Political stability is perhaps among the most important attributes that help Southeast Asia become a choice investment location for FDIs (Borner et al. 1995). The electorate in Singapore and Malaysia has returned the same political party to government throughout their postindependence histories. Thailand, on the other hand, has never been colonized. There were frequent shifts at the reins alternating between influential businessmen and army generals, but Thailand has always been politically stable. Thais are steadfastly loyal to their king, who becomes a powerful moderating force during political conflicts. In the Philippines, where there is a two-term limit to the presidency, the people continue to experience peaceful transitions of power through the exercise of their constitutional rights since the 1980s. Vietnam, on the other hand, remains tightly controlled as a socialist society. In the rest of Southeast Asia, the military has played a dominant role in the political structure and thus leaves very little behind by way of political discourse and the exercise of democratic rights. Indonesia has become the exception, as a new political leadership without ties to the military has finally come into existence.

One weakness of too much stability, however, is that governments become too powerful, leading to questionable policies and lack of transparency. The extent to which that is true depends on the degree of openness of the economies concerned, because if investor confidence is to be earned, regulations, policies governing money supply and the banking system, and other relevant controls must harness market forces, not stifle them. Southeast Asian economies, being very open, have had to be relatively free in the context of having policies that embrace the market. The relative success of these countries may be judged by scores given by independent assessors, such as those published by the World Economic Forum (WEF) and by the International Institute of Management Development (IMD) as follows:

	WEF	IMD
Singapore	1	2
Hong Kong	2	3
United States	3	1
Taiwan	9	18
Malaysia	10	23
Japan	13	4
Thailand	14	30
Britain	15	19
Germany	22	10

SOURCE: *The Economist*, 1 June 1996.

The WEF score depends on the ability of the country to achieve sustained high rates of growth, compared against the IMD's definition of competitiveness, which rates the country's ability to increase wealth by managing production factors integrated into an economic and social model.

Agricultural Production and Food Security

The inability to modernize the agricultural sector is a major failure among Southeast Asian countries. It may not be for lack of trying, but rather because of the large peasant population, distorted agricultural pricing, and shrinking

land availability resulting from competing land uses. The greatest impact, however, was social mobility, involving the transition out of agriculture over the course of development. As a result, although the number of rural poor declined, living standards among them did not improve as much as for those who switched to other sectors of the economy. Policies aimed at retaining agricultural population while modernizing and significantly improving their living standards would have been better at keeping agriculture viable and ensuring better food security in the future.

Prospects and Conclusions

During the last half-century, Southeast Asia has emerged from its dismal past under foreign dominance to become a viable economic player within the international division of labor in the age of globalization. Singapore, for instance, is by per capita income standards well past the level that marks a developed nation. But at the close of the twentieth century, the age of miraculous growth appeared to be nearing its end for Southeast Asian economies as growth rates plummeted. For decades, Southeast Asia had been the recipient of the bulk of foreign investments. By the 1990s, four-fifths of the investment capital, along with the latest technologies, had instead gone to the People's Republic of China (PRC), leaving the remainder to be shared by the countries of Southeast Asia. This development would not have been as critical had Southeast Asia embraced its golden age of economic expansion with a little more emphasis on building up technocratic skills and with more robust capital markets. It would have had at least a couple of decades of a head start.

The time for yet another transition has come, because Southeast Asian countries can no longer continue to compete on the basis of cheap labor and resources. Instead they need to move up to become a global supplier that bridges the technology gap between the advanced North and those new entrants that have now joined the global production market. A half-century of growth in Southeast Asia has mostly been a disarray of strategies, policies, and priorities among its various countries. Today there is a refreshing hope that ideas and mind-

sets will converge through the tested forum of ASEAN, whose membership list is now complete for all of Southeast Asia.

ECONOMIC HISTORY OF EARLY MODERN SOUTHEAST ASIA (PRE-SIXTEENTH CENTURY)

When did the early modern period in Southeast Asia begin? Some historians identify the middle of the fifteenth century as a time when rapid change began to affect Southeast Asia's economy and society. The spread of trade networks based on Islam and the incursions of Europeans beginning some fifty years later have been conventionally identified as two of the major factors responsible for the transition to the modern era. Other historians and some archaeologists suggest that the new economic institutions that became established during the fifteenth century, in some areas associated with early conversion to Islam, did not constitute discontinuity with the past. Instead, they formed part of a gradual transition that had begun one or even two centuries earlier.

Few records of everyday economic activities in early Southeast Asia have survived. It is therefore difficult to prove that the spread of Islam and European influence were correlated with important changes in the economic systems of the region, since the amount and types of documentation available changed greatly over the course of the sixteenth century. Evidence is, however, accumulating to show that

another key factor in altering economic conditions in Southeast Asia—sizable communities of resident foreign merchants—was already present by the thirteenth century. Chinese immigrants may have begun to form enclaves by the twelfth century. They were not the first; Tamil groups may have been present in northern Sumatra and southern Thailand by the early eleventh century, but their influence in the economic sphere, as opposed to artistic and religious matters, seems to have been neither extensive nor lasting.

Chinese involvement in the region's trade therefore preceded both intensive Islamization and European influence. The role of Chinese communities in Southeast Asia's economy is still one of the principal features of that sphere of activity today. Effects of Chinese merchant communities in Indonesia include the introduction of a convenient, low-value coinage suitable for use in everyday market transactions. Southeast Asian coins were traditionally made of gold and silver, high-value materials, which restricted their usefulness in low-value trading. A Javanese document of 1300 C.E. shows that Chinese coinage was common enough that it had become the accepted legal tender of Majapahit, one of Southeast Asia's largest kingdoms. The existence of this mode of exchange would have led to a much greater volume of economic activity and would have encouraged occupational specialization. Archaeological discoveries indicate that Chinese coinage was used over an area stretching from East Java to northeast Sumatra. When Islamic kingdoms in fifteenth-century Southeast Asia, such as Melaka, began minting locally made low-value coins, the use of these coins would not have represented a new idea but rather an elaboration of a preexisting custom.

The monetization of mainland Southeast Asia's economy began in the fifth century. The oldest coin hoards have been found in a zone reaching from Myanmar (Burma) through Thailand to southern Vietnam. Although coinage existed both on the Southeast Asian mainland and in major islands of the archipelago by 800 C.E., the two regions followed different paths of development thereafter. Coinage disappeared from the archaeological record of the mainland, not to reappear until after Islamization and the arrival of Europeans. The large kingdoms of Pagan and Angkor abolished

coinage and implemented a command economy in which the government regulated economic activity through taxation and redistribution. In Indonesia, by contrast, coinage continued to be produced, and it became more integral and/or essential to the functioning of several societies.

This dichotomy is correlated with differential involvement in long-distance trade. Indonesian kingdoms had been heavily involved with trade networks from China to the Persian Gulf since the beginning of the common era (C.E.). Mainland Southeast Asian societies, however, seem to have shifted their orientation away from the sea and toward elaborate, agrarian-based economies. By the fourteenth century, Chinese coinage had become a standard medium of exchange in kingdoms from North Sumatra to Bali. Thus, an economy based on coinage was already well developed in the insular realm of Southeast Asia before either Islamic or European models were introduced. However, data are lacking to draw inferences regarding the impact this means of exchange had on social structures. The most that can be said is that monetization was already well advanced when the new forms of documentation of the Southeast Asian economy became available.

The origins of Southeast Asian Islam are still a subject of inquiry. Many early Chinese immigrants may have been Muslims, as records of the Zheng He (Cheng Ho) voyages in the early Ming dynasty attest. But immigrants from India were almost certainly the most important group in this transition. In any case, Islamization, which primarily affected southern Southeast Asia, would have had an impact on two areas of economic history in particular: the use of wealth and the formation of new networks of relationships. In premodern times, much wealth (considered as liquid assets such as money or other readily exchangeable commodities, accumulated from taxation and trade) was probably expended on large-scale ritual performances, fulfilling a kind of redistributive function. The introduction of Islam must have had an important effect on the use of surplus wealth. Large ceremonies such as cremations when substantial amounts of wealth were burned or given out to the public were gradually abandoned. Court life would have become more somber and restrained. Although Bali is not a fossilized replica of premodern Southeast Asia, a comparison be-

tween the amount of resources expended on religious activity in (Hindu) Bali and (Muslim) Java today has to correspond to the reallocation of resources that must have occurred in Java during the conversion to Islam. The end result would have been to increase the amount of wealth theoretically available for reinvestment in productive enterprises rather than conspicuous consumption or gift giving.

Yet it would be a mistake to characterize pre-Islamic Southeast Asia as economically unsophisticated, concerned mainly with ritual and ceremony. One of the main reasons for the existence of royal courts may have been the organization of rituals involving large proportions of their subjects, but most of the population would still have had to obtain their means of livelihood from other sources. The amount of change that took place in the sixteenth century, when Islam attained its greatest extent and Europeans began to enter the region, is difficult to measure but would not have been very great.

When the Portuguese, the first European group to penetrate Southeast Asia, arrived in 1509, their own country was still comparatively underdeveloped economically in comparison with the more prosperous areas of Europe. Their motivations were to gain wealth and to make converts to Christianity. Their leader, Afonso de Albuquerque (ca. 1462–1515), had fought Muslims in northern Africa and considered himself a religious crusader rather than a merchant. The Portuguese incursion into Southeast Asia was also part of a grand strategy to outflank the greatest trading port in the Mediterranean at the time, Venice, and its Muslim partners, the Mamelukes of Egypt. The chosen tactic was the bold stroke of advancing straight to the heart of the region that provided the basis of Venice's wealth: the spice islands. By seizing Melaka in 1511, the Portuguese achieved what Christopher Columbus (1451–1506) had tried and failed to do in 1492. They succeeded in establishing a direct route from Europe to Maluku, the only source of the cloves and nutmeg, a route that played such a disproportionate role in Europe's balance of power relative to its utilitarian value. From Melaka, the Portuguese forced their way to Maluku, and through a combination of violence and negotiation, they sought to deflect the income that had built the grand structures of the Venetian lagoon to Lisbon.

Although the Portuguese strategy succeeded in attaining its physical objectives, it failed to make Lisbon the equivalent of Venice. One of the results of Portugal's policy was simply to shift the locus where most of the spices entered the main east-west trade route from Melaka to Banten (Bantam), West Java. Melaka languished under the Portuguese until 1641, when it was acquired by the Dutch, who intentionally prevented it from competing successfully with their own base in West Java, Batavia (Jakarta). Economically, the main lesson to be drawn from this sequence of events is that the spice trade network was flexible enough to make quick adjustments to unforeseen disturbances to its overall system.

The strength of trading connections forged by Islamic traders provided the flexibility of the spice trade network. From Gujarat, northwest India, to the Coromandel Coast and Bengal, the network passed through the Arakan coast where rulers were either Muslims or Buddhists whose culture had a strong Muslim element. Thereafter, the network went to Aceh at Sumatra's northern tip, to the Straits of Melaka, to Cambodia and southern Vietnam where Muslim Malays and Chams were predominant, and eventually to Quanzhou, Fujian, where a Muslim population had been established since the early Ming dynasty. Other important Muslim ports were found at Brunei in northwest Borneo and along the eastern rim of the South China Sea in the Philippines. Welded together by a common religion, traders all along this extensive network of ports enjoyed access to commercial intelligence and credit facilities that the overseas Chinese were only beginning to assemble.

Other than causing a slight repositioning of the trade routes, the Portuguese and later the Spanish had little effect on the Southeast Asian economy. They did not add a large new element of demand to the market, so prices remained largely the same. The Muslim network for the most part stayed intact. The seventeenth century tells a different story, however. The arrival of the English and especially the Dutch was correlated with a shift in dominance from the Muslim to the Chinese network. India became an area for competition among various European powers, and gradually, the hold of the Mughals over their mainly Hindu subjects was broken. Indian Muslim political and economic power declined

in tandem with the introduction of more efficient north European military technology. Muslim groups in Southeast Asia found themselves increasingly fragmented and facing competition from several parties at once. Slowly but inexorably, the Sino-European alliance overcame the Muslim coalition. The climactic event in this transition was the transfer of control over Banten's economy to the Dutch in 1682. Banten was the last great Muslim trading port to survive; after its ruler ceded control in return for Dutch support in a civil war against his own father, indigenous shippers found themselves more and more hemmed in by Dutch restrictions. These regulations were intended to favor Dutch traders, but due to a combination of factors, the Chinese ended up as the main beneficiaries. The Dutch were physically unable to conduct all trade and transport themselves; the Chinese were able and willing to pay fees to the Dutch, thus guaranteeing them their profit, while still making enough additional money to accumulate their own capital. Thus was formed an alliance between two non-Southeast Asian groups. The Dutch were never entirely happy with this arrangement, and more than once, they turned on their Chinese subjects. Nonetheless, the Chinese traders managed to survive and resume their activities after periodic pogroms once the Dutch realized that they could not prosecute their economic plans without Chinese participation. Muslims from India and Arabs too continued to participate in the economy, but they were less influential or powerful than the Chinese.

Only in Sumatra, Borneo, and the southern Philippines did Muslim networks remain dominant through the early modern period. Aceh and Brunei and, to a lesser extent, the Johor-Riau area at the southern end of the Malay Peninsula and the Sulu sultanate represented significant concentrations of economic power in the hands of Muslim rulers with strong links to Islamic kingdoms across the Indian Ocean.

The economy of mainland Southeast Asia was much less intertwined with long-distance trade and therefore attracted less attention from outsiders. Cambodia experienced a brief era of involvement on the part of various foreign groups, from both Europe and other areas of Southeast Asia (particularly Malays), but it sank back into relative isolation due to a lack of large quantities of products in demand in interna-

tional markets. Similarly, Europeans and other Asian groups made attempts to exploit the commercial possibilities of the Arakan and Martaban coasts of Myanmar, but they made no significant impact there during the early modern era. In Siam (Thailand/Ayutthaya), the Dutch, French, and English tried during the seventeenth century to reap commercial profits and gain political influence, but they were rebuffed.

The practices through which foreign trade was conducted during the early modern period incorporated both premodern and modern elements. And even within the same kingdom, policies might fluctuate between one pole and the other. An example is Aceh. Strong sultans such as Iskandar Muda (Mahkota Alam, r. 1607–1636) of the early seventeenth century attempted to monopolize all international trade throughout their realm, which, in his case, extended over much of North Sumatra and far down the west coast as well to pepper-producing regions in West Sumatra. Later, a system of rule by queens was adopted. This practice seems to have been favored by local merchants, who found the rule of women much less onerous. In most cases, international trade was conducted on the basis of the ideal of reciprocity and gift giving rather than hard bargaining. The Dutch eventually learned to turn this system to their advantage, usurping the rights of local rulers through treaties and instituting monopoly control over foreign trade as efficiently as any local rulers ever had succeeded in doing. The Dutch quickly gained the upper hand over other foreign groups in Southeast Asia, and from 1641 through 1800, they dominated most of the region's long-distance maritime trade.

Although many data exist for the study of the international trade of Southeast Asia during the early modern period, the agrarian economy is much less well documented. That economy was not of interest to the foreign traders, and local archives have not survived. On the mainland, coinage was only gradually introduced during the early modern period. In Thailand, the practice of using cowrie shells instead of coins persisted until modern times. This system was also very popular across the border in Yunnan, where the Chinese had to resort to threats of imposing the death penalty to suppress the use of cowries instead of Chinese coins in the late Ming dynasty (seventeenth century) among the T'ai linguistic groups of that region. Ac-

According to an English visitor of the early seventeenth century, this shell money was used as far south as Kedah in the Malay Peninsula and at other places around the Bay of Bengal. In the absence of a widespread system of coinage, taxes and tribute were paid in produce and precious metal by weight rather than in a currency system.

In both mainland and island Southeast Asia, the very notion of “the economy” differed from that of the modern period in one important respect: control over labor was much more esteemed and emphasized than control over physical assets. The social structures of both parts of the region were predicated upon the notion that it was the fate of everyone to “belong” to someone else of higher status, in the sense of the need to uphold a set of mutual obligations. The lower-status person in most settled societies was expected to form part of the retinue of someone of higher status and to perform certain duties for that individual in return for the fulfillment of specific obligations, mainly protection. Early European sources refer to slaves as a major component of Southeast Asian population, but this single word does not do justice to the range of relationships that it described in early modern Southeast Asia. People could become enslaved for debt and as war captives, or they could sell themselves. As a result of accepting someone as a slave in some societies, however, the slave master in fact became responsible for ensuring the welfare of the slave. In this matter as in so much else having to do with early modern Southeast Asia, one cannot simply read the European sources as literal descriptions of reality. References to slavery have to be analyzed in the context of the place and specific period in which they are situated. The complexity of this set of institutions in determining the allocation of social and physical resources and in determining the economic choices of individuals suggests that the notion of the economy in early modern Southeast Asia is itself a concept in need of definition according to the local situation.

The early modern period can be conveniently considered to end in the early nineteenth century. The next decades saw the rapid spread of European administration from small enclaves to a large proportion of Southeast Asia. Economic activity was strongly influenced by imperial demands and administrative practices,

plantation agriculture, industrial expansion, and a host of other new factors. Yet even in the twenty-first century, one cannot understand Southeast Asian attitudes toward matters that Westerners may consider purely economic without recognizing that Southeast Asians often place higher priorities on matters of personal relationships than on principles of profit and loss. Continuity with aspects of the premodern and early modern periods is still an important phenomenon.

ECONOMIC TRANSFORMATION OF SOUTHEAST ASIA (ca. 1400–1800)

The humid Tropics, despite their abundance of water, are not easy to tame with settled agriculture. Southeast Asia was relatively lightly peopled until the nineteenth century; the majority of the population then consisted of mobile, shifting cultivators and fisherpeople. Pockets of irrigated rice agriculture became important in the drier areas from the ninth to thirteenth centuries and sustained the classic cultures of Angkor, Pagan, Java, and Dai Viet in that period.

Throughout the recorded history of the region, Southeast Asia was a place of exchange and interaction—between uplands and coasts, trading ports and hinterlands, specialist production centers and their clients. Because it lay athwart the maritime routes between China, the world’s largest economy, and the rest of the known world, Southeast Asia was always home

to important ports, notably around the Straits of Melaka, the portages across the Malay Peninsula, and the Cham coast of what is today southern Vietnam. Rivers and sea-lanes provided ready access by water to populated parts of the region, compensating for the unusual difficulty of movement by land.

Cash Crops for the World

Until the fifteenth century C.E., the long-distance exports of the region were the product of foraging rather than agriculture—exotic spices; birds’ nests; birds of paradise; woods and resins from the forests; and pearls, tortoiseshells, and seashells from the oceans. Even the cloves and nutmeg that found their way from the Maluku (“Spice”) Islands of eastern Indonesia to the Roman Empire and Han China had been plucked from trees growing wild in these small islands.

In the decades before and after 1400, evidence suggests a more systematic production for the export of cloves in northern Maluku (especially Ternate and Tidore), nutmeg and its by-product mace in the Banda islands, and pepper in northern Sumatra. Venetian agents reported that about 30 tons of cloves and 10 tons of nutmeg annually were arriving in the Mediterranean ports of Europe, through Egypt, at that time. The growth was slow and spasmodic through most of the fifteenth century but rapid enough after 1570 to find about 200 tons of cloves and 100 tons of nutmeg arriving in Europe annually by the early 1600s. Prices paid in Maluku for the spices also grew about twentyfold as competition mounted between 1500 and 1600 (Reid 1993: 13–24). Since these precious spices passed through many hands on their long journey from *entrepôt* to *entrepôt*, they were crucial to the growth of mercantile activity.

Piper nigrum, the true pepper vine, is native to India, and southwest India provided virtually all the world’s needs for this commodity until around 1400. Likely stimulated by Chinese demand, pepper then began its remarkable career in Southeast Asia, beginning in northern Sumatra. Primary forest was felled to create the pepper gardens, and yields would decline after about the tenth year of production, leading to the opening of new tracts of forest and the abandoning of exhausted ones. Pepper cultivation therefore tended to shift, spreading around almost the whole of the coastal and riverine

portions of Sumatra most accessible to trade and into the Malay Peninsula, coastal Borneo, southeastern Siam, and south-central Vietnam. By the early 1600s, Southeast Asia was exporting 4,000 tons of pepper a year and supplying the bulk of the world's needs. Around 6 percent of the population of Sumatra and the Malay Peninsula must have been living from pepper production for export in the seventeenth century (Reid 1993: 33).

Sugar began its career as a major Southeast Asian export in the seventeenth century. Chinese (mostly Teochiu) immigrants started growing it, primarily for export to Japan, in the Quang Nam area of central Vietnam, in Siam, and in Cambodia. Chinese migrants also began growing sugar in the outskirts of Banten, in Java, around 1600. The Dutch encouraged them to move to Batavia in the 1620s, and by the 1640s and 1650s, up to 1,000 tons a year were being shipped by the Dutch to Europe, Japan, and Persia (Bulbeck et al. 1998: 112).

Mention should also be made of tin, Southeast Asia's primary mineral export. Tin was extracted from flooded pits by part-time Thai and Malay miners, primarily in the river valleys of Perak and Kedah on the Malay Peninsula and Phuket. Production appears to have grown markedly from the time around 1500 when the Melaka sultanate controlled the export to India until the seventeenth century, when Dutch, Acehnese, and Thai authorities competed to control it. At its seventeenth-century peak around the 1630s, 1,000 tons may have been exported (Irwin 1970: 268–269).

An Age of Commerce

The growth in cash cropping around 1400 was likely stimulated by the extraordinary interest in Southeast Asia (and beyond) of the first three Ming dynasty rulers of China (1368–1424). In particular, the third, the Yung-lo emperor, sent six huge naval expeditions to the ports of the region and intervened militarily in Dai Viet and northern Burma. There is good evidence for the Chinese demand for Southeast Asian products such as pepper, sappanwood, and minerals, and Chinese migrants left behind by the expeditions greatly assisted the development of ports such as Japara, Demak, and Gresik (in Java); Ayutthaya (in Siam); Melaka; Brunei; and Manila.

Subsequent emperors lost interest in official contacts while continuing to ban private trade, and the Chinese commercial element merged with other traders to form a largely Malay- and Javanese-speaking trading class. Whereas earlier and later Chinese contacts proceeded both along the western route (Vietnam coast and Malay Peninsula) and the eastern route (Taiwan, Philippines, and Borneo), the eastern route appears to have died in the mid-fifteenth century. Manila, Brunei, and eastern Indonesia redirected their China trade through the major entrepôt of Melaka, presumably because goods traveling along the coastal routes linking that city to Chinese ports were easier to disguise as local trade. Around 1500, therefore, Melaka played a crucial role as the single privileged entrepôt for trade in cloth from India and spices from the archipelago, as well as metal goods and ceramics from China.

The arrival of Portuguese vessels in 1509 and their capture of Melaka two years later contributed to a major disruption to Southeast Asian trade and to Indian Ocean trade more generally. The predatory nature of their attacks on the large Javanese and Indian Muslim ships that dominated the trade appears to have set back the level of commerce by several decades. By the 1530s, however, Muslim traders had established new bases in ports such as Aceh (North Sumatra), Patani, Pahang and Johor (Malay Peninsula), and Banten (West Java), and they established a direct route for pepper and spices from Aceh to the Red Sea ports controlled by Turkey, avoiding the former stapling ports in India where the Portuguese had become dangerous. The Portuguese themselves adjusted to more peaceful forms of trade, and the oceanic trade networks continued to expand.

The height of Southeast Asia's age of commerce occurred in the period from 1570 to 1630, fueled by rising prices for most products, an abundant flow of silver, and intense competition for the key commodities. Three related events contributed to the increase in commerce. First, in 1567, the Ming emperor lifted the imperial ban on foreign trade, beginning a system of licensing junks for a dozen Southeast Asian ports. Second, silver production from both Peru and Japan increased rapidly beginning around 1570 as a result of new techniques of mercury extraction. And third, the Spanish established in Manila (1570) an entrepôt where

Chinese traders could obtain American silver as well as Japanese and Southeast Asian goods. Muslim and Portuguese traders competed in carrying silver and Indian cloth eastward to exchange for spices, pepper, and Chinese manufactures in Southeast Asian ports, with the result that prices and quantities both rose. The Japanese began sailing directly to Southeast Asian ports in the 1580s (chiefly to exchange with the Chinese, which they were forbidden to do directly), and the northern Europeans did so in the 1590s, adding to the competition and the buoyancy of mercantile ports.

Urban Life and Commerce

This age of commerce created large cosmopolitan cities, which, for more than a century, were the centers of cultural innovation and political power as well as commercial dynamism. In both Burma and Java, the political and cultural centers shifted to coastal ports roughly between 1450 and 1620, and Cambodia's capital also moved to the river port of Phnom Penh in the fifteenth century. Port cities such as Pegu, Ayutthaya, Aceh, Banten, and Makassar grew to the dimensions of contemporary European cities and dominated their agricultural hinterlands to an even greater extent. Most cities had a royal core, often fortified in the form of a citadel, and extensive suburbs in which the different national groups of traders would congregate in their respective quarters.

The growth of commercial transactions stimulated a relatively sophisticated pattern of commercial techniques, paralleling many of the capitalist institutions of Europe, India, and China in the period. The alternation of monsoon winds in the region favored a pattern of seasonal voyages, with traders from China, India, or Java remaining for several months in the main entrepôts before returning home on the favorable wind. Within the region, traders identified with Java, Banda, Makassar, Pegu (ethnically Mon), Melaka/Johor/Patani (ethnically Malay), and Champa owned and operated large rice junks as well as smaller vessels, whereas the trade to China and India was dominated by Indian and Chinese traders, respectively.

The key indigenous commercial actors were the *nakhoda* (supercargos) who traveled on each vessel and regulated the trade of the traveling merchants on it and the merchant-aristocrats

(*orangkaya* in Malay) who regulated commerce in the ports and mediated with rulers, often also acting as port officials. These were frequently foreign-born individuals, since what autonomy and security of property they enjoyed rested largely on their mobility. In addition, resident Indian, Chinese, Arab, and Portuguese minorities played important mediating roles, often including the introduction of commercial or manufacturing techniques. Indian commercial castes, including Gujarati Sharafs and south Indian Chettiars, operated as money changers, moneylenders, and protobankers, with the capacity to send letters of credit (*hundi*) to their counterparts in distant cities. In the larger ports, an interest rate of 2 percent per month became common for reliable borrowers (Reid 1993: 110). Trading voyages were financed through established principles of profit sharing and bottomry (a credit system of lending to a ship owner on the security of his vessel).

If in these respects Southeast Asia was moving in a capitalist direction comparable to that in Europe, India, and Japan, it lagged behind in others. In the seventeenth century, there still were no impersonal banks or stock exchanges, as were starting to emerge in Europe. A more fundamental point was the lack of security of property against the whim or greed of a ruler. Power was diffuse in practice but unlimited in theory, in part because the new port-centered power bases adopted new ideologies of absolutism to justify using power to obtain wealth and vice versa. The *orangkaya* elite adopted a number of devices to curb arbitrary royal power, including a succession of female rulers in Aceh and Patani, child rulers in Banten, and supernaturally sanctioned pluralities in Makassar. Yet none of these became permanently institutionalized, as free cities, parliaments, and courts did in parts of Europe.

Crisis and Retreat in the Seventeenth Century

The Europeans traveled to Southeast Asia in pursuit of increasingly high-priced spices and at first contributed to the competition that drove local prices higher still. In the mid-seventeenth century, however, the Dutch East India Company (VOC) established an effective monopoly over cloves, nutmeg, and mace and a partial monopoly over pepper, cinnamon, and sandal-

wood. In pursuing these monopolies, the VOC also conquered two of the largest entrepôts—Makassar (1669) and Banten (1682)—and weakened a number of others. It has therefore often been blamed for reversing the healthy development of Indonesian commerce as well as urbanism, at least in Indonesia, and inaugurating a period when foreigners dominated all the high points of commerce.

Other parts of the world, however, such as the Hapsburg, Chinese, and Ottoman Empires, also experienced major crises in the mid-seventeenth century. Some of the factors that turned Southeast Asians away from an export-dependent path were global, notably, a worldwide cooling effect, which appears to have caused unusual climatic variation, and a downturn in world output of silver, which had been fueling price rises throughout the sixteenth century. In almost every part of Southeast Asia for which records are available, population dipped in the second half of the seventeenth century. It is more helpful to see the increasingly deadly competition for spices in the 1600s as a development in a time of crisis, in which there was room for only one winner.

For Southeast Asians, one major effect was a sharp decline in the influence that cosmopolitan port cities had in their lives. Capitals had fallen and shifted before, but there were to be no indigenous replacements when major port cities fell in this crisis, as Pegu did in 1599, Surabaya in 1623, Makassar in 1669, or Banten in 1684. The Javanese and Mon ethnic groups ceased to be identified particularly with maritime commerce, which became increasingly the business of minority diasporas—Chinese, Arab, European, Malay, Bugis. In the archipelago, the defeat of important port capitals led to a return to more diffuse systems of power, though on the mainland, such an effect was short-lived at best.

Euro-Chinese Cities

The Portuguese occupation of the Melaka entrepôt in 1511 dislocated trade to new centers but had little effect on urban life more broadly. The establishment of Manila in 1570, however, immediately proved very interesting to Chinese traders who had been newly authorized to trade to the *Nanyang* (South Seas, namely, Southeast Asia). By 1589, almost half of all junks that ac-

quired licenses were destined for Manila, where they could exchange the abundant manufactures of China (especially silk and porcelain) for Mexican silver. By 1603, there were about 20,000 Chinese living in the Chinese quarter (*parian*) of Manila and providing most of the city's needs for manufactures, construction, and foodstuffs (De la Costa 1967: 68, 205).

Founded by the VOC in 1619, Dutch Batavia set out to emulate this model by attracting Chinese settlers and traders through every means possible, including force. By 1630, the Chinese had become the most useful group in terms of urban services, manufacturing, and tax revenue, but they made up less than 20 percent of the population. Batavia was the headquarters of the Asia-wide network of the VOC, and slaves were introduced first from India and Arakan and then, after 1670, chiefly from South Sulawesi and Bali. They constituted about half of Batavia's population in the sixteenth century, and freed slaves (*mardijkers*) comprised another 20 percent (Raben 1996: 82–97). Batavia was even more attractive than Manila to both Chinese and Muslim (chiefly Indian Muslim and Malay) traders and settlers, since no demands were made for conversion or cultural assimilation. This model of a culturally plural entrepôt, with a valuable Chinese population of craftspeople and traders, was repeated in other Dutch ports, such as Padang, Melaka (after 1640), Semarang, Makassar, and Kupang.

The trade, which initially sustained the early Dutch, Spanish, and English operations in Southeast Asia, was gradually supplemented by the controlled cultivation of cash crops for export. The Dutch had begun with nutmeg after 1621, producing all the world's supply on slave estates in Banda. Company cloves and pepper were produced through binding contracts with producers in specified regions. The British also used a system of binding contracts with local chiefs to produce their share (about a quarter, at best) of the world's pepper needs after 1684. In 1707, the Dutch company began distributing coffee seedlings to the chiefs of the Priangan highlands above Batavia with such success that West Java became Europe's main supplier of coffee until West Indian slave production developed in the 1730s.

The eighteenth-century companies were as much producers of tropical produce under monopoly contracts as they were traders. In 1781,

the Spanish took a similar route (about the time the VOC system was collapsing), declaring all tobacco cultivation in the Philippines a government monopoly. In the 1790s, a factory was built to produce the subsequently renowned Manila cigars, employing 5,000 women rollers (De Jesus 1980). This quickly became the Philippine government's primary source of revenue.

A Second Commercial Boom

In the latter part of the eighteenth century, European and Chinese free traders were visiting Southeast Asia in ever-increasing numbers, whereas the Dutch, English, and Spanish monopoly systems were in decay. The freeing of trade to competitive influences, coinciding with a period of global trade growth, inaugurated another phase of commercial expansion and urban growth roughly between 1780 and 1840.

China's population is thought to have doubled during the relatively peaceful and prosperous reign of the Qienlong emperor (1736–1795). Chinese trade and emigration to Southeast Asia increased throughout the reign but especially after 1754, when Chinese were officially permitted to return home with their foreign wealth. In the previous century, Manila and Batavia were the principal destinations, but now the Chinese made Asian-ruled centers such as Bangkok, Saigon, Ha Tien, Riau, Brunei, Sulu, and Terengganu their major destinations. Miners for tin and gold and planters of pepper, gambier, and sugar established relatively autonomous frontier settlements in lightly populated areas in Borneo, the Malay Peninsula, the Riau archipelago, and the Gulf of Thailand. In the decades before Singapore's foundation (1819), Bangkok became the largest base for Chinese trade and shipping outside China.

The Chinese may have been the most important single factor in the second boom. Nonetheless, the growing numbers of English and French country traders based in India after 1760, of New England pepper traders from 1793, and of Chulia and other Indian merchants also profited from the atrophy of the Dutch and English companies, which could no longer control effective monopolies. The Americans as a group were the biggest single buyer behind a huge expansion of pepper growing in Aceh from the 1790s, and Aceh's total exports increased about tenfold in value between the

1770s and the 1820s (Bulbeck et al. 1998: 66). Coffee escaped from the narrow world of Dutch forced cultivation in the Priangan to become the smallholder crop par excellence in much of Sumatra and Java. By the 1830s, Southeast Asia produced the bulk of the world's coffee as well as pepper. Shipping records for Singapore in the years after 1819 reveal that maritime trade in its hinterlands, from southern Vietnam and Siam to Bali and Borneo, increased several-fold between the 1790s and the 1830s.

This kind of expansion in trade, the most measurable dimension of economic performance, was matched by a growing commercialization within the larger states of the region. It is possible to see this second period of commercial growth, like the age of commerce two centuries earlier, as the harbinger of various types of modern sensibility in literature, art, and religion, as well as of more modern, centralized state forms. For instance, Nidhi Aeusrivongse has shown this scenario for Siam in the early Bangkok period; likewise Li Tana for Cochin China.

EDSA REVOLUTION (1986)

“People Power Revolution”

EDSA is the acronym for Epifanio De los Santos Avenue, the major highway in metropolitan

Manila, the national capital region of the Philippines. It was the site of the four-day “people power revolution” of 22 to 25 February 1986, where more than a million Filipinos gathered on the road to force a showdown with president-turned-dictator Ferdinand Marcos (1917–1989). Marcos had refused to resign from office after fourteen years at the helm of a repressive regime. The vast multitude responded to frantic calls by Manila’s archbishop, Jaime Cardinal Sin, to go to EDSA to show their support for the defense minister, Juan Ponce Enrile, and the armed forces vice chief of staff, Fidel Ramos, who had forsworn Marcos and defected to the opposition, headed by Corazon (Cory) Aquino (1933–). In four days, EDSA swelled with crowds of Filipinos from all walks of life—rich, poor, young, old, professionals, executives, farmers, workers, laborers, students, women, children, religious, and so on. The phenomenon had a heavily religious atmosphere. Priests and nuns intoned prayers and chants; carried religious icons such as the Virgin Mary and Santo Niño (Child Jesus); and offered rosaries, flowers, and food to Marcos’s soldiers, who were just waiting for orders to shoot into the crowd.

Some called the EDSA rebellion nothing short of a miracle because, with the presence of a million people and the full weight of Marcos’s military arrayed against them, the potential for violence was extremely high but did not erupt. All that was needed was for someone in the crowd to throw a stone, and violence would have ensued. It was a very tense situation, yet the crowd remained disciplined but determined. They pleaded with rather than confronted or taunted the military. For their part, the troops could not fire on the crowds or drive their tanks into their midst because they knew some of their relatives and friends were there. They voluntarily returned to their barracks without firing a single shot.

The defection of various units of the military, especially the air force under Colonel Antonio Sotelo, sealed the fate of Ferdinand Marcos. Isolated in Malacanang, the presidential palace, with his family and loyal military, he underestimated the size of the EDSA crowd and continued ordering his troops not to shoot. Meanwhile, he was in constant touch with the administration of Ronald Reagan (t. 1981–1989), asking the U.S. president, whom he con-

sidered his friend, what to do. In turn, President Reagan (1911–2004) requested a U.S. senator, Paul Laxalt, to tell Marcos to “cut, and cut cleanly,” to which the latter responded, “I’m so very very disappointed” (Kerkvliet and Mojares 1991: 160). In his delusion, if not arrogance, he had expected Reagan to support him to the very end.

On the night of the fourth day at EDSA, two helicopters from Clark Field Air Force Base in the Philippines arrived at the presidential palace to evacuate Marcos and company after the dictator was persuaded it was in his best interests to go into exile in Hawai’i. The U.S. Embassy in Manila had contacted incoming president Cory Aquino, who had said in very definite terms that it was best for Marcos to leave the Philippines to forestall any violence that might ensue if he remained. Marcos and his entourage of eighty-nine persons were put on a plane to Guam, en route to Hawai’i. A second plane carried 300 pieces of luggage, containing jewelry, Philippine currency, U.S. dollars, guns, medical equipment, clothing, Imelda Marcos’s shoes, and other items too numerous to mention, which were later impounded by the U.S. Customs authorities in Honolulu.

The EDSA crowd reached Malacanang after the Marcos party had left, and the people celebrated the end of the dictatorship by throwing out and burning the portraits of Ferdinand and Imelda Marcos. They photographed themselves taking over the presidential desk and other parts of the palace. The incoming Aquino government had sent its couriers to retrieve whatever papers and documents were left behind, which could later be used in court cases against the Marcoses. Much jewelry had been left behind, as well as several dialysis machines, confirming long-standing rumors that Marcos had suffered from a kidney disease.

EDSA has since been reconstructed, with a massive statue at its heart symbolizing “people power.” There is also a specially commissioned, towering icon of the Virgin Mary, to whom the crowd prayed during those tense days to bring a peaceful end to the Marcos regime. The site is a reminder of the unique Filipino contribution to the theory of modern revolution.

EDUCATION, OVERSEAS CHINESE

The educational policies and provisions for immigrant Chinese and their descendants, Southeast Asia’s most significant immigrant minority, changed as former colonies became independent countries striving for national unity and development in the 1950s and 1960s. The relations between China and the immigrants’ countries of overseas residence influenced the educational changes that occurred. Across the region, there were variations in the minority status of the Chinese, including their numerical and economic importance. These differences affected government policies toward Chinese education—policies that had political as well as educational significance.

Extensive Chinese immigration to Southeast Asia in the nineteenth century led to the emergence of a settled Chinese population and a demand for local schools, as only a small proportion of the Chinese could afford to send their children to private tutors or to China for education. Some Chinese children gained an education in the few modern, Western-style schools established by colonial authorities and Christian missionaries. These schools used the colonial language and a curriculum designed to produce the colonies’ future clerks and bureaucrats. As in the Straits Settlements, the Chinese children educated in these schools became a distinctive segment of the Chinese population—the English-educated Anglo-Chinese.

The inability of these schools to accommodate the demand spawned by the growing school-age population among the Chinese, especially those seeking a Chinese-language education, led local Chinese associations to found their own schools. Diversity characterized these early community-funded schools. There was no common curriculum or common language of instruction. Although some schools taught in Mandarin, the national language, many used the

dominant local Chinese dialect, such as Hokkien, Teochew (Teochiu), or Cantonese.

Soon, these schools, begun as a response to the immediate educational needs of the emigrant Chinese families and employers, were influenced by the social and political reform movements in China, where education was emphasized as a key to modernization, including the replacement of the Qing (Ch'ing) dynasty (1644–1912). In Southeast Asia, local schools were urged to prepare citizens for the new China through a modern, Western-oriented curriculum that used the Chinese national language. The recruitment of teachers from China to overcome local shortages contributed to curriculum reform in Southeast Asia's Chinese schools, including an increased use of Mandarin. Colonial governments viewed the expansion of the schools and their orientation to China with suspicion. Accordingly, they introduced restrictions on size, curriculum, and teachers to ensure that the schools did not become promoters of a Chinese nationalism that would threaten colonial interests.

After the Pacific War (1941–1945), the Chinese schools played an important role in meeting the growing popular demand for education. But their perceived links to China, with its communist government that was supporting communist groups in Southeast Asia, strengthened the concerns of the colonial authorities. Many indigenous independence leaders also were hostile to the economic influence of the Chinese, which they wished to limit as their countries became independent.

With the growth of nationalism, Chinese schools became subject to even harsher controls in the 1950s and 1960s. The use of the Chinese language was either banned or severely curtailed. In the Philippines and Indonesia, schools were closed or restricted so that they could not provide a viable alternative to the national systems of education that had as a major objective the promotion of national unity. Even in Singapore, with its majority Chinese population, the government worked to establish a national system of education based on English, with a subsidiary role for Chinese, Malay, and Tamil.

These changes coincided with a declining demand for separate Chinese education, as the Southeast Asian Chinese increasingly saw that their long-term future lay in the region. Immigration from China ceased, and the idea of re-

turning to China was less attractive to Southeast Asian Chinese. Among the growing numbers of locally born Chinese, there was a strong desire to become more fully integrated into the new homelands. One pathway was to be educated in the mainstream school system, following the national curriculum and using the national language. The merging of Nanyang University with the University of Singapore in 1980 deprived the region of its only Chinese-language tertiary institution. The closure, justified on the grounds of declining student numbers, symbolically ended more than a century of Chinese community-based education in Southeast Asia. Today, only in Malaysia, where the ethnic Chinese remain a significant minority, are there private as well as government schools making significant use of Chinese as their medium of instruction. The status of these schools and educational provisions for ethnic Chinese remains an important area of political debate.

By the end of the twentieth century, improving political relations between China and Southeast Asian countries and their growing economic links led to a lessening of hostility toward knowledge of the Chinese language and culture. Although there has been an easing of bans on the use and teaching of the Chinese language in countries such as Indonesia, it is difficult to envisage an extensive return to separate schooling for ethnic Chinese in Southeast Asia.

EDUCATION, TRADITIONAL RELIGIOUS

Prior to European contact, Southeast Asia had strongly developed traditions of literacy and education. These traditions were built upon the region's diverse religious heritage and the Hindu, Buddhist, and Islamic institutions integral to the local societies. Buddhism, with an education system based on the monasteries, was firmly established in contemporary Myanmar (Burma), Thailand, Laos, and Cambodia. Islamic schools existed in Malaysia, Brunei, and Indonesia. In Vietnam, Confucian principles derived from China underpinned a highly systematized pattern of education. Only in the Philippines is there little evidence of such a tradition of religious education. The initial contacts between Western education, both Christian and secular, and these traditional patterns of education varied with religion and colonial policies and their reception in the traditional societies.

The contemporary survival and modification of these earlier patterns of traditional education have been affected in complex ways by the patterns of religious diversity that exist in today's nation-states. Another important factor is whether the nation-state is secular or has an official religion. Indonesia is a secular state, although most of its people are Muslims, with smaller numbers of Christians, Buddhists, Hindus, and animists. By contrast, Islam has an official role both in Brunei, an Islamic monarchy with an Islamic majority, and in Malaysia, where one of the attributes of a Malay is to be a Mus-

lim. Yet Malaysia has a far smaller percentage of Muslims in its population than Indonesia, and there are substantial minorities of Buddhists, Hindus, and Christians. Thailand is a Buddhist monarchy and includes several Muslim provinces in its southern region. Vietnam, Cambodia, and Laos have all had periods of communist rule and, like Burma, have no state religion. The Philippines has a Christian (mainly Catholic) majority but also has provinces dominated by Muslims.

The extent to which religious education touched the lives of children in traditional society is difficult to determine precisely. Family-based education provided the skills needed for daily agricultural and domestic life and was probably the most common form of education available to boys as well as girls in traditional Southeast Asia. In those regions where animism was the major form of religious and spiritual belief, education could also include apprenticeships in magic and sorcery. Indeed, when Western-style schools were introduced in such areas, they were sometimes viewed as a form of these apprenticeships.

Buddhist Education

The traditional form of education in Buddhist societies was provided by monks attached to the monasteries (*wats*). The first stage of education was a prerequisite for young men to be ordained as monks, an important rite of passage in these societies. Typically at the age of five or six, boys were sent to the local monastery, where monks would teach them to read religious texts, do simple arithmetic, and learn religious principles. The instruction was individualized, as a monk would have no more than ten or twelve pupils, each working through his lessons at his own pace. There was no specific curriculum or formal examination, although there was progression through texts and tasks. Boys were free to come and go as they wished from the classes. Once they had been ordained as monks, only a few would remain to continue their studies in religious or secular knowledge.

For most young men, their education did not continue past their ordination. Although they had gained some secular knowledge, the educational outcome most frequently emphasized by Western observers was that they had gained a moral education that situated them within their

community. With education considered a religious act, commentators suggest that this type of education was relatively common among young men. Girls were not part of this system; they learned to read or write either at home from members of the family or, in certain elite groups, with a tutor. The young men who continued with their education were the exception; the system did provide an avenue of social mobility for those from poorer backgrounds.

In Burma in 1866, the British had initially proposed to provide Western education by working in conjunction with the monasteries. Although slow to develop, 801 of these monastic schools existed by 1873, compared with only 112 secular schools. Later policies favored these Anglo-vernacular secular schools. They became the path to employment in the colonial economy and increasingly attracted pupils from the monastery schools. There was also a decline in the prestige of the monks. Some of the monks involved themselves in anti-British uprisings. Most significant, argued British administrator John Sydenham Furnivall (1878–1960), was that young men and their families were more interested in economic gain and opportunities for social mobility than in the moral education at the heart of Buddhist education. He also noted that the extensive changes affecting the society that monastic education had served further undermined its viability (Furnivall 1948).

In Laos, the French had a similar plan to build upon the monastic schools. Colleges were set up in 1909 and 1911 to retrain the monks to teach in the secular school system. Although welcomed by the local population, the scheme proved impractical, as the monks sought better-paying civil service posts when they completed their training. Efforts to modernize the monastic schools by adding subjects such as French and arithmetic encountered problems because of difficulties in finding monks with the appropriate training to teach them.

In Thailand, however, the strategy of using the monastic schools as a basis for the expansion of modern education was far more successful. After 1898, these schools underpinned the effort to extend modern education beyond Bangkok and into the provinces. Modern textbooks were provided to the schools, which also received limited government funding. Important for the success of this strategy was the ac-

tive support provided by King Chulalongkorn (Rama V) (r. 1868–1910); indeed, his brother, head of an influential monastery, was in charge of its implementation. This situation contrasted with that in Burma and Laos, where the traditional power holders were not involved in the attempts to modify the monastic schools. The Thai monastic schools also complemented rather than competed with the lay school system in providing pathways to social mobility. The viability of the strategy was demonstrated by the fact that in the early 1970s, one-fifth of Thai primary schools were still these monastic schools. In the Muslim areas of southern Thailand, the government also allowed the operation of Koranic schools that combined Muslim education with parts of the national primary curriculum.

Islamic Education

In contrast to the organization of Buddhist education around individual monasteries, there was greater diversity in the patterns of Islamic education that developed in Southeast Asia. Apart from recitation centers associated with mosques, the major form of schooling was the village school (*pondoks*, *pesantren*), where students (*santri*) would gather around an individual scholar (*'ulama* or *kyai*). Often, these were boarding schools. The content of education followed patterns not too dissimilar from those found in Buddhist schools: rote learning was the method of instruction, and students would work their way through a series of religious texts. The schools also were intended for boys rather than girls. One significant difference, however, was that many of these schools used not the vernacular language but rather Arabic, the language of Islamic religious texts and rituals. Few students studied beyond the initial level, but for those who continued, educational opportunities were available outside Southeast Asia in the Middle East (West Asia) at institutions including al-Azhar University in Egypt, which played a major role in the development of modern forms of Islam. The existence of this alternative to higher education in the European metropolises was an important element that was absent from Buddhist education. It was also a factor of particular significance for the development of Islamic education in the Netherlands East Indies.

Most of the people of the Netherlands East Indies were Muslims, but there were significant differences in the nature of their involvement with Islam. Those from western Sumatra and Aceh were widely regarded as far more devout in their practice of Islam as compared with those from Java and other islands. Acehnese efforts to gain independence from the Dutch administration were intertwined with the work of Islamic opposition groups who derived much of their support from students inspired by their Islamic teachers. There was also considerable debate among Indonesian intellectuals about how and to what extent Islam and Islamic education should be modernized to operate more effectively within the changing world order. During the 1920s and 1930s, increasing numbers of *madrasahs* (traditional Islamic schools), which combined Islamic and modern, secular education, were set up. Changes also occurred in certain pesantren as they attempted to compete with the reformist Islamic schools. Debate about modernization was not unique to Indonesia, but it played a most important role in political, as well as educational and religious, developments. Among the movements that changed Islamic religious education in the first half of the twentieth century were Kaum Muda (young group) and Muhammadiyah (“Way of Muhammad”), which established pesantren based on modernist principles. Taman Siswa (Garden of Students) schools, with their combination of Javanese culture and a modernist, Western-oriented curriculum, provided an alternative to modernist Islam.

After the Pacific War (1941–1945), the newly independent Republic of Indonesia was constituted as a secular state that recognized the existence of different religious groupings. Nevertheless, its state-funded education system still supports both secular and Islamic systems of schooling. The Ministry of Education regulates the secular schools, whereas the Islamic schools are under the control of the Ministry of Religious Affairs. The government Islamic schools are recognized as an integral part of the state education system, and their structure parallels that of the secular schools at the primary and secondary levels. One of the challenges confronting educators responsible for these schools is their ability to successfully integrate a modern education and a religious education. The Ministry of Religious Affairs also is responsible

for supervising the private pesantren or pondoks. Though these schools enjoy considerable independence, there is nevertheless a decline in their enrollments, and increasing control is exercised by the government, as they accept funding from it.

Like Indonesia, contemporary Brunei also has a parallel system of Islamic schooling; this voluntary schooling requires that students study at both the secular and the religious schools. Unlike Indonesia, however, Brunei is an Islamic state. The existence of a parallel system of Islamic religious schools in secular Indonesia seems somewhat paradoxical. But it should be viewed as an attempt by the state to maintain control over religious education that, in the past, provided a base for opposition to national unity and political leaders.

In British Malaya, Islamic schools never became the same focal point for opposition to the administration as occurred under the Dutch in Indonesia. In large part, this was because the traditional rulers retained effective political and religious control while working with, rather than against, the British administration. The divisions between advocates of modernism and more traditional approaches of Islam existed in the British colonies but did not result in the establishment of alternative systems of Islamic schooling. The growth of the government village schools was slow, as villagers saw little advantage in sending their children to them because the curriculum was based on Malay literacy and vocationally oriented schooling for the boys and girls. Attempts to overcome resistance to the village schools involved associating religious instruction with these schools in parts of British Malaya.

Following independence (1957), a priority for the Malaysian government was to unify the linguistically diverse colonial education system. This task was accomplished through introducing a common curriculum and making Bahasa Melayu the primary medium of instruction in all except the Chinese and Indian primary schools. Today, however, to meet pressures for greater diversity, the government allows private schools to operate. Although some cater to the Chinese-speaking population and those wanting English-language education, there is also a group of Islamic schools that operate alongside the regular state school system. They do not need a license to operate, but these schools are

monitored and regulated by the Religious Affairs Department of the Ministry of Education. In allowing the operation of these schools, the government is accommodating stronger, more fundamentalist views of Islam. These schools exist in certain states of Peninsular Malaysia, where political parties with a strongly Islamic base oppose the national government led by the United Malays National Organization (UMNO). Recent years have also seen a growth of fundamentalist Islamic influences throughout Malaysia, paradoxically associated, in part, with Malay students studying in Western countries. The effectiveness of these controls has been called into question by evidence that Jemaah Ismailiah, an extremist group in Southeast Asia, used Islamic educational institutions to promote its course. In response, the Malaysian government temporarily suspended public funding to private Islamic schools in 2002. There are also proposals to closely regulate the content of private Islamic education and absorb the estimated 126,000 students studying in private Islamic schools into the government's national schools. Further, plans are being discussed to remove religious instruction from the national school curriculum, leaving its provision to special after-school classes with no political content.

Confucian Education

When the French administration was established in Vietnam in the 1880s, a highly developed national system of education based on the Chinese Confucianist model existed. Although more appropriately regarded as an ethical system rather than a religion, Confucianism provided the basis for a rigorous classical education in which successful exam candidates were appointed to administrative positions in the mandarin state. Like both Buddhist and Islamic schooling, Confucianist education catered to boys rather than girls. Like them, it also provided opportunities for social mobility independent of established elite status, although students from educated, official families began with better resources for success in the examination system. Where Confucian education differed was that the examination system ensured that students pursued a uniform pattern of education.

Instead of seeking to use Confucian education as a basis for introducing modern, Western

education, the French aim was to replace the whole system. The Confucianist schools taught Vietnamese literacy through the medium of Chinese characters; the French administrators replaced this with the romanized form of *quốc ngữ* (lit., national language) in their own schools. Complementing practical reasons for this shift, there was also a view that the use of characters inhibited modernization. The French also hoped to remove a source of potential opposition by undermining the power of the Vietnamese mandarins. By the 1870s, the Confucianist schools were already losing their influence and role. The abandonment of the national system of examinations eliminated the employment rationale for the schools. To gain employment in the French administration, students now needed the newer education introduced by the French. It was also becoming difficult to find teachers able to use the Chinese characters needed to teach Vietnamese.

The Future of Traditional Religious Education

Examples exist of the incorporation and modification of traditional patterns of religious education in the colonial school systems and, in some cases, in the educational systems of contemporary Southeast Asian nations. However, in many cases, the continuity is more apparent than real. Extensive modernization of curricula has occurred in an effort by both government and religious leaders to ensure that the schools provide a meaningful pathway to modern life. The challenges involved in this "modernization" were evident in Singapore's attempts in the 1980s to introduce a moral education curriculum based on traditional Asian values and religions. Singaporean educators had to decide which version of Hinduism, Islam, or Buddhism was to be privileged in the curriculum. In the case of Confucianism, the task involved reformulating the key social relationships at the core of traditional Confucianism so that they neither ignored nor downplayed the role of women.

Many commentators have noted, with romantic regret, the loss of traditional values associated with these changes to traditional and religious education. This sentiment overlooks the way the traditional societies served by these schools have undergone irreversible changes as

they have been drawn, over more than a century, into a modern world very different from that which existed before. When governments such as that of Myanmar speak of revitalizing monastic education to complement primary education, this does not mean a return to the older forms but an attempt to use them to meet contemporary needs. The Thai experience shows that the success of using the Buddhist monastic schools to extend the new, modern education depended on a very specific combination of factors. These factors were motivated by a concern to retain the schools' contribution to moral and ethical standards while expanding opportunities to learn the modern knowledge necessary to survive in a rapidly changing world. Islamic reformers in Indonesia had similar objectives. In other Southeast Asian countries, the diverse approaches of those seeking to introduce an Islamic dimension to contemporary education highlight the ways in which religious education may be used for directly political purposes hostile to existing governments. However, religious education can also be an important means of providing the ethical and moral dimension to education overlooked in many instrumental approaches to educational expansion and innovation.

EDUCATION, WESTERN SECULAR

Colonialism underlay the introduction of Western education to the countries of Southeast Asia. The exception was Thailand, where King Chulalongkorn (Rama V) (r. 1868–1910) introduced Western education as a means to modernize his country. As colonies became independent after the Pacific War (1941–1945), colonial education systems were viewed as inappropriate for the needs of the new nations in pursuing national development and unity. Extensive educational restructuring and expansion characterized the period of independence, to be followed by efforts to improve the quality and relevance of education to meet emergent needs. Although these phases and the type of issues addressed are remarkably constant throughout Southeast Asia,

each country's history and development dictated the specific forms of educational change and expansion.

The Colonial Period

Southeast Asian societies had long traditions of literacy, albeit restricted to the secular and religious elite. Patterns of elite education were also the norm in Europe until the late nineteenth century, and they influenced the earliest forms of European education introduced to Southeast Asia. Under the Spanish administration in the Philippines from the sixteenth century, the Catholic Church played a major role in education, including the foundation of Santo Tomas University in 1611. Although educational initiatives of this type were significant for the introduction of Western religion and knowledge, they touched only small sections of colonial society. The more extensive impact of Western education began in the latter half of the nineteenth century as the expansion of European colonization coincided with the European development of compulsory, secular systems of schooling. The focus of content then shifted from the classics toward new, scientific knowledge to meet the needs of an industrializing society for a suitably educated, literate, and compliant labor force. This type of Western education attracted rulers such as King Chulalongkorn. It was also the form familiar to European administrators. Nevertheless, not all administrators saw the content of European education as appropriate in the colonies, even if they were committed to bringing their colonial subjects the benefits of Western civilization.

Until the latter half of the nineteenth century, Christian missionaries played the major role in establishing schools for the small European population and local elite in Southeast Asia. These schools operated independently and did not provide a common system of education. This situation changed as the colonial powers established more formal control in the region and began to consider the role of schooling for the ethnically diverse and stratified populations under their administration. Their response was shaped by circumstances different from those in Europe, as they were operating in societies without sizable European populations but with established elites, large agricultural populations, and growing numbers

of Chinese and other immigrant groups who played an important role in the colonial economies. Although the need for workers fluent in European languages was limited, other objectives of schooling included the maintenance of traditional lifestyles and inculcating loyalty to the colonial regime. Financial constraints also shaped colonial educational policies, since the colonies were intended to provide wealth to the metropole rather than to be an economic burden on it.

Debates about the language of education—whether teaching should be done in the local vernacular or in the colonial language—played an important part in the formulation of colonial education policies. In India and in Burma (Myanmar), British administrators had adopted policies based on extensive English-language education. However, British administrators in the Federated Malay States (FMS) and the Straits Settlements believed that this policy had led to a large, “overeducated” populace that was dissatisfied with the traditional lifestyle and unable to find employment in the relatively small, Western-oriented urban economies. As part of their policy of protecting the lifestyle of the Malay peasant, they thus settled on a policy of vocationally oriented, vernacular primary education for Malay students. However, for the Malay elite, who were to provide the core of the colonial administration, they established the Malay College at Kuala Kangsar, modeled on British boarding schools such as Eton, to groom the country's leadership. The government played only a limited role in establishing other schools. The Chinese set up their own schools, which were regulated by, but eligible for only limited funding from, the colonial administration. The children of Indian plantation workers were educated in vernacular primary schools funded by the plantation owners. However, the administration did establish a small number of English-language schools and offered grants to those English schools that were established by Christian churches. In doing so, they were addressing the need of the colonial administration and commerce for a relatively small number of English-educated local workers. These schools became extremely popular; Eurasians, Chinese, and Indians viewed the English-medium schools as avenues for social mobility. During the depression of the 1930s, the administration reduced funding

to them, in part to limit the numbers of “unemployable” graduates.

The linguistically stratified systems of education in British Malaya were also replicated in French Indochina and the Netherlands East Indies after often lengthy consultations and debate. The Dutch Ethical Policy, emphasizing the need to uplift the Indonesian people through education and closer association with The Netherlands, led to increased opportunities for Dutch-language schooling, although the majority of children were educated in vernacular schools. In Indochina, the 1917 Code of Public Instruction was a key expression of educational policy and practice. Both colonies had schools, primarily for European students, that followed the metropole’s education system and curriculum. In the rural areas, a system of vocationally focused village primary schools that used the vernacular evolved. In Vietnam, *Quốc Ngữ*, or romanized Vietnamese, replaced the traditional Chinese characters for Vietnamese; this was a means to distance the new schools from the traditional ones. In the higher levels, French was introduced. Despite this innovation and despite the presence of Link schools (elementary schools “linked” to a particular secondary school) in the Netherlands East Indies, there was little scope for students from these schools to progress to secondary schooling that used French or Dutch as the medium of instruction.

The Philippines under U.S. control from 1898 followed a different path. Although the Spanish administration had promulgated educational decrees in 1863 and 1865 applying to primary and secondary schooling, little progress had been made to implement these policies. When the Americans seized control of the Philippines, they rebuilt the education system using English and patterning the organization, curriculum, and methods of instruction on those in the United States.

By the end of the 1930s, just prior to the Pacific War, the colonial systems of Western education had been in existence for little more than thirty years. Although schooling had been extended to many in the local population, primary education and literacy were far from universal. The 1925 Monroe Report in the Philippines highlighted the shortcomings that persisted in the education system despite substantial expenditure. Similar evaluations were made in other colonies. A lack of financing and

a low priority for education meant that little action was taken to redress problems of access and quality. Especially in rural areas, schooling opportunities were ignored by the local population as either irrelevant or in competition with more important priorities, such as the harvesting of crops and domestic chores. Western education did, however, provide an important means of social and economic mobility for a group of Western-educated individuals fluent in the colonial language.

The Pacific War and the Japanese occupation of many Southeast Asian countries were watershed events for educational development. Schooling was extensively disrupted, with many teachers and students displaced or killed. In Singapore and Penang, the Japanese introduced Japanese-language (*Nihon-go*) schooling, but few students attended, and, as elsewhere, the outcome was the collapse of the earlier school systems. When the colonial administrations returned after 1945, they faced major educational challenges, including the need to rebuild schools and satisfy the unmet demand for education. Even more significant were the strong pressures for independence, since it was evident that the earlier educational policies were unsuitable for modern independent nations.

Preparing for Independence

In Burma, Indonesia, and the Philippines, independence followed swiftly after the Japanese capitulation, so the colonial authorities had little opportunity to revisit educational policies. In Indochina, Cambodia, Laos, and Vietnam gained independence from the French in the early 1950s, but the conflict surrounding French withdrawal ensured that there was little educational preparation for independence. By contrast, in British Malaya, independence did not come for more than a decade. During this period, the British confronted the pent-up demand for education. Schools had to be rebuilt, teachers trained, and textbook and resource materials prepared. Similar pressures existed for the newly independent nations.

The more pressing political issue confronting educators in British Malaya was resolving the tensions associated with the linguistically stratified prewar schooling system. Indian and especially Chinese immigrant groups made up a substantial segment of the population, and

they now sought a future alongside the Malays in an independent Malaya. How could this be accomplished under the existing educational policies? Compounding the difficulty was the fact that the predominantly Chinese Malayan Communist Party (MCP), which had played a major role in resisting the Japanese during the occupation period, was mounting an insurgency campaign against the British—the Malayan Emergency (1948–1960). Prewar British concerns about the loyalty of the Chinese and the role of Chinese schools again came to the fore. Early on, the British decided to separate predominantly Chinese Singapore from the rest of British Malaya. However, this move did not resolve the issue of linguistic diversity in Singapore's school system, since a substantial divide existed between Chinese educated in the English-medium schools and those from the Chinese-language schools. Not only were the latter viewed with political suspicion, they also faced barriers to employment in the English-language administration. Chinese schoolteachers also were alienated by the fact that they received less pay than their peers in English schools, who were considered better qualified. Dissatisfaction spilled into the streets in bloody rioting in 1955 and 1956 before the government set up the All Party Committee on Chinese Education. The report issued by this committee recommended that unity be encouraged through a policy of instituting a common curriculum and giving equal treatment to each of the four language streams of schooling: English, Chinese, Tamil, and Malay. Given the unequal resources available, this approach was never likely to be fully achievable. Nevertheless, it provided a respite while the administration and the Singaporean politicians charted a future federation with the other states of Malaya. Given the predominance of Malays in the short-lived Malaysia, which included Singapore (1963–1965), it was not surprising that the Malay language was declared the national language, although in Singapore, English remained the language of administration and Chinese and Tamil had the status of official languages. Elsewhere in Malaysia, educational issues surrounding the preparation for independence took a similar, although far less conflictual, course. As a result, it was acknowledged within the federation that the independent government should support the four separate strands of education.

The inherent instability of this policy became evident when Singapore broke from Malaysia in 1965 and further changes were made to education.

Postindependence Education

The independent states of Southeast Asia embraced Western mass education as a tool for achieving their sociopolitical objectives of developing national unity and ensuring the legitimacy of the new political regimes. All the countries inherited ethnically diverse populations through annexation and the immigration of groups such as the Chinese. The achievement of national unity was a major imperative for all the new states, and schooling was seen as capable of making a substantial contribution to that end. One way this was to be achieved was by teaching in a common language. The older colonial debates about the relative importance of the vernacular and the metropole's language took a new turn at independence as nations sought to unify around a single language. The selection of the common language was influenced by the linguistic composition of the population and debates about the advantages of a major international language such as English. In the Philippines, the debate was settled in favor of retaining English as the medium of instruction. However, in other colonies, the stratified schooling system worked against this approach. In Indonesia, Bahasa Indonesia was identified as the lingua franca to be developed in place of Dutch or a regional language. Bahasa Melayu played a similar role in Malaysia, although the government continued to fund Chinese and Tamil vernacular primary schools. In Singapore, Bahasa Melayu remained the national language and was taught with English in all schools, including those using Chinese and Tamil as the medium of instruction until 1979. In that year, reforms began, so that today, English is used in all schools, with students also studying their native Chinese, Malay, or Tamil. In Indochina, Laotian, Vietnamese, and Khmer replaced French as national languages, and Burmese replaced English in Burma. This issue also confronted Thailand, since it, too, had a diverse population, including Chinese who had developed their own schooling system. These schools were closed, and the Thai language became the medium of instruction in all schools. At the

same time, English was introduced as a subject. Before independence in 1984, Brunei had separate English and Malay schools, but these were amalgamated to provide bilingual education in English and Malay.

Another means used by states to promote national unity was the introduction of curriculum content that promoted the national ideology, such as Pancasila (“Five Principles”) in Indonesia, Rukunegara (“National Principles”) in Malaysia, and civics and moral education. In doing so, they were highlighting the state’s distinctive values and seeking to socialize the youth into them. This was especially important in states involved in revolutionary change, such as Cambodia and Vietnam. In Singapore, too, the moral education curriculum was emphasized as a means of promoting the society’s underlying Asian values as a prerequisite to avoiding adoption of undesirable and alienating Western values associated with individualism. Asian values have been viewed as contributing to successful Singaporean social and economic development.

The potential of mass education to contribute more directly to economic development has also been embraced by national leaders. In doing so, they share the views of international experts on development and modernization who advocate the importance of basic levels of education and literacy as key to economic development and modernization, goals espoused by all the states. This agreement is particularly significant for those developing states unable to fund their educational expansion without international assistance, since many international agencies provide funding for projects that are congruent with their educational models. In addition to international agencies such as the United Nations Educational, Scientific, and Cultural Organization (UNESCO) and the World Bank, the Southeast Asian region has regionally based agencies with an educational focus, including the Asian Development Bank and the Southeast Asian Ministers of Education Organization (SEAMEO). Established in 1965, SEAMEO sponsors twelve specialist centers concerned with educational issues, including educational innovation and technology (INNOTECH), mathematics and science education (RECSAM), vocational and technical education (VOCTECH), language teaching (RELC), and history and tradition (CHAT).

The lack of substantial economic resources has been exacerbated by lengthy and debilitating periods of civil war and unrest, particularly in the countries of Indochina, Indonesia, and the Philippines. In addition to reducing funding for education, civil unrest directly affects the ability of schools to operate.

By the 1970s, although considerable resources had been invested by all states in developing universal primary education and achieving literacy, questioning arose in regard to the educational outcomes, which often fell far short of the high initial expectations for economic growth and social development. Concerns continue today and include whether the expansion has actually resulted in higher levels of literacy and whether educational access for women and regional and ethnic minorities has been substantially improved. Explanations for the educational outcomes focus on the quality of the education. Particular attention is given to the existence of adequately trained teachers, appropriate teaching methods, textbooks, and other classroom resource materials as well as suitable curricula. The emphasis in these explanations is on the technical nature of the problems confronting education.

Other criticisms are more concerned with underlying educational assumptions and strategies. They focus on the appropriateness of the curricula. These criticisms are bolstered by evidence that many students favor the more academic curriculum associated with higher education and social mobility despite indications that, with increasing levels of education, their aspirations may not be achievable. A related issue is that vocational training, seen as more important for economic development, is failing to attract a sufficient number of students. It is somewhat ironic in light of colonial rural educational policies that some people explain these trends by arguing that the “Western” curriculum is inappropriate for those in rural areas, as it is irrelevant to their needs and may dislocate them from their traditional lifestyles.

As this indicates, notions of what constitutes Western education have changed over the years of contact between Europe and Southeast Asia. Initially, Western education was distinguished by the way in which it introduced different belief systems and knowledge, which, in conjunction with other changes associated with colonialism, led to change in the tradi-

tional societies. By the nineteenth century, one of the distinguishing features of Western education in Southeast Asia was the development of education systems that offered a more homogeneous and centrally determined educational experience (albeit within diverse educational streams). Although there was also some shift in the content of education to include newer subject areas, attempts were made to ensure that change in traditional rural society was minimized. In the postindependence period, Western education has come to be associated with the further development of mass education systems involving extensive government control, even as the trend toward increasing privatization at the primary, secondary, and postsecondary levels has grown. This growth reflects a market response to unmet educational demand sanctioned by states for financial and/or ideological reasons. The challenge for Southeast Asian states in the years ahead will be to determine whether a modification of their control of education in the postindependence period will jeopardize the future achievement of their national objectives.

ELEPHANTS

From the Sacred to the Mundane

The Asian elephant (*Elephas maximus*) has been worshiped as a god, served as the mount of royalty, suffered as a battle tank, and labored as the workaday helper of loggers, farmers, soldiers, and merchants throughout much of its history. It is smaller, more docile, and more adaptable to life among humans than its distant relative, the African elephant (*Loxodonta africana*). The Asian elephant is now an endangered species.

The range of the Asian elephant once extended from present-day Syria east to Vietnam, north to China, and south to Sri Lanka. By the end of the twentieth century, the habitats of both wild and tamed elephants were limited to scattered locations in Sri Lanka, India, Pakistan, Bangladesh, and Nepal in South Asia. They were also confined to forested areas and preserves in Burma (Myanmar), Thailand, Laos, Cambodia, Malaysia, and the island of Sumatra in Indonesia. Elephants numbered in the hundreds of thousands as recently as the nineteenth century. Yet at the beginning of the twenty-first

*Statue of Ganesh decorated with hibiscus flowers.
(Paul Seheult/Eye Ubiquitous/Corbis)*

century, wild Asian elephants likely numbered under 50,000, and tame elephants approximate less than 20,000.

No historical or prehistorical record informs us when the elephant was tamed in Southeast Asia. The South Asia evidence is clear, however, that elephants were under human control during the Indus Valley civilization in the third millennium B.C.E. A Mohenjo-Daro steatite seal depicts an elephant with a saddle blanket, and others show elephants at feeding troughs. The idea of elephant control may have spread from India into the heavily forested areas of Southeast Asia, where wild elephant populations abounded. In Southeast Asia, the use of elephants in warfare may not have occurred until complex, stratified societies with chiefs and minor kings developed.

An early state or complex of chiefdoms now called Funan, dating to the first five centuries C.E., had the first record of Southeast Asian use of elephants. The Funan polities were located in the Mekong Delta and north into Cambodia. Chinese envoys to Funan in the fourth century

C.E. recorded tame elephants sent to the Chinese emperor as tribute. Elephants increasingly assumed important roles in work and in aristocratic society about the time South Asian cosmology and writing were adopted. The elephant in the form of the Hindu god Ganesh, an elephant-headed human, came to take a prominent place in Southeast Asian religion, a place still retained today.

The elephant was most clearly recorded during the Khmer empire dating from roughly 809 C.E. to 1431 C.E. During this time, the great temple of Angkor Wat and the Bayon were built. The frequent wars against the Thais and Chams involved use of large “tuskers,” or superior male elephants, as well as elephants that carried men and goods. Elephants were important in moving the stones that built the temples, the logs that built the palaces, and the rice and other foods produced by the populace to feed the royalty and the priests. The war elephants are wonderfully illustrated in the reliefs on the gallery walls of Angkor Wat. Similarly, many elephants are found among the carvings on the walls of Borobudur, the great Javanese Hindu-Buddhist temple dating to about 800 C.E.

Elephants continued to play important roles throughout the historical period, in the colonial era, and into modern times. The sacred and royal “white elephant,” a rare elephant with light skin color and special characteristics, was always the property of a king. Possession of the white elephants often figured in conflicts among kings. An important episode in Thai history featured King Mahachakrapat of Ayutthaya, who ascended the throne in 1549, facing the attacking Burmese army. The king rode his war elephant, as did Queen Suriyothai and Princess Tepsatri. In battle, Queen Suriyothai drove her elephant between those of her husband and the Burmese king, saving King Mahachakrapat’s life but losing her own and her daughter’s lives. This heroism has remained celebrated among the Thai, most recently in the 2002 feature film *Suriyothai*.

With the appearance of the Western colonial powers in Southeast Asia, teak logging became important, and elephant use shifted emphasis. Elephants and teak logging were especially important in British Burma, throughout the interior and upland forests of the region. Teak logging continued in the early

twentieth century in Burma but was largely curtailed by the Pacific War (1941–1945) and by the postwar diminishing of the forests. The teak elephants did play an important role in the war, being used by both the Allies and the Japanese army to haul equipment, munitions, and men in the remote, inaccessible, and inhospitable interiors. Elephants continued their war efforts, although only for haulage, in the Indochina conflicts of the 1960s. Elephant populations suffered greatly in Vietnam and Cambodia, since U.S. pilots shot elephants to prevent their use by enemy forces.

At the close of the twentieth century, elephants no longer were held in large numbers in royal stables, they no longer logged (except in Burma and in occasional illegal logging), and they no longer served as war elephants. An endangered animal today, they increasingly play roles in tourism, carrying visitors around the temples of Angkor and into Thai forest on short excursions, and they are favorites in festivals and fairs. International elephant polo teams now compete, replacing the real battles of the past. The Asian elephant has lost much of its sacred status, although it is still loved as a symbol by millions. Its survival may depend on history—on the cultural heritage of its millennia of partnership with the Southeast Asian people.

**ETHICAL POLICY
(ETHISCHE POLITIEK)**

The Ethical Policy was the stance adopted by the Dutch in their colonial administration after 1900. By the end of the nineteenth century, it seemed that Dutch policy in colonial Indonesia was not generating the effects expected from the demise of the Cultivation System thirty years earlier. With the phasing-out of the Cultivation System in Java and the inflow of Dutch private investment capital for the purpose of developing colonial resources, increasing export production was expected to gradually improve the lot of indigenous people in colonial Indonesia. However, in the late 1890s, foreign enterprise had not flooded into colonial Indonesia to the degree anticipated, and there were no clear signs that the lot of the Indonesian people was improving, particularly in Java. In fact, famines in 1900 and 1902 in Semarang suggested that the Javanese population was sliding into poverty.

In The Netherlands, criticism of the colonial policy was mounting. The lawyer Conrad Theodor van Deventer, later a Liberal Democratic member of the Dutch Parliament, gave such criticism particularly influential expression. In an 1899 article in the journal *De Gids*, he argued that The Netherlands had been draining wealth from Java during the nineteenth century and had therefore incurred a “debt of honour” of f200 million that had to be repaid. He suggested that the colonial policy be reformulated to include a program aimed at improving the welfare of the Indonesians, generously supported by the Dutch treasury. In 1901, the editor of the newspaper *De Locomotief* in Semarang, Pieter Brooshoof, maintained that colonial Indonesia required an “ethical policy.” Such a policy, he proposed, would include altruistic measures by the Dutch government to further the prosperity of Indonesians in the main island of Java, where the indigenous population was widely believed to be experiencing a decline in living standards.

The leader of the Dutch Anti-Revolutionaire Partij (the Calvinist Christian Democrats), Abraham Kuijper, had long advocated an end

to the economic exploitation of colonial Indonesia. In 1901, he came to lead a new coalition government that provided an opportunity for change in Dutch colonial policy along the lines suggested by van Deventer. In her annual speech to the Dutch Parliament, Queen Wilhelmina (r. 1880–1962) formally announced this change. She mentioned that it was the “moral duty” of The Netherlands to combat the causes of perpetual poverty in colonial Indonesia and improve the welfare of the people there.

The new stance became popularly known as the Ethical Policy. However, a clear definition of this policy, particularly its goals and means, has never been provided. The queen’s announcement was only a reflection of an ongoing process of change in Dutch colonial policy. The term therefore meant different things to different people.

Its most fervent supporters saw the Ethical Policy as the Dutch version of the “white man’s burden,” a selfless experiment aimed at transforming Indonesian society, enabling a new elite to share in the riches of Western civilization, and bringing the colony into the modern world. For instance, van Deventer foreshadowed the emergence of a Westernized elite that would be grateful to The Netherlands for its material wealth and high culture and would work to cement a lasting bond between Indonesia and The Netherlands. Others hoped for the development of a new Indonesian society that would blend elements of Indonesian and Western cultures. Furthermore, this new society would enjoy a large measure of autonomy within the framework of the Dutch colonial empire. Brooshoof stressed decentralization of colonial administration and measures to spur the welfare of Indonesians. A widely used slogan summarized the practical implications of the Ethical Policy: “irrigation, migration and education.”

The Ethical Policy comprised a complex of ideas and goals, all arising from a sense of ethical or moral responsibility for colonial Indonesia. In practical terms, it was associated with improvements in educational opportunities for Indonesians, a degree of tolerance for Indonesian nationalism, decentralization of the colonial administrative system in Indonesia, limited participation in local government for Indonesians, and a series of proactive policies aimed at furthering economic development, particularly in Java.

It was initially believed that economic change in Indonesia could be achieved with financial assistance from The Netherlands. In 1904, the Dutch Parliament approved a proposition that The Netherlands guarantee the repayment of the current debt of the Dutch colonial government, extending f40 million as grants-in-aid for development projects (Van der Eng 1996: 152). Although a sizable sum at the time, the grant was much less than van Deventer’s debt of honor and small compared with sums required to further economic improvement in Indonesia. Hence, most policy initiatives were to be funded with revenues generated in colonial Indonesia. This imposed clear limits on the initiatives the colonial government could develop with the aim of furthering economic and social development. Still, during the late colonial period, the government developed and pursued a range of initiatives. In all cases, these measures involved the creation of public services and an expansion of the number of public officials—both Dutch and Indonesian.

From the start, improvements in irrigation works were at the forefront, possibly as a consequence of Dutch prowess in hydraulic engineering. Already in the 1890s but with more fervor after 1901, weirs and primary and secondary irrigation channels were improved with modern construction methods, schedules for water distribution and management were established in river systems, and schemes for the operation and maintenance of irrigation structures were put in place throughout Java. The aims of such measures varied, but they generally involved raising rice yields, increasing the area suitable for double cropping, and reducing crop failure. Despite some failures, such as the grandiose Solo Valley works in 1905, the irrigation effort contributed to the sustained growth of rice production in Java in the face of increasing population pressure.

In the nineteenth century, Dutch officials were concerned about the rising population density in Java. Orchestrated migration to sparsely populated parts of the country was entertained as a possible way to relieve population pressure. Government-sponsored migration schemes started in 1905 with a project in Lampung (South Sumatra), and later projects were initiated in Kalimantan and Sulawesi. But between 1905 and 1930, only 37,800 people migrated under these projects, while the popula-

tion in Java increased by 9 million. The effort to enhance education involved the establishment of village schools after 1906, which brought larger numbers of indigenous children into the classrooms. However, the colonial government continued to favor educational facilities for European children. The enrollment of indigenous children increased quickly, but the quality of their educational facilities and of the education they received remained lower than that of European children and children of the indigenous aristocratic elite. Still, these changes created chances for bright Indonesian children to qualify for education at European primary and secondary schools and at institutions for tertiary education. This development nurtured the rise of a small but well-educated indigenous elite who, ironically, started to give expression to the growing popular anticolonial feelings. By the end of the 1930s, still only a small number of indigenous students graduated from high school, and the adult literacy rate was just under 19 percent (Van der Eng 1996: 120).

The Dutch colonial government introduced a range of other public services, including an agricultural extension service that propagated improved crops, superior farming methods, and the use of fertilizers. The Public Health Service disseminated knowledge of common diseases and how to prevent them through basic hygiene. A service for small-scale credit aimed to reduce widespread dependence for credit on usurers and crop foresters (moneylenders who accept the pledge of the farmer's future crop as surety for credit), in an effort to combat the problem of rural indebtedness and the evil of usury. A system of village banks and district banks was established and became the predecessor of the current Bank Rakyat Indonesia.

Throughout the 1920s, Dutch colonial officials were involved in most aspects of indigenous agriculture. They assisted and advised the people on irrigation, selection and spreading of new crop varieties, improvement and demonstration of new cultivation procedures, prevention of pests and crop diseases, furthering fertilizer use, credit supply, agricultural education, rural cooperatives, and enforcing an agrarian legislation that protected the rights of small farmers. Before the Pacific War (1941–1945), several international observers of Dutch colonial policy considered that the Ethical Policy had been without precedent in the colonial

world, and they praised the benevolence of the Dutch colonial regime.

The popular perception of the Ethical Policy involved more than furthering prosperity. Decentralization of government and greater political participation of Indonesians in political processes were other aspects of the approach. Developments in this regard took the form of the establishment of municipal and regency councils and a surrogate parliament (the *Volkstraad*) in 1918, all with participation of indigenous Indonesians, and the subsequent establishment of three provinces with a degree of administrative autonomy in Java in the late 1920s. It is difficult to say whether all these measures were, in a strict sense, part of the Ethical Policy because neither the Dutch nor the colonial government ever defined the policy or made a formal announcement of the policy's abolishment. In addition, the phrase *Ethical Policy* was less commonly used in the early 1920s because it became associated with a budding Indonesian nationalism that took on more and more radical tendencies. Although initially perceived as a development effort that would help Indonesia achieve administrative self-sufficiency, the Ethical Policy became increasingly regarded as a politically neutral effort to enhance popular prosperity.

Despite the grandiose visions some may have entertained about the impact of the ending of the Cultivation System, the achievements of the Ethical Policy in the form of spurring indigenous prosperity were, on the whole, modest. The good intentions and genuine candor of colonial administrators were not in doubt, and evidence to conclude that there was a continued slide of greater numbers of people in Java into poverty was scant, but a very significant improvement in the living standards of Indonesians in Java was not achieved. A major reason was that, due to limitations of the budget of the colonial government, the development effort was simply not extensive enough. However, the seeds for the further development of the welfare services were sown. All were reestablished after Indonesia's independence, and they formed the basis for later efforts to improve prosperity through education, health care, agricultural extension, popular credit, and other means.

ETHNOLINGUISTIC GROUPS OF SOUTHEAST ASIA

There is still considerable dispute among archaeologists, prehistorians, anthropologists, and ethnolinguists about the origins, differentiation, distributions, and migrations of the major ethnolinguistic groups of Southeast Asia and the interrelationships among them. However, what is certain is that the prehistory and early history of Southeast Asia must be seen in a much broader context, given that the region and its constituent nation-states are relatively recent creations and that ethnic and cultural relationships do not map neatly onto these political units. As Sandra Bowdler noted, "There is no particular reason to assume that south China was a separate entity from northern Vietnam, Laos and Burma in prehistoric times" (1993: 49). Indeed, there were considerable movements of people and traits across this mainland region, and there is evidence of shared cultural traditions and exchanges, as well as migrations by sea between what is now southern China and Southeast Asia. Thus, there are no sharply defined and bounded ethnolinguistic or human biological groupings either in prehistory or at the present time. Peter Bellwood has shown in some detail that it is "impossible to construct watertight categories"; specifically, "a cursory survey of the ethnographic record reveals that people who appear biologically to be quite different may speak languages in the same family, and peoples with strong physical similarities may be quite different in terms of language and cultural background" (1992: 56).

Research on the prehistory of Southeast Asia, including the neighboring and culturally related area of southern China, has made an important contribution to our knowledge about the development of human societies (Bellwood 1992: 54). It was from the Southeast Asian region that Australo-Melanesian populations made early sea-crossings to Australia and the western Pacific islands some forty thousand years ago. These early Australoid hunting-and-gathering communities were subsequently displaced by expansions of Southern Mongoloid agriculturalists in what were quite remarkable colonizations by Austroasiatic speakers into much of mainland Southeast Asia and by Austronesian speakers into the maritime regions and further afield into the Pacific. Northern mainland Southeast Asia and south-central

Ethnolinguistic pattern of modern Southeast Asia. The Modern Anthropology of South-East Asia: An Introduction. (Adapted by permission from King, Victor T., and William D. Wilder. 2003. London: RoutledgeCurzon, p. xxv)

China were also important sites for the development of early Neolithic cultures and the domestication of plants and animals.

The first clear evidence we have for the presence of *Homo sapiens* in Southeast Asia is the human skull found in the West Mouth of the Niah Caves limestone complex in north-western Borneo. The skull was dated to the late Pleistocene period about forty thousand years ago, though there is still some debate about the accuracy of this dating, given the methods employed in the Niah archaeological excavations

undertaken in Sarawak during the 1950s (King 1993: 65–67). Some archaeologists suggest that the skull may be more recent than originally supposed (Bellwood 1997: 84). What seems to be agreed is that it is of Australoid or Australo-Melanesian type and that Southeast Asia was populated at that time (and probably further back to fifty thousand years ago) by ancestors of the present differentiated Australian–Melanesian aboriginal populations of Australasia and New Guinea (Bellwood 1997: 91–92). Other more recent skeletal remains, also of Melanesian type,

have been excavated in Niah burial sites; in addition, in Tabon Cave, on the Philippine island of Palawan, an excavated mandible, dated between 20,000 and 18,000 B.C.E., was also identified as Australo-Melanesian.

The Southeast Asian Australo-Melanesian economy was based on hunting, gathering, and fishing. Large forest animals were hunted, including cattle, pigs, and deer, as well as arboreal mammals such as monkeys and orangutans. These early communities made use of cave sites at or close to the coast or in more open sites along the lower courses of rivers, though there is evidence of some communities penetrating to inland lake sites and caves some distance from the sea. They used stone implements, and some were also “coastally adapted” and used watercraft (Bowdler 1993: 57). Early stone tools were probably multifunctional and comprised pebble and basic flake artifacts, which became more refined between twenty thousand and ten thousand years ago, with evidence of such processes as edge grinding. Many of the finds from the Niah excavations comprise burial artifacts of stone, bone tools, and ritual shells occurring in a range of different burial types, dated between about 15,000 B.C.E. and 4000 B.C.E. (King 1993: 68–72). No doubt, these early peoples also fashioned equipment and objects from perishable materials such as bamboo, wood, and other vegetable matter. There is also early evidence of hunter-gatherers in mainland Southeast Asia at the rock shelter of Lang Rongrien in Krabi Province, southern Thailand, with hearths, animal bones, and flaked stone implements dated from thirty-eight thousand to twenty-seven thousand years ago, at the Red River sites of Son Vi, which have been dated from about 18,000 B.C.E., and in the important Hoabinhian sites south of the Red River Valley, commencing from about 11,000 to 9000 B.C.E. (Higham and Thosarat 1998: 24–25, 64; Higham 1989: 35).

Up to about 8000 B.C.E., roughly at the commencement of the Holocene period, the climate was drier and cooler than it is today, vegetation was more open, and sea levels were lower; consequently, large areas of the Sunda Shelf comprised dry land, bridging what is now mainland and island Southeast Asia. However, postglacial warming, commencing from about eighteen thousand to six thousand years ago, resulted in gradually rising sea levels, increasing

temperatures and rainfall, and denser and lusher vegetation, especially in the tropical, equatorial zones. Mainland Southeast Asia, once joined to what is now western Indonesia and permitting the movements by land of people and fauna, became separated from such present-day islands as Sumatra, Borneo, and Java by the South China Sea, the Gulf of Thailand, the Straits of Melaka, and the Java Sea. It is from the warmer, wetter Holocene period that we have evidence of marked cultural change, the domestication of plants and animals, and the movements of people by sea.

Again, the details are disputed. Bellwood and others argued that from about 3000 B.C.E., these early Australo-Melanesian populations, which were widespread in Southeast Asia, gradually gave way in the island world to Southern Mongoloid, Austronesian-speaking peoples, the ancestors of most of the present-day Southeast Asians in the Philippines and the Indo-Malaysian archipelago (Bellwood 1997: 96–127). In mainland Southeast Asia, it was Southern Mongoloid Austroasiatic speakers who gradually expanded southward.

Austronesian cultures were moving southward from Taiwan into the northern Philippines from about forty-five hundred years ago and are assumed to have settled much of the Philippines and eastern Indonesia between 2500 and 1500 B.C.E. and the western Indo-Malaysian archipelago between about 1500 and 500 B.C.E. The related Austronesian-speaking Polynesian and Micronesian populations began to settle the Pacific islands in about 2000 B.C.E., and with the exception of New Guinea and some neighboring islands, they had populated most of the Pacific islands by 500 C.E.

Nevertheless, this was not a straightforward replacement process, and neither were the boundaries between Australo-Melanesians and Southern Mongoloids sharply defined; migrations, interactions, and local evolutions were undoubtedly complex, and aside from migrations of people, there were movements of ideas and practices. Bellwood has also considered and to some extent accepted the view that “the postulated Southern Mongoloid migrants may have been settling amongst populations [Australo-Melanesians] who were also evolving in similar ways.” Moreover, “many aspects of the present Southern Mongoloid phenotype have actually evolved within Southeast Asia from the

Late Pleistocene onward.” Indeed, “many of the present Southern Mongoloid populations of Indonesia and Malaysia also have a high degree of Australo-Melanesian genetic heritage” (Bellwood 1997: 89, 92).

The Southern Mongoloids are usually distinguished from Northern Mongoloids, represented by the Chinese, Koreans, and Japanese, and these southern populations probably originated somewhere in present-day southern China before some of them began to move eastward and seaward to Taiwan and the Philippines. In physical type, Southern Mongoloids are generally short or medium in stature, with yellowish or brown skin, and most are straight-haired. By contrast, the remaining Australo-Melanesian peoples of Southeast Asia are generally small in stature and very dark-skinned, with tight curly or woolly hair (sometimes brown or red in color) and Australoid facial features.

Residual elements of earlier Australo-Melanesian settlement are represented today in the Negrito populations of central Peninsular Malaysia and in small pockets in the Philippine islands of Luzon, northern Palawan, Panay, Negros, and Mindanao; they are also in the Andaman Islands and in various Melanesian communities in the eastern Indonesian islands of the Lesser Sundas and the Moluccas. Of course, substantial numbers of Melanesians in western New Guinea (Irian Jaya, West Papua) were incorporated into the Netherlands East Indies, and following a Dutch postwar interregnum, these territories were eventually transferred to the Republic of Indonesia in 1962. Australoids have also intermixed with Mongoloid populations to give rise to phenotypically intermediate populations, such as the Senoi of Peninsular Malaysia (Bellwood 1997: 72). Moreover, the Philippine Negritos have adopted Austronesian languages from their neighbors, and Malaysian Negritos speak Austroasiatic languages related to Mon and Khmer. Prior to their contact with Mongoloid populations, we assume that they spoke Papuan-type languages distantly related to those of the present-day Australo-Melanesian groups.

Evidence from archaeological excavations in island Southeast Asia suggests a “cultural break” during the third millennium B.C.E. and the appearance of hand-molded, plain or red-slipped pottery in burial and other sites. But in mainland Southeast Asia in Hoabinhian and Bacson-

ian sites, pottery remains are found in earlier hunting-gathering contexts, at least going back some seven thousand years ago (Bellwood 1992: 87). Bellwood and others have argued that cultural and other changes from about 2500 B.C.E. coincided with the expansion of Austronesian settlement in island Southeast Asia (Bellwood 1997: 119–124).

The Austronesians were agriculturalists who planted rice, millet, and sugarcane, though they also hunted, gathered, and fished. They kept domestic pigs, poultry, and dogs; used more sophisticated stone tools; lived in substantial timber houses; manufactured pottery; developed distinctive art styles; practiced a range of elaborate funerary rituals; and used canoes for sea transport. In their movements into the tropical regions, there was also increasing adoption of other crops, including taro, breadfruit, banana, yam, sago, and coconut. Nevertheless, small groups of Austronesians and surviving Australo-Melanesian communities were involved in forest hunting and gathering, and some Austronesian communities specialized in coastal marine fishing and strand collecting.

In mainland Southeast Asia, too, the Southern Mongoloid ancestors of Austroasiatic speakers had expanded their settlement from the north probably from about 4000 B.C.E. By 2000 B.C.E., the whole of the mainland region, extending through the Malaysian Peninsula and Sumatra (with a possible outlier in western Borneo), was occupied by Southern Mongoloid, Austroasiatic populations (Bellwood 1995: 105; 1997: 117). Austroasiatics and Austronesians increasingly came into contact in the western Malay-Indonesian archipelago as Austronesians expanded westward from about 1500 B.C.E. and also settled in coastal southern Vietnam. There is evidence of rice-cultivating, pottery-making Austroasiatic populations from excavations at Ban Kao in Kanchanaburi and Tha Kae in the Lopburi area and from the Red River Valley in Vietnam. The finds indicate that agriculture was known from about 2300 B.C.E. (Higham and Thosarat 1998: 76–89) and in the Khorat Plateau of northeast Thailand from about five thousand years ago (Bellwood 1992: 97–98). The use of metals came somewhat later, during what is termed the Late Neolithic. Archaeological evidence suggests bronze casting was known in Thailand and Vietnam soon after about 1500 B.C.E., and iron forging was known

from about a thousand years later, associated subsequently with an increase in population and the size of settlements, political centralization, and trade with India and China (Higham 1989: 190–238). It was during this latter period that the Austroasiatic Dong-son bronze industry, with its manufacture of remarkable decorative bronze drums, flourished in the region around Hanoi in northern Vietnam, and the Austronesian Sa Huynh culture, especially skilled in iron manufacture, developed in central and southern Vietnam. Both bronze and iron appeared together in island Southeast Asia toward the end of the first millennium B.C.E.

Linguistic classification is a subject of much controversy in Southeast Asia, given that there have been both convergence and divergence of languages over a considerable period of time in Asia, and some of the interrelationships are still uncertain. However, it is generally maintained that there are four major language families in the region: Austronesian (with two major subgroups, Formosan and Malayo-Polynesian), Austroasiatic (or Mon-Khmer), Tai-Kadai, and Sino-Tibetan. This classification is based on genetic relationships; in other words, languages grouped together in the same overarching language family are assumed to share some common characteristics, which are attributed to a postulated common ancestor or protolanguage (Amara Prasithrathsint 1993: 76–77).

Austronesian is a nontonal language, and proto-Austronesian is said to have originated from a Taiwanese source about six thousand years ago and ultimately from southern China (Bellwood 1997: 117). Austronesian speakers then spread over the Indo-Malaysian archipelago from about 2500 B.C.E. onward.

They also populated the islands in the Pacific. They found their way to central and southern Vietnam, where the colonization eventually gave rise to the kingdom of Champa. (Austronesian languages are spoken by the Cham and by Vietnamese upland minorities such as the Rhade and Jarai.) Others traveled across the Indian Ocean to Madagascar in eastern Africa; Malagasy is an Austronesian language (Bellwood 1995: 98–101). It is estimated that this language family now comprises up to about 1,200 identifiable languages. Austronesian languages also constitute the national languages of Malaysia, Brunei, Singapore, Indonesia (Malay/Indonesian), and the Philippines (Taga-

log). The largest Austronesian-speaking community is the Javanese, whereas the major Austronesian-speaking minority populations are the Balinese; the Dayaks of Borneo; the Batak, Rejang, and Minangkabau of Sumatra; the Toraja of Sulawesi; and the Ifugao and Kalinga of northern Luzon.

In mainland Southeast Asia, the linguistic patterns are rather more complex. However, a major set of languages comprises the Austroasiatic family, consisting of about 150 separate languages spoken by the Vietnamese; the Khmers or Cambodians; the Mons of Burma; and certain hill groups of northern Burma, Assam, Vietnam, and Laos, including the Khasi, Palaung, Wa, Lawa, and Moi. Also included are most of the aboriginal groups of the Malay Peninsula and the Nicobarese. The Austroasiatic family also encompasses the Munda languages of Bihar, Orissa, and West Bengal. Prior to the movements into northern Southeast Asia of such ethnic groups as the Thais and the Burmese, there must have been a continuous distribution of Austroasiatic speakers over much of the mainland region and into eastern India.

The third language family is that of Tai-Kadai. The languages in this group are very widely spoken in Thailand; the Shan states of Burma; lowland Laos; the southern Chinese provinces of Guizhou (Kweichow) and Guangxi (Kwangsi); and on the northern fringes of Cambodia, Vietnam, and Malaysia. Major Tai-speaking populations, who began to expand from the borderlands of southern China into northern mainland Southeast Asia in the eleventh century C.E. and displaced Austroasiatic speakers, are the Thais, Laos, and Shans. The scattered Hmong-Mien (or Miao-Yao) languages, spoken by upland tribal minorities in southern China and northern mainland Southeast Asia, once thought to be separate from Tai-Kadai, have more recently been included within this language family (Bellwood 1997: 111).

Finally, there is the Sino-Tibetan language family, of which Chinese is a member. A major branch is Tibeto-Burman, and its speakers comprise the lowland Burmese or Burmans and various hill peoples in Burma and the neighboring mainland Southeast Asian countries, as well as in southern China, northern and northeastern India, Bangladesh, southern Tibet, and Nepal (Amara Prasithrathsint 1993; Burling

1992: 162–165). Important minorities in the borderlands from Assam through Burma, southern China, Laos, northern Thailand, and northern Vietnam include the Garo, Karen, Kachin, Lolo, Chin, Naga, Akha, Lisu, and Lahu. The language of the lowland Burmese became firmly established in central and lowland Burma following the expansion of the power of the Burmese kingdom of Pagan from the interior dry zone of Upper Burma from the ninth and tenth centuries C.E. At one time, this major language family was thought to include Tai-Kadai, but subsequently, Tai-Kadai was established as a separate family.

Although the matter is still a subject of contention among linguists, it has been suggested that there could be very remote connections among these four large Asian language families. Some linguists argue for distant connections between Tai-Kadai and Austronesian (together referred to as Austro-Tai), whereas others argue for remote or deep links between Austronesian and Austroasiatic (together known as Austric) (Bellwood 1997: 111–112). Bellwood has also suggested that the ancestors of all these four families, who were of Southern Mongoloid physical stock, inhabited contiguous areas of southern and central China, south of the Yangzi (Yangtze) River, from the early period of monsoon agricultural development about eight thousand years ago. However, it is uncertain whether these networks of linguistic connections were the result of common origins or borrowings or both, and there is still some uncertainty about the status of Sino-Tibetan (Bellwood 1995: 96–98). Bellwood has further suggested that these Neolithic revolutions then led to the expansion of settlement and, over a very long period of time, the complex movements of populations and cultural traits into other parts of Asia, including the regions to the south. Some thirty-five years ago, Robbins Burling, though suggesting that some of the “typological resemblances” among several of the mainland languages are likely to have been the result of contact and exchange, also posed the following question: “Could it be that all these languages are, even if only very remotely, related to each other in one great super-family?” (1992: 157).

Undoubtedly, a considerable amount of further social, cultural, political, and economic differentiation then took place, beginning in the

early centuries of the first millennium C.E., when Southeast Asian peoples were adopting traits from both India and China and were becoming increasingly involved in far-flung Asian trade. Early Indian-influenced coastal states were identified from the second century C.E. along the sea routes between India and China, in southern and central Vietnam, around the margins of the Gulf of Thailand, in southern Thailand, in Sumatra, and in West Java. Northern Vietnam, however, was incorporated into a Chinese cultural sphere of influence. With the introduction of Indian court culture, particularly Hinduism and Mahayana Buddhism and subsequently, during the second millennium C.E., Theravada Buddhism and Islam, the lowland populations of Southeast Asia, which were part of large-scale political systems with more developed urban forms of settlement, became increasingly differentiated from upland tribal populations. This differentiation persisted between the lowland peoples and the upland communities despite their shared common linguistic and cultural roots. These divisions were further consolidated during the period of European colonialism and, in the Philippines, the conversion of the majority of the lowland communities in the northern two-thirds of the island to Roman Catholicism.

The contemporary cultural diversity of Southeast Asia is therefore the result of a progressive differentiation of populations originally of the same stock as they moved through and settled in different parts of the region. The diversity is also a consequence of the complex migrations of peoples and the displacement and assimilation of some by others, long-established exchanges of goods and cultural elements, and, subsequently, the adoption of cultural influences from India, China, the Middle East (West Asia), and the West.

F

FAMINES

Historically, hunger and malnutrition were common problems throughout Southeast Asia. Hunger often occurred before the main rice harvest when old stocks were depleted. Malnutrition was the plight of the poorest, who had no access to land for growing food crops or who lived in marginal areas with high crop-failure risks. But, unlike famines, hunger and malnutrition do not necessarily endanger survival. They are incidental situations in which the normal systems that ensure access to sufficient nutrients for survival break down, causing social disintegration. The community loses its ability to support marginal members, who migrate or die from starvation or starvation-induced diseases.

Southeast Asia did not suffer extensive famines as China and India did. Its population density was much lower. Access to land was, for a long time, sufficient to expand food production by rolling back the land frontier. Famines were generally caused by coincidence, such as natural disasters (drought or floods and subsequent crop failures), and/or acute man-made problems, such as war. For instance, the eruption of the Tambora volcano in Sumbawa (Nusatenggara, Indonesia) destroyed food crops in 1815 and caused 44,000 deaths from hunger (Stibbe and Uhlenbeck 1921: 254). Evidence of abandoned villages in the Red River delta in North Vietnam suggests that population growth was long constrained by crop failures and famines caused by floods in delta areas.

Densely populated Java suffered local famines in the nineteenth century. The operation of a rice mill by European entrepreneurs and the granting of padi purchase monopolies to them triggered the 1844–1847 famine in Cirebon Residency (West Java). The millers purchased padi without regard for local rice requirements. In the lean season, local supplies were insufficient, and Chinese rice traders, generally a source of credit to bridge the season, were no longer allowed to operate in the area.

The 1849–1850 famine in Demak and Grobogan (Central Java) was caused by four successive crop failures due to drought. Farmers had to sell buffaloes to pay the land tax. The demands on farmers to supply labor for the Cultivation System, local rulers, village elite, and colonial public works worsened the situation. A lack of action by colonial officials to bring relief also explains why this famine took the lives of 83,000 people (Elson 1985: 56).

The 1881–1882 famine in Banten Residency (West Java) was caused by cattle plague, which reduced the cattle stock by two-thirds, followed by a fever epidemic that killed 10 percent of the population (Hugenholtz 1986: 172). The 1900–1902 famine in Semarang Residency was the result of several crop failures, followed by a cholera epidemic that kept people at home and left the fields uncultivated. The colonial government mitigated both disasters by selling imported rice below cost.

The development of markets for imported and locally produced food products was effective famine mitigation. Areas suffering food deficits experienced an inflow of food products, organized by entrepreneurs to take advantage of high prices. The development of the intraregional trade of rice from Burma, Thailand, and South Vietnam to rice-deficit areas prevented starvation in times of adversity.

The Japanese occupation caused famine in Java and North Vietnam. In Java, the requisitioning of rice to feed Japanese troops amounted to modest demands compared with total production. However, Japanese authorities paid for rice purchases with money that quickly lost its value, and farmers became reluctant to sell. In 1943 and 1944, the Japanese imposed a quota from the highest to the lowest administrative levels and forbade all nonregulated trade of rice. Farmers sought to evade the quota, and rice production plummeted. A long dry season that delayed planting and harvesting for the 1944–1945 crop aggravated the situation. Insufficient rainfall caused widespread crop failures. Black market food prices increased quickly, and people not included in the official rice distribution system, such as migrant workers in urban areas, and those without assets to sell or barter were caught out. In 1944 and 1945, excess mortality was 2.4 million people (Van der Eng 2002: 503).

In the 1930s, North Vietnam was a rice-deficit area that depended on imports from South Vietnam. The Japanese obliged French Indochina to supply large amounts of rice for export to Japan and to troops in Asia. Most rice came from South Vietnam, but to meet the demands, the French introduced a system of compulsory requisitioning throughout the country, including North Vietnam. Inflation eroded purchase prices and increased the reluctance among farmers to produce a surplus. In 1944, the fifth-month harvest was poor. Insufficient rice was available until the main tenth-month harvest. When typhoons followed by strong tidal waves swept the country, flooding destroyed a large part of the tenth-month crop. Famine spread in North Vietnam, particularly among the landless. The cold 1944–1945 winter prevented the production of nonrice food crops. Estimates of the deaths during 1944 and 1945 range from 1 to 2 million people (Bui 1995: 575–576).

Other parts of Southeast Asia were also affected, particularly the areas that relied on food imports in times of production shortfalls. For instance, drought in 1944 affected the Nusatenggara region in East Indonesia, where at least 40,000 people died on Timor (Telkamp 1979: 75). A major famine struck East Timor in 1975 and 1976 as a consequence of the war in Timorese freedom fighters and Indonesian troops. The dislocation of farming communities and the destruction of food crops caused the death of possibly 100,000 people (Cribb 2001: 82–98).

In the mid-1970s, a famine emerged in Cambodia, which had been a rice-surplus area in the 1960s. In 1970, civil war broke out between Khmer nationalists and the U.S.-supported government. Warfare and American bombing drove more than a quarter of the population to the cities. Starvation started in Phnom Penh in 1974. The victorious Khmer Rouge forced people to join regimented rural cooperatives and work the land. Massive dislocation, widespread purges, and the shunning of foreign aid led to starvation. A Vietnamese invasion in 1978 toppled the brutal regime, but many people abandoned fields and fled toward Thailand. By 1979, Cambodia suffered a full-blown famine, requiring foreign food assistance. From 1975 to 1979, an estimated 1.5 million people died from malnutrition, illness, or overwork (Chandler 1999: 3).

Floods and drought caused occasional food shortages in the region, as in Irian Jaya in 1997 and 1998 and Vietnam in 1999. The specter of widespread famine has, however, disappeared. The Green Revolution in rice agriculture increased rice productivity. Growing numbers of people are no longer primarily dependent on food agriculture; their discretionary income is high enough to purchase food. Better communications encourage food to flow where the price is highest, including areas suffering shortages. Further, individual countries and international aid agencies now have famine prevention and relief mechanisms in place.

FEDERATED MALAY STATES (FMS) (1896)

The Federated Malay States (FMS) came into being in 1896, bringing the peninsular Malay States of Perak, Selangor, Negri Sembilan, and Pahang under a central federal administration based in Kuala Lumpur. Although the FMS created uniformity and greater administrative efficiency, it enhanced the role and status of the central federal government at the expense of the state authorities. The FMS eroded the power and authority of the Malay rulers, who were reduced to the status of constitutional monarchs without political influence.

The British Residential System, implemented after the Pangkor Engagement (1874), created four separate independent entities of the Malay States of Perak, Selangor, Negri Sembilan, and Pahang (from 1888), each under their own resident. There was a limited amount of mutual support and cooperation among the states. The tin-rich states of Perak, Selangor, and Negri Sembilan progressed and prospered by leaps and bounds. Pahang, however, despite its size and perceived potential mineral and agricultural resources, became a financial liability, with the Straits Settlements' government as its creditor. Federation appeared to be Pahang's salvation, as the richer partners would be obliged to assist in developing its resources.

Frank Swettenham (1850–1946), an ardent proponent of federation, stressed the advantages of administrative uniformity, greater administrative efficiency, and economy. Centralization would enhance coordination of services such as revenue, infrastructure development (in particular rail and road construction), public health, education, and law and justice. The agricultural and mining sectors would benefit from federation, as would matters relating to land.

Interestingly, although the issue of federation would significantly change the status of the Malay sultans and their country, the debate was confined within British colonial official circles. In a whirlwind tour of ten days in July 1895,

Swettenham secured the signatures of the Malay rulers to the Federation Agreement.

On 1 July 1896, FMS came into effect. Perak, Selangor, Negri Sembilan, and Pahang became British protected states, to be administered under the advice of the British government through its representative, the resident-general based in Kuala Lumpur. He would advise the four Malay sultans on all aspects of administration, apart from those dealing with the Islamic religion. Theoretically, the powers and authority of the Malay rulers remained intact but confined to their respective states.

Sir Charles B. H. Mitchell (t. 1894–1899), governor of the Straits Settlements and first high commissioner for FMS, presented a blueprint of how this new entity was to be administered. Centralization of authority dwelling on the resident-general was apparent. Federal heads of the various government departments, directly responsible to the resident-general, would direct and coordinate the work of his department in the four states. A *Durbar* (conference of Malay rulers) was constituted whereby the four Malay sultans would meet annually with British officials to discuss state affairs; the outcomes of these meetings were, however, nonbinding.

Although the resident-general was, in theory, subordinate to the governor, he could exert his independence through sheer force of personality, as demonstrated by Swettenham, who was the inaugural appointee. To prevent having a too-powerful resident-general, Governor Sir John Anderson (t. 1904–1911) created the Federal Council in 1909 to ensure that power and authority were centralized with the governor/high commissioner, who was its president. Furthermore, the title of resident-general was reduced to chief secretary in 1910. Although all resolutions passed in the Federal Council had to be sanctioned by the State Councils presided over by the sultans before they were enacted, this step was a mere formality, as all decisions made by the former had to be accepted. Consequently, the State Councils functioned as mere rubber stamps to the federal government.

Partly to assuage concerns about over-centralization and the erosion of the political authority of the Malay rulers and partly to induce the five other Malay States (Perlis, Kedah, Kelantan, Terengganu, and Johor) to join FMS,

proposals for decentralization were initiated during the 1920s and 1930s. However, the decentralization proposals of Sir Lawrence Nunns Guillemard (governor/high commissioner, t. 1920–1927) and Sir Cecil Clementi (governor/high commissioner, t. 1930–1934), which were approved and implemented in 1927 and 1933, respectively, did not restore power to the Malay rulers. Instead, these rulers remained politically impotent despite being consulted more frequently. Toward the late 1930s, state governments regained control over certain departments (medical and public works), and State Councils could legislate on certain subjects and have some control over their revenue and expenditure. Efforts at decentralization failed to entice the other Malay States to participate in federation.

The creation of FMS brought prosperity to all its member states, including Pahang. Infrastructure development was efficiently undertaken, whereby a good rail and road network was established. The economy—in particular, the agricultural sector (mainly the rubber industry)—benefited tremendously from federation. Notwithstanding the socioeconomic benefits, however, FMS reduced the four Malay rulers to politically impotent constitutional monarchs and further strengthened the colonial clasp of the British over the most prosperous parts of the Malay Peninsula.

FEDERATION OF MALAYA (1948)

The Federation of Malaya was officially established in February 1948. This was a new form of government in Malaya, replacing the much-criticized Malayan Union formed by the British in 1946. Under the federation, all the nine Malay States—Perlis, Kedah, Perak, Selangor, Negri Sembilan, Johor, Pahang, Kelantan, and Terengganu—as well as the former Straits Settlements of Penang and Melaka were placed under one government headed by a British high commissioner.

The high commissioner, who was the highest-ranking executive officer of the federal government, administered the federation with the help of two councils, the Executive and Legislative Councils. He had to ensure that Malay privileges and the rights of the different communities according to the constitution were safeguarded. The federal government was also responsible for matters concerning security, foreign affairs, civil laws and legislation, trade, transport, communication, and finance.

The position of the nine sultans as heads of their respective states was guaranteed. They headed the state governments with the help of the State Executive and Legislative Councils. The state governments had jurisdiction over matters concerning their own local governments, religious affairs, education, health, and land. The governments of Melaka and Penang, former members of the Straits Settlements, were headed by governors appointed by the high commissioner. The sultans and the governors formed the Rulers' Council to discuss matters concerning themselves and other crucial issues with the high commissioner. They met annually or whenever the need arose.

One very important factor that emerged under the constitution of the federation was the question of citizenship. Under the constitution, people could apply for citizenship by legal means or acquire it by birth. Citizenship was accorded to those who had been born in any one of the states, or alternatively whose parents (or at least one parent) had been born in the states and had been domiciled for a specific period of time. They were also required to know the Malay language or English and to be of good character. The Federation of Malaya placed all the states in Malaya under one constitution, and for the first time, non-Malays

were given the opportunity to be citizens of the federation.

FILIPINIZATION

Filipinization was the process, during the American colonial period in the Philippines, of putting Filipinos in active positions in government, replacing U.S. officials. This was part of the American policy of creating a government for the Philippines and preparing the country for eventual independence. Filipinization peaked during the administration of Governor-General Francis Burton Harrison (t. 1913–1921), when Harrison made it his policy to place more administrative control in the hands of Filipinos.

Since the establishment of American civil government in the Philippines in 1901, U.S. policy toward the islands was to create a stable government and to build a Philippines for the Filipinos. In the first thirteen years of American rule, Filipinos were gradually given positions of increasing responsibility in government, including local government and the legislature. Those with sufficient educational attainment and economic means were given the right to vote; out of the three provincial board positions, Filipinos held two of them through election. The lower chamber of the legislature was

Filipino-controlled. Until 1913, however, Filipinos were a minority in the upper chamber of the legislature, the Philippine Commission. They were seldom appointed as executive division or bureau heads, and in the provincial governments, U.S. officials routinely checked up on local administration. The governor-general—always an American—had the final say in legislative, executive, and judicial matters.

Filipinization echoed the liberal policy adopted by the Democrat U.S. administration, headed by President Woodrow Wilson, from 1913 to 1921. In the Philippines, Governor-General Harrison endorsed the belief that the best way to prepare Filipinos for independence was to place them in government and in positions of responsibility and to grant them as much autonomy as possible. Hoping to encourage Americans who were working in government service in the islands to retire early or otherwise leave their posts, he approved legislation that offered attractive early-retirement benefits and lowered the salaries of those Americans who stayed on. As Filipinos replaced Americans who vacated such positions, the civil service was increasingly dominated by Filipinos.

In addition to appointing Filipinos as executive department and bureau heads, Harrison allowed the top Filipino political figures, led by Manuel L. Quezon (1878–1944) and Sergio Osmeña (1878–1961), to form the Philippine Council of State, an advisory body to assist the governor-general. Meanwhile, President Wilson increased the number of Filipinos in the Philippine Assembly, thereby giving them control of both houses of the legislature. The Harrison administration also made all provincial board positions elective, thus paving the way for an all-Filipino provincial administration.

The Jones Law (sponsored by William Atkinson Jones, a Democratic representative from Virginia), passed by the U.S. Congress in 1916, gave greater impetus to Harrison's Filipinization policy. The law provided that the United States would withdraw its sovereignty over the Philippines and recognize its independence when a stable government could be established. Harrison believed that a stable government would be one controlled by Filipinos who had been prepared for self-government by handling the government themselves. Toward that end, he also gave Filipinos greater

leeway in administration by not actively exercising his powers as governor-general, thereby giving more initiative to the local political leaders. He also used his veto power sparingly and supported actions of the Filipinos in government.

Harrison's Filipinization policy reduced the number of Americans in the Philippine government from 2,623 in 1913 to only 614 in 1921, while increasing the number of Filipinos from 6,363 in 1913 to 13,240 in 1921 (Agoncillo and Alfonso 1967: 340). Filipino political power increased as that of the Americans waned.

The people of the Philippine Islands welcomed Filipinization, especially as undertaken by Governor-General Harrison. The policy was, however, criticized by Americans who wanted greater U.S. control over the Philippine insular government. Critics pointed out that the rapid pace of Filipinization resulted in inexperienced persons taking important posts and led to inefficiency and corruption. Governor-General Leonard Wood (t. 1921–1927), who succeeded Harrison, discontinued the Filipinization policy.

FILIPINO-AMERICAN WAR (1899–1902)

See Philippine War of Independence (1899–1902)

FIREARMS

When Portuguese and Spaniards first entered the seas of Southeast Asia, early in the sixteenth century, they often marveled at the quantity and the quality of the locally cast swivel-guns in use aboard boats and on the wooden palisades of fortified settlements. These were light, very mobile cannons, many of them carried and shot by a single man. The guns were mounted on a swivel yoke that could be set up almost instantly on stirrups cut into the rails of ships or on stockades, to absorb recoil. Most of the pieces were made of bronze, but some were cast in brass; it is known that both copper alloys often were obtained through the smelting of imported Chinese cash. Although most of the cannons that were made were muzzle-loading, there are also quite a few examples of breech-loading cannons in various collections, and these are probably the oldest. A piece of wood, or tiller, was inserted into the back handle and lashed to the cannon with rattan, which enabled it to be trained by the gunner. Most of these swivel-guns had small bores (30 to 60 millimeters). They were loaded with small cannonballs or hail shots and primarily used against people. Such firearms were still being cast and used until modern times, as they were best adapted to common Southeast Asian warfare techniques. Brunei was known for its foundries in the nineteenth century, and in 1904, the Americans often fought in the Philippines against "Moros" armed with such cannons.

Chinese are known to have built breech-loading swivel-guns in the sixteenth century. These, however, were considered, in China, to be of Turkish origin. This is a perfect illustration of the swift diffusion of firearms and gunpowder techniques in the Old World, after the invention of fast-burning gunpowder in thirteenth-century China. Southeast Asia came in regular contact with Chinese artillery shortly after this invention, during Kublai Khan's (1215–1294) late-thirteenth-century invasions, and there are a few other testimonies to the use of firearms in Southeast Asia during the fourteenth and early fifteenth centuries. At the crossroads of the transasian maritime route and in overland contact with both India and China, Southeast Asians quickly adopted the warring techniques they needed in military conflicts, whether internal or with the Europeans.

Larger cannons do not seem to have been in regular use in Southeast Asia before the second half of the sixteenth century. When they appeared in the region, they did so as part of a broader evolution of military techniques. At sea, small swivel-guns were ideally suited for the light and swift local boats that composed most of the war fleets of the Southeast Asian powers in the beginning of the sixteenth century. Later on, much larger, galley-type war vessels, influenced by Mediterranean techniques learned from Portuguese renegades and Turkish shipwrights, complemented these indigenous fleets. Sultan Iskandar Muda (r. 1607–1636) of Aceh built the largest of them all in the 1620s. These sturdier vessels were able to carry and absorb the recoil of much larger cannons that could be used in sieges for offshore bombardment.

As a by-product of sixteenth- and seventeenth-century developments in fortress construction, large land-based siege cannons were soon cast in most countries of Southeast Asia, with the help of Turkish and Portuguese foundries. Regardless of the actual efficiency of such unwieldy cannons in war tactics, local legends and literature point to the spiritual power that was attached to them and to the vested interest Southeast Asian rulers had in possessing as many as possible. Lighter guns, such as muskets, were also incorporated into the armament of Southeast Asian armies, whether locally produced or bought from Indians, Turks, or Europeans.

By the late seventeenth century, technological innovations and mass production meant European firearms became ever more efficient and prestigious among Southeast Asian rulers, leaving local productions in their wake. They became a trade commodity that European merchants could provide best, at a cost. The ability to purchase and resourcefully use European artillery was a decisive factor in conflicts internal to the region, such as the eighteenth- and early-nineteenth-century wars between Burma and Siam or between the warring lords of Vietnam.

FIRST AVA (INWA) DYNASTY (1364–1527 C.E.)

Prelude to Modern Myanmar

The end of the Pagan kingdom in the early fourteenth century as a central and unifying authority ushered in a short period of political decentralization, with different centers of power struggling for paramountcy. By 1364, these contending powers had been unified under a new dynasty that was located at the city of Ava and hence was called the First Ava (or Inwa, in Burmese) dynasty, which lasted until 1527. Although the Ava period is conventionally known as the "period of Shan domination," there is little or no evidence to support such a contention, particularly since the significance of this age was more political, cultural, and religious than ethnic. Indeed, the structural principles and institutions that the Burmese kingdom of Pagan had established did not die; instead, the kingdom of Ava resurrected them to perpetuate the Pagan standard, the model for subsequent dynasties. The crucial difference be-

tween Pagan and Ava was quantitative, not qualitative: in size and scale, wealth and power, influence and image. Ava was, in effect, Pagan writ small.

The city of Ava was located on an island. On its north and west was the Irrawaddy River; on its east was the Myitnge River, which flowed into the former; and on its south was the Myitha River, a tributary of the Myitnge running east to west to which was joined a canal, both emptying into the Irrawaddy. Clearly, security and defense were on the minds of the new leaders when they made Ava the capital. The shift northeast from Pagan to Ava, over 128 kilometers (80 miles) away, addressed an important concern that all Upper Burma capitals faced: an invasion from the north coming down the Irrawaddy Valley. The kingdom of Nanchao invaded the Pyu kingdom in the ninth century from the north via this route. Pagan, likewise, had to fight unnamed forces from the north in the early twelfth century, only to be invaded again from the north in the late thirteenth century by Mongols using the same routes. Pagan's leadership seemed to have anticipated this problem early and addressed it during the eleventh century by building a line of 43 forts along that invasion path. (The Yuan sources actually mentioned 300 stockades built for that purpose.)

Ava's location revealed another concern: the city lay at a strategic point for control of Shwebo and Kyaukse, two of the most important rice-growing regions in Burma at the time. They were the economic mainstay of any Burma dynasty, especially one that had political ambition or visions of reunifying the country. Although Pagan was far from Kyaukse, it had been powerful enough to control the region from that distance. But the new dynasty was not as powerful and therefore had to move its capital right to its source of wealth, where the region could be better defended and utilized. By doing so, however, the seat of power was also moved farther away from the coasts of Lower Burma, which meant the dynasty lost control over that region (control that Pagan once had). The result was the rise of the first Lower Burma kingdom in Burma's history, led by kings who claimed Mon rather than Burman descent. Thus, the decision to build the new capital at Ava, next to the dynasty's main economic resources, revealed both defensive

and offensive military and economic concerns and would have unanticipated consequences.

The style and configuration of the capital city revealed that traditional cosmological beliefs were also part of the dynasty's concern. The city of Ava represented heaven on earth and was designed to suggest that the king, while in his symbolic city, was the intermediary between this world and the heavenly realm. Culturally, the Ava period is best known for the further development (and in some cases, the birth) of Burmese literature. Pagan had clearly been a very literate society as well, and in many respects, it produced literature (especially Pali literature) that has not, in general, been surpassed. But certain genres of verse, some of the earliest chronicles, and several of the most exemplary treatises on legal and religious topics to have survived had their origins at Ava. Still, the principles, conceptualizations, and organization of court and king, provincial administration, military and Crown service groups, village society, the economy, the legal system and jurisprudence, and the sangha (Buddhist monkhood) and religious affairs were virtual replicas of Pagan's—only on a smaller scale.

Ava *did* break with the Pagan tradition in at least one respect: in its art and architecture. The city of Sagaing, across the Irrawaddy from Ava, represents Ava's field of merit, where most of its temples and other religious edifices were built. The majority of the monuments at Sagaing reflect a preference for the solid temple, or *stupa*. Although important at Pagan as well, the stupa was not a prevailing style like the hollow *gu* (cave-temple) had been, with its interior space, keystone arching, barrel vaults, double stories, interior stairways, and varied floor plans. Ava may have lost the technique of keystone arches and barrel vaults, the architectural principle fundamental to the hollow-style temples of Pagan. Indeed, there is some evidence of this, as the few Pagan-style hollow temples built during the immediate post-Pagan period at the city of Pinya, briefly the predecessor to Ava, showed signs of flawed and tiered design in their arches.

Perhaps it was also a matter of economic resources. Ava did not and could not recapture the wealth needed for this kind of expensive and technically demanding temple construction on the size and scale enjoyed by Pagan, especially since the latter had committed, in perpetuity,

much of the available landed wealth to the tax-exempt sector. At the same time, Ava could no longer harness the commercial revenues of the Lower Burma coasts that Pagan had enjoyed, as that region saw the beginning of a new Lower Burma dynasty led by Mon speakers centered at Pegu, once a provincial capital under Pagan. Moreover, other areas that had once submitted to Pagan and had supplied it with human and material resources, such as Arakan on the western coast and the Shan polities located in the highlands, both north and east of Ava, were no longer reliable tributary regions.

The zenith of the Ava kingdom occurred during the hundred years between 1400 and 1500, when it was politically and militarily dominant in all of Upper Burma and exercised considerable influence over Lower and western Burma periodically. This was the time when Ava produced brilliant Burmese poetry and literature, when hundreds of temples and monasteries were built, and when religion was well patronized. It was also the time when the court was resplendent and when Crown soldiers were strong enough to repel invasions by powerful external forces such as the Ming, as well as internal competitors from Arakan, Pegu, and Prome. It was also a time when Ava was considered a model Buddhist state by its Buddhist neighbors. In short, it was an era when Ava was once more like Pagan but on a smaller scale. But this era was not to last.

In 1527, one of its Shan vassals, sensing the weakness at the center with court factionalism, marched on Ava and took it. The city's vulnerability was, in part, caused by the same kind of wealth flow experienced by Pagan from state to sangha, along with the untimely death of a brilliant young general who would have been king. However, without a larger vision to unite Burma, the conquerors only played the role of spoiler, and after appointing a titular head to hold the city, they returned to their home turf, leaving the heartland in limbo. With no central authority and no able leaders with the kind of vision needed to unify the "feudalistic" and anarchic situation, the population fled to another regional center farther south that was once under Ava's rule, Toungoo. And here began the next dynasty of Burma, the Toungoo, which was to reunify the country once more in the mid-sixteenth century under the militarily brilliant king Bayinnaung (r. 1551–1581). This dy-

nasty was to become the largest, most far-reaching empire that the Burmese ever had, twice conquering Ayutthaya, the capital of Siam, and even taking Vientiane, now the capital of Laos. But the Toungoo was also the shortest dynasty, ruling for a mere seventy-seven years before it was brought down by internal factionalism, wealth flow to the religious sector, and the ambition of regional rivals.

The legacy of the First Ava dynasty lay in its contributions in developing Burmese literature and preserving many of the classical traditions begun and developed at Pagan, including the Burmese Theravada Buddhism (and its conceptual system) that has underpinned Burma's state and society to the present. But it did more than preserve traditions: it also preserved what was to become modern Burma. It did this by successfully forming a political, cultural, and military barrier at Ava against the movement of the T'ai speakers who had been migrating southward into the river valleys of western mainland Southeast Asia for several centuries. In doing so, it prevented that migration from going down the plains of the Irrawaddy River and establishing what might have been a T'ai polity in what is now Burma. And perhaps, therefore, it also prevented the formation of a modern Thailand that would have stretched from Assam on the Indian border in the west to Cambodia on the east.

FIRST WORLD WAR (1914–1918)

See Great War (1914–1918)

FOLK RELIGIONS

To speak of folk religions is, in the first place, to refer to what ordinary village people do in everyday practice rather than to ideals articulated by religious specialists or urban elites. As soon as Europeans, already conditioned by the print revolution of the Reformation (sixteenth century), encountered the peoples of what we call Southeast Asia, they registered differences between formal professions of faith and everyday practices. Most observers thought this meant that ordinary people did not really understand Islam or Buddhism, the prevalent formal religions, and that, in practice, locals were actually animists, or superstitious believers in magical powers and ancestral spirits.

More recently, students of the region were influenced by the anthropologist Robert Redfield's analysis of folk and civic traditions in Mexico and India. He suggested that the "great tradition" of urban written cultures always interacted dynamically with a "lesser tradition" of village oral customs—each shaping the other yet remaining distinct and coherent (Redfield 1956). Thus, although Burmese villagers bow to Theravada monks, they may be more focused on healing and connection to spirits, the *nats*, than on the Buddhist imagination of spiritual liberation. Similarly, committed Muslims in Java may spend more time making pilgrimages

(*ziarah*) to sacred sites to connect with the goddess of the Southern Ocean (Nyai Loro Kidul) than practicing daily prayers (*solat*).

The keynotes of folk religion in villages throughout monsoon Asia are remarkably consistent. Villagers have generally held that all of existence, even stones and metals, is animate—alive and charged with specific, magical energies. In the Malay Archipelago, such ideas are evident in beliefs about the *kris*, or the wave-shaped daggers that were traditionally critical to war and manhood. Springs, caves, mountains, and trees (especially the banyan) are each thought to be alive with spirits that influence the human domain. The spirit of rice, named Nang Phrakosib in Thailand or Dewi Sri in Java and Bali, is seen as a goddess upon whom life depends.

Beyond shared awareness of a spiritually charged environment, villagers usually relate to nature through hierarchies of spirits inhabiting invisible planes accessible only to especially powerful people. Shamanic mediums and healers have often been female; the *datu* (rulers or chiefs) have usually been “big men,” meaning important men in the society. In any case, every person is understood as being differently empowered rather than equal, and links with guardian (or tutelary) spirits are believed to underlie the power of the living. Thus, the founding ancestor of a community or kingdom would, upon death, move into the spirit world, becoming a bridge between human and natural realms and remaining accessible to living descendants. Usually, prayer or meditation at graves or other sacred sites would be undertaken to tap into spirit powers through contractual relationships, which ensured healing of the sick, the success of crops, or social power.

The past is knowable through living practices as well as through traces in texts, monuments, or artifacts. Since ethnography exposes such practices in a way archival research cannot, cultural archaeology is a crucial means to aid our understanding of local histories on their own terms. Insofar as prehistoric patterns persist into the present, they must have conditioned intervening transitions. Village rituals, divination, sexual magic, and the quest for powers through sacred sites relate at once to contemporary social contests and, as Anthony Reid (1988) showed, to early historical transitions. Because animistic folk religion remains a

pervasive underlayer in village societies, the basic logic of this pattern must be original. Although this does not imply that the substratum is either singular in essence or unique to the region, it does mean that it is foundational in the same way that grammar is within language.

Focus on ancestral folk religion became a central feature in seminal works of French scholarship on Indochina. George Coedès (1968) termed it a “substratum,” whereas Paul Mus (1975) stressed that contractual relations with tutelary spirits underpinned rice cultures throughout Asia. Their works helped shift attention from outside influences to indigenous forces, from elites to the foundations of subsistence and everyday life, to what Harry Benda (1962) later called the “infrastructure.” We are now more likely to call the village substratum a Bakhtinian “chronotype,” noting that folk religion carries a distinctive sense of time that speaks dialogically with subsequent discursive domains, thus producing the separate rhythms of social life in agricultural villages, trading ports, and dynastic kingdoms.

Distinct spheres, related at once to different historical phases and groups, coexist in the present, however transformed internally and through the gestalt that contextualizes them, rather than replacing each other in simple sequence. This relationship is suggested by the coexistence of oxcarts, horse carriages, bicycles, cars, and airplanes—each following a distinct rhythm and thus embodying a different sense of time yet moving together. Using this image and noting that peasant societies have focused, as Mercia Eliade (1954) suggested, on rituals that “regenerate time,” we can imagine a sense in which folk religions maintain a literally timeless, because nonlinear, awareness from prehistory into the present.

In sociological terms, continuity of the substratum is stressed in the works of J. C. van Leur and B. J. Schrieke. Van Leur (1967: 95) held that “the sheen of the world religions and foreign cultural forms is a thin and flaking glaze; underneath it the whole of the old indigenous forms has continued to exist.” Schrieke (1957) argued that the infrastructure of Java did not fundamentally change from 700 to 1700 C.E. And Mus (1975) noted that Vietnamese villagers were traditionally autonomous in their internal affairs. Symbolically, bamboo hedges marked their autonomy, bounding them socially just as

they were insulated by the mediation of councils of notables that protected them from centralizing states. Later and in different ways Clifford Geertz's (1976) work on Java and S. J. Tambiah's (1970) on Thailand drew attention to the persistence of primal village religious patterns within present frames.

The formation of states in what would remain the core areas—the dominant centers of population and power in Southeast Asia—brought dynastic periodicity into the seasonal and life cycles of the folk religious substratum: villages counterpointed courts so that they came to define each other. Cosmopolitan contacts within early states brought not only increasing scale but also an imperative to conceptualize local forces in more universalized terms—as societies of millions replaced the kinship patterning of villages, scale called for specialization, for a new language to orchestrate energies. Indian (or in Vietnam, Chinese) written culture offered an instrument for this purpose.

There is no doubt that, in the process, folk religion was transformed. Through most of Southeast Asia, even most of what became the Philippines, Indian-derived terms for deities, *dewi* or *dewa*, became common. Mythologies derived from Indian cycles—the *Jatakas*, *Mahābhārata*, and *Rāmāyana*—found reenactment in oral village traditions such as the *wayang* (shadow play) in Java. Notions of karma and reincarnation became parts of a pervasive new frame for local imaginations of spirit realms.

Syncretism defined the process by which local beliefs found voice within, rather than being simply replaced by, Indian spiritual vocabularies. Syncretism arises naturally from folk religious ontologies because those usually register all as being one at root. This perspective predisposed locals to allow additions and new interpretations, to be received as supplements that enriched by elaboration rather than replacements for what went before. Localization provided new idioms relating to the same energies of spirits, shrines, caves, and ancestors. Spirit hierarchies continued to parallel social structures, as had earlier tutelary spirits. But with new kingdoms, kings, queens, princes, and armies fought in the spirit as well as the social realms.

Everywhere in these societies, external influences have been transformed, reworked, and used by local systems that have ancestral spirits at their heart. As the template world religions

fitted into has been animistic, spirit cults still percolate below the surface. Richard Winstedt (1951) linked shamanism, Saivism, and Sufism to show how the main strands of Malay religious history wove into a pattern based on prehistoric systems. L. Golomb (1985) noted that animistic healing practices transcended boundaries between Buddhism and Islam or Thais and Malays. Because Muslims in Java meditate on graves seeking magical powers, Suharto's grave complex at Blitar was styled to enshrine him as the guardian ancestor of the modern state in the same way that earlier Indian-influenced rulers had themselves enshrined within massive stone temples.

When changes appear overwhelming on the surface, underlying continuity is obviously obscured. The substratum is now breaking down rapidly, yet it retains more power than we easily register. Only nocturnal ethnography opens this face of local practice, as in the daylight, little activity suggests any of the power present within sacred sites. As with the subconscious or the submerged portion of an iceberg, the surface evidence of folk religion—what may catch our eye and enter discourse—depends profoundly on what does not appear. Emphasis on it is analogous to the importance of the first years of life as recognized in psychology: we may not remember them, but we know that the patterns imprinted then nevertheless inform our subsequent paths. The spiritual substratum of the Southeast Asian region is especially hard to see because modern Europeans have suppressed or marginalized their analogues to it and cannot see in others what they can no longer imagine as existing in themselves.

FORCE 136

Promoting Anti-Japanese Armed Resistance

The India Mission of Britain's Special Operations Executive (SOE) was set up in May 1941 to counter subversion in India. In August 1942, its purpose changed to the promotion of in-

digenuous military resistance in Japanese-occupied Burma, Malaya, Siam, Indochina, and Sumatra. The mission was based at Meerut in India and then, from 1944, at Kandy, Ceylon (Sri Lanka). After coming under the control of the South-East Asia Command (SEAC), the India Mission changed its name in March 1944 to Force 136. European and Asian operatives of Force 136 armed and trained thousands of Southeast Asians, with the aim of eventually expelling the Japanese and reestablishing British dominance.

As well as operating with pro-British groups such as the Karen in Burma (Myanmar), Force 136 struck alliances with anticolonial and left-wing resistance groups. Consequently, in May 1945, Aung San's Burma National Army deserted the Japanese for the British. In Malaya, Force 136 gained the support of the Malayan Communist Party's Malayan People's Anti-Japanese Army (MPAJA).

Operations in Sumatra and Indochina were much less successful. In Sumatra, there was insufficient opposition to the Japanese to support armed resistance. And in Indochina, the Force 136 support of pro-French resistance proved too weak to withstand Japanese attacks.

There was often bitter operational rivalry between Force 136 and the U.S. Office of Strategic Services (OSS). The United States aimed to extend its political and economic influence in Southeast Asia and opposed the restoration of British, French, and Dutch colonies.

By the end of the Pacific War (1941–1945), Force 136's biggest military successes were in Burma, where it assisted British reoccupation. In Siam, the war ended before troops trained by Force 136 could make any significant military impact. In 1948, the communist forces, armed and trained by Force 136 in Malaya, commenced a twelve-year (1948–1956) insurgency against the British in the so-called Emergency.

FORCED DELIVERIES

The term *forced deliveries* refers to the compulsory deliveries of produce by farmers to rulers. The term is generally associated with the Cultivation System (*Cultuurstelsel*), which the Dutch colonial government maintained in Java between 1830 and 1870. Under this system, farmers were forced to produce cash crops such as coffee and take their produce to collection points supervised by Dutch colonial officials. Payment for the crops enabled the farmers to pay the land tax. However, the Dutch colonial government continued a prerogative of indigenous rulers in areas it had brought under direct colonial rule. Such deliveries to local rulers had generally been made in rice. The predecessor of the Dutch colonial government, the Dutch United East India Company (VOC), also demanded the delivery of produce. The VOC often exacted from subjugated indigenous rulers valuable cash crops such as coffee and spices as either a form of tribute or a tax in kind from farmers in areas under its direct rule. The Cultivation System was based on such precedents. The practice of forced deliveries existed in places other than colonial Java as well. For instance, in the surroundings of Padang, farmers were compelled to supply coffee in lieu of income tax.

FORMOSA (TAIWAN)

An island situated 160 kilometers off the coast of Fujian Province in China, Formosa (also known as Taiwan) was governed by the Republic of China from 1949. Due to its geographic proximity, it has, from time to time, played a part in the Southeast Asian network throughout its known history.

The word *Formosa* originated in the term *Isla Formosa* (Beautiful Island), expressing admiration for the island's beauty as experienced by sailors aboard a Portuguese ship in 1517. Nowadays, the term *Formosa* may connote the independent regime on the island that is objectionable to the Beijing Chinese leaders, who regard the island as an indivisible part of China. The Chinese first used the name *Taiwan* during the Ming dynasty (1368–1644). Neither the Portuguese nor the Chinese were indigenous to the island. Aborigines of Malay-Polynesian origin had lived on the island since the prehistoric era.

Though the island had been mentioned vaguely in Chinese texts since the Sui dynasty (581–618 C.E.), it was under the Dutch that Taiwan gained its first experience of being ruled by a regime, albeit briefly (from 1624 to 1662). The Dutch East India Company (VOC) then made Taiwan a transshipment center for China, Japan, and Batavia. Such trade continued after the Dutch were expelled by Zheng Chenggong (also known as Koxinga, 1624–1662), who established an anti-Manchu regime in Taiwan that existed from 1662 to 1683. To Zheng, the relationship with Southeast Asia was something beyond trade. He planned to stage an onslaught on the Manchus in China, manned by an army of Philippine Chinese. However, the effort was aborted, as the Spanish killed all the 10,000 Chinese in the Philippines upon learning of the plot.

Taiwan was incorporated institutionally as part of Fujian Province after the Manchus defeated Zheng's regime in 1683. Trade was

maintained only with the Chinese mainland, and Taiwan's Southeast Asian connections were not renewed until the latter half of the nineteenth century. The Treaty of Tianjin (1858) opened Taiwan to foreign trade. Liners bound for Southeast Asia plied the waters between Taiwan and ports such as Singapore, Saigon, and Manila (Luzon). The enhanced economic and strategic importance of the island made the Qing court grant it provincial status in 1887.

After two hundred years of Chinese rule, Taiwan became a colony of Japan. The Treaty of Shimonoseki that concluded the Sino-Japanese War (1894–1895) ceded the island to Japan after China's defeat. Taiwan became an attractive market for Japanese products, although its exports, including tea, camphor, sugar, and opium, continued to go to Southeast Asia. During the Pacific War (1941–1945), Japan used Formosa as a military base for the expansion to Southeast Asia.

Taiwan was returned to China after Japan's defeat in 1945. Taiwan was portrayed as "Free China" after 1949 (as it continues to be), for it was planned to be an anticommunist stronghold under the Kuomintang (KMT), which still claimed legitimacy over the whole of China in spite of its defeat by the Chinese Communist Party (CCP). Anticommunism became a common interest for Taiwan in maintaining relations with Southeast Asian countries, but other factors hindered closer contact. The newly independent Southeast Asian states developed industries quite similar to those of Taiwan, and they became competitors. A further setback was suffered in the diplomatic sphere. In 1971, Taiwan, represented as the Republic of China, lost its seat to Beijing (that is, the People's Republic of China, PRC) in the United Nations. Vietnam, Cambodia, Laos, Malaysia, Thailand, and the Philippines recalled their ambassadors from Taiwan in the mid-1970s and recognized the PRC; the latter had, by then, become less threatening to its Asian neighbors after reaching rapprochement with the United States.

Taiwan's diplomatic setback was partially compensated by its "economic miracle." Toward the end of the 1970s, Taiwan was recognized as a successful newly industrialized country (NIC) and extolled as one of Asia's "Four Little Dragons," alongside Hong Kong, South Korea, and Singapore. In the 1980s, Southeast Asia had a new role to play in Taiwan's economic develop-

ment. The rise of the middle class in Taiwan led to a huge demand for domestic helpers. Southeast Asians filled the need, and currently, their numbers total more than 200,000. In view of the mounting labor cost in Taiwan in the 1980s, Taiwanese entrepreneurs running labor-intensive industries turned to the Southeast Asian countries, which by then had adopted open-door policies and provided the much-needed cheap labor. This trend of southward investments culminated in the proclamation of the 1993 "go south policy" by President Lee Teng-hui (1923–), with a view to checking the multiplying investments to mainland China, a trend that may put Taiwan in a bewildered situation in a future political contest with Beijing.

To break its diplomatic isolation, Taiwan practiced "pragmatic diplomacy" in the 1990s, and Southeast Asia was considered important for relations at various levels. However, developments are not optimistic. On the one hand, Beijing will not tolerate any Taiwanese diplomatic activities conducted under the name Republic of China or Taiwan. And on the other hand, there are sovereignty conflicts over territories such as the Spratly Islands in the South China Sea, where Taiwan, China, Vietnam, Malaysia, Brunei, and the Philippines claim overlapping parts of these lands.

"FORTRESS SINGAPORE"

Illusory Strategy

After World War I (1914–1918), Singapore became a focal point for the British military in Southeast Asia. Faced with U.S. objections to the continuation of the Anglo-Japanese Alliance, the British government in London decided in June 1921 that the interests of regional and empire defense would best be served by building a new, first-class naval base in Singapore.

Situated on the northern coast of the island at Sembawang less than a mile (about 1.6 kilometers) across the Strait of Johor from the Malayan shore, it was designed to become the largest base that the Royal Navy possessed east of Malta in the Mediterranean. However, it was never the British government's intention to station a substantial number of warships permanently at the Sembawang base. Nonetheless, the Admiralty envisaged that in times of grave emergency, such as the outbreak of war with Japan, the Royal Navy would send a large battle fleet to Singapore to defend British interests in the region. This plan (the "Singapore strategy") has often been derisively described as a strategic illusion. Starved of the funds necessary to build a first-class naval base, the Sembawang base could never hope to function as the British planners had originally hoped it would. Moreover, the growth of fascism and militarism in Germany, Italy, and Japan in the 1930s was to pose an ever-increasing problem for the British and reveal the improbable nature of their Singapore strategy. This was clearly a case of imperial overreaching, and no amount of wishful thinking would make Singapore become the fortress it was portrayed as the international media. Denied the aircraft and defensive measures in Malaya that it would have required if it was ever to have become an impregnable fortress, Singapore became a hostage to fortune once the Japanese had launched their invasion of Southeast Asia on 8 December 1941. By 31 January 1942, the Malay Peninsula had fallen,

and Singapore became a temporary home for more than 100,000 British and Allied forces. Shortly thereafter, the island fell to General Tomoyuki Yamashita's (1885–1946) forces on 15 February 1942.

Fortress Singapore was little more than a mirage and the "Singapore Strategy" an unrealistic anachronism more suited to the Victorian heyday of *Pax Britannica* than the turbulent epoch in which it was actually conceived and supposed to operate.

FREE THAI MOVEMENT

The Free Thai Movement (or Siamese Movement, as it was called by the British) was a national resistance group organized while Japanese troops occupied Thailand (Siam) from 1941 to 1945. Before the Japanese invasion on 8 December 1941, the Thai government, in anticipation of the coming of war, had instilled in the people's mind the duty to fight and sacrifice their lives to preserve the nation's independence. Quickly following the surprise invasion of the country, many Thai political and government leaders, both inside and outside of the country, began to formulate what would later become the Free Thai Movement. The movement's objectives were, first, to fight against the Japanese occupation of Thailand and, second, to be able to negotiate with the principal Allied countries in order to resolve Thailand's status in the war. Ultimately, the primary aim was to ensure the restoration of Thailand's sovereignty and establish an independent nation that would be regarded as an equal by the Allies.

By late December 1941, Pridi Phanomyong (1900–1983), the former foreign minister in Plaek Phibunsongkhram's government (1938–1944) who would shortly be appointed chairman of the regency, formed an underground organization to resist the Japanese occupation in Thailand. Operating from the regent's office, the underground movement quickly gained support and cooperation from members of Parliament, bureaucrats, and military officials. Meanwhile, Thais in the United States and Britain organized parallel resistance movements. The Free Thai Movement in the United States was initiated and led by M. R. Seni Pramroj (1905–1997), a prominent lawyer appointed by Phibun to be the Thai minister in Washington. Seni made clear from the beginning that the Thai legation in Washington would not follow the Bangkok government's collaboration with Japan, and he firmly sought U.S. support to fight against Japanese acts of aggression. Thai students in England organized, by themselves, the third resistance movement in July 1942, without support from the Thai officials there. The group, however, received support from the British government and high-ranking royalty who resided in England following the 1932 Revolution.

During the first phase of the movement, from 1941 to 1943, the three resistance groups in Thailand, the United States, and Britain operated independently from one another. There was no real and systematic cooperation in their efforts to resist Japanese occupation. Not until the second phase, from 1943 to 1945 during which Pridi assumed the official leadership of the Free Thai Movement, did all the resistance forces come under a unified command that directed concerted activities. This was the period when the Free Thai Movement finally established contacts with and joined the U.S. and British forces in fighting the Japanese.

By the end of the Pacific War (1941–1945), the Free Thai Movement had proved to be a very successful effort on the part of the Thais because it helped saved the country from becoming a defeated nation that would be subjected to harsh punishment and reparation for its war crimes. Furthermore, the Free Thai Movement was also the first grassroots political movement to give an opportunity to many local political activists. This opened the way for the development and growth of their organiza-

tions, including the Communist Party of Thailand (CPT), which was formed on 1 December 1942.

FREE TRADE

Free trade is a phrase that has, over time, been widely used in public affairs, and like other such phrases, it has consequently been subjected to a diversity of meanings. They all call to mind the relationship between the state and the economy. In the contemporary phase of globalization and the nation-state, that relationship seems more important than ever. Are the governments going to promote the free trade that globalization calls for? Or is the relationship a more ambiguous one, depending on the relative position and interest of the states? Contemporary concerns may cast light on the past, just as study of the past may enhance an understanding of current problems.

Even before they avowed their interest in the welfare of the people, governments the world over were interested in the prosperity of their domains: only that, after all, could provide them with revenues for sustaining church and state and with the sinews of war. In the majority of states, the prime resource was agriculture, and trade was local or regional. For some states, foreign trade was more important, and for a few—such as Venice or Melaka—it was the state's very *raison d'être*.

Intensifying competition among the European states accompanied the disintegration of the Holy Roman Empire and the advent of the Renaissance. That was a powerful motive behind the voyages of “discovery” and the establishment of dependencies and trading posts outside Europe on the part of the Portuguese and the Spaniards initially and then others, such as the Dutch and the English. Though the world economy expanded—with the exploitation of Japanese silver mines and then with the mobilization of the wealth of Mexico and Peru—states still saw it in strictly competitive terms, and the recession that followed in the seventeenth century promoted a mercantilist approach. Trade was seen as a zero-sum game: what one had, another could not have. Commercial competition was thus accompanied by measures designed to reserve the colonial trade to the colonial power and to exclude others.

In the long period of expansion that ensued in the eighteenth century and that gathered momentum with the industrial and communications revolutions of the nineteenth century, such perceptions were undermined. The relationship of state and commerce remained important. Should a state cling to old-fashioned regulations or sacrifice the vested interests involved in them in favor of new interests that would profit by a new approach? Not all the states would answer the question in the same way, for their positions differed.

The keenest advocates of free trade had been the states whose economies were most likely to benefit. The Dutch East India Company (VOC) had used the argument of *mare liberum*—open seas—against the then much weaker English East India Company (EIC) in the early seventeenth century, though it also proceeded to argue that it could impose commercial monopolies by making agreements with the rulers in Southeast Asia. In the late eighteenth and nineteenth centuries, the British came to enjoy an economic advantage over other European states and became the advocates of free trade. Though it took some decades, they abandoned their navigation acts and accepted competition at home and overseas in the confidence that they could benefit from it. The lesson that Adam Smith had drawn from the struggle with the American colonies in *The Wealth of Nations* (1776) was adopted. “No nation ever voluntarily gave up the dominion of any province,” he

had argued, “how troublesome it might be to govern it. Such sacrifices . . . are always mortifying to the pride of every nation, and . . . contrary to the private interest of the governing part of it. . . . If it was adopted, however, Great Britain would not only be immediately freed from the whole annual expense of the peace establishment of the colonies, but might settle with them such a treaty of commerce as would effectually secure to her a free trade, more advantageous to the great body of the people, though less so to the merchants, than the monopoly which she at present enjoys” (quoted in Bennett 1962: 47).

Britain embarked on what Ronald Robinson and John Gallagher (1953) memorably but misleadingly called “the imperialism of free trade.” The object was not to rule other lands—rather the reverse—but to remove the trade obstacles their governments put in the way of Britain’s goods, which would otherwise, it was assumed, have been economically competitive. In the closing decades of the nineteenth century, those goods faced a new obstacle. Emulating Britain’s industrialization, other Western states, including the United States as well as Germany and Russia, sought to protect their nascent industries by protective tariffs. Britain did not react by abandoning free trade until, under the impact of the depression (1929–1931), it adopted a strategy of “imperial preference” in 1931 and 1932. The United States, which was then the predominant economic power, criticized this British strategy. It was the United States that appeared to be the prime advocate of free trade in the postwar years.

In Southeast Asia, the French had initially adopted a free trade regime in Cochin China, designed to attract Chinese and other traders. The Meline Tariff of 1892 imposed a protectionist regime on Indochina, which was to stand in the way of industrialization in Vietnam. The Dutch, long pressed by the British and now anxious to avoid the intervention of others, dropped protectionism in Netherlands India in the 1870s, but in the depression, they reintroduced it as a means, above all, of limiting the competition of cheap Japanese goods.

FRENCH AMBITIONS IN SOUTHEAST ASIA

Before the nineteenth century, the French made no attempt to establish a territorial empire in Asia. In the two previous centuries, French commercial and missionary interests in India, China, and Southeast Asia were sustained by *comptoirs* (stations, outposts, branches) and mission stations, protected by naval forces that were eventually based on Mauritius. From the mid-nineteenth century, the interventions of the French state in Asia became more systematic and culminated in the formation of a territorial empire principally located in mainland Southeast Asia. In the process, the ambitions of the French were both stimulated and constrained by rivalry with the British, whose large Eastern empire was seen both as a standing threat to French interests in Asia and as a model to emulate.

In Asia from 1669, the French presence consisted of a succession of short-lived royal-chartered trading companies. In 1720, the formation of the powerful new *Compagnie des Indes* inaugurated over forty years of direct competition with the English East India Company (EIC) for dominance of the India trade. The downfall of this company in 1769 left French

influence diffused among mercenaries working for Indian rulers, individual traders operating from small settlements in India, and French missionary networks extending from India to China.

In Southeast Asia, political initiatives by the French government were rare. The Chaumont embassy to Siam, a major diplomatic mission sent by Louis XIV (r. 1643–1715) in 1687 and 1688 to implant French political and military influence and encourage Christianization, had been a disaster, precipitating the downfall of King Narai (r. 1656–1688) in a political coup. A later intervention in Vietnam was equally without success. In 1787, a French missionary, Msgr. Pierre Joseph Georges Pigneau de Behaine (1741–1799), negotiated a Franco-Vietnamese treaty and obtained material assistance for the reinstallation of the Nguyễn dynasty on the throne of Vietnam. The French state made nothing of this isolated adventure, which was of temporary benefit only to French missionaries in Vietnam until the persecutions of the 1820s.

The earliest signs of a systematic state policy to establish a significant French presence off the mainland of Southeast Asia began in the 1840s, when King Louis Philippe's (r. 1830–1848) premier, François Guizot, sanctioned a search for a naval station in the South China Sea. But the effort, intended to support French trade with China, produced no suitable point d'appui. The intensification of missionary appeals for protection from persecution in Vietnam in 1856 and 1857 spurred the beginnings of the French commitment to large-scale territorial annexation in Southeast Asia. Anti-Christian violence provided the occasion for intervention, but French military involvement plainly reflected an interest in pursuing economic and strategic advantages in the region. The Brenier Commission (1857), convened to report on the proposal for a Vietnam expedition, strongly emphasized the material benefits both of establishing some form of protectorate over Vietnam and of gaining a strategic foothold from which to protect French access to the China market. The proposal was controversial, and Napoleon III's (r. 1852–1870) cabinet balked at the likely cost. It was the emperor himself who made the final decision, influenced by Empress Eugénie's concern about Vietnamese persecution of missionaries.

The subsequent development of a new French colony in Vietnam was the product of initiatives by French expeditionary admirals. The first of these, Admiral Rigault de Genouilly, seemed reluctant to embark on wholesale conquest. He planned to impose a limited political and commercial treaty on the Vietnamese after a difficult assault on the port of Tourane (Danang), close to the capital. But the Vietnamese declined to capitulate, and his successor, Admiral Page, decided to shift the locus of French attack southward to Cochin China, the main source of Vietnam's food supply. In a peace treaty forced on him by Admiral Louis Adolphe Bonard in 1862, the Tu Duc emperor finally acknowledged French sovereignty over Saigon and the three eastern provinces. In June 1867, without prior authorization from Paris, Admiral-Governor Charles-Marie de La Grandière seized an opportunity provided by rebel cross-border infiltration to extend and consolidate French dominance over the rest of the Mekong Delta. Shortly afterward, a nominal French protectorate over the kingdom of Cambodia, previously agreed upon in secret between King Norodom (r. 1860–1904) and Admiral de La Grandière, was reluctantly acknowledged by King Mongkut (Rama IV, r. 1851–1868) of Siam, Norodom's overlord, in a formal treaty with France. In return for Siamese renunciation of suzerainty over Cambodia, the French foreign office, in the teeth of de La Grandière's protests, acknowledged Siamese sovereignty over two formerly Khmer provinces, Battambang and Siem Reap, held by Siam since 1794. Battambang, which bordered the Great Lake of Cambodia (Tonle Sap), was of considerable economic value, and Siem Reap, containing the ruins of Angkor, was the historical heartland of the Khmer people. These two Siamese-held Khmer provinces remained consistently high on the French colonialist agenda for future retrieval.

The historiography of the later stages of French expansion reflects considerable debate and forms part of the wider framework of controversy over the nature of later nineteenth-century imperialism as a whole. Most historians agree that there was a clear pattern of preemptive economic calculation behind French expansion over the following forty years. There is less agreement as to whether expansion was led

by officials seeking to establish a *raison d'être* for this haphazardly assembled colony or whether business pressures alone were strong enough to account for it.

The early stages of growth took place under exclusively naval management. In the 1860s and 1870s, French entrepreneurs and banks had largely ignored Cochin China as a field of activity, but the navy's colonial administration pursued strategic control over the remainder of Vietnam's major river systems as a means of securing political dominance over the whole economy. Initially, Admiral de La Grandière had hoped to seize Siamese Laos in order to connect the Mekong Delta with the southwest China market. Draining Chinese goods out through the delta would help, in the governor's phrase, to turn Saigon into "the queen of the Far East," outperforming Shanghai, Hong Kong, and Singapore. When the Mekong River expedition under Captain Ernest Doudart de Lagrée (1823–1868) discovered in 1866 that the great river was blocked and unusable for this purpose, administrative attention shifted away from Laos and toward the northern Vietnamese province of Tonkin (Tongking). There, when a French trader discovered in 1872 and 1873 that the Song Koi, or Red River, was commercially usable as a link to the southwest China market, the naval administration in Saigon under Admiral Marie Jules Dupré acted. An unauthorized expedition was mounted, led by Lieutenant Francis Garnier (1839–1873), to seize the Song Koi and with it the rest of Tonkin. One of the major concerns driving Dupré had been the fear of intervention by British and German China coast business interests, which had shown excitement at the opening of the river. But when Garnier was killed on a *sortie* in December 1873, French forces were ignominiously withdrawn. In 1874, Dupré and his successor, Admiral Jules François Émile Krantz, sought to cover French embarrassment by imposing two treaties on Vietnam by which the French acquired a range of special commercial and political privileges in Tonkin and Annam. British diplomatic pressure, however, ensured that the term *protectorate* did not appear in these agreements, leaving French dominance in question.

The Garnier fiasco, a mission undertaken without authorization from Paris, had been a response to local crisis and opportunity. The

subsequent decision to seize Tonkin by the government of Jules Ferry in the early 1880s was an outcome of a more complex process of political change in France itself, stimulating the revival of a state policy of colonial expansion in Africa, the Middle East (West Asia), and the Pacific.

Defeat at the hands of Prussia in 1870 had helped to inflame French nationalism, but German continental ascendancy made French colonial expansion a safer outlet than *revanche* (revenge) for the restoration of French prestige. Business interests were also becoming more evidently engaged in the process of colonial acquisition. Historians, however, are divided over whether French capitalism or French nationalism was the greater influence in French expansion. Charles Ageron (1978), C. M. Andrew and A. S. Kanya-Forstner (1981), and Patrick Tuck (1995) have developed, in relation to Southeast Asia and elsewhere, the argument of Henri Brunschwig that the nationalistic colonial party was the predominant force shaping French late-nineteenth-century imperialism. John Laffey (1969), Pierre Brocheux and Daniel Hémerly (1995), and Dieter Brötzel (1971) have argued that French expansion in Southeast Asia was fundamentally a business-driven process.

In the new climate of metropolitan commitment to expansion, the cabinet of Jules Ferry (t. 1883–1885) opted to monopolize control over the Song Koi route into southwest China. Ferry found himself engaged first in hostilities with the Vietnamese in 1883 and 1884 and then in a debilitating conflict with the Vietnamese monarch's overlord, China. By 1885, the increasing scale and cost of the Franco-Chinese war provoked revulsion among the French public, and Ferry was ejected from office. His successors were to take a further decade to pacify northern Vietnam, and the possession, renamed French Indochina, continued to disappoint French economic expectations. A belated effort by Governor Paul Doumer in 1899 and 1900 to galvanize the Indochina economy by organizing the seizure of the Chinese province of Yunnan was suppressed by the French foreign office, resulting in Doumer's removal. Not until after the start of World War I (1914–1918) did the economy begin to fulfill the aspirations of the 1880s.

As colonial expansion proceeded in the 1880s, French possessions in mainland Southeast Asia came to converge with those of the

British in the vicinity of Siam, and the "Siam question" then emerged as an acute issue in Anglo-French diplomacy. Already at odds with Britain over Egypt and in tropical Africa, the French colonial interest in Paris and Indochina showed increasing concern at the possibility that Siam would become a British colony. Siam's economy, already closely linked to the trade of British India, Singapore, and Hong Kong, could only be wrenched into alignment with that of Indochina if the French imposed political control and forced the kingdom's economy into their new colonial protectionist system, formed in 1892. This became the objective of a powerful French colonial lobby, the *parti colonial*, which worked through official networks and through Parliament to promote the advance of French expansion across the Mekong Valley. French challenges to Siamese suzerainty over Lao principalities in the Mekong Valley eventually precipitated a crisis (the Paknam Incident) between France and Siam in 1893, marked by a French naval invasion of the Chaopraya River and the imposition of a humiliating treaty. But the crisis backfired on the French colonialists. In order to reduce ensuing diplomatic friction with the British, the French foreign ministry chose to sidestep the colonial party, and by the Declaration of London in 1896, France agreed with Britain to avoid pursuit of military measures or exclusive privileges in the central part of the kingdom. Debarred from pursuing French dominance, the colonial party aimed at joint Anglo-French exploitation of the kingdom, but this project was thwarted by Siamese exclusion of virtually all forms of French influence from the kingdom. Only in negotiations leading to the Entente Cordiale of 1904 did the French colonial party finally give up its ambitions for an Anglo-French "condominium" in Siam, in return for the prospect of British diplomatic support for the French dominance of Morocco. By the terms of a subsequent agreement with Siam in 1907, the colonial party agreed to sacrifice some French extraterritorial rights in return for the Siamese surrender of Battambang and Siem Reap to the French-protected state of Cambodia. This final acquisition brought French territorial expansion in Southeast Asia to a close.

FRENCH INDOCHINA

The term *French Indochina* refers to the French-created Indochinese Union (1887), constituting the colony of Cochin China, the protectorates of Annam, Tonkin (Tongking), and Cambodia. When Laos became a French protectorate in 1893, it was incorporated in this administrative structure.

The imperialistic expansion of France into Indochina was begun in the late 1850s and was

completed by 1893. The French occupied Tourane (Đà Nẵng) in 1858 and proceeded to capture Saigon, including the three surrounding provinces, from 1859 to 1862. Cambodia then became a French protectorate in 1863. Subsequently, in 1867, the French annexed three other provinces in lower Cochin China, situated west of the Mekong Delta to Pulo Condore. Annam and Tonkin became French-protected territories in 1883 and the French extended similar protectorate status to Laos in 1893.

During the Pacific War (1941–1945), French Indochina initially allied itself with the Japanese Imperial military authorities. However, in the early part of 1945, the French civil administration was terminated and replaced by Imperial Japanese military rule. The Indochinese Federation replaced the prewar Indochinese Union, whereby the components Vietnam, Cambodia, and Laos were constituted as quasi-independent “associated states” within the federation.

Full political independence was attained: Cambodia in 1953, Vietnam in 1954, and Laos in 1953 and 1954. Vietnam, however, was partitioned at the seventeenth parallel that split the country into two, with Tonkin and North Annam constituting the Democratic Republic of Vietnam (DRV) and Cochin China and South Annam forming the Republic of Vietnam (or South Vietnam).

FRENCH INDOCHINESE UNION (UNION INDOCHINOISE FRANÇAISE) (1887)

Spread over some thirty-odd years, the French takeover of Indochina started with the absorption of southern Vietnam and its conversion into the Cochin China colony (1858–1867); it was completed with the establishment in 1893 of the French protectorate over the Lao principality of Luang Prabang. But as early as 1887, Cambodia, Cochin China, Annam, and Tonkin had been brought together to form the *Union Indochinoise*, placed under the ultimate authority of the French minister of marine and colonies in Paris. The administration was entrusted to a civilian governor-general assisted by a higher commander of the troops, a higher commander of the marine, a general secretary, a chief of the judiciary service, and a director of the customs and excise. The governor-general was advised but not controlled by a government council (called *Conseil Supérieur de l'Indochine*—Higher Council of Indochina—from 1887 to 1911, and *Conseil de Gouvernement*—Council of Government—after 1911), which sat each year to discuss general matters of public interest.

It was Paul Doumer, governor-general from 1897 to 1902, who made the Indochinese Union an actual administrative and financial unity. He centralized the civil services of the colony—customs, postal telegraph service, forestry, and commerce. He also introduced the common general budget funded by the proceeds of indirect taxes (customs, taxes on opium, alcohol, salt, etc.), while revenues from direct taxes (land and poll taxes) were assigned to the regional administrations. At the same time, he organized for Laos an entirely new state within borders formed by the amalgamation of territories that had never before been under a single administration. During Doumer's term of office, the Indochina Geographical Service was created, as well as the *École Française d'Extrême-Orient*, a scientific establishment whose mission was to collect and study the archaeological and cultural data of Indochina and to preserve its historical monuments.

The *Union Indochinoise* incorporated into a political, economic, and social federalism five separate administrative regions, under five regional heads, the governor of Cochin China and the *résidents supérieurs* of Annam, Tonkin, Cambodia, and Laos. It represented a complex

supranational structure. If Cochin China was the colony in the narrow constitutional sense, a system of indirect government, similar to that applied by the British to certain parts of Burma, was put into practice in the protectorates of Cambodia and Laos. Local political structures based on the Cambodian provincial governors and the Laotian *chao miang* (heads of provinces) had been left intact. But it meant for Vietnam in particular the dismantlement of its territorial unity. Moreover, the bureaucracy of the “protected” Vietnamese emperor was merged into a highly centralized system dependent exclusively on the competence of France's representatives, who surrogated themselves to the authority of the monarch on the one hand, and his mandarins on the other, for the effective exercise of power. In such a regime of protectorate, the distinction between direct and indirect rule was legal rather than practical.

In fact, the actual movement was toward more direct rule—notwithstanding Governor-General Paul Beau's (t. 1902–1907) efforts after 1902 to restore a part of the local administration and set up a consultative assembly in Tonkin, and Albert Sarraut's (t. 1911–1914) promise in 1911 to revert to the policy of association, while reforming justice, developing public education, and enlarging political representation in consultative councils. Eventually, in 1928, Indochina was endowed with a *Grand Conseil des Intérêts Économiques et Financiers* (Great Council of Economic and Financial Interests). It was composed of a French section and a native section, with an advisory role for all financial and economic issues and the right of decision on the matters of taxation. At the regional level, the creation of indigenous assemblies with elected delegates seemed to indicate a liberal evolution. Nevertheless, the governor-general's authority remained absolute, and as far as his position was concerned the term *viceroi* could be used. If the policy of association was supposed to be guiding the French administration of the *Union Indochinoise* from 1907 until the suspension of direct French rule by the Japanese in March 1945, the powers of the governor-general were repeatedly exercised to overrule the nominal autonomy of the component territories. Although native sovereignties continued to be recognized in certain formalities, in practice they were considered to be overridden by the authority of the French state.

In any case, during most of its history, the *Union Indochinoise* was administered by governor-generals whose average term of office was less than two years, with the exception of Paul Doumer, who stayed in office for five years. Moreover, the men appointed to this paramount position were nearly proconsuls whose previous careers had brought them little experience relevant to the problems of colonial administration. Rare certainly were men of established professional standing whose names came to figure on the list of Indochina's governors-general.

The movement toward greater centralization, rationalization, and efficiency could be explained by metropolitan demands to reduce costs and to find local resources for colonial improvements and for European capitalist investments. The interest attached to the colonies was indeed related to the investments they represented and controlled by means of big financial groups: the principal mining or rubber companies in Indochina depended more or less directly on the Banque de l'Indochine (Bank of Indochina). The influx of private capital (more than 3 billion francs from 1924 to 1932) accelerated economic development, while colonial loans were allocated to the construction of the rail and road infrastructure (Nguyễn 1999: 350–351). But the new economy based on rich cultures, mining, and big commerce disturbed the balance between the forms of activity: efforts were concentrated on the exportation of raw materials and the importation of metropolitan manufactured articles. And, compared with the other products, rice was by far the most exported item. Thanks to the construction of new dykes in Tonkin and of irrigation canals in Cochin China, rice fields covered 4 million hectares in 1913, and 5.6 million in 1938 (*ibid.*: 354).

But the people did not live better because rice, coal, and rubber could now be exported. Indochina's apparent prosperity at the end of the 1920s was beneficial to less than 10 percent of the population, and first to the civil or military French population (36,000 in 1937) and to a thin class of well-off natives (*ibid.*: 356). The 1929–1930 economic crisis was going to show that the number of economic consumers in Indochina amounted to 1,800,000 persons, whereas more than 17 million were utterly destitute (*ibid.*).

FRETILIN (FRENTE REVOLUCIONÁRIA DO TIMOR-LESTE INDEPENDENTE)

FRETILIN, the Revolutionary Front for an Independent East Timor (Frente Revolucionária do Timor-Leste Independente), was established on 12 September 1974 by members of the Timorese Social Democratic Association (Associação Social Democrata Timorense, ASDT), which had been founded only a few months previously, on 20 May 1974. Initially, its founders considered FRETILIN as a united front directed by a central committee rather than as a unitary party.

During 1975, after conflict with rival parties, FRETILIN gained control of the Portuguese colony, and on 28 November 1975, it declared the country's independence as the Democratic Republic of East Timor. The first East Timorese government under FRETILIN included Francisco Xavier do Amaral as president, Nicolau

Lobato as prime minister, Mari Alkatiri as minister of state for political affairs, Abilio de Araujo as minister for economic and social affairs, Rogerio Lobato as defense minister, Vincente Sa'he as minister of labor and welfare, José Goncalves as minister for economic coordination, Alarico Fernandes as minister for internal affairs and security, and José Ramos Horta as minister of foreign affairs. Many of these founding members of FRETILIN went on to play significant roles in a long struggle to regain independence for East Timor.

On 7 December 1975, Indonesia invaded the country, and East Timorese resistance groups, under FRETILIN leadership, were forced to flee into the mountains. Key members of the Central Committee—Mari Alkatiri, Rogerio Lobato, and José Ramos Horta—were overseas. As a consequence, the Central Committee established two fronts, an armed front and a diplomatic front, to maintain its struggle. The Armed Forces for the Liberation of East Timor (*Forças Armadas da Libertação de Timor Leste*, FALINTIL) carried out guerrilla warfare within East Timor, whereas the diplomatic efforts were pursued at the United Nations and in countries that supported FRETILIN's struggle, in particular Portugal and Mozambique.

In the year after the invasion and under heavy pressure from Indonesian forces, party stalwarts in the mountains adopted a Marxist-Leninist stance, which resulted in internal disputes. Xavier do Amaral, the head of FRETILIN and the country's former president, was expelled from FRETILIN and was later captured by the Indonesians in September 1977; he was replaced by Nicolau Lobato, who would be killed on 31 December 1978. José Alexandre "Kay Rala Xanana" Gusmão replaced Lobato as the head of FALINTIL and began a process of restructuring the resistance forces in the interests of national unity. As part of this process, FALINTIL was formally detached from FRETILIN on 7 December 1986, to become the army of national resistance. One year later, Gusmão formally resigned from FRETILIN and was joined in this move by Ramos Horta.

The Central Committee of FRETILIN agreed to work with the broader resistance bodies established under Gusmão's leadership. The first of these was the Revolutionary Council of National Resistance (CRRN), formed in 1981; this was followed by the Na-

tional Council of Maubere Resistance (CNRM), formed in 1987, and the National Council of Timorese Resistance (CNRT), which was established in Peniche, Portugal, in April 1998. During this period, a third, "clandestine" front was established to carry the struggle from the countryside into the towns and villages of East Timor.

During the 1980s, FRETILIN was headed by a succession of guerrilla leaders, two of whom, Ma Huno (Antonio Gomes) and Hudo Ran Kadalak (José da Costa), were captured by Indonesian forces, as was Xanana Gusmão in 1992. For a brief period thereafter, Konis Santana assumed command of both FALINTIL and FRETILIN.

In 1999, East Timor was given the right to a UN-supervised vote on whether to accept autonomy within Indonesia. Activists under the umbrella of the National Council of Timorese Resistance rallied the population, which voted overwhelmingly for independence. Following this vote, the UN Transitional Administration of East Timor assumed responsibility from Indonesia for preparing the country for independence.

For a period, the CNRT acted as the principal representative of the East Timorese population. Key political figures returned from detention, from the diaspora, or from the mountains where they had maintained the guerrilla struggle.

In preparation for elections to the Constituent Assembly that was to draft a constitution for the country, FRETILIN—as well as its rival, União Democrática Timorese (UDT)—withdrew from CNRT to operate independently. Other parties were also established or reconstituted until, in the end, there were sixteen parties in the election for the eighty-eight-member Constituent Assembly.

Francisco Xavier do Amaral formed his own party, the Timorese Social Democratic Association (ASDT), using the name of the 1974 organization that was transformed into FRETILIN; Abilio de Araujo, who had been expelled from FRETILIN for cooperating with Indonesia, established the Timorese National Party (PNT).

In the elections held on 30 August 2001, FRETILIN obtained over 57 percent of the vote, giving it an allocation of forty-three nationally determined seats and another twelve district seats in the new assembly. It was thus able to form a government on 20 May 2002

when the United Nations officially handed over authority to East Timor.

The new government included Mari Alkatiri as prime minister, Rogerio Lobato as minister of internal affairs, and José Ramos Horta as foreign minister. Lu Olo (Francisco Guterres), the head of FRETILIN, became the speaker of the National Assembly, and Xanana Gusmão, who had been elected by an overwhelming majority in a contest with Xavier do Amaral, became the president of the revived Democratic Republic of East Timor. It had taken twenty-seven years of work by a committed group of East Timorese, all of whom were at one time or another associated with FRETILIN, to achieve this goal.

FRIARS, SPANISH (THE PHILIPPINES)

The friar orders played a crucial role both in the evangelization of the Philippines and in the maintenance of Spanish colonialism in the islands for over three hundred years. The close relationship between ecclesiastical mission and secular authority had its basis in the *patronato real* (royal patronage), whereby the Spanish Crown assumed the financial support of the Roman Catholic Church in the New World, including the cost of sending missionaries, in return for the privilege of nominating ecclesiastical benefices. This arrangement was extended to the Philippines with the arrival of Miguel López de Legazpi (1505–1572) to-

gether with five members of the Augustinian order in 1565, an event that constitutes the origins of missionary endeavor in the archipelago. Many religious came from Spain, a journey that involved sailing to Vera Cruz on the Caribbean coast of Mexico, traveling overland to the Pacific port of Acapulco via Mexico City, and finally taking a ship to Manila. Sending just one missionary from Spain to the Philippines is said to have cost 129,526 maravedis or about 1,012 pesos, a truly fabulous sum for the period (Cushner 1971; Roth 1977). Despite an unfavorable start to the mission, reflecting the tenuousness of the Spanish settlement's early days, there were 134 religious in the archipelago by 1595. Apart from the Augustinians, these included the Franciscans arriving in 1578, the Jesuits in 1581, and the Dominicans in 1587. Other orders subsequently arrived: the Augustinian Recollects (1606), the Fathers of San Juan de Dios (1641), the Vincentians or Paúles (1862), the Capuchins (1886), and the Benedictines (1895). By 1896, there were a total of 1,124 friars in the archipelago (Cushner 1971; Roth 1977). Nor should the good works of the female religious be overlooked. Notable for their contributions to charity, education, and health were the Beaterio of the Society of Jesus, established in 1684 (presently the Religious of the Virgin Mary); the Beaterio of Santa Catalina in 1696; and the Daughters of Charity in 1852. The Philippines also functioned as a base for missionary endeavors to the rest of Asia and the Pacific; missionaries set forth from the archipelago to evangelize neighboring peoples in Japan, China, Formosa (Taiwan), Indochina, Siam (Thailand), the Moluccas, the Marianas, and the Caroline and Palau islands.

The religious retained houses in and around Manila, though each of the four main orders had definite districts or missions assigned to them by the king (royal decree of 27 April 1594). Augustinians were mainly in northeastern Luzon and the central Visayas; Franciscans in southern and eastern Luzon, Mindoro, and Marinduque; Jesuits (before their expulsion in 1768) in the Visayas; and Dominicans in Pangasinan and northwestern Luzon. The Augustinian Recollects also played an important role in evangelizing Romblon, Bohol, and Negros. Members of the missionary orders enjoyed a great deal of freedom to evangelize in their own ways. The *Omnimodam auctitatem*, first

granted by Pope Adrian VI to the Franciscans in 1522 and subsequently extended to the other orders, gave friars permission to perform every episcopal faculty as occasion demanded for the conversion of pagans and the preservation of the faith. Their independence was further strengthened by the papal brief *Exponi nobis* in 1567, which effectively authorized members of the missionary orders to act in the capacity of parish priests throughout the archipelago. Friars were only supposed to administer *doctrinas*—communities of the recently converted—as a temporary stage in preparing these communities to become established parishes or curacies, at which point they were to be handed over to the care of the secular clergy. However, due to the shortage of the latter in the Philippines, this transfer was never completed, and many *doctrinas* effectively became regular parishes administered by the religious orders.

Evangelization was carried out in the vernacular despite the difficulties often encountered in finding appropriate equivalents for Christian concepts; it was considered easier for a friar to learn the local language than for a community to learn Spanish. The colonial government's repeated orders to establish local schools in which the Spanish language was taught were stubbornly ignored. Instead, the friars' main missionary endeavors were directed at the principal inhabitants of a village, as such conversions often encouraged others in the community to follow suit. These first baptisms were conducted with great pomp to impress upon people the solemn nature of the sacrament being received, and they were accompanied by choirs and brass bands and followed by other festivities. The fact that many friars were accomplished physicians able to dispense medicine and cure the sick also greatly facilitated their activities. Nor should the distinct social advantages of conversion in terms of legal status, tributary payments, and labor requirements be underestimated in this respect. For most of the colonial period, these friars constituted the only European presence to be found in most native pueblos; Spanish settlers did not become a significant factor until the second half of the nineteenth century with the opening of the Suez Canal in 1869, and even then, they came only in small numbers. As such, the religious often paid dearly for their mission, being seized or murdered by nonsubdued tribespeople and

marauding pirates. Jesuits in the Visayas proved particularly tempting prizes for Muslim raiders due to both their geographic vulnerability and the ransoms they commanded. Still, this missionary endeavor was ultimately responsible for the gradual evangelization of most of the archipelago, from the northernmost islands off Luzon to the tip of the Zamboanga peninsula in Mindanao.

Relations were often strained among the friar orders, the colonial governments, and episcopal authorities. Enforcement of the royal patronage resulted in friar-secular clashes. For instance, the Augustinians and the Jesuits objected to the action of governors-general in appointing or removing the religious from parishes; the friar orders claimed that only their superiors in Rome possessed such a prerogative. The orders successfully opposed in 1637, 1650, and 1682 the efforts of the colonial governments to impose the Crown's right of *presentación* (the right to offer an ecclesiastical benefice). In this struggle with the secular authorities, the orders turned to the simple threat of relinquishing their parishes amidst an acute shortage of secular clergy. Likewise the orders relied on the same strategy when they resisted the efforts of the Archbishop of Manila during the seventeenth and eighteenth centuries to exert control over the friar orders by vetting those acting as parish priests and carrying out episcopal visitations. However, in 1773 Archbishop Basilio Sancho de Santa Justa y Rufino bravely called the Augustinians' bluff and expelled them from their parishes in Pampanga. Rufino replaced them with Filipino clergy who were hastily ordained and largely unprepared. The dire consequences of this policy considerably weakened the development of a native clergy vis-à-vis the religious, who returned to their parishes and attained a stronger position than they had possessed previously. Although the Crown generally supported the policy of episcopal visitation, as any claim to perpetual parish jurisdiction seriously compromised the royal patronage, it was also mindful of the important role friars played in maintaining allegiance and order in rural areas and so sought to mediate in these disputes.

Many friars destined for the Philippines were those who were "exiled" there for one reason or another, with consequent repercussions for both the clerics involved and the proper evangeliza-

tion of native peoples. Regular complaints about their abuse of office had been partly responsible for attempts at enforcing episcopal visitation in the first place. Friars were frequently accused of exacting excessive fees for burials and weddings (supposedly free or voluntary offerings), illegally using indigenous labor, and requisitioning food supplies. Still others were charged with openly flaunting their vows of celibacy and living in concubinage with indigenous women who acted as their so-called housekeepers. Many of these women also played important roles as the priests' agents or factotums, helping them with their financial and trade transactions. Specific orders were known for particular transgressions: Augustinians were continually admonished for engaging in local commerce, Jesuits for usurping lands and engaging in the galleon trade, and Dominicans for excessive rigor and the use of corporal punishment at the slightest provocation. A particular cause of much resentment was the growth of the religious-owned estates, or *haciendas*, often acquired by means of fraudulent surveys and the illegal incorporation of village lands. Anger and frustration culminated in the agrarian revolt of 1745, one of the most serious uprisings against Spanish colonialism prior to the Philippine Revolution (1896–1898). Attacks on haciendas occurred in the provinces of Cavite, Tondo, Bulacan, and Batangas, during which granaries and irrigation works on disputed lands were burned down or destroyed, cattle were stolen or slaughtered, and administrators were forced to flee. The rebellion was only suppressed by an adroit mixture of firmness and redress, which involved restoring much of the disputed lands to the municipalities in question. Despite limitations on growth, the religious orders still had extensive landholdings by the nineteenth century, from which they derived a substantial income.

The influence and material assets of the religious orders grew accordingly in a colony where they played such an important role in upholding the regime, though much of this wealth was directed toward the maintenance of schools, hospitals, orphanages, asylums, and universities. In particular, the expansion of the export economy proved an incentive to develop the friar-owned haciendas during the nineteenth century. Undeveloped portions of estates were often leased out to Chinese mestizo or indigenous tenant farmers (*inquilinos*), who gen-

erally hired sharecroppers (*kasamahanes*) to work the land. Attempts to raise rents in line with increasing productivity were bitterly resented and a major cause of the widespread anticlericalism found among the *ilustrado* (intelligentsia) sector of society. Some 40 friars were killed during the Philippine Revolution, and a further 403 were taken prisoner, though virtually all of these were later released (Cushner 1971; Roth 1977). Still, only 472 religious were left in the Philippines by 1900, and their numbers continued to decline, falling to 246 in 1902 (Cushner 1971; Roth 1977). Appropriation of friar lands was called for under the Malolos Constitution (1899) but was not realized until 1903 when the new U.S. colonial administration purchased approximately 166,000 hectares for redistribution, farmed by some 60,000 tenants (Cushner 1971; Roth 1977). However, the subsequent resale of these estates to members of the upper class did much to consolidate a landed elite in the Philippines and proved the root cause for a continuing agrarian unrest that persists today.

FRIAR-SECULAR RELATIONSHIP

Relations between the religious orders and the colonial and episcopal authorities of the secular clergy in the Philippines under Spanish colonialism were seldom harmonious. The *Omnimodam auctitatem* (“Enlargement of any kind,” meaning extension of power) of Pope Adrian VI (r. 1522–1523) in 1522 granted the missionary orders the freedom to evangelize in their own way, and the papal brief *Exponi nobis* (“It is expounded to us,” meaning provide a detailed explanation) of 1567 effectively allowed them to act as parish priests in the archipelago. Friars were only supposed to administer communities of the recently converted (known as *doctrinas*), as a preparatory stage to becoming established parishes that were then to be surrendered to the secular clergy. Despite Philip II’s (r. 1556–1598) confirmation in 1583 that parochial administration belonged to the latter except where dire necessity had prompted papal concessions, the transfer of parishes was never completed in the Philippines. An acute shortage of secular clergy, occasioned by the reluctance to ordain Filipinos, meant that many *doctrinas* effectively became regular parishes administered by friars. The subsequent history of the colonial state in the islands was largely determined by the various attempts of both royal and episcopal officials to limit the influence of these orders and exert their own authority over rural populations.

Enforcement of the royal patronage led to much bitter controversy as governors-general tried to remove or appoint the religious from parishes, which the latter claimed was the sole prerogative of their superiors in Rome. The colonial governments’ attempts to impose the Crown’s right of nomination were successfully resisted in 1637, 1650, and 1682. The simple expedient of threatening to relinquish their parishes in the face of an acute shortage of secular clergy gave the orders the upper hand in any such contest of wills. A further attempt by

Ferdinand VI (r. 1746–1759) to relieve the orders of their parishes in 1753 was never put into effect in the Philippines. Similarly, efforts by the archbishops of Manila to exert episcopal control over the friar orders by vetting religious acting as parish priests and carrying out visitations failed for much the same reasons during the seventeenth and eighteenth centuries. The most serious confrontation occurred in 1773 when Archbishop Basilio Sancho de Santa Justa y Rufino called the Augustinians’ bluff and expelled them from their parishes in Pampanga, replacing them with hastily ordained and unprepared native clergy. The disastrous results of this policy led the king to rescind his actions and restore the friars to their ministries. Although the Crown vigorously resisted all claims that might compromise the royal patronage, it was also mindful of the important role the religious played in maintaining allegiance and order in rural areas.

Secularization assumed more overtly political dimensions during the nineteenth century as an issue between a largely Spanish regular clergy and an increasingly native secular one. The shortage of regular clergy due to the expulsion of the Jesuits (1768), together with the fact that there were fewer arrivals from Spain during the Napoleonic Wars (1803–1815), ensured that secularization continued as parishes were turned over to native clergy on an interim basis. The question was raised once again in 1803 when three new parishes were assigned to the regular orders, prompting a petition to the king to assign them to the secular clergy. The subsequent royal consent, however, was simply ignored by colonial authorities in the Philippines. Prior to the independence of Spain’s American colonies, successive governments in Madrid had been in favor of further secularization to relieve the state of the high costs of sending religious to the colonies. After the loss of the Americas, however, Ferdinand VII (r. 1808–1833) moved swiftly to prevent any further moves of that type and even called for the restoration of the religious orders to their former parishes on the death or retirement of their secular incumbents (royal order of 8 June 1826).

The last half century of Spanish rule was one of increasing hostility between a largely secular native clergy deemed to have separatist aspirations and a colonial administration bent on restoring the influence of the religious orders.

Matters were only exacerbated by subsequent royal orders that granted friars parishes that were formerly in the possession of the secular clergy and by the return of the Jesuits in 1859. Events further degenerated after the recall of the liberal governor-general Carlos Maria De La Torre y Nava Cerrada (t. 1869–1871) and his replacement by the much less sympathetic Rafael Izquierdo (t. 1871–1873). Subsequently, three secular native priests—Frs. José Burgos (1837–1872), Mariano Gomes (1799–1872), and Jacinto Zamora (1835–1872)—were implicated in the abortive Cavite Mutiny of 1872 and executed. Others were sentenced to varying terms of exile in Guam. It is now generally considered that the friars seized upon this incident to preserve their influence and discredit the native clergy. Though the latter played a much less prominent role in subsequent developments, José Rizal (1861–1896) dedicated his second novel, *El Filibusterismo*, to the memory of the executed priests, and still others were arrested for circulating revolutionary material. The complete secularization of the parishes was only effected during the Philippine Revolution (1896–1898), when many of the religious were forced to abandon their parishes and subsequently prevented from returning.

FUJIWARA KIKAN (F KIKAN)

Harnessing Indigenous Nationalist Support

Fujiwara Kikan (known as F. Kikan) was the Japanese military intelligence organization headed by Major Fujiwara Iwaichi (1908–1986) (who was promoted to lieutenant colonel in August 1944). The *F* stands for Fujiwara as well as "Freedom" and "Friendship"; *Kikan* means "organization."

The Japanese Imperial General Headquarters (IGH) formed F. Kikan in September 1941. Originally, the organization consisted of six officers (excluding Fujiwara) and an interpreter; later, it increased to more than twenty members. At the end of September 1941, members were sent to Bangkok to contact and garner the cooperation of the various nationalist movements—Indian, Malay, Indonesian, and Chinese—in preparing for the war. They were most successful with the Indian Independence League (IIL). Fujiwara met its leader, Pritam Singh, in October 1941 and secured his agreement to cooperate with the Japanese Imperial Army (JIA). (Pritam Singh died in a plane crash in Japan in March 1942.) When the Pacific War (1941–1942) started, F. Kikan, with the help of some seventy IIL members who followed the JIA, succeeded in persuading many British Indian army soldiers to switch allegiance without fighting. While advancing southward in the Malay Peninsula, the Indian National Army (INA), which had been formed on 31 December 1941, recruited troops from among surrendered British Indian soldiers. In the main cities, IIL branches were established.

After reaching agreement with Fujiwara, Captain Mohan Singh, who was skeptical of the real intention of the Japanese, became commander of the INA; in February 1942, he was promoted to major general. The agreements with both Pritam Singh and Mohan Singh stated that the Indian organizations were independent and were to be treated as Japanese al-

lies. These agreements were, however, regarded by the IGH as personal matters and ignored. The IGH staffers tended merely to utilize the Indian organizations as their subordinates. Though 25,000 of the 65,000 British Indian army soldiers who had surrendered to the Japanese ultimately joined the INA, the superior attitude exhibited by the Japanese increasingly irritated their organization (Allen 1977: 261).

F. Kikan also contributed largely in the Sumatran campaign. Twenty Sumatra Youth League members recruited by F. Kikan penetrated into Sumatra and succeeded in mustering tens of thousands of local people to drive out the Dutch. F. Kikan also played a part in gaining the support of the Young Malay Union (*Kesatuan Melayu Muda*) of Malaya, headed by Ibrahim Yaacob (1911–1979).

In April 1942, Fujiwara was transferred to the Southern Army Headquarters, and F. Kikan was replaced by Iwakuro Kikan, headed by Colonel Iwakuro Hideo (1897–1965). After this replacement, Mohan Singh was arrested in December 1942. A paramount nationalist leader, Subhas Chandra Bose (1897–1945), arrived in Singapore from Berlin in July 1943 to lead the IIL as well as the INA.

FUNAN

An Early Maritime Power

Funan is the name applied in Chinese dynastic histories to a maritime kingdom located in the lower Mekong Valley of modern Cambodia and Vietnam, dated from the third to seventh cen-

turies C.E. At the height of its power in the mid-third century, Funan is also thought to have controlled some of the major ports on the Malay Peninsula and to have been influential in the development of maritime trade between India and China.

Archaeological excavations in 1944 at the town of Oc Eo in the western Mekong Delta have demonstrated close contact with the Indian subcontinent during the first centuries C.E. It may well have been a manufacturing site for the nearby city of Angkor Borei, where archaeologists from Hawai'i University have recently excavated the remains of a substantial ceremonial center.

Much of our knowledge of Funan is derived from a Chinese embassy led by K'ang T'ai and Chu Ying in the mid-third century C.E. Their original writings have not survived but are quoted in later Chinese histories. They include a description of the founding of Funan by a man named Hun-t'ien, who sailed to Funan and married a queen named Liu Ye or “Willow Leaf.” This story is also recounted in a seventh-century inscription from Champa. There, however, the man is called Kaundinya and the queen, Soma.

The importance of Funan as a maritime power is attributed to the king Fan Man or Fan Shi Man, whose reign has been dated to around 200 C.E. He is said to have constructed a fleet of ships and to have attacked more than ten kingdoms. Only three kingdoms were individually named, but all have been identified with the Malay Peninsula. These raids appear to have been an attempt to take control of the maritime trade flowing from India through the Malay Peninsula to China.

The embassy of K'ang T'ai and Chu Ying was received by King Fan Chan, who also sent and received envoys from the country of Dayuezhi in northern India. Fan Chan sent a further embassy to the southern Wu kingdom of China in 243 and 244. However, relations with Wu gradually soured, and in 268, envoys were sent to the northern Chinese kingdom of Jin, together with representatives from the kingdom of Linyi in what is now central Vietnam. Between 270 and 280, Linyi and Funan continually harassed the southern Wu borders until the kingdom finally fell to the Jin in 280 C.E. King Fan Hsün thereafter sent three trade embassies to China from 285 to 287.

Little is known of Funan in the fourth century. In 357 C.E., a gift of trained elephants was sent to the Jin court by a king of Funan named T'ien Chu Chan-t'an. T'ien Chu was a common Chinese name for India at that time, and it has been argued that this king was of Indian origin (Coedès 1968: 46–47). Another king, named Kaundinya, is said to have come from the kingdom of Pan Pan on the Malay Peninsula and to have introduced Indian administrative reforms in the early fifth century. Little is really known, however, regarding either of these men. The first king of Funan with a recognizably Indian Sanskrit name was Shih-li-t'o-pamo (possibly Sri Indravarman), who sent three embassies to China between 434 and 438 C.E.

In 484 C.E., an embassy was sent by Kaundinya Jayavarman of Funan and delivered by a Buddhist monk named Nagasena. Kaundinya Jayavarman was granted the title of "General of the Pacified South, King of Funan" by the Chinese Liang emperor in 503, and he sent further embassies in 511 and 514. Two inscriptions have been attributed to his wife and son: the first, from the province of Takeo, was ordered by a Queen Kulaprabhavati; the second, from the Plain of Reeds, by Gunavarman. According to the Chinese histories, a king named Rudravarman succeeded Kaundinya Jayavarman. He sent six embassies to China between 517 and 539. The Chinese associated his reign with Buddhism; two monks named Sanghapala and Mandrasena were sent to China from Funan.

According to Chinese sources, after the reign of Rudravarman, Funan was conquered from the north by the kingdom of Zhenla (Chenla). However, three more embassies were received from Funan between 559 and 588, and further embassies were sent in the early seventh century. Funan was clearly an important maritime power during the third century C.E., and it was a center of Buddhist learning in the late fifth and early sixth centuries. It is widely regarded as an ancient, maritime precursor of the modern kingdom of Cambodia. Paul Pelliot (1903) pioneered the collection of information on Funan derived from Chinese sources; George Coedès (1968) added the evidence gleaned from inscriptions.

FUNCINPEC (UNITED NATIONAL FRONT FOR AN INDEPENDENT, NEUTRAL, PEACEFUL AND CO-OPERATIVE CAMBODIA)

FUNCINPEC is the Cambodian royalist political party founded in Pyongyang, North Korea, by Prince Norodom Sihanouk (1922–) in March 1981. Its name is an acronym for its full French title, usually translated as United National Front for an Independent, Neutral, Peaceful and Co-operative Cambodia.

In the aftermath of the Khmer Rouge era (1975–1979) in Cambodia, Sihanouk was living in comfortable exile in North Korea. Cambodia was governed by a pro-Vietnamese regime, following the Vietnamese invasion that had driven the Khmer Rouge from power. Sihanouk's patrons in Pyongyang and Beijing pressed him to form a united front with the Khmer Rouge faction, which operated a guerrilla army on the Thai-Cambodian border and occupied Cambodia's seat at the United Na-

tions. Sihanouk agreed reluctantly and designated his eldest son, Norodom Rannaridh, then a professor in France, as leader of the party. FUNCINPEC joined forces with the Khmer Rouge and with another anti-Vietnamese faction on the Thai-Cambodian border to confront the Vietnamese forces still occupying Cambodia. The three factions formed the Coalition Government of Democratic Kampuchea (CGDK) in 1982 and held Cambodia's UN seat until the early 1990s. FUNCINPEC candidates contested national elections sponsored by the United Nations in 1993 and won a majority of seats. But the incumbent former communist party forced the royalists into a coalition, which survived for several years but broke down in 1997 when Cambodia's prime minister, Hun Sen (1951–), carried out a *coup de force* (sudden successful strategy employed with overwhelming force/pressure) against his coalition partners. Under foreign pressure to

reinstate the coalition, Hun Sen agreed, but new elections in 1998 confirmed the popularity of his party vis-à-vis FUNCINPEC, whose fortunes declined sharply over the next two years.

G

GAJAH MADA (t. 1331–1364) **Javanese Empire-Builder**

Gajah Mada's name is popular in post-Majapahit traditions, though in contemporaneous sources such as inscriptions and the literary work *Nāgarakērtāgama*, the name is also often spelled Gaja Mada. As the grand vizier (t. 1331–1364) of the kingdom of Majapahit during its heyday in the fourteenth century C.E., Gajah Mada served two sovereigns of Majapahit, namely Queen Tribhūvanatunggadewī (r. 1329–1350) and her successor son, King Râjasanegara Dyah Hayâm Wuruk (r. 1350–1389).

His career in serving the Majapahit kingdom began as a leader of the king's guard, when the king at the time was Tribhūvanatunggadewī's brother, King Sundarapandyadewa (r. 1309–1329)—more popularly known as King Jayanagara. The corps of the king's guard was called Bhayamkara (meaning “that generates fear” or “to be feared by the enemies”). (This name is presently used in the administration of the Republic of Indonesia as a denomination for the state police.) His praiseworthy achievement related to the incident of Badander, where he, as the chief guard, protected and hid King Jayanagara from the hazards of Kuti, the rebel Javanese nobleman. Kuti was then subjugated. That happened in the year śaka 1241 (the śaka years refer to the Burmese Era beginning in 78 c.e.), or around 1319 c.e. Presumably after these heroics, he assumed a position as rake mapatih ring Janggala Kadiri (head or chief minister of the

provinces Janggala and Kadiri); his name was mentioned (as Pu Mada) in an undated inscription of Walandit. His appointment as grand vizier (freely translated from the titles used, such as sang mantry-apatih, rakryan sang mapatih, or sang mantry-adhimantri, which is normally mentioned as the first among high dignitaries) was the pinnacle of his illustrious career.

The mention of *Janggala Kadiri* may mean just a territorial part of the great kingdom of Majapahit, which consisted of several other regions, such as Wurawan and Madhura (Madura). However, it may also be symbolic of the general idea of unification. As it is mentioned in a much later chronicle (ca. early seventeenth century), the *Pararaton*, Gajah Mada was said to take an oath that he would not partake of pleasures (*amukti palapa*) until (the entire) *Nusantara* (regions overseas) came under the domination of Majapahit. The names of places mentioned in that text, excluding the hinterland of Majapahit itself such as Kadiri and Janggala, are Gurun, Seran (in Maluku), Tanjungpura (in Kalimantan), Haru, Pahang, Dampo (in Sumbawa), Bali, Sunda, Palembang (in Sumatra), and Tumasik (Singapore).

Nine years after the rebellion of Kuti, Tañca, the royal physician, assassinated King Jayanagara. Gajah Mada killed Tañca in śaka 1250 (1328). A year later, Tribhūwanatunggadewī, the princess of Jiwana and Jayanagara's sister, was put on the throne of Majapahit. In 1331, Gajah Mada was sent to vanquish Sadeng and Keta, the enemies

of Majapahit. Thereafter, his position was raised, and he became “the protector of the kingdom.” According to the *Nāgarakērtāgama* in the year śaka 1265 (1343), Gajah Mada led an expedition to subjugate Bali. An inscription at the posterior of a statue of Mañjuśrī found at Candi Jago in East Java, from the year 1341, mentioned that in his campaigns to Bali, Gajah Mada was accompanied by Adityawarman, a prince of the Singhasāri-Majapahit line of descent who later became a king in Sumatra. From such evidence, it can be surmised that the conquest of Bali took several years; Bali was finally subjugated in 1343. An account of Gajah Mada’s death in the year 1364 is noted in the *Nāgarakērtāgama*.

Gajah Mada’s popularity in traditional historiography spills over into fictional literature. Works possibly written in the late seventeenth century, called the *Kidung Sunda* and the *Kidung Sundayana*, dramatically rendered, were supposedly based on a short account in the *Pararaton*. The chronicle related historical incidents in which Gajah Mada played a significant role, namely, the defeats of Dempo and Sunda in the year śaka 1279 (1357). Even in the twentieth century, a poetical work in Old Javanese composed in Bali, the *Kakawin Gajah Mada*, narrated Gajah Mada’s story from his divine birth to the peak of his career in Majapahit. As P. J. Zoetmulder (1974) observed, there are many details in this fiction that are incongruous with historical accounts.

GALLEON TRADE

Spurring Asia-Pacific Commercial Links

Prior to the nineteenth century, the commerce of the Spanish colony in the Philippines was built around a single activity known as the galleon trade. The strategic location of Manila

off the Chinese mainland and its colonial links with the Americas ensured that the port became an important entrepôt from the late sixteenth century onward. Manila merchants acted as middlemen in the exchange of New World silver brought by galleon across the Pacific for the luxury merchandise of East and South Asia. Initially, this trade was conducted by Manila together with the Viceroyalties of New Spain (Mexico) and Lima and proved highly lucrative. Effective lobbying by the merchants of Seville and Cádiz, who felt their commercial position in the American market was threatened, and mercantilist fears about the drain of silver to China led the Spanish monarch to end unrestricted shipping. Laws passed between 1591 and 1604 confined sailing between China and Manila to the Mexican port of Acapulco and restricted those able to engage in it to Spanish residents of the Philippines. Trade was further constrained to only two galleons of 300 tons a year (raised to 560 tons in 1729), and limits were placed on the value of the goods carried: America-bound merchandise was not to exceed 250,000 pesos in value and that of the return cargo of bullion 500,000 pesos. Reshipment of goods between New Spain and South America was strictly prohibited, but this rule was difficult to enforce. In the Philippines, the Spaniards' inability to discover workable mines of precious metals and their disinclination to engage in tropical agriculture largely confined economic activity in the colony to the galleon trade. Moreover, the duties levied on cargoes at Acapulco (10 percent *ad valorem*, subsequently raised to 16.6 percent) were returned to the Philippines, along with an annual subsidy known as the *situado* to cover the yearly administrative deficit of the Manila treasury.

All Spanish residents in the Philippines were theoretically considered to be merchants and thus able to engage in this trade. A galleon's hold was divided into parts equal to a bale, or *fardo*, with each bale being further subdivided into four *piezas* (packages). The right to ship merchandise was then allotted by a system of *boletas*, or vouchers, that corresponded to one *pieza* each with a nominal value of 125 pesos. Vouchers were supposedly distributed according to individual needs and resources as determined by the governor-general. In 1604, however, the governor-general was forced to share this privilege with a *junta de repartimiento* (board

of apportionment) representing the principal interests of the Spanish community (royal government, church, "city and commerce"); it was subsequently replaced by a *consulado* (the executive of a mercantile guild) of merchants in 1769. However, as the governor and board members were also the chief beneficiaries of any such apportionment and wielded inordinate influence in colonial society, the system was open to abuse. Charges of fraud and nepotism were commonplace; governors-general reserved up to 45 tons of a vessel's cargo for themselves, and in one instance, a governor-general did not provide any space at all for citizens. The selling of vouchers also became common practice during the seventeenth century, as many of those who were allotted vouchers (such as common soldiers and widows) lacked the means to purchase exportable merchandise. Though such sales were forbidden by decree in 1638, vouchers continued to be illegally exchanged. Eventually, in 1734, the law was relaxed to permit widows and orphans to sell vouchers openly to active merchants.

The most flagrant circumvention of the restrictions occurred in regard to the issue of a cargo's value. Trade was supposedly highly regulated, with the governor-general of the Philippines providing the viceroy in New Spain with a report on the distribution of space. At the same time, a treasury official in Acapulco inspected the arriving cargo to ensure that it complied with the manifest and that the vessel did not carry contraband. In practice, though, the values of cargoes in both directions were regularly underestimated, and ships frequently carried the equivalent of 6,000, 12,000, or even 18,000 *piezas* in some years (the officially permissible number was 4,000). Nor were the tonnage restrictions strictly enforced, and some galleons were as large as 2,000 tons by the eighteenth century. Despite periodic incremental revisions of the *permiso* (the allowable value) from 300,000 pesos outgoing in 1702 to 500,000 pesos in 1734 and 750,000 pesos in 1776, with return cargoes double these amounts, galleons continued to regularly carry from 1.5 million to 3 million pesos during the galleon trade's last century of operation. Space was made by piling the decks high with chests and bales, stowing away the cannons, and depending on qualls at sea to replenish minimal water supplies. Officers, crew, and passengers

also filled their chests of “personal” belongings with silks and other trade items. Additional cargo was often loaded during the ship’s progress through the island-studded channels along the south coast of Luzon en route to Mexico. When the *Covadonga* was captured in 1742, for example, it was found to be carrying 1,313,843 pesos in pieces of eight and 35,632 ounces of bullion, with many of the coins secreted in the rind of cheeses and the silver stuffed into the vessel’s beams and timbers. The accounting for cargoes was made even more difficult by a legal loophole that exempted Filipino goods and repatriated proceeds from previous voyages from the limits imposed by the permiso.

Much of the capital used in the Manila-Acapulco trade was supplied by the Obras Pías. These were pious foundations composed of lay brothers affiliated with religious orders such as the Hermandad de la Misericordia de Manila, a group of virtuous gentlemen originally formed to raise alms and provide charitable services. Granted space on the galleons from which to finance these activities, they grew immensely rich on the proceeds of trade. Moreover, the various legacies of the *hermanos* (brothers) and other wealthy benefactors often specifically apportioned a third part of their bequest for use in the Acapulco trade. The income derived from such ventures not only supported the foundations’ good works but also was lent out at interest to others engaged in the galleon trade, the funds having the character of both bank loan and marine insurance. Over time, this commercial involvement would make the Obras Pías a powerful economic force in the colony, and by the end of the eighteenth century, they operated much in the capacity of a professional banking system run by salaried officials experienced in financial matters.

The galleon trade itself drew on the full spectrum of goods available in the East, attracting silks from the north (China and Japan), spices from the south (Southeast Asia), and cottons and ivory from the west (Indian subcontinent). More specifically, exports to Mexico included textiles, porcelain, ivory (especially carved religious images), furniture (inlaid and lacquered items), metalwork (from grills and delicate filigrees to cast-iron pots), various foods and plants (rice, tea, mangoes, orchids, and other flowering species), and occasionally

slaves. Carpets from Persia, precious stones from India and Burma (Myanmar), rich hangings and bedcoverings from Bengal, cinnamon from Ceylon, pepper from Java and Sumatra, balsam from Cambodia, camphor from Borneo, civet from the Ryukyu Islands, and silverware from Japan also figured among the items transported. Domestic Philippine exports included gold dust, wax, cordage, various kinds of sheeting, and some textiles but never amounted to more than 10 percent of the total value of the shipment. Return cargoes constituted mainly silver (from 90 to 99 percent) in the form of irregular cob coins and minted dollars (after 1732), along with some American products (cochineal, cacao, leather bags) and transshipped Spanish products such as wine, olive oil, and woolen cloth. Of more importance was the transfer of New World plants, some of which enriched the diets of Filipinos (maize, papaya, cassava, tomatoes, eggplant, and potatoes); others subsequently became important commercial crops, such as tobacco, indigo, maguey, cacao, pineapple, and coffee.

The galleons were mainly constructed in the Philippines (except one built in Siam [Thailand] and another in Japan). They were made of native hardwoods (almost impervious to contemporary cannonballs), fitted with cordage prepared from local abaca, and had sails manufactured in the Ilocos; only the metal fittings were imported from China, Macao, Japan, or India. Filipinos also constituted the workforce employed in their construction (through the *repartimiento*, or *polo*, system of forty days’ annual corvée labor) and between 50 and 80 percent of the crews that sailed in them.

Initially conceived of as a means to provide gainful livings for Spanish settlers in the islands, the trade gradually became concentrated in fewer and fewer hands as rich merchants monopolized the cargo space and bought up the vouchers of others. When the galleon *San Martín* sailed for Acapulco in 1586, the merchandise it carried belonged to 194 persons, but when the *San Andrés* sailed two centuries later, its cargo was the property of just 28 individuals. A law of 1769 that restricted trading to Spaniards with ten years of residence in the archipelago and in possession of 8,000 to 10,000 pesos in capital only further constrained participation. Moreover, even at the best of times, the galleons remained an erratic source of income

for the colony, subject to the vagaries of weather, the arrival of junks from China, the state of the market in Mexico, and the deprivation of corsairs. The failure of a galleon could plunge Manila into a financial crisis, as happened when the *San Javier*, bound for Acapulco, sank with its entire cargo in 1705 or when the returning galleon of 1709 was wrecked. The distress was particularly acute when a succession of such events occurred, as was the case when the *situado* failed to arrive in the three years prior to 1721. In all, 30 of the 108 galleons that sailed between 1565 and 1815 (or nearly a third) were lost to shipwreck or capture (4 of them fell to the English).

It is estimated that in the span of more than two hundred years of the galleon trade, more than 250 million pesos in silver and 50 million in gold were carried from Acapulco to Manila. Cyclical analyses of trade reveal five discernible periods: expansion between 1580 and 1620, severe contraction from 1620 to 1670, recovery between 1670 and 1720, mild recession between 1720 and 1750, and brief expansion again after 1750. In 1773, the galleons were allowed to call at Californian ports for the first time, but despite such new initiatives, there was a gradual overall decline in the trade during the eighteenth century, leading to the gradual immiseration of even formerly wealthy Spanish families. Many factors contributed to this deterioration. They included embezzlement, corruption, overtaxation, the loss of ships, the British seizure of Manila (1762–1764), and the inroads made by English and French merchants. The drain of silver to China, the increased competition of industrial products from Western Europe, the establishment of the Royal Philippine Company (1785), and the outbreak of the Mexican War of Independence in 1810 further contributed to the overall decline. By 1790, the decline was irreversible, and the last galleon, aptly called the *Magallanes*, set sail for Mexico in 1811.

In the context of East Asian commerce, however, the galleon trade was an innovative one, stimulating increased traffic between China and the Philippines, linking the archipelago to a world economy based on Seville and the Atlantic, and making Manila the first primate city (large urban center) in Southeast Asia.

GAMA, VASCO DA (1459–1524)

Precursor of Portuguese Imperialism

Vasco da Gama's fame rests on his discovery of the sea route to India, which made possible the foundation of the Portuguese Empire in Asia. Da Gama was born in Sines about 1459 into a family of minor Portuguese nobility. As a young man, he had some experience as a seafarer, but little is known about his life before 1497. The Portuguese king Manuel I (1495–1521) gave him the command of a fleet of four ships, with instructions to sail to India. His mission was to complete the work begun by Bartolomeu Dias, the first Portuguese to sail around the Cape of Good Hope (1487–1488). He was to identify the principal spice markets and to persuade any

Christian rulers he might encounter to join an alliance of Christian powers against Islam. On 20 May 1498, he landed near Calicut, India. He was coolly received by its Hindu ruler, the *samorin*, whom he believed to be a Christian, and soon incurred the hostility of the powerful Muslim traders in the city. He left Calicut, with a small cargo of spices, at the end of August 1498 but did not reach Lisbon until September 1499.

In 1500, Manuel I dispatched another, larger fleet to India, commanded by Pedro Álvares Cabral. Cabral also soon fell out with the Muslim merchants in Calicut and so bombarded the city and made alliances with the rulers of Cochin and Cannanore, who were opposed to the *samorin*. In 1502, Vasco da Gama, now ennobled as conde da Vidigueira, was again sent to India, with an even larger fleet, to punish Calicut—which he did with appalling ferocity—and to establish the Portuguese permanently as a naval and military power in India capable of wresting control of trade in the Indian Ocean from Muslim hands. In 1503, he returned to Portugal and remained there until 1524, when he went once more to India as viceroy. He died in Cochin on Christmas Day in that year.

GARNIER, FRANCIS (1839–1873) Explorer of the Mekong

A naval officer, a colonial official, and, most important, an explorer of the Mekong River, Francis Garnier typified the generation of convinced and energetic French colonialists who served in Vietnam and Cambodia in the 1860s

and 1870s. Second in command of the 1866–1868 French Mekong River expedition, he became its leader after the death of Ernest Doudart de Lagrée (1823–1868) and was later responsible for the publication of the expedition's official report. In 1873, he was killed while heading an unofficial attempt to establish a new French colonial position in northern Vietnam.

The son of a retired army officer, Garnier was born on 25 July 1839 at Saint-Étienne in central France. Baptized as Marie Joseph François (Francis) Garnier at birth, he was known by his shorter name throughout his brief but adventurous life. Entering the French naval college at Brest against the wishes of his family in 1848, he participated in the French conquest of southern Vietnam (Cochin China) in 1860. After recuperating from a tropical illness, he returned to France's new colony in Vietnam as an inspector of native affairs in 1862 and took up his post in Cholon, Saigon's twin city. In this position, Garnier was among a small group of officials who lobbied the French government to explore the Mekong River, arguing that this would open up the possibility of profitable trade with China using the river as a transportation route.

As second in command of the Mekong Commission, as it was called, Garnier displayed great energy and personal courage, among other things overcoming serious illness in the expedition's early stages. In terms of French hopes that the Mekong would be navigable and that commercial opportunities would be found in China, the expedition was a failure. From the point of view of exploring previously unknown territory, however, the expedition was of the greatest importance. Throughout the expedition, which lasted for more than two years, Garnier played a major part in surveying and mapping more than 6,000 kilometers (3,759 miles) of the river and surrounding territory. He also compiled a mass of information on political and ethnographic aspects of the regions through which the expedition traveled. Assuming leadership of the expedition when Lagrée died in China in March 1868, he led it to its conclusion in June of that year.

Returning to France, Garnier was the principal author of the magnificent official account of the expedition, contained in two volumes of

text and another two devoted to maps and illustrations. Yet his achievements excited remarkably little interest in France, a fact that Garnier resented deeply. However, he shared an award with the famous Scottish explorer and missionary David Livingstone (1813–1873) at the 1869 Geographical Congress in Antwerp. The following year, he was honored by the Royal Geographical Society of London and awarded the society's Patron's Medal for an expedition that was described as "the happiest and most complete of the nineteenth century" (Osborne 1997 [1975]: 186).

Concerned for his financial future and bitter about France's defeat in the Franco-Prussian War (1870–1871), the recently married Garnier returned to the East in 1872 with the hope of beginning a commercial venture importing silk and tea from China. Nothing came of these plans. Instead, in October 1873, he answered an appeal for assistance from the French governor of Cochin China, Admiral Marie Jules Dupré (1813–1881), to extricate a French trader, Jean Dupuis, who was in difficulties with the Vietnamese authorities in Hanoi. The weight of evidence strongly suggests Dupré authorized Garnier to try to establish a new colonial position in northern Vietnam, but he was careful not to include this direction in the written orders he gave Garnier, since such action was contrary to the policy of the government in Paris.

Despite being briefly successful in gaining control over an area around Hanoi, Garnier was soon threatened by a combined force of Vietnamese troops and Chinese Black Flag bandits. Characteristically making a bold advance against these adversaries, Garnier was killed on 21 December 1873. The French authorities wholly disavowed his actions in Hanoi. It was only after a decade that his reputation was rehabilitated. A statue honoring Garnier was eventually erected in Paris in 1896.

A man of passionate beliefs and strong convictions, Francis Garnier was a loyal friend if sometimes a difficult companion for those who did not share his views. A firm supporter of France's advance in the Indochinese region, his association with the Mekong River prefigured the later French advance into the Lao territories at the end of the nineteenth century. Likewise, his actions in northern Vietnam set the stage for France's subsequent occupation of the

Portrait of Francis Garnier. (Milton Osborne)

whole of Vietnam in the 1880s. Above all, his role as a member of the Mekong River expedition ensured Garnier's status as one of the great explorers of the nineteenth century.

GENERAL COUNCIL OF BURMESE ASSOCIATIONS (GCBA) (1920)

Crystallizing the Burmese Nationalist Movement

The General Council of Burmese Associations (GCBA) succeeded the Young Men's Buddhist Association (YMBA) in 1920, as the earlier association was split by disagreement between those who were uncomfortable with the overt political focus the association was taking and those who wished to pursue more radical measures against the British colonial administration. Within the GCBA, the General Council of Sangha Samettgi (GCSS) became the vehicle for politically conscious Buddhist monks, or *pongyis*, concerned at the decline of monastic education and discipline within the Burmese Buddhist sangha (term denoting the Buddhist monkhood). They sought to unite the urban-based, Western-educated nationalist leadership with the rural masses in protest actions against the foreign domination of Burmese cultural and political life. There were precedents for this in the monk-led uprisings in Tenasserim, Toun-goo, and Tharrawaddy against the British in Lower Burma after Pegu was annexed in 1852. One of the politically active monks, U Ottama (1897–1939), had participated in the Indian National Congress Party's independence movement. Returning to Burma in 1921, he preached self-rule for Burma and urged monks to leave their monasteries to take up the national struggle.

In its 1921 conference in Mandalay, the GCBA had 12,000 affiliated associations, led by

the council's president, U Chit Hlaing. The split in the GCBA between those who advocated cooperation (led by U Ba Pe) and those who urged boycotting the Legislative Council elections resulted in a triumph for the latter group, which was led by U Chit Hlaing. At the first elections, twenty-eight members were elected to the Legislative Council. Sir Harcourt Butler (t. 1923–1927), the new governor in Burma, however, chose only one of these individuals for his Council of Ministers. Others, such as U Maung Gyi, were chosen from among the loyalists in the Twenty-One Party. Another group, the Golden Valley Party, supported the government. Thereafter, the GCBA was referred to as the Hlaing-Pu-Gyaw Party, reflecting the names of its leaders. The fragmentation in the GCBA after its sixteenth conference marked the end of the first phase of the nationalist movement. The Dyarchy reforms initiated by the British administration in India soon failed due to internal dissent within the nationalist group, leaving a suspicion of Western institutions and those who supported them (Maung Maung 1980: 35).

The GCBA drew support for its policy of noncooperation from younger monks, in particular the martyred U Wizara (1888–1929), whom U Ottama had sent to the Indian National Congress at Gaya. From 1927 to 1929, he was imprisoned by the British for his political activities, and he died on 19 September 1929 as a result of a 166-day hunger strike. As political dissent grew following the Rangoon University strike of 1920, the government's persecution of monks and leaders of village *wunthanu* (anti-colonial rural societies) increased. From 1928 to 1929, the colonial authorities imprisoned some 120 monks for political activities. Political agitation by the *pongyis* on 17 February 1939 led to a tragic massacre of monks, part of the concerted program of dissent that had gathered pace since the 1930 Hsaya San peasant revolt in Tharrawaddy District.

The Hsaya San revolt (1930–1931) and the formation of the Dobama Asiayone (We Burmans Association) by student activists at Rangoon University marked the transition from nonviolent to violent agitation, culminating in a series of labor and race riots during the late 1930s. Arising from economic hardship and repression, the Hsaya San rebellion quickly spread to other districts in the Pegu Yomas. From

Theyetkan village in Shwebo District, Hsaya San had been a member of the district GCBA. In August 1931, he was betrayed when he sent a local guide to a village for food; he was then tried by a special tribunal and hanged on 28 November 1931. The Hsaya San rebellion was the most serious challenge to the colonial authorities since 1886.

At Rangoon University, student leaders who gained experience in organizing nationwide mass protests advanced the nationalist cause. Under the tutelage of the Thakin movement (composed of members of Dobama Asiayone, including Aung San [1915–1947]), the cooperative government of Dr. Ba Maw (b. 1893), which had been formed following elections in November 1935 based on the new constitution and the Government of Burma Act of 1935, was undermined. This process began with the 1936 student strike at Rangoon University and was furthered by the oil field labor strike in Chauk, initiated on 8 January 1938, in the period leading up to the Pacific War (1941–1945).

Known as the BE 1300 Revolution, the thirty-four strikes affecting the oil industry, foundries, dockyards, steamer services, manufacturing plants, plantations, port labor, rice mills, and offices were a measure of how far the nationalist movement had come since the debating days of the YMBA. Marxist literature had begun circulating among the nationalist groups after the Hsaya San revolt in 1930. Thakin Thein Maung brought back more such works from the London Round Table Conference in 1932, where he had met Ashin Kyaw Sein, a member of the British Communist Party who introduced him to the League against Imperialism and for National Independence. (Established in 1919 in London, the League Against Imperialism and for National Independence was an ultranationalist, leftist group, comprising left-leaning elements, communists, and nationalists with close ties to international Marxism. It was closely allied to the Burma Reform League.) J. S. Furnivall (1878–1960) introduced further sources through his Burma Book Club (Trager 1959: 21). Steeped in such literature, the nationalist movement within the Dobama Asiayone soon split into communists and socialists, a legacy that would continue past independence on 4 January 1948 into the history of postcolonial Burma.

At the beginning of the Pacific War, the Burma Freedom Bloc had begun calling for the Burmese right to self-determination. The political agitation of the 1930s, the various associations and parties, and exposure to new ideologies provided a foundation for the leaders of the independence movement, mostly students at Rangoon University, to prepare to lead the nation. The achievement of the 1930s nationalist movement, inaugurated by the GCBA, was to bring together the urban and the rural, the educated and the working class, and the peasant and the office clerk in a genuine mass movement for Burmese independence. By the end of the 1930s, several Burmese political groups in addition to the Dobama Asiayone were actively seeking political change, among them the Sinyetha Wunthanu Aphwegyi of Dr. Ba Maw and the Myochit Party led by U Saw. The reforms of 1937 granted by the British colonial administration were too little, too late, as signified by the burning of the Union Jack at the high court by those who became the leaders of independent Burma (Myanmar).

GENEVA CONFERENCE (1954)

Birth of Two Vietnams

The Geneva Conference, which took place in the Swiss city from April to July 1954, was an outgrowth of a meeting among the United States, the Soviet Union, Britain, and France in Berlin in January and February. It was intended to seek a settlement of the war in Korea, in which the Chinese had introduced troops that they called “volunteers,” hoping to thus avoid all-out war, and thus follow up the truce of July 1953. It failed in this regard, but it succeeded in bringing an end to the war in Indochina, which had been added to its agenda.

Whether in so doing it also averted a major war is less certain, though there was much apprehension about the possibility of a large-scale conflict at the time, especially in Britain—a fear that was only increased by news of the unexpected power of the hydrogen bomb. In retrospect, it seems unlikely, but the negotiations were conducted against that background. The attempts of Anthony Eden (t. 1951–1955), the British foreign secretary, to bring about a settlement were the more persistent, and his success is the more widely admired. But the United States saw his achievement as a defeat, not strictly in line with their goals of containment, and the process soured the Anglo-American relationship.

In Indochina, the Viet Minh, backed by Chinese aid and advice, had won striking successes against the French: these climaxed, after the conference had started, at Dien Bien Phu. Support for the war in France had never been

wholehearted, and by late 1953, leaders in the Joseph Laniel (1889–1975) government (1953–1954) were committed to peace without dishonor—a goal they hoped might be secured through international negotiation. But though the People's Republic of China (PRC), like the Soviet Union, had switched to a policy of coexistence, it was not prepared to abandon Hồ Chí Minh (1890–1969). Nor did it want a colonial power to remain on its southern frontier.

What kind of deal, if any, was possible in these circumstances? The British believed it had to be some kind of partition of Vietnam. That would leave the Viet Minh with a north Vietnamese state, establish an independent Laos and Cambodia, and leave the Bảo Đại regime (t. 1949–1955) in the south. The British recognized that the division of Vietnam might only be temporary.

Such a deal accorded with the British desire for peace and Britain's pragmatic foreign policy. The United States, however, could not endorse the “loss” of territory to communism. It had no intention of introducing troops nor, indeed, of using the bomb. Its main objective was to keep the French fighting, while pressing them to complete the independence of the Indochina states.

A settlement was reached in July. A new French premier, Pierre Mendès-France (t. 1954–1955), had set himself a deadline for achieving one. The Chinese wanted a settlement in Indochina all the more because they had not gotten one in Korea, and the PRC's premier and foreign minister, Zhou Enlai (1898–1976), was ready to accept an independent Laos and Cambodia. The deal over Vietnam that Zhou impressed on Hồ effected a kind of partition based on military regrouping but envisaged unification elections in 1956. The Americans did not endorse the settlement but did not undertake any overt military action to oppose it.

The Americans' fear that the “loss” of the north would be followed by the “loss” of the south encouraged them to support the regime Ngô Đình Diệm (1901–1963) created in the south, which lasted from 1955 to 1963. So, too, did their experience in Korea: they drew a mistaken parallel between South Korea and South Vietnam.

GERMANS (GERMANY)

If they did not invent the term *Southeast Asia*, Germans and Austrians gave it a scholarly usage, even before the Pacific War (1941–1945) and before the creation of Admiral Lord Louis Mountbatten's allied South-East Asia Command (SEAC) gave it popular and political currency. Franz Heger may have been the first to use the term in the title of a book—*Alte Metalltrommeln aus Sudostasien [Ancient Metaldrums from Southeast Asia]* (1902)—and the 1923 monograph entitled “Sudostasien” [Southeast Asia] gave Robert Heine-Geldern a claim to be the founder of Southeast Asian studies. Neither Germans nor Austrians possessed colonies in the area, and they could more readily adopt a regional approach, “not hampered,” as Donald K. Emmerson (1984: 5) put it, “by the geographic limits that preoccupation with a specific possession tended to place on the perspectives of land-controlling colonizers.”

Their lack of possessions did not mean that the Germans were without political effect, par-

ticularly after the creation of the Second Reich in 1871. The colonial powers were bound to consider that a major new European state might become a colonial rival, despite the disclaimers of the German chancellor, Otto von Bismarck (1815–1898). “For us in Germany,” he had said, “this colonial business would be just like the silken sables in the noble families of Poland who have no shirts on their backs” (quoted in Henderson 1993: 32). Action matched rhetoric: in 1871, he took Alsace-Lorraine from France but not Cochin China. “We are not rich enough to be offered the luxury of colonies,” he explained (quoted in Taboulet 1956: 579). Yet apprehension about Germany was a factor in Britain's decision to protect the security of the Straits by appointing residents in Perak and Selangor in 1874.

The presence of German ships and traders in Sulu alarmed the Spaniards and concerned the British. The British ambassador in Berlin was, however, assured in 1873 that Germany had “no wish or intention . . . to acquire transatlantic possessions in the Sulu Archipelago, or indeed in any other portions of the Globe” (Tarling 1978: 132). Refraining from a colonial policy, however, meant that it was “urgently . . . bound to secure German commerce from unjustifiable encroachments on the freedom of its movements.” Such were presented by the “paper claims” of other powers (Tarling 1978: 132, 147).

Bismarck's domestic politics shifted in 1879 when he offered the industrialists a protective tariff. That had its effect on the free-trading British, giving Lord Kimberley, secretary of state for the colonies, for example, an additional argument for granting a charter to the British North Borneo Company. Bismarck's adoption of a “colonial policy” should, however, be seen less as a further gesture to industrial interests than as a means of co-opting right-wing support. “All this colonial business is a fraud, but we need it for the elections” (quoting Winfried Baumgart, in Knoll and Gann 1987: 157). Bismarck tried to adopt a limited policy of “protection” that would not alienate other powers.

In 1884 and 1885, Bismarck took up the idea of a conference on the Congo; that conference was held in Berlin and was designed to prevent antagonism to Germany as a colonial power but also to gain it recognition as a world power. The conference was, in theory, confined to Africa, but in renewing the opposition to

“paper claims,” it was enunciating a principle of “effective occupation” that might be used elsewhere. The Dutch became more determined to round out their claims in eastern Indonesia, and the British established protectorates in Borneo. British premier William Gladstone (1809–1898) welcomed Germany’s colonial endeavor, however, and New Guinea was divided.

After the fall of Bismarck, the kaiser’s government adopted a more vigorous “world policy,” especially from 1897. The extension of the Spanish–American War (1898) to the Philippines the following year aroused the interest of all the powers. Prince Heinrich, then in command of the Asiatic squadron, cabled that the Filipinos were ready to place themselves under German protection. Bernhard von Bulow, the secretary of state, advised against allying with revolutionaries. But after the Peace of Paris, Germany agreed to pay Spain U.S.\$4.2 million for the Caroline, Pelew, and Mariana islands, except Guam, and the United States accepted the deal. These islands were to become Japanese mandates after the Great War (1914–1918).

German competition in trade and shipping aroused some jealousy in Singapore, and in the war, the interned Germans were connected with the mutiny of 1915. German expertise had, however, been welcomed in Siam, which sought to utilize a mix of foreign experts, including some from noncolonial states. Germans were particularly prominent in railway construction. Other states welcomed them, too. Lord Dalhousie, governor–general of India, appointed Dietrich Brandis as superintendent of forests in the newly acquired Pegu, Lower Burma, in 1855, and his first order became the basis for forest administration in India as a whole.

GESTAPU AFFAIR (1965)

Annihilation of the Left

The Gestapu Affair was an ambiguous coup launched by junior military officers in Jakarta and Central Java on 1 October 1965, ostensibly to forestall a coup by senior officers that was allegedly scheduled for 5 October. The coup was thwarted by General Suharto (Soeharto) (1921–), who blamed it on the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) and used it as the pretext for a bloody purge of communists in which perhaps 500,000 people died.

Early on 1 October, military units arrived at the houses of seven conservative generals to arrest them. Three generals, including the army commander General Ahmad Yani (1922–1965), were shot while resisting arrest; three more were captured, and the seventh, Defense Minister General A. H. Nasution (1918–2000), escaped, though his daughter was killed. The survivors were taken to the Halim air force base in south Jakarta, where they were killed; their bodies were dumped in an unused well. Other troops seized important positions in central Jakarta, and both President Sukarno (1901–1970) and the PKI leader, D. N. Aidit (1923–1965), were taken to Halim. The ostensible leader of the coup, Lieutenant Colonel Untung, who was commander of President Sukarno’s palace guard, the Tjakrabirawa Regiment, then announced that the action had been launched to prevent a coup by a “council of generals” on 5 October. He also announced the formation of a revolutionary council to rule Indonesia as an interim government. A similar seizure of power took place in Central Java.

Untung, however, appeared to do little to consolidate his coup, and his forces were soon outmaneuvered by those of General Suharto, commander of Komando Cadangan Strategis Angkatan Darat (KOSTRAD, Army Strategic Reserve). The coup in Jakarta was crushed within twenty-four hours, and that in Central Java was put down within three days. The immediate leaders of the coup were tried in a special military tribunal (*Mahmillub*) and were sentenced to death or long prison terms. Suharto's forces, however, quickly claimed that the coup had been masterminded by the PKI, and on this basis, he launched a campaign of extermination against the party. The character of the killings varied widely from region to region. In some places, they were mainly the work of army units, especially Resimen Para Komando Angkatan Darat (RPKAD, Army Paracommando Regiment). In other places, the army trained and armed civilian militias to carry out the killings, and in still other locations, social antagonisms were so strong that news of the coup and clear indications that killing would not be punished were enough to start massacres. The military further encouraged the killings by circulating false stories that the murdered generals had been sexually tortured by communist women before they were killed. The name Gestapu (from the acronym for the 30 September Movement) was adopted to link the coup with the methods of the Gestapo in Nazi Germany. There is almost no evidence on the number of people killed, but many scholars suggest that the figure was close to half a million.

The question of who organized the coup remains deeply contested, and reliable evidence is still scanty. The New Order maintained that the PKI organized the coup through a "Special Bureau" set up to infiltrate the military and that the actions in Jakarta and Central Java were only the first phase of a planned nationwide seizure of power in which the enemies of the PKI were to be massacred on a vast scale. Evidence of this broader plan is virtually nonexistent. The Special Bureau appears to have existed, but whether it instigated, encouraged, or simply observed the coup plans is unclear. As later events proved, the PKI was highly vulnerable to military suppression and would have had great interest in an action to weaken the military's power.

Sukarno's presence at Halim compromised him in the eyes of many people, and shortly after the coup, there was speculation that he might have instigated it to remove Yani and other obstructive generals. Little evidence has emerged to back this view. Further speculation has focused on General Suharto, for several reasons: because he was the most senior general not on the list to be kidnapped, because he was a friend of Untung and is known to have met one of the plotters a few hours before the coup, and because the incompetence of the plotters in consolidating the coup raises the suspicion that it was intended to fail. This theory attracted much attention in Indonesia after the fall of Suharto in 1998. It has also been suggested that the U.S. Central Intelligence Agency (CIA) used agents in the PKI Special Bureau to instigate an unsuccessful coup as a pretext for destroying the party. Although this speculation cannot be dismissed, the evidence is perhaps more consistent with Suharto and/or the CIA having had some inkling of a plot and having seized the opportunity it presented rather than having engineered the affair.

The alleged treason of the PKI in 1965 became an important source of legitimacy for Suharto's New Order, and the anniversary of the coup was commemorated each year as Sacred Pancasila Day.

GOH CHOK TONG (1941–)

Leading the “Second Generation”

Goh Chok Tong is the second person to have held the office of prime minister of Singapore, having succeeded Lee Kuan Yew (1923–) on 28 November 1990. He was born on 20 May 1941 in Singapore. After studying at Raffles Institution, he read economics at the University of

Singapore, graduating with first-class honors in 1964. He then joined the premier administrative service and was sent to Williams College in Massachusetts, where he graduated at the top of his class with an M.A. in developmental economics in 1967. Two years later, he was seconded to Neptune Orient Lines, the newly established national shipping company, as its planning and projects manager. Within four years, he became its managing director and was credited with having put the company back on its feet. In 1976, he was recruited by the finance minister, Hon Sui Sen (t. 1972–1983), to enter electoral politics. Within nine months of being elected to Parliament in the general elections of December 1976, Goh was promoted to senior minister of state for finance in 1977. In 1979, he became Singapore's first trade and industry minister, a post he held until 1981, when he moved to other portfolios in the Health and Defense Ministries. After the general elections in December 1984, Goh was picked by his cabinet colleagues to be first deputy prime minister and leader of the younger team to succeed the “first-generation” leaders. Though not Lee Kuan Yew's first choice, Goh succeeded him as prime minister in November 1990. He is distinguished from Lee, who remained in the cabinet as senior minister, by his more consultative political style. But like his predecessor, he is not averse to making tough and controversial decisions to ensure Singapore's sovereignty, political stability, social unity, and continual economic progress. One of the urgent tasks that he sets for himself is that of party and leadership renewal: to find a new group of men and women to lead Singapore in the twenty-first century.

GOLD

All That Glitters

Gold, one of the most easily worked of all metals, is found in varying amounts (often along

with silver, copper, lead, tin, and zinc) in various parts of mainland and island Southeast Asia. It appears in Myanmar (Burma), Vietnam, the Philippines, the Malay Peninsula (West Malaysia), the islands of Sumatra, eastern and southern Kalimantan (Borneo), western and southern Sulawesi (Celebes), and eastern Indonesia. On Java, there are virtually no deposits of modern economic significance. Gold, though rarely found in large quantities, has been of economic importance for centuries and was one of the earliest exports from the region, along with spices, aromatics, and other forest products. With silver, it played a major role in the medieval and later trading systems of East and Southeast Asia and was an important part of early tribute systems throughout the region.

Early Indian sources refer to *Suvarnabhumi* (the land of gold) or to *Suvarnavipa* (the gold islands) of Southeast Asia. The Romans knew of the Malay Peninsula. Pliny mapped it as *Aurea Chersonesa* (the Golden Chersonese)—a source of gold, though its gold may have come from Sumatra. For centuries, India has had an insatiable demand for gold. Indeed, the earliest Indianizing influences in the archipelago are associated with the polities of Kutei in eastern Kalimantan, thought to have been established by the fifth century C.E., and the slightly later Tarumanegara in the Sundalands of western Java, both polities being founded in close proximity to alluvial gold sources. Those in Kalimantan are extensive and gave rise to the Busang gold hoax of the 1990s. In western Java, alluvial sources at Ponggol along the upper reaches of the Cikaniki River, which rises in the hills of Banten, may have been worked during the early Hindu period. These were lost, however, for centuries due either to earthquakes or landslides that covered the workings, only to be rediscovered in the 1980s. In Sulawesi, the Kalumpang Buddha, dated to the sixth century C.E., was discovered at a riverine settlement site on a route that leads to gold deposits in the interior. Although the arrival of outsiders may have stimulated a demand for gold, the metal apparently was appreciated by indigenous peoples in Southeast Asia long before the arrival of Indian and other traders.

By the early medieval period, the Hindu Buddhist polities of Central Java generated a strong demand for gold for use in rituals. Although Java is mentioned in historical records

as a source of gold, the precious metal would have been imported there in exchange for rice. The advanced skills of the Javanese gold workers are reflected in the magnificent jewelry and ritual utensils recovered in the ninth-century Wonoboyo hoard found near Yogyakarta, now in the National Museum in Jakarta. Cambodia also imported gold, having none of its own.

In Sumatra, Hindu and Buddhist images made from gold-washed copper-bronze appear to have been produced in preference to those of pure gold, possibly reflecting the relative difficulty in obtaining the metal. In medieval Kalimantan and Java, by contrast, images were made of pure gold.

Gold foil impressed with Chinese characters was recovered at Kota Cina, a medieval Tamil trading site in northeast Sumatra. China exported gold in preference to silver, and Chinese gold artifacts have been found in medieval shipwrecks. Unfortunately, in the past, most recoveries of earlier gold artifacts seem to have been simply melted down and reworked. Traditional gold-working methods exist among most peoples of the archipelago, with some very fine filigree jewelry made by the Acehnese and Malays. A large part of the modern gold trade is in the hands of Chinese goldsmiths.

Although almost all gold procured in the Malay Peninsula and the Indonesian archipelago came from alluvial sources, gold was mined on a relatively large scale in Vietnam from the twelfth century on. In the archipelago, Pasai, Melaka, and Aceh produced small gold coins known as *mas* (gold). Gold dust would appear, however, to have been the most usual medium of exchange.

By the latter half of the eighteenth century and into the nineteenth, immigrant Chinese exploited alluvial deposits in the Sambas region of western Kalimantan. Apart from a minor operation at the Salida mine under the Dutch East India Company (VOC) in western Sumatra between 1669 and 1735, there was little European interest in commercial gold exploitation in the Indonesian archipelago until the end of the nineteenth century. Western-style commercial gold exploitation has had a very checkered history.

In the Malay world, gold was panned from alluvial deposits that produce *mas urai* (loose gold) using a *dulang* (wooden pan). The Rejang people of the interior of Bengkulu in south-

west Sumatra used chicken feathers to extract gold dust from streams. Alluvial deposits do, however, tend to run out, and signs of earlier workings are no guarantee of any present-day presence of the metal. Modern indigenous, small-scale, alluvial gold-mining operations are often associated with acute mercury and cyanide poisoning.

GOLKAR

Harnessing Loyalty

Golkar, a shortened form of Golongan Karya (Functional Groups), is a political party in Indonesia. Golkar was dominant under the regime of President Suharto (Soeharto) (t. 1967–1998).

After Indonesia's general elections of 1955, a large number of parties in Parliament kept the country politically divided. In reaction, President Sukarno (t. 1945–1967) established "guided democracy" in 1959 and furthered the establishment of an increasing number of "functional groups" that would replace political parties. In an effort to consolidate the political power base of the Indonesian army, senior army personnel established the Joint Secretariat of Functional Groups (Sekretariat Bersama Golongan Karya) in October 1964. It was intended to be the coordinating body for almost 100 anticommunist social organizations but later became a federation of these organizations. In theory, Golkar was a nonpartisan organization representing the functional groups.

Under President Suharto's New Order, military men were appointed in administrative positions, and the military started to use Golkar as

its political vehicle. Effectively, Golkar became the government party and drew its strength from the fact that promotions, assignments, and appointments in the public service depended on the loyalty of public servants to Golkar.

In 1971, Golkar secured 236 of the 360 seats in the Indonesian Parliament. It supported the government's forced amalgamation of the remaining nine political parties into two parties. These opposition parties could not prevent Golkar from scoring overwhelming majorities in the subsequent parliamentary elections in 1977, 1982, 1987, 1992, and 1997. Each of these elections was followed by the unopposed reelection of Suharto to the office of president.

Golkar's electoral success owed much to the pressure exerted on voters during elections by the various government agencies, particularly the regional public service. Polls were also managed to ensure its success. At least initially, Golkar's success was also due to the fact that the party was genuinely popular in several sections of society and willingly accepted in many others. When Golkar was opened to individual membership in 1983, it soon had around 9 million individual members (Reeve 1985: 220).

Golkar obtained 21 percent of the votes during the free elections in 1999 and became the biggest opposition party. It has since sought to cast off its reputation as Suharto's political machine. It remains a significant player in Indonesian politics because, unlike other parties, it has extensive resources and an organizational network that spans the entire nation.

GREAT DEPRESSION (1929–1931)

Economies are subject to business cycles. The more they are integrated in the international economy through trade and investment, the more the business cycles of various countries will be synchronized. For that reason, the so-called Great Depression of the early 1930s re-

verberated more strongly in the Western world, where it originated, than in the rest of the world, including Southeast Asia.

The Depression was triggered by the bursting in October 1929 of an asset bubble caused by extensive speculation on the U.S. stock market. The deeper causes of the crisis were overproduction in various economic sectors, such as the automotive industry and in real estate, in the 1920s. Overproduction reduced the profitability of U.S. firms, but that was hidden by the sustained inflation of stock prices fueled by misguided optimism. The stock market crash brought underlying problems into the open and forced companies to reduce production and costs by dismissing workers and reducing wages. The severe macroeconomic contraction decreased U.S. imports from overseas. The crisis was first felt in Europe in 1930, after stock markets followed the U.S. trend and companies started to experience difficulties in exporting to the United States. European firms also started to lay off workers and reduce wages. The macroeconomic contraction in Western Europe was less severe than in the United States.

The gold standard made it impossible to use exchange rate devaluation as a buffer against having to import deflation, until some countries ceased gold-parity—for instance, the U.K. devalued in September 1931, the United States in April 1933, and France in September 1936. The crisis was also combated through severe trade restrictions to reduce imports and encourage import-substituting production. World trade was drastically reduced and became subject to stifling bilateral trade agreements.

The impact of the crisis in Southeast Asia was exacerbated by the buildup of excess production capacity in various export commodities such as rubber, sugar, copra, tobacco, tea, rice, and tin during the 1920s. For instance, Java achieved record sugar output levels as a consequence of the development of high-yielding cane varieties and the success of sugar factories in achieving economies of scale. But that happened at a time when various Western countries imposed restrictions on sugar imports. Rice production for export in Burma (Myanmar), Thailand (Siam), and South Vietnam reached record levels in the 1920s, and rice prices started to fall after 1928. Rubber trees that had been planted when rubber prices peaked in the late 1910s were ready for tapping

by the early 1920s, thereby increasing production. Consequently, the prices of the region's main export commodities fell during the late 1920s.

The price decrease accelerated in 1930 and 1931, when firms in the United States and Europe scaled back imports of primary commodities. Particularly the contraction of overseas automobile production caused a decline in the demand for rubber for car tires, affecting rubber producers in Indonesia, Malaya, and Vietnam. Their initial reaction was to increase output for export in an effort to beat declining prices, thus exacerbating the price drop. In particular, rubber producers with low marginal costs of production increased output. The initial reaction of other producers of primary commodities was the same. However, orders decreased, and access to foreign markets became more restricted. Consequently, the deterioration of the terms of trade was much worse for commodity-exporting nations than for exporters of manufactures. The decline in both the volume of exports and commodity prices led export revenues to reach rock bottom in 1932 throughout Southeast Asia, as the accompanying table shows.

The crisis in the United States and Europe also affected Southeast Asia in the monetary sphere. Preceding the 1929 crisis, the speculative stock market boom had led to increases in interest rates as well as reduced lending to less developed parts of the world, including Southeast Asia. The onset of the crisis led to bank collapses in North America and Europe, which intensified international credit scarcity, including in Southeast Asia. Higher interest rates were difficult to absorb in the region's export industries, because by the late 1920s they were already operating with small profit margins. Falling export revenues caused firms to default on their debts, which in turn reduced the international creditworthiness of Southeast Asia.

Colonial governments in the region (except for Thailand) were to different degrees dependent on taxing foreign trade. They saw their revenues decline. Although some governments increased borrowing, all had to cut expenditure drastically, mainly by dismissing public servants. Export revenues and reserves were insufficient to sustain imports. Limited reserves also made it difficult to qualify for loans to sustain imports.

The macroeconomic contraction was worsened by the monetary regimes of countries in Southeast Asia. When the crisis hit, all had a gold exchange standard according to which the value of their currencies was fixed relative to a gold-based international currency. Such monetary regimes made it difficult to use currency devaluation as a buffer to reduce the overseas cost of their export products. The regimes forced countries to import deflation. Some relief came for Burma, Thailand, and Malaya when the U.K. devalued the pound in September 1931 and for the Philippines when the United States devalued the dollar in April 1933. In contrast, French Indochina and colonial Indonesia had to wait until September 1936.

An earlier devaluation of the guilder would have relieved the plight particularly of Indonesia. Given the small size of the Dutch market, Indonesia could not benefit from preferential trade agreements with The Netherlands. Devaluation would have been possible, because Indonesia effectively had its own currency—the guilder—which was kept at par with the Dutch guilder in The Netherlands. On the other hand, devaluation might not have had much effect. Indonesia's access to commodity markets for sugar and rubber had been severely restricted. Indonesia had the highest level of foreign debt in the region, largely denominated in the gold-based Dutch guilder. A devaluation of the guilder in Indonesia would have increased the cost of servicing that debt and would have made it difficult for the colonial government to borrow on the Dutch capital market in order to dampen the fall in public expenditure in Indonesia.

International import restrictions meant that goods were traded on the basis of bilateral trade agreements rather than price, quality, and delivery terms. Thus the recovery in Southeast Asia was assisted by the preferential trade arrangements that the Philippines, Malaya, Burma, and Indochina had with, respectively, the United States, the British Commonwealth, and France.

The Philippines suffered less from the crisis, because of the preferential access for Philippine sugar to the protected U.S. market. In fact, sugar production in the Philippines increased during the 1930s. In contrast, sugar from Java suffered severely from declining free-market prices and rising protectionism in Japan, India, and Europe following the 1931 Chadbourne Agreement. Sugar producers in Java did not

have a benefactor, as the Dutch market was too small to absorb Java sugar. Sugar production had to be scaled back dramatically in Indonesia.

Rice producers in Burma benefited from lower import duties in India and Malaya on Burmese rice than for Thai rice, while rice producers in South Vietnam were supported by the fact that France and its colonies gave preferential treatment to Vietnamese rice and significantly increased rice imports after 1930. In contrast, Thai rice producers faced depressed international prices.

At the micro level, the crisis started to take its toll in 1932. Increasing numbers of firms were unable to find sufficient markets for their produce or were unable to meet production costs. The initial reaction had been to reduce production costs by lowering wages and dismissing workers, but by 1932 more were forced to close down. In particular, the labor-intensive plantations and mines in Malaya and Sumatra released hundreds of thousands of migrant workers from China, India, and Java.

Small indigenous producers of products such as rice, rubber, and copra chose instead to increase production in an effort to offset lower prices. For instance, rubber farmers in Sumatra and Kalimantan increased production until the colonial government in Indonesia entered the 1934 International Rubber Regulation Agreement and imposed a production quota system to curtail output and stabilize prices. Thai rice producers also maintained high levels of export production. Thai rice found ready markets throughout Southeast Asia, particularly in Indonesia, where imports of cheap Thai rice—and also cheap Japanese manufactures such as textiles—increased quickly as a consequence of the fact that the Indonesian guilder remained linked to gold until September 1936.

The literature on the crisis in Southeast Asia is dominated by concern about the consequences for the standard of living. It was argued that the crisis exacerbated the plight of the rural poor, leading them to resist payment of land taxes to governments and of debt to moneylenders. That led to peasant uprisings and a heightened level of political radicalization that precluded later calls for independence. However, the available evidence reveals a mixed experience. In Indochina, the colonial government insisted on land tax payments, while the colonial administration in the Philippines and In-

Indonesia turned a blind eye to tax evasion. In Burma rising rural indebtedness indeed led to increased landlessness as Chettyar (Chettiar) moneylenders foreclosed on land that marginal farmers had put up as collateral. Rural indebtedness increased in Indonesia as well, but it did not lead to a similar degree of increased landlessness because Chinese moneylenders were prohibited from owning agricultural land and would not accept it as collateral.

Recent research has emphasized that the impact of the crisis varied across Southeast Asia, depending on the dependence of income earners on export production. For instance, urban wage laborers experienced an increase in their standard of living as retail prices fell faster than wages. In rural areas, farmers changed to the production of nonexport crops for domestic markets where technically possible and economically feasible.

Perhaps the crisis was more important for its long-term impact. In particular, it instilled among local nationalists a sense of lasting mistrust of economic forces and of colonialism. Reflecting international trends, governments in the region implemented trade policies that furthered

domestic industrial production in an effort to reduce dependence on international commodity markets and to diversify economies. Such remedies established the foundations for inward-looking development policies that became prominent after the Pacific War (1941–1945).

GREAT WAR (1914–1918)

Conflict between Imperialists

Southeast Asia was involved in the 1914–1918 Great War only indirectly, whereas it was twice fought over in the 1941–1945 Pacific War. Yet it was, inevitably, affected by the Great War, which is also referred to as World War I or the European War.

Controversy over the origins of the war dates back to its outbreak but was intensified by the horrors of the trench warfare into which it rapidly descended and by its unexpected length. The victorious Allies (mainly Britain and France, and the United States) were to pin guilt upon the Germans, though they did not, as after World War II (1939–1945), proceed with the trial of war criminals. Historians are

less confident about attributing guilt, but the investigations and reconsiderations that have continued to take place have led to something of a consensus that the German leaders bore a predominant share of responsibility for the deterioration in international relations that preceded the war and for the outbreak itself.

After the accession of Kaiser Wilhelm II (1859–1941) in 1890 and especially after 1897, the Germans had spoken of achieving "world power" and pursued *Weltpolitik* (playing a role in world affairs and politics). What they meant was not always clear, though not the less alarming to other powers in consequence. Perhaps the best definition relates German aspirations to those of the British, the predominant nineteenth-century power, and those of the Americans and the Russians. The potential of the United States and Russia seemed so great that they were likely to dominate the world of the twentieth century, territorially and economically. The Germans could not wait for the achievement of economic success, which would certainly take them past Britain, though not the United States. To be sure of obtaining a share of world power, moreover, they believed they would need a secure base in Europe, and since Europe could, at most, sustain only one power with worldwide influence, the British had to see the wisdom in stepping aside and accepting German leadership in Europe. What Britain perceived, however, was a threat to its security and even its independence, and it sought to uphold the resistance of other powers to German hegemony.

Baffled and frustrated, the Germans attempted an open challenge to "encirclement." At most, they expected a short war; it would quickly resolve a diplomatic impasse, and the troops would be home by Christmas. They failed, however, to secure the rapid victory they anticipated. Nor did they admit defeat. The war extended, drawing in other powers—even, in 1917, the United States itself. It also challenged the organization of the individual states and their capacity to mobilize their human and material resources. The weakest of the Great Powers (though the most populous)—Russia—could not meet the challenge. The czarist regime was overthrown in Russia, and in October 1917, the Bolsheviks seized power. At the end of the war, the German and Austrian monarchies were also overthrown. At the same

time, the victorious European powers had themselves been profoundly challenged. The involvement of the Americans on their side had committed them to a more idealistic approach to international affairs, set out, for example, in U.S. president Woodrow Wilson's (1856–1924) Fourteen Points (which called for greater liberalism in international affairs and supported national self-determination) and the creation of the League of Nations.

The extension of the war to Asia was more indirect than direct. Germany was deprived of its colonial possessions, but those were mostly in Africa and the Pacific. Its Turkish ally was dismantled, though by no means without conflict or without effect on Islam. One way in which Turkey sought to fight back was by supporting Indian revolutionaries, particularly the Ghadr movement, radical and militant Indian nationalists of the Ghadr (Mutiny) Party. The future of India was, however, more affected by the concessions the British felt they had to make, given their increasing use of the Indian army. Those culminated in the Montagu declaration of 1917, which made it clear that India was destined for self-government within the empire.

In the first war, unlike the second, Japan was the ally, not the opponent, of Britain. Tokyo took advantage of its position to secure the German concessions in Shandong (Shantung) and to exert pressure on divided postrevolutionary China while the Europeans were otherwise occupied, presenting the so-called Twenty-One Demands in 1915. It also enjoyed major economic opportunities, becoming a creditor rather than a debtor nation in this phase. The British needed Tokyo's friendship, but they also wanted to restrain Japan, feeling that the help Japan offered in the Singapore mutiny of 1915 was too demonstrative. The British felt that the efficient and powerful force of the Japanese should be concentrated on China rather than on British territory.

In Southeast Asia, the colonial structure was unaffected by the war. In the Great War, unlike the Pacific War, the Dutch were neutral. The British consul general thought that the government in Batavia leaned toward the German side, but the Foreign Office gave no support to his suggestion that Japan should be given part of eastern Indonesia. Britain's object was to maintain the status quo for as long and as far as

possible. That remained its postwar policy: though victorious, it had been greatly weakened by the war.

The ideologies the war promoted were also to have their effect in the longer term. Burma was to seek the self-rule Britain had promised India. Even the Dutch were moved to set up the *Volksraad* (People's Council). They and, to a lesser extent, the other colonial powers faced an upsurge in communism after 1917. Nationalists did not have the opportunity they found in the Pacific War—to secure independence out of a worldwide struggle—but the struggles among their metropolitan powers suggested the possibility of change. Some Southeast Asians were directly involved in the conflict. Though they made no political concessions in Indochina, the French recruited seventeen Indochinese battalions to fight in the Balkans and on the western front. Siam declared war in 1917 in the hope of enhancing its status and ending the unequal treaties.

**GREATER EAST ASIA
CO-PROSPERITY SPHERE
Imperial Japan's Aspiration**

Establishing the "Greater East Asia Co-prosperity Sphere" was the official goal of the Japanese government when it waged the war in Asia and the Pacific that began on 8 December 1941. The concept implied that Japan would liberate

East and Southeast Asia from Western colonial rule and create a co-prosperity sphere under its leadership. In reality, however, it was a pretext for Japan to invade, occupy, and rule Asian countries. The term was first announced by the Japanese foreign minister, Matsuoka Yosuke (1880–1946), on 1 August 1940. Previously, a few cadres of the military proposed to establish the “East Asia Co-prosperity Sphere” around 1938. The sphere was to contain Japan, Manchuria, North China, and Mongolia as the “self-relying” sector; Siberia, central and southern China, and the parts of Southeast Asia located east of Burma (Myanmar) as the defense sector; and India and Australia as the economic sector.

According to Matsuoka, the sphere would encompass Japan, Manchuria, and China as the basic unit, with the South Sea area, consisting of Dutch East Indies (Indonesia), French Indochina, and Thailand, as the supplemental unit. In September 1940, British Malaya, Borneo, Burma, and India were added (India could be put in the Soviet survival bloc). Originally, the decisive objective was proclaimed to be securing the important strategic resources in East and Southeast Asia. However, from around September 1940 on, liberation of the area was advocated. The second objective was apparently to procure Asian peoples’ support for Japan’s war against the Western powers. In Japan, there are still individuals who insist that as a result of this policy, Asian countries were able to attain independence much earlier. Few Asians, however, concur with this thesis.

**GUIDED DEMOCRACY
(DEMOKRASI TERPIMPIN)**

Indonesian Style of Governance

Guided Democracy was a semiauthoritarian regime introduced by President Sukarno (t. 1945–1967) in Indonesia from 1957 to 1959. The system led to economic decay and sharp political tension, and it collapsed in late 1965 in the aftermath of the Gestapu Affair.

Guided Democracy was a confluence of four processes. First, it was an expression of Sukarno’s drive to place his person at the center of Indonesian politics. He had been the most important nationalist leader since 1927 and president since 1945, but he was only a figurehead under the parliamentary system from 1950. Guided Democracy placed him once more in the center of politics as the arbiter of political power and the main source of ideology. During 1957 and 1958, he teased the Indonesian public with hints about the kind of system that he believed would suit Indonesia. In 1959, he sidestepped the Constituent Assembly, which had been elected in 1955 to prepare a new national constitution, and unilaterally restored the provisional 1945 constitution that gave the president sweeping powers. He became president-for-life in 1963 and took grandiloquent titles such as “Extension of the People’s Tongue.” He paid little attention, however, to administration, and the government of the country decayed disastrously, especially after the death of his nonparty chief minister Djuanda Kartawidjaja (1911–1963), who had headed a series of “business” or “working” cabinets on Sukarno’s behalf. By 1965, Indonesia was suffering from high inflation, administrative disintegration, infrastructure collapse, and impending famine.

Second, Guided Democracy was an intellectual response to the problems of applying Western democratic forms to a large and diverse developing country. Many Indonesians, especially Sukarno, felt that the party system encouraged division rather than unity and that a majoritarian system would necessarily oppress minorities. Sukarno described a process of *musyawarah* (exhaustive discussion) and *mufakat* (consensus articulated by wise leaders), allegedly followed in village Indonesia, as more appropriate to Indonesian culture. Guided Democracy also rested on a long-standing intellectual tradition of corporatism in Indonesian thought that em-

phasized the harmonious interaction of different functional groups within society, rather than competition based on individual, class, or other particularist interests. Sukarno also stressed *gotong royong* (mutual self-help) as preferable to competition, and in 1959, he appointed 200 functional group representatives (representing workers, peasants, women, intellectuals, youth, and so on) and 94 presidential nominees to sit alongside the existing 281 members of Parliament in the new Provisional People's Deliberative Council (Madjelis Permusyawaratan Rakjat-Sementara, MPRS), which formally became the central legislative body of Guided Democracy.

Third, Guided Democracy was a major step toward military domination of Indonesian politics. In March 1957, Sukarno responded to a series of regional military rebellions by declaring martial law, effectively ending parliamentary rule and legalizing those rebellions. The army also took over management of former Dutch-owned enterprises, which were seized by workers in December 1957 in protest against the Dutch retention of West New Guinea (Irian Barat), which Indonesia claimed as an integral part of its territory. The army was active in sponsoring mass organizations as representatives of the various functional groups. Although martial law formally ended in 1963, Guided Democracy greatly expanded the military's economic resources and established it as the clear leader of a broad coalition of anticommunist forces.

And fourth, Guided Democracy was an unsuccessful attempt to overcome the political conflict of the 1950s by creating a structure in which parties and social groups would be forced to cooperate. Until Indonesia received international recognition in 1949, deep disagreements over the appropriate nature of the independent state had been partly controlled by the need for national unity. From 1950, however, the deep divisions over regional autonomy, social and economic reform, and the place of Islam raised the stakes in Indonesian politics.

By 1957, several regions were in revolt, discontented with their treatment by Java, and the elected Constituent Assembly was deadlocked over whether Islam was to have a place in the constitution. At the same time, a major Islamic revolution, the Darul Islam, was under way in the countryside in West Java and South Su-

lawesi. Moreover, the strong performance of the communists (Partai Komunis Indonesia, PKI) in the 1955 national elections and their even stronger performance in 1957 regional elections raised the prospect of communist participation in government after the elections scheduled for 1959. Under these circumstances, Guided Democracy initially seemed to offer a moratorium on political change.

Quickly, however, it became apparent that change had only been postponed. Observers commonly described the real political structure of Guided Democracy as a triangle, in which Sukarno balanced the army (with the Muslims) against the communists. Sukarno, however, was ailing and aging, and he would be succeeded either by the PKI or by an army-led coalition. Bitter antagonism developed between the two sides, often spilling over into violence when the PKI pursued issues such as land reform. The external campaign to recover West Irian (West New Guinea), which succeeded in 1963, as well as the subsequent *Konfrontasi* ("Crush Malaysia" campaign launched by Sukarno's Indonesia against British plans to create a new Federation of Malaysia) and Sukarno's general espousal of Third World anti-imperialist causes, provided only limited distraction from internal divisions. The perception that the PKI had launched a preemptive coup against the army high command in Jakarta on 1 October 1965 (the Gestapu Affair) gave the military grounds to destroy the party and to remove Sukarno from power.

The military-dominated Suharto regime that succeeded Guided Democracy described itself as the New Order, in contrast to Sukarno's Old Order. However, it inherited from the Sukarno era an authoritarian presidential constitution, a doctrine of military engagement in politics, and a system of military finance through enterprises separate from the state budget. It also assumed a suspicion of democracy, a sympathy for political corporatism, and a preference for removing conflicts by repressing them and defining them out of existence. In this respect, the legacy of Guided Democracy persisted until the late 1990s.

GUJARATIS

Of the Indian trading groups that conducted international trade throughout Southeast Asia, the most widespread and important was the Gujarati. The Gujaratis, from their base at Gujerat on the west coast of India, were skilled shippers and traders and formed part of the vast

trading network that linked western Indian ports with ports on the eastern shores of the Bay of Bengal. These included the Burmese ports of the Irrawaddy Delta, Thai ports, and Malay ports. The Gujaratis plied routes linking West Asia, the Mediterranean, Southeast Asia, Japan, and China. They were specialist textile traders, distributing silk and cotton textiles from Ahmedabad and Baroda to the Southeast Asian region in exchange for rice and teak from Burma, pepper and tin from western Indonesia and Malaya, and spices gathered in the Straits of Melaka from the neighboring region. Gujarati shipowners controlled the interisland trade and parts of the international trade with western Asia and Europe.

Like the Chettiars, the Gujaratis also developed a financial trading system throughout the region. They operated as bankers and merchant bankers, and their letters of credit (*hundi*) issued in one region could be cashed in another. The arrival of the Europeans in the sixteenth century resulted in the dispersal of the spice trade and forced the Gujarati and Malabar Muslim networks to disperse into other areas as well.

In the nineteenth and twentieth centuries, the Gujaratis became increasingly important as compradors (*shroffs*) to Western banks in Southeast Asia, securing credit for large urban textile firms or opium traders, with networks extending from Persia (Iran) to China. The Gujaratis also provided short-term credit to the Chettiars. Their dominance in the Indian textile trade in the urban areas of Singapore, West Malaysia, Sabah and Sarawak, Indonesia, and Bangkok continues to this day.

GULF OF TONKIN INCIDENT (AUGUST 1964)

Prelude to the Vietnam War

The Gulf of Tonkin Incident involved the August 1964 naval exchanges in which U.S. warships faced smaller North Vietnamese naval units in the Gulf of Tonkin. It was the main event preceding the massive involvement of U.S. forces in Vietnam, and it served as the pretext for the United States to escalate its intervention.

To this day, the facts surrounding the incident remain controversial, as does the background to the event. On 2 August, there was a twenty-minute skirmish between Hanoi patrol boats and the destroyer USS *Maddox* off the North Vietnamese coast. Washington decided not to act. In a tense context between North and South Vietnam, ten years after the Geneva cease-fire, the juxtaposition of two American naval operations near the Democratic Republic of Vietnam (DRV, North Vietnam) would prove explosive—the OPLAN-34A commando raids on coastal islands (covert operations from South Vietnam) and the U.S. naval patrols near DRV territorial waters (DeSoto program for electronic surveillance). But on 4 August, in very bad weather, a second alleged naval incident occurred, involving the *Maddox* and another U.S. destroyer, the *Turner Joy*, which apparently was attacked by DRV torpedo boats. Did this last Vietnamese attack really happen? Decades later, former U.S. defense secretary Robert McNamara himself apparently was not sure (McNamara 1996).

Regardless of what actually did or did not happen on 4 August, the consequences of the incident are clear. Only a few hours later, Washington authorized reprisal raids on four North Vietnamese patrol boat bases and an oil depot. Thereafter, events unfolded quickly: sixty-four sorties were made from aircraft carriers cruising nearby, and Lieutenant Everett Alvarez Jr. be-

U.S. president Lyndon B. Johnson signs the Gulf of Tonkin Resolution on 10 August 1964. The congressional resolution authorized the president to take whatever measures he deemed necessary to deal with communist aggression in Vietnam. The resolution was repealed at the end of 1970. (U.S. National Archives)

came the first U.S. pilot to be shot down and imprisoned in Hanoi. Even more important, on 7 August 1964, the U.S. Congress voted almost unanimously for the Gulf of Tonkin Resolution that had been submitted by Lyndon B. Johnson's administration (1963–1969): “the Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression” (quoted in Galloway 1970: 167). The idea incorporated in the resolution had been percolating for a few months, and the Gulf of Tonkin incident gave the opportunity for its execution. The time had arrived for the Vietnam War.

HAMENKUBUWONO II (r. 1792–1812)

Imprudent Ruler

Hamengkubuwono II was the son of Sultan Hamengkubuwono I (r. 1742–1792) of the Yogyakarta sultanate. His father was deemed the most able descendant of the Mataram royal family since Sultan Agung (r. 1613–1645). In 1774, when Hamengkubuwono II was still crown prince of Yogyakarta, he wrote *Serat Surya Raja* (“The Book of the Sun of Kings”). In this work, which became part of the royal regalia of the Yogyakarta sultanate, he prophesied that the conflict between the two kingdoms of Yogyakarta and Surakarta would be resolved and the kingdoms reunited. The Dutch, according to the text, would convert to Islam, and Java would emerge triumphant under the rule of the hero represented by the crown prince.

Hamengkubuwono II’s disregard for the Dutch was clearly expressed in this work. This lack of respect made him very unpopular with the Dutch, whose reluctance to recognize his right to succeed Hamengkubuwono I forced

the latter to abandon his plans to abdicate his throne in favor of his son.

The crown prince eventually succeeded his father upon the latter’s death in 1792. When Hamengkubuwono I died at the age of eighty, he left behind a strong and wealthy state and a legacy of astute leadership. But Hamengkubuwono II found it impossible to emulate his father. His disregard for the prowess of the Dutch was apparently the single most important obstacle to the new ruler’s chances for a successful reign. He believed that the Dutch constituted an insignificant group in the overall context of Java and that they could be easily manipulated. His disdain for the Dutch was one of several factors that resulted in Yogyakarta’s diminished and enfeebled state by the end of his reign.

When Hamengkubuwono II ascended the throne in 1792, he inherited a mighty kingdom. The sultan’s own personal troops amounted to 1,765 men, in addition to which he could levy over 100,000 men from his nobles (Ricklefs 2001: 143). However, the sultan’s troubled relations with his brothers and his mismanagement of the internal affairs of the kingdom threatened Yogyakarta’s military prominence by upsetting the order and stability of the court. Hamengkubuwono II was wary of his brothers, especially Pangeran Natakusuma, whose popularity and influence threatened the sultan’s own position. The sultan was also not a good judge of character and talent. He replaced many of his father’s advisers and officials with persons of mediocre ability.

The replacement of his father's capable prime minister, Danureja I, with the latter's less able grandson, Danureja II, was but one of several instances of poor judgment on his part.

Hamengkubuwono II embarked on a series of building projects that stretched the kingdom's treasury and labor force, especially in the peripheral regions (*mancanegara*), to the limits. The sultan's oppressive taxation and corvée programs were extremely unpopular. His failure to maintain good relations with the Dutch enabled his rival, Sultan Pakubuwono IV (r. 1788–1820) of Surakarta, to plot the destruction of Yogyakarta. Unlike Pakubuwono IV, who accepted Dutch proposals to change the status of his kingdom, Hamengkubuwono II rejected Dutch requests with contempt.

A revolt by the sultan's brother-in-law, Raden Rangga, heralded a period of turbulence as Yogyakarta–Dutch relations worsened. The Dutch easily crushed the revolt, but this rebellion gave the Dutch the pretext for issuing an ultimatum to Hamengkubuwono II. They demanded that the sultan accept changes proposed by the Dutch and reinstate former prime minister Danureja I, who had been dismissed. Hamengkubuwono II defied Dutch orders, whereupon Dutch troops defeated the sultan's forces and compelled him to step down. Though Hamengkubuwono II was allowed to stay in the Yogyakarta court, his son replaced him as the new ruler, becoming Hamengkubuwono III (r. 1810–1814).

The Napoleonic Wars (1803–1815) led to drastic changes in Java. French defeat of the Dutch led the Netherlands government-in-exile to issue the “Kew Letters,” allowing Britain to take over the administration of the Dutch colonies as a caretaker government. Hamengkubuwono II seized the opportunity to regain the Yogyakarta throne. Hamengkubuwono III was reduced to his former status as crown prince. However, he remained the favorite of the Europeans, who saw him as malleable in comparison with his father.

Hamengkubuwono III, Natakusuma, and Pakubuwono IV of Surakarta soon launched a plot aimed at bringing about the downfall of Hamengkubuwono II. The latter's disdain for Europeans made him susceptible to the schemes of his enemies. Pakubuwono IV wrote a secret letter to Hamengkubuwono II, advocating a joint revolt against the Europeans by

both sultanates in which Surakarta troops would be sent to support Hamengkubuwono II's army. In June 1812, during the British occupation, when European troops were sent to conquer Yogyakarta, Pakubuwono IV did nothing to aid Hamengkubuwono II. The British, assisted by the Mangkunegaran Legion, conquered Yogyakarta and plundered the court. Hamengkubuwono II was dethroned and exiled to the British colony at Penang, on the Malay Peninsula. Hamengkubuwono III was restored to the position of sultan.

HAMZAH FANSURI

Proponent of Sufi Mysticism

A Malay Sufi writer and poet, Hamzah Fansuri was one of the foremost proponents of Wujudiyah mysticism and lived and taught in Aceh during the second half of the sixteenth century, during the reign of Sultan Alauddin Riayat Shah ibn Firman Shah (r. 1589–1604). Although his teachings were denounced and his works were burned in the mid-seventeenth century, thirty-two poems and three prose writings have survived to the present. His works reveal a creative marriage of the Malay verse compositions—*syair* and *pantun*—with the grace and eroticism of Persian mysticism.

The date and place of Hamzah's birth remained problematic. It is very likely that he was born sometime in the mid-sixteenth century. As his name suggests, he was connected to Fansur, a port on the western coast of North

Sumatra between Singkil and Sibolga. Foreigners called Fansur by the name Barus. Chinese sources referred to Fansur (Barus) as Pin-su or Pan-ts'ut, where the famed Barus camphor was an important export. Though it is probable that Hamzah spent the greater part of his adult life in Barus, it is not clear if he was born there. Citing from Hamzah's verses, one writer concluded that he was born in either Shahr Nawi (Shah r-i-Naw) or Ayutthaya (Al-Attas 1970: 5–8). Established in 1351, Ayutthaya, as the capital of Siam, attracted foreign traders, including Muslims (Malays, Indians, Persians, Arabs, and Turks). It is more probable that Hamzah traveled to Shahr Nawi and learned Persian from the Muslim community there than that Shahr Nawi was Hamzah's birthplace (Drewes and Brakel 1986: 5). The date of his death remains open to speculation as well. It is suggested that he lived until the reign of Sultan Iskandar Muda (Mahkota Alam) (r. 1607–1636), as hinted at by one of his verses. Further scrutiny, however, reveals that he likely died in or about 1590 (Drewes and Brakel 1986: 3).

Hamzah was an avid traveler, visiting and sojourning in the Malay Peninsula (Pahang), Ayutthaya, Mughal India, Mecca and Madinah, and Baghdad. As noted, he lived and taught in Barus and Banda Aceh.

Greatly influenced by the doctrine of *Wahdat al-Wujud* (Unity of Being), which was pioneered by Ibn al- 'Arabi of Spain and attained currency in Persia and Mughal India during the latter half of the sixteenth century, Hamzah was the doctrine's preeminent writer and teacher in Aceh. Toward the last quarter of the sixteenth century, Aceh emerged not only as a major political and military power in the Straits of Melaka but also as the regional center of Islam, replacing Melaka, which had been under Portuguese control since 1511. Hamzah's teachings and the influence of his writings spread throughout the Malay Archipelago. Shamsuddin al-Sumatrani (Shamsuddin of Pasai, d. 1630), a powerful and influential theologian during the reign of Sultan Iskandar Muda, shared Hamzah's beliefs and convictions, commented on his writings, and promoted his teachings. Hamzah's three prose works are *Asrau'l-Arifin* ("The Secrets of the Gnostics"), *Sharabu' l-'Ashqin* ("The Beverage of the Lovers"), and *Al-Muntahi* ("The Adept"). His thirty-two poems (*rubai*) are of

unequal length, from thirteen to twenty-one strophes of four lines each.

Hamzah's greatest critic was Nuruddin al-Raniri (d. 1658) from Gujerat. He denounced Hamzah and Shamsuddin for promoting *Wahdat al-Wujud* as opposed to what he believed was the true, orthodox mysticism, *Wahdat al-Shuhud* (Unity of Witnessing). In Nuruddin's India, the doctrine of *Wahdat al-Wujud* had been strongly criticized by theologians, and Nuruddin carried that criticism to Aceh. Garnering the support of Sultanah Taj al-Alam Safiatuddin Shah (r. 1641–1675), he attempted to obliterate Hamzah's name and works.

Due to Nuruddin's denunciation but also to Hamzah's antagonism of three powerful groups—the 'ulama (theologians), the *qadi* (judges), and the aristocracy, all of which he attacked with his pen—Hamzah was literally persona non grata in official records, including the *Hikayat Aceh* (*History of Aceh*). Ironically, however, Hamzah Fansuri's name and writings were resurrected in Nuruddin's denunciation and also in Shamsuddin's commentary on his poems.

HANOI (THANG-LONG)

Citadel of Power

The capital city of the Socialist Republic of Vietnam, Hanoi today consists of seven wards of urban area (*noi thanh*) and five prefectures of suburban area (*ngoai thanh*). The total area of Hanoi is about 918 square kilometers. The population is about 2.7 million, and the overall population density is 2,952 people per square kilometer. The population density in the urban area is noticeably higher: with 1.45 million people residing in about 84 square kilometers of urban area, there

are 17,207 people per square kilometer (Hanoi Statistical Office 1999). Communist organizations, a base of the People's Army, the ministries, and the diet are concentrated in Hanoi, the center of the state power in Vietnam. Geographically, Hanoi is located on the natural levees of the Red River, where many lakes and marshes are scattered, and it functions as a node that connects Yunnan in China to the Bac Bo Gulf and the South China Sea.

In the late seventh century, the Annam protectorate, the local capital of the Imperial Chinese Tang dynasty (618–907), was built at this site, and the city apparently was a political center under Chinese rule. In 1010, Ly Cong Uan (1009–1028) moved the capital from Hoa Lu, the then capital of Dinh (968–980) and of the early Ly dynasty (980–1009), to Hanoi. The city was then named Thang-long, which means “ascending dragon.” Hanoi was sometimes also called Dong Do or Dong Kinh (meaning “eastern capital”), in contrast with Thanh Hoa, which was called Tay Do (meaning “western capital”) during the Hồ dynasty (1400–1407). After the Nguyễn dynasty (1802–1945) moved the capital to Hue in the early nineteenth century, the political importance of Hanoi decreased. The name *Hanoi* was actually given to the city only in 1831. During the French colonization of the late nineteenth century, the governor-general of French Indochina was established in Hanoi, and the city again became a site of political importance. Since the foundation of the Democratic Republic of Vietnam in September 1945, Hanoi has been the capital of the independent state.

Before Hanoi was reconstructed by the French, the city was surrounded by outer ramparts of earth. Called *dai la thanh*, they were developed by the Annam protectorate of the Tang dynasty and were the first such walls in Vietnamese history. Inside the outer ramparts were the political and economic areas. The political area was formed around an inner citadel. The economic area was located around the political area and was a place where merchants and craftspeople lived.

Hanoi was the capital for the successive dynasties from the eleventh century to the eighteenth century. The imperial palace in the political area of Hanoi was constructed in the Chinese style of the period, but under the Nguyễn dynasty, a Vauban-style citadel was

built at the site of the former imperial palace, and Hanoi became the only center of local administration. The most prosperous part of the economic area was east of the palace or citadel along the Tô Lịch River, which flows into the Red River. Because the economic area of the city had many markets, Hanoi was called Ke Cho (the place of markets). In the sixteenth century, British and Dutch firms were located temporarily in the city. The Chinese immigrant town within Hanoi appeared in the fifteenth century and developed greatly during the nineteenth century. A clubhouse (*huiguang*) of the Guangdong community and the Fujian community was built on the eastern side of the citadel in the nineteenth century. The economic area to the east of the citadel had distinct characteristics. First, there were many blocks of craftspeople, and only one category of job was conducted in each block. Job categories included textile dyeing, gold and silver work, woodwork, paper manufacture, hide processing, and xylography. Second, each block consisted of people from the same village, and they worshiped the tutelary deity of their native village.

After the French occupation in 1884, the French colonial government destroyed the citadel and the outer ramparts and carried out infrastructure projects. Straight roads were constructed at the center of the city, and with modern technology, a bridge named after Governor-General Paul Doumer (t. 1897–1902) was constructed over the Red River. Streetcars and railroads also appeared. A French district with many French-style buildings was constructed. The most typical French-style buildings were the governor-general's office, the opera house, and the church. Light industries were also imported from the late nineteenth century to the early twentieth century, and match, cigarette, and liquor factories were established.

When the First Indochina War ended in 1954, Hanoi had an area of only about 130 square kilometers and a population of 380,000. In 1961, the area of the city was expanded to more than 900 square kilometers. In 1978, Hanoi annexed peripheral provinces and once had more than 2,000 square kilometers, but in 1991, the city was shrunk again to its current scale (Hanoi Statistical Office 1999).

HARRISON, FRANCIS BURTON (1873–1957)

Champion of Filipinization

Francis Burton Harrison was the sixth American governor-general of the U.S. colonial government in the Philippines, serving from 1913 to 1920. As governor-general under the Democratic administration of President Woodrow Wilson (t. 1913–1921), he carried out a policy of increased Filipinization, which meant placing more Filipinos in positions of authority in the colonial government. He granted greater autonomy to the Filipinos in government and lessened his own powers in the belief that the best way to prepare the country for independence was to provide its people with more experience through actual governing. He was very popular among Filipinos, although conservative Americans criticized his liberal rule.

Harrison, born in 1873, was a Yale University graduate and earned his law degree from the New York Law School. He volunteered for the Spanish–American War (1898) and served with the U.S. garrison in Cuba. He was elected to the U.S. Congress, where he served a full term and came to know the Philippine resident commissioner at the time, Commissioner Manuel L. Quezon (1878–1944).

With the election of Woodrow Wilson of the Democratic Party in 1913, Harrison was appointed governor-general of the Philippines, to succeed W. Cameron Forbes (t. 1909–1913). The Filipinization policy he pursued after assuming that post was in line with the Wilson

administration's liberal policy toward the Philippines and in accordance with the report of Henry Jones Ford, who had been sent to the Philippines to assess conditions there.

During Harrison's term in office, the U.S. Congress passed the 1916 Jones Law, which stated that the Americans would withdraw their sovereignty over the Philippines and recognize Philippine independence once stable government had been established. Harrison interpreted this to mean that Filipinos should be granted greater autonomy in domestic affairs in order to prepare them for independence.

As governor-general, Harrison took steps to increase the number of Filipinos in the government, while simultaneously reducing the number of Americans in the civil service. To give Filipinos more hands-on training and hence more active roles in government, he approved bills from the Philippine legislature that offered attractive early-retirement benefits to Americans in civil service jobs and reduced the salaries of those who stayed on in government. Posts vacated by Americans were then filled by Filipinos.

Harrison also approved legislation that made all posts in the provincial boards elective, thus doing away with appointments from the governor-general. He increased the number of Filipinos heading executive departments and bureaus and allowed Filipino politicians, led by Manuel L. Quezon and Sergio Osmeña (1878–1961), to form the Council of State, a body that served as a link between the executive and legislative branches of the government.

Harrison granted Filipinos great leeway in government and did not actively exercise his prerogatives and functions as governor-general. He vetoed only five bills—the smallest number by any American governor-general in the Philippines.

Harrison also believed in the need for Filipinos to prepare themselves economically, and he allowed increased government participation in the economy, through government-owned and government-controlled corporations. Further, he permitted Quezon and other political leaders to form the Board of Control, which would decide on policies for these corporations. He authorized the establishment of the Philippine National Bank and agreed to having it directed by a Filipino president. When the Great War (1914–1918) broke out in Europe

during his administration, Harrison organized the Philippine National Guard in an effort to contribute to the war effort. After his term as governor-general, he returned to the United States and wrote a book defending his policies.

Harrison was viewed as a pro-Filipino American administrator and was a good friend to Quezon. He was one of the most popular governors-general during the U.S. colonial administration, and he returned to the Philippines during the Commonwealth period to aid Quezon. He was made an honorary Filipino citizen and, upon his death in 1957, was buried in Manila.

Although Harrison supported the cause for Philippine independence and granted much autonomy to Filipinos, he was criticized by many Americans for being too liberal and not supportive of U.S. interests. He was condemned for being too lenient and for failing to exercise stronger executive control. Critics also pointed out that his policy of Filipinization led to inefficiency and corruption, as many Filipinos who were given high-ranking positions did not have enough experience and many safeguards were not implemented. His term as governor-general marked one extreme of American colonial rule in the Philippines; the other extreme would be manifested by his successor, Leonard Wood (t. 1921–1927), who pursued a stricter policy.

**HASSANAL BOLKIAH,
SULTAN OF BRUNEI (1946–)**

Exemplifying a Malay Muslim Monarch

Sultan since 1967, Hassanal Bolkiah guided Brunei to complete independence from the United Kingdom at the start of 1984, when his country became known as Negara Brunei Darussalam and he himself was promoted from “His Highness” to “His Majesty.” A national ideology, the *Melayu Islam Beraja* (Malay Islamic Monarchy) (MIB) concept, was formulated to meet his requirements. Besides being monarch, he has held numerous posts: unelected prime minister (1984–), minister of defense (1986–), minister of finance (1984–1986 and 1997–), minister of law (1998–), head of Islam, commander-in-chief, inspector general of police, and chancellor of the local university. His reign has involved a process of nation building, consummated in 1996 with recognition of the sultanate as a “developed nation.”

Hassanal Bolkiah represents a generation that has been spared firsthand experience of national ignominy, for the oil price rises of the 1970s brought his realm unprecedented riches. Born on 15 July 1946, he was installed as crown prince in 1961, educated at Sandhurst from 1966 to 1967, and ascended the throne in 1967 upon the abdication of his father, Omar Ali Saifuddin III (1914–1986). The two monarchs then ruled together for nineteen years, the latter gradually asserting his authority and taking over in his own right.

Hassanal Bolkiah has expanded the armed forces and police service; he has also had a modern bureaucracy trained and has overseen town planning projects. Further, the provision of health and education has been enhanced, and the communications infrastructure has been improved. In foreign affairs, the sultanate emerged from under the British umbrella in the 1980s to make its voice heard in the international arena, culminating with the hosting of the Asia Pacific Economic Caucus (APEC) Summit in Bandar Seri Begawan in November 2000.

At the same time, however, there is a lack of democracy in Negara Brunei Darussalam, coupled with a degree of secrecy and incompetence, and materialism and secularism have not been entirely excluded. Legislation is by decree, and the power of patronage is concentrated in the royal family. A succession of development

Sultan Hassanal Bolkiah during the ceremony in which his son was proclaimed crown prince, 10 August 1998. (Attar Maher/Corbis Sygma)

plans designed to diversify the economy enjoyed only patchy success.

HATIEN

Hatien was a major eighteenth-century overseas Chinese free port and kingdom in southwest Indochina, lying across the present Cambodian-Vietnamese border. It was originally a Cambodian vassal and then nominally dependant on Nguyễn Cochinchina from 1708, but by the later 1750s, under its second ruler, Mac Thien Tu (r. 1735–1780), Hatien had become a wealthy, expanding state. It extended along the coast from Ca Mau in the far end of southern Vietnam to Kompong Som in Cambodia (including the island of Phu Quoc). It stretched inland from the Hau Giang (Bassac) arm of the Mekong to the headwaters of the Ha Tien River and west to Tuk Meas in Cambodia. However, when the 1767 Burmese destruction of the Siamese Ayutthaya kingdom radically transformed political conditions in southern mainland Southeast Asia, Mac Thien Tu's bid for greater power ultimately caused Hatien's ruin at the hands of the formidable new Thai king, Taksin (r. 1767–1782). Later, a greatly reduced Hatien was incorporated into the new unified Vietnamese kingdom established in 1802, and it subsequently became part of French Cochinchina and a district in modern Vietnam.

As a young Cantonese fleeing the fall of the Ming dynasty in China, Mac Cuu (1655–1735) had immediately recognized the potential of the Hatien River (Giang Thanh) to become a major commercial artery. Its broad, deep estuary and inner basin would easily accommodate merchant shipping following the coastal current from China and Taiwan to Vietnam and past Hatien to Siam, the Malay Peninsula, and Sumatra. Traders could transact business year-round in the old river port of Banteay Mas (known as Panday Mas to Malays, Phuttaimat to Thais, and Pontemas to Europeans). Alternatively, during the wet season, traders could use the ancient canal that connected the river to the Lower Mekong arm for easy access to the inland Khmer capital. Accepted into royal service in

Cambodia, Mac Cuu later managed to arrange an official appointment to Banteay Mas, with the aim of developing it commercially.

Sometime in the early part of the eighteenth century—traditional sources disagree about the date—Mac Thien Tu, son of Mac Cuu, moved his operations to the river mouth (Peam to Cambodians). There, he established a market town at the spot long known to Chinese mariners as Kang Kau (Kankao/Cancar to eighteenth-century Europeans or Hatien to Vietnamese). His encouragement of commerce and agriculture quickly attracted Vietnamese and Chinese immigrants, but before adequate defenses could be erected, Hatien was devastated in 1717 by Siamese forces intervening in a Cambodian civil war. After returning in the early 1720s, Mac Cuu and his son began erecting the entrenchments and fortifications that would enable Hatien to withstand Khmer attacks in 1730, 1736–1739, and 1750. They also maintained close diplomatic relations with the Nguyễn court in Huế, accepting the subordinate Vietnamese titles that promised military support in return.

From the 1730s until its destruction in 1771, Hatien developed as a unique experiment in overseas Chinese localization. The Mac regime encouraged all traders, whatever their Chinese dialect affiliation, ethnicity, or religion. Their subjects included Khmer, Malays, Vietnamese, Chams, and Portuguese descendants, as well as Chinese from Hainan, Guangzhou (Canton), Fujian (Fukien), and elsewhere. Though the Mac court maintained Ming forms, its military and civil officials were drawn from several ethnic groups. By the 1760s, even Christianity was openly tolerated, with a French seminary established at Hon Dat (1765). Hatien developed its own export-based industries (pepper, sea products, timber, lacquer, and rice), and as a duty-free entrepôt, it linked various Chinese trading networks and local commodity-producing collectives (*kongsí*) throughout insular Southeast Asia and up to China. In 1757, as a reward for Mac's military support for the Cambodian king, Hatien acquired the former Khmer ports of Kampot and Kompong Som and, with them, the monopoly of Cambodian maritime trade.

Wealthy and confident, Hatien reacted ambitiously to the political instability in southwest Indochina after 1767. Its ruler immersed himself in intrigues and regional conflicts, but, impru-

dent and unfortunate, he overextended Hatien's resources and offended neighboring Khmer and Vietnamese ruling factions. His activities also enraged Taksin, the half-Teochui Chinese Thai ruler. Backed by Teochui trading communities in rival ports along the Gulf of Siam, especially Chonburi and Trat, Taksin attacked Hatien in 1771. Denied Vietnamese support, the town was utterly devastated and depopulated before Thai forces chased Mac remnants deep into Vietnamese territory. To prevent Hatien's resurgence, Taksin sank the large Mac fleet at the harbor entrance, making its channel too hazardous for large seagoing junks. Combined with later silting, this barrier ultimately doomed Hatien to receive coastal traffic only.

Although later Vietnamese sources always portrayed Hatien as a Nguyễn dependency, the wider historical perspective reveals it as an autonomous state that was in large part responsible for spreading throughout southern Indochina the political shock waves that followed the 1767 fall of Ayutthaya. Although the Mac expansionary push rebounded catastrophically on Hatien, the subsequent decades of warfare forged the new Chakkri and Nguyễn kingdoms that would dominate mainland history in the precolonial nineteenth century.

HAYÂM WURUK (RĀJASANAGARA) (r. 1350–1389)

Presiding over the Malay Archipelago

Hayâm Wuruk was the fourth king of the great kingdom of Majapahit, with its main territory on the island of Java. He was the reigning monarch when Majapahit, under the leadership of the “grand vizier,” Gajah Mada (t. 1331–1364), reached the zenith of its imperial expansion. Majapahit then dominated *Nusantara*, which encompassed Kalimantan to the north; Sunda, Bali, and Maluku to the east; and Tumasik to the west—that is, more or less the entire Malay Archipelago, the area of modern-day Malaysia and Indonesia.

During Hayâm Wuruk’s reign, the court poet Prapañca wrote the *Nāgarakertāgama*, a poetical narrative about occurrences in Majapahit, both contemporaneous and historical. The literary work was completed in 1365 C.E. In its opening lines, the king was lauded as the incarnation of the supreme god, Bhaṭāra Nātha or Śrī Parwwatanātha. Hayâm Wuruk’s official name was Rājasanagara, but a later chronicle, the *Pararaton* (written around the year 1600 C.E.), gave the king other appellations, namely, Janeśwara, Hyang Wēkasing Sukha, and just Bhaṭāra Prabhu. The name Sanghyang Wēkasing Sukha and its synonym, Pamēkasing Tuṣṭa—referring to Hayâm Wuruk as a royal personage who was still leading the royal family—was also mentioned by the contemporaneous poet Pu Tantular in his work *Arjunawijaya*.

Hayâm Wuruk was born in 1334 as a prince of Kahuripan during an earthquake and the eruption of the volcano Kampud, which, ac-

ording to the *Nāgarakertāgama*, reflected his superhuman nature. He ascended the throne when he was sixteen years old, the same age as the much earlier ruler of Kahuripan, Airlangga (r. 1019–1049), had been when he became king. Hayâm Wuruk was of an illustrious royal line. His mother, Queen Tribhūwanatung-gadewî (who was also called the queen of Jīwana or Kahuripan), had ruled before him, from 1329 to 1350. She was the daughter of the much venerated “queen mother” Gayatrī, who was the daughter of Kērtanāgara (r. 1268–1292, the last king of Singhasāri) and the consort of the first king of Majapahit, Wijaya/Kērtarājasa Jayawarddhana.

As narrated in the *Nāgarakertāgama*, King Hayâm Wuruk undertook tours to several regions within his kingdom, where he inspected the villages and the sanctuaries; occasionally, these were in a dilapidated state. His first royal tour was to Pajang (Central Java) in the year 1275 śaka (1353 C.E.). In the following year, he visited Lasēm (on the north coast of Java), traveling along the coast. In 1357, he partook of the beauties of the “Southern Ocean,” traveling through the woods and visiting three towns, including Lodaya in the southern part of East Java. During the full moon in the month of Bhādrapada in 1359, the king and his entourage—all the princes with their wives, officials, and officers, as well as the king’s priest and the court poet—visited Lamajang and many other places. The royal entourage utilized all kinds of vehicles and was followed from place to place by people on foot; the group eventually traveled on the *rājamārga*, or royal highway.

The king and his company spent the night in many places, including Kapulungan, Gangan Asēm, a Buddhist foundation at Mandala Hambulu Traya (a freehold foundation granted by the Patih Gajah Mada), Balater, and Rēnēs. At Patukangan and at Kēṭa, the king stayed for more than one night. At Patukangan, he received officials from Bali and Madura, as well as from different places in the eastern part of Java. They brought gifts in the form of various kinds of animals and cloth. The next morning, the king distributed gifts of clothing to all the troops and the poets. At Kēṭa, the king stayed for five nights. Officials from that city and its dependent territories came to pay respect to the king, bringing gifts of food, and they were all pleased when he gave them fine clothes.

When the king departed from Kēṭa, the number of servants escorting him increased.

In the next stop at Kalayu, at a Buddhist freehold foundation, the king attended a royal ceremony known as *amēgat sigi*, or cutting the warp. After the rites, excellent foods were served, and many kinds of drums accompanied dancing that went on all day long. Then the king went to the nearby villages, unannounced. While spending several nights in these villages, he took “perfect maidens” as *bini haji* (wives of the king). The next destination was another Buddhist foundation at Kambang Rawi. Further on, at Pajarakan, he stayed for four days, camping on a grass field near a Buddhist foundation. The next stop was the hermitage at Sagara. The great sage of that hermitage served the king the refreshments that he himself consumed in the hermitage, and the king duly repaid him with honey. The king and his company continued their journey, spending the night at Gēnding, Kagēnēngan, Wēdwa-wēdwan, Pahañangan, and Padāmayan. While traveling between all those places, the king visited many other villages.

Hayâm Wuruk’s final inspection journeys were taken in the years 1360 and 1361. During the last tour, one destination was Palah, where the present Panataran temple complex is situated. The royal party spent the night at Lodaya, stayed for a while at Siping to restore the holy sanctuary, and spent another night at the eminent religious foundation of Śûrabhâna (in which there is the temple now known as Surawana). After the king returned to the capital, Gajah Mada reminded him that the grand royal ceremony known as the *śraddha* was to be executed in 1362, in honor of the late queen mother Gayatrî. Hayâm Wuruk consented to the preparations. Gajah Mada led the rituals and festivities of that royal undertaking, and during the ceremony filled with pomp and circumstance, Hayâm Wuruk himself danced in the exclusive presence of ladies of the court.

The reign of Hayâm Wuruk not only marked the expansion of the political hegemony of Majapahit but also represented the efflorescence of Javanese literary tradition, culture, and history. Prapañca’s *Nāgarakertāgama* and Pu Tantular’s works—*Arjunawijaya* and *Purushadasanta* (*Sutasoma*)—glorified the kingdom and empire of Majapahit and showcased the Javanese cultural accomplishments of the Hindu-Buddhist era.

HEEREN ZEVENTIEN (GENTLEMEN SEVENTEEN)

Directing from Afar

The Heeren Zeventien, or Gentlemen Seventeen, constituted the central board of the Dutch United East India Company (VOC). The Heeren Zeventien was not a permanent institution but consisted of regional representatives (directors) of the six separate “chambers” that made up the company. This peculiar arrangement was the outcome of the intricate history of the company’s founding: it had been formed out of a number of preexisting companies in various places in the United Provinces, which, under political pressure, merged into one.

The Heeren Zeventien met only two or three times per year, alternately in the cities of the two largest chambers: Amsterdam and Middelburg (Zeeland). The meetings lasted only a few weeks. The directors decided on all major matters of general concern to the enterprise. They ruled on the number of ships to be built and dispatched to Asia, the amounts of commodities and bullion to be exported and imported, the auctions of imported products from Asia, and the most important political and military issues in the Asian possessions. To facilitate decision making, several preparatory commit-

tees were established, which concerned themselves with correspondence, accounting, auditing, and inspection.

The Heeren Zeventien and its committees consisted of delegates from the boards of directors of the six chambers and had limited discretionary powers. Thus, the central organ of the company was neither permanent nor very centralized. The decision-making structure, although fairly sophisticated, was inefficient. But the Heeren Zeventien was far from powerless: the chambers were to execute the policies stipulated by the central meetings, and the dominance of the Amsterdam chamber in the entire enterprise guaranteed some degree of stability and permanency. As for the operations of the company in Asia, the directors were severely handicapped by the magnitude of the enterprise and the slowness of communications. The Heeren Zeventien could only give general instructions and outlines for the policies to be followed by the officials in the Indies, who consequently had much latitude.

HENG SAMRIN (1934–)

Pro-Vietnam Cambodian Political Leader

Heng Samrin, a Cambodian political figure, was born into a poor peasant family in Prey Veng, eastern Cambodia. Little is known about his early life, except that he joined the communist-dominated resistance to the French in the early

1950s. He probably became a member of Cambodia's clandestine communist party at that time, but he managed to evade arrest in the years that followed.

During the Cambodian civil war (1970–1975), Heng Samrin was a Khmer Rouge military commander, and after the Khmer Rouge victory, he rose to become political adviser to the Fourth Division, operating in the eastern part of the country. In 1978, the Khmer Rouge leader, Pol Pot (1925–1998), believed that cadres in the eastern provinces were secretly allied to the Vietnamese, and he set in motion a wave of brutal purges that soon claimed tens of thousands of lives. In May 1978, Heng Samrin, Chea Sim (1932–), and several hundred Khmer Rouge soldiers from the Eastern Zone sought refuge in Vietnam, where the Vietnamese, then at war with the Khmer Rouge, organized them into a “patriotic front” that would take power once the Vietnamese had defeated the Pol Pot regime.

In January 1979, Vietnam invaded Cambodia, and in the puppet regime set up in Phnom Penh a few days later, Heng Samrin was named head of state, a largely ceremonial position that he held for over a decade. In the 1981 elections, running for the National Assembly, Heng Samrin allegedly gained over 99 percent of the vote. By the mid-1980s, however, he was overshadowed by Cambodia's dynamic prime minister, Hun Sen (1951–). Heng Samrin made little impression on Cambodian governance and held on to his position on the basis of his seniority in the party, his loyalty to Vietnam, and his lack of political ambition. In the 1990s, he faded from view, although he was retained in ceremonial positions in successive ex-communist regimes.

HIGHWAYS AND RAILWAYS

Prior to the nineteenth century, the forested terrain of much of Southeast Asia severely restricted overland communication, and the rivers and seas provided the main means of cultural and commercial contact. Land transport was slow, expensive, difficult, and dangerous. Colonialism and the creation of new states in Southeast Asia represented new departures within the region. These new states had precisely delineated boundaries and a permanency that indigenous states had lacked, a new style of administration and institutional structures to oversee the various aspects of government, and intensity in governance not hitherto experienced in the indigenous states. Few changes were as striking as those in transportation, as governments created physical and economic infrastructures to make colonies profitable. Railways and roads both enhanced and modernized communication links and promoted a closer involvement with the world economy. They also facilitated an expansion in agricultural and mineral production and the transformation of Southeast Asian states into export-oriented economies.

Transport Development in Historical Perspective

If we survey in a broad fashion the economic basis of traditional Southeast Asia, two general types of economies can be distinguished: those based on agriculture and those based on coastal or river trade. As far as political organization was concerned, the agriculture-based economies tended to exist in large, highly structured states or empires located in the broader river valleys of the mainland. Leaders in these states and empires usually ruled from a powerful inland center that controlled, with varying degrees of trib-

ute relations, the more remote provinces. By contrast, the trading centers, or entrepôts, strongly influenced by Muslim traders, often controlled particular rivers or coastal locations that held some distinct advantage. Historically, the main mode of communication within and between the different states was by water, with the seas and rivers forming natural highways. Land transport was hindered by, among other factors, barriers of dense vegetation and the absence of suitable beasts of burden. The only channels of communication between riverine and estuarine settlements were the river networks. Although systems of footpaths evolved to provide land links, these were short and limited in scope, permitting only limited incursions into the surrounding regions. Another striking feature was that these overland facilities were unevenly distributed throughout the region.

Transport Development during the Colonial Period

Railway and road development was seen as the key to opening up the colonies to the outside world. Indeed, railways and highways functioned as instruments of the expansion of the world economy, designed to facilitate the reproductive capacity of the states. Therefore, their specific forms and locations reflected the features of the larger capital growth process and investment in the region. Subsequently, a complex of interlocking circular and cumulative changes took place in these countries, resulting in the uneven distribution of transport networks and disparities between regions. From a geographic viewpoint, this spatial dualism was most evident in the creation of export-oriented enclaves associated with mineral deposits, agricultural commodity production, and administrative centers. A few case studies will illustrate this point.

British Malaya

Broadly, three phases can be distinguished in the development of the railway system in British Malaya, corresponding approximately to the three stages in British political involvement in the peninsula. In the first period (1885–1896), short latitudinal lines were built in the western half of the peninsula to serve the tin-mining areas. These lines linked the inland tin-producing centers to coastal ports from which the ore was

shipped to either Penang or Singapore for smelting. The localized nature of economic penetration was congruent with the piecemeal development of the infrastructure. The second period of railway development (1897–1909) was marked by the construction of a north–south trunk line that connected the original latitudinal lines. This process of railway amalgamation had its political counterpart in the consolidation of British rule in the four western states of Perak, Selangor, Negri Sembilan, and Pahang by the creation of the Federated Malay States (FMS) in 1896. The final stage in the development of the railway system (1910–1931) was consistent with the needs of commercial (plantation) agriculture that was not confined solely to the Straits Settlements and FMS. Politically, this period marked the outer limits of the British sphere of influence in the country by the establishment of protectorates over Kelantan, Terengganu, Kedah, Perlis, and Johor.

Since the main function of the railways was to assist the development of the extractive economy, the pattern of railway development and the nature and frequency of the services provided were unduly biased toward the advancement of the export sector and the interests of foreign investors. Furthermore, railway development was largely confined to the western half of the peninsula, where the profitability of the lines—in terms of both forward linkages (lowered transportation charges resulting in greater productive efficiency of the economy as a whole) and railway revenues—was ensured. The pattern of railway construction also contributed to Singapore's position as a focal point by rail, whereas Kuala Lumpur became a railway nodal point.

Railways as the chief means of transport witnessed a development that was not intended to facilitate well-rounded economic development in the country. The railroads were concentrated in the western half of the peninsula and laid out in such a way as to allow for rapid transport of minerals and agricultural products from the interior to the chief ports. The major towns in Kedah, the Straits Settlements, the FMS, and Johor, where economic activity was the greatest, were connected with one another and with the centers of raw material production; there was an absence of such linkages between towns in the eastern half of the peninsula. The freight rates favored the long haul of primary products to the ports from the interior. Furthermore, since

the tariff structure favored large clients, these interests experienced a greater reduction in transportation costs in comparison with most producers for the domestic market. Consequently, the railroads facilitated the transformation of British Malaya into an export-oriented, lopsided economy heavily specialized in tin and rubber.

Road development in the different regions of Malaya took place at different times to meet specific needs. In the western half of the peninsula, roads were initially constructed as feeder lines to the railway or were seen as a mechanism for extending the developmental space of the western coast states. In Pahang, Johor, and the northern Malay States, they were built principally to provide accessibility or were a means for initiating economic growth. In Kelantan, roads were also constructed for security reasons. Compared with the railway, roads were less substantial lines of communication, and road building could be carried out within a flexible policy. Moreover, road development could be done in stages, depending on the financial health of the states, and road improvements such as metalizing could be undertaken when funds permitted.

Road development policies were aimed at the construction of north–south roads that could be connected with those of neighboring states to facilitate interstate communication. By 1895, there was a fairly complete through road for carts from Melaka in the south to Province Wellesley in the north; seven years later, it had become a main trunk road, 576 kilometers (360 miles) long. In 1928, a through road ran from Johor Bahru in the south to the Siamese border in the north. In the eastern coast states and Johor, roads enabled many export products to be transported by land. The growth of the road system was accelerated by technical innovations in road transport, including the development of the internal combustion engine, which resulted in the expansion of motor transport and road haulage services. The configuration of the country dictated the almost parallel location of highways and railways and subsequently led to competition between the two transport systems.

Indonesia

In Indonesia, overland transportation facilities were concentrated in Java. Railway (and tramway) development was associated mainly with the sugar industry. The first railway conces-

sions were let in 1863 and 1864, and in 1872, they resulted in the completion of a railroad from Batavia to Bogor and one from Semarang to Solo and Yogyakarta. A third railroad, linking Surabaya, Pasuruan, and Malang, was completed in 1879. Subsequently, the network was extended all over the island. Beginning in 1884, an increasing number of narrow tramways were built as feeder lines to serve the sugar industry. Each company operated its own dedicated workshops to service the tramways. Since the construction of the railways was primarily motivated by commercial considerations, the railway system was fragmented.

The road system of Java originates from the time of the administration of Governor-General Herman W. Daendels (t. 1808–1811) and extends from one end of the island to the other, paralleling the north coast. Subsequently, a second main east–west route was added. The roads were built for strategic reasons. Overall, the focus on Java has helped the island maintain its central position in relation to the other islands.

Siam (Thailand)

Siam, which remained independent during the age of empire building, stands out among the other Southeast Asian states as the exception to the rule of being surrounded by colonized neighbors while retaining its sovereignty. The Siamese government's main reason for building its rail network was related to political considerations. Fearful of its colonial neighbors, Siam built railroads to counter the threat from the French. Three major lines were built, starting in 1892. The first, from Bangkok to Khorat, was intended to help counter the French advance through Laos. Branch lines were also built toward the Mekong in the 1920s and 1930s. The second major line ran north from Bangkok to Chiang Mai. The third line connected Bangkok to Penang and Singapore along the northwest of the Malay Peninsula. A subsequent line connected Haadyai to the East Coast Malayan Railway and thence to Singapore in 1931. The first two lines were built using state funds, but the Malayan connection was built with a loan from the Federated Malay States (FMS) government.

Notwithstanding the political considerations, the economic effects of railroad construction were striking. The northern and eastern lines permitted the carriage of rice exports

from the area to other regions. More important, the railroads provided vital connections with Malaya and Singapore, which handled a large amount of Siam's trade prior to the Pacific War (1941–1945). In 1917, for example, rice shortages in Malaya were met by imports of rice transported overland from Siam.

In contrast, highway construction in Siam was undertaken on a piecemeal basis. Prior to the Pacific War, the road network linking urban centers to rural areas was relatively poor. After 1950, the Thai government embarked on a program of road construction that effectively linked rural villages to the larger urban centers. This was followed by the provision of bus services, which permitted rural–urban transport and stimulated the market economy.

Railways and Highways in Perspective

In all countries, railways and highways also had an integrative effect. Although the railways permitted the penetration of capital, roads especially helped administrations to maintain the peace so that development by rail could take place. Steamships played a less revolutionary role in transport development, although they strengthened connections in island nations (Indonesia, the Philippines) through the provision of interisland shipping facilities. More significantly, international shipping provided a fundamental link between Southeast Asia and the rest of the world and contributed to the export orientation of the region. Shipping lines not only moved bulk commodities, machinery, and food within and outside the region but also carried millions of migrant workers from China and India to the Southeast Asian region to work in the mines, plantations, and urban areas. Thus, the three main modes of transport shaped and continue to shape economic structures in the region.

HINDU-BUDDHIST PERIOD OF SOUTHEAST ASIA (FIRST CENTURY B.C.E. TO THIRTEENTH CENTURY C.E.)

The Hindu-Buddhist period will be interpreted here as the period of Southeast Asian history from around the first century B.C.E. up to the end of the thirteenth century C.E. That period was when two successive phases of early cities and states flourished in Southeast Asia on a brilliant level of material culture, making original contributions to wider Buddhist and Hindu traditions. The first part of this article presents new information and interpretations on Southeast Asia as a region; the second encapsulates in table form, country by country, information on spe-

cific sites, based on palaeoenvironmental, archaeological, and epigraphical data.

In approaching this subject, three overarching considerations should be kept in mind. First, it was Dutch historians who formulated the term "Hindu-Buddhist period" in the nineteenth and early twentieth centuries, mainly to describe the period of civilization in Indonesia before the widespread adoption of Islam—but they extended it to Southeast Asia as a whole. In Indonesia and the whole Southeast Asian region, the spread of all three of the world's religions—of Hinduism and Buddhism in the first millennium C.E. and Islam in the second millennium C.E.—was a long process that took place in strikingly uneven ways in space as well as time. On mainland Southeast Asia, the main population centers—namely, the lowland societies of Burma (Myanmar), Siam (Thailand), Laos, Cambodia, and Vietnam—converted to Hindu and Buddhist religions in the first millennium C.E. This conversion occurred mainly from the third to sixth centuries C.E.; they still adhere to Buddhist cultures tinged with Hindu influences in the twenty-first century. For most of them, therefore, the Hindu-Buddhist period has never ended, and conversion to Islam has been insignificant except among the Cham population of central Vietnam.

The second consideration is that among the ancient conversions to Hinduism and Buddhism in Southeast Asia, not a single case can be found to support the cultural colonization model proposed by George Coedès. Coedès sketched a picture in which Indian Hindu colonists were thought to have implanted Sanskrit literacy, kingship, statecraft, and religion in passive Southeast Asian societies that had "failed to evolve beyond a late Stone Age level" (Coedès 1962). In reality, every early urban society in Southeast Asia reveals or implies significant anterior stages of development through the Bronze and Iron Ages associated with increasing degrees of economic and social complexity *before* they converted to Hinduism or Buddhism. The earliest evidence of those conversions (whether in the form of writing systems, sacred art, or architecture) already reveals processes of selective assimilation of a variety of Indian influences and their creative reworking. The results produced a garland of Southeast Asian Hindu or Buddhist cultures resulting from encounters with identifiable traditions in India

and Sri Lanka (Ceylon), but they were new flowerings that never reproduced a prototype.

The third general consideration is that many nonliterate upland societies of mainland Southeast Asia coexisted with the magnificent Hindu or Buddhist cultures of their lowland neighbors without adopting their religions—and influenced only marginally by their cultures, despite having links with them through trade and exchange. In maritime Southeast Asia, Hindu and Buddhist societies developed from the sixth to seventh centuries in parts of northwest Java, Central Java, and southeast Sumatra. Brilliant Buddhist and Hindu art and architecture survive in Central Java, northwest Malaysia, and northeast and southeast Sumatra from the eighth to tenth centuries. Monumental evidence of this kind has not been found in the Philippine archipelago. Some degree of cultural assimilation must have taken place, to judge from the Sanskrit words assimilated into Filipino languages and from the sumptuous, apparently royal, hoards of gold regalia found there in which Hindu/Buddhist motifs appear. In the early second millennium C.E., Hindu and Buddhist cultures flourished in east and central Sumatra, northwest Malaysia, East Java, and Bali. But, as on the mainland, so too in the archipelagos, the non-Buddhist and non-Hindu communities collectively known as animist societies coexisted with them in Peninsular Malaysia, Sumatra, Java, Bali, and all the islands of Eastern Indonesia. The Hindu and Buddhist societies of ancient Southeast Asia have monopolized the attention of historians but occupied only a minority of the total terrain.

In India and Southeast Asia, the early cities and states were based mainly in the plains. It is true that these were the most densely populated, economically active areas of the region, and the only ones that left abundant records of themselves in art, architecture, and writing on durable materials such as metal and stone. But these Hindu and Buddhist communities of the plains were surrounded by vast tracts of upland forest, estuaries, and small islands, whose inhabitants usually left no record of their cultures and economies in durable materials as art or inscriptions. Nonetheless, they contributed to the prosperity of the urbanized societies in a variety of crucially important ways: only they possessed the specialized skills that enabled them to harvest the treasures of the forests, the caves, and

the seas, and they were porters and navigators par excellence. Ancient Southeast Asian trade in particular depended heavily on these people who did not write their own history and are too often overshadowed by those who did.

Conversions to Islam in Indonesia took place over an extended period and in a patchy way, starting in the eleventh to twelfth centuries C.E. in Aceh (northern Sumatra), and were still taking place up to the nineteenth century in parts of Java. The population of Madura converted to Islam, while most of the dense population of neighboring Bali describes itself as Hindu-Buddhist-animist even today. Most of the peoples of the islands of Eastern Indonesia converted to Islam only through the internal migrations of the twentieth century or to Christianity as a result of colonial influence. Islamization thus occurs only at the very end of the period covered by this entry.

Regional Patterns of Early Urban Settlement in Southeast Asia

Among the criteria of a city, the following are representative: a well-defined, sometimes fortified, central space in relation to its hinterland, revealing an exceptional degree of socioeconomic specialization in relation to other communities, hierarchical organization, and a dominant position as a ceremonial center. One pattern of late prehistoric settlement, found consistently in mainland Southeast Asia, repeats itself in early historic settlements of proto-urban or fully urban character. It is the clustering of settlements along the tributaries of the great rivers and avoidance of the great rivers themselves. There are no ancient urban sites directly on the Irrawaddy, Mu, Sittang, and Salween Rivers in Burma, the Chao Phraya in Thailand, or the Mekong in Cambodia and Vietnam. This pattern also holds true for the great rivers in China and India. In Central Java, too, where early settlements are less easily distinguished and less researched than the monumental clusters, the latter are also associated with small rivers. Pagan, an apparent exception, was in fact built on a high plain above the Irrawaddy, and watered by several small tributary streams.

Georg Wilhelm Friedrich Hegel's (1770–1831) often-quoted vision of great river valleys as the cradles of early civilization does not apply to Asia, home to some of the world's great-

est rivers, except in a generalized sense. Settlements along the tributaries of the great rivers appear to be linked to flood retreat irrigation and a whole range of other experiments with water control to achieve larger and more reliable harvests. Unlike the great rivers of Southeast Asia named above, which remain untamed to the present, smaller rivers presented much more manageable conditions for the development in Southeast Asia of an impressive repertoire of ancient irrigation techniques leading to reliable agricultural surpluses. Settlements located in habitats of that kind constitute the majority of known early cities in Southeast Asia. They took shape on the basis of evolutionary processes of increasing agricultural prosperity and the activities of specialists in water control.

A second pattern of proto- and early urban settlements can be seen near ancient coastlines, lower river valleys, and estuaries. It is linked both to upriver/downriver trade and long-distance maritime trade. It included the exchange of cultivated plants, such as rice, bananas, and coconuts, and plant products such as timber, incense, and spices across large distances—as well as the invisible cargoes, both in the form of technologies such as metallurgy, ceramics, brick-making, and irrigation and the ideas that shaped religions and cultures generally. The history of trade in Southeast Asia begins at the latest in the first millennium B.C.E. with local networks of the upriver/downriver or montane-forest/rice-plain kind. Improvements in Southeast Asian shipbuilding and navigational techniques transformed the remarkable journeys of prehistory across the Indian Ocean to East Africa and across the South China Sea to the Pacific Ocean into maritime trade networks with established links between communities in India, Sri Lanka, Southeast Asia, and South China. The results of this trade were conspicuous from the third to second centuries B.C.E. and the second to third centuries C.E. in driving urbanization in all these areas. Maritime trade between the eastern provinces of the Roman empire and Southeast Asia via South India and Sri Lanka dates from the second to fifth centuries C.E., succeeded by trade between Byzantium and Southeast Asia up to and beyond the end of the thirteenth century. Maritime trade between Southeast Asia and China assumed significant proportions in the second half of the Tang dynasty, from the seventh/eighth century C.E., and also continued

beyond the end of the thirteenth century. Trade across both the Indian Ocean and the South China Sea was marked by significant fluctuations in density and commodities, with a corresponding impact on the prosperity of Southeast Asian port cities.

The Malay Peninsula, often depicted as a north-south land bridge between continental and maritime Asia, was equally an east-west land barrier to navigation between the Indian Ocean and the South China Sea, creating specific hazards along both its east and west coasts that, certainly throughout the period discussed here and even as late as the early twentieth century, were a forcing house for the expertise of Southeast Asian navigators and obliged foreign ships to depend on them in those waters. The benefits of maritime and trading skills such as these, or of land-based expertise in agriculture, irrigation, metals, ceramics, art, and architecture, were unevenly distributed. They reinforced the claims of the elite to privileged contacts with gods and forces of nature, creating social stratification, rivalries, and conflicts in protohistoric societies that led to the appearance of courts, rulers, literate societies, and religions.

These were the conditions that preceded the conversions to Hinduism and Buddhism. Buddhism was adopted in many parts of Southeast Asia before Hinduism, and the earliest contacts appear to date from the second century C.E. Missionaries and forest monks probably came to Burma at that time both from the Satavahana kingdom of Andhra and from Sri Lanka. The second to fourth centuries were a period of active travel and reciprocal influence among Buddhist monks and lay benefactors along much of the southeastern coast of India and northern Sri Lanka. The web of their activities spread to include both coastal and inland communities in Burma. From the fourth to the eighth centuries C.E., Buddhist and Hindu cultural influences of many kinds passed among Southeast Asian communities as much as they did among India, Sri Lanka, and Southeast Asia.

The final part of this entry presents a table of early urban sites or states in Southeast Asia, giving location, broad chronology, religious orientations, and affinities, and relating each to the major site types described above (based on agricultural surpluses or maritime trade, often both).

JANICE STARGARDT

**Table of Early Sites and States in Southeast Asia
(First Century B.C.E. –Thirteenth Century C.E.)**

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
BURMA				
Beikthano	C. Burma 9 sq. km.	1st c. B.C.E.– 9th. c. C.E.	Irrigated rice; some indirect trade with Andhra, S.E. India	Pyu; ancestor worship in grouped cremation burials; Andhra-style Pali Buddhism. Phase 1, late 3rd–5th c. C.E.; phase 2 (under Sri Ksetra), 6th–9th c. Visnuite minority 7th–8th c.
Minbu	C. Burma near Beik- thano	1st mill.	Irrigated rice	Pyu; ancestor worship in grouped cremation burials, also Buddhist.
Halin[gyi]	C. Burma 5 sq. km.	2nd c.– 9th c. C.E.	Irrigated rice; salt, jade, rubies trade to China, Thailand, Vietnam.	Pyu; ancestor worship inhumation burials; Buddhism 4th–9th c. (under Beikthano); phase 2 (under Sri Ksetra) 6th–9th c.
Sri Ksetra	C./S. Burma ca. 19 sq. km.	2/3d c.– 9th c. C.E.	Irrigated rice; trade S.E. India	Pyu; ancestor worship in grouped cremation burials, integrated into Pyu Pali Buddhism 4th–9th c. Earliest Pali texts in world preserved here. Most powerful Pyu kingdom and Buddhist center; important cultural contacts with Andhra, Orissa, Bengal; diplomacy with Nanchao and Tang courts; created a standard of royal urban culture with which the kings of Pagan identified themselves to enhance their legitimacy.
[H]Maingmaw	C. Burma	1st mill.	Irrigated rice	Pyu; Buddhist; surveys/excavs. Incomplete; 1 major inscription.
Pagan	C. Burma ca. 50 sq. km.	?9th–13th c.	Imperial/ religious capital ruling Pyu, Mon, and Arakanese. Trade with India and China.	Burmese; Buddhist architecture in brick magnificent and innovative; Pala influences on art. In 12th c. center of Pali grammar for South and S.E. Asia; 1st Burmese imperial capital, very powerful, remains center of Buddhist pilgrimage; assimilated many influences from Pyu and Mon. With Angkor, the greatest monumental achievement of mainland S.E. Asia. Created a standard of material magnificence and political authority to which later kingdoms aspired. King defeated by Mongol invasions 1295–1298.

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
BURMA (<i>Continued</i>)				
Dhanyawadi	Arakan	?–4th c.	Irrigated rice and trade with India and Pyu in C. Burma	Arakanese, Buddhist, and Hindu; small but important city-state.
Vesali	Arakan	4th–10th c.	Irrigated rice and trade with India and Pyu in C. Burma	Arakanese: Buddhist and Hindu; small but important city-state.
Thaton	S. Burma Delta ca. 4 sq. km.	?–13th c.	Rain-fed rice and trade with S.E. India and Pyu in C. Burma	Mon, Buddhist, and Hindu, few remains in laterite soil. Many early Mon coins with conch shell in area. (?4th–?6th c.). Royal monk in Pagan from Thaton 11th c., led indirectly to Pagan’s conquest of Thaton, capture of king, court, Buddhist Pali, and Mon texts and strong Mon influences in Pagan 11th–12th c.
Ayethema	S. Burma	?4th–12th c.	Trade	Mon—Suvannabhumi of the Mahavamsa?—part of the Thaton cluster with ruined walls and stupas rebuilt many times, traditionally associated with Sri Lanka and Buddhaghosa.
Kyaikto	S. Burma	?1st–7th c.	Trade	Mon. Buddhist and Hindu, no settlement defined but most productive find-site of hoards of early coins in silver and gold, including thousands of “elm-seed”-sized coins noted by Chinese travelers 6th/7th c.; major trading site on or near ancient coastline; Kyaiktiyo stupa on huge rock nearby contains hair relic.
Dagon	S. Burma Delta	?–15th c.	Trade, shipbuilding	Mon, Buddhist, no ancient area of settlement defined but associated with Shwe Dagon stupa (hair relics)—greatest Buddhist monument of Burma; many small clay votive tablets of 8th–9th c. Mon style found in Rangoon area, especially Tadagale.

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
THAILAND				
Nakorn Pathom [first city]	C. Thailand western edge Chao Phraya Valley	5th/6th–13th c.	Trade, irrigated rice. Contacts with Mekong Delta and S. Burma.	Dvaravati-Mon kingdom, Buddhist, special veneration of Dhammacakka, influenced by post-Gupta art styles, brick monuments.
Uthong [gold port]	C. Thailand western edge Chao Phraya Valley	5th/6th–13th c.	Trade, irrigated rice. Contacts with Mekong Delta and S. Burma.	Dvaravati-Mon kingdom, Buddhist, brick monuments, stucco decorations.
Si Thep [great god]	C. Thailand E. edge of Chao Phraya River Valley	6th/7th–9th/10th c.	Not studied	Mon kingdom, Hindu-Visnu stone statues with cylindrical crown in dynamic style.
Chansen	C. Thailand E. edge of Chao Phraya River Valley	?9th c. B.C.E.–7th c. C.E.	Trade with India and Mekong Delta	Mon? developed Iron Age to historical period. Water stored in large moats. Pottery of 6th/7th c. suggests association with Dvaravati.
Lopburi	C. Thailand	1st mil. B.C.E.? 10th c. C.E.	Iron-smelting trade, capital city, strong agriculture	Mon, continuously settled Iron Age to end of study period. Powerful Mon kingdom, assimilated many Khmer influences 11th–13th c.
Muang Fa Daed	N.E. Thailand Tributary of Chi River	1st mil. B.C.E.–?10th c. C.E.	Irrigated rice, some river trade with Khmers	Mon, continuously settled Iron Age into historical period. Cult of stone circles and markers, assimilated into numerous Buddhist Sema stones of huge size with vivid relief carvings of <i>Jatakas</i> and other Buddhist themes. Small stucco ornaments similar to Kubua. Site development from prehistoric moated sites to historical city delineated.
Kantarawichai	N.E. Thailand on tributary of Chi River	?–6th/7th c.	Irrigated rice?	Mon, find-site of cache of silver plaques with Buddhist relief motifs showing post-Gupta influences. Close to Muang Fa Daed.

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
THAILAND <i>(Continued)</i>				
Sukhothai	N.Thailand	?10th–14th c.	Irrigated rice	Thai, earliest Thai capital city extended rectangular form, many Buddhist monuments, irrigation works within urban area. Famous for elegant, original style of Buddhist art in bronze, especially “Walking Buddhas.” Eclipsed by Ayutthaya from late 13th c.
Sawangkhlok	N.Thailand	12th–14th c.	Ceramics	Thai, center of ceramics industry for Sukhothai kingdom, inspired by Song green, brown, white glazes but coarser pastes.
Satingpra	S.E.Thailand	4th–14th c.	Irrigated rice and center of transisthmian trade on Trang–Sating–Pra, Palaing–Staingpra routes	Mon origs., pre–urban participation in Romano–Asian trade. Urban cultural phases: (1) 5th/6th–8th c. maritime trade and cultural contacts across the Indian Ocean (Pallavas) and Gulf of Thailand to Oc Éo and Sambor Prei Kuk; religion Visnuite and post–Gupta–style Buddhist—part of S. Thailand and S. Cambodian worship of Visnu with cylindrical crown. (2) 8th–9th c. strong cult. influences from C. Java Mahayana Buddhist and Saivite Hindu. (3) 11th–13th c. strong contacts with Muara Jambi in S.E. Sumatra. From 10th to 14th c. major part in maritime trade with S. China: incense for ceramics trade. With Bujang Valley sites and Palembang—later Jambi—one of the three great maritime trading centers of S.E. Asia grouped under Sanfoqi in Song records. Center of many dependent sites linked by large network of navigable canals on Isthmus of Malay Peninsula, served as center of collection and re–export of S.E. Asian trade goods extending from Butuan Philippines to Kota Cina, N.E. Sumatra. (4) 14th c. Mon–style Buddhist art of Buddha seated on Naga. Declined economically as Chinese ships increasingly carried Chinese trade through S.E. Asia and into Indian Ocean; destroyed as city c. 1340 before trade in blue–and–white Chinese ceramics began.

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
THAILAND (<i>Continued</i>)				
Ban Pah O	S.E. Thailand	?8th–13th c.	Ceramics	Mon, main production center of ceramics for Satingpra complex 11th–12th c., at Kok Moh kiln; unglazed but finely potted and burnished flagons [kendis] and pots in white, red, buff monochromes—signposts to parts of trade network. Twin village, Ban Wat Khanoon, find-site of 9th c. bronze statue of Siva (C. Javanese style) and nine-chambered stone deposit box.
Nakorn Si Thammarat	S.E. Thailand	5th–14th c.	Trade and capital city	Mon origs., originally part of Satingpra complex, outlived it to become center of S. Thai culture; in 18th c. supplied court Brahmans to Bangkok dynasty; had same long cultural sequence as Satingpra but less intensely involved in maritime trade. Linked to Satingpra by navigable canal via Ranot but otherwise not involved in major canal works. Said to be find-site of Srivijaya and Sailendra inscriptions that testify to Javano-Sumatran influences on Isthmus [Ligor inscriptions], but many Hindu and Buddhist artifacts moved here after the destruction of Satingpra.
Si chol	S.E. Thailand	5th–?8th c.	Trade and religious centers	Mon origs., between Nakorn Si Thammarat and Chaiya, beads and monumental remains of many small stone temples belonging to the earliest style of temple-building in India; no settlements defined, but fragments of Hindu statuary, shrines, and inscriptions from an early phase of monumental civilization in Thailand. Probably connected with trans-isthmian trade between Indian Ocean and Gulf of Thailand.
Chaiya	S.E. Thailand	?5th–14th c.	Trade and religious center	Mon origs., not part of Satingpra complex; had similar cultural sequence but less intensely involved in maritime trade, though just north of the ancient transisthmian route from Krabi to Ban Don Bay.

<i>Name</i>	<i>Location</i>	<i>Dates</i>	<i>Econ. Base</i>	<i>Culture</i>
THAILAND <i>(Continued)</i>				
Takua pa	S.W. Thailand	6th–10th c.	Trade	Unknown origs., settlement site not yet defined. Find-site of magnificent stone Visnu with cylindrical crown 8th c., and later Visnu with Tamil merchants' inscription.
Khlong Thom	S.W. Thailand	?2nd–6th c.	Bead trade	Unknown origs., in Krabi Prov., center of prolific manufacture and trade in stone beads in the Indian Ocean and across the isthmus to S.Vietnam.
SOUTH VIETNAM and CAMBODIA				
Oc Êo	S.Vietnam	?2nd–6th c.	Maritime trade, drained agriculture	Mon/Khmer, large city [Funan?] near ancient W. coast of Mekong Delta. Trade network embraced E. provinces of Roman Empire, India, Isthmus, and S. China. Network of navigable canals to coast and Angkor Borei. Center for manufacture of small jewels in tin and silver in two-piece stone molds, traded regionally; involved in stone and glass bead trade. Early Buddhist sculpture in wood; later stone Visnus with cylindrical crown.
Angkor Borei	S. Cambodia	5th/6th–8th c.	Trade, agriculture	Khmer, political/cultural center [Chenla of Chinese sources?]; retreat from coast but still linked to it by over 90 km. of canals navigable by very small boats. Center of great cult of worship of Visnu with cylindrical crown, Phnom Da school.
CAMBODIA				
Pre-Angkorian	Tonle Sap and Middle Mekong	6th–8th c.	Irrigated agriculture	Ca. 17 small kingdoms with unstable successions and rivalries. They demonstrated the historic establishment of secure surplus agriculture along the small rivers draining into Tonle Sap and the Mun–Chi basins, which provided the economic base for the centralized Angkorian kingdom. Main sites, (1) Srestha-pura, (2) Bhavapura, (3) Purandarapura, Isanapura in the Sambor Prei Kuk group. Sites mainly known by royal data in inscriptions; settlements ill-defined, but monuments of Sambor Prei Kuk group excavated and dated by art, architectural, and paleographical styles.

CAMBODIA (<i>Continued</i>)				
Angkor	N. of Tonle Sap on three small rivers	9th–15th c.	Irrigated agriculture; capitals; lacustrine resources	Khmer pronunciation of <i>nagara</i> —Sanskrit city. In fact a complex of cities: covering sites (1) to (3) above as well as others. Founded mid-9th c. by King Yasovarman. Twenty-five kings traced and dated in inscriptions and art. Capital moved within Angkor plain and outside it to Kulen plateau, mid-Mekong (Koh Ker) and Roluos. With Pagan, Angkor has the greatest concentration of monumental architecture in S.E. Asia: Angkor Wat founded by Suryavarman II, 12th c.; Angkor Thom founded by Jayavarman VII, early 13th c., centered on the Bayon temple. He also endowed many other great monuments, roads, and hospitals. Khmer religion: Siva and Visnu worship (also Harihara = fusion of both), with gradual transition to Buddhism. Numerous inscriptions in Khmer and Sanskrit. Angkor, again like Pagan, created a standard of grandeur and legitimacy to which later courts aspired; court rituals survive in Phnom Penh and Bangkok. Exposed to twin pressures from Thais and Chams, abandoned for more defensible site of Phnom Penh.
VIETNAM				
Mi Son	C. Vietnam near E. coast	7th–12th c.	Trade and capital city; Rice-breeding	Cham, part of Amaravati area complex where Cham culture flourished from 3rd to 12th c. Restricted area of alluvium very productive owing to development of Champa [short-season] rice, allowing multiple cropping—introduced to Song China and fueled demographic/economic expansion there. On trade route from S.E. Asia to Guangzhou [Canton]. Religion Hindu and Buddhist, tower-temples in brick with single shrines. Stupas with breast-shaped mouldings. Sculpture in relief and round, including the famous Mi Son dancer in relief and gold-sheathed heads of Siva from linga-shrines.

Tra Kieu Dong Duan	C. Vietnam	?-?	Trade and ceremonial	Cham, associated with Mi Son in the Amaravati complex.
Panduranga Po Nagar, Vijaya	S.C. Vietnam	?-?	Trade and ceremonial centers	Cham, smaller coastal complexes south of Amaravati area. Had occasionally separate diplomatic relations with Song China.
Co loa	N. Vietnam Red River	3d c. B.C.E.– 13th c. C.E.	Trade and irrigated Lac agriculture	Viet/Yue, center of late Bronze and Iron Age culture, long history of site occupation and reconstruction, including some periods of fusion of Chinese and Viet culture under the Han and later dynasties, punctuated by reassertion of independence. On trade route from S.E. Asia to Guangzhou; relations with China oscillate among diplomacy, war, and annexation into Chinese commanderies.
MALAYSIA				
Kuala Selinsing	S.W. coastal Malaysia	2nd–?4th c. C.E.	Bead trade	Malay, settlement ill-defined but strong concentration of glass and carnelian beads; active in circumpeninsular trade with Oc Êo complex in S. Vietnam and Philippines.
Bujang Valley	W. Malaysia Muda and Merbok Rivers	5/6th–14th c.	Trade, monumental clusters	Malay, settlements ill-defined; complex but numerous monuments and two major sites with trade, esp. ceramic, debris identified and partly excavated: Pengakalan Bujang and Sungai Mas sites. Total sites number between 40 and 55; discrepancy ca. 200 yrs. between dating of Buddhist traders' inscriptions and other evidence. Attest to long process of urbanization and involvement in maritime trade. Nine Buddhist monuments, 14 Hindu monuments identifiable. Kadaram of Cola inscriptions? With Satingpra and Palembang/later Jambi, one of the three great S.E. Asian maritime trading centers grouped under Song references to Sanfoqi?

INDONESIA				
Buni complex	N.W. Java Taruma River	5/6th c.–?	Trade and irrigated agriculture	Malayo-Javanaese. Inscriptions by King Purnavarman mention canal, script related to Pallava; settlements undefined but related inscriptions found in Jakarta, Banten, and Bogor.
Śrivijaya complex	S.E. Sumatra and Bangka Island	7th–9th/ 10th c.	Trade	Malay, seven related 7th c. inscriptions in Palembang, Jambi, and Bangka concerning ruler of Śrivijaya and his subjects, identified with Foqi of 7th c. Chinese Buddhist pilgrim as great center of Buddhist learning. Upriver/downriver trade mainly in incense; Malay maritime skills expanding to exploit strategic location on Straits of Melaka, where Indian Ocean traders interacted with South China Sea traders. Active throughout the Tang dynasty and Five Kingdoms but in Song was eclipsed in China trade by Jambi. Controversy surrounds location and identity of Sanfoqi of Song records: identical with Śrivijaya-Foqi of Tang period? Appropriate to identify Śrivijaya with Sanfoqi, the greatest S.E. Asian trading power, after 11th c.? Despite areas of uncertainty, there was a powerful trading entity in this area known to the Chinese as Sanfoqi, whose incenses were a major driver in the Song economy and whose ships dominated the Straits of Melaka. They conveyed their own and other S.E. Asian embassies to Song China, where they enjoyed special respect.
Jambi	S.E. Sumatra	9th–13th c.	Trade and ritual center	Malay, great city on estuary of Batang Hari-Malayu Rivers, settlement area well defined, partly excavated, and many brick temples restored. With Padang Lawas, greatest monumental center of Sumatra—Mahayana Buddhist and Hindu. Also riverine trading deposits test-excavated, reveal intensive trade with Song China and Satingpra: Ban Pah O-Kok Moh kendis found among trade debris, in sacred ponds and as foundation deposits in Chandi Gumpung, the largest temple in Jambi. By 11th c., with Satingpra and the Bujang Valley sites, the Sanfoqi of Song records?

HINDUISM

The spread of Hinduism across the Bay of Bengal to several regions of Southeast Asia is reflected in the use of Sanskrit, the adoption of Hindu deities for worship, the acceptance of the Hindu devotional movement, or *bhakti*, and the construction of religious edifices such as the Hindu temple. O. W. Wolters (1999) has suggested that the “Hindu world” was a selective appropriation and localization of what were originally “foreign” concepts by local societies. What were these elements that formed a part of the larger cultural ethos in the first millennium C.E.?

The first was the use of Sanskrit as a language of both royal edicts and texts, such as the epics (namely, the *Rāmāyana* and the *Mahābhārata*), treatises outlining duties of the king (for example, the *Arthashastra*), and other works. Stone inscriptions in Sanskrit dated to the fourth to fifth centuries C.E. appear in several parts of mainland and island Southeast Asia, whereas local indigenous languages were used somewhat later, around the seventh century. These inscriptions of the early rulers refer to the kings adopting Sanskrit names and titles, performing sacrifices as enjoined in Hindu sacred literature, and making generous donations to *brahmanas* (priests), who had been invited to perform these rituals.

It is interesting that many of the rituals were a continuation of earlier practices. For example, the seven Sanskrit records on stone pillars from Kutei (Kutai) in East Kalimantan are the earliest sets of inscriptions from Indonesia. These record victories of the king Mulavarman, son of Asvavarman and grandson of Kundunga (clearly a non-Sanskritic name), over his rivals and the regular gift-giving ceremonies undertaken by him at the site of Vaprakesvara. It is generally accepted that elaborate potlatch rituals occupied an important place in early Indonesian society, and hence, the ceremonies recorded in the Kutei epigraphs are a continuation of this earlier practice in a different form.

Another element of the common cultural ethos was *bhakti*, or devotion to the gods, such as Visnu and Siva, the latter worshiped in both his iconic and his aniconic forms. Early images of these deities have been found in mainland Southeast Asia and the Indonesian archipelago, but by the sixth century C.E., these were pro-

duced locally and were distinctive enough to be distinguished from Indian prototypes. Nearly all early Hindu temples in Java seem to have been of Saivite affiliation, but it is almost impossible to find an Indian prototype of the Javanese *candi* (temple) or even a distinct temple style in the subcontinent that may have been the direct source of the influence.

Epics such as the *Mahābhārata* were recited in temples of seventh-century Cambodia, and the *Rāmāyana* is mentioned in pre-Angkorian inscriptions. These public recitations were a means of popularizing social ideals and cultural norms as envisioned in the Hindu world and provided the worshipers an occasion for identifying with the heroes of the epics. It is significant that many of these texts, such as the *Rāmāyana*, were reworked in several centers in Southeast Asia as early as the ninth century.

How were these Hinduistic concepts introduced into Southeast Asia? It is generally agreed that religious teachers traveled along trade routes to the courts of the local rulers and were instrumental in the spread of the Hindu religion and culture. Many of these are mentioned in early inscriptions; for example, the renowned philosopher Sankara (700–750 C.E.) is referred to in ninth-century Cambodian inscriptions.

Similarly, the sacred geography associated with Hindu pilgrimage sites in India was recreated in Southeast Asia. For instance, the Tuk Mas inscription from Java describes the spring in which it is found as being as purifying as the Ganga, the holy river of the Hindus that flows through North India. Further evidence for this comes from Laos and is found on a stone stele at Vat Luong Kau on the right bank of the Mekong River in southwestern Laos, near the ancient shrine of Vat Phu. The stele is inscribed on each of its four sides with sixteen lines of Sanskrit in an early variety of Brahmi dated paleographically to the second half of the fifth century. The objective of the record was to establish a new *mahatirtha* (major pilgrimage center) called Kurukshetra, which was meant to duplicate the spiritual efficacy of the original center in North India. This historical foundation of a *tirtha* (pilgrimage center) is in contrast to the practice in India, where the foundation of *tirthas* is not associated with historical events and figures but is regarded in mythological and

legendary terms. It is this process of adaptation and reinterpretation that added richness and variety to the Hindu cultural experience in Southeast Asia.

How is the influence of Hinduism to be assessed? The answer to the question would include complex facets of the cultural heritage of several Southeast Asian countries, such as traditional notions of kingship, the importance of the *Rāmāyana* and the *Mahābhārata* in art and architecture, and the growth of literature based on these works. This would include texts such as the *Rāmāyana* of Yogisvara in Java, the *Ramakerti* of Cambodia, the *Ramakien* of Thailand, the *Hikayat Seri Rama* of Malaysia, and smaller recensions in the form of *wayang* stories. But perhaps most important are the reinvention and reinterpretation of these religious inputs by the local societies and communities.

HISPANIZATION

The term *Hispanization* is used to denote the process by which profound changes took place

in the lifestyle, socioeconomic organization, and political structure of the Filipino people during the Spanish colonial regime in the Philippines (Phelan 1959). The term should not be conceived as suggesting that the end product of this process was a transformation of Filipinos into Spaniards. As the historian John Leddy Phelan has pointed out, the Spaniards were only moderately successful in changing the Filipino way of life (1959: 159). It was a two-way process in which Spanish institutions introduced into the islands became infused with Filipino elements as well. The process of Hispanization mainly involved the Christianized, tribute-paying lowland population. In other areas, non-Hispanized populations were living beyond the control of the Spanish government. These were the Muslim populations and the animistic tribal groups in Mindanao and the Sulu Archipelago and the ethnolinguistic groups in the Cordilleras Mountains in northern Luzon.

The Spanish expansion in Asia had three objectives. The first was to get access to the spice-producing islands in the Moluccas (Maluku). The second was to acquire a foothold in China and Japan and to Christianize these countries. The third was to conquer the Philippine Islands and to Christianize the inhabitants. The first objective was not realized because the Dutch drove the Spaniards out of the Moluccas. The second failed because the rulers of China and Japan were not sympathetic to missionary activities. The third objective was partially realized.

The Spanish conquest of the Philippine Islands was facilitated by several factors: the population was thin and widely dispersed, political units were small, and there was an absence of centralized states. The basic social and political unit was a local kinship group called the *barangay*, under a local chief, called the *datu*. State formation had just started, with small sultanates in the south and an incipient sultanate in Manila. This fragmented social structure allowed the Spaniards to spread the Catholic faith in the islands and to introduce a system of colonial rule.

For most of the three centuries of Spanish rule (ca. 1560s–1898), contact between Spaniards and Filipinos was limited. The number of Spaniards in the islands was small prior to the mid-nineteenth century. For instance, in 1810, about 4,000 Spaniards were living in the midst

of a population of about 2.5 million lowland Filipinos (Corpuz 1989, 1: 547–548). Most Filipinos only had contact with the Spanish friar in their hometown. In Manila, where the majority of the Spaniards were located, contact was somewhat more intensive. It was only in the second half of the nineteenth century that the Spanish influence in education increased, when sons of rich landowners went to Manila for studies; a small number of them went to Spain.

In the Spanish Empire, the Catholic Church and the state were closely intertwined. The pope had granted the Spanish king patronage and power over the administration of church affairs in the newly conquered areas in the Americas and Asia. The Crown had the task of promoting the conversion of the “Indian” population to Christianity. In addition, the Spanish Crown assumed the obligation to finance all missionary activities. This was also the situation in the Philippines. Friars sailed with the Spanish expeditions to Asia, and together with Captain-General Miguel Lopez de Legazpi (1500–1572), a number of Augustinian friars arrived in the islands.

The Spanish conquest of the Philippines was carried out with violence and destruction in the first few decades. Alongside the conquerors, missionaries explored the islands and started to Christianize the population. By 1622, an estimated 500,000 people had been baptized by a few hundred missionaries (Corpuz 1989). Missionaries studied the native languages, wrote grammars and dictionaries, and used these languages for teaching the Christian faith.

The number of Spanish priests and friars was relatively small throughout the period of Spanish rule in the islands. The friars opposed the admission of Filipinos into the priesthood. In the nineteenth century, the Spanish government was afraid that Filipino priests would spearhead a nationalist movement striving for independence.

As the contact between the Spanish clergy and the rural population was limited, the indoctrination of the population with the Catholic religion was flawed. The religious teachings reached the population selectively. And though people participated in the colorful rituals and fiestas (such as Holy Week and Christmas) with processions, dances, and theatrical performances, the believers had little doctrinal knowledge, and the performance of

religious duties was often an outward, formal activity. In fact, the Catholic religion had split into two layers. One was the Catholicism of the Spanish clergy, the Spanish colonists, and the urban Filipino elite. The other was the folk Catholicism of the Filipinos. Historian Reynaldo Clemeña Iletto has argued that the Filipino brand of folk Christianity was deeply influenced by the experience of Holy Week, focused on the suffering, crucifixion, and resurrection of Jesus Christ. Ideas associated with this experience permeated the thoughts of religious preachers such as Apolinario de la Cruz (1814/1815–1841), as well as the political ideals of revolutionaries such as Andres Bonifacio (1863–1897).

Because of the close interconnection between church and state, the Catholic hierarchy was one of the administrative pillars of colonial rule. In the rural areas, the Spanish priest or friar was the only representative of the Crown in a town. Aside from his religious duties, the priest performed administrative tasks, such as collecting taxes, leading the local officials, mediating local conflicts, advising the higher Spanish officials, supervising local elections, and executing public orders. In short, he was a man of great prestige and power. Individuals who displeased a friar either in personal or business matters would be denounced to the authorities as a *filibuster* (rebel) and deported. Excommunication would also be imposed, which was one of the grievances of the Filipinos against the friars and the Spanish regime.

The Catholic custom of *compadrazgo*, or ritual coparenthood, was integrated in the Philippine kinship system, though with a special Filipino ingredient. In this ritual, a child who is baptized has two sponsors, a godfather (*compadre*) and a godmother (*comadre*), who assume responsibility for giving the young person spiritual guidance in life. In the Philippines, the *compadrazgo* relationship acquired another function: it strengthened the bond not only between the godparent and the godchild but also between the godparent and the parent. The relationship, consecrated in church, involved a moral responsibility between the two parties to help each other in social life. This custom became an important mechanism for the creation of political alliances.

One of the most salient legacies left by Spanish rule in the Philippines is the system of fam-

ily names. In Southeast Asia, an individual traditionally had a personal name (or often several during a lifetime) but no family name. The Spanish priest gave the individual a personal name upon baptism, usually the name of a saint. In addition, people often used nicknames in addressing each other. But in 1849, the Spanish government ordered the adoption of a system of family names—a system that had been generalized throughout Europe during the Napoleonic period (ca. 1800–1815)—because it proved to be efficient for administrative purposes. The Spanish government prepared an alphabetic catalog of Spanish family names. As officials had only one copy of this list, they took out a few letters of the alphabet for one town, a few other letters for another town, and so on. Consequently, one finds in many places in the Philippines a regional concentration of surnames, all starting with the same letter of the alphabet. Present-day Filipinos possess three types of family names: old Filipino names, Spanish names, and Filipinized Chinese names. It should be pointed out that the Dutch, British, and French colonial governments in Southeast Asia refrained from interfering with the traditional name systems of their colonial subjects.

The Spanish language was never adopted as the national language in the Philippines, unlike in Hispanic America. Indeed, toward the end of the Spanish rule, less than 10 percent of the population could speak Spanish (Phelan 1959: 131), mostly in urban areas, and people in rural areas could not speak and read the language (Corpuz 1989, 1: 488). Spain had ordered that schools be set up, but these orders were not obeyed in the colony. It was only toward the end of the Spanish regime that the government actively encouraged the use of Spanish. At that time, a number of authors, essay writers, and poets had started writing in Spanish. The nationalists in the Propaganda Movement published their journal *La Solidaridad* in Spanish, and so did José Rizal (1861–1896) with his novels *Noli Me Tangere* and *El Filibusterismo*. Spanish was the language of the Malolos Republic, and Apolinario Mabini (1864–1903) wrote his decrees in that language. If the Americans had not occupied the country and made English mandatory, Spanish would probably be the national language of the Philippines today.

Architecture during the Spanish period blended Spanish and Mexican influences and

newly emerging Filipino creativity. Religious architecture, the construction of churches and convents, had a characteristic Philippine style. Spanish and Mexican Baroque exerted a great influence, but the exigencies of climatic conditions as well as local building techniques and materials added a specific flavor. Religious architecture was in the hands of the friars, who relied on Mexican and Filipino master builders, masons, and carpenters and Chinese sculptors. The massive churches, with their thick stone walls, were built with a solidity that could withstand earthquakes and the corrosive effects of the tropical climate (Coseteng 1972).

Private houses with a typical Filipino style were constructed during the nineteenth century, with the emergence of Filipino landowning elites who prospered from the cultivation of export crops. They were no longer satisfied with the traditional native house on stilts, constructed of wooden poles, woven rattan, and bamboo and with a straw roof. Instead, they built two-story houses, with massive stone on the bottom and wood above. The architecture and decoration of these houses were the typical products of a Filipino-Spanish mestizo culture, developed in the late Spanish period. The style combined elements such as iron grilles, wooden carving, wooden balustrades, red tile roofs or galvanized iron roofs, sliding windows, lattice-work, and staircases, and the homes featured wide, spacious rooms and European furniture. In the second half of the eighteenth century, a number of Spanish-trained Filipino architects used their creative skills to design churches and private houses. Unfortunately, in the late twentieth century, many of these beautiful houses gave way to modern concrete buildings (Zialcita and Tinio 1980).

HISTORICAL GEOGRAPHY OF INSULAR SOUTHEAST ASIA

The historical geography of insular Southeast Asia is dominated by the patterns of land and life as shaped by environment, culture, and historical development. Island Southeast Asia is generally held to comprise those parts of the region that lie astride and to the north of the major tectonic plate boundary that runs through the heart of the region. Sumatra and Java, the Outer Islands of Indonesia through to Irian Jaya, the island of Borneo, and the Philippines constitute insular, as opposed to mainland, Southeast Asia. This broad geographic region has been shaped by rather different historical and geographic factors from the mainland regions.

Undoubtedly, environmental conditions give these island territories a degree of unity. Geologically, much of the region shares similar tectonic characteristics. The fact that lines of tectonic boundaries run through Sumatra, Java, the Celebes, and the Philippines has meant that

they have shared the consequences thereof—frequent earthquakes and volcanic activity (from Krakatoa to Mount Pinatubo, the region is the scene of frequent, catastrophic eruptions) and a predominance of volcanic, acidic soils that have helped to shape agricultural systems and patterns of settlement and livelihood. Climatically, equatorial monsoon conditions dominate. This brings high rainfall and humidity coupled with a dry season that may last less than a month astride the equator or three or four months in parts of the Philippines and the more easterly islands of Indonesia. The climate brings important patterns in wind speed and direction. Thus, the northwest and southeast monsoons have important navigational consequences; in addition, frequent tropical cyclones, especially in the northern part of the region, can make navigation difficult.

How, then, have these environmental conditions contributed to the creation of the cultural landscapes of the region? Historically, farming systems have been based on rice. Complex and highly developed wet-rice farming systems on islands such as Java and Bali have developed using fertile, acidic soils and well-organized systems of social control to facilitate irrigation. Pockets of highly fertile wet-rice farming are also evident in parts of the Philippines and Malaysia. Historically, they have supported very high population densities. In other parts of the region, dry-rice or hill-rice systems dominate. In many areas, these are based on shifting cultivation systems in which fields are periodically abandoned and new land cleared through burning. Such “slash-and-burn” farming systems provide good short-term yields and are ecologically viable, provided the land is allowed to rest for fifteen- to twenty-year periods. Each cultivation type elicits its own landscapes and systems of social organization, from the highly concentrated population and intensive, manicured landscapes of Bali to the seemingly chaotic cleared and burned fields of the Borneo interior.

Another important culture trait that can be linked, in part, to the distinctive geography of the region is the basic settlement pattern. A continuum of settlement types can be identified, from the temporary habitations of hunter-gatherer groups such as the Penan of Borneo to the nucleated *kampongs* (villages) of the Malay Peninsula and the port cities that have

flourished on the shores of the region. Such settlement patterns reflect the influence of environmental factors and the impact of social and cultural attitudes on ways of life. Both the artifacts themselves (the houses, farms, tools, and techniques) and the producers of culture themselves (the ways in which societies are organized, their territorial conceptions, their hierarchies) help shape the landscape of the region. Thus, the Javanese or Malay village settlement encapsulates not only a particular set of connections to the material environment (wet-rice farming, the importance of irrigation skills) but also a set of social relations that govern how the settlement and its peoples function. Geographic studies of the Dayak longhouse or of the Malay stilted house can be an important means to help our understanding of territorial organization.

The role of the sea in shaping the historical geography of the region has been of major significance. During the Pleistocene when sea levels were lower, the landmasses of the region were connected by a land bridge, which allowed for the dispersal of plants and animals through the region. In the period of human history, sea transport has allowed for a remarkable diversity of peoples and cultures to develop, especially along the shores of the South China Sea and the Straits of Melaka. The importance of fishing to the domestic economy was and remains great, and many indigenous coastal peoples successfully combined fishing with a range of trading and agricultural pursuits. Along the sea-lanes of the region flowed goods, ideas, and peoples, and it has been through the sea and maritime trade that the influences of Indian and Chinese civilization have been felt in the region from as early as the sixth and seventh centuries. The characteristic port cities of the region were the product of trading through the seas of the region, often taking advantage of the monsoonal wind systems that left ships becalmed for months at a time in these “lands below the winds.” In general, the seas of insular Southeast Asia are warm, shallow, and relatively easy to navigate. Indigenous maritime skills created traditions of coastal trade, and the rise of maritime empires such as Śrīvijaya on the island of Sumatra from the eighth century and Melaka from the fifteenth century established prototypical port cities. The careful regulation of trade, a degree of political stability,

and good port facilities contributed to the opening-up of the region to merchants from West Asia, India, and China, and the powerful trading and sailing skills of indigenous groups such as the Bugis from the Celebes were also important. The built form of many of these cities, which often had carefully demarcated trading quarters, palaces, and marketplaces, created an urban type that developed in many parts of the region.

Western enterprise and the development of colonialism undoubtedly reshaped many of the characteristic culture traits of the region, though one should be cautious and not overestimate the degree or magnitude of the changes wrought. To the traditional cultivation systems of the region, colonialism brought new forms of agriculture and new geographies of rural change. The regimented and regulated landscape of the plantation spread through the region from its early footholds in the “Spice Islands” (the Moluccas) to the large tobacco, rubber, coffee, and tea plantations of areas such as western Sumatra, northern Borneo, Malaysia, and the southern Philippines. Pencil-straight roads, industrial buildings, and barrackslike workers’ housing subsequently intruded into the traditional rural landscape. Colonialism also reshaped culture through the migration of peoples, goods, and capital into the region. The migration of the southern Chinese into Malaya, Sumatra, and Borneo, for example, brought new ways of living. Distinctive cultural traditions of architecture and farming were introduced, together with a focus on trade and enterprise that reshaped many small trading settlements into small towns and centers for commerce and administration. European colonial administration also brought new settlements, often grouped around forts and trading bazaars, into the landscape, and they acted as catalysts for new patterns of in-migration and economic and social change.

The urban fabric of the region was undoubtedly transformed by the arrival of European colonialism. The concentration of many immigrant communities in the towns and cities created new economic conditions. Furthermore, along with these new economic conditions were new urban forms. Port facilities were greatly expanded—the city of Singapore, for example, was transformed from a small Malay kampong in 1819 to a major global port by

1910: colonial government helped establish a port infrastructure even as a dynamic immigrant Chinese and Malay population transformed its trade and commerce. Other cities, such as Jakarta and Manila, epitomized this combination of a dynamic indigenous population and external colonial influences shaping and reshaping the port city.

Alongside economic changes, colonial government and administration created new political geographies and boundaries. Thus, the diverse peoples and environments of the Dutch East Indies were transformed into the Republic of Indonesia in 1949. The creation of the Federation of Malaysia in 1963—most notably the decision to incorporate the Bornean states of Sabah and Sarawak—reflected the conveniences of diplomatic policy rather than geographic and ethnic reality. New regional and administrative boundaries, a new transport infrastructure, the concentration of power in the key district towns and capitals of the colonial era, and the hypergrowth of capital cities such as Manila and Jakarta epitomize postcolonial geographic transformations.

Postcolonial impacts on the landscape and way of life have been huge. It may be argued that the pace of change is faster now than at any time in the history of the region. Agricultural and rural populations continue to fall in percentage terms as migration to the towns and cities grows. The search for natural resources is well reflected in the deforestation of parts of Borneo or the onshore and offshore installations of the hydrocarbon industry in the South China Sea or Straits of Melaka. The expansion of urban boundaries, the growth of squatter populations, and the economic expansion of the economies of countries such as Singapore and Malaysia have created new urban landscapes and radically changed patterns of employment.

Culture traits, the patterns of field and farm, and the fabric of urban and rural settlement have evolved through the continued interaction of environment and culture. A diverse physical environment has produced a range of cultural environments. Landscapes of town and country can thus reveal much about how societies are organized and how they have changed. Physical conditions are important in patterns of land and life, and so, too, is the role played by social and cultural change in modifying and transforming

environments. The incorporation of a historical perspective in understanding how landscapes and ways of life have been shaped is vital if we are to capture the full, rich dimension of historical change in insular Southeast Asia.

HISTORICAL GEOGRAPHY OF MAINLAND SOUTHEAST ASIA

Mainland Southeast Asia comprises a broad region extending from the tip of Myanmar (Burma) to Johor at the end of the Malay Peninsula (West Malaysia), a distance of some 3,200 kilometers. At its widest, its breadth is some 1,200 kilometers, extending through Myanmar, Thailand, Laos, and Vietnam; toward the south, the mainland narrows in southern Thailand and Malaysia. The region represents the southern edge of continental Asia, and both relief and soils reflect these continental origins. Broad sweeps of mountains and valleys dominate the relief and influence patterns of settle-

ment and human exploitation. The climate is equatorial, with generally high rainfall, average temperatures, and humidity. The transition from insular to mainland Southeast Asia is marked by more varied monsoonal conditions, with a dry season four or five months in length and cooler, dryer winters, particularly in the uplands.

Especially important for human settlement are the great rivers of the mainland, which flow broadly from north to south—the Irrawaddy, Sittang, Chao Phraya, Mekong, and Song Koi (Red River). The high temperatures and heavy rainfall in the continental uplands of the mainland have led to high rates of weathering and erosion. Consequently, these key rivers transport very large sediment loads, which provide a rich alluvium for intensive rice production in the valley basins and river deltas. It is these areas that provided the core of dense human settlement in the past, and they continue to be important in the present. Drawing on the skills of drainage and irrigation technology, indigenous techniques of rice growing flourished and supported rich and technically sophisticated civilizations. Much of the rest of the mainland is upland and, although not poor in terms of resources, has historically been devoted to shifting cultivation systems. Hill rice has been the mainstay of these areas. In places such as northern Burma and Thailand and the uplands of Vietnam, Cambodia, and Laos, indigenous groups have largely exploited the rain forest through shifting cultivation. Clearing and burning fields to provide a nutrient-rich ash produces an excellent short-term yield of hill rice, and if the fields are rested adequately (usually between fifteen and twenty-five years) before reclearing, soil and biomass can recover. Such systems, once much derided by tropical agronomists, are now increasingly recognized as viable and sustainable means of farming rain forest areas, provided population densities are low.

Historically, settlement patterns in the region have been agricultural and rural in character. In areas of shifting cultivation, village sites have usually been static, although some groups do migrate to temporary settlements at certain times of the year depending on the agricultural cycle. The use of bamboo and palm leaf as construction materials and the frequent use of pile-dwellings are typical cultural traits of the region. But migration has introduced diversity, and the dwellings of, for example, Chinese

groups are marked off from those of their neighbors by form and materials. A propensity to locate close to water has given many settlements, even in the interior, what one author called an almost amphibious way of life, in which farming and fishing provide key sources of employment and sustenance; it has also shaped both the location and form of rural settlements.

In addition to its characteristic rural settlement pattern, mainland Southeast Asia has been the location for culturally and historically significant cities and kingdoms. The inland state of Angkor and its magnificent monumental complex of Angkor Wat in northern Cambodia, which flourished from the tenth to fourteenth centuries, was built on tremendous technical skill in marshaling the problems of irrigation and drainage to create an economy based on intensive wet-rice farming. Its artistic and aesthetic achievements more than matched its technological capacity and created perhaps the most important of the mainland empires in the historic period. But the wealth and skills of the mainland peoples and their rice-based civilizations were equally well reflected in other great kingdoms and empires—the Pagan empire in Myanmar, for example, was dominant in the twelfth and thirteenth centuries; the Champa empire on the coast of Vietnam was also important in that period.

These monumental empires serve to emphasize the richness of material and nonmaterial cultural artifacts arising from intensive wet-rice farming systems. What the built form of mainland Southeast Asia in the classical period reflected, then, was the importance of a strong agricultural base, an economic surplus generated through technical skill and sophisticated systems of political patronage, and an ability to control route ways in order to encourage the development of regional trading systems. River transport was vital in connecting regional powers, and though port cities were more characteristic of island Southeast Asia, the ports of the mainland region were vital in connecting the region to the circuits of trade from West Asia, India, and China.

The impact of colonialism on the mainland was rather different from that on the islands. Although the ships and merchant-adventurers of Holland, Portugal, and Britain scoured the islands and inlets of the archipelago for spices

and precious goods, contact with the mainland was more limited. The exigencies of geography meant that any contact was, in any case, limited to a narrow coastal belt. Navigation up the winding and braided river deltas could be perilous: moreover, richer and easier pickings were to be found elsewhere. The lure of the mainland was also more limited due to the lack of spices and precious goods that Europeans found relatively easily elsewhere. Finally, the mainland states—notably the Thai and Vietnamese states—were more powerful than most island states and better able to resist colonial authority. By the middle of the nineteenth century, nonetheless, much of the mainland had fallen under Western influence. The British colonized Burma largely in order to consolidate their Indian border. The French, after a number of exploratory missions in the mid-nineteenth century, had, by the 1880s, taken control of most of Indochina through establishing either protectorates or direct colonial dependencies. Only Thailand remained outside direct colonial intervention, partly because of political skill and partly because both Britain and France preferred to maintain Thailand as a buffer state between their respective zones of influence.

The impact of the colonial era on the landscapes and cultures of the mainland was varied. Traditional cultivation systems were modified with the development of the plantation system and cash-crop farming. In southern Vietnam and the Malay Peninsula, the production of rubber, tea, coffee, and cocoa created new landscapes and new forms of social and economic organization. The production and export of minerals, from tin in British Malaya to oil in British Burma, also brought important changes to landscapes and peoples. The flow of migrant workers into the region—especially the Chinese—reshaped settlements and introduced new culture traits (in housing, diet, religion, social organization), and European capital and administration wrought changes in the urban hierarchy, in urban form, and in the infrastructure. Railway lines linked the different parts of Vietnam or British Malaya with administrative and economic centers. The port city of Singapore, at the fulcrum of mainland and island Southeast Asia, acted as a funnel for the export of commodities from the region and the import of Western goods. Capital cities grew rapidly as commerce and administration

expanded—colonial cities such as Saigon (Hố Chí Minh City) and Rangoon (Yangon) and noncolonial cities such as Bangkok expanded with the integration of the region into the nascent global economy at the end of the nineteenth century.

If the historian is struck by the increased pace of change in the colonial period, for the geographer, change has been ever more rapid with the dismantling of the colonial regime. The impact of population growth and migration since 1970 has been enormous, even in the more isolated parts of the mainland. Previously isolated tribal groups in northern Thailand or inland Vietnam have been drawn into the mainstream economy as new groups have sought to develop their traditional lands. The ravages of deforestation have created both environmental and social problems in many interior regions of the mainland as both national and multinational companies seek out the most valuable species in the rain forests. Such deforestation has compromised fundamentally the ability of shifting-cultivators to maintain their way of life. Political unrest and uncertainty have also created major problems for minority groups, especially on the borders of Myanmar, Thailand, and Laos, where the territorial and cultural affinities of groups such as the Karen are in dispute.

Rural-urban migration has been an endemic population characteristic in recent decades. Rural change, much of it articulated through the technical advances of the Green Revolution, has reduced agricultural employment and, through changing patterns of investment, has led to the interpenetration of the rural and urban in new forms of spatial and social organization. Farm, field, and factory are now closely intermeshed in the new landscapes of the region. Population shifts have also meant that cities such as Bangkok and Saigon have swollen with new migrants eschewing traditional rural lifestyles in favor of industrial employment in the factories of the city. A new urban fringe landscape has emerged around Bangkok, Saigon, and similar cities—a landscape in which industrial estates, squatter housing, and the residences of a burgeoning middle class intermingle. The past remains omnipresent in the landscapes and culture traits of mainland Southeast Asia: the task of interpreting them becomes ever more complex as the pace of social and

economic change in the region accelerates. It is a more difficult but arguably more rewarding task than ever.

HLUTDAW

The Hludaw was a council of ministers established to advise the king that became integrated into the main functions of government in monarchical Burma. It is said to have been formed in the reign of King Htilominlo (r. 1210–1234) of Pagan but may have existed earlier. Composed of the king's brothers in Pagan times (Htilominlo, for example, relegated his powers to his four elder brothers [Mya Sein 1973: 5]), the council wielded a great deal of actual power, as demonstrated in 1254 when the ministers of the Hludaw chose Narathihapate, the son of a concubine, to succeed to the throne instead of Thingathu, the son of a queen. This pattern developed through the Toungoo dynasty (1531–1752) and continued into the third Burmese empire of the Kon-

baung dynasty. Under King Thalun in 1637, the Hludaw had responsibility for royal edicts concerning taxation, military, and legal issues (Lieberman 1984: 87).

By the time of King Thibaw (r. 1878–1885) at the end of the Konbaung dynasty and the era of independent, monarchical Burma, the Hludaw had become the supreme Council of State, presiding over all executive and judicial issues. Its membership comprised the four Wungyis (ministers), four Wundauks (junior ministers), four Sayedawgyis (senior Buddhist monks/teachers), and four Nakhandaws (officers who present petitions to the king). The senior prince usually presided over its deliberations, but the king could do so if he wished, as King Thibaw announced he intended to do in 1884. The members of the Hludaw were appointed by the king and remained in office at his pleasure. He could dismiss them if they passed orders contrary to the interests of the realm or the king. All orders from the king passed through the Hludaw.

The Council of Ministers met daily in a hall within the palace compound or sometimes at the home of a Wungyi. It heard petitions and appeals; proceedings were public, and evidence was presented verbally. In function, the council was both an advisory body and a judiciary, acting as a court. The four Wungyis were the highest officials in the administration. Four Wundauks assisted the Wungyis; the former often settled minor cases without reference to the Wungyis. Various administrative departments reported to the Hludaw. Separate from the Hludaw was the functioning of the Atwinwuns (deputy ministers), lower in rank than the Wungyis but very influential because their responsibilities for the palace gave them constant access to the king. An indefinite number of Atwinwuns operated as a privy council. An order from the king was first passed to the Atwinwun on duty before being passed up the ranks of officials to the Wungyis, who, if they disapproved, could refer the order back to the king. He, in turn, could insist on his order being carried out. Life at court was hazardous, and Wungyis, Wundauks, and Atwinwuns alike could be deprived of office, thrown into prison, or executed at the whim of the king. None received a salary, but they were remunerated through the lands bestowed on them by the king—they received revenue from the villages or districts under their domain. The Hludaw

was abolished in 1886 following the British annexation of Upper Burma at the end of the Third Anglo-Burmese War (1885), but five Wungyis were retained to advise the new chief commissioner, Sir Charles Bernard (t. 1880–1887).

HMONG

With over 4 million individuals worldwide (Culas and Michaud 1997), the Hmong constitute one of the most numerous mountain minority groups of the Indochina peninsula. Linguistic data show that the Hmong of the peninsula (around 1.2 million) stem from the Miao of southern China as one among a set of ethnic groups belonging to the Miao-Yao linguistic subfamily (which included 7.4 million Miao in 1989) (Culas and Michaud 1997).

A few centuries ago, the lowland Chinese started moving into the mountain ranges of China's southwest region. This migration combined with major social unrest in southern China in the eighteenth and nineteenth centuries to cause some minorities of Guizhou, Sichuan, and Yunnan—where the majority of the Hmong in China (around 2.5 million) still live today—to migrate south (Culas and Michaud 1997). A number of Hmong thus settled in the ranges of the Indochina peninsula to practice subsistence agriculture and opium poppy cultivation.

Vietnam, where their presence is attested to from the late eighteenth century onward, is probably the first Indochinese country into

which the Hmong migrated. During the colonization of Tonkin (1883–1954), a number of Hmong decided to join the Vietnamese nationalists and communists, whereas many Christianized Hmong sided with the French. In particular, numerous Hmong took part on both sides in the Battle of Dien Bien Phu in 1954. After the Viet Minh victory, many pro-French Hmong had to fall back to Laos and South Vietnam. The ones remaining in the Democratic Republic of Vietnam (North Vietnam) had to accept living under communist rule.

The traditional trade in coffin wood with China and the cultivation of opium—both prohibited only in 1992—long guaranteed a regular cash income. Today, cash cropping is the main economic activity. As in Laos, some Hmong participate in the local and regional administrations. At the time of the 1999 national census, there were 787,604 Hmong living in Vietnam. Also in the late 1990s, several thousand Hmong moved to the Central Highlands, and in 2001, some crossed the border into Cambodia, constituting the first attested presence of Hmong settlers in that country.

In Laos, Hmong settlement is nearly as ancient as in Vietnam. After decades of distant relations with the Lao kingdoms, closer ties between the French military and some Hmong on the Xieng Khouang plateau were established after the Pacific War (1941–1945). There, a particular rivalry between members of the Lo and Ly clans developed into open enmity, also affecting those connected with them by kinship. Clan leaders took opposite sides, and as a consequence, several thousand Hmong participated in the fighting against the Pathet Lao communists, and perhaps as many were enrolled in the People's Liberation Army. As in Vietnam, numerous Hmong in Laos also genuinely tried to avoid getting involved in the conflict in spite of the extremely difficult material conditions under which they lived during wartime.

After the 1975 communist victory, thousands of Hmong from Laos had to seek refuge abroad. Approximately 30 percent of the Hmong in that country crossed the border, although the only concrete data we have indicate that 116,000 Hmong from Laos and Vietnam together sought refuge in Thailand up to 1990 (Culas and Michaud 1997). In 1995, the Hmong in Laos numbered 315,000 (Culas and Michaud 1997).

In Thailand, the presence of Hmong settlements is documented from the end of the nineteenth century. Initially, the Siamese paid little attention to them. But in the early 1950s, the state suddenly took a number of initiatives aimed at establishing links. Decolonization and nationalism were gaining momentum in the peninsula, and wars of independence were raging. Armed opposition to the state in northern Thailand, triggered by outside influence, started in 1967, yet here again, most Hmong refused to take sides in the conflict. Communist guerrilla warfare stopped by 1982 as a result of an international concurrence of events that rendered it pointless. Priority has since been given to sedentarizing the mountain population and introducing commercially viable agricultural techniques and national education, with the aim of integrating these non-T'ai animists within the national identity. In 1995, the Hmong in Thailand numbered 124,000 (Culas and Michaud 1997).

Myanmar most likely includes a modest number of Hmong (perhaps around 2,500). However, no precise census has been conducted in recent years (McKinnon and Michaud 2000).

As result of refugee movements in the wake of the First and Second Indochina Wars, the largest Hmong community to settle outside Asia was in the United States, where approximately 100,000 individuals had already arrived by 1990 (Culas and Michaud 1997). California became home to half of this group, and the remainder went to Minnesota, Wisconsin, Washington, Pennsylvania, and North Carolina. By the same date, 10,000 Hmong had migrated to France (that figure includes 1,400 in French Guyana) (Culas and Michaud 1997). Canada admitted 900 individuals, and another 360 went to Australia, 260 to China, and 250 to Argentina (Culas and Michaud 1997). Over the following years and until the definitive closure of the last refugee camps in Thailand in 1998, additional numbers of Hmong have left Asia, but the definitive figures are still to be produced.

HỒ CHÍ MINH (1890–1969)

Vietnamese Nationalist Hero

Hồ Chí Minh, who set up the Indochina Communist Party (ICP) in 1929 and the Vietnamese Communist Party (VCP) one year later, led the August Revolution in 1945 and ruled the Democratic Republic of Vietnam (DRV) from 1954 until his death in 1969. He is still portrayed everywhere in Vietnam, and

Saigon, the country's busiest city, now bears his name—Hồ Chí Minh City.

Hồ was born Nguyễn Tất Thành in 1890 near Vinh (Nghe An), the second son of a civil servant at the imperial court in Huế, under the French protectorate. He left school without graduating in 1910. At about the same time, his father was dismissed from his government post. In 1911, Thành chose to work abroad in French shipping. It was, of course, unknown then that he would only return home thirty years later.

His first years abroad were mostly spent in Europe. He stayed in London during World War I (1914–1918) and thereafter settled in Paris. He joined other Vietnamese nationalists, studied socialist theory, and assumed the name Nguyễn Ai Quốc (Nguyễn the Patriot). He was present outside the 1919 Versailles Peace Conference with a petition (*Annamite People's Claims*) demanding the right of self-determination for Vietnam.

As a socialist, he participated in the 1920 Tours Congress, cofounding the French Communist Party. But in the tracts and articles he wrote at this time, especially in *Le Paria*, the paper he launched in Paris, he addressed the national and the colonial questions together. He went to Moscow in 1923 and sojourned there for a year and a half. His most significant activity in this period was his attendance at the Fifth Communist International Congress.

Between 1924 and 1931, Nguyễn Ai Quốc was pivotal in setting up a communist network in Southeast Asia. Initially, he joined Mikhael Borodin and the Soviet mission in Guangzhou (Canton). In 1925, he established the Thanh Nien (the Vietnam Revolutionary Youth League) and wrote *Duong Cach Mang* ("The Revolutionary Path"). In the late 1920s, he visited Siam (Thailand) and British Malaya, where the communist movement was disorganized. While in Hong Kong, he unified three Marxist groups of Vietnamese to establish the Indochina Communist Party in June 1929. Due to factionalism, a decision was made in February 1930 that brought about the founding of the Vietnamese Communist Party. Imprisoned in 1931 at Hong Kong, he spent the next two years behind bars, sparking a rumor that he had died. Following his release in 1933, he made his way back to Moscow, where he served as a Comintern cadre (1934–1937).

Vietnamese communist leader and first president of the Democratic Republic of Vietnam (North Vietnam) Hồ Chí Minh in 1950.
(Bettmann/Corbis)

Then came the World War II (1939–1945) period. In late 1938, Nguyễn Ai Quốc left Moscow for China, which at that point had been partly invaded by Japan. In early 1941, he entered Vietnam, where he settled in the northern caves of Pac Bo. There, in May, he founded the Viet Minh (League for the Independence of Vietnam). He took the name Hồ Chí Minh (*Hồ* means "who brings the light") in this period and was arrested in 1942 in Guangxi (Kwangsi), South China, and incarcerated for more than a year.

Consequent of a pact between the French Vichy government and the Japanese, the French colonial administration in Indochina continued to function from August 1940 to March 1945. Opposing this Franco-Japanese arrangement were the Anglo-American allies that were in league with the Soviet Union and Nationalist China. Owing to this alliance, the anti-communist Chiang Kai-shek reluctantly ordered the release of Hồ Chí Minh in 1943. This was to

enable him to organize a resistance movement in Vietnam. Hồ and his Viet Minh comrades received military supplies and technical assistance from the U.S. Office of Strategic Services (OSS) in his plans for the toppling of the Japanese-dominated Vichy government.

The opportune moment came with the Japanese surrender in 1945. Immediately upon news of the Japanese capitulation on 14 August, the Viet Minh convened and elected a National Liberation committee, which, for all intents and purposes, was a provisional government led by Hồ *inter alia*. The committee's ten-point plan was to engineer a seizure of power, achieve independence for the Democratic Republic of Vietnam (DRV), and ensure cordial relations with the Anglo-Americans. It was basically a nationalist agenda. A Viet Minh uprising, often referred to as the August Revolution, witnessed the seizure of Hanoi, on 26 August, and most provinces of northern Vietnam (later to be known as North Vietnam). Demonstrations by the common people numbering in the hundreds of thousands declaring their support for the Viet Minh and demanding complete independence swept Huế and Saigon. On 26 August the French-installed Bảo Đại (Vinh Thuy) (1913–1997), the last of the Nguyễn emperors, abdicated in favor of Hồ's provisional government, hence affording the new regime legitimacy. The Viet Minh's August Revolution had triumphed. On 29 August Hồ formed his first government with himself as president. Then on 2 September, Hồ presented his government to the country and proclaimed in Hanoi the establishment of the DRV. Communists dominated the cabinet (ten members of fifteen, but the local situation remained complicated.

At the Potsdam Conference (July–August 1945), the Anglo-American and Soviet alliance had agreed to maintain the status quo in post-war Southeast Asia. As a result, the reoccupation of Vietnam north of the sixteenth parallel was entrusted to Nationalist China and South Vietnam to Britain. British major general D. D. Gracey, commanding the 20th Indian Division, arrived in Saigon on 13 September and managed to secure strategic sections of the city and certain designated zones of Saigon-Cholon, Thudau Mot-Bien Hoa-Lai Taien, and Mytho. French officials imprisoned since March 1945 when the Imperial Japanese military seized

control were released by the British and, contrary to instructions, were given arms.

The presence of Nationalist Chinese troops, the Viet Nam Quoc Dan Dang (VNQDD, Vietnamese Nationalist Party), and other pro-Chinese groups deterred Viet Minh occupation of North Vietnam, meaning territories north of the sixteenth parallel. Hanoi was effectively partitioned, with the Viet Minh in control of the central and southeast suburbs and the VNQDD and others in control of the northeast section. In South Vietnam (south of the sixteenth parallel), the French, with British assistance, succeeded in reoccupation. With scant popular support, the Viet Minh turned to guerrilla warfare in efforts to exert pressure on the French.

Then, on 6 March 1946, Hồ signed an agreement with Jean Sainteny, the head of "Mission 5" of the French intelligence service based in Kunming, China, thereby recognizing Vietnam as a free state within the French Union and allowing French troops to return to North Vietnam and replace Nationalist Chinese troops. At the same time, the French agreed to a referendum as to the status of Cochinchina, which would be a part of the French Union, and the gradual withdrawal of French military presence from Vietnamese soil.

But the cohabitation quickly deteriorated. Hồ spent three months in France in the summer of 1946 during the Fontainebleau talks, which ended in vain. The peace talks at Fontainebleau were destined not to succeed or achieve any concrete political developments simply because the French had no intention of putting Vietnam on the road to independence. Hồ and his Viet Minh colleagues, on the other hand, sought national liberation. The French intentions were reflected in the composition of the French delegation, where no cabinet member participated. Instead decisions were left to colonial officials, who were determined to ensure that basic political differences remained unsettled. Hồ had included in the Vietnamese delegation not only cabinet ministers of the DRV but also representatives of pro-Viet Minh groups as well as anti-Viet Minh parties. Hồ, however, had Pham Van Dong (1906–2000) to head the Vietnamese delegation. The talks at Fontainebleau revealed that war was inevitable. A few months later, after the 23 November bombardment of Haiphong that signaled the outbreak of hostilities in the First Indochina

War (1946–1954), Hồ Chí Minh called for national resistance.

Facing the French “puppet emperor” Bảo Đại (1913–1997), Hồ Chí Minh led the resistance during the Indochina War, supported by both Beijing and Moscow from January 1950. In the latter part of 1953, Hồ was in a position of strength, and he suggested via a Swedish newspaper that the conflict be concluded through negotiations. He did not attend the conference in Geneva that ensued, but in early July 1954, Chinese premier Zhou Enlai (t. 1949–1976), who had played an important part in that conference, traveled to the Sino-Vietnamese border to discuss the provisional partition of Vietnam with him.

Returning to Hanoi after the 1954 Geneva Agreement was concluded and heading the DRV in North Vietnam, President Hồ Chí Minh entered his sixty-sixth year in a new life. Living modestly, dressing simply, and affectionately addressed as “Uncle Hồ,” he often traveled around the country and met with the people; he also visited other communist states and various Asian nations. But he faced several crises, as well. In 1956, when it was clear that the government land reform program had proceeded too hastily, Truong Chinh (1907–1988) was dismissed as general secretary of the party, and Hồ himself assumed the vital post. When the general elections scheduled in 1956 for the whole country did not materialize, the party secretly decided in 1959 to “promote the armed struggle” in the South in 1960. (It was apparent that Ngô Đình Diệm [1901–1963], the head of state of the Republic of Vietnam [South Vietnam], a Catholic and anticommunist regime, would never negotiate with the DRV [North Vietnam]; plans were under way to unite the country through the force of arms. He had demonstrated his refusal to abide by the Geneva Agreement to hold nationwide, all-party elections; instead, on 4 March 1956 elections were held in South Vietnam only to give a constitution to the Republic of Vietnam. No communist parties were allowed to participate.) Consequently Hồ relinquished the party’s general secretariat to Le Duan (1907–1986), the principal leader of the resistance in South Vietnam. And in the 1960s, with the Sino-Soviet conflict heating up, Hồ had to tread a middle course between them: it was imperative to maintain impartiality, for

the DRV received aid from both Beijing and Moscow.

But the main crisis occurred with the outbreak of the American/Vietnam War in 1964 (Second Indochina War [1964–1975]). At this time, Hồ Chí Minh’s name was chanted everywhere in the world in support of the Vietnamese resistance. Hồ Chí Minh, who was not a theoretician and had never commanded troops in combat, threw his prestige behind mobilizing the population to support the resistance effort in the South. He repeatedly told Washington why the United States could not win the war it was fighting, and in the last years of his life, he provided advice to the Hanoi delegation in the 1968 Paris peace talks. In March 1968, American president Lyndon Johnson (t. 1963–1969), as a gesture to bring the DRV to the negotiating table, announced that aerial bombing would be temporarily reduced. In May, peace talks began in Paris between the DRV (Xuan Thuy [1912–1985], foreign minister) and the United States (William Averell Harriman [b. 1891], ambassador at large). Then in January 1969, the two opposing sides met at a round table meeting in Paris: the government of South Vietnam and the United States on one hand and the DRV and the Provisional Revolutionary Government (PRG) on the other. Following a series of meetings that dragged on over four years, little was achieved.

Hồ Chí Minh died on 2 September 1969. In 1975, at the end of the Vietnam War, his body was enshrined in a public mausoleum on the main square in Hanoi. To this day, everywhere in reunified Vietnam, he is revered as a nationalist hero.

HỒ CHÍ MINH TRAIL

The Strategic Key to Reunification

The Hồ Chí Minh Trail, a network of tracks linking North and South Vietnam via southern Laos and northeastern Cambodia, served the communist resistance during the First and Second Indochina Wars (1946–1954, 1964–1975), especially during the 1960s and the 1970s. Indeed, when the Democratic Republic of Vietnam (DRV, North Vietnam) decided in May 1959 to promote the “armed struggle” in South Vietnam, the trail was the main way for Hanoi to support the insurgency there. (Abiding by the Geneva Agreement of 1954, Vietnam had been divided into north and south at the seventeenth parallel five years earlier.) As the chief supply conduit, the trail was the target of many U.S. air raids during the Vietnam War (Second Indochina War, 1964–1975).

Reopened by Group 559, a logistical unit of the North Vietnamese Army (NVA), the trail crossed sparsely populated areas and apparently was not too difficult to secure for the Vietnamese communists and their Lao and Cambodian allies. Notably commencing from the My Gia Pass in North Vietnam, it skirted around the seventeenth parallel, using hundreds of kilometers of paths and roads on the other side of the border and into South Vietnam, where the trail ended in the highlands not far from the vicinity of Saigon. In 1964, when the threat of an American action became clear, engineer bat-

talions were sent to widen the roads, construct stations, and build bridges to allow heavy trucks and other vehicles carrying troops and material to use the trail day and night. Consequently the trail extended to more than 20,000 kilometers and 5,000 kilometers of pipeline.

From the mid-1960s, the trail appeared to be the most important front of the war. It was involved in the secret war from Laos in 1964. Southeastern Laos in the location of the trail became an aerial bombing target of the U.S. Air Force, which through Operations Steel Tiger and Tiger Hound from 1965 to 1973 sought to destroy the NVA bases on Laotian territory. B-52 bomber strikes were employed to destroy the trail. Operation Die Marker (known as “McNamara’s Wall” or “The McNamara Line”) was a forty-kilometer barrier constructed astride South Vietnam’s northern perimeter as a means to block the infiltration of the NVA. Work on this barrier began in April 1967. Building materials included not only conventional material such as land mines and barbed wire but also acoustic sensors (some 20,000 devices) and infrared intrusion detectors linked to computers, which were employed to function as an early warning system of enemy movement. The air campaign against the trail strengthened in late 1968, with chemicals being used to defoliate the jungle and high technologies employed to hit the targets.

U.S. and South Vietnamese forces launched a land operation, albeit unsuccessful, to cut the trail near the demilitarized zone (DMZ) at Lam Son 719 in February 1971. But the United States and its South Vietnamese ally lost the battle of the supply line. The Hồ Chí Minh Trail was instrumental in the defeat of the South and, in turn, the reunification of Vietnam.

HÒA HÀO

Hòa Hào or Hòa Hào Buddhism (Phat Giao Hòa Hào) is an indigenous religion of South Vietnam. Hòa Hào originally was the name of a village in Chau Doc Province, where Prophet Huynh Phu So was born. Located on the western side of the Mekong at the confluence of two tributaries, the Hòa Hào village became the cradle of Hòa Hào Buddhism as established by Huynh Phu So (1919–1947). From its inception in 1939, the religion attracted many peasants, and it quickly spread across those provinces known as the “rice basket of the South.” The popularity of the religion was the result of the charismatic, messianic, and mysterious character of its founder and preacher. Huynh Phu So was also regarded as a prophet due to his early prediction of the fall of France to Hitler’s Germany. He proved to be right with the outbreak of World War II (1939–1945) and France’s defeat at the hands of Nazi Germany.

In 1939, the young Huynh Phu So wrote four volumes (about 150,000 words) known as the *Oracles (Sam Giang)*, which form the basic Hòa Hào doctrine; they included notions for self-improvement. These works were written in simple language and arranged in the popular Vietnamese poetry style, which is easy to remember and understand. Although Huynh Phu So’s overall teachings were closely related to Buddhist doctrines, they strongly reflected the Buu Son Ky Huong tradition formulated in 1849 by a living Master Buddha (Phat Thay Tay An). In his day, Phat Thay preached Buddhism and encouraged people to cultivate their land. In addition to following in Phat Thay Tay An’s footsteps, Huynh Phu So asked his followers to “study Buddhism to improve yourself,” which serves as one of the guidelines of Hòa Hào. In other words, the religion holds that followers can improve themselves by observing Buddhist teachings. The Four Graces/Four Debts of Gratuities (*Tu An*) are among its most important tenets: be grateful to your parents and ancestors; be grateful to your country; be grateful to the three gems—Buddha, Buddha’s teachings, and the sangha; and be grateful to fellow countrymen and to humankind.

In line with the original teachings of Buddha, which stressed that belief must come from the heart, Hòa Hào Buddhism allows its followers to practice religion at home. The faithful do not have to shave their heads or take refuge in pagodas. They are allowed to reside with their families and live normal lives. In a Hòa Hào’s home, the Buddha’s altar does not have to be adorned with a Buddha statue, gongs, or bells. A piece of brown cloth is used to symbolize the human harmony. An Ancestors’ Altar is placed below the Buddha’s altar. Outside the home, a Heaven’s Altar (*Ban Thong Thien*) can be set up to help in communication with the Universe (sky and earth, the four cardinal corners, the ten Buddhist directions). The offerings are simple: pure water, symbolic of cleanliness; flowers for purity; and incense to freshen the air. The Hòa Hào flag is quite plain: it is brown in color and rectangular in size, bearing no characters or images.

The founder and leader of Hòa Hào is engraved in Vietnam’s history as an ardent nationalist. He was concerned about the harsh French colonial rule. Due to his popularity, the French wanted to banish him. However, he was rescued by the *Kempeitei* (Japanese military police) and took refuge under Japanese protection. He continued to teach and gather more followers, while also demanding independence for Vietnam. After the Pacific War (1941–1945), he continued to be involved in the political affairs of Vietnam out of concern for the future of the country. Many Hòa Hào followers took part in the guerrilla resistance against the French and against the communist Viet Minh. Consequently, Huynh Phu So disappeared at the hands of the communists in 1947.

It is estimated that there are up to 3 million Hòa Hào followers today (U.S. Department of State 2002: 3). Few Hòa Hào have moved overseas: most still hold fast to the hope that Huynh Phu So will come back to save the country from French rule again. Despite repression by the authorities, the Hòa Hào hold to their faith. The Hòa Hào village, the home of Hòa Hào Buddhism, is referred to as Holy Land (*Thanh Dia*), and it continues to attract many pilgrims. Each year, there are large gatherings of the faithful at the Ancestral Temple for religious ceremonies to pay respect to the founder.

HOABINHIAN Hunter-Gatherer Cultures of Southeast Asia

Hoabinhian is a term used to describe the hunter-gatherer cultures of Southeast Asia. The earliest sites date to approximately 16,000 B.C.E., but the end of the Hoabinhian tradition varied regionally. Nearly all the sites comprised inland rock shelters or caves located in a canopied forest near streams or rivers. There is no doubt that the hunter-gatherers also lived in the open, but few of their sites have survived. The name *Hoabinhian* derives from the Vietnamese province of Hoa Binh, where the first occupied caves were examined by a French archaeologist, Madeleine Colani. She excavated numerous sites in this limestone upland area lying southwest of the Red River delta (Colani 1927). Subsequently, many more cave sites have been identified in the central uplands of Vietnam; in northern, central, and southern Thailand; and in Burma, Cambodia, and Malaysia. Related and contemporary groups of hunter-gatherers also occupied southern China and the islands of Southeast Asia. The stone technology and the subsistence activities largely determine the definition of the Hoabinhian culture. Stone

tool manufacture centered on an artifact known as a sumatralith, or unifacial discoid. This was made of a large river cobble, flaked only on one side, and was probably used for a variety of purposes. There are also flaked stone axes, scrapers, and points. The Hoabinhian people hunted a wide variety of forest animals, and they fished and collected shellfish. They also collected plants for food, medicines or stimulants, poison, and fuel. It is highly likely that they made many of their tools and weapons from wood, particularly bamboo.

The origins of the Hoabinhian people lie in the expansion into Southeast Asia of anatomically modern human groups of hunter-gatherers. These people originated in Africa and began to spread in Asia sometime between 60,000 and 100,000 years ago. The analysis of DNA from modern hunter-gatherers in the Andaman Islands has shown close biological links with African populations. Recent excavations have revealed the ancestral populations to the Hoabinhian people. They are distinguished by different preferences for stone tool making and date back as early as 40,000 to 38,000 B.C.E. For much of the period when these ancestral groups and Hoabinhian hunter-gatherers occupied the forested uplands of Southeast Asia, the Pleistocene Ice Age absorbed a great deal of water in the form of continental ice sheets. Therefore, the sea level was much lower than it is today. From about 4000 B.C.E., as the world climate warmed sharply, the sea level rose higher than it is at present. Only from that period do we have any evidence for the hunter-gatherers who occupied the rich coastal environment, for any earlier settlements would have been drowned by the rising sea. The excavation of the settlements on the old shorelines allows us to appreciate the contrast between the culture of those living in the inland-forested stream valleys and the occupants of permanent settlements on the seashore.

To understand the Hoabinhian way of life, it is best to begin by examining the lives of surviving hunter-gatherer groups in Southeast Asia. In Trang Province of southern Thailand, Gerd Albrecht has not only excavated the large cavern of Sakai but has also visited and recorded the Mani, surviving hunter-gatherers in this region. This unique opportunity even involved the analysis of the remains of Mani occupation on the surface of the cave floor. Among these

people, the seasonal rhythm of the monsoon encouraged settlement in the airy and cool rain forest during the dry season, whereas the protection afforded by rock shelters made them more attractive during the rains. The social groups in either case were small, measured in the teens in one case (with twelve adults and five children), and the area under occupation covered about 40 square meters. The Mani exploited a similar range of animals as during the remote prehistoric past, including gibbons, macaques, squirrels, fish, and shellfish. Their shelters comprised small huts fashioned from bamboo, tree bark, and leaves that would leave few if any archaeological traces. However, hearths containing stones and raised on clay supports were used, and these would survive.

The excavations within Sakai cave itself incorporated a cultural buildup about 2 meters deep and dating up to 10,000 years ago. It included a number of hearths, and stone flakes dominated the material remains. No polished stone tools or pottery vessels were encountered. The faunal remains reflected hunting in a canopied forest: the bones of gibbons and macaques, squirrels, and civets predominated. The prehistoric hunter-gatherers also collected freshwater shellfish, and a few marine shellfish must have come to the cave from at least 30 kilometers away.

This pattern of forest hunting and gathering is matched by the findings of many other excavations. The most famous research program centered on the limestone uplands of Mae Hongson Province, Thailand, where Chester Gorman excavated three rock shelters from 1965 to 1973. The rugged limestone crags and valleys of his study area are cut by swiftly flowing streams. His first excavation took place at Spirit Cave, a complex of three small rock shelters, all of which contained prehistoric occupation (Gorman 1971, 1972). The first occupants scooped out shallow depressions, laid sticks in a radial manner like spokes of a wheel, and lit their fires. This activity was followed by a buildup of cultural material: stone artifacts, food remains, and further ashy lenses. This layer was homogeneous across the excavated area and may well represent intermittent occupation over a lengthy period.

The occupation lasted between about 9000 and 5500 B.C.E. The stone artifacts included unifacial discoids, grinding stones, and flakes

bearing signs of edge damage. The surfaces of all the grinding stones recovered had traces of crushed red ochre, fragments of which were found at the site. About a third of the flakes had been used, for microscopic examination revealed thin striations running both along the worked surfaces and vertical to them.

Many species of animals and fish were consumed at Spirit Cave. Although it was a sharp half-hour climb from the Khong Stream to the cave, the occupants included the valley bottom in their territory, for each layer contained fish bones as well as freshwater crab claws. Shellfish, too, were taken to the shelter from the streambed, and both otter and fishing cat bones were found. Arboreal animals predominated. Among primates, the langur and macaque were most common, but the gibbon and slow loris were also present. Other small arboreal mammals included the banded palm civet, the elusive marten, the flying squirrel, and many small squirrels. Then there were small ground-dwelling mammals, such as the bamboo rat, badger, porcupine, and leopard cat. The sambar deer and pig were the only reasonably large mammals found at Spirit Cave.

Careful screening recovered a large number of plant remains. *Canarium* seed fragments were the most numerous. All were smashed, probably to obtain the edible kernels. The kernels of butternuts and the fruits of other plants were particularly interesting finds because they were sources of poison. Poison-tipped projectile points would help account for the presence of the bones of elusive arboreal mammals. Seven fragments of bamboo stem indicated interest in this valuable plant. Almond remains provided evidence of food collection in the surrounding forests. This assemblage demonstrated that the occupants of the cave exploited a range of local plants with a variety of potential uses. Some are still used for food, others as condiments and stimulants. Then there were sources of poison, gum, and resin. Indeed, any survey of hunter-gatherer occupation of the evergreen forest habitat following the research at Spirit Cave must acknowledge the broad spectrum of resources, as well as the intimate acquaintance of the occupants with the plant and animal world around them.

Two other sites were excavated in the same program, Banyan Valley and Steep Cliff Caves. The former, occupied from about 3500 B.C.E.,

is located beside a permanent stream just as it cascades into a cleft in the limestone bluff. Precipitous slopes and canopied evergreen forest hem in the Banyan Valley. The hillside has a series of caverns that yielded prehistoric remains considerably broader and deeper than those of Spirit Cave. Steep Cliff Cave was occupied between 5500 and 3500 B.C.E. A huge dump of burned and smashed animal bones suggests that it was used to process wild cattle, deer, and water buffalo, perhaps to dry the meat for later consumption.

In the classical area of northern Vietnam, where the Hoabinhian tradition was first recognized, there has been much recent research. Here as elsewhere, the characteristic Hoabinhian site comprised a small rock shelter, giving access to both the dissected limestone uplands and the nearby stream. Food remains included shellfish, fish, and hunted mammals. The Con Moong fauna, for example, revealed the presence of wild cattle and water buffalo, rhinoceros, forest birds, and both water turtles and land tortoises. Many freshwater bivalve and gastropod shellfish were also recovered. Excavations at Xom Trai have also yielded, for the first time in a Vietnamese Hoabinhian context, the remains of rice. This site is located only about 15 meters above the surrounding plain, and it has been meticulously excavated by Nguyễn Viet. The basal 2 meters were undisturbed and yielded a wide array of Hoabinhian stone implements in association with carbonized plant remains and shellfish. The radiocarbon dates suggest, as has been noted, that occupation was under way by 16,000 years ago. Although stone pieces dominated the artifacts found in these sites, there was also a vigorous bone industry, as evidenced at the Da Phuc rock shelter. Most of the 105 bone tools found there comprised points or awls. An intriguing question is how the Hoabinhian people disposed of the dead. Burials are rare in the cave sites. A major exception is Lang Cao, where Madeleine Colani found about 200 skulls within an area of only 25 square meters. The skulls were propped up by stones, with few associated limb bones, but there were no grave goods. The crania were buried sometime after death within a reserved area. If the social group responsible for these artifacts was mobile for some of the year, then this cave may represent a central focus for the burial of the dead

whose remains were returned there at some interval after death.

There are many settlements of coastal hunter-gatherers on the old raised shorelines of Southeast Asia. There, the rich harvest of fish, shellfish, and marine mammals allowed people to settle for lengthy periods of time, and one finds large deep sites that incorporate cemeteries. The dead were interred in a crouched, seated position and accompanied by grave offerings. Excavations at one such site, at Nong Nor, have revealed many aspects of this coastal adaptation (Higham and Thosarat 1998a, 1998b). It was occupied for a brief period, measured in months rather than years, in the vicinity of 2450 B.C.E. The people chose to live on the protected shore of a deep marine embayment. By launching their boats, they could reach the open sea in a matter of minutes. They collected millions of cockles adapted to sandy beaches, but they also fished for tiger and bull sharks and hunted dolphins and eagle rays. The shell midden contained many hearths and ash spreads. Some of the latter may have been used for firing ceramic vessels, since pottery sherds were relatively common. Indeed, several complete pottery vessels were found over a woman buried in a crouched and seated position. Her grave goods also included a pebble used for burnishing the surface of the clay vessels before firing, to impart a sheen to the surface. Clay anvils used to shape pottery vessels were recovered, showing beyond doubt that the hunter-gatherers of Nong Nor made burnished and incised pottery vessels at the site. They also used polished stone adzes, but there was no evidence for plant cultivation or the raising of domestic animals.

The Hoabinhian cultures of Southeast Asia occupy a vital 20,000 years. They reveal a successful adaptation to the canopied inland forests that has continued to the present in peninsular Thailand and Malaysia. There were also groups adapted to the mangrove-fringed estuaries and inlets along the coast, which come into archaeological visibility only when the sea rose above its present level between about 4,000 and 1,500 B.C.E. From about 2,500 B.C.E., intrusive rice cultivators infiltrated the river valleys of Southeast Asia from an ultimate homeland in the Yangzi (Yangtze) Valley in China, bringing with them domestic animals and new patterns of village settlement. They interacted with the

Hoabinhian people, but the number of occupied caves dwindled as farming took hold.

HOKKIEN

See Chinese Dialect Groups

HONG KONG

Hong Kong, an international cosmopolis of South China, consists of Hong Kong proper, Kowloon, and the New Territories. A British colony from 1841 to 1997, it has had a long and close connection with Southeast Asia, especially in the years before the Pacific War (1941–1945). The name *Hong Kong* literally means "fragrant harbor"; nowadays, Hong Kong is often known by its sobriquet—the "Pearl of the Orient."

When the British first occupied Hong Kong, it was described as a "barren rock" with

only a small number of fishing villages, and the surrounding waters were notorious for piracy. Declared a free port, Hong Kong developed the area along its northern coast on the island in the 1840s, followed by a more massive buildup in the 1850s, primarily due to the influx of immigrants from mainland China during the Taiping Rebellion (1850–1864). Among those who arrived in that period were merchants of *nam pak hong* (import and export firms), who found Hong Kong a haven where they could continue their trade in goods from mainland China and Southeast Asia, a business they had long conducted in Chaozhou and Shantou (Swatow) before moving their base to Hong Kong.

Such businesses became even more lucrative when Chinese products were in great demand among the increasing numbers of Chinese immigrants who poured into Singapore and other Southeast Asian cities via Hong Kong. The hardy Chinese coolie was a boon in providing much-needed cheap labor. Whether he worked in tin mines (Southeast Asia), gold and diamond mines (South Africa, Australia, California), or railroad construction (North America) or on sugar plantations (Caribbean) or, later in the twentieth century, on rubber estates (Southeast Asia), the coolie became indispensable after slavery was prohibited throughout the British Empire in 1833. Many of these Chinese immigrants anticipated a sojourn of several years' labor and planned to return to the homeland with great wealth; instead, most found themselves working with no end point in sight and with scant hope of either obtaining riches or returning to China. Others decided to settle down in the host country. In the process, Singapore and Hong Kong functioned as the centers of a vast network not only for the trade of goods but also for an expanding financial market, for voluminous remittances were sent by Chinese sojourners in Southeast Asia to their relatives in mainland China via Singapore and Hong Kong. Charitable institutions such as the Tung Wah Hospital and Po Leung Kuk, whose directors were mostly influential merchants, established tight working relationships with sister institutions throughout Southeast Asia.

These growing connections with Southeast Asia were part of a process that turned Hong Kong into a regional center of shipping, trade, and finance. It became a stronghold for invest-

Hong Kong Harbor. (PhotoDisc, Inc.)

ments, especially those of the British and Chinese. Hong Kong also became such a trade magnet in South China that Guangzhou (Canton) and Macau, the twin cities that had monopolized foreign trade during the Qing dynasty (1644–1912) before the colonization of Hong Kong, began to lose their centrality and suffer perennial economic recessions.

Hong Kong as an entrepôt facilitated the movement of not only goods, but also the educated elite. For example, Wu Tingfang (1842–1922), a Singapore-born Chinese who had received his secondary-school education in Hong Kong, was the first Chinese member of Hong Kong's Legislative Council; his appointment to the council in 1880 led to a distinguished diplomatic career in China. Hong Kong also provided opportunities for tertiary education. Students from British Malaya and the Philippines took their degrees at the University of Hong Kong (founded 1912) and after graduation contributed to building the modern states of their home countries. Only after the Pacific War (1941–1945), when tertiary educa-

tion in Southeast Asia became more developed, did the number of students seeking higher education in Hong Kong begin to decrease.

The 1920s and 1930s witnessed fluctuations in the Hong Kong–Southeast Asian trade, due to the Great Depression (1929–1931) and the anti-Chinese movements in Southeast Asia. Trade recovered and expanded during the Second Sino-Japanese War (1937–1945), when Southeast Asia served as China's only source for both strategic and daily necessities, imported via Hong Kong. The import and export business expanded substantially in Vietnam and Singapore during this period.

Following the end of the Pacific War and the Chinese civil war (1946–1949) between the Kuomintang and the Chinese Communist Party, there was a massive influx of Chinese refugees in Hong Kong, and with them came capital, industrial expertise, and cheap labor. This inaugurated an era of industrialization in Hong Kong, with the production of competitive commodities that were traded worldwide. By contrast, trade between Hong Kong and

Southeast Asia experienced an overall decline. Embargos imposed by the United Nations on the People's Republic of China (PRC), or Communist China, and protectionism among the Southeast Asian countries confined trade expansion for decades.

The 1980s witnessed revived connections between Hong Kong and Southeast Asia in several respects. The rise of the middle class and the predominance of small families in Hong Kong resulted in a great demand for domestic helpers, a demand that was largely filled by Southeast Asian people. Today, the total number of such employees exceeds 230,000; most of these workers are Filipinos, and others include Indonesians and Thais. Meanwhile, the impact of Hong Kong's television programs, soap operas, movies, popular music, and magazines and novels has been increasingly felt among the Chinese community in Southeast Asia, to the extent that Hong Kong has become a model of popular culture. Another trend is the renewed interest expressed by the Hong Kong government in encouraging investments in Southeast Asian markets. In turn, Southeast Asian companies, such as the Thailand-based Charoen Pokphand Group, are investing heavily in both Hong Kong and China.

HORSES AND MULES

Horses were vital to war, prestige, sport, and transport in large swaths of Southeast Asia, whereas mules were mostly restricted to transport in the far north. There was a lively regional trade between breeding and consuming areas, as well as some maritime exports of horses to India and China. However, these were overshadowed by overland imports of horses and mules from Yunnan and Tibet and maritime imports of luxury horses, initially from the Middle East (West Asia), India, and China and later from Australia, Europe, and the Americas.

How and when these natives of the Eurasian steppe reached Southeast Asia remain shrouded in mystery. Most archaeologists consider that horses arrived from the north around the beginning of the common era (C.E.). They were certainly present over much of Southeast Asia by the time Europeans arrived around 1500 C.E., with the major exception of the northern and central Philippines. The basic stock consists of small and tough Mongolian and Tibetan ponies, that is, breeds measuring less than fourteen and a half hands (147 centimeters) at the shoulders. However, there are also clear indications of Arab blood, possibly derived from western India. Horses do best in relatively dry and high areas, notably those with calcareous soils for good bone formation. They are most numerous in relation to humans in the Lesser Sunda Islands of Indonesia and East Timor. Other maritime clusters occur in the western Philippines, South Sulawesi, Java, and the Sumatran highlands. Mainland Southeast Asia's horses are concentrated where the Yunnan Plateau extends from China and in the rain shadow areas of central Burma (Myanmar), northeastern Siam (Thailand), Cambodia, and central Vietnam. Around 1910, there were some 800,000 horses in maritime Southeast Asia, and about 300,000 in mainland Southeast Asia.

There is some correlation between centers of horse breeding and core regions of classical empires, suggesting that easy access to horses contributed to the military might of Pagan, Angkor, Champa, and Majapahit. This is most strikingly illustrated by well-preserved bas-reliefs of prancing Khmer horses. An elite culture of horsemanship diffused from India in the course of the first millennium C.E., reflected in Sanskrit words embedded in many Southeast Asian languages, with China as another influential model. Numerous Indian and Chinese texts relating to horses were available, but the military technology and court rituals of Southeast Asia remained distinct. To a greater extent than in India, horses were subordinate to elephants, for both war and prestige. Mounted infantry was more common than cavalry proper, and the technique of the mounted archer was scarcely employed. Vietnam and Burma fought off several major Chinese attacks, carried out with large cavalry forces, but the Restored Tounggoo dynasty (1597–1752) of Burma was undermined by fierce Hindu horsemen from the tiny state of Manipur in the early eighteenth century. Colonial armies in Southeast Asia had some light cavalry units, but they mainly relied on horses and mules for the transport of mountain artillery and machine guns. This persisted as late as the Pacific War (1941–1945), notably in the great Burmese campaigns. Vietnamese troops were the last to use a few horses and mules in this way, against both France and the United States.

Other uses of horses and mules are less well documented. The Mongol conquest of Yunnan in the thirteenth century C.E. led Central Asian Muslims (Hui, Haw, Panthay) to develop a spider's web of mule and pony caravans, covering northern Southeast Asia, southern China, and eastern Tibet. This system reached its zenith in the late nineteenth century, but it still persists on a small scale, especially for contraband. The revolution in the use of coaches and carriages in late-eighteenth-century Europe affected rural Java and Luzon, but elsewhere, roads remained rudimentary prior to the advent of the internal combustion engine. However, carriages had a major impact on late-nineteenth-century towns, sometimes supplemented by horse trams. Light pony traps endure in places, partly because of tourism. Horse racing, polo, jousting, and horse fights were ancient sports in

Southeast Asia, and racing with Australian and Western horses remains a multimillion-dollar business to this day. Horses have played some productive roles in herding, forestry, plowing, trampling, threshing, and carting, especially in the eastern archipelago. They have also been eaten on a small scale in Muslim, Christian, animist, and Mahayana Buddhist areas but not in Theravada Buddhist and Hindu ones.

The history of Southeast Asia's horses and mules is little known. Archaeologists and rural historians have paid most attention to more directly productive animals, notably buffalo, cattle, and pigs. Historians of transport have concentrated on ships, railways, and motor vehicles, ignoring not only horses and mules but also the many other animals employed for pack and traction. Even political and military historians have neglected the noble horse, perhaps because elephants have so often stolen the show.

HSINBYUSHIN (r. 1763–1776) Feared Conqueror

Third king of the Konbaung dynasty (1752–1885), Hsinbyushin, known as the Myeidu prince, was the second of Alaung-hpaya's (r. 1752–1760) sons to reign over the empire in accordance with the dying wish of his father that each of his six sons should reign in turn. Alaung-hpaya, the founder of the dynasty, had hoped thereby to forestall dynastic succession disputes. Hsinbyushin was a much-feared conqueror whose armies extended the empire across mainland Southeast Asia from Manipur to Laos, covering a territory as large as that of the sixteenth-century First Toungoo dynasty under Bayinnaung (r. 1551–1581). He launched the final campaign against the Siamese capital at Ayutthaya in 1765, and his generals Neimyo Thihapatei and Maha Nawrahta conquered and destroyed the capital two years later, although the latter died in the siege. His 9 January 1767 order to Neimyo Thihapatei to quickly finish the Ayutthaya campaign and deport the Siamese king and his subjects arose from the imminent threat of invasion in the north by the Chinese army of the Manchu Ch'ien Lung emperor (r. 1735–1795). The Siamese armies under Generals Phya Taksin and Chakri were able to regroup, and by 1770, they had overwhelmed the small numbers of Burmese troops who had been left behind. For the rest of his reign, Hsinbyushin had to contend with almost annual campaigns on the eastern frontier as Siam asserted its independence.

Hsinbyushin's military power was also demonstrated in the north when his forces won major victories against three invading Chinese armies from 1766 to 1769. Competing for dominance and control of the overland trade in the Shan states and Yunnan, the Burmese outmaneuvered the Chinese, ignored a treaty negotiated by the Burmese general Maha Thihathura when the Chinese army was on the defensive, and established Burmese supremacy in the border areas.

Hsinbyushin's military expeditions meant he had a continuing need for arms, an issue that led to the renewal of commercial contacts with the French in 1770. Pierre de Milard, a former prisoner who became commander of the palace guard at the court of Hsinbyushin, facilitated the arrival of the French envoy, Feraud, and the reopening of the French shipyard at Rangoon.

Hsinbyushin offered the French trade concessions in return for munitions. Beset with conspiracies arising from his plan to make his son Singu his successor, in contravention of his father's directive, Hsinbyushin slept in the same room with Milard as a protection against his enemies—a situation in stark contrast to his claims in the 1774 Poudaung inscription to have subdued all the kings of the world. He fell ill and died in the spring of 1776.

HUẾ

Situated on the banks of the Huong (lit. perfume, scent) River in the province of Thua Thien-Hue in Central Vietnam, Huế emerged as a major town. It was the capital city of Vietnam from 1802 and was the last capital city of independent Vietnam before the kingdom was completely colonized by the French in 1883. From then on, the city remained as the imperial city but held no political significance as far as French colonial rule was concerned.

Huế first came under Vietnamese rule at the beginning of the fourteenth century. King Jaya Sinhavaraman III gave the land as a gift to a Tran emperor in 1301 after the latter allowed

him to marry his daughter, and the area was then known as Thuan Hoa (Woodside 1988: 126). In the second half of the sixteenth century, Vietnam was engaged in a political rivalry between two powerful entities: the Trinh and the Nguyễn. The Trinh, under the leadership of Trinh Khiem, managed to capture Hanoi, the capital, and the Nguyễn, under the leadership of Nguyễn Hoang, chose to move to the south to avoid Trinh domination. In 1558, Nguyễn Hoang was made the governor of Thuan Hoa, which he used as a base to rule his southern principality. In 1601, he paid a visit to Huế and developed the area to be the center of his rule. The Trinh tried to capture the south in the seventeenth century, but their forces failed to reach Huế, and they did not succeed in taking political control of the region; in 1673, they gave up their attempt. From then on, the kingdom was divided into the north, under the Trinh who ruled from Hanoi, and the south, under Nguyễn who ruled from Huế, and both pledged loyalty to the powerless emperor at Hanoi (Buttinger 1973: 48).

However, it was the Nguyễn dynasty (1802–1945) that built and developed Hue as it is known at present. In 1802, Nguyễn Anh, a member of the Nguyễn family who survived the suppression of the Tay Son brothers (1772–1802), was able to defeat the Tay Son with French assistance. He reunified the kingdom of Vietnam and proclaimed himself Emperor Gia Long (r. 1802–1820). He chose Huế to be the new capital because it was centrally located between the north and south branches of the kingdom. Furthermore, Huế had long been the home of the Nguyễn family (Woodside 1988: 127). The decision to build a new capital there instead of ruling from the family's traditional capital at Hanoi had political and cultural significance. First, Hanoi was too far away from the south; as a result, it would be difficult for the newly established dynasty to administer the region. Second, Hanoi had long been the political base of the Trinh family; this could destabilize the power of the Nguyễn. And third, the transfer of the capital to Huế led to the demise of Hanoi's cultural and educational monopoly; Hanoi had long been the center for Confucian studies and the place where the literati concentrated themselves. In the nineteenth century, Vietnam saw a better

proportion of literati and mandarins who came from the center and the south.

The new capital city reflected Gia Long's political and cultural thinking. Huế was an imitation of Beijing in terms of political and cultural cosmology. The imperial city was the center of the universe on earth from which the emperor ruled his kingdom. Its plan—citadels, gates, halls, mandarin offices, and imperial tombs—was modeled after the Chinese ones. Even names of buildings were comparable to those of Beijing. The Chinese imitation was deliberate, reflecting the way in which the Vietnamese emperor and his court ruled the kingdom in conformity with Chinese codes (Woodside 1988: 128, 129, 131).

Huế kept its status as the capital of unified Vietnam until the 1880s, when France completed its colonization of the kingdom. Thereafter, Huế was only the imperial city of the protectorate of Annam or Central Vietnam, whereas Hanoi became the administrative center of French colonial rule. On 30 August 1945, Bảo Đại (r. 1925–1945), the last emperor of the Nguyễn dynasty and of Vietnam, who resided in this imperial city after abdicating the throne, transferred power to the Viet Minh and agreed to move to Hanoi (Marr 1995: 451).

Today, some parts of the imperial city have been renovated, for they were badly damaged during the intense fighting between U.S. and Viet Cong forces in the Tet Offensive of January and February 1968. Huế is probably the best manifestation of the political and cultural closeness of the Vietnamese and Chinese court traditions.

HUI

Hui is a Chinese term for a society or association of any kind. It appears in the titles of various membership groups—for example, *huiguan* (place-of-origin associations), political groupings, and associations to sponsor schools, funeral associations, and the like.

A *hui* can also be a revolving credit association, an institution known in China for four or more centuries. Members each contribute a certain sum of money, usually monthly, and each can use, by turns, the entire sum for a time, usually by agreeing to pay interest to the other members; thus, it is a simple way of obtaining credit for agriculture or business.

Another meaning of the term *hui* is “sworn brotherhood” or “secret society,” as in the Tiandihui (Heaven and Earth Society) or Sandianhui (Three Drops Society, so called because of the way members wrote secret signs). Such societies spread through South China after the eighteenth century. Often, they organized opposition to the Qing or Manchu dynasty’s rule (1644–1912) there. Members took blood oaths to bind themselves together and used secret signs to recognize one another because membership was punishable by death by the Qing authorities.

Immigrants from South China brought the *hui* to Southeast Asia, using its oaths, signs, and rituals in a new environment. In the colonies, *hui* were not illegal in Southeast Asia in the mid-nineteenth century, and they appeared openly. Colonial rulers knew and often respected the leaders of such societies. *Hui* inducted new immigrants, single men far from home, into a relationship of mutual assistance through ritual brotherhood. They also helped control the opium- and gambling-revenue farms from which the colonies obtained substantial income. But outbreaks of violence or rebellion finally led Southeast Asian authorities to outlaw and suppress the societies. In the twentieth century, *hui* influence receded in economic and social life, but it reappeared in the form of criminal groupings or so-called triad societies.

HUKBALAHAP (HUKBO NG BAYAN LABAN SA HAPON) (PEOPLE’S ANTI-JAPANESE ARMY) (1942)

The Hukbalahap (Hukbo ng Bayan Laban sa Hapon, or People’s Anti-Japanese Army) was a Philippine anti-Japanese peasant guerrilla movement based in Central Luzon. It played an active role in opposing the Japanese occupation forces and depriving them of food and resources. It also fought against Japanese collaborators, particularly landowners, the prewar elite, and constabulary forces. After the Pacific War (1941–1945), the Huks, as members of the group were known, turned against the government when attempts at peaceful reform failed. The antigovernment Huk movement reached its peak from 1949 to 1951, after which it declined due to strengthened government military and socioeconomic programs and internal problems. Remnants of the movement, however, continued to oppose the government until the 1960s.

The Hukbalahap was built on anti-Japanese sentiments among the peasants in Central Luzon, where many were brutally treated by the Japanese. It was organized from peasants’ associations that had sought socioeconomic reforms before the Pacific War but sided with the United States and the Philippine Commonwealth government in its antifascist, anti-Japanese stance. The movement was formally organized and named on 29 March 1942. Luis Taruc (1913–) was chosen as chairman of the Military Committee, with Casto Alejandrino as second in command.

The Huks organized into squadrons and procured weapons that had been abandoned in the battlefield. They were influenced by Edgar Snow’s *Red Star over China* (1946) and Chinese communist veterans of the Sino-Japanese War (1937–1945), who organized a squadron that was affiliated with the Huks. Most of the Huk

leaders, however, were steeped in Russian communist and socialist thought.

The Huks developed various policies. Militarily, they built up strength and resisted the Japanese through sabotage, guerrilla raids, and armed encounters. Politically, the Huks discredited the Japanese-organized government and destroyed its influence, while building a functioning democracy in Huk areas. Economic objectives were to thwart the Japanese in exploiting Philippine resources and at the same time develop the means to provide for the people's welfare. The Huks also planned for social and economic reforms that could continue after the war, and they abolished rents and executed landlords who collaborated with the Japanese. Further, they established a propaganda and education arm and tried to organize barrios for security and self-sufficiency.

The Hukbalahap grew from around 300 members organized into five squadrons in April 1942 to between 10,000 and 12,000 members (in seventy-six squadrons) by September 1944. The movement did not get along with other guerrilla organizations, particularly the pro-American ones, due to differing policies, which resulted in clashes with pro-Japanese elements and other guerrilla groups.

The Huks participated in the 1944–1945 campaigns against the Japanese and appointed their own local officials in place of the Japanese. The U.S. Army and Filipino politicians identified the Huks as potential threats to the government after the war. Furthermore, when the Commonwealth government was reestablished in 1945, Huk leaders were not included. U.S. Army units and Filipino guerrillas disarmed the Huks; some were arrested and charged with murder, subversion, kidnapping, or espousing communism. In February 1945, over a hundred Huks were massacred by rival guerrillas in Malolos, Bulacan. Landlords demanded back rent, and the prewar socioeconomic system was reimposed.

Huk leaders ran for the postwar congress on a platform of socioeconomic reform, and they opposed granting the Americans parity rights in the exploitation of Philippine natural resources. Two of the Huk contenders, Luis Taruc and Jesus Lava (who would be captured by the government in 1964), won election but were unseated by rival politicians amid charges that they had used force and coercion to win. One of the ranking Huk leaders was kidnapped and

allegedly murdered, leading Taruc to accuse the government of plotting to kill Huk leaders.

The Huks then fought against the government. The organization was given a new name sometime around June 1947—Hukbong Magpapalaya ng Bayan (HMB, People's Liberation Army)—and sought the redress of grievances through violent, armed means.

The government, under President Manuel Roxas (t. 1946–1948), fought back with the military and declared the HMB illegal on 6 March 1948. Roxas's successor, Elpidio Quirino (t. 1948–1953), offered amnesty to the Huks in June 1948 and allowed Taruc to reassume his seat in congress. Negotiations failed, however, and Taruc again went underground as the Huks resumed their fight against the government. The Huk rebellion peaked in the years 1949 to 1951 and spread to the Visayas and Mindanao.

Huk atrocities, internal differences, and more vigorous leadership of the armed forces under Secretary of National Defense Ramon Magsaysay (1910–1957) broke the rebellion. Ranking members of the Huk politburo were arrested as military campaigns put the Huks on the defensive. Government reform programs undermined Huk claims, and the organization ceased to be a major threat by 1954, when Taruc surrendered to the government.

The HMB was outlawed on 17 June 1957, and many Huks surrendered to the government to take advantage of the amnesty offered to them. Nonetheless, scattered Huk remnants continued to operate until the 1960s. In the 1970s, the Philippine government officially recognized the Hukbalahap as a legitimate anti-Japanese guerrilla movement; its veterans were awarded back pay and benefits.

In sum, the Hukbalahap was a peasant movement motivated by antifascist and anti-Japanese sentiments, with a long-term socioeconomic reform agenda. It proved to be a major force against the Japanese occupation army and the puppet administration it set up. In the postwar period, the movement maintained its socioeconomic agenda but was opposed by the government, leading the Huks to turn against the government. Although the leaders were communists or socialists, many of the members were not. The whole movement was considered subversive by the government, however, which led to the prolonged rebellion.

HUMAN PREHISTORY OF SOUTHEAST ASIA

The majority of Southeast Asia's history belongs to the period prior to the appearance of written records. Generally referred to as the prehistoric period, it covers more than 1 million years and begins with the Pleistocene artifactual record of early hominids and ends with the appearance of indigenous written records. The timing of the latter varies by area; for example, in Indonesia, stone inscriptions in Sanskrit appeared in the fourth century C.E., whereas extant written accounts of the Philippine islands date from the tenth century C.E. onward. The present coverage summarizes major periods and cultural developments in Southeast Asia's prehistory primarily based on English-language sources and the better-known archaeological records, at least for certain periods, of Thailand, Vietnam, Cambodia, Malaysia, Indonesia, and the Philippines. Although archaeologists also include southern China and

Taiwan in studying some aspects of the region's prehistory, these two areas are excluded from this discussion.

Early Hominids in Southeast Asia

Homo erectus, the first hominid to have occupied Southeast Asia, was present by at least 1 million years ago. The majority of the evidence is paleontological and primarily from sites on Java (for example, Sangiran and Trinil), though fossil remains of *H. erectus* are also known from Burma (Myanmar) and Vietnam. Stone tool assemblages, composed of large pebble and flake tools, do not generally derive from primary contexts (such as living areas), nor have they yet been found in association with hominid fossils. Thus, the interpretation of much of the archaeological record assigned middle Pleistocene dates continues to be the subject of debate. The presence of early Pleistocene (ca. 800,000 years ago) sites on the island of Flores, from which lithic artifacts have been recovered, suggests that the achievements of *H. erectus* included maritime technology. Occupation of this island would have entailed crossing deep-sea channels, since it was not part of Sundaland—the landmass connecting the mainland with Sumatra, Java, Bali, Borneo, and Palawan, which was exposed at various times during the Pleistocene. It suggests then that *H. erectus* possessed voyaging skills and watercraft (Morwood et al. 1999).

Hunter-Gatherers of the Late Pleistocene and Early Holocene

Approximately 40,000 years ago, anatomically modern humans occupied Southeast Asia, and by 30,000 years ago, they had colonized islands of the eastern Indonesian archipelago, which would have entailed ocean-crossing voyages. Well-dated archaeological evidence of late Pleistocene occupation derives from only a few sites, such as the Lang Rongrien rock shelter, the Lang Kamnan cave, Son Vi sites, Niah Cave, Tabon Cave, and Leang Burung 2 (Anderson 1990; Glover 1981; Ha Van Tan 1997; Shoocongdej 2000). The early hunter-gatherer groups who seasonally occupied these caves and rock shelters are known primarily from their flake and pebble/cobble stone tool assemblages. The majority of their material culture was probably made of bamboo and wood, as suggested by the generalized nature of

the stone tools and their probable use in manufacturing activities. Remains of hearths have also been found in these sites, as well as remains of various animals (for example, deer, wild pigs, monkeys, orangutans, shellfish), suggesting these hunter-gatherers engaged in a broad-spectrum subsistence strategy involving hunting, collecting, and fishing.

By the early Holocene (10,000 years ago), hunter-gatherers occupied most of Southeast Asia, with some areas, such as the Malay Peninsula, reoccupied following the expansion of the postglacial equatorial rain forest. Occupation of the mainland's upland areas is better known than that of the lowlands, where rising sea levels and subsequent landscape changes after the last glacial maximum destroyed or buried most sites. Holocene hunter-gatherers are also known primarily from their seasonal use and occupation of caves and rock shelters (Gua Cha, Lang Kamnan, Lang Rongrien, Spirit Cave, Xom Trai, among others) and, in some cases, from coastal shell midden sites. The primary material remains found at these sites are stone tools; the tool assemblages tend to be dominated by unifacially flaked pebble tools. Other types of tools included grinding stones, bone points, and antler wedges, though the majority of their material culture was presumably made of perishable materials. Caves and rock shelters were also used for burial; individuals were buried in either flexed or extended positions and accompanied by stone artifacts, animal bones, and red ochre. Mobility strategies may have varied with the wet and dry seasons, entailing different types of settlements (including in open areas) and exploitation of different food resources (Shoocongdej 2000). Diet varied by location and included a wide variety of terrestrial (pigs, deer, bovids, monkeys, rhinoceri), riverine, and marine shell species. Holocene hunter-gatherers also exploited a wide range of plants. Their role in plant domestication, a topic of long-standing interest in Southeast Asia, remains little known, due, in part, to the current archaeological focus on the domestication, adoption, and spread of rice farming—the subsistence base of later complex societies.

Early Rice-Farming Communities

Currently, the earliest known domesticated rice came from the middle Yangtze Valley in China

and has been dated to ca. 6000 B.C.E.; Southeast Asian sites have not yet yielded direct evidence of rice this early. Consequently, this evidence, in conjunction with linguistic data, underlies current models. The models propose that in the third millennium B.C.E., rice agriculture was introduced into mainland Southeast Asia by expanding Austroasiatic-speaking farming communities that originated in the Yangtze River area and into island Southeast Asia by expanding Austronesian-speaking communities from Taiwan (Bellwood 1997; Higham 1996). The adoption of an agricultural economy based on rice, however, did not occur simultaneously or everywhere in Southeast Asia, as hunter-gatherer societies continued in some areas.

In northern coastal Vietnam, shell middens and other sites (for instance, Da But and Cai Beo) dated from the fifth millennium B.C.E. have yielded pottery and polished stone adzes, material culture often associated elsewhere in the world with Neolithic communities. Similarly, in Thailand, pottery and stone adzes, often from burials in caves, predate evidence considered indicative of rice-farming villages. Whether such evidence indicates hunter-gatherer groups who adopted pottery and polished stone tools or early farming activities remains unknown.

In mainland Southeast Asia, evidence of village settlements and rice farming appeared earliest in the inland areas of northern Vietnam in the early to mid-third millennium B.C.E. (for example, Phung Nguyễn). The inhabitants of these farming villages also raised domesticated dogs, pigs, and cattle; manufactured plain and decorated pottery vessels; engaged in textile making as evidenced by spindle whorls; and produced and used stone ornaments (such as nephrite bracelets and beads). The villages' inhabitants were buried in nearby cemeteries, excavations of which have yielded extended burials and infant jar burials. In northeastern and central Thailand, farming communities are known primarily from cemeteries of extended inhumations (the sites of Non Nok Tha and Ban Chiang, among others), with some of these sites also yielding evidence of habitation (such as postholes that were possibly from houses raised on piles). These farming communities used and produced plain and decorated pottery (some tempered with rice chaff), polished stone adzes, stone bracelets, stone reaping knives, and

bone tools. Spindle whorls indicate they engaged in textile making, whereas marine shell beads and bracelets and exotic stone attest to participation in exchange networks. In addition to growing rice, these villagers raised domesticated cattle, pigs, chickens, and dogs, though they also continued to hunt and collect wild resources. Mortuary evidence from Non Nok Tha suggests the beginnings of hereditary social ranking and part-time craft specialization (Baryard 1996–1997). However, mortuary evidence from other contemporary/chronologically overlapping sites (for example, Khok Phanom Di and Ban Chiang) suggests differences in social status based on an individual's achievements in social, ritual, and/or economic activities (pottery crafting, exchange, and so on) (Higham 1996; White and Pigott 1996).

Within the islands and Malay Peninsula, early rice-farming communities are known almost entirely from occupation and burial remains in caves and rock shelters, as well as a few shell midden sites. In the Philippines, sites dating from at least the early third millennium B.C.E. onward indicate these communities used and produced items such as plain and decorated pottery, stone and shell adzes, stone reaping knives, textiles (as known from spindle whorls), stone and shell jewelry, and tattooing chisels. Domesticated pigs and dogs were raised, with food resources continuing to include hunted and collected wild animals and shellfish. One of the few open sites—Dimolit in northeastern Luzon—has also yielded postholes from two square domestic structures that appear to have been seasonally occupied. Within the Indonesian archipelago, pollen evidence suggests minor forest clearance, presumably for agriculture, on Sumatra around 4500 B.C.E. and permanent clearance after 1000 B.C.E.; unfortunately, on Sumatra and Java, little is known archaeologically of early farming communities. On other islands, including those of the eastern Indonesian archipelago as well as the areas of Sarawak and Sabah, sites are known primarily from caves and rock shelters. They have yielded various types of Neolithic material culture, including plain and decorated pottery and rice as well as shell beads, bracelets, and fishhooks, dating from 2500 B.C.E. on. There is also evidence for human introduction, via watercraft, of pigs and nondomesticated animals to some of these islands between 2500 and 2000 B.C.E. During the

second millennium B.C.E., caves in the Malay Peninsula (such as Gua Cha) were used for mortuary purposes and contain graves of extended individuals accompanied by items such as stone adzes, bone points, shell beads and bracelets, and plain and decorated pottery. The associated settlements may have been located along the riverine areas adjacent to these caves.

Copper- and Bronze-Producing Communities

By the early to mid-second millennium B.C.E., autonomous village communities on the mainland (known primarily from cemetery sites) became involved in the small-scale production, distribution, and consumption of copper/bronze items, with the continued production and use of stone and pottery craft goods. Hereditary ranking appears to have existed among some of these communities, though the incorporation of this new metal technology may not have been accompanied by increasing sociopolitical complexity as seen in Bronze Age societies elsewhere in the world. Around 1500 B.C.E., if not earlier, bronze objects appeared in sites in northern Vietnam (concentrated along the Red and Black Rivers at Go Bong, Dong Dau, Go Mun, and other locations). They appeared somewhat later in the central and southern areas (for example, the sites of Binh Chau and Doc Chua), where ore resources were more distantly located. Items such as arrowheads, spearheads, socketed axes, fishhooks, and, later, ornaments were locally cast in bronze using clay and stone bivalve molds. Stone ornaments and tools continued to be used, though this declined over time.

Sites in central and northeast Thailand (among them Phu Lon, Ban Chiang, and Non Nok Tha), with their initial use dating to the early to mid-second millennium B.C.E., provide the earliest evidence for copper/bronze metallurgical activity (Pigott and Natapintu 1988). The acquisition and processing of ores, as well as the smelting and casting of copper/bronze objects, do not appear to have required full-time specialists (White and Pigott 1996). After 1500 B.C.E., bronze-casting technology, which involved the use of ceramic crucibles and stone or ceramic bivalve molds, appears to have spread along riverine and coastal exchange routes (Higham 1996). Copper ingots entered

into existing exchange networks, thus enabling communities situated far from ore sources to engage in bronze casting. Prior to the production of iron craft goods (ca. 500 B.C.E.), bronzes were cast into ornaments (bracelets, ear ornaments) and utilitarian objects such as socketed ax heads and other implements, chisels, arrow- and spearpoints, fishhooks, and sickles. Bronze objects and copper ingots, together with items such as pottery vessels, animal remains, stone tools, shell ornaments, and clay figurines, also served as grave goods, though whether their value in mortuary contexts related to distinguishing status differences and/or other social identities remains unclear. These communities engaged in rice agriculture, possibly both wet and dry forms of nonintensive cultivation, animal husbandry, and hunting and collecting of wild food resources.

The Development of Complex Societies

Around the mid-first millennium B.C.E., significant changes entailing increasing social stratification appear to have been under way. Archaeologists interpret such increasing hierarchization as indicative of complex societies (such as complex chiefdoms or prestate polities). In mainland Southeast Asia, large settlements (up to 40 to 50 hectares, some with moats as in northeastern Thailand), together with smaller ones, appear to have been integrated into regional settlement hierarchies. Urban settlements (Co Loa in northern Vietnam and Beikthano in Burma) also appeared during this period. Remains of residential structures, though, are rare and usually take the form of postholes, which suggests houses were built on stilts. Other changes, occurring variably within the region, included engagement in iron production (for instance, ornaments and tools in localized forms), with smelting and forging first appearing in the Chao Phraya and middle to lower Mekong Valleys. Then there was the increased scale of production and variety of bronzes crafted (various vessel shapes, large drums, axes, spearheads, jewelry, and the like), as exemplified by northern Vietnam Dong-son bronzes (such as large decorated drums, situlae, and bells). Also, there was a greater use of bronze objects in mortuary ritual, as well as glass-working (in southern Vietnam). Intensification of wet-rice cultivation using domesti-

cated water buffalo and iron plows and participation in maritime and long-distance exchange relations between the mainland and island areas and South Asia, with exotic goods used as grave goods, are among other evident changes. The earliest evidence of trade between mainland communities and India dated to the fourth century B.C.E. and came from a cemetery site in western Thailand (Ban Don Ta Phet [Glover 1996]). Among the exotic goods were high-tin bronze vessels, beads of glass and semiprecious stones (carnelian, agate, and others, some of which were etched), and a possible Buddhist carnelian pendant.

The complex societies that developed during the last few centuries B.C.E. in areas of island Southeast Asia acquired bronze objects, including items that presumably were used to mark prestige/status (such as Dong-son drums), and iron goods via exchange with mainland polities. Soon thereafter, local metal-working centers were established in the islands. Island polities also engaged in exchange networks involving South Asia, with sites from the north coast of Bali (for example, Sembiran) so far yielding the earliest dated Indian materials (rouletted wares) from around two thousand years ago (Ardika and Bellwood 1991). As with the mainland, the majority of information on island societies of this period derives from burials; these are found interred in open sites and caves and include the distinctive jar, slab grave (Sumatra, Java, and Peninsular Malaysia), and carved stone sarcophagi (Java and Bali) forms of burial. Such sites have yielded information on mortuary ritual, along with a wealth of material culture such as decorated pottery, bronze socketed tools, bowls, drums, glass and carnelian beads, and iron tools. Much remains to be learned, though, of the social, political, economic, and ideological aspects of this period, which preceded the formation of states in the Indo-Malaysian archipelago.

Early Southeast Asian States

States in Southeast Asia are traditionally thought to have appeared on the mainland during the early centuries C.E. This dating reflects, in part, the privileging of written sources in the identification of state-level polities; thus, to understand the formation of the early historic states, archaeologists are now investigating prehistoric

sites of the last few centuries B.C.E. to the beginning of the common era. Traditionally, Funan is considered the earliest state. Written accounts, the earliest dating to the third century C.E. and prepared by visiting Chinese emissaries, describe, for example, Funan's origin story, dynastic lineage, raiding activities, and vassal polities. Also mentioned are walled settlements that contained palaces, the taxation system (paid in gold, silver, perfumes, and pearls), an intensive rice agricultural system, and the presence of a representative of the Indian Murunda king. Oc Êo, a 450-hectare rectangular site (enclosed by several ramparts and moats) of approximately the second to sixth century C.E., is located in the lower Mekong Delta, the area in which Funan is thought to have been located. It has yielded evidence of participation in extensive exchange networks that involved Persian, Roman, Indian (some engraved in Indian script), and Chinese goods from the second century C.E. onward; there are also indications of a settlement engaged in glass, stone (precious and semi-precious), and metal craft production (Higham 1996). An extensive system of canals (though not yet dated) connects Oc Êo with several other large sites, including Ta Keo (the probable port) and Angkor Borei. The latter was continuously occupied from the late centuries B.C.E. onward and was contemporary with and shared similarities in material culture with Oc Êo, suggesting the two sites were part of the same polity (Stark et al. 1999). The lower Mekong Delta state, though, was not an isolated polity, as other contemporary maritime-oriented states appear to have existed on the west coast of the Malay Peninsula and in West Java by the early centuries C.E. (Wisseman Christie 1995).

From the middle of the first millennium C.E., more early historical states are known (for example, Chenla, Dvaravati, Champa, Kedah, and Śrīvijaya). These states exhibit a shared incorporation of Indian legal, political, and religious ideas and institutions, including the use of Sanskrit names by rulers, as seen in stone inscriptions (first in South Indian and then in indigenous scripts) and in the layout and styles of religious architecture and carvings. Although "Indianization"—the view that statecraft was brought to Southeast Asia by Indians—is no longer accepted, relatively little is known about indigenous sociopolitical processes in polities that immediately preceded the early historical

states. In northern Vietnam, state polities may have existed prior to the expansion of the Han empire in 111 B.C.E., and this is an issue that requires further consideration and investigation. Recently, several archaeological projects aimed at understanding state development on the mainland have been initiated in central coastal Vietnam, the area of the Cham state (Glover and Yamagata 1995); the lower Mekong Delta, an area associated with Funan (Stark et al. 1999); and northeastern Thailand (Higham and Thosarat 2000). Such research should contribute to the understanding of the processes (social, ideological, economic, and others) leading to the formation and structure of early Southeast Asian states, as well as their development prior to the better-documented historical period.

HUN SEN (1951–)

"Strong Man" of Cambodia

Hun Sen is a prominent Cambodian political figure and has been prime minister since 1984. He was born in rural Kompong Cham Province in April 1951. His parents were poor farmers, but Hun Sen showed promise in primary school and went to Cambodia's capital, Phnom Penh, to complete his education. In 1970, following the coup that removed Prince Norodom Sihanouk (1922–) from power, Hun Sen, while still a student, joined the Khmer Rouge guerrillas, ostensibly seeking to return the prince to power. Hun Sen was severely wounded in the final assault on Phnom Penh in April 1975, losing the sight of an eye. While recovering from his wounds, he met his future wife, who was working as a military nurse. In 1976 and 1977, under Democratic Kampuchea (DK), Hun Sen served as a regimental commander in eastern Cambodia, but when local cadre began to be purged by the regime,

he fled to Vietnam, where he was imprisoned briefly. In 1978, he was released, after several high-ranking Khmer Rouge cadre defected to Vietnam.

A Vietnamese invasion in December 1978 removed the Khmer Rouge from power. In the pro-Vietnamese Khmer government established in early 1979, Hun Sen, at twenty-eight, was named foreign minister, the youngest person in the world to hold the office. In 1984, he became prime minister, with Vietnamese encouragement, and held the post after the Vietnamese withdrew their forces five years later. In the UN-sponsored elections of 1993, Hun Sen's Peoples' Party came in second but refused to relinquish power and forced a coalition government onto the victorious royalist party. Four years later, as the royalist faction sought to arm itself for its protection, Hun Sen forcefully ousted it from the coalition. A more compliant coalition government took office after the elections of 1998, and Cambodia was admitted to the Association of Southeast Asian Nations (ASEAN). By then, the Khmer Rouge movement had collapsed, and Cambodia was at peace. Hun Sen took personal credit for both developments.

Throughout his political career, Hun Sen has displayed a mixture of brutality, shrewdness, populism, and sensitivity. He relishes the title of "strong man," while displaying acuity in selecting his advisers, distributing patronage, and keeping political rivals at a safe distance from the levers of power.

I

IBAN

The name *Iban* is of uncertain origin. Early writers speculated that it derived from the Kayan term *hivan*, meaning “wanderer.” More likely, it comes from the Iban word *iban*, meaning “a person,” “human being,” or, more specifically, a “layperson,” as opposed to a “ritual specialist” (a *manang* [shaman] or *lemambang* [bard]). In the post-Pacific War (1941–1945) years, with growing political consciousness, Kalaka and Saribas Iban preferred to call themselves Sea Dayaks, reflecting a former tradition of coastal raiding. However, since the 1970s, that term has largely passed out of use, and today, *Iban* is universally employed, both officially and by the Iban themselves.

The Iban speak a single, comparatively homogeneous language that is, in turn, part of a larger complex of Borneo–Malayic languages. Also part of this complex are a number of related Ibanic dialects and languages, some of them mutually intelligible, including Kantu’, Desa, Bugau, and Mualang, all spoken in West Kalimantan. Although related to Malay, Iban is a distinct language, with its own ritual-speech genre known as *jaku’ dalam* (deep speech).

Iban are found in all of the political divisions of Borneo but in largest numbers in Sarawak, where they comprise the single most populous ethnic group. There, in 2001, they numbered 603,540, or more than a quarter of the state’s population. In West Kalimantan (Indonesia),

they number approximately 14,000; in Brunei, 10,000; and in Sabah (in 1991), 6,672. Traditionally, Ibans chiefly inhabited the hills at mid-level elevation, generally locating their settlements along rivers, especially the middle reaches. But during the last two centuries, more than half have settled downriver and in the deltaic plains of Sarawak, and over a quarter live in urban areas today.

According to genealogical traditions, ancestors of the present-day Iban began to filter across the low-lying Kapuas watershed into Sarawak sixteen to seventeen generations ago. They first settled the interior and lower rivers of western Sarawak. A period of territorial consolidation followed, giving way, shortly before the beginning of the nineteenth century, to renewed expansion. Iban pioneers from the Batang Lupar and Saribas crossed the southern watershed of the Rejang and settled along the Kanowit River and its tributaries. Still others, from the upper Batang Lupar, Lemanak, and Skrang Rivers, moved across the headwaters of the Batang Ai and along the Kanyau in West Kalimantan into the Katibas, a major Rejang tributary. Back in western Sarawak, Saribas and Skrang war leaders were, at the same time, forging military alliances with local Malay chiefs. Venturing to sea in large, well-armed war boats, they raided coastal and riverine settlements all along the western coast of Borneo, from the Rejang Delta to Pontianak and the Sambas in

southern Kalimantan. This raiding posed an immediate threat to the newly founded Brooke territory (established in 1841 when James Brooke [1803–1868] was appointed raja of Sarawak by the sultan of Brunei), which, with the aid of the Royal Navy and Balau and Sebuyau Iban allies, defeated the Saribas and Skrang Iban in a series of campaigns from 1842 to 1844.

Although Iban migration into the Rejang basin had begun several decades before James Brooke's arrival, this movement was undoubtedly accelerated by Brooke's military incursions into the Iban heartland in the 1840s, followed by the "punitive expeditions" of his successor, Charles Brooke (1829–1917). The havoc wreaked by the Brooke state as it extended its rule, together with the continuing disruption caused by interregional warfare, impelled many to migrate in search of more secure conditions and to escape the interference of the new and alien Brooke raj. The enormity of these migrations can scarcely be exaggerated. At the beginning of the nineteenth century, there were no Iban living north of the southern watershed of the Rejang. By the end of the century, more than half of the total Iban population lived north of this line, having spread through the whole Rejang basin and beyond, reaching, by the end of the century, Sarawak's northernmost frontiers with Brunei and Sabah. These latter movements, indeed, played an important part in extending Sarawak's northern borders.

Iban settlements are predominantly in the form of a longhouse, although in some areas, villages of separate houses have replaced the longhouse. In the past, when head-hunting was endemic, the longhouse was an important defensive unit. Today, it continues to be a ritual entity, with residents sharing responsibility for its ritual well-being. A longhouse consists of a series of laterally joined family units, each unit built and maintained by a household. Access is typically by a notched-log ladder or stairs. Inside the longhouse, an inner wall separates individual family apartments on one side from an opened gallery on the other. Between the two is a communicating passageway. Above each apartment is a loft where rice is stored in bark bins and where, in the past, women spun cotton and wove intricate *ikat* (tie-dyed weaving) tex-

tiles. Each longhouse contains from four to seventy or eighty households.

The primary subsistence activity of most rural families is rice farming. In the hills, farmers practice swidden cultivation, whereas in low-lying areas or in upland valley pockets, many grow *padi paya*, or swamp rice. Each family maintains its own stock of rice seed and plants between one and two dozen varieties of rice annually. Farmers also interplant their fields with gourds, long beans, mustard greens, pumpkins, cucumbers, maize, and cassava. Wild fruits, shoots, and vegetables are collected, and hunting and fishing traditionally provided the principal sources of dietary protein, although today, logging and river silting have reduced the availability of fish and wild animals. Almost all families keep chickens and pigs, and every longhouse has dogs, used mainly for hunting. Chickens and pigs are used in sacrifices, and eggs are an indispensable part of most offerings. Rubber and pepper are major cash crops. Today, with a declining rural economy, off-farm labor and remittances from those working in towns, logging camps, or plantations have become vital sources of support for many longhouse families. In addition, the attraction of salaried jobs and educational opportunities is resulting in large-scale urban migration. In Sarawak, Iban are now found in all major occupations.

The fundamental unit of Iban society is the *bilik* (lit. room or apartment) family (a family group living in an apartment). Families are corporate groups that hold in trust farmland, fruit trees, sacred rice, charms, prohibitions, and heirloom valuables. Traditionally, a son or daughter remained with the family following marriage, to ensure the group's continuity. Sons and daughters have equal rights of inheritance. Adoption is common, and couples are likely to adopt an heir should they be childless. The organization of Iban society is bilateral; descent groups are lacking, and marriage is preferentially endogamous within widely ramifying kindred networks. In some areas, oral genealogies of up to twenty or thirty generations are preserved, memorializing, in particular, local pioneering ancestors. In others, such genealogies are absent. Intrakindred marriage is preferred, provided partners are of the same generation. Divorce is not uncommon and, with mutual consent, is relatively easy.

In the past, men of influence included renowned warriors, migration leaders, expert farmers, orators, bards, and augurs. Virtually all were self-made men. Although essentially egalitarian, Iban society was and remains highly competitive, and the Iban are keenly aware of status distinctions, recognizing in the past *raja berani* (the rich and brave), *orang sengapa'* or *orang mayuh* (ordinary people), *jaum* (debt-bondsmen), and *ulun* (slaves). Status distinctions were valorized by wealth and reputation and were given social recognition in ritual festivals and displays of social precedence. Debt-clients and slaves lacked the means to sponsor ritual feasts and so were precluded from the competition for prestige. The chief area of female achievement was excellence in weaving.

Following the establishment of the Brooke state, Iban society was restructured to create a hierarchy of formal offices: the longhouse headman (*tuai rumah*), regional chief (*penghulu*), and paramount chief (*temenggong*). In the early 1960s, political parties took form, but after some initial electoral success, party support split, largely along traditional regional lines, and greatly reduced the overall influence of the Iban in state politics.

Religious belief and ritual pervade every aspect of Iban life. According to Iban beliefs, the world was brought into existence and given its present form by remote creator gods (*betara*), most of which are thought to reside in the upper world (*langit*).

Among the principal pantheon is Singalang Burung, the god of augury and warfare. Others include Simpulang Gana, the god of the earth and agriculture, and Selampandai, the creator of humankind and the god of blacksmithing. Bunsu Petara, the god who imparts the breath of life to human beings; Ini' Inda, the goddess of healing; Menjaya, the god of shamans; and Anda Mara, the god of riches and material wealth, are each revered by all pagan Ibans. Singalang Burung is the eldest and most powerful of the gods, and he influences human affairs by means of his seven sons-in-law, the principal omen birds.

Intermediate between the gods and human beings are the spirit heroes and heroines (*orang panggau*), who inhabit a mythic raised world called Panggau Libau. These are exemplary figures that inspire women weavers and male warriors, orators, and craftsmen. Below the upper

world and the intermediate Panggau Libau realm is "this world" (*dunya tu'*), the earthly world of living human beings; Sebayan, the shadowy afterworld of the dead, is downriver. Invisible to the living, Sebayan's predominant feature is the Mandai River of the Dead. Along its banks, departed souls erect longhouses and clear farms. Sharing "this world" are spirits (*antu'*), including the *antu' generasi* (demon hunters), who prey upon errant human souls.

There are four principal religious practitioners: augurs (*tuai burung*), bard-priests (*lemambang*), soul guides (*tukang sabak*), and shamans (*manang*). Augurs are typically consulted before crucial activities are initiated. Bard-priests sing invocational chants during major ritual festivals (*gawa'* or *gawai*). Soul guides sing the lamentation (*sabak*) for the dead throughout the night immediately preceding burial, whereas shamans are concerned chiefly with treating spiritual aspects of illness and inauspicious dreams, and effecting a proper separation between the living and the dead. Christian missionaries have been active among the Iban for more than a century, and today many Iban are Christian.

IBN BATTUTA (1304–1377)

Traveling Scholar

A famous Moroccan traveler, Ibn Battuta toured almost all the Muslim cities and, provided that his accounts he provided in his work *Rihla* can stand trial, landed as far as East and Southeast Asia in three decades' time. Born to a family of Muslim judges (*qadis*), Ibn Battuta grew up with a scholarly disposition. In 1325, he started his travel career by paying pilgrimage to Mecca. Then he traveled around the Near East (the western part of modern West Asia), seeking great learning from famous scholars. He developed a strong passion while in Cairo to visit as many parts of the world as possible. From then until 1342, he traveled widely in Egypt, Mesopotamia (Iraq), and Asia Minor (Turkey).

The connection of Ibn Battuta with Southeast Asia was established in 1342 when Sultan Muhammad of India appointed him as his envoy to the Chinese emperor. Around 1345, he set off from the Maldives to go to China, via the Straits of Melaka, calling at ports including

Barah Nagar (Burma), Qaqla (Kedah [?], on the western side of the Malay Peninsula), Samudra (Sumatra), and either Champa or Tonkin. He disembarked at Zaytun (modern Quanzhou) in China, then traveled north as far as Shangdu (modern Beijing).

Ibn Battuta's Southeast Asian narrative, part of the adventurous story that he related to a writer named Ibn Juzayy upon his return to Morocco in 1353, described the increasing exposure of Sumatra to Muslim customs and trade. Apparently, he observed a rising trend among the peoples of the Malay Archipelago to convert to Islam.

A major problem underlying his Southeast Asian narratives relates to their obscurity and unreasonable sketchiness as compared to the rest of the work, which is generally full of detailed and vivid descriptions. Some historians are skeptical of his accounts of lands east of India, believing they may have been merely hearsay and therefore suspect.

IBRAHIM YAACOB (1911–1979)

Malay Nationalist

Born in Kertau, Temerloh, in the state of Pahang in Peninsular or West Malaysia on 27 November 1911, Ibrahim Yaacob, also known by his pen name IBHY, was the first president of the Kesatuan Melayu Muda (KMM), founded in 1937 to struggle for Malayan independence from the British.

After completing his studies at a teacher training institute in Pahang in 1927, Ibrahim was admitted to the famous Sultan Idris Training College (SITC) in Tanjung Malim, Perak, where he graduated in 1931. It was at the SITC that Ibrahim became more informed of history and politics and began to get involved in writing, journalism, and political activities. Like many other Malay students at the college in the

1920s and 1930s, his sociopolitical awareness was nurtured by nationalist-minded lecturers such as Abdul Hadi Hassan, Zainal Abidin Ahmad (Za'ba) (1895–1973), and Harun Muhammad Amin and from reading materials, especially those from Indonesia and Singapore. Ibrahim served as a teacher in a Malay school in Bentong, Pahang, from 1932 to 1935 and later, from 1936 to 1937, at the Police Cadets Training Center in Kuala Lumpur before becoming a journalist, writer, and political activist. He became assistant editor and member of the managerial board of the periodical *Majlis* (1937–1938) and in 1938 and 1939 served as chief editor and general manager.

While heading *Majlis*, Ibrahim formed the KMM with a number of colleagues—especially former fellow students at SITC such as Hassan Manan, Abdul Karim Rashid, and Muhammad Isa Mahmud—and had it registered in 1938. Ibrahim is representative of the nationalist-minded journalists and writers of his time, such as Abdul Rahim Kajai (1894–1943), Harun Aminurrashid (1907–1986), Ishak Haji Muhammad (1909–1911), and Yusuf Ishak, who made use of their writing skills to instill sociopolitical consciousness among the Malays. With the money received from the Japanese consul in Singapore in 1941, Ibrahim—who had been secretly recruited into the Japanese espionage apparatus, Kame (the code name for KMM)—bought the daily *Warta Malaya* and utilized it as a propaganda tool against the British. When the British colonial government discovered this ploy, Ibrahim and over 100 other members of the KMM were detained; Ibrahim was placed at the Outram Road prison in Singapore.

Freed on the eve of the British surrender in February 1942, Ibrahim was made commandant, with the rank of lieutenant colonel, of the Japanese-sponsored Malayan Army, the *Malai Giyu Gun* or *Pembela Tanah Air* (PETA), literally meaning “Defenders of the Motherland.” Together with Dr. Burhanuddin al-Helmy (1911–1969) and a number of other Malay political activists, Ibrahim was instrumental in the formation of the *Kesatuan Rakyat Indonesia Semenanjung* (KRIS, the Union of Peninsula Indonesians) in July 1945. Through KRIS, Ibrahim and his colleagues hoped to achieve political independence together with Indonesia in accordance with the concept of *Melayu Raya*

(Pan-Malay) or *Indonesia Raya* (Pan-Indonesia). Both concepts envisaged the unity of the Malay Archipelago, which encompassed present-day southern Thailand, Malaysia, Indonesia, and the southern Philippines (Sulu Archipelago and Mindanao). The rather sudden Japanese surrender (15 August 1945) and the hasty declaration of independence (17 August 1945) for Indonesia without Malaya by Sukarno (1901–1970) and Mohammad Hatta (1902–1980) disrupted KRIS’s planning, and as a result, Ibrahim did not attend the reduced KRIS meeting on 16–17 August in Kuala Lumpur.

On 19 August 1945, after boarding a Japanese plane in Singapore, Ibrahim; his wife, Onan Siraj; and Hassan Manan flew to Jakarta to consult the Indonesian leaders on the question of independence for Malaya. While continuing to liaise with his colleagues in Malaya, Ibrahim participated in the war against the Dutch in Indonesia. According to some sources, as a result of the British political suppression in Malaya following the declaration of the Emergency in 1948, the Central Committee of the *Partai Kebangsaan Melayu Muda* (PKMM, National Party of Malay Youth) in Malaya handed Ibrahim the “full mandate” of the party. The mandate was prepared by Taha Kalu and Abdullah Zawawi and signed by Dr. Burhanuddin on 1 May 1950. It empowered Ibrahim to lead and chart the future struggle of the PKMM against British colonialism.

After receiving the PKMM mandate through an intermediary, Ibrahim announced the formation of the *Kesatuan Malaya Merdeka* (also KMM) or Union of Independent Malaya on 27 June 1950 to enhance the anticolonial struggle in Malaya. In Indonesia, Ibrahim used a new name—Iskandar Kamel—and participated fully as a member of the *Perserikatan Nasional Indonesia* (PNI, Indonesian National Party). He later joined Partindo and was appointed as the representative for Riau in the *Madjelis Permusyawaratan Rakjat Sementara* (MPRS, Provisional Peoples’ Deliberative Council). At the same time, he engaged in business and successfully set up the *Bank Industri Nasional* (National Industrial Bank) and later the *Bank Pertiwi*.

Ibrahim was not only a practicing nationalist but also an ideologue and a recorder of his times. He wrote a number of books: *Melihat Tanah Air* (See the Motherland), *Nusa dan*

Bangsa Melayu (Malay Race and Nation), *Sejarah Perjuangan di Malaya* (The History of the Struggle in Malaya), and *Sekitar Malaya Merdeka* (Of Independent Malaya). Ibrahim's political experiences, observations, and ideas can be traced from these writings. In recognition of his contributions to the Indonesian struggle for independence, Ibrahim, who passed away on 8 March 1979, was buried at the Kalibata warriors' mausoleum in Jakarta.

I-CHING (I-TSING) (635–713 C.E.)

Buddhist Pilgrim–cum–Travel Writer

I-Ching was a Chinese Buddhist pilgrim and was the first to take a sea route to India via Southeast Asia. He learned both the Confucian classics and the Buddhist canon as a child. After

developing a sense of mission in Buddhism, he became dissatisfied with the Chinese Buddhist texts, which were full of obscure meanings, and was eager to search the original texts. This served as a strong motivating force behind his pilgrimage to India in 671. The twenty-year odyssey was originally designed for a group of about thirty, but it turned out to be a lonely one for I-Ching, as he was deserted by all his companions when the Persian ship set out at Guangzhou (Canton).

I-Ching chose a sea route to circumvent the growing Arabian strength in Central Asia, which made a land route to India insurmountable. His travel to India turned out to be historically important. He brought from India to China 400 volumes of Buddhist manuscripts. The translations done by I-Ching provided the Chinese Buddhists with more authentic texts, which later gained currency in China. Southeast Asia, especially Srivijaya, played a special role in the success of I-Ching's pilgrimage. He was indebted to the ruler of Srivijaya, who provided much-needed assistance to his travels to India. On his return trip, he stayed for ten years at Palembang, the capital of Srivijaya and a center for Buddhist study, making use of the expertise of the numerous Buddhist monks there for translating the Buddhist texts into Chinese. He also completed here two books about his travels, in which the existence of the kingdom of Srivijaya was first revealed. His writings are invaluable source materials on early Southeast Asian history.

IENG SARY (1927–)

Khmer Rouge Survivor

Ieng Sary, a Cambodian Communist leader, was born in what is now southern Vietnam but moved to Phnom Penh in 1945 for schooling. He was an excellent student and received a scholarship to study in France in 1951. He soon neglected his studies, joined the French Com-

munist Party, and became active in anticolonial student circles. After Cambodia gained its independence from France in 1955, Sary returned home, became a schoolteacher, and joined his brother-in-law, Saloth Sar (Pol Pot) (1925–1998), to work for the clandestine Communist Party of Kampuchea (CPK). Three years later, fearing arrest, Sary fled with several high-ranking colleagues to a Vietnamese Communist encampment on the Cambodia-Vietnam border. In 1965, the group moved their headquarters to the northeast, where for five years they hammered out the utopian policies they hoped to enact when they came to power.

Following the anti-Sihanouk coup in 1970, the Khmer Rouge allied themselves with the ousted Prince Norodom Sihanouk (1922–) and the Vietnamese. During these years, Sary worked in Hanoi and Beijing as a spokesman for the Khmer Rouge. When the Khmer Rouge came to power in 1975, Sary returned to Phnom Penh and became minister of foreign affairs for Democratic Kampuchea (DK). He used his office to seek overseas allies for the Khmer Rouge and presided over purges of local intellectuals and of Cambodians returning from overseas to help the revolution.

When DK collapsed in 1979 following an invasion from Vietnam, Sary fled with Pol Pot and thousands of others to the Thai-Cambodian border, where he remained in the Khmer Rouge hierarchy as the organization launched a war against the new, Vietnamese-backed regime in Phnom Penh. Offered amnesty by the Phnom Penh authorities in 1996, Sary defected to the government, with hundreds of followers. Never brought to trial for atrocities in the DK period, Sary settled in a former Khmer Rouge area in Cambodia's northwest.

ILANUN AND BALANGINGI

For nearly two centuries, the Sulu-Mindanao region was synonymous with piracy in the Malayo-Indonesian archipelago. And for over eighty years, from roughly 1762 through 1848, Southeast Asia felt the full force of slave raiders from the Sulu-Mindanao region. During this period, two ethnic groups emerged, specializing in organized maritime raiding on a scale never before witnessed in the region: the Iranun or Ilanun (Lanun) and the Balangingi Sama.

Between them, these two groups were responsible for capturing and transporting to the Sulu sultanate several thousand slaves annually, seized in raids carried out over virtually the whole of maritime Southeast Asia, from the Bay of Bengal to the Timor and Arafura Seas. Captive slaves were put to work mainly in the Sulu Archipelago, chiefly by Tausug *datus* (non-royal chiefs), who acted as the principal patrons of Ilanun and Balangingi slave raiders. Great numbers of them were also absorbed by assimilation into the Balangingi and Ilanun communities themselves or were traded to Makassar or other Southeast Asian slave markets.

Raiding during this time was carried out by both groups in well-organized fleets composed of large, fast-moving vessels, some of them rowed by as many as 100 slaves and all heavily armed. Fleets annually circumnavigated Borneo and crossed the South China Sea to the Straits of Melaka, Riau, and the Bay of Bengal, where they seized Malay fishermen, attacked shipping, and plundered coastal villages. In the south, fleets sailed through the Makassar Strait and then fanned out over much of eastern Indonesia. Some crossed the Banda Sea to New Guinea; others raided the Moluccas or coastal Java. Their most devastating attacks, however, were directed against Christian, Hispanized settlements in the Philippines. There, Ilanun and Balangingi fleets preyed annually upon the poorly defended lowland villages and towns of southern Luzon and the Visayan Islands. They sometimes sailed upriver to attack and burn

churches and inland settlements, taking hundreds of captives and, in some areas, causing massive demographic decline, abandonment of farmland, and a collapse of coastal trade.

Balangingi

The Balangingi, or Balangingi Sama, belong to the Bajau/Sama ethnolinguistic group. Today, they are primarily in the Tongkil island group in the northernmost Samales island cluster of the Sulu Archipelago; on the islands and coastal areas immediately to the north, bordering Basilan Island; and along the southern Zamboanga Peninsula of Mindanao. In addition, small communities are found in the Sulu-Sulawesi region, testimony to their former dispersal as specialized slave raiders. For example, a small Balangingi settlement is present at Telisai, in the Lahad Datu District of Sabah (Malaysia). Early in the nineteenth century, these scattered settlements served Balangingi fleets as staging points and strategic havens along routes of long-distance voyaging.

By the beginning of the nineteenth century, Balangingi slave raiding had become a major feature of the maritime economy of the Sulu sultanate. Balangingi raiders were active each year mainly from May to November, typically returning to their home settlements during the northwest monsoon (January to March). There, many resumed the more conventional Sama occupations of fishing and salt making. For defensive and strategic reasons, raiding fleets operated chiefly from bases located in mangrove-lined bays or reef-fringed islands, where boats could be easily hidden and settlements defended from attack by sea. Balangingi raiding proved extremely difficult to suppress. Expeditions were sent against them, but they met with only limited success due to their mobility and the vast areas over which they operated. The situation changed only with the introduction of steam-powered vessels and, by the mid-nineteenth century, increased cooperation among the colonial powers of the region. In 1845, the British navy attacked Ilanun and Bajau bases in Marudu Bay in northeastern Sabah, and in 1848, a Spanish force using steam-powered gunboats laid waste to Balangingi Island, systematically destroying all villages, crops, and orchards and forcing the inhabitants to flee to neighboring islands. But

even in the diaspora, the Balangingi continued raiding. In the following year, a Spanish naval force returned to attack Bukutua and other settlements in the Tongkil island group, and in 1851, a major force attacked and sacked Jolo town, then the seat of the Sulu sultanate. Two decades later, the Spanish established a military garrison in Jolo and began a naval blockade of the Sulu Archipelago, interdicting and destroying all native shipping. With this, Balangingi raiding came to an end.

Ilanun

The Ilanun, also known as the Iranun, Iranon, Illanun, or Lanun, were, at the height of this period (1760s–1840s), the most feared and redoubtable of all Sulu-Mindanao slave raiders. The period from the end of the eighteenth century through the first decades of the nineteenth came to be known in Southeast Asian waters as the “age of the Ilanun,” thanks, in part, to the regularity of their movements and the enormous range over which they operated. Ilanun slave raiding took them to the coasts of Thailand and Vietnam and to New Guinea. So regular was the annual appearance of Ilanun fleets in the Straits of Melaka that colonial authorities in Singapore and other Straits Settlements referred to the months of August, September, and October as the *musim lanun* (pirate season).

Expanding from their ancestral home south of Lake Lanao in southern Mindanao, the Ilanun appear to have been the first to take advantage of the growing commercial and political power of the Sulu sultanate to become large-scale slave raiders. To conduct their operations, they established a scattered network of satellite communities all across the region. The Ilanun are one of three major Muslim ethnic groups in southern Mindanao. The largest of these, the Magindanao or Maguindanao (the people of the floodplain), are the most populous Muslim ethnic group in the Philippines. Settled immediately to the north are the Maranao (the people of the lake), who occupy the region around Lake Lanao. The Ilanun live to the southwest of the lake, in and around Balabagan, and along the rivers and coastline of Illana Bay. All three groups are closely related linguistically and culturally. In the early 1970s, the Ilanun numbered an estimated 65,000 in the southern Philippines.

The Ilanun subsisted in the past chiefly by cultivating wet rice and maize. In addition, because of the strategic location of Ilanun villages along the shores bordering Illana Bay, their home area also acted as a regional conduit for trade goods flowing from Sulu and the Malayo-Indonesian world. Initially, the Ilanun allied themselves with the Magindanao sultanate of Cotobato, but with the rise of Sulu, they were increasingly drawn into the latter's political orbit, becoming, by the second half of the eighteenth century, major participants in its wider trading economy. As the more maritime Sulu sultanate eclipsed its Magindanao rival, the Ilanun emerged as a major slave-raiding force, becoming, by the 1770s, a significant factor contributing to Sulu's subsequent commercial and political ascendancy.

Visitors to southern Mindanao in the 1840s described the Ilanun as specialized slave raiders, for whom piracy was considered a community calling. Not a unified political unit but fragmented into a multitude of power centers, each revolving around individual leaders, the population went about heavily armed and lived in settlements surrounded by barricades. The economy was based on the large-scale procurement of slaves, whose labor provided subsistence to the rest of the population. Slave raiding was carried out in fleets, comprised, during the early decades of nineteenth century, of large double-decked vessels up to 30 meters (100 feet) long, rowed by slaves, and heavily armed with cast bronze swivel-cannons. Besides supplying slaves to their Sulu patrons, the Ilanun, like the Balangingi, assimilated slaves, continually replenishing their numbers with fresh captives.

During the latter half of the eighteenth century, Sulu gradually extended its control over southern Palawan, Balabac, and the northern and eastern coasts of Borneo, bringing itself into direct conflict with the Brunei sultanate. The Ilanun figured significantly in the ensuing struggle. Encouraged by Sulu, Ilanun settlements were established at Pandasan and Tempasuk on the western coast of Sabah and in Marudu Bay on the northeast coast. Marudu Bay, in particular, served as a major staging point for slave-raiding operations. By the 1820s, the presence of Bajau and Ilanun settlements in coastal Sabah effectively eliminated Brunei's political and commercial hold over the region. At the same time, Ilanun slave-raiding

activities, sponsored by Sulu, dealt a crippling blow to Brunei's maritime commerce, disrupting its traditional sea routes and severing its connections with the vital Chinese junk trade. For a short period, these Sabah settlements, particularly those of the Tempasuk Bajau, became strong enough to ignore Sulu's hegemony, but in the 1830s, Sulu reasserted its influence by recognizing the powerful chief, Syarif Usman, as its regional governor in Marudu.

In the 1840s, James Brooke (1803–1868) sought to consolidate his then still-uncertain position in Sarawak by actively seeking British involvement in the Borneo region. His principal method was to campaign for the destruction of "pirate" strongholds on the island. His efforts ultimately resulted in 1845 in the destruction of Syarif Usman's Marudu base. Many of its inhabitants dispersed to Labuk, Sugut, and Tunku on the eastern coast. Apart from this dispersal, Bajau and Ilanun settlements in coastal Sabah otherwise remained intact, although their former maritime activities were severely curtailed. Thus, the Ilanun in Sabah lost their maritime orientation and became increasingly agrarian, known especially for their artisan skills, particularly in weaving and ironwork. In 1991, the Ilanun numbered 9,781 in Sabah, most of them living in the Tempasuk district.

ILUSTRADOS

The “Enlightened Ones”

The term *ilustrado* derives from the Spanish *La Ilustración*, meaning “the Enlightenment,” and initially referred to those members of the intelligentsia in the colonial Philippines who had received a liberal education and were possessed of some degree of wealth. These “enlightened ones” were mainly the sons of a newly emergent middle class composed of large tenant farmers (*inquilinos*) as well as small commercial and professional sectors who rose to prominence during the second half of the nineteenth century with the opening of the Philippine economy to world trade. Most were college students or expatriates who studied and traveled in Europe, either in Spain, France, and England or later in Germany and Switzerland. Though never comprising more than a tiny percentage of the population, they exercised an influence that was out of all proportion to their numbers, and their varied dialect, ethnic, and regional affiliations made of them the first truly national social class in Philippine history.

Exposed to the ideas of nineteenth-century liberalism while overseas, many *ilustrados* took the lead in advocating reform and subsequently independence back at home. Often divided over issues and never belonging to a single organization, they nonetheless shared a common program of assimilation based on the extension of metropolitan laws and rights to the Philip-

pinos by which all Filipinos would be recognized as Spanish citizens and treated accordingly as equals. Much of their rhetoric, however, was characterized by anticlericalism, finding fault in the Catholic practices of their day that they regarded as both childish and incompatible with modern ideas. The friar orders were a particular object of their scorn, blamed for both the uneducated state of the people and the economic backwardness of the country. Many *ilustrados* remained in Spain, principally in Madrid and Barcelona, where they engaged in nationalist activities, founded associations, dabbled in masonry, and quarreled bitterly with each other between 1880 and 1895. Principal figures among this community were the lawyer and journalist Marcelo H. del Pilar (1850–1896), the journalist and orator Graciano López-Jaena (1856–1896), and the historian Mariano Ponce (1863–1917). Newspapers constituted the movement’s main medium of expression. Most, with the notable exception of the biweekly newspaper *La Solidaridad* (first printed in Barcelona in 1889), were short-lived affairs, and all suffered from a lack of financing despite the establishment of the Comité de Propaganda in Manila to raise funds in support of these activities. Just as influential as these journalist ventures were the works of José Rizal (1861–1896), physician, linguist, poet, writer, and statesman. His two novels exposing the corruption of colonial officialdom and the avarice of the clergy, *Noli Me Tangere* and *El Filibusterismo* (published in 1887 and 1891, respectively), proved particularly instrumental in preparing outlooks and minds for the Philippine Revolution that broke out in 1896. Together, this corpus of journalistic and literary endeavor convinced many that further attempts at reforming the Spanish colonial administration were futile.

More controversial is the role of *ilustrados* in the Philippine Revolution (1896–1898) and the subsequent Philippine-American War (1899–1902). Members of this class provided much of the revolutionary leadership during these turbulent years. In particular, they have been reviled by subsequent nationalist historians for the alacrity with which they transferred their allegiance from the Spanish government to the revolutionary regime to the new U.S. administration, all within a few years. Even the first president of the republic, Emilio Aguinaldo

(1869–1964), has not escaped this censure. Already a privileged and property-owning class, ilustrados benefited greatly from the policies of assimilation and accommodation practiced under American rule and were quickly granted important posts in the new colonial bureaucracy. Moreover, the electoral system introduced in 1907 fostered a form of national political leadership based on loose alliances of contending provincial factions that was rapidly subordinated to the interests of ilustrado families. Parties provided no more than vehicles for political activity, and a single party, the Nacionalistas, under the strong leadership of Sergio Osmeña (1878–1961) and Manuel Quezon (1878–1944), dominated the national scene until the outbreak of the Pacific War (1941–1945). Despite the emergence of an ostensible two-party system after independence from the United States in 1946, Filipino politics was noted for its lack of ideological differentiation. Party membership was largely recruited from the same ilustrado families, and the winning administration merely represented the current political “ins” versus the current “outs.” These families became so entrenched in high political office that they exercised an inordinate influence over the Filipino political system, a status they continued to enjoy largely undisputed until the election of Ferdinand Marcos (1917–1989) in 1965. Their influence has even experienced something of a comeback following the People Power Revolution and the restoration of democratic forms of government in 1986. In this sense, the term *ilustrado* has now become largely synonymous with *national elite*, though its colloquial use in this respect is rare.

“IMAGINED COMMUNITIES”

One of the most influential postwar studies of the origins and spread of nationalism is Benedict Anderson’s *Imagined Communities* (1991), which emerged significantly from reflections on the process of national identity formation in Southeast Asia, especially from his detailed examination of the relations between politics and culture in Indonesia. Anderson’s work, though primarily in political science, owes much to “an anthropological spirit” and relates directly to studies by anthropologists of ethnicity and identity (Bowen 2000). He examined the cultural roots of nationalism and the values associated with nationhood, demonstrating how a “sense of fraternity” and of belonging to a nation is invented or constructed and then sustained through time (Anderson 1991: 6–7).

His study is particularly important for regions such as Southeast Asia, where the colonial powers in competition with one another carved out and demarcated their dependent territories arbitrarily; political units therefore cut across shared ethnicity and culture and often encompassed considerable ethnic diversity.

Anderson's concept helps us to understand how national identity has been thought about, represented, and given meaning with the granting of independence. For him, the key factors and processes in the emergence of nationhood as an idea comprised the development of printing and publishing ("print capitalism") and the associated creation, privileging, and standardization of particular "national" print languages, as well as the creation of administrative units and their unification through markets in the context of the expansion of Europe overseas, and the development of industrial capitalism, a bourgeois class, and rational bureaucracies. Furthermore, he highlighted the importance in colonial territories of such boundary-drawing and identity-creating agents as the "census, map and museum" (Anderson 1991: 163–185).

With few exceptions, the leaders of newly independent states maintained the political units and boundaries bequeathed them by the departing colonial powers and then set about creating national identities by promoting national languages, religions, histories, and institutions. Indonesia, with its national ideology of "unity in diversity" and its promotion of Indonesian as the national language, provides a good example of this process (Hitchcock and King 1997).

IMPERIALISM

The word *imperialism* is a political coinage and has passed through several phases in which its meaning has shifted. Initially, it did not apply

to the non-European world in the way it characteristically would. It was used to describe the ambitions of Emperor Napoleon III (1808–1873), which, though they came to involve Indochina and Mexico, focused, like those of Napoleon I (1769–1821), on Europe. Only after Napoleon's regime had been destroyed by what in 1871 became the German Empire was the term invoked to describe the extension of territorial control in Asia and Africa in which the European states engaged themselves. "It is only in quite late times within my own memory," Edward Freeman wrote in 1885, "that the word 'empire' has come into common use as a set term for something beyond the kingdom" (quoted in Koebner 1961: 295).

Some proudly accepted the description "imperialist"; but increasingly, the term *imperialism* was being defined by its critics. J. A. Hobson's *Imperialism: A Study*, which first appeared at the conclusion of the Anglo-Boer war (1880–1881, 1899–1902), had a political purpose: "to alert the British public to the new plutocratic phenomenon that was hijacking British foreign policy" (Hobson 1988, introduction: 39). His view was conspiratorial. Big moneylenders and speculators were "the prime determinants of imperial policy." Finance was not the "motor-power" of imperialism, but it was "the governor of the imperial engine. . . . Finance manipulates the patriotic forces which politicians, soldiers, philanthropists, and traders generate" (Hobson 1988: 55, 59).

Lenin (1870–1924) acknowledged Hobson and incorporated some of his ideas into Marxism, the founder of which had not used the word *imperialism*. "Of course, finance capital finds most 'convenient,' and derives the greatest profit from, a *form* of subjection which involves the loss of the political independence of the subjected countries" (Lenin 1962, 22: 259). Hobson, however, had envisaged a reform of capitalism: he attributed its evils to underconsumption. Lenin did not think it could be reformed—it had to be overthrown. "The capitalist delays the day of doom by re-allocating his resources on a world scale" (Hodgart 1977: 42).

The Great War (1914–1918) offered an opportunity, Lenin believed, to bring both imperialism and capitalism itself to an end. His April 1916 thesis, "The Socialist Revolution and the Right of Nations to Self-Determination," en-

visaged an alliance between workers in the metropolitan countries and bourgeois-democratic nationalists in colonial and semicolonial countries, such as China, Persia, and Turkey. The Bolshevik seizure of power in 1917 was followed by an attempt to carry out the policy. In making his contribution, the Dutch social democrat H. Sneevliet drew on his experience in Netherlands India.

Nowhere did the policy succeed, and Stalin (1879–1953), Lenin's successor, reverted to a policy of "socialism in one country." It had, however, achieved a measure of identification with the cause of those who wished to overthrow the unequal treaties in China and colonial rule in Southeast Asia. Their struggles gave the word *imperialism* new meanings. For Sukarno in 1930, for example, it was "a concept, an idea, a lust, a program, a system, a policy of subjugating or controlling the country of another people or the economy of another nation" (Paget 1975: 137). After the Pacific War (1941–1945), the nationalists generally secured the political independence they sought. The limitations on it tended to be ascribed to "neoimperialism" or "Soviet imperialism."

A term with so many political overtones seemed to Sir Keith Hancock "no word for scholars" (1940, 2: 1–2). It was, no doubt, a proper subject for historical study. Could it also provide useful means of studying history and offer useful concepts or analyses? The chance of effectively attempting the former and still more securing the latter depends on establishing a working definition. Probably the most useful is that offered by Maarten Kuitenbrouwer: "the effort to establish formal or informal political control over another society." He also suggested that "modern imperialism should be reserved above all for the period between 1870 and 1914" (Kuitenbrouwer 1991: 3–4).

In that phase (1870–1914), most of Southeast Asia came under the control of Western powers. A study of the process does not, however, support the assertions of Hobson or Lenin. One factor is the challenge that the recrudescence of international rivalry presented to the status quo associated with the primacy Britain had secured in the pre-1870 period. State-builders engaged in what Lord Rosebery called "pegging out claims for the future" (quoted in Bennett 1962: 310). Often, they were ahead of the capitalists, whose endeavors

they had to foster in order to secure the revenue needed to support their acquisitions.

IMPHAL-KOHIMA, BATTLE OF (1944)

The Beginning of the End

No single engagement could equal that of the Battle of Imphal-Kohima, which raged for five months from March through July 1944. It marked the furthest western advance of Imperial Japanese forces during the Pacific War

(1941–1945), and the eventual defeat of the Japanese at Imphal marked the beginning of the decline in Japanese military power in Southeast Asia, presaging the eventual victory by Allied forces the following year. Imphal is the capital city of Manipur, the most eastern province of British India bordering Burma (Myanmar). Imphal was set in rugged mountains, and the terrain very much favored the defenders in battle. Kohima is a village on the road from Imphal to Dimapur, providing the best route westward into India from Burma at this point. When the Japanese failed to take Imphal, the fighting concentrated around Kohima in a Japanese attempt to cut off the British lines of communication.

The fighting, which was marked by artillery exchanges as well as hand-to-hand combat, was very intense and very costly in terms of human lives. The British side, which included British, Indian, and Ghurkha forces, suffered nearly 28,000 casualties (Allen 1984: 637–641), of which the majority were suffered at Imphal and Kohima and the remainder in the last stages of the battle as the British pursued the Japanese through the Burmese division of Rakhine. The Japanese side suffered 66,000 wounded and killed, nearly 55,000 at Kohima alone (Allen 1984: 637–641). The battle was distinguished also for the inclusion on the Japanese side of troops from the Indian National Army (INA) led by Subhas Chandra Bose (1897–1945). Composed of forces from the Indian diaspora in Southeast Asia, they were fighting to free India from British rule.

INDIA

India dominates the great peninsula that extends to the south of the Asian continent, known as South Asia. The vast body of water

that washes the shores of the subcontinent, the Indian Ocean, forms the connecting link between the Atlantic and Pacific Oceans and was India’s principal means of contact with Southeast Asia. Southeast Asia’s focal position between India and China determined its relationships with these two great centers. These relationships differed principally because of geography. In the case of India, the formidable mountain barrier meant that there was no direct overland link between it and Southeast Asia. The sea therefore provided the means for the spread of Indian culture through trading contacts, resulting in the great Indian acculturation of Southeast Asia.

This acculturation cannot be attributed solely to traders. Brahmans, the priestly class who monopolized knowledge of the sacred lore, the rites and rituals, and customs and laws, are perceived as the principal agents of the Indianization process. Southeast Asia’s ruling elites invited the Brahmans to serve at their courts as priests, advisers, and astrologers. The Brahmans introduced Indian court customs, ensured the divine nature of monarchy through a variety of ritual sacrifices and ceremonies, and enhanced the prestige and power of Southeast Asian rulers. The process of Indianization also included the alphabetical basis (with the exception of Vietnam) of the Southeast Asian scripts, the importance of Sanskrit in the vocabulary, and the introduction of the great Indian epics the *Râmâyana* and *Mahâbhârata* (*Mahâbhâratha*). Other elements included the Code of Manu, philosophy, astrology, medicine, mathematics, and the arts. The religious lore—Brahmanic, Buddhist, and a combination of both—was also introduced.

Since Indian cultural diffusion followed the sea routes, the earliest of the Indianized states that emerged in Southeast Asia were all situated along the coast in the Southeast Asian region. These states, which were based at river mouths for ease of both control and travel, provided routes into the interior. Examples of these early Indianized port states were Funan and Champa on the Indochina coast; the Mon kingdoms of Lower Burma and Thailand; Langkasuka in peninsular Thailand; and several states in western Indonesia, the most important of which was Palembang, the precursor of the extensive trading empire of Śrīvijaya. In due course, these port states were eclipsed by other larger and more highly organized states that were centered

on major interior river basins and corresponded with the major rivers of Southeast Asia. There were three principal trade zones: the western Indian Ocean, the eastern Indian Ocean, and the South China Sea. Indians played key roles in all three.

The arrival of the Europeans in the sixteenth century and the policies of the (Dutch) United East India Company (VOC) and the English East India Company (EIC) in the seventeenth and eighteenth centuries resulted in new trading relationships in the area. The EIC, from its major trading ports in India, stimulated the Bay of Bengal trade generally and trade with the Malay Peninsula in particular. Gujaratis, Muslims, and Chulias from India intensified their trading links with port states in Southeast Asia.

In the late nineteenth century, India became a major supplier of migrant labor to the Southeast Asian region, principally to Malaya, the Straits Settlements, British North Borneo, and Burma. Indian migration was regulated and assisted by the Indian colonial government and the colonial governments of the receiving countries. But not all Indian migrants were poor, impoverished laborers. In Malaya, North Indians were recruited to serve in the police force and a paramilitary force known as the Malay States Guides. A significant minority possessed considerable economic standing and migrated to Southeast Asia to exploit the commercial or employment opportunities available to them there. These included traders, artisans, moneylenders, and government employees. The traders and merchants in particular reinforced the commercial and financial networks that linked Southeast Asia to India.

In the post-Pacific War (1941–1945) era, following the Geneva Agreements (1954) on the partition of Vietnam, two main security alternatives emerged for Southeast Asia. The first, advocated by the United States, was the so-called domino theory, according to which if Vietnam came under communist rule, it would not be long before the other Southeast Asian states fell like dominoes to communist domination. India under Prime Minister Jawaharlal Nehru (1889–1964) advocated neutralization of the region and urged the United States to keep out of Southeast Asia. Nehru also secured promises from China and North Vietnam to not interfere in neighboring countries. Consequently, most

of the independent states of Southeast Asia spurned the U.S. alternative of enhanced security through military alliances. This policy culminated in the formation of the Association of Southeast Asian Nations (ASEAN) in 1967 as the first successful experiment in regional political cooperation. Nevertheless, despite ASEAN's policy of maintaining a "Zone of Peace, Freedom and Neutrality" (ZOPFAN), its members continue to depend on external security guarantees.

INDIAN IMMIGRANTS (NINETEENTH AND TWENTIETH CENTURIES)

Indian immigration to Southeast Asia in the nineteenth and twentieth centuries differed from earlier migrations of merchants who had traded with the region, selling textiles in exchange for Southeast Asian produce. The migrants who arrived during the colonial period (ca. 1800–ca. 1960s) were mainly laborers, businesspeople, and financiers. Moreover, they went almost entirely to British Malaya and British Burma, places that had imperial connections with British India. These migrants were also divided on the basis of ethnicity, occupation, and economic role. There were three main groups, each of which was associated with specific economic roles. The first group—laborers—comprised mainly Tamils and Telegus who worked as plantation workers in Malaya, laborers on the Burmese rice fields, and on public works in both countries. The second group—moneylenders—was made up of the Chettiers from South India who financed the rice farmers in Burma and the rubber smallholders in Malaya. The third group—civil servants—consisted of North Indians who served in the police force and mainly Malayalees and Jaffna Tamils who were employed as clerks and civil servants. The main characteristics of the Indian diaspora in Southeast Asia were that the migrants were considered sojourners, they formed minority communities that exemplified some of the problems of plural societies, and they retained a strong attachment to India.

Indian Laborers in Malaya

The spread of plantation agriculture in Malaya was a major consequence of economic penetration accompanying the integration of economies, diversification of economic activity, changing production technologies, and the emergence of new markets for tropical products in the industrializing West. The most important crops were rubber, coffee, oil palm, and sugarcane. Labor shortages in the country meant that

planters had to rely on migrant workers to carry out the myriad tasks associated with export production. The plantation wage labor force comprised migrants principally from India.

European planters preferred South Indian labor for a variety of reasons. South Indians (Tamils and Telegus) were cheaper than Chinese labor, and they could be recruited easily because India was under the same imperial government. South India's proximity to Malaya was an additional consideration. South Indians were also preferred because they were considered docile and fitted well into the dependent relationship between management and employee. However, the South Indians lacked funds to migrate spontaneously, and there were more attractive opportunities for them in other British colonies that offered higher wages, better living conditions, and a greater chance of landing as free men. Consequently, from the start, the recruitment of Indian labor, in contrast to Chinese labor, was both regulated and sponsored by the colonial administration. In 1884, the Indian Immigration Ordinance was passed in the Straits Settlements to replace previous legislation, and in 1887, the governments of the Straits Settlements and several Malay States agreed to provide a steamship subsidy for the transportation of Indian labor migrants to Malaya. Additionally, a centralized body, known as the Indian Immigration Committee, was set up to facilitate and supervise the importation of South Indian labor. Its activities were strengthened in 1908 when the Tamil Immigration Fund, to which employers were required to contribute according to the number of workers employed, was established to provide free passages to Malaya for laborers. Basically, there were two main mechanisms for recruiting labor: the indenture and *kangani* (overseer) systems.

Indentured Labor Recruitment

The majority of migrants were impoverished and in no position to meet the cost of their passage. An employer wishing to recruit immigrants thus had to engage the services of one of the labor recruitment firms in Negapatnam or Madras (Chennai) in India or send agents to South India to recruit laborers directly. These agents advanced money to persons wanting to immigrate to Malaya. The advance was conditional on the prospective migrant entering into

a contract with the employer. The contract was usually a written one, but verbal agreements were also common. Breaches of written contracts were regarded as criminal, not civil, offenses. Workers were under indenture to a single employer for a fixed period, varying from one to three years. They could not change either employer or place of employment. Wages were fixed at the time of recruitment and were not negotiable. The employer was responsible for all recruitment charges, notably the expenses involved in the transportation of workers, and workers' wages were calculated after deducting this initial outlay. When their period of indenture was completed, workers could be reindentured for a further period or released from indenture, provided they had paid off the expenses incurred in their recruitment. Since the workers were paid very low wages, few were able to repay the advances received and were therefore reindentured. In the second half of the nineteenth century, several thousand Indian laborers migrated to Malaya under indenture, and this mechanism of recruiting workers remained in force in the Malay States and the Straits Settlements until 1910. Between 1845 and 1910, about 250,000 indentured laborers went to Malaya.

Kangani System

The *kangani* system was essentially a system of personal recruitment, and it became popular when the coffee and, later, rubber planters hired labor through this channel. The system rapidly took over as the main supplier of labor and came under the control of the Indian Immigration Committee in 1907. The word *kangani* means "overseer" or "foreman" in Tamil, and under this system, the *kangani*, usually a laborer already employed on the plantation, was sent by his employer to recruit workers from his home village in India. He was paid a commission on each laborer recruited. On his return to Malaya, he usually acted as plantation foreman for the laborers he had recruited. Compared with the indenture system, the contractual position of the laborers under the *kangani* system was less harsh. Desertion was regarded as a civil, not a criminal, offense. The contract was also more often verbal rather than written, and the worker had the right to abandon his contract at a month's notice. This sys-

tem was preferred because of the lower cost involved in sending a *kangani* to recruit labor compared with the cost of indentured labor obtained through recruiting agencies. Moreover, the monopoly of Indian recruiting firms, which were believed to be responsible for restricting labor supply, was broken. The *kangani* system also appealed to the planters because the prospect of workers absconding was less likely compared with the indenture system, especially since the *kangani* usually had a vested interest in ensuring that they did not.

In the 1910s, between 50,000 and 80,000 Indians went to the Malay States and Straits Settlements annually. After the 1920s, with the exception of a very short period, *kangani*-assisted immigration declined. In the early 1930s, under the impact of the Great Depression, *kangani* recruitment was suspended, and it was formally abolished in 1938.

Additionally, there was direct recruitment of free labor from India, whereby free laborers who volunteered themselves for employment at Malayan depots in India were assisted in migrating to Malaya. The system was cheaper than the *kangani* system because no payments or inducements had to be paid to the *kangani*. But it also meant that the hold of the *kangani* over the worker was diminished.

The labor recruitment mechanisms discussed here were also used to hire workers for service in the public services department (railways, roads), in city municipalities (construction), and at the ports (stevedores).

Indian Agricultural Labor in Burma

In Burma, the principal mechanism for recruiting Indian labor was through an intermediary known as the *maistry*. This system was similar to the *kangani* system. The *maistry* was an established laborer who recruited labor gangs in India, organized their passage to Burma, and then acted as their overseer in Burma, whether on the rice fields, on the wharves, or on public works construction. The *maistry* also exercised strong control over the Indian workers.

Chettiars

The Chettiars were a South Indian money-lending caste that played a decisive role in the expansion of Lower Burma's rice industry in

the late nineteenth century. Each Chettiar business concern, sustained by caste and kinship ties, was part of a network with connections across the Southeast Asian region and India. Like the Chinese financial and commercial intermediaries, the Chettiars linked the rural Southeast Asian communities to the expanding Western economy.

The Burmese rice industry serves as an important example to highlight the role of Chettiar capital in export expansion in Southeast Asia. From around 1880, Chettiar moneylenders made mortgage loans to Burmese cultivators needing capital for land clearance and plow animals and to pay migrant workers. Indeed, it has been asserted that Chettiar credit was fundamental to the growth of the industry. When the Burmese cultivators suffered a reversal, they lost their land, which the Chettiars then sold to other cultivators, and the process was repeated within a few years. The Chettiars were thus regarded as the cause of Burmese landlessness and impoverishment. They also played an important role in financing Malay peasants in smallholder rubber production in Malaya. In Malaya, however, an amendment to the Malay Land Reservation Enactment in 1933 prevented Chettiars from gaining land through default in Malay reservations.

Indians in the Colonial Civil Service

Policemen, civil servants, and clerks formed a smaller group of Indians who were employed in the administrative, technical, and professional fields in the urban areas. They were much smaller in number than the laborers, and they did not have the financial clout of the Chettiars. Nevertheless, their political roles were more important, and they were the first to encounter competition from the indigenous populations, especially in the 1930s when the indigenous populations clamored for employment opportunities in the urban areas. After 1938, for example, Indians were no longer welcome in Burma.

Indian Immigrants: Plight and Place

Colonialism, the circumstances of Indian recruitment and the occupations Indians had, and the divide-and-rule policy of the British played key roles in the maintenance of plural societies

in Malaya and Burma. Low economic and social mobility, an attachment to India, and the lack of advancement opportunities also contributed to the Indians' separateness in their adopted countries. Allied to these, factors such as the geographic and social isolation of the workers and the physical, cultural, and religious differences between them and the indigenous populations shaped and continue to shape ethnicity and ethnic relations in Malaysia.

INDIAN NATIONAL ARMY (INA)

The Indian National Army, first formed in early 1942, derived its *raison d'être* from the Indian independence movement. Its leaders were seized by the nationalist fervor that had taken hold in India. What set the movement apart from the rest, however, was the manner in which it went about achieving its demand for independence. The INA sought help from and allied itself with Britain's wartime antagonist, Japan. This course of action was to have signifi-

cant and controversial repercussions in the aftermath of the Pacific War (1941–1945).

The INA was primarily raised from the ranks of the Indian soldiers and officers who were part of the British forces that surrendered to the Japanese Imperial Army in Singapore on 15 February 1942. The beginnings of the INA can be traced to the surrender of Captain Mohan Singh, an officer in the British Indian army, to the Japanese in December 1941. He was encouraged by Major Fujiwara Iwaichi (1908–1986), a Japanese officer in charge of the Fujiwara Kikan—a small group actively engaged in subversive activities and propaganda campaigns against the enemy—to organize Indian prisoners of war (POWs) against their former army. The ultimate aim of liberating India from the yoke of colonial rule supposedly provided the impetus for these men to cast aside their allegiance to the British.

The idea of a liberation army for India was conceived soon after the Japanese Imperial Army began its campaigns in Southeast Asia. Japanese intelligence established contacts with Indian nationalist groups in the region with the aim of assisting them in forming an independence movement against the British.

The surrender of Captain Mohan Singh and his willingness to cooperate with the Japanese against the British offered Major Fujiwara the opportunity he had been waiting for. At a conference held in Tokyo in 1942, Indian representatives from Japanese-occupied Southeast Asia gathered under Japanese auspices to call for an army to be raised from Indian soldiers and civilians in the region to fight for Indian independence. Although its military value was questionable, an Indian fighting unit purportedly raised to put an end to British imperialism in India provided choice material for Japanese propaganda. With remnants of defeated Indian troops in Malaya and Singapore, Mohan Singh began building the Indian National Army. By September 1942, he had managed to raise a division of Indian POWs based in Singapore. It became the military arm of the Indian Independence League (IIL), a civilian organization formed in June 1942 to back up the INA in terms of men and money.

Although the INA was formed in 1942, it did not immediately see action as a military unit. Meanwhile, its effectiveness was compromised by leadership clashes between Resh Be-

hari Bose, as civilian president of the IIL, and Mohan Singh, as military commander of the INA. These conflicts, coupled with uncertainty over the extent of support from the Japanese in the plans for an invasion of India, rendered INA a paper tiger in its early incarnation. In December 1942, Mohan Singh was placed under house arrest by the Japanese, and despite attempts to reorganize its command structure, the INA was brought to a virtual standstill.

The flagging fortunes of the INA received a tremendous boost with the arrival of Subhas Chandra Bose (1897–1945) in Singapore in July 1943. The organization was plagued by low morale and discipline before Bose—a fervent nationalist fully committed to the cause of the Indian independence movement—took over the reins of the INA leadership. He assumed direct command of both the IIL and the INA, and under his leadership, both arms of the liberation movement were reorganized and expanded. Bose injected a greater sense of purpose into the INA, and his battle cry of “Chalo [On to] Delhi!” had a desired rallying effect on the troops. With the support of General Hideki Tojo (t. 1941–1944), the wartime Japanese premier, Bose went on to constitute a provisional government known as Azad Hind (Free India).

The INA created a women’s regiment named after a heroine of the 1857 Revolt, the Rani of Jhansi. Led by Captain (Dr.) Lakshmi Swaminathan, the Rani of Jhansi Regiment had several hundred women volunteers and received arms and logistical support from the INA.

The INA did not succeed in invading India. Its principal battles were fought just outside the Indian borders, in Burma and the northeast frontier in Assam, during 1944 and 1945. The INA troops who participated in those campaigns were ill equipped and poorly led, and they were duly routed by the British troops. The military reverses revealed the inadequacies of the INA. All plans to invade India evaporated in August 1945 when Bose was fatally wounded in a plane crash in Taiwan.

The impact of the INA, however, did not die with Bose. Although the INA did not create much of an impact militarily, the trials of the INA officers held in the Red Fort at Delhi in late 1945 became a cause célèbre for the nationalist movement. In an unexpected turn of events, the political nature of the trials brought latent resentments to the surface and roused the

nationalist spirit of the Indian people. The trials ignited a countrywide movement that valorized the INA and turned swiftly into an anticolonial struggle against the British. The ramifications of the INA trials undoubtedly undermined the authority of the ruling power and contributed eventually to the British decision to disengage from India.

INDIANIZATION

Indianization is a term used to describe the impact and historical transmission of Indian cultural influence in Southeast Asia. The intellectual debate on Indianization once dominated historical discussion of early state formation in Southeast Asia, particularly during the first half of the twentieth century.

Early European explorers and colonial officials in Southeast Asia became fascinated by the discovery of ancient stone and brick temples, stone sculpture, and engraved inscriptions, which suggested a long historical antiquity in the areas that they traveled and worked. These three elements of monumental architecture, fine art, and writing equated exactly with nineteenth-century concepts of “civilization,” and all three could be compared with architectural, iconographic, and paleographic models from India. The influence of Indian religion, writing, and thought can still be seen in the contemporary cultures of Southeast Asia. Theravada Bud-

dism remains the predominant religion in Burma (Myanmar), Thailand, Laos, and Cambodia, and the official scripts of all these countries are ultimately derived from Indian *Brahmi*.

By the beginning of the twentieth century, it was common to view these elements of Southeast Asian history and culture as mere offshoots or branches of Indian civilization. Just as civilization was thought at this time to have been carried to India by Aryan invaders from the north, a similar trend could be discerned in Southeast Asia. The discovery of early Sanskrit inscriptions in Southeast Asia encouraged the idea that the early cultures of the region had been imported by Indo-Aryan invaders from the Indian subcontinent.

These historical theories on the spread of civilization and the replacement of an “inferior” culture by a “superior” one through conquest and colonization were clearly well suited to the European colonial powers that took increasing control over Southeast Asia in the later nineteenth century. In India itself, the colonial model was consistently applied to interpretations of Indianization in Southeast Asia, which was often described as “Greater India.” In books and articles written during the 1920s and 1930s (many of them published by the Greater India Society) by eminent scholars such as R. C. Majumdar, the early kingdoms of Southeast Asia were routinely described as being founded by direct colonists from India. The Indians passed on their superior knowledge and culture to an entirely passive indigenous population. Majumdar himself (1927) emphasized the importance of the *ksatriya*, or Indian warrior caste, in this cultural process, with the early kingdoms of Southeast Asia being founded by Indian warrior adventurers who transplanted their own culture to these newly conquered territories. Other scholars, such as N. J. Krom (1931), saw the *vaisya*, or merchant caste, as the main promoters of Indianization, through a more peaceful process of trade and intermarriage with the indigenous elite.

Although both these models of Indianization achieved widespread acceptance, there is very little historical evidence to support them. An eleventh-century inscription of the South Indian king Rajendracola lists a series of conquests made by the king along the western coast of southern Thailand and the Malay Peninsula. It is clear, however, that this was

merely a punitive expedition, designed to open up the region to trade. Similarly, a ninth-century inscription found at Takuapa in southern Thailand describes the creation of a water tank by one of the South Indian merchant guilds. This inscription is exceptional, however, and it is probable that this was part of a South Indian commercial enclave or concession within a wider port community under indigenous control, rather than any sign of conquest or direct political control from India.

Further evidence for early trade with India was supplied by archaeology, in particular from the excavations conducted by Louis Malleret at the site of Oc Êo on the western coast of the Mekong Delta in southern Vietnam during the 1940s. In addition to a small number of statues, Malleret uncovered large quantities of Indian beads made from carnelian, agate, and glass, as well as intaglios made in imitation of Roman designs. A medallion of the Roman emperor Marcus Aurelius (r. 161–180 C.E.) was also found and helped to demonstrate that the Roman sea trade to southern India had been extended to Southeast Asia during the first century C.E. (Malleret 1959: 63). The discovery of a Roman bronze lamp at P'ong Tuk in eastern Thailand also reinforced this conclusion and substantiated the historical references to Southeast Asian produce and trade routes made by classical Roman writers such as Strabo (ca. 63 B.C.E.–21 C.E.), Pliny (23–79 C.E.), and Ptolemy (90–168 C.E.).

These archaeological discoveries were included in the historical work of George Coedès, whose general history of the early “Hinduized” kingdoms of Southeast Asia was first published in French in 1944. It was further updated in 1948 and 1964 and translated into English in 1968 as *The Indianized States of Southeast Asia*. This work remains the most influential interpretation of the process of Indianization in Southeast Asia and was compiled from a wide range of historical sources. Coedès was primarily a Sanskrit epigraphist, and his conception of Indianization was closely based on Sanskrit inscriptions. Coedès identified different stages or waves of Indian influence, based on the discovery of successive groups of Sanskrit epigraphy. The earliest Sanskrit inscription of any length yet found in Southeast Asia is the Vo Canh inscription, found some 4 kilometers west of the modern town of Nha Trang in central Vietnam.

The paleography of this text suggested a date during the second or third century C.E., and Coedès therefore dated the “First Indianization” to this period. Further groups of inscriptions could be dated to the fifth and late sixth centuries, providing evidence for a second and third wave of Indianization at these periods.

The First Indianization of the Vo Canh inscription was considered contemporary to the appearance of the earliest Southeast Asian states to be mentioned in the Chinese historical records. These states, such as Linyi in central Vietnam, Funan in the lower Mekong Delta of southern Cambodia and Vietnam, and Tun Sun on the Malay Peninsula, are mentioned as having close contacts with India. They were assumed to have been created according to Indian state principles and most probably by Indian settlers. Much of the evidence for this close association with India, however, has since been eroded. The kings of Linyi and Funan in the third century C.E. are listed in the Chinese histories under names beginning with *Fan*, which Coedès interpreted as a Chinese transcription of the Sanskrit title *varman*, used by kings in southern India. This interpretation has since been rejected, and the term is now considered an indigenous honorific. Royal titles ending in *varman* certainly appear in inscriptions from the fifth century C.E., including a series of inscribed pillars of a King Mulavarman discovered at Kutei in eastern Borneo. However, though these inscriptions clearly show the adoption of Sanskrit titles by the king and his father, the grandfather of Mulavarman is simply named Kundunga, suggesting an indigenous parentage and a recent assimilation of Indian royal forms.

In the years following the Pacific War (1941–1945), traditional ideas on the passive nature of the Southeast Asian response to Indianization began to be reviewed. The most radical reinterpretation was that of J. C. van Leur (1955), who suggested that Indonesians were equally active participants in the transferral of Indian culture across the Indian Ocean. He saw Indian cultural influence as merely a thin veneer of elite cultural interests, overlaying a more general continuation of indigenous Indonesian cultural and social forms among the ordinary population. Although Sanskrit royal titles were adopted by the Southeast Asian elite, the Indian caste system was never applied even

under a simplified form, and local titles and terms for different types of function and social organization abound in the vernacular inscriptions. This historical interpretation was popular with cultural and social anthropologists who emphasized the continuation of traditional or local patterns in both material culture and social organization. Archaeologists such as Chester Gorman and Donn Bayard in the 1960s and 1970s also revealed the antiquity and sophistication of prehistoric societies in North and Northeast Thailand, at sites such as Spirit Cave, Non Nok Tha, and Ban Chiang. National governments of the newly independent countries of Southeast Asia were keen to promote the unique, local aspects of their culture and to emphasize the autonomy of their own past.

Some of the very early dates presented for the introduction of bronze, iron, and rice in Southeast Asia during this period have since been questioned by scholars such as Joyce White and Charles Higham (1989). All of these technologies may have been introduced into the region via either India or China. Nevertheless, it cannot be doubted that many parts of Southeast Asia achieved a high level of social, cultural, and technological sophistication well before the historical process of Indianization began. During the 1980s and 1990s, the cultural relationship between India and Southeast Asia began to be reinvestigated in terms of an equal or reciprocal relationship between the two regions.

Pierre-Yves Manguin (1985) has demonstrated the importance of Southeast Asian shipping and boat technology in the early Indian Ocean trade. Ian Glover (1990) has examined the archaeological evidence for this trade in terms of a network of commodities linking Southeast Asia not only with India but also with the eastern Roman Empire. This emphasis on a reciprocal relationship has begun to raise questions as to the possible Southeast Asian impact on India itself and has also helped to re-legitimize the study of Indian cultural transference. In some respects, this impact may be more diverse than originally suspected. The spread of Islam across maritime Southeast Asia in the thirteenth century, for example, was probably dependent on the establishment and growth of the Delhi sultanate and other Muslim states in northern India at that time. Conversely, the roles of China and Japan in the

spread and practice of Buddhism in Southeast Asia have never been fully acknowledged.

In this respect, the term *Indianization* itself is probably inappropriate. The term is never used in relation to China or Japan, even though the influence of Buddhism and Indian theological and philosophical concepts on the wider culture of these countries has been profound. There, as in Southeast Asia, particular aspects of Indian culture have been adopted, rejected, or transformed according to the needs of the indigenous society. This process has led to diverse variations of religious architecture, iconography, writing, and religion among the peoples and cultures of the region, but it is also part of a continuing system of cultural selection and adaptation.

The most influential overview of the subject of Indianization is that by Ian Mabbett, in two articles published in 1977. Although the historical section remains a useful introduction, the article on prehistory now requires major revision. The historiographic essay by J. D. Legge (1992) also includes a good summary of the debate and of the wider intellectual context, and contemporary ideas on early state formation in maritime Southeast Asia have been discussed by Jan Wisseman Christie (1995).

INDIGENOUS POLITICAL POWER Kings, Emperors, and Sultans

The men (and sometimes women) who ruled over states and kingdoms in premodern Southeast Asia were heirs to two traditions of leadership. Indigenous ideas regarded leaders as individuals possessed of special qualities that distinguished them from ordinary people. These ideas were combined with those derived from political models imported from India, China, and the Middle East (West Asia), which tended to emphasize patrilineal descent and primogeniture and to draw on religious beliefs for justification. Though monarchs have disappeared from most Southeast Asian states, echoes of earlier attitudes toward rulers can be discerned among a number of contemporary political leaders.

Indigenous Ideas of Leadership

In early Southeast Asia, words associated with leadership stressed the idea of a chief as a parent, with followers as children, and in some areas, there are indications that chiefs were supervisors of community activities, such as water control. Such individuals were often believed to embody extraordinary "luck," encapsulated in indigenous words such as *tuah* (Malay) and *hpon* (Burmese) and manifested in their possession of powerful objects, such as a sacred dagger. A leader's prowess could also be explained by tracing descent from some great ancestor, and this relationship with the supernatural provided an explanation for the leader's ability to perform feats beyond the capabilities of ordinary mortals. Rather than contesting these ideas, the arrival of the world religions reinforced indigenous views by placing rulers on a continuum that continues to conceive of them as parents, while simultaneously linking them with the world of ancestors, gods, and spirits.

Imported Ideas and the Enhancement of Kingly Powers

Penetrating the region from around the fifth and sixth centuries, Hinduized notions of kingship fundamentally influenced Southeast Asian ideas of leadership. In Cambodia, for example, it is possible to track the evolution of kingship as indigenous words were displaced by Sanskrit terms attached to the cult of the *devaraja*, or god-king, the emblem of male virility. Centered on the great complex of Angkor and surrounded by a sophisticated irrigation system, the temples between the tenth and twelfth centuries not only symbolized world-mountains but also presented the ruler as a god.

The porous line between kingship and "divine beings" was similarly evident in Mahayana Buddhism, which also arrived in this early period. A common motif was the representation of the ruler as a bodhisattva, a Buddha-to-be, especially Avalokitesvara, the compassionate bodhisattva. In East Java, elements of both Hinduism and Buddhism are found in statues that some believe to be portraits of local rulers. Both there and in Sumatra, there is evidence of Tantric Buddhism, with rulers represented in the form of the god Bhairava, seated on a dais surrounded by skulls.

Theravada Buddhism, which spread to mainland Southeast Asia from Sri Lanka around the eleventh century, introduced the idea of the *cakkavatti*, or Universal Monarch, who would prepare the world for the coming of the next Buddha. The notion was highly appealing as a justification for expansion, and the title of *cakkavatti* was frequently claimed by Buddhist rulers, who also proclaimed themselves *Dhammaraja*, or kings of Buddhist law, while still invoking Hindu gods such as Siva or Viṣṇu.

Islam, which gathered pace in island Southeast Asia from the fifteenth century, theoretically rejected ideas of royal divinity and represented rulers simply as the Shadow of Allah on Earth. Nonetheless, Persian ideas of sacral kingship and Sufi teachings that saw the ruler as the Perfect Man mingled with indigenous ideas to enhance the status of Islamic kings and make disloyalty a crime against Allah himself. Malay society, for instance, paired the Sanskrit term *derhaka* (treason) with the Arabic-derived term *daulat* (royal supernatural power); the *daulat* would punish disloyal subjects. From the fifteenth century, neo-Confucianist teachings in Vietnam likewise stressed the loyalty a subject owes the ruler as one of the five relationships (*Tam Cuong*). At the popular level, a mingling of Taoist, Buddhist, and local spirit beliefs also fostered ideas that emperors had a special path of communication to powerful ancestors and divinities.

The European Arrival and Its Effects on Indigenous Kingship

When Europeans reached Southeast Asia in the sixteenth century, they believed that alliances with rulers would be the key to achieving their political and economic goals. "Kingship" in the Philippines was represented by "enhanced chiefdoms," except in the Muslim south, but the Spanish had lost no time in making these chiefs, or *datu*, part of the governing elite through titles, emoluments, and other rewards. In the Malay-Indonesian archipelago, where Europeans actively sought to control the lucrative spice trade, the Dutch East India Company (VOC) was tied to a policy that saw treaties signed with local kings as means of monopolizing market access. Persuaded or threatened, rulers across the archipelago entered into con-

tracts with the VOC, frequently in hopes of securing Dutch military assistance. When such rulers adopted European-style clothing, assumed European names, and even converted to Christianity, they were aiming to demonstrate their close relations with a new and powerful friend. In the process, however, they became implicated in policies that sought to compel unwilling communities to sell their products only to the Dutch at the lowest possible price.

Rulers in areas of VOC control were also affected by the fact that the Dutch were quite willing to use force to oust or exile uncooperative kings. The princes who replaced them were usually ineffectual because they were VOC appointees who relied on Dutch military support to retain their position. In the long term, this type of association fundamentally undermined the standing of local rulers. Opponents to unpopular rulers had little difficulty in locating an alternative leader because most rulers had numerous wives, which meant that there were a number of princes who were potential heirs. Dutch policies were thus a significant element in prolonging civil war in the late seventeenth and early eighteenth centuries. As successive Javanese kings looked to Dutch military support to maintain their power against challenges, they ceded large tracts of territory to the VOC, and by the end of the eighteenth century, most of Java was effectively under Dutch control.

There are, of course, other aspects of this generalized picture. For example, Islamic leaders were quite willing to invoke religious teachings as a rallying cry against unpopular rulers, and in Aceh, their opposition was responsible for ending over fifty years of female rule. There were also some rulers whose reputation was actually enhanced by their association with the VOC. In seventeenth-century South Sulawesi, the Bugis people considered their prince Arung Palakka not as a Dutch lackey but as a hero who had defeated their long-standing rivals, the Makassarese. Nor should it be forgotten that numerous areas remained completely outside European interests or that a number of rulers did successfully resist the European presence. The kings of Minangkabau, for example, maintained their authority not through armies but through widespread belief in their supernatural powers, and the Spanish never succeeded in conquering the Muslim rulers of the

southern Philippines, despite many campaigns. Nonetheless, in broad terms, this period was a harbinger of the way in which full-fledged colonialism would deal with indigenous kingship. For instance, the English had no compunction in creating a new “king” of Singapore in order to legalize their occupation of the island in 1819.

In mainland Southeast Asia, the dynamics of local kingship developed relatively independently of outside interference, since the European presence was limited. As new dynasties were founded or old ones revived, rulers sought to draw on memories of past greatness and revered predecessors to validate their claims to succession or preeminence. Because of the frequency of warfare between the Thai and Burmese kings, symbols of royal legitimacy such as white elephants or venerated Buddha statues became potent symbols of power. In Vietnam, the former prestige of the Le dynasty (1428–1789) had fallen away, but the emperor remained an important figurehead, and the two great rival families (Trinh and Nguyễn) who controlled the country each claimed to be ruling in his name. As in China and Japan, therefore, the European Christian propagation of a divinity higher than the emperor was considered not only heretical but also treasonous.

Colonialism, Independence, and Southeast Asian Kingship

By the 1890s, most of Southeast Asia except Siam was under European control. This was a significant development because colonial powers always sought to cultivate and co-opt amenable rulers, while marginalizing or removing those who showed signs of recalcitrance. For instance, the Burmese monarchy was abolished in 1885, and a number of rulers in the Dutch territories were either exiled or deposed. In the Malay States, the British exploited the principle of “indirect rule,” “advising” the sultans who essentially became their agents. The Vietnamese call to “rally to the king” (*can vuong*) in 1885 had a brief period of success, but it proved impossible to mount sustained resistance against the French campaigns. Subsequent Vietnamese emperors became merely French puppets, and like their counterparts in much of Southeast Asia, their capacity to serve as a focus

of anticolonial resistance was thus severely compromised.

The crisis of indigenous kingship induced by colonialism was underscored by the prestige enjoyed by the rulers of Siam, especially Rama V (Chulalongkorn) (r. 1868–1910). There can be little doubt that his achievements in keeping colonialism at bay helped sustain the monarchy through some of the low periods in the twentieth century, including the end of absolute rule in 1932. The position of the Thai king has also been greatly enhanced during the reign of the present king, Rama IX (Bhumibol) (1946–). The only equivalent figure in Indonesia was Sultan Hamengkubuwana IX (1939–1988) of Jogjakarta, whose support for the revolution secured him a leading position in the new republic. His son continues to exercise considerable influence in modern Indonesia, although descendants of other ruling houses, stripped of their titles, seem increasingly irrelevant in contemporary Indonesian life.

With the gaining of independence, most Southeast Asian states have abandoned the monarchical system, with Thailand being a significant exception. Although the personal power wielded by the sultan of the small state of Brunei carries echoes of the “traditional” authority of Malay kings, kingship has assumed a new importance as a focus of identity in other contexts. In Cambodia, for example, the mercurial King Norodom Sihanouk (1922–) is still regarded by many Khmer as a symbol of their identity vis-à-vis the Vietnamese. In Malaysia, with its large Chinese minority, the sultans also remain an important reminder of the “Malay rights” that were guaranteed when Malaya gained its independence.

Conclusion

Today, hereditary rulers can be found in only a minority of Southeast Asian states, yet the region’s history is inseparable from the actions of kings and the attitudes toward them. In general, studies of kingship tend to concentrate on specific cultural regions, rather than attempt a regional and comparative approach, and only rarely are lines of continuity drawn between contemporary individuals and those of the past. Understanding the cultural and historical contexts in which Southeast Asian kings operated,

however, may help explain the policies of some modern leaders who have adopted significant aspects of the monarchical style.

INDOCHINA COMMUNIST PARTY (JUNE 1929)

The Vietnamese communist movement originated in the Việt Nam Thanh Niên Cách Mệnh Đồng Chí Hội (Vietnamese Revolutionary Youth Association), set up in southern China by Nguyễn Ái Quốc, the future Hồ Chí Minh (1890–1969), during his stay in Guangzhou (Canton) from early 1925 until April 1927. It was originally devised as a transitional revolutionary nationalist organization, under the leadership of an inner core of trained communists, that would prepare the way for a communist party in the full and strict sense. By the time of Chiang Kai-shek's (1887–1975) counterrevolutionary coup in 1927, which resulted in the headquarters of the organization's central committee being moved first to Guangxi (Kwangsi) and then to Hong Kong, some 200 cadres had been sent back to Vietnam to establish, by a process called "bead-stringing," a "people's network" that was to be used, at a suitable moment, for "masses activation."

Although not yet named "communist," Thanh Niên conformed fairly closely to the Comintern model, with an essentially communist conception of party discipline and revolutionary obligations. The rapid growth of the movement from 1928 to 1929—when membership increased from an estimated 400 to 1,250, recruited mostly from the urban, educated population—contributed to developing contradictions within its ranks. Already in January 1929, the journal *Thanh Niên* had discussed the problem of the role to be played by the petite bourgeoisie and intellectuals in particular in the revolutionary movement. Hence, the basic concept of proletarianization was developed, defined as an attempt to inculcate in the adherents a proletarian and popular consciousness. Although the principal issues dividing Thanh Niên's members were those of nationalism versus communism or proletarian internationalism, the movement was, at the same time, confronted with the problem of its relations with other anticolonial organizations, particularly the Tân Việt Cách Mệnh Đảng (Revolutionary Party of New Vietnam). The consequence was that, on the eve of the Great Depression

(1929–1931), several mutually antagonistic groups were in competition inside Vietnam, struggling for control over the Vietnamese revolutionary movement. Tensions also arose between activists working within Indochina and a central bureau now seated in Hong Kong. But they seemed also to have involved genuine disagreements about strategy and possibly different assessments of the current stage of the social contradictions in Vietnam, heightened by the deterioration of the economic situation of the masses and expressed in the outburst of anti-colonial and working-class movements. This engendered a spontaneous demand for the foundation of a Vietnamese communist party.

The confrontation of the contending forces within the Thanh Niên came at the first party congress, held in Hong Kong from 1 to 9 May 1929. But the motion presented by delegates from northern Vietnam for the establishment of a true communist party was voted down. The resolution actually approved on 9 May 1929 analyzed the development of capitalism in Indochina and recognized that the emergence of sharper class conflicts would eventually make the foundation of a communist party necessary. But it argued that the proletariat in Indochina was still too weak for that step to be taken and that the immediate need was to reorganize the existing association.

A schism within the party ensued, which followed regional lines. By the latter part of December 1929, two rival communist parties were operating inside Vietnam. The Indochina Communist Party (Đông Dương Cộng Sản Đảng), formally established in June 1929, was by far the stronger of the two in northern Vietnam, and it had some support in southern Vietnam. Its leading figures were Nguyễn Đức Cảnh in Hanoi and Ngô Gia Tự in Saigon. The Annam Communist Party (An Nam Cộng Sản Đảng), closely identified with the older Thanh Niên association, had its principal following in southern Vietnam, but its leadership organization was based outside the country, in the region of Guangzhou, Hong Kong, and Macao. Sometime toward the end of 1929, the Tân Việt party apparently also decided to become communist and to change the name of the organization to the Indochinese Communist League (Đông Dương Cộng Sản Liên Đoàn).

The factionalism of Indochina's revolutionary movement was sharply criticized by the

Comintern, which insisted that the future of the revolution in Indochina was greatly endangered by the lack of a united communist party while agitation among the worker and peasant masses was increasing; the absolutely urgent task was to found a revolutionary party of the proletariat—that is, a communist party of the masses. A first but unsuccessful effort to reconcile the factions was apparently made by Lê Hồng Phong, a representative of the Comintern, at a meeting in Hong Kong in December 1929. Finally, a conference was convened in Hong Kong from 3 to 7 February 1930, with the purpose of unifying the different groups into a single communist organization, on the basis of proposals put forward by the Comintern representative Nguyễn Ái Quốc. The decisions made by the conference covered problems of both organization and strategy. It was agreed to set up an entirely new party, to be called the Việt Nam Cộng Sản Đảng (Vietnamese Communist Party). A central committee of nine members was to be formed to deal with party affairs. Its headquarters was no longer to be in China but in Vietnam, in Hải Phòng initially but later in Saigon. A program based on the general line of the Sixth Comintern Congress (1928) was set forth for a revolution founded on a worker-peasant alliance, with the support of the petite bourgeoisie. The goals were to overthrow imperialism and feudalism and secure national independence and freedom while establishing a communist society.

The first plenum of the Central Committee of the Vietnamese Communist Party met in Hong Kong in October 1930, essentially to approve a constitution and a program for the party as drafted by Trần Phú. Trần Phú had been designated first secretary-general of the party in June 1930, two months after his return from Moscow to study at the University of the Toiling Peoples of the East. His “political theses” developed more systematically the basic themes of the interdependence of the anti-imperialist and antifeudal struggles: not only was the Communist Party to take the lead in anticolonial activity, it was also to aim for a “Soviet”-style revolution to establish a “worker-peasant and soldier” government, after which a radical reform program would be initiated. The change of name from Vietnamese Communist Party to Indochina Communist Party (Đông Dương Cộng Sản Đảng) was adopted as well, seemingly in response to a

Comintern directive, on the grounds that it was most necessary for the proletarian class and the oppressed masses of the three countries—Vietnam, Laos, and Cambodia—to join efforts to emancipate themselves. Some months later, on 11 April 1931, the Communist International Executive Committee recognized the Indochina Communist Party as an independent section, which came directly under the Comintern.

The unification of the Vietnamese Communist Party, although it was brought about by the intervention of Nguyễn Ái Quốc, did not amount to a victory for his own immediate protégés. While he himself was occupied elsewhere with the essentially regional role of building links among the overseas Chinese communities in Thailand, Malaya, and Indonesia, the people who mattered inside Vietnam were those who had founded the Indochina Communist Party in June 1929. However, Trần Phú confirmed a “proletarian” line that was more in keeping with Stalin’s current policies than the line with which Nguyễn Ái Quốc had previously been identified. The party seemed poised for a new high tide of proletarian struggle, which eventually developed with the peasant movement in the countryside in 1930 and 1931—the antitax revolts in numerous provinces, from Thái Bình in the north to Bến Tre and Long Xuyên in the south—that culminated in a peasant rebellion, now remembered as the movement of the Nghệ Tĩnh Soviets (from the name of the province where it became most intense). But the setback of the episode of the Nghệ Tĩnh uprising was soon to dictate a reversion to the “doctrine of temporary alliances” with “bourgeois” bodies of opinion wherever common ground could be found to exploit.

INDOCHINA DURING WORLD WAR II (1939–1945)

The outbreak of World War II in Europe in September 1939 provided Japan with the opportunity to expand into Southeast Asia. But apart from its ultimate goal of creating “the Greater East Asia Co-prosperity Sphere,” an economically self-sufficient realm under Japanese control, Tokyo premeditated few other political designs for any of the countries that the Japanese Imperial Army would liberate from colonial rule. Thus, on the one hand, French Indochina remained under French authority almost throughout the duration of the war, but on the other hand, in British Malaya (including Singapore) and British Borneo, the Japanese undertook to impose their power. And in the Philippines, Indonesia, and Burma, the Japanese transferred power (at least partially) by mid-1943 to indigenous regimes composed of persons favorably disposed to Tokyo’s goals.

Japan’s advance into the Indochina peninsula was an extension of the conflict that began in China in 1937. In March 1939, the Japanese had taken over the Paracel Islands. Then, after seizing Hainan Island, off China’s southeastern coast, in September 1939, they focused their immediate interest on French Indochina, with its Red River supply route to the interior of Nationalist-controlled China. In addition, Japan

fancied the strategically located Siam (Thailand); a foothold would be helpful in any attempt at launching invasions into neighboring British Burma in the west and/or British Malaya in the south. Siam, for its part, seemed receptive; since 1938, it had appeared to be moving toward Japan, and it joined the war on the Japanese side in January 1942. France's defeat in Europe at the hands of Nazi Germany in the summer of 1940 triggered Japan's penetration into Indochina, now under the Vichy regime and nominally a Japanese ally. On 22 September 1940, a convention was signed that granted the Japanese the right to use the port of Hải Phòng as a transit base; to utilize the airfields of Hanoi, Lao Cai, and Phủ Lạng Thương; and to station troops in northern Indochina. Consequently, this Japanese move effectively severed the aid supply route to Nationalist China. In return, Japan pledged to recognize French sovereignty and to respect French territorial integrity in Indochina. But in the 1940–1941 winter, the French were forced by the Japanese to concede to Thailand (as Siam was renamed in 1939) the Lao territories on the eastern bank of the Mekong River and the Cambodian provinces of Battambang, Siem Reap, and Sisophon. Then, in July 1941, after the German invasion of the Soviet Union, French colonial authorities in Indochina had to acquiesce to the landing of 30,000 Japanese soldiers. The Japanese Imperial Army was stationed in the southern part of Indochina, supposedly to protect the country, which was now completely cut off from metropolitan France.

The French colonial administration in Indochina remained in place during the war years from 1940 to March 1945, but it had to coexist with the Japanese military command in Saigon. For a brief while, from 1940 to 1942, it seemed as if Tokyo would devote special attention to exploiting the resources of French Indochina and would seek to develop its economy to meet Japan's own requirements. The French were obliged to sign a trade agreement with Tokyo in May 1941; although it allowed the Japanese to acquire the commodities they needed in exchange for their industrial products, the agreement seemed to presage a new era of investment. But that possibility was forestalled by Japan's move into the rest of Southeast Asia, leading to an intensification of the war and the consequent unavailability of invest-

ment funds for Indochina. At the same time, economic hardships resulting from the discontinuation of normal trading links and the dedication of key resources to the use of the Japanese war machine soon revealed the ruinous effects of the Japanese occupation.

Meanwhile, needing the French bureaucracy and police to ensure the management of the economy and to maintain law and order, Japan adopted the expedient policy of "upholding tranquillity" in Indochina by leaving the French administration intact until almost the very end. This enabled Admiral Jean Decoux (t. 1940–1945), appointed by the Vichy regime to be Indochina's governor-general, to devote his energy to retaining as much power as he could. The French grip on Indochina appeared even tighter during the course of World War II. Swift and harsh measures were taken against all attempts at rebellion. In November 1940, upon hearing of the Japanese entry into northern Vietnam and of the threatened Siamese invasion of eastern Cambodia and southern Laos, the communists staged a general insurrection in southern Vietnam. The rebellion was easily crushed, but the subsequent severe political repression did not entail any Japanese intervention on behalf of the Vietnamese. Forced by circumstances to bring more native officials into Indochina's civil services, Decoux tried to win over the sovereigns of the three countries of Indochina and their elites by enhancing their prestige. At the same time, he launched a sport and youth movement in an attempt to develop Marshal Philippe Pétain's cult and loyalty to France, and he applied to Indochina the Vichy regime's slogan "National Revolution" and the virtues of "Work, Family, and Fatherland." While keeping a watchful eye on Vietnamese political activists, he favored activities that glorified Vietnamese national culture, with the hope of thwarting Japanese propaganda in magnifying the Greater East Asia Co-prosperity Sphere.

Paradoxically, the call by the Vichy regime for a national revival had anticolonial effects. In fact, the French colonial government's inability to keep the Japanese out of its colony destroyed the myth of French invincibility and contributed to the erosion of French authority and the loss of French prestige. Under these circumstances, the Japanese occupation helped to revitalize various anti-French movements in Viet-

nam and unleash nationalist aspirations. The Japanese apparently felt the need to put all political groups together under the same banner, especially that of the exiled Prince Cường Để, to whom Japan had given shelter for nearly four decades. Without Japan's initiative and assistance, it might have been impossible for those scattered political groups and individuals who were supposed to be pro-Japanese to be unified, as they were isolated from each other because of their factionalism and regionalism. Particular support was lent to two politicoreligious sects in Cochin China—the Cao Đài, whose main area of recruitment covered Saigon and the area to the northwest of Saigon, and the Hoa Hao, with its main area of influence along the southwestern Vietnamese-Cambodian border.

But in the final analysis, it was to the Vietnamese communists that the Japanese occupation, along with the preservation of the French colonial regime, had lent support: in the communists' rise to power, the occupation and the colonial regime gave them their justification. The Vietnamese communists now had an opportunity to blend their esoteric dogmas with the more easily understood nationalist cause of resistance to both the French and the Japanese. The fatal distraction of French colonialism gave them a chance to acquire a base in the jungles of the area of Cao Bằng and Bắc Sơn (Việt Bắc), close to the Sino-Vietnamese border, from where they concentrated on building up a revolutionary nucleus and establishing contacts across the border with Chinese Nationalist leaders, U.S. and Free French liaison officers, and other anti-Japanese Vietnamese nationalists. To shed its pre-1941 image as a locus of class struggle and proletarian internationalism, the Indochina Communist Party (ICP) set up the League for the Independence of Vietnam (Việt Nam Độc Lập Đồng Minh Hội), or Việt Minh, consisting of members from various subgroups called National Salvation Associations. The objective of the Việt Minh front, conceived as a purely patriotic organization, was to liberate Vietnam from the unholy alliance of the "colonialist" French and the "fascist" Japanese. Therefore, until 1945, this movement confined itself largely to developing a politico-military base and spreading patriotic-nationalist propaganda throughout Vietnam; it concentrated in particular on mobilizing the peasants of the Red River delta against taxation, *corvée* labor, and rice

requisitioning by the administration to meet Japan's requirements for food supplies. In spite of the harsh repression they encountered from both the French and the Japanese, Việt Minh cadres managed to maintain a network of secret cells in almost every city and village in Vietnam and to infiltrate all pro-French and pro-Japanese organizations.

Forced into a steady withdrawal by Allied victories, the Japanese had to move the headquarters of their Southern Army from Manila to Saigon in November 1944. In January 1945, retreating troops were used to reinforce Japan's strength in Indochina, which the Japanese High Command was ordered to hold at all cost. The situation changed dramatically on 9 March 1945. The Japanese military, anticipating an Allied offensive and fearful that the French colonial army in Indochina would turn against it, carried out a *coup de force* (swift execution of forceful action) by removing the French administration and imprisoning the French army and colonial administrators. Immediate independence was granted to the monarchies of Laos, Cambodia, and Vietnam. In all three countries, the Japanese advised the respective sovereigns to repudiate the French protectorate and to form "independent" governments with a diverse collection of nationalist politicians. But in Vietnam in particular, the declaration of independence proclaimed by the emperor Bảo Đại (1913–1997) concerned only north and central Vietnam and had no formal effect for the time being on the political situation in Cochin China, which was still under Japanese authority. However, the new Trần Trọng Kim cabinet, composed of men with little experience in political organization, lacked both credibility and the capacity to impose its authority over the provinces. From the very moment of its inception, it was, in a sense, living on borrowed time, since much of its political authority and all of its military security were tied to the Japanese. Moreover, the new regime was confronted with a cataclysmic famine in the north, caused by a combination of bad weather, French and Japanese requisitions of the peasants' rice, and the disruption of communication among the various parts of the country due to intense Allied bombing. The worsening of the famine to crisis proportions coincided with the Japanese granting of independence to Vietnam, so the problem of

hunger in the north was an ongoing concern during the early weeks of the existence of the Trần Trọng Kim government.

The situation was ripe for the Việt Minh. The removal of the French colonial administration, the weakness of the Vietnamese substitute government, and the absence of a mass nationalist organization created a political vacuum in Vietnam. In some areas of the south, however, local organizations, such as the religious sects Cao Đài and Hòa Hào, formed what amounted to local warlord governments. But with the concentration of Japanese minds on an increasingly desperate military situation, the political vacuum presented the Việt Minh with the opportunity to spread out networks of “liberation committees” from its northern base and to build up its political and military infrastructure. The Japanese did not bother to send their troops into the northern area, and the Việt Minh forces took over the region, expanding their “liberated zone” beyond Cao Bằng to include seven provinces. They issued a proclamation calling on the people to rise up against the Japanese and to contribute to making Vietnam strong, free, and independent. The famine in the north provided them with the possibility of eliminating the anticommunist village leaders and spreading a mass movement of political and social salvation in the countryside. The status and credibility of the Việt Minh movement were greatly enhanced by the fact that its communist leaders had, since 1941, maintained a firm anti-French (the colonial enemy) and anti-Japanese (the fascist enemy) stance, not least by their military links with the Allies.

On 15 August 1945, the Japanese suddenly capitulated. Overnight, the Allies, in particular the South-East Asia Command (SEAC), were faced with the responsibility of overseeing the surrender and repatriation of an almost intact Japanese army in Southeast Asia. What is more, SEAC had to ensure the safe release of Allied prisoners of war (POWs) and civilian internees held by the Japanese, the maintenance of law and order, and the eventual transfer of power to civilian governments. The zone of responsibility for SEAC covered Malaya, Singapore, Sumatra, Java, Thailand, and the southern part of Indochina. As a consequence of American pressure, Nationalist China assumed similar responsibilities over northern Indochina. But considerably overstretched, SEAC was in no

way capable of carrying out all its tasks and filling the power vacuum left by the Japanese surrender. Therefore, the Việt Minh leader, Hồ Chí Minh, judged the moment right to seize power openly, through the agency of the liberation committees. Supported by massive demonstrations in provincial capitals, the Việt Minh took control of the whole country between 19 and 25 August. As the Việt Minh soldiers marched into Hanoi, there were demonstrations in the city celebrating independence, and the Việt Minh youth groups and militia took over the city while the Japanese stood by. By 27 August, Việt Minh committees were set up in all the provinces to administer them. Meanwhile, on 25 August in the imperial city of Huế, Emperor Bảo Đại abdicated, and the Trần Trọng Kim government, which had already resigned on 18 August, transferred its power to a Việt Minh committee. On 2 September 1945, to a huge and tumultuous crowd of Vietnamese in Hanoi as well as to the nation and the world at large, Hồ Chí Minh proclaimed the independence of Vietnam and the formation of a provisional government for the Democratic Republic of Vietnam (DRV).

By their reluctance to encourage and concede Vietnamese independence, the Japanese had therefore helped to discredit the pro-Japanese nationalist groups that they would have preferred to leave in command in Vietnam. However, Japanese forces still in control of Indochina after Japan's surrender might have crushed the Việt Minh forces had Bảo Đại and Trần Trọng Kim requested them to do so. As it turned out, Bảo Đại rejected such an extreme measure and agreed to transfer his power to the Việt Minh because he imagined that, with the U.S. support secured by Hồ Chí Minh, independence could be guaranteed to Vietnam. In the end, even a Vietnamese government led by communists who had been generally anti-Japanese seemed, from Tokyo's perspective, to be preferable to returning the country to the French. The benevolent neutrality displayed by the Japanese explains the ease with which the Việt Minh came to power.

The war years and the period of Japanese occupation had thus fundamentally changed the political environment of Indochina. Mass nationalist movements had taken root during these years and had been able to seize power and establish some form of governmental legit-

imacy. However diverse their ideological complexions and their internal divisions may have been, they were by no means keen on the restoration of colonial authority. Acquainted with the vulnerability of the French and with their own strength tested during these years, the Việt Minh forces would prepare themselves for an all-out war for independence. Yet the bridgehead of military authority—SEAC, established in September 1945 in southern Indochina—allowed the landing of a company of the French Expeditionary Corps, bent on reestablishing colonial control over all of Indochina. Meanwhile, in the northern part of Vietnam, other Vietnamese political groups returned in the wake of Chinese Guomintang (Kuomintang, KMT) troops and endeavored to abolish all the political and administrative structures set up by the Việt Minh. The end of World War II was not to usher in a new era of peace for the Vietnamese but a most destructive period in their history.

INDOCHINA WAR, FIRST (1946–1954)

After the Pacific War (1941–1945), France fought Vietnam during the First Indochina War, resulting in the retreat of the former and the partition of the latter into two territories. The conflict arose amid the complex situation existing in 1945 and 1946. Much had happened in the course of a few months. The French colonial administration had been overthrown by the Japanese Imperial forces on 9 March 1945, and Indochina had been divided along the sixteenth parallel by the Conference of Potsdam (the division was moved to the seventeenth parallel by the 1954 Geneva Agreement). China was entrusted with the job of disarming Japanese troops in the North, and the United Kingdom handled those in the South. Thereafter, the August Revolution erupted, brought about by the Việt Minh (the League for the Independence of Vietnam). Then, on 2 September 1945 in Hanoi, Hồ Chí Minh (1890–1969) proclaimed the country's independence and the establishment of the new Democratic Republic of Vietnam (DRV). The French returned to the South with the aid of the British in September 1945, taking back the territorial administration. The following year, after a double agreement with Hồ Chí Minh (on 6 March 1946) and the Chinese, the French were present in the North as well. However, they did not get on with the Vietnamese authorities, mainly because of the status of Cochinchina. After a few months of growing tension, the failure of the 19 December Vietnamese takeover forced the Hồ Chí Minh government to abandon Hanoi. This marked the official start of the hostilities.

From the French point of view, the war was begun to recover lost territory, especially in the North. Directed from Saigon, the war would be

Two members of the French forces capture a Viêt Minh youth who had a communist flag in his possession. From 1947 to 1950 the Viêt Minh made a concerted effort to drive the French Army out of Vietnam. (U.S. National Archives)

long, costly, and ultimately incomplete. From the Vietnamese point of view, the conflict was conceived as resistance. The DRV, whose leaders were secluded in a region accessible only with great difficulty north of Hanoi, was facing the prospect of a lengthy war, which allowed General Vo Nguyễn Giap (1911–) to build up an effective army. Confrontation was rarely direct, but the terrain was hotly contested. The guerrillas had been active in the South since 1945, and they had spread to the North at the end of 1946. After 1950, due to the evolving balance of power, several important battles were fought in the North beginning with the French defeat at Cao Bằng in October 1950 and ending with

their defeat at Dien Bien Phu in May 1954. On the French side, nearly 200,000 men were fighting in Indochina by then, with around 250,000 Vietnamese nationals recruited on the spot; on the side of the DRV, some 360,000 men were found at the front. Estimations of strength proved to be difficult because the overlapping levels of mobilization made every DRV citizen a potential combatant.

The war took place on all levels. On the political level, in 1949, France agreed with the ex-emperor Bảo Đại (r. 1925–1945) to establish the Associated State of Vietnam and a “national army” to form a counterforce to the DRV. On the economic level, each side issued its own

currency and bitterly fought over the main rice-producing areas (the Red River and Mekong deltas). Finally, the growing importance of the conflict and the cost of the war forced each side to rely on foreign aid—from the United States on the Franco-Vietnamese side and from the Chinese on the DRV side.

The conflict can be divided into three main periods. Until 1948, the war still had a colonial character and was not yet very costly, but there was no military solution in sight. The establishment of the People's Republic of China (PRC) in 1949 set the tone: backed by Chinese aid, the DRV was able to consolidate itself. The financing of the war became a problem, so France obtained American aid—materially—as well as the implication of the Associated State of Vietnam and its young army in the war. Finally, from 1952 to 1954, the French found themselves in an increasingly difficult position and sought to disengage themselves by shifting the fighting to the Associated State of Vietnam and financial responsibility to the United States. However, this strategy backfired: in 1954, when the United States was committed to funding almost 80 percent of the conflict, Bảo Đại's Associated State claimed its own independence; meanwhile, the DRV inflicted the defeat at Dien Bien Phu on the French expeditionary corps in May. The cease-fire agreement negotiated at the Geneva Conference of 20 July 1954 included the partition of Vietnam—which theoretically was only provisional—along the seventeenth parallel. The division was intended to return the country to the status quo of 1945 (albeit one degree latitude north), with the forces of the DRV in the North and the forces of the French Union in the South. But Bảo Đại was soon thwarted by his new prime minister, Ngô Đình Diệm (t. 1955–1963), and his American allies, and France found itself ousted even from the South. Thus, besides the French defeat, the First Indochina War, which inaugurated decolonization in a dramatic fashion, was terminated by an unsatisfactory solution that would soon provoke a new war due to international tensions.

INDOCHINA WAR, SECOND (VIETNAM WAR) (1964–1975)

The Second Indochina War—better known as the Vietnam War—was a local war insofar as it was a confrontation between ideological blocs. It can only be understood within the context of the U.S. intervention that dealt with a communist-inspired insurrection in the South supported by the North and, beyond that, by the entire communist bloc. Its exceptional length, the importance of the American engagement, and the failure of the latter characterized this conflict.

The state of war was undermining South Vietnam in 1965 when the United States committed its forces. After the Geneva Agreement, which divided (provisionally) Vietnam along the seventeenth parallel, it only took a few years for the growing unrest, attributed to the Việt Cong (Vietnamese communists), to destabilize the regime and for the National Liberation Front to openly contest it (December 1960). President John F. Kennedy (t. 1961–1963) had sent military advisers to the area. The United States had supported President

Ngô Đình Diệm (t. 1955–1963) since 1954, but toward the end of 1963, he was overthrown with Washington's complicity by a military junta. Nguyễn Văn Thiệu (1923–2001) emerged as the victor in this incident in November 1963. Entering the White House soon afterward, President Lyndon Johnson (t. 1963–1969) decided to resort to drastic measures in Southeast Asia: to contain China and to stop the development of communist influence there, the insurrection in South Vietnam had to be crushed, which meant dissuading North Vietnam from supporting it. He obtained the necessary authority from the U.S. Congress to do so, thanks to the Gulf of Tonkin incident in early August 1964.

The intervention, as originally conceived, was intended to be limited in scope. Việt Cong operations, in particular those against U.S. military installations, were to be countered by retaliatory air raids north of the seventeenth parallel (in February 1965). But the adversary was not impressed. This kind of retaliation would become systematic—in Operation Rolling Thunder—and two marine battalions were deployed in the South, in Danang (March 1965), but again to no avail. The turning point came when the president decided to engage the army in South Vietnam (April 1965). The expeditionary corps already numbered more than 184,000 men at the end of 1965 when the U.S. leaders began to ask themselves how to pull out of the crisis.

The difficulty in finding a military solution dominated the period from 1965 to 1968. In South Vietnam, the U.S. military relied heavily on its air force and deployed about 540,000 men (by 1968), without taking into account the Saigon army. Yet the U.S. search-and-destroy strategy did not succeed in reducing the number of guerrillas deployed by the North, which probably mobilized more than 400,000 men. Meanwhile, in North Vietnam, the U.S. aerial escalation caused massive destruction (226,000 tons of bombs were dropped in 108,000 air raids in 1967), but it did not even dampen the determination of the Hanoi regime. At the beginning of 1968, the revolutionary Tet offensive launched in Saigon and in other towns demonstrated that the Viet Cong had retained its power and could undermine American confidence. Soon afterward, President Johnson decided to give up the fight. Bombardments on North Vietnam were re-

stricted, and discussions with the enemy were opened. Against a background of stalemate (a complex balance of power) on the battlefield, the communist bloc maintained strong support for the DRV in its resistance (to the Saigon regime and the United States), and while both parties in the conflict were increasingly gathering international public opinion to their side, negotiations that began in Paris in the spring of 1968 would continue for more than four years.

Parallel to these negotiations, the incoming president in the United States, Richard Nixon (t. 1969–1974), developed a strategy destined to extract U.S. forces from this quagmire. This meant a “Vietnamization” of the troops, extending the war to include Cambodia, on whose border the Việt Cong leaders were hiding (1970), and southeastern Laos, through which the Hồ Chí Minh Trail passed (1971). The strategy also fostered direct negotiations with the Union of Soviet Socialist Republics (USSR) and China, which Nixon visited personally in 1972. After a second general Việt Cong offensive (1972) and an ultimate U.S. Air Force bombardment of Hanoi (December), the Paris Agreement was finally signed in January 1973. Another agreement was made in regard to Laos, but the American bombardments continued on those regions in Cambodia beyond the control of the capital (Phnom Penh). The Paris Agreement, which prescribed a cease-fire and a “union” government in Saigon that was barely respected, permitted Washington to free its armed forces from the country where its troops had suffered more than 50,000 dead.

The Vietnam War, which had become a second Indochina war, suffered a fate similar to that of the first. A devastated country was left behind on the battlefield, and in the United States, public opinion was profoundly traumatized. The outcome of the U.S. strategic failure was sanctioned by a last communist offensive in spring 1975, which forced the U.S. ambassador and his staff to evacuate Saigon by helicopter. The People's Army overthrew the Saigon regime on 30 April 1975, thereby achieving the reunification of Vietnam by force.

INDOCHINESE UNION

See French Indochinese Union (*Union Indochinoise Française*)

“INDONESIA”

The name *Indonesia* (from the Greek *indos*, meaning “India,” and *nesos*, meaning “island”) was coined in 1850 by a British anthropologist, J. R. Logan, as a term analogous to Polynesia and Melanesia; it referred to the island region between mainland Asia and Australia where Indian cultural influence had been significant. By the third decade of the twentieth century, however, *Indonesia* had become a political term, referring to the aspiration for an independent, multiethnic state to succeed the Netherlands Indies. In 1945, the name was adopted without question for the new Republic of Indonesia.

In the nineteenth century, Westerners used several names for the region. *Further India*, *East Indies*, *Indian Archipelago*, and *Insulinde* emphasized the Indian cultural heritage; *Netherlands India* (*Nederlands Indië*), *Dutch East Indies*, and *Tropical Netherlands* (*Tropisch Nederland*) reflected Dutch political control; and *Malaysia* (sometimes *Malesia*), *Malay Archipelago*, and the Malay term *Nusantara* (lit. islands between, beyond Java) stressed the importance of Malay culture in the broad sense.

Indonesia came into more widespread public use following the 1884 publication of a general book in German by Adolf Bastian entitled *Indonesien*. In 1917, Indonesian students in The Netherlands formed the Indonesisch Verbond van Studeerenden (Indonesian Students' Society), and in 1922, the Indische Vereeniging (Indies Association) in The Netherlands adopted the name Indonesische Vereeniging or Perhimpunan Indonesia. In 1928, delegates at the second Youth Congress (Kongres Pemuda) in Batavia formally adopted the name Indonesia as part of their efforts to frame the struggle against colonialism and affirmed that they were one nation (*bangsa Indonesia*) with one language (*bahasa Indonesia*) and one homeland (Indonesia). Dutch authorities resisted the term because they saw it as falsely implying a unity of ethnic groups. In 1948, however, the Dutch constitution was changed to refer to *Indonesië* as a gesture to nationalist sentiments.

INDONESIAN REVOLUTION (1945–1949)

"We the Indonesian people hereby declare Indonesia's independence. Matters concerning the transfer of power and other matters will be executed in an orderly manner and in the shortest possible time." With these words, President Sukarno (t. 1947–1967), representing the Republic of Indonesia, launched the revolution on 17 August 1945. What was this revolution?

It was a struggle for independence and a strike against the reimposition of Dutch rule. This struggle lasted until 1949, when both sides reached a settlement (at the so-called Round Table Conference) with the establishment of the United States of Indonesia, consisting of several states (of which the Republic of Indonesia was one) joined in a federation.

The revolution started in August 1945 when the Japanese surrender in the Pacific War (1941–1945) resulted in a power vacuum in Indonesia. The opportunity that presented itself was seized upon by prewar nationalist leaders such as Sukarno (1901–1970) and Mohammad Hatta (1902–1980) to establish the republican government, complete with a provisional parliament, a cabinet led by Prime Minister Sutan Sjahrir (1909–1966), regional governors, and a newly created army. Thus, when Dutch military forces returned to the formerly occupied territory to reclaim their erstwhile colonial possession, they faced a functioning government. The Dutch were few in number and easily confined to the urban areas. They were led by Lieutenant Governor-General Dr. Hubertus Johannes Van Mook (1894–1965), who was given the unenviable task of reaching a settlement with the Indonesian nationalists, especially the republican leaders—a settlement that would ensure a peaceful outcome. Peace was not easily attained, for many nationalist leaders were wary about Dutch motives. Nonetheless, negotiations began. In 1947, the Linggadjati Peace Agreement was signed, but bad faith resulted in Van Mook ordering military action (the so-called

police action). Then, the Renville Agreement was signed in 1948. Meanwhile, the United Nations became involved in brokering the peace. The revolution became an international issue. Amid these events, measures were taken by the Dutch and other groups opposed to republican dominance to organize federal states outside Java and Sumatra. As bickering continued over the implementation of the Renville Agreement, Van Mook launched another military action against the republic (the second so-called police action). Principal republican leaders (Sukarno, Hatta, and others in the cabinet) were arrested, and the Indonesian army was driven into the countryside, where guerrilla warfare became the preferred mode of engagement. Stunned by this turn of events, world opinion was expressed through the United Nations. International pressure was applied on the Dutch to negotiate with the republic to hand over sovereignty. Independence for the United States of Indonesia was finally conceded at the Round Table Conference of 1949.

The foregoing thumbnail sketch of the major events during the Indonesian Revolution scarcely does justice to the complex series of developments that took place from 1945 to 1949. However, it serves as an anchor to set the context in which various themes about the revolution can be identified for further study.

The first aim of the revolution was to achieve independence from Dutch rule. In 1945, the permanence and continuation of Dutch authority was not to be lightly dismissed. On the Indonesian side, the fervor and strength of Indonesian nationalism was also never lacking. The youth groups (*pemuda*) were a potent force. They were the vanguard in the Battle of Surabaya (November 1945), as Indonesians fought against the returning Dutch forces working in partnership with the British-Indian soldiers. Youth leaders kidnapped Sukarno and Hatta when they felt that these older nationalist leaders were betraying the goals of the revolution and conceding too much to the Dutch. Nationalism was therefore a major force driving the revolution.

The second aim of the revolution was to achieve political unity. Unity had always been an endemic problem. There were many angles involved—political, regional, ethnicity, and others. Just to cite one example, political divisiveness constituted a major problem as religious

(Muslim) leaders vied for influence with communist and “secular” groups. There were also disagreements over the nature of the Indonesian state. Should it be Islamic or secular? And how should the interests of the non-Javanese segments be accommodated in a Java-dominant republic? The overriding concerns of independence somehow managed to move these political hot potatoes to the back burner, at least for a while. For the most part, the period of the Indonesian Revolution was focused on common goals. Muslims made concessions on the Islamic state question. Regional elites did not openly voice their challenge to the Javanese Sukarno. Army leaders were drawn from various parts of Indonesia, and all placed their professionalism above parochial interests.

A third aim of the revolution was social in nature—to achieve greater equality and justice for all. At the national level, a debate ensued between Prime Minister Sjahrir’s accommodation with capitalist interests (represented by his negotiations with the Dutch) and the communist Tan Malaka’s 100 percent *merdeka*, meaning full freedom from all, including capitalist and imperialist, controls. In this respect, the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) even launched the Madiun revolt, or Madiun Affair, in 1948 to advance the goal of a social revolution. At the regional level below the politics of the nation, various incidents occurred that suggested the makings of social changes. In Yogyakarta, village heads were replaced. In east Sumatra, the sultans who enjoyed support from the Dutch in prewar days were forced to flee for their lives. The same kind of unsettling changes took place in Pekalongan (on the north coast of Java) and Aceh, where regional and local scores were settled between contesting elites with long histories of enmity toward each other.

As an event, the Indonesian Revolution was very significant in different ways to different groups. It impacted on the political processes that took place many years after. Some examples are illustrative. The revolution provided all nationalist leaders with credentials that remained important for the rest of their political careers. For the late President Sukarno, his arrest by the Dutch (1949) and subsequent internment were turning points in the history of the revolution that he could always use to justify his nationalist reputation, if it was ever

called into question. To the army leaders, participation in the revolution was critical because it gave them the reputation of saving the Indonesian state in the hour of need. When civilian leaders such as Sukarno and Hatta were interned in 1949, the army was the de facto rallying force that continued to fight the Dutch. Revolutionary values were inculcated as part of officer training long after the Indonesian Revolution ended. In 1965, when General Suharto (1921–) seized power and, later, when he became president (t. 1967–1998), the fact that he played a combat role during the revolution was an important credential.

One way to conclude this brief account of the Indonesian Revolution is to summarize the manner in which (by way of historiography) historians and others have analyzed the episode in Indonesia’s history. If it is possible to speak of schools of thought, then the following observations are relevant.

The “nationalist” school views the revolution as a struggle for independence from all forms of colonial control. In this account, the Dutch are portrayed as the villains. This perspective takes a long view of the past. Since the 1930s, it had proved impossible to dislodge the Dutch. Like Mont Blanc in the Alps, Dutch colonialism was immovable and had existed for years with restrictive controls. A pressure-cooker situation developed, with some ineffective valves provided by the Dutch to let off steam—for instance, the Dutch-organized *Volksraad*, or People’s Council, which consulted with Indonesian representatives. When the Japanese drove out the Dutch and later surrendered to the Allied forces in 1945, the Indonesian Revolution was merely the outcome of a long period of history. This interpretation of the revolution is represented in Indonesian-language textbooks, novels, personal memoirs, army histories, and various academic and scholarly accounts.

Another school adopts a more future-oriented perspective. In this view, the Indonesian Revolution released forces that shaped Indonesia’s democracy. How did this happen? The revolution was a platform to involve many in the political process. The determination of the nation’s future was not to be confined to an elite few. By dismantling an autocratic Dutch system of colonial rule, the revolution opened the way to greater participation—and more democracy.

Also, during the revolution, various democratic institutions were formed, especially parliamentary institutions and a cabinet, and generally popular leaders emerged in the republic. This was contrasted with the phalanx of Dutch leaders and other ephemeral figures who assumed positions of power in some federal states outside Java and Sumatra. The Indonesian Revolution was therefore an instrument of democracy. The most prominent exponent of this school was the late George McTurnan Kahin.

A third school of thought argues that the revolution was merely a national struggle in which the Indonesian people exchanged one set of masters for another. Supporters of this perspective have tried to place in the forefront the social revolution that was kept as a sub-theme in the other accounts. One proponent of this school is B. R. O'G. Anderson. Many others have also directed their research efforts to understanding the social aspects of the Indonesian Revolution. The intense research activity gives the impression that this is the dominant school, but this is not to say that it has edged out the thesis that nationalism was the driving force of the Indonesian Revolution.

A fourth school of thought attempts to correct the national emphasis of the Indonesian Revolution and instead focuses attention on the subnational developments. There are now more and more regional studies that explore the dynamics of the Indonesian Revolution outside Java or even at the local level within Java. These studies take Sumatra, Sulawesi, and even Singapore as their units of analysis.

The Indonesian Revolution thus remains an important event in the history of Indonesia. It continues to be a subject of research by academic historians. Memoirs, biographies, and commemorative seminars still provide various perspectives not generally available in survey accounts.

INDULTO DE COMERCIAR

The *indulto de comerciar* (commercial privilege) was a special concession or permission that allowed Spanish provincial governors (*alcaldes*) in the Spanish Philippines to engage in commercial activities that were otherwise proscribed by law. Under the Laws of the Indies, officials were forbidden to trade but were allowed to violate this prohibition under a royal order of 17 July 1751 or 1754 by paying a prescribed fine in advance. The legal definition of the word *indulto* means a permission or privilege conceded to a person so that he or she can do what cannot be done without that permission. Provincial governors, paid inadequate salaries and frequently obliged to purchase their positions in the first place, took advantage of this concession to make their fortunes. Generally, the highest fines were paid for posts where trading opportunities were

most lucrative at centers of industry and foreign trade or along the inland frontier. But the basis on which indultos were calibrated was not always apparent, and major provinces such as Tondo and Cavite incurred no such fines. The system gave rise to many abuses. A newly appointed *alcalde* was able to establish his own supply store run by his wife or agent and then use his executive powers to undermine business rivals. He could also monopolize the market for credit by using his judicial office to interpret contracts and obligations in order to disadvantage competitors. Legal redress was difficult. The only appeal was to the same officeholder in his capacity as judge of the court of first instance (district court). The system was finally abolished by royal decree on 23 September 1844.

INQUILINO

A person who held a near-hereditary lease on agricultural land in the Spanish Philippines was known as an *inquilino*. In return for a flat rent paid to the landowner, he either worked a lease with tenant-sharecroppers known as *kasamahanes* or sublet smaller parcels for amounts in excess of what he paid himself, a practice that was technically illegal but easily concealed. He was also assured security of tenure unless he was unable to pay rent for two consecutive years. Rents depended on the quality and location of the land

and ranged from 30 to 80 *cavans* (1 *cavan* equals 44 kilograms) of unhusked rice per *quiñon* (2.7 hectares). Tenant-sharecroppers received a percentage of the harvest in return for their labor, which varied according to the provision of seed, work animals, and tools but frequently left them in debt against the next year's labor or share, thereby laying the foundations of the paternalistic landholding system still extant today. Many *inquilinos* were Chinese mestizos who, by intermarriage with members of the hereditary chiefly class, the *principalia*, had come to constitute a rural upper class, especially in Central Luzon by the late nineteenth century. Their wealth not only assured them a reliable body of farmworkers and followers but also enabled them to send their sons to study law and medicine in Manila or overseas. The national hero of the Philippine Revolution (1896–1898), José Rizal (1861–1896), executed by the Spaniards in 1896, came from just such a family background.

INSTITUTE FOR MEDICAL RESEARCH (IMR)

In the last quarter of the nineteenth century, vast areas of jungles and swamps were devoted to tin mining, plantations, and the construction of roads and railways in the British-protected

Peninsular Malay States. The British colonial authorities faced problems in tackling contagious tropical diseases that beset thousands of workers involved in the process. The hot and wet tropical conditions that enveloped jungles and swamps encouraged the breeding of malaria-bearing insects and a host of viruses that caused certain death. These problems prompted the authorities to set up a medical institute to carry out research on and eventually find cures for these diseases, for the benefit of the empire and the well-being of the people. Thus, in 1900, the Institute for Medical Research (IMR) was established in Kuala Lumpur.

The main objectives of the IMR were not restricted to research and diagnostic purposes alone. Later, the institute would also serve as a central reference laboratory, a training center for medical technologists, a site for vaccine production, and a center for reference at national and international levels. It is associated with the British Medical Research Council, the U.S. Army Medical Research Command, the International Center for Medical Research and Training at the University of California, and the Tropical Medicine Project of the Southeast Asian Ministers of Education Organization (SEAMEO). It also has joint projects with the World Health Organization (WHO) and universities in the United States and Japan.

From the outset, the IMR has slowly but surely made progress in its research. Discoveries about the causes or sources of diseases were made, followed by preventive measures and cures. Some such discoveries were made about beriberi, which was basically linked to a dietary factor and is now no longer a medical problem. In overcoming malaria, a mosquito-borne disease, effective preventive measures and control freed Malaysia to a very large extent from the blight. Numerous other discoveries made by the IMR also led scientists elsewhere to pursue more research in the field, namely, in the causes and treatment of dysenteries, typhus, leptospirosis, leprosy, filariasis, and other diseases. The IMR has also produced and is still producing vaccines for particular diseases. Discoveries made by the IMR also help Malaysia to plan and develop health programs and to introduce policies through the Ministry of Health, which tables them in the Malaysian Parliament.

IRIAN JAYA (WEST IRIAN)

Irian Jaya (Glorious Irian), also known as West Irian, West New Guinea, and West Papua, is the most eastern province of Indonesia, bordering independent Papua New Guinea. There were early trade contacts between West New Guinea (WNG) and the Majapahit empire in Java in the thirteenth and fourteenth centuries. Rulers of Majapahit and neighboring Tidore regularly raided New Guinea to capture slaves. The Portuguese discovered the island in 1512, but it was named by the Spaniard Ynigo Ortiz de Retes, who, on his way to Mexico in 1545, noted similarities with Guinea in West Africa and named it New Guinea.

New Guinea had no significance for the (Dutch) United East India Company (VOC). The VOC recognized the sovereignty of the sultan of Tidore over the area, hoping that he would restrain piracy. In 1828, the Dutch government annexed WNG up to the one hundred forty-first parallel, and the area became part of the residency of Ternate. Attempts to actually exercise Dutch administrative control failed. Fort Du Bus was established near Lobo, in a malarial region. It had to be abandoned in 1836.

In 1861, the colonial government forbade the sultan of Tidore's raiding of WNG to demand tribute. Some Dutch trading companies started to trade with WNG, and Catholic and Protestant missionaries established themselves along the coast. German and British private

companies took an interest in eastern New Guinea. In 1884, Germany claimed the northeast area and Britain the southeast. Increased German and British interest motivated the Dutch colonial government to introduce effective colonial rule in WNG. In 1898, administrative posts were established in Manokwari and Fak Fak, as they were in Merauke in 1902. In 1905, the sultan of Tidore ceded all rights to WNG to colonial Indonesia.

It took several decades before the inhospitable interior of WNG was explored. The colonial army conducted exploratory treks from 1907 to 1915. Scientific explorations were conducted. For instance, from 1920 to 1922, an expedition climbed the Wilhelmina peak (now Puncak Trikora). The coastal regions were mapped in the 1920s. In 1936, an expedition climbed the highest mountain, the Carstensz peak (now Puncak Jaya Kesum). The Wissel Lakes were explored from the air, and in 1938, the large Baliem Valley was discovered. WNG proved to have a wide variety of peoples, organized in some 200 distinct language groups.

In 1926, the Dutch established a penal settlement at Tanah Merah, up the Digul River. It housed over 800 Indonesian nationalists, banned from other parts of the country, and members of the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) who had been involved in uprisings.

By 1941, WNG had 650,000 inhabitants (Lagerberg 1962: 35, 68). Dutch colonial rule was largely confined to the coastal areas. New Guinea was of strategic significance during the Pacific War (1941–1945), during which the Dutch held on to Merauke. Australian troops surrendered the northeast part of the island, but Japanese attempts to capture the southeast failed. In 1943 and 1944, Australian and U.S. forces pushed back Japanese positions, and in July 1944, the whole island was under U.S. control; Dutch colonial administration returned to WNG.

WNG was excluded from negotiations about Indonesia's independence in 1949. The Dutch argued that the population was ethnically different from the rest of Indonesia. The small number of educated Papuans shared Dutch fears that the people would not be regarded as equals in Indonesia. The Dutch colonial government hatched plans to resettle dis-

placed Indo-Europeans in WNG and encouraged Dutch migrants to colonize its highlands.

Further Dutch-Indonesian discussions in 1950 were unsuccessful. The Dutch intensified the administration of the area and started to develop it. Indonesia failed to gain support in the United Nations in 1957 for inclusion of WNG in the Republic of Indonesia. It nationalized Dutch companies and expelled Dutch nationals. The Dutch hardened their position against WNG's integration, and they enhanced the political awareness of the population by establishing a semirepresentative body, the West Papuan Council, in 1961. The date for West Papuan independence was set for 1970. The word *Papua* was used as a substitute for WNG rather than *New Guinea*. It was obtained from the Portuguese word *papuas*, itself derived from the local word meaning "curly hair."

Indonesia started military intrusions into WNG in 1961. It again brought its case before the United Nations, but no solution was reached. The U.S. government was concerned about left-leaning President Sukarno (t. 1945–1967), and they wooed him by pressuring the Dutch and Australian governments into a compromise. Sovereignty was transferred to the UN Temporary Executive Authority (UNTEA) in October 1962 and to an Indonesian interim government in 1963. WNG was renamed Irian Barat (West Irian), *Irian* being a Biak word meaning "the island." During a 1969 referendum, 1,026 selected representatives were cajoled into voting for remaining with Indonesia. Irian Barat became Irian Jaya, Indonesia's twenty-sixth province, in 1972.

The Indonesian government orchestrated economic development in West Irian. In 1967, it granted exploitation rights to the vast copper and gold deposits in the Grasberg mountains to a consortium of the U.S. company Freeport McMoRan and the British firm RTZ. Other mining and rain forest logging concessions were granted to consortia of foreign and Indonesian companies. These ventures mainly employed labor from other parts of Indonesia. Land was appropriated from local people without sufficient compensation, and the mining and logging royalties flowed largely to Jakarta. Thus, the benefits to local people were limited, and the mine tailings and deforestation also caused severe environmental problems.

Migrants, partly sponsored by the government, flooded in from overpopulated areas in Indonesia. By 1990, the population was 1.6 million, of which at least 0.6 million were migrants (Kerajaan Indonesia 1990). Non-Papuans took most of the jobs in the public sector, and Papuans were forced to change their behavior to suit the cultural norms of administrators. All social indicators, such as literacy and health status, revealed low standard-of-living levels in Irian Jaya. Papuans expressed their dissatisfaction in several ways, from occasional demonstrations to open resistance by the Organization for Free Papua (Organisasi Papua Merdeka, OPM, established in 1965). Resistance was forcefully repressed by the Indonesian military.

After the regime change in Indonesia in 1998, calls for attention to WNG's plight increased. In 2000, President Abdulrahman Wahid (t. 1998–2001) promised greater freedom of expression, which reinforced the call for independence by unified Papuan leaders. The region was renamed West Papua in 2001, but the Indonesian government has yet to deliver on its promise of greater autonomy.

ISAN

Isan (lit. northeast) is a geographic and administrative term referring to the northeastern region of Thailand. This region covers the largest part of the country and has the greatest amount of population. However, it is also the poorest part in terms of both economic prosperity and natural resources.

The term *Isan* was first coined in 1900 by the centralized government based in Bangkok when King Chulalongkorn (Rama V) (r. 1868–1910) undertook administrative reforms by grouping a number of provinces into a single administrative unit called the *monthon* (circle) (Wyatt 1984: 209). As a result, some provinces in the northeast were grouped together as a circle and named *Isan*, since it was located to the northeast of Bangkok, the capital city.

Although the region as a single administrative unit was introduced only a century ago, Isan was the site of early settlements of humans from the Neolithic period. Archaeological excavations reveal that, at that period, there were early settlements around the river basins of the Chi and the Moon, two of the most important rivers of the region (Bellwood 1992: 118–120). These basic prehistoric settlements gradually developed into small city-states based on Buddhism and Hinduism from Dvaravati and Angkorian Khmer (Cambodian empire) cultures during the eleventh and thirteenth centuries C.E. However, the region was still underpopulated during this period.

Ayutthaya kings ruled the lower part of Isan, notably King Boromracha II (r. 1424–1448) and King Boromtrailoknat (r. 1448–1463);

before the fall of Ayutthaya more northeast areas were brought under its sovereignty while the others were under the influence of the Laotian kingdom. The inhabitants were a mixture of T'ai, Lao, Khmer, and other ethnic groups. However, in the sixteenth century, more Lao people started to cross the Mekong River to settle down in the northeast, but their mass migration did not take place until the late seventeenth and eighteenth centuries. During this period, the Laotian kingdom of Lan Xang experienced political instability arising from the problem of succession to the throne, which was followed by fighting among many court factions. As a result, four groups of Lao crossed over the Mekong River to settle in Isan. This exodus led to substantial increases in the numbers of Lao in the region.

Lao settlements in the northeast helped to strengthen the political and economic power of Thai kingdoms because they provided much-needed manpower for the newly established Thonburi (1767–1782) and Chakri (founded in 1782) dynasties after the fall of Ayutthaya in 1767. During the reigns of the first three Chakri kings, Lao settlers were welcomed in the northeast, and the kings supported local Lao leaders who led their followers from Lao to live in Siam by promoting them to be local chiefs. Many new towns were founded with royal support and approval. This policy was carried out until King Chulalongkorn undertook administrative reforms in the 1880s. By the time this policy ended in 1885, 113 new towns had been founded and were ruled by local leaders according to Laotian traditions, with minimal interference from the capital. Thus, by the nineteenth century, the whole region of the northeast was brought under Thai sovereignty. It is obvious why Bangkok wanted to incorporate the region under its complete control, since it provided the capital with abundant and valuable forest products for local consumption and export, as well as cheap manpower.

The French presence in Indochina, especially its attempt to colonize Laos in the second half of the nineteenth century, posed a serious threat to Siamese control over the northeast. At the same time, the need to centralize political and economic power led King Chulalongkorn to replace traditional rule, in

which local leaders were given complete control over their vicinity, with centralized authority at the expense of local power. In 1892, the new form of regional and local administration known as *Monthon Thesaphiban* (circle) was introduced, in which a number of provinces were grouped together as a single administrative unit and ruled by a centrally appointed governor (Wyatt 1984: 209–210). In 1894, all the towns in the northeast were grouped into three circles, and in 1900, one of the circles was named Isan, hence recording the debut official usage of the word. Subsequently *Isan* became synonymous with the region.

In 1933, the Siamese government, which came into power after the 1932 Revolution, abolished the *Monthon Thesaphiban* system and divided circles into provinces; as a result, Isan as a regional administrative unit no longer exists. However, the term *Isan* is still widely used and connotes a sense of regionalism (Tambiah 1977: 495–495, 498).

**ISKANDAR MUDA, SULTAN
(MAHKOTA ALAM) (r. 1607–1636)
“Crown of the World”**

Aceh reached its height in power and influence under Sultan Iskandar Muda, the self-declared “Crown of the World” (Mahkota Alam). Modern-day Acehnese people look upon him as the embodiment of Aceh’s independent imperial past. However, the wars he waged and the policies he enacted created a burden that was ultimately unsustainable for his kingdom, and his death heralded its slow decline.

The vast wealth and pomp of the court of Aceh never failed to impress foreign visitors. Guarded by a retinue of slave-soldiers, Iskandar Muda would proceed to Friday prayers accompanied by several thousand people and dozens of elephants. The port of Banda Aceh was an entrepôt crowded with the peoples of South-east Asia, India, and West Asia.

Iskandar Muda’s wealth derived from his monopolizing of the trade in forest products in the hinterland, particularly pepper, and through the levying of duties on passing shipping. Vessels from India paid the relatively high 5 percent duty, and those belonging to the European states and trading companies paid 7 percent. Iskandar Muda was said to be a rapacious harvester of properties on the death of their owners—all land being regarded as royal property. He also ensured his personal domination of commerce, first making monopoly arrangements to disadvantage local and Indian traders while attracting the Dutch and English. He then forced these newcomers in 1622 to purchase his stocks of pepper at exorbitant prices. Most foreign accounts are naturally critical of Iskandar Muda as an avaricious and arbitrary ruler. Certainly, he sought to compete with the Europeans. Anthony Reid (1993: 107) also argued that he sought to resist the influx of Spanish silver in Southeast Asia by minting and inflating the value of his own gold coin in 1620.

Iskandar Muda is also remembered as having instituted the formal Islamization of governmental structures in Aceh. He created a new legal system, giving the office of *qadi* (*kadi*; judge) greater influence. He enforced greater adherence to Islamic norms, such as obligatory fasting in the month of Ramadan and the giving of alms (*zakat*). Like his predecessors, he encouraged *‘ulama* (theologians) at

his court, the most famous being Shamsuddin al-Sumatrani of Pasai (d. 1630), although the mystical doctrines that were encouraged there were later denounced during the reign of his successor, Iskandar Thani (r. 1636–1641). Furthermore, he established a policy of appointing district chieftains (*uleebalang*) on three-year rotations, and he set up a system of parochial mosques. Aceh also maintained formal ties with the Ottoman Empire.

In the seventeenth century, Aceh was engaged in a three-way struggle for the Straits of Melaka with the Portuguese at Melaka and the Malay sultanate of Johor. Further eastward lay the equally powerful states of Banten and Mataram. Iskandar Muda had at his disposal a large fleet of war galleys. However, these vessels, heavily armed and manned, were also very unwieldy and would fail in the key campaign of 1629.

In 1612, Iskandar Muda sent to England’s King James I (1566–1625) a lavishly gilded letter describing himself as “the lord in power here below the winds who holds the throne of Aceh and Samudra and all the countries adjacent” (Schrieke 1957: 254). He sought to back up these claims through regular campaigns, succeeding against Deli (1612) and Aru (1613), defeating Johor and capturing its sultan in the same year, and then unseating the Portuguese at Bintan (1614). After failing to take Melaka in 1616, he took Pahang and its sultan in 1617. Three years later, he struck Kedah, and he sacked Johor again in 1623 and raided Nias in 1624 and 1625. His most cherished aim, though, was to remove the Portuguese from Melaka. In 1629, he assembled a massive fleet to attack Melaka. Unable to take the well-defended town, the fleet laid an ineffective siege for six months before being repulsed by a Portuguese relief mission. The majority of the Acehnese fleet was lost and with it Iskandar Muda’s hopes of dominance of the straits.

Iskandar Muda reigned for a further seven years, his ambitions checked. Moreover, with his death, the foundations he had laid were exposed. Aceh, or more correctly the crowded port city that lay at its heart, was probably unable to be sustained by the surrounding fields. And with the loss of the fleet he had developed, it was probably unable to enforce its claims at sea. None of the rulers who suc-

ceeded Iskandar Muda was able to maintain Acehese power to the same level, although it did remain an independent sultanate until the advent of the Aceh Wars in 1873.

ISLAM IN SOUTHEAST ASIA

Island Southeast Asia was Islamized over a period of eight centuries. Today, Indonesia represents the largest Muslim nation-state in the world, with an estimated 88 percent of its population of over 228 million people professing Islam. Neighboring Malaysia, with a population of 22 million, has an indigenous Malay and tribal majority of around 58 percent; Thailand and the Philippines each have substantial Muslim minorities in their southern provinces (3.8 percent of 62 million and 5 percent of 83 million people, respectively) (CIA 2001).

Some scholars have argued that Southeast Asian Islamization was accomplished primarily through the agency of foreign traders. The conversion myths of several Southeast Asian peoples, emphasizing a divine connection between the Prophet (s.a.w.) and the local ruler, often hint at such a transmission, relating stories of the visit of a holy man from India or Arabia. It is quite likely, however, that the process was even more complicated, as there were also Southeast Asians actively involved in Indian Ocean trade. Southeast Asian waters facilitated

the trade from India to China, where there was an established Muslim presence from the ninth century. Perhaps, too, there was an impulse from Muslim communities in Champa (present-day southern Vietnam), a kingdom with a history of connections with Java.

It has been suggested that communities of foreign Muslims, forced to wait in Southeast Asia for the return of the monsoon, were given the protection of local rulers. From about the late twelfth century, it appears that some of these Muslims enjoyed influence at various Southeast Asian courts and might have played a role in the conversion of their rulers. The first reports of this process are found in the accounts of Marco Polo (1254–1324), who visited Sumatra en route from Mongol-ruled China in 1292, and the Moroccan Ibn Battuta (1304–1377), who set foot in Sumatra in 1345 and 1346.

Still, trade alone does not explain Islamization, especially as Muslim traders had lived in Southeast Asia for centuries without altering the faith of their local protectors. An alternative argument, pioneered by A. H. Johns, is that with the collapse of the Muslim order in West Asia after the Mongol conquests, Islam underwent an inward turn, with the mystical teachings coming to the fore. Johns argued that traveling mystics should therefore be seen as the primary agents of Islamization, pointing out that mysticism was not a vocation precluding the taking of any other occupation. Famous examples of Southeast Asian *'ulama* (theologians) who emphasized the importance of the mystical path in their teachings include Hamzah Fansuri (d. 1526?) and Shamsuddin al-Sumatrani of Pasai (d. 1630), active in Aceh in the seventeenth century. Even the quasi-mythical *Wali Songo*, the "Nine Saints" who are said to have Islamized Java, also laid emphasis on the mystical path. These teachings did not always remain dominant, though, and some *'ulama*, such as Nuruddin al-Raniri (d. 1658), attempted to reduce the influence of the allegedly "heterodox" teachings of al-Fansuri and Shams al-Din.

In any case, the first documentation of a royal conversion in island Southeast Asia is the tombstone, dated 1211, of Sultan Sulaiman bin Abdullah al-Basir at Lamuri on the northern tip of Sumatra. Later evidence of the gradual Islamization of the island is seen in the stone of Sultan Malik al-Salih of Samudra (Pasai), dated

Muslim women attend a mass prayer for Idul Adl-Ha. Yogyakarta, Indonesia. (Michael Freeman/Corbis)

1297. By the late fourteenth century, much of the passing trade between India and China was dominated by another Malay sultanate, that of Melaka. After it fell to the Portuguese in 1511, the locus of Muslim trade shifted to the sultanates of Aceh and Banten. From Melaka, the Portuguese Tomé Pires (ca. 1465–ca. 1540) gave a detailed description of the ongoing process of newly Islamized kingdoms asserting their control over the archipelago.

The Islamization of Southeast Asia did not accompany an Arabic conquest and was not identified with the acceptance of Arabic culture. This is not to say that Islam was never spread by conquest, as the forced conversion of the Buginese of Sulawesi by the neighboring Makassarese in 1610 demonstrates. At first, Islamization probably followed simple outward forms for the majority of Southeast Asian populations as, like their rulers, they took Muslim names and began to forsake pork and practice circumcision and Muslim funerary rites. In time, many Muslims sought instruction in the texts of Islam as compiled and disseminated by their religious scholars, the *‘ulama*.

As in West and South Asia, Southeast Asian rulers were often styled “God’s shadow on earth.” The most important Southeast Asian sultanates after the fall of Melaka were those of Mataram (Central and East Java, sixteenth to seventeenth centuries), Banten (West Java, seventeenth century), and Aceh (North Sumatra, sixteenth to seventeenth centuries). However, the supremacy of the sultans was slowly upset from the beginning of the sixteenth century by the incursions of the European states, first Portugal and Spain and then, from the seventeenth century, The Netherlands and Great Britain. And together with the Chinese, Europeans competed aggressively for the trade in the archipelago from their fortified settlements, such as those of Melaka, Tidore, or Batavia (now Jakarta). Whereas the spice-producing sultanates of Maluku (northeast Indonesia) had been effectively under European control from the sixteenth century, it was the complete annexation of Java at the end of the Java War (1825–1830) that signified the final phase of the transition from Muslim to European dominance in present-day Indonesia.

Meanwhile, Singapore (established as a British outpost by Sir Thomas Stamford Raffles in 1819) would function as a rival British hub

to Batavia, with most of the polities of the peninsula coming under de facto British administration subsequent to the Pangkor Agreement of 1874. Nonetheless, the British and Dutch administrations differed in colonial practice with regard to the treatment of the indigenous rulers. Whereas the Dutch generally left the ruler a pensioner in the palace, with little role in the maintenance of religious practice, the British deferred to the Malay rajahs in matters touching on custom and religion.

Despite the rise of Western power, the activities of Southeast Asian scholars in Mecca and Medina continued to play an important role in shaping the future intellectual directions of Southeast Asian Islam. In Arabia, many Southeast Asian *‘ulama*, such as the Acehnese *‘Abd al-Ra’uf* of Singkel (seventeenth century), composed manuals in Malay designed to guide their cobelievers at home. Others, such as the South Sumatran scholar *‘Abd al-Samad* of Palembang (1704–ca. 1789), used the Holy Cities as a base from which to launch polemics against the Christian invaders. The conquest of the Holy Cities in Arabia by the puritanical Saudi-Wahhabi alliance in the early years of the nineteenth century also appears to have inspired the violent activities of the Padri movement in the Minangkabau cultural area of West Sumatra. In this movement and as al-Raniri had in Aceh, the Padris sought to impose a more scripturalist interpretation of Islamic law on the existing traditional (*adat*) order. Matters came to a head in the 1830s when the Dutch intervened on the side of the *adat* chiefs, suppressing the Padris and annexing West Sumatra.

More direct European control in the nineteenth century would inadvertently intensify connections with Islam in West Asia, particularly after the opening of the Suez Canal in 1869. Increasing numbers of pilgrims were able to travel to Mecca for the hajj (pilgrimage). In Mecca, many sought admittance into the mystical orders headquartered there. For example, many West Javanese now gravitated to the Naqshbandiyya *tarekat* (Ar. *tariqa*)—a mystical order of Central Asian origin with a strong emphasis on normative piety. At a time when Europeans were concerned about the potential for Ottoman interference in the ongoing Aceh War and the question of political Islam generally, the Dutch interpreted the Naqshbandiyya as an inherently anticolonial movement. The Banten Ji-

had of 1888 further heightened such fears. However, it was the organizational structure of the movement, rather than its teachings per se, that allowed for the coordination of anti-Dutch activities.

Christiaan Snouck Hurgronje (1857–1936), who traveled to the Hijaz in 1884 and 1885 in order to study Southeast Asia's pilgrims and the impact of the mystical orders upon them, dispelled much of the mystery about the activities of Southeast Asians in Mecca. Furthermore, in the aftermath of the Banten Jihad, Snouck Hurgronje was hired to head the newly founded Office for Native and Arab Affairs in order to monitor the activities of Muslims in the archipelago.

At the same time, though, Cairo emerged as an important center for Southeast Asians and particularly the Malays, with the new reformist teachings of Muhammad 'Abduh (1849–1905) and Rashid Rida (1865–1936) creating great interest. These men inspired a new generation of Muslim activists and urged that the popular practice of Islam had to be stripped to its bare essentials and cleansed of the "heretical innovations" of medieval scholarship. To some extent, they advocated the puritanism of the Wahabiyya but with the important difference that they advocated the appropriation of Western technologies, such as the printing press, and modern organizational techniques. There was already a different reformist impulse emanating from among the Southeast Asian 'ulama in Mecca under Ahmad Khatib of Minangkabau (1860–1915) and among some Hadrami Arabs resident in the archipelago.

Such influences—Western, Cairene, and Meccan—coalesced in the 1910s to give rise to influential Muslim movements on Java, including Sarekat Islam (founded in Surakarta in 1912) and Muhammadiyah (founded in Yogyakarta in 1912). The first emphasized the political activation of Indonesian Muslims; the second prioritized educational and welfare reforms. The influence of these two movements was paralleled in the Malay Peninsula and in particular in Sumatra by the Kaum Muda movement. Shaykh Tahir Jalal al-Din (1869–1956), Abd al-Karim Amr Allah (Haji Rasul, 1879–1949), and Abdullah Ahmad (1878–1933) led the movement in Sumatra.

These reformists did not go unchallenged, and there were many Muslims who sought to

retain their traditional interpretations of Islam, particularly in the regions still under the nominal rule of the Malay sultans and on Java, where many Muslims resented the aggressive puritanism of the reformists. From their disputation for the leadership of Southeast Asian Islam—and particularly in Java after the founding of the traditionalist organization of Nahdatul Ulama (in Yogyakarta in 1926)—Islamic activism became polarized in many parts of Southeast Asia. Such divisions persist in Muslim political culture today, yet both sides have had an impact on the Islamic resurgence now in motion.

ISLAMIC RESURGENCE IN SOUTHEAST ASIA (TWENTIETH CENTURY)

The Islamic resurgence currently taking place in Southeast Asia is part of a broader trend in the Muslim world to reassert the core values and experience of Islam as the model by which all people should live their lives. It is, to a large degree, founded on the rejection of Western values and economic dominance in Muslim societies.

The Islamic resurgence arose out of both the nationalist and reformist movements of the late nineteenth and early twentieth centuries. At first, the character of these movements was anticolonial rather than anti-Western. In the case of Egypt, the reformists Jamal al-Din al-Afghani (1849–1905) and Muhammad 'Abduh (1849–1905) advocated a return to the idea of a single Islamic community united under a caliph. They also advocated the appropriation of modern forms of education and technology in order to address the physical predicament of Muslims.

They nonetheless urged that this material advancement also needed a solid foundation in faith. Muslims were to do away with the centuries of “accretions” that impeded the individual's access to a true understanding of Islam as defined by the Koran and the pious conduct of the Prophet (s.a.w.). Moreover, revivalists have conceptualized an idealized state modeled on their understanding of the first Muslim community (*umma*) in Medina, which laid the groundwork for Islam as both revealed faith and a system of governance.

Muhammad 'Abduh was not alone in this regard. There were similar movements in other parts of the Muslim world, most notably in Turkey and India. However, 'Abduh's line of thought was taken up by both modernists and nationalists in Egypt. With 'Abduh's death in 1905, Rashid Rida (1865–1936) played the crucial role of disseminating 'Abduh's ideology in the pages of the influential journal *al-Manar* (established in 1898 in Cairo). This journal would prove to be a key link bringing Egyptian reformism to Southeast Asia and Southeast Asians to Cairo at the turn of the twentieth century. And although there were far fewer Southeast Asians in Cairo than in Mecca, they had a strong impact on the growth of a specifically Southeast Asian reformist movement. Mecca also played a part in the dissemination of such ideas, but in general, the traditionalist line was stressed in that city, and reformism was not encouraged.

The Southeast Asian variant of the movement also adopted the forms of technology advocated by 'Abduh and Rida. It, too, highlighted the role of modern Islamic schools and publishing. Islamic presses were of key importance to this end, and reformist ideas were disseminated through *Manar*-style journals such as *al-Imam* in Singapore (1906) and *al-Munir* in Padang, West Sumatra (1911).

This was a crucial time for Southeast Asian Islam. Reformism, often referred to as modernism, usually found success in areas where the traditional role of the local rulers as defenders of religion had been revoked. For this reason, reformism developed more easily in the areas under Dutch control (in Java in particular after 1912), with the foundation of the key movement Muhammadiyah, which was allied to the mass-organization Sarekat Islam. Ironically, the Dutch authorities were at first well disposed to-

ward the modernists. However, once they began to agitate for independence by the end of World War I (1914–1918), modernism was again regarded as a manifestation of “pan-Islamism” and a religion hostile to the colonial state.

Despite the modernists’ prominent role in the national movement, with the collapse of the Ottoman caliphate in 1924 and the rise of their traditionalist opponents in organizations such as Nahdatul Ulama, the factionalized nature of political Islam in Indonesia was manifested. Reformist support for the new Saudi regime in Arabia further alienated many traditionalists. And as the national movement began to split from the reformist movement, some Muslim leaders began to question the validity of the nationalist project as an end in itself, and they hardened their scripturalist approach.

The Japanese occupation from 1942 to 1945 saw the temporary neutralization of the competing variants of Indonesian Islam by their forced merger within Masyumi (Masjumi). In the constitutional debates leading up to the declaration of Indonesia’s independence on 17 May 1945, Masyumi leaders strove to have Islam acknowledged as the state religion by stipulating that the president be Muslim and that all Muslims must implement the *Shari’ah* (*Syari’ah*), or Islamic law. Their attempts to include the *Shari’ah* in the constitution as part of what was called the Jakarta Charter became one of the most contentious issues in establishing the new state. Non-Muslim leaders and secularly inclined Muslims opposed constitutional reference to the *Shari’ah* and eventually persuaded Masyumi leaders that, in the interests of national unity, the Jakarta Charter had to be omitted for the time being. Thus, Indonesia was constituted as a pluralist state based on the quasi-secular Pancasila ideology.

The late 1940s and 1950s also saw a number of Islamic insurgencies seeking to establish an Islamic state, such as the Darul Islam movements in West Java and Aceh. Sukarno’s (Soekarno’s) Guided Democracy (1945–1967) and Suharto’s (Soeharto’s) New Order (1967–1998) regimes saw political Islam as a threat and sought either to incorporate or to suppress it, but Islamic revivalism continued to grow, fed by more intensive educational activities.

Since the 1980s, Islam has become far more prominent in the political and social life of Indonesia and Malaysia, especially among urban,

middle-class Muslims. Many more Muslims are attending to ritual obligations such as praying five times a day and fasting during the holy month of Ramadan, and in recent years, record numbers have undertaken the pilgrimage to Mecca. Islamic-style clothing, such as head-dresses and loose-fitting gowns, are now much more popular; the market for books on Islam has burgeoned; and programs on Islam feature prominently on television and radio. In short, both societies have taken on a more overtly Islamic flavor in recent decades, suggesting a deeper Islamization process.

A complex mix of factors accounts for this Islamic resurgence. Both Indonesia and Malaysia underwent rapid economic development and modernization from the 1970s, giving rise to a burgeoning Muslim middle class but one whose values and orientation were disturbed by the quick pace of change, competitiveness, and materialism of urban, professional lifestyles. Many turned with greater fervor to Islam as a way of restoring their moral bearings and identity. Politically, the Suharto (t. 1967–1998) and Mahathir (t. 1981–2003) governments found it expedient to appeal to Islamic sentiment. In President Suharto’s case, deteriorating relations with the military from the late 1980s led him to cultivate support among Islamic groups. Measures adopted included sponsoring the formation of new Islamic associations, increasing the proportion of Muslims in key government and military posts, encouraging Islamic banking, and expanding the authority of Islamic courts. In Malaysia, Prime Minister Dr. Mahathir Mohamad (t. 1981–2003) has championed Islamic causes and granted significant concessions to the Muslim community as a way of retaining the support of his Muslim Malay constituency.

This recent Islamic resurgence has taken a variety of forms, ranging from the liberal to the militant. The efflorescence in liberal Muslim thinking in Southeast Asia has attracted interest from across the Islamic world. Indonesia, in particular, has developed a strong liberal movement built on a desire to critically appraise existing doctrine and reinterpret Islamic teachings in a contemporary context. This has led to innovative and often controversial new thinking on issues such as gender, human rights, the environment, reproductive health, and civil society and democracy. Leading figures in this movement

included Nurcholish Madjid, Abdurrahman Wahid (who served as the Indonesian president from 1999 to 2001), and Djohan Effendi. In Malaysia, a similar, though less influential, movement has been under way, led by groups such as Sisters in Islam, Angkatan Belia Islam Malaysia (ABIM, Muslim Youth Movement of Malaysia), and Chandra Muzaffar's International Movement for a Just World.

Militant and doctrinaire expressions of the faith are diverse in both Indonesia and Malaysia. Tight control during the Suharto era kept militant groups underground, but remnants of organizations such as the Darul Islam remained active, though ineffective. Following Suharto's downfall in 1998, militant Islamic groups proliferated as state surveillance was scaled back and as greater freedom of expression made it easier to publicize their activities and recruit members. Among those that have risen to prominence are the paramilitary group Laskar Jihad, which has engaged in armed conflict with Christians in several regions of eastern Indonesia, and the Islam Defenders' Front (FPI), which resorts to vigilante action against nightclubs and red-light areas. Although such organizations have little mainstream support, they attract considerable media attention and have given Indonesia a somewhat more Islamist reputation in the West. Malaysia has taken a strong line against militant groups, banning the revivalist Al-Arqam in 1994 and more recently linking the opposition Partai Islam Se Malaysia (PAS, Pan-Malaysia Islamic Party) to alleged terrorist groups such as al-Ma'unah (Brotherhood of Inner Power) and the Malaysian Council of Islamic Fighters (KMM).

Political Islamism is most apparent in the efforts of several major Islamic parties in Indonesia and Malaysia to expand the scope and authority of Islamic law in national life. In Indonesia, these efforts have focused on a new campaign to reinstate the Jakarta Charter. In Malaysia, PAS is also committed to establishing an Islamic state and has sought to introduce a full Islamic penal code in the two state governments that it controls (namely, Kelantan and Terengganu), though this effort was halted by the central government.

Current indications are that the Islamic resurgence will continue in Southeast Asia, at least in the short to medium term. The election of Megawati Sukarnoputri (1947–), a secular

nationalist, as Indonesia's president in July 2001 has had little impact on the prominence of Islamic issues in the public sphere, and the survival of her coalition government relies upon her maintaining the support of major Islamic parties. Her government's muted response to the 11 September 2001 terrorist attacks on the United States and the subsequent U.S.-led military campaign against Islamic terrorism was driven largely by the need to avoid alienating the Islamic community. In Malaysia, Mahathir's successor, Abdullah Ahmad Badawi (1939–), continues to burnish his own Islamic credentials by adopting elements of the Islamist agenda such as making Islam the basis of the Malaysian state.

ISTHMUS OF KRA

The Isthmus of Kra is the narrow section of land in southern Thailand that separates the Andaman Sea from the Gulf of Thailand. At its narrowest, in the region between Chumphon on the west coast of Thailand and Nangin on the east, fewer than 80 kilometers separate the two seas. Its chief significance is that the isthmus traditionally provided an important route for goods moving between the South China Sea and the Indian Ocean, thereby connecting the important products and markets of southern China, West Asia, and Europe. An overland route across the isthmus was important because it allowed shipping to bypass the sea-lanes of the Straits of Melaka, with its attendant hazards from both the difficulties of navigation and the potential dangers of piracy.

Despite this apparent advantage, the isthmus was never especially popular as an overland alternative to the route around the Malay Peninsula. Transshipment costs were high, and crossing the isthmus, especially with heavier goods, was difficult and costly. The development of the ports of the Straits of Melaka (namely, the Straits Settlements—Melaka, Penang, and Singapore) provided added attractions for merchants taking the longer sea route around the Malay Peninsula, as well as additional trading opportunities. The expansion of European shipping into the region from the early nine-

teenth century did lead to a number of proposals to build a canal across the isthmus to seize that trade. British, French, and German interest in the potential geostrategic importance of the isthmus grew as a result. From the 1860s onward, a series of proposals were mooted, but no successful project was ever launched because of the high cost and economic uncertainty involved in the project. In recent times, canal projects have been proposed as part of wider strategies for the economic development of southern Thailand and northern Malaysia, but no clear economic benefit has yet been demonstrated from such projects, especially as the environmental costs associated with such major undertakings would be very significant.

J

JAMBI

The Jambi region, around the basin of the Batanghari River in central Sumatra, was the site of the pre-Islamic kingdom of Melayu. It also sometimes served as the capital of the empire of Śriwijaya (Śrivijaya). Jambi was an important pepper port in the seventeenth century and later supplied dragon's blood resin to China and Europe. Jambi resisted Dutch control until the early twentieth century.

The earliest references to the region are found in Chinese texts, which recorded an embassy from Melayu to the Chinese court around 644 C.E. A stone inscription suggests that Śriwijaya and Melayu were linked during this period, and the writings of I-Tsing (I-Ching) (635–713 C.E.) have been taken to indicate that Jambi was the capital of Śriwijaya at that time. In the ninth century and again in the eleventh century, Jambi sent further missions to the Chinese court.

The large Buddhist complex of Muara Jambi, 26 kilometers downstream from the modern capital, probably dates from the ninth century, but there is evidence that it was still of importance in the thirteenth, when Melayu seems again to have been the capital of Śriwijaya. Trade in forest products and control of the Straits of Melaka through which foreign shipping passed were key to Jambi's importance.

In the mid-fourteenth century, the Jambi kingdom came under the control of Adityawarman, who had been brought up in the Majapahit kingdom in Java but was probably the son of the

Malay ruler. Adityawarman moved his capital to Dharmashraya, somewhere in the upper reaches of the Batanghari. He extended his power to the highlands of West Sumatra and later moved the capital to Pagarruyung. Although the *Kertanagara*, a Javanese account, listed it as a dependency of Java, Jambi avoided paying tribute to Majapahit and sought patronage from China. However, this strategy caused Jambi to fall afoul of both Majapahit and China. According to O. W. Wolters (1986), the Javanese laid waste to the Jambi *keraton* (*kraton*, royal court, palace) in 1377.

After Adityawarman and until the arrival of European traders, the history of Jambi was recorded only in oral tradition. Islam was probably introduced in the early fifteenth century, when Jambi came under the sway of Demak. By the sixteenth century, Jambi was attracting Arab and Portuguese merchants, but by this time, it owed allegiance to Melaka. In the seventeenth century, pepper brought down the river from the highlands attracted Dutch and English traders. By 1626, Jambi was regarded as the chief source of pepper for the English East India Company (EIC), which brought Indian textiles and gold for exchange. The Dutch also found Jambi a profitable source of pepper, and Jambi enjoyed a time of plenty while manipulating the Anglo-Dutch rivalry.

A fall in pepper prices and conflict with Johor marked the start of economic decline. This process was exacerbated by disputes over royal succession that led to a split between upriver and downriver parts of the kingdom. By the 1630s,

the English had left. Dutch attempts to profit from Jambi's internal difficulties were unsuccessful, and the (Dutch) United East India Company (VOC) closed its post in Jambi in 1770.

In the early nineteenth century, Jambi's trade was chiefly with the British city ports of Singapore and Penang, the main exports being resins, especially *jerenang* (dragon's blood resin). The Dutch returned to Jambi in 1833 and forced a contract with Sultan Muhammad Fakhrudin (Facharudin) (r. ca. 1833–1841) in which he relinquished his rights to import and export duties. However, the British continued to assert their right to trade with Jambi, and Dutch hegemony was circumvented by the use of alternative trade routes.

In 1855, a new ruler, Sultan Taha Saifuddin (r. 1855–1858), came to the throne. He refused to continue the agreements that the Dutch had forced on his predecessors and moved to a secret location in the interior. The Dutch installed a series of puppet rulers, but none agreed to Dutch requests to reside in the capital. From upriver bases, they kept in close contact with Taha, who orchestrated a continuing but erratic resistance to the Dutch, for whom much of the territory remained unsafe.

In 1904, the Dutch killed Taha, and two years later, Jambi became a full residency. Resistance continued for some years, however, and economic factors brought about the relatively settled period thereafter. Local landowners were compensated financially for the use of their land for rubber plantations, heralding a period of prosperity for the people of Jambi. Chinese traders gradually took over the commercial center.

The period of the Japanese occupation (1941–1945) was one of hardship, which continued during the years immediately following Indonesian independence in 1949. Jambi's history from then on has reflected the fortunes of Indonesia as a whole. Proximity to Singapore, the large and economically active Chinese population, and the availability of timber have meant that a degree of prosperity has been maintained. However, the relative lack of substantial resources such as oil has meant that Jambi has remained something of a backwater.

JAPAN AND SOUTHEAST ASIA (PRE-1941)

Japan's specific position as the only country in Asia that succeeded in economic modernization in the late nineteenth as well as the early twentieth century stipulated its relations with Southeast Asia. Japan was inclined to regard itself as a leader of Asia, including Southeast Asia. Outstanding Japanese economic as well as military performance induced a kind of respect from Southeast Asian peoples in the early stages. But as its colonialist policies became clearer, awe and respect were replaced with fear and hatred of Japan.

Starting in the 1910s, Southeast Asia became the supplier of raw materials and the market for industrial products (initially sundry goods, then textiles) for Japan. Japanese investment to this area also began in the early 1900s (first in rubber plantations in Malaya). Japanese immigration to Southeast Asia commenced in the beginning of the Meiji era (1868–1912), the largest settle-

ment being Davao on Mindanao Island, the Philippines, where Manila hemp was grown by the Japanese starting in the mid-1900s.

The clash of interests between a newly emerging imperialist country, Japan, and the old Western imperialist powers that had long ruled Southeast Asia culminated in the outbreak of the Pacific War in December 1941. In August 1945, Japan was defeated. The most important clue that led to the resumption of economic relations between Japan and the newly independent Southeast Asian countries after the Pacific War was the payment of war-damage reparation. It paved the way for Japanese companies to export their industrial products. Japanese investment in the area started in the late 1950s.

From the mid-sixteenth century till the late seventeenth century, there were seven Japanese enclaves in Southeast Asia that respectively formed a portion of such prosperous cities as Ayutthaya (Thailand), Manila (Philippines), Phnom Penh (Cambodia), and Hanoi (Vietnam). Because of the ban on emigration and external trade by the Tokugawa government in 1635, these Japanese “towns” were gradually extinguished. In the Edo era (1603–1868), Japan was closed to foreigners, with the notable exception of the Dutch and Chinese. Only after the Meiji Restoration (1868) were relations between Japan and Southeast Asia resumed.

Political and Diplomatic Relations

There were several cases in which the nationalists in Southeast Asia required help or assistance from Japan in struggling against the Western colonialists. For instance, in 1899 the Revolutionary Army of the Philippines procured arms and ammunition, though archaic, from the Japanese army. By this dealing Japan intended to extend its influence to the Philippines. But the Japanese ship carrying the firearms sank in a rainstorm, and the attempt was aborted. Soon after the end of the Russo-Japanese War (1904–1905), the Vietnamese nationalist Phan Boi Chau (1867–1940) led the “Exodus to the East” movement, sending some 200 youths to Japan. Their objective was to learn how to modernize a country and to garner support from the Japanese government for Vietnam’s independence. Several years later, however, they

realized that Japan was not their ally, but France’s.

Along with the only independent country in Southeast Asia before the Pacific War, Thailand, Japan concluded the Treaty of Friendship, Commerce, and Navigation in 1898, in which extraterritoriality was admitted to the Japanese. The extraterritoriality clause was abolished only in 1924. Nonetheless, based on this treaty, Japanese advisers helped Thailand in various fields, such as modernizing the legal system, sericulture, and female education.

The first Japanese diplomatic office was established in Manila in 1888 and increased gradually following the expansion of its economic influence (see table). The Western countries welcomed Japanese advancement in the early stages because it was useful for the economic development of their colonies. That was why the Dutch East Indies government accorded the same legal status to the Japanese in 1899 as to Caucasians. But after the end of World War I (1914–1918), conflicts of interest began to surface. Although Japanese activities in Southeast Asia did not provoke anti-Japanese sentiment from the native nationalists, its military invasion and political interference in China resulted in the establishment of anti-Japanese movements among the overseas Chinese in Southeast Asia.

Trade

In the late 1890s, the main commodities of Japanese export to Southeast Asia were coal, fishes, and sundry goods. Its largest imported commodity was raw sugar from the Dutch East Indies (Indonesia). By the 1900s sundry goods including matches, soap, and chinaware became the largest exported item, and by the early 1910s, textiles, especially cotton products, exceeded all others. Rapid penetration of Japanese textiles into the Southeast Asian market threatened the dominant position of the products of Western countries, and eventually an import quota system was introduced in the respective colonies in the late 1930s. As for Japanese imports, by about 1900 rice from Indochina, Burma (Myanmar), and Thailand exceeded raw sugar. Tin and natural rubber from Malaya were imported by Japan from the start of the twentieth century, and iron ore from Malaya from 1921. Malaya was Japan’s biggest supplier of iron ore during the second half of

the 1930s. At that time Indonesia was the second largest supplier of petroleum to Japan after the United States. In short, Southeast Asia has been a supplier of raw materials and a market for light industrial products for Japan since the end of World War I. Japanese *sogo-shoshas* (large trading companies) had surpassed Western companies in trade with Japan by the early 1910s. The two largest *sogo-shoshas*, Mitsui and Company and Mitsubishi Corporation, established Singapore branches in 1891 and 1917, respectively. Prior to the Pacific War, the two companies had established their branches in the main economic towns of Southeast Asia.

Investments

As of 1939, Japanese investments by area and by industry were as follows (million of Yen):

By Territory

Malaya	69.9
British North Borneo	20.1
Dutch East Indies	60–90
Philippines	88.0
Indochina	0.9
Thailand	1.3
Others	22.8
Total:	300.0

By Products

Rubber	100
Manila hemp	30
Coconuts, agricultural produce	20
Forestry	20
Mining	60
Fisheries	20
Commerce, Banking & Services	40

Conglomerate companies such as Mitsubishi, Mitsui, and Nissan owned the larger Japanese rubber plantations in Malaya. The highest Japanese percentage of plantation acreage in Malaya (3.9 percent) was in 1919. A few Japanese companies including a Nissan affiliate monopolized the iron ore mining in Malaya, and all the products were exported to Japan. Japanese fishing companies provided half of the marine products in Singapore in the 1930s. The Japanese monopolized Manila hemp plantations in Davao. Western countries felt threatened by these activities and began to restrict them after the end of World War I.

Immigrants and Education

From the very beginning of the Meiji era, hundreds of young girls of poor rural areas were taken to foreign countries, especially to Southeast Asia. They were called “*karayuki* (go to China) *san*.” The majority of *karayuki-san* served as inmates of brothels in the major urban centers. As the Japanese government encouraged emigration of poor farmers to reduce rural poverty, hundreds of Japanese farmers were settled in Malaya, North Borneo, and Thailand in the early 1890s. But many of them died because of the tropical climate and overwork; the immigration projects failed within a few years. In the Philippines, thousands of Japanese laborers were employed to construct the Benguet Road to reach Baguio, a newly planned summer resort, in the early 1900s. After the completion of the road in 1905, Davao became the center for Japanese settlers. They grew Manila hemp, and their numbers had reached about 20,000 when the Pacific War started. In Malaya, 1,000 to 2,000 Japanese worked on rubber plantations as tappers in the 1910s. Hundreds of merchants also lived there. They started their businesses as peddlers in the 1900s and later settled themselves in various towns as retailers, photographers, dentists, and so on. They were the vanguard for Japanese goods. Hundreds of Japanese fishermen also lived in Singapore, North Borneo, the Philippines, and Indonesia. These Japanese residents formed Japanese societies even in remote towns. Most of them were formed in the mid-1910s.

Like their Chinese counterparts, the Japanese emphasized the need for and value of education. Japanese immigrants established Japanese-type elementary schools in the bigger towns. Teachers, textbooks, and curricula were imported from Japan.

Prior to the Pacific War, many of these Japanese returned to Japan. When the war started, those who had remained were arrested and interned. They were later released upon the arrival of Japanese Imperial forces. War, however, did not bring prosperity to the Japanese residents of Southeast Asia.

JAPANESE OCCUPATION OF SOUTHEAST ASIA (1941–1945)

The Pacific War started when Japanese armed forces landed on the Malay Peninsula on 8 December 1941. Manila was occupied by Japanese forces on 2 January 1942, followed by Singapore on 15 February, Batavia (Jakarta) on 5 March, and Rangoon (Yangon) on 8 March. By the end of May 1942, all of Southeast Asia had come under Japanese military occupation. Prior to that, they had peacefully occupied North Indochina on 23 September 1940 and South Indochina on 29 July 1941, based on the agreements that had been concluded, under military threat, with the French Vichy government. Although Thailand (Siam) was an independent country, Japanese armies intruded there on the same day that the Pacific War erupted. With the Pact of Alliance concluded between the two countries on 11 December 1941, Thailand was de facto occupied by Japan also. Thus, until 15

August 1945, when Japan surrendered, the entire region of Southeast Asia was under Japanese jurisdiction.

Although this period itself was not long, the occupation brought about drastic changes to Southeast Asia in many dimensions. Nationalistic awakening during the occupation brought about the independence of various countries soon after the end of the war. Southeast Asians consider this awakening to have grown because Japanese rule was far more oppressive than that of the Western colonialists. On the contrary, some Japanese still maintain the opinion that this awakening resulted from the self-reliant consciousness cultivated by the occupying Japanese authorities. As to the economic situation, the occupation destroyed the prewar fundamental production system. Such products as the rice of Burma (Myanmar), Thailand, and Indochina, as well as the rubber and tin of Malaya, could not be transported to the traditional consuming areas. Manufactured daily necessities could not be imported from the Western countries as in the past. As hundreds and thousands of youths were conscripted for military construction works, production, such as rice cultivation, suffered. The Japanese military administration (JMA) issued large quantities of military banknotes, and shortages of materials and soaring inflation haunted the entire region. In the social arena the JMA tried to Japanize (*Nipponize*) the local peoples. Japanese culture, especially Japanese spirit (*Yamato-damashii*) and the Japanese language (*Nihon-go*), was imposed on them as the model to be upheld. People were compelled to worship the Japanese emperor. Religions other than Shintoism were slighted. To implement its policies, the JMA mobilized various elements of the local population such as the traditional elite and young nationalists. Many prewar elite who cooperated with the Japanese lost their influence after the war. Those leaders who had been involved in the clandestine anti-Japanese activities led the independence struggle in the postwar period.

Politics

In preparation for war, Japanese intelligence sections worked upon the various anti-Western groups. The fundamental stand of the Japanese government, as well as its army, toward the Southeast Asian peoples was shown in the "Es-

sential Guidelines in Implementing the Administration in the Southern Occupied Territories," decided at the Imperial General Headquarters–Government Liaison Conference on 20 November 1941. The "Guidelines" stated: (1) In order to ascertain acquisition of the military resources and self-support of the army in the occupied areas, heavy burden on civil life should be tolerated. (2) Lead the natives (*genju domin*) to strengthen their reliance on the Imperial Army. (3) Refrain from inducing a too early independence movement (Japan Defense Agency 1985: 91–92). Concrete policies varied, depending on the country as well as on the deteriorating war situation. As for Burma, the *Minami Kikan* (Minami Agency) headed by Colonel Suzuki Keiji was formed in January 1941. By October 1941, persuaded by the Japanese army, thirty young nationalists including Thakin Aung San (1915–1947) received training on Hainan Island, which had been occupied by the Japanese forces since February 1939. They became the nucleus of the Burma Independence Army (BIA), which was formed in December 1941 and helped the Japanese military invasion into Burma.

As for Malaya, the Japanese consul in Singapore as well as the Fujiwara Kikan approached the *Kesatuan Melayu Muda* (KMM, Young Malay Union) led by Ibrahim Yaacob (1911–1979). This was detected by British intelligence, and 140 members of the KMM were detained on 7 December 1941. On their release by the Japanese army, they cooperated with Japan. As KMM's demand for independence seemingly went too far, it was disbanded in May 1942. Afterward, some leaders including Ibrahim worked individually as advisers. As for Indonesia, Japan attached importance to such nationalists as M. H. Tamrin of the *Partai Indonesia Raya* (Parindra). Because of severe oppression by the Dutch authorities, however, Japanese intelligence works were ineffective before the war. Shortly after occupying Indonesia, the Japanese army released the most influential nationalists, Sukarno (1901–1970) and Mohammad Hatta (1902–1980), who had been imprisoned since 1934. Intending to take advantage of the Japanese for their independence struggle against the Dutch, they decided to cooperate with Japan to a certain extent. In Vietnam, such conservative anti-French elements as Prince Conde (1883–1951) and the Cao Đài Church were

made the Japanese vanguards. The Indian campaign also involved Southeast Asia—inter alia Malaya and Thailand. The Indian Independence League (IIL) organized by the Indian nationalists residing in those areas cooperated with the Japanese army, and as a result the Indian National Army (INA) was born in Malaya. A prominent leader, Subhas Chandra Bose (1897–1945), led both the IIL and the INA following July 1943.

In order to showcase the cause of Asian liberation from Western colonial rule, the Japanese prime minister, Tojo Hideki (1884–1948, t. 1941–1944), announced at the Diet (Parliament) that while Malaya and Hong Kong would be kept as Japanese defense bases, the Philippines and Burma would be permitted independence. Official documents from this period show that the real objectives were military expediency. Nonetheless, this policy, which was initiated by the Ministry of Foreign Affairs, was opposed by the military and shelved when the whole of Southeast Asia came under Japanese rule. At the early stage of the JMA, the native peoples in general welcomed the Japanese forces as liberators. Because of oppressive policies and ever deteriorating living conditions, however, their hostility toward the JMA gradually and steadily grew. Besides, since mid-1942, Japan was losing the war. In order to rule and defend the occupied territories, the cooperation of the local people became indispensable. Thus, the dormant original plan was revived. Burma was granted independence on 1 August 1943, followed by the Philippines on 14 October 1943, Annam (Vietnam) on 11 March 1945, Cambodia on 13 March 1945, and Luang Prabang (Laos) on 8 April 1945. The Free India Provisional Government headed by Bose was founded on 21 October 1943 and two days later recognized by the Japanese government. As its territory the Japanese government offered the Andaman and Nicobar islands in the Indian Ocean. In any case, the Japanese army held the real power. Each independent country had to be a part of the Greater East Asia Co-prosperity Sphere. As such, few Southeast Asians regarded this as real independence. Moreover, based on the Tydings-McDuffie Act of 1934, the Philippines was to attain independence in 1946. The “future” independence of Indonesia was first referred to by Prime Minister Koiso Kuniaki (1880–1950, t. 1944–1945) on 6 Sep-

tember 1944. The Indonesian nationalists greatly shortened the originally scheduled preparation period; two days after the Japanese surrender, Sukarno declared Indonesia’s independence.

Another important device of the JMA was Japanese-trained armies. In Burma the BIA became the Burma Defense Army in July 1942 and then the Burma National Army in August 1943, following the Japanese-sponsored Burmese declaration of independence. In Indonesia and Malaya, there were the Giyugun (Pembela Tanah Air [PETA] Defenders of the Homeland), Giyutai (volunteer corps), and Heiho (auxiliary soldiers). These groups were formed in order to defend their respective territories from the Allied Forces’ imminent counterattack; in reality, they functioned virtually as laborers in the construction and repair of military installations (airfields, ports). All of them were drawn exclusively from native youths. Relations between the JMA and these armies, including the INA, were not always cordial, because while the JMA considered the armies as merely their tools, the armies considered themselves as means for attaining independence. The BNA led by Aung San, together with the Burmese Communist Party (BCP) and the People’s Revolutionary Party, formed the Anti-Fascist People’s Freedom League (AFPFL) in August 1944 and en masse rose up against Japan in March 1945. PETA in Indonesia was to become the nucleus of the anti-Dutch armed struggle from 1945 to 1949 when the Dutch government denied Indonesian independence. PETA in Malaya was dissolved mainly because its commander, Ibrahim Yaacob, who was also the former KMM leader, absconded to Indonesia. But many members were to become the core of the Malay left-wing party, the Malayan Malay Nationalist Party, when it was formed in September 1945.

Various spontaneous as well as Allied-sponsored anti-Japanese movements also emerged. The former included the Malayan People’s Anti-Japanese Army (MPAJA) led by the Malayan Communist Party (MCP), whose members consisted mainly of Chinese, and the Việt Minh (Vietnam Independence League) led by the Indochina Communist Party (ICP). In the Philippines, there was the Hukbalahap (Hukbo ng Bayan Laban sa Hapon, or People’s Anti-Japanese Army), and in North Borneo

(Sabah, Malaysia) the Kinabalu Guerrilla Force, whose numbers were composed of both natives and the Chinese. The Free Thai Movement operated underground in occupied Thailand. The Allied-sponsored anti-Japanese movements included Force 136, which was organized by both the British and Chinese governments and operated in Malaya, Thailand, and Burma. Its counterpart operating in northern Borneo was the Anglo-Australian Services Reconnaissance Department (SRD). In Malaya, those traditional elite who in one way or another cooperated with the JMA also secretly formed or sponsored clandestine anti-Japanese organizations.

In the anti-Western independence struggle in the postwar period, the overt anti-Japanese forces played the pivotal role in Vietnam and Burma. In Indonesia, Sukarno continued in leading the struggle. In Malaya and the Philippines, the returned colonial powers suppressed the respective anti-Japanese guerrilla forces and instead chose the traditional elite as their successors to power.

Economy

The prewar fundamental economic structure was broken from the onset of the Japanese occupation. As for rice cultivation, many indispensable elements gradually became scarcer. Laborers were conscripted, farming implements could not be renewed, and cattle were commandeered by the military. In one of the major producing areas, Burma, Indians who played major roles as laborers as well as moneylenders fled to India. Rice mills that had been destroyed consequent of warfare could not be repaired for want of materials. In Vietnam, farmers were forced to convert cultivation from rice to cotton and jute. Forced delivery of rice to the JMA at low prices discouraged the rice farmers. Thus production was greatly reduced (see table). Moreover, products in these areas could not be effectively transported to consuming areas such as Malaya and the Philippines. Cargo vessels, even if available, were sunk by Allied navies. Railway and road transportation was inadequate because of lack of fuel. Besides, there was a shortage of locomotives and trucks, and railway tracks were destroyed. Even in North Vietnam and Upper Burma, people suffered food shortages because rice could not be transported from the producing areas—that is, South

Vietnam and Lower Burma. In North Vietnam, 2 million people were believed to have starved to death in the first half of 1945.

In the rice-importing territories, despite JMA efforts in implementing various policies to increase rice production, none attained expected results. Schemes such as opening new rice fields, introducing high-yielding Taiwan (*Horai*) rice, irrigation, and double cropping, as well as resettlement programs in which townspeople were sent to the interior areas or to the jungle, achieved little success. Military consumption was given priority. Rationing had been introduced in Singapore and Manila in early 1942, and rations were gradually reduced and eventually in early 1945 became unavailable altogether. People were told to grow tapioca and sweet potatoes. Other foods also became difficult to obtain. In the Philippines, farmers were compelled to grow cotton instead of sugarcane. Private Japanese companies monopolized and controlled trade in essential commodities. Scarcity of commodities and their awkward circulation made the black markets thrive. The cost of living increased tremendously, and malnutrition prevailed. In Singapore, the living cost index of 100 in December 1941 shot to 10,980 in May 1945 (Kratoska 1997: 202, 203). The number of deaths in Singapore for the year 1944 was 42,751, far exceeding that of births, 31,722, and nearly triple the average prewar figures (Colony of Singapore 1958: 21, 32).

As the traditional export commodities could not be exported anymore, their production was also badly hit. Laid-off workers were either conscripted as *romushas* (laborers) or resettled to grow their own edible plants. Some 20,000 former Indian tappers joined the INA (Netaji Centre 1992: 42).

To compensate for damage caused during the military campaigns and occupation, the Japanese government paid reparations to each Southeast Asian country. In many fields, it took no less than a few years to recover the prewar production levels.

Society

When the JMA started operation, the Japanese army felt it necessary to eliminate anti-Japanese elements. In Malaya, tens of thousands of Chinese were massacred in the early days. In the Philippines hundreds of thousands of people

were killed, mainly in the defense campaigns. Total death tolls in Asia including both soldiers and civilians as well as the Japanese themselves during the war are estimated at between 20 and 30 million.

The JMA designed and implemented different policies toward the various ethnic communities. The Chinese were generally discriminated against. In Malaya, northern Borneo, and the Philippines, Chinese communities were forced to donate huge amounts of compensation money to the JMA. Even though not intentional, the “divide and rule” policies widened, if they did not create, the rift between the Chinese and the natives. In Malaya, bloody Sino-Malay clashes broke out in early 1945 and lasted for a few years. In Bangkok, the Yaowarat Incident of September 1945, a celebration by Chinese nationalists living in Thailand of China’s victory of Japan, witnessed open clashes between Thais and Chinese.

Some prewar primary schools were reopened. In these schools, Western languages were prohibited. The main educational objective was to teach the Japanese language and instill the Japanese spirit. Native languages other than Chinese were allowed as auxiliary languages. Not only schoolchildren but also the general public were taught that Japan and Japanese culture were superior, and that the Japanese emperor was the supreme living god. Nonetheless, the Japanese language, in practice,

could not be used for daily life and administration. As such, the Indonesian language (Bahasa Indonesia) was adopted as the common language in Indonesia. Indonesian historians attributed this practice to the improvement of their national language. English was widely used for administrative purposes in Malaya and northern Borneo, despite the closure of all English-language schools.

Religion was also mobilized in order to realize the objectives of Japan, although religious disciplines and morals were slighted. Religious leaders and teachers, who had been neglected in the early stages, were later told to preach to their followers cooperation with the JMA and Japan. Even Muslims were compelled to worship, facing east toward the emperor’s palace, instead of or in addition to Mecca. These were all part of the Japanization process.

On 12 September 1945, Major General Itagaki Seishiro (1885–1948), on behalf of the commander-in-chief of the Southern Army, Field Marshal Count Terauchi Hisaichi (1879–1946), who had been taken ill in Saigon, officially signed the surrender treaty in Singapore.

JATAKAS

The *Jatakas* are moral stories related to the previous lives of the historical Buddha. They exist in numerous versions and have been translated into all the major languages of Southeast Asia. What makes these texts particularly appealing is that they were illustrated on numerous Buddhist monuments. For example, the lower register of the first gallery of Borobudur is composed entirely of illustrations of this type of story (the size of this composition is, however, exceptional). Other representations of *Jatakas* can be found at Candi Mendut and Candi Sojwan, both of the eighth to ninth centuries. From the thirteenth century, although Buddhism was no longer the preponderant religion, one finds some rare *Jataka* illustrations, no longer from the original text but according to a Javanese reinterpretation of the stories, *Tantri*, such as are retold in the *Pancatantra* on Candi Jago and Candi Panataran.

In Cambodia around the end of the twelfth century, Buddhism became the state religion. But despite the abundance of Buddhist iconography, the *Jatakas* were seldom depicted in reliefs. This situation probably changed when the Khmer embraced a version of Buddhism nearer to the doctrine of the Lesser Vehicle. Pagodas were ornamented with frescoes depicting not only the life of the Buddha but also the *Jatakas*, although, sadly, ancient remains of them are scanty. The situation is the same in Laos and Thailand. In the latter country, particularly in the Chiang Mai region, the paintings are often of

high quality, for example, those that adorn Wat Phra Sing from the early nineteenth century.

In Burma, the situation is rather different due to the existence of frescoes executed on brick walls of considerable area; the paintings are better preserved than elsewhere in Southeast Asia. At Pagan, in the great architectural group at the site, the Pitaka Taik library contains a remarkable group of frescoes painted in the eighteenth century. However, in Burma, the oldest *Jataka* representations are modeled on the blue-glazed terra-cotta plaques inserted in walls, remnants of which unfortunately are very fragmentary. The most complete series is found on the Ananda temple of the eleventh century and on the base of the Petleik stupa of the twelfth century, both at Pagan.

JAVA

Java as an identity is very ambiguous. Although in cartography and common speech the term *Java* generally applies to the island of that name, the ethnic content of the term *Javanese* applies primarily to the central and eastern parts of the island, where Javanese is spoken. As a geographic term, it was already mentioned before the common era and was subsequently found in the *Geographia* by the Greek geographer Claudius Ptolemaeus (Ptolemy) (90–168 C.E.). Whether inhabitants of the island referred to

themselves as Javanese is, of course, impossible to assess. Although the term *Jawi* is known from the earliest chronicles, it was foreigners who applied it to the island and not to the predominant polity in the central part of the island.

Central Java has been the dwelling place of humans and their supposed predecessors since the earliest times, and the world's oldest human remains have been found in that island, specifically around Merapi. In prehistoric times, Java was visited by traders from the surrounding countries, who introduced the technology of metalworking. Maritime relations with China and India increased enormously in the first centuries of the common era, and Javanese ships sailed the Asian waters as far as Madagascar. Political organization reached a level of sophistication during the first millennium C.E. For centuries, the fertile plains of central and eastern Java would be the hotbed of kingdoms and sophisticated cultures, only to be surpassed in the sixteenth century by Islamic kingdoms along the north coast and, later, by the colonial powers. The power of the Central Javanese kingdoms may have been based on agriculture and taxation, but the market economy was well developed. The numerous archaeological remains point to intensive long-distance trade relations, not least epitomized in the refined Hindu-Buddhist monumental architecture.

The most expansionist Javanese state of the next millennium was Majapahit, which dominated politics on the island from the late thirteenth century through the fifteenth century. Majapahit experienced its glory days under King Râjasanagara (Hâyam Wuruk) (r. 1350–1389). Its sphere of influence extended over most islands bordering the Java Sea and sometimes even beyond. Its hegemony over the polities outside the central plains of Java was largely based on tribute relations, not on formal rule, which makes it difficult to assess its power range. Majapahit's power weakened after the late fourteenth century.

By the fourteenth century, Islam had reached Java, where it made quick headway. It seems that only the elites of the towns on Java's north coast, where traders and settlers from Arabia had taken residence and had successfully proselytized, had adopted the new faith. But the Islamic identity became the cornerstone of the new states that sprang up along the north coast of Java after the Majapahit kingdom had crum-

bled. Its successor states fell to the armies of the sultan of Demak in the early sixteenth century. Demak's hegemony over the island was incomplete and short-lived, but it showed the importance of two new forces in Java: Islam and commerce-based politics.

By the end of the sixteenth century, a new dynasty had risen in the central plains of Java, known by the name Mataram. Within several decades until about 1630, the first three Mataram rulers managed to subdue most parts of the island, including the commercially thriving northern coast (*pasisir*). The Mataram rulers wanted to present themselves as the (rightful) successors of the Majapahit kings and did everything to prop up this claim. But Mataram never reached the expanse of Majapahit, and after the reign of Amangkurat I (r. 1646–1677), a decline set in. Internal strife eroded the strength of the state, while the expanding power of the Dutch East India Company (VOC) slowly ate away at the territories of Mataram. The VOC did this reluctantly, as it shied away from taking on large territorial responsibilities, in particular as the Central Javanese lands had little to offer in terms of high-value export products for the European markets. But the VOC was depending on rice and timber from Java, and it had no interest in a back-door neighbor that was either unstable or too powerful.

The Mataram kingdom (ca. 1580–1755) reached its greatest power during the reign of Sultan Agung (r. 1613–1646). After him, control over the kingdom became more tenuous and problematic. Central to these problems was the advent of the VOC, though not, as could be expected, by its territorial ambitions but rather by its recurrent interventions in succession struggles and pacifying the kingdom and by its maritime hegemony in the archipelago. Although the VOC added Javanese districts to its territory piecemeal, the Mataram state became crippled by recurrent succession crises and civil wars. In the mid-eighteenth century, the stalemate between two rival factions was complete, and the VOC enforced a division of the kingdom. The result was the formation of the twin kingdoms of Yogyakarta and Surakarta, which, with different status, have survived until the present day.

The balance between the European and Javanese powers tipped definitively only in the early nineteenth century, when the Dutch and, for a short period, the English rulers in Batavia

were willing and able to enforce their will on the Javanese courts with military power. The Java War (1825–1830), led by the anti-Dutch and religiously inspired Prince Dipanegara (Diponegoro) (ca. 1785–1855), was to be the last attempt at resistance from the Javanese courts, but it resulted only in a further mutilation of the territories and assertion of Dutch hegemony.

In the parts of Java under direct rule of the government in Batavia, the Dutch embarked on a reorganization of their system of administration and the extraction of marketable products. The Cultivation System, which became the formal policy of exploitation in 1830, was not a completely new invention. In fact, it was a continuation and extension of a system of forced deliveries that had been applied in the West Javanese mountain areas of the Priangan (Preanger). Historians have hotly debated the effects of the Cultivation System on Javanese society. It is argued that the introduction of the system of forced deliveries resulted in a general impoverishment of the Javanese population. But the effects were at once more varied and, in the longer term, less harmful than alleged. In reality, the effects for the Javanese differed strongly from region to region. The greatest hardship was felt in the early decades of the system. In some regions, the labor burdens were too heavy and led to severe famines. Later, the system seems to have operated more smoothly. This was reflected in the fairly quick growth of the Javanese population, which, if colonial guesswork can be trusted, rose from 6.3 million in 1825 to 19.5 million in 1880 (Boomgaard 1989: 166).

Another effect of the system of exploitation was the change in the settlement and authority structure. The position of the *pangreh praja* (administrative elite) was adversely affected. The main business of extracting products and labor went on between the Dutch Indies government and the *lurah* (village heads), thereby surpassing the Javanese regents (*bupati*). The Javanese *bupati* were gradually reduced to salaried officials with an increasingly ceremonial position. Their posts tended to become hereditary, and their numbers were gradually reduced. Although many families retained their official positions until after independence, the *pangreh praja* lost their popular leadership and would, during the last colonial decades, be surpassed by a new nationalist elite.

Colonialism was not only about the extraction of products for the world markets. As the Indies government paid for the deliveries, the Cultivation System greatly stimulated the monetization of the Javanese economy. However, the emphasis on agricultural labor, the concentration of various commercial and credit functions in the hands of Chinese, and the privileging of European business impeded the development of an indigenous Javanese business community. Another effect of the Cultivation System was the continuing commercial development of cities along Java's north coast. Batavia, Semarang, and Surabaya developed into harbor towns, from where export commodities were shipped to the markets in Europe and elsewhere.

After 1860, the Cultivation System was gradually being dismantled, and a more liberal economic system was introduced, whereby the plantation sector was left to entrepreneurs and the colonial government concentrated on administration, education, and infrastructural projects. Thanks to the demographic pressure on the island, Java became the source of large numbers of laborers who were recruited for the new plantations and industries in the so-called Outer Islands, especially East Sumatra and Borneo (Kalimantan).

The first nationalist stirrings in the Indonesian archipelago occurred on Java, where, in 1908, the Javanese association Boedi Oetomo (Noble Endeavor) was founded. The association aimed at bolstering Javanese consciousness and culture against European arrogance and Chinese dominance. In its wake, other organizations sprang up, such as the Sarekat Islam (1912), which advocated, in increasingly radical terms, the independence of Indonesia. Instead of the provincial outlook of the early organizations, the later parties all had an Indonesia-wide focus. After 1900, the Netherlands Indies became increasingly unified, and the anticolonial reaction adopted the same geographic scope.

The Japanese occupation (1942–1945) set Java apart from the other portions of the former Netherlands East Indies. For three and a half years, the contacts between Java and the other islands were broken, except for the deportation of about 300,000 *romusha* (laborers) and for the Indonesian leaders who traveled to Japan (Ricklefs 2001: 255). When Japan capitulated on 15 August 1945, the nationalist leaders

immediately proceeded to proclaim the independence of the Indonesian Republic, an act that plunged Java and parts of the other islands into warfare with the Dutch. Between 1946 and 1949, Yogyakarta became the capital of the nascent republic.

In the new Republic of Indonesia, Java was often considered to be the center stage while the rest of Sumatra, Borneo, and the Outer Islands were props backstage or mere audience members. Kahhar Muzakkar, the former republican revolutionary who turned insurrectionist in the 1950s to withstand the expanding power of Jakarta in Sulawesi, blamed Soekarno (Sukarno) (1901–1970) for “Majapahitism.” He was referring to the imperialistic vision embraced by the rulers of the Javanese Majapahit kingdom that sought to bring *Nusantara* (lands beyond Java) under their control, in other words, hegemony over the Malay Archipelago (present-day Malaysia and Indonesia). Much regional resentment against the heavy hand of Jakarta in the 1950s and later was expressed in this kind of anti-Javanese sentiment but was, in fact, more directed against the central government based at Jakarta than against Java per se.

The postindependence period is characterized by an ambiguous relationship between the center of power and the out-of-center power base in Central and East Java. After the government had moved to Jakarta in 1949, Central and East Java remained the most important electorate for Jakartan politics. It was the hotbed of communism until the Suharto-led mass killings in 1965 and 1966, as well as the center of the Nahdatul Ulama and other Islamic movements. In cultural terms, the developments of the late colonial period have continued, in which Java is primarily identified with the court cultures of Yogyakarta and Surakarta, whose courts have positioned themselves as the keepers of Javanese culture and traditions.

In the post-Suharto era (since 1998), differences between Central Java and the Sundaland have become more overt. An upsurging cultural consciousness among intellectuals and cultural brokers and the republic's policy on the devolution of responsibilities to the local (*kabupaten*, or district) level have propped up regional antagonisms between the Pasundan and Central Java and even more localized differences as well.

“JAVA MAN” AND “SOLO MAN”

Eugene Dubois made the discovery in 1891 of the skeletal remains of *Homo erectus* in Trinil, East Java—thus the name “Java Man.” He identified the remains as *Pithecanthropus*. Reputedly the first human fossil discovery in Southeast Asia, it is believed to be from 500,000 to 1,000,000 years old, from the Lower Pleistocene period. Sangiran and Ngandong as well as Trinil are sites along the Solo River as it flows from Central to East Java that possess many fossilized human remains, including skulls. “Solo Man” (*Homo sapiens soloensis*) refers to fossilized human skeletal remains found in Sambungmacan and Ngandong; much younger, they may be from the Upper Pleistocene period—or some 100,000 years old.

Java Man and Solo Man are described as having smaller brains than modern man (*Homo sapiens*), an apelike facial profile, stronger jaws and teeth, and a muscular build; they are thought to have walked upright but to have been overall shorter in stature. Although it remains uncertain whether he is a descendant of Java Man and Solo Man, the earliest discovered *Homo sapiens* is “Wajak Man,” who lived about 40,000 years ago in Wajak, East Java. There is close affinity between Wajak Man, believed to be an Austromelanesian, and the forefathers of present-day Australian Aborigines.

What is apparent is that by about 30,000 years ago, ancestors of modern humans had settled throughout Southeast Asia. Their remains have been found in the Niah Caves (Sarawak) and Tabon Cave (Philippines).

JAVA WAR (1825–1830)

At the beginning of the nineteenth century, politics developed in a way that the Javanese kingdoms of Surakarta and Yogyakarta could not have imagined. When the Vereenigde Oost-Indische Compagnie (VOC, [Dutch] United East India Company) was liquidated (1799), its possessions were taken over by the then-French-dominated government in The Netherlands. Previously, the position of the Javanese kingdoms was strong and more or less free of Dutch interference. After the division of the kingdom of Mataram in the middle of the eighteenth century, peace had reigned on the island of Java. The population of Central Java expanded, and many new areas were brought under cultivation. The Javanese people, from the nobility to the peasant farmers, experienced years of prosperity. All this changed with the arrival of Herman W. Daendels, who was appointed governor-general in 1808.

Daendels (t. 1808–1811) forced new treaties on the Javanese kings, involving the annexation of great parts of their royal domains. The onset of the Napoleonic Wars (1803–1815) witnessed the occupation of the Dutch colonies in the Indies, including Java by the British. Daendels's British successor, Lieutenant Governor Stamford Raffles (t. 1811–1816), intervened even more profoundly in the affairs of the Javanese kingdoms. Under his rule, the land tax system was introduced and the tollgates and markets in the royal territory were rented out to the Chinese, who extorted the people. Hamengkubuwana II (r. 1792–1810, 1810–1812), who had refused to accept the newly imposed changes, was deposed and exiled to Penang. His son, Hamengkubuwana III (r. 1810–1811, 1812–1814), who was appointed as his succes-

or, only reigned for two years and was succeeded by Hamengkubuwana IV (r. 1814–1822), a younger brother of Diponegoro, the prince who instigated the Java War in 1825.

In 1816, the colony in the Indies was returned to the Dutch. They continued the new policy toward the Javanese kingdoms. It was the Dutch governor-general G. A. Ph. van der Capellen who unintentionally strengthened the power base of Diponegoro. After the death of Hamengkubuwana IV in 1822, van der Capellen appointed the king's three-year-old son, Hamengkubuwana V (1822–1826), instead of his elder brother, Diponegoro. That move split the Javanese aristocracy into two parties, for and against Diponegoro. The radical 1823 decision to abolish the private leasing of land to Chinese and Europeans put the Javanese aristocracy in great financial difficulties. They not only lost their source of revenue but also had to compensate the leaseholders for the loss of their leased land. All these measures intensified the anti-European feelings among the Javanese aristocracy. Rebellion loomed and then erupted when a new road was built cutting across Diponegoro's ancestral land in Tegalreja without his permission.

At least half of the Javanese aristocracy and a large part of the Islamic community, as well as many Javanese villagers, joined Diponegoro in his fight against the Dutch. Highly valuable was the support of his uncle, Mangkubumi, and Kyai Maja, who preached holy war against the *kafirs* (infidels, nonbelievers). One of his commanders, a nephew of Diponegoro named Sentot, proved to be an excellent guerrilla fighter. Besides their shortage of trained soldiers, it was this hit-and-run tactic that made it impossible for the Dutch to get a grip on the rebellion. Time after time, the Dutch were attacked and were not able to defeat the enemy because they constantly withdrew. Despite the Dutch having succeeded in taking Surakarta from the rebels, Diponegoro controlled the larger part of the countryside in Central Java at the end of 1826. Moreover, people considered him to be the *ratu adil* (just or righteous king), who Javanese legend said would reign justly after a short period of war. Diponegoro saw himself as the one chosen to become sultan over the whole of Java and to drive the *kafir* out of the island of Java.

By 1827, the tide of war had turned against Diponegoro. More Dutch troops arrived in

Java. The Dutch general H. M. de Kock developed the so-called *benteng* (fortress, fortification) system, in which small, mobile columns operated independently of a growing network of strategic fortified posts. In the course of 1828, Diponegoro lost a great number of his followers. The surrender of his uncle Mangkubumi and his commander Sentot, with his troops, to the Dutch in 1829 sounded the death knell for Diponegoro. At the beginning of 1830, he sent a message to General de Kock, stating that he wished to negotiate an end to war; in March, they met at Magelang. Despite guarantees of his safety, Diponegoro was arrested and exiled to Makassar, where he died in 1855.

The war had cost the lives of 15,000 soldiers on the side of the government, and about 200,000 Javanese also perished (Van den Doel 1996: 39). The end of the war ushered in a new era in which the power of the Dutch colonial state would be increased at the cost of the local authority of the Javanese aristocracy. For the Indonesians and in particular for the Javanese, the Java War marked the beginning of a new era in which nationalism developed in spite of the increasing repression of the Dutch. This led to independence for Indonesia in 1949.

JAVANESE WARS OF SUCCESSION (1677–1707, 1719–1722, 1749–1755)

In 1677, the ruler of the Central Javanese kingdom of Mataram, Amangkurat I (r. 1645–1677), was faced with a rebellion launched by his own son in alliance with a prince named Trunajaya from the island of Madura, just off the coast of East Java. The rebels captured Mataram's capital, Kartasura, and Amangkurat I died while fleeing. His son took the title Amangkurat II (r. 1677–1703) and quarreled with Trunajaya. The Madurese prince then threatened to depose his former ally and take the throne. In desperation, Amangkurat II asked the Dutch East India Company (VOC) for help.

The Dutch launched a military expedition against Trunajaya. In return for this assistance, Mataram gave the VOC an extensive area of land that separated Mataram from the Dutch foothold of Batavia in West Java. The territory conceded stretched completely across the island of Java, from the north to the south coast. In this way, the Dutch became the first Europeans to become directly involved in Javanese politics, and by their interference in a war of succession, they obtained possession of a strategic land area and became a territorial power in Java.

Dutch intervention in civil wars, usually by invitation, became a pattern whereby the Dutch came to administer large areas of Java and eventually secured various special privileges from Indonesian rulers as compensation for assistance rendered to those rulers. The VOC (or *Kumpeni*, as the Javanese often referred to it) gradually expanded its civil authority over Indonesian territory as the result of its endeavors to enforce compliance with these agreements. In this way, the *Kumpeni* obtained great political as well as economic influence.

By 1677, the Kumpeni had already obtained the monopoly over the rice trade in Java. This right had been given in exchange for military assistance in putting down various rebellions. In that year, Mataram gave the VOC the monopoly over imports of textiles and opium, the export of sugar from Semarang and Jepara, first rights to the purchase of rice, and the right to administer and levy duties in the ports of north Java.

Research on the important centers of Muslim power cannot neglect the role of the *panembahan* of Kajoran, a place in the Klaten region, near Surakarta, the masters of which were the kin of Sunan Bayat, the founder of the sacred location known as Tembayat. The rulers of Kajoran repeatedly contested the rule of Mataram, despite marriage links between them. Trunajaya, son-in-law of Raden Kajoran or Panembahan Rama, played an important part in this revolt. Open war between Mataram and Kajoran in 1677 ended with Kajoran's defeat in 1679.

In 1680, Amangkurat II set up a new capital at Kartasura. In 1703, Amangkurat II died, and his son, Sunan Mas, became Amangkurat III (r. 1703–1704). Sunan Mas's uncle, Pangeran Puger, challenged his right to succeed. The Dutch were happy to assist Pangeran Puger, since they believed that Amangkurat III and a charismatic Balinese named Surapati were plotting against them. Pangeran Puger was popular among the Mataram nobles, however, and with Dutch arms, Puger captured the palace at Kartasura. He was then crowned as Paku Buwana I in 1704. Surapati died of wounds sustained in battle near Surabaya, and Amangkurat III was captured in 1707 and exiled to Sri Lanka. Thus ended what Western historians call the First Javanese War of Succession. In return for Dutch assistance, Mataram gave the VOC several districts in Parahyangan (the hinterland of West Java), Cirebon, and Madura and agreed to provide a certain amount of rice annually to the VOC.

The *Babad Tanah Jawi* (*Chronicle of Java* of the eighteenth century) states that Panembahan Wijil Kadilangu was present at the installation of Pangeran Puger as Pakubuwana I in Semarang in 1704. Nevertheless, Kadilangu's significance gradually declined and disappeared. This phenomenon is reflected in the titles used by its (Surakarta) rulers. The title "Susuhunan

Kalijaga" only persisted for five generations. Thereafter, the kings of Surakarta altered this title to "Panembahan Natapraja." The VOC itself acknowledged them as "Pangeran Wijil," later changed by the post-VOC government of the Netherlands East Indies to "Pangeran van Adilangu" (Pangeran of Kadilangu).

When Paku Buwana I passed away in 1719, his son Amangkurat IV (r. 1719–1725) took the throne but was challenged by several of his brothers. Dutch assistance was again used to quell the rebellion of the male siblings of Amangkurat IV, who refused to acknowledge his ascension to the throne, which took four years. As a result, the Dutch had to be paid again; upon the conclusion of this affair, known as the Second Javanese War of Succession, Mataram had to pay regular amounts of pepper and wood to the Kumpeni.

The Third Javanese War of Succession resulted in the dissolution of Mataram and the establishment of two separate kingdoms—Surakarta and Yogyakarta. Mangku Bumi, brother to Pakubuwono II (r. 1725–1750), felt slighted by the tactless treatment he received from the Dutch governor-general Gustaaf W. van Imhoff (t. 1743–1750). In 1749, the disaffected prince revolted against his brother and his Dutch ally (the VOC). Pakubuwono II, on his deathbed, ceded Mataram to the Dutch in 1750 as a means of denying the kingdom to his brother. The Dutch placed on the throne the late ruler's son, as Pakubuwono III (r. 1750–1788), a mere puppet. Mangku Bumi was widely recognized by many as the *Susuhunan* (supreme ruler), and his opposition to the Dutch was viewed by the Javanese populace as the key to the liberation of Mataram from Dutch control. In 1755, Governor-General Jacob Mossel (t. 1750–1761) decided on a peace settlement. By the terms of a treaty signed in 1755, Mataram was divided into two halves. Pakubuwono III, with his seat at Surakarta, ruled over the eastern part; Mangku Bumi (Sultan Amangku Buwono) administered the western half, with his capital at Yogyakarta.

JAYAVARMAN II
(r. 770/790/802?–834 C.E.)

Founder of Angkor

Jayavarman II was the founder of a new polity that is now called Angkor. Details of his reign are very sparse, and some of what has been synthesized by modern writers may be legendary. Several inscriptions erected much later (in the tenth to eleventh centuries) give the date 802 as marking an important event in his reign, and this has generally been taken to be its beginning. But no inscription specifies the event of 802, and one other inscription from the same period refers to a King Parameshvara, the posthumous title of Jayavarman II, ruling in 790. At least, in the tenth century, there were two different traditions about the date of his reign.

There is also a growing consensus that two eighth-century inscriptions that name a Jayavarman, in 770 and 781, actually record the first activities of Jayavarman II. They traced his activities starting in southeastern Cambodia and moving northward to the area of Kratie, before establishing his new center at Roluos, some 20 kilometers southeast of what is now Angkor. Thereafter, there are no extant inscription dates from Jayavarman II or from his son Jayavarman III (834–877), and all information about them comes from inscriptions of the ninth to eleventh centuries.

Recognition of these eighth-century records as Jayavarman's undermines his standard biography. Found in only one inscription ("Sdok Kak

Thom") written 250 years later (1052), this biography says that Jayavarman returned to Cambodia from "Java" at an unrecorded date and was first active gathering support in central Cambodia (Indrapura, Bhavapura) before moving on to Roluos. The meaning of "Java" in that record, however, is uncertain. Indonesian history does not support stories of Indonesian conquests in Cambodia in the eighth century, and no convincing hypothesis has been offered for a voluntary presence of Cambodian royalty in Java. The Java story may be a legend built up in the tenth and eleventh centuries when new centers in East Java were increasingly important in control of maritime routes.

Later generations, through the eleventh century, considered Jayavarman a great ruler and the founder of their kingdom, from whose cohorts, or wives, the most important official families later claimed descent. In addition to the first capital, these records attribute to Jayavarman the founding of another city in the northwest and a city high up on Mount Kulen, some 30 kilometers northeast of Angkor. Strangely, except for one temple in Sambor Prei Kuk in central Cambodia, constructions attributable to Jayavarman II are found only on Kulen. They show considerable Cham influence in architecture and decor, which is not surprising given the close relations between Cham and Khmer already demonstrated in the seventh-century inscriptions in southern and central Cambodia. Nothing from this "founder of Angkor" has been left in the immediate region of Angkor.

From the very sparse inscriptions and the contradictory details in scholarly work to date, we may accept the following surmises. First, Jayavarman II was a chief of some place, probably in the southeast of Cambodia, perhaps Vyadhapura or Indrapura or both, in 770. Second, around 780, he was accepted as king in Sambhupura (Kratie), which had its own dynasty of queens; this may mean that he married a Sambhupura queen. Third, in 790, he and a son named Indrayudha fought against the Cham and won. (At that time, the center of Champa was in the south, at Panduranga, very near southern Cambodia.) Fourth, during this period, from 780 to 802, Jayavarman occupied most of northern Cambodia, including the provinces of Battambang and Siem Reap. Fifth, in 802 or later, according to the Sdok Kak Thom inscription (which contains no date), he

had important ceremonies performed on Mount Mahendra (Kulen) to keep Cambodia safe from “Java.” He also made himself a great king, a *cakravartin*, with a new ritual for the protection of the king and realm. Then he returned to Hariharalaya (Roluos), where he died.

The Sanskrit name of the new state ritual, *devaraja* (meaning “god-king” or “king of gods”), found in only one inscription, has led to needless controversy over its representation. The more precise Khmer name, *kamrateng jagat ta raja/rajya*, means “lord of the world the king” or “lord of the world of the king” or “lord of the world of the realm.” The title *kamrateng jagat* designated a frequently recorded type of traditional Khmer deity, probably of a protective nature. Its importance may have been exaggerated because the powerful family who wrote the Sdok Kak Thom inscription were the caretakers of that ritual, and the inscription represented their family history more than a history of the royalty.

The end of the reign of Jayavarman II occurred in 834, not 850 as repeated in all but the very latest work. The new date is based on a better interpretation of inscription K.521, which says that in 850, his son, Jayavarman III, “had been ruling 16 years,” not “was aged 16.”

JAYAVARMAN VII (r. 1181–1220?) Angkor’s Greatest Ruler

Jayavarman VII was the greatest Angkor king and also the last to leave large, enduring monuments or detailed inscriptions. He descended from the Mahidharapura dynasty, whose origins were north of the Dangrek Mountains; he became king after a thirty-year period of internal and external warfare and the apparent breakdown of the state apparatus, about which few details are known because of the lack of inscriptions.

His inscriptions differ from those of previous kings. There are sixty-two inscriptions, but over thirty are one-line texts with the names of gods or dead persons inscribed near their images, in temples, usually with the title *kamrateng jagat*, a special type of Khmer protective deity. The few very long inscriptions are by the king and are in Sanskrit, not Khmer. That is, after about three hundred years of increasing use of Khmer in inscriptions, Cambodia’s greatest king returned to the use of Sanskrit for his important records.

Jayavarman came to the throne after defeating invaders from Champa who had seized the city of Angkor at a date believed to be 1177. Peculiarly, Jayavarman himself was in Vijaya, central Champa, when that invasion occurred and had apparently been there for some time. Champa inscriptions record that a Champa army returned to Cambodia with Jayavarman and was a major force in his campaigns to reunify Cambodia. His relationship with Champa was complex and is still not clear.

Jayavarman VII was Angkor’s greatest builder. Among his constructions are the huge temples

Sculpture of Jayavarman VII with missing arms.
(Luca I. Tettoni/Corbis)

of Banteay Kdei, Ta Phrom, Preah Khan, and Bayon within the city of Angkor. He also built the square city walls, measuring 3 kilometers on a side, and other structures in different parts of Cambodia, including the huge Banteay Chhmar near the Thai border in the northwest. The inscription lists thousands of people involved in the work of these temples, which shows that the royal government of Jayavarman VII had strong control over a large country.

Along with the enormous new temples, the principal religion changed to a type of Mahayana Buddhism—a change that may have been influenced by Champa, where Buddhism had always been more important than in Cambodia. Mahayana Buddhism was also very important in Vietnam. The Mahidharapura dynasty had always shown some signs of Buddhism but of a different type, perhaps from Mon and Burmese influence and illustrated in the temple of Phimai in northeast Thailand.

Besides religious works, special new types of construction were undertaken. Highways were built—straight, stone-paved roads running across hundreds of kilometers, raised above the flood level, with stone bridges across rivers and

lined with rest houses every 15 kilometers. Parts of some roads are still visible, even serving as the bed for modern roads. From the capital city, Angkor, there were at least two roads to the east and two to the west. One of the latter ran across the Dangrek Mountains to Phimai, and another went due west toward Sisophon, which means toward the only lowland pass from Cambodia into eastern Thailand in the direction of Lophburi or Ayutthaya. Toward the east, one road has been traced almost to the Mekong, and according to an inscription in which these roads are described, it may have continued as far as the capital of Champa.

Such roads must have been built for either political control or transport of goods, and the frequency of rest houses and “hospitals” indicates the movement of large numbers of people or official missions entitled to state support on their journeys, either of which is consistent with the movement of goods.

Another significant (though still incompletely understood) record is that of twenty-three cities, apparently most within Thailand, to which Jayavarman sent personal Buddha images, called “Jayabuddhamahanatha,” possibly representing the king as Buddha and intended as symbolic of his rule over the localities concerned. Only seven of the twenty-three city names are now understood: Lophburi, Muang Sing, Petchaburi, Petchabun or Kamphaeng Phet, Ratchaburi, Singburi, and Suphanburi.

Jayavarman continued the policy of Suryavarman II (r. 1113–1145?) to subjugate Champa. He attacked Champa in 1190, and from 1203 to about 1220, all of Champa, north and south, was occupied by Cambodia. In addition, Jayavarman appointed Cham princes who were loyal to him to rule for him in Vijaya in central Champa and in Panduranga in the south. He also followed Suryavarman II in attacking Vietnam. Vietnamese history says the last Cambodian attacks against Vietnam were in 1216, 1218, and 1220. After 1220, Cambodia withdrew from Vijaya, and a Cham prince who had been raised by Jayavarman became king there. Jayavarman probably died shortly before the withdrawal of Cambodian control from Champa.

Although much has been written on the topics, Jayavarman’s religious ideology, foreign policy, and economic objectives are still poorly understood. It is possible that his ambitious

construction works and territorial expansion contributed to the subsequent decline of Cambodia.

JOHOR

Johor's more than 2 million inhabitants live in the third largest state (19,984 square kilometers) in Malaysia. It is also one of the most developed, mainly because it has benefited from its location directly across from the island of Singapore. Linked by road and rail over a causeway to Singapore, Johor has shared in that center's phenomenal economic development since its breakaway from Malaysia in 1965.

Perhaps the earliest known reference to Johor is from the history of Melaka known as the *Sejarah Melayu* (Malay Chronicles/Annals), a work conceived during the heyday of the

Melaka kingdom in the fifteenth century. The Tang Chinese between the seventh and the early tenth centuries called this area Luoyue and noted that it was simply a collecting point for forest products. From Luoyue, products were taken either to Pulau Tioman or to a settlement on Singapore, where they were then traded to the Chinese. Johor was not even mentioned in the 1365 Javanese court text, the *Nāgarakertāgama*, but it was included as part of the southern portion of the Malay Peninsula simply known as Pahang.

Johor as a political entity only began with the arrival there of the refugee princes from the Melaka kingdom, seized by the Portuguese in 1511. With the relocation of the capital of the Melaka ruler on the Johor River, the kingdom came to be called Johor. However, since the capital alternated between the mainland and the islands to the south, it was generally referred to by modern scholars as the Johor-Riau kingdom. In the sixteenth century, the survival of the kingdom was sorely tested by continuing attacks by the Portuguese and by the new power in the Straits of Melaka, the northern Sumatran kingdom of Aceh. Only in the last quarter of the seventeenth century did Johor emerge as a dominant force in the straits, due, in part, to the special privileges accorded to it by the new European power in the region, the Dutch East India Company (VOC).

In 1699, the assassination of the Johor ruler (Mahmud Syah, r. 1685–1699) created divisions in the kingdom. The result was the involvement of both the Minangkabau and the Bugis in the affairs of the Malay world. When Johor came under strong Bugis influence after 1728, Malay opposition became centered on Terengganu and Pahang. There was an uneasy partnership in Johor between the Bugis and the Malays, but for much of the eighteenth century, it was the Bugis who were dominant. In 1784, the Bugis were defeated by the VOC, thus enabling Sultan Mahmud (1761–1812) to reassert Malay control in the kingdom.

With the establishment of Singapore by the British in 1819, Johor's long-held position as the preeminent entrepôt state in the Straits of Melaka was undermined. The Anglo-Dutch Treaty of 1824 placed the peninsular portion of the Johor kingdom under the British sphere of influence, leaving the island part of the kingdom based in Riau under the Dutch. Thus, the

Johor kingdom was forever divided: Riau remained under the old Johor royal family, and peninsular Johor was placed under the *temenggongs* (Malay chiefs of ministerial rank in charge of defense, justice, and palace affairs).

Johor's modern history began with Temenggong Daing Ibrahim, a descendant of the rulers of Johor. In 1855, the British and Sultan Ali of Johor signed a treaty giving Ibrahim formal control of the state of Johor. Then, in 1885, the British formally recognized Ibrahim's successor, Abu Bakar (r. 1862–1895), as sultan of Johor. In return for this recognition, Abu Bakar relinquished his control over foreign affairs. Under Abu Bakar, Johor promulgated a constitution and developed a modern administrative system. For this reason, he is sometimes referred to as "the Father of Modern Johor."

Johor's continuing good relations with the British and its ability to maintain peace and order in the land provided little reason for direct intervention by the British. Johor possessed a well-ordered government, and its road system and economy were integrated with those of Singapore and the Federated Malay States under British control. Johor was therefore the last entity to become incorporated into British Malaya in 1914, but it was unique in retaining certain privileges, such as the wearing of a Johor uniform and the preference for Johor Malays in government.

Johor's proximity to Singapore has been a major boon to the state's economy. In the nineteenth century, Singapore became not only the port of export but also a source of much-needed Chinese capital and labor for development in Johor. Today, many of Johor's inhabitants have been able to gain employment in Singapore, and Johor has provided space for expanding Singaporean enterprises. Tourism has also flourished because Johor offers Singaporeans and short-term visitors to Singapore an accessible and inexpensive weekend getaway. While profiting from its close ties to Singapore, Johor has begun to attract foreign firms to its shore because it is a cheaper alternative to Singapore. This situation augurs well for Johor's economic future.

JOHOR-RIAU EMPIRE

The foundation of the Johor-Riau empire can be dated at soon after the fall of the Malay sultanate of Melaka to the Portuguese in 1511. After a period of frequent moves, the royal family settled in a new capital that alternated between a site on the Johor River and another on the island of Bintang in the Riau archipelago. Although the Johor-Riau rulers continued to claim suzerainty over their former Melaka territories, most of the latter now followed an independent policy. The change can be attributed to the dramatically altered political equation in the Straits of Melaka.

In the sixteenth century, the Portuguese in Melaka and the North Sumatran kingdom of Aceh posed a continuing threat to Johor-Riau. The rulers were forced to move frequently to avoid capture, and there was little opportunity to regain the trade that had once frequented Melaka. From 1564 to 1565 and in 1613, the Acehnese destroyed the capital of Johor, and

members of the royal family were taken as prisoners to Aceh. On neither occasion was the Johor-Riau kingdom permanently destroyed, but instead, it recovered quickly to pose yet again a challenge to Aceh and the Portuguese for dominance in the straits. In 1615, just two years after the devastation of the kingdom, Sultan Hammat Syah (r. 1613–1623) of Johor-Riau sent one of the royal princes to rule as sultan in Pahang and then organized an alliance against Aceh. This time, however, the ruler took the precaution of abandoning the site of the capital on the Johor River; he sought the greater safety of the islands of the Riau-Lingga archipelago. Riau was a preferred site, particularly in times of danger, because the Riau-Lingga archipelago was the home waters of the Orang Laut, or Sea People, who were fiercely loyal to the rulers.

The Johor-Riau kingdom was finally able to recover some of the glory of the Melakan period in the last quarter of the seventeenth century. By that time, the twin threats to the kingdom had been removed. Portuguese Melaka had been seized by the Dutch East India Company (VOC) in 1641, and Aceh had declined in power. Johor-Riau benefited further from the fact that it had been the principal local ally of the VOC in the seizure of Portuguese Melaka and was given special trade and political privileges by the VOC as a reward. By the end of the century, Johor-Riau had become a major entrepôt much in the style of its predecessor, the kingdom of Melaka.

After the assassination of Sultan Mahmud Syah (1685–1699) by his nobles in 1699, there was upheaval in the kingdom. A Minangkabau adventurer known as Raja Kecil claimed to be Mahmud's son and was immediately supported by the Orang Laut. With the combined force of the Orang Laut and the Minangkabaus, Raja Kecil gained control of the kingdom. The son of the deposed Bendahara ruler, in turn, called in the assistance of refugee Bugis groups in the area, thus igniting a civil war that finally ended in 1728 in favor of the Bendahara-Bugis alliance.

The Bugis were rewarded by the new Bendahara dynasty with the position of Raja Muda (a title meaning young prince or heir apparent) and a base in Penyengat in Riau. From there, they controlled the activities of Sultan Sulaiman (1722–1760) and extended their influence to the Malay Peninsula. Although the Bugis were generally unchallenged in the west coast states,

the Malay faction supporting Sulaiman was particularly strong in Pahang and Terengganu on the peninsular east coast. The Bugis's dominance in the Malay world was ended with their defeat by the VOC in 1784. Nevertheless, the mistrust between the Bugis and the Malay factions in the Johor-Riau kingdom remained.

When Sultan Mahmud (1761–1812) of Johor-Riau died, he left two sons born of commoner mothers. The Bugis faction supported Abdul Rahman, and the Malay faction backed the elder son, Husain. In 1818, the Dutch signed a treaty with the former, recognizing him as the legitimate heir to the Johor-Riau kingdom in return for the right to reestablish their post on Riau. The following year, the British signed an agreement with the *temenggong* of Riau-Johor, the territorial chief of Singapore, which gave them the right to establish a post or factory on the island. To provide legitimacy to this transaction, the British recognized Husain as the legitimate ruler of Johor-Riau in a formal treaty signed in 1819. Then, in 1824, the Dutch and the British signed a treaty dividing their spheres of influence. They drew a line down the Straits of Melaka, south of Singapore, and out to the South China Sea, with British jurisdiction in areas north of the line. A permanent division of the Johor-Riau empire was thus created, with Johor now consisting of the peninsular possessions within the British sphere and Riau under the Dutch comprising the islands to the south of Singapore.

JUNGLE/FOREST PRODUCTS

A major part of the maritime Southeast Asian environment comprises the equatorial dipterocarp forests, which historically have been important in local economies and in the international trade in forest products. The rain forests are of great antiquity and have been comparatively stable in composition since the Miocene period from about 20 million years ago (Bellwood 1985: 34). The earliest firm evidence of human habitation in Southeast Asia is from excavations at the Niah Caves in northwestern Borneo. It is clear that humans depended on the tropical forests for food, equipment, and shelter from at least 40,000 years B.P.; the early populations were stone-users and were of Australoid or Australo-Melanesian physical stock (King 1993: 60–61). They hunted forest animals, all of which, with the exception of the giant pangolin (*Manis palaeojavanica*), are still part of today's faunal inventory. They also gathered edible freshwater and estuarine shellfish and mollusks; shells were probably part of an early barter trade. Items discovered in burials included stone and bone tools, along with ritual shell. It is assumed that domestic and other implements would also have been made of such perishable materials as wood, fibers, and bamboo.

Some 5,000 years ago, the Indo-Malaysian region was gradually settled and the resident Australoids were replaced by peoples of different physical type and culture, though pockets of rain forest-dwelling Australoids remain in Peninsular Malaysia, Sumatra, and the Philip-

pin. The new arrivals were of Mongoloid stock and belonged to the Austronesian language family. Their origins lie somewhere in southern China, and they began to populate the Philippines in about 3000 B.C.E. and the western parts of the Indonesian archipelago by 1000 B.C.E. or later. It was the ancestors of the present-day Austronesians who penetrated the rain forests, but the effective clearance and cultivation of forest areas in the island world had to await the introduction of metal tools, which probably occurred from about 200 B.C.E. (Bellwood 1985: 309–311).

In the first millennium C.E., a sociocultural revolution took place in Southeast Asia. Trading contacts with China and India increased; harbor principalities began to be established around the coasts of such islands as Borneo and Sumatra, and smaller market centers grew up along the major rivers. These channeled luxury products from the interior rain forests into Asian commercial networks (Dunn 1975: 111). The increasing demand led to various groups of forest dwellers specializing in the gathering of products in return for metal tools, beads, brassware, ceramics, textiles, and salt; some of these items were manufactured in coastal centers. Native groups that had developed more permanent forms of agriculture in the interior usually acted as intermediaries between the coastal and main river traders, on the one hand, and the mobile bands of forest hunter-gatherers, such as the Punan of Borneo, on the other. The farmers also collected some of the more accessible products, such as resins.

The dipterocarp forests are abundant in resiniferous trees, and resins or “plant fluids” (often referred to generally as *damar*) were sought after in Asian markets for use as illuminants, sealants, glues, glazes, colorants, paints, incense, perfumes, cosmetics, and medicines (Burkill 1966). Early items referred to in the China trade comprise benzoin or “gum benjamin” (*Styrax benzoin*), for incense and curative purposes, and the aromatic wood *gaharu* or *lignum aloes* (*Aquilaria microcarpia*). Another popular product was “dragon's blood,” which was a general term for a number of red resins; one such—*rotan jaranang* (*Daemonorops didymophyllus*)—was used as an aromatic drug and a dye. There was also oleoresin or wood-oil, commonly called “gurun balsam” in India and Burma, employed for incense and medicinal purposes.

A very widely known early trade item was camphor, sought after in Chinese, Indian, and Middle Eastern (West Asian) markets. Crystalline scales of pure camphor, which formed in crevices and the decayed heart of old trees of the species *Dryobalanops aromatica*, were used in medicines and as a fumigant and incense. Beeswax, too, was collected for use in ointments and medicines.

Other forest trade items comprised birds' nests, a Chinese food delicacy made from the saliva of species of cave swiftlets (*Collocalia fuciphaga*, *C. Lowii*, *C. Lichaii*); bezoar stones, used as medicines and found in the gallbladders and intestines of certain species of monkey (*Semnopithecus Hosei* and *S. Rubicundus*); rhinoceros horn, for its curative and aphrodisiac properties; and anteater scales, for use as magical charms. Many products were also sought for decorative purposes. Such items included feathers of tropical birds such as the argus pheasant, kingfisher, and rhinoceros hornbill; "hornbill ivory" from the hardened casque of the helmeted hornbill; deer antlers; tortoiseshells and cowries; and rattans, bamboos, *pandanus*, *nipah*, and various fibers for the manufacture of mats, baskets, and other objects.

This trade in jungle/forest products lasted well into the European colonial period, but it became increasingly marginalized by the exploitation of raw timber and the clearing of forests for planting commercial crops such as rubber and oil palm and mineral exploitation for tin and gold. Nevertheless, such items as rattan, bamboo, palm leaves, resins, live birds, and animals and animal products still have an important role in local economies and in trade.

JUNK CEYLON (UJUNG SALANG, PHUKET)

Junk Ceylon (or *Junkceylon*) was the name given to the island of Phuket by European travelers and traders from the sixteenth to nineteenth centuries. The term was, in fact, a European version of the Malay name for the island, *Ujung Salang*. The historical importance of Phuket was always very much connected with its rich tin resources.

Phuket, or Thalang, was a province of the Siamese kingdom. Nevertheless, Phuket retained much of its commercial and political autonomy. Its governors traded with Malays, Moors, Chinese, Portuguese, English, Dutch, and French merchants or trading companies. The (Dutch) United East India Company (VOC) wished to establish a monopoly on tin export on Phuket, but its hopes were constantly dashed by the endemic unrest on the island. The French obtained a tin monopoly by the Treaty of 1685, but this was not put into effect, as the French traders were forced to leave Siam in 1688.

The 1770s saw the involvement of English country traders—for example, Francis Light (1740–1794), who established the settlement of Penang—in the island's trade. Then came Burmese invasions in 1785 and 1786, 1809 and 1810, and 1811 and 1812. Although the islanders fought heroically, especially in 1785 and 1786, the invasions resulted in famine, depopulation, and a temporary decline of the island and its trade. From the 1820s onward, the Chinese became tax farmers in Phuket and began exploiting the tin mines.

During the late nineteenth century and early twentieth century, the Chinese, notably the Khaw family and others, exploited these tin mines to their fullest extent. Sino-Thai families

indeed came to dominate the trade and politics not only in Phuket but also in southern Siam. Since being integrated into the new centralized administrative system during the late nineteenth century, Phuket has continued to prosper. However, it is not tin that draws people to present-day Phuket but the attractions of the sun, sea, and sand.

KACHIN INDEPENDENCE ORGANIZATION (KIO)

The Kachin Independence Organization (KIO) was founded in 1961 by a group of young Kachin nationalists whose aspirations for autonomous political power in northern Burma (Myanmar) had been forged during their time as students at Rangoon University. KIO was founded by three brothers from the Shan State, and its long-term leader was Brang Seng. The KIO first came to public notice as the result of an attack on the government treasury in Lashio. It quickly grew over the next decade to be one of the largest insurgent organizations in the country. The Kachin are an ethnic group residing in the Kachin and Shan states of Myanmar and in southern China. They account for approximately 1.5 percent of the total population of Myanmar (Smith 1999: 30). The late blossoming of Kachin nationalism was the result of the increasing centralization of power that accompanied independence in 1948 as well as the plans of the government of then Prime Minister U Nu (1958–1962, t. 1954–1956) to make Buddhism the state religion. Many Kachins had converted to Christianity during the previous

century, though many others were Buddhists or followed various local belief systems unique to themselves.

During the 1960s, the KIO linked up with the Karen National Defence Organisation (KNDO) in an alliance against the government, but in the 1970s, it held talks with both the government and the Burma Communist Party (BCP) to enter into alliances in exchange for arms. The KIO cooperated with a number of other insurgent and opium-smuggling armed bands over the years. For much of the 1970s and 1980s, large areas of the Kachin and Shan states were outside of government control as a result of KIO operations. However, in a surprise move in 1994, the KIO entered into a cease-fire with the government. The organization has subsequently gone into business and runs a number of community development programs.

KACHINS

The term *Kachin* today refers to a number of groups living in the north and northeast of Burma (Myanmar). Initially, it was used in relation to the Jinghpaw people, the dominant Kachin group, but it may now refer to the Lachik (Lashi), Zaiwa (Atsi), Lawngwaw (Maru), Nung Rawang, and northern Lisu peoples as well. All of these groups had strong links with peoples in China and Assam. However, the British colonial period in Burma (1824–1948) resulted in the identity “Kachin” developing within a quite specific Burmese political context. Related groups outside Burma do not use this identity in referring to themselves.

The origins of the term *Kachin* are not clear, but the Burmese and the Shan peoples used it before the colonial period. As mentioned, they used it in reference to the Jinghpaw people, who formed a matrix of clans and lineages sharing a common linguistic, social, and cultural identity. When the British first encountered the term *Kachin* around 1837, it referred to these communities in the hills region around Bhamo, near the Chinese border. These lineages spread westward all the way to Assam, where they were called Singpho and where many had already established themselves in the plains. The enclaving of the Assamese tea plantations by the British administration during the first half of the nineteenth century led to the artificial separation of the Jinghpaw in Upper Burma from the Singpho in Assam.

From the 1860s onward, British officers in Burma and American Baptist missionaries again came into close contact with the Jinghpaw people of the Bhamo Hills region, and usage of the term *Kachin* became established by them. It was not a term that was either used or liked by Kachin people themselves, as they felt it had derogatory associations. Following the annexation of Upper Burma by the British in 1885, loose administrative control was established over these potentially troublesome peoples. In 1896, the Kachin Hills Regulation was introduced, which consolidated the use of *Kachin* as both an ethnographic and administrative term. The recruitment of “Kachin” troops into the Burma police and the Indian army also confirmed its usage. However, the identity also began to be extended to non-Jinghpaw communities in a number of contexts—those who paid

tribute to Jinghpaw chiefs in the Kachin hills, soldiers who entered the Kachin battalions of the Burma Rifles, and those who used Jinghpaw as the lingua franca of the region.

Dislike of the term *Kachin* continued throughout the colonial period, and attempts were made to develop a local synonym. Today, the term *Wunpawng* is used. It is derived from the name of a mythic common ancestor of the Kachin peoples according to Jinghpaw oral tradition. Contemporary multigroup unity is based upon ideas of common descent, parallels between the clan organization of the different groups, common social and ritual practices, and their historical integration through reciprocal economic and political relationships. The conversion of many to Christianity has contributed to a further sense of common interest, in opposition to the majority Buddhist and Burman government. However, contemporary Kachin identity is also vulnerable to attempts by the Burmese government to create divisions between the Jinghpaw and other Kachin subgroups.

Much more research needs to be conducted into Chinese, Burmese, Shan, and Assamese sources to reconstruct the ethnohistories of the various Kachin groups prior to the British colonial period. As the Jinghpaw script was only developed in the 1890s by the Baptist missionary Ola Hanson, internal histories must be derived principally from the careful interpretation of oral traditions. However, due to the spread of Christianity, most of these traditions have almost completely disappeared. Clan histories frequently relate migrations from the north and northeast, through parts of Tibet and Yunnan into the Triangle (the territory where northeast Myanmar, northwest Laos, and northwest Thailand meet) and from there westward to the Hukawng Valley and Assam or southeast into the northern Shan State. The chronology of these migrations is highly conjectural.

Present-day Kachin nationalists remember vividly how the Kachin community freed themselves from the shackles of domination by the Shan, Burmese, and British. However, their actions also meant that in the debates leading up to the independence of Burma in 1948, the Kachin Hills were marginalized from the political center as Scheduled Areas. In 1947, a conference was held at Panglong in the Shan State,

at which the political future of the main minorities within an independent Burma, including the Kachin, was discussed. In 1948, Kachin State was created, and the Kachin hoped that promises made at Panglong to respect regional autonomy would be upheld. Following independence, there was increasing discontent with the progress of affairs in Burma, and in the early 1960s, the Kachin Independence Army (KIA) was formed. This was one of the best-organized armed opposition groups in Burma, although for many years, accusations were leveled that the troops were funded by illicit opium trading. The KIA remained in conflict with the Burmese government until 1994, when a cease-fire agreement was signed. Splinter groups signed separate agreements. Today, the Kachin Independence Organization has entered into a number of business arrangements with the Burmese government, and the cease-fire holds. However, Kachin State remains economically underdeveloped, and serious infrastructure, social, and health issues loom, which may yet cause cracks in the veneer of political stability.

KADAZAN-DUSUNS

The term *Kadazan-Dusun* (also *Kadazan/Dusun* and *Kadazandusun*) refers to a collectivity of ethnic groups in Sabah that belong to the Dusunic linguistic family. The term is constructed from the autonyms of two ethnic groups within that family. *Kadazan* is the autonym of a Dusunic group in Papar and Penampang. *Dusun* was originally thought to be only a term applied by the coastal Muslim to the interior agriculturalists speaking a Dusunic language. Since the 1980s, however, it has been recognized that *Dusun* is actually the autonym of a large self-conscious ethnic group in the hills behind Tuaran and Kota Belud up into Ranau. The use of the term *Kadazan-Dusun* as an attempt to unite the Dusunic language family reflects a political rather than an ethnographic reality. It is not an ethnic group with a common culture or language, and use of the term ignores other autonymic Dusunic groups.

The Kadazan people experienced Catholic missionization well before other indigenous groups. This provided them with the advantage of education, which resulted in the development of a more complex economy before other Dusunic groups. In the 1950s, the Kadazan formed a society to promote the recognition of their culture and language, so that these would not be forgotten, and to uplift the welfare and standard of education of natives throughout Sabah. One of the leaders of the society, Donald Stephens (1920–1976), was of mixed European-Kadazan ancestry. His newspaper, *The Sabah Times* (1953), ran a section in the Kadazan language, which was not understood by many other Dusunic groups.

When plans were being made to create the new country that would be known as Malaysia, the formation of political parties was permitted. Stephens and other Kadazan political leaders formed the United National Kadazan Organization (UNKO) in 1961. To some Dusunic groups, the name *Kadazan* meant “enemy.” However, under that banner, the Kadazan leaders attempted to attract all Dusunic speakers and eventually all the non-Muslim native peoples of Sabah. The use of this ethnic name to unite the various ethnic groups was seen by many as giving a privileged position to the Kadazan. And it met with resistance, resulting in a few other ethnic groups forming competing political interest groups.

The term *Kadazan* thus has mixed connotations, from political to ethnic. Other groups to this day deny they are Kadazan. As the Kadazan originally refused to use the term *Dusun*, considering it to be pejorative, this also isolated the autonymic Dusun group in the interior. In turn, this isolation led them to form their own Dusun cultural association and political party. Since the 1960s, there has been continuous dissension throughout the groups in the Dusunic language family over the use of *Kadazan* as a label. This has eroded much of the political unity that was originally sought.

In the mid-1990s, there were efforts to put a stop to this dissension and bring together the Dusun party and the Kadazan party into one larger party, which led to the creation of the term *Kadazandusun*. However, wrongly joined arguments still persist and confuse ethnic and ethnographic issues with political issues. There are continuing attempts to claim cultural unity as a basis for a political interest group rather than shared political issues.

In addition to the Dusunic family, there are three other major language families in Sabah: Paitanic, Murutic, and Kelabitic. Each of these is composed of a number of self-conscious, named ethnic groups, many without mutual intelligibility within the larger families. To confuse the matter further, some of these groups claim to be Kadazan when asked for their ethnic and linguistic identity, believing that this identity will give them greater privilege in the national scene.

Dusunic peoples stretch along the west coast of Sabah and into the mountains and intermontane plains. Their cultures and languages have been little studied, so the range of variation is not known. The languages of these various groups are largely not mutually intelligible. Their economy traditionally consisted of swidden agriculture of dry rice with maize, cassava, and a variety of vegetables in the hilly areas and irrigated rice along the coastal plains and intermontane basins. Chickens, pigs, and water buffalo are raised. Fruit trees are planted and cultivated. Traditionally, these peoples lived in longhouses, except in isolated mountain areas. Other shared sociocultural traits include a cognatic social organization with no unilineal groups; the village as a corporate entity holding residual rights over land in which members

cultivate their fields; bride-price; rice spirits propitiated for a good harvest; and women having high status, equivalent to that of men. Women as priestesses and spirit mediums control a body of esoteric literature that they sing in couplets to cure illness or increase the fertility of agricultural pursuits and marriages. Irritable, vindictive in-dwelling spirits are believed to cause illness. Children are highly valued, and socialization is gentle and nonpunitive. Mount Kinabalu (4,101 meters) is considered the location of the afterlife.

With development and modernization, particularly following the creation of Malaysia (1963), some Dusunic peoples have lost their lands and now serve as manual laborers in towns or on plantations. Others have developed smallholdings of coconut, oil palm, and rubber or have extended their wet-rice fields. Many are small entrepreneurs, work in various trades, or are employed by the government.

KADIRI (KEDIRI)

Kadiri was an ancient kingdom on the island of Java. It was the first kingdom known in Indonesia to have developed a stratified territorial administration, consisting of three levels: the village (called *thâni*, which itself consisted of several subdivisions, each having its own name); the coordinated unity, made up of several villages (called *wisaya*); and the state or kingdom (called *bhûmi*). The capital, where the king abided in his palace, was called *nâgara*, and the palace itself was called *kadatuan*. The denomination of the capital may, occasionally, be used as a synonym for the whole country.

Based on the location where inscriptions issued by authorities of the Kadiri kingdom have been found, the territory of this kingdom can be identified as within the present-day East Java Province. However, there are two inscriptions in Central Java Province mentioning year numbers that fall within the Kadiri period. Nevertheless, the contents of the two inscriptions do not have any connection with authorities of the Kadiri kingdom.

In its early phase, the kingdom of Kadiri must have been one of the twin kingdoms created as a result of Airlangga’s (r. 1019–1049) division of his kingdom Kahuripan, mentioned in the inscription *Wurare* (1289 C.E.) that was found at Simpang, Surabaya, and in the literary texts entitled *Nâgarakertâgama* (fourteenth cen-

tury C.E.). The twin kingdoms comprised Pangjalu and Janggala, presumably partitioned by the River Brantas, one of the two biggest rivers in East Java. The inscription of *Wurare* also mentioned that the capital of Pangjalu was Daha. The name *Daha* was also mentioned in a slightly earlier inscription (the *Mîla-malurung* inscription) as the capital of bhûmi Kadiri. Thus, it becomes clear that *Kadiri* as a name of a kingdom was a synonym of *Pangjalu*. However, the predominance of the use of the Kadiri in later textual evidences might be explained as a function of the remarkable developments during the internally called Kadiri period (mentioned in contemporaneous inscriptions and literary works). The noteworthy developments were both in state management and in cultural expression, and they may have been marked enough to cause this kingdom to overshadow its twin.

Aside from territorial administration, the Kadiri period also saw developments in military organization and mobilization. Troops were divided according to the mastery of different kinds of weapons, such as the club, the arrow, the battle-ax, and the lance, or according to mastery over different serving animals, such as the elephant and the horse. Every unit had a leader and a certain symbol put on its flag. Most symbols used a figure of an animal. Initiatives in the Kadiri state formation also included the development of a system of water management (supposedly for both transportation and irrigation purposes). A special government official appointed for this task, the *senapati sarwawajala*, first appeared during the Kadiri period. A water-related professional that was first mentioned in Kadiri inscriptions was the *undahagi lañcang*, the shipbuilder. Another official that likewise first appeared during the Kadiri period was the *sopana*, who acted as an intermediary between the king and those who needed the king’s favor.

Kings of Kadiri proper, mentioned in inscriptions, began with Bâmeswara (in inscriptions of 1117 and 1120 C.E.), then Warmmeswara-Jayabhaya (1135, 1136, 1144, and 1157), Sarwmeswara (1159), Arryeswara (1169), Kroñcaryyadipa (1181), Kâmeswara (1185), and Śrengga-Jayawarsa/Warsajaya (1194, 1204, 1205). Some of those Kadiri kings were mentioned in literary works as the patrons of the

court poet, even as literary critics. Several works by Kadiri court poets survive to the present through the tradition of copying manuscripts, both in Java and in Bali. The popularity of those works is demonstrated by their many dramatic and musical interpretations on both islands. Among the poetic works are the *Bhâratayuddha*, *Smaradahana*, *Bhomakâwya*, and *Ghatotkacâśraya*. Quotes from the *Bhâratayuddha*, telling about the war between the Pandawas and Kaurawas, are still used as formulaic expressions in today's Javanese shadow-puppet plays. The name *smaradahana* (the burning of Smara, the god of love) is perpetuated in the name of a meter in local traditional Javanese-Balinese-Sundanese poetry.

KAMPONG AYER (BRUNEI)

Kampong Ayer is the spiritual home of Negara Brunei Darussalam. The sultanate's former political and economic capital, it is the "Water Village" section of the present-day city of Bandar Seri Begawan.

Built at a defensive location, Kampong Ayer comprises houses built on stilts in the Brunei River, which has acted as water supply, rubbish dump, and waste-disposal system. The settlement is divided into many different wards that are interconnected by wooden walkways. Each ward has its own name, perhaps that of an economic specialization or of a prominent resident in the past. Kampong Ayer's silversmiths were among the best in the entire Malay Archipelago. Disparities of social status and income persist to this day both within and between wards.

Although there is sixteenth-century evidence of terrestrial construction, the present land town (the country's administrative headquarters) dates essentially from the early twentieth century. The combined entity was known as Bandar Brunei (Brunei Town) until 1970, when the city was renamed Bandar Seri Begawan.

Kampong Ayer's population waxed and waned in accordance with the sultanate's political fortunes, reaching a nadir in the early twentieth century but subsequently making a strong recovery (it was 27,285 in 2001) (Daniel 2002: 219). Despite government efforts since the colonial era, the inhabitants remain resistant to resettlement on terra firma. The British had wanted to promote rice cultivation; the present regime aims to improve housing and promote social welfare. There is a dilemma in that the government is obliged to supply Kampong Ayer with the essentials of modern life, yet the more it does so, the less willing people become to settle elsewhere.

Although no longer the sultanate's center of gravity, Kampong Ayer looks set to survive for many years to come. It is promoted nowadays as a tourist destination. Problems include regular conflagrations, which can destroy whole wards; in the past, savage epidemics took a fearsome toll of life.

KAMPUCHEA UNITED FRONT FOR NATIONAL SALVATION (KUFNS)

The Kampuchea United Front for National Salvation was a Cambodian political body that was established by Vietnam toward the end of 1978, prior to Vietnam's invasion of the communist regime of Democratic Kampuchea (DK). The front consisted of Cambodian soldiers and party cadre who sought refuge in Vietnam to escape the purges being conducted by the DK. Most of the refugees came from the eastern part of Cambodia, bordering Vietnam. The men selected by the Vietnamese to lead the front included such future Cambodian political figures as Chea Sim (1932–), Heng Samrin (1934–), and Hun Sen (1951–). The front leadership also included Cambodians who had lived in exile in Vietnam since the 1950s and had gained the trust of the Vietnamese.

In December 1978, Vietnam launched a blitzkrieg attack on DK, using several hundred thousand troops. The country broke open like an egg, and Vietnamese forces accompanied by their Cambodian protégés entered Phnom Penh on 7 January 1979. A new government, calling itself the Peoples' Republic of Kampuchea (PRK), was swiftly established, and figures prominent in the front assumed ministerial rank.

Over the next few months, as Cambodia struggled to its feet, the newly reconstituted Cambodian Communist Party operated from the shadows, with the front taking responsibility, under close Vietnamese supervision, for a series of initiatives aimed at gaining the confidence of the war-weary Cambodian people. These steps included reopening schools and markets, allowing freedom of movement, and permitting Buddhism to flourish in a restricted form. The front ceased to exist following the Cambodian national elections of 1981, but the leaders installed by the Vietnamese remained in charge of the PRK, even after the withdrawal of Vietnamese forces from Cambodia in 1989.

KANGANI SYSTEM

The *kangani* system was a system of labor recruitment from India associated with the growth of the international economy and the spread of the plantation economy in Southeast Asia in the late nineteenth century. Plantation

workers in Malaya were predominantly South Indian and were hired as either “assisted” or “unassisted” labor. Under the category of assisted labor, there were two types of recruitment systems—indenture and kangani. The kangani system was essentially one of personal recruitment. It rapidly took over as the main mechanism of labor recruitment, enabling both coffee- and rubber-planting interests and the British colonial administration to import Indian labor on a large scale for the plantation economy and the public works sector in Malaya and the Straits Settlements.

The word *kangani* means “overseer” or “foreman” in Tamil, and under this system, the kangani, usually a senior laborer, was sent by his employer to recruit workers from his home village. This system was preferred because of the lower cost involved in sending a kangani to recruit labor compared with the cost of indentured labor obtained through recruiting agencies. The kangani system also appealed to the planters because the prospect of absconding was less likely compared with the indenture system, especially since the kangani usually had a vested interest in ensuring that the laborers did not run off. The kangani was not only a powerful intermediary but also received “head money” for each recruited worker for every day he labored.

The kangani system was considered less harsh than the indenture system because laborers were no longer bound by written contracts. Desertion was regarded as a civil, rather than a criminal, offense, and workers were regarded as “free” workers. Kangani labor recruitment began to decline in the late 1920s, was suspended in the 1930s, and was formally abolished in 1938.

KANGCHU SYSTEM

The *Kangchu System* was a pattern of agricultural development that flourished in Johor, a West Malaysian state, during the nineteenth century. The ruler gave a Chinese capitalist the authority to recruit and introduce pepper and gambier planters into the watershed of a specific river. The *Kangchu* (a Chinese term translated as “Lord of the Port”) received a letter of authority, a *surat sungai* (lit. river letter), giving him most of the powers of government over the Chinese community that he founded. These included the right to collect taxes, particularly excise taxes on the sale of opium, alcohol, pork, and the like, and the provision of services such as pawnbroking, gambling, prostitution, and theatrical productions.

Some version of the system seems to have been in operation earlier in Singapore and on the island of Bentan (Bintan) in the Riau-Lingga archipelago, where place-names (such as Lim Chukang and Pitchukang) reflect the use of this system. Most of the terminology apparently derived from Chinese expressions, primarily in the Teochew (Chaozhou) speech.

In Johor, the system reached a fairly sophisticated level of development. The existing records of the Johor archives show that the ruler gathered considerable information from the Chinese businessmen who controlled the system, maintaining a check on the partnerships formed to manage the enterprises and keeping a register of the shareholding *kongsi* (*gongsi* [lit. sharing, cooperative undertaking]), which managed each river valley. In Singapore, the British colonial government exercised virtually no control over these Chinese settlements.

The system, which reflected an ongoing political and economic relationship between the Johor ruler and the Chinese merchants of Singapore, was instrumental in bringing about a productive population in the state during the nineteenth century and providing the ruler with a substantial and dependable income. This system was abolished after Johor became a part of British Malaya in 1914.

KAPITAN CHINA SYSTEM

Kapitan China, the Malay title meaning "captain [or chief] of the Chinese," was accorded to the leader or headman of the Chinese community. This individual functioned as both intermediary and representative between the European colonial authorities and the Chinese community. The system proved to be an economical and effective means of indirect rule.

The practice of appointing a captain for each ethnic group and only dealing through this leader on all matters relating to that particular community was an administrative device used by the Melakan Malay rulers of the fifteenth century in dealing with the cosmopolitan trading community. The Portuguese adopted this method of indirect rule during their administration over the city port of Melaka in the sixteenth century, and the Dutch and the British utilized this method in handling and controlling the Chinese in their respective domains in Southeast Asia. The Dutch and the British shared the policy of restricting their interaction with the Chinese community to matters in which they had a direct material interest. Apart from that, the Chinese were left to administer and manage affairs among themselves. The Dutch and British colonial authorities appointed a prominent Chinese merchant or a miner as the *kapitan China*, whom they dealt with on all matters relating to the Chinese community. The *kapitan China* was invested with judicial powers to handle offenses within his community and to generally keep the peace. To a large extent, this individual was held responsible for the actions of his brethren. The *kapitan China* system was adopted in the Dutch East Indies, particularly in Java, and in British Malaya. The English White Rajas of Sarawak also subscribed to a similar practice.

During the mid-twentieth century, toward the close of the colonial period, the title *kapitan China* became more honorary, and the system was subsequently abandoned in the post-1945 period.

KAREN NATIONAL DEFENCE ORGANISATION (KNDO)

When the British government concluded an agreement with the Anti-Fascist People's Freedom League (AFPFL) in January 1947 to grant Burma (Myanmar) independence in one year, the majority of the leadership of the Karen National Union (KNU) decided to boycott the elections for a national assembly. Unless prior agreement on seven demands, including the establishment of a separate ethnic Karen state with its own seaboard, was reached, the KNU would withdraw from the elections. Though the AFPFL agreed to give the Karen community twenty-five seats in the assembly and to discuss the other matters in time, it was unwilling to make the major concessions the KNU demanded.

At that time the KNU, having parted company with the AFPFL, decided to organize its own paramilitary force, similar to the AFPFL's People's Volunteers Organization, which General Aung San (1915–1947) had established after the war as a paramilitary force in the event that the British had not conceded independence. Named the Karen National Defence Organisation (KNDO), the force soon began to group together young supporters into disciplined groups to defend what the leaders perceived to be the threats to Karen interests following the establishment of an independent democratic regime in Burma.

After the assassination of Aung San in July 1947, a period of civil uncertainty occurred,

and local units of the KNDO began to act without government approval to provide security protection for Karen communities in various areas of southern Burma. KNDO units held Moulmein for two months and only returned the city to government control when the Karen commander of the Burma army, General Smith-Dun, conceded their authority in other areas. The KNDO seized Moulmein again in September 1948, and at about the same time, Karen troops in the Burma armed forces revolted and joined the KNDO. The Karen insurgency had started; it would last for more than fifty years.

KAREN NATIONAL LIBERATION ARMY (KNLA)

The Karen (or Kayin) National Liberation Army is the armed wing of the Karen (Kayin) National Union (KNU), the longest existing separatist movement in Burma (Myanmar). Headed for many years by the veteran Bo Mya, the KNLA is a descendant of previously organized Kayin separatist forces, including the Karen National Defence Organisation (KNDO), formed in July 1947, and the Kawthoolei People's Liberation Army (KPLA), established in the 1950s when the KNU broke into factions. The KPLA was aligned with a procommunist organization known as the Karen National Unity Party (KNUP) and led by Mahn Ba Zan, whereas Saw Hunter Tha Hmwe led the conservative faction that retained the KNU name. In the early 1960s, a third faction formed around the Karen Revolutionary Council (KRC). The KNLA largely operates along the Thai border areas in the Myanmar state of Kawthoolei.

The Kayin, who compose 2 to 4 million of Myanmar's 50 million population, are divided between the majority who are Buddhists and animists and the less than 25 percent who became Christians during the British colonial period (Smith 1999: 30). The leadership and most of the followers of the KNU/KNLA come from the Christian minority of the Kayin population. Many of the troops that formed the KNDO had formerly served in the colonial army. Never accepting incorporation into Myanmar at the time of independence from the British in 1948, the KNU had sought to establish a separate Karen state. Pursuing different strategies since the middle of the twentieth century, the Kayin separatist groups have never come close to success despite their tactical and actual alliances at various times with the Burma Communist Party (BCP), Chinese Nationalists, Shan Nationalists, and Thai forces.

KAREN NATIONAL UNION (KNU)

The Karen (Kayin) National Union (KNU) is the major Kayin rebel group in Burma (Myanmar) today. When founded in 1947, it brought together some of the leaders of the minority Kayin Christian and other communities to press the departing British colonial government to establish a separate independent Kayin state out of parts of Burma and perhaps Thailand. The Kayin and those closely related to them are an ethnic group who compose a number of distinct communities in the delta region and eastern border areas, numbering from 2 to 4 million out of Myanmar's 50 million population (Smith 1999: 30). The armed wing of the KNU, the Karen (Kayin) National Defence Organisation (KNDO), was composed initially of veterans from government forces raised before and during the Pacific War (1941–1945).

In January 1949, while the government of Myanmar was facing assaults from the Burma

Karen National Union (KNU) soldiers hold guns during the anniversary of the 53rd Karen National Resistance Day at Valay Kee base near the Thailand-Myanmar border, 31 January 2002. (AFP/Corbis)

Communist Party (BCP), the majority of the KNU went underground to join in rebellion against the new state. Because of the military training and equipment at their disposal, the KNDO forces soon controlled large parts of Myanmar, briefly including a number of major towns. Gradually, however, the government was able to regain territory. Since then, the KNU, though never threatening the government, has been a continual drain on resources and a major hindrance to creating a stable country. The organization has undergone a complex evolution, marked by several major fissures as its leaders have developed and disagreed over alliances with the BCP, Chinese Nationalist troops in Myanmar territory, and other ethnic minority insurgent groups. Although many insurgent groups entered into cease-fire agreements with the government of Myanmar after 1988, the KNU refused to do so. It has since

been significantly reduced in strength as it has further fractured from within and as the government has applied greater military pressure on it from without.

KARENS

The Karens comprise one of the largest ethnic groupings in Myanmar (Burma), though there is dispute over just how many persons in the country identify themselves as Karens. Accord-

ing to the government, there are approximately 2.5 million Karens out of a total population of over 50 million people, but according to the Karen National Union (KNU), which has been in revolt against the government since the middle of the twentieth century, the number is closer to 7 million. Another 200,000 live in Thailand (Smith 1999: 30). In the nineteenth century, the broad ethnic category “Karen” came to be applied to hill tribe peoples living in eastern Myanmar, primarily near the border with Siam (Thailand). There are a number of subdialects of the Karen language, and over time, these have come to be identified with particular subsets of Karen. Also, political distinctions among the Karens have tended to become reified into ethnic categories.

What may be referred to as the mainstream Karens (or Kayins) now live both in the hill areas in the east and in the expansive Irrawaddy Delta, which was opened to rice cultivation in the nineteenth century. By and large, the plains or deltic Karens have integrated into Burmese society, rather like their compatriots living in Thailand have done. However, in the more variegated and inaccessible terrain of the mountainous border region, numerous distinctions among people who might be described as Karens have been maintained. Moreover, these distinctions may be even more pronounced because these people have been forced to come to terms with the political and economic changes caused by the growth in population of their neighbors and the increasing capacity of modern states to regulate life in remote territories. Sgaw and Pwo are two of the major Karen dialects. The Sgaw people tend to identify themselves as Christians, whereas the Pwo more commonly are Buddhists.

In addition to the mainstream Karens, twenty subsets can be identified, with four major political identities that have come to have ideological resonance since Myanmar achieved independence in 1948. The other three political identities are the Karenni, the Kayans, and the Pao. The Karenni are also known as the Kayinni, Kayah, or Red Karens. The Kayans are known as the Padaungs, and the Pao are sometimes called Taungthu. Predominantly practitioners of animism prior to the nineteenth century, many have been converted to Theravada Buddhism, like the majority Burman and Mon populations, or to Christianity. Both Protestant

and Catholic missionaries worked among the Karens during and after the colonial period. Christian Karens, who composed approximately 25 percent of the mainstream Karen population, are primarily Baptists (Smith 1999: 44). Catholicism is often practiced by Padaung and Pao people, even though they retain many of their earlier animist beliefs.

At the time that Myanmar achieved independence, the constitution adopted provided for a federal republic with three states and one special division, each with a separate ethnic designation given it. Independent Myanmar then consisted of the Shan State, the Karenni State, the Kachin State, the Chin Special Division, and the seven divisions of what had been known as Burma proper. Provision was also included in the constitution for the creation of a Karen state, but this was delayed as a result of the civil war that broke out in 1948 and engulfed the country. However, in 1952, such a state was carved out of the approximately 30,000 square kilometers of territory along the Thai border. Given the great ethnic mixing that exists in Myanmar, less than half the population in this territory was actually Karens, and it is difficult to see how an ethnically cohesive unit could be created anywhere in the country without massive migration and human dislocation.

Karen identity was greatly strengthened during the colonial period not only by the work of Christian missionaries but also by the policies of the British administration. Special political rights, including Karen-designated seats in the legislature, and disproportionate recruitment into the police and armed forces provided Karens with what the Burmans perceived as special favors; consequently, the Karens were considered collaborators in colonialism. These divisions were exacerbated during the Pacific War (1941–1945) when a number of Christian Karens remained loyal to the British while the majority of the population initially rallied to the invading Japanese. This resulted in the massacre of a church full of Karens one Sunday, an event that has become symbolic of the strained relations between the two groups ever since.

The Karen community was the first in colonial Burma to organize in modern political forms. In the 1880s, Christians, in conjunction with American missionaries, formed the Karen National Association. After the Pacific War, leading Karens formed the Karen Central Or-

ganization (KCO); a split in 1947 brought forth the Karen National Union (KNU). It was this organization that led the revolt against the government of Myanmar that broke out in 1948, a revolt that had not ended at the time of writing (2002). The more moderate members of the KCO continued to cooperate with the government, and a Karen woman served as a minister in the first cabinet of independent Myanmar. The KNU argued that the British had promised the Karens an independent state, similar to Pakistan, in exchange for their loyalty during the war. However, they felt let down by the failure of any British government to acknowledge their claim.

The revolt of the KNU was greatly aided by the defection of a number of troops from the Myanmar army. In December 1948, the Third Battalion Karen Rifles along with Karen military and civilian police joined the rebellion. At that time, the Karen commander of the Burma army, General Smith-Dun, was relieved of his command. The KNU managed to hang on to the territory they controlled along the Thai border as a result of a number of factors. During the socialist period in Myanmar (1962–1988), they taxed the lucrative smuggling trade then developed with Thailand. They also levied taxes on the population they controlled and received some assistance from Christian groups abroad. From time to time, they entered into temporary alliances with other insurgent groups in Myanmar, including the now defunct Burma Communist Party (BCP) and some drug warlords. Following the prodemocracy uprising in 1988, the KNU served as a rallying point for a number of anti-military factions and movements.

A majority of the troops of the KNU were not Christian, and a number of these revolted against their officers in the mid-1990s and formed the Democratic Karen Buddhist Army (DKBA). Claiming discrimination against Buddhist Karens by their Christian commanders, the DKBA quickly reached a cease-fire with the government army and began to conduct warfare against the KNU. Unlike the majority of ethnic groups in Myanmar, which were previously in revolt against the army government but which entered into cease-fires with it during the 1990s, the KNU, despite several failed attempts at negotiations, remains at arms. The KNU as a political movement and armed force

is now much weaker than it was, and the Karen community has suffered a great deal of deprivation and death as a result of living in what has been, for over fifty years, a war zone. More than 100,000 lived in refugee camps in Thailand at the start of the twenty-first century, and many more were displaced within their own country.

The separate Karenni or Kayah State and its diverse population of Kayah, Shans, Burmans, and others are the result of a treaty signed between the British and King Mindon (r. 1853–1878) in 1875, which recognized Kayah as a separate political entity from the remainder of the king's territories. The Kayah had adopted the more formal and hierarchical social and political kingship (*sawbwa*) systems of their northern neighbors, the Shans, than had those Karens living farther south, who organized their society around hereditary village headmen. This anomaly was formally recognized in the 1947 constitution of Myanmar, and the Kayah State, like the Shan State, was granted the right of secession from the Union of Myanmar in ten years' time. However, before then, relations between many in the Kayah State and the government became tense, and there has been armed insurgency of various degrees of intensity against the central government and its policies since 1948.

The small population of the Kayah State, estimated at only about 250,000 in 1997, in comparison with the Karen State population of 1.4 million at that time, is very diverse. These divisions are the result of linguistic, religious, ethnic, and, increasingly, ideological distinctions that often overlap and reinforce limited and antagonistic worldviews. The Karenni National Progressive Party (KNPP), formed in 1957, led the opposition to the government. In 1978, the KNPP split from the left-wing Karenni Nationalities People's Liberation Front (KPLF). The KPLF entered into a cease-fire with the government in the early 1990s, as did another rebel group in the Kayah State, the Kayan New Land Party (KNLP). The KNPP initially also agreed to a cease-fire with the government, but that agreement quickly broke down over disputes about logging rights and control of territory.

The Kayah State, like much of the Kayan State farther south, has been subjected not only to years of warfare that has had deleterious consequences for the people of the area but also to extensive legal and illegal logging. There is widespread smuggling of timber, cattle, and

other goods into Thailand in exchange for food and medicine. Kayah State is perhaps the poorest and least developed territory in all of Myanmar. Because of the very mountainous terrain of the state, as well as the varieties of political powers in existence, it is not an area over which any government, before or after independence, has ever had firm administrative control. In an attempt to establish its authority over the Kayah State and end the years of insurgency, the government relocated more than 35,000 villages in the first half of the 1990s. A further 20,000 fled to Thailand, where they live in refugee camps or have been absorbed into the labor force.

**KARTINI, RADEN AJENG
(1879–1904)**

Javanese Feminist

Raden Ajeng Kartini entered Indonesia's pantheon of national heroes by presidential decree

in 1963, fifty-nine years after her death in the Dutch colony then known as the Netherlands (Dutch) East Indies. In her homeland today, Kartini is honored rather than studied. Republican Indonesia shed Kartini's inherited title, Raden Ajeng, in favor of *Ibu* (mother) and imprinted her on the national consciousness as a sanctified figure, eternally caring for others—an advocate of women's rights, advanced education, and careers and a precursor of nationalism.

Family and friends considered the historical Kartini emotional, combative, and unconventional. Her private letters preserve a jumble of thoughts, an ardent yearning for personal freedom, extravagant outpourings of affection, plans for careers, an eye for observation, and a passionate belief in her own destiny.

Kartini's family was self-consciously modern, the men holding important positions in the colonial civil service. They employed Dutch live-in tutors, invited Europeans to dinners where champagne was served, journeyed by the new railway to the colony's capital of Batavia, and wrote articles for Dutch-language journals. Vaunting their blood ties to Java's royal houses, they claimed a special relationship with the rural Javanese that enabled them to deliver to the Dutch taxes, prosperity, and calm. While cementing their place in Java's colonial present with Western jobs and tastes, Kartini's male kin linked Java's present with its past, maintaining the standing of the family through polygamous marriage alliances. Chief wives brought the glamour of royal Java, whereas minor wives reflected the obedience of village populations.

Kartini and seven of her siblings were children of her father's village wife; three others were children of the wife with connections to royalty. Kartini's experience of polygamy impressed on her the subordination of women and strife in the home. She came to view the practice through Dutch eyes as shameful. Becoming fluent in Dutch at the local European school, which was multiracial and coeducational, Kartini urgently wanted what Dutch girls seemed to have—a choice over her own future. But though her brothers continued their studies in secondary school and one went on to the university in The Netherlands, the sisters followed the dictates imposed on Javanese girls of their class. They withdrew into the home to wait through puberty for marriage.

Kartini and her sisters became invisible to the Javanese. They could, however, visit the women of the Dutch community. They expanded their reach after meeting J. H. Abendanon (1852–1925), Java's director for education, and his wife and learning of the government's proposals for girls' schooling. Kartini corresponded regularly with Rosa Abendanon, and through her, she extended her acquaintances among the senior levels of the colony's administration. In 1900 in Batavia, she met members of the governor-general's circle. She remained in correspondence with them until her death, using the letter as the medium to develop her views on the place of women in Javanese society, the need for girls' education and enlightened female behavior, and ending arranged marriages and polygamy. She also wrote for Dutch-language journals published in the colony.

Through her network, Kartini was offered a government scholarship for study in The Netherlands. Her goals were to further her formal education, to develop a mentality of freedom, and to provide a role model on her return to Java. Such ideas, conceived in opposition to the family, resulted in frustration, but at home, she started her own small school for daughters of her father's staff, trying to develop a teaching method that would attract the Javanese and mold them in modern ways.

Kartini's notoriety brought her to the attention of Raden Adipati Djojoadiningrat, the Javanese official heading the district of Rembang. Although her well-known desire to remain single was considered scandalous, her personal connections to influential Dutch families made her an eligible wife. The family overcame her opposition, and in 1903, Kartini entered a polygamous household to share her husband with three cowives and seven children. She died following the birth of a son in 1904.

In 1911, Abendanon published a selection of Kartini's letters to Dutch friends to raise funds for girls' schools in Java. Many editions and translations into numerous languages followed. Some Indonesians saw Kartini as an embarrassment due to her appreciation of Dutch people and their culture. They faulted the absence of an Islamic sensibility and her lack of interest in Dutch colonial possessions beyond Java, and they saw few accomplishments in her short life to merit public attention.

In 1987, the publication of all of Kartini's letters to the Abendanon family revealed Kartini the gossip, explained what had been conjecture, and portrayed the crucial alliance of Javanese and Dutch elites that had made colonial rule possible. The letters show the intellectual ferment provoked by a Western education and provide a rare female voice from the period. They give an eyewitness account of daily life at a critical turning point in Indonesia's history.

KATIPUNAN

Clandestine Filipino Revolutionary Organization

Katipunan was a secret society organized in Manila in 1892 with the purpose of working toward a separation of the Philippine Islands from Spain. The founding of the Katipunan ended the period of reformism and ushered in a period of revolutionary activity. The society represented the role of the lower classes in the Philippine Revolution. In 1896, the *katipuneros* raised the flag of the revolution and started the armed struggle against the regime.

In July 1892, José Rizal (1861–1896) had returned to the Philippines to start a reformist organization called La Liga Filipina. The Span-

ish government, suspecting him of undermining the regime, arrested him and ordered his deportation to Mindanao. A number of Rizal's sympathizers, including Andres Bonifacio (1863–1897), realized that the period of reforms had come to an end and that stronger action was necessary. On the night of 7 July, after the deportation order had been issued, they met secretly at a house in Tondo, Manila, and decided to organize a secret society. This clandestine society adopted the Tagalog name *Kataastaasan Kagalang-galang na Katipunan nang mga Anak nang Bayan* (Highest and Most Respectable Society of the Children of the People), abbreviated as KKK, or Katipunan. The society had a number of objectives: striving for the separation of the Philippines from Spain, enhancing the moral character of the Filipinos, attacking religious fanaticism, and defending the poor and the oppressed. The Katipunan venerated José Rizal as the personification of the independence struggle and used his name as a password and battle cry.

Organizationally, the society was influenced by the secret society setup of the Masons, which had been active in the Philippines for some time. Initially, recruitment took place via the “triangle method,” whereby every member initiated two individuals into the organization who were not supposed to know each other and who did not know anybody else in the society. Only the first person had contact with another triangle. This cellular structure was used so that if one person was arrested and questioned under duress, he could not give authorities information that would enable them to round up the whole organization. Another characteristic was the division of members into three grades signifying different levels of initiation, each with its distinct paraphernalia. The initiation took place during a ceremony in which a new member had to sign his oath with his blood. Women could join the Katipunan as well, and they underwent the same initiation rites, but they did not have to seal their membership with a blood compact. Like the Masons, the society had a secret password, special signs so members could acknowledge one another, and a secret code for communicating in writing. A flag was designed, with the letters KKK forming a triangle on a red piece of cloth.

This complicated system of recruitment limited the number of members. During the first two years, membership of the Katipunan was small, gradually growing from a few dozen to a few hundred, mainly concentrated in Manila. The society particularly appealed to lower- and lower-middle-class people, such as laborers, clerks, petty merchants, and peasants. After some time, the tedious and restrictive triangle method of recruitment was abandoned. In 1895, Bonifacio became the supreme head of the society. In early 1896, the first (and only) issue of a journal, *Kalayaan* (“Freedom”), was printed, and copies were widely distributed in and around Manila. The periodical had a strong effect on the people, and large numbers joined the society, bringing its membership to the level of many thousands of people; some historians cited the figure of 30,000. However, the society did not attract wealthy merchants in Manila, who loathed its lower-class character and consequently refused to contribute funds so that the organization could not purchase weapons. One of the new members initiated in March 1896 was Emilio Aguinaldo (1869–1964), from Kawit, Cavite. Aguinaldo and his brothers built up a strong organization in Cavite, recruiting large numbers of followers with a simple ceremony in which they only signed their names in blood.

On 19 August 1896, the Spanish government discovered the existence of the Katipunan and started a reign of terror to clamp down on the organization. Bonifacio and his followers fled to the town of Balintawak, where they convened the members of the Katipunan and proclaimed the revolution against the Spanish regime. For several months, the katipuneros led by Bonifacio attempted to conquer Manila, but they were repelled and later defeated by stronger Spanish forces. In the meantime, Aguinaldo and his followers had driven the Spaniards out of Cavite. In December, Bonifacio moved to Cavite, where he became entangled in a factional rivalry with the Aguinaldo group. When Aguinaldo was elected president of the revolutionary movement, Bonifacio, who wanted to preserve the organizational structure of the Katipunan, refused to recognize the new government. Aguinaldo ordered his officers to arrest Bonifacio and his brother. The two men were tried before a revolutionary court, found guilty of treason, and executed on 10 May

1897. With Bonifacio's death, the Katipunan practically ceased to exist as an independent organization.

KEBATINAN MOVEMENTS

The word *kebatinan* refers to Javanese mystical movements and is almost synonymous with *Javanism* (*kejawen*). Both refer to Javanese traditions that prioritize syncretic ancestral culture rather than religious affiliation, especially as distinct from Islam, which is statistically dominant in Java. Javanists insist their practices were rooted in a perennial indigenous wisdom predating even Hindu and Buddhist influence. Thus, *kebatinan* refers to a category of spiritual movements, such as Bon in Tibet or Shinto in Japan, within which people imagine themselves as activating an ageless consciousness rooted in local ancestral culture.

However, the term *batin* is from Arabic (*bathin*), which is paired with *lahir* (the Arabic *zahir*). *Lahir* refers to outer material realities

known through the senses and intellect; *batin* references inner spiritual realities known only through the spiritual heart, or *rasa*, a Sanskrit word referring in this context to “intuitive feeling.” Thus, *kebatinan* may be translated as “the science of the inner,” and this framing of the esoteric leads committed Muslims to argue that Javanese spiritual discourse is Islamic at root.

Kebatinan movements appeared early in the 1900s in tandem with the rise of nationalism and the Muhammadiyah (1911), which is still the leading modernist Islamic movement. At the same time, Hardopusoro, among the earliest kebatinan movements, had strong links with the Theosophical Society. Thus, like nationalism itself, their constitution as organizations reflected all of the influences associated with the rise of the modern state. It is in the context of debate with modernist Muslims that kebatinan movements became a recurrent issue of Indonesian politics, especially during the 1950s and again in the 1970s.

Following independence in 1949, Wongsonegoro, the first minister of the Department of Information, became the patron of a series of umbrella movements that lobbied, on behalf of several hundred kebatinan organizations, to establish their legitimacy. Some movements, notably Sapto Darma, argued that as indigenous traditions, they deserved the same status as given to recognized “religions,” all of which were imported. These debates resurfaced in the Suharto era (1967–1998), at which time kebatinan (renamed *kepercayaan*, or “beliefs,” in 1971) appeared to offer potential as a counter to organized Islam. Although a significant portion of the population still empathizes with Javanism in general, the dynamism of kebatinan movements has declined markedly, and most adherents now avoid public engagement.

KEMPEI-TAI

Suppressing Anti-Japanese Elements

The Kempei-tai–Japanese troops (*tai*) of the Military Police (*kempei*)—was established in 1881. The original objectives were to ensure discipline in the army and to maintain internal social security. Until the end of World War II (1939–1945), any kind of social reformists, especially socialists, who were regarded as antinational by the government were arrested and tortured by the Kempei-tai inside Japan.

Taiwanese, Korean, and Chinese offices were set up in 1895, 1896, and 1901, respectively, to prevent and oppress any anti-Japanese movement. When the Second Sino-Japanese War began in 1937, the Field Military Police (FMP, *Yasen Kempei*) was formed and sent to the battlefield. When the Pacific War started in December 1941, many FMP members were dispatched to the occupied Southeast Asian territories. Their tasks included vigilance of army discipline and normal police administration. However, the main task was to detect anti-Japanese elements. They employed many local informers. Tens of thousands of local people who were suspected of involvement in an anti-Japanese movement were arrested, tortured, and killed by the Kempei-tai. In Malaya, the situation was more serious among the Chinese inhabitants, who were disliked by the Japanese Imperial army because of their influential and remarkable anti-Japanese national salvation movement before the war.

When the Pacific War ended, the numbers of Kempei-tai personnel stationed in various territories were as follows: in Japan, 10,679; in Tai-

wan and Korea, 2,672; and in occupied territory, 22,686. Out of the total number of 36,037, there were 1,843 officers (Nihon Kenyu Kai 1976). Of the 984 Japanese soldiers who were sentenced to death at the various war criminal courts after the end of the Pacific War, 447 were Kempei-tai members (Nihon Kenyu Kai 1976).

KĒRTANAGARA (r. 1268–1292)

Harboring Ambitions beyond Java

Kĕrtanagara was the last legitimate king of Singhāsari (1222–1293) and the most prolific in terms of issuing inscriptions. After him, a usurper by the name of Jayakatwang of Kadiri ruled briefly (from 1292 to 1293). Kĕrtanagara was also the first Javanese king to have direct concerns with territories outside the island, in this case, Sumatra. The development of relationships beyond the homeland is a phenomenon worth scrutinizing in the Southeast Asian context. What factors enabled those connections? What were the expectations of the rulers who reached out to other polities? Such questions are relevant in regard to the ancient history of Southeast Asia. Presumably, relationships that linked people from two different cultural spheres entailed problems of communication, especially in terms of language use.

The fourteenth-century chronicle poem *Nāgarakertāgama* (canto 41–44; see Pigeaud 1960) incorporates the following information and quotes about Kĕrtanagara. He ascended the throne in 1176 śaka (1254 C.E.), inaugurated by his father, Wisnuwardhana (r. 1248–1268). All the local leaders of “Kadiri and Janggala” (the former unified kingdom of Kahuripan under Airlangga [r. 1019–1049]) then paid obeisance to Kĕrtanagara. His district Kutarāja “became more and more splendid and came to be known as Singhāsari.”

His father died in 1268 C.E., and Kĕrtanagara began his attempts to control his political environment by subjugating one of his enemies, a “wicked man” named Cayarĕja, in 1270 C.E. He then sent his men to Malayu to establish religious diplomatic relations in the year 1275 C.E. Another “bad man,” Mahisa Rangkah, was overthrown in 1280 C.E. Bali was conquered in 1284, and its queen was made a captive and taken to Kĕrtanagara’s court. Subsequently, many other countries—Pahang, Malayu, Gurun, and Bakulapura, as well as Sunda and Madura on the island of Java itself—submitted to the king of Singhĕsari. Kĕrtanagara died in the year 1292 C.E., which was phrased as “returning to the abode of the lord of the Jinas” in the *Nĕgarakertĕgama*.

The *Nĕgarakertĕgama* formulation of “sending his men for a search to the land of Malayu” warrants further discussion with reference to other sources. There are a pair of matching inscriptions in two different places in Sumatra—at Rambahan and Padangroco. One is written at the back part of a stone statue of Amoghapasa, and the other appears around the sides of a stone pedestal matching the statue. The inscription at the back of the statue contains a laudation to Amoghapasa, a Buddhist deity, and a reference to the regent of the respective area in Sumatra, Adityawarman by name. It is written in Old Javanese script and the Sanskrit language. The other part of the inscription, on the pedestal, is also in Old Javanese script, but the language is Sanskrit mixed with some Malay words. This part mentions that Srĭ Mahĕrĕjĕdhirĕja Srĭ Kĕrtanagara Wikrama Dharmottungadewa, namely, King Kĕrtanagara of Singhĕsari, in the year śaka 1208 (1286 C.E.), sent the statue of Buddha Arryyamoghapasa Lokeswara from bhĕmi Jawa (land of Java) to Swarnabhĕmi (Suvarnabhumi [lit. Land of Gold]—referring to Sumatra), to be installed at Dharmmĕsraya (probably a sanctuary) and to be a delight for all the people of bhĕmi Malĕyĕ (Malayu, located in southeastern Sumatra and the center of the kingdom of Śrĭvijaya [Śrĭwijaya]). The statue was taken to Sumatra, accompanied by four high dignitaries from Singhĕsari. This fact suggests a religious diplomatic expedition rather than a military one.

In the *Nĕgarakertĕgama*, the last king of Singhĕsari was praised as a learned man, virtuous and firm in his Buddhist observances and

knowledgeable in various rites and all kinds of eminent doctrines. When he died, he was said to return to the abode of Jinandra (king of the Jinas), released into the sphere of Siva-Buddha. On earth, he was then commemorated by the establishment of three divine statues in three different places—in the form of Siva-Buddha, as a Jina, and as “ardhanareswari” (a male-female form) symbolizing the Buddhist Tathagata, Vairocana, and his consort Locanĕ. Since Kĕrtanagara was also referred to as conducting rites with intoxicating drinks, as mentioned in the sixteenth-century Javanese chronicle-history *Pararaton* (Book of Kings), Piet Zoetmulder (in 1968) identified Kĕrtanagara’s practice as “tantrisme bhairawa-siwa-bouddhique” (the tantrism having a bhairawa and Siva-Buddha character), namely, as a combination of the syncretic cult of Siva-Buddha and Tantric Buddhism. With its ritualistic practices, this cult sought the redemption of the souls of the dead.

KERTARAJASA JAYAVARDDHANA (VIJAYA)

See Majapahit (1293–ca. 1520s)

KESATUAN MELAYU MUDA (KMM, YOUNG MALAY UNION)

The Kesatuan Melayu Muda, or Young Malay Union, was formed by a group of Malay nationalists who were in their early twenties. This organization, better known by its abbreviated form KMM, was registered in 1938 in Kuala Lumpur. To the “inner circle,” KMM stood for Kesatuan Malaya Merdeka (Union of Independent Malaya), the name later adopted by Ibrahim Yaacob (1911–1979) in Indonesia after he received the full mandate of the Partai Kebangsaan Melayu Muda (PKMM, National Party of Malay Youth) in 1950. The aim of KMM was to struggle for political independence from Britain and freeing the Malays of economic, social, and political woes caused by British imperialism, Malay feudalism, and the influx of immigrant non-Malays into Malaya. To dodge the long hand of the colonial apparatus, KMM was registered as a social organization working to improve Malay youths in sports, education, health, agriculture, and other recreational pursuits through lectures, discussions, and self-help. The first KMM president, Ibrahim Yaacob, was assisted by Mustapha Hussain (vice-president), Hassan Manan (secretary-general), Othman Mohd. Noor (vice-secretary), and a central committee consisting of activists such as Abdul Karim Rashid, Onan Haji Siraj, Ishak Haji Muhammad (1909–1911), and Abdul Samad Ahmad (1913–).

KMM branches were established throughout Malaya. The organization’s first annual meeting was held toward the end of 1939, but it gained little success among the Malay bureaucratic class. On the eve of the Japanese invasion in

December 1941, more than a hundred KMM members were detained on charges of collaborating with Japan. Some were released a few days before the British surrender and some after February 1942. On 14 January 1942, led by Mustapha Hussain, KMM demanded that Japan declare independence for Malaya. The Japanese authority instead disbanded KMM and established the Malai Giyu Gun in June 1942, thus forcing a group of KMM members to secretly form the KMM Youth Front to continue the independence struggle. KMM members made up the nucleus and backbone of the radical PKMM formed in October 1945. The PKMM, under the chairmanship of Dr. Burhanuddin Al-Helmy (1911–1969), embraced the Indonesia Raya (Greater Indonesia) concept and sought the incorporation of Malaya into the Republic of Greater Indonesia.

KEW LETTERS

The Kew Letters were copies of a document written by William V (1748–1806), the exiled Stadhouder of the United Provinces, in 1795. The letters were written to the British government requesting that it assume responsibility for the Dutch possessions in the Indies (Dutch East

Indies) lest the French seize them, and return them upon the end of the war with France. Himself pro-British, Stadhouder endured the Dutch participation in the Fourth Anglo-Dutch War (1780–1784), which resulted in the loss of vast amounts of shipping and much of the Dutch colonial possessions in America, Africa, and, to a lesser extent, Asia. Begun in 1781, the Patriot Revolution was spearheaded by the Patriot press, which deluged the common Dutch people with criticism of the House of Orange and its regime. It was a revolution led by professionals (journalists, lawyers) that garnered support largely from the urban, literate middle class, in particular the shopkeepers. The members of the movement sought to spread democratic awareness among the people through the press and to compel the government to restore political power to the people at the local, provincial, and national levels. This mass movement started off at Utrecht. Subsequently there were street clashes between the Patriots, wearing black cockades and ribbons, and the Orangists, with orange cockades. The supporters of the House of Orange were working-class and less affluent. Inevitably, the radical Patriot movement gained momentum. It regarded the House of Orange as the main enemy of Dutch “liberty.” According to the Patriot rhetoric, the British were the main threat to the commerce and colonies of the Dutch republic. The United Kingdom supplied money and support for the Orangist cause after 1784, rightly seeing the Patriots as a threat to British interests. In the crisis of 1787, cash from the London government and Prussian troops enforced the Orangist counterrevolution. It was natural for William V to flee with his family to nearby England from Scheveningen on 18 January 1795 as the armies of the French Revolution overran the United Netherlands, helped by Patriot risings. When the Batavian Republic was set up, it was allied with France and at war with the United Kingdom.

In February 1795, William V was persuaded to sign, in his residence at Kew Palace near London, a “circular note of Kew,” which told Dutch colonial governors not to resist British forces. Not all surrendered the colony when they received their copy, but the letters sowed confusion and demoralization in Dutch colonial circles, which already were often deeply split between Orange and Patriot factions. The

governors of Melaka, West Sumatra, and Amboina did yield at once to British expeditions. By the end of 1796, the British had conquered Dutch posts in India and Dutch Ceylon. The Kew Letters ironically helped to save the Dutch Asian empire in the long run from the suicidal implications of Patriot confrontational policies.

KHAW FAMILY

A Sino-Thai Politico-Business Dynasty

The story of the Khaw family is, in essence, a typical story of Chinese immigrants arriving in Southeast Asia, especially in the late eighteenth and early nineteenth centuries, in search of fortune. What makes the achievements of the Khaw stand out from those of most successful Chinese families scattered around the region is the family’s ability to develop what Jennifer Cushman (1991) termed “the corporate lineage,” that is, the maintenance of Chinese identity and clanship through a common revolving trust fund. Evidently, their corporate lineage had served them well, both in the accumulation of riches and fame and in the preservation of their Chinese identity and lineage. It has been convincingly argued that precisely because the Khaw were essential to the security and political stability in the southern region of the Thai/Siamese kingdom during the nineteenth and early twentieth centuries, the family was able to merge their personal and clan interests with those of the Thai state, to the great benefit of both. The Khaw thus emerged as a Sino-Thai tin-mining dynasty that could keep its Chinese identity even to the present day and that defied the usual assimilation explanation of the development of the Sino-Thai community in Thailand.

Khaw Soo Cheang (1797–1882), the farsighted founder of the dynasty, was, by Thai sources, a Hokkien Chinese who at the age of twenty-five went to look for his fortune in Southeast Asia. The early history of his life in the region is inconsistent. He was reported to

have first settled down in Phang-nga in southern Siam (Thailand) or in Penang and started life as a laborer or as a fruit-and-vegetable seller. As his fortunes improved, Soo Cheang expanded his trade to other states along the western seaboard of the upper Malay Peninsula. Up to 1844, Phang-nga and Penang were the two main bases for this enterprising young man, though he appeared to have made Phang-nga his home base. In 1844, Soo Cheang left Phang-nga and put up a permanent residence in Ranong, where he had acquired the tin monopoly rights from the Thai authorities, together with the junior noble title of “Luang Rattanasetthi,” signifying his position as an official of the Siamese government. Soo Cheang proved himself a competent and conscientious official who was able to send in his farming revenue on time and to provide development and stability, both premium requirements by Bangkok, for the territory under his care. In 1862, Soo Cheang was promoted to the rank of *phraya* (gubernatorial rank), evidence of Bangkok’s appreciation of his service and loyalty. Besides a nobility status, Soo Cheang also earned an enormous fortune through the royal grant of tax farming in the Siamese western seaboard provinces. “Tax farming” involved a designated activity (gambling, pawnshops, prostitution) or commodity (opium, alcohol) where taxes were imposed. Tax farmers paid an agreed amount of money to the ruler for the right to collect taxes for a specified period of time.

Khaw Soo Cheang/Phraya Rattanasetthi took a number of local women as wives. However, his major wife was said to be a half-Thai, half-Chinese woman from Penang who gave him sons; the mother of his youngest, Khaw Sim Bee (1854–1913), however, was a Thai. His sons became governors of the provinces on the western seaboard, namely, Ranong, Kraburi, Langsuan, and Trang. Khaw Sim Bee rose to become the superintendent commissioner of Monthon Phuket, the highest position in the Siamese provincial administrative hierarchy.

Khaw Soo Cheang was a man of grand vision who was determined to keep alive the Khaw kinship. His will set up the clan trust fund—the Koe Guan Trust—in Penang in 1905, made up of a great portion of his wealth. His second son, Khaw Sim Khin (1845–1903), who established a base on Penang Island, managed this trust fund. According to the will’s in-

structions, the fund was to be invested in various businesses, the income of which was to be solely used for the sacrificial ceremonies to the ancestors and the welfare of Soo Cheang’s direct male descendants who paid homage to his tablet on their wedding day. By so stipulating, Soo Cheang made certain that the Khaw lineage would uphold the Chinese kinship tradition amid the strong local sociocultural influences. His descendants would therefore remain Chinese.

Central to the successes of Khaw Soo Cheang and his children in social status, political and administrative powers, and economic wealth and prestige was their ability to first serve the socioeconomic requirements of the semimodern Siam. Concurrently, they were prudent in capitalizing on the enormous opportunities for their own socioeconomic gains. At the time, the Siamese government required efficiency in the realm of both finance and administration of the southern provinces, especially those in close proximity to British territories in Malaya and British Burma. Stability, law and order, and economic development were on Bangkok’s priority list, as only socioeconomic and political stability would keep the colonial powers off Siam’s territory. Khaw Soo Cheang/Phraya Rattanasetthi and his sons, especially Khaw Sim Bee/Phraya Rasdanupradit, had proved themselves capable administrators, loyal officials, and shrewd businessmen. They played a major role in the development of the Thai tin-mining industry and in the modernization of the backwater provinces of Ranong, Trang, Kraburi, and Phuket. Their service was greatly appreciated, as confirmed by the honors, special favors, and economic privileges showered on them. The real reward was the Khaws’ enormous fortune, which was the product of their ability to be both efficient and trusted officials of Siam and capable and astute businessmen in the upper Malay Peninsula.

Yet the corporate lineage visualized and perpetuated by the trust fund did not succeed in perpetuating the Chinese identity of the Siamese branch of the clan. The descendants of Khaw Soo Cheang in Thailand now go by the family name of na Ranong. Most of them are unable to speak Chinese. Instead, they identify themselves as descendants of a noble and famous Thai family whose ancestors happened to be Chinese. Only those members in Malaysia

are still very much tied to the founder's vision of clanship. They are remnants of Soo Cheang's great hope and reminders of the Khaw's glorious past.

KHIEU SAMPHAN (1931–)

A Surviving "Ghost"

Khieu Samphan, a Cambodian political figure, was born in Svay Rieng, Cambodia, the son of a judge. He studied economics in France in the 1950s and joined the French Communist Party. When he returned to Cambodia in 1959 and edited a radical French language weekly, *L'Observateur*, he concealed his affiliations. In 1962, Samphan was elected to the Cambodian National Assembly, and he became a subcabinet official while retaining his membership in the clandestine Cambodian Communist Party. Unlike many Cambodian politicians, he was popular in his electorate and among students because of his hard work, honesty, and concern for the poor. He was reelected to the assembly in 1966, but fearing arrest in an anticommunist crackdown, he fled the capital in 1967 together with two other prominent Cambodian com-

munists. For several years, the "Three Ghosts" were assumed to be dead, but they reemerged during the 1970–1975 civil war, when Samphan became deputy prime minister of the communist-dominated united front. The other "ghosts" were eventually purged by the Khmer Rouge. Following the Khmer Rouge victory in 1975, Samphan became the ceremonial chief of state of Democratic Kampuchea (DK). The Pol Pot regime was removed from power by the Vietnamese army in 1979, and soon afterward, Khieu Samphan was named prime minister of the Khmer Rouge government in exile. Throughout the 1990s, he served as a spokesman for the Khmer Rouge, defecting to the government in 1998 after receiving amnesty from the Cambodian prime minister, Hun Sen (1951–). Although he was a lifelong communist and closely associated with all the leaders of the Khmer Rouge, Khieu Samphan's name was not directly linked to the purges and killings that characterized the Pol Pot regime.

KHMER ISSARAK (FREE KHMER)

Khmer Issarak was a Cambodian nationalist movement founded in June 1945 in Bangkok by Cambodians living in exile. Its leaders, with Thai government support, sought to recruit and train a military force to overthrow the French protectorate of Cambodia, established in 1863. In its initial phase, the movement gained members and momentum because the occupying Japanese military authorities had interned French soldiers and civil servants. In October 1945, however, the French returned to power throughout Indochina. In August 1946, a small Khmer Issarak force, assembled in Thailand, launched an attack on the Cambodian provincial capital of Siem Reap and held it for six days. A former Cambodian militiaman named Dap Chhuon led the assault. In south-

eastern Cambodia, other Issarak units soon formed under the leadership of Puth Chhay, a former bandit, and Son Ngoc Minh, an ex-monk supported by the Vietnamese anti-French resistance known as the Việt Minh and controlled by the Vietnamese Communist Party.

The Issarak movement fractured in the late 1940s. Those members drawing support from Thailand were anticommunist, whereas those backed by the Việt Minh soon came under direct communist control. Dap Chhuon defected to the semi-independent Cambodian government in 1949 and was named a provincial governor. As Cambodian government forces grew stronger, Puth Chhay's faction collapsed, and the pro-Thai Issarak faction, confined to the northwest of the country, soon dispersed into ineffective guerrilla bands. In the southeast, the pro-Vietnamese Issarak, trained and equipped by the Việt Minh, became stronger and played a helpful role in Vietnam's struggle against the French, without doing much to accelerate Cambodia's own progress toward independence.

When the anticommunist Cambodian nationalist figure Son Ngoc Thanh (1907–1976?) left Phnom Penh to lead an antimonarchical independence movement in March 1952, he linked up with anticommunist Issarak forces in the northwest. Thanh and his followers received some clandestine support from Thailand, but his movement never caught fire, and after Cambodia gained its independence from France in 1953, Thanh took refuge in Bangkok.

Issarak representatives attended the Geneva Conference in 1954 as part of the Việt Minh delegation, but they were unable to obtain a regroupment zone similar to the one gained by their procommunist counterparts in Laos. Soon afterward, roughly 1,000 Issarak combatants were allowed to emigrate to North Vietnam, where they remained under government protection until civil war erupted between communist and anticommunist forces in Cambodia in 1970; most of them were sent south to join the Cambodian communist forces. Members of the movement who stayed behind went underground. Many of them reemerged as combatants in the civil war and as cadre in the victorious Khmer Rouge regime. The Khmer Rouge purged many of these cadres in 1972 and 1973, for they were suspected of being primarily loyal to Vietnam.

Several hundred pro-Thai Issaraks regrouped in Thailand after 1954, and a similar, anti-Phnom Penh movement also formed at this time in southern Vietnam. Neither faction used the name "Issarak," and neither movement was able to inflict serious damage on Norodom Sihanouk's popular, independent government.

KHMER PEOPLE'S NATIONAL LIBERATION FRONT (KPNLF)

The Khmer People's National Liberation Front was a noncommunist Cambodian political group. The KPNLF was founded in 1979 in the wake of the Vietnamese invasion that had toppled the regime of Democratic Kampuchea (DK), sometimes known as the Khmer Rouge. Cambodian refugees in Thailand, initially supported financially by Cambodians living in France and in the United States, formed the front. Its policy was to oppose the open-ended Vietnamese occupation of Cambodia. Its leader was a venerable, respected Cambodian politician, Son San (1911–2001), who had served in several Cambodian cabinets in the 1950s and 1960s. The front's members included former bureaucrats and military officers from pre-DK Cambodian governments, as well as thousands of refugees and expatriates who resented Vietnamese control of Cambodia. In 1981, under pressure from several Western powers, the KPNLF reluctantly joined a coalition with the Khmer Rouge government-in-exile and with a royalist faction, known by its French acronym FUNCINPEC (United National Front for an Independent, Neutral, Peaceful, and Co-opera-

tive Cambodia), which was linked to Cambodia's former monarch, Prince Norodom Sihanouk (1922–). This uneasy alliance, known as the Coalition Government of Democratic Kampuchea (CGDK), was dominated militarily by the Khmer Rouge, which continued to occupy Cambodia's seat at the United Nations. The KPNLF and FUNCINPEC factions, like the Khmer Rouge, fielded military forces and received military assistance from foreign powers. The KPNLF and FUNCINPEC forces received overt support from the United States and played important roles in the Paris Peace Agreements reached in 1991, two years after the Vietnamese had withdrawn their forces from Cambodia. The CGDK, together with the ruling faction in Phnom Penh, formed a temporary coalition government, monitored by the United Nations pending nationwide elections.

KHMER ROUGE

Cambodian Communists

Khmer Rouge, or Red Khmer, was the name bestowed in the 1960s by Prince Norodom Sihanouk (1922–) of Cambodia on communists and leftists who were opposed to his rule. The ambiguous label appealed to foreign journalists, and it remained in use until Cambodia's communist movement dissolved in the late 1990s.

In the 1950s and 1960s, the movement, operating in secret, enjoyed the patronage of Vietnam. But its members were harassed and often jailed by Sihanouk's police, and the movement attracted little popular support. In

With a skull in the muzzle of his M-16 rifle, a Khmer Rouge government soldier with his comrades-in-arms waits for the word to move out from Dei Kraham 20 kilometers south of Phnom Penh during an operation along Highway 2, 5 September 1973. (Bettmann/Corbis)

1960, with Vietnamese encouragement, the clandestine movement was formally constituted into a communist party, and three years later, Salth Sar (1925–1998, better known as Pol Pot), a schoolteacher who had been active in the movement since 1954, was named secretary of the central committee. Soon afterward, Sar and his closest colleagues, fearing arrest, went into hiding in the eastern part of Cambodia and later in the sparsely populated northeast. In 1965 and 1966, Sar was summoned to Hanoi to discuss the role that the Khmer Rouge would be expected to play in the intensifying war between North Vietnam and the United States. During the visit, Vietnamese leaders supported Sar's nationally fo-

cused program. They told him, however, to subordinate Cambodia's revolution to their own and to postpone a communist seizure of power in Cambodia until after Vietnam, with Khmer Rouge assistance, had defeated the United States.

After enduring this humiliation, Sar visited China briefly and came away favorably impressed by the fervor of the Cultural Revolution (1966–1968) and by the possibility that China, rather than Vietnam, would eventually become the patron of the Khmer Rouge. He resented having to take advice from Vietnam, but he was in no position at that stage to exert his independence. He returned to his base in Cambodia's northeast, where, with his close associates and far removed from the realities of day-to-day Cambodian life, he formulated a set of radical programs that would take effect if the Communist Party of Kampuchea (CPK) ever came to power. In the 1960s, the possibility was remote.

Meanwhile, the Khmer Rouge movement gained momentum, followers, and extensive assistance from Vietnam during the civil war that followed Sihanouk's fall from power in 1970. Alliance with Vietnam and Sihanouk's support were decisive for the Khmer Rouge's success. In 1972, however, Vietnam withdrew its forces from Cambodia, under the terms of a cease-fire negotiated with the United States. The Khmer Rouge, feeling abandoned, fought on against the severely weakened forces of the pro-American regime of Lon Nol (1913–1984) that clung to power in Phnom Penh. The communists survived the massive American aerial bombardment in 1973 that effectively postponed their victory for two years. As Cambodia briefly captured the world's attention, the Khmer Rouge label stuck to those forces led by the CPK that were victorious in April 1975.

Immediately after the victory, Pol Pot (Sar) and his colleagues set in motion a set of policies that aimed to transform Cambodia completely, by overturning its institutions and dissolving what they saw as its essentially exploitative social relations. From one day to the next, schools, markets, money, law courts, and private property were abolished. Religious practices were banned. Cities and towns were evacuated, and the entire population—except the party's leaders—was forced to work as farmers or laborers under harsh conditions. The new regime

called itself Democratic Kampuchea (DK), and Saloth Sar, concealed behind the pseudonym Pol Pot, became its prime minister in April 1976. Until October 1977 when Pol Pot made a state visit to China, the existence of the CPK was kept secret from outsiders. So were the identities of its leaders. The country cut itself off from the outside world.

A four-year plan, drafted in 1976, called for doubling Cambodia's agricultural outputs almost overnight and was based on the premise that sales of surpluses, mainly rice, could provide sufficient foreign exchange to industrialize Cambodian farming and, in due course, the entire country. However, the plan ignored regional differences; shortages of manpower, livestock, and equipment; and the fact that the country was emerging from a ruinous civil war. The Khmer Rouge leaders, inspired by Maoist China, believed that their utopian goals could be attained via the revolutionary zeal of Cambodia's people, released at last from capitalist oppression.

The plan was poorly conceived, never explained, and brutally enforced. It also had disastrous effects. By the end of 1976, reports of widespread starvation in the countryside reached the Khmer Rouge leadership. So did news of high death tolls due to overwork and mistreated illness. The leadership's response was to purge those party members charged with implementing the plan, on the spurious grounds that they had deliberately betrayed the party. Subsequent purges swept through the ranks of the CPK and soon included several of its senior figures. Hundreds of thousands of other Cambodians were summarily executed as "class enemies," and thousands more continued to die of starvation, disease, and sheer overwork. As the regime spiraled toward internal self-destruction, its leaders, probably encouraged by China, embarked on a suicidal war against Vietnam, the CPK's former mentor.

In December 1978, after a year of sporadic fighting, the Vietnamese launched a blitzkrieg attack on DK using tanks, aircraft, and more than 100,000 seasoned troops. Cambodia cracked open like an egg, and Khmer Rouge forces retreated first to bases in the northwest and later across the Thai-Cambodian frontier, where they received support from China, Thailand, and the United States, all enemies of Vietnam. As news of DK's horrendous record

reached the outside world, the name Pol Pot and the phrase *Khmer Rouge* became synonymous with genocide, but the humanitarian motives of the Vietnamese in overthrowing DK and the Cambodian people's relief to see the Khmer Rouge gone were generally overlooked. The new, pro-Vietnamese regime installed by Vietnam in Phnom Penh, known as the Peoples' Republic of Kampuchea (PRK), was unable to muster international support outside of the Soviet bloc. Throughout the 1980s, DK representatives held on to Cambodia's seat at the United Nations, the only government-in-exile to do so.

During these years, the Khmer Rouge forces encamped along the Thai-Cambodian border were able to draw politico-military support from Thailand, China, and, indirectly, the United States. The key leadership remained intact. Vietnamese forces withdrew from Cambodia in 1989, and foreign powers began serious negotiations to solve the "Cambodian problem." These talks culminated in the Paris Peace Accords of 1991, which placed Cambodia under a UN trusteeship pending national elections. The Khmer Rouge boycotted the elections and was marginalized permanently from Cambodian political life. For most of the 1990s, however, sporadic fighting continued between Khmer Rouge forces and PRK forces. In the 1990s, as the Cold War ended and a coalition government was formed under UN auspices in Phnom Penh, foreign support for the Khmer Rouge diminished sharply, and thousands of Khmer Rouge members defected to the government. After Pol Pot died in 1998, those Khmer Rouge leaders who were still at large received amnesties from the Cambodian government. The Khmer Rouge movement, which had devastated Cambodia for over twenty years, sputtered to a close.

KHMERS

The Khmers are the predominant ethnolinguistic group inhabiting Cambodia. Khmer is also the national language of Cambodia, whose inhabitants colloquially refer to the kingdom as *sruk khmer* (country of the Khmer).

The origins of the word *Khmer*, like those of the Khmer people and their language, are unknown, but Neolithic excavations in Cambodia suggest that people physically resembling present-day Khmers have inhabited the region for several thousand years. The Khmer language, which is distantly related to Vietnamese and many minority languages spoken in mainland Southeast Asia, belongs to the Mon-Khmer subset of the Austroasiatic family of languages. Over fifty distinct Austroasiatic languages are spoken across a wide swath of the Asian mainland, stretching from eastern India westward to Vietnam. Of these languages, only Khmer and Mon possess alphabets of their own. The Mons and the Khmers are also the only speakers of Austroasiatic languages to practice settled agriculture.

The earliest evidence of written Khmer comes from an inscription incised in southern Cambodia of the seventh century C.E., using an alphabet derived from southern India, which, in modified form, remains in use in contemporary Cambodia. The Thais adapted the alphabet for their own use in the thirteenth century C.E.

KHUANG APHAIWONG (1902–1968)

Political Chameleon

With his jovial and humorous talk, Khuang Aphaiwong, the founder and leader of the Democrat Party (Prachathipat), became prime minister of Thailand four times in a span of three years. Entering politics on the coattails of the People's Party, he gradually moved to a conservative and proroyalist stand in the fight against the political dominance of the People's Party under Pridi Phanomyong (1900–1983) and Phibul Songkram (Plaek Phibunsongkham, 1897–1964). Khuang's legacy in Thai politics thus was the fostering of conservative opposition to the government. His party became the only civilian political party surviving the coups of the 1940s and 1950s, mainly because of its urban-based, conservative, proroyalist stand.

Khuang was born in Battambang on 17 May 1902. His father was the last Siamese governor of the province before Siam relinquished its suzerainty to France, and the family then moved to Prachinburi. Khuang finished secondary school at Assumption College in Bangkok before leaving for further studies in France in 1917 as a private student. He studied civil engineering in Central Lyonnaise in Lyon for three years. During that time, he met with other Thai students, especially Pridi Phanomyong, Phibul Songkram, and Prayoon Pramornmontri, who later formed the underground People's Party. But he did not join the Promoter's group then, due to his uncommitted political stance and especially because his elder sister was the wife of the prince who was the Thai ambassador in Paris at that time.

After graduating and a brief period of training in France, Khuang returned home in 1928 and found work in the Post and Telegraph Department. He was contacted to join the People's Party via Pridi's group three months before the launching of the 1932 Revolution. Following the revolution, Khuang was appointed to Parliament, then composed of both elected and appointed members. His initial role in the Parliament was in support of the People's Party,

which was becoming a target of attack from the royalist and senior faction of the party. Khuang served as a minister in the Phahol cabinet in 1935; this government lasted only two years. Then he became minister of communication in the Phibul government in 1941. When the Phibul government demanded the return of territories from France in 1940, Khuang headed the Thai mission to receive the eastern territory at Battambang, his birthplace. In 1942, he became deputy education minister and commerce minister.

Khuang became deputy speaker of Parliament when Phibul lost a vote of no confidence in the National Assembly and resigned in 1944. Khuang was named prime minister, minister of finance, and minister of communication on 1 August 1944 with approval from all sides in an attempt to break the image of a collaborationist Thai government. His government established the practice of rewarding members of Parliament (MPs) by appointing them as secretaries to the ministers, with authority to issue ministerial orders to government officials. Elected MPs were the first to be given this political reward, which soon expanded to include varied economic interests. At that time, the Japanese suspected the Thai government of helping the underground resistance movement. Khuang was able to allay Japanese suspicions by offering diplomatically evasive answers that got him out of difficult situations with the Japanese.

After the Pacific War (1941–1945), Seni Pramoj became the prime minister (t. 1945–1946) and entrusted Khuang as head of the Rice Delivery Committee. His performance greatly satisfied Seni, who cherished his friendship and soon formed a political alliance with Khuang. Seni resigned after completing treaty negotiations with the Allied powers, and Khuang gained majority support in Parliament to become prime minister in January 1946. Khuang also asked Seni to head the foreign ministry in his cabinet. But this cabinet was short-lived, resigning after losing a vote in Parliament. Khuang struck back by joining a newly formed proroyalist political party, the Advanced Party, to fight with Pridi's Cooperative Party. The Advanced Party (later renamed the Democrat Party) gained momentum after the sudden and mysterious death of the young king, Ananda, on 9 June 1946. The party launched an attack on Pridi and the govern-

ment, as they failed to satisfactorily resolve the case. Khuang joined the royalists and with the Democrats now tried to oust Pridi and his followers. The postwar political conflict ended with a military coup on 8 November 1947. Ironically, Khuang, who had collaborated with Pridi to oust Phibul in 1944, now joined with Phibul to oust Pridi in 1947.

After the coup group successfully gained control of the government and the country, it agreed that in order to satisfy the public, Khuang Aphaiwong, leader of the opposition to the government, should be appointed the prime minister of the new government. Khuang and the Democrat Party had called for a general debate or censure to attack the Thamrong-Pridi government in Parliament shortly before the coup took place. So the military leaders of the coup group recognized the important role of opposition politicians in making it possible for them to easily overthrow the elected government. Khuang was the nominal head of the caretaker government from 10 November 1947 to 19 February 1948 and resigned after a general election took place, in which his Democrat Party won a majority in the assembly.

Thus, Khuang became prime minister for the fourth and last time in February 1948. Having been in power for slightly over five months, he was given an ultimatum by the coup group, which apparently was dissatisfied with his government's performance. The group therefore pressured Khuang to resign as prime minister. But the hidden incentive for his ouster was that he could not satisfy the financial demands of the military. Phibul relaxed his grip on political repression in the late 1950s and allowed opposition parties to play a role in the 1957 elections. Khuang again led the Democrat Party, which was relegated to the opposition bench. The opportunity to participate was soon shut down by the authoritarian Sarit regime (1959–1963). Khuang ended his political activism, leaving the Democrat Party as his legacy. He died in 1968.

KIAI

A *kiai* is, above all else, a religious leader recognized as an authority in the teaching of Islamic doctrine and observances. *Kiai* is also a title of respect given to masters of particular areas of knowledge. A traditional puppeteer (*dalang*) may be addressed as *kiai*. The name may even be given to ritual objects, such as a ceremonial dagger (*kris*).

Most usually, though, the term *kiai* is reserved for the custodians of Islamic knowledge, the *'ulama*. In Java and Madura, this group might include even those who have only achieved a basic mastery of Arabic grammar. But most *kiai* have spent years studying the traditional Islamic disciplines, principal among them jurisprudence and mysticism. Many of them will have performed the *hajj* (the pilgrimage to Mecca) and thus have the dual title "Kiai Haji," for example, K[iai] H[aji] Hasyim Asy'ari, one of the founders of Nahdatul Ulama.

A *kiai's* leadership of a residential religious school (*pesantren*), hundreds of which are scattered throughout Java and Madura, might bolster his reputation. Through these schools, the *kiais* stay in close contact with their local communities. The *kiais* have maintained the transmission of the traditional disciplines of Islam, often with a distinct emphasis on regional beliefs and practices. Many of them have taken a strong stand against the currents of anti-Sufi ideology propagated by the reformists, particularly by the Muhammadiyah. These reformists attempt to restrict the title *kiai* to those *'ulama* with a genuine qualification in jurisprudence. The erratic presidency (October 1999–July

2001) of Abdurrahman Wahid (1940–), a traditionalist kiai, initially welcomed by both traditionalists and reformists, to some degree exacerbated conflict among the kiais of Java and, more widely, among ‘ulama circles in Indonesia.

KILLING FIELDS, THE

The Killing Fields, a successful film released in 1984, was based on an article by *New York Times* correspondent Sydney Schanberg that recalled his time in Cambodia in the early 1970s. The article also told of the experiences of Schanberg’s Cambodian assistant, Dith Pran, who endured the Khmer Rouge era (1975–1978) and was reunited with Schanberg in Thailand when he fled Cambodia in 1979. “The killing fields” referred to the mass graves of so-called enemies of the state executed by the Khmer Rouge and unearthed in the early 1980s, after the Maoist-inspired revolutionary regime had been driven from power by a Vietnamese invasion.

The Killing Fields was filmed largely on location in Thailand, and it employed hundreds of Cambodian refugees as extras and in minor speaking roles. It was directed by Roland Jaffe and produced by David Puttnam. It starred Sam Waterston as Schanberg and a Cambodian-American refugee, Haing Ngor, as Dith Pran. For his performance, Ngor was awarded an Oscar as best supporting actor in 1985.

The film brought the horrors of Cambodia in the 1970s into sharp focus for millions of viewers around the world. Many Cambodian refugees who saw the film commented favorably on its accuracy, although some of them agreed with Haing Ngor, who had been a

physician in prerevolutionary times, that the relentless cruelties of the Khmer Rouge period, as he had perceived them, could never be fully captured on film.

**KING EDWARD VII
COLLEGE OF MEDICINE**

As the first tertiary medical institution in Malaysia and Singapore, the King Edward VII College of Medicine in 1905 was established in response to public demand for a local institution to train physicians. Coupled with Raffles College, it formed the nucleus of the University of Malaya.

Public demand and public generosity brought forth the establishment of a medical school in Singapore in 1905. Complaints about the lack of general practitioners to cater to the large Chinese population (mostly of working-class background) had long been vented in the vernacular press but to no avail. The number of European doctors at the time was small, and their fees were beyond the reach of the ordinary coolie. In 1904, a petition initiated by Tan Jiak Kim was handed to the governor of the Straits Settlements, Sir John Anderson (t. 1904–1911), requesting that a medical school be set up to train local doctors.

The colonial government agreed to the petitioned request on the condition that the public raise the initial amount of 71,000 Straits dollars. The public response was encouraging; \$87,000 was collected, exceeding the proposed sum, and the school became a reality. The first seven students graduated in 1910.

In 1912, the King Edward Memorial Fund contributed \$124,800 to the school and consequently prompted a name change—to King Edward VII Medical School—in recognition of this monetary gift. Four years later, the General Medical Council of the United Kingdom recognized its status as equivalent to that of a uni-

versity. However, it was another four years before it finally adopted the name King Edward VII College of Medicine.

Instructors from Britain taught medical courses modeled on those in British universities. The bulk of the students were Chinese who had graduated from English-medium schools. Little research was undertaken during the college's early days; later, tropical diseases such as malaria were given priority. Dental surgery and pharmacy were introduced in 1928 and 1935, respectively.

KINTA VALLEY

The World's Richest Tin Producer

The Kinta Valley is situated in Perak, a state on the west coast of Peninsular Malaysia. It is only about 12 to 16 kilometers (8 to 10 miles) in width and was once the richest tin-mining valley in the world. Surrounded by mountain ranges on the western and eastern borders, the valley is fed by no fewer than nine rivers that flow between limestone hills. Below the surface of the valley lay tin ore, which, according to some adventurers, could at times be easily seen by the naked eye.

The state of Perak was already known for its wealth in tin. The metal was first extracted by Malays who used traditional methods of scooping the soft soil from the riverbanks or beds with a *dulang* (dish). The *dulang* would then be swirled lightly to allow the current to wash away the light sand, leaving the heavy mineral ore behind. This was the tin ore in its raw form that was sold to locals or Europeans. In the seventeenth century, the Dutch were the main importers.

In the last two decades of the nineteenth century, the British who had occupied the western Peninsular Malay States, including

Perak, began to exploit the production of tin. They allowed thousands of Chinese immigrants to open up mines, especially in the Kinta Valley, which was discovered to be rich in this mineral. The immigrant population increased from a mere 4,000 in 1880 to 184,693 in 1911 (Loh 1988). The Kinta Valley became the most densely populated area in the whole of the Malay Peninsula. As a result, several new townships emerged. Among them were Ipoh, which later became the capital of Perak, and Batu Gajah, which became the administrative capital of Kinta District.

From the first decade of the twentieth century, capital-intensive tin mines, most of which belonged to Europeans, began to replace the labor-intensive Chinese mines. The Kinta Valley, though still dominated by Chinese in population, began to face new developments in terms of physical and administrative changes. Roads and railways were built to facilitate the export and import of goods. These were further enhanced by the establishment of postal and telegraphic linkages that connected the valley to different places in the country as well as to Europe. Modern buildings of colonial designs mushroomed in Ipoh, Batu Gajah, Kampar, and other towns to denote the birth of modern living. This scenery, however, was changed in the late 1940s and 1950s when the outskirts of the valley began to be dotted with new settlements populated by Chinese from outlying areas. The introduction of New Villages by the British was a security measure to alienate the population from communist insurgents operating in the jungle during the Malaya Emergency (1948–1960).

Now, although tin no longer plays an important role in the wealth of the state, the Kinta Valley remains the most populated area in Perak and maintains its position as one of the most industrialized locales in the country. Because of the density of the population and other developments that took place there, Ipoh was granted city status and has its own mayor. The Kinta Valley, which started as a tin-mining location, is now a modern and progressive area that is still growing and expanding.

KONBAUNG DYNASTY (1752–1885)

The third and last of Burma's imperial dynasties and founded by Alaungpaya (Alaung-hpaya) in 1752, the Konbaung dynasty was the predominant military power in mainland Southeast Asia until the First Anglo-Burmese War (1824–1826). The resurgent Mon of Lower Burma, based at their traditional capital at Pegu, sacked the Burmese capital at Ava in 1752 and deported and then killed the last king of the Restored Toungoo dynasty (1597–1752), Maha Damayazadipati. From his base at Shwebo in Upper Burma, Alaungpaya raised the standard of Burmese nationalism against Mon hegemony. He was a charismatic leader, and Burmans rallied to Alaungpaya's call. When Prome rebelled against the Mon and supported Alaungpaya, he was able to seize the delta lands, investing and destroying Pegu in 1757 and executing its last king, Binnya Dala. To symbolize the end of Mon power, Alaungpaya dissociated his dynasty from Pegu. He established a new chief port city in Lower Burma at the village of Dagon, which he renamed Rangoon (or Yangon, in the current Burmese [Myanmar] variant); the term *Rangoon* means "end of strife." On the road to military success, Alaungpaya routed the British and French interests in Lower Burma, massacring the British forces at Negrais (1759), which he saw as supporting the Mon by providing them with arms and ammunition. Alaungpaya had a detestation of disloyalty and treachery. Those foreigners he considered guilty of treachery, such as the Italian priest Father Nerini, he summarily executed.

Alaungpaya continued Burma's traditional wars against Siam. In 1760, he invaded Siam by

the southern route through Tenasserim and Mergui, taking Phetburi, Ratburi, and Suphanburi on his way to the Siamese capital at Ayutthaya, where he arrived in April 1760. But illness cut short his military career. The Burmese forces suddenly withdrew, taking a fatally ill Alaungpaya with them. He died on 11 May 1760 at Kinywa on the return march, just three days' journey from Martaban. His body was taken to the family seat at Moksobo and cremated, with the ashes placed in a new gilded earthen pot and dropped in the river (James 2000: 89). His legacy to his heirs directed that each of his seven sons by his major queens succeed him in turn. By this directive, he apparently hoped to avoid the bloodshed that accompanied each transfer of power at the death of a Burmese monarch. It was a vain hope. The directive itself led to bloody succession crises, as some of his sons sought to pass the crown to their sons instead of their brothers, thereby thwarting Alaungpaya's dying wish. Another aspect of his legacy was, however, continued, as his sons prosecuted the wars with Siam for the next four years, up to 1809. Even in 1824, on the eve of the First Anglo-Burmese War, the Burmese monarch at the time, Bagyidaw, Alaungpaya's great-grandson, was contemplating another war with Siam and sounding out Vietnam to see if that country would support him in such an action.

Under Alaungpaya's son and successor Naungdawgyi (r. 1760–1763), the monarch's short reign was punctuated by challenges to his rule. These challenges came from his uncle, Alaungpaya's younger brother, Thado Theingathu; from his brother, the Myeidu prince, who purportedly claimed that their father had designated *him* as heir on his deathbed; and from the old general Mingaung Nawrahta. Of these, the first challenge ended in 1762 with Naungdawgyi's victory. He treated his uncle and family leniently, compelling the uncle to live out his life as a monk and keeping the family under house arrest at Moksobo. His brother's maneuverings ended quietly when the Myeidu prince, seeing that he did not have the support of the army, made peace with Naungdawgyi. Mingaung Nawrahta, against whom Naungdawgyi held a grudge, was made a convenient scapegoat for the machinations of the Myeidu prince (later King Hsinbyushin). With 12,000 men, he seized Ava and held out against

the king until starvation forced him and his remaining troops to fight their way out. A musket shot felled him in the forest.

Naungdawgyi was not a popular king. Known for his vindictiveness, he summarily executed those he disliked. He himself died suddenly on 28 November 1763 of scrofula, the same illness that inflicted his father and would also take his brother Hsinbyushin (James 2000: 88). There was also the possibility that he was poisoned (Koenig 1990: 198). Since his only surviving son, Maung Maung, was then only three months old, the crown passed to the twenty-seven-year-old Myeidu prince, Alaungpaya's second son, who became King Hsinbyushin (r. 1763–1776).

King Hsinbyushin conceived and prosecuted the successful pincer movement campaign against Siam from 1765 to 1767. It resulted in the total destruction of the Siamese capital of Ayutthaya in April 1767, the death of its last king, deportation of the royal family and thousands of captives, and looting of the royal treasures and temples. At the same time, Chinese armies attacked Burma in the north. Hsinbyushin's successful defense against them is a measure of how strong Konbaung Burma was at this time. Yet despite his military successes and far-flung empire, Hsinbyushin was beset with internal political troubles, including the abortive challenge from his younger brother, the Amyin prince, resentful of Hsinbyushin's obvious intent to anoint his son, Singu, as his heir, rather than follow the deathbed directive of Alaungpaya. On Hsinbyushin's death on 10 June 1776, Singu was proclaimed king, opening the way for a series of challenges, first from his younger half brother, the Salin prince, and then from his uncle, the Amyin prince, both of whom, with their key supporters, were executed. Unnerved, Singu called a halt to the continuous campaigns against Siam; he then sent his three remaining uncles, the Badon prince, the Pindale prince, and the Pahkan prince, into penurious exile.

By his intemperate and vicious behavior, Singu alienated support. His most notorious action was the drowning of the North queen, the daughter of Maha Thihathura, in a fit of pique and jealousy. This was followed by several years of unseemly behavior punctuated by orgies, gaming, cockfighting, and dissolute behavior considered unfitting for a king. By 1782, the

centers of opposition to him had grown to the extent that it was timely for a concerted effort to displace him. This came both from the other contender, Maung Maung, son of Naundawgyi, and from his uncle, the Badon prince. On 5 February 1782, with Singu away from the capital (Ava) visiting a temple, Maung Maung and his followers invested the palace. Fleeing upriver with his queens in an attempt to reach China, Singu was persuaded by his few remaining followers to return to the capital, allegedly to challenge Maung Maung, who, it was obvious to all, was unfit to be king.

Singu's uncles, smarting in exile, made their move. Drawing on his extensive circle of family support (including that of Maha Thihathura), the Badon prince, with 4,000 men from Mok-sobo, occupied Sagaing. On 11 February, he moved on Ava and captured and drowned Maung Maung, "the seven-day king," and then Singu, who was reputedly burned alive with his queens, concubines, and children. Proclaimed king at noon on 11 February 1782, the Badon prince took the title "King Bodawpaya" (r. 1782–1819). He restored the former ministers of Hsinbyushin to their positions, including Maha Thihathura, and distributed rewards to those who had supported him. He went on to reassert the military might of Konbaung Burma, becoming the most feared monarch of the dynasty yet constantly having to put down challenges to his rule. These came from his uncle, the Sitha prince, thought to have been a tool in the hands of the old general Maha Thihathura, whose plot surfaced on 23 February 1782, just twelve days into the new reign. Then there was the threat from his younger brother, the Pindale prince, who apparently had learned nothing from a previous abortive attempt to seize the crown. The Pindale prince had, through his actions, compromised his blameless brother, the Pahkan prince, who was apparently not ambitious for the crown. The Pindale prince drowned on 19 June 1785. The Pahkan prince lived out his life under house arrest until 11 December 1802, the last of Alaungpaya's sons, for whom his directive had been so ill fated, causing "twenty-five years of conflict between lineal and collateral succession" (Koenig 1990: 211).

Bodawpaya moved to ensure the succession in his own line. His two sons born in 1762 and 1765 to his second wife, Me Lun Thu, who was

made North queen on his ascending the throne, were already adults. He installed the eldest, the Shweidaung prince, as crown prince on 13 July 1783 and married him to his half sister, the Taungdwyingyi princess, the same day. His grandson, born 23 July 1784, became King Bagyidaw in 1819 on the death of King Bodawpaya, the crown prince having died in 1808. It was under King Bodawpaya and his grandson, King Bagyidaw (r. 1819–1837), that the first American Baptist missionaries, Adoniram and Ann Judson, entered Burma on 13 July 1813. It was also during this period that the First Anglo-Burmese War (1824–1826) was fought, resulting in the defeat of the Burmese armies after the death of their competent general, Maha Bandula, at Danoubew. By the Treaty of Yandabo, signed on 24 February 1826, the provinces of Tenasserim (including Ye, Tavoy, and Mergui) and Arakan were ceded to the British and a war reparations fine equal to 1 million pounds (one crore of rupees) was exacted. Moreover, the Burmese court was committed to the indignity of having a British resident (a representative of the government of British India) located at the Burmese capital and agreed to the future negotiation of a commercial treaty.

The psychological results of the war are said to have been responsible for Bagyidaw's descent into madness. In 1837, the first British resident at the Court of Ava, Major Henry Burney, witnessed and tacitly approved the palace coup by Bagyidaw's brother, King Tharrawaddy (r. 1837–1846). His attempts to repudiate the Treaty of Yandabo and his virulent xenophobia led to the withdrawal of the residency in 1840. Like Singu before him, Tharrawaddy was given to cockfighting and unkingly behavior; he was succeeded by his son, King Pagan (r. 1846–1853), in 1846. Pagan's ineptitude, incapacity to control officials, and lack of skill in dealing with the importunities of the British East India Company (EIC) led to the Second Anglo-Burmese War, in 1852. It was a war that the British parliamentarian Richard Cobden (1804–1865) denounced as having been "got up" by merchants in Rangoon and the rash behavior of Commodore George Robert Lambert in defiance of the British colonial administration in Calcutta. The ignominious defeat administered to the Burmese forces on this occasion led to further dismemberment of the

Burmese empire, as Pegu and Lower Burma became part of British India. A coup in 1853 brought King Mindon (r. 1853–1878) to the throne; Mindon allowed his brother to live out his life peaceably.

The ablest of the later Konbaung dynasty monarchs, King Mindon was only too well aware that the continuing independence of Upper Burma rested on his capacity to institute reforms that would enable his country to modernize and acquire the skills it needed to deal with the rapidly changing international situation. He had also to rely on his diplomatic skills in managing the importunities of both British administrators and merchants who wanted to gain access to the supposedly rich markets of China through the old Burma road to Yunnan. On the diplomatic front, he received and made friends with key British administrators and hosted their delegations: Sir Henry Yule in 1855, Sir Arthur Phayre in 1862 and 1866, and later Edward B. Sladen, appointed political agent at the Konbaung court. Internationally, Upper Burma at Mandalay, cut off from the sea, was thwarted by the British authorities in Rangoon and Calcutta from developing the type of international alliances with European powers that might have provided support against the British. On the domestic front, Mindon, a devout Buddhist, built a new capital at Mandalay, hosted the Fifth Buddhist Synod and purification of the Buddhist scriptures that were engraved in stone at the Kuthodaw Temple near Mandalay Hill, and sought to keep the peace between the competing Buddhist sects. He made his able brother, the Kanaung prince, *Einsheimin* (crown prince) and he then set about to industrialize and modernize Upper Burma. The crown prince's assassination in 1866 by two sons of Mindon, the Myingon and Myingondaing princes, was a great tragedy for Burma. Mindon also reformed the administration and introduced the *thatameda*, or capitation tax, giving officials salaries instead of appendages. Mindon did not appoint another crown prince. On his death in 1878, by a clever bit of court intrigue and manipulation of the ministers of the Hlutdaw, the Alenandaw queen had a minor prince, Thibaw (whose parentage was doubtful but who was in love with her daughter, whom she married to Thibaw) appointed as king.

King Thibaw (r. 1878–1885) commenced his reign with the murder of some eighty of his relatives, sons and daughters of King Mindon, and the mother of the Mekkaya prince, one of the ablest of Mindon's sons. While the dying King Mindon thought that his beloved sons were safely out of the capital, they were actually languishing in prison, awaiting execution. Only two escaped—the Nyaungyan and Nyaung-yoke princes—having taken refuge with the British resident and then being spirited away to Rangoon. The murder of the relatives to allegedly circumvent challenges to the crown when there was a large pool of successors was not a new tactic in Burmese court politics. But in an age of rapid communications and newspapers, such events were used to emphasize the negative characteristics of the Burmese monarchy. The British residency was finally withdrawn in 1879, which opened the way for British merchants to create a *casus belli* in the case of the Bombay Burmah Trading Corporation, although even without this event, given Thibaw's close relations with France and the British–French competition, it is likely that hostilities would have resumed. The Third Anglo–Burmese War in November 1885 lasted only two weeks—“more of a farce than a war” (Mya Sein 1973: 15). King Thibaw, the last of the Konbaung dynasty monarchs, was deposed on 29 November 1885, and with his domineering queen Supayalat and their daughters (their only son having died of smallpox in infancy) he was sent into exile to British India. On 1 January 1886, Britain annexed Upper Burma. So ended the Konbaung dynasty and Burma's independence. Several minor princes vainly waged a guerrilla war in Upper Burma for the next five years, the most serious being the Limbin confederacy. Of the two sons of Mindon who escaped the massacre, intrigues and natural death took them out of serious contention for the crown, although there had been some support for Burma being a protectorate. From 1 January 1886 to 4 January 1948, Burma was part of the British colonial administration.

KONBAUNG RULERS AND BRITISH IMPERIALISM

The Konbaung dynasty, the last of the Burmese kingdoms, ruled from 1752 to 1885, when it finally fell to an invading British Indian army. The dynasty succeeded the Restored Toungoo dynasty (1597–1752). The latter had become increasingly vitiated by external attacks by Manipuri raiders, rebellions among the southern provinces of the empire, and internal disagreements within the court because of the weak leadership of the last of the line and his inability to maintain the administrative machinery of the monarchy. Alaungpaya (Alaung-hpaya), a deputy to the lord of Shwebo, a town several days' ride from the then capital at Ava, mounted increasingly strong attacks on the capital after it fell to rebel forces. Eventually, by 1753, he had recaptured the capital, and his newly proclaimed dynasty was firmly in place.

Like the founders of earlier dynasties in Burma and elsewhere in Southeast Asia, Alaungpaya (r. 1752–1760) worked to maintain and expand the military might of his armies while reestablishing the institutions of rule of the monarchy. Grasping the mantle of a powerful ruler on earth with the full legitimacy that came to him as a Buddhist king, he built and displayed his power through court regalia and ceremony. By 1757, Alaungpaya had reconquered Rangoon and Pegu in the southern extremities of the kingdom.

He then sought to expand his empire eastward in the direction of the king of Siam at Ayudhaya (Ayutthaya). His opportunity arose when a rebellion broke out in the region of Tavoy, in which Siamese officials from Tenasserim and Mergui were allegedly involved. Marching with his armies onto Ayudhaya in order to impress upon all who cared to know that the Konbaung dynasty was not to be challenged, Alaungpaya was wounded in battle just outside the walls of the Siamese capital and died in 1760. By this time, he had built a Burmese kingdom as large and powerful as any that had ever existed in the area. Moreover, the empire's appetite for power and prestige had not been quenched with the death of its founder. Naungdawgyi succeeded Alaungpaya and ruled for a brief three years. Hsinbyushin then ascended the Konbaung throne and reigned from 1763 to 1776.

Though the 1760 campaign against Ayudhaya was a failure, the Konbaung dynasty remained at war for the next twenty years. Burmese armies marched through the Shan and Lao principalities, gaining their allegiance to Ava. Furthermore, Burmese armies moved into the Malay Peninsula, in effect creating a trap on three sides of the Siamese kingdom. In 1767, the Konbaung dynasty once more marched on Ayudhaya, this time seizing and sacking the city. King Hsinbyushin then turned his armies back to defending the core of his kingdom in Burma, as the activities of his forces in the Shan and Lao principalities had drawn the attention of the Chinese governor of Yunnan. Yunnan launched four invasions into the Shan States in as many years, but its forces were driven back each time by the Konbaung defenders. A truce was reached in 1769 against the will of the king, who had wished to invade China. The Konbaung forces, which were faced with internal discord, were forced to pull back from Siam and the Lao principalities, though the Tenasserim range was held by the Burmese. Hsinbyushin died in 1776 and was succeeded by King Singu, who himself passed away six years later.

King Bodawpaya, who reigned from 1782 to 1819, exerted political dominance over the disputing commanders of the sovereign's realm. The last of Alaungpaya's sons to reach the throne, he demonstrated his military prowess and hence his power by annexing the formerly independent principality of Arakan to his possessions. He also attacked Siam once more. Following his military exploits, Bodawpaya turned to strengthening the grip of the state on the population. He ordered two major general revenue inquests in 1784 and 1803. The effects of these major reviews of everyone of his kingdom's 2 million inhabitants resulted in the state having a firmer fiscal basis and greater control over the economy than previously. Revolts broke out in Arakan in 1797 and 1811, but the king was able to suppress them. Bodawpaya also launched military campaigns against Manipur and Assam, and from 1804 onward, he imposed Burmese hegemony over these minor states by providing Burmese military support for compliant vassals.

Konbaung military activities along the northwest frontier of the kingdom brought Burmese military power directly up against the

military might of the British Indian Empire. The result was the beginning of a series of misunderstandings that would result in the eventual collapse of the Konbaung dynasty at the hands of British invaders. The fundamental problems that plagued the relationship between the British and the Konbaung empire were clashes that arose from different concepts of statecraft. On the one hand, the British view of sovereignty allowed for no ambiguity over territorial control but demanded clearly demarcated borders; on the other, the Konbaung view, like that of other Southeast Asian states at the time, was that sovereignties could exist side by side in the same territory. This major issue was obscured by a number of minor issues, such as court etiquette and ideas about equality of status.

At the end of the eighteenth century, Britain was concerned with the growing influence of France in Southeast Asia. Diplomatic relations were established with the Konbaung court in an attempt to ensure that British interests were protected there. However, relations soon soured as the result of rebels against Konbaung authority among the populations of Arakan who, when being pursued by the king's forces, fled over the Naaf River into British-held Bengal. When the Burmese pursued the rebels into their sanctuaries across the river, conflict was inevitable. Although the British viewed the river as the natural border between two sovereigns, the Burmese regarded these as two overlapping sovereignties. Each side saw the other as ignorant of modern state procedures and intransigent in sticking to its position.

Other issues underlay the developing conflict as well. For example, the two sides had very different ideas about how the economy should be managed. The English East India Company (EIC) viewed the king's monopolies as restraints on trade and resented the harassment British traders received from the king's officials. The Burmese, for their part, resented being dealt with by the governor-general of India rather than having equal relations with the British sovereign in London. Finally, relations were broken off in 1811, but the issues that underlay their disputes did not go away. As the rebellions in Arakan persisted and the activities of Burmese forces in Assam and Manipur continued to irritate the British, war between the two sides became increasingly probable. British as-

sistance to anti-Konbaung dissidents in Manipur, Assam, and Arakan added to the increasingly threatening circumstances.

To reassert Burmese control over the border areas, King Bagyidaw (r. 1819–1837), who succeeded Bodawpaya in 1819, posted General Maha Bandoula (Maha Bandula) as governor of Assam and subsequently Arakan. The British became alarmed when, in 1823, Bandoula's forces threatened the British protectorate of Cachar and occupied an island in the Naaf. The British replied by laying siege to Rangoon in May of the following year; they took the city without a struggle. Fighting persisted for the next year or more, as the British sought to march north and force the Konbaung king to accept their conditions for restoring peace in the region. When the British were within a day's march from the capital at Ava, the Burmese bowed to the terms of the Treaty of Yandabo in February 1826. They conceded Arakan and Tenasserim to the EIC and agreed to withdraw their forces from Manipur and Assam and pay an indemnity equivalent to U.S.\$5 million.

Relations between the two sides remained tense following the signing of the Treaty of Yandabo. The court was impoverished, and its prestige was badly damaged by the humiliating defeat it received at the hands of the British. Later in 1826, the British negotiated a commercial treaty with the court on terms that were unacceptable to the Burmese, and the effect was effectively nil. Bagyidaw, catching reports that the British were considering withdrawing from Arakan and Tenasserim, sent a diplomatic mission to Bengal to negotiate with the authorities there, but the mission returned with no new agreements being reached.

The Treaty of Yandabo had insisted on the right of the British to place a resident as representative of their interests at the Konbaung court. However, not until 1830 did Maj. Henry Burney arrive to assume the post. Unusually for that period, he made an effort to understand why the Burmese felt that the British had trampled on their rights and interests. Relations looked set to improve thanks to Burney's ability to establish a cordial personal relationship with King Bagyidaw, but they soon deteriorated again when the British made clear that they were not willing to cede Tenasserim back to the Burmese. The blow to the prestige of the

court was so great that Bagyidaw became a recluse and was ousted from the throne by his brother, Prince Tharrawaddy, in 1837. Murdering many of his brother's advisers and officials, Tharrawaddy brought into positions of authority men much less well equipped to dissemble when dealing with the British. Tharrawaddy abandoned Bagyidaw's efforts to pursue a conciliatory policy toward the British. Though not denouncing the Treaty of Yandabo, he largely ignored its terms.

Relations further deteriorated when Tharrawaddy refused to meet with Major Burney, who eventually withdrew his embassy from the capital at Amarapura. Burney's successor concluded that maintaining a mission there or even at Rangoon on the coast was a fruitless endeavor, and the relations between Britain and Burma once more ceased in 1840. Relations did not improve as the century progressed, leading to the Second Anglo-Burmese War in 1852 and a third in 1885. And with that came the end of the Konbaung dynasty and the loss of the independence of Burma. The issues that lay behind those two wars were similar to those of the first war, but by then, the power of the Burmese empire was much reduced.

KONFRONTASI (“CRUSH MALAYSIA” CAMPAIGN)

Konfrontasi (the “Crush Malaysia” campaign) was a military and political effort launched by Indonesia against British plans to create a new federation of Malaysia from its former colonial territories in maritime Southeast Asia. The campaign reflected both President Sukarno's (Soekarno's) (t. 1945–1967) hostility to incomplete decolonization and his need for an external distraction from domestic problems.

In 1957, Britain had given independence to the Federation of Malaya, comprising most of its possessions in the Malay Peninsula. Britain had retained control of the island city of Singapore and of three territories in northern Borneo, but by the early 1960s, it wished to be rid of these colonies as well. British planners felt that Singapore was too small, too dependent on its Malayan hinterland, and too vulnerable to leftist control to be made independent in its own right. If Singapore were included in the Federation of Malaya, however, its predominantly Chinese population would have tipped the demographic balance in favor of Malaya's Chinese, to the likely disadvantage of the indigenous Malays. In 1961, to make Singapore acceptable to the Malay elite of the federation, Britain proposed to include its northern Borneo territories (Sarawak, Brunei, and North Borneo) in an expanded state along with Singapore and the Federation of Malaya.

Britain's initiative aroused Indonesian antagonism for several reasons. First, there were

strong indications that the people of northern Borneo feared neocolonial rule from the peninsula and preferred an independent state of North Kalimantan. A. M. Azahari (Sheikh Azahari bin Sheikh Mahmud [1928–2002]), leader of the Partai Rakyat Brunei (PRB, Brunei People's Party), which subsequently won all but one of fifty-five indirectly elected seats in Brunei's district councils, also favored this solution and had close ties with Indonesia. Second, Indonesia objected to what it saw as Malaysia's neocolonial, neofeudal character: Britain would retain military bases, and the Malay sultans whose power had been entrenched in the Federation of Malaya would remain pivotal in the political system. And third, seeing itself as a major regional power, Indonesia was offended that Britain had not consulted it concerning plans for the region.

In December 1962, British Gurkha troops suppressed an Azahari-led uprising in Brunei aiming for an independent North Kalimantan. Indonesia's foreign minister, Subandrio, then announced that the Malaysia proposal was unacceptable and described Indonesia's policy as one of "confrontation." From May to August 1963, discussions among Indonesia, Malaya, and the Philippines led to vague proposals for a confederation, to be called Maphilindo, and in August, the British agreed to allow the United Nations to conduct a test of public opinion in northern Borneo. Even before the UN report was written—it indicated that only a third of the population favored the Malaysia proposal—the British and Malayan authorities announced that Malaysia would go ahead, though without Brunei, whose sultan had chosen to keep his small but oil-rich territory under British protection. The test of opinion, however, also showed that there was widespread fear of Indonesia in northern Borneo, and there is evidence that Britain expected its insensitive behavior to provoke an extreme Indonesian reaction that would, in turn, boost support for Malaysia.

Indonesia's "confrontation" of Malaysia began in September 1963 with the sacking of the British embassy in Jakarta and the severing of diplomatic relations. Sukarno announced that Indonesia would *ganyang* (literally meaning "chew up" but usually translated as "crush") Malaysia, and Indonesian troops began a small-scale offensive on the Kalimantan border and

supported communist rebels operating within Sarawak. In early 1964, acting on behalf of U.S. president Lyndon Johnson (t. 1963–1969), Robert Kennedy (1925–1968) sought unsuccessfully to persuade Sukarno to abandon his policy of confrontation. In January 1965, Indonesia withdrew from the United Nations after Malaysia was elected to a nonpermanent seat on the Security Council.

Confrontation served important domestic interests in Indonesia. Sukarno could distract attention from political tension and the deteriorating economy by focusing on an external enemy. Military action justified greater resources for the armed forces, and the Partai Komunis Indonesia (PKI) could use the campaign to help radicalize the masses. By mid-1964, however, the army had become increasingly uneasy with confrontation. As their standoff with the communists in Java grew more intense, they were reluctant to devote capable troops to the campaign, and the troops they did send to the front generally performed badly against British and other Commonwealth forces. Commandos sent to raid Peninsular Malaysia were captured. In 1965, moreover, the PKI began to urge the arming of workers and peasants to take part in the struggle against imperialism. This initiative would have cost the armed forces their monopoly of weapons, and they strenuously resisted the proposal. They also made secret contact with the British, asking that the conflict be kept low-key to avoid giving the communists an advantage.

The military dimension of confrontation effectively ended in late 1965 after the Gestapu affair, a coup launched by junior military officers that, because of the deaths of several senior generals, General Suharto and the military used as the pretext for an all-out annihilation of communists throughout the country. However, Sukarno's successor, General Suharto (1921–), did not get control of Indonesia's foreign policy until March 1966, and the ending of the confrontation was not his highest priority, partly because military prestige was involved, partly because many Indonesians remained somewhat suspicious of Malaysia. The confrontation formally ended in August 1966, but full diplomatic relations were established only in August 1967.

The confrontation was often portrayed as aiming for Malaysia absorption into Indonesia, but neither Sukarno nor other Indonesian per-

sonalities ever suggested annexation or used pan-Malay rhetoric. Rather, the confrontation was primarily an attempt to export the Indonesian brand of revolution to a close neighbor and a bid by Indonesia for a sphere of influence within its immediate region.

KONGSI

Kongsi (*gongsi*) is a Chinese loanword widely used in Southeast Asia to describe a common undertaking. It is therefore a generic term, having so many meanings that a definition is nearly impossible. It literally means “public and private.” Some of the possible uses of the term include:

- A commercial activity in which several persons agree to pool their capital and share profits; in modern times, a “limited liability” company.
- Mines or other enterprises in which members join together to contribute labor and sometimes capital and to share the profits. The Chinese gold and tin mines of the eighteenth and nineteenth centuries were run as kongsis. When they federated into larger groups, these, too, were called kongsis. The most famous of such federations were those of West Borneo.
- The headman of a kongsi was often called “kongsi”; so was his residence.
- A temple, for example that of a clan association, might also be called “kongsi.”
- Sworn brotherhoods or “secret societies,” although usually designated *hui*, also used the term *kongsi* to describe themselves. When the mining kongsis of West Borneo were dissolved, conspirative brotherhoods soon appeared.

Some authors speak of “economic democracies” in describing the essence of kongsis. Indeed, the idea of cooperation and sharing is at the heart of the word. Kongsis as cooperative undertakings have a long tradition in China, where miners pooled their labor, but overseas traders also took out shares to distribute the risks and costs of business (for example, in hiring a ship). Such endeavors were an important instrument in the commercial activities of Chinese businesspeople, both at home and in Southeast Asia.

KOREAN WAR (1950–1953)

Though fought in Northeast Asia, the Korean War affected Southeast Asia by intensifying the Cold War, by stimulating commodity trade, and by offering what seemed to be precedents. Two rival regimes had been set up in Korea in 1948—a communist regime in the north and a noncommunist one in the south. The Korean War began late in June 1950, when northern forces invaded the south. At the time, there was a tendency to see that move as part of a challenge to the West by the major communist powers—the Soviet Union and the newly founded People’s Republic of China (PRC). Recent research, however, has modified that view.

The most powerful advocate of forceful action was the northern leader Kim Il-sung (1912–1994), whose attempt to dislodge the southern regime by guerrilla action had failed. Invasion was the alternative, and despite the failure of the guerrillas, he believed that the people would rise up and bring him prompt victory. Joseph Stalin (1879–1953), the Russian leader, was in no mood to risk a major war, but it was hard to deny Kim, especially as he claimed it would all be over quickly. He referred him to Mao Zedong (1893–1976). The Chinese leader had no wish for a war in Korea. His priority was Taiwan. A war would also endanger reconstruction and threaten the industrial centers in Manchuria. Yet it was again hard to deny the North Korean leader.

The war did not, however, go as Kim forecast. The north enjoyed success at first, but only at first. Furthermore, the United States decided to intervene. It had not seen Korea as essential to its security, and it had perhaps made that all too clear. But Kim’s venture was interpreted as a challenge to the peace structure on the part of the communist powers, to which Washington had to reply. Furthermore, in the absence of the Soviet Union, the United States won the support of the United Nations and acted in its name, securing the collaboration of a number

of allies and the reluctant approval of India, the other leading Asian power.

Stalin was not entirely displeased: the war dug a ditch between the People’s Republic and the West. Kim’s failure, however, was followed by a U.S./UN counteroffensive that posed more of a threat to China and ran the risk that he would have to implement his recently made alliance with it. He offered only limited support when China intervened in October 1950, calling its troops “volunteers” in an attempt to reduce the prospect of all-out war. The United States not only stopped short of using the atomic bomb in retaliation but, amid controversy, abstained from extending the war. Truce talks began in June 1951 but were concluded only in July 1953, some months after the death of Stalin. Talks on a peace settlement began in 1954, but none was ever concluded.

The Korean War intensified the Cold War antagonism, already marked in Europe. The United States mobilized its vast resources and extended its policy of “containment.” Its major Western ally, Britain, concluded that it had to support the U.S./UN side in Korea, though to do so removed any chance of benefiting from its own recognition of the People’s Republic and damaged its economic recovery and, with it, its chance of continuing as a major world power. Britain was apprehensive, too, lest the war turn “hot.” Stalin had acquired the atomic bomb, and Britain’s own security was at risk.

The effects of the war on Southeast Asia were mainly indirect. War and stockpiling produced an economic boom, benefiting most Southeast Asian countries and then mainly producers of food and commodities. The boom helped the newly independent government in Indonesia, though it also meant that the country avoided necessary restructuring. It helped the government in Burma, struggling against the communists and the “minorities” ever since independence had been secured in 1948. It also provided additional revenue for the British in Malaya, engaged since mid-1948 in a struggle with the communists known as the Emergency.

Politically, too, the impact of the war was mainly indirect, though Thailand and the Philippines intensified their security relationship with the United States; most of all, it affected Indochina. Since late 1946, the French had been in open conflict with the Việt Minh, which received support from the PRC. The

Korean War raised the prospect of open Chinese intervention, at a time when “volunteers” were sent to Korea and again when a truce was reached in the north. The Chinese made no such move, deeming it not only unwise but also unnecessary. The French, however, used the threat as a means of attracting U.S. support and subsidy, while still avoiding U.S. intervention in Indochinese affairs.

In Burma, Chinese intervention seemed, at times, more likely. Kuomintang troops had fled there in 1950 after the triumph of the communists, and they made a number of raids back across the border. The troops were offered covert U.S. support in 1951 and 1952. Countering them diverted Burma’s army from its struggle against the Union’s internal opponents, as the British pointed out, and made it quite unlikely that its government would drop the “neutralist” stance it assumed.

The war had yet more indirect effects, though, and in some sense, these were even more important. One related to Japan. A peace treaty between the United States and Japan was concluded in 1951, and recognizing that Japan could not develop its trade with China, the United States encouraged it to look to Southeast Asia. The other effect related to the lessons the United States derived from the Korean War. On the one hand, it came to believe that aggression might be deterred by clear warnings. On the other, it saw the measures it had taken to repel the aggression in Korea as a precedent. That included supporting South Korea’s leader, Syngman Rhee (1948–1960), though he was a difficult man to deal with, and building up an effective South Korean army. The United States was to hanker after a similar “solution” in South Vietnam and even in Indonesia perhaps, when it afforded support to the Pemerintah Revolusioner Republik Indonesia (PRRI) “government” in 1958.

KRATON CULTURE

For over two thousand years, the courts (*kraton*) of Southeast Asia have variously served as temples, tax offices, land registers, universities, barracks, courts of law, and museums. But these courts were not always centers of highly centralized and regulated states. In eighth-century Java, for instance, they formed part of a loose system of vertical alliances between leaders that were only gradually forged into a hierarchy by force and symbolic means (Christie 1983). Leaders already associated with ancestor cults and a symbolic geography in which the mountain was associated with ancestral and local spirits used ideologies from Hinduism, Buddhism, and Islam to further legitimize their authority and, in principle, strengthen their succession. In reality, these states were unstable and changing, and many kratons date from the eighteenth century. After European traders arrived in the region, they exploited factional competition and thereby secured the footholds that provided the foundations for the colonial bureaucracies of the nineteenth century (Reid 1993).

Kraton culture presents a mythologized view of the past, emphasizing the ideals of kingship and social order. Kratons have been described as exemplary centers that radiate the spiritual and material beneficence of their rulers. Cultural

activities are tangible signs of their productivity, including musical and theatrical performance, wood- and metalwork, writing and illuminating manuscripts, batik making, carriage making (Jessup 1990), and the proper customary execution of rites and ceremonies such as marriages and enthronements. These activities continue to be hedged by rituals and taboos, and they carry a mystique that serves to protect the kratons and to contribute to their claim to power. Their architecture is modeled on the heavenly palaces of Hindu gods (Dumarçay 1991), but Islam has also shaped kraton culture and the role of the ruler. In Java, the personal symbol of the sultan of Yogyakarta is the wing of the Garuda bird from Hindu mythology; he, however, is also called caliph (*kalifatullah*), Allah's representative on earth. Despite the wide range of cultural influences, local customs have ultimately defined the forms of kraton practice. The sultan's court at Yogyakarta holds *Garebeg* ceremonies three times a year to celebrate Islamic holidays. Although these ceremonies are said to have their roots in Hindu-Buddhist rituals, they also serve as occasions on which the ruler distributes food to the people. Theatrical performances also reflect this pattern. It is generally known that dance dramas in Southeast Asia, from the masked and unmasked dance dramas (*khon* and *lakhon*) of Thailand to the dance dramas and shadow plays (*wayang wong* and *wayang kulit*) of Java, draw on the Hindu epics, the *Mahâbhârata* and *Râmâyana* (Rutnia 1993; Soedarsono 1984). But the way these stories are told and the events represented vary from kraton to kraton, even in the same region. Kraton dance, theater, and puppet performances also draw on other sources, such as the *Hikayat Amir Hamzah*, relating the adventures of Prophet Mohammed's (s. a. w.) uncle; the *Pañji* cycle of tales about a wandering hero; and many local myths and legends. These performances support the illusion of unbroken and distinctive regional traditions, despite the fact that during the colonial period, their audiences included foreign administrators. In these terms, kraton culture has been analyzed as a product of colonial ideas of order that permeated the courts and not the continuation of a long-lived cultural heritage implied by the myths and stories (Pemberton 1994).

Despite this view, in contemporary nation-states that have replaced or incorporated tradi-

tional kingdoms, kratons continue to assert their claim to be the custodians of traditions that are at once morally and spiritually relevant and, as such, relevant to the cultural identity of the nation. Resources available for financing kraton patronage of such activities are much reduced today, but members of kraton families and occupational groups who carry kraton values have transferred their expertise to state educational institutions, passing on knowledge and skills about music, dance, and literature to the next generation. This pattern is particularly strong in Indonesia. There, the traditions of the different kratons have been taken up by the state to represent official Indonesian culture at home and overseas, even if this has involved a selection of traditions that does not represent the scope and sometimes earthiness of kraton culture (Florida 1987). Although *all* regional cultures are claimed to form Indonesian culture, the fact that the Javanese are numerically the largest ethnic group has meant that Javanese kraton cultures have been privileged over others. Gradually, as royal families moved from their palaces into modern metropolitan mansions and as the colonial generation died out, kraton values were transformed, kraton culture became a contested concept, and conflicts arose about the future of court centers in nation-states. In Indonesia, the New Order regime of President Suharto (t. 1968–1998) attempted to develop and preserve the colonial traditions as the heritage of Java, not only for the local community but also for tourists from other parts of Indonesia and from overseas. Today, instead of thinking of kratons as museums of culture, a new generation of leaders and custodians, such as the sultan of Yogyakarta, is trying to keep the kratons alive. These individuals aspire to maintain kratons as exemplary centers for the present, acting as patrons not only of established traditions but also of modern and innovative kinds of performance and art. But as these young leaders are dependent on state patronage, their plans will depend on the willingness of governments to allow them to keep kraton culture alive and not limit it to being a symbol of a past without a future.

KUALA LUMPUR (KL) **Muddy Confluence to Metropolis**

Kuala Lumpur (KL) is the federal capital of Malaysia, formerly in the Peninsular Malay State of Selangor but since 1974 an autonomous federal territory. Kuala Lumpur was originally established (ca. 1857) as a small trading post serving tin mines in the upper Kelang (Klang) Valley. It became the capital of Selangor in 1880, of the

Federated Malay States in 1896, of Malaya in 1946, and of Malaysia in 1963.

Raja Abdullah, who became chief of Kelang town and district (ca. 1853), raised loans in Melaka to finance the opening of mines in the upper Kelang Valley in 1857, importing Chinese laborers. Standing at the junction of the Gombak and Kelang Rivers, the point at which the latter ceased to be navigable for large boats, KL was a convenient collection and dispersal point, linked with the mines by jungle tracks. The name *Kuala Lumpur* means "muddy river junction" in Malay, but it may well be a corrupt form of some other phrase. In the period up to 1880, when a rise in the price of tin restored its prosperity, KL suffered much damage in the Selangor civil war (1867–1873) and setbacks in the ensuing slump from 1875 to 1879, and its mere survival was more than once in doubt.

In 1880, it had become the most important town in Selangor, and the British resident, who had established himself at Kelang town in 1875, moved upstream to make KL the state administrative capital. Prosperity drew in a large population, making KL an overcrowded and unhealthy town, often damaged by fire or by river floods. It was, however, largely rebuilt in the 1880s, with brick and tiled houses and somewhat wider streets. From 1884 to 1890, the population rose from 4,500 to 20,000 (Gullick 2000: 45, 100). This rapid expansion owed much to the construction of a railway line (completed in 1886) between Kelang town and KL and its later extension into the interior of Selangor. Good road and rail communications led to widespread development of rubber estates around KL early in the twentieth century. A piped water supply in the 1890s was followed by a town electricity supply a few years later, but neither was reliable or adequate until about 1920, when the population had grown to 80,000 (Gullick 2000: 100, 185, 246). There was also a grave shortage of housing, especially for the lowest-paid workers, and growing congestion as the use of motor vehicles expanded rapidly after 1920.

As a federal capital (from 1896), KL acquired impressive government buildings, beginning with the Bangunan sultan Abdul Samad, designed in a style that combined features of Indian Islamic tradition with Western architecture. In the business quarter, shop fronts were attractively decorated, and in the new suburbs,

Petronas Twin Towers. Kuala Lumpur, Malaysia. (Yang Liu/Corbis)

there were substantial mansions and villas for the officials and the affluent. Merdeka Square (formerly “the Padang”) and the Lake Gardens date from this period. The gardens, always a fine amenity, have provided a spacious setting for buildings of the period of Malaysian independence, such as the Parliament building and the national monument to the armed forces.

In 1890, the Sanitary Board, including officials and nominated community representatives, took on the management of urban services, but KL did not become a municipality until after independence. Severe floods came at intervals after abnormal rainfall and reached a climax in 1926, when a major project to widen and straighten the rivers was at last undertaken to provide a solution.

The first English-medium secondary school, the Victoria Institution, was founded by local initiative in 1893. The Institute for Medical Research, founded in 1900, soon achieved major results in the treatment and control of malaria and other diseases. The Rubber Research Institute was established, after much deliberation, in 1926, and the University of Malaya was set up in 1962. The Jamek Mosque, at the river junction, was completed in 1909, under the auspices of Sultan Sulaiman (r. 1898–1938). Although the sultan of Selangor, like other state rulers, has an official residence in KL, the Selangor rulers have always preferred to have their main seat elsewhere—at Jugra, then Kelang, and nowadays Shah Alam.

Although major improvements and construction programs have been implemented since the middle of the twentieth century, the center of KL retains some of its historical character, especially in Chinatown and the public buildings grouped around Merdeka Square. Many of the public buildings of the colonial period have been adapted to other uses, more particularly as museums, and they join the modern additions, from skyscrapers and stadiums to a rapid-transit system, to make an attractive blend of old and new. KL now stands at the center of a conurbation of dense industrial development in the Kelang Valley, with a ring of satellite towns. Apart from its political status as the national capital of Malaysia, it is the heart of the country’s thriving business world and of its many-sided culture.

KUANTAN PRINCIPLE (1980)

The Kuantan Principle (also referred to as the Kuantan Doctrine) refers to a joint statement made in March 1980 following a meeting between the Malaysian prime minister, Datuk Hussein Onn (1922–1990), and the Indonesian president, Suharto (1921–), in the Malaysian city of Kuantan. The Kuantan Principle relates to the developments in Cambodia following Vietnam’s military intervention in that country in late December 1978, with particular reference to the preferred policy to be implemented toward Vietnam as a response to the intervention.

The Association of Southeast Asian Nations (ASEAN) openly condemned Vietnam’s intervention in Cambodia and sought international support for this policy. The statement made in Kuantan in March 1980 needs to be understood in the context of this ASEAN policy.

The joint statement issued by Malaysia and Indonesia took into consideration the broader security concerns of the two countries, such as the perceived threat posed by China and the increased influence of the Soviet Union in the region. The statement envisaged a Vietnam free from the influences of both China and the Soviet Union and took into consideration Viet-

nam's security interests in Cambodia. In other words, the Kuantan Principle sought to bring Vietnam out of the Sino-Soviet dispute and to reduce the influence of these two powers in the region. It also displayed a less confrontational stand toward Vietnam over the Cambodian situation as compared with the ASEAN policy.

The Kuantan Principle was never implemented. Instead, Indonesia and Malaysia opted to support the ASEAN policy on Cambodia, which was more reflective of the security concerns of ASEAN's frontline member state during the Cambodia Conflict—that is, Thailand. However, Indonesia persisted in maintaining a bilateral dialogue with Vietnam, and this dialogue played an important role in the early stages of the diplomatic efforts to resolve the Cambodian Conflict during the second half of the 1980s.

KUKRIT PRAMOJ, M. R. (1911–1995) **Royalist Democrat**

M. R. Kukrit Pramoj was prime minister of Thailand during the democratic interlude after the October 1973 uprising that toppled the military-led government. Born in Bangkok on 20 April 1911 into a junior branch of the royal family, and the younger brother of the former prime minister, M. R. Seni Pramoj (1905–1997), Kukrit studied at Suan Kularb Withayalai before completing high school at Trent College, England. He then graduated with honors

in politics, philosophy, and economics from Queen's College, Oxford University. Kukrit returned to Siam in 1933, a year after the 1932 Revolution that overthrew the monarchical, absolutist regime. He cried when he set foot in the New Siam. (Later, in June 1939, Siam was renamed Thailand.)

Kukrit started working in the Revenue Department at the Ministry of Finance and was secretary to James Baxter, an adviser to the ministry. He soon resigned and went to work with the Siam Commercial Bank, where he spent many years as manager in the Lampang branch. He married in 1938 but left married life to live on his own in later years. He had a daughter and a son. After the establishment of the Bank of Thailand in 1943, Kukrit went to work there and also taught banking at Thammasat and Chulalongkorn Universities.

In 1946, Kukrit and others organized a political party called the Advanced Party (*kao naa*) to run against the People's Party. Kukrit was the first who employed the so-called Hyde Park speech-making technique in his campaign, and he won in Bangkok. The party was later reorganized as the Democrat Party, with Khuang Aphaiwong (1902–1968) as leader and Kukrit as secretary-general. A coup in 1947 cleared the way for the Democrat Party. With no major opposition, the party won the election in 1948; Khuang became prime minister, and Kukrit became minister of finance. Nine months later, they were forced to resign by the army and take the role of opposition in the National Assembly. Soon afterward, Kukrit resigned from the assembly in protest against a salary increase for the House of Representatives. He surprised his critics when he accepted Plaek Phibunsongkhram's invitation to be the deputy minister of commerce, but he left that post after a few months.

Kukrit continued to voice his opposition in the *Siam Rath* ("Thai State") newspaper, which he established on 25 June 1949. From then until 1973, he had no political role except as a member of the Constituent Assembly set up in 1959. Kukrit was able to return to politics again after the Student Revolt in October 1973, when he became the president of the royally appointed National Convention to form the Constitution Drafting Assembly. Kukrit then set up a new political party, the Social Action Party (Kit Sangkhom), and became its leader. With

only eighteen seats in the assembly, Kukrit managed to defeat the Democrat Party, led by his elder brother, Seni, to become prime minister from March 1975 to April 1976. He dissolved the Parliament but then lost his post in a Bangkok district. His government, however, left remarkable policies in domestic and foreign affairs, namely, the economic relief fund for the villages and his tough stance with the United States in its declining role in Indochina and the rapprochement with the People's Republic of China (PRC). Kukrit managed to secure a promise from Washington for rapid troop withdrawals from Thailand that proved to be a popular move among the Thais. Equally appealing were his government's attempts to resume diplomatic relations with the PRC. Again, however, his political star was dimmed by a military coup, on 6 October 1976. Kukrit resigned as chief of the Social Action Party in 1986 but continued playing the role of a "pillar of democracy."

Kukrit was a prolific writer and the author of short stories, novels, articles, columns, and critiques. He is generally regarded as the best Thai short story author. His most outstanding novel, *Si Phandin* ("Four Reigns"), written during the 1950s and early 1960s, reconstructs court life from the reigns of Kings Rama V to Rama VIII, reflecting his deep royalist feelings in regard to politics and society in Thailand. Kukrit died on 9 October 1995 at the age of eighty-four.

KUOMINTANG (KMT)

The Kuomintang (Guomindang) (KMT), also called the Nationalist Party, claims loyalty to Sun Yat-sen (1866–1925) and his Three Principles of

the People (*Sanmin Zhuyi*). Founded in 1912, KMT imposed one-party rule in China from 1928 to 1949 and then governed Taiwan for another fifty years. In a larger part of its history, it maintained a close relationship with the Chinese sojourners in Southeast Asia as a source of moral and financial support and legitimacy.

The party was formed as an open political party to supersede the underground Tongmenghui and to compete for seats in the Parliament after the founding of the Republic of China (ROC) in 1912.

The pursuit of parliamentary democracy suffered a serious setback in 1913, when President Yuan Shikai (1859–1916) murdered Song Jiaoren, a KMT leader, as a means to check the expansion of the party. The KMT organized an anti-Yuan military campaign, which was soon suppressed. The party was outlawed, and its members fled abroad.

It was at this juncture that the KMT members became revolutionary again and sought support from the Southeast Asian Chinese sojourners, as they did in the late Qing era, for their struggles against Yuan and other warlords. Sun Yat-sen, later renowned as "the Father of Modern China," founded a new Chinese revolutionary party in Japan for planning revolts in China; other less radical KMT members who had fled to Singapore and Penang formed their own. All solicited support from the Chinese communities in Southeast Asia.

Sun Yat-sen readopted the title of KMT in 1919 and later accepted Soviet guidance in fighting against the northern warlords. Sun's revolutionary regime in South China was supported financially by Chinese donations from Southeast Asia, notably from Burma (Myanmar). In the party's First National Congress in 1924, about one-tenth of the representatives came from Southeast Asia. In response to the call for "nationalist revolution" resolved in the Congress, a cadre school was established in 1926 for training professional revolutionaries to be sent to Chinese communities in Southeast Asia.

Given their substantial contributions to the Chinese Revolution, "overseas Chinese" (*Huaqiao*) became a concern for the KMT after its success in reunifying China in 1928 and the onset of the 1929 Great Depression, which deprived many overseas Chinese sojourners of the means to make a living. Committees were set

Some 1,000 supporters of the right-wing New Party (NP) march on Taipei streets on 24 November 2001, calling for unification of the Kuomintang (KMT) and its splinter group, the People First Party (PFP), in the upcoming parliamentary polls. They carried a portrait of Sun Yat-sen, founding father of the Republic of China (Taiwan's official name) and waved flags reading "KMT, PFP, NP three in one." (AFP/Corbis)

up for improving the welfare of returned overseas Chinese, who were provided with employment and educational opportunities. Overseas Chinese also returned to China for patriotic reasons. Chinese youths in Burma organized militias to Manchuria, which was invaded by Japan in 1931. After the outbreak of the Sino-Japanese War in 1937, the Chinese communities in Southeast Asia organized the China Relief Fund under the leadership of Tan Kah Kee (1874–1961); the group raised several millions in donations for launching the war.

The KMT was successful in providing national leadership under Chiang Kai-shek (1887–1975) during the Sino-Japanese War (1937–1945) and even in enhancing the international status of China, which was accepted as one of the Big Four (with Britain, the United States, and the Soviet Union). But it failed in the post-

war reconstruction, which gave the Chinese Communist Party (CCP) a chance to launch mass movements against the KMT regime. The KMT finally had to retreat to Taiwan in 1949. Taiwan, then known as Free China to the capitalist world, was constructed as a stronghold for the future "reunification of China under the Three Peoples' Principles." Southeast Asia was soon perceived as a competitive testing ground between KMT and CCP in terms of their ability to win loyalty from the local Chinese communities. The KMT propaganda was as effective, if not more so, than the CCP's united front policy. The KMT was also active in receiving Vietnamese Chinese who fled from the First Indochina War (1946–1954). Every year, an increasing number of Chinese sojourners from Malaysia, Vietnam, Cambodia, Thailand, Indonesia, and the Philippines visited Taiwan for

purposes of sightseeing, exploring investment opportunities, receiving military training, and celebrating National Day. All these manifestations were assets that the KMT could use as it presented itself as the representative of all Chinese throughout the world.

However, this claim of a “Chinese connection” did not last. Both the younger generations of overseas Chinese and the new members in the KMT gradually lost their Chinese identity. After the rule of the CCP in China proved to be permanent and old leaders with strong Chinese passions, such as Chiang Kai-shek, passed away, the KMT was reduced to a party of Taiwanism, predominantly designed to promote the welfare of Taiwan. The final defeat of the Kuomintang by the Democratic Progressive Party in the 2000 presidential election formally marked the end of one-party rule in Taiwan. For survival, the KMT had to pour all its resources into local concerns and put overseas Chinese very low on its agenda. However, the ongoing Taiwanese “go-south policy,” which aims at encouraging more investments in Southeast Asian countries, can be viewed as a kind of continuation of the KMT’s traditional relations with the region.

KUTAI (KOETEI)

The sultanate of Kutai (Kutei, Koetei), located on the banks of the lower Mahakam River in southeastern Kalimantan, was the most prominent Malay political state on Borneo’s eastern coast. It is suggested that its origins can be traced to the conversion to Islam of local pagan Dayaks, called Tunjung, sometime after 1600. However, there is evidence of the existence of a very early Hinduized kingdom in the area, Muara Kaman, from the fourth to eighth centuries (King 1993: 54, 107; Rousseau 1990: 283). Dutch traders of the (Dutch) United East India Company (VOC) visited the sultanate for the first time in 1635. Kutai was also a focus of Bugis trade and settlement from Sulawesi in the seventeenth century and an important market center for wild rubber, rattan, resins, birds’ nests, and other forest products from the Upper Mahakam in the nineteenth century (Lindblad 1988: 3, 9, 10).

Kutai was a vassal of the more powerful state of Bandjarmasin for a considerable period of time, though Bandjarmasin ceded its sovereignty to the Dutch government in 1817, and a contract was negotiated with Kutai in 1825 (Irwin 1955: 4, 153–154). In February 1844, a Scottish adventurer, Erskine Murray, with two trading brigs, arrived at Tenggarong, the capital of Kutai, with the intention of establishing a permanent British presence in the heart of the Dutch sphere of influence. The expedition was attacked by the sultan’s forces and forced to withdraw; Murray lost his life in the engagement (Irwin 1955: 102–103). As a result, the Dutch negotiated a new contract with Kutai in 1844 and put an administrator in place in 1846.

Sultan Sulaiman came to the throne in 1845 and reigned until 1899. Although Kutai was, in theory, internally self-governing, with the right to levy its own duties and taxes and run monopolies such as salt and opium, the sultan’s power was gradually undermined by the Dutch. Sultan Alimudin (r. 1899–1910) ceded

the Upper Mahakam to the Dutch in 1904, and the sultan's power to raise taxes and levies was finally removed in the 1930s under Sultan Parikesit, Sulaiman's great-grandson (Lindblad 1988: 124–125).

From the late nineteenth century, the region of Kutai became an increasingly important contributor to the Dutch colonial economy; coal deposits were discovered in the Lower Mahakam and then oil in the coastal and deltaic regions between Balikpapan and Samarinda (Lindblad 1988: 32–33, 42–47). Today, with the development of the timber industry and commercial agriculture, Kutai is a boom area and has attracted large numbers of immigrants from other parts of Indonesia.

L

LA LIGA FILIPINA

La Liga Filipina was a secret patriotic association founded by José Rizal (1861–1896) on 3 July 1892 in Manila, with the purpose of promoting national solidarity, social betterment, and political reforms in the Philippine Islands. At that time, Filipino nationalists had waged a campaign for political reform for more than a decade, with the publication of the journal *La Solidaridad* and the association La Propaganda. They had done so mainly as expatriates and exiles in Europe, hoping to influence public opinion in Spain. By 1892, Rizal and others had come to realize that these efforts had been in vain, as the Spanish government and the general public were not interested in promoting reforms in the colony. In the Philippines, political opposition found expression in an underground press of antifriar leaflets. The Spanish government and the friar orders felt threatened and reacted with a campaign of arrests, denunciations, and deportations. In June 1892, Rizal returned to Manila in order to direct a more radical campaign for reform, and within a few days, he had gathered a number of political friends to start his secret association, patterned after the system of Masonic lodges. Although the Liga's statutes did not openly advocate a revolution, its first objective, "to unite the entire archipelago into one compact, vigorous and homogeneous body," was a challenge to the "Mother Spain" concept (Corpuz 1989, 2: 209); it went beyond the notion of assimilation and instead empha-

sized self-reliance. The Liga was granted only a short life. A few days after its founding, Rizal was arrested and deported to the town of Dapitan on the island of Mindanao, and the Liga was discontinued. Of the nineteen persons who had been present at the founding, six were later executed by the Spaniards, and most of the others were imprisoned or deported. An attempt to resurrect the Liga in 1893 was quickly abandoned for fear of government reprisals. On the day of Rizal's deportation, one of the Liga's members, Andres Bonifacio (1863–1897), founded another secret association, the Katipunan, which was to spearhead the Philippine Revolution in 1896.

LA SOLIDARIDAD

La Solidaridad is the name of a journal published by Filipino expatriates and exiles in Spain from 15 February 1889 to 15 November 1895, with the purpose of advocating political reforms in the Spanish colony of the Philippine Islands.

Lopez Jaena, a Filipino nationalist, established the journal in Barcelona and became the first editor. Later in the publication's first year, the office was transferred to Madrid, where Marcelo H. del Pilar (1850–1896) assumed the editorship. *La Solidaridad* was a Spanish-language journal, published biweekly in newspaper format, but it was not an ordinary newspaper, as essays and articles, rather than news items, formed the main contents. From its inception, the journal followed a liberal course, criticizing the political and legal situation in the Philippine Islands but advocating assimilation of the Filipino people to Spain and political reforms, rather than separation and revolution. The journal published a wide variety of articles on topics concerning the Philippines, such as education, Spanish administrative reforms, the political role of the friars, censorship, injustice, and proposals for the extension of the Spanish 1876 Constitution to the Philippines and the representation of Filipinos in the Spanish Cortes (parliament). The journal also published articles on art, history, ethnology, and linguistics, in an attempt to convince the Spaniards that the Filipinos were culturally advanced and should not be considered savages, as many Spaniards seemed to conceive of them.

A number of Filipino expatriates in Spain contributed to the journal, such as the writer and nationalist José Rizal (1861–1896), but there were also a few Spanish sympathizers and the Austrian professor Ferdinand Blumentritt among the contributors. The government in Manila prohibited the journal, and only a few smuggled copies circulated among nationalists in the home country.

In 1892, Rizal concluded that a journal published in Europe no longer contributed to the campaign for reforms in the Philippines. He wrote to his friend Blumentritt: "I have lost my hopes in Spain" (quoted in Guerrero 1963: 308). Rizal decided to return to the Philippines; there, he would organize a secret society, La Liga Filipina, and prepare the people for a more active role in government. However, shortly after the founding meeting, Rizal was arrested and

sent into exile. One of his followers, Andres Bonifacio (1863–1897), then established another secret society—the Katipunan, which started the Philippine Revolution in 1896.

In the meantime, del Pilar continued *La Solidaridad* in Madrid for three more years, along reformist lines and staying strictly within the confines of the law. The journal was stopped when funds were exhausted. Many of the ideas discussed in *La Solidaridad* inspired and directed the revolution and continued to influence the nationalist movement in the Philippines.

LABOR AND LABOR UNIONS

The type of labor systems that emerged in particular sectors in Southeast Asia originated in the strategies and capacities of states, firms, workers, and other actors as they socially constructed such systems. Not all these groups determined the nature and diverse outcomes of this social process, namely, the way in which both the benefits of success and the burdens of failure were shared. As such, changes in labor processes were a result of the dynamic interplay between global capitalism, the type of products/services produced for the international economy, and the availability of manpower.

Labor Processes in Historical Perspective

One of the most important characteristics of Southeast Asian demographic history before

1750 was a low population density. According to Anthony Reid, population growth in the seventeenth and eighteenth centuries did not exceed 0.2 percent (Reid 1987: 35). Control of people rather than control of land was the main indicator of power, and the state's prosperity depended upon the ruler's ability to extract produce and taxes from the peasantry. Society was vertically organized through reciprocal patron-client relationships. Patrons offered protection to their clients, who, in turn, owed labor or service to their patrons, with the ultimate patron being the ruler of the state. Ideological sanction for this arrangement was provided by concepts of rulerless chaos, deriving from early Hindu influences. Obligations to provide labor or service could be defined by craft or other abilities, so that such industry or manufacturing as existed was tied in to the hierarchical structure of society. The legal codes of the period also indicate the monetary value of human beings who could be bought outright as slaves or could be bonded through debt. Thus, several types of economic institutions and servitude existed in various combinations in the state, which enabled the ruler to acquire wealth and distribute it among his followers.

Production and Labor Supply, 1800–1900

The main pressures underlying state formation—the process of accumulation, economic rationalization, and political centralization—required centrally controlled human resources. A resource and labor pool that expanded the capacities of the state was thus a key component in social organization. This labor pool had its basis in servitude. Essentially, there were three main forms of servitude—slavery, bondage or peonage, and labor obligations. In contrast to the first two, the third was flexible and negotiable, and in view of the fact that people were an index of power, the exaction on peasants was normally constrained. Moreover, labor obligations, or *corvée*, were used more for public purposes, whereas the first two were for private purposes.

Slavery was inevitably a consequence of war, which made available a group of prisoners for the labor pool. Since it originated in an act of violence, its continuance required coercion. The slave was seen as an outsider, as property that had marketability value. The second common form of servitude was conceived in relation to debt

and was known as debt slavery or debt bondage. Although debt bondage could be hereditary, in most cases the bonded person or his or her family worked for the creditor until the debt was repaid. The main difference between this form of servitude and slavery was that the bonded person was part of a community and had kinship ties. Bondage was also a consequence of the vertical obligations in society. The wealth of the rich lay in the power of the dependent men (or women) they could gather around them. The socioeconomic relationships inherent in the state, which prevented the accumulation of savings, further fostered the creation of bondage. In comparison with *corvée*, slavery and forms of bondage were the preferred categories of labor control and labor relations.

Corvée was an obligation of the subject or commoner class to the ruling class. In many areas, people had an obligation to labor for the state or its representatives that could last up to six months at a time. Although it was not slavery, *corvée* has been described as a form of “property in man.” The forced levy of men was effected through the headmen of villages or district chiefs. It was generally utilized to raise armies or for irregular tasks of cooperation on a large scale, such as public works construction (for example, in Cambodia, Java, and parts of Vietnam) and tin mining (as in Malaya). The arbitrary nature of *corvée* disrupted peasant agricultural production and was responsible for low agricultural productivity. Nevertheless, the state did not have the resources to enforce unreasonable demands on a regular basis, nor did it want to encourage flight to neighboring territories and the transference of allegiance to rival states.

The International Economy, 1840–1914

The period from around 1840 to 1914 saw the spread of the industrial system in Europe and North America and the integration of world markets. An important element in this globalization process was the acquisition of colonies in Asia and Africa by European powers. The process began around 1850 and climaxed between 1870 and 1914. Great Britain annexed Lower Burma in 1852, and by the mid-1880s, it had taken over all of Burma (present-day Myanmar). From the Straits Settlements (acquired between 1786 and 1824), Britain also brought the Peninsular Malay States under for-

mal control between 1874 and 1914. Indochina (Cambodia, Laos, and Vietnam) came under the French by the last quarter of the nineteenth century. Since the mid-seventeenth century, the Dutch had extended their control over the islands of the “Indonesian” archipelago, and the United States took over the Philippines from the Spaniards in 1898. Thailand (Siam) remained outside formal colonial rule, but the Thai state acceded to free trade demands from Britain and other Western countries. Thus, a new political order was created in Southeast Asia, which resulted in new economic structures, the creation of new primary production centers, and the international division of labor. The colonial states forcibly integrated their Southeast Asian colonies into the international economy through transfers of capital and labor and, later, commodities. Although the capital was of European origin, migrants were drawn from neighboring regions to meet the demand for labor, especially in the case of Malaya, Sumatra, North Borneo (Sabah), Sarawak, Burma, and Thailand.

Labor Migration

Three migration networks are associated with the labor diaspora in Southeast Asia. They were the Chinese, Indian, and Javanese networks, and the workers who came through these networks had many characteristics in common. First, they were principally young, unskilled, adult males who emigrated as individuals, carrying both high labor-force participation rates and low dependency burdens with them. Second, they comprised mainly illiterate peasants who had spent very little time away from their village roots. Third, they were regarded as sojourners, to be repatriated when the demand for their services ended or when those services could no longer be justified. Fourth, the diversified recruitment policy adopted by colonial regimes meant that migrant labor could be manipulated easily. All these factors ensured that the workers were not easily assimilated or readily accepted by the local inhabitants.

Labor Dynamics in the Mining Sector

Chinese migration comprised the largest migration stream, and Chinese mining labor recruitment was essentially a personal system of recruitment, reflecting varying recruitment networks.

Workers bound for Malaya, Indonesia, and Thailand were initially recruited through the only channel of the Straits Settlements (mainly Singapore), where British firms and Baba (peranakan) Chinese coolie brokers handled the trade. Their networks extended from Singapore to the South China port cities and even to the hometowns of the Chinese subbrokers. This system of indirect recruitment later gave way to a direct recruitment policy whereby coolie foremen and middlemen, such as Chinese officials closely associated with the mines, were entrusted with the job. The new immigrants (*sinkheh*, meaning “newly arrived guests”) were transported under the credit-ticket system and were held on arrival in Singapore. The coolie brokers, who also functioned as agents for the prospective employers in the new lands, organized employment for the migrants whereby these employers settled the *sinkheh*’s travel costs or obtained their labor by way of advances on wages. Subsequently, the indentured worker was bound by a contract to serve for a specified period (usually three years) until the debt incurred by him was paid off to his employer. In effect, this meant that the employer had a contractual obligation on the *sinkheh*’s services for the specified period. The transaction was conducted between broker and prospective employer, with the worker usually unaware of the identity of his employer or the place or conditions of his work. He was not allowed to change employers until he had repaid his steamer-passage ticket or allowance. This meant that employers exercised a strong control over their employees that amounted to a de facto property right, rather than the customary rights over person, for example, to extract labor (*corvée*) in many Southeast Asian societies.

Mining was organized through the *kongsi* (association) that provided an institutional framework into which new arrivals were inducted. More significantly, the *kongsi* allowed mining operations to continue unhampered by the fluidity of workers. The *kongsi* thus offered a sense of security and identity—it relied on a variety of mechanisms, including a personal recruitment system, kinship links, and clan ties and provincial connections. Workers were essentially locked into a dependency relationship with the employers.

Low-wage Chinese labor enabled the mainly Chinese-owned mines to produce at low cost, making less labor-intensive techniques noncom-

petitive. Chinese indentured labor migration was banned in 1914. Coincidentally, the rise of protectionism after World War I (1914–1918) not only witnessed the decline of the kongsi system but also the passing of control of the industry to Western capital and technology.

Labor Dynamics in the Plantation Sector

The trade in minerals formed an important component in regional specialization, but the spread of plantation crops had a far bigger impact, in terms of both the commodities produced and labor specialization. The most important of these plantation crops were rubber, coffee, oil palm, tobacco, sugarcane, and coconut. The rapid expansion of plantation production in Southeast Asia was a direct consequence of the expansion of the international economy, especially the growth of the automobile industry in the United States, incentives provided by the colonial states such as cheap land, infrastructure, and above all the availability of low-wage labor. This plantation labor was predominantly of South Indian (Malaya), Chinese (Malaya, Sumatra, North Borneo, Sarawak), Javanese (Sumatra, Sarawak, North Borneo, and Malaya), and Vietnamese (Vietnam and Cambodia) origins. The majority of these immigrant workers were hired under the indenture system, and their transportation was both regulated and sponsored by colonial states.

European planters preferred South Indians for a variety of reasons. South Indians were cheaper, and they could be recruited easily because India was under the same imperial government. They were considered docile, fitting well into the dependent relationship between management and employee. However, the South Indians lacked funds to migrate spontaneously, and there were more attractive opportunities in other British colonies. Consequently, from the start, the colonial administration both sponsored and regulated the recruitment of Indian labor.

South Indian plantation labor was hired either as assisted or unassisted labor. Under the category of assisted labor, there were two types of recruitment systems—indenture and *kangani* (foreman or overseer). Indenture was more important in the sugarcane plantations in the first half of the nineteenth century. It gave way to *kangani*-assisted labor in the coffee plantations in the second half of the century and in turn was replaced by free or unassisted labor. In rub-

ber plantations, planters utilized all three types of recruitment systems.

The workers lived on the plantations. They were forbidden to leave without passes, they worked unlimited hours, and they were subjected to penalties for misconduct; attempts to run away were punishable, and in the Netherlands East Indies, Chinese and Javanese workers were subject to a penal sanction for any transgression. In return, the workers received basic wages that were tied to the prices of commodities (but were rarely revised upward), basic free accommodation in coolie lines, subsidized food, and return passages.

In the Netherlands East Indies, the Dutch had only one labor regime or system for the mining and planting sectors, covering both Chinese and Javanese coolies. Similar regulations were introduced for workers recruited to serve on the plantations in French Indochina and in North Borneo. The authorities believed that coercion served the interests of workers because it fostered the work ethic and conditioned them to be useful. In time, coercive measures were replaced by more indirect controls, as supervisor-foremen functioned as a link between the capitalist employer and the worker. The supervisor-foreman imposed the work discipline and thus relieved the state of this task. These coercive legal measures were repealed after World War I. The distinguishing feature of the labor market in Southeast Asia during this period was that it remained in a state of flux. In all labor systems, labor continued to be on the move because in most cases, employment was permanently casual, conditioned by short-term arrangements, and contingent on economic conditions. As noted previously, many workers were contracted through advance payment, binding them to an employer or his or her agent. Others remained attached to systems of delayed payment, permitting them to leave only at the end of the “contract” or when the (planting or harvesting) season was over. Colonial regimes were thus both complicit and acquiescent in the exploitation of labor and consequently played a key role in structuring labor institutions.

Three principles governed colonial labor policy. They included the acquisition of a plentiful and cheap supply of labor for capitalist expansion, the assurance of the laborer’s freedom of movement through the abolition

of indenture, and the provision of a limited amount of protection for workers. Labor policy was determined in consultation with employer associations. These associations emerged in the early stages of the expansion of capitalist productive relations. Such employer associations aimed at dealing with the labor question, notably to keep wages low, to block workers' protest and action, to regulate competition among employers for labor by fixing wages, and to act as a lobby group. As a result, although the authorities set up labor departments, labor inspectorates, and Chinese protectorates, these involved principally the supervision of immigration and health matters and the keeping of records. To a large extent, the success of these institutions in ensuring basic rights for workers depended on the character and attitude of the administrators and the cooperation of the leading planters.

After World War I, there was a backlash against globalization and a rise in protectionism associated primarily with commodity restriction schemes in Southeast Asia. This had important consequences for the region. It stemmed the cross-border flows of goods, capital, and migrants. Indentured labor migration was banned. There was also mass repatriation of workers to their countries of origin. The ending of direct state involvement in labor recruitment also led to a decline in authoritarianism, paternalism, and the reliance on official bodies to protect labor's interests. Some colonial states (for example, Malaya) restricted labor migration but allowed the migration of women and children, thus enabling the formation and reconstitution of families. In Burma and Thailand, there was a political backlash against migrant labor and restrictions on foreign labor. In other areas, a more stable labor force emerged, resulting in the formation of a free or freer labor force.

Globalization Reinstated: The New International Economic Order after 1945

The shape of Southeast Asia's current politics and policies was set in the 1960s amid postcolonial anxieties and the Cold War. Southeast Asian nations were divided either into socialist states or pro-Western states. The states that embraced the global market economy—Singapore, Malaysia, Thailand, Indonesia, and the Philippines—

became the location sites of manufacturing industries producing for the world market. One key element of this global reorganization of production systems was a corresponding reorganization of labor, or the new international division of labor.

Why did manufacturing pass into the hands of developing countries in Southeast Asia and elsewhere? In the period after 1960, the expansion of the world economy gave a further impetus to global capital markets. Direct foreign investment (DFI) represented more than simply international capital seeking out the highest returns. Firms went multi- or transnational when they wished to locate activities in more than one country. It also made sense to conduct these activities within the firm rather than through the marketplace. Moreover, overseas production made it possible to reduce operating costs. The substantial setup costs in producing abroad were no longer a problem, since production could be decomposed, the new transport and communications technology led to a reduction in transport costs, and the establishment of export-processing zones (funded by the state and international development agencies) facilitated the relocation of industry. More significantly, labor was much cheaper in developing countries. Rising wage levels and improved working conditions for labor in the Organization of Economic Cooperation and Development (OECD) countries resulted in the relocation of production facilities, especially to East Asia. The targeted industries were those requiring a large, essentially unskilled workforce, such as the textile and electronics industries. This relocation was due to three main factors.

Low wages were Southeast Asia's drawing card. In their industrialization drive, Southeast Asian economies became an ever larger cog in the global economy, in which skilled operations were carried out in the developed countries of the West and Japan and the simpler parts were exported to lower-wage regions. Singapore led the second tier of newly industrializing economies, followed by Malaysia, Thailand, and Indonesia. This low-technology, labor-intensive production niche had important implications for the labor system, since it involved state strategy becoming identified with the strategies of firms. In the construction of the manufacturing labor regime, therefore, the workers were assembly-line labor, with little bargaining power and short-lived participation.

Changing Labor and Women's Increased Labor Market Participation

A major transformation in labor relations was the feminization of labor in manufacturing. Three developments account for the increased labor-market participation of women in the economy. The first relates to the conventional hypothesis that the participation of women in the labor force increases during the course of socioeconomic development. The second relates to demographic change. Historically, Singapore, Malaysia, and Thailand have been among the most sparsely settled countries in Southeast Asia. As noted earlier, migrants from China, India, and the Netherlands East Indies had gone to Malaya, Singapore, and Thailand to work, whether in mining, on plantations, or in rice cultivation. In the 1960s, the pattern of migration shifted, with changes in national government policy playing a key role. Again to take the case of Malaysia, the national government imposed restrictions on immigration, and the movement of foreign labor into Malaya was curtailed. The subsequent labor shortage was also related to demographic change arising from a decline in fertility. The transition from high to low fertility rates is closely intertwined with the changing economic role of women. The conventional wisdom is that education (see the later discussion) and the spread of birth control were major contributory factors, but there is evidence from surveys that women themselves delayed marriage and had fewer children in response to economic opportunities provided by the then-expanding economy. Third, the state's role in the provision of educational facilities meant that secondary and tertiary education became readily available in these countries. Moreover, education policy provided both boys and girls with equal access to education, resulting in a rising level of educational attainment among girls in particular. The bulk of the government's education budget was allocated to primary and secondary education. The long-term investment in basic education resulted in relatively high levels of literacy and meant that the workforce was well suited to the more sophisticated production processes found in many of the export-oriented industries relocated to Southeast Asia. This fact was reflected in increased labor-market participation among women.

In the import-substitution manufacturing phase in all these countries, men were the pre-

ferred labor force. However, women were targeted as the workforce in the export-oriented industrialization phase because the very nature of this production niche relied on female labor. It has often been said that women were the preferred labor force because the work involved in the manufacturing processes described above, that is, repetitive work requiring high levels of accuracy, manual dexterity, and a "light touch," embodied the kinds of tasks traditionally carried out by women. However, women's psychological makeup, passivity, docility, controllability, and capacity for hard work were also contributory factors. It is argued here that the manufacturing labor system itself played a pivotal role in women's employment.

What, then, are some of the consequences of manufacturing labor systems for gender roles in development? First, women are concentrated in the industrial and service sectors of the economy. Second, factory work and organization replicate the patriarchal structure of society. Male managers supervise the women, discipline is strictly enforced, and the male "control" of women is but a redefinition of gender roles accompanying the transformation of capitalist relations of production. Third, factory work is also characterized by short contracts and insecurity of tenure (the women work either on fixed contracts or on a subcontractual basis, for example, in the garment industry). When women reach a certain age, their services are often terminated to avoid payment of "seniority" wages. They are also the most vulnerable to dismissal and/or unemployment during an economic downturn.

The nationalist state, like the colonial state, has played a central role in securing the conditions for the exploitation and domination of wage labor. Prior to the Pacific War (1941–1945), segments of wage labor were divided along racial and occupational lines in most Southeast Asian countries. There was no real alliance of class, and class-consciousness was limited and heavily influenced by nationalist ideology. The colonial governments frowned upon worker organization and ensured that only compliant organizations were allowed to survive. There was no general proletarianization process in operation (except in Vietnam). Following independence, the state viewed labor's struggles for industrial and political rights as a threat to the social order and the development process. Con-

sequently, the state has pursued a range of policies and practices designed to ensure that working-class organization, militancy, and opposition remain subordinated to the logic and dictates of capital. In this process, both the nature of industrialization and the specific management practices of employers have aided the state.

Globalization, which has linked almost all parts of the world through open trade and capital and labor flows, has affected the different ways in which labor relations are played out across the Southeast Asian region. Whether “imperial-” or “free market-led” globalization, the internationalization of Southeast Asian economies resulted in rapid growth in the region. Consequently, the interlocking of Southeast Asian economies with the global marketplace, particularly the global marketplace for labor, lies at the very heart of the Asian miracle today, just as it did in the past.

LABUAN (1847)

Situated at the entrance to Brunei Bay, the island of Labuan was annexed by the British in 1847 as a strategy to establish hegemony over the northwestern coast of Borneo. Labuan was a Crown Colony until 1888 when it became part of British North Borneo, then administered by the British North Borneo Chartered Company.

During the early nineteenth century, Thomas Stamford Raffles (1781–1826) advocated the establishment of British domination over Borneo to the English East India Company (EIC) to check Dutch influence. James Brooke (1803–1868), an English gentleman-adventurer, on his own initiative had obtained a fiefdom, Sarawak, in 1841 from the ruler of Brunei. As a defense against piratical activities and as a safeguard for shipping and the promotion of trade and commerce, the British mercantile community in Singapore lobbied for the establishment of a British port and naval station on the northwestern coast of Borneo. It was Brooke who proposed Labuan, then under Brunei. In the mid-nineteenth century, Britain’s concern was focused on renewed French and American interests in the South China Sea region. The Anglo-Brunei Treaty of May 1847 formalized the cession of Labuan to Britain.

Labuan failed not only as a naval station but also as an entrepôt. There were extensive coal

deposits on the island, but the string of failed companies that had attempted to work the mineral resulted in the abandonment of Labuan as a coaling station by the Royal Navy in 1886. Ambitions to make Labuan a “second Singapore” were overly optimistic; Labuan was merely a minor entrepôt servicing the northwest coast of Borneo and the western parts of the Sulu Archipelago. European and Chinese traders bypassed Labuan and dealt directly with Singapore.

Nonetheless, Labuan was not forsaken, and its modest colonial administration was attended to by a handful of officials who assumed several posts conjointly. Britain could not afford to abandon Labuan, lest its annexation by another European power undermine British influence over the northwestern coast of Borneo. Proposals to incorporate Labuan into the Straits Settlements came to nothing. In 1888, when Britain granted protectorate status over Sarawak, Brunei, and British North Borneo, Labuan came under the administration of the latter.

During the Pacific War (1941–1945), Labuan served as the administrative center for Imperial Japanese forces, then for the Australian Imperial Forces (AIF), and lastly for Australian and British military administration for Sarawak, Brunei, and British North Borneo.

In 1963, British North Borneo, together with Sarawak, joined the Federation of Malaysia. Labuan was rejuvenated when it was accorded the status of a federal territory in 1984. Efforts to transform the island into an international banking and financial haven and a center for offshore investment proved promising. In late 1989, Labuan was to be accorded the status of an international offshore financial centre (IOFC). Coupled with its function as an entrepôt as well as its free port status, Labuan was set to take off as an important destination.

Toward the end of the 1990s it became apparent that Labuan was not fulfilling its potential as an entrepôt and free port. Regional trade was hindered by a lack of physical linkages with neighboring regions and the hinterland. A shortage of skilled workers in the financial sector and quality supporting facilities (educational, medical, commercial, etc.) slowed Labuan’s aspirations. It also faced stiff competition from well-entrenched IOFCs in the region, namely, Singapore and Hong Kong. The Labuan Development Authority launched an eighteen-year

development plan in 1997 to rectify the island’s shortcomings.

LAGRÉE-GARNIER MEKONG EXPEDITION (1866–1868)

The Mekong River Expedition left Saigon in June 1866, led by two naval officers, Commander Ernest Doudart de Lagrée (1823–1868) and Lieutenant Francis Garnier (1839–1873) as his second-in-command. There were four other principal explorers in the group: Louis Delaporte, a navy sublieutenant; Lucien Joubert and Clovis Thorel, navy doctors; and Louis de Carné, a representative of the French Ministry of Foreign Affairs. In addition, there were three interpreters (one French, one Cambodian, and one Lao), four French soldiers, two Filipino soldiers, and seven Vietnamese militiamen. The expedition’s task was to explore the then largely unknown Mekong River, in hopes that it would be navigable into China and could serve as a route to develop profitable commerce with that country.

In terms of these hopes, the expedition was a major disappointment. Rapids prevented navigation by all but small craft along much of the river's course, and there was a major barrier in the form of the Khone Falls, near the modern border between Cambodia and Laos. Further, hopes for finding opportunities for commerce with China were not realized. Afflicted by sickness and facing political difficulties, the expedition members abandoned travel on or by the river in China's Yunnan Province at Jinghong. Once in China, Lagrée's health deteriorated rapidly, and he died in March 1868. Garnier led the expedition to its end, returning to Saigon in June 1868.

Despite its disappointing results, the Mekong Expedition ranks as one of the great nineteenth-century achievements of exploration. The Mekong River was scientifically charted from the sea to southwestern China for the first time, as the French explorers mapped 6,700 kilometers of the river and its surrounding territory. The results of the expedition were published in four magnificently presented volumes (two consisting of text and two of maps and plates) published in 1873.

LANGKASUKA

Langkasuka was a kingdom located in the region of modern Pattani in southern Thailand

during the thirteenth and fourteenth centuries C.E., as well as the name given to a series of states on the Malay Peninsula dating from the early first millennium. The *Liang shu* ("History of the Liang Dynasty") in China (502–556 C.E.) contains a long description of Langkasuka in the early sixth century and records that the inhabitants dated the foundation of their kingdom over four hundred years earlier.

The country of Langkasuka is first mentioned under the name Lang-ya-hsiu, in the record of an embassy sent to China in 515 C.E. This record has survived in some detail. Lang-ya-hsiu's territory was described as being a thirty days' journey from east to west and twenty days from north to south. Aloeswood (*Aquilaria*) and camphor were said to be particularly abundant. Both men and women were described as wearing only a sarong (*pareo*), with nothing on the upper part of the body, although the king and senior officials covered their shoulders with cloth and wore gold earrings and belts of gold cord. Women of high status would also wrap themselves in cotton cloth and wear jeweled girdles about their bodies. The city of Lang-ya-hsiu was described as being enclosed by walls, with double gates, towers, and pavilions. The king would ride on an elephant, shaded by a white parasol and fly whisk, and he was accompanied by flags, banners, and drums (Wheatley 1961: 253–254). Further embassies from this kingdom of Lang-ya-hsiu to China were recorded in 523, 531, and 568, but none were mentioned after the last date.

Langkasuka has also been identified with the kingdom of Lang-ya-hsü, mentioned in the record of a Chinese embassy sent to Southeast Asia in 608 C.E., and it is also probably the kingdom of Lang-chia-shu mentioned by the Buddhist pilgrim I-Ching in the late seventh century. I-Ching described Lang-chia-shu as lying southeast of "Shi-li-ch'a-ta-lo" (the city of Sriksheṭra in the central Irrawaddy Valley of Myanmar [Burma]) and west of "Tu-ho-po-ti" (the kingdom or city of Dvaravati in Central Thailand). This description suggests it was situated along the northern coastline of the Malay Peninsula, but the precise location remains unknown.

The *Chiu T'ang shu* ("Old History of the T'ang Dynasty") (618–907 C.E.) also states that Lang-ya-hsiu adjoined P'an P'an, a country

probably situated on the Bay of Bandon near modern Surat Thani in southern Thailand—but whether it lay to the north or south was unspecified. No further information on Langkasuka was given in the Chinese texts after the seventh or eighth century, although earlier information was repeated in the later histories. However, during the early eleventh century, the Malay Peninsula was raided by the Chola dynasty of southern India, and in an inscription of King Rajendrachola at Tanjore dated to 1030–1031 C.E., Langkasuka is named among the list of conquests on the Malay Peninsula under the name *Ilangashoka*.

Langkasuka may also be the kingdom of *Lochac* mentioned in the *Travels of Marco Polo* and, more convincingly, the *Langashuka* described in Arab texts of the fifteenth century. These later sources placed the kingdom on the east coast of the lower Malay Peninsula, to the south of Songkla. This general location was also corroborated by a map from the Chinese Ming dynasty (1368–1644) showing a kingdom of *Lang-hsi-chia* between Songkla and Pattani and by an account in the Javanese epic poem the *Nāgarakertāgama* (composed in 1365), which placed a city of *Lengkasuka* north of Saiburi. Paul Wheatley (1961: 265) carefully collated these varied references and concluded that Langkasuka must have been situated near the modern town of Pattani.

Some caution, however, needs to be used in our historical reading of Langkasuka. Large temporal gaps remain in our current knowledge of this kingdom, and it is not certain whether the name was consistently applied to the same location at all periods. The kingdom of *Lang-ya-hsiu*, which sent embassies to China in the sixth century C.E., was almost certainly the same as the kingdom of *Langchia-shu* mentioned by I-Ching in the seventh century. But it is uncertain whether this country was the same as that attacked by Rajendrachola in the eleventh century or later described in the region of Pattani in the fourteenth and fifteenth centuries. Indeed, the *Nāgarakertāgama* appeared to imply that Langkasuka was originally situated on the western coast of the peninsula and was only later transferred to the east.

What is certain is that the name of Langkasuka was consistently applied to the Malay Peninsula from the sixth to the fifteenth cen-

turies C.E., and it remains an important element in the local histories of southern Thailand and Malaysia.

LAO

The Lao people of northern Indochina and northeast Thailand are a subgroup of the T'ai peoples. Spoken Lao shares similarities with other T'ai languages, and Lao ethnohistory is also characterized by the historical importance of the T'ai *muang*—a territory defined by the personal allegiance of a number of villages to a local ruler, or *chao*, from whom rights to land were obtained. Yet despite linguistic, political, and cultural similarities with other T'ai groups, the ethnic Lao, particularly those residing in Laos, prefer to trace a separate ethnohistory for themselves.

The origins of the term *Lao* are uncertain, but well before the thirteenth century, small *muang* were established in the Mekong River valley and on the Khorat (Korat) Plateau. This was the area in which a distinct Lao identity was to emerge. The Mongol invasions in the thirteenth century provided an opportunity for the general expansion of T'ai influence in the region, and this included the takeover by T'ai rulers of a small Khmer city called Mong Swa. This city was later renamed Luang Pra-

bang, and it was to become the historical heartland of the Lao people. In the fourteenth century, the Lao ruler Fa Ngum (r. 1357–1371) extended this principality to Vientiane and called the kingdom he established Lan Xang, with Luang Prabang as its capital. This is considered by many to be the first ethnic Lao kingdom and the starting point of Lao ethnohistory proper. Although it was a T'ai state, being based upon the authority of an expanded muang, it was oriented strongly toward the Khmer kingdom of Angkor in Indochina, not toward the powerful Siamese state of Ayutthaya. This orientation has been important in establishing a distinct Lao political identity, and it is restated whenever Thailand appears to have expansionist pan-T'ai aspirations toward modern Laos based on claims of common T'ai ethnicity.

Although the kingdom of Lan Xang was under the control of Burmese kings from 1574, it did not collapse until 1713. It was then divided into smaller constituent parts, which came increasingly under the dominance of Siam. It was only in 1893 that a small territory, conceived as a buffer state, was officially named Laos by the French administration as it sought to consolidate its colonial possessions in the region. The French retained control of Laos as a protectorate until the Pacific War (1941–1945), and it was not until 1954 that a fully independent Laos was established.

Laos was not a coherent ethnic, geographic, or political entity. Large numbers of non-Lao peoples lived (and still live) in this region, and, indeed, most ethnic Lao reside across the Mekong River in Isan in northeast Thailand. Thai policy in Isan has sought to downplay ethnic Lao affinities and to integrate this area as one of the regions of Thailand. This policy seems to have been fairly successful, and there is evidence of a regional Isan identity (*Isan Khon*), rather than an ethnic Lao identity, emerging there. However, this division of Lao peoples between the two states complicates the writing of ethnohistory by nationalists in Laos. It is in this context that the historical recollection of the kingdom of Lan Xang has become so important. Holding sway over an area far greater in extent than the borders of the modern Laotian state, the memory of Lan Xang evokes the idea of a regionally significant, independent Lao ethnohistory.

Laos was embroiled in the regional struggles for power that beset Indochina after the Pacific War, which were also played out as internal power struggles within the new Lao state. In 1973, the main nationalist organization, Pathet Lao, succeeded in gaining full control of the country, and in 1975, the socialist Lao People's Democratic Republic (LPDR) was established. Policies were introduced to forge a stronger identification of the state of Laos with the ethnic Lao people, who dominate the government but constitute a minority of the population. Lao is the official language, and state culture consists of politicized interpretations of Lao "tradition" and ritual. The complexities of the country's ethnic composition are concealed by the use of ethnographic categories (first employed by the French) prefaced by the term *Lao*: Lao Loum (lowland Lao, which includes ethnic Lao people), Lao Theung (midland Lao), and Lao Sung (upland Lao). Many of these communities are neither Lao nor T'ai. Some of the non-Lao minorities, such as the Hmong, have rebelled on a number of occasions in objection to the tendency to equate the kingdom of Laos and the term *Laotian* with the minority ethnic Lao identity.

Laos's closed-door policy has meant that very little foreign historical or anthropological research has been carried out in the country since the Pacific War. However, in recent years, a number of works have been produced, which suggests that a sea change in Lao studies may be taking place. These works differentiate themselves from nationalist rhetoric as well as from still influential French colonial constructions, being more sensitive to issues of Lao identity and history within a complex anthropological and historical setting.

LAO ISSARA (ISSARAK)

Lao Issara (Issarak), sometimes known as Neo Lao Issara (*Issara* means “freedom” in the Lao language), is the Lao independence movement that crystallized just prior to the capitulation of the Japanese army in Laos in August and September 1945. Dominated by Prince Phetsarath (1890–1959), the Lao Issara, or Free Lao, created the Provisional Lao People’s Government in Vientiane on 12 October. With its members forced into exile in Bangkok by the returning French, the movement was dissolved in 1949, although Phetsarath’s brother, the Red Prince Souphanouvong (1911–1995), merged his Issara faction with the victorious communist Pathet Lao movement.

Modern Lao nationalism was actually promoted by the Vichy French administration to buttress the country against Thai irredentism, as pushed by the Plaek Phibunsongkhram regime in Thailand. The youthful members joined what would be known as the Lao Nhay movement, which took the form of a Lao cultural revival. But this official French crusade to help the Lao save themselves also had a Pétainist character in the way it exulted the family and homeland. Viceroy Phetsarath actually distanced himself from such radical moves as latinizing the Lao script, as did other Lao figures.

The opening shots of an autonomous anti-French nationalism arising from an educated elite was undoubtedly the “coup” staged by fifty students of the Vientiane high school in 1940, although they were obliged to flee to Thailand. But also in the 1941–1943 period, other ethnic Lao in exile in Thailand began to intrigue against the French. They formed a semisecret cadre group called Lao Pen Lao (Lao

for Laos). Certain of them fell in with the Japanese following the *coup de force* of March 1945 against the French administration, and others sided with the Free Thai movement. Phetsarath also lent his support to the movement.

When the provisional Lao People’s government (the Lao Issara government) was proclaimed on 12 October 1945 by Khammao Vilay (1892–1965), the former governor of Vientiane Province, various people’s committees came together, representing diverse nationalist tendencies. The Khammao-Phetsarath group and the Lao Issara group looked to links with Thailand, and the Lao Pen Lao group inclined toward a greater Laos, whereas the Committee for an Independent Laos, led by Prince Souphanouvong, looked to the Việt Minh for support. In the government, Khammao served as prime minister, Souphanouvong as foreign minister and defense minister, Prince Souvanna Phouma (1901–1984) in public works, Nhouy Abhay (1906–1963) in education, and Katay Don Sasorith (1904–1959) in finance, to mention some of the more prominent Lao Issara members.

Robbed of power by the French restoration and faced with recognition of the status quo ante by the king in Luang Prabang, the Lao Issara leadership accepted the hospitality of the left-wing government of Pridi Phamanyong in Bangkok. At the same time, many of their followers joined in armed activities against the French from across the left bank of the Mekong River. But as the French consolidated their control over the Mekong River towns of Laos, armed actions by Lao Issara partisans became increasingly ineffectual. Lacking weapons and material, dispersed and isolated, some of them turned to robbery in order to survive.

Meanwhile, French diplomacy drove a wedge between the Bangkok-based radicals headed by the Red Prince, the neutralists headed by Phetsarath, and the accommodationists led by Khammao, Prince Souvanna Phouma, and Katay Don Sasorith. On 16 May 1949, the Red Prince was expelled. Following the Franco-Lao Convention of 19 July 1949, offering independence to Laos within the French Union arrangement, and following correspondence between Souvanna Phouma and the French authorities, along with French assurances that the Lao Issara would be received back into society, the remaining leaders decided

to dissolve the Provisional Lao Issara Government along with its armed wing. This decision was declared in a statement signed in Bangkok on 25 October 1949. With the notable exception of Phetsarath, the Lao Issara leadership, along with the rank and file, returned to Laos within a short time. Katay and Souvanna Phouma went on to head governments in the kingdom of Laos.

The importance of the Lao Issara lies especially in the way that it offered a means by which a truly autonomous Lao nationalism could surface outside of the Leninist party networks in Laos that were otherwise entirely dominated by ethnic Vietnamese in the pre-1941 period. Domination of the Lao Issara by the educated members of the Lao elite differentiated the movement from the rebellions of ethnic minorities that had challenged French power in the early decades of the twentieth century. But unlike the Lao Nhay movement, which was directed against Thai irredentism, the Lao Pen Lao and the Lao Issara movements, suspicious of Vietnamese intentions, looked to Thailand for support in their independence struggle against France. Although Lao communist historiography incorporates the legacy of the Lao Issara, the memory tends to be overshadowed by the more than thirty years of Lao-Vietnamese communist collaboration.

LAO PEOPLE'S DEMOCRATIC REPUBLIC (LPDR)

The Lao People's Democratic Republic (LPDR), or Sathalanalat Pasathipatay Pasason Lao, is the official title of the state of Laos, which came into being on 2 December 1975. As such, the proclamation of the republic on what is now commemorated as National Day ended the Royal Lao Government (RLG) and the six-hundred-year monarchy.

Power in the LPDR continues to be monopolized by the Lao People's Revolutionary Party (LPRP), a party that still professes Marxism-Leninism and proclaims solidarity with other communist states, especially with the Socialist Republic of Vietnam. In July 1977, the LPDR entered a twenty-five-year treaty of friendship and cooperation with Vietnam.

Following Eastern European and, especially, Vietnamese communist precedent, the creation of a socialist state ended the thirty-year-long nationalist revolution and set the course for the building of socialism. The change of regime from constitutional monarchy to communist people's republic was determined at an LPRP congress in December 1975. Unlike the communist victories in Vietnam and Cambodia, achieved through revolutionary violence, the LPRP had entered into a coalition government with the U.S.-backed RLG in April 1974 following a cease-fire brokered in February 1973. This breathing time enabled the triumphant Pathet Lao, a blanket designation for the communist-nationalist movement in Laos, to develop its government base in Vientiane, pending the arrival in the capital of the leadership.

Prince Souphanouvong (1911–1995), the popular titular leader of the Pathet Lao movement, assumed the largely ceremonial presidency in 1976 until stepping down ten years later. Real power, however, continued to remain with the first generation of Pathet Lao leaders. Notably, the staunchly pro-Vietnamese, pro-Soviet LPRP secretary-general and prime minister Kaysone Phomvihane, who also served as president from 1991 until his death in November 1992, wielded enormous power. The influential Nouhak Phoumsavanh, his deputy, also assumed the presidency in 1992 and stepped down in 1997 at the age of eighty-four. Another high-ranking party figure, Phoumi Vongvichit (d. 1994), served as acting president from 1986 to 1991. The current presi-

*Two propaganda posters of the Lao People's Democratic Republic displayed in Vientiane in 1990.
(Geoffrey C. Gunn)*

dent, replacing Nouhak, is Khamtay Siphandone, party chairman from 1996, former prime minister from 1991, and long-serving defense minister. The former RLG prime minister Souvanna Phouma (1901–1984) was appointed adviser to the government, as was the former king Sisavang Watthana (d. 1984?), whose disappearance has never been officially explained.

Institutions in the LPDR reflect the state structures of other socialist countries but equally share features with other modern states. The governing body in Laos is the Council of Government. From its inception, Kaysone headed the council. At the center of government stands the Supreme People's Assembly, comprising the office of the prime minister, twelve ministries, and three state committees. The most powerful ministry, besides interior, is defense. Although tiers of decision making exist, right down to the *muong* or district level, the Leninist principle of democratic centralism also applies. The first elections since the communist takeover were only held in 1989. As in other party states, overlapping membership in state organs is the norm, but in Laos, the dearth of cadres and the failure to promulgate a constitution until August 1991 effectively meant that the party dominated the state. As in other communist states, the employment of mass organizations to mobilize and to transmit instructions also holds in Laos. Aside from youth and women's organizations, the key mass organization in Laos is the Lao Front for National Reconstruction, a successor organization to the semiclandestine Lao Patriotic Front that spearheaded the revolution. But forged in the fires of thirty years of armed struggle, the Lao People's Army remains a special institution in Laos. Not only does army leadership overlap with party leadership but the army also continues to bear the brunt of defense against rebel incursions and ethnic insurgency, especially from the ethnic Hmong (many of whom have never accepted the LPDR) and from Laos's neighbor Thailand, in recurring armed conflict over boundary questions.

Notwithstanding the gradualist, ostensibly legalist, and relatively bloodless accretion of power, the new regime proceeded to remake society with breathtaking speed. Many middle-class and old regime elements fled the country before the consolidation of the revolution, but forced agricultural cooperativization programs,

suspended only in the early 1980s, drove some 35,000 people, or 10 percent of the population, across the border to Thailand (Stuart-Fox 1986: 52). Isolated from the market economies of Southeast Asia and desperately impoverished, the party state only conceded the principles of market incentives in 1979.

Rapprochement with Thailand and the countries of the Association of Southeast Asian Nations (ASEAN) eventually translated into Laos's membership in ASEAN in July 1997. Promarket policies ushered in by Kaysone's new thinking on reforms, as determined by the fourth congress of the LPRP in November 1986, slowly translated into injections of foreign investment. In any case, with the collapse of communism in the Soviet Union, Laos had little choice but to look westward. Even so, to the chagrin of the World Bank and Western donors, the party state has not conceded on issues of major economic reforms, much less democratization. One of the last remaining self-proclaimed communist regimes in the world, Laos remains an enigma—part Buddhist, part socialist, and part market capitalist.

LAOS (NINETEENTH CENTURY TO MID-1990s)

In many senses, modern Laos is a European colonial construct. French intervention in the late nineteenth century revived the dominant

politico-royal center of Luang Prabang in northern Laos. It was again the French who were instrumental in incorporating the rest of the thinly populated country and its mixed Lao and ethnic minority populations into a colonial administrative setup with well-defined internal as well as external boundaries. Dating from 1893, French Laos was created out of a loose system of Buddhist kingdoms and principalities. Although France was also drawn into the military pacification of the especially rebellious minority peoples of Laos, the major challenge to colonial rule emerged in the context of the Japanese *coup de force* in Laos in March 1945. Following various political and military vicissitudes engaging the French and the nationalists, Laos gained its independence in 1953 as the Kingdom of Laos. However, the postwar constitutional construction of the kingdom also met the challenge from the procommunist Pathet Lao movement, setting the scene for a highly destructive thirty-year civil war. Laos's traditional status as a buffer state between Thailand to the west and Vietnam to the east came to be reinvented in the context of the Cold War as Laos emerged as a key domino in the Western defense of the free world from communism. Since 1975, Laos has been ruled as a communist people's republic, the Laos People's Democratic Republic (LPDR).

French Colonialism

The arrival in the late nineteenth century of French explorers and empire builders in the Upper Mekong coincided with the high tide of Thai expansionism over the east bank of the Mekong. The prevailing situation placed the ancient capital of Luang Prabang, Xieng Khouang, along with Vientiane and Champasak in the south, as virtual vassal states. In this venture, France "rescued" the kingdom of Luang Prabang from absorption by, respectively, Thai and Vietnamese encroachments; set down the boundaries of modern Laos; and unified the princelings. With its administrative capital seated in the ancient capital of Vientiane, France also linked Laos to French Indochina in a federal administrative setup ruled by a governor-general in Hanoi.

It can be argued that, insofar as the French protectorate over Luang Prabang respected Lao tradition and bolstered the monarchy, colonial

rule rested lightly upon Laos. And to be sure, Laos was never developed or exploited on the scale of Vietnam. Nevertheless, France expected its colonies to pay for themselves. Colonialism demanded roads, or routes of exploitation for the extraction of forest products and minerals, but to build those roads, France favored *corvée* labor. France also imposed a head tax upon the peoples of Laos, to be paid in cash. *Corvée* and the head tax were bitterly resisted by the minority peoples of Laos, and rebellion flared in the face of armed pacification campaigns mounted by the French and their Vietnamese auxiliaries until the outbreak of the Pacific War (1941–1945). Colonialism also changed the demography of the towns and mining centers of Laos by importing Vietnamese civil servants to staff the administration and Vietnamese manual workers to labor in the tin mines of southern Laos. Lines of communication and economic flows further served to link Laos with Indochina, as opposed to its "natural" or historical hinterland across the Mekong River in Thailand (Siam). Little educational advance was achieved in Laos under French rule, with the exception of certain members of the aristocracy. Alongside Vietnam and even Cambodia, Laos remained a backwater within French Indochina, albeit a useful exporter of tin and, thanks to ethnic Hmong peasant-farmer enterprise, a handy supplier of opium for the French monopoly.

But a challenge to French rule also emerged from student circles in prewar Vientiane, a precursor to the foundation of the Lao Issara nationalist movement. In turn, the Lao Issara founded a government in Vientiane in the period following the surrender of the Japanese (August 1945), until its members were forced into exile in Thailand by the returning French. A more subversive opposition, however, arose from underground members of Hồ Chí Minh's Indochina Communist Party, who made common cause with Vietnamese residents in Laos. Famously, in Lao political history the schism of aristocratic elite reflected the postwar scenario. Two of the sons of Viceroy Boun Kong (t. 1887–1920) lined up behind the Lao Issara-in-exile (Prince Phetsarath [1890–1959] and Prince Souvanna Phouma [1901–1984]), and the other, Prince Souphanouvong (1911–1995), sided with the procommunist, pro-Vietnamese Pathet Lao.

Kingdom of Laos

The following three decades in Laos witnessed a complex diplomatic and military play between the Royal Lao Government (RLG), or the “Vientiane side,” headed by Prime Minister Souvanna Phouma, and the Pathet Lao side, nominally headed by the Red Prince Souphanouvong. Although the two sides were joined in three coalition governments, the breakdown of the first two Governments of National Union (November 1957–July 1959 and November 1962–September 1963) was accompanied by spiraling violence surrounding outside interventions. On the one hand, the United States replaced France as the dominant military and economic prop of the Vientiane side, whereas Vietnam and the Soviet Union provided major support to the Pathet Lao. China also exercised political and military leverage in the two northern provinces of Phong Saly and Sam Neua. Unknown to the U.S. Congress, Washington supported a “secret war” in Laos by backing Hmong insurgents under the Hmong general Vang Pao, albeit bloodily contested by the Vietnamese-backed Pathet Lao forces. Devastating U.S. air power over the southern Laos panhandle also combined to generate large numbers of internal refugees. Laos lived up to its name as a Cold War buffer state. Sadly, little development occurred under the RLG. Notoriously taking advantage of the windfall aid economy, Vientiane-side warlord generals enriched themselves and their close followers. North-south rivalry also weakened the unity of the RLG, especially between the royal court in Luang Prabang and Prince Boun Oum of Champassak.

Socialist State

Unlike the bloody revolutionary takeovers in Saigon and Phnom Penh in April 1975, the Pathet Lao triumph in December 1975 was gradualist, ostensibly legal, and relatively bloodless. This was, in large part, due to the participation of the Pathet Lao alongside the RLG in the Provisional Government of National Union (PGNU), sworn in on 5 April 1974 following the signing of a cease-fire agreement on 21 February 1973. By December 1975, from a position of political and military strength, the Pathet Lao declared the end to the PGNU and

announced the creation of the Lao People’s Democratic Republic (LPDR).

Despite the gradualism of the communist takeover in Laos, the regime moved with great haste to make over the country in the image of Lao socialism, borrowing heavily from Vietnamese, Soviet, and Eastern European experiences. Notably, in December 1975, the monarchy was abrogated, cutting the traditional nexus linking the kingship, the Buddhist religion, and the sangha, or religious community. Just as the LPDR assumed full political control, most old regime figures and their families fled the country. Those who remained endured months or years of “reeducation,” or socialization into Lao socialist thinking, often under harsh conditions. Anticolonial, anti-imperialist, and anti-Thai “reactionary” themes were emphasized as communist Laos emerged as a hard-line, pro-Hanoi, pro-Moscow regime. With the Red Prince Souphanouvong appointed to the presidency, real power lay with the party chief and prime minister, Kaysone Phomvihane (1920–1992), with his deputy Nouhak Phoumsavanh, and with other veterans of the thirty-year struggle. At the center of government under the new party state was the Supreme People’s Council and, above that, the State Council. Facing down a low-level insurgency, especially from armed Hmong, and frequently at war with Thailand over a contested boundary, the new regime tolerated no opposition. The first elections conducted after the communist takeover were only held in 1989, and a constitution was only promulgated in August 1991.

Economically, the regime pushed through with broad socialization of the economy, including an attempt to cooperativize agriculture. Laos experienced a major diminution of economic activity as markets dried up, and in addition, the coercive aspects of the program pushed tens of thousands of peasant farmers to join their countrymen and countrywomen in refugee camps across the Mekong in Thailand. Only in late 1979 was the principle of market incentives conceded, a decision echoing Vietnam’s own economic reform program. Nevertheless, it would take a change in the international situation before Laos reaped the benefits of foreign investments. Desperately dependent on aid, Laos forged close internationalist links with Vietnam, the Soviet Union, and the Eastern European countries. It also suspended rela-

tions with China over that country's support for the Khmer Rouge. Laos's isolation from the market economies of Southeast Asia only ended with the resumption of commercial ties with Thailand following the internationally imposed solution to the Cambodia problem from 1991 to 1993. Further, the collapse of the Soviet Union left Laos little choice but to reach out to the West, while once again resuming political and commercial links with China. Rapprochement with Thailand and the Association of Southeast Asian Nations (ASEAN) eventually translated into Laos's membership within the major regional organization in July 1997. Although the country's new embrace of foreign investment and market capitalism heralds a postsocialist economic future, the party state remains firmly entrenched, with no space granted for political opposition.

Even alongside the experience of many other Asian polities drawn into European world empires, Laos has seen its share of the vicissitudes of war and revolution. But the former French colony and Buddhist kingdom stands out in the way that its elite responded to the drives of anticolonial nationalism. One faction, the Royalists, sought accommodation with the West, whereas the other was attracted to anticolonial Marxism. The anticolonial nationalist variant eventually triumphed around the broad appeal of "patriotism" as opposed to class struggle; further, it sought, through the actions of its political commissars, to radically remake the Lao Theravada Buddhist society in a socialist mold.

LAOTINIZATION

Lending its name to the country, the dominant Lao-speaking population of Laos (glossed in Laos today as *Lao Loum*, or Lao of the lowlands) shares space with a mosaic of ethnic minority groups. Historically, the southward-migrating Lao who established Buddhist principalities in the *muong* (bounded districts) of the Mekong River valley have either absorbed, assimilated, or marginalized the indigenous Austroasiatic and Mon Khmer population, glossed as *Lao Theung* (midland Lao), or Lao of the lower mountain slopes, or Montagnards. Later-arriving minorities such as the Hmong and Yao, glossed as *Lao Soung* (Lao Sung or upland Lao), or Lao of the mountain slopes, have been far less receptive to assimilation into Theravada Buddhist culture and continue to strike for autonomy. Yet this tripartite partitioning of the ethnic minorities in communist Laos in the post-1975 period reflects the active construction by the state in building a Laos national identity. To understand the active process of Laotization by the modern state in Laos, we should look to some history.

Modern Laos, defined by frontiers set down by French colonialism, shares boundaries with five countries. Nevertheless, it is the Mekong River valley and the Mekong's tributaries that have served as the cradle of Lao civilization. This was acknowledged by French empire builders who rescued the kingdom of Luang Prabang from Thai overlordship and Vietnamese encroachments. With the sacking of the kingdom of Vientiane by Thailand in 1805, the Lao of the Issan, or northeast provinces, of Thailand were separated from their kin in the east. This

situation left the demographic balance between Lao and non-Lao inside Laos more equal. Nevertheless, the Lao kingdoms and, in turn, the French colonizers designated—and indeed treated—the Montagnard population as *Kha*, or slaves. Indeed, the slave status of the non-Buddhist animist Kha was ceremonially acknowledged in the kingdom of Luang Prabang, to which the Kha were obliged to pay ritual tribute. The rebellious actions of the Kha against the encroachments of the modernizing colonial state, along with crushing tax and corvée obligations, confirmed their marginal status. The sinicized Hmong migrants, no less refractory in their engagement with the Lao kingdoms, nevertheless won their place in the colonial economy as producers of opium.

In their bid to set down the armature of a modern colonial administration, the French actively recruited Vietnamese to staff the civil service. Although representing just 2 percent of the population of Laos, their presence in administrative positions far outstripped their demographic strength; for example, 70 percent of clerks and secretaries employed in the federal administrative services in Laos were Vietnamese (Gunn 1990: 35). According to an official reckoning, the figure for the military was 90 percent, and it was even 30 percent for primary schoolteachers. Although the leading Lao administrator in French Laos, Prince Phetsarath (1890–1959), sought to Laotianize the administrative system in Laos in tune with popular sentiment, the situation would not be reversed until the postwar period.

In the post-1945 period, all the major actors in the Kingdom of Laos, including cabinet members of three coalition governments, were Lao. The Royal Lao Government (RLG) confirmed the hegemony of the Lao Buddhist monarchy. In reality, isolated ethnic communities, from the Lu in the north to the T'ai on the Vietnamese border to the southern Montagnards, lived outside the reach of the modern state.

A major theme running through communist Pathet Lao (meaning “Lao nation”) propaganda during the thirty-year civil war was the rallying of the ethnic minorities to the side of the revolution. This was true of sections of the T'ai and the southern Montagnards, but the Hmong were split. Thousands of Hmong were sacrificed as cannon fodder for the RLG, yet minority, including Hmong, representation in the

Vientiane-side government was never more than token. The exceptions were Touby Lyfong (1919–1978) and Vang Pao (1931–).

Although some ethnic minority leaders—the Hmong leader Faydang (d. 1986) and the Montagnard leader Sithone Kommandan (1908–1977)—achieved prestigious positions within the Pathet Lao movement, the leadership remained ethnic Lao. The personage of Prince Souphanouvong (1911–1995) linked the national movement with Lao history and tradition. The Lao People's Democratic Republic (LPDR) never saw to the creation of minority zones, as experimented with by socialist China and Vietnam, but confirmed the hegemony of Lao culture, Lao language, and Lao state while extending the category of Lao citizenship to all, including the minorities.

So, in the official version, Lao Loum (including T'ai, Lu, and lowland Lao) comprise 56 percent of the population, whereas Lao Theung comprise 34 percent and Lao Soung, 9 percent. The balance is made up of Vietnamese, Chinese, Indians, and others. But though some sixty-five different ethnic groups are acknowledged by the regime—different ethnologists offer different counts—it is clear that the official policy is to homogenize and to blur rather than to celebrate the differences. Even the origins of the Lao as supposed migrants from the north have been challenged in official historiography to give them historically equal status with the “indigenous” Montagnards.

LARUT WARS (1872–1874)

Larut was a district in the northwest of Perak, a western Peninsular Malay State, and was rich in tin. During the late 1840s the chief, Long Jaafar (d. 1857), had farmed out the mining and felling of timber to other Malay chiefs and some Chinese. It was normal practice for the main leases to be subleased to others. Eventually, various parties would compete with one another for the leases. Since this district was rich, it became a site of contention among several important chiefs, including the sultan who did not observe the right of the Larut chief to collect revenues there. Various interested Malay chiefs then asked the British in Penang to intervene.

Groups of Chinese miners and loggers who were given leases in Larut belonged to secret societies, two of the most important ones being the Hai San and the Ghee Hin. These societies had their stronghold in Penang. They, too, were in rivalry with one another. In the 1860s, they clashed, and when one member was killed, many others fled to the island seeking help from the British. The situation worsened when clashes spread to nearby areas, prompting some Malay chiefs to take sides. Disgruntled chiefs then approached certain British traders with the request that they interfere. This caused consternation for the reigning Sultan Ali (r. 1865–1871), who was also a participant of the feuds. In 1871, when Sultan Ali died, the situation was further clouded because his passing had created conflicts among the chiefs over the accession.

Meanwhile, in the early 1870s, Ngah Ibrahim, the son of Long Jaafar, was in control of Larut. He was a shrewd chief who had been favored by the deceased sultan and was friendly with one of the Chinese secret societies. He had increased the levy on tin that caused others to complain to the British. Ngah Ibrahim also faced rivalry from Raja Abdullah, who was a contender in the accession to the throne. Raja Abdullah had requested help from a British trader from Penang to acquire some revenue from Larut. He had also campaigned for other Malay chiefs to support him in his quest for the throne.

In 1872, clashes broke out among the secret societies in Larut. The apparent cause of the trouble was a woman, but in actual fact, the parties were determined to oust one another for commercial control. In these conflicts,

Ngah Ibrahim and Raja Abdullah, who were directly or indirectly involved, took sides and were supported by secret societies, Malay chiefs, or British traders. Attacks were launched from Penang, at times intermittently on a daily basis. These had caused a good deal of losses, especially in the production and export of tin, of which Penang had become a port of export. The “troubles,” referred to as the Larut Wars, dragged on until 1874 when Raja Abdullah managed to influence Andrew Clarke, the British governor of the Straits Settlements in Singapore, to intervene. This led to the signing of the Pangkor Engagement, which endorsed the installation of Raja Abdullah as the sultan of Perak and marked the beginning of British intervention in the Malay States. The Pangkor Engagement concluded the Larut Wars.

LAUREL, JOSÉ PACIANO (1891–1959)**Filipino Nationalist**

José Paciano Laurel was the president of the Japanese-sponsored Philippine Republic (1943–1945). As president, he attempted to make Philippine independence real, despite the presence of Japanese military occupation forces in the midst of the Pacific War (1941–1945). He pushed for a stronger national character while attempting to solve serious shortages of food and other basic commodities; at the same time, he also tried to balance Japanese pressures and Filipino needs. Aside from being president, Lau-

rel had a distinguished career before and after the Pacific War, serving in important positions in all branches of government.

Laurel was born in the town of Tanauan, Batangas, on 9 March 1891. His father, Sotero Laurel, had served as a member of the legislature established during the revolution against Spain. Laurel studied at the University of Santo Tomas and the University of the Philippines in Manila. He obtained a doctor of civil laws degree from Yale University, where he studied as a government scholar. He also obtained a doctorate from the University of Santo Tomas in 1936, and two years later, he was awarded the honorary degree of doctor of laws, *honoris causa*, by the Tokyo Imperial University.

He became secretary of the interior in February 1923 but resigned in protest five months later after a conflict over the controversial reinstatement by the U.S. colonial governor-general, Leonard Wood (t. 1921–1927), of an American who was under investigation. Laurel's resignation triggered a crisis in government, as other Filipino cabinet secretaries resigned to protest Wood's move. Laurel then served as a senator from 1925 to 1931. He was elected to the Constitutional Convention of 1934 and took a leading part in framing the Philippine Constitution.

From 1936 to 1941, Laurel served as associate justice of the Supreme Court, where he wrote the classic definition of social justice, then a major platform of the Philippine Commonwealth administration of Manuel L. Quezon (t. 1935–1944). With the outbreak of war in December 1941, Laurel was appointed secretary of justice and chief justice of the Supreme Court. He was ordered to remain in Manila as Quezon evacuated the seat of government from Manila.

When the Japanese occupied Manila, Laurel was appointed commissioner of justice in the Japanese-formed Philippine Executive Commission. In December 1942, he became commissioner of the interior. He was shot but not killed by anti-Japanese guerrillas in June 1943. On 19 June 1943, Laurel was appointed a member of the Preparatory Commission for Philippine Independence (PCPI) and then became its president. He led the PCPI in framing a wartime constitution in preparation for the independence promised by Japan, a document that established a republican state with a strong executive.

Laurel was elected president of the Philippine Republic and took his oath on 14 October 1943. His was a controversial position; many Filipinos regarded him as a puppet president. Japanese forces continued to stay on Philippine soil, and many Japanese officers treated his administration with contempt. Moreover, Japanese citizens were given the same rights as Filipinos in exploiting natural resources, and Laurel was unable to stop Japanese depredations on the people. Due to Laurel's limited powers and resources, his main focus was to make independence a reality and to try to gain as much power from the Japanese as possible, while also attempting to win the support of Filipinos. Immediate concerns included providing food and combating inflation; longer-term goals were to develop a stronger Philippine culture and identity and to achieve economic self-sufficiency. Trying to balance Japanese demands with Filipino needs, he staved off Japanese calls for a declaration of war against the United States and Great Britain but eventually bowed to Japanese pressure by declaring a state of war, without conscription. Because of his strong nationalistic stand, young Japanese officers plotted to remove him from office and overthrow his wartime government but were not successful.

Laurel was forced by the Japanese to evacuate Manila for the northern Luzon city of Baguio in December 1944. In March 1945, he was taken to Tokyo. With the surrender of Japan, Laurel formally dissolved his administration on 17 August 1945.

He was arrested by the Americans and charged with treason by the returning Philippine Commonwealth government. But on 28 January 1948, President Manuel A. Roxas (t. 1946–1948) granted amnesty to Laurel and others charged with collaborating politically with the Japanese. Laurel ran for president in 1949 but lost in a hotly contested election. In 1951, he won a race for a Senate seat and served for two terms. As a senator, he advocated nationalism in economic and political policies. In 1954, Laurel headed an economic mission to revise economic relations with the United States and strengthen the Philippine economy. Seeing the need for higher education in the Philippines, he founded the Lyceum of the Philippines in 1952. He also established the Philippine Banking Corporation. Laurel died of

a cerebral hemorrhage on 6 November 1959 in Manila. His position as president of the Japanese-sponsored Philippine Republic is controversial, but his strong nationalist stand before, during, and after the Pacific War was consistent and farsighted.

LE DUAN (1907–1986)

Striving for One Vietnam

The life story of Le Duan, who for twenty-seven years was the leader of the Vietnamese Communist Party (VCP), merged with the struggle of the party against the Saigon regime and the United States until the reunification of Vietnam after the 1975 victory in the Vietnam War (1964–1975).

Le Duan was born in 1907 in the province of Quang Tri (Central), but little is known about his family and his youth. He arrived in Hanoi in the 1920s and became an early member of the Indochina Communist Party (ICP), which was formed in 1930. However, his activities were severely restricted: arrested in 1931, he spent five years imprisoned at Poulo Condore before being granted amnesty from the French Front Populaire government in 1936. He was a member of the Central Committee of the ICP in 1939 and was arrested anew a year later after attempting an uprising in the South,

and he remained in prison until the August 1945 Revolution.

During the First Indochina War (1946–1954), he was the secretary of the party's Regional Committee and, therefore, the principal leader of the resistance in the South: at first in Nam Bo (Cochin China) in 1946 and then also in South Trung Bo (South Annam) in 1951. The situation became complicated because the Viet Minh soon had only a few "liberated zones" under its control there. Replaced by his deputy, Le Duc Tho (1911–), he was recalled to the North around 1953, where, after the Geneva Agreement of 1954, he reorganized combatants from the South and Central Vietnam who had regrouped there.

From 1956 to 1959, he gained access to the leadership of the communist Labour Party. A member of the secretariat of the Central Committee in 1956 and of the Political Bureau in 1957, he was Hồ Chí Minh's (1890–1969) deputy when the latter personally took over the secretariat after Truong Chinh's (1907–1988) resignation after the excesses of the 1956 Agrarian Reform. He accompanied "Uncle Ho" to the International Communist Party conferences in Moscow in 1957 and 1960, during the rupture between China and the Soviet Union. He remained the man of the South, where he traveled clandestinely around 1956 and at the end of 1958: consequently, he played an important role in shaping the new strategy defined by the January 1959 plenum, which relaunched the armed struggle. In 1959, Hồ Chí Minh named him first secretary, and the Third Congress confirmed his appointment in 1960.

In a divided Vietnam, Le Duan simultaneously followed the socialist transformation of North Vietnam and the armed struggle in the South, where a separate secretariat was installed. Moreover, at the time of the U.S. intervention in 1965, he also had to oversee the complex relationship of the Vietnamese Worker's Party with its Chinese and Soviet counterparts. The Democratic Republic of Vietnam (DRV, North Vietnam) received aid from both parties, but a discreet shift in favor of Moscow had taken place: the negotiations carried out by Le Duan in Hanoi in 1971 with the Soviet delegation led by Nikolay Podgorny were crucial in this case. He did not participate directly in the negotiations in Paris. A year after concluding the Paris agreement (1973), he sup-

ported the secret decision to launch a new military offensive against the Saigon regime in 1975. This offensive, expected to last two years, brought victory for Hanoi in less than two months.

Thus, after having directed the victorious strategy since 1959, Le Duan, who was himself *de facto* “number one” after the death of Hồ Chí Minh in 1969, seemed to favor rapid reunification. In 1976, he continued as secretary-general of the Vietnamese Party, which had again adopted the term *Communist* (at the Fourth Congress). After 1975, he had gone to Beijing (Peking) and Moscow to thank those governments for their aid, but his visits betrayed a visible rapprochement with Moscow. This became apparent in 1977 with the entry of the Socialist Republic of Vietnam (SRV) into the Council for Mutual Economic Assistance (COMECON), a Moscow-dominated organization presenting a communist equivalent of Western Europe’s Common Market, and by the signature of a friendship and cooperation treaty between the SRV and the Soviet Union. Tensions then escalated with Beijing, against the background of the conflict with Pol Pot’s Cambodia; the latter was supported by China and was defeated by Vietnam in January 1979. In the same year, the brief Sino-Vietnamese War that erupted in February and March consecrated the rupture. Thus, it was a Vietnam entirely supportive of the Soviet Union that Le Duan led during the last years of his life. He died in 1986, just before the opening up of Vietnam.

Though he was relatively unknown internationally, Le Duan both personified and directed communist Vietnam in its struggle for reunification. While doing so, he could not prevent the domination of the Soviet Union in terms of political, moral, and material support to Vietnam, hence designating the so-called Soviet era. With the opening of the country since the late 1980s, dictates from Moscow would appear to present a hindrance to Vietnam’s development.

LE DUC THO (1911–)

Hard-Liner of Vietnamese Communism

Long a discreet figure but of primary importance for the Vietnamese communist movement, Le Duc Tho is known, above all, for having led the secret and decisive talks with Henry Kissinger (1923–) in Paris on the fringe of the Peace Conference that would result in the 1973 Paris Peace Agreement.

He was born in October 1911 in the province of Nam Ha (North) into the family of a civil servant; a number of the children in this family would become important figures in the country’s revolutionary movement (including Mai Chi Tho, interior minister in reunified Vietnam). Little is known about Le Duc Tho’s youth, other than that he joined the Indochina Communist Party when it was founded in mid-1929. Following that, he spent several years in prison, except during the years from 1936 to 1939 when the Front Populaire government in power in Paris decreed an amnesty for the Vietnamese communists (and even authorized their activities). Even before the August 1945 Revo-

lution, he joined the Viet Minh resistance movement in the Hanoi region, rather than in the remote area where Hồ Chí Minh (1890–1969) or Võ Nguyễn Giáp (1911–) were to be found. Thereafter, he gained a reputation for being one of the hard-liners of Vietnamese communism.

During the First Indochina War (1946–1954), as well as during the Vietnam War (1964–1975), Le Duc Tho was in the upper echelons of the communist organization. At the end of the 1940s, he was sent to the South as deputy to Le Duan (1907–1986), secretary of the Regional Committee of the party. Even though they both endured the difficult conditions of the anti-French resistance, these two men did not always agree about tactics. Le Duc Tho succeeded Le Duan around 1953 and continued as secretary at least until 1954. After the Third Congress of the party in 1960 (and probably even before it), he was a member of the Political Bureau and of the secretariat of the Central Committee, responsible for the Department of Party Organization. Strengthened by this competence, he would take de facto leadership of the peace negotiations with the United States ten years later.

In the Paris negotiations (1968–1973), Le Duc Tho entered the scene in February 1970 when he secretly met with White House security adviser Henry Kissinger. Thus, a series of negotiations began in a suburban villa near Paris. (The talks continued for nearly two years before their existence would be revealed by President Richard Nixon [t. 1969–1974] in January 1972.) Between suspending and resuming the talks, it took almost a year for the points of view of those negotiating to converge. The preliminary talks had appeared inauspicious: Le Duc Tho, the “special adviser” of the Democratic Republic of Vietnam (DRV, North Vietnam) delegation, contested the legitimacy of President Nguyễn Văn Thiệu (1923–2001) in Saigon, whereas Kissinger, Richard Nixon’s adviser, insisted upon the retreat of the Hanoi troops from the South as the condition for the departure of the Americans. The end of the negotiations would be full of unexpected developments. Thiệu refused to sign the 8 October 1972 agreement as tensions were mounting anew, and the U.S. Air Force would launch a further bombardment campaign on Hanoi in December. However, in January 1973, Le Duc

Tho returned to Paris to sign the agreement. The 1973 Nobel Peace Prize was awarded jointly to Henry Kissinger and Le Duc Tho; the latter would refuse it because of continuing hostilities.

In 1975, while the ultimate revolutionary offensive was building up in the South under the leadership of General Van Tien Dung (1917–), commander-in-chief of the People’s Army, Le Duc Tho would secretly join the front. In April 1975, from the general headquarters of the “Hồ Chí Minh campaign” situated north of Saigon, it was he who would supervise the operation to “liberate” the southern capital.

After 1975, in reunified Vietnam, the department of which he was in charge had to both reunify the party, once again termed *communist* in 1976 (at the Fourth Congress), hence Vietnamese Communist Party (VCP), and supervise the difficult relationship with the Cambodian and Chinese parties. Late in 1978, Le Duc Tho would once more oversee military operations, this time those that overthrew the Pol Pot regime (1975–1979), substituting a replacement regime under Vietnamese control. Still ensconced in powerful functions in 1982 (at the Fifth Congress) but faithful to a hard-line position and unfavorable toward reforms, he had to give up his position in 1986 (at the Sixth Congress) but still preserved some influence until his death in October 1990.

In his own way, Le Duc Tho was one of the Vietnamese leaders who most clearly symbolized the liberation struggles led by their movement. In turn, whether on the military front, in the spotlight of diplomatic negotiations, or in carrying out their duties, these men shaped the Vietnam of our day.

LE DYNASTY (1428–1527, 1533–1789)

The Le Dynasty was one of the long-term dynasties of premodern Vietnam. It is usually divided into two terms—1428 to 1527 and 1533 to 1789—and is also called the Hau Le (latter Le) dynasty to distinguish it from the Ly dynasty of the tenth century.

The first emperor, Le Loi (whose temple name was Thai To, r. 1428–1432), was the chief of Lam Son village in Thanh Hoa Province. After ten years of struggle against the Chinese Ming forces, he came to the throne and fixed the capital at Thang Long (present-day Ha Noi or Hanoi). He and his counselor Nguyễn Trai tried to establish a civilian-controlled state like Ming China. But generals from Thanh Hoa took power in the court, denying the authority of the Le emperor. Furthermore, Emperors Thai Tong (r. 1433–1442), Nhan Tong (r. 1442–1459), and Le Nghi Dan (r. 1459–1460) met untimely deaths. Under the reign of the fifth emperor, Thanh Tong (r. 1460–1497), state control became apparent. His successor, Hien Tong (r. 1497–1504), continued his policies. But subsequently, civil control was lost, and military commanders held to their own sphere of influence. Meanwhile, rural peasant rebellions were endemic.

Against this backdrop, General Mac Dang Dung seized power and established a new dynasty—the Mac dynasty—in 1527. But other generals, such as Nguyễn Kim and Trinh Kiem, refused to submit. Instead, they found the prince of Le, Trang Tong (r. 1533–1548), a symbol to resist the Mac. After the death of Emperor Trung Tong (r. 1548–1556), the direct line of Thai To ceased to exist; the descendant of Le Tru, the eldest brother of Thai To, ascended the throne as Anh Tong (r. 1556–1573). Political power, however, was in the hands of the Trinh king, and the emperors of the Le were politically impotent.

In 1597, the Mac family was defeated and retreated to the mountainous area of northern Vietnam. The emperor of Le returned to Thang Long; from 1647, Le emperors in the latter period were given the title "King of Annam."

Meanwhile, in the southern part of the Indochina peninsula, the Nguyễn expanded their territory and refused to acknowledge the sovereignty of the Le emperor. From 1627 to 1672, the Trinh–Nguyễn civil war continued without any apparent victor.

After the cessation of hostilities, the histories of North and South Vietnam developed separately. In the North, the reclamation of new land reached the northern limit of expansion without encroaching on the lands of the Chinese empire. The rule of feudal lords from manors (*Dien Trang* in Sino-Vietnamese) acting as the administrative arm of the government declined, and peasantry management became popular. The latter refers to the self-rule of peasants, where village councils comprising elders and members of the community undertake to administer the common people. Based on this type of management, an autonomous village society appeared during this period.

In contrast, in the South, the Nguyễn expanded their territory to the Mekong Delta and the Central Highland. Land was vast and population was small; consequently, village society became more open. But because the expansion was so rapid, contradictions between social classes, areas of old land and new reclaimed land, and ethnic groups became severe. In 1771, the Tay Son Rebellion broke out. The Trinh took advantage of the opportunity and destroyed Nguyễn power in Huế. Shortly thereafter, Tay Son forces defeated Trinh. The last emperor of the Le, Chieu Thong (r. 1786–1789), sought the help of the Manchu Qing to fight the Tay Son. Despite their smaller numbers, the Tay Son defeated the Qing army. At last, Chieu Thong escaped to China; the Le dynasty ended in 1789.

It has been estimated that the first term of the Le period (1428–1527) was the golden age of peace and unity. But the latter term (1533–1789) has generally been underestimated. Recently, this latter period has been recognized as the initiation of the early modern era that prepared the new oligarchic kingdoms in mainland Southeast Asia. During this period, the two countries of Vietnam focused

on international commerce, together with internal trade and commercial growth. Port cities such as Pho Hien (Hung Yen Province) in the North and Hoi An (Quang Nam Province) in central Vietnam were prosperous, catering to foreign traders including the Chinese, Japanese, Dutch, Spanish, and Portuguese. It was this economic accumulation and the trading network that contributed to the foundation of the Nguyễn dynasty after the disturbance from the end of the eighteenth century to the early years of the nineteenth century. Unfortunately, Vietnam sources in those days mentioned little about the activity of international commerce, but foreign sources and archaeological findings point to the importance of this later Le period.

LE THANH TONG (r. 1460–1497)
Vietnamese Imperialist

Le Thanh Tong (Le Tu Thanh or Le Hao) was the fifth emperor of the Le dynasty (1428–1527) of Vietnam. He ascended the throne after the coup d'état against the usurper Le Nghi Dan (r. 1459–1460) by some military officers. He succeeded in furthering a series of policies initiated by his predecessors and in doing so launched the golden age in the premodern history of Vietnam.

In internal affairs, reforms in government administration in accordance with the Ming model were implemented in an exemplary manner by 1471. Reforms included the establishment of six ministerial offices, six offices of security, five chief military commissions, a competitive civil service examination, the adoption of neo-Confucianist doctrines, the enactment of the Le Code (*Hong Duc luat le* in Sino-Vietnamese), and a land registration and redistribution system. Although military officers still maintained power in the court, the emperor endeavored to establish the oligarchy by using both military and civil officers.

In foreign affairs, Le Thanh Tong adopted aggressive attitudes toward the southern and western neighboring countries. In 1470, he occupied the capital of Champa, and nine years later, he launched an expedition to Lan Xang kingdom. In the northern area, he imposed his will over the boundary dispute with Ming China to the extent that Chinese records referred to him as a "greedy and arrogant king."

Le Thanh Tong was also a poet, and he organized a cultural circle in the court, named *Tào dan*. His poems and other kinds of literary articles were recorded in his voluminous collection, *Thien Nam Du Ha Tap*. (Only 10 of the 200 volumes of this work are preserved in Hanoi.)

Although regarded as an expansionist even in Vietnam, Le Thanh Tong is held in high esteem. Indeed, he is considered to be one of the greatest heroes in the history of Vietnam.

LEE KUAN YEW (1923–)

Architect of Modern Singapore

Lee Kuan Yew was the first prime minister of Singapore and held that office from June 1959 to November 1990, when he relinquished it voluntarily to Goh Chok Tong (1941–). Under his leadership, Singapore was transformed into one of the most stable, safe, modern, and economically prosperous countries in Asia and a renowned international and regional shipping, aviation, and financial hub. Well respected in Singapore, Lee has also enjoyed a reputation as a statesman of international standing whose views, perspectives, and analyses were often sought.

Born in Singapore on 16 September 1923, Lee received his secondary education at the Raffles Institution from 1936 to 1939. As the top-scoring student in Singapore and Malaya, he was offered a scholarship to study at Raffles College but found his studies interrupted by the outbreak of the Pacific War (1941–1945) and the occupation of Singapore by Japanese Imperial forces. During the war, he worked as a clerk and later as a cable editor in a Japanese propaganda agency. Lee subsequently attributed his political awakening to the occupation years. In September 1946, he proceeded to Britain to study law at the London School of Economics but transferred to Fitzwilliam House, Cambridge University, in January 1947 and graduated with special distinction (a “double first”) in 1949. To qualify as a barrister, Lee joined the Middle Temple in London, where he also became involved in the Malayan Forum, a discus-

Lee Kuan Yew, the premier of Singapore, 1968. (Hulton-Deutsch Collection/Corbis)

sion group comprising students from Malaya and Singapore whose objective was to awaken political consciousness and to press for an independent Malaya, inclusive of Singapore. In England, Lee was also attracted to Fabian socialist ideals and campaigned for a Labour Party candidate. Returning to Singapore in August 1950, he joined the law firm Laycock & Ong and campaigned for his boss, John Laycock, a Singapore Progressive Party leader, in the 1951 elections. He became increasingly involved in Labour and left-wing causes when he took on a number of high-profile cases. His growing interest in politics led him to be one of the founding members of the People’s Action Party (PAP) in November 1954. As secretary-general of the party, he contested and won a parliamentary seat in the 1955 elections, as one of the three PAP candidates, and became de facto op-

position leader in the Legislative Assembly. For the next few years, Lee used his public forum in the assembly to establish the PAP as a left-wing and anticolonial party, committed to non-violent constitutional struggle, and he employed his considerable political skills to fend off efforts by the procommunist faction to control the PAP. In May 1959, his party swept the polls, winning forty-three of the fifty-one seats, and Lee became prime minister of a self-governing Singapore.

His efforts to persuade the Malayan premier and leader of the Alliance Party, Tunku Abdul Rahman (1903–1990), to include Singapore in a wider political merger—Malaysia, incorporating the British Borneo territories—bore fruit in 1961. However, this move precipitated a split within the PAP, with the procommunist faction moving into the opposition as the Socialist Front (Barisan Sosialis). Five days after the formation of Malaysia on 16 September 1963, Lee led his party to another electoral victory in Singapore. He was one of fifteen members of Parliament (MPs) from Singapore to be subsequently appointed to the Malaysian Parliament. But Singapore remained in Malaysia for only twenty-three months, during which time relations between the two sides, marked by political competition and acerbic public exchanges between their leaders and the outbreak of race riots in Singapore, deteriorated over political and economic differences that touched on Singapore's position and role in Malaysia. The resulting political competition and racial tension led Tunku to decide that only by Singapore's separation, which took place in August 1965, could the potentially explosive situation be contained. At his press conference announcing the separation, Lee broke down and wept emotionally at the shattering of his goal of unifying the two territories.

The sense of crisis in the aftermath of separation had galvanized support behind his party and pragmatic programs. Lee led the PAP to six more electoral victories—with the party winning all the seats in the first four—before stepping down as prime minister in November 1990 in favor of Goh Chok Tong. However, he remained influential as senior minister in the cabinet. Lee relinquished his post as secretary-general of the PAP to Goh in 1992. Lee's tenure as prime minister saw the spectacular transformation of Singapore into a modern

city-state, for which he has often been credited as its main architect.

Since resigning as prime minister, Lee has found time to research, reflect, and write his memoirs. The publication of the first volume of his memoirs in 1998, which recounted his perspective on Singapore's failed Malaysian venture, fueled controversy, especially in Peninsular Malaysia.

LEGAZPI, CAPTAIN GENERAL MIGUEL LOPEZ DE (1500–1572)
Spanish Colonizer of the Philippines

Miguel Lopez de Legazpi was the Spanish conquistador who began the Spanish colonization of the Philippines. He was appointed to lead an expedition to the Philippines, arriving in 1565 to formally lay claim to the archipelago for the Spanish king, Philip II (r. 1556–1598). On arrival, he negotiated with local rulers and was able to take possession of several islands in the Visayas. After subduing resistance by Filipinos, he proceeded to Manila, in Luzon, where he was welcomed by Raja Lakandula and Raja Matanda. With Manila in Spanish hands,

Legazpi formally established it as a city, under Spanish rule. As the leader of the Spanish colonization mission, he was initially given the title “Adelantado” (Advanced Colonial Governor). In 1569, he was appointed as the first Spanish governor and captain general of the Philippines. He was the founder of the first two cities in the Philippines under Spanish rule, Cebu and Manila.

Legazpi (also spelled Legaspi) was born in Zumarraga, Guipuscoa, Spain, and sailed for Mexico around 1530, where he worked with the Spanish colonial government. He had a reputation as an explorer and was known to Friar Andres de Urdaneta, who had gone on an earlier mission to the Philippines. (That mission had failed to establish a settlement for the Spaniards.) Friar Urdaneta recommended to the Spanish court that Legazpi lead a new expedition to the Philippines. Legazpi accepted the appointment and, with five ships, set sail on 25 November 1564, from the port of Navidad in Mexico. At sea, Legazpi opened the sealed orders from the Spanish king and learned that his mission was to claim the Philippines for Spain and lead the conquest of the islands. Legazpi faced some unrest among the expedition’s officers and the Augustinian missionaries on board, but he was able to quell this and proceeded westward across the Pacific. He stopped by Guam and then, on 14 February 1565, reached the island of Samar in the Visayas, Philippines. He took formal possession of the island and then proceeded to Leyte, Limasawa, and the Camiguin Islands, formally taking them as possessions of the Spanish Crown. Legazpi then went into the central Visayas and persuaded the leader of Bohol, Raja Sikatuna, to sign a blood compact. Legazpi next went to Cebu, where he crushed local resistance with Spanish firearms. One of his men found the image of the Child Jesus in one of the houses, reportedly the same image given by Ferdinand Magellan (1480–1521) to the wife of the local leader in 1521. (This image has been enshrined in Cebu and is known as the Santo Niño.)

Legazpi requested assistance from Mexico and Spain to further expand and consolidate Spain’s conquests in the Philippines. Reinforcements arrived in 1566 and 1567, led by two of Legazpi’s grandsons, Juan and Felipe Salcedo. Legazpi consolidated his conquests and then moved on to Panay Island in search of food

supplies and further extended his hold on the Visayas.

In 1569, he was officially appointed by King Philip II as governor and captain general, with authority to conquer the rest of the islands in the Philippine archipelago. In 1571, he returned to Cebu and established Cebu City as the first city in the Spanish-colonized Philippines. Three months later, in April 1571, he proceeded to Manila, in Luzon. Initially, the three native chiefs—Raja Lakandula, Raja Sulayman, and Raja Matanda—welcomed him. Raja Sulayman and Raja Lakandula, however, decided to oppose Spanish colonial rule, and they fought Legazpi and his men. Spanish military might prevailed, and Manila was formally taken by Legazpi for Spain. Under his orders and using local labor, the first Spanish fortifications, buildings, and houses were built for the Spaniards. Legazpi then established Manila as a formal city under Spanish rule, and it became the capital of the Philippine archipelago. Legazpi died of apoplexy on 20 August 1572 in Manila. His remains were buried in the San Agustin Church in Intramuros, Manila, where they lie to this day.

As one of Spain’s most famous conquistadores, he managed, in his seven years in the region, to take possession of most of the major Philippine islands, protect them from Spanish and Muslim incursions, and establish the foundations of Spain’s colonial government in the archipelago.

LIBERAL EXPERIMENTAL PERIOD (1816–1830)

After the end of the Napoleonic Wars (1803–1815) in Europe, the British let the Dutch re-

turn to the East Indies in 1816. A state commission (*commissie generaal*), consisting of C. T. Elout, A. A. Buyskes, and G. A. P. van der Capellen, was in charge of reestablishing Dutch authority. One of its tasks was to design a new constitution (*Regeeringsreglement*). The activity of European entrepreneurs was an issue that required resolution because the Dutch government wanted clarity about how the colony would be able to repay the debts of the bankrupted (Dutch) United East India Company (VOC).

Van der Capellen (1778–1848) became governor-general in 1819. He initially favored opening up Java to foreign private entrepreneurs, and he handed out tracts of uncultivated land for them to establish plantations to be operated with wage labor. But he came under the influence of those who argued that private enterprise would use its technological superiority to exploit the indigenous population. Van der Capellen then ruled that it would be best for the government to orchestrate the economic development of Java. He banned the sale of land by the indigenous aristocratic landowners to foreign private entrepreneurs and forbade entrepreneurs to lease land in the self-governing principalities in Java. This move infuriated both enterprising Europeans and aristocratic Javanese.

Commissioner-General L. P. J. du Bus de Gisignies (1780–1849) replaced van der Capellen in 1825. His main tasks were to reorganize the colony's finances and to investigate what system of government would be most appropriate. His May 1827 report advocated the development of Java by issuing unused land to private entrepreneurs for agricultural production. He lifted restrictions on the settlement of Europeans in Java. However, du Bus's proposals were not implemented. In 1830, the new governor-general, Johannes Van den Bosch (1780–1844), advocated the Cultivation System (*Cultuurstelsel*), which involved government-controlled development.

Between 1816 and 1830, private entrepreneurs established a range of private estates, mainly in the surroundings of Batavia. Others started sugar mills in the principalities of Java, leasing land and labor from local aristocrats for the production of sugarcane.

LIGHT, CAPTAIN FRANCIS (1740–1794)

From Trader to Colonialist

Francis Light, an English country trader, played a decisive role in the establishment of a British outpost in 1786 at Penang, an island off the northwestern coast of the Malay Peninsula. Penang was the initial base for the expansion of British influence in the Malay Peninsula (present-day West Malaysia) during the nineteenth century and subsequently for the creation of "British Malaya."

Francis Light was born in 1740 in Dallinghoo, Suffolk, England, the illegitimate child of Mary Light. His father was William Negus, a landowner in the county of Suffolk. Light joined the Royal Navy at age nineteen. As a midshipman, he fought against the French. He left the navy when he was twenty-three to seek his fortune in India. In Madras, he worked for Jourdain, Sullivan and De Souza (JSD) and was given command of one of its ships. Captain Light frequented the ports of call in the northern Straits of Melaka, namely, Aceh (Aceh), Junk Ceylon (Ujung Salang, present-day Phuket), and Kuala Kedah. Besides acting as an agent of JSD, Light undertook trading on his own. He was one of the scores of British country traders

in the Malay Archipelago (present-day Indonesia and Malaysia).

The need to protect the lucrative China trade of the English East India Company (EIC) in luxury goods (tea, silk, porcelain) and to safeguard British military and strategic interests in the Bay of Bengal and the Straits of Melaka led to the acquisition of Penang. The rulers of Kedah—Muhammad Jewa (1710–1773) and Abdullah Muharum Shah (1773–1798)—were willing to cede territories, specifically the island of Penang, in return for British protection against their enemies, notably Chakri Siam (present-day Thailand) and Konbaung Burma (present-day Myanmar).

Having failed to convince the EIC to acquire Junk Ceylon, Light focused his attention on Penang. When acting as Sultan Abdullah's *wakil* (representative) in negotiations with the EIC at Calcutta, he did not faithfully represent the sultan's views about the vital military alliance against Siam and Burma and financial compensation for the loss of trade. Moreover, he did not reveal the fact that Kedah was a vassal of Siam. Calcutta was, in general, agreeable to the sultan's conditions as represented by Light but withheld the decision for military protection and financial compensation pending a ruling from the EIC directors in London.

In February 1786, Burmese forces invaded Siam. Sultan Abdullah sent arms to Burma and letters of loyalty to Siam in the hope of appeasing both parties. Siam expelled the Burmese and turned on its own southern vassals (Patani, Ligor, Pugit, Kedah, and Terengganu) in retribution for their siding with the enemy.

Meanwhile, the EIC appointed Light as the superintendent of Penang. Disregarding stern warnings from Sultan Abdullah that he should not land in Penang pending the decision from London, Light formally took possession of the island in the name of King George III and the "Honorable East India Company." He named it Prince of Wales Island after the heir apparent (later George IV) and designated the township at the promontory on the northeastern part of the island as George Town.

Lord Cornwallis (t. 1786–1793), governor-general of India, was determined that EIC commitments be limited to Penang to avoid straining Anglo-Dutch and Anglo-Siamese relations. Consequently, military assistance to Kedah was denied. Understandably, Sultan Ab-

dullah demanded that the British vacate Penang. Instead, Light proposed to buy or lease the island from Kedah; the sultan was reluctant. Regardless, EIC-Kedah negotiations proceeded with Light as the go-between.

In attempting to settle the protracted negotiations over the compensation issue, the sultan enlisted the Illanun and blockaded Penang. The forts at Prai fronting the island were strengthened. An ultimatum was announced, demanding the settlement of the compensation issue, failing which the British should evacuate the island.

Instead of complying with the terms of the ultimatum, Light launched a swift attack on Prai in April 1791, destroying the batteries and routing the Kedah forces. Sultan Abdullah agreed to the signing of the Treaty of Peace, Friendship and Alliance on 1 May 1791. According to its terms, the EIC would compensate the sultan 6,000 Spanish dollars per annum as long as the British occupied the island. Neither the cession of Penang nor the EIC's military protection for Kedah was mentioned in the agreement.

During his tenure as superintendent (1786–1794), Light had a stockade erected (which subsequently became Fort Cornwallis) and built a public well that supplied fresh water to the early inhabitants; he also laid down the outline of the pioneer commercial sector of the settlement bordered by main thoroughfares. He welcomed immigrants and settlers from the surrounding vicinity, and within a short period, George Town became a cosmopolitan commercial center. Light instituted the *Kapitan* system, whereby he appointed a headman (*kapitan* or captain) for each community to administer its own affairs.

Light died, apparently of malaria, on 21 October 1794 in Penang and was buried in the Protestant Cemetery in George Town. His estate was divided between his English wife and Martina Rozells, a Eurasian woman with whom he cohabited. One of his sons, William, became the first surveyor-general of South Australia and planned the city of Adelaide.

LIGOR/NAKHON

Ligor, or the present-day province of Nakhon Sithammarat in South Thailand, was a thriving local power center in the upper part of the Malay Peninsula, most likely as far back as the ninth century C.E. The name *Ligor* is a corrupted pronunciation of the word *Nakhon* by Portuguese traders who came to trade with this entrepôt during the sixteenth and seventeenth centuries. During Śrīvijaya times, Ligor went by the name of Tambralingam, and until the mid-thirteenth century, it formed a part of that ancient maritime empire. From then on, Ligor appeared as an autonomous center within the sphere of influence of the Thai kingdom, whether the latter's capital was at Sukhothai or Ayudhya (Ayutthaya) or Bangkok. It was during the first half of the thirteenth century also that Ligor's great ruler, King Chandrabanu, sent an army to attack Ceylon (Sri Lanka) and brought the Theravada Buddhism of the Mahavihara monastery teachings from Ceylon to Ligor. It was from Ligor that the Theravada Buddhism

of the Ceylonese orientation spread to the ancient Angkorian empire and the Thai world in Southeast Asia.

During the two subsequent centuries (the fourteenth and fifteenth centuries), Ligor evidently transformed itself into a powerful and thriving center on the peninsula. Its prosperity made it an international bone of contention among the budding and old powers in the region, especially among the Malay, Burmese, Khmer, Mon, and South Indian rulers, all of whom wished to control the flow of the maritime trade through their control of Ligor. Amid this scenario, it remains a historical puzzle as to how Ligor was eventually moved into the Thai political sphere. What was clear was that it was during the Thai kingdom of Sukhothai, namely, around the mid-thirteenth century, that Ligor, then known by its Thai name of Nakhon Si Thammarat, became a vassal state of Sukhothai. Historical speculations surmise that Sukhothai most likely acquired Ligor as its dependency not through conquest but rather through a submission of the ruling house of Phetburi, to which Nakhon was then a dependency. King Ramakhamhaeng (r. 1279–1298) of Sukhothai subjugated Phetburi in 1294. It was most likely that a Thai ruling house was established in Ligor around this time as well. From the mid-thirteenth century onward, Nakhon acted most of the time as a principal southern outpost of Sukhothai, from where Siamese authority and prestige expanded into the Malay Peninsula. Most historians believe that when Ligor was brought into the Siamese sociopolitical orbit, it was already a locally powerful center whose sphere of influence had reached as far as Pahang and Singapore. Ligor's vassalage to the Siamese kingdom meant an automatic expansion of the latter's sociopolitical power and prestige into the Malay world.

Both local chronicles and foreign records confirm that from the fifteenth century onward, Ligor was a viceroyalty of Siam in affairs concerning the Malay Peninsula. Malay chronicles repeatedly recorded Ligor's active role in maintaining and expanding Siamese interests in the region. The *Al-Tarikh Salasilah* even recorded, for example, that the traditional sending of the *bunga mas bunga perak* (ornamental gold and silver flowers) by a Malay sultanate to the king of Siam originated from an obligation of the sultanate of Kedah to Ligor. A report by

Joao de Barros, a Portuguese trader in the sixteenth century, stated that “it was to the Payoa [Phraya Nakhon/ruler of Nakhon] that the King of Malaca [Melaka] and governors of Patane [Patani], Calantan [Kelantan], Pam (Pahang) and others all along that coast had to pay the tribute which they owed each year to the King of Siao [Siam]” (De Barros 1960: 23). In fact, the ruler of Ligor was the most trusted viceroy of Siam and the principal player in the lengthy conflict between Bangkok and Kedah from 1821 to 1842—the conflict that led to a temporarily direct Siamese rule of that Malay State. The unchallenged influence of Ligor over Malay affairs only slowly came to an end by the mid-nineteenth century, as the Siamese traditional system of regional administration became increasingly incapable of dealing with the dynamic sociopolitical changes and ceaseless demands of the neighboring British and French colonial empires. As the ruling Nakhon family failed to adjust to the new sociopolitical conditions, its grip on local affairs steadily eroded, and its prime position in the southern region was superseded by those of the new ruling cliques, such as the Khaw/Na Ranong family of the Siamese western seaboard.

In spite of its impressive political credentials, Ligor was not always a good and loyal dependency of the Thai kingdom. A few times, it tried to assert its independence and reestablish itself as a sovereign power in the upper Malay Peninsula region. In 1628, for instance, Ligor refused to accept the suzerain authority of King Prasat Thong (r. 1629–1656) of Ayudhya on the ground that Prasat Thong’s claim to the throne was not legitimate. It took Ayudhya four years to suppress and bring Ligor back into the Siamese political orbit. Again in 1767, Ligor declared itself free from the ties of the Siamese vassalage at the time when Ayudhya fell to the Burmese. And again, it was only by force that Siam was able to reclaim the loyalty of Ligor. However, it was evident that through its long association with the Thai kingdom since the thirteenth century and in spite of its occasional delinquencies, Ligor had proved itself a valuable and capable viceroyalty that was able to effectively defend and expand the authority and interests of the Siamese empire in the Malay Peninsula throughout the traditional period.

The provincial administrative reform introduced in 1896 by King Chulalongkorn

(r. 1868–1910) gradually saw the transformation of Nakhon from an autonomous viceroyalty of Siam in the south to a modern province, the governorship of which is no longer a family heirloom to be passed on from one generation to the next. Only seasoned government officials with personal ability and administrative merit can aspire to become the governor of Nakhon. Now one province among the seventy-six provinces composing the Thai kingdom, Nakhon remains a center of Buddhism and the quintessence of southern Thai culture.

LIM YEW HOCK (1914–1984)**Securing Self-Government for Colonial Singapore**

Lim Yew Hock served as Singapore's second chief minister from June 1956 to June 1959, during which time he led several missions to London to negotiate a self-governing constitution for the colony.

Lim Yew Hock was born on 15 October 1914 in Singapore. After completing his secondary education at the Raffles Institution, he started work as a clerical worker in 1933 and became involved in the trade union movement, becoming the general secretary of the Singapore Clerical and Administrative Workers' Union after the Pacific War (1941–1945). In 1947, he joined the Singapore Progressive Party (SPP) and was nominated to the Singapore Legislative Council in 1948. One year later, he left the SPP to join its main rival, the Singapore Labour Party (SLP), and was one of the organizers of the Singapore Trade Union Congress in 1951, the year he was also elected to the council. But he was expelled from the party in December 1952 following an internal power struggle. Lim, however, successfully contested the 1955 Singapore Legislative Assembly elections as a candidate of a new political party, the Singapore Labour Front, which he helped to establish in 1954. Upon succeeding David Marshall (1908–1995) as chief minister in June 1956, Lim, through a series of meetings with the British in December 1956, April 1957, and May–June 1958, secured their agreement to grant self-government to Singapore. His party contested the 1959 elections under a new name, the Singapore People's Alliance, and won four seats. In the 1963 elections, however, which he declined to contest, his party, which became part of the wider coalition known as the Singapore Alliance, failed to win any seats. With the support of the Malaysian premier, Tunku Abdul Rahman (1903–1990), Lim subsequently served as Malaysia's high commissioner to Australia but resigned in embarrassing circumstances. He converted to Islam, took the name Haji Omar Lim, and moved to Saudi Arabia as an official of the Islamic Conference. He died in November 1984.

LINGGADJATI (LINGGAJATI) AGREEMENT (1947)

Linggadjati was a hill resort in western Java. In 1946, the Dutch colonialists and the Indonesian nationalists led by the Republic of Indonesia met there and forged an agreement to settle their differences. These differences related to the Dutch intentions to create a federal state for an independent Indonesia and the opposite aim of the Republic of Indonesia to decide on its own future without Dutch interference.

The main terms of the agreement were as follows. The Netherlands government recognized the republic as the de facto authority in Java and Sumatra (the two main islands of Indonesia). Both The Netherlands and the republican governments promised to establish a sovereign federal state called the United States of Indonesia (USI), which would include the republic. Meanwhile, the republic would recognize all claims by foreign nationals (read Dutch and Western entrepreneurs) for the restoration of their properties within areas controlled by the republic.

The agreement was concluded within a tight time frame. After the Japanese surrendered their occupation of Indonesia to the Western allies (1945), a power vacuum came into existence because the former Dutch colonial authorities were not ready to assume control. Under these circumstances, the Republic of Indonesia seized the opportunity and proclaimed independence, followed by a de facto extension of its authority over large parts of Indonesia. Gradually, the strength of the Dutch colonial forces developed, and conflicts between Dutch troops and Indonesian nationalist supporters of the republic became a daily occurrence. A peace agreement was necessary to prevent an all-out war.

The terms were deliberately ambiguous in order to accommodate different viewpoints. They were subject to reinterpretation by both

sides and were not finally ratified by the Netherlands Parliament until March 1947. The ambiguity was the recipe for the agreement's failure.

LOMBOK

About 4,600 square kilometers in area, Lombok is a volcanic island with mountain ranges in the north and south. In consequence of this topography, Lombok's population, since time immemorial, has been concentrated in the valley in the center of the island, which runs from west to east. Lombok's indigenous people are the Sasaks, a Malay subgroup that has been under the influence of Islam since the sixteenth century. Islam penetrated the island unevenly, so by the nineteenth century, some of the Sasaks professed an orthodox version of the faith (*Waktu-lima*), whereas others, especially in West Lombok, practiced a form of Islam infused with animistic beliefs and rituals (*Waktu-telu*). Apart from the Sasaks, Lombok has long had minorities of Balinese and Buginese.

The Balinese in particular have played an important role in the island's history. Having settled in West Lombok in the early seventeenth century, the Balinese community remained politically fragmented until well into the nine-

teenth century, divided as it was into a number of descent-groups that were frequently at war with each other. In 1839, however, these conflicts came to an end when one of the descent-groups, the Mataram group, asserted its power over all its rivals, whereupon it brought the entire island, including its majority Sasak population, under its dominion. Around the same time, Lombok entered into the network of international trade as an exporter of rice, most of which was marketed in China via Singapore.

The wealth derived from this export trade in rice, much of which came to benefit Lombok's Balinese rulers, allowed for the emergence of a magnificent Balinese court culture. In the latter half of the nineteenth century, many temples and several palaces were constructed in Mataram and Cakranegara, and in the vicinity of these urban centers, a number of pleasure gardens were laid out, such as those at Narmada, Singasari, and Gunungsari. At the Balinese court, the arts flourished, many being inextricably interwoven with the Bali-Hindu religion, a religion the Lombok Balinese observed more strictly even than their brethren in Bali across the strait. In the 1890s, however, this "golden" period in the island's history was brought to a violent end in consequence of the combined effects of internal Sasak rebellion and external Dutch aggression.

In 1891, the Sasaks of East Lombok raised the banner of Islam and rose in rebellion against their Balinese overlords. Meanwhile, in faraway Batavia (Jakarta), the Dutch colonial government saw in Lombok's internal strife an opportunity to incorporate the island easily into the Netherlands (Dutch) East Indies. After some initial hesitation about which side to support, Batavia decided to back the Sasak insurgents and began to use its naval power to disrupt Lombok's communications with Singapore, thereby preventing the importation by the Balinese rulers of firearms and other war materials. This pressure, however, failed to bring the Lombok Balinese to heel, whereupon the Dutch, in July 1894, decided to send a military expedition to force the issue.

Although the Lombok Balinese made no attempt to oppose the landing of the expeditionary forces when they came to realize, in August 1894, that the Dutch would be satisfied with nothing less than complete sovereignty, some of their leaders decided to resort to

armed resistance. In a surprise nocturnal offensive upon the Dutch army encampments, the Balinese inflicted a heavy and unprecedented defeat on the expeditionary forces, killing or wounding more than 500 soldiers, sailors, and coolies. But though they had achieved a great victory, the attack upon the Dutch expeditionary forces was the beginning of the end for the Lombok Balinese. In subsequent weeks, the Dutch made good their losses, brought in reinforcements in men and material, and began a systematic artillery bombardment of the Balinese strongholds of Cakranegara and Mataram. By November 1894, the last pockets of resistance were crushed. Mataram and Cakranegara lay in ruins, thousands had perished, and the Balinese state, with its vibrant court culture, had ceased to exist.

Following its conquest, Lombok was integrated into the Netherlands (Dutch) East Indies. Administratively, the island came to be linked with Bali, and economically, the colonial government concentrated on promoting rice cultivation, which was very successful. During the colonial period (1894–1942), numerous large and small irrigation works were constructed, rice production increased by leaps and bounds, and the surplus available for export rose steadily. However, colonial Lombok had ceased to be an autonomous participant in international trade. That is, its rice exports no longer went to China via Singapore but were largely used to make good rice deficits in other parts of the Netherlands (Dutch) East Indies. Upon independence, Lombok was linked with Sumbawa to form the Indonesian province of Nusa Tenggara Barat. Rice cultivation continued to be the island's principal economic activity, although since the mid-1980s, tourism has emerged as an important industry, providing employment opportunities for many thousands of Lombok people.

LON NOL (1913–1984)

Anticommunist Cambodian Leader

Lon Nol was a Cambodian political and military leader who served as prime minister in the short-lived Khmer Republic (1970–1975). The

Lon Nol at Cham Car Mon palace, prior to leaving Cambodia. (Françoise de Mulder/Corbis)

son of a high-ranking Cambodian official in the colonial era, he attended a French-language high school in Saigon, where classmates recalled his interest in mysticism and martial arts. He was a provincial official in Cambodia in the 1930s and became a military officer in the closing stages of French colonial rule. After independence, he earned the trust of Prince Norodom Sihanouk (1922–) for his apparently total loyalty and served for many years as minister of defense and commander of Cambodia's armed forces. Because of his anticommunist stance, Lon Nol was named prime minister by Sihanouk in 1967, and he soon launched a campaign against local communist guerrillas. In March 1970, when Sihanouk was overseas, Lon Nol joined several senior Cambodian officials in orchestrating a bloodless coup d'état against the prince. Because Sihanouk, in Beijing, had allied himself immediately with the Vietnamese communists, Lon Nol's coup plunged Cambodia into the closing phases of the Vietnam War. Soon afterward, leaders of the new government named the country the Khmer Republic and sought to establish a pluralist, relatively democratic regime.

Cambodia's small, poorly equipped army, despite massive doses of assistance from the United States, was torn to pieces by North Vietnamese troops in 1970 and 1971 and barely withstood the Khmer Rouge guerrilla forces that it faced from 1972 to 1975. Lon Nol suffered a stroke in 1971 and became increasingly dictatorial and withdrawn, heeding only the advice of family members and Buddhist monks and barely noticing the country collapsing around him. He went into exile in March 1975, just before Khmer Rouge troops overran Phnom Penh. After spending several years in Hawai'i, he died in California in 1984.

LOOSELY STRUCTURED SOCIETIES

The concept of loosely structured societies, formulated by the American cultural anthropologist John F. Embree (1950: 181–193), was to have a profound influence on the post-1945 study of Thai society. Embree, whose main research experience had been in Japan, contrasted Thai social organization and behavior with that in Japan, which he saw as disciplined, regimented, and formal. In contrast to the Japanese, he argued, the Thais have a high tolerance for variations in individual behavior; they do not commit themselves to the continuing fulfillment of their obligations in the longer term, nor do they have a strong sense of familial duties and responsibilities.

Some of Embree's observations were seen to offer a way of understanding Central Thai society. In particular, the diffusely organized rice-growing village of Bang Chan (Ban Chan, Ban Chiang), close to Bangkok, was studied by a team of American social scientists from Cornell University, in cooperation with local researchers (Sharp and Hanks 1978). The director of the research, Lauriston Sharp, initiated the project in 1947. From then to the 1970s, the Cornell team undertook studies not only of Bang Chan but also of other villages in Central, North, and Northeast Thailand; the Chinese community in Bangkok; Thai history and modern politics; and minority upland groups in northern Thailand. One of their main interests was the social history of small rural communities and the effects on them of post-1945 modernization and nation building. So dominant were the Cornell studies that even in the 1970s, it was remarked that "the world's view of rural Thailand is biased by Bang Chan" (Moerman 1975: 151).

Subsequently, the loose-structure model was criticized as failing to identify those principles of social organization that did give order and coherence not only to social and cultural life in Bang Chan but also to Thai peasant societies generally (Potter 1976).

LOPBURI (LAWO)

Lopburi, now a provincial town in the Central Plains of Thailand, played a very important part in the country's history during four different periods. In old documents, Lopburi was usually called by its ancient name of Lawo (also spelled Louveau, Lavo, Livo, and Louvo).

The Lopburi area has been the site of human settlement since prehistoric times, and traces of Dvaravati (Mon) civilization have been found there, too. But Lopburi reached its first peak of prosperity during the Khmer period in Thai history (ca. ninth to eleventh centuries C.E.).

Hindu or Buddhist art in Thailand that shows strong Khmer influence has even been labeled as being in the "Lopburi style" due to the possibility that the Lopburi area was ruled by indigenous princes or governors under the overall suzerainty of the Khmers. Many Khmer-style monuments still stand in Lopburi town, notably Phra Prang Sam Yod and parts of Wat Phra Si Ratana Mahathat.

During the seventeenth century, Lopburi regained its importance. Although mention may be found in the historical sources of King Prasat Thong (r. 1629–1656) visiting Lopburi, it was his son, King Narai (r. 1656–1688), who revived the town's fortunes by building (or rebuilding) a large palace there. King Narai was fond of catching wild elephants and hunting tigers, so Lopburi became his alternative residence, a place that he eventually preferred to the capital, Ayutthaya.

A Frenchman who visited Siam in King Narai's time described Lopburi as being to the king of Siam what Versailles was to King Louis XIV (r. 1643–1715). This meant not only that the palace at Lopburi was a hunting lodge con-

verted into a palace but also that the court resided for long periods there. King Narai was probably especially fond of Lopburi because he could live a more leisurely life there, less constrained by court routine. It is also possible that the king wished to escape the intrigue-ridden court at Ayutthaya, where his most eminent as well as ambitious officials and courtiers resided and worked. At Lopburi, he was still surrounded by courtiers and officials; however, protocol seems to have been less rigid—for example, the king gave "informal" audiences to members of the French diplomatic mission in 1685.

A figure much associated with both the town of Lopburi and King Narai was the Greek Constance (or Constantine) Phaulkon (d. 1688). A favorite of King Narai, he virtually controlled Siam's foreign affairs during the 1680s and was largely responsible for a pro-French policy on the part of the Siamese court. When the French embassy arrived in Lopburi in 1685, its members were lodged in a grand, European-style mansion that was later taken over by Phaulkon himself. French Jesuits were warmly welcomed, and they watched the lunar eclipse in late 1685 with the king at his residence Thale Chupson, just outside Lopburi.

The pro-French and pro-Catholic policies of Phaulkon and King Narai led to the creation of an anti-French faction at the Siamese court, spearheaded by the Master of the Royal Elephants Okphra (or Phra) Phetracha and his son Okluang (Luang) Sorasak. The situation was exacerbated in late 1687 by the arrival of a French embassy, together with garrison troops that took over the fortresses at Bangkok and Mergui, two key towns in Siam.

If, in choosing to live most of the year at Lopburi, King Narai hoped to avoid having to contend with the internal faction fighting in Ayutthaya, it was to no avail. In 1688, when the frail king fell ill at his palace in Lopburi, Okphra Phetracha formed an alliance of officials, Buddhist monks, and local Lopburi people and seized political power. King Narai became a prisoner in his own palace, and Phaulkon was captured and executed, followed by the king's own half brothers. When the king died, no political rivals remained to oppose Okphra Phetracha, who ascended the throne as the first king of Ayutthaya's last dynasty, the Ban Phlu Luang dynasty (1688–1767).

According to the Siamese *Royal Chronicles of Ayutthaya*, King Narai gave his palace at Lopburi to the Buddhist clergy to use as a monastery. The new king, Phetracha, was not interested in residing at Lopburi anyway, moving the court back to Ayutthaya. Lopburi thus became a historical backwater for around a century and a half.

The nineteenth-century Siamese king Mongkut (Rama IV, r. 1851–1868) rebuilt King Narai's palace and stayed there occasionally. During a period of increased pressure from Western imperial powers, Lopburi was thought of as a possible alternative capital to Bangkok due to its greater distance from the Gulf of Siam.

During the twentieth century, Lopburi became a strategic military town, starting with Field Marshal Plaek Phibunsongkhram's time as prime minister of Thailand. Nowadays, Lopburi retains its military significance, with its large army camp, but it is most visited for its many monuments of cultural and historical importance.

LOW, SIR HUGH (1824–1905)

Model British Resident

As British resident to Perak from 1877 to 1889, Hugh Low demonstrated how, through diplomacy and tactfulness, the British Residential

System could achieve impressive and beneficial results. During his tenure, the western Peninsular Malay State of Perak achieved rapid economic development.

An enthusiastic botanist, Low first ventured to Southeast Asia in 1845, arriving in Sarawak as a guest of the first White Raja, James Brooke (r. 1841–1868). He had the opportunity to observe firsthand the nature of Brooke rule, which emphasized the protection and promotion of native interests. As a consequence of his sojourn, Low wrote *Sarawak: Its Inhabitants and Productions, Being Notes during a Residence in That Country with H. H. the Rajah Brooke* (1848), dedicating it to Raja Brooke. He served as an officer in the newly established British outpost of Labuan (1847), subsequently rising to the post of colonial secretary. His three decades of Bornean residence made Low knowledgeable about Brunei and the Malay language, culture, and way of life. He was one of the pioneer European explorers of the territory that later became known as British North Borneo (Sabah). In honor of Raja Brooke, Low named his son Hugh Brooke Low (1875–1887); the younger Low served under the second White Raja, Charles Johnson Brooke (r. 1868–1917).

Low was appointed resident to Perak in 1877 in the aftermath of the 1875 assassination of J. W. W. Birch (1826–1875), the first resident. Anglo-Malay relations had been severely strained following the Birch affair, Birch's insensitivity and ignorance of Malay pride and traditions during his residency. His Bornean experience had prepared him with the necessary skills to deal with the Perak Malays. His command of the Malay language and knowledge of the Malays' customs, traditions, and general way of life and their mentality were invaluable assets that complemented his diplomacy in winning over the local peoples.

Low established an efficient system of revenue collection. Its implementation was accomplished by a strong police force. Malay territorial chiefs who had been deprived of their traditional rights and sources of income were compensated in the form of official salaries or pensions, even to the extent of creating a deficit in public funds. A judicial system with European judges assisted by Malay junior magistrates reaching to the grass roots was laid out, emphasizing the rule of law rather than of man. At the *mukim* (cluster of villages), the *penghulu* (head-

man) settled minor offenses and collected land and other taxes from the *rakyat* (masses).

Low invested heavily in the tin industry and tin trade through enacting laws to regulate water control, the alienation of land, and the development of an efficient system of transport and communication. The Taiping–Port Weld line, opened in 1885, was the first railway line in the Malay Peninsula. Appreciating the Brooke practice of using experimental farms in testing new crops for commercial exploitation, Low started the cultivation of para rubber (*Hevea brasiliensis*) at Kuala Kangsar. Commercial agriculture was actively promoted through dispensing loans to planters; facilitating the introduction of immigrant agricultural labor; and providing infrastructure facilities, especially in transport and communication.

Drawing from his observations of Brooke rule, Low understood the importance of consulting with native chiefs on matters of governance. Therefore, when the State Council was instituted in Perak in 1877, Low utilized it to perpetuate the fiction of the resident as a mere adviser to the sultan; in practice, the resident wielded executive power. Imitating Raja Charles Brooke, Low allowed the age-old practice of debt bondage to die a natural death over the span of a decade.

Saddled with a debt of 800,000 Straits dollars upon taking office in 1877, he liquidated the debt within six years through his efficient system of revenue collection coupled with prudent expenditures. And when he stepped down as resident in 1889, the Perak treasury had a credit balance of 1.5 million Straits dollars.

Low's success was attributed to his tactful and unobtrusive approach in introducing and implementing changes and reforms. Acknowledged as the model British resident in the 1880s, he proved the viability of the Residential System as a practical and cost-effective method in exercising British influence over one of the richest Peninsular Malay States of the nineteenth century.

LUANG PRABANG

Located on a peninsula formed by the confluence of the Mekong River with the smaller Khan River, the northern Laos city of Luang Prabang exudes a majestic presence and appeal. The city was named after the sacred Phra Bang Buddhist image and known for its numerous Buddhist temples, and its religious symbolism is matched by the natural beauty of the densely wooded encircling mountains. Today a provincial capital of the Lao People's Democratic Republic (LPDR), Luang Prabang, with a population of less than 20,000, has known better days. It was once the royal capital of the historic kingdom of Lan Xang, the royal capital under French rule from 1893 to 1954, and the seat of the Kingdom of Laos until the liquidation of the monarchy by the incoming LPDR government in late 1975. The architectural heritage of this historical city only commanded major international attention in the closing years of the twentieth century.

Foundation

The royal capital of Luang Prabang, first known as Muong Sua and later as Xieng Dong–Xieng–Thong, is closely associated with the role of King Fa Ngum. In 1353, he founded the kingdom of Lane Xang Hom Khao (“Kingdom of a Million Elephants and the White Parasol”), connoting kingly power. His son, Sam Senthai (“Three thousand Thai”) deposed him in 1393. Fa Ngum, who, according to legend, married a Khmer princess, is believed to have introduced Theravada Buddhist concepts of power and religion to his capital. As a Lao monarch, he also stamped his *muong*, or bounded realm, with the quintessential elements of Lao Buddhist political rule, notably incorporating Indianized elements of kingship. Nonetheless, the enduring

presence of pre-Buddhist elements, especially among the non-Lao indigenous population, was acknowledged in court rituals and ceremonies until the end of the kingdom. Proximity to China has also seen the incorporation of certain Chinese elements. There is no doubt that the ability of Fa Ngum and successors to exact tribute and taxation and to attract trade laid the economic foundations of support for the kingdom at its apogee.

About the year 1560, pending a shift of the capital to Vientiane in 1563 by King Setthathirat, the city became known as Luang Prabang in honor of the sacred Phra Bang, the most venerated Buddhist image in Laos. Believed to be of Sri Lankan provenance, the Phra Bang was undoubtedly imported from the Angkorian capital.

During its history, Luang Prabang suffered numerous foreign incursions and invasions. In 1753, a Burman army invaded, returning in 1771 in league with Vientiane, hence opening up a rift between the two Lao royal centers. In 1778, King Taksin (r. 1767–1782) carried away the palladium of the city, the Phra Bang, to Bangkok. Vientiane invaded Luang Prabang again in 1791 and annexed the northern province of Houa Phan. Thereafter, Luang Prabang underwent a long period of decay.

By the mid-nineteenth century, however, the Chakri dynasty based in Bangkok had imposed its sovereignty over Luang Prabang. Subject to investiture by Bangkok, the kings of Luang Prabang exercised a very restricted power over a limited domain. Also at the same time, Luang Prabang was checked by the action of the court of Annam in occupying the border provinces of Tranninh and Xieng Khouang as well as suffering raids by piratical Ho elements from Yunnan. Luang Prabang barely survived by paying dual tribute to both Bangkok and Hué. It was only in 1867 that the sacred Phra Bang was returned to Luang Prabang by King Mongkut (Rama IV, r. 1851–1868) of Siam.

Colonial French historiography views the action of the French mission as rescuing the kingdom of Luang Prabang from certain liquidation. Successively, the missions of French empire makers such as Henri Mouhot (1861), Doudart de Lagrée and Francis Garnier (1866–1868), and especially Auguste Pavie (1847–1925), who in November 1885 was named French vice-consul in Luang Prabang,

underwrote future French domination over the kingdom, pending its full incorporation into French Laos in 1893.

But agents of Siam and Pavie, who rescued the old king Oun Kham, were unable to prevent the sacking of the city in 1887 by the White T'ai chief Deo Van Tri and the killing of the viceroy Souvanna Phouma. Such historical temples witnessed and sketched by Garnier as Wat Vixun were destroyed. With the signing of the Franco-Siamese Treaty of 1907 sanctioning new boundaries, peace returned to Luang Prabang. Kingship passed from Zakharine (d. 1904) to Sisavang Vong (r. 1904–1959).

French Laos to Kingdom of Laos

Commensurate with their political support for the Kingdom of Laos based upon the ancient capital of Luang Prabang, the French colonial rulers sponsored the architectural renovation of the ruined city. The French sought to restore the traditional Buddhist heritage where it supported the institution of kingship, and French architects designed and constructed, from 1904 to 1909, an elaborate royal palace and European-style gardens facing the Mekong River. Although the rest of Laos was ruled directly as a colony, the province of Luang Prabang was legally treated as a protectorate, with the king presiding over a part modern, part traditional administration in which all senior positions were occupied by the nobility, albeit answering to the locally established French Commissariat. In many ways, the French “rescue” of Luang Prabang from prolonged decay invested the royal city with an intense aura of traditionalism and culture.

Under the French protectorate, the basic street grid of the royal capital was laid out, administrative buildings were erected, and other basic colonial services were introduced. As the commercial importance of the capital expanded, distinctive two-storied stucco shops also were constructed. Connected by road to central Vietnam in 1936 and to Vientiane in 1944, the city served as the major administrative and commercial center of northern Laos. Even so, the remoteness of the city left it out of the mainstream of political and economic affairs, which served to preserve its traditional institutions from the encroachment of the modern world.

The link between the sacral topography of the city as created by Fa Ngum and the revived version under the French may be tenuous. Nevertheless, the continuity in ritual and remembrance in Luang Prabang was remarkable until the end of the city as a royal capital in December 1975. However, only thirty-two of the original sixty-six Buddhist temples have survived the ravages of history. Singularly representative of the northern Laotian style of religious architecture is Wat Xieng Thong, founded by Setthatharit in 1560 and sited at the confluence of the two rivers. Luang Prabang also hosts the finest examples in Laos of wood sculpture, including gilded Buddha images. The facade of Wat Mai, built in 1796, offers an exquisite example of northern Laotian mural art. Dutch visitors to the court of Setthathirat recalled with admiration the decorated doors of a temple in Luang Prabang. The singular dominating religio-topographical feature of the city, however, is Phou-Sy hill, upon which is built a temple that is unimposing but visible from afar.

Luang Prabang was also the center of an annual calendar of festivals and processions, shared across much of Laos but given special prominence in the royal capital, especially the week-long Pi-May, or Buddhist New Year ceremonies, attended by the king, Buddhist monks, and a procession of royal elephants. Some authors have expressed amazement at the longevity of festivals and the continuity of traditions in Luang Prabang, making it a unique vantage point upon a vanished world, in part because of its geographic isolation. Frank Reynolds (1978: 168–169) isolated three festivals as paramount, each of which reflected a religiousocial ideal that harked back to the period from 1315 to 1550. He argued that though the ideal was hierarchical—and perhaps because it was hierarchical—it structured the entire human environment, even including the animist non-Lao population, who also peopled the city and its precincts. These festivals involved the reestablishment of a purely Lao ideal, outside of Indian or Buddhist tradition.

As war raged over northern Laos, setting French expeditionary forces against the Viet Minh, Luang Prabang was repeatedly threatened with invasion. But the war spared the ancient city, with the communist Pathet Lao declaring its respect for Laos's patrimony.

Nevertheless, the monarchy was abruptly abrogated in December 1975 upon the proclamation of the LPDR, bringing to an end the six-hundred-year-old traditions associated with the court. Indeed, King Sisavang Watthana (r. 1959–1979) died in unexplained circumstances. Many Buddhist activities and ceremonies were proscribed, and the imposition of a socialist economic regime radically changed the rhythm of life and human environment that had existed under the kingdom. In line with the prevailing socialist orthodoxy, the Royal Palace became the National Museum; it houses various royal regalia and works of Buddhist art, including the sacred Phra Bang and the royal throne of Luang Xang kingdom.

Rediscovery

In 1995, the town of Luang Prabang gained inscription as a site protected by the UN Educational, Scientific, and Cultural Organization (UNESCO). In justifying its nomination of the city as a World Heritage site, UNESCO declaimed: "This town reflects the exceptional fusion of traditional architecture and urban structures built by 19th and 20th century European colonial rulers. Its unique township is remarkably well preserved, illustrating a key stage in the blending of these two distinct cultural traditions" (UNESCO 2000). Under the UNESCO plan, new building is limited, and some 600 buildings have been classified as historical; certain of them have been restored. Together, UNESCO protection, official tolerance, and the tourist rediscovery of Luang Prabang appear to have rescued the architectural heritage of the city from further decay. But it will take a most liberal interpretation of cultural policy to reawaken the past and prevent the city from permanently becoming a showpiece museum.

LUZON

Luzon is the largest island in the Philippine archipelago, with an area of 104,688 square kilometers. It is separated from the Batanes Islands in the north by the Babuyan Channel and is bordered on the east by the Philippine Sea and on the west by the South China Sea. To its south are the Visayan Islands and the San Bernardino Strait. Characterized by a mountainous interior interspersed with lakes and plains and a long coastal area, Luzon is also the site of the capital of the Philippines, Manila, and its important bay.

Luzon is broken by mountain ranges into different regions, with different cultures, languages, and ethnic groups. Because of its proximity to China and Japan, it has traded and interacted with both countries, as well as enjoyed active relations with the rest of Southeast Asia. It was colonized by Spain and served as the center of its colonial efforts in Asia. It was later taken over by the Americans in 1898 and the Japanese during the Pacific War (1941–1945). During these periods of foreign occupation, Filipinos on the island rose to resist the colonizers, resulting in many revolts—culminating in a revolution in 1896 against the Spaniards, in a war against the Americans (1899–1902), and in active military and guerrilla resistance against Japan (1942–1945). Luzon was the site of heavy fighting and suffered much damage during the Pacific War. As the largest island in the archipelago and containing the nation's capital, Luzon has always figured prominently in the history of the Philippines.

The name *Luzon* originates from the Tagalog word *lusong*, referring to a wooden mortar

used to pound rice. The Chinese called the island *Liusing*, and when Europeans put it on the map, the name became *Luconia*. The hard *c* was changed to *z* to approximate the original Tagalog word.

The island of Luzon is of tectonic origin. Five major mountain ranges run roughly north to south. The Sierra Madre parallels Luzon's east coast from Cape Engaño on the northeastern tip to the middle of the island's east coast, ending in the vicinity of Laguna de Bay. The Central Cordillera traverses most of northern Luzon, running 250 kilometers south as the largest and highest mountain range on the island; Mount Pulog, the highest mountain in the island at 2,930 meters, is located here. The Caraballo Mountains run on a line from northwest to southeast and serve as the northern boundary of Central Luzon; they connect the Sierra Madre and Cordillera ranges. The Zambales Mountains parallel the western coast from Cape Bolinao to the Bataan Peninsula. The Tagaytay range forms the mountainous region immediately south of Manila. A 10-kilometer-wide land bridge joins the Bicol Peninsula with its own mountain range to the main island.

Apart from Mount Pulog, there are other important mountains: Mount Arayat in Central Luzon, Mount Pinatubo in the Zambales range, Mount Banahaw and Mount Makiling in southern Luzon, and Mount Mayon in the Bicol Peninsula. Most are volcanoes, either active or dormant. Taal Volcano is unique in that it is a volcano in a lake.

The major rivers that drain Luzon are the Cagayan River in northeastern Luzon, the Agno and Pampanga Rivers in Central Luzon, and the Pasig River that runs through Manila. There are two major freshwater lakes, Laguna de Bay and Taal, the latter having a volcano in the center. The irregular coastline features many natural harbors, of which Manila Bay is the most famous.

The topography of Luzon divides it into several regions: the Cagayan Valley region, centered on the Cagayan River and the fertile plains it irrigates; the mountainous region in northern Luzon; the Ilocos region of northwest Luzon, which lies between the mountains and the sea. There is the Central Luzon plain, the fertile volcanic south Luzon region, and the Bicol Peninsula. Luzon has a tropical climate and experiences two major seasons a year, the dry season

(caused by the northeast monsoon, from November to April) and the wet season (caused by the southwest monsoon, from May to October).

The population of Luzon as of 2000 was 42.52 million (Republic of the Philippines 2000). Most of the island's inhabitants are Christian. The people of Luzon are mainly of Malay origin and inhabit the lowlands. The mountainous areas are inhabited by Negritos and Igorots. The different races are further subdivided into language and culture groups. The lowland groups are the Ilocano, Pangasinense, Cagayanon, Pampango, Tagalog, and Bicolano. The mountain groups include the Ifugaos, Ivatan, Ibanag, Apayao, Tinggian, Bontok, Gaddang, and Dumagat. The indigenous people of Luzon adapted to the environment and formed their own cultures and groupings according to where they lived. In the lowlands of Central Luzon, rice paddy fields were developed in the plains; in Banawe, the Igorots carved rice terraces on the mountain slopes. Trade with neighboring groups and other Asians enriched their culture; there was active trading with the Chinese and the Japanese, as well as with the other peoples of Southeast Asia, from traditional times. Manila became a flourishing trading port.

The Spaniards reached the Bicol Peninsula in 1569 and conquered Manila in 1570. The lowlands of Luzon were gradually conquered by the Spaniards, led by Miguel Lopez de Legazpi (1500–1572) and Pedro de Salcedo. The Spaniards also created provinces and towns as they began to spread the Christian faith. Manila was made the capital of the colonized Philippines. Spanish control did not extend to the mountain regions, however, where the native peoples were able to resist the colonizers. The Dutch threatened Spain's control of Luzon when they blockaded Manila Bay in 1621 and 1646. The British, too, attacked parts of Luzon, and they took over Manila from 1762 to 1764.

Due to oppressive Spanish colonial policies, several revolts took place in the various colonized regions of Luzon. The regional revolts were crushed by people from other regional groups, as the Spaniards had adopted a divide-and-rule policy for the Philippines. The anti-Spanish sentiment culminated in the revolution of 1896, which started in Central Luzon and rapidly spread to other regions.

With the outbreak of the Spanish-American War in 1898, the Americans defeated the Span-

ish fleet in the Battle of Manila Bay, and they took possession of the bay. In December 1898, the Americans took possession of Luzon and the Philippines by virtue of the Treaty of Paris (1898). Filipinos fought the American takeover but were eventually defeated.

Under American colonial rule, Manila and other cities were modernized, and the mountain areas were placed under the government. The Americans developed the city of Baguio in the mountains of northern Luzon as the Philippine summer capital and improved roads and ports.

Luzon again became the scene of fighting during the Pacific War (1941–1945), when the Japanese bombed Luzon on 8 December 1941. Japanese Imperial forces invaded the island soon after, and U.S. and Filipino forces withdrew to the Bataan Peninsula in a holding action. The Japanese eventually forced the surrender of the defending forces and placed Luzon under Japanese rule. The three-year occupation was harsh and led to many guerrilla groups rising up. U.S. forces returned to Luzon in January 1945 and fought to retake the island.

After the Pacific War, a peasant revolt (the Huk Rebellion) broke out in Luzon against the government due to unfavorable agrarian conditions. The government was able to quell the revolt in the early 1950s. Luzon hosted the Clark Field and Subic bases, both American installations, until 1992.

Lowland Luzon is basically agricultural, with the major crops being rice, sugarcane, coconut, mangoes, and tobacco. Gold, chromite, copper, iron, manganese, and nickel mines have been developed in the mountainous regions. Luzon's mountains used to be rich in forests, but they were overharvested in a lucrative lumber industry. Along the coastal areas, fishing is the main occupation.

Manufacturing is centered mainly in the Manila metropolitan area, where the major industries produce textiles, chemicals, and metal products. In line with government economic programs, industrial centers have been established in various regions, with specified areas designated as new growth areas. Elsewhere on Luzon are oil refineries, cement plants, wood processing plants, electronics assembly plants, and food processing plants.

The major cities on the island include Manila, capital of the Philippines; Quezon City; Baguio City, the summer capital of the

Philippines; Batangas City, Tarlac; Laoag; and Legaspi. Major ports are Manila, Batangas, San Fernando (La Union), and Legaspi. Subic, formerly a U.S. naval base, was turned into a free port after it was closed as a base. Luzon is administratively divided into seven regions, generally following the geographic and linguistic-cultural regions. These regions and their provinces are: Region 1, the Ilocos Region (Ilocos Norte, Ilocos Sur, La Union, and Pangasinan); Region 2, the Cagayan Valley Region (Cagayan, Isabela, Nueva Vizcaya, and Quirino); Region 3, Central Luzon (Batangas, Bulacan, Nueva Ecija, Pampanga, Tarlac, and Zambales); Region 4, Southern Tagalog (Aurora, Batangas, Cavite, Laguna, Quezon, and Rizal); Region 5, the Bicol Region (Albay, Camarines Norte, Camarines Sur, Catanduanes, and Sorsogon); the National Capital Region (including the cities of Manila and Quezon); and the Cordillera Autonomous Region (Abra, Apayao, Benguet, Ifugao, Kalinga, and Mountain Province). Also, administratively, the islands of Batanes, Mindoro, Marinduque, Masbate, Palawan, and Romblon fall under Luzon's provincial governments.

As the largest island in the Philippines, Luzon has always played a key role in Philippine history, politics, culture, and economics. Its rugged terrain has resulted in a variety of linguistic-cultural groups and regions that form part of the Philippines.

LY DYNASTY (1009–1225)

Considered the first long-lived patrilineal dynasty in Vietnam, the Ly dynasty forged the independent state that would become the direct predecessor of modern Vietnam. The Ly dynasty was initially established in the present Northern Region in the tenth century C.E. after a millennium of Chinese dominion. Therefore, French and Vietnamese scholars had long believed the Ly polity always followed the Chinese model of centralized state with the Confucianistic system of patrilineal dynasty. Since the 1970s, however, interestingly, U.S. and Japanese scholars have discovered a dramatic change that occurred during the first centuries after independence of a “Southeast Asian” society (with a loosely structured political system based on bilateral kinship and patron-client relationships) developing toward an East Asian (sinicized) model.

Ly Cong Uan (Thai To) (r. 1009–1028) founded the Ly dynasty. Born in present-day Bac Ninh and supported by influential monks there, he ascended the throne after the cruel emperor Le Long Dinh died in 1009. Cong Uan, his son Phat Ma (Thai Tong) (r. 1028–1054), and his grandson Nhat Ton (Thanh Tong) (r. 1054–1072) were all-powerful and charismatic emperors. Therefore, after Nhat Ton died, his six-year-old son Can Duc (Nhan Tong) safely ascended and kept the throne (for fifty-five years, from 1072 to 1127) by virtue of his patrilineal blood. Can Duc's reign was the golden age of the dynasty. Four kings subsequently ascended to the throne in their childhood and maintained it until their adulthood.

During the Ly period, many elements of the framework of the northern Vietnamese polity that lasted to the eighteenth century began to develop, most notably Thang Long (Hanoi), the capital city since 1010 and the state name Dai Viet, employed since 1054. Also, the title “king of the Nation of Annam” was conferred by China in 1174, by which China recognized Dai Viet as a foreign country and no longer a

colony, though it still paid tribute to China. Furthermore, the territorial divide between the northern and southern parts of North Vietnam was established. The northern territory was fixed following the suppression of the Nung clan in Cao Bang from 1039 to 1053 and the successes of General Ly Thuong Kiet in driving back the invasion by the Song dynasty from 1075 to 1077. The establishment of the southern provinces (present-day Nghe An and Ha Tinh) as an integral part of Dai Viet occurred despite the invasions of Champa and Cambodia in the twelfth century. The idea of a “southern empire” on equal terms with the northern empire (namely, China) was already formulated under the Ly emperors. Ly forces attacked Champa’s capital, Vijaya, in 1044 and again in 1069; Champa, Cambodia, and the Lao tribes were regarded by the Ly dynasty as its vassals.

However, the dynasty developed less than scholars have long believed. In the central government, the famous civil service examination system for the appointment of officials (inaugurated in 1075) did not take root. Infant emperors maintained the throne not by virtue of Confucianist ideology and family system but rather thanks to the leadership of females. Mothers of emperors (the most famous being Lady Y Lan, the mother of Nhan Tong) often played a political role even after the emperor had grown up. Likewise, emperors’ wives and daughters also had their own properties and were active politically. In the countryside, the centralized administration system through twenty-four *lo* (provinces) was not effective, the eternal annexation of Champa’s three provinces after 1069 was rather a myth, and the semi-independent local chiefs could be subjugated only with constant marriage alliances and demonstrations of the military and religious power of the imperial family.

In the cultural sphere, the emperors had to mobilize all spiritual powers of the multicultural southern empire, such as Buddha, Indra, dragon, local deities, and spirits, to create the Ly dynasty religion. In the field of economic history, the popular image of traditional northern Vietnam deltas with constant population pressures, intensive agriculture, and developed dyke networks was realized only after the thirteenth century, under the Tran dynasty (1225–1400). Because the central government could not control and exploit sparsely populated villages

rigidly, it had to rely upon still-thriving foreign trade for its financial bases. (Consequently, the port of Van Don was less important than ports in present-day Nghe An and Ha Tinh.)

At the end of the twelfth century, the development of T’ai-speaking people in the western mountains seems to have become critical to the fluid ethnonational consciousness of Dai Viet. Simultaneously, extensive development of agriculture on the delta area reached its peak, and population pressures became serious. These subsequently led to the collapse of Ly power. In 1209, a civil war occurred, involving many local chiefs. Among them appeared the Tran family from the lower delta (present-day Nam Dinh and Thai Binh); the family supported the eighth emperor, Hué Tong (r. 1210–1225), who had married a Tran woman. Opposing local chiefs, many of whom were mobilized by Empress Dowager Dam (Hué Tong’s mother), were defeated one after another. Finally, Tran Thu Do and Tran Thua forced Hué Tong to leave the throne to his seven-year-old daughter Phat Kim and then let her pass the throne to her “husband” Canh (Tran Thai Tong), the second son of Thua, in 1225. The Tran dynasty would build a more centralized state and establish a more clearly defined ethnonational consciousness to solve the challenges that overcame the Ly.

M

MABINI, APOLINARIO (1864–1903) **The Sublime Paralytic**

Apolinario Mabini was the chief adviser of the president of the Philippine Republic, Emilio Aguinaldo (1869–1964), during the second phase of the Philippine Revolution, from the day of the proclamation of Philippine independence on 12 June 1898 until the first week of May 1899. Mabini was prime minister and minister of foreign relations in the cabinet of the Revolutionary Government from 2 January 1899 until his resignation on 9 May of that year.

Mabini was born in the province of Batangas on 23 July 1864. His parents were poor but his mother was literate, as his maternal grandfather had been a village teacher. He obtained his early education at home but was later able to attend elementary school and a few years of high school in a college founded by a Filipino priest. From 1884 to 1894, while having to earn his living by teaching, Mabini was able to study philosophy in a college and law at the University of Santo Tomas, both in Manila. In 1894 he graduated in law with excellent grades. He briefly worked as a clerk in a court in Manila before joining the Spanish colonial bureaucracy. In January 1896 he contracted a disease, probably polio, that left him paralyzed in both legs.

Since the early 1890s Mabini had been in contact with the Reform Movement, first as a fund-raiser for the journal *La Solidaridad*, later

as a member of the revived Liga Filipina, a clandestine patriotic association. When the Spaniards discovered the existence of the secret association Katipunan in August 1896, they unleashed a wave of arrests and executions of all those suspected of having connections with the revolutionaries. Mabini was arrested in October of that year, but because he was afflicted with paralysis, he escaped the death sentence and was instead confined as a prisoner to a hospital. He was released in June 1897 after the Spanish government declared a general amnesty.

After his release Mabini contacted the revolutionary leaders, expressing his desire to join their struggle. However, within a few months it became clear that the revolution had failed. The Spanish forces had defeated the untrained Filipino rebels, and in December 1897 the leader of the revolution, General Aguinaldo, negotiated a pact with the Spanish government that allowed him and a number of his followers to go into exile in Hong Kong. Several revolutionary groups, however, refused to lay down their arms and were ready to resume fighting. Mabini realized that the revolution had failed for two reasons: first, lack of an ideological direction; and second, lack of a coordinated plan to achieve a revolutionary consciousness among the people (Majul 1964: 46).

In order to remedy these shortcomings, Mabini wrote three important documents that were to have a great influence on the second phase of the Philippine Revolution. The first,

“The True Decalogue,” was an exhortation to Filipinos to develop a civic consciousness, a moral character, and a patriotic and nationalistic attitude. The second, “Constitutional Program of the Philippine Republic,” was an outline of political structure and civil rights of the new republican state. This document, which has never been put into practice, reflected the liberal and republican ideas of nineteenth-century Europe. A salient feature was the separation of state and church and the prohibition of religious associations. Mabini wrote this article because he feared the domination of the state by the church, as had been the case with the Spanish regime in the Philippines. The third document, “Ordinances of the Revolution,” contained a set of practical rules for the coming revolutionary struggle.

The second phase of the revolution started when war broke out between the United States and Spain in April 1898, at which time the U.S. Navy destroyed the Spanish fleet in Manila Bay. Aguinaldo returned to the Philippines in May, and he invited Mabini to become his adviser. The revolutionary movement faced a complicated situation. On the one hand it was fighting against the Spanish colonial government; on the other it was not sure whether the Americans would recognize an independent Filipino republic or intended to annex the islands. Mabini cautioned Aguinaldo to exercise extreme care in the relationship with the Americans.

Between the U.S. occupation of Manila in August 1898 and the signing of the Treaty of Paris in December of that year, an awkward truce existed between the U.S. forces and the Filipino revolutionaries. The Spanish army and civil service were withdrawing from parts of the country, leaving behind an administrative void. The revolutionary government issued a series of decrees, written by Mabini, inter alia establishing rules for local and provincial governments, the election of officials, the convening of a revolutionary Congress, and the maintenance of public security. In October and November a congress of representatives was convened in Malolos and adopted a constitution. Mabini was instrumental in the drafting of that constitution.

In January 1899 the Americans announced their plan to annex the Philippines, and in February war broke out between the U.S. forces and the Filipino revolutionaries. In May of that

year, under pressure from his enemies in the movement, Mabini resigned as prime minister.

After leaving the government, Mabini stayed for some time in the province of Pangasinan, writing political articles for independent newspapers. The Americans arrested him in December 1899. Because Mabini refused to take the oath of allegiance to the United States, the U.S. government sent him into exile on the island of Guam in January 1900. In January 1903 Mabini was allowed to return to the Philippines, where he finally took his oath of allegiance to the U.S.

Mabini died on 13 May 1903 in Manila, victim of the cholera epidemic in the town. Mabini had become known as “the sublime paralytic” and “the brains of the revolution.” His funeral, in the words of biographer Cesar Adib Majul, was “one of the biggest funerals witnessed in Manila” (1964: 217).

MAC DYNASTY (1527–1592)

Usurper Dynasty of Vietnam

The Mac dynasty was often underestimated as a usurper dynasty of Vietnam. In the first half of the sixteenth century, a general of the Le dynasty named Mac Dang Dung (r. 1527–1541), whose hometown was Co Trai village (now located in the suburb of Hai Phong city), utilized a disturbance in and around the capital to seize the central army, defeat other generals, suppress

rebellions, and subsequently establish a new dynasty at Thang Long (present-day Hanoi) in 1527.

Mac Dang Dung insisted that he was a descendant of Mac Hien Tich (a civil officer and the successful candidate of the competitive examination of the Tran dynasty) and Mac Dinh Chi (also a civil officer of the Ly dynasty, and a successful candidate). But this assertion is denied by Chinese and Vietnamese sources. His ancestors might have been the maritime people living along the coast of the South China Sea.

After coming to the throne at Thang Long, Mac Dang Dung demanded recognition from the Ming emperor as the king of Annam, but the Le emperor Trang Tong also sent a mission to insist upon his own legitimacy and the title of King of Annam. In the Ming court many officers insisted upon sending an army against Mac, but the military power of the Ming was too weak. Finally in 1541, the Ming sent a mission to give the title “capital commandant of Annam” (*An Nam Do thong su*, in Sino-Vietnamese) to Dang Dung; he died shortly thereafter. His son, the second emperor, Mac Dang Doanh (r. 1530–1540; the temple name is Mac Thai Tong), had already died, so his son Mac Phuc Hai (r. 1541–1546) ascended the throne.

In order to win over the people of the Red River delta, Mac rulers did not change the political administration of the Le on a large scale. But in the area from Thanh Hoa to Thuan Quang, under the control of the Le, they reestablished the five-chief military commission system based on the soldiers of four provinces of the Red River delta. Mac family members and their supporters occupied most of these commissions.

Owing to the dependence on civil officers for the maintenance of the administrative system, Mac rulers accepted civil officials who had previously served the Le. In order to increase the number of civil administrators, competitive examinations were introduced every three years from 1529 to 1592 (a total of twenty-two times, selecting 484 persons). In fact, many former civil officers of the Le participated in the Mac government.

The economic base of the Mac is uncertain, owing to their lack of resources, although their homeland—the eastern part of the Red River delta—was a center in the East and Southeast Asian maritime trade, as well as a production

center for ceramics. The land distribution system of the Hong Duc period continued on.

Mac efforts notwithstanding, many people went south to support the restoration of the Le dynasty in Thanh Hoa. Throughout the sixteenth century, Mac–Le animosity was played out on the battlefield. Despite their numerical advantage over the Le, Mac forces failed to be victorious. In addition, the Nguyễn family (also a subject family of the Le, based in the Quang Binh–Quang Tri–Thua Thien area) organized a naval force to attack the Mac’s ports along the coast. In the northern area, semi-independent chiefs also resisted Mac rule. In 1592 the Le army under General Trinh Tung occupied Ha Noi. The last emperor of the Mac, Mac Mau Hop (r. 1562–1592), was killed, and the dynasty was overthrown. But some family members, such as Mac Kinh Cung, escaped into the northern mountain area (Cao Bang, Lang Son, etc.) and maintained their regional power until the second half of the seventeenth century. The Qing court, according to Ming policy, continued to bestow the title of emperor on Mac lords until 1677.

Sources on the history of the Mac dynasty are minimal; consequently, little has been known about this period. Efforts are under way in Vietnam to collect source materials, including inscriptions. Some promising finds were made in the 1990s.

MAC THIEN TU (1700–1780) "King of Cambodia"

Mac Thien Tu was a chief of Cancao (or Hatien in Vietnamese) chiefdom of the second generation. His father, Mac Cuu, was a Cantonese migrant who left China in 1671. He first settled in Phnom Penh and traveled to the Philippines and Java. His success began when he visited Banday Mas, a thriving port town on the Cambodian coast, and saw the many Chinese, Viet, Khmer, and Malay merchants gathered there. He bought the town's gambling den on which the Khmer king levied taxes and set up a gambling farm, thus becoming one of the earliest tax farmers in Southeast Asia. "Gambling farm" was a designated activity (gambling) or commodity (opium, alcohol) where taxes were imposed. "Tax farmers," often Chinese businessmen, bid for the right to collect taxes, for instance for gambling in a certain town. The ruler of the kingdom/sultanate awarded this right to collect taxes to the highest bidder. The "tax farmer" then paid a fixed agreed amount of money to the ruler for the right to collect taxes for a specified period of time, often one year. Mac Thien Tu also discovered buried silver and consequently became very wealthy. Based on this sudden and mysterious wealth, he gathered several more merchants from the region to him, and Banday Mas became a prosperous port, later known as Cancao.

Mac Thien Tu was the only son of the marriage between Mac Cuu and a woman of Viet origin from the Bien Hoa area of the Mekong Delta. He was born in Ream on the Khmer coast when the family was sojourning there. Succeeding his father as chief in 1735, Mac Thien Tu continued his late father's "free port" policy and encouraged merchants from all ethnic backgrounds. This made Hatien a ren-

devous in the trading networks among China, the Mekong Delta, Siam, and the Malay Peninsula. By the 1760s, under Mac Thien Tu's rule, Hatien became the best-known port in the Gulf of Siam long before the founding of Saigon and Bangkok.

Seeking to put Hatien on a firmer footing in the politics of the region, Mac Thien Tu attempted to establish regular trade and contacts with regions both near and far. In his 1742 letter to the Japanese shogunate written in Khmer, he used his Khmer name *Neak Somdec Preah Sotoat* and the title "King of Cambodia." His younger sister, Mac Kim Dinh, was married to the son of the famous Chinese general Tran Thuong Xuyen (Chen Shang Chuan in Chinese), who was most active in the Bien Hoa area in the late seventeenth century. Being a poet himself, Mac Thien Tu invited Chinese scholars to visit Hatien and write poems about the port. When the scholars brought these poems back to China, they aroused strong interest among the literary circle in Canton, inspiring poems about Hatien to be written by those who had never set foot there. The collection of these poems, *Minh Bac Di Du*, was edited and prefaced by Mac Thien Tu in 1737.

As a semi-independent fiefdom, Hatien under Mac Thien Tu paid tribute to the Nguyễn kingdom rather than taxes. In the mid-eighteenth century Mac Thien Tu also reportedly cast coins for Hatien. His multiethnic policy saw Khmer, Viets, and Malays attain high office under his rule. The Hatien army included Chinese, Khmer, and most likely Vietnamese. As part of this policy Mac Thien Tu tolerated, indeed protected, Christians, giving shelter to missionaries of the Missions Étrangères de Paris after the fall of Ayutthaya in 1767. He allowed them to choose Hon Dat as the new site of their college. This religious tolerance was unusual among the Southeast Asian rulers at the time.

Mac Thien Tu played the role of middleman in the Viet-Khmer conflicts (1754–1756) and harbored Khmer refugees. In 1757, when Cambodia was again in chaos, the prince Nac Ton fled to Hatien seeking Mac Thien Tu's protection. Mac adopted Nac Ton as his son and, through the Nguyễn court, made Nac Ton the king of Cambodia. In return Nac Ton ceded Bassac, Tra Vinh, Sa Dec, and Chau Doc to the Nguyễn, the areas immediately to the east and west of today's Hau Giang River. All

the coastal areas of the western Mekong were ceded to Hatien.

Hatien's prosperity and increasing sphere of influence created suspicion not only in Siam and the Nguyễn generals in the Mekong Delta but also among the Teochiu Chinese active in the areas along the Gulf of Siam. With its strategic position, Hatien was forced to play a role in the late-eighteenth-century politics in this area. Its fate, however, was doomed, as the only semi-independent kingdom situated between Siam and Vietnam, the two rapidly emerging modern nation-states. The situation intensified when Chao Chuy, the Ayutthayan prince, fled to Hatien for Mac Thien Tu's protection. Mac sheltered him and refused to send him back despite the pleas of the new Siamese king, Taksin. Meanwhile Mac Thien Tu's adopted son, the pro-Vietnamese Khmer king Nac Ton, refused to send tribute to Taksin. In 1771, Hatien fell under Siamese attack, partly because of the Nguyễn generals' delay in sending Vietnamese reinforcement.

After the fall of Hatien, Mac Thien Tu actively supported the Nguyễn in the Bassac area. In 1777, Mac Thien Tu and his followers moved back to the Kompong Som area, planning to resettle in the Malay Peninsula, but they were stopped by the envoys of King Taksin, who welcomed them to Thonburi. In 1780, Mac Thien Tu was forced to commit suicide and all his followers were killed when Taksin suspected that they were spies of the Nguyễn.

MACAPAGAL, DIOSDADO (1910–1997)

Unfulfilled Good Intentions

Diosdado Macapagal was the fifth president of the postwar Philippine Republic, serving a single term from 1961 to 1965. He attempted to alleviate long-standing problems in Philippine society and economy—namely, landownership and economic underdevelopment. However, he was hampered by a hostile legislature and was not able to carry out all his policies.

Macapagal was born on 28 September 1910 in the town of Lubao, Pampanga, Luzon. His parents were both from the tenant farmer class. Macapagal studied at the University of the Philippines, the Philippine Law School, and the University of Santo Tomas, and passed the bar examination in 1936. He practiced law and then went on to obtain a Master of Laws degree from the University of Santo Tomas in 1941. In addition to his legal practice, he had begun teaching law when the Pacific War (1941–1945) intervened. After the war, Macapagal obtained a doctorate in Civil Laws and another in Economics, both from the University of Santo Tomas.

Macapagal joined the newly created Department of Foreign Affairs of the Republic of the

Philippines in 1946. As a diplomat, he negotiated the transfer of the Turtle Islands from Great Britain to the Philippines and served briefly in the Philippine embassy in the United States.

Macapagal entered politics in 1949, winning a seat in the House of Representatives. He was reelected to a second term in 1953. He wrote bills designed to improve social and economic conditions in the rural areas, and he sponsored a resolution calling the British annexation of North Borneo (Sabah) illegal. He was named chairman of the House Committee on Foreign Affairs, and participated in various foreign conferences and assignments as a member of the Philippine panel. He defended himself and the Philippines from criticism by the delegate of the Union of Soviet Socialist Republics (USSR).

In 1957, Macapagal won the election for vice-president. The president, Carlos P. Garcia (t. 1957–1961), however, belonged to the rival political party and thus did not delegate much work to Macapagal.

In November 1961, Macapagal won the presidential election, to become the fifth president of the postwar Philippine Republic. He announced that he aimed to solve immediate problems and build, both materially and spiritually, for the future. Macapagal had inherited an economy in trouble—as well as outgoing president Carlos P. Garcia's last-minute appointment of officials to key government posts.

Macapagal attempted to liberalize the Philippine economy and restore free enterprise by lifting exchange and import controls, and he devalued the Philippine peso to its actual value in the free market. He pushed for a serious land reform program and abolished tenancy, and he embarked on an ambitious nationwide electrification program. His administration built roads and public housing and sought to improve the agricultural sector. To strengthen the Philippine economy, Macapagal also sought to assist income-generating private enterprises. He attempted to restore honesty and pride to government service. Many of his plans, however, were not carried out because of the legislature, which was dominated by the rival political party. Partisan politics severely limited the execution of Macapagal's ambitious plans.

In the field of international relations at the time, Philippine–American relations deteriorated

when the U.S. Congress disapproved further rehabilitation funds for the country. Partly as a result, and also because of a rising sense of nationalism in the Philippines, Macapagal moved the date of Philippine independence from 4 July 1946 to 12 June 1898. He pushed for a Southeast Asian association, and took steps to form the Association for Southeast Asia (ASA) and later, in July 1963, Maphilindo (consisting of Malaysia, the Philippines, and Indonesia). He filed the government's official claim to Sabah (North Borneo) on 22 June 1963. Macapagal also tried to shift the thrust of Philippine foreign relations from the United States to Asia, Europe, South America, and Africa.

Macapagal ran for reelection in 1965, but he lost to Ferdinand Marcos (1917–1989). After his defeat, Macapagal retired from politics. In 1971 he was elected delegate to the constitutional convention, to which he was named president. The new constitution was ratified in January 1973, but in a questionable manner. Macapagal criticized this act by President Ferdinand Marcos, as well as Marcos's declaration of martial law in 1972. He elaborated his criticisms in a book, *Democracy in the Philippines* (1976). The Marcos government harassed Macapagal by filing a legal case against him.

Diosdado Macapagal died on 21 April 1997. He had far-reaching ideas and the intellectual background to chart a firm foundation for the Philippines and steer the country along a more nationalistic and regional path. He attempted to restore honesty in government. His policies were farsighted, but they were defeated by partisan politics. The roots of a Southeast Asia-wide organization can, however, be traced to him.

MACARTHUR, GENERAL DOUGLAS (1880–1964)

Wartime General

The son of an army officer, Douglas MacArthur became a soldier, serving in the U.S. Army in the Philippines and in the Great War (1914–1918). After serving as U.S. chief of staff in the early 1930s, he returned to the Philippines as an adviser to and later commander of the Filipino army. MacArthur avoided the humiliation of

defeat when President Franklin D. Roosevelt (1882–1945) ordered him to leave the Philippines in February 1942. In doing so he made the famous promise, “I shall return.”

MacArthur became supreme commander of Allied forces in the South–West Pacific Area (SWPA), based in Australia, whose military and economic resources he harnessed to the Allied war effort. Struggling to secure reinforcements and a voice in U.S. strategy, MacArthur directed Australian and U.S. troops in the reconquest of Australian Papua by early 1943. Using strong air and naval forces, he directed an advance to retake New Guinea in a series of bold amphibious landings, advancing closer to his goal, the liberation of the Philippines.

In late 1944, MacArthur’s forces landed on Leyte, where he commanded the Asian theater’s largest land operations. Early in 1945, while his forces attacked Borneo, MacArthur was given command of the projected Allied invasion of Japan. Possibly to deflect his domestic political aspirations, MacArthur was appointed Supreme

Allied Commander in occupied Japan, which under his direction was dramatically transformed.

MacArthur later became commander of U.S. and UN forces in Korea. He was dismissed, however, in April 1951 after opposing President Harry S Truman's (1884–1972) policies. MacArthur was a complex and controversial figure, easy to caricature but difficult to understand. He dominated the Allied war effort in the southwest Pacific theater, crucially influencing the outcome of the campaigns in the region.

MACAU (MACAO)

Long-Lasting Colonial Outpost

A former Portuguese colony at the southern tip of the Pearl River delta in South China, Macau was the oldest European enclave in Asia. Macau has a glorious past as a regional and international trading center for Europeans from the sixteenth century, before Hong Kong superseded it in the mid-nineteenth century.

Macau, consisting of Macau Peninsula and the two islands of Taipa and Coloane, remained an unnoticed and unproductive place until occupied by the Portuguese in 1556, after which time they made strongholds at Goa and Melaka in 1510 and 1511, respectively. The acquisition was prompted by the need for a transshipment base in China for the newly opened Japan market, and it was facilitated by the trust of the Chinese officials in the Portuguese, who displayed astute ability in combating piracy. Shortly after its establishment, Macau developed into an international emporium, an entrepôt serving three lucrative trade routes: Macau–Melaka–Goa–Lisbon; Guangzhou (Canton)–Macau–Nagasaki; and Macau–Manila–Mexico—all the trades being monopolized by Portuguese vessels. An outpost of Portugal's maritime empire, Macau had both international and regional significance, the lat-

ter especially in providing vessels for trading countries such as China, which prohibited its merchants from going abroad.

Macau also served as a religious center spreading Christianity (Catholicism) to China, Japan, and Southeast Asia. It was common practice among Portuguese merchants to seek baptized girls in Melaka and Nagasaki as wives and carry them to Macau, which practice subsequently gave rise to generations of native-born Macanese.

By the beginning of the seventeenth century, Macau had reached the heyday of its commercial history. Thereafter, the Portuguese faced many challenges in maintaining the unique role of Macau. The Japanese trade, the most lucrative, was forced into termination in 1636 when the Portuguese were expelled from Nagasaki on account of the Tokugawa shogunate's hatred toward Christianity. (Apparently, Christian daimyos were suspected of plotting against the ruling shogunate.) Unable to provide China with the much-needed Japanese silver, Portuguese traders were barred from Guangzhou's twice-yearly trade fairs after 1640.

The Portuguese monopoly in the Southeast Asian market broke down after the Dutch displaced the Portuguese from Melaka in 1641, and other European powers (namely, the English) entered the market as competitors. The imperial decree of 1723 that facilitated Chinese merchants' going abroad cut the demand for Portuguese vessels, and the Portuguese monopoly of European commerce became history. But Macau still functioned as the only port in China open to European traders of all nationalities, and it continued to flourish in the first half of the Qing (Manchu) dynasty (1644–1912), when Guangzhou was made the only port open for trade. The city functioned as a logistical base for European traders who went up to Guangzhou during the trading season from October to January.

To Macau, the nineteenth century was a turning point in two ways. The cession of Hong Kong to Britain in 1842 as a Crown colony prompted Portugal to seek from China a formal recognition of the colonial status of Macau, before which the land had been only informally leased to the Portuguese. This resulted in the Luso-Chinese Treaty of Friendship and Trade, ratified in 1888. Another step downward was the replacement of Macau by Hong

Kong, with its deep natural harbor, as an international entrepôt. Hong Kong developed even stronger economic ties with Southeast Asia; it and Singapore (1819) became the two trade centers in the region. Although Macau followed the example of Hong Kong in declaring itself a free port, it was gradually reduced to an appendage of Hong Kong. All kinds of businesses and investments shifted to Hong Kong, even to the extent that the supply of daily necessities in Macau depended upon reexports from Hong Kong.

Macau's fortunes began to revive in the mid-1930s, especially after 1936, when Guangdong imposed a universal ban on gambling; owners of gambling dens shifted their businesses to Macau. The industry earned Macau the nickname "the Monte Carlo in the East" during the Sino-Japanese War (1937–1945), when the Japanese honored the neutrality of Macau and casinos in Macau hosted visitors of every kind, Chinese and foreign. It was also during these brief years that Macau showed a revival of foreign trade, arising from the increasing demand from the influx of Chinese refugees from the mainland after the fall of Guangzhou in 1938 and Hong Kong in 1941.

Postwar Macau developed close trade relationships with Hong Kong, mainland China, Japan, the United States, and Europe after the embargo on Macau was lifted by the United States in 1956. Trade with Southeast Asia was maintained on a very low level.

Macau was returned to China in 1999 following a twelve-year transitional period agreed to between China and Portugal. During the transition, arrangements were made for the handover of sovereignty, and, coincidental with the economic downturn in the region, measures were designed to attract overseas Chinese to Southeast Asia for settlement and investment in Macau.

MADIUN AFFAIR (SEPTEMBER 1948) "A Stab in the Back"

The Madiun affair was a revolt launched by followers of the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) to wrest power from the republican government led by Prime Minister Mohammad Hatta. Madiun is a town located in East Java, some 120 kilometers from Yogyakarta.

On the night of 17 September, the Democratic Front government, led ostensibly by Musso (the prewar PKI leader who had just returned from exile), started a rebellion. This rebellion took place at a difficult time. Dutch military forces were poised in strength to invade Republican-held territories in Java. Ongoing negotiations with the Dutch to reach a political settlement on Indonesia's independence had reached a stalemate. The Dutch blockade of the republic resulted in food shortages, which were made worse by the presence of large numbers of soldiers and refugees who had retreated from the front lines.

The dire circumstances contributed to an environment ripe for rebellion. Prime Minister Hatta was forced to launch rationalization measures that would strengthen the republic. Army units were identified for demobilization, and civil servants and general workers faced retrenchment even though alternative jobs were unavailable. Many of those affected were also members of the SOBSI, a pro-PKI trade union, and the PKI naturally regarded Hatta's rationalization program as an anti-PKI measure.

Hatta (1902–1980) was the prime minister succeeding Amir Sjarifuddin (1907–1948), who was the leader of the Socialist Party that was

closely allied to the Labor Party and the communists led by Musso. These diverse factions regrouped to form the PKI, and the leaders embarked on a speaking tour (which included Madiun on its itinerary) to publicize the amalgamation as a reconstructed party. The panicky conditions at the local level at Madiun fed the rebellion. Musso and company, in the vicinity of Madiun, threw in their lot.

The rebellion was quickly brought under control by the Indonesian army. The national leaders—Sukarno (1901–1970) and Hatta—swung into action as soon as they heard about the rebellion. Sukarno went on the air asking the Indonesian people to choose between him and the communist leaders. The question was rhetorical. Sukarno was *the* established leader, while Musso and Sjarifuddin probably had not planned the rebellion itself; they had been surprised by the independent initiatives of lower-level leaders who presented a *fait accompli* for endorsement.

The debacle of the rebellion suggested that the PKI was not in control of events. Indeed, the party was just being reconstructed. The leaders had not yet had the opportunity to work the ground. Generally, Indonesia had just emerged from the Japanese occupation (1942–1945) and was caught in the throes of a life-and-death struggle against the returning Dutch colonialists. It was not too far-fetched to assert that the Madiun affair caught everyone unprepared.

The Madiun affair, despite its brevity, had important consequences for all the parties concerned. The communist leadership was decimated in one fell swoop. Musso was caught and killed very soon after the rebellion. Amir Sjarifuddin and Tan Malaka (1897?–1949) faced the same fate, the latter dying under mysterious circumstances in 1949, although he did not support the rebellion at Madiun. Their deaths marked the end of an older generation of communist leaders and paved the way for the emergence of a set of new and younger leaders who were convinced that the way to power was not via open rebellion.

The Indonesian army became the undying enemy of the PKI. The Madiun affair was blamed on the PKI, which was regarded as stabbing the nation in the back while it faced the Dutch opponents. The army's distrust of the PKI continued well into the postindependence period.

At the national level, the ongoing Indonesian revolution took a turn to the right. The failed Madiun affair made clear that the supporters of the nationalist (as opposed to socialist) goals of the revolution had the upper hand over those who advocated socioeconomic change via socialism or communism.

The Dutch regarded the Madiun affair as vindication that the republican government was not as popular or as influential as it professed. The PKI revolt was a sign of disaffection. This strengthened the hawks among the colonial authorities who saw in the aftermath of the Madiun affair a golden opportunity to launch a military action against the republic. This took place in December 1948, some three months later.

At the international level, the decisive victory over the PKI impressed the U.S. government. At a time when the worldwide struggle against communism was imminent, and the United States was assembling allies against foes, the Sukarno–Hatta government basked in its newly acquired credibility as a reliable anti-communist partner. With U.S. support ensured, its diplomatic front against The Netherlands received a boost. However, U.S. support also meant reliance on the United States in the struggle against the Dutch, instead of greater self-reliance.

MADJELIS SJURO MUSLIMIN INDONESIA (MASJUMI) (COUNCIL OF INDONESIAN MUSLIM ASSOCIATIONS)

The abbreviation *Masjumi* has applied to two different Indonesian organizations. The well-known reference is to the political party that was founded on 7 November 1945 and disbanded by Sukarno (1901–1970), president of the Republic of Indonesia (1945–1962), in August 1960. During the Japanese occupation (1942–1945) of the Netherlands Dutch East Indies (present-day Indonesia), however, the Council of Indonesian Muslim Associations had been created under the same name. This council could be considered the successor to the MIAI (Madjlisul Islamil a'laa Indonesia), the Supreme Indonesian Council of Islam, founded in 1937. The MIAI had been abolished by the Japanese authorities, and in its place a new organization, the Madjelis Sjuro Muslimin Indonesia (Masjumi), was established under Japanese control.

What Putera (Center of Peoples' Power) was to the nationalist movement, Masjumi was to the Islamic movement, with one important difference: the Islamic elite gained much more from the Masjumi than the nationalists did from Putera. The council was set up by the Japanese to strengthen the unity of all Islamic organizations in order to mobilize them in the interests of the Greater East Asia Co-prosperity Sphere. In contrast to the MIAI, the Muhammadiyah and the Nahdatul Ulama (NU), the two most important Islamic organizations, both participated in the new council. In 1912 modernist religious leaders founded the Muhammadiyah as a nonpolitical reformist association. The NU was set up in 1926 by orthodox *'ulama* to maintain the authority of the traditional Islamic faith characteristic of the Javanese countryside. The leading positions in the new council were distributed among the supporters of both organizations. The founder of the NU, Kiyai Haji Mohammad Hasjim Asjari, was appointed head of the council. These measures taken by the Japanese were of great importance to the Islamic movement. For the first time, its

leaders came into direct contact with government officials at the highest level.

The Islamic movement gained much from the opportunities offered by the Japanese. For the first time the movement had a position in the administrative structure. The establishment of the Masjumi together with the Office for Religious Affairs meant in fact that, besides the secular administration, a religious apparatus had been created. The Masjumi set up branches in each residency and principality in Java. It was the task of the local branches to supervise the local religious leaders and the mosque officials, who earlier had fallen under the authority of the regents. In return, the Masjumi had to make concessions for Japanese favors. The organization was expected to arrange meetings in which people were encouraged to support the Japanese war effort. In the mosques the imam, heads of congregations, had to pray for Japanese victory. Besides the Masjumi, a separate organization had to be set up, on the basis of the Koran, to urge the peasants to deliver the compulsory amount of rice.

At the beginning of December 1944 the Masjumi received permission from the Japanese to establish its own military organization. The Hizbullah, the party of Allah, was meant for Muslim youths. The first trainees came from *peasantren*, religious schools, and after a three-month training course, they spread out over the countryside to set up local units. The Hizbullah played an important role during the revolutionary period, and many of its members later joined the Indonesian army. In the course of 1945 the Japanese granted other long-standing wishes of the Islamic movement. Accordingly, in April 1945, the Japanese authorities decided that from 1 May all government offices would be closed on Friday in the afternoon. In July 1945 the first Islamic university, located in Jakarta, opened its doors. Mohammad Hatta (1902–1980) was appointed head of this institute. In the same month an Islamic Institute with an extended library was also opened in Jakarta.

Supported by Japanese policy, the Islamic movement could entrench itself in a strong position in Indonesian society during the Japanese occupation with a network of local offices all over Indonesia. It was a position that they only might have dreamed of during Dutch colonial rule. At the end of the Japanese occupation, the

Masjumi had become part of the administration itself. The organization was granted an increasing measure of home rule for Indonesian Islam in Java, and the apparatus created offered a basic structure for the establishment of a Ministry of Religious Affairs in 1946. Moreover, for the first time in the history of the Islamic movement, the Islamic elite won a position in the Indonesian political arena and would play an important role in the new political constellation via the Masjumi, which was reorganized as a political party on 7 November 1945.

**MADJLISUL ISLAMIL A'LA
INDONESIA (MIAI) (GREAT ISLAMIC
COUNCIL OF INDONESIA)**

Madjlisul Islamil a'laa Indonesia (MIAI, Great Islamic Council of Indonesia) was a loose federation of Islamic organizations formed in late colonial Indonesia, representing a partial and temporary truce in the struggle between modernist and traditionalist or orthodox Islam. During the Japanese occupation, the MIAI was briefly maintained as a body for the mobilization of Muslims, but it was soon replaced by the Masjumi.

From the mid-1920s, Indonesian Islam had been divided among three principal organizations: the modernist Muhammadiyah, the traditionalist Nahdatul Ulama (NU), and the radical

Sarekat Islam, as well as many smaller parties and associations. Sarekat Islam (SI; later Partai Sarekat Islam Indonesia, PSII) had declined in importance as it became clear that radical confrontation with the Dutch would not end colonialism, but the much larger Muhammadiyah and NU were divided doctrinally and socially. SI had sought to assert its leadership of Indonesian Islam by convening a series of al-Islam congresses, but in 1937, Muhammadiyah and NU jointly organized a congress in Surabaya that agreed to create the Madjlisul Islamil a'laa Indonesia (MIAI) as an umbrella organization. The immediate purpose of the new council was to oppose a change to colonial marriage laws, which would effectively have banned polygamy. The PSII joined the MIAI in 1939.

The MIAI was part of the broad cooperative stream in Indonesian nationalism that accepted engagement with colonial institutions but sought to marshal both intellectual arguments and the force of public opinion to achieve changes in colonial policy. In 1941 the MIAI joined the political federation GAPI (Gabungan Politik Indonesia, Indonesian Political Union) and an association of government employees to form the Madjelis Rakjat Indonesia (Indonesian People's Council). This coalition pressed the colonial government for an Indonesian parliament and other concessions to national identity similar to those proposed in the Soetardjo Petition (1936) and the Wiwoho Resolution (1940).

After Japan conquered Java in 1942, the occupation authorities reconstituted the MIAI as a body to mobilize Muslims for the war effort. The council's loose structure, however, and the fact that its leadership came into the hands of PSII leaders who, although generally sympathetic to Japan, had a weak popular base, meant that it was not very effective in this role. The Japanese soon decided to develop direct relations with rural Islamic teachers (*kiai*) and to some extent the Muhammadiyah, leaving the MIAI to seek a mainly social role in promoting an Islamic treasury that would collect religious tax (*zakat*) for distribution to the poor. The MIAI was dissolved by Japanese orders in October 1943, and its coordinating role was taken over by the Masjumi in December.

To some extent, the MIAI represented a softening of the modernist-traditionalist divide in Indonesian Islam in the face of common ad-

versaries, but the council was never permitted to create a broad Islamic platform. Its cooperative yet independent-minded relationship with both Dutch and Japanese reflected the perennial difficulties that Islamic organizations faced in deciding the terms of their dealings with non-Islamic authorities.

MADURA

Islamic Isle

Madura, the island situated off the northeast coast of Java, is always mentioned in the same breath with Java. For a long time the island has been considered an appendage of Java. In all administrative reports and documents up to the present, Madura can be found under the heading “Java and Madura.” Economically, the island was of little interest to the Dutch, and for a long time Madurese culture and society did not attract attention from scholars. Only in the 1970s did Madura get the attention it deserves. This resulted in a great number of studies and articles about the island and its inhabitants.

The histories of Madura and Java have been inextricably linked for centuries. Before the island was definitely incorporated into the Dutch colonial state in the late nineteenth century, the three principalities of Bangkalan, Pamekasan, and Sumenep had at one time or another been subjugated by various realms and coastal states in Java. Up till about 1500 the principalities fell

within the political sphere of influence of the East Javanese Hindu realms of Kediri, Singosari, and Majapahit. After the introduction of Islam in the sixteenth century, however, they became more or less dependents of the Islamic coastal principalities of Demak, Gresik, and Surabaya, successively. In 1624, Madura became part of the Islamic state of Mataram, until it fell under the hegemony of the Dutch East Indies Company (VOC) in the mid-eighteenth century. In the course of the nineteenth century, the indirectly ruled Madurese principalities lost their autonomy and became part of the Dutch colonial state. On instigation of the Dutch, the *Negara* (nation-state) Madura, as part of the United States of Indonesia, had been formed in 1948. In 1950 the parliament of Madura abolished the *negara* and merged with the republic of Indonesia.

The inhabitants on the island have always been forced to look for a living outside their island. The soil on Madura is barren, and barely enough crops can be grown to feed the population. Those living on the island itself numbered about 2.8 million in 1976 (De Jonge 1988: 15–20). The majority of the Madurese on the island subsist on agriculture, although fishing, salt production, and maritime trade are also important. Fruit and tobacco cultivation are both important sources of income, and the breeding of cattle and animal husbandry are widespread. There is no large-scale industry on the island.

From the middle of the eighteenth century, Madurese made a practice of migrating to East Java. In 1930 about 2.5 million Madurese were settled outside their homeland, most of them in East Java (Department of Economic Affairs 1947). In the course of the twentieth century, many more migrated to the cities of Surabaya and Jakarta, as well as the port cities of Pontianak and Banjarmasin in Kalimantan. Most of them seek a living in trade, transportation, or handicrafts. On major Islamic holidays, such as *Maulud* and *Id al Fitri*, they return to their homeland to celebrate these festivals with their relatives. Extrapolation from the figures available puts their number at about 13 million in the late 1990s.

Madurese are strict Muslims and adhere to the tenets of the Shafi school. They observe the Five Pillars of Islam: acknowledging no other God but Allah and Muhammad as His Prophet, performing the five daily prayers,

contributing their yearly *zakat*, fasting during Ramadan, and performing the pilgrimage to Mecca. To be a *haji* means not only the performance of the pilgrimage but also an increase of status in the community. Despite the fact that the Madurese are pious Muslims, their religious conceptions are intertwined with non-Islamic elements. To avert evil influences, a *salamatan* (blessings for safety, security, and well-being) is organized on all sorts of occasions—birth, circumcision, marriage, and death—including at the start of a business or before going on a journey. The prayers said during these religious meals are addressed not only to Allah but also to the ancestors.

Traditional values are strong among the Madurese. The rules given by the ancestors represent the *adat*, custom, and must be respected if health and prosperity are to be enjoyed. Despite this, people are expected to be good Muslims. To prevent conflicts as far as possible, the rules of social conduct are very strict. The Madurese are noted for their bull-racing and for their practice of *carok*, which involves eliminating an adversary with a sickle-shaped knife. The threat of *carok* is always present among Madurese when prestige and honor are at stake. The motives for *carok* include adultery, quarrels about goods and cattle, and losing “face” in public.

For a Madurese, the best way to keep up his reputation is to win a bull race. In these competitions, teams of two bulls must pull a sledge and jockey as fast as possible along a track of more than a hundred meters. The Madurese bull races are unique in the world, and because of the folklore attached to them they have long been a tourist attraction.

See Spanish Expansion in Southeast Asia

MAGSAYSAY, RAMON (1907–1957) People's President

Ramon Magsaysay was the third president of the post-Pacific War (1941–1945) Philippine Republic, serving from 1954 to 1957. As president he was extremely popular with the masses and strove to improve their conditions as well as the relationship of the government to them. Anti-communist, during the height of the Cold War he worked for close relations with the United States but was also open-minded enough to see other opportunities for the country. Prior to becoming president, he had been a guerrilla leader during the Pacific War and congressman and secretary of national defense during the turbulent Huk Rebellion of the late 1940s and early 1950s.

Magsaysay was born on 31 August 1907 in the town of Iba, Zambales. His father, Exequiel Magsaysay, was a trade school teacher. Magsaysay obtained a bachelor's degree in commerce from José Rizal College in Manila in 1932. Mechanically inclined, he worked in a bus company in Manila while still studying, and rose to become its chief administrator.

During the Pacific War, Magsaysay joined the U.S.-Filipino defense forces as a civilian. With the surrender of organized resistance in May 1942, he became a guerrilla leader in Luzon, and with the return of the Americans in 1945, he was appointed military governor of the province of Zambales.

In 1946 he entered politics and became a member of the House of Representatives as a member of the newly formed Liberal Party. As a congressman, he was named chairman of the House Committee on National Defense and

headed a Philippine mission to the United States to work for veterans' benefits. He sponsored bills relating to veterans' benefits and military affairs. He was reelected in 1949, but before his term was over, he was appointed secretary of national defense by then-president Elpidio Quirino (t. 1948–1953), on 1 September 1950. At that time, the antigovernment Huk Rebellion seriously threatened the Quirino administration. Staunchly anticommunist, Magsaysay vigorously led the campaign against the Huks, through combined military operations and socioeconomic programs. He paid surprise visits to military camps, reorganized the military high command, and replaced inefficient officers, thereby raising the efficiency of the Philippine military establishment. Through his dynamic efforts, the Huk Rebellion was broken. Luis Taruc (1913–), leader of the Huks, surrendered to Magsaysay in May 1954, after Magsaysay had become president.

In 1953, Magsaysay ran for president against Elpidio Quirino, who was running for a second term. Charismatic and reaching out to the Filipino masses, Magsaysay won by a large margin. He became the first Filipino president to wear the native formal shirt, the *barong tagalog*, at his inauguration.

Magsaysay adopted a propeople policy, opening the presidential palace, Malacañang, to the general public. He pushed land reform programs and developed cooperatives for rural communities. He worked for legislation that clearly defined tenants' rights. He gave the people an opportunity to air their complaints against the government by opening a special office to hear grievances; he also adopted a program of one-centavo telegrams whereby anyone could send complaints against the government to Manila by telegram. He attempted to keep the price of basic goods affordable and introduced a nationwide social security system. He utilized the military for constructive civic action. Through these policies, Magsaysay tried to bring the government to the people.

In the field of diplomacy, Magsaysay worked closely with the United States, taking a strongly anticommunist stance. The anticommunist Southeast Asia Treaty Organization (SEATO) was formed during his administration. Despite his pro-American stance, Magsaysay worked for adjustments in Philippine-U.S. economic relations, sending Senator José P. Laurel (1891–

Ramon Magsaysay was a guerrilla leader in the Philippines during the Japanese occupation of World War II. He later became president of the Philippines, serving from 1953 until his death in 1957. (Library of Congress)

1959) to negotiate more balanced terms with Secretary James M. Langley. He also sent a representative, Carlos P. Romulo (b. 1899), to attend the Asian-African conference in Bandung in April 1955, a conference that did not include the United States.

Magsaysay did not live to finish his presidential term. He was killed when his presidential plane crashed in Cebu Island on 17 March 1957.

Magsaysay was known as a dynamic, charismatic leader, who was staunchly anticommunist and pro-American. He embarked on programs that attempted to solve the social and economic difficulties of the Philippines, thereby building a stronger foundation for the country while containing the communist menace during the Cold War. His abrupt death, however, put a sudden end to his administration, an administration that showed how the presidency could be brought closer to

the people. Magsaysay's charisma and dynamism set examples for future Philippine presidents to follow. Furthermore, a foundation was organized in his memory, one that awards prizes to Asians who echo Magsaysay's sentiments of integrity in public office and pragmatic idealism in a democratic society.

MAHĀBHĀRATA AND RĀMĀYANA Hindu Epics

The *Mahābhārata* and *Rāmāyana* are among the most useful gifts that Southeast Asia received from India. These two magnificent epics of Visnuite origin are the source of innumerable texts and illustrations. Their success derives from the fact that they are in a sense the expression of the ideal origin of royalty, the king being identified as one of the heroes. Thus in Thailand one of the capitals of the kingdom founded by King U Thong (r. 1351–1369) was called Ayutthaya, after the name of the city that Rama, the hero of the *Rāmāyana*, founded at the end of his epic, Ayodhya.

The *Mahābhārata* is an immense poem of 90,000 verses divided into eighteen chapters that describe the struggle between the Kaurava and the Pandava for control of universal power. The *Rāmāyana* is significantly shorter, containing about 30,000 verses divided into seven

books that describe the events surrounding the abduction of Sita, wife of Rama, by the demon Ravana.

The episodes of the *Mahābhārata* are illustrated by reliefs carved on the entry pavilions of Bapuon (Baphuon) (eleventh century) and at Angkor Vat (Angkor Wat) (twelfth century). On the latter temple a striking relief located at the southern part of the west gallery, first story, depicts a principal event of the epic, the battle of Kuruksetra. This panel, despite its carving, is the only one apart from the central motif that does not take account of the movement of the visitor.

The *Rāmāyana* is present on many monuments, such as the great compositions relating the entire epic—for example, at Prambanan (ninth century, Java). The tale is illustrated by reliefs on the inner face of the balustrade of the Siva temple and terminates on the inner face of the balustrade of the Brahma temple. Another great composition depicts the entire epic on the lower register of the main edifice at Panataran (fourteenth century, Java). The *Rāmāyana* in Cambodia forms part of the iconographic program of numerous monuments: the Bapuon, Angkor Vat, and Bayon. It is also the subject of large frescoes decorating the galleries of the royal palaces of Bangkok and Phnom Penh; the passages from this epic are sometimes illustrated in Buddhist pagodas.

**MAHATHIR BIN MOHAMAD, DR.
(1925–)**

Visionary Leader

Born on 20 December 1925 in Alor Setar, Kedah, in Peninsular Malaysia, Mahathir is the youngest of nine children of Muhamad Iskandar, the headmaster of the Government English School in Kedah. Mahathir studied for two years in a Malay school and then enrolled in the Government English School.

When the Japanese occupied Malaya in 1942, Mahathir—or “Che Det” to his family and close friends—started a coffee shop with a friend and began to acquire knowledge of operating a small business. This experience made him realize the weaknesses and backwardness of the Malays and the need for them to improve economically and academically in order to survive.

Like many young Malays of his time, Mahathir opposed the Malayan Union (MU) scheme imposed by Britain in 1946 because it was outright colonialism and contrary to the earlier British-Malay treaties that recognized Britain merely as “protector” of the Malays and their countries. After passing his senior Cambridge examination, Mahathir gained admission to the King Edward VII College of Medicine in Singapore on a federal government scholarship. It was while in Singapore that many of his articles on various issues appeared, especially in the years from 1948 to 1950 in the *Sunday Times* under the pen name C. H. E. Det. At the college Mahathir met Siti Hasmah Muhammad Ali, whom he married on 5 August 1956.

Upon graduation, he served at government hospitals. In 1957, Mahathir left government service and opened his own private clinic in Alor Setar. His frequent visits to rural areas and his constant mingling with the people made his MAHA Clinic popular among Alor Setar Malays; being active in the United Malays National Organization (UMNO), he was nicknamed Dr. UMNO. Mahathir won the parliamentary seat for Kota Setar in 1964 but lost to Partai Islam Se Malaysia (PAS) candidate Haji Yusuf Rawa in the 1969 general elections. As a politician Mahathir strongly fought for the betterment of the Malays and urged the government to take concrete steps toward giving the Malays a head start in modern economic activities, particularly through education. He was very critical of the Singapore-based People's

Mahathir bin Mohamad. (Embassy of Malaysia)

Action Party (PAP); he regarded the PAP as an extremist Chinese party working for Chinese domination of the country. Holding this view, Mahathir's non-Malay opponents labeled him ultra-Malay.

Mahathir blamed the May 13, 1969 incident on the government, and particularly on the then prime minister, Tunku Abdul Rahman Putra Al-Haj (t. 1957–1970). He accused the Tunku of being simple-minded and lacking proper understanding and planning for a strong and prosperous Malaysia, with the Malays having a reasonable share of its economic stake. Tunku, on the other hand, blamed “extremists” like Mahathir as the cause of the racial clashes following the 1969 elections. As a result, Mahathir was expelled from UMNO. He returned to his clinic as a private practitioner. It was during this time that in 1970 he published his controversial book *The Malay Dilemma*, which attempted to analyze the Malay mind and the root causes of the Malay plight.

When Tun Abdul Razak (t. 1970–1976) became prime minister, he reinstated Mahathir in UMNO in 1972 and appointed him senator in 1973. After winning in the election of 1974, Mahathir was made minister of education and successfully tackled a number of important issues, thereby endearing himself to UMNO members. He was elected as one of the vice-presidents of UMNO in 1975. When Tun Razak died in 1976, Prime Minister Hussein Onn (t. 1976–1981) appointed Mahathir his deputy, and when Hussein retired on 16 July 1981, Mahathir became the fourth prime minister of Malaysia.

As prime minister, Mahathir was businesslike and forthright. Starting with the “clean, efficient and trustworthy,” “instilling Islamic values,” and “clock-in and clock-out” campaigns, Mahathir then embarked on bigger endeavors such as “Buy British Last,” “Look East,” and “Vision 2020” to transform Malaysia quickly into a developed nation. To achieve this objective he launched the “privatization” policy that hinged on close cooperation between the government and the private sectors in industrial and commercial activities. To tap available internal resources and to encourage and facilitate the participation of as many people as possible in national development, various unit trust schemes were launched beginning with those specifically for the *bumiputera* (indigenous, native) and later for all Malaysians. Despite occasional setbacks, in general his policies proved to be fruitful, and by the 1990s the Malaysian economy was less dependent upon export of primary commodities such as tin and rubber; petroleum and natural gas, palm oil, and electronics were gaining momentum as important foreign exchange earners. Domestically pragmatic and forceful, Mahathir was controversial and sophisticated on the international stage. He has been one of the most outspoken leaders of the Muslim and developing countries championing the cause of the “small nations.”

During his twenty-two years as UMNO president, Barisan Nasional chairman, and Malaysia’s prime minister, Mahathir has had four deputies. The third, Anwar Ibrahim (1947–), is serving a total prison term of fifteen years on charges of corruption and misbehavior; the fourth, Abdullah Ahmad Badawi (1939–), succeeded him in October 2003.

MAHMUD, SULTAN OF MELAKA (r. 1488–1511)

The Last Malay Ruler of Melaka

Better known as Sultan Mahmud Syah, this last ruler of the Malay Sultanate of Melaka was born Raja Mamat (Raja Muhammad) and ascended the throne after his father, Sultan Alauddin Riayat Syah, died of poisoning in 1488; his mother was Tun Senaja, the daughter of Tun Ali and sister of the wealthy Tun Muzaahir (Mutahir). As a young boy, Mahmud was bypassed by his elder half brother of royal blood, Raja Munawar, who was sent to rule Kampar in Sumatra. Mahmud was kept under the care and guidance of the powerful and influential Bendahara Tun Perak (d. ca. 1498), but when the latter died, at the insistence of Tun Senaja, Mahmud appointed his maternal uncle Tun Muzahir as the new *bendahara* (chief minister).

Mahmud was an energetic but impulsive man. The Melakan empire reached its peak politically and economically under his rule, and Tun Muzahir contributed significantly toward

it. The whole of the Malay Peninsula and a large portion of areas on the east coast of Sumatra and the Straits of Melaka were under Melaka's control, directly or otherwise. Not only was the Siamese attempt to reconquer Pahang in 1500 foiled but, in addition, Melaka conquered Manjung in the north and Kelantan in the northeast in the same year. If the *Sulalatus-Salatin* (Malay Annals) is to be believed, as a young man Mahmud was notorious as a womanizer who often created anxiety and hatred among caring parents and husbands. It was on one of these philandering errands that Mahmud was nearly killed by one of his own officials, Tun Biajid. Realizing that he was wrong for transgressing Biajid's home, Mahmud compensated the latter by bestowing on him one of his own favorite concubines, despite which Biajid continued to distance himself from the sultan.

The worst tragedy occurred about a year before the Portuguese conquest in 1511. It started when Mahmud discovered that the bendahara had purposely ignored him by marrying his beautiful daughter, Tun Fatimah, to her cousin, Tun Ali, without first presenting her to the sultan as required by the *adat* (law) of the time. Incidentally, the sultan's major consort, the princess from Pahang, had just died. When, about a year later, the sultan received reports that the bendahara was in the midst of a plot to overthrow him, Mahmud immediately ordered the assassination of the bendahara—who curiously did not attempt to prove his innocence. Also killed were the bendahara's accomplices: the state treasurer, Seri Nara Aldiraja; the head of the state security agency, Tun Hassan Temenggung; and Tun Fatima's husband, Tun Ali. The incident robbed Melaka of some of its more capable ministers, weakened its leadership, and contributed to the success of the Portuguese onslaught.

The family dispute, however, continued, and its seriousness is borne out by the fact that after the Portuguese occupation of Melaka (1511), Raja Munawar's son, Raja Abdullah, who succeeded his father in Kampar, attempted to get the Portuguese to recognize him as the rightful successor to the Melakan empire. Abdullah was unfortunately abducted by the Portuguese to Portugal. Mahmud also secretly ordered the assassination of his other half brother, Raja Zainal Abidin, who was fond of deliberately exploiting his extremely good

looks in public, causing havoc among the women of Melaka.

Sultan Mahmud then married Tun Fatimah but abdicated in favor of his son, Raja Ahmad, and lived as a recluse devoted to spiritual self-enhancement. Unable to withstand the Portuguese, Mahmud and Ahmad continued the fight while having to retreat first to Muar in the south of the Malay Peninsula and then to Pahang in the east. He finally moved south to the island of Bintan and stayed there for twelve years, mending his losses and making efforts to retake Melaka.

The war had resurrected Mahmud's interest in politics. Discovering that his son and appointed successor, Sultan Ahmad, was behaving improperly toward the elder officials and thus creating discontentment and disunity in the leadership, Mahmud had Ahmad killed and resumed active reign from Bintan. The Portuguese continued to pursue Mahmud from Melaka and caused him severe losses but failed to defeat him because of his mobility and the support that he continued to receive from the people. Although losing the city-state of Melaka to the Portuguese, Mahmud continued to command the respect of the rest of his empire. From Bintan, Mahmud launched at least two major attempts to retake Melaka before he finally moved his capital to Kampar, where he died in 1529. His son by Tun Fatimah, who succeeded him as Sultan Alauddin Riayat Syah, returned the capital to Hujung Tanah on the peninsula.

MAJAPAHIT (1293–ca. 1520s) A Hindu-Javanese Power

Majapahit is the name of a kingdom that had its core territory in more or less the eastern and larger half of the island of Java. The founder of the capital of the kingdom was Wijaya, a prince descendant of Singhasâri's first king, Kèn Angrok (r. 1222–1227), from a patriarchal line. (His name is spelled Dyah Wijaya in the contemporary, fourteenth-century text of the *Nâgarakertâgama*, and Raden Wijaya in the later sixteenth- to seventeenth-century *Pararaton*.) The establishment of the new settlement in the land of Tarik took place while Wijaya, in coalition with the “Tatar” or Mongol troops from China, defeated the usurping Kadiri king, Jayakatwang. While clearing the land, Wijaya's men found a bitter (*pahit, tikta*) *maja* (a kind of *wilwa*) fruit—hence the name “Majapahit.” The name is interchangeable with its synonym, Wilwatikta. Wijaya was the son-in-law of Kêrtanâgara (r. 1268–1292), the last king of Singhasâri. He ascended the throne as the first king of Majapahit in the year 1294 C.E. and assumed the official name Kêrtarâjasa Jayawardhana. He married all the four daughters of Kêrtanâgara, among others the Râjapatnî Dyah Gâyatri, for whom the lavish posthumous ceremony of *śradha* was organized during the reign of his grandson Hayâm Wuruk (r. 1350–1389). Wijaya died in 1309.

Information on the greatness of the kingdom of Majapahit is given by a multitude of sources, including contemporary inscriptions, Chinese chronicles, and literary texts. Worthy of special mention is the unique literary text, at the same time a historical narrative, called the *Nâgarakertâgama* or the *Deśawarjāna*, written by the court poet Mpu Prapañca and completed in 1365.

In addition, a later work of Malay literature, the *Hikayat Hang Tuah* (written between 1641 and 1726 by an unknown author), has an episode related to Majapahit. In this work Majapahit is described, through the many turns of the story of the Malay hero Hang Tuah, as a powerful competitor of Melaka. The story recounts the shift of power in the region, from Majapahit to Melaka. Nevertheless, it also tells that the elements of Hang Tuah's success as a knight of Melaka were “made in Majapahit.” These included the magical knowledge he acquired from Majapahit sages; the holy kris,

Tamias Sari, which he acquired from Majapahit; and the title “Laksmana” (admiral), which he received from the king “Seri Batara” of Majapahit. He was also considered successful in winning the hand of a Majapahit princess for the ruler of Melaka.

Folklore from other parts of Indonesia, outside Java, refers to the Majapahit presence in their respective regions, and there are at least two archaeological remains in Indonesia: one is in Lampung, Sumatra, and the other in Buton, Sulawesi, which local people believed to be the last resting place of the famous Patih Gajah Mada (d. 1364). Gajah Mada, the “grand vizier” of Majapahit during its heyday (t. 1331–1364), took part in the kingdom's imperialistic expansion of achieving political hegemony over all *Nusantara* (see below) and the establishment of its hierarchical administration. In the genealogy of the kings of Bima (Sumbawa) there is also a name, Batara Sang Bima Dewa, about whom it is said that he “went to Majapahit.”

In the contemporary text of the Majapahit era itself, the aforementioned *Nâgarakertâgama* (cantos 13–15), there are tens of names of regions outside Majapahit proper that seek refuge and pay homage to the king of Majapahit. Those places are collectively called *nîus ântara* (*Nusantara*), which, in view of their context in the narrative and evidence from inscriptions, should signify “places across the sea” or “abroad.” Such places in Sumatra include Malayu, Jambi, Palembang, Toba, Manangkabwa (Minangkabau), Siyak (Siak), Rokan, Kampar, Pane, Mandahiling (Mandailing), Parlâk (Perlak), Lwas, Samudra, Batan, Lampung, and Barus. Places in Kalimantan include Tanjung-Nagara, Kapuhas, Katingan, Sampit, Kuta-Lingga, Kuta-Waringin, Sambas, Pasir, Baritu, and Tañjung-Puri; in the Malay Peninsula, places include Pahang, Kalantan (Kelantan), Tringgano (Terengganu), Tumasik, Kêlang, and Kêda. Places in Bali are Badahulu and Lwa-Gajah, whereas those to the east of Bali include Sukun, Taliwang, Dampo, Sapi, Bhîma, Lombok-Mirah/Saksak, Sûmba, and Timûr. In Sulawesi, places include Makasar, Butun, Salaya, Banggawi, and Luwuk; in Maluku, Wandan, Ambwan, and Sera.

The aforementioned place-names were also indicated as *deśântara*, literally translated as “other places.” The uniqueness of Madura is also indicated in the text; although technically

it would fall into the category of *nîus ântara* (“places across the sea”), it was not considered foreign because it had always been one with Jawa, as was already mentioned in Singhasâri inscriptions. Another category is the *mitra satata*, meaning “perpetual friends,” which include the countries Syangka, Ayodhyapura, Dharmagarî, Marutma, Râjapura, Singhanagarî, Campâ, Kamboja, and Yawana. Places of origin of merchants and scholars who came to Majapahit are also mentioned, notably Jambudwîpa (India), Cinâ (China), and specific regions in India such as Karṇâṭaka, Godâ, and Kânçipurî.

The list of these places may perhaps present an idea of a “Majapahit network,” be it in a political or economic sense. In addition, there were foreigners who settled in Majapahit. As Anthony Reid (2000: 56, 59) pointed out: “[W]hen the Portuguese reached Southeast Asian waters they found them dominated by Javanese junks” [from Old Javanese *jong*]; “once established in Malacca, the Portuguese identified Java as the home par excellence of the biggest junks.” The imposing Javanese fleet might have been that of the Demak sultanate on the north coast of Java, the inheritor of Majapahit traditions (apart from its religion).

Demak was reported to have helped Melaka with its ships to check the Portuguese advance, and it may well go back before the culmination of shipbuilding excellence on the part of the Javanese. The earliest account of expertise in shipbuilding was in the Kadiri period (twelfth century C.E.). There was then the profession of *undahagi lañcang* (“master shipbuilder”). Inscriptions of this period also mentioned for the first time the official *senapati saruwajala*, meaning “commander of all water matters.” Having that legacy as a foundation, it is expected that Majapahit, with its increased integrating power, gained success in dominating the Java Sea in the middle of the fourteenth century. The *Hikayat Raja-Raja Pasai* text, written in the northern part of Sumatra in the mid-fourteenth century, mentions that “people in vast numbers thronged Majapahit; there was a ceaseless coming and going of people from overseas subjected territories . . . bringing their offerings of beeswax, sandalwood, massoia bark, cinnamon, cloves and nutmeg piled in heaps” (ibid.: 62). Apart from shipbuilding and navigation, a notable development in the Majapahit

era was the use of *pisís* (Chinese coins) as official currency, replacing the earlier use of pieces of gold and silver in specified weights. Majapahit even produced *pisís* locally when the supply from China ceased.

The kingdom of Majapahit itself, within its core territory, was presumably structured as an empire, a continuation of what was first ventured during the preceding Singhasâri period. It was in a Singhasâri inscription of the second half of the thirteenth century that a number of minor kingdoms within the empire were mentioned—namely, Kadiri, Lamajang, Madhura, Wurawân, Morono, Hring, and Lwa, with members of the royalty as their respective rulers. In this account the hierarchy of territorial terminology is clear: Kadiri, Lamajang, and other places are indicated as *bhûmi* (“country”), and within them there are the *nagara* or *râjya* (“capital towns”) where the ruler presides. The Majapahit chronicle, however, does not explicitly identify and list these minor kingdoms. There is, though, a reference to the regions in which Hayâm Wuruk placed his close female relatives. Such regions are Pajang, Lasêm, Kabalan/Lodaya, and Lumajang/Wirabhûmi (which must be the same as the Lamajang of the Singhasâri inscription). Mention is made also of the princess of Daha and that of Jîwana (synonym of Kahuripan). These must be taken as additions to the Singhasâri list. Those minor kingdoms were supposedly under the direct administration of the state of Majapahit. After its subjugation in the year 1343, Bali was possibly included within the “internal affairs” administration of Majapahit.

It is also worth noting that aside from the princesses, who were given prominent status, there were two queens who took the highest position as head of state—namely, Tribhûwanottunggadewî (r. 1329–1350) and Suhitâ (r. 1429–1447). The last Majapahit king known from his inscriptions (all issued in śaka 1408 or 1486 C.E.) was Girîndrawardhana Dyah Ranawijaya. How and when he ended his reign is unknown.

The end of Majapahit itself is problematic: later Javanese tradition mentions śaka 1400 (1478 C.E.) as the (symbolic) “end of Majapahit.” But Ranawijaya still issued inscriptions in 1486 C.E., while Pigafetta, chronicler of Ferdinand Magellan’s round-the-world voyage, acknowledged the existence of Magepaher (Ma-

japahit) in 1522 C.E. And a Majapahit inscription of Pabañolan Parî has been alternatively read as having the year śaka 1563 (1541 C.E.). The demise of Majapahit was probably gradual and nondramatic. It is very likely that with the flourishing of trade cities on the northern coast of Java (*pasisir*), and especially the rise of Demak as a strong Islamic sultanate, Majapahit lost its control of the sea trade routes, then became disintegrated and subsequently exited the historical stage.

During its lifetime of more than 220 years, Majapahit achieved several notable accomplishments. One of them is the *kakawin* poetical literature, some of which propounds Buddhism with a suggestion of an identification of the essence of God with that of the Hindu–Saiva creed, while other poems are purely Saiva–Hinduism. The credo *bhinneka tunggal ika*, meaning “it is one (although) it is separated,” was coined to refer to the unity of the highest god. The wording originated with Mpu Tantular, a scholar of fourteenth-century Majapahit. That credo has been transposed to the nationalist movement context of modern Indonesia, to mean “unity in diversity.”

The Majapahit era was an experience in religious tolerance and management. High-ranking officials were charged with assignments to take care of different kinds of religious foundations. The *Dharmādhyaksa* was an organization assigned to care for *dharma i dalēm* or *dharma haji* (the king’s foundations) and was directly controlled by the crown. Other foundations, classified as *dharma lēpas*, were taken care of by the king and tended (day-to-day administration) by the following officials. They were *Śaiwādhyaksa* for *parhyangan* and *kalagyan* (Śivaitic foundations); *Boddhādhyaksa* for *kuti* and *wihâra* (Buddhistic foundations); and *Mantri Her Haji* for *karēsyan* (hermitage). The listing in the *Nāgarakertāgama* has 27 *dharma haji*; 140 *dharma lēpas* comprising 95 Buddhistic, 38 Śivaitic, and 7 *karēsyan*; 11 offshoots for each of the three religious groups; and 41 other kinds of religious foundations. Sculpture and the performing arts flourished in the Majapahit era, establishing their typical Javanese styles.

The decline of Majapahit, the last kingdom and empire of the Hindu–Buddhist period of insular Southeast Asia, ushered in the advent of Islam, which for the succeeding centuries till

the present has dominated Gajah Mada’s Nusantara. But Majapahit’s legacy survived in the literature, the arts, culture, and governance throughout maritime Southeast Asia. Bali, whose inhabitants claimed descent from Majapahit, remained aloof from the Islamic wave and has maintained its Hinduized traditions to this day.

MALANG TEMPLES

Hindu-Buddhist Monuments with Javanese Influence

The city of Malang is located in East Java Province. Its environs contain a wealth of monuments. The four main edifices are Candi Badut, Candi Kidal, Candi Jago, and Candi Singosari.

Candi Badut, the oldest structure in the region, dates from the eighth century and is thus contemporaneous with the Gedong Songo temples, but it has been rebuilt several times. Its present state dates from the mid-thirteenth century. It is a simple structure that reposes on a base and is enclosed within a surrounding wall having an entrance pavilion.

Candi Kidal, intended for a Visnuite cult, was built around 1260 in a rectangular walled courtyard. The ground plan of the site is similar to those of ninth-century monuments—namely,

the center of the courtyard is left unoccupied. The level of the courtyard is perceptibly lower than that of the surrounding ground, thus constituting a basin. The temple itself is composed of a simple tower with an entrance on the west; the superstructures above the body are destroyed above the first false story, but they can be accurately reconstructed.

Candi Jago, meant for Buddhism, was built around 1280 but was reconstructed in 1343. It has a very large base divided into three registers, the upper two of which are decorated with reliefs. The sanctuary would have had a tower like that of Candi Kidal, but everything above the body is now destroyed.

Candi Singosari was built at the end of the thirteenth century in the capital of the Singosari dynasty (1222–1293). Work on it stopped when the city was sacked. It consists of a temple with cruciform plan in which there is a central cella and a west-facing porch. Smaller sanctuaries are at the other cardinal points. The edifice is the base of a tower of which nothing more remains than the body of the structure decorated with four niches. The temple was intended for a cult of Siva, with an iconographic program similar to that of the central temple of Prambanan.

The builders of the thirteenth century near Malang, remaining very close to the architecture of earlier centuries—Candi Sembodro in Dieng has the same plan as Candi Singosari—entirely altered the appearance of the Hindu and Buddhist temples, the decoration becoming more explicitly symbolic.

MALAY COLLEGE, KUALA KANGSAR (MCKK) **“Eton of the East”**

The sultans of the four Federated Malay States (Perak, Selangor, Negeri Sembilan, and Pahang) led by Sultan Idris Murshidul 'Azam Shah of Perak, had successfully convinced the British to set up a residential school for the children of the Malay elite. They had felt the need to educate their children so that they could later become efficient bureaucrats. The construction of the school, which was built on a 30-acre (1.2-hectare) site in Kuala Kangsar, the royal town of Perak, was started in 1905 and was completed four years later.

The college employed British educationists to head the college. The first was William Hargreaves, the former head of the Penang Free School, the oldest English school in Malaya. In 1905 the first batch of fifty students was enrolled. This number was gradually increased, and later was also to include children of ordinary Malay subjects who did very well in public examinations set by the government. They were given English education following the syllabus of schools in Britain. Subjects such as British history, literature, geography, and mathematics were taught, using English as the language of instruction. Later, pure science was introduced. The students, as in English schools elsewhere in the country, were being prepared to sit for the Senior Cambridge Examination, which was endorsed and certified by Cambridge University of England. The best achievers in this examination were allowed to continue for further studies at any university in Britain.

Besides learning English subjects in the classrooms, the students were taught Western/European etiquette and ethics, especially in the ways they dressed, ate, spoke, and spent their leisure. The first swimming pool in Perak, constructed in 1924, was built here. Other traditional British sports were also introduced here, and the students were proud to have become champions in rugby, soccer, cricket, hockey, tennis, squash, basketball, badminton, athletics, and swimming.

Enrollment in the college has always been very selective, based on academic excellence. Graduates were very often employed by the government in the Malayan, later Malaysian, Civil Service, forming the Malay bureaucratic

elite. They have constituted the “Who’s Who” in Malaysia up to the present day. The Malay College, Kuala Kangsar, popularly known by its acronym MCKK, is also dubbed the “Eton of the East.”

MALAYAN COMMUNIST PARTY (MCP)

The forty-one-year-old armed struggle of the Malayan Communist Party in Malaya (Peninsular or West Malaysia) ended in 1989. The party dissolved itself and disbanded its armed forces at the Thai-Malaysian border, where they had taken refuge since 1960. The lack of popular support, military reverses, and the collapse of international communism brought about its end. The party had reached an agreement with the governments of Malaysia and Thailand on a ceasefire, and permission was given for its members to return to civilian life in the two countries. The MCP operated mainly in Malaya, one of the three component states that make up the nation-state of Malaysia. The only time it secured official recognition was in 1941, when the British colonial government accepted its offer of volunteers and labor services after the Japanese army began its invasion of Malaya. In 1948 it was prohibited again when it launched an armed rebellion against British rule.

The MCP originally began its activities in the country in 1925 as an overseas branch of the Chinese Communist Party (CCP). In 1930 it became an independent organization, under the direction of a Vietnamese communist who was an agent of the Moscow-based Communist International (Comintern), Nguyễn Ai Quoc

(better known as Hồ Chí Minh [1890–1969]). Hồ criticized the CCP's earlier role in fostering the growth of a predominantly Chinese communist movement and urged the MCP to become a genuinely multiracial party to represent the three major races in Malaya: Malays, Chinese, and Indians. Throughout its history, however, the MCP failed to shake off this CCP legacy. It remained to the end a predominantly Chinese party. In 1930, following the coordinated arrest of Hồ in Hong Kong and police arrests of its leaders in Malaya, the MCP's links with the Comintern were cut off until the end of the Pacific War (1941–1945).

The Japanese occupation of Malaya (December 1941 to September 1945) allowed the party to build up its strength and popularity, especially among the Chinese population who suffered from the Japanese army's harsh policies because Japan was at war with China. The British authorities in Malaya had trained the MCP's volunteers as guerrillas to be left behind enemy lines. These volunteers later formed the nucleus of its resistance force, the Malayan People's Anti-Japanese Army (MPAJA). In 1944 the wartime British South-East Asia Command (SEAC), based in Kandy in Sri Lanka, reestablished contacts with the MPAJA and requested its assistance in its plan to recapture Malaya. In return, the British provided funds, supplies, and arms to the MPAJA and were allowed to send special forces into its jungle camps. The guerrillas' military services, however, were not needed in the battlefield when Japan surrendered in August 1945, after the atomic bombs were dropped on Hiroshima and Nagasaki.

When peace returned to Malaya, the MPAJA disarmed. The MCP was allowed to operate legally for the first time. Many of its members, however, were jobless and had problems adjusting from conditions of war to peacetime. They were frequently involved in street demonstrations and labor strikes that were quickly suppressed by the postwar British Military Administration (BMA). In 1947 rivals in the party exposed the party's secretary-general, Lai Tek (Loi Tek), as a British secret agent. He, however, managed to escape into hiding with all the party's funds. His policies of fostering "peace and cooperation" with the British administration were abandoned. The party's new leaders, headed by Chin Peng (1922–), who was Lai Tek's assistant, adopted a militant line.

The British government returned to Malaya with constitutional plans for a unitary state. It also offered citizenship and political rights and promised self-government to the country's multiracial population. The MCP showed little interest in these proposals, although the majority of the Chinese population stood to gain equal political rights with the indigenous Malays. As social unrest continued to spread throughout the country, the MCP took advantage of these conditions to prepare for revolution. When violence attributed to the work of communist agents escalated, with the murders of Chinese businessmen and European managers in rubber estates, the British government declared a state of emergency in June 1948. In response, the MCP announced an armed uprising against British rule and stated that it would struggle for Malaya's independence. It called on former members of the MPAJA to take up arms again and flee to the jungles.

In 1957, to blunt the communists' propaganda that they were a nationalist movement, Britain granted Malaya independence and handed over power to a noncommunist multiracial government, formed by a coalition of communal parties led by Tunku Abdul Rahman Putra Al-Haj (1903–1990), whose members had been elected by the people in the country's first general elections in 1955. In December 1955 the Tunku (the Malay word for prince) held talks with MCP leader Chin Peng. He urged the communists to lay down their arms. Chin Peng asked for the MCP to exist as a legal organization and insisted that communist insurgents who laid down their arms should not be detained and screened by the police. When the Tunku rejected both demands, the talks broke down. Chin Peng and the other communist delegates returned to the jungles to resume their armed struggle.

The guerrillas' biggest success during the Emergency "war" was their assassination of the British high commissioner of Malaya, Sir Henry Gurney, in 1951. Gurney was on his way to Fraser's Hill in the highlands of Pahang state when his car was ambushed.

In 1960 the Tunku's government lifted the state of emergency in Malaya, as the communist threat had receded. Most of the communist forces had withdrawn to the northern jungle areas of the Thai-Malayan border. Until 1989 the party made its presence felt in frequent

skirmishes with the government's security forces, in armed attacks on public development projects, and in assassinations of government officials.

MALAYAN EMERGENCY (1948–1960)

Defeating Leftist Insurgency

The Malayan Emergency, which lasted from 16 June 1948 to 31 July 1960, began when the Malayan Communist Party (MCP) unsuccessfully attempted to overthrow the government of Malaya. The MCP primarily drew support from the Chinese community, whereas the Malay community actively opposed it. Led by Chin Peng (1921–), the MCP appeared to have the initiative in the Emergency's early years. However, its support base was eroded by the resettlement of half a million Chinese squatters under the Briggs Plan. From 1952 to 1954, Lieutenant General Gerald Templer (t. 1952–1954), as high commissioner and director of operations, galvanized the government resources into victory. His "hearts and minds"

strategy integrated social issues, politics, and the economy into the counterinsurgency campaign against which MCP responses proved inadequate. Under increasing military pressure and denied material support, the MCP's insurgency became increasingly untenable. By 1961, remnants of the MCP finally withdrew to the Thai border area.

The MCP had emerged from the Pacific War (1941–1945) with a committed guerrilla force of over 6,000 and a strong support base among rural squatters. Overwhelmingly Chinese in membership, the MCP had little appeal to Malays, who were fearful of a Chinese takeover.

The MCP gained support during the turmoil of the postwar period, with an economy troubled by shortages of goods, corruption, poor wages, and high prices. Supporters included squatters in forest reserves who resisted, sometimes violently, British attempts to restrict their activities and many Chinese who felt alienated at the defeat of the Malayan Union proposals that had promised them easier citizenship. Under its moderate secretary-general, Loi Tek (Lai Tek), the MCP worked through mainly urban-based front organizations and industrial action, controlling the Pan-Malayan Federation of Trade Unions (PMFTU).

After Loi Tek was exposed as a Japanese and British agent in March 1947, leadership passed to Chin Peng, and the MCP adopted a more militant industrial strategy the following November. This change in policy coincided with increasing militancy outside Malaya, with the Soviet foreign minister Andrei Zhdanov declaring the world divided into two ideologically hostile camps. The government reacted with arrests and increasing control of trade union activity.

Early in 1948, the MCP realized that armed struggle was inevitable. At the same time, the government's intelligence network was downplaying the MCP threat. Nevertheless, in June, the government outlawed the PMFTU. Fearing further crackdowns, the MCP commenced preparations to decamp to the jungle. On 16 June 1948, armed elements of the MCP killed three European estate workers at Sungei Siput, Perak. Two days later, the government declared a state of emergency.

The MCP was caught by surprise, and several senior members were arrested. Neverthe-

less, jungle camps were established within reach of the group's support network, the Min Yuen (People's Movement), among some half million Chinese squatters who provided recruits, food, supplies, and intelligence. They obtained arms and ammunition from hidden Pacific War caches or captured from the security forces and relied on couriers or the regular mail for communication. The MCP's military arm, the Malayan People's Anti-British Army (MPABA), which was renamed the Malayan Races Liberation Army (MRLA) in February 1949, rapidly gained prominence in western Malaya.

The MCP's strategy was to establish "liberated areas" from which to capture towns and instigate a general revolt. During the ensuing campaign of economic disruption, MCP members slashed rubber trees and destroyed equipment, and they assassinated estate managers, police, and others. In 1948 and 1949, MPABA/MRLA incidents totaled 2,716, rising to 4,739 in 1950 (Short 1975: 507). Recruitment of new MRLA members more than offset the loss of 2,842 individuals from 1948 to 1950 (killed, captured, or surrendered) (Short 1975: 507), and MRLA strength rose from 5,000 in 1949 to 8,200 in 1951 (Coates 1992: 73, n. 46).

Malaya's rubber and tin industries were Britain's largest earners of foreign exchange, vital for both Britain's and Malaya's postwar economic recovery. This fact ensured Britain's active resistance to the MCP's threat. However, the government's response was initially indecisive and hampered by insufficient resources. The new high commissioner, Sir Henry Gurney (t. 1948–1951), was criticized for failing to realize the gravity of the Emergency. The army and police were unprepared to fight a counterinsurgency war. Poor intelligence and a weak police–army liaison seriously limited the ability to make an effective military response.

The government resorted to coercion, detention, and deportation to China. The bulk of this work fell to the police. The Malayan police force, however, was too small and inadequately armed and equipped to fully meet the MCP threat. A new force of over 40,000 special constables (mostly Malays) was established to guard estates and mines, but inexperience and inadequate training limited their effectiveness. The government also recruited police with experi-

ence in Palestine, but their methods alienated many. The MCP appeared to have the initiative.

It was not until 1950 that a director of operations, Lieutenant General Sir Harold Briggs, was appointed. His plan (the Briggs Plan mentioned earlier) addressed the Emergency's underlying social, political, and economic causes and laid the basis for the government's eventual victory. The plan aimed to ultimately starve out the MCP members by eliminating their support base. Squatters were resettled en masse in secure "New Villages"—by 1952, over 300,000 were resettled (Stubbs 1989: 102)—and estate and mine workers were similarly "regrouped." The Police Special Branch was enlarged, and the Joint Intelligence Advisory Committee was established. However, the security forces continued to be hampered by the paucity of high-quality intelligence. Militarily, tactics now avoided broad-sweeping operations in favor of concentrated ones. Briggs's control, however, was frustrated by an indirect command structure.

As the Briggs Plan took effect, reactive MRLA attacks increased markedly and in October 1951 caused the MCP to adopt a major new strategy. The MCP also found its original terror tactics had alienated potential supporters. In order to increase their popular support, MCP members emphasized political work through front organizations above the military struggle (MRLA incidents fell from 564 in October 1951 to just 99 in April 1953) (Coates 1992: 193, 197). They countered the government's operations to deny them food by cultivating food at bases deep in the jungle. They were also able to win over the support of the Orang Asli, various aboriginal groups. The MCP utilized the Orang Asli as a source for food and natural medication, safe havens deep in the forest, and intelligence.

In 1951, after 504 deaths among the security forces and with the MRLA seemingly unchecked, public confidence in the government plummeted. On 6 October 1951, Gurney was ambushed and killed. Briggs retired in November, and both the director of intelligence and the police commander departed Malaya. The fortunes of the government had now reached their nadir, and the British government needed to drastically change its approach.

The British government appointed Lieutenant General Sir Gerald Templer (1898–1979)

as both high commissioner and director of operations, duties he commenced in February 1952. Templer's forceful and inspirational personality injected a new sense of purpose and confidence into the antiguerrilla struggle. By the time he left in May 1954, government forces had secured large areas of Malaya, and complete victory was in sight.

Fortuitously for Templer, the Malayan economy in 1952 was booming. The Korean War (1950–1953) had caused tin prices to almost double and rubber to rise by over 400 percent. The resulting increased revenue helped fund the antiguerrilla campaign. For the general population, rising incomes and low unemployment diminished their sense of dissatisfaction.

Templer considered the "hearts and minds" battle to be even more important than the military battle, and he succeeded in largely neutralizing potential support for the MCP. Conditions in the New Villages greatly improved. Villages that supported the government were rewarded, and recalcitrant ones were punished. The institution of elections for village councils and higher levels of government aided in the building of a united nation of Malaya and eventual independence.

All civil and military resources were coordinated to defeat the MCP. Efficient decision-making bodies and processes were established. A revitalized Police Special Branch provided military planners with high-quality intelligence. Sustained, systematic operations against the Min Yuen complemented smaller-scale patrolling against an increasingly fragmented MRLA. Radio, films, leafleting, and aerial broadcasting disseminated sophisticated propaganda. Constant pressure caused increasing guerrilla surrenders and subsequently more intelligence and further inroads against the insurgent forces. From December 1952, a permanent security force presence was maintained in a system of forts deep in the jungle in order to win over the Orang Asli who still supported the MRLA. Positive contact, security from the MRLA, medical facilities, and trading stores were real inducements that the MCP could not match.

In September 1953, Templer announced the first "White Area" (in Melaka), wherein restrictive Emergency regulations would be lifted. This return to normalcy was a major psychological boost and provided a very good reason to sup-

port the government. By 1956, almost half of Malaya's population lived in White Areas.

The MCP now faced some serious dilemmas. Min Yuen support was removed, the deep-jungle cultivations were being destroyed, and difficulties with north-south communications had caused the MCP to split its command between Chin Peng on the Thai border and Hor Lung in the south. As well, the electoral dominance of the Alliance Party and its promotion of independence had robbed the MCP of its political initiative.

With the wider communist world extolling peaceful coexistence, the climate for negotiations was ripe. On 28 and 29 December 1955, Chin Peng and Tunku Abdul Rahman (1903–1990) met at Baling, Kedah. However, with Chin Peng's insistence on legal recognition of the MCP and Tunku Abdul Rahman's equal insistence on an MCP surrender, the talks broke down.

By 1957, the MRLA, though numbering over 2,000 (Short 1975: 489), was split into isolated groups, and their guerrilla existence was increasingly untenable. This led to a rapid increase in surrenders, which rose from 134 in 1956 to 209 in 1957 and 502 in 1958 (Short 1975: 508), including that of Hor Lung, the MRLA's southern commander.

By 1958, the military conflict was effectively over. Only 868 guerrillas remained with Chin Peng, who had retreated to the Thai-Malayan border area or southern Thailand. The security forces began a protracted mopping-up campaign. On 31 July 1960, the government declared the Emergency at an end. Throughout the Emergency, 6,711 insurgents were killed and 3,993 were captured or surrendered; 1,346 police and 519 soldiers were also killed, and a further 3,283 civilians were either killed or missing (Coates 1992: 202). Finally, on 2 December 1989, Chin Peng signed a peace agreement with Malaysia and Thailand.

The Malayan Emergency quickly became a model for successful counterinsurgency campaigns. In postcolonial Malaya (Malaysia after 1963), the Emergency presaged the formation of a nation-state that denied a role for left-wing politics but had unprecedented authority throughout Malayan/Malaysian society. Communalism retained its importance, but new sociopolitical institutions constrained its potential for divisiveness. The opening of the archival

record has allowed historians new insights into the Malayan Emergency, including its influence on nation building, the government's use of sociopolitical initiatives in counterinsurgency, and the paramountcy of the internal causes of the Emergency.

MALAYAN/MALAYSIAN CHINESE ASSOCIATION (MCA) (1949)

The Malayan Chinese Association (MCA) officially came into being on 27 February 1949 as an outcome of the rapid political changes that took place in Malaya after the Pacific War (1941–1945). The formation of the Federation of Malaya (1948) and the Emergency (1948–1960) adversely affected the Chinese community. This situation prompted sixteen Chinese members of the Malayan Federal Legislative and Executive Councils led by a former Kuomintang administrator and general in China, Leong Yew Koh, to form a united body. The primary objective was to find means to safeguard the interests of the Chinese community and to cultivate the goodwill and confidence of the government and the Malays. It was also to some extent a reaction to cleanse the negative image of the Chinese produced by the terrorist acts of the Malayan Communist Party (MCP), whose members were mainly Chinese.

The formation of the MCA was timely and encouraged by the British government, which was looking for ways to solve the complex political and social situation after the war. That the MCA was close to the government is seen in the fact that its constitution stipulated "the Chinese members of the (Malayan) Legislative and Executive Councils would automatically become officers of the Association." That the organization was intended to encompass as many Chinese as possible is seen in the fact that it was opened to "all Chinese above the age of 18 who have lived for at least 5 years continuously in Malaya and intend to make Malaya their permanent home." As a social and welfare organization, the MCA allowed its members to join any political party they chose. The wealthy

English- and Malay-speaking Tan Cheng Lock (1883–1960), who had been active trying to unite the Chinese and had proposed the formation of the Malayan Chinese League a year before, was elected its first president. It was claimed that by the middle of 1951, 300,000 Chinese had become members of the MCA.

The MCA was initially formed to help lessen the predicaments of Chinese squatters harmed by the Emergency. It financed itself through donations and an attractive lottery scheme endorsed by the government. As is indicated in its constitution, its primary aims were promotion of interracial harmony, the welfare of the Chinese, and the peaceful and orderly progress of Malaya. These were the concern of the wealthy progovernment and mainly English-educated founders of the MCA. To achieve these aims MCA demanded that Chinese squatters be given “a real stake” in Malaya, that Chinese be given equal citizenship rights, and that non-Malays be accepted into the Malayan Civil Service (MCS). The MCA became a full-fledged political party two years later, when Tan Cheng Lock drafted a Memorandum of the Reorganization of the MCA toward the end of 1951. Thereafter, the MCA struck a coalition with the United Malays National Organization (UMNO) to form the UMNO-MCA Alliance, which participated in the Kuala Lumpur municipal election in February 1952. Apart from those who had joined the MCP, for the first time a substantial number of Chinese of diverse backgrounds and dialects began to work together toward their common stake in Malaya. For the long-term interest of the Chinese, the MCA incessantly and in various ways worked toward the goal of getting as many Chinese as possible Malayan citizenship. As a result of those efforts, the more stringent prerequisites for citizenship under the 1948 Federation of Malaya Constitution were relaxed, and by 1959 the Chinese population with Malayan citizenship was three times what it had been in 1955.

This new development, however, caused strains in the MCA. As more newly domiciled, Chinese-educated, and younger members became active in the party, they began to question the long-term direction of the MCA and started to make political demands that challenged the very basis of the Alliance that recognized the special position of the Malays and the

Malay language. At the annual Central General Committee meeting in March 1958, Tan Cheng Lock and the old guards were replaced by the younger and more outspoken group led by the newly elected president, Dr. Lim Chong Eu (1919–), and by Secretary-General Too Joon Hing. The new leadership demanded that the MCA be allotted forty seats in the 1959 parliamentary elections, rather than the fifteen they had received in 1955. This was disagreeable to UMNO, which thus supported members of the old guard, resulting in the resignation of Dr. Lim Chong Eu (b. 1919) and the return of the moderates led by Tan Siew Sin (1916–1988) in 1961.

The MCA that had helped to form the Alliance Party in 1954 continued to be an essential and influential member of the ruling party, the Alliance, and, since 1974, the larger coalition, the Barisan Nasional (National Front).

The MCA was often challenged by other Chinese-based parties, including the People's Action Party (PAP) when Singapore was in Malaysia (1963–1965), and the Democratic Action Party (DAP), as well as from other quarters such as the People's Progressive Party (PPP). Despite these rivalries and occasional setbacks from within and without, the MCA managed to survive and retain the favor of UMNO, which considered it the most reliable among the Chinese political parties in Malaysia.

MALAYAN/MALAYSIAN EDUCATION

There was little to speak of in the way of formal education and schooling prior to the establishment of colonial administration—namely, the British in Peninsular Malaysia, the Brookes (a family of English rajahs) in Sarawak, and the British North Borneo Chartered Company in British North Borneo (Sabah). Consequent of the *laissez-faire* attitude of the colonial governments, there evolved a plural educational setup of four different forms of school systems whose recipients possessed different academic and vocational qualifications, mental outlook and worldview, and long-term loyalties. Compounding the situation were not only the peoples of the three territories segregated into various ethnic communities but also divisions in terms of sociocultural background, religious adherence, socioeconomic status, and spatial distribution. Malaysia constituted the Malay Peninsula (West/Peninsular Malaysia) and the Borneo territories of Sabah (until 1963 referred to as North Borneo) and Sarawak, the latter two referred to as East Malaysia.

Therefore, following independence (Peninsular Malaysia in 1957 and Sabah and Sarawak in 1963), a national system of education with a single school system using a common language of instruction, curriculum, syllabus, textbooks, and served mainly by locally trained teachers, was implemented. The ultimate objective of the Malayan (after 1963, Malaysian) education system is to foster unity through integration of the multiethnic and multicultural population composed of numerous indigenous peoples and long-settled immigrant communities.

The Plural School System of the Colonial Period

During the precolonial period, a common practice among Malay-Muslim communities was the *pondok* (lit.: hut, shack) system, whereby young boys gathered around a *guru* (teacher) to recite Arabic verses from the Koran. Informal education in sustaining a subsistence livelihood was the norm among the var-

ious indigenous communities of hunter-gatherers and shifting cultivators in Sarawak and British North Borneo.

Overall, little interest was paid to the issue of education and schools by the three colonial governments in their respective territories. But of the four school systems that subsequently evolved independently, Malay and English-language education received comparatively more attention than Chinese and Tamil education, the last mentioned being grossly neglected. Political motives spurred the involvement of the colonial authorities in Malay and Chinese education; for English-language education, it was economic concerns.

Malay Education and Government Malay Schools

Curiously, the Malay language was not taught under the *pondok* system. Apparently the Malays themselves regarded its instruction unnecessary, owing to its use in daily secular life. However, admiration for the Malay language by colonial administrators and European Christian missionaries resulted in Malay being formally taught in colonial government Malay schools.

Government Malay schools offered four years of elementary education with instruction in the three Rs—that is, basic reading and writing skills and simple arithmetic. Anything above this elementary level of education was deemed unnecessary, as great care was taken in order that the Malays not be enticed from farming and fishing in the *kampung* (village) by higher ambitions encouraged by their education. Thus products of Malay schools possessed a rudimentary grasp of the three Rs and upon completion of their schooling returned to their *kampung* as literate farmers and fishermen.

Notwithstanding the free education offered by the government Malay schools, attendance remained poor and irregular. The majority of Malays did not see the practical value of secular education. Similarly, attempts by Anglican and Catholic missions to provide education in vernacular schools in the rural districts of Sarawak and British North Borneo using Malay, Iban, and other indigenous languages proved abortive, owing to poor response. Muslim and pagan indigenous peoples were apprehensive of Christian mission schools.

Chinese Education and the Chinese Schools

Scholastic attainment had always been the ultimate aspiration of the Chinese, among whom the scholar-bureaucrat was highly esteemed in the traditional social order. Traditional Chinese communities viewed education in sociocultural terms rather than for achieving economic or political ends.

Until 1920, the Chinese schools were established along dialect lines—namely, Hokkien, Teochew, Cantonese, Hakka (Kheh), and Foo-chow. Books and teachers were imported from China, although the literary-based curriculum had little practical use. Nonetheless Chinese schools in urban and rural settings were well attended by boys and, to a lesser extent, by girls. Dialect schools were built and funded mostly by clan organizations and philanthropists. The London Missionary Society (LMS) and the American Methodist Mission were particularly active promoters of Chinese schools.

Following the May Fourth Movement (1919; student demonstrations against Japan's acquiring German possessions in Shandong province after World War I; a movement toward modernization), the republican government adopted *Kuo-yu*, or vernacular Mandarin, as the national language in place of the classic literary script. Although the changeover was widely adopted, Chinese schools in Sarawak remained as dialect schools.

The Chinese schools generally offered a six-year elementary education with some of the larger urban schools having senior middle three (the third year in secondary education for fifteen- to sixteen-year-olds) and high school level. Students wishing to pursue tertiary education had to go to China. The adoption of *Kuo-yu* was followed by the importation of the new curriculum, syllabus, and textbooks that were introduced by the republican government. The imported textbooks, curriculum, and syllabus taught by Chinese-born and -trained teachers produced graduates who were China-oriented, patriotic toward the motherland, and particularly proud of their "Chineseness." The Nationalist Kuomintang (KMT) and the Chinese communists exploited the patriotic vulnerability of the students for their own political ends.

The Chinese schools became hotbeds for anticolonial activities. The colonial authorities responded with greater control (such as regis-

tration of schools and teachers). The colonial governments resorted to providing grant-in-aid to Chinese schools; in return the schools were subjected to government inspection. An inspector of Chinese schools was appointed for the Federated Malay States (FMS) in 1924.

There were few employment prospects for products of Chinese schools apart from the limited openings in Chinese businesses that recruited through familial, clan, or dialect relations. Nonrecognition by the colonial governments of the qualifications of Chinese school graduates drove them to seek solace in anti-colonial elements, including leftist groups.

Tamil Education and Estate Schools

Tamil schools catered to the children of South Indian laborers who were brought into the Straits Settlements during the nineteenth century for the sugar, coffee, and tea plantations. The schools were established on the plantation premises and taught a rudimentary level of literacy.

The booming rubber industry during the early decades of the twentieth century brought large numbers of Tamil workers to the FMS. In 1923 the colonial government introduced the Labour Code into the FMS, inter alia requiring estate employers to establish schools at their own expense for the education of the children of their workers. In return for a government grant-in-aid, the schools were subjected to regular inspection. Known as Estate Schools, they were staffed largely by untrained teachers offering a poor-quality elementary education of the three Rs of no more than four years. Despite the appointment of an inspector of Tamil schools in 1930, little was done for Tamil education.

Isolated in the estate environment and receiving little instruction, recipients of Tamil education had little option other than continuing to work on the estates as their illiterate forefathers had done.

English-Language Education and the English Schools

The colonial governments were particularly cautious in offering English-language education, lest aspirations become unfulfilled. Because of this concern, teaching of the English

language was denied to government Malay schools. However, as the colonial bureaucracy and European businesses expanded, there was an apparent need for locally trained English-educated clerical personnel. It was for this purpose alone that the colonial governments took an interest in English-language education.

A number of “free schools”—that is, schools opened to all ethnic groups regardless of religious adherence—were initiated and funded by contributions from philanthropists, public subscriptions, and a token grant from the colonial government. Notable examples were the Penang Free School (1816), the Singapore Free School (1834, later the Raffles Institution), and the Malacca High School (1826). All such schools subsequently became government schools.

There were only a few government English-language schools in the Malay States, notably Victoria Institution (1893) in Kuala Lumpur and the Malay College (1905) at Kuala Kangsar (MCKK). The former had an overwhelming Chinese enrollment, while the latter catered with full boarding facilities to the sons of sultans and chiefs in an attempt to train a Malay administrative elite.

Christian missionary bodies such as the LMS, the American Methodist Mission, the Anglican Church, and the Roman Catholic Church were particularly active promoters of English-language education. Their undisguised objective of propagating Christianity did not deter non-Christian pupils from partaking in the English-language education their schools offered. The missionaries achieved a breakthrough in promoting female education, especially among the conservative Chinese in the Methodist girls’ schools and the Catholic convent schools.

English-language mission schools were urban-based, with a majority Chinese student enrollment with small numbers of Indians, Sinhalese, Sikhs, and Eurasians. Head teachers and teachers were exclusively European; Chinese, Eurasians, and Sinhalese served as assistant teachers.

Prior to 1891 there was no common curriculum or syllabus among the English-language schools. The emphasis then was to teach the three Rs in English. The larger urban schools offered candidates in competitive examinations for the prestigious Queen’s Scholar-

ships, which started in the Straits Settlements in 1885. When the Cambridge Certificate examinations were introduced in 1891, English-language schools began to adopt a common syllabus based on that of secondary schools in England, offering academic-oriented arts and science subjects.

The English-language schools offered eleven years of education (seven at primary level and four at secondary). The handful of students who attained the Senior Cambridge, if sufficiently wealthy, pursued higher education in Britain. The rest of the majority went on to attain socially respectable clerical positions in the colonial bureaucracy or to join European companies and banks.

Products of English-language schools possessed an Anglo-centric worldview far divorced from the local reality. Acquiring English manners and taste, some developed into Anglophiles and proved to be loyalist to the colonial regime.

Unity through Education

The plural school system in the pre-1941 period posed a major hindrance to unity and integration of the multiethnic population. A landmark government report with recommendations that became public policy was prepared in 1956 by a committee chaired by the minister of education of the Federation of Malaya, Abdul Razak bin Dato Hussain (1922–1976). The Razak Report sought to establish a national system of education with Malay, the acknowledged national language, as the medium of instruction. A common syllabus for all schools and the use of Malayan-centric textbooks were imposed throughout the federation.

A similar policy direction (English as the single language of instruction, common syllabus, common textbooks) was adopted by the colonial administrators in British North Borneo and Sarawak after they became British Crown colonies in 1946. The conversion exercise to English as the language of instruction of all secondary schools from the mid-1950s sparked controversy and leftist-backed opposition among the Chinese community. When Sarawak and British North Borneo joined Malaysia in 1963, another changeover in the language of instruction, from English to Malay, was instituted. A longer grace period than in Malaya was given to the conversion.

Following the creation of Malaysia in 1963, two issues dominated the educational landscape. The first was the changeover of the language of instruction from English to Malay in all levels, from primary schools to tertiary institutions. By the mid-1980s, the school curriculum and university courses were conducted in Malay. There was dissatisfaction, particularly among Chinese educationalist groups, but no untoward actions were taken to oppose the government. The second issue was the implementation of the quota system in university placements for *bumiputera*—that is, Malays and other indigenous peoples of Sabah and Sarawak. This affirmative action was in line with the aims of the National Economic Policy (NEP) implemented following the May 13 incident of 1969.

MALAYAN/MALAYSIAN INDIAN CONGRESS (MIC)

The Malayan Indian Congress (MIC) was formed in August 1946 at a meeting of about 600 Indian delegates representing various Indian organizations in Malaya. Its constitution was modeled after that of the Congress Party of India, and the resolutions passed were in general Indian in orientation. Among other things it proposed closer India-Malaya economic ties and that Hindi be cultivated as the national language of Indians in Malaya. In November 1946, John A. Thivy (b. 1904), the MIC president, led an MIC delegation to the Congress Party of India annual meeting in Meerut, Uttar Pradesh, and in July 1947, Thivy resigned to become India’s representative to Malaya. Budh Singh, the next president, continued the India orientation of MIC and, like Thivy, Budh Singh later returned to India.

Under K. Ramanathan (t. 1950), MIC began to be more Malayan in outlook. The Malayan-born K. L. Devaser, who became president in 1951, followed along the same lines and was responsible for bringing MIC into the Independence of Malaya Party (IMP) and later the Alliance in 1954.

The Indian community in Malaya made up about 10 percent of the population but was grossly divided ethnically, educationally, socio-economically, and in political orientation. MIC thus had to compete for support and patronage of the Indian community with other Indian organizations, such as the Malayan Indian Association (1935) and the Federation of Indian Organizations (1950). The situation, however, changed when Veerasamay Thirugnan Sambanthan (1919–1979), a Tamil estate owner from Ipoh, Perak, became president in 1955. MIC was then a full-fledged member of the Alliance. More Indians were acquiring Malayan citizenship, and more Tamils who made up the largest component of Indians in Malaya were becoming active in the leadership of MIC.

Sambanthan's close relationship with Tunku Abdul Rahman Putra Al-Haj (1903–1990), the UMNO president and prime minister of Malaya/Malaysia, facilitated MIC's role in the government and paved the way for its continuing existence.

MALAYAN PEOPLE'S ANTI-JAPANESE ARMY (MPAJA)

The Malayan People's Anti-Japanese Army was the wartime armed guerrilla force of the predominantly Chinese Malayan Communist Party (MCP) that fought the Japanese Imperial Army during the latter's occupation of Malaya from 1941 to 1945. Malaya (the Malay Peninsula) is one of three territories that make up the present nation-state of Malaysia, the other two being the Borneo territories of Sarawak and Sabah. The MCP operated mainly in Malaya.

MPAJA in Chinese was *Ma-lai-ya ren-min k'ang rih-jun*. Among the Malay population it was known as *Bintang Tiga* (Three Stars), because of the three yellow stars on its red flag, which the MPAJA claimed represented the three major communities in Malaya—Malays, Chinese, and Indians. Despite this claim, it succeeded in recruiting very few Malay and Indian members and remained overwhelmingly Chinese. The MPAJA comprised eight semi-independent regiments that were located in eight

different states of the Malay Peninsula. The initial batches were recruited at the last minute, just after the Japanese invaded Malaya in December 1941, by the MCP at the British Special Operations Executive (SOE) Training School in Singapore to fight as guerrillas behind enemy lines. They were later brought under a central command headed by Liu Yau, chairman of the MCP's Military Committee. After the fall of Malaya, Britain's wartime South-East Asia Command (SEAC), based in Ceylon (Sri Lanka), lost contact with the MPAJA, but in mid-1944, SEAC's clandestine Force 136 landed agents by submarine off Malaya's west coast. The agents made contact with the MPAJA in the jungles and reported MPAJA strength at between 3,000 and 4,000 (Mountbatten 1969: 301); when the MPAJA was disarmed at the end of the war, however, some 7,000 members handed over their arms, mostly seized from the Japanese (Purcell 1949: 262). About 2,000 new arms were supplied by SEAC, but not many of these were turned in (Malaysian National Archives); they were believed to have been buried in deep jungle for use in the near future. For the entire occupation period, the MPAJA claimed to have eliminated 5,500 Japanese troops, police, and local volunteers; Japanese records, however, admit to only 600 killed or wounded, and the local police 2,000 (Malaysian National Archives). The MPAJA's guerrilla tactics and training, including the use of women recruits, were patterned on the anti-Japanese guerrilla war of Mao Zedong's Red Army in China. When its members were demobilized in December 1945, the MPAJA formed and enrolled most of them in a MPAJA Ex-Servicemen's Association.

These former servicemen were reactivated in June 1948 when the MCP launched its armed insurrection to "liberate Malaya from British rule" and establish itself as a nationalist movement to fight for independence. Its uprising (termed the "Emergency") in Malaya coincided with other armed communist uprisings in Burma (Myanmar), Indonesia, and the Philippines in 1948. Controversy has raged among scholars over whether local factors or external factors such as the Moscow-dominated Communist International (Comintern) were responsible for these Southeast Asian uprisings.

MALAYAN UNION (1946)

A Failed Proposal

The Malayan Union (MU) was a new policy of the government of Great Britain concerning Malaya after the Japanese surrender in August 1945. It was laid out by the Malayan Planning Unit (MPU) set up in London after the Japanese occupation of Singapore in February 1942 and was announced by the secretary of state for the colonies in the House of Commons on 10 October 1945. Although the express aim of the policy was to “promote the sense of unity and common citizenship” in preparation for eventual “self-government within the British Commonwealth,” it was motivated more by Britain’s own strategic and power considerations. To achieve these objectives, Britain had to annul previous agreements with the Malay state rulers and introduce “fresh constitutional measures for the Straits Settlements.” The MU was to consist of the nine Malay States in the peninsula plus the Straits Settlements of Penang and Melaka. For economic, political, and strategic reasons, Singapore was to be a separate colony of the British Crown.

To realize the MU, Sir Harold MacMichael was dispatched as a special representative to Malaya to “invite” the Malay rulers to conclude “a formal agreement by which he [the Ruler] will cede full jurisdiction” of his state to “His Majesty’s Government.” Immediately after arriving in Malaya on 11 October, MacMichael rushed to meet the nine Malay rulers, starting with the sultan of Johor. By 1 January 1946 all

the signatures had been secured and the stage was set for the implementation of the MU.

Two white papers were published—on 22 January and 4 March—detailing the precise nature of the new arrangement. The MU was to have a legislative council composed of a maximum of twenty-two official and twenty-one unofficial nominated members presided over by the governor, who held veto powers in the council. There was to be an executive council of six official and five unofficial members, the latter to be appointed by the governor. No provision was made to introduce the electoral process in the Malayan Union. A council of sultans consisting of the Malay rulers, the chief secretary, the attorney general, the financial secretary, and the governor (as its president) was to be set up and to meet twice a year. The council would consider legislation relating only to Islamic religious matters that had been approved for enactment by the Malay advisory council of any state. The council would also advise the governor on any matter that he might refer to it for discussion or on matters that, with the governor’s prior consent, had been proposed by any sultan.

Every state was to have a council consisting of a resident commissioner as its chairman and of ex officio members, nominated official members, nominated unofficial members, and elected members as might be prescribed by law or regulation. The uniform post of resident commissioner was suggested in place of the prewar post of British resident or advisor in the Federated Malay States and non-Federated Malay States. The state council’s jurisdiction was restricted to local matters only, and its decisions were revocable by the Union Legislative Council. The State Malay Advisory Council comprised the Malay rulers and other Malays appointed by him. Its basic function was to advise the rulers on matters relating to Islam in the state or referred to it by the resident commissioner “with the Governor’s approval,” and to make laws relating “solely to Islamic religion and [that] do not involve taxation or tithes.” Thus at state level, too, even in Islamic affairs, the power of the governor was absolute.

With regard to citizenship, the second white paper provided that all MU or Singapore residents born in either territory before, on, or after the date the order came into force were MU citizens. The same was true of any person

born outside the MU or Singapore but whose father was an MU citizen. Citizenship by naturalization was open to any person eighteen years of age or older who was ordinarily resident in the MU or Singapore on the date the order came into force. Eligibility was accorded those who had resided in either of the territories for ten years during the fifteen years preceding 15 February 1942, on condition that they took the oath of allegiance to the MU.

It is clear from the above that for the first time in Malayan history, there was to be a common citizenship for all in the peninsula and *ius soli* citizenship applicable to all in Malaya irrespective of race, color, or creed. Ironically, although Singapore was excluded from the MU, Singaporeans meeting certain prerequisites were allowed to opt for Malayan Union citizenship.

Reactions and Outcome

The idea of a united Malaya attracted the support of radical politicians and nationalists of all races in Malaya and Singapore. But when the British colonial intentions became more exposed, the radical politicians too rejected the MU. To the Malays and especially to left-leaning political activists, the MU was direct British colonization, and the separation of Singapore was contrary to their struggle for a united and greater Malay polity. For the minority but politically conscious non-Malay activists, the separation of Singapore meant the prolonging of British rule, especially in Singapore, and the diminution of non-Malay influence in the peninsula.

The Malays in general were against the MU for a number of reasons. The MU drastically changed the political status of the Malay States vis-à-vis Britain from “Protected States” of the prewar period to “Colonies.” Political and legislative powers now rested solely with the British government in the person of the governor. Even in Islamic religious matters, the role of the sultan and the Malays was merely advisory. The citizenship provisions of the MU robbed the Malays of their inherent and presumed “political ownership” of Malaya and exposed them to “threats” from the immigrant communities. Very disappointed with the new policy, the Malays accused Britain of betrayal (*khianat* or *pecah amanah*) of Malay trust and loyalty, and of attempting to appease the “immigrants” (namely, Chinese and In-

dians) for its own colonial advantages at the expense of the Malays. The Malays were also annoyed at the manner in which MacMichael attained the Malay rulers’ signatures, which completely surrendered all the political rights of the Malay. The Malay rulers revealed the rather crude nature of MacMichael’s methods not only to the people in Malaya but also to the British public, and in their complaints to the British government. In his letter to Sir Frank Swettenham (1850–1946), former governor and high commissioner, for instance, the sultan of Kedah wrote:

I was presented with a verbal ultimatum with a time limit, and in the event of my refusing to sign the new agreement, which I call the Instrument of Surrender, a successor who would sign it, would be appointed Sultan. Members of the State Council were compelled to sign an undertaking that they would advise me to sign it. I was told that this matter was personal and confidential, and was not allowed to tell my people what had taken place. (Allen 1967: 169)

All the Malay rulers thus insisted that since they had signed the MU agreement under duress, the treaty was null and void. For the first time there was a common political sentiment, peninsula-wide and encompassing all sections of Malay society. Initially peaceful but later aggressive demonstrations involving tens of thousands of Malays started in December 1945, and prewar Malay associations became active again and new ones appeared. In the southern state of Johor, Dato’ Onn bin Jaafar (1895–1962) formed *Pergerakan Melayu Semenanjung* (Peninsula Malay Movement), and in the northern state of Kedah, SABERKAS (Unity) and *Kesatuan Melayu Kedah* (Kedah Malay Union) actively campaigned against the MU.

Apart from speeches criticizing the MU and the British government, some educated Malays expressed their disappointment through the press—especially the Malay press, such as *Majlis*, *Utusan Melayu*, and *Warta Negara*, which became the mouthpieces of Malay sentiment. The Pan-Malaya Malay Congress, held from 1 to 4 March 1946 at the Sultan Sulaiman Club, Kampung Baru, Kuala Lumpur, was the first truly all-Malaya Malay gathering of the postwar period. Representatives of forty-one associa-

tions, including *Kesatuan Melayu Singapura* (Singapore Malay Union) and the radical *Partai Kebangsaan Melayu Muda* (PKMM, National Party of Malay Youth), were present. Declared opened by the sultan of Selangor and chaired by Dato' Onn, the congress unanimously rejected the MU and demanded that the prewar status quo be maintained. The congress paved the way for the formation of the United Malays National Organization (UMNO), which officially came into being on 11 May 1946.

At another gathering, on 30–31 March, the Malay *rakyat* (masses) successfully dissuaded the sultans from attending the installation ceremony of the MU governor, Edward Gent, on 1 April. They also observed a weeklong period of mourning in protest. The installation of the governor-general of MU and Singapore, Malcolm MacDonald, on 22 May 1946 was similarly boycotted. Reports and recommendations made by the British members of Parliament led by Captain L. D. Gammans and Lieutenant Colonel R. D. Rees-Williams, who visited Malaya in May, were also sympathetic to the Malays and critical of the new policy. At the same time in Britain, many prominent former Malayan Civil Service (MCS) officials such as Frank Swettenham, Richard Winstedt (1878–1966), George Maxwell (1871–1959), and Cecil Clementi also spoke against the MU.

Faced with overt opposition, the governor and the governor-general decided to negotiate with the Malay rulers and UMNO. Their 28–30 May meeting in Kuala Kangsar paved the way for further negotiations, which led to the formation of a working committee on 25 July composed of six British officials, four Malay rulers, and two UMNO representatives. Although agreeing on the need for a strong central government to ensure effective administration and progress of Malaya as a whole, the Malay representatives insisted on the retention of some degree of individuality by each Malay state and the promise of eventual self-government. The draft proposal of the Working Committee issued on 24 December was then tabled for the consideration of a consultative committee composed mainly of influential non-Malay representatives. In April 1947 the working committee published the final draft, which became the basis of the Federation of Malaya (*Persekutuan Tanah Melayu*), which officially replaced the MU on 1 February 1948.

Under the new agreement there was to be a British high commissioner in place of the governor and a conference of rulers in place of the council of rulers. The ruler's assent was required on all bills passed by the state council, and the state executive council was to be headed by a *Menteri Besar* (chief minister). The state council was empowered to legislate on matters relating to Islam and Malay customs, and the conference of rulers was to be chaired by one of the rulers himself. New provisions were also made with regard to citizenship. The new arrangement was essentially a compromise between the Malay insistence on their special ownership over Malaya and British pressure for an administratively united Malaya and the acceptance by the Malays of non-Malays as citizens of the new administrative entity.

MALAYS

One of the principal ethnic groups of Southeast Asia, the Malays are the majority community in the nation-states of Malaysia and Brunei and a significant minority in Indonesia and Thailand. Smaller numbers of people who call themselves Malay are to be found in various other parts of Southeast Asia, as well as in Sri Lanka and South Africa. Exactly how the term "Malay" is defined has continued to be an issue of dispute. In fact, the elusiveness of this ethnicity, together with its rich and influential culture, helps to explain the historical significance of the Malays.

Just who were the "Malays"? In the earliest Malay manuscripts, "Mĕlayu" referred specifically to representatives and close associates of the dynasty who ruled the polity of Melaka (Malacca) before the Portuguese conquest of 1511, and later ruled in Johor. In this period, however, ethnicity was a less developed and less potent concept than it later became. People tended to be identified with respect to their relationship to a ruler or to a particular geographic locality. From the sixteenth century, Chinese and European writings increasingly used the term "Malay" with reference to people in what is now southern Thailand, Malaysia, and Indonesia, and this practice may have helped to promote a broader sense of Malay community extending beyond the Johor sultanate.

There had long been good reason for thinking in terms of such a broad community. In speaking of a "Malay nation" (to use Governor Stamford Raffles's [1781–1826] expression), European and Chinese commentators drew attention to a genuine degree of homogeneity among "Malay" groups in the Malay archipelago (present-day Malaysia, Indonesia, and

southern Philippines). Proclaiming the faith of Islam, dressed in jacket (*baju*) and *sarong* (pareo), listening to a similar mythological literature (much influenced by Indian, Persian, and Arabic works), and ruled by rajas and chiefs holding similar titles from one polity to the next were some of the homogenous traits of the Malay. Furthermore, speaking the same language (though with dialectical differences) and writing that language in a remarkably standardized form were the characteristics of a people that conveyed the impression of a cultural community that transcended the multiplicity of often warring rajaships. In the nineteenth century, as the British and Dutch extended their empires across the region, and in an age when "race" came to be employed as a fundamental category in the scientific analysis of humankind, the colonial construction of "Malay" began to crystallize. It further influenced the way Malays thought about their identity.

Colonialists and the new Malay ethno-nationalists also cooperated (and sometimes clashed) in constructing a new historical consciousness—one that incorporated the known narratives of many of the kingdoms of the archipelago, reaching back to seventh-century Śrīvijaya, based in Palembang in South Sumatra. Inscriptions from Śrīvijaya are written in the Old Malay language and use a script based on the Pallava script from India; they contain concepts of allegiance and magic that reveal strong Buddhist and Hindu influence and, in addition, have affinities with the cultural perspectives documented in later Malay States. In the manner of a *boddhisattva*, for instance, the Śrīvijaya ruler offered his "loyal" subjects an "immaculate tantra" and "eternal peace."

Śrīvijaya's influence extended up coastal Sumatra, across to the Riau archipelago and parts of the Malay Peninsula. The achievement of such a wide-flung empire was assisted by Chinese policy: when that country depended on foreign shipping to carry its imports—for example, from the seventh to eleventh centuries—Śrīvijaya was able to establish itself as a tributary state providing a safe base for commerce to China. When Chinese ships began to enter the trade in the twelfth century, going directly to supply centers in the archipelago, the Śrīvijayan entrepôt lost its hegemony.

In the late fourteenth century, when the Chinese moved to restore the tribute system,

there was competition to assume the role of overlord in the western Malay archipelago. A ruling family claiming descent from the rulers of Palembang established a new entrepôt in Melaka on the Malay Peninsula, and eventually they extended their control over a territory comparable to that of Śrīvijaya. Melaka became a thriving port, drawing merchants from China, India, and Southeast Asia and eventually attracting the envy of the Portuguese, who conquered the city-port in 1511. Although pre-conquest Melaka is today presented as a golden age in Malay history, at the time its rulers acknowledged the rivalry of such polities as Aru and Pasai in North Sumatra; such states as Kedah, farther up the peninsula, have not recognized the Melaka heritage in their royal genealogies.

Partly because of the presence of European powers, the kingdoms scattered around the Malay archipelago in the sixteenth to nineteenth centuries do not ever seem to have achieved the imperial strength of Śrīvijaya or Melaka. The spread of Malay culture into the Philippines was also halted by the intervention of Spanish power. But Aceh in North Sumatra, Johor (whose rulers claimed descent from Melaka) in the south of the peninsula, Patani to the north, and Brunei in Borneo were all influential polities, or *kerajaan*. They all attracted numerous traders, generated a distinguished corpus of Malay literature, and possessed similar political institutions and ceremonies, legal culture, personal manners, and religious adherence. Although all of these polities had converted to Islam, or were in the process of doing so, much of their royal ritual and popular custom continued to reveal the influence of animism and Hindu-Buddhism. The sultan, like his Hindu-Buddhist royal ancestor—for instance, in Śrīvijaya—offered his subjects spiritual as well as worldly rewards.

The process of Islamization, which had gathered pace in the fourteenth century and continues today, is an important issue in Malay history. Whether Islamic influence came initially from the east or west, the reasons for adopting Islam; the role of commercial, political, and spiritual factors; the social impact of conversion—all are issues of debate. Some have stressed the common ground between pre-Islamic religious beliefs and Islamic mysticism (Sufism) as facilitating conversion; others ob-

serve that the central role of the ruler in the fourteenth-century Muslim world also happened to be congenial to Malay culture at that time. Against these views, it has been argued that conversion constituted a sharp cultural break rather than the gradual development that the above observations imply.

There is no doubt that religious change brought a degree of cultural and social change, and in the long run it had the potential to be revolutionary. From the sixteenth century, for instance, the impact of Arabic on the Malay language increased substantially. In the nineteenth century, Europeans noted the way Sumatran Bataks, who converted to Islam, changed their clothing, learned to speak Malay, adopted Malay customs, and listened to Malay literature. They were engaged in ethnic as well as religious conversion, which is a reminder of just how fluid Malay ethnicity has been. In recent times this “conversion” has continued in many parts of the archipelago. In the Riau Province of Indonesia, for instance, many Kuantan people have redefined themselves as Malay rather than Menangkabau (Minangkabau).

The most radical impact of Islam was evident in the nineteenth century in the growth in influence of *Shari’ah*-mindedness in the archipelago region. Those people who held Islamic law (*Shari’ah*) to be all-important in the life of the community struggled against others (particularly in the royal courts) who defended Malay custom. In Sumatra this involved killing or threatening the Malay rulers. Some Islamic activists saw an advantage in the onset of colonial rule, using in particular the British-governed colonies of Singapore and Penang as safe enclaves from which they could propagate reformist doctrines beyond the reach of the Malay *kerajaan*.

By the nineteenth century it was evident to most Malays that their societies were under threat. Not only the Dutch extending control over one *kerajaan* after another in Sumatra, Borneo, and the islands, and the British moving into the peninsular polities, but also large numbers of Chinese and Indian immigrants presented an economic threat in many regions. Influenced by both Islamic and Western thinking, social critics began to examine the reasons for Malay weakness and to propose a range of measures to revitalize the community. Islamic critics argued that Malays should identify themselves

primarily as members of the Islamic community (*umat*) and eliminate non-Islamic elements from their society, including much of the *kerajaan* ritual and hierarchical structure. At the opening of the twentieth century, Muslim reformists—influenced by Muhammad Abduh (1849–1905) and others in the Middle East—argued that such a return to Islamic fundamentals was consistent with the acquisition of Western-style scientific learning, and called for the modernization of the Islamic education system. An alternative emphasis, pioneered early in the nineteenth century by the social critic Munshi Abdullah (1797–1854), laid greater stress on the creation of a strong Malay consciousness, focused on the Malay *bangsa* (race), and reaching beyond individual *kerajaan*. This approach also advocated European secular learning. The extent to which there was division or compatibility in these reformist programs for Malay society is a subject of debate. In recent years, especially in Malaysia, Islamic activists have been accused of “dividing the Malay race” because of their insistence on the primacy of membership in the wider Islamic community.

The colonial contribution to the development of Malay consciousness is critical—particularly the potent concept of “race” and the later development of ethno-nationalism (in Japan and Turkey as well as Europe). Not only did Malays increasingly begin to see themselves as members of a race rather than mere subjects of a specific *raja* but, in addition, the characteristics that colonial administrators attributed to the “Malay race” influenced Malay self-perceptions. The “Real Malay”—to use Governor Frank Swettenham’s (1850–1946) phrase—was said to be courteous but also lazy, conservative, superstitious, and vengeful. In seeking to rejuvenate Malay society, both Islamic and Malay nationalist critics committed themselves to changing these characteristics.

Although influenced by successful ethno-nationalism elsewhere in the world, Malay nationalism developed its own specific characteristics, one of which was the appropriation from the *kerajaan* of a rhetoric of loyalty.

Just what was the scope of “Malayness” became a contested issue, and it has often depended on local circumstances. Some Malays (and Europeans) saw it as incorporating the entire archipelago, including the large population of Javanese. The elite that won control of

Malaya at independence in 1957, and was determined to keep the new state separate from Indonesia, tended to restrict the Malay *bangsa* to the people of the peninsula and the *kerajaan* in Borneo and Sumatra. From earlier periods, some people have understood “Malay” primarily in terms of adherence to Islam—in present-day Singapore and Penang, for instance, Malay ethnicity is claimed by a broad range of Malay-speaking Muslims, including people of primarily Indian background.

Certain texts from traditional Malay literature also took a relaxed view toward the idea of “hybrid Malays,” but others (for example, the Malays of Riau who faced intense competition from the Bugis people, especially in the nineteenth century) emphasize the importance of descent. Faced with Asian immigration in early-twentieth-century Malaya, such Malay commentators as Abdul Rahim Kajai (1894–1943) also put a greater stress on blood qualification, in particular questioning the credentials of “Malays” of Arab or Indian (or Chinese) background. The issue of just who ought to be classified as Malay continues today as Malaysia responds to claims to Malay ethnicity on the part of Indonesian and other Muslim immigrants.

The Malays emerged from the colonial period in a stronger position in Malaysia and Brunei, where the sultanates were retained and the Malays continued to dominate government. At the end of Dutch rule in Indonesia, republican forces often dominated by other ethnic groups overturned most of the *kerajaan* there. In Indonesia, the Malays are considered to be just one of a large number of ethnicities (*suku bangsa*) in the nation. In many places they have fared badly in competition with other groups and are sometimes antagonistic to the Indonesian state. The laws introduced in Indonesia in 1999 to facilitate a greater measure of regional autonomy have helped to reopen the whole issue of the *suku bangsa* “Melayu” in the Indonesian state. In this fluid situation there have been moves to carve out a strongly Malay province in Riau, and some Malays even seek a new association with the “Malay homeland” of Malaysia. It is true that Malaysia was constructed as a Malay-dominated nation, and it communicates a pride in Malayness through a Malay International Secretariat and a World Malay Assembly. Furthermore, in the 1990s, un-

der the leadership of Dr. Mahathir bin Mohamad (1925–), the Malaysian government invoked the idea of the “Melayu Baru”—the “new Malay”—who has thrown off the retarding ethnic characteristics attributed to Malays in the past and acquired a new entrepreneurial and professional outlook.

MALAYSIA (1963)

Malaysia, as a federation consisting of eleven states of British Malaya including Singapore, Sabah (North Borneo), and Sarawak, officially came into being on 16 September 1963 after a nine-member UN mission reported that the majority of the population of Sabah and Sarawak supported its establishment. But since Britain and the four prospective members had already decided in December 1962 that Malaysia be constituted on 31 August 1963, that date (which was similar to the date on which Malaya had attained independence in 1957) was taken as the official date for “Malaysia Day.” With due amendments, the constitution of the Federation of Malaya became the basis for the Federation of Malaysia constitution.

Like Malaya, Malaysia is a unique parliamentary constitutional monarchy headed by an elected monarch designated Yang di-Pertuan Agong (paramount ruler) who is chosen by and among the nine hereditary Malay sultans of Malaya to hold the office for a period not exceeding five years. At the regional level, the nine Malay States are headed by the Malay rulers while Sabah, Sarawak, and Singapore, like Penang and Melaka, are each led by a governor with the title Yang di-Pertua Negeri appointed by the Yang di-Pertuan Agong.

Historically, “Malaysia” is not a new concept. The idea that former British colonies and protectorates in the Malay Peninsula and British Borneo should be centrally administered for political, administrative, and socioeconomic reasons had been mooted out since the nine-

teenth century. It became even more popular after the 1940s. However, it was Tunku Abdul Rahman's (1903–1990) speech to the Foreign Correspondents' Association of Southeast Asia in Singapore on 27 May 1961 that started the speedy process toward Malaysia being actualized. The speech enhanced political consciousness and maneuvering among the potential members of the new entity and Britain, and it caused some concern to neighboring countries such as Indonesia and the Philippines.

The motives behind the creation of Malaysia were economics, ethnicity, and security. Singapore's participation would undoubtedly boost the economy of Malaya. But Tunku's fear of a Chinese deluge from the colony might destabilize the ethnic composition of Malaya, where the combined Chinese and Indian populations outnumbered the indigenous Malays. To offset this racial arithmetic, Tunku felt that the inclusion of Sarawak and Sabah with their indigenous ethnic groups (Ibans, Kadazan-Dusuns) would bring equilibrium to the indigenous-nonindigenous equation. The Cold War brought instability to the geopolitical situation. A leftist regime in Singapore would be a nightmarish thought for Malaya, which had managed to defeat communist subversion (the Emergency [1948–1960]).

To encourage the active participation of representatives from Sarawak and Sabah, the British arranged for their presence at the Commonwealth Parliamentary Association conference in Singapore in July 1961. This led to the formation of the Malaysia Solidarity Consultative Committee (MSCC), made up of Sabah, Sarawak, Brunei, Singapore, and Malaya, to deliberate further on the views of the prospective members. Chaired by Donald A. Stephens (1920–1976), the leader of the United National Kadazan Organization (UNKO) of Sabah, MSCC met four times and came up in February 1962 with the *Memorandum on Malaysia*, which speeded up the process.

The Cobbold Commission (1962), which was set up "to ascertain the views of the peoples of North Borneo and Sarawak . . . and, in the light of these views, to make recommendations," undertook tasks from 19 February to 17 April. Its recommendations were favorable but cautioned that "Malaysia should be regarded by all concerned as an association of partners, combining in the common interest to create a

new nation but retaining their own individualities." Based on the recommendation of MSCC, an Inter-Governmental Committee (IGC) was formed in August 1962 consisting of members from Britain, Malaya, Sarawak, and Sabah to look further into the details. Submitted in February 1963, the final IGC report was finally approved by the legislative councils of Sarawak and Sabah on 8 and 13 March, respectively. The sultan of Brunei, too, early in 1962, set up a commission to gauge the prospects of Brunei joining Malaysia. As was indicated by the overwhelming majority won by Partai Rakyat Brunei (PRB) in the election, the majority of the Bruneians were more in favor of the unification of the Borneo territories than of joining Malaya and Singapore to form Malaysia.

On 1 September 1962 the People's Action Party government in Singapore held a referendum on how the Singapore-Malaya merger should be instituted. About 71 percent voted for Alternative A, which proposed a Penang-type merger (granted concessions, including autonomy in education and labor policies), and 25.8 percent cast blank votes, presumably in opposition to the merger.

The Malaysia Agreement was signed in London among Britain, Malaya, Singapore, Sarawak, and Sabah on 8 July 1963 and was endorsed in the parliaments or legislative councils of the contracting states. Brunei decided not to participate. The Malaysia Act, amending the Malayan constitution as proposed by the IGC, was passed in the Malayan parliament on 26 August 1963.

Indonesia and the Philippines insisted that an independent commission be sent to assess opinion and the willingness of the peoples of Sabah and Sarawak. This insistence was coupled with the Sukarno-Macapagal-Tunku Accord in Manila in June 1963, and a UN Malaysia Mission (UNMM) was sent to Sabah and Sarawak that carried out its assessment between 16 August and 5 September. Malaysia officially came into being two days after the *United Nations Secretary-General Report* of 14 August confirmed that a sizable majority of the peoples of Sabah and Sarawak wished to join the federation.

The UN confirmation notwithstanding, President Sukarno (t. 1945–1967) launched Indonesia's *Konfrontasi* ("Crush Malaysia" campaign) in September 1963. The Philippines pursued the sovereignty claim to Sabah.

Meanwhile conflicts developed within the federation between Kuala Lumpur and Singapore on various issues, and on 9 September 1965 the federation government and Singapore made simultaneous announcements that Singapore had seceded from Malaysia to form a new independent nation, thus reducing the Malaysia federation to thirteen states.

MALIK, ADAM (1917–1984)

Architect of New Order Foreign Policy

Indonesian political activist, journalist, diplomat, and statesman Adam Malik was affectionately nicknamed *Bung Kancil* (The Mousedeer) in recognition of his wit. (Although small in size, the mousedeer often outwits larger animals such as the tiger and crocodile in Malay fables.) Born in Kampung Keling, Pematang Siantar, North Sumatra, from a Batubara family of Mandailing descent, Malik received his elementary education at the Hollandsch Inlandsche School (HIS). Thereafter he went to an Islamic boarding school in West Sumatra, but he never completed his studies. Instead, at seventeen years of age, the Dutch colonial government jailed him for being a member of the proscribed Indonesian nationalist group Partai Indonesia (Partindo).

After his arrival in Java, he formed a close association with the leftwing group of Tan Malaka's (1897?–1949) underground political party, Partai Indonesia Raya (PARI). This involvement earned him his second sojourn in jail, in 1935. He was, however, released a year later, because as a youth selling books on the sidewalks of Pasar Senen, he seemed to the Dutch authorities too inexperienced to be a member of PARI. They were mistaken, for, on the contrary, the young Malik involved himself in the newly founded nationalist party of Gerakan Rakyat Indonesia (GERINDO) in 1937. In the same year, Malik, together with several nationalist-minded journalists, set up a news agency called *Antara*, which aimed to compete with the Dutch news agency *Aneta*. For his recalcitrance Malik was brought, together with hundreds of young nationalist activists, to the concentration camp of Garut in West Java in December 1941. Shortly after, he earned a stay at the reputedly harsh prison of Nusakambangan Island in Central Java, where he witnessed the last day of the Dutch colonial empire after Japanese planes bombarded the area on 7 March 1942 and the Dutch officially surrendered a day after.

During the period of the Japanese occupation, Malik busied himself in Antara, which had

Indonesian foreign minister Adam Malik, ca. 1966. (Bettmann/Corbis)

become a part of the Japanese news agency *Domei*. At the same time Malik was also engaged in the underground nationalist movement. Together with Sukarni and Chairul Saleh, he led radical youths to kidnap Soekarno (Sukarno) (1901–1970) and Mohammad Hatta (1902–1980) in order to force them to proclaim Indonesian independence as early as possible in Rengasdengklok on 16 August 1945.

From 1945 to 1949, Malik served in different posts in the republican government in addition to his involvement in political parties. His relation with Tan Malaka's leftist group continued. He founded *Partai Rakyat*. At the same time he associated with Tan Malaka's *Persatuan Perjuangan*, a group that was alleged to have abducted Prime Minister Sutan Sjahrir in mid-1946. Along with Sukarni, Malik paid tribute to the establishment of Tan Malaka's proletarian party, *Partai Murba*, in 1948.

After 1949, Malik represented *Partai Murba* in the parliament and commenced his diplomatic career. He became Indonesian ambassador

to the Soviet Union and Poland in 1959. He also led secret negotiations between Indonesia and The Netherlands concerning West Papua in 1962. Malik returned to Indonesia in 1963 and then held a ministerial post of economic affairs under President Soekarno. When Soeharto (Suharto) (1921–) took over power after the failure of the September 1965 movement, Malik was brought in to Pejambon to lead a department/ministry in charge of foreign affairs. In his capacity as Indonesia's foreign minister, he was directly involved in the establishment of the Association of Southeast Asian Nations (ASEAN) in 1967. Malik was also responsible in bringing an end to confrontation between Indonesia and Malaysia, to normalize relations with the Philippines and China, to regain for Indonesia a seat in the United Nations, and to negotiate Indonesia's debt. In addition, he was the sole architect of Indonesia's foreign policy during the first fifteen years of the New Order (1966–1981). He was appointed the second Asian (after UN secretary-general U Thant of Burma) to

hold one of two top posts at the United Nations—namely, to be the twenty-sixth president of the General Assembly. His two-year presidency from 1971 to 1972 witnessed the entry of the People's Republic of China (PRC) to the United Nations, a South Asian war between Pakistan and India, and the appointment of a new secretary-general.

Malik ended his diplomatic career in 1977, when he was appointed speaker of the Indonesian parliament and then Indonesia's third vice-president in 1978. He is well-known for his phrase *semua bisa diatur* ("everything can be easily managed"), reflecting his optimism and pragmatism. He is married and has five children.

MALUKU (THE MOLUCCAS)

The Spice Islands

Maluku is the traditional Malay name for the constellation of small to medium-sized islands in the southeastern corner of Indonesia bounded by New Guinea, Timor, and Sulawesi. Most lie in the region of deep seas known as Wallacea, though a few are located on the Sahul continental shelf. Halmahera, at the far north of Maluku, is its largest island, followed by Seram and Buru in central Maluku, and Aru in the region's eastern corner. The standard name in English is "the Moluccas," which derives from *as*

Malucas, the Portuguese attempt to render the Malay term in a plural form to reflect the numerous islands in the region. Its most widely known name in English is the Spice Islands, in recognition of the two renowned spices native to Maluku: cloves and nutmeg. Maluku falls entirely within 10 degrees of the equator, and, apart from the relief of cooler temperatures in the scattered highlands, variation in the climate is modest. The islands differ in how much rain they receive, whether it falls in a distinct wet season, and, if so, whether the monsoon peaks at around January or May.

The archaeologist Peter Bellwood (Bellwood et al. 1998) has recovered traces of human habitation on Gebe Island, near Maluku's boundary with New Guinea, dating as far back as 35,000 years ago. He believes that the original inhabitants spoke Papuan languages, which is the name given to a diverse array of language families stretching from Timor in the east to the Solomon Islands in the west. These first occupants would have survived through hunting and gathering land and sea resources in a way of life that continued in some parts of Maluku till at least as recently as 2,000 years ago. However, the entry of pottery, polished stone adzes, shell jewelry, and domestic animals (pigs and dogs) at around 3,500 years ago is recognized on the islets of Kayoa in the north and, in less complete form, Ay in central Maluku. This cultural complex is linked to the suspected arrival of Austronesian speakers and their agricultural practices, from islands to the west. Western and central Indonesia is also the probable source of various other technological innovations that arrived in Maluku, after 2,000 years ago, including iron technology and wet-rice agriculture. Nonetheless, Papuan languages have continued to thrive in many parts of Maluku, and the native languages of the powerful Ternate and Tidore sultanates are Papuan, even though the court language was Malay.

Cloves and nutmeg have reached China, India, and the Mediterranean region for more than 2,000 years, from times long before the source of these spices was at all widely known. Presumably, trade between adjacent islands resulted in the movement of cloves from Halmahera's offshore islands, and nutmeg from the Banda islands, to early emporia in Bali, Java, and Sumatra. Scholars have recorded stylistically late Dong-son kettledrums, manufactured in North

Vietnam in the early centuries C.E., on many of the islands of southern and central Maluku. In addition, the Dutch destroyed another kettle-drum on the Banda islands in 1625, and Georgius Everhardus Rumphius sent two further specimens from Maluku to Europe in the late seventeenth century. These drums would seem to be the visible reminder of the ancient trade route from western Indonesia to Maluku, even though intensive archaeological excavations of the Halmahera region and the Bandas have revealed relatively modest finds of early, exotic manufactured goods: metal scraps and glass beads within the last 2,000 years, Chinese ceramics and coins from 1,000 years ago.

Shadowy textual sources trace the origins of the ruling lineages of Ternate and Tidore, the two northernmost clove-producing islands, back to the fourteenth or even the thirteenth century C.E. When Wang Ta-yuan visited the South Seas in the 1330s, he recorded that traders of Chinese origin frequented Ternate and Tidore. This matches information given to the Portuguese in Maluku that Chinese were the first foreign visitors who could be remembered, only later followed by Javanese and Malay traders. The latter emanated from the Javanese empire of Majapahit and the Malay empire of Melaka that successively commandeered the route to Maluku in the fourteenth and fifteenth centuries, and brought Islam to the five spice-producing islands and adjacent coast of Halmahera. Islamic practices gradually became more entrenched among the local populace throughout the period of direct engagement with Europeans, which began with the arrival of Portuguese ships in 1512.

The Portuguese concentrated on Ternate, which, at that time, led Tidore in the competitive rivalry between the two intermarrying, royal houses that jointly ruled Maluku. Tidore for its part welcomed the Spanish, when they arrived in 1521, to offset the stranglehold of the Ternate-Portuguese alliance. Increasingly, Ternate and Tidore settled on complementary spheres of activity: Ternate governed clove production (including new plantations in and around Seram) and foreign trade, and extended its empire westward to include much of Sulawesi; Tidore was suzerain over Halmahera and northwestern New Guinea, bringing cloth and other valuables to its dependencies. This situation persisted into the seventeenth century,

when the Dutch established themselves on Ternate and began to impose a monopoly over cloves. The Netherlands United East India Company (VOC), established largely for the purpose of bringing these spices back to Europe, competed and warred against the Iberian alliance of the Spanish, based on Tidore, and Portuguese traders in league with other mercantile interests opposed to the Dutch.

The VOC succeeded in destroying all of the clove plantations in Maluku except those it directly controlled along the southwest coast of Seram on the Lease Islands and, most important, Ambon. Eviction of the Spanish from Tidore in 1666 and the complete conquest in 1669 of Makassar, in Sulawesi, which had harbored non-VOC traders, granted the Dutch unimpeded monopoly over the clove trade till the late eighteenth century. Ambon remained the world leader in clove production till the end of the nineteenth century; its status as one of the centers of indigenous Christianity and education is closely linked to the nearly 300 years during which Ambon supplied the bulk of the world's cloves. Ternate and Tidore were increasingly consigned to dependence on the Dutch and, in turn, obscurity, apart from a brief interlude around 1800 when Sultan Saifuddin aligned with the English and briefly snatched Ternate and Tidore from Dutch control. With the loss of their singular export, cloves, and increasingly more of Maluku's minor polities establishing a relationship of direct dependency to the Dutch, Ternate and Tidore gradually lost their role as intermediaries between the Dutch overlords and the local populace.

The Bandas were the worst affected area in all of Maluku by the actions of the Dutch. Aided by Japanese mercenaries, Dutch forces massacred, expelled, or enslaved the entire Bandanese population in the 1620s, and usurped ownership of the only nutmeg plantations then operating in the world. The minuscule surface area of the Bandas, about 50 square kilometers in all, rendered its population (estimated at around 15,000 at the time) highly vulnerable to a concerted attack (Muller 1991: 81). Over the previous half century, the Bandanese had engaged in deft diplomacy in allowing an English military presence to contain the Dutch threat and, in the late sixteenth century, in forming an alliance with Ternate against the hegemonic plans of the Portuguese. The Bandanese had become more than

accustomed to the presence of foreigners, with 10 percent of the population estimated to be Javanese traders in 1609, as well as agents from many other Southeast Asian islands. These influences had brought Islam to the Bandas in the fifteenth century, along with the tradition of a wealthy merchant elite (*orang kaya*).

Banda was the emporium of Maluku, and its economy was based entirely on trade. Cloves, feathers of tropical birds, and other lines of Maluku produce could be obtained in its ports, in addition to the locally produced nutmeg. Virtually all of its food, especially sago cakes, had to be imported from larger, surrounding islands in exchange for cloth and other foreign manufactured goods. However, there is no evidence that the Bandas had ever been united under a local ruler. Possibly this was because the lack of an agriculturally productive hinterland stymied the establishment of a power base that could prevent foreign interests from swaying the Bandanese communities in disparate directions. To the degree that the Bandanese exercised an effective resistance against external pressures, it appears to have been in the form of a late persistence of pre-Islamic traditions among communities based in the islands' volcanic uplands and along the sections of the coastline least suited as anchorages. Ritual connections among the Bandanese to their sacred, ancestral places survived the 1621 Dutch massacre, and have experienced a revival in recent times with the return of many Bandanese from the islands where their ancestors had been forced to take refuge.

The commercial schemes of the VOC and, in later centuries, the Dutch colonial government did not extend to less lucrative items such as sea cucumbers, tortoiseshell, earthenware pots (for which the Kei Islands enjoyed some renown), or bird plumage. Makassar traders, who were first attracted to Maluku in the early seventeenth century to "smuggle" precisely those goods that the Dutch strove to monopolize, filled the opening for petty commerce, especially after the 1660s. They were soon joined by Bugis and, later, Butonese traders, also from Sulawesi. Sulawesi traders established quarters in the Dutch-controlled centers of Ternate and Ambon, where they cooperated with the authorities and spread along the coasts of other islands, freely intermarrying with the inhabitants. As followers of Islam, they forged the wide-

spread practice in Maluku of communities of immigrant Muslims who, from their coastal vantages, ruled the roost while the indigenes were often confined to the hinterland. Many of the latter groups are Christian through their long association with the Dutch, coupled with resistance against the newcomers. A close association with the Dutch colonial administration and army developed, especially in Ambon, and a republic of the South Moluccas existed for some months in 1950 before the eventual integration of this area into the Republic of Indonesia. Current tensions and violence in Maluku have very deep roots.

As the home of two spices of international renown over the last 2,000 years, Maluku stimulated early trade, both within the archipelago, and between the archipelago and major population centers in China, Europe, and ports along the Indian Ocean. Tensions between rival commercial interests reached a peak in the sixteenth and seventeenth centuries as Europe's principal trading nations strove to control the lucrative spice market. The limited landmass and agrarian potential of the Maluku islands have always rendered the indigenous people vulnerable to foreign domination, a state of affairs that has arguably been localized, but not reversed, with Indonesia's independence over the last half century.

MANDALAY

City of Burmese Culture

Situated in Upper Burma (Myanmar), Mandalay is the cultural heart of the Myanmar people. It was built as a capital city by King Mindon (r. 1852–1878) in 1853. It was here that King Mindon received the missions of Sir

Henry Yule and Sir Arthur Phayre in 1855, 1862, and 1867. It was to Mandalay that Edward Bosc Sladen was appointed political agent of the British colonial authorities that had dismembered Burma after the First and Second Anglo-Burmese Wars (1824–1826, 1852), cutting off its access to the sea. Mandalay was the last capital of precolonial monarchical Burma, the seat of government for the last two Konbaung dynasty monarchs, King Mindon and his son, King Thibaw (r. 1878–1885).

At the heart of Mandalay was the king's palace, one square kilometer in area. It was the scene of the tragic 1866 rebellion by two of King Mindon's sons, the Myingon and Myingondaing princes, who killed their uncle, the crown prince or *Einshemin*, King Mindon's brother, Prince Kanaung, and several others, and nearly killed King Mindon himself. The king escaped on the back of a court official, who, ironically, had been sent to kill him. Consequently, King Mindon did not appoint another crown prince for the rest of his reign, a fact that inspired the revolt in 1868 by the Padein prince, son of the late crown prince. It was at the palace that his successor, King Thibaw, was appointed as a result of the machinations of his mother-in-law, the Alenandaw Queen, who had married her daughters, Supayalat and Supayagyi, to the young king. But the domineering Supayalat soon drove her sister into seclusion and kept a watchful eye on any competitors for the king's graces. It was at the palace that King Mindon's beloved sons and one of his queens were apprehended, imprisoned, and murdered on the orders of the Alenandaw Queen and her supporters in the Hlutdaw (Council of Ministers), including the Kinwun Mingyi. Some eighty royal relatives perished, depriving Burma of much of the talent that might have steered a different course for the country had they lived. Two of Mindon's sons, the Nyaungyan and Nyaung-oke princes, escaped the bloodshed to Rangoon (Yangon). Shortly afterward, under the guise of a prison fire, another massacre carried off other relatives and supporters who Queen Supayalat and her mother thought threatened their power over the young king. The palace and Mandalay could not shake off this legacy of bloodshed.

Mandalay, under King Mindon, was also the scene for the Fifth Great Buddhist Council in

1872. The pious king had the Buddhist texts inscribed on stone tablets at the Kuthodaw Pagoda at the foot of Mandalay Hill. Under King Mindon, the Shwegyin Sect of Burmese Buddhist monks increased its power and independence. King Mindon combined religious pursuits with canny political sense that extended monarchical Burma's independent life by twenty-five years. The years of his reign saw him maintain a balance of friendly relations with both the British and French, enabling European explorers to seek the southwest route to China through northern Burma, yet keeping Burmese independence intact.

His skills were wanting in his successor. On 25 November 1885, at the conclusion of the Third Anglo-Burmese War, Mandalay witnessed the deposition and exile of King Thibaw and Queen Supayalat to British India. The procession from the capital, downriver, was a grievous sight for most Burmese, who realized they were witnessing the end of one of the key Burmese cultural institutions. The victors stripped Mandalay palace, the spoils and thrones going to Calcutta and the jewels entrusted to Political Agent Sladen disappearing. One of the thrones, the Bee Throne, was returned to Burma after the Pacific War in 1945 by Lord Louis Mountbatten (1900–1979), a friend to Burma; it is housed in the National Museum in Yangon.

Mandalay's tragic history continued during the Pacific War (1941–1945), when the palace was burned during hostilities. It is being reconstructed under the current Myanmar government. The Mandalay region during the war was the sight of fierce battles between the occupation Japanese troops and Allied forces.

Today, Mandalay's cultural heritage is continued in the traditions of Mandalay University and the many Buddhist temples rising above the city. Mandalay is known as the religious center of Burma (Mya Maung 1992: 174), to which is attributed the fact that Mandalay escaped the severe civil violence that flared up in other Myanmar cities after the political uprising of 1988. In Mandalay, seven Buddhist monk organizations under the leadership of senior abbots maintained control of demonstrators (ibid.: 175). At the beginning of the third millennium Mandalay is a vibrant commercial center, gateway to the north, that hosts much of the border trade with Yunnan. Its skyline is dotted with satellite communications dishes. It has

a population of over 600,000 people, connected to Yangon by air, rail, road, and water transportation services (Hla 2001).

"MANIFEST DESTINY"

"Manifest Destiny" was a phrase used in the United States in the nineteenth century to justify territorial expansion. The phrase carried the belief that such expansion was inevitable and had divine support; it led to U.S. expansion not only in the North American mainland but also to the Caribbean and into the Pacific and Asia.

John Louis O'Sullivan, a U.S. journalist and diplomat, first utilized the phrase to argue for the acquisition of Texas in 1845. "Manifest Destiny" gave the United States a sense of purpose, in which U.S. territorial expansion differed from the European type of imperialism because the United States had a divine mission to spread its religion, culture, and government. The phrase represented American jingoistic sentiment of the late nineteenth century and fueled the expansion to the Pacific coast. From the Pacific coast, "Manifest Destiny" served as

the inspiration and rationale for controlling Hawai'i and taking over the Philippines and Guam. It also underlined the Monroe Doctrine and U.S. policy in Asia until the early twentieth century. Similar to Manifest Destiny was the idea of the White Man's Burden.

"Manifest Destiny" has been seen as a pillar of American foreign policy from the late nineteenth century, justifying imperial expansion with a sense of righteousness and divine mission. To those who came under U.S. control, however, it simply meant an excuse to control other people and lands and impose foreign ideas.

MANILA

Village to Metropolis

Manila, the principal port of the Philippine Islands, is situated on the west coast of the island of Luzon, and on the east shore of Manila Bay, at the mouth of the Pasig River. There was a pre-Spanish Muslim settlement, May-nilad. In 1571 a Spanish conquistador, Miguel Lopez de Legazpi (1500–1572), destroyed it. After assaulting and burning the earlier settlement, he established a new Spanish town in which he died in 1572. After a successful Chinese piratical attack in 1574, serious fortification started in 1590. Eventually a walled city (*intramuros*) was created with a defensive moat crossed by six drawbridges that continued to be raised nightly until 1852. The moat was filled only in 1905.

The Portuguese feared that Manila would threaten their ascendancy in the spice trade, but cooperation soon replaced jealousy. The merchants of Macao illegally sold Chinese silk in Manila in exchange for American silver. In the seventeenth century, when the Portuguese lost their spice monopoly and the Dutch closed the Straits of Melaka to them, the Manila trade sustained Macao's economy. The silver-hungry nature of Asian economies and the abundance of American silver enabled Spanish merchants to

buy silk in Manila so cheaply as to justify the long voyages of the Manila galleons. These ran from Acapulco in Mexico, with a trade wind behind them, to reach Manila in eight to ten weeks. The return journey could take four to seven months and involved struggling northwest into the typhoon belt, before running down to Acapulco.

In the late sixteenth and early seventeenth centuries, this trade peaked. Exceptionally, in 1597 the bullion sent from Acapulco to Manila amounted to 12 million pesos, which was more than the legally registered value of trans-Atlantic trade (Parry 1966: 132–133). The usual contemporary figure for silver shipped to Manila was less than half of the 1597 figure. The galleons were normally built in the Philippines of local teak. Two-thirds of the bullion came from Peru, which absorbed the largest share of the textiles, transshipped from Acapulco to Lima. Mexico absorbed a good deal, but until about 1640 it was profitable to take silks from Manila across Mexico for transshipment to Spain.

Thereafter, economic decline set in. The dues paid to the Crown by the Manila galleons (there were never more than two any year, and their sailings became increasingly erratic) never covered the annual subsidy to the administration of the Spanish Philippines. Profits from the exploitation of local resources tended to be gathered by immigrant Chinese. Predominantly Tagalog-speaking Manila grew as the colonial administrative, educational, and religious center, styled after 1574 "The Distinguished and Ever Loyal City." It had a seminary, opened in 1601, as well as a Dominican college after 1611. Such developments culminated in the establishment of the University of Santo Tomas. Religious orders built and served churches near the markets in nearby villages that were subsequently swallowed by Manila. The city became the seat of an archbishop. Earthquakes, especially those of 1645 and 1863, retarded its progress.

Acting Governor Archbishop Rojo had to surrender Manila in 1762 to a British attack mounted from Madras, commanded by General William Draper and Vice Admiral Samuel Cornish. Rojo admitted that nobody had anticipated an attack by a European power. The British suffered from delusions about Manila's "Known Wealth and Opulency," hence the nonpayment of the proposterous ransom they

set. The city was returned to Spain by the peace of 1763. After 1810, Manila became a neglected outpost of a residual imperial system. By 1825 it traded more with the United States and United Kingdom than with Spain, which opened Manila to foreign trade in 1837. After the U.S. occupation of 1898, the removal of tonnage levies helped make it the world's biggest hemp market and a port with extensive hemp, sugar, copra, and tobacco exports, as well as steam-powered processing industries. The population was 219,928 in 1903 (*Encyclopedia Britannica* 1910–1911: 54).

In 1899, U.S. troops repulsed a Filipino nationalist attack, and military government was maintained in the city until 1901. By 1935 it had 620,000 inhabitants and was the capital of a self-governing commonwealth. During the Pacific War (1941–1945), it witnessed the Japa-

nese occupation from early 1942. Following new U.S. landings, fighting destroyed the colonial city in 1944. Shortly after independence in 1946, Quezon City, included in Metro Manila in 1976, became the seat of the independent government. The 1950s saw a revival of Manila as a port and a second wave of industrialization. The Marcos regime actively encouraged immigration from the country to the city, of which Imelda Marcos was governor. This exacerbated terrible slum problems, as well as sewage, power, and (despite light railroad developments from 1984) transport problems. With about 12 million inhabitants, metropolitan Manila in the early twenty-first century is an extreme example of the polluted and overcrowded but vital Southeast Asian metropolis (Nelles Guide 2000: 51).

MAPHILINDO CONCEPT **Uniting Insular Southeast Asia**

Maphilindo was a plan to create a regional body of Malay States, composed of Malaysia, the Philippines, and Indonesia. The plan was formalized in the Manila Accord of August 1963 and succeeded the Association of Southeast Asia (ASA), while preceding the Association of Southeast Asian Nations (ASEAN).

Maphilindo was a scaled-down version of Philippine president Diosdado Macapagal's (1910–1997) idea of creating a Pan Asian Union (later the Association of Southeast Asia) in 1962. After the Philippines and Pakistan drifted apart, in late July 1962 Macapagal announced his proposal to form a greater Malayan Confederation involving the Philippines, the Federation of Malaya, Singapore, and the British territories of Sarawak, Brunei, and North Borneo (Sabah). The initial Philippine proposal did not consider Indonesia, which had been lukewarm to the Association of Southeast Asia. However, as the regional concept developed, Indonesia became part of it.

The basis for Maphilindo was discussed in a summit conference held in Manila from 30 July to 15 August 1963, and the concept was formalized in the Manila Accord and the Manila

Declaration of 6 August 1963. The signatories were Tunku Abdul Rahman of the Federation of Malaya, President Sukarno of Indonesia, and President Macapagal of the Philippines.

Maphilindo was supposed to be a regional organization that would attempt to address local problems by consultation, without interference by outside states, based on the principle of “Asian solutions by Asian nations for Asian problems.” In addition, Maphilindo could bring unity among the Malay peoples and restore their historic traditions, ties, and common heritage. In 1964 the Philippines sought to expand Maphilindo to include neutral countries such as Cambodia, Laos, Burma, Thailand, and South Vietnam, but this was opposed.

Maphilindo soon ran into difficulties because each country had different intentions, and conflicting interests, disputed boundaries, the Sabah issue, and political leanings all served to prevent Maphilindo from consolidating. Maphilindo was one among many attempts to create a Southeast Asian regional organization. However, conditions were not yet ripe for it to become a success.

MARCO POLO

See Polo, Marco (1254–1324)

MARCOS, FERDINAND (1917–1989) **One-Man Rule**

Ferdinand Edralin Marcos was the sixth president of the post-Pacific War (1941–1945) Philippine Republic, assuming office in 1965. He was reelected in 1969, but during his second term he declared martial law and kept the

Philippines under his rule until 1986, when he was overthrown by a peaceful revolution. His presidency was marred by large-scale antigovernment demonstrations, and his rule under martial law led to human rights abuses and unequal economic and social development.

Marcos was born on 11 September 1917 in the town of Sarrat, Ilocos Norte. His father, Mariano Marcos, was a lawyer and congressman, and his mother, Josefa Edralin, a schoolteacher. Marcos graduated from the University of the Philippines College of Law in 1939, but he was convicted and jailed for murdering his father's political rival; subsequently he was acquitted after clearing his name.

During the Pacific War, he fought in the defense campaign against Japan. After release from imprisonment, he joined the guerrillas.

Having served as technical assistant to the president, Marcos began his political career in 1949, when he became a congressman. He was reelected twice, after which he won a seat in the Philippine senate. He left the Liberal Party in 1965 and ran against the incumbent, Diosdado Macapagal (1910–1997), for the presidency. He became president and was reelected in 1969.

The priorities of Marcos's first presidential term (t. 1965–1969) were to achieve rice self-sufficiency and embark on a massive infrastructure program while strengthening industry and education. He also dispatched the Philippine Civic Action Group to Vietnam during the Vietnam War (1964–1975).

Marcos's second term faced a communist resurgence with the birth of the leftist New People's Army (NPA) and student and labor unrest. A proliferation of private armies in the hands of local politicians, graft and corruption, unemployment, and high prices led to strikes, demonstrations, and attacks by the press and opposition politicians that peaked in the first quarter of 1971. Then a bomb explosion in an opposition election rally in August 1971 reflected the increasingly growing threat of Muslim secessionism in Mindanao. In response Marcos suspended the writ of habeas corpus, allowing for arrests and detention without formal charges.

On 21 September 1972, Marcos declared martial law. He closed the legislature and banned all antigovernment organizations, arrested members of the opposition, ruled by

presidential decree, and imposed what he called a New Society. He created a new political party, the Kilusang Bagong Lipunan (New Society Movement), and adopted a new constitution that made him president and prime minister with an indefinite term.

Marcos embarked on land reform, infrastructure building, and industrialization programs, and sought to break up the old order of ruling families (oligarchs) in politics and the economy. Initially, Marcos's policies brought peace and order to the major cities and restored a sense of authority and economic growth. He attracted foreign investors as he tried to make the Philippines a conference and art center in Asia. In foreign relations Marcos opened up to communist countries, without abandoning old allies; he negotiated for a greater say in the running of the U.S. military bases in the Philippines.

But conditions under Marcos later deteriorated, with the economy being hit hard by the oil crisis of the 1970s. Marcos borrowed money from the International Monetary Fund (IMF) and the World Bank, but only favored business enterprises benefited. Marcos's wife, Imelda (1930–), was given powerful positions in government leading to charges of nepotism and attempting to set up a dynasty. As economic conditions worsened, opposition politicians and media were suppressed. The lavish lifestyle of Marcos's cronies contrasted with that of the poor, and anti-Marcos movements developed in the late 1970s. At the same time, the Muslim secessionist movement in Mindanao became an armed rebellion, and the NPA grew in strength. In response, Marcos used the military to crack down on the opposition. This resulted in human rights abuses that included disappearances, torture, and summary executions.

Facing domestic opposition and international concern, Marcos lifted martial law on 17 January 1981, but that proved superficial, as Marcos could still rule by decree. Marcos was reelected in June 1981 as president for a new six-year term in what many considered a sham election.

Marcos's health began to fail as economic conditions deteriorated. On 21 August 1983 his political rival, Benigno Aquino, Jr. (1932–1983), was assassinated under suspicious circumstances upon arriving from exile in the United States. This plunged the Philippines

Standing with his family, Ferdinand Marcos waves to the crowd after his inauguration as the president of the Philippines on 30 December 1965. (Bettmann/Corbis)

into worse conditions. In 1985, Marcos announced that he would hold a snap presidential election to show that he still had public support. The elections were held in February 1986; challenging him was Corazon C. Aquino (1933–), widow of Benigno Aquino, Jr. Marcos attempted to cling to power as the National Assembly, which was loyal to him, proclaimed him as winner. He took his oath as president on 25 February but lost control of the media and the military and was forced to leave the presidential palace.

Marcos was evacuated to Guam on board a U.S. aircraft and lived in exile in Hawai'i, facing various legal cases for ill-gotten wealth and human rights abuses. Marcos died of cardiac arrest in Honolulu, Hawai'i, on 28 September 1989.

Ferdinand Marcos remains a very controversial figure. Elected as the youngest president at that time in Philippine history, he had sound ideas for Philippine development and could

have carried them out during the period of martial law. Various factors led to his failure to institute meaningful changes, which in turn alienated him from the public and subsequently led to his downfall.

MARINE/SEA PRODUCTS

In Southeast Asia marine or sea products have long been featured as commodities in regional transactions, as well as in international trade. Majul (1973: 348–352) has shown the regularity of tribute-cum-trade missions that China received over the centuries from Malay kingdoms of insular Southeast Asia.

The greater part of Southeast Asia lies on the shallow Sunda Shelf of less than 200 meters' depth. The South China Sea and the Andaman Sea, the gulfs of Thailand and Tongkin, wash the shores of mainland Southeast Asia. Insular Southeast Asia is surrounded in the eastern part by the Arafura and Banda Seas, the Moluccas Sea and the Makassar Strait, Celebes, and Sulu Sea, and westward by the Java Sea and the Straits of Melaka. Where mountain ranges and hilly terrain tend to divide and hinder interaction among inhabitants, the seas unite. Native craft plied the surrounding seas in the conduct of intra-island trade long before the arrival in these waters of Portuguese carracks and Spanish galleons in the early sixteenth century.

Marine products as trade commodities were as important and at least as valuable as spices (pepper, cloves, cinnamon, nutmeg, sandalwood) and forest products (camphor, dammar, bird's nest). Like forest products, the exoticism and perceived medicinal properties and culinary delights of marine products such as pearl shells, pearls, mother-of-pearl, tortoiseshells, shark's fin, agar-agar (seaweed), and *tripang* (*trepang*) or sea-cucumber (*Holothuria*) were much sought after by Chinese traders as well as European merchants.

Shark's fins are an invaluable ingredient for the famous Chinese soup that has been enjoyed as a delicacy for centuries in China using imported shark's fins largely from Southeast Asia. Tripang as a soup ingredient is a popular Chinese culinary specialty. Agar-agar is a gelatinous substance obtained from certain seaweeds. When mixed with hot water and then cooled, it sets to a firm jelly ready to be consumed. Traditionally, the Chinese believed in the "cooling" effects of agar-agar. Pearl shells, pearls, mother-of-pearl, and tortoiseshells were traditionally valued for their intrinsic beauty and decorative value. Pearls have long been a jewelry item, treasured by Europeans, Chinese, and Japanese alike. Mother-of-pearl, the hard, pearly, iridescent internal layer of oysters, is often used in Chinese and European furniture for decorative inlays. Tortoiseshell is the semitransparent material forming the carapace of the hawksbill turtle; its golden brown or reddish appearance offers aesthetic material for inlaying furniture, or making small decorative items such as jewelry boxes and combs.

The Samal Bajau Laut, the maritime nomadic boat-dwellers found in northeast Borneo, throughout the Sulu archipelago, and Sulawesi (Celebes), were, and still are, the leading procurers of sea products. Tripang and pearl fisheries sustained the livelihood of these communities for centuries.

Fresh fish from the seas and from freshwater lakes (Tonle Sap in Cambodia, for example) and rivers were and continue to be the major source of protein for many Southeast Asian coastal communities. Dried and salted fish, *belachan* (shrimp paste), and *cincolok* (preserved shrimp condiment) remain important sea products in contemporary Southeast Asia.

MARSHALL, DAVID SAUL (1908–1995)

First Chief Minister of Singapore

David Saul Marshall served as the chief minister of Singapore for fourteen months in June 1955 and 1956. Born in Singapore on 12 March 1908 to a Sephardic Jewish family, he was educated at St. Joseph’s Institution and St. Andrew’s School, completing his secondary education at Raffles Institution, before studying law in London from 1934 to 1937. Upon his return to Singapore he was called to the bar in 1938, only to find his career in criminal law disrupted shortly after by the outbreak of the Pacific War (1941–1945) and Singapore’s occupation by the Japanese. Marshall, who had joined the Singapore Volunteer Forces prior to the war, was interned and was dispatched to Japan to work in coal mines. Returning after the war in February 1946, he pursued his law career with distinction and became increasingly involved in affairs of the Jewish Welfare Board, becoming its president for seven years. He soon drifted into politics and joined the Singapore Progressive Party in November 1949 but resigned in December 1952 over policy disagreements. News of the impending 1955 elections led to new political configurations, and Marshall was closely involved in the founding of the Singapore Labor Front (SLF) and its predecessor, the Singapore Socialist Party, in 1954. Under his leadership, the SLF won ten of the twenty-five seats it contested in the elections in April and secured additional support to form the government with Marshall as chief minister. He resigned his office in June 1956 after failing in talks in London to secure full independence for Singapore. In April 1957, Marshall resigned his parliamentary seat, and, as a candidate of the Workers’ Party, which he founded in November 1957, he won a by-election in Anson in 1962, only to lose it in the September 1963 general elections, which he contested as an independent candidate. From 1978 to 1993 Mar-

shall served as Singapore’s first ambassador to France. He died in December 1995.

MARTIAL LAW (1972–1981) (THE PHILIPPINES)

Marcos’s Trump Card

President Ferdinand E. Marcos (1917–1989) of the Philippines imposed martial law on the country from September 1972 to January 1981. The martial law regime was initially meant to restore order to the Philippines, which had been racked by antigovernment demonstrations and a declining economy, and an attempt to establish a New Society that would break with past evils. Order was initially restored and antigovernment dissent quashed. By the late 1970s, however, economic conditions had declined and anti-Marcos sentiment built up as Marcos exercised one-man rule and favored only those who were close to him. Pressure from abroad led Marcos to grant superficial reforms and lift martial law on 17 January 1981. However, Marcos retained power, and the martial law regime continued on until February 1986, when Marcos was ousted from power.

Marcos placed the Philippines under martial law on 21 September 1972 because of disorder that had resulted in the so-called First Quarter Storm in early 1971, wherein antigovernment rallies peaked. Many of these rallies were violently dispersed, with numerous casualties. The communists were blamed for these demonstrations, and they were likewise accused of bombing a political rally of opposition politicians. Furthermore, there was a growing threat of Muslim secessionists in Mindanao.

Thus, to restore order and governmental authority, Marcos declared martial law. Marcos’s

second—and constitutionally last—term as president was also ending, and the declaration of martial law, which suspended the democratic process, enabled him to stay in power indefinitely.

With the declaration of martial law, Marcos was given dictatorial powers that covered executive, legislative, and judicial fields. He abolished the Philippine legislature and ruled by decree. The news media were either closed or placed under strict censorship, and his opponents were jailed. A curfew was imposed, as was a ban on demonstrations and strikes. Marcos established military courts and placed key private economic institutions under the control of military officers or his friends.

Under the martial law regime, Marcos tried to create what he called the New Society, which would replace the old sociopolitical-economic order in which a few families (the oligarchs) controlled the wealth of the country. The New Society was supposed to bring back discipline and respect for authority, and do away with graft, corruption, and patronage politics.

Initially, the proclamation of martial law led to stable conditions in many cities and towns. One drug dealer was executed to emphasize the government's stand on drugs. Land reform programs were carried out as private armies were broken up and illegal firearms seized. Philippine culture and art were given emphasis and support.

The military fought the communist New People's Army (NPA) and the secessionist Moro National Liberation Front (MNLF). Meanwhile the government pursued negotiations in Libya with the MNLF. The ensuing Tripoli Agreement between the Philippine government and the MNLF seemed to promise peace in Mindanao.

The restoration of peace and order brought in foreign investments and resulted in massive infrastructure development. Marcos tried to make the Philippines a center of Asian and world affairs. Big international events were held, such as meetings of the World Bank and International Monetary Fund (IMF), international film festivals, and the Miss Universe beauty pageant. The Philippines diversified its foreign relations and opened to China and other communist countries as it actively participated in conferences with Third World nations.

Martial law, however, entrenched Marcos in power, along with his cronies. The New Society

was new only insofar as faces were concerned; the old system of patronage and cronyism remained. Graft and corruption were not eradicated. The strengthened military was used by Marcos and his cronies, resulting in human rights violations. Marcos and his friends lived lavish lives while poverty increased because of misrule and corruption.

A new constitution proclaimed Marcos president and prime minister with an indefinite term. To bring a semblance of democratic process, he created a transitional legislature, the Interim *Batasang Pambansa* (National Assembly). He established a new political party, the *Kilusang Bagong Lipunan* (KBL; New Society Movement), which ensured that the legislature would be loyal to him. The elections, held in 1978, were marred by irregularities and charges of fraud, which would typify other such elections under the martial law regime.

Marcos took out large loans to finance infrastructure development, but much money was misused or lost as a result of corruption. The Philippines was hit hard by the oil shocks of the 1970s; consequently the country's debt grew, necessitating further loans. The Philippine peso dropped in value.

As dissent against Marcos grew, legitimate protest was suppressed and the media censored. The military and its armed citizen paramilitary units treated anti-Marcos activists brutally, resorting to torture and summary execution. To keep the military under control, Marcos retained and promoted officers who were loyal, resulting in demoralization and low professionalism in the armed forces. Military brutality and the absence of due process pushed peasants and others to join the NPA.

Charges of dictatorship and human rights abuses, together with worsening economic problems, led to statements of concern from abroad. To allay fears of one-man rule and abuse of authority, Marcos lifted martial law on 17 January 1981, just prior to the visit of Pope John Paul II. The basic elements of martial law, however, remained—presidential decrees with the force of law, warrantless arrests, and control of media, among others—keeping a de facto martial regime in place until Marcos was overthrown in 1986.

The martial law regime of Marcos in the Philippines seemed to reinforce the idea that authoritarian government was suited to devel-

oping Southeast Asian countries. However, it was contrary to the democratic system that the Americans had tried to develop during their colonization of the Philippines. In a sense, Marcos can be seen as having followed the political style of Manuel L. Quezon (1878–1944) and José P. Laurel (1891–1959), which was founded on strong personal leadership. The martial law regime did not serve its avowed purposes, however; by maintaining the old order among Marcos's cronies and suppressing dissent, it thereby worsened conditions in the Philippines.

**MẤT NƯỚC
(LOSING ONE'S COUNTRY)**

With the onset of Western imperialism, the Vietnamese found themselves faced with a kind of domination that effected the dislocation of traditional social, economic, and political institutions, processes, and values. Colonial rule precipitated a cultural crisis by questioning the validity of every aspect of the traditional world order, and also by constraining people to find new patterns of expression for their national consciousness. The intricacy of the situation was such that it appeared un-

thinkable to consider conciliating the type of modernity brought by foreign rule or restructuring within the framework of the traditional Confucian monarchy, the only form of political organization that the Vietnamese had ever known.

The moral dilemma was complicated by the fact that the court at Huế adopted a compromising policy, so that open resistance to the French would mean opposition to court policy as well. The traditional supporters of the monarchy, the scholar-gentry, who had been taught by classical political theory that the maintenance of the dynasty was synonymous with the preservation of the country, were then confronted with an impossible choice. The court having surrendered to the enemy, how could the moral principle of loyalty toward the sovereign be reconciled with the duty of resisting the invaders? Moreover, the establishment in 1887 of the Indochinese Union implied the completion of a double dismantlement. First was dismantlement of the territorial unity of the country, now divided into three separate entities of different status. Second came dismantlement of the sociocultural structure, the keystone of which, the monarchical institution, was emptied of its substance and ceased to be perceived as the reference axis around which society was to be organized. Having confiscated the royal functions, France's representatives surrogated themselves to the authority of the king and his mandarins for the effective exercise of power. The governing class of literati thus witnessed the increasing erosion of the social status that had been theirs.

Dispossessed of their rank, questioned by what had become of the monarchy, those representatives of the Confucian ideology were clearly aware of their own degradation. The failure after 1897 of every resistance movement made them gauge all the more the inextricability of the impasse into which they found themselves driven.

The sense of total disaster was associated with what was termed "the loss of one's country" (*Mất nước*) or "national extinction" (*vang quốc*). It was an idea movingly expressed by Phan Bội Châu (1867–1940), who conveyed it in an essay entitled "Lưu Cầu Huyết Lệ Tân Thư" ["Letter with Blood and Tears on the Ryūkyūs"] (1903 or 1904). He feared that the Vietnamese nation, after having lost its sover-

eighty, would be destroyed by the French, just as the Ryukyus had been completely annexed by Japan. Analyzing further the causes of Vietnam's decline and fall in his *Việt Nam Vong Quốc Sử* (*A History of the Loss of the Vietnamese Country*) (1905), Phan demonstrated that, should the Vietnamese fail to improve themselves, France would annihilate them. Yet to refuse to struggle for national survival when one was threatened with extinction would be sure suicide.

This perception was to lead the men of Phan Bội Châu's generation to formulate a new vision for the reconstruction of Vietnamese society. What mattered to them would not be only to overthrow foreign rule but also and more significantly to search for new values and an institutional system that would enable Vietnam at the same time to regain its lost independence and to revitalize its society. They deemed therefore that a sociopolitical revolution was necessary in order to effect radical transformations within Vietnamese society.

MAT SALLEH REBELLION (1894–1905)

Resisting Foreign Intrusion

An antigovernment resistance of the 1890s, the so-called Mat Salleh Rebellion to a certain extent reflected the inadequacy of the rule of the British North Borneo Chartered Company over its acquisition of North Borneo (Sabah) after two decades of control. The rebellion, led by Mat (Mohamed) Salleh (d. 1899), of mixed Bajau-Sulu heritage, was the culmination of a series of opposition actions

against the authority of the company that had begun in the 1880s.

Mat Salleh, a trader and minor chief in the Upper Sugut on the eastern coast of North Borneo, was described as tall, slender-built with pockmarked features, and of above-average intelligence. His commanding personality and a reputation as a master military tactician, coupled with the belief in his supernatural powers and apparent invulnerability to weapons, made Mat Salleh a great personage among the multiethnic indigenous peoples. He exploited both Muslim and native symbols of authority, such as Islamic standards, colorful flags, enormous silk umbrellas, and insignias of royalty with inscriptions attesting to his invincibility. He commanded prestige and an aura of mystique among Muslim and non-Muslim communities alike.

There was no clear indication as to the right and wrong of the case between Mat Salleh and the company. An initial misunderstanding between the parties escalated into a series of horrific acts and retribution by both sides, creating a tense and hostile situation along the entire western coastal area and in the interior.

The so-called rebellion erupted in 1894 when some followers of Mat Salleh were alleged to have killed two Iban traders in the Sugut River. Mat Salleh refused to surrender the suspected murderers when a force of Iban police was sent to the Sugut. Then in August 1895, Mat Salleh and an armed entourage of boats anchored at Buli Sim Sim, outside Sandakan, then the seat of the government of North Borneo. They presented petitions detailing their grievances toward the company. In the absence of Governor Leicester P. Beaufort (t. 1895–1900), the government treasurer, Cook, petrified by the show of force, requested through a representative that Mat Salleh and the others tender their petition in a formal manner and instructed them to disperse. Cook's request only came after Mat Salleh waited for two days.

While the government attacked his village on Pulo Jambangan and offered a reward of Straits \$700 for his capture, Mat Salleh sacked and burned Gaya Island and Ambong. Government forces captured his fort at Ranau. The tit-for-tat dual came to a deadlock by early 1898.

Then William Clarke Cowie (1897–1910), the managing director to the court of directors of the British North Borneo Chartered Company, arrived from London. He firmly believed

that a settlement could be reached and proceeded to meet Mat Salleh at Menggatal in April 1898. Cowie verbally promised amnesty and to allow Mat Salleh to settle in the Tambunan Valley, pledging noninterference from the government. Mat Salleh acceded, but in the written agreement pardon was denied to some of his followers who were escaped felons. Mat Salleh felt deceived and began to strengthen his position in Tambunan. Beaufort was blamed for the disparity in the written agreement, and he in turn accused Cowie of giving in to Mat Salleh. Meanwhile Mat Salleh raided and pillaged at will in Tambunan. In transgression of the pledge of noninterference, a government station was established in Tambunan in June 1898.

In December 1899 a company expedition attacked Mat Salleh's fort at Tambunan. At noon on 31 December 1899, a chance shot from a Maxim gun hit Mat Salleh in the left temple, killing him instantly. It was, however, another five years before the remnants of Mat Salleh's henchmen surrendered or were killed or captured.

The Mat Salleh episode was the major disturbance faced by the company during its sixty-year administration of North Borneo. A causal factor could have been the discontent felt by the introduction of new taxes, including a levy on rice, the staple food of the population. In its attempt to revitalize the sagging economy, Cowie launched two major projects—the construction of a cross-country rail link between Brunei Bay and Cowie Harbor, and a telegraphic line from Labuan to Sandakan. New levies were imposed to finance these large-scale projects. The lack of manpower and means forced the government to rely on local chieftains as agents for revenue collection; subsequently they abused this privilege and created dissatisfaction among the peoples who, in several areas, rallied to Mat Salleh's cause.

Throughout the protracted, decade-long resistance, there was at no time a consciously unified territory-wide resistance, as well as no semblance or hint in any way of a nationalist-type struggle. It was, in all forms and purposes, a typical and traditional type of resistance to intrusion and curtailment of freedom from without.

MATARAM

A Javanese Empire Pre-Islamic Period

The history of Javanese courts can be traced back to the fourth century C.E. The first known Javanese kingdom, Taruma, was established in highland West Java. The center of political domination eventually shifted to central Java, where a sophisticated culture flourished between 732 and 918 C.E. Although the possibility exists that more than one polity wielded authority, the idealized picture presented by inscriptions is of a unitary state called Mataram.

The nature of kingship in the ancient central Javanese court is still obscure. The rulers were mainly male, but women held high positions; queens were able to endow temple complexes. Rulers were devotees of both Hindu deities and Buddhism of the Mahayana variety. The rulers paid much attention to religion, but they did not consider themselves gods. The king was considered a *titisan dewa*—a "droplet distilled from the essence of God"—whose function was to maintain contact between the kingdom on the microcosmic scale and the universe or macrocosm. In Indonesia during pre-Islamic times the king was perceived as being directly associated with Mount Meru in its role as axis of the world and was its master.

The king as the royal icon was considered the basis of the kingdom's existence. Therefore the king occupied the pinnacle of the social hierarchy. This view began to change as a result of the spread of Islam, so that belief in the king as a *titisan dewa* was replaced by the idea of a messenger of god, or *Kalifatullah*; nevertheless, other sources termed *Babad* ("Chronicles") show that a cult of royal divinity continued to exist.

After almost two centuries of glorious artistic achievement, Mataram suddenly vanished. A new kingdom was established in East Java, but the name Mataram was not used.

Early Islamic Kingdoms of Java and the Rise of Islamic Mataram

Islam first emerged as the dominant religion in the kingdom of Cirebon in the mid-fifteenth century and Demak in the early sixteenth century. Javanese culture changed gradually but in important ways over the next two centuries. Religious figures became deeply involved in struggles for power and in factionalism.

According to *Babad* tradition, nine *wali* (spiritual guardians of Islam) began to occupy important positions in political life when the last major pre-Islamic kingdom, called Majapahit, fell. The *Babad Tanah Jawi* and *Babad Mataram* describe the important roles played by religious figures in Majapahit's collapse. The *Babad Mataram* tells the story of how Raden Patah of Demak sought the advice and blessings of Sunan Ngampel, who resided in Ngampel, Surabaya, prior to launching an attack on Majapahit. Sunan Ngampel advised him to be patient, for the propitious time had not yet arrived. His advice was that the king of Majapahit should be given one more year to govern. Meanwhile, Raden Patah was advised to prepare himself mentally and spiritually by studying Islam and asking for Allah's consent, as well as the concurrence of the *wali*. Apparently the influence of religious figures was so strong that their advice and blessing were significant for a person who intended to occupy the seat of power.

Demak was the most powerful early Muslim kingdom on Java. Its period of glory was, however, relatively short, between 1518 and 1550. Thereafter two kingdoms emerged, Banten on the northwest coast and Mataram in the central hinterland. In Pengging, south-central Java,

which seems to have been an important province of Majapahit, a kingdom arose that traced its origins to Bajul Sangara of Semanggi, near Solo. The ruler of Kudus on the north coast killed the last king of Pengging in the mid-sixteenth century. In the political chaos associated with the breakup of Demak, another kingdom arose in south-central Java, called Pajang. Pajang's position was never secure either, however, and it was seriously challenged almost from the start by one of its restless vassals, a Muslim kingdom that revived the old name of Mataram. Islamic Mataram, centered at Kerta, founded by a strong figure known as Panembahan Senopati, attempted to extend its rule over all Java but was not acknowledged as supreme sovereign by the coastal authorities.

"Senopati" was a title conferred by the kings of Demak and Pajang on prominent people in rural areas during the fifteenth and sixteenth centuries—for example, to the rulers of Pasir, in western Banyumas, and also to the head of the Mataram district.

After a peace treaty of 1590, Cirebon acknowledged the suzerainty of Mataram. Meanwhile the popularity of the *wali* had become a political factor that required serious consideration. Thus Sultan Agung (r. 1613–1646) in 1624 took the title "Susuhunan Ngalaga Mataram." Abbreviated to Sunan, this title was adopted by the *wali* and their successors. The word originates from Javanese and simply means "he who is respected, the exalted one," deriving from the root *suwun* ("to carry on top of the head"). The title is close to *panembahan*, from the root *sembah* ("to salute by raising two hands in front of the face in a prayerful manner").

The title "susuhunan" was considered higher than "sunan," even superior to "sultan." Thus Amangkurat I (r. 1646–1677), who succeeded Sultan Agung, did not use the title "sultan" but instead used "sunan" or "susuhunan," which in everyday speech was pronounced *sinuwun*.

Between 1600 and 1640, Islamic Mataram tried to elevate its port at Jepara to the status of a major commercial center, declared a monopoly over the export of rice, and launched attacks against other north coast ports. In the early seventeenth century, Mataram destroyed most of the important coastal cities in central and East Java. At the same time, the Dutch were establishing a foothold in West Java, at Batavia (Jakarta). In 1628 and 1629, after Pati was con-

quered, Islamic Mataram launched attacks against Batavia, with the objective of consolidating its control over the north coast. English and other European merchants moved to Jepara during the attacks but returned when Mataram failed to achieve victory.

The next fifty years were marked by a period of relative calm and stability. Then in the late seventeenth century a series of events began that were to lead to the gradual domination of the Dutch over Mataram.

In 1677 the ruler of Mataram, Amangkurat I (r. 1646–1677), called upon the Dutch for assistance in quashing a rebellion launched by his own son. Mataram gave the Dutch United East India Company (VOC) an extensive area of land as payment. In 1680, Amangkurat II (r. 1677–1703) set up a new capital at Kartasura that lasted for sixty years. In 1703, Amangkurat II died and his son Sunan Mas became Amangkurat III (r. 1703–1704). His uncle, Pangeran Puger, challenged his right to succeed. Pangeran Puger was crowned Paku Buwana I in 1704. In return for Dutch assistance Mataram gave the VOC land and a certain amount of rice annually.

When Paku Buwana I passed away in 1719, his son took the throne but was challenged by several of his brothers. Dutch assistance was again used to quell the rebellion. As a result, Mataram had to pay regular amounts of pepper and wood to the VOC, or what the Javanese addressed as *Kumpeni*.

In 1740 a series of tragic events known as the *Geger Pacinan* took place. The VOC implemented a policy intended to diminish the Chinese population of Batavia (Jakarta) because of fears of their increasing economic power. This policy gave rise to unrest among the Chinese population of Batavia that eventually resulted in open conflict. Many Chinese were massacred. Others fled to the east, where local rulers gave them support and safe haven. The ruler of Mataram, Paku Buwana II, also supported the Chinese, after witnessing the determination of the Chinese resistance in Kartasura. The rebels besieged the Dutch port of Semarang, central Java. However, Paku Buwana II began to hesitate when Semarang did not quickly fall.

The sunan finally decided to return his support to the VOC. However, a Javanese anti-Dutch faction at Kartasura took advantage of the situation to defeat a Dutch garrison there.

In 1742 the palace was attacked and destroyed by a combined army of Chinese and Javanese rebels. Paku Buwana II, however, escaped.

The Sunan's departure created a power vacuum in Kartasura. Paku Buwana II in desperation offered the Dutch rich rewards if they would restore him to his throne: the right to choose the prime minister, and possession of the whole north coast. In 1743 the VOC and regional chiefs, or *bupatis*, expelled the rebels from Kartasura. Although the sunan was back in power, the situation was not yet stable. The Chinese and their allies were still carrying on insurgent activities. The Kartasura Palace had sustained considerable damage. This led Sunan Paku Buwana II to seek a replacement. It was customary whenever a palace was damaged in Java to abandon it because it was judged to have lost a quality known as *wahyu*. This characteristic, literally a kind of divine aura or glow, is associated with a protective quality of a place; once lost, a new site with *wahyu* must be sought. A new palace was completed at the site of Surakarta (Solo) in 1745.

In 1746, an official, Patih Pringgalaya, became envious because of the new division of territory among the various nobles of Mataram. Because of fears that this inequality would give rise to further revolts or antiroyalist attitudes, the sunan agreed to reduce the extent of Pangeran Mangkubumi's appanage. This of course angered Pangeran Mangkubumi. A crisis ensued in 1749, when Mangkubumi left the *kraton* and the sunan's health deteriorated. The VOC seized this moment to achieve another of its goals. When the sunan fell ill, the Dutch ambassador went to Surakarta, bringing with him a new treaty. In his ill and weakened condition, having been roused from his sickbed, the sunan was forced to sign the treaty, which included the stipulation that the sunan surrender the crown of Mataram to the VOC and put the fate of his son in the *Kumpeni*'s hands. The VOC then obtained supreme power over the kingdom of Mataram, for not long thereafter Sunan Paku Buwana II passed away. In 1749, as Pangeran Mangkubumi's rebellion spread and grew stronger, achieving several successes such as taking control of the southern coastal zone, the throne changed hands. Crown Prince Pangeran Adipati Anom was crowned Sunan Paku Buwana. His position was now that of "representative" of the VOC.

The VOC then persuaded the sunan to divide the kingdom of Mataram into two, giving up half to Mangkubumi, in return for peace. On 13 February 1755 a treaty was made in the village of Giyanti, near Surakarta. Thereupon the kingdom of Ngayogyakarta Hadiningrat, or Yogyakarta as it is commonly known, came into being. The sunan retained his title, while Pangeran Mangkubumi assumed the throne of Yogyakarta as Sultan Hamengkubuwana. After 1755 the kingdom was no longer referred to as Mataram. Instead the Mataram area was usually termed the Royal Lands (*Vorstenlanden* in Dutch or *Praja Kejawen* in Javanese) to distinguish it from the areas directly administered by the Dutch.

MAX HAVELAAR (1860)

An Exposé

Max Havelaar is the central character in the novel *Max Havelaar of de koffieveilingen der Nederlandsche Handelmaatschappij (Max Havelaar or the Coffee Auctions of the Dutch Trading Company)*, published in 1860. The semiautobiographical novel was written by Eduard Douwes Dekker (1820–1887) and published under the pseudonym Multatuli ("I have suffered a lot"). He had been a public servant in the Dutch colonial administration from 1840 to 1856, with placements in West Sumatra, Bagelen, Menado (North Sulawesi), Ambon (the Moluccas), and Lebak (Banten, West Java).

To an extent the novel describes Douwes Dekker's experiences as an assistant resident in Lebak. The main character in the novel is an idealistic young colonial official who seeks to remedy the wrongs perpetrated by the ruling indigenous aristocracy against villagers in the form of corvée labor and compulsory deliveries. He discovers, however, that his superiors do not share his interest in improving the plight of Indonesian people and fail to support him.

At the time of publication, the novel failed entirely in its aims of rallying Dutch public opinion against the practices of Dutch colonial rule in Java and providing rehabilitation for Douwes Dekker, who had felt compelled to resign from the colonial service in 1856. From a literary perspective, the novel is now a classic in Dutch literature and has been translated into many other languages.

Although the novel is often praised for its anticolonial stance, there are now considerable doubts about its historical and factual accuracy. Inter alia, the author did not propagate an anti-colonial stance but rather advocated a more en-

lightened interventionist colonial government that would protect ordinary Indonesians from the indigenous aristocracy. As such, it inspired a generation of Dutch colonial administrators who arrived after around 1900, when colonial policy in Indonesia changed to what was described as the Ethical Policy.

“MAY 13, 1969” (MALAYSIA)

Sino-Malay Riots

This was the darkest incident in the history of Malaysia, when Malays and Chinese, the two major communities in the country, fought bloody clashes with each other on 13 May 1969. Tensions started to grow during the political campaigns for the general elections that took place on the 10th of the same month when the contending parties brought out racial insinuations against each other. The ruling Alliance Party lost its parliamentary majority when the opposition won several seats. The tension was enhanced by the outward celebrations of the opposition in the capital city of Kuala Lumpur, and subsequently sparked the unprecedented Sino-Malay clashes.

Political, economic, and social differences among the communities in Malaya, which resulted from the “divide and rule” policies of the British, who ruled the country since 1786, are the main reasons for the 13 May incident. The so-called *laissez-faire* policies of the British allowed the people, especially the Malays, who claimed to be the indigenous people, and the Chinese, most of whom were initially immigrants, to grow and develop separately. Although the Malays under the British maintained their nominal power through the sultans, the Chinese were more advanced economically. During British rule political affiliations among the immigrant population were directed to the countries of their origin. Different kinds of educational systems, especially

among the various vernacular schools, separated the ethnic groups. Furthermore, the groups were divided by their different religious beliefs; a majority of the Malays were Muslims, while the Chinese were mainly Buddhists, Taoists, or followers of Confucianism or Christianity. Sino-Malay mistrust could be traced to the Japanese occupation (1941–1945) and the Emergency (1948–1960).

The racial clashes brought chaos to the otherwise peaceful country. Yang Dipertuan Agong, the “paramount ruler” of Malaysia, on the advice of the prime minister, declared a state of emergency on 16 May. On the following day, parliament was suspended and the government was placed under the care of the National Operation Council. Under the caretaker government a Council for Friendship and Integration was set up to ensure better relationships among the different communities.

Thereafter the National Consultation Council was convened to advise the National Operation Council, especially on matters concerning ethnic relations. Loyalty by all citizens to the country was fostered by the formulation of the Rukunegara (“Principles of the State”). Several amendments were made to the constitution that disallowed sensitive issues from being made into public debates. A New Economic Policy (NEP) was introduced to ensure that everyone was given equal opportunities. Parliamentary government was reinstated on 23 February 1971.

McARTHUR, M. S. H. (1872–1934)

British Resident of Brunei

Malcolm Stewart Hannibal McArthur was responsible for setting Brunei on a new course, particularly during his term as the first British resident in the sultanate from 1906 to 1908. He preserved the political and territorial integrity of the sultanate that ambitious neighbors were encroaching upon.

Born at Chatham on 10 March 1872, son of a general, McArthur was educated at Queen's College, Oxford. Joining the civil service in Malaya in 1895, he was sent to Brunei in April 1904 with instructions to make recommendations concerning the sultanate's future administration.

By 1904 the British protectorate of Brunei had reached the nadir of its fortunes. Threatened by expansionist Sarawak and North Borneo, with the loss of Limbang (1890) creating particular bitterness, it seemed that the bankrupt sultanate could hardly survive as an independent unit. Indeed, but for the intervention of the British government in 1905, after receipt of McArthur's final *Report*, it would not have done so.

After a year in Singapore, McArthur returned to Brunei in November 1905 with D. G. Campbell (1867–1918), resident of Negri Sembilan, to obtain the consent of Sultan Hashim (r. 1885–1906) to a new treaty, making provision for the installation of a British resident to govern the sultanate. As the first occupant of the post, McArthur restored political and territorial stability to Brunei and introduced a wide-ranging program of financial and administrative reform. All this was achieved with sufficient tact, unlike the situation in Perak of the first British resident, J. W. W. Birch (1826–1875). The Perak Malay chiefs murdered Birch in 1875, consequent of his manner in implementing policies.

After returning to Malaya, McArthur was appointed acting British adviser to Kedah in

1919–1922. He departed for reasons of ill health in May 1922 and retired on 4 October 1922.

McArthur died on 20 February 1934. His will (1928) reveals that he had married an Italian; there is no mention of any children. His memorial is the continued existence of Negara Brunei Darussalam as a separate country.

MELAKA

A Century of Malay Ascendancy

From the eighth to the thirteenth centuries, the dominant power in the Straits of Melaka and the surrounding area was the commercial empire of Śrīvijaya, centered on Palembang and Jambi on the west coast of Sumatra. In the late thirteenth century the balance of power in the region shifted to East Java, where a succession of Hindu kingdoms gradually superseded Śrīvijaya. The last of these was Majapahit, which by the late fourteenth century had suzerainty over Palembang. Both the *Sĕjarah Mĕlayu (Malay Annals)* and the *Suma Oriental* of Tomé Pires state that sometime before 1403 a prince of Palembang named Paramesvara (the name Paramesvara means "prince consort"), who was married to a Majapahit princess, threw off Majapahit's suzerainty and was driven out, first to Tumasik (Singapore) and thence to Muar, where he was invited by a group of sea-pirates who traded in goods taken from ships captured in the Straits of Melaka to become ruler of a settlement they had founded on the Melaka River.

At this time both Majapahit and the Siamese (Thai) kingdom of Ayutthaya (Siam) claimed suzerainty over the Malay Peninsula, and the

nascent state of Melaka paid tribute to Ayutthaya. In 1403, according to the *Ming Annals*, a Chinese embassy led by a eunuch named Yin Ch'ing was sent to Melaka. In reply Paramesvara sent embassies to China in 1405 and in 1407 to seek Chinese recognition and support against Siamese attacks, and in 1411 he went to China himself with his family and a large retinue. He also sent embassies to Majapahit and to Pasai, a coastal sultanate in north Sumatra. The sultan of Pasai agreed to open trading relations with Melaka on condition that Paramesvara became a Muslim, which about 1414 he did, taking the name of Megat Iskandar Shah and at the same time marrying one of the sultan's daughters.

Iskandar Shah's son and successor, Sri Maharaja (r. 1424–1444), was also converted to Islam, taking the title of Muhammad Shah, and also sent embassies to China (in 1424 and 1431); he also went to China himself. He was succeeded by two of his sons, Abu Shahid Ibrahim Shah, who was assassinated in 1445, and Muzaffar Shah (r. 1445–1458), who, assisted by his *bendahara* (first minister, treasurer, and chief justice) and brother-in-law, Tun Perak (d. ca. 1498), established Melaka as a major commercial power, controlling all the shipping passing through the straits in both directions and providing the principal market in Southeast Asia for the valuable commodities produced in the region, including Sumatran pepper, cloves from Maluku and nutmeg and mace from the Banda Islands, Timorese sandalwood, Chinese silks and porcelain, and Indian cloth. Muzaffar Shah drew up a code of laws, won two notable victories over the Siamese of Ayutthaya, and extended his suzerainty northward in the Malay Peninsula to Kedah and Patani, southward to Singapore and Riau-Lingga, and across the straits to Indragiri, Kampar, and other port states on the west coast of Sumatra. He also maintained relations with Ming China, and in 1456 the emperor conferred the title of sultan on him. Muzaffar Shah's son, Mansur Shah (r. 1458–1477), married a Chinese princess, conquered Pahang, and placed a Melakan prince on the throne. This policy of territorial aggrandizement elevated Melaka to imperial status with political and commercial hegemony over the greater part of the Malay Archipelago (present-day Malaysia and Indonesia).

The numerous Muslim Gujarati merchants who traded with Melaka played an important part in the conversion of Melaka to Islam, and Melaka soon became a center for the dissemination of Islam in the region—notably in the conversion of Java. Melaka depended for most of its supplies of rice and other foodstuffs on Java, and the Javanese dominated the carrying trade in spices, which they brought from the eastern Indonesian islands to Surabaya, Demak, Japara, and other north Javanese ports and shipped thence to Melaka, so that by the end of the fifteenth century the Muslim Javanese were the richest and most influential of the many foreign communities in the city-port of Melaka.

Following their discovery of the sea route to India in 1498, the Portuguese quickly learned the crucial role that Melaka played in the Indian Ocean trading networks. They realized that to gain a monopoly of that trade they would need to have control of Melaka and of the shipping that passed through the straits. In 1509 a small Portuguese fleet commanded by Diogo Lopes de Sequeira was sent to Melaka to open trading relations. But largely as a result of the hostility of the Muslim merchants in the city, the expedition ended disastrously, with the destruction of the *feitoria* (trading post) that Sultan Mahmud Shah (r. 1488–1511) had allowed the Portuguese to set up and the imprisonment of the factor, Rui de Araújo. Therefore in 1511, Afonso de Albuquerque (1453–1515), who had been appointed governor of Portuguese India in 1509, sailed from Goa with a small force of 800 soldiers and 200 Malabar mercenaries and, after some abortive attempts to negotiate with the sultan, on 25 July attacked Melaka (Castanheda 1924–1933: 125–151). By 24 August he was master of the city, and Sultan Mahmud Shah had fled to Pahang.

During the five months Albuquerque spent in Melaka he built a stone fortress, *A Famosa*. Its surrounding wall, 2.4 meters in thickness, was made from materials taken from Muslim tombstones and stones from mosques. He erected a hospital, and sited a church on the premises of the sultan's palace, which became the cathedral of the Melaka diocese in 1557. He also minted a coinage and set up a Portuguese administration. In November 1511 he

left Melaka in the largest of his ships, the *Flor de la Mar*, laden with treasures that he had collected for himself and for King Manuel I (1469–1521). But the *Flor de la Mar* was old and leaky and broke up on a reef off the coast of Sumatra with the loss of its entire cargo. Albuquerque himself escaped with nothing but the clothes he was wearing.

The Portuguese tried to compel all shipping passing through the straits to call at Melaka and to pay anchorage charges and customs duties on all the commodities they brought to the city except food. But they never had sufficient resources to impose an effective monopoly, and the need to use every available vessel for the transport of goods to Goa and Europe meant that there were never enough ships to police the sea-lanes or men to defend the city. Melaka's profitability to the Crown was further undermined by the illicit private trading activities of many Portuguese and their propensity to seize the cargoes of any ships they encountered that did not carry a *cartaz* (safe-conduct) issued by the Portuguese authorities. Moreover, the Muslim merchants soon deserted Melaka in favor of other ports, notably Brunei and the small sultanate of Aceh in northern Sumatra. Aceh became the chief adversary of the Portuguese in the struggle for control of the straits, launching numerous attacks on the city. Johor was also strongly opposed to the Portuguese; ironically, however, they sometimes allied with them against Aceh.

In addition to its commercial importance for the Portuguese, Melaka soon became the principal center for their missionary endeavors in Southeast and East Asia. In 1545, Francis Xavier (1506–1552) first arrived in Melaka and established it as the center for the Jesuit missions in Southeast Asia and Japan. Other orders followed the Jesuits: the Dominicans (1554), the Franciscans (1581), and the Augustinians (1587).

By the end of the sixteenth century the Dutch and the English had arrived in Southeast Asian waters. The Dutch were determined to drive the Portuguese out of all their strongholds in the region and repeatedly attempted to take Melaka; in alliance with the Acehnese, they finally conquered the city in January 1641 after a long siege. They repaired the Portuguese fortress, appointed a governor and council to administer the city, and concluded treaties with

the people living in the vicinity of Melaka who had been subject to the Portuguese. They continued the Portuguese policy of demanding payment of customs duties and harbor fees from all ships sailing through the straits and maintained the sole right to trade in tin, spices, pepper, sandalwood, cloth, and other valuable merchandise. But, like the Portuguese, they could not impose a monopoly in the face of competition from Asian and European traders.

The Dutch failed in their efforts to make Melaka self-sufficient in food. Although Melaka remained a substantial exporter of tin and importer of Indian cloth under Dutch rule, it was soon overtaken by Batavia, since 1619 the headquarters of the Dutch United East India Company (VOC); it became little more than a fortress protecting shipping in the straits. The Dutch themselves increasingly bypassed Melaka altogether, preferring to send their shipping from Batavia through the Sunda Straits. Furthermore, from the late eighteenth century the exodus of many of the Chinese inhabitants to Penang, where a British settlement had been established in 1786, and later to Singapore, similarly a British outpost opened in 1819, accelerated the decline of Melaka. By 1800 the population of the city of Melaka had been reduced to about 1,500, in contrast to Penang, which already had a population of 20,000 (Stone 1966: 85; Fisher 1966: 595, n. 27).

In 1793 the French revolutionary government declared war on Britain and The Netherlands, and the following year the French invaded The Netherlands. This led the British, with the authorization of the Dutch Stadthouder William V, then in exile in England, to occupy Dutch factories and fortresses overseas, including Melaka, to prevent them from falling into French hands. The British were anxious to attract as much of Melaka's remaining trade as possible to Penang, so in 1807 they set about demolishing the fortress *A Famosa* and would have destroyed the rest of the city had not Stamford Raffles (1781–1826), who was then on the staff of the governor of Penang, arrived there to convalesce from an illness and ordered the destruction to cease.

Melaka was restored to the Dutch in 1818 after the Napoleonic Wars (1803–1815) and then, by the Anglo-Dutch Treaty of 1824, handed back to Britain, along with all the Dutch possessions in India, in exchange for

Bengkulu and the English East India Company's (EIC) other possessions in Sumatra. The British then joined Melaka with Penang and Singapore to form the Straits Settlements, which were initially a presidency under the authority of the governor-general of India, and after 1830 a residency under the Bengal presidency. After the EIC was taken over by the British government in 1858, the Straits Settlements, with all the EIC's other territories, passed to the control of the India Office; in 1867 they became a Crown colony. In 1948, Melaka and Penang—but not Singapore, which remained a colony until 1956—joined with the nine Malay States to form the Federation of Malaya.

**MĚLAYU ISLAM BERAJA (MIB, MALAY ISLAMIC MONARCHY)
National Ideology of Brunei**

The "Mělayu Islam Beraja" concept, the state ideology of Negara Brunei Darussalam, is the sultanate's equivalent to Indonesia's Pancasila or Malaysia's Rukunegara. The public has never been offered a vote on the issue.

The privileged position of Islam and the Malay language had already been enshrined in the 1959 constitution. The proclamation of independence (31 December 1983) declared the sultanate to be "a sovereign, independent and dem-

ocratic Malay Islamic Monarchy.” MIB began to be formulated around the same time, went into recession in 1986–1988, was officially enunciated in July 1990, and became all-pervasive during the 1990s. Globalization makes the defense of “Brunei values” seem all the more imperative.

MIB, which has been declared to be “Allah’s will,” is an exercise in nation-building and regime legitimization. In an implicit social compact, the majority of the Brunei population are reassured that the domination of Malay culture will be upheld, and that non-Muslims (a third of the population in 1991) will be kept in their proper place. The government will provide for every ethnic Malay citizen from cradle to grave; for their part, Malays are expected to bolster the executive monarchical system. Islamic intellectuals must furnish ideological underpinnings for the status quo; in return they derive status, career opportunities, and magnificent mosques in which to exercise their religious obligations. The government will not allow Western-style secularism to gain a foothold. The local Chinese may remain in the sultanate, provided they confine their activities largely to the economic sphere. The animist indigenes, community leaders in particular, are invited to convert to Islam; as a reward, they will be given presents, better housing, and higher-paid jobs. Foreigners are to be thankful for their lucrative contracts and are to refrain from importing their own shibboleths into Negara Brunei Darussalam.

MERDEKA (FREE, INDEPENDENT)

Merdeka, from the Sanskrit *maharddhika* (“great, wise, rich”), is a powerful Indonesian political slogan referring to both political and personal freedom.

The term is known with its Sanskrit meaning from tenth-century Java, but by early colonial times it seems to have referred specifically to freed slaves. The “Mardijkers” of colonial Batavia were the Portuguese-speaking Christian descendants of former slaves, mostly from India. By the early twentieth century, however, the term had acquired a strong political meaning. It referred on the one hand to political independence as an aspiration of the emerging nationalist movement, and on the other to personal freedom. During Indonesia’s struggle for independence, a common commitment to achieving an otherwise undefined *merdeka* was one of the most powerful uniting forces in the national movement.

In Malaysia, *merdeka* is treated as a noun and refers especially to the granting of a somewhat qualified independence by Britain in 1957. In Indonesia, however, the use of the derivative noun *kemerdekaan* to denote formal independence has left the adjective *merdeka* with a richer and more powerful range of meanings. *Merdeka* implies, on the one hand, freedom from vexatious control, whether by colonial or neocolonial powers, bureaucratic rules, or power holders in society in general. On the other, it implies a personal attitude of not being unnecessarily respectful of social hierarchy and

social controls. As a slogan, merdeka still refers most of all to national independence, uncompromised by any kind of subordination to former colonial powers or great powers, and is a call for national solidarity. It also implies a demand for freedom of political expression, freedom to assemble, and freedom from unnecessary regulation that sets it against power holders. It can also be a rather individualistic assertion of personal integrity.

MESTIZO

Mestizo means "mixed." The word is of Spanish origin and designates individuals born to parents of different ancestries. In Southeast Asian histories, the term means an individual born to an immigrant man and a local woman. In Malay and Indonesian contexts, mestizo signals male ancestry in Europe; in Philippines history, mestizo signals male origins in China. Mestizo also refers to distinctive cultural features of mixed communities that reproduced themselves in Southeast Asia's cities.

The Portuguese entered island Southeast Asia in 1505. The Spanish established Manila as their headquarters in 1571. Dutch men sailed into Indonesian seas in 1595. Europeans injected a new set of foreigners along established trade routes and ports of call. All were men. Like other foreigners (Chinese, Indians, Arabs, and Persians), they sought companionship from local women.

The Portuguese and the Spanish were Roman Catholics. Within archipelago cities there developed small Catholic communities of immigrants, their local wives, children, in-laws, and servants. Not all men came directly from Europe. Many Portuguese had been born in Indian ports and were the sons of Portuguese who had married Asian women.

Foreigners brought a new look into the multiracial ports. European men introduced a clothing style that covered the male body with shirt, jacket, trousers, and hat. They introduced the habit of smoking tobacco, the guitar, and new singing styles. Portuguese became widely used for trade and diplomacy. Europeans introduced a new writing system, the Latin alphabet, and printed books. Their envoys carried gifts of maps and mechanical clocks to Southeast Asian kings and news of intellectual trends circulating in Europe.

The Dutch fought to evict Portuguese competitors. They chased Portuguese ships out of Southeast Asian waters and expelled Portuguese administrations from Ambon (1605) and Melaka (1641). In 1670, Dutch forces captured Makassar, which had a Portuguese community of 3,000. Many mestizos moved to Holland's Asian capital of Batavia in northwest Java. As the Dutch observed it, mestizos were disdainful of manual labor. They had adopted Southeast Asian habits, such as frequent bathing and betel chewing, and Southeast Asian status symbols, such as the parasol. Their women had a languorous deportment and their homes an air of depravity; they lived in semi-purdah, and left to domestic slaves the care of their households and children. To the Dutch who had fought against Spain and Portugal, Roman Catholics represented the enemy. They required mestizos to demonstrate loyalty by converting to Protestant Christianity.

A Portuguese mestizo community survived in Dutch Batavia until the early decades of the nineteenth century. Portuguese-speaking clergy and Portuguese-language catechisms and Bibles kept parishes distinct long after immigration of Portuguese speakers had ceased. In the nineteenth century, Malay superseded Portuguese as the language of interethnic communication. Mestizo came to mean the descendants of Dutch men and Asian or Eurasian mothers.

Mestizo culture in Dutch contexts was characterized by a slow rhythm to daily life, spicy

foods, and a dialect of Malay laced with Portuguese words. Mestizo culture was rooted in pride in European heritage, in Christianity as a badge of European identity, and in a sentimental attachment to Portuguese *kroncong* music, native domestic servants, and Indonesian folklore. Mestizo culture was symbolized by the female costume of batik wrap, lace blouse, bare feet in sandals, and long hair worn uncovered. It was a culture described harshly by outsiders. It remained dominant in Dutch settlements so long as male immigration from Holland and local marriage remained the norm. When Dutch women formed a growing proportion of the wives of senior colonial officials from the 1870s, they replaced mestizo women as arbiters of manners and fashion and fixed Europe as the standard. Mestizo culture retreated to the fringes of European immigrant society; mestizos blended into Indonesian quarters and poverty.

In the Philippines, mestizos were descendants of Chinese men who were Catholic, had adopted local clothing and hairstyles, and had married local women. The community reproduced itself quickly through intermarriage, through the constant influx of Chinese men, and the willingness of Catholic Filipinos to marry daughters into mestizo families. Mestizo communities prospered because the Spanish favored mestizos over Chinese in commerce. They retained a distinct identity through separate corporate bodies established by the Spanish to administer their communities.

Mestizos represent intermediate communities and specific periods in the histories of Southeast Asian societies. Their emergence coincided with the injection of Europeans into Southeast Asia's towns. European investment stimulated local economies, attracting men from Europe and Asia. In the twentieth century, Dutch and Chinese women began immigrating. They inserted themselves into the local bride pool, offering retention or revival of ties to the homeland. Immigration laws of the independent governments of Indonesia, Malaysia, and the Philippines required mestizos to choose citizenship and identity, and they restricted immigration. In the Philippines, mestizos emerged as the Philippine elite. Mestizos remain a tiny Christian fraction of the population in Indonesia and Malaysia. Most have left to settle in Europe, the United States, Canada,

or Australia, where their descendants are forging new identities.

METAL AGE CULTURES IN SOUTHEAST ASIA

The most important metals in early Southeast Asia were bronze and iron. Bronze is constituted primarily by copper but usually has a substantial proportion of tin to improve the hardness. Lead, with its low melting point, was often added to

facilitate casting, while arsenic was sometimes also included in the bronze alloy. Iron is a valuable metal for making hard, durable implements when carbon is incorporated into its chemical structure during smelting and forging. Iron oxide is abundant, and its ore sources are spread widely across Southeast Asia, though the quality varies greatly. Copper ore deposits dot mainland Southeast Asia and the main islands from Java and Sumatra to the Philippines, but tin ore is essentially restricted to the “tin belt,” which runs from the Burma–Thailand border through West Malaysia and central Sumatra to the islands of Bangka and Belitung. Gold, extracted through panning in many locations in Southeast Asia, and to a lesser degree silver, were significant in producing ornaments.

The earliest bronze in Southeast Asia dates probably to between 2000 and 1500 B.C.E. Soon after, the benefits of lead to facilitate casting were recognized in North Vietnam. Throughout Southeast Asia, casting was accomplished mainly with the use of bivalve molds of sandstone or clay, but the larger and more complex objects required piece molds and the application of the lost-wax technique (in use along the Mekong Valley after 1000 B.C.E.). The appearance of high-tin bronzes in Southeast Asia after 500 B.C.E. probably reflects early trade of tin from sources along the tin belt. By this time, iron metallurgy was dispersing widely across Southeast Asia, followed shortly by gold. For most of mainland Southeast Asia, we can talk of a Bronze Age when bronze artifacts circulated in variable quantities for approximately a millennium before iron had entered into use. There is some evidence for small amounts of bronze in Malaysia and the Philippines before the arrival of iron, but in Indonesia the two seem to have coincided fully.

Archaeologists recognize four successive cultures in the region of the Red River delta, North Vietnam, that have associations with bronze. A few bronze pieces occur late in the Phung Nguyễn sequence (ca. 2500–1500 B.C.E.), along with jade items imported from the north, suggesting that bronze arrived through interaction between North Vietnam and southern China. During the Dong Dau phase (ca. 1500–1000 B.C.E.), pottery decorations and the production of stone tools continued according to prescriptions established in Phung Nguyễn times, but an increasing num-

ber of traditional implements were being made from locally cast bronze. These include axes, chisels, spearheads, arrowheads, barbed points, and fishhooks. The variety expanded to include awls, knives, and sickles in the Go Mun phase (1000–500 B.C.E.), as did the abundance of bronze implements. The overwhelming evidence for cultural continuity between the Phung Nguyễn, Dong Dau, and Go Mun cultures and with the Dong Son (Dongson) culture that immediately followed makes it quite certain that we are dealing with the early cultural elaboration of the proto-Vietnamese speakers in their Red River heartland.

The Dong Son culture, which persisted for several centuries after the Chinese established their presence on the Red River in 111 B.C.E., is best known for the massive “Heger I” kettle-drums made here and exported widely to the south in the early centuries C.E. The repertoire of bronze wares concurrently expanded to bucket-shaped vessels, bells, bracelets and other personal ornaments, clothing fasteners, swords and daggers, plowshares, and digging-tool blades. Many implements were also made of iron, while a specialty of Dong Son was the production of bimetallic spears with bronze sockets cast onto previously forged iron blades. Numerous burials have been found in boat-shaped coffins, sometimes lavishly decked with grave goods, in agreement with Chinese records of a hierarchical society ruled by local chiefs. A subsistence economy based on rice farming had clearly fueled population growth for millennia, and some settlements had grown into population centers covering many hectares. Decorations on the Dong Son drums reveal a complex society that included warriors, sailors, musicians, and peasants among other occupational groups, and the construction of houses on wooden piles.

Bronze and iron artifacts similar to their Dong Son equivalents, along with glass and carnelian beads, have been recovered from the Plain of Jars in the central highlands of Laos. However, radiocarbon dates from the fields of massive mortuary jars and disks suggest that the masonry that shaped these and related megaliths (notably upright stones, or menhirs) may have begun as early as 1000 B.C.E. Iron slag and bronze-casting molds demonstrate local metallurgy, but archaeologists attribute the flowering of these spectacular megalithic sites to their in-

termediary position in the trade routes between North Vietnam and the Mekong catchment area. One site that could have been involved in this trade is Lao Pako, on the Mekong, where the inhabitants specialized in ironworking and buried the deceased in massive jars beneath the settlement. These and other Metal Age sites in Laos are almost certainly associated with late-prehistoric communities of Mon-Khmer (Austroasiatic) speakers, but attempts at more specific identification would be unwarranted at this stage.

South of Lao Pako lies the Khorat Plateau, where numerous sites have been excavated along the three main rivers (the Mun, Chi, and Sakhon Nakhon) that drain into the Mekong. Most famous are the mounded sites of Non Nok Tha and Ban Chiang, where bronze artifacts first appeared between 2000 and 1500 B.C.E., and Ban Na Di and Noen U-Loke, which display a parallel cultural sequence during the Bronze and Iron Ages. Almost universally across the Khorat Plateau, the dead were buried on their backs, sometimes in clay-lined graves, and flanked by pots and other mortuary goods (jar burials of children and flexed burials of adults were also practiced during the early occupation of Ban Chiang). A variety of bronze axes, iron implements including harpoons and knives, bronze and iron rings, and bronze ornaments including bracelets, belts, and headbands have been recovered from the graves. Shell and marble jewelry is also common, as are spindle whorls and beads of glass, carnelian, and agate in Iron Age contexts. Industrial production of bronze and, later, iron and even glass is evidenced at many sites. Rock salt occurs widely across the Khorat Plateau (and the Laos uplands), and its trade must have played an important part in the local economy.

Pottery during the Bronze Age continued the Neolithic styles of cord-marking and curvilinear incisions, but it began to diversify in the Iron Age. Painted pottery, such as the red-on-buff ware famously associated with Ban Chiang, occurred widely across the Khorat Plateau but seems to have been most persistent at the smaller, more isolated sites on the piedmont. Along the main bodies of the Mun and Chi valleys, monochrome pottery (sometimes cord-marked) came into style, most notably the "Phi-mai Black" pattern-burnished wares. Moated sites proliferated, expanded, and elaborated, evi-

dently related to water control and agricultural intensification as the population rapidly grew. Many of these sites became incorporated into the early Khmer empire, which expanded from its heartland along the lower reaches of the Mekong after the fifth century C.E.

The oldest known Khmer inscription (sixth century C.E.) comes from Angkor Borei, an elevated site immediately west of the Mekong Delta, occupied by 500 B.C.E. Excavations suggest a transition in mortuary practices from inhumations with pots and other grave goods, similar to those on the Khorat Plateau, to cremations buried in brick structures. Angkor Borei is linked by a complex of canals to near-coastal sites associated by Vietnamese archaeologists with the "Oc Êo culture," in honor of Louis Malleret's 1944 excavation of Oc Êo. Malleret recovered numerous exotic goods from as far away as Rome and China dating to the second to fifth centuries C.E.; glass, gold, tin, and many semiprecious stones were utilized in manufacturing jewelry and other goods. Most scholars accept an identification with the Funan kingdom described by Chinese visitors, as early as the third century C.E., as a complex of walled political centers where craft specialists plied their trade, summary justice was administered, stone inscriptions were engraved, and the range of mortuary practices included inhumations. Angkor Borei may have been the "inland capital" of Funan referred to by the Chinese, as its large area (300 hectares) and plethora of brickwork suggest.

At the same time, Oc Êo culture sites reveal a domestic economy based on wet-rice agriculture, undistinguished pottery, and stone tools (including mortars and pestles) that firmly link these sites to much older Mekong Valley traditions. Although poorly reported, Samrong Sen, a large midden on a western tributary of the lower Mekong, bridges the gap between the Neolithic and the early occupation at Angkor Borei. Bronzes including bracelets, arrowheads, a fishhook, and an ax, plus a sandstone mold for an ax, appear in late Samrong Sen contexts. There may also be an association with the "Memotian" circular earthwork sites (2500–300 B.C.E.) located slightly east of the lower Mekong; if true, that could identify the latter sites as proto-Khmer.

To the west of the Mekong, the Chao Phraya basin of central Thailand constituted an-

other cultural hearth. The upper reaches of the Lopburi River, a major tributary of the Chao Phraya, are well endowed with copper sources. Several sites here yield traces of copper smelting and bronze metallurgy, similar to contemporary practices on the Khorat Plateau (which lies across a watershed) immediately after 1500 B.C.E. Bangles and socketed tools of bronze, along with a tin earring, were found among the grave goods in the cemetery, dated to around 1000 B.C.E., at the near-coastal site of Nong Nor. The major efflorescence of Metal Age sites, however, relates to the Iron Age after 500 B.C.E. The cemetery at Ban Don Ta Phet has yielded numerous socketed, tanged, and attachable iron tools, including spearheads, harpoons, arrowheads, fishhooks, axes and adzes, sickles, and digging tools. Bronze ornaments and vessels also abound, including high-tin bowls whose golden color sets off their fine decorations of lotus flowers, domestic animals, and intricate geometric designs. Three thousand glass beads and 600 stone beads, including etched carnelian and agate, as well as a lion-shaped carnelian pendant, reflect regular trade with India.

Near Ban Don Ta Phet, Ongbah Cave was used for extended inhumations (the usual mortuary practice in the Chao Phraya basin); it also contained more than ninety wooden coffins. Six Dong Son drums head the list of grave goods that otherwise resemble those from Ban Don Ta Phet. A transition to cremations may be evident at Chansen, a site near Lopburi that spans the prehistoric and protohistoric periods. Moats, settlement walls, and changes in the pottery and other portable artifacts reflect a smooth transition to the Dvaravati culture that is itself associated with the early history of the Mon, especially at U-Thong, Nakhon Pathom, and other early political centers along the Chao Phraya. If Chao Phraya constituted the proto-Mon heartland, the strong Indian influence on the Mon is clear from the balanced use of both Sanskrit and Mon in Dvaravati inscriptions.

On the eastern outlet of the Mekong River (near Saigon) and in coastal central Vietnam, a distinctive range of mortuary vessels allows archaeologists to recognize Sa Huynh culture sites. The burial urns, with their painted and incised decorations of curvilinear scrolls and geometrically infilled bands, usually contained crouched inhumations in the Saigon region, while in central Vietnam the remains had been

cremated. Mortuary goods include beads of silver, gold, polished stone, and other materials, along with socketed and tanged spearheads of iron, spindle whorls, and distinctive forms of earrings. Based on their geographic distribution and antiquity between ca. 500 B.C.E. and 300 C.E., Sa Huynh sites appear to have marked the establishment of proto-Cham, who are Austronesian speakers whose origins lie in the islands to the east. The Chams were among the earliest groups in Southeast Asia to have adopted Indic religious ideas, incised inscriptions, and latched on to the benefits to be had from the passing maritime trade into and from China. One major site in central Vietnam, Buu Chau, which spans the late Sa Huynh and early Cham cultures, imported large quantities of ceramic tiles from the Red River area (then a southern outpost of the Chinese Empire).

Recognizing the similarity between the Sa Huynh decorations and those on early Metal Age pottery from the central Philippines, Wilhelm (Bill) Solheim (2002) proposed a "Sa Huynh-Kalanay tradition." He extended the concept to cover late Neolithic and early Metal Age decorated wares from elsewhere in the Philippines, Indonesia, and Malaysia, making a close relationship with the distribution of Austronesian languages. Efforts to identify more tightly defined, regional cultures within the tradition, as portended by the claim for a "Leang Buidane culture" during the early Metal Age in the islands between Mindanao and Sulawesi, have been hard to sustain. Statistically speaking, sites close to each other do tend to produce similar repertoires of pottery decorations, but this is merely the localized expression of the maritime interaction around 2,000 years ago, which allows us to recognize a Sa Huynh-Kalanay cultural horizon. Regional cultures rarely emerged because, evidently, local communities concurrently reinforced their autonomy by replacing particular motifs used by their neighbors with other motifs selected from the common pool. For instance, the late Neolithic/early Metal Age cemetery at Niah Cave contains distinctive wares such as three-colored jars with massive, painted curvilinear scrolls, and double-spouted vases, but these have been found at few other sites in northwest Borneo. Similarly, Sa Huynh-Kalanay sites are often associated with disposal of the pretreated remains of the dead in mortuary jars, but they may also

contain extended inhumations, sometimes placed in boat-shaped coffins, or still other burial types.

Nor did all communities participate in the trend toward decorating their pottery. In Luwu, South Sulawesi, the Lemolang language is a linguistic isolate that appears to have survived as its speakers have occupied a strategic node for the export of high-quality iron from sources in the mountains upstream. Lemolang oral history outlines a settlement history of places that, when excavated, produced traces of ironworking in a continuous sequence lasting 2,000 years and petrologically monotonous, totally plain pottery despite several changes in mortuary practices. This example suggests that the explicit combination of local history with targeted excavations may provide the means to trace the history of particular Austronesian groups back into the Metal Age.

Indonesia's prehistoric megaliths hint at the development of regional cultures of variable geographic extent. The highlands of central Sulawesi contain numerous ancestor statues, sometimes of spectacular dimensions, as well as huge stone vats that strikingly resemble those on the Plain of Jars (Laos). When the less spectacular megaliths are also considered (for instance, menhirs, dolmens, and relief-carved boulders), the closest similarity may be with the equally mysterious fields of megaliths on the Pasemah Plateau in south Sumatra. The latter are dated to the early centuries C.E., based on imported grave goods and the image of a man on an elephant carrying a Dong Son drum. A direct cultural link between central Sulawesi and south Sumatra would be preposterous; instead, we are probably looking at the development of similar ways of expressing prestige through monumental works. The same point would apply to the Metal Age megaliths of Bali (especially stone sarcophagi) and Java (notably, fields of menhirs).

Java and Bali were critical locations in the Metal Age long-distance trade routes, as the site of Sembiran in north Bali shows. This proto-Balinese port (some of the earliest Balinese inscriptions refer to it) yielded direct evidence of visits by Indian traders around 2,000 years ago: a potshard with an incised Indic script, and 120 pieces of rouletted-wheel ware from South India. Sembiran also yielded a fragment of a mold used in making Pejeng bronze drums, an elon-

gated drum that was evidently cast in Bali and traded as far as East Java. The Pejeng style, however, was more widespread, being displayed on early bronzes from Java, southwest Sulawesi, and southern Sumatra. Numerous Metal Age sites in Java reveal evidence for local industrial production of bronzes, ironwares, and wheel-made pottery. The kingdom of Taruma was established in the region of Jakarta in western Java by the fifth century C.E., as testified by a series of Sanskrit inscriptions. It was evidently related to the Buni cultural complex recognized by Indonesian archaeologists from a recurrent body of pottery forms and decorations associated with rouletted-wheel shards and other exotic grave goods. The Buni culture is probably proto-Batawi (Batawi is the Malayic language spoken in the Jakarta region) rather than proto-Javanese, but contemporary developments in central and eastern Java clearly paved the way for the flowering of the Singosari and later Javanese states.

Peninsular Malaysia has one of the most intriguing Metal Age records, and this likely reflects exposure to multifarious outside influences. It lay directly on the great coastal trade route between China and India, and constant exposure to maritime traders would have stimulated the discovery and exploitation of its abundant tin reserves. "Klang" clapperless bells of bronze of local production and the importation of eight Dong Son drums reveal the same fascination with ceremonial bronzes as is found in southern Sumatra, Java, and Bali. In the Kedah region, the entrepôt of Pengkalan Bujang arose, associated with Sanskrit inscriptions dated to around the fifth century C.E. These likely reflect a local presence of early Mon, who seemed to have expanded down the Malay Peninsula in the early centuries C.E. A Mon inspiration is also likely for the socketed and tanged iron artifacts, very similar to those from Ban Don Ta Phet, found as hoards and collections of burial goods at numerous places in Peninsular Malaysia. On the other hand, the southern Perak slab-grave burials (now dated to the early centuries C.E.) probably reflect an early Austronesian influence in their megalithic aspect, even if grave goods of high-tin bronzes, and socketed and tanged iron artifacts, evoke a Mon connection. Kuala Selinsing, an offshore island occupied throughout the first millennium C.E., almost certainly reflects occupation

by Austronesian “boat people,” given the classically Sa Huynh–Kalanay nature of the pottery decorations and the burial of the deceased in boat-shaped coffins. These developments would have preceded the establishment of Malays in Peninsular Malaysia, which occurred essentially as a post-Śrīvijayan phenomenon.

The Metal Age in Southeast Asia was a dynamic period when goods in high demand, traders, and artisans circulated across the region, and when formative local polities came into direct contact with the burgeoning civilizations in India and China. In places where population growth and local artistic traditions were strong, as best exemplified by the Red River delta, it is possible to identify distinctive cultures that can moreover be related to early historical language groups. In places where the language groups were smaller and cultural practices more likely to be adopted than exported (applicable to much of the Philippines), it is only possible to talk of generalized cultural traditions until detailed work is undertaken to set local historical accounts into a reliable archaeological framework. Overall, the Metal Age may be seen as Southeast Asia’s formative period, when the linguistic groups we find in early accounts took on their distinctive, identifying features.

METAL SMITHING

Like the dyeing and weaving of patterned cloth, metal smithing in Southeast Asia points beyond the mundane and the technological to complex folk understandings of spiritual forces of generativity and creation. Forging and working iron, for instance, have often been imaginatively linked in numerous Indonesian societies to the origin of the world. Gold, a locus of dangerous, even deadly powers, had to be handled with great spiritual care and considerable ritual (sacrifices, the production of stone monuments), lest the gold-smithing activity harm the community. Metal also often formed parts of larger material culture sets. Most prominently, handwoven textiles were often seen as women’s products; the soft, pliable, open-weave,

light cloths are often considered feminine. Dye materials such as natural indigo were linked to the beneficent yet highly charged fertility powers of women's bodies (Hoskins 1989). The symbolic complementary opposite to clothwork and women's bodily creativity was often held to be men's metal smithing. Heavy, dense metal objects such as swords, daggers, and ritual jewelry became the masculine counterpart to feminine cloth. The textile/metal pair worked as a sexual and religious combination. This was given public form in ceremonial costumes, which often combined weaponry with elaborate sarongs and cloaks. Village cycles of gift exchange in upland Southeast Asian societies also demonstrated the metal/cloth complementarity. In one common pattern found in eastern Indonesia, brides brought fertility-enhancing textiles into their marriage and bridegrooms' kin paid bride-wealth payments in metal (gold earrings, chains) to the young women's families. The metal-smithing arts were also long associated with the production of sumptuary goods for rulers who often wished to literally "shine" with splendor in ornate precious metal finery. A core Southeast Asian technology along with weaving and rice cultivation (Reid 1988: chs. 2, 3), the forging and crafting of metal thus have a deeply cultural history.

Bronze working in mainland Southeast Asia may have been present as early as 2000 B.C.E., although that early date is a contentious one among archaeologists (Bellwood 1985: 271–317; Solheim 1968). From about 1500 to 600–400 B.C.E., bronze socketed axes, spearheads, hunting and fishing equipment, and bracelets were produced in northern Vietnam and northern Thailand (Bellwood 1985: 272ff). The classic Dong Son (Dongson) culture of northern Vietnam followed, beginning sometime between 600 and 400 B.C.E. This remarkable metalworking set of societies produced the famous, immense, Dong Son patterned bronze drums (with their peripatetic travels throughout archipelagic Southeast Asia), some ironworking, and what seem to have been funeral feasts to commemorate the dead, events that may have entailed animal sacrifice. Archaeologists assert that Dong Son bronze casting was part and parcel of an innovative Vietnamese ranked society based on intensive wet-rice cultivation, craft specialization, and some urbanization (Bellwood 1985: 274–275). Bellwood goes on to argue that the Austronesian-

speaking Sa Huynh metalworking society of southern Vietnam (at its height in 600 B.C.E. but possibly dating to the second millennium B.C.E.) had an even greater role in spreading metallurgy to island Southeast Asia (*ibid.*: 275–276). Indian trade to Southeast Asia over the period from 200 B.C.E. to 500 C.E., directly before the rise of Indianized kingdoms, overlapped with the intensely creative influence of these early northern metalworking peoples.

Local metalworking centers producing weapons, tools, ornaments, and ceremonial gongs developed in these seedbeds of Dong Son, Sa Huynh, and Indian and also Chinese trade contacts. Southeast Asia's low-grade surface ores of iron, copper, tin, and lead took considerable labor to yield tools and weaponry. This explains the special status of blacksmiths in Southeast Asia and the fact that the region remained a net importer of these metals except for tin, abundant in Malaysia and south Thailand (Reid 1988: 106–119). Iron ore was present in Luwu, Central Sulawesi, and in West Kalimantan, West Sumatra, Cambodia, and Burma (Myanmar), while copper occurred in Java, West Sumatra, Cambodia, and several regions of Vietnam and northern Luzon. Lead was rare, appearing in a few spots in Vietnam. Some individual areas such as Luwu and Minangkabau had active iron industries predating European contact. Metal-poor regions depended on cheap trade iron from China, from as early as the Śrīvijaya period, and on the interregional metal trade. Some hill tribes near rich iron deposits possessed smithing technologies. This pattern existed alongside the connection between metalworking and the rise of states. Great metal-crafting traditions such as Majapahit's *keris* (dagger) industry and subsequent Javanese ironwork depended on extensive trade links to ore-producing areas such as Borneo and Sulawesi. Metallurgy, in other words, was quite cosmopolitan in precolonial Southeast Asia (*ibid.*: 110).

Tom Harrisson and Stanley O'Connor posit an intriguing social and religious complex undergirding one local metal industry, the iron and gold smelting and smithing of prehistoric and recent Borneo (1969a; 1969b; 1970). They assert that metalworking, stone monument building, the ritual manipulation of smaller stone objects, and gold jewelry-making were all part of a seamless ritual system involving feasting cycles among rival "center men." Harrisson

and O'Connor's ambitious claims remain unsubstantiated, but one point is undeniable: the religious undertones to metalwork and smithing in Southeast Asia often played on themes of taking life, creating life, and demonstrating power through profligate feasting. These larger themes should probably be kept in mind when encountering the region's abundant tales about the magical powers of keris and gold royal jewels. More is going on in folk ideology than the story lines alone.

A typical narrative goes as follows, as told in F. M. Schnitger's romanticized but valuable *Forgotten Kingdoms in Sumatra*, a book replete with magic metal stories of this sort (1989: 18–23). In this tale, Sumatra's Jambi was a vassal state to Java's prince of Mataram. Periodically, Jambi had to provide tribute to the prince. A noble from Turkey, Paduka Berhala, rose in importance in Jambi; his fourth, youngest son was Orang Kaya Item. This young man urged his brothers and countrymen to resist Mataram's hegemony by refusing to pay the tribute. He plotted to kill all the emissaries sent by the prince to collect the payments. This went on for several visits by Mataram's warriors, all of whom were dispatched by Orang Kaya Item.

The Prince of Mataram realized that it was no use fighting against such a brave man, and ordered an astrologer from Pamalang to come to him, in order to learn from him how to kill O.K. Item. The astrologer informed him to have a weapon wrought of iron obtained from nine different places and derived from nine different objects whose names should begin with 'Pa.' The iron, however, should be acquired through theft. So some sly thieves went out, and were so lucky to hand to the monarch the desired iron. The astrologer commanded to send for some smiths from Pamaja Pahit, who should make the iron into a sword. These people were set to work by the Prince of Mataram in a deep pit, so that the people in Jambi nor anywhere else should know what was going on. Besides, it had been stipulated that the smiths were only allowed to do a stroke with the hammer every Friday. (Ibid.: 18–19)

The story goes on and on (as Malay world tales often do), with battle scenes and an eventual marriage between Orang Kaya Item and

the prince's daughter. Orang Kaya Item turns his threatening keris into a head ornament by thrusting it into his cloth headdress. The nine-metal dagger is renamed Si Gunjai, and the two kingdoms thenceforth cooperate as marriage alliance partners. Many royal houses throughout the region have similar magic daggers forged through supernatural means as power emblems (Wiener 1995). Narratives about the loss of a noble keris to another kingdom (or to a European colonial power) frequently work as stories about the emasculation of an aristocracy's secular political power.

Beyond these sacred weaponry tales are stories about the special nature of metal smiths: they are crippled, lame, blind, one-eyed, or dwarfs, and thus filled with magic powers. The men who forge perfect metal tools are themselves deformed in body (Eliade 1971). In Southeast Asia, smiths are sometimes allied with jesters and clowns and through those connections with death and black magic.

Deeper religious convictions about metal smithing go beyond heroic tales and claims about magic vulcans to propose more thoroughgoing folk theories of world creation. In an especially insightful study, Charles Zerner (1981) details a local philosophy of ironworking in Toraja, Central Sulawesi, in Indonesia. He reports patterns of thought about forging, smithing, and cosmic, human, and agricultural generativity that may give us a window onto what may be long-standing Southeast Asian epistemologies about metal (Solyom and Solyom 1978; O'Conner 1975).

During Zerner's 1977–1978 fieldwork, Toraja iron smiths used plugs of metal from old railroad ties and Land Rover shocks and springs; Toraja smiths deemed the latter "the best, the strongest, number one" (1981: 91). Much earlier iron sources were open pit mines in Seko to the northeast. Trade for iron ore and nickelous iron with the Palopo region (a vassal state to the Luwu kingdom) was also important. The Toraja highlanders had extensive trade relationships with the coastal Muslim states, and the prestige of goods from "far off Java" (batiks, keris) was also a key part of Toraja political status systems. Seko smiths used forge and pattern welding techniques also employed in creating Javanese keris. Seko forgers' ability to produce decorative nerve patterns on sword blades by forge-welding nickelous iron to iron sponges

was greatly admired by Toraja smiths, Zerner reports. Surface patterning was highly valued in Toraja aesthetics, extending even to their regard for dappled water buffalo.

In the 1970s the Toraja forge consisted of an open-air fireplace banked on three sides with rock walls. Zerner reports that the smith, the bellows pumper, and the hammerer worked together in a kind of rhythmic dance, and “[t]he air itself tastes of smoke and iron, steam and charcoal” (ibid.: 93). Cool water and citrus juice solutions were used to moderate the red heat of the forged metal, as it was shaped into plow blades, ax heads, rice-cutting tools, and ceremonial swords. The latter were loci of power and mnemonics for creation myths.

Zerner terms Toraja iron forging “a generative idiom” (ibid.: 94). Puang Matua, the creator ancestor, “forged the heavens, forged the earth, forged the ancestor of the earth, called Patala Bunga, forged the ancestor of cool water, called Patala Merang, forged the ancestor of fire, called Patala Lamma, forged the ancestor of mankind, called Datu Laukku,” in the words of the Mount Sesean *tominaa* priest Tandi Datu (ibid.: 94). Human iron smiths take on extraordinary qualities given their heirship to these world creation powers. *Tominaa* consecrate the implements of ironworking (a new forge, for instance) and, given the crucial role of iron-tipped tools in tilling the soil, iron-smithing technology is intimately incorporated into farming ritual. This tied ironwork to gender ideas: “It is also said that women were not allowed to stand within the boundaries of the forge. Iron, the raw stuff of forging, constituted a particularly potent material: hard, durable, resistant to change, and yet made into a multitude of tools which could cut down the forest, clear the land for the cultivation of rice, and thus transform the natural landscape on an unprecedented scale” (ibid.: 95).

Ancestral swords, forged elsewhere in places like Seko and Palopo, were costly and part of inalienable house treasures. Pong Sirintik from Seko, the mythical master smith, “sees the mother of iron” (ibid.: 91) and is regarded with special respect because he controls life’s animate forces and forges a tool or weapon from them. This allies him with the *deata* spirits’ control of the land and with (in premodern times) the Toraja aristocrats’ ownership of slaves (ibid.: 100–101).

Zerner observes that ironworking emerged in this context as a kind of writing. “Regarding

iron as animate, the creation of living things as exclusively the domain of the spirits, the Toraja may have seen the man-made furrows on the surface of the blade as a kind of iron writing embodying the mysteries of natural configurations” (ibid.: 102). Ironwork thus became a locus for the conveyance of messages from the distant dead to the living, hence a pattern reflected in the widespread eastern Indonesian belief that certain types of heirloom gold ornaments (for instance, Sumba’s larger *mamuli*) act as contact points between the dead and the living (Rodgers 1985). In some Sumbanese and Flores societies, gold pendants and royal chains of office are thought to occasionally rustle inside their rattan storage cases, anxious to convey warnings to their human possessors. Zerner reports that Toraja ancestral swords play a central spirit possession role of this type in the *maro* ritual, where the iron swords work as mediums for ancestor spirits to visit human supplicants. Certain ritual actions, times, and spaces connected to swords in the *maro* are considered to be “afire” and red hot, like glowing heated iron in the forge (Zerner 1981: 106).

Swords of course recall images of violence, and Toraja iron weaponry evoked war powers and the taking of enemy lives in battle. Much recent anthropological research on head-taking in premodern times in upland Sulawesi, interior Kalimantan, Sumba, Timor, and Luzon in the Philippines documents this connection between metal weaponry and death (Rosaldo 1980; Hoskins 1996; George 1996). Head-taking was often seen as a generative act: to assuage grief, to bring order back to a village after the chaos of war, to demonstrate the “red heat” of young men’s emotions, to complement women’s quieter ground-tilling (and pregnancy) activities.

The spiritual forces assigned to gold and iron may once have also been attached to other metals. A technology indispensable to rice cultivation and to the ranked social orders found from northern Thai villages through Indonesia and the Philippines, metal smithing was a foundational art for the region and a wellspring for religious creativity on themes of origin times, death, and the regeneration of life.

MIAs (MISSING IN ACTION)

The MIA question has haunted relations between the United States and Vietnam since the end of the Vietnam War (1964–1975), for both humanitarian and political reasons. The problem is tragic but simple: the Vietnam war cost the lives of about 58,000 Americans, but some of them—around 2,500—were lost completely and their bodies were not repatriated. A large portion of MIAs disappeared on North Vietnam territory, but some others were lost in the sea or in fights over South Vietnam, even in covert operations. Today, when remains are available, DNA tests make the macabre work easier: since June 1998, for example, we have known the name of the Vietnam War Unknown Soldier resting at Arlington: it is Lieutenant M. J. Bassie, a pilot who crashed near Saigon in 1972. But it is hard to find something to test. During his November 2000 trip to Vietnam, President Bill Clinton (t. 1993–2000) paid a visit to an excavation site near Hanoi where a joint U.S.–Vietnamese team uncovered the remains of Captain L. E. Evert, who was downed there in 1967.

Prior to cooperation between Hanoi and Washington, the MIA question was a matter of conflict. As Article 8 of the Paris Peace Agreement, the MIA issue appeared in all bilateral talks since 1975. The question was a very sensitive one, a preliminary to any discussion for the U.S. side and a matter of bargaining for the Vietnamese. Further complicating the issue is the troubling question of whether the Vietnamese authorities are holding in custody MIAs who are still alive. Hanoi made the restitution very slowly, with solemn reception from the Americans, but the treatment of the issue of MIAs appeared progressively encouraging: first during the 1977 attempt to normalize relations, and second during the Clinton presidency and throughout the 1990s, when Hanoi decided to give more information to Washington and Bill

Clinton and to undertake the normalization. At the present time, more than a thousand soldiers are still missing.

MILITARY AND POLITICS IN SOUTHEAST ASIA

Armies have played a large role in the politics of Southeast Asia for centuries. Prior to the common acceptance of the modern democratic notion that the military should not be involved in politics but rather be the instrument of popular governments, the Southeast Asian context proved the contrary. The kings and other rulers of Southeast Asian polities considered their military forces integral to the instruments of rule at their disposal. Little distinction was made between civil and military roles, and a ruler was the supreme commander of his forces; his other ministers or top officials were also his subordinate military leaders. No distinction was thus made between the government and what would now be seen as a separate institution, the military.

As regards nonofficials in the population, in many societies in the region, the military was an alternative form of obligatory service to the ruler and his standing bodyguard. Thus members of the army were exempt from other forms of obligatory taxation or royal service. At times of war, all of the ruler's subjects could be called upon to augment the ranks of the military. But if the power of a ruler was seen to be waning, a man of prowess, usually from

official classes and claiming a royal lineage, who claimed superior military capacities, could count a challenge and, if successful, seize authority.

During the colonial period, the modern idea of subordinating the military to civilian control became the norm across the region. Colonial armies, pursuing a policy that Southeast Asian nationalists came to see as "divide and rule," tended to be recruited from indigenous minorities or from other colonies. This was the case in the Netherlands East Indies, British Burma, and French Indochina. Siam, which was not formally colonized, established a new form of armed forces under King Chulalongkorn (r. 1868–1910), trained on Western lines with European advisers, but relying, to ensure its political allegiance, on junior members of the royal family. Rivalry among commoner soldiers, who felt their careers were being slighted in favor of members of the nobility, contributed to the political upheaval in Bangkok that ended the absolute monarchy in 1932. The key role of the army in that event allowed the political power of the army to grow during the remainder of the decade, eventuating in Colonel Pibunsongkhram's (1897–1964) being made prime minister in 1938. It was Pibun's military government that changed Siam's name to Thailand in 1939.

The Japanese occupation of Southeast Asia during the Pacific War (1941–1945) provided an opportunity for popular nationalist armies to be organized in Burma (Myanmar), Vietnam, and Indonesia. These became critical in the postwar struggles for independence in all these countries. Whereas in Vietnam, the revolutionary forces accepted their subordination to the political authority of the Vietnamese Communist Party (VCP), neither the Burmese nor Indonesian armed forces accepted more than nominally a superior political authority over them. Rather, they saw themselves as independent actors crucial to achieving independence, and a degree of self-fulfilling conviction about the key role of the army in shaping the post-colonial state began to take shape. However, when these countries attained their independence, their armies initially accepted the formal position of being subordinate to civilian political authority. Nonetheless, from this time on, armies in Southeast Asia developed independent sources of revenue through running their

own businesses and providing some of their financing separate from the government budget. Although all the armies of Southeast Asia were formally under the control of civilian governments at the time of independence, in the cases of Indonesia and Burma that was not true. And in Thailand, the army maintained its grip on government from the 1930s through to the 1970s, except for brief interludes.

The Indonesian armed forces after independence were initially far from being a unified force. Rather they were an amalgam of troops who had served under the Dutch or been raised during the war by the Japanese and fought the return of the colonial rulers. In time the officer corps became convinced that the civilian politicians in Jakarta were venal and self-seeking rather than the selfless patriots they portrayed themselves to be. Many of the troops were facing political rebellions, particularly in the Outer Islands, and they often resorted to smuggling and other illicit activities to support themselves when the central government could not provide them with the wherewithal to fight. When, by the late 1950s, disillusionment with parliamentary government became widespread, the army in 1958 joined with President Sukarno (t. 1945–1967) to impose his system of Guided Democracy on the country. Sukarno and the army, however, rather than working closely together to create a strong government, soon became rivals, and Sukarno turned to the army's main opponents, the Partai Komunis Indonesia (PKI, Indonesian Communist Party), for support. In 1965, in disputed circumstances that saw the deaths of thousands of people, the army moved to end Guided Democracy and seized power in its own right.

A New Order government was installed under General Suharto, who was to preside until ousted from power in 1998. The New Order attempted to establish its legitimacy by bringing order and prosperity to the country. Thanks to massive Cold War foreign assistance and investment, coupled with escalating oil prices, Indonesia did see improved living standards through much of this period. However, following the economic crisis of 1997, which saw a massive devaluation of the Indonesia rupiah, Suharto's military-backed government came under strong criticism, particularly because of what became known as "crony capitalism," which came with the New Order development

schemes. Popular disgust at a regime perceived as being hopelessly corrupt came at the same time as a crisis arose over the province of East Timor, which, through the use of military force, had been incorporated into Indonesia following the collapse of the Portuguese empire. Suharto was then forced out of office by the parliament that had legitimized his rule for many years. Even the military members of the parliament by then agreed that he had to go. However, while the military has subsequently taken a subordinate role in the affairs of the Indonesian state, its political power is far from negligible.

The rise of the Indonesian army to political dominance has its parallels in the case of Burma. There the army was deeply embroiled in defending the state against communist and ethnic separatist insurgents from before independence. In 1958 the army took power for eighteen months with a caretaker government installed to maintain civil order. In 1962, fearing the possible fracturing of the territorial integrity of the country, the army seized power once more; unlike their Indonesian counterparts, however, rather than turning to the West and foreign aid assistance to bolster their legitimacy, the Burmese army turned to policies of socialist autarky. This attempt to develop Burma as a nonaligned socialist state, while initially popular and effective in keeping the country out of the Cold War tensions of Asian international politics in the 1960s and 1970s, ultimately proved disastrous. By the mid-1980s, the country was on the verge of bankruptcy. The Burma Socialist Program Party (BSPP), the instrument the army under General Ne Win (1911–2002) had created to rule the country, then faced overwhelming public protest and fell in the middle of 1988.

Rather than a return to democracy, however, which was what the public had been demanding, the army once more intervened. Claiming that the country was threatened by mob rule spawned by both communist and right-wing domestic and foreign enemies of Burma, the army installed itself as the State Law and Order Restoration Council (SLORC) government. The SLORC, which was renamed the State Peace and Development Council (SPDC) in 1997, was successful in reaching cease-fire agreements with a number of insurgent groups that had been attacking the state for many

years. However, when it refused to acknowledge the results of national elections held in 1990, it was widely condemned for its antidemocratic behavior. In the post-Cold War international climate of the 1990s, the behavior of the military in Burma was seen as unacceptable.

Thailand's military dominated the state until 1973, when student-led public demonstrations forced it from office, only to return in 1976 following a coup d'état. After ruling in a highly arbitrary and dictatorial manner for several years, factions in the army determined that a more accommodating political order needed to be created. New officers took power, and the governments of General Prem Tinsulanond during the 1980s created the conditions for the establishment of a democratic constitution in the 1990s. Following a brief return to military power in 1992, the army was forced to hand back power to a civilian parliament, as the complexities of managing the modern Thai state and economy are now beyond the competence of the military alone. However, a number of former military officers now have leading roles in civilian politics and the army, which has its own radio and television stations and often acts independently of government policy.

The military in the Philippines was known until the 1960s for its apolitical support for the president and the constitution. However, its political role began to grow under President Ferdinand Marcos (t. 1965–1986), especially after he declared martial law in 1972. The army then became a key instrument of his rule; but as its importance to the president grew, so did its political power. When, in February 1986, the army refused to obey Marcos's order to turn back demonstrators demanding his ouster from office for having rigged his reelection but rather joined with them, it demonstrated the military's capacity to make or break Philippine presidents. On several occasions since, the Philippine armed forces, in coalition with favored civilian politicians, have intervened to place in power a president who will pursue policies to their liking.

Militaries rose to political prominence and remained there in large parts of Southeast Asia during the Cold War period as strong anticommunist governments were perceived by the United States and other Western developed nations as essential for maintaining peace and stability in the region. With the end of the Cold War those arguments lost much of their appar-

ent cogency, and armies in power have been on retreat since. Military government has not been installed in societies with developed economies, relatively high living standards, widespread education, and substantial middle classes, as found in Singapore and Malaysia. Militaries have intervened in the postindependence political processes of many Southeast Asian societies that are characterized by the absence of these qualities. In the process of transition from traditional agrarian societies to more complex, urban, capitalist orders, the military has come to be seen as a creator of order during a period of chaos. Many of the arguments that are advanced to justify this condition seem to be rationalizations, but as the maintenance of social order remains the underlying justification for the modern state, the military will intervene where other institutions are too weak to oppose them.

MINANGKABAU

Minangkabau is the name for a region and a people located in the central highlands of Sumatra. The Minangkabau call their homeland the *Alam Minangkabau*, or “the world of Minangkabau.” The *alam* includes Minangkabau territories in the high plateaus of central Sumatra, the *darat*, and frontier regions or *rantau* that reach down to the coast in both east and west Sumatra.

Numerical divisions abound within Minangkabau, and the highlands are divided between three principal territories or *luhak*: Agam, Tanah Datar, and Limapuluh Kota. The three highland valleys are spread around two sizable lakes, Lake Maninjau and Lake Singkarak, lying, respectively, to the north and south of the towering volcanoes Gunung Merapi (2,891 meters) and Gunung Singgalang. The volcanic soil of these valleys is highly productive and intensively cultivated, supporting a population that has developed a complex and distinctive culture. Over time Minangkabau men have ventured beyond the highlands, traveling into the *rantau* regions and beyond, a process known as *merantau*. In this way the Minangkabau have come to have an influence far beyond their homelands and have settled in many parts of the archipelago.

Minangkabau society has attracted considerable attention from anthropologists, who have frequently focused on a system of descent and

inheritance that is reckoned through the female line. Members of the society are also divided into two moieties, or *laras*: Bodi Caniago and Koto Piliang, which have coexisted, over the centuries, in a relationship of ritualized rivalry that appears to have been governed by local *adat*, or custom. The complexity of Minangkabau social structure is legendary, and descriptions of Minangkabau society emphasize that each of these *laras* is further divided into four *suku*, a term that implies a matrilineal clan or family. The Minangkabau of the highlands have traditionally lived in *nagari*, autonomous settlements governed by elders in accordance with the provisions of the customary *adat*. Family groups focus on an ancestral communal house (*rumah gadang*, “big house”), which passes down through the female line; these houses are famous not just for their elaborate decoration but also for their distinctive shape, which is said to be modeled on the horns of the buffalo. In addition to a distinctive social structure, kinship system, and material culture, the Minangkabau possess their own language, one that is closely associated with Malay, and numerous written and oral accounts of their *adat* and of their legendary ancestors. Despite these sources, known as *Kaba* and *Tambo*, our knowledge of the details of Minangkabau’s history are surprisingly sparse. This is largely due to the fact that the Minangkabau highlands were, until the nineteenth century, largely inaccessible to foreign travelers.

Little is known about the prehistory of Minangkabau. Menhirs, or megalithic standing stones, are found in several districts in the highlands, and some of these are decorated with elaborate, and probably pre-Islamic, carvings. We have little information about the people who erected these stones, but they point to an early connection between Minangkabau and Negeri Sembilan, on the Malay Peninsula, where groups of similar menhirs are also found. The close parallel between Minangkabau *adat* and that of Negeri Sembilan, including matrilineal descent and inheritance, is well established, and it is generally assumed that groups from Minangkabau migrated and settled on the west coast of the Malay Peninsula sometime before the sixteenth century.

Future archaeological work may tell us much more about the early history of Minangkabau, but in the meantime historians are dependent

on written records, which commence in the fourteenth century. Between 1347 and 1375 a ruler named Adityawarman established a series of stone inscriptions in Minangkabau that allow us to make some tentative deductions about the nature of his kingdom. The inscriptions are written in Old Malay, and they indicate that Adityawarman was a devotee of a syncretic form of Siwa-Buddhism known as Kalacakra, which was also practiced by the Javanese kings of Majapahit (to whom it is thought Adityawarman was related) in the same period. In the inscriptions Adityawarman referred to himself as a Great Lord of Rulers (Sri Maharajadiraja) whose dominion was absolute. The inscriptions appear to refer to ritual sacrifice, but also speak of the ruler's benevolence and the blessings that would flow to loyal subjects.

The question arises as to why a ruler practicing Mahayana Buddhism should appear, apparently quite suddenly, in the Minangkabau highlands in the fourteenth century. One reason may have been a change in conditions in the Melaka Straits, close to which earlier Sumatran kingdoms, such as Śriwijaya and Malayu, had been based. Another possibility may be found in Adityawarman's description of himself as "Sovereign of the Land of Gold," an apparent reference to the deposits of alluvial gold that were found in the highlands and for which Sumatra had long been famous among foreign merchants. The scanty evidence suggests that control over the gold-rich interior may have prompted a member of the Malayu dynasty to move inland in this period, but the details remain a mystery. It is interesting to note that the Minangkabau *Kaba* and *Tambo* do not deal with this period. These tend to ignore kingship and to relate instead the history of the two legendary ancestors of the Minangkabau laras, Datuk Perpatih nan Sebatang and Datuk Katumanggungan. This fact, coupled with the absence of any historical information about Adityawarman's immediate successors, has given rise to the perception that kingship was an anomaly in Minangkabau history and that the existence of a royal lineage sat in tension with adat and with the autonomous character of the Minangkabau nagari. The difficulty for historians in trying to substantiate any of these theories is that the local sources are rarely dated, and it is often necessary to rely on meager external accounts for a chronology of

events. While these are scarce before the seventeenth century, Dutch records from that period offer some new insights into circumstances within Minangkabau.

The Dutch United East India Company (VOC), which established itself on the west coast of Sumatra in the 1660s, wanted access to Minangkabau gold and sought a relationship with the rulers inland who, they hoped, could influence the flow of trade. Possibly this intervention gave new currency to the institution of kingship in the period; certainly the VOC encountered an established lineage that had the ability to affect the gold trade. But the Minangkabau court was not as easy to manipulate as the VOC had hoped, and it soon became clear that the prestige of the rulers in the coastal regions (where they were regarded as "almost holy") was a potent political force. Emissaries from the court appeared in the rantau bearing elaborate letters that were treated with veneration by the population and were used as signs of power on which rebellions against the Europeans might focus. Although emanating from a court that was by this period Islamic, these letters, or *surat cap*, recall Adityawarman's language of threats and blessings and assert the king's role as an intercessor with God. The reports of troubled VOC officials reveal a culture of communication between the darat and the rantau that enabled the ruler's presence to be represented in the coastal regions while his person was still hidden inland. Despite his absence, the ruler still offered a source of authority for coastal communities, which were increasingly beleaguered by Dutch trading monopolies around the coast of Sumatra. By the early eighteenth century Minangkabau royal emissaries helped to lead a holy war against the Dutch and encouraged rebellions in other parts of the archipelago.

Despite the idealized picture of social and political organization found in the local sources—the *Kaba*, *Tambo*, and *Undang-Undang*—there is probably no stage of Minangkabau history at which we can point to a static "traditional" society of the type they describe. Moreover the complex balance between different sources of authority in the interior appears to have varied over time. By the later part of the eighteenth century, Minangkabau's gold had been exhausted and new products—crops such as coffee and gambier—were in demand.

These commercial developments brought new groups into prominence and stimulated religious change with the introduction of ideas of Islamic reform from the Middle East (West Asia). The VOC sources indicate that there had been clear friction between the two Minangkabau laras throughout the seventeenth and early eighteenth centuries, but by the early 1800s that became more acute. Members of Bodi Caniago, who had come into new prominence through coffee cultivation, took up the call of the Wahabbis in Mecca to reform their society and their religion. This internal struggle developed into a civil conflict known as the Padri War, which pitted village against village as members of the laras fought against each other. The royal dynasty, with its claims to intercession with God, was a particular target for reform, and in 1815 the court was massacred and destroyed by fire.

Until the early nineteenth century only a handful of Europeans had ever ventured into the mountainous Minangkabau interior, but the civil strife that took place from 1803 to 1837 provided an opportunity for the Dutch to become more fully involved. They entered the conflict on the side of what they understood to be the traditional adat leaders, and by 1838 Dutch forces had succeeded in overcoming the advocates of reform. There could be no going back from such intensive contact, and colonial rule was extended into the Minangkabau darat, establishing an infrastructure, including rail and roads, that could be used for the extraction of produce. Colonial administrative intervention reached down to *nagari* level with the aim of securing profits from coffee production, and by 1847 a system of compulsory deliveries was introduced that, by the early twentieth century, was replaced by monetary taxation. Historical work on this period emphasizes both the economic and social adaptability of Minangkabau villages in the face of the intrusion of colonial state power.

This adaptation has encouraged a perception of the “modernism” of Minangkabau society in the late colonial period. Analysts point to the enthusiasm with which the Minangkabau people took up new educational opportunities and to the significant role of Minangkabau figures in the Indonesian nationalist movement and in the struggle for independence. Within Minangkabau the reform of Islam advocated by

the Kaum Muda movement in the 1920s gave rise to debates about the relationship between adat and Islam. The Padris had initiated this issue of the uneasy Islam-*adat* relations that have helped to fix these categories as the twin poles of Minangkabau society in many descriptions of the period. The nature and role of Minangkabau *adat* is a subject that has fascinated both external observers and the Minangkabau themselves. One challenge for historians is to understand the process by which *adat* became such a distinct element of Minangkabau identity and to investigate its character and relevance in earlier periods of Minangkabau history. Future research may also trace the evolution of the picture of “traditional” Minangkabau found in the *Kaba* and *Tambo*. The dearth of alternative sources has often led analysts to read the Minangkabau past in terms of these idealized descriptions, but questions remain as to how old these sources are and how they, themselves, might be located.

Two clear themes that do emerge from a brief survey of Minangkabau history are the persistence over time of complex and elaborately articulated divisions within the society and a dynamic relationship between the inner and outer spheres of the Minangkabau world.

MINDANAO

The Muslim South

Mindanao is the second largest island in the Philippines, located in the southern portion of the archipelago. Together with Luzon and the Visayas, it constitutes one of the three major geographical divisions of the Philippines. The Philippine Sea washes the eastern coast of Mindanao; on the north sweeps the Mindanao Sea; on the south is the Celebes Sea; on the west is the Sulu Sea. Immediately to the east of Mindanao is the Philippine deep, also known as the Philippine Trench (10,497 m), a deep elongated valley in the sea that extends from Mindanao in the south to Luzon in the north. The island has a mountainous interior, coastal plains, harbors, and major river systems. It has long been considered a land of promise because of its fertile soil, favorable climate, and abundant natural resources. The tallest mountain in the Philippines, Mount Apo (2,954 m), is located there.

Since Mindanao is located in the southern part of the Philippines, it has had a long history of trade and relations with other Asian countries, including China, India, Thailand (Siam), Malaysia, and Indonesia. Because of its diverse geographic features, it was home to several different cultural and linguistic groups. Islam was introduced in the early sixteenth century, and two major sultanates were established. Despite various attempts to assimilate the Muslims into the mainstream colonial or national fabric, Mindanao was never fully conquered by the Spaniards, Americans, or Japanese. Moves for an independent Muslim state were started in the late 1960s, and full-scale military operations erupted in the 1970s. Attempts for a peaceful settlement of the Muslim conflict were never successful in the long term, and they continue today.

In addition to the Muslim population, there is a substantial Christian population in the major cities and towns that had been developed during the Spanish and U.S. colonial periods. There also exist various indigenous minority groups collectively called *lumads*. The native inhabitants of Mindanao include the Maguindanao and the Maranao, both groups that became Muslim and established sultanates. Other native peoples, with their own languages and cultural heritage, are the Bagobo, Bilaan, Bukidnon, Iranun, Mananua, Mandaya, Manobo, Subanon, and Tiruray. The variety of cultures, religions, and historical traditions in Mindanao has led to conflict and tension over the years, although periods of peace and cooperation have also existed.

Mindanao has an area of 94,630 square kilometers, and it constitutes almost 34 percent of the total land area of the Philippines. It has diverse geographical features, including volcanoes, mountains, plateaus, low basins, a fault area, valleys, and canyons. There are four major mountain ranges in the island. The Pacific (Eastern) Cordillera, also known as the Surigao range or the Diuata Mountains, hugs the Pacific coastline. The Butuan range extends from north to south and forms the origin of the Agusan and Pulangui Rivers. The Central Cordillera (or the Bukidnon–Davao range) peaks at Mount Apo. The Southwestern Cordillera commences from west of Iligan Bay and extends through the Zamboanga peninsula until it reaches Basilan Strait. Among the mountains in Mindanao are several active volcanoes, such as

Mount Apo, Mount Balut, and Mount Makaturing.

Major rivers drain Mindanao. Among them the Rio Grande de Mindanao, the longest river in Mindanao, originates from the Central Cordillera range and runs west to the Moro Gulf. Other important rivers include the Pulangi, which runs north and drains into Macajalar Bay, and the Agusan and Tagolon Rivers. The largest lake in Mindanao is Lake Lanao; others are Buluan, Mainit, and Pagusi. Various plateaus, basins, and plains settle between the mountain and water features.

Surigao, in the north, occasionally suffers heavy rains brought by typhoons, but Mindanao itself lies outside the typhoon belt. The Zamboanga peninsula and Misamis do not experience very pronounced seasons, although they are relatively dry from November to April and relatively wet the remainder of the year. The eastern section of the island has no dry season and experiences relatively heavy rains from November to January. The rest of Mindanao has rainfall more or less evenly distributed throughout the year, with mild temperatures all year round. Agriculture in Mindanao thus does not suffer the destruction brought by typhoons.

Mindanao has abundant natural resources and has been considered a treasure house and a land of promise. Fertile soil because of volcanic activity and river silt yields coconut, abaca, rubber, rice, corn, root crops, vegetables, cassava, coffee, cocoa, peanuts, tobacco, bananas, and pineapples. Because of the mild weather and the absence of typhoons, fruits such as lanzones, durian, mangosten, and rambutan grow all year round. Mineral ores such as gold, silver, lead, zinc, copper, manganese, iron, nickel, chromite, and cobalt are plentiful. Timber is also found in abundance. Cattle raising and fishing are other major sources of livelihood.

Mindanao appears under various names in early maps. One of the earliest European maps names the island Vendanao; later maps spelled the name Medanao. The Japanese called the island Mitanao in the early days of trading.

When man first appeared on Mindanao is not known, but archaeological evidence shows that there were wooden boats in Butuan by 320 C.E., and that there was Metal Age pottery in South Cotabato by 585 C.E. The oldest trading materials, as well as metal tools, date back to

around 900 C.E., evident from finds in Butuan. Trade was conducted between the peoples of Mindanao and China, India, Arabia, and Southeast Asia. Major trading centers in Mindanao at that time were Butuan, at the mouth of the Agusan River; Caraga, on the east coast; Maguindanao, next to the Rio Grande; and Dapitan, on the west coast. Missionaries brought Islam to Maguindanao in the early sixteenth century, and a sultanate was established. Islamization continued throughout the century and spread to the Maranao people around Lake Lanao. Maguindanao, as a major Muslim center, traded with Sulu and Ternate, and alliances were forged.

The Muslims in Mindanao were centered in Lanao and Cotabato (present-day provinces of Lanao del Sur and Maguindanao), where the Maranao and Maguindanao sultanates were established, respectively. *Maguindanao* means "people of the foot plains," while *Maranao* denotes "people of the lake."

Magellan's expedition to the Philippines in 1521 may have anchored in Mindanao, as some historians claimed. The arrival of the Spaniards in the Visayas in 1521 witnessed the landing of Ruy Lopez de Villalobos in Mindanao; he explored part of the island but was unable to establish a colony and was driven out.

Islamization in Mindanao continued, as did traditional trade relations, now including the Portuguese, as the Spaniards began colonizing the Visayas and Luzon in the late sixteenth century. Some Spaniards visited northern and eastern Mindanao and attempted to establish settlements and garrisons in Caraga (now Davao Oriental) and Zamboanga. Attempts were also made to penetrate and conquer Muslim areas; Jesuit missionaries began converting the people in northern Mindanao.

The Spaniards were able to establish a garrison in Zamboanga in 1635. Spanish missionaries and soldiers with Filipinos from the Visayas settled in Zamboanga and began conversion and subjugation in the Zamboanga peninsula. A major Spanish military expedition led by the governor-general, Sebastian Hurtado de Corcuera, was launched in 1637 against Lanao and Cotabato (where the Maguindanao sultanate was). After eight years of fighting, the sultan of Maguindanao, Sultan Kudarat, signed a peace treaty with the Spaniards, but tensions continued and Sultan Kudarat declared a jihad (holy

war) in 1656, the first jihad in the history of Islam in the Philippines. Fighting continued until 1663, when the Spanish forces were ordered to Luzon to defend against an imminent Chinese attack. Mindanao was largely abandoned by the Spaniards, and the Maguindanao sultanate carried out trade with the Dutch, the British, and Southeast Asia.

In the eighteenth century, the Spaniards re-established their fort in Zamboanga. Other settlements were established in northern and eastern Mindanao. Conflict between the Muslims and the Spaniards started again, and continued sporadically, with major campaigns being launched by the Spaniards in the 1860s and 1890s. The Spaniards also encouraged Filipino migration into northern and eastern Mindanao, as well as to Zamboanga. The Spaniards evacuated from large parts of Mindanao in 1899 during the Philippine Revolution (1896–1898) and the arrival of the Americans.

With the acquisition of the Philippines by the United States in 1898, a military government was established in 1899 to govern Mindanao and Sulu. Initially the Americans tried to win over the Muslims by diplomacy and tact. They soon resorted to force, however, with military operations commanded by Captain John Pershing (1869–1948). In 1903 a portion of Mindanao and Sulu were designated the Moro Province (Jolo, Lanao, Cotabato, Davao, and Zamboanga), which remained under military rule. Military operations continued even as public works and other programs were instituted. Civil government was established in 1914 with the creation of the Department of Mindanao and Sulu. In 1920, Mindanao became a regular part of the Philippine civil administration, although the Muslims remained under a separate agency, the Bureau of Non-Christian Tribes.

Muslim uprisings continued through the U.S. colonial period and through the 1930s during the Philippine Commonwealth. In 1937, heavy fighting between the Muslims in Lanao and the newly established Philippine army broke out, the first serious fighting encountered by that army.

Japanese immigrants had settled in the province of Davao from the early twentieth century and had built up the abaca industry there. Conflict with the native people, however,

broke out sporadically, and the increasing number of Japanese led to suspicion in Manila.

The Japanese invaded Mindanao during the Pacific War (1941–1945). Davao was occupied first in December 1941, to serve as a base for further operations southward. Conquest operations for the rest of the island began in March 1942, and formal resistance by the Filipino-American defense forces ended in May. However, a strong guerrilla resistance movement comprising both Muslim and Christian Filipinos harassed the enemy and were never defeated by the Japanese. The guerrillas received assistance from Australia and were recognized as the 10th Military District. U.S. forces returned to retake the island in March 1945, and with guerrilla assistance had defeated most of the Japanese by June 1945.

Mindanao was a basic part of the country when the Philippines became an independent republic in 1946. Provincial divisions were maintained, but as population grew and towns developed, many of the provinces were subdivided into two or three divisions in the succeeding years.

Muslim disaffection with the government, however, remained, especially with the influx of more Filipinos from Luzon and the Visayas. In 1971, the Moro National Liberation Front (MNLF) was established by Nur Misuari (1940–), who was determined to fight for an independent Muslim state (Bangsa Moro). Armed clashes began in 1972 and escalated rapidly. In an attempt to stop the fighting, negotiations were held in Libya, bringing forth the Tripoli Agreement of 1976. The agreement provided for a ceasefire and the establishment of an autonomous Muslim region in the southern Philippines to be composed of thirteen provinces. The agreement, however, was not immediately put into effect. Although the Autonomous Region in Muslim Mindanao (ARMM) was created in 1989, this encompassed only two Mindanao provinces, the Sulu archipelago and Tawi Tawi Island. Fighting continued through succeeding administrations until 1996, when a formal peace agreement between the MNLF and the Philippine government was reached. Misuari won in regional elections as the head of the ARMM. Tensions continued, however, and another group, the Muslim Independence Liberation Front (MILF), was

formed, insisting on an independent Muslim state. Fighting continues up to this writing.

Administratively, Mindanao is divided into six regions, generally following the geographic and religious divisions. These regions and their provinces are: Region 9, Western Mindanao (Basilan, Zamboanga del Norte, and Zamboanga del Sur); Region 10, Northeastern Mindanao (Bukidnon, Camiguin, Misamis Occidental, and Misamis Oriental); Region 11, Southern Mindanao (South Cotabato, Davao, Davao Oriental, and Davao del Sur); Region 12, Central Mindanao (North Cotabato, Lanao del Norte, and Sultan Kudarat, plus Sarangani Island); the Autonomous Region in Muslim Mindanao (Lanao del Sur and Maguindanao, plus the Sulu archipelago and Tawi Tawi Island); and Caraga (Agusan del Norte, Agusan del Sur, Surigao del Norte, and Surigao del Sur). Major ports in contemporary Mindanao are Zamboanga, Davao, Cagayan de Oro, General Santos, and Iligan.

The population of Mindanao Island (including Basilan, Sarangani, and Camiguin Islands) as of 2000 was close to 13.6 million, of whom about 1.3 million were in the ARMM (National Statistics Office 2000). Mindanao as an intrinsic part of the Philippines is rich in resources and culture. However, the constant conflict in the island has caused it to remain underdeveloped.

MINDON (r. 1853–1878)

Postponing Imperialism

The defeat that the Burmese kingdom received at the hands of the British Indian army in the second Anglo-Burmese War in 1852 shocked the conservative court and prompted a revolt against the king, Pagan Min. The victor in the palace revolt against Pagan Min was his half brother, Mindon Min. Mindon Min arrived on the throne at a time of crisis for the Burmese kingdom and immediately launched a thorough review of the practices and methods of the kingdom. His was a forward-looking, progressive, modernizing monarchy that attempted to reform the institutions of the state in order to preserve it and maintain its independence against the overwhelming forces of European imperialism that were encroaching on Southeast Asia at that time. Unlike his Siamese counterparts, Mindon was given neither the time nor the resources to sufficiently strengthen the Burmese state and save the monarchy.

One of the intentions of the British in seizing Rangoon, Martaban, and Bassein was to unite the two British provinces of Arakan and Tenasserim in order to cut the Burmese state off

from the coast and thus be in a position to squeeze further advantages from it. Mindon, realizing the weakened position of his kingdom, sought with the remaining resources at his disposal to try to thwart that plan. But first he had to secure his own position on the throne. Mindon, who held the position of president of the Council of State in Pagan's government, was allied with his brother, Kanaung, one of the king's generals. Kanaung was convinced of the military superiority of the British and insisted on finding a way to end the war before further damage was inflicted on the remaining Burmese empire.

Fearing a plot against him by one of the king's officials who wished to continue pursuing the line of battle, Mindon, together with Kanaung, went up to Shwebo, the seat of power of his grandfather, King Alaungpaya (r. 1752–1760), the founder of the Konbaung dynasty. There he ousted the local ruler and raised an army of his own to march on the capital at Amarapura. The government of Pagan Min now faced two enemies: the British to the south, and Mindon's force of more than 3,000 to the north. Fractured Pagan Min soon submitted to Mindon. Just thirty-nine years old when he seized the throne, Mindon was to govern for twenty-five years, until his death at age sixty-four in 1878. During that time he gained the reputation as a great Buddhist king.

Like his contemporary Southeast Asian monarch, King Mongkut (r. 1851–1868) of Siam, Mindon determined that if Burma was to survive as an independent kingdom, his state would have to move into line more with modern forms of statecraft as represented by Western Europe. A number of his reforms were not completed before his death, but he put in train a number of processes that have had an impact on twentieth-century Burmese statecraft. He faced a number of difficulties in implementing his reforms. These included opposition from older officials at the capital and harassment by the uncooperative British. Moreover, the tax base of his kingdom had been significantly lessened by the loss of the rice surplus in the delta to the south. Now, rather than having a state monopoly on rice to distribute to his subjects, the Burmese king was forced to purchase rice for his subjects in foreign currency at international prices. Also, a large number of his subjects left the country to take up residence in the more prosperous free-market British

Burma, away from the economic constraints imposed by the monarchy.

Mindon apparently was very much involved in the details of his administration. British visitors to his court in the 1850s remarked on his capacity to manage his people, as well as his wisdom and intellectual superiority over almost everyone else in his court. He was known to foreign observers as a man of principle and interested in justice and fairness for his people. On receipt of petitions from his subjects, whom he insisted on seeing personally, he sometimes overturned the decisions of his subordinates.

The heart of Mindon's strategy was to preserve the independence of the Burmese kingdom through blending the awe and majesty of the institutions of the monarchy and the Buddhist faith with the power of modern science, technology, and bureaucratic government. Initially he shared many of the responsibilities of reform with his brother Kanaung. Kanaung oversaw technological innovation, military reform, and the like, while Mindon concerned himself with foreign affairs, administrative reforms, and the economy. The traditional responsibility of a Burmese king to uphold and propagate Buddhism was also a key activity for the king. This he pursued with great diligence, because he was himself a man of religious orientation and scholarship.

Given Mindon's intention to preserve Burma's independence, many of his reforms concerned the military and national defense. He sent some younger members of the officer corps to Europe for training. He ended the traditional practice of rotating corps of troops commanded by hereditary officers, replacing them with a standing army with a salaried, permanent officer corps. Munitions factories were built and heavy guns and steamships imported to improve riverine defense. French and Italian engineers were hired to build fortifications on the Irrawaddy River on the approaches to his new capital at Mandalay. Plans to build a railway to China failed, and Mindon's tiny fleet of steamers could not compete with the better run and better capitalized Irrawaddy Flotilla Company in Rangoon. Mindon did succeed, however, in tying some of the outlying regions of his kingdom to the capital by a telegram system that was in place by 1870.

Some of Mindon's plans were disappointments and probably drained more away from

the treasury than they produced. Among these were a number of state-owned and -managed factories to produce lac, cutch, sugar, cotton, and silk goods. He also developed a mint to fashion coins for the newly monetarized economy. These reforms were perhaps too few and too haphazard to have much of an impact on improving the strength of his state in the short period of time that Mindon had to complete them. But they did demonstrate to the Burmese their capacity to carry out such activities.

Another of Mindon's major reforms was in the field of education. Up until then, most education in Burma had centered on the teaching of Buddhist texts and practices. Mindon, however, saw the advantages of secular and scientific education as practiced by his opponents, the British, as well as other Europeans. He sent a number of junior members of the court or their children to India, Britain, France, and Italy for training. Many returned to take up posts in Mindon's expanded army and industrial efforts.

The heart of Mindon's strategy to strengthen and preserve the monarchy was centralizing political and administrative power. Here he met resistance from the existing nobility, who saw these reforms as threats to their independence and authority. However, gradually, by dismissing hereditary authorities for incompetence or violation of the orders of the government, he was able to replace them with his own salaried provincial officials. Through a process of gradual reform, Mindon was attempting to construct a modern bureaucratic state while ensuring that those who lost out in these reforms did not generate enough power to thwart his plans. He was much more successful in the valley areas near his capital than farther away, where local rulers easily challenged his authority. Mindon also attempted to carry out fiscal reforms in order to centralized tax revenues under his authority. That, too, was resisted by his hereditary subordinates but much favored by the court, which saw that they would benefit from this new order.

Mindon moved the capital of his kingdom to Mandalay. There he lavished large expenditures on building hundreds of religious buildings, including beautiful pagodas and monasteries. He also convened a meeting of Theravada Buddhist monks to correct errors in the texts of his faith. Mindon also insisted on the proper carrying out of royal procedures and protocol.

Court life provided an aesthetic, religious, and political example for his subordinates and local governors to model themselves upon. The role of the state in shaping the ethos of his society was not lost on the king.

Mindon became ill late in 1877, and he was not to live much longer. Reformers in his court, led by the Kinwun Mingyi, or Kinwun minister, saw the prospective succession struggle as their opportunity to continue their reforms, perhaps turning the monarchy into merely a symbol of authority rather than the effective ruling power. The model they had in mind was that of the British constitutional monarchy. Burmese kings had never established a clear line of succession, for fear that those chosen to succeed would perhaps not live to reach the throne. There were three senior princes, brothers of Mindon, who were thought likely to succeed, and the rivalry among them was strong.

In the end, however, the Kinwun Mingyi and Mindon's senior queen managed to place on the throne Prince Thibaw, the twenty-year-old son of a lesser queen. Thibaw had neither the strength of character nor the experience of most of those around him, and it was believed that he would be compliant with the wishes of his senior advisors. What happened was effectively a palace coup. Many of those who opposed Thibaw's accession were forced to flee or were placed under arrest. The Kinwun Mingyi's rivals in the administration were dismissed, and those who supported the coup were given appointments. Many of those arrested were executed. However, the long-term plans of the Kinwun Mingyi to finish the reforms that Mindon had commenced were thwarted when the British invaded less than eight years later, and abolished the Burmese monarchy.

MING DYNASTY (1368–1644)

The Ming dynasty was established by the Han Chinese to succeed the collapsed Yuan (Mongol) dynasty (1271–1368). Its relationship with Southeast Asian countries operated largely within the confines of the hierarchical tributary system.

The establishment of the Ming dynasty and the expulsion of the Mongols to the Gobi marked the return of Han Chinese legitimacy in ruling China. The first Ming emperor, Hongwu (1328–1398, r. 1368–1398), learned a lesson from the bellicose Mongols and announced the building of a harmonious empire in which the peripheral Asian states were vassals. He sent out missions to Southeast Asian countries decreeing that a new dynasty had superseded that of Yuan, demanding tributes to the new Chinese emperor, and promising that there would be no more military campaigns, which had been perennial during the Yuan dynasty against Vietnam and Java. The traditional Sino-centric tributary system was thus revived. The empire's diplomatic relationship with the Southeast Asian countries became the closest during the reign of Emperor Yongle (1360–1424, r. 1402–1424), with seven naval expeditions commanded by Cheng Ho (Zheng He), a Muslim eunuch, to as far as East Africa. In all the voyages, Cheng with his marvelous fleet called at Southeast Asian ports, pacified local monarchs, and impressed them with the need to pay regular tributes to the Ming emperors in the future. Tributary missions might conduct a limited amount of trade, supervised by the Maritime Trade Supervisorates (*shiboshi*) at Ningbo, Quanzhou, and Guangzhou, the last

Chinese scholar writing in his study. Chinese literature flourished during the Ming dynasty, spurred on by prosperity and the introduction of a dictionary that simplified the written language by reducing the number of signs for characters.

specializing in dealing with Southeast Asian missions. Emperor Yongle, among the successors of Emperor Hongwu, was the only one who had the temerity to break the ancestral rule in sending forces to Vietnam to suppress usurpation against the Trần house.

However, the effect of Emperor Yongle's aggressive policies in bonding the tributary system did not last long. The vassal states' acknowledgment of China's central status and the system's operation grew to be symbolic, especially in the second half of the dynasty's tenure, when the Ming court came to view the southern border of the empire as less strategic than the northern.

The Mongols returned with restored strength, posing a direct threat to Beijing, a new capital established by Emperor Yongle to replace Nanjing but geographically more exposed to military threat across the Wall. National insecurity forged new developments in the dynasty's relationship with Southeast Asia. The attention of the Ming court was diverted from the sea; naval adventures of any scale did not occur after that of Cheng Ho. The tributary system grew loose, which facilitated political changes in Southeast Asia, notably the weakening of Vietnam and the rise of Burma (Myanmar).

More prominent was the expansion of private trade between Southeast Asia and China. In the context of the tributary system, only tributary trade was allowed, which was in the form of gifts from the Chinese emperor in return for the tributes paid. Any trade aimed at seeking profit was disallowed. However, the Ming government grew reluctant to check the expanding activities of private merchants, resulting in private trade exceeding the tributary trade in volume. Although profitable, the increasing traffic with Southeast Asia created a crisis in the stability of the Chinese Empire. The expanding junk trade constantly attracted Chinese emigrants to Southeast Asia, an unlawful act according to Ming regulations. Some of them became smugglers, some even armed pirates in liaison with the Japanese gangs harassing Chinese coastal provinces, Guangdong (Kwangtung) and Fujian (Fukien) in particular. Together with the northern border problem, this maritime crisis forced the Ming court to face a two-front threat. Besides military confrontations, the Ming court intended to uproot the piracy problem, by legalizing foreign trade by the Chinese and by granting coastal residents the right to operate oceangoing ships for trade. It was decreed in 1567 that fifty licenses would be issued annually for oceangoing ships to trade with Southeast Asia. This new legislation worked, and it unleashed further vigor to the junk trade with Southeast Asia. Ports such as Manila and Batavia benefited and developed into important trade cities.

Once the pirates lost the support of the coastal residents, they faced more effective exterminatory campaigns by the government. Some of them fled to Southeast Asia. A Lin Feng reached Luzon with his small fleet, where he joined the locals in combating the Spanish

intruders but ended in failure and was forced to retreat to China.

The lucrative Southeast Asian trade even started a new era for Sino-European relationships. After acquiring Melaka, Portuguese traders verified from the locals the existence of a Chinese Empire with great trading opportunities. They set their sails for China and set up a settlement at Macau (Macao), upon the payment of a sum of land rent to the Guangdong government. The first and only European enclave before the Anglo-Chinese or Opium War (1840–1842), Macau served as an indispensable entrepôt, opening a new Sino-European trade route and providing a regular channel through which Sino–Southeast Asian trade was conducted.

MISCEGENATION

Miscegenation means union of individuals of different races. Miscegenation may involve change of legal status, nationality, or religion for one of the partners. Like all forms of marriage, it is regulated by governments and religious authorities and is the subject of public debate. In Southeast Asian histories, miscegenation was a vehicle for incorporating the foreign male into

a local community, and for translating a local woman into a foreign settler community.

Malay and Indonesian chronicles often link conversion to Islam with miscegenation. A foreigner of mysterious powers who arrives by ship announces the new religion to a local king. The royal convert then gives a daughter in marriage to the stranger to secure his permanent residence and entry into local society.

In the age before the hotel chain, marriage provided mobile men with places of residence and domestic services. Marriage, preceded by conversion to Islam, offered Chinese men a stake in local communities. Army commanders who took Europeans prisoner in Indonesian sultanates gave them the stark choice of execution or admission into the local community through conversion and marriage.

In Southeast Asian histories, miscegenation is often cast as marriage between European men and Southeast Asian women. European trading networks operated like those of Chinese, Indians, Arabs, and Malays. Small communities of men established themselves in Southeast Asian ports. They maintained connections to other settlements and to Europe through men who traveled the sea highways and put in at port for weeks at a time. Settled and transient Europeans found female companionship among women of the ports. Dutch paintings of seventeenth-century settlements in Asia show mixed-race couples among market crowds and in family portraits. In places where men put down permanent roots and where Europeans became administrators, there was a push to regularize unions and proscribe temporary marriage and prostitution.

Batavia was established in 1619 on the site of the sultanate of Jayakarta to be the Asian headquarters of the Dutch United East India Company (VOC). Its ruling administration set rules for all company settlements in Asia. A priority was to bring public order to private life. Girls were imported from Holland as brides for company employees, but the scheme was soon dropped in favor of promoting settler communities through marriage of immigrant men to local women. Women with ties in Asian communities were expected to keep their European husbands renewing their five-year work contracts with the VOC instead of repatriating to Europe. To promote permanent communities, the company prohibited repatriation by men

with an Asian-born wife and children. It employed boys born from these unions in its offices and armed forces, and encouraged the girls to become brides of immigrants from Holland.

The company and the Batavia church synod established regulations governing mixed marriage. Weddings had to be conducted in the Reformed Church. If the bride was a slave, her husband had to purchase her freedom and have her baptized prior to marriage. Christian name and marriage to a European man gave the bride the legal status and nationality of European. Children born to such unions inherited European status. In the early days, before a mixed community had reproduced itself in sufficient numbers, the company purchased slave girls and housed them in the Women's Court until husbands were found for them. The bride's purchase price was deducted in installments from the husband's monthly salary.

Visiting Europeans condemned miscegenation. They claimed that mixed marriage produced children who were lazy, amoral, and vicious. In narratives published for the reader in Europe, travelers ridiculed the manners and tastes of the part-European. Within company communities, Dutch men honored the Asian and Eurasian ladies married into the ruling clique. Public celebrations marked their anniversaries, and public mourning was observed at their passing.

Miscegenation outlasted slavery. It was the norm until greater numbers of European women began migrating to Dutch outposts in Asia from the 1870s. Steamship connections, the fast route through the Suez Canal, and mass production of quinine made tropical settlements seem less distant and life-threatening to women in Holland, and they coincided with changes in colonial government policy that welcomed female immigrants. Although the proportion of women among Dutch migrants gradually increased, overseas communities remained products of their early roots. When Japan invaded the Dutch East Indies in 1942, 70 percent of the colony's European community were Asia-born (Van Marle 1955).

Miscegenation in Southeast Asian sultanates was a mechanism for enfolding foreign men into local communities. In Europe's Southeast Asian colonies, miscegenation conferred European status on Southeast Asian women. Colonial administrators and legislation classified

people as European, Native, or Foreign Oriental (meaning Arab and Chinese), and devised separate rules and rights for each category, but individuals entering mixed marriages crossed colonial boundaries. Miscegenation produced children who challenged the colonial order because identity and privilege could not be determined by physical appearance. In the independent nations of Southeast Asia, nationality laws required individuals to choose between their heritages. Those choosing Dutch citizenship were expelled from Indonesia in 1959.

**MISSION CIVILISATRICE
("CIVILIZING MISSION")**

France's *mission civilisatrice*—a civilizing mission that spreads the republican concepts of liberty throughout the world on the back of the French language and cultural genius—was a long-nurtured notion that had guided and justified nineteenth-century French colonial expansion. This ideology derived from the conviction that France, by virtue of its status as an enlight-

ened civilization, had a duty to disseminate these concepts widely. French colonial policymakers felt genuinely that France could and should exert its powerful civilizing influence on the underdeveloped nations of the world, bringing to them the best of Western methods of industrial production, medicine, and fair governance. Thus, committed to reshaping their colonial subjects' lives in ways consistent with a French republican vision of modernity, the French colonial administrators regarded themselves as on a mission civilisatrice—a mission to civilize their colonial subjects.

To be "civilized," therefore, was to rise above the various tyrannies imposed on humans by climate, disease, ignorance, and despotic governments. In the face of such tyrannies, the French colonial administrators saw themselves as liberators whose task was to diffuse the benefits of Western science and education while actively attacking and eradicating native institutions they deemed retrograde. This belief gave rise to the doctrine of *assimilation*, by which was meant the raising of the standards of native life to a level that would eventually permit the colonial territories' absorption into the French Republic and the adoption of the people, individually, as full-fledged citizens of France.

In the early 1900s, the doctrine of assimilation gave way to that of *association*, which envisaged a partnership among races and among their institutions that should be of equal benefit to both parties. The benefits to be shared would extend to the advantages to be derived from an enlightened legal and judicial system and from modern agriculture, mineral and plantation exploitation, from commerce, and perhaps industry. This joint venture, guided and developed by the genius of France, was to be a high moral enterprise. Such were the tone and the direction of the colonial policy set between 1919 and 1939 by Albert Sarraut, governor-general of Indochina (t. 1911–1914, 1917–1919), then minister of colonies (t. 1921–1924, 1932–1933), through a corpus of ideas that very much resembled a liberal reinterpretation of the "White Man's Burden." Sarraut considered the assignment, qualified by him as "Colonial Greatness and Servitude," as part of the responsibilities France could not shirk within the scope of its mission at the service of humankind. It was its duty to bring progress "in the respect of local

beliefs” and to lead to emancipation with sincere but prudent liberalism.

Such an approach, trying to reshape rather than to crush native institutions, was certainly subtler and more culturally sensitive than what had gone before it, but it was still a firm expression of the republican zeal embodied in the mission civilisatrice. One of the goals of the International Colonial Exposition of Paris in 1931, for example, was to demonstrate that the French colonial effort was achieving this mission—and that colonial industry, however primitive, was showing promising signs of advancement from savagery to civilization.

On the other hand, the faith in the mission civilisatrice may explain that, whereas the British hung on to colonial possessions for commercial and military reasons, the French added an emotional and cultural dimension to their attachment. And because the French encouraged their local colonial elites to look upon mainland France as the center of their universe, particularly through higher education, the French cultural penetration was far deeper than that of the British, Dutch, or Portuguese.

MISSIONARIES, CHRISTIAN

The world religions of Hinduism, Buddhism, Islam, and Christianity were not brought to Southeast Asia by armies and colonial occupation alone as according to the so-called *ksatriya*

theory after the Hindu caste of warriors, nor by traders alone (the *vaysha* theory after the Hindu caste for traders). Missionaries also played an important role. Specialized religious knowledge, which was needed for the great temples of Angkor Wat, Prambanan, and Borobudur, was restricted to Brahmin pundits and Buddhist monks. The same was the case with Islam and Christianity. Notwithstanding the historical trio of military, merchants, and missionaries, the latter have to be taken as distinct from the former two groups, although there have often been common interests as well. Therefore the Spanish worked until 1900 in the Philippines, the British in Burma and Malaysia, the French in Vietnam, and the Dutch in Indonesia, with some exceptions such as the Germans, who joined Ingwer Ludwig Nommensen (1834–1918) in Indonesia.

Following is a brief description of the most prominent and best-known foreign missionaries who brought Christianity to Southeast Asia, emphasizing the very different characters and roles in culture and society where they undertook their missionary work.

In Burma (Myanmar) the contributions of three outstanding missionaries are prominent. Paul Ambroise Bigaudat (1813–1894) was in 1865 one of the first Catholic bishops in Burma. He is not only known for preaching his own faith and educating a Burmese clergy; in addition, he wrote one of the best books ever written on Burmese Buddhism: *The Life or Legend of Gaudama, the Buddha of the Burmese* (1858, many reprints). Adoniram Judson (1788–1850) was the pioneer Baptist missionary in Burma, doing the basic work of language studies, working also as a translator for the Burmese independent government after he was imprisoned as a spy. He published a Bible in Burmese in 1834. John Ebenezer Marks (1832–1915) was an Anglican educator in Burma who had nine sons of the monarch in his school and developed St. John’s College, Rangoon (Yangon).

Among Protestant missionaries to Indonesia was Justus Heurnius (1557–1652), who arrived in Batavia in 1624, translated the Heidelberg catechism in Chinese, worked in the Moluccas from 1633 to 1638, and translated sections of the Bible into Malay. Joseph Kam (1769–1833) reorganized the mission in the Moluccas in the early nineteenth century. Nommensen was the first Westerner to live in Batakland (Sumatra).

He had set up a common school system for all children. He was impressively successful, in that 180,000 had converted by the time he died. Albert Kruyt (1869–1949) was among the first missionaries to enter Torajaland (Sulawesi), where he developed the ethnological approach, studying and respecting local culture and language. Hendrik Kraemer (1888–1965) was, in the 1920s and 1930s, the revolutionary missionary to lead the Protestant mission to accept independent churches and be tolerant of nationalist Christians. Among the Catholics of Indonesia, quite a few martyrs are known from the earliest period. The Portuguese Franciscan priest Simon Vaz was murdered in Moro in 1535 and is considered the first of them. Francis Xavier (1506–1552) is without doubt the best-known Catholic missionary: he worked from 1545 to 1547 in the Moluccas and briefly in Melaka. Later prominent missionaries were Frans van Lith (1863–1926), who started the Java mission and made it flourish by the excellent Jesuit schools and their mixture of the best of Western education and a high esteem for Javanese culture. The learned Jesuit Piet Zoetmulder (1906–1995) devoted his life to the study of classical Javanese, composed a dictionary, and published many texts that made available the treasury of Buddhist and Hindu developments in Indonesia. Jilis Verheijen (1908–1997), a missionary of the Society of the Divine Word (SVD) order, was among the most noted scholars of language and culture of West Flores or Manggarai.

The most famous Catholic missionaries of the Philippines are all from the sixteenth century. Juan de Plasencia (d. 1590) was the first to compose a dictionary of Tagalog. His catechism in Tagalog was the first book printed in that language. Martin de Rada (1533–1578) wrote a strong condemnation of colonial policy as executed by the Spaniards. Domingo de Salazar (1512–1594), the first bishop of the Philippines, denounced the satanic coalition of Spanish landlords and traditional nobility. He was the architect of the quick conversion of a large part of the Philippine population. From later periods there was Pedro Murillo Velarde (1696–1753), a learned Jesuit who wrote works on Philippine history and geography, but most of all was known as a legal expert. Jacinto Juanmartí y Espot (1833–1897), also a Jesuit, worked among Christian slaves ransomed from Muslim Magin-

danao. Juan Villaverde (1841–1897), a Dominican friar, became known as the road builder, part of his work among the hill people of Nueva Vizcaya. James Rodgers (1865–1944) is celebrated (and sometimes detested) as the first Protestant missionary in the Philippines.

For Malaysia, Francis Thomas McDougall (1817–1866) is honored as the pioneer Anglican missionary in Sarawak. William Shellabear (1862–1947) is known as a scholar in Malay studies, but also for his work among the Chinese of Singapore and Malaysia.

For Vietnam, the best-known missionary is Alexandre de Rhodes (1591–1660), a Jesuit and gifted linguist who first wrote Vietnamese in Latin script, the way it is written today. Jerónimo Hermosilla (1800–1861), bishop of Tonkin, saw a great increase in Catholics during the thirty-two years he worked there, but also experienced the most severe persecution. He died as a martyr, beheaded in 1861.

MISUARI, NUR (1940–)

A Moro Leader

Nurullaji (Nur) Misuari is the chairman of the Moro National Liberation Front (MNLF), the group that led the Moro (Muslim Filipino) struggle for self-determination in the southern Philippines. As chairman, he was instrumental in obtaining international recognition for the MNLF and in securing foreign assistance that sustained the Moro struggle for years.

Misuari, born in 1940, acquired his college education at the University of the Philippines where, later, he was employed as instructor in the Department of Political Science.

Shortly after the massacre of Moro trainees by military men in Corregidor in 1968, he left the university and decided to be active in the movement against the government. In 1969, when the MNLF was organized, he was chosen

chairman of its central committee, the position he has held since then.

As MNLF chairman, Misuari became a more determined advocate of the Moro struggle for self-determination; even while abroad, he ardently pursued his advocacy through his articulation of the Moro plight and struggle in his fiery speeches before Muslim leaders and intellectuals in international assemblies. Consequently, he earned recognition and more support for the MNLF from the Organization of Islamic Conference (OIC).

In 1996, Misuari, as chairman and representative of the MNLF, concluded a peace agreement with the Philippine government and subsequently accepted the chairmanship of the Southern Philippines Council for Peace and Development (SPCPD), a government-created council tasked to monitor development projects in selected areas in the southern Philippines. He also decided to run as a government official candidate, and he won the gubernatorial election in the Autonomous Region in Muslim Mindanao (ARMM) held in the same year. As ARMM governor, Nur Misuari has now joined the ranks of politicians running the government he once denounced.

However, his political partnership with the government ended on a sad note. The Philippine government accused him of rebellion and ordered his arrest due to his alleged involvement in the attacks in Sulu in November 2001. In January 2002, after being detained for several days in Malaysia, Misuari was deported to the Philippines, where he is currently under detention.

MOHAMMAD HATTA (1902–1980)
Patriot, Muslim Intellectual,
and Administrator

Mohammad Hatta was the vice-president of Indonesia from 1945 to 1956. A Minangkabau, born in Bukittinggi, Hatta was educated in Dutch primary and secondary schools in Padang and Batavia. He was treasurer of the Jong Sumatranen Bond in Padang and Batavia. In 1922 he undertook tertiary studies in Rotterdam, where he remained for ten years. He was involved in the conversion of the Indische Vereeniging (the Indies students' society) in The Netherlands from a social club to the politically active Perhimpunan Indonesia (PI, Indonesian Union). He became chairman of PI in 1926, and contributed to the planning of a new nationalist party in the Netherlands Indies. He also became involved with the League Against Imperialism. In 1927 he was arrested on the charge of encouraging armed resistance to Dutch rule in Indonesia, was tried in The Hague, and was acquitted after using his defense speech to make a sweeping denunciation of Dutch rule and a justification of Indonesian nationalism.

After being expelled from PI in 1931, he returned to Indonesia and took over leadership of the Pendidikan Nasional Indonesia (PNI-Baru, National Education Club). In February 1934 he was arrested with other PNI-Baru leaders and exiled to the Boven Digul penal settlement in New Guinea, before being removed with Sutan Sjahrir (1909–1966) to the relative comfort of Banda Naira in 1936. He was brought back to Java just before the Japanese invasion. Despite having previously condemned the Japanese occupation regime, serving as vice chairman of its mass organizations and seeking to manipulate events in the interests of Indonesian independence. It was during this period that he renewed his curious and sometimes acrimonious relationship with Sukarno (1901–1970), and the so-called *Dwi-Tunggal* (Two-in-One) was born. He was cosignatory with Sukarno of the Proclamation of Independence in August 1945, and became vice-president, a post in which he served for the next eleven years. Commissioned by Sukarno to head an emergency presidential cabinet in the period 1948–1949, he was imprisoned in the second Dutch "police action" (1948). Then, as prime minister of the republic,

he presided over negotiations with the Dutch and the transfer of sovereignty to the republic. He dominated the Indonesian side of the Round Table conference at The Hague from August to November 1949, where he impressed all the participants.

Disturbed by political trends in the early 1950s, he submitted his resignation as vice-president in 1956, using his final speech to condemn the narrow self-interest of party politicians since independence. Although Hatta was asked by Sukarno to negotiate with the Pemerintah Revolusioner Republik Indonesia (PRRI, Revolutionary Government of the Republic of Indonesia) rebels in Sumatra, force was used before he could negotiate an end to a rebellion that he may have unwittingly helped to provoke.

In subsequent years Hatta's political activities were essentially covert. Although there were clandestine gatherings of Muslim youths at his villa in Megamendung in 1962, he did not play a direct political role against Sukarno's Guided Democracy. With the fall of Sukarno, Hatta sought to reenter national politics by trying to form a Partai Demokrasi Islam Indonesia, blending Modernist Muslims and socialists. Suharto's New Order refused to sanction this new party, however. He still remained a potential focus of opposition to the New Order: he was offered the leadership of PNI in 1969 and was effectively sent abroad during the 1971 elections. In 1973 he was involved in the Sawito affair, a plot for a bloodless coup against Suharto. In a notable speech in August 1975 he attacked the government's failure to base itself on the rule of law. Hatta had sought to invoke the Pancasila (the five national principles of Indonesia) in order to condemn the excesses of both Sukarno's Old Order and Suharto's New Order. It was in an attempt to co-opt him that the Suharto regime appointed him in 1975 to the Committee of Five to advise the president on the proper implementation of the Pancasila.

Hatta died on 14 March 1980. He was most famous as the other (and more attractive to most commentators) half of the *dwi-tunggal* with Sukarno: Hatta the dispassionate, Muslim Sumatran intellectual and administrator, juxtaposed with Sukarno, the passionate Javanist nation-builder. This may exaggerate Hatta's dispassionate, intellectual side: he was as much a religious as a revolutionary ascetic, a deeply pious but eclectic Muslim—Modernist, Sufist, and Wahab-

ist. He was fascinated by Marx, convinced of the possibility of synthesizing Islam and socialism, and devoted above all to the principle of popular sovereignty, remaining a committed advocate of the development of cooperatives as a solution to Indonesia's economic problems.

It is customary for commentators to depict Hatta as the social democrat who could have saved Indonesia from the ravages of both the Old and New Orders. But while his ability and integrity have never been doubted, he was short of two essential attributes. His lack of a parliamentary party base, despite his close links to the Council of Indonesian Muslim Associations, worked against him. And, second, perhaps the lack of a ruthless streak in him that would have been necessary if he were to have played a decisive political role in the later 1950s and 1960s destined him ultimately to play the part of a universally respected but essentially ineffectual elder statesman.

MON

Linguistically and genetically an Austro-Asiatic group, the Mon belong to the Mon-Khmer ethnological unit. Archaeological remains have shown that they inhabited the area of the Mekong Delta and Tonle Sap regions of present-day Cambodia, northeast Thailand, and around the Gulf of Thailand from at least the beginning of the Common Era (C.E.). Perhaps they date even earlier, as evidence of an Austro-Asiatic group has been found in western Thailand in Kanchanaburi Province near the village of Ban Kao, dating from Neolithic times (10,000 B.C.E.). Archaeological remains indicate that a Mon civilization based on Theravada Buddhism was present in northeast Thailand up to around the early ninth century, when it was overtaken by the Khmers of Angkor expanding from central Cambodia at the beginning of the reign of Jayavarman II (770/790/802?–834 C.E.). Around the Gulf of Thailand in the lower Chao Phraya valley, Mon Buddhist culture seems to have been centered on the protohistoric cities at U-thong, Nakhon Pathom, Ku Bua, and Phetburi. Evidence of habitation at U-thong extends back into Iron Age cultures (500 B.C.E.), predating the adoption of Buddhist culture.

The Mon civilization extended north into central and north-central Thailand at Haripunjaya (Lamphun), founded by the Mon Queen Chamadevi in the eighth century. It spread eastward into the city-states of the Pasak River Valley, Sri Thep, Sab Champa, and Chansen. The strategic location connecting the cities of the Chao Phraya valley with those of the Mun and Chi Rivers on the Korat Plateau in northeast Thailand may have helped to spread Theravada Buddhism to that part of the country. These cities are considered to be the heart of the Mon cultural polity in Thailand, the Dvaravati culture, known in the Chinese dynastic records as T'o-lo-p'o-ti. Once thought to be a far-flung empire, Dvaravati is now considered a shared culture based on Theravada Buddhism. This culture is apparent in the series of Mon city-states from around the first century C.E. and surviving until Khmer expansion during the ninth to eleventh centuries incorporated them in the Angkorian polity.

How far westward this early Mon polity extended beyond the Gulf of Thailand is a matter of controversy. British colonial scholars created a Mon polity called Rammanadesa based at

Thaton/Pegu contemporaneous with the Dvaravati polity in Thailand. However, recent research by Michael Aung-Thwin, building on some suggestive inferences by earlier scholars C. O. Blagden, Professor Than Tun, and Paul Strachan, challenges this assumption, asserting that there is no empirical evidence for such a polity until much later, in the late thirteenth century. "It was King Dhammaceti who first made the claims about Mon antiquity by shifting the sacred geography, genealogy and chronology of Buddhist India to Lower Burma in his inscriptions. That not only gave the Mon a greater antiquity by taking them back at least to the time of Asoka, but also linked their conceptual system with the most orthodox version of the Buddhist scriptures derived from the Third Buddhist Council via Sona and Uttara" (Aung-Thwin 2001: 20).

The Mon paradigm, as Michael Aung-Thwin has called it, developed the myth that King Anawrahta (r. 1044–1077) of Pagan had conquered the Mon capital at Thaton as a consequence of the refusal of the king of Thaton, Manuha, to give him the Theravada Buddhist scriptures. The victorious Anawrahta carried king, populace, priests, and scriptures to Pagan, inaugurating a cultural efflorescence at Pagan based on Mon Theravada Buddhist culture that also was said to be responsible for the development of the Burmese script and literary tradition. This myth has now been called into question. When colonial scholars deciphered the Kalyani inscriptions, they linked the myth of an early Mon polity called Rammanadesa in Lower Burma with the myth of Anawrahta's conquest of Thaton.

Nevertheless, by the fourteenth century, in the wake of the political collapse of the Pagan polity following the Mongol and Shan incursions in the late thirteenth and early fourteenth centuries, a Mon state was developing in Lower Burma around Pegu, Martaban, and Moulmein. When the Burmese from Pagan regrouped at Toungoo, then Ava, the stage was set for Mon-Burmese competition and conflict for control of the Ayeyarwaddy (Irrawaddy) heartland and the revenue from the maritime trade of the coastal lands. At first, the ruler in Lower Burma, Wareru (r. 1287–1296), was of Shan extraction and related to the T'ai king Ramkhamhaeng (r. 1279–1298) at Sukhothai, who laid claim to Martaban and Tenasserim. When the T'ai king-

dom of Sukhothai was weakening in the mid-fourteenth century, the Mon under Byinna Law (r. 1331–1353) and his son Binnya U were able to reassert Mon control. It was under his successor, Razadarit (r. 1385–1423), that a powerful Mon polity developed in Lower Burma. With the assistance of Portuguese mercenaries, Razadarit engaged in a lengthy struggle with the Burmese king, Mingyiswasawke (r. 1368–1401) of Ava, simultaneously holding back the Shans on his eastern flank. The tradition of Mon-Burmese competition may be traced to this medieval conflict.

After the deaths of Razadarit of Pegu and Mingyiswasawke of Ava, the conflict dissolved into desultory border skirmishes. Lower Burma, in the period 1423–1539, was able to develop into a prosperous maritime commercial polity under its renowned king, Dhammazedī (r. 1472–1492), a former monk who had been advisor to the Mon queen Sawlu. While Upper Burma at Ava was beset by internecine troubles and palace plots, Dhammazedī built Lower Burma into a wealthy polity on the base of international trade and the Theravada Buddhist religion. It was the “Golden Age” of Pegu.

In Upper Burma, Minkyinyo (r. 1486–1531) of Toungoo married the daughter of the Ava king, received the rich “rice bowl” Kyaukse area as her dowry, and began to assert Toungoo’s dominance. His son, Tabinshweihti (r. 1531–1550), revived the all-Burma policy of Pagan, defeated both the Mon and his rivals in central Burma, and asserted the preeminence of the First Toungoo dynasty (1531–1599) as supreme rulers of the country. He held a double coronation at both Pagan and Pegu, an act of symbolic significance in establishing him in the line of succession to Anawrahta of Pagan. He also continued the campaigns against the Shan-T’ai peoples, invading Siam in 1548. His conciliatory policy toward the Mon saw Mon customs and culture incorporated into his administration.

Under King Bayinnaung (r. 1551–1581) the Mon, often referred to as the Talaings in Burma, were again incorporated into the larger Burmese empire. Like his predecessor, Bayinnaung was sympathetic to Mon culture. He made his capital at Pegu, whose splendor was described by the European traveler Caesar Federicke (Federici) (1588). But the Mon chafed under Burmese control. Revolts and

conspiracies by Mon aristocrats and courtiers were severely punished, leading to a periodic exodus of Mon refugees across the border to Siam (Thailand). One such revolt during the reign of Nanda Bayin (r. 1581–1599), Bayinnaung’s son and successor, in 1599–1600 led to the delta’s being laid waste and thousands of Mon killed. The ravages of civil war destroyed the once-fertile Mon heartland as the Arakanese and Portuguese at Syriam joined forces with those opposing Nanda Bayin. During wars with Siam in the late sixteenth century, the Mon were thought to side with the Siamese, a perspective maintained during the next period of Mon-Burmese struggle in the mid-eighteenth century.

In the first half of the seventeenth century, Kings Anaukpetlun (r. 1600–1628) and Thalun (r. 1629–1648) of the Restored Toungoo dynasty (1599–1752) defeated the Arakanese-Portuguese-Mon federation and moved the Burmese political and cultural center back to Ava in Upper Burma. Repression against the Mon in the latter part of the seventeenth century saw many migrate to Siam; by then Siam had regained control of Martaban, Tavoy, and Tenasserim.

By the early eighteenth century, the Mon at Pegu had recovered their strength; they revolted in 1740 and were able to sack Ava in 1752 and capture and kill the king and most of the royal princes, leaving only two incompetent princes remaining in Ava. The resurgence of the Mon in turn brought a revival of Burmese leadership under a new champion, who took the name Alaungphaya (Alaung-hpaya); he was destined to become the first monarch (r. 1752–1760) of the third Burmese empire and founder of the Konbaung dynasty (1752–1886), the last Burmese dynasty. From his base at Shwebo, Alaungphaya raised the standard against the Mon, driving them from Ava. In a series of swift campaigns punctuated by French and English support, arms, and munitions for the Mon, Alaungphaya captured the delta, taking Negrais, Syriam, and Pegu, which he razed in 1757. When a Mon conspiracy implicated the last Mon king, Binnya Dala, Alaungphaya put him to death along with many surviving Mon nobles. Those who could fled into Siam and fought with the Siamese armies against the Burmese in the Burma-Siam wars of the late eighteenth and early nineteenth centuries (1760–1809).

During the three Anglo-Burmese Wars of 1824–1826, 1852–1853, and 1885, this long tradition of Mon-Burmese conflict was revived. The British anticipated that the Mon would rise in their support during the First Anglo-Burmese War, but such support was sporadic. When the British withdrew from Lower Burma in 1826 instead of annexing Pegu at that time, retribution was exacted against the Mon. Sympathy for the Mon during the British colonial administration, following the incorporation of the entire country into the province of British India after the Third Anglo-Burmese War in 1886, led to the creation during the twentieth century of the “Mon Paradigm” by colonial scholars and Burmese scholars of Mon background. The Mon Paradigm was consistent with the British “divide and rule” policy of pitting one ethnic group against another.

After independence on 4 January 1948, ethnic insurgencies soon broke out against the majority Burman central government. One of these was instigated by the Mon, who wished to have an autonomous state and be able to sustain teaching of their own language. Over the past fifty years since independence, these insurgencies have been mostly settled. Both Lieberman (1978) and Aung-Thwin (1996) have discussed how resorting to ethnic politics by various scholars as a means of explaining the dynamics of Burmese history is misleading, a continuation of the colonial-era prejudice against the majority Burman. Under various alternate paradigms, both federalist and centralist, attempts have been made to create a framework that will provide appropriate space for the many ethnic groups in Burma (from 1989, Myanmar) to work and live together harmoniously. Nevertheless, the Mon are a significant proportion of the refugees living precarious lives as displaced persons in other countries, including Thailand and Australia, and they continue to be vociferous, active antagonists of the Myanmar government.

MONS

The Mon people were historically one of the most important ethnic groups in Southeast Asia. Residing in the area spanning southern Burma (Myanmar) to central Thailand (Siam), from the Gulf of Martaban to Nakhon Pathom, they made significant cultural and political contributions to the region, particularly in relation to the development of literate culture and the spread of Theravadan Buddhism.

Mon ethnohistory is usually said to begin in the fifth or sixth century C.E. By this time the Mon language with its own vernacular script had emerged as a distinct branch of the Mon-Khmer group of Austro-Asiatic languages. Small Mon city-states had also started to develop. Inscriptions and archaeological remains from early Mon settlements have been dated to this time in the Menam basin in Thailand. The seventh century is often referred to as the beginning of significant Mon influence in the region. This is because some art historians have associated the city-states of Dvaravati (seventh to ninth centuries C.E.) with an ethnic Mon identity. This viewpoint is, however, also subject to criticism.

In Burma, the earliest Mon city-states were at Thaton, Pegu, and Martaban. The first kingdom was that of Thaton, which according to myth was founded in the early centuries C.E. In 1057 the Burmese king of Pagan, Anawrahta (r. 1044–1077) captured Thaton. Although that led to a decline of Mon political power, it resulted in considerable Mon influence being exerted upon Burmese culture and religion through the medium of Mon monks and artisans who were taken to Pagan. It was by this route that the Theravadan Buddhist canon, the *Tripitika*, is deemed to have entered the Burmese kingdom. The traditional founding date of the kingdom of Pegu is 825 C.E. However, it was after the decline of Pagan following the Mongol invasions of 1287 that Pegu began to establish itself as a powerful Mon political and cultural center. Mon political fortunes in Lower Burma were erratic, however, and during the sixteenth to eighteenth centuries C.E., Burmese expansion-

ism ultimately led to the collapse of independent Mon power. In the sixteenth century this also led to the large-scale emigration of Mon people into Thailand. In Thailand, Mon influence during the ninth to thirteenth centuries C.E. centered upon the kingdom of Haripunjaya. This fell to the expansionist T'ai Lan Na kingdom in 1292 and, following that date, there was no independent Mon polity in Thailand.

Although there has been no independent Mon center of political authority in either Burma or Thailand since the eighteenth century, Mon cultural influence remained significant, especially in the nineteenth-century Thai court and in the order of Buddhist monks, the sangha. Mon political revolts also took place over an extended period in Burma. The last Mon uprising in precolonial Burma was in 1838. In 1852 the British annexed Pegu and Lower Burma, the Mon cultural and political heartland. When independence was obtained for Burma in 1948, this did not include provision for a separate Mon state. That was created only in 1974, when a new constitution was introduced. Political upheavals subsequently have led to continuing resistance to the Burmese government by a number of armed Mon nationalist organizations. Many of these demand that full independence be obtained from Burma, citing the extended Mon ethnohistory outlined above to justify their claims. In reality, most would settle for greater recognition and protection of Mon identity and autonomy within the country. The main Mon political organizations have in recent years allied themselves with the Burmese-led National League for Democracy, which won elections in 1990 but was denied power by the military regime. A cease-fire was signed with the Burmese government in 1995 by the largest Mon political organization, the New Mon State Party, but this has been criticized by other Mon groups and the situation remains unstable. In the 1990s, there were significant numbers of Mon refugees in camps along the Thai-Burma border.

Because of the importance attached to Mon literate and religious culture in Southeast Asia, little attention has been given to other aspects of Mon cultural, political, and social identity through which an understanding of Mon ethnohistory should also be constructed. The absence of both archaeological and anthropological research in Burma in particular is critical in

this respect. The emphasis placed upon linguistic identity has also impeded the attempt to get accurate census returns of the Mon population in Southeast Asia. Mon people lived (and live) in close proximity to other communities, such as the Karen peoples, and bilingualism was and is common. These factors conceal the true numbers of Mon people in the region, and have led to a perception that the Mon people have almost disappeared. Although Mon identity is clearly vulnerable, claims relating to the supposed disappearance of the Mon are overstated, as the extended Mon nationalist conflict in Burma reveals.

MONSOONS

The term *monsoon* is usually applied to two aspects of the tropical climate—the prevailing wind direction and the rainfall regime—and in Southeast Asia the monsoon regime has had important influences on the environment and human geography of the region. Monsoon wind patterns are primarily a consequence of the large-scale regional displacement of air masses coupled with the role of jet streams in the upper atmosphere. Two dominant patterns exist in Southeast Asia. The northeast monsoon prevails in the period November to February and brings a wet season to the region. From about June to August the southwest monsoon brings somewhat drier conditions.

While the monsoon wind patterns are important in explaining the diversity of climatic conditions, other factors are also important. The length of the dry season varies with latitude. Around the equator, much of Borneo, southern

Malaysia, and Sumatra have no marked dry season. As one moves away from the equator, however, a more distinctive monsoon pattern is evident with longer, more marked dry seasons. In regions such as northern Thailand and parts of the northern Philippines, the dry season can extend for as much as five months. In addition, altitudinal variations influence precipitation and temperature.

The monsoon is important in contributing toward the distinctive environmental conditions in the region and can influence agriculture (the length of the growing season or the need for irrigation, for example) and settlement patterns. In addition, the pattern of winds was significant in controlling the movement of sailing ships in these “lands below the winds.” Thus the northeast monsoon took ships down into the Straits of Melaka from China or India. They would then be becalmed during the transition period between the two monsoons until the southwest monsoon allowed them to continue their journey. This circulation pattern encouraged the emergence of ports in the Straits of Melaka such as Aceh, Melaka, and Singapore to cater to ships moving between Europe, India, and China.

MONTAGNARD

In the Indochina peninsula, the name *Montagnard* refers specifically to a few dozen highland minority societies belonging to the Mon-Khmer and Austronesian language families, dwelling on moderately elevated valleys and plateaus in the south of Vietnam (*Tây Nguyên*, the Central Highlands), in southeastern Laos (around the Bolovens Plateau), and in northeastern Cambodia. In each country they represent a small minority.

The term *montagnard* is a legacy from French colonial times. Meaning simply “mountain

people,” it applied generically to all mountain dwellers in Indochina and beyond. Its restricted use in English, as in this entry, dates from the U.S. involvement in South Vietnam and is a subject for debate.

It is widely accepted that the Montagnards have inhabited the region since at least the proto-Malay peopling of the peninsula. They were pushed into the highlands over several centuries by the expansion of the successive and more powerful lowland kingdoms. These otherwise culturally and linguistically heterogeneous Montagnard groups eventually came to dwell in the same ecosystem between the Vietnamese coastal strip and the Mekong watersheds.

In the second half of the nineteenth century, social systems among dwellers of the southern Annam Range were for the most part still lineage-based and nonliterate, and the economy was centered on rotational swidden agriculture. In peaceful times, settlement patterns would be stable and the relationship to the natural environment balanced. Trade among neighbors consisted in necessities such as metals and salt obtained in exchange for forest products, basketry, and silver. Tribute was paid to lowland monarchs. Customary law consisted in a system of negotiation between households and lineages, and animistic beliefs implied constant arbitration between the temporal world—the human domain—and the supernatural world inhabited by spirits.

During colonial times, occasional co-optation became politically and militarily expedient for French colonial rule. Outside these specific needs, age-old prejudice was prevalent. The Montagnards were considered by outside observers as savages (*moi* in Vietnamese, *kha* in Lao, *phnong* in Khmer), superstitious, and backward. Later, Vietnamese, U.S., and various pro-U.S. troops stationed in the Republic of Vietnam (South Vietnam) needed to ally with the inhabitants of the highlands, as their lands bordered eastern Cambodia and southeastern Laos, where the intricate network of the Hồ Chí Minh Trail was used to bring military support from the Democratic Republic of Vietnam (North Vietnam) during wartime.

In the process, the South Vietnamese regime tried to suppress customary law and created strategic hamlets and various other resettlement schemes, forcing the highland populations to abandon their usual dwellings and thus inspiring

among many Montagnards armed resistance and nostalgia for “benevolent” colonial rule. With their traditional religious practices outlawed, other Montagnards turned to communism as an act of protest. Against this, Christian missionary work met with some success among the Ede, Jarai, Churu, Koho, and Lat in particular. During the Second Indochina War (1964–1975), the number of Montagnard casualties was estimated at 200,000 in Vietnam alone, while more than 85 percent of the Central Highlands population were forced to flee or resettle at one time or another, often across the border into Laos and Cambodia (Salemink 2002).

In the midst of this ordeal, FULRO (Front Unifié pour la Libération des Races Opprimées) was created in 1964 in the ranks of the U.S. Army Special Forces in Vietnam and became the most important Montagnard autonomy and anticommunist movement. FULRO’s political and military resistance to the communist state after 1975 slowly faded out until the surrender of the last armed group in 1992 in Cambodia.

The highland peoples of Vietnam, Laos, and Cambodia are—most of the time wrongly—blamed for the deforestation occurring in their upland environment. In the Vietnamese Central Highlands in particular, the massive migration of Kinh from the plains, which was officially launched by the state in 1975 under the New Economic Zones scheme, put an immense pressure on the natural resources of that ecosystem. Economic immigration further developed at the end of the 1980s, thanks to the Economic Renovation (*Doi Moi*), and it was soon encouraged by crop substitution schemes aimed at installing ever more farmers. This strategy still goes on today in the form of economic migration from other parts of the country, notably with lowland coffee growers and with other minority peoples from the north. This excessive stress on resources causes social tensions, triggering severe social unrest, as was the case in February 2001, and a deterioration of the environment most dramatically visible in the rapid deforestation and the lowering of the groundwater tables.

In search of a sustainable solution, Vietnamese scholars and their Lao counterparts are conducting research on issues such as customary law in relation to natural resource management, indigenous knowledge and indigenous strategies for improved fallow management, and

community-based forest management institutions. But in the process, preserving cultural identity comes low on the agenda. In Laos and Vietnam in particular, following the Chinese example, “selective preservation” of minority cultures is implemented, in which the state decides unilaterally which aspects of a culture are sufficiently valuable—and politically acceptable—to be retained, and which should be actively discouraged.

MONUMENTAL ART OF SOUTHEAST ASIA

The monumental art of Southeast Asia is essentially religious but not entirely so; the palaces, even if their vestiges are few, also played a major role. This architecture presented a great unity of conception; whichever civilization it expressed, the basic symbolism was always there. Despite this fact, there was often no connection between the techniques and the forms of the structures. The symbolic weight of a structure could change without any transformation of its form. Thus when Islam became dominant in Java, and it became necessary to build mosques

for common prayers, the masters of works utilized an ancient form for annexes (*pendopo*) of Hindu temples that imparted a visible continuity with the monumental art of the island.

The monuments of Southeast Asia were in large part the expression of the prosperity of the kingdoms of the region; as a consequence, the masters of works sought all possible means to make them seem larger and more sumptuous than their means actually permitted them to erect. These edifices displayed a desire to impose a certain order on the universe, which is true of all architecture, but most particularly in this part of Asia. Power there was equally related to mastery of water, which governed agriculture and the abundance of the harvest; therefore their distribution reaffirmed the authority of the sovereign. This is particularly apparent in Khmer civilization. In developing the Roluos plain in the ninth century, the Khmer kings built at Lolei a very large reservoir that was no more than the enlargement of the older reservoirs on Kulen, with dikes on three sides. Henceforth, this established the model that was used at Angkor and the whole Khmer kingdom until the thirteenth century.

On a smaller scale, and perhaps less closely related to the mastery of water, the monuments of Indo-Javanese civilization also manifested the desire to bring harmony to the universe. For example, the Buddhist complex of Plaosan, which consists of two sanctuaries surrounded by four rows of chapels each bearing the name of the donor and his official function, perhaps also depicts the ideal geography of the kingdom. Without attaining the same scale as in Cambodia, the mastery of water in Java played a certain role. The temple of Prambanan, consecrated in 854 C.E., is connected to a dam on the Opak River the collapse of which had grave consequences for the temple and perhaps led to the abandonment of the site.

The religious monuments of Southeast Asia were modeled on those of India, but most often in an indirect manner. There were some exceptions, in the form of edifices, that were constructed in direct imitation of Indian norms, as in the case of the monuments of Chaiya, Thailand: for example the original state of Wat Kev followed the same model as the Pallava temple of Panamalai in South India.

The influence of India is manifested in several successive waves and sometimes in a very

complex fashion. For example the Khmer in the early period knew of Indian forms only through their Javanese transcriptions. However, after the liberation of the country from the suzerainty of the Javanese kings (at the start of the ninth century), that influence no longer existed. When a new wave of Hinduization took place in Java around 830 C.E. and made the Javanese masters of works aware of new construction methods, these methods were never used in the Khmer country.

The Indian architectural models evolved through wooden structures built in Southeast Asia with unknown methods; for example, curved roofs were translated into stone with inconsistencies seen for example at Angkor Wat, where channeled roof tiles are depicted on a curved roof, which is technically impossible. Indian influence in this case was strictly formal; it was the perception of the model that was exported and not the model itself. The masters of works in south India, at Mahabalipuram, themselves translated the perception that they obtained from their models sculpted into the solid stone edifices.

Monumental art of Southeast Asia is essentially the house of the god, when it was destined for the Hindu religion. The divinity resided in a cave on a mountain that rose at the center of the universe, which partially explains the difference in volume between the very small internal space and the exterior form of the buildings (as well as the rupestrian origin of the Indian sanctuaries). The diverse descriptions of these fabulous mountains indicate prodigious dimensions that it was impossible to consider imitating, so that it was necessary to resort to trickery to enlarge these edifices to the maximum. Thus the masters of works utilized perspective effects. The temple, which would be the pyramid that supported the edifice itself, its elevation divided into horizontal elements of decreasing height, augmented the perspective effect and, as a result, the apparent height of the structure. Sometimes the god was placed in a flying palace; to symbolize this type of edifice, the Garudas (fabulous birds serving as Visnu's mount) or winged lions were sculpted on the structure that they appeared to be holding up in the air.

Buddhist monuments did not assume the image of the house of the god but that of the mound, the stupa, which sheltered relics,

whether of Buddha or a saintly person. But above all else they were directly linked to rites, in particular that of circumambulation, which consisted of walking around the stupa while keeping it on the right side. The masters of works of the Buddhist sanctuaries in Southeast Asia borrowed much from Hindu works even as they endeavored to distance themselves from them. For example, Borobudur, the celebrated Buddhist monument, was built on an unfinished pyramid from a Hindu monument that incorporated perspective effects. The new master of works utilized the structure but destroyed the perspective effects that indicated in too obvious a fashion the origin of the structure.

In the monumental architecture of Southeast Asia one can observe forcing techniques: radiating roof beams where the utilization of enormous stone blocks was executed with a certain lack of care. There are, however, some particularly well-built exceptions—for example, the stonework of Angkor Wat. However, the construction techniques were not very important to the masters of works, since the monuments were not built for themselves but for what they represented. This architecture was not for their makers but for the image of a work quite evidently more beautiful and worthy of the gods, so that its decoration assumed very great importance because it was that which suggested the true meaning of the monument, that which it wished to represent.

The structures followed the evolution of the rituals until the end of the eighth century in the Buddhist monuments of Java. The statues erected in the temples were visible from the outside—for example, at Candi Sewu—which is why they had no doors on their cellas. When the Buddhist cult of the five Jina arrived, the cellas were enclosed, with very important consequences. Not only were doors added to existing monuments but also structures erected after this reform were closed. These effects went beyond Java and affected all of Southeast Asia in more or less obvious fashion. The Khmers, for example, maintained the generally open plan, but they installed doors and false doorways in all their architecture (this dates the influence of Java in Cambodia, which cannot be earlier than the end of the eighth century).

One can observe a similar evolution of the plan in certain later sanctuaries (eleventh century), also related to rituals, when the main

temple of Vat Phu (in Laos near Champassak) was transformed with the addition of a long room in front of the sanctuary. Temples built thereafter had this new plan constructed in a single step—for example, at Nang Sida, near Vat Phu. Not only nearby but also right in Angkor, the temples of Thomanon, Chau Say Tevoda, and even another structure of a very different scale, Banteay Samre, were built on this new ground plan.

We know nothing of palaces except for a few traces, in particular those of the royal palace at Angkor, and through the architecture depicted on reliefs of the Bayon at Angkor and at Borobudur and Prambanan, Java. There were huge complexes built of wood, though according to their form, no section had a specific function. There are, however, some exceptions, where functions can be tentatively determined, such as the compound of the royal palace of Angkor, which was built of stone. Then, thanks to the Chinese traveler Zhou Daquan, we have a description of the audience hall at the Angkor palace, which must have been comparable to that of the palace of Lopburi, Thailand. But this does not permit us to identify its location or the site.

Despite their Indian origin, the Southeast Asian monuments acquired their own unique personality over the course of time. If in the eighth century the monuments on the Dieng Plateau, in Java, were quite similar to those of the Kulen in Cambodia, this was already no longer the case for the monuments built in the following century; the differences became increasingly accentuated only thereafter.

The knowledge that we have acquired of this architecture belongs to a completely different context than that in which the monuments were built, and the monuments have often experienced modifications and damage that render it difficult for us to appreciate them properly. For example, when the surrounding wall has been destroyed, the internal and external views of the structures can no longer be differentiated. Restoration too is a source of architectural modification; the restorer, no matter how careful, imposes a vision on the monument corresponding to the style of that time and place that does not necessarily correspond to that of the original master of works.

MORAL ECONOMY

In the context of Southeast Asia, the term was popularized by James Scott's study *The Moral Economy of the Peasant* (1976). Based on case studies of prewar Burma and Vietnam, Scott argued that the development of commercial agriculture had a detrimental impact on farmers, particularly in the early 1930s, when colonial administrations faced decreasing tax revenues and enforced tax demands against the local population. With product prices falling and taxes and debts fixed in nominal terms, the rising real debt and tax burden drove rural Southeast Asians into using violent rebellion as anguished protest.

Scott explained this strong reaction by attributing two key traits to farm households that form the foundation of farmers' behavior and traditional institutions: "safety first" and the "subsistence ethic." To subsistence farmers, crop failures are an immediate threat to their bare survival. Their choice of production techniques is guided by risk minimization rather than output maximization. Thus, social institutions of rural communities were traditionally oriented toward stability and the assurance of a minimum standard of living. For instance, there were obligations for villagers to support each other with labor. Reciprocity in exchange relationships protected farm households on the margin of subsistence.

Scott argued that commercialization of farm agriculture and bureaucratic centralization during the colonial period had eroded these traditional relations. New impersonal relationships in a capitalist economy created uncertainties in the subsistence life of farm households, and peasant uprisings were a defensive response to the threat to subsistence and an attempt to resurrect the traditional, precapitalist order.

Scott's interpretation has been widely criticized. Popkin (1979) argued that Scott idealized traditional farming societies and traditional power structures, and ignored the fact that farm households are engaged in a rational pursuit of their own interests. Haggis et al. (1986) maintained that peasant revolts in Asia generally did not start as a reaction to the disappearance of the moral economy, but that richer farmers whose opportunities were restricted often played an important role. Brown (1999) found historical flaws in Scott's argument. For instance, the colonial administration in Burma granted substantial remissions on land taxes, and the violence was more a preemptive strike to destroy administrative records than an enraged response.

MORO NATIONAL LIBERATION FRONT (MNLF)

The Moro National Liberation Front is a revolutionary organization that spearheaded the Muslim separatist movement in the Philippines

in the 1970s. In providing leadership to the movement, the MNLF significantly influenced its direction such that the Moro (Muslim Filipino) struggle is oftentimes referred to as the MNLF struggle.

Organized in 1969 by a group of ninety Moro youths who underwent military training in Pulau Pangkor, Malaysia, the MNLF was made public only in the early 1970s, when martial law was declared by President Ferdinand Marcos (t. 1965–1986). Initially the MNLF demanded independence, but with the intervention of the Organization of Islamic Conference (OIC), the group opted for autonomy. The clamor for independence was triggered by the Corregidor incident, involving the killing of Moro trainees by military men in 1968. This event, which intensified the Moro resentment toward the government, resulted in the emergence of organizations campaigning for the independence of the Moro homeland, Mindanao and Sulu, in the southern Philippines. These organizations were the Mindanao Independence Movement (MIM) and the MNLF. The MIM did not last long, but its objective was carried on by the MNLF.

The MNLF organization is governed by a central committee headed by a chairman and assisted by a secretariat consisting of different bureaus and committees. During the height of the struggle the MNLF central committee operated in foreign countries, and its leaders focused their work on attaining recognition and securing support from the OIC, "leaving the task of fighting and organizing to local leaders" (Che Man 1990: 82). In the different Moro provinces, provincial or state revolutionary committees were created to recruit, train, and organize Moro armed groups in their respective areas. MNLF's logistics and financial support came mainly from foreign supporters, but they also received assistance, either in cash or kind, from the Moro masses (*ibid.*: 84).

The OIC was the staunch supporter of the MNLF, generously providing the latter with financial assistance. It passed resolutions affirming its commitment to support the group, and in 1997 it accorded observer status to the MNLF. However, reliance on the OIC had its drawbacks. It made the MNLF susceptible to pressures and interference from the OIC, as demonstrated in the decision of the organization to tone down its independence stance re-

garding autonomy. This was the result of the 1974 fifth Islamic conference in Malaysia, where the OIC passed a resolution urging the Philippine government to find a peaceful solution to the Moro plight within the bounds of the country's national sovereignty and territorial integrity. It also pushed for negotiations between the government and the MNLF. Consequently, through the OIC's mediation, the Philippine government and the MNLF concluded two significant agreements.

The Tripoli Agreement was signed on 23 December 1976 at Libya. This accord was significant not only because it committed the government to establish autonomy in the southern Philippines but also because it "institutionalized the MNLF struggle's international character" and obliged the OIC to defend the MNLF cause (Tan 1993: 81). However, the agreement failed to lure the MNLF members to lay down their arms because of the parties' conflicting interpretations of its equivocal provisions. And with the government's imposition of its interpretation of the accord, the MNLF resumed hostilities. Peace talks were again initiated during the presidency of Corazon Aquino (t. 1986–1992) in 1986, but these did not prosper.

In 1996 the Philippine government (GRP) and the MNLF concluded the GRP-MNLF Peace Agreement, which was the final agreement on the implementation of the 1976 Tripoli accord. It provided for the establishment of the Southern Philippines Council for Peace and Development (SPCPD) to monitor and implement peace and development projects in the areas covered by the Special Zone for Peace and Development (SZOPAD). Consequently, MNLF leader Misuari (1940–) was appointed chairman of the SPCPD and elected governor of the Autonomous Region in Muslim Mindanao (ARMM). Other MNLF members were also appointed to key positions in the ARMM and SPCPD. And in compliance with the agreement, Moro combatants who returned to the fold of law were integrated into the Philippine armed forces and national police. With the signing of the 1996 peace agreement and the subsequent participation of the MNLF members in the government, a chapter in the history of the Moro struggle ended. The MNLF still exists, although recently there has been a leadership crisis that resulted in factionalism within the organization.

The significance of the MNLF's role in the Moro struggle in the 1970s lies in the fact that when it provided leadership to the separatist movement, it had become a "Mindanao-wide, disciplined and well-organized" struggle that threatened the Marcos administration (Muslim 1994: 114). Moreover, the MNLF was instrumental in elevating the Moro struggle to an international concern, thus adding more pressure to the Philippine government to find a political solution to the conflict in the southern Philippines.

MOROS

The Moros comprised some thirteen ethnolinguistic Muslim groups found in the Philippine islands of Mindanao, Sulu, and Palawan. In the 1970s their struggle for self-determination was spearheaded by the Moro National Liberation Front (MNLF), which posed a serious problem to the Philippine government. This struggle became an international issue when leaders of

Muslim countries, particularly members of the Organization of Islamic Conference (OIC), showed concern over the plight of the Moros. The OIC brokered negotiations between the MNLF and the Philippine government, and consequently, two important peace agreements were signed: the 1976 Tripoli Agreement and the 1996 Government of the Republic of the Philippines– Moro National Liberation Front or GRP-MNLF Peace Agreement.

As Muslims, the Moros are united by a common religion—namely, Islam—but as ethnic groupings they differ in terms of their languages, customs, and traditional practices. Their subsistence patterns are also varied, but the majority of Moros are involved in agriculture. Despite their adoption of Western political systems, the Moros still retain some of their indigenous political institutions, and they acknowledge and respect their traditional leaders, the hereditary sultans and *datus*.

Of the various Moro groupings, the most popular and numerous are the Maguindanao of the Cotabato region, the Maranao of the Lanao provinces, and the Tausog (Tausug) of the Sulu Archipelago. Numbering close to 4 million (out of a Philippine population of 64 million [1998]), the Moros are considered an ethnic minority.

Arab Muslim traders introduced Islam to the peoples of Sulu during the last quarter of the thirteenth century. The traders were followed by Muslim missionaries who reinforced the teachings in Sulu and later preached the faith to the natives in the island of Mindanao. Islam not only introduced a new way of life but also brought unity among those who embraced it. And alongside the advent of Islam was a new political institution, the sultanate, introduced by one of the foreign missionaries who settled in Sulu. However, Islam did not have a chance to spread to other parts of the country because of the coming of the Spaniards in the sixteenth century.

The Colonial Period: Spanish then American

It was during the second half of the sixteenth century that the Spaniards began their attempts to conquer the Muslims in Sulu and Mindanao. The Spaniards called them “Moros” because of their religious similarity to the Moors

(Berbers), the Muslims from northern Africa who once conquered and dominated the southern part of Spain for more than 700 years (711–1492 C.E.). The Spaniards, in their military campaigns against the Moros, employed, as soldiers, the colonized and Christianized natives whom they called *Indios*, from the other parts of the Philippine archipelago. However, the Moros were never subjugated, as they were able to put up a strong resistance brought about by their unity and commitment to defend their faith and homeland. In addition they had a strong centralized government, the sultanate, which was able to consolidate and mobilize bigger forces as well as seek alliances and support from the neighboring sultanates of Borneo and Ternate.

The Spanish colonial rule, which lasted for more than three centuries, left a legacy that played a significant role in the relationship between the minority Moros and the majority Christian Filipinos, or *Indios*. To justify their military campaigns against the Moros and to stir and inspire the *Indios* to conspire with them, the Spaniards denigrated the Moros by describing them as savages, barbarians, and infidels who deserved death for rejecting colonial rule and Catholicism. These manipulations and imputations lowered the opinion of the Christianized Filipinos toward the Moros. The latter, on the other hand, considered the *Indios* their enemies for supporting the Spanish colonizers. Thus discrimination and prejudice encouraged by the colonizers created barriers between the Moros and the *Indios* that remained even long after the Spanish left the archipelago.

Spanish rule of the Philippines officially ended following the signing of the Treaty of Paris on 10 December 1898. Spain ceded the islands of the Philippines to the United States for U.S.\$2 million. Mindanao and the Sulu Archipelago were part of the cession, thus bringing the Americans to the Moro homeland. The Americans, like their predecessors, were determined to conquer the Moros and integrate them into the Philippine political system. Through the force of arms and diplomacy, the U.S. succeeded in attaining this objective.

The Moros, while still painfully adjusting to U.S. rule, were confronted with a perplexing problem: their integration into the Philippine political system dominated by Christian Filipinos from the north. This political develop-

ment was an offshoot of the U.S. Filipinization policy, which called for the systematic transfer of the civil administration to the hands of native Filipinos. In the Moro homeland the civil administration was gradually handed over to Filipinos who, not surprisingly, were predominantly Christians. The Moros resented this, as they perceived these Christian Filipinos to be their enemies.

Moro resentment was expressed through armed confrontation in concert with petitions to Manila and to the U.S. government. These petitions, written in 1921, 1924, and 1935, clearly expressed their sentiments, suspicions, doubts, and fears that their religion, customs, and traditional practices would be disregarded and that their lands would be taken away. They feared that their political, religious, and socio-economic status could not be guaranteed by a government run by people whom they had doubts they could trust. They echoed in their petitions their desire to have their own separate independence and to be known to the whole world as the “Bangsamoro Nation” (Nation of the Moro People).

The U.S., however, did not heed the clamor of the Moros. Thus, when they finally granted independence to the Philippines on 4 July 1946, the Moro areas in Mindanao and Sulu were made integral parts of the Republic of the Philippines. The Moros, as citizens of the Philippines, became Filipinos.

Under the Philippine Republic

Moro concerns were not the priority of the newly established Philippine Republic. Ravaged by the Pacific War (1941–1945), the Philippine government was preoccupied with the economic problems confronting it. One of the probable solutions was to encourage people from the north to migrate and settle in the Moro homeland in the south. Sponsored by the government, these immigrants were able to have easy access to lands claimed by Moros as their ancestral domain. The growing number of Christian migrants trekking south ultimately made the Moros the minority in the areas where they were once the majority. This eventually created friction between them and the new settlers.

During the first few decades of the republic, there was relative peace in Mindanao and Sulu.

Muslims and Christians coexisted peacefully as they learned to understand and accept each other’s cultural and religious ways. However, events during the latter part of the 1960s and early 1970s threatened this harmonious relationship and shattered the peace of those areas.

The postcolonial conflict in the southern Philippines began in the early 1970s, although some of the contributory factors that precipitated this conflict occurred in 1968, when the Corregidor massacre took place in which some twenty-eight Moro trainees were killed by their military trainers. This tragic event revived once again the doubts, suspicions, and fears long nurtured by the Moros. Two months after the massacre, the Mindanao Independence Movement (MIM) was organized to work for the independence of the Moro homeland. The MIM’s campaign for independence awakened the desire of the Moros for freedom. A year later the Moro National Liberation Front (MNLF) was established with a similar objective, but advocating a more militant approach. When the MNLF came to the fore, the situation in Mindanao and Sulu was already critical, such that most Moros felt they needed the protection of the MNLF. In 1971 a series of massacres in Moro areas reached alarming proportions, and as a result some Moros opted for arms and joined the MNLF. The early 1970s witnessed the increasing popularity of the MNLF, which had assumed the leadership of the Moro struggle for self-determination. Others, however, decided to evacuate to safer places—areas where Muslims were dominant.

The declaration of martial law in 1972 by President Ferdinand Marcos (t. 1965–1986) further alarmed the Moros because of allegations that the Philippine military were behind some of the reported massacres. It was during the martial law period (1972–1981) that the plight of the Moros caught the attention and interest of the Organization of Islamic Conference (OIC). The OIC created the Quadripartite Ministerial Commission, composed of representatives from four member countries of the organization, to enter into discussion with the Philippine government regarding the condition of the Muslims in the country. The involvement of the OIC facilitated the negotiation between the Government of the Republic of the Philippines (GRP) and the MNLF that ended with the signing of the Tripoli Agreement on 23 De-

cember 1976. In the implementation of the agreement, the Philippine government created two autonomous regions (Regions X and XII) in Mindanao and Sulu, consisting of ten provinces.

However, in 1969 the two autonomous regions were reduced to a single Autonomous Region in Muslim Mindanao (ARMM), comprising only four provinces dominated by Muslims. The creation of ARMM was mandated by and within the framework of the 1987 Philippine constitution. The MNLF participated in the governance of ARMM after signing the 1996 GRP-MNLF Peace Agreement. Nur Misuari (1940–), chairman of the MNLF, ran in and won the gubernatorial election of the ARMM in that year.

The creation of the autonomous region and the active involvement of the MNLF in its administration failed to provide assurances of peace and economic development among the Moros. Still, poverty reigns in many areas in the region, and the armed struggle for self-determination has been taken over by another revolutionary group, the Moro Islamic Liberation Front (MILF), whose leader, Hashim Salamat, was a former vice chairman of the MNLF. During the first quarter of 2000, when President Joseph Estrada (t. 1998–2000) issued an “all-out war” policy against the MILF, the region again experienced armed encounters between the military and the MILF.

The Moros in general are oftentimes the object of derogatory remarks because of the misconduct and crimes of a few; however, just like the rest of the Filipinos, they desire progress and development, but not at the expense of their culture, religion, and identity.

MOUNTBATTEN, ADMIRAL LORD LOUIS (1900–1979)

Taking Southeast Asia from War to Peace

Admiral Lord Louis Mountbatten was supreme commander of the South-East Asia Command (SEAC) from October 1943 to May 1946. His ability to motivate and coordinate Allied forces in the disparate and poorly supported Allied theater was arguably decisive in achieving Allied victory in Southeast Asia in 1945. A cousin of King George VI (1894–1952) and a progressive-minded naval officer since 1914, Mountbatten was both ambitious and talented. A destroyer captain early in World War II (1939–

Lord Louis Mountbatten, newly appointed Supreme Allied Commander in Southeast Asia, at work in his London headquarters, 14 October 1943. (Bettmann/Corbis)

1945), he was made chief of Combined Operations by British premier Winston Churchill (1874–1965), in charge of planning the invasion of Europe; Churchill subsequently appointed him to direct the SEAC. A dynamic leader whose diplomatic skills were suited to leading a coalition at war, Mountbatten effectively coordinated Allied forces in the reconquest of Burma and in the reoccupation of Malaya and the Netherlands East Indies. The “troubled days of peace,” as Mountbatten called them, confronted him with a major challenge. He became responsible for the governance of 128 million people liberated from Japanese occupation, and had to disarm and repatriate 738,000 “Japanese Surrendered Personnel” and locate and recover more than 100,000 prisoners of war and civilian internees (Dennis 1987: 225, 227). SEAC’s forces occupied Java and Indochina, encountering active and armed nationalist movements. Although in Java Mountbatten’s forces became embroiled in fighting with Indonesian nationalists, his political acuity and diplomatic flair elsewhere prevented a seri-

ous collision. Mountbatten went on to become the last viceroy of British India, transferring power to an independent India and Pakistan in August 1947. He was assassinated by Irish Republican Army terrorists in 1979. Mountbatten had been equal to the massive task of taking Southeast Asia from war to peace, enabling the European powers to reoccupy their Asian colonies.

MUHAMMADIYAH

A Modernist Muslim Organization

For much of the twentieth century, the Muhammadiyah (Arabic, “Way of Muhammad”) was the dominant social organization of modernist Muslims in Indonesia. It was linked at times to important Muslim political parties, but never participated directly in politics. Its aim rather was to improve Muslim welfare and to increase Muslim piety through education and social programs.

Kiai Haji Ahmad Dahlan (1868–1933), a religious figure in the royal court of Yogyakarta, founded the Muhammadiyah in 1912. Like other Islamic Modernists, Dahlan was disturbed by the political and intellectual weakness of contemporary Islam. The Modernists sought to reinvigorate Islam by stripping away what they saw as un-Islamic practices that had accumulated over centuries. They were optimistic that a reinvigorated Islam would be able both to resist Christian missionary activity and to equip Muslims for a respected and powerful role in the modern world. The Muhammadiyah’s main effort went into education—by 1925 it had established fifty-five schools—but it later also sponsored mosques, libraries, health clinics, or-

phanages, and a women's organization, Aisyiyah. In 1925, Haji Rasul (1875–1949) established a branch in the Minangkabau region of West Sumatra, but branches were soon to be found in most Muslim regions of the archipelago. By the end of the colonial era, it claimed about a quarter of a million members. The Muhammadiyah was especially important as a source of social welfare for Muslims during the Great Depression of the 1930s.

The efforts of the Muhammadiyah to “purify” Indonesian Islam met considerable resistance from traditionalist Islamic leaders, whose authority it undermined, from colonial officials who were suspicious of its links with Middle Eastern Islam, and from believers in the many heterodox forms of Islam found in Indonesia. In 1926 the rift with the traditionalists formalized with the founding of the rival Nahdatul Ulama, but after a decade the two sides somewhat reconciled their differences by forming the *Madjlisul Islamil a'laa Indonesia* (MIAI) in 1937. Muhammadiyah members were also expelled from the radical political party *Sarekat Islam* in 1929.

Although the Muhammadiyah was formally dissolved along with all other organizations when the Japanese conquered Indonesia in 1942, it continued to function and became one of the bodies with which the Japanese negotiated over their plans for managing the archipelago. In November 1943, the organization's head, Ki Bagus Hadikusumo (b. 1890), was chosen along with prominent nationalist leaders Sukarno and Hatta to fly to Tokyo to receive a decoration from the emperor. Muhammadiyah leaders also dominated the *Hizbullah* (“Army of God”), an armed auxiliary force created in early 1945 under Japanese auspices, and the *Masyumi*, a Muslim umbrella organization created by the Japanese to replace the MIAI.

After the declaration of Indonesian independence in August 1945, the Muhammadiyah stayed on the fringes of politics. Unlike the *Nahdatul Ulama*, which became a political party, the Muhammadiyah became a powerful but informal backer of the modernist *Masyumi* political party. When the *Masyumi* was banned in 1960, the Muhammadiyah distanced itself from politics and focused on proselytization and social work. Many members described their primary task as bringing Islam to those who were only nominally Muslim, especially

peasants whose Muslim belief was mixed with pre-Islamic cultural practices and intellectuals who were considered unduly influenced by Western values. Under the New Order (1966–1998), the Muhammadiyah's nonpolitical stance was rewarded with some state support, but at the cost of having to accept the *Pancasila* in 1985 as its sole basic principle.

At the close of the New Order, the Muhammadiyah claimed 25 million members, most of them in the Outer Islands and the cities. Its membership included both those whose aims were only to purify the faith of Muslims, without changing the legal standing of Islam or impinging upon non-Muslim minorities, and those who wanted some form of Islamic state. Amien Rais (1944–), Muhammadiyah chair since 1995, spoke strongly in public against both Christians and Chinese. In the closing months of the New Order, Rais became one of the most prominent critics of the Suharto regime. He later sought to use the organization as a political base for his new *Partai Amanat Nasional* (PAN, National Mandate Party) in the 1999 elections. He, however, won fewer votes than expected, probably because PAN's platform of democratic, capitalist, and multiethnic secularism was significantly out of step with mainstream opinions within the Muhammadiyah.

The success of the Muhammadiyah in promoting modernist Islam reflects the broader pattern of Islamization in Indonesia, in which unobtrusive community work by Muslim missionaries has played a more important role in both introducing and strengthening Islam than has direct political action.

MUI TSAI Female Servitude

Mui tsai is a euphemism for a form of servitude practiced in China and by Chinese communities in Southeast Asia. In the Cantonese dialect, *mui* means "younger sister," and *tsai* literally refers to "a son," being a diminutive; *mui tsai* is "little younger sister." *Char boh kan*, meaning "female servant," is the equivalent in the Hokkien dialect.

During the nineteenth century and the first half of the twentieth, China was plagued with political instability, economic dislocation, social upheaval, and natural calamities, resulting in widespread human suffering. Poor Chinese peasant families often willingly transferred a daughter directly, or through an intermediary, to a family of a higher socioeconomic standing with the express purpose that the child be used for domestic duties without payment of wages. In return, her parents would receive a consideration from the host family. In some cases the transfer of the child represented a pledge for a loan, her services as a servant in lieu of interest until the loan was repaid. The details of the arrangement of transfer were drawn up in a document mutually agreed upon by both parties.

Mui tsai offered a safety net of survival for young girls of poor households who otherwise faced certain death from starvation in times of crisis. Host families were obligated to provide the mui tsai with food, clothes, shelter, and general upkeep, like any other family member. And it was expected that when she came of age at eighteen, her host parents would arrange that she be married.

In households in which the mui tsai was treated like an adopted daughter, ill treatment was rare. However, cases of mui tsai being subjected to cruelty and abuse, including sexual assault and rape, were reported. Generally the young girls lived under conditions of tight control; their sense of filial piety and their timidity and low self-esteem prevented them from voicing any ill treatment they may have received.

In Hong Kong, British colonial authorities had abolished the mui tsai system, and there was a similar move in British Malaya during the 1930s. Compulsory registration of mui tsai was enforced, and the age limit for domestic service was fixed at fourteen. Those mui tsai who were found to be victims of cruelty and abuse were sent to the Poh Leong Keok (Poh Leong Kuk), a girls' welfare home administered by a committee of *towkay* (persons of wealth and standing) and presided over by the colonial secretary for Chinese affairs. The increased availability of the Cantonese *amah-chieh*, the professional domestic servant, during the 1930s diminished the need for wealthy households to acquire mui tsai.

MUSIC AND MUSICAL INSTRUMENTS OF SOUTHEAST ASIA

Southeast Asia's musical cultures portray the mixing of indigenous traditions with cultural influences from India, China, the Middle East (West Asia), Europe, and America.

Contemporary Southeast Asia displays contrasting genres, from the healing songs accompanied by the stamping of bamboo tubes in the upland forests of Borneo and the Philippines to bronze gong ensemble music in the courts of Java and Thailand. Recitation of Quranic verses in Islamic communities coexists with Chinese opera, classical Indian music, popular music, and the symphony orchestra in the cities. Despite the diversity of musical traditions, common traits distinct to the region are evident. Bronze gongs and bamboo instrumental ensembles point to the relationship and common origins in the musical cultures.

Indigenous Music of the Precontact Period Gong-Chime Ensembles

The best-known ensemble indigenous to and prevalent in various styles in Southeast Asia is the bronze gong-chime ensemble. Music played on bronze ensembles is so predominant that Southeast Asian musical cultures are often known as bronze gong or gong-chime cultures (Kunst 1973).

The bronze gong's origins were associated with the bronze drum of the Dong Son (Dongson) period (700 to 100 B.C.E.). These bronze drums were cast in molds and elaborately decorated with a raised star at the top (tympanum). The sides were elaborately decorated with carvings of animals, people, musical instruments, and boats. In Burma (Myanmar), figures of small frogs found on the drumhead associate it with rain-making ceremonies.

Many bronze drums have been found in mainland and island Southeast Asia (except in the Philippines and Borneo), indicating the trade network of the Dong Son community. It is believed that bronze techniques were imported into Java around 300 B.C.E. The Javanese developed skills in hand-forging (a process of alternate hammering and reheating of molten

metal) and produced large suspended gongs with a central boss. Bronze gong music has close relations with animism, the main form of religious belief during the precontact period. This connection is evident in the reverence shown to the musical instruments—rituals associated with the forging of gongs, and the custom of propitiating gongs with flowers and incense—which remain prevalent in Indonesia and Malaysia. The large suspended gong is considered the most sacred instrument of the ensemble and marks the beginning and ending of performances.

Bronze gong ensembles range from a few instruments in the villages to large ensembles of more than seventy performers in the courts. Although the various gong-chime ensembles may vary in the number, size, tuning, quality of bronze, design, and combination of the instruments, they share many similarities.

Instruments and Tuning

The basic instrument is the gong-chime, a set of small, tuned, knobbed gongs placed horizontally in one row (Filipino: *kulintang*; Sarawakian: *engkerumong*; Sumatran: *talempong*; Balinese: *reyong* or *trompong*) or in two rows on a rack (Malay: *keromong*; Javanese: *bonang*). The gong-chimes may also be placed in a circular frame known as a gong circle (Thai: *khong uong*; Laotian: *khong vong*; Khmer: *korng vung*; Burmese: *ciwain*). Gong-chime ensembles usually have large suspended knobbed gongs of various sizes (Javanese: *gong ageng*; Filipino: *agung*), metallophones (Javanese: *saron* and *gender*; Khmer: *roneat dek*), and one or two barrel-shaped or cylindrical drums (Javanese: *kendang*; Malay: *gendang*; Thai: *tapone*; Khmer: *skor thomm*). Other components of the gong-chime ensemble are one or two xylophones (Malay/Javanese: *gambang*; Laotian: *lanat*; Thai: *ranat*; Khmer: *roneat*), cymbals (Thai and Khmer: *ching*; Burmese: *si*), and bamboo or wooden flutes (Javanese: *suling*). Also featured are stringed instruments (Javanese: *rebab* and *celempung*), a shawm (Thai: *pi nai*; Khmer: *sralai*; Burmese: *hne*), and male or female singers.

Most Southeast Asian bronze gong ensembles are tuned to five-note or seven-note modes, but no two ensembles are tuned alike. There is no standard pitch, as is the case in the Western diatonic scale, but rather tuning is in-

ternally cohesive according to the musical aesthetics of each community.

Large ensembles of various sets of bronze instruments (many of them of the melodic percussive type), such as the central Javanese *gamelan*, Balinese *gong kebyar*, Malaysian *gamelan Melayu*, Burmese *hsainwain*, Khmer *pinn peat*, and Thai and Laotian *pi phat*, usually accompany dance, theater, and ritual ceremonies. Smaller ensembles, such as the *kulintang*, *engeromong*, and *taklempong*, which feature one melodic instrument accompanied by other gong and rhythmic timbres, play similar functions among the indigenous groups of Mindanao, Sarawak, and Sumatra, respectively.

Stratification, Temporal Cycles, and Interlocking Rhythms

The music of gong-chime ensembles is stratified. In the large bronze gong ensembles there are several layers of sound produced by instruments playing the main melody, an abstraction of the main melody, elaboration of the main melody, and those punctuating the temporal and rhythmic cycles. In the Central Javanese *gamelan*, the main melody is played by metallophones of various sizes called *saron*. In the Thai *piphat*, the basic melody is played on the large gong-circle known as *khong wong yai*. Below the main melody, metallophones (Javanese: *slen-tem*; Thai: *ranat thum lek*) play an extraction of pitches from the main melody.

Above the main melody, elaborating instruments such as gong chimes, metallophones, flutes, zithers, and spiked fiddles play variations to the main melody based on short melodic motifs of the main melody. The different instruments come together at certain structural points in unison/octaves, fourths or fifths. In Central Java, the *bonang* elaborates the main melody by anticipating or repeating its pitches. The *gender*, *gambang*, *celempung*, *suling*, and *rebab* play variations to the main melody, particularly in the soft-style repertoire of Central Java. In Thailand, the high-pitched *ranat ek* and *khong wong lek* play fast-running parts, doubled by the high metallophone, *ranat ek lek*. The *pi nai* performs variations to the main melody.

The sounding of the gongs punctuates the basic melody and its variations at certain points. The big suspended gong (*gong agung*) marks the end of each temporal cycle and the largest

phrase known as the *gongan* in Java. Smaller gongs known as *gong suwukan* and *kempul* (suspended) or *kenong* (horizontal) subdivide the *gongan* in binary fashion. The number of beats in a *gongan* and the punctuation at specific points by smaller gongs determine the form and its colotomic structure. In the Thai *piphat*, the gong (*mong*) and cymbals (*cing*) punctuate the melody at specific points, depending on the form. Various types of drums (Javanese: *kendang*, *ciblon*, *ketipung*; Thai: *tapone*, *klong that*) play interlocking rhythms framed by the temporal cycle.

Features of stratification, interlocking rhythmic patterns, and temporal cycles are also characteristic of smaller gong-chime ensembles in the region. The basic layers in the Maguindanao *kulintang* music of the southern Philippines are as follows. The main rhythmic pattern/mode is played as an ostinato by a thin-rimmed gong (*babandil*). Another layer witnesses the reinforcement of the rhythmic mode by other gongs (one pair of deep-rimmed, high boss, large *agung*, and two pairs of *gandingan* gongs with narrower rim and lower boss), and a tubular-shaped drum (*dabakan*) interlocking with the *babandil*. Last comes the improvised melody by a gong-chime (*kulintang*), based on the rhythmic mode.

In the *talempong* of the Minangkabau of Sumatra, large and small gong-chime instruments (known as *talempong* and *canang*, respectively) and a pair of two-headed drums (*gandang*) interlock with the shawm (*pupuih*), which plays the main melody.

Many Southeast Asian ensembles that do not use the gong-chime also share the same principles of stratification, interlocking parts, and temporal cycles. The large gong orchestras of the Kadazan of Sabah (*sopogandangan*) and the Kalagan community near the Davao Gulf (*tagunggo*) emphasize the layering of interlocking rhythmic timbres played by various large suspended gongs. The *khruang sai* ensemble of Thailand comprises musical layers performed by bowed and plucked string instruments, flutes, hand drums, hand cymbals, and a small gong.

Bamboo Instruments

Bamboo instruments are the oldest instruments in Southeast Asia, predating bronze gongs. Bamboo, which is found in the tropical jungles,

Sumatra musicians in Indonesia. (Corel Corporation)

hills, and plains of Southeast Asia, has many uses. The stem is used to carry water, cook rice and other foods, build houses, and is woven into baskets and other items. Bamboo musical instruments are common among indigenous communities living in the lowland and highland forests of Southeast Asia, as bamboo is easily available, light, and can be easily transported from one place to another. As these communities practice a dynamic type of animism even where Christian missionaries have been active, bamboo ensembles are used during healing ceremonies and to propitiate spirits during harvest festivals. Nose flutes are often played for the deceased, as the air from the nose is associated with the spirit of man (Roseman 1993).

Solo Instruments

Bamboo instruments can be performed solo or in ensemble. Solo bamboo instruments are usually played for entertainment and courting. The mouth organ is a solo instrument believed to have developed in Southeast Asia. It consists of

a wind box made of gourd with a mouthpiece and tubes of different lengths of bamboo inserted into the box. Each tube has a reed that vibrates freely when the instrument is played. Different pitches are produced by closing holes at the bottom of the tubes or by closing the tubes themselves. The pipes can be arranged in two parallel lines (the *sompoton* of Sabah, *khaen* of Thailand, *khen* of Vietnam, *ken* of Kampuchea, and *khene* of Laos) or in a circle (the *keluri* of Sarawak).

Tube zithers consisting of a body made of bamboo that has been cut from one node to another are also distinct to Southeast Asia. Strings are carved from the cortex, or external strings can be attached. Tube zithers in Southeast Asia include the *krem* (Malaysia), *kullitong* (Philippines), *tueng-tueng* (Thailand), and *tol alao goang* (Vietnam). It should be noted that a few mouth organs or tube zithers could be played at the same time.

Other solo bamboo instruments include a variety of end-blown and side-blown flutes (the Malaysian and Indonesian *suling* or *seruling*, Viet-

namese *tieu*, Thai *khлуй*, and Khmer *khloy*) as well as nose flutes. The jaw's harp (*bungkau* of Sabah, *kang knoch* of Kampuchea, *kubing* of the southern Philippines, and *huen* of North Thailand) is also popular. It is a thin frame with a lamella (tongue) carved from it. The performer plucks the free end of the lamella while placing it in the mouth cavity (which acts as a resonator).

Solo instruments play short, improvised melodic motifs often accompanied by the continuous sounding of one or more tones known as a drone. Maceda (1974) has suggested that the melody and drone may prove to be a basic structure that binds together the music of Southeast Asia that goes back to the pre-Neolithic Age.

Ensemble Instruments

Ensemble instruments constitute mainly bamboo tubes of different lengths and pitches that are stamped on pieces of wood (Jah Hut: *Ding Galung*; Kalinga: *tongatong*) or struck with sticks (Dusun: *Togunggu*; Kalinga: *patangguk*). Percussion and stamping tubes were developed as a result of motor impulses related to work and are considered one of the earliest instruments found in Southeast Asia. They are used in activities related to paddy planting (to frighten mice and other insects away from crops), during healing ceremonies, and to accompany dances, harvest festivals, and the welcoming of guests.

Stratification, interlocking rhythmic patterns, and temporal cycles are characteristics of gong ensembles that are also found in bamboo ensembles. The bamboo tubes are stamped or struck using interlocking patterns that produce resultant rhythms. The repeated timbres and interlocking rhythms of the bamboos (which constitute a type of melodic drone) are emphasized.

Xylophones made of bamboo or hardwood are also common in Southeast Asia. They are hung vertically from a post (Filipino: *luntang*) or set horizontally over a trough resonator (Burmese: *pa'tala*; Thai: *ranat*; Laotian: *lanat*; Cambodian: *roneat*; Indonesia: *gambang*). They can be played as solo or ensemble instruments. The *angklung* ensemble popular in Java and Malaysia (consisting of sets of bamboo tubes in frames that are shaken to produce pitches) is unique to the region.

The importance of bamboo music among the upland and inland communities can be seen

in the wide use of bamboo instruments as substitutes when gongs such as those of the *kulin-tang* ensemble are not available. Over time, gongs acquired greater prestige than bamboo instruments, as they were used in the ceremonial music of the courts.

Influences from India, China, the Middle East, Europe, and America

Southeast Asian countries are also unique in the ways they have adapted to foreign influences. Indian arts and aesthetics, literature, and court practices were introduced into the Hindu-Buddhist kingdoms of Funan, Angkor, Sukothai, Śrīvijaya, and Majapahit beginning in the first century C.E. Musical instruments carved on the walls and panels of Angkor Wat (twelfth century) and Borobudur (eighth century) show that local as well as foreign instruments were performed in these courts. The two Indian epics—*Rāmāyana* and *Mahābhārata*—were adopted and remain central in the shadow and dance theater of Java, Bali, Malaysia, Thailand, and Cambodia.

When Islam spread along the coastal areas of Sumatra, Java, and the Malay Peninsula from approximately the twelfth century, Middle Eastern instruments and forms were imported. The reeded shawm (Thai: *pi nai* and *pi chawa*; Burmese: *hne*; Malaysian: *serunai*; Vietnamese: *sarunai*; Javanese: *selompret*) came from the Middle East via India with the spread of Muslim culture. The same instrument is known as the *surmay* in Iran, *zorna* in Turkey, and *zurna* in India. The spiked fiddle (*rebab* of Malaysia, Sumatra, and Java) is a variant of the Arabic *rabab*. The *gambus*, a plucked lute with a short neck and large, pear-shaped body, is derived from the Middle Eastern *ud*. The frame drum (*rebana* of Malaysia and Sumatra; *rabana* of Celebes; *ravana* of the Moluccas) originated in the Middle East, where it is also used to accompany Islamic religious chanting. The *nobat* ensemble that symbolizes the sovereignty of the Malay rulers at royal ceremonies is said to have originated from the *naubah* or *naubat* in the Arab countries.

Chinese influence is evident in the mainland Southeast Asian countries because of their proximity to China. The Thai *so duang* and *so u*, Vietnamese *dan nhi*, and Kampuchean *dra u* derive from the Chinese *er-hu* (a two-stringed, long-necked spiked fiddle with the bow passing

between the strings). Vietnamese musical instruments are largely derived from China but modified to suit Vietnamese music and aesthetics. The *dan tranh* zither is similar to the Chinese *zheng*, the *dan ty ba* (pear-shaped lute) derives from pipa, and the *dan nguyet* (moon-shaped lute) resembles the *yue qin/ruan*.

Dutch, Portuguese, Spanish, and U.S. colonialism beginning in the sixteenth and seventeenth centuries has had a strong impact in many Southeast Asian countries. Syncretic musical forms developed as a result of early contact between Portuguese and the locals. The Malaysian *joget/ronggeng* ensemble comprises a vocalist singing Malay verses (*pantun*) accompanied by a Western violin and accordion, two Malay frame drums, and a gong. The *keroncong* of Java is performed by the Western ukulele, banjo, violin, flute, cello, and double bass but features local stratification (as in the gamelan) and *pantun*-singing. In the Roman Catholic areas of the Philippines, local traditions were replaced by Spanish musical traditions such as the *rondalya* (plucked string orchestra), adapted from the Spanish *comparsa*, the brass band, liturgical music, and the *zarzuela* (derived from Spanish opera).

The colonial period also saw the second wave of migration of Chinese and Indian workers to the region. Chinese immigrants first introduced Chinese opera, puppet theater, and instrumental music prevalent in Southeast Asian cities. Similarly, the *sitar* and *tabla* from North India and the *vina* and *mridangam* from South India and other percussion instruments were brought from the subcontinent during this period.

Through new types of media such as film, cassette, video, compact disc, and satellite television, Southeast Asians continue to be exposed to foreign influences. They have been adapting to music of other parts of the world, especially international trends in popular music. Local versions of Hindustani and Tamil film songs, Cantonese pop (Canto-pop), Japanese (J-pop), hip-hop, and heavy metal can all be heard. World music of Southeast Asia incorporates elements of traditional music (stratification, interlocking rhythms, and temporal cycles), musical instruments from the multiethnic communities (Indonesian *Campur Sari*, *Irama Malaysia*; Thai *Luuk Thung*), Islamic fusion with texts praising Allah (*nasyid* pop), and Hindustani singing style and

rhythms (*dangdut*). Western symphony orchestras and marching bands are popular in the cities.

Documentation

A complete history of Southeast Asian music has yet to be written. As many traditions are passed down orally and musical recordings date from the early twentieth century, musicologists have tried to reconstruct history based on the discovery of bronze drums and lithophones (eight to twelve narrow stones unearthed in Vietnam that are each capable of producing pitch). Reference is also made to reliefs of musical instruments found on ancient buildings such as Angkor Wat, Prambanan, and Borobudur. Historical records written mainly by early Chinese and European visitors provide some information. References to Burmese musicians sent to the Chinese court have been found in the Chinese Tang dynasty chronicles. French missionaries have written about theater and ceremonial music in Thailand in the seventeenth century. Dutch scholars have described certain genres such as the shadow puppet theater, dance, and gamelan of the courts of Central Java in the nineteenth century. Vietnam seems to have the largest number of documents written in Sino-Vietnamese.

Local and foreign ethnomusicologists are undertaking research of oral traditions, although fieldwork in Burma, Laos, and Cambodia has been constrained by political uncertainties and war. Emphasis is on the importance of learning to perform in a particular musical tradition and on extended interaction with the performers. The introduction of cassettes, compact discs, and videos has provided a new stimulus to researchers, who now have greater access to regional music.

MUSLIM MINORITIES (THAILAND)

Islam is the faith with the second largest number of followers in Thailand, a country where some 96 percent of the population are Buddhists. In general, the Muslim community in Thailand is scattered all over the country: in the central region—Bangkok and its surrounding

provinces, the northern region—Chiang Mai (Chiangmai) and the surrounding districts, and the deep south of Peninsular Thailand. It is quite evident that the Thai Muslims are not a homogeneous society. The Muslims in the north are, ethnically speaking, very much affiliated with and influenced by the Muslims of southwestern China. Their brethren in the central region are a mix between the communities of the Shiite Muslims, whose ancestors are often traced back to Iran and West Asia, and those of the Sunni Muslims, whose forefathers came mainly from the Malay Archipelago, Cambodia, and the Indian subcontinent. The majority of Thai Muslims are ethnically Malay, living mainly in the deep south—namely, Peninsular Thailand.

Islam commands the faith of approximately 2.5 million Muslims, or around 3 percent of the total Thai population. At a glance the figure appears insignificant. However, under close scrutiny the picture changes drastically. Of the estimate of 2.5 million, a decided majority of the Muslim Thais live in the southernmost part of the country, concentrated in the five deep southern provinces of Pattani, Yala, Narathiwat, Satun, and Songkhla (Forbes 1989: 167–182). Other provinces in the south of Thailand with noticeable Muslim communities include Krabi, Phuket, Trang, and Nakhon Sri Thammarat.

Unlike Muslims in the central and northern regions who trace their origin mainly back to the immigrant communities, Muslims in the south are indigenous inhabitants. Other significant facts about the Muslims in the south are these. First, they are a homogeneous society of ethnic Malays. Second, they form an overwhelming majority in the three provinces of Pattani, Yala, and Narathiwat. A qualifying note on the Muslims in Satun must be made. The Satun Muslims form the biggest community. However, the majority of the Muslims there are the Sam-Sam—that is, those of mixed Malay-Thai origin whose ancestors, and they themselves, have embraced Islam but have retained many aspects of Thai culture, of which the most pronounced is the Thai language (Kobkua Suwannathat-Pian 1994). As for Songkhla, it is home to a sizable Thai-Malay Muslim community, though the majority of the inhabitants of that province are Thai Buddhists. Third, unlike their Muslim brothers in the northern and central regions, Muslim communities in the south,

those in Songkhla and Satun excepted, until recently found it impossible to blend in with their Buddhist Thai compatriots. In fact, the deep southern region with the Muslim majority has always been considered a "sensitive" area of the country, particularly from the security, law and order, and sociopolitical perspectives.

Historically, the southern region possessed a large portion of population who shared a common historical heritage and sociocultural identity more with the Malays in the Malay Peninsula than with their Thai compatriots. The three provinces of Pattani, Yala, and Narathiwat were once parts of the old Malay Kingdom of Patani (Wan Kadir 1996). The latter was for a long time regarded as a cradle of Malay and Islamic civilization in Southeast Asia. The traditional relations between Patani and its more powerful northern neighbor had never been really happy. At best, Pattani was allowed to exercise its sovereign power in all matters not affecting the security of its northern neighbor, as clearly displayed during the latter part of the seventeenth century. Step by step, the old sultanate of Patani was forced militarily to accept the tributary relations with Siam, which was represented by Ligor, the present-day Nakhon Sri Thammarat.

Finally, the old Pattani was absorbed by Siam in 1902 as an integral part of the Siamese kingdom, with a special proviso safeguarding the Malay culture and Islam. The *Kadhis (Tòh Kalí)* court, which hears and decides cases concerning Muslim marriage and inheritance, is an outstanding institution representing this special proviso.

Because of political and religio-economic reasons, the post-Pacific War (1941–1945) years saw the resurgence of Malay nationalism among the Thai Malays in the deep south. Most of these nationalist movements demanded virtual freedom of the former Pattani sultanate plus Satun from Thailand. Up to the 1970s, the southern region was generally an impoverished zone, particularly when compared with the central plain or the north. The most negative result of historical and socioeconomic divides in the three provinces of Pattani, Yala, and Narathiwat was an almost total separation between Thai-Malay Muslim and Thai Buddhist communities. This kind of socioeconomic separation did not (and does not) exist between the two communities living around the Thonburi-Bangkok areas—nor for that matter among the

Muslims and Buddhists living in the Chiang Mai area. By the mid-1980s, a progressive political environment and liberal government policies had succeeded in addressing some fundamental problems of the Thai Muslims in the south. Sociopolitical tranquillity as well as educational and economic progress followed. The violent and armed struggles for a separate and independent Muslim polity for Thai-Malay Muslims subsided.

Presently, the administration of Muslim affairs comes under the National Council for Muslims. The council consists of at least five distinguished Muslim Thais, all of whom are appointed by a royal proclamation. The president of the council, Chula-ratchamontri, is appointed by the king. Provincial councils for Muslim affairs are set up as affiliations of the national council in the provinces that have substantial Muslim minorities to act as a medium between the local community and the government in Bangkok.

MY LAI

A Crisis of Conscience

The tragic affair of My Lai (or Song My), where U.S. soldiers slaughtered Vietnamese villagers without obvious reason, remains symbolic of the Vietnam War, both for itself and for the debate the incident brought out.

The incident took place in a central Vietnam Viet Cong area in the province of Quang Ngai (south of Danang), on 16 March 1968, in the context of the Tet offensive. According to press reports, three sections of infantry headed by Captain Ernest Medina and Lieutenant William Calley, Jr., surrounded the village in the morning, after an initial artillery barrage. Then they gathered the population, 400 to 500, mainly elderly, women, and children, outside the village and shot them. Some rapes were also perpetrated, and the houses were burned.

In 1969, *Newsweek* and the *New York Times* took up the event, which launched a national debate and a crisis of conscience in the United States over questions of ethical behavior, the objectives of the war, and U.S. superiority and civilization. The massacre polarized antiwar

sentiment in the United States. However, according to public opinion polls, 65 percent of the U.S. people thought that such affairs were unavoidable in wartime.

Then came the trial. On 29 March 1971, in Georgia, the Fort Benning military court found Lieutenant Calley guilty of the murder of twenty-two civilians by his own hand and sentenced him to life imprisonment. Veterans and left-wing groups both disputed the verdict. At this time Calley appeared to be an underling, not the person genuinely responsible. Moreover, the day after the verdict, President Richard Nixon (t. 1969–1974) ordered his release from prison and Calley spent the next three and a half years under house arrest in his Fort Benning house while awaiting the outcome of appeals. Even though his conviction was upheld by the Court of Military Appeals, his sentence was reduced to ten years under instructions from the Secretary of the Army. Following a review by the military authorities, who recommended that Calley be paroled, the White House sanctioned the motion. The whole affair was officially closed in the mid-1970s.

In 1977 the U.S. humanitarian group Friendshipment decided to build a hospital at My Lai. And "My Lai" has since entered the U.S. vocabulary as an eponym or is used metaphorically.

NAHDATUL ULAMA

An Orthodox Muslim Organization

Nahdatul Ulama (Arabic, “Renaissance of the Islamic Scholars”) is a powerful traditionalist Muslim organization in Indonesia that emphasizes the teaching authority of Islamic scholars (*ulama*).

Kiai Haji Wahab Chasbullah (ca. 1884–1971) founded NU in 1926. It represented orthodox Islamic scholars of the Shafi’i school who objected to the growing influence of modernist Islamic doctrines in Indonesia. Islamic modernism emphasized the authority of the Qur’an and Hadiths and stressed the need to refer all Islamic practice to those sources. It regarded much of the cultural and intellectual diversity within the Islamic community as doctrinally suspect. By contrast, orthodox or traditionalist Muslims paid greater attention to the teachings of the four main schools of Islamic law and to the individual teaching authority of Muslim scholars, and they had a tradition of allowing a diversity of thought. In Indonesia, modernism was linked socially to urban Muslim communities, whereas traditionalism was strongly associated with rural Islamic teachers (*kiai*) and their residential schools (*pesantren*), especially in East

Java. The principal spiritual leader of the Nahdatul Ulama (NU) was Kiai Haji Hasjim Asjari (1871–1947), an influential East Javanese kiai. Like the modernist Muhammadiyah, the NU established schools and set up welfare organizations to promote its vision of Islam in Indonesian society. Outside Java, the NU was strongest in Kalimantan.

In 1937 the NU joined the Muhammadiyah in the Madjlisul Islamil a’laa Indonesia (MIAI), but modernists and traditionalists grew further apart during the Japanese occupation (1942–1945), when the Japanese authorities set out to cultivate rural kiai as a useful force in mobilizing the Indonesian masses. The NU, which the Japanese had officially dissolved at the start of the occupation, did not take a formal part in this process, but leading NU figures became increasingly important as interlocutors between the Japanese authorities and rural Muslim communities. In 1943, Hasjim Asjari was made head of the new Japanese-sponsored Muslim umbrella organization, Maşjumi, and his son, Kiai Haji Wahid Hasjim (1913–1953), was made its effective head. This rapprochement with the occupation forces began to earn the NU a reputation for political opportunism, an alleged willingness to collaborate with any authorities for the sake of the immediate religious interests of the NU’s constituency. This apparent pliability, however, was belied by the role of rural kiai in several local uprisings against the Japanese and by the swiftness with which the NU de-

clared Indonesia's war of independence after August 1945 to be a Holy War (jihad).

After November 1945, when Masjumi became a political party, the NU remained as a corporate member, but its leaders lacked influence in the party; in 1952 they separated to become a political party in their own right under the leadership of Wahid Hasjim. In this split, the NU took a large part of the Masjumi's constituency in Java, leaving the rump Masjumi very much identified with the Outer Islands. Because the party was interested mainly in controlling the large Department of Religious Affairs, it was a willing participant in successive cabinets in the 1950s.

The NU performed strongly in the 1955 national elections, winning over 18 percent of the vote and emerging as the third largest party in parliament, its support concentrated in East and Central Java. Initially the NU seemed much more willing to accommodate the Partai Komunis Indonesia (PKI, Indonesian Communist Party) and to take part in Sukarno's semiauthoritarian Guided Democracy than the stridently anticommunist Masjumi, but in the early 1960s, the NU and PKI became increasingly antagonistic. NU leaders feared that the PKI's atheism would secularize the Indonesian state, while in village Java wealthier NU members were increasingly the target of PKI campaigns for land and tenancy reforms. Especially during the PKI's "direct action" for land reform in 1963, the NU youth wing, Ansor, was involved in violent confrontations with communist youth groups in the Javanese countryside. Following the 1965 Gestapu affair, the NU was a key element in the army-dominated "New Order coalition" of General Suharto, and Ansor gangs played a major role in the massacre of communists in Java.

Although the military soon turned on its allies and began to restrict political activity, the NU largely preserved its vote in the 1971 election, winning again just over 18 percent of the vote. In January 1973 it was forced by the government to join other Muslim parties in the new Partai Persatuan Pembangunan (PPP, Unity Development Party). In subsequent elections, the NU's core of support in East Java was a mainstay of the PPP, but as in the earlier Masjumi the NU's influence at upper levels of the organization was relatively weak. In the early 1980s, with the New Order increasingly regarding Islam as politically subversive, pressure

grew within the NU to give up formal politics. The formal decision to withdraw from the PPP was made at an NU congress in December 1984. The organization adopted the Pancasila as its sole basic principle and accepted the 1945 Indonesian constitution as the basis for political life, thereby excluding the possibility of an Islamic state. At the same time, however, the NU affirmed its identity as an Islamic organization. This strategic change was spearheaded by Abdurrahman Wahid (1940–), son of Wahid Hasjim, who became NU general secretary.

This disavowal of politics had two immediate consequences. First, the PPP's share of the vote in the 1987 elections dropped from 27 to 15 percent. Second, the withdrawal opened the way for a rapprochement between the NU and the government, which led to a reduction of unofficial harassment and to government support for NU social and religious activities. By the end of the New Order the NU claimed 30 million members, and Abdurrahman Wahid was recognized as a key power broker in the reshaping of Indonesian politics after the fall of Suharto.

The NU did not take direct part in the elections of 1999, but four parties claimed to be standing in its name. The most successful of these, winning 12.6 percent of the vote, was the Partai Kebangkitan Bangsa (PKB, National Awakening Party), aligned with Abdurrahman Wahid, the other three winning less than 1 percent among them. The PKB chose the Pancasila, rather than Islam, as its basis, and presented itself as an inclusive national party open to non-Muslims.

The NU's willingness to compromise and collaborate with the authorities of the day often led to accusations of opportunism and lack of principle by other political forces. This accusation, however, is hard to reconcile with the NU's record of militancy under the extreme conditions of the Japanese occupation and in 1965. The NU's own leaders described their stance as freedom from dogmatism, a willingness to take seriously other points of view in order to come to broadly acceptable conclusions and a pragmatic recognition of the constituted authorities.

NAM TIEN

Southward Expansion

Nam tien is the term for precolonial Vietnam's southward expansion from its original nucleus in the present Northern Region (Bac bo) to

the present Central (Trung bo) and Southern (Nam bo) regions at the expense of Champa and Cambodia.

The traditional view that the Vietnamese were ever expanding to the south is not accurate. The real *Nam tien* started in the fourteenth century as a result of the rapid increase of overpeopled delta villages and the development of the Chinese-modeled polity in northern Vietnam. In 1471, Le Thanh Tong (r. 1460–1497) captured the Champa's capital of Vijaya (in present-day Binh Dinh). The Thuan Hoa (present Quang Binh to Hué) and Quang Nam (present Danang to Binh Dinh) regions were gradually Vietnamized, with military posts and resettled northern peasants under a collective settlement (*don dien*) system.

Opposing the Trinh family in Hanoi, the Nguyễn government put forward the *Nam tien* policy on a larger scale. Champa's remaining territories down to Binh Thuan were incorporated into Quang Nam one by one by the end of the seventeenth century. Meanwhile, since the mid-seventeenth century, the Nguyễn approached the Cambodian territories in present southern Vietnam, along with the Chinese (for instance, the Mac family in Ha Tien) and Malay people. The Nguyễn first occupied Dong Nai-Sai Gon Region (named Gia Dinh) by the end of the century. Gia Dinh's territory was gradually expanded to and beyond the Mekong Delta despite Siamese expeditions. In the nineteenth century, all regions as far as Ca Mau and Ha Tien were Vietnamized under the Nguyễn dynasty (1802–1945), though it failed to dominate the entire territory of Cambodia.

Nam tien brought about two features of modern Vietnamese society. First, it created, on the narrow territory, forms of "Vietnamese-ness" that vary from the north to the south. Second, security in the western neighboring areas became crucial for the whole country because the narrow territory can be easily cut in two if attacked from the west, especially in Central Vietnam.

NAM VIET (NAN YUE)

Genesis of Vietnam

Viet (Yue) means the area of the southern part of the lower reaches of the Changjiang (Yangzi) River, and also refers to the native peoples or ancient kingdom that flourished in this area during the pre-Qing (1644–1912) period. *Nam (Nan)* means "south" and thus the term *Nam Viet (Nan Yue)* means "Southern Viet (Yue)." *Nam Viet* is the modern Vietnamese notation, *Nan Yue* the modern Chinese. In historical studies, "Nam Viet (Nan Yue)" is used in this way as either a geographical or a historic concept.

An example of Nam Viet as a geographical concept can be found in the "Shi-ji" (Historical Record) written at the beginning of the first century B.C.E., where it referred to today's Guangdong/Guangxi area in China. Through the subsequent establishment of the Nam Viet kingdom, its meaning was extended to include the present-day regions of Guangdong/Guangxi, Hainan Island, and the northern part of modern Vietnam. Nam Viet as a historic concept means the ancient Nam Viet kingdom (204?–111 B.C.). This Nam Viet kingdom was a polity founded by a Chinese named Trieu Da (Zhao Tuo) and, based on a modern Guangzhou city in the Guangdong province, it controlled the whole area from Guangdong/Guangxi to northern Vietnam and survived five kings for almost a century until its domination in 111 B.C.E. by Han Emperor Wu-di (r. 141–84 B.C.E.).

Historical Background

Modern-day Guangdong/Guangxi became a part of Chinese territory as a result of the expedition of the first emperor of Qin, Huang Di (r. 221–210 B.C.E.). Trieu Da, who established Nam Viet kingdom, was born in northern China, and joined the Qin expedition against this area, later being appointed a county magistrate in Guangdong by the Qin dynasty (221–206 B.C.E.). The Qin fell to Chu troops in 206 B.C., four years af-

ter the death of Huang Di. As a result of the struggle between Liu Bang and Xiang Yu, China was united again under Liu Bang, who became the first emperor of Han in 202 B.C.E. During this period of war, Trieu Da appointed himself as a commandant of central Guangdong, closing the borders and conquering neighboring districts. Trieu Da titled himself "King of Nam Viet," a title that was approved as "King of Nam Viet (of Han)" in 196 B.C.E. by Liu Bang. Relations with the Han were maintained until the fall of the Nam Viet kingdom in 111 B.C.E.

Relations with Neighboring Areas

In addition to its relations with the Han dynasty (202 B.C.E.–220 C.E.) and native "Viet (Yue)" peoples, the Nam Viet kingdom had close relations with the societies of the northern part of modern Vietnam, with local kingdoms in the modern Fujian province in southeastern China, and with the various chiefdoms in the Guizhou and Yunnan provinces. Few historical records remain regarding the relations between Nam Viet and northern Vietnam. According to the available records, during the period of the Nam Viet kingdom, in the northern part of Vietnam there existed the "Au Lac" kingdom, which was governed by "King An Duong (An Duong Vuong)" and which Trieu Da later conquered. Archaeological evidence and historical studies support the existence of this kingdom. Some artifacts, for instance, that belonged to the Dong-son culture of northern Vietnam were found as burial goods in the tomb of the second king of Nam Viet, discovered in Guangzhou City. A bronze seal inscribed "Seal for Captain of Tu Pho (Xu Pu) County" was uncovered at Thanh Hoa in northern Vietnam during the 1930s. Owing to the similarity to seals found at the tomb of the second king of Nam Viet, this bronze seal is recognized as an official seal of the Nam Viet kingdom. Based on these discoveries, the relationship between the Nam Viet kingdom and northern Vietnam consisted not merely of long-distance trade and cultural exchange but also political control.

Political System of Nam Viet Kingdom

The Nam Viet kingdom was characterized by a unique political system. The most symbolic ex-

ample is the existence of the title of “emperor” in the Nam Viet polity. Trieu Da had been formally titled “King of Nam Viet” by the Han emperor, but this was only a formal approval of a *fait accompli*, as Trieu Da had earlier declared himself to be king. The fiercely independent stance of Nam Viet became apparent following the death of the first emperor of Han, Liu Bang. Trieu Da launched offensives in the borderland of Han territory, and challenged the Han world order by calling himself “(Nam Viet) Wu-di Emperor.” As a result of persuasion by the Wen-di Emperor of Han, Trieu Da later apologized for his impoliteness and withdrew the title of “emperor,” showing his subordination to the Han as “King of Nam Viet.” However, it is recognized that he actually still reigned as “emperor” in the domestic context. It has been shown that even the next king called himself “Wen-di Emperor (of Nam Viet),” according to the discovery of the “Wen-di Xing Xi (Royal Seal for Wen-di Emperor [of Nan Yue=Nam Viet])” gold seal in the tomb of the second king of Nam Viet excavated at Guangzhou city in 1983.

In the domestic context, therefore, Trieu Da and his descendants titled themselves “emperor” and influenced neighboring regions such as King An Duong’s Vietnam and several local polities in South China. Based on these facts, it is recognized that Trieu Da actually succeeded in building an original world order that was completely different from that of the Han. The ruler of Nam Viet had two different faces—on the one hand obeying the Han emperor as “King of Nam Viet,” on the other reigning over the Nam Viet empire as domestic “emperor.” This dualistic nature of the polity influenced the political system of Nam Viet society. According to the study of historical records and recent archaeological finds, it is realized that, in the core of Nam Viet territory, the system adopted was basically the same as the Han dynasty’s, reflecting actual diplomatic relations with the Han. For the local chieftains in the peripheral areas of Nam Viet, however, a special system based on Chu traditions such as the title of “Zhi-kui” was adopted by an individual “emperor” who had a different world order. In northern Vietnam, the local tradition was preserved and Nam Viet officers ruled with a soft glove in deference to the actual social situation as a newly conquered region. In the

Nam Viet territory, there thus existed a unique regional structure of concentric circles with several different systems in each region. Furthermore, several local polities such as Dong Yue (Eastern Yue=Viet) in modern Fujian and chiefdoms in southwest China maintained close relations at different levels with Nam Viet. The Nam Viet empire was characterized by such a “Nam Viet Mandala” structure and stood against the Han world order.

Although there have been various opinions, according to current archaeological understanding it is usually accepted that during the period preceding Nam Viet, including that of the Qin dynasty, the southern border of Chinese territory did not reach northern Vietnam. In other words, Nam Viet was the first dynasty established in modern Chinese territory that expanded its domain into northern Vietnam and established a unity over this area by a principle of pluralistic rule deriving from its unique historical background. The Wu-di Emperor of Han who conquered Nam Viet simply inherited this domain and later further expanded the borders of Chinese territory into modern Vietnam.

Nam Viet Influences on Later History

The Nam Viet kingdom fell in 111 B.C.E., but its influence continued afterwards. In the area from Guangdong to northern Vietnam where the ancient Nam Viet “empire” was established, moves for independence appeared again and again during times when one Chinese dynasty changed to another. The fruition of this trend was Vietnamese independence from China in the tenth century. After more than 800 years, “Nam Viet” became an issue again.

At the beginning of the nineteenth century, Nguyễn (phuc) Anh (the Gia Long Emperor) founded the Nguyễn dynasty after a war of unification. He dispatched a diplomatic mission as “Ruler of Nam Viet” to the Jia Qing Emperor of Qing China and petitioned for approval of “Nam Viet” as the formal name of this new kingdom instead of the conventional “An Nam (An Nan).” However, this name reminded the Qing court of the historical events of ancient Nam Viet. As a geographical concept, this name meant not only the Vietnamese area under Nguyễn’s control, but also regions such as Guangdong/Guangxi in Qing territory. As a

result, the Qing court refused this request, and in 1803 a new name, “Viet Nam,” was given as a compromise. Because the historical views of both the Qing and Nguyễn dynasties with regard to ancient Nam Viet played an important role in the formation of the name “Vietnam,” it can be said that the contemporary name “Vietnam” is an inheritance of “Nam Viet.”

Ancient Nam Viet in Historical Descriptions

Under Chinese dynasties after the Han period, a critical view of Nam Viet as a separatist dynasty was the standard view of orthodox Chinese historians. In thirteenth-century northern Vietnam (Tran dynasty), after independence from China, the Vietnamese court started editing its own historical chronicles. In the oldest history compiled by the Vietnamese court, the “Dai Viet Su Ky (Historical Records of Great Viet)” written by Le Van HUU, the ancient Nam Viet dynasty was viewed as the legitimate starting point, and Trieu Da who confronted the Chinese was described as the first “emperor” of “Viet.” In Le Van HUU’s text, Trieu Da was recognized as the person who formed the foundation of the system of imperial rule of “(Great) Viet” and was given the highest positive evaluation. For a Vietnamese dynasty that reigned domestically as “Emperor of Dai Viet (Great Viet)” and obeyed the Chinese emperor as “King of An Nam,” ancient Nam Viet and Trieu Da were seen as the best models of their own power in Vietnam.

In Vietnam, local history about legendary kings prior to the Nam Viet conquest such as the “Hung Kings (Hung Vuong)” and “King An Duong” came to attract attention, and the legitimate starting point of Vietnamese gradually got older. Trieu Da and the Nam Viet dynasty nevertheless retained their claim to legitimacy. However, in the latter half of the eighteenth century, a unique opinion that criticized Trieu Da as an invader and presented Nam Viet as a foreign dynasty that should be excluded from authentic Vietnamese history was presented by the famous scholar Ngo Thi Si. Nevertheless, under the Nguyễn dynasty in the nineteenth century, descriptions of Trieu Da and ancient Nam Viet were retained as part of official Vietnamese history while Nam Viet was demoted as an illegitimate dynasty. It was the North Viet-

namese historians after World War II who wiped out such vagueness and removed the Nam Viet dynasty from the national history, and established the historical view of Trieu Da as a foreign invader. After the unification of the north and south, this became the official historical view throughout the country.

In China, a unique evaluation of Nam Viet history has also been conducted in Guangdong. Originally, it was viewed as a separatist polity against Chinese rule, but in the first half of the fifteenth century, Huang Zuo, a famous Confucian scholar born in Guangdong, was the first to provide a systematic description of ancient Nam Viet in an official publication. By the mid-fifteenth century, Trieu Da was evaluated at the same level as successive rulers and officers in Guangdong, and henceforth Trieu Da was considered a historical person to be evaluated positively within the logic of the Chinese court. This approach continued afterwards as the typical style of local history and is found in the first half of the nineteenth century in monographs such as the “Nan Yue Wu Zhu Zhuan” (Chronicle History on Five Rulers of Nan Yue [Nam Viet] edited by Liang Ting Nan, a well-known intellectual in Guangdong. In modern China, through later twists and turns, Trieu Da gets the highest evaluation as a pioneer in the development of Guangdong.

NAN CHAO (NANCHAO) (DALI/TALI)

A T'ai Polity

Nan Chao was the kingdom located in present-day Yunnan Province in south China that lasted from the eighth to the thirteenth centuries C.E. It is believed by some to be the first kingdom founded by the T'ai-speaking ethnic group before their defeat by the Mongols. The Mongol advance led to the migration of the T'ai and the formation of new T'ai states in the plains of the Mekong and the northern part of modern Thailand in the thirteenth century (Williams 1976: 15–16). However, some scholars argue that the inhabitants of Nan Chao were not T'ai, but that the rise and fall of this kingdom created political opportunities for the T'ai to form independent principalities (Wyatt 1984: 35).

The history of Nan Chao can be traced back to the seventh century C.E., when the Tang dynasty (618–907 C.E.) extended its rule to Yunnan in present-day southern China. At the beginning of that period, Chinese emperors installed direct rule over the local people, whom they called Wu-men, or black-skinned barbarians. However, threatened by the Tibetans in the second half of the seventh century, the Chinese made an alliance with the local inhabitants at the beginning of the eighth century and allowed them to form small semiautonomous principalities. The Chinese hoped that these small principalities would form a buffer zone to provide them with territorial security and curb Tibetan invasions (Williams 1976: 15–16). However, one of the leaders of these small principalities, called Pi Lo Ko, proved to be very capable and was able to unite six small states of the Wu-men to form a kingdom around the Tali Lake in western Yunnan in

the 730s. In 738 his kingdom gained recognition from the Chinese court, which called it Nan Chao, or the "southern prince" (Wyatt 1984: 13).

The Tang and Nan Chao were able to maintain peaceful relationships until the 740s, when Ko Lo Feng, Pi Lo Ko's son, became king. Ko Lo Feng was an ambitious and militarily capable king who wanted to extend the rule of Nan Chao. During the 750s, the Chinese frequently sent armies to wage war against Nan Chao, but Ko Lo Feng and his armies defeated them. From then on, Nan Chao was able to control most parts of Yunnan, and he extended its political and military power even further over its neighbors in southern China and northern Southeast Asia. For example, in the early ninth century C.E., it sent armies to break the power of the Pyu kingdom in modern northern and central Burma (Taylor 1992: 165). Furthermore, it attempted to put pressure on small principalities in present-day northern Thailand, Annam, and Chen La kingdom between 846 and 866. However, Nan Chao's military campaigns against neighboring states during this period gave the T'ai opportunities to settle down on the plains of the Mekong River, while their more powerful neighbors, such as Pyu and Chen La, were engaged in defending themselves. However, the T'ai had still not been able to form their own unified state during the ninth and tenth centuries and had to mingle with other powerful ethnic groups in mainland Southeast Asia. Their presence in the region would later enable them to found their own kingdoms in the north and in the Chao Phraya delta of present-day Thailand during the century when the more politically and militarily powerful kingdoms of Nan Chao and Cambodian Angkor were in decline.

The administration of Nan Chao under its *chao* (lit. prince, king) was very well organized and was quite similar to the Chinese court. The king presided over the court, and small principalities of different ethnic groups were incorporated into the kingdom. The board of six ministers and the council of twelve military generals carried out the day-to-day administration at the center. Local administration was under the responsibility of hierarchical officials who were granted land in proportion to their rank as the return for their service (Wyatt 1984: 13–14). Buddhism was the dominant religion

of the kingdom. Its expansion into the kingdom of Pyu in modern Burma linked southern China and northern Southeast Asia to India, which helped the spread of Indian knowledge to the region (*ibid.*: 15).

In the twelfth and thirteenth centuries, Nan Chao was experiencing internal political instability, and its rulers had to focus their attention on internal problems rather than external expansion. More important, by the thirteenth century, the Mongols, who had become the most powerful rulers in China and mainland Southeast Asia, had started to extend their power. By the 1250s, Nan Chao was defeated and occupied by the Mongols, and that eventually led to the collapse of the kingdom (Taylor 1992: 168).

NANYANG

"South Seas"

Nanyang is the Chinese term for the "South Seas"—namely, the area situated southward of the Chinese mainland that in the post-1945 period became generally referred to as Southeast Asia. The Chinese—especially those from the southeastern seaboard—had since the early times ventured into the South Seas engaging in trade. Chinese Buddhist travelers such as Fa Hsien (fifth century) and I-tsing (seventh century) wrote extant accounts of their visits to territories in the region. During the Ming dynasty (fifteenth to sixteenth centuries), naval convoys were dispatched to the Nanyang to foster relations with indigenous rulers to bring them under the imperialistic fold of the Chi-

nese tributary system. Despite pogroms and discrimination, the Nanyang continued to be economically appealing to the Chinese. Pockets of settled Chinese communities throughout Southeast Asia from Rangoon (Yangon) and Batavia (Jakarta) to Manila testified to the attractiveness of the region. Large-scale mass immigration from the southeastern provinces of China to the Nanyang began in earnest in the mid-nineteenth century, as part of an exodus of Chinese coolie traffic to California, the Caribbean, and Australia. The Nanyang was viewed favorably by would-be Chinese immigrants against the background of the destitute conditions in the homeland. The Nanyang Chinese or overseas Chinese of Southeast Asia played significant roles, particularly in trade and commerce, mining, and commercial agriculture. They remained vibrant elements in their adopted homes in the Nanyang.

NAPOLEONIC WARS IN ASIA

The Napoleonic Wars (1803–1815) involved the French and the British as leading protagonists in Europe, but because each was incapable of invading the other's home territory, their warfare became markedly colonial and economic in character, as well as global in range. Napoleon I (Napoleon Bonaparte) (1769–1821) tried to shake British dominion in India, and his Berlin decree of 1806 closed all Continental harbors to British trade, directly damaging Britain's colonial commerce with Europe. Conversely, hostilities with France offered Britain opportunities for seizing control over points of

strategic importance belonging to France and to its Dutch and Spanish satellites in the Mediterranean, Africa, the Indian Ocean, and Southeast Asia. After Napoleon's final defeat (Waterloo, 1815), the British found themselves in unchallenged control of all the main axes of maritime communication linking Europe with Asia, from the Atlantic to the South China Sea.

During this whole period of conflict, Holland and Spain, as much as France, were Britain's adversaries in Asia. Even before Napoleon's rise to power, the Batavian Republic, set up in 1795 by Dutch sympathizers with the French Revolution, incorporated itself into the French system as a satellite. In 1796, Spain also fell under French control. As a result, Dutch possessions situated at the Cape of Good Hope, Ceylon (Sri Lanka), and Java, together with the Spanish colony of the Philippines, became exposed to potential British attack. On the axiom that "what was a feather in the hands of Holland would become a sword in the hands of France," Dutch Ceylon was declared a British dominion in 1798. Upon Napoleon's arrival in power, the French riposted with a project in the same year to combine forces with Tipu (r. 1782–1799), the sultan of Mysore, to oust the British from India. After capturing Malta as the first stage of this scheme, Napoleon led an army to invade Egypt, intending to ship his forces via the Red Sea to Mauritius, and thence to India. When news of the expedition broke, the British moved to forestall Napoleon, first by attacking and defeating Tipu at Seringapatam and then by sinking the French fleet at Aboukir Bay off Alexandria.

The failure of the Egypt expedition left France's Dutch ally in Asia isolated, making it unnecessary for the British to proceed to the conquest of Java for the time being. Yet the Dutch colonial system would be considerably damaged by the Napoleonic Wars. In 1806 the British seized the Dutch colony at the Cape of Good Hope. In the same year Napoleon abolished the Batavian Republic, and, after installing his brother Louis as king of Holland, he sent a Bonapartist marshal of Dutch origin, Herman Willem Daendels (t. 1808–1811), to the Netherlands East Indies as governor-general, with special powers to put Java on a war footing. To build up the defense of Java, Daendels stripped Palembang in Sumatra, Makassar in the Celebes, and Banjermasin in Borneo to

strengthen the port capital of Batavia. Daendels's measures were so extreme that he alienated not only the sultans of Jogjakarta and Bantam but also the Dutch residents of the colony. In 1810, after abolishing Louis Bonaparte's new kingdom of Holland, Napoleon absorbed The Netherlands into France, formalizing French ownership of Java. With a French naval force still present at Mauritius and with the defenses of Java recently strengthened by Daendels, the British began to fear the recrudescence of French power, and the East India Company (EIC) was persuaded to undertake an invasion.

The Java expedition established the British in control of Java from 1811 to August 1816. One of the main proponents of this successful expedition, Thomas Stamford Raffles, became lieutenant governor of the territory (t. 1811–1816). Raffles inaugurated a new phase of internal reform by which the Dutch administrative system, recently gallicized by Daendels, was reconstructed along Anglo-Indian lines. A general tax on land was substituted for previous arrangements for compulsory services and forced deliveries. Yet despite undertaking further experimental fiscal measures, Raffles was incapable of resolving the financial difficulties left by Daendels's extravagance. In the wake of Napoleon's abdication, Britain promised, by the Convention of London of August 1814, that they would restore Java to the Dutch, together with other scattered settlements in the East Indies, principally Amboina, Banda, and Ternate. The main purpose of this restitution, which took place in 1816, was to rebuild the Dutch home economy as a bastion against future French expansion on the continent.

By the termination of hostilities, the French had lost Mauritius and the Seychelles, as well as Malta, permanently to the British. But they hung on to some of their Indian footholds—Mahé, Karikal, and Pondicherry. The British, however, emerged in control of the main strategic points in Asia. They retained two of their Dutch conquests, the excellent harbors at Trincomalee in Ceylon, and at the Cape of Good Hope. Although relinquishing Java, Britain's temporary occupation paved the way for another crucial acquisition in Southeast Asia. In 1819, to their moribund settlement at Penang, acquired in 1786, they added Singapore, in an initiative prompted in part by Raffles's impressions of the potential of the region's trade de-

rived from his time as lieutenant governor of Java. Singapore, which became the axis of Britain's India-China trade in the nineteenth century, also came to serve as the focal point of Britain's communications and defense in East Asia in the twentieth century.

NARAI (r. 1656–1688)

Opening Siam to International Trade

As king of Siam, Narai ruled at a time of intense trading activity in the kingdom, and in the Southeast Asian region overall. He was an outward-looking ruler who used diplomacy to further his international political and commercial objectives.

The son of the usurper King Prasat Thong (r. 1629–1656) by a queen who was a daughter of King Song Tham (r. 1610/1611–1628), Narai was thus linked by blood to two dynasties. Although he had an elder brother, Chao Fa Chai, and an uncle who had political influence, Narai's own claim to the throne was very strong.

In 1656 he triumphed over both Chao Fa Chai and their uncle Si Suthammaracha in a bloody struggle for the throne, successfully capturing the Royal Palace in Ayutthaya twice. The international tenor of Narai's reign was set by his use of foreign mercenaries in his two assaults on the royal palace in 1656. Records mention the participation of Indian and Persian Muslims, Malays, Chams, Javanese, Japanese, and Portuguese on Narai's side during the fighting.

Narai's reign is remarkable for the international trade and diplomacy engaged in by the Siamese royal court. Foreign trade and diplomacy enriched the king's treasury and spread

his fame. Narai's court traded and had diplomatic contact with Europeans, Indians, Persians, Chinese, Javanese, and Malays. Crown junks fitted out for the Siamese monarch by Sino-Siamese merchants managed to trade in Japan regularly, in spite of that country's seclusion policy.

Another key aspect of Narai's long reign was the employment of foreigners, especially Persians and Europeans, in royal trade and administration. The early and middle parts of his reign were dominated by the ascendancy of Persian as well as Siamese officials, notably the Persian Aqa Muhammad (Okphra Si Naowarat) and the Mon-Siamese minister for trade and foreign affairs, Chaophraya Kosathibodi (Lek). From the late 1670s onward, Europeans entered the Siamese royal service in greater numbers, notably the Greek employee of the English East India Company (EIC) who was to become Narai's great favorite, Constantine Phaulkon (d. 1688). Once entrenched in the Siamese bureaucracy, Phaulkon brought in his friends and acquaintances among the English, such as Samuel White, who was appointed harbormaster of Mergui.

Narai's relations with the European powers have naturally attracted most scholarly attention, especially his contacts with the Dutch, the English, and most notably the French. During the early 1660s Narai's court was involved in a conflict over trading interests with the Dutch United East India Company (VOC). The Dutch company sent two ships to cruise the mouth of the Chao Phraya River and the adjacent coastline to the east. The conflict was resolved by the signing of a treaty in August 1664 that gave extraterritorial powers to the Dutch and also prohibited the use of Chinese to man the Siamese king's junks. The traditional interpretation has been to ascribe Narai's desire to have closer contacts with the English and the French to his fear of the Dutch. Later research, however, has shown that the Dutch and Siamese were on good terms for much of Narai's reign, the blockade and the 1664 treaty notwithstanding. Dutch artisans and experts on everything from medical and military matters to enamellers and goldsmiths were provided by the VOC to the Siamese court.

Constantine Phaulkon played a prominent role in promoting the king's pro-French foreign policy. The peak of this policy was reached with

the exchange of embassies between Siam and France in 1685 and 1686. Under Phaulkon's supervision, the French ambassador Chaumont was given a grand reception in 1685. When Chaumont had concluded a treaty with the Siamese court, he returned to France, taking with him a Siamese embassy. Okphra Wisut Sunthon ("Kosa Pan"), an ancestor of the Chakri dynasty of Bangkok, was the leader of this Siamese delegation to France.

The policies of King Narai and Phaulkon faltered and went out of control toward the end of the reign. A state of war existed between Siam and the EIC as White's friends, in the king of Siam's name, engaged in piratical activities from Mergui, and the EIC's subsequent attempt to take Mergui ended in a massacre of the English there. The French wanted more than was granted to them in the 1685 Franco-Siamese Treaty, and they sent several hundred soldiers along with a second embassy in 1687 with instructions to garrison Bangkok and Mergui, two key localities in the kingdom.

King Narai's last days were tragically spent as a virtual prisoner in his own palace at Lopburi (Lawo). The political problem at the end of his reign revolved mainly around the issue of the royal succession. Narai had no son, and his surviving half brothers were politically impotent. The way was clear for the king's own brother-in-law and commander of the royal elephants, the nobleman Phra (Okphra) Phetracha, to form a powerful faction and seize power. After Narai's death in July 1688, Phra Phetracha became king.

NARESUAN

See Phra Naret (King Naresuan) (r. 1590–1605)

NASUTION, GENERAL ABDUL HARIS (1918–2000)

Soldier-Scholar

Indonesian leading army general and its theoretician, politician, and historian, Abdul Haris Nasution was, like Soeharto (1921–), awarded the rank of five-star general. He was instrumental in bringing the military into Indonesian politics.

A native of the village of Hutapungkut, Kotanopan, Nasution came from an ordinary Batak peasant family of North Sumatra. He spent his secondary and high school days in Bukittinggi, West Sumatra, and Bandung, West Java, respectively. After obtaining his double diplomas from Hollandsch-Inlandsche Kweek-school (HIK) and Algemeene Middelbare School (AMS) in Bandung in 1937, he served as a teacher initially in Bengkulu and then in Palembang, South Sumatra. In Bengkulu he met Soekarno (Sukarno) (1901–1970), who was then living in exile. He left Palembang for Bandung and began his military career at the military academy of Corps Opleiding Reserve Officieren in 1940. He was promoted to lieutenant two years later, and then served as infantry in Surabaya fighting in the Dutch colonial army against the invading Japanese.

Nasution first achieved prominence during the Japanese occupation, when he was appointed deputy commander for the paramilitary group *Barisan Pelopor* in Bandung. He also traveled around West and Central Java to train and to create a network among the youths for the Javanese war effort. The period following Indonesian in-

dependence (1945) afforded more room for the young Nasution. He was appointed local commander of the newly established *Tentara Keamanan Rakyat* (TKR, People's Peacekeeping Force) in Bandung, and then chief commander for West Java, later the Siliwangi Division, in early 1946. He held several positions during the Indonesian Revolution (1945–1949), including fighting a communist group in September 1948 and as the commander responsible for the whole of Java during the second Dutch "police action" of December 1948.

During the war years, Nasution was given the responsibility by the Japanese of fashioning modern guerrilla warfare and its relationship with civilian elements, which then became the core of the Indonesian military concept of *sistem pertahanan semesta* (Total People Defense System), the creation of a territorial army that incorporated civilians into the defense system.

His successes during the war were rewarded by a series of rapid promotions. In 1950, when he was just thirty-two years old, Nasution became the youngest officer ever appointed Indonesian chief of the army with the rank of colonel. Two years later, however, he relinquished this post following an action by a military group that demanded the dissolution of parliament on 17 October 1952 as a result of internal military conflict. Three years later he was reappointed chief of the army. During this inactive period, Nasution established the semi-military political party of *Ikatan Pendukung Kemerdekaan Indonesia* (IPKI) in 1954, which took part in the first general elections of 1955. He became a strong supporter of Soekarno's policy, particularly concerning the return to the 1945 Constitution, clamping down on regional rebellions, nationalization of Western enterprises, the West Irian campaign, and the confrontation policies against Malaysia.

Nasution, who became a full general in 1960, encouraged many military officers to take up economic and political posts. His statement on the dual function of the Indonesian armed forces (ABRI) in the late 1950s provided a legal and historical basis for the next generation of officers to be actively involved in social and political roles during the New Order.

Abdul Haris Nasution was the main target of military action by the September 1965 Movement. He succeeded in escaping with only minor injuries, but his five-year-old

daughter, Ade Irma Suryani, was fatally shot during the rampage into his residence.

During the transitional period of struggle for power following the failure of the attempted coup, Nasution commenced his political career as chairman of the *Madjelis Permusyawaratan Rakjat Sementara* (MPRS, Provisional Peoples' Deliberative Council). Although he had earlier been dismissed by Soekarno from his position as minister of defense and chief of the armed forces, Nasution was responsible for the removal of Soekarno from his presidential position and brought Soeharto into power in 1967. But the retired general, ironically, was considered the main opponent of Soeharto during his reign, particularly after Nasution was involved with a group, called *Petisi Limapuluh* (Fifty Petitions), that was critical of the New Order.

Besides being an army general, Nasution was a scholar and historian. His eleven-volume work *Sekitar Perang Kemerdekaan* [*About the War of Independence*] and seven volumes of memoirs reflect his scholarly achievements; he also held honorary doctorates from prestigious universities. Popularly addressed as *Ris* or *Pak Nas*, Nasution was married to Johana Sunarti, who is of Javanese/Sundanese parentage.

NATIONAL LEAGUE FOR DEMOCRACY (NLD)

The National League for Democracy was formed in September 1988 following the establishment of a new military government in Myanmar (Burma) that promised to hold national elections. It quickly grew to become the major legal political party in the country. Brigadier Aung Gyi (ret.), General Tin U (ret.), and Daw Aung San Suu Kyi (1945–) initially led the NLD. Much of the party's initial support drew on the public profile of Daw Suu Kyi, who in addition to being its secretary-general was the daughter of Myanmar's national hero, General Aung San (1915–1947). Her prominent role in criticizing the socialist-military regime of her father's successor, General Ne Win (1911–2002), won instant popularity. Brigadier Aung Gyi resigned from the presidency of the NLD four months after its formation, accusing Daw Suu Kyi of having been manipulated by communists. Many of the initial stalwarts of the party were either politicians from a number of pre-1962 political parties or military officers who, like Aung Gyi, had subsequently fallen out of favor with Ne Win. Students provided much of the NLD's organizational energy.

When elections were held in 1990, the NLD won more than 60 percent of the votes and more than 80 percent of the posts in the new national legislature. However, the military refused to hand over power to the league, on the grounds that first a national constitution had to be written. The army then began to arrest a number of NLD members and placed the leadership under house arrest. General Tin U and Daw Suu Kyi had their existing house arrest orders extended. Twelve successful NLD candidates and other party members fled to the Thai border area and established a parallel government-in-exile, known as the National Coalition Government of the Union of Burma.

Within the country a stalemate ensued, although secret talks on political reconciliation commenced in 2000.

NATIONAL PEACE-KEEPING COUNCIL (NPKC) (THAILAND)

The National Peace-Keeping Council was set up after a coup group led by General Sunthorn Kongsompong, supreme commander of the armed forces, together with army, navy, and air force chiefs, overthrew the elected Chatichai government on 23 February 1991. Until the new election, the NPKC then installed a government led by Anand Panyarachun, former permanent secretary of the foreign affairs ministry and an eloquent businessman; the elections installed General Suchinda Kraprayoon, the army commander, as prime minister. The ensuing protest and demonstration against Suchinda led to the bloody May 1992 incident and the end of the NPKC.

The NPKC-led coup was unexpected but quickly gained sympathy, if not outright support, from big-business quarters. The coup group cited five reasons in justifying military intervention in the democratic procedure, which had just started again after the voluntary exit of General Prem Tinsulanond (1920–) from military politics in 1988; Lieutenant General Chatichai Choonhavan was the first elected premier after the 1976 coup. The first reason was that the Chatichai government had notoriously been known as the "buffet cabinet," meaning that cabinet members were involved in corrupt practices. Second, the political officials, including members of parliament (MPs) and their secretaries and appointees, unjustly attacked government officials and bureaucrats. Third, the parliament had become a dictatorship. Fourth, there were plans to destroy the army. Fifth, there were attempts to derail an in-

vestigation into the attempted assassination of the queen and General Prem.

The real cause underlying the NPKC coup, however, was the conflict between the Chatichai government and the army. The latter had increasingly lost its perks in its traditional control over the government as a result of its declining influence over politics.

The NPKC comprised five military leaders: General Sunthorn Kongsompong, chairman; General Suchinda Kraprayoon, army commander, vice chairman; General Kaset Rojananil, air force commander; General Prapat Krisnachan, navy commander; and General Issarapong Noonpakdi, deputy army commander.

NATIONAL TRADES UNION CONGRESS (NTUC)

The National Trades Union Congress, formed in July 1961 and closely linked to the People's Action Party (PAP) government, is the largest association of trade unions in Singapore. The NTUC had its origins in the Singapore Trade Union Congress (STUC), which was established in 1951 as an alternative noncommunist labor movement to the communist-led unions that dominated Singapore's postwar political landscape. The STUC, however, failed to make an impact until the leaders of the PAP, wanting to unify the union movement and harness labor support, revived it after being elected to office in 1959. Faced with mounting unemployment and population increase, the PAP government sought to curb labor unrest, but this ran con-

trary to the party's procommunist faction, which considered strikes and industrial disputes an integral part of its anticolonial and anticapitalist struggle. The break between the two factions surfaced over the Malayan premier's proposal—which was supported by the moderate PAP leadership—for the creation of an enlarged Federation of Malaysia to include Malaya, Singapore, and the British Borneo territories in May 1961. Opposed to the plan, the procommunists left the PAP to form the Barisan Sosialis in July 1961. The STUC was consequently split into the Singapore Association of Trade Unions (SATU), which supported the Barisan Sosialis, and the National Trades Union Congress, led by PAP members. Several reasons motivated the PAP and the NTUC to work closely together.

Singapore's separation from Malaysia in August 1965 and the need to preserve industrial peace and attract foreign investments to solve its unemployment problem and ensure Singapore's economic and political survival were prominent factors. The PAP and the NTUC lent their support to tough labor legislation enacted by the government in 1968. The NTUC's wage-negotiating role was soon diffused by the formation in 1972 of a National Wages Council, comprising representatives of the government, employers, and unions. To improve the social and economic welfare of workers, the NTUC has established many workers' cooperatives, and its representatives sit on many statutory boards and organizations, assuring it of a voice in Singapore's nation-building process.

NATIONALISM AND INDEPENDENCE MOVEMENTS IN SOUTHEAST ASIA

At one level, nationalism in Southeast Asia was about overthrowing Western colonial rule. To achieve that goal, movements of various kinds

were organized. Some adopted independence as their target. Others were more modest. They concentrated on arousing consciousness of Southeast Asians as a people with values as resilient as those advocated by Westerners. The aim was to create awareness and self-confidence with which to face the challenge of the dominant colonial authorities.

Given the diversity and complexity of Southeast Asia as a region, it would not be surprising if the kinds of nationalism and the independence movements that emerged were similarly varied. In this discussion, the various approaches to nationalism will be examined from the causes espoused by the different kinds of independence movements.

The key features that characterized the independence movements can be briefly identified as follows: (1) religious and nonreligious movements; (2) rural and urban movements; (3) backward- and forward-looking movements, or amalgamations of the two; (4) mass and elite movements; (5) movements peculiar to certain contemporary phases of development; and (6) movements shaped by the nature of colonial rule.

Each key feature is itself characterized by peculiarities and exceptions, typical of the regional landscape that often displayed little consistency except for geographical proximity. Any survey of nationalism and the independence movements must necessarily traverse this vast terrain in order to facilitate a comprehensive understanding—clearly a Herculean task. Using the framework defined by the aforesaid key features, a number of propositions can be advanced.

Nationalist and independence movements were often defined in terms of anticolonial responses. They sought independence from the colonial authorities—Spanish, French, Dutch, British, and even U.S.—because the colonial authorities intruded into their social and political space, and not just because those authorities were able to exact economic tribute such as taxes.

Nationalism and independence movements used religion—mainly Islam and Buddhism—to rally support against the Western colonial powers. This resort to religion was almost a default strategy because the Western rulers had shorn off the dynastic powers of the Southeast Asian leaders, leaving untouched their religious

influence. Examples included the Muslim sultans of Aceh. In Vietnam, on the one hand, the monarchs adroitly used Confucianism to protect the fatherland in the face of Western pressure. On the other hand, the religious leadership of the sultans in the Malay States was strengthened by the British colonial authorities in the hope that the sultans could help keep their followers in check, thus preventing Islam from being used as an anticolonial tool.

The issue of religion was also related to the messianic movements usually prevalent in the rural parts of Southeast Asia. There, latent longings for bygone days persisted where local religious leaders presented themselves as messiahs who could not only overthrow colonial authorities (with their power to tax and seize land) but also recover the golden societies that once existed, where peace, harmony, prosperity, and justice once prevailed. These messianic movements served as critical vehicles of nationalism and the independence movements that emerged. In the Philippines, during the Spanish colonial period, there were countless such local movements, not all of which were fighting for “independence” but certainly for the alleviation of local miseries. Other such movements that attracted the attention of the colonial powers because of their strength and popularity were the Samin movement (Java) and the Hsaya San rebellion (Burma), both occurring in the early twentieth century.

Away from the rural areas, nationalism and independence movements adopted different modes. Urban centers were zones of Western education, institutions, and business enterprises. They represented the beachheads of Westernization. Thus it was not surprising that nationalism and early independence movements first emerged in the Philippines, where there was a long tradition of friar-sponsored education. In Java as well, the Dutch were very active in establishing an education infrastructure.

What did education institutions impart in order to heighten consciousness about nationalism and independence? Students were generally more exposed to intellectual trends emanating from abroad. They were challenged by Western secular and spiritual influences. They sought answers to meet those challenges, and such answers were not always available within paradigms of traditional knowledge. Of course, not all education institutions produced students

with this degree of awareness. Schools, after all, were established to produce graduates to serve in the colonial administration, not to undermine the colonial government. But all over Southeast Asia, there were enough anticolonial graduates of the likes of José Rizal (1861–1896), Sukarno (1901–1970), and Aung San (1915–1947) with the mettle to justify the claim that the Western education available in urban areas was vital to the development of nationalism and independence movements.

The encounter with Western learning also led other Southeast Asians to examine how local mores could accommodate the best of Western culture. This was in part an exercise to make tradition more serviceable for modern requirements. In Burma, the Young Men's Buddhist Association searched for a usable Burmese and Buddhist identity. In Java, Western-educated intellectuals founded the Budi Utomo and Taman Siswa, to marry Western learning with tradition. In Vietnam, Pham Boi Chau (1867–1940) performed similar roles.

Although these efforts were secular in essence, the same experiences were taking place in the religious sphere. The religious expression of nationalism and independence movements was represented by organizations such as the Sarekat Islam of Indonesia, together with modernist and traditionalist movements in other Islamic areas. The Sarekat Islam was a mass anticolonial movement founded in 1911. Soon, agitators preoccupied with wider social and political goals captured the leadership. Religion (Islam) had to share space with other influences. In fact, the more religiously inclined found new homes in the modernist Muslim teachings then emanating from the Middle East. Other Muslim leaders faced the challenge of Western influences by developing the traditionalist organization called the Nahdatul Ulama.

These examples of nationalism and independence movements in Java were replicated with modifications in the Malay States across the Straits of Melaka. On the whole, Islam provided a more vibrant environment for the development of such movements than the Buddhist parts of Southeast Asia—namely, Burma (now Myanmar), Siam (now Thailand), Cambodia, and Vietnam.

Unlike Islam, with its spiritual authority in Mecca and Cairo, Buddhism in Southeast Asia

did not experience the kind of dynamic influences originating from those centers. More research is still needed to decide whether the Buddhist parts of Southeast Asia also experienced the cultural divisions found within Islam that resulted in the development of divergent groups actively defending their own turf. One significant exception was the attempt by the Buddhist Chakri rulers of Siam to promote a renaissance for the religion, but it is not clear how this renaissance affected Buddhist institutions in neighboring Laos and Cambodia, if at all. Apart from that initiative in Siam, Buddhism did not provide the lead role in nationalism and independence movements in the other major parts of mainland Southeast Asia—namely, Burma and Vietnam.

In Burma, the British colonial authorities had demolished the ecclesiastical head of the Burmese Buddhist authority. This resulted in the emergence of many small pockets of resistance led by men claiming to be religious icons of sorts. In southern Vietnam, where Buddhism had never sunk deep roots, the syncretistic religious groups—namely, Cao Dai and Hoa Hao—were the principal anticolonial fighters.

It was in the 1920s that more organized anticolonial movements emerged that embraced specific plans about freedom and independence. Again, worldwide influences were important. Radical Marxist and socialist ideas were encouraged by the outbreak of the Russian Revolution (1917). The rise of Japan was much admired. The assertion of Chinese nationalism inspired Southeast Asians. By the 1920s, the number of Southeast Asians who absorbed new ideas after having ventured abroad was increasing. Many studied in colonial institutions; some found their Mecca in Japan. Ferment was the order of the day.

Briefly, there were two types of Southeast Asian returnees from abroad, both distinguished in terms of their contribution to social continuity or social disruption. The first type was the nationalist elites who later assumed power in Malaya, the Philippines, and Cambodia. The second group was prominent in Burma, Indonesia, and Vietnam. The first group sank deep roots in their respective societies, and these societies suffered minimal changes under colonial rule. The second group consisted of leaders who had no vested interest in the continuance of colonial rule, and indeed were the products

of societal changes induced by colonial rule. The outcome of the wave of nationalism and independence movements led by the two groups naturally differed. Malaya, the Philippines, and Cambodia enjoyed relative stability as they made the transition from colonial rule to independence. In contrast, Burma, Indonesia, and Vietnam experienced revolution and political turmoil.

What has been attempted here has been an analysis based on patterns that could be discerned, using broad brushstrokes. Other characteristics about nationalism and the resultant independence movements in Southeast Asia that do not fit the earlier patterns must also be mentioned.

The role of minorities in nationalism and independence movements is also important for an understanding of the Southeast Asian context. Many population groups inhabit Southeast Asia. Migrations from India and China resulted in large numbers of Indians residing in Burma, and Chinese settlements were made in all parts of Southeast Asia. In Indonesia, nationalist and independence movements such as the Sarekat Islam embodied a degree of anti-Chinese feeling, inspired in part by business competition with Chinese traders. Elsewhere—for example, in Siam and the Philippines—the Chinese integrated with the local population by marriage, and anti-Chinese feelings were only occasional outbursts within the ambit of nationalist and independence movements. Even in Java, such integration between Chinese traders and local Javanese women resulted in the development of several kinds of Chinese organizations that negotiated very skillfully between Indonesian nationalism and concerns about China. In Burma, anti-Indian sentiments were a rallying cry of nationalism and the independence movements. Minorities also included ethnic groups such as the Shans and the Karens—the non-Javanese people living in the Indonesian archipelago. Although independence movements were prominent at the urban capital level, important developments were taking place at the subnational level as well. The picture was thus uneven, and any broad sweep of nationalism and independence movements such as this survey must be augmented by more in-depth studies.

It is also important to ask what mental image coursed through the minds of nationalist and independence leaders as they developed

their ideas about their goal. What was the “nation” they were fighting for? Was their “nation” the same as that conceived and envisaged by the Western colonial powers? Put briefly, was “Indonesia” the mere successor to the “Netherlands East Indies”? What was the “Philippines”? Did it include the Moro sultanate of southern Mindanao and the present Sabah? What about Burma? Was Burma confined to the central lowlands, or was Burma inclusive of the highlands as well?

Diversity was thus the hallmark of nationalism and the independence movements in Southeast Asia. By way of summary, it will be useful to identify a thread that can weave through the diversities and draw together divergent data as far as possible. One way to achieve this goal is to describe the impact of Western colonial rule on nationalism and the independence movements.

It is often assumed that colonial governments were powerful entities. They could not be otherwise, because how else could they control vast Southeast Asian populations? The historical records passed down to posterity also tend to dignify the colonial governments as strong, stable, and confident. That was not, however, necessarily the case. Often, colonial governments were stretched thin and weak. They remained in power because of strategic alliances negotiated with local rulers. They recruited military units from local populations that were derived from minority groups (either by race or religion). Thus, by the infamous device of “divide and rule,” they could maintain power in the face of immense odds. A telling illustration of the weakness of the colonial authority can be found in the way these authorities dealt with nationalist and independence leaders. The former imprisoned them or tried to drive them away. This gave the impression of power, control, and awe. Actually, the reverse was just as true, if not more so. Imprisonment or exile could be viewed as admission of weakness. Nationalist and independence leaders had to be put away in order to avoid the challenges they posed. Such weakness often meant that colonial governments had to deal with the populations under their authority with kid gloves. They could not embark on major social and political changes, even if they wanted to. There were thus many pockets of indigenous Southeast Asian societies that were left un-

touched by colonial rule, while other areas experienced more change. The nationalist and independence movements thus differed from region to region, depending on the intensity of colonial rule.

Broadly, Western colonial administration came in two forms: indirect and direct rule. Indirect rule denoted those systems of colonial governance whereby precolonial forms were allowed to survive. Direct rule tended to replace native forms of government. Both systems were in force by the late nineteenth century in Southeast Asia. Examples of indirectly ruled areas included Laos and Cambodia, the Malay States, and many Indonesian principalities in Borneo, Celebes, and eastern Indonesia. Directly ruled areas included the lowlands of Burma, Java, and southern Vietnam.

In general, indirect rule aroused less opposition toward the colonial authorities. The latter were less visible. They operated through native rulers using strategic alliances. For example, if taxes were levied, the native rulers were the ones who collected them upon the "advice" of the colonial authorities. Control was disguised. Under this system, only members of the local aristocracy were given access to Western education. There was no need to extend training to others, since an elaborate bureaucracy was not necessary for the maintenance of indirect rule. Indirect rule was also the preferred mode of administration for dealing with ethnic or religious minorities. In this way, the Shans in Burma, the mountain peoples in Laos, and the non-Javanese communities could continue their particular ways of life with a minimum of interference and change.

In contrast, the population in the directly ruled areas experienced major changes. The native institutions of government could not meet the demands of the modern colonial state. The former were not able to serve the colonial authorities adequately, and so they became increasingly irrelevant. The solution then was to provide Western-style training in modern schools and colleges. These opportunities were thrown open to all, and not necessarily confined to the local aristocracy. The intelligentsia that emerged was not always committed to the maintenance of the traditional status quo. At the same time, this intelligentsia felt discriminated against because they had to work with less qualified European offi-

cial drawing better remuneration. Here was a sure recipe for the development of nationalism and the independence movements that preached violence and the overthrow of the existing order.

Thus the mechanics of colonial rule can explain the texture of nationalism and the type of independence movements in different parts of Southeast Asia. However, there are other features that cannot be encapsulated in this explanation of direct and indirect rule. In Southeast Asia, communist leaders and the military elite played major roles in the nationalist and independence movements of both directly and indirectly ruled territories. Certainly, colonial regimes did not contribute much to the development of such elites. Thus in order to explain their origins, it is necessary to turn to other explanations. The popularity of communism can be attributed to the neat and incisive analysis afforded by Marxism to account for the problems of exploitation faced by colonial societies. As for the rise of a military elite, it is necessary to examine the role of Japan and the Japanese occupation of Southeast Asia (1941–1945). Clearly, the Japanese military governments of the 1930s attracted the attention of many Southeast Asians who viewed the Japanese as setting an example of how to maintain independence from Western intrusion. During the subsequent Japanese occupation of Southeast Asia, the new masters endeavored to train Southeast Asians in military arts. This included not only the use of weapons but also the mental attitudes of discipline and dedication. The result was the creation of a military elite that subsequently played a vital role in fighting the Western colonial authorities. No longer was opposition expressed only in slogans within political parties. A new dimension became available as a result of the Japanese occupation—namely, the use of arms to drive out the colonial authorities.

One other peculiarity about nationalism and the independence movements in Southeast Asia must also be noted. These movements were almost land-bound and territorially defined. That is, they existed and functioned on dry land. Their concerns included the independence of a nation that was territorial. They agitated over taxes and land; they were angered by unfair land tenure practices. Yet Southeast Asia was and is largely a maritime region. Strangely

enough, there is no evidence that nationalism and the independence movements were concerned about developments overseas while they agitated on dry land. Indeed, Southeast Asians were also a seafaring people before the Western colonial powers established themselves. Even during the colonial period, they maintained trading, travel, and social contacts with counterparts across the seas. The impact, or lack of impact, of such contacts on nationalism and the independence movements has yet to be explained.

Finally, did the nationalist leaders achieve the results they desired—namely, freedom and independence—on their own? The answer is probably not an unequivocal “yes.” Notwithstanding the weaknesses of colonial control, the Southeast Asian leaders could not have succeeded without external assistance from the Imperial Japanese army.

YONG MUN CHEONG
