

Exeter Chess Club: Benedict's Index

Benedict Verheyen [also known as blackknightofdoom] got fed up thrashing around trying to find stuff, and so has sorted me out with this neat index, for which I am enormously grateful.

UPDATE 2005: I've added to it to make it a more complete list of what's on the site (not just what's classified by grade)

Opening

* The London Chess Centre has published a whole bunch of introductory stuff on [Openings](#), but you have to pay for any meat. [A Lynx-hostile site] *I'm delighted to say that the Wilkes-Barre/Traxler line has its own web pages at [Echecs](#) . *The Giuoco Piano and Evans' Gambit are ideal for juniors, beginners and other players. [Lytham Ex Chess Club](#) have some information for club-players on the Scotch Gambit. * I incline more to Lombardy's view that "at the amateur level, anything is playable" than the master view [[\(1\)](#) , [\(2\)](#)] that all such openings suck. Well perhaps they do, at [master level](#) . (4) See also [Introduction to the Sicilian](#), [Steve Spurgeon's page](#) at Bath, and the (Sicilian) [Dragon's Lair](#). (5) These may now be compared with the [variation index](#) of [BDG World magazine](#). Ryan's initiative was an attempt to get some newsgroup discussion going about opening choices, but not many folk contributed constructively and the thread died. There are some dedicated pages on the BDG from [Jyrki Heikkinen](#) (alongside superb stuff on the [Diemer-Duhm Gambit](#), a related Anti-French line: this is a model of how to present chess openings on the Web), [Tom Purser](#) (editor of [Blackmar-Diemer Gambit World](#) magazine) and [David Flude](#). There is even a [BDG newsgroup](#) in existence, but there is little or no relevant traffic on it. Tom recently organised a [BDG theme e-mail tournament](#), and you can read about [my adventures](#) if you're interested.

Tactical

100 positions from the canon. I note with both pleasure and humility that the standards in this section have been substantially exceeded by [WT Harvey](#) [John Coffey](#) and [David Hayes](#)

Exeter Chess Club Coaching Page

A page for people interested in teaching
and learning about chess
[whatever [gimmicky proprietary browser](#)
they use]

WELCOME to the Exeter Chess Club Coaching Page.

We have had **Lots of Visitors** to the Exeter Chess Home Page since 28th Nov 1995.

[This is one of Anand's favourite links ; -)]

- Below you will find a collection of [materials](#) collected for use in [Exeter Chess Club's](#) coaching sessions, and other documents and [links](#) of interest.
- If it all seems a bit much to cope with at once I have composed a [course of study](#) for players at [different levels](#) {A} {B} {C} {D} ([guide to levels/ratings](#)).
- **I offer this all free in the hope that people will [e-mail](#) their own favourite instructive games and examples..**
- To use this site you need to be able to read [chess notation](#) and sometimes to understand [chess symbols](#). The **three-character codes** (like [C40]) are ECO openings reference codes [[ECO codes](#)].
- If you find the diagrams slow to load you might try clearing your memory cache

Exeter Chess Club Coaching PAGE DESIGN

A page for people interested in teaching and learning about chess
[whatever [gimmicky proprietary browser](#) they use]

Unenhanced for Proprietary Browsers: i.e. no frames, huge graphics, jiggling GIFs, "portable" applets, FONT adjustments, clickable maps, garish backgrounds, or any other unnecessary bandwidth-wasting devices which make using a proprietary graphical browser more slow and more unpleasant than using a text-only browser. These all seem to me:

1. to celebrate form over content
2. to be opposed to the original idea of HTML/WWW by excluding users without particular software or hardware, and in any event
3. make browsing a pain: nothing more irritating than zipping into a new site to meet:

"You will need a gimmick-enabled browser, such as Micro\$oft Internet Exploiter 7.4 or Nerd\$cape Complicator 3.2 to use this site [and even then you'll need to download some painfully slow add-on software from some other site (if it's up).]"

All those expensive bitmaps and graphic buttons are barely readable on my 1280x1024 screen when I turn image loading on.

If you are a Web author please bear in mind speeding surfers with image loading turned OFF, LYNX users, blind users of screenreaders, slow machines and connections in schools and in the developing world, etc., etc.. **Please use ALT= elements in image tags**, and provide information in text as well as graphics.
screen

[I know [some people](#) love [progress](#) more than I do; *chacun à son gout*]

Yours sincerely,

Ned Ludd

<FLAME = OFF>

How form can affect your appreciation of content

From: Keith Gardner

Date: Fri, 12 Sep 1997 03:41:00 -0400

Subject: HTML/WWW

You seem to be greatly opposed to browsers such as Netscape and MS IE. I would have to agree I'm still waiting for them to fix a few details with Java and HTML issues, which will probably not come about until 5.0 (hopefully without taking over the operating system).

I would have to say that your website was unattractive, un navigatable, and unreadable with the way it was organized. The only place you used a table, you ruined it with the

tacky borders.

The **blink** tag, the most hated, was also used by you. LYNX is for 9600 bps modems and VT100 terminals. Do people actually use these for surfing the web still? Minimum requirements for the web is usually HTML 3.2 for the present day. At one time about 2 years ago I was advent in designing web sites that would be enhanced for all the browsers including AOL HTML. Nowadays, I am trying to figure out how to change the border setting for text fields in the X11R6 stuff that Netscape scraped into their Java Virtual Machine so that we can expand web-based client-server applications to support those slow, unreliable Sun Sparc20s.

Anyway, don't look for a job in desktop publishing. You might could write man pages for UNIX, if you actually have the free time to learn that cryptic markup language that I forgot the archaic cryptic thing they called it (nroff or something).

Anyway, looks like a lot of great content, too bad it didn't have form.

Keith Gardner * cabernet@mindspring.com * http://www.gt.ed.net/keith

[Dr. Dave](#)

Exeter Chess Club Coaching HANDOUTS

Examples of handouts

The point of collecting all those Canonical games was to put them in photocopied handouts to go with presentations to children and adults. There are many more games in the [canon](#) than are included in the handouts below, particularly on [attacking techniques](#) and [analysis and errors](#).

N.B.

The example games used in the openings handouts are kept in a [separate database](#).

[Do you know how to [edit/print out the handouts](#)?]

[If you would like to make your own chess booklets, see the [third part](#) of the [techie bit](#).]

I have composed a [course of study](#) for players at [different levels](#).

Here are some HTML versions of the finished handouts:

- [General](#) Browsers and beginners start here
- [Tactics](#) Get your eye in...
- [Strategy](#) Pieces and pawns in harmony
- [Opening](#) A series of short and long booklets
- [Endings](#) These rules apply in all endings, apart from the exceptions.

[Coaching materials for juniors are listed separately.](#)

[Dr. Dave](#)

Back to [Chess Coaching Page](#)

This document (handouts.html) was last modified on 13 Aug 2005 by

[Dr. Dave](#)

Dr.Dave's Canon of educational chess games

[HOME](#) | [EXETER CC](#) | [COACHING](#) | [BOOKS](#) | [LINKS](#) | [QUOTES](#) | [E-MAIL](#)

Introduction

The games and positions below have been compiled through a weekly discussion group in [Exeter Chess Club](#) as being useful examples, mostly trawled from books and magazines. They have been aimed at club players in the BCF 100-150 grade range (ELO up to 1800); the simplest should be accessible to all, the deepest I am only beginning to understand myself (= ELO about 1800! [USCF 1900]).

Download

If you want to download the complete canon of games in database format, you can have it

- [as pure PGN](#), or
- the main [file](#) and [index](#) for users of ChessBase 1.11 or Fritz versions 1-4, or
- [ChessBase 6.0 Zip file](#) (.cbh and all the others) for CB 6/7 or Fritz 5.
- Games and analysis used in the opening booklets are kept separately; again you can have them as [PGN](#), two [ChessBase 1.11 files](#), or a [ZIP file for CB 6.0](#).

ChessBase files can be used by many other commercial and PD database programmes, and either the CB or the PGN files can be converted into other database formats using readily available PD utilities.

You can download demonstration versions of ChessBase 1.11 and 6.01 from the [ChessBase Site](#).

You can also get the *whole* of the chess on this site (the Canon and other games with explanatory notes) as a [gzipped tar file](#) [9Mb file, use TAR and GZIP to unpack].

It is, as you might expect, rather derivative, but hopefully there are some examples you haven't seen before. This index has separate sections on: [tactical patterns](#) and [opening traps](#) {D}, [guidelines](#) for opening play and [example openings](#) {C} {D}, [model attacking games](#) {D} and [attacking techniques](#) {C} {D}, [defensive](#) play {B} {C}, [positional themes](#) {B} {C} and [planning](#) {B}, the [endgame](#) {all}, the [psychology](#) {all} of chess, and personal [style](#) {all}.

All of the examples contained here **should** contain at least one diagram, and at least one comment. Let me know if you catch me out. The games are available in a database - see the main [Coaching Page](#).

Comments

and contributions You can **send me comments and games** (Portable Game Notation [PGN] format preferred, [example](#) available) at D.Regis@exeter.ac.uk.

In particular I'd like to know about: * hits and misses for topics and examples

* names for any of the players marked NN or Anon.

* club players' own examples of these topics (too many are mine!)

* queries on particular games: I have used most of these games with groups, and I'm always being asked " *why can't Black play...* ", and I often don't have a good answer. I'd like to add notes where I can to cater for these suggestions.

"Far from all the obvious moves that go without saying are correct"

-- BRONSTEIN

P.S. If you find odd dates (e.g. 2004) or grades (club players with grades over 2500) this is because Fritz has decided that there are no grades and no dates below 1700 or so. Harass the company... (Can you convert [BCF to ELO](#)?)

[Tactics](#) | [Openings](#) | [Attack](#) | [Strategy](#) | [Endgames](#) | [Psych](#) | [Praxis](#)

Tactics

"Chess is 99% tactics"

-- RICHARD TEICHMANN

Tactical patterns

Best single reference: Chernev & Reinfeld **Winning Chess**

"At the heart of every combination there shines an idea, and though combinations are without number, the number of ideas is limited"

Defence

"Winning isn't everything... but losing is nothing" [Edmar MEDNIS, on the importance of fighting for a draw]

"The basic principle of defence consists in making the opponent's task as difficult as possible, creating ever new obstacles in his path.

" [...] If you can succeed in abruptly changing the situation on the board (even by choosing a continuation which is objectively not the strongest, associated with a degree of risk), your opponent, having already envisaged a particular pattern of play, will frequently not manage to reorganise his thoughts and will begin to make mistakes."

Style of the world champions

"It was night. I went home and put my old house clothes on and set the chessmen out and mixed a drink and played over another Capablanca. It went fifty-nine moves. Beautiful, cold, remorseless chess, almost creepy in its silent implacability..."

-- RAYMOND CHANDLER, **The High Window**

"Alekhine is a player I've never really understood; yet, strangely, if you've seen one Alekhine game you've seen them all. He always wanted a superior centre; he manoeuvred his pieces towards the King's-side, and around the twenty-fifth move began to mate his opponent.

"(...) ...it worked for him, but it could scarcely work for anyone else. He played gigantic

conceptions, full of outrageous and unprecedented ideas. It's hard to find a mistakes in his game, but in a sense his whole method of play was a mistake."

-- Fischer.

"How does Tal win? It is very simple: he places his pieces in the centre and he sacrifices them somewhere."

-- BRONSTEIN

Exeter Chess Club Homepage

[HOME](#) | [COACHING](#) | [CANON](#) | [BOOKS](#) | [LINKS](#) | [QUOTES](#) | [E-MAIL](#)

We are a large, successful and friendly club. We have a junior wing: [Exeter Junior Chess Club](#). We are affiliated to [Devon County Chess Association](#).

Exeter Chess Club meets Tuesdays 7:00pm at Clifton Road Games (No.16)

Juniors meet 5:30-6:30pm, Fridays Sept-May

Tel.Simon Waters (President) (01395) 233 280 Tel.Sean Pope (Secretary) 436 420
Tel.Dave Regis (Juniors) 431 785

www.exeterchessclub.org.uk secretary@exeterchessclub.org.uk
juniors@exeterchessclub.org.uk

Exeter Chess Club

was established in 1895 and so we celebrated our centenary in 1995.

As part of our centenary activities we held a [Simultaneous Display](#) by IM Gary Lane, which was [repeated in 1996](#).

International Internet Challenge

We have held Internet matches:

- a single-board [consultation match](#) with Hafnarfjardar (Hafnarfjörður), an Icelandic chess club
- a four-board junior match with the University of West Alabama
- a seven-board match with [Warwick](#)

Coaching

We run a weekly coaching/discussion group, which include what we think are professional-looking handouts. There is an index of some of the ideas and materials to be found [here](#), namechecked

	<p><u>University</u></p> <ul style="list-style-type: none">o a double-round eight-board match with the West Wales Internet Chess Associationo We would be interested in hearing from clubs elsewhere to play live team chess via one of the chess servers	<p>by "the Doc" (John Nunn) in the BCF Yearbook (1997).</p>
<p>We have just published <u>100-odd years of Exeter Chess Club</u>, which we are proud of.</p>	<p>Games of the Year: brillancies and others The 1994/95 Alexandra Buchanan Brilliancy Prize was won by <u>Rex Willis</u> ahead of two cheapos by <u>Dave Regis</u>. Reference to other sites:

Opening

* The London Chess Centre has published a whole bunch of introductory stuff on [Openings](#), but you have to pay for any meat. [A Lynx-hostile site]

* I'm delighted to say that the Wilkes-Barre/Traxler line has its own web pages at [Echecs](#)

* The Giuoco Piano and Evans' Gambit are ideal for juniors, beginners and other players. [Lytham Ex Chess Club](#) have some information for club-players on the Scotch Gambit.

* I incline more to Lombardy's view that "at the amateur level, anything is playable" than the master view [[\(1\)](#)]

, [\(2\)](#)

] that all such openings suck. Well perhaps they do, at [master level](#)

(4) See also [Introduction to the Sicilian](#), [Steve Spurgeon's page](#) at Bath, and the (Sicilian) [Dragon's Lair](#).

(5) These may now be compared with the [variation index](#) of [BDG World magazine](#). Ryan's initiative was an attempt to get some newsgroup discussion going about opening choices, but not many folk contributed constructively and the thread died. There are some dedicated pages on the BDG from [Jyrki Heikkinen](#) (alongside superb stuff on the [Diemer-Duhm Gambit](#), a related Anti-French line: this is a model of how to present chess openings on the Web), [Tom Purser](#) (editor of [Blackmar-Diemer Gambit World](#) magazine) and [David Flude](#).

There is even a [BDG newsgroup](#) in existence, but there is little or no relevant traffic on it. Tom recently organised a [BDG theme e-mail tournament](#), and you can read about [my adventures](#) if you're interested.

Tactical

100 positions from the canon. I note with both pleasure and humility that the standards in this section have been substantially exceeded by

QR8	QN8	QB8	Q8	K8	KB8	KN8	KR8
QR1	QN1	QB1	Q1	K1	KB1	KN1	KR1

Let's see that again in pre-formatted text:

8 a8 b8 c8 d8 e8 f8 g8 h8
QR8 QN8 QB8 Q8 K8 KB8 KN8 KR8
QR1 QN1 QB1 Q1 K1 KB1 KN1 KR1

7 a7 b7 c7 d7 e7 f7 g7 h7
QR7 QN7 QB7 Q7 K7 KB7 KN7 KR7
QR2 QN2 QB2 Q2 K2 KB2 KN2 KR2

6 a6 b6 c6 d6 e6 f6 g6 h6
QR6 QN6 QB6 Q6 K6 KB6 KN6 KR6
QR3 QN3 QB3 Q3 K3 KB3 KN3 KR3

5 a5 b5 c5 d5 e5 f5 g5 h5
QR5 QN5 QB5 Q5 K5 KB5 KN5 KR5
QR4 QN4 QB4 Q4 K4 KB4 KN4 KR4

4 a4 b4 c4 d4 e4 f4 g4 h4
QR4 QN4 QB4 Q4 K4 KB4 KN4 KR4
QR5 QN5 QB5 Q5 K5 KB5 KN5 KR5

3 a3 b3 c3 d3 e3 f3 g3 h3
QR3 QN3 QB3 Q3 K3 KB3 KN3 KR3
QR6 QN6 QB6 Q6 K6 KB6 KN6 KR6

2 a2 b2 c2 d2 e2 f2 g2 h2
QR2 QN2 QB2 Q2 K2 KB2 KN2 KR2
QR7 QN7 QB7 Q7 K7 KB7 KN7 KR7

1 a1 b1 c1 d1 e1 f1 g1 h1
QR1 QN1 QB1 Q1 K1 KB1 KN1 KR1
QR8 QN8 QB8 Q8 K8 KB8 KN8 KR8

These should all represent the same short game:

Short Algebraic

1. e4 e5 2. Nf3 Nf6 3. Nxe5 Nxe4 4. Qe2 Nf6?? 5. Nc6+! 1-0

Long Algebraic

1. e2-e4 e7-e5 2. Ng1-f3 Ng8-f6 3. Nf3xe5 Nf6xe4 4. Qd1-e2 Ng8-f6?? 5. Ne5-c6+! 1-0

Descriptive

1. P-K4 P-K4 2. N-KB3 N-KB3 3. NxP NxP 4. Q-K2 N-KB3?? 5. N-B6ch! 1-0

The +/ch means "check"; the 1-0 means "resigns".

You may find variations on these, for example, Kt for Knight, : for a capture, and so on. I use standard short algebraic.

[\[Further explanation of Notation\]](#)

Symbols: evaluation and comment codes

Evaluations are used very often, the comments usually only in 'languageless' publications. Here are the most common:

Evaluations of moves:

Nf3!! Excellent move

Nf3! Good move

Nf3!? Interesting or tricky move

Nf3? Bad move

Nf3?! Dubious move but not losing

Nf3?? Terrible move

Evaluations of positions:

+ - White has a winning advantage

+/- White has an advantage

+ = White has a slight advantage

= Level position

= + Black has a slight advantage

-/+ Black has an advantage

- + Black has a winning advantage

& Unclear

&= With compensation for material

Tutorial on Chess Notation

The chess notation format most people think of when they think of chess is called descriptive notation, with moves like P-K4, N-KB3, etc. There are many systems of chess notation, three of which are common today. These are descriptive, coordinate, and algebraic. Algebraic is the "official" notation used in tournaments and in all modern books, and it is kind of a cross between descriptive and coordinate.

The main thing to remember when looking at a chess diagram, regardless of the notation system used, is that the board is always "right-side up" for White, meaning White is always shown as playing from the "bottom" of the board. The board is always "up-side-down" for Black. Also, when placing a chess board down to play, the square in the lower right hand corner should always be white (the lighter of the two colors).

The rows on the board (running left to right) are called ranks. The columns (running the length of the board between the two players) are called files. Series of squares running at a 45 degree angle (assuming a square board), composed of squares of all the same color, are called diagonals. The longest diagonals run from the lower-left-hand corner to the upper-right-hand corner, and the lower-right-hand corner to the upper-left-hand corner.

In chess notation, each square has a name. In descriptive notation the names of the squares depend upon which side of the board you are playing from. In either algebraic or coordinate notation, the names of the squares are absolute, no matter which side you are sitting on. Let me illustrate:

Descriptive Notation

Black

----- The board is divided into
| QR8 | QN8 | QB8 | Q8 | K8 | KB8 | KN8 | KR8 | two halves, the queenside
| qr1 | qn1 | qb1 | q1 | k1 | kb1 | kn1 | kr1 | and the kingside.

| QR7 | QN7 | QB7 | Q7 | K7 | KB7 | KN7 | KR7 | Names of squares from:
| qr2 | qn2 | qb2 | q2 | k2 | kb2 | kn2 | kr2 |

----- White's point of view
| QR6 | QN6 | QB6 | Q6 | K6 | KB6 | KN6 | KR6 | are in upper case
| qr3 | qn3 | qb3 | q3 | k3 | kb3 | kn3 | kr3 |

----- Black's point of view
| QR5 | QN5 | QB5 | Q5 | K5 | KB5 | KN5 | KR5 | are in lower case
| qr4 | qn4 | qb4 | q4 | k4 | kb4 | kn4 | kr4 |

----- Which point of view is used
| QR4 | QN4 | QB4 | Q4 | K4 | KB4 | KN4 | KR4 | depends on whose turn it is
| qr5 | qn5 | qb5 | q5 | k5 | kb5 | kn5 | kr5 |

----- The names of the squares
| QR3 | QN3 | QB3 | Q3 | K3 | KB3 | KN3 | KR3 | are based on the name of
| qr6 | qn6 | qb6 | q6 | k6 | kb6 | kn6 | kr6 | the piece that sits in
----- the home row at the start,
| QR2 | QN2 | QB2 | Q2 | K2 | KB2 | KN2 | KR2 | & differentiated from each
| qr7 | qn7 | qb7 | q7 | k7 | kb7 | kn7 | kr7 | other by whether they
----- belong to the kingside
| QR1 | QN1 | QB1 | Q1 | K1 | KB1 | KN1 | KR1 | or queenside. The squares
| qr8 | qn8 | qb8 | q8 | k8 | kb8 | kn8 | kr8 | are always numbered away
----- from the player (1 being
closest and 8 far away).

White

While this system makes notating the game equally easy for White and Black, it can get confusing with each square essentially having two names. The pieces are designated as:

K = King Q = Queen R = Rook B = Bishop N = Knight P = Pawn

These abbreviations also serve as the key to the diagram above. Note that the Knight is designated with an N, since K is already taken by the king. Old books will sometimes use Kt instead for the Knight. A move is written by first naming the piece that is moving, indicating whether it is a regular move (indicated by a dash) or a capture (indicated by a lower case "x"), and finally indicating the arrival square or the piece being captured. All letters for the pieces and squares are written in upper case (I only used lower case for Black in the diagram above to make it easier to read). So, for example, P-K4 means "take a pawn and move it to K4". NxQ means "Knight takes Queen".

Also, moves are always stated in the simplest manner that still describes only one unique and legal move on the board. For example, if only one pawn can move to B4, then you do not designate whether it

is KB4 or QB4, as there is only one choice, and would write P-B4. If there is more than one such possibility, then you would clarify it with either P-KB4 or P-QB4. Sometimes two pieces can go to the same square, such as two Rooks on the first rank being able to move to Q1. R-Q1 would not be adequate in this case. You would designate which rook moved by noting which side of the board it originally came from, such as QR-Q1 or KR-Q1. If it can't be determined which side of the board the piece originally came from (usually late in the game), then you assume the piece farthest on the kingside of the board (this never changes even when the King moves) came from that side, and the other came from the queenside. If they are both on the same file, then you can designate the rank the piece came from with a slash. Suppose two rooks can go to Q4, one being on Q8 and the other on Q1, you would say R/1-Q4 or R/8-Q4, depending on which rook was moved. The same rules apply to captures, whether you need to clarify which piece is doing the capturing, or which piece is being captured.

Check is designated by appending "ch" after the move, such as Q-N8 ch. Checkmate is indicated by appending the word "mate", such as N-B7 mate. Appending "ch" or "mate" is enough to make a move unique. Thus, if a Queen can take either of two Bishops, but only one choice gives check, it is enough to say QxB ch. The other choice, QxB, would be unique because of the absence of the "ch". The same is true of "mate". En passant is indicated as PxP e.p. Castling kingside (also called castling short) is indicated O-O, and castling queenside (also called castling long) is O-O-O. Promotion of a pawn to another piece is indicated in parentheses, i.e., P-Q8(Q), or P-B8(N).

While this system was in use for most of this century, it was eventually replaced by algebraic because of the confusion over the names of squares and the extent to which ambiguities in notation would arise. It is still important to know, however, as many older books still use this notation, and even some more recent books, such as the manual for Battle Chess. Also, many older players prefer this and will use it, so it has by no means died out, but it is definitely out of favor, and no longer the official notation of chess.

The next two systems I will describe, algebraic and coordinate, are very similar, and even share the same names for the squares. The ranks are still numbered 1-8, as in descriptive notation, but instead the files are designated with the letters a-h. There is only one point of view: White's. This has the advantage that each square has only one name, and can be easily referred to away from a board. The

disadvantage is that Black has to look at the board with the ranks and files numbered and lettered backward, but this is easy to get used to for most people, especially since most newer boards have the numbers and letters along the edges for reference. The names of the squares for these two systems are shown in the following diagram, which you can compare to the one for descriptive, above.

Algebraic & Coordinate Notation

Black

White

Coordinate notation simply uses the coordinates of the square the piece comes from, a dash, and the coordinates of the square the piece

moved to. Example moves are E2-E4, E7-E5, etc. An "=" is used to indicate pawn promotion, i.e., E7-E8=Q. Everything is entered in caps. Castling is indicated by showing where the king moved (it is the only time it will move two spaces to either side). No distinction is made between a move and a capture. This system is used almost solely with computers, as it is easiest to program, because there is no possibility for ambiguous moves. Humans don't favor it much, however, as looking at the move on a scoresheet tells you nothing about what is going on in the game, and it is prone to being misread when replaying a game using its score.

Algebraic notation uses the same names for squares as coordinate notation, but uses the piece names from descriptive notation, with one exception - a Pawn is given no designation. Instead, a Pawn is indicated by the absence of a piece letter. Piece letters belong in caps, square letters in lower case. This is important when differentiating a Bishop from a square on the b-file, for example. Unlike descriptive, no dash is used to indicate movement of a piece. So, moving a Knight from g1 to f3 would be written Nf3. A pawn moving to e4 would simply be "e4". An "x" is used to indicate a capture, just as in descriptive notation. To lessen the potential for ambiguity, however, the square the captured piece rests on is used instead of the name of the piece. So, a Knight capturing a Queen on d8 would be written Nxd8. A pawn capture is indicated by noting the letter of the file the pawn came from, and its arrival square upon completing the capture. For example, exd5 would indicate the pawn came from the e-file, and captured the piece on d5. Similarly, gxh7 would indicate a pawn on the g-file took the piece on h7.

Ambiguities are resolved by indicating the rank or file the piece came from (whichever is unique - if both are unique, use the letter of the file). For example, Nbd7 would mean the Knight on the b-file moves to d7, and N4xd6 would mean the Knight on the 4th rank captures the piece on d6. Note this is much simpler than resolving ambiguities in descriptive notation.

Check is indicated by a "+" after the move, such as Qg8+. Checkmate is indicated with two plusses, "++", such as Nf7++. Castling is indicated the same way as in descriptive notation, which is O-O for castling kingside (short), and O-O-O for castling queenside (long). En passant is indicated the same way as a normal Pawn capture. However, since the square the captured pawn stood on is not the same as the arrival square of the pawn making the capture (as it is in all

other captures), one method had to be chosen over the other. Since algebraic notation and coordinate notation are closely related, it was decided to keep it the same, and use the `_arrival square_` of the pawn, and not the square the captured pawn stood on. To further clarify that it is an en passant capture, "ep" is appended after the move. So, a pawn on e5 capturing the pawn on f5 that has just moved two squares forward would be written `exf6ep`. Pawn promotion uses the "=" sign like coordinate notation. A pawn on e7 being promoted to a Queen would be written `e8=Q`.

Algebraic notation is now the "official" language of chess, both in the US and internationally. The only difference in other countries is that they have different names for the pieces, so the letters used to designate the pieces vary.

One variation on algebraic sometimes encountered is long algebraic. This is the same as algebraic in every way, except that square the piece originated from is also indicated, and a dash is used to separate the originating square and the arrival square for a regular move. An "x" is still used to indicate a capture, lower case is still used for the names of the squares, and pawns are still designated by the absence of a letter. Thus moves look like `e2-e4`, `Ng1-f3`, `Bc8-f5`, `Nb8xc6`, `e5xd4`, `O-O`, `Ng5xf7+`, `d4xe3ep`, `g2-g1=Q`, etc.

Notice that while this is a little longer to write out, it has the advantage of avoiding ambiguities altogether, since both the originating and arrival squares are given. It also has an advantage over coordinate notation, which is that since the piece names are given, you can tell better by looking at the score what is happening on the board, because it provides more information. This extra information also helps to compensate for errors made in notation. Since errors in notation are especially unwanted in postal chess due to the long response times, where a single error can take a week to correct by the time the original player is informed of the error and a reply is sent back to correct the error, this notation is well-suited for postal chess.

Below is a quick sample game fragment showing all four notations side-by-side. All four notation lists are identical in content, and should all arrive at the same position, shown below.

Algebraic	Coordinate	Descriptive	Long Algebraic
1. e4 e5	1. E2-E4 E7-E5	1. P-K4 P-K4	1. e2-e4 e7-e5

2. Nf3	Nc6	2. G1-F3	B8-C6	2. N-KB3	N-QB3	2. Ng1-f3	Nb8-c6
3. Bb5	a6	3. F1-B5	A7-A6	3. B-N5	P-QR3	3. Bf1-b5	a7-a6
4. Bxc6	dx6	4. B5-C6	D7-C6	4. BxN	QPxB	4. Bb5xc6	d7xc6
5. d3	Bb4+	5. D2-D3	F8-B4	5. P-Q3	B-N5ch	5. d2-d3	Bf8-b4+
6. Nc3	Nf6	6. B1-C3	G8-F6	6. N-B3	N-B3	6. Nb1-c3	Ng8-f6
7. O-O	Bxc3	7. E1-G1	B4-C3	7. O-O	BxN	7. O-O	Bb4xc3

The position all three notations should reach is this:

```

BR -- BB BQ BK -- -- BR
-- BP BP -- -- BP BP BP
BP -- BP -- -- BN -- --
-- -- -- -- BP -- -- --
-- -- -- -- WP -- -- --
-- -- BB WP -- WN -- --
WP WP WP -- -- WP WP WP
WR -- WB WQ -- WR WK --

```

If you can get that far in each notation, then you're probably doing ok.

Also note that should one want to refer to a move in the game score above, for example, White's 6th move, it would be written 6. Nc3 in a sentence. Notice there is only one period after the move number - this indicates it is a move by White. To refer to Black's 6th move by itself, one would write 6...Nf6, the three dots (an ellipsis) indicating that it is a move made by Black. This convention is used regardless of which notation system is used, so one could just as easily write 5. P-Q3 or 5...B-N5ch, for example.

When reading game scores or annotated games (games with comments and analysis to go with the score), one will often run into the use of "?" and "!", such as 20. Rd8? or 30...Bxh3! This is to indicate the relative strength or weakness of a given move, in the mind of the writer. A "?" indicates a weak move or mistake. A "!" indicates an excellent move, usually one that is unexpected and requires deep analysis to see why it works. Some writers will use the "?" and "!" additively, thus 20. Rd8?? would be a horrible move, and 30...Bxh3!! would be a truly inspired move. Since this can quickly get out of hand, restraint is required by the writer, and one usually never sees more than two punctuation marks.

Another way the "?" and "!" can be used is to combine them, such as 20. Rd8?! or 30...Bxh3!?. The meaning of this depends on which

punctuation mark comes first. "?!" is often used to mean a questionable move, but not an outright mistake. This can also be represented as a question mark in parentheses, for example, 20. Rd8 (?), but is seen much less often nowadays than "?!". The combination "!?" is often used to indicate surprise at a particular move, and often also to mean that move is speculative and risky, but probably good (which is why the "!" goes first).

None of this punctuation (?, !, ?!, and !?) is required, and is used primarily as a diagnostic or learning tool, and to allow a little room for expression in game scores or analysis. It is included here so you can make sense of it when you see it in other people's game scores or analyses. Do not include these marks when simply taking down the score of a game or sending your reply to someone in a game. These are reserved for analysis only, which occurs after the game is over.

Standard: Portable Game Notation Specification and Implementation Guide

Revised: 1994.03.12

Authors: Interested readers of the Internet newsgroup rec.games.chess

Coordinator: Steven J. Edwards (send comments to sje@world.std.com)

0: Preface

From the Tower of Babel story:

"If now, while they are one people, all speaking the same language, they have started to do this, nothing will later stop them from doing whatever they propose to do."

Genesis XI, v.6, New American Bible

1: Introduction

PGN is "Portable Game Notation", a standard designed for the representation of chess game data using ASCII text files. PGN is structured for easy reading and writing by human users and for easy parsing and generation by computer programs. The intent of the definition and propagation of PGN is to facilitate the sharing of public domain chess game data among chessplayers (both organic and otherwise), publishers, and computer chess researchers throughout the world.

PGN is not intended to be a general purpose standard that is suitable for every possible use; no such standard could fill all conceivable requirements. Instead, PGN is proposed as a universal portable representation for data interchange. The idea is to allow the construction of a family of chess applications that can quickly and easily process chess game data using PGN for import and export among themselves.

2: Chess data representation

Computer usage among chessplayers has become quite common in recent years and a variety of different programs, both commercial and public domain, are used to

generate, access, and propagate chess game data. Some of these programs are rather impressive; most are now well behaved in that they correctly follow the Laws of Chess and handle users' data with reasonable care. Unfortunately, many programs have had serious problems with several aspects of the external representation of chess game data. Sometimes these problems become more visible when a user attempts to move significant quantities of data from one program to another; if there has been no real effort to ensure portability of data, then the chances for a successful transfer are small at best.

2.1: Data interchange incompatibility

The reasons for format incompatibility are easy to understand. In fact, most of them are correlated with the same problems that have already been seen with commercial software offerings for other domains such as word processing, spreadsheets, fonts, and graphics. Sometimes a manufacturer deliberately designs a data format using encryption or some other secret, proprietary technique to "lock in" a customer. Sometimes a designer may produce a format that can be deciphered without too much difficulty, but at the same time publicly discourage third party software by claiming trade secret protection. Another software producer may develop a non-proprietary system, but it may work well only within the scope of a single program or application because it is not easily expandable. Finally, some other software may work very well for many purposes, but it uses symbols and language not easily understood by people or computers available to those outside the country of its development.

2.2: Specification goals

A specification for a portable game notation must observe the lessons of history and be able to handle probable needs of the future. The design criteria for PGN were selected to meet these needs. These criteria include:

- 1) The details of the system must be publicly available and free of unnecessary complexity. Ideally, if the documentation is not available for some reason, typical chess software developers and users should be able to understand most of the data without the need for third party assistance.
- 2) The details of the system must be non-proprietary so that users and software developers are unrestricted by concerns about infringing on intellectual property rights. The idea is to let chess programmers compete in a free market where customers may choose software based on their real needs and not based on artificial requirements created by a secret data format.

3) The system must work for a variety of programs. The format should be such that it can be used by chess database programs, chess publishing programs, chess server programs, and chessplaying programs without being unnecessarily specific to any particular application class.

4) The system must be easily expandable and scalable. The expansion ability must include handling data items that may not exist currently but could be expected to emerge in the future. (Examples: new opening classifications and new country names.) The system should be scalable in that it must not have any arbitrary restrictions concerning the quantity of stored data. Also, planned modes of expansion should either preserve earlier databases or at least allow for their automatic conversion.

5) The system must be international. Chess software users are found in many countries and the system should be free of difficulties caused by conventions local to a given region.

6) Finally, the system should handle the same kinds and amounts of data that are already handled by existing chess software and by print media.

2.3: A sample PGN game

Although its description may seem rather lengthy, PGN is actually fairly simple. A sample PGN game follows; it has most of the important features described in later sections of this document.

```
[Event "F/S Return Match"]  
[Site "Belgrade, Serbia JUG"]  
[Date "1992.11.04"]  
[Round "29"]

3: Formats: import and export

There are two formats in the PGN specification. These are the "import" format and the "export" format. These are the two different ways of formatting the same PGN data according to its source. The details of the two formats are described throughout the following sections of this document.

Other than formats, there is the additional topic of PGN presentation. While both PGN import and export formats are designed to be readable by humans, there is no recommendation that either of these be an ultimate mode of chess data presentation. Rather, software developers are urged to consider all of the various techniques at their disposal to enhance the display of chess data at the presentation level (i.e., highest level) of their programs. This means that the use of different fonts, character sizes, color, and other tools of computer aided interaction and publishing should be explored to provide a high quality presentation appropriate to the function of the particular program.

3.1: Import format allows for manually prepared data

The import format is rather flexible and is used to describe data that may have been prepared by hand, much like a source file for a high level programming language. A program that can read PGN data should be able to handle the somewhat lax import format.

3.2: Export format used for program generated output

The export format is rather strict and is used to describe data that is usually prepared under program control, something like a pretty printed source program reformatted by a compiler.

3.2.1: Byte equivalence

For a given PGN data file, export format representations generated by different PGN programs on the same computing system should be exactly equivalent, byte for byte.

3.2.2: Archival storage and the newline character

Export format should also be used for archival storage. Here, "archival" storage is defined as storage that may be accessed by a variety of computing systems. The only extra requirement for archival storage is that the newline character have a specific representation that is independent of its value for a particular computing system's text file usage. The archival representation of a newline is the ASCII control character LF (line feed, decimal value 10, hexadecimal value 0x0a).

Sadly, there are some accidents of history that survive to this day that have baroque representations for a newline: multicharacter sequences, end-of-line record markers, start-of-line byte counts, fixed length records, and so forth. It is well beyond the scope of the PGN project to reconcile all of these to the unified world of ANSI C and the those enjoying the bliss of a single '\n' convention. Some systems may just not be able to handle an archival PGN text file with native text editors. In these cases, an indulgence of sorts is granted to use the local newline convention in non-archival PGN files for those text editors.

3.2.3: Speed of processing

Several parts of the export format deal with exact descriptions of line and field justification that are absent from the import format details. The main reason for these restrictions on the export format are to allow the construction of simple data translation programs that can easily scan PGN data without having to have a full chess engine or other complex parsing routines. The idea is to encourage chess software authors to always allow for at least a limited PGN reading capability. Even when a full chess engine parsing capability is available, it is likely to be at least two orders of magnitude slower than a simple text scanner.

3.2.4: Reduced export format

A PGN game represented using export format is said to be in "reduced export format" if all of the following hold: 1) it has no commentary, 2) it has only the standard seven tag roster identification information ("STR", see below), 3) it has no recursive annotation variations ("RAV", see below), and 4) it has no numeric annotation glyphs ("NAG", see below). Reduced export format is used for bulk storage of unannotated games. It represents a minimum level of standard conformance for a PGN exporting application.

4: Lexicographical issues

PGN data is composed of characters; non-overlapping contiguous sequences of characters form lexical tokens.

4.1: Character codes

PGN data is represented using a subset of the eight bit ISO 8859/1 (Latin 1) character set. ("ISO" is an acronym for the International Standards Organization.) This set is also known as ECMA-94 and is similar to other ISO Latin character sets. ISO 8859/1 includes the standard seven bit ASCII character set for the 32 control character code values from zero to 31. The 95 printing character code values from 32 to 126 are also equivalent to seven bit ASCII usage. (Code value 127, the ASCII DEL control character, is a graphic character in ISO 8859/1; it is not used for PGN data representation.)

The 32 ISO 8859/1 code values from 128 to 159 are non-printing control characters. They are not used for PGN data representation. The 32 code values from 160 to 191 are mostly non-alphabetic printing characters and their use for PGN data is discouraged as their graphic representation varies considerably among other ISO Latin sets. Finally, the 64 code values from 192 to 255 are mostly alphabetic printing characters with various diacritical marks; their use is encouraged for those languages that require such characters. The graphic representations of this last set of 64 characters is fairly constant for the ISO Latin family.

Printing character codes outside of the seven bit ASCII range may only appear in string data and in commentary. They are not permitted for use in symbol construction.

Because some PGN users' environments may not support presentation of non-ASCII characters, PGN game authors should refrain from using such characters in critical commentary or string values in game data that may be referenced in such environments. PGN software authors should have their programs handle such environments by displaying a question mark ("?") for non-ASCII character codes. This is an important point because there are many computing systems that can display eight bit character data, but the display graphics may differ among machines and operating systems from different manufacturers.

Only four of the ASCII control characters are permitted in PGN import format; these are the horizontal and vertical tabs along with the linefeed and carriage

return codes.

The external representation of the newline character may differ among platforms; this is an acceptable variation as long as the details of the implementation are hidden from software implementors and users. When a choice is practical, the Unix "newline is linefeed" convention is preferred.

4.2: Tab characters

Tab characters, both horizontal and vertical, are not permitted in the export format. This is because the treatment of tab characters is highly dependent upon the particular software in use on the host computing system. Also, tab characters may not appear inside of string data.

4.3: Line lengths

PGN data are organized as simple text lines without any special bytes or markers for secondary record structure imposed by specific operating systems. Import format PGN text lines are limited to having a maximum of 255 characters per line including the newline character. Lines with 80 or more printing characters are strongly discouraged because of the difficulties experienced by common text editors with long lines.

In some cases, very long tag values will require 80 or more columns, but these are relatively rare. An example of this is the "FEN" tag pair; it may have a long tag value, but this particular tag pair is only used to represent a game that doesn't start from the usual initial position.

5: Commentary

Comment text may appear in PGN data. There are two kinds of comments. The first kind is the "rest of line" comment; this comment type starts with a semicolon character and continues to the end of the line. The second kind starts with a left brace character and continues to the next right brace character. Comments cannot appear inside any token.

Brace comments do not nest; a left brace character appearing in a brace comment loses its special meaning and is ignored. A semicolon appearing inside of a brace comment loses its special meaning and is ignored. Braces appearing inside of a semicolon comments lose their special meaning and are ignored.

*** Export format representation of comments needs definition work.

6: Escape mechanism

There is a special escape mechanism for PGN data. This mechanism is triggered by a percent sign character ("%") appearing in the first column of a line; the data on the rest of the line is ignored by publicly available PGN scanning software. This escape convention is intended for the private use of software developers and researchers to embed non-PGN commands and data in PGN streams.

A percent sign appearing in any other place other than the first position in a line does not trigger the escape mechanism.

7: Tokens

PGN character data is organized as tokens. A token is a contiguous sequence of characters that represents a basic semantic unit. Tokens may be separated from adjacent tokens by white space characters. (White space characters include space, newline, and tab characters.) Some tokens are self delimiting and do not require white space characters.

A string token is a sequence of zero or more printing characters delimited by a pair of quote characters (ASCII decimal value 34, hexadecimal value 0x22). An empty string is represented by two adjacent quotes. (Note: an apostrophe is not a quote.) A quote inside a string is represented by the backslash immediately followed by a quote. A backslash inside a string is represented by two adjacent backslashes. Strings are commonly used as tag pair values (see below). Non-printing characters like newline and tab are not permitted inside of strings. A string token is terminated by its closing quote. Currently, a string is limited to a maximum of 255 characters of data.

An integer token is a sequence of one or more decimal digit characters. It is a special case of the more general "symbol" token class described below. Integer tokens are used to help represent move number indications (see below). An integer token is terminated just prior to the first non-symbol character following the integer digit sequence.

A period character (".") is a token by itself. It is used for move number indications (see below). It is self terminating.

An asterisk character ("*") is a token by itself. It is used as one of the possible game termination markers (see below); it indicates an incomplete game or a game with an unknown or otherwise unavailable result. It is self terminating.

The left and right bracket characters ("[" and "]") are tokens. They are used to delimit tag pairs (see below). Both are self terminating.

The left and right parenthesis characters ("(" and ")") are tokens. They are used to delimit Recursive Annotation Variations (see below). Both are self terminating.

The left and right angle bracket characters ("<" and ">") are tokens. They are reserved for future expansion. Both are self terminating.

A Numeric Annotation Glyph ("NAG", see below) is a token; it is composed of a dollar sign character ("\$") immediately followed by one or more digit characters. It is terminated just prior to the first non-digit character following the digit sequence.

A symbol token starts with a letter or digit character and is immediately followed by a sequence of zero or more symbol continuation characters. These continuation characters are letter characters ("A-Za-z"), digit characters ("0-9"), the underscore ("_"), the plus sign ("+"), the octothorpe sign ("#"), the equal sign ("="), the colon (":"), and the hyphen ("-"). Symbols are used for a variety of purposes. All characters in a symbol are significant. A symbol token is terminated just prior to the first non-symbol character following the symbol character sequence. Currently, a symbol is limited to a maximum of 255 characters in length.

8: Parsing games

A PGN database file is a sequential collection of zero or more PGN games. An empty file is a valid, although somewhat uninformative, PGN database.

A PGN game is composed of two sections. The first is the tag pair section and the second is the movetext section. The tag pair section provides information that identifies the game by defining the values associated with a set of standard parameters. The movetext section gives the usually enumerated and possibly annotated moves of the game along with the concluding game termination marker. The chess moves themselves are represented using SAN (Standard Algebraic Notation), also described later in this document.

8.1: Tag pair section

The tag pair section is composed of a series of zero or more tag pairs.

A tag pair is composed of four consecutive tokens: a left bracket token, a symbol token, a string token, and a right bracket token. The symbol token is the tag name and the string token is the tag value associated with the tag name. (There is a standard set of tag names and semantics described below.) The same tag name should not appear more than once in a tag pair section.

A further restriction on tag names is that they are composed exclusively of letters, digits, and the underscore character. This is done to facilitate mapping of tag names into key and attribute names for use with general purpose database programs.

For PGN import format, there may be zero or more white space characters between any adjacent pair of tokens in a tag pair.

For PGN export format, there are no white space characters between the left bracket and the tag name, there are no white space characters between the tag value and the right bracket, and there is a single space character between the tag name and the tag value.

Tag names, like all symbols, are case sensitive. All tag names used for archival storage begin with an upper case letter.

PGN import format may have multiple tag pairs on the same line and may even have a tag pair spanning more than a single line. Export format requires each tag pair to appear left justified on a line by itself; a single empty line follows the last tag pair.

Some tag values may be composed of a sequence of items. For example, a consultation game may have more than one player for a given side. When this occurs, the single character ":" (colon) appears between adjacent items. Because of this use as an internal separator in strings, the colon should not otherwise appear in a string.

The tag pair format is designed for expansion; initially only strings are allowed as tag pair values. Tag value formats associated with the STR (Seven Tag Roster, see below) will not change; they will always be string values. However, there are long term plans to allow general list structures as tag

values for non-STR tag pairs. Use of these expanded tag values will likely be restricted to special research programs. In all events, the top level structure of a tag pair remains the same: left bracket, tag name, tag value, and right bracket.

8.1.1: Seven Tag Roster

There is a set of tags defined for mandatory use for archival storage of PGN data. This is the STR (Seven Tag Roster). The interpretation of these tags is fixed as is the order in which they appear. Although the definition and use of additional tag names and semantics is permitted and encouraged when needed, the STR is the common ground that all programs should follow for public data interchange.

For import format, the order of tag pairs is not important. For export format, the STR tag pairs appear before any other tag pairs. (The STR tag pairs must also appear in order; this order is described below). Also for export format, any additional tag pairs appear in ASCII order by tag name.

The seven tag names of the STR are (in order):

- 1) Event (the name of the tournament or match event)
- 2) Site (the location of the event)
- 3) Date (the starting date of the game)
- 4) Round (the playing round ordinal of the game)
- 5) White (the player of the white pieces)
- 6) Black (the player of the black pieces)
- 7) Result (the result of the game)

A set of supplemental tag names is given later in this document.

For PGN export format, a single blank line appears after the last of the tag pairs to conclude the tag pair section. This helps simple scanning programs to quickly determine the end of the tag pair section and the beginning of the movetext section.

8.1.1.1: The Event tag

The Event tag value should be reasonably descriptive. Abbreviations are to be avoided unless absolutely necessary. A consistent event naming should be used to help facilitate database scanning. If the name of the event is unknown, a single question mark should appear as the tag value.

Examples:

[Event "FIDE World Championship"]

[Event "Moscow City Championship"]

[Event "ACM North American Computer Championship"]

[Event "Casual Game"]

8.1.1.2: The Site tag

The Site tag value should include city and region names along with a standard name for the country. The use of the IOC (International Olympic Committee) three letter names is suggested for those countries where such codes are available. If the site of the event is unknown, a single question mark should appear as the tag value. A comma may be used to separate a city from a region. No comma is needed to separate a city or region from the IOC country code. A later section of this document gives a list of three letter nation codes along with a few additions for "locations" not covered by the IOC.

Examples:

[Site "New York City, NY USA"]

[Site "St. Petersburg RUS"]

[Site "Riga LAT"]

8.1.1.3: The Date tag

The Date tag value gives the starting date for the game. (Note: this is not necessarily the same as the starting date for the event.) The date is given

with respect to the local time of the site given in the Event tag. The Date tag value field always uses a standard ten character format: "YYYY.MM.DD". The first four characters are digits that give the year, the next character is a period, the next two characters are digits that give the month, the next character is a period, and the final two characters are digits that give the day of the month. If the any of the digit fields are not known, then question marks are used in place of the digits.

Examples:

[Date "1992.08.31"]

[Date "1993.??.??"]

[Date "2001.01.01"]

8.1.1.4: The Round tag

The Round tag value gives the playing round for the game. In a match competition, this value is the number of the game played. If the use of a round number is inappropriate, then the field should be a single hyphen character. If the round is unknown, a single question mark should appear as the tag value.

Some organizers employ unusual round designations and have multipart playing rounds and sometimes even have conditional rounds. In these cases, a multipart round identifier can be made from a sequence of integer round numbers separated by periods. The leftmost integer represents the most significant round and succeeding integers represent round numbers in descending hierarchical order.

Examples:

[Round "1"]

[Round "3.1"]

[Round "4.1.2"]

8.1.1.5: The White tag

The White tag value is the name of the player or players of the white pieces.

The names are given as they would appear in a telephone directory. The family or last name appears first. If a first name or first initial is available, it is separated from the family name by a comma and a space. Finally, one or more middle initials may appear. (Wherever a comma appears, the very next character should be a space. Wherever an initial appears, the very next character should be a period.) If the name is unknown, a single question mark should appear as the tag value.

The intent is to allow meaningful ASCII sorting of the tag value that is independent of regional name formation customs. If more than one person is playing the white pieces, the names are listed in alphabetical order and are separated by the colon character between adjacent entries. A player who is also a computer program should have appropriate version information listed after the name of the program.

The format used in the FIDE Rating Lists is appropriate for use for player name tags.

Examples:

[White "Tal, Mikhail N."]

[White "van der Wiel, Johan"]

[White "Acme Pawngrabber v.3.2"]

[White "Fine, R."]

8.1.1.6: The Black tag

The Black tag value is the name of the player or players of the black pieces. The names are given here as they are for the White tag value.

Examples:

[Black "Lasker, Emmanuel"]

[Black "Smyslov, Vasily V."]

[Black "Smith, John Q.:Woodpusher 2000"]

[Black "Morphy"]

8.1.1.7: The Result tag

The Result field value is the result of the game. It is always exactly the same as the game termination marker that concludes the associated movetext. It is always one of four possible values: "1-0" (White wins), "0-1" (Black wins), "1/2-1/2" (drawn game), and "*" (game still in progress, game abandoned, or result otherwise unknown). Note that the digit zero is used in both of the first two cases; not the letter "O".

All possible examples:

[Result "0-1"]

[Result "1-0"]

[Result "1/2-1/2"]

[Result "*"]

8.2: Movetext section

The movetext section is composed of chess moves, move number indications, optional annotations, and a single concluding game termination marker.

Because illegal moves are not real chess moves, they are not permitted in PGN movetext. They may appear in commentary, however. One would hope that illegal moves are relatively rare in games worthy of recording.

8.2.1: Movetext line justification

In PGN import format, tokens in the movetext do not require any specific line justification.

In PGN export format, tokens in the movetext are placed left justified on successive text lines each of which has less than 80 printing characters. As many tokens as possible are placed on a line with the remainder appearing on successive lines. A single space character appears between any two adjacent symbol tokens on the same line in the movetext. As with the tag pair section, a single empty line follows the last line of data to conclude the movetext

section.

Neither the first or the last character on an export format PGN line is a space. (This may change in the case of commentary; this area is currently under development.)

8.2.2: Movetext move number indications

A move number indication is composed of one or more adjacent digits (an integer token) followed by zero or more periods. The integer portion of the indication gives the move number of the immediately following white move (if present) and also the immediately following black move (if present).

8.2.2.1: Import format move number indications

PGN import format does not require move number indications. It does not prohibit superfluous move number indications anywhere in the movetext as long as the move numbers are correct.

PGN import format move number indications may have zero or more period characters following the digit sequence that gives the move number; one or more white space characters may appear between the digit sequence and the period(s).

8.2.2.2: Export format move number indications

There are two export format move number indication formats, one for use appearing immediately before a white move element and one for use appearing immediately before a black move element. A white move number indication is formed from the integer giving the fullmove number with a single period character appended. A black move number indication is formed from the integer giving the fullmove number with three period characters appended.

All white move elements have a preceding move number indication. A black move element has a preceding move number indication only in two cases: first, if there is intervening annotation or commentary between the black move and the previous white move; and second, if there is no previous white move in the special case where a game starts from a position where Black is the active player.

There are no other cases where move number indications appear in PGN export

format.

8.2.3: Movetext SAN (Standard Algebraic Notation)

SAN (Standard Algebraic Notation) is a representation standard for chess moves using the ASCII Latin alphabet.

Examples of SAN recorded games are found throughout most modern chess publications. SAN as presented in this document uses English language single character abbreviations for chess pieces, although this is easily changed in the source. English is chosen over other languages because it appears to be the most widely recognized.

An alternative to SAN is FAN (Figurine Algebraic Notation). FAN uses miniature piece icons instead of single letter piece abbreviations. The two notations are otherwise identical.

8.2.3.1: Square identification

SAN identifies each of the sixty four squares on the chessboard with a unique two character name. The first character of a square identifier is the file of the square; a file is a column of eight squares designated by a single lower case letter from "a" (leftmost or queenside) up to and including "h" (rightmost or kingside). The second character of a square identifier is the rank of the square; a rank is a row of eight squares designated by a single digit from "1" (bottom side [White's first rank]) up to and including "8" (top side [Black's first rank]). The initial squares of some pieces are: white queen rook at a1, white king at e1, black queen knight pawn at b7, and black king rook at h8.

8.2.3.2: Piece identification

SAN identifies each piece by a single upper case letter. The standard English values: pawn = "P", knight = "N", bishop = "B", rook = "R", queen = "Q", and king = "K".

The letter code for a pawn is not used for SAN moves in PGN export format movetext. However, some PGN import software disambiguation code may allow for the appearance of pawn letter codes. Also, pawn and other piece letter codes are needed for use in some tag pair and annotation constructs.

It is admittedly a bit chauvinistic to select English piece letters over those from other languages. There is a slight justification in that English is a de facto universal second language among most chessplayers and program users. It is probably the best that can be done for now. A later section of this document gives alternative piece letters, but these should be used only for local presentation software and not for archival storage or for dynamic interchange among programs.

8.2.3.3: Basic SAN move construction

A basic SAN move is given by listing the moving piece letter (omitted for pawns) followed by the destination square. Capture moves are denoted by the lower case letter "x" immediately prior to the destination square; pawn captures include the file letter of the originating square of the capturing pawn immediately prior to the "x" character.

SAN kingside castling is indicated by the sequence "O-O"; queenside castling is indicated by the sequence "O-O-O". Note that the upper case letter "O" is used, not the digit zero. The use of a zero character is not only incompatible with traditional text practices, but it can also confuse parsing algorithms which also have to understand about move numbers and game termination markers. Also note that the use of the letter "O" is consistent with the practice of having all chess move symbols start with a letter; also, it follows the convention that all non-pwn move symbols start with an upper case letter.

En passant captures do not have any special notation; they are formed as if the captured pawn were on the capturing pawn's destination square. Pawn promotions are denoted by the equal sign "=" immediately following the destination square with a promoted piece letter (indicating one of knight, bishop, rook, or queen) immediately following the equal sign. As above, the piece letter is in upper case.

8.2.3.4: Disambiguation

In the case of ambiguities (multiple pieces of the same type moving to the same square), the first appropriate disambiguating step of the three following steps is taken:

First, if the moving pieces can be distinguished by their originating files, the originating file letter of the moving piece is inserted immediately after the moving piece letter.

Second (when the first step fails), if the moving pieces can be distinguished by their originating ranks, the originating rank digit of the moving piece is inserted immediately after the moving piece letter.

Third (when both the first and the second steps fail), the two character square coordinate of the originating square of the moving piece is inserted immediately after the moving piece letter.

Note that the above disambiguation is needed only to distinguish among moves of the same piece type to the same square; it is not used to distinguish among attacks of the same piece type to the same square. An example of this would be a position with two white knights, one on square c3 and one on square g1 and a vacant square e2 with White to move. Both knights attack square e2, and if both could legally move there, then a file disambiguation is needed; the (nonchecking) knight moves would be "Nce2" and "Nge2". However, if the white king were at square e1 and a black bishop were at square b4 with a vacant square d2 (thus an absolute pin of the white knight at square c3), then only one white knight (the one at square g1) could move to square e2: "Ne2".

8.2.3.5: Check and checkmate indication characters

If the move is a checking move, the plus sign "+" is appended as a suffix to the basic SAN move notation; if the move is a checkmating move, the octothorpe sign "#" is appended instead.

Neither the appearance nor the absence of either a check or checkmating indicator is used for disambiguation purposes. This means that if two (or more) pieces of the same type can move to the same square the differences in checking status of the moves does not allieviate the need for the standard rank and file disabiguation described above. (Note that a difference in checking status for the above may occur only in the case of a discovered check.)

Neither the checking or checkmating indicators are considered annotation as they do not communicate subjective information. Therefore, they are qualitatively different from move suffix annotations like "!" and "?". Subjective move annotations are handled using Numeric Annotation Glyphs as described in a later section of this document.

There are no special markings used for double checks or discovered checks.

There are no special markings used for drawing moves.

8.2.3.6: SAN move length

SAN moves can be as short as two characters (e.g., "d4"), or as long as seven characters (e.g., "Qa6xb7#", "fxg1=Q+"). The average SAN move length seen in realistic games is probably just fractionally longer than three characters. If the SAN rules seem complicated, be assured that the earlier notation systems of LEN (Long English Notation) and EDN (English Descriptive Notation) are much more complex, and that LAN (Long Algebraic Notation, the predecessor of SAN) is unnecessarily bulky.

8.2.3.7: Import and export SAN

PGN export format always uses the above canonical SAN to represent moves in the movetext section of a PGN game. Import format is somewhat more relaxed and it makes allowances for moves that do not conform exactly to the canonical format. However, these allowances may differ among different PGN reader programs. Only data appearing in export format is in all cases guaranteed to be importable into all PGN readers.

There are a number of suggested guidelines for use with implementing PGN reader software for permitting non-canonical SAN move representation. The idea is to have a PGN reader apply various transformations to attempt to discover the move that is represented by non-canonical input. Some suggested transformations include: letter case remapping, capture indicator insertion, check indicator insertion, and checkmate indicator insertion.

8.2.3.8: SAN move suffix annotations

Import format PGN allows for the use of traditional suffix annotations for moves. There are exactly six such annotations available: "!", "?", "!!", "!!?", "?!", and "??". At most one such suffix annotation may appear per move, and if present, it is always the last part of the move symbol.

When exported, a move suffix annotation is translated into the corresponding Numeric Annotation Glyph as described in a later section of this document. For example, if the single move symbol "Qxa8?" appears in an import format PGN movetext, it would be replaced with the two adjacent symbols "Qxa8 \$2".

8.2.4: Movetext NAG (Numeric Annotation Glyph)

An NAG (Numeric Annotation Glyph) is a movetext element that is used to indicate a simple annotation in a language independent manner. An NAG is formed from a dollar sign ("\$\$") with a non-negative decimal integer suffix. The non-negative integer must be from zero to 255 in value.

8.2.5: Movetext RAV (Recursive Annotation Variation)

An RAV (Recursive Annotation Variation) is a sequence of movetext containing one or more moves enclosed in parentheses. An RAV is used to represent an alternative variation. The alternate move sequence given by an RAV is one that may be legally played by first unplaying the move that appears immediately prior to the RAV. Because the RAV is a recursive construct, it may be nested.

*** The specification for import/export representation of RAV elements needs further development.

8.2.6: Game Termination Markers

Each movetext section has exactly one game termination marker; the marker always occurs as the last element in the movetext. The game termination marker is a symbol that is one of the following four values: "1-0" (White wins), "0-1" (Black wins), "1/2-1/2" (drawn game), and "*" (game in progress, result unknown, or game abandoned). Note that the digit zero is used in the above; not the upper case letter "O". The game termination marker appearing in the movetext of a game must match the value of the game's Result tag pair. (While the marker appears as a string in the Result tag, it appears as a symbol without quotes in the movetext.)

9: Supplemental tag names

The following tag names and their associated semantics are recommended for use for information not contained in the Seven Tag Roster.

9.1: Player related information

Note that if there is more than one player field in an instance of a player (White or Black) tag, then there will be corresponding multiple fields in any

of the following tags. For example, if the White tag has the three field value "Jones:Smith:Zacharias" (a consultation game), then the WhiteTitle tag could have a value of "IM:-:GM" if Jones was an International Master, Smith was untitled, and Zacharias was a Grandmaster.

9.1.1: Tags: WhiteTitle, BlackTitle

These use string values such as "FM", "IM", and "GM"; these tags are used only for the standard abbreviations for FIDE titles. A value of "-" is used for an untitled player.

9.1.2: Tags: WhiteElo, BlackElo

These tags use integer values; these are used for FIDE Elo ratings. A value of "-" is used for an unrated player.

9.1.3: Tags: WhiteUSCF, BlackUSCF

These tags use integer values; these are used for USCF (United States Chess Federation) ratings. Similar tag names can be constructed for other rating agencies.

9.1.4: Tags: WhiteNA, BlackNA

These tags use string values; these are the e-mail or network addresses of the players. A value of "-" is used for a player without an electronic address.

9.1.5: Tags: WhiteType, BlackType

These tags use string values; these describe the player types. The value "human" should be used for a person while the value "program" should be used for algorithmic (computer) players.

9.2: Event related information

The following tags are used for providing additional information about the event.

9.2.1: Tag: EventDate

This uses a date value, similar to the Date tag field, that gives the starting date of the Event.

9.2.2: Tag: EventSponsor

This uses a string value giving the name of the sponsor of the event.

9.2.3: Tag: Section

This uses a string; this is used for the playing section of a tournament (e.g., "Open" or "Reserve").

9.2.4: Tag: Stage

This uses a string; this is used for the stage of a multistage event (e.g., "Preliminary" or "Semifinal").

9.2.5: Tag: Board

This uses an integer; this identifies the board number in a team event and also in a simultaneous exhibition.

9.3: Opening information (locale specific)

The following tag pairs are used for traditional opening names. The associated tag values will vary according to the local language in use.

9.3.1: Tag: Opening

This uses a string; this is used for the traditional opening name. This will vary by locale. This tag pair is associated with the use of the EPD opcode "v0" described in a later section of this document.

9.3.2: Tag: Variation

This uses a string; this is used to further refine the Opening tag. This will vary by locale. This tag pair is associated with the use of the EPD opcode "v1" described in a later section of this document.

9.3.3: Tag: SubVariation

This uses a string; this is used to further refine the Variation tag. This will vary by locale. This tag pair is associated with the use of the EPD opcode "v2" described in a later section of this document.

9.4: Opening information (third party vendors)

The following tag pairs are used for representing opening identification according to various third party vendors and organizations. References to these organizations does not imply any endorsement of them or any endorsement by them.

9.4.1: Tag: ECO

This uses a string of either the form "XDD" or the form "XDD/DD" where the "X" is a letter from "A" to "E" and the "D" positions are digits; this is used for an opening designation from the five volume Encyclopedia of Chess Openings. This tag pair is associated with the use of the EPD opcode "eco" described in a later section of this document.

9.4.2: Tag: NIC

This uses a string; this is used for an opening designation from the New in Chess database. This tag pair is associated with the use of the EPD opcode "nic" described in a later section of this document.

9.5: Time and date related information

The following tags assist with further refinement of the time and data information associated with a game.

9.5.1: Tag: Time

This uses a time-of-day value in the form "HH:MM:SS"; similar to the Date tag except that it denotes the local clock time (hours, minutes, and seconds) of the start of the game. Note that colons, not periods, are used for field separators for the Time tag value. The value is taken from the local time corresponding to the location given in the Site tag pair.

9.5.2: Tag: UTCTime

This tag is similar to the Time tag except that the time is given according to the Universal Coordinated Time standard.

9.5.3: Tag:; UTCDate

This tag is similar to the Date tag except that the date is given according to the Universal Coordinated Time standard.

9.6: Time control

The following tag is used to help describe the time control used with the game.

9.6.1: Tag: TimeControl

This uses a list of one or more time control fields. Each field contains a descriptor for each time control period; if more than one descriptor is present then they are separated by the colon character (":"). The descriptors appear in the order in which they are used in the game. The last field appearing is considered to be implicitly repeated for further control periods as needed.

There are six kinds of TimeControl fields.

The first kind is a single question mark ("?") which means that the time control mode is unknown. When used, it is usually the only descriptor present.

The second kind is a single hyphen ("-") which means that there was no time control mode in use. When used, it is usually the only descriptor present.

The third Time control field kind is formed as two positive integers separated by a solidus ("/") character. The first integer is the number of moves in the period and the second is the number of seconds in the period. Thus, a time control period of 40 moves in 2 1/2 hours would be represented as "40/9000".

The fourth TimeControl field kind is used for a "sudden death" control period. It should only be used for the last descriptor in a TimeControl tag value. It is sometimes the only descriptor present. The format consists of a single integer that gives the number of seconds in the period. Thus, a blitz game would be represented with a TimeControl tag value of "300".

The fifth TimeControl field kind is used for an "incremental" control period. It should only be used for the last descriptor in a TimeControl tag value and is usually the only descriptor in the value. The format consists of two positive integers separated by a plus sign ("+") character. The first integer gives the minimum number of seconds allocated for the period and the second integer gives the number of extra seconds added after each move is made. So, an incremental time control of 90 minutes plus one extra minute per move would be given by "4500+60" in the TimeControl tag value.

The sixth TimeControl field kind is used for a "sandclock" or "hourglass" control period. It should only be used for the last descriptor in a TimeControl tag value and is usually the only descriptor in the value. The format consists of an asterisk ("*") immediately followed by a positive integer. The integer gives the total number of seconds in the sandclock period. The time control is implemented as if a sandclock were set at the start of the period with an equal amount of sand in each of the two chambers and the players invert the sandclock after each move with a time forfeit indicated by an empty upper chamber. Electronic implementation of a physical sandclock may be used. An example sandclock specification for a common three minute egg timer sandclock would have a tag value of "*180".

Additional TimeControl field kinds will be defined as necessary.

9.7: Alternative starting positions

There are two tags defined for assistance with describing games that did not start from the usual initial array.

9.7.1: Tag: SetUp

This tag takes an integer that denotes the "set-up" status of the game. A value of "0" indicates that the game has started from the usual initial array. A value of "1" indicates that the game started from a set-up position; this position is given in the "FEN" tag pair. This tag must appear for a game starting with a set-up position. If it appears with a tag value of "1", a FEN tag pair must also appear.

9.7.2: Tag: FEN

This tag uses a string that gives the Forsyth-Edwards Notation for the starting position used in the game. FEN is described in a later section of this document. If a SetUp tag appears with a tag value of "1", the FEN tag pair is also required.

9.8: Game conclusion

There is a single tag that discusses the conclusion of the game.

9.8.1: Tag: Termination

This takes a string that describes the reason for the conclusion of the game. While the Result tag gives the result of the game, it does not provide any extra information and so the Termination tag is defined for this purpose.

Strings that may appear as Termination tag values:

- * "abandoned": abandoned game.
- * "adjudication": result due to third party adjudication process.
- * "death": losing player called to greater things, one hopes.
- * "emergency": game concluded due to unforeseen circumstances.
- * "normal": game terminated in a normal fashion.
- * "rules infraction": administrative forfeit due to losing player's failure to observe either the Laws of Chess or the event regulations.

* "time forfeit": loss due to losing player's failure to meet time control requirements.

* "unterminated": game not terminated.

9.9: Miscellaneous

These are tags that can be briefly described and that don't fit well in other sections.

9.9.1: Tag: Annotator

This tag uses a name or names in the format of the player name tags; this identifies the annotator or annotators of the game.

9.9.2: Tag: Mode

This uses a string that gives the playing mode of the game. Examples: "OTB" (over the board), "PM" (paper mail), "EM" (electronic mail), "ICS" (Internet Chess Server), and "TC" (general telecommunication).

9.9.3: Tag: PlyCount

This tag takes a single integer that gives the number of ply (moves) in the game.

10: Numeric Annotation Glyphs

NAG zero is used for a null annotation; it is provided for the convenience of software designers as a placeholder value and should probably not be used in external PGN data.

NAGs with values from 1 to 9 annotate the move just played.

NAGs with values from 10 to 135 modify the current position.

NAGs with values from 136 to 139 describe time pressure.

Other NAG values are reserved for future definition.

Note: the number assignments listed below should be considered preliminary in nature; they are likely to be changed as a result of reviewer feedback.

NAG Interpretation

---	-----
0	null annotation
1	good move (traditional "!")
2	poor move (traditional "?")
3	very good move (traditional "!!")
4	very poor move (traditional "??")
5	speculative move (traditional "!?")
6	questionable move (traditional "?!")
7	forced move (all others lose quickly)
8	singular move (no reasonable alternatives)
9	worst move
10	drawish position
11	equal chances, quiet position
12	equal chances, active position
13	unclear position
14	White has a slight advantage
15	Black has a slight advantage
16	White has a moderate advantage
17	Black has a moderate advantage
18	White has a decisive advantage
19	Black has a decisive advantage
20	White has a crushing advantage (Black should resign)
21	Black has a crushing advantage (White should resign)
22	White is in zugzwang
23	Black is in zugzwang
24	White has a slight space advantage
25	Black has a slight space advantage
26	White has a moderate space advantage
27	Black has a moderate space advantage
28	White has a decisive space advantage
29	Black has a decisive space advantage
30	White has a slight time (development) advantage
31	Black has a slight time (development) advantage
32	White has a moderate time (development) advantage
33	Black has a moderate time (development) advantage
34	White has a decisive time (development) advantage
35	Black has a decisive time (development) advantage

- 36 White has the initiative
- 37 Black has the initiative
- 38 White has a lasting initiative
- 39 Black has a lasting initiative
- 40 White has the attack
- 41 Black has the attack
- 42 White has insufficient compensation for material deficit
- 43 Black has insufficient compensation for material deficit
- 44 White has sufficient compensation for material deficit
- 45 Black has sufficient compensation for material deficit
- 46 White has more than adequate compensation for material deficit
- 47 Black has more than adequate compensation for material deficit

- 116 White has played the middlegame poorly
- 117 Black has played the middlegame poorly
- 118 White has played the middlegame well
- 119 Black has played the middlegame well
- 120 White has played the middlegame very well
- 121 Black has played the middlegame very well

- 122 White has played the ending very poorly
- 123 Black has played the ending very poorly
- 124 White has played the ending poorly
- 125 Black has played the ending poorly
- 126 White has played the ending well
- 127 Black has played the ending well
- 128 White has played the ending very well
- 129 Black has played the ending very well
- 130 White has slight counterplay
- 131 Black has slight counterplay
- 132 White has moderate counterplay
- 133 Black has moderate counterplay
- 134 White has decisive counterplay
- 135 Black has decisive counterplay
- 136 White has moderate time control pressure
- 137 Black has moderate time control pressure
- 138 White has severe time control pressure
- 139 Black has severe time control pressure

11: File names and directories

File names chosen for PGN data should be both informative and portable. The directory names and arrangements should also be chosen for the same reasons and also for ease of navigation.

Some of suggested file and directory names may be difficult or impossible to represent on certain computing systems. Use of appropriate conversion customs is encouraged.

11.1: File name suffix for PGN data

The use of the file suffix ".pgn" is encouraged for ASCII text files containing PGN data.

11.2: File name formation for PGN data for a specific player

PGN games for a specific player should have a file name consisting of the player's last name followed by the ".pgn" suffix.

11.3: File name formation for PGN data for a specific event

PGN games for a specific event should have a file name consisting of the event's name followed by the ".pgn" suffix.

11.4: File name formation for PGN data for chronologically ordered games

PGN data files used for chronologically ordered (oldest first) archives use date information as file name root strings. A file containing all the PGN games for a given year would have an eight character name in the format "YYYY.pgn". A file containing PGN data for a given month would have a ten character name in the format "YYYYMM.pgn". Finally, a file for PGN games for a single day would have a twelve character name in the format "YYYYMMDD.pgn". Large files are split into smaller files as needed.

As game files are commonly arranged by chronological order, games with missing or incomplete Date tag pair data are to be avoided. Any question mark characters in a Date tag value will be treated as zero digits for collation within a file and also for file naming.

Large quantities of PGN data arranged by chronological order should be organized into hierarchical directories. A directory containing all PGN data for a given year would have a four character name in the format "YYYY"; directories containing PGN files for a given month would have a six character name in the format "YYYYMM".

11.5: Suggested directory tree organization

A suggested directory arrangement for ftp sites and CD-ROM distributions:

- * PGN: master directory of the PGN subtree (pub/chess/Game-Databases/PGN)
- * PGN/Events: directory of PGN files, each for a specific event
- * PGN/Events/News: news and status of the event collection
- * PGN/Events/ReadMe: brief description of the local directory contents
- * PGN/MGR: directory of the Master Games Repository subtree
- * PGN/MGR/News: news and status of the entire PGN/MGR subtree

- * PGN/MGR/ReadMe: brief description of the local directory contents
- * PGN/MGR/YYYY: directory of games or subtrees for the year YYYY
- * PGN/MGR/YYYY/ReadMe: description of local directory for year YYYY
- * PGN/MGR/YYYY/News: news and status for year YYYY data
- * PGN/News: news and status of the entire PGN subtree
- * PGN/Players: directory of PGN files, each for a specific player
- * PGN/Players/News: news and status of the player collection
- * PGN/Players/ReadMe: brief description of the local directory contents
- * PGN/ReadMe: brief description of the local directory contents
- * PGN/Standard: the PGN standard (this document)
- * PGN/Tools: software utilities that access PGN data

12: PGN collating sequence

There is a standard sorting order for PGN games within a file. This collation is based on eight keys; these are the seven tag values of the STR and also the movetext itself.

The first (most important, primary key) is the Date tag. Earlier dated games appear prior to games played at a later date. This field is sorted by ascending numeric value first with the year, then the month, and finally the day of the month. Query characters used for unknown date digit values will be treated as zero digit characters for ordering comparison.

The second key is the Event tag. This is sorted in ascending ASCII order.

The third key is the Site tag. This is sorted in ascending ASCII order.

The fourth key is the Round tag. This is sorted in ascending numeric order based on the value of the integer used to denote the playing round. A query or hyphen used for the round is ordered before any integer value. A query

character is ordered before a hyphen character.

The fifth key is the White tag. This is sorted in ascending ASCII order.

The sixth key is the Black tag. This is sorted in ascending ASCII order.

The seventh key is the Result tag. This is sorted in ascending ASCII order.

The eighth key is the movetext itself. This is sorted in ascending ASCII order with the entire text including spaces and newline characters.

13: PGN software

This section describes some PGN software that is either currently available or expected to be available in the near future. The entries are presented in rough chronological order of their being made known to the PGN standard coordinator. Authors of PGN capable software are encouraged to contact the coordinator (e-mail address listed near the start of this document) so that the information may be included here in this section.

In addition to the PGN standard, there are two more chess standards of interest to the chess software community. These are the FEN standard (Forsyth-Edwards Notation) for position notation and the EPD standard (Extended Position Description) for comprehensive position description for automated interprogram processing. These are described in a later section of this document.

Some PGN software is freeware and can be gotten from ftp sites and other sources. Other PGN software is payware and appears as part of commercial chessplaying programs and chess database managers. Those who are interested in the propagation of the PGN standard are encouraged to support manufacturers of chess software that use the standard. If a particular vendor does not offer PGN compatibility, it is likely that a few letters to them along with a copy of this specification may help them decide to include PGN support in their next release.

The staff at the University of Oklahoma at Norman (USA) have graciously provided an ftp site ([chess.uoknor.edu](ftp://chess.uoknor.edu)) for the storage of chess related data and programs. Because file names change over time, those accessing the site are encouraged to first retrieve the file "pub/chess/ls-lR.gz" for a current listing. A scan of this listing will also help locate versions of PGN programs for machine types and operating systems other than those listed below. Further information about this archive can be gotten from its administrator, Chris

Petroff (chris@uoknor.edu).

For European users, the kind staff at the University of Hamburg (Germany) have provided the ftp site [ftp.math.uni-hamburg.de](ftp://ftp.math.uni-hamburg.de); this carries a daily mirror of the pub/chess directory at the chess.uoknor.edu site.

13.1: The SAN Kit

The "SAN Kit" is an ANSI C source chess programming toolkit available for free from the ftp site [chess.uoknor.edu](ftp://chess.uoknor.edu) in the directory pub/chess/Unix as the file "SAN.tar.gz" (a gzip tar archive). This kit contains code for PGN import and export and can be used to "regularize" PGN data into reduced export format by use of its "tfgg" command. The SAN Kit also supports FEN I/O. Code from this kit is freely redistributable for anyone as long as future distribution is unhindered for everyone. The SAN Kit is undergoing continuous development, although dates of future deliveries are quite difficult to predict and releases sometimes appear months apart. Suggestions and comments should be directed to its author, Steven J. Edwards (sje@world.std.com).

13.2: pgnRead

The program "pgnRead" runs under MS Windows 3.1 and provides an interactive graphical user interface for scanning PGN data files. This program includes a colorful figurine chessboard display and scrolling controls for game and game text selection. It is available from the [chess.uoknor.edu](ftp://chess.uoknor.edu) ftp site in the pub/chess/DOS directory; several versions are available with names of the form "pgnrd**.exe"; the latest at this writing is "PGNRD130.EXE". Suggestions and comments should be directed to its author, Keith Fuller (keithfx@aol.com).

13.3: mail2pgn/GIICS

The program "mail2pgn" produces a PGN version of chess game data generated by the ICS (Internet Chess Server). It can be found at the [chess.uoknor.edu](ftp://chess.uoknor.edu) ftp site in the pub/chess/DOS directory as the file "mail2pgn.zip". A C language version is in the directory pub/chess/Unix as the file "mail2pgn.c".

Suggestions and comments should be directed to its author, John Aronson (aronson@helios.ece.arizona.edu). This code has been reportedly incorporated into the GIICS (Graphical Interface for the ICS); suggestions and comments should be directed to its author, Tony Acero (ace3@midway.uchicago.edu).

There is a report that mail2pgn has been superseded by the newer program "MV2PGN" described below.

13.4: XBoard

"XBoard" is a comprehensive chess utility running under the X Window System that provides a graphical user interface in a portable manner. A new version now handles PGN data. It is available from the chess.uoknor.edu ftp site in the pub/chess/X directory as the file "xboard-3.0.pl9.tar.gz". Suggestions and comments should be directed to its author, Tim Mann (mann@src.dec.com).

13.5: cupgn

The program "cupgn" converts game data stored in the ChessBase format into PGN. It is available from the chess.uoknor.edu ftp site in the pub/chess/Game-Databases/CBUFF directory as the file "cupgn.tar.gz". Another version is in the directory pub/chess/DOS as the file "cupgn120.exe". Suggestions and comments should be directed to its author, Anjo Anjewierden (anjo@swi.psy.uva.nl).

13.6: Zarkov

The current version (3.0) of the commercial chessplaying program "Zarkov" can read and write games using PGN. This program can also use the EPD standard for communication with other EPD capable programs. Historically, Zarkov is the very first program to use EPD. Suggestions and comments should be directed to its author, John Stanback (jhs@icbdfcs1.fc.hp.com).

13.7: Chess Assistant

The upcoming version of the multifunction commercial database program "Chess Assistant" will be able to use the PGN standard as an import and export option. There is a report of a freeware program, "PGN2CA", that will convert PGN databases into Chess Assistant format. For more information, the contact is Victor Zakharov, one of the members of the Chess Assistant development team (VICTOR@ldis.cs.msu.su).

(800) 262-4277

13.8: BOOKUP

The MS-DOS edition of the multifunction commercial program BOOKUP, version 8.1, is able to use the EPD standard for communication with other EPD capable programs. It may also be PGN capable as well.

The BOOKUP 8.1.1 Addenda notes dated 1993.12.17 provide comprehensive information on how to use EPD in conjunction with "analyst" programs such as Zarkov and HIARCS. Specifically, the search and evaluation abilities of an analyst program are combined with the information organization abilities of the BOOKUP database program to provide position scoring. This is done by first having BOOKUP export a database in EPD format, then having an analyst program annotate each EPD record with a numeric score, and then having BOOKUP import the changed EPD file. BOOKUP can then apply minimaxing to the imported database; this results in scores from terminal positions being propagated back to earlier positions and even back to moves from the starting array.

For some reason, BOOKUP calls this process "backsolving", but it's really just standard minimaxing. In any case, it's a good example of how different programs from different authors performing different types of tasks can be

integrated by use of a common, non-proprietary standard. This allows for a new set of powerful features that are beyond the capabilities of any one of the individual component programs.

BOOKUP allows for some customizing of EPD actions. One such customization is to require the positional evaluations to follow the EPD standard; this means that the score is always given from the viewpoint of the active player. This is explained more fully in the section on the "ce" (centipawn evaluation) opcode in the EPD description in a later section of this document. To ensure that BOOKUP handles the centipawn evaluations in the "right" way, the EPD setting "Positive for White" must be set to "N". This makes BOOKUP work correctly with Zarkov and with all other programs that use the "right" centipawn evaluation convention. There is an apparent problem with HIARCS that requires this option to be set to "Y"; but this really means that, if true, HIARCS needs to be adjusted to use the "right" centipawn evaluation convention.

A vendor in North America is:

BOOKUP
2763 Kensington Place West
Columbus, OH 43202
USA
(800) 949-5445
(614) 263-7219

13.9: HIARCS

The current version (2.1) of the commercial chessplaying program "HIARCS" is able to use the EPD standard for communication with other EPD capable programs. It may also be PGN capable as well. More details will appear here as they become available.

A vendor in North America is:

HIARCS
c/o BOOKUP

(800) 949-5445
(614) 263-7219

13.10: Deja Vu

The chess database "Deja Vu" from ChessWorks is a PGN compatible collection of over 300,000 games. It is available only on CD-ROM and is scheduled for release in 1994.05 with periodic revisions thereafter. The introductory price is US\$329. For further information, the authors are John Crayton and Eric Schiller and they can be contacted via e-mail (chesswks@netcom.com).

13.11: MV2PGN

The program "MV2PGN" can be used to convert game data generated by both current and older versions of the GIICS (Graphical Interface - Internet Chess Server). The program is included in the self extracting archive available from chess.uoknor.edu in the directory `pub/chess/DOS` as the file "ics2pgn.exe". Source code is also included. This program is reported to supersede the older "mail2pgn" and was needed due to a change in ICS recording format in late 1993. For further information about MV2PGN, the contact person is Gary Bastin (gbastin@x102a.ess.harris.com).

13.12: The Hansen utilities (cb2pgn, nic2pgn, pgn2cb, pgn2nic)

The Hansen utilities are used to convert among various chess data representation formats. The PGN related programs include: "cb2pgn.exe" (convert ChessBase to PGN), "nic2pgn.exe" (convert NIC to PGN), "pgn2cb.exe" (convert PGN to ChessBase), and "pgn2nic.exe" (convert PGN to NIC).

The ChessBase related utilities (cb2pgn/pgn2cb) are found at chess.uoknor.edu in the `pub/chess/Game-Databases/ChessBase` directory.

The NIC related utilities (nic2pgn/pgn2nic) are found at chess.uoknor.edu in the `pub/chess/Game-Databases/NIC` directory.

For further information about the Hansen utilities, the contact person is the author, Carsten Hansen (ch0506@hdc.hha.dk).

13.13: Slappy the Database

"Slappy the Database" is a commercial chess database and translation program scheduled for release no sooner than late 1994. It is a low cost utility with

a simple character interface intended for those who want a supported product but who do not need (or cannot afford) a comprehensive, feature-laden program with a graphical user interface. Slappy's two most important features are its batch processing ability and its full implementation of each and every standard described in this document. Versions of Slappy the Database will be provided for various platforms including: Intel 386/486 Unix, Apple Macintosh, and MS-DOS.

Slappy may also be useful to those who have a full feature program who also need to run time consuming chess database tasks on a spare computer.

Suggestions and comments should be directed to its author, Steven J. Edwards (sje@world.std.com). More details will appear here as they become available.

13.14: CBASCII

"CBASCII" is a general utility for converting chess data between ChessBase format and ASCII representations. It has PGN capability, and it is available from the chess.uoknor.edu ftp site in the `pub/chess/DOS` directory as the file "cba1_2.zip". The contact person is the program's author, Andy Duplain (duplain@btcs.bt.co.uk).

13.15: ZZZZZZ

"ZZZZZZ" is a chessplaying program, complete with source, that also includes some database functions. A recent version is reported to have both PGN and EPD capabilities. It is available from the chess.uoknor.edu ftp site in the `pub/chess/Unix` directory as the file "zzzzzz-3.2b1.tar.gz". The contact person is its author, Gijsbert Wiesenecker (wiesenecker@sara.nl).

13.16: icsconv

The program "icsconv" can be used to convert Internet Chess Server games, both old and new format, to PGN. It is available from the chess.uoknor.edu site in the `pub/chess/Game-Databases/PGN/Tools` directory as the file "icsconv.exe". The contact person is the author, Kevin Nomura (chow@netcom.com).

13.17: CHESSOP (CHESSOPN/CHESSOPG)

CHESSOP is an openings database and viewing tool with support for reading PGN games. It runs under MS-DOS and displays positions rather than games. For each position, both good and bad moves are listed with appropriate annotation. Transpositions are handled as well. The distributed database contains over 100,000 positions covering all the common openings. Users can feed in their own PGN data as well. CHESSOP takes 3 Mbyte of hard disk, costs US\$39 and can be obtained from:

CHESSX Software
12 Bluebell Close
Glenmore Park
AUSTRALIA 2745.

The ideas behind CHESSOP can be seen in CHESSOPN (alias CHESSOPG), a free version on the ICS server which has a reduced openings database (25,000 positions) and no PGN or transposition support but is otherwise the same as CHESSOP. (These are the files "chessopg.zip" in the directory pub/chess/DOS at the chess.uoknor.edu ftp site.)

13.18: CAT2PGN

The program "CAT2PGN" is a utility that translates data from the format used by Chess Assistant into PGN. It is available from the chess.uoknor.edu ftp site. The contact person for CAT2PGN is its author, David Myers (myers@frodo.biochem.duke.edu).

13.19: pgn2opg

The utility "pgn2opg" can be used to convert PGN files into a text format used by the "CHESSOPG" program mentioned above. Although it does not perform any semantic analysis on PGN input, it has been demonstrated to handle known correct PGN input properly. The file can be found in the pub/chess/PGN/Tools directory at the chess.uoknor.edu ftp site. For more information, the author is David Barnes (djb@ukc.ac.uk).

14: PGN data archives

The primary PGN data archive repository is located at the ftp site chess.uoknor.edu as the directory "pub/chess/Game-Databases/PGN". It is organized according to the description given in section C.5 of this document.

The European site <ftp.math.uni-hamburg.de> is also reported to carry a regularly updated copy of the repository.

15: International Olympic Committee country codes

International Olympic Committee country codes are employed for Site nation information because of their traditional use with the reporting of international sporting events. Due to changes in geography and linguistic custom, some of the following may be incorrect or outdated. Corrections and extensions should be sent via e-mail to the PGN coordinator whose address listed near the start of this document.

16: Additional chess data standards

While PGN is used for game storage, there are other data representation standards for other chess related purposes. Two important standards are FEN and EPD, both described in this section.

16.1: FEN

FEN is "Forsyth-Edwards Notation"; it is a standard for describing chess positions using the ASCII character set.

A single FEN record uses one text line of variable length composed of six data fields. The first four fields of the FEN specification are the same as the first four fields of the EPD specification.

A text file composed exclusively of FEN data records should have a file name with the suffix ".fen".

16.1.1: History

FEN is based on a 19th century standard for position recording designed by the Scotsman David Forsyth, a newspaper journalist. The original Forsyth standard has been slightly extended for use with chess software by Steven Edwards with assistance from commentators on the Internet. This new standard, FEN, was first implemented in Edwards' SAN Kit.

16.1.2: Uses for a position notation

Having a standard position notation is particularly important for chess programmers as it allows them to share position databases. For example, there exist standard position notation databases with many of the classical benchmark tests for chessplaying programs, and by using a common position notation format many hours of tedious data entry can be saved. Additionally, a position notation can be useful for page layout programs and for confirming position status for e-mail competition.

Many interesting chess problem sets represented using FEN can be found at the chess.uoknor.edu ftp site in the directory `pub/chess/SAN_testsuites`.

16.1.3: Data fields

FEN specifies the piece placement, the active color, the castling availability, the en passant target square, the halfmove clock, and the fullmove number. These can all fit on a single text line in an easily read format. The length

of a FEN position description varies somewhat according to the position. In some cases, the description could be eighty or more characters in length and so may not fit conveniently on some displays. However, these positions aren't too common.

A FEN description has six fields. Each field is composed only of non-blank printing ASCII characters. Adjacent fields are separated by a single ASCII space character.

16.1.3.1: Piece placement data

The first field represents the placement of the pieces on the board. The board contents are specified starting with the eighth rank and ending with the first rank. For each rank, the squares are specified from file a to file h. White pieces are identified by uppercase SAN piece letters ("PNBRQK") and black pieces are identified by lowercase SAN piece letters ("pnbrqk"). Empty squares are represented by the digits one through eight; the digit used represents the count of contiguous empty squares along a rank. A solidus character "/" is used to separate data of adjacent ranks.

16.1.3.2: Active color

The second field represents the active color. A lower case "w" is used if White is to move; a lower case "b" is used if Black is the active player.

16.1.3.3: Castling availability

The third field represents castling availability. This indicates potential future castling that may or may not be possible at the moment due to blocking pieces or enemy attacks. If there is no castling availability for either side, the single character symbol "-" is used. Otherwise, a combination of from one to four characters are present. If White has kingside castling availability, the uppercase letter "K" appears. If White has queenside castling availability, the uppercase letter "Q" appears. If Black has kingside castling availability, the lowercase letter "k" appears. If Black has queenside castling availability, then the lowercase letter "q" appears. Those letters which appear will be ordered first uppercase before lowercase and second kingside before queenside. There is no white space between the letters.

16.1.3.4: En passant target square

The fourth field is the en passant target square. If there is no en passant target square then the single character symbol "-" appears. If there is an en passant target square then is represented by a lowercase file character immediately followed by a rank digit. Obviously, the rank digit will be "3" following a white pawn double advance (Black is the active color) or else be the digit "6" after a black pawn double advance (White being the active color).

An en passant target square is given if and only if the last move was a pawn advance of two squares. Therefore, an en passant target square field may have a square name even if there is no pawn of the opposing side that may immediately execute the en passant capture.

16.1.3.5: Halfmove clock

The fifth field is a nonnegative integer representing the halfmove clock. This number is the count of halfmoves (or ply) since the last pawn advance or capturing move. This value is used for the fifty move draw rule.

16.1.3.6: Fullmove number

The sixth and last field is a positive integer that gives the fullmove number. This will have the value "1" for the first move of a game for both White and Black. It is incremented by one immediately after each move by Black.

16.1.4: Examples

Here's the FEN for the starting position:

```
rnbqkbnr/pppppppp/8/8/8/8/PPPPPPPP/RNBQKBNR w KQkq - 0 1
```

And after the move 1. e4:

```
rnbqkbnr/pppppppp/8/8/4P3/8/PPPP1PPP/RNBQKBNR b KQkq e3 0 1
```

And then after 1. ... c5:

```
rnbqkbnr/pp1ppppp/8/2p5/4P3/8/PPPP1PPP/RNBQKBNR w KQkq c6 0 2
```

And then after 2. Nf3:

```
rnbqkbnr/pp1ppppp/8/2p5/4P3/5N2/PPPP1PPP/RNBQKB1R b KQkq - 1 2
```

For two kings on their home squares and a white pawn on e2 (White to move) with thirty eight full moves played with five halfmoves since the last pawn move or capture:

```
4k3/8/8/8/8/8/4P3/4K3 w - - 5 39
```

16.2: EPD

EPD is "Extended Position Description"; it is a standard for describing chess positions along with an extended set of structured attribute values using the ASCII character set. It is intended for data and command interchange among chessplaying programs. It is also intended for the representation of portable opening library repositories.

A single EPD uses one text line of variable length composed of four data field followed by zero or more operations. The four fields of the EPD specification are the same as the first four fields of the FEN specification.

A text file composed exclusively of EPD data records should have a file name with the suffix ".epd".

16.2.1: History

EPD is based in part on the earlier FEN standard; it has added extensions for use with opening library preparation and also for general data and command interchange among advanced chess programs. EPD was developed by John Stanback and Steven Edwards; its first implementation is in Stanback's master strength chessplaying program Zarkov.

16.2.2: Uses for an extended position notation

Like FEN, EPD can also be used for general position description. However, unlike FEN, EPD is designed to be expandable by the addition of new operations that provide new functionality as needs arise.

Many interesting chess problem sets represented using EPD can be found at the

chess.uoknor.edu ftp site in the directory pub/chess/SAN_testsuites.

16.2.3: Data fields

EPD specifies the piece placement, the active color, the castling availability, and the en passant target square of a position. These can all fit on a single text line in an easily read format. The length of an EPD position description varies somewhat according to the position and any associated operations. In some cases, the description could be eighty or more characters in length and so may not fit conveniently on some displays. However, most EPD descriptions pass among programs only and these are not usually seen by program users.

(Note: due to the likelihood of future expansion of EPD, implementors are encouraged to have their programs handle EPD text lines of up to 1024 characters long.)

Each EPD data field is composed only of non-blank printing ASCII characters. Adjacent data fields are separated by a single ASCII space character.

16.2.3.1: Piece placement data

The first field represents the placement of the pieces on the board. The board contents are specified starting with the eighth rank and ending with the first rank. For each rank, the squares are specified from file a to file h. White pieces are identified by uppercase SAN piece letters ("PNBRQK") and black pieces are identified by lowercase SAN piece letters ("pnbrqk"). Empty squares are represented by the digits one through eight; the digit used represents the count of contiguous empty squares along a rank. A solidus character "/" is used to separate data of adjacent ranks.

16.2.3.2: Active color

The second field represents the active color. A lower case "w" is used if White is to move; a lower case "b" is used if Black is the active player.

16.2.3.3: Castling availability

The third field represents castling availability. This indicates potential future castling that may or may not be possible at the moment due to blocking

pieces or enemy attacks. If there is no castling availability for either side, the single character symbol "-" is used. Otherwise, a combination of from one to four characters are present. If White has kingside castling availability, the uppercase letter "K" appears. If White has queenside castling availability, the uppercase letter "Q" appears. If Black has kingside castling availability, the lowercase letter "k" appears. If Black has queenside castling availability, then the lowercase letter "q" appears. Those letters which appear will be ordered first uppercase before lowercase and second kingside before queenside. There is no white space between the letters.

16.2.3.4: En passant target square

The fourth field is the en passant target square. If there is no en passant target square then the single character symbol "-" appears. If there is an en passant target square then is represented by a lowercase file character immediately followed by a rank digit. Obviously, the rank digit will be "3" following a white pawn double advance (Black is the active color) or else be the digit "6" after a black pawn double advance (White being the active color).

An en passant target square is given if and only if the last move was a pawn advance of two squares. Therefore, an en passant target square field may have a square name even if there is no pawn of the opposing side that may immediately execute the en passant capture.

16.2.4: Operations

An EPD operation is composed of an opcode followed by zero or more operands and is concluded by a semicolon.

Multiple operations are separated by a single space character. If there is at least one operation present in an EPD line, it is separated from the last (fourth) data field by a single space character.

16.2.4.1: General format

An opcode is an identifier that starts with a letter character and may be followed by up to fourteen more characters. Each additional character may be a letter or a digit or the underscore character.

An operand is either a set of contiguous non-white space printing characters or

a string. A string is a set of contiguous printing characters delimited by a quote character at each end. A string value must have less than 256 bytes of data.

If at least one operand is present in an operation, there is a single space between the opcode and the first operand. If more than one operand is present in an operation, there is a single blank character between every two adjacent operands. If there are no operands, a semicolon character is appended to the opcode to mark the end of the operation. If any operands appear, the last operand has an appended semicolon that marks the end of the operation.

Any given opcode appears at most once per EPD record. Multiple operations in a single EPD record should appear in ASCII order of their opcode names (mnemonics). However, a program reading EPD records may allow for operations not in ASCII order by opcode mnemonics; the semantics are the same in either case.

Some opcodes that allow for more than one operand may have special ordering requirements for the operands. For example, the "pv" (predicted variation) opcode requires its operands (moves) to appear in the order in which they would be played. All other opcodes that allow for more than one operand should have operands appearing in ASCII order. An example of the latter set is the "bm" (best move[s]) opcode; its operands are moves that are all immediately playable from the current position.

Some opcodes require one or more operands that are chess moves. These moves should be represented using SAN. If a different representation is used, there is no guarantee that the EPD will be read correctly during subsequent processing.

Some opcodes require one or more operands that are integers. Some opcodes may require that an integer operand must be within a given range; the details are described in the opcode list given below. A negative integer is formed with a hyphen (minus sign) preceding the integer digit sequence. An optional plus sign may be used for indicating a non-negative value, but such use is not required and is indeed discouraged.

Some opcodes require one or more operands that are floating point numbers. Some opcodes may require that a floating point operand must be within a given range; the details are described in the opcode list given below. A floating point operand is constructed from an optional sign character ("+" or "-"), a digit sequence (with at least one digit), a radix point (always "."), and a final digit sequence (with at least one digit).

16.2.4.2: Opcode mnemonics

An opcode mnemonic used for archival storage and for interprogram communication starts with a lower case letter and is composed of only lower case letters, digits, and the underscore character (i.e., no upper case letters). These mnemonics will also all be at least two characters in length.

Opcode mnemonics used only by a single program or an experimental suite of programs should start with an upper case letter. This is so they may be easily distinguished should they be inadvertently be encountered by other programs. When a such a "private" opcode be demonstrated to be widely useful, it should be brought into the official list (appearing below) in a lower case form.

If a given program does not recognize a particular opcode, that operation is simply ignored; it is not signaled as an error.

16.2.5: Opcode list

The opcodes are listed here in ASCII order of their mnemonics. Suggestions for new opcodes should be sent to the PGN standard coordinator listed near the start of this document.

16.2.5.1: Opcode "acn": analysis count: nodes

The opcode "acn" takes a single non-negative integer operand. It is used to represent the number of nodes examined in an analysis. Note that the value may be quite large for some extended searches and so use of (at least) a long (four byte) representation is suggested.

16.2.5.2: Opcode "acs": analysis count: seconds

The opcode "acs" takes a single non-negative integer operand. It is used to represent the number of seconds used for an analysis. Note that the value may be quite large for some extended searches and so use of (at least) a long (four byte) representation is suggested.

16.2.5.3: Opcode "am": avoid move(s)

The opcode "am" indicates a set of zero or more moves, all immediately playable from the current position, that are to be avoided in the opinion of the EPD writer. Each operand is a SAN move; they appear in ASCII order.

16.2.5.4: Opcode "bm": best move(s)

The opcode "bm" indicates a set of zero or more moves, all immediately playable from the current position, that are judged to be the best available by the EPD writer. Each operand is a SAN move; they appear in ASCII order.

16.2.5.5: Opcode "c0": comment (primary, also "c1" through "c9")

The opcode "c0" (lower case letter "c", digit character zero) indicates a top level comment that applies to the given position. It is the first of ten ranked comments, each of which has a mnemonic formed from the lower case letter "c" followed by a single decimal digit. Each of these opcodes takes either a single string operand or no operand at all.

This ten member comment family of opcodes is intended for use as descriptive commentary for a complete game or game fragment. The usual processing of these opcodes are as follows:

- 1) At the beginning of a game (or game fragment), a move sequence scanning program initializes each element of its set of ten comment string registers to be null.
- 2) As the EPD record for each position in the game is processed, the comment operations are interpreted from left to right. (Actually, all operations in an EPD record are interpreted from left to right.) Because operations appear in ASCII order according to their opcode mnemonics, opcode "c0" (if present) will be handled prior to all other opcodes, then opcode "c1" (if present), and so forth until opcode "c9" (if present).
- 3) The processing of opcode "cN" ($0 \leq N \leq 9$) involves two steps. First, all comment string registers with an index equal to or greater than N are set to null. (This is the set "cN" through "c9".) Second, and only if a string operand is present, the value of the corresponding comment string register is set equal to the string operand.

16.2.5.6: Opcode "ce": centipawn evaluation

The opcode "ce" indicates the evaluation of the indicated position in centipawn units. It takes a single operand, an optionally signed integer that gives an evaluation of the position from the viewpoint of the active player; i.e., the player with the move. Positive values indicate a position favorable to the moving player while negative values indicate a position favorable to the passive player; i.e., the player without the move. A centipawn evaluation value close to zero indicates a neutral positional evaluation.

Values are restricted to integers that are equal to or greater than -32767 and are less than or equal to 32766.

A value greater than 32000 indicates the availability of a forced mate to the active player. The number of plies until mate is given by subtracting the evaluation from the value 32767. Thus, a winning mate in N fullmoves is a mate in $((2 * N) - 1)$ halfmoves (or ply) and has a corresponding centipawn evaluation of $(32767 - ((2 * N) - 1))$. For example, a mate on the move (mate in one) has a centipawn evaluation of 32766 while a mate in five has a centipawn evaluation of 32758.

A value less than -32000 indicates the availability of a forced mate to the passive player. The number of plies until mate is given by subtracting the evaluation from the value -32767 and then negating the result. Thus, a losing mate in N fullmoves is a mate in $(2 * N)$ halfmoves (or ply) and has a corresponding centipawn evaluation of $(-32767 + (2 * N))$. For example, a mate after the move (losing mate in one) has a centipawn evaluation of -32765 while a losing mate in five has a centipawn evaluation of -32757.

A value of -32767 indicates an illegal position. A stalemate position has a centipawn evaluation of zero as does a position drawn due to insufficient mating material. Any other position known to be a certain forced draw also has a centipawn evaluation of zero.

16.2.5.7: Opcode "dm": direct mate fullmove count

The "dm" opcode is used to indicate the number of fullmoves until checkmate is to be delivered by the active color for the indicated position. It always takes a single operand which is a positive integer giving the fullmove count. For example, a position known to be a "mate in three" would have an operation of "dm 3;" to indicate this.

This opcode is intended for use with problem sets composed of positions requiring direct mate answers as solutions.

16.2.5.8: Opcode "draw_accept": accept a draw offer

The opcode "draw_accept" is used to indicate that a draw offer made after the move that lead to the indicated position is accepted by the active player.

This opcode takes no operands.

16.2.5.9: Opcode "draw_claim": claim a draw

The opcode "draw_claim" is used to indicate claim by the active player that a draw exists. The draw is claimed because of a third time repetition or because of the fifty move rule or because of insufficient mating material. A supplied move (see the opcode "sm") is also required to appear as part of the same EPD record. The draw_claim opcode takes no operands.

16.2.5.10: Opcode "draw_offer": offer a draw

The opcode "draw_offer" is used to indicate that a draw is offered by the active player. A supplied move (see the opcode "sm") is also required to appear as part of the same EPD record; this move is considered played from the indicated position. The draw_offer opcode takes no operands.

16.2.5.11: Opcode "draw_reject": reject a draw offer

The opcode "draw_reject" is used to indicate that a draw offer made after the move that lead to the indicated position is rejected by the active player.

This opcode takes no operands.

16.2.5.12: Opcode "eco": _Encyclopedia of Chess Openings_ opening code

The opcode "eco" is used to associate an opening designation from the _Encyclopedia of Chess Openings_ taxonomy with the indicated position. The opcode takes either a single string operand (the ECO opening name) or no operand at all. If an operand is present, its value is associated with an "ECO" string register of the scanning program. If there is no operand, the ECO string register of the scanning program is set to null.

The usage is similar to that of the "ECO" tag pair of the PGN standard.

16.2.5.13: Opcode "fmvn": fullmove number

The opcode "fmvn" represents the fullmove number associated with the position. It always takes a single operand that is the positive integer value of the move number.

This opcode is used to explicitly represent the fullmove number in EPD that is present by default in FEN as the sixth field. Fullmove number information is usually omitted from EPD because it does not affect move generation (commonly needed for EPD-using tasks) but it does affect game notation (commonly needed for FEN-using tasks). Because of the desire for space optimization for large EPD files, fullmove numbers were dropped from EPD's parent FEN. The halfmove clock information was similarly dropped.

16.2.5.14: Opcode "hmvc": halfmove clock

The opcode "hmvc" represents the halfmove clock associated with the position. The halfmove clock of a position is equal to the number of plies since the last pawn move or capture. This information is used to implement the fifty move draw rule. It always takes a single operand that is the non-negative integer value of the halfmove clock.

This opcode is used to explicitly represent the halfmove clock in EPD that is present by default in FEN as the fifth field. Halfmove clock information is usually omitted from EPD because it does not affect move generation (commonly needed for EPD-using tasks) but it does affect game termination issues (commonly needed for FEN-using tasks). Because of the desire for space optimization for large EPD files, halfmove clock values were dropped from EPD's parent FEN. The fullmove number information was similarly dropped.

16.2.5.15: Opcode "id": position identification

The opcode "id" is used to provide a simple identifying label for the indicated position. It takes a single string operand.

This opcode is intended for use with test suites used for measuring chessplaying program strength. An example "id" operand for the seven hundred

fifty seventh position of the one thousand one problems in Reinfeld's _1001 Winning Chess Sacrifices and Combinations_ would be "WCSAC.0757" while the fifteenth position in the twenty four problem Bratko-Kopec test suite would have an "id" operand of "BK.15".

16.2.5.16: Opcode "nic": _New In Chess_ opening code

The opcode "nic" is used to associate an opening designation from the _New In Chess_ taxonomy with the indicated position. The opcode takes either a single string operand (the NIC opening name) or no operand at all. If an operand is present, its value is associated with an "NIC" string register of the scanning program. If there is no operand, the NIC string register of the scanning program is set to null.

The usage is similar to that of the "NIC" tag pair of the PGN standard.

16.2.5.17: Opcode "noop": no operation

The "noop" opcode is used to indicate no operation. It takes zero or more operands, each of which may be of any type. The operation involves no processing. It is intended for use by developers for program testing purposes.

16.2.5.18: Opcode "pm": predicted move

The "pm" opcode is used to provide a single predicted move for the indicated position. It has exactly one operand, a move playable from the position. This move is judged by the EPD writer to represent the best move available to the active player.

If a non-empty "pv" (predicted variation) line of play is also present in the same EPD record, the first move of the predicted variation is the same as the predicted move.

The "pm" opcode is intended for use as a general "display hint" mechanism.

16.2.5.19: Opcode "pv": predicted variation

The "pv" opcode is used to provide a predicted variation for the indicated position. It has zero or more operands which represent a sequence of moves

playable from the position. This sequence is judged by the EPD writer to represent the best play available.

If a "pm" (predicted move) operation is also present in the same EPD record, the predicted move is the same as the first move of the predicted variation.

16.2.5.20: Opcode "rc": repetition count

The "rc" opcode is used to indicate the number of occurrences of the indicated position. It takes a single, positive integer operand. Any position, including the initial starting position, is considered to have an "rc" value of at least one. A value of three indicates a candidate for a draw claim by the position repetition rule.

16.2.5.21: Opcode "resign": game resignation

The opcode "resign" is used to indicate that the active player has resigned the game. This opcode takes no operands.

16.2.5.22: Opcode "sm": supplied move

The "sm" opcode is used to provide a single supplied move for the indicated position. It has exactly one operand, a move playable from the position. This move is the move to be played from the position.

The "sm" opcode is intended for use to communicate the most recent played move in an active game. It is used to communicate moves between programs in automatic play via a network. This includes correspondence play using e-mail and also programs acting as network front ends to human players.

16.2.5.23: Opcode "tcgs": telecommunication: game selector

The "tcgs" opcode is one of the telecommunication family of opcodes used for games conducted via e-mail and similar means. This opcode takes a single operand that is a positive integer. It is used to select among various games in progress between the same sender and receiver.

16.2.5.24: Opcode "tcri": telecommunication: receiver identification

The "tcri" opcode is one of the telecommunication family of opcodes used for games conducted via e-mail and similar means. This opcode takes two order dependent string operands. The first operand is the e-mail address of the receiver of the EPD record. The second operand is the name of the player (program or human) at the address who is the actual receiver of the EPD record.

16.2.5.25: Opcode "tcsi": telecommunication: sender identification

The "tcsi" opcode is one of the telecommunication family of opcodes used for games conducted via e-mail and similar means. This opcode takes two order dependent string operands. The first operand is the e-mail address of the sender of the EPD record. The second operand is the name of the player (program or human) at the address who is the actual sender of the EPD record.

16.2.5.26: Opcode "v0": variation name (primary, also "v1" though "v9")

The opcode "v0" (lower case letter "v", digit character zero) indicates a top level variation name that applies to the given position. It is the first of ten ranked variation names, each of which has a mnemonic formed from the lower case letter "v" followed by a single decimal digit. Each of these opcodes takes either a single string operand or no operand at all.

This ten member variation name family of opcodes is intended for use as traditional variation names for a complete game or game fragment. The usual processing of these opcodes are as follows:

- 1) At the beginning of a game (or game fragment), a move sequence scanning program initializes each element of its set of ten variation name string registers to be null.

- 2) As the EPD record for each position in the game is processed, the variation name operations are interpreted from left to right. (Actually, all operations in an EPD record are interpreted from left to right.) Because operations appear in ASCII order according to their opcode mnemonics, opcode "v0" (if present) will be handled prior to all other opcodes, then opcode "v1" (if present), and so forth until opcode "v9" (if present).

- 3) The processing of opcode "vN" ($0 \leq N \leq 9$) involves two steps. First, all variation name string registers with an index equal to or greater than N are set to null. (This is the set "vN" though "v9".) Second, and only if a string

operand is present, the value of the corresponding variation name string register is set equal to the string operand.

17: Alternative chesspiece identifier letters

English language piece names are used to define the letter set for identifying chesspieces in PGN movetext. However, authors of programs which are used only for local presentation or scanning of chess move data may find it convenient to use piece letter codes common in their locales. This is not a problem as long as PGN data that resides in archival storage or that is exchanged among programs still uses the SAN (English) piece letter codes: "PNBRQK".

For the above authors only, a list of alternative piece letter codes are provided:

Language Piece letters (pawn knight bishop rook queen king)

19: Canonical chess position hash coding

*** This section is under development.

20: Binary representation (PGC)

*** This section is under development.

The binary coded version of PGN is PGC (PGN Game Coding). PGC is a binary representation standard of PGN data designed for the dual goals of storage efficiency and program I/O. A file containing PGC data should have a name with a suffix of ".pgc".

Unlike PGN text files that may have locale dependent representations for newlines, PGC files have data that does not vary due to local processing environment. This means that PGC files may be transferred among systems using general binary file methods.

PGC files should be used only when the use of PGN is impractical due to time and space resource constraints. As the general level of processing capabilities increases, the need for PGC over PGN will decrease. Therefore, implementors are encouraged not to use PGC as the default representation because it is much more difficult (than PGN) to understand without proper software.

PGC data is composed of a sequence of PGC records. Each record is composed of a sequence of one or more bytes. The first byte is the PGN record marker and it specifies the interpretation of the remaining portion of the record. This remaining portion is composed of zero or more PGN record items. Item types include move sequences, move sets, and character strings.

20.1: Bytes, words, and doublewords

At the lowest level, PGC binary data is organized as bytes, words (two contiguous bytes), and doublewords (four contiguous bytes). All eight bits of a byte are used. Longwords (eight contiguous bytes) are not used. Integer values are stored using two's complement representation. Integers may be signed or unsigned depending on context. Multibyte integers are stored in low-endian format with the least significant byte appearing first.

A one byte integer item is called "int-1". A two byte integer item is called "int-2". A four byte integer item is called "int-4".

Characters are stored as bytes using the ISO 8859/1 Latin-1 (ECMA-94) code set. There is no provision for other characters sets or representations.

20.2: Move ordinals

A chess move is represented using a move ordinal. This is a single unsigned byte quantity with values from zero to 255. A move ordinal is interpreted as an index into the list of legal moves from the current position. This list is constructed by generating the legal moves from the current position, assigning SAN ASCII strings to each move, and then sorting these strings in ascending order. Note that a seven bit ordinal, as used by some inferior representation

systems, is insufficient as there are some positions that have more than 128 moves available.

Examples: From the initial position, there are twenty moves. Move ordinal 0 corresponds to the SAN move string "Na3"; move ordinal 1 corresponds to "Nc3", move ordinal 4 corresponds to "a3", and move ordinal 19 corresponds to "h4".

Moves can be organized into sequences and sets. A move sequence is an ordered list of moves that are played, one after another from first to last. A move set is a list of moves that are all playable from the current position.

Move sequence data is represented using a length header followed by move ordinal data. The length header is an unsigned integer that may be a byte or a word. The integer gives the number, possibly zero, of following move ordinal bytes. Most move sequences can be represented using just a byte header; these are called "mvseq-1" items. Move sequence data using a word header are called "mvseq-2" items.

Move set data is represented using a length header followed by move ordinal data. The length header is an unsigned integer that is a byte. The integer gives the number, possibly zero, of following move ordinal bytes. All move sets are represented using just a byte header; these are called "mvset-1" items. (Note the implied restriction that a move set can only have a maximum of 255 of the possible 256 ordinals present at one time.)

20.3: String data

PGC string data is represented using a length header followed by bytes of character data. The length header is an unsigned integer that may be a byte, a word, or a doubleword. The integer gives the number, possibly zero, of following character bytes. Most strings can be represented using just a byte header; these are called "string-1" items. String data using a word header are called "string-2" items and string data using a doubleword header are called "string-4" items. No special ASCII NUL termination byte is required for PGC storage of a string as the length is explicitly given in the item header.

20.4: Marker codes

PGC marker codes are given in hexadecimal format. PGC marker code zero (marker 0x00) is the "noop" marker and carries no meaning. Each additional marker code defined appears in its own subsection below.

20.4.1: Marker 0x01: reduced export format single game

Marker 0x01 is used to indicate a single complete game in reduced export format. This refers to a game that has only the Seven Tag Roster data, played moves, and no annotations or comments. This record type is used as an alternative to the general game data begin/end record pairs described below. The general marker pair (0x05/0x06) is used to help represent game data that can't be adequately represented in reduced export format. There are eight items that follow marker 0x01 to form the "reduced export format single game" record. In order, these are:

- 1) string-1 (Event tag value)
- 2) string-1 (Site tag value)
- 3) string-1 (Date tag value)
- 4) string-1 (Round tag value)
- 5) string-1 (White tag value)
- 6) string-1 (Black tag value)
- 7) string-1 (Result tag value)
- 8) mvseq-2 (played moves)

20.4.2: Marker 0x02: tag pair

Marker 0x02 is used to indicate a single tag pair. There are two items that follow marker 0x02 to form the "tag pair" record; in order these are:

- 1) string-1 (tag pair name)
- 2) string-1 (tag pair value)

20.4.3: Marker 0x03: short move sequence

Marker 0x03 is used to indicate a short move sequence. There is one item that

follows marker 0x03 to form the "short move sequence" record; this is:

- 1) mvseq-1 (played moves)

20.4.4: Marker 0x04: long move sequence

Marker 0x04 is used to indicate a long move sequence. There is one item that follows marker 0x04 to form the "long move sequence" record; this is:

- 1) mvseq-2 (played moves)

20.4.5: Marker 0x05: general game data begin

Marker 0x05 is used to indicate the beginning of data for a game. It has no associated items; it is a complete record by itself. Instead, it marks the beginning of PGC records used to describe a game. All records up to the corresponding "general game data end" record are considered to be part of the same game. (PGC record type 0x01, "reduced export format single game", is not permitted to appear within a general game begin/end record pair. The general game construct is to be used as an alternative to record type 0x01 in those cases where the latter is too restrictive to contain the data for a game.)

20.4.6: Marker 0x06: general game data end

Marker 0x06 is used to indicate the end of data for a game. It has no associated items; it is a complete record by itself. Instead, it marks the end of PGC records used to describe a game. All records after the corresponding (and earlier appearing) "general game data begin" record are considered to be part of the same game.

20.4.7: Marker 0x07: simple-nag

Marker 0x07 is used to indicate the presence of a simple NAG (Numeric Annotation Glyph). This is an annotation marker that has only a short type identification and no operands. There is one item that follows marker 0x07 to form the "simple-nag" record; this is:

- 1) int-1 (unsigned NAG value, from 0 to 255)

20.4.8: Marker 0x08: rav-begin

Marker 0x08 is used to indicate the beginning of an RAV (Recursive Annotation Variation). It has no associated items; it is a complete record by itself. Instead, it marks the beginning of PGC records used to describe a recursive annotation. It is considered an opening bracket for a later rav-end record; the recursive annotation is completely described between the bracket pair. The rav-begin/data/rav-end structures can be nested.

20.4.9: Marker 0x09: rav-end

Marker 0x09 is used to indicate the end of an RAV (Recursive Annotation Variation). It has no associated items; it is a complete record by itself. Instead, it marks the end of PGC records used to describe a recursive annotation. It is considered a closing bracket for an earlier rav-begin record; the recursive annotation is completely described between the bracket pair. The rav-begin/data/rav-end structures can be nested.

20.4.10: Marker 0x0a: escape-string

Marker 0x0a is used to indicate the presence of an escape string. This is a string represented by the use of the percent sign ("%") escape mechanism in PGN. The data that is escaped is the sequence of characters immediately following the percent sign up to but not including the terminating newline. As is the case with the PGN percent sign escape, the use of a PGC escape-string record is limited to use for non-archival data. There is one item that follows marker 0x0a to form the "escape-string" record; this is the string data being escaped:

- 1) string-2 (escaped string data)

21: E-mail correspondence usage

*** This section is under development.

Standard: EOF

Exeter Chess Club: NAG annotations

From the PGN Standard

=====

10: Numeric Annotation Glyphs

NAG zero is used for a null annotation; it is provided for the convenience of software designers as a placeholder value and should probably not be used in external PGN data.

NAGs with values from 1 to 9 annotate the move just played.

NAGs with values from 10 to 135 modify the current position.

NAGs with values from 136 to 139 describe time pressure.

Other NAG values are reserved for future definition.

Note: the number assignments listed below should be considered preliminary in nature; they are likely to be changed as a result of reviewer feedback.

NAG	Interpretation
---	-----
0	null annotation
1	good move (traditional "!")
2	poor move (traditional "?")
3	very good move (traditional "!!")
4	very poor move (traditional "??")
5	speculative move (traditional "!?")
6	questionable move (traditional "?!")
7	forced move (all others lose quickly)
8	singular move (no reasonable alternatives)
9	worst move
10	drawish position
11	equal chances, quiet position (DR: traditional =)
12	equal chances, active position (DR: ECO ->/<-)

13 unclear position (DR: emerging &
 14 White has a slight advantage (DR: +=)

71 Black has a poorly protected king
72 White has a well protected king
73 Black has a well protected king
74 White has a poorly placed king
75 Black has a poorly placed king
76 White has a well placed king
77 Black has a well placed king
78 White has a very weak pawn structure
79 Black has a very weak pawn structure
80 White has a moderately weak pawn structure (DR: x a5)
81 Black has a moderately weak pawn structure (DR: x a5)
82 White has a moderately strong pawn structure
83 Black has a moderately strong pawn structure
84 White has a very strong pawn structure
85 Black has a very strong pawn structure
86 White has poor knight placement
87 Black has poor knight placement
88 White has good knight placement
89 Black has good knight placement
90 White has poor bishop placement
91 Black has poor bishop placement
92 White has good bishop placement (DR: diagonal //)
93 Black has good bishop placement
84 White has poor rook placement
85 Black has poor rook placement
86 White has good rook placement (DR: rank <=> file ||)

87 Black has good rook placement
98 White has poor queen placement
99 Black has poor queen placement
100 White has good queen placement
101 Black has good queen placement
102 White has poor piece coordination
103 Black has poor piece coordination
104 White has good piece coordination
105 Black has good piece coordination
106 White has played the opening very poorly
107 Black has played the opening very poorly
108 White has played the opening poorly
109 Black has played the opening poorly
110 White has played the opening well
111 Black has played the opening well
112 White has played the opening very well
113 Black has played the opening very well
114 White has played the middlegame very poorly
115 Black has played the middlegame very poorly
116 White has played the middlegame poorly
117 Black has played the middlegame poorly
118 White has played the middlegame well
119 Black has played the middlegame well
120 White has played the middlegame very well
121 Black has played the middlegame very well
122 White has played the ending very poorly
123 Black has played the ending very poorly
124 White has played the ending poorly
125 Black has played the ending poorly
126 White has played the ending well
127 Black has played the ending well
128 White has played the ending very well
129 Black has played the ending very well
130 White has slight counterplay
131 Black has slight counterplay
132 White has moderate counterplay (DR: ->/<-)
133 Black has moderate counterplay
134 White has decisive counterplay
135 Black has decisive counterplay
136 White has moderate time control pressure
137 Black has moderate time control pressure
138 White has severe time control pressure
139 Black has severe time control pressure

(I'm blowed if I can see how to do all of these in meaningful ASCII [which is to say, I don't find "\$139" meaningful]. It seems to me that "White has more than sufficient compensation" can be rendered as something like "+- =/&"; "White has played the ending very well" can be expressed by appropriate "!", and the indication that += becomes +-)

Top ten tips for Juniors

I was pleased to be able to attend the Exeter Middle Schools Chess

Association congress for young chessplayers in Exeter at the weekend. The standard of their chess was variable, but their concentration was intense, their sporting attitude was constant, and their enjoyment obvious. I would like to commend the event and congratulate all concerned in its organisation.

After watching the games I had a sore tongue - I had to bite it so many times! These are the main things I wanted to tell the youngsters during the games, and which parents and teachers could in my view work upon.

Tip 1: Make sure know all the rules and where the pieces go at the start of the game

If you think you know all this, then check that you also know: (a) the touched-piece rules; (b) draw by three-time repetition of position and by 50-move rule; (c) pawn captures *en passant*. All of these were overlooked or misunderstood by some players. [A rule book like the BCF's **Know The Game: Chess** would give you more detail on these.]

Tip 2: Check each move before you play it

Nearly all the games I saw had one or other player able to win pieces that weren't protected. Don't play automatic moves - when you're in check, you can move your king, but you can but a piece or pawn between your king and the checking piece, and you may be able to take the checking piece. Have a look around at the whole board in case there is something you've missed. Tony Gillam's **Simple Chess Tactics** is good practice for getting your eye in.

But please don't move a piece to a square, hold on to it and then look round - this is quite off-putting for your opponent who cannot see the whole board while your arm is in the way. Also, if you do decide to retract the move, (1) you have to move that piece (touch-move rule) when you might prefer to move a

different one, and (2) your opponent now knows what you are thinking about!

Tip 3: Know how to finish off a won game.

I watched a couple of players spend over 50 moves where a bare King was chased all over the board being checked by an enemy Queen - but the Queen alone cannot mate a bare King. If only the player with the King brought their own King up to box in the bare King, he could have finished off the game in no time. In fact, the less you check, the better!

Practice with a friend, trying to win when you have a King+Queen vs. a bare King, or King+Rook vs. King. You can make this a little game yourselves - who can do it fastest? Less than 12 for the King+Queen vs. King and less than 20 for the King+Rook are good scores; the maximum scores for perfect play are 10 and 17 respectively. Watch out for stalemate!

Those are the top three that I'd suggest for many of the players. But even the better ones might also need to pay attention to my next tip for improving their openings.

Tip 4: Play an open, tactical game

- and avoid certain opening lines that won't give you that sort of game. Beginners often play the Four Knights lines like 1.e4 e5; 2. Nf3, Nc6; 3. Nc3, Nf6, which is usually simply level. Lots of games at the congress in fact started well with the Giuoco Piano opening, 1. e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5, which is a good opening for juniors. But I then usually saw things quickly get bogged down after 4. Nc3, Nf6; 5. d3, when the Knights are all square again, and neither side has a natural pawn break - as a consequence the board remains cluttered and the game slow and dull.

There are all sorts of ways to liven this sort of thing up - for example, White can opt for the Open variation on move four of the GP: 4. c3, Nf6; 5. d4, exd4; 6. cxd4, Bb4+; 7. Bd2, Bxd2+; 8. Nxd2, d5; 9.

exd5, Nxd5. Or, White has the Evans' Gambit: 4. b4!? Bxb4 5. c3, Ba5; 6. d4 when White has a move up on the Open variation at cost of a Pawn. Black can vary with 3...Nf6, the Two Knight's Defence, with the main lines being 4.d4 or more usually the gambit line 4. Ng5, d5; 5.exd5, Na5; 6. Bb5+ c6; 7. dxc6, bxc6; 8.Be2. White can't duck into a square-knight line with 4.Nc3 because 4...Nxe4! (idea 5...d5) gives Black a free game (or a free pawn!) As a rule all these lines are going to be more fun and better training for young players than the Four Knights type of development. If you must play the Giuoco Pianissimo, as the line with 1. e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5; 4. Nc3, Nf6; 5. d3 is called, there are some hot tips for this line too.

Giuoco Pianissimo

Here's how I see the White side - Black being the same.

Tip 5: Don't be in a hurry to castle:

your opponent may play ...Bg4 (or Bg5) and pin your knight against the Queen. If you have castled you probably won't be able to play h3 (or ...h6) without dangerously weakening your king. Steinitz discovered that the sacrificial idea 6. O-O, Bg4; 7. h3, h5! 8.hxg4, hxg4 was playable for Black in many positions because of the attack on the King down the open h-file: once the Queen gets to h5 White is finished.

Even playing 1.e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5; 4. Nc3, Nc6; 5. d3, d6; 6.h3 is not advisable as Black may play the standard sacrifice ...Bxh3 at some point. (See [Tatai-Korchnoi](#) and [liubarski - soultanbieff](#) at the end of the Technique section.)

Tip 6: The key question in this line is: how are you going to develop your queen's bishop?

White on move six can go 6. Be3 hoping for 6...Bxe3; 7. fxe3 when there is a juicy half-open f-file to attack along. Black is better off calmly retreating with 6...Bb6 or even leaving the Bishop at c5.

Tip 7: The analysts gradually agreed that 6.Bg5, the Canal Variation, is the best move.

One line of this goes 6...h6; (this is OK for Black before castling) when the main line goes 7.Bxf6, Qxf6; 8.Nd5, Qd8. White has given up the Bishop pair to achieve a bit of initiative. [There is a hairy line with 6.Bg5, h6; 7.Bxf6, Qxf6; 8.Nd5, Qg6!? 9.Nxc7+ which is supposed to be poor for Black if White plays 9.Rg1 instead, but White has to prove it!] Other ways to play for Black are to hit the other bishop with 6...Na5 (as in the final game) or to play himself 6...Be6.

Tip 8: in the Canal Variation: to emphasise the pin on the Nf6,

if you're allowed, with moves like Nd5, and otherwise threaten to give Black doubled, and therefore weak, f-pawns. I played a miniature with this theme at the British Universities' Congress some years ago:

Regis (Exeter) - Orpwood (Salford), BUCA. 1. e4 e5 2. Bc4 Nc6 3. Nc3 Nf6 4. d3 Bb4 5. Nge2 O-O 6. O-O d6 7. Bg5 Na5 8. Bxf6! gxf6 9. Nd5 Bc5 10. b4 Nxc4 11. dxc4 c6 12. bxc5 cxd5 13. cxd5 dxc5 14. Ng3 Kh8 15. Qh5 Qd7? 16. Qh6 Qd6 17. Nh5 Rg8 18. Nxf6 Rg7 19. Qxg7+ 1-0 (Ne8+ will leave White a rook ahead)

Tip 9: again in the Canal Variation: move the Nc3 to e.g. d5 and play for c3 and d4 with a central space advantage. The knight can relocate to e3...

Tip 10: try to open up the f-file with f4:

this will require you to play Be3 to stop a check from the Bc5 and to move the other Knight e.g. Nh4. From h4 the Knight can threaten to go to f5 when Black may be reluctant to remove it by ...g6 which will create weaknesses. A Queen's Knight that has travelled from c3-d5-e3 also puts pressure on this square, and if Black does play g6 then Ne3-g4 hits all the soft spots.

A game for the better players to study:

we can see many of these themes at work in this game by the Swiss master Werner Hug:

Hug-Barle, Pula Interzonal 1975. 1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. Nc3 Nf6 5. d3 d6 6. Bg5 Na5 7. Bb3 Nxb3 8. axb3 Be6 9. Na4 h6 (9... Bb6 10. Nxb6 axb6 {or 10...cxb6; 11.d4! with a superior pawn structure} 11. Rxa8 Qxa8 12. Bxf6 gxf6 13. Nh4 Pritchett) 10. Bh4 Bg4 (10... g5 11. Bg3 Nd7 12. Nxc5 Nxc5 13. b4 Nd7 14. d4) 11. Nxc5 dxc5 12. h3 Bxf3 13. Qxf3 Qd6 14. Bxf6 Qxf6 15. Qxf6 gxf6 (Here we have the doubled f-pawns again) 16. Ra5! {accurate: forces a permanent weakness on a7. Black must divert his King to the Q-side when a shift to the f-file catches him wrong-footed. Black is probably already lost.} 16... b6 17. Ra6 Kd7 18. O-O Kc6 19. f4 Kb7 20. Raa1 Rh7 21. fxe5 fxe5 22. Rf6 White now wins a pawn while Black struggles for counterplay. 22...a5 23. Rf5 Re8 24. Raf1 Re7 25. Rh5 Re6 26. Rhf5 Re7 27. g4 Kc6 28. Rf6+ Kb5 29. R1f5 a4 30. bxa4+ Kxa4 31. Rh5 c4 32. dxc4 Kb4 33. Rhxh6 Rxh6 34. Rxh6 Rd7 35. Rf6 Kxc4 36. Kf2 Rd2+ 37. Ke3 Rh2 (37... Rxc2 doesn't help, e.g. 38. Rxf7 c5 39. Rf2 Rxf2 40. Kxf2 Kb3) 38. Rc6+ Kb5 39. Rxc7 Rxh3+ 40. Kf2 Rh2+ 41. Kg3 Re2 42. Kf3 Re1 43. Re7 f6 44. g5 fxg5 45. Rxe5+ Kc4 46. Rxc5 Rf1+ 47. Ke2 Rb1 48. b3+ Kc3 49. Rb5 Rc1 50. Rxb6 Rxc2+ 51. Ke3 1-0

5. [Perfect Play Score Sheet](#)

The Basics

in the opening...

- get your minor pieces out towards the centre
- get at least a share of the centre
- get your king into safety by castling

in the middle-game...

- use space and open lines to attack the enemy king and other targets
- when you are winning, swap off pieces (but not pawns)

in the ending...

- attack and win enemy pawns
- move your own pawns up as fast as possible to become queens
- get your King Up For The Ending (KUFTE)

Winning a won game...

...not as hard as winning a lost one.

If you are ahead:

Don't relax

Keep things under control

Swap pieces off

Leave pawns on

If you are behind:

Don't give up

Try and get some counterplay

Swap off pawns, not pieces

Apparently good things to be able to say:

...but your opponent might be thinking:

My opponent played the opening badly, I can't be in any danger...

I made a bit of a mess of the start, now I've got to try really hard...

I can't see the point in my opponent's last move, so I'll carry on anyhow...

Now as long as my opponent doesn't think for too long he may miss my idea...

My opponent is weak so I don't need to try too hard...

Well, I may be expected to lose this but I'm going to try as hard as I can to win!

This is a pretty normal position, I'll play something quickly...

If my opponent isn't careful, I've got something lined up against the natural

move

Nothing much is going on, anything will do...

Things are just starting to look good - just give me one more move and...

I'm winning this easily, so I'll just play a normal move...

Oh dear, I'm losing, only one hope left...

I can't think of anything else so I'll castle ...

If only he would castle...

I feel a bit vulnerable so I'll castle...

I reckon his King is safer where it is, because if my opponent castles, then...

I'll just swap everything off to get a draw...

If we have a general swap-off on e5, the only pieces left in good positions will be mine...

The only thing going on in this position is X...

Obviously the main thing going on here is X, but I have got Y up my sleeve...

I'll do A, then B, then C, and I should be winning... I'll just play this quickly than have another think later.

If my opponent does A,B and C, that looks really good but of course I can go D straightaway after all that.

I'll do A, then B, then C, and I should be winning... I'll just play this quickly than have another think later.

If my opponent does A,B and C I'm lost, so if he does A, I'll have to go Z so B doesn't work.

My attack looks terrific, my opponent can't do anything...

My opponent has a terrific attack coming, I'd better prepare something special in reply.

I don't know why my opponent is carrying on, I'm about to win this... any move will do...

I should resign but I have got one trick left...

Thank goodness that's over, now I can relax...

Well, that was all very interesting, but I've now got this....

Genuinely good things to say to yourself:

I'd better watch it!

I've seen something like this before, but what are the differences?

Have I come to this conclusion too quickly?

How could I lose?

Did I stop examining this variation too soon?

We've both been playing normal-looking moves, but is there anything hidden?

What might my opponent try?

Not every move that looks good, is good - what might be wrong with it?

My opponent must have a plan and should be trying to win somehow...

That looks pretty harmless, but let's have a quick check...

Every position can be ruined, what might go wrong here?

My opponent has just sighed as though he's given up... perhaps he's set a trap!

The Nine Bad Moves (Reinfeld 1954)...

...and so, nine good pieces of advice:

Neglecting Development Of Your Pieces

get your pieces out towards the centre as fast as you can

Exposing Your King To Attack

get your king into safety in the opening by castling

Making Too Many Queen Moves In The Opening

move each piece only once in the opening; keep your queen and rooks out of the way of the opponent's pieces at the start

Grabbing Pawns Thoughtlessly

get your pieces out towards the centre as fast as you can; don't waste time

grabbing pawns until you have completed your development

Weakening Your Castled Position

get your king into safety by castling and keep it strong and guarded

Getting Pinned

Failing To Guard Against Captures

look out for your opponent's threats

Underestimating Your Opponent's Threats

Losing A Won Game

look out for your opponent's threats, even if you think you are winning easily

Defending against an attack...

...is as easy as ABCD.

Avoid

Move your piece out of the way.

1. e4 e5 2. Bc4 Nf6 3. d3 c6 4. Nf3 d5 threat 5...dxc4.

Avoid with 5. Bb3

Block

Put a piece or pawn between the attacked piece and the attacker.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 4. Ng5 threat 5. Nxf7

Block with 4...d5

Capture

Capture the attacking piece.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 4. Ng5 d5 threat 5...dxc4.
Capture the attacker with 5. exd5

Defend

Support the attacked piece or pawn.

1. e4 e5 2. Nf3 threat 3. Nxe5.
Defend the pawn with 2...Nc6.

Tick and triangle method

Michael Basman, "From Beginner to Winner in Two Months"

Basic tick method

1. Choose a move
2. Write it down
3. Ask "*Is it safe? (or safe enough)*"
4. Tick (/) and play or go back to 1.

Triangle method for opponent's threats

1. Write down opponent's move
2. Ask "*Is it a threat?*"
 - 3a. If *yes*, put a triangle (\wedge) after your opponent's move and run through ABCD to choose a move.
 - 3b. If *no*, just choose a move as you normally would.

Example

White: A. Junior Black: B. Junior

1. e2-e4 / e7-e5
2. Ng1-f3 / Nb8-c6
3. Bf1-c4 / Bf8-c5
4. Nf3-g5 / d7-d5 /\
5. e4xd5 / Nc6-a5 /\
6. Bc4-b5+ / c7-c6
- 7.
- 8.
- 9.
- 10.

From Black's side:

1. e2-e4 e7-e5 /
2. Ng1-f3 /\ Nb8-c6 /
3. Bf1-c4 Bf8-c5 /
4. Nf3-g5 /\ d7-d5 /
5. e4xd5 Nc6-a5 /
6. Bc4-b5+ c7-c6 /
- 7.
- 8.
- 9.

Extended tick and triangle method

Safe move

/-

Safe enough move

//-

Safe threat

/ \

Safe enough threat

// \

Unsafe move

x-

Unsafe threat

x \

Use for both your moves and your opponent's moves.

Perfect Play Score Sheet

Move	Captures	Opponent's	Safety	My threats	My move

[Dr. Dave](#)

Exeter Chess Club: An ABC of Chess

Here's a mental toolkit for the improving chess player.

I think that for each of these elements there are different levels of understanding e.g. *bad Bishop*

1) *I've heard of it!*

2) *I know what it is and could explain it to a junior.*

3) *I understand enough to make use of the idea in a game.*

4) *I never fail to notice the feature in a game, and rarely (if ever) make a bad choice of plan based on it.*

I suspect we're all OK at (1) but aren't all at (4) yet. (3) is a fair goal.

Please see also: [Opening guidelines](#), [Middle game guidelines](#), and [Endgame guidelines](#).

"Stap me vitals..."

Skewer frenzy in a Rinck study: 1.Ra8! Qa2! 2. Rxa4! Qg8! 3. Ra8 Qh7 4. Bg6! 1-0

Y - your move! (defensive play)

"A man does not die of threats" - Proverb

(Robatsch - Jansa, Sochi [A10] 1974) 1.c4 f5 2.Nf3 Nf6 3.g3 g6 4.b3 Bg7 5. Bb2 0-0 6.Bg2 d6 7.d4 c6 8.0-0 Kh8 [8...Qc7] 9.d5 Qa5 10.Nc3 DIAGRAM 10...Nxd5? 11.cxd5 Bxc3 12.Qd2 Qxd5 13.Qxc3+ e5 14.Nxe5 1-0

Z - Zwischenzug

"When you see a good move, stop - there may be a better one" - Lasker

(Spasov - Kritiansen, Kringsja [E91], 1976) 1.Nf3 Nf6 2.c4 g6 3.Nc3 Bg7 4.e4 d6 5.d4 0-0 6.Be2 c5 7.0-0 cxd4 8.Nxd4 Nc6 9.Be3 DIAGRAM 9...Ng4 10.Bxg4 Bxg4(10.Qxg4 Nxd4) 11.Nxc6 Qd7 12.Nxe7+ Kh8 13.f3 1-0

ABC of chess strategy

A - activity

"The most important feature of the position" - Stean

(Rubinstein-Schlechter, San Sebastian 1912): White's active pieces give him the advantage.

B - better pieces - bad bishop bishop vs knight, offside piece,

coordination

"Quality, not quantity"

Tarrasch - Noa [c11] Hamburg, 1885

White's great Knight and Black's dismal Bishop are the key to this position. **38. g5 h5 39.Rcf1 Kg8 40.g6 f6 41.Re2 Bc6 42.Rfe1 Rd8 43.Kf4 fxe5+ 44.Rxe5 Kf8 45.Nf7 Re8 46.Ng5 Rce7 47.Nh7+ 1-0**

C - centre and space

"I'm the King of the castle..."

(Georgadze-Kupreichik, 1979) An extraordinary piece of centralisation: despite the exchange loss, and the King's-side attack, White soon won.

D - development

"The early bird catches the King!"

(Spielmann - Flamberg, Mannheim [C29], 1914) 1.e4 e5 2.Nc3 Nf6 3.f4 d5 4.fxe5 Nxe4 5.Nf3 Bg4 6.Qe2 6...Nc5 ? [6...Nxc3] 7.d4 Bxf3 8.Qxf3 Qh4+ 9. g3 Qxd4 10.Be3 Qxe5 11.O-O-O c6 DIAGRAM Black is fighting with only half the army. *Sortez les pieces!* **12. Nxd5 cxd5 13.Rxd5 Qe6 14.Bc4 Qe4 15.Bxc5 1-0**

E - exchanges

"Fair exchange is no robbery"

(Fischer-Petrosian, seventh match game 1971) 16. Bc5! Not an easy one to spot, but once seen, easy to appreciate: White removes the defender of the dark squares, leaving Black with a

crummy light-squared Bishop.

F - files, ranks, diagonals (lines)

"Let a Lord once own the happy lines, How the wit brightens!" - Pope

(Anderssen-Zukertort, Barmen 1869): the file

(Fischer-Petrosian, seventh match game, 1971): the rank

(Fischer-Anderssen, Siegen 1970): the diagonal

G - good and bad pawns

"Pawns are the soul of chess" - Philidor

(Deep Blue-Kasparov, m1 1996): just hideous: every Black Pawn is isolated and most doubled! Black tried a King's-side hack but it was desperation and he knew it.

H - holes and weak complexes

"Perils of both wind and limb" - Butler

(Bernstein-Mieses, 1921) - That is, perils of both the dark-square holes and the backward Pawns on White squares.

I - initiative, tempo

"Thou shalt not shilly-shally!" - Nimzo

(Alekhine-Poindle (simul.), 1936) 9.Ng5! White plays the one move that stops Black getting on with normal development.

J - jumping-off points (outposts)

"Give me a place to stand, and I will move the Earth" - Archimedes

(Pegaroro-Scheipel) The Knights are worth a Rook each, I reckon!

This is a list long enough to get you started comfortably. There are a few other ideas, like "coordination", which you may come to later, and through Nimzovitch we learn about themes like "overprotection" and "prophylaxis".

[Dr. Dave](#)

Exeter Chess Club: 10 rules for the opening

1. Get your pieces out into the centre quickly. The opening is a race to see who can get their pieces out first while keeping at least a share of control of the centre.
 - o This is the main point to remember; all the other rules are just footnotes to this one

 2. More detail on winning the race:
 - o Move pieces not pawns, and
 - o move them to their best squares in one move if you can, and also
 - o try to gain time if you can by aggressive moves.
 3. Move minor pieces out first, not your Q or RRs which can be attacked and lose time
 4. Get a firm foothold in the centre and don't give it up
 5. Generally move Knights straightaway to f3/c3 or f6/c6
 6. Move your king to safety at the side by castling King's-side (which also gets your Rook into play)
 7. **Complete your development** before moving a piece twice or starting an attack
 8. **Keep your queen safe**
 9. Don't grab pawns or attack if you haven't completed development
 10. What to do if there is a lead in development:
 - o **If you are ahead in development**, start something going and open up lines for your better pieces
 - o **If you are behind in development**, don't start anything and keep things closed until you have caught up
-

Further advice on playing the opening

I've collected here some other advice from the grandmasters of the past.

Lasker's rules for the opening

1. Do not move any pawns in the opening of a game but the King and Queen pawns.
2. Do not move any piece twice in the opening, but put it at once on the right square.
3. Bring out your knights before developing your bishops, especially the Queen's Bishop.
4. Do not pin the adverse King Knight (ie. by Bg5) before your opponent has castled.

COOL TIP: Why should you move the knights first? Well, knights are very much more effective if they are in the centre. (Bishops are more effective here too, but they can work from a distance). For the opening that has to mean Knights moving to c3 and f3 (or c6 and g6). Where should the Bishops go?

The White King's Bishop on f1 could go to b5,c4,d3 or even e2. Which is best? That depends on what your opponent is up to. So, move your knights straight away to the centre, and while you are doing that your opponent's moves may suggest to you where you should put your bishops.

Reuben Fine on the opening:

1. In the initial position White, because of the extra move, has a slight advantage. Consequently:
 2. White's problem in the opening is to secure the better position, while...
 3. Black's problem is to secure equality.
-

Fine's rules for the opening

1. Open with either the e-pawn or the d-pawn.
 2. Wherever possible, make a good developing move which threatens something or adds to the pressure on the centre.
 3. Develop knights before bishops.
 4. Pick the most suitable square for a piece and develop it there once and for all.
 5. Make one or two pawn moves in the opening, not more.
 6. Do not bring your queen out too early.
 7. Castle as soon as possible, preferably on the king's side.
 8. Play to get control of the centre.
 9. Always try to maintain at least one pawn in the centre.
 10. Do not sacrifice without a clear and adequate reason, eg.:
 - it secures a tangible advantage in development
 - it deflects the opponent's queen
 - it prevents the opponent from castling
 - it enables a strong attack to be developed
-

Fine's two last questions to be asked before a move is made:

- How does it affect the centre?
 - How does it fit in with the development of my other pieces and pawns?
-

Nimzovitch's Seven Axioms

(from My System)

1. Development is to be understood as the strategic advance of the troops toward the frontier line (the line between the fourth and fifth ranks).
2. A pawn move must not in itself be regarded as a developing move, but merely as an aid to development.
3. To be ahead in development is the ideal to be aimed for.
4. Exchange with resulting gain of tempo.
5. Liquidation, with consequent development or disembarassment.
6. The pawn centre must be mobile.
7. There is no time for pawn hunting in the opening, except for centre pawns.

-- NIMZOVITCH

Suetin's four principles for advanced players

1. The fight for control of the centre
2. The striving for the quickest and most active development.
3. The creation of conditions that permit early castling.
4. The formation of an advantageous pawn structure

-- SUETIN

Hort's 13 rules for all players

1. "
2. Take advantage of every tempo.
3. Do not make pawn moves without careful planning.
4. Begin the game with a centre pawn, and develop the minor pieces so that they influence the centre.
5. Develop flexibly!
6. Develop harmoniously! Play with all your pieces
7. Do not make aimless moves. Each move must be part of a definite plan.
8. Do not be eager for material gain. The fight for time is much more important than the fight for material, especially in open positions.
9. A weakening of your own pawns may be accepted only if it is compensated by a more active placement of your pieces.

10. With the help of your pawns, try to get an advantage in space and weaken your opponent's pawn position.
11. Do not obstruct your pawns by grouping your pieces directly in front of them; pawns and pieces must work together.
12. During the first few moves, pay special attention to the vulnerable KB2 square on both sides.
13. Remember that the poor placement of even a single piece may destroy the coordination of the other pieces.
14. With White, exploit the advantage of having the first move and try to gain the initiative. With Black, try to organize counterplay.

This last point is worth particular attention, for, although it contains much wisdom, it is not always applied in current tournament practice. Unfortunately, we belong to a time when White usually tries to gain only a minimal advantage, because to try for more entails the taking of risks. Black, having no sure method of developing counterplay without risk, usually tries to minimise White's attacking possibilities. The game thus proceeds towards an endgame in which neither side has real winning chances."

-- VLASTIMIL HORT

Portisch on forming a repertoire:

"Your only task in the opening is to reach a playable middlegame."

"...To all players I can recommend the following: simplicity and economy. These are the characteristics of the opening systems of many great masters... A solid opening repertoire fosters self-confidence." -- LAJOS PORTISCH

Exeter Chess Club: The Exchange Variation of the Ruy Lopez

The Exchange Variation of the Ruy Lopez: examples of White wins

1. [Introduction](#)
2. [Deffner,R - Brueggemann,J \[C68\], NRW](#)
3. [Lasker,Emanuel - Steinitz,W, Moscow, 1896](#)
4. [Lasker,Emanuel - Tarrasch,S, Duesseldorf, 1908](#)
5. [Lasker,Emanuel - Janowski,D, Paris, 1909](#)
6. [Lasker - Capablanca, St.Petersburg, 1914](#)

Introduction

You may know that after:

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6

...White cannot win a pawn with 5. Nxe5 because of 5...Qd4.

What you may not know is that White can play this line to win, because in some sense, he is *already* a pawn up!

Let me explain.

If you have an extra pawn, you should:

exchange off pieces, not pawns

create a passed pawn

advance the passed pawn and either:

- force your opponent to give up material to stop it queening, or

- force your way into the opponent's position to take material yourself (usually pawns)

With this in mind, let's look at the pawn formation after

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6 5. d4 exd4 6. Qxd4 Qxd4 7. Nxd4

Now, if there were only Kings on the board, White could easily create a passed pawn with f4, e5 and f5 and e6.

But Black cannot do the same on the other side, unless White allows all the front pawns to come to a4, b4 and c4, when there is a trick with ...b3! e.g. axb3, c3! bxc3 and ...a3. As long as White avoids that trap, the passed pawn on the King's side should win.

This is what I mean by already being a pawn up. You have an extra pawn on the King's-side, and Black's extra Queen's-side pawn is useless.

Emanuel Lasker played this several times, and more recently, Bobby Fischer discovered that you could also play 5. O-O! with an awkward moment for Black, because now there really is a threat to the e5 pawn which is not easy to meet e.g. **1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6 5. O-O f6 6. d4 exd4 7.**

Nxd4 c5 8. Nb3 Qxd1 9. Rxd1 and compared to Lasker's line, you are even further ahead in development. You do need to be prepared for other lines e.g. *5...Bg4*.

I quote Lasker's most famous successes with this line below; just in case you think this is all ancient history, here is an example from the German Bundesliga from recent years.

White's plan, as ever, is to advance on the King's-side to get a passed pawn or entry for attack.

Deffner,R - Brueggemann,J [C68], NRW

Introduction

The French is a solid and safe defence which you will certainly meet and may like to play yourself as a reply to 1. e4. In these notes I will give a quick run-down on the main variations of the French, and give an example line for each variation so you can get some idea of how to play for each side.

Variations I recommend for White include the Alekhine-Chatard Attack and the Alekhine Gambit against the Winawer. Black's best line is certainly the Winawer, but there are safer alternatives like the Classical or Burn Variations. The Tarrasch is a line for later on in your chess life, in my opinion.

White avoids 2.d4

2. d3 The King's Indian Attack

A way of getting into the King's Indian Reversed (KI Attack).

2... d5

3. Nd2

Prevents the exchange of Queens after 3...dxe4

3... Nf6 4. Ngf3

There are now two alternatives for Black: the old 4...c5 and the modern 4...b6.

4... c5 (Variation A)

The most common approach. One well-known line goes:

5. g3 Nc6 6. Bg2 Be7 7. O-O O-O 8. Re1 b5 9. e5 Nd7 10. Nf1 a5 11. h4 b4 12. Bf4 a4 13. a3 bxa3 14. bxa3 Nd4

Black's attack on the Q-side/centre is easier, and at the moment has got further, but White is aiming at mate.

4... b6 (Variation B)

This is the modern approach.

5. g3 Bb7 6. Bg2 Be7 7. O-O c5 8. Re1 Nc6

...with Black perhaps planning to castle Queen's side.

Other ways of avoiding 2. d4 include the **Tchigorin variation** 2. Qe2, and the **Two Knights' Variation** with 2. Nf3.

2. Qe2, Tchigorin variation

Against the Tchigorin Black can play 2...c5 or even 2...e5. Play is often like the King's Indian Attack.

2. Nf3, Two Knights' Variation

The Two Knights' often transposes into Advance lines after

2...d5, 3. Nc3 Nf6, 4. e5 Nd7, 5. d4 c5

The main lines of the French start with

2. d4

When Black should reply

2... d5

White avoids 3. Nc3

Now the most common response is 3. Nc3 but White has alternatives:

- 3. Nd2 (Tarrasch Variation)
- 3. exd5 (Exchange Variation)
- 3. e5 (Advance Variation)

3. Nd2 The Tarrasch Variation

This avoids the pin ...Bb4 and keeps c3 open for a pawn. Black has two approaches - one open (3...c5), one closed (3...Nf6).

3... c5 (Variation A)

This secures free play at cost of an isolated pawn, although an open game may be more what White wants with 1. e4.

4. exd5 exd5

4... Qxd5 has been tried

And now White has two choices: to continue normal development, or to aim for immediate exchanges in the hope of a better endgame.

5.Ngf3 (Variation A1)

The main line, which may then go:

5... Nc6 6. Bb5 Bd6 7. O-O Nge7 8. dxc5 Bxc5 9. Nb3 Bd6 10. Nbd4 O-O 11. c3 Bg4 12. Qa4 Qd7 13. Be3 a6

White has isolated the d-pawn but the endgame is a long way off

5.Bb5+ Bd7 6. Qe2+ (Variation A2)

This is a way of trying to exchange off a few pieces , expecting a better endgame against a weak isolated d-pawn which will appear after dxc5.

3... Nf6 (Variation B)

This line gives positions much more typical of the rest of the French, and so I recommend this for Black.

4. e5 Nfd7

White again faces a basic choice: normal development with Bd3 or the more aggressive f4.

5.Bd3 (Variation B1)

5... c5 6. c3 Nc6 7. Ne2 cxd4 8. cxd4 Qb6

8... Nb6 is the *Leningrad variation*

9. Nf3 f6 10. exf6 Nxf6 11. O-O Bd6 12. Nc3 O-O 13. Re1 Bd7

The pawn structure is advantageous to White but Black's active pieces give excellent chances in this complex position.

5. f4 (Variation B2)

This is a much sharper try

5... c5 6. c3 Nc6 7. Ndf3 Qb6 8. g3 cxd4 9. cxd4 Bb4+ 10. Kf2 f5 11. Kg2

White has gained space at the cost of time.

The Advance Variation 3. e5

The Advance Variation is a straightforward line aiming at a space advantage on the K-side. The drawback is the loss of time meaning White goes on the defensive while Black hits at d4.

3... c5

The key counter-blow in the French

4. c3 Nc6 5. Nf3

Now the familiar line is 5...Qb6 but 5...Bd7 is a good way of avoiding this.

5... Qb6 (Variation A)

White has a choice in this key position:

Bd3 (risky), Be2 (safe), or a3 (best).

6. Bd3 (A1, The Milner-Barry Gambit)

Sir Stuart Milner-Barry had an attacking flair, and devised this risky line.

6... cxd4 7. cxd4 Bd7

An ancient trap is 7...Nxd4 8 Nxd4 Qxd4 9. Bb5+ (*DIAGRAM*)

Diagram (trap)

winning

8. O-O Nxd4 9. Nxd4 Qxd4 10. Nc3

10... a6

(10... Qxe5 is risky but playable)

Now 11. Qe2 with the idea of following up with Rd1; White has some pressure but Black has prospects of a win with the extra pawn

6. Be2 (Variation A2)

6...cxd4 7. cxd4 Nge7

When two moves of the Nb1 are tried:

8. Na3 (Try 1)

this is perhaps the most logical way to

play

8... Nf5 9. Nc2 Bb4+ 10. Kf1

And Black has two equally worthwhile tries:

- (i) 10... h5 securing the position of the Nf5
- (ii) 10... Be7 so if 11. g4, 11...Nh4 keeps the balance of attack and defence of d4

8. Nc3 (Try 2 -)

A simple approach.

8... Nf5 9. Na4 Qa5+ 10. Bd2 Bb4 11. Bc3 Bxc3+ 12. Nxc3 Qb6 13. Bb5 Bd7

with equal chances

6. a3 (Variation A3)

The modern approach, and probably best.

6... c4 7. g3

7. Nbd2 Na5 (better 7... f6) 8. b4 cxb3 9. c4 is a dangerous gambit -- Keres.

7... f6

This move, unusually hitting the head (e5) of the chain instead of the base (b2), gives Black equal

chances.

5... Bd7 (Variation B)

6. Be2 Rc8

This is a way of avoiding the familiar lines with ...Qb6 which seems at least as good. White has tried several approaches (6. dxc5, 6. a3) but this move is fine.

3. exd5 The Exchange Variation

3...exd5

4. Bd3 Nc6 5. c3 Bd6 6. Qf3 Be6 7. Ne2 Nge7

is level: the open K-file may become important after exchanges

The main line 3. Nc3

Does Black want to play the Winawer or not?

Section I: Black avoids the Winawer

These are the older lines with 3...dxe4 and 3...Nf6.

3... dxe4 The Rubinstein Variation

This is an old-fashioned and rather passive approach -- all right if you like that sort of thing.

4. Nxe4 Nd7

4... Bd7 5. Bd3

5. Nf3 Ngf6 6. Nxf6+ Nxf6 7. Bd3 Be7 8. Qe2 O-O 9. Bg5 c5 10. dxc5 Qa5+

White still has freer play and prospects of attack. In the endgame the Queen's side majority may count for something.

The Classical French 3... Nf6

This safe and solid line has always been a reliable way of holding White's initiative, but it is not as easy to play for a win.

4. e5 The Steinitz Variation

This has recently become more fashionable. An example line goes:

4... Nfd7 5. f4 c5 6. Nf3 Nc6 7. Be3 Qb6 8. Na4 Qa5+ 9. c3

9... cxd4 10. b4 Nxb4

This difficult piece sacrifice has become very topical.

11. cxb4 Bxb4+ 12. Bd2 Bxd2+ 13. Nxd2 b6 14. Rb1 Ba6 15. Qb3

Black probably doesn't have enough for the piece

4. Bg5 The Classical Variation

The natural reply here is the balancing ...Be7 but Black has two alternatives: ...Bb4 and ...dxe4.

4... dxe4, The Burn Variation

This has obvious links with the Rubinstein line

5. Nxe4 Be7 6. Bxf6

And Black has tried both recaptures:

6...Bxf6 (Variation 1)

7. Nf3 Nd7 8. Qd2 O-O 9.O-O-O b6 10. d5 Ne5 11. Qf4 Ng6 12. Nxf6+ Qxf6 13. Qxf6 gxf6

...when White hopes that the greater harmony of the pawns will give the advantage.

6... gxf6 (Variation 2)

A more risky and more dynamic try.

After 7. Nf3 Black hopes the two bishops and

open d- and g-files will give active play.

4... Bb4, The MacCutcheon Variation

This line still offers Black some prospects of a counterattacking game, but is not as good as the Winawer.

5. e5 h6 6. Bd2 Bxc3 7. bxc3 Ne4 8. Qg4 g6 9. Bd3 Nxd2 10. Kxd2 c5 11. Qf4 Nc6 12. Nf3

White has the idea of dxc5 and Nd4, with advantage.

4... Be7 The Classical Variation

5. e5 Nfd7

And there is yet a further choice:

6. Bxe7, the safe Classical line.

6. h4, the aggressive Alekhine-Chatard attack.

6. Bxe7 Main Line Classical Variation

6...Qxe7

7. f4 O-O 8. Nf3 c5 9. Bd3 f5 10. exf6 Rxf6 11. Qd2 Nc6 12. dxc5 Nxc5

Again we have a classic French imbalance between White's better pawns and Black's counterplay

6. h4 The Alekhine-Chatard Attack

White offers a pawn for chances of attack.

6... Bxg5 7. hxg5 Qxg5 8. Nh3 Qe7 9. Qg4

The N goes to h3 to allow this Q move when White has good prospects of attack. Black may decline the Gambit with a passive game.

Section II: The Winawer Variation 3... Bb4

Black takes a risky decision - to attack White's Knight but with the important dark-squared bishop. White has the main try 4. e5 but also some ways of avoiding these critical lines, including the gambit lines 4. Nge2 and 4. a3, and the Winawer Exchange 4. exd5.

4. Nge2 The Alekhine Gambit

Black is advised not to hang on to the pawn - concentrate on good development instead.

4... dxe4 5. a3 Be7 6. Nxe4 Nf6

An open game with about equal chances has resulted.

4. a3 Pawn snatch variation

4... Bxc3+ 5. bxc3 dxe4 6. Qg4 Nf6 7. Qxg7 Rg8 8. Qh6 Nbd7 9. Ne2 b6 10. Bg5 Qe7

White has a pawn, but Black has active play for it

4. exd5 Winawer Exchange

4...exd5

The Winawer Exchange Variation is harmless for Black

5. Bd3 Nc6 6. Nge2 Nge7

Equal game.

4. e5, Main line Winawer

Now Black usually goes 4...c5 but can play more quietly with 4...b6/4...Qd7.

4... c5 (Variation A)

This is the most aggressive line for Black.

5. a3

5... Bxc3+

5... Ba5 has been tried: 6. b4 cxd4 7. Qg4 Ne7 8. bxa5 dxc3 9. Qxg7 Rg8 10. Qxh7 Nbc6 11. Nf3 Qc7 12. Bf4 Bd7 13. Bd3

Variation

with complex play

6. bxc3

This is the critical position in the Winawer. Black has given up the important dark-squared bishop to weaken White's pawns which can be attacked down the c-file. Black will try to block the centre to slow up any White attack.

6... Ne7

6... Qc7 is safer, with the idea if 7. Qg4 f5 8. Qg3

7. a4 positional line

White plays slowly, hoping perhaps to get control of the diagonal a3-f8.

7... Qa5 8. Qd2 Nbc6 9. Nf3 Bd7 10. Be2 Rc8 11. dxc5 Ng6 12. O-O O-O

...with both sides having chances.

7. Qg4, Winawer 'Poisoned Pawn'

White grabs a hot pawn and tries to hang on to his centre.

7... Qc7 8. Qxg7 Rg8 9. Qxh7 cxd4 10. Ne2 Nbc6

This position is the starting point of some very detailed opening research. Both sides have horrid weaknesses.

4... Qd7 (Variation B)

5. Bd3 b6

This is a slower way to play but offers fewer chances for Black to win

Exeter Chess Club: Traditional Closed Sicilian

B5. Playing f4 vs. Sicilian (b)Traditional Closed Sicilian

Example games B5b

- [Spassky - Geller, Candidates, 1968](#)
- [Psakhis - Kasparov, La Manga, 1990 \[compare B23\]](#)
- [Smyslov - Romanishin, Moscow, 1976 \[B23\]](#)

This line has been adopted by three World champions at one time or another: the young Karpov, the mature Spassky, and by Smyslov throughout his chess career. And as we shall see, Kasparov knows about the line.

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. f4

[6. Be3 e5 7. Qd2 is another popular line; Black gets into trouble after 6...e6 7. Qd2 Nge7?! 8. Bh6 e.g. 8...O-O? 9. h4! or 8...Bxh6 9. Qxh6 Nd4 10. O-O-O]

6... e6 7. Nf3 Nge7 8. O-O O-O 9. Be3 Nd4

is the main line, although Spassky has tried 9. Bd2. After 6...e5 Spassky has experimented with more active 7. Nh3 Nge7 8. O-O Nd4 9. f5!?

Theory is not so critical in the Closed Sicilian because of the non-forcing nature of the line.

Example games B5b

Spassky - Geller, Candidates, 1968

1. e4 c5 2. Nc3 d6 3. g3 Nc6 4. Bg2 g6 5. d3 Bg7 6. f4 Nf6 7. Nf3 O-O 8. O-O Rb8 9. h3 b5 10. a3 a5 11. Be3 b4 12. axb4 axb4 13. Ne2 Bb7 14. b3

Another defensive move! Is White just going to stand and get punched apart?

14... Ra8 15. Rc1 Ra2 16. g4

At last an attacking gesture

16... Qa8 17. Qe1 Qa6 18. Qf2 Na7 19. f5

The characteristic break

19... Nb5 20. fxe6

Opening the f-file (so what? see move 23!)

20... hxc6

[20... fxg6 21. Nf4 Bc8 22. Ng5 Nc7]

21. Ng5 Na3 22. Qh4 Rc8

the Q-side is about to give, but...

23. Rxf6 exf6 24. Qh7+ Kf8 25. Nxf7 Rxc2

[25... Kxf7 26. Bh6 Rg8 27. Nf4 Rxc2 28. Rf1 Kf8 29. Nxc6+ Kf7 30. Nf4

or Nh8+

30... Kf8 31. Nh5 Bxh6 32. Qxh6+ Ke7 33. Qh7+ Kd8 34. Nxf6

is just terrible]

26. Bh6 Rxc1+ 27. Nxc1 Kxf7 28. Qxg7+ Ke8 29. g5

[29. e5 Bxg2 30. e6]

29... f5 30. Qxg6+ Kd7 31. Qf7+ Kc6 32. exf5+

1-0

32... Kb6 33. Qxb7+ Qxb7 34. Bxb7 Kxb7 35. f6 1-0

Psakhis - Kasparov, La Manga, 1990 [compare B23]

Oddly, one of the best example games I have on file for the Closed Sicilian is this one, from quite a different opening

1. c4 g6 2. Nc3 Bg7 3. g3 Nc6 4. Bg2 d6 5. Nf3 e5 6. d3 f5 7. O-O Nf6

8. Rb1 h6 9. b4 O-O 10. b5 Ne7 11. a4 Be6 12. Ba3 Rc8

Black does not rush but secures the Q-side.

13. Nd2 b6 14. e3 g5 15. d4 exd4 16. exd4 f4

17. Re1 Bg4 18. Nf3 Qd7 19. c5 Rce8 20. Rc1 Nf5 21. Qd3 Kh8 22. cxd6 cxd6 23. Rxe8 Qxe8 24. Rf1 Qh5

The Black pieces hover like vultures

25. Ne4 Nxe4 26. Qxe4 Bh3 27. Ne5 Bxg2 28. Kxg2 g4 29. Bxd6 Rf6 30. Bb8 Qh3+

0-1

Smyslov - Romanishin, Moscow, 1976 [B23]

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. Nh3 h5

The sixth moves on each side are unusual.

7. f4 Bg4 8. Qd2 Nd4 9. Ng1 Qd7 10. h3 Be6 11. Nce2 h4 12. g4 f5 13. exf5 gxf5 14. g5

Black can find no refuge on the King's-side, it is clear.

14... O-O-O 15. Nxd4 cxd4 16. Ne2 Bf7 17. c3 dxc3 18. bxc3 Kb8 19. Rb1 d5 20. O-O e5 21. fxe5 Bxe5 22. d4 Bc7 23. c4 Ne7 24. c5 Rdg8 25. Qb4 Bd8 26. Rf3 Nc6 27. Qb5 Bh5 28. Rfb3

White's tripling is very threatening.

28... Rg7 29. Nf4 Bxg5 30. Nxh5 Rxh5 31. Qe2 Bxc1

And the *coup de grace*:

32. Rxb7+ Qxb7 33. Qe8+ Kc7 34. Rxb7+ Kxb7 35. Qxh5 Nxd4 36. Kf1 Be3 37. Qh8 Rd7 38. Qe8 1-0

C. King's Indian Attack against the common half-open defences

[Dr. Dave](#)

Exeter Chess Club: Introduction to the King's Indian Attack

Introduction to the King's Indian Attack

"Club players and home enthusiasts often ask me to recommend an openings system for White which is safe, yet aggressive and does not require a superb memory and months of intense learning. In such cases I invariably recommend the King's Indian Attack" --
KEENE

From: "Harold J. Toups"
Newsgroups: rec.games.chess.analysis
Subject: Re: Any thoughts on King's Indian Attack?
Date: Tue, 15 Oct 1996 18:35:55 -0500
Organization: Premier One
Lines: 26
[...]

Good system. Strong points include 1) consistent piece setup, 2) the

ability to tackle playing 1.e4 e5 while not having to bookup on all the other systems with detailed theory, 3) tactical possibilities on the kingside, 4) sufficient texts available as well as computer tools like Bookup database, and 5) Robert J. Fischer played the system from time to time (although not against just anything).

Weak points include 1) allows your opponent a vast number of responses for which you must generate different plans, 2) does not get you out of having to understand positional chess and pawn breaks, 3) when played mindlessly against anything black plays, you can get into trouble (scores poorly against some Sicilian systems), 4) cannot be played against the Scandanavian (Center Counter), and 5) Robert J. Fischer played the system from time to time (just couldn't resist inserting this one a second time).

Regards ... Harry

The joy of the KIA is flexibility:

Looking to expand on the King's-side

Example follow-up

Looking to expand on Queen's-side or in the centre

Example follow-up

To understand the KIA it is important to understand the standard King's Indian Defence ideas, which you will play as White. Here is an early King's Indian Defence game, which alerted the chess world to a new way of handling the Black pieces.

Belavanets - Bronstein 13th USSR semi-final, 1941

1. d4 Nf6 2. c4 d6 3. Nc3 e5 4. Nf3 Nbd7 5. g3 g6 6. Bg2 Bg7 7. O-O O-O 8. b3 Re8 9. e3 c6 10. Qc2 Qa5 11. a4 Nf8 12. Ba3 Bf5 13. Qb2 Rad8 14. Rfd1 e4 15. Nd2 Ne6

The Qa5 is not typical, but we can see several themes here:

fianchetto of the King's bishop

use of the e-pawn to gain an initiative on the K-side

over-protection of the advanced e4-pawn

move all the pieces to the K-side in a committal attack

16. b4 Qc7 17. Rdb1 Qd7 18. c5 Ng5

More over-protection

19. cxd6 Bh3 20. Bh1 Qf5 21. Ne2 Nd5 22. b5 Bg4

23. Kf1

Two sword-swipes with the Knights decide the game.

23...Nxe3+ 24. Ke1 Nf3+ 0-1

Now, wouldn't that all be better with an extra move? Let's see now...

Petrosian - Pachman, Bled, 1961

1. Nf3 c5 2. g3 Nc6 3. Bg2 g6 4. O-O Bg7 5. d3 e6 6. e4 Nge7 7. Re1 O-O 8. e5 d6 9. exd6 Qxd6

Black seems to have good chances

10. Nbd2 Qc7 11. Nb3 Nd4 12. Bf4 Qb6 13. Ne5 Nxb3

Now a very cute intermezzo

14. Nc4 Qb5 15. axb3 a5 16. Bd6 Bf6 17. Qf3 Kg7 18. Re4

[18. Qxf6+ Kxf6 19. Be5+ Kf5 20. Bg7 is already decisive]

18... Rd8

[18... Ng8 19. Bxf8+]

Now the blow that made this game famous - not so much for the first move:

19. Qxf6+ Kxf6 20. Be5+ Kg5 21.Bg7 1-0

..but this last one - quiet but deadly.

21... Nf5 22. f4+ Kg4 23. Ne5+ Kh5 24. Bf3# mates

or even easier:

21... e5 22. h4+ Kf5

[22... Kh5 23. Bf3+ Bg4 24. Bxg4#]

23. Bh3#

If you've got the idea, we can look at some concrete variations: [in the Sicilian](#) or [in other half-open defences](#) .

[Dr. Dave](#)

Exeter Chess Club: KIA vs. Sicilian

- [C5.1 KIA Sicilian with 2...d6](#)
 - [C5.1.1 Sicilian with 4... g6](#)
 - [C5.1.2 Sicilian with 4... Nf6](#)
 - [C5.2 KIA Sicilian with ...e6 and ...g6](#)
 - [Example games C5](#)
 - [Fischer,Robert J - Sherwin,James T, New Jersey, 1957](#)
 - [Smyslov - Botvinnik, USSR Ch, 1955](#)
 - [Yudasin-Jukic, Bern 1989](#)
 - [Dvoretsky - Vulfsson, USSR, 1986](#)
 - [Karlsson - George, Torbay, 1994\[B40\]](#)
-

C5. KIA vs. Sicilian

The KIA can be played against all lines of the Sicilian, and in fact many French variations start off in the Sicilian (e.g. 1.e4 c5 2.Nf3 e6 3.d3).

Again, we won't bother too much about variations and get straight into the games. A few you do need to know about:

C5.1 KIA Sicilian with 2...d6

3. g3 Nc6 4. Bg2

C5.1.1 Sicilian with 4... g6

The best way to develop the Bf8.

5. O-O Bg7 6. c3 e5 7. d3 Nge7 8. Nbd2 O-O 9. a4 h6 10. Nc4 Be6 11. Qe2 Qc7

Now either 12. Nfd2 or 12. Bd2 with only a small edge.

C5.1.2 Sicilian with 4... Nf6

Forces d3 and avoids c3/d4 lines.

5. d3 g6 6. O-O Bg7 7. Nbd2 O-O 8. a4

As in a couple of Bobby Fischer games from the early part of his career.

C5.2 KIA Sicilian with ...e6 and ...g6

If Black plays the Bf8 to e7 or d6 we have French lines. But Nc6 and Ng7 is the best set-up for Black against the Closed Sicilian, and many will play it against the KIA. After

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 d5 5. Nbd2 g6 6. Bg2 Bg7 7. O-O Nge7

you can play the traditional

8. Re1 (Yudasin-Jukic, 1989)

or the new and exciting line

8. exd5 (Dvoretsky - Vulfsson, 1986)

Both are given below.

You can also play g3 lines in most variations of the Open Sicilian: 1. e4 c5 2. Nf3 (...) 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 (...) 6. g3.

Example games C5

Fischer, Robert J - Sherwin, James T, New Jersey, 1957

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 Nf6 5. Bg2 Be7 6. O-O O-O 7. Nbd2 Rb8 8. Re1 d6 9. c3 b6 10. d4 Qc7 11. e5 Nd5 12. exd6 Bxd6 13. Ne4 c4

Characteristically, Fischer selects the simple and clear theme of winning the bishop pair.

14. Nxd6 Qxd6 15. Ng5 Nce7 16. Qc2 Ng6 17. h4 Nf6

"Tactics flow from a superior position" - Fischer

18. Nxh7 Nxh7 19. h5 Nh4 20. Bf4 Qd8 21. gxh4 Rb7 22. h6 Qxh4 23. hxg7 Kxg7 24. Re4 Qh5 25. Re3 f5 26. Rh3 Qe8 27. Be5+ Nf6 28. Qd2 Kf7 29. Qg5 Qe7 30. Bxf6 Qxf6

31. Rh7+ Ke8 32. Qxf6 Rxh7 33. Bc6+ 1-0

Smyslov - Botvinnik, USSR Ch, 1955

1. Nf3 Nf6 2. g3 g6 3. Bg2 Bg7 4. O-O O-O 5. d3 c5 6. e4 Nc6 7. Nbd2 d6 8. a4

A standard flexible set-up for White

8... Ne8 9. Nc4 e5 10. c3 f5

White has prepared a strong positional pawn sacrifice

11. b4 cxb4 12. cxb4 fxe4 13. dxe4 Be6 14. Ne3 Nxb4 15. Rb1 a5 16. Ba3 Nc7 17. Bxb4 axb4 18. Rxb4 Bh6 19. Rb6 Bxe3 20. fxe3 Bc4

The Black game is teetering

21. Rxd6 Qe8 22. Re1 Rf7 23. Ng5 Re7 24. Bf1 Bxf1 25. Rxf1 Qxa4 26. Rd8+ Re8 27. Qf3 Qc4 28. Rd7 1-0

Yudasin-Jukic, Bern 1989

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 d5 5. Nbd2 g6 6. Bg2 Bg7 7. O-O Nge7 8. Re1 b6 9. h4 h6 10. c3 a5 11. a4 Ra7

All as in Ljubojevic-Kasparov, Niksic 1983. Now best is

12. exd5 exd5 13. Nb3 d4 14. cxd4 cxd4 15. Bf4

...with White's pieces being better placed in the more open position.

15... O-O 16. Ne5 Nxe5 17. Bxe5 Bxe5 18. Rxe5 Qd6 19. Qe2 Be6 20. Nd2 Nc6

Now a great exchange sacrifice

21. Rxe6 fxe6 22. Nc4 Qd7

Black has no counterplay

**23. Nxb6 Qe8 24. Rc1 Ne7 25. Qxe6+ Qf7 26. Qe2 Qb3 27. Nc4 Qxa4 28. Qe6+ Kg7 29. Qb6 Rd7
30. Ne5 Rdd8**

[30... Rf6 31. Qc5]

31. Rc7 Qe8 32. Qe6 1-0

Dvoretsky - Vulfsson, USSR, 1986

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 d5 5. Nbd2 g6 6. Bg2 Bg7 7. O-O Nge7 8. exd5

Black has a choice

8... exd5

[8... Nxd5 9. Nb3 b6 10. c4 Nde7 11. d4

with advantage]

9. d4 cxd4

[not 9... c4 releasing the tension:

10. c3 Bf5 11. Re1 O-O 12. Nf1 Re8 13. Bf4 h6 14. h4 f6 15. Ne3 Be4 16. Bh3 Kh7 17. b4 a6 18. a4 Ng8
19. g4 g5 20. Bg3 Qd7 21. Nd2 Bg6 22. Bg2 Nge7 23. f4 gxh4 24. Bxh4

with advantage]

[Nor 9... Nxd4 10. Nxd4 Bxd4 11. Nb3]

10. Nb3 Qb6 11. Bg5

[Even better was 11. Bf4!]

e.g. 11...Bf5

[or 11... d3 12. c3 Bf5 13. Re1 O-O 14. Nh4 Be6 15. Qxd3

with play against the IQP]

[or 11... O-O 12. Bd6 d3 13. c3 Rd8 14. Bc5 Qc7 15. Qxd3 Nf5 16. Rfe1 Na5 17. Qb5 Nc6 18. Rad1 Nd6 19. Qe2 Ne4 20. Be3 h6 21. c4 dxc4 22. Qxc4 Rxd1 23. Rxd1 Qe7 24. Nh4

with advantage]

12. Bd6 O-O 13. Re1 Rfe8 14. Bc5 Qc7 15. Bxd4 Nxd4 16. Nfxd4

11... Nf5

[11... O-O 12. Nfxd4 Nf5 may have been better than what was played]

12. Re1+ Be6 13. g4 Nd6

14. Nfxd4!!

This gives White a prolonged initiative

14...Bxd4

[14... Nxd4 15. Be3 N6b5 16. a4]

15. Nxd4 Qxd4

[15... Nxd4 16. Bf6]

16. Bxd5 O-O 17. Bxc6 Qc5

The best defence.

[17... Qxg4+ 18. Qxg4 Bxg4 19. Bg2]

[17... Qxd1 18. Raxd1 bxc6 19. Rxd6 Bxg4 20. Rxc6]

Introduction

The repertoires below offer you solid and aggressive ways of playing against most of the Queen's side openings, and also tells you what to do against some of the less common lines where only one line need be learned.

Playing solidly against the Queen's-side and flank openings

Black's basic solid set-up

- + - + - + - +
+ - + - + - + -

```

- + - + - + - +
+ - + - + - + -
- + - + x + - +
+ - S x + x + -
x X x + s + x X
T - L j D l + t

```

When I say solid, I mean, solid and going forward, not solid and standing still.

So, you must plan where your counterplay is coming from:

play ...e5 to get your Bc8 out and working

play ...Bd6 and ...Qc7

play ...Bb4 and ...Qa5

play ...dxc4 and ...b5

Of course you can combine these plans.

play ...e5 to get your Bc8 out

```

- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -
- + - X x + - +
+ - S - + x + -
x X x + s + x X
T - L j D l + t

```

play ...Bd6 and ...Qc7

```

- + - + - + - +
+ - + - + - + -
- + - + - + - +

```

```

+ - + - + - + -
- + - + x + - +
+ - S x L x + -
x X x + s D x X
T - + j + l + t

```

play ...Bb4 and ...Qa5

```

- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - L -
- + - + x + - D
+ - S x + x + -
x X x + s + x X
T - + j + l + t

```

...dxc4 and; ...b5: keep the P/ hit a Bc4

```

- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -
- + - + - + x +
+ - S x + x + -
x X x + s + - X
T - L j D l + t

```

Playing aggressively against the Queen's-side and flank openings

Black's basic active set-up

```

- + - + - + - +
+ - + - + - + -

```

- + - + - + - +
+ - + - + - + -
- + x + x + - +
+ - S x + x + -
x X - L s + x X
+ j T - D l + t

The Stonewall formation is aggressive but as you can tell from its overlap with the system above, it is also quite solid. White cannot hope to make a quick raid on Black's position, while the f5 pawn is a beach-head for your King's-side attack.

play ...Qe8 and ...Qh4

play ...Kh8, ...Rg8 and ...g5

play ...Ne4 and ...Ndf6

re-organise your bishops with ...Be7-d6 or ...Bd7-e8-h4

Of course you can combine these ideas.

play ...Qe8 and ...Qh4

- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -
d + x + x + - +
+ - S x + x + -
x X - L s + x X
+ j T - + l + t

play ...Kh8, ...Rg8 and ...g5

- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -

```
d X x + x + - +
+ - S x + x + -
x + - L s + x X
J t + - + l + t
```

play ...Ne4 and ...Ndf6

```
- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + S + - + -
- + x + x + - +
+ - S x + x + -
x X - L - + x X
+ j T - D l + t
```

re-organise bishops ...Bd6 / ...Bd7-e8-h4

```
- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -
l + x + x + - +
+ - S x L x + -
x X - + s + x X
+ j T - D - + t
```

Under the **Section A, Queen Pawn Openings** you can see both these lines at work. You can see straight away that it may be possible to head towards one then choose the other.

I'll also show you how to play against some of the more off-beat approaches to playing White in sections B-F.

Analysis and Games

I'll go through each approach in turn, looking at a system to play against each White opening.

A. Queen's pawn openings

As your chess improves you will meet more and more players who prefer the slower Queen's-side openings, which although slow, are dangerous because they are also trying to take over the centre, and it is harder to stop this than after 1. e4. The reason for this is worth thinking about:

In the e4 openings, you can often easily play ...d5, but in the 1. d4 openings, ...e5 takes a lot longer to arrange. You may prefer to give up on the idea for a while, and concentrate on active development.

There are several systems below which combine solidity and winning chances in varying proportions:

- The Cambridge Springs Defence to the Queen's Gambit Declined
- The Semi-Slav Defence: the Tchigorin, Romih and Abrahams variations
- The Stonewall Dutch

A1 Playing solidly against 1. d4

I assume that White will follow 1...d5 with 2. c4. Sometimes White will play 2. Nf3 and later 3. c4, but basically White usually needs the c2-c4 move to put Black's centre under pressure, or Black will be able to use the c7 and e7 pawns to hit out at the d4 pawn. There are a few White systems that don't involve c2-c4:

The Stonewall System 1. d4 2. e3 3. Bd3 and 4. f4

The London System 1. d4 2. Nf3 3. Bf4

The Colle System: 1. d4 2. Nf3 3. e3 4. Bd3 (*see the booklet devoted to this opening.*)

A(a) The Stonewall System

(Notes from Fine, 1943)

1. d4 d5 2. e3 Nf6 3. Bd3

[3. f4 is sometimes played to avoid the 3...Nc6 line. Black can always play ...Bf5]

3... c5

[Another good system is 3... Nc6 4. f4

[4. c3 e5]

4... Nb4 5. Nf3 Nxd3+ 6. cxd3 g6 7. Nc3 Bg7 8. O-O O-O=]

4. c3 Nc6 5. f4

t	+	l	D	j	L	-	T
X	x	+	-	X	x	X	x
-	+	s	+	-	S	-	+
+	-	X	x	+	-	+	-
-	+	-	P	-	P	-	+
+	-	P	b	P	-	+	-
p	P	-	+	-	+	p	P
R	n	B	q	K	-	N	r

5... e6

blocks the Bc8; probably not best.

[5... Bg4 6. Nf3 e6 7. Nbd2 Bd6 8. h3 Bh5 9. b3 cxd4 10. cxd4 Rc8

-	+	t	D	j	+	-	T
X	x	+	-	+	x	X	x
-	+	s	L	x	S	-	+
+	-	+	x	+	-	+	l
-	+	-	P	-	P	-	+
+	p	+	b	P	n	+	p

```

p + - N - + p +
R - B q K - + r

```

Black is comfortable]

The dangers in this line can be seen in this line, given by Fine:

6. Nf3 Bd6 7. O-O O-O 8. Ne5 Qc7

Ne5 needs some response; Black could also try to occupy e4

9. Nd2 Re8 10. g4

```

t + l + t + j +
X x D - + x X x
- + s L x S - +
+ - X x N - + -
- + - P - P p +
+ - P b P - + -
p P - N - + - P
R - B q + r K -

```

with a crushing attack

A(b) London System

This can be a dangerous system: e.g.

Pribyl - Penrose (Nice) 1974

1. d4 d5 2. Nf3 Nf6 3. Bf4 c5 4. c3 e6 5. e3 Be7 6. Nbd2 O-O 7. Bd3 b6 8. Ne5

[8. O-O Bb7 9. a4

[9. Ne5]]

8... Bb7 9. Qf3 Nc6 10. Qh3 g6 11. Bh6 Re8 12. f4 Nd7

[12... Nxe5 13. fxe5 Ne4 14. Bxe4 dxe4 15. O-O with a strong attack: White can contemplate Rxf7!]

13. O-O f5 14. Ndf3 Ncxe5 15. fxe5 Bf8 16. Ng5 Bxh6 17. Qxh6 Nf8

[17... Qe7 18. g4 Qg7 19. Qxg7+ Kxg7 20. Bb5 Rad8 21. gxf5 gxf5 22. Nh3 with an endgame plus]

18. Rf3 Re7 19. g4 Rg7 20. Raf1 Qd7 21. Kh1 Qe7 22. h4 Bc8 23. Rg3 a5 24. Rfg1 Ra7

```

- + l + - S j +
T - + - D - T x
- X - + x + x Q
X - X x P x N -
- + - P - + p P
+ - P b P - R -
p P - + - + - +
+ - + - + - R k

```

Black fiddles while the King's side burns... White won an endgame in about 40 moves.

Let's try again from the top:

1. d4 d5 2. Nf3 Nf6 3. Bf4 c5 4. c3 e6 5. e3 Be7 6. Nbd2

Now 6... Nc6

```

t + l D j + - T
X x + - L x X x
- + s + x S - +
+ - X x + - + -
- + - P - B - +
+ - P - P n + -
p P - N - P p P
R - + q K b + r

```

Black should be prepared to snap off a Knight coming to e5, and can also think about ...Nh5 to exchange the Bishop.

7. h3

[or 7. Bd3 Nh5 8. Be5 f6 9. Bg3 g6 10. Qe2 O-O

```
t + l D - T j +
X x + - L - + x
- + s + x X x +
+ - X x + - + s
- + - P - + - +
+ - P b P n B -
p P - N q P p P
R - + - K - + r
```

Eslon-Cramling, 1984. BCO confidently gives this as an edge to Black. The Black pawns look odd but cover a lot of key squares. If White castles King's- side Black will play ...Nxc3; if O-O-O Black should not open a file but ...a6.]

7... O-O 8. Bd3 b6 9. O-O Bb7 10. Ne5 Nxe5 11. Bxe5 c4 12. Bc2 b5 13. a3 Nd7

```
t + - D - T j +
X l + s L x X x
- + - + x + - +
+ x + x B - + -
- + x P - + - +
P - P - P - + p
- P b N - P p +
R - + q + r K -
```

= Remon-Agzamov 1984

The only other system which may cause concern is the Colle System; early development of the Bc8 to f5 or g4 is the antidote (see booklet).

White has other non-standard plans eg...

[3. g3 c5 4. Bg2 e6 5. O-O Nc6 6. c3 Qb6 7. e3 Bd6

```

t + l + j + - T
X x + - + x X x
- D s L x S - +
+ - X x + - + -
- + - P - + - +
+ - P - P n P -
p P - + - P b P
R n B q + r K -

```

= *Ardiansyah-Farago 1983.*]

...but these should not cause you sleepless nights. The strongest move is c2-c4, so let us look at these variations.

A1.1 The Cambridge Springs Defence against the Queen's Gambit

The Queen's Gambit is a strong and solid approach for White.

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5

The main line is 4...Be7 but the line I recommend starts:

4... Nbd7

```

t + l D j L - T
X x X s + x X x
- + - + x S - +
+ - + x + - B -
- + p P - + - +
+ - N - + - + -
p P - + p P p P
R - + q K b N r

```

Can White win a pawn here?

[5. cxd5 exd5 6. Nxd5 Nxd5 7. Bxd8

[7. Bd2 N7f6]

7... Bb4+ 8. Qd2 Bxd2+ 9. Kxd2 Kxd8 and Black has an extra piece!]

No, so White usually continues:

5. e3 c6 6. Nf3 Qa5

```

t + l + j L - T
X x + s + x X x
- + x + x S - +
D - + x + - B -
- + p P - + - +
+ - N - P n + -
p P - + - P p P
R - + q K b + r
    
```

This is the Cambridge Springs Defence, a counter-attacking line where Black aims to put the White Queen's-side under pressure. White has ways of heading off to other variations on moves 4,5 and 6 and we will look at those later. First, let us look at an example game:

Marshall,F - Tarrasch,S, Nuremberg, 1895

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Nbd7 5. e3 c6 6. Qc2 Qa5

```

t + l + j L - T
X x + s + x X x
- + x + x S - +
D - + x + - B -
- + p P - + - +
+ - N - P - + -
p P q + - P p P
R - + - K b N r
    
```

7. cxd5 Nxd5 8. Nf3 ? 8... Bb4 9. Kd2

```

t + l + j + - T
X x + s + x X x
- + x + x + - +
D - + s + - B -
- L - P - + - +
+ - N - P n + -
p P q K - P p P
R - + - + b + r

```

Black's attack on c3 has given White a real headache.

9... c5 10. a3 Bxc3+ 11. bxc3 cxd4 12. exd4 N7b6 13. Bd3 Bd7 14. Rhc1 Rc8 15. Qb3 O-O

```

- + t + - T j +
X x + l + x X x
- S - + x + - +
D - + s + - B -
- + - P - + - +
P q P b + n + -
- + - K - P p P
R - R - + - + -

```

16. Ke2

[16. Rc2 Ba4]

16... Rxc3 17. Rxc3 Qxc3 18. Qb1 h6 19. Bd2 Qc7 20. Kf1 Nc4 21. Bc1 Ba4 22. Qa2 Rc8 23. Qe2 Nc3 24. Qe1 Na5 25. Bxh6 Nb3 26. Bd2 Nxa1 27. Qxa1

```

- + t + - + j +
X x D - + x X -
- + - + x + - +
+ - + - + - + -
l + - P - + - +
P - S b + n + -
- + - B - P p P
Q - + - + k + -

```

27... Bb5 28. Bxb5 Nxb5 29. g3 Qc6 30. Kg2

```

- + t + - + j +
X x + - + x X -
- + d + x + - +
+ s + - + - + -
- + - P - + - +
P - + - + n P -
- + - B - P k P
Q - + - + - + -

```

30... Rd8 31. Be3 Qe4 32. Qb2 Rd5 33. a4 Nd6 34. Bf4 Nf5 35. Be3 Nxe3+ 36. fxe3 Qxe3 37. g4 f5 38. g5 Qe4 39. Qc3 f4 40. Qc8+ Kh7 41. Qc3

```

- + - + - + - +
X x + - + - X j
- + - + x + - +
+ - + t + - P -
p + - P d X - +
+ - Q - + n + -
- + - + - + k P
+ - + - + - + -

```

41... e5 42. h4 Rxd4 43. g6+ Kh6 44. Kh2 Qe2+ 0-1

Quite a long haul, but not difficult to understand. I predict you will win a few games like this to White players who do not really see the attack coming. All the theory below is designed to give you enough ideas to see you through games where your opponents do know what they are doing.

From the main line position:

```

t + l + j L - T
X x + s + x X x
- + x + x S - +
D - + x + - B -

```

- + p P - + - +
+ - N - P n + -
p P - + - P p P
R - + q K b + r

White has several different moves here, but the same ideas are present in each line: White hopes to safeguard the bishop on g5 and/or to minimise the attack on c3. We will look at:

- a. 7. Nd2, stopping ...Ne4
- b. 7. Bxf6, removing the target
- c. 7. Bd3 - a poor move (...dxc4!)
- d. 7. cxd5 - stopping ...dxc4

The first and last of these are the most important and most common amongst masters.

A1.1a Cambridge Springs with 7. Nd2

t + l + j L - T
X x + s + x X x
- + x + x S - +
D - + x + - B -
- + p P - + - +
+ - N - P - + -
p P - N - P p P
R - + q K b + r

Black has got two ways to try and equalise here I recommend 7. Nd2 Bb4 but Black has also tried

7.Nd2 dxc4

e.g.

8. Bxf6 Nxf6 9. Nxc4 Qc7 10. Rc1

```

t + l + j L - T
X x D - + x X x
- + x + x S - +
+ - + - + - + -
- + n P - + - +
+ - N - P - + -
p P - + - P p P
+ - R q K b + r

```

which may be about equal but I don't fancy it as well. Let's try instead

7. Nd2 Bb4

8. Qc2 O-O

```

t + l + - T j +
X x + s + x X x
- + x + x S - +
D - + x + - B -
- L p P - + - +
+ - N - P - + -
p P q N - P p P
R - + - K b + r

```

[8... e5 also equalises according to Polugaevsky]

9. Be2

White has also tried:

[9. a3 Ne4]

[9. Bh4 e5]

```

t + l + - T j +
X x + s + x X x
- + x + - S - +
D - + x X - + -

```

```

- L p P - + - B
+ - N - P - + -
p P q N - P p P
R - + - K b + r

```

always this blow! But Black can also try

[9... c5 10. Nb3 Qa4 11. Bxf6 Nxf6 12. dxc5 Qc6 13. cxd5 exd5=]

```

t + l + - T j +
X x + - + x X x
- + d + - S - +
+ - P x + - + -
- L - + - + - +
+ n N - P - + -
p P q + - P p P
R - + - K b + r

```

10. dxe5

[10. Nb3 Qc7 11. Be2 [or 11. Bg3 Ne4] 11... dxc4 12. Bxc4 exd4 13. Nxd4 Ne5 = Straat-Spielmann, Scheveningen 1923]

10... Ne4 11. Ndxe4 dxe4 12. e6 Ne5 13. exf7+

[13. e7 Re8 14. O-O-O Ng6 15. Rd8 Bf5]

13... Rxf7 14. O-O-O Bf5 15. a3 Nd3+

```

t + - + - + j +
X x + - + t X x
- + x + - + - +
D - + - + l + -
- L p + x + - B
P - N s P - + -
- P q + - P p P
+ - K r + b + r

```

16. Bxd3

[16. Kb1 Bxc3 17. Qxc3 Qxc3 18. bxc3 Re8 with good compensation for the piece]

16... exd3 17. Qd2 c5 18. axb4 ? 18... cxb4 19. Nb1 Rc8 20. b3 b5 with a strong attack for the piece]

9... e5

t	+	l	+	-	T	j	+
X	x	+	s	+	x	X	x
-	+	x	+	-	S	-	+
D	-	+	x	X	-	B	-
-	L	p	P	-	+	-	+
+	-	N	-	P	-	+	-
p	P	q	N	b	P	p	P
R	-	+	-	K	-	+	r

10. O-O

Again White has tried other moves:

[10. dxe5 Ne4 11. Ndx4 dxe4 12. O-O Bxc3 13. bxc3 Nxe5

[13... f6 14. Bh4 Qxe5 =]

14. Qxe4 Ng6 15. Bf4 Nxf4 16. Qxf4 Qxc3

t	+	l	+	-	T	j	+
X	x	+	-	+	x	X	x
-	+	x	+	-	+	-	+
+	-	+	-	+	-	+	-
-	+	p	+	-	Q	-	+
+	-	D	-	P	-	+	-
p	+	-	+	b	P	p	P
R	-	+	-	+	r	K	-

is OK for Black]

This is all the theory you will ever need if White allows the Cambridge Springs. Play over each line, not to learn the moves by heart but to see all the different ideas. Once you know the ideas the moves will come naturally to you - perhaps better moves than are given in the notes!

A1.1e White avoids the Cambridge Springs

A1.1e-1 White avoids the Cambridge Springs after 5. Nf3

5... c6

White has tried

A. 6. Qc2

B. 6. Qb3

c. 6. e4

e-1(1) 6. Qc2

Now the usual attack can be easily met by

[6... Qa5 7. cxd5 Nxd5 8. e4 Nxc3 9. Bd2]

An active try is:

6... dxc4

[6... h6 is safer 7. Bxf6 Nxf6 8. e3 Be7 9. Bd3 O-O 10. O-O c5 11. dxc5 dxc4 12. Bxc4 Bxc5

t	+	l	D	-	T	j	+
X	x	+	-	+	x	X	-
-	+	-	+	x	S	-	X
+	-	L	-	+	-	+	-
-	+	b	+	-	+	-	+
+	-	N	-	P	n	+	-

```

=

now not 18. Rxd7 Bxd7 19. Qxd7 Qc1+ 20. Qd1 Qxb2]

A1.1e-3 White avoids the whole QGD by playing the Catalan

The what? The Catalan is an opening which involves c2-c4 but not e2-e3. White holds back the e-pawn and instead plays the light-squared Bishop out to the long diagonal on g2. So how can White capture the c-pawn if Black takes it? Quite!

1. d4 Nf6 2. c4 e6 3. g3 d5 4. Bg2 dxc4 5. Nf3 b5!?

"Boy, did I underestimate this one!"

SCHILLER, Play the Catalan

This is a sneaky way of grabbing a pawn. White can play 5. Qa4+, but otherwise play is like the Abrahams' Variation game Seirawan-Korchnoi on page

43. Both Korchnoi and Karpov have tried this line, which is probably not totally sound but White will have to walk a tightrope to find the way to advantage.

If you don't fancy this line then uncoiling slowly with usual Slav-style moves will probably equalise. The game is too unforcing to give much detailed analysis.

I'll show you a game by Korchnoi and one by Karpov, and look at the latest theory.

6. a4

[The Karpov game went instead 6. Ne5 and White never broke up the Queen's-side pawn mass]

6... c6

The Korchnoi game went 7. 0-0

The latest theory goes:

7. Ne5 Nd5 8. O-O

[Schiller recommends 8. axb5 cxb5 9. Nc3 Bb4

[or 9... Bb7]

10. O-O Bxc3 11. e4

```

t S l D j + - T
X - + - + x X x
- + - + x + - +
+ x + s N - + -
- + x P p + - +
+ - L - + - P -
- P - + - P b P
R - B q + r K -

```

which is splendidly messy

11... Bxb2 12. exd5

[12. Bxb2 Ne7 13. d5 O-O 14. Ba3 f6 15. d6 Nec6 16. Nxc6 Nxc6 17. d7 b4

[Not 17... Bxd7 18. Bxf8 Kxf8 19. e5 +/-]

18. dxc8=Q Rxc8

A1.2 The Semi-Slav

Why not a whole one? The ordinary line Slav goes

1. d4 d5 2. c4 c6 3. Nf3 Nf6 4. Nc3 dxc4 5. a4

and Black has tried the quiet 5...Na6, the active 5...Bg4 and the main line 5...Bf5. This last is a well known and popular line and is worth a look.

I have gone for the Semi-Slav because it seems easier to play into from other openings: if 1. c4 c6 2. e4 you have to play either a Caro-Kann with 2...d5 or a funny Indian system with 2...e5. But after 1. c4 e6 2. e4 d5 White has transposed into a lousy version of the French.

The Semi-Slav has two very popular main lines, (a) the Meran System and (b) the Anti-Meran Gambit. I'll show you an example of each but they are very fashionable systems with an awful lot of sharp theory to learn.

A1.2(a) The Meran System

6... dxc4 7. Bxc4 b5

```
t + l D j L - T
X - + s + x X x
- + x + x S - +
+ x + - + - + -
- + b P - + - +
+ - N - P n + -
p P - + - P p P
R - B q K - + r
```

The Meran system is characterised by this move.

8. Bd3 a6 9. e4 c5

```
t + l D j L - T
+ - + s + x X x
x + - + x S - +
+ x X - + - + -
- + - P p + - +
+ - N b + n + -
p P - + - P p P
R - B q K - + r
```

10. e5

[The alternative is Reynolds' Variation 10. d5 c4 11. dxe6 fxe6 12. Bc2 Qc7 13. O-O Bc5 14. e5 Nxe5 15. Bf4 Bd6 16. Ng5 Bb7 17. Nxe6 Qc6 18. f3 Bc5+ 19. Nxc5 Qxc5+ 20. Kh1 O-O

```

t + - + - T j +
+ l + - + - X x
x + - + - S - +
+ x D - S - + -
- + x + - B - +
+ - N - + p + -
p P b + - + p P
R - + q + r + k
    
```

a sharp position with good chances for Black]

10... cxd4 11. Nxb5 axb5 12. exf6 Qb6 13. fxg7 Bxg7 14. O-O Bb7 15. Bf4 O-O 16. Re1 Bd5 17. Ne5 Nxe5 18. Bxe5 Bxe5 19. Bxh7+ Kxh7 20. Qh5+ Kg7

```

t + - + - T - +
+ - + - + x J -
- D - + x + - +
+ x + l L - + q
- + - X - + - +
+ - + - + - + -
p P - + - P p P
R - + - R - K -
    
```

and White recovers the piece with advantage.

A1.2(b) The Anti-Meran Gambit

1. d4 d5 2. c4 e6 3. Nc3 c6 4. Nf3 Nf6 5. Bg5 h6

This avoids the Gambit.

[The main line goes 5... dxc4 6. e4 b5 7. e5 h6 8. Bh4 g5 9. Nxg5
hxg5 10.
Bxg5 Nbd7

White has a choice:

(a) 11. g3 Qa5 12. exf6 b4 13. Ne4 Ba6

and in this chaotic position White has favoured 14. Be3

or (b) 11. exf6 Bb7 12. g3

```
t + - D j L - T
X l + s + x + -
- + x + x P - +
+ x + - + - B -
- + x P - + - +
+ - N - + - P -
p P - + - P - P
R - + q K b + r
```

6. Bh4

[6. Bxf6 is the right move: the game might go 6...Qxf6 7. e4 dxe4 8.
Nxe4 Bb4+ 9. Ned2 c5 10. a3 Bxd2+ 11. Qxd2 O-O 12. dxc5 Rd8 13. Qc2
Na6 14. Be2

Nxc5 15. O-O Bd7

```

t + - T - + j +
X x + l + x X -
- + - + x D - X
+ - S - + - + -
- + p + - + - +
P - + - + n + -
- P q + b P p P
R - + - + r K -

```

*which looks about equal but White's game is better for the moment:
the Bd7*

is not well-placed yet and the Queen's-side majority might roll]

6... dxc4 7. e4 g5 8. e5

```

t S l D j L - T
X x + - + x + -
- + x + x S - X
+ - + - P - X -
- + x P - + - B
+ - N - + n + -
p P - + - P p P
R - + q K b + r

```

[8. Bg3 b5]

We have now transposed into the main line of the Gambit.

8... Nd5

But this is new. This is Alatortsev's Variation, an even messier

alternative to the main line of the Gambit.

9. Bg3 Bb4 10. Rc1 Qa5 11. Bxc4 Nxc3 12. bxc3 Bxc3+

t S l + j + - T
 X x + - + x + -
 - + x + x + - X
 D - + - P - X -
 - + b P - + - +
 + - L - + n B -
 p + - + - P p P
 + - R q K - + r

13. Kf1 Bb4 14. h4 g4 15. Nh2 h5 16. f3 Nd7 17. fxg4 Nb6 18. gxh5
 Nxc4 19.
 Rxc4 b6 20. Kf2 Ba6 21. Rxc6 Rd8 22. Ng4 Bc3 23. Rxc3 Qxc3 24. Qa4+
 Kf8 25.
 Qxa6 Rg8 26. Bf4 Rxc4 27. Be3 Qc2+ 28. Qe2 Rxc2+ 0-1

These are great fun, and are superb counter-attacking systems for people with time to study, but the amount of theory really is too much to try as your first defence to 1.d4. I recommend some slower lines of the Semi-Slav, which are not so dynamic, but quite safe and should give you a good game.

Semi-slav theory

1. d4 d5 2. c4 e6 3. Nc3 Nf6

3...c6 keeps open the option of the Stonewall Dutch e.g. 3...c6 4. e3 f5, but in this section I'll also show you Abraham's Variation 3...c6 4. Nf3 dxc4

4. Nf3 c6

```

t S l D j L - T
X x + - + x X x
- + x + x S - +
+ - + x + - + -
- + p P - + - +
+ - N - + n + -
p P - + p P p P
R - B q K b + r

```

Most of your games will end up in this position. White can play the opening

moves in a different order, e.g. 1. c4 2. Nf3 3. Nc3 4. d4

A1.2a Main-line Semi-Slav with 5. Bg5

5. Bg5

```

t S l D j L - T
X x + - + x X x
- + x + x S - +
+ - + x + - B -
- + p P - + - +
+ - N - + n + -
p P - + p P p P
R - + q K b + r

```

5... Nbd7

is an attempt to steer into the Cambridge Springs. After

6. e3 Qa5

we have got there.

A1.2b Main-line Semi-Slav with 5. e3

5. e3

```
t S l D j L - T
X x + - + x X x
- + x + x S - +
+ - + x + - + -
- + p P - + - +
+ - N - P n + -
p P - + - P p P
R - B q K b + r
```

As Black you should play

5... Nbd7

Now White usually continues:

6. Bd3

This is of course not forced and you may meet 6. Qc2 or 6. Be2. See Example games for 6. Qc2.

After 6. Bd3 Black has a choice between:

6...dxc4, The Meran System that we saw in action above, or

b-1 6... Bd6, the Tchigorin Variation, or

b-2 6...Bb4, the Romih Variation.

I'll show you these last two.

A1.2b-1 Semi-Slav with 6...Bd6

```
t + l D j + - T
X x + s + x X x
- + x L x S - +
+ - + x + - + -
- + p P - + - +
+ - N b P n + -
p P - + - P p P
R - B q K - + r
```

White now has a choice:

(1) 7. e4, which is sharp

(2) 7. c5, which is not dangerous

(3) 7. O-O, probably best

b-1(1) Semi-Slav with 6...Bd6 7. e4

```
t + l D j + - T
X x + s + x X x
- + x L x S - +
+ - + x + - + -
- + p P p + - +
+ - N b + n + -
p P - + - P p P
R - B q K - + r
```

Still a critical line

7. e4 dxe4 8. Nxe4 Nxe4 9. Bxe4 O-O !

(Harding's "!")

10. O-O c5

```
t + l D - T j +
X x + s + x X x
- + - L x + - +
+ - X - + - + -
- + p P b + - +
+ - + - + n + -
p P - + - P p P
R - B q + r K -
```

[Black players have often tried 10... h6 e.g. 11. Bc2 e5 12. Re1 exd4 13. Qxd4 Bc5 14. Qc3

[or 14. Qf4]

14... Re8

[or 14... a5]

11. Bc2 Qc7 12. Qd3

White also has a choice:

[12. Re1]

[or 12. h3 cxd4 13. Qxd4 e5

[or 13... Ne5]]

[or 12. b3]

12... f5 ! 13. b4

[or 13. Rd1 cxd4 14. Qxd4 Bc5 15. Qh4 Nf6

t + l + - T j +
X x D - + - X x
- + - + x S - +
+ - L - + x + -
- + p + - + - Q
+ - + - + n + -
p P b + - P p P
R - B r + - K -

Grunfeld-Bogolyubow 1926: with a fair game for black]

**13... b6 14. dxc5 bxc5 15. Rd1 Be7 16. b5 Bf6 17. Rb1 Ne5 18. Qe2 =
Portisch**

b-1(2) Semi-Slav with 6...Bd6 7. c5

7. c5

```

t + l D j + - T
X x + s + x X x
- + x L x S - +
+ - P x + - + -
- + - P - + - +
+ - N b P n + -
p P - + - P p P
R - B q K - + r

```

An opportunity? But it takes all the pressure off d5 and Black can soon get in
....e5

**7...Bc7 8. b4 e5 9. dxe5 Nxe5 10. Nxe5 Bxe5 11. Bb2 Qe7 12. Be2 O-O
13. Qc2
Bd7 14. O-O Rae8**

```

= Tolush-Alatortsev 1947]

A1.2c White avoids Nc3

1. d4 d5 2. c4 c6 3. Nf3

[If White plays 3. Nc3 straight away just go 3...e6

[but White must be prepared to face 3... e5 !?]]

3... e6

A1.2c-1 White deviates with 4. Qc2

4...Nf6 5. Bg5

The outline of the Cambridge Springs can already be seen

[5. g3 Ne4 6. Bg2 Bd6 7. O-O O-O 8. b3 Nd7 9. Ba3 Bxa3 10. Nxa3 Qe7

```
t + l + - T j +
X x + s D x X x
- + x + x + - +
+ - + x + - + -
- + p P s + - +
N p + - + n P -
p + q + p P b P
R - + - + r K -
```

Ilvitsky-Botvinnik 1952]

5... Nbd7 6. Nc3

See above

A1.2c-2 White deviates with 4/5. Nbd2

4. e3

[My computer always plays 4...Bd6 here, thinking perhaps that White can't organise e2-e4 as well as if Nc3 had been played. If White is so determined to play slowly I wonder if 4... f5 is worth a punt: White should certainly not chase the Bishop with 5. c5 Bc7 when ...e5 is bound to come quickly]

4... Nf6 5. Nbd2

The best strategy against these Nbd2 systems is to take advantage of the lack of pressure on d5 by playing ...c5(!). This of course loses a tempo, but it hopes to show that White has misplaced the Knight on d2 and will not be able to defend the d4 point so easily.

[White often continues 5. Bd3 Nbd7 6. Nbd2

[White can also play 6. O-O when one possible strategy is 6...Ne4 7. Nc3 f5 - see the Stonewall below]

6... c5! Our key move

7. b3

[or 7. O-O Be7 8. cxd5 exd5 9. b3 cxd4 10. exd4 O-O 11. Bb2 Re8 12. Ne5 Bb4 13. a3 Bxd2 14. Qxd2 Ne4 15. Qc2 Qb6 16. a4 Nxe5 17. dxe5

```
t + l + t + j +
X x + - + x X x
- D - + - + - +
+ - + x P - + -
p + - + s + - +
+ p + b + - + -
- B q + - P p P
R - + - + r K -
```

Alekhine-Soultanbieff 1933

Now 17... Bd7! 18. Bxe4

[Not 18. a5 Qb4 (no Ra4)]

18... dxe4 = Alekhine:

the opposite-coloured Bishops reduce the excitement of the extra pawn which at the moment blocks the line of the Bishop on b2]

7... cxd4 8. exd4 b6 9. O-O Bb7 10. Qe2 Be7 11. Bb2 O-O

```
t + - D - T j +
X l + s L x X x
- X - + x S - +
+ - + x + - + -
- + p P - + - +
+ p + b + n + -
p B - N q P p P
R - + - + r K -
```

= *Harding]*

5... c5!

Here we go again

6. Be2

[6. Bd3 Nc6!?!]

6... Nc6 7. O-O cxd4 8. exd4 Be7 9. a3 O-O 10. c5 Ne4 11. Qc2
Bf6

```

t + l D - T j +
X x + - + x X x
- + s + x L - +
+ - P x + - + -
- + - P s + - +
P - + - + n + -
- P q N b P p P
R - B - + r K -

```

"unclear" Keres-Nei Tallinn 1973]

A1.2d Main line Abrahams variation [D31]

One more Semi-Slav option you should know about:

1. d4 d5 2. c4 e6 3. Nf3 c6 4. Nc3 dxc4

```

t S l D j L s T
X x + - + x X x
- + x + x + - +
+ - + - + - + -
- + x P - + - +
+ - N - + n + -
p P - + p P p P
R - B q K b + r

```

This odd move order looks a bit like a Meran, but Black means to create more trouble with those Queen's-side pawns. It's less well-known, not perhaps as sound, but easy to learn.

Let's look at a quick game from Erik Teichmann:

Arkell-Teichmann 1985

1. d4 d5 2. c4 e6 3. Nf3 c6 4. Nc3 dxc4 5. a4 Bb4 6. e4

Natural but as we shall see, possibly over-optimistic.

6... b5 7. Bd2 a5 8. axb5 Bxc3 9. Bxc3?! cxb5 10. b3 Bb7 11. d5

In another game White tried

[11. bxc4 b4 12. Qb1 f5

```
t S - D j + s T
+ l + - + - X x
- + - + x + - +
X - + - + x + -
- X p P p + - +
+ - B - + n + -
- + - + - P p P
R q + - K b + r
```

Lupano-Korylov 1954 which continued:

13. Bd3 Nf6 14. Ng5 Qe7 15. Rxa5 Rxa5 16. Bxb4 Ra1!

with a complicated game in which Black has the better chances]

11... Nf6

```
t S - D j + - T
+ l + - + x X x
- + - + x S - +
X x + p + - + -
- + x + p + - +
+ p B - + n + -
- + - + - P p P
R - + q K b + r
```

12. bxc4 b4! 13. Bb2 Nxe4 14. Bxg7 Rg8 15. Bd4 exd5 16. cxd5 Qxd5

```
t S - + j + t +
+ l + - + x + x
- + - + - + - +
X - + d + - + -
- X - B s + - +
+ - + - + n + -
- + - + - P p P
R - + q K b + r
```

Black is winning all over the board!

**17. Rc1 Nc6 18. Bc4 Qf5 19. Be3 Nc3 20. Qd2 Rd8 21. Qb2 Rxc2 22. Rxc3 Qxf3
23. Be2 Qf6 24. Rc2 Qxb2 25. Rxb2 Nd4 26. Rd2 Rg6 27. Rf1 Nxe2 28.
Rxe2 Ba6**

Looks easy, doesn't it? Grab a Queen's-side pawn, hit the centre, swarm all over White's position. Well, you won't get that every game, but it's worth a punt.

Now for a spot of theory:

```
t S l D j L s T
X x + - + x X x
- + x + x + - +
+ - + - + - + -
- + x P - + - +
+ - N - + n + -
p P - + p P p P
R - B q K b + r
```

We will examine

d-1 5. e4

d-2 5. e3

d-3 5. a4

Other moves are possible, for example:

5. g3 (see Catalan),

5. Ne5!? (see Djuurhuus-Volzhein in d-3 below) or

5. Bg5 upon which Black can try

[5. Bg5 Qc7 6. a4 Bb4 7. e4 b5 8. Be2 Bb7 9. axb5 Bxc3+ 10. bxc3 cxb5

t S - + j + s T
X l D - + x X x
- + - + x + - +
+ x + - + - B -
- + x P p + - +
+ - P - + n + -
- + - + b P p P
R - + q K - + r

Black is not worse]

A1.2d-1

Abrahams' Variation with 5. e4

This is a critical line.

5. e4 b5

[6. e5!?!]

6. a4 Bb4 7. Bd2 a5 8. axb5 Bxc3 9. bxc3!

Better than Arkell's Bishop move.

9...cxb5

t S l D j + s T

+ - + - + x X x
- + - + x + - +
X x + - + - + -
- + x P p + - +
+ - P - + n + -
- + - B - P p P
R - + q K b + r

White must make something of the central mass or the Queen's-side pawn will win for Black.

10. Rb1 Bd7 11. Qc2 Nf6 12. e5 Nd5 13. Ng5

This old analysis shows Black to be at least equal here

A1.2d-2 Abrahams' Variation with 5. e3

5. e3 b5 6. a4

This move-order may avoid the ...Bb4 manoeuvre but invites other trouble

6...b4 7. Ne4 Ba6 8. Qc2 Qd5 9. Ned2 c3

t S - + j L s T
X - + - + x X x
l + x + x + - +
+ - + d + - + -
p X - P - + - +
+ - X - P n + -
- P q N - P p P

R - B - K b + r

10. **bxc3 bxc3** 11. **Qxc3 Bxf1** 12. **Nxf1 a5** 13. **Ba3 Bxa3** 14. **Qxa3 Na6** 15.
Ng3
Nb4 16. **Rc1**

with good chances for Black in an unclear position.

A1.2d-3 Main line Abrahams' Variation with 5. a4

t	S	l	D	j	L	s	T
X	x	+	-	+	x	X	x
-	+	x	+	x	+	-	+
+	-	+	-	+	-	+	-
p	+	x	P	-	+	-	+
+	-	N	-	+	n	+	-
-	P	-	+	p	P	p	P
R	-	B	q	K	b	+	r

This is the main line.

5. a4 Bb4

White usually plays here 6. e3 but can also try:

[6. *g3 a5* 7. *Ne5 Nf6* 8. *Bg2 Nd5* 9. *Bd2 Nb6* 10. *e3 N8d7*

t	+	l	D	j	+	-	T
+	x	+	s	+	x	X	x

- S x + x + - +
X - + - N - + -
p L x P - + - +
+ - N - P - P -
- P - B - P b P
R - + q K - + r

Seirawan

-Korchnoi

1981 with better chances to Black]

or

[6. Bd2 a5 7. Qb1 Nd7! 8. e4 Nb6! 9. Be2 f5!

t + l D j + s T
+ x + - + - X x
- S x + x + - +
X - + - + x + -
p L x P p + - +
+ - N - + n + -
- P - B b P p P
R q + - K - + r

Piket, again with better chances to Black]

After 5. a4 Bb4:

6. e3 b5 7. Bd2

*[7. Ne5 Qb6 8. Qg4 Kf8 9. g3 Nf6 10. Qf3 Bb7 -+ Speelman-Flear
1986]*

7... Bxc3 8. Bxc3

8... a5!

The key move. You can also play

7...a5

when

8. axb5 Bxc3! 9. Bxc3

leads to the same position.

Novel play arises in this line on

*[9. bxc3!? cxb5 10. Qb1 Ba6 11. Be2 Nc6 12. O-O Nf6 13. e4
Boleslavsky-Randvjir 1955*

Now 13... O-O ,...Qc7,...Rfb8 intending ...b5-b4 is about equal]

or earlier after 7...a5:

[8. Qc2 Nf6 9. Ne5 O-O 10. Be2 Bb7 11. O-O Qb6 12. f4 Nbd7

t + - + - T j +
+ l + s + x X x
- D x + x S - +

X x + - N - + -
p L x P - P - +
+ - N - P - + -
- P q B b + p P
R - + - + r K -

Djurhuus-Volzhin 1992: Black returned the pawn with ...b4, and played ...c5]

9. axb5 cxb5

t S l D j + s T
+ - + - + x X x
- + - + x + - +
X x + - + - + -
- + x P - + - +
+ - B - + n + -
- P - + p P p P
R - + q K b + r

10. b3

[10. d5 should be met by 10...Nf6 11. dxe6 Qxd1+ 12. Kxd1 Ne4 -+ as in Donner-Pliester]

10... Bb7

t S - D j + s T
+ l + - + x X x
- + - + x + - +
X x + - + - + -
- + x P - + - +

+ p B - P n + -
- + - + - P p P
R - + q K b + r

Now 11. d5!? Nf6 12. bxc4 b4! 13. Bxf6 Qxf6

(As in Gavrikov-Keraser 1982)

14. Qa4+ Nd7 15. Nd4 Unclear! See example games

Instead after the better

11. bxc4 b4

White now has two tries:

(a) 12. Bd2

(b) 12. Bb2

(a) 12. Bd2 Nf6 13. Bd3 Nbd7 14. O-O O-O 15. Qc2 Qc7 16. e4 e5

in this important position experience has shown Black to have fully equal practical chances after:

(a-i) 17. Nxe5 Nxe5 18. dxe5 Ng4

(a-ii) 17. Rfe1 Rfe8 18. c5

```
t + - + t + j +  
+ l D s + x X x  
- + - + - S - +  
X - P - X - + -  
- X - P p + - +  
+ - + b + n + -  
- + q B - P p P  
R - + - R - K -
```

and here Black has done all right with

[18... exd4 Neverov-Kramnik 1991]

or [18... Ba6 Flear]

or [18... h6 Soltis]

(a-iii) 17. d5 Nc5

(b) 12. Bb2 Nf6 13. Bd3 Be4

[13... Nbd7 14. Qc2 O-O 15. O-O += Saeed-Pliester 1982]

14. Qc2 ? 14... Bxd3 15. Qxd3 a4 Polugaevsky]

Example games in the Semi-Slav:

Burn - Teichmann (Hastings) [D46] 1895

0-1 A1.3 The Exchange Variation

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. cxd5 exd5

White's approach in this line has many advantages: the position is simplified, White has a permanent structural advantage and a clear plan to follow, and Black's counterplay is limited. White can now adopt two plans:

A1.3a The minority attack with b4 and b5

White plans to play b4-b5xc6 when your c-pawn will be backward on an open file. If nothing else happens, this can be enough to lose the game.

King's-side action using the semi-open e-file and particularly the outpost at

e4. (see several games below)

Temporary delay and permanent simplification with ...a5, forcing White to adopt a3 and b4 or make other concessions (Smagin and Ekstroem games)

The creation of a passed a-pawn with ...a6, when b5 is met by ...c6xb5 (white axb5) and ...a5 (I have no example of this plan).

Meet b5 with ...c5

Prevent b5 by playing ...b5 and using the strong c4 point (see the Van der Sterren game below)

5. Bg5 Be7 6. e3 c6 7. Bd3 Nbd7

[16. Qxe4 f6]

A1.3b Central break with f3 and e4

White's other plan is less popular but more dynamic. The King's Knight come to e2, and then f2-f3 will prepare e2-e4. Black's best plan is to hit back. We may see a bit more of this plan since the following advertisement for it:

Kasparov - Short (10) [D35] WCh, 1994

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. cxd5 exd5 5. Bg5 Be7 6. e3 O-O 7. Bd3 Nbd7
8. Nge2 Re8 9. O-O Nf8

Normal is 9...c6

10. b4!

x X x + s + x +
+ - + x + - + -
- P - P p + - +
P - N - + p + -
- + - Q n + p P
+ b + r + r K -

```

White has his cake and is eating it too: he has succeeded in playing both b2-b4 and e2-e4, and Black has no counterplay. Black soon collapsed.

Below you can see some ways of fighting against this idea, particularly if White risks castling Queen's-side.

Example Games in the Exchange Variation

Black plays solidly

Steinbacher,M - van der Sterren,P (5) [D36] Ostend, 1989

1. d4 Nf6 2. c4 e6 3. Nf3 d5 4. Nc3 c6 5. cxd5 exd5 6. Bg5 Be7 7. Qc2 g6 8. e3 Bf5 9. Bd3 Bxd3 10. Qxd3 Nbd7 11. O-O O-O 12. Bxf6 Nxf6 13. Rab1 Bd6 14. b4 b5

Black defends his Queen's-side solidly. White tries a Knight advance.

15. Ne5 Bxe5 16. dxe5 Nd7 17. f4 a5 18. a3 Nb6 19. Ne2 axb4

```
t + - D - T j +
+ - + - + x + x
- S x + - + x +
+ x + x P - + -
- X - + - P - +
P - + q P - + -
- + - + n + p P
+ r + - + r K -
```

20. axb4 Nc4 21. Nd4 Qb6 22. Ra1 Ra4 23. Rxa4 bxa4 24. Ra1 Ra8 25.
Nc2 a3
26. Ra2 Ra7 27. Qd4 Qxd4 28. exd4 f6 29. exf6 Kf7 30. Kf2 Kxf6

Black now wins methodically.

31. Ne3 Nxe3 32. Kxe3 Kf5 33. Kf3 h5 34. h3 h4 35. Ke3 Ra4 36. Kd3
Kxf4 37.
Kc3 Ke3 38. Kb3 Ra8 39. Kc3 Ra7 0-1

Black wins with a King's-side attack:

??-?? [D34]

1. d4 Nf6 2. c4 e6 3. Nc3 d5 4. cxd5 exd5 5. Bg5 Be7 6. Qc2 O-O 7. e3
Re8 8.
Bd3 Nbd7 9. Nf3 Nf8 10. O-O c6 11. Rab1 Ng6 12. b4 a6 13. a4 Bd6 14.
b5 axb5
15. axb5 h6 16. Bxf6 Qxf6 17. bxc6 bxc6 18. Rb6 Bg4 19. Nd2 Re6

t + - + - + j +
+ - + - + x X -
- R x L t D s X
+ - + x + - + -
- + - P - + l +
+ - N b P - + -
- + q N - P p P
+ - + - + r K -

This neat move is useful for attack and defence: if Rxc6, then Bxh2+

wins the exchange. GM Nigel Davies in an article praises this type of rook manoeuvre for Black: the Rook can move to (say) the g-file and cause problems for the White King. As it happens White soon digs a pit into which he or she falls!

20. Na4 Nh4 21. g3 Nf3+ 22. Nxf3 Qxf3 23. Re1 Bh3 24. Bf1 Bf5 25. e4 Rxe4
26. Qxc6 Rxe1 27. Qxa8+ Kh7 28. Nc3 Bh3 0-1

Davidovic,A - Smagin,S (4) [D36] It-open, Dortmund, 1989

1. Nf3 d5 2. d4 Nf6 3. c4 e6 4. Nc3 c6 5. cxd5 exd5 6. Qc2 Be7 7. Bg5 g6

This plan is unusual.

8. e3 Bf5 9. Bd3 Bxd3 10. Qxd3 Nbd7 11. O-O O-O 12. Rab1 a5 13. a3 Re8 14.
Rfc1 a4 15. Qc2 Qa5 16. Re1 Bd6 17. Bh4 Ne4

This plan is very familiar!

18. Nxe4 dxe4 19. Nd2 Qh5

t + - + t + j +
+ x + s + x + x
- + x L - + x +
+ - + - + - + d
x + - P x + - B

P - + - P - + -
- P q N - P p P
+ r + - R - K -

Black is well-placed for a quick King's-side attack; White's intended Queen's-side initiative is nowhere to be seen.

20. Bg3 Bxg3 21. hxg3 Nf6 22. b3 Ra5 23. bxa4 Ng4 24. Nf1 Rf5 25.
Rxb7 c5
26. Re2 Qh6 27. Qb3 Re6 28. f3 Rh5 29. fxg4 Rh1+ 30. Kf2 Rxf1+ 0-1

Von Gleich,A - Ekstroem,R (1) [D36] Lugano, 1989

1. d4 d5 2. c4 e6 3. Nc3 Be7 4. Nf3 Nf6 5. cxd5 exd5 6. Bg5 c6 7. Qc2
h6 8.
Bxf6 Bxf6 9. e3 O-O 10. Bd3 Re8 11. h3 Nd7 12. O-O Be7 13. a3 Bd6 14.
b4 Nf6
15. Rfc1 Qe7 16. Ra2 a5 17. bxa5 Rxa5 18. a4 Ne4 19. Bxe4 dxe4

+ x + - D x X -
- + x L - + - X
T - + - + - + -
p + - P x + - +
+ - N - P n + p
r + q + - P p +
+ - R - + - K -

The familiar ...Ne4 move leads to a quick King's-side kill.

20. Nd2 Be6 21. Raa1 Bxh3 22. Qxe4 Qd7 23. Qh4 Rg5 24. g3 Bg4 25. Qh1
Bxg3
26. Nce4 Rh5 27. Qg2 Bh2+ 28. Kf1 Kh8 29. Ke1 Bc7 0-1

Yermolinsky - Shipman,W (3) [D36] MCC, 1989

1. d4 Nf6 2. c4 e6 3. Nf3 d5 4. Nc3 c6 5. Bg5 Nbd7 6. cxd5 exd5 7. e3
Be7 8.
Qc2 O-O 9. Bd3 Re8 10. O-O Nf8 11. h3 Nh5 12. Bxe7 Qxe7 13. a3 g6 14.
b4 Ne6
15. b5 Ng5 16. Nxc6 Qxc6 17. Kh2 f5 18. bxc6 bxc6 19. Na4 Re6

```
t + l + - + j +  
X - + - + - + x  
- + x + t + x +  
+ - + x + x D s  
n + - P - + - +  
P - + b P - + p  
- + q + - P p K  
R - + - + r + -
```

White has created a weak pawn on c6 but Black doesn't care too much!

20. Nc5 Rf6 21. Be2 f4 22. Bxh5 Qxh5 23. f3 fxe3 24. Qd3 Bxh3 25.
gxh3 Re8
26. Nd7 Rf4 27. Rae1 Re7 28. Qa6 Qf5 29. Ne5 Rxe5 30. dxe5 Rh4 0-1

White wants to play in the centre:

Deze,A - Tadic,K (1) [D35] Novi, 1989

1. d4 Nf6 2. c4 e6 3. Nc3 d5 4. cxd5 exd5 5. Bg5 Be7 6. e3 O-O 7. Bd3

c6 8.

Qc2 h6 9. Bh4 Re8 10. Nge2 Nbd7 11. f3 c5

A change of emphasis: White wants to advance in the centre with e2-e4, so Black immediately hits at the d-pawn with ...c7-c5.

12. O-O b6 13. Rad1 Bb7 14. Bf2 cxd4 15. exd4 a6 16. Qb3 b5 17. a4 b4
18.

Na2 Qb6 19. Rc1 Bd6

```
t + - + t + j +

A2 Playing actively against 1. d4

A2.1 The Dutch Defence, Stonewall Variation

Rabinovitch - Botvinnik (Ussr Ch'p, 1927)

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Be7 5. Nc3 O-O 6. Nf3 d5 7. O-O c6
8. Qc2
Qe8 9. Bf4 Qh5 10. Rad1 Nbd7 11. b3 Ne4 12. Ne5 Ng5

[12... Bf6 is better, says MB]

13. h4

[13. f3 Nh3+ 14. Bxh3 Qxh3 15. e4 += MB]

13... Ne4 14. Bf3 Qe8 15. Nxd7 Bxd7 16. Kg2 Bb4

```
t + - + d T j +
X x + l + - X x
- + x + x + - +
+ - + x + x + -
- L p P s B - P
+ p N - + b P -
p + q + p P k +
+ - + r + r + -
```

White seems to have defended more than got on with his own plans. He now makes a mistake:

17. Bxe4 ? 17... fxe4 18. Rh1 Qh5 19. f3 Qg6 20. Kf1 e5 21. dxe5 Rxf4 22. gxf4

```
t + - + - + j +
X x + l + - X x
- + x + - + d +
+ - + x P - + -
- L p + x P - P
+ p N - + p + -
p + q + p + - +
+ - + r + k + r
```

Black has some clear achievements: the open g-file, the two bishops, the upset White King.

22... Qg3

threats ...Bc5/...e3

23. Nxe4 dxe4 24. Rxd7 Bc5 25. e3 Qxf3+ 26. Qf2 Qxh1+ 27. Ke2 Qh3 28. f5 Qg4+ 29. Kd2 Rf8 30. e6 Qxf5 31. Qxf5 Rxf5 32. Rxb7 Rf2+ 33. Ke1 Rf6 34. b4 Bxe3 0-1

Another decisive King's side attack:

Steiner - Botvinnik, Groningen, 1946

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Bb4+ 5. Bd2 Be7 6. Nf3 d5 7. Nc3 c6 8. O-O O-O 9. Bf4 Qe8 10. Qc2 Qh5 11. Rae1 Nbd7 12. Nd2

Aiming at e4, but too slowly. Another plan is to attack c6 with the b-pawn.

12... g5 13. Bc7 Ne8 14. Be5 Nxe5 15. dxe5 f4

Black's plans are well-advanced; e4 will now be answered by ..f3

16. gxf4 gxf4 17. Nf3 Kh8 18. Kh1 Ng7 19. Qc1 Bd7 20. a3 Rf7 21. b4 Rg8

A2.2 White avoids the Stonewall

There is no Exchange Variation against the Dutch but there are some

annoying

ways for White to avoid the Stonewall. You can avoid all these by playing first ...d5, ...e6, ...c6 and ...f5, but you must then face the Exchange QGD.

If White hasn't met the Dutch defence before, it's likely they will just play their usual old moves: the London system, the classical system or a Gambit.

The London system *d2-d4, Ng1-f3, Bc1-f4* is just asking for Black to play ...e7-e5, with a good game.

If White plays a classical Queen's Pawn game with *d2-d4 c2-c4 Ng1-f3 Nb1-c3 Bc1-g5 e2-e3 Bf1-d3* Black can get a good game with normal Dutch moves:

**1.d4 f5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Be7 5.e3 0-0 6.Bd3 b6
7.Nge2 Bb7 8.0-0 Nh5 9.Bxe7 Qxe7 10.Ng3 Nxc3 11.hxg3 d6 12.f4
Nc6=** (0-1,54) *Harrwitz,D - Morphy,P (5) Paris match, 1858.*

**1.d4 e6 2.Nf3 f5 3.c4 Nf6 4.Bg5 Be7 5.Nc3 0-0 6.e3 b6
7.Bd3 Bb7 8.0-0 Qe8 9.Qe2 Ne4 10.Bxe7 Nxc3 11.bxc3 Qxe7 12.a4 Bxf3
13.Qxf3 Nc6 14.Rfb1 Rae8 =+** (1-0,52) *Capablanca,Jose - Tartakower,Savielly [A40] New York (06), 1924.* White went on to win this famous ending, but according to Robert Bellin, sometime British Champion and longtime Dutch defender, Black has the advantage because of his better Pawn structure.

Other systems without c2-c4 after **1. d4 f5:**

A2.2a Modern System with Bg5xf6

2. Nc3 Nf6 3. Bg5 d5 4. Bxf6 exf6 5. e3 Be6 6. Bd3 g6

This is currently very popular. I offer you a selection of games in the examples section.

A2.2b Staunton Gambit with e4

2. e4 fxe4 3. Nc3 Nf6

Now White can play:

(a) 4. Bg5 Nc6 5. d5 Ne5 6. Qd4 Nf7 7. Bh4

[7. Bxf6 exf6 8. Nxe4 f5 9. Ng3 g6 10. O-O-O Bh6+ 11. f4 O-O 12. Nf3 Bg7 13. Qd2 b5 14. Nd4 Nd6

t + l D - T j +
X - X x + - L x
- + - S - + x +
+ x + p + x + -
- + - N - P - +
+ - + - + - N -
p P p Q - + p P
+ - K r + b + r

= BCO2]

7... g5 8. Bg3 Bg7 9. O-O-O

[9. Nxe4 O-O]

9... c6 =+ BCO2

(b) 4. f3

4... Nc6

[4... d5 5. fxe4 dxe4 6. Bg5 Bf5 7. Bc4 e6

[7... Nbd7 8. Nge2 Nb6 9. Bb3 Qd7 = BCO2]

8. Nge2 Bb4 9. O-O c6 =]

5. fxe4 e5 6. dxe5 Nxe5 7. Nf3 d6 8. Bf4 Ng6]]

A2.2c Korchnoi Gambit with g4

Korchnoi has offered a number of gambits with g2-g4, making use of the target on f5.

See the example game Menadue-Pert.

A2.2d Others

These shouldn't be any problem

BCO2 gives:

2. Qd3 d5 3. Bf4 e6 4. Qg3 Na6 5. e3 c6 =+

Ivkov

Examples of White avoiding the Dutch

Karayannis-Bellin 1993

1. d4 e6 2. c4 f5 3. e4

```

t S l D j L s T
X x X x + - X x
- + - + x + - +
+ - + - + x + -
- + p P p + - +
+ - + - + - + -
p P - + - P p P
R n B q K b N r

```

This almost forgotten gambit is not much worse than the others which surface sporadically. Even though dubious, all such gambits require precise defence from Black. -- BELLIN

3... fxe4 4. Nc3 Nf6 5. g4 h6 6. h4 d5 7. Nh3 Nc6 8. Nf4 e5 9. Ng6

[9. dxe5 Nxe5 x f3]

[9. Nfxd5 exd4 10. Nxf6+ Qxf6 11. Nd5 Bb4+ is also fine]

9... Bxg4 10. Qa4

White insists on being shown, but 10. Be2 was better

10... exd4 11. Nxh8

[11. Nxd5 Nxd5 12. cxd5 Bb4+ 13. Bd2 Bxd2+ 14. Kxd2 Qxd5 and the White King will not survive ...e3+]

B. English opening

This subtle system is out to stop you playing ...d5, and then taking over the centre or Queen's-side later.

B1 Playing solidly against 1. c4

The ...e6 system is a nice counter to the English; ...c6 is OK as a system as long as White does not transpose into something unfamiliar to you.

1. c4

```

t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- + p + - + - +
+ - + - + - + -
p P - P p P p P
R n B q K b N r

```

1... e6

[1... c6

Now

(a) 2. Nf3 is OK

2... d5 3. b3 Nf6 4. Bb2 Bg4

[or 4... Bf5]

BUT

(b) 2. e4 d5 3. exd5 cxd5 4. d4 Nf6 5. Nc3 e6 6. Nf3 Bb4 is a Caro-Kann or Nimzo-Indian line which is OK for Black but is outside the scope of the repertoire I recommend]

2. Nf3 d5 3. b3 c6 4. g3 Nf6

An alternative system is:

Kurajica [A13] Agincourt Defence (French-English), 1995

1. c4 e6 2. Nf3 d5 3. g3 c6

offering to transpose into standard QP lines

4. b3

```
t S l D j L s T
X x + - + x X x
- + x + x + - +
+ - + x + - + -
- + p + - + - +
+ p + - + n P -
p + - P p P - P
R n B q K b + r
```

insisting on independent lines

[4. d4]

[4. Bg2 dxc4 5. Qc2 b5 6. a4 Bb7 -/+ Carls-Nimzovitch 1925]

[4. Qc2 Nf6 5. Bg2 a5 6. O-O Na6 7. a3 Be7 8. d4

[8. b3]

8... O-O 9. Nbd2 b6 Naranja-Larsen 1973]

4... b5

"Black intends to bite the c-pawn until it screams in pain"
Benjamin/Schiller

5. Bg2 Ba6

t S - D j L s T
X - + - + x X x
l + x + x + - +
+ x + x + - + -
- + p + - + - +
+ p + - + n P -
p + - P p P b P
R n B q K - + r

6. cxd5

[6. d3 Qb6 != Kurajica]

6... cxd5 7. O-O Nf6 8. Bb2 Be7 9. d3 O-O

t S - D - T j +
X - + - L x X x
l + - + x S - +
+ x + x + - + -
- + - + - + - +
+ p + p + n P -
p B - + p P b P
R n + q + r K -

10. e4

White could also try:

[10. Nbd2 Nc6 11. a3

[11. Rc1 Qb6 =+ Masic-Kurajica 1972]

11... b4 12. axb4 Nxb4 13. Ne5 Qb6 = Romanishin-Kurajica 1977]

[10. Ne5!? is a suggestion of Watson]

10... dxe4 11. dxe4 b4 =+ Hartoch-Kurajica 1974 =

B2 Playing actively against 1. c4

Your Dutch-style system is a fine counter to the English. The first time I ever tried it I beat a 140-grade player in about 30 moves.

Theory of the Anglo-Dutch

1. c4 e5 2. Nc3

This is the Sicilian Reversed line of the English Opening, sometimes called the King's English. Black can play two lines with a Dutch feel, playing on the second move either 2...d6 or 2...Nc6. The first risks being met by 3.

d4 (if that is a risk), the second may not be quite the right square for the Knight. If you play the Closed Sicilian as White, this must be the best choice for you.

Example lines go:

After 2... d6:

(a) 3. d4 as in Hubner-Kasparov m1 1979

(b) 3. Nf3 f5

[or 3... Bg4 idea 4. g3 Bxf3 5. exf3 Nc6]

4. g3 Nf6 5. Bg2 Nc6 6. O-O Be7

[or 6... g6]

(c) 3. g3 f5

[or 3... Be6 4. Bg2 c6]

After 2...Nc6:

3. Nf3 f5

```

t + l D j L s T
X x X x + - X x
- + s + - + - +
+ - + - X x + -
- + p + - + - +
+ - N - + n + -
p P - P p P p P
R - B q K b + r

```

4. d4 e4

```

t + l D j L s T
X x X x + - X x
- + s + - + - +
+ - + - + x + -
- + p P x + - +

```

+ - N - + n + -
p P - + p P p P
R - B q K b + r

Now White has a number of moves:

(a) 5. Bg5

e.g. 5... Be7 6. Bxe7 Ngxe7 7. Nd2 Nxd4 8. Ndx e4 Nec6 9. Nd2 O-O 10. g3 d6 11. Bg2 f4 12. O-O fxg3 13. hxg3 Bg4

t + - D - T j +
X x X - + - X x
- + s X - + - +
+ - + - + - + -
- + p S - + l +
+ - N - + - P -
p P - N p P b +
R - + q + r K -

(b) 5. Ng5 h6

[or 5... Be7 6. Nh3]

[or 5... Nf6 6. e3 and now

6... h6

[6...g6]

7. Nh3 g5

```
t + l D j L - T
X x X x + - + -
- + s + - S - X
+ - + - + x X -
- + p P x + - +
+ - N - P - + n
p P - + - P p P
R - B q K b + r
```

after 5...h6 White can retreat with

6. Nh3

[6...g5!?!]

or spuddle with

6. Nd5

(c) 5. Nd2

as in Miles-Chaves

Instead of the immediate 3...f5 Black can play more slowly e.g.

3... g6 4. Bg2 Bg7 5. e3 d6 6. Nge2

and now Black has tried:

6...f5

6...h5

Play in these hypermodern openings is more flexible and less forcing, so both sides have a lot of choice about their early move orders.

I've tried

to give an example of each line cited in the games below.

Example games in the Anglo-Dutch

System with 2...d6

Hubner - Kasparov (1, Hamburg) [A21] 1985

1. c4 e5 2. Nc3 d6 3. d4

Most folk used to think this was good for White... until this game!

3...exd4 4. Qxd4 Nf6 5. g3 Nc6 6. Qd2 Be6 7. Nd5 Ne5

t + - D j L - T
X x X - + x X x

- + - X l S - +
+ - + n S - + -
- + p + - + - +
+ - + - + - P -
p P - Q p P - P
R - B - K b N r

Creating trouble on c4

8. b3 Ne4 9. Qe3 Nc5 10. Bb2 c6 11. Nf4 Ng4

t + - D j L - T
X x + - + x X x
- + x X l + - +
+ - S - + - + -
- + p + - N s +
+ p + - Q - P -
p B - + p P - P
R - + - K b N r

The pesky Knights keep hopping around, not letting Black settle.

12. Qd4 Ne4

Very alert

13. Bh3

Again, White doesn't want to rush into the centre without preparation, and plays Nf3 first to stop you playing ...e5.

C1 Playing solidly against 1. Nf3

David Norwood, who is a specialist in the King's Indian Attack, reckons that

Black equalises easily in this line which:

*"...offers excellent chances of equality. Black's plan is extremely logical
 - to limit the scope of the fianchetto bishop with ...d5 and; ...c6, then
 develops the B to g4 where it can either exchange or retreat. I predict it will
 remain difficult for KIA players to prove any advantage in this system.
 "*

You may be interested in this excellent game, which features our system with colours reversed.

Smyslov,V (2565) - Nunn,J (2565) [A48] (Tilburg 34/91), 1982

1. d4 Nf6 2. Nf3 g6 3. Bg5 Bg7 4. Nbd2 O-O

[4... c5 5. Bxf6 Bxf6 6. Ne4 Bxd4 7. Nxd4 cxd4 8. Qxd4 O-O 9. c4 Nc6 10. Qd2 d6 11. Nc3 += Smyslov-Ernst, London 1988]

5. e4 d6 6. c3 h6 7. Bh4

t S l D - T j +
X x X - X x L -
- + - X - S x X
+ - + - + - + -
- + - P p + - B
+ - P - + n + -
p P - N - P p P
R - + q K b + r

Does driving the bishop back have any effect in this formation? Yes - it does further weaken the kingside fortress.

7... Nc6 8. Bb5 Bd7 9. O-O a6 10. Bc4 e5 11. dxe5 dxe5 12. Re1!

Overprotection of e4 frees up the minor pieces for more useful tasks.

12... Qe8

[12... b5 13. Bf1 followed by an eventual a2-a4 would put strong pressure on the queenside.]

13. a4 Nh5 14. Nb3 g5 15. Bg3 Rd8 16. Nfd2

```
- + - T d T j +
+ x X l + x L -
x + s + - + - X
+ - + - X - X s
p + b + p + - +
+ n P - + - B -
- P - N - P p P
R - + q R - K -
```

White's pieces have been quickly transferred to the queenside. Black's pieces, especially the offside knight, cannot get there so quickly.

16... Nxc3 17. hxc3 Kh8 18. Qe2 Qe7 19. Nf1!

The exchange of the Black knight for the Bg3 has created new opportunities on the kingside. Smyslov is the master of harmonic play - his pieces are often ready to switch to new targets quickly.

19... Qf6 20. Nc5 Bc8 21. Ne3 Ne7 22. a5 Qg6

Black has chosen to sue the Bc8 to defend the queenside, but the heavy guns are all on the kingside, and White controls a bit more of the center. But before foraging on the queenside, Smyslov squashes the counterplay.

23. g4! b6?!

Black is paralyzed on the kingside, unable to transfer the knight to f4 due to the placement of the queen at g6. But this sacrifice of a queenside pawn leads to disaster. There is nothing more rueful than a lost pawn formation. Black could resign without remorse

24. Nf5! Nxf5

[24... bxc5 25. Nxe7 Qd6 26. Nxc8 Rxc8 27. Bxa6+/-]

25. gxf5 Qc6 26. Nxa6 Bxa6 27. Bxa6 bxa5 28. Rxa5

Now White has an extra pawn and better bishop. The rest is easy for a player of Smyslov's caliber.

28... Ra8 29. Rea1 Rfd8 30. Bc4 Rxa5 31. Rxa5 Kg8 32. Ra6 Qd7 33. Bd5 Qe7
34. Qh5 Rd6 35. Rxd6 cxd6 36. b4 1-0

Resigns; a tale of two bishops...

C2 Playing actively against 1. Nf3

There is a slight problem here:

1. Nf3 f5

can be met by the awkward gambit

2. d3 Nf6 3. e4 fxe4 4. Ng5

So you may prefer to play into your line with

1. Nf3 d5 2. c4 c6 3. g3 e6.

The other way to play into the Dutch allows some transpositions:

1. Nf3 e6

2. g3

[2. e4 d5 is a French Defence which is OK for Black]

*[2... c5 is a Sicilian: White can play the King's Indian Attack with
3. d3
or play it open with 3. d4 e.g. 3...cxd4 4. Nxd4 Nf6 5. Nc3 Nc6 6. a3
Be7 7.
Be2 O-O 8. O-O d5 9. exd5 Nxd5]*

[2. b3 Be7]

2... f5 3. Bg2 Nf6 4. O-O Be7

```
t S l D j + - T
X x X x L - X x
- + - + x S - +
+ - + - + x + -
- + - + - + - +
+ - + - + n P -
p P p P p P b P
R n B q + r K -
```

Both sides are quietly getting on with their own systems. The trouble with meeting White's flexible setup with the Dutch is that Black may be denied the outpost on e4 and White can even try to blow up the pawn structure by playing e2-e4.

5. d3

[5. b3 c5 6. Bb2 O-O 7. c4 Nc6 8. Nc3 e5 9. e3 d6 10. d4 e4 11. Ne1 Qe8 12. Nd5 Bd8 13. dxc5 dxc5

```
t + l L d T j +
X x + - + - X x
- + s + - S - +
+ - X n + x + -
- + p + x + - +
+ p + - P - P -
p B - + - P b P
R - + q N r K -
```

This is better for White]

5... O-O 6. Nbd2 d6 7. e4 fxe4 8. dxe4 e5 9. c3 Qe8 10. Nh4 Nc6 11.

Nc4 Qh5 12. Qxh5 Nxh5 13. Nf5 Bd8

```

t + l L - T j +
X x X - + - X x
- + s X - + - +
+ - + - X n + s
- + n + p + - +
+ - P - + - P -
p P - + - P b P
R - B - + r K -

```

With about equal chances.

D Sokolsky opening (Polish)

```

t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- P - + - + - +
+ - + - + - + -
p + p P p P p P
R n B q K b N r

```

This is an oddly effective line; White stops active play with ...c5 and prepares to bring the Bb2 onto the long diagonal.

D1 Playing solidly against 1. b4

I think the most solid system is

1. b4 e5 2. Bb2 Bxb4 3. Bxe5 Nf6

when I know of no way for White to secure the advantage.

White can try

1. b4 e5 2. a3

but this is fairly harmless:

2...d5 3. Bb2 f6

should be fine for Black

D2 Playing actively against 1. b4

Of course you can play

1. b4 f5

but the theory on this line is hardly explored.

White may play d3 at some point which may rob you of some of your best ideas.

E Nimzo-Larsen Opening

```
t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ p + - + - + -
p + p P p P p P
R n B q K b N r
```

This is a flexible line, aiming at first to post the Bc1 on b2, pointing at the e5 point and beyond at the Black King's-side.

The Bb2 needs watching but you should be OK in this opening.

E1 Playing solidly against 1. b3

1. b3 d5 2. Bb2 Nf6

is fine for Black

E2 Playing actively against 1. b3

Go for it...

1. b3 f5

...and Black should not be without play.

1. b3 f5 2. Bb2 Nf6 3. d3 d6 4. e4 e5 5. exf5 Bxf5 6. Ne2 Nc6 7. d4
Be7 8.
Ng3 Bg6 9. dxe5 dxe5 10. Qxd8+ Rxd8 11. Bb5 O-O

```
- + - T - T j +
X x X - L - X x
- + s + - S l +
+ b + - X - + -
- + - + - + - +
+ p + - + - N -
p B p + - P p P
R n + - K - + r
```

Black has active play and won in 23 moves! -- KEENE]

F Various other openings

This obviously can transpose to other openings, and it is probably best to try to do just that.

F1. Benko's Opening, 1.g3

```
t S l D j L s T
X x X x X x X x
- + - + - + - +
```

```

+ - + - + - + -
- + - + - + - +
+ - + - + - P -
p P p P p P - P
R n B q K b N r

```

1...d5

and

1...f5

both look playable. White may well transpose into lines considered above.

F2. Bird's opening, 1. f4

```

t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- + - + - P - +
+ - + - + - + -
p P p P p + p P
R n B q K b N r

```

The obvious snag is, you can't play the Dutch against this:

1. f4 f5 2. e4

is awkward.

But why not play the most awkward lines for White: the From Gambit.

1. f4 e5

Now

2. fxe4 d6 3. exd6 Bxd6

gives you a development lead and free play for your pieces. Instead:

2. e4

transposes into the King's Gambit, which I think most Bird players will do. See the booklet on **Playing Black in e4 openings**.

F3. The Dunst, 1. Nc3

```

t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- + - + - + - +
+ - N - + - + -
p P p P p P p P
R - B q K b N r

```

A while ago I wouldn't have bothered with this odd-looking opening, but it has become a bit of a secret weapon among those in the know. What to play against it depends on what else you play; it's probably the best of the unusual lines.

1...f5 walks into 2. e4.

1...c5 offers a Sicilian, and after 1...d5 2. e4 you can with 2...d5 offer a Caro-Kann or with 2...e6, a French. Perhaps 2...dxe4 3. Nxe4 and ...c6 may appeal.

1...d5 2. e4 d4 3. Nce2

is a well-known sequence, after which

3...e5 4. Ng3 Be6

Else 5. Bc4 will follow. This looks like Black's best idea to me.

Example game in the Dunst:

Ekebjaerg,Ove - Strand,Torger cr Nielsen-mem, 1987

1. Nc3 d5 2. e4 d4 3. Nce2 e5 4. Ng3 Be6 5. Nf3 Nd7 6. c3 c5 7. cxd4 cxd4 8. Be2 Bd6 9. O-O h5 10. d3

```
t + - D j + s T
X x + s + x X -
- + - L l + - +
+ - + - X - + x
- + - X p + - +
+ - + p + n N -
p P - + b P p P
R - B q + r K -
```

This doesn't look to me very promising for White, although White did win.

F4. Grob's opening, 1. g4

```
t S l D j L s T
X x X x X x X x
- + - + - + - +
+ - + - + - + -
- + - + - + p +
+ - + - + - + -
p P p P p P - P
R n B q K b N r
```

The idea of this odd-looking move is...

1. g4 d5 2. Bg2 Bxg4 3. c4!

...when the pin on the b7 point may be embarrassing.

The two best-known players of this line, Henri Grob and Claude Bloodgood, agree that one of the most awkward lines for White is

1. g4 e5

with the idea 2. Bg2 h5! when the pawn cannot advance to g5.

Grob himself played this against 1. g4. So Bloodgood reckons White's best try is

2. d3

To be honest, many Grob players have no idea that this is a known line, all they know about is the ...Bxg4 variation. So they may be out-tricked in their own opening!

Some sample lines in this rare opening:

Ott - Grob, Corr

1. g4 e5 2. Bg2 h5 3. gxh5 Rxh5 4. e3 Rh8 5. c4 f5 6. Qc2 g6 7. Nc3 c6 8. Nge2 Nf6 9. d4 d6 =

Hug - Grob, Corr

1. g4 e5 2. Bg2 h5 3. gxh5 Rxh5 4. e3 Nf6 5. c4 c6 6. Nc3 d5 7. cxd5 Rg5 8. Bf3 cxd5 9. Qa4+ Nc6 10. d3 Rg6 11. e4 d4 12. Nd5 Be6 13. Qb5 Qd7 14. Bd2 Bxd5 15. exd5 Nb4 16. Qxd7+ Kxd7 17. Bxb4 Bxb4+ 18. Kd1 Kd6 = [*or 18... Bd6*]

Grob - Aebi (corr) and; Analysis

1. g4 e5 2. d3! d5 3. Bg2

[3. g5 Be7 4. h4 h6 =+]

3... Bxg4 4. c4

Now this gambit is not as good for White as in the lines without d3 and ...e5.

4...Bb4+ 5. Nd2 c6 6. cxd5 Ne7

[6... cxd5 7. Qb3 Nc6 8. Bxd5 Qe7 9. h3 Bh5 dr]

7. dxc6 Nbx6 8. a3 =

Grob - Stingelin+ Analysis, 1993

1. g4 e5 2. d3! d5 3. Bg2 c6 4. h3 Ne7 5. Nf3 Ng6 6. Nc3 f5 =/+

[6... h6 was the game: 7. e4 !]

If this sly system doesn't appeal you might fancy the emerging main line approach:

Basman - Keene, Benedictine, 1981

1. g4 d5 2. h3 e5 3. Bg2 c6 4. d4 e4 5. c4 Bd6 6. Nc3 Ne7 7. g5

Basman has also tried:

[7. Qb3 O-O 8. Bg5 f6 9. cxd5 cxd5 10. Nxd5 Be6 11. Nxe7+ Qxe7 12. d5 Bf7
13. Be3 Na6

t + - + - T j +
X x + - D l X x
s + - L - X - +
+ - + p + - + -
- + - + x + p +
+ q + - B - + p
p P - + p P b +
R - + - K - N r

-+ Keene]

[7. Bg5 f6 8. Bd2 unclear, (Basman - Kudrin, Benedictine, 1981)]

7... Be6 8. h4 Nf5 9. Bh3 O-O 10. cxd5 cxd5 11. Nxd5

t S - D - T j +
X x + - + x X x
- + - L l + - +
+ - + n + s P -
- + - P x + - P
+ - + - + - + b
p P - + p P - +

R - B q K - N r

11... Ng3 12. Nf6+ gxf6 13. fxg3 Bxg3+ 14. Kf1 Nc6 15. Be3 Nb4 16.
Kg2 Nd5
17. Kxg3 Nxe3 18. Qd2 Qd6+ 19. Kf2 Qf4+ 20. Nf3 exf3

t + - + - T j +
X x + - + x + x
- + - + l X - +
+ - + - + - P -
- + - P - D - P
+ - + - S x + b
p P - Q p K - +
R - + - + - + r

0-1

21. Qxe3 Qxh4+ 22. Kxf3 Bd5+

Also ran: 1. e3, 1. a3, 1. a4, 1. h4, 1. f3

I can't imagine these giving you any trouble: You can certainly play your usual Colle or Dutch, and various 1. e4 lines can be played with colours reversed.

1. e3 Van T'Kruij's Opening hopes for a reversed French. 1...d5 is OK for Black.

1. a3 has some idea of playing b2-b4; just 1...d5 and 2...c6 in reply is a good start for playing fast or slow. You can also blow up the Queen's-side with ...a5 if White does play b4.

1. a4 might tempt you to 1...e5 if that's what you usually play.

1. h4 e5 must be all right too.

1. f3 is a bit of a joker; 1...d5 or 1...e5 should give you an easy game.

Exeter Chess Club: General Middlegame Advice

- [Playing the Middlegame](#)
 1. [Attack and defence](#)
 2. [You and your opponent](#)
 3. [Positional play](#)
- [Planning](#)
- [Strategical advice](#)
 1. [General advice](#)
 2. [Space and the centre](#)
 3. [Advice about Kings and Queens](#)
 4. [Advice about Rooks](#)
 5. [Advice about minor pieces](#)
 6. [Advice about Pawns](#)
 7. [Advice on tactics](#)

This compilation has been made by going through all my beginner's books and making notes. I was after *practical* advice on [thinking](#) rather than chess theory this time; the most useful titles by a mile were Simon Webb's **Chess for Tigers**, Jeremy Silman's **The Amateur's Mind**. Also running strongly were the old Keres/Kotov title **The Art of the Middle Game**, Kotov's **Think like a Grandmaster**, Avni's **Danger in Chess** and Krogius' **Psychology in Chess**. In each of these books, the points they make are illustrated by actual examples, which helps fix the point in your mind. I won't attempt to reproduce examples from these or other books on this page (as if the lawyers would let me), but the points below could all do with reference to a practical context - see if you can identify examples from your own play. I have a stash of games from [our last simul](#), and some [recent club games](#) which might be helpful.

Playing the Middlegame

"During a chess competition a chessmaster should be a combination of a beast of prey and a monk."

-- Alexander ALEKHINE

Attack and defence

You must **think for both sides**. I would guess that the vast majority of decisive mistakes in club play are not misjudgements (like, "*I thought my attack would be faster than yours*") but oversights ("*Oops - missed that one.*"). Purdy says you will never overcome blunders by effort alone (what you need is a trained eye), which is surely true, but you must *also* put in the effort! If you never try to work out what your opponent might be doing, you will never find out until it is too late. Let's clarify this with an example:

Kasparov - Karpov, Linares, 1994

1. e4 c6 2. d4 d5 3. Nd2 dxe4 4. Nxe4 Nd7 5. Bc4 Ngf6 6. Ng5 e6 7. Qe2 Nb6 8. Bb3 h6 9. N5f3 a5 10. c3 c5 11. a3 Qc7 12. Ne5 cxd4 13. cxd4 **DIAGRAM**

13... a4

[13... Bxa3]

14. Bc2 Bd7 15. Nxd7 Nbx d7 16. Qd1 Bd6 17. Ne2 Nd5 ...drawn

I wouldn't like to say there's anything wrong with the analytical

abilities of either player - but neither is it an error of judgement. My guess is, it's a quiet position in a solid opening, and neither player bothered to look hard enough.

Chess is a tense game. This tension may make you want to believe things that aren't really true, and comfort yourself with things that mean you don't have to think too hard any more. Not a bit of it...

Petrosian-Korchnoi 1963

Black has a hopeless, passive position, just as he has had for the last umpteen moves. Petrosian just went

1. Rxf6

which was met by

1...f3!

Hoping for 2. Kxf3 Kg7 *discovered check*, winning the rook.

2. Kg5 Ke8 **White resigns**, unable to catch the f-pawn.

Afterwards, Petrosian explained that a move like ...f3 just didn't fit with "*Black's hopeless position*". But where there's life, there's hope!

*"For a long time I had regarded my position as a winning one. Thus the whole opening phase of the struggle, when Korchnoi was unable to get out of trouble, had psychologically attuned me to the idea that the ending would be favourable to me ... and here comes the oversight **35 Rxf6??** I did not even see the threat ...f4-f3, possibly because it was in contrast to Black's hopeless position. Personally, I am of the view that if a strong master does not see such a threat at once he will not notice it, even if he analyses the position for twenty or thirty minutes."
- PETROSIAN.*

I have a whole book full of these types of disaster, when one player just turned the alarm off. You should be on guard all the time, with the alarm dial turned up to 11!

Please note that Petrosian was also thinking less than objectively about the game, and thinking only about his plans. Your opponent also has a right to exist...

-
- Remember:
 1. every position is capable of being ruined
 2. minor details can affect the outcome
 3. if there is only one way you can lose, make sure you secure against it
 4. if the position changes, re-assess your previous conclusions
 5. actively search for danger as a routine part of your choice of move
 - **Danger signs** - General things to watch out for:
 1. leaving the king without sufficient support from other pieces
 2. weakness of the eighth rank
 3. entering a lasting pin
 4. poisoned pawns
 5. placing pieces without escape routes-- Amazia AVNI
 - You mustn't ignore genuine threats, but don't be panicked or distracted by them - especially when faced with a King's-side attack [when you must pursue your own attack with extra vigour.]. Don't worry needlessly, resulting in panic and retreat - you need to keep active and keep counterplay.
 - **Take nothing for granted.** Don't fret needlessly - analyse and find out if there is a win for your opponent. I often say, "*Oh, Black's only going to threaten mate*", by which I mean, the best they can achieve is a one move threat that can be easily contained. When they make that threat, you do need to react, but don't worry needlessly; carry on with your own plans.

There are some "clockwork" attacks (like the h-file assault against the fianchettoed King, or the King's Indian Attack) that will eventually produce checkmate if left alone, but usually the best recipe is to counterattack, even if you do have to stop from time to time to counter a mating threat.

- In particular, don't panic and refuse sacrificed material that you could have for free. Don't decline "on principle". This is declining from fear, not knowledge. Play the strongest move, which may well be to take the material and make your opponent prove their judgement was correct.
 - Neither be over-impressed by your own threats. An attack by one piece on another is meaningless in itself - it may distract an important defender. Equally, don't assume that a stock combination or sacrifice works for you in the position you have today - small differences can make it fail. Don't hope vainly - **analyse and find out**.
 - **Don't allow counterplay**, e.g. a Pawn race, a counterattack against the other wing, if you don't have to. Defensive play is difficult, and playing the downside of a position without active chances of your own is doubly so. [Many of the best players are masters at snuffing out the opponent's plans.]
 - **[Read more about [Rules for attack](#), [Attacking the King](#), [Attacking the Queen's-side](#) or [Attacking techniques](#)]**
-

You and your opponent

- How do you react to pressure? Mental toughness and willpower are important in chess. The top boards often look calmer and more composed because they are; they are concentrating on the game and are not distracted by unexpected events on the board. [*I have more than once played strong opponents who said afterwards they thought I was winning at one point, but I would never have guessed that from their expression during the game - they looked totally assured and confident!*]
- Patience is a virtue. **Good nerves are essential**: this doesn't mean you shouldn't ever feel nervous during a game (boy, do I wish I could manage that!) but that you should not let your nervousness tempt you to poor decisions: e.g. make back away from a critical line, or make you try to force the issue too soon.
- Don't ever coast along. Keep coming up with ideas. Put your opponent under pressure. Force your will on your opponent - get them to react to you. If you think you see a win, go for it.
- **If you stand worse**:
 - Fight, don't just react to threats. Mednis calls passive play "*awaiting the undertaker*"! It is much harder for the attacker to keep their nerve

if the defender has active play, and without counterplay your opponent will just keep building up their position. It used to be said of Alekhine that to beat him you had to win three games - once in the opening, once in the middlegame, and once in the endgame. **Make the same be true for you.**

- Don't stop looking for your own opportunities. Many games have been lost that could have been drawn or even won (don't I know it!). But also, people resign with a saving move available on the board - they were just going through the motions until resigning, instead of planning their comeback.
- Never give up. **There is always hope if you fight.** Don't play for one last cheap trap and then resign. Play the move that will make your opponent groan, the move you would hate to see if you had the advantage. Defend with endless determination.
- If your best hope is for your opponent to fall into a trap, then you can play for a swindle, but only when you know you are losing. Otherwise, play good moves, not trappy ones.
- Take your opponent seriously if they are lower-rated, but don't be overawed if they outgrade you. [Don't look at your opponent's rating if it takes the edge off your attitude.]
- Everyone is vulnerable. Play without fear. **Play to win from the first move against every opponent.** That doesn't mean, attack like a mad thing from move 1, but each move should be played accurately and seriously.

When playing stronger players, don't stick to the script! Make a nuisance of yourself. Don't make concessions. Good players drop games to lesser lights every year - make sure it's you that they drop them to. Many players when pitted against a stronger opponent try and swap everything off and get a draw in the endgame. They then get a worse game, and are ground steadily down by their opponent's superior technique who is pleased to get a win without danger of losing. Every exchange made is going to be better for one side or the other, and every passive move makes your position less promising. The best way to get a draw is to **play as well and actively as possible**, just the same as if you were trying to win!

If your opponent is trying to win a level position, don't get impatient and rush, and don't get bored and go on the defensive, don't be tempted into exchanges that give a little ground. Stay calm. Give the impression of great patience, that you aren't going to blunder no matter how long they spin it out. And keep trying to play good and active moves, even if you think it's only a draw.

- When playing weaker players, don't go for the throat, don't try to bamboozle your opponent in a complex position (you might get lost too!); instead, play

steadily and wait for a mistake - in fact, don't try to jump all over their first mistake, you can wait for another mistake to turn up. If your opponent is only a bit weaker than you, you may need to mix things up a bit, but generally the message is 'steady does it'.

- **Ignore your opponent's time pressure.** Take your own time to find the best moves as you normally would. Don't try and rush your opponent - they are probably more used to playing quickly than you are and may outplay you, or set you a trap!
 - [Read more about [You and your opponent](#), [Chess Psychology](#)]
-

Positional play

- If you have a space advantage (or any other long-term advantage, like the Bishop pair), don't rush to attack. **Milk your advantages** - don't feel obliged to cash in immediately. You should not try to force the issue, but rather maintain or increase your advantage while preventing counterplay. Don't lash out just because you feel there ought to be a winning combination by now. Avoid exchanges and build up your position so that when things do come to a head the situation is at its most favourable to you.
 - **Preserve your options.** Do what is required - whether a retreat or an attack - but don't burn your bridges unnecessarily. Squeeze your opponent's options - this is hard for them to sit still for, and they may lash out without heed for the dangers.
 - [Read more about [Chess Strategy](#)]
-

Planning

- **Good positions don't win games - good moves do.** Silman says, "*Make good things happen*". Play with a positive plan (although part of your plan might be prevention). The initiative goes to the side than can devise and (at least threaten to) put into action a realistic plan.
- **Create a plan right away** or you may drift. There is always something to do, e.g. improve the position of your worst piece. Appraise the position honestly. **Avoid vagueness** in assessment - don't say "*maybe I'll get an attack on the Queen's-side*", but "*in three moves I can get my Knight to c5 and my rook to b1 to attack b7 - can my opponent defend in that time, or create a distraction?*"

- Your plan must be based on the *actual features of the position*. Work out what each side should be up to. You can't attack the King just because you want to. **Play where you have some advantage**. Silman talks about the '*pawn-pointing*' rule: you have more space to attack where the Pawn-chains point. This is also true for blocked positions, like the French where opening a file with ...c7-c5 will not leave you with a backward Pawn as does ...f7-f6.
 - Don't play a good-looking move in vague hopefulness: consider what your opponent's reply might be. Don't play a move with a one-move threat that can be easily stopped. Don't hope that your opponent won't see the threat - **expect your opponent to play the best move**, and see if you still like your plan. [*You cannot base your game around one-idea plans like a3 Bc2 Qd3 Qxh7# - this may take four moves to threaten and one move (...g6) to defend*]
 - **"Play a move which improves your position no matter what."** - SILMAN
 - Don't play a quick move because you can't really decide what is going on, or because you suddenly see a good-looking idea. Take the time to find a good move. I think 15-20 minutes to decide if a Pawn grab is safe is not unreasonable.
 - But don't dither - decide what your basic choices are at the start - narrow it down to the two or three most likely - and decide. [If you know which plan you are following the moves can come fairly easily.] If you get it down to two moves which look equally good, find some other way of deciding between them (most centralising, least forcing for your opponent...). [*You know the story of Buridan's ass, which died of starvation between two equal-sized piles of hay because it never could choose which one to start on*].
 - To summarise: anxiety, haste, vagueness, confusion and simple-mindedness are the enemies of good moves.
 - **[Read more about [Planning](#)]**
-

Strategical advice

General advice

- **Rules are meant to be broken** (or, at least, checked to see if they apply in the actual position in front of you!)
- Don't seek or avoid exchanges without good reason. **Exchanges are just**

moves, they make changes, and you must assess these changes. [*It seems to me that many players exchange almost by reflex. I have a theory that when learning chess we may become anxious about leaving exchanges 'on', in case we leave the piece or pawn undefended later, and do not like the tension of unresolved exchange possibilities. A mark of maturity in a player is the capacity to manage tension in the position.*]

- Quiet positions demand patience. They are not to be abandoned as a draw or played carelessly - you must learn to concentrate and outplay your opponent in these positions as well as when it's very tactical.
 - **Accumulation theory**: even if you have several advantages, don't be too confident to pick up another.
 - Dynamic positions require energetic play. You must make the most of your own chances, and not just react to threats or coast along until you have to do something.
 - [Read more about [Strategy](#)]
-

Space and the centre

- **Always look to the centre**, even if it is closed or has been quiet.
 - **Decentralising is always suspicious**, particularly for knights, but also for long-range pieces like Queens. This is a corollary of Stean's assertion that the most important feature of any position is the **activity of the pieces**, since pieces are most active in the centre.
 - A space advantage is meaningless without a potential breakthrough, or some other way to get behind enemy lines.
 - An attack on the wing is best met by play in the centre.
 - [Read more about [Space and the centre](#)]
-

Advice about Kings and Queens

- **KING**: tuck it away during the opening, by castling as a rule to get the rook out as well. But in the endgame, the King becomes a strong attacking piece, and can make raids on the opponent's Pawns, and guide your own Pawns through to be Queens. Because of course, with only a few pieces on the board, there is less danger of a middle-game attack, and then the King needn't hide. Then the King becomes like any other piece, and should be moved into the centre of the board to attack or defend as necessary.

- **QUEEN:** Not very useful right at the start, because it may be harassed, but always powerful. Place it near the centre in the opening, behind the minor pieces - e2,d2 or f2/c2 are good squares - ready to jump out to make a raid in combination with other pieces. After some pieces have been exchanged, or you have a clear advantage, you can move the Queen further towards the little centre (e4,d4,e5,d5).
-

Advice about Rooks

- **Rooks need open files.**
 - **ROOK:** Rooks must have open lines. This may take some time to arrange, and because they can be chased by minor pieces they are best placed in waiting (like the Queen) on the central e- and d-files. Later, they can move strongly up the board using these central files - for example, in the middle game, to e3 and then move over to g3 to help attack the Black King, or right up to the seventh rank on e7 or d7, where it can attack pawns right along the opponent's second rank. This control of the seventh rank is very powerful, particularly in the endgame if your opponent's King is stuck on the last rank (a8-h8). Rooks work even better in pairs - for example, by putting them on e1 and e2 they can control the e-file and then often Black cannot swap off by playing their own Rook to e8. Even stronger is to control the seventh rank absolutely with eg. Rook on d7 and e7, where they can gobble up pawns and often Ks.
 - The furthest available square on an open or half-open file is a potential outpost or entry point.
 - Open files are precious. If there is one around, with Rooks on the board, you must seek to control or challenge it. Particularly in open positions, control of files is paramount.
 - Open files are useful only if there is an entry point, and in semi-open positions with many minor pieces an entry for a Rook may be lacking. In these cases you may be able to use a minor piece to make the first invasion, but sometimes the open file is not very useful.
 - Very often the first priority in the early middle game in closed positions is to see where you can open a file. (*Like in the French defence: after 1. e4 e6 2. d4 d5 3. e5 Black should immediately see about opening up space on the Queen's-side with 3...c5.*)
 - Half-open files (in positions without an open file) can be used to create pressure against the exposed Pawn.
 - **[Read more about [Rooks](#)]**
-

Advice about minor pieces

- BISHOP: like the Rook, also needs open lines. The long diagonals a1-h8 and h1-a8 are useful, but often it is more important to point them at your opponent's King's-side, for example, by putting them on c4 and e3. Two bishops side by side can be very powerful in attacking from a distance, for example on b2 and c2.
- Fianchettoed Bishops, at b2 or g2, need open diagonals.
- Knights need to be near the **centre and forward**; they thrive on outposts (whether *absolute* = can't be dislodged by a Pawn, or *relative*, like on f5, when a pawn move (...g6) would weaken the opponent's position).
- KNIGHT: The short-stepping Knight can get left behind if the battle moves away, so the best bet is to keep them in the centre. They are often best placed on c3 and f3 in the opening, although a Pawn on c3 may be needed to support d2-d4. Later, e5 and d5 are useful squares to occupy when they can threaten Pawns on c7/f7 and pinned Knights on c6/f6. They may be driven away from e5/d5 by pawns; best are squares where the opponent cannot - or dare not - chase them with pawns. If Black has moved his Pawns from c7 to c5 and from e7 to e5 then a Knight on d5 can never be driven away, only exchanged for another piece. When this happens, you can try to recapture with another piece which also cannot be driven off. But another good square for a Knight, when pawns are on e4 and e5, is f5: here it threatens the pawn on g7, and if ever Black pushes it away with g6 then a hole appears on h6 for the Knight to hop into, perhaps giving check.
- **The struggle of Bishop(s) against Knight(s) is crucial**: the Bishops are not always better but in all positions you must strive to make your minor piece(s) better, or make the position suit them more.
- Bishops are better than Knights in Pawn races, because they can influence each side of the board at once.
- If you have the Bishop pair you must try to open up lines for them, and deny the opposing Knights any central posts.
- **[Read more about [Bishops](#) and [Knights](#)]**

Advice about Pawns

- PAWNS: You will have to move some to get your pieces out, and you can try to dominate the centre with pawns on e4 and d4 (perhaps with c4 and/or f4). But the pawns in front of your castled King form a solid wall on f2/g2/

h2, and those on a2/b2/c2 are probably OK where they are too. So, oddly, pawns are often well-placed where they are at the start of the game. "*Every pawn move loosens the position*", says Tarrasch: if you move the pawn on g2 to g3, you immediately get holes at f3 and h3. Moving a pawn from f2 to f3 not only takes away the best square for your Knight, which is a good defender of the pawn on h2, but also opens up a check to your King from c5. When the endgame appears, one side or the other will have to win material to win - by queening a Pawn, or at least threatening to. Then Pawns can be moved more freely, to block opposing Pawns, to create and support extra or passed Pawns of their own side, and to keep out the opponent's pieces - including their King.

- If the pieces don't suggest what plan you must adopt, the Pawns will.
- Weak Pawns are only weak if they (or the squares near them) can be attacked.
- **Pawn structures usually have positive and negative features**, e.g. every doubled Pawn yields a (half)-open file.
- Hanging Pawns are a typical example of an unbalanced dynamic situation, requiring vigorous action from both players.
- **[Read more about [Pawns](#)]**

Advice on tactics

- Combinations do not usually come out of nowhere - they are based on a **superiority in position**, and you can tell when a combination is likely to be around:
 1. **Exposed or "stalemated" Kings are always vulnerable**
 2. **Undefended or 'hanging' pieces often lead to trouble.**
 3. **Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised..**
- **[Read more about [Tactics](#)]**

Exeter Chess Club: Chess and Psychology

- [Introduction](#)
- [Analysis vs. judgement](#)
- [Memory: the touchstone of talent?](#)
- [Towards a general model](#)
- [Further reading](#)

Introduction

Many people use the word "psychology" to refer to 'gamesmanship', or perhaps to the familiar failings of attention or attitude during play. For example, I have written and collected material elsewhere about getting your mental attitude right: there are examples (good and bad) in the [Psychology section of the Canon](#), there is some good advice on a [Poster for Juniors](#), and in a compilation of [Advice for the middlegame](#). But here I would like to discuss some of the research that has gone on into chess by psychologists - if you like, the science of chess thinking.

The reason for doing this, apart from my own general interest, is because:

- chess research has had a big influence on psychology (particularly in skill research: see, for example, [Nicolas](#), [Charness](#), [Vicente and Brewer](#))
- chess research may have important implications for players
- many players have misconceptions about what chess research shows: until recently (at least!), this included myself

Chess research seeks to answer: "*How do chessplayers think?*". This was actually the title of a commendable series of articles by Simon Webb in CHESS magazine in the late 'seventies, and if you would like to work through a few examples before reading on, I have collected some material in a [separate Web page](#). I'll make reference to this page where appropriate below.

Analysis vs. judgement

Many chessplayers have read Alexander Kotov's book [Think like a Grandmaster](#). It describes how Kotov lifted himself from the also-rans of strong players to become a grandmaster, and what is more, he tells us how he did it: through rigorous training in the analysis of complex positions. His method led him to describe the approach of selecting **candidate moves**:

"All candidate moves should be identified at once and listed in one's

head. This job cannot be done piecemeal, by first examining one move and then look at another." -- Kotov, **A Think like a Grandmaster**, tr. Cafferty. [1978] (Batsford)

Kotov also insists that each branch of what may be a complex tree should be examined *once and once only*: anything else shows lack of confidence and leads to a waste of precious minutes on the clock.

I know club players who feel guilty because they rarely or never use this technique. There are a number of important points that can be made in reassurance:

- Kotov was already a strong player before he adopted this approach, and while this may be what one needs to get from FM to IM, it may not be the most important thing for you;
- not all strong players adopt Kotov's candidate move approach (would they be still stronger using it? - see position [6/78 - W to move candidate moves?](#)); and, most importantly,
- not all positions are suitable for this approach: it is a way of working through positions of a pronounced tactical nature.

Now, it is possible to conclude that this analytical approach is almost irrelevant to club play. For example, Reti famously once said:

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one' "

Moreover, if you read many primers on play: Chernev's **Logical Chess**, for example, or his **The Most Instructive Games of Chess Ever Played** or even Nimzovitch's **My System**, they all seem to emphasise positional play and judgement as being the most important aspect of chess.

There is something quite appealing about concluding that strategical judgement is more important than tactical analysis. It may confirm the supremacy of the world of ideas over the brute and grubby realm of tactics; in a sense, strategy is a more inclusive, higher-level way of talking about positions than tactics, just as the gas laws are a higher-level way of talking about the behaviour of gas molecules.

But as well as being appealing, it may be correct. Many people have argued that chess research shows that, whatever makes the difference between masters and the rest of us, it's not the ability to calculate. For example, the British GM David Norwood has published a booklet summarising his views on chess, which includes

this statement:

" It is often supposed that, apart from their 'extraordinary powers of memory', expert players have phenomenal powers of calculation. The beginner believes that experts can calculate dozens of moves ahead and he will lose to them only because he cannot calculate ahead so far. Yet this is utter nonsense. From my own experience I can say that grandmasters do not do an inordinate amount of calculating. Tests (notably de Groot's experiments) supports me in this claim. If anything, grandmasters often consider fewer alternatives; they tend not to look at as many possible moves as weaker players do. And so, perversely, chess skill often seems to reflect the ability to avoid calculations. It is, in truth, not clear that chess is a game of calculation. Of course there are times when intense calculation is called for, and often the master is better at dealing with these situations than the amateur. No wonder, he has had more practise than the amateur, but all the same his innate calculating ability need not be any greater. Most of the time it is something quite different that is required in chess, something more akin to 'understanding' or 'insight'." -- David NORWOOD, [Chess and Education](#) [1995, Gresham College, London].

[Paul Powell's Chess Page](#) includes a polemic to much the same effect, and there are a number of off-line sources (what are they called again? Oh, yes, "books") which concur. I'd like to look at de Groot's research, but first, review the history of chess research that de Groot had to go on before his own studies.

Memory: the touchstone of talent?

I don't know any other sport or game in which you can arrange a [simultaneous display](#), but it is one of the most impressive demonstrations of chess skill. Masters take on dozens of opponents with little apparent mental effort, and achieve huge winning percentages. There seems no time to calculate, as the moves are made almost at a glance. More amazing is blindfold chess, and yet masters can even give blindfold simultaneous displays.

What enables masters to do this?

The most obvious explanation is that they are cleverer than the rest of us. But while there are some links between Chess and IQ, masters are not do not score much more highly than other players - certainly not enough to explain the dramatic differences in performance you can see at a simul. And although chess masters' memory for chess, as Binet showed, is striking, it seems no better for other spheres.

In fact, for a long while there seemed not much more to add than that masters are better than other players at chess - full stop. What was needed was some task that was not the game of chess itself, but which showed important differences between masters and the rest of us. One was found in the **recall of chess positions**.

The paradigm was established in an experiment by Djakow, Rudik and Petrovsky [1927]. They presented a chess problem to masters and non-players, and found that after a minute's exposure the masters could recall the position very much better than the non-players, although this is perhaps a difference that one would expect.

In his book **Thought and Choice in Chess**, Dutch master and psychologist Adrian de Groot describes how he extended and *refined* this experiment. He also showed a *series* of chess positions to a panel *composed of four chess players* for a *few seconds only*. Grandmaster Euwe and Master de Groot were very good at this - almost perfect (93%) - whereas other players (an expert and a club player) were much worse (68% and 51%), getting no position entirely right. de Groot talks about a "*gulf that separates the master from the non-master*".

This is a difference that perhaps is more of a surprise. de Groot had another surprise for us too: he showed the following position "A" (from one of his own games) to five Grandmasters and five experts, and recorded and analysed their thoughts:

He then drew up a table of the number of depth of lines analysed. [*If you would like to compare your thoughts, there is some light commentary here: [Comment on \(de Groot\)](#).*] He concluded:

"It is unequivocal that depth of calculation cannot be the prime distinguishing characteristic between the grandmaster and the expert player."

This hits one with rather a thump. But of course:

"Substantial differences in thinking do exist. The gap between levels of performance of the G- and E-group is enormous: four of the five subjects would almost certainly have won the game; even the fifth would have had a better chance than the E-players who without exception let their opportunity go down the drain."

de Groot's research thus led to two things:

- a widespread [belief](#) that GMs do not calculate much better than other strong players
- a very fruitful series of studies on the recall of chess positions.

The subsequent research on recall (e.g. Chase and Simon's famous study) is of less immediate interest to me here than research on chessplayer's thinking as such. There is a lot of recall research, which I summarise briefly:

- recall tends to be in bite-sized chunks, e.g. fianchetto/castled king [Kg1,Rf1, Bg2,Pf2,Pg3,Ph2], or an inter-related set of pieces in attack and defence
- errors tend to be of the same "chunked" nature: for example, including typical elements that are normally missing [say, a Bg2], or excluding elements that are not normally present [say, a Pf4]
- recall by strong players is no better than other players for *random* positions (Chase and Simon, 1973)

[This seems also to relate to performance: performance in finding mate-in-one by strong players is no better than other players for *random* positions (CHESS, April 1984, pp. 289-290), although in a best-move test Holding found clear strength differences.]

There's a nice real-life example of chunked memory, and playing by analogy, in John Nunn's [game](#) against Korchnoi in the Blindfold round of the 1994 Melody Amber tournament.

So we seem to have a paradigm for research which is not itself chess, but seems able to tell us something about the way chessplayers perform during games - even suggesting how they think. There was developed the '**recognition-association**' model, which suggested that strong players play essentially by analogy: recalling positions and elements of positions, and making judgements about the current position based on this recall. This surely makes a great deal of sense. How often have we seen players flash out the 'stock' Bxh7 sacrifice? Is this skill or merely recognition? Gerald Abrahams, in **The Chess Mind**, argues strongly for the primacy of vision, and says:

"Seeing the idea precedes the logical argument."

Similarly, Hartston and Wason give an imaginary *post mortem* conversation which I seem to have heard before:

[Stronger player rejects a move suggested by the weaker player]

Weaker player: *What's wrong with it?*

Stronger player: *It's not good.*

Weaker player: *Why not?*

Stronger player: *It's not the sort of move you play in this sort of position*

[end of conversation]

So, this "vision thing" seems more important than memory or calculation. I have two immediate caveats to the direction that chess research took, following de Groot:

- It should be noted immediately that even if GMs do not calculate much better than other strong players, if you want to be a strong player, then I think you do need to be able to calculate. de Groot presents no data for club-class players compared to "experts", but I suspect they would be pretty telling. It may not be the thing that is most important for you to improve, and it may be the thing that is most difficult for you to improve, but I have a feeling that tactical alertness and reliability in analysis are important to develop for we club players.
- Even if we accept that Grandmasters' judgements and technique are much better, and that many positions do not require analysis, it still may be that

GMs do calculate rather better than other strong players when the need arises.

But there are further cautions one needs to make. Anecdotally, I have read:

"... one other thing is the GMs superiority in tactics. For example Christiansen can find tactics in any position. If you're a GM you should be able to overpower the IM tactically. The GM will often blow out the IM in this area." -- Nick de FIRMIAN, in **How to get Better at Chess Chess Masters On Their Art** by GM Larry Evans, IM Jeremy B Silman and Betty Roberts

And in fact, if you look at the the de Groot material again, the GM/Expert measures were completed once for each player, for only one position. It may be that de Groot chose a position with a number of features that made it particularly hard for the experts to grasp. The key move **1. Bxd5** is a little anti-positional and the Black position does not look vulnerable at first blush. It is interesting to speculate what results he might have got with this one: **Colle - O'Hanlon, Nice Ol, 1930**: 1. d4 d5 2. Nf3 Nf6 3. e3 c5 4. c3 e6 5. Bd3 Bd6 6. Nbd2 Nbd7 7. O-O O-O 8. Re1 Re8 9. e4 dxe4 10. Nxe4 Nxe4 11. Bxe4 cxd4

I guess nearly all players would consider the critical continuation **12. Bxh7+ Kxh7 13. Ng5+**, but I suspect experienced masters would run through the tree of variations more thoroughly and deeply than experts and club players.

Now, Dennis Holding in his 1985 book **The Psychology of Chess Skill**, collates a number of strands of evidence which suggest that in fact, as we might have all suspected at the outset, strong players do analyse deeper and faster than weaker ones, even in random positions. [But they also are more efficient, homing in on good lines and abandoning duff ones. So it's not just quantity but also the quality of their analysis which is better.] Norwood's claims above look more shaky.

The points made above are not meant to be unkind to de Groot: his work has been so widely cited because it was exciting and important. [I do feel a bit cheated by Norwood, who after all could have found Holding's work as easily as I could.] But it is in the nature of science to improve on past work. There are lots of other good things in de Groot's book: for example, *when do players abandon a line of thought and look for something better?* (Answer seems to be: when the assessment of a position at the end of the variation being considered is out of keeping with the initial evaluation of the position.)

Towards a general model

Teichmann once said that "[chess is 99% tactics](#)", and CJS Purdy added "*Chess is the art of analysis*"; on the other hand David Norwood and Reti suggest that analysis is relatively unimportant.

Surely both positions are partly true. (This "*one the one hand... on the other*" style makes one yearn for genetic engineers to develop the one-armed academic.) I might offer that memory, judgement and analysis are all important, that we have different abilities and experiences for each aspect, and that different positions make different demands on each skill. Without some pains being taken to discover the balance of skills amongst players of different strengths (style notwithstanding), and the balance of demands of different positions, we are not yet in a position to say what (if anything) is the key to chess mastery.

In support of this general position, I quote from the abstract of a paper by Dennis Holding:

"The paper reviews the evidence for and against the recognition-association theory and a forward-search (SEEK) theory of chess skill. The recognition-association theory appears to be founded on indirect evidence concerning visual short-term memory, together with supplementary assumptions that may be questioned, and provides no role for verbal processes. There is no direct support for the theory, which omits forward search for reasons that are reexamined. In contrast, the SEEK theory maintains that move choice is based on search and evaluation processes supplemented (or else supplanted) by

a knowledge base. These processes are directly evidenced by experimental findings. The objection that search theories cannot account for speed chess is met by a review of the available evidence. It is concluded that chess skill relies on thinking ahead rather than on pattern recognition." -- [Holding, PSYCHOLOGICAL RESEARCH, 1992](#)

Now, we needn't agree with everything Holding says, but it is clear that we may have been hasty in dismissing the importance of analysis (thinking ahead).

The whole of this issue of *Psychological Research* is devoted to chess, and Holding has written a whole book on **The Psychology of Chess Skill** (1985). There is clearly much research of interest going on, much of which suggests that chess is more complicated than the 'recognition-association' model. And however resounding the pronouncements made about the importance of chess skills, chess remains more complex, and more interesting, than any pat statement.

One last point. It may be that de Groot had something right all along, namely, his method. I think part of the attraction of the later recall paradigm is that there is no messiness: subjects are given a definite task and the languageless patterns of results are scored according to a definite scheme. But de Groot saw no virtue in this style of work: in fact his book is in part a long plea in favour of "introspective" methods in psychology, where subjects are encouraged to talk about their thinking, and the whole messy, unreliable collection of their words is analysed. I have a suspicion that rather than seek the key(s) to chess through some neat experimental technique, the closer we come to studying chess itself, the more likely we are to find an answer.

Further reading:

In addition to books and papers cited above, I have found interesting and useful Krogus'

Psychology of chess and Pflieger and Treppner's **Chess: the mechanics of mind**.

Hartston and Wason have published a readable book on **the Psychology of Chess**: it has had favourable reviews and covers the [psychoanalytic approach](#) rarely referred to elsewhere.

I have a fairly random selection of recent [Chess research abstracts](#) tucked away somewhere, and if the psychology side interests you, you may also be interested to read [San Francisco Exploratory's Exhibit on Memory](#)

DT: Note

AB: If Alfred Binet (1857-1911) is famous as the author of the IQ test that bears his name, he is almost unknown, however, as the psychological investigator who generated original experiments and fascinating results in the field of memory. As Hermann Ebbinghaus, Binet was a pioneer in this domain of research. This article reviews in a diachronic perspective Binet's major contributions on memory: mnemonic virtuosity, visual and auditory memories, and influences of suggestibility on memory. The first contribution to the understanding of memory came from Binet's study of the role of this faculty in expert mental calculators (Inaudi and Diamandi) and in expert blindfold chess players. The second original contribution was his examination of children's visual memory for lines and auditory memory for words and prose (memory for ideas). The third original contribution was the pioneering work of Alfred Binet on eyewitness testimony. Although all these contributions are not often cited today in the psychological literature, we show that Binet's conclusions made nearly 100 years ago are mirrored in modern conceptualizations of memory and are still informative today.

AU: CHARNESS_N

NA: UNIV WATERLOO,DEPT PSYCHOL,WATERLOO N2L 3G1,ONTARIO,CANADA

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.4-9

AB: Although chess research has not been a mainstream activity in cognitive science, it has had a significant impact on this field because of the experimental and theoretical tools it has provided. The two most-cited references in chess research, de Groot (1965) and Chase and Simon (1973 a), have accumulated over 250 citations each (SSCI and SCI sources summed), with the majority of citations coming a decade or more from their publication dates. Both works are frequently cited in contemporary cognitive-psychology textbooks. Chess playing provides a model task environment for the study of basic cognitive processes, such as perception, memory, and problem solving. It also offers a unique opportunity for the study of individual differences (chess expertise) because of Elo's (1965, 1978) development of a chess-skill rating scale. Chess has also enjoyed a privileged position in Artificial-Intelligence research as a model domain for exploring search and evaluation processes.

JN: COGNITION 1993 Vol.46 No.2 pp.101-128

AB: In this paper we investigate the role of reconstructive memory in citation errors that occur in the scientific literature. We focus on the case of de Groot's (1946) studies of the memory for chess positions by chess experts. Previous work has shown that this research is very often cited incorrectly. In Experiment 1 we show that free recall of this work by research psychologists replicates most of the errors found in the published literature. Experiment 2 shows that undergraduates reading a correct account of the de Groot study also make the same set of errors in recall. We interpret these findings as showing that consistent errors in secondary accounts of experimental findings are frequently reconstructive memory errors due to source confusion and schema-based processes. Analysis of a number of other examples of scientific literature that have been frequently cited incorrectly add additional support to the reconstructive account. We conclude that scientists should be aware of the tendency of reconstructive memory errors to cause violations of the scientific norm of accurate reporting of the scientific literature.

KP: MEMORY RECALL PARADIGM, CHESS, INFORMATION, PLAYERS

Exeter Chess Club: How do Chess-Players Think?

These are extracts from Simon Webb's superb series of articles for Barry Wood's old CHESS magazine. Simon showed a panel of players a position and recorded their spoken thoughts for ten minutes. The articles are well worth digging out: obviously there is much more in the articles than I can present here, but it will give you a flavour of the sorts of issues that can arise. The joy of this technique, of course, is that you can repeat the exercise with the same or different positions in your own club.

The positions are presented twice, one without commentary if you would like to attempt 10 minutes thought on them, and once with a comment cherry-picked from Simon's much more detailed discussion.

I have also added two famous examples of master's thinking.

-
1. [1 - W to move: assume in haste, repent at leisure!](#)
 2. [2 - B to move: analyse your way to success](#)
 3. [2/78 - B to move: what is the point at issue?](#)
 4. [6/78 - W to move: candidate moves?](#)
 5. [7/78 - W to move: begin at the end](#)
 6. [10/78 - W to move: playing by analogy](#)
 7. [deG - W to move: what makes a difference?](#)

[Comment on #10/78](#)

deG - W to move: what makes a difference?

[Comment on \(de Groot\)](#)

LCM - W to move: masters at fault?

[Comment on Lasker-Capablanca](#)

1 White to play: assume in haste, repent at leisure!

"...Thus all the panellists seemed to make a judgement about the position instantaneously, and spent the rest of the time trying to find evidence to support this judgement, Clearly it is very difficult to approach chess in a truly objective manner -- so much seems to be based on 'instinct'." -- Webb

*[**Comment from DR:** I might add, that a misjudgement of this sort might lead to much fruitless searching for a winning line if you think you are better. Blumenfeld used to advise trying to look again with a fresh eye at a position to see if you haven't overlooked some simple tactical point, but no less important to make sure you don't overlook some important positional point. I have known players ignore really key features of a position (a Pawn majority, and open file) because they thought they knew what the position was 'about'. Positions in books are selected to be 'about' one clear theme. Positions in most games are usually more complex!]*

2 Black to play: analyse your way to success

"A striking example of the different depths to which the players analysed was provided by the move 1...P-QB4. GJ[112] considered this for about five minutes, but in general terms, without actually mentioning a reply for White. JW[155] and IC[149] got as far as 1...P-QB4 2. Q-B2 R-R7 3. QxBP Q-KB3 4. Q-KB5 before giving the line up, but RW[208] continued with 4...Q-N7 5. R-Q8 R-R8 6. Q-B8 Q-N8 7. RxNch K-R2 8. Q-KB5ch and mates. I had always thought that strong players don't analyse much deeper than weaker players, but this is a clear example to the contrary." -- Webb

[**Comment from DR:** This belief is rather widespread. [de Groot's research](#) certainly seemed to argue more for the importance of judgement than calculation, but there has been a lot of work since which shows the importance of seeing ahead.]

2/78 Black to play: what is the point at issue?

"They all settled fairly quickly on a king move so as to be able to get the rook into play with ...R-QB1 (...) The main problem in this position is whether to play ...K-R1 or ...K-R2. (...) Although having ten minutes to use up, two of the panel (of four -- DR) gave scarcely any consideration to which was the better king move." -- Webb
[Comment from DR: [de Groot's research](#) is also relevant here. What his tests seemed to show was not that masters analysed very much deeper, but they homed in on the critical lines and issues much more quickly than non-masters.]

6/78 White to play: candidate moves?

"Korchnoy played 12. N-KN5! (-K4-B5), a move not considered by any of the panel..."

"JN[236] thought almost exclusively in terms of concrete variations, whereas GJ [112] went to the opposite extreme... RW[208] and SJ[165] also gave very few concrete variations, and this may be more a question of style than strength..."

"IC[149]... seemed to have the best-organised thought processes (...) It is not clear, however, whether this logical approach is necessarily all that effective, for it could be argued that if IC had adopted the RW approach of looking at moves twice he might have spotted 1. P-K4 B-N5 2. P-Q5 N-Q5! which seems good for Black" -- Webb

[Comment from DR: This position illustrates for me quite nicely Kotov's notion of 'candidate moves': Korchnoi's actual choice wasn't even considered by the panellists. Korchnoi may even have reviewed, and rejected, other moves that were not considered by them.

Kotov expands his approach to analysis by saying once the list of candidate moves is drawn up, each branch should be considered once and once only. IC has clearly read and believed, and this player may be more efficient because of it, but at least while we are improving this may be at the cost of accuracy. de Groot used to describe an approach of 'progressive deepening', and this may not just a more common approach but a more appropriate one for positions which are not highly tactical.]

7/78 White to play: begin at the end

"JN[236] and RW[208] had far more idea what they ought to be doing than the others, and this supports the widely held supposition that the greatest difference between stronger and weaker players is in the endgame." -- Webb

[**Comment from DR:** Howard Staunton complained that only the 'magnates' of the game were really skilled at endgame play, and this remains true!

But Capa advised, that chess study really should begin with the endgame.]

10/78: playing by analogy

"...Although experience is an advantage in telling a player what to look for, it can also restrict you into considering only 'normal' moves.

"JM [237] 's idea of meeting 1. P-B5 with ...PxP and ...P-K5 (was) difficult to spot, because ...PxP is an abnormal way of meeting the thrust P-B5. This also applied to RY[160] and RN [165], who didn't consider ...PxP because it would have looked anti-positional to them. To AP [ungraded player], however, ...PxP was the obvious reply...

[**Comment from DR:** *I like this observation. It may be that stronger players actually consider more 'stupid' moves than weaker ones - dismissing most of them, but not ruling them out without a glance! It may be that this is the only possible explanation for, say, some of Tal's moves...*]

White (de Groot) to play: what makes a difference?

Chess master and psychologist de Groot gave this position to Alekhine, Keres, Euwe and other GMs at the 1938 AVRO tournament, as well as to a number of weaker, but still expert, players.

All the GMs except Flohr quickly found the win with **1. Bxd5** (1...exd5 2. Qf3 Qd8 3. Rfe1 Kg7 4. Ng4 Nxc6 5. Bxe7). They also analysed other forcing continuations like **1. Nxc6**, which Alekhine considered just as strong and which Flohr actually preferred.

Hardly any of the other players suspected there was a forcing solution (even after 15-20 minutes, much longer than the GMs. For the most part, they opted for safe positional moves like **1. Rfe1** or **1. Bh6**; nothing alerted their antennae to a concrete solution.

Every solver thought: White has an isolated d-pawn, so endgame problems, so attack now. But only the GMs chased it down to a line 4/5 moves deep. The lesser masters seemed unable to overcome two barriers to seeing the tactic: the safe appearance of the Black position, and the anti-positional appearance of **1.Bxd5**.

"It is by no means easy to detect these chance factors which are not based on obvious strategic factors", conclude Pflieger and Treppner, rather gloomily.

Oh, Flohr's idea? Looking for something even better than Bxd5, he hatched **1. Nxc6 bxc6 2. Bxd5 cxd5 3. Bxf6 Bxf6 4. Nd7**, winning the exchange... but it is only the ghost of the knight that goes to e7!

Lasker-Capablanca #10 1921; White to play: masters at fault?

This is a similar case, where the GMs may have got it wrong: Breyer analysed a win starting **15. Bxf6!**

It looks anti-positional to give up the Bishop, but Breyer claims an advantage in all lines:

17... Bxf6 18. Bxd5 exd5 19. Ng4 Bg5! (19... Bd8 20. Qf5) **20. f4 exf4 21. Qf5 Bc7** (else 22. Qxd5 a6 23. a4) **22. Nxd5 Kh8 23. Nxh6 gxh6 24. Nf6 Kg7 25. Nh5+** with mate in two.

I have seen this analysis "busted", and I don't feel qualified to judge: but if Lasker didn't overlook something important, then Breyer did!

Exeter Chess Club: Simultaneous Display

Post Mortem

[\[Index to games at end of page\]](#)

Although he obviously knows a lot of **theory** International Master Gary Lane wasn't out to play right down the line - he deviated in the sharper bits of theory against Mark and Steve. Rather, he played mostly **solidly** - certainly in only a few games did he set out for mate straight away. His opening repertoire leaned heavily on his published books (*Ruy Lopez, Bishop's Opening, Closed Sicilian, Alapin Sicilian*) and unpublished ones (*Blackmar-Diemer Gambit*, which I think no-one accepted).

"**When I attacked, I won**" he said afterwards: this indicates some need for better defensive technique (Bruce, Daniel, Geoff). On several occasions it seemed he just pushed a queen near an Exeter King's-side, hoping that things would turn up. This '**fishing**' for opportunities can be seen in the games with Iain, Geoff and Ivor. Also, there were a couple of games where we seemed to be doing well to start with, but the moment we started mixing it, we fell apart (Sean, Iain). There are a couple of games where GL adopted **standard attacking formations**, and the attack went like clockwork - my guess is our mistake here was allowing such a formation to start with (Bruce, Tom, Keith).

Masterly judgement was apparent in the games - where after a fair opening, our player's pieces seemed to start going backwards (Geoff) or became decentralised (Iain); when GL was at a clear disadvantage in a game, he cold-bloodedly made the most of his own advantages (Ivor, Steve, Chris).

GL wasn't out to knock us out in the opening, and in most of the games we seemed to be still in the game at move 15. We did best when we played his strategy back at him - kept **solid and played good positional chess** (Mark, Steve, Gill), kept **centralised** (Matthew), **didn't let him settle** with a stable centre (Matthew, Steve), **insisted on some play of our own** (Iain, Ivor, Steve...) **didn't take his word for it** (Ivor, Steve, Chris). And I'm sure we were all reassured to watch GL play with a flourish **Qe8+ Nxe8** (oops) as he was finishing off little David Butler...

Several folk did well for much of the game, outplaying our esteemed visitor for at least some of the time. This goes some way towards suggesting that masters don't do anything very different to club players, rather they do it more or faster.

Exeter Chess Club: ECC\simul\ChrisB.html

Lane,G(IM) - Chris Bellers

1. e4 g6 2. d4 Bg7 3. Nf3 c6 4. c3 d5

I have never believed in playing the Gurgendidze line against a White move order without Nc3.

5. Bd3

[5. Nbd2] But the dismal text leaves the Bishop exposed...

5... dxe4 6. Bxe4 Nf6 7. Bd3

[7. Bc2]

...and the d-pawn undersupported.

7... O-O 8. O-O Bg4 9. h3 Bxf3 10. Qxf3 Nbd7 11. Re1 Re8 12. Bf4 Qb6 13. Re2 Nd5 14. Be5 Nxe5 15. dxe5

15...Bxe5

a pungent rejoinder! Showing this to a group, it took a while for the true position to be seen:

- oh no, we can't take the e-pawn!
- oh yes we can, the b-pawn is going!
- oh no we can't, you shouldn't snatch pawns in the opening, you lose time and might get the Queen stuck!
- oh yes we can, we only need one move to complete development and it's actually the Rook on a1 that is stuck!

16. Na3

[16. Rxe5 Qxb2]

16... Qc7 17. Rae1 Bg7 18. g3 e5 19. Nc4 b5 20. Nd2 f5 21. Qg2 Rad8 22. Bc2

Black has consolidated his gains although is a little loose. White must avoid exchanges and seek to make the most of any opportunities; Black has no need to provoke a crisis yet and should try slowly to improve his position.

22... e4

Just sets up the f2-f3 break for White.

23. Nf1

Watching, I was anxious about

[23. Nb3]

but that's my style.

23...Nf6 24. f3 Qb6+ 25. Kh2 exf3 26. Rxe8+ Nxe8 27. Bb3+ Kh8 28. Qxf3 Nf6 29. Re7

How quickly the scene changes!

Exeter Chess Club: ECC\simul\SteveH.html

Lane,G (IM) - Steve Homer

1. e4 c5 2. Nc3 e6 3. g3 d5 4. exd5 exd5 5. Bg2 Nf6 6. d3 Be7 7. Nge2 d4 8. Ne4 O-O 9. O-O Nc6 10. Nf4 Bf5 11. Nxf6+ Bxf6 12. Nd5

White has a good Knight post on d5, but Black has made a firm stand in the centre and there is nothing for White on the long White diagonal.

12... Be5 13. Re1 Qd7 14. Bg5 f6 15. Bf4 Rae8 16. Qd2 Re6 17. a3

Optically Black is better-placed, and while you need to translate that into a concrete plan, I think that is the correct assessment of the position, and that Steve has outplayed his opponent.

17... Rd6 18. Bxe5 fxe5 19. c4 dxc3 20. Nxc3 Rxd3

White has been careless; Black is clearly winning.

21. Qg5 h6 22. Qh4 Qd4 23. Qxd4 cxd4 24. Na4 Rd2 25. b4 Bc2 26. Nc5 Rxf2 27. Bd5+ Kh7 28. h4 Rfe2 29. Rf1 Ne7 30. Bf3 Re3 31. Ra2 Kg8

[31...b6.]

Eye off the ball, I think; GL was coming around very quickly now.

32. Rf2

I think Black is winning, but less clearly: White's pieces now start coming out because of the loose b7 and second rank targets. Perhaps Steve over-reached, but I don't know where.

32... Re1+ 33. Kg2 Rxf2+ 34. Kxf2 Rc1 35. Ke2 Bg6 36. h5 Bf7 37. Rb2 Bd5 38. Nd3 Bxf3+ 39. Kxf3 Rc3

The Black pawns, which have for so long been immobile, are revealed as targets.

40. Ke4 Rxa3 41. Nxe5 Rxc3 42. Kxd4 Rh3 43. Rc2 Rxh5 44. Rc7 Nf5+ 45. Ke4 (...)

Steve allowed White to capture both Q-side pawns, and sacrifice the wN to queen the b-pawn; GL then won a tricky KQ/KNPP ending ...

...1-0

The sacrifice went something like...

(...) 1. Rc8+ Kh7 2. Rh8+ Kxh8 3. Ng6+ Kh7 4. Nxh4 Ne4 5. b6

Then GL let Steve waste moves with the K to capture the N while the pawn Queened...

(...near the end...)

GL was having trouble approaching with the K; there were several nasty forks with the Q on g2. I wrote this position down, (after Qg3+ Kd7) and now White played Qg2+. I think GL mistakenly assumed he couldn't capture the N, while my faithful companion Fritz took one electronic look and crashed out:

1. Qxg4+ Kf2 2. Qh3 Kg1 3. Qg3+ Kh1

usually a drawing resource...

4. Qf2 g4 5. Qf1# 1-0

In the event White approached with his King and ate the King's-side... 1-0.

Exeter Chess Club: Chunking in patterns of GM thought

This game features two nice examples of the role of experience in GM thought: one, where he drew on a remembered example (Vukovic), and another where extraneous information from an analogous type of position (Winawer) led to mistakes in thinking.

Nunn,J (2605) - Korchnoi (2615) (11)

Amber-blind, 1994

1. e4 c6 2. d4 d5 3. e5 Bf5 4. Nf3 e6 5. Be2 c5 6. O-O Nc6 7. c3 Rc8 8. a3 h6 9. b4 c4 10. a4 Nge7 11. Na3 Ng6 12. Nc2 Nh4 13. Ne3 Nxf3+ 14. Bxf3 Bd3 15. Be2 Bxe2 16. Qxe2 h5 17. f4 g6 18. g3 Ne7 19. Ng2 Nf5 20. Ne1 Kd7 21. Nf3 Be7 22. Ba3 Qf8 23. Ra2 Kc7 24. Rfa1 Qh6 25. Bc1 Kb8 26. b5 Rce8 27. Ng5 Qg7 28. Ba3 Bd8 29. a5 f6 30. Nf3 Qd7 31. exf6 Bxf6 32. Rb1 Ka8 33. Bc5 Qh7 34. Rba1 Rhg8

Black has the threat ...g5. How can White open a file against the King?

a5-a6 is met by ...b6; b5-b6 by ...a6. Nunn, playing blindfold here, recalled reading Vukovic [see [Canon](#) attack: opening lines], and came up with:

35. Bb6 a6

[35... g5 36. a6 axb6 37. axb7+ Kb8 38. Ra8+ Kc7 39. Rc8+ Rxc8 40. bxc8=Q+ Kxc8 41. Qxe6+]

[35... Rg7 36. a6 axb6 37. axb7+ Kxb7 38. Ra7+ Kc8 39. Ra8+ Kd7 40. R1a7+ Kd6 41. Qe5+ Bxe5 42. fxe5#]

(43) TI: THEORIES OF CHESS SKILL

AU: HOLDING_DH

NA: UNIV LOUISVILLE,DEPT PSYCHOL,LOUISVILLE,KY,40292

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.10-16

AB: The paper reviews the evidence for and against the recognition-association theory and a forward-search (SEEK) theory of chess skill. The recognition-association theory appears to be founded on indirect evidence concerning visual short-term memory, together with supplementary assumptions that may be questioned, and provides no role for verbal processes. There is no direct support for the theory, which omits forward search for reasons that are reexamined. In contrast, the SEEK theory maintains that move choice is based on search and evaluation processes supplemented (or else supplanted) by a knowledge base. These processes are directly evidenced by experimental findings. The objection that search theories cannot account for speed chess is met by a review of the available evidence. It is concluded that chess skill relies on thinking ahead rather than on pattern recognition.

- "I hate anyone who beats me." -- LISA LANE
- "Chess was Capablanca's mother tongue." -- RETI
- "Let the perfectionist play postal." -- SEIRAWAN
- "A good player is always lucky." -- CAPABLANCA
- "There are no heroes in chess." -- CORY EVANS
- "One bad move nullifies forty good ones." -- HOROWITZ
- "The older I grow, the more I value Pawns." -- KERES

"If drink is the curse of the working classes and work is the curse of the drinking classes then chess is the curse of the thinking classes "

-- J. Ross

There is, of course, a very famous saying from Reuben Fine:
"I'd rather have a pawn than a finger."

It's often quoted during analysis.

One of my favorite sayings, though, came as a response to this.

About 40 players were watching an online broadcast of a major match.

One of the players was a pawn down, and there was some argument as to how much compensation the other had.

One of the masters present quoted Fine, *"As Reuben Fine said, "I'd rather have a pawn than a finger."*

To which Grandmaster Roman Dzindzichashvili replied:
"It all depends: which pawn and which finger?" -- Duif

jcl continues:

- *"A wood-pusher overlooks the ranks."* -- RUSSIAN SAYING
- *"The hardest game to win is a won game."* -- Em. LASKER

" Actually, the hardest game to win is a lost game." -- Dr.Dave

In article <473jk9\$phu@condor.ic.net> razor@mail.ic.net writes:

>An excerpt from **Murders in the Rue Morgue** by Edgar Allan POE:

" Yet to calculate is not in itself to analyze. A chess-player, for example, does the one without effort at the other. It follows that the game of chess, in its effects upon mental character, is greatly misunderstood. I am not now writing a treatise, but simply prefacing a somewhat peculiar narrative by observations very much at random; I will, therefore, take occasion to assert that the higher powers of the reflective intellect are more decidedly and more usefully tasked by the

unostentatious game of draughts than by all the elaborate frivolity of chess. In this latter, where the pieces have different and bizarre motions, with various and variable values, what is only complex is mistaken (a not unusual error) for what is profound. The attention is here called powerfully into play. If it flag for an instant, an oversight is committed, resulting in injury or defeat. The possible moves being not only manifold but involute, the chances of such oversights are multiplied; and in nine cases out of ten it is the more concentrative rather than the more acute player who conquers."

[Comment by DR](#)

Quotes on: | [Coaching](#) | [Life](#) | [Play](#) | [Players](#) | [Openings](#)

Learning to play chess

*"Chess rules and exercises - 5 hours
Elementary endings - 5 hours
Some openings - 10 hours
Combination - 20 hours
Positional play - 40 hours
Practical play with analysis - 120 hours*

"Having spent 200 hours on the above, the young player, even if he possesses no special talent for chess, is likely to be among those two or three thousand chessplayers [who play on a par with a master]. There are, however, a quarter of a million chessplayers who annually spend no fewer than 200 hours on chess without making any progress. Without going into any further calculations, I can assert with a high degree of certainty that nowadays we achieve only a fraction of what we are capable of achieving."

-- Em. Lasker, Manual of Chess

(fortissimo) *"Have you ever seen a monkey examining a watch?"*

-- STEINITZ, impatient with an enquirer.

"We perceive after a careful consideration of the evolution of the chess mind that such evolution has gone on, in general, in a way quite

similar to that in which it goes on with the individual chess player, only with the latter more rapidly."

-- Richard RETI

"The delight in gambits is a sign of chess youth... In very much the same way as the young man, on reaching his manhood years, lays aside the Indian stories and stories of adventure, and turns to the psychological novel, we with maturing experience leave off gambit playing and become interested in the less vivacious but withal more forceful manoeuvres of the positional player."

-- Emanuel LASKER

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game"

- RICHARD RETI

"Mikhail Gromov, the outstanding Soviet pilot, wrote that if one wants to become a good pilot one must learn the art of self-control. These words may apply equally to chess and to every chessplayer."

-- VB Malkin

"Nimzovitch became then for me more or less the author of the only book which could help me get away from these Euwe books, which, I admit, are very good for the ordinary club player. But once you've reached a certain strength you get the impression that everything that Euwe writes is a lie."

-- Bent LARSEN, in KEENE, **Nimzowitsch: a reappraisal.**

I still like them! - DrD

"Play your best chess by post..."

-- BCCA

"...In some places words have been replaced by symbols which, like amulets from a witch's bag, have the power to consume the living spirit of chess. The notorious "!!" can never approximate the human emotions which accompany an "excellent move" or a "great idea".

...Oh, those exclamation points! How they erode the innocent soul of the amateur, removing all hope of allowing him to examine another player's ideas critically!"

-- Tigran PETROSIAN

"Most commentaries in chess magazines and books are superficial and sometimes just awful. Once a certain experienced master explained to me how he worked. You put two fingers to the page with text on it and see that there are only moves under them - in other words, it is time to make a comment. You write something like "The Ruy Lopez always leads to a tense, complicated struggle" - and your fee goes up by a rouble.

"The ability to distinguish between real feelings and thoughts and this kind of verbal facade will be of use to you, and not just in chess.

"Often you will find the opposite situation. The author seems to have interesting ideas, but he is not able to illustrate them with decent examples. If a grandmaster is commenting on one of his own games, then there is usually not any problem: his general thoughts are closely tied up with what is happening on the board. But as soon as he starts

writing an article or book on a different theme the difficulties begin, as he may not have suitable material to hand."

-- Dvoretsky

THE ENGLISH SCHOOL OF ANALYSIS:

"The word "combination" means different things to different people."

"... I bid farewell to my readers in the hope that they have formed their own opinion as to the meaning of the word "combination"."

-- Ray KEENE, **The Chess Combination from Philidor to Karpov**

"(3) 'IS IT A SYSTEM...?'

... Ultimately, I suspect, this is a question about which the reader should form his own judgement by study of the original text."

-- Ray KEENE, **Aron Nimzowitsch: A reappraisal**

On advanced ideas:

"After giving a student the basic mating patterns and strategies you must begin giving them advanced concepts. At first these ideas will not make sense, many players will have a vague idea of what you are talking about but nothing more. Even a fragmented understanding of these concepts will prove useful though, and eventually they will improve as these lessons are assimilated by repetition and example."

-- Jeremy SILMAN, **The Amateur's Mind**, 1995

cf.:

"We begin with the hypothesis that any subject can be taught effectively in some intellectually honest form to any child at any stage of development. ... (The "spiral curriculum") ... Is it not possible ... to introduce them to some of the major ... ideas earlier, in a spirit perhaps less exact and more intuitive?"

-- Jerome BRUNER, **The Process of Education**, 1960

For a contrasting view:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

-- Peter MEDAWAR, *The Art of the Soluble*

"What distinguishes a Grandmaster from a master? Chess-lovers often ask questions like that. To many people it seems that Grandmasters simply calculate variations a little deeper. Or that they know their opening theory slightly better. But in fact the real difference is something else. You can pick out two essential qualities in which those with higher titles are superior to others: the ability to sense the critical moment in a game, and a finer understanding of various positional problems."

-- Yusupov, in **Opening Preparation**

" It is often supposed that, apart from their 'extraordinary powers of memory', expert players have phenomenal powers of calculation. The beginner believes that experts can calculate dozens of moves ahead and he will lose to them only because he cannot calculate ahead so far. Yet this is utter nonsense. From my own experience I can say that grandmasters do not do an inordinate amount of calculating. Tests (notably de Groot's experiments) supports me in this claim. If anything, grandmasters often consider fewer alternatives; they tend not to look at as many possible moves as weaker players do. And so, perversely, chess skill often seems to reflect the ability to avoid calculations. It is, in truth, not clear that chess is a game of calculation. Of course there are times when intense calculation is called for, and often the master is better at dealing with these situations than the amateur. No wonder, he has had more practise than the amateur, but all the same his innate calculating ability need not be any greater. Most of the time it is something quite different that is required in chess, something more akin to 'understanding' or 'insight'. "

-- David NORWOOD, **Chess and Education**

"A lot of the difference between an IM and GM is a seriousness to the game. The GM is willing to go through all this. He's willing to put up with anything. This shows his dedication. One other thing is the GMs superiority in tactics. For example Christiansen can find tactics in any position. If you're a GM you should be able to overpower the IM tactically. The GM will often blow out the IM in this area. "

-- Nick de FIRMIAN, in [How To Get Better at Chess : Chess Masters on Their Art](#) by GM Larry Evans, IM Jeremy B Silman and Betty Roberts

EDITORIAL NOTE: This of course contradicts David Norwood's view. While David's opinion is based on research, I think Nick's is the correct one. I have a [wonderful proof](#) of this theorem, but unfortunately this page is too small to hold it. - Dr.Dave.

"Games like this [Penrose-Botvinnik] (and there were plenty in this tournament) impressed on me that 'wanting to win' was perhaps more important than 'playing good moves'."

-- KEENE, **'Becoming a Grandmaster'**.

"At that age (ten), the odd piece here or there often makes little difference. Rather, ingenuity and the will to win may prove decisive."

-- ZAK, **Improve your chess results.**

"Combinative vision manifests itself at an early age, and children are quick to notice and execute combinations which chance to turn up. Preparing combinations, however, is more difficult for them."

-- ZAK, **Improve your chess results.**

"Many players, even of a high calibre, will assert, half jokingly and half seriously, that a difficult labour of analysis can be replaced by intuition. 'I played this move in a flash - it was obvious it couldn't be bad' is the sort of thing we often hear in a post-mortem."

"Criticising such a policy is not simple - not after it has just been successful! [...] Instead of appraising the state of struggle on the basis of precise calculation, Black makes a move, which on general considerations, is wholly in the spirit of the position - a flank attack is countered by a break in the centre. Yet in chess there are no axioms."

-- ZAK, **Improve your chess results.**

"One of the main aims has been to highlight the differences in approach between a Grandmaster and a weaker player, and to try and narrow the gap. To some extent this comes down to technical matters - more accurate analysis, superior opening knowledge, better endgame technique and so forth; but in other respects the difference goes deeper and many readers will find that they need to rethink much of their basic attitude to the game. One example of this would be the tremendous emphasis which is placed on the dynamic use of the pieces, if necessary at the expense of the pawn structure, or even of material. This is no mere question of style; it is a characteristic of the games of all the great players."

-- Peter Griffiths, Introduction to **Secrets of Grandmaster Chess.**

"Openings teach you openings. Endgames teach you chess!"

-- Stephan Gerzadowicz, US Postal Chess Master

"In order to improve your game, you must study the endgame before everything else, for whereas the the endings can be studied and mastered by themselves, the middle game and the opening must be studied in relation to the endgame."

-- Jose Raul Capablanca, World Champion 1921-1927

Playing a game of chess

"Chess is 99% tactics"

-- Richard TEICHMANN

[More [Tactics Quotes?](#)]

"Those who say they understand chess, understand nothing"

-- Robert HUBNER

*"The most important feature of the chess position is the activity of the pieces. This is absolutely fundamental in all phases of the game (opening, middlegame and **especially** endgame). The primary constraint on a piece's activity is the Pawn structure."*

-- Michael STEAN, in **Simple Chess**.

"...only the player with the initiative has the right to attack"

-- Wilhelm STEINITZ

"no one ever won a game by resigning"

(Unfortunately origin unknown)

"A good sacrifice is one that is not necessarily sound but leaves your opponent dazed and confused"

-- Rudolph SPIELMANN

Remember Soltis' immortal words:

"Pawns are born free, yet are everywhere in chains..."

-- rkennedy@freenet.columbus.oh.us (Rick Kennedy)

"Modern chess is too much concerned with things like pawn structure. Forget it - checkmate ends the game"

-- Nigel SHORT

"Only a good bishop can be sacrificed, a bad bishop can only be lost."

-- Yuri RAZUVAYEV. Source: Gennady Nesis, Tactical Chess Exchanges, foreword. [via Ari Makela]

"The great master places a Knight at e5; mate follows by itself."

"Some Knights don't leap - they limp."

"A chess game is divided into three stages: the first, when you hope you have the advantage, the second when you believe you have an advantage, and the third... when you know you're going to lose!"

-- Savielly Tartakower

"Black is now in desperate need of a good idea. Or, to put it standard chess notation, +-"

-- DVORETSKY and YUSUPOV, Opening Preparation

"Whereas the tactician knows what to do when there is something to do, it requires the strategian to know what to do when there is nothing to do"

-- Gerald ABRAHAMS (this seems to be fairly free translation of one of TARTAKOVER's aphorisms).

"It is not a move, even the best move, that you must seek, but a realisable plan"

-- Eugene A. ZNOSKO-BOROVSKY.

I have formulated a rule for myself which I call *the principle of the worst piece*:

"In positions of strategic manoeuvring (where time is not of decisive importance) seek the worst-placed piece. Activating that piece is often the most reliable way of improving your position as a whole."

-- Mark DVORETSKY & Artur Yusupov, Positional Play [and see below!]

"In the eighteenth century they announced their first rule: "Sortez les pieces" - "Get the pieces out". "It took a hundred years before a new rule was announced. Anderssen, the winner of the first International Tournament, that of London, 1851, said:

"Move that one of your pieces, which is in the worst plight, unless you can satisfy yourself that you can derive immediate advantage by an attack"

"A few decades went by [...] the masters evolved a "public opinion":

Avoid the moves of Pawns in the Opening as far as possible.

"I have added to these principles the law: Get the Knights into action before both Bishops are developed."

-- LASKER, Manual of Chess (second book)

"A draw can be obtained normally by repeating three moves, but also by one bad move."

"The winner of the game is the player who makes the next-to-last [mistake](#)"

-- TARTAKOVER

*" "There are no hopeless positions;
there are only inferior positions that can be saved.*

*There are no drawn positions;
there are only equal ones in which you can play for a win.*

*But at the same time, don't forget that there is no such thing as a
won position
in which it is impossible to lose."*

-- Grigory SANAKOEV (via Peter Lane)

36. Ne1?

"Well, well. IM (and correspondence GM) Douglas Bryson once told me that he almost never plays a game that flows smoothly from start to finish; there is always a "moment" of sorts where someone misses a big defensive opportunity or the nature of the position changes more than one might reasonably expect. This was such a "moment"."

-- Jonathan Rowson British Chess Magazine October 1999 p.553

"I wasn't sure what square to take the rook to. Because there were three alternatives (e8, d8 and c8), I decided to go for the middle one."

-- Timman, NIC 1998 No 2. (via Mark Brodie)

" I have also heard that GM Oscar Panno said that -whenever you have to make a rook move and both rooks are available for said move- you should evaluate which rook to move and, once you have made up your mind... MOVE THE OTHER ONE!!! "

-- Oscar PANNO (via PEDRO HEGOBURU)

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one' "

-- Richard RETI.

COOL TIP: What does Reti mean? *He was one of the strongest players of his day, but surely grandmasters are superb calculators! Yes, they are, but often they do not need to calculate something from scratch, because they recognise the type of position they are in, and they know what to play in that sort of position. All the calculating has been done before by someone else, and once you are shown how it works, you can use it and apply it in your own games. It's all about recognising and making judgements about patterns, so as you read the notes and ideas elsewhere on these pages, what you should be doing is seeing and remembering patterns.* -- Dr. Dave.

"The idea comes before the logical argument."

-- Gerald ABRAHAMS

Good positions don't win games, good moves do.
[Gerald ABRAHAMS]

I've wasted a Black.
[ABRAHAMS, after drawing a game with the Black pieces]

You can retreat pieces... but not pawns. So always think twice about pawn moves.
[Michael STEAN, in **Simple Chess**]

Open files can be used by both players. The chess player, not being an unselfish advocate of equal opportunity, naturally prefers a one-way system.
[Michael STEAN, in **Simple Chess**, on half-open files]

all from **Peter BALLARD**

"The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?"

-- Reinfeld, to Thomas-Euwe, Carlsbad 1929.

[The terminology is: **Combinations**

- Mating
 - direct mate
 - break-up
 - penetrative
 - lateral
- open-field
 - for material gain
 - focal-point
 - pinning
 - unmasking
 - overload
 - obstructive
 - desperado
 - cumulative
- compound
- endgame
 - forcing
 - advancing
 - promotion

]

To compare with Reinfeld's observation:

" Muscular dystrophy ... was never seen until Duchenne described it in the 1850s. By 1860, after his original description, many hundreds of cases had been recognised and described, so much so that Charcot said:

'How is it that a disease so common, so widespread, and so recognisable at a glance - a disease which has doubtless always existed - how is it that it is recognised only now? Why did we need M. Duchenne to open our eyes?'

"

-- Oliver Sachs, in **The man who mistook his wife for a hat.**

"The scheme of a game is played on positional lines, the decision of it is, as a rule, effected by combinations. This is how Lasker's pronouncement that positional play is the preparation for combinations is to be understood."

-- Richard RETI

"It is the aim of the modern school, not to treat every position according to one general law, but according to the principle inherent in the position."

-- Richard RETI

"On a motif such as was indicated by Reti one cannot build the plan of a whole well contested game; it is too meagre, too thin, too puny for such an end. Reti's explanations, wherever they are concerned with an analysis which covers a few moves, are correct and praiseworthy. But when he abandons the foundations of analysis in order to draw too bold, too general a conclusion, his arguments prove to be mistaken."

-- LASKER, Manual of Chess

(after **1 d4, Nf6; 2 c4, g6; 3 Nf3, Bg7; 4 g3, O-O; 5 Bg2, d6; 6 O-O, c5; 7 Nc3, Nc6; 8 d5, Na5**)

"Many are of the opinion that the Knight on QR4(a5) does not participate fully in the struggle, while others hold that, on the contrary, in view of Black's coming Q-side pawn advance and pressure against White's QB4(c4), his position is quite satisfactory. These debates are futile. The important thing is to see clearly what is positive and what is negative in the position of the Knight, and act accordingly when choosing a strategic plan."

-- MAROVIC and SUSIC

"Chess is above all a fight"

-- Emanuel LASKER.

"During a chess competition a chessmaster should be a combination of a beast of prey and a monk."

-- Alexander ALEKHINE

From: Dan Scoones

Moments when you should sense DANGER in chess:

1. There has been a change in the pawn structure. Your opponent has 8 and you don't have any.
2. Your opponent begins to throw pawns at your eyes.
3. You have a position won but your opponent has a gun.
4. The Director tells you not to bother turning in your scoresheet after the game.
5. Before game begins you notice your opponents 1st [initials](#) are 'GM'.
6. After completing your development you sense your opponent playing the endgame.
7. Just as you make your opening move your opponent announces mate in 11.
8. You don't control any squares at all.
9. Your draw offer sends all the people watching your game into uncontrollable laughter.
10. Your opponent has 3 bishops.

I don't know the composer of this - anyone?

"Before the endgame, the Gods have placed the middle game. "

-- Siegbert TARRASCH

*"Well, hmmm, endgames, yes, they are important,
Yaaaaawwwwnnnn!"*

-- [Norbert FRIEDRICH](#)

"If you have any doubt what to study, study endgames. Openings teach you openings. Endings teach you chess."

-- Stephan GERZADOWICZ, **Thinker's Chess**.

"To play with correctness and skill the ends of games, is an important but a very rare accomplishment, expect among the magnates of the game."

-- Howard STAUNTON, **The Chess-Players' Handbook** 1847 (*Plus ca change...*)

Quotes on: | [Chess](#) | [Coaching](#) | [Life](#) | [Players](#) | [Openings](#)

Chess players

"Who is your opponent tonight?"

"Tonight I am playing against the Black pieces"

-- A. RUBINSTEIN (via ilias kastanas)

About the Deeper Blue-Kasparov match (1997):

*" I just think we should look at this as a chess match," he said,
"between the world's greatest chess player and Garry Kasparov. "*

-- Louis GERSTNER, IBM Chairman (via Peter Lane)

*" Reti studies mathematics although he is not a dry mathematician;
represents Vienna without being Viennese; was born in old Hungary
yet he does not know Hungarian; speaks uncommonly rapidly only in
order to act all the more maturely and deliberately; and will become
the best chessplayer without, however, becoming world champion. "*

-- TARTAKOVER, **Hypermodern Chess**

*"When Garri Kasparov wrestles with his conscience, he always wins.
It's what he's best at."*

-- Dominic LAWSON

"Excellence at chess is one mark of a scheming mind."

-- A. Conan Doyle (in the mouth of Sherlock Holmes)

from Stanton Nesbit

"Chess, like the tomb, levels all grades of conventional rank and distinction and reserves its high places for the best players."

-- GEORGE WALKER

"It has been said -- and is probably not true -- that every great man has been a chess player. But was there ever a chess player who was also a great man? Of course not and never will be. It is impossible. Great skill at chess is not a mark of greatness of intellect but of a great intellect gone wrong."

-- NEW YORK MORNING TELEGRAPH

"As one by one I mowed them down, my superiority soon became apparent."

-- CAPABLANCA, **My Chess Career**

(You could look at that statement as astounding egotism or the simple truth, and either way I guess you'd probably be right. - Timothy Hanke)

"Have you ever seen a chess article without a brilliant example of the author's own play? 'Silly question,' you will say. Quite."

-- Razuvayev, introducing Razuvayev-Bagirov 1982

"As Olafsson showed me, White can win... It's hard to believe. I stayed up all night analysing, finally convincing myself, and, incidentally, learning a lot about Rook and Pawn endings in the process."

-- FISCHER

When asked, "How many moves do you see ahead?", CAPABLANCA replied:

"One move - the best one." ()*

Similarly, when asked, "How is that you pick better moves than you opponents?", ALEKHINE responded:

"I'm very glad you asked me that, because, as it happens, there is a very simple answer. I think up my own moves, and I make my opponent think up his."

(*) According to Horowitz + Reinfield's "How to think ahead in Chess" (published in the 1940's I believe), it is attributed to someone who BEAT Capa. - Peter Ballard

I have also seen it attributed to Tarrasch! - DrD

"Deux fous gagnent toujours, mais trois fous, non!"

-- Alexander ALEKHINE, on the advantage of the Two Bishops at amateur level

"Style, I've got no style."

-- Anatoly KARPOV.

"Tal doesn't move the pieces by hand; he uses a magic wand."

-- RAGOZIN. Source: J. Hajtun: Selected Chess Games of Mikhail Tal, p. 9.

"Do you realize, Fischer almost never has any bad pieces. He exchanges them, and the bad pieces remain with his opponents. "

-- Yuri BALASHOV. Source: Gennady Nesis, Tactical Chess Exchanges, foreword.

"My style is somewhere between that of Tal and Petrosian"
[made in all seriousness by RESHEVSKY in **Great Chess Upsets**]

"Why must I lose to this idiot?"
['Alekhine', says Peter, but I heard it was NIMZOVITCH - DR]

"Winning isn't everything... but losing is nothing"
[MEDNIS, on the importance of fighting for a draw]

In chess, at least, the brave inherit the earth.
[Edmar MEDNIS, commenting on Tal]

Normally we'd draw the curtain here, but I just wanted to see what he'd play next.
[FISCHER, on delaying resignation]

No game was ever won by resigning.
[TARTAKOVER?]

If your opponent offers you a draw, try to work out why he thinks he's worse off.
[Nigel SHORT]

all from **Peter BALLARD** - Thanks, Peter!

"Later, ... I began to succeed in decisive games. Perhaps because I realised a very simple truth: not only was I worried, but also my opponent."

-- Mikhail TAL

Here are some of the questions and answers to an examination paper in chess that was given some time ago by Dr. TARRASCH. (...)

Q: What is the object of playing a gambit opening?

A: To acquire a reputation of being a dashing player at the cost of losing a game.

Q: Account briefly for the popularity of the Queen Pawn Opening in matches of a serious nature.

A: Laziness.

Q: What is the duty of an umpire where a player wilfully upsets the board?

A: Remove the bottle.

Q: What exceptional circumstances will justify the stopping of clocks during a tournament game?

A: Strangling a photographer. "

-- *Chess Review*, 1935.

"When it is so freely asserted that Morphy's style was all genius and inspiration ... Morphy possessed that most profound book knowledge of any master of his time, and never introduced a single novelty, whereas since his day the books have had to study the players...

We may all learn from Morphy and Anderssen how to conduct a King's side attack, and perhaps I myself may not have learnt enough. But if you want to learn how to avoid such an attack, how to keep the balance of the position on the whole board and how to expose the King and invite a complicated attack that cannot be sustained in the long run, then you must go to the modern school for information...

The progress of age can no more be disputed than Morphy's extraordinary genius."

-- Wilhelm STEINITZ

"The captain was a good chess player, and the games with him were always interesting. Yossarian had stopped playing chess with him because the games were so interesting that they were foolish."

-- Joseph HELLER, **Catch-22**

"No fool can play chess, and only fools do."

-- GERMAN

"You may knock your opponent down with the chessboard, but that

does not prove that you are the better player."

-- ENGLISH

(from Marc Lowrance)

From: johnnymc@news.rio.com (John McMenamin)

Here's my entry to this mess:

"Skeletons of mice are often to be found in coconuts, for it is easier to get in, slim and greedy, than to get out, appeased but fat."

-- Viktor KORCHNOI

I have a quote I would like to share by an average tournament player.

After 3 dismal rounds, losing to three lower-rated players, he withdraws from the January Swiss. He appears an hour later, I asked him what brings you back. He states:

"I not only lost my shirt at this tournament, but I left my coat as well."

-- David LENHART: dalen@delphi.com

"Henry won fo much at Cheffe of Louis the King's eldest fon, as hee growing into Choller, called him the fonne of a Baftard, and threw the cheffe in his face. Henry takes vp the Cheffe-board, and ftrake Louis with that force as drew bloud."

-- DANIEL's **The Collection of the History of England**, 1621

rook@islandnet.com (Dan Scoones)

from: **The Psychology of the Chess Player** -- Reuben FINE (the man who put the 'anal' into analysis)

"Chess is a contest between two men in which there is considerable

ego-involvement. In some way it certainly touches upon the conflicts surrounding aggression, homosexuality, masturbation and narcissism which become particularly prominent in the anal-phallic phases of development. From the standpoint of id psychology, Jones' observations can therefore be confirmed, even enlarged upon. Genetically, chess is more often than not taught to the boy by his father, or a father-substitute, and thus becomes a means of working out the son-father rivalry."

So now you know... It's easy to be dismissive of this, but if you [don't think there's anything in it](#), and are not easily offended, then I invite you to look at a few [statements](#) quoted in Dominic Lawson's **The Inner Game**. The most obvious caution against a psychodynamic interpretation of chess is that Short's anal rape fantasies here seem anything but "unconscious" or "repressed"!

> Does anybody know the etymology of skittles?

*"Once in a Moscow chess club I saw how two first-category players knocked pieces off the board as they were exchanged, so that the pieces fell onto the floor.
It was as if they were playing skittles and not chess!"*

-- **Think Like A Grandmaster** by Alexander KOTOV

"After black's reply to 1.e4 with 1..e5 leaves him always trying to get into the game"

-- Howard STAUNTON

"After white's reply to 1.e4 e5 with 2.f4 the game is in its last throes"

-- Howard STAUNTON

From: een6cmm@electeng.leeds.ac.uk (Michuk)
Subject: Re: Best Chess Sayings of them all

...which of course was superceded by the more famous:

"After 1.e2-e4 White's game is in its last throes!"

-- Julius BREYER

*All openings are sound below master level.
[LOMBARDY?]*

Choose an opening... which is sound, regardless of fluctuations in current theory.

[HOROWITZ and REINFIELD, in recommending the Sicilian Dragon(!)]

when I'm white I win because I am white, when I'm black I win because I am Bogulyubov"

all from **Peter BALLARD**

A quote from Richard RETI's **Masters of the Chessboard**(p 395):

"In general, it can be established that there are two defenses against 1. e4, which make it absolutely impossible for the first player to take

any initiative, and which give Black such an even game, without any difficulties at all, that it has now become useless in practice, since these defenses are generally known. They are the Caro-Kann Defense and the variation of the French Game: 1.e4 e6 2.d4 d5 3.Nc3 Nf6 4.Bg5 dxe4."

Glad that's settled! :-)) -- Randy Pals

"I have never in my life played the French Defence, which is the dullest of all openings"

-- STEINITZ

From: arimakel@cc.Helsinki.FI (Ari Kalevi Makela)

"Like us as Black", beg the chess pieces, " and you will anyway like us as White"

-- Isaac BOLES LAVSKY

"Always deploy," says Franklin K. Young, "so that the right oblique can be readily established in case the objective plane remains open or becomes permanently located on the centre or on the King's wing, or that the crochet aligned may readily be established if the objective plane becomes permanently located otherwise than at the extremity of the strategic front."

If this is somewhat obscure (and I see no reason to believe otherwise), the conclusion it reaches is stated in limpid prose by the same writer:

"The best initial move for white is 1. P-K4."

-- from **Logical Chess** by Irving CHERNEV

"I don't know what I am going to play, so how can she know what I am going to play!"

-- GM Arthur Bisguier, commenting on the virtues of opening preparation. (via Rachel Landry)

Quotes on: | [Chess](#) | [Coaching](#) | [Life](#) | [Play](#) | [Players](#)

Chess and life

"Luzhin, preparing an attack for which it was first necessary to explore a maze of variations, where his every step aroused a perilous echo, began a long meditation: he needed, it seemed, to make one last prodigious effort and whe would find the secret move leading to victory. Suddenly, something occurred outside his being, a scorching pain - and he let out a loud cry, shaking his hand stung by the flame of a match, which he had lit and forgotten to apply to his cigarette. The pain immediately passed, but in the fiery gap he had seen something unbearably awesome, the full horror of the abysmal depths of chess. He glanced at the chessboard and his brain wilted from hitherto unprecedented weariness. But the chessmen were pitiless, they held and absorbed him. There was horror in this, but in this also was the sole harmony, for what else exists in the world besides chess?"

-- Vladimir NABOKOV, **The Defence**.

"I find that chess is very useful when travelling alone in Turkey. ...Take yourself to the nearest teahouse. Order a glass of tea, and another or Raki, and set up a chess problem. Within seconds Turks will appear. they won't play chess with you, but it starts a conversation.

"I did this once and someone asked, "Can I practise my English with you?" His first question was: "How many princesses have you slept with?" So now you see the point of chess."

-- Bryan SEWELL

"At that time two opposing concepts of the Game called forth commentary and discussion. The foremost players distinguished two principal types of Game, the formal and the psychological."

-- Hermann Hesse, **The Glass Bead Game**

"If chess is a science, it's a most inexact one. If chess is an art, it's too

*exacting to be seen as one. If chess is a sport, it's too aesoteric. If chess is a game, it's too demanding to be *just* a game. If chess is a mistress, she's a demanding one. If chess is a passion, it's a rewarding one. If chess is life, it's a sad one. "*

-- pinched from <http://freedom.NMSU.Edu/~jdenman/>

(another personal favourite)

" A combination composed of a sacrifice has more immediate effect upon the person playing over the game in which it occurs than another combination, because the apparent senselessness of the sacrifice is convincing proof of the design of the player offering it. Hence it comes that the risk of material, and the victory of the weaker material over the stronger material, gives the impression of a symbol of the mastery of mind over matter. "

Now we see wherein lies the pleasure to be derived from a chess combination. It lies in the feeling that a human mind is behind the game dominating the inanimate pieces with which the game is carried on, and giving them the breath of life. We may regard it as an intellectual delight, equal to that afforded us by the knowledge that behind so many apparently disconnected and seemingly chance happenings in the physical world lies the one great ruling spirit - the law of Nature. "

-- Richard RETI, *Modern Ideas in Chess*.

*"The chess-board is the world,
the pieces are the phenomena of the Universe,
the rules of the game are what we call the laws of Nature,
The player on the other side is hidden from us."*

-- Thomas HUXLEY (1825-1895).

This issue's Colemanballs selection:

"Football today, it's like a game of chess. It's all about money."

NEWCASTLE UNITED FAN, Radio 5 Live

(R. Webb)

<http://www.intervid.co.uk/intervid/eye/868/cmanball.html>

"A discussion between the top management of the firm Audi and grandmasters Darga, Schmid and Pflieger dealt with the similarities and differences between chess-oriented thinking and the thinking processes required in business, and in particular whether one can benefit from the other. The question arose as to how a chess master actually discovers his moves. Dr. Pflieger was of the opinion that in the last analysis nobody fully knows the reasoning by which he arrives at a certain move. Schmid disagreed emphatically, stating that he knew very well why he played his moves!"

-- PFLEGER and TREPPNER, **Chess: the mechanics of the mind**

"THE KING

*The King himself is haughtie care,
Which ouerlooketh all his men,
And when he seeth how they fare,
He steps among them now and then,
Whom when his foe presumes to checke,
His seruants stand, to giue the necke.*

THE QUEENE

*The Queene is queint, and quicke conceit,
Which makes her walke which way she list,
Ans rootes them up, that lie in wait,
To worke hir treason ere she wist:
Hir force is such against her foes,
That whom she meets, she ouerthrowes...*

THE PAWNES

*The Rookes poore Pawnes, are sillie swaines,
Which seldom serue, except by hap,
and yet those Pawns, can lay their traines,
To catch a great man, in a trap:
So that I see, sometime a groome
May not be spared from his roome.*

THE KNIGHT

*The Knight is knowledge how to fight
against his Princes enimies,
He neuer makes his walke outright,
But leaps and skips, in wilie wise,
To take by sleight a traitrous foe,
Might slilie seek their ouerthrowe.*

THE BISHOP

*The Bishop he is wittie braine,
That chooseth crossest pathes to pace,
And euermore he pries with paine,
To see who seekes him most disgrace:
Such straglers when he findes astaie,
He takes them up, and throws awaie.*

THE ROOKES

*The Rookes are reason on both sides,
Which keepe the corner houses still,
And warily stand to watch their tides,
By secret art to worke thier will,
To take sometime a theefe unseen,
Might mischiefe mean to King or Queene."*

-- Nicholas BRETON (1542-1626), **The Chesse Play**.

"O life, what art thou? Life seldom answers this question. But her silence is of little consequence, for schoolmasters and other men of good will are well-qualified to answer for her. She is, they inform us, a game. Which game? Bagatelle? No, life is serious, so not bagatelle, but any game that -- er -- is not a game of chance; not Baccarat, but Chess; or, in moderation, Bridge; yes, or better still Football with its goals and healthy open-air atmosphere and its esprit de corps;...

"Let is therefore turn to games of skill, and in the first place to Chess."

"I play the Evans.

"The invention of a naval officer, the Evans Gambit is noted for its liquidity. A heavy current rapidly sets in from the South-West and laps against the foundations of Black's King's Bishop's Pawn. The whole surface of the board breaks into whirlpools. But sooner or later out of

this marine display there rises a familiar corpse. It is mine. Oh, what have I been doing, what have I been doing? The usual thing. Premature attack, followed by timidity. Oh, why didn't I move out my Rook's Pawn? Because as always I was misled by superficial emotion. No, not as always. It must be that the Evans doesn't suit my style. Hence-forward I play Old Stodge.

"I do so. There is nothing liquid about Old Stodge. He smacks of the soil. On either side runs a dreary ridge of Knights and Bishops. Between them is a plain (whence the term of Giuoco Piano) where the Pawns butt one another like rams. The powers of earth move slowly to the shock, then topple over with alternate and uninspiring thuds. It's supposed to be an exchange. But when the lines of the new landscape emerge from the dust, what familiar corpse is disclosed? Mine. Oh, what have I been doing? The usual thing. My character has come out. If I go down to the depths of the sea it is there, if I seek the heart of the hills it is there also. Chess, which severely eliminates accident, is a forcing house where the fruits of character can ripen more fully than in life. In Life we can always blame the unknowable for our failures, wave the hand to some horizon, shake the fist at some star. But surely when we make the same mistakes in the Evans, Old Stodge, the choice of a tie, a row in the office and a love affair, the same defect must be to blame -- character; for which, the men of goodwill hasten to remind us, we are entirely and eternally responsible.

"Since there are two elements, in life, the uncontrollable and that which we are supposed to control; and since games of chance exaggerate the former and chess the latter -- what game reflects their actual proportion?"

-- E.M.FORSTER, **Abinger Harvest**, a collection of essays.

"There are two classes of men; those who are content to yield to circumstances and who play whist; those who aim to control circumstances, and who play chess."

-- Mortimer COLLINS.

XLVIX.

"'Tis all a Chequer-board of Nights and Days

*Where Destiny with Men for Pieces plays:
Hither and thither moves, and mates, and slays,
And one by one back in the Closet lays. "*

Rubaiyat of Omar Khayyam

Rendered into English Verse by Edward Fitzgerald, First Edition

<http://www.teachersoft.com/Library/poetry/fitzgrld/chapt01.htm>

*"Impotent Pieces of the Game He plays
Upon this Chequer-board of Nights and Days;
Hither and thither moves, and checks, and slays,
And one by one back in the Closet lays. "*

-- Fifth edition, <http://www.nmaa.si.edu/vedder/slide37p.html>

There are other editions, and other translations, but none, I think, on the Web.

"She hung up and I set out the chess board. I filled a pipe, paraded the chessmen and inspected them for French shaves and loose buttons, and played a championship tournament game between Gortchakoff and Meninkin, seventy-two moves to a draw, a prize specimen of the irresistible force meeting the immovable object, a battle without armour, a war without blood, and as elaborate a waste of human intelligence as you could find anywhere outside an advertising agency."

-- Raymond CHANDLER, **The Long Goodbye**, Chapter 24, final sentences.

"It was night. I went home and put my old house clothes on and set the chessmen out and mixed a drink and played over another [Capablanca](#). It went fifty-nine moves. Beautiful, cold, remorseless chess, almost creepy in its silent implacability.

When it was done I listened at the open window for a while and smelled the night. Then I carried my glass out to the sink sipping it and looking at my face in the mirror.

'You and Capablanca,' I said."

-- Raymond CHANDLER, **The High Window**, final sentences.

Tips on the opening

Cool Tip: All rules are made to be broken, (including that one).

"don't move pieces twice in the opening". So what if a game goes 1 e2-e4, e7-e5; 2 Ng1-f3, Qh4. Is White supposed to ignore the queen and develop another piece with 3 Bf1-c4? No, of course you take the queen and think yourself lucky! A better example is in the opening line 1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Nf6. White can play a number of moves here, but one common line is to go 4 Ng5. This gives Black a number of problems, although it's likely that the game will turn out fairly level. So what's happened to the rule? When I say "*don't move pieces twice in the opening*", I really mean "*it's usually not a good idea to move pieces twice in the opening, so unless you have got a really good reason for moving a piece twice, get on with developing your other pieces*". O.K?

COOL TIP: how to choose an opening

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game"

- RICHARD RETI

Cool tip: I often play 1 e4, e5; 2 Nf3, Nc6; [3 Bc4, Bc5]; 4 d3, Nc6; 5 Nc3, d6 but this often gives a slow, stodgy game and I never get any ideas.

Beginners often play **1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5; 4 d3, Nc6; 5 Nc3, d6**. This is the *Guioco Pianissimo*, the 'very quiet game', and can lead to rather slow and stodgy play. The liveliest line of it is Canal's variation, 7 Bg5, h6; 8 Bxf6, Qxf6; 9 Nd5 and now 9...Qg6 is fun but the best line is 9...Qd8, when Black can equalise. If you must play this line, there are some notes [elsewhere](#).

Far from quiet is the line starting **1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5; 4 c3**. White is threatening to occupy the centre and roll forward: Fine gives a sample line 4... Nf6; 5 d4, exd4; 6 cxd4, Bb6? 7 d5, Nb8; 8 e5 Ng8 (*yeuch*); 9 O-O, Ne7; 10 d6 (*zok*) Ng6; 11 Ng5 (*pow*) O-O; 12 Qh5 and Black must give up his queen to avoid mate.

Black must hit back quickly with **6...Bb4+ 7 Bd2, Bxd2 8 Nbx d2 d5!** or **7 Nc3, Nxe4; 8 O-O, Nxc3; 9 bxc3, d5!** with equal chances, e.g. **7 Bd2, Bxd2; 8 Nbx d2, d5! 9 exd5, Nxd5; 10 Qb3, Nce7; 11 O-O, O-O; 12 Ne4, c6; 13 a4, Qc7; 14 Re1, Qf4** (diagram). This open attacking game is what I recommend you play as White or Black while you are learning chess.

If you are feeling frisky as White you can try **6...Bb4+ 7 Nc3** since **7...Nxe4; 8 O-O, Nxc3?! 9 bxc3, Bxc3? 10 Ba3!** leads to a terrific attack. These lines are just examples, as the game is far from over, and both sides have alternative moves to the lines considered. They are all likely to be more to your taste than the flat Nf3/Nc3/Nc6/Nf6 formations.

COOL TIP: Another line to give the Guiooco Piano a bit of fizz is *Evans' Gambit*, 4 b4!? The gambit accepted is exciting: **4...Bxb4; 5 c3, Ba5; 6 d4** when White is a move up on his plan in the 4 c3 line, but this has cost him a pawn. The gambit may be declined by 4...Bb6.

Tips on the middle game

COOL TIP: Where should I put my pieces?

KING: tuck it away during the opening, by castling as a rule to get the rook out as well. But in the endgame, the King becomes a strong attacking piece, and can make raids on the opponent's Pawns, and guide your own Pawns through to be Queens. Because of course, with only a few pieces on the board, there is less danger of a middle-game attack, and then the King needn't hide. It becomes more like any other piece, and should be moved into the centre of the board to attack or defend as

necessary.

QUEEN: Not very useful right at the start, but always powerful. Place it near the centre in the opening, behind the minor pieces - e2,d2 or f2/c2 are good squares ready to jump out to make a raid. After some pieces have been exchanged, or you have a clear advantage, you can move the Queen further towards the little centre (e4,d4,e5,d5).

ROOK: Rooks must have open lines. This may take some time to arrange, and because they can be chased by minor pieces they are best place in waiting (like the Queen) on the central e- and d-files. Later, they can move strongly up the board using these central files - for example, in the middle game, to e3 and then move over to g3 to help attack the Black King, or right up to the seventh rank on e7 or d7, where it can attack pawns right along the opponent's second rank.

This control of the seventh rank is very powerful, particularly in the endgame if your opponent's King is stuck on the last rank (a8-h8). Rooks work even better in pairs for example, by putting them on e1 and e2 they can control the e-file and then often Black cannot swap off by playing their own Rook to e8. Even stronger is to control the seventh rank with eg. Rooks on d7 and e7, where they can gobble up pawns (and often Kings, by moving one Rook to the back rank).

BISHOP: also needs open lines. The long diagonals a1-h8 and h1-a8 are useful, but often it is more important to point them at your opponent's king side, for example, by putting them on c4 and e3. Two bishops side by side can be very powerful, and can act from the safety of their own lines; Bishops on b1 and c1 are known as Horwitz Bishops.

KNIGHT: The short-stepping Knight can get left behind if the battle moves away, so the best bet is to keep them in the centre. Elsewhere I have described why they are often best placed on c3 and f3 in the opening. Later, e5 and d5 are useful squares to occupy when they can threaten Pawns on c7/f7 and pinned Knights on c6/f6. They may be driven away from e5/d5 by pawns; best are squares where the opponent cannot or dare not chase them with pawns. If Black has moved his

Pawns from c7 to c5 and from e7 to e5 then a Knight on d5 can never be driven away, only exchanged for another piece. When this happens, you can try to recapture with another piece which also cannot be driven off. But another good square for a Knight, when pawns are on e4 and e5, is f5: here it threatens the pawn on g7, and if ever Black pushes it away with g6 then a hole appears on h6 for the Knight to hop into, perhaps giving check.

PAWNS: You will have to move some pawns to get your pieces out, and you can try to dominate the centre with pawns on e4 and d4 (perhaps with c4 and/or f4). But the pawns in front of your castled King form a solid wall on f2/g2/h2, and those on a2/b2/c2 are probably OK where they are too. So, oddly, pawns are often well-placed where they are at the start of the game. **Every pawn move loosens the position:** if you move the pawn on g2 to g3, you immediately

get holes at f3 and h3. Moving a pawn from f2 to f3 not only takes away the best square for your Knight, which is a good defender of the pawn on h2, but also opens up a check to your King from h4, or c5 after castling. When the endgame appears, one side or the other will have to win material to win by queening a Pawn or at least threatening to. Then Pawns can be moved more freely, to block opposing Pawns, to create and support extra or passed Pawns of their own side, and to keep out the opponent's pieces including their King.

COOL TIP: how do you decide on a move?

Things to ask yourself about your intended move:

"What wonderful things does this move do for my position?"

Avoid the quick, lazy move. This is one move that will almost always turn out to be the losing blunder.

Nothing freaks out the amateur player more than the threat of an attack against the King [...] Funnily enough, it is then not the opponent's King's-side attack that wins the game but rather the amateur's lack of threats due to his having given up on his own plans.

Take nothing for granted. Don't feel or hope that some line is good or bad. Make sure that it is!

Always expect your opponent to see your threat and make the best reply.

Play to win against anyone and everyone. [...] Play without fear (after all, we are all going to lose lots of games, so there is nothing to be afraid of, is there?) and you will instil fear into your opponents. "

-- SILMAN, **The Amateur's Mind, and Re-assess your Chess**

COOL TIP: how do you avoid blunders?

After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this fresh look, then you move.

Blumenfeld's rule:

"It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation: -

When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a

mate in one on, or left a piece or a pawn to be taken. Only when you have convinced yourself that there is no immediate catastrophe for you should you make the planned move."

-- KOTOV

"You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look. there are two basic ways of mishandling the method:

I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything **at the start** of your thinking. You are not checking *conclusions* - you are checking **assumptions**. [If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while.]

The second useless way of implementing Blumenfeld's rule is to carry on thinking about the position. You see players with two, three, maybe four moves written down and crossed out over the course of fifteen minutes. This is hopeless indecision. You write the move down **once you have decided on it**. You then check it **in case it is a blunder** - not to see if you prefer another move. If there is **nothing obvious tactically wrong with it**, you *must play it* or you will run out of time. If you use the time to think about other moves you are not only wasting time, you are not even safeguarding yourself against blunders!"

COOL TIP: How to analyse

"All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another."

-- ALEXANDER KOTOV

COOL TIP: how do you keep track of all the different strategical ideas?

Horowitz and Mott-Smith in **Point Count Chess** offer a little list (every book has their own little list):

Plus points

- Control of the centre
- Pawn on fourth vs. Pawn on third
- Mobile Pawn wing
- Strong outpost station
- Superior development
- Greater space
- Bishop-pair
- Bishop vs. Knight
- Half-open file
- Control of useful open file
- Rook(s) on seventh rank
- Passed Pawn
- Outside Passed Pawn
- Advanced Pawn
- Qualitative Pawn majority
- Advanced chain
- Advanced Pawn 'salient' (Pawns in arrow formation \wedge)
- Better King position
- Offside Pawn majority

Minus points *WEAK PAWNS*

- Backward Pawn
- Doubled Pawn
- Isolated Pawn
- Hanging Pawns
- Hanging group
- Crippled majority wing

WEAK SQUARES

- "Weak-square complex"
- Holes
- Compromised King's-side
- King held in centre
- Cramped position
- Bad Bishop

Rather than remember all 31, at each point Kotov says you should try and consider:

1. weak squares and pawns
2. open lines
3. the centre and space
4. piece position

Silman lists:

- 1) Material (owning pieces of greater value than the opponent's).
- 2) Space (the annexation of territory on a chess board).
- 3) Superior Minor Piece (the interplay between Bishops and Knights).
- 4) Pawn Structure (a broad subject that encompasses doubled pawns, isolated pawns, etc.).
- 5) Control of a key file or square (files and diagonals act as pathways for your pieces, while squares act as homes
- 6) Lead in development (more force in a specific area of the board).
- 7) Initiative (dictating the tempo of a game).

Cool tip: What is a plan?

Kotov has been much exercised by this notion of planning, and in his books gives lots of examples of

planless play being punished. You can often see glorious examples of well-planned play like in the old master games of Tarrasch and Steinitz, where a plan conceived early in the game was carried out to perfection and gradually overwhelmed the opponent. Tarrasch and Steinitz also showed how to form a plan where to find weak points, and how to attack at the weakest point. I'll discuss this in more detail below, but first another word from Kotov and Bronstein on planning in general. Kotov describes reading over a game of Romanovsky's against Vilner, which made a powerful impression on the young Kotov here a plan which Romanovsky stuck to over 5 hours eventually resulted in victory. ROMANOVSKY commented on his own game:

" 'The last and main conclusion to be drawn and the main one is as follows. In every game we ought to have a single basic plan, and by carrying out this plan we ought to get a prolonged initiative. The initiative so gained will tend to increase until it reaches the stage where it is sufficient to force a win.' ...

"My own reaction"

says KOTOV

"was immense admiration. Everything foreseen and planned from the first move to the last... I tried to start playing in a planned fashion... but I got precisely nowhere! I would envisage a long siege of my opponent's pawn at a6 but was distracted by threats on the f-file... My games still consisted of isolated episodes which I feverishly tried to knit together into a harmonious whole...

"It was only much later ... that the question of a single plan became clear to me... In the Vilner game it was a struggle between unequal sides. When, however, you meet a strong inventive opponent and he counters every one of your intentions not only by defensive but also by counter-attacking measures, then it is far from simple to carry out a single plan.

*"... I finally concluded: **'A single plan is the sum total of strategic operations which follow each other in turn and which each carry out an independent idea that arises logically from the demands of a given position'**. ...*

The definition given above is supported by the following quotation from Bronstein:

'Due to [Tarrasch\(\)](#) an idea grew up that is still prevalent nowadays, the idea that there are the so-called logical games in which one side*

carries out a logical plan from beginning to end rather like a theorem in geometry.

I do not think that there are such games between opponents of the same strength and the annotator who gives that impressions is often the winner of the game who makes out that what happened is what he wanted to happen'

Znosko-Borovsky says much the same thing in his *How Not To Play Chess* lecture. So, read and believe when you are told that you need a plan, but remember that real chess is likely to be more messy and less smooth. Unless you are playing an opponent who hasn't got a clue you will have to keep chopping and changing plans to cope with the changing situation on the board, and maybe play a few moves without commitment to a definite plan. That's life...

Cool Tips from the masters on training and practical play:

Advice from the Botvinnik school

"One should play 50-55 games a year.

"It is advisable to confine one's opening repertoire to three opening systems. While studying those systems one should strive to establish a close link between the opening stage and typical plans in the middlegame. A thorough use should be made both of opening manuals and of the games played in the latest tournaments.

"One should study the endgame systematically [the pupils were asked to prepare written reports on some types of endgame]

"To avoid time-trouble, it is useful to play training games paying attention primarily to the time-limit, even if this is detrimental to the quality of the games. In tournament games (...) one should make the first 15 moves in 30 minutes.

"It is vital to check one's analyses thoroughly, including those that

have already been published. To broaden one's chess outlook it is useful to study the available game-collections of the leading chess players. To improve one's accuracy of calculation, one should solve endgame studies and analyse games abounding in tactical ideas."

-- MM Botvinnik

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, Strategy and Tactics in Chess.

"The basic principle of defence consists in making the opponent's task as difficult as possible, creating ever new obstacles in his path.

" [...] If you can succeed in abruptly changing the situation on the board (even by choosing a continuation which is objectively not the strongest, associated with a degree of risk), your opponent, having already envisaged a particular pattern of play, will frequently not manage to reorganise his thoughts and will begin to make mistakes."

-- DVORETSKY

Cool Tip: "Always try to keep the three pawns in front of your castled king on their original squares as long as possible"

-- ALEXANDER ALEKHINE

"The Queen in chess loves company; it must have an attendant, a fellow piece, as otherwise it will not be at its best. And these other pieces should be able to cooperate with their mistress, and not stand

around merely as onlookers."

-- Vukovic. veresov-makogonov, moscow 1940

paulsen-anderssen, leipzig 1877

*"As much choice as possible in intervening on one or on the other wing
- a discussion on the centre."*

-- Euwe, Strategy and Tactics in Chess.

Cool Tips from the masters on the endgame:

ENDGAME

In his excellent book PRACTICAL ENDGAME LESSONS, Edmar Mednis formulated one of the most important principles with startling simplicity:

"Passed Pawns must be pushed"

-- Mark DVORETSKY, Secrets Of Chess Training

[I don't know if this is original to Mednis: the phrase is used freely by Irving Chernev in books that predate all the Mednis books I own. -- DR

COOL TIP:

"Every healthy, uncompromised majority must be able to yield a passed Pawn."

"The passed Pawn is a criminal that must be kept under lock and key. Mild measures, such as police surveillance, are not sufficient."

"With every step nearer the endgame the power of the King increases. You should throw him without fear for his safety where the battle is thickest."

-- Nimzovitch

"The basic rule of endings is not to hurry. If you have the chance to advance a Pawn one square or two, then first of all advance only one square, have a good look round, and only then play it forward one more square. Repeating moves in an ending can be very useful. Apart from the obvious gain of time on the clock one notices that the side with the advantage gains psychological benefit. The defender who has the inferior position often cannot stand the strain and makes new concessions, so easing the opponent's task. Apart from this, repetitions clarify the position in your mind to the greatest possible extent."

"We know that certain devotees of the 'pure' art of chess will criticise us for this piece of advice, but we cannot help but advise chess players to repeat moves in the endgame. You have to take all the chances you get in a game, and there is nothing ugly or unethical about the repetition of moves."

-- Sergei Belavenets #53 CR 2 weaks

"Let us enumerate again the ways of playing that are specific to the endgame phase:

- 1. Think in terms of schemes*
- 2. Do not be in a hurry*
- 3. Bring the King as quickly as possible to the centre of the board."*

-- Kotov

"... I was surprised to see that Capablanca did not initiate any active manoeuvres and instead adopted a waiting game. In the end, his opponent made an imprecise move, the Cuban won a second Pawn and

soon the game."

"Why didn't you try to convert your material advantage straight away?' I ventured to ask the great chess virtuoso. He smiled indulgently: 'It was more practical to wait'."

-- Botvinnik

"(Endgame theory:) The Queen's-side majority, the outside passed Pawn, the 'good' and 'bad' Bishop have all become standard reference terms. Many players still commit the error of extrapolating these notions to the middlegame where in most cases endgame principles are reversed. Alekhine warned that a Queen's-side majority can be an advantage in the ending but that a central majority is far more important in the middlegame. (...) The outside passed Pawn is more of a weakness in the middlegame when the fight is concentrated on the centre and King's-side."

-- SUBA

[Computers](#) find this especially confusing...

"Before the endgame the gods have placed the middlegame!"

-- TARRASCH

(*) See the Tarrasch-von Scheve game in the [canon](#).

Exeter Chess Club Stories: Capablanca's Challenge

In article <552g6s\$ba@alpha.sky.net> artburke@sky.net (Arthur Burke) writes:

Along the same lines, while not a quote, per se, here's one of my favorite chess stories.

After Alekhine had taken the championship title from Capablanca, Capa apparently spent quite a bit of his spare time hanging out in a specific cafe in Paris. Friends, acquaintances, and others would often drop by, participating in games and libations with the former, charismatic, champion. One day, while Capa was having coffee and reading a newspaper, a stranger stopped at his table, motioned at the chess set and indicated he would like to play if Capa was interested. Capa's face lit up, he folded the newspaper away, reached for the board and proceeded to pocket his own queen. The opponent (who apparently had no idea who Capablanca was) reacted with slight anger. "Hey! You don't know me! I might beat you!", he said.

Capablanca, smiling gently, said quietly, "Sir, if you could beat me, I would know you."

Exeter Chess Club Stories: Lasker incognito

Lasker often used to play without letting on who he was: he had fun at the expense of one poor chap who managed always to win against his mystery opponent when he gave knight odds, but lost when he had the extra knight!

One day he sat down to play a blind man, who despite his disability was a strong player.

After a few moves of the game, the man raised his head and said,

"Ah, Dr.Lasker, I presume."

Exeter Chess Club Stories: Playing Botvinnik

*"If you play Botvinnik, it is even alarming to see him write his move down. Slightly short-sighted, he stoops over his scoresheet and devotes his entire attention to recording the move in the most beautifully clear script; one feels that an explosion would not distract him and that examined through a microscope not an irregularity would appear. When he wrote down **1.c2-c4** against me, I felt like resigning."*

Exeter Chess Club Stories: Time for a quick game?

From: jberry@islandnet.com (Jonathan Berry)
Newsgroups: rec.games.chess.misc
Subject: Re: Shortest Tournament Games

In article ,
asdmm4@UAA.ALASKA.EDU wrote:

|
| But even this has been improved on by a game (Miles-Reuben) that
went:

|
| 1. Draw agreed
|

I believe that the best of these games was Hubner - Rogoff from a World Youth (Under-26?) Team Championship, maybe circa 1970. In those days of adjournments, Hubner had a long long long game. Germany was due to play USA the next round, and Hubner obviously wanted to rest instead. But the team captain said they really needed his strength or at least his presence on top board. So Hubner said OK, but only if you let me make a draw. The captain agreed, because that would boost his team's lineup on the remaining boards. But Hubner, being a man of some principle, didn't want it ever to appear that this might have been a real game, so he offered to Rogoff (a very strong player, but not quite in Hubner's class) that they draw without any moves being played. So:

1. Draw agreed.

However, the arbiters did not like this and refused the game. So Hubner and Rogoff put together a scoresheet of a game which began something like this:

1.b3 g6 2.Na3 Bg7 3.Rb1 Ba1 4.Bb2 Nh6 5.Bg7 Rg8 6.Bh8 Bg7 and so on ... Draw.

The arbiters were not amused. They *insisted* that the two play some real moves. Rogoff agreed, Hubner didn't. Hubner 0-1 Rogoff, which makes this game the answer to the trivia question:

"Which game was the shortest draw in chess history and also the shortest decisive game?"

cheers,
Jonathan Berry

Promotion for Alexander

Sender: P.A.Taylor@open.ac.uk
Date: Fri, 10 Jan 1997 16:47:24 +0000
Organization: The Open University
To: D.Regis@exeter.ac.uk
Subject: Chess quotations

I have a vague memory of one by C.H.O'D
Alexander that you may like: after being
awarded an OBE or MBE (can't remember which),
Alexander was asked by a French(?) interviewer

"Does that mean you are a Knight?".

"Alas, barely a tempo" he replied.

Sorry I can't remember the source, possibly Chernev's
"Chess Companion".

Exeter Chess Club Stories: A threat to Nimzovitch

Before his game with X, Lasker approaches the tournament director, pleading with him to ask X to refrain from smoking cigars during their game. The tournament director goes to X and requests his compliance and X agrees. The game begins and shortly thereafter X removes a cigar from his pocket and places it on the table. A few minutes go by and then Nimzovich again approaches the tournament director, who notices that the cigar is just sitting on the table and says to Nimzovich: "What's the problem? X is not smoking." Nimzovich: "Yes, but he is threatening to smoke, and any fool knows that the threat is more powerful than the execution"

MaxB

P.S.

Who is X?

Exeter Chess Club Stories: Several Stories

From: Avital Pilpel (ap241@columbia.edu)

Organization: Columbia University

Subject: Some chess anecdotes.

- About "Chess and James Bond":

A family friend of ours, a chess master, went to see the movie **THREE DAYS IN A ROW** in the movie theatre (it was before VCR's) just so he could figure out the position and then spent another week figuring out where the position was from!

- A humorous definition of chess tournaments:

1. Swiss system: Very much like swiss cheese, full of holes and comes in different flavors.
2. Round Robin: You have to play everybody, including those that you are scared to death to play against...
3. Elimination: Not for you, what will you do after the first round?

- A story about Rubinstein, the great master:

In one tournament, he needed only a draw to clinch first place uncontested in the last round. A few moves were played, and his opponent offered a draw. Rubinstein refused! After a few more moves, when Rubinstein had an obvious advantage, HE offered a draw that was gladly accepted, and then he said: "I will decide what the result will be with a player of YOUR caliber".

- Two chess stories from Israel, my home country:

1. One time, Nimzovitch visited Israel and went to the local Lasker chess club anonymously. He naturally crushed everyone else, and eventually one of the old kibitzers there told him: "You're a pretty good player, your style reminds me of Nimzovitch...".
2. A few days after the 1973 Yom Kippur war started, the next round of the Israeli open was supposed to begin - naturally nobody showed up except for a few old kibbitzers who wondered why the hell nobody came!

- The worst blunder:

One of the marks of the amateur is that he or she seems to consider material advantage better than mating the opponent for some reason. I was once in a tournament in NYC, where white had the following advantage: Queen, rook (or two? not sure) , three light pieces, five or six pawns, against a... BARE KING!

The result??? STALEMATE!!!
(I swear this is true).

- I am surprised there was no mention of famous underpromotions that win the game. There are quite a few famous ones and it is always amusing to watch. Zuckertort [sp?] had actually composed a problem in which white mates by promoting a pawn to a BLACK knight, and said: "when the horse is well-bred, you don't check it's color". Some other famous problem composer, I do not remember who, had another interesting variation: Black, in order to escape mate,

"promotes" his pawn to a new KING. White retaliates by promoting HIS pawn to ANOTHER BLACK KING, and goes on to mate all three of them!!!

Exeter Chess Club: My Blunders and Swindles

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | Swindles | [Cheapoed](#) | [Recent](#)

the best blunders and swindles

I consider it a matter of disquiet that the most heartfelt tributes to my chess prowess include the following:

- { *FrankNStein says:
Baaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaastaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaard* }
[BICS]
- "f***ing cheapo, bl**dy swindling b*gg*r" [OTB National Club Championships]
- { *Walt tells you: you played me a set of dirty schwindles* } [Dutch ICS]

The sporting achievements that led to these fine compliments are to be found [here](#), but below are the ones I am proudest of... You might also enjoy:

[Swindle your way to success](#)

An introduction to the ignoble art, which uses some games from below.

I'm still (1992) taken with the determined attitude of White here! 28... R3d6 29. Ng6+ Kg8 30. Ne7+ Kf7 [30... Kf8 31. Qf3+ Ke8 32. Nd5+ Kd7 33. Re7+ still] 31. g6+ Ke8 32. Nd5+ Kd7 33. Re7+ Kc8 34. Rxc7+ Kb8 35. Qa6 Rxc6+ 36. Kf1

It is an omen that my first ever competitive game featured both a cheapo AND a swindle. 1-0

regis,d - richard dixon (CORR_92/93) [B36]

FIRST: devon vs glos. (ward-higgs I), 1993

My first and only correspondence game, during which I made comments to myself throughout. I can only add here NEVER AGAIN: I found the experience appalling - months of paranoia, hesitancy and self-recrimination. At least OTB you can let it go at the end of the day (usually...), although I know there are folk who feel OTB slow chess is too heavy.

1. c4 g6 (I knew a game of [Portisch](#)'s which I had in mind throughout) **2. g3 Bg7 3. Bg2 Nf6 4. Nc3 O-O 5. e4** (new for me this season: I played the e3/Nge2/d4 plan for years but recently fancied this, which looked more enterprising) **5... d6 6. Nge2 c5** (black had a lot of choice at this point: ...e5/...c6/etc.) **7. O-O Nc6 8. d3 Ne8 9. Be3 Nc7** (?! in the books) **[9... Nd4] 10. d4 !** (in the

books) **10... cxd4 11. Nxd4 Ne6 12. Nde2 Ne5 ! TN - threatens c4 and e3 via g4 [12... Nc5 13. Rc1 Be6 14. b3 Qa5 15. Qd2 Rac8 16. Nf4 +- and black is in trouble: barcza-szilagyi 1967]** **13. b3 b6** (transposing to a hedgehog formation looks better than szilagyi's setup) **14. h3** (stopping the ... Ng4 lines seemed sensible, especially since last move they were possible. The knights now need to get out of the way of the pawn roller) **14... Bb7 15. Rc1** (looks slow and a bit aimless with hindsight) **15... Nc5**

16. f4 (now I thought I was on the right lines: turn that space into attack, as in the portisch game) **16... Ned7 17. g4 a5** (I would have preferred ...a6) **18. Ng3** (I don't know where this is going yet, unless black can be obliged or tempted to take on f5 eventually - if not the Ng3 and Bg2 are very passive) **18... Bc6** (! I now wanted the wN back on e2) **19. a4** (this isn't really necessary [19...a4; 20 b4 looked good] but I thought was justified psychologically - what is black's plan now ? the real challenge of course is to find white's plan! The wQ is badly tied to b3 and d3) **[19. Bd4 (this was better I thought afterwards)** 19... e5 20. Be3 exf4 21. Bxf4 Ne5 22. Rc2 Ned3] **19... Rb8 20. Rf2** (Nicely ambiguous [ideas of Qd2 or Rd2] but d3 is now more tender) **20... Qc8 21. Nd5** (I'm obviously entertaining pushing f4-f5-f6) **21... Re8 22. g5** (not f5 yet) **22... Qb7** (adds to pressure but locks in Bc6) **23. f5** (It's starting to get hard for me to find a plan which doesn't involve f5 but Black can play ...e6 and build up nicely now. I had some fun with 23 f5 and 24 Nh5 in analysis which was all bluff but looked worth starting) **23... Bf8** (I looked at ...Bxd5 and ...Be5 in analysis but this looked most solid. If ...e6 white can afford ...exd5 because exd5 wins the Bc6) **24. Bd4** (24 f6 simply takes a good square away from the knight. Now I have more realistic-looking threats but I must say by this stage I thought it

was all starting to slip away) **24... Ne5 25. Rc3 Bg7** (I now entered a short sequence of moves which I thought were most solid and maintained a space advantage despite exchanges) **26. f6 Bf8 27. fxe7 Bxe7 28. h4 Bxd5** (the two bishops are no real advantage here as the Bg2 is inactive) **29. exd5 Bf8 30. Rf4** (else Qf1,Bg7 will threaten ...Nf3+ and ...Bxd4) **30... Bg7 31. Qf1** (both sides have consolidated after some white initiative and I thought we're now in for a phase of manoeuvring) **31... Re7 32. Bxc5 [32. Rf6] 32... bxc5** (obviously not 32...dxc5; 33 d6) **33. Ne4** (This move cheered me up a little; I felt I had some chances for the initiative) **33... Rd8 34. Nf6+ [34. Nxc5 (idea d6 again) 34... Qb6] 34... Bxf6 35. gxf6 Ree8 36. Re4 h5** (I admit I analysed this only after sending off my last move - I concluded I had some chances of a combinative breakthrough on the K-side but this couldn't be forced, and I became slightly less alarmed about possible endgames) **37. Rce3 Kh7 38. Qf4** (I couldn't see a way of winning after what I thought was the best line, ...Qb4, but I didn't have to lose either. White can try to contrive a lever with Bh3, Qg5 and now Bf5, but ...Qb4 & ...Rg8 (forces Kh1) slows or stops it) **38... Qc8** (I thought at the time, not as strong as ...Qb4, but realised it's trickier) **39. Bh3 Qb8** (if the knight moves don't work this is probably best) **40. Kh1 Qc7 41. Bf5**

41...Qb8(I immediately thought this was too resigned) **42. Qg5** (mates in six)
1-0

Briggs, Tom - regis,d [C02]

FIRST: march cc friendly, 1975

Tom founded March Chess Club and worked hard for the club until his death. I played many games with Tom as a young player and was always impressed by his consistent good humour and generosity. Like Andersson, he met defeat only with laughter and praise for his opponent. Chess is full of people like Tom, although we tend to notice only the Kasparovs.

1. e4 This game is probably fairly typical for the time, and features my first and long-time favourite French Defence to 1.e4.

1... e6 2. d4 d5 3. e5 Nc6 4. Nf3 f6 5. Bf4 g5 6. Bg3 fxe5 7. dxe5 Bg7 8. Bb5 Nge7 9. O-O a6 10. Ba4 Bd7 11. c3 Ng6 12. Bxc6 Bxc6 13. Re1 Bb5 14. Nd4 Qd7 15. a4 Bc6 16. b4 b5 17. a5 O-O-O 18. Qg4 h6 19. Qxe6 Qxe6 20. Nxe6 Rd7 21. Nc5 Re7 22. Nd3 Rhe8

23. f4 Nxf4 24. Nxf4 gxf4 25. Bxf4 Bxe5 26. Bxe5 Rxe5 27. Nd2 Re2 ??? 28. Nf3 d4 29. Rxe2 Rxe2 30. Nxd4 Rxc2+ 31. Kf1 Bb7 32. Re1 Rxc2 33. Re2 Rh3 34. Rc2 Be4 35. Re2 Bd3 36. Kg2 Rh5 37. Re8+ Kb7 38. Exeter Chess Club: Dr. Dave's Recent Games

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | [Swindles](#) | [Cheapoed](#) | [Recent](#)

After every match or tournament game I type the game up with notes; here are some examples. I used to use a version of the commercial package Fritz, but now use the free(!) ChessBase demo. See what you think.

- [East Devon Congress, March 1996](#): ups and downs, mostly ups!
 - [East Devon Congress, March 1997](#): the tournament from hell?
 - Adventures with the [Blackmar-Diemer Gambit](#): an e-mail tournament
 - [East Devon Congress, March 1998](#): Par for the course?
 - [East Devon Congress, March 1999](#): The Red Queen's Race
-

What got me started on showing off these recent games was an absolutely splendid chap called Alex Bellinger, who has established an electronic magazine devoted to the amateur game at [Chess Scene](#), which has great articles like [Gene Thompson's](#).

If you still want to read about my adventures that weekend you can do so [here](#) or [there](#).

Exeter Chess Club: One amateur's weekend.

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | [Swindles](#) | [Cheapoed](#) | [Recent](#)

Here are all my games from this year's (1996) superbly organised East Devon Congress, held in the excellent venue of St.George's Hall (big, cool, near town centre, has a bar). I scorn the idea of trying to win money in the Major and go for the Premier (my grade is 3 points too high for the Major). Five rounds later...

Round	Opponent (my col)	BCF	ELO	Result	Score	
1	Ian George (B)	184	2072	0.0	0.0	(A hard rain...)
2	David Hodge (W)	161	1888	0.5	0.5	(Don't count your chickens)
3	Peter Chaplin (B)	158	1864	1.0	1.5	(Beware geeks bearing gifts)
4	David Parr (W)	181	2048	0.5	2.0	(Below Parr, as usual)
5	Rob Newton (W)	177	2016	1.0	3.0	(Sweet, but not fattening)

Round 1. A Hard Rain...

Black vs. Ian George (grade 184): 1-0 (52 moves). I lose one game like this in every weekend tournament. With Black, I get an about-equal opening, which turns into a slightly worse middlegame, then a worse endgame, and then I lose. Percentage play at its best by my opponent: I never felt clearly equal and find myself on the slide.

I quite fancy this opening but clearly haven't quite got the hang of it. I remember considering 21...Nxa5 but played something else, I think having forgotten that the capture was on. We played moves 34-37 quickly, then, after a while, he plays g4, the best way to keep up the pressure. Of course, if I wasn't caught up by the momentum, I could have anticipated 37. g4 and played 34/35/36 ...h5, with better chances than in the game. The final position sees Black stuck for ideas, but not for blunders. (Score: 0

out of 1).

Round 2. Don't count your chickens...

White vs. David Hodge (161): 1/2-1/2 (41). I throw away one game like this in every weekend tournament. With White, I get a better opening, a winning middlegame, and then blow it.

I've been playing 1.e4 recently in an attempt to sharpen my game but I always play my old favourite 1. c4 against juniors. The Queen's-side attack works like clockwork and the ...f5 move seems only to limit Black's pieces. My opponent gives up a pawn on move 15, with a straight face, only to see me hand it

straight back (move 28), with rather a red one. In the post mortem he criticised the "pointless" manoeuvre Qa8+-e8 and chided me for missing Bh6+, which of course was the point. (Score: 1/2 out of 2).

Round 3. Beware geeks bearing gifts.

Black vs. Peter Chaplin (159): 0-1 (29). I win a game like this one in every weekend tournament: an impatient opponent sacrifices in an essentially level position, and I hang on to win. A shame really, he was playing probably the only other player in the tournament that had read Van Geet's book on the opening and knew the suggestion of **5. Rxh5**. Not that I knew what to do about it, but having read about it I could regard the move with some outward appearance of cool, which I think helped.

Despite some anxieties at about move 20, when I thought a central break would have been embarrassing, I am able to force a decision without ever using the extra Rook! (Score : 1 1/2 out of 3).

Round 4. Below Parr, as usual.

White vs. David Parr (180): 1/2-1/2 (17). With White, I play the English again and I get a slightly better opening, but am so paranoid about blowing it once more that I use all the first hour over sixteen moves, and offer a draw for fear of time trouble. Not impressive. I would have fancied his chances of outplaying me even if the position was objectively inferior. (Score: 2 out of 4).

1/2-1/2

Round 5. Sweet, but not fattening.

White vs. Rob Newton (179): 1-0 (30). This was a bonus: a second win through a higher-graded opponent pushing their luck. The critical phase of the game seemed to be to be around move 17. Shortly after we had one of those typical situations where you should think just one more move after the end of a line of analysis. My opponent had caned me over 10 years ago in the National Club Championships, and this was my revenge... although I had forgotten him, and he had to remind me afterwards. (Score: 3 out of 5).

1-0

Towards a conclusion:

- In each game I felt I knew the opening better than my opponent. (Did they think the same?) Whatever the feeling, the practical outcomes of the openings were good. This suggests that I should stop studying openings, since they aren't a problem, but do I have the courage?
- In both the first two games I overlooked one-move wins of pawns. This suggests that refining my grasp of the theory of doubled pawn complexes has only limited point.
- I have been losing games like that one to Ian all my life, (although I used to lose them to 130-grade opposition). How do you repair that weakness (or collection of weaknesses)? I suppose, because there will always be players better than me, and with better technique, to choose an opening where Black has more obvious counterplay is best. At least then I have something to attempt on my own behalf, which might worry my opponent. So, although I quite fancy the opening, I might have been better off in more conventional Modern territory which might be more dynamic (although I expect Ian would have met this too with a solid and straight bat).
- Perhaps the most revealing game was round 4: I have been drawing games like this all my life. Until I also have the courage to try and win from positions like that, I'll never develop the technique of doing so, and will never raise myself out of the slough of 150-grade chess in which I currently reside.

Overall:

I suppose the two games where I didn't make the most of my position (rounds 2 and 4) are amply compensated by the two where I was given an advantage for free (3 and 5). I scored 60% against an average opposition grade of 172, which is a grading performance of 182. This obviously flatters my actual grade of 153. A one-off? By no means - I usually get good grading results in Open/Premier tournaments, it's my league chess that drags me back to reality. I have a theory that chess favours the underdog (which is to say, I might make only a 40% score against 140-strength opposition!). I never know why: I do try harder, but I suspect my opponents have some complacency to answer for. Which suggests I too am complacent facing lower-graded players during the league. Oh, and having 3 Whites helped, I never lose with White.

Meanwhile, at the other end of the room, Jack Rudd stormed home with 5/5 including this brisk win in the last round...

Rudd,Jack - Greet, Andrew 1.e4 c5 2.Nc3 e6 3.Nf3 d5 4.exd5 exd5 5.Bb5+ Nc6 6.Ne5 Nge7 7.0-0 g6 8.Re1 Be6 9.d4 Bg7 10.Bg5 cxd4 11.Nxc6 bxc6 12.Bxc6+ Kf8 13.Nxd5 f6 14.Rxe6 Nxd5 15.Qf3 Rc8 16.Bxd5 Rc5 17.Rae1 h6 18.Bxf6 Qxd5 19.Re8+ 1-0

[Dr. Dave](#)

My Chess Career

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | [Swindles](#) | [Cheapoed](#) | [Recent](#)

I always dream of playing smooth positional games where I [beat strong players](#) to the cheers of the adoring crowds, but even my [best efforts seem to have huge holes in them](#), and the rest seem to be dominated by [cheapos](#), [blunders](#) and [swindles](#). But who can claim more? I hope you are entertained at least by these humble efforts.

I do like my opponents to resign when I'm winning, but I can't blame them for not doing so when you see how often I get swindled by [others](#). When Nabokov refers to the "[abysmal depths of chess](#)", you may assume he had games like these in mind.

In recent years, despite the embarrassing evidence below, I have taken on [coaching](#) of adults and juniors, using [canonical](#) examples. One of the things that makes me do this is the number of games that I win because I remember something I've seen in a GM game - for example, in my one and only [correspondence game](#). At times like this, a club player can (in some sense) play like a [master](#). The other thing is, coaching is a way of paying [tribute to people like Tom Briggs](#), who were kind to me when I was starting out.

My Chess Career:

I've noted my clubs, tournament results, end-season grades and opening repertoire of the time.

1974-75

March Town Chess Club. Few recorded games. Won the Fenland Guards Junior Championship. 5.12.75: first match [game](#) for March, which I won - a [blunder AND a swindle](#) (an ominous event!).

1975-76

Fenland Individual Tournament: 3/6 (UNG).

Repertoire I: White: Giuoco Piano; Black vs. 1. e4: French; Black vs. 1.d4:

QGD.

1976-77

Read *Logical Chess*, discovered *Audio Chess* cassettes (openings marked * below).

*Repertoire II: W: QGD/Trompovsky *; B/e4: French; B/d4: QGD (still playing GP occasionally).*

1977-78

First county II team game. Won March Town Chess Championship.

Repertoire III: W: QGD/Trompovsky; B/e4: French; B/d4: English Defence (...b6).*

End of season B.C.F. grade I recall as 120-ish.

1978-79

[Cambridge Minor 3/4 (A tournament performance of B.C.F. 137). East Anglia Major 3 1/2 /5 (148). Thetford Major 4/5 (142).]

Repertoire IV: W: QGD/Indian; B/e4: French, Owen's, Sicilians with ...e6; B/d4: English Defence (...b6).

B.C.F. **124**

1979-80

Cambridge University Chess Club. CUCC Championship 2 1/2 /6 (160). East Anglia Major 2/5 (120). Cambridge Major 4/6 (152). Thetford Premier 2/5 (144).

Repertoire V: W: English Staunton System (c4/Nc3/g3/Bg2/e3/Nge2); B/e4: Sicilian with ...e6; B/d4: English Defence (...b6).

B.C.F. **142**

1980-81

Got my act together a bit more this season; of course, it's nice to be surrounded by strong opposition.

[CUCC Championship 3/6 (173). CU Major 2+1/2 / 5 (131). Thetford Premier 2/5 (144).]

B.C.F. **152**

1981-82

CU win National Minor Club Championship (now called the Major Cup) without me winning a single game, but I did have a great [swindle](#).

B.C.F. **150**

1982-83

Only four league games: 2 Sicilians as Black , and oddly two as White. [I play 1.e4 very rarely in matches, although I'll play anything at blitz.]

1983-84

Andover Chess Club. Few games: they played matches on Saturdays, when I was off seeing my partner of the time.

[Portsmouth Open 31/2/6 (176).]

1984-85

Cambridge City Chess Club. Very few games. *Still playing Repertoire V.*
B.C.F. **170**

1985-86

Very few games. Still Repertoire V, but try the Modern Defence a couple of times.

B.C.F. **168**

1986-92

Virtually no chess.

1992-93

[Exeter Chess Club](#). A return to chess! I got stuck into every team I could, playing mostly 120-140-strength opposition, and did OK.

[East Devon Premier 3/5 (192).]

Repertoire VI: W: English Botvinnik system with c4/Nc3/g3/Bg2/e4/Nge2; B/e4: Modern Defence with ...c6; B/d4: Modern Defence with ...Nc6.

B.C.F. **167** a good return to form. I believe this one a bit more than the other 160+ grades, as it was based on 30+ games.

1993-94

Nothing terribly remarkable: I played less chess.

[East Devon Premier 2/5 (157). Frome Major 3/5 (174).]

B.C.F. **157**

1994-95

Exeter win National Major Plate without me winning a single game. I won the Club Lightning Event this year, which is not a form of chess I have ever looked forward to!

[East Devon Premier 2/5 (170). Torbay Open 2/5 (170).]

Repertoire VII: W: King's Gambit/King's Indian Attack; B/e4: Modern Defence with ...c6; B/d4: Modern Defence with ...Nc6.

B.C.F. **153** (yeuch).

1995-6

You can read a report of [my adventures at the East Devon Congress](#) this year. Exeter do well in National Major Plate with the help of some wins but get firmly sat on by Huddersfield in the final.

[Paignton Challengers 4/7 (172), Spectrum Torquay Major 4/5 (170), Torbay Open 2+1/2 /5 (170), Weymouth Open 2/5 (164) East Devon Premier 3/5 (182).]

Repertoire VII: (still) - but I'm going off the King's Gambit and I'm losing too many with the Modern! Whither?

B.C.F. **168** (better!)

1996-7

I've felt pretty up-and-down this season: I had three good tournament results then one [tournament from hell](#); I've stopped losing games with the Modern to 140-grade opposition, but managed to overlook two mates in two (!) this season, actually going on to lose both games. I also got crushed by

Steve Homer whose current grade is 129 (but used to be 180+), which similarly did nothing for my grade...

[Paignton Challengers 4+1/2 /5 (170), Torbay Open 2+1/2 /5 (171), Weymouth Open 2/5 (171), [East Devon Premier 2+1/2 /5 \(140\)](#).]

Reportoire VII: (still) - the haemorrhage of losses with the Modern is drying up but I seem to have sprung some leaks elsewhere: no fault of the openings, though. I have made a conscious attempt to play different openings this year, particularly with Black: I've played 1...e5 a couple of times, which I haven't touched since I was a junior, and I even tried 1.d4 in one game. The King's Gambit issue hasn't really resolved itself in my mind, but no-one this year has replied 1...e5! That's got to be too much theory to carry around unused...

B.C.F **160** (worse!)

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | [Swindles](#) | [Cheapoed](#) | [Recent](#)

I have put my grades in, not because I believe in any of them, but because there seems a fairly consistent pattern: the tournament performances have higher performance grades than the end-of-season grade. Apparently I play better in tournaments than league matches. [BCF 150 = ELO 1800 = USCF 1900].

Why should this be?

I think it is because, typically, I am meeting players stronger than I am in tournaments. Rather than differences between tournament and match games, it's about playing stronger players, and yes, my average grade against higher-graded players is always higher than my grading performance against lower-graded players. Do I play better than usual when playing opponents with higher grades? Or do they play worse? Or both? [*A possible test of this is the East Devon Premier 1997: every opponent I played was graded lower than me, and I scored well below par. You might say that when I have a bad tournament, I will meet players like this, but you can see the same pattern with league match results.*]

Anyhow, if you want to get your grade up, my advice is go into the section above your normal grade in a weekend Swiss. I have a suspicion this is good for your chess as well as your grade.

Illustrative games:

The formatting of these isn't very good PGN but I keep these in ChessBase format, which has a poor

header protocol.

Exeter Chess Club: The Tournament from Hell?

[Best](#) | [NOT](#) | [Early](#) | [Masterly](#) | [Cheapos](#) | [Swindles](#) | [Cheapoed](#) | [Recent](#)

Jump to game:

- [\(1\) Ian Rescorla](#): a disappointing draw
- [\(2\) John Gorodi](#): an even more disappointing loss
- [\(3\) D Saqui](#): didn't get the hang of this one
- [\(4\) Frank Chambers](#): a good scrap, and good fortune
- [\(5\) Rich Towers](#): beating the tortoise

Not hell for everyone, I mean, just me - the East Devon Congress is a fine event which should be in everyone's diary (held this year at the start of March), but this year it all went wrong. I scraped up 2 1/2 out of 5 by the finish but started on 1/2 out of 3 and overall achieved a grading performance of 140 (ELO=1720; my current grade is 168=1944).

Round by round:

Round	Col	Opponent	BCF	ELO	Result	Score
1	w	Ian Rescorla	118	1395	1/2	1/2
2	b	John Gorodi	146	1765	0	1/2
3	w	D Saqui	164	1910	0	1/2
4	b	Frank Chambers	120	1605	1	1 1/2
5	w	Richard Towers	156	1848	1	2 1/2

So, a poor performance, which I am still puzzling about. I thought I should put a lot of effort immediately into recording my feelings and thoughts immediately after the game, in the hope that, if not now, then later I might see the error(s) of my ways. Weeks later (end of March), I still have no more than a feeling of confusion about most of the games, and can't see anything very constructive to suggest by way of alternatives.

To describe my performance as "bad form" begs a number of questions: how does this bad form manifest itself - poor analysis, poor judgment, or what?

The blunder against John Gorodi perhaps speaks for itself, but I blundered only in that game, and in post mortem analysis found a clearly better line for myself

only in the game against Frank Chapman. [To be honest, that's about par for the course in a tournament where I score 4/5!]

For the others, "trying too hard to win" is a fair diagnosis, but still rather vague; "trying to win too early" might be better. Of course, having made a bad start I was anxious to make up lost ground, so this led me to take unjustifiable risks. The one game I didn't feel bad about was the last, where I built up slowly.

Maybe I should have compromised from the start and played the English Opening, but I had determined not to do that in this tournament. I believe that I should be trying to play more sharply, because I feel I don't attack well, and have started playing **1. e4** to try and improve that aspect of my game. Perhaps the line I play against the Scandinavian (Centre Counter) is to blame, but my first experiment with it (see notes to Game Three) was so rewarding that I of course persist. *[If I do adopt the main line against the Scandinavian, it will be the only defence against which I play a main line system - perhaps a revealing observation. Is it about time for **Beating the Sicilian 3?** - but that seems like an awful lot of homework, and I don't usually feel the opening is my main weakness]*

I should add, one unexpected pleasure was meeting in Real Life [TM] a character with whom I have often done battle at [FICS](#), one tomahawk. If any other ICS player sees me at a tournament, be sure and say hello, won't you?

**Regis,D (1940) - Rescorla, Ian (1605) (1) East Devon, 1997
(1/2-1/2, 36)**

Friday night: a discouraging draw. Black peppered me with draw offers throughout (as he did *every* opponent thereafter); I kept going, trying to win, but eventually conceded the draw when I was a pawn down with a worse position!

1. e4 d5

Hmm. This month's copy of BCM calls this 'uncommon', but I seem to meet this as often as anything else. My opponent is graded 118, but in the U200 section: monstrously undergraded? a shark? a postal expert? Anyhow, he plays pretty conservatively.

2. Nc3

I don't know much about the theory: there are main lines with 2...Qxd5 and 2...Nf6 and some fancy 2...Nf6 Gambit systems which have been popularised by Keene and Levy's book.

[2. d4] [2. exd5]

2... dxe4 3. Nxe4 Bf5 4. Ng3 Bg6 5. Bc4 e6 6. Nf3 [6. Nh3] 6... Bd6 7. d3 c6 8. Qe2 Qc7

Oops, should have played h2-h4 earlier. Now Black is easily equal, I think.

9. Ne4 Bxe4 10. dxe4 Nd7 11. Bd2 Ne7 12. Bc3 b5!? [12... O-O-O] 13. Bb3 O-O-O!?

Black's last two moves are inconsistent - one or the other is OK, but now I thought I had good prospects of an attack.

14. a4 [14. e5 Bc5 15. a4 b4 16. Bd4 Bxd4 17. Nxd4 Qxe5] 14... b4 15. Bd4 [15. Bxg7 Rhg8 16. e5 Nxe5 [16... Bc5 17. Bf6 Rxc2] [16... Rxc7 17. exd6 Qxd6] 17. Bxe5 Bxe5 18. Qxe5] 15... c5 16. Be3 [16. Bxg7 Rhg8 17. Qa6+ Kb8 18. e5 Bxe5 19. Bxe5 Nxe5 20. Nxe5 Qxe5+ 21. Qe2 Qxb2 [21... Rxc2]] 16... h6 17. c3 Nc6 18. cxb4 Nxb4 19. Rc1 Kb8 20. O-O Rc8

(about here I was rewarded by the first of about a dozen draw offers)

[20... Rdg8] **21. Rfd1** [21. e5 Be7 [21... Nxe5 22. Nxe5 Bxe5 23. Rxc5] [21... Bxe5 22. Nxe5 Nxe5 23. Rxc5] 22. Qb5+ Qb7] **21... Rhd8**

White's pieces lack the scope to coordinate much of an attack.

22. e5 Be7 23. a5 g5 24. h3 Qc6 25. Bc4 Rc7 26. Bb5 Qe4 27. Bxd7 [27. Rc4! Qb7 28. Rc3 but I still don't think White has anything.] 27... Rdx7 28. Rxd7 Rxd7 29. Qb5+ Qb7 30. Qc4

(getting short of time, but the draw offers kept coming)

[30. Qxb7+ Rxb7 31. Bxc5 Nd3]

30... Rc7 31. Nd2 Nc6 32. a6 Qc8 33. Qb5+ Ka8 34. Nc4 [34. Bxc5 Nd4 35. Qb4] 34... Nb8 35. Ra1 [35. Nd6 Qxa6 36. Bxc5 Qxb5 37. Nxb5 Rxc5] 35... Rc6 36. Rd1 [36. Nd6 Bxd6 37. exd6 Rxd6 38. Bxc5 Rxa6] 36... Qxa6 1/2../strong>

[36... Qxa6 (must be better for Black!) 37. Qxa6 Nxa6 38. Nd6 f6 [38... f5]]

Gorodi, John (1765) - Regis, D (1940) (2) East Devon, 1997 (1-0, 65)

Saturday morning brought an even more discouraging loss! I tried hard to work up some pressure against White's solid centralised formation, but overlooked a simple threat and lost a piece. After that I didn't really have a chance, although it kept going for forty moves. Not to take anything away from John, who later drew against Alan Spice, an Exeter University graduate who was one of the top players in the Premier.

1. d4 g6

[After 1... Nf6 it's getting to be a novelty to see 2.c4!]

2. Nf3 Bg7 3. Bg5 c5

Trying to play sharply in the hope that my opponent will start going backwards. 4. e3?! [4. c3! Qb6 5. Qb3!? Qxb3 6. axb3 cxd4 7. Nxd4 Nc6 8. Nxc6 dxc6] 4... Qb6 5. Qc1 h6

Thinking about ...g5 but this is trying too hard; now the dark-squared Bishop inhibits ...e5.

6. Bf4 Nc6 7. c3 Nf6 8. Nbd2 d5 (else Nc4) 9. Bd3 cxd4!? ("preventing" e3-e4, but opening the e-file) 10. exd4 O-O 11. O-O Nh5 12. Be3 Qc7 13. Re1 Kh7 14. Nf1 [14. h3 Nf4 15. Bc2 e5] 14... Bg4 (idea ...Rae8 and ...e5, trying for an attack, but overlooking White's reply. With hindsight 14...f5 may have been better, but I don't fancy that e-Pawn!) 15. Ne5!?

15... Bxe5?!

[15... Nxe5 16. dxe5 Bxe5 [nor 16...Qxe5?!] 17. Bxh6 Bf4 18. Bxf4 Nxf4 19. Bc2 Ne2+ didn't seem to me to be going anywhere]

16. dxe5 Nxe5 17. Bc2 Nc6 18. Bxh6 Rfe8

This was the position I was playing for (oddly enough): I hoped to make something out of my central Pawns.

19. h3 Bd7 20. Qg5 e5?? 21. Qxh5 (Oh, dear.) 21... f5 22. Qh4 Re6 23. g4 fxe4 24. hxe4 Rh8 25. Ng3 Kg8 26. Qg5 Kf7 27. Rad1 Ne7 28. Re3 Qb6 29. b3

This is terribly grim, White has an extra piece and a crushing position.

29... Ke8?! Releases the Bishop, but what else? [29... d4] 30. Bg7 Rh7
31. Bxe5 Rf7 32. Bd4 Qd6 33. Rde1 Rxe3 34. Qxe3 b6 35. Qe5 Qxe5 36.
Bxe5 Kd8 37. Bd4 Bxg4 38. Bd3 Bf3 39. Bf1 Nc6 40. Bg2 Rf4 41. Be3 Rf7
42. Bg5+ Kc7 43. Re6 d4 44. Bxf3 Rxf3 45. cxd4 Nxd4 46. Re7+ Kc6 47.
Re3 Rf7 48. Kg2 a5 49. Ne2 Nf5 50. Re6+ Kb5 51. a4+ Kc5 52. Rxc6 b5
53. axb5 Kxb5 54. Rf6 Rxf6 55. Bxf6 Kb4 56. Nc1 a4 57. bxa4 Kxa4

Well, I've got most of the Pawns off, all I need do now is sac the Knight for the Pawn and hope John doesn't know how to mate with Bishop and Knight! (well, some IMs can't)

58. Kf3 Kb5 59. Ke4 Nd6+ 60. Kd5 Nf7 61. Ne2 Kb6 62. Nd4 Kc7 63. Nf5
Kd7 64. f4 Ke8 65. Nd6+ 1-0

Regis,D (1940) - Saqui,D (1910) (3) East Devon, 1997 (0-1, 32)

Saturday afternoon: my first heavyweight opponent, but I didn't get the hang of this one at all.

1. e4 d5 (Hey!) 2. Nc3 d4 The other line, which I have had a happy

experience with:

Regis,D (1820) - Sandercock,EB (1640) [B01] Paignton Challengers #6, 1995

1.e4 d5 2.Nc3 d4 3.Nce2 c5 4.Ng3 Nc6 5.Nf3 a6 6.a4 e5 7.Bc4 h6 8.d3 Nf6 9.O-O Be7 10.Nh4 Bg4 11.f3 Bh5 12.Nxh5 Nxh5 13.Nf5 Bg5 14.f4 Nxf4 15.g3 Ne6 16.Bxe6 fxe6 17.Qh5+ Kd7 18.Qf7+ Ne7 19.Nxg7 Qb6 20.a5 Qc6 21.Bxg5 hxg5 22.Qf6 Rh3 23.Qxg5 Rah8 24.Rf2 c4 25.Raf1 Qc5 26. Qg4 R8h6 [26...R3h6] 27.Nxe6 Rxe6 28.Qxh3 Qxa5 29.Rf6 Qb6 30.Rh6 1-0

3. Nce2 e5 4. Ng3 g6 5. Nf3 Bd6 6. Bc4!? [6. c3! c5!] 6... h5 7. c3 [7. h3?!] [7. h4!?!] 7... h4 8. Ne2 c5 9. d3

Afterwards, I was very dissatisfied with my opening play in this game; however the expert in this opening (Dick van Geet) has played an identical formation:

[9...h3 10. g3 Nc6 11. O-O Qe7 12. b4 Bg4 13. Ng5 Nh6 14. f3 Bd7 15. f4 = Van Geet-Scheltinga/Netherlands 1968 although he actually lost this game!]

10. cxd4 cxd4 11. Qb3 (Probably a mistake, but it looked right at the time) 11...Qc7 12. Bg5

White's position looks pretty but it isn't going anywhere from here. In particular, the Knights lack scope. 12... h3 13. gxh3?! [*I feared 13. g3 Bg4!*] 13... Rxh3 [*13... Bxh3*] 14. Nfg1 [*14. Neg1*] 14... Rh7 15. h4 (not an attacking idea, just trying to get rid of that lame h-Pawn) 15...Bd7

Now it all starts going downhill (...Na5): Black just drives hard for the win move by move. I think almost any move here is better than the one I chose, although I did see that 16. Rc1 doesn't really work.

16. Bd5?! Nge7 17. Rc1 Qa5+ 18. Kf1 Nxd5 19. exd5 Nb4 20. a3 Qxd5 21. Qxd5 Nxd5 22. Ng3 f6 23. Bd2 Bb5 24. Ke2 f5! 25. f3 e4 26. Nxe4?!

[26. fxe4 Nf4+!? This is what he intended; wish I'd known! 27. Bxf4 Bxf4 28. Rc5!]

[26. fxe4 Bxg3! is what I feared. Maybe he would have changed his mind if it came to the crunch]

26... fxe4 27. fxe4 Re7 28. Kf2 Nf4 29. Bxf4 Bxf4 30. Rd1 oh, dear 30... Rc8 31. Ne2 Rc2 32. Kf3 Be3 0-1

Late Saturday night: 1/2 point from three games against lower-graded players: was this the tournament from hell? I do see other people withdraw at times like this, but I thought, I'm not ill, and if I don't go back tomorrow, what else will I duck?

Chambers, PF (1605) - Regis,D (1940) (4) East Devon, 1997 (0-1, 58)

Sunday morning: A good scrap, and some good fortune. Arriving with 1/2 out of 3, I found myself drawn against a charming old boy graded 120: I had the attitude that I would sooner lose than draw. I came rather close to the former but wobbled on for a win!

1. e4 e5

Second time I've played this in a match game for 20-odd years; like I said, I was in a funny mood!

2. f4 Thank Ford for that, if it was anything else I'd be improvising even earlier. I have ventured the King's gambit myself so I know some of the theory. 2... exf4 3. Bc4 Be7

Not the most direct line against the Bishop's Gambit.

[3... Nf6] [3... d5] [3... Nc6] [3... Qh4+]

4. Nf3 Transposing to the Cunningham is what I wanted. Can White profitably avoid this? I think not by **[4. Qf3!?!]** but **[4. d4!]**, when we looked at **[4...d5!?!]** I don't know if this is right, but it seems to get into a Modern Defence when the **Be7** is played too early to a passive square.]

4... Nf6 5. Nc3? **[5. e5! Ng4 is the main line]** **5... Nxe4!** I know this is supposed to be better for Black, but it's not the sort of position I like defending: I like more active play as Black, but I guess you have to play these moves to win. So, ...Nxe4 it is!

6. O-O A good response. **6... O-O!?**

[6... c6!?! 7. Bxf7+ Kxf7 8. Nxe4 d5 9. Ne5+ Kg8 10. Nc3 Nd7 11. d4]

[6... Nxc3?! 7. dxc3 d5 8. Bxd5 Be6 9. Bxe6 fxe6 10. Bxf4 O-O 11. Be5 Nc6]

7. Nd5! **c6 8. Nxe7+ Qxe7 9. Bb3 d5 10. d3 Qc5+ 11. d4 Qd6**

I liked the Knight on e4 but I still wasn't happy with this position, and I don't know what else I was supposed to do!

12. c3?! [12. c4!?!] [12. Ne5!?!] **12... Bg4 13. Qe1 Nd7 14. Qh4**

14... Ndf6?! Confused.

*[14... Bxf3! 15. Bxf4 [15. gxf3 Qf6 16. Qe1 Ng5] [15. Rxf3 g5] 15... Qf6!
16. Qxf6 Ndx6 [16... Nex6 17. Rxf3 Ne4 [17... Rfe8] 18. Bc2 Ndf6 19.
Be5 Rfe8] 17. gxf3]*

15. Bc2

[15. Ne5 He wrote down this one, which is what I expected. 15... g5!]

*[Maybe 15. h3!? g5 16. Qh6 Bf5 17. Bc2 Ne8 18. Qxd6 N8xd6 but if 19.
Bxe4 Nxe4 hanging on to g5]*

Black is struggling for a plan. 15... Qe6 (after 30 minutes thought) 16. Bxf4 Nh5!? 17. Ng5 Nxc5 18. Bxc5 Now White has fine compensation for the single Pawn deficit.

18... h6 19. Bd2

19... g5? A foolish bet. 20. Qf2? Trusted me, I guess.

[Most King's Gambit players might have been expected to play 20. Bxg5! hxg5 21. Qxg5+ Kh8 [21... Ng7 22. Rf6] 22. Rae1 Rg8 [22... f6 23. Qh6+] 23. Qd2 Qd6 24. Rxf7 Rg7 25. Ref1 Rag8 26. Qg5]

20... Qe2! 21. Bd1 Qxf2+ 22. Rxf2 Bxd1 23. Rxd1

23... Ng7?

A real hallucination: I thought the Knight was still attacked by the Bishop on d1!

[23... f5! is better but only equal: 24. Rdf1 Rae8 [24... Ng7 25. h4 f4 26. g3 Nh5] 25. Rxf5 Rxf5 26. Rxf5 Re2 27. Rf2]

24. Rf6 Kh7 25. Rdf1 Rae8 26. Rxf7

[26. h4!? Re6! [26... gxh4 27. Rxh6+ Kg8 28. Rxh4 with an attack] 27. hxg5 hxg5 28. Rxf7 Rxf7 29. Rxf7 Re2 30. Rf2=]

26... Rxf7 27. Rxf7 Re2 28. Bc1 [28. Rf2 Rxf2 29. Kxf2 Ne6 30. b3 Kg6] 28... Rc2 [28... Re1+ 29. Rf1 Re2 30. Rf2] 29. Rf1 Kg6 30. g4 Ne6 31. h3 Nf4 [31... c5] 32. Bxf4 gxf4 33. Rf2 Rc1+ 34. Kg2 [34. Rf1] 34... Kg5 35. Kf3 Rh1 36. Kg2 Re1 37. Kf3 Re3+ 38. Kg2 Rg3+ 39. Kh2

39... b6?! 40. a3?! [40. Re2! Kh4 41. Re7 [41. Re6 Rxh3+ 42. Kg2 Rg3+ 43. Kf2 Kxg4 44. Rxh6 c5] 41... Rxh3+ 42. Kg2 Rg3+ 43. Kf2 Rxg4 44. Rxa7]

40... Re3 41. Kg2 Rg3+ 42. Kh2 Re3 (whew, made the time control) 43. Kg2 c5 44. dxc5 [44. Rd2 c4] 44... bxc5 45. Rf3 [45. Rd2 Re5] 45... Re4 46. Rd3 d4 47. cxd4 Rxd4?! (Another foolish bet, which also came off!) 48. Rxd4?!

[48. Rc3! Rd2+ 49. Kf3 Rd5 [49... Rxb2 50. Rxc5+ Kh4 51. Rh5#] 50. Rc4 Rd3+ 51. Kg2 and Black looks over-stretched.]

48... cxd4

Two sharp young players (including young Alan, graded 194) glanced at this in the post-mortem and declared immediately "winning for White" - after all, White has potential passed Pawns on both wings! But I've counted it out.

49. Kf3 [49. Kf2 is the same] 49... d3 50. b4 Kh4 51. b5 d2 52. Ke2 Kg3! [52... Kxh3 is what White had analysed, but is missing the point.] 53. Kxd2 [53. a4 doesn't save a tempo because of the check: 53... Kg2 54. a5 f3+ 55. Kxd2 f2 56. b6 axb6 57. axb6 f1=Q 58. b7 Qb5 still works by a tempo.] 53... Kg2 [53... Regis,D (1940) - Towers,RC (1845) (5) East Devon, 1997 (1-0, 23)

Sunday afternoon: Beating The Tortoise 3. My esteemed Exeter clubmate Rich Towers played too cautiously, allowing me a position which was advantageous without being winning, but then overlooked a shot.

1. e4 d5

Anything but this dismal bloody opening again...

Ironically, Rich had sat in on a 1.Nc3 d5 2. e4 bull session that I had been part of the previous evening, so we played our first moves v e r y . . . s l o w l y . . . in between giggling. Did he dare? Did I dare? (He did, I didn't!)

2. d4

So, no 2. Nc3 today!

2... dxe4 3. Nc3 Nf6 4. f3 (The Blackmar-Diemer gambit, which I know next to nothing about, despite having read a book on it: I know some of the attacking formations but didn't bother getting to grips with any of the critical lines)

4...e3 (The Langerheinecke Defence; a perfectly solid line, I guess.) 5. Bxe3 c6 (Still playing the Scandinavian!) 6. Bd3 [6. Bc4 has been tried] 6... Nbd7 7. Nge2 e6 [7... e5 is flying rather in the face of the four developed White minor pieces.] 8. O-O Nd5 (To develop the Bc8, but shedding another tempo. [8... Nb6] [8... Bd6 9. Ne4 Bc7 10. c4] [8... Be7]) 9. Nxd5 exd5 10. Re1 Be7 11. Ng3 O-O 12. Nf5 [12. Qe2] [12. c4] 12... Bf6 13. Qd2?! Nb6! 14. b3?!

14... Be6 Rich is determined to take no risks, but this may be his mistake!
[possible is 14... c5 !? when I had resolved to sac the exchange by 15. dxc5] 15. c3 Nc8 *[15... Qd7 16. Qc2]* 16. Re2 Ne7 17. Ng3 g6 18. Rae1 Qd7 19. Bg5

19... Bg7 *[19... Bxg5 20. Qxg5 Nf5 21. Nxf5 Bxf5 22. Bxf5 Qxf5 23. Qxf5 gxf5 24. Re7 b6 25. Rc7 Rfc8 26. Ree7]* 20. Qf4 Rae8

21. Bf6

Here's where all those night with the tactics training books should pay off... but this took me 20 minutes! There is no guarantee that any of the lines have a 'solution' leading to a White win (or even a plus); the move chosen was non-forcing which makes it even worse to analyse. Also, key lines with exchanges kept failing because White gives up the e-file, so I had to feel confident. In the event Rich came up with a blunder, but we had fun analysing the position afterwards:

[21... a5!? "Pass!" 22. Qe5 [22. Bxg7 was preferred by Fritz; I didn't think long about that plan. 22... Kxg7 23. Qg5 Ng8 24. Nh5+ Kh8 25. Nf4 missed that one 25... b6 [25... f6 26. Qh4 Bf7 27. Bxg6 h6 28. Bxf7+-] 26. Nxe6 fxe6 [26... Rxe6 27. Rxe6 fxe6 28. Qe5+] 27. Re5] 22... Bxf6 23. Qxf6 b6 24. h4 and Black cannot pass any more. 24... b5 25. h5 h6 26. hxg6 Nxg6 27. Nh5+-]

[21... Nf5 "Exchanging #1" 22. Nxf5 [22. Bxg7 Nxg7] 22... Bxf5 [22... Bxf6 23. Nd6 Rd8 24. Nxb7] 23. Bxf5 Qxf5 24. Qxf5 gxf5 25. Rxe8 [25. Bxg7 I spent a little while during the game analysing this! 25... Rxe2 26. Rxe2 Kxg7 27. Re7 Rb8 28. Kf2 Kf6 29. Rc7]]

[21... Bxf6 "Exchanging #2" 22. Qxf6 Nf5 23. Bxf5 [23. Nh5] 23... Bxf5 24. Nxf5 (stops ...Rxe2) 24... gxf5 [24... Qxf5 25. Qxf5 gxf5 26. Rxe8] 25. Rxe8?! [25. Re7 Rxe7 26. Rxe7 Qd8 27. Qe5 Qc8 28. Qc7] 25... Rxe8 26. Rxe8+ Qxe8+ /= 27. Qxf5?? [27. Kf2 Qe6 28. Qd8+ Kg7 29. Qb8] 27...

Qe1#]

[21... Nc8! "Reorganising" (idea Qd6/Qe7) 22. Bxg7 Kxg7 23. Qg5 Qe7 [23... h6? 24. Nh5+ +-] 24. Nh5+ Kh8 25. Nf6 [25. Qh6! Rg8+ /=] 25... Rd8 unclear! White can try h4-h5 but it looks flaky.]

Instead:

21... Kh8?? 22. Nh5

I took me ages to realise (a) that Nh5 was now a useful candidate (it was useless before), and (b) that it won, although the very first reply I thought of was 22. Qh6!

22... gxh5 23. Qh6 1-0

[Dr. Dave](#)

Exeter Chess Club: Free Internet Chess Servers

[PLAY LIVE CHESS](#) free via telnet at the [British Internet Chess Server](#) (BICS) or other [addresses](#) with [players](#) like yourself.

[Naturally, my handle at FICS is [Dr.Dave](#).]

There is on-line help once you log in (type "help"), or you could visit the handy walk-through [ICS help site](#).

You can play using a mouse on a normal-looking board [[80k GIF](#)] using [SLICS/CHESSBD](#) for a Windows PC with SLIPP connection, and there are other [interfaces](#) for players with modems and/or other makes of computer. You can get the interfaces from the [FTP directories](#) for your make of computer from [Internet Chess Library](#); many are free but some like SLICS are shareware.

Once you are on you can play "lightning", "blitz" or "standard" time limits, although the [quality](#) isn't always wonderful at the faster limits (and the server will post all your blunders to you after the game...)

On these servers you get given a [4-figure rating](#) for each type of time limit to help you find players of about your standard. Most folk are pretty friendly although many have a "[no takeback](#)" rule, and if you are playing a rated game you may find yourself [lag-flagged](#), and sometimes if you are winning your opponent may disconnect rather than finish the game and lose rating points. And Ford help you if you [overlook](#) a takeback request by a higher-graded player, even in an unrated game... Not all players are so aggressive: I lost a game on time to a player who accidentally left on the "autoflag" - the next game he resigned on move one! It is a pleasure and a privilege to play with such people. See also:

Subject: The proof of the pudding ...

About my thesis on the low quality of play on FICS (etc): two excellent examples from this weekend.

The first is the worst blunder I have ever seen. White is a reasonably strong player - Qc2! caused convolutions - but throwing the Queen away with 4+ minutes on the clock by putting it en prise (it would have been slightly more understandable if I'd attacked it and he missed the attack) is plain bizarre. I'm not so wonderful myself - look at the way the pawn on d2 was lost - but I had only 1+ minutes after move 25.

Rg1 43. Kc3 a5 {White resigned} 0-1

The second shows the other side of the coin - play goes to move 30 fairly sensibly, then collapses into idiocy when time gets short. The Rook sacrifice on f8 was because of a strange 'self-zugzwang' - Black

had played pretty well to confuse things, I ran out of ideas and was trying to swindle him by playing the Queen to e6 and hoping that he would accidentally remove the defence of f7. This, and the other sacrifice on f7, had the desired effect in causing confusion: before the first sacrifice I had 34 seconds left, he had 2+ minutes, and he lost on time! Chess it was not.

I guess most people who play on a FICS server have also played OTB match/tournament and casual games.

I have one fairly strict set of rules for match and tournament games (which should be the same as everyone else!), and one relaxed set of 'rules' for friendly games.

At my club I allow in friendly games touch-but-didn't-move, takeback, flag-falling, almost anything - and I'm the same on FICS servers (I hope), because they too are friendly and not tournament games.

[BTW, I feel that allowing (and even offering) takeback makes for a more satisfying and more complete game for both winner and loser, whoever made the earlier blunder; I suppose that may reflect the low level of my chess that blunders are so common, but it's still true.]

Other folk seem to play on chess servers much more strictly - more like they would interpret rules for a tournament game.

I don't see the latter attitude as being less sporting, just less friendly. I liked someone else's comment on this thread about playing for 'enjoyment' or 'competitive' reasons; I sometimes like to compete, but I always like to enjoy.

Also, if you don't allow takeback, they can mooch off muttering nasty things about you to console their shattered egos, but if you allow takeback and THEN win, they have NO excuse for losing, they just PLAYED WORSE, and they'll have to ADMIT that you're BETTER, BWAHAHAHAHAHAHA.....

Sorry. Anyhow, you get the point.

D

Exeter Chess Club: Lag flag

Lag is where a delay in transmission eats away at your clock time. You can add time to your opponent's clock if they have lag problems. Lag-flagging is calling time out on a player who is experiencing lag, as in this example:

Some joker had bagged my usual handle (**DrDave**) so I played under a different name - **EvilTwin** - for a week's trial at ICC. I was lag-flagged under similar circumstances more than once at ICC; you can make sure your interface does not have "autoflag" set, but I have never had the same experience on other servers.

Unedited record (except to preserve the anonymity of the guilty) of rated blitz game played at the Internet Chess Club, 20 Jan 1997.

[Dr. Dave](#)

Exeter Chess Club: A course of study

- [Guide to grade levels](#)
- [Guide to study \(1\) - where do you stand?](#)
- [Guide to study \(2\) - what should you know?](#)
- [Guide to study \(3\) - what is there here?](#)

The handouts are of different degrees of complexity. I don't think it does any harm to be exposed to ideas more [advanced](#) than you are quite ready for, as I imagine that if you don't really get it then it won't stick and/or you won't pay attention to it during a game. However, if you do want a rough guide to an order for tackling the handouts, here it is. [*All the stray forward slashes are for text-only browsers.*]

Beginners can start with my [posters](#) or the [Top 10 tips for Juniors](#) but are probably better off with other sites like [David Hayes'](#) or [Diuf's](#). There is a list of [other links](#) around.

For players up to USCF class A (Major players, up to 150 or so BCF, up to 1800+ ELO) see below. Anyone better than that may be at the wrong web site!

I have in my own mind some simple guidelines for chess study. For a programme of study you should have a proper balance between each phase of the game (opening, middle, ending). And for each phase of the game you should work to improve not just your knowledge but also your capacity to judge and to analyse. Schematically this looks like:

Balance in chess study

opening endgame

The three pillars of chess skill

judgement experience

There are other maps of study: Kotov has his own trinity: **assessment, calculation, planning**, which might be two elements from my second and one from my first diagram.
And Lasker famously suggested:

*"Chess rules and exercises - 5 hours
Elementary endings - 5 hours
Some openings - 10 hours*

Combination - 20 hours

Positional play - 40 hours

Practical play with analysis - 120 hours

"Having spent 200 hours on the above, the young player, even if he possesses no special talent for chess, is likely to be among those two or three thousand chessplayers [who play on a par with a master]. There are, however, a quarter of a million chessplayers who annually spend no fewer than 200 hours on chess without making any progress. Without going into any further calculations, I can assert with a high degree of certainty that nowadays we achieve only a fraction of what we are capable of achieving."

-- Em. Lasker, Manual of Chess

Edmar Mednis suggested for a player on their way to a master title:

50% of study time on openings

25% of study time on middle-games

25% of study time on endings,

adding that "openings" study should include you to examining typical middle- and end-games.

Whether any of us are most "right" is a poor question; what is important is that these schemes work for each of us as *aides-memoires* when drawing up a balanced coaching programme.

Also, there needs to be a dialogue between your games, your study of your own games and your 'homework':

- where do I stand?

- what should I work on?
- what is there available?

The last bit is the easiest.

Guide to grade levels

////////////////////

LEVEL	BCF grades	ELO	USCF class	Category
Minor	80-100	1240-1400	D	4
Intermediate	100-120	1400-1560	C	3
Major	120-150	1560-1800	B	2
County	150-180	1800-2040	A	1

The USCF supports other titles, with USCF (not ELO) grades as follows:-

Expert: 2000-2199, Master: 2200-2399, and Senior Master: 2400 and up.

Guide to study (1) - where do you stand?

I liked Vladimir Zak's description of the different stages of development of chess players:

1. Attack something - and if it doesn't move, take it
2. Both opponents base their play on elementary traps
3. Tactical operations without regard for position
4. Harmonious cooperation of the pieces and combinations
5. Ability to find the right strategic plan

I'd guess that {D} players are fighting clear of stage 3, although stage 4 isn't always apparent in the play of {A} players! So, while I liked this, I thought it could do with some expansion.

Here is my attempt at a set of thumbnail sketches of chessplayers. Do you recognise any of them?

[It is of course perfectly possible for a player to play the opening like a Major {B} player, the middlegame like an Intermediate {C}, and the ending only as well as a Minor {D} player. I know computer programmes just like that!]

////////

<i>Level</i>	<i>{D} Minor</i>	<i>{C} Intermediate</i>	<i>{B} Major</i>

<i>opening</i>	{D} know basic principles but sometimes incomplete and often too-simple development	{C} Play solidly and can trot out moves of their systems but not good at seeing or setting problems	{B} Opening theory sound and can adapt to changed circumstances./
<i>middlegame tactics</i>	{D} Basic tactics but easier to see their own.	{C} More complex tactics but usually in familiar settings.	{B} Can see and set traps; moves have a 'point'./
<i>middlegame strategy</i>	{D} Can see a King and go for it; in planning don't use all the pieces and games often appear episodic	{C} Can play soundly but can be inflexible; often have a marked preference for certain styles of play.	{B} Understand most of the clockwork attacks; when solid are also flexible - keep their pieces active./
<i>endgame</i>	{D} May be hesitant to use King and often don't know theory	{C} May defend rather than attack. Theory often not much better!	{B} Again good at problem-setting in endgame, and seeking or limiting counterplay./

Knowledge and understanding appropriate to each level

i.e. look at the next level up from you to see what you might be missing!

///
 //////////

Level:	{D} Minor	{C} Intermediate	{B} Major
opening	{D} 'rules' (guidelines): development and the centre, the Italian game, a system against 1.d4,	{C} ideas behind the openings, playing White against odd Black lines,	{B} opening 'theory', hypermodern openings,
middlegame tactics	{D} combination, sacrifice, mating patterns, basic tactics (pin, fork, skewer/X-ray, back rank, queening combinations, no retreat, removing guard, deflection/ decoy/overloading, discovered attack/ discovered check, double attack/ double check,)	{C} square vacation, line-opening, intermezzo, calculation of variations,	{B} combinational vision, liquidation, combinational horizon, /
middlegame strategy	{D} time space material (activity / quality), attacking the King (open lines, counterplay, breaking through) bishops: bad bishop, knight outpost, open files/ranks e.g. seventh, centralised Q,	{C} weak pawns (backward, isolated, doubled), majority attack, holes, weakening the defensive line, fixing weaknesses, slow King's-side attack with closed centre,	{B} planning, two bishops, restraint, colour complexes, pawn formations, e.g. minority attack, exchanging, centralisation, overprotection, manoeuvre, co-ordination, initiative, /
endgame	{D} active K in the endgame, majorities theory of K+P, Q+P,	{C} theory of R +P,	{B} theory of B +N, two weaknesses, endgame openings/

I think that for each of these elements there are different levels of understanding e.g. bad Bishop

- I've heard of it!
- I know what it is and could explain it to a junior.
- **I understand enough to make use of the idea in a game.**
- I never fail to notice the feature in a game, and rarely (if ever) make a bad choice of plan based on it.

I suspect we're all OK at (1) but aren't all at (4) yet. (3) is a fair goal.

Guide to study (3) - what pages are here?

N.B. These are illustrative rather than comprehensive. For a complete list of handouts check out the class letters allocated on the separate indices for [general ideas](#), [openings](#), [tactics](#), [strategy](#) and [endgames](#).

////////

Level	Openings	Middle-game	Endgame
Minor (Class D)	Basic Opening Principles , Italian game , Playing Black against 1.e4 , Why not play 1.d4? , Stonewall Dutch .	Basic Ideas (Tactical & Strategic) , Mates , Basic Tactical Ideas , Attacking the King , Knights , Bishops , Rooks , King and Queen .	General , King and Pawn , Rook endings
Intermediate (Class C)	Choosing Openings , White against odd 1.e4 lines , Petroff , French Defence Ideas/Variations , Colle , Anti-Indian systems , Playing Black against 1.d4 .	Pawn mobility , Pawn formations , Slow attack ,	Bishops , Two weaknesses ,
Major (Class B)	Hypermodern , Sicilian ,	Scheming and Planning ,	Double Bishops , Endgame Openings ,
County (Class A)	Sicilian with ...e5 , Benko , Beating Anti-Indians ,	Material inequality , Manoeuvring , Balance ,	

N.B.

There are many more games in the [canon](#) than are included in the handouts.

Minor/Intermediate players might look particularly at [attacking techniques](#) and I

hope players of different standards will be interested in the section on [analysis and errors](#).

This document (programme.html) was last modified on 6th Sept 96
by

[Dr. Dave](#)

analysis

tactics - middlegame - strategy

Chess Coaching Links

Links for people interested in teaching and learning about chess

Some non-coaching links are found on the [front door](#).

[N.B.

1. I'm struggling to keep up just these coaching links: other people seek to be inclusive, but below the links are just about coaching or learning.
2. *Do you have a site I should know about? I'm not really interested in giving free advertising for exclusively commercial sites. Please don't e-mail me with requests to be added to this list unless you have at least some free instructional material*
3. ...Instead tell [Yahoo](#) or [Chessopolis](#) about your site

]

Did you know

you can [play live chess for free](#) on the internet?

1. [Self-help groups](#)
2. [Other instructional chess pages](#)
 - o [Basics](#)
 - o [Junior and School Chess](#)
 - o [General Chess Instruction](#)
 - o [Coaches](#)
3. [Links to look for coaching links:](#)
4. [The big sites and indices...](#)
5. [Other and Non-Internet contacts](#) (shome mistake surely? - Ed.)

1. Self-help groups

Chessplayers Unanimous!

- o [Chess Analysis](#), James Baldwin hosts a mutually supportive commentary forum.

2. Other instructional chess pages (in no particular order):

o Square one

1. The Official [FIDE Laws of Chess](#)
2. You can also learn to play at the [Chess Corner](#) which has some nice teaching material organised around the British Chess Federation [Certificate of Merit](#) scheme.
3. There is good advice in the rec.games.chess newsgroup's FAQ ([Frequently Asked Questions](#)) list with answers. You can access the [rec.games.chess.misc newsgroup itself](#), a magpie's nest of [Goodies from r.g.c.*](#) and an immodest preserve of [my old posts](#).
4. [Joe Brooks](#) has composed and made available texts explaining *en passant* rule, beginners' [guidelines](#), systems of [notation](#) and [US ratings](#).
5. US Correspondence Champion Jon Edwards claims [Chess is fun!](#) The moves and more, in Netscape Frames.
6. [How to get to 1900](#) is a set of online articles by John Coffey.
7. [Karel van Delft](#) has some excellent articles on studying chess - essential!

o Junior and School chess

1. [Duif's place](#) has a host of relevant material, including *Tips For Parents of Young Chessplayers* and an *International Directory of Chess Teachers*.
2. UK readers will not need reminding about the success of Richmond Juniors, but they will no doubt be pleased to see the website from their esteemed coach Richard James [www.chesskids.com](#)
3. There is a [Scholastic Chess](#) mailing list; e-mail [scholastic-chess-request@cis.uab.edu](#) to join.
4. [Chess'n Math Homepage](#): - a Canadian initiative incorporating school chess into maths (or vice versa!).
5. [Chess in Schools: a Brazilian Project](#) - not just Chess and Maths, but Chess and Geography, History...!
6. Peter Walker's [Essex Junior Chess News](#) has some Tactical Puzzles and notes on games.
7. [Kids' Chess Network - New York City](#). There is some very nice material developing on the openings here, both at introductory

- and advanced levels. Check out the material on [The Italian Game](#) and other [Double King Pawn Openings](#).
8. [Food for Thought Software](#) have lots of ideas about how to organise a school chess club, and sell a software series designed to run a complete school chess program.
 9. And last, but by no means least, **Steve Martinson** has kindly sent some notes from his own work with school children, which I am pleased to offer through a separate [Menu Page](#).
- o General Instructional Links
1. [Kevin O'Connell](#) has an archive of columns, some coaching advice and promises some interesting perspectives from his study of sports science: check it out!
 2. Lonnie Lee has provided the [THE 64 COMMANDMENTS OF CHESS](#).
 3. Ooi N-de and Aaron Ong have constructed [ChessSite](#) as a project organised by [ThinkQuest](#).
 4. Here's another interesting one: chess used as a topic area for teaching undergraduates. Pomona College ran a term's class on [The Nature of Chess Players](#), and made the conduct and progress of the class open to the Internet. The [Final Projects](#) include essays on [scholastic chess](#), [Freudian Theory and chess](#) and [Art, Mathematics and Chess](#).
 5. [Lytham Ex Chess Club](#) have some information for club-players on the Scotch Gambit [and some openings even worse than the Grob].
 6. [Brigend Chess Club](#) have a [Coaching section](#), from John Watts.
 7. [Midwest Chess Academy](#) has no free lessons but a cute refreshable chess quote server.
 8. [The Chess Scene](#), a new amateur e-zine devoted to the amateur game. It promises to be entertaining and accessible, and will be better with your support.

We often use [Club games](#) from Exeter players in coaching. For other amateur games, many players maintain a 'vanity' Web page with a game or two (like [this](#) one!), and Rudolf Steinkellner ([below](#)) has a collection of CC games.

See also the [Difference](#) handout which has a booklist.

9. There is some good information and exercises at [Hellas Chess Club](#), but I have always found it slow to load. Best of luck!
10. The [USCF](#) have a [Beginners' Section](#), and a free syndicated

[weekly column \(*\)](#), and offer a set of 'Chapter One' book advertisements, two of which are very relevant:

- Kotov's classic [Think Like a GM](#), the first chapter of which has been very influential; and
- [How To Get Better at Chess : Chess Masters on Their Art](#): lighter fare but most interesting.

There are other goodies there too, like [Learn Chess with Gary Kasparov\(!\)](#)

(*) Other newspaper columns are occasionally updated at the [Chess Connection](#), and there is a list of online journals at [Chess Space](#), many of which have sites with sample articles. Latest of these is Tim Harding's [Chess Mail](#) for CC chess; Tim also has an on-line column *The Kibitzer* at the [Chess Cafe](#), along with a number of other fine writers. I have some information about [KingPin](#) magazine; young players will welcome the USCF [School Mates](#) magazine.

11. [Norbert Friedrich](#) has all sorts of goodies, including some instruction on endings.
 12. [Eduardo Suastegui](#) by all accounts has a nice (growing!) endgame selection (needs JAVA, so I can't actually see what he's got).
 13. Bernd Rosen presents [Schachtraining Online](#), mostly in German but with [some English material](#) and a nice set of [Links](#)
 14. [Barnet Chess Club](#) has an excellent and growing collection of "technical papers" on various topics in the [opening](#) and [middlegame](#), and more basic material on [improving your play](#).
 15. Last time I looked the [recent FICS events](#) included some helpful lectures.
 16. Steve Lopez (now *there's* a surname) of ChessBase USA has started writing [Battle Royale](#) about the New York tournament of 1924, which includes [pen-portraits](#) of the players and a chess [glossary](#). The material is two parts: the games annotated from the point of view of their instructional value, and an imaginary account of what Steve would have seen and heard as a visitor to the tournament. The latter might not be to your taste, but the basic lessons from the games are put across with admirable vigour, (literally every move being annotated) and a summary of principles is given for each game. Good effort!
- Coaches
 1. [Euwe Chess Academy](#) has instruction, examples and annotated

- amateur games - nice!
2. [IM Javier Gil](#) has free files (annotated amateur games) and free on-line tests.
 3. Most people know that Kasparov has some chess instructional material at [Kasparov Chess](#), but it's just the sort of thing I hate, if you're going to install some software and download 8 Megabytes of content I'd want more than 8 minutes worth of study material! [Chacun a son gout.]
 4. [SmartChess chess tutorial](#) is now available: if they get this right, I can give up...
 5. [Sample lectures](#) from GM **Gabriel Schwartzman** (you can force him to give you more by pressing money into his hand)
 6. [Planet Chess](#) not only has waycool graphics but a [Chess 101](#) instructional section, [Endgame lessons](#), and other goodies.
 7. [GM Nigel Davies](#). Coaching services with an archive of essays offering practical advice.
 8. The London Chess Centre has published a whole bunch of introductory stuff on [Openings](#), but you have to pay for any meat. [A Lynx-hostile site]
 9. There is a heap of good stuff at [CHESSPLAYER \(IM Orlov\) Instruction](#)
 10. [Master Preparation: Lectures](#), a Non-Credit Continuing Education Course in Chess by International Grandmaster Ilya Smirin: course materials
 11. [Analysed games](#) from Danny Mozes (one of the strongest players to use a computer to choose his moves on IC\$ and FICS), and company.
 12. [Ignacio Marin](#) offers opinions and advice on a variety of chess topics. Worth a look, if only to find out about "**Becoming a chess master!**". [[Needs a little salt seasoning](#). Ignacio has a lively style, but "*The opposite of a great truth is also true.*" (Bohr)]
 13. [Chess Web University](#) offers courses for sale and has an example of its material on a [Preview page](#); see also the [ChessWise University](#).
 14. Manus Fealy bids you Welcome to the [Chess for Success Tutorial](#), where he has several pages of free notes on on topics from basic tactics to deep strategy.
 15. [Chess Coaching Tips](#) from Bill Jordan on each phase of the game, and advice on strategy and tactics. Bill also offers coaching over the 'net. [Scott Taylor](#) offers a free sample analysis; you can find

an online directory of chess coaches at [Duif's place](#).

16. There is some more splendidly opinionated stuff at [Paul Powell's Chess Page](#). For a free sample chess lesson send email to memnoch@voicenet.com.

3. Links to look for coaching links:

1. [Chess: Education](#) index of **Chess Space** - recommended!
2. [Search the web's chess resources](#) for links about "Education" (praise and thanks to Steffen Jakob for making the search possible!)

4. ...or browsing at any of the big sites or indices couldn't hurt...

1. **Sites:** [Internet Chess Library](#) or its [ICL European mirror site](#), [Traveller Chess Archives](#), [University of Pittsburgh Chess Club](#) (which has an [Education](#) section), or its European mirror for [ChessBase games](#).

There is also the wonderful

2. [THE WEEK IN CHESS](#) from Mark Crowther, and sundry local sites like the [Dallas Chess Homepage](#)
3. [Palamede](#) is a group of independent European chess sites, including coaching, desk-top publishing, graphics, news and games.
4. **Indices:** You have got to check out [Chess Space](#), rated one of the top 5% of Web sites: it has indices of links for [openings](#) and [endings](#). Sean Whalen's site at [The Mining Company](#) had helpful descriptions of each site. Other starting points include [Yahoo! - Chess Index & search](#) [[Instructional](#), [Indices](#)], [Chesslinks Worldwide](#), [Maclin Chess](#) [links and news], [GNN's Chess Index](#) and [Rudolf Steinkellner's Chess Page](#) (which has a whole bunch of amateur CC games).

5. A recent and welcome development is Maskeret's [\[MECCA\]](#) [MECCA Chess encyclopedia](#), where you can play [Chess Roulette](#) to get a random Chess Web site!

5. Other and Non-Internet contacts

1. Addresses of [UK Chess organisations](#): try the BCF or [Barnet Chess Club](#) to find a UK club near you.
2. Many publishers and suppliers are getting onto the Web, in the British Isles this includes [Batsford](#), [Cadogan](#), [London Chess Centre](#) [Chess Monthly] (N.B. the web site is "chesscenter", the e-mail is "chesscentre), [KingPin](#) magazine, [Chess Mail](#)...
3. [UK Chess suppliers](#) (postal addresses) Commercial suppliers on the web [like [ChessBase](#), Yasser Seirawan's [Inside Chess](#) and [s1 editrice](#)] can be found at [Chess Space](#), and at the [CHESS CONNECTION](#). They may have samples to download and/or a collection of links. One particularly for young players is to be found at [Chess For Students, Inc.](#)

4. **Nearly chess:** This page is only about chess, but I do have a soft spot for and other [Chess Variants](#) like [Semi-Random Baseline Chess](#), [Losing Chess](#), [Exchange Chess](#) (= "Bughouse" in the US, although they do play mating drops), and I also enjoy [Retrograde analysis](#) and [Studies and problems](#). And don't get me started on [Bridge](#)...

Exeter Chess Club Coaching COMMENTS

Comments and contributions

You can **send me comments and games** at

[\[DrDave"at"sheu.org.uk\]](mailto:DrDave@sheu.org.uk) (remove [NOSPAM](#) to send mail)

but please read the notes below!

- **Comments on particular pages:** I very much welcome comments on individual pages on the site, especially correcting errors, but please tell me the title or preferably the URL of the page (that's the alphabet soup beginning "http://www..." at the top of your Windows browser) so I know which one you are talking about!
- **Frequently Asked Questions:** I try to respond positively to all e-mail but, **please**, try reading the Chess [FAQ list](#) first. You can imagine how tiresome it is to get e-mail like:
 - I'd like to know more about chess!**
 - Please send me some information by e-mail...**
- **Your web page:** I like to hear about instructioncoaching web pages, but I don't usually add other types of site to my links page. If you have free coaching material available on your site I will certainly add a link, even for commercial sites. Otherwise, there are many good indices of chess who try to be comprehensive, like [Chess Space](#), and I am sure they would be pleased to create a link for you.
- **Playing chess on the 'net:** You can [play live chess](#) free via telnet or other [interfaces](#) at the [Free Internet Chess Server](#) with players like yourself. I'm not available to [play by e-mail](#) or give advice on [chess-playing](#) or [tutorial](#) commercial software but there are other places where you can get help.
- **General queries and requests** for information and comments are usually best posted to the appropriate **rec.games.chess** group: [analysis](#), [computers](#), [politics](#), [e-mail](#), [misc](#)... Immodestly, I preserve a directory of my [old r.g.c. posts](#).
[Someone has written [an interesting paper on the Internet](#) using r.g.c. as an example.]
- **Can you help me?** I'm always after useful examples: if you have any,

please let me know! ([Portable Game Notation \[PGN standard\]](#) format is nicest)

- Lastly, on **Improving your chess**:

	<p>Article 9288 in rec.games.chess.misc: Subject: Re: Best Quick Study?? From: sloan@cis.uab.edu (Kenneth Sloan) Date: 22 Jun 1996 15:00:58 -0500 Organization: Dept of CIS, Univ. of AI at Birmingham</p> <p>Annotate your last 20 tournament games.</p> <p>-- Kenneth Sloan sloan@cis.uab.edu</p>
---	---

In a book by Dan Heisman called **The Improving Annotator** he attributes his success to self-study of this sort. If Kenneth's advice seems not enough to go on, here are some things to look for to [Assess Your Chess {all}](#).

>In Moscow former world champion Michael Botvinnik has died at the
>age of 83.

As we remember Botvinnik, here are some Botvinnik-related
quotes to enjoy...Please post others of interest to rec.games.chess!

Chess is no whit inferior to the violin, and we have a large
number of professional violinists.

-Botvinnik

Chess is the art of analysis.

-Botvinnik

Once man starts designing `electronic brains' analogous to
human chess players, the inadequacies of `chess thinking'
will be revealed, and the checking of the various methods
of programming will tell us how the live players really think.

-Botvinnik, 1961

The boy doesn't have a clue about chess, and there's no future
at all for him in this profession.

-Botvinnik said about a young 12 year old boy named Anatoly Karpov

Don't worry, kids. You'll find work. After all, my machine will need strong chess player-programmers. You will be the first.
-Botvinnik said to Karpov and other chess students, c.1963, regarding his computer chess program which he claimed would eventually defeat the World Champion.

Of course, the essence of chess is not to be found in the opening of the game. The basic ingredient of chess is that in a complex, original situation, where no source of help is apparent, a player must find the correct solution or move. Anyone who is able to do this can feel confident at the board.

-Botvinnik

Chess, like any creative activity, can exist only through the combined efforts of those who have creative talent, and those who have the ability to organize their creative work.

-Botvinnik

Botvinnik is working hard at trying to make a computer play chess as well as a human being, so let me teach human beings to analyse with the accuracy of a machine.

-Kotov, 1970

Chess is a part of culture and if a culture is declining then chess too will decline.

-Botvinnik, 1978

Botvinnik tried to take the mystery out of chess, always relating it to situations in ordinary life. He used to call chess a typical inexact problem similar to those which people are always having to solve in everyday life.

-Kasparov, 1987

Botvinnik's ideas were highly original and led to many stimulating publications on computer chess. Unfortunately Botvinnik's most active period as a researcher into computer chess coincided with the era when access to computer time in the Soviet Union was severely limited. Had he been given access to virtually unlimited amounts of time on powerful computers, there is no telling how much he and his programmers could have achieved.

-David Levy and Monty Newborn, 1991

Everything is in a state of flux, and this includes the world of chess.

-Botvinnik

In article <1995Feb23.212717.12034@zippy.dct.ac.uk>

mab025@mathssun5lancs.ac.uk (Mr Peter Marsden) writes:

>In a book of Reti's he describes a puzzle of Breyers in retrograde analysis

>where it was possible to show that the game was a draw due to the 50 move rule

>does anyone knowthe actual puzzle or another retrograde analysis puzzle

>where it is possible to prove the 50 move rule has been passed?

Here is Gyula Breyer's famous retrograde analysis problem that Reti mentions in `Modern Ideas in Chess.'

It was published in the Chess Amateur, February 1922, page 164, No. 180,

in the Fairy Chess column, edited by T. R. Dawson.

Breyer had died in November 1921 at age 27 from heart disease.

8 K B * * * Diagram 1

```

7 Q p N   p   * p
6 r R p k P *   *
5 * R p   p   *

3 b r P   *   *
2 p P P *   *   *
1 N B *   *   *
  a b c d e f g h

```

Dedicated to T. R. Dawson and W. Hundsdorfer, the Great Masters of Retrograde Analysis.

Who wins?

Here is The Chess Amateur's description:

```

``The wonderful No. 180, certainly the most glorious retro I have had
the
privilege of yet printing, is sent me by the Budapest circle.
Composed during
the war, its dedication shows that chess could rise supremely over
all the
turmoil. Its talented composer's death was announced only a few days
ago, at a
tragically early age. So that no solver shall miss the idea, I state
distinctly that the retro analysis proves the game is DRAWN by virtue
of
the 50-move Rule!''
}

```

All right, but the story continues...

47 years after this Luis Garaza from Uruguay discovered the possibility to shorten the retroanalysis one move. He also found the correction: normally prolonged the combination. (Problem 3. 1969) - the glorious thought of Breyer was saved. (B.Formanek - Kompozicny sach na Slovensku, 1984)

Really was ? Story continues again...

The Uruguay composer has bad luck too ! I don't know who found his correction was incorrect, but in the selection from world's chess composition magazines in the Slovak magazine Pat a Mat 19/1994 was published the next one correction of this problem. It follows:

```

8 KB-----
7 QpN-p--p

```

6 r-pkP--- Gyula Breyer, correction Gerard Willts (dedicated to
5 Rqp-p--- Andrej Kornilov)
4 bRP----- Die Schwalbe 6. 1991
3 brP-----
2 pPP----- The last 96 halfmoves ?
1 NB-----
abcdefgh

As Peter Gvozdjak writes in this article, it is with high probability the successful correction: the uniqueness of the last 96 moves is proved using the 50 moves rule, the 97th and more halfmoves are not unique. It is interesting that G.W. used computer for analysis ...

(I am too lazy to write all the solution down - it seems it is not very different from the Breyer's one, already published here.)

Juraj Lorinc - The unbelievable fairy chess composer.

I once had one of those fancy display sets, with large plastic pieces
set
up on a small chess table. One of the cats I had at the time would
jump
onto the table, pick up pieces in his teeth, and move them elsewhere
on
the board. Really. I don't know if he was just imitating something
he'd
seen me do, or what. (Who knows what motivates cats?)

Another cat at the same time would also play with the pieces, but he
liked
to carefully push them to the edge and watch them fall off (a common
behavior
of his with other objects, as well.)

|> the players reach this position [deleted], at which point 20
|> consecutive checks
|> can occur at the square marked "*".

I believe the current world record is a legal position without promoted pieces in which an amazing 36 consecutive checks are possible.

The position was composed by W Frangen in 1975.

```
[-----  
b . q . . . .  
B . . p . P . .  
. p . p p . . N  
R B b . . . .
```

```

. . K . . k r r
Q . P P N P . .
. . n P . P n .
. . . . R . . .
white to play
-----]

```

2. f4 Rxf4
3. d4 Bxd4
4. Qc5 Bd5
5. Nxd5 Nce3
6. Nxe3 d5
7. Nxd5 Ne3
8. Nxe3 Bxc5
9. d4 Rxd4
10. cxd4 Bxd4
11. Bc6 b5
12. Rxb5 d5
13. Rxd5 exd5
14. Nxd5 Be3
15. Ng4 Qxg4
16. f4 Qxf4
17. Qxf4 Rxf4
18. Bd4 Rxd4

An oddity is that although a condition is that there are no promoted pieces on the board, promotions are necessary to reach this position, and the promoted pieces have been captured - rather like virtual particles in physics.

I don't know what the record is allowing promoted pieces. I composed a position with 39 consecutive checks and lots of promoted pieces. I think it's attainable in play. But doubtless you can push it much further using all these promoted pieces.

Hello

Craig Jefferies (506-11554%ww4@tweekco.ness.com) wrote about the Ammonia opening (1. Nh3) which lead me to discover a set of openings which I have christened the "Global Warming" openings as the move sequences define hydrofluorocarbons, which can damage the ozone layer. There are several move sequences which fit into these opening. Here are a few.

1. c3 f5 2. h3	C F H 3 5 3	pentafluoropropane opening
1. c4 h6 2. f4	C F H 4 4 6	fluorobutane opening
1. c3 h5 2. f3	C F H 3 3 5	trifluoropropane opening

I wouldn't bother playing them - they don't look all that good. In fact, as openings, they stink!

David

OK then, 1. h3 c6 2. f3 1,3,5 trifluoro benzene

definitely harmful to your ELO rating, but may keep the mosquito population down too :-)

Followup-To: rec.games.chess

Lines: 251

Sometime ago, the following 11 positions collected by Pierre Nolot were

posted to rgc. Pierre claimed that no computers can solve any of them in reasonable time (and no micros in even a few weeks). A long while back, he

might be right. At this point, a few of them are solvable even under tournament time control. The ones that we tried overnight are all solvable

in a few hours. DT-2 was searching around 3 million nodes/sec during the

runs. The time probably would be reduced by 5-30 times for the harder problems if the machine has a better quiescence search.

The comments below might be considered spoilers. The first line for each position is in a computer-readable notation.

1 ;r3;q;b1;k/1;b4;p1;/ip2;p;r2;p/3;n4/p;n;ipln1n1/6rp/lb3pp1/lb1qr1k1/40

a b c d e f g h

```

Source: Kasparov-Karpov, Lyon 1990.

Kasparov played Nh6 here. DT-2 agreed with Kasparov's analysis after going down the line given in Informant, but could not find the move on its own in one hour time. When letting it run overnight, it produced

Nh6 after 8 hours (but would play it with a 6 hours/move time control; that

is, it got first indication that the combination might work after about 6

hours), with the variation 1. Nh6! c3 2. Nf5 cb2 3. Qg4 ... which wins for white.

```

Source: Melaniuk-Ivanchuk, USSR 1988.

Ivanchuk played 1. ... ab5! which appears to be a sound positional sacrifice.

Calling this position a tactical one, however, is a little unfair on Pierre's

part. Ivanchuk, by the way, could not find the best continuations over the

board, but won it anyway due to Melaniuk's inaccurate defence. Could not

solve it in one hour. Probably a home preparation. The same move was replayed 3 years later in some random tournament.

```

Source: unknown

Be6 appears somewhat worse for white, but 1. Rh6 Nh6 2. Qg5 Nf7 3. Qd8 appears to be a repetition draw or slightly ahead for white. Plays 1. Rh6 after 5 minutes, thought white was slightly ahead, but going down the line, it appeared that black had enough pressure for a draw.

: -)

In "How to Cheat at Chess" IM Hartston gives Hartston's Iconoclastic
Combinational Uncertainty Principle(?), which states (I am
reconstructing from memory, rather than quoting) that:

for a given sacrificed piece value (S), the expected value (V) to be
gained from a sacrifice can be worked out, since we know,

firstly, the hoped-for gain (H) and
the number of moves deep the variations are (N).

The motivation for the sacrifice is $H - S$, but this is tempered by the

increasing probability of miscalculation as we go deeper in analysis - in fact, the probability increases as the square of the move depth.

$$\text{So, } V = \frac{H - S}{N^2}$$

Applying HICUP then, if you sacrifice a pawn (S=1) hoping to gain a queen (H=9) in two moves (N=2), then $V = 9/4 - 1 = 2.3 - 1 = 1.3$; V is positive, so the sacrifice is worth a go. However, sacrificing a rook hoping to gain a knight in three moves gives S=5, H=3, N=3 and so $V = 3/9 - 5 = -3.7$. V is strongly negative, that is, you have probably miscalculated and should give it a miss.

I'm not a Londoner, but I've spent many a fine hour at the King's

Head.

Its on Moscow Road, Bayswater. Quite close to the Bayswater tube station.

cheers,
Peter

I see the rules have changed some since I invented "refusal chess" back
in 1958. The original idea was that, after all the refusals, we would have a legal (but strange) game of orthodox chess, ending with an orthodox checkmate. Thus, if a player had only one legal move, he would
just make that move and the other guy had nothing to say about it. In your example, if white can refuse Ke7, then it seems logical that black
should be able to play Kxf7 and claim that he's not in check because he
will refuse 5. QxK. But playability is more important than logic, and I
suppose the rules have evolved to optimize playability. I never played it
much because I thought it was too damn complicated.

Yeah, she was cute back then. I stopped by to watch one of her games in
the evening with a Hungarian friend of mine (who kept informed of the
conversation). Her opponent, who had white, was a little bit late (the
starting time was 7:30pm) and she wanted to start his clock. Her mother

said yes, it was her right, but it wasn't a nice thing to do, and didn't she want to be a nice girl? But I have to go to sleep soon! she whined. The guy showed up five minutes and probably wished he hadn't; she used about 90 seconds to his hour, and spent her waiting time playing with her toy lion.

Sean Robert Johnson asked about the "The Tumbleweed" opening also
known
as the "King's Own Gambit" the following poem was published in the
Ohio Chess Bulletin for December 1960. It is stated that the authour
is
unknown. I hope everyone enjoys it, for poetical reasons the notation
is
in descriptive but it is easy to follow.

THE TUMBLEWEED

In my home town, last summer, with nothing to do
I went to the chess club and there met a new player,
A guest expert of great Eastern fame.

Perhaps you met have met him or heard of the same:
He's a player of note and his problems in chess
Get some mighty good players in awful bad mess.
He asked "Do you play sir" I said "Just a little."
"Well sit down here and lets have a skittle"

He glanced round the room. "I judge by the looks
That you players here ane not up on the books."
I replied with a laugh and a gentel "Ahem,"
"No we long, long ago went far beyond them."
With a shrug of his shoulders, the Whites he gave me,
"Make your opening," he said, "and we will soon see."

FIRST GAME

I played Pawn to Kings fourth, which he seemed to approve
And replied with the same, twas a very good move.
The Kings Bishop Pawn I put out with some force,
He took it at once as a matter of course.
But judge the expression that came o'er his face
When I played my King to KB's second place.
"Oh well" said the expert, "that looks a bit hazy.
If I'm any judge, the King's Gambit gone crazy."

So out with the Queen and he checked at Rook five
With the evident purpose to flay me alive.
With a soft gentle push, I interposed Pawn,
He took it with his. In a moment 'twas gone.
He thundered out "Check" in such stentorian tones
That it gave me the shivers, a quake in the bones.
But I slipped my King over to Knight's second square,
Then he took my Rook's pawn with his and said "There!"
"You must take that with with your Rook and then it is plain,
That my Queen takes the other one out in the main;
And with no pawns on you King's side, must say I can't see
How you can prevent me from Queening my three-
Should the game ever get to the point where they're needed."
"I don't think it will." I replied, but he heeded
Me not; and when he captured my little KP
I brought out my Knight to King Bishop three.

Next came pawn to Queen's four to free up his house,
I replied with my Queen's Knight attacking his spouse,

Which he played to Knight's third, giving check to my King
And at the same time remarking: "I'm on to this thing."
The King to Rooks square, I quietly played,
And the Queen's Bishop to Knight's fifth he likewise assayed.
Not wishing harm should come to my "hoss"
I transferred King's Rook from his second across.
To Knight's two. He now thought to win in a canter,
So he took up his Queen, and at Rook's fourth instanter
He put her and checked; but I moved to Knight's square
And he little dreaming of the trap that was there,
Whipped off my poor Knight, and laughingly said,
"That horse is of no use, so off comes his head."
My Knight, he is gone - O'h alas it is too true,
But I'll interpose Bishop and see what he'll do

"Well, if you want me to take all your pieces and done,
Shove 'em out, and I'll capture them, every darn one."
So he grabbed the poor prelate at once by the neck,
And I somewhat suprised him with RxB, check.
Not till then did the truth dawn clear on his brain.
And he tried hard to save his fair Queen but in vain.

"Now what kind of game do you call that?"
"The KING'S OWN", I replied, "and I'll bet you a hat
You can't find it in any or all chess books
You have studied." And I judged from his looks
That he somewhat doubted, when I told him the same
Wa a notion of Pollock's, who gave it that name.

THE SECOND GAME

The result of the first game was not satisfying,
So he reset the men, and insisted on trying
Another. "Your game is all bad," he said at the start,
An assertion by no means he proved on his part.
But I said "Of the opening, say what you can sir,
Of what use are sound one's when bad one's will answer?"
We commenced another, the same as before,
And every move was just the same score.

1. P-K4 P-K4
2. P-KB4 PxP
3. K-B2 Q-R5+
4. P-N3 PxP+

5. K-N2 PxP
6. RxP QxP+
7. N-KB3 P-Q4
8. N-QB3

Until he arrived at move number eight;
Before lifting his Queen he considered her fate.
But where should he put her, but he seemed to agree
That the check at Knight's fifth was better than three.
So he landed her there and I went to the corner,
Prepared for the Plum ala little Jack Horner.
Then his Bishop he played to King's three to defend
Both his Pawn and his King, but I, wishing to send
His Queen somewhere else, played my Bishop to Rook's three.
He put her on Knight's sixth, intending, you see,
To back up the Bishop, attacking my Rook;
I captured his Bishop with mine. He retook.
The Pawn to Queen's fourth, I played, with never a word.
And he brought his Knight to King's Bishop's third.
My Knight to King's fifth I proceeded to play
To prevent that of his of coming over my way.
He brought his King's Bishop to third square of Queen;
I played Knight to King's second, and 'tis plainly seen
That, while eighteen clear moves she has at her command,
The Queen and the game are now both in my hand.

A more dumbfounded expert was never, I guess
Caught nappin like this in skittle of Chess.
He sat there gazed at the board, then at me,
Then laughingly said "Fiddle-dum Fiddle-dee,
But I think I see where I made my mistake;
Your pawn at Rook's second, 'tis wise not to take.
Now try it again, and mind I will change,
And endeavor to keep my Queen out of range."

THIRD GAME

1. P-K4 P-K4
2. P-KB4 PxP
3. K-B2 Q-R5+
4. P-N3 PxP+
5. K-N2

So we reset the pieces at his move, the fifth.
And there he proceeded my King's Pawn to lift
And check with his Queen; but nothing undaunted
My Knight to King's Bishop three I immediately flaunted.
The Pawn to Queen's fourth he played in a twinkling;
I checked with my Bishop, which gave him an inkling
That something was wrong; and to save his fair maid
His King to the Queen's square he rapidly played.
I brought my Rook up to King's, and he saw, when too late,
If he saved his fair lady, he suffered checkmate.

With a laughing ha, ha, and a hearty ho, ho,
I said "The next time that you come far to go
To talk of bad chess, just be sure that you know
The how and the way to ward off the blow.
I'ts all very well of sound moves to talk,
But what is the use when you can't even balk
the unsound ones? So then ever strive to pursue
The gist of the thing. Look the whole matter through,
Or some day a fellow who's not much on looks
Will spring something on you not in the books,
The books often tell you that a such moves are poor,
But leave you to find out the why and wherefore.
When I study the openings I'm always inclined
To help out the weak and let the strong go blind.
Now in this simple opening you've noticed, I ween
Are a thousand and one ways of catching the Queen.

Tony Mantia mantiat@dma pub.dma.org

"An art appearing in the form of a game"

-entry on Chess in the Great Soviet Encyclopedia.

Chess Players

They sit in well-lit rows,
cufflinks sparkling over each battlefield
like stars. Is this what God was doing
at Flanders, Stalingrad?

The wooden men click. They're not fooled
by generals bargaining at tables.
They face each other. They die.
Spaces split slowly open like craters, wounds.

The women are somewhere else,
harmless, beyond hope.
In here is a perfect celibacy
- knights without favours, castles bare of maidens.

Sometimes it ends in madness
- Steinitz challenging that
star-sleeved General to match His mere omniscience
against the mind of a chessplayer.

Time shrivels like an aging pianist's fingers
on keys where there are more harmonics
than atoms in the universe.
Yet nothing really happens

among these clocks and lights.
The end is scarcity,
winds howling over the chequered plains.
Imagine moving words

like platoons into their slaughter
- you'd never get literature!
Yet the chessplayers talk of beauty.
Sometimes they sigh like lovers.

Subject: Tartakower, Lazard, and Castello --- a competition

Message-ID: <3d9r5r\$gn2@lightning.ditc.npl.co.uk>

From: rss@seg.npl.co.uk (Roger Scowen)

Date: 21 Dec 1994 18:12:11 GMT

Distribution: world

Organization: R S & P A Scowen, UK

Summary: A Christmas competition

NNTP-Posting-Host: pear.ditc.npl.co.uk

Lines: 90

While browsing in S. Tartakower's ``A Breviary of Chess'', I came across

some very neat little poems on chess which had been translated by D. Castello from French originals by Jules Lazard (see below for a couple of examples). I was curious to see the original French poems and, naturally, found them in ``Br'eviare des 'Echecs''. I also found some that had not been translated into English, and this provides an opportunity for a competition.

(I apologise for the approximate French accents,

'e = e acute, 'E = E acute, `e = e grave,

^a = a circumflex, `` = opening quotes, '' = closing quotes)

Roger Scowen, 21 December 1994

*** Christmas competition ***

Task: Translate ``Psychologie'' into English.

Send your solution by e-mail (rss@ditc.seg.npl.co.uk), or by post to:
9 Birchwood Grove, Hampton, Middx, ENGLAND TW12 3DU.

[Solutions posted only to rec.games.chess or alt.quotations
will not be eligible for the prize because I may not see them.]

My decision as judge is final.

Closing date: 6 January 1995.

First, and only, prize: A copy of ``A Breviary of Chess''.

The result, and best translation, will be posted to rec.games.chess and alt.quotations.

PSYCHOLOGIE

Une occulte raison fait pr'ef'erer la pi`ece
Dont un bon maniemment augmente la valeur.
Celui qui les conduit toutes avec adresse
Saura, de tous ses plans, d'evelopper l'ampleur.

Jules Lazard, ``Quatrains 'echiqu'eens,''
S. Tartakower, Br'eviare des 'Echecs, p257.

L'ILLUSION or CHESS MATHEMATICS

L'Illusion

De ce nombre ``grand V'', la valeur qu'il se donne,
Soustrayons ``petit v'', ce qu'il vaut pour de bon.
Il en r'esultera, ce que l'alg`ebre ordonne :
``Grand V'' moins ``petit v'' --- 'egale Illusion.

Chess mathematics

Let ``S'' be the strength that a player professes,
And ``s'' represent what in fact he possesses,
>From a small calculation we reach the conclusion
That ``S'' minus ``s'' must equal Illusion.

Jules Lazard, ``Quatrains 'echiqu'eens,''
English version by D. Castello.
S. Tartakower, Br'eviare des 'Echecs, p60;
A Breviary of Chess, p46.

BIENS'EANCE or CHESS MANNERS

Biens'eance

Le r`eglement proscrit tous abus de paroles,
De rires, de tabac, de tous gestes frivoles,
B^aillement, toux, lecture ou bruit de pi`ece en main,
Ni surtout, gentleman! la nargue dans le gain.

Chess manners

Don't chatter, don't read,
Don't smoke a cheap ``weed'',
Reckon singing and humming a sin,
Don't titter, don't frown,
Don't bang a piece down,
And never exult when you win.

Jules Lazard, ``Quatrains 'echiqu'eens,''
English version by D. Castello.
S. Tartakower, A Breviary of Chess, p47;
Br'eviare des 'Echecs, p61.

An unknown ecclesiastic of the 17th century has penned a vivid description of the kind of appeal that chess exerts. He calls it "The Evils of Chess" (20):

I. It is a great time-waster. How many precious hours (which can never be recalled) have I profusely spent in this game!

II. It hath had with me a fascinating property; I have been bewitched by it: when I have begun, I have not had the power to give over.

III. It hath not done with me, when I have done with it. It hath followed me into my study, into my pulpit; when I have been praying or preaching, I have (in my thoughts) been playing at chess; than I have had, as it were, a chess-board before my eyes. . . .

IV. It hath caused me to break many solemn resolutions; nay, vows and promises. Sometimes I have obliged myself, in the most solemn manner, to play but so many mates at a time, or with any one person, and anon I have broken these obligations and promises. . . .

V. It hath wounded my conscience and broken my peace. I

have had sad reflections upon it, when I have been most serious. I find, if I were now to die, the remembrance of this game would greatly trouble me and stare me in the face. I have read in the life of the famous John Huss, how he was greatly troubled, for his using of this game, a little before his death.

VI. My using of it hath occasioned much sin, as passion, strife, idle (if not lying) words, in myself and my antagonist, or both. It hath caused the neglect of many duties both to God and men...

>From Harley, E. The Harleyan Miscellany. R. Dutton, London, 1808-1811, as cited by Reubin Fine, The Psychology of the Chess Player, Dover, NY (1956), p. 7.

Subject: The Sphinx problem

Message-ID:

Summary: What goes first on four legs, then on two, then on three?

Organization: University of Exeter, UK.

Date: Fri, 12 Jan 1996 12:33:54 GMT

Help please!

Chandler's novels mention that Philip Marlowe once tried to find alternative solutions to the famous Sphinx chess problem. I have (a version of?) this puzzle from the dust wrapper of a modern reprint of Staunton's CHESSPLAYER'S HANDBOOK [Staunton (Bracken/Batsford), 1985], given with caption below:

(wKg5,Qf4,Bb2,Pa2,h5; bKg8,Rf8,Pa3,b4,f5,g4,h7)

```
+-----+
| -+--+rk+ |
| +--+--+p |
| -+--+--+ |
| +--+pKP  |
| -p--+Qp+ |
| p--+--+ |
| PB--+--+ |
| +--+--+ |
+-----+
```

"THE SPHYNX: White playing first mates in eleven moves. "

I showed this to Fritz who quickly came up with a mate in six:

1. Qc4+ Rf7 2. Bf6

[2...h6+ 3. Kg6 g3 4. Qxf7#]

[2...b3 3. Be7 Kg7 4. h6+ Kg8 5. Qc8+]

2... g3 3. Be7 Kg7 4. h6+ Kg8 5. Qc8+ Rf8 6. Qxf8# 1-0

What's going on?

Is the picture not giving the right problem?

If it is the right position what was the intended solution?

Is Fritz' solution a cook?

Is this all well-known and I've just caught up?

D

--

P.S. The riddle of the Sphinx was of course:

What goes first on four legs, then on two, then on three?

The answer is of course a chessplayer, who is born a crawling infant, walks as a child, then learns to play chess and spends the rest of their life resting on two elbows and their backside

Mir Sultan Khan

by Ismail Sloan

One of the most interesting and important personalities in chess history was Mir Sultan Khan. He was brought from India to England in 1929 by his master, a maharaja, was kept there for four years, and then was taken back to India in 1933 by his master, never to be seen by the world of chess again.

During his short stay in England, Sultan Khan won the British Chess Championship, defeated World Champion Alekhine and former World Champion Capablanca and played first board for England during the World Chess Olympiads at Prague 1931 and at Folkestone 1933. At the same time, another

servant brought by the same maharaja, a Miss Fatima, won the British Woman's Chess Championship.

Sultan Khan never finished lower than fourth in any chess tournament in which he ever played. Although he always lost to William Winter (who usually finished last, in spite of defeating Sultan Khan) there is no doubt that Sultan Khan was one of the strongest chess players in the world at that time. According to the modern rating system, Sultan Khan was about 2550 in strength and was easily a grandmaster. This also means that Sultan Khan was the first ever Asian grandmaster of chess.

There is some dispute as to whether Sultan Khan was a slave or was merely a servant. Reuben Fine related that when he was a guest for dinner at the maharaja's home in England, Sultan Khan was a waiter who brought the dishes to the table.

It is often said that Sultan Khan was a beginner at chess and that he learned the rules only shortly before being brought from India, but that he was a master at the Indian version of chess. However, this story does not mean much, because the Indian version of chess is almost exactly the same as Western chess, the main difference being that in Indian chess, a pawn can only move one square on the first move, not two, and, when reaching the "queening" square, the pawn becomes the piece of the file on which it promotes. In other words, if the white pawn reaches c8 or f8, it becomes a bishop.

In the 1950s, there was an article in British Chess Magazine which said that Sultan Khan had been found to be an opera singer in Durban, South Africa. However, this probably was merely somebody who looked like him.

According to the book by R. N. Coles, Sultan Khan lived out his life on his family plot in Pakistan, surrounded by his children and great grand children, etc. and died in 1966.

Coles relates that in the early 1960s, someone (I forget the name) located Sultan Khan at his home near Lahore, Pakistan and visited him there. He found Sultan Khan sitting under a tree smoking hookah. The visitor related that Sultan Khan offered to play him a game of blindfold chess, but that the visitor "wisely declined".

I would like to find out the exact location of that plot of land and of the tree. I used to visit Pakistan frequently and the next time I go there I would like to go to that exact spot.

Note that while it is always said that Sultan Khan came from India, he actually came from that part of India which is now Pakistan.

A friend from Pakistan informs me that anyone who smokes hookah does not live very long. It is a very pungent version of tobacco, or so I am told.

Does anybody know or can anybody find out the exact address of that plot of land where Sultan Khan and his family lived?

An interesting exercise is going on on one of the threads of
rec.games.chess.computer. Don Getkey proposed finding out how long
it would take various programs to find the winning move in a certain
position he provided (White: Kb1,Qe6,Rd1,Rg3,Bd3,Nc3,Nf3,Pb2,Pd4,Pe5,
Pf4,Pg2; Black: Kg8,Qa5,Rc8,Rf8,Be7,Bf7,Nc6,Pa3,Pa7,Pd5,Pg6,Ph7).

It is white to play and find the winning sacrifice, a "box" move
fairly
obvious to humans but not to computers since, among other things, it
does not end in quick forced mate. Don's MChess Pro 5 found the
winning
move in about 7 hours, running on a Pentium 75, 8 megs RAM. Some
other
computers tested failed to find the move in 12 to 24 hours!

What is interesting is that my MCP5 found the move in 1 hour, 41
minutes.
But I'm running it on a Pentium 120, 16 megs RAM. So at least with
this
particular problem, the Pentium 120 resulted in a 4-fold faster
search!

I'm somewhat surprised that the difference is this great. I'd like to

ask Bob Hyatt or other knowledgeable people to comment. Also, if anyone would like to test Genius 4, Rebel 7, or others on this problem, of course that would be interesting. Thanks!

(the story, not the copyright notice).

Not So Lonely At The Top
by Dave Bealer

The 2005 World Chess Championship tournament was the first to feature a LeMans-style start. The large number of competitors made this an interesting (in the Chinese sense of the word) proposition, and many critics predicted disaster. Television network executives had the final decision, of course, and LeMans starts had boosted the ratings of previous contract bridge and quilting championships.

An unprecedented six reigning World Champions would be competing. Bobby Fischer appeared with his entourage consisting of three Serbian bankers, two bodyguards, and a skunk named

Florencio. Gary Kasparov traveled light, accompanied by only four bodyguards, his family, and a lap dog named Nigel. Anatoly Karpov had his usual team of parapsychologists and ex-Politburo hacks.

Deep Kimchee, the World Computer Champion from Korea, became the first machine to compete with humans for the world title. Under a rule in use since the 1999 Championship, the World Junior Champion was automatically seeded into the tournament. Petey Browning, the reigning junior champ was 18 months old. He had become the youngest master in American history at the ripe age of 8 1/2 weeks. Alexander Alekhine was the surprise entrant, coming out of retirement to compete while being channelled by a professional medium, courtesy of one the tournament's major sponsors, 1-900-MYSTICS, Inc.

The remainder of the field of thirty-two consisted of various former champions, qualifiers, passers-by, and the billionaire technologist duffer who was bankrolling the event. Certain pundits argued that this "sponsor berth" in the championship was the real reason the event had been converted to a tournament from one-on-one match play.

As in all modern World Championships, special arrangements and conditions were necessary to accommodate the players. Diaper changing facilities were installed behind the stage to meet Petey Browning's special needs. Ramps were installed to allow Korchnoi access to all player areas with his wheelchair. Alekhine's mystic was under contractual obligation not to read the minds of any of the other players. Tonya Kamski's opponents were provided with protective clothing to guard against an assault by her cronies in the event of a win. Paramedics were standing by to perform the Heimlich maneuver on Seirawan when he choked, which was inevitable at such an important event. Tony Miles had to be flown in for each round from whatever country he was representing that day.

Nobody was surprised when trouble started before the opening banquet had ended. It all began innocently enough when young Browning threw mashed potatoes at his table mates. Judit Polgar simply laughed and cleaned the stuff out of her hair. Former prodigy Fischer was not amused, however, and set his skunk on the young malefactor. During the altercation that followed it was discovered that Florencio had not been de-scented. The banquet ended abruptly at that point and pets were banned from all future

Championship events, causing Fischer to threaten to quit. Room service in the hotel which was hosting most of the participants experienced an inexplicable run on tomato juice orders that evening.

Karpov drew quite a bit of attention when he showed up for the LeMans start of round one wearing a pair of hip boots. His strategy became clear when his personal psychic, Dr. Zarkhov, began performing a Native North American rain dance in front of the stage. Spectators, officials, and the other competitors found the good doctor's antics amusing until small, but ominous looking clouds began to form above the stage. Arbiters removed Zarkhov from the playing room at this point, and the tournament began after the clouds exhausted their cargo of water on the stage and first few rows of spectators. Zarkhov settled for sticking pins in dolls representing Karpov's opponents in later rounds.

The LeMans start turned out to be only a moderate disaster. Insufficient room had been allotted on the stage for Korchnoi's wheelchair and two participants suffered minor hip injuries during the mad dash for the boards. Petey Browning experienced some difficulty mounting his high chair, but his mother was allowed to assist him.

>Zarkov, MChessPro 4, WChess and soon Chessmaster 5000.

Yes, and it's EPD that makes this happen. There are reports that
ChessBase can connect to Fritz3, but it is not a free, non-proprietary
interface.

The suggestion is that advertising copy, such as that which appears in

Chess Life and other periodicals, should clearly state information about standards conformance to help the consumer make an intelligent choice. Some advertisers already do this, but not all.

So, an ad for a chessplaying program might state:

"WoodMangler 2001 supports EPD import and export for compatibility with EPD capable position database programs. WoodMangler also supports PGN import and export for compatibility with PGN capable game database programs."

Similar copy would be provided for various database and publishing programs.

>Genius, Zarkov and HIARCS can each annotate your data, too -- not
>just your games but your entire opening repertoire or group of
>analysis if you like.

True again, but rarely seen in ad copy.

Maybe we could design seals saying "EPD Aware" and "PGN Compatible" and have them appear in ad copy and stamped on retail packages. It would help purchasers and would be more polite than sticking labels saying "Proprietary Formats Only, Kiss Off" on products with no standard support.

Subject: Strange new defence to 1.e4: 1.e4 d6 2.d4 e5!?
Message-ID: <DGC0sx.I16@exeter.ac.uk>
Organization: University of Exeter, UK.
Date: Thu, 12 Oct 1995 10:50:56 GMT

I have just started playing 1.e4 and was surprised to meet

1.e4 d6 2.d4 e5!?

in a recent congress. Of course I could play 3.Nf3 which transposes to a Philidor, but it seemed to me that the only way to 'punish' Black for the odd move order was

3.dxe5 dxe5 4.Qxd8+ Kxd8 5.Bc4 f6 6.Be3

Although I won I was worried later about 6...Nd7 and 7...Bc5, which looked very defensible.

Any comments?

Thanks

D

P.S. Thanks for all the French Defence suggestions, I'll post a summary soon.

Message-ID: <E69rEC.Env@exeter.ac.uk>
Organization: University of Exeter, UK.
Date: Thu, 27 Feb 1997 16:06:11 GMT

I've posted this before, so if you remember it you can now forget it again.

I wonder if anyone can help me find some simple examples of two endgame ideas:

- if you overpress, you risk losing ("playing for the loss" - Tarrasch)
- the need to get activity or counterplay as defender

I suppose I could make something up but a practical example is always more convincing. Can anyone help?

There are some nice examples of the latter which I found an old magazine article by Edmar Mednis, but they are rather too complicated for my audience.

Thanks again to folk who have helped me in the past - I couldn't manage half as well without this group!

Message-ID: <E4EM49.7CF@exeter.ac.uk>
Organization: University of Exeter, UK.
Date: Wed, 22 Jan 1997 09:52:56 GMT

I'm on the scrounge again, trying to put together a set of examples.

There's a bit in Fischer's "My 60 Memorable Games" (Gligoric-Fischer) where he quotes Tarrasch, describing his attitude in the endgame as "playing for the loss" - that is, trying to win a balanced position, and thereby risking losing.

I can think of several examples of over-eagerness to attack in the opening and middlegame, but not in the ending.

Does anyone know of any others? I'd be grateful to hear from you. The simpler the example, the better.

Thanks

<pre>

Elo says this is an expected result if there are more people playing chess now. Are there? e.g. If Fischer was one in a million, are Kasparov and Co. just 8 in 8 million?

A better model of the distribution of chess strengths suggests that the wider the base of the pyramid (greater number of players), the taller the peak (more players over given grade), rather than insisting on a fixed proportion being over 2700.

[But, is Karpov at age 40-odd really 100 points stronger now than he was ten years ago?]

>
>There was a discussion about the more difficult defence to 1 d4 recently
>and everyone seemed to recomend the benoni...

I missed these posts but word is on the street that the Modern Benoni
is suspect at the moment, at least in its main line: the Taimanov or
Bishop Check variation is doing rather well. (A67 1. d4 Nf6 2. c4 c5
3. d5 e6 4. Nc3 ed5 5. cd5 d6 6. e4 g6 7. f4 Bg7 8. Bb5 with 9. a4)

Lev Psakhis in "The Complete Benoni" says he will ONLY play the Benoni
against 2./3. Nf3, so the Benoni is advisable on combination with another
line like the Budapest or King's Indian.

Kasparov,Gary - Nunn,J

I'm amazed that it's not in any of your Caro books, it's a well-known idea.

In the Tarrasch, the White Bf1 starts out for g2 with 6.g3 (met by ...c5-c4). In the Caro, the Black Bf8 is on f8 without a commitment to ...g7-g6; this difference may favour Black!

Both ...b6 and ...e5 are good ideas; White should go for b4-b5. If you are worried about f2-f5 maybe 5...e5 is playable.

West Hansen G - Ciric D [B13] It, Kobenhavn, 1989

1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4 Nf6 5.c5 e5 6.dxe5 Ng4 7.Qd4 Nc6
8.Bb5 Qa5+ 9.Nc3 Qxb5 10.Nxb5 Nxd4 11.Nxd4 Bxc5 12.Ngf3 Nxe5 13.0-0
0-0 0-1

6.f4 looks like a lemon to me, but I don't know the line much further than move White's 5th...

>or 1. d4) react when they meet the Dutch? (1. ... P-KB4 or ...f5?) I don't mean
>"What is your reply?", I'm asking more, does it upset you?
[...]

I like to play it and I like to play against it! But I think Black has got more chance of getting a good King's-side attack out of the King's Indian.

The trouble with playing the Dutch is (a) White can see you coming and (b) structurally it's not so good (that poor B on QB1/c8...).

As White I often adopt a restrained posture, inviting ...P-K4/e5 and I usually have a good time belting down the Queen's-side and centre, and exploiting the looseness of the Black King's position.

I think if Black keeps the centre quiet there are good chances of getting at the King.

White players locally though seem to be more happy playing one of the Anti-Dutch systems without P-QB4/c4, going for systems with moves like N-QB3/c3, B-KN5/g5, P-K4/e4, Q-Q3/d3, P-KN4/g4, maybe castling long. I think these positions are often no fun at all for Black.

>Anyway, I'm hoping that this will stimulate a discussion on whether or
>not the Dutch Defense is a good way to deal with the 1. P-Q4 (d4)
>players?

Depends on the level and the player:

1. Some people play P-Q4/d4 with a view to attacking your King, in which case I think it's good, because the strongest lines against the Dutch don't usually give them the sort of game they like.
2. Some like playing quietly for a structural edge, in which case you're just playing into their hands.
3. But if they are positional but not too hot a player, I think the Dutch can be very powerful - once you have the initiative you're in.

(I probably qualify under both the last two!)

>Can someone give me some insight to whites
>1. b4 2. Bb2
>What is the theme here and what is the best way for black to
>punish white.
>

White's main ideas are:

1. pressure on long dark diagonal a1-h8
2. general Queen's-side advance (rather like the English or reversed French)
or just thrust b4-b5 to make life awkward
3. allow Black to occupy the centre and then use it as target
4. after ...c7-c5, exchange b4xc5 giving an extra central pawn

It's a sound opening, relatively unexplored and well-motivated. I don't think White can be punished, but there is no way for White to gain an advantage. I think the main line with 1. b4 e5 2. Bb2 Bxb4 3. Bxe5 Nf6 is perfectly OK for Black; a club mate abandoned the opening because of this line (it's also one that naive opponents are likely to adopt).

Black's main ideas are:

1. Block or oppose on the long diagonal
e.g. 1. b4 e5 2. Bb2 f6
e.g. 1. b4 e5 2. Bb2 d6 with ...Nf6, ...g6
2. Counter-attack on Q-side
e.g. 1. b4 c6 2. Bb2 a5 with ...Qb6
3. Occupy centre at least temporarily

e.g. 1. b4 e5 2. Bb2 Bxb4 3. Bxe5 Nf6 with ...Nc6

e.g. 1. b4 e5 2. a3 d5 3. Bb2 Nd7

4. Adopt a general-purpose formation like the Dutch or King's Indian or "general QP" (with d5/Nf6/e6/Nbd7/Be7/O-O and ...c7-c6 or ...c7-c5) These can be adopted with confidence against most unusual openings by White.

What's best for you might not be best for someone else! I play the ...c6 system because I like being awkward, but you won't go far wrong with a KID system if that's the sort of thing you normally play.

Subject: Re: 1. e4 player bored with French: any suggestions: SUMMARY
Message-ID: <DGC7A9.KBB@exeter.ac.uk>
Organization: University of Exeter, UK.
Date: Thu, 12 Oct 1995 13:10:56 GMT

Thanks to everybody who sent or posted comments. My original post went:

=I have switched to playing 1.e4 recently (wanting to get my grade up
=over 1800 ELO) but am a bit fed up with the French Defence.

=
=I'll just talk aloud for a bit and would be interested to know if anyone
=has a good idea for me.

=
=I've been playing the King's Indian Attack but haven't won any games
=with it yet! I've even thought about playing 1.g3 because I quite
=like g3 systems in general and could go for a Catalan if Black tried
=to steer towards the French. For other defences I like the Panov
=attack in the Caro and the 3.Nge2 line in the Sicilian, and have had
=good results with them, particularly the Sicilian line.

=
=I'd be happy in the Tarrasch 3...c5 variation but 3...Nf6 seems to
=give Blacks the sort of game that they want. I can't see much for
=White in the main line, Black has a supposedly worse structure but
=Black's pieces become very active. That's the sort of position I want
=to play for White!

=
=I sometimes fancy the Advance but I don't see anything very convincing
=for White in the main lines, and most people seem to go for 5...Bd7
=anyhow since Watson recommended it.

=
=And my one excursion into 3. Nc3 intending to play a Alekhine-Chatard
=Attack went 3...Bb4 4.Nge2 Nf6 5. Bg5 which as far as I can see is a duff
=version for White of the MacCutcheon.

=
=Does anybody have a good French-bashing weapon? It's quite putting me
=off 1.e4.

=

=Thanks

The responses were mainly:

1. you aren't going to find a bashing line, it's a good defence
2. suggestions of gambits
3. suggestions that I learn some main line Winawer theory
4. suggestions that I get a life

1. you aren't going to find a bashing line, it's a good defence

=====

- fair comment

2. suggestions of gambits

=====

- these included:

1. e4 e6 2. c4 d5 3. Qb3 (Bucker)
1. e4 e6 2. Nf3 d5 3. e5 c5 4. b4 (French Wing Gambit)
1. e4 e6 2. d4 d5 3. Be3 (Alapin)
1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Nc6 6. Bd3 (Milner-Barry)

- there is even web page for a french Gambit at

<http://www.to.icl.fi/chess/french/>

1. e4 e6 2. c4 d5 3. Qb3 (Bucker)

I don't know any more about the Bucker idea. The other suggestions are rather curtly dismissed by Watson (Play the French, Pergamon):

1. e4 e6 2. Nf3 d5 3. e5 c5 4. b4 (French Wing Gambit)

2. Nf3 d5 3. e5

(3. Nc3 {French Two Knights' is no real problem either for Black after} 3... Nf6 4. e5 Ne4 or 4... Nfd7 5. d4 c5)

3... c5 4. b4 { French Wing Gambit} 4... cxb4 5. d4 (or 5. a3 which can be met by either 5...d4 {JLW} or 5... Nc6 6. axb4 Bxb4 7. c3 Ba5 8. d4 f6)

- 5... Nc6 6. a3 f6

(6... bxa3 7. Bxa3 Nge7 8. Bd3 Bd7 9. O-O Nc8 10. Bxf8 Kxf8 {^ ...Nb6, ...Rc8})

7. axb4 Bxb4+ 8. c3 Ba5 9. Ba3

(9. exf6 Nxf6 10. Ba3 Bc7 {!})

9... fxe5 10. dxe5 Nh6 11. Bb5 Nf7 12. O-O Bd7 13. Qe2 Qc7 14. Re1 O-O-O {! JLW})

With fair chances for Black in each line.

1. e4 e6 2. d4 d5 3. Be3 (Alapin)

3. Be3 {Alapin Gambit} 3... dxe4 4. Nd2 Nf6

Someone has just published a book on this line so they may know something I don't. I would expect many club players to decline it on principle.

(or 4... f5 {!} 5. f3 Nc6 6. Bb5 Nf6 {-+ Keres})

5. c3

(5. f3 Nd5 (5... Nc6 6. c3 e5 {=+ Pachman}))

5... b6 6. g3 Bb7 7. Bg2 { Mieses-Janowsky 1896} 7... c5 {!? JLW})

with good chances for Black.

1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Nc6 6. Bd3 (Milner-Barry)

2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 (5... Bd7) 6. Bd3 cxd4 7. cxd4 Bd7 8. O-O { Milner-Barry Gambit} 8... Nxd4 9. Nxd4 Qxd4 10. Nc3

This is of course well-known, and maybe White has enough for the pawn.

I have seen my esteemed Exeter colleague Peter Lane survive fairly comfortably after 10...a6, but Watson suggests White soon starts going

downhill even after 10...Qxe5. He gives several of his own games which are convincing.

3. suggestions that I learn some main line Winawer theory

=====

- probably the best suggestion, but I do find the amount of theory daunting. That's why I ended up playing 4.Nge2.

4. suggestions that I get a life

=====

- this suggestion is gratefully received but I am reluctant to give up chess

Conclusion?

=====

Well, to be honest, I haven't seen anything obviously better than the KIA, except the main line Winawer. Maybe it's time to grow up and do just that.

Anyhow, thanks again

Dr.Dave

>
>One of the suggestions I have heard is to respond with h5 to 1. g4
>(One stupidity deserves another).

It's far from stupid!

>[I guess the idea is that gh5 gives black a semi-open file and white
>an isolated pawn.]

And that's why! - but 1. g4 h5 2. g5 gives the beginnings of a bind.

So, try instead 1. g4 e5 2. Bg2 h5!

This was played as Black by Grob himself, and is also recommended by Bloodgood, who considers it so strong that White should play 2. d3.

To be honest, many Grob players have no idea that this is a known line, all they know about is the ...d5/...Bxg4 variation. So they may be out-tricked in their own opening!

Some sample lines:

Ott - Grob, Corr

1. g4 e5 2. Bg2 h5! 3. gxh5 Rxh5 4. e3 Rh8 5. c4 f5 6. Qc2 g6 7. Nc3 c6
8. Nge2 Nf6 9. d4 d6 =

Hug - Grob, Corr

1. g4 e5 2. Bg2 h5! 3. gxh5 Rxh5 4. e3 Nf6 5. c4 c6 6. Nc3 d5 7. cxd5

Rg5 8. Bf3 cxd5 9. Qa4+ Nc6 10. d3 Rg6 11. e4 d4 12. Nd5 Be6 13. Qb5
Qd7 14. Bd2 Bxd5 15. exd5 Nb4 16. Qxd7+ Kxd7 17. Bxb4 Bxb4+ 18. Kd1
Kd6 = [or 18... Bd6]

Grob - Aebi (corr) & Analysis

1. g4 e5 2. d3! d5 3. Bg2

[3. g5 Be7 4. h4 h6 =+]

3... Bxg4 4. c4

Now this gambit is not as good for White as in the lines without d3 and ...e5.

4...Bb4+ 5. Nd2 c6 6. cxd5 Ne7

[6... cxd5 7. Qb3 Nc6 8. Bxd5 Qe7 9. h3 Bh5 DR]

7. dxc6 Nbxc6 8. a3 =

Grob - Stingelin & Analysis, 1993

1. g4 e5 2. d3! d5 3. Bg2 c6 4. h3 Ne7 5. Nf3 Ng6 6. Nc3 f5 =/+

[6... h6 was the game: 7. e4 !]

>tournament, state that the backward pawn on the (half-open) d-file is "far
>from weak". How is this so? It is not intuitively obvious to me. Can anyone
>shed some light on this topic?

It's not intuitively obvious to many people! Bronstein said:

"I think now is the time to acquaint the reader with the mysteries of the Black d-pawn in the King's Indian. Even though it is situated on an open file and therefore always exposed to attack, it is not a very easy nut to crack. The simplest method for White is apparently to retreat the Knight from d4, but d4 is precisely where the Knight needs to be: its jobs are to supervise b5, c6, e6, and f5 and to buffer the influence of the Bg7. Only after White has taken steps against possible Black attacks (...a3, ...Be6, ...f5) can his Knight leave the centre, but during that time Black can regroup to cause worries elsewhere.

"So the weakness of the d-pawn proves to be imaginary. Contemporary methods of play in the opening recognise the illusory weakness of such pawns. But it was exactly this 'eternal' weakness of the Pd6 that led to the King's Indian being regarded as dubious."

Did that help at all? If not, where did you fall off? To be honest, you don't get these positions much any more - both White and Black prefer different treatments of the variations which used to lead to the backward d-pawn. I play a line similar to the KID and almost never

get a backward d-pawn, and if I do, it's at my choice. There are several modern lines which are counter-intuitive in this way, most obviously in the Sicilian where Black doesn't even have a Pawn to cover d5.

>2. What is the best book currently in print on the KID? I've been looking for
>the Ponzetto book, but it's out of print. I'd like something that concentrates
>more on ideas, and less on variations.

The trouble is that the KID has got too big for single-volume books.

The Bellin/Ponzetto title (Batsford) is the best for ideas. You might try picking it or another one-volume book up second-hand. There's a Keene/Jacobs title (Batsford) which may be the closest thing in print to what you want (I haven't read it), but it may be everything you need is in non-specific books like Fine's "The ideas behind the chess openings" (Bell/Hyman), updated with material from Evans' "The Chess Opening for You" (R.H.M.) and Marovic's "An active opening repertoire for Black" (Batsford), both of which recommend the KID for Black.

Do you belong to a club? Find a player two classes above you who plays the KID and ask them to clue you in.

[gist below also e-mailed]

I know what you mean, I think: in the 1953 games both Black and White
know that the d-Pawn isn't really weak, so they don't try to attack it
directly, and don't fail in the attempt.

Does anyone have a canonical Bronstein or Bondarevsky game from, say,
the 1940s, where someone had a go at the d-Pawn and came unstuck?

If not you can try playing-out the position (from both sides) - maybe
against a computer or against someone on FICS.

If you try to attack it and don't succeed in showing that it is weak,
you'll maybe know why - and if you try to attack it and succeed, we'll
have to let Bronstein know!

>Do you face your knights forwards or sideways?

Great thread!

I've seen a screen saver which bounces 2 pairs of eyes around the screen; the eyes always look at each other. So you could adjust the knights move by move so they are looking at the opponent's king, or at their opposite numbers i.e. Nb1 points at Ng8 to start with... I'm sure some programmer could do this for a FICS interface...

Or in time trouble when you don't have time to keep score you could rotate the knight around in eighths of a complete arc to keep count of moves, like some programmes do to indicate a clock hand... |/-\|/-\|

Or you could have your knights look at the queen's side when really you're planning to move them over to the king's-side...

Or...

I haven't played it a lot, but here's tuppence-worth from a couple of
my old posts:

In <DG9yt8.CLK@exeter.ac.uk> Date: Wed, 11 Oct 1995 08:12:43 GMT I wrote:

=====

1. The fun line is 1. e4 e5 2. Nf3 f5 3. Bc4 fxe4 4. Nxe5 Qg5...

=====

<DywMo0.8G@exeter.ac.uk> Date: Mon, 7 Oct 1996 11:59:59 GMT
I heard about a player who devoted hours to learning a bust to the
Latvian Gambit (1. e4 e5 2. Nf3 f5 3. Bc4). Hours. Of course, it was all
wasted, because no-one plays the Latvian, but just in case ... And then
the day came when someone played the Latvian against him! And his
opponent deviated from his analysis... shaken, he went wrong and drew,
but was back the next club night to demonstrate a carefully analysed
refutation...

=====

2. Most White players know about this line but avoid it in favour of
something less committal.

3. One less committal line goes 3. Nxe5 Qf6 4. d4 d6 5. Nc4 fxe4 when
White probably has a small advantage after 6. Nc3 (book), 6. Ne3

(Nimzo) or (best?) 6. Be2, preventing ...Qg6 (Bronstein). White has a number of small pluses (immobile target at e4, White can open up with f3 at an awkward moment, I don't know where the Bc8 is going...) and Black's prospects look pretty dismal to me. I had a quick look at a copy of Tony Kosten's book on this line once and it seems he thinks so too!

=====

The Black King's-side is only weak if White gets enough pieces out to attack it; Black often makes the running on that wing, and can castle long.

The one and only time I ever met it I played 3. Nxe5; Black visibly slumped in his chair because all he knew was the 3. Bc4 line, and I won in twenty! We were both graded about 1800 ELO (1900 USCF?) at the time.

There are a couple of books just printed in the UK on the Latvian by GMs: "Winning with the Latvian" (KOSTEN) and "The Latvian Gambit: a Grandmaster view" (?LEIN). I haven't bought either but the Kosten book looks OK. I wouldn't spend money on either until you'd borrowed them or had a chance to try the gambit a few times to see how it went, because I'm going to guess that the level of detail in these is way beyond anything you need to play the line. The best sort of depth may be a magazine article, if you can find one. Someone may write one for the newsgroup...

"Club players and home enthusiasts often ask me to recommend an openings system for White which is safe, yet aggressive and does not require a superb memory and months of intense learning. In such cases I invariably recommend the King's Indian Attack" -- KEENE

...quoted in <http://www.ex.ac.uk/~dregis/DR/Opening/sic10.html>

Are you opening 1. Nf3, 1.g3 or 1.e4? As a recent convert to 1.e4 I use it to avoid a ton of theory on the half-open defences. It's a nice one to have up your sleeve; you don't have to use it against every half-open defence, or against every opponent. It's no good against Alekhine's or Nimzo's defences (2...e5) and impossible against 1...d5.

In article <546pag\$vg@news-e2b.gnn.com> KenNaugle@gnn.com (KenNaugle) writes:

>My thoughts:

>

>1. Good opening, sound to play, good change of pace.

>2. It is rather inflexible. Black has lots of options against it.

^^^^^^^^^^

I also said "The joy of the KIA is flexibility" (!)

You can play it a little differently against each defence, and play in the centre or on either wing.

The amount of available material is good and bad: I think John Watson concludes that in the French version "Black has easy equality in each of the main defensive systems" (I may have paraphrased). This may be true, but at club level most players don't know or understand the theory the way John does (and I'm damned if I know a way to get an advantage with the White pieces with any other line, against the French or any other defence!).

Some of the books available (Schiller, Smith & Hall, Dunnington, Henley) have flaws and I couldn't recommend any of them completely whole-heartedly. If you can borrow one or find one second-hand that might be a best introduction.

It seems that the French is the most common setting for the KIA (following Fischer) and the Sicilian is the least common - although they can transpose:

Karlsson - George [B40]
Torbay , 1994

1.e4 c5 2.Nf3 e6 3.d3 d5 4.Nbd2 Nc6 5.g3 b6 6.Bg2 Bb7 7.0-0 Bd6 8.Re1 Nge7
9.Ng5 0-0 10.Qh5 h6 11.Ndf3 Nd4 12.e5 Bc7 13.Nxd4 cxd4 14.Nf3 Nf5 15.g4 Ne7
16.Bxh6 Ng6

[16...gxh6 17.Qxh6 f6 18.exf6 Nf5 19.Qg6+ Kh8 20.Rxe6 Bc8 21.gxf5 Bxe6
22.Qg7#]

17.Bd2 Qb8 18.Ng5 Rd8 19.Bb4 Nf8 20.Qxf7+ Kh8 21.Bxf8 1-0

That may simply be an example of a 2300-player beating a 2100-player, but it's also an illustration of how far it is from "easy equality" to "easy draw".

The most difficult lines for White IMHO are the ones where Black plays away from standard formations, e.g.

1. e4 e6 2.d3 d5 3. Nd2 Nf6 4. g3 b6! (Uhlmann)

1. e4 e6 2.d3 d5 3. Nd2 Nf6 4. g3 dxe4 idea ...e5

This may be an argument for 4. Ngf3, which allows a switch to 5. c3 with 6. d4 or 6. Be2.

I'm happy to agree to differ, but both these lines can be interpreted in a fairly direct attacking style, and I know from experience that they can be dangerous! I think we're not talking about the sort of opening that a beginner can rely on against expert opposition, but where a novice or D player is up against a player a class above. I have in mind games where a beginner can just go into autopilot and sometimes cause an upset

with a very straightforward attacking plan, where a superior opponent, anxious to play carefully, may not react sharply enough.

Do you know a better line that fits this "clockwork" attacking recipe? I can think of types of attack better than opening lines: the attack down the h-file against the fianchettoed King, the KIA where you just keep shifting pieces across until you have a combination... Now you've got me going, I remember Bird's Opening where you can play for direct attack as in the Dutch. I also forgot to mention the Stonewall, which I think is a little too obvious, but I've had trouble against that in the past too!

>

>>Does anyone know a good opening that a beginner chess players can use to

>>help him beat higher rated players

You need one that you understand better than the opponent.

You need to get right inside your chosen system and get experience with it. Talk it over with other players. Play blitz games with it.

You need one that offers active play for the beginner. Only by putting your superior opponent under pressure do you stand any chance at all.

You need one where either (a) the beginner's attack is wild, so your opponent's better technique and experience are less relevant, or (b) the beginner's attack works like clockwork. Something that might fit (a) might be a gambit opening (or defence), although gambits can be declined - the Blackmar-Diemer, Budapest, Scotch, Elephant and/or Vienna Gambits might be tried. Something that might fit (b) is the King's Indian Attack or the Colle System, although these may be familiar to your opponent. Hopefully they will be more familiar to you!

>I was reading where the benoni after:

>

>1. d4 c5

>2. d5

>

>Is supposed to be especially favorable for White as long as he avoids playing
>a pawn to c4. I would like to know why. I have found very little in MCO and
>nothing in my book on the modern benoni.

[The Modern Benoni involves 1...Ng8-f6 2. c2-c4 followed by ...e7-e6,
...e6xd5 and c4xd5, so it's not to be found there. The line is the
Old (Schmidt) or Czech Benoni].

After 1. d4 c5 2. d5 how will the two sides continue?

If Black does not mean to open things up with ...e6 and ...e6xd5
(Modern Benoni) Black will usually either leave the e-Pawn at home, or
try to blockade with ...e5 and ...d6. When the e-pawn comes to e5,
the Bf8 can be developed at e7 (Czech Benoni); otherwise it will go to
g7 (Old or Schmidt Benoni).

Why might White prefer to do without c2-c4? In the more blocked
formations that arise in these lines, c2-c4 by White may block the
Bf1, but also the best square for the Ng1 is often c4, which it can
reach by Ng1-f3-d2-c4. After a2-a4 the Knight cannot easily be
dislodged by the Black b-Pawn and it puts pressure on lots of
important squares like d6 and e5. With the Black e-Pawn still at
home, the Nc4 supports the break e4-e5; with the Black e-Pawn on e5,
the Knight exerts some pressure on the backward d-Pawn which may
become very tangible after f2-f4.

So, White might prefer to do without c2-c4.

Botvinnik M - Schmid,L [A43/12]

Leipzig Olympiad Fin, 1960

1.d4 c5 2.d5 d6 3.e4 g6 4.Nf3 Bg7 5.Be2 Nf6 6.Nc3! Na6 7.0-0 Nc7 8.a4
a6 9.Nd2 Bd7 10.Nc4 b5 11.e5! dxe5 12.axb5 axb5 13.Rxa8 Qxa8 14.Nxe5 b4
15.d6 bxc3 16.dxc7 Qc8 17.Bf4 cxb2 18.Nxd7 Nxd7 19.Bb5 Bd4 20.c3 e5
21.cxd4 exf4 22.Bxd7+ Qxd7 23.Qe2+ Kf8 24.Qe5 Kg8 25.Rb1 f6 26.Qxc5
Kg7 27.Rxb2 Re8 28.Rb1 f3 29.gxf3 Qh3 30.Qc6 1-0

[P.S. I know a couple of Petrosian games where TP didn't bother with
any finesses like this, whipped out c2-c4 and just applied the usual
boa constrictor treatment, and Black didn't look any comfier with the
Ng1 'only' having f3 available.]

(Robert Canright) writes:

>

>If I were to buy just 1 or 2 books on the french defence, what would
>you recommend?

Hi Rob

It depends a bit on what you've got. I'd recommend reading a good
general treatment in a book like

- Fine,R: The Ideas Behind the Chess Openings
- Euwe,M & Kramer,W: The Middle Game, vol.1

- There's also some stuff on my web pages.

After that, there is a decent introduction in:

- Taulbut,S: How to play the French Defence

If you want to play seriously you'll need a book on the variations, and from
Black's point of view the new edition of

- Watson,J: The French Defence

is attracting the same rave reviews as the earlier editions. There was
an old RHM title by Botvinnik and others which I enjoyed, but it's been
out of print for yonks.

For a more general coverage there are books with all the variations in
by Psakhis and Suetin, and both seem to me to be good at first look -
comprehensive and with some explanatory chat.

>Also, the French locks in the Q-bishop while you can get it out in
>some variations of the Caro-Kann. So why would one play the French
>Defence instead of the Caro-Kann? More dynamic? Better pawn
>structure?

Some of it depends on your style, but I offer some thoughts:

In the French, after the natural 1. e4 e6 2. d4 d5 3. Nc3, Black has
3...Nf6 and 3...Bb4, both of which are likely to provoke e4-e5.

This will lead to blocked, unbalanced positions in which Black has
some clear goals, like playing for ...c5 and ...Nc6. If you like,
Black has sacrificed the activity of the Bc8 in order to get White to
make a commitment in the centre, after which Black can organise around
it. This is a good way of playing for a win as Black.

After 3. Nd2 Black can reply 3...Nf6 with similar ideas; after 3. exd5
exd5 Black has no problems and this is rarely played. 3. e5 for White
leads to positions with familiar ideas (3...c5 is automatic).

In the Caro-Kann, after the natural 1. e4 c6 2. d4 d5 3. Nc3, Black
really has only 3...dxe4 and 3...g6. (3...Nf6 4. e5 is awkward, and
there is no way to develop the Bc8.)

3...dxe4 gives up the central stake and leads to a semi-open position
where White has lots of choice about development and Black, while
solid, has few active plans. The Nb8 will usually come to d7: solid,
but nothing more. The natural way of attacking the centre, ...c6-c5,
concedes a tempo. This is all perfectly playable, of course, but is
often seen as a good way of playing for a draw.

(3...g6 often leads to a blocked French-style position)

After 3. Nd2 Black has nothing better than 3...dxe4, and players of
White often use this to avoid the 3...g6 line (3. Nd2 g6 4. c3!);
after 3. exd5 cxd5 White has a choice of two rather different systems
in 4. Bd3 and 4. c4. 3. e5 for White leads to a whole separate system
again (...c5 may take some organising).

Hope this helps

[...]

>Also, does this clear visualisation come automatically with enough normal
>playing and training, or does one have to specificly train ones mind to
>visualise the board clearly. (and how would one do that?).

I remember reading that when Philidor played TWO blindfold game, it was held as a marvel, one of the finest feats of the human mind that will be regarded with awe and wonder as long as civilisation endures. Then you read about Tony Miles cracking off a couple of dozen in Germany a year or two ago. He did it "straight" i.e. no scoresheets.

I think the answer to your questions is: yes! i.e. (1) with more normal chess you get better at playing blind, (2) you would get better faster if you practiced playing blind specifically, and (3) there are people who have unusually clear powers of visualisation, more than you would expect from their skill at chess or how much they've practiced.

One easy way to practice would be to log in to one of the free FICS servers using a text-only connection, and type in your moves, that way the machine will honk at you if you play an illegal move. I understand this is pretty much how they run it during the Melody Amber tournaments.

>I suppose that normal playing and training does involve a certain amount of
>visualisation of the board, but I find I usually visualise the pieces on the
>board while calculating variations and staring at the board. The piece

>movements are imagined, but the board is real.

Yes, I think this is why 'normal' chess helps playing blind, and why talented chessplayers can cope comfortably with playing blindfold simul. The GMs who do this well perform feats that seem amazing, but I am reminded that parents of our junior club members find it amazing that members of our first team can take on the whole junior club in a simul. and make a 100% score.

I got interested in playing blindfold when chatting to a blind player in the bar at a congress, when he challenged me to a blindfold game. Although I had a much higher grade than he, I assumed he'd whip me, but I won pretty quickly - although I never felt I had clear sight of all the board at the same time, just bits of it. Fairly soon after that, on a long car journey with our chess team, the indefatigable Steve Webb started a series of blindfold games, and we could all cope to a certain extent.

The things that interested me were:

1. the fact that we could all have a go, while the better players were better blindfold players
2. the things that were easy in blind chess were the things that were easy in normal chess e.g. patterns like standard king's-side hack, munching on the long diagonal with ...Bg7xb2.
3. the things that we tended to miss were the same as in normal chess e.g. generally playing in obscure 'random' positions, and in particular missing strong retreats, long moves of a Queen across a rank, missing back rank mates, and missing unusual moves and ideas like ...Bf6xc3 (which is not a usual square for the B) ...Qc7xBc1 (which is usually protected). Once I realised this, being a cheap sort of player, I started playing for this sort of trap, and collected a handful of scalps!

What this all suggests to me is that blindfold play is probably a good indicator of what goes on in the heads of players during a game. I made reference to this in my much-neglected Chess and Psychology musings at "<http://www.ex.ac.uk/~dregis/DR/psych.html>", when I saw John Nunn's annotations to a Melody Amber blindfold game of his at "<http://www.ex.ac.uk/~dregis/DR/chunk.html>". It seemed to me that here was a very big clue to the way he was thinking about the

position, and he had made an error which perhaps a less experienced player who didn't know about pawn formations could not have made.

>I would appreciate it if someone who can play (good) blindfold chess would
>respond and answer these questions

"Good"? oh dear, too late ;-)

> (which I am sure many other people are
>interested in too.).

I too would look forward to other responses.

I guess we're talking 2...Qe7 here ;-)

I should say I don't know a bust, but I'll add some other thoughts.

There's actually a small literature on this line. It was played by a club player in the UK and promoted by (guess who) Mike Basman as "the Strong Point Defence".

I don't know how your colleague followed up, or exactly how MB reckons you are supposed to handle it, but I'm going to guess that after e.g.

3. Nc3! c6! 4. d4!

Black will play 4...d6, then get his bits out with ...Nbd7, ...g6 and ...Bg7

Analogous variations include the Philidor Defence, Hanham variation

1. e4 e5 2. Nf3 d6 3. d4 Nd7

the Closed Giuoco Piano

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Qe7 5. d4 Bb6

and some lines of the Classical Pirc

1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Nf3 Bg7 5. Be2

All three are played by Black players who don't mind a bit of cramp if their position is solid and they can uncoil later. The two strategies used by White against these lines are either

- (a) try and bust the line (which is what you want to do)
- (b) just squeeze the Black position

(a1) The try for a bust in the Hanham is:

1. e4 e5 2. Nf3 d6 3. d4 Nd7 4. Bc4 c6

Reaching an analogous position.

5. Nc3 Be7 6. dxe5 dxe5 7. Ng5 Bxg5

(7...Nh6 8. Ne6! wins)

8. Qh5 g6

(or 8...Qf6 9. Bxg5 Qg6 10. Qh4 +- Schlechter-Alekhine 1910)

9. Qxg5 Qxg5 10. Bxg5.

This position is much easier to play for White, and when it has been reached White players have a huge plus score from here. White will play O-O-O and double rooks on the d-file. There is no way for White to penetrate further than playing Rd6 just yet, but b2-b4-b5 should either win the c6 pawn or produce the exchange ...cxb5, Nxb5 with pressure.

(a2)

The try for a bust in the closed Giuoco is Mestel's:

4... Bb6 5. d4 Qe7 6. Bg5

Of course, Black doesn't want to weaken the Kings-side with ...f6.

6... Nf6 7. d5 Nd8 8. d6 cxd6

The capture with 8...Qxd6 9. Qxd6 cxd6 is no safer for Black.

9. Na3 a6 10. Nc2 Bxf2+ 11. Ke2 Bc5 12. Nh4 Ne6 13. Nf5 +-
Mestel-Doyle '75

(b1) The squeeze for White against the Hanham and Closed Giouco is different in detail but similar in principle: maintain your space advantage, avoid exchanges, keep Black's counterplay under control and, rather than trying to overrun the Black position, try building up pressure on each side until something cracks. This is difficult to keep control of and is why people keep playing this sort of line as Black, hoping for a breakout later.

There are some examples of successful squeezes in the Strategy: Space section of the Canon on my Web site, which should give you the idea.

 ^^^^^^^^^^^^^^^^^^^^ :~)

Hi Bro!

Have you tried this? How far did you get?

1. I think the educational philosophy is spot on -

"tell me and I forget, show me and I remember, involve me and I understand"

- but although it may not be true that "life is too short for chess"
it may be too short for your approach.

2. I dunno though, maybe playing only the first 15 moves against a computer at G/15, you could pack quite a lot in an evening, although...

3. ...you might not understand why you ended up worse (if you did). I played a girl a while ago who opened 1...e5 2...d6 3...f6 4...g5 5...h6. She lost, whereupon I asked Dr.Dave's patent Chess Coaching Question: "do you know why you lost?" (She didn't, and it took a good deal of coaxing to get it out of her, which a computer couldn't do.) Reading books is just a short-cut; you don't teach everything by the discovery method, even if it's in your repertoire.

4. But I'd also guess that playing a KNOWN opening against a computer would teach you as much, in that the errors beginners make in known openings are likely to be the same as the errors they make in unknown ones (failure to complete development, exposing the King...)

5. I often read a chapter of a book, think "yeah, yeah, I got all that" ... and then I come to the "test yourself" positions at the end of the chapter. No, I didn't get it! But rather few books have these "test yourself" positions in - openings books almost never.

6. So a compromise is:

a. Buy only books with self-assessment exercises in them

b. Use the time saved on Matt's method to write to your favourite chess publisher saying:

"Your otherwise excellent book 'A dull defensive repertoire for the average club rabbit' would have been much improved by a page of self-assessment problems for each chapter."

AFAIK, they are "classes" in the usual chess sense (strength
difference between consecutive classes is ~ 200 Elo).

1st cat. means about 2000-2100 (European) Elo, 2nd corresponds to
1800-1900 etc..

Hi Tom

After 1.e4 e5 White can and should aim to play d2-d4, giving an "open" game, where play strongly features, or is dominated by, tactics.
After 1. d4 d5 White may find it slow and unprofitable to play e2-e4, so we get a more "closed" game, where play is slower and more strategical. However, this is purely a general guide: after 1.d4 d5 2.c4 dxc4 3. e4 e5 the game is already more open than the heavyweight main line of the Ruy Lopez with d4-d5 e.g. 1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. O-O Be7 6. Re1 b5 7. Bb3 d6 8. c3 O-O 9. h3 Na5 10. Bc2 c5 11. d4 Qc7 12. Nbd2 Nc6 13. d5 Nd8 (Karpov-Unzicker). And you have already discovered the Colle, which is an open interpretation of a closed start.

>Therefore, I am asking for tactical player's favorite opening lines for
>white. Will the Ruy do for me, or is there a more dynamic opening?
>How does the Bird system rate? Or should I pursue something a little more
>mainstream?

I guess every tactical player has a different favourite opening! And it depends on your standard: tuppenny-hapenny openings that don't work at master level can give good business at club level, and the Colle is

a good example of this.

Most players start off playing the Italian Game with Bf1-c4 (e.g. 1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 is the Giuoco Piano, and now 4. c3 gets the centre open), but there are some well-known ways to equalise and simplify against it. Many club players have adopted a gambit line instead: you can choose from the Evans' Gambit (1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4), the Scotch or Goring Gambits (1. e4 e5 2. Nf3 Nc6 3. d4 exd4 and now 4. Bc4 or 4. c3), or maybe the King's Gambit (1. e4 e5 2. f4). There are many viable defences to the King's Gambit but it's worth a punt. The Scotch Game with 4. Nxd4 is a fine opening, and guarantees a more open game than many lines of the Ruy Lopez.

The Ruy itself has some heavyweight closed lines but a variation with an early (move 5./6.) d2-d4 may suit you.

The Bird can get a nice attack going but may be a bit slow for a tactician. If you don't mind a slow overture before the tactics then this, or the King's Indian attack (Nf3/g3/Bg2/d3), are fine. Bird's has a counter-gambit, the From (1.f4 e5!?), which may put White more on the defensive than you would prefer. Many White players transpose here into the King's Gambit by 1. f4 e5 2. e4, and this invites immediate tactical complications.

>However, I think I need to learn a much more tactical opening for white, as
>I genuinely prefer the tactical nightmares that I can obtain as Black by
>using the Sicilian or the MODern Defense (?? - ..g6, 2)..Bg7 3)..d6).
>

I'm not sure I follow this, but the great attacking champion Mikhail Tal used to say he like playing against the Sicilian better than the Ruy Lopez, because it was easier to open up the game against it. For most attacking White players, the French is their least favourite defence.

There have been two books published with the same title: An Opening Repertoire for the Attacking Club Player by (1) Keene and Levy, and (2) Edward Gufeld. The Keene/Levy title has been completely re-written since the first edition, and nearly all the recommended lines have changed. Each book recommends lines against all the Black defences and may give you a good start towards a repertoire.

Generally, Keene and Levy in their second edition (KL2) have recommended a mix of recent fashions and less well-known continuations, whereas Gufeld has selected much more theoretical lines from a long-standing main stream. Both, therefore, may become dated rather quickly.

Main line system for White after 1...e5

KL1: Scotch Gambit/Max Lange 1. e4 e5 2. Nf3 Nc6 3. d4 exd4 4. Bc4

KL2: Scotch Game 1. e4 e5 2. Nf3 Nc6 3. d4 exd4 4. Nxd4

EG: Vienna Game 1. e4 e5 2. Nc3 Nf6 3. Bc4

Philidor's Defence 1. e4 e5 2. Nf3 d6

KL1: main line with 3. d4 Nf6 4. Nc3

KL2: exchange system 3. d4 Nf6 4. dxe5 Nxe4

EG:

Latvian Gambit 1. e4 e5 2. Nf3 f5

KL1: main line with 3. Bc4

KL2: exchange system with 3. dxe4

EG:

Alekhine's Defence 1. e4 Nf6

KL1: (can't remember)

KL2: Exchange variation 1. e4 Nf6 2. e5 Nd5 3. d4 d6 4. c4 Nb6 5. exd6

EG: Four Pawns' attack 1. e4 Nf6 2. e5 Nd5 3. d4 d6 4. c4 Nb6 5. f4

Caro-Kann Defence 1. e4 c6

KL1: Gunderam attack 1. e4 c6 2. d4 d5 3. exd5 cxd5 4. c4 Nf6 5. c5

KL2: Advance Variation 1. e4 c6 2. d4 d5 3. e5

EG: Advance Variation 1. e4 c6 2. d4 d5 3. e5

French Defence 1. e4 e6

KL1: (can't remember)

KL2: Advance Variation with 5. Be3, 6. Qd2

EG: Advance Variation with 5. Nf3, 6. Be2

Nimzovitch Defence 1. e4 Nc6

KL1: (can't remember)

KL2: (transpose into main system after 2...e5)

EG: 1. e4 Nc6 2. d4 e5 3. dxe5 Nxe5 4. Nc3 and 5. Bf4, 6. Qd2

Pirc/Modern defence 1. e4 d6 2. d4 Nf6 3. Nc3 g6

KL1: Byrne Variation 4. Ng5

KL2: Byrne Variation 4. Ng5

EG: Austrian Attack 4. f4

Sicilian Defence 1. e4 c5

KL1: Alapin Variation 2. c3

KL2: Alapin Variation 2. c3

EG: Grand Prix attack 2. f4

I fancy the Dutch for novices against 1. d4, as I posted in another thread.

Top ten defences to 1. e4 as Black, in descending order of risk:

=====

Scandanavian Defence, Gambits with 2...Nf6

Alekhine's Defence

Sicilian Defence, Dragon Variation

French Defence, Winawer Variation

Sicilian Defence, Kan Variation

Pirc Defence

French Defence, classical Variation

Caro-Kann Defence

Most King Pawn openings with 1...e5

Scandanavian Defence with 2...Qxd5

That sounds a model of etiquette.

>However, I find repeated offers of a draw by opponents
>tiresome and annoying.

If it really annoys you, it's distracting and the controller should be informed. Do you escalate your declines? My experience is that a second offer is always made from an inferior position, which is a rude thing to do once, let alone twice. Unless the position changes its character dramatically, I meet the second offer with: "No, and please don't ask me again", and once I got as far as a brusque "I'll let you know when and if I think it's drawn!".

One might imagine a scale of refusals:

"I'll think about it" (the usual down this way: they don't really think about it, they just make the next move)

"Not yet"

"No, thank you"

"No" (piano)

"No" (forte)

"Of course not" [(c) R J Fischer]

"No WAY"

"You're joking, right?"

"BWAHAHAHAHA"

One of the worst ways to offer a draw is by sticking your hand out over the board without even playing a move, ala "Searching for Bobby Fischer." In the 1995 New York Open, there was a kid who played in the _open_ section, and did this in every game. I think he lost every one too.

>"I'll think about it" (the usual down this way: they don't really think
> about it, they just make your next move)

I use this almost always. This way I can think for a while, and if I
decide I don't like my position, I can still take the draw. Also, it
usually makes the opponent stop sitting on the edge of his seat waiting for
an answer.

>"Not yet"
>"No, thank you"
>"No" (piano)
>"No" (forte)

I got one of these from A. Ivanov, in the first round of the 1994 NY Open.
I really didn't expect him to take it, but the Q's just came off, and I
thought he might be willing to take the early draw and go to bed early. I
drew anyway 43 moves later at about 1:30 AM.

>"Of course not" [(c) R J Fischer]
>"No WAY"
>"You're joking, right?"
>"BWAHAHAHAHA"

Also:
"No thanks" (with contempt)
"Excuse me, I have a winning position" (V. Korchnoi, 1993 National open,
opponent unknown)
"I'd rather lose!" (I think some famous early 20th century player used this
one, can't remember which)

In article <3283C60A.529D@cesi.it> Marco Aspes <aspes@cesi.it> writes:
>Yes, I know that "Chess in fight" but, sometime, you just need a draw.
[...]
>So, what an intermediate player, as I am, has to choose as opening?

Well, Marco, the time-honoured approach is to start 1.Nf3, or if you know what your opponent is likely to play (say, the Pirc or Petroff) to prepare some exchanging variation. But if you have never played a line before, or it does not suit your style, you cannot expect even a draw. Say, 1.Nf3 e6 2. g3 f5 and you may face a lively King's-side attack. Play as you normally play, play to get an advantage, and you may hold the draw more easily! What do you normally play? There may be some safer alternative at some point, but your opponent may also be preparing a different opening...

Krogus advises:

"Instructive examples of correct psychological preconditioning are furnished by Botvinnik's games. During his matches against Bronstein (1951) and Smyslov (1954) the score before the last round was 11 1/2: 11 1/2. A draw would secure the World Championship title for Botvinnik.

"(In the 1951 match) The decisive game began. Bronstein with a smile of cunning on his face advanced his QP: 1 P-Q4. The hall was silent. People made guesses as to what opening Botvinnik would play? Somebody's voice predicted "It will be the Orthodox Defence. True, Black has to defend for a long time, but the position is stable. Botvinnik needs a stable position today."

"But no! The first moves already refute the prognosis. We see the sharp and tense variation known to theory as the "Botvinnik

Variation". The champion bravely challenges his opponent, as if saying: "Although I would like a draw I am not going to beg for it myself!"

"I would like to make clear to the reader that I do not wish to deprecate the Orthodox Defence, which was used by Lasker and Capablanca. The point is that Botvinnik hardly ever used to play this system of development. The champion chose the safest, most thoroughly analyzed and, perhaps, the most aggressive continuation in his repertoire. One can only guess what the feelings of his opponent were, but the movements of the White pieces suggest that he was assailed by doubt. One can see a sort of resignation in the action of the White army. Perhaps he was recalling the successful course of his battle in the preceding twenty-third game of the match, or perhaps his balance was upset by Black's coolly executed, precise and relentless attack. The denouement was not long in coming: after gaining a won position the champion offered a draw "just in case". It was accepted.

"[...]

"In my game against Gheorghiu at Sochi in 1964 ... I did not think only of defence. Although a draw would secure me first place and the Grandmaster norm... Gheorghiu did not expect such an aggressive, even if positionally justified, style of play. When the game ended in victory for me he remarked: "I did not think one could play like that when going for the first place." "Not only 'can', but must" -- I mentally answered the Rumanian." -- KROGIUS

See also <http://www.ex.ac.uk/~dregis/DR/Canon/canon468.html>, where Bondarevsky played for a draw with Black, and succeeded only in sliding downhill.

>Dave B.

The Panov is by no means forced for either side after 1. c4 c6 2. e4.

Black can dodge by 2...e5, and White may prefer to take twice on d5
after 2...d5.

>A very common reply to 2...d5 is 3.cd.

I don't often play 3.cd; rather, after 1. c4 c6 2. Nf3 d5 3. b3, we
are in a position that is meat and drink to the English/Reti player.
It's not easy for Black to get organised without either taking on a
space disadvantage, or going for more space but exposing their centre
to attack. It's a solid enough line but IMHO difficult to handle, and
I push my juniors towards more active and counter-attacking lines.

There are three major branches after 1. c4 besides 1...c6:

1...e5

1...c5

1...Nf6

There are others, like 1...g6 and 1...e6.

It depends on what style CUL prefers to play, and how they like to reply to 1. d4.

1...e5 would suit a 1.e4 player who likes to attack, especially if they play (as White) the Closed Sicilian or (as Black) the Dutch. I think this is the best approach for beginners.

1...c5 would suit a Sicilian player who has the patience for a longer game but doesn't mind drawing occasionally.

1...Nf6 would suit a player who is angling for a version of their favourite Indian defence.

1...e6 (or 1...Nf6, 2...e6) is an invitation to transpose into the Queen's Gambit; if Black also plays the Tarrasch Defence it can be hard for White to avoid transposing into it.

Another great piece of Batsford editing, folks!

>Can anyone tell me if this is
>possible; at my level of play my opponent is more likely to want to play the
>KID than the English and it would be nice to be able to stop/punish this.

The trivial answer is: avoid playing d2-d4!

Assume you play something like 1. c4 Nf6 2. Nc3 g6 3. g3 Bg7 4. Bg2 O-O

The three most straightforward English ideas I suppose are:

(a) play e3, Nge2, d4. This is a solid system and useful against many Black set-ups but promises no advantage: Botvinnik tried it a few times against Smyslov and I don't think theory has moved on much since then. Also, as it involves d4, you are transposing into the KID.

(b) play e4, d3, aim for f4. This is Botvinnik's system and can also be played against many Black set-ups. It's not too hot at GM level but I find this excellent rabbit-bashing material and in fact have never lost with it even against players 20+ grading points above me. Black must be ready to meet f4 with ...f5 else after f4-f5 White's chances on the King's-side are excellent. Andy Soltis' book on the English has analysis on this line, as well as the old Povah book on the English from Batsford.

(c) play an early b4. You can try 1. c4 Nf6 2. Nf3 g6 3. b4!? which again promises no advantage but is well outside normal KID territory. Otherwise 5/6/7 b2-b4 with a general Q-side advance is normal English fare when Black is often a tempo down on comparable lines of the Sicilian. You have to suffer some discomfort from a King's-side attack, but White is pretty solid.

Hope this helps

>
>1 c4 c6
>2.b3 ...

>
>This seems to leave black with a pretty free game as white's second move
>doesn't seem to do much for him.

The trouble with ...c6 is that ...d5 ...d5xc4 and ...b5 is a real threat. The most sensible plans involve either playing b3, or you have to go for one of the gambit or a2-a4 lines of the Slav. The other ways to cover c4 (2.d3 d5 3.Nd2 or 2.e3) probably involve you playing b2-b3 someday, but might be worth a punt.

2. b3 is OK, I don't think 2...e5 is much of a threat, but it's something you can slow up if you want. I think the whole English Opening, though, leaves Black with a pretty free game, or at least a game in which Black is free to choose a set-up that they prefer. If you don't really like moves like 2.b3, why do you want to play the English?

The only other determinedly non-QP approach might be:

1. c4 c6 2. b4!?

This transposes into (wait for it) the Outflank Defence to the Sokolsky (Polish) Opening, 1. b4 c6 2. c4. There is some analysis on this somewhere: I think it copes well against 2...Qb6 [3. a3 a5 4. c5!] but not so well against other second moves (maybe 2...a5!?).

The move order I play usually leads essentially to the same system as given by Soltis:

1. c4 c6 2. Nf3 d5 3. b3

There is a 'pure' English line:

1. c4 Nf6 2. Nc3 c6 3. e4

...which is given in some books: I remember an old Shatskes/Cafferty title with a couple of games by Polugaevsky in. (1. c4 c6 2. e4 d5 is the Caro-Kann, 2..e5 keeps it special).

Lastly, there is a novel unclear line:

Kurajica [A13] Agincourt Defence (French-English), 1995

1. c4 e6 2. Nf3 d5 3. g3 c6

offering to transpose into standard QP lines

4. b3

insisting on independent lines

[4. d4 transposes to the QG]

[4. Bg2 dxc4 5. Qc2 b5 6. a4 Bb7 +/- Carls-Nimzovitch 1925]

[4. Qc2 Nf6 5. Bg2 a5 6. O-O Na6 7. a3 Be7 8. d4

[or 8. b3]

8... O-O 9. Nbd2 b6 Naranja-Larsen 1973]

4... b5!?

"Black intends to bite the c-pawn until it screams in pain" Benjamin/Schiller

5. Bg2 Ba6 6. cxd5
[6. d3 Qb6 != Kurajica]
6... cxd5 7. O-O Nf6 8. Bb2 Be7 9. d3 O-O

Now 10. e4

White could also try:

[10. Nbd2 Nc6 11. a3
[11. Rc1 Qb6 =+ Masic-Kurajica 1972]
11... b4 12. axb4 Nxb4 13. Ne5 Qb6 = Romanishin-Kurajica 1977]
[10. Ne5!? is a suggestion of Watson]

Why?

In my limited experience of it, it was very laggy, from the UK at least. On FICS, people seem more sympathetic to genuine lag problems. On ICC, I had more than one game like the following:

(CharmlessNurk) (2141) vs. (Myself) (1929)

[Rated blitz match, initial time: 3 minutes, increment: 10 seconds]

1. d4 g6 2. e4 Bg7 {Black forfeits on time} 1-0

It was no encouragement to subscribe. Anyone else from the UK have these problems?

>Thanks a lot!

>Damir

There is a helpful description of the linear approximation formula in a text file by Joe Brooks which is kicking around the 'net:

"For those who are mathematically inclined and interested, the formula for a provisional chess rating is:

$$R_p = R_c + \frac{400(W-L)}{N}$$

where:

R_p = the player's provisional or performance rating

R_c = the average rating of the player's opponents

W = the number of wins

L = the number of losses

N = the total number of games played ($N \leq 20$ for a provisional rating)

A draw counts as half a win and half a loss."

Joe's text doesn't cover whatever the PCA do/did for their ratings.

The formula comes from "normal" statistics which Prof. Elo used, setting the mean to 1500 and the class interval at 200. The formula

above describes the expected result for a given excess of your rating over opponent(s)'s rating(s) and is an approximation to the normal distribution function, which looks a bit like this (on my screen at least!):

roughly straight part of the curve
where ratings are same or near each other

That will be tuppence

>FM title was "Mister".

When I was at college there was a vogue for using stock chess phrases in conversation about other topics, like "obvious, and good" and "a result of time trouble". I still enjoy doing this ("the Labour Party are trying to occupy the centre; the Tories have counterplay but are finding it difficult to coordinate the offside pieces").

Anyhow, once someone wondered aloud if the title "FM", seen appended to the name of one of our less likable members, meant "Obvious and good Moron" (as in RTFM, "Read The Obvious and good Manual").

Since that day I haven't been able to see "FM" by a player's name without that phrase echoing in my head. Sad but true.

>French for beginners as Black; as White, choose 1. e4 and aim for a Ruy
>Lopez - perfectly pragmatic chess.

Whoa!

I wouldn't recommend a beginner touch any of these with a bargepole.

They are all sophisticated modern lines heavy on theory.

Why those lines and not, say, the Petroff, Sicilian Four Knights, and the Classical French as Black; and as White, 1. e4 with the Italian Game 3. Bc4 and/or a Ruy Lopez with an early d4?

The standard advice for beginners is to play open games using systems with straightforward aims until they have got the hang of tactics, attacking the King, simple endgames and so on. I see no reason to depart from this advice. I know club players graded 150 or so (1800 ELO) who can handle the systems you mention with reasonable success, but I doubt they played them as beginners.

Maybe when I've played for another twenty years I might open a book on the Najdorf Sicilian, but by then, they will be too heavy for me to lift...

>How can the "basic ideas" be "too sophisticated" ????

I find I can get across the ideas of the French easier than the Sicilian. The attack on the d4 Pawn is similar in several variations of the French, but the equivalent(?) in the Sicilian, the attack on e4, I think is much harder to handle. It's certainly harder for me to explain!

Some of the fundamental ideas in the open Sicilian (minority attack against backward pawn on c2, restraint of Pawns on e4/f4) seem to me to place greater demands on a player than the French; moreover the range of variations of the French (with locked pawns on d4/e5 and d5/e6) are more similar than the range of more flexible formations that a Sicilian player might meet (Morra, Alapin, Closed, Grand Prix, King's Indian Attack).

This is getting to be a Frequently Asked Question! Steve Pribut, can you hear us?

It arises from the Two Knights' Defence.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 (Two Knights' Defence)

Now 4. Ng5 d5 5. exd5 Nxd5?! 6. Nxf7!? is the Fried Liver Attack (or FL Variation), also known as the Fegatello. The idea is 7. Qf3+ Ke6 with an enduring initiative against the exposed King. Watson and Schiller I think have done some analysis to suggest that Black can survive after best play by both sides.

The engaging name comes from the Italian, where a little liver was used to bait traps.

[N.B. White has other choices at move 4, but 6. d4! (threatening 7. Nxf7!) is a better approach. Black has several better moves at move 5, and can even venture 4...Bc5!?!]

>This suggests the following:

>1). Tactics are important. At the moment I've stopped learning openings, I just work
>on tactics the whole time.

In consecutive rounds of my last congress my opponents overlooked mate
in one! grades around 1800 ELO (1900 USCF?).

But they were spotting all sorts of other tactics throughout the game.

Tactics may be their biggest failing (and mine) but it doesn't mean
that it's the easiest thing to cure. It's like telling a beginning
skier not to fall over!

The usual advice is: write your move down first, shut your eyes, and
look again afresh.

>2). Gambits are good. 1 e4 e5?! (1..e6!) 2 f4! will win a lot of games, whatever
>the ultimate truth of theory as discussed here. A pawn just isn't that much down
>this end of the aquarium.

I like the King's Gambit and have played it, but there are too many
good defences to the King's Gambit which are too well known for me to
recommend it, including counter-gambits which are no fun to sit
through.

>3). Tactics early in the game will tend to favour White, because he has the
>initiative. This suggests that what you want to do, where possible, is to play
>open games/gambits with White, and closed games with Black. As well as being a

There are lots of open counter-attacking systems for Black novices
after 1...e5, e.g. Italian Wilkes-Barre, Vienna Frankenstein-Dracula,
King's Gambit Nimzo Counter-Gambit, Ruy Cordel/Schliemann... no need to go
into a shell.

Matt Guthrie posted the most helpful commentary I have seen on
questions of this sort a while ago. I have filed his post (with his
permission) at:

<http://www.ex.ac.uk/~dregis/DR/Openings/19th.html>

If you don't have WWW access, he was saying that:

"1. The question "what should I play against..." cannot be adequately
answered without further data. (rating, previously used systems,
goals, etc.)"

"Goals" means: what do you want to get out of your practice? I
personally hate 1.e4 games because I have no confidence in my analysis
of tactics ... that's why I have recently started playing 1.e4.

"2. There are good reasons to believe that individual progression of
opening understanding can and should mirror historical progression" -
that is, play 19th century openings first, and interpret other
openings in a 19th century way.

My own take on this is, like Matt's, still Reti's:

"A knowledge of tactics is the foundation of positional play. This is

a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid the Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game" - RICHARD RETI

I migrated far too fast from the Giuoco Piano to 1.d4 and then 1.c4, feeling at each point I was playing a more sophisticated opening. I was, but I was entering running races before passing the walking exam.

>1.e4 c5 2.Nc3 e6 3.f4 d5 and
>1.e4 c5 2.f4 d5 (or 2..e6 3.Nf3 d5) 3.exd5 Nf6!

Whoa! These lines may be fine for Black but White is being needlessly cooperative.

>1.e4 c5 2.Nc3 e6 3.f4 d5 and
3.Nge2!? d5 can leave Black defending a dodgy
centre. I've had a couple of easy wins with this. Black is better
advised to wait with 3...Nc6, but White may sneak in 4.d4! Do you
play the Taimanov?

>1.e4 c5 2.f4 d5 (or 2..e6 3.Nf3 d5) 3.exd5 Nf6!
3.Nc3!? has been tried as a way
to avoid the gambit; I don't think it's much good for White (3...dxe4
4. Nxe4 Qc7!?) but it's comfortable.

I suppose I agree that the system is equal but keep your eye on the
move order.

A more serious challenge to the GP in my view is the related system

with 1...c5, 2...Nc6, 3...e6, 4...Nge7 and 5...d5. This seems to leave White with little better to do than play 1.e4 c5, 2.f4 Nc6, 3.Nf3 e6, 4.Nc3 Nge7 5.d4 cxd4 6.Nxd4, which is another Taimanov Sicilian, and which also may be in White's repertoire, but maybe not yours.

The system with 1.e4 c5, 2.Nc3 Nc6, 3.f4 g6, 4. Nf3 Bg7 5.Bc4 e6 6. f5 Nge7 7.fxe6 fxe6 is risky for both sides, but I can never make it work as White. Joe Gallagher in "Beating the Anti-Sicilians" gives a game where he picked up a piece in about 12 moves as Black, after ...d5, Bb3 when the c-Pawn crashed through. As this line was always one of the main motivations for getting into the Grand Prix to start with, this is disappointing. Does anyone know of a way to prop this gambit up? It looks like a great way to play for a win with Black.

The system with 1.e4 c5, 2.Nc3 Nc6, 3.f4 g6, 4. Nf3 Bg7 5.Bb5 Nd4! is probably equal, and may prompt White to switch to the Closed with 5.g3.

Mark Hebden I think has started to fiddle the move order a little: 1. e4 c5 2. Nc3 Nc6 3. Bb5!? I don;t know what he gets out of it, apart from uncharted territory, but that is not to be dismissed.

(Robert MacAusland) writes:
>Could some kind soul please post a sample sequence of play involving the
>Grob Attack?

After 1.g4 the play could go anywhere!

Some better-established sequences:

The main line gambit with 1. g4 d5 2. Bg2 Bxg4 3. c4 is often people's first introduction to the line, and may be better for White because of the weakness on b7: White has Qb3 coming.

1. g4 d5 2. Bg2 c6 is a solid response. White can play 3. h3 and after 3...e5 go 4. d4 since after 4...exd4 5. Qxd4 Black doesn't have 5...Nc6. So 4...e4! 5. c4! when we have something that is a little like a reversed Sicilian but White is rather loose on the King's-side. This is how Basman played it, but Grob more often went for 4.d3 and e4.

1. g4 d5 2. Bg2 c6 3. g5 may be annoying for Black's Knight on g8, but 3...e5, 4...Bd6, 5...Ne7 untangles.

1. g4 d5 2. Bg2 e5 is natural for Black although less solid. After 3. c4 Black can return to the line above with 3...c6 or play more ambitiously with 3...d4, intending to put the b8 Knight on c6. Basman has shown that the Grobber can sometimes get good control of e4 because Black cannot hit it with ...f5.

A clever idea for Black is 1. g4 e5 2. Bg2 h5! which splits the White Pawns (played by Grob himself). So 1. g4 e5 2. d3! has been recommended by Bloodgood.

Grob futures: 1...e6, 1...g6, 1...c5 and 1...Nf6 are all
under-rehearsed!

A couple of points summarising follow-ups to my old post:

1. "You can try using Word for Windows Frames." This drove me nuts. getting the spacing right was more or less impossible, you couldn't thereafter change the font size in the diagram. Also - it may be me, but it may be you too - they can behave in unexpected ways at page breaks/column switches and require a lot of cut-and-pasting to use at all. If you use Word for Windows, you may know that the easiest way to work is using normal text in "Normal view" mode. Once I started playing with frames, "Page Layout View" and so on my speed went down and my blood pressure went up.

2. "You might not bother, because you might create a dependence". Fair point: I still think real beginners might need the help, but I also expect more experienced readers and players to be weaned off coordinate grids.

3. "You can use Steve Smith's Alpine fonts". These use ordinary characters appropriately spaced to specify borders with 1-8 and a-h. My cheque is in the post.

>

If you are distracted like this:

- go over your book with someone else who will keep you on track
- pick a book that stresses ideas first rather than variations
(the RHM 'Understanding the...' series was a model in this regard,
many recent Batsford books have the same idea but are often glib)
- only read a book when you have a specific question you want answered
after a game e.g. what do you do after 4. f4?

That will be tuppence

>Sicilian Defense.

You and me both...

>My favorite playing style is positional one, and mine is somewhat
>similar to An. Karpov's playing style. I tried the Closed Sicilian
>several times, but I am not sure if I like it or not.

You know that Karpov played the Closed Sicilian in the late 'sixties?
Did well with it, but he was doing well with all sorts of openings. he
used to play 6.Nge2.

You can adopt a positional approach to each line of the Open Sicilian;
although these are not terribly forcing they might suit your style.
For example, you can try the systems with 6.Be2 or 6.g3 against every
Sicilian variation.

>So, please recommend any one best Sicilian Defense book for me.

You don't know whether you like the Closed but still want us to
recommend a book? If you ever decide you want to play the Closed, the
most recent treatment is Gary Lane's Batsford title "Winning with the

Closed Sicilian". Theory has moved on a bit since then, but the ideas are still the same. There is a chapter on 6.Nge2 which includes a few Karpov games.

Another book which might suit your style, is Andrew Soltis' "Chamaeleon Sicilian" (Chess Digest). There is less theory on this line and less in the book, so you get fewer pages for your pennies.

A simple answer is to say: play what Karpov does! Against the Dragon he has done well with a funny little line of the Yugoslav:

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. Be3 Bg7 7. f3 O-O 8. Qd2 Nc6 9. g4
e.g. 9...Nxd4 10. Bxd4 Be6 11. O-O-O Qa5 12. Kb1 Rfc8 13. a3 Rab8
14. g5 Nh5 15. Nd5 Qxd2 16. Rxd2 Bxd5 17. exd5 with an ending that can be played for a win.

Are your endgames as good as Karpov's? This line is covered in a book by Mednis called "From the Opening to the Endgame", but it doesn't cover other Sicilian lines. As far as I know there is no book on Karpov's treatment of the Sicilian for the 1600 player. You might borrow his "The Semi-Open Game in Action" which I think has some of his ideas in, but take a breath. This is a book I guess for 2000+.

Another book to borrow might be John Grefe's "The Offbeat Sicilian": this is a compendium of relatively unusual lines which avoid the theory of the Open.

A line that might suit you is the system with 1.e4 c5 2.c3. A book published recently which recommends this system:
"An Opening Repertoire for the Attacking Club Player" (by Keene & Levy [Batsford])

There is no book called "An opening repertoire with 1.e4 for the dull positional club player", but one day I may write one.

>If you
>know the title of the correct Sicilian Defense book for me, please email

I share your misgivings about Keene's books, but it seemed appropriate for the level of question. By the time your opponents know refinements at move 9 in your openings you need a different book, but until then, I think it's OK. Do you know a better introductory reference for the c3 Sicilian?

It's not too hard to crack the analysis in these one-stop repertoire books - there are a good few leaks in the Gufeld book as well, but if you/your opponent are good enough to find them, you can probably make use of what is there. I think the Nf6 Scandanavian and Kupreichik French (5.Be3) have really taken off in the UK thanks to the Keene/Levy book. Amusingly, a game that Gufeld gives as the

recommended approach for White against the Scandanavian, Keene and Levy give as a line for Black!

>Against the Latvian Gambit he gives 3 Bc4, an piece of Keres' analysis.
>It certainly isn't too up-to-date.

In the second edition? I remember the first edition going for this, but the second I think they went for something simpler. Sorry if my memory is letting me down again.

>I find ... d5 a somewhat annoying response to 1 e4, especially
>because it can't really be that good. What do you 1 e4 players
>like to use against it?
>
>Ed Hummel

Last week I played against it for the first time and played 2. Nc3, transposing to the Dunst/Van Geet Opening. I won an easy game, but I don't think it's anything special for White - I just prefer the positions to the main lines after 2. exd5 Qxd5 (someone posted something last year saying that this line 'sucks all the life out of the position'). Black is depressingly solid, and although I think White can easily gain the advantage, it's hard to convert to a win at club level. (2...Nf6 is more of a fight)

2. Nc3 has two principal themes:

(a) 1. e4 d5 2. Nc3 dxe4 3. Nxe4 when you have a temporary edge in central control and development. Van Geet had three correspondence(!) games go 3...e5 4. Bc4 Be7 5. Qh5 Nh6 6. d4 1-0.

(b) 1. e4 d5 2. Nc3 d4 3. Ne2 when you can recycle the N to g3, play Bc4 and are poised for a King's side attack (this is what happened in my game). Often these lines can also be played as reversed Indians, e.g. 4. g3 with a KID or if Black plays 3...c5 and 4...Nc6 you can play Bb5 when you are about three tempi up on a Nimzo, and Black is committed to ...d4 which would normally have to be coaxed.

See what you think. If you are an attacking player you might prefer

these lines to whittling away with 2. exd5.

>It is a pity you won't read anything to do with chess I
>write, because I think the analysis below is interesting.

Ignacio, you haven't quoted any text, so readers don't know who you are referring to or what they said. [The article you refer to may show up at this site before the week is over, if I'm lucky.]

>I think my estimate of Fischer getting 4 to 6 points
>less in standard circumstances is not exaggerated.
>You can argue even for 6.5 less.

Using arguments of equal merit, could you argue the score up as easily as down? For example, I believe Fischer had a cold during the Petrosian match. So maybe he could have scored higher there. And that ...Bxh2 move in the first Spassky game was untypical, so we could count that as a draw... Do you see what I mean? A game with Fischer participating could hardly ever be standard!

>Finally, Fischer's psychological warfare cannot be
>underestimated, but I think it was secondary in these
>successes (I also want to believe so...).

Fischer's power at the board intimidated players before the 1970-72 cycle. Byrne talked about 'Fischer-fear'. Perhaps other of his remarkable results - say, the 11-0 at the US championships - could also be put down to psychology more than chess.

But you seem to be saying that it is only Fischer's opponents that suffered from nerves, and that this detracts from Fischer's

performance. He never seemed to be a man immune from tension. Perhaps if Fischer did not suffer from nerves, he would have scored an extra 5-6 points! Moreover, psychology (nerves) is always part of the chess struggle, even in correspondence games, and should not be regarded as secondary, because we can never disentangle it.

[The use of the term 'warfare' suggests that Fischer's behaviour was a deliberate device to upset opponents. Not proven.]

[...]
>In any case, it is impossible to find a collection of
>blunders by opponents of a single player in a
>world title cycle like those found in these 42 games.

The two Taimanov examples were indeed corkers, but what else did you have in mind? Someone has to have the most blunders! The Botvinnik-Bronstein encounter showed that World Championship matches can feature such errors.

It has actually often been remarked how many errors appear at World Championship level. Before the Fischer match there was compiled a top three blunders at Championship level in the "Chess Bedside Book". Maybe we do not give other games the same scrutiny, or attribute the same significance to them.

The way to decide these things is not to read the ink off the Fischer games we are talking about, but to count up all such championship cycle errors, their depth and their consequences.

[In another thread some time ago, someone said that even at the highest level *most* games are decided by tactical oversights, and cited the Karpov-Kamsky match games as evidence. I went and added up all the errors to see if this was true. If we did that for all the matches we might have enough evidence to decide.]

[...]
>So, Fischer, whatever the reason, was lucky.

You know of course Capablanca's saying, that the good player is always lucky. And Lasker too was considered to have amazing luck in escaping from dubious positions. How much luck is a player allowed before you say they are not lucky, but successful?

It seems to me that for every point there is available an equally

plausible counter-argument. I'm not trying to say there is no luck in chess, but re-hashing the limited evidence we have about Fischer is perhaps too narrow, and can never produce a conclusion.

>I need some help on winning with this opening.

>I can never win a pawn back or anything. Are there any

>variations to the gambit??

Are there ever. The King's Gambit is a bit of an ancient woodland. Folk who have lived there for years can make a good living out of it, but the casual passer-by might find it inhospitable and incomprehensible by turns.

Positionally it is well-founded, decoying the Black e-Pawn and (half-)opening the f-file, but the complications can be immense and the number and variety of viable Black defences is large.

An introduction to the gambit and it's variations is to be found at

http://www.ex.ac.uk/~dregis/DR/Openings/kg_ideas.html

If you want to warm up on the variations without lashing out on a book, you can try

http://www.ex.ac.uk/~dregis/DR/Openings/kg_vars.html

I won't e-mail because other folk may be interested.

1. The fun line is 1. e4 e5 2. Nf3 f5 3. Bc4 fxe4 4. Nxe5 Qg5...
2. Most White players know about this line but avoid it in favour of something less committal.
3. One less committal line goes 3. Nxe5 Qf6 4. d4 d6 5. Nc4 fxe4 when White probably has a small advantage after 6. Nc3 (book), 6. Ne3 (Nimzo) or (best?) 6. Be2, preventing ...Qg6 (Bronstein). White has a number of small pluses (immobile target at e4, White can open up with f3 at an awkward moment, I don't know where the Bc8 is going...) and Black's prospects look pretty dismal to me. I had a quick look at a copy of Tony Kosten's book on this line once and it seems he thinks so too!

--and there have been others in this thread.

I was perhaps the highest-rated person in the 1970's who made a habit of playing (and losing with) this opening.

>1. It's playable but can lead to positions where Black has no obvious
>active plan... e.g. 1. e4 b6 2. d4 Bb7 3. Bd3 e6
>4. Nf3 c5 5. c3 Nf6 6. e5 (6. Qe2 may be even better)...

I was willing to "mix it up" in lines with e5, which made my QB feel OK. But what took much of the fun out was when White plays slowly, as if this were a Lopez: 6. Nd2 Nc6 7. a3! The poster's 6. Qe2 may be equally good, though this way White can do 8. O-O and 9. Re1 instead. White's eventual idea is to play b4, and from the Black side, this feels like a nasty clamp on both sides of the board. I've never found an effective countermeasure in my (old, buried) analysis.

>
>2. The line
>
> 1. e4 b6 2. d4 Bb7 3. Bd3 f5!?

>
>is I think reckoned currently to be unsound, but you've got to know it.
>Basically Ray Keene published some analysis in the 1970s which said

>that Black could take the rook after 4. exf5 Bxg2 5. Qh5+ g6 6. fxg6
>Bg7 7. gxh7+ Kf8 8. hxg8=Q+ Kxg8 9. Q moves, and Black can consolidate
>and win. Then someone discovered that on move 8 White can play
>something like Ne2(-f4-g6) and Black loses.

Correct. I don't know where the final analysis is. After I played this
against Lombardy in the 1973 US Open (I consolidated but didn't win),
he, I, and a crowd looked at 8. Ne2, 8. Nf3, and 8. Nh3. We reached
the conclusion that two of these moves win, but I forget which two :-).

> I'm not saying it's a totally duff opening, and if White goes all out
>on the King's-side you get lots of chances, but if White just builds
>up solidly you can get horribly short of ideas.

Correct, see above.

>5. There is further analysis and lots of games in the following books:
[snipped]

A late-1970's book by Soltis had five of my wins, but none of my losses
:-).

>Arun

Hi Arun

A. The Maroczy Bind is a structure usually arising from the Sicilian Defence. In the Open Sicilian after

1. e4 c5 2. Nf3 Nc6 (say) 3. d4 cxd4 4. Nxd4

Black should continue

4... Nf6 5. Nc3

This position with an extra central pawn for Black gives dynamic chances for both sides; Black can think about putting a Rook on c8 and hassling the c2 and e4 pawns with ...a6 and ...b5-b4, or blowing up the centre with ...d5.

If Black continues:

4...d6

...White can apply the Bind with:

5. c4.

Now the ...b5 and ...d5 breaks are much more difficult and there is no minority attack/half-open c-file counterplay(*). These differences make the White structure very safe and solid. Of course, Black is solid too, but the dynamic chances are what make the Sicilian desirable.

B. In some positions of the Open Sicilian where White's e4-pawn is not under attack it is a good idea to consider Nc3-e2 and c2-c4.

C. The Maroczy Bind can also arise from the English Opening,

1. c4 c5 2. Nf3 Nf6 3. d4 cxd4 4. Nxd4 ...

In this form Black often fianchettoes the Bc8 (sometimes the Bf8 too) and hopes to adopt a sound, flexible formation and hope that White either over-extends by pushing pawns forward on the King's-side, or alternately White goes solid but overlooks a ..b5/...d5/...e5 blow in the centre.

This is sometimes known as the 'Hedgehog' formation, but that is properly reserved for a solid double-fianchetto formation without any pawn exchanges.

HTH

D

The game is certainly:

Lasker Ed. - Thomas (London), 1912

1. d4 f5 2. e4 fxe4 3. Nc3 Nf6 4. Bg5 e6 5. Nxe4 Be7 6. Bxf6 Bxf6 7.
Nf3 O-O 8. Bd3 b6 9. Ne5 Bb7 10. Qh5 Qe7 11. Qxh7+ Kxh7 12. Nxf6+ Kh6
13. Neg4+ Kg5 14. h4+ Kf4 15. g3+ Kf3 16. Be2+ Kg2 17. Rh2+ Kg1

drum roll

18. Kd2 mate

Now, as you know, 18. O-O-O (mate) is given by some sources, which was possible, but I believe was not Lasker's choice. I recall he commented after the game that the King move was more aesthetic, in his view.

Perhaps I was a bit cryptic - I wasn't suggesting prophylaxis isn't
useful, necessary or important. But reading Nimzo you almost get the
idea that you can win a game by prophylaxis alone! Perhaps that
because N isn't very clear about how it fits into his system, but
that's maybe because it isn't really a system.

>I draw your attention to Mark Dvoretsky, Artur Yusupov: "Positional
>Play", London: Batsford 1996, Part 2, chapter 4 "Prophylactic
>thinking".

Thanks for the reference, which I will pursue. Can I return the
favour by referring you to Hooper and Whyld's Chess Companion, where
they are sharply critical of Nimzo's views on prophylaxis.

>mailto:cschess@nwlinc.com

I don't know if these are helpful:

amateurs - nimzo [B00]

overprotection, 1993

1.e4 Nc6 2.d4 d5 3.e5 f6 4.Bb5 Bf5 5.Nf3 Qd7 6.c4 Bxb1 ! 7.Rxb1 0-0-0
8.cxd5 Qxd5 9.Bxc6 Qxc6 10.0-0 e6 11.Be3 Ne7 12.Qe2 Nd5

Nimzovich comments that the Pd4 is effectively an isolated one.

Black has blockaded the d4 pawn and the Bishop behind it. Nimzo used

to get a bit mysterious about overprotection, but we can see that the d5 point is both an outpost and a jumping-off point or channel for the Black pieces that can reach it, as well as fulfilling a blockading function.

13.Rfc1 Qd7 14.Rc4 Kb8 15.Qd2 Rc8 16.Ne1 Be7 17.Nd3 Rhd8 18.Qc2 f5
19.Rc1 g5 20.Nc5 Bxc5 21.Rxc5 Rg8 22.Qe2 h5 ! 23.Bd2 h4 24.a4 g4
25.a5 a6!

The knight on d5 supports c7 and can free the Rook for other duties.
The White Bishop isn't really participating in the attack, and won't unless the a-pawn gets to a6 - hence the last move.

26.b4 c6 27.Rb1 Qf7 28.Rb3 f4 29.Qe4 f3 30.Rc1 fxg2 31.Kxg2 Rcf8
32.Rf1 g3 ! 33.hxg3 hxg3 34.f4 Ne7 35.Be1 Nf5 36.Rh1 Rg4 37.Bxg3 Qg6
38.Qe1 Nxg3 39.Rxg3 Rfxf4 40.Rhh3 Rxd4 41.Qf2 Rxg3+ 42.Rxg3 Qe4+
43.Kh2 Qxe5 44.Kg2 Qd5+ 0-1 The d5 square remained pivotal to the end.

tal - bronstein [C80]
overprotection, 1956

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3

"The Ideas Behind the Chess Openings", Reuben Fine, 1943.

=====

SUGGESTION: Can the diligent readers of r.g.c.* compile a list of updates to Fine's openings book, which is so valuable but so out of date? Or is there a modern title which now does the same job as Fine's? I would be happy to act as compiler/editor, and circulate the collection freely.

I have in mind Larry Evans' careful collation of corrections to Fine's other magnum opus, Basic Chess Endings, so that for many years your best endgame buy was BCE plus Evans' booklet of notes.

The post that prompted this suggestion is enclosed:

>The algebraic version has a few typographical errors which can be

>annoying. And Fine can be very concise in some of his discussions, for

I agree with all this; his 2-3 page overview of the double King Pawn openings should be written in gold paint on the walls of every chess club. But it does need leavening with a few up-to-date perspectives, particularly on modern openings like the King's Indian Defence. I don't know how to get these new angles easily, but one way might be to get hold of a class A/B player and check out your understanding with them. For example:

>For example, in his discussion of
>the Sicilian Defense, he emphasizes (among other things) White should
>never be allowed to play c4 and, after White has played d4, Black must
>not play e5.

I'm afraid this is just what I am referring to. While there is a large amount of truth in this advice, chess openings have moved on.

Allowing White to set up the Maroczy Bind with c2-c4 is not something I'm in the habit of doing, but many players swear by it - the Sicilian Accelerated Dragon and English Hedgehog are two popular systems which encourage the Bind.

Also, Sicilian systems with ...e7-e5 have been a real growth area since the war. If you subscribe to British Chess Magazine, you will have read a two-part article describing the "Kalashnikov" Sicilian, a variation with ...e7-e5 which allows White to play c2-c4! The true worth of this system has probably yet to be established, but I pity the poor student who has diligently read Fine and then meets this line! - although amongst beginners this is unlikely.

>2. c4

Yes it is!

>

>Does anyone play this? And if so, what do you answer to 2...dxc4 ?

>What kind of game does this give?

The traditional answer is 3. Na3, giving a fairly slow, solid game which might be to your taste. [White can also play 3. Qa4+]

>Would this opening work well for my style of playing? If not, which
>openings for black and white? I usually prefer less popular openings, but
>I do play Alekhine against 1.e4. Is the Pirc defense suitable, etc?

Both of these often require vigorous counterattacking play if White decides to go for your throat, which might not be to your taste. Slower defensive systems, where White may find it more difficult to play sharply, include the Caro-Kann and the French.

>Does the Reti focus on defending while still maintaining an attacking edge
>for later on when the time comes to beat my opponent?

I wouldn't ordinarily say that the Reti had much of an attacking edge, although some systems with an apparently slow start (like the double fianchetto with e2-e3) can lead to a vicious attack if Black is complacent. I'd say the Reti is generally too slow and subtle an

opening for most folk, as White doesn't have a clear plan to follow.

>If anybody else plays 1. Nf3, I would be interested in knowing if you
>recommend the 2. c4 or if you play something else like g3, etc.

I'm quite amenable to the King's Indian Attack, a system with:

Nf3 g3 Bg2 O-O

and instead of c2-c4 follow up with:

d3 Nbd2 e4

you can the attack the King's-side with moves like...

Re1 e5 Nf1 Bf4 h4 Nh2 Ng4 Ng5 Qh5

or expand in the centre and Queen's-side with c3 b4 a4 Nc4 d4

These pawn-led advances may be clearer to you than re-arranging the pieces in the less fixed Reti systems. Also, there are lots of readily-available games, books, and so on - you can get much more help with playing the KIA than the Reti.

>Is it a good position to have pawns at c4, b3, and d3, with the knight at
>c3? Or even a pawn at e4?

I'd usually plonk it on d2, because I'd expect to have a B on b2.

>I guess I should buy a book, but I don't know if I am really interested in
>this opening or not... yet.

Well, try it a few times. Proof of the pudding, eh?

For White, you mean? There are two fairly serious answers I considered
to your fairly serious question:

1. No, there is no such "best" opening, otherwise there wouldn't be
1000s of different variations. Start with the Giuoco Piano 1. e4 e5
2. Nf3 Nc6 3. Bc4 Bc5 4. c3 and then learn what to do against the
Black deviations that you meet; don't worry about deviations you
haven't met yet.

2. Yes, it's called the King's Indian Attack. Shut your eyes and play
1. Nf3/ 2. g3/ 3. Bg2/ 4. O-O/ 5. d3. Open them, play 6. Nbd2 and
follow-up with either e4/Re1/Nf1/Ne3/Nh4/f4/f5 or e4/c3/d4/e5 or
c3/a4/Nc4/b4/b5.

Which answer would you prefer? ;-)

>Any ideas? Makes me almost want to play d4 exclusively from now on :(.

Hi Andy

There was a fashion for avoiding the Petroff entirely with 2. Bc4,
which is of course no answer at all, but is a nice system.

Your first line is given by Keene and Levy in the second edition of "An
opening repertoire for the Attacking Club Player" as +/-.

Depending on what sort of player you are, you might fancy the
Cochrane line: 1. e4 e5 2. Nf3 Nc6 3. Nxe4 d6 4. Nxf7!?

There is a famous trap which I predict you can pull off a few times:

Soderstrom - Tzannetakis cr, 1981. 1.e4 e5 2.Nf3 Nf6 3.Nxe5 d6 4.Nxf7
Kxf7 5.d4 Nxe4? 6.Qh5+ Ke7 7.Qe2 +/- e.g. Kf7 8.Qxe4 Qe7 9.Bc4+ Be6
10.Qf5+ 1-0

Vitolins has played it a few times, often catching out the King by

opening lines. With a more closed defence Black can still be overwhelmed by the Pawns, as in a famous Bronstein game (see 200 Open games).

The 3. d4 line seems to be going out of fashion. The GMs play the main lines of 3. Nxe4 these days. Black can find a way to rough equality in lots of lines, according to the books, but not everyone at my level (1800) knows the books beyond about move 7 of the main line. You do get a complex open game with, I would have thought, good chances of outplaying your opponent. In playing 1. e4 would sooner play in these lines than grotty closed games like the French or Closed Ruy Lopez.

Those top ten Petrosian games in full:

10.

Petrosian-Euwe, Zurich 1953

- Play with a plan, they say in the books. Euwe's bishop loses its way early on and the squeeze begins

9.

Fischer-Petrosian, Portoroz 1958

- The "Bear Hug" from Fischer's famous book. Only a draw, but a lesson in positional play. Many people's first encounter with Petrosian.

8.

Petrosian-Yuchtman, 1959 (King's Indian, Petrosian Variation)

- The light square game in Petrosian's patent variation.

7.

Petrosian-Botvinnik, 5th Match Game 1963

- Never try and outstare a snake! A long manoeuvring game where whittling at a tiny weakness causes the tower to topple.

6.

Petrosian-Spassky, 10th Match Game 1966

- Chess as judo: Spassky is invited to occupy the centre, but falls under

his own weight.

5.

Jopen-Petrosian, 1954 (French Winawer)

- How not to open a chess game: Petrosian must have broken every one of the recommendations of beginners books in this game!

4.

Petrosian-Peters, Lone Pine 1976

- A lesson about isolated Pawns. A witness said "Peters looked so confused during that game..." - even when he lost.

3.

Petrosian-Mecking, 1969

- The light square game (reprise).

2.

Petrosian-Pachman, Bled 1961

- The quietest killer move in history!

And the top Petrosian game in history is

(..... [your choice here])

Message-ID: <E0pAxr.2E0@exeter.ac.uk>
Organization: University of Exeter, UK.
References: <55rmgu\$jtt@library.airnews.net>
Date: Mon, 11 Nov 1996 10:10:39 GMT

In article <55rmgu\$jtt@library.airnews.net> canright@airmail.net (Robert Canright) writes:
>I've seen one book refer to a knight posted on QB5 (c5) as being the
>"Pillsbury" bind (after Harry Pillsbury). Is this true? Any other
>conditions needed to qualify as a Pillsbury bind? I thought it was a
>type of pawn formation.

I owe what I know about this to Chernev's books like "Logical Chess"
and "The Most Instructive Games...". There's a game
Checkover-Rudakowsky which I think is in both books which illustrates
the formation. The use of the term in this context may be Chernev's
own.

The formation is: White Pawn on d4, Black Pawn on c6. White c-Pawn
missing, and Black b-Pawn advanced past b6. You get a pawn formation
with the Black c-Pawn backward on a half-open file. This gives an
outpst for the Knight on c5, but if the place of the Knight was
occupied by a Rook, I'd say White still had a bind.

```
+ - + - + - + -  
- + - + - P P P  
P - P - P - + -  
- P n + - + - +  
+ - + p + - + -  
- + - + p + - +  
p p + - + p p p  
- + r + - + - +
```

The bind occurs where Black defends the Queen's Gambit with ...e6, and
later plays ...dxc4 (White recaptures Bxc4) and ...b5. If Black can't
(or won't) follow-up ...b5 rapidly with ...c5 White may be able to
restrain it forever, and pressurise the c-Pawn. As a result of games
by Pillsbury and others most Black players know to get ...c5 in pretty

damn quick.

Now, Harry Pillsbury also practiced an attacking formation in the Queen's Gambit with Nf3-e5 and f2-f4, and my guess is that there are folk who refer to this formation as the Pillsbury bind. There are famous examples against Marco and Wolf. It is more common when Black adopts a system with ...b6 and ...Bb7, when clearly there is no outpost on c5 and ...c7-c5 cannot be prevented. Again, Black can avoid or neutralise the bind, but you do get modern examples, like Portisch-Petrosian, Candidate's Match 1974.

Matt Guthrie once said that you can't recommend openings to someone without knowing what their current strength, recent repertoire and current goals are. So here goes... ;-)

I'm not sure what you find wrong with the Modern Defence (1...g6), which is structurally most similar to your other systems and can be used with a lot of the same ideas. If you are wary of conceding White a flexible centre with possibilities of a King's-side Pawn storm (and who isn't!), then you can use Gurgenzidze's interpretation with ...c6 and ...d5 instead of ...d6. This often tempts or obliges e4-e5, with a formation a little like a French.

Of course, if you don't mind that, you can always play the French Defence itself, although some of the lines (like the Tarrasch) may be more open and fluid than you would prefer. But it's a good solid defence, with lots of chances of getting the better of your opponent.

(Mark S. Hathaway) writes:

>

>"Meaning" is, to some extent or other, a fiction. In the end only the
>move exists and it will stand on it's own merits regardless of any
>meaning.

Ah, the post-modern variation (Derrida-Foucault, Paris 1983). It is refuted by the materialist attack (Hume-Engels, London 1881). "A move", a real move, always has meaning, it is the idea of "the move" which does not exist. Really, only the starting position has no meaning. Once a move is made, we see it made by a human hand, driven by conscious thought, motivated by conscious intentions, and thus saturated with meaning. Actual moves made by players can always be enquired after, although these enquiries may be met by refusal, or misleading responses.

The "move" of which you speak, free from these brute realities of play, the platonic ideal, never exists in its pure form, we only ever see concrete instantiations of it embedded in a context of play, where each player tries to substantiate (or otherwise interact with) the meaning of the move by their subsequent choices.

P.S. The enquiry of the original poster might best be referred to the book "How to play the Sicilian Defence", by David Levy and another chap, which discusses the ideas behind the various central formations. Helpful, I thought.

P.P.S. Stay tuned for the dialectical variation (Hegel-Marx, Frankfurt 1886), where the thesis, the argument that motivates the move by one player, prompts the antithesis, the reply, and the continual evolution

and interplay of replies (which are also moves in their own right) results in the thesis that we call the game. This quantitative progression of moves is eventually transformed into a qualitative difference, the result. It is thus, not ideals like "moves", but the dialectical interplay of ideas which is the motor of the chess game, and results in the perfect State, namely, winning and going to the bar afterwards.

>in ANY line of the QG, accepted or declined, that covers Ne2-g3. Is this
>actually a bad thing to do, or do I need to dig a little deeper?

The N is usually better on f3, as it controls e5. You might delay putting it on f3 un case of ...Bf8-b4, when Ng1-e2 might be preferable. If Black lets you move all your pieces over to the King's-side, fine, but usually you need the centre to be fixed or at least firmly under your control before you do. Otherwise, Black can blow up the centre with ...c5, or, if your Knight has been posted on f4, ...e5.

The only time I've seen it on e2 is when ...e6-e5 is impossible, viz. after c4xd5, e6xd5 (Exchange variation). White can play the Exchange at move 3,4,5 ... but an early exchange allows this alternative setup with Ng1-e2. One idea is to play f2-f3 and e3-e4, perhaps with O-O-O, but some folk use it just to get control of f5. You will find analysis on this in the books (promise!).

This is an idea of Alekhine's, but has had outings since:

A Devon dumpling is hurled into the arena:

Statistically, an expert has an expected percentage score which should maintain their rating and status - say, 80% against opposition whose average rating is a couple of hundred points below them, or 20% for opposition which outrates them by a similar margin. So, theoretically you should be able to maintain any rating against any standard of opposition.

Anecdotally, this seems not to be the case. Is there a contradiction here? Maybe not.

Also anecdotally, I play better against better opposition. My average rating (BCF grade) against opponents who are better than me is much higher than my performance against players worse than me, in any given season. I don't know if the lower-rated player plays better, the higher-rated plays worse, or a bit of both, but it is a consistent feature of my chess for the last twenty years. Just my chess? Maybe not, and this would account for the class of the "lonely experts" dropping.

P.S. I remember reading a letter, perhaps from one Jonathan Berry, where complaints about the ratings system in his country fell into two categories:

1. My rating is too low.
2. The ratings of players from my town/county/state are too low.

He concluded, that, in the absence of any other complaints, one can assume that the system is working perfectly!

>queen pawn for his king pawn by 5. ... c5 (e.g.). So the best line is
>5. d4 ed Qd4: Qd4: Nd4: Bc5

Whoa! The point of 5. O-O as played by Fischer (pioneered by Barendregt) is to reinforce the threat to the e-Pawn. Every schoolchild knows that 5. Nxe5 Qd4!, but if White has castled, taking the e-Pawn is a real threat (5.O-O c5? 6.Nxe5 Qd4 7.Nf3 Qxe4?? 8.Re1), and not convenient to defend:

e.g. 1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6 5. O-O f6 6. d4 exd4
7. Nxd4 c5 8. Nb3 Qxd1 9. Rxd1 and compared to Lasker's line 5.d4, you

are ahead in development.

Black can try other defences e.g. 5...Bg4, and even the line 5...f6 illustrated is by no means prospectless for Black, but the point is 5. O-O is played as a refinement on the old 5. d4.

If you really insist on playing the ending, then 5.d4 is right, and keeps things simple, but keeping an option on the middlegame is OK too.

A good place to start looking at 5. O-O, if you don't have a book on the Ruy Lopez, is probably Fischer's "My 60 Memorable Games", although the recommended lines have moved on a bit since then. I think it's also covered in Mednis "From the Opening to the Endgame".

(Travis Kidd) writes:

>On an internet chess server I played a game as white and it went like this:

>1) e4 e5 2) Qh5 Opponent: I've seen this trick before! :-)
>2) ... Nc6
Me: damn 3) Bc4 Nf6 Opponent: doh 4) Qf7 checkmate.

>I believe that my having said "damn" was one of the reasons that I won so
>quickly.

[...] I wonder if there are any other anecdotes out there

There is a famous example:

"Here Gunsberg picked up his Kk4 (f3) with the evident intention of playing it to R4 (h4). He even placed it on that square, and then hastily retracted the move. After a while Gunsberg picked up the Knight again and played

20 Kt-R4 (h4).

As he did so he shook his head and shrugged his shoulders as if to say 'I'm bound to move this piece, and I can't see a better place to put it'.

20...QxBP (xf2).

Steinitz played this move without thought. In view of what had happened he was quite convinced that his opponent had overlooked, until too late, that his KBP was unprotected.

21 Kt-K4 (e4).

Rude awakening. The only move for the Black Queen is to K6 (e3), but then comes 22 B-QB1 (c1)*, and the Queen is trapped in mid-board.

Black resigned...

We must make it clear, however, that Gunsberg's tactics are not to be condoned. After the game Steinitz pointed out that Gunsberg had been the victim of similar tactics, in a match-game with Chigorin, and on that occasion Gunsberg had been extremely angry."

(EUWE AND KRAMER, The Middle Game Vol I.)

>Also, are there any rules which govern "expressions of opinion" during >tournament play?

I think just that you are not supposed to distract your opponent, which should cover everything.

From the FIDE laws - Article 15: The Conduct Of The Players

=15.1 Prohibitions:

=

=[...] (d) It is forbidden to distract or annoy the opponent in any =manner whatsoever. This includes the persistent offering of a draw.

=

=15.2 Infractions of the rules indicated in Article 15.1 may incur =penalties even to the extent of the loss of the game (see Article =16.5).

My own contribution to cheating at chess in this way was in a game in my first year at the Exeter club, when I sat down to play the Black side of a Queen's Indian against a very cocky young man from Totnes, who outgraded me by a street and had just had a storming tournament success.

I analysed at move 15 and saw that at move 19 White had a choice between a move giving a dead equal position, and a very tempting try that just catastrophically overstretched his position.

So, I offered a draw at move 15 in a fairly loud voice, so people on each team looked over to us.

He declined rather abruptly, searched for a punishing blow, snapped out the sequence leading to the catastrophe, realised it lost a piece, resigned, went off in embarrassed huff.

I'm sure if I hadn't made him badly want to find a nice crisp win at #15 he wouldn't have blundered. On the other hand, it was at #15 that I assessed the proper result as a draw. Unethical? I think so. What do others think?

BTW I was so ashamed at succeeding with this ruse, I don't do that sort of thing any more. Much.

>tough to follow, mainly because of the descriptive notation, which is a
>real pain to work with. Also, some of the writing is awkward to read - I
>think it loses something in the translation.

I think the writing is wonderful! - it must be one of the most-quoted
books around. Can anyone improve on his endgame advice?

"Passed Pawns must be pushed!"

"Every healthy, uncompromised majority must be able to yield a passed Pawn."

"The passed Pawn is a criminal that must be kept under lock and key.
Mild measures, such as police surveillance, are not sufficient."

"With every step nearer the endgame the power of the King increases.
You should throw him without fear for his safety where the battle is
thickest."

Anyhow, it's probably one of the best introductions to most modern

strategical ideas - with some genuinely striking games.

"Nimzovitch became then for me more or less the author of the only book which could help me get away from these Euwe books, which, I admit, are very good for the ordinary club player. But once you've reached a certain strength you get the impression that everything that Euwe writes is a lie."

-- Bent LARSEN, in KEENE, Nimzowitsch: a reappraisal.

But, as I said in another thread, I suggest reading it with a pinch or three of salt. I wonder if other readers would salt the same passages as myself? Off the top of my head, I'd mention:

- a. the lines 1. e4 e5 2. Nf3 d6 3. d4 exd4 4. Nxd4 and
1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4
are strategically important and may be good practice, but the feeling these days is that they do give up the centre too soon.
- b. the whole idea of prophylaxis as a positive strategy I don't think has ever been universally accepted
- c. is it really a system? or a set of ideas you can use in games? I think my vote would be for the latter - I never really got the idea of a "system" at all
- d. generally, Nimzo fancied himself as a thinker and, perhaps in common with the feeling of the time, may have regarded strategy as somehow a higher calling than tactics. So in his book and his annotations he emphasises strategical elements, but usually there's a pretty busy tactical argument going on as well. Modern annotations are more inclined to emphasise the dynamic and tactical features of positions - partly because the modern game is more dynamic, but I think a modern GM would annotate Nimzo's games with a different emphasis.

Anyhow, that's my tuppence-worth. Any more?

>The only difference I can be sure of is that the master
>sees more tactical possibilities than the non-master, and
>calculates further.

The things is, you could swap all the occurrences of "strategy" and "tactics" in these two paragraphs and it would all still make sense, and be as true. [For example, Znosko-Borovsky famously said that the number of tactical ideas is limited - forks, double attack, etc.].

Masters are masters because they are better than us at both strategy AND tactics, and better at spotting opportunities of both kinds, and have more instantly available experience of each.

I've just read John Nunn's Best Games book, and the instructional examples - and why his opponents lose - are of tactical and strategical types, and more often than not a bit of both. I think it goes quite a long way to illustrating the differences between masters

and experts.

e.g. strategical insight:

NUNN-GELFAND

"As a young player I was puzzled by games in which White played the manoeuvre Nc2-e2-g3 against the Pirc. It seemed to me that the Knight was not very well placed on g3, because Black's g6 pawn prevented the Knight advancing. Indeed its one and only duty seemed to be to defend the pawn on e4. Then, in 1984, I lost a game with Black against Murray Chandler, in which he used precisely this manoeuvre. The crucial distinction is whether White is attacking or defending. If White doesn't hold the initiative then the Knight on g3 is truly inactive, but if White holds the initiative and has pressure in the centre then the Knight can be very useful. The Rooks and Queen operating on the open files are so dangerous for Black that he cannot counter them directly; instead, Black must somehow aim for counterplay. The only weakness in White's position is the vulnerable Pawn on e4. If this is secure, then White has plenty of time to improve his position. The function of the g3 Knight is precisely to support the e4 Pawn and give White the freedom of action he needs to step up the pressure."

-- NUNN

e.g. mixed strategical/tactical insight:

NUNN-MESTEL

[18. h6 when:

18...Bh8 19. h7+ Kxh7 20. h5 +-

18... dxc3 19. hxg7 Kxg7 20. Rxd6 +-

18... Bxh6!! 19. Bxh6 Nxb3 20. axb3 dxc3]

"When conducting a sacrificial attack, it is very important to consider lines in which the defender returns material in order to exchange some attacking pieces. If the attacker has made positional as well as material concessions, then the defender may even be satisfied with a final material balance in the opponent's favour, as he may even have a positional advantage or even a counterattack in compensation."

"The move 18...Bxh6! is very hard to see, because it is very unusual for Black to give up his 'Dragon' bishop voluntarily, least of all for a mere pawn."

-- NUNN

Now, if you are still with me, Nunn is a demon attacker and a theory nut, but his games aren't driven by "98-99%" tactics. Positional play is the basis for combinational play, and while I don't doubt he can out-calculate many of his opponents, the strategical insights are also important.

> Sometimes, when I play a game, I like to play purely
>strategically. Especially when the game is a hard fought
>one you get a certain sense of satisfaction knowing that
>it has some sort of theme or idea in it, and it becomes,
>in a way, sort of like a work of art. Against this tendency
>are the purely tactical elements of the game which one
>is forced to consider. And this somehow destroys the
>overall aesthetics of it.
>
> - DougRockacy, FICS(2050)

I have a lot of sympathy with this - I've never played anything you could call call artistic, but I do tend to think of the strategical ideas of chess as more attractive than the tactics, which seem more mundane. I often like Nunn's verbal strategical comments more than his usually very attractive and instructive variations. It's a sort of romanticism, I suppose.

[I wonder if it's related to the sort of snobbery that exists between 'pure' and 'applied' science, or between the professions and the trades - somehow the intrusion of the grubby details of the world is demeaning to my sphere of ideas... Just thinking aloud, flames redirected to alt.dev.null]

>In case you do not have Reuben Fine's "Chess Marches On" I will give you
>what Fine said about, Strategy and Tactics. "Thirty years ago (this was
>written in 1942), Teichmann said that chess is 99% tactics. And despite
>the enormous strides of chess theory since then, his percentage can only
>be reduced a few points

Richard, thanks for posting this, I think it is very interesting.

I think in fact we don't know a great deal about chess: the vast bulk of games at most levels go unscrutinised (at least publicly), and those that do get examined and published may be both untypical (e.g. a brilliancy) and be annotated in a self-serving way. There has often been noted another tendency in published games, for the tactics to be suppressed in annotations in favour of the strategical side.

I agree at club level (say, up to 1800 ELO) games are often marred or decided by tactical oversights. But what about a 'typical' master game? How many errors does it contain, and of what type? We have now an abundance of master games available, say, from TWIC and the archives, but no error analysis.

It would be an interesting exercise to take a tournament book where every game is analysed, and go through it, counting:

- number of errors
- size of error (?! ? ??)
- nature of error (tactical/strategical, oversight/misevaluation, how many moves deep)
- consequences of error (= to +/-, += to +-, +/- to 1-0)
- context (time trouble?)

I no of no such analysis of master or amateur tournaments. [I have got a stack of games from the East Devon Minor tournament which I intend to go through one day.]

I think only after such a count would I believe Fine's conclusion that "most games, even between the greatest of the great, are decided by tactics or combinations which have little or nothing to do with the fundamental structure of the game". The Alekhine-Euwe matches may be an example, but the style of the players, the tension and the alleged drunken state of Alekhine may have increased the proportion of games decided by tactical oversights.

My guess is these match games are not typical of most master games, certainly not nowadays: I hear more about "percentage chess" and "playing inside the margin of the draw". One must also recall Alexander's observation that blunders only occur in lost positions!

It may be that aspects of style (i.e. a player who avoids tactical positions) would confound such an analysis of tournament games, but I'd be interested to see it done anyhow. I don't own a tournament book suitable i.e. literally every game analysed, preferably not by the players themselves. Could anyone take this on? I see some difficulties in assigning errors to classes e.g. Gligoric failing to play Rf7+ in a Rook ending against Fischer in 1958: was this a failure of analysis (tactical error), or a failure to assess the position as containing such a resource (positional evaluation)?

Anyhow, it made me think!

How do you feel about the Stonewall set-up? I've been wading my way through a collection of games from minor/intermediate tournaments (ELO 1000-1400, 1400-1600 - class "D"/"C"?) and I was struck by the number of Stonewalls played as Black and White. The rigid centre seems to simplify things enough for players at that level.

"Don't judge a book by..." ;-)

I've just read the Gufeld title and while I had no problem with it as
a book I wondered who it was aimed at. It suggested that the Sicilian
Defence is met 90% of the time by 2. Nf3 - which at Gufeld's level it
might be, but down in the shallow end...

The opening systems chosen seemed really heavyweight, and the analysis
was pretty dense (lots of moves, few comments), all of which suggested
that it was aimed at a strong player with a great memory and appetite
for work but with not enough opening books. The more usual book buyer
is probably someone like me, not very strong, can hardly remember
their own name, but with too many opening books.

>more going on that opening than many people think. Move order makes a
>great deal of difference.

Thank you for your interesting comments, which I'm sure are absolutely right, but did you wonder why these folk persist with the system? In practice, the Stonewall Dutch seems to do all right, although at this level games are usually decided for reasons that have nothing to do with the opening.

In these examples of the Stonewall Dutch most White players either adopted a stereotyped set-up, e.g.:

d4 c4 Nc3 Nf3 Bg5 e3 Bd3 O-O

d4 c4 Nc3 Nf3 g3 Bg2 O-O

d4 c4 Nc3 Nf3 e3 Be2 O-O b3 Bb2

or played one of the "anti-Dutch" lines without c4 and with an early e4.

I might suggest that your comments on move order, although they may not be beyond a C-class player, are in practice unknown to them.

Similarly, as Black against the Stonewall with 1.d4, most folk just trot out a standard move-order (e.g. ...Nf6 ...d5 ...c5 ...Nc6), instead of adopting a system specifically designed to combat it (with ...d6 or ...Bf5).

The advantages of the Stonewall for players of White or Black in these classes are that it gives a familiar set-up with chances of a King's-side attack. I have seen the Stonewall succumb to White's recommended Queen's-side attack, but only in A/B classes (Major tournaments). The QGD may be a better opening, but is more passive. C/D players of Black are inclined to think it no fun, and may drift when they play it. With the Stonewall, I guess they think they know what they are supposed to be doing, and can easily take over the initiative.

We have had a thread "what is the best opening for a beginner?", without it being clear how much of a beginner we were talking about.

I think re. the Stonewall:

- I wouldn't talk about to a player below class D,
- I would suggest it to C/D players who were meeting 1.d4 in practice, and
- thanks to Randy, I would be able to demonstrate some problems of move order to players of A/B level.

There is a cheap collection of games under the Dover imprint by
Dubois, but if you're looking for instruction it leaves a lot to the
reader.

One of the best references on Steinitz is Lasker's Manual of Chess,
although it obviously won't have much on the development of ideas
since Steinitz. There's a little of the latter in Keene's
"Nimzovitch: a re-appraisal".

Obviously you can't use a chess book, but I think there are some interesting theoretical questions about what book to bring.

I remember a college player who leant on a copy of the London "Times", open at the crossword page which was of course completed. He then followed this up with a novelty - leaning on a copy of Wittgenstein's "Tractatus Logico-Philosophicus".

The showdown came when he met an opponent who was leaning on a piece of lurid pulp fiction - "Cannibal Chainsaw Teen Orgy" or somesuch. It was like seeing the English Opening met with the Grob. Result? 0-1 to the Chainsaw.

Chess bookstalls ought to stock a few of these so the research can continue.

>Wouldn't it be better to come up with a classification system based on the

>characteristics of the position, so that every position is classified just

>once? (Probably easier said than done, I know.)

>

But the easiest way to define opening positions is by the preceding moves. After "1. e4 e5 2. Nf3 Nc6 3. Bb5 f5" you will get a chorus of "Schliemann!" from a group of chess players, but what on earth is "r1bqkbnr/pppp2pp/2n5/1B2pp2/4P3/5N2/PPPP1PPP/RNBQK2R", what would you call it, and how would you index it?

Transpositions will be the bane of any classification system anyhow. The well-known transpositions between the Caro-Kann Panov Attack and the Nimzo-Indian, or the Panov and the Semi-Tarrasch, will still need to be noted. The latter is:

1. e4 c6 2. d4 d5 3. exd5 cxd5 4. c4 Nf6 5. Nc3 e6 6. Nf3 Bb4

or

1.d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5 5. Nf3 cxd4 6. exd4 d5

Now, say 98% of games starting 1.d4 Nf6 2. c4 e6 3. Nc3 Bb4 don't transpose to positions that arise by other move orders, so it's pointless not calling this the Nimzo-Indian Defence. Similarly for the Caro-Kann. Call them anything else but the Nimzo and Caro and we're all in more trouble than when we started. Classify under B14 or E40-something? I don't mind which, as long as you refer me from one to the other.

Even if you set up a whole system based on the definitions of

positions, what you would want to do with it is to examine the theory and practice of games with that position using various moves and move orders, and then you are back trying to spot and reference transpositions. And planning how to get to that position in a game, you need to be able to spot and use transpositions and move orders.

Unless we go back to the ancient Arab practice of starting from certain fixed start positions ("tabiya") this will always be with us.

[Good thing too: I'm always trying to use move order to get my opponents to play lines/positions that I don't think they know, on the basis that I'll play anything!]

yes.

Why? Because the beginner's opponent's will generally be similarly
disadvantaged. The games will be wide open tactical battles -
interesting, absorbing, and fun! Two beginners can begin their chess
careers exploring, with fresh eyes, that great sea of possibilities.

They may also learn that a little research can earn them a few quick

Sure.

Do you know any beginners (or other players) who play the Wilkes-Barre?

How do they get on?

In our club they love it and they win with it.

As far as i'm concernbd, that's a QED.

> Actually, I have plenty of "video's". I would, however, be interested

>in VIDEO recommendations. :)

;:-)

I don't mean to hijack the thread, but why are you interested in videos especially? I think they are mostly poor value compared to books.

I suppose a really good video can be better than a so-so book, but I don't think chess is a very suitable subject for video.

I have a "GM Video" tape on the King's Bishop's Gambit by Andrew Martin, which cost me 17.99 pounds sterling, and I also own a book on the King's (Knight's) Gambit by Joe Gallagher, which I think cost me a little less (say, 13.99).

Firstly, in order to get the most out of it I actually ended up transcribing the analysis [so that I could cross-check it against books, see if I could find the lines on a database, and so on.] A good video would have this included; you can't zip back and forth with the fast-forward button if you want to look something up, so it's essential for an openings video of this type.

The analysis and moves on the video, when transcribed, comes to about 2 sides of A4. Say, about 4 pages of an A5 book; with commentary added, this would come to maybe 8 sides. If I'm way out, and it's actually 16 sides-worth, then it's still only a fraction of the content of a book - a chapter, perhaps.

So, is the charm of the presenter or the increased impact of the video format worth it? I'd guess not. Is the content of the video something really special?

The commentary was fair but nothing very illuminating: I didn't get that "aha" feeling that I sometimes get when reading good explanations. How about the moves displayed? In this case, half the games and analysis I had seen before (hey, guess which book it was all in?), and the new stuff, while interesting, wasn't really worth the extra.

Opening innovations have rather a short shelf-life; if you're lucky you can play them once in your local club, after which your cover's blown... and even against strangers, the line is viable only until the antidote is found by some GM, when you need your books again. In fact, for every super new idea that was on the video, I bet I could think of one that would leave a naive new player of the King's Gambit stranded without much of a clue (e.g. the common ploy to transpose into the Cunningham Defence with 3. Bc4 Be7, or to the Modern Defence with an early ...d5 from either the 2...exf4 or 2...d5 move orders).

In short, I would have preferred to pay 2.99 for a pamphlet on "New Ideas in the King's Gambit" by Andrew Martin, than 17.99 to get the same stuff on video.

Anyhow, that's my tuppence-worth. Maybe if I had started with a different video I might have bought more by now.

I have seen a video of one of the K-K matches, with interviews and "live" match footage, which I thought worked quite well, and made good use of the video format. But the topicality might of that one might wear off pretty soon too.

>I lose several games playing like this, especially against my computer.
>Finally, I say to hell with Fine and play Bc4 and aim to actively
>control d5 (f4, f5, Bg5, Bxf6, etc...). I start beating my computer.

They say a player with a plan will always beat a player without a plan...

Maybe a better way to say it is that all moves have positive and negative features. ("Some part of a mistake is always correct"). If you can argue the positive side better than your opponent can put the negative side, you will win. I have often been frustrated by opponents who play an opening (like the reversed Grob) that I think is unsound, but they beat me with it! [I still believe the opening's unsound, but I've discovered I don't play the White side of the positions well enough...]

>I tell this to my friend who looks in his new version of Fine's book
>where it now says "it used to be thought that Bc4 was bad. now it's
>the best move."

Well, Fine's book is fifty years old, and openings are the most busy area of chess. I'd say most of Fine's judgements are pretty good and have stood the test of time better than some books that have come out later, mostly because the heart of the book is ideas rather than variations. (For example, the 197? RHM title on the Caro-Kann needs supplementing with material on the advance variation, which has been

the big growth area of the C-K in subsequent years). Despite his dismissal of things like the King's Indian, if I am teaching an opening I still look in Fine first.

By the way, are we talking the Closed Sicilian with 2. Nc3 and f2-f4 here, which I call the Grand Prix attack? I expect that Bc4 will go out of fashion again; players like Hebden who pioneered and popularised The GPA have been giving it up because antidotes have been found. I don't know how many players would still say the system with Bc4 is best. Fine underestimated it, sure, but what he said was wrong about it is still wrong - that is, players of White are still finding the Bishop in trouble after ...e6/...d5/...b5/...c4

P.S. I didn't know there was a new edition of Fine: could you provide details, please? Off the top of my head, the major things that I remember having to revise from Fine are:

King's Indian Defence (general)

Open Sicilian with ...e5

Closed Giuoco Piano with d2-d3

Pirc/Modern defence

>wow! what a turnaround. now i start to wonder what *else* i'm
>missing by using some 2nd hand books. obviously, books about openings
>will change the most. this is fine (pardon the pun) because i don't
>really use too many openings books (at 1600 my friend and i are out of
>book after 5 moves!). last night i picked up older editions of
>soltis' "Art of Defense in Chess" and Znosko-Borovsky's "Art of a
>Chess Combination". do you think there have been any major changes
>in these books in the recent editions (other than moving to
>algebraic)?

I didn't know there were algebraic editions of these either! But I'd say you were pretty safe with both of those - again, ideas will have dated less than variations. I think they are both good books; in fact, I don't know too many non-opening chess books that have dated so badly that I'd give you a caution on them. The ones that need a caution are the ones that have always needed a caution, like Nimzo's My System. (</flamebait>...)

There is an excellent article by Tim Harding at

<http://www.chesscafe.com/KIB2.ASC>

I found it didn't display well on my browser because it didn't have
line ends but I think it has the sort of content you are looking for.

The Kibitzer

by

Tim Harding

NOTEBOOM OR ABRAHAMS: WHOSE VARIATION IS IT ANYWAY?

How to name variation- after their true originator or after the person
who introduced them to master practice or the place where it was first
played or on some other principle?

8x----- huge snip -----x8

The question of who should be given the credit remains unclear. Before you can say who introduced the variation into master practice, you have to decide what move (or group of linked moves) constitutes the variation because clearly 4...dxc4 followed rapidly by one or more poor or inconsistent moves does not make a true anticipation of the variation. Nimzovich was after all not the first person to play 3...Bb4 after 1 d4 Nf6 2 c4 e6 3 Nc3 and there are several other such cases. It is also a little unfair to disqualify Abrahams on the grounds that his game with Allcock does not count as introducing the variation into master practice, his victory over Ragozin being 16 years too late, when he was after all analysing and playing the line in the intervening years. In practical terms, however, I think that the Dutch have been allowed to win this argument by default!

As a postscript, I found the following game by Alekhine in one of the databases at the Pitt.edu ftp site. Does anybody know the source of it or who was Black?

Alekhine-Amateur, Paris 1928: 1.d4 d5 2.c4 e6 3.Nc3
c6 4.Nf3 dxc4 5.a4 Nd7? 6.e4 Bb4 7.Bxc4 Qa5 8.Bd2 e5 9.0-0 exd4
10.Nxd4 Qc5 11.Bxf7+ Kxf7 12.Qb3+ Ke8 13.Ne6 Qe5 14.Bf4 Nc5 15.Qxb4
Qxe6 16.Qxc5 Ne7 17.Rfe1 Ng6 18.Nd5 b6 19.Qc3 Kf7 20.Nc7 Qg4 21.Bg3
Rb8 22.h3 Qd7 23.Rad1 Qe7 24.Bd6 Qf6 25.e5 Qf5 26.e6+ Bxe6 27.Nxe6
1-0.

>Why do some players move 3.Nd2 in the Caro-Kann instead of 3.Nc3 as the

>knight recaptures on e4 in most variations whichever square it goes to

>initially. Does Black have some additional ideas if the knight is on c3?

>

Usually 1. e4 players are after an open game, but after 1.e4 c6 2.d4 d5 3.Nc3 Black can go 3...g6 and tries to force/tempt e5 and get a white-square blockade (Gurgenidze system). This is a bit like the French but the prospects for a King's-side blockade are better and the Bc8 hopes to get out to g4.

After 3. Nd2 g6 White can play 4.c2-c3 with a better set-up than in the Nc3 Gurgenidze (5. Bd3 is on, for example, whereas with the N on c3 instead of the P 5...dxe4 and 6...Qxd4 is available).

And if 3...dxe4, 4. Nxe4, and we're back on course.

>Hi All,
>
>I'm looking for advice on how best to reply to 1.d4...

1. d4 is hard for Novices to handle for either side; you can get into dreadful blocked positions where neither player gets any ideas...

The Queens' Gambit Declined is too dull.
The Queens' Gambit Accepted is too loose.
The Slav Defence is too fashionable.
The King's Indian is too difficult.
The Queen's Indian can be avoided.
The Nimzo-Indian is too complex.
The Budapest is too well-known.
The Benoni is too cheap.
The Benko is too.

So play... the Dutch Defence, 1...f5. Aim at a Stonewall formation with ...d5.

>reply could spend a moment describing why they prefer the line they
>recommend

It can be interpreted simply, is unavoidable, and provides some room to grow (i.e. can be interpreted in a more flexible way later, with ...d6 and/or ...g6).

>and what circumstances/opportunities this line is aimed at
>creating...

A King's-side hack!

YMMV.

I don't understand the Leningrad...

I don't know how much study material a novice needs on the Stonewall - it depends what standard of novice! I don't know of a dedicated book for Black (there are some for the system played as White) and so one could beg/borrow/buy secondhand the following titles:

As an introduction to the defence there are some nice Botvinnik games in his "100 Selected Games", and there is a nice discussion in Euwe and Kramer's "The Middle Game, volume I". More advanced material can be found in Bellin's "The Classical Dutch", and there is also a chapter in one of Dvoretzky's books for Batsford - "Opening Preparation", I guess.

I would be interested to know of any others.

I composed some notes on the Stonewall once (my first ever set of notes, I think) which are on the web, address below. I don't think they are very good, but they might get someone started OK.

>pointing out opening theory or correct endgame play to mere mortals,
>you know?

1. If a C player sees a question posted to which they know the answer,
I see nothing wrong in them replying. The only thing that could be
a problem is if they don't know their limitations, but I haven't seen
that as much of a problem.

2. It seems obvious to me that experts can help A players, and indeed
A players can help A players. We discuss things after team games in
the club all the time; this is just a public way of doing that.

What's your beef? May be even IM contenders can learn things from
posts by inferior players.

3. If mere mortals had to wait for an IM to post an answer there would
be no traffic on r.g.c.*

It never occurred to me to think, I wonder if the r.g.c FAQ is
written by an IM, if not I'd better ignore it...

>make the moves on the fly using guiding opening principles?

Making the moves on the fly using guiding opening principles is what we all have to do once we are out of the book, which in most people's case, is pretty early on!

There is no cure for being out-thought in the opening. But don't try and learn more than you need. Learn about only those openings that you meet, and then, learn principles and ideas as much as variations.

I heard about a player who devoted hours to learning a bust to the Latvian Gambit (1. e4 e5 2. Nf3 f5). Hours. Of course, it was all wasted, because noone plays the Latvian, but just in case ... And then the day came when someone played the Latvian against him! And his opponent deviated from his analysis... shaken, he went wrong and drew, but was back the next club night to demonstrate a carefully analysed refutation...

So, play your Lopez or your other favourite opening against other players your own strength. If someone starts playing the Sicilian against you then learn that one. Someone at your club can teach you a system that will suit you.

What were your Lopez plans? Were they very different from "guiding

opening principles"? i.e. Fast development towards the centre? Open lines to exploit a lead in development? Move over and attack the King? I think if your Lopez intentions went 1. e4 2. Nf3 3. Bb5 4. O-O 5. Re1 6. c3/d4 that would work fine against the Sicilian! But against the other defences, you might have to try a different approach.

However, you don't have to learn very different systems against each half-open defence. For example, if you like gambits, then play a gambit against the lot. If you like the King's Indian Attack, play that against the lot. If you like space advantages, go for those lines, e.g.

Alekhine (1. e4 Nf6)

Four pawns variation (1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. d4 d6 5. f4)

Caro-Kann (1. e4 c6)

Advance Variation (1. e4 c6 2. d4 d5 3. e5)

French (1. e4 e6)

Advance Variation (1. e4 e6 2. d4 d5 3. e5)

Pirc/Modern (1. e4d6/...g6)

Three Pawns Attack (1. e4 d6 2. d4 Nf6 3. c3 g6 4. f4)

Sicilian (1. e4 c5)

Big Clamp Variation (1. e4 c5 2. d3 (...) 3. f4)

There are other defences but you rarely come across them, even at Expert level.

Hope this helps

>can provide the following advantages for "beginners":

[...]

>

>That opening is the "hippopotamus"

Orthodoxy suggests:

Beginners playing opponents of a similar standard should play open games.

Beginners playing opponents who are clearly better should play open games.

In the hippo you often get a closed, if not cramped, game.

Beginners usually find they don't understand or enjoy the blocked, messy positions that result. They don't understand when they lose against better players, and they don't even understand what was going on if they win against players their own or lower standard.

In open games, even if they lose, they have fun, and can understand where they went wrong. It's also a style that is more likely to upset a better player than keeping things closed and under control.

Morphy,P - Meek,A []
New York, 1857

1.e4 e6 2.d4 c5 3.d5 e5 4.f4 d6 5.Nf3 Bg4 6.fxe5 Bxf3 7.Qxf3 dxe5
8.Bb5+ Nd7 9.Nc3 Ngf6 10.Bg5 Be7 11.d6 Bxd6 12.0-0-0 ... 1-0

Morphy,P - Meek,A (2)
New York USA-ch 2nd match, 1857

1.e4 e6 2.d4 g6 3.Bd3 Bg7 4.Be3 Ne7 5.Ne2 b6 6.Nd2 Bb7 7.0-0 d5 8.e5
0-0 9.f4 f5 10.h3 Nd7 11.Kh2 c5 12.c3 c4 13.Bc2 a6 14.Nf3 h6 15.g4 Kh7
16.Rg1 Rg8 17.Qe1 Nc6 18.Nh4 Qf8 19.Nxg6 Kxg6 20.gxf5+ Kf7 21.fxe6+
Kxe6 22.f5+ Ke7 23.Qh4+ Ke8 24.f6 Bxf6 25.exf6 Rxd6 26.Rxd6 Nxf6
27.Bg6+ Kd7 28.Bf5+ Ke8 29.Bxh6 Qh8 30.Rg7 Ng8 1-0

Now, not every player of the 1850s could expect to beat Morphy with
Black, but that's not the point.

I suggest that beginners seeing these games would find Morphy's play
attractive, engaging, comprehensible and would feel willing and able
to emulate the style. What he was doing right, they can do right.

But they would find Meek's play neither engaging nor comprehensible.
What did Meek do wrong? What plans should he have adopted instead?
What he was doing wrong, they would do wrong.

I'm not against closed openings, and I'm not against introducing
positional ideas to relative beginners, but your first opening should
be the Giuoco Piano. When you can beat beginners and real beginners
(ones that open 1...e5, 2...d5, 3...f6, 4...g5) in the Morphy style
with Morphy's openings, then you can move on.

>
>scott

I think you must have a copy of Reti's "Masters of the Chess Board". His better-known work is "Modern Ideas in Chess" which overlaps in some of its concerns.

I got a lot out of reading both of them, and guess you would too.

Reti writes very well, and with great sympathy and generosity for his subjects. I get a real pleasure out of coming across, say, the "Rubinstein variation" or the "Schlechter system", now I can call to mind Reti's pen-portraits and his exposition of their characteristic games. His prose has rather a longer stride than we are used to nowadays, and he is inclined to draw parallels with general cultural questions - he would never say, "it's only a game".

The strengths are in his enthusiasm and explanation of ideas, and, in the "Masters" book, a series of "asides" about the ideas behind particular openings. There is one statement from Reti which I typed out and stuck on the junior notice board:

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid the Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game"

I keep on at this one, if only because I wish I had heeded the advice when I was younger! Juniors are too keen to rush off to the Queen's-side, or worse, follow Basman into the realms of 1.h3...

Opening theory has moved on since Reti, of course, but to understand today's chess a historical perspective is helpful. In Reti's own words:

"We perceive after a careful consideration of the evolution of the chess mind that such evolution has gone on, in general, in a way quite similar to that in which it goes on with the individual chess player, only with the latter more rapidly."

I think that it particularly true of the Hypermodern school of which Reti was one of the principal members. He famously outplayed Capablanca in the opening which now bears his name, shortly before his life was tragically ended in his twenties by disease - scarlet fever, I think. I have a whole stash of chess quotes on the Web and Reti features heavily in it, mostly stuff from "Modern Ideas".

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one' "

There's some head-scratching material for a beginner! Another quote I liked:

"It is the aim of the modern school, not to treat every position according to one general law, but according to the principle inherent in the position."

If you read some of the Soviet school, you'd think this was peculiarly a post-war idea, but there it is in Reti years earlier. By contrast, some stuff in Reti has obviously dated - this from "Masters...":

"In general, it can be established that there are two defenses against 1. e4, which make it absolutely impossible for the first player to take any initiative, and which give Black such an even game, without any difficulties at all, that it has now become useless in practice, since these defenses are generally known. They are the Caro-Kann Defense and the variation of the French Game: 1.e4 e6 2.d4 d5 3.Nc3 Nf6 4.Bg5 dxe4."

My edition has a foreword by Jon Speelman which frowns a bit over Reti's opening pronouncements, and that is the thing which is most in need of a pinch or two of salt. For all that, the principles he expounds still hold good. Indeed, the Caro still has a reputation as being a hard nut to crack, and rehearsing the Burn variation with 5. Nxe4 Be7 6. Nxf6+ (6...Bxf6, 6...gxf6) I found useful at one point in my life as the ideas behind it are important.

Lastly, an example of Reti's inclination to philosophy, which I find inspiring but others may find pretentious:

"A combination composed of a sacrifice has more immediate effect upon the person playing over the game in which it occurs than another combination, because the apparent senselessness of the sacrifice is convincing proof of the design of the player offering it. Hence it comes that the risk of material, and the victory of the weaker material over the stronger material, gives the impression of a symbol of the mastery of mind over matter.

"Now we see wherein lies the pleasure to be derived from a chess combination. It lies in the feeling that a human mind is behind the game dominating the inanimate pieces with which the game is carried on, and giving them the breath of life. We may regard it as an intellectual delight, equal to that afforded us by the knowledge that behind so many apparently disconnected and seemingly chance happenings in the physical world lies the one great ruling spirit - the law of Nature. "

-- Richard RETI, Modern Ideas in Chess.

One last quote, about Reti rather than from him:

" Reti studies mathematics although he is not a dry mathematician;

represents Vienna without being Viennese; was born in old Hungary yet he does not know Hungarian; speaks uncommonly rapidly only in order to act all the more maturely and deliberately; and will become the best chessplayer without, however, becoming world champion. "

-- Savielly (Xavier) TARTAKOVER, Hypermodern Chess

The Caro-Kann Defence with 3. Nc3

=====

(White has alternatives, of course: 3.f3 is obscure;
3.e5 is the fashion; and 3. Nd2 is a finesse with the
aim of meeting 3...g6 systems with c2-c3)

Black normally take with the d-pawn here.

(But two alternatives have been tried: 3...g6
(Gurgenidze System), which aims to blockade on the
light squares, and 3...e6, which just goes into a
little huddle)

After 3...dxe4 White normally recaptures: 4. Nxe4

(But sometimes they play a gambit with 4.Bc4 and 5.
f3; an immediate 4.f3 is bad because of 4...e5, but
after 4. Bc4, ...e5 can be met with d4-d5)

After 4. Nxe4, the resulting half-open formation
concedes White some extra space; Black can normally
develop soundly then hit at the other central Pawn with
...c7-c5. Also, the Ne4 is a little unstable and can

be used to gain a tempo for Black. The defence has a reputation for dullness, and at master level is something of a signal that Black is content with a draw.

Black has a choice of lines:

4...Bf5 (Classical Variation).

This was Capablanca's preference, and the variation is sometimes named after him. White normally will chase the Bishop with some hopes of extra space and lead in development, but Black's game is sound. 5. Ng3 Bg6 6. h4 h6 7. Nf3 Nd7 8. h5 Bh7 9. Bd3 Bxd3 9. Qxd3 Qc7 is one example rehearsed at World Championship level.

4...Nd7 (Solid Variation).

This has been a growth area in this opening, adopted by Karpov and Speelman. The most aggressive approach by White threatens all sorts of sacrifices on f7 and e6 but Black can steer through them, e.g. 1.e4 c6 2.d4 d5 3.Nd2 dxe4 4.Nxe4 Nd7 5.Bc4 Ngf6 6.Ng5 e6 7.Qe2 Nb6 (7...h6 invites trouble!) 8.Bd3 h6 9.N5f3 c5 10.dxc5 Bxc5 11.Ne5 Nbd7 as in the Karpov-Timman match 1993. White can play more solidly: 1.e4 c6 2.d4 d5 3.Nc3 dxe4 4.Nxe4 Nd7 5.Nf3 Ngf6 6.Nxf6+ Nxf6 7.c3 Bg4 8.h3 Kasparov - Karpov Sevilla, 1987.

4...Nf6 5. Nxf6+ exf6 (Tartakower Variation).

An interesting try, rehearsed by the great counter-puncher Korchnoi, although it concedes White a Queen's-side majority. The Black King's-side Pawns can be used as a defensive mound or can advance to attack the White King's-side. One active treatment for White goes 6.c3 with the idea of ganging up on the b1-h7 diagonal. Kudrin - King [B15] London, 1988. 1.e4 c6 2.d4 d5 3.Nc3 dxe4 4.Nxe4 Nf6 5.Nxf6+ exf6 6.c3 Bd6 7.Bd3 0-0 8.Qc2 Re8+ 9.Ne2 g6 10.h4 Be6 11.h5 f5 12.hxg6 fxg6 ? 13.Bh6 Nd7 14.g4 Bd5 15.0-0-0 Bxh1 16.Rxh1 Bf8 17.Bd2 fxg4 18.Qb3+ Kg7 19.Rxh7+ Kxh7

20.Qf7+ Kh8 [20...Bg7 21.Qxg6+ Kg8 22.Bc4+ Kh8 23.Qh5+ Bh6 24.Qxh6#] 21.Nf4 1-0

4...Nf6 5. Nxf6+ gxf6 (Bronstein-Larsen Variation).

The unbalanced Pawn formation can be exploited with dynamic play by Black. The two half-open files give Black some extra opportunities although the Black formation is less solid than in other lines and it can be hard to place the Bc8. Perhaps the simple 6. Nf3 is best (when 6...Bg4 should be preferred to 6...Bf5), although many other moves have been tried (6. c3, 6. Bc4, 6. g3, 6. Be2, 6. h3).

>In <4031uv\$slq\$1@mhafm.production.compuserve.com>

Peter Sowray <100560.557@CompuServe.COM> writes:

>

>>Hi David,

>

>>Maybe you could try a repertoire along the following lines.

>

>>With Black

>>- Petroff Defence versus 1. e4

>>- Queen's Gambit Tarrasch Defence versus 1. d4 (and 1.c4, 1.Nf3

>>for that matter)

>

>>With White

>>- Giuoco Piano / Two Knight's Defence versus 1... e5

>>- Exchange Variation versus the French (with an early c4)

>>- Alapin Variation (2. c3) versus the Sicilian

>>- Panov Botvinnik attack versus the Caro Kann

I think these are very good recommendations. The system I would add is the Bc4 line against the Pirc/Modern.

In article <405edt\$4hg@hermes.acs.unt.edu> oauld@ponder.csci.unt.edu (Orion Auld) writes:

>All of these openings (as white) are detailed in "An Opening Repertoire

>for the Attacking Player" by Keene & Levy. (I think they recommend

>several lines v. the French, though). You might check that book

>out if you are interested.

>

>As black, ORAP recommends the Benko vs. d4 and the Pirc vs. e4.

This is ORAP, first edition. The only one you can buy new is the second edition, which recommends:

- Scotch against 1.e4
- 3.Nc3 against Petroff, 3.Nxe4 against Latvian Gambit
- Alapin 2.c3 vs. Sicilian
- Advance 3.e5/4.h4 vs. Caro-Kann
- Advance 3.e5/5.Be3 vs. French
- Byrne 4. Bg5 vs. Pirc/Modern
- Main line vs. Centre Counter (Scandinavian)
- Exchange variation vs. Alekhine's

- Black vs. 1.e4: Centre Counter gambits
- Black vs. 1.d4: Tchigorin Defence
- Black vs. 1.c4: Dutch system
- Black vs. 1.Nf3: Tartakower system (1...d6 2...Bg4

[IMHO if you're going to go for a Dutch, play it against the lot.]

I think the only recommendation that lasted into the second edition was the Alapin Sicilian. The first edition ORAP rather famously recommended the Gunderam Variation against the Caro: 1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4 Nf6 5.c5?! which is a waste, and the 3.Bc4 variation against the Latvian, which has to be what Black was hoping for.

>game that changed that opinoin?

3. d5 in that position, or just d4-d5 generally? I don't know about a single game, but there were discovered methods of putting the central phalanx under pressure with moves like ...f5 (I remember a game Whiteley-Keene, and one on TV between Donner and Miles) and ...Qh5 (as in a famous Karpov-Miles game). As far as my ailing memory functions, it offers:

Whiteley-Keene: 1.d4 e6 2.c4 b6 3.e4 Bb7 4.Nc3 Bb4 5.Bd3 f5 6.d5 fxe4 7.Bxe4 Qh4 ... (0-1, 30?)

Donner-Miles: 1.d4 e6 2.c4 b6 3.e4 Bb7 4.f3 Bb4+ 5.Nc3 Qh4+ 6.g3 Bxc3+ 7. bxc3 Qh5 8. Nh3 f5 (0-1,50-odd)

Karpov-Miles: 1.d4 b6 2.c4 Bb7 3.d5 Qh5!?

I think most folk have gone off ...b6 since then, as White has found less ambitious but more secure ways of maintaining the centre, either by adopting less of a centre or by anticipating ...Bb4 with a2-a3:

1. e4 b6 2.d4 Bb7 3.Bd3 e6 4.Nf3 c5 5.c3 Nf6 6.Qe2

1. e4 b6 2.d4 Bb7 3.Nc3 e6 4.a3

1. d4 b6 2.c4 Bb7 3.a3

But I imagine it's still in Tony Miles' repertoire occasionally. ("X is in Tony Miles' repertoire occasionally" is true for all values of X, I believe.)

>Hi

>Any advice as to when to initiate a pawn storm?

Pawns are slower than pieces, so only advance Pawns when pieces alone cannot manage the job.

Advanced Pawns may create holes and/or become weak, so advance Pawns when you are confident of covering the holes - usually, because you have such a big space advantage that any weaknesses aren't apparent.

>Which pawns are the best to advance(or does it depend on the situation)?

1. Unopposed Pawns (if you have any) because they cannot be blockaded.
2. Pawns which can attack enemy Pawns which have moved, in the hope of opening a file e.g. after ...g6, advance h2-h4-h5. If Black blockades with ...h7-h5, you can try g2-g4. This is faster than the more certain method of advancing g2-g4-g5 (if ...h7-h5, g5xh6 e.p.), then h2-h4-h5.
3. Pawns which are further from the enemy pieces - usually Rooks' Pawns.
4. Pawns whose advance can be supported by a Rook - usually Rooks' Pawns!

>Any opening/defences that lend themselves particularly well to pawn storms?

Many half-open defences, especially the Sicilian (Dragon Variation, Yugoslav attack, and the Closed Sicilian) and the Pirc.

nn - nn [B75]

attack: pawn storm: opposite castling, 1993

Article 9288 in rec.games.chess.misc:

Subject: Re: Best Quick Study??

From: sloan@cis.uab.edu (Kenneth Sloan)

Date: 22 Jun 1996 15:00:58 -0500

Organization: Dept of CIS, Univ. of AI at Birmingham

Annotate your last 20 tournament games.

--

Kenneth Sloan sloan@cis.uab.edu

In a book by Dan Heisman called **The Improving Annotator** he attributes his success to self-study of this sort. If Kenneth's advice seems not enough to go on, here are some things to look for to [Assess Your Chess {all}](#).

How good is your annotating?

"Most commentaries in chess magazines and books are superficial and sometimes just awful. Once a certain experienced master explained to me how he worked. You put two fingers to the page with text on it and see that there are only moves under them - in other words, it is time to make a comment. You write something like "The Ruy Lopez always leads to a tense, complicated struggle" - and your fee goes up by a rouble.

"The ability to distinguish between real feelings and thoughts and this kind of verbal facade will be of use to you, and not just in chess." -- DVORETSKY

- [Dismal padding: -3 points](#)
- [Glib observation: -2 points](#)
- [Unexplained symbols: -1 point](#)
- [Glib explanation: 0 points](#)
- [Genuine explanation: 1 point](#)
- [Crisp, deep commentary: 2 points](#)
- [Arguing for a given choice with evidence: 3 points](#)
- [Secrets of chess revealed: 4 points](#)
- [Whimsy or humour: extra 1/2 point](#)
- [RATE YOUR ANNOTATIONS](#)
- [In a class of its own: Secrets of Grandmaster Play by Nunn and Griffiths.](#)

Inspired by the popular format of **How Good is Your Chess?**, where readers are invited to come up with moves which are given points in order to assess their standard of play, I have wondered if the business of annotating could be placed on a similar scientific footing. You can use this system to review books, or to assess how well you make notes to your own games.

I have long had in mind Phil Crocker's criticism of chess publishing in **Kingpin** No.22, to which Batsford's, for some reason, felt the need to respond in No.23. As I remember, Phil's main gripes were:

(a) **shallowness**: books are full of glib, vague or uncommittal commentary (e.g. "*with compensation*", no need to mention if it is adequate!) - only general and strategic comments, none cashed out in terms of variations

(b) **padding**: complete games are included for no good reason at the expense of extra commentary or additional detail. I do get annoyed by large sections of games being quoted in 'double-column' format without notes viz.

1. **d4 Nf6**

2. **c4 e6**

3. **Nc3 Bb4**

This uses three lines when only one is required. If you look at older opening books (Nunn's 1982 **Benoni**, for example) there are many part games and games in block text, squeezing the most chess and instruction on the page. No longer.

(c) **question-begging**: books allow important questions about particular variations to be ignored, and only light notes are added to games

(d) **lack of originality/ no value added**: analysis and comments by others are quoted freely, games are cited without their significance being explained.

These were humorously put in the article, but clearly felt keenly - my guess being that Phil has more than once spent the best part of 15 quid on various selections from the Batsogan list.

Now, with the scheme below, annotators can be classified and titles awarded according to their real merits. Find an annotated game, and award points for the annotator according to the following scheme:

Dismal padding: -3 points

Glib observation: -2 points

Unexplained symbols: -1 point

Glib explanation: 0 points

Genuine explanation: 1 point

Crisp, deep commentary: 2 points

Arguing for choice with evidence: 3 points

Secrets of chess revealed: 4 points

Whimsy or humour: extra 1/2 point

This might be clearer if we look at a few examples:

Dismal padding: -3 points

Gary Lane commits one of these in his book on the Blackmar-Diemer gambit. Chapter 1 is devoted to the Euwe Defence:

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 e6

Now after **6.Bg5 Be7 7.Bd3 Nbd7** he criticises **8. Qe2** as probably time-wasting (as *Qe2-f2* may follow), but still gives three White wins as examples: firstly,

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 e6 6.Bg5 Be7 7.Bd3 Nbd7 8. Qe2 b6 9.Ne5 Nxe5 10.dxe5 Nd5 11.Bxe7 Qxe7 12.O-O-O Nxc3 13.bxc3 Qa3 + 14.Kb1 Qxc3 15.Qe4 Rb8 16.Bb5+ Ke7 17.Rhf1 g5 18.Rd3 Qc5 19.Qf3 1-0 (*Diemer Emil - Buis W, Haarlem, 1952*)

and after **8...0-0 9.0-0**:

9...0-0 10.Kh1 a5 11.Rae1 a4 12.Ne5 Ra5?! 13.Rf4 g6 14.Bh6 Nh5 15.Rf3 Ng7 16.Bxg7 Kxg7 17.Rxf7+! Rxf7 18.Nxf7 Kxf7 19.Qxe6+ Kg7 20.Qxe7+ Qxe7 21.Rxe7+ Kh6 22.Ne4 Rd5 23.c3 b5 24.g4 g5 25.Nd6 1-0 (*Falkeid - Vallestad, Nordic Team Ch.1965*)

9...Re8 10.Qf2 Nf8 11.Qh4 Ng6 12.Bxg6 fxc6 13.Ne5 Nd5 14.Ne4 Nf6 15. c3 Nxe4 16.Bxe7 Qxe7 17.Qxe4 c6 18.Rf7 Qd8 19.Raf1 Qd5 20.Nxg6! 1-0 (*Diemer-Locher, Corr 1950*)

In the main line (where White gains a tempo) he gives a critical game which eventually turned out well for Black.

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 e6 6.Bd3 Nbd7 7.O-O Be7 8. Bg5 O-O 9.Qe1 Re8 10.Qh4 Nf8 11.Ne5 Ng6 12.Bxg6 fxc6 13.Rf3 Nd5 14. Ne4 Bxg5 15.Nxg5 h6 16.Nef7 Qe7 17.Raf1 e5 18.dxe5 Be6 19.Qg3 Rf8 20. Nxe6 Qxe6 21.c4 Ne7 22.Qf2 Nf5 23.g4 Rxf7 24.gxf5 gxf5 25.Rxf5 Raf8 26. Rxf7 Rxf7 27.Qe2 Qg6+ 28.Kh1 Rxf1+ 29.Qxf1 Qe4+ -/+ (*Diebert-Fishbein, World Open, 1986:*).

And that's it! Is this eighth move position some bizarre Zugzwang, so that by triangulating White wins, even if Black adopts the critical plan? Of course not, but the work needed here is all left to you. If **8. Qe2** is time-wasting it should have been noted as such and the three games should have been left out. If these games have important or original attacking ideas then perhaps we should be given them, but also be told what to look for.

ObSheesh: sheesh.

[The Blackmar-Diemer Gambit, LANE]

Glib observation: -2 points

The *Pride and Sorrow of British Chess*, Ray Keene, published one of his own games (against Vella) which opened:

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5 5. Bd3 Nc6 6. a3 Bxc3 7. bxc3 d6 8. Ne2 e5 9. Ng3.

"A theoretical novelty" says Keene, but the main line is not suggested. He adds that the move offers "a pawn for open lines", which is a shallow comment in the 'with compensation' class.

Whatever thought may have gone behind this move, we are offered none of it.
[Winning with the Nimzo-Indian, KEENE]

Unexplained symbols: -1 point

Keene in his notes to the same game cites a Plaskett encounter with Psakhis which continued instead **7...e5 8. Ne2 e4!?**. In fact Keene quotes the whole of Psakhis-Plaskett 1985, *without a single real comment*. The "!" mark is actually Keene's, and two further moves during the game are annotated "?!" and "!", but no support is offered for these judgements.

We can see the same thing at work in the three games with 8. Qe2 in the Blackmar-Diemer above. "**12...Ra5?!**" doesn't really cut the mustard: what was the standing of this game before ...Ra5? How does Black stand after - is he really busted? What would have been a better move? How would Black stand then? How should Black play in this sort of position - what would be the best defensive plan?

"...In some places words have been replaced by symbols which, like amulets from a witch's bag, have the power to consume the living spirit of chess..."

"...Oh, those exclamation points! How they erode the innocent soul of the amateur, removing all hope of allowing him to examine another player's ideas critically!"

-- Tigran PETROSIAN

[Winning with the Nimzo-Indian, KEENE;

The Blackmar-Diemer Gambit, LANE;

How to play the Opening in Chess; ed. EVANS]

Glib explanation: 0 points

(see diagram above)

9...g6 ("to prevent Nf5...")

Well, we guessed that. But was it compulsory? Desirable? Unnecessary? Weakening? Solid? Double-edged?

If you find yourself lapsing into this sort of thing, it's no better than football commentary: "White moves the pieces to the King's-side, Black sets an offside trap, White shoots... and scores! - no, Black's cleared it off the back rank!"

[Winning with the Nimzo-Indian, KEENE]

Genuine explanation: 1 point

The reason RDK is both the pride and the sorrow is that he can do it when he wants to. His note in the same book to move 8 of Portisch-Fischer (p.113) is as good as anything I've read elsewhere on this line, and claims to improve significantly on Fischer's analysis.

[KEENE, Winning with the Nimzo-Indian]

Crisp, deep commentary: 2 points

It should be no secret to readers that John Nunn is one of the world's finest chess authors. He is noted for a sharp style and deep analysis of complications, but he can also be illuminating about strategy:

Nunn - Gelfand, Munich, 1991

17. Ng3

"As a young player I was puzzled by games in which White played the manoeuvre Nc2-e2-g3 against the Pirc. It seemed to me that the Knight was not very well placed on g3, because Black's g6 pawn prevented the Knight advancing. Indeed its one and only duty seemed to be to defend the pawn on e4. Then, in 1984, I lost a game with Black against Murray Chandler, in which he used precisely this manoeuvre. The crucial distinction is whether White is attacking or defending. If White doesn't hold the initiative then the Knight on g3 is truly

inactive, but if White holds the initiative and has pressure in the centre then the Knight can be very useful. The Rooks and Queen operating on the open files are so dangerous for Black that he cannot counter them directly; instead, Black must somehow aim for counterplay. The only weakness in White's position is the vulnerable Pawn on e4. If this is secure, then White has plenty of time to improve his position. The function of the g3 Knight is precisely to support the e4 Pawn and give White the freedom of action he needs to step up the pressure.

"In the current position, Black is attacking e4 twice, but at the moment he cannot consider taking the Pawn because of the exposed Knight on d7."

[John Nunn's Best Games, NUNN]

Arguing for a given choice with evidence: 3 points

For club players, reading what a GM says can often be persuasive without it really standing up to proper standards for argument. Some annotators like Larsen and Timman like to tease readers with their opinions: "*I still don't regard [the King's Indian] as a fully-fledged opening*" says Timman, annotating a game where he played the system as Black!. This is entertaining and may prompt the reader to think more deeply about the opening, but a properly based conclusion should be based on reasons. What alternatives are there, and do they stand scrutiny? Perhaps only when GMs disagree are we in with a chance of seeing this proper level of commentary. I remember being engaged by a comment in a Hodgson/Day book on the Grand Prix attck, where they said "Hodgson says White is better, because of X, Day thinks Black is better because of Y". It gave me the idea that here is a situation where these factors X and Y might be in rough balance, and might help me judge them better next time.

For these reasons I have long been fascinated by a book in which two annotators wrote separate notes to the games of the 1972 Spassky-Fischer match. Here's an example:

15...P-QN4 "?"

"Dr. Euwe thought that this was a deliberate sacrifice, since Black does get some compensation for the Exchange. Gligoric disagreed, contending that only White has any winning chances now.

"The main question is how well Black stands after 15...R-B2, recommendation by Euwe and Najdorf. 16 B-R7 R-R1, 17 Q-K3! N-Q2, 18 N-Q4 improves the White game, delaying ...P-QN4 and aiming to get rid of the fianchettoed bishop. 17...N-N5, 18 Q-N6 QxQ, 19 RxB QxR, 20 QxR gives White such an enormous advantage that it has to be classed as a forced win (20...RxB, 21 Q-N8ch wins).

"So, in response to the immortal chess question of the late Oscar Tenner -- "Did he fall, or was he pushed?" -- I tend to favour the latter alternative. The Maroczy Bind is not without teeth."

Everything one might want: a proper consideration of the alternatives, a focus on the critical issue, and a reasoned conclusion. Perhaps not every position is as amenable to such a definitive analysis, but it is a goal to be aimed for.

[Timman's Selected Games, TIMMAN;

Both Sides of the Chessboard, BYRNE and NEI]

Secrets of chess revealed: 4 points

Every so often someone will write a comment that enables me to think about not just that position, but actually improves the way I can think about all positions.

Najdorf-Petrosian, Zurich 1953

Now Black tried **12...c5**; Bronstein comments:

"A serious positional mistake, whose significance the reader can realise from the following considerations: Black has an open file on the Queen's side and can provoke b2-b3, whereupon his plan must be to attack White's b3 by advancing his a-pawn. This attack had prospects of succeeding if Black can support his pawn when it gets to a4. What is he to support it with? He has no white-squared bishop, and the square c5 has been taken away from his knight by his last move. Moreover, it is clear that Black will not be able to maintain his knight on d4 forever. Hence he is now left without any plan that has prospects of being successful."

Looking back, I can now recognise how sometimes a plausible move leaves my position without a way forward, and I don't think I'd be as alert to the problem as if I hadn't read that comment. Perhaps it's an insight that can be obtained elsewhere, but many people say they have had that "aha!" experience reading Bronstein.

[The Chess Struggle in Practice, BRONSTEIN]

Whimsy or humour: extra 1/2 point

My introduction to chess, as so many, was through Irving Chernev: as much as the magic of the game I was attracted to Chernev's delightful whimsy. Another author I like is Stephan Gerzadowicz: who could prefer the pedestrian "*White takes yet another Pawn*" to Stephan's "*They're like peanuts, you know*"?

[Logical Chess, CHERNEV;

Thinker's Chess, GERZADOWICZ]

Having got the points system we can start to see a few patterns emerge. For a game of average length in a book or magazine, we can classify annotators as follows:

0-10 points: hack work - club standard annotator

Your lower-graded club colleagues may be entertained or even assisted by your efforts, but there are enough chess books in the world without you adding to the pile. Improve or give up.

10-20 points: good effort - candidate master annotator

It is clear from your score that you can understand chess and can communicate your understanding, and this is the heart of annotating.

There is probably another level to be reached: have you considered all important alternatives? have you tried to explain how the general strategical tensions are

reflected in the key variations? have you explained how the perceptions of this type of game have changed over time?

20-30 points: excellent - master annotator

You may be justly proud of your efforts in annotation. It is likely that there is little more to be said about a game when you have written about it. You have noted all the important choices and explained the players' motivations at each point in the game.

30-40 points: grandmaster annotator

Here we have a standard of annotation which even masters will find illuminating. Of course, not all moves of all games will be able to support the weight of commentary you are able to offer, but among the notes you offer will be gems which will stay with the reader for the rest of their life. Tsar Nicholas nominated the first five "Grandmasters of chess"; may I indulge myself by nominating my first five "Grandmasters of annotation". Take a bow, Mikhail Botvinnik, David Bronstein, Mark Dvoretsky, Bent Larsen, and John Nunn. Honourable mention: Peter Clarke.

In a class of its own: Secrets of Grandmaster Play by Nunn and Griffiths.

My points scheme fell apart here. This is the gold standard of annotation: the games are analysed in all their tactical and strategical complexity (some positions being given more than two pages of notes), there is due regard given to the realities of tournament play (for example, how much did Nunn really see in the game?), the background to the game is given consideration, and there is a genuine attempt to educate. New revised edition published 1997. A must-read, but take a deep breath!

This document (annotate.html) was last modified on 3 July 1997 by

[Dr. Dave](#)

Exeter Chess Club: How to lose at Chess

Peter Lane, 13th September 1996

After a season of mixed results, it is time to go back over some of the more painful losses, and ask: 'Why did I lose?', and 'how can I avoid this in future?' Here I divide up losses into three basic types, and to avoid too much self-pity, my examples begin with those where my opponent was the loser!

1. The Blunder

There are many ways of losing a game of chess. Ever popular is the blunder. At the beginning of a game, this can provide a few extra hours at the bar, or in less extreme cases, a long wait until your opponent manages to finish things off.

Example 1 : P.C.Lane vs R.Jones (Exeter vs Exmouth Bd:1, 8th February 1995).

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 b6 5. Ne2 Bb7 6. a3 Be7 7. Ng3 c5 8. d5

rn1qk2r/pb1pbppp/1p2pn2/2pP4/2P5/P1N1P1N1/1P3PPP/R1BQKB1R

8...O-O? 9. d6!

More irritating are those at the end of games, four hours of careful strategic manoeuvring ruined by one stupid move!

Antidote

``Write the move down first" (Webb?)

``Sit on your hands" (Lasker)

Not much to add to this, you just have to look around you, one more time, immediately before moving.

2. Ignorance

A less obvious losing technique, avoiding the embarrassment of a blunder, is the total misunderstanding of the opening position in front of you. This leads to positional style errors, perhaps only discernable to the elect, but leading to a definite loss without any undue effort.

Example 2: A.Brusey vs P.C.Lane (Teignmouth vs Exeter Bd:1, 23rd March 1996).

1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Bd7 6. a3 c4 7. Nbd2 f6

White now has to deal with the attack on his centre. One approach is to exchange on f6 and c5, leaving black with a loose centre, but good chances of turning it into a mobile monster. Attacks, such as 8. Nh4 look dangerous, but 8. ... Qc7 9. Qh5+ Kd8 10. Qf7 Nh6 11. Qh5 fxe5 is messy. Instead white decides to leave a pawn on e5, in the hope of cramping the black position.

8. Be2 fxe5 9. Nxe5 Nxe5 10. dxe5 Qc7

r3kbnr/ppqb2pp/4p3/3pP3/3pP3/2p5/P1P5/1P1NBPPP/R1BQK2R

White's plan of cramping black would be better attained without the exchange of knights. Instead his e5 pawn is looking weak, and the positional error is now made, opening up the black diagonal, forcing white to waste time trying to block it before castling. Meanwhile, black gets on with developing and attacking the centre.

11. f4? Bc5 12. Nf3 Ne7 13. Nd4 Qb6 14. Bg4 O-O 15. a4 Bxd4 16. Qxd4 Qxd4 17. cxd4 Nc6 18. Be3 Nxd4

winning a pawn, as 19. Bxd4 Rxf4 forks the bishops.

Antidote

This depends upon how bad a loss, or series of losses, you get. Severe losses are best answered by a change of opening. If you get good results in other variations, then some homework is needed on the kind of position you do not understand. (It is important not to confuse this category with defeat by a much stronger player!)

3. Losing `Won' Games

If the above two categories look almost trivial, pointing up areas of carelessness or inadequate preparation, and easily rectifiable in consequence, this category provides the deepest benefits in terms of self-improvement. The sort of losing technique I am referring to is that often met with after the gain of a pawn, or some other positional `advantage'. You think away, working out possible winning tries, make

some moves, ... and suddenly find your position falling apart before your eyes! Typically, in my case, this is accompanied by increasing time pressure.

Once we recognise these losses as examples of mistaken thinking, we can see them as the most instructive. Why? Because the error is not due to a lack of ability or foresight. Instead, the wrong mental attitude leads to self-doubt in considering some lines of play, and blindness when considering our opponent's resources in others.

Let us work through:

Example 3 : S.Pope vs P.C.Lane (Club Championship, 2nd April 1996).

1. e4 e6 2. d3 c5 3. Nf3 Nc6 4. g3 g6 5. Bg2 Bg7 6. O-O Nge7 7. Nbd2 d6 8. c3 O-O 9. Re1 Rb8 10. a4 a6 11. Nc4 b5 12. axb5 axb5 13. Ne3 Qb6 14. Nc2 b4 15. d4 b3 16. Na3 cxd4 17. cxd4 Nxd4 18. Nxd4 Bxd4 19. Be3 Bxe3 20. Rxe3 Ba6

1p3rkRnp1p/bq1pp1p1/8/4P3/Np2R1P1/1P3PBP/R2Q2K1

(Note that 18. ... Qxd4 19. Qxd4 Bxd4 20. Rd1 or 19. ... Nc6 20. Nc4 embarrass d6.) We begin with this position: Black seems to have a winning position in terms of a pawn advantage and the advanced b-pawn. The bishop holds the knight at a3, at least for the moment. The only disadvantage is the relative weakness of d6. White would like to play 21. Bf1 to exchange the bishops, but 21. ... Bxf1 22. Kxf1 f5! opens the f-file, removes the e4 pawn, and allows Nd5, eg: 23. Rc1 fxe4 24. Nc4 Nd5 25. Re2 Qa6 and ... e3. Instead white attacks the b- pawn, and tries for c-file pressure.

21. Rc1 Rfc8 22. Rec3 Rc5 23. Rxc5 dxc5 24. Nc4 Bxc4 25. Rxc4

1r4kRnp1p/1q2p1pQp5/2R1P3/1p4P1/1P3PBP/3Q2K1

Things are not entirely in black's favour here, as his Q-side pawns are weak. Further, they are not very mobile, as the c5 pawn is backward. ``Nevermind'', thinks black (me!), ``if I take my time I can get my knight to d4, defending b3, and my king to d6, defending c5. The Rook and Queen can then investigate the a-file. Of course, white may play e5, freeing his bishop, and stopping the king defending c5, so ..."

25. ... e5?

There are many things wrong with all this, and white manages to demonstrate them!

26. Qc1 Rc8 27. Bh3! Rc7 28. Qc3 f6 29. Qd3! Kg7 30. Qd8 Qa5 31. Bd7 Qa7? 32. Qxe7+ Kh6 33. Qf8+ and checkmate follows.

... e5? actually gave white's bishop a diagonal to use, that from h3-c8. White's queen moves took the initiative, attacking pawns and occupying the open d-file. The knight died on the square it developed to on move 6.

What should black have been thinking of? Essentially his plan was too passive. First and foremost the knight needs developing to take an active role, in particular it needs an outpost square to assert itself against the bishop, and this was identified accurately as d4.

Therefore, 25. ... Nc6 26. Qd6 Rd8 27. Qxc5 Qxc5 28. Rxc5 Rd1+ 29. Bf1 Nd4 and white is in big trouble. eg: 30. Rc4 e5 with Rb1/d2xb2 to follow.

If instead, 26. Qc1 Nd4 27. Kf1 Qa6 or 27. Bf1 Qb7 and if 28. Bd3 Nf3+ -e5 xd3 and Qxe4 is threatened, or if 28. Qe3 Qa7 with Qa1. This last line retains black's advantage, with attacks on the white king and b2 to compensate the loss of c5.

Apart from the miscalculations, the error here was in not 'suppressing the opponent's counter-play'. The initial appraisal of the kind of options open to the opponent was lacking, in particular the open d-file and the fact that advancing the central pawns will weaken them and the surrounding white squares. From this, and an honest recognition of our weaknesses, we come up with a counter-plan. The passivity of black's pieces could largely be rectified by developing the knight to d4, incidentally blocking the d-file.

Example 4 : P.C.Lane vs P.Lesniowski (West of England Open, 8th April 1996).

In this game an opening advantage is thrown away through not appreciating an opponent's counter-attacking chances.

1. d4 Nf6 2. Nf3 g6 3. c4 Bg7 4. Nc3 d5 5. Bf4 c5 6. dxc5 O-O 7. Rc1 Qa5 8. e3 Rd8 9. Qa4 Qxa4 10. Nxa4 Bd7 11. Nc3 Qa6 12. cxd5 Nxc5

r2r2k1/pp1bppbp/5npQnP4/5B2/2N1PN2/PP3PPP/2R1KB1R

This is the first critical position. White is a pawn up, with well- developed minor pieces, and plans Bc4 and O-O Rfd1, or Ke2 Rhd1, with central action to follow. The mistake is not so much the move now

made, but the state of mind when making it. Black has ideas of ...xd5, Nfe4, Bxb2, Bf5 and Nd3. All enough to prevent any ideas of an 'easy' win!

Ideally, reflecting that after 13. Be2 Bf5 or 13. Bc4 b5 white has difficulties, he should reject the idea of simple development. A move which breaks the black bind slightly, and removes the weak d-pawn, is: 13. d6! exd6 (... e6 is ugly, leaving white all the play) 14. Bxd6 Nce4 and not 15. Nxe4 Nxe4 16. Be5 Rac8 giving black play, but 15. Be5 Be6 16. b3/a3 when the extra pawn is maintained, and Be2 O-O to follow leave white playing for a win.

13. d6 is imaginative, but not too hard to find, particularly if we are looking for ways to remove the opponent's counter-play and jettison our own weaknesses.

13. Bc4 b5! 14. Nxb5 Bxb5 15. Bxb5 a6 16. Bc4? Nxd5

Here we have a typical case of blindness. With the rapid clearance of c3 and c4, and white's fixation on keeping the Bc4 defending the pawn on d5, white forgets that 16. Be2 threatens 17. Rxc5! Intended was 17. Be5 Nb4 18. Ke2, but Nd3 forks the rook and bishop and 18. Bxg7 fails to Nd3+ 19. Bxd3 Nxd3+ 20. Ke2 Nxc1+ winning the exchange. After this error in calculation white has to grovel a bit, but things are not all bad as black must waste time regaining his pawn.

17. b3 Bb2 18. Rd1 Nb4 19. O-O Nxa2 20. Ne5 e6 21. Nc6 Rxd1 22. Rxd1 Nc1

r5k1/5p1p/p1N1p1pQn5/2B2B2/1P2P3/1b3PPP/2nR2K1

White now has two good bishops, an advanced knight and control of the d-file, while black goes for the Q-side pawns. White now tries to exploit the tangled state of the black pieces to win one of them, but in

his delight at winning after all, he gets it wrong! Instead, 23. b4! with ... Na4 24. e4, or ... N5b3 24. Bxb3 Nxb3 25. Rb1, or ...Ne4 24. f3 Nc3 25. Rd2 Ba1/a3 26. Rc2 and e4, wins a piece and the game.

This is another mental error: feeling self-justified in winning due to the earlier superiority, I am careless in the calculation.

23. e4? N1xb3 24. Rb1 Nd4 (simple really!) **25. Ne7+ Kf8 26. Bd6 Nxe4 27. Nxb6+ Kg7 28. Be5+ Kxg6 29. Rxb2 Nc6 30. Bd3 Kf5 31. Bc3 Rd8 32. g4+ Kf4 33. Bxe4** and white lost on time, though 33. ... Kxe4 34. Rb6 Kf3 35. h3 is not totally clear.

Antidote

Both games are similar in my thinking about winning and not considering an opponent's chances to make my life difficult. In addition, by refusing to give up certain 'advantages', I blinded myself to other options and this leads to miscalculation.

Many of my clock problems are caused by being in this mental state, unable to think clearly, and reluctant to move in consequence. I hope to recognise this critical point of a game in future, and avoid the debilitating effects. Of primary importance is a mental readjustment to reflect changes in fortune on the board.

Conclusion

Working on our own games is often given as the best way to improve. But which of the many games in a season are most instructive? And how do you go about analysing them? I would suggest the third category of games above as the most profitable. Characterised by the sudden reversal of fortune through mistaken thinking, they offer a focus for self-analysis.

Questioning my emotional state as well as my reasoning, leads to a greater understanding of how I play chess. Although in themselves the analyses above cannot be of personal interest to other players, they may help in showing how to work at one's own games for self-improvement.

As a practical message: *``Always remember, when things are going well, that they don't have to.''*

Exeter Chess Club: Shakespeare annotates a chess game

Pinched wholemeal (as opposed to piecemeal) from Irving Chernev.

*"In a book called **Chesslets**, by Dr. J. Schumer, all the games are annotated by quotations from various writers.*

Here is one of the games, with comments by Shakespeare:"

-- CHERNEV, Wonders and curiosities of chess

(27) Atkins - Saunders [E90]

Stratford-Upon-Avon, 1925

1.d4

To show our simple skill,
That is the true beginning.

1...Nf6 2.c4 g6 3.Nc3 d6

... to climb steep hills
Requires slow pace at first.

4.e4 Bg7

To be direct and honest is not safe.

5.Nf3 Nc6 6.h3

... to be forestalled ere we come to fall.

6...0-0 7.Be3 Nd7

... retire into your trenches.

8.Qd2 e5 9.d5

My purpose, is, indeed, a horse of that colour.

9...Ncb8

There is no virtue like necessity.

The better part of valour is discretion.

10.Bh6

By the pricking of my thumbs
Something wicked this way comes.

10...f5

Though this be madness,
yet there is method in't.

11.Bxg7

The ripest fruit falls first.

11...Kxg7

. . . would be rid of such an enemy.

12.exf5 gxf5

... food for powder, food for powder

13.Be2 a5 14.g4

Playing the mouse in absence of the cat.

14...Nc5 15.gxf5 Bxf5 16.0-0-0 Nba6 17.Rdg1+

Sits the wind in that corner ?

17...Kh8

Thou marshall'st me the way that I was going;

18.Qe3 Qf6 19.a3

Instinct is a great matter;
I was a coward on instinct.

19...Bg6 20.Rg5

Defer no time, delays have dangerous ends.

20...Nb4

Some Cupid kills with arrows, some with traps ...

... to the noble mind

Rich gifts wax poor
when givers prove unkind.

21.Nh4

When I shun Scylla, your father,
I fall into Charybdis, your mother.

21...Nb3+

Stand not upon the order of your going,
But go at once.

22.Kd1

My grief lies onward and my joy behind.

22...Bc2+

Courage mounteth with occasion

23.Ke1

Something is rotten in the state of Denmark

23...Be4

Cassio, I love thee;
But never more be officer of mine.

24.Qxe4

... it goes much against my stomach

24...Qxf2+

Lady, you are the cruell'st she alive.

25.Kd1

One woe doth tread upon an-
other's heel, So fast they follow.

25...Rf4

The Gordian knot of it he will unloose.

26.Rf1

Hoist with his own petar.

26...Qd4+

Striving to better, oft we mar what's well.

There is a tide in the affairs of men,
Which, taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries.

27.Qxd4

What's gone and what's past help
Should be past grief

27...Rxd4+ 28.Ke1

. . . to fear the worst oft cures the worse.

28...Nc2+ 29.Kf2

True hope is swift,
and flies with swallow's wings.

29...Rxf4

If it were done when 'tis done,
then 'twere well It were done quickly.

30.Kg3

... naked as I am, I will assault thee.

30...Rf4 31.Rxf4

Off with his head!

31...exf4+ 32.Kxf4

... there's a special providence in the fall of a sparrow.

[Dr. Dave](#)

Exeter Chess Club: Assess Your Chess

I am occasionally asked, "What's the best way to improve my chess?". Other than **practice**, I warmed to Kenneth Sloan's reply to a similar query on the newsgroups:

Article 9288 in rec.games.chess.misc:

Subject: Re: Best Quick Study??

From: sloan@cis.uab.edu (Kenneth Sloan)

Date: 22 Jun 1996 15:00:58 -0500

Organization: Dept of CIS, Univ. of AI at Birmingham

Annotate your last 20 tournament games.

--

Kenneth Sloan

In a book by Dan Heisman called [The Improving Annotator](#) he attributes his success to self-study of this sort. If Kenneth's advice seems not enough to go on, here are some things to look for.

I think you must look at your games as a whole bunch. It's no use playing over your best games and looking to see what else needs to be improved, you have to look more at your losses. I know some players who will screw up a score sheet when they lose to a weaker player, when what they should do is go over it move by move, however painful. Soltis' [classification of errors](#) is given below.

You actually can get a lot of informal, qualitative evidence about your play from your opponent in a "post mortem" after a game. Don't ever use these to brag, or show how much more you saw - the idea is to learn, not play another game!

Even better is if you can persuade your local 'expert' to have a look at a couple of games that you really didn't understand - perhaps games where you were sure you were better at some stage but lost.

Many folk these days have a **computer**: **Chess-playing programmes** can help particularly with looking for tactical shots that you (or your opponent) missed, and checking your ideas and suggesting alternatives. They can miss some good ideas which are just outside their "horizon", so do push them a move or two along a line if you still think it looks good. For strategical ideas, **database programmes** with opening/position searches can help you find games with similar positions, to see what plans are commonly followed in positions like yours.

The free ChessBase demo is able to do both, and I use it for these purposes after every game.

In Exeter we often use our own games as the basis for discussion in our coaching sessions - we aren't experts but a second or third opinion can be very illuminating.

- [Taking stock](#): openings, middlegames, endgames
- [A bestiary of errors](#)
- [Point count chess](#)

Taking stock

Simon Webb, in his excellent **Chess for Tigers**, has some helpful suggestions for looking at collections of games, by compiling some data to look for patterns. I have extended his account slightly below. The point is, by facing the facts in this way you don't get a chance to make excuses, and you may spot something that you hadn't realised before - e.g. that you don't do very well in an opening that you always thought was right up your street.

Taking stock of your openings

Draw up a table of your games, showing firstly, the outcome of the opening (e.g. +/- or =), and secondly, the outcome of the game (1-0, 1/2 etc.).

| _ | Opening | | | Game Result | | | All |
|-----------------|---------|----|-----|-------------|-----|-----|-----|
| | + - | = | - + | 1-0 | 1/2 | 0-1 | |
| _ | | | | | | | |
| Ruy Lopez | 3 | 4 | 2 | 2 | 4 | 2 | 8 |
| Petroff | 0 | 1 | 0 | 0 | 1 | 0 | 1 |
| Open Sicilian | 2 | 5 | 3 | 5 | 3 | 2 | 10 |
| Closed Sicilian | 0 | 2 | 0 | 0 | 1 | 1 | 2 |
| French | 0 | 1 | 1 | 0 | 0 | 2 | 2 |
| Pirc/Modern | 2 | 1 | 0 | 3 | 0 | 0 | 3 |
| Alekhine | 0 | 1 | 0 | 0 | 1 | 0 | 1 |
| TOTAL | 8 | 14 | 5 | 9 | 11 | 7 | 27 |

Conclusions:

1. Ruy Lopez not too successful - maybe try something sharper?
2. Play well in open Sicilians but must learn more theory
3. Don't understand French - must find decent line

During middle-game

| type | my position: | improved a lot | improved a bit | remained about the same | got a bit worse | got much worse | total |
|----------------------------|-----------------|----------------|----------------|-------------------------|-----------------|----------------|-------|
| Positional | Open | 1 | 2 | 5 | 2 | 2 | 12 |
| — | Semi-Open | 4 | 7 | 17 | 4 | 1 | 33 |
| — | Closed | 0 | 4 | 9 | 3 | 3 | 18 |
| Tactical | Attack on King | 5 | 9 | 7 | 6 | 6 | 33 |
| — | Defence of King | 1 | 3 | 5 | 4 | 2 | 15 |
| — | Wild tactics | 3 | 4 | 2 | 3 | 1 | 13 |
| Middle-game without Queens | — | 0 | 2 | 7 | 1 | 0 | 10 |
| Late middle-game | — | 1 | 4 | 9 | 7 | 3 | 24 |

N.B. one game may feature as more than one type as it progresses

Conclusions:

1. Semi-Open positions and tactical positions in general seem to suit me: when there's an attack on the King or a melee I can often outplay my opponent.
2. However, in simpler positions and positions without Queens I seem

more likely to lose the plot; this is also true of closed positions.

- I must study the strategy of the closed positions I get into more thoroughly, and during play must not get complacent in apparently simple positions.

Endgames

| — | Estimated theoretical result | | | Actual game result | | | |
|----------------------|------------------------------|-----|-----|--------------------|-----|-----|-----|
| | 1-0 | 1/2 | 0-1 | 1-0 | 1/2 | 0-1 | All |
| — | | | | | | | |
| King and Pawn | 1 | 1 | 0 | 1 | 1 | 0 | 2 |
| Rook | 3 | 1 | 1 | 3 | 2 | 0 | 5 |
| Rook and minor piece | 2 | 2 | 2 | 1 | 2 | 3 | 6 |
| Knights only | 1 | 0 | 0 | 1 | 0 | 0 | 1 |
| Bishops only | 0 | 1 | 0 | 0 | 0 | 1 | 1 |
| Bishops and Knights | 1 | 2 | 3 | 1 | 1 | 4 | 6 |
| Queen | 0 | 1 | 0 | 0 | 0 | 1 | 1 |

N=22

Conclusions:

The basic King and Rook endings seem handled well, but endings with minor pieces (with or without Rooks) look suspect. Moreover, half the Bishop/Knight endings were probably lost before I had a chance to play - I must see these situations coming earlier.

time-trouble table:

| who | what happened |
|-----|---------------|
| | |

| | my position got worse | normal result | opponent's position got worse |
|----------|-----------------------|---------------|-------------------------------|
| me | 3 | 6 | 2 |
| opponent | 4 | 2 | 2 |
| both | 2 | 5 | 4 |

N where i was in TT = 22

Conclusions:

I play OK in time-trouble and the % of games where I get in TT is not too bad. But I am not getting any benefit from my opponent's time trouble - am I trying to rush them into making mistakes, instead of paying attention to the position?

I hope you get the idea.

N.B.

statistics like these can be enhanced by consideration of grades, if you have enough games. In BCF terms, you should turn in an extra 10% of available points for every 10 points your grade exceeds the average of your opposition. So, scoring 4/5 against 120-grade opposition is no more than a par performance for a player of grade 150. Equally, if you are outgraded by an average of 30 points a game, but make a 40% score, this is a very good performance, as you could have fairly expected only 20%.

For ELO, I think a superiority of 400 points should yield a harvest of an extra 25% of points viz. 75%.

Error analysis

Without mistakes, there can be no brilliancies, said Lasker. Actually, without [mistakes](#) there wouldn't be any decisive games at all. What mistakes do you make? Vladimir Zak described "typical mistakes by young players":

- Hasty moves, and, inconsequence, blunders
- Learning openings without understanding the ideas

- Reliance on general principles, without a concrete plan
- Underestimating the opponent's combinative chances
- Disparity between aggressive and defensive ability
- Miscalculating variations and combinations
- Inadequate knowledge of basic endgames
- Implementing the wrong strategic plan
- The problem of the clock in practical play

Andrew Soltis has classified mistakes in a more detailed way, as follows below: do you make some of these more than others? [I have collected a whole bunch of [errors](#) in the Canon.]

- Tactical errors
 - allowing mate
 - removal of defender
 - double attack in defence
 - faulty tactics
 - weakening castled King's position
 - overlooking checks
 - overestimating checks
 - overlooking back rank threats
 - ditto, long diagonals
- Mishandling Pieces
 - development
 - offside piece
 - unccordinated pieces
 - faulty exchanges
 - queen exchange
 - temporary invasion
 - castling into it
 - wrong Rook
- Analysis
 - faulty assumptions
 - oversights
 - missing bottom line
 - faulty sequence
 - overlooking quiet moves
 - missing desperado
 - stopping analysis one move short
- Positional errors
 - bad Bishops
 - creating holes
 - backward Pawns

- opening lines
- King's-side advance
- permitting Pawn advances
- Strategic errors
 - neglect of centre
 - wrong side
 - onesided
 - unjustified attack
 - failed restraint
 - reduce tension
 - counterplay
 - poor timing
 - passivity
 - giving winning plan
- Attitude
 - trying for too much
 - changing fortunes
 - letting down
 - believing opponent
 - peer pressure
 - vacillation
 - monomania
 - dogmatism
 - draw-mindedness
 - frustration
- Practical mistakes
 - hallucination
 - long moves on a big board
 - pretty moves
 - getting fancy
 - overfinessing
 - Lasker's law
 - missed opportunities
 - bad moves in bad positions
 - desperation and surrender
 - greed
 - negative sacrifice

Point Count Chess

In assessing your games a checklist of points from Horowitz' **Point Count Chess** might be useful

1. Plus Points

1. Control of the centre
2. Pawn on fourth rank vs. Pawn on third
3. Mobile pawn wing
4. Strong outpost station
5. Superior development
6. Greater space
7. Bishop-pair
8. Half-open file
9. Control of useful open file
10. Rook(s) on the seventh rank
11. Passed Pawn
12. Outside Passed Pawn
13. Protected Passed Pawn
14. Advanced Pawn
15. Qualitative Pawn majority
16. Advanced chain
17. Advanced salient
18. Better King position
19. Offside Pawn majority

2. Minus Points

- *Weak Pawns*
 1. Backward Pawn
 2. Doubled pawn
 3. Isolated Pawn
 4. Hanging Pawns
 5. Hanging phalanx
 6. Crippled majority wing
- *Weak Squares*
 1. "Weak square complex"
 2. Holes
 3. Compromised King's-side
 4. King held in the centre
 5. Cramped position
 6. Bad Bishop

By adding and subtracting points they say you can assess who has the advantage. They also say that five points is a win!

This whole scheme is impossible to remember and obviously formulaic. The value of the book is really to introduce you to the ideas and how to exploit each sort of advantage.

A more practical way of doing the same thing is to compare pairs of pieces: compare my King and my opponent's King, then my Queen and my opponent's Queen, etc., thereby assessing who stands better.

Another nice suggestion (which I associate with Chernev) is to add up the legal moves available to the pieces on each side. You can also add up the territory you control: the squares behind your Pawns.

Another sequence to go through:
to know what plan to follow, look carefully

| | |
|------------------------------------|---|
| To
decided | Tactics: before anything else, see if the game can be
right now! |
| Know
centre | King position: mostly in terms of safety, but also near
for endgame |
| What
above) | Weaknesses: weak pawns and weak squares (variety as |
| Plan to
Follow,
breakthrough | Piece position: centralised or offside, bad Bishop etc.
Forcing moves: tempo, initiative, possibility of |
| Look
one? | Lines: files, diagonals, ranks; control, or can you open
one? |
| Carefully | Centre and space |

Now, I can remember that a whole lot better than all the point count stuff!

Exeter Chess Club: 2 Open Games

From **200 Open Games** by David Bronstein (DESCRIPTIVE)

The games and stories are a joy.

THE SCOURGE OF CHAMPIONS

White: F. Duz-Khotimirsky

Moscow 1954, match 'Lokomotiv' v. 'Dinamo'

It is commonly thought that chess is a game for silent people. As soon as my opponent had played P-KB4 I suddenly heard an angry:

'And I'm having no refusal! Accept the sacrifice! If you don't take the pawn I won't continue the game!'

There was nothing I could do. I accepted the old maestro's gambit.

Several moves later Duz-Khotimirsky played a hurried move and, whilst I was considering my reply, decided ... to change his move.

The spectators gasped, the judges wanted to stop the clocks, but Fedor Ivanovich suddenly shouted at everyone:

'What on earth is this? Look, I made a bad move and now I'm changing it for a good one. Rules, you say? To hell with your rules, this is chess. Besides, you don't object?' said my opponent, turning to me.

'Please, it's my pleasure!'

And the game went on as if nothing had happened.

F.I. Duz-Khotimirsky defeated at the international Chigorin Memorial Tournament in St. Petersburg in 1909 both first prize-winners - the world champion and the champion of Russia, Lasker and Rubinstein.

In his game with Em. Lasker he conducted a K-side attack with exceptional accuracy, and in his game with A. Rubinstein he took over the initiative with a cunning pawn move and forced his opponent to make an unfavourable combination.

These successes earned the veteran fame with the chess public for many years, and he was called none other than 'the scourge of champions'.

THE THEORY OF MINOR MISTAKES

White: P. Trifunovic

Leningrad 1957, USSR v Yugoslavia

R. Fine expressed the view that a game would be lost in the last century after four mistakes, at the beginning of the present century only two, and in the middle of the 50's only one mistake would be needed.

This inevitably suggests the conclusion that we are approaching the time when it will be possible to lose a game without making a single mistake!

The famous Grandmaster-journalist S.G. Tartakover warned us, not against making mistakes in general, but against making the last mistake, as he was convinced that the person who makes the last mistake loses the game. I should like to develop his idea.

Avoid minor mistakes! Most often he loses who makes the first minor mistake because it signifies the beginning of an incorrect strategical plan.

A quiet opening, an early exchange of queens, a leisurely ... P-KN3 lulled Trifunovic's imagination to sleep and when he saw that the black-squared bishop wanted to occupy the great KR1-QR8 diagonal, instead of the usual K2 square, he thought: why should I castle K-side? And he castled Q-side.

Two more minor mistakes followed on this one. First the KRP advanced one square, to make room for the bishop on KB4, and then the white bishop took advantage of this haven.

Three minor mistakes probably equal one full mistake.

[Dr. Dave](#)

Exeter Chess Club: Techie Bit

Obviously, typing in moves by hand and cut-and-pasting GIFs from screen captures is as easy as ABC, well, easy as DEF at most. This page is for folk who like to lift the bonnet hood of the computer and start tweaking the engine to make things run more smoothly.

- [Creating Web pages from a Fritz/ChessBase database](#)
- [Creating Web pages from a handout](#)
- [Creating Handouts with a word processor](#)
- [Printing from these web pages](#)

Creating Web pages is easy, this booklet describes the tricky bits of getting chess diagrams to appear. This too is easy if you cut-and-paste pictures of chess boards, but that is very inefficient. [If you want it easy and on a plate, Traveller Archives offer a wonderful diagram creation service where you can even make [3-D boards](#) for newsletters.]

But what you really want is a little 8x8 array of characters like this:

```
+-----+
| rnbqkbnr |
| pppppppp |
| -+-+--+ |
| +-+--+ |
| -+-+--+ |
| +-+--+ |
| PPPPPPPP |
| RNBQKBNR |
+-----+
```

The notes below describe [how to do this in Word Processors](#) and [how to do this in HTML](#), and [how to get from a handout to a Web page](#).

I am pleased to see that Alastair's terrific [Chess DTP](#) page is occasionally back up, and there is an equally terrific [Chess DTP](#) page from Eric Bentzen, and the wonderfully public-spirited folk at [Palamede](#) have got more chess publishing stuff than you can shake a stick at. between them, these sites list all the currently available PD, shareware and commercial fonts together with chess Web authoring tools.

[[Jon Perry](#) and [Patrick Surry](#) at Edinburgh offer more technical advice and programmes: if you're into

UNIX, you can produce great diagrams like they do.]

The links above probably describe everything you need; read on only if you are determined to imitate or use the pages here.

Do you just want to know how to [edit/print out the handouts](#)? Or write [booklets with a word processor](#)?

To make these pages, the games are entered on a PC using Fritz, and then turned into teaching handouts using Word for Windows via Andy Duplain's superb CBASCII utilities, which have their own [CBASCII](#) homepage. They are also available via FTP from the [Internet Chess Library](#) (Caissa) [ChessBase Tools directory](#) and the [Pittsburgh](#) site Directory [UTIL](#). There are hundreds of great PD/shareware files around; I've put the ones I use most for these pages on [FTP here at Exeter](#), but I also get a lot out of [Rob Weir's ChessBase Utilities](#).

All the diagrams in these pages exist as 8x8 arrays of squares. I could have used GIFs of the whole board (e.g. cut and paste from CHESSBD or CBDEMO) but this is memory-hungry (5k a diagram) and doesn't allow use of efficiencies in caching. The GIFs I scrounged from John Tamplin, although I believe they are originally from a release of [xboard](#), author Tim Mann. [Patrick](#) uses a different set of pieces (watch for case of file names).

If you have a **text-only browser** the diagrams should still appear as 8x8 arrays using the alt="*" element; the light and dark squares are "-" and "+", the white pieces are "kqrbn" on light squares and "KQRBN" on dark, and the Black pieces are respectively "jdtls" and "JDTLS". If you have a chess font you should be able to save the file, and edit in the characters you need; this is pretty much the reverse of what I do to make them in the first place.

These Web pages are derived from either the Fritz database ([Method 1](#)) or the handouts ([Method 2](#)).

N.B. You don't need the [Fritz programme](#) itself to make handouts: try instead the [ChessBase Windows Demo](#) (which has its own [FAQ](#)), or see below! If you can use the CBWin demo., or any other piece of software that writes PGN or CBF files, you can bypass some of the CBASCII route I describe below: see the notes at the end of Method 1.

N.B. When I say Word for Windows, I imagine any other Windows word processor would do.

This is how I do it. **You need an IBM PC and a UNIX machine** for this trick, although DOS versions of the UNIX-y tools are freely available. The thought of doing all 400 of the games in the Canon by hand makes me dizzy, but if you want to do lots of games/positions yourself, you might fancy either just

1. typing in the positions like Jon Perry does, or
2. setting up positions using [SLICS/CHESSBD](#)
3. using xboard on a Unix machine like Patrick Surry does, then and using [xbdtohtml](#) on a Unix machine or DOS port of PERL.

See also notes on [Creating handouts](#). Now read on...

Method 1: From Fritz .cbf database

1. Download a copy of **CBASCII** to your PC from ICL/Pittsburgh or [my FTP site](#) or [CBASCII](#) homepage.
2. Download a copy of [SLICS/CHESSBD](#) from [my FTP site](#) or [Don Fong](#).
3. Enter games and positions in [PGN format](#) using [SLICS/CHESSBD](#). Set output option variable to 2 (PGN), and save as "games.pgn".
4. Edit the PGN file manually: type in [{DIAGRAM}](#) wherever you want your arrays. (Actually {CTRL-D} will also work.)
5. Convert from PGN to CHESSBASE using

```
c:\cbascii -i games.pgn games.cbf
```

6. Convert back out to text with added 8x8 diagrams using

```
c:\cbascii -e -fcb -d8x8=squares.def games.txt games.cbf
```

You need to set up a **sed** definition file: I use [this one](#), which puts junky "^A" characters in, but you can't put nothing in, and lots of other characters have other meanings in chess. [In order to [create Word handouts](#) I use instead the [mappings](#) to [Eric Schiller's](#) Tilburg font: see [notes below](#).]

7. Upload the [text file](#) to Unix. Currently it has "junk" CTRL-A (^A) characters in, which can be removed easily using "mg" or "emacs".
8. Edit using sed command file:

```
% sed -f sq2img.sed games.txt > games.html
```

9. Patch in [header](#), [footer](#) and get it so as it looks right.

The [sed command file](#) looks a bit of a nightmare but each line beginning with a "|" is a diagram line, I change all the KQRNB to tags, and add in 'alt=' elements.

I have to do it circuitously because I use "l" and "t" to stand for black bishop and rook, both of which are found in the word 'alt'!

10. Split your games up somehow: I have a little utility that does it for me but I don't think I'm free to give it away (yet).
11. Breathe huge sigh thinking that however painful this was, making them manually is worse.
12. Lastly, don't forget to e-mail [Andy Duplain](#) saying what a great programme CBASCII is. Also, write to [Don Fong](#) saying what a great programme CHESSBD is, and enclosing at least \$12 registration.

The advantage of using PGN is that (a) you can use existing database games, and (b) the computer gets all the piece positions right, and doesn't occasionally leave off pawns like I do.

A desire to do coordinates led me to lash out some of my hard-earned on the Linares font family. If you are compiling Handouts using the character sets appropriate to the ChessBase for Windows fonts, the sed scripts required to turn them into HTML are

```
sed -f CBWIN1.sed games.doc > games.tmp
sed -f CBWIN2.sed games.tmp > games.html
```

If you can use the CBWin demo., you can bypass the CBASCII route I describe above using cut-and-paste or Printing-CreateTextFile.

Method 2: From Word handouts

1. Create a [Word for Windows handout](#), as in steps 1-2 [below](#).
2. The [Word for Windows handout](#) is saved as a [Rich Text Format](#) file.
3. Upload the RTF file to UNIX and apply **rtftohtml** to get [an HTML version](#).
4. Edit in piece image references using

```
% sed -f tilbrtf.sed handout.html > test.tmp
cat head handout.tmp tail > handout.html
```

This is the real point: having put some sweat into creating a neat word-processed handout for a coaching session, I can upload it to this server and with [one macro command](#) I can turn it into valid HTML without creating or uploading new diagrams. (*bows*) With all the diagrams, about 12 pages of A4 in Word comes out at 100-150k of HTML.

Method 3: Creating handouts

There are several PC solutions to this task (if you aren't using a chess-playing programme with a print facility) but they all start with getting hold of a chess font. The ICL has a very nice set of PD [graphics](#) to enhance the basic stuff below.

Then you need to create little 8x8 arrays of characters in your document to fit your font. You can do this either:

- a. by hand using ZugZwang for Windows (not all fonts supported)
- b. by hand using CDE: [Chess Diagram Editor](#)
- c. by hand using handmade FEN files and [CBASCII](#)
- d. by computer using [CBASCII](#) and PGN game files (handmade or by [SLICS/CHESSBD](#))

The last being the most accurate, and hence the one I use.

1. use CBASCII to create text files with 8x8 diagram arrays, as in steps 1-6 above. [I use [Eric Schiller's](#) Tilburg font (see [below](#)), which also can be used nicely with Anders Thulin's Chess Diagram Editor, available from [my FTP site](#) or the big US sites and their mirrors.] I get to a document I can edit by using a CBASCII character mapping that fits the chess font I use, that is, on the PC going:

```
c:\cbascii -e -fcb -d8x8=tilburg.def games.doc games.cbf
```

CBASCII takes game number options, so you can output just the ones you want.

2. edit the text file using your favourite word processor: I usually set the handout in two columns, with half-a-dozen or so separate paragraph styles to get the appearance of chess diagrams:

normal text:

Arial 12pt, paragraph 0.5 line before, 1.5 spacing

game comment:

normal + 1.0 spacing

game moves:

normal + indent and bold

game variation:

normal + italic

game subvariation:

normal + italic and indent

diagram:

Tilburg 12 pt, paragraph indented both sides, border variation diagram:

diagram + Tilburg 10pt,extra indent, double border

Here is a completed [Word for Windows handout](#). There's also an example of a Word 6 file [italian.doc](#) among the Openings handouts. If you don't have Tilburg you'll have to edit in another font (change TILBURG to TASC) and change the characters (/0220 to A, /0221 to a, ...) to see these properly. The troff character translations to create a [plain ASCII text](#) are given [here](#).

3. **Using other TrueType fonts:** Tilburg was the firstest with the mostest as far as I was concerned, and is still advertised as the main commercial option by UK database agents, although it has been overtaken by [Steve Smith's](#) Alpine fonts (Linares, Zurich, Hastings, etc.).

Excellent free public domain [PD] alternatives have appeared since I got going, including: I have stored here possibly old copies of [Hans Bodlaender's Utrecht](#) font [\[homepage\]](#), and Alan Cowdery's wonderful new PD [Traveller](#) font. There's a TT version of the [Adobe cheq](#) font around; I also keep a copy [here](#).

Some fonts like the [TASC's Figurine](#) font [\[homepage\]](#) are designed to accompany commercial packages, including now: [ChessMaster 5000](#), [Chess Office](#) and [Smart Chess](#).

They all have their own advantages: **cheq** can be read easily in small font sizes, **Traveller** is very comprehensive but doesn't read well on the screen in Windows 3.1, and so on.

Some of these fonts have borders but I don't think any have coordinates. All praise and thanks to these folks for putting their hard work out free for us hacks... Someone posted a list of [Sites with downloadable chess fonts](#), and there is a great archive in [Norresundby Chess Club's site "En Passant"](#).

As all these fonts use 'normal' characters like ABC to stand for chess pieces you have to use different fonts for diagrams and body text. [You might end up doing that anyhow with Tilburg as it uses characters in the 0220-0244 range for pieces, which is a royal pain to type in].

Of course, you can use all these with CBASCII in the same way as Tilburg, viz.

```
c:> cbascii -e -fcb -d8x8=normal.def normal.txt diagram.cbf
c:> cbascii -e -fcb -d8x8=tilburg.def tilburg.txt diagram.cbf
c:> cbascii -e -fcb -d8x8=std.def std.txt diagram.cbf
c:> cbascii -e -fcb -d8x8=utrecht.def utrecht.txt diagram.cbf
c:> cbascii -e -fcb -d8x8=tasc.def tasc.txt diagram.cbf
c:> cbascii -e -fcb -d8x8=cheq.def cheq.txt diagram.cbf
```

```
c:> cbascii -e -fcb -d8x8=linares.def linares.txt diagram.cbf
```

I have made up a demonstration file for these fonts in this way as a [Windows Write](#) file. Alastair Scott spent a long while tidying up DTP for users of CBASCII and some of the fruits of his labour are in a little file called [cbasckit.zip](#); I am pleased to see that Alastair's page is back up.

[Steve Smith's](#) commercial TT fonts e.g. Linares, also use "normal" characters and can offer borders and coordinates. If I was starting again I would always use one of these, as I think Tilburg doesn't yet support borders or coordinates. The Linares fonts include versions which will (a) work wonderfully with the Chessbase for Windows Demo, and (b) turn 'natural' chess text (1.Nf3) into figurines. If you can use the CBWin demo. with these fonts, you can bypass the CBASCII routes I describe above using cut-and-paste or Printing-CreateTextFile.

Clearly all these files still need a lot of tweaking with sundry UNIX tools to get them to look like web pages, and if I could get the hang of the TeX chess macros, I might even use them instead! Shaihin very kindly sent me not [one](#) but [two](#) studies laid out in beautiful LaTeX PostScript, if you are interested in this approach.

Anyhow, if you have any comments or suggestions on how to do this more easily, I'd love to hear from you.

How do I print out the Web page handouts?

These notes arose after I got a note from a friend:

[...]

I don't know how easy it is, but one suggestion I have is to make a text/postscript printable version of the material, without the diagrams! They are great in colour on the web page, but do take up a lot of paper, and don't go into wordprocessors (mine, at least). I made a copy of your French Defence ideas by dragging and dropping the text around the diagrams into a text editor, a few Latex commands, and the whole looks nice in six pages, very handy at home with the chess board.

Of course, most browsers have a simple print option. These notes are only for those who find this unsatisfactory (the diagrams are bulky, and the handouts are sometimes very long) and would like

another route. [PC/UNIX users only, I'm afraid, until someone helps me out]

1. The easiest way I know to create your own text-only printable version using the save (p) option in LYNX, which will include ASCII diagrams. This is very quick, although I'd find it a bore to do the lot that way. I've no idea how to do this in Netscape: you can turn images off but I don't think you can do that when you print. But
 - o there is a DOS LYNX
 - o it serves people right for using [Netscape](#)
2. Otherwise, you'll have to save the source and [macro](#) out the tags. I've had a go at doing this myself, i.e.

sed -f [html2txt.sed file.html](#) > [file.html.txt](#)

- o The diagrams in the resulting text files are derived from the alt="" elements; the light and dark squares are "-" and "+", the white pieces are "kqrbn" on light squares and "KQRBN" on dark, and the Black pieces are respectively "jdtls" and "JDTLS". If you have a chess font you should be able to save the file, and edit in the characters you need; this is pretty much the reverse of what I do to make them in the first place.
- o You can do this by creating the "[file.html.txt](#)" and running a sed macro on it which matches the font you intend to use: for example, if you use the character map for [Traveller Standard font](#) or [Adobe cheq](#) or [Linares](#) you can use the sed macro for [std](#) or [cheq](#) or [Linares](#). [If you design your own, you could post it to me and I'd put a link in here.]

So, having saved the source, you go:

sed -f [std.sed file.html.txt](#) > [file.txt](#)

sed -f [cheq.sed file.html.txt](#) > [cheq.txt](#)

or

sed -f [linares.sed file.html.txt](#) > [linares.txt](#)

You can then create your e.g. [Word for Windows](#) version of the Web page.

- o If you intend to leave it as plain text, but prefer "kqrbn" for White pieces and "KQRBN" for Black (thus losing the square colour information), then try running (guess?) this [sed macro](#) on it.

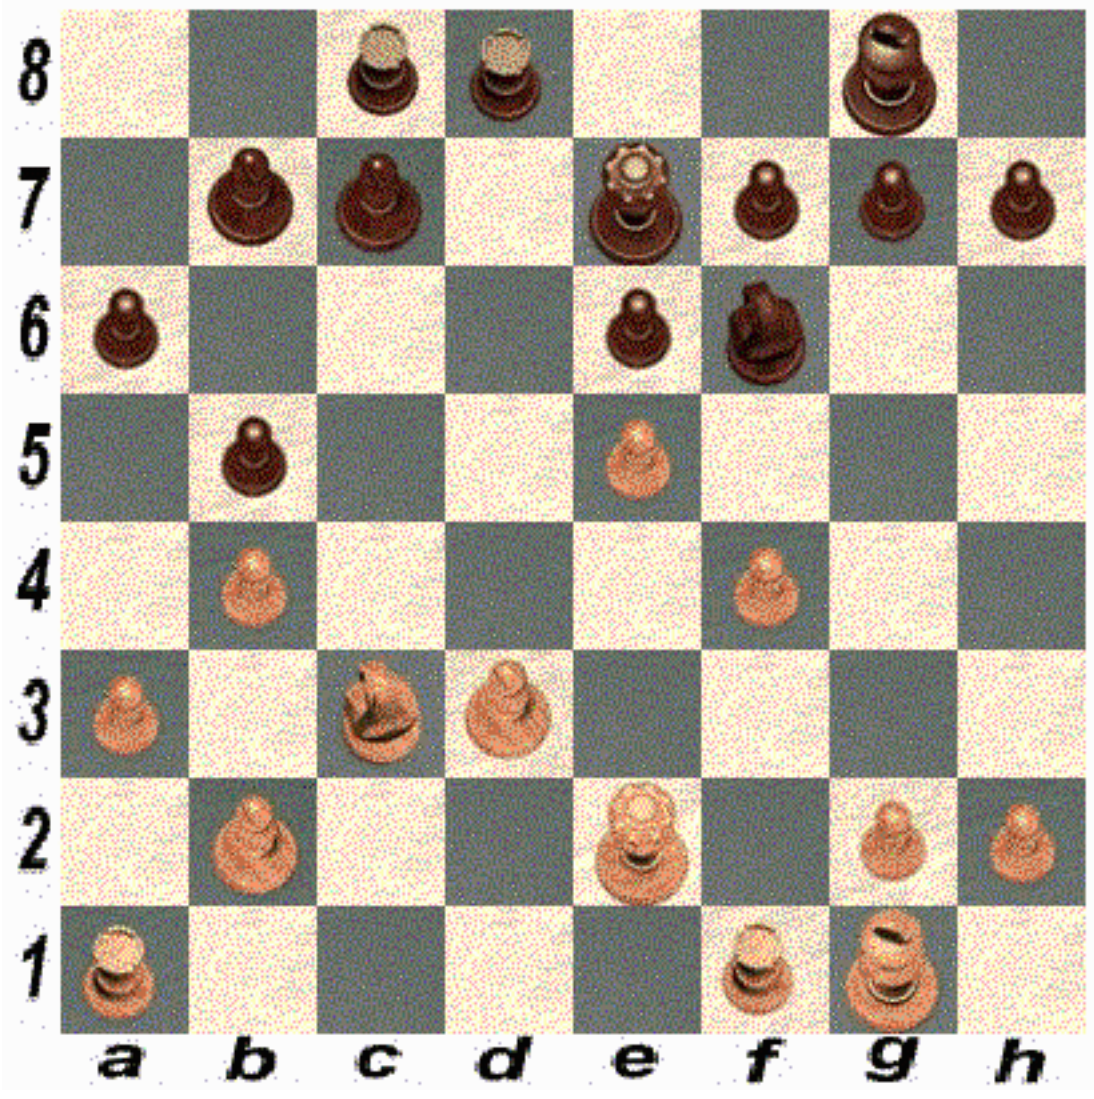

Comments etc. to the usual mailbox.

[Dr. Dave](#)

Exeter Chess Club: Fritz

I am now on my third version of Fritz and am still not entirely happy with it. It plays a mean game of chess, and has an attractive screen, but has some clunkiness which I would resent in shareware, let alone full-price commercial software.

Fritz gripes (relevant to version 3, but most are present in all versions)

=====

STARTING UP

- I get a persistent "EMS error" message on startup (which takes one key press to remove - it doesn't disappear after a delay and I can't disable it - I have trialled shareware which pestered me less than this!)

[EMS is incompatible with Windows, so you have to reconfigure the whole machine to get Fritz to work in optimal mode, then change it all back to use Windows - or get this message every time]

- Auto-analyse has to be switched off every run (this takes two key presses to close) Although Fritz does save information about colour and sound and animation, it doesn't save this as a preference.

- The set level has to be moved up every run (two key presses) Although Fritz does save information about colour and sound and animation, it doesn't save this as a preference.

WORKING WITH FRITZ

- You are given only a 3-line comment box to annotate moves, rather than open-ended pop-up text window; a pointless restriction.

SAVING GAMES

- If I have unsaved changes in current game, I'd like Fritz to ask: really load new game? This would have saved a lot of lost work at times...

- I type in one of my league games, and type in 3-figure BCF grade - but the machine won't accept a three-figure grade. A pretty pointless restriction in itself, but...
- I still want my UK grade information, so I convert 113 BCF to ELO 1504, type in ELO 1504... then ELO comes out at 2780 after a save!
- Fritz' books recognise an opening's ECO code, but the openings classification it uses for reports is much cruder and idiosyncratic. This is inconsistent and annoying.
- Fritz books recognise ECO, but Fritz doesn't offer the ECO code it clearly knows about as a prompt in the save screen
- The save screen prompts the current year, even if you are entering a 1884 game! The opening ECO code is always right but date is often wrong - why does Fritz prompt the date & not the opening?

Exeter Chess Club:

Lessons from Rubinstein

Peter Lane, 10 June 1997

Akiba Rubinstein made enormous contributions to the game of chess. In the first place, our opening books contain Rubinstein's lines in the Nimzo-Indian (**1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 4.e3**), the Tarrasch Defense (**1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.g3**), the Four Knights' Game (**1.e4 e5 2.Nf3 Nc6 3.Nc3 Nf6 4.Bb5 Nd4**) and the French Defense (**1.e4 e6 2.d4 d5 3.Nc3 dxe4**). Secondly there is the legacy of his games, containing some superb endgames (Reuben Fine believing he ranked above Capablanca in this respect) and a middlegame style based upon a preference for the attack.

The games selected here will focus upon Rubinstein's attacking skill. My reasons for this are twofold. Firstly, I have been reading Vukovic's '**Art of Attack in Chess**', and you can see this selection as my attempt to understand some of the principles! Secondly, his combinational style was a method which permeated all areas of the game, as we will see in his clash with Capablanca.

Game 1 : Rubinstein's Immortal

Rotlewi vs A.R., Lodz 1907/8, Queen's Gambit Declined.

1.d4 d5 2.Nf3 e6 3.e3 c5 4.c4 Nc6 5.Nc3 Nf6 6.dxc5 Bxc5 7.a3 a6 8.b4 Bd6 9.Bb2 O-O 10.Qd2?

Only 10.cxd5 exd5 11.Be2/d3 could save the opening.

10. ... Qe7! 11.Bd3 dxc4 12.Bxc4 b5 13.Bd3 Rd8 14.Qe2 Bb7 15.O-O Ne5 16.Nxe5 Bxe5 17.f4 Bc7 18.e4 Rac8 19.e5

```
2rr2k1/1bb1qppp/p3pn2/1p2P3/1P3P2/P1NB4/1B2Q1PP/R4RK1
```

White is asking for trouble. The open c- and d-files have been left uncontested, and the pawn advances have additionally opened diagonals for the Black bishops. A.R. moves over to a direct attack.

19. ... Bb6+ 20.Kh1 Ng4! 21.Be4

Of course 21.Qxg4 Rxd3 is strong. 21.Ne4 Rxd3 22.Qxd3 Bxe4 23.Qxe4 Qh4 24.h3 Qg3 25.hxg4 Qh4 'mate begins to reveal the danger White is in.

21. ... Qh4 22.g3

```
2rr2k1/1b3ppp/pb2p3/1p2P3/1P2BPnq/P1N3P1/1B2Q2P/R4R1K
```

22. ... Rxc3! 23.gxh4

if 23.Bxc3 Bxe4+ 24.Qxe4 Qxh2 'mate, or 23.Bxb7 Rxg3 24.Rf3 Rxf3 25.Bxf3 Nf7 + 26.Kg1 Ne4+ 27.Kf1 Nd2+ 28.Kg2 Nxf3 29.Qxf3 Rd2+ etc.

23. ... Rd2!! 24.Qxd2

if 24.Qxg4 Bxe4+ 25.Rf3 Rxf3 etc, 24.Bxc3 Rxd2 with Rxh2 'mate or Bxe4+ 'mate to follow, or 24.Bxb7 Rxe2 25.Bg2 Rh3! etc.

24. ... Bxe4+ 25.Qg2 Rh3! 0-1

'mate in three follows, 26.Rf3 Bxf3 27.Bd4 Bxd4 and Rxh2 'mate.

Game 2 : Refuting Unsound Opening Play

A.R. vs Dr. Tartakower, Kissingen 1928, Budapest Defense.

1.d4 Nf6 2.c4 e5 3.dxe5 Ng4 4.Bf4 Bb4+ 5.Nd2 Nc6 6.Nf3 f6

Black avoids the mainline, 6...Qe7 7.a3 Ngxe5 8.Nxe5 Nxe5 9.e3 Bxd2+ 10.Qxd2 and White is visibly superior. White's line is a recommendation of Dr. Bernstein, and designed to retain the two bishops - an important point for A.R., as we will see.

7.exf6 Qxf6 8.g3!

This is the Rubinstein touch - offering back the pawn in exchange for superior development.

8. ... Qxb2 9.Bg2 d6 10.O-O O-O

r1b2rk1/ppp3pp/2np4/8/1bP2Bn1/5NP1/Pq1NPPBP/R2Q1RK1

11.Nb3!

This move is quite subtle. Black's opening is based upon the hope of active piece play, but now his pieces are looking uncoordinated, and White is well developed. In situations of this kind, it is important to gain and keep the initiative, primarily through attacking and removing your opponent's best pieces. With this in mind, A. R. plans to exchange the Bb4 for a knight, drive back the Ng4, and use his two bishops and central control to break through.

11. ... Qf6 12.Ng5 h6 13.Ne4 Qf7

if 13. ... Qe7 14.a3 Bc5 (not Ba5 15.Nxa5 and Qd5+) 15.Nexc5 dxc5 16.Qd5+ Be6 17.Qxc5 Qxc5 18.Nxc5 Bxc4 19.Rfc1 Bxe2 20.Nxb7 wins a pawn.

14.a3 Ba5 15.Nxa5 Nxa5 16.h3! Ne5

We begin to see some of Black's problems: 16...Nf6? 17.Nxf6+ Qxf6 18.Qd5 +xa5 or 17...gxf6 18.Bxh6

17.c5!

showing that e5 is not a strong point for the knight, only a cover for the d6 pawn. Notice how Black's pieces are kept on the run.

17. ... g5?

Black should centralise: 17...Nac4 18.cxd6 Rd8 maintains complications.

18.Bd2 d5 19.Nxg5 hxg5 20.Bxa5 Be6 21.Bc3 Nc6

r4rk1/ppp2qpp/2n1b3/2Pp2p1/8/P1B3PP/4PPB1/R2Q1RK1

Now watch A.R. infiltrate with his queen.

22.Qd2 Qf5 23.g4 Qf4 24.Bxd5 Bxd5

of course, 24...Qxd2 25.Bxe6+. Notice the deflection of the overloaded Black queen.

25.Qxd5+ Kh7 26.e3! Qf3 27.Qxg5 Qxh3 28.Qg7 'mate

(If 27...Q/Rf7 28.Qh4+ and 'mate.)

This game demonstrates three very important principles of Rubinstein's play:

- 1. Use of the bishops, note the Bf4-d2-c3 manoeuvre, changing the attack point from d6 to g7.**
 - 2. Attacking the opponent's pieces to prevent development and consolidation.**
 - 3. By maintaining the initiative in the centre, a weakened king's side can be punished with a swift kill.**
-

Game 3 : Causing Chaos

A.R. vs Dr. Tarrasch, Hastings 1922, Dutch Defense.

1.d4 e6 2.c4 f5 3.g3 c5

This line looks an active central attack, but creates weaknesses. Nf6 or Bb4+ are superior. Notice how A.R. develops smoothly, not attempting a refutation.

4.Nf3 cxd4 5.Nxd4 Nf6 6.Bg2 Nc6 7.O-O Bc5 8.e3 O-O 9.Nc3 a6

Neither b6 nor d6 are playable due to Nxc6, and Qc7 is met by Nb5, but this passive move gives A.R. the chance to gain some queen side space.

10.a3 Qc7 11.b4 Be7 12.Bb2 Ne5

if 12...d6 13.e4 opens the game to White's advantage, but this tempting line is flawed. Vukovic gives a useful comment to bear in mind: 'the use of force from a weaker position usually prompts a still more forceful reply from one's opponent'.

13.c5 Nc4

r1b2rk1/1pqp1pp/p3pn2/2P2p2/1PnN4/P1N1P1P1/1B3PBP/R2Q1RK1

14.Nxf5!

And this is it! Qb3 would follow the capture of the knight, but that is not the full story...

14. ... Bxc5 15.bxc5 Qxc5 16.Nh6+

This is the real point. The combination has removed the dark square bishop, wrecked the Black king side, and gained the initiative, at the cost of a pawn. (Note 14...Nxb2 15.Nxe7+ and Qb3 won a pawn, but 15...Nxb2 16.Ne7+ Kf7 17.Qe2 seems no worse than the game, and White has lost a bishop.)

16. ... gxh6 17.Bc1 Qe5? 18.Qd3! Qc5

Oh dear, but if 18...Nb6 19.Bb2, or 18...d5 19.e4. Better was 17...d6 or Rb8 to continue developing.

19.a4! d6 20.e4

This is now playable, because his previous move prevented ...b5 20. ... Kg7 21. Nd1! painfully simple chess - the Nc4 must go!

21. ... Bd7 22.Ne3 b5 23.Nxc4 bxc4 24.Qd2 Ne8 25.e5!

r3nr2/3b2kp/p2pp2p/2q1P3/P1p5/6P1/3Q1PBP/R1B2RK1

The final disorganisation - a blow in the centre. White's bishops dominate the board. The Bc1 aims at h6, and threatens to move to a3 at an opportune moment; the Bg2 strikes down to a8, and is anxious to play a bigger role!

25. ... Rab8 26.Qxh6+ Kg8 27.Qg5+ Kf7 (if 27...Kh7 28.Qe7!) 28.Bf3! Rg8 29.Qh5+ Kg7 30.Be4! Qxe5

what else? 30...Rh8 31.Bh6+ Kg8 32.Qg5+ Kf7 33.Qf4+ wins.

31.Qxh7+ Kf8

if 31...Kf6 32.Qxg8 Qxe4 33.Bg5+ Kf5 34.Qh7+ etc.

32.Qxd7 Qxe4 33.Bh6+ 1-0

as White wins a rook after 33...Ng7 34.Bxg7+ Rxg7 35.Qxd7+xb8

This game shows the same three characteristics:

1. The bishops reign supreme.

2. Removing the opponent's better pieces (Be7 and Nc4).

3. Taking the initiative, and not letting it go.

Game 4 : Pawn Storm

A.R. vs Teichmann, Vienna 1908, Queen's Gambit Declined.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Nbd7 5.e3 Be7 6.Nf3 O-O 7.Qc2 b6

Better is 7...c5. For this line to be playable, Black must keep the queen's knight at home to cover the White squares, and play ...h6 in preference.

8.cxd5 exd5 9.Bd3 Bb7 10.O-O-O c5 11.h4

r2q1rk1/pb1nbppp/1p3n2/2pp2B1/3P3P/2NBPN2/PPQ2PPQKR3R

11. ... c4?

This move always seems to be a critical error by Black in Queen's side openings - it blocks the position, and White's attack is quicker. The position is one of opposite side castling, and the central formation is, at the moment, fixed. Therefore the plan is one of pushing pawns at the opponent's king. This is not because the pawns make the best attackers - pieces prefer to deliver 'mate' - but because we need to open lines of attack, especially files for the rooks. Black's plan is therefore indicated: 11...cxd4 to open the c-file, followed with ...Rc8...a6...b5

12.Bf5 Re8 13.Bxf6!

This is most instructive. When playing an attack involving a pawn storm every tempo becomes critical, and it is particularly important to prevent your opponent making good defensive moves. In this position Black wants to cover his h7 pawn with the move ...Nf8. White's plan is to push his g-pawn, and for this purpose the Bg5 is an obstruction. It would also be pleasant if the move g5 were to gain a tempo against a Nf6. Therefore this move, which gets rid of the obstruction, prevents the defensive Nf8, and forces Black to keep a knight on f6 ready to be attacked by the advancing pawn. Finding moves like this is necessary if your attack is to keep on rolling!

Finally we must remember to be flexible in attack, if Black had played 12...g6 13. Bxd7 and Bh6 would have followed.

13. ... Nxf6 14.g4 Bd6 15.g5 Ne4 16.h5 Qe7

The pawns just keep moving up the board, and Black has yet to move on the queen-side. Note: 16...Nxg5 17.Nxg5 Qxg5 18.Bxh7+ Kf8 19.h6 gxh6 20.Rdg1 and `etc' say the commentators. After 20...Qf6 21.Rh5 Qe6 22.Rgh1 does look good.

17.Rdg1 a6

r3r1k1/1b2qppp/pp1b4/3p1BPP/2pPn3/2N1PN2/PPQ2P2/2K3RR

This is the crucial point. White has brought all his pieces into optimal places, and the pawns are only a step from the enemy defenses, but how to break through? 18.g6 fxc6 ...h6 or 18.h6 g6 will not do. Of course, if the f-g-h pawns were removed, White would be up by two rooks, because the Black rooks cannot shield their king.

Therefore, White is free to sacrifice a piece to prevent any blockade.

18.Bxh7+! Kxh7 19.g6+ Kg8

if 19...fxg6 20.Nxe4 dxe4 21.Ng5+ Kg8 22.Qxc4+ or 21...Kh6 22.Nf7+ Qxf7 23.hxg6+ etc

20.Nxe4 dxe4 21.h6 f6?

Tougher is 21...fxg6 22.Nh4 g5 23.Ng6 Qf6 24.h7+ Kf7 25.h8(Q) Rxh8 26.Nxh8 + Ke7 leaving White to extricate his knight.

A.R. missed 21.Ng5 Bd5 22.gxf7+ Bxf7 23.f3! Bd5 (else 24.fxe4-e4) 24.h6! coupling a central break through with the king-side attack,

e.g. 24...Rac8 25.fxe4 Bxe4 26.h7+ Kh8 27.Qxe4! Qxg5 28.Qxe8+ wins.

22.hxg7 exf3

if 22...Qe6 23.Rh8+ Kxg7 24.Rh7+ and Rgh1 will force 'mate.

23.Rh8+ Kxg7 24.Rh7+ Kg8 25.Qf5 c3

if 25...Qe6 26.Qh5

26.Rxe7 1-0

as 26...Rxe7 27.Qxf6 and Rh1 'mates.

Game 5 : A Clash of Titans

A.R. vs J.R. Capablanca, San Sebastian 1911, Tarrasch Defense.

1.d4 d5 2.Nf3 c5 3.c4 e6 4.cxd5 exd5 5.Nc3 Nc6 6.g3

Black's opening was held by Tarrasch: *to be the best, although I must add that I am almost completely alone in holding that opinion. It is based upon the undeniably correct idea that in the Queen's Gambit ...c5 is the freeing move for Black, and must therefore be made as soon as possible. With this defense Black gets a fine free game for his pieces, at the cost of isolating his Queen's Pawn'.*

And for those who worry about that 'cost'? *He who fears an isolated Queen's Pawn should give up chess'.* (Tarrasch referred to this debate as *Tarrasch contra mundum*).

A.R.'s enduring contribution was a plan involving a fianchetto of the king's bishop, bringing it to bear on the pawn at d5. This simple scheme was used by Karpov to defeat Kasparov twice in 1985.

6. ... Be6

Capablanca used this line against Marshall in 1909, winning his 'most accurate game', but 6...Nf6 7.Bg2 Be7 8.O-O O-O is preferable.

7.Bg2 Be7 8.O-O Rc8 9.dxc5 Bxc5 10.Ng5!

White can begin an attack while Black still lacks two moves for castling. Notice that the initiative is used to make the most of a development edge.

10. ... Nf6 11.Nxe6 fxe6 12.Bh3

Again, the mobile bishop - h3-c8 is now the crucial light diagonal.

12. ... Qe7 13.Bg5 O-O

Black has finally caught up in development, but A.R. has been preparing his middle game plans - watch the board explode!

14.Bxf6 Qxf6 15.Nxd5!

2r2rk1/pp4pp/2n1pq2/2bN4/8/6PB/PP2PP1P/R2Q1RK1

**15. ... Qh6**

Of course, 15...exd5 16.Qxd5+ and Bxc8 or 15...Bxf2+ 16.Kg2 Qh6 17.Nf4 and 18.Bxe6+xc8 win quickly for White. Instead Capablanca puts another piece under attack, and prepares to pin the knight: who's winning?

16.Kg2 Rcd8 17.Qc1!!

A.R. of course! 17...Rxd5 fails to 18.Qxh6 and 19.Bxe6+, so White wins at least a pawn.

17. ... exd5 18.Qxc5 Qd2 19.Qb5 Nd4 20.Qd3 Qxd3 21.exd3 Rfe8

3rr1k1/pp4pp/8/3p4/3n4/3P2PB/PP3PKP/R4R2

22.Bg4

Black's better development make White's win hard work, at best. 22.Rae1 Nc2 23.Rxe8+ Rxe8 leaves both Nb4 and Ne1+xd3 threatened. White must work up something with his rooks, and try to dislodge that knight on d4. Both players are legends in the endgame, and the following moves unfold an epic battle.

22. ... Rd6 23.Rfe1 Rxe1 24.Rxe1 Rb6 25.Re5!

Rooks must be active. 25.b3 Ra6 and 25.Rb1 would be deplorably passive.

25. ... Rxb2 26.Rxd5 Nc6

as 26...Nb5 27.Rd8+ Kf7 28.Rd7+xb7 loses and 26..Nc2 leaves the knight out of the game. Now watch the White pieces jockeying for the best places: the rook to attack the pawns on the 7th rank, the bishop to cover the a2 pawn, not forgetting to drive the defending king away!

27.Be6+ Kf8 28.Rf5+ Ke8

if 28...Ke7 29.Bc4 with Rf7 to come.

29.Bf7+ Kd7

The king must come forward now to gain counterplay.

30.Bc4 a6

To prevent Rb5 swapping the rooks, and now White is free to gain some pawns.

31.Rf7+ Kd6 32.Rxg7 b5 33.Bg8 a5 34.Rxh7 a4 35.h4 b4 36.Rh6+

The Black pawns are beginning to look worrying, and White must take counter measures.

36. ... Kc5 37.Rh5+ Kb6 38.Bd5? b3?

Missing the chance to play 38...Rxa2! as 39.Bxa2 b3 40.Bxb3 axb3 will queen the pawn, but 39.Bc4 Rc2 40.Rb5+ Kc7 41.Bg8 is still winning.

On White's side a better line was 38.Bc4 b3 39.Rb5+ Kc7 40.Bxb3 axb3 41.axb3 winning comfortably.

We now get a finely calculated finish.

39.axb3! a3 40.Bxc6! Rxb3

if 40...a2 41.Rb5+ Ka6 42.Rb8

41.Bd5 a2 42.Rh6+ 1-0

because 42...Ka5/a7 43.Rh8-a8, or if 42...Kb5 43.Bc4+ and Ra6.

Lessons from Rubinstein

Peter Lane, 10 June 1997

Akiba Rubinstein made enormous contributions to the game of chess. In the first place, our opening books contain Rubinstein's lines in the Nimzo-Indian (**1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 4.e3**), the Tarrasch Defense (**1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.g3**), the Four Knights' Game (**1.e4 e5 2.Nf3 Nc6 3.Nc3 Nf6 4.Bb5 Nd4**) and the French Defense (**1.e4 e6 2.d4 d5 3.Nc3 dxe4**). Secondly there is the legacy of his games, containing some superb endgames (Reuben Fine believing he ranked above Capablanca in this respect) and a middlegame style based upon a preference for the attack.

The games selected here will focus upon Rubinstein's attacking skill. My reasons for this are twofold. Firstly, I have been reading Vukovic's **'Art of Attack in Chess'**, and you can see this selection as my attempt to understand some of the principles! Secondly, his combinational style was a method which permeated all areas of the game, as we will see in his clash with Capablanca.

Game 1 : Rubinstein's Immortal

Rotlewi vs A.R., Lodz 1907/8, Queen's Gambit Declined.

1.d4 d5 2.Nf3 e6 3.e3 c5 4.c4 Nc6 5.Nc3 Nf6 6.dxc5 Bxc5 7.a3 a6 8.b4 Bd6 9.Bb2 O-O 10.Qd2?

Only 10.cxd5 exd5 11.Be2/d3 could save the opening.

10. ... Qe7! 11.Bd3 dxc4 12.Bxc4 b5 13.Bd3 Rd8 14.Qe2 Bb7 15.O-O Ne5 16.Nxe5 Bxe5 17.f4 Bc7 18.e4 Rac8 19.e5

2rr2k1/1bb1qppp/p3pn2/1p2P3/1P3P2/P1NB4/1B2Q1PP/R4RK1

ÜçÜ[[Yacute]]î[[Yacute]][[Thorn]]ß

ëÜ[[Yacute]]Ü[[Yacute]]êóÜ

White is asking for trouble. The open c- and d-files have been left uncontested, and the pawn advances have additionally opened diagonals for the Black bishops. A.R. moves over to a direct attack.

19. ... Bb6+ 20.Kh1 Ng4! 21.Be4

Of course 21.Qxg4 Rxd3 is strong. 21.Ne4 Rxd3 22.Qxd3 Bxe4 23.Qxe4 Qh4 24.h3 Qg3 25.hxg4 Qh4 'mate begins to reveal the danger White is in.

21. ... Qh4 22.g3

2rr2k1/1b3ppp/pb2p3/1p2P3/1P2BPnq/P1N3P1/1B2Q2P/R4R1K

[[Yacute]]à[[Yacute]]ÜÜ[[Yacute]]Ü

ÜÜ[[Yacute]]æßñ

ÜÜ[[Yacute]]ÜÜ

ÜçÜ[[Yacute]]î[[Yacute]]Üß

ëÜ[[Yacute]]Ü[[Yacute]]ê[[Yacute]]ò

22. ... Rxc3! 23.gxh4

if 23.Bxc3 Bxe4+ 24.Qxe4 Qxh2 'mate, or 23.Bxb7 Rxc3 24.Rf3 Rxf3 25.Bxf3 Nf7 + 26.Kg1 Ne4+ 27.Kf1 Nd2+ 28.Kg2 Nxf3 29.Qxf3 Rd2+ etc.

23. ... Rd2!! 24.Qxd2

if 24.Qxg4 Bxe4+ 25.Rf3 Rxf3 etc, 24.Bxc3 Rxd2 with Rxh2 'mate or Bxe4+ 'mate to follow, or 24.Bxb7 Rxe2 25.Bg2 Rh3! etc.

24. ... Bxe4+ 25.Qg2 Rh3! 0-1

'mate in three follows, 26.Rf3 Bxf3 27.Bd4 Bxd4 and Rxh2 'mate.

Game 2 : Refuting Unsound Opening Play**A.R. vs Dr. Tartakower, Kissingen 1928, Budapest Defense.**

1.d4 Nf6 2.c4 e5 3.dxe5 Ng4 4.Bf4 Bb4+ 5.Nd2 Nc6 6.Nf3 f6

Black avoids the mainline, 6...Qe7 7.a3 Ngxe5 8.Nxe5 Nxe5 9.e3 Bxd2+ 10.Qxd2 and White is visibly superior. White's line is a recommendation of Dr. Bernstein, and designed to retain the two bishops - an important point for A.R., as we will see.

7.exf6 Qxf6 8.g3!

This is the Rubinstein touch - offering back the pawn in exchange for superior development.

8. ... Qxb2 9.Bg2 d6 10.O-O O-O

r1b2rk1/ppp3pp/2np4/8/1bP2Bn1/5NP1/Pq1NPPBP/R2Q1RK1

[[Yacute]]Ü[[Yacute]]Ü[[Yacute]]âßÜ

[[Thorn]]ñÜã[[Thorn]]ßæß

ëÜ[[Yacute]]î[[Yacute]]êóÜ

11.Nb3!

This move is quite subtle. Black's opening is based upon the hope of active piece play, but now his pieces are looking uncoordinated, and White is well developed. In situations of this kind, it is important to gain and keep the initiative, primarily through attacking and removing your opponent's best pieces. With this in mind, A. R. plans to exchange the Bb4 for a knight, drive back the Ng4, and use his two bishops and central control to break through.

11. ... Qf6 12.Ng5 h6 13.Ne4 Qf7

if 13. ... Qe7 14.a3 Bc5 (not Ba5 15.Nxa5 and Qd5+) 15.Nexc5 dxc5 16.Qd5+ Be6 17.Qxc5 Qxc5 18.Nxc5 Bxc4 19.Rfc1 Bxe2 20.Nxb7 wins a pawn.

14.a3 Ba5 15.Nxa5 Nxa5 16.h3! Ne5

We begin to see some of Black's problems: 16...Nf6? 17.Nxf6+ Qxf6 18.Qd5 +xa5 or 17...gxf6 18.Bxh6

17.c5!

showing that e5 is not a strong point for the knight, only a cover for the d6 pawn. Notice how Black's pieces are kept on the run.

17. ... g5?

Black should centralise: 17...Nac4 18.cxd6 Rd8 maintains complications.

18.Bd2 d5 19.Nxg5 hxg5 20.Bxa5 Be6 21.Bc3 Nc6

r4rk1/ppp2qpp/2n1b3/2Pp2p1/8/P1B3PP/4PPB1/R2Q1RK1

î[[Yacute]]Ü[[Yacute]]Üíô[[Yacute]]

áàáÜ[[Yacute]][[eth]]áà

Ü[[Yacute]]ä[[Yacute]]è[[Yacute]]Ü[[Yacute]]

[[Yacute]]Üßà[[Yacute]]ÜáÜ

Ü[[Yacute]]Ü[[Yacute]]Ü[[Yacute]]Ü[[Yacute]]

BÜçÜ[[Yacute]]Üß[[Thorn]]

Ü[[Yacute]]Ü[[Yacute]][[Thorn]]Bæ[[Yacute]]

ëÜ[[Yacute]]î[[Yacute]]êóÜ

Now watch A.R. infiltrate with his queen.

22.Qd2 Qf5 23.g4 Qf4 24.Bxd5 Bxd5

of course, 24...Qxd2 25.Bxe6+. Notice the deflection of the overloaded Black queen.

25.Qxd5+ Kh7 26.e3! Qf3 27.Qxg5 Qxh3 28.Qg7 'mate

(If 27...Q/Rf7 28.Qh4+ and 'mate.)

This game demonstrates three very important principles of Rubinstein's play:

- 1. Use of the bishops, note the Bf4-d2-c3 manoeuvre, changing the attack point from d6 to g7.**
- 2. Attacking the opponent's pieces to prevent development and consolidation.**
- 3. By maintaining the initiative in the centre, a weakened king's side can be punished with a swift kill.**

Game 3 : Causing Chaos

A.R. vs Dr. Tarrasch, Hastings 1922, Dutch Defense.

1.d4 e6 2.c4 f5 3.g3 c5

This line looks an active central attack, but creates weaknesses. Nf6 or Bb4+ are superior. Notice how A.R. develops smoothly, not attempting a refutation.

4.Nf3 cxd4 5.Nxd4 Nf6 6.Bg2 Nc6 7.O-O Bc5 8.e3 O-O 9.Nc3 a6

Neither b6 nor d6 are playable due to Nxc6, and Qc7 is met by Nb5, but this passive move gives A.R. the chance to gain some queen side space.

10.a3 Qc7 11.b4 Be7 12.Bb2 Ne5

if 12...d6 13.e4 opens the game to White's advantage, but this tempting line is flawed. Vukovic gives a useful comment to bear in mind: 'the use of force from a weaker position usually prompts a still more forceful reply from one's opponent'.

13.c5 Nc4

r1b2rk1/1pqp1pp/p3pn2/2P2p2/1PnN4/P1N1P1P1/1B3PBP/R2Q1RK1

[[Yacute]]è[[Yacute]]Üíô[[Yacute]]

[[Yacute]]àñàéÜáà

à[[Yacute]]Ü[[Yacute]]àåÜ[[Yacute]]

[[Yacute]]ÜßÜ[[Yacute]]à[[Yacute]]Ü

ÜßääÜ[[Yacute]]Ü[[Yacute]]

ßÜääÜßÜßÜ

ÜçÜ[[Yacute]]Üßæß

ëÜ[[Yacute]]î[[Yacute]]êóÜ

14.Nxf5!

And this is it! Qb3 would follow the capture of the knight, but that is not the full story...

14. ... Bxc5 15.bxc5 Qxc5 16.Nh6+

This is the real point. The combination has removed the dark square bishop, wrecked the Black king side, and gained the initiative, at the cost of a pawn. (Note 14...Nxb2 15.Nxe7+ and Qb3 won a pawn, but 15...Nxb2 16.Ne7+ Kf7 17.Qe2 seems no worse than the game, and White has lost a bishop.)

16. ... gxh6 17.Bc1 Qe5? 18.Qd3! Qc5

Oh dear, but if 18...Nb6 19.Bb2, or 18...d5 19.e4. Better was 17...d6 or Rb8 to continue developing.

19.a4! d6 20.e4

This is now playable, because his previous move prevented ...b5 20. ... Kg7 21. Nd1! painfully simple chess - the Nc4 must go!

21. ... Bd7 22.Ne3 b5 23.Nxc4 bxc4 24.Qd2 Ne8 25.e5!

r3nr2/3b2kp/p2pp2p/2q1P3/P1p5/6P1/3Q1PBP/R1B2RK1

à[[Yacute]]Üáà[[Yacute]]Üá

[[Yacute]]ÜñÜßÜ[[Yacute]]Ü

[[Thorn]][[Yacute]]à[[Yacute]]Ü[[Yacute]]Ü[[Yacute]]

[[Yacute]]Ü[[Yacute]]Ü[[Yacute]]ÜßÜ

Ü[[Yacute]]ÜiÜßæß

ëÜçÜ[[Yacute]]êóÜ

The final disorganisation - a blow in the centre. White's bishops dominate the

board. The Bc1 aims at h6, and threatens to move to a3 at an opportune moment; the Bg2 strikes down to a8, and is anxious to play a bigger role!

25. ... Rab8 26.Qxh6+ Kg8 27.Qg5+ Kf7 (if 27...Kh7 28.Qe7!) 28.Bf3! Rg8 29.Qh5+ Kg7 30.Be4! Qxe5

what else? 30...Rh8 31.Bh6+ Kg8 32.Qg5+ Kf7 33.Qf4+ wins.

31.Qxh7+ Kf8

if 31...Kf6 32.Qxg8 Qxe4 33.Bg5+ Kf5 34.Qh7+ etc.

32.Qxd7 Qxe4 33.Bh6+ 1-0

as White wins a rook after 33...Ng7 34.Bxg7+ Rxc7 35.Qxd7+xb8

This game shows the same three characteristics:

- 1. The bishops reign supreme.**
- 2. Removing the opponent's better pieces (Be7 and Nc4).**
- 3. Taking the initiative, and not letting it go.**

Game 4 : Pawn Storm

A.R. vs Teichmann, Vienna 1908, Queen's Gambit Declined.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Nbd7 5.e3 Be7 6.Nf3 O-O 7.Qc2 b6

Better is 7...c5. For this line to be playable, Black must keep the queen's knight at home to cover the White squares, and play ...h6 in preference.

8.cxd5 exd5 9.Bd3 Bb7 10.O-O-O c5 11.h4

r2q1rk1/pb1nbppp/1p3n2/2pp2B1/3P3P/2NBPN2/PPQ2PP1/2KR3R

[[Thorn]]βî[[Yacute]]Üß[[Thorn]][[Yacute]]

[[Yacute]]Üóê[[Yacute]]Ü[[Yacute]]ê

11. ... c4?

This move always seems to be a critical error by Black in Queen's side openings - it blocks the position, and White's attack is quicker. The position is one of opposite side castling, and the central formation is, at the moment, fixed. Therefore the plan is one of pushing pawns at the opponent's king. This is not because the pawns make the best attackers - pieces prefer to deliver 'mate' - but because we need to open lines of attack, especially files for the rooks. Black's plan is therefore indicated: 11...cxd4 to open the c-file, followed with ...Rc8...a6...b5

12.Bf5 Re8 13.Bxf6!

This is most instructive. When playing an attack involving a pawn storm every tempo becomes critical, and it is particularly important to prevent your opponent making good defensive moves. In this position Black wants to cover his h7 pawn with the move ...Nf8. White's plan is to push his g-pawn, and for this purpose the Bg5 is an obstruction. It would also be pleasant if the move g5 were to gain a tempo against a Nf6. Therefore this move, which gets rid of the obstruction, prevents the defensive Nf8, and forces Black to keep a knight on f6 ready to be attacked by the advancing pawn. Finding moves like this is necessary if your attack is to keep on rolling!

Finally we must remember to be flexible in attack, if Black had played 12...g6 13. Bxd7 and Bh6 would have followed.

13. ... Nxf6 14.g4 Bd6 15.g5 Ne4 16.h5 Qe7

The pawns just keep moving up the board, and Black has yet to move on the queen-side. Note: 16...Nxc5 17.Nxc5 Qxc5 18.Bxh7+ Kf8 19.h6 gxh6 20.Rdg1 and `etc' say the commentators. After 20...Qf6 21.Rh5 Qe6 22.Rgh1 does look good.

17.Rdg1 a6

r3r1k1/1b2qppp/pp1b4/3p1BPP/2pPn3/2N1PN2/PPQ2P2/2K3RR

ì[[Yacute]]Ü[[Yacute]]î[[Yacute]]ô[[Yacute]]

[[Yacute]]Ü[[Yacute]]à[[Yacute]]æß[[Thorn]]

Ü[[Yacute]]àßä[[Yacute]]Ü[[Yacute]]

[[Yacute]]ÜäÜßâ[[Yacute]]Ü

[[Thorn]]ßî[[Yacute]]ÜßÜ[[Yacute]]

[[Yacute]]ÜóÜ[[Yacute]]Üèè

This is the crucial point. White has brought all his pieces into optimal places, and the pawns are only a step from the enemy defenses, but how to break through? 18.g6 fxg6 ...h6 or 18.h6 g6 will not do. Of course, if the f-g-h pawns were removed, White would be up by two rooks, because the Black rooks cannot shield their king.

Therefore, White is free to sacrifice a piece to prevent any blockade.

18.Bxh7+! Kxh7 19.g6+ Kg8

if 19...fxg6 20.Nxe4 dxe4 21.Ng5+ Kg8 22.Qxc4+ or 21...Kh6 22.Nf7+ Qxf7 23.hxg6+ etc

20.Nxe4 dxe4 21.h6 f6?

Tougher is 21...fxg6 22.Nh4 g5 23.Ng6 Qf6 24.h7+ Kf7 25.h8(Q) Rxh8 26.Nxh8

+ Ke7 leaving White to extricate his knight.

A.R. missed 21.Ng5 Bd5 22.gxf7+ Bxf7 23.f3! Bd5 (else 24.fxe4-e4) 24.h6! coupling a central break through with the king-side attack,

e.g. 24...Rac8 25.fxe4 Bxe4 26.h7+ Kh8 27.Qxe4! Qxg5 28.Qxe8+ wins.

22.hxg7 exf3

if 22...Qe6 23.Rh8+ Kxg7 24.Rh7+ and Rgh1 will force 'mate.

23.Rh8+ Kxg7 24.Rh7+ Kg8 25.Qf5 c3

if 25...Qe6 26.Qh5

26.Rxe7 1-0

as 26...Rxe7 27.Qxf6 and Rh1 'mates.

Game 5 : A Clash of Titans

A.R. vs J.R. Capablanca, San Sebastian 1911, Tarrasch Defense.

1.d4 d5 2.Nf3 c5 3.c4 e6 4.cxd5 exd5 5.Nc3 Nc6 6.g3

Black's opening was held by Tarrasch: *`to be the best, although I must add that I am almost completely alone in holding that opinion. It is based upon the undeniably correct idea that in the Queen's Gambit ...c5 is the freeing move for Black, and must therefore be made as soon as possible. With this defense Black gets a fine free game for his pieces, at the cost of isolating his Queen's Pawn'.*

And for those who worry about that `cost'? *`He who fears an isolated Queen's Pawn should give up chess'.* (Tarrasch referred to this debate as *Tarrasch contra mundum*).

A.R.'s enduring contribution was a plan involving a fianchetto of the king's bishop, bringing it to bear on the pawn at d5. This simple scheme was used by Karpov to defeat Kasparov twice in 1985.

6. ... Be6

Capablanca used this line against Marshall in 1909, winning his 'most accurate game', but 6...Nf6 7.Bg2 Be7 8.O-O O-O is preferable.

7.Bg2 Be7 8.O-O Rc8 9.dxc5 Bxc5 10.Ng5!

White can begin an attack while Black still lacks two moves for castling. Notice that the initiative is used to make the most of a development edge.

10. ... Nf6 11.Nxe6 fxe6 12.Bh3

Again, the mobile bishop - h3-c8 is now the crucial light diagonal.

12. ... Qe7 13.Bg5 O-O

Black has finally caught up in development, but A.R. has been preparing his middle game plans - watch the board explode!

14.Bxf6 Qxf6 15.Nxd5!

2r2rk1/pp4pp/2n1pq2/2bN4/8/6PB/PP2PP1P/R2Q1RK1

22.Bg4

Black's better development make White's win hard work, at best. 22.Rae1 Nc2 23.Rxe8+ Rxe8 leaves both Nb4 and Ne1+xd3 threatened. White must work up something with his rooks, and try to dislodge that knight on d4. Both players are legends in the endgame, and the following moves unfold an epic battle.

22. ... Rd6 23.Rfe1 Rxe1 24.Rxe1 Rb6 25.Re5!

Rooks must be active. 25.b3 Ra6 and 25.Rb1 would be deplorably passive.

25. ... Rxb2 26.Rxd5 Nc6

as 26...Nb5 27.Rd8+ Kf7 28.Rd7+xb7 loses and 26..Nc2 leaves the knight out of the game. Now watch the White pieces jockeying for the best places: the rook to attack the pawns on the 7th rank, the bishop to cover the a2 pawn, not forgetting to drive the defending king away!

27.Be6+ Kf8 28.Rf5+ Ke8

if 28...Ke7 29.Bc4 with Rf7 to come.

29.Bf7+ Kd7

The king must come forward now to gain counterplay.

30.Bc4 a6

To prevent Rb5 swapping the rooks, and now White is free to gain some pawns.

31.Rf7+ Kd6 32.Rxg7 b5 33.Bg8 a5 34.Rxh7 a4 35.h4 b4 36.Rh6+

The Black pawns are beginning to look worrying, and White must take counter measures.

36. ... Kc5 37.Rh5+ Kb6 38.Bd5? b3?

Missing the chance to play 38...Rxa2! as 39.Bxa2 b3 40.Bxb3 axb3 will queen the pawn, but 39.Bc4 Rc2 40.Rb5+ Kc7 41.Bg8 is still winning.

On White's side a better line was 38.Bc4 b3 39.Rb5+ Kc7 40.Bxb3 axb3 41.axb3 winning comfortably.

We now get a finely calculated finish.

39.axb3! a3 40.Bxc6! Rxb3

if 40...a2 41.Rb5+ Ka6 42.Rb8

41.Bd5 a2 42.Rh6+ 1-0

because 42...Ka5/a7 43.Rh8-a8, or if 42...Kb5 43.Bc4+ and Ra6.

The Art of Attack in Chess, by V. Vukovic.

Lessons from Rubinstein

Peter Lane, 10 June 1997

Akiba Rubinstein made enormous contributions to the game of chess. In the first place, our opening books contain Rubinstein's lines in the Nimzo-Indian (**1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 4.e3**), the Tarrasch Defense (**1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.g3**), the Four Knights' Game (**1.e4 e5 2.Nf3 Nc6 3.Nc3 Nf6 4.Bb5 Nd4**) and the French Defense (**1.e4 e6 2.d4 d5 3.Nc3 dxe4**). Secondly there is the legacy of his games, containing some superb endgames (Reuben Fine believing he ranked above Capablanca in this respect) and a middlegame style based upon a preference for the attack.

The games selected here will focus upon Rubinstein's attacking skill. My reasons for this are twofold. Firstly, I have been reading Vukovic's **'Art of Attack in Chess'**, and you can see this selection as my attempt to understand some of the principles! Secondly, his combinational style was a method which permeated all areas of the game, as we will see in his clash with Capablanca.

Game 1 : Rubinstein's Immortal

Rotlewi vs A.R., Lodz 1907/8, Queen's Gambit Declined.

1.d4 d5 2.Nf3 e6 3.e3 c5 4.c4 Nc6 5.Nc3 Nf6 6.dxc5 Bxc5 7.a3 a6 8.b4 Bd6 9.Bb2 O-O 10.Qd2?

Only 10.cxd5 exd5 11.Be2/d3 could save the opening.

10. ... Qe7! 11.Bd3 dxc4 12.Bxc4 b5 13.Bd3 Rd8 14.Qe2 Bb7 15.O-O Ne5 16.Nxe5 Bxe5 17.f4 Bc7 18.e4 Rac8 19.e5

2rr2k1/1bb1qppp/p3pn2/1p2P3/1P3P2/P1NB4/1B2Q1PP/R4RK1

White is asking for trouble. The open c- and d-files have been left uncontested, and the pawn advances have additionally opened diagonals for the Black bishops. A.R. moves over to a direct attack.

19. ... Bb6+ 20.Kh1 Ng4! 21.Be4

Of course 21.Qxg4 Rxd3 is strong. 21.Ne4 Rxd3 22.Qxd3 Bxe4 23.Qxe4 Qh4 24.h3 Qg3 25.hxg4 Qh4 'mate begins to reveal the danger White is in.

21. ... Qh4 22.g3

2rr2k1/1b3ppp/pb2p3/1p2P3/1P2BPnq/P1N3P1/1B2Q2P/R4R1K

22. ... Rxc3! 23.gxh4

if 23.Bxc3 Bxe4+ 24.Qxe4 Qxh2 'mate, or 23.Bxb7 Rxc3 24.Rf3 Rxf3 25.Bxf3 Nf7+ 26.Kg1 Ne4+ 27.Kf1 Nd2+ 28.Kg2 Nxf3 29.Qxf3 Rd2+ etc.

23. ... Rd2!! 24.Qxd2

if 24.Qxg4 Bxe4+ 25.Rf3 Rxf3 etc, 24.Bxc3 Rxd2 with Rxh2 'mate or Bxe4+ 'mate to follow, or 24.Bxb7 Rxe2 25.Bg2 Rh3! etc.

24. ... Bxe4+ 25.Qg2 Rh3! 0-1

'mate in three follows, 26.Rf3 Bxf3 27.Bd4 Bxd4 and Rxh2 'mate.

Game 2 : Refuting Unsound Opening Play

A.R. vs Dr. Tartakower, Kissingen 1928, Budapest Defense.

1.d4 Nf6 2.c4 e5 3.dxe5 Ng4 4.Bf4 Bb4+ 5.Nd2 Nc6 6.Nf3 f6

Black avoids the mainline, 6...Qe7 7.a3 Ngxe5 8.Nxe5 Nxe5 9.e3 Bxd2+ 10.Qxd2 and White is visibly superior. White's line is a recommendation of Dr. Bernstein, and designed to retain the two bishops - an important point for A.R., as we will see.

7.exf6 Qxf6 8.g3!

This is the Rubinstein touch - offering back the pawn in exchange for superior development.

8. ... Qxb2 9.Bg2 d6 10.O-O O-O

r1b2rk1/ppp3pp/2np4/8/1bP2Bn1/5NP1/Pq1NPPBP/R2Q1RK1

11.Nb3!

This move is quite subtle. Black's opening is based upon the hope of active piece play, but now his pieces are looking uncoordinated, and White is well developed. In situations of this kind, it is important to gain and keep the initiative, primarily through attacking and removing your opponent's best pieces. With this in mind, A.R. plans to exchange the Bb4 for a knight, drive back the Ng4, and use his two bishops and central control to break through.

11. ... Qf6 12.Ng5 h6 13.Ne4 Qf7

if 13. ... Qe7 14.a3 Bc5 (not Ba5 15.Nxa5 and Qd5+) 15.Nexc5 dxc5 16.Qd5+ Be6 17.Qxc5 Qxc5 18.Nxc5 Bxc4 19.Rfc1 Bxe2 20.Nxb7 wins a pawn.

14.a3 Ba5 15.Nxa5 Nxa5 16.h3! Ne5

We begin to see some of Black's problems: 16...Nf6? 17.Nxf6+ Qxf6 18.Qd5+xa5 or 17...gxf6 18.Bxh6

17.c5!

showing that e5 is not a strong point for the knight, only a cover for the d6 pawn. Notice how Black's pieces are kept on the run.

17. ... g5?

Black should centralise: 17...Nac4 18.cxd6 Rd8 maintains complications.

18.Bd2 d5 19.Nxg5 hxg5 20.Bxa5 Be6 21.Bc3 Nc6

r4rk1/ppp2qpp/2n1b3/2Pp2p1/8/P1B3PP/4PPB1/R2Q1RK1

Now watch A.R. infiltrate with his queen.

22.Qd2 Qf5 23.g4 Qf4 24.Bxd5 Bxd5

of course, 24...Qxd2 25.Bxe6+. Notice the deflection of the overloaded Black queen.

25.Qxd5+ Kh7 26.e3! Qf3 27.Qxg5 Qxh3 28.Qg7 'mate

(If 27...Q/Rf7 28.Qh4+ and 'mate.)

This game demonstrates three very important principles of Rubinstein's play:

- 1. Use of the bishops, note the Bf4-d2-c3 manoeuvre, changing the attack point from d6 to g7.**
- 2. Attacking the opponent's pieces to prevent development and consolidation.**
- 3. By maintaining the initiative in the centre, a weakened king's side can be punished with a swift kill.**

Game 3 : Causing Chaos

A.R. vs Dr. Tarrasch, Hastings 1922, Dutch Defense.

1.d4 e6 2.c4 f5 3.g3 c5

This line looks an active central attack, but creates weaknesses. Nf6 or Bb4+ are superior. Notice how A. R. develops smoothly, not attempting a refutation.

4.Nf3 cxd4 5.Nxd4 Nf6 6.Bg2 Nc6 7.O-O Bc5 8.e3 O-O 9.Nc3 a6

Neither b6 nor d6 are playable due to Nxc6, and Qc7 is met by Nb5, but this passive move gives A.R. the chance to gain some queen side space.

10.a3 Qc7 11.b4 Be7 12.Bb2 Ne5

if 12...d6 13.e4 opens the game to White's advantage, but this tempting line is flawed. Vukovic gives a useful comment to bear in mind: 'the use of force from a weaker position usually prompts a still more forceful reply from one's opponent'.

13.c5 Nc4

r1b2rk1/1pqp1pp/p3pn2/2P2p2/1PnN4/P1N1P1P1/1B3PBP/R2Q1RK1

14.Nxf5!

And this is it! Qb3 would follow the capture of the knight, but that is not the full story...

14. ... Bxc5 15.bxc5 Qxc5 16.Nh6+

This is the real point. The combination has removed the dark square bishop, wrecked the Black king side, and gained the initiative, at the cost of a pawn. (Note 14...Nxb2 15.Nxe7+ and Qb3 won a pawn, but 15...Nxb2 16.Ne7+ Kf7 17.Qe2 seems no worse than the game, and White has lost a bishop.)

16. ... gxh6 17.Bc1 Qe5? 18.Qd3! Qc5

Oh dear, but if 18...Nb6 19.Bb2, or 18...d5 19.e4. Better was 17...d6 or Rb8 to continue developing.

19.a4! d6 20.e4

This is now playable, because his previous move prevented ...b5 20. ... Kg7 21.Nd1! painfully simple chess - the Nc4 must go!

21. ... Bd7 22.Ne3 b5 23.Nxc4 bxc4 24.Qd2 Ne8 25.e5!

r3nr2/3b2kp/p2pp2p/2q1P3/P1p5/6P1/3Q1PBP/R1B2RK1

The final disorganisation - a blow in the centre. White's bishops dominate the board. The Bc1 aims at

h6, and threatens to move to a3 at an opportune moment; the Bg2 strikes down to a8, and is anxious to play a bigger role!

25. ... Rab8 26.Qxh6+ Kg8 27.Qg5+ Kf7 (if 27...Kh7 28.Qe7!) **28.Bf3! Rg8 29.Qh5+ Kg7 30.Be4! Qxe5**

what else? 30...Rh8 31.Bh6+ Kg8 32.Qg5+ Kf7 33.Qf4+ wins.

31.Qxh7+ Kf8

if 31...Kf6 32.Qxg8 Qxe4 33.Bg5+ Kf5 34.Qh7+ etc.

32.Qxd7 Qxe4 33.Bh6+ 1-0

as White wins a rook after 33...Ng7 34.Bxg7+ Rxd7 35.Qxd7+xb8

This game shows the same three characteristics:

- 1. The bishops reign supreme.**
- 2. Removing the opponent's better pieces (Be7 and Nc4).**
- 3. Taking the initiative, and not letting it go.**

Game 4 : Pawn Storm

A.R. vs Teichmann, Vienna 1908, Queen's Gambit Declined.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Nbd7 5.e3 Be7 6.Nf3 O-O 7.Qc2 b6

Better is 7...c5. For this line to be playable, Black must keep the queen's knight at home to cover the White squares, and play ...h6 in preference.

8.cxd5 exd5 9.Bd3 Bb7 10.O-O-O c5 11.h4

r2q1rk1/pb1nbppp/1p3n2/2pp2B1/3P3P/2NBPN2/PPQ2PPQKR3R

11. ... c4?

This move always seems to be a critical error by Black in Queen's side openings - it blocks the position, and White's attack is quicker. The position is one of opposite side castling, and the central formation is, at the moment, fixed. Therefore the plan is one of pushing pawns at the opponent's king. This is not because the pawns make the best attackers - pieces prefer to deliver 'mate' - but because we need to open lines of attack, especially files for the rooks. Black's plan is therefore indicated: 11...cxd4 to open the c-file, followed with ...Rc8...a6...b5

12.Bf5 Re8 13.Bxf6!

This is most instructive. When playing an attack involving a pawn storm every tempo becomes critical, and it is particularly important to prevent your opponent making good defensive moves. In this position Black wants to cover his h7 pawn with the move ...Nf8. White's plan is to push his g-pawn, and for this purpose the Bg5 is an obstruction. It would also be pleasant if the move g5 were to gain a tempo against a Nf6. Therefore this move, which gets rid of the obstruction, prevents the defensive Nf8, and forces Black to keep a knight on f6 ready to be attacked by the advancing pawn. Finding moves like this is necessary if your attack is to keep on rolling!

Finally we must remember to be flexible in attack, if Black had played 12...g6 13.Bxd7 and Bh6 would have followed.

13. ... Nxf6 14.g4 Bd6 15.g5 Ne4 16.h5 Qe7

The pawns just keep moving up the board, and Black has yet to move on the queen-side. Note: 16...

Nxg5 17.Nxg5 Qxg5 18.Bxh7+ Kf8 19.h6 gxh6 20.Rdg1 and `etc' say the commentators. After 20...Qf6 21.Rh5 Qe6 22.Rgh1 does look good.

17.Rdg1 a6

r3r1k1/1b2qppp/pp1b4/3p1BPP/2pPn3/2N1PN2/PPQ2P2/2K3RR

This is the crucial point. White has brought all his pieces into optimal places, and the pawns are only a step from the enemy defenses, but how to break through? 18.g6 fxg6 ...h6 or 18.h6 g6 will not do. Of course, if the f-g-h pawns were removed, White would be up by two rooks, because the Black rooks cannot shield their king.

Therefore, White is free to sacrifice a piece to prevent any blockade.

18.Bxh7+! Kxh7 19.g6+ Kg8

if 19...fxg6 20.Nxe4 dxe4 21.Ng5+ Kg8 22.Qxc4+ or 21...Kh6 22.Nf7+ Qxf7 23.hxg6+ etc

20.Nxe4 dxe4 21.h6 f6?

Tougher is 21...fxg6 22.Nh4 g5 23.Ng6 Qf6 24.h7+ Kf7 25.h8(Q) Rxh8 26.Nxh8+ Ke7 leaving White to extricate his knight.

A.R. missed 21.Ng5 Bd5 22.gxf7+ Bxf7 23.f3! Bd5 (else 24.fxe4-e4) 24.h6! coupling a central break

through with the king-side attack,

e.g. 24...Rac8 25.fxe4 Bxe4 26.h7+ Kh8 27.Qxe4! Qxg5 28.Qxe8+ wins.

22.hxg7 exf3

if 22...Qe6 23.Rh8+ Kxg7 24.Rh7+ and Rgh1 will force 'mate.

23.Rh8+ Kxg7 24.Rh7+ Kg8 25.Qf5 c3

if 25...Qe6 26.Qh5

26.Rxe7 1-0

as 26...Rxe7 27.Qxf6 and Rh1 'mates.

Game 5 : A Clash of Titans

A.R. vs J.R. Capablanca, San Sebastian 1911, Tarrasch Defense.

1.d4 d5 2.Nf3 c5 3.c4 e6 4.cxd5 exd5 5.Nc3 Nc6 6.g3

Black's opening was held by Tarrasch: *`to be the best, although I must add that I am almost completely alone in holding that opinion. It is based upon the undeniably correct idea that in the Queen's Gambit ... c5 is the freeing move for Black, and must therefore be made as soon as possible. With this defense Black gets a fine free game for his pieces, at the cost of isolating his Queen's Pawn'.*

And for those who worry about that `cost'? *`He who fears an isolated Queen's Pawn should give up chess'.* (Tarrasch referred to this debate as *Tarrasch contra mundum*).

A.R.'s enduring contribution was a plan involving a fianchetto of the king's bishop, bringing it to bear on the pawn at d5. This simple scheme was used by Karpov to defeat Kasparov twice in 1985.

6. ... Be6

Capablanca used this line against Marshall in 1909, winning his `most accurate game', but 6...Nf6 7.Bg2

Be7 8.O-O O-O is preferable.

7.Bg2 Be7 8.O-O Rc8 9.dxc5 Bxc5 10.Ng5!

White can begin an attack while Black still lacks two moves for castling. Notice that the initiative is used to make the most of a development edge.

10. ... Nf6 11.Nxe6 fxe6 12.Bh3

Again, the mobile bishop - h3-c8 is now the crucial light diagonal.

12. ... Qe7 13.Bg5 O-O

Black has finally caught up in development, but A.R. has been preparing his middle game plans - watch the board explode!

14.Bxf6 Qxf6 15.Nxd5!

2r2rk1/pp4pp/2n1pq2/2bN4/8/6PB/PP2PP1P/R2Q1RK1

15. ... Qh6

Of course, 15...exd5 16.Qxd5+ and Bxc8 or 15...Bxf2+ 16.Kg2 Qh6 17.Nf4 and 18.Bxe6+xc8 win quickly for White. Instead Capablanca puts another piece under attack, and prepares to pin the knight:

who's winning?

16.Kg2 Rcd8 17.Qc1!!

A.R. of course! 17...Rxd5 fails to 18.Qxh6 and 19.Bxe6+, so White wins at least a pawn.

17. ... exd5 18.Qxc5 Qd2 19.Qb5 Nd4 20.Qd3 Qxd3 21.exd3 Rfe8

3rr1k1/pp4pp/8/3p4/3n4/3P2PB/PP3PKP/R4R2

22.Bg4

Black's better development make White's win hard work, at best. 22.Rae1 Nc2 23.Rxe8+ Rxe8 leaves both Nb4 and Ne1+xd3 threatened. White must work up something with his rooks, and try to dislodge that knight on d4. Both players are legends in the endgame, and the following moves unfold an epic battle.

22. ... Rd6 23.Rfe1 Rxe1 24.Rxe1 Rb6 25.Re5!

Rooks must be active. 25.b3 Ra6 and 25.Rb1 would be deplorably passive.

25. ... Rxb2 26.Rxd5 Nc6

as 26...Nb5 27.Rd8+ Kf7 28.Rd7+xb7 loses and 26..Nc2 leaves the knight out of the game. Now watch

the White pieces jockeying for the best places: the rook to attack the pawns on the 7th rank, the bishop to cover the a2 pawn, not forgetting to drive the defending king away!

27.Be6+ Kf8 28.Rf5+ Ke8

if 28...Ke7 29.Bc4 with Rf7 to come.

29.Bf7+ Kd7

The king must come forward now to gain counterplay.

30.Bc4 a6

To prevent Rb5 swapping the rooks, and now White is free to gain some pawns.

31.Rf7+ Kd6 32.Rxg7 b5 33.Bg8 a5 34.Rxh7 a4 35.h4 b4 36.Rh6+

The Black pawns are beginning to look worrying, and White must take counter measures.

36. ... Kc5 37.Rh5+ Kb6 38.Bd5? b3?

Missing the chance to play 38...Rxa2! as 39.Bxa2 b3 40.Bxb3 axb3 will queen the pawn, but 39.Bc4 Rc2 40.Rb5+ Kc7 41.Bg8 is still winning.

On White's side a better line was 38.Bc4 b3 39.Rb5+ Kc7 40.Bxb3 axb3 41.axb3 winning comfortably.

We now get a finely calculated finish.

39.axb3! a3 40.Bxc6! Rxb3

if 40...a2 41.Rb5+ Ka6 42.Rb8

41.Bd5 a2 42.Rh6+ 1-0

because 42...Ka5/a7 43.Rh8-a8, or if 42...Kb5 43.Bc4+ and Ra6.

Here are URLs for a number of downloadable TrueType chess fonts.
The first one below is definitely in Mac format.

http://nobi.inf.ethz.ch/febi/smart_chess/smart_chess.html
<http://www.tasc.nl/downloadable.html>
<http://www.cs.ruu.nl/~hansb/d.chessvar/d.font/utrecht.html>
<http://ourworld.compuserve.com/homepages/clubmate>

If you want something really complete, however, the thing to get
is one or more of the commercial Alpine fonts. Their Web site is:

<http://wave.park.wy.us/~alpine/main.html>

Each font family includes chess pieces, several border
styles (including algebraic row/column codes), all Informant and
NIC annotation symbols and more.

Many books, magazines and newsletters use the Alpine fonts.

I bought all three Alpine font families
(they are not too expensive).

Introduction

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired"

-- RETI

[**Coincidentally this document was followed by a useful UseNet [post by NM Dan Scoones.](#)**]

The way it works is this:

My mum and dad taught me how to play chess, and when I was about 9 I went to the school chess club. I sat down to play a small boy, took the Black pieces and was mated in four moves (Scholar's Mate). To the best of my recollection I have never fallen for it since, and while I can't ever remember perpetrating that particular sequence on anyone else, I have delivered mate on f7 a number of times.

Learning and applying tactics is just that: you learn to recognise a pattern, you see it coming if someone tries it on you, and you can apply it in similar positions in your own games. In fact, once you know the patterns, a lot of the calculation comes pretty easily.

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one' "

-- Richard RETI.

It used to be thought - perhaps because of statements like this, and a little early [psychological research](#) - that there wasn't much difference in the abilities of strong and weak players at analysis: rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences [see [Simon Webb's panel tests](#)]. So, the patterns and judgements are important, but you must also train yourself to analyse. Sir Peter Medawar once remarked, rather testily:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

[A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*]

No less a tribute may be paid to the editors at Batsford and Cadogan and Chess Digest: there is a population of chessplayers who know about mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win a Rook Ending. This piece is dedicated to the first of these failings.

The elements of combination

A **combination** is a forcing sequence, often involving a temporary sacrifice, which results in an advantage - checkmate, win of material or a winning positional bind.

Here's a nice example, which I think is not out of most players' reach: have a go at solving it (White to move and win) before reading on.

Becker-Jung, Eberstadt-Bensheim, 1948

(wKh1,Qc3,Ne2,e3,Bd3,Ra1,f2,Pa2,b2,c4,e5,f4,g3,h2; bKf7,Qd7,Nc6,g6,Bh3,Ra8,h8,Pa7,b7,c7,d6,f6,g7,h5)

The different combinational themes are often called *motifs*.

The theme or *motif* of this combination is the *fork*. There is almost no way you can find the combination in this position if you have not seen this pattern before.

First, we examine the position for pointers. The Black pieces are not very well coordinated, and the Black King and Queen seem almost in reach - for example, if we had protection for e6, we could think about e5-e6+ winning the Queen. In fact, **f4-f5** provides that protection, so **1. f5 (Knight moves) 2. e6+** looks excellent, except that Knight moves **1...Ng6xe5**, but it starts to look as though we might be on for something here.

More details: we can, by **Bxg6+**, bring the Black King a little closer, and check it by **f4-f5**. In fact, we can check it immediately by **e5-e6**. Maybe some combination of these ideas might allow us to lure Black pieces to e6 and g6, and fork them by f4-f5.

So, this fork becomes the *idea* of our combination.

Next, the combination must now be *calculated* and the correct move order sorted out.

We might try **1. Bxg6+ Kxg6 2. e6** when if Black takes it **2...Qxe6**, we win with **3. f5+**, but Black can safely sidestep with **2...Qe7**.

Purdy coined the splendid term *smite*: you must learn to examine *smiting moves*, checks and captures. These are the most forcing and the key to starting most combinations. With this in mind we can reconsider our combination: the starting move **1. e6+** is perhaps surprising, but once we consider the move at all we can see that is it very forcing, and after **1...Kxe6** or **1...Bxe6** we can play **2. f5(+)** winning a piece.

So, Black seems obliged to play **1. e6+ Qxe6**. Now again, **2. f5** fails to **2...Qxe3**. Humph.

The forcing sequence **2. Bxg6+ Kxg6 3. f5+ Bxf5** seems almost to fizzle out, but then (aha!) **4. Nf4+** forks King and Queen. Missed anything? No, all looks OK, so, Black has to lose a piece, probably by **1...Bxe6** when a couple of Pawns will be partial compensation.

So, the elements of a combination are *motif, idea, and calculation*. You don't really change gear from one to the other when trying to come up with a combination in practice, but you do need to work on each separately if you are to improve.

How did your attempt match up to my account of the solution? Missed the idea? Missed a defence? Muddled the move order? Hopefully what I describe below can improve your performance in each aspect. Even if that one seemed totally beyond you I'll at least show you how such a standard can be approached.

*"A thorough understanding of the **typical mating combinations** makes the most complicated sacrificial combinations leading up to them not only **not** difficult, but almost a matter of course."*

-- TARRASCH

You **must** know all these motifs:

- [K - knight forks](#)
- [L - last rank](#)
- [M - mating pattern](#)
- [N - network nobbled \(Nterference\)](#)
- [O - overloading](#)
- [P - pins](#)
- [Q - queening](#)
- [R - retreat](#)
- [S - sacrifice at castle gates](#)
- [T - two for the price of one](#) [double attack]

- [U - undermining \(removing the guard\)](#)
- [U2 - unmasking \(discovery\)](#)
- [V - vulnerable f7](#)
- [W - weakening King's-side](#)
- [X - X-ray \(skewer\)](#)

[And there are others, I'm sure].

Once you are aware of these motifs you can apply them in your own games. See also [Combinational vision](#) below.

"The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?"

-- Reinfeld, to Thomas-Euwe, Carlsbad 1929.

Sight of the board

By which I mean, how deep can you analyse without losing track? The ability to play a game blindfold isn't that good a guide - I can remember a game where both players couldn't "see" that they could play Qa5xQh5 (or Qh5xQa5) for free! Playing a game blindfold against a computer is a test, though, and so is solving problems without moving the pieces. On a good day I can do six-move problems. I'm aiming at seven/eight. (But why do I still make one-move blunders? See below!)

You can get this far solving positions [one move deep](#), [two moves deep](#), [three moves](#), [four moves](#), [five moves](#) and [six moves deep](#). They are all knight forks, if you want a hint, although other motifs may make an appearance.

knight fork combination (1), one move deep, 1997

(wKe3,Nd5,Rc4,Pf4; bKe8,Nd7,Ra8,Pb6)

1. Nc7+: if you can't spot that one, don't read on!

KFC (2) chernev/reinfeld, 1949

(wKg1,Qa4,Ng3,Pf2; bKg7,Qg4,Nd4)

1. Qxd4+ Qxd4 2. Nf5+ 1-0

This 'decoy' of the Queen onto a forking square is very common in combinations with a Knight Fork motif.

KFC (3), c/r, 1949

(wKg1,Qd3,Nf4,Ra1,f1,Pa2,b2,c2,d4,g3,h4; bKg8,Qe7,Nc6,e4,Bd7,Rc8,Pa7,b7,c7,d6,g4,h7)

1. Nd5 is an obvious first move for a tactic, and forcing because the Black Knight is loose; once considered, you should be able to wrap it up:

1. Nd5 Qe6 2. Qxe4 Qxe4 3. Nf6+ 1-0 Black has better moves than 2...Qxe4, but if Black cannot recapture on e4, White wins a piece.

KFC (4) zukertort - english, london, 1883

(wKg2,Qb3,Nd5,Pc7,f3,g3,h2; bKe8,Qc6,Ne6,Pa7,f6,g7,h6)

You've had your hint! It's a matter of nudging the Black pieces onto the right squares, which White can do neatly:

1. Qb5 Qxb5 2. c8=Q+ Kf7 3. Qxe6+ Kxe6 4. Nc7+ Kd7 5. Nxb5 1-0

KFC (5) kofman-sakketi, corr., 1948

(wKh1,Nc4,Rd1,e1,Pa2,b2,h3; bKc8,Qg3,Bd4,Pa7,b7,c7,f7,h7)

White actually resigned here, but...

1. Re8+ Kd7 2. Re3 Qg7 3. Rxd4+ Qxd4 4. Rd3 Qxd3 5. Ne5+ 1-0

Remember, this was a correspondence game, so time wasn't the issue - despair was.

KFC (6) schlechter-mieses, st.petersburg, 1909

(wKg1,Qc4,Nd1,e2,Rc1,f3,Pa3,b2,d4,e5,g2,h2; bKc8,Qg5,Ng4,Bd6,Rd7,h8,Pa7,b7,c7,e6,f7,g7,h7)

Deep breath: **1... Bxe5 2. dxe5 Qh4 3. Rg3 Qxh2+ 4. Kf1 Rxd1+ 5. Rxd1 Qxg3 6. Nxc3 Ne3+** with an easily winning endgame, so **0-1**. Can you see the continuation after, say, 3. g2-g3, or other alternatives?

[3.Nf2 Qxh2+ 4.Kf1 Nxe5 5.Qc5 Nxf3 6.gxf3 -+;
3.h3 Qe1+ 4.Rf1 Qxf1+ 5.Kxf1 Rxd1+ 6.Rxd1 Ne3+ -+]

The other resource, besides these tactical problems, is simple chess studies: at their best they can make you pay close attention to the geometry of the board, like this one:

chekhover, QN v Q, 1996

(wKa1,Qh1,Nf3; bKe4,Qb8)

1. Ng5 is a very vigorous double-check, but the key is:

1. Ne5+

In an actual game, you just play this straight away as the best winning attempt because there are so many ways for Black to go wrong. But for practice, can you follow it to the finish? These open-field combinations can be hard to keep track of, because of the apparently great number of choices at each turn.

1... Ke3

[1... Kf4 2. Qf3+ Kg5 3. Qg4+ Kh6 4. Qg6#]

[1... Kf5 2. Qh3+ Ke4

or [2... Kg5 3. Qg4+]

3. Qf3+ Kd4 4. Nc6+]

2. Qe1+ Kf4 3. Qf2+ Kg5 4. Qg3+ Kf5 5. Qg4+ Kxe5 6. Qg3+ Kf5 7. Qxb8 1-0

Combinational vision

Combinational vision is a product of experience and imagination, both of which broaden the chess mind.

Experience: Once you have seen something, you might be able to implement an analogous idea in your own games. This is more than knowing the motifs; I mean you should continue to broaden your experience of combinations by examining new examples. An example from my own modest practice: I have known about *knight forks* for ages (ever since I kept finding them arriving on c7, checking and forking Ke8/Ra1). But once I had seen the famous finish of a Petrosian-Spassky game (see the entry for Petrosian in the [Style](#) section of [Canon](#)), I could see the same thing going on in my [own game](#).

This rather reminds me of the old psychological tests based on embedded figures; finding combinations seems a bit like that.

Imagination: I used to think that the creative imagination was something mysterious and intangible, which could neither be described nor trained. While there may always be something elusive about artistic creation, some thinking by people like Liam Hudson and Daniel Dennett gave me some cause to hope. Creativity is not a simple product of unfathomable inspiration, but a result of firstly, generating lots of (mostly junky) ideas, and then weeding them out to discover the ones that work. If this is true of the expressive arts, then it surely also applies to chess, where the ideas have such concrete prompts on the board, and the selection of the ideas that work can be put to the simple test of analysis.

Put simply, this suggests that someone like Tal can come up with great ideas because they come up with loads of ideas, good, bad and indifferent, and then can select the great one. The problem with most of us is not that we are failing to come up with enough *good* ideas, but we are failing to come up with *enough ideas*, full stop. Our ability to spot combinations is limited by our tunnel vision, considering only a few moves of a stereotyped nature, and not having the habit of looking at every thing once, no matter how foolish at first sight. Developing imagination, then, is not a matter of learning how to do something terribly magical, but to some extent involves putting aside what you think you know (retreating pieces is bad, putting your Queen *en prise* is bad) and considering moves that only very good players - or [very bad players!](#) - look at.

Varieties of error

The way it is supposed to work is:

- [A tactic appears for you: you get it right.](#)

But we also see:

- [A tactic appears for you: you miss it.](#)
- [A tactic appears for your opponent: you miss it.](#)
- [A tactic appears for you: you see it but analyse it wrongly.](#)
- [A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.](#)
- [A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.](#)

A tactic appears for you: you get it right.

The idea is easy, but can you analyse it to a finish?

Regis,D - Lane,P (1994)

13. Bxe6 fxe6 14. Qh5+ Kf8 15. Bh6+ Rg7 16. Ng5 Qe8 17. Nh7+ 1-0

Ah, if only it was all like that...

A tactic appears for you: you miss it.

Regis,D. - Aston,P (1994)

21. Qe8+??

[21. Qe6 Qd8 22. c6 or even 21. Rxd7 Kxd7 22.Rd1]

...1-0

Patzer sees a check... It didn't affect the outcome in the end but White had to start all over again to build up another combination.

A tactic appears for your opponent: you miss it.

Oh, how many times... asleep, overconfident or confused, we ignore our opponent's best reply.

Regis,D - Stirling,A (1984)

1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. c5 Nd5 5. Bc4 e6 6. Nc3 Nf4

7. Qg4 Qh4 ...0-1

There are lots of opening traps like that: White bites off more than he can chew.

A tactic appears for you: you see it but analyse it wrongly.

Regis,D. -Stooks, Charles (1993)

19. Nef4? (yes, very good but unfortunately 19...exf4; 20 Rxf4, g5! gets at least a draw! 20 Nxf4 also fails to 20...g5)

19... Nc6??

[19... Qb7]

20. Nh3 Qg4 21. Ng5 1-0

Simple over-optimism: I didn't consider 20...g5.

A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.

Ward,D - Regis,D (1994)

26... Bd4 27. Bxd4 Rxe4 28. Qxe4 Ng3+ 29. Kg1 Nxe4 30. Rxe4 Re8 31. Rbe1 Rxe4 32. Rxe4 Qf7 33. Re6 Kh7 34. Rf6

[34. Kh2! ...when it's all a bit tricky!]

34... Qe8 35. Re6 Qxa4 36. Re7+ Kg6 37. Rxc7 Qd1+ 0-1

The tactic was obvious enough, what I failed to assess was how good White's pieces would be in the ending.

A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.

Wilcox, RJ (1830) - Regis, D (1945) (3) [B06] Paignton Challengers, 1996

I thought I could wrap things up here: **28... Nxe4?!** was an obvious first choice, trying to win a Pawn. Does it win a Pawn? Oh no, because White swaps on e4 then goes Nxc4. No, I was right, it does win a Pawn, because when the Queen comes to e4 I've always got both ...Bxh3 and ...Bxa4. So...

28... Nxe4?!

[28... Qc7! wins, I think]

29. Bxe4 Qxe4 30. Nxc4

And of course I realised here I'd blown it: **30... Bxa4? 31. Nd6!**

This is very common: stopping analysis at the end of a sequence favourable to you. But after that, it's your opponent's move!

As we start to comment more deeply on these examples, we see two sources of error: mistakes or bad habits in *analysis*, on the one hand, but also *misjudgements* on the other - errors in the general assessment of the board or the opponent. It is just the first of these I am concerned with here; else we are raising another big issue about attitude.

Getting your mind right

I don't know any exercises to improve your mental attitude, but awareness - particularly self-awareness - is important in eliminating all sources of error, not just tactical ones. I have written and collected material elsewhere about getting your mental attitude right: there are examples (good and bad) in the [Psychology section](#)

[of the Canon](#), there is some good advice on a [Poster for Juniors](#), and in a compilation of [Advice for the middlegame](#). However, in this document on tactics I'll mention the issue of attitude in this aside, and return to the matter at hand.

Combinations do not usually come out of nowhere - they are based on a **superiority in position**, and you can tell when a combination is likely to be around:

- **Exposed or "stalemated" Kings are always vulnerable**
- **Undefended or 'hanging' pieces often lead to trouble.**
- **Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised..**

This last category can be hardest to spot, because it is so common. There is some sense in which, as Lasker described, there should be some *justice* in chess - have you done enough, to deserve to win? that is, have you a big enough advantage? This is to some extent a matter of judgement, but if you feel you have a good advantage in space or mobility, then you should look:

*"No combination without a considerable plus, no considerable plus without a combination [...]
In the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power and will of intellect, because the combination must exist, however deeply hidden."*

-- LASKER.

I like this quote, but it has to be said that while there are 'just' and logical combinations where you (say) carry out a combination based on a campaign against the long-term weakness of a Pawn, there are also 'accidental' combinations which seem to be based on nothing but the chance arrangement of pieces, and there are also traps - so diligence in searching for tactics is required at almost every move.

- you must routinely check all positions for tactical opportunities
- you must think for your opponent as well as yourself

How can you make sure that you get better at this? Determination alone may not be enough: we need a bit more theory, and practice.

Candidate moves

The first bit of theory is the search for *candidate moves*; I also owe my appreciation of the idea of candidate moves to Kotov.

"All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another."

-- ALEXANDER KOTOV

The idea is, to make sure you don't overlook some vital idea at the start of analysis.

Varley - Hewson, WECU Jamboree [B18], 1993

Black has a restricted position and is behind in 'development' (=getting his pieces out) but his pawn structure is very solid. Can Black get away with this, or can White show the flaw in Black's move order by the sacrifice **Bxe6**? What do you think?

11. Bxe6

An enterprising sacrifice! White hopes to catch Black's King in the centre.

11... O-O!

Unflappable Exeter player Brian Hewson calmly sidesteps the main line of a sacrifice (11...fxe6) threatening a pin on the e-file.

12. O-O Bxf4 13. Bxf4 fxe6 14. Qxe6+ Kh8 ... and Black consolidated and won. [0-1]

It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move *at the outset* before analysing any one move deeply. Had White done this he **could not fail** to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8, and *could not fail* to realise that it refuted the sac.

There is another example or two illustrating the 'candidate move' idea from [Simon Webb's panel tests](#), and the commentary on Nunn's games in the [Analysis](#) section of the Canon.

There are certain sorts of moves which are easy to spot (or train yourself to spot: like checks, captures, and so on. There are also certain classes of move which are difficult to make yourself consider - here are a few surprising/paradoxical moves. You should (a) make sure you know these models, (b) collect and review other examples, (c) see if there are either *types* of moves which you or somebody else found difficult to anticipate.

Retreats

Christiansen - Karpov (1993)

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6 9.Nxc6 Bxc6 10.Bf4 Nh5 11.Be3 Bd6 (wait for it...)

12.Qd1 1-0

The error made by Karpov above is actually a common one - missing an undeveloping retreat.

Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on. Another example:

Putting pieces en prise

Fischer - Sherwin, USA Ch'p , 1957

30. Rxf7 Rc1+ 31. Qf1!! h5 32. Qxc1 Qh4 33. Rxf8+ Kh7 34. h3 Qg3 35. hxg4 h4 36. Be6 1-0

How about that one: a Queen moving backwards into a position where it can be captured!

'Silent' sacrifices

You can get so used to looking for 'smiting' moves that apparently non-forcing, 'quiet' sacrifices can be surprising:

Fischer,R - Benko,P, ch-USA, 1963

Obviously, there is a mating attempt at h7 but
 [19. e5 f5 20. Qxe8 Nxe8 21. Ne2 Bxe5 22. Rxf5 Bf6=]

19. Rf6!

This is what I mean: a silent sacrifice of the Rook, which actually leaves Black helpless. Chess may not be an art, but moves like this have a strong aesthetic effect, at least for me - I like the apparent subtlety of the sacrifice without a check or capture, and I like the drama of giving Black an apparently free move for the defence - which he cannot make use of. **19... Kg8**

[19... h6 20. e5 [20. Rxf6+-] 20... Kg8+-]

20. e5 h6 21. Ne2 1-0

'Creeping moves'

I keep alluding to Purdy's advice:

"examine moves that smite!"

But have a look at this:

Spassky - Korchnoi, Kiev, 1968

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f3 O-O 6. Be3 Nc6 7. Nge2 a6 8. Nc1 e5 9. d5 Nd4 10. Nb3 Nxb3 11. Qxb3 c5 12. dxc6 bxc6 13. O-O-O Be6 14. Qa3 Ne8 15. h4 f6 16. c5 Rf7 17. Qa4 Qc7 18. Bc4 Bxc4 19. Qxc4 Bf8 20. h5 dxc5 21. hxg6 hxg6 22. Qe6 Rd8 23. Rxd8 Qxd8 24. Rd1 Qe7 25. Qxc6 Nc7 **DIAGRAM**

The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. Nd5 Qe6! and Black holds.

26. Qb6

Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...Qe6 with Bxc5 and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game.

26... Kg7 27. Nd5 Qe6 28. Bxc5 Bxc5 29. Qxc5 Nb5 30. Qe3 Qc6+ 31. Kb1 Nd4 32. Rc1 Qb5 33. Nc7 Qe2 34. Ne6+ Kh7 35. Qh6+ 1-0

It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange. Here is a simple example:

Wahl Tuch - Palmer, Manchester, 1912

1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O Nxe4 5. d4 Nd6 (Berlin Defence, Rio De Janeiro Variation) 6. dxe5 [6. Bxc6] 6... Nxb5 7. a4

This is a gorgeously messy line

7... Nd6 [better 7... d6]

8. Bg5 f6 9. Re1 fxg5 10. exd6+ Ne7 11. Ne5 cxd6 12. Qh5+ g6 13. Nxg6 Qa5 14. Nxb8+ Kd8

Have a look at the next diagram and see what you think.

15. Nc3

[Obviously not 15. Qf7 Qxe1#]

It is tempting to try a forcing move, but none work.

"A quiet move in the midst of an attack is the sign of the master" - Du Mont

15... Qf5 (else Qf7) 16. Nb5 Ng6 17. Qxg5+ 1-0

The calculation of variations

The starting point for any consideration of analysis must be Kotov, again.

- **Candidate moves must be established straight away and they must be clearly enumerated.**
- **Once we have established all the candidate moves, we then proceed to work out the variations arising from them one by one.**
- **In analysing complicated variations, one must examine each branch of the tree once and once only.**
- **This task cannot be split into parts, by examining one move fully and then looking for the next one.**

Kotov gives some example of positions where the analysis gets progressively more detailed: The 'tree of analysis'

bare trunk

bare trunk with
side-branch

coppice

bush

bare trunk

*bare trunk
with side-branch*

coppice

bush

Through practice, I would have thought anyone could master the art of analysing "bare trunks" and "trunk-with-branch" - what is required here is the ability to visualise the board several moves ahead.

Also, I think also the "coppice" type of position is not out of most players' reach. What is required here is organisation - to list the moves required at the outset, and to work through them methodically.

What is most challenging is the type of position which is genuinely complex, like the "bush", when it is difficult for most of us to analyse everything relevant. Are there any hints or tips for making best use of the time we have, while our analytical skills are still developing? Yes indeed: we have advice from de Groot, from Nunn/Griffiths, and from Nimzovitch.

The chess master and psychologist De Groot, in commenting on transcriptions of players' verbal reflections, used to talk about 'progressive deepening'. If this strategy is to be adopted it must not resemble the feckless meandering described so amusingly by Kotov in his book [Think Like a GM](#), switching dissatisfied from one move to another until you run out of time.

However it has often seemed to me that rather than work six moves deep down line "A", then six moves each down line "B", it might be better to look (say) two moves deep in each of lines A-G, then go back to "A" and go four moves deep this time, and so on. It may be that you find the key to the position earlier than you would have done by a strictly sequential approach, and in any event, ideas which may be obvious from one line of analysis may come in handy when analysing other lines, where the same idea is not so obvious. There is an example illustrating the idea of 'progressive deepening' from [Simon Webb's panel tests](#). Given a list of candidate moves, which lines do you start with? Purdy again: start with the most forcing moves. But if none look any better than the others?

Nunn and Griffiths advise: "*Just plunge in*"; take a look at this one, where "Black has a decisive attack" but there is no forced mate.

Corden - Nunn, Birmingham 1975 [Variation]

The first move to look at must be **15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5#**

... "*and straightaway you have learned a lot about the position*".

That is, you can regain at least one piece whenever you wish, still keeping the K exposed. After this you can work your way methodically through the other lines, with the conclusions from your quick first assessment already in mind.

Sometime you can divert the task of analysis: play a good positional move relatively quickly.

nimzovitch - tartakower (karlsbad) [E81], 1929

[15. Bxf6 Bxf6 (Nimzo analysed briefly:) 16. Qh6 Bg7 17. Qxh5 h6 18. g5 f5 "now it is necessary to analyse several variations which are roughly equally good:" e.g. 19. gxf6 [or 19. gxh6] 19... Rxf6 20. Bh3]

"all of this is extremely complicated and therefore I played after no more than five minutes' thought" ...

15. Bxf6!

15... Bxf6 16. Rxh5 Bg7 17. Nh1 There followed:

17... f6 18. Qh2 h6 19. Ng3 Kh7 20. Be2 Rg8 21. Kf2 Rh8 22. Rh4 Qe8 23. Rg1 Bf8 24. Kg2 Nb7 25. Nh5

"with a strong solid game and chances of attack" - NIMZO [...1-0]

However, sometimes there is no such resource, and you must simply work your way through the variations as best you can.

Good practice

So much for theory. How do you put this into practice? Well, you practice! We must cultivate good habits in our analysis.

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, **Strategy and Tactics in Chess**.

Since Euwe wrote, some other methods have become more available.

Gaining practice and experience through tests:

You have probably seen either the **British Chess Magazine** column *Find the Winning Continuation*, or the same idea in **Chess** magazine, called there *Winning Combinative Play*. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, *Winning Chess*.

If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: *Test your chess IQ, Vol.1* (for players up to BCF 160/ELO 1850), *Test your chess IQ, Vol.2* (for BCF 160-200/ELO 2000) and *Test your chess IQ, Vol.3 - Grandmaster Challenge* (for BCF grades 200+/ELO 2000).

They all suffer from the drawback, in my view, of containing only combinations that work - there are no false but tempting opportunities offered to you, which is so often the case during a game, except in Livshits' books in a section called "Traps"(!). In fact, I believe that mass practice of tactical tests like this can lead to a false sense of optimism when presented with a promising tactical opportunity. Unless these tests have many hidden points in the variations you are required to spot, or include 'false' opportunities, they must be supplemented by other activities. Some support for this is found in [Gene Thompson's article](#) for **Chess Scene**.

More testing (literally) is the **Chess Monthly** magazine feature, *How Good is your Chess?* which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called *Test Your Chess*.) Here's an easy example of such [a test](#) from the B.C.F., [with answers](#).

Other Books for study

Most of the above is 'practice makes perfect' style with little explanation. The theory of *candidate moves* and *trees of analysis* I found in Kotov, *Think like a Grandmaster* (a summary is also to be found in Kotov, *Plan like a Grandmaster*). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis.

Another important book for theory is Nunn and Griffiths, *Secrets of Grandmaster Play*. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board.

Gaining practice and experience through exercises:

One of the best exercises is to play tactical games, against a player of about your own strength or better. If the point is to develop tactics, there can be no better way of doing this for most people than practicing against a computer - that will show you how thorough you really are!

Playing-out of positions

There are also some good ideas in Dvoretsky, *Secrets of chess tactics*. In particular, he describes the technique of "playing-out" of positions for which an analysis has been published. For example, he played on from positions found in the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the clock. This is a realistic test and you can check your conclusions against what Nunn has analysed. Of course, you can use a computer to play positions out.

Examining your own games:

Always a good idea - and it is quite possible to do so concentrating mostly on the number and type of tactical errors you make. Mistakes are perhaps inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. Also, make sure you are spotting opportunities for your opponent as well as yourself. I'm sure becoming more efficient or more consistent in this regard would result in a rise in grade for most of us, without any great new insights being gained.

Blumenfeld's rule for avoiding blunders:

After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this fresh look, then you move. This is called...

Blumenfeld's rule:

"It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation:-

When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a mate in one on, or left a piece or a pawn to be taken. Only when you have convinced yourself that there is no immediate catastrophe for you

should you make the planned move."

-- KOTOV

You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look.

I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything **at the start** of your thinking. You are not checking *conclusions* - you are checking **assumptions**. [*If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while, but "now then, sit up straight, start worrying, what have I missed?"*]

Net reading:

Online exercises from [John Coffey](#) and [David Hayes](#).

Worked example from [Gabriel Schwartzmann](#)

Kotov's classic [Think Like a GM](#), the first chapter of which has been very influential.

A nice piece of self-reflection from an amateur, [Gene Thompson](#), first published in **Chess Scene**.

Bibliography

"The pleasure of a chess combination lies in the feeling that a human mind is behind the game, dominating the inanimate pieces with which the game is carried on, and giving them the breath of life."

Great questions. You don't say what your playing strength is, but I'll assume you're not a complete beginner. Here goes...

Start simple. Get a book like "1001 Brilliant Ways to Checkmate" by Fred Reinfeld, and set up the first position on your board. (It's best to start with checkmate because the goal is clear-cut.) If you can't spot the solution, look it up in the back. Leave the position set up on your board, and mentally visualize each move being played in sequence. If you can't get all the way to the end, make the moves on your board, and then go back and recapitulate mentally.

Make sure you keep getting material that is on your level or slightly

above it. After Reinfeld, go with the Informant combination books, and then with the combination sections in the back of Informant. After that, go with actual game situations (e.g., taken out of Informant) featuring lots of analysis of many different variations. Another good system is to work your way through the best game collections of strong players, or through well-annotated tournament and match books. As you make progress, you'll be able to apply the same methods to positions calling for more strategic solutions. A good book for this purpose is *New Ideas in Chess*, by Larry Evans.

When a strong player visualizes, say, a knight having moved from f3 to e5, it does not mean "seeing" a full mental image of a chess piece, complete with carved eyes, mane, etc., resting on e5. Rather, there is a fairly abstract image of something having the *powers* of a knight being on e5 (and, just as important, no longer being on f3). Supporting this image is an episodic memory trace of having played Ne5, which is strengthened by the prior idea that Ne5 would be a good move to play for either positional or tactical reasons. So to answer your specific questions, visual memory is the key, but both episodic memory and positional understanding play supporting roles.

Kotov's book *Think Like a Grandmaster* is very inspiring, but I think he puts some emphasis in the wrong places. For example, I've never heard other grandmasters talk about the so-called "tree of analysis," and I've never heard other grandmasters talk about disciplining himself to go down each branch of the tree only once. When you're working with visual images, especially ones that arise after several half-moves, your mental chessboard is naturally somewhat less clear. If the position is sharp, you don't want to risk losing unnecessarily, so if there's time, by all means check your analysis.

In my opinion, Kotov's follow-up book *Play Like a Grandmaster* is much more helpful. In that book he boils a master's strength down to three elements: positional understanding, an eye for combinations, and the ability to calculate variations, and gives exercises for strengthening each element.

One thing I've noticed about less-experienced players is that they may be able to calculate a tricky variation, but when they get to the end of it, they either can't evaluate the position correctly, or they can't visualize it clearly enough to allow an evaluation. Learning the elements of positional evaluation is good for your analytical ability. It is very important to combine this with knowledge of

specific types of positions, because such positions tend to recur. That is also why many authorities recommend that you specialize in certain openings rather than try to play all openings.

Constant practice will strengthen your mental chessboard and allow you to penetrate even complicated positions quickly and accurately. Your intuition, or "feeling for position," will also develop.

Play, analyze, and study. Use the right material and the right methods. After you've played in a tournament, analyze your own games and find your mistakes. Get help from stronger players. The list goes on...

For the record, I think De Groot's book is overrated as a teaching aid. It's more a cognitive psychology tract than a chess book. If you must read something on those lines, I recommend a book called The Psychology of Chess Skill... can't remember the author's name, though!

Good luck,
NM Dan Scoones

[Dr. Dave](#)

Exeter Chess Club: General advice on the endgame:

1 key idea, 3 principles, 15 general laws, 12 practical guides and 6 tips for the ending

One key idea: the passed pawn.

1. Endgames, and some middlegames, are all about creating and advancing a passed pawn. Either the pawn queens, or your opponent gets so tied up in knots trying to stop it that they lose something else.
-

3 principles (Fine)

1. Without pawns, you must be at least a Rook ahead in order to force mate (exceptions: R+R wins against two minor pieces; four minor pieces win against a Queen)
 2. If you are two or more Pawns ahead the win should be routine by advancing the Pawns
 3. With only one Pawn advantage, you will win if you can use it to gain more material - it is not usually enough just to advance the Pawn. Often one Pawn advantage is thought to be a theoretical draw, although the practical difficulties may be very great. Winning by the advance of the Pawn may be won because it allows entry with the King, or causes distraction from one vulnerable side, or allows simplification into a known won ending.
-

15 general laws (Fine again)

1. Doubled, isolated and blockaded pawns are weak: avoid them!
2. Passed pawns should be advanced as rapidly as possible.
3. If you are one or two pawns ahead, exchange pieces but not pawns.
4. If you are one or two pawns behind, exchange pawns but not pieces.
5. If you have an advantage, leave pawns on both sides of the board.
6. If you are just one pawn ahead, in 99 cases out of 100 the game is drawn if there are pawns on only one side of the board.
7. The easiest endings to win are pure King+Pawn endings.
8. The easiest endings to draw are those with opposite coloured bishops.

9. The King is a strong piece: use it!
10. Do not place pawns on the colour of your bishop.
11. Bishops are better than knights in all except blocked pawn positions
12. Two bishops vs. B&N or N&N are usually a real advantage.
13. Passed pawns should not be blockaded by the king: the only piece which is not much harmed by watching over an opponent's pawn is the knight.
14. A rook on the seventh rank is worth a pawn.
15. Rooks belong behind passed pawns, of your own or the opponent.

12 practical tips (Mednis)

1. The king is a fighting piece and should be centralised and used actively.
2. Material advantage wins endgames: hold on to your material.
3. Be wary of sacrificing pawns for development: only in Rook+Pawn endings is an active piece worth material.
4. Try and gain tempi whenever possible, but without giving up material.
5. The fewer the pieces, the more important the pawns
6. Keep a flexible, sound pawn formation: avoid doubled, isolated and blockaded pawns.
7. Passed pawns must be pushed.
8. The outside passed pawn is an advantage: in King&Pawns endings it is decisive.
9. Rooks belong behind passed pawns.
10. In open positions the two bishops are murder: in most other positions they are a real advantage.
11. In open or semi-open positions a bishop is usually superior to a knight.
12. The knight is superior to the bishop in blocked positions or when the bishop is hemmed in by pawns on the same colour squares as the bishop.

COOL TIP: MEDNIS says 'good technique' means:

1. not allowing counterplay
2. holding on to material advantage
3. establishing a clear plan and following it
4. being careful
5. never being in a hurry
6. avoiding complications
 - (and ... winning the game!)

This document (genending.html) was last modified on 3 Nov 95 by

[Dr. Dave](#)

Exeter Chess Club: Solving Tactical Problems

You can always win material or get a checkmate if your opponent overlooks your threat. But there are some threats your opponent cannot get out of, *even if they notice them*.

Problems can be solved because either you have:

Double attack

or

Concentration of force against a fixed point

(When I say a fixed point I mean either a piece than has limited mobility, like a King or a Pawn that can't run away. Another immobile point is a pinned piece.)

Most junior games are decided by tactical threats, traps and oversights. If you get better at tactics your results are bound to improve.

A. Winning material by concentration of force against a fixed point

based on Alekhine-Nimzovitch, 1930

White has four pieces attacking c6, and Black defends the Knight with only three. Black will lose material because none of **the four basic defences work**:

A Avoid - the Knight is pinned to the Queen and cannot avoid the attack

B Block - Black cannot block the attack by putting a Pawn in the way

C Capture - Black cannot capture any of the attacking pieces

D Defend - Black cannot defend the Knight with any more pieces

A. Winning material by double attack

Christiansen - Karpov,1993

White's Queen on d1 has just moved back from c2, attacking two points at once - d6 and h5. Black cannot defend both and so must lose material.

So, these are the two basic principles.

B. All problems can be solved when you hit on the idea.

Try this one: Black to move and win.

Black to move.

What is the **idea** in this position? What do you notice about this position?

1. The White Knight on h4 is attacked once and defended once. If we attack it again it will need to move or be defended because we have a 2:1 greater **concentration of force**
2. The White Rook on f1 is undefended.
3. The White King and Queen are safe, and the White Pawns can probably be defended.
4. Is there any idea here? If we attack both the Rook and the Knight with one move, this might create a

problem for White. Is there any move which attacks f1 and h4? Yes there is!

5. 1...Qc4! With a **double attack** on f1 and h4.

6. What can White do? White needs a defence which either defends both pieces at once or somehow creates a counterattack. No such move is there. **Solved!**

When you solve a problem you usually know it straight away - it's like solving a sum. The only **warning** is: problems in books always have a solution - but real games might not have!

A. Make good things happen: examine moves that smite!

We don't know how the last position above came about, but it looks like White was careless and Black just took the chance that was there. But you sometimes have to make good things happen. You have to force your opponent to do what you want. You can do this in two ways

Playing a check: everything stops for a check!

Playing a capture: if your opponent does not recapture you will win material

Purdy talks about "**smiting**" moves - checks and captures. In fact, the best move is a move which is a capture with check!

D1: Winning material by playing a forcing check

White to play and win:

White to move

What's the **idea** here?

1. The Black King has no moves - it's very nearly mate! But Black is covering h7 and g7. I have a check on h4 or h5 with the Queen, but that doesn't do much: my Queen and Rook can do nothing more by themselves.

2. I would like to get the Bishop into play - for example on the long diagonal a1-h1. In fact, at the moment, if only I had some support for c3, I could play Bc3 winning the Queen by a deadly pin!

3. Is there any way I can cover c3? Yes there is: I can cover it by a Queen on g3.

4. If I just play Qg3 Black may have time to get out of it - I must not give my opponent any choice! I must play forcing moves - like checks...

5. Aha! **1. Qh4+ Kg8 2. Qg3+ Kh8** gets my Queen to g3 without Black being able to do anything. I can now play **3. Bc3**, winning - **Solved!**

D2: Winning material by playing a forcing capture Black to play and win:

1. One idea: if the Black Queen on e2 was a Black Knight - I'd win the White Queen by **double attack** (knight fork) And even better - I can move a Knight on f4 to e2!

2. BUT if I move the Queen away quietly White can move the Queen, or even take the Knight with the one on d3.

3. So I can't move the Queen away quietly: I must move it noisily - forcibly - I must **smite** my opponent!

4. I can play Queen takes the Rook on f1 with check. This must be the most **forcing** move! - but after Kxf1 I have no fork on e2.

5. I can play Queen takes Knight on f3: if White takes the Queen I play ...Ne2+ and ...Nxd4, coming out a piece ahead. If White doesn't recapture, I'm still a piece up. **Solved!**

[Dr. Dave](#)

Exeter Chess Club: Practical Tactics 2

[An old handout that goes through types of error and analysis]

A tactic appears for you: you get it right.

Here's a simple one to get us started:

Regis,D - Jones,R (1995)

1. c4 Nf6 2. Nc3 e6 3. e4 Nc6 4. Nf3 b6 5. e5 Ng4 6. d4 g6 7. h3 Nh6 8. Bg5 Ne7 9. Qd2 Nhf5 10. g4 Ng7 11. Ne4 f5 12. exf6 Bb7

13. f7+ Kxf7 14. Ne5+ 1-0

And a more complicated one: the idea is easy, but can you analyse it to a finish?

Regis,D - Lane,P (1994)

13. Bxe6 fxe6 14. Qh5+ Kf8 15. Bh6+ Rg7 16. Ng5 Qe8 17. Nh7+ 1-0

Ah, if only it was all like that...

A tactic appears for you: you miss it.

Regis,D. - Aston,P (1994)

21. Qe8+??

[21. Qe6 Qd8 22. c6 or even 21. Rxd7 Kxd7 22.Rd1]

...1-0

Patzer sees a check... It didn't affect the outcome in the end but White had to start all over again to build up another combination.

Jackson,Dave - Regis, D (1993)

17... b4 ??

[17... Qxa2+ 18. Kxa2 Ra6+ 19. Ba5 Rxa5+ 20. Kb1 Ra1#]

18. a4 Bd7 19. e5 Bxa4 20. Bc1 O-O 21. Nd2 Bb5 22. Bb2 Nf5 23. Nc4 Bxc4 24. dxc4 (Draw agreed)

I suppose I wasn't looking for a win just then!

A tactic appears for your opponent: you miss it.

Oh, how many times... asleep, overconfident or confused, we ignore our opponent's best reply.

Regis,D. - Beake,B. (1994)

18. g3? f3 19. Bd3 Ne5 20. Nxe5 fxe5 ...0-1

You don't get away with that sort of thing against 200-grade players.

Regis,D - Stirling,A (1984)

1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. c5 Nd5 5. Bc4 e6 6. Nc3 Nf4

7. Qg4 Qh4 ...0-1

There are lots of opening traps like that: White bites off more than he can chew.

Fayle,A - Regis,D (1984)

29... Rfc8?? 30. Rd8+ Rxd8 31. Rxd8+ Kh7 32. Bg8+ Kg6 33. Rd6+ winning a piece (but ...0-1!)

It was almost the only thing Black had to analyse, and I didn't!

A tactic appears for you: you see it but analyse it wrongly.

Regis,D. -Stooks, Charles (1993)

19. Nef4? (yes, very good but unfortunately 19...exf4; 20 Rxf4, g5! gets at least a draw! 20 Nxf4 also fails to 20...g5)

19... Nc6??

[19... Qb7]

20. Nh3 Qg4 21. Ng5 1-0

Simple over-optimism: I didn't consider 20...g5.

Regis,D - Prideaux,E (1994)

White lashes out without much justification:

30. Rd8+ Bxd8 31. Nd6+ Kf8 32. Nxf5 Bxb6+ 33. Kh2 Bxf5 winning...

(but here and black's flag fell... 1-0 There ain't no justice...)

Not hard to analyse, just I felt I had to do something and couldn't see anything else!

A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.

Ward,D - Regis,D (1994)

26... Bd4 27. Bxd4 Rxe4 28. Qxe4 Ng3+ 29. Kg1 Nxe4 30. Rxe4 Re8 31. Rbe1 Rxe4 32. Rxe4 Qf7 33. Re6 Kh7 34. Rf6

[34. Kh2! ...when it's all a bit tricky!]

34... Qe8 35. Re6 Qxa4 36. Re7+ Kg6 37. Rxc7 Qd1+ 0-1

The tactic was obvious enough, what I failed to assess was how good White's pieces would be in the ending.

Webb,S - Regis,D (1994)

17...a5

18. Bxd5 cxd5 19. Nxd5 Bxd5 20. Rxe8+ Qxe8 21. Rxe8+ Rxe8

As last time, Black has secured (or provoked White into giving up) a material advantage that is difficult to make use of, this time with the opponent having the Queen.

22. Ne5 Nxe5 23. dxe5 Bc6 24. Qc3 Re6 25. f3 a4 26. a3 g5 27. Bxg5 Bxe5 28. Qd3 Bd4+ 29. Kf1 Ne3+ 30. Bxe3 Bxe3 31. b3 Bf4 32. c4! Bxh2 33. bxa4 bxc4 34. Qxc4 Bg3 35. Qg4+ Rg6 36. Qc8+ Kg7 draw agreed .

As we start to comment more deeply on these examples, we see two sources of error: mistakes in analysis, surely, but also misjudgements - errors in the general assessment of the board or the opponent.

Let's clarify this with an example:

Kasparov - Karpov, Linares, 1994

1. e4 c6 2. d4 d5 3. Nd2 dxe4 4. Nxe4 Nd7 5. Bc4 Ngf6 6. Ng5 e6 7. Qe2 Nb6 8. Bb3 h6 9. N5f3 a5 10. c3 c5 11. a3 Qc7 12. Ne5 cxd4 13. cxd4 DIAGRAM

13... a4

[13... Bxa3]

14. Bc2 Bd7 15. Nxd7 Nbx7 16. Qd1 Bd6 17. Ne2 Nd5 ...drawn

I wouldn't like to say there's anything wrong with the analytical abilities of either player - what we have here is an error of judgement. My guess is, it's a quiet position in a solid opening, and neither player bothered to look.

Chess is a tense game. This tension may make you want to believe things that aren't really true, and comfort yourself with things that mean you don't have to think too hard any more. Not a bit of it....

Petrosian-Korchnoi 1963

Black has a hopeless, passive position, just as he has had for the last umpteen moves. Petrosian just went

1. Rxf6

which was met by

1...f3!

Hoping for 2. Kxf3 Kg7 *discovered check*, winning the rook.

2. Kg5 Ke8 White resigns, unable to catch the f-pawn.

Afterwards, Petrosian explained that a move like ...f3 just didn't fit with "*Black's hopeless position*". But where there's life, there's hope!

"For a long time I had regarded my position as a winning one. Thus the whole opening phase of the struggle, when Korchnoi was unable to get out of trouble, had psychologically attuned me to the idea that the ending would be favourable to me ... and here comes the oversight 35 Rxf6?? I did not even see the threat ...f4-f3, possibly because it was in contrast to Black's hopeless position. Personally, I am of the view that if a strong master does not see such a threat at once he will not notice it, even if he analyses the position for twenty or thirty minutes." - PETROSIAN.

I have a whole book full of these types of disaster, when one player just turned the alarm off. You should be on guard all the time, with the alarm dial turned up to 11!

Please note that Petrosian was also thinking less than objectively about the game, and thinking only about his plans. Your opponent also has a right to exist...

B. Analysis

It used to be thought that there wasn't much difference in the abilities of strong and weak players at analysis - rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences.

Here White gets carried away with his attacking possibilities, when unflappable Exeter player Brian Hewson calmly sidesteps

the main line of a sacrifice (11...fxe6) threatening a pin on the e-file.

and won. It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move *at the outset* before analysing any one move deeply. Had White done this he **could not fail** to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8.

surprising/paradoxical moves

Retreats

Christiansen - Karpov (1993)

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6 9.Nxc6 Bxc6 10.Bf4 Nh5 11.Be3 Bd6 (wait for it...)

12.Qd1 1-0

The error made by Karpov above is actually a common one - missing an undeveloping retreat.

Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on. Another example:

Putting pieces en prise

Fischer - Sherwin, USA Ch'p , 1957

30. Rxf7 Rc1+ 31. Qf1!! h5 32. Qxc1 Qh4 33. Rxf8+ Kh7 34. h3 Qg3 35. hxg4 h4 36. Be6 1-0

How about that one: a Queen moving backwards into a position where it can be captured!

'Creeping moves'

Purdy advises:

"examine moves that smite!"

...which is clearly good advice. But have a look at this:

Spassky - Korchnoi, Kiev, 1968

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f3 O-O 6. Be3 Nc6 7. Nge2 a6 8. Nc1 e5 9. d5 Nd4 10. Nb3 Nxb3 11. Qxb3 c5 12. dxc6 bxc6 13. O-O-O Be6 14. Qa3 Ne8 15. h4 f6 16. c5 Rf7 17. Qa4 Qc7 18. Bc4 Bxc4 19. Qxc4 Bf8 20. h5 dxc5 21. hxg6 hxg6 22. Qe6 Rd8 23. Rxd8 Qxd8 24. Rd1 Qe7 25. Qxc6 Nc7 **DIAGRAM**

The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. *Nd5 Qe6!* and Black holds.

26. Qb6

Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...*Qe6* with *Bxc5* and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game.

26... *Kg7* 27. *Nd5 Qe6* 28. *Bxc5 Bxc5* 29. *Qxc5 Nb5* 30. *Qe3 Qc6+* 31. *Kb1 Nd4* 32. *Rc1 Qb5* 33. *Nc7 Qe2* 34. *Ne6+ Kh7* 35. *Qh6+ 1-0*

It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange.

Wahl Tuch - Palmer, Manchester, 1912

1. *e4 e5* 2. *Nf3 Nc6* 3. *Bb5 Nf6* 4. *O-O Nxe4* 5. *d4 Nd6* (Berlin Defence, Rio De Janeiro Variation) 6. *dxe5* [6. *Bxc6*] 6... *Nxb5* 7. *a4*

This is a gorgeously messy line

7... Nd6 [better 7... d6]

8. Bg5 f6 9. Re1 fxg5 10. exd6+ Ne7 11. Ne5 cxd6 12. Qh5+ g6 13. Nxc6 Qa5 14. Nxc8+ Kd8

Have a look at the next diagram and see what you think.

15. Nc3

[Obviously not 15. Qf7 Qxe1#]

It is tempting to try a forcing move, but none work.

"A quiet move in the midst of an attack is the sign of the master" - Du Mont

15... Qf5 (else Qf7) 16. Nb5 Ng6 17. Qxg5+ 1-0

The 'tree of analysis'

The starting point for any consideration of analysis must be Kotov, again.

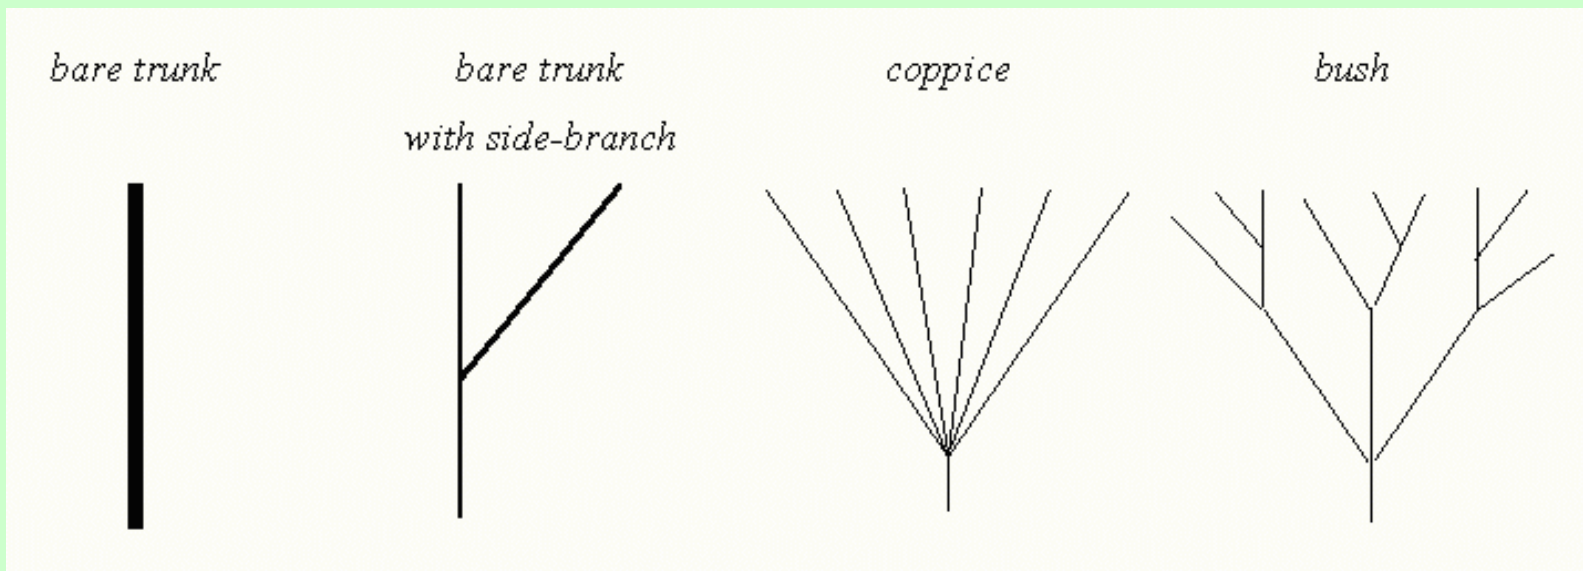

Candidate moves must be established straight away and they must be clearly enumerated.

Once we have established all the candidate moves, we then proceed to work out the variations arising from them one by one.

In analysing complicated variations, one must examine each branch of the tree once and once only.

This task cannot be split into parts, by examining one move fully and then looking for the next one.

Kotov gives some example of positions where the analysis get progressively more detailed.

bare trunk

side-

branch

'Just plunge in':

Corden - Nunn, Birmingham 1975

Nunn and Griffiths advise: "Just plunge in"

The first move to look at must be 15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5#

... "and straightaway you have learned a lot about the position".

That is, you can regain at least one piece whenever you wish, still keeping the K exposed. Other lines include:

'Play a good positional move'

Nimzovitch

How to improve your analytical skills

So much for theory. How do you put this into practice? Well, you practice!

Solving problems in books and magazines

You have probably seen either the **British Chess Magazine** column *Find the Winning Continuation*, or the same idea in **Chess** magazine, called there *Winning Combinative Play*. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, *Winning Chess*.

After that, you get serious. More testing (literally) is the **Chess** magazine feature, *How Good is your Chess?* which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called *Test Your Chess*.) Here's an easy example of such a test:

How good is your chess?

If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: *Test your chess IQ, Vol.1* (for players up to 160), *Test your chess IQ, Vol.2* (for 160-200) and *Test your chess IQ, Vol.3 - Grandmaster Challenge* (for 200+ grades).

This is all 'practice makes perfect' style with little explanation. The theory of *candidate moves* and *trees of analysis* I found in Kotov, *Think like a Grandmaster* (a summary is also to be found in Kotov, *Plan like a Grandmaster*). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis.

Another important book for theory is Nunn and Griffiths, *Secrets of Grandmaster Play*. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board.

And lastly, there are some good ideas in Dvoretsky, *Secrets of chess tactics*. In particular, he describes the technique of playing-out of positions for which an analysis has been published. For example, he played on from the following positions from the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the

clock. This is a realistic test and you can check your conclusions against what Nunn has analysed.

"I can see the combinations as well as Alekhine, I just cannot get into the same positions" -- SPIELMANN

[Dr. Dave](#)

Exeter Chess Club: Strategy and Tactics

Two or three things prompted this session:

- There was a long-running argument on the UseNet **rec.games.chess** newsgroups earlier this year, basically around the idea that "*chess is tactics, and club players should study nothing but tactics*" (or 90% tactics).
- More recently I got a video by Nigel Davies called **Dirty Tricks** which offered a complete repertoire for a club player. In every line, there was at least one huge smelly pit for the opponent to fall into, or some other hope of some other dramatic way of finishing the game early.
- Pete Lane has kindly offered to run a session soon on '**Preparing For Combinations**'. Without knowing what's in it. I thought I might be able to do the overture for his three-act drama.

I am probably the best example you could hope to find of a club player trying to run strategically before they can walk tactically. I used to play like beginners should, all open games and swashbuckling attacks, but then I saw a striking positional game (**Bernstein-Mieses**) which has been my ideal ever since. I switched to playing the Queen's Gambit (and, soon after, the English Opening), but, like many club players, rather too many of my games feature elementary tactical oversights. Here is a particularly dismal example: me to play as Black, in a dominating position, and to come up with three tactical blunders in a row...

Bellers,C - Regis,D [B27] Exeter Club Ch'p Exeter Club Ch'p (5), 1997

33...Bxg3+?? [33...Re3! -+] 34.Kxg3 Qe5+ 35.Kxg4 h5+?? [35...Re4+!] 36.Kh3 Re3+?? [36...Qe6+] 37.Nf3 (sealed move) (and resigned) 1-0

(37...Qf4?! might have been worth a punt OTB, but not after a week's analysis) In response to this obvious failing I have tried to play more open games and treat all positions a little more sharply.

However, I am far from persuaded that club players should study nothing but tactics, or even devote (say) 75% of their study time to it. But first let us hear the case for the prosecution:

"Chess is 99% tactics" -- Richard TEICHMANN

"Until you are at least a high Class A player: Your first name is 'Tactics', your middle name is 'Tactics', and your last name is 'Tactics'." -- Ken SMITH

"Thirty years ago (this was written in 1942), Teichmann said that chess is 99% tactics. And despite the enormous strides of chess theory since then, his percentage can only be reduced a few points.

"Many amateurs think that master games are usually decided by some deeply-laid plan covering all possibilities for at least ten moves. It is still true that most games, even between the greatest of the great, are decided by tactics or combinations which have little or nothing to do with the fundamental structure of the game.

"To take one striking example, look at the games of the Euwe-Alekhine matches. Euwe is a player who analyses openings ad infinitum, i.e., one who wants to settle everything strategically. Alekhine is likewise adept at the art of building up an overwhelming position. And yet in almost all cases the outcome depended not on the inherent structure of the play, but on some chance combination which one side saw and the other side did not. Tactics is still more than 90% of chess." - - GM Reuben FINE, "Chess Marches On", Strategy and Tactics. (from Richard S. Cantwell)

"It's not that chess is 99% tactics, it's just that tactics takes up 99% of your time"- - NM Dan HEISMANN.

"Chess IS tactics" -- NM Ignacio MARIN

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. " -- RICHARD RETI

...and so on. Moreover:

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired" -- RETI

So, it seems fair to say that you do need to get your eye in for tactics, and keep up your practice, and try to extend the depth and range of what you can analyse routinely.

However, I would disagree with the conclusion that tactics are the be all and end all at club level. It's not just the point that if chess was only a matter of calculation, it would be unplayable - obviously the number of choices at each turn means you must use your judgement to select which moves to analyse. Also, I'd guess that for at least 9 moves out of every 10 there is not going to be any combinational blow available for either side, so you are going to have to think about something else, if only how to set up such a blow. But the real reason I object is: where do these tactics come from? Why do combinations arise at all? It used to be thought that chess mastery depended on ingenuity, daring and intuition, but according to Lasker there is...

*"...No combination without a considerable plus, no considerable plus without a combination" -- Em. Lasker, **Manual of Chess**, Book IV*

So, before you get your tactical opportunity, you need to build up a positional plus. Studying tactics alone is putting the cart before the horse - or more fairly, the chicken before the egg.

ASIDE: Part of this essay explains that I don't entirely agree with this view either; in fact, this is so dogmatic that Lasker risks being dumped with Steinitz among the impractical theorists rather than the practical players (of which he is usually taken as a supreme example). So, why did Lasker make such a statement? Well, there is more than a grain of truth in it, and I think the absolute way in which Lasker expressed it was born out of Lasker's esteem for Steinitz, and particularly what he saw as the heart of Steinitz' theory. Anyhow, let's listen to Lasker's ideas first, before criticising them.

Steinitz had many ideas which have become associated with the treatment of *closed* positions, but Steinitz the player and Steinitz the theorist both started in the arena of *open*, tactical games. Lasker gives a game of Steinitz against **Hamppe** as an example, with both players out to score a win from the very start of the game. (In fact, Steinitz won more brilliancy prizes than most of his 'brilliant' contemporaries, and won them throughout his career.) Although he could play like this, Steinitz also thought about, where do tactical combinations come from?

"...If Steinitz continually took pains to discover combinations, the success or failure of his diligent search could not be explained by him as due to chance. Hence, he concluded that some characteristic, a quality of the given position, must exist ... that would indicate the success or the failure of the search before it was actually undertaken. (...)

"The master should not look for winning combinations, unless he believed, unless he could prove to himself that he held the advantage.

"An advantage could consist ... not only in a single important advantage but also in a multitude of insignificant advantages.

*"Therefore... in the beginning of the game ignore the search for violent combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power of will and intellect, because then the combination must exist, however deeply hidden." -- Em. Lasker, **Manual of Chess, Book IV***

I think here is the heart of the matter: combinations in fact do not come out of nowhere, so if you want to strike tactically, you must first play positionally. Morphy's dominance was often attributed to brilliance, and while Morphy undoubtedly was brilliant his games were based on good positional principles, and his combinations came out of positional advantages. If you fail to understand this, you may end up in this, perhaps familiar, predicament of amateur players:

"... the most disheartening issue was our failure to play as well as we feel we should (...)

"Here is my hypothesis: My friend and I are both afflicted with the same problem, Forcing The Issue. We have spent so much effort learning tactics from setup positions, that once we are in a real game, we try to apply our lessons to positions that don't warrant it. Subconsciously, we believe that every position has some stunning combination in it that will allow us to win. When we look for it, if it's not there (most often the case), we try to force one, causing a lost game.

*"Studying tactics in setup positions is a VERY necessary part of learning chess, but, knowing when to apply tactical knowledge is, at this point in my education, to me even more important. My friend's opponent instinctively makes "better" moves because my friend is making weaker moves, and so am I. Given a setup position, he would most likely find the solution much faster than his opponent. In a general position, we would both likely find a combination that wasn't there." -- Gene THOMPSON, *The Search for Great Chess Part V, Chess Scene**

(By the way, Gene is in my view also suffering from using books that contain no 'false positives', that is, tests which include tempting tries but no actual winning tactic.)

Spielmann said something that alludes to the same problem:

"I can see the combinations as well as Alekhine, but I cannot get into the same positions." -- SPIELMANN

So, combinations do not come out of nowhere, but out of previous good play, or out of the characteristics of the position, and if you don't play with that in mind, you can end up in trouble.

Positional factors also explain how and where come combinational blows actually fall. We nowadays

speak of a *cutting-point combination* (a sacrifice at the crossroads of two lines which we control - for example, if attacking the Black castled King's position with your Nf5, Bb2 and Rg1 all focussing on g7, the sacrifice Nxg7 should immediately be considered. One might also cite *Rubinstein's Immortal* (Black against Rotlevi):

22. ... Rxc3! 23.gxh4

if 23.Bxc3 Bxe4+ 24.Qxe4 Qxh2 'mate, or 23.Bxb7 Rxg3 24.Rf3 Rxf3 25.Bxf3 Nf7+ 26.Kg1 Ne4+ 27.Kf1 Nd2+ 28.Kg2 Nxf3 29.Qxf3 Rd2+ etc.

23. ... Rd2!! 24.Qxd2

if 24.Qxg4 Bxe4+ 25.Rf3 Rxf3 etc, 24.Bxc3 Rxd2 with Rxh2 'mate or Bxe4+ 'mate to follow, or 24.Bxb7 Rxe2 25.Bg2 Rh3! etc.

24. ... Bxe4+ 25.Qg2 Rh3! 0-1

'mate in three follows, 26.Rf3 Bxf3 27.Bd4 Bxd4 and Rxh2 'mate.

Here we can see that Rubinstein's well-posted pieces are as much the heart of this combination as his insight; without accumulating control of the open files and diagonals, none of it would work. And the combination, once launched, works like clockwork - based mostly on the power of the Bishop on the long diagonal but also the Rook on the seventh rank. One attraction of the combination for me is the way the two groups of Black pieces are brought into a working geometric mechanism.

So, positional advantages not only let us know when, but also where, to strike with a combination.

Moreover, [Steinitz' theory](#) has some important corollaries:

- 1. The right to attack belongs only to that side which has a positional advantage, and this is not only a right, but also a duty, otherwise there is the risk of losing the advantage. The attack is to be directed against the weakest spot in the opposing position.*
- 2. The defending side must be prepared to defend and make concessions, e.g making a weakening pawn move. However, the defender should avoid making concessions until forced, and then should make only the minimum concession necessary to meet the threats.*
- 3. In level positions the two sides will manoeuvre, trying to tilt the balance of the position, each in their own favour. With correct play on both sides, level positions keep on leading to further level positions. Any attempt to undertake an attack without an adequate positional basis should lead to a disadvantage, if parried properly.*

(after Kotov and Chernev)

So, we can now say more clearly what is wrong with a diet of studying only tactics. We can also understand how Steinitz could contain someone like **Zukertort** or Blackburn (see games below, in particular the *accumulation of advantages* against **Blackburn**). And we can look back at the old nineteenth-century games and see how a Steinitz might have handled them too:

"Playing through this beautiful game, we can see why lovers of the romantic era speak so highly of such games and the era in which they were played. ... (But) these combinations should never have been allowed to come into being. In an opening in which both players relentlessly pursue their respective aims - without acknowledging the requirements of the position - rapidly changing situations are produced, culminating in (a sacrifice.)" -- KONIG

So, there is a lot to be said for this argument of Lasker (and Steinitz), but he did overstep the mark when talking about combinations, and Purdy was one who pointed this out most forcefully. He had a lot of fun at Lasker's expense about this "utterly mad advice", and indeed wrote an article entitled '**The Steinitz-Lasker "Law" exploded**'.

He shows by looking at two famous games (**Reti-Alekhine 1925**, and rather ironically the game from the **Lasker-Capablanca** match in **1921** that put Lasker two points behind) that combinations are sometimes available without there being any considerable plus, perhaps no plus at all. You might say that you know of, or can devise, a scheme for assessing positions which gives the advantage to Lasker or to Alekhine in the two games, but I know of none such. In any event, surely positional evaluations cannot be made irrespective of any immediate and concrete tactical possibilities; moreover, it is difficult to say whether the familiar geometrical motifs that lie behind combinations - like a weak back rank - should be called positional or tactical considerations. For the club player this is all academic:

"The question that matters to you in actual play is simply, 'What is my best move?', and if you can decide without being sure who has the theoretical advantage, so much the better" -- PURDY

Now, Purdy's criticism of this Steinitz-Lasker law is pertinent, but not absolute. There is no doubt that the majority of favourable combinations do appear in positions where one side has the advantage.

My objection to the "Tactics, tactics, tactics" school of thought is not to say that tactics are not important or that most games are not decided by tactical blows. Indeed, what is often at fault in the game of the club player is a failure to check for their opponent's opportunities in reply. Moreover, given the rather static manner of play and poor level of defensive skill amongst club players, they are probably as well advised to imitate Zukertort or Blackburn than Lasker or Steinitz. Seizing the initiative, going for an attack, and having an eye for random chances are probably at least as important as positional judgement in club play. But I would still not wish to call for one type of study as being important - in particular, not for tactics being more important than strategy.

Lasker once gave a scheme for studying chess, which is much more convincing and pragmatic than his theorising about combinations:

*"Chess rules and exercises - 5 hours
Elementary endings - 5 hours
Some openings - 10 hours
Combination - 20 hours
Positional play - 40 hours
Practical play with analysis - 120 hours*

*"Having spent 200 hours on the above, the young player, even if he possesses no special talent for chess, is likely to be among those two or three thousand chessplayers [who play on a par with a master]. There are, however, a quarter of a million chessplayers who annually spend no fewer than 200 hours on chess without making any progress. Without going into any further calculations, I can assert with a high degree of certainty that nowadays we achieve only a fraction of what we are capable of achieving." -- Em. Lasker, **Manual of Chess, Book IV***

Notice that "*Practical play with analysis*" comprises over half of the hours of study. What I would take from this is not that '*positional play at 40 hours is more important than combinational play at 20 hours*', but rather that each are to be integrated into a study of real games, both your own and those of the masters. There is surely a case for balance in your study: a balance between opening, middle- and end-game study, a balance between reading, doing exercises and analysing your own games.

I sometimes think studying is actually the easy bit. Knowing what to study, based on an honest analysis of your own strengths and weaknesses, is the hard bit. However, the goal may be more clear:

"However obviously the majority of Chess-players may be divided into two big classes of combination- and position-players, in the Chess-master this antagonism is transformed into a harmony. In him combination play is completed by position play." -- Em. Lasker, Manual of Chess, Book IV

Steinitz pioneered the defence of the Queen's Gambit Accepted, and used this blockade which is still recognised as the standard and best plan for Black.

Ba4 28.Rf3 Qd6 29.Rd2 Bc6 30.Rg3 f5 31.Rg6 [31.Nd1 Lasker] 31...Be4 32.Qb3 Kh7 The tension mounts. **33.c5 Rxc5 34.Rxe6 Rc1+ 35.Nd1 Qf4 36.Qb2 Rb1 37.Qc3 Rc8 38.Rxe4 Qxe4 0-1**

A dramatic finish, but it was all decided beforehand.

*"If Zukertort has a plan in mind, he is a match for Steinitz, possibly even his peer. ... Every move of Zukertort's pointed towards a vigorous cooperation the pieces united to attack the King. This is the old Italian plan; Zukertort found it ready made, and in the tactics of execution he was a great master. Steinitz, however, discovered sound and successful plans **over the board**. [...]"*

*"Zukertort relied on combinations, and in that field he was a discoverer, a creative genius. For all that, he was unable to make use of his faculty [in the majority of games in the match], the positions yielding no response to his passionate search for combinations. (...) Zukertort, the great discoverer, searched in vain, while Steinitz ... was able to foresee them. Zukertort could not understand how Steinitz was able to prevent combinations... he tried for four years to solve this riddle, but he never approached its solution by even one step." -- Em. Lasker, **Manual of Chess, Book IV***

Exeter Chess Club: Preparation for combinations

Peter Lane, 26th May 1998

*"Combinative vision manifests itself at an early age, and children are quick to notice and execute combinations which chance to turn up. **Preparing combinations**, however, is more difficult for them." -- ZAK, Improve your chess results.*

- [I: STUDY OF PIECE CO-ORDINATION](#)
- [II: WEAPONS IN THE ARSENAL](#)
- [III: PREPARING THE GROUND](#)

About two years ago I decided to become a more "combinational" player. Specifically, I wanted to understand how to play for a direct attack, not shy away from complications, and, perhaps, play the occasional breath-taking sacrificial combination. Since then, I have studied many games, particularly those of Tal, which offered attacking motifs; begun to include sharper opening lines in my repertoire; and took an enormous stride forward by buying (and reading) V.Vukovic's **The Art of Attack in Chess** (1965).

How far I've progressed you can judge from the games at the end of this piece. I do know that I feel a great difference in my willingness to go in for complications, and greater confidence in attempting to whip up an attack.

My aim here is to lay out what I see as the principal elements of my last two years' study which have led to these changes. In short, I offer a pattern (not a complete course!) of home study which, in my case, has resulted in a significantly sharper (more interesting? stronger?) style.

It is not my aim to consider how to calculate variations. Not that I don't agree this is an essential ability, but I do believe it is over-estimated in its own right. Practice is actually very easy: set up complicated positions, either from **Winning Combinative Play** or from games collections such as those of Tal, and analyse -- against the clock! The one rule you must adhere to is not to waste time. Go over

lines 10 times if you want, but only if you are asking new questions at each repetition. Depth, accuracy and thoroughness will come with practice, as you compare what you worked out in your head with what is there on paper.

The point to understand is that no-one can calculate perfectly (not even the computers -- chess is too big for that) and so it is irrelevant whether you can calculate 10 moves deep or only 2: at some point you have to stop and make an assessment of the position.

Instead of asking: "does that really work? What am I overlooking?", you have to develop the intuition that lies behind a sacrifice.

So, after this lengthy introduction, I'm concerned with a related pair of questions:

- How can we raise the courage to play sacrificial moves?
- And, how can we improve the likelihood of getting the chance?

I address the courage aspect by offering the study of simple positions in an effort to understand piece co-ordination as a key way to improve our assessment of positions reached in analysis. The increased opportunity arises when we understand how to steer a given position into one in which a combination might be lurking.

I: STUDY OF PIECE CO-ORDINATION

There is one piece of advice all the great players give, "study endgames". Why? Because only in this manner can you understand how the pieces CO-OPERATE. Only with piece co-operation is it possible to force checkmate.

Botvinnik claimed to have learnt about Queen+Knight co-operation from Capablanca. To see what he learnt, consider the following finish of **Silva-Botvinnik, Moscow 1956** (for full analysis see **Botvinnik on the Endgame** (1985)):

8/8/8/6pk/3Pq2p/2P1n2P/P1P3PQ/7K

White has more than enough material compensation for the knight, and the black king is insecure. Therefore, attempts to win the Q-side pawns, which lift the mate threat, would allow white to escape with perpetual. The winning plan is extra-ordinary. By sacrificing his last two pawns, black opens up the white king and forces 'mate, due to the co-operation of his queen and knight.

41... Qc6 42.Qg1 Qxc3 43.a4 g4!

(43... Qxd4 44.a5 Nxc2 45.a6 would be harder.)

44.hxg4+ Kg5! 45.a5 h3!

There goes the last pawn, opening up the long diagonal. Because both *46.gxh3 Qc6+ 47.Kh2 Qf3!* and *46.g3 Qc6+ 47.Kh2 Qxc2+ 48.Kh1 Nxc4* quickly lead to 'mate -- **White resigned.**

And now see the finish of **V.Anand-V.Topalov (Wijk Aan Zee, 1998)**:

2q3kQp1nbpp/1r1pN3/3P4/6P1/7P/5P2/R1BQ2K1

26.Nxg7!! Kxg7

(Acceptance is forced. Although all white's pieces are on the back rank, the weak dark-squares are decisive. If 26...Nxd5 27.Nf5 Qf8 28.Nh6+ Kg7 29.Qd4+ Kg6 30.h4 etc.)

27.Qd4+ Kf8 (27...Kg8 28.Bh6 or 27...Kg6 28.h4) **28.Bh6+ Ke8 29.Re1 1-0**

(For we mortals: 29...Kd7 30.Rxe7+! When it's B+Q vs K+others. e.g. 30...Kxe7 31.Qe4+ Be6 32.Qxh7+ Bf7 33.Bg5+ Kf8 34.Qh8+ Bg8 35.Qh6+ Ke8 36.Qg6+ Bf7 37.Qe4+ Kf8 38.Bh6+ Kg8 39.Qd4 forces the win of the queen, with the advance of the g and h-pawns winning the game.)

Amazing stuff, but note that after the demolition sacrifice Anand finished playing Q+B vs K+scattered defence; as the black K could never escape to d7 (because of Qf5+ and Bg5 forcing the win of the queen) Anand could judge that a 'mating position was forceable (of course, he *may* have calculated it too!). The choice is simple. Either you can calculate perfectly (me neither), or you must understand piece co-operation enough to make an accurate assessment of such positions.

Studying simple positions will help us gain the courage to make the initial sacrifice -- trusting our assessment will remove the worry of "overlooking something"; if your assessment is right, you can find the good moves when you get there.

II: WEAPONS IN THE ARSENAL

There are a number of basic attacking motifs which must be studied, with a view to reaching a position in which a combination can be used. My favourite source for these is **The Art of Attack in Chess** by V.Vukovic (1965). Some of the more helpful concepts I have found are focal-points and networks of weak squares. In terms of specific weapons, Vukovic analyses attacking the fianchettoed bishop and the value of different open files, amongst others. The Classic Bishop Sacrifice (or Greek Gift) is one such standard weapon:

r1bq1rk1/pp1n1ppp/2n1p3/3pP3/3P4/P1PB1N2/5PPP/R1BQ1RK10

The thematic move here is **1.Bxh7+**, but before playing it, there are FOUR variations that need to be considered:

1) *1... Kh8* Worth remembering that sacrifices do not have to be accepted. In this position *2.Bd3* is possible, winning a pawn.

and after *1... Kxh7 2.Ng5+*

2) *2... Kg8 3.Qh5 Re8 4.Qxf7+ Kh8 5.Qh5+ Kg8 6.Qh7+ Kf8 7.Qh8+ Ke7 8.Qxg7* 'mate. A typical procedure, driving the king to its fate.

3) *2... Kh6 3.Nxf7+ xd8* wins the queen.

4) *2... Kg6 3.h4* (sometimes *3.Qg4* is strongest) *Rh8 4.h5+! Rxh5 5.Qd3+ f5 6.exf6+ Kxf6 7.Qf3+ Ke7 8.Qf7+ Kd6 9.Qxh5* and wins (*10.Nf7+* is threatened too).

[5) *2... Kh8* is never really an option *3.Qh5+ Kg8 4.Qh7* 'mate.]

Once mastered, this is a powerful weapon, ready to be used whenever possible. A light-hearted example:

Gaudersen-Paul (Melbourne, 1928)

1.e4 e6 2.d4 d5 3.e5 c5 4.c3 cxd4 5.cxd4 Bb4+ 6.Nc3 Nc6 7.Nf3 Nge7 8. Bd3 O-O 9.Bxh7+

"Almost any decent player would make this sacrifice instinctively, without bothering to calculate the consequences." CHERNEV

9... Kxh7 10.Ng5+ Kg6 11.h4 Nxd4 12.Qg4 f5 13.h5+ Kh6 14.Nxe6+ g5 15. hxg6 *en passant*, 'mate!

This is, of course, an example of "castling into it". What is to be done when your opponent tries his/her level best to avoid falling for such basic attacking motifs? Just how can we force an opponent into accepting the pre-conditions for a combination?

Consider an example of Capablanca's, where a combination is used to set up the pre-conditions for a Classic Bishop Sacrifice.

J.R.Capablanca vs Angel Ribera (Barcelona, 1935)

1.e4 c6 2.Nc3 d5 3.Nf3 dxe4 4.Nxe4 Nd7 5.d4 Ngf6 6.Ng3 e6 7.Bd3 Be7 8. O-O O-O 9.Qe2 c5 10.Rd1 Qc7 11.Bg5 b6?

r1b2rk1/p1qnbppp/1p2pn2/2p3B1/3P4/3B1NN1/PPP1QPPP/R2R2K1

Black's last move prepares to develop his last piece, but allows JRC an attractive combination. *11...h6* would have avoided immediate danger. Note that white's pieces are right for the Classic Bishop Sacrifice, but black's knights are irritatingly covering f6. Capablanca uses one decoy sacrifice and one exchange sacrifice to clear his way.

12.d5! Nxd5 13.Bxe7 Nxe7

step 1: white moves the N from f6, making the sacrifice possible:

14.Bxh7+! Kxh7 15.Ng5+ Kg8 16.Rxd7!

step 2: white removes the other N before it goes to f6, e.g. *16.Qh5? Nf6* and black defends.

16...Qxd7 17.Qh5 Rd8 18.Qxf7+ Kh8 19.h4

(not *19.Nh5 Qd1+ 20.Rxd1 Rxd1 'mate!*)

19...Nf5 20.Nh5 Qe8 21.Nf6! 1-0

(because *21...Nd6 22.Nxe8 Nxf7 23.Nxf7+ Kg8 24.Nxd8 Bd7 25.Nxe6 Rxe8 26.Ng5* leaves white with a won endgame.)

Studying games such as these (more from Capablanca in a later piece), and other masters like Tal, helps us understand the pre-conditions behind a finishing combination, and how to set them up.

III: PREPARING THE GROUND

Finally, not every position is amenable to a combinative treatment. If you want to play combinations on a regular basis, you have to play the right openings -- ones where some of the pre-conditions for combinations are present from the outset. Books have been written about the sacrifices available in the King's Indian Defence or Sicilian. The main strategy is to pick an opening which is unbalanced, play through some sharp games in it, and *keep playing* the opening. If you want to develop a feel for when a sacrifice might be correct, you must know a lot about the positions you reach.

I want to illustrate all this with some examples of my own play. One from last

year:

D.Hill vs P.C.Lane (Club Championships, Rd:6, 29/4/97)

1.e4 e6 2.d4 d5 3.Nd2 Nf6 4.e5 Nfd7 5.Bd3 c5 6.c3 Nc6 7.Ne2 Qb6 8.Nf3 cxd4 9.cxd4 f6 10.exf6 Nxf6 11.O-O Bd6

r1b1k2r/pp4pp/1qnbpn2/3p4/3P4/3B1N2/PP2NPPP/R1BQ1RK1

This is a standard position from the French Defence, Tarrasch Variation. Some books may tell you that the French stresses the "defensive" aspect of Defence, whereas I have always thought of the opening as a counter-attacking one, and particularly attractive to those aspiring to be "combinative players".

In particular, this position is wonderfully unbalanced. Note Black's attack on d4, the half-open f-file, and the free piece play. The battle is usually about control of e5, because if black manages to play ...e5 his game generally becomes very free -- taking over the central squares, freeing his Bc8, and also creating a passed d-pawn (not always a trivial factor!). The danger for black is in allowing white to establish a bind on e5 and the Q-side, which can make white's wins look effortless.

12.Nc3 O-O 13.a3 Bd7 14.b4 Kh8

White is making progress towards a Q-side bind, but leaving the centre undefended -- so black strikes there.

15.Na4 Qc7 16.Bb2 e5! 17.dxe5 Nxe5 18.Nxe5 Bxe5 19.Bxe5 Qxe5 20.Nc5

r4r1k/pp1b2pp/5n2/2Npq3/1P6/P2B4/5PPP/R2Q1RK1

This is where the fact that I play the French all the time played its role -- I *knew* that White had handed the advantage over to Black. In fact, I am convinced that after ...e5 Black manages to take control of these kinds of positions. Therefore, I spent a long time looking for a decisive continuation. In short, I wanted a combinative attack.

45 minutes is a long time to spend on one move, especially when it's as obvious as the next:

20...Ng4 21.g3 Nxf2!

That wasn't so obvious, but if I hadn't played it then 20...Ng4 would have been a bit pointless.

22.Rxf2 Rxf2 23.Kxf2 Bh3!!

I found this quiet move by a combination of remembered lessons and frustration at not finding anything by direct calculation. A quiet move like this is hard to find, especially with ...Qd4+ ...Qb2+ or ...Rf8+ as viable alternatives. However, I couldn't find a decent follow-up to any of these moves, and instead remembered: firstly, "the threat is stronger than the execution", and secondly, Vukovic has an extended discussion on weak square complexes, and using them to force checkmate. White's king already looks draughty on the dark squares, but how about the light ones? Therefore 23...Bh3, and I found this during my long think on

move 20!

24.Be2

Stronger is *24.Ra2*, though after *24...Rf8+ 25.Kg1 Qe3+ 26.Kh1 b6* Black forces a winning ending after, e.g., *27.Nb3 Rf2 28.Rxf2 Qxf2 29.Be4! Bg4! 30.Qg1 Bf3+ 31.Bxf3 Qxf3+ 32.Qg2 Qxb3*.

24...Rf8+ 25.Kg1 Qe3+ 26.Kh1 Qf2 27.Qxd5 Qxe2 28.Rg1 Bg4 29.0-1

This kind of combination is standard for the French player. Another example of the same theme:

J.M.Shepley vs. P.C.Lane (Surrey vs. Devon, Board 1, 16/5/98)

1.Nc3 e6 2.Nf3 d5 3.e4 Nf6 4.e5 Nfd7 5.d4 c5 6.dxc5 Nc6 7.Bf4 Bxc5 8. Bd3 f6 9.exf6 Nxf6 10.O-O O-O 11.Ne5 Qe8

By transposition we've reached a theoretical position of the French Two Knights, where white gives up his central pawns for piece control of e5. In earlier games I struggled for a plan in these positions, but these days I'm armed with *11...Qe8*, Watson's recommendation.

12.Qd2? Nxe5?

Best for white is *12.Nb5* when *Qe7* gives black a decent game. Black's move is also a mistake: the theoretical *12...Nh5!* forces the win of material, e.g. *13.Nxc6 Nxf4 14.Ne5 Qh5 15.Nf3 Nxc6 16.Kxc6 Qxf3+ etc.* Other choices for white cost even more.

13.Bxe5 Qh5 14.Rae1 Ng4 15.Bg3

r1b2rk1/pp4pp/4p3/2bp3q/6nQNB2B1/PPPQ1PPP/4RRK

15...Rxf2!

Again, that f2 square -- Black has to strike now or h3 follows.

16.Rxf2 Bxf2+ 17.Bxf2 Qxh2+ 18.Kf1 Bd7 19.Qg5 Qh1+ 20.Ke2 Qxg2 21. Qh4

I had overlooked this move. The threat to h7 allows Rg1, forcing an endgame with black's 3Ps vs the N. I had assumed such positions would offer both sides winning chances when offering the sacrifice on move 15 -- the kind of assessment I would not have trusted myself to make a couple of years ago -- and my opponent proceeds to misplay the endgame badly.

21...h6 (Playing the pawn to a dark square -- observe the Bd3) **22.Rg1 Qxf2+ 23.Qxf2 Nxf2 24.Kxf2 Rf8+ 25.Ke2? g5 26.Rf1? Rxf1 27.Kxf1 Kg7 28.Kg2 Kf6 29.Kg3 h5** (White's passive play [25.Ke3-d4!] and exchange of the rooks, have made the pawns a winning team.) **30.a4 h4+ 31.Kf3 Bc6 32.Kf2 g4 33.a5 g3+ 34.Kg2 d4+ 35.Ne4+ Ke5 36.Kf3 g2 37.Kxg2 Bxe4+ 38.Kh3 Bxd3 39. cxd3 Kf4 40.Kxh4 Ke3 41.0-1**

P.C.Lane vs M.Brierley (West of England, Rd:7, 1K/98)

1.d4 Nf6 2.c4 g6 3.Nc3 Bg7 4.e4 d6 5.Nf3 O-O 6.Be2 e5 7.dxe5 dxe5 8. Qxd8 Rxd8 9.Bg5

An interesting system against the King's Indian: White simply captures the e5-pawn and sets Black some problems. I had assumed this was quite rare, but looking down the table I.George vs. D.Grossett had the same position -- **9...Nc6?**

10.Nd5! won the exchange quickly. *9...Nbd7?* is no good, *9...Na6!?* is better, and *9...Re8!* is probably best.

9...c6!? **10.Nxe5 Re8 11.O-O-O! Na6**

If *11...Rxe5 12.Rd8+ Re8 13.Bxf6; 12...Ne8 13.Rxc8* etc. The whole point of the system is that White (almost) gets away with a blatant pawn grab!

12.f4 h6 13.Bh4 g5 14.fxg5 hxg5 15.Bg3 Nc5

r1b1r1k1/pp3pbQp2n2/2n1N1pQP1P3/2N3B1/PP2B1PP/2KR3R

Black tries to recover the e4 pawn. Although *15...Be6* doesn't regain the material, it would have avoided the following combination.

16.Nxf7! (the KB2 square bears the brunt of many sacrifices) **Kxf7 17.e5 Ng4 18.Rd4 Nxe5 19.Bh5+ Kg8**

A wise decision -- *19...Ng6 20.Rf1+ Bf6 21.Rd6 Re6 22.Rxe6 Bxe6 23.Be5 Nd7 24.Bxf6 Nxf6 25.Ne4* and, *19...Kf8 20.Bxe8 Kxe8 21.Re1 Nd7 22.Rxd7 Bxd7 23.Bxe5* leave White with his extra material and a simplified ending.

20.Bxe8 Ned3+ 21.Rxd3 Nxd3+ 22.Kd2 Bf5 23.Rf1 Bh7 24.Bf7+ Kh8

r6k/pp3Bbb/2p5/6pQP5/2Nn2B1/PP1K2PP/5R2

The net result of the last 9 moves is that White has kept his extra pawn! At first I was a little worried about black's two bishops, and the possibility of *Rd8*, but I decided my pieces were still better placed than Black's, and thought I would just "push them forward".

25.Ke3 Nxb2 26.Ne4 Rd8 27.Nd6 Rd7 28.Be6 Bd3

Or *28...Re7 29.Nf7+ Kg8 30.Nxg5+ Kh8 31.Rf7 Re8 32.Be5 Rg8 33.Bxb2*; or *31...Nxc4+ 32.Ke2 Re8 33.Rxb7* are winning.

29.Nf7+ Kh7 30.Nxg5+ Kg6?

Not the best, but neither *30...Kh6 31.Rf7 Rxf7 32.Nxf7+* nor *30...Kh8 31.Rf7* give black time to regain his pawn.

31.Bxd7 Bxf1 32.Ne6! Bxg2?

Time trouble : but *32...Nxc4+ 33.Kf2 Nb6 (...Bd3 34.Nf4+)* *34.Kxf1 Nxd7 35.Nd8* is still winning for white.

33.Nxg7 Nxc4+ 34.Kd4 Nb6 35.Ne6 Kf6 36.Bh4+ Kf7 37.Nf4 Bf1 38.Be6+ Kg7 39.Bb3 Nd7 40.Ne6+ Kg6 [TIME] 1-0

Introduction

1. e4 e5 2. Nf3 d6 How many times have you seen played the following moves?

1. e4 e5 2. Nf3

What is Black's best reply?

2...Nc6 is undoubtedly the best reply, but sometimes you see others. Let's have a look at the move

2...d6.

What do you think of this? Looks rubbish? Looks OK? Your favourite? Never thought about it?

You should always think about alternatives to 'obvious' moves. Even if you play the move you first thought of, thinking helps you understand the position, and there is often a lot going on. Also, you sometimes come up with a nice surprise.

What do you think of 2...d6? What's the point? 2...d6 is called Philidor's Defence. Philidor was the strongest player of his day, so it's probably not a pointless move. But since Philidor, it has not been played much, so it might not be the best move (one or two Grandmasters today still play it at least occasionally).

[C41]

What are the good points and bad points about the move?

How should White reply?

3. d4 This is a good move - White prepares to develop the Queen's Bishop, takes another square in the centre, and puts Black's claim to the centre under pressure. In fact, White now threatens to win a Pawn for nothing with

4.dxe5 dxe5 5. Nxe5

or even better

4.dxe5 dxe5 5. Qxd8+! Kxd8 6. Nxe5

How should Black meet the threat?

A Avoid: 3...exd4

B Block - can't block the attack of either Pawn or Knight

C Capture or Pin Knight - 3...Bg4

D Defend - 3...Nc6 3...Nd7 3...Qf6 3...Qe7

E Counterattack: 3...f5 3...Nf6

- [1] 3...Bg4
- [2] 3...exd4
- [3] 3...Nc6
- [4] 3...Nd7
- [5] 3...f5
- [6] 3...Nf6

Not obvious! Black has many choices. It's worth thinking through each if them to make sure you understand what is going on in this typical opening position. How can you decide? Well, position is a guide - but analysis is proof. However, definitive analysis not always possible - at some point you have to stop analysing and reach a judgement.

Let's see if we can pick off two quickly:

3...Qf6 3...Qe7

I don't know any way to prove a win for White here, but I'd suggest we can say straight away these moves are not good on principle. Black's moves block either the King's Bishop (Qe7) or King's Knight (Qf6). So, we can see some more awkwardness coming up for Black. Also, these moves bring the Queen within reach of White's pieces: moves like 3...Qe7 4. Nc3 threatens Nd5, making Black waste a move with 4...c6, and after 3...Qf6 white can gain time with 4. Bg5. So, only if everything else fails should you consider a move like 3...Qe7. It may be survivable, but is not going to be comfortable. The best you can hope for is to 'get away with it'.

Let's look at some others.

[1] 3...Bg4

Black pins the Knight, so defending the threat, and develops a piece. So, this looks a bit better than the Queen moves.

This move was played in one of best-known games in chess history. The great American Paul Morphy was interrupted during a performance of the opera *The Barber of Seville* by two toffs wanting a game. They played in consultation, with poor Morphy sat with his back to the action. Morphy went through them like a knife through butter, winning in just 17 moves, so I hope he didn't miss too much of the opera. The whole game is appended, but let's see the start.

Black is actually in difficulties here. How might you try and create problems for Black?

Always look at forcing moves first - checks and captures. If these do not win, or force an advantage, then you can turn your mind to slower moves with a clear conscience. But only look at non-forcing moves once you have checked to see you have no way of making trouble for your opponent right now. You may be winning, and not know it! We have no check, but we have a forcing capture:

4. dxe5

This move indeed causes Black a problem, because the simple

4...dxe5 5. Qxd8+ Kxd8 6. Nxe5

loses a Pawn. So Black must play an in-between move before recapturing the pawn.

4...Bxf3 5. Qxf3 dxe5

Now White gets the advantage by playing

6. Bc4

This is great for White. Six moves into the game and we can count

the two Bishops,

a lead in development and

the initiative

in White's favour.

So, 3...Bg4 is probably not right.

[2] 3...exd4

This is not entirely logical, since Black having played 2...d6 to support the e-pawn on e5, now gives up the e5 point. However, it might not be entirely a bad move. Having opened up the centre, Black should try and castle quickly on the King's side. There are two lines, depending on how Black intends to develop the King's Bishop, currently residing on f8. The efficient but passive development of the Bishop on e7 is called Antoshin's Variation:

3...dxe5 4. Nxd4 Be7

In the riskier but more active line played by Larsen, the Bishop is developed *in fianchetto* on g7:

3...dxe5 4. Nxd4 g6

The game might go:

4.Nxd4 g6 5.Nc3 Bg7 6.Bf4 Nc6 7.Nxc6 bxc6 8.Qd2 Nf6 9.0-0-0

Another way to play for White (as in the famous fake game Adams-Torre) is

3...exd4 4. Qxd4

4...Nc6 5.Bb5 Bd7 6.Bxc6 Bxc6 7.Nc3 Nf6 8.Bg5 Be7 9.0-0-0 0-0 10.Rhe1

White has a healthy space advantage, although Black is cramped.

Well, if Black is trying to be consistent, perhaps Black should try to defend the e-Pawn.

[3] 3...Nc6

How should White reply to this?

4. Bb5

This renews the threat against the e-pawn.

4...Bg4

Not satisfactory because of 5. dxe5, as in the Morphy game.

4...Qf6, 4...Qe7

Not satisfactory for reasons we have already looked at

4...dxe5

Not satisfactory because having decided to support our Pawn at e5, Black is now giving it up.

4...Bd7, 4...Nf6.

May be possible, in fact lead to the old Steinitz variation of the Ruy Lopez

Unpick our way back:

3. d4

Now maybe

[4] 3...Nd7

Hanham

Stops the Bb5 idea

White's best is undoubtedly

4. Bc4

How should Black reply?

Very carefully! Black, having played so safe and solid, is very nearly losing!

4-i 4...Nf6

4-ii 4...h6

4-iii 4...Be7

4-iv 4...c6

4-i 4...Nf6

5. dxe5 dxe5 6. Ng5!

(5...Nxe5 6.Nxe5 dxe5 7.Bxf7+

wins a pawn, but not so straightforwardly as you might think at first: 7...Kxf7 8. Qxd8 Bb4+ 9. Qd2 Bxd2+ 10. Nxd2)

Or maybe 5. Ng5!

4-ii 4...h6 being safe?

5. dxe5

forcing

5...dxe5 6.Bxf7+! Kxf7 7.Nxe5+ Kf6 8.Qd4 with a deadly attack

worth trying different defences and attacks here - very good teaching position

5...Nxe5 6. Nxe5 dxe5

Now the obvious line is

7. Qxd8+ Kxe8 8. Bxf7 +-

which is good for White, but we can make it a little better with

7. Bxf7+!

This is a common situation where we have two ideas: try them in a different order, and perhaps you will see something new. Sometimes the order

1 => 2

doesn't work at all, but

2 => 1

wins a Queen. In our example here, the better order just leads to an even better position for us. So, even if you see a good move - don't bash it out, sit on your hands and think for a little while, and perhaps you will find something even better.

4-iii 4...Be7

Again, our favourite forcing move is strong:

5. dxe5

Now the simple Pawn recapture is disastrous:

5...dxe5 6. Qd5!

Instead:

5... Nxe5

Follow through forcingly:

6. Nxe5 dxe5

Now if we hope to win the pawn on f7 as in the 4...h6 line, we may be disappointed

7. Qxd8 Bxd8!

However, f7 is a little bit tender, and e5 is unprotected... can you see a move which gives Black two problems at once?

7. Qh5!

Wins a pawn.

4-iv 4...c6

This is the only way to survive, but White can still press hard.

For example, we can go forward with the natural

5.Ng5 Nh6

Now White should examine, but perhaps reject, the exciting sacrifice:

[6.Bxf7+ Nxf7 7.Ne6 when Black may fall for 7...Qe7? 8.Nc7+ Kd8 9.Nxa8: White has an exchange, but may lose the Knight - White has also managed to remove from the field of play the only two pieces that we had developed! So Black may start coming forward faster than we would like now, even if he falls into our trap.]

But having seen this, White can play a very good move:

6.a4

This is obviously a decent idea if it stops Black gaining space on the Queen's-side with ...b5. However, White's move also sets a very subtle trap...

6...Be7 7.Bxf7+ Nxf7 8.Ne6 Qb6 9.a5

that's (partly) what the pawn move was for

9...Qb4+ 10.Bd2 Qc4

[10...Qxb2 11.Bc3]

11.Nc7+ Kd8 12.b3

winning the Queen!

There's no guarantee that Black will allow this, so White may prefer to continue instead with

5.Nc3

After **5...Be7** a well-known line goes:

[5...h6 6.a4 ! is the way to keep the edge.]

6.dxe5 dxe5 7.Ng5 Bxg5

[7...Nh6 8.Ne6 ! wins e.g. 8...fxe6 9. Bxh6 gxh6 10. Qh5+]

8.Qh5 g6

or

[8...Qf6 9.Bxg5 Qg6 10.Qh4

+ - Schlechter-Alekhine 1910]

9.Qxg5 Qxg5 10.Bxg5

This position is much easier to play for White, and when it has been reached White players have a huge plus score from here. White will play O-O-O and double rooks on the d-file.

The critical game here is Barden-Klein from 1950, which is appended.

So, following every twist and turn after 3...Nd7, we seem to find at least an advantage for White, and in some lines White wins quickly.

What have we learned so far?

It's surprising how close Black is to losing after these two slow moves, 2...d6 and 3...Nd7. So, if nothing else, we should have learned to be very careful before making such moves ourselves.

Also, we should now know to think rather carefully in the opening before replying - some quite good-looking ideas have led to absolute disaster for Black, so it's worth looking for outright wins from the very first moves.

Lastly, we have met a lot of nice tactical ideas, which occur in many different openings, not just Philidor's Defence. So, patterns we have seen here may well occur in your own games, even if none of your opponents ever play Philidor's Defence against you. For this reason, it's worth trying to see how many of these ideas you can remember (or work out again on a board) without looking at this sheet.

There is a lot going on in the opening, and you shouldn't play automatic moves assuming that you know what is going on. Sit on your hands and think!

If not [4] 3...Nd7, then what?

[5] 3...f5

3...f5

This is Philidor's counter-Gambit - not for the faint-hearted! Again, although this is obviously risky, it is not obviously losing, and again we have several games on record where strong masters have tried the gambit. Even Morphy played it a few times! So, let's take it seriously.

White has tried many moves here: 4. Bc4, 4. dxe5, 4. exf5, but perhaps best is:

4.Nc3 fxe4 5.Nxe4 d5

Now, one idea is:

6.Nxe5 dxe4 7.Qh5+

[6] 3...Nf6

Improved Hanham variation

This counterattack gives Black a moment to get organised while White defends the e-Pawn.

4. Nc3 Nbd7

(cf. Hanham: with B on c4 Ng5 wins.)

Now

5.Bc4 Be7

...and now we are into the main line theory of the Philidor defence.

Simple is

6. O-O O-O 7. a4,

with a close battle ahead.

BCO gives here

6.Ng5 !?

The attempt to refute the defence, if it is refutable, is

6.dxe5 Nxe5

(On 6...dxe5 then the aggressive 7.Ng5 O-O 8.Bxf7+ Rxf7 9.Ne6 Qe8 10.Nxc7 Qd8 11.Nxa8 ? seems to be a mistake because of 11...b5 12.Nd5 - maybe it's not clear, but maybe White should do better. Again, we have managed to remove from the field of play the only two pieces that we had developed!)

Now Levy says here 7.Be2 ! should preserve a plus. Instead BCO prefers

7.Nxe5 dxe5

when Black is far from refuted.

Another line giving white a simple small advantage is

4. *dxe5* *Nxe5* 5. *Qd5* *Nc5* 6. *Bg5*

Illustrative games

Paul Morphy - Duke of Brunswick /Count Isuard 1858 **1.e4 e5 2.Nf3 d6 3.d4 Bg4 4.dxe5 Bxf3 5.Qxf3 dxe5**

Morphy had many contemporaries who could attack as well as he, but more than anyone Morphy knew how to create an attack out of the opening through accurate play. Here he already has a development advantage and the two bishops.

6.Bc4 Nf6

7.Qb3

Keeping the initiative going

7...Qe7 8.Nc3 c6 9.Bg5

White needs only two more moves to complete his development - breathtakingly efficient work, and White has even moved his Queen three times!

9...b5

Just the wrong sort of move - a loosening move, and a Pawn move, when a spot of solid development was overdue. White now rips open the position:

10.Nxb5! cxb5 11.Bxb5+ Nbd7 12.O-O-O

How forceful Morphy is: all captures, checks and threats. Now Black's pieces are treading on each other's toes, and White is threatening to win back his piece.

12...Rd8 13.Rxd7! Rxd7 14.Rd1

Bringing White's last piece into the attack with a nicely-coordinated crossfire of pins.

14...Qe6 15.Bxd7+ Nxd7 16.Qb8+

apparently dramatic...

16...Nxb8 17.Rd8#

1-0

Barden - Klein, Buxton 1950 1. e4 e5 2.Nf3 d6 3.d4 Nd7 4.Bc4 c6 5.Nc3 Be7 6. dxe5 dxe5 7.Ng5 Bxg5 8.Qh5 g6 9.Qxg5 Qxg5 10.Bxg5

This position is much easier to play for White, and when it has been reached White players have a huge plus score from here. White will play O-O-O and double rooks on the d-file. There is no way for White to penetrate further than d6, so once that is accomplished White must see about using the two Bishops to keep black under pressure on both wings. This is not an automatic win for White, but is a position Black should try to avoid.

10...Nf8 11.O-O-O Be6 12.Be2 f6 13.Be3 Ne7 14.Rd2 Nc8 15.Rhd1 Nb6 16. Rd6 h5 17.a4 Nbd7

18.a5

With the idea b4-b5 and White breaks through with the Knight.

18...a6 19.Na4 Rh7 20.b3 Re7 21.Nb2 Kf7 22.Nc4 Kg7 23.R6d2 Nh7 24. Nd6 Ndf8 25.Nc4 Nd7

The repetitions gain time on the clock.

26.g3 Rc8 27.Nd6 Rb8 28.Nc4 Rc8 29.f4 exf4 30.Bxf4 Ndf8 31.Bd6 Rf7 32. Ba3 Ra8

Black can only wait to see what plan emerges.

33.e5

Perhaps hasty?

(33.Rd8 Rxd8 34.Rxd8 Bxc4 [else Nd6 and Rb8 picks up a pawn] 35.Bxc4 Rd7)

Exeter Chess Club: Studies and problems

[This simple introduction is probably redundant because there are now some good problems and studies sites.

Characters that clearly like problems include the folks at [Chess Cafe](#), [Cornel Pacurar](#) (who has a [links](#) page), [Ian Gent](#), [Vincent van der Bilt](#) and [Manolis Stratakis](#). Nandakumar Sankaran has an [Endgame Studies](#) as does [IM Igor Khmelnitsky](#). Shaihin very kindly sent me not [one](#) but [two](#) studies laid out in beautiful LaTeX PostScript.

As ever, I wrote this piece for our juniors.]

- [Problems](#)
- [Studies](#)
- [Curios](#)

Chess problems

"It is quite a three-pipe problem". - SHERLOCK HOLMES

"A chess problem is an exercise in pure mathematics" - G.H. HARDY

You may have often seen chess puzzles with the challenge of 'White to play and mate in two'. Well, the area of chess problems of this sort is really a whole extra chess continent, with strange customs and unusual wildlife. A well-formed problem is a composed position with a single, often surprising, solution. Many different sorts of problems exist, and most of them look as though they really have been composed - that is, nothing like that would happen in a real game.

Problem thinking is a bit different to chess thinking, but the same principles apply - once you've seen a pattern (theme) you can find it more easily in other settings.

The Indian Problem: White to play and mate in 4 (Rev. HA Loveday, 1845)

SOLUTION

1. Kb1 b4
2. Bc1 b5
3. Rd2 Kf4
4. Rd4 mate

The problem is 'cooked' by 1. Bh1 or 1. Rd8, but the solution is essentially the same.

This I believe was very difficult to solve at the time, because it was a new type of problem; now, the "Indian theme" is well-known to solvers.

Want to try some? Here is a three-mover, a retrograde problem and a 'fairy chess' helpmate problem (helpmate = Black to play and help White mate!). They are all pretty tough for beginners, so you might just prefer to play over and enjoy the solutions rather than try to solve them.

In the Fairy Chess problem below, there is a new type of piece on the board at c7 - the CamelHopper. This attacks the squares just one more square distant than a N does - that is, on b4,d4,f6 and f8. But it moves only by moving over an attacked piece and moving the same distance the other side - so, if the bQ moved to d4 white could play 1 CHe1, leaving the Qd4. If the bQ was on f8, CH couldn't move to "i9", and in fact can't move in the diagrammed position. Clue: how to control b1?

(a) S.Loyd 1869

The Lovechase: *Black invalidation: White non-permission.:* **Mate in 3**

(b) R Smullyan '57

Where is the wK?

(c) Lewis 1929. Camelhopper on c7: helpmate in 5.

ANSWERS

(a) 1 Qe4 fails to 1...g6. Sadly, 1 Ng6+ hxg6; 2 Qc8+ isn't fast enough, and 1 Qc8 (threat 2 Ng6++) fails to 1...h6. The retreat 1. Qf1! is the key - Now, if 1... Bb2; 2 Qb1, or if 1...Bc3 or 1...Bd4; 2 Qd3, or if 1...Be5 or 1...Bf6; 2 Qf5, or if 1... g6; 2 Qxa1#.

(b) K is on c3: the previous moves must have been: 1 Pc2-c4, Pb4xc3e.p.+; 2 Kb3xc3+. Clever stuff! Smullyan has published two or three books of these logical teasers.

(c) The CH can only hit black squares, so the N must hit b1, and so the CH must deliver the mate. So, 1...Qd4; 2 CHe1, Qf4; 3 CHg7, Qd6; 4 CHa5, Qd4; 5 CHg3, Qb2; 6 Nd2#. The N moving to d2 also allows the CH to mate the Ka1. Neat, eh?

There are magazine and societies devoted to these sorts of things, and a World Solving Championship is hotly contested each year. Two GMs who excel at solving are John Nunn and Jon Mestel.

Chess studies

"If a garden is nature perfected, then a study might be described as a game of chess perfected" - .

We have already met a study: Saavedra's position given under 4.4.3.2 is a study, that is, a composed position with a realistic feel to it and with reduced material, and there are other studies in this section. Studies are often referred to as 'endgame studies', and the British study magazine is in fact called **EG**. As well as the problem magazines above, the **BCM** publishes a study column each month, and many other fine examples are to be found in Chernev's **Practical Chess Endings**. Some of the best-known studies are to be found in **The Complete Chess Addict**, including the most famous of all - this one of Reti's (1922):

White to play and draw. A seeming impossibility: the Pc6 will be caught by the bKa6 as soon as it moves, and the Ph5 can't be caught by the king. Watch...

1 Kg7 h4; 2 Kf6 (now 2...h4 allows 3 Ke7, h3; 4 c7, Kb7; 5 Kd7, so..) **2...Kb6; 3 Ke5, Kxc6; 4 Kf4** and draws!

With minimum material, this is a perfect example of a study - it could have arisen in a game, there is no demand to 'win in two moves', and the play has a

charming and surprising 'point' to it. One more (Joseph, 1922):

Stalemates and perpetual checks loom: **1 h8=Q** threatens mate by e.g. Kd7 but **1...a1=Q** and if **2 Qxa1** stalemate, so **2 Qg8, Qa2!**; **3 Qe8, Qa4**; **4 Qe5+, Ka8**; **5 Qh8** and wins - triangulation by the Q(!) to get the bK onto a8.

Curios

A related field is not exactly study composition but the challenge of composing to a particular task: for example, from the Usenet newsgroups:

From: Fred Galvin <galvin@math.ukans.edu>**Newsgroups:** sci.math,rec.games.chess.misc
Subject: Re: Strange Question?
Date: Thu, 12 Dec 1996 15:12:07 -0600
From: Fred Galvin <galvin@math.ukans.edu>
Organization: University of Kansas Computing Services

On Wed, 11 Dec 1996, Bob Silverman wrote:

- > Consider the set of all legally reachable positions in chess.
- > Which position(s) give the largest number of different 1 move

> checkmates? What is that number?

The following positions were the record holders as of January 1, 1969, according to Anthony Dickins, **A Guide to Fairy Chess**, *Second Edition* (The Q Press, Richmond, Surrey, 1969); as far as I know, none of them has been *proved* to be best possible; I don't know of any published upper bounds.

Legal position, no promoted men, 47 mates (**J. C. West, 1880**):

4N1r1/P2PK2P/8/1P1kBQ2/2R5/3N4/B3P3/3R4

Legal position with promoted men, 105 mates (**N. Petrovic, 1947**):

1B1Q1Q2/2R5/pQ4QN/RB2k3/1Q5Q/N4Q2/K2Q4/6Q1

Illegal position, 143 mates (**N. Petrovic, 1947**):

QnQQ1QQ1/PQ1Q3Q/QQ4QQ/4k3/QQ4QQ/Q6Q/Q2Q1Q2/1QQQ1QQQ

Exeter Chess Club: The Art of Analysis

Let us begin with a mistake - what we might call positional mistake:

"Positional sense should free you from the slavery of `variations'." - Nimzovitch

Statements like this, and one or two other factors, led me to neglect the analysis of variations - instead preferring to develop positional assessments - for many years. It is possible to consider positional judgement and planning as somehow a higher calling, which avoids the need for grubby heavy analysis. This, however, was a mistake on my part.

Here is some treatment for people suffering from the same condition:

"What is the essence of the chess master's art? Fundamentally it consists of the ability to analyse chess positions.

"Home analysis has specific features of its own: you are not restricted by time, and you can move the men freely. Despite this difference between home analysis and practical play, there is much in common between them. It is a well-known fact that almost all the outstanding chess-players have been first-class analysts. (...)

"It is useful to publish your individual analytical work. Then you are subject to objective criticism." - Botvinnik, 100 SELECTED GAMES.

"So I began to analyse games..." - Timman, THE ART OF CHESS ANALYSIS

"I got to know Mark (Dvoretsky) at the very beginning of my chess career, at one of the sessions of Botvinnik's chess school in 1974; in those days, Dvoretsky was Botvinnik's assistant. (...)

"We are adherents of the same, analytical, way, and we believe in the triumph of analytical penetration into the secrets of a position" - Kasparov, Preface to Dvoretsky's SECRETS OF CHESS TRAINING (FIRST PUBLISHED IN RUSSIA AS "THE ART OF ANALYSIS").

"I selected from tournament books those games in which the greatest complications had arisen. (Then) set myself the task of thinking long and hard so as to analyse all the possible variations. I would sometimes ... write down the variations I had examined and then I would compare them with those of the annotator. (...)

"Great help can be got from solving studies from a diagram without setting up the position on the board." - Kotov, THINK LIKE A GRANDMASTER

"Analysis, if it is really carried out with a complete concentration of his powers, forms and completes a chess player." - Polugayevsky

"Many players, even of a high calibre, will assert, half jokingly and half seriously, that a difficult labour of analysis can be replaced by intuition. 'I played this move in a flash - it was obvious it couldn't be bad' is the sort of thing we often hear in a post-mortem.

"Criticising such a policy is not simple - not after it has just been successful! [...] Instead of appraising the state of struggle on the basis of precise calculation, Black makes a move, which on general considerations, is wholly in the spirit of the position - a flank attack is countered by a break in the centre. Yet in chess there are no axioms."

-- ZAK, **Improve your chess results.**

Two sorts of games should hold a special place in your own study: (a) Analysis of master games, and (b) analysis of your own games (especially losses). So, I have an exercise which involves neither...

I have been privileged to obtain a copy of the six games from the first match of the Exeter `A' team this season. I propose to analyse each game with the coaching group during a session in the New Year, but I would like you to have a go at analysing them first. Then we can compare notes...

How do you analyse a chess game?

If it's someone else's:

- (1) Play through the whole game fairly quickly, seeing what ebb and flow the game had.
- (2) Divide the game up into episodes, even if they are only opening middlegame and endgame, and try to describe what happened and who if anyone had the advantage.
- (3) Try and find the critical steps, where one or other side made an important choice (even if it was only to overlook something!).
- (4) Put your account aside for a few days and have a fresh look later. What other ideas now occur to you? Did you make a too-smooth moral fable out of a more fluctuating scrap?

If it's your own:

- (1) write down as much as you can remember about what you thought about at the time, and
- (2) any thought your opponent shared during a Post Mortem.
- (3) Leave it for a few days and come back fresh, then analyse it as you would somebody else's. Be particularly wary of self-serving interpretations, especially of the "I was winning all the way through" variety. What did you miss?

Below, Round numbers are board numbers. The Exeter players (White on even boards) hold BCF grades this year between 171 and 156; Teignmouth between 180 and 130. These are roughly between 2000 and 1600 ELO.

N.B. Games 2 and 5 feature an early loss of material; to analyse past this point, in Game 5 at least, may not be very profitable.

Hodge,D - Lane,P [C07]

Exeter vs. Teignmouth (1), 01.11.1997

OPENING: in a standard line Black has a slight cramp and an extra central Pawn. Soon, however, exchanges break out. **1.e4 e6 2.d4 d5 3.Nd2 c5 4.exd5 Qxd5 5.Ngf3 cxd4 6.Bc4 Qd6 7.O-O Nf6 8.Nb3 Nc6 9.Nbxd4 Nxd4 10.Nxd4 a6**

So far, so standard. **11.Be3** "Less dangerous" - John Watson. Nonetheless both David and Pete are about as safe to relax around as an alligator in your swimming pool, so I imagine the next few moves were played with some care on both sides.

[11.Bb3;

11.c3;
 11.b3;
 11.Re1 Qc7 12.Bb3 Bd6 13.Nf5 Bxh2+ 14.Kh1 0-0 (14...Kf8!?) 15.Nxg7 Rd8 (15...Kxg7 16.Qd2 Ng8) 16.Qf3 Kxg7 17.Bh6+ Kg6 18.c3 Nd5 19.Rad1 f5 20.Bc1 Bd6 21.Bxd5 exd5 22.Rxd5 Bd7 23.Qh3 Bf8 24.Re3 Kg7 25.Rg3+ Kh8 26.Qh4 Be6 27.Bf4 Be7 28.Bxc7 1-0 Adams,M-Dreev,A/Hoogovens, Wijk aan Zee NED 1996]

11...Qc7 12.Bb3 Bd6 13.h3 0-0

[13...b5 is one more Pawn move to get the Bd7 developed more aggressively.]

14.a4 Bd7 15.Qe2 Black has an extra central Pawn and has an opportunity to make use of it. **15...Bh2+**

[15...e5 This looks bold but is entirely consistent with the position, and is played at a time when White can't react with usual annoying ideas like Nf5 or Nc2-e3. That's what I would have played, but Pete likes to play it the way he is used to.]

16.Kh1 Bf4 Exchanges are a reasonable objective in a cramped position, although that is one of Black's better pieces it is being exchanged for a potentially dangerous White one. **17.Rfe1 Bxe3 18.Qxe3 Bc6 19.Qe5**

[19.Nxc6 Qxc6 20.Rad1 looks a better try for an edge.;
 19.Rad1!= Fritz5]

19...Qxe5 20.Rxe5 Bd5 21.c3= +

[21.Bxd5 Nxd5 22.c4= Fritz5]

21...Bxb3 22.Nxb3 Rfd8

ENDGAME: There now follows a tense sequence where each side tries to make their Rooks active and attack Pawns. White targets b7 but allows Black activity in return. White then carelessly drops the a-Pawn. Can Black convert the win? Black decides to make his two breaks earlier rather than later - possibly incorrectly. **23. a5 Rac8 24.Ra4 Rd1+ 25.Kh2 Rb1 26.Re2 Nd5 27.Nd4 g6 28.Kg3 Kg7 29. c4 Nf6 30.Rb4 Rd1 31.Nf3 Rc7**

Last chance to save the a-Pawn. **32.Ne5 Ra1 33.Ng4 Nxc4**

[33...Nh5+ retains the Knights;
33...Rxa5 allows White to exchange if he wants]

34.hxc4 Rxa5 35.Rd2 Rac5 36.b3 b5

[36...Kf6 make the King one square better before breaking;
the Rook on b4 is going nowhere fast.]

37.Ra2 bxc4 38.bxc4 Ra7 39.Kf3 Kf6 40.Ke3 a5 41.Rb5 Rxc4= +

[41...Rxb5! 42.cxb5 Ke5u Fritz5]

**42.Raxa5 Rxa5 43.g5+ Kg7 44.Rxa5 h6 45.gxh6+ Kxh6 46.f3 Rb4 47.Re5
Rb3+ 48.Kf4 Rb2 49.g4 g5+ 50.Ke3 Kg6 51.Ra5 Rb3+ 52.Ke2 f5**

Black could try to get the Rook to d5 before this. **53.gxf5+ exf5 54.Kf2 f4 55.
Ra2 Kh5 56.Kg2 Kh4 57.Rc2 Ra3 1/2-1/2**

Pickering,A - Brusey,A

[C05]

Exeter vs. Teignmouth (2), 01.11.1997

[DR, RS, Fritz5]

OPENING: Black chooses a cheeky line and equalises without difficulty. White commits a serious error and bales out by sacrificing the exchange. **1.e4 e6 2.d4 d5 3.Nd2 Nf6 4.e5 Ne4 5.Bd3** when faced with a sharp and unorthodox move, returning the ball with a good solid all-purpose move like Bd3 is the right strategy, deferring the critical moment to later in the game.

[5.Nxe4 dxe4+= is the critical line, supposed to give White the advantage (perhaps no more than in other lines of the French), although Black naturally would know his way around this better than White. 6.Bc4 (6.Be3)]

5...Nxd2 6.Bxd2 c5 7.c3 Nc6?! BCO2 gives the immediate ...Qb6 as better. 8. Be3

[8.Nf3 Qb6 9.dxc5+=]

8...Qb6

Black has an OK game - a standard Advanced French but with less cramp - but has sacrificed a tempo to do so. However, White faces unpleasant pressure against d4 and b2. **9.b3?** Can't be right.

[9.dxc5;
9.Nf3 cxd4 10.cxd4 Bb4+ (10...Qxb2) ;
9.Qb3 "should not be overlooked" - Fritz 5]

9...cxd4 10.cxd4 Bb4+ 11.Kf1 Normally Black just displaces the King out of spite, but here he can nibble a Pawn. **11...Bc3**

MIDDLE GAME: White manfully gives up the exchange, but the test of the game is a slow exercise in the inevitable. Black can always gain squares by threatening exchanges. **12.Nf3**

[12.Rc1 Bxd4 13.Bxd4 Nxd4 14.Qg4 +/- Fritz 5]

12...Bxa1 13.Qxa1 Bd7 14.g3 Nb4 15.Bb1 Rc8 16.Kg2 Nc2 17.Qb2 Nxe3+ 18.fxe3 Qb4 19.Ng5 h6 20.Nf3 Bb5 21.Rc1 Rxc1 22.Qxc1 Kd7 23.a4 Be2 24.Nd2 Rc8 25.Qe1 Bh5 26.e4 Qxd4 27.exd5 Qxd5+ 28.Be4 Qd4

[28...Qxe5?? 29.Bc6+ Rxc6 30.Qxe5 - Fritz 5]

29.Nc4 b6 30.Kh3 Qd1 31.Qe3

[31.Qxd1+ Bxd1 32.a5 bxa5 33.Nxa5 - Fritz 5]

31...Bg4+

[31...Qf1+! 32.Kh4 g5+ 33.Kxh5 (33.Qxg5 hxg5+ 34.Kxg5 Rg8+ 35.Kh6 Qc1+ 36.Ne3 Qxe3+ 37.Kh7 Qg5 38.Bc6+ Kxc6 39.h4 Qg6#) 33...Qh3# - Fritz 5]

32.Kg2 Qe2+ 33.Kg1 Qxe3+ 34.Nxe3 Rc1+ 35.Kf2 Bd1 36.Nxd1 Rxd1 37.Ke3 f6 38.Kf4

[38.exf6 gxf6 39.Ke2-+ Fritz 5]

38...f5 39.Bf3 Rb1 40.g4 g5+ 41.Kg3 f4+ 42.Kf2 Rxb3 Thanks to Ray Shepherd's Fritz5 **0-1**

Halmkin,P - Bellers,C

[B24]

Exeter vs. Teignmouth (3), 01.11.1997

OPENING: a less common line is adopted where some controversial decisions are made. **1.e4 c5 2.Nc3 g6 3.g3 Bg7 4.Bg2 Nc6 5.Nge2 d6 6.d3 e5**

The Botvinnik treatment. **7.0-0**

[7.Nd5 Nge7 8.c3 Nxd5 9.exd5 sealing the hole on d5 sealing the hole on d5 9... Ne7 10.0-0 0-0 11.f4 Bd7 12.h3 Qc7 13.Be3 Rae8 14.Qd2 Nf5 15.Bf2 h5 16.Rae1 Qd8 17.Kh2 Bh6 18.h4 Qf6 19.Be4 exf4 20.Nxf4 Nxh4 21.Be3 Nf5 22.Bxf5 Qxf5 23.Qg2 Qg4 24.Qe2 Qxe2+ 25.Rxe2 Re5 26.Ree1 Rfe8 27.Bf2 h4 28.Rxe5 Rxe5 29.d4 hxg3+ 30.Kxg3 Rg5+ 31.Kh2 Rf5 32.Be3 cxd4 33.cxd4 Kh7 34.Rf2 g5 35. 7...Nge7 8.Kh1

[8.Be3 h5!? 9.h3 Be6 10.Nd5 Qd7 11.h4 Bxd5 12.exd5 Nd4 13.c3 Ndf5 14.Bg5 0-0 15.a4 Qc7 16.a5 b5 17.axb6 axb6 18.Qb3 b5 19.Rxa8 Rxa8 20.Qxb5 Rb8 21. Qa4 Rxb2 22.Qe8+ Bf8 23.Ra1 Qc8 24.Qxc8 Nxc8 25.Kf1 Nb6 26.c4 Be7 27.Be4 Bxg5 1/2-1/2 Kharitonov Andrei Y-Psakhis Lev/Cup World (open), Moscow (Russ 1989)]

8...h5!? A move with some point (see the Psakhis game) but better saved up, I think.

[8...0-0;
8...f5!?]

9.f4 Botvinnik would say that this Pawn is in White's way. **9...exf4**

[9...h4!?]

10.Bxf4 Bg4

[10...h4!? looks like the right follow-up, taking advantage of the absence of the Knight from f3 and making use of the Pawn on h5.]

11.Nb5 Be5

MIDDLE-GAME: White rolls out the standard attack on the f-file but Black holds the line - just.

[11...Ne5 12.Bg5 a6]

12.c3

[12.h3 Be6 13.Bxe5 dxe5 (13...Nxe5 14.d4 Bc4 15.dxe5 Bxb5 16.exd6 Bxe2 17.Qxe2 Qxd6 18.Rad1 +/-) 14.Rf6 Ng8 15.Rf2]

12...a6 13.Na3 Rb8 A natural follow-up to ...a6, but there's a lot of action on the other side. **14.h3 Bxf4 15.Rxf4 Bxe2**

[15...Be6 idea ...d5 later]

16.Qxe2 0-0 17.Raf1 b5 18.g4

[18.Qf2 with one idea d3-d4]

18...hgx4 19.Qxg4 Ne5 20.Qg3 b4 21.Nc4 bxc3 22.bxc3 Nxc4 23.dxc4 Nc6 24.e5u

[24.Qd3!?= + was preferred by Ray's friend Fritz]

24...Nxe5 25.Bd5 Kg7 26.h4 f5

[26...Rb2!?!]

27.h5

[27.Rxf5 Rxf5 28.Rxf5 Rb1+ 29.Kg2 Rd1 30.h5 Rd3]

27...Qf6 28.Rxf5 Qxf5 29.Rxf5 Rxf5 30.hxg6 Rb1+ 31.Kg2 Rb2+ 32.Kg1 Rb1+?? The clock may have had something to do with this if I know Chris.

[32...Rf6 33.Qe1 Rxc6+ 34.Kf1 Rxa2-+ Fritz5 35.Qb1 Rd2 36.Qb7+ Kh6 37. Qxa6?? Nd3;
32...Rd2 idea Rd3]

1/2-1/2

Rudall,D - Hill,D

[B06]

Exeter vs. Teignmouth (4), 11.1997

OPENING: White plays solid, and Black plays solid-but-passive allowing a cheeky attack on f7: Black concedes a Pawn. **1.e4 g6 2.d4 Bg7 3.Nf3 d6 4.c3 c6** Solid but perhaps not to the point. I like to play these positions with ...c5 to break up

the solid centre. **5.Bd3 Nd7 6.Nbd2 Qc7 7.Qb3 Ngf6**

[7...b5 8.c4 a6]

8.Bc4 0-0 9.Ng5 d5

[9...e6 is usually an OK try but here 10.e5 Ne8 11.Bxe6 fxe6 12.Nxe6 Qb6 13.Ng5 + Kh8 14.Nf7+ Rxf7 15.Qxf7]

10.exd5 cxd5 11.Bxd5 Nxd5 12.Qxd5 Nf6

MIDDLE-GAME: Black has some compensation in the two Bishops: he must avoid exchanges and play as actively as possible. White concedes the Pawn and exchanges off into an endgame. **13.Qc4 Qb6 14.0-0 Bd7 15.Qb3 Qa5 16.Nge4 Nxe4 17.Nxe4 Bc6 18.Ng3 e5 19.Be3?! Defending d4 just creates a target.**

[19.dxe5 Bxe5 20.Re1]

19...exd4 20.cxd4

[20.Bxd4 Bxd4 21.cxd4 Bd5 is not easy for White either.]

20...Rfd8 Recovering the Pawn with a slight advantage. **21.Qc3**

[21.Rfd1 Ba4 22.Qa3 Bf8 23.Bd2 Qb5-+]

21...Qd5 22.f3 Bxd4 23.Bxd4 Qxd4+ 24.Qxd4 Rxd4

ENDGAME: Black shows a textbook approach with an active pieces and an active King. White goes passive and creates numerous weaknesses. **25.a3 h5 26.Rfd1 Rad8 27.Rxd4 Rxd4 28.b4?! Kg7** KUFTE! In fact, all Black's pieces are better than their White counterparts, a fact which the symmetrical Pawns seem to emphasise! **29.Ne2 Rd2 30.Nc3 Rc2 31.Nd1 Kf6 32.Ne3 Rc3 33.Kf2 a6 34.Ra2 Ke5 35.g3 Kd4 36.Rd2+ Rd3 37.Re2 Kc3 38.f4 Kb3 39.Nc2 Kc3 40.Ne3 Rd2 41.Rxd2 Kxd2** A classic Bishop vs. Knight ending has arisen. **42.f5 Kc3 43.fxg6 fxg6 44.g4 Kb3 45.Kg3 Kxa3 46.gxh5 gxh5 47.Kh4 Be8 48.Nd5 Bf7 49.Nf4 Kxb4 50.Nd3+ Kb5 51.Kg3 a5 52.Kf3 a4 0-1**

Lee,R - Gorodi,J

[E24]

Exeter vs. Teignmouth (5), 11.1997

1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 OPENING: White plays the most aggressive system against the Nimzo, siezing space in the centre and glaring at the Black King. **4.f3**

[4.a3 Bxc3+ 5.bxc3;
4.e3 0-0 5.Bd3 c5 6.a3]

4...d5 5.a3 Bxc3+ 6.bxc3 c5 7.e3 Gligoric gives this "?!", although it is merely a switch to another, slower, plan, from the Closed Samisch Variation normally intriduced by 4. e3 or 4. a3.

[7.cxd5 is more aggressive, aiming to play e2-e4 in one move. Karpov got the edge using this system against Timman in their Candidates' Match. 7...Nxd5 (7...exd5 transposes) 8.dxc5 Qa5 9.e4 Ne7 10.Be3 0-0 11.Qb3 Qc7 12.Bb5 Nec6 13. Rd1 Na5 14.Qb4 e5 15.Ne2 Be6 16.c4 a6 17.Ba4 Nxc4 18.Bf2 Nc6 19.Qc3 Qa5 20. Bxc6 bxc6 21.Qxa5 Nxa5 22.0-0 Rab8 23.Nc3 Rb3 24.Na4 Rxa3 25.Nb6 Nc4 26.h3 h5 27.Rc1 Nb2 28.Rb1 Nd3 29.Rfd1 f5 30.exf5 Rxf5 31.Rd2 Nxf2 32.Kxf2 Timman J-Karpov A/3, Kuala Lumpur cm f 1990/1/2-1/2 (61)]

7...0-0 8.Bd3 b6 9.cxd5 exd5 Dissolving the doubled Pawns. Black must play very carefully now, for White has a natural plan of campaign. The GMs play this difficult position from both sides, but White seems to be playing the positive side of the position (aiming for e4).

[9...Nxd5 is a spoiling alternative, aiming for piece play: I might prefer this having played ...b6 already. 10.Qc2 cxd4 11.cxd4 idea ...Ba6, with a Queen's-side Pawn majority as long as we survive the middlegame.]

10.Ne2 Re8

[10...Ba6 11.0-0 Re8 12.Ng3 Qc8 13.Bxa6 Nxa6 14.Qd3 Qb7 15.Ra2 Re6 16.Re2 Rae8 17.Rfe1 h5 18.Qf5 g6 19.Qf4 Qd7 20.Bb2 cxd4 21.cxd4 Rc6 22.e4 Nc7 23. Nf1 a5 24.h3 Kg7 25.g4 hxg4 26.hxg4 Ne6 27.Qe3 Rh8 28.Ng3 Kf8 29.e5 Ng8 30. f4 Ng7 31.Qf3 Nh6 32.Rh2 Kg8 33.f5 gxf5 34.g5 Ng4 35.Rxh8+ Kxh8 36.Ne2 Rc2 37.Qb3 Qc6 38.Bc3 Ne3 39.Kf2 f4 40.Rh1+ Kg8 41.Rh6 Qc8 0-1 Beliavsky Alexander G-Short Nigel D/Linares (Spain) 1990]

11.0-0 Nc6

21...Bf5 Not a bad idea: the Black light-squared Bishop is poor, and if your opponent has two Bishops (however crummy they might appear at the moment) it is good to exchange one of them. However, the tactical execution is wrong. Every strategical idea must be negotiated with the tactics in the position. **22.Nxf4 Bxc2**

[22...gxf4 is messy but not so obviously losing: 23.Bxf5 (23.Qxf4 Bxc2) 23...Qxf5 24.Bc1 cxd4 25.cxd4 Rc2 26.Qxf4 Ng7]

23.Nh3 h6 24.Qxc2

That'll do nicely. **24...cxd4 25.Qd2 dxc3 26.Bxc3 Ng7 27.Nf2 h5 28.Rc1 Ne6 29.Bb2 Rc4 30.Rxc4 dxc4 31.Qxd7 Rxd7 32.Rd1 Rc7 33.Ne4 Kg7 34. Bc3 Kg6 35.Kf2**

Black is again obliged to play with maximum energy... **35...Kg7** ...not like this.
36.g3 Kg6 37.Ke3 a5

[37...b5 is better, keeping the Pawns intact, when White might still have some problems.]

38.Rd6 Rb7 39.a4 fixing the b-Pawn **39...b5 40.axb5 Rxb5 41.Rc6 a4 42. Rxc4 a3 43.Ra4 Nc7 44.Rxa3 Nd5+ 45.Kd4 Nxc3 46.Rxc3 g4 47.Rc6+ Kg7 48.fxg4 hxg4 49.Nf6 Kg6 50.Nxg4+**

Black could resign with a clear conscience. **50...Kg5 51.h3 Rb4+ 52.Ke3 Rb3+ 53.Kf2 Rb2+ 54.Kf3 Rb3+ 55.Ne3 Rb5 56.h4+ Kh5 57.Rf6 Rb7 58.Kf4 Rb4 + 59.Kf5 Rb7 60.Nd5 1-0**

Blackmore,M - Ingham,B

[B12]

Exeter vs. Teignmouth (6), 11.1997

1.e4 c6 2.d4 d5 OPENING: A modest system leads to a position where White has a bit more space. **3.e5 Bf5 4.Nf3 e6 5.Bd3**

[5.Be2 is the fashion - a good reason for not playing it!]

5...Bxd3 6.Qxd3 c5

[6...Qa5+ 7.c3 Qa6 is a way to reduce tension if Black wants to play it that way.]

7.0-0 Nc6 8.c3 Qb6 9.Nbd2 Rc8

[9...cxd4 would prevent the next manoeuvre 10.cxd4 h5 11.Nb3 Nh6]

10.dxc5 Bxc5 11.Nb3 Bf8 rather a sign of distress, but Black is still OK I think
12.Bf4

[12.Be3 looked more natural. With Black's underdevelopment I was trying to find a way to open up the game with f2-f4, but hadn't considered c3-c4. 12...Qc7 (12...Qa6 13.Qxa6 bxa6 14.Nc5) 13.c4 (13.Bd4 is the stodgy method; 13.Nbd4!? Nxe5 14.Nxe5 Qxe5 15.Qb5+ Kd8 16.Qxb7) 13...dxc4 14.Qxc4 Nxe5 15.Qb5+ Nd7 16.Rac1 Qb8 17.Bxa7]

12...Nge7

MIDDLEGAME: White now looks for a chance to upset the course of the game by direct attack, rather than going for a positional squeeze. **13.h4 Ng6 14.Qd2 Nxf4 15.Qxf4 Be7 16.h5 h6 17.Qg3 0-0 18.Nh2 f6 19.Ng4 Nxe5 20.Nxh6+ Kh8 21.Ng4 Nxg4 22.Qxg4 f5**

[22...Rc4 was calmer]

23.Qd4 Qxd4 24.Nxd4 e5

EARLY ENDGAME: At first glance this looks very good for Black but White makes a right nuisance of himself. **25.Rfe1 e4**

[25...Bd6 26.Nf3 is much easier for Black.;

25...exd4 was worth a look, calling White's bluff: I think it doesn't win but Black has good chances 26.Rxe7 dxc3 27.bxc3 (27.Rxb7 c2 28.Rc1 Rfd8 29.Kf1 d4 30.Ke1 d3 31.Kd2 Rc5 32.Re7) 27...Rxc3 28.Rxb7 (28.Rd7) 28...Rd8 (28...d4 29.Rd7 d3 30.Rd1) 29.Rxa7 d4]

26.Rad1 Rf6 27.Ne2 Rb6 28.Nf4 Bg5 29.Ng6+ Kh7 30.Rxd5 Rxb2 31.Rxf5 Bf6 32.Rxe4 Rxc3

When the Rook left the back rank, the mate alert sensor should have flashed red. **33.Nf8+**

[33.Re8+ -]

33...Kg8 34.Nd7 Rc1+ 35.Kh2 Rc6 36.Rg4

[36.h6!?+/-]

36...Kh7 37.a4 Rd6 38.Nf8+ Kg8 39.h6 Be5+ 40.Rxe5 Rxh6+ 41.Kg3 Rb3+ 42.f3 Kxf8

Double Rook endings are both more, and less, drawish than single Rook endings! Here White has an immediate initiative and wangles a Pawn. **43.Reg5 Rh7 44.Rc5 a6 45.Rc7**

[45.Rc8+ Kf7 46.Rc7+ Kf6 was suggested: this does get the Rook to the seventh "with gain of time" except that ...Kg8-f7-f6 is very useful for Black, escaping from the dangerous back rank and getting KUFTE]

45...b5 46.Rd4 Ke8 47.Ra7 bxa4 48.Rxa4 Rh6 49.Rxg7 Rbb6 50.Ra2

50...Rhg6+ The White King's-side Pawns scamper off home in the game, but keeping Rooks on doesn't look right because of the trapped Black King. **51.Rxg6 Rxg6+ 52.Kf4 Rb6 53.g4 Kf7 54.Ra5 Kf6 55.g5+ Kg6 56.Kg4 Rb4+ 57.f4 Rb6 58.f5+ Kf7 59.Rc5 Rb4+ 60.Kh5 Rb1 61.Rc7+ Kg8 62.Kg6 Rb6+ 63.f6 Rb8 64.Re7 Kh8 65.Rh7+ 1-0**

Exeter Chess Club: Chess Tactics Quotes

Sir Peter Medawar once remarked, rather testily:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

[A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*]

No less a tribute may be paid to the editors at Batsford and Cadogan and Chess Digest: there is a population of chessplayers who know about mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win Lucena's Rook Ending. This collection is dedicated to the first of these failings.

It all started with this one:

"Chess is 99% tactics"

-- Richard TEICHMANN

I like to quote this, but usually add:

...Although it has often seemed to me that the remaining 99% must be all strategy :-)

And then I found:

*"Chess isn't 99% tactics, it's just that tactics takes up 99% of your time" -- Dan HEISMAN, **The Improving Annotator***

But after this, the deluge!

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired"

-- RETI

"The scheme of a game is played on positional lines, the decision of it is, as a rule, effected by combinations. This is how Lasker's pronouncement that positional play is the preparation for combinations is to be understood."

-- Richard RETI

"I can see the combinations as well as Alekhine, but I cannot get into the same positions."

-- SPIELMANN

"All I need is a little position"

-- De La BOURDONNAIS

"Combinative vision manifests itself at an early age, and children are quick to notice and execute combinations which chance to turn up. Preparing combinations, however, is more difficult for them."

-- ZAK, **Improve your chess results.**

"I like to play combinations, some of them intuitive and not fully calculated"

Rudolph Spielmann

3). Tactics early in the game will tend to favour White, because he has the initiative. This suggests that what you want to do, where possible, is to play open games/gambits with White, and closed games with Black. As well as being a strategy aimed at winning games (always good) it gives you experience with a wide range of positions. You learn that a "weak square" doesn't always mean f7 :-)

From: johns@cs.man.ac.uk (John Sargeant)

(Tim Sawyer) writes:

"A 1500 player will lose a pawn anyway about every 15 moves, so you might as well invest a pawn to sharpen your tactics."

Matt's Rating formula:

$$R=200(P) - 1500$$

Where R = rating
and P = average number of moves between Pawn drops.

Of course this will generate negative ratings if you give stuff away more than every 8 moves, so it needs some fine-tuning. Anybody up to the task? :)

-- Matt Guthrie

*"A thorough understanding of the **typical mating combinations** makes the most complicated sacrificial combinations leading up to them not only **not** difficult, but almost a matter of course."*

-- TARRASCH

"The pleasure of a chess combination lies in the feeling that a human mind is behind the game, dominating the inanimate pieces with which the game is carried on, and giving them the breath of life."

-- RETI

Nunn-Dlugy

"If you want to lose a miniature, then here are three helpful tips. First of all, it is a big help if you are Black: losing with White in under 20 moves requires a special talent which few possess. Secondly, choose a provocative opening, for example an opening in which you try to realise strategic ambitions, but at the cost of backward development and delayed castling. Thirdly, if something goes slightly wrong, don't reconcile yourself to defending a bad position - seek a tactical solution instead! Don't

worry about the fact that tactics are bound to favour the better developed side; just go ahead anyway. Follow this advice and at least you will get home early."

-- NUNN

In case you do not have Reuben Fine's "Chess Marches On" I will give you what Fine said about, Strategy and Tactics.

"Thirty years ago (this was written in 1942), Teichmann said that chess is 99% tactics. And despite the enormous strides of chess theory since then, his percentage can only be reduced a few points

Many amateurs think that master games are usually decided by some deeply-laid plan covering all possibilities for at least ten moves.. That is what they conceive the grand strategy of tournaments to be. Actually, however, strategical considerations, while quite important, do not cover a range or depth at all comparable to the popular notion. Very often, in fact, sound strategy can dispense with seeing ahead at all, except in a negative or trivial sense. And it is still true that most games, even between the greatest of the great, are decided by tactics or combinations which have little or nothing to do with the fundamental structure of the game.

To take one striking example, look at the games of the Euwe-Alekhine matches. Euwe is a player who analyzes openings ad infinitum, i.e., one who wants to settle everything strategically. Alekhine is likewise adept at the art of building up an overwhelming position. And yet in almost all cases the outcome depended not on the inherent structure of the play, but on some chance combination which one side saw and the other side did not. Tactics is still more than 90% of chess.

In the following game (which we will not give) we have a good illustration of the interplay of strategy and tactics in the practice of two outstanding contemporary masters. The opening results in a position which is dynamically in Botwinnik's favor; yet because he is, for purely tactical reasons, unwilling to adopt the maneuver which best answers the needs of the position, he drifts into a situation where Lilienthal has the initiative. Lilienthal tries his hardest to increase his advantage, and succeeds to a certain extent. Then he makes a slight error, which gives his opponent adequate chances. Finally Botwinnik, faced by a difficult choice, picks the wrong alternative. And thereby both again demonstrate the wisdom of Tartakover's adage that a winner in a game of chess is the man who made the next to the last blunder."

from Richard S. Cantwell

In article <32npl2\$i3p@senator-bedfellow.MIT.EDU>
 richard@genome.wi.mit.edu (Richard Resnick) writes:
 >Above and beyond being able to look very very deep, are there are
 >guidelines that can be stated regarding the sacrifice of minor
 pieces?
 >It seems to me that with all 32 pieces on the board, it becomes very
 >difficult to be accurate when looking ahead, so I assume that the
 >masters must have a set of guidelines that they use when determining
 >whether to go down in material for the tactical advantage. Any help
 >(either commentary or literature citations) would be greatly
 >appreciated. Thanks very much.

: -)

In "How to Cheat at Chess" IM Hartston gives Hartston's Iconoclastic
 Combinational Uncertainty Principle(?), which states (I am
 reconstructing from memory, rather than quoting) that:

for a given sacrificed piece value (S), the expected value (V) to be
 gained from a sacrifice can be worked out, since we know,

firstly, the hoped-for gain (H) and
 the number of moves deep the variations are (N).

The motivation for the sacrifice is H-S, but this is tempered by the
 increasing probability of miscalculation as we go deeper in analysis -
 in fact, the probability increases as the square of the move depth.

$$\text{So, } V = \frac{H - S}{N^2}$$

Applying HICUP then, if you sacrifice a pawn (S=1) hoping to gain a
 queen (H=9) in two moves (N=2), then $V = 9/4 - 1 = 2.3 - 1 = 1.3$; V is
 positive, so the sacrifice is worth a go. However, sacrificing a rook
 hoping to gain a knight in three moves gives S=5, H=3, N=3 and so $V =$
 $3/9 - 5 = -3.7$. V is strongly negative, that is, you have probably
 miscalculated and should give it a miss.

"...one other thing is the GMs superiority in tactics. For example Christiansen can find tactics in any position. If you're a GM you should be able to overpower the IM tactically. The GM will often blow out the IM in this area. "

-- Nick de FIRMIAN, in **How to get Better at Chess Chess Masters On Their Art** by GM Larry Evans, IM Jeremy B Silman and Betty Roberts

"I really find all this [opening preparation by club players] quite amazing, not least because the games concerned are almost invariably decided much later on and often by rather unsophisticated means."

-- Nigel DAVIES, KingPin No.28 Spring 1998.

I haven't got the exact form of words, but I enjoyed the Daily Telegraph's comment on the position in which Kasparov agreed a draw against Lautier, missing a simple opportunity which may have cost him outright first place:

Position after 20. Rc7, Lautier-Kasparov, Tilburg Fontys 1997 [20...c5! -+]

"The simplified nature of the position makes it hard for humans to spot the tactic." -- Malcolm PEIN

- there's no hope for us, then!

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, Strategy and Tactics in Chess.

My own view is most closely represented by this quote:

"However obviously the majority of Chess-players may be divided into two big classes of combination- and position-players, in the Chess-master this antagonism is transformed into a harmony. In him combination play is completed by position play."

-- Em. Lasker, **Manual of Chess**, Book IV

 - [7+8. Mating the lone 3/4 in the middle of the board with various pieces](#)
 - [9+10. Mating the uncastled king](#)
 - [4.1.2 Mating the castled king:](#)
 - [11,12. mates on the back rank](#)
 - [13,14. mates on the second rank](#)
 - [15-20. other mates](#)
 - [4.1.3 Vukovic's mates](#) [Separate document]

4.1 20 basic mates

BCF Certificate of Merit

Class 1 (Elementary)

*"The game is won by the player who has mated the opponent's king. This immediately ends the game" - **Article 10.1 of the official laws of chess, FIDE.***

4.1.1 Material advantage

1+2. Mating the lone king at the edge of the board with the queen

You can't mate a K with K and Q in the middle of the board, but you can at the edge where there's less room for him to wriggle out. The Black Kings in the first diagram are all in checkmate.

But how do you get to that point? Let's try from a starting position below:

We know we must get to the edge. So the winning plan is:

1. Centralise your own K

2. Drive the king to the edge of the board using the Q, stepping in with your Q or K every time the K gives way

3. Bring up your own K, and arrange the K and Q to mate the K

N.B. Don't allow stalemate!

In practice from the diagram below, you might play:

1 Ke2, Ke5; 2 Ke3, Kf5; 3. Qd5+ Kf6; 4 Kf4, Ke7; 5 Ke5, Kf8; 6 Kf6, Ke8; 7 Qb7! (not 7 Qd6?? stalemate!) Kd8; 8 Kd6 mates.

Training exercise for one person Try doing this sort of mate as quickly as you can from different starting positions - count how many moves you make as the attacker, and see if you can get it as low as possible. Have another go tomorrow, and next week, to see if you improve.

3 +4. Mating the lone king at the edge of the board with the rook

Same again: you can't mate a K with K and R either in the middle of the board, but you can at the edge. The diagram shows more or less the only mate with the rook (others are possible if there are other pieces on the board).

So the winning plan from the diagram below is:

1. Drive the king to the edge of the board using both K and R, stepping in every time the K gives way

2. Arrange the K and R to mate the K

So, we can go 1. Ke2, Ke4; 2 Rh4+ Kd5; 3 Ke3, Ke5; 4 Rh5+ Ke6; 5 Ke4, Kd6; 6 Re5, Kc6; 7 Kd4, Kc7; 8 Kc5, Kb7; 9 Rd7+ Kc8 (or 9...Ka6; 10 Rc7!); 10 Kc6, Kb8; 11 Rg7! Ka8; 12 Kb6, Kb8; 13 Rg8#

The variation at move 9 is interesting. Black's K might be better off where it is, but does have to move even if it means walking into a mate. This unpleasant obligation is called *zugzwang*. Did you get this? In the next diagram we see a similar position where White could mate in 2.

With you as White to move, if you try and arrange things with 1 Kf6, he sidesteps with 1...Kg8. If it was Black's turn to move, he would have to go 1...Kg8 and you could play 2 Re8#. But if it's your turn to move? Make it Black's turn! Play 1 Re5! then its easy: 1...Kg8; 2 Re8#

5+6. Mating the lone king at the edge of the board with other pieces

With some combinations of pieces you can mate in the middle of the board, but it's usually easier and sometimes necessary to do it at the edge. For some piece combinations, you need to get the king into the corner! You can do this with K+BB vs. K. You can arrange a mate in a corner with K+NN vs. K, but this cannot be forced. You can also mate in a corner with K+NB vs. K, but this is very tricky to force. You can try it against yourself if you like!

The diagram above shows the *mate with two bishops*, which is not too much of a struggle to force

because the two bishops together form a barrier like a rook does. Let's have a go from the diagram below:

BCF Certificate of Merit

Class 2 (Intermediate)

1. Bd2, Kd4; 2 Kf2, Ke4; 3 Be2, Kd4; 4 Kf3, Ke5; 5 Be3, Kd5; 6 Kf4, Kd6; 7 Bf3, Ke6; 8 Bc5, Kd7 (8... Kf6; 9 Bc4); 9 Ke5, Kc7; 10 Ke6, Kd8; 11 Bd6, Kc8; 12 Bc6, Kd8; 13 Bb7, Ke8; 14 Bc7, Kf8; 15 Kf6! Ke8; 16 Bc6+ Kf8; 17 Bd6+ Kg8; 18 Kg6, Kh8; 19 Be8, Kg8; 20 Bf7+ Kh8; 21 Be5#

Capablanca recommended the study of this mate, not because it comes up very often, but to show the power of the two Bishops in combination. You try with two Knights, but don't hold your breath... ;-) You should see the differences in the nature of the pieces straight away.

COOL TIP: That probably isn't the most efficient but is easy to understand. And that's the secret of good chess - understanding. I hope you can see this pattern of driving the king back, cutting off squares, pushing it back to the edge of the board, in *all* these examples. Do try to repeat all these on a board yourself.

Training exercise

for two people

Try doing various mates as quickly as you can from different starting positions - count how many moves one of you makes as the attacker, and see if the other can get it lower. Have another go tomorrow, and next week, to see if you both improve.

7+8. Mating the lone K in the middle of the board with various pieces

Just to show it can be done.

9+10. Mating the uncastled king

You must know the mate with 1 e4, e5; 2 Bc4, Nc6; 3 Qh5, Nf6; 4 Qxf7#, and there are several others like it. These are important formations, and most amusing if you can pull it off is the epaulette (shoulder-pad?) mate, in the second diagram below.

4.1.2 Mating the castled king:

11,12. mates on the back rank

This is a very common mate, and easy to overlook if you have been sensible enough to leave your K behind a nice safe wall of pawns!

back rank mate

13,14. mates on the second rank

These are very common and important mates; in the first diagram it is a luxury to have both Bishop and Rook supporting the Queen!

The last of these three is known as *Philidor's Legacy*: 1 Nxf7+ and if 1...Kg8; 2 Nh6++! Kh8; 3 Qg8+! Rxf7; 4 Nf7, a terrific *smothered mate*. So Black must play 1...Rxf7, losing the exchange in most situations.

15-20. other mates

arab mate

smothered mate

fool's mate

COOL TIP: Obviously, there are loads of mates. You must develop a feel for the sorts of ways pieces work together to create checkmates.

Training exercise

for one person

One way to do this is to set up one corner of a board with a castled king's position and try and mate the king using different combinations of pieces - Q+B, Q+N, Q+R, R+B, and so on.

Also, as above, set up positions with a K (perhaps with some help) against other pieces, e.g. Q and R, so you practice finishing off won games.

Exeter Chess Club: Vukovic's mates

Some time after writing the above section, I bought V. Vukovic's famous book **The Art of Attack in Chess**. In it he gives a chapter full of mates, shown below; the numbering and terminology are his.

All of these mates are worth knowing, although you may only pull off Reti's mate once in your life. But the threat to carry out Reti's mate may come up every year.

White is to move unless indicated otherwise.

A word about opening books...

There are more books on the opening than any other aspect of the game, and loss in the opening leaves you with the discouraging feeling that you haven't really had a game. Perhaps for these reason players often move from opening to opening, collecting books as they go, spending a fortune, knowing a little of everything but never settling long enough to be comfortable. DON'T do this. Take up a few openings and try and stick to them. If you must buy books, here are some pointers. I've included a fair minimum of what you need to know at each level in this section.

A. General openings books

These are one book you might want to buy - not to read straight off, but certainly to check up new things you see or find.

Znosko-Borovsky, E.A. **How to play the opening in chess.** Dover. Descriptive, slightly dated but good.

Fine, R **The ideas behind the chess openings.** (Algebraic edition by Batsford)

Basman, MJ **Chess Openings.** Crowood

B. Basic Repertoire Books.

These give one basic line against all your opponent's possibilities. This is fine if you like all the author's choices, and they may date if someone discovers a weakness. These are a good place to start.

Keene, R and Levy, D. **An Opening Repertoire for the Attacking Club Player.** Batsford. (1.e4)

Marovic, D. **An opening repertoire for Black.** Batsford (Sicilian Scheveningen and Benoni)

Marovic, D. **An active repertoire for Black.** Batsford (Sicilian Scheveningen and King's Indian). Revision of the above book: one of the earliest to use complete games.

Soltis, A. **A complete black defensive system with ...g6.** Chess Digest. Gurgendidze Caro-Kann line and Modern Defence.

C. Books on specific openings.

These include repertoire books (i.e. one line recommended) and more complete studies (all major lines for both sides considered).

Winning with series. Batsford. Variable quality.

Winning with the ... series. Chess Digest. Also variable - more individual.

Understanding the ... series. RHM. Generally very high quality, some are now dated but still useful (e.g. the chapter on the Advance Variation in

Understanding the Caro-Kann needs to be supplemented with a lot of new ideas - see BCO2).

The Complete ... series. Batsford. More detailed but more useful for reference - less prone to dating.

Anything by *Nunn* is worth buying, but he tends to favour openings with pronounced tactical flavour, which is his style. If it isn't yours, *Watson's* book on the French is one of the best repertoire books because it offers alternatives at each point.

D. Reference Books.

These exist for beginners and advanced players.

Horowitz . The Opening in Chess (Intermediate).

Kasparov, G and Keene, R. **Batsford Chess Openings 2**. Batsford 1992 ([sterling]19.99). isbn 0 7134 6099 7 (also known as BCO2) or *Korn, W* (Ed.)

Modern Chess Openings 13th edn (also known as MCO13). (Advanced) Both contain all the major lines and byways.

There are several more books recommended in the **chess FAQ**.

E. Truth and Knowledge in Opening Theory

There are some other things to be said about openings books.

Firstly, don't take what they say on trust, and secondly, don't take what they say on trust. There are many examples of lines being given which are soon discovered to be inadequate. This is perhaps the difference between public knowledge and truth: the fact that something is generally known doesn't make it so!

You must look to see if the books have overlooked things.

One example: when I played the very strong player Agust Karlsson in the club championship, we got into the line

1. d4 g6 2. c4 Bg7 3. Nc3 d6 4. e4 Nc6!? 5. d5 Nd4 6. Be3 c5 7. Nge2 Qb6 8. Qd2 (DIAGRAM),

when I remembered the idea **8...Nf6** (White can't take the Knight and win a pawn because of the ideas ...Nxe4 and ...Qxb2). Now my august opponent played **9. Rd1**. I couldn't find anything much against this idea and lost quickly.

What do the books recommend for Black here? Kasparov and Keene (1989) **Batsford Chess Openings** (Batsford), p. 67 doesn't cover this exact position, and to be fair, I wouldn't expect it to. But I've got six(!) other books which cover this line.

Keene and Botterill (1972) **The Modern Defence** (Batsford), p. 23: gives only 9. Nxd4 (Donner-Ree, 1972).

Hort and Mednis (1979) **The Modern Defence** (RHM), p.118: doesn't even mention 8...Nf6.

Keene (1984). **An Opening Repertoire For White** (Batsford), p. 106: doesn't give 8. Qd2 as its recommendation.

Soltis (1988) **Black to play and win with 1...g6** (Chess Digest), p.66: gives 9. h3 (as in Bohm-van der Weil, 1982) and 9. f3 (as in Donner-Timman, 1974).

Nunn (1989) **The Complete Pirc** (Batsford), p.177: gives 9. Nxd4, 9. h3 and 9. f3 as above (the update book **New Ideas in the Pirc** adds nothing to this list).

Norwood (1994) **The Modern Defence** (Batsford), p.99: gives 9. Nxd4, 9. h3 and 9. f3, and the new move 9.O-O-O.

So, I was no better off for my researches, but 9. Rd1 is a logical - in some ways, the most logical - move. So, even if the whole chess world ignores a move, you would do well to think about it.

In another game I wanted to know more about, I had two books saying totally different things!

[Event "opening books II?"]
[Site "-"]
[Date "1993.??.?"]
[Round "?"]
[White "regis"]
[Black "nash"]
[Result "1/2-1/2"]

1.c4 e5 2.g3 g6 3.Bg2 (3.d4 Bg7 4.dxe5 Bxe5 5.Nf3 Bg7) 3...Bg7 4.Nc3 Ne7 5.e3 (5.e4) 5...Nbc6 6.Nge2 d6 7.d4 exd4.

Now here I played **8. Nxd4** and nearly lost. I went to the books to see what they said: one gave **8. exd4 O-O 9.O-O** and then said that *9...Nf5?* was a mistake and *9...Bg4!* should be played [*Botvinnik, in Shatskes' book*] whereas the other said *9...Nf5!* was the right move but *9...Bg4?* was inaccurate! [*Ribli and Kallai*] - so I still don't know what should happen! Obviously you have to check what they say against each other, but in the end, just see what you believe in, what suits you, and make your own judgement about what to play.

But beyond checking the variations, you must understand what you play, and feel comfortable with it. Korchnoi, one of the strongest players of the twentieth century, once got into trouble in the King's Gambit - which he had just written a book on! Korchnoi is a great player but had no over-the-board practice with it, and had no 'feel' for that type of position. As a result he makes several inaccuracies...

Nf5 Nd5+ 38.Ke4 Nf6+ 1/2-1/2

The point is, not to learn variations from books, but learn ideas. Easily the best book to start on for this is Fine's, which has a recent algebraic edition. It is very comprehensive but rather dense - a lighter offering in descriptive notation is Znosko-Borovksy. Z-B's books always stress ideas rather than details, and so although they are rather old they are still good to learn from. In the next section are some ideas behind some common openings.

Themes in common openings

BCF Certificate of Merit: Class 1 (Elementary)

Giuoco Piano (Italian Game)

Giuoco Piano means 'quiet game', most popular in the 1800s, and is indeed quieter than the bloodthirsty openings like the King's Gambit and other lines that were being played then.

The *Giuoco Piano* is defined by the following sequence:

1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5.

The idea is to develop naturally and quickly, attacking the important weak point on f7, and restraining ...d7-d5.

You may stray from here into the *Two Knights'* or *Four Knights'* openings, but you are most likely to follow one of the following two lines:

Beginners often play **1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5; 4 d3, Nc6; 5 Nc3, d6**. This is the *Giuoco Pianissimo*, the 'very quiet game', and can lead to rather slow and stodgy play. The liveliest line of it is Canal's variation, **7 Bg5, h6; 8 Bxf6, Qxf6; 9 Nd5** and now 9...Qg6 is fun but the best line is **9...Qd8**, when Black can equalise.

Far from quiet is the line starting **1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5; 4 c3**. White is threatening to occupy the centre and roll forward: Fine gives a sample

line 4...Nf6; 5 d4, exd4; 6 cxd4, Bb6? 7 d5, Nb8; 8 e5 Ng8 (yeuch); 9 O-O, Ne7; 10 d6 (zok) Ng6; 11 Ng5 (pow) O-O; 12 Qh5 and Black must give up his queen to avoid mate.

Black must hit back quickly with **6...Bb4+ 7 Bd2, d5! or 7 Nc3, Nxe4; 8 O-O, Nxc3; 9 bxc3, d5!** with equal chances, e.g. 10 exd5 Nxd5, 11 Qb3 Nce7, 12 Ne4 c6, 13. a4 Qf4 (diagram).

This open attacking game is what I recommend you play as White or Black.

If you are feeling frisky as White you can try 6...Bb4+ **7 Nc3** since **7...Nxe4; 8 O-O, Nxc3?! 9 bxc3, Bxc3? 10 Ba3!** leads to a terrific attack. These lines are just examples, as the game is far from over, and both sides have alternative moves to the lines considered. They are all likely to be more to your taste than the flat Nf3/Nc3/Nc6/Nf6 formations.

COOL TIP: Another line to give the Giuoco Piano a bit of fizz is *Evan's Gambit*, 4 b4!? The gambit accepted is exciting: **4...Bxb4; 5 c3, Ba5; 6 d4** when White is a move up on his plan in the 4 c3 line, but this has cost him a pawn. The gambit may be declined by **4...Bb6**.

If you must play the **Guioco Pianissimo**, as the line with 1. e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5; 4. Nc3, Nf6; 5. d3 is called, there are some hot tips for this line too.

[[Read more about The Italian Game](#)]

Ruy Lopez (Spanish Game)

This opening is named after the Spanish priest who was the strongest player of his day. The opening is still generally considered the best way to keep White's initiative going.

1 e4, e5; 2 Nf3, Nc6; 3 Bb5.

The house that Ruy built: the Bishop attacks the knight that defends the pawn attacked by the knight.

It would be great if it worked so simply: 3...a6; 4 Bxc6, dxc6! 5 Nxe5?! Qd4! and Black will regain his pawn through the *double attack*. So, the immediate threat to the pawn isn't quite so deadly, but the pawn on e5 is a lot easier to get at than the one on f7, and Black can get badly tied up or just stiff and cramped trying to hold on to his claim to the centre. The most natural sequence of moves lead to trouble for Black: after **1 e4, e5; 2 Nf3, Nc6; 3 Bb5, d6; 4 d4, Bd7; 5 Nc3, Nf6; 6 O-O, Be7; 7 Re1, exd4; 8 Nxd4, O-O; 9 Bf1!** (to stop the exchanges

threatened by 9...Nxd4) when Black has lots of pieces but not enough space.

Why **7...exd4** when the idea is to hold on in the centre? Tarrasch's famous trap showed that Black cannot play **7...O-O?** because of the forcing continuation **8 Bxc6, Bxc6; 9 dxe5, dxe5; 10 Qxd8, Raxd8; 11 Nxe5, Bxe4; 12 Nxe4; Nxe4; 13 Nd3, d5; 14 f3, Bc5+; 15 Nxc5** (if 15 Kh1, Nf2+ uncovers an attack on the R), **Nxc5; 16 Bg5, Rd5; 17 Be7, Rf7** and now **18 c4** wins the exchange. (If instead 10...Rexd8 White would have 15 Kh1 (15...Rxd3; 16 fxe4).) These lines had a strong effect on players who started to realise just how good the Ruy Lopez is. The Giuoco Piano is a great opening for your early chess years; the Ruy Lopez is an opening for life.

Black has many lines, which fall into basically two approaches (as usual): defence or counterattack. (There are simple developing approaches also like 3...Nge7, 3...Bc5 or 3...g6, but these are rather uncommon.) Defence of the strong point at e4 we have looked at with 3...d6, the Steinitz Defence, (or 3...a6; 4 Ba4, d6, the Deferred Steinitz Defence), but we have seen that the point cannot be held for long; counterattack may be attempted with 3...Nf6, the Berlin Defence, or **3...a6; 4 Ba4, Nf6**; the Morphy Defence. In reply to the Morphy the obvious 5 Nc3 is rather boring, but White can play **5 O-O** as Black cannot really win the e4 pawn. The Morphy has itself a strong point line, 5 O-O, **Be7**; 6 Re1, b5; 7 Bb3, d6, the Closed Morphy Defence, and a counter-attacking line, 5 O-O, **Nxe4**; 6 d4, b5; 7 Bb3, d5, the Open Morphy Defence. These are systems of great subtlety, and the Closed Morphy best avoided until your chess understanding is well advanced.

5 d4 or **5 Qe2** (idea O-O and Rd1) lead to more familiar open and attacking e-pawn styles of game. An example: 1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. d4 exd4 6. O-O Be7 7. Re1 b5 8. Bb3 d6 9. Bd5 Nxd5 10. exd5 Ne5 11. Nxd4 O-O

This is about even, and, I hope, a game you would enjoy playing as either colour.

[Read more about [Ruy Lopez Exchange variation](#)]

BCF Certificate of Merit Class 2 (Intermediate)

Sicilian Defence

1, e4, c5

There are a number of defences to the 1 e4 opening which do not involve 1 ... e5 in reply. 1...e5 balances the position but there are a variety of ways of counter-attacking. There are defences based on disrupting the White centre, like the *Centre Counter (Scandinavian) Defence* 1...d5. There are a couple of defences based on setting up a solid counter to the Pe4 with ...d5, such as the *French Defence* (1 e4, e6; 2 d4, d5) and the *Caro-Kann Defence* (1 e4, c6; 2 d4, d5). The *Sicilian* (1. e4 c5) usually leads to more exciting and complex battles.

The *Sicilian Defence* allows White to play his P to d4 but it will be exchanged off straightaway, for example, **1 e4, c5; 2 Nf3, Nc6; 3 d4, cxd4; 4 Nxd4**. There then arises a typical centre formation with a White Pe4 and Black's pawns on d6/e6 or d6/e7. White has more space and easier development, while Black has an extra centre pawn and has succeeded in unbalancing the position.

White has a no reason to avoid the main "open" variations with 3. d4, which offer good chances of an advantage. Black has a number of ways of approaching the middle game - here are a few of the most common:

The Scheveningen Variation 1 e4, c5; 2 Nf3, e6; 3 d4, cxd4; 4 Nxd4, Nf6; 5 Nc3, d6. (Black tries to hold the centre and prepare a counterattack, e.g. ...d5)

The Dragon Variation 1 e4, c5; 2 Nf3, d6; 3 d4, cxd4; 4 Nxd4, Nf6; 5 Nc3, g6. (An exciting counterattacking line: the Bg7 is aggressive but h6 weak)

The Najdorf Variation 1 e4, c5; 2 Nf3, d6; 3 d4, cxd4; 4 Nxd4, Nf6; 5 Nc3, a6. (A flexible system beloved of Fischer and Kasparov) An example: 6. Be2 Nbd7 7. O-O e6 8. f4 b5 9. Bf3 Bb7 (diagram).

The pressure on e4 is characteristic of the Open Sicilian as a whole.

The Sozin Variation 1 e4, c5; 2 Nf3, Nc6; 3 d4, cxd4; 4 Nxd4, Nf6; 5 Nc3, d6; 6 Bc4. (An aggressive system to seize the centre, revived by Fischer)

The Richter-Rauser Variation 1 e4, c5; 2 Nf3, Nc6; 3 d4, cxd4; 4 Nxd4, Nf6; 5 Nc3, d6; 6 Bg5. (The most analysed and complex system: lively!)

There are, however, ways for White of avoiding all these lines - which are perhaps slower, or aim for just a small plus, but are not to be dismissed.

The Closed Variation 1 e4, c5; 2 Nc3. White will prevent the counter-punch with ...d5 and try to keep the centre under control while attacking the K-side. There is a related system with 2.f4 which is more direct.

The Alapin Variation 1 e4, c5; 2 c3. White will have his pawn on d4 anyway. Black can transpose into the French with 2...e6, or counterattack with either 2...Nf6 or 2...d5.

· See also the vigorous **Morra Gambit** 1 e4, c5; 2 d4, cxd4; 3 c3 dxc3, 4. Nxc3 e.g 4...Nc6 5. Bc4 d6 6. Nf3 (diagram), a line where White has a lead in development but Black has no weaknesses. Black can decline with 3...Nf6/3...d5, both leading to the Alapin.

[Read more about [Sicilian Defence](#)]

Queen's Gambit Declined

1. d4, d5; 2. c4, e6

The Queen's Gambit is the main weapon of most players who play the Closed games, and still makes appearances at the highest levels of chess. The Gambit can be declined (usually with 2...e6) or accepted (2...dxc4), and there are other ways of declining (e.g. 2...Nc6).

The *Orthodox Queen's Gambit Declined* with 2...e6 is an old system where Black tries to hold on to the d5 point for as long as possible, looking for chances to exchange or counterattack.

The old **Main Line** goes: 1 d4, d5; 2 c4, e6; 3 Nc3, Nf6; 4 Bg5 (you can also try 4 Bf4), Be7; 5 e3, Nbd7; 6 Nf3, O-O; 7 Rc1.

Now the most common move is 7...c6; 8 Bd3, dxc4; 9 Bxc4 when Black can try to equalise with 9...Nd5; 10 Bxe7, Qxe7; 11 O-O, Nxc3; 12 Rxc3, e5 (**Capablanca's System**), or there is a more counterattacking system with 9...b5 (**Extended Fianchetto** or **Swedish System**).

More interest has been shown recently in systems with 7...h6 e.g.

Tartakower defence 7...h6; 8 Bh4, b6 (a favourite of Spassky, Fischer and Karpov)

Lasker Defence 7...h6; 8 Bh4, Ne4; 9 Bxe7, Qxe7, an exchanging system which can transpose into the Main Line

White can avoid these with the **Modern Variation** 7 Bxf6, exchanging the Nf6 which often has an important role in defence of the king and also stopping any later counterattacking ideas with ...Ne4. This has been the main debating ground in the QGD in recent years.

Black can decide earlier to counterattack with 4...Nbd7; 5 e3, c6; 6 Nf3, Qa5 with ideas of ...Bb4 and ...Ne4. This is the **Cambridge Springs Variation**, which is an old system recently revived by Smyslov in the 1980s. The 4...Nbd7 appears an error, but sets a wicked trap. 5. cxd5, exd5; 6. Nxd5? Nxd5; 7. Bxd8, Bb4+ 8. Qd2, Bxd2+ 9.Kxd2, Kxd8 winning a piece.

There are a couple of other ways to play it for White: to attack with 7 Qc2 and 8 O-O-O in the Main Line (**the Rubinstein Variation**), or go on a long war of weakening the Black Q-side with 7 cxd5, exd5 (**the Exchange Variation**) and then following up with Rb1 and b4-b5.

BCF Certificate of Merit Class 3 (Higher)

Here's some more, as recommended by BCF: "5.3.3a. A wider knowledge of the openings than in Class 2..."

...specifically the ability to recognise:

Vienna Game

1 e4, e5; 2 Nc3

[Diag. 1] This is the standard position in the *Vienna Game*, although it can transpose into other openings e.g. after Nf3, Bc4 to the *Giuoco Piano*, or more commonly after f4 to the *King's Gambit*, although there are independent gambit which belong to the Vienna. The counter ...d5 is a key equaliser for Black in both these other openings, so White stops it for a while. The plan is less direct than lines with 2 Nf3 but is more solid.

EXAMPLE LINE: 1. e4 e5 2. Nc3 Nf6 3. f4 d5 4. fxe5 Nxe4 5. Nf3 Bg4 6. Be2 Nc6 7. d3 Bxf3 8. Bxf3 Nxc3 9. bxc3 Nxe5 10. Qe2

[Diag.2] This is the more common way of playing the Vienna - to play f4 in gambit style. In fact Black has used the delay in White's plan of development - Nc3 threatens nothing - to organise ...d5 in any event. The play is open and balanced - a typical e4 position.

[Read more about [Vienna Game and Gambit](#)]

Scotch Game

1 e4, e5; 2 Nf3, Nc6; 3 d4

[Diag. 1] This has become more popular recently, being given the occasional outing by Kasparov, although it is a very old opening. White abandons any hope of supporting two pawns on e4 and d4, but plays the line-opening d4 immediately, more or less forcing Black to give up his only central pawn with **3...e5xd4**. White usually recaptures **4 Nxd4** but can play a gambit with 4.cK.Bc4 (*Goring Gambit*).

EXAMPLE LINE: 1. e4 e5 2. Nf3 Nc6 3. d4 exd4 4. Nxd4 Nf6 5. Nxc6 bxc6 6. e5 Nd5 7. Bd3 Nb4 8. Be2 Bc5 9. a3 Nd5 10. O-O O-O 11. Bd3 Re8 12. c4 Nb6 13. b4 Bf8 14. Bb2

[Diag. 2] After these 13 example moves White is still trying to make his early initiative stick. Although White is pressing hard, the advanced pawns may become weak, and Black's game is strong and sound.

In the two openings above, and in similar lines beginning **1 e4, e5**, you may feel there are good chances for Black to achieve equality with straightforward moves. The positions that come about may be generally balanced and tend to lead to level play. All the other openings and defences in this section are about achieving equality through counterattack, which leads to unbalanced positions with each side trying to make the most of their own strengths. In these games the positions are

more difficult but more exciting, and there is less likelihood of a draw even between players who are equally matched.

[[Read more about Scotch Game](#)]

French Defence

1 e4, e6

[Diag. 1] The *French* is a true defence, usually saving counterattacking ideas for later in the game. Black plays to set up ...d5 as a strong counter to White's e4. If White advances with e5, Black hopes to show that in the blacked position that follows his Bc8 is no worse than the Bc1, and that the White centre is in fact vulnerable to weakening moves such as ...c5 and ...f6. If White covers his pawn with **2 d4, d5**; **3 Nc3**, Black can try to make life awkward with **3...Bb4** - the lively *Winawer Variation*.

EXAMPLE LINE: 1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. Bxe7 Qxe7 7. f4 O-O 8. Nf3 c5 9. Bd3 f5 10. exf6 Rxf6 11. Qd2 Nc6 12. dxc5 Nxc5

[Diag.2] This is the old main line (*Classical Variation*). Compare the position after move 8 with the position after move 12. White's proud centre has had a hole punched in it, and Black has an extra central pawn which Black hopes will give his pieces more influence over the centre . The Black Bc8 is still stuck behind the Pe6, and the next moves will see Black try to move ...e6-e5, and White will try to hold it back.

[Read more about [Ideas behind the French Defence](#)]

Caro Kann Defence

1 e4, c6

[Diag. 1] This has similar ideas to the *French*, making a strong counter with ...d5. Comparing the two defences, the *Caro-Kann* move **1...c6** doesn't block the Bc8, but neither does it free the Bf8. After **2 d4, d5; 3 Nc3**, Black doesn't really want to play **3...Nf6** to tempt **4 e5**, because the counterpunch ...c5 will lose a move. The Winawer move **3...Bb4** is not available, so Black usually plays **3...dxe4**. After this, Black will not rush to open the position but will carefully prepare ...c5 or... e5, while keeping an eye on White's break with d5.

EXAMPLE LINE: 1. e4 c6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nd7 5. Nf3 Ngf6 6. Ng3 e6 7. Bd3 c5 8. O-O cxd4 9. Nxd4 Bc5 10. Nf3 O-O 11. Qe2

[Diag.2] Black has given up the d5 point but is developing with natural moves. The White centre has disappeared after the ...c5 break. Although White has a bit more space (so will want to avoid exchanges), a potential K-side raid from the Knights and a Queen's side pawn majority, it is hard to give a convincing assessment of White advantage here. Black can continue to manouvre simply, completing development of the Rooks and improving the position of the other pieces, particularly the Bd7.

[Read more about [Playing against the Caro-Kann](#)]

Pirc Defence

1 e4, d6; 2 d4, Nf6; 3 Nc3, g6

[Diag.1] This move order is designed to stop White filling up the centre with pawns on e4/d4/c4. Black allows White to occupy the centre with e4/d4 (and maybe f4) in the hope of blocking it or attacking it later, using the strong Bg7.

EXAMPLE LINE: 1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Be3 Bg7 5. Qd2 c6 6. f3 Nbd7 7. O-O-O O-O

[Diag.2] The central position is still tense and an exciting choice of plans has developed. Each player will attack the opponent's king, and hopes to land a heavy blow before their own king is mated.

[Read more about [Playing against the Pirc](#)]

Alekhine's Defence

1 e4, Nf6

[Diag. 1] This is a more provocative defence. Black more or less forces White to play **2 e5** (or Black will play **2...d5** with equality). Then, having lured the e-pawn and perhaps others with reach, Black will attack them. This is a risky strategy, because of course if it goes wrong, White will hold a crushing space advantage with control of the centre.

EXAMPLE LINE: 1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. d4 d6 5. exd6 cxd6 6. Be3 g6 7. Nf3 Bg7 8. Bd3 O-O 9. O-O Bg4

[Diag. 2] This is a position typical of *Alekhine's Defence*. White has abandoned the attempt to maintain a full pawn front but has succeeded in keeping the advantage in the centre. At the moment most of Black's pieces are nicely active - the Nb6 is a bit lost but can support the counter ...d5. White will complete development and then see what prospects there are for a general pawn advance on the Q-side, or for a K-side attack using the extra space and central control.

[Read more about [Playing against Alekhine's Defence](#)]

Budapest Defence

1 d4, Nf6; 2 c4, e5

[Diag. 1] Rather than face the *Queen's Gambit* Black launches a gambit in return! White's pieces can get a bit muddled if they try to hang on to the pawn, so White usually lets Black recapture and hopes that in the meantime White's pieces will come to more natural squares, and thus still controlling more of the centre. Black will try to keep maximum piece activity.

EXAMPLE LINE: 1. d4 Nf6 2. c4 e5 3. dxe5 Ng4 4. Bf4 Nc6 5. Nf3 Bb4+ 6. Nbd2 Qe7 7. e3 Ngxe5 8. Be2 Nxf3+ 9. Bxf3 Ne5 10. Be2 d6

[Diag.2] This is the strategy in action. In order to regain the pawn Black's Nc6 has blocked the Pc7. White has played modestly but now has a slightly better hold on the centre than Black, and will hope to prove that Black's nicely centralised pieces are actually rather loose and vulnerable to attack.

Grunfeld Defence

1 d4, Nf6; 2 c4, g6; 3 Nc3, d5

[Diag. 1] This is a Queen's side version of the *Pirc/Alekhine* strategy of tempting White to construct a big pawn centre which Black will try to show is either too slow to set up or too difficult to maintain.

EXAMPLE LINE: 1. d4 Nf6 2. c4 g6 3. Nc3 d5 4. cxd5 Nxd5 5. e4 Nxc3 6. bxc3 c5 7. Bc4 Bg7 8. Ne2 cxd4 9. cxd4 Nc6 10. Be3 O-O 11. O-O Na5 12. Bd3 Bg4

[Diag.2] After this development of the main line *Exchange Variation* White has succeeded in holding on to the 'ideal' pawn centre of e4/d4. Black in return can feel pleased with the open nature of the position, the strong Bg7 and the weakening of White's central support by ...c5. The main battle lies ahead, with White hoping to show that the centre is still strong enough to force an advantage, and Black hoping to work round the White centre and/or use the White centre as a target to tie the White pieces to their defence of the pawns.

Two Knights' Defence

1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Nf6

[Diag. 1] This is the simplest deviation from the *Giuoco Piano*. Black counterattacks immediately and prepares ...d5. White can play **4 d4** - the *Max Lange attack*, which leads to positions similar to those you have already seen. The old main line of the defence arises when White tries the apparently primitive **4 Ng5**. The main line, which I recommend, goes:

4... d5

But there is an alternative: the Wilkes-Barre variation or Traxler Counterattack.
 4... Bc5!?

This is wild and exciting chess, and you will enjoy playing over [games in this line](#) even if you never play it yourself.

Otherwise, after 4. Ng5 **4...d5** is forced, and after **5 exd5** Black should avoid **5... Nxd5**, **6 d4** which Lasker showed leads to White advantage. White can even play **6 Nxf7, Kxf7; 7 Qf3+, Ke6** - the *Fegatello* or *Fried Liver attack*.

EXAMPLE LINE: 1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 4. Ng5 d5 5. exd5 Na5 6. Bb5+ c6 7. dxc6 bxc6 8. Be2 h6 9. Nf3 e4 10. Ne5 Bd6 11. f4 O-O 12. O-O Qc7

[Diag.2] So, after 5 exd5 Black usually sacrifices a pawn with 5...Na5 (or 5...Nd4 or 5...b5!?). White

is put on the defensive, which is never pleasant. Black will push forward the attack with all speed, but Black must win back the pawn at least or will lose the endgame. Generally, the *Two Knights'* leads to more prospects for Black than the *Giuoco Piano*.

[[Read more about Two Knights' Defence](#)]

Petroff (Petrov) Defence (Russian Game)

1 e4, e5; 2 Nf3, Nf6

[Diag. 1] This is the most basic challenge to White: simple symmetry. This cannot actually be pursued for any longer than the second move, for **3 Nxe5, Nxe4? 4 Qe2** wins. Black can instead win the pawn back after 3...d6, and White hopes to show that the time Black spends can be used to gain a useful lead in development and/or gain of space. If White can do this and make it stick the game should go against Black, but Black will hope to catch up quickly with a probable draw in sight.

EXAMPLE LINE: 1. e4 e5 2. Nf3 Nf6 3. d4 Nxe4 4. dxe5 d5 5. Nbd2 Nc5 6. Nb3 Nxb3 7. axb3 Be7 8. Bf4

[Diag.2] Here the classic Petroff battle is still being fought. White is trying to sieze space and keep the Black pieces on the hop; Black is trying to complete development while hanging on to enough of the centre to achieve level chances. The Petroff has a drawish reputation but White has a choice of active lines, including this **3 d4**.

Introduction

This is an updated and expanded version of a booklet first written in 1994. The major change is the conversion of the 'example games' section to a much larger 'ideas and traps' section.

The trouble with the Giuoco Piano (is the Giuoco Pianissimo)

The name *Giuoco Piano* means 'quiet game', but it is not really quiet. When it got its name, people were still playing the bloodthirsty variations of the King's Gambit like the *Muzio Gambit* (1. e4 e5 2. f4 exf4 3. Nf3 g5 4. Bc4 g4 5. O-O gxf3 6. Qxf3). Compared to that, I suppose the Giuoco Piano **is** quiet! But there is a variation to be avoided, which is the *Giuoco Pianissimo*. That means 'very quiet game'.

It looks like this:

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. Nc3 Nf6 5. d3 d6

```

t + l D j + - T
X x X - + x X x
- + s X - S - +
+ - L - X - + -
- + b + p + - +
+ - N p + n + -
p P p + - P p P

```

R - B ♗ K - + r

Junior players can usually get to this point safely but often don't really enjoy the game that results. The position is blocked, the sides are equal and it's hard to get things going. It can take a long time to beat worse players because things are so solid. Also, it may be that almost every game you play ends up something like this, and perhaps you would like some variety.

Why does this go wrong? Well, you should know that Plan A in the opening (for White and Black) is to play e4 and d4. If you both play sensibly 1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 White cannot play d4, so you both continue sensibly 4. Nc3 Nf6 5. d3 d6. Which is where we came in. If you really want to play like this, see the last section, but I don't think it's a good way to play.

Knowing this can happen, you need to know the two great ways to avoid it, which lead to open exciting games:

```
t + l D j + s T
X x X x + x X x
- + s + - + - +
+ - L - X - + -
- + b + p + - +
+ - P - + n + -
p P - P - P p P
R n B ♗ K - + r
```

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4.c3

This is the main line of the Giuoco Piano. The idea is to play c3, d4 and only after ...exd4,cxd4 do you play Nc3. You then have your old-fashioned centre and good prospects of a quick attack down the centre or on the K-side. I often call this **Plan A**.

Black can use the temporary weakness of e4 to play 4...Nf6 when it is difficult to stop Black upsetting your plan a little.

```
t + l D j + s T
X x X x + x X x
- + s + - + - +
```

+ - L - X - + -
- P b + p + - +
+ - + - + n + -
p + p P - P p P
R n B q K - + r

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4.b4!?

This is the Evans' Gambit, the "*gift of the gods to a languishing chess world*". After 4...Bxb4, 5. c3 Bc5 6. d4 you have gained a move on Plan A, although you are a Pawn down. The Evans' is more dangerous than the Giuoco Piano - for both sides!

Enterprising chess players still occasionally trot this one out at master level: Bobby Fischer and John Nunn have played it with success.

So, let's have a look at some ideas in these more exciting lines. I'll show you

1. first, the basic ideas
2. secondly, some important traps
3. lastly, some variations

You should read and play over the examples with a board, and do them in the order above: (1) ideas, (2) traps, and only then (3) variations. This is how to study any opening.

Basic ideas in the Italian Game

I've described some of them above.

bring your Bishop onto the a2-g8 diagonal, eyeing up the tender f7 point

play c2-c3 and d2-d4 to take over the **centre**

develop your other pieces **rapidly**, bring your King's Rook to e1. If you have a lead in development, **break open lines** to get at the Black position

keep the opponent's pieces from settling with **central pawn stabs**. Usually we say, don't make time-wasting pawn moves, like h2-h3. But if you play e4-e5 attacking a Knight on f6, the Knight has to move, and so you haven't given Black a chance to catch up in development, and you may have dislodged an important defender. It's odd that, because Pawns are worth the least, nothing can resist their attacks!

try and catch the opponent's **King in the middle**, or, if it escapes by castling, **attack on the King's-side**.. Usually, only the Evans' Gambit and Moller Attack in the Giuoco Piano are fast enough to catch the King in the middle.

if your attack doesn't come about, fast development and siezing the central files may give you an **advantage in the endgame**

Because the basic layout is similar for both sides, some of these ideas also apply to playing Black: in addition Black should strive for:

rapid **development**

castle into safety

counter with ...**d5**

play for **counterattack** on the King's-side or an **endgame advantage** First, I'll show you an example game which includes the ideas I have listed above.

All the basic ideas: White,R - Al Marif,S [C51 Evans' Gambit] (London LB), 1990

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. O-O!? d6 7. d4 exd4 8. cxd4

```
t + l D j + s T
X x X - + x X x
- + s X - + - +
+ - L - + - + -
- + b P p + - +
```

```

+ - + - + n + -
p + - + - P p P
R n B q + r K -

```

Central advantage: the Plan A pawn centre with **good development**.

8...Bb6 9. Re1

The Rook comes to e1, giving the King a Hard Stare.

9...Bg4

```

t + - D j + s T
X x X - + x X x
- L s X - + - +
+ - + - + - + -
- + b P p + l +
+ - + - + n + -
p + - + - P p P
R n B q R - K -

```

White's next points both Bishops at the King's-side.

10. Bb2 Qf6 11. e5 dxe5 12. dxe5

```

t + - + j + s T
X x X - + x X x
- L s + - D - +
+ - + - P - + -
- + b + - + l +
+ - + - + n + -
p B - + - P p P
R n + q R - K -

```

Raiding by centre pawns. The Pawn wins time by the attack on the Queen, and then **breaks open lines** by a further step forward.

12... Qf4 13. e6 Bxf3

Black hopes to gain time by taking a piece with an attack on the Queen.

```
t + - + j + s T
X x X - + x X x
- L s + p + - +
+ - + - + - + -
- + b + - D - +
+ - + - + l + -
p B - + - P p P
R n + q R - K -
```

14. exf7+

Not a bit of it! - Check stops everything. In fact White never moves the Queen or takes the Bishop!

```
t + - + j + s T
X x X - + p X x
- L s + - + - +
+ - + - + - + -
- + b + - D - +
+ - + - + l + -
p B - + - P p P
R n + q R - K -
```

Attack on f7 along the "*Italian Diagonal*"

14... Kf8 15. fxg8=Q+ Rxf8 16. Ba3+ Ne7 17. Bxe7+

```
t + - + - J t +
X x X - B - X x
- L - + - + - +
+ - + - + - + -
- + b + - D - +
```

```

+ - + - + l + -
p + - + - P p P
R n + q R - K -

```

The **King caught in the middle**. Black resigns... **1-0**

An exciting game! Let's have a look at each of these ideas again in actual play, and how to play when you are Black.

Ideas mainly for White

Develop rapidly and take over the centre

You should know this idea already. Get your pieces out and fighting - if they are on the back rank you might as well not have them! And of course, they are most effective in the centre.

The way to take over the centre is with your e- and d-pawns. These pawns can make little steps down the middle towards the Black King, and on the way stamp on the toes of the Black pieces to make them jump out of the way!

The raid with central pawns: Boleslavsky - Scitov [C54 Giuoco Piano] (Moscow) 1933

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb6

```

t + l D j + - T
X x X x + x X x
- L s + - S - +
+ - + - + - + -
- + b P p + - +
+ - + - + n + -
p P - + - P p P

```

R n B q K - + r

This move gives White too much of a free hand. The "Plan A" pawn centre just rolls over the Black position.

7. e5 Stamp!

7...Ng4 8. h3 Stamp!

8...Nh6 9. d5 Stamp!

9...Ne7 10. d6 Stamp!

10...Ng6

The Pawns have marched forward, causing the Black pieces to scatter. Time to develop a piece...

11. Bg5 f6

```

t + l D j + - T
X x X x + - X x
- L - P - X s S
+ - + - P - B -
- + b + - + - +
+ - + - + n + p
p P - + - P p +
R n + q K - + r
    
```

12. exf6 gxf6

White can win a piece, but:

13. Qe2+ Kf8 14. Bxh6# 1-0

Isn't that better than the Giuoco Pianissimo?

The raid with central pawns: Morphy, Paul - Laroche, H [Evans' Gambit, C52] Paris, 1859

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 Nf6

```
t + l D j + - T
X x X x + x X x
- + s + - S - +
L - + - X - + -
- + b P p + - +
+ - P - + n + -
p + - + - P p P
R n B q K - + r
```

Now a little Pawn stab.

7. dxe5 Ng4 8. Bg5 f6 9. exf6 Nxf6 10. e5

```
t + l D j + - T
X x X x + - X x
- + s + - S - +
L - + - P - B -
- + b + - + - +
+ - P - + n + -
p + - + - P p P
R n + q K - + r
```

Another awkward Pawn raid.

10... h6 11. exf6 hxg5 12. fxg7 Qe7+ 13. Qe2 1-0

The raid with central pawns: Morphy, Paul(bl_sim) - Cunningham [Giuoco Piano, C54] London, 1859

1. e4 e5 2. Bc4 Bc5 3. c3 Nc6 4. Nf3 Nf6 5. d4 exd4 6. e5 Qe7 7. O-O Ng8
8. cxd4 Bb6 9. d5

```
t + l + j + s T
X x X x D x X x
- L s + - + - +
+ - + p P - + -
- + b + - + - +
+ - + - + n + -
p P - + - P p P
R n B q + r K -
```

This we would call a *central pawn roller*.

9... Qc5 10. Na3 Nd4 11. Be3 Nxf3+ 12. Qxf3 Qf8 13. Bxb6 axb6 14. Nb5
Kd8 15. Rac1

```
t + l J - D s T
+ x X x + x X x
- X - + - + - +
+ n + p P - + -
- + b + - + - +
+ - + - + q + -
p P - + - P p P
+ - R - + r K -
```

Black is getting squashed by those Pawns.

15... d6 16. exd6 cxd6 17. Qe3 Ra6 18. Nc7 Qe7

```
- + l J - + s T
+ x N - D x X x
```

```

t X - X - + - +
+ - + p + - + -
- + b + - + - +
+ - + - Q - + -
p P - + - P p P
+ - R - + r K -
    
```

Black wants to exchange Queens.

19. Ne6+! fxe6 20. Bxa6 Bd7 21. Bb5 Ke8 22. dxe6 Nf6 23. Rc8+ 1-0

Central advantage: Bastian,Herbert - Eng,Holger (10) [Giuoco Piano, C54] Bad Neuenahr ch-DE, 1984

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2 Bxd2+ 8. Nbx d2 d5 9. exd5 Nxd5 10. Qb3 Nce7 11. O-O O-O 12. Rfe1

```

t + l D - T j +
X x X - S x X x
- + - + - + - +
+ - + s + - + -
- + b P - + - +
+ q + - + n + -
p P - N - P p P
R - + - R - K -
    
```

This is the Main line position. Most of the Pawns have disappeared, but Black must be careful not to let the White pieces dominate the central squares and the e-file.

12... Nb6 13. Bd3 Bf5 14. Rxe7 Bxd3 15. Rae1 Bg6 16. Nh4 Nc8

```

t + s D - T j +
X x X - R x X x
- + - + - + l +
+ - + - + - + -
    
```

```

- + - P - + - N
+ q + - + - + -
p P - N - P p P
+ - + - R - K -
    
```

White has far more active pieces and control of the e-file. This is an easy game to understand, and, hopefully, imitate.

17. Nxg6 hxg6 18. R7e5 Qxd4 19. Nf3 Qd7 20. Ng5 Nd6

```

t + - + - T j +
X x X d + x X -
- + - S - + x +
+ - + - R - N -
- + - + - + - +
+ q + - + - + -
p P - + - P p P
+ - + - R - K -
    
```

Black is starting to get sorted out but White's next move tempts the f-pawn to move...

21. Qb4 f6 22. Re7 Qb5 23. Rxg7+ Kxg7 24. Re7+ Rf7 25. Rxf7+ Nxf7 26. Ne6+ 1-0

Catch the Black King in the middle

As I said, this is mostly an idea for the Evans' Gambit. White's pieces charge out before Black can play ... Nf6 and ...O-O, and before the defence can get organised.

The King caught in the middle (and Central advantage): Morphy - Hampton, H [Evans' Gambit, C52] (London) 1858

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. O-O d6 7. d4 exd4

8. cxd4 Bb6 9. Nc3

```

t + l D j + s T
X x X - + x X x
- L s X - + - +
+ - + - + - + -
- + b P p + - +
+ - N - + n + -
p + - + - P p P
R - B q + r K -

```

This simple developing move is best, but not much played before Morphy. Instead they used to rush with *9. d5* or hesitate with *9. h3*.

9... Nf6 10. e5 dxe5 11. Ba3

Stops the Black King castling.

11...Bg4 12. Qb3 Bh5 13. dxe5 Ng4 14. Rad1 Qc8

```

t + d + j + - T
X x X - + x X x
- L s + - + - +
+ - + - P - + l
- + b + - + s +
B q N - + n + -
p + - + - P p P
+ - + r + r K -

```

White has a model position, while Black's pieces are disorganised and the King vulnerable.

15. e6 f6 16. Qb5 Bg6 17. Bd5 1-0

King caught in the middle: Fischer - Fine RH [Evans' Gambit, C52] (New York) 1963

This game was played as a 'friendly' game at Fine's house.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. O-O dxc3

"A little too greedy", said **Modern Chess Openings**, and Fischer agreed.

8. Qb3 Qe7 9. Nxc3

```
t + l + j + s T
X x X x D x X x
- + s + - + - +
L - + - + - + -
- + b + p + - +
+ q N - + n + -
p + - + - P p P
R - B - + r K -
```

White has a massive lead in development. Now *9...Qb4* is the most awkward. Fischer's reply does not lose time because Black must respond to the attack on the Queen, and, after the exchange, the Knight.

9... Nf6 10. Nd5 Nxd5 11. exd5 Ne5 12. Nxe5 Qxe5 13. Bb2 Qg5

```
t + l + j + - T
X x X x + x X x
- + - + - + - +
L - + p + - D -
- + b + - + - +
+ q + - + - + -
p B - + - P p P
R - + - + r K -
```

Fischer now finds a nice deflecting move.

14. h4 Qxh4 15. Bxg7 Rg8 16. Rfe1+ Kd8 17. Qg3

```

t + l J - + t +
X x X x + x B x
- + - + - + - +
L - + p + - + -
- + b + - + - D
+ - + - + - Q -
p + - + - P p +
R - + - R - K -

```

1-0

Another, conclusive deflection. The Black Queen cannot defend the f6 square, so if *17...Qg3 18. Bf6 mate*.

King
 caught in the middle: Anderssen,Adolf - Dufresne,J [Evans' Gambit, C52]
 Berlin 'Evergreen', 1852

This is a very famous game, published in newspapers all over the world at the time.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. O-O d3 8.

Qb3 Qf6 9. e5 Qg6 10. Re1 Nge7 11. Ba3 b5 12. Qxb5 Rb8 13. Qa4 Bb6 14. Nbd2 Bb7 15. Ne4 Qf5 16. Bxd3 Qh5 17. Nf6+ gxf6 18. exf6 Rg8

```

- T - + j + t +
X l X x S x + x
- L s + - P - +
+ - + - + - + d
q + - + - + - +
B - P b + n + -

```

```

p + - + - P p P
R - + - R - K -

```

In playing his next move, Anderssen must have seen the mate at the end. Superb!

19. Rad1 Qxf3 20. Rxe7+ Nxe7 21. Qxd7+ Kxd7 22. Bf5+ Ke8 23. Bd7+ Kf8 24. Bxe7# 1-0

King caught in the middle: Romero Holmes,Alfonse - Estremera Panos,Serg [Giuoco Piano, C54] Leon, 1989

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. b4

R - + - K - + r
    
```

Black jumps at a loose Pawn...

17... Qxc7 18. Qa3 1-0

The King's-side attack.

Of course, if Black is not greedy you may see the Black King flee to the King's-side. But all the things that make the attack on the uncastled King work - better development, central control and open lines - also make a King's-side attack work!

King's-side

attack: Morphy,Paul - Amateur [Giuoco Piano, C51] London, 1858

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. d4 exd4 7. cxd4 Bb6 8. Bg5 Nge7 9. Nc3 O-O 10. d5 Na5

```
t + l D - T j +

This too was one of a number of games played by Morphy without sight of the board.

The Queen's-side attack.

Black's Queen's-side may be late coming out, and may be a target for a direct attack by e.g. Qd1-b3xb7. But if the Black King cannot feel entirely safe on the King's-side, and not at all in the centre, perhaps your opponent will castle Queen's-side? This is usually easier to attack than the King's-side, because you won't mind moving your Queen's-side Pawns forward!

Move
to the Queen's-side: Szecsi - Szarka [Giuoco Piano, C54] cr, 1987

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4 8. O-O Bxc3 9. d5 Bf6 10. Re1 Ne7 11. Rxe4 d6 12. Bg5 Bxg5 13. Nxc3 h6 14. Qe2 hxg5 15. Re1 Be6 16. dxe6 f6 17. Re3 c6 18. Rh3 Rxh3 19. gxh3 g6 20. b4

t + - D j + - +

X x + - S - + -
 - + x X p X x +
 + - + - + - X -
 - P b + - + - +
 + - + - + - + p
 p + - + q P - P
 + - + - R - K -

This move is quite cute: White realises Black will castle Queen's-side, and so arranges a welcome for the Black King...

20... Qb6 21. Qb2 O-O-O

Told you!

**22. b5 Rf8 23. a4 Qa5 24. Rc1 Qxa4 25. bxc6 b6 26. Bb5 Qe4 27. c7 Kb7
28.
Qa3 a5 29. Qxd6**

```
- + - + - T - +  
+ j P - S - + -  
- X - Q p X x +  
X b + - + - X -  
- + - + d + - +  
+ - + - + - + p  
- + - + - P - P  
+ - R - + - K -
```

Black is cut to shreds. It's an interesting point that this was played in recent years by post, so Black had plenty of time to work out the best opening variation and the best defence to the attack!

1-0

Ideas for Black

Of course, you need to know how to play the Black side of the Italian Game.

Hit back with ...d5

This is the most important idea. Black's problems in the games we have looked at stem from (a) poor development, (b) poor control over the centre.

The ...d5 break is crucial, releasing the Bc8 and getting a share of the centre (or at least breaking up White's pawns). This goes some way to solving both problems. If you can play ...d5 as Black without immediate disaster you usually get an even game at least.

Black hits back with ...d5: Marache,N - Morphy,Paul [Evans' Gambit, C52] New York, 1857

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. e5

```
t + l D j + s T
X x X x + x X x
- + s + - + - +
```

```
L - + - P - + -
- + b X - + - +
+ - P - + n + -
p + - + - P p P
R n B q K - + r
```

White swings a punch into the air. Black responds with one on the chin.

7... d5 8. exd6 Qxd6 9. O-O Nge7 10. Ng5 O-O 11. Bd3

```
t + l + - T j +
X x X - S x X x
- + s D - + - +
L - + - + - N -
- + - X - + - +
+ - P b + - + -
p + - + - P p P
R n B q + r K -
```

White has no reason to expect these attacking gestures to succeed. Black sensibly develops, connecting the Rooks, and soon moves over to the attack.

11... Bf5 12. Bxf5 Nxf5 13. Ba3 Qg6 14. Bxf8 Qxg5 15. Ba3 dxc3 16. Bc1 Qg6 17. Bf4 Rd8 18. Qc2 Ncd4 19. Qe4

```

```

12... d5

...And the ...d5 blow recovers the piece.

13. Rf4 dxc4 14. Qa4 c3 15. bxc3 Bxc3 16. Rb1 Qd3

```
t + l + - T j +
X - X - + x X x
- + x + - + - +
+ - + - + - + -
q + - + - R - +
+ - L d + n + -
p + - + - P p P
+ r B - + - K -
```

White is getting into a right mess.

17. Rbb4

[17. Qb3 Rb8 18. Rd4 Rxb3 19. Rxd3 Rxb1]

17... Ba6 18. Rbc4 Bxc4 19. Rxc4 Rab8 0-1

Catch the White King in the middle

If you are developing as fast as you can, and White isn't, you may find that you are ahead in development. In this case you have every right to attack the White King, and if this is still in the middle, so much the better!

Black catches the King in the middle: Noa,Josef - Kopylov [Evans' Gambit, C52] Leningrad, 1937

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 d6 7. Bg5 Nf6 8. Qa4 exd4 9. Nxd4 Bb6 10. Bb5 O-O 11. Nxc6 bxc6 12. Bxc6

```
t + l D - T j +
X - X - + x X x
- L b X - S - +
+ - + - + - B -
q + - + p + - +
+ - P - + - + -
p + - + - P p P
R n + - K - + r
```

White has tried to cash in straight away before completing development.

12... Bxf2+ 13. Ke2

[13. Kxf2 Ng4+ 14. Kf1 Qxg5 15. Bxa8 Qc1+ 16. Ke2 Qxh1]

13... Rb8 14. Rf1 Rb2+ 15. Nd2

```

- + l D - T j +
X - X - + x X x
- + b X - S - +
+ - + - + - B -
q + - + p + - +
+ - P - + - + -
p T - N k L p P
R - + - + r + -

```

Black now finds a neat move to exploit White's loose position.

15... Nxe4! 16. Qxe4 Qxg5 17. Kxf2 Bf5 18. Qf3 Bg4 19. Qe4 d5 0-1

Counterattack on the White King's-side

Similarly, if you are ahead in development or have some other

advantage, you
 can (and should!) think about a King's-side attack.

Black's King's-side counterattack: Mongredien,A - Morphy,Paul (07) [Evans' Gambit, C52] Paris m, 1859

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. O-O Nf6 7. d4 O-O

```

t + l D - T j +
X x X x + x X x
- + s + - S - +
L - + - X - + -
- + b P p + - +
+ - P - + n + -
p + - + - P p P
R n B q + r K -
    
```

White tries a pawn stab, but things are pretty solid. No quick raid will be possible, which is bad news for the Gambit player.

8. d5 Ne7 9. Qd3 d6 10. h3 Ng6 11. Nh2 Nh5 12. Bb3 Ngf4 13. Bxf4 Nxf4 14. Qf3 f5

```

t + l D - T j +
    
```

```
X x X - + - X x
- + - X - + - +
L - + p X x + -
- + - + p S - +
+ b P - + q + p
p + - + - P p N
R n + - + r K -
```

This move announces to White that it is Black who holds the initiative.

15. exf5 Bxf5 16. g4 Bd3 17. Qe3 Bb6 18. Qd2 Qh4 0-1

Black's King's-side counterattack: Saint Amant - Morphy, Paul [Giuoco Piano, C54] Paris, 1858

**1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2
Bxd2+ 8. Nbx d2 d5 9. exd5 Nxd5 10. O-O O-O**

```
t + l D - T j +
X x X - + x X x

p P - N - P p K
+ - + r + r + -

```

"And now for my last trick:"

18... Bxh3 19. gxh3 Rd3 20. Qxd3 Nxd3 21. Bxd3 Qd6+ 22. f4 Qxd3 0-1

Black's chances in the endgame

It is actually quite difficult to take over the attack and mate White. This is nearly always true if the Queens are exchanged. But very often, once White's initiative blows itself out, you may be left with better placed pieces. Then there may be open lines that you can use to attack White Pawns. White may have given up a pawn for the attack, or may have advanced one or two Pawns beyond easy reach of White's pieces, but within easy reach of yours. Then Black can look forward to a very promising endgame.

Black's endgame chances: Hammond,G - Morphy,Paul [Giuoco Piano, C54] New York, 1857

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. e5

```
t + l D j + - T
X x X x + x X x
```

```

- + s + - S - +
+ - L - P - + -
- + b X - + - +
+ - P - + n + -
p P - + - P p P
R n B q K - + r

```

As ever, Black must hit back hard:

6... d5 7. Bb3 Ne4 8. cxd4 Bb6 9. O-O Bg4 10. Be3 O-O 11. Qd3 Bxf3 12. gxf3 Ng5 13. Qf5

```

t + - D - T j +
X x X - + x X x
- L s + - + - +
+ - + x P q S -
- + - P - + - +
+ b + - B p + -
p P - + - P - P
R n + - + r K -

```

White is doing his best to attack.

13... Nxd4 14. Bxd4 Bxd4 15. Nc3 g6 16. Qg4 h5 17. Qg2 Bxe5 18. Nxd5 c6 19. Rfe1 Re8 20. f4 cxd5 21. fxe5 Ne6 22. Qxd5 Qxd5 23. Bxd5 Nf4 24. Bxb7 Rab8 25. Bc6 Re6 26. Bd7 Re7 27. Rad1 Rxb2

- + - + - + j +
X - + b T x + -

```

```
- + - + - + x +  
+ - + - P - + x  
- + - + - S - +  
+ - + - + - + -  
p T - + - P - P  
+ - + r R - K -
```

The attack has blown out leaving Black's pieces very well placed.
White is
losing at least a Pawn...

28. Re4? Rxd7 0-1

...if not the game!

Some traps in the Italian Game

I hope that's given you a feel for the way to play these positions.
Now I'd
like to look at some specific variations, because in these lively
lines you
have to watch your step! Here are some of the most important traps,
the
tactical ideas behind some of the main lines.

These are taken `wholemeal' (rather than piecemeal) from Znosko-
Borovsky's
Traps on the Chessboard. I think this is out of print (I have a 1940s
copy) but worth trying to find if you read *descriptive notation*. In
fact, that goes for all Z-B's books! Many of them are issued in
inexpensive

editions by Dover.

A poor line for White in the Closed Variation of the Giuoco Piano

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Qe7 5. O-O?!

[5. d4 is best]

5... d6 6. d4 Bb6 7. h3 Nf6 8. dxe5?!

Just because your opponent plays slowly doesn't mean you can relax.

[8. d5 may have been better]

8... Nxe5 9. Nxe5 Qxe5 10. Nd2

```
t + l + j + - T
X x X - + x X x
- L - X - S - +
+ - + - D - + -

+ - + - + - + -
p X - + - + p P
R n + - + r + k
```

16. exf6 Rxf6 17. Qxf6 bxa1=Q 18. Qxa1+-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O

White sometimes plays this uncommon alternative to avoid the main lines after 6. cxd4.

6...Nxe4?

[6...d6]

7. cxd4 Be7 8. d5 Nb8 9. Re1 Nd6 10. Bb3 O-O 11. Nc3 Ne8 12. d6

```
t S l D s T j +
X x X x L x X x
- + - P - + - +
+ - + - + - + -
- + - + - + - +
+ b N - + n + -
p P - + - P p P
R - B q R - K -
```

A very clever move.

12... cxd6

[12... Bxd6 13. Bg5 Nf6 14. Nd5 Nc6 15. Nxf6+ gxf6 16. Bh6+-]

[12... Nxd6 13. Rxe7 Qxe7 14. Bg5 Qe8 15. Qd3 Nc6 16. Re1+-]

13. Rxe7 Qxe7 14. Bg5 Nf6 15. Nd5 Qd8 16. Qd4 Nc6 17. Qh4+-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O O-O?

[again, 6...d6 is most reliable]

7. cxd4 Bb6 8. d5 Ne7 9. e5 Ne8 10. d6 cxd6 11. exd6 Ng6 12. Bg5 Nf6
13. Nc3 h6 14. Qd3

```
t + l D - T j +  
X x + x + x X -  
- L - P - S s X  
+ - + - + - B -  
- + b + - + - +  
+ - N q + n + -  
p P - + - P p P  
R - + - + r K -
```

A terrific example of the central pawn raid.

14... Kh7

[14... hxg5 15. Qxg6]

15. Bxf7! Rxf7 16. Ne5 hxg5 17. Qxg6+ Kg8 18. Qxf7+ +-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O dxc3

A little greedy.

7. e5

```
t + l D j + - T
X x X x + x X x
- + s + - S - +
+ - L - P - + -
- + b + - + - +
+ - X - + n + -
p P - + - P p P
R n B q + r K -
```

Black's next is often the right idea, but doesn't work here because of the lag in development and castling.

7... d5 8. exf6 dxc4 9. Qxd8+ Nxd8 10. fxg7 Rg8 11. Nxc3 Rxg7 12. Bf4 Ne6 13. Rfe1 c6 14. Ne4 Be7 15. Rad1+/-

```
t + l + j + - +
X x + - L x T x
- + x + s + - +
+ - + - + - + -
- + x + n B - +
+ - + - + n + -
p P - + - P p P
+ - + r R - K -
```

could you win from here as White? Black cannot afford to play

15... Nxf4

because of

16. Nf6+ Kf8 17. Rd8+ Bxd8 18. Re8#

```
t + l L r J - +
X x + - + x T x
- + x + - N - +
+ - + - + - + -
- + x + - S - +
+ - + - + n + -
p P - + - P p P
+ - + - + - K -
```

Trap in the Main Line of the Giuoco Piano with 6. cxd4

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4

```
t + l D j + - T
X x X x + x X x
- + s + - S - +
+ - L - + - + -
- + b P p + - +
+ - + - + n + -
p P - + - P p P
R n B q K - + r
```

This is the normal continuation.

6... Bb6?

This isn't! The Pawns push forward.

[6... Bb4+ is best]

7. d5 Ne7 8. e5 Ne4 9. d6 Nxf2 10. Qe2 Nxf1 11. Bg5

```
t + l D j + - T
X x X x S x X x
- L - P - + - +
+ - + - P - B -
- + b + - + - +
+ - + - + n + -
p P - + q + p P
R n + - K - + s
```

11... Bf2+

Black intends to get the Queen out via c7

12. Kd1!

[12. Kf1 Nf5 13. Bxd8

[or 13. Qe4 Nhg3+ 14. Kxf2 Nxe4+ 15. Ke1 Nxg5-+]

13... Ne3+ 14. Qxe3 Bxe3-/+ and Black is in the clear]

12... c5 13. Bxe7 Qb6 14. Ng5 Rf8 15. Qh5 g6 16. Qxh7+-

Trap in the Moller Attack

**1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4
8. O-O Bxc3 9. d5**

```
t + l D j + - T
X x X x + x X x
- + s + - + - +
+ - + p + - + -
```

```
- + b + s + - +  
+ - L - + n + -  
p P - + - P p P  
R - B q + r K -
```

The Moller Attack

9... Ne5?!

[9... Bf6!]

10. bxc3 Nxc4 11. Qd4 Ncd6?

[11... f5]

12. Qxg7 Qf6 13. Qxf6 Nxf6 14. Re1+

```
t + l + j + - T  
X x X x + x + x  
- + - S - S - +  
+ - + p + - + -  
- + - + - + - +  
+ - P - + n + -  
p + - + - P p P  
R - B - R - K -
```

14... Kf8

[14... Kd8 15. Bg5 Nde8 16. Rxe8+ Kxe8 17. Re1+! Kf8 18. Bh6+ Kg8 19. Re5 d6 20. Rg5#]

15. Bh6+ Kg8 16. Re5 Nfe4 17. Re1 f5 18. Re7+-

```
t + l + - + j T
X x X x R - + x
- + - S - + - B
+ - + p + x + -
- + - + s + - +
+ - P - + n + -
p + - + - P p P
+ - + - R - K -
```

"and wins", says Znosko-Borovsky. Have a go!

**18... a5 19. Nd4 b5 20. f3 Nxc3 21. Rg7+ Kf8 22. Rxd7+ Kg8 23. Rg7+ Kf8
24.
Rxc7+ Kg8 25. Rg7+ Kf8 26. Ra7+ Kg8 27. Rxa8 +-**

Bernstein's Trap in the Moller Attack

**1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3
Nxe4
8. O-O Nxc3 9. bxc3 Bxc3 10. Qb3**

```
t + l D j + - T
X x X x + x X x
- + s + - + - +
```

```
+ - + - + - + -  
- + b P - + - +  
+ q L - + n + -  
p + - + - P p P  
R - B - + r K -
```

10... Bxa1?

Black is being terribly greedy.

[10... d5 11. Bxd5 O-O 12. Bxf7+ Kh8 13. Qxc3 Rxf7 14. Ne5 Nxe5 15. dxe5 Be6<-/->]

11. Bxf7+ Kf8 12. Bg5 Ne7 13. Ne5 Bxd4 14. Bg6 d5 15. Qf3+ Bf5 16. Bxf5 Bxe5 17. Be6+ Bf6 18. Bxf6+-

Some Variations in the Italian Game

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5

We will look at the Giuoco Piano with 4.c3, and Evans' Gambit with 4.b4.

A. Main line Giuoco Piano 4. c3

4... Nf6

The alternatives 4...Bb6, and 4...d6 give White a free hand. We'll have a look at 4...Bb6, the Closed Variation in section B later.

5. d4 exd4

```

t + l D j + - T
X x X x + x X x
- + s + - S - +
+ - L - + - + -
- + b X p + - +
+ - P - + n + -
p P - + - P p P
R n B q K - + r

```

6. cxd4

White has alternatives:

[6. e5 d5 is no good]

[You might try one day 6. b4 Bb6 7. e5 d5 8. exf6 dxc4]

```

t + l D j + - T
X x X - + x X x

```

- L s + - P - +
+ - + - + - + -
- P x X - + - +
+ - P - + n + -
p + - + - P p P
R n B q K - + r

*For example 9. b5 Na5 10. Qe2+ Be6 11. fxg7 Rg8 12. Nxd4 Bxd4 13. cxd4 Qxd4
14. Bb2 Qd3 15. Bf6 Qg6 16. Qf3 Rxc7 17. Nd2 Qxc2 18. Qa3*

t + - + j + - +
X x X - + x T x
- + - + l B - +
S p + - + - + -
- + x + - + - +
Q - + - + - + -
p + - N - P d P
R - + - K - + r

which is wonderfully messy]

[Lastly, White has 6. O-O hoping for 6...dxc3 7. Nxc3 with a big lead in development. There are examples of this line in the section on Traps, but it is neglected in many books on the opening]

After 6. cxd4 Black must reply

6... Bb4+

[6... Bb6 does nothing to slow White's plan - see the game by Boleslavsky in the ideas section if you are not convinced!]

Now White can play the risky 7. Nc3 or the safe 7. Bd2.

Risky main line 7. Nc3

7. Nc3

```

t + l D j + - T
X x X x + x X x
- + s + - S - +
+ - + - + - + -
- L b P p + - +
+ - N - + n + -
p P - + - P p P
R - B q K - + r
    
```

7... Nxe4

[Instead 7... d5 can be tried, which is probably not as good: e.g.

8. exd5 Nxd5 9. O-O Be6 10. Bg5 Be7 11. Bxd5 Bxd5 12. Nxd5 Qxd5 13. Bxe7 Nxe7 14. Re1 f6 15. Qe2 Qd7

```

t + - + j + - T
X x X d S - X x
- + - + - X - +
    
```

```

+ - + - + - + -
- + - P - + - +
+ - + - + n + -
p P - + q P p P
R - + - R - K -

```

Black's King is caught in the centre, and cannot easily leave.

Now White can try either:

16. Qe4 or

16. Rac1

*For example: 16. Rac1 c6 17. d5 cxd5 18. Nd4 Kf7 19. Ne6 Rhc8 20. Qg4 g6
 21. Ng5+ Ke8 22. Rxe7+ Kf8 23. Rf7+ Kg8 24. Rg7+ Kh8 25. Rxh7+ Kg8 26. Rg7
 + Kh8
 27. Qh4+ Kxg7 28. Qh7+ Kf8 29. Qh8+ Ke7 30. Qg7+ Ke8 31. Qg8+ Ke7 32. Qf7
 + Kd8
 33. Qf8+ Qe8 34. Nf7+ Kd7 35. Qd6#*

```

t + t + d + - +
X x + j + n + -
- + - Q - X x +
+ - + x + - + -
- + - + - + - +
+ - + - + - + -
p P - + - P p P
+ - R - + - K -

```

An attractive 'swallowtail mate' in a game which Fritz produced from memory]

White continues in bold style with

8. O-O

Black has a further choice:

8...Bxc3, the Moller attack

8...Nxc3, avoiding the Moller

We'll look at the avoiding line first, as it's such a good example of how quickly White can win in the Giuoco Piano.

Black avoids the Moller

8...Nxc3

```
t + l D j + - T
X x X x + x X x
- + s + - + - +
+ - + - + - + -
- L b P - + - +
+ - S - + n + -
p P - + - P p P
R - B q + r K -
```

White has to play

9. bxc3

when Black has another choice

Greedy 9...Bxc3

Safer 9...d5

Bernstein's line: greedy 9...Bxc3

```
t + l D j + - T
X x X x + x X x
- + s + - + - +
+ - + - + - + -
- + b P - + - +
+ - L - + n + -
p + - + - P p P
R - B q + r K -
```

Reply

10. Ba3

[10. Qb3 is also fun: see the Traps section]

```

t + l D j + - T
X x X x + x X x
- + s + - + - +
+ - + - + - + -
- + b P - + - +
B - L - + n + -
p + - + - P p P
R - + q + r K -

```

This is Bernstein's line, and Black no longer has a satisfactory reply. When I came across this line as a junior I fell in love with it, and always tried to play it.

The most important one to deal with is the most obvious:

10... Bxa1

11. Re1+ Ne7 12. Bxe7 Qxe7 13. Rxe7+ Kxe7 14. Qe1+ Kf8 15. Qxa1

```

t + l + - J - T
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + b P - + - +
+ - + - + n + -
p + - + - P p P
Q - + - + - K -

```

with extra material, and White's attack is far from over. Black must back out earlier.

10... d6

is also insufficient

11. Rc1 Ba5 12. Qa4 a6 13. Bd5 Bb6 14. Rxc6 Bd7 15. Re1+ Kf8 16. Rxd6 cxd6 17. Bxd6+ Kg8 18. Bxf7+ Kxf7 19. Qb3+ Kg6 20. Ne5+

```
t + - D - + - T
+ x + l + - X x
x L - B - + j +
+ - + - N - + -
- + - P - + - +
+ q + - + - + -
p + - + - P p P
+ - + - R - K -
```

20...Kf6 [20... Kh5 21. Qf3+ Kh6 22. Nf7+ Kg6 23. Nxd8 Bxd8 24. Qxb7]

21. Qf7+ Kg5 22. Qxg7+ Kh5 23. g4+ Bxg4 24. Qxg4+ Kh6 25. Nf7#

10... d5

Often a good idea but here is no good either:

**11. Bb5 Bxa1 12. Re1+ Be6 13. Qa4 Qc8 14. Bxc6+ bxc6 15. Qxc6+ Kd8
16. Ng5
Qb8**

```
  t D - J - + - T
X - X - + x X x
- + q + l + - +
+ - + x + - N -
- + - P - + - +
B - + - + - + -
p + - + - P p P
L - + - R - K -
```

10... Qf6

Not even close

11. Rc1 Bb4 12. Bxb4 Nxb4 13. Re1+

```
  t + l + j + - T
X x X x + x X x
- + - + - D - +
+ - + - + - + -
- S b P - + - +
+ - + - + n + -
p + - + - P p P
+ - R q R - K -
```

10... Ne7

best: the game might go

11. Qb3 d5 12. Qxc3 dxc4 13. Rfe1 Be6 14. Bxe7 Kxe7 15. d5 Qxd5 16. Rad1 Qc5 17. Re5 Qb6

```

t + - + - + - T
X x X - J x X x
- D - + l + - +
+ - + - R - + -
- + x + - + - +
+ - Q - + n + -
p + - + - P p P
+ - + r + - K -

```

White now can finish nicely:

18. Rxe6+ Qxe6

else Qxg7+ is terrible

19. Re1 Qxe1+ 20. Qxe1+ Kd8 21. Ne5

```

t + - J - + - T
X x X - + x X x
- + - + - + - +
+ - + - N - + -
- + x + - + - +
+ - + - + - + -
p + - + - P p P

```

+ - + - Q - K -

when White should be able to handle the Pawns, which lack support from the Rooks.

Bernstein: the safer 9... d5

```
t + l D j + - T
X x X - + x X x
- + s + - + - +
+ - + x + - + -
- L b P - + - +
+ - P - + n + -
p + - + - P p P
R - B q + r K -
```

This may be really where Black should back out.

10. cxb4 dxc4 11. Re1+

[A safer line for White here is 11. b5 Ne7 12. Ba3 O-O 13. Qe2 Re8 14. Qxc4]

11... Ne7

```
t + l D j + - T
X x X - S x X x
- + - + - + - +
+ - + - + - + -
- P x P - + - +
+ - + - + n + -
p + - + - P p P
R - B q R - K -
```

12. Qe2

[John Walker suggests the piece sacrifice with 12. Bg5 f6

[not 12... Be6 13. Bxe7 Qxe7 14. d5]

13. Qe2 fxg5 14. Nxg5

```
t + l D j + - T
X x X - S - X x
- + - + - + - +
+ - + - + - N -
- P x P - + - +
+ - + - + - + -
p + - + q P p P
R - + - R - K -
```

...which certainly puts Black under pressure, but it's not my style.]

After 12. Qe2 Fritz wanted to play out a game it knew about, which ran:

12... Be6 13. Bg5 Qd7 14. Qe5 c6 15. Qxg7 O-O-O 16. Ne5 Qd5 17. Qf6 Ng6 18.

h4 Rhg8 19. Nxc6 hxg6 20. Rac1 b5 21. a4 Qxd4 22. axb5 Qxf6 23. Bxf6 Rd3 24. bxc6 Kc7 25. Rxe6 fxe6 26. Rxc4

```
- + - + - + ♠ +  
X - J - + - + -  
- + p + x B x +  
+ - + - + - + -  
- P r + - + - P  
+ - + ♠ + - + -  
- + - + - P p +  
+ - + - + - K -
```

White's exchange deficit is compensated by the pawns

If you don't fancy this you can always play *11.b5*.

Moller attack

8... Bxc3

Now the key reply is 9. d5, although we will look at 9. bxc3 below.

9. d5

t + l D j + - T
X x X x + x X x
- + s + - + - +
+ - + p + - + -
- + b + s + - +
+ - L - + n + -
p P - + - P p P
R - B q + r K -

9... Bf6

Neither

[9... Na5 ?]

nor

[9... Nd6 ?]

are any good.

[9... Ne5 is better, but after 10. bxc3 Nxc4 11. Qd4 f5 Keene and Levy give 12. Qxc4 d6 13. Nd4 O-O 14. f3 Nc5 with advantage

(Alert and anxious reader: "What about 11...Ncd6? What about 11...O-O?")

[What indeed?](#))

]

[And after 9... Ne7 White continues logically 10. bxc3 O-O 11. Re1 Nf6 12. Bg5 Ng6 13. d6 h6 14. Qd3 hxg5 15. Qxg6 cxd6 16. Nxc5 Qc7 17. Bxf7+ Kh8 18. Re3

```

t + l + - T - J
X x D x + b X -
- + - X - S q +
+ - + - + - N -
- + - + - + - +
+ - P - R - + -
p + - + - P p P
R - + - + - K -

```

winning]

After 9...Bf6, the only try is

```

t + l D j + - T
X x X x + x X x
- + s + - L - +
+ - + p + - + -
- + b + s + - +
+ - + - + n + -
p P - + - P p P
R - B q + r K -

```

10. Re1

[If 10. dxc6 bxc6 11. Re1 Black can continue 11...O-O 12. Rxe4 d5 13. Rf4 dxc4 14. Qa4 c3 15. bxc3 Bxc3 16. Rb1 Qd3 17. Rbb4 Ba6 18. Rbc4 Bxc4 19. Rxc4 Rab8 -+]

10... Ne7 11. Rxe4 d6 12. Bg5 Bxg5 13. Nxc5

```

t + l D j + - T
X x X - S x X x
- + - X - + - +
+ - + p + - N -
- + b + r + - +
+ - + - + - + -
p P - + - P p P
R - + q + - K -

```

13... O-O

[BCO reckons a better line is 13... h6 14. Qh5 O-O 15. Rae1 Nf5 16. Nxf7]

[16. Ne6 fxe6 17. dxe6 Ne7 -+ BCO2]

16... Qf6 Zak]

14. Nxf7 Kxf7

[or 14... Bf5 15. Rh4=]

15. Qh5+ Kg8 16. Rh4 f5 17. Re1 Re8

[We saw ...Ng6 in the Traps section above]

18. Re6 Kf8 19. Be2 Nxd5 20. Qxf5+ Kg8 21. Qh7+ Kf7 22. Rxe8 Kxe8 23. Qg8+ Kd7 24. Bg4+ Kc6 25. Qxd8 winning

```

t + l Q - + - +
X x X - + - X -
- + j X - + - +
+ - + S + - + -

```

```

- + - + - + b R
+ - + - + - + -
p P - + - P p P
+ - + - + - K -

```

If this is all a bit much, White can go instead

9. *bxc3*

when 9... d5

is OK for Black.

```

t + l D j + - T
X x X - + x X x
- + s + - + - +
+ - + x + - + -
- + b P s + - +
+ - P - + n + -
p + - + - P p P
R - B q + r K -

```

White is still ahead in development but Black still has a pawn. At Grandmaster level they have given up on this line, thinking White cannot get enough of an attack going. At club level, though, there may be enough meat left to chew.

Let's look at two example lines, to see how games might go.

10. Bb5 O-O 11. Qc2 Bf5 12. Bd3 Bg6 13. Rb1 Nd6 14. Ba3 b6 15. Ne5 Bxd3 16. Qxd3 Ne7 17. Rfe1 f6 18. Ng4 Qd7 19. Qh3 Rad8 20. Rb2 Ng6 21. Qf3 Rfe8 22. Rbe2 Rxe2 23. Rxe2 Ne4 24. h3 Qa4 25. Bb2 Qxa2 26. Ne3

```

- + - T - + j +
X - X - + - X x
- X - + - X s +
+ - + x + - + -
- + - P s + - +
+ - P - N q + p
d B - + r P p +
+ - + - + - K -

```

when it has all gone minty for White.

So White can try instead

10. Be3 dxc4 11. Re1 f5 12. Nd2 Kf7 13. Nxe4 fxe4 14. Rxe4 Qf6 15. Qe2 Bf5
 16. Qxc4+ Kg6 17. Re3 Rae8 18. Rae1 Rxe3 19. Rxe3 h5 20. h3 h4 21. d5 Ne5 22.
 Qxc7 Nd3 23. Qxb7 Bc8 24. Qc6 Qxc6 25. dxc6 Nf4 26. Re7 a6

```

- + l + - + - T
+ - + - R - X -
x + p + - + j +
+ - + - + - + -
- + - + - S - X
B - P - + - + p
p + - + - P p +
+ - + - + - K -

```

when White has enough pawns to account for the piece, but their scattered placing makes it hard to play for a win.

If you are not convinced by any of these lines (and while they are worth a punt in practice the theory is against them) you can always

play safe
on move 7. So let's look at that next.

Safe main line 7. Bd2

7. Bd2

```
t + l D j + - T
X x X x + x X x
- + s + - S - +
+ - + - + - + -
- L b P p + - +
+ - + - + n + -
p P - B - P p P
R n + q K - + r
```

7... Bxd2+ 8. Nbx d2 d5

Of course.

9. exd5 Nxd5

[A solid line is 10. O-O O-O 11. Nb3]

10. Qb3 Nce7 11. O-O O-O

```
t + l D - T j +
X x X - S x X x
- + - + - + - +
+ - + s + - + -
- + b P - + - +
+ q + - + n + -
p P - N - P p P
R - + - + r K -
```

White has several alternatives in this well-known position:

[12. Ne5]

[12. Ne4]

[12. Bxd5]

[12. Rae1]

[12. Rfe1]

For an example of 12. Rfe1 see the games section.

The closed variation 4...Bb6

4... Bb6 5. d4 Qe7

[6. O-O+ = is good enough, but try instead...]

6. Bg5

```

t + l D j + s T
X x X x + x X x
- L s + - + - +
+ - + - X - B -
- + b P p + - +
+ - P - + n + -
p P - + - P p P
R n + q K - + r

```

This continuation was discovered by Jonathan Mestel and helped him win the UK Championship in 1975. Of course, Black doesn't want to weaken the King's-side with ...f6, when Nxe5 looks very dangerous.

6... Nf6 7. d5 Nd8 8. d6 cxd6

The capture with 8...Qxd6 9. Qxd6 cxd6 is no safer for Black.

9. Na3 a6 10. Nc2 Bxf2+ 11. Ke2 Bc5 12. Nh4 Ne6 13. Nf5 +-

```

t + l + j + - T

```

```
+ x + x D x X x
x + - X s S - +
+ - L - X n B -
- + b + p + - +
+ - P - + - + -
p P n + k + p P
R - + q + - + r
```

Mestel-Doyle '75; White has a large positional advantage and may be winning.

Evans' Gambit 4. b4

4. b4

```
t + l D j + s T
X x X x + x X x
- + s + - + - +
+ - L - X - + -
- P b + p + - +
+ - + - + n + -
p + p P - P p P
R n B q K - + r
```

Evans'

Gambit Declined (4...Bb6)

4... Bb6

The best way to refute a gambit is to accept it.

5. a4 a6 6. Nc3 d6

[6... Nf6 7. Nd5 Nxd5 8. exd5 e4 9. dxc6 exf3 10. Qxf3 Qe7+ 11. Kd1 dxc6 12. Re1 Be6 13. Bb2 +=/+ - estrin]

7. Nd5 Ba7 8. d3 h6

[8... Nce7 Fritz]

9. Be3 +=

```

p + - + b P p P
R - + r + - K -
```

White's lead on development could hardly be greater

22. Qe3+ Kf7 23.

Nd5 Be6 24. Nf4 Qe7 25. Re1 1-0

```
t + - + - L - T
X x + - D j + x
- + - X l X x +
+ - + - + - + -
- + - + - N - +
+ - + - Q - + -
p + - + b P p P
R - + - R - K -
```

[25... Qd7 26. Bb5 Qxb5 27. Qxe6+ Kg7 28. Nd5 Qb2 29. Rab1]

[25... Re8 26. Nxe6 Qxe6 27. Qxe6+ Rxe6 28. Bc4]

[25... Bh6 26. Bc4]

An amazing destruction of the then world No.3 and his PCA championship challenger.

Evans' Gambit with 5... Ba5

```
t + l D j + s T
X x X x + x X x
- + s + - + - +
L - + - X - + -
- + b + p + - +
+ - P - + n + -
p + - P - P p P
R n B q K - + r
```

This is the best line.

6. d4 d6

Lasker's Defence, which led to some disillusionment with the Gambit.

7. Qb3

```
t + l D j + s T
X x X - + x X x
- + s X - + - +
L - + - X - + -
- + b P p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r
```

Black has three tries here, but only the last is trustworthy:

A. 7... Qe7

B. 7... Nxd4

C. 7... Qd7

Lasker's Defence with 7... Qe7

7... Qe7

```

t + l + j + s T
X x X - D x X x
- + s X - + - +
L - + - X - + -
- + b P p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r

```

The trouble with this move is that the Nc6 has no good retreat, and must advance. This leads to trouble. The game might go:

8. d5 Nd4 9. Nxd4 exd4 10. Qa4+ Kd8 11. Qxa5 Qxe4+ 12. Kd2 Qxg2 13. Re1 Nf6 14. Bd3 Qxf2+ 15. Re2 Qg1 16. Na3 Bg4 17. Bb2 dxc3+ 18. Bxc3 Qb6 19. Bxf6+ gxf6 20. Qc3 Kd7 21. Bb5+ c6 22. dxc6+ bxc6 23. Bxc6+ Kd8 24. Qxf6+ Kc7 25. Re7+ Kxc6 26. Rc1+

```

t + - + - + - T
X - + - R x + x
- D j X - Q - +
+ - + - + - + -
- + - + - + l +
N - + - + - + -
p + - K - + - P
+ - R - + - + -

```

26... Qc5 27. Rxc5+ Kxc5 28. Qc3+ Kb6 29. Qb4+ Kc6 30. Qb5#

Lasker's Defence with 7... Nxd4

7... Nxd4

```
t + l D j + s T
X x X - + x X x
- + - X - + - +
L - + - X - + -
- + b S p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r
```

8. Nxd4 exd4 9. Bxf7+ Kf8 10. O-O dxc3 11. e5 Qe7

```
t + l + - J s T
X x X - D b X x
- + - X - + - +
L - + - P - + -
- + - + - + - +
+ q X - + - + -
p + - + - P p P
R n B - + r K -
```

If White consolidates, Black's lost King will die.

12. Bxg8 Rxc8 13. exd6 Qe5 14. Na3 Be6 15. Qxb7 Bd5 16. Qb5 Bb6 17. Nc4 Qe4 18. Ne3

```

t + - + - J t +
X - X - + - X x
- L - P - + - +
+ q + l + - + -
- + - + d + - +
+ - X - N - + -
p + - + - P p P
R - B - + r K -
    
```

This move holds the game for White.

18... Bc6

[18... Bxe3 19. fxe3+ Bf7 20. dxc7]

19. Qb3 cxd6 20. Ba3 g6 21. Rad1 Kg7 22. Qxc3+ Kh6 23. Bc1 Kh5

```

t + - + - + t +
X - + - + - + x
- L l X - + x +
+ - + - + - + j
- + - + d + - +
+ - Q - N - + -
p + - + - P p P
+ - B r + r K -
    
```

24. Nd5

Lasker's Defence with 7... Qd7

This is the only satisfactory line.

7... Qd7

covers f7

```

t + l + j + s T
X x X d + x X x
- + s X - + - +
L - + - X - + -
- + b P p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r

```

Now as far as I can find out the best try for White here is:

8. dxe5!

```

t + l + j + s T
X x X d + x X x
- + s X - + - +
L - + - P - + -
- + b + p + - +
+ q P - + n + -

```

```
p + - + - P p P
R n B - K - + r
```

Now Black has:

CI: 8...dxe5

CII: 8...Bb6

Variation CI: 8... dxe5

```
t + l + j + s T
X x X d + x X x
- + s + - + - +
L - + - X - + -
- + b + p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r
```

9. O-O Bb6 10. Rd1 Qe7 11. a4 a6

[11... a5 is less safe:

12. Bd5 Bg4 13. Rd3 Be6 14. Ba3

```
t + - + j + s T
+ x X - D x X x
```

- L s + l + - +
X - + b X - + -
p + - + p + - +
B q P r + n + -
- + - + - P p P
R n + - + - K -

+ - Shaposhnikov-Veltmänder 1958]

12. Ba3 Qf6

t + l + j + s T
+ x X - + x X x
x L s + - D - +
+ - + - X - + -
p + b + p + - +
B q P - + n + -
- + - + - P p P
R n + r + - K -

13. a5 Bxa5 14. Bd5 Bb6 15. Nbd2 Nge7 16. Nc4 Ba7 17. Rd2 8/=

With enough compensation for the material, according to Estrin.

Variation CII: 8... Bb6

t + l + j + s T

```

X x X d + x X x
- L s X - + - +
+ - + - P - + -
- + b + p + - +
+ q P - + n + -
p + - + - P p P
R n B - K - + r

```

This may be the best line for Black.

9. Bb5 a6 10. Ba4 Qe6 11. Bxc6+ bxc6 12. O-O Rb8 13. Qxe6+ fxe6 14. exd6 cxd6 15. Ba3

```

- T l + j + s T
+ - + - + - X x
x L x X x + - +
+ - + - + - + -
- + - + p + - +
B - P - + n + -
p + - + - P p P
R n + - + r K -

```

+=

In this endgame, White has a slight advantage, according to Estrin.

Appendix 1. Why is it called "Italian"?

The play most characteristic of the late 1700s and later was

dominated by the style of the Italian MODENESE SCHOOL - Italian players and writers like DEL RIO, LOLLI and PONZIANI, through whom the *Italian Game* (*Gioco Piano* and related openings) came into prominence. Fast development followed by *attack* was the name of the game, and beyond this it is difficult to see much theory at all; players were concerned with direct attack - to mate, or lose gloriously in the attempt. From this period we inherit all the older tactical variations of the *King's Gambit* and *Gioco Piano*, where sacrifices were common and their acceptance almost routine. This period should not be thought of as artless - it produced legions of fine analysts and several games of genius, and much was learned about the art of attack.

Sadly, when players learned to decline or return sacrificed material, a lot of the steam went out of these openings. e.g. an old line of the *Danish Gambit* goes **1 e4, e5; 2 d4, exd4; 3 c3, exc3; 4 Bc4, cxb2; 5 Bxb2**. If Black clings to the material White will have a good time, but MIESES showed **5...d5; 6 Bxd5, Nf6** secures open lines and probably the two Bishops. The best line for White here is probably **7 Bxf7+ Kxf7; 8 Qxd8, Bb4+ 9 Ke2, Rxd8** when Black has no extra material but can play to win the ending with the *Queen's-side majority*. Technique was replacing romance in chess.

The play of the American Paul MORPHY brought some additional science to all this, not that everyone recognised it at the time. Through his games he showed that a successful attack must be based on a lead in *development*. Similarly, he showed that a player who is behind in development must not open lines to 'free their position', since these lines will provide

avenues along which the better-developed side will attack - instead, they should keep things closed until they have caught up a bit. Morphy's play was the Italian game perfected, and I have used many of his games in this booklet.

Appendix 2. Oh, if you must... some ideas for playing the Giuoco Pianissimo

If you must play the **Giuoco Pianissimo**, here are some quick hot tips for this line.

```
t + l D j + - T
X x X - + x X x
- + s X - S - +
+ - L - X - + -
- + b + p + - +
+ - N p + n + -
p P p + - P p P
R - B q K - + r
```

Don't be in a hurry to castle: your opponent may play ...Bg4 (or Bg5) and pin your knight against the Queen. If you have castled you probably won't be able to play h3 (or ...h6) without dangerously weakening your king. Steinitz discovered that the sacrificial idea 6. O-O, Bg4; 7. h3, h5! 8.hxg4, hxg4 was playable for Black in many positions (see below) because of the attack on the King down the open h-file: once the Queen gets

to h5 White

is finished. Even playing *1.e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5; 4. Nc3, Nc6; 5. d3, d6; 6.h3* is not advisable as Black may play the standard sacrifice

...Bxh3 at some point, or lever open your king's side with ...g7-g5-g4.

The key question in this line is: *how are you going to develop your queen's*

bishop? White on move six can go *6. Be3* hoping for *6...Bxe3; 7.*

fxe3 when there is a juicy half-open f-file to attack along. Black is better off calmly retreating with *6...Bb6* or even leaving the Bishop at c5.

The analysts gradually agreed that *6.Bg5, the Canal Variation, is the best move.* One line of this goes

6...h6; (this is OK for Black before castling) when the main line goes *7.Bxf6, Qxf6; 8.Nd5, Qd8.* White has given up the Bishop pair to achieve a bit of initiative. [*There is a hairy line with 6.Bg5, h6; 7.Bxf6, Qxf6; 8.Nd5, Qg6!?* *9.Nxc7+* which is supposed to be poor for Black if White plays *9.Rg1* instead, but White has to prove it!] Other ways to play for Black are to hit the other bishop with *6...Na5* (as in the final game) or to play himself *6...Be6.*

in the Canal Variation: to *emphasise the pin on the Nf6*, if you're allowed, with moves like *Nd5*, and otherwise threaten to give Black doubled, and therefore weak, f-pawns. I played a miniature with this theme at the British Universities' Congress some years ago:

Regis (Exeter) - Orpwood (Salford), 1987.

1. e4 e5 2. Bc4 Nc6 3. Nc3 Nf6 4. d3 Bb4 5. Nge2 O-O 6. O-O d6 7. Bg5

Na5 8.**Bxf6! gxf6 9. Nd5 Bc5 10. b4 Nxc4 11. dxc4 c6 12. bxc5 cxd5 13. cxd5 dxc5****DIAGRAM**

```

14. Ng3 Kh8 15. Qh5 Qd7? 16. Qh6 Qd6 17. Nh5 Rg8 18. Nxf6 Rg7 19. Qxg7+ 1-0

(Ne8+ will leave White a rook ahead)

again in the Canal Variation: move the Nc3 to e.g. d5 and *play for c3 and d4* with a central space advantage. The knight on c3 can relocate to e3...

try to open up the f-file with f4: this will require you to play Be3 to stop a check from the Bc5 and to move the other Knight e.g. Nh4. From h4 the Knight can threaten to go to f5 when Black may be reluctant to remove it by ...g6 which will create weaknesses. A Queen's Knight that has travelled from c3-d5-e3 also puts pressure on this square, and if Black does play g6 then Ne3-g4 hits all the soft spots.

And here are some traps:

A trap in the Giuoco Pianissimo

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. d3 d6 5. Nc3 Nf6 6. Bg5 h6 7. Bxf6 Qxf6
8. Nd5 Qd8 9. c3

6... h6 7. Bh4 g5 8. Bg3 h5! 9. Nxc5 h4

```

t + l D j + - T
X x X - + x + -
- + s X - S - +
+ - L - X - N -
- + b + p + - X
+ - + p + - B -
p P p + - P p P
R n + q + r K -

```

10.Nxf7 hxg3 11.Nxd8 Bg4 12.Qd2 Nd4 13.Nc3 Nf3+ 14.gxf3 Bxf3 and wins 0-1

Even armed with all these ideas it's really not that good a line to play. I include one last game which is intended to put you off it for life!

Example Game in the Giuoco Pianissimo: Chambers-Vorhees (Dayton, Ohio) 1972

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. d3 d6 5. O-O

Too early: invites ...Bg4.

5...Nf6

```
t + l D j + - T
X x X - + x X x
- + s X - S - +
+ - L - X - + -
- + b + p + - +
+ - + p + n + -
p P p + - P p P
R n B q + r K -
```

This is a prime example of how not to play for this position for White.

6. Ng5

Premature.

6...O-O 7. Bxf7+ Rxf7 8. Nxf7 Kxf7

White has snatched what he can.

9. h3

```

t + l D - + - +
X x X - + j X x
- + s X - S - +
+ - L - X - + -
- + - + p + - +
+ - + p + - + p
p P p + - P p +
R n B q + r K -

```

Well, this does stop ...Bg4, but invites a worse fate.

9... Be6 10. Nc3 Qd7 11. Qf3

Not good enough, I'm afraid.

11...Nd4 12. Qd1

```

t + - + - + - +
X x X d + j X x
- + - X l S - +
+ - L - X - + -
- + - S p + - +
+ - N p + - + p
p P p + - P p +
R - B q + r K -

```

12... Bxh3 13. gxh3 Qxh3 14. Be3 Nf3+ 0-1

Exeter Chess Club: Moller attack

From D.Regis@exeter.ac.uk Mon Dec 2 13:33:20 1996

Subject: Re: Guioco Piano notes

To: lorda@boat.bt.com (Andrew Lord)

Date: Mon, 2 Dec 1996 13:33:18 +0000 (GMT)

Hi Andrew

> I've just got addicted to chess

Sympathy: there is no cure...

> I'm stuck on a problem with a Guioco Piano line. I got as far
> as:

>
> 1. e4 e5
> 2. Nf3 Nc6
> 3. Bc4 Bc5
> 4. c3 Nf6
> 5. d4 exd4
> 6. cxd4 Bb4+
> 7. Nc3 Nxe4
> 8. 0-0 BxN
> 9. d5

>
> Then you say some black options don't work, including 9...Ne5
> You cite a progression:

>
> 9. ... Ne5
> 10. bxc3 NxB
> 11. Qd4

>
> You then have black playing 11. ... f5 to protect one of the
> attacked Knights, allowing the white Queen to take the other
> one. Instead why can't black simply play 11. ... Ncd6? I can't

> see a way after this for white to win the piece back.

Interesting - the verdict on 11...f5 I think has stood for 100 years, until now! - but the best move probably isn't 11...Ncd6, or 11...f5, but 11...0-0.

Let's see: after

9...Ne5 10.bxc3 Nxc4 11.Qd4

Black can play instead of 11...f5:

[A] **11...Ncd6(?)**

White doesn't get the piece back but seems to get a strong attack through

12.Qxg7 Qf6 13.Qxf6 Nxf6 14.Re1+ Kf8 15.Bh6+ Kg8 16.Re5 Nfe4 17.Re7 as in Durao-Ferrera, 1994;

[B] **11...0-0(!)**

12.Qxc4

(*12.Qxe4 b5 13.a4 c6 14.axb5 cxb5 15.Qd4 Nb6 16.Be3 d6*

and White has nothing, as in a Dzindzhikashvili-Karpov rapid game)

12...Nd6

And maybe White's best try is now **13.Qd3**, according to Gufeld and Stesko.

I'll make a note on the page.

Thanks for your prompt: if nothing else, I've discovered that these old lines are far from played out!

May your pieces harmonise with your Pawn structure and your sacrifices be sound in all variations

Exeter Chess Club: An introduction to the Sicilian Defence

"Never go in against a Sicilian when *death* is on the line!"

-- from **The Princess Bride** (via Christine Malcom); WAV file listed at [MovieSounds](#).

I'll discuss here first some of the ideas behind the Open Sicilian. Chess magazines are full of quick White kills against the Sicilian. Why do players bother with it, then? Because the longer games where the attack founders and Black wins the endgame are too long for magazines.

Having looked at the Open Sicilian from both sides' points of view, I'll then show you some examples of how White can play for a win without having to read Nunn's "*Beating the Sicilian 3*" every night for the next two years. I do like the Sicilian Defence, for both sides, but got discouraged as Black by all the theory, particularly after I suffered at the hands of several White players with a "pet" anti-Sicilian weapon like those below!

An Introduction to the Open Sicilian

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6

Black has alternatives on move 2, but will usually play ...Nf6 on move 4 to prompt:

5. Nc3

The point of Black forcing this move now is to avoid the Maroczy Bind - see below. The characteristics of most main line Sicilian games can already be seen.

1. White has more space and better development (Black has to move the e- or g-pawn to get the Bf8 out, and may have to spend another move on ...a6)
2. Black has an extra central Pawn; White has no compensating structural advantage like a Queen's-side majority - in fact, the c-Pawn is backward on an open file. Larsen has claimed that this means the Sicilian is strategically superior for Black, and he may be right.
3. Therefore, the short-term chances favour White, but as the game goes on the ending may favour Black. Sicilian games are usually a race for White to make something out of the temporary advantages in space and mobility before Black completes development and piles up on the e-pawn or the c-file. There are some common tactical themes based around sacrifices at h7, d5 and b5; Stean talks about White arranging a "tactical accident" for Black, whereas Larsen refers to White's approach in the Open Sicilian as a "cheap trick" (!).
4. The e-Pawn is a site of contention; Black may try to attack it with ...Bb7, ...Nb8-d7-c5; White may try to advance or reinforce it. The move ...b5 by Black may threaten to dislodge the Knight defender on c3, and expose the c-Pawn.
5. The positions are very flexible and many plans and sub-plans are available for each side. The sharpest variations involve hazardous negotiations for each side, but slower positional approaches are adopted too.

After **5. Nc3** Black can play:

5...e6 the Scheveningen Variation,

5...g6, the Dragon Variation

5...a6, the Najdorf Variation

Another common move is 5...Nc6, which is usually named for White's reply:

6. Bg5, the Richter-Rauser attack

6. Bc4, the Fischer-Sozin attack

The Sicilian is a vast battleground where many areas have been mapped in detail and I cannot attempt any sort of summary of the theory in these various lines.

However, there are two general structural differences which can be used to unlock some of the ideas: **firstly**, where is Black going to put the Bf8? If Black plays ...e6, this is solid, whereas ...g6 and ...Bg7 is much more active, but more risky. These are the Paulsen/Scheveningen and Dragon structures, respectively. **Secondly**, if White can play c2-c4, this denies Black three of the key opportunities for active play: ...d6-d5, ...b7-b5, and generally chances down the c-file with a minority attack against the pawn on c2. This is the **Maroczy Bind**, which while not a losing option for Black, is a lot less fun than lines without c2-c4.

There are other structures, like when Black plays ...e7-e5, but that's too chewy for this booklet. There is a bit of material in the sections on [Knights](#) and [Planning](#).

- [White's attacking chances against the Paulsen/Scheveningen: Ljubojevic,L - Andersson,U \(Wijk Aan Zee\), 1976](#)
- [Black's chances in the Paulsen/Scheveningen: Renet - Taimanov, Montpellier 1986](#)
- [White's chances against the Dragon: Karpov - Korchnoi, Moscow 1974](#)
- [Black's chances in the Dragon: Prokopp - Deuel \(corr. 1986\)](#)
- [White's chances if allowed to play c4: The Maroczy Bind](#)
- [Black's chances with a minority attack in the endgame](#)

An introduction to beating the Sicilian

The repertoires below offer you three ways of playing against most of the semi-open defences, and also tell you what to do against some of the less common lines after 1. e4 e5 2. Nf3.

The three approaches are:

- **Fast attacking game with pieces**
- **Slower attacking game with f4**
- **King's Indian Attack with g3**

Which you choose will depend on what sort of player you are. It may also depend on what you hope to play after 1. e4 e5.

Fast attacking game with pieces

- Giuoco Piano (my main recommendation for junior players) or
- Scotch Game
- [A. Piece attacks against the common half-open defences](#)

Slower attacking game with f4

- Vienna Gambit or
- King's Gambit)
- [B5. Playing f4 vs. Sicilian \(a\) 1. e4 c5 Grand Prix attack](#)
- [B5. Playing f4 vs. Sicilian \(b\)Traditional Closed Sicilian](#)

King's Indian Attack with g3

- KIA with 1. e4 e5 2. Nf3 Nc6 3. g3 or
- in the Vienna 1. e4 e5 2. Nc3 Nc6 3. g3
- [Introduction to the King's Indian Attack](#)
- [C5. KIA vs. Sicilian](#)

Exeter Chess Club: Knight outposts

Knight outposts

When looking at openings I often ask players to perform the following exercise:

On a bare chessboard, put a knight on a1. How many squares can it move to? Just two. On b1, three. On c1, four. On c2, six. On c3, eight. From this you can see that moving from b1 to c3 in the opening makes the knight more than twice as powerful.

Now, this is part of the argument about control of the centre, and helps explain why development towards the centre is so important. But it is particularly true of knights, because their step is so small. A bishop developed in *fianchetto* on b2 or g2 can extend its reach to the other side of the board, but a knight on b2 can hardly make it to the half-way line. Knights become much stronger by being moved into the centre, but as a rule are vulnerable to being swapped off or nudged by pawns. An *outpost* is a square which a knight can occupy, which is either immune from attack (like d5 in the lower diagram) or the opponent would get into other sorts of trouble by getting rid of it (like in the Tal game overleaf). So, one of the key strategic ideas in chess is the *knight outpost*.

[Event "knight outpost?"][Site "-"][Date "1945.?.??"][Round "?"]

[White "smyslov"][Black "rudakovsky"][Result "1-0"]

1.e4 c5 2.Nf3 e6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 d6 6.Be2 Be7 7.O-O O-O 8.Be3 Nc6 9.f4 Qc7 10.Qe1 Nxd4 11.Bxd4 e5 12.Be3 Be6 13.f5 Bc4? [13... *Bd7 was essential*] 14.Bxc4 Qxc4 15.Bg5 {!} 15...Rfe8 16.Bxf6 Bxf6 17.Nd5 {!} **DIAGRAM**

17...Bd8 (17...Qxc2 18.Rf2 Qc6 19.Rc1 Qd7 20.Nc7) **18.c3 b5 19.b3 Qc5+ 20.Kh1 Rc8 21.Rf3!** Black's pieces are passive; White has enough of a bind to effect a King's side attack.

21...Kh8 22.f6 gxf6 23.Qh4 Rg8 24.Nxf6 Rg7 25.Rg3 Bxf6 26.Qxf6 Rcg8 27.Rd1 d5 28.Rxg7 {!} 1-0 (28.Rxg7 Rxg7 29.Rxd5 Qf8 30.Rd8)

David Norwood describes an exercise given to players in the old USSR where they were given the position in the diagram

and asked:

remove pairs of pieces of equal value to White's advantage.

The solution they were looking for was to remove all the Qs, Rs, and everything else apart from the Kings, one White knight and the Black B on f8. Then White's knight could go to d5, dominating the board, while Black's poor bishop couldn't ever swap it off. It would be a pretty miserable bishop anyhow, which is our next idea - the *bad bishop*. But this exercise also starts to show you how to plan a game of chess based on the pawn structure: this 'remove pairs of pieces' exercise is what you can try and do by exchanging pieces, and this is pretty well what Smyslov does in the illustrative game.

More knight outposts.

Here's three more, in increasing difficulty. The Boleslavsky game works on the same strategical principles as the Smyslov one but is more tense in terms of tactics. The Botvinnik game shows an outpost being created rather than given to you, and the Tal game shows a common Ruy Lopez theme of outpost with overprotection.

Fighting tactically with an outpost.

{boleslavsky-lisitsyn, moscow 1953}

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. Be3 Bg7 7. f3 O-O 8. Qd2 Nc6 9. O-O-O Nxd4 10. Bxd4 Qa5 11. Kb1 e5 12. Be3 Be6 13. a3 Rfd8 14. Nb5 Qa4 {taking the d6 pawn loses a piece, but White has a great pawn sacrifice of his own}

15. c4! Bxc4 (else White has a bind) 16. Nc3 Qb3 17. Bxc4 Qxc4 18. Bg5 Qe6 19. Bxf6 Qxf6 20. Nd5 Qh4 21. Qe2 Bf8 22. Qf1! Rac8 23. g3 Qg5 24. h4! Qh6 {not ...Qxg3, Rd2!} 25. g4 g5 26. hxg5 Qxg5 27. Rh5! Qg6 28. g5! h6 29. Rxh6! Qxg5 30. Rh5! and Black resigns: 30... Qg6 31. Qh1 Qe6 32. Rh8+ Kg7 33. Qh7#

Building an outpost.

[Event "?"] [Site "amsterdam"] [Date "1965.??.?"] [Round "?"]

[White "botvinnik, m."] [Black "donner, jh"] [Result "1-0"]

1.c4 Nf6 2.Nf3 e6 3.g3 d5 4.Bg2 Be7 5.O-O O-O 6.b3 b6 7.Bb2 Bb7 8.cxd5 Nxd5 9.d4 c5 10.dxc5 Bxc5

11.Nbd2 Nd7 12.a3 N5f6 13.b4 Be7

Pretty level-looking? But Botvinnik has a keen and clear mind, and has spotted an outpost opportunity.

14.Nd4 Bxg2 15.Kxg2 Qc7

Perhaps now you can start to see it too. The exchange has made Black's white squares on the Q-side a little weak, and if White can use his extra space to get in b5, suddenly the N has a dream home built on c6.

16.Qb3 Rfc8 17.Rfc1 Qb7+ 18.Qf3 Nd5 19.e4 N5f6 20.b5 a6 21.Nc6

Bingo! The rest is an effective exercise in realising this advantage. White will trade a pair of rooks - so Black can't use his two rooks to fight back along a file, but leaving White a rook to be a nuisance with. Black's one rook just can't dodge well enough to stop this...

21...Bf8 22.a4 axb5 23.axb5 Rxa1 24.Rxa1 Ra8 25.Rd1 Ne8 26.Nc4 Nc5 27.e5 Rc8 28.Ra1 Rc7 29.Ra7 Qxa7 30.Nxa7 Rxa7 31.Nxb6 1-0

Outpost with overprotection of supporting pawn (tal-bronstein)

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.O-O Be7 6.Re1 b5 7.Bb3 d6 8.c3 O-O 9.h3 Na5 10.Bc2 c5 11.d4 Nc6 12.Nbd2 Qb6 13.dxc5 dxc5 14.Nf1 Be6 15.Ne3 Rad8

16.Qe2 g6 17.Ng5 c4 {!} (making an outpost out of d3) 18.a4 Kg7 19.axb5 axb5
20.Rb1 Na5 21.Nf3 Qc7

22.Nd5 {!} 22...Bxd5 23.exd5

Unleashing the force built up behind the e-pawn.

23...Rfe8 24.Qxe5 Qxe5 25.Nxe5 Nxd5 26.Ra1 Nb3 27.Bxb3 cxb3 28.Bh6+ {!}
28...Kg8 {?!} 29.Nc6 Rc8 30.Rad1 Rxc6 31.Rxd5 f6 32.Rxb5 g5 33.Rxb3 Kf7 34.
Rb7 Re6 35.Rxe6 Kxe6 36.h4 Rg8 37.f4 Bc5+ 38.Kf1 gxh4 39.Rb5 Rc8 40.f5+ Kd6
41.b4 h3 42.Rxc5 h2 43.Bf4+ 1-0

Exeter Chess Club: Twentieth-Century planning

Twentieth-Century planning

Some time ago, we looked at this one:

[Event "rooks on ranks and files"][Site "-", Leipzig][Date "1894.??.?"][Round "?"]

[White "Tarrasch"][Black "von Scheve"][Result "1-0"]

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Nf3 Be7 5.Bf4 c6 6.e3 Nbd7 7.h3 Ne4

Tarrasch: *"The decisive error. After the exchange of Knights, Black's capturing Pawn becomes weak, and needs protection by ...f5. It is then attacked by f3, forcing Black to exchange and open up the Knight file for White. Thereupon there ensues a combined attack of White's Queen, both Rooks and the Queen Bishop against the Knight Pawn (the keystone of the Castled position) an attack which is irresistible."*

He adds modestly: *"I know of no game in all the chess literature in which it is possible to conceive of so detailed a plan, leading almost to mate, and in which the remaining 20 moves lead up to a catastrophe."*

8.Nxe4 dxe4 9.Nd2 Bb4 10.a3 Bxd2+ 11.Qxd2 O-O 12.Qc2 f5 13.Bd6 Re8 14.O-O-O Nf6 15.Be5 Bd7
16.f3 exf3 17.gxf3 b5 18.Rg1 Rf8 19.Rd2 Rf7 20.Rdg2 a5

The prediction fulfilled.

21.Qf2 Ne8 22.Rg5 Qe7 23.Qh4 Nf6 24.Qh6 Ra7 25.Bd6 Qxd6 26.Rxg7+ Kf8 27.Rxh7+ Ke7 28.Rxf7+
Kxf7 29.Rg7+ Kf8 30.Qxf6+ 1-0

This is an unusually clear example. But do you have to go through all this planning stuff? You do if you want to get better results. Of course, you have been planning for ages - all that stuff about K-side pawn storms, Knight outposts and Bad bishops was all basic planning. But you do need to do it.

Unplanned chess

[Event "?"][Site "Zurich"][Date "1953.??.?"][Round "?"]

[White "Petrosjan"][Black "Euwe"][Result "1-0"]

1. Nf3 Nf6 2. g3 d5 3. Bg2 Bf5 4. d3 e6 5. Nbd2 h6 6. O-O Bc5 7. Qe1 O-O 8. e4
BRONSTEIN comments:

'Black's last few moves seem rather inconsequential to me. By move ten Black should not only have formed a plan, but should be sticking to it as well.'

KOTOV adds: '...the pawn exchange was illogical. He should have retreated the bishop to h7, maintaining the tension in the centre. If, however, he had decided to exchange pawns in this way which was a possible line, he should have followed it up by getting rid of his bishop by exchanging it for the White N at e4.'

The B got stuck on h7, and the other pieces couldn't get going. Eventually White's better pieces supported a general advance which won a pawn and the game.

8...dxe4 9. Nxe4 Nxe4 10. dxe4 Bh7 11. b4 Be7 DIAGRAM

We now have a classic 'offside piece' position.

12. Bb2 Na6 13. a3 c6 14. Rd1 Qc8 15. c4 Nc7 16. Qc3 Bf6 17. Ne5 Rd8 18. Bf3 Ne8 19. Rxd8 Qxd8 20. Rd1 Qc7 21. c5 a5 22. Bg2 axb4 23. axb4 Rd8 24. Rxd8 Qxd8 25. Qc2 Nc7 26. Bf1 Nb5 27. f4 Kf8 28. Kf2 Bxe5 29. Bxe5 f6 30. Bb2 Ke7 31. Bc4 31...Bg6 32. Ke3 Bf7 33. g4 Qc7 34. e5 Qd8 35. exf6+ gxf6 36. h4 Nc7 37. Qc3 Nd5+ 38. Bxd5 Qxd5 39. Qxf6+ Ke8 40. Qh8+ Kd7 41. Qg7 Ke8 42. Bf6 Qb3+ 43. Bc3 Qd1 44. Qh8+ Kd7 45. Qb8 Qc1+ 46. Bd2 Qg1+ 47. Kd3 Qf1+ 48. Kc2 Qa6 49. h5 Qa2+ 50. Kd3 Qb1+ 51. Ke2 Qe4+ 52. Kf2 Qd4+ 53. Be3 Qxb4 54. Qf8 Qb2+ 55. Kg3 Qf6 56. Qd6+ Kc8 57. Bd4 Qd8 58. Qxd8+ Kxd8 59. Bg7 Kc7 60. Bxh6 b6 61. cxb6+ Kxb6 62. Kh4 1-0

[For this and other games below from the Zurich 1953 tournament, Kotov and I are relying on Bronstein's great book.]

Here is another example of a good plan, played against a player who didn't have much of a plan:

[Event "?"] [Site "ussr ch'p SF"] [Date "1939.??.?"] [Round "?"]

[White "Sokolsky"] [Black "Botvinnik"] [Result "0-1"]

**1.c4 Nf6 2.Nc3 d5 3.d4 g6 4.Nf3 Bg7 5.e3 O-O 6.Be2 e6 7.O-O b6 8.cxd5
exd5 9.b3 Bb7 10.Bb2 Nbd7 11.Qc2**

"It gradually becomes clear that White has no plan and merely concerns himself with developing his pieces. You might have been able to play that fifty years ago, but nowadays, when every master makes a plan after the first six to eight moves of the game, there is no better way of getting into a cramped and passive position than thinking of development alone." - BOTVINNIK

11...a6 12.Rac1 Rc8 13.Rfd1 Qe7 14.Qb1 Rfd8 15.Bf1 c5 16.dxc5

"Yet another positional error. It is not possible to exploit the hanging pawns at c5 and d5 with a large number of minor pieces on the board by attacking them from the back line! Meanwhile White parts with his last strong point in the centre - the strong point at d4. This brings Black's Bb7 to life, and the tempo of the game speeds up" - BOTVINNIK

Black exploits his extra space with a vigorous attack on the K-side. He cleverly realises he needs the Bg7 to pressurise e3, so fearlessly gives up the long diagonal a1-h8 to White.

16...bxc5 17.Ne2 Bh6 18.Ba3 Ng4 DIAGRAM

White's natural moves have let him drift into a passive position.

19.Qd3 (19.Nc3 Bxe3) 19...Nde5 20.Nxe5 Qxe5 21.Ng3 Qf6 22.Nh1 d4 23. Qe2 Ne5 24.exd4 cxd4 25.Rxc8 Bxc8 26.Re1 d3

White's position has continued to slide while Black has been getting more menacing... Time for the final push:

26... d3 27.Qd1 Bg4 28.Qa1 d2 29.Rxe5 d1=Q 30.Re8+ Rxe8 31.Qxf6 Be2
 And Black won easily ...0-1

One more example - losing a better game by playing without a plan.

[Event "?"][Site "Zurich IZT"][Date "1953.??.?"][Round "?"]

[White "Gligoric, S."][Black "Kotov, A."][Result "0-1"]

1.e4 c5 2.Nf3 d6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 a6 6.g3 e5 7.Nde2 Be6 8.Bg2 b5 9.O-O Nbd7 10.a4 b4 11.Nd5 Nxd5 12.exd5 Bg4 13.Bd2 a5 14.c3 bxc3 15.Bxc3 Qb6 16.h3 Bh5 17.Kh2 Be7 18.f4 DIAGRAM

"White has a plus. Sometimes 'natural' moves suffice, but against able and determined defence the attack may need to be pursued along a tightrope of only moves. 18 g4! first then f4 would have been more incisive, if more risky."
BRONSTEIN

18...Bxe2 19.Qxe2 Bf6 20.Qc4 O-O 21.Qc6 Rfd8 22.Rae1 Qb8 DIAGRAM

"Backing up for a running jump... the initiative has passed to Black." **BRONSTEIN**

Kotov has been much exercised by this notion of planning, and in his books gives lots of examples of planless play being punished. You can often see glorious examples of well-planned play - like in the old master games of Tarrasch and Steinitz, where a plan conceived early in the game was carried out to perfection and gradually overwhelmed the opponent. Tarrasch and Steinitz also showed how to form a plan - where to find weak points, and how to attack at the weakest point. I'll discuss this in more detail below, but first another word from Kotov and Bronstein on planning in general. Kotov describes reading over a game of Romanovsky's against Vilner, which made a powerful impression on the young Kotov - here, a plan, which Romanovsky stuck to over 5 hours, eventually resulted in victory. ROMANOVSKY commented on his own game:

" 'The last and main conclusion to be drawn and the main one is as follows. In every game we ought to have a single basic plan, and by carrying out this plan we ought to get a prolonged initiative. The initiative so gained will tend to increase until it reaches the stage where it is sufficient to force a win.' ...

"My own reaction" says KOTOV, "was immense admiration. Everything foreseen and planned from the first move to the last... I tried to start playing in a planned fashion... but I got precisely nowhere! I would envisage a long siege of my opponent's pawn at a6 but was distracted by threats on the f-file... My games still consisted of isolated episodes which I feverishly tried to knit together into a harmonious whole...

"It was only much later ... that the question of a single plan became clear to me... In the Vilner game it was a struggle between unequal sides. When, however, you meet a strong inventive opponent and he counters every one of your intentions not only by defensive but also by counter-attacking measures, then it is far from simple to carry out a single plan...

"... I finally concluded: 'A single plan is the sum total of strategic operations which follow each other in turn and which each carry out an independent idea that arises logically from the demands of a given position'. ...

*The definition given above is supported by the following quotation from Bronstein: 'Due to Tarrasch * an idea grew up that is still prevalent nowadays, the idea that there are the so-called logical games in which one side carries out a logical plan from beginning to end rather like a theorem in geometry. I do not think that there are such games between opponents of the same strength and the annotator who*

gives that impressions is often the winner of the game who makes out that what happened is what he wanted to happen' "

Znosko-Borovsky says much the same thing in his **How Not To Play Chess** lecture. So, in the examples I gave above (and more below), read and believe when I say you need a plan, but remember that real chess is likely to be more messy and less smooth. Unless you are playing an opponent who hasn't got a clue you will have to keep chopping and changing plans to cope with the changing situation on the board. That's life...

Modern chess planning

This century has not produced any great new theorists like Steinitz or Nimzovitch, rather an approach to chess which takes no theory for granted. Novel play in the opening has become increasingly sophisticated, and players will defend the most dreadful-looking pawn structures if they get some sort of activity for it. Chess has become more concrete, more dynamic, and more difficult. Let's have a look at a couple of examples:

This position, arising after **1 e4, c6; 2 d4, d5; 3 Nc3, dxe4; 4 Nxe4, Nf6; 5 Nxf6, exf6** (now we more often play 5...gxf6); **6 Bc4, Bd6; 7 Qe2, Be7; 8 Nf3, O-O; 9 O-O**, was well-known to players and theorists of the 19th century. Lasker, for example, comments:

"White's plan consists in realising his pawn superiority on the Queen's side while remaining passive on the King's side. Black, on the other had will atttempt to force

his opponent to advance one of his pawns on the King's wing, in order to start play against White's King's side with his pawns."

Lasker has in mind moves for White such as c4 and d5 to create a passed pawn, and for Black ...Bg4, ...Bd6, ...f5 and ...Qh5. In fact play went **9 ...Bd6; 10 Re1, Bg4; 11 Qe4! Bh5; 12 Nh4, Nd7; 13 Qf5**. Steinitz and Lasker would undoubtedly have criticised White's crude and 'unjustified' attack. What's going on? Ragozin, a strong and experienced Soviet master, must have been aware of Lasker's views, and of the theories of Steinitz, so why is he playing on the 'wrong' side? He has made in fact a much more dynamic and concrete assessment of the position which notes, not just the Q-side majority, but also: the awkwardly placed bishops, missing Nf6, the compromised f-pawns and White's development and control of space. Given time, Black could no doubt disentangle his pieces. Ragozin gives him no time at all.

13...Nb6; 14 Qxh5, Nxc4; 15 Bh6!! Qd7 (can you find the win after 15... gxf6?); **16 b3, Nb6; 17 Nf5, Kh8; 18 Re4, Bxh2+ 19 Kh1** and Black resigned.

This is the real contribution of the 20th century to chess theory, in which SOVIET players have been dominant. Players look beyond the geometry of pawn formations and have moved to a more flexible and more dynamic style of play. There are no new general principles, because modern players do not believe in general principles. Players like BRONSTEIN and BOLES LAVSKY turned established ideas on their heads in the 1950s, championing Black's dynamic chances in the King's Indian and Sicilian.

There is another good example of modern planning from Bronstein's superb book on the 1953 Candidates tournament **The Chess Struggle in Practice**.

In this line of the King's Indian, an opening he and Boleslavsky more or less re-invented, White has a significant space advantage, and Black has a 'backward' d-pawn on an open file, although he has covered the outpost on d5. Black has some good pieces: the Bg7 and Nc5 are well-placed, and the Bc8 and Re8 also have some potential.

Bronstein comments:

"I think now is the time to acquaint the reader with the mysteries of the Black d-pawn in the King's Indian. Even though it is situated on an open file and therefore always exposed to attack, it is not a very easy nut to crack. The simplest method for White is apparently to retreat the Knight from d4, but d4 is precisely where the Knight needs to be: its jobs are to supervise b5, c6, e6, and f5 and to buffer the influence of the Bg7. Only after White has taken steps against possible Black attacks (...a3, ...Be6, ...f5) can his Knight leave the centre, but during that time Black can regroup to cause worries elsewhere.

"So the weakness of the d-pawn proves to be imaginary. Contemporary methods of play in the opening recognise the illusory weakness of such pawns. But it was exactly this 'eternal' weakness of the Pd6 that led to the King's Indian being regarded as dubious.

The most dramatic recent example of this is Evgeny Sveshnikov's cherished variation of the Sicilian, sometimes known as the Pelikan: **1 e4, c5; 2 Nf3, Nc6; 3 d4, cxd4; 4 Nxe4, Nf6; 5 Nc3, e5; 6 Nb5, d6; 7 Bg5, a6; 8 Bxf6, gxf6; 9 Na3, f5!?** Black will use the extra central pawns and piece activity to stop White getting a proper hold on the weaknesses on ...d6 and ...f6/...h6.

Zinn-Sveshnikov, Decin 1974: 1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 e5 6. Ndb5 d6 DIAGRAM

Black has an obvious hole on d5; White sets out, in textbook fashion, to occupy it. 7. Bg5 a6 8. Na3 b5 9. Bxf6 gxf6 10. Nd5 Mission accomplished! DIAGRAM

But at what cost? The outpost stands unsupported by any other White pieces, and the Na3 is at present a

bit lost. Black's pawns are very muddled but control a lot of key squares (c4,d4 and f4). The muddling also gives Black the open g-file.

Let's see how things unfold

10... f5 11. Bd3 Be6 12. Qh5 Bg7 13. O-O f4 14. c3 O-O 15. Nc2 f5 DIAGRAM

The muddled pawns dominate the centre and the King's side, while White's pieces are still looking for a decent plan. Black now attacks down the open g-file. **16. Ncb4 Nxb4 17. Nxb4 d5 18. exd5 Bd7 19. Bc2 Be8 20. Qe2 Kh8 21. Rad1 Qh4 22. f3 Rf6 23. Qe1 Qg5 24. Qxe5 Bd7 25. Qe7 Rg8 26. Qxd7 Rf7** 0-1 DIAGRAM

Games like this may make the classically-trained chessplayer despair, but they have added a richness and excitement to our understanding of the game.

" Their point of view can be summarized as follows: what had for generations been accepted as a weakness, such as a hole or an isolated pawn, was not weak unless or until the opponent began to attack it; a much smaller hostile weakness which could be attacked first was in fact a greater weakness. Thus the dynamic approach brought about a radical adjustment in the views on weakness and strenght. It was no longer possible to measure one's weakness against those of one's opponent by the old method, but it was necessary to assess also the potentialities and speeds of the relative attacks. This called for a new degree of acute positional judgement, and in this was the Russian school has specially trained itself."

-- **Dynamic Chess** by R.N. Coles; I am grateful to Ariel Quinatana for supplying this quote.

A5. Piece attacks vs. Sicilian: lines with piece play

A5.1. Ideas with Be2

It would be wrong to say there is much theory on these lines.

The basic idea is to develop the King's side pieces quickly, and play c3 and d4 (very much the same plan as the normal 1. e4 e5 openings).

1. e4 c5 2. Nf3

Now Black has a basic choice between 2...d6, 2...Nc6 and 2...e6. Alternatives are less strong, e.g. 2...a6 3. c4 or 2...Nf6 3. e5. These should not be scorned - GMs have played each line - but are less good for Black than normal lines.

2...d6

*[after 2... e6 White can play an interesting gambit, borrowed from a variation of the English Opening:
3. Be2 Nc6 4. b4 Nxb4*

[4... cxb4 5. d4]

5. c3 Nc6 6. d4;

(compare the line 1. c4 e5 2. Nc3 Nf6 3. Nf3 e4 4. Ng5 b5)]

3. Be2 Nf6

[3... e6 4. c3 Nc6 5. d4 Nf6 6. Nbd2]

4. c3 Nc6 5. d4 cxd4 6. cxd4 Qa5+ 7. Nc3 Nxe4 8. d5

...with interesting gambit play in each line.

A5.2. Ideas with Bb5

Rossolimo Variation with 2... Nc6

3. Bb5

Now the most common line is

3...g6

Alternatives:

[3... Nf6 e.g. 4. e5 Nd5 5. Nc3 Nc7 6. a4 Nxb5 7. axb5]

[3... e6 e.g. 4. O-O Nge7 5. c3 d5 6. exd5]

4. O-O Bg7 5. c3 Qb6 6. Na3 Nf6 7. Re1

[or 7. e5 Nd5 8. Bc4 Nc7 9. d4]

...when White has good play.

Rossolimo Variation with 2...d6

3. Bb5+

This is a complex line. After 3...Bd7 White will often play 4. Bxd7+ and 5.c4, placing the pawns on light squares to complement the dark-squared bishop.

One example in another line:

3... Nd7 4. d4 cxd4 5. Qxd4 Ngf6 6. Bg5 e6 7. Nc3 Be7 8. O-O a6 9. Bxd7+ Bxd7 10. Rad1 Bc6 11. Rfe1 O-O 12. Bxf6 gxf6

Again, White has good piece play, although the bishops may be dangerous

Example games A5

A5.1. Examples with Be2

Basman-Stein, Hastings 1974

This is a famous game in this line.

1. e4 c5 2. Nf3 d6 3. Be2 Nf6 4. c3 Nc6 5. d4 cxd4 6. cxd4 Nxe4 7. d5 Qa5+ 8. Nc3 Nxc3 9. bxc3

9...Ne5

[9... Nd8 may be better]

10. Nxe5 Qxc3+ 11. Bd2 Qxe5 12. O-O Qxd5

[The main alternative is 12... a6]

Nikolenko-Obukhov 1991

13. Rb1 g6 14. Rxb7 Bg7

[14... Bxb7 15. Qa4+ Kd8 16. Ba5+ Kc8 17. Qe8#]

15. Qa4+ Kf8 16. Rc7 Bf5

[16... Qxe2 17. Qc6 Bb7 18. Qxb7 Re8 19. Rc8 Qb5 20. Rxe8+ Qxe8 21. Rc1]

17. Qc6 Rd8 18. Bxa6

idea Re1 - Gallagher]

The game as it goes is a rout.

13. Rb1 e6 14. Bb5+ Bd7 15. Bxd7+ Kxd7 16. Qa4+ Kd8 17. Rb5 Qc6 18. Rc1 Qa6 19. Ra5 Qd3 20. Be3 d5 21. Rxa7 Rxa7 22. Qxa7 Ba3 23. Qb8+ Ke7 24. Bg5+ f6 25. Qxb7+ Kd6 26. Qc7#

A5.2. Examples with Bb5

Georgiev,Kr - Feher,G [B30], Cappelle

1. e4 c5 2. Nf3 Nc6 3. Bb5 e6 4. O-O Nge7 5. b3 Qb6 6. Na3 Ng6 7. Bb2 a6 8. Nc4 Qc7 9. Bxc6 Qxc6

White is miles ahead in development, so breaks with d4.

10. d4 cxd4 11. Nxd4

Black now grabs a hot pawn while behind in development.

(Kids! Don't try this at home!)

11... Qxe4 12. Re1 Qf4 13. Nb6 Rb8 14. Nd5

Almost inevitable

14... f6 1-0

Smirin,I - Nun, Ji [B30], Polanica

1. e4 c5 2. Nf3 Nc6 3. Bb5 e6 4. O-O Nge7 5. b3 Ng6 6. Bb2 Be7 7. Bxg7 Rg8 8. Bb2 h5 9. Nc3 Qc7 10. Re1

10... h4 11. Nd5

A very typical Sicilian sacrifice.

11...exd5 12. exd5 Nd4 13. Nxd4 cxd4 14. Ba3 Qa5 15. Bxe7 Nxe7 16. Qe2 Qa3

White threatens Qe5 and d6, winning the knight. Black keeps the Knight, but loses the King.

17. Qe5 Kf8 18. d6 Ng6 19. Qf6 Qa5 20. Bc4 Rg7 21. Re7 1-0

Bogumil - Sarosi [B30], Budapest

1. e4 c5 2. Nf3 Nc6 3. Bb5 e6 4. O-O Nge7 5. c3 d5 6. exd5 Qxd5 7. d4 cxd4 8. c4 Qd8 9. Nxd4 Bd7 10. Nf3 Nf5 11. Nc3 Be7 12. Ba4 O-O 13. Bc2 Nh4 14. Nxe4 Bxe4 15. b3 Bf6 16. Ba3

A neat move making use of the extra space and mobility.

16... Re8

[If 16...Bxc3, 17. Qd3!]

17. Qd3 g6 18. Rad1 Ne5 19. Qg3 Qa5 20. Ne4 Bg7 21. b4 Qc7 22. Nd6 Red8 23. Bb2 Nc6

White is obviously winning. He finds a neat unmasking (Nf5)

24. Bxg7 1-0

B. Slow attacks with f4 against the common half-open defences

The move f4 is often a strong idea against the Sicilian and Pirc, and to some extent the French; less good against other lines. The ideas are similar:

- **develop rapidly**
- **use the extra space given by the extra central pawn**
- **use the f4 pawn to break open lines against the King**

Example games B5a

- [Hodgson - Ady, Streatham Vs Ymca, London, 1981\[B23\]](#)
- [Hebden - Large, British Ch'p, 1982\[B21\]](#)
- [Plaskett - Howell, British Ch'p, 1983\[B21\]](#)
- [Ekebjærg, Ove - Danner, Georg, cr Nielsen-mem, 1987](#)
- [Hodgson - Nunn, Aaronson Open, 1978\[B23\]](#)

B5. Playing f4 vs. Sicilian (a) 1. e4 c5 Grand Prix attack

This is another system where the White side is easy to understand, and where Black has struggled to find a clear equaliser. 2. f4 can lead to the slow Sicilian with g3 and Bg2, but several English players have adopted the more aggressive system with Bc4. We will look at both systems.

A second idea is to play Bb5xNc6 and then play a slow Dutch-style attack with Qe1 and Qh4.

1. e4 c5 2. f4 g6

There are alternatives:

[2... d5 can be met by 3. Nc3 (EG)

[The point of 2...d5 is the wicked gambit line 3. exd5 Nf6 4. c4 e6 5. dxe6 Bxe6 devised by Mikhail Tal]

]

[2... e6 3. Nc3 d5

[3... Nc6 4. Nf3 Nge7 5. Bb5 d5 6. Qe2 d4 7. Nd1]

4. Nf3]

3. Nf3 Bg7 4. Nc3 Nc6 5. Bc4

[The other idea in this line is 5. Bb5 to exchange off the Nc6, and then play a standard Dutch-style attack with Qe1 and Qh4 (EG)]

Black can playd6 (EG) but more often goes:

5... e6

6. f5

This is the sharpest line, although White does not have to gambit

[e.g. 6. O-O Nge7]

Now the complications that follow...

6... exf5 7. d3 Nge7 8. O-O O-O? (EG)

or

6... gxf5 7. d3

...must be known in a little detail to be played safely. There is also plenty of scope for original analysis - for example, what should happen after

6... d5

The gambit is probably best declined with

6... Nge7 7. fxe6 dxe6

[7... fxe6 may be better]

when Black's King is in danger but the central pawn mass is dangerous and may trap the White Q-side pieces]

There are also many lines with f4 in the open Sicilian i.e.. 1. e4 c5 2. Nf3 (...) 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 (...) 6. f4.

Example games B5a

First, a straightforward quick attack down the King's side

Hodgson - Ady, Streatham Vs Ymca, London, 1981[B23]

1. e4 c5 2. f4 g6 3. Nf3 Bg7 4. Nc3 Nc6 5. Bc4 e6 6. f5 exf5 7. d3 Nge7 8. O-O O-O?

This natural-looking move is probably a decisive mistake. Black has no effective counter to White's simple mating attack.

9. Qe1 Nd4 10. Qh4 Nxf3+ 11. Rxf3 fxe4 12. Rh3 h6 13. Bg5 Re8 14. Rf1 d5 15. Nxd5 hxg5 16. Nf6+ Black resigns

[16. Nf6+ Kf8

[or 16... Bxf6 17. Qh7+ Kf8 18. Qxf7#]

17. Nh7+ Kg8 18. Bxf7+ Kh8 19. Nxg5+ Bh6 20. Qxh6#]

1-0

Next, a slower attack with the Bb5 idea

Hebden - Large, British Ch'p, 1982[B21]

1. e4 c5 2. f4 Nc6 3. Nf3 g6 4. Bb5 Bg7 5. Bxc6 dxc6 6. d3 Nf6 7. Nc3 O-O 8. O-O b6

White has an obvious plan. And the player with a plan will always beat the player without one.

9. Qe1 Ne8 10. Qh4 Nd6 11. f5 gxf5 12. e5 Ne8 13. Bh6 f6 14. Kh1 Bxh6 15. Qxh6 Ng7 16. Rae1 Be6 17. Ne2 c4 18. Nf4 cxd3 19. cxd3 Bxa2

Black might as well snatch a pawn, he has achieved nothing to counter White's simple attack.

20. e6 Qc8 21. Re3 Nxe6 22. Nxe6 Bxe6 23. Rxe6 Rf7

[23... Qxe6 24. Ng5 Qf7 25. Nxf7 Rxf7]

24. Rfe1 1-0

And what if Black throws a spanner in the works with 2...d5?

Plaskett - Howell, British Ch'p, 1983[B21]

1. e4 c5 2. f4 d5 3. Nc3 dxe4 4. Nxe4 e6 5. Nf3 Be7 6. Bc4 Nf6 7. Qe2 Nc6
8. c3 O-O 9. O-O b6 10. d3 Bb7 11. Ng3 Bd6 12. Bd2 Qc7 13. Ng5

Black's pieces are nicely placed but going nowhere. White, as usual, knows where he is going!

13... Ne7 14. N5e4

forcing an exchange he had earlier avoided

14... Nxe4 15. dxe4 Ng6 16. Nh5 Kh8 17. Rae1 Rad8 18. Bc1 Rd7 19. e5
Be7 20. f5 exf5 21. Rxf5 Bd5 22. Bxd5 Rxd5 23. Qg4 Qd7 24. Ref1 Kg8

25. Nxg7 Kxg7 26. Qh5 Kg8 27. Bh6 Qe6 28. Bxf8 Nxf8 29. c4

[29. Rxf7 Rxe5]

29... Rd4 30. Rxf7 Qg6 31. Qf3 Ne6 32. Rxe7 Rf4 33. Rxe6 1-0

Ekebjaerg,Ove - Danner,Georg, cr Nielsen-mem, 1987

[B23/07]

1. Nc3 c5 2. e4 d6 3. f4 g6 4. Nf3 Bg7 5. Bc4 e6 6. f5 Ne7 7. O-O O-O

A typical sort of position in this line, although an odd move order (no ...Nc6)

8. fxe6 fxe6 9. Ng5 d5 10. Rxf8+ Qxf8 11. exd5 b5 12. Bxb5 exd5 13. Qf3 Qxf3 14. Nxf3

White is simply a pawn up and needs only consolidate to win the ending.

14... Ba6 15. Ba4 Bb7 16. d3 Nbc6 17. Bg5 h6 18. Bxe7 Nxe7 19. Re1 Nf5 20. Bd7 Nd4 21. Be6+ Nxe6 22. Rxe6

White has given up both bishops, which would make me anxious, but he seems to know what he is doing.

22... g5 23. Na4 Rc8 24. Ne5 Rc7 25. Re8+ Kh7 26. Nc3 a6 27. Nd1 d4 28. b3 h5 29. Nb2 g4 30. Nbc4 Kh6 31. Nd6 Bd5 32. Nec4 Kg6 33. Nb6 Bf7

34. Nxf7 1-0

Without the light-squared bishop Black is in trouble, but it might have been worth struggling on over the board (this was postal).

Hodgson - Nunn, Aaronson Open, 1978[B23]

1. e4 c5 2. f4 g6 3. Nf3 Bg7 4. Nc3 Nc6 5. Bc4 d6

[5... e6 and now 6. f5, 6.e5, 6.O-O, 6. d3, and 6.a3 have been tried. Since Grandmaster Nunn lost this dashing game to the young Hodgson, hardly anyone has tried this line!]

6. O-O Nf6 7. d3 O-O 8. f5 gxf5 9. Qe1 fxe4 10. dxe4 Bg4 11. Qh4 Bxf3

[11... Bh5 idea ...Bg6]

12. Rxf3 Ne5 13. Rh3 Ng6

[13... Nxc4 14. Nd5 Re8 15. Nxf6+

15. Bh6 Bxh6 16. Qxh6 Ne5 17. Rf1]

15... exf6 16. Qxh7+ Kf8 17. Rg3 Bh8]

14. Qg3 Qd7 15. Nd5 Nxd5 16. Bxd5 e6 17. Bb3 d5 18. Qf3 c4 19. Ba4 Qxa4 20. Qh5 Rfd8 21. Qxh7+ Kf8 22. Bh6 Bxh6 23. Rxh6 Rd7

[23... c3 =+ Nunn]

24. Rf1 Ke8 25. Qg8+ Nf8 26. Rxe6+ Kd8 27. Qxf8+ Kc7 28. Qc5+ Kd8 29. Rh6 1-0

Exeter Chess Club:

Playing Black in e - pawn games

An Exeter Junior Chess Club booklet

Edition 2.9, April, 95

Bibliography:

Kasparov/Keene, *Batsford Chess Openings*

Levy/Keene, *An Opening Repertoire for the Attacking Club Player*

Walker, *Chess Openings for Juniors*

Various magazines and other books

I. Introduction

The two general opening rules are:

Rule 1: Develop as fast and as actively as you can

Rule 2: Get a stake in the centre, and try to stop your opponent

What does this mean in the e-pawn openings?

Plan A for White:

try and build a big centre with c3,d4 etc.

try and destroy Black's hold in the centre with f4 or d4

You can see that the move d4 may do both: after ...exd4, cxd4 Black's centre pawn has disappeared and White has the perfect pawn centre. This is the worst

case for Black Plan A for Black:

Rule 1: develop as fast as you can

Rule 2: try to hang on to your own stake in the centre, or at least make sure you destroy White's as well.

Both sides may be able to maintain the e-pawn centre with pawns on e4/e5, or these may disappear and both sides have a central d-pawn (d4/d5). Lastly, all four central pawns may vanish. In each case Black should have equal play.

if White doesn't do much, grab as much of the centre as you can

Again, the move ...d5 often forms part of Black's plans. If Black can play this in safety, you will usually have equalised at least.

| e-pawn centre
centre | d-pawn centre | vanished |
|---|---|--|
| With or without the d-pawns files open the natural break is are likely, and f4/...f5, and either side one side can sieze can hope to plant a Knight centre by force, or has on f4/f5. bishops, play is drawish. | The open e-file usually means exchanges of the heavy pieces, as neither side can afford to abandon control of the file. The right square to plonk a Knight is e4/ | With both exchanges unless the the two |
| e5 | | |

So, let's have a look at some variations.

I.A.

II. Analysis

1. e4 e5 2. Nf3

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K b + r

```

The commonest and probably the best move here, but there are alternatives. We divide this booklet into:

White plays 2. Nf3

Less usual tries for White

III. Less usual tries for White

III.A. The Vienna Opening, 2. Nc3

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - + p + - +
+ - N - + - + -
p P p P - P p P
R - B q K b N r

```

This old move is not bad: it threatens nothing but holds up Black's ...d5, and leaves open the possibility of 3. f4. How should Black reply?

2... Nf6

This is Rule 1: develop as fast and as actively as you can

White has several choices here: 3. f4, 3. Bc4 and 3. g3 are common

III.A.1. Vienna Gambit, 3. f4

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - X - + -
- + - + p P - +
+ - N - + - + -
p P p P - + p P
R - B q K b N r

```

3... d5

And this is Rule 2: keep hold of your share of the centre, or hit back with ...d5. [The move 3...d6 looks half-right, but blocks in the Bf8 and gives up on playing ...d5. 3...d5 is all right.]

Now you should get an equal game, although, as always, you must be careful.

4. fxe5

[4. exd5 exf4 5. d4 Bd6 6. Qe2+ Kf8! Inkirov-Pinter, 1982. BCO2 give this as a slight edge to Black]

4... Nxe4

```

t S l D j L - T
X x X - + x X x
- + - + - + - +
+ - + x P - + -
- + - + s + - +
+ - N - + - + -
p P p P - + p P
R - B q K b N r

```

5. d3

[Natural development by 5. Nf3 Be7 6. d4 O-O 7. Bd3 f5 8. exf6 Bxf6 9. O-O Nc6 10. Ne2 Bf5 11. c3 Qd7 12. Bf4 Rae8 leads to a level d-pawn type of centre]

```

- + - + t T j +
X x X d + - X x
- + s + - L - +
+ - + x + l + -
- + - P s B - +
+ - P b + n + -
p P - + n + p P
R - + q + r K -

```

Now after 5. d3 Black can simplify carefully and gain equality:

5... Nxc3 6. bxc3 d4

6...Be7 is more solid-looking, perhaps

7. Nf3 Nc6 8. cxd4 Nxd4

[Instead 8... Bb4+ 9. Bd2 Bxd2+ 10. Qxd2 Nxd4 11. c3 Nxf3+ 12. gxf3 Qh4+ 13. Qf2 Qxf2+ 14. Kxf2 f6 is level:

```

t + l + j + - T
X x X - + - X x
- + - + - X - +
+ - + - P - + -
- + - + - + - +
+ - P p + p + -
p + - + - K - P
R - + - + b + r

```

]

9. c3 Nxf3+ 10. Qxf3 c6 11. d4 Qh4+ 12. g3 Qg4 13. Bg2 Qxf3 14. Bxf3 Be6

with a level endgame; not much chance for Black to win in this line I'm afraid.

III.A.2. Vienna Game with 3. g3

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - X - + -
- + - + p + - +
+ - N - + - P -
p P p P - P - P
R - B q K b N r

```

This line was fashionable amongst masters a few years ago. White isn't doing much, so just follow rules one and two: first develop:

3... Bc5 4. Bg2 O-O 5. d3 Re8

Then hit back with ...d5.

6. Nge2 c6 7. O-O d5 8. exd5 Nxd5 9. Kh1 Bg4 =

```

t S - D t + j +
X x + - + x X x
- + x + - + - +
+ - L s X - + -
- + - + - + l +
+ - N p + - P -
p P p + n P b P
R - B q + r + k

```

with a level game, as in Portisch-Toran 1961.

III.A.3. Vienna Game with 3. Bc4

```

t S l D j L - T
X x X x + x X x
- + - + - S - +

```

+ - + - X - + -
- + b + p + - +
+ - N - + - + -
p P p P - P p P
R - B q K - N r

If White plays this I recommend you reply

3... Nc6

[There is an exciting line 3... Nxe4 4. Qh5 Nd6 5. Bb3

t S l D j L - T
X x X x + x X x
- + - S - + - +
+ - + - X - + q
- + - + - + - +
+ b N - + - + -
p P p P - P p P
R - B - K - N r

when Black can survive with ... Be7, but I don't think you should let White get into this line]

4. d3 Bb4 5. Nf3 d6 6. O-O Bxc3 7. bxc3 Na5

[Fritz reckons you should play 7... h6]

8. Bb3 Nxb3 9. cxb3

t + l D j + - T
X x X - + x X x
- + - X - S - +
+ - + - X - + -
- + - + p + - +
+ p P p + n + -
p + - + - P p P
R - B q + r K -

When play is level.

III.B. Bishop's opening, 2. Bc4

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + b + p + - +
+ - + - + - + -
p P p P - P p P
R n B q K - N r

```

This became fashionable as a way of avoiding the Petroff. The right move is:

2... Nf6

Now White's most common move is:

3. d3

[The line 3. d4 exd4 4. Nf3 is the dangerous Urusoff Gambit 4...Nxe4 when 5. Qxd4 Nf6 6. Bg5 Be7 7. Nc3 c6 8. O-O-O d5 9. Rhe1 Be6 leads to a strong attacking game for White

```

t S - D j + - T
X x + - L x X x
- + x + l S - +
+ - + x + - B -
- + b Q - + - +
+ - N - + n + -
p P p + - P p P
+ - K r R - + -

```

Simply 4... Nc6 5. O-O transposes to the Two Knights' lines below]

3... Nc6 4. Nf3

This transposes to a quiet line of the Italian (*Giuoco Piano/Two Knights*) group of openings

[4. f4 is the only attempt to be original, but is a poor version of the King's Gambit where White has been committed to d2-d3. One line might go:

4...exf4 5. e5 d5 6. exf6 dxc4 7. fxg7 Bxg7 8. Bxf4 cxd3 9. cxd3 Qe7+ 10. Ne2 Bxb2, when White is in all sorts of trouble]

4... Be7 5. O-O O-O 6. Bb3

Having developed quickly, you are now ready for:

6...d5 7. exd5 Nxd5 8. Re1 Bg4 9. h3

```

t + - D - T j +
X x X - L x X x
- + s + - + - +
+ - + s X - + -
- + - + - + l +
+ b + p + n + p
p P p + - P p +
R n B q R - K -

```

Now, the book line goes:

9... Bh5 10. g4 Bg6 11. Nxe5 Nxe5 12. Rxe5,

when BCO2 gives:

12...Nb6! =

```

t + - D - T j +

```

```

X x X - L x X x
- S - + - + l +
+ - + - R - + -
- + - + - + p +
+ b + p + - + p
p P p + - P - +
R n B q + - K -

```

Dolmatov-Chekhov, 1981.

This is a move Gary Lane ignores in his popular book.

But Lane does suggest the magnificent mess starting:

9... Bxf3

e.g.

10. Qxf3 Nd4 11. Qxd5

Qxd5 12. Bxd5 Nxc2

If you prefer this sort of game, this is a nice try.

III.C. The King's Gambit, 2. f4

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - + p P - +
+ - + - + - + -
p P p P - + p P
R n B q K b N r

```

Emanuel Lasker, world champion after Steinitz, said that gambit pawns should always be taken if you haven't broken any opening rules. He adds, you take them, not to hang on to them, but to make your opponent waste time and energy getting the pawn back. Meanwhile, you can develop and prepare to hit back.

This is good advice, but just as in the Vienna Gambit, we will also look quickly at a line with ...d5.

2... d5 3. exd5

Now you can try the relatively unanalysed 3...c6

3...c6

```

t S l D j L s T
X x + - + x X x
- + x + - + - +
+ - + p X - + -
- + - + - P - +
+ - + - + - + -
p P p P - + p P
R n B q K b N r

```

The Nimzovitch counter-gambit; 3...e4 is the old Falkbeer counter-gambit. Either way you get a good gambit line of your own against the King's Gambit. But Lasker would undoubtedly play:

2... exf4

Now White has two main ways of continuing:

(a) King's Bishop's Gambit, 3. Bc4

(b) King's Knight's Gambit, 3. Nf3

III.C.1. King's Bishop's Gambit, 3. Bc4

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + b + p X - +
+ - + - + - + -

```

```

p P p P - + p P
R n B q K - N r

```

Black can play simply

3... Nf6 (Rule 1)

4. Nc3 c6 (Rule 2)

with good chances.

III.C.2. King's Knight's Gambit, 3. Nf3

I have always liked

3... Be7

```

t S l D j + s T
X x X x L x X x
- + - + - + - +
+ - + - + - + -
- + - + p X - +
+ - + - + n + -
p P p P - + p P
R n B q K b + r

```

This Cunningham Variation reinforces the ancient weakness on the e1-h4 diagonal, and covers the e-file.

4. Bc4

Now 4...Bh4+ is a fair try, but it's easier to go

4...Nf6 5. e5

Alternatives include

[5. Nc3 c6]

[5. O-O d5]

but these should cause you no trouble. After 5. e5

5... Ng4 6. O-O d6

Black has an equal game.

III.D. Centre Game and; Danish Gambit, 2. d4

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - P p + - +
+ - + - + - + -
p P p + - P p P
R n B q K b N r

```

Don't mess around, just play

2... exd4

Now White has a choice:

(a) Centre Game, 3. Qxd4

(b) Danish Gambit, 3. c3

or White can try to transpose into the Scotch with 3. Nf3.

III.D.1. Centre Game, 3. Qxd4

```

t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + - Q p + - +
+ - + - + - + -
p P p + - P p P

```

R n B - K b N r

This exposes the Q to attack, when it is hard to find a good retreat.

3... Nc6 4. Qe3 Nf6 5. Nc3 Be7

[or 5... Bb4 6. Bd2 O-O 7. O-O-O Re8 8. Bc4 d6 9. f3 Na5 10. Bb3 Be6 = +

```

t + - D t + j +
X x X - + x X x
- + - X l S - +
S - + - + - + -
- L - + p + - +
+ b N - Q p + -
p P p B - + p P
+ - K r + - N r
    
```

with slight advantage to Black, according to BCO2]

6. Bd2 d5 7. exd5 Nxd5 8. Nxd5 Qxd5

```

t + l + j + - T
X x X - L x X x
- + s + - + - +
+ - + d + - + -
- + - + - + - +
+ - + - Q - + -
p P p B - P p P
R - + - K b N r
    
```

Black is ahead in development, which makes the opposite-side castling difficult to play for White. The game is equal.

III.D.2. Danish Gambit, 3. c3

```
t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + - X p + - +
+ - P - + - + -
p P - + - P p P
R n B q K b N r
```

3... dxc3 (Lasker!)

[Although 3... Qe7 is an interesting way of declining]

Now 4. Nxc3 is a sort of 'half-Danish', and is likely to transpose to the Goring Gambit, dealt with under the Scotch Game section below. The Danish proper is:

4. Bc4 cxb2 5. Bxb2

```
t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + b + p + - +
+ - + - + - + -
p B - + - P p P
R n + q K - N r
```

When White has a genuinely dangerous lead in development. Correct technique here is to return some of the material to get your own development back on track.

5... d5 6. Bxd5 Bb4+

[or 6... Nf6 7. Bxf7+ Kxf7 8. Qxd8 Bb4+ 9. Qd2 Bxd2+ 10. Nxd2]

```
t S l + - + - T
X x X - + j X x
- + - + - S - +
+ - + - + - + -
```

```

- + - + p + - +
+ - + - + - + -
p B - N - P p P
R - + - K - N r

```

is a level ending with rival majorities, and is as good try to win as any for Black.]

7. Nc3 Nf6

```

t S l D j + - T
X x X - + x X x
- + - + - S - +
+ - + b + - + -
- L - + p + - +
+ - N - + - + -
p B - + - P p P
R - + q K - N r

```

when Black has good chances of an advantage - either securing the two bishops in an open position, or developing quickly and then keeping the pawn. If you find yourself as Black thinking about odd or cramped moves just to try and hang on to the pawn, my advice is: let it go.

IV. White plays 2. Nf3

The best reply, is, of course:

IV.A. .. Nc6

White has a few different tries here, the main ones being

```

t + l D j L s T
X x X x + x X x
- + s + - + - +
+ - + - X - + -
- + - + p + - +
+ - + - + n + -

```

```

p P p P - P p P
R n B q K b + r

```

3. Bb5, the Ruy Lopez

3. d4, the Scotch Game

3. Bc4, the Italian game which can lead to the Giuoco Piano. Here I recommend the Two Knights' Defence.

IV.B. Ruy Lopez, 3. Bb5

```

t + l D j L s T
X x X x + x X x
- + s + - + - +
+ b + - X - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

```

This is the most important move at master level. The 'Spanish torture' (Ruy Lopez was a Spanish priest) is the main winning weapon for White and has held centre stage for hundreds of years. At junior level, though, there are a few ways to play it, depending on how much you trust your opponent to play lines you like. John Walker recommends the exciting Open Morphy Defence with 5...Nxe4, but White can veer off into some really dull lines on moves 4 and 5, and if anything your two moves tempt White to play a dull line. The Open Morphy is very well known and hard to play for both sides, so I'll throw in one more alternative: the Archangel Variation. See what you think for yourself.

My own recommendation is the old Cordel Defence with

3... Bc5

```

t + l D j + s T
X x X x + x X x
- + s + - + - +
+ b L - X - + -
- + - + p + - +
+ - + - + n + -

```

```

p P p P - P p P
R n B q K - + r

```

Bobby Fischer played this a few times in the 'sixties, and never had any trouble reaching a level game. It avoids any trouble you may have with the Exchange Variation and Lopez Four Knights' lines below. Let's look at how you can try and get into the Open Morphy lines, and perhaps then you can will see why I started looking at the Cordel line.

To get into the Open Morphy line you play

3... a6

hoping for

4. Ba4

White has an important alternative here, which might be played just out of nerves.

IV.B.1. The Exchange variation 4. Bxc6

After

4. Bxc6 dxc6

```

t + l D j L s T
+ x X - + x X x
x + x + - + - +
+ - + - X - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

```

White can play either the old main line

(a) 5. d4

or the Barendregt line

(b) 5. O-O

The move 5.Nxe5 is met by 5...Qd4, regaining the pawn.

IV.B.1.a) Old main line 5. d4

White is going for the better ending with this move; the hope is that all the pieces will come off, when White can create a passed pawn on the K-side with f4-f5 and e4-e5-e6 while your Q-side majority is crippled. So Black should avoid too many exchanges and play very actively, using the two bishops and open lines.

5... exd4 6. Qxd4 Qxd4 7. Nxd4 c5 8. Nf3 Bg4

```
t + - + j L s T
+ x X - + x X x
x + - + - + - +
+ - X - + - + -
- + - + p + l +
+ - + - + n + -
p P p + - P p P
R n B - K - + r
```

with equal chances.

IV.B.1.b) Barendregt line 5. O-O

Bobby Fischer revived this in the 'seventies, and it is still being tried.

What should you do? The book line is roughly equal after

5... f6 6. d4 exd4 7. Nxd4 c5 8. Nb3 Qxd1 9. Rxd1 Bg4 10. f3 Be6 11. Bf4 c4 12. Nd4 O-O-O 13. Nc3 Bf7 14. Nf5 Rxd1+ 15. Rxd1 Ne7 16. Ne3 Ng6 17. Bg3 Bc5 18. Kf2 Rd8 =/+ =

```
- + j T - + - +
```

```

+ x X - + l X x
x + - + - X s +
+ - L - + - + -
- + x + p + - +
+ - N - N p B -
p P p + - K p P
+ - + r + - + -

```

(Vitolins-Romanishin 84) with at most a small advantage for White.

But I reckon at junior level the line

```

t + - D j L s T
+ x X - + x X x
x + x + - + - +
+ - + - X - + -
- + - + p + l +
+ - + - + n + -
p P p P - P p P
R n B q + r K -

```

5...Bg4

is worth a punt:

6. h3 h5!

Now

7. hxg4 hxg4 8. Nxe5 Qh4 9. f4 g3

```

t + - + j L s T
+ x X - + x X -
x + x + - + - +
+ - + - N - + -
- + - + p P - D
+ - + - + - X -
p P p P - + p +

```

R n B q + r K -

leads to mate.

So White should play either

7. c3

with a probable draw after

7...Qd3 8. Re1

[8. hxg4 hxg4 9. Nxe5 Bd6 10. Nxd3 Bh2+ 11. Kh1 Bg3+ 12. Kg1 Bh2+ drawn

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | - | + | j | + | s | T |
| + | x | X | - | + | x | X | - |
| x | + | x | + | - | + | - | + |
| + | - | + | - | + | - | + | - |
| - | + | - | + | p | + | x | + |
| + | - | P | n | + | - | + | - |
| p | P | - | P | - | P | p | L |
| R | n | B | q | + | r | K | - |

8... Bxf3 9. Qxf3 Qxf3 10. gxf3 O-O-O 11. Kf1 Be7 12. Ke2 Bg5 13. Na3 Ne7 14. Rg1 Bh6 15. Nc4 f6 16. h4 c5 17. d3

Or, the best line,

7. d3

White can get a small advantage here I think, but has to play lots of good moves.

7... Qf6 8. Nbd2 Ne7 9. Re1 Ng6 10. d4 Bd6 11. hxg4 hxg4 12. Nh2 Rxh2 13. Qxg4 Qh4 14. Qxh4 Rxh4 15. Nf3 Rh5 16. dxe5

[16. c3 f6 17. Be3 += bco2]

16... Nxe5 17. Nxe5 Bxe5 18. c3 g5 19. Be3 g4

```

t + - + j + - +
+ x X - + x + -
x + x + - + - +
+ - + - L - + t
- + - + p + x +
+ - P - B - + -
p P - + - P p +
R - + - R - K -
    
```

]

If White plays the main line with 4. Ba4,

we continue to steer for the Open Morphy with

4... Nf6

```

t + l D j L - T
+ x X x + x X x
x + s + - S - +
+ - + - X - + -
b + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r
    
```

hoping for

5. O-O

Sadly, White has several alternatives here, and if all your opponent knows about the Ruy Lopez ends after the third move, you may well startle White into playing one of these lines:

5. Nc3 Lopez Four Knights

5. d3 Andersson-Steinitz

There is also

[5. Qe2

which is no problem, but it does stop you playing your intended 5...Nxe4. Instead 5...Be7 6. Bxc6 dxc6 7. b3 Bd6 8. Bb2 Qe7 9. d3 =

```
t + l + j + - T
+ x X - D x X x
x + x L - S - +
+ - + - X - + -
- + - + p + - +
+ p + p + n + -
p B p + q P p P
R n + - K - + r
```

9... Bg4 10. Nbd2 O-O-O is simply level]

IV.B.2. Lopez Four Knights' Variation, 5. Nc3

```
t + l D j L - T
+ x X x + x X x
x + s + - S - +
+ - + - X - + -
b + - + p + - +
+ - N - + n + -
p P p P - P p P
R - B q K - + r
```

5. Nc3

Now ...d5 is difficult, but White has little chance of advantage.

5...b5 6. Bb3 Be7 7. d3

[7. a4 is more risky: 7...b4 8. Nd5 Nxe4

```

t + l D j + - T
+ - X x L x X x
x + s + - + - +
+ - + n X - + -
p X - + s + - +
+ b + - + n + -
- P p P - P p P
R - B q K - + r

```

when Black may have the edge.]

7... d6 8. Nd5 Na5 =

```

t + l D j + - T
+ - X - L x X x
x + - X - S - +
S x + n X - + -
- + - + p + - +
+ b + p + n + -
p P p + - P p P
R - B q K - + r

```

with equality: BCO2.

IV.B.3. The Andersson-Steinitz line, 5. d3

```

t + l D j L - T
+ x X x + x X x
x + s + - S - +
+ - + - X - + -
b + - + p + - +
+ - + p + n + -
p P p + - P p P
R n B q K - + r

```

White intend to play slowly. There's not much you can do but trot out the usual recipe: develop and play ...d5. This should lead to level play.

5. d3 d6 6. c3 Be7 7. Nbd2 O-O 8. Nf1 b5 9. Bc2

[9. Bb3 d5 10. Qe2 Be6]

9... d5 10. Qe2 Re8

```
t + l D t + j +
+ - X - L x X x
x + s + - S - +
+ x + x X - + -
- + - + p + - +
+ - P p + n + -
p P b + q P p P
R - B - K n + r
```

with equality.

After 5. O-O we can at last enter the

IV.B.4. Open Morphy Variation with 5... Nxe4

```
t + l D j L - T
+ x X x + x X x
x + s + - + - +
+ - + - X - + -
b + - + s + - +
+ - + - + n + -
p P p P - P p P
R n B q + r K -
```

The main line of the Open Morphy variation goes:

6. d4 b5 7. Bb3 d5 8. dxe5 Be6 9. c3 Bc5

```

t + - D j + - T
+ - X - + x X x
x + s + l + - +
+ x L x P - + -
- + - + s + - +
+ b P - + n + -
p P - + - P p P
R n B q + r K -

```

When Black has superb development, although may look a little loose. The Open variation has been a great favourite of fighting players like Euwe and Korchnoi.

10. Nbd2 O-O 11. Bc2

```

t + - D - T j +
+ - X - + x X x
x + s + l + - +
+ x L x P - + -
- + - + s + - +
+ - P - + n + -
p P b N - P p P
R - B q + r K -

```

Now you might even consider the Dilworth line:

11... Nxf2 12. Rxf2 f6 13. exf6 Bxf2+ 14. Kxf2 Qxf6

```

t + - + - T j +
+ - X - + - X x
x + s + l D - +
+ x + x + - + -
- + - + - + - +
+ - P - + n + -
p P b N - K p P
R - B q + - + -

```

Botvinnik has tried this, although it is clearly risky to give up a piece in such an apparently equal

position.

There are many alternatives in the Open Morphy at each point for both players, so I have only indicated some of the outlines above. Look in books like BCO2 for more information. Or, if the number of variations you see in the books frightens you, please consider the Archangel Variation

5... b5 6. Bb3 Bb7

which I discuss below.

But I have a feeling that most White junior players won't let you play these lines, and instead will veer off with the natural-looking Exchange or Four Knights' lines.

IV.B.5. Cordel Defence 3...Bc5

```

t + l D j + s T
X x X x + x X x
- + s + - + - +
+ b L - X - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

```

Having seen the number of ways White can shoot off into odd lines, you can see why I would like to recommend the Cordel variation. After

3...Bc5

White's best try is

4. c3

[or 4. O-O Nge7 5. c3 Bb6 6. d4 exd4 7. cxd4 d5 8. exd5 Nxd5 9. Re1+ Be6 = Evans-Fischer 1960]

Now the only lines I could find in BCO2 started

4... f5

```

t + l D j + s T
X x X x + - X x
- + s + - + - +
+ b L - X x + -
- + - + p + - +
+ - P - + n + -
p P - P - P p P
R n B q K - + r

```

...with White getting the advantage after

5. d4 fxe4 and

5. exf5 e4.

But Fischer's treatment was more simple: e.g.

4... Nge7 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2 Bxd2+ 8. Qxd2 a6 9. Ba4 d5 10. exd5 Qxd5 11. Nc3 Qe6+ 12. Kf1 Qc4+ 13. Kg1 O-O 14. d5 Na7 15. Re1

```

t + l + - T j +
S x X - S x X x
x + - + - + - +
+ - + p + - + -
b + d + - + - +
+ - N - + n + -
p P - Q - P p P
+ - + - R - K r

```

15... Nf5

[or 15... Ng6]

which was soon drawn: Tal-Fischer, 1960.

Fischer also had several games with the bolder line

4... Nf6

For example

5. d4 exd4

[5... Bb6 6. O-O O-O 7. Re1 exd4 8. cxd4 d5 9. e5 Ne4

```

t + l D - T j +
X x X - + x X x
- L s + - + - +
+ b + x P - + -
- + - P s + - +
+ - + - + n + -
p P - + - P p P
R n B q R - K -

```

drawn shortly, Unzicker-Fischer 60]

6. e5 Ne4 7. O-O

[7. cxd4 Bb4+ 8. Bd2 Nxd2 9. Nbx d2 O-O 10. O-O a6 11. Ba4 d6 = Jimenez-Fischer 60]

7... d5 8. Nxd4 O-O 9. f3 Ng5 10. Bxc6 bxc6

```

t + l D - T j +
X - X - + x X x
- + x + - + - +
+ - L x P - S -
- + - N - + - +
+ - P - + p + -
p P - + - + p P
R n B q + r K -

```

drawn Gligoric-Fischer 60.

So on this evidence, the Cordel Defence is a simple way to get your pieces out against players who you don't trust to enter the main lines.

IV.B.6. An alternative to the Open Morphy: Archangel Variation with 5...b5

5... b5 6. Bb3 Bb7

```

t + - D j L - T
+ l X x + x X x
x + s + - S - +
+ x + - X - + -
- + - + p + - +
+ b + - + n + -
p P p P - P p P
R n B q + r K -

```

Now the best line is (c) 7. Re1, but White has been tempted to go for a quick break with either

(a) 7. d4 or

(b) 7. c3 and 8. d4

IV.B.6.a) Archangel with 7. d4

7. d4

This is nothing to be scared of.

7... Nxd4 8. Nxd4 exd4 9. e5 Ne4 10. c3 dxc3 11. Qf3

This looks awkward, but Black can survive happily.

11...d5 12. exd6 Qf6 13. d7+ Kd8!

t + - J - L - T
+ l X p + x X x
x + - + - D - +
+ x + - + - + -
- + - + s + - +
+ b X - + q + -
p P - + - P p P
R n B - + r K -

14. Qxf6+ Nxf6 15. Nxc3 Kxd7 16. Bf4 =

t + - + - L - T
+ l X j + x X x
x + - + - S - +
+ x + - + - + -
- + - + - B - +
+ b N - + - + -
p P - + - P p P
R - + - + r K -

With equality, according to Vlastimil Hort.

IV.B.6.b) Archangel with 7. c3

This is more patient but not stronger.

7. c3

Black can now make a mess with

7...Nxe4 8. d4 Na5 9. Bc2 exd4 10. b4 Nc4 11. Bxe4 Bxe4 12. Re1 d5 13. Nxd4
Bd6

t + - D j + - T
 + - X - + x X x
 x + - L - + - +
 + x + x + - + -
 - P s N l + - +
 + - P - + - + -
 p + - + - P p P
 R n B q R - K -

14. f3 Qh4 15. h3 Qg3 16. Nf5 Qh2+ 17. Kf2 O-O-O 18. fxe4 dxe4 19. Qg4 Kb8
 20. Qxe4 Rhe8

- J - T t + - +
 + - X - + x X x
 x + - L - + - +
 + x + - + n + -
 - P s + q + - +
 + - P - + - + p
 p + - + - K p D
 R n B - R - + -

Black is doing fine here.

IV.B.6.c) Main line Archangel with 7. Re1

7. Re1 Bc5

White now plays his Plan A

8. c3 d6 9. d4 Bb6

t + - D j + - T
 + l X - + x X x
 x L s X - S - +
 + x + - X - + -
 - + - P p + - +

```
+ b P - + n + -
p P - + - P p P
R n B q R - K -
```

Black is solid and well-developed, as in many lines of the Lopez, but here has posted the bishops on much more active squares, pointing at the White King. Black can play very actively now, castling Queen's side and hammering down the other wing.

10. Bg5 h6 11. Bh4 Qd7 12. a4 O-O-O 13. axb5 axb5

```
- + j T - + - T
+ l X d + x X -
- L s X - S - X
+ x + - X - + -
- + - P p + - B
+ b P - + n + -
- P - + - P p P
R n + q R - K -
```

14. Bxf6

This is the strongest line:

[14. Na3 g5 15. Bg3 h5 16. dxe5

[16. h4 was essential: 16...gxh4 17. Bxh4 Rh6 18. Nxb5 Rg8 19. Qd3 exd4 20. cxd4 Nb4 and Black is still spuddling away well]

16... h4 17. exf6 hxg3 18. hxg3 g4 19. Nd4 Rh7 20. Bd5 Rdh8= +

```
- + j + - + - T
+ l X d + x + t
- L s X - P - +
+ x + b + - + -
- + - N p + x +
N - P - + - P -
- P - + - P p +
R - + q R - K -
```

with an edge for Black, according to BCO2]

14... gxf6

Now White does best to try and keep things under wraps with

15. Bd5

But Black can give White some nervous moments with:

15...Rhg8 16. Kh1 Qg4 17. Rg1 exd4 18. cxd4 f5 19. Nc3 fxe4 20. Nxe4 Qf5 21. Nc3 Nb4 22. Bxb7+ Kxb7=

```

- + - T - + t +
+ j X - + x + -
- L - X - + - X
+ x + - + d + -
- S - P - + - +
+ - N - + n + -
- P - + - P p P
R - + q + - R k
    
```

Klovans-Shirov 87: equal, accoring to BCO2

IV.C. 3. d4 Scotch Game and gambits

```

t + l D j L s T
X x X x + x X x
- + s + - + - +
+ - + - X - + -
- + - P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r
    
```

The old (1826) Scotch Game is

3... exd4 4. Nxd4

People have recently found some new ideas in lines that had been abandoned, but I think interest is waning again as these ideas become better known. The natural move is

4...Bc5

when White has two natural moves: 5. Nb3 and 5. Be3, although you must also consider 5. Nxc6 (and I have even seen 5. Nf5!?)

[If 5. Nxc6 bxc6 6. Bd3 Ne7 7. O-O d5 should hold, but more accurate 5...Qf6! 6. Qe2 bxc6 7. Nc3 Ne7=]

IV.C.1. Scotch Game with 5. Be3

```

t + l D j + s T
X x X x + x X x
- + s + - + - +
+ - L - + - + -
- + - N p + - +
+ - + - B - + -
p P p + - P p P
R n + q K b + r

```

5. Be3 Qf6 6. c3 Nge7 7. Bc4

White has tried many moves in this position, but this Icelandic line is the most current.

[One alternative being 7. g3 d5 8. Bg2 dxe4 9. Nb5

[or 9. Nd2 Bb6 10. Nxe4 Qg6 11. O-O Bg4 12. Qa4 O-O 13. Nc5 Ne5 14. Bf4 Bxc5 15. Bxe5 c6+ =

```

t + - + - T j +
X x + - S x X x
- + x + - + d +
+ - L - B - + -
q + - N - + l +
+ - P - + - P -
p P - + - P b P
R - + - + r K -

```

with only a small advantage to White, according to Gary Lane]

9... Bxe3 10. Nxc7+ Kf8 11. fxe3 Rb8 12. Nd5 Qg5 13. Nf4 Qc5 14. O-O g5 15. Nh5 Be6

```

- T - + - J - T
X x + - S x + x
- + s + l + - +
+ - D - + - X n
- + - + x + - +
+ - P - P - P -
p P - + - + b P
R n + q + r K -

```

Klovan-Romanishin 74, with complications avouring black (Lane)

After 7. Bc4 the equaliser used to be 7...Ne5 8. Be2 and 8...d6/8...Qg6 (see BCO2), but that has started to creak.

Will Black succeed in reinforcing the line? Karpov has still happily played 8...Qg6 9. O-O d6 10. f3! O-O 11. Nd2 d5!? and perhaps that is OK.

7... O-O 8. O-O Bb6 9. Nc2

[or 9. Na3 Nxd4 10. cxd4 d5 11. exd5 Rd8 12. Qh5 h6 13.

Rfe1 Bf5 14. Qf3 Rd7 15. Nb5 Rad8

```

- + - T - + j +
X x X t S x X -
- L - + - D - X
+ n + p + l + -
- + b P - + - +
+ - + - B q + -
p P - + - P p P
R - + - R - K -

```

unclear/equal, Chandler-Short 91]

[White could also try 9. Bb3 Na5 10. Bc2 Nc4 11. Bc1 d5 12. exd5 Bxd4 13. cxd4 Bf5 14. Nc3 Bxc2 15. Qxc2 Nb6 16. Qe4 Qd6 17. Bf4 Qd7 18. d6 cxd6 19. a4 Rfe8 20. Qf3 Nc6 21. Rfd1 Rad8 =/+ =

```

- + - T t + j +
X x + d + x X x
- S s X - + - +
+ - + - + - + -
p + - P - B - +
+ - N - + q + -
- P - + - P p P
R - + r + - K -

```

Polgar-Zuniga 92

9. Nc2 d6 10. Bxb6 axb6 11. f4

```

t + l + - T j +
+ x X - S x X x
- X s X - D - +
+ - + - + - + -
- + b + p P - +
+ - P - + - + -
p P n + - + p P
R n + q + r K -

```

Now

11...Be6 12. Nd2 Bxc4 13. Nxc4 Qe6

leaves White with a small space advantage. In the game Kasparov-Short (Linares 1991) Black tried

11...g5!? 12. f5 Ne5 13. Be2 Bd7 14. c4

when

14...Ba4! 15. b3 Bc6

would have been the best line.

IV.C.2. Scotch Game with 5. Nb3

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | j | + | s | T |
| X | x | X | x | + | x | X | x |
| - | + | s | + | - | + | - | + |
| + | - | L | - | + | - | + | - |
| - | + | - | + | p | + | - | + |
| + | n | + | - | + | - | + | - |
| p | P | p | + | - | P | p | P |
| R | n | B | q | K | b | + | r |

You must retreat with

5... Bb6

Now White usually chases the Bishop with

6. a4 a6

Gary Lane reckons this gives White good chances, but one move order he doesn't consider is

7. Nc3 Nge7 8. Bg5 f6!

Now

9. Bh4 O-O

```

t + l D - T j +
+ x X x S - X x
x L s + - X - +
+ - + - + - + -
p + - + p + - B
+ n N - + - + -
- P p + - P p P
R - + q K b + r

```

and now

10. Bc4+ Kh8 11. Qd2 d6 12. f4 Ng6 13. Bg3 Na5 =+ Rodriguez-Unzicker, 1970

or

10. Qd2 d6 11. a5 Ba7 12. O-O-O Be6 13. Nd5 Bxd5! (an improvement on an old Hort-Portisch game) 14. exd5 Ne5 15. Nd4 Bxd4 16. Qxd4 Nf5 17. Qe4 Nxe4 18. Qxe4 f5=

and according to **ChessBase**, Black has achieved a pleasant equality.

IV.C.3. Scotch And Goring Gambits

After 1. e4 e5 2. Nf3 Nc6 3. d4 exd4 White may try

4. c3

```

t + l D j L s T
X x X x + x X x
- + s + - + - +

```

```

+ - + - + - + -
- + - X p + - +
+ - P - + n + -
p P - + - P p P
R n B q K b + r

```

[4. Bc4 leads to lines of the Italian Game, below]

Black can equalise with

4... d5

[The old recommendation 4... d3 5. Bxd3 d6

```

t + l D j L s T
X x X - + x X x
- + s X - + - +
+ - + - + - + -
- + - + p + - +
+ - P b + n + -
p P - + - P p P
R n B q K - + r

```

is OK after 6. h3 g6 7. Bg5 Nf6 8. Nbd2 Bg7 9. Nd4 O-O 10. Nxc6 bxc6 11. f4 Rb8 12. O-O Qe8 = Raaste-Westerinen, 1979, but leads to a less east time after

6. Bf4 Be7 7. h3 Nf6 8. Nbd2 Bd7 9. Qc2 += BCO2]

5. exd5 Qxd5 6. cxd4 Bg4 7. Be2 Bb4+ 8. Nc3 Bxf3 9. Bxf3 Qc4

```

t + - + j + s T
X x X - + x X x
- + s + - + - +
+ - + - + - + -
- L d P - + - +

```

+ - N - + b + -
 p P - + - P p P
 R - B q K - + r

10. Qb3

Neither [10. Bxc6+ bxc6 11. Qe2+ Qxe2+ 12. Kxe2 O-O-O 13. Be3 Ne7=]

*[Nor 10. Be3 Bxc3+ 11. bxc3 Qxc3+ 12. Kf1 Qc4+ 13. Kg1 Nge7 14. Rc1 Qxa2
 15. Ra1 Qc4 16. Rc1 (drawn here marshall-capablanca, 1926) 16... Qa2 17. Ra1
 Qc4 18. Rc1 Qb4*

t + - + j + - T
 X x X - S x X x
 - + s + - + - +
 + - + - + - + -
 - D - P - + - +
 + - + - B b + -
 - + - + - P p P
 + - R q + - K r

-+ Bryson-Flear, Edinburgh 1985, are any good for White]

10... Qxb3 11. axb3 Nge7 12. O-O a6 =

t + - + j + - T
 + x X - S x X x
 x + s + - + - +
 + - + - + - + -
 - L - P - + - +
 + p N - + b + -
 - P - + - P p P
 R - B - + r K -

with equality, Ljubojevic-Ree, 72.

Lastly, but most importantly, we must consider how you should reply to:

IV.D. 3. Bc4

You can defend the Giuoco Piano, which is OK, except you cannot rely on White to play an interesting open game. The best way to get a good game going is:

IV.E. Two Knight's Defence, 3... Nf6

```

t + l D j L - T
X x X x + x X x
- + s + - S - +
+ - + - X - + -
- + b + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

```

White has several tries here:

- (a) Max Lange Attack with 4. d4
- (b) Main line Two Knights' with 4. Ng5
- (c) Closed line with 4. d3
- (d) Variation with 4. Nc3

```

t + l D j L - T
X x X x + x X x
- + s + - S - +
+ - + - X - + -
- + b P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

```

IV.E.1. The Max Lange Attack 4. d4

After 4. d4 Black must reply:

4... exd4

The alternatives are unattractive:

[4... Nxe4 5. dxe5 Nc5 else Qd5 6. O-O Be7 7. Nc3+-

```

t + l D j + - T
X x X x L x X x
- + s + - + - +
+ - S - P - + -
- + b + - + - +
+ - N - + n + -
p P p + - P p P
R - B q + r K -

```

]

[4... Nxd4 5. Bxf7+ Kxf7 6. Nxe5+ Ke8 7. Qxd4+-]

[4... d6 5. Ng5 Nxe4

[not 5... Be6 6. d5]

6. Bxf7+ Ke7 7. Bb3 +-]

Now

5. O-O

```

t + l D j L - T
X x X x + x X x

```

```

- + s + - S - +
+ - + - + - + -
- + b X p + - +
+ - + - + n + -
p P p + - P p P
R n B q + r K -

```

[5. e5 is sometimes played, with the idea of making a rush with the King's-side pawns:

```

t + l D j L - T
X x X x + x X x
- + s + - S - +
+ - + - P - + -
- + b X - + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

```

5... d5 6. Bb5 Ne4 7. Nxd4 Bd7 8. Bxc6 bxc6 9. O-O Be7 10. f3 Nc5 11. f4 Ne4 12. f5 Bc5 13. e6 fxe6 14. fxe6 Bxe6 15. Qh5+ Kd7 16. Be3 Qe7

```

t + - + - + - T
X - X j D - X x
- + x + l + - +
+ - L x + - + q
- + - N s + - +
+ - + - B - + -
p P p + - + p P
R n + - + r K -

```

when Black is quite OK]

Black now has a choice:

(a) Max Lange with 5... Nxe4

(b) Max Lange with 5... Bc5

I include analysis of both lines in case you fancy playing this as White.

IV.E.1.a) Max Lange with 5... Nxe4

This is the most complex line, but can fizzle out quickly to a draw.

6. Re1 d5

Now White has two important attacking alternatives:

Sacrificial 7. Nc3

or

Tricky 7. Bxd5

Although, both lines are tricky *and* sacrificial!

IV.E.1.a)(1) Sacrificial 7. Nc3

7. Nc3 dxc3

[or 7... dxc4 8. Rxe4+ Be7 9. Nxd4 f5 10. Rf4 O-O 11. Nxc6 Qxd1+ 12. Nxd1 bxc6 13. Rxc4 Bd6 14. Nc3 =

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | + | - | T | j | + |
| X | - | X | - | + | - | X | x |
| - | + | x | L | - | + | - | + |
| + | - | + | - | + | x | + | - |
| - | + | r | + | - | + | - | + |
| + | - | N | - | + | - | + | - |
| p | P | p | + | - | P | p | P |
| R | - | B | - | + | - | K | - |

Botvinnik]

8. Bxd5 Be6

[8... Bf5 9. Bxe4 Bxe4 10. Rxe4+ Be7 = BCO]

9. Bxe4 Bb4 10. b3 Qxd1 11. Rxd1

```

t + - + j + - T
X x X - + x X x
- + s + l + - +
+ - + - + - + -
- L - + b + - +
+ p X - + n + -
p + p + - P p P
R - B r + - K -
    
```

11... Rd8 12. Be3 a6

Black has an extra pawn which is hard to keep and harder to make use of. The storm has blown itself out.

So let's look at the alternative

IV.E.1.a)(2) Tricky 7. Bxd5

7. Bxd5 Qxd5 8. Nc3

```

t + l + j L - T
X x X - + x X x
- + s + - + - +
+ - + d + - + -
- + - X s + - +
+ - N - + n + -
p P p + - P p P
R - B q R - K -
    
```

Another surprising Knight move. This is a terribly well-analysed position, so whoever knows most about it should win. One line goes:

8... Qa5

[8... Qh5 9. Nxe4 Be6 10. Bg5]

9. Nxe4 Be6 10. Neg5 O-O-O 11. Nxe6 fxe6 12. Rxe6 Bd6

[or 12... Qf5 13. Qe2 h6 14. Bd2 Qxc2 = Bogolyubov]

13. Qe2 Qh5 14. h3 Rde8 15. Bd2 Ne5

```
- + j + t + - T
X x X - + - X x
- + - L r + - +
+ - + - S - + d
- + - X - + - +
+ - + - + n + p
p P p B q P p +
R - + - + - K -
```

And again White's attack has blown out.

IV.E.1.b) Max Lange with 5... Bc5

5...Bc5

6. e5

Black has only one good move here:

6...d5

To see why:

[6... Ng4 7. Bf4 O-O 8. h3 Nh6 9. Bxh6 gxh6 10. c3 +-]

t + l D - T j +
 X x X x + x + x
 - + s + - + - X
 + - L - P - + -
 - + b X - + - +
 + - P - + n + p
 p P - + - P p +
 R n + q + r K -

+ -]

[6... Ne4 7. Bd5 f5 8. exf6 Nxf6 9. Bg5 +-

t + l D j + - T
 X x X x + - X x
 - + s + - S - +
 + - L b + - B -
 - + - X - + - +
 + - + - + n + -
 p P p + - P p P
 R n + q + r K -

+ -]

Now the main line of analysis goes:

7. exf6 dxc4 8. Re1+ Be6 9. Ng5 Qd5 10. Nc3 Qf5 11. Nce4 O-O-O

- + j T - + - T
 X x X - + x X x
 - + s + l P - +
 + - L - + d N -
 - + x X n + - +

+ - + - + - + -
p P p + - P p P
R - B q R - K -

This is exciting stuff! White has a strong K-side attack and control of the e-file. But Black has an extra pawn, good central hold and has sent the King off into safer territory. Black can even think about a K-side counter-attack. For example:

12. Nxe6 fxe6 13. fxg7 Rhg8 14. Bg5 Rd7 15. Nf6 Qxg5 16. Nxd7 Rxc7

and White has run out of steam...

Now, you can research this lot for yourselves, but there's a lot to it. For example, if you check this line in the Levy/Keene book, they give 12. g4!

They also say Black's 8...Be6 is "*more or less forced, since on 8...Kh8 comes 9. Bg5 cxb2 10. Bh6+ Kg8 11. Nc3! with a tremendous game for the pawn... e.g. ... 11...Bf8 12. Bxf8 Kxf8 13. Ne4 followed by 14. Qd2 with clear advantage to White.*" Whereas, if you look in BCO2, you find "8...Kh8 9. Bg5 cxb2 10. Bh6+ Kg8 11. Nc3 f8 12. Bxf8 Kxf8 13. Ne4 f5 =+" - that is, advantage to Black, and instead White can only hope for equality after 12. Nxd4 Bxh6!. So I don't know how many recent books you need, although Andrew Soltis (who seems to be going for the world record of chess books published) has written a repertoire book from White's point of view about the Moller and the Max Lange.

IV.E.2. Main line Two Knights' with 4. Ng5

The main line, which I recommend, goes:

4... d5

But there is an alternative: the Wilkes-Barre variation or Traxler Counterattack.

[4... Bc5

This is wild and exciting chess, although I have a nasty suspicion that White can just play safe with

5. Bxf7+ Ke7 6. Bb3 [or 6. Bd5] 6...Rf8 7. O-O d6 8. Nc3

```
t + l D - T - +
X x X - J - X x
- + s X - S - +
+ - L - X - N -
- + - + p + - +
+ b N - + - + -
p P p P - P p P
R - B q + r K -
```

when I don't see how Black can justify both the pawn deficit and poor King position.

But it's worth a look, and I include some examples in the games section. Even if you don't ever play the variation, you might learn from some of the tactical ideas.]

After 4. Ng5 d5, White should try

5. exd5

```
t + l D j L - T
X x X - + x X x
- + s + - S - +
+ - + p X - N -
- + b + - + - +
+ - + - + - + -
p P p P - P p P
R n B q K - + r
```

Now the best move here is probably

5... Na5

Although 5...Nb4, 5...Nd4 (Fritz variation) and 5...Nxd5 have been tried. More than one person has e-mailed me recommending the [Ulvestad](#) variation, 5...b5, and I thank Jarret Minkler for providing some helpful notes.

[5... Nxd5 can lead to the famous Fried Liver Attack

```
t + l D j L - T
X x X - + x X x
- + s + - + - +
+ - + s X - N -
- + b + - + - +
+ - + - + - + -
p P p P - P p P
R n B q K - + r
```

6. Nxf7

```
t + l D j L - T
X x X - + n X x
- + s + - + - +
+ - + s X - + -
- + b + - + - +
+ - + - + - + -
p P p P - P p P
R n B q K - + r
```

This is the famous Fried Liver Attack (or Fegatello) After 6... Kxf7 7. Qf3+ Ke6 8. Nc3 Nce7 9. d4 c6

```
t + l D - L - T
X x + - S - X x
- + x + j + - +
+ - + s X - + -
- + b P - + - +
+ - N - + q + -
p P p + - P p P
R - B - K - + r
```

We can only say the position is unclear!

But White can actually play the simple 6. d4

```

t + l D j L - T
X x X - + x X x
- + s + - + - +
+ - + s X - N -
- + b P - + - +
+ - + - + - + -
p P p + - P p P
R n B q K - + r

```

with the better game, and when Nxf7 is a real threat]

After 5...Na5, play usually goes

6. Bb5+ c6 7. dxc6 bxc6

When there are two well-known gambit lines

(a) 8. Be2 h6 9. Nf3 e4 10. Ne5 Bd6 11. f4 exf3 12. Nxf3 O-O

and

(b) 8. Qf3 Rb8 9. Bxc6+ Nxc6 10. Qxc6+ Nd7

```

- T l D j L - T
X - + s + x X x
- + q + - + - +
+ - + - X - N -
- + - + - + - +
+ - + - + - + -
p P p P - P p P
R n B - K - + r

```

Black has some prospects of attack for the material; I enclose a game in each line below.

IV.E.3. Closed variation with 4. d3

```

t + l D j L - T
X x X x + x X x
- + s + - S - +
+ - + - X - + -
- + b + p + - +
+ - + p + n + -
p P p + - P p P
R n B q K - + r

```

4... d5 5. exd5 Nxd5 6. O-O f6 is one time when the Rule 2 should perhaps be broken, as Re1 to follow is uncomfortable, although I don't know if Black is in any great danger.

4...Bc5 of course returns you to the Giuoco Pianissimo (spit).

And another safe line is 4... Be7.

But the alternative

4... h6

is quite OK. The idea is: in the slow Closed Morphy Variation (5...Be7) of the Ruy Lopez, Black often re-organises with ...O-O, ...Rfe8, ...Bf8, ...g6 and ...Bg7. Now with 4. d3, White has said that they plan to play it slow, so you might as well put the B on g7 straight away. 4...g6 loses to 5. Ng5, so you play 4...h6 first. The only way to take advantage of this apparent waste of time is to break open the centre with d3-d4, but this is also a loss of time (d2-d3 then d3-d4), and Black can adjust.

5. O-O

[or 5. Nc3 d6 6. a3 g6 7. h3 Bg7 8. Be3 O-O 9. Qd2 Kh7 10. g4 Nd7 11. Rg1 Nb6

```

t + l D - T - +
X x X - + x L j
- S s X - + x X

```

```

+ - + - X - + -
- + b + p + p +
P - N p B n + p
- P p Q - P - +
R - + - K - R -

```

= Spassky-Belyavsky 82 12. g5 Nxc4 13. dxc4 h5]

5... d6 6. c3 g6 7. d4 Qe7 8. Nbd2 Bg7 9. Re1 O-O 10. h3 Bd7 11. Nf1 Rae8
=

```

- + - + t T j +
X x X l D x L -
- + s X - S x X
+ - + - X - + -

Exeter Chess Club: Ulvestad Variation

From minkler@buffnet.net Sat May 4 03:51:23 1996

Subject: The Dreaded Fried Liver attack

[Impertinent editorial note: I think the Fried Liver Attack should refer to only the line **1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 4. Ng5 d5 5. exd5 Nxd5 6. Nxf7**, but here my esteemed correspondent means the line with **4. Ng5** - Dr.Dave]

In my quest at becoming a better player (USCF 1360) I was constantly faced with the Fried Liver attack as black. After losing the game several times I finally got off my butt to learn the stupid thing... And, what I found was striking. First off black should have nothing to fear from Ng5. In fact he can practically laugh at it. I have enclosed some games from the local club here where me and my uncle have done extensive research on the Ulvestad Var. of the Two Knight's Defense. If you have MCO- 13 the page is 111. But, what I found its that people DON'T play these lines... And give black a perfectly healthy game.

If you would like to see the rest of Ng5_1 where my Uncle John Powell Defeated the Master his E-mail address is powell@net.bluemoon.net

I think that these lines would be very useful to you web page and chess club...

[Appreciative editorial note: I agree!]

Jarret Minkler

 - [H : The French 'Small Centre' \(=/+\)](#) (Thanks, Peter!)

Consider the French defence pawn formation in the diagram. You can sort of 'feel' that White should be attacking on the K-side, and Black on the Q-side. That's where they each have more space, and can organise their attacks better. Nimzovitch taught that these 'pawn chains' should be attacked at the base - in this case, at d4 and e6. White will aim for the pawn break f2-f4-f5; Black with ...c7-c5 and/or ...b7-b5-

b4.

So In the line after **1 e4, e5; 2 d4, d5; 3 e5** we see **3...c5**, attacking the base. The immediate reply **4.c3** by White transfers the base, and therefore the focus of the attack, to c3. Black can push past with ...c4 and go for ...b5-b4, or exchange on d4 with ...cxd4,cxd4 which brings the base one step nearer again, at cost of relieving some tension. There can follow **4...Nc6; 5 Nf3, Qb6**. now the natural **6.Bd3** leaves the d-pawn exposed (although you can play it as a gambit), and a logical sequence is: **6 Be2, cxd4; 7 cxd4, Bb4+ 8 Kf1** since **8. Bd2** risks **8...Nxd4**. Nowadays we are less rigid about these things: for example, White need not sit back on the Q-side, and instead often plays **6.a3** threatening b4, and experience has shown that this is not an idle threat. Black usually moves one more step down the chain with **6...c4**, but a playable alternative is **6...f6!?**, attacking the head and not the base. Admittedly after **7 exf6** Black's e-pawn is a bit sickly, but for the moment White is in no position to attack it.

The most important feature of positions shown in the first diagram is not itself actually shown: this is the Black light-squared (Queen's) Bishop. Stuck behind the pawn on e6, it will play little role in the game for a while. This feature led Bob Wade to coin the line **1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Qb6** planning ...Bd7 and ...Bb5. Recently there has been a small fashion for **1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Bd7!?** idea ...Bc6. More commonly Black will play ...b6 and ...Ba6 to secure the exchange (see Hubner-Larsen), but often as not Black just carries this piece as a slight liability on d7, waiting for its chances after ...e5 or in an endgame when it might reappear on b5.

White's chances on the King's-side

The King's-side attack is mainly seen in the middlegame. There are genuine chances here for White, particularly if there are other factors favouring the attack. For example, in the Alekhine-Chatard attack White sacrifices a pawn: **1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. h4!?** for an open h-file and attacking chances, or in another line Nimzovitch invented **1. e4 e6 2. d4 d5 3. e5 c5 4. Qg4!?**, giving up the d-pawn but intending to base an attack on the wedge at e5, when Black's usual Queen's-side attack has no natural outlet. There are many attractive miniatures where White's attack crashes through in these lines. However, Black players with a little knowledge of these lines can avoid the worst dangers, and so White usually plays more slowly.

White's chances on the K-side: Pillsbury - Lasker (Nuremberg, 1896)

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. e5 Nfd7 5. f4 c5 6. dxc5 Nc6 7. a3 Nxc5 8. b4 Nd7 9. Bd3 a5 10. b5 Ncb8 11. Nf3 Nc5 12. Be3 Nbd7 13. O-O g6 14. Ne2 Be7 15. Qe1 Nb6 16. Nfd4

Despite the weak c-pawn, White is well placed here: Black cannot quickly organise a Queen's-side attack while the White Bishops are nicely placed to influence events on both sides. The Black King cannot comfortably castle ...O-O with the holes all over the defences there.

16... Bd7 17. Qf2 Nba4 18. Rab1 h5 19. b6 Nxd3 20. cxd3 Bxa3 21. f5

Just as Black is getting somewhere on the Queen's-side we have a classic Pillsbury breakthrough. This is a *vacating sacrifice* to allow the Ne2 to move up into firing position, hoping to catch the Black King in the centre.

21... gxf5 22. Nf4 h4 23. Ra1 Be7 24. Rxa4

A deflecting sacrifice, pulling the Bd7 away from the support of e6.

24...Bxa4 25. Nfxe6 fxe6 26. Nxe6 Bd7 27. Nxd8 Rxd8

The Queen rather than the King was caught!

The attack has thus resulted in a small material advantage (Q v. RB) which White converts with continued vigour.

28. Bc5 Rc8 29. Bxe7 Kxe7 30. Qe3 Rc6 31. Qg5+ Kf7 32. Rc1 Rxc1+ 33. Qxc1 Rc8 34. Qe1 h3 35. gxh3 Rg8+ 36. Kf2 a4 37. Qb4 Rg6 38. Kf3 1-0

Black's chances on the Queen's-side

Just as White can hope for good things on the King's-side, Black has opportunities on the other side of the board.

Black's Queen's-side attack: Neumann - Tranmer, Manchester, 1950

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Bb4

The sharp MacCutcheon Variation.

5. e5 h6 6. Bd2 Bxc3 7. bxc3 Ne4 8. Bd3 Nxd2 9. Qxd2 c5 10. dxc5 Qc7 11. Qe3 O-O 12. Ne2 Nd7 13. f4 Nxc5 14. O-O Bd7 15. Rf3 Rac8 16. Rh3 f5 17. Qd4 Rf7 18. c4 dxc4 19. Bxc4 Be8 20. Qe3 b5 21. Bb3 Re7 22. Nd4 Kh7 23. Qe2 Qb6

White's energetic start has not given him anything concrete. Meanwhile, Black has ample opportunities on the Queen's-side, with a sickly pawn on c2 to lean on.

24. Kh1 Ne4 25. Rd3 a5 26. a3 Bf7 27. Qe3 Qc5 28. Rf1 a4 29. Ba2 Nc3

The point immediately in front of an isolated pawn is a great outpost for a Knight. The Bishop retreats, but soon wishes it had a 0-th rank to retire further.

30. Bb1 Rec7 31. Qc1

31... b4 32. Rff3 Qa5 33. Qb2 bxa3 34. Qa1 Qb4 35. Ba2

[35. Rf1 Qb2 36. Qxb2 axb2 and ...a4-a3-a2]

35... Nxa2 36. Qxa2 Qe1+ 0-1

The bad Black light-squared Bishop and the bad endgame for

Black

Everyone (Stean, Harding, Taulbut...) quotes this game: Tarrasch gives a beautifully clear example of what can go wrong for Black with the bad light-squared Bishop in the endgame. All the other pieces come off, and Black cannot stop an invasion of the White King on the dark squares.

[Why does everybody quote this game? Laziness? Or is it that it's not so easy to do for White? Or that Black players now see it coming and avoid it?]

Black's bad bishop and the bad Black endgame: Tarrasch,S - Teichmann,R (14) [C14] (San Sebastian, 1912)

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. Bxe7 Qxe7 7. Qd2 O-O 8. f4 c5 9. Nf3 Nc6 10. g3 a6 11. Bg2 b5 12. O-O cxd4 13. Nxd4 Nxd4 14. Qxd4 Qc5 15. Qxc5 Nxc5

The Queens have come off leaving a bad Black Bishop. White has potential control of the d4 point and would ideally like to get rid of the Black Knight for his own Knight or Bishop, so that he can occupy d4 unchallenged.

16. Ne2 Bd7 17. Nd4 Rac8 18. Kf2 Rc7 19. Ke3 Re8 20. Rf2 Nb7 21. Bf1 Na5 22. b3 h6 23. Bd3 Nc6 24. Nxc6 Bxc6 25. Kd4

The moment the Black Knight disappears the King moves up into position.

25... Bd7 26. g4 Bc8 27. h4 g6 28. Rh1 Kg7 29. h5 Rh8 30. Rfh2 Bd7 31. g5 hxg5 32. fxg5 Rxh5 33. Rxh5 gxh5 34. Rxh5

White has used the extra space and good Bishop to make some progress on the King's-side. This progress consists of open lines, and Black cannot easily oppose Rooks on the h-file because the White King would immediately barge in through the unlocked door at c5.

34... Kf8 35. Rh8+ Ke7

White is two pieces up on the King's-side.

36. g6 fxg6 37. Bxg6 b4 38. Rh7+ Kd8 39. Bd3 Rc3 40. a3 a5 41. Rh8+ Ke7 42. Ra8 1-0

The good endgame for Black

If White's King's-side initiative dies down, which it often will with an exchange of Queens, White may be left facing a persistent Queen's-side attack from Black (after all, not trying for mate, the Q exchange need not affect its force) and perhaps over-exposed pawns.

Here is a well known example.

Fischer,R - Petrosian,T [C12] Curacao ct, 1962

1.e4 e6 2.d4 d5 3.Nc3 Nf6 4.Bg5 Bb4 5.e5 h6 6.Bd2 Bxc3 7.Bxc3 Ne4 8.Ba5 0-0 9.Bd3 Nc6 10.Bc3

White has got nothing from his Bishop excursions.

10...Nxc3 11.bxc3 f6 12.f4 fxe5 13.fxe5 Ne7 14.Nf3 c5 15.0-0 Qa5 16.Qe1 Bd7 17.c4 Qxe1 18.Rfxe1

dxc4 19.Be4 cxd4 20.Bxb7 Rab8 21.Ba6 Rb4

After the exchange of Queens there is still an initiative (and for the moment a pawn) for Black. White successfully fends off the first wave...

22.Rad1 d3 23.cxd3 cxd3 24.Rxd3 Bc6 25.Rd4 Rxd4 26.Nxd4 Bd5 27.a4 Rf4

But the defence has left White passive and uncoordinated. Black manoeuvres skilfully to weave a win.

28.Rd1 Ng6 29.Bc8 Kf7 30.a5 Nxe5 31.a6 Rg4 32.Rd2 Nc4 33.Rf2+ Ke7 34.Nb5 Nd6 35.Nxd6 Kxd6 36.Bb7 Bxb7 37.axb7 Kc7 38.h3 Rg5 39.Rb2 Kb8 40.Kf2 Rd5 41.Ke3 Rd7 42.Ke4 Rxb7 43.Rf2 0-1

French pawn formations

Fine gives a helpful analysis of possible pawn formations which might arise from the French. With a sensible distribution of pieces, we might expect

A : The hanging centre (=/+ =)

FIX

This is best for Black. It is also the most common and important type of centre. The e-pawn is weak but White cannot easily attack the K-side because of the need to prevent ...e5. In most French games Black can keep White worrying about enough other things on the board to stop White making much use of theoretical advantages.

An actual example:

1. e4 e6 2. d4 d5

This is the classic French conjuring trick with the White pawn centre.

3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. Bxe7 Qxe7 7. f4 O-O

Now you see it...

8. Nf3 c5 9. Bd3 f5 10. exf6 Rxf6 11. Qd2 Nc6 12. dxc5 Nxc5

...Now you don't! Without the f-pawn White risks being rolled over. Even with the f-pawn White must still pay constant attention to Black possibilities of an ...e5 break, so much so that White may undertake little elsewhere on the board.

Another example:

3. Nd2 Nf6 4. e5 Nfd7 5. Bd3 c5 6. c3 Nc6 7. Ne2 cxd4 8. cxd4

White can count this exchange a partial relief.

8...Qb6 9. Nf3 f6 10. exf6 Nxf6 11. O-O Bd6 12. Nc3 O-O 13. Re1 Bd7

This formation is more favourable to White, but look at the pieces! White has spent so much time carefully arranging the pawns and Knights that the Black pieces have had time to come to very good squares. The proud White d-pawn is under some pressure (not lots of pressure yet because of the Bxh7+ trick), the White Queen's-side is no more developed now than at move three, and Black can eye up a few stray White pawns (b2, d4, f2). The position possibly is slightly more favourable to White, but in practical play the conversion to a full point is a long hard struggle in which Black has good chances to win, since if ...e5 does ever come the d-pawn will be passed.

White's chances with a hanging centre: Nimzovitch - Salwe (Carlsbad, 1911)

1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 6. Bd3 Bd7 7. dxc5 Bxc5 8. O-O f6 9. b4 Be7 10. Bf4 fxe5 11. Nxe5 Nxe5 12. Bxe5

This is the hanging centre in the worst form for Black: White has a through blockade.

12... Nf6 13. Nd2 O-O 14. Nf3 Bd6 15. Qe2 Rac8 16. Bd4 Qc7 17. Ne5 Be8 18. Rae1 Bxe5 19. Bxe5 Qc6 20. Bd4 Bd7 21. Qc2 Rf7 22. Re3 b6

White has maintained the restraint of the pawns, and has pointed his Bishops at the Black King.

23. Rg3 Kh8 24. Bxh7

White is now a pawn up, and exchanges down to a won ending.

24...e5 25. Bg6 Re7 26. Re1 Qd6 27. Be3 d4 28. Bg5 Rxc3 29. Rxc3 dxc3 30. Qxc3 Kg8 31. a3 Kf8 32. Bh4 Be8 33. Bf5 Qd4 34. Qxd4 exd4 35. Rxe7 Kxe7 36. Bd3 Kd6 37. Bxf6 gxf6

38. h4 1-0

Black's chances with the hanging centre: Van Scheltinga - Van der Tol [C02] , 1946

1. e4 e6 2. d4 d5 3. e5 c5 4. dxc5 Nc6 5. Nf3 Bxc5 6. Bd3 f5 7. exf6 Nxf6 8. O-O O-O 9. c4 e5

The centre begins to roll... the central pawns are exposed, so Black needs to play sharply (i.e. vigorously)

and accurately). That's just what he does!

10. cxd5 e4! 11. dxc6 Qxd3 12. Qxd3 exd3 13. Ne5

White really needs to get a few more reserves into action.

[13. Nc3 bxc6 14. Na4 Bd6 15. Be3 <=>/=+]

13... bxc6 14. Nxd3 Bd4 15. Be3

[15. Nc3 Ba6 16. Rd1 Rad8 17. Ne2 Bxd3 18. Rxd3 Bxf2+]

15... Bxe3 16. fxe3 Ba6 17. Rd1 Rad8 18. Nf2 Rxd1+ 19. Nxd1 Ne4 20. Nf2 Nxf2 0-1

B : The c5 lever only (+=)

White can exchange dxc4 and aim to put a N on d4: this is better for White in the middlegame (ideas of f5) and the endgame (good N vs. bad Bc8)

White's chances with only the ...c5 lever: Tarrasch - Noa (Hamburg, 1885)

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. e5 Nfd7 5. Nce2 c5 6. c3 Nc6 7. f4 cxd4 8. cxd4 Bb4+ 9. Bd2 Qb6 10. Nf3 O-O 11. Bxb4 Qxb4+ 12. Qd2 Nb6 13. Nc3 Rd8 14. Nb5 Bd7 15. Nd6 Rab8 16. Rc1 Qxd2+ 17. Kxd2 Nc8 18. Nb5 a6 19. Nc3 N8e7 20. Bd3 Rbc8 21. b3 Nb4 22. a3 Nbc6 23. b4 h6 24. h4 Nb8 25.

Ke3 Rc7 26. Rc2 Rdc8 27. Rhc1 Kf8 28. g4 Be8 29. Nd2 Nd7 30. Nb3 Nb6 31. Nc5

After a long first act we see the c-file being hotly contested with an additional two plus points for White: the outpost on c5 and the initiative on the King's-side. At this point Black snaps and concedes a pawn for some chances to re-arrange his defences.

31... Nc4+ 32. Bxc4 dxc4 33. N5e4 b5 34. Nd6 Rb8 35. f5 Bd7 36. Rf2 Nd5+ 37. Nxd5 exd5

White has exchanged all but Black's least useful minor piece.

38. g5 h5 39. Rcf1 Kg8 40. g6

The exchanges have left the Queen's-side blocked while the King's-side pawns keep rolling along... This push wins an outpost on f7(!).

40... f6 41. Re2 Bc6 42. Rfe1 Rd8 43. Kf4 fxe5+ 44. Rxe5

White now has the e-file all to himself, and Black cannot strike down the impudent Knight because of the back rank mate. Black tries to contest the e-file...

44... Kf8 45. Nf7 Re8 46. Ng5 Rce7 47. Nh7+ 1-0

C : The f6 lever only (+=)

White can exchange $exf6$ and restrain the e-pawn: this usually signals a good middle-game for White and a better ending.

Example with only the ...f6 lever: Hubner - Larsen (2) [C04] Montreal Intl, 1979

1. d4 e6 2. e4 d5 3. Nd2 Nc6 4. Ngf3 Nf6 5. e5 Nd7 6. Nb3 a5 7. a4!? b6 8. c3 Be7 9. Bd3 Ba6 10. Bxa6 Rxa6

After the exchange of the bad light-squared Bishop, Black can look forward to reasonable chances in the middlegame.

11. O-O Ra8 12. Re1 Nf8 13. Nbd2 Ng6 14. Nf1 Qd7 15. Qe2 O-O 16. Ng3 Rae8 17. Nh5 f6

18. Nf4 Nxf4 19. Bxf4 f5

(= Taulbut) After some inaccuracies by both sides, White steers home a win, but at this point chances are probably about equal.

20. Reb1 Ra8 21. Qb5 Rfc8 22. Bg5 Bf8 23. Bd2 h6 24. b4 g5 ?! 25. h4 g4 26. Ne1 Qe8 27. Qd3 axb4 28. cxb4 Ra7 29. Bc3 Rca8 30. Qd1 Nd8 31. b5 c5 ?! 32. dxc5 Bxc5 33. Nd3 Nb7 34. g3 d4 ?! 35. Bd2 Bf8 36. Qb3 ?! 36... Rc8 37. Rc1 Raa8 38. Ra2 Rxc1+ 39. Bxc1 Na5 40. Qd1 Rc8 41. Rc2 Rc3 ?! 42. Rxc3 dxc3 43. Qc2 Qc8 44. Be3

44... Qc4 45. Bxb6 Nb3 46. Be3 Na1 47. Qe2 Qxa4 48. b6 Nb3 49. Qc2 Qc4 50. Qa2 Qd5 51. Nf4 Qd1+ 52. Kh2 c2 53. Qxb3 1-0

D : Two open files (+/-)

This is poor timing: both ...f6 and ...c5 have been tried but the White centre is stronger than ever, and will be unhindered by the need to defend a tense centre. A good middlegame for White but only a slightly better ending.

White's chances with two open files: Watson - Short (Brighton, 1983)

1. e4 e6 2. d4 d5 3. Nd2 Nf6 4. e5 Nfd7 5. f4 c5 6. c3 Nc6 7. Ndf3 Qb6

8. g3 cxd4 9. cxd4 Bb4+ 10. Kf2 g5 11. Be3 f6 12. Bh3 gxf4 13. gxf4 fxe5 14. fxe5 Rf8

There is no pawn tension in the centre now. Both Kings are a little exposed, but what matters is getting men into the box.

15. Ne2 Be7 16. Qd2 Ndb8 17. Rhf1 Na6 18. Kg2 Bd7 19. Ng5

White's Knight parachutes in. Of course, ...Bxg5 removes the intruder but at cost of conceding the dark squares.

19... Rg8 20. Kh1 Na5 21. b3 Rg7

White spies loose piece on a5.

22. Bxe6 Bxe6 23. Nxe6 Qxe6 24. Qxa5 1-0

A pawn down with the King still stuck in the middle, Noshier had seen enough.

E : No pawn levers (+-)

White's game at its best: a built-in King's side attack with f4 and even g4 is unhindered by the need to defend the centre, and Black's pieces have very little room, and no counterplay to slow up White's attack. I actually couldn't find an example of this, but some of Black's problems are illustrated in the following early game in the Tarrasch Variation by its founder.

Tarrasch - Eckart [C05] Nuremberg, 1889

1. e4 e6 2. d4 d5 3. Nd2

This distinctly unclassical move has been a major line ever since: it avoids the ...Bb4 pin, allows c2-c3 reinforcing the d-pawn, and has a mind to go later to f3, while the Ng1 goes via e2 to f4 or g3. 3... Nf6

4. e5 Nfd7 5. Bd3 c5 6. c3 Nc6 7. Ne2 Qb6 8. Nf3 Be7

This is now recognised as too slow.

9. O-O O-O 10. Nf4 Nd8 11. Qc2

Black's king is in the firing line with little support. This is the sort of fierce initiative Black can be faced with if no counterplay is forthcoming. Now Black is obliged to move the f-pawn.

11... f5 12. exf6 Nxf6 13. Ng5

Black must make some concession on the King's-side

13... g6 14. Bxg6

In such positions, this sacrifice is a matter of technique more than imagination.

14... hxg6 15. Qxg6+ Kh8 16. Qh6+ Kg8 17. Ng6 1-0

The gang of thuggish White pieces cannot be stopped.

F : The isolated Queen's Pawn (+=)

Typically this arises through the Tarrasch Variation, as Karpov and Korchnoi battled on through their 1974 match, e.g. game 16:

1. e4 e6 2. d4 d5 3. Nd2 c5 4. exd5 exd5 5. Ngf3 Nc6 6. Bb5 Bd6 7. O-O cxd4 8. Nb3 Nge7 9. bxd4 O-O 10. c3 Bg4 11. Qa4 Qd7 ...etc.

Karpov repeatedly showed that Black labours under a disadvantage in this line, and Korchnoi repeatedly showed that it was possible to draw with the IQP. The IQP is associated with possibilities for a Knight outpost on e4 and chances for a King's-side attack, as in this striking game:

Tatai-Korchnoi, Beersheva 1978

1. e4 e6 2. d4 d5 3. exd5 exd5 4. Bd3 c5 5. Nf3 Nc6 6. Qe2+ Be7 7. dxc5 Nf6 8. h3 O-O DIAGRAM

Having played h3, White now castles under it.

9. O-O Bxc5 10. c3 Re8 11. Qc2 Qd6 12. Nbd2 DIAGRAM

The weakness created by h3 now meets swift punishment.

12...Qg3 13. Bf5 Re2 14. Nd4 Nxd4 0-1

(resigns, because 14... Nxd4 15. cxd4 Bxd4 16. Bxc8 Rxf2 and Black will soon mate)

G : The Winawer Formation (=/+ =)

White has prospects of a King's-side attack with f4-f5, but Black's attack on the c-pawns can be certain of opportunities. The big structural disadvantage for Black is the lack of the Bf8, creating possibilities of a dark-square campaign. Black should castle Queen's-side, if at all.

Blacks chances in the Winawer: Tolush - Botvinnik (Ussr Ch'p, 1945)

1. e4 e6 2. d4 d5 3. Nc3 Bb4 4. e5 c5 5. a3 Bxc3+ 6. bxc3

The basic Winawer start. White can play Qg4 or more slowly:

6... Ne7 7. Nf3 Qa5 8. Bd2 c4 9. a4 Nd7 10. Be2 Nb6

White is passive and Black has already rounded up a Queen's-side pawn.

11. O-O Nxa4 12. Nh4 Ng6 13. Nxg6 hxg6

The open h-file will be important later. Black has potential initiatives on both sides.

14. Re1 Bd7 15. Bf1 b5 16. Qf3 Rb8 17. Reb1 Qc7 18. Bc1 a5

Black's Queen's-side advance rolls.

19. Ba3 Rb6 20. Qg3 Qd8 21. Bd6

This is the problem with the Winawer: you may get a Bishop stuck in your throat. Here Black sacrifices the exchange, confident he has enough going for him on the Q-side, which the Bishop was holding up!

21... Rxd6 22. exd6 Bc6 23. h3 Kd7 24. Re1 Qh4 25. Qe5 Qf6 26. Qg3 Rh4 27. Re3 Rf4 28. Be2 Qh4 29. Bf3 b4

White is hanging on grimly.

30. Qxh4 Rxh4 31. g3 Rh8 32. cxb4 axb4 33. Rb1 Rb8 34. h4 Rb7 35. Kh2 Kxd6 36. g4 Nc3 37. Ra1 Nb5 38. Rd1 Ra7 39. h5 g5 40. Kg2 Ra2 0-1

This document (frencheg.html) was last modified on 30 Jan 1996 by

[Dr. Dave](#)

Exeter Chess Club: H: The French 'Little' Centre

Peter Lane, 11th October 1996

The prime example of this formation arises in the Tarrasch Variation, as a means of avoiding the isolated queen's pawn.

1. e4 e6 2. d4 d5 3. Nd2 c5 4. exd5 Qxd5 5. Ngf3 cxd4 6. Bc4 Qd6 7. O-O Nf6 8. Nb3 Nc6 9. Nbx d4 Nxd4 10. Nxd4 a6

r1b1kb1r/1p3ppp/p2qpn2/8/2BN4/8/PPP2PPP/R1BQ1RK1

Black loses time with his queen (...Qc7 will be her third move) to obtain a better pawn formation for the endgame. In fact, the position looks more like a Sicilian, with ...a6 and ...b5, ...Bb7, ...Rc8 to come. And, as in a Sicilian, White's lead in development can turn into a nasty attack.

eg: after 11. Re1 Qc7 12. Bb3 Bd6 13. Nf5! Bxh2+ 14. Kh1 Kf8 15. g3 threatening Bf4-d6, but Black does have a pawn.

If the game is less sharp, Black will hope to gain a little time off the white bishop and develop for the endgame. All is not peace and tranquillity though, and a careless White can fall badly.

e.g.: from the diagram

S. Gilmour vs. P.C. Lane (Maidenhead, 1992)

11. c3 Qc7 12. Qe2 Bd6 13. g3? e5! 14. f4? Bg4!

and wins a piece, as the queen is overloaded, pinning the e-pawn (so it cannot take the knight) and defending a bishop.

15. Nf3 e4 16. Bd3 O-O 17. Bxe4 Rae8 (perfect timing!)

and black won comfortably a little later. This line is interesting in proving that the e-pawn may move, if the Bishop on c8 spies a light square weakness.

Assuming that Black can survive, what sort of endgame are we looking at? The pattern is simple: The sole central pawn on e6 acts as a buffer to white attacks, and provides a support on d5 for a knight. The half open c-file and the minority attack generate a comfortable initiative on the queen side for black. We can see this in action in the game

L.Vogt vs U.Andersson (Havana, 1975)

1rb2rkRbpppp/p3pn2/1p6/5P2/2N1B3/PPP1B1PP/3R1R1K

This position derived from a Sicilian, but illustrates the theme in an easy to understand example of the

minority attack.

1. Ba7 Ra8 2. Bb6 Bb7 3. a3 Rfc8

White may own the d-file, but black's minor pieces keep the rooks out, and now the knight on c3 is pinned to the c2-pawn, and ...Bxa3 is threatened! ``*Half-open files do not need entry points. They naturally generate pressure.*'' (Stean)

4. Ba5 g6 5. h3? (weakening) 5...h5 6. Bf3 Bxf3 7. Rxf3 h4!

suddenly the aggressive f-pawn is looking lonely.

8. Rd2 Rc4 9. b3 (forced, else ...Rac8...Nh5xf4) 9...Rc6 10. a4 b4 11. Ne2 Rac8 12. c4 bxc3 13. Rxc3 Nd5 14. Rxc6 Rxc6

The finish of this game is given in Stean's *Simple Chess*, with further notes on the minority attack in general. Black wins by manoeuvring against the two weaknesses. My games are not so well controlled, but black has ongoing play, and can often gain the full point merely by planting a knight on d5 and pushing the pawns down the right.

These lines are used further in the Rubinstein lines, **1. e4 e6 2. d4 d5 3. Nc3 dxe4** though ...c5 can be harder to achieve. But for those wanting to shock the Exchange-players, and to prove a missing d-pawn does not imply a dull endgame, there is:

1. e4 e6 2. d4 d5 3. exd5 Qxd5 4. Nc3 Bb4 5. Nf3 Nf6 6. Bd3 Ne4 7. O-O Nxc3 8. bxc3 Bxc3

for his pawn white has a lead in development, and that queen is still exposed, the books give Kotkov vs. Bukhman, 1966 (by transposition)

9. Rb1 Nc6 10. Rb5 Qd6 11. Be3 Nb4 12. Ng5 c6 13. Ne4 Qd8 14. Qg4 Kf8 15. Rg5

r1bq1k1r/pp3ppp/2p1p3/6R1/1n1PN1QQbBB3/P1P2PPP/5RK1

which is supposedly in white's favour

but *15...f5 16. Qg3 fxe4 17. Rxc7 Qf6!* wins

or *16. Qf3 Bxd4* and the Black-side holds, so I find this unclear at worst.

This last line highlights the basic strengths of the Black position. After the queen recapture, White has to gambit a pawn in order to gain an initiative, else Black develops comfortably, and patiently waits to begin his minority attack...

Introduction

The repertoires below offer you three ways of playing against most of the semi-open defences, and also tell you what to do against some of the less common lines after 1. e4 e5 2. Nf3.

The three approaches are:

Fast attacking game with pieces

Slower attacking game with f4

King's Indian Attack with g3

Which you choose will depend on what sort of player you are. It may also depend on what you hope to play after 1. e4 e5.

Fast attacking game with pieces

Giucoco Piano (my main recommendation for junior players) or

Scotch Game

Slower attacking game with f4

Vienna Gambit or

King's Gambit)

King's Indian Attack with g3

KIA with 1. e4 e5 2. Nf3 Nc6 3. g3 or

in the Vienna 1. e4 e5 2. Nc3 Nc6 3. g3

Sadly, the KIA lines have no real force and are not good lines to adopt against 1...e5. But the point is, how well does your chosen repertoire fit together? I'll go through each approach in turn, looking at a system to play against each defence.

I'll concentrate more on the example games than the theory, and more on the 'piece attack' lines than the others, because I think that's what you should be playing.

A. Piece attacks against the common half-open defences

In each of these lines White has a straightforward plan of campaign:

rapid development

keep Black passive

keep lines open if you can

keep an eye out for lightning raids

A1. Piece attacks vs. Alekhine 1. e4 Nf6: 1. e4 Nf6 2. Nc3 d5 3. exd5 Nxd5 4. Bc4

This is not a particularly well-regarded line for White - that is, it is not considered to be a good way to

try for advantage at GM level. But it gives you game where you don't have to learn much sharp theory and you are playing the sort of game you like. It has also been responsible for some amusing miniatures:

Ourmet,J - Cierniak,P (1) Paris, 1989

1. e4 d5 2. exd5 Nf6 3. Nc3 Nxd5 4. Bc4 Nxc3 5. Qf3 e6 6. Qxc3 Nc6 7. Nf3 b6

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | j | L | - | T |
| X | - | X | - | + | x | X | x |
| - | X | s | + | x | + | - | + |
| + | - | + | - | + | - | + | - |
| - | + | b | + | - | + | - | + |
| + | - | Q | - | + | n | + | - |
| p | P | p | P | - | P | p | P |
| R | - | B | - | K | - | + | r |

8. Bb5 1-0

and

Iskov,G - Woge Nielsen,J, it, Kobenhavn, 1989

1. e4 Nf6 2. Nc3 d5 3. e5 d4 4. Nce2 Ne4 5. c3 c5 6. d3 1-0

You must be prepared, after 1. e4 Nf6 2. Nc3, to play the Vienna or other opening after 2...e5.

After 2...d5 3. exd5 Nxd5 4. Bc4 Black has a choice of moving the knight (4... Nb6, 4...Nxc3) or finding some way to defend it (4...c6, 4...e6):

Avoiding with 4...Nb6

White's next is easy to find.

5. Bb3 c5

[5... Nc6 6. Qf3 e6 7. Nge2 Be7 8. d3 O-O 9. Bf4 Na5 10. Qg3 Bd6 11. Ne4 Nxb3
12. axb3 Bxf4 13. Nxf4

```
t + l D - T j +
X x X - + x X x
- S - + x + - +
+ - + - + - + -
- + - + n N - +
+ p + p + - Q -
- P p + - P p P
R - + - K - + r
```

+ = Tietze-Neumann, corr; the Knights are nicely placed]

6. Qh5 e6 7. d3 Nc6 8. Bg5 +=

[This is the best move, but an example with 8. Nf3 went 8...Be7 9. Ng5 g6 10.
Qh6 Bf8 11. Qh3 Bg7 12. Nge4 Nd5 13. Bh6 e5

```
t + l D j + - T
X x + - + x L x
- + s + - + x B
+ - X s X - + -
- + - + n + - +
+ b N p + - + q
p P p + - P p P
R - + - K - + r
```

White plays a likely-looking Queen sacrifice.

14. Bxg7 Bxh3 15. Nxd5 Qa5+ 16. Kf1 O-O-O 17. Bxh8 Rxh8 18. gxh3

```
- + j + - + - T
```

```

X x + - + x + x
- + s + - + x +
D - X n X - + -
- + - + n + - +
+ b + p + - + p
p P p + - P - P
R - + - + k + r

```

Visser-Spanjaard 1948; White is better, as the Black pieces can't get going]

]

Avoiding with 4... Nxc3

White has a cunning reply to this move.

5. Qf3 e6 6. Qxc3

```

t S l D j L - T
X x X - + x X x
- + - + x + - +
+ - + - + - + -
- + b + - + - +
+ - Q - + - + -
p P p P - P p P
R - B - K - N r

```

6... Qg5 7. Nf3

[7. Kf1 +=]

7... Qxg2 8. Rg1 Qh3

```

t S l + j L - T
X x X - + x X x
- + - + x + - +
+ - + - + - + -

```

```

- + b + - + - +
+ - Q - + n + d
p P p P - P - P
R - B - K - R -

```

]

White has compensation for the sacrificed pawn.

Defending with 4... c6

Again, the Qf3 move is strong; Black is obliged to lock in the Bc8.

5. Qf3 Be6 6. Nge2 Nc7 7. Bxe6 Nxe6 8. d4

[8. d3 += is good enough]

8... Nxd4 9. Nxd4 Qxd4 10. Be3 Qb4 11. O-O-O e5 ?

[11... e6]

12. Qf5 f6 13. Ne4 Be7 14. Qe6

```

t S - + j + - T
X x + - L - X x
- + x + q X - +
+ - + - X - + -
- D - + n + - +
+ - + - B - + -
p P p + - P p P
+ - K r + - + r

```

+ - Potengowski-Kerckhoff, 1930; White has a clear advantage]

Defending with 4... e6

White places his pieces as actively as possible.

5. Qf3 Nb4 ?! 6. Bb3 N8c6 7. Nge2 Be7 8. a3 Ne5 9. Qg3 Nbc6 10. d4

```
t + l D j + - T
X x X - L x X x
- + s + x + - +
+ - + - S - + -
- + - P - + - +
P b N - + - Q -
- P p + n P p P
R - B - K - + r
```

+/- Bellon-Alburt 1978]

White is better placed.

Example games A1

Karaklajic,N - Marjanovic,Z (3) Pula, 1990 [B02]

1. e4 Nf6 2. Nc3 d5 3. exd5 Nxd5 4. Bc4 Nb6 5. Bb3 c5 6. Qh5

```
t S l D j L - T
X x + - X x X x
- S - + - + - +
+ - X - + - + q
- + - + - + - +
+ b N - + - + -
p P p P - P p P
R - B - K - N r
```

Again, White tries to get Black to play ...e6; Black resists.

6... c4 7. Bxc4 Nxc4 8. Qb5+ Nc6 9. Qxc4 Qd4 10. Qxd4 Nxd4 11. Kd1

```

t + l + j L - T
X x + - X x X x
- + - + - + - +
+ - + - + - + -
- + - S - + - +
+ - N - + - + -
p P p P - P p P
R - B k + - N r

```

White is a pawn up and just needs to survive the next few moves to reach a winning endgame.

11... Bf5 12. d3 O-O-O 13. Be3 e5 14. Nge2 Bc5 15. Re1 Nxe2 16. Kxe2 Bxe3 17. Kxe3 Rhe8 18. f3 h5 19. a4 g5 20. h3 g4 21. hxg4 hxg4 22. f4 Rd4 23. fxe5 Rxe5+ 24. Kd2 1-0

Lendwai - Neckar,L, Nova-Park/SW,2,21, 1989 [B02]

1. e4 Nf6 2. Nc3 d5 3. exd5 Nxd5 4. Bc4 e6 5. Nf3 Be7 6. O-O O-O 7. Re1 Nb6 8. Bb3 c5 9. d3 Nc6 10. a3 Nd5 11. Ne4 b6 12. Qe2 Qc7

```

t + l + - T j +
X - D - L x X x
- X s + x + - +
+ - X s + - + -
- + - + n + - +
P b + p + n + -

- X - P - B - +
+ - P - + - R -
p + p + - P p P
+ - + - R - K -

```

Black undoubtedly missed White's idea when considering his last few moves.

24. Rxc7 1-0

Weiss,M - Shields,P (5), Chicago, 1989 [B02]

1. e4 Nf6 2. Nc3 d5 3. exd5 Nxd5 4. Bc4 e6 5. Qf3 Nxc3 6. Qxc3 Nc6 7. Nf3 Qd6 8. a3 Bd7 9. O-O O-O-O

```

- + j T - L - T
X x X l + x X x
- + s D x + - +
+ - + - + - + -
- + b + - + - +
P - Q - + n + -
- P p P - P p P
R - B - + r K -

```

Black skips to the Queen's-side

10. d4 Be7 11. Be3 Bf6 12. Rad1 Ne7 13. Ne5 Be8 14. Bf4 Nf5 15. Ng6 e5

```

- + j T l + - T
X x X - + x X x

```

- + - D - L n +
+ - + - X s + -
- + b P - B - +
P - Q - + - + -
- P p + - P p P
+ - + r + r K -

This central break is the right sort of idea for Black, but goes very wrong here.

16. dxe5 Qxd1 17. exf6 Bc6 18. Qe5 Rd7 19. Rxd1 Rxd1+ 20. Bf1 Nd6 21. Nxb8 Bb5 22. Qxb5 Nxb5 23. fxg7 1-0

I have spent quite a while on the Alekhine's, not because it's a very common line but

you won't find much on the Bc4 plan in the books

the White plan is exactly what you should be doing in all the recommended lines below.

A2. Piece attacks vs. Caro-Kann Defence

All the main lines in the books continue:

1. e4 c6 2. d4 d5

and now

3. Nc3 dxe4 4. Nxe4

You may find players who will try and gum the whole position up with 3...g6. tempting 4. e5. You can play 4. h3 but the resulting positions are rather dull If you don't like that idea, try instead

3. Nd2

when 3...g6 can be met by 4. c3, keeping the tension in the centre, and **3... dxe4 4. Nxe4**

gives us the starting position from the books.

A2.1 Solid line with 4... Nd7

White places his pieces actively in the hope of forcing ...e6 before the Bc8 escapes.

5. Bc4 Ngf6 6. Ng5 e6 7. Qe2 Nb6

[7... h6 8. Nxf7 Kxf7 9. Qxe6+ Kg6 10. Bd3+ Kh5 11. Qh3#]

8. Bd3 h6

[8... Qxd4 is too dangerous:

9. N1f3

idea Ne5,Ng5xf7

9... Bb4+ 10. c3 Bxc3+ 11. Kf1 Qc5 12. bxc3 Qxc3 13. Bb2 Qa5

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | + | j | + | - | T |
| X | x | + | - | + | x | X | x |
| - | S | x | + | x | S | - | + |
| D | - | + | - | + | - | N | - |
| - | + | - | + | - | + | - | + |
| + | - | + | b | + | n | + | - |
| p | B | - | + | q | P | p | P |
| R | - | + | - | + | k | + | r |

White has great play for the pawn]

9. N5f3 c5 10. dxc5 Bxc5 11. Ne5 Nbd7 12. Ngf3 O-O 13. Bd2 Nxe5 14. Nxe5 Bd4

[14... Qd5 15. O-O-O Qxa2 16. c3]

15. O-O-O Qd5 16. f4 Qxa2 17. c3 Bc5 18. g4 Nd5 19. g5 Qa1+ 20. Bb1 g6

21. gxf6 b5 22. Qd3 Ba3 23. Qc2 Bb7 24. Rhg1 Rfc8

t + t + - + j +
X l + - + x + -
- + - + x + x P
+ x + s N - + -
- + - + - P - +
L - P - + - + -
- P q B - + - P
D b K r + - R -

Ripe for picking, I'd say.

25. Rxf6+ Kf8 26. h7 Ke7 27. Rg7 b4

[27... Rf8 28. Ng6+ Kf6 29. Nxf8 Kxg7 30. h8=Q+ Kxh8 31. Qh7#]

28. Rxf7+ Kd6 29. Rd7+ Kc5 30. Rxb7 1-0

Kirpichnikov-Lein, 1974]

A2.2. Lines with 4... Nf6

5. Nxf6+

...and Black has a choice of captures.

A2.2.1

Tartakower Variation, 5... exf6

This is a dull line for Black. The most straightforward attacking line against it is

6. c3 Bd6 7. Bd3 O-O 8. Ne2 Re8 9. Qc2 g6 10. h4

See example games.

A2.2.2 Bronstein-Larsen line, 5...gxf6

This is the more dynamic line; Black hopes to make good use of the half-open files.

6. Nf3 Bg4

[6... Bf5

is the normal-looking move, but it isn't very good here e.g.

7. Bd3 Bg6 8. O-O Qc7 9. c4 Nd7 10. d5 O-O-O 11. Be3 e5 12. Be2 Kb8

[12... c5 13. Nh4]

13. Rc1 f5 14. c5

```

- J - T - L - T
X x D s + x + x
- + x + - + l +
+ - P p X x + -
- + - + - + - +
+ - + - B n + -
p P - + b P p P
+ - R q + r K -

```

14... cxd5 15. c6 bxc6 16. Bb5]

7. Be2 Qc7 8. h3 Bh5 9. O-O Nd7

[9... e6 is better, but White should still get a good attacking game after 10. c4 Nd7 11. d5 O-O-O]

10. d5 Rd8 11. c4 Nb6 12. Be3 Bxf3

[12... cxd5 13. cxd5 Nxd5

[13... Rxd5 14. Bxb6 Rxd1 15. Bxc7]

14. Bb5+]

13. Bxb6 axb6 14. Bxf3 cxd5 15. cxd5 Bh6 16. Qa4+ Kf8 +/- Smyslov-Pachman 1964]

A2.3 Classical Variation with 4...Bf5

Now play:

5. Ng3 Bg6 6. h4 h6 7. Nh3

This is the most exciting line. The main line goes something like:

7. Nf3 Nd7 8. h5 Bh7 9. Bd3 Bxd3 10. Qxd3 Qc7 11. Bd2 e6 12. O-O-O Ngf6 13. Qe2 O-O-O 14. Ne5

```

- + j T - L - T
X x D s + x X -
- + x + x S - X
+ - + - N - + p
- + - P - + - +
+ - + - + - N -
p P p B q P p +
+ - K r + - + r

```

...when White has a small advantage which is difficult to make any use of.

7... Nf6 8. Nf4 Bh7 9. Bc4 e6 10. O-O Bd6

Now we see the point of the Nf4 move:

11. Nxe6 fxe6 12. Bxe6

```

t S - D j + - T
X x + - + - X l
- + x L b S - X
+ - + - + - + -
- + - P - + - P
+ - + - + - N -
p P p + - P p +
R - B q + r K -

```

White has good chances for attack, although if the attack fails, the missing piece will lose the game.

12... Qc7 13. Re1

[13. Nh5 may be better]

13... Nbd7 14. Bg8+ Kf8 15. Bxh7 Rxh7

and Black is holding on.

Example games A2

Kavalek-Andersson 1978

1. e4 c6 2. d4 d5 3. Nd2

Kavalek actually played 3. Nc3

3...dxe4 4. Nxe4 Nf6 5. Nxf6+ exf6 6.c3 Bd6 7. Bd3 O-O 8. Ne2 Re8 9. Qc2 g6 10. h4 Nd7 11. h5 Nf8 12. Bh6 Qc7 13. O-O-O Be6

[13... b5 14. Rh4]

14. c4 Rad8 15. hxg6 fxg6 16. c5 Be7 17. Nf4 Bf7 18. Bc4

```

- + - T t S j +
X x D - L l + x
- + x + - X x B

```

```

+ - P - + - + -
- + b P - N - +
+ - + - + - + -
p P q + - P p +
+ - K r + - + r

```

The Bf7 must be exchanged.

18... Rd5

[18... Bxc4 19. Qxc4+ Kh8 20. Qf7 Bd6 21. Bg7#]

19. Rde1 Red8 20. Bxd5 cxd5 21. Re3 Rd7 22. Rhe1 g5

else Qe2 and Re8+

23. Bxf8 Bxf8 24. Rh1 h6 25. Ng6 Bxc5 26. Rc3 Bd6 27. Rxh6 Kg7 28. Nf8 Kxf8

[28... Bg8 29. Nxd7]

29. Rh8+ Ke7 30. Qe2+ Be6 31. Rh7+

```

- + - + - + - +
X x D t J - + r
- + - L l X - +
+ - + x + - X -
- + - P - + - +
+ - R - + - + -
p P - + q P p +
+ - K - + - + -

```

White, who has conducted the attack with great accuracy, finds an equally crisp finish.

1-0

[31... Kf8 32. Rxc7 Bxc7 33. Qxe6 Rxh7 34. Qc8+]

[31... Kd8 32. Qxe6 Rxh7 33. Qg8+]

De Armas,A - Jensen,C (7) Novi, 1990 [B18]

**1. e4 c6 2. d4 d5 3. Nd2 dxe4 4. Nxe4 Bf5 5. Ng3 Bg6 6. h4 h5 7. N1e2 e6
8. Nf4 Ne7 9. c3 Nd7 10. Nxg6 Nxg6 11. Nxh5 Nxh4 12. g3**

```
t + - D j L - T
X x + s + x X -
- + x + x + - +
+ - + - + - + n
- + - P - + - S
+ - P - + - P -
p P - + - P - +
R - B q K b + r
```

The open h-file looks dangerous for both sides, but Black must retreat.

12... Ng6 13. Bd3 Rh7 14. Qc2

```
t + - D j L - +
X x + s + x X t
- + x + x + s +
+ - + - + - + n
- + - P - + - +
+ - P b + - P -
p P q + - P - +
R - B - K - + r
```

Suddenly, White looks much the better.

14... f5 15. Qb3 Ne7 16. Qxe6 g6 17. Bg5 Qa5 18. O-O-O

```
t + - + j L - +
X x + s S - + t
```

- + x + q + x +
D - + - + x B n
- + - P - + - +
+ - P b + - P -
p P - + - P - +
+ - K r + - + r

White is looking very good!

18... Rxb5

[18... gxf5 19. Rde1 O-O-O 20. Re5 Qa4 21. Bxf5 Rg7

- + j T - L - +
X x + s S - T -
- + x + q + - +
+ - + - R b B x
d + - P - + - +
+ - P - + - P -
p P - + - P - +
+ - K - + - + r

19. Bxe7 Qd5 20. Qxg6+ Kxe7 21. Rxb5

t + - + - L - +
X x + s J - + -
- + x + - + q +
+ - + d + x + r
- + - P - + - +
+ - P b + - P -
p P - + - P - +
+ - K r + - + -

Enough! 1-0

Haas,C - Trachsel, Arosa, 1990 [B18]

**1. e4 c6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Bf5 5. Ng3 Bg6 6. h4 h6 7. Nh3 Nf6
8. Nf4 Bh7 9. c3 e6 10. Bc4 Nd5 11. Qg4**

t S - D j L - T
X x + - + x X l
- + x + x + - X
+ - + s + - + -
- + b P - N q P
+ - P - + - N -
p P - + - P p +
R - B - K - + r

Black now exchanges one his two developed pieces, bringing another White piece into play.

11... Nxf4 12. Bxf4 Qf6 13. Kf1 Nd7 14. Re1 O-O-O 15. Rh3 Bf5

- + j T - L - T
X x + s + x X -
- + x + x D - X
+ - + - + l + -
- + b P - B q P
+ - P - + - N r
p P - + - P p +
+ - + - R k + -

Winning the exchange? This was actually a cunning trap for Black to fall into.

16. Qf3 Bxh3 17. Qxc6+ 1-0

Rodriguez,Danie - Ruxton,K (6) WchJ, 1989 [B18]

1. e4 c6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Bf5 5. Ng3 Bg6

Here White adopts a slightly different move order to the recommended line

above.

6. N1e2 e6 7. Nf4 Bd6 8. h4

```

t S - D j + s T
X x + - + x X x
- + x L x + l +
+ - + - + - + -
- + - P - N - P
+ - + - + - N -
p P p + - P p +
R - B q K b + r

```

Again, Black is prompted to exchange on f4.

8... Bxf4 9. Bxf4 h6 10. h5 Bh7 11. c3 Nf6 12. Qb3 Qe7 13. Be5 b6 14. O-O-O O-O 15. Bd3 Bxd3 16. Rxd3 Nbd7 17. Kb1 Ng4 18. Re1

```

t + - + - T j +
X - + s D x X -
- X x + x + - X
+ - + - B - + p
- + - P - + s +
+ q P r + - N -
p P - + - P p +
+ k + - R - + -

```

White simply plays to dominate the d-file after the exchange on e5.

18... Ngxe5 19. dxe5 Nc5 20. Qa3 Qg5 21. Rd4 Rfd8 22. Red1 Rd5 23. b4 Nd7 24. c4 Rxd4 25. Rxd4 Qe7 26. f4 c5 27. b5 f6 28. exf6 Nxf6 29. Rd2 e5 30. fxe5 Qxe5 31. Qd3

```

t + - + - + j +
X - + - + - X -
- X - + - S - X

```

```
+ p X - D - + p
- + p + - + - +
+ - + q + - N -
p + - R - + p +
+ k + - + - + -
```

Black's position is loose and he must be very careful...

31... Rf8 32. Re2 Qf4 33. Nf5 Re8

```
- + - + t + j +
X - + - + - X -
- X - + - S - X
+ p X - + n + p
- + p + - D - +
+ - + q + - + -
p + - + r + p +
+ k + - + - + -
```

34. Ne7+ Kf7 35. Qg6+ Kf8

```
- + - + t J - +
X - + - N - X -
- X - + - S q X
+ p X - + - + p
- + p + - D - +
+ - + - + - + -
p + - + r + p +
+ k + - + - + -
```

36. Qxe8+ Kxe8 37. Nd5+ 1-0

...More careful than that, anyway

Schlindwein,R - Hugger,M (1) Badenweiler, 1990 [B18]

1. e4 c6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Bf5 5. Ng3 Bg6 6. N1e2 h6 7. Nf4 Bh7 8. Bc4 e6 9. O-O Nf6 10. Re1 Nd5

```

t S - D j L - T
X x + - + x X l
- + x + x + - X
+ - + s + - + -
- + b P - N - +
+ - + - + - N -
p P p + - P p P
R - B q R - K -

```

The pin on the e-file can be exploited.

11. Bxd5 cxd5 12. Qh5 Qg5

[12... g6 13. Qxd5 Nc6]

13. Rxe6+ Kd8 14. Qxf7 Nc6 15. Re8# 1-0

A3. Piece attacks vs. French 1. e4 e6: 1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. h4 (Alekhine-Chatard Attack)

Well, you won't get the Alekhine line in every game. The French starts:

1. e4 e6

Now play the natural sequence

2. d4 d5 3. Nc3

Black now has an important choice: safe or brave?

A3.1. Rubinstein Variation 3...dxe4 4. Nxe4

```

t S l D j L s T
X x X - + x X x

```

```

- + - + x + - +
+ - + - + - + -
- + - P n + - +
+ - + - + - + -
p P p + - P p P
R - B q K b N r

```

This is a solid line but Black lacks counterplay.

A3.1.1 Rubinstein Variation with 4...Nf6

1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nf6

White can get an advantage through straightforward moves:

5. Nxf6+ gxf6

(5...Qxf6 6. Nf3 h6 7. Bd3

```

t S l + j L - T
X x X - + x X -
- + - + x D - X
+ - + - + - + -
- + - P - + - +
+ - + b + n + -
p P p + - P p P
R - B q K - + r

```

+/-)

6. Nf3 b6 7. Bb5+ c6 8. Bc4 Bb7 9. Bf4 Bd6 10. Bg3 Qc7 11. Qe2 Nd7 12. O-O O-O-O 13. Ba6

```

- + j T - + - T
X l D s + x + x

```

```

b X x L x X - +
+ - + - + - + -
- + - P - + - +
+ - + - + n B -
p P p + q P p P
R - + - + r K -

```

Liublinsky-Ufimsev 1945.

A3.1.2 Rubinstein Variation with 4...Bd7

1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Bd7

This *Stonewall* variation recently had some recommendations with the idea of getting a line for the Bishop with Bc6, but White shouldn't be short of play:

5. Nf3 Bc6 6. Bd3

```

t S - D j L s T
X x X - + x X x
- + l + x + - +
+ - + - + - + -
- + - P n + - +
+ - + b + n + -
p P p + - P p P
R - B q K - + r

```

6...Nf6

(6...Nd7 may be better)

7. Nxf6+ gxf6 8. Qe2

```

t S - D j L - T
X x X - + x + x
- + l + x X - +
+ - + - + - + -

```

```

- + - P - + - +
+ - + b + n + -
p P p + q P p P
R - B - K - + r

```

+/- Levy.

A3.1.3

Rubinstein Variation with 4...Nd7

1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nd7

The main line, which, however, promises Black little. There have been

many lines explored here but as an example you could play over:

5. Nf3 Nf6 6. Nxf6+ Nxf6 7. Ne5

```

t + l D j L - T
X x X - + x X x
- + - + x S - +
+ - + - N - + -
- + - P - + - +
+ - + - + - + -
p P p + - P p P
R - B q K b + r

```

White has a small advantage with easy development. Tarrasch showed us several times how to play these positions: see EG.

A3.2. Guimard Variation 3. ... Nc6

```

t + l D j L s T
X x X - + x X x
- + s + x + - +
+ - + x + - + -

```

```

- + - P p + - +
+ - N - + - + -
p P p + - P p P
R - B q K b N r

```

In this line, Black cannot play the natural counterattck ...c5, and the other break with ...f6 is riskier. Now

4. e5

```

t + l D j L s T
X x X - + x X x
- + s + x + - +
+ - + x P - + -
- + - P - + - +
+ - N - + - + -
p P p + - P p P
R - B q K b N r

```

4...Nge7 5. Nce2 Nf5 6. Nf3 b6 7. Nf.. /em>

```

t + l D j L - T
X - X - + x X x
- X s + x + - +
+ - + x P s + -
- + - P - N - +
+ - + - + n + -
p P p + - P p P
R - B q K b + r

```

leaves Black without scope, so Black should prefer

4...f6

when, after

5. exf6 Nxf6 6. Nf6 Bd6 7. Bg5 O-O 8. Bd3 Bd7 9. Qd2 Qe8 10. O-O-O Qh5

11.Rde1 [[threesuperior]],

t + - + - T j +
X x X l + - X x
- + s L x S - +
+ - + x + - B d
- + - P - + - +
+ - N b + n + -
p P p Q - P p P
+ - K - R - + r

White has pressure along the e-file and is in any event more actively placed.

A3.3. Classical Variation, 3...Nf6

This is met by:

4. Bg5

t S l D j L - T
X x X - + x X x
- + - + x S - +
+ - + x + - B -
- + - P p + - +
+ - N - + - + -
p P p + - P p P
R - + q K b N r

The natural reply here is the balancing ...Be7 but Black has two alternatives: ...Bb4 and ...dxe4.

A3.3.1. The Burn Variation, 4... dxe4

t S l D j L - T
X x X - + x X x
- + - + x S - +
+ - + - + - B -
- + - P x + - +
+ - N - + - + -
p P p + - P p P

R - + q K b N r

This has obvious links with the Rubinstein line.

5. Nxe4 Be7 6. Bxf6

And Black has tried both recaptures:

6...Bxf6 (Variation 1)

```

t S l D j + - T
X x X - + x X x
- + - + x L - +
+ - + - + - + -
- + - P n + - +
+ - + - + - + -
p P p + - P p P
R - + q K b N r

```

Black has the two bishops and is solid; White can claim only a small advantage.

7. Nf3 Nd7 8. Qd2 O-O 9.O-O-O b6 10. d5 Ne5 11. Qf4 Ng6 12. Nxf6+ Qxf6 13. Qxf6 gxf6

```

t + l + - T j +
X - X - + x + x
- X - + x X s +
+ - + p + - + -
- + - + - + - +
+ - + - + n + -
p P p + - P p P
+ - K r + b + r

```

...when White hopes that the greater harmony of the pawns will give the advantage.

6... gxf6 (Variation 2)

t S l D j + - T
 X x X - L x + x
 - + - + x X - +
 + - + - + - + -
 - + - P n + - +
 + - + - + - + -
 p P p + - P p P
 R - + q K b N r

A more risky and more dynamic try.

After 7. Nf3 Black hopes the two bishops and open d- and g-files will give active play. White should develop properly and aim for d5, breaking open the position.

A3.3.2. The MacCutcheon Variation, 4... Bb4

t S l D j + - T
 X x X - + x X x
 - + - + x S - +
 + - + x + - B -
 - L - P p + - +
 + - N - + - + -
 p P p + - P p P
 R - + q K b N r

This line still offers Black some prospects of a counterattacking game, but is not as good as the Winawer.

5. e5 h6 6. Bd2 Bxc3 7. bxc3 Ne4 8. Qg4 g6 9. Bd3 Nxd2 10. Kxd2 c5 11. Qf4 Nc6 12. Nf3

t + l D j + - T
 X x + - + x + -
 - + s + x + x X
 + - X x P - + -
 - + - P - Q - +

+ - P b + n + -
p + p K - P p P
R - + - + - + r

White has the idea of dxc5 and Nd4, with advantage.

A3.3.3. The Classical Variation 4... Be7 (and Alekhine Chatard attack with 6. h4)

t S l D j + - T
X x X - L x X x
- + - + x S - +
+ - + x + - B -
- + - P p + - +
+ - N - + - + -
p P p + - P p P
R - + q K b N r

Again White's move is easy to remember:

5. e5 Nfd7

t S l D j + - T
X x X s L x X x
- + - + x + - +
+ - + x P - B -
- + - P - + - +
+ - N - + - + -
p P p + - P p P
R - + q K b N r

6. h4

This is, at last, the Alekhine-Chatard Attack. White offers a pawn for chances of attack. Just how good this line can be is shown by the following miniature:

Zuber,M - Halmkin,P (Exeter Vs Teignmouth, 1995)

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. h4 Bxg5 7. hxg5 Qxg5 8. Nh3 Qe7 9. Qg4 g6 10. Bd3 b6 11. Nf4 Ba6 12. Bxg6 fxg6 13. Nxe6 Nf8 14. Nxd5 Nxe6 15. Nxe7 1-0

Good, isn't it?

Black has various ways of declining the gambit, but none are very promising (analysis from BCO2 and elsewhere):

Declining with 6... f6

7. Qh5+ Kf8

[or 7... g6 8. exf6 gxh5 9. fxe7 Qxe7 10. Bxe7 Kxe7

t S l + - + - T
X x X s J - + x
- + - + x + - +
+ - + x + - + x
- + - P - + - P
+ - N - + - + -
p P p + - P p +
R - + - K b N r

Declining with 6... c5

7. Bxe7 Qxe7 8. Nb5 +=

Declining with 6... h6

7. Be3 c5 8. Qg4 g6 9. Nf3 +=

Hellers-Barayev 1986

Declining with 6... a6

7. Qg4 Bxg5 8. hxg5 c5 9. g6 f5 10. Qg3 h6 11. Nf3 O-O 12. O-O-O Nc6 13. Ne2

t + l D - T j +
+ x + s + - X -
x + s + x + p X
+ - X x P x + -
- + - P - + - +
+ - + - + n Q -
p P p + n P p +
+ - K r + b + r

+ = /unclear BCO2

Declining with 6... O-O

7. Qg4 f5 8. exf6 Nxf6 9. Qg3 c5 10. dxc5 Nbd7 11. O-O-O Nxc5 12. Bd3 b5

t + l D - T j +
X - + - L - X x
- + - + x S - +
+ x S x + - B -
- + - + - + - P
+ - N b + - Q -
p P p + - P p +
+ - K r + - N r

unclear: Kupreichik-Moskalenko 1986

The Gambit accepted: 6...Bxg5

7. hxg5 Qxg5 8. Nh3 Qe7 9. Nf4 Nc6

t S l + j + - T
X x X S D x X x

- + - + x + - +
+ - + x P - + -
- + - P - N - +
+ - N - + - + -
p P p + - P p +
R - + q K b + r

The N goes to h3 instead of f3 to allow Q to move to g4 when White has good prospects of attack.

Black has a couple of alternatives to 9...Nc6:

[9... f5 10. Qh5+ Qf7 11. Nxe6 g6 12. Nxc7+ Kd8 13. Qf3

t S l J - + - T
X x N s + d + x
- + - + - + x +
+ - + x P x + -
- + - P - + - +
+ - N - + q + -
p P p + - P p +
R - + - K b + r

+ - BCO2

13... Kxc7 14. Nxd5+ Kd8 15. Bc4]

[9... Nf8 10. Qg4 f5 11. exf6 gxf6 12. O-O-O: see example games]

[9... a6 10. Qg4 Kf8 11. Qf3 Kg8 12. Bd3 c5

[12... h6]

13. Bxh7+

t S l + - + j T
+ x + s D x X b

X + - + X + - +
+ - X x P - + -
- + - P - N - +
+ - N - + q + -
p P p + - P p +
R - + - K - + r

Keres-Wade 1954]

10. Qg4 Nxd4 11. O-O-O Nf5 12. Nfxd5

t + l + j + - T
X x X s D x X x
- + - + x + - +
+ - + n P s + -
- + - + - + q +
+ - N - + - + -
p P p + - P p +
+ - K r + b + r

With compensation, according to BCO2

A3.4. The Winawer variation, 3... Bb4 and Alekhine Gambit 4. Nge2

t S l D j + s T
X x X - + x X x
- + - + x + - +
+ - + x + - + -
- L - P p + - +
+ - N - + - + -
p P p + - P p P
R - B q K b N r

Black takes a risky decision - to attack White's Knight but with the important dark-squared bishop. White has the main try 4. e5 but also some ways of avoiding these critical lines, including the gambit lines 4. Nge2 and 4. a3, and the Winawer Exchange 4. exd5.

4. Nge2

Another Alekhine Gambit

t S l D j + s T
X x X - + x X x
- + - + x + - +
+ - + x + - + -
- L - P p + - +
+ - N - + - + -
p P p + n P p P
R - B q K b + r

Black is advised not to hang on to the pawn, but to concentrate on good development instead.

4... dxe4 5. a3 Be7 6. Nxe4 Nf6

t S l D j + - T
X x X - L x X x
- + - + x S - +
+ - + - + - + -
- + - P n + - +
P - + - + - + -
- P p + n P p P
R - B q K b + r

An open game with about equal chances has resulted.

Example games A3

A3.3.3 Examples of the Alekhine-Chatard Attack

Alekhine - Fahrni, Mannheim, 1914

This is an early game that showed us all the way.

1. e4 e6 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. h4 Bxg5 7. hxg5 Qxg5 8. Nh3

t S l + j + - T
X x X s + x X x
- + - + x + - +
+ - + x P - D -
- + - P - + - +
+ - N - + - + n

Black's attack hasn't even started.

23. Rxc7 Nxf5 24. Rxc8+ Rxc8 25. Qxf6+ 1-0

De Eccher,S - Schneiders,A [C15], Lugano

1. e4 e6 2. d4 d5 3. Nc3 Bb4 4. Nge2 dxe4 5. a3 Be7 6. Nxe4 Nf6 7. Qd3 b6 8. Bf4 Bb7 9. Nxf6+ Bxf6 10. O-O-O

t S - D j + - T
X l X - + x X x
- X - + x L - +
+ - + - + - + -
- + - P - B - +
P - + q + - + -

- P p + n P p P
+ - K r + b + r

Black is fairly well placed, though behind in development, but now blunders.

10... Bg5 11. Qb5+ 1-0

A3. Example of other French variations

Tarrasch - Mieses[C30], Berlin Match (3) , 1916

1. e4 e6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nd7 5. Nf3 Ngf6 6. Bd3 Be7 7. O-O Nxe4 8. Bxe4 Nf6 9. Bd3 b6

t + l D j + - T
X - X - L x X x
- X - + x S - +
+ - + - + - + -
- + - P - + - +
+ - + b + n + -
p P p + - P p P
R - B q + r K -

Black has conceded a small space advantage and plays his last move to get the blocked Bc8 out. Tarrasch prevents even that.

10. Ne5 O-O

Else Bb5+

11. Nc6 Qd6 12. Qf3 Bd7 13. Nxe7+ Qxe7 14. Bg5 Rac8 15. Rfe1 Rfe8

Black knows enough not to move his King's-side pawn unless he is forced to. So Tarrasch forces him to!

16. Qh3

```

- + t + t + j +
X - X l D x X x
- X - + x S - +
+ - + - + - B -
- + - P - + - +
+ - + b + - + q
p P p + - P p P
R - + - R - K -

```

Threatening 17. Bxf6 and 18. Qxh7

16... Qd6 17. Bxf6 gxf6 18. Qh6 f5

In just a few moves, Tarrasch has got into the heart of the King's defences.

19. Re3 Qxd4 20. c3!

A pretty final move: Black resigns, unable to stop Rg3.

```

- + t + t + j +
X - X l + x + x
- X - + x + - Q
+ - + - + x + -
- + - D - + - +
+ - P b R - + -
p P - + - P p P
R - + - + - K -

```

A4. Piece attacks vs. Pirc/Modern 1. e4 ...d6/...g6: 1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Be3

The trouble with the Pirc is that Black will just lurk behind his pawns, and your pieces won't find much to attack. I play the Pirc/Modern as Black, and am always more impressed by systems which threaten to open lines with pawn breaks than any of the piece play lines. But that's not to say they aren't all dangerous; the player with a plan will always beat the player without one.

There are two principal 'piece play' lines available:

1. e4 d6 2. d4 Nf6 3. Nf3 g6 4. Bc4 Bg7 5. Qe2

```

t S l D j + - T
X x X - X x L x
- + - X - S x +
+ - + - + - + -
- + b P p + - +
+ - + - + n + -
p P p + q P p P
R n B - K - + r

```

White concentrates on rapid development and aims at a timely e5.

The other line I have in mind is:

1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Be3 Bg7 5. Qd2

```

t S l D j + - T
X x X - X x L x
- + - X - S x +
+ - + - + - + -
- + - P p + - +
+ - N - B - + -
p P p Q - P p P
R - + - K b N r

```

Now the simple idea is to play the standard attack with O-O-O, f3, g4, h4, Nge2-g3 and h5. Let's see this in action:

Hort, V - Rota [B07], Aachen/SW, 16, 18

1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Be3 Bg7 5. Qd2 O-O 6. O-O-O

t S l D - T j +
X x X - X x L x
- + - X - S x +
+ - + - + - + -
- + - P p + - +
+ - N - B - + -
p P p Q - P p P
+ - K r + b N r

6... c6 7. Bh6 b5 8. f3 a5 9. h4 b4 10. Na4 Bd7 11. h5

t S - D - T j +
+ - + l X x L x
- + x X - S x B
X - + - + - + p
n X - P p + - +
+ - + - + p + -
p P p Q - + p +
+ - K r + b N r

11... Nxb5 12. Rxb5 Bxb6

[12... gxh5 13. Qg5 b3 14. Qxg7#]

13. Rxb6 c5 14. Rh2 1-0

This plan depends a little on Black castling King's side, although it will not have guaranteed safety on the other side, nor in the centre. See the example games.

Example Games A4

Firstly, let's look at a few games in the Bc4 lines .

A4.1. Examples with Bc4

Christ,R - Kljako,D [B07], it, Biel

1. e4 d6 2. d4 g6 3. Nc3 Bg7 4. Bc4 Nf6 5. Qe2 c6 6. e5 dxe5 7. dxe5 Nd5 8. Bd2

t S l D j + - T
X x + - X x L x
- + x + - + x +
+ - + s P - + -
- + b + - + - +
+ - N - + - + -
p P p B q P p P
R - + - K - N r

Simple development is the trademark of the White system

8... Nxc3 9. Bxc3 O-O 10. f4 a5 11. a4 b6 12. Nf3 Ba6 13. Rd1 Qc7 14. O-O Bxc4 15. Qxc4 Na6

t + - + - T j +
+ - D - X x L x
s X x + - + x +
X - + - P - + -
p + q + - P - +
+ - B - + n + -
- P p + - + p P
+ - + r + r K -

White has a simple advantage in space.

16. Ng5 h6 17. Ne4 Qc8 18. Rd3 Rb8 19. Rh3 b5 20. Qe2 b4 21. Bd2 f5

- T d + - T j +
+ - + - X - L -
s + x + - + x X
X - + - P x + -
p X - + n P - +
+ - + - + - + r
- P p B q + p P
+ - + - + r K -

Black was cramped, but this bid for freedom looks very loose.

22. exf6 exf6 23. f5 g5 24. Qc4+ Kh7 25. Bxg5 fxg5 26. f6 Bh8 27. Nxg5+ Kg6

```

- T d + - T - L
+ - + - + - + -
s + x + - P j X
X - + - + - N -
p X q + - + - +
+ - + - + - + r
- P p + - + p P
+ - + - + r K -

```

Black's King is being knocked about all over the place, while the Black pieces watch glumly from the wings.

28. Rxh6+ Kxh6 29. Qh4+ Kg6 30. Qh7+ Kxg5 31. h4+ Kg4 32. Qg6+ 1-0

Knippel,M - Stratmann,B [B08], NRW

1. d4 Nf6 2. Nc3 g6 3. e4 d6 4. Bc4 Bg7 5. Nf3 O-O 6. Qe2 Nc6 7. e5

```

t + l D - T j +
X x X - X x L x
- + s X - S x +
+ - + - P - + -
- + b P - + - +
+ - N - + n + -
p P p + q P p P
R - B - K - + r

```

This is the key break in the Bc4 systems.

7... Ng4 8. h3 Nh6 9. g4 Na5 10. Bd3 b6 11. Bf4 Kh8 12. O-O-O

t + l D - T - J
X - X - X x L x
- X - X - + x S
S - + - P - + -
- + - P - B p +
+ - N b + n + p
p P p + q P - +
+ - K r + - + r

Black's next move seals the centre, but White's King's side attack can now proceed without worrying about the central tension.

12... d5 13. Qe3 Ng8 14. Rdg1 h6 15. h4 Nc4 16. Bxc4 dxc4 17. h5 Bb7 18. g5

t + - D - T s J
X l X - X x L -
- X - + - + x X
+ - + - P - P p
- + x P - B - +
+ - N - Q n + -
p P p + - P - +
+ - K - + - R r

It looks grim for the Black King.

18... Bxf3 19. Qxf3 Qxd4 20. Rd1 Qc5 21. Rd5 Qc6 22. gxh6 Nxh6 23. hxg6 Qxg6

t + - + - T - J
X - X - X x L -
- X - + - + d S
+ - + r P - + -
- + x + - B - +
+ - N - + q + -
p P p + - P - +

+ - K - + - + r

Recapturing with the pawn wasn't pretty, but this fails to:

24. Rdd1 1-0

25. Rdg1 is killing.

See also the games under the **Gurgenidze System**.

A4.2. Examples with Be3

Adams,M - Wolff,P [B07], London

1. e4 d6 2. d4 g6 3. Nc3 Bg7 4. Be3 c6 5. Qd2 b5 6. h4 Nf6 7. f3 Qc7 8. Bh6 Bxh6 9. Qxh6 Be6 10. Nh3 Bxh3 11. Rxh3 Nbd7 12. O-O-O

t + - + j + - T
X - D s X x + x
- + x X - S x Q
+ x + - + - + -
- + - P p + - P
+ - N - + p + r
p P p + - + p +
+ - K r + b + -

White's K-side initiative persuades Black to castle Queen's side.

12... Nb6 13. Kb1 O-O-O 14. Qe3 e5 15. a3 d5 16. dxe5 Qxe5 17. f4 Qe7 18. e5 Nfd7

- + j T - + - T
X - + s D x + x
- S x + - + x +
+ x + x P - + -

- + - + - P - P
P - N - Q - + r
- P p + - + p +
+ k + r + b + -

White opens up the Q-side; he can skip the Rh3 across easily.

19. a4 a6

Taking on a4 will allow Ba6+.

20. a5 Na8 21. Nxd5 cxd5

s + j T - + - T
+ - + s D x + x
x + - + - + x +
P x + x P - + -
- + - + - P - P
+ - + - Q - + r
- P p + - + p +
+ k + r + b + -

The entry of the Queen is decisive.

22. Qa7 Nc7 23. Rc3 Nb8 24. g3 1-0

Lane,G - Saucey,M [B07], Royan

1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Be3 Nf6 5. Qd2 O-O 6. f3 e5 7. Nge2 c6 8. O-O-O Nbd7 9. g4 b5 10. Nb1 Nb6 11. Ng3 Be6 12. b3

t + - D - T j +
X - + - + x L x
- S x X l S x +
+ x + - X - + -

- + - P p + p +
+ p + - B p N -
p + p Q - + - P
+ n K r + b + r

Black now takes on d4, and the game starts to look rather like the Yugoslav Attack in the Sicilian Dragon.

12... exd4 13. Bxd4 d5 14. g5 Nfd7 15. Bxg7 Kxg7 16. f4 f6 17. h4 Bg4 18. Be2 Bxe2 19. Qxe2 Qe7 20. Rdg1

t + - + - T - +
X - + s D - J x
- S x + - X x +
+ x + x + - P -
- + - + p P - P
+ p + - + - N -
p + p + q + - +
+ n K - + - R r

Again, White's attack has proceeded faster than Black's.

20... f5 21. exf5 Qxe2 22. f6+ 1-0

Black will have no prospects in the endgame with White's secure pawn on f6.

Chacon,E - Blazquez,J. L [B07], Alicante

1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Be3 Nf6 5. f3 c6 6. Qd2 O-O 7. Bh6 Bxh6 8. Qxh6 Qb6 9. O-O-O Nbd7 10. h4

t + l + - T j +
X x + s X x + x
- D x X - S x Q
+ - + - + - + -
- + - P p + - P

```

+ - N - + p + -
p P p + - + p +
+ - K r + b N r

```

A typical thrust.

10... c5 11. d5

Often, if the situation in the centre is clear, the attack is easier.

11...Ne5 12. h5 Bd7 13. Be2 c4 14. Nh3

```

t + - + - T j +
X x + l X x + x
- D - X - S x Q
+ - + p S - + p
- + x + p + - +
+ - N - + p + n
p P p + b + p +
+ - K r + - + r

```

White threatens Ng5 after which hxg6 and f4 look very strong.

**14... Bxh3 15. Rxh3 g5 16. Qxg5+ Kh8 17. g4 Rg8 18. Qd2 Qa5 19. g5 Ne8
20. f4 Nd7 21. Qd4+ f6 22. Bg4 Nc5 23. Bf5 Qb6 24. Kb1 h6 25. Bg6 Nd7**

```

t + - + s + t J
X x + s X - + -
- D - X - X b X
+ - + p + - P p
- + x Q p P - +
+ - N - + - + r
p P p + - + - +
+ k + r + - + -

```

White's King's-side initiative will persist into an endgame.

26. Qxb6 Nxb6 27. gxh6 1-0

After 27... Nc7 28. h7 Rg7

[28... Rgf8 29. Bf5 Na6 30. Rg3 Nc5 31. Rdg1 Rfe8 32. Rg7 Nbd7]

29. Rg3 e5 30. h6

the endgame is hopeless for Black.

A5. Piece attacks vs. Sicilian: lines with piece play

A5.1. Ideas with Be2

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | S | l | D | j | L | s | T |
| X | x | + | x | X | x | X | x |
| - | + | - | + | - | + | - | + |
| + | - | X | - | + | - | + | - |
| - | + | - | + | p | + | - | + |
| + | - | + | - | + | n | + | - |
| p | P | p | P | b | P | p | P |
| R | n | B | q | K | - | + | r |

It would be wrong to say there is much theory on these lines.

The basic idea is to develop the King's side pieces quickly, and play c3 and d4 (very much the same plan as the normal 1. e4 e5 openings).

1. e4 e5 2. Nf3

Now Black has a basic choice between 2...d6, 2...Nc6 and 2...e6. Alternatives are less strong, e.g. 2...a6 3. c4 or 2...Nf6 3. e5. These should not be scorned - GMs have played each line - but are less good for Black than normal lines.

2...d6

[after 2... e6 White can play an interesting gambit, borrowed from a variation of the English Opening: 3. Be2 Nc6 4. b4 Nxb4

[4... cxb4 5. d4]

5. c3 Nc6 6. d4;

(compare the line 1. c4 e5 2. Nc3 Nf6 3. Nf3 e4 4. Ng5 b5)]

3. Be2 Nf6

[3... e6 4. c3 Nc6 5. d4 Nf6 6. Nbd2]

4. c3 Nc6 5. d4 cxd4 6. cxd4 Qa5+ 7. Nc3 Nxe4 8. d5

t + l + j L - T
X x + - X x X x
- + s X - + - +
D - + p + - + -
- + - + s + - +
+ - N - + n + -
p P - + b P p P
R - B q K - + r

...with interesting gambit play in each line.

A5.2.

Ideas with Bb5

Rossolimo Variation with 2... Nc6

3. Bb5

t + l D j L s T
X x + x X x X x
- + s + - + - +
+ b X - + - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

Now the most common line is

3...g6

Alternatives:

[3... Nf6 e.g. 4. e5 Nd5 5. Nc3 Nc7 6. a4 Nxb5 7. axb5]

[3... e6 e.g. 4. O-O Nge7 5. c3 d5 6. exd5]

4. O-O Bg7 5. c3 Qb6 6. Na3 Nf6 7. Re1

t + l + j L - T
X x + x X x X x
- D s + - S - +
+ b X - + - + -
- + - + p + - +
N - P - + n + -
p P - P - P p P
R - B q R - K -

[or 7. e5 Nd5 8. Bc4 Nc7 9. d4]

...when White has good play.

Rossolimo Variation with 2...d6

3. Bb5+

t S l D j L s T
X x + - X x X x
- + - X - + - +
+ b X - + - + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

This is a complex line. After 3...Bd7 White will often play 4. Bxd7 + and 5.c4, placing the pawns on light squares to complement the dark-squared bishop.

One example in another line:

3... Nd7 4. d4 cxd4 5. Qxd4 Ngf6 6. Bg5 e6 7. Nc3 Be7 8. O-O a6 9. Bxd7+ Bxd7 10. Rad1 Bc6 11. Rfe1 O-O 12. Bxf6 gxf6

t + - D - T j +
+ x + - L x + x
x + l X x X - +
+ - + - + - + -
- + - Q p + - +
+ - N - + n + -
p P p + - P p P
+ - + r R - K -

Again, White has good piece play, although the bishops may be dangerous

*Example
games A5*

A5.1. Examples with Be2

Basman-Stean,Hastings 1974

This is a famous game in this line.

**1. e4 c5 2. Nf3 d6 3. Be2 Nf6 4. c3 Nc6 5. d4 cxd4 6. cxd4 Nxe4 7. d5 Qa5+
8. Nc3 Nxc3 9. bxc3**

```
t + l + j L s T
X x + x X x X x
- + - + - + - +
D - X p S - + -

```

- + - X - + - X
D p + - + - + -
p + p P q P p P
R - + - R - K -

```

White threatens Qe5 and d6, winning the knight. Black keeps the Knight, but loses the King.

17. Qe5 Kf8 18. d6 Ng6 19. Qf6 Qa5 20. Bc4 Rg7 21. Re7 1-0

Bogumil - Sarosi [B30], Budapest

1. e4 c5 2. Nf3 Nc6 3. Bb5 e6 4. O-O Nge7 5. c3 d5 6. exd5 Qxd5 7. d4 cxd4 8. c4 Qd8 9. Nxd4 Bd7 10. Nf3 Nf5 11. Nc3 Be7 12. Ba4 O-O 13. Bc2 Nh4 14. Nxf4 Bxf4 15. b3 Bf6 16. Ba3

```

t + - D - T j +
X x + l + x X x
- + s + x L - +
+ - + - + - + -
- + p + - + - +
B p N - + - + -
p + b + - P p P
R - + q + r K -

```

A neat move making use of the extra space and mobility.

16... Re8

[If 16...Bxc3, 17. Qd3!]

17. Qd3 g6 18. Rad1 Ne5 19. Qg3 Qa5 20. Ne4 Bg7 21. b4 Qc7 22. Nd6 Red8 23. Bb2 Nc6

t + - T - + j +
X x D l + x L x
- + s N x + x +
+ - + - + - + -
- P p + - + - +
+ - + - + - Q -
p B b + - P p P
+ - + r + r K -

White is obviously winning. He finds a neat unmasking (Nf5)

24. Bxg7 1-0

B. Slow attacks with f4 against the common half-open defences

The move f4 is often a strong idea against the Sicilian and Pirc, and to some extent the French; less good against other lines. The ideas are similar:

develop rapidly

use the extra space given by the extra central pawn

use the f4 pawn to break open lines against the King

B1. Playing f4 vs. Alekhine 1. e4 Nf6: 1. e4 Nf6 2. d3 and 3. f4

Sadly, this line has no real force and is not a good line to adopt.

If you insist on consistency, you can try it, but otherwise I would look at a different line.

Example games B1

Lazarevic,M - Maric,D (6) Pula, 1990[B02]

1. e4 Nf6 2. d3 d5 3. e5 Nfd7 4. f4 Nb6

```

t S l D j L - T
X x X - X x X x
- S - + - + - +
+ - + x P - + -
- + - + - P - +
+ - + p + - + -
p P p + - + p P
R n B q K b N r

```

With the N on b6 it is harder to organise the obvious 'French' break with f6.

**5. c3 c5 6. Nf3 Bg4 7. Be2 e6 8. Na3 Be7 9. O-O O-O 10. Nc2 Nc6 11. Ne3
Bxf3
12. Bxf3**

t + - D - T j +
X x + - L x X x
- S s + x + - +
+ - X x P - + -
- + - + - P - +
+ - P p N b + -
p P - + - + p P
R - B q + r K -

Black has done everything right so far, but gets careless.

**12... d4 13. Ng4 dxc3 14. bxc3 c4 15. d4 Nd5 16. Bxd5 Qxd5 17. Ne3 Qb5
18.
Qe2 Rac8 19. f5 Bg5 20. f6 gxf6 21. Ng4 Ne7 22. Bxg5 fxe5 23. Nf6+**

- + t + - T j +
X x + - S x + x
- + - + x N - +
+ d + - P - X -
- + x P - + - +
+ - P - + - + -
p + - + q + p P
R - + - + r K -

White should never have been allowed to reach this easy attacking position.

**23... Kg7 24. Qh5 h6 25. Ng4 Ng8 26. Nxe6 Nxe6 27. Qxg5+ Kh7 28. Rf6
Nf5 29.
Rf1 Rg8 30. Qh5+ 1-0**

B2. Playing f4 vs. Caro-Kann 1. e4 c6: 1. e4 c6 2. Nc3 d5 3. f4 (a line of the Dunst opening, 1.Nc3)

I couldn't find a single example of this with f4. This is probably because it's not a very good line!

Example games B2

Van der Vaeren - Savva, Haifa, 1989[A00]

1. e4 d5 2. Nc3 dxe4 3. Nxe4 c6 4. Bc4 Nf6

This could have arisen from the Caro-Kann

5. Nxf6+ exf6 6. Ne2 Be6 7. Bxe6 fxe6 8. Nf4

```
t S - D j L - T
X x + - + - X x
- + x + x X - +
+ - + - + - + -
- + - + - N - +
+ - + - + - + -
p P p P - P p P
R - B q K - + r
```

Hitting at the weak White squares. Black now prompts an elementary combination.

8... e5 9. Qh5+ Ke7 10. Ng6+ hxg6 11. Qxh8 Kf7 12. Qh3 Qd7 13. Qb3+ Ke7 14. O-O b6 15. d3 Qd5

t S - + - L - +
X - + - J - X -
- X x + - X x +
+ - + d X - + -
- + - + - + - +
+ q + p + - + -
p P p + - P p P
R - B - + r K -

An interesting moment: I would have swapped off here to try and win on material.

16. c4 Qd6 17. Be3 c5 18. a4 Nc6 19. a5 Nb4 20. axb6 Qxb6 21. f4 exf4 22. Bxf4 Kf7 23. d4 Nd5 24. Qf3

t + - + - L - +
X - + - + j X -
- D - + - X x +
+ - X s + - + -
- + p P - B - +
+ - + - + q + -
- P - + - + p P
R - + - + r K -

Black is very wobbly here.

24... Nxf4 25. Qxa8 Ne2+ 26. Kh1 Nxd4 27. Rxa7+ Kg8 28. Qd5+ Qe6 29.

Qxe6+
Nxe6 30. Re1 1-0

**B3. Playing f4 vs. French 1. e4 e6: 1. e4 e6 2. Nc3 d5
3. f4 (a line of the Dunst opening, 1.Nc3)**

Now, I have found a few of these. With the P on e6, Black is necessarily a little more passive than the Caro lines above. I don't think White can claim much advantage (indeed, John Watson reckons that the Pf4 may be in the way of the Bc1), but it's an easy line to understand.

Example games B3

Hill,S - Wright,A , ch-AUS/SW,5,18, 1989[B21]

1. e4 c5 2. f4 e6 3. Nf3 d5 4. Nc3 dxe4 5. Nxe4 Nc6 6. Bc4

*t + l D j L s T
X x + - + x X x
- + s + x + - +
+ - X - + - + -
- + b + n P - +
+ - + - + n + -
p P p P - + p P
R - B q K - + r*

White has nicely centralised pieces.

**6... Nf6 7. Nxf6+ Qxf6 8. O-O Bd6 9. d3 Bxf4 10. Ng5 Qxg5 11. Bxf4 Qe7
12.
Qg4 O-O 13. Rae1 Kh8 14. Qg3 Rd8 15. c3 b6 16. Re3 Re8**

t + l + t + - J
X - + - D x X x
- X s + x + - +
+ - X - + - + -
- + b + - B - +
+ - P p R - Q -
p P - + - + p P
+ - + - + r K -

Every White piece is well-placed.

17. Bd5 Bb7 18. Be4 Nd8 19. Bg5 f6

t + - S t + - J
X l + - D - X x
- X - + x X - +
+ - X - + - B -
- + - + b + - +
+ - P p R - Q -
p P - + - + p P
+ - + - + r K -

White now plays a sacrifice which is easy to think of but hard to analyse!

20. Bxh7 Kxh7 21. Qh4+ Kg8 22. Bxf6 gxf6 23. Rg3+ 1-0

Campora,D. H - Shirazi,A , Ch New York (open), 1989[B21]

1. e4 c5 2. f4 e6 3. Nf3 Nc6 4. Bb5 Nge7 5. O-O a6 6. Be2 g6 7. d3 Bg7 8. c3 d5 9. Nbd2 O-O 10. Qe1 b5 11. Qf2 Qb6

t + l + - T j +
+ - + - S x L x
x D s + x + x +
+ x X x + - + -
- + - + p P - +
+ - P p + n + -
p P - N b Q p P
R - B - + r K -

A position that could have arisen from either the French or the Sicilian.

12. e5 f6 13. d4 cxd4 14. cxd4 fxe5 15. fxe5 g5 16. g4 h5 17. gxh5 g4 18. h6 Bxh6 19. Nc4 dxc4 20. Bxh6 Nf5

t + l + - T j +
+ - + - + - + -
x D s + x + - B
+ x + - P s + -
- + x P - + x +
+ - + - + n + -
p P - + b Q - P
R - + - + r K -

Rather a sign of distress; White is winning.

**21. Bxf8 Kxf8 22. Nh4 Ncxd4 23. Bxg4 Bb7 24. h3 Qc5 25. Rae1 Kg8 26. Kh2
1-0**

B4. Playing f4 vs. Pirc/Modern 1. e4 ...d6/...g6: 1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. f4 (Austrian Attack)

Against the Pirc, f4 is not a particularly slow line!

1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. f4 Bg7 5. Nf3 O-O

[5... c5 is probably a better way to equalise, or so the books say in 1990]

6. Bd3 Nc6 7. O-O

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | - | T | j | + |
| X | x | X | - | X | x | L | x |
| - | + | s | X | - | S | x | + |
| + | - | + | - | + | - | + | - |
| - | + | - | P | p | P | - | + |
| + | - | N | b | + | n | + | - |
| p | P | p | + | - | + | p | P |
| R | - | B | q | + | r | K | - |

The White attack is easy to understand; White will complete development and then break with e5 or f5 - or both!

Example games B4

Ekebjærg, Ove (2580) - Van Manen, Gerben (2580) cr Blass-mem, 1990[B07]

1. Nc3 Nf6 2. e4 d6 3. f4 g6 4. Nf3 Bg7 5. d4 O-O 6. Bd3 Nc6 7. O-O Bg4 8. e5 Nd7 9. Be3

```
t + - D - T j +
X x X s X x L x
- + s X - + x +
+ - + - P - + -
- + - P - P l +
+ - N b B n + -
p P p + - + p P
R - + q + r K -
```

A set-up for White which is easy to understand. I have watched relatively weak (170-grade) players carve up 200-strength players in this line.

9... dxe5 10. dxe5 f6 11. exf6 Bxf6 12. h3 Be6 13. Qe2 Bf7 14. Rad1 Qe8 15. f5

```

+ - K - + - + -

1-0

Black never got going.

B5. Playing f4 vs. Sicilian (a) 1. e4 c5 Grand Prix attack

This is another system where the White side is easy to understand, and where Black has struggled to find a clear equaliser. 2. f4 can lead to the slow Sicilian with g3 and Bg2, but several English players have adopted the more aggressive system with Bc4. We will look at both systems.

A second idea is to play Bb5xNc6 and then play a slow Dutch-style attack with Qe1 and Qh4.

1. e4 c5 2. f4 g6

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | S | l | D | j | L | s | T |
| X | x | + | x | X | x | + | x |
| - | + | - | + | - | + | x | + |
| + | - | X | - | + | - | + | - |
| - | + | - | + | p | P | - | + |
| + | - | + | - | + | - | + | - |
| p | P | p | P | - | + | p | P |
| R | n | B | q | K | b | N | r |

There are alternatives:

[2... d5 can be met by 3. Nc3 (EG)

t S l D j L s T
X x + - X x X x
- + - + - + - +
+ - X x + - + -
- + - + p P - +
+ - N - + - + -
p P p P - + p P
R - B q K b N r

[The point of 2...d5 is the wicked gambit line 3. exd5 Nf6 4. c4 e6 5. dxe6 Bxe6 devised by Mikhail Tal]

]

[2... e6 3. Nc3 d5

t S l D j L s T
X x + - + x X x
- + - + x + - +
+ - X x + - + -
- + - + p P - +
+ - N - + - + -
p P p P - + p P
R - B q K b N r

[3... Nc6 4. Nf3 Nge7 5. Bb5 d5 6. Qe2 d4 7. Nd1]

4. Nf3]

3. Nf3 Bg7 4. Nc3 Nc6 5. Bc4

[The other idea in this line is 5. Bb5 to exchange off the Nc6, and then play a standard Dutch-style attack with Qe1 and Qh4 (EG)]

Black can play ...d6 (EG) but more often goes:

5... e6

```
t + l D j + s T
X x + x + x L x
- + s + x + x +
+ - X - + - + -
- + b + p P - +
+ - N - + n + -
p P p P - + p P
R - B q K - + r
```

6. f5

This is the sharpest line, although White does not have to gambit

[e.g. 6. O-O Nge7]

Now the complications that follow...

6... exf5 7. d3 Nge7 8. O-O O-O? (EG)

or

6... gxf5 7. d3

...must be known in a little detail to be played safely. There is also plenty of scope for original analysis - for example, what should happen after

6... d5

The gambit is probably best declined with

6... Nge7 7. fxe6 dxe6

[7... fxe6 may be better

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | j | + | - | T |
| X | x | + | x | S | - | L | x |
| - | + | s | + | x | + | x | + |
| + | - | X | - | + | - | + | - |
| - | + | b | + | p | + | - | + |
| + | - | N | - | + | n | + | - |
| p | P | p | P | - | + | p | P |
| R | - | B | q | K | - | + | r |

when Black's King is in danger but the central pawn mass is dangerous and may trap the White Q-side pieces]

There are also many lines with f4 in the open Sicilian i.e.. 1. e4 c5 2. Nf3 (...) 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 (...) 6. f4.

Example
games B5a

First, a straightforward quick attack down the King's side

Hodgson - Ady, Streatham Vs Ymca, London, 1981[B23]

1. e4 c5 2. f4 g6 3. Nf3 Bg7 4. Nc3 Nc6 5. Bc4 e6 6. f5 exf5 7. d3 Nge7 8. O-O O-O?

t + l D - T j +
X x + x S x L x
- + s + - + x +
+ - X - + x + -
- + b + p + - +
+ - N p + n + -
p P p + - + p P
R - B q + r K -

This natural-looking move is probably a decisive mistake. Black has no effective counter to White's simple mating attack.

9. Qe1 Nd4 10. Qh4 Nxf3+ 11. Rxf3 fxe4 12. Rh3 h6 13. Bg5 Re8 14. Rf1 d5 15. Nxd5 hxg5 16. Nf6+ Black resigns

[16. Nf6+ Kf8

[or 16... Bxf6 17. Qh7+ Kf8 18. Qxf7#]

17. Nh7+ Kg8 18. Bxf7+ Kh8 19. Nxg5+ Bh6 20. Qxh6#]

1-0

Next, a slower attack with the Bb5 idea

Hebden - Large, British Ch'p, 1982[B21]

1. e4 c5 2. f4 Nc6 3. Nf3 g6 4. Bb5 Bg7 5. Bxc6 dxc6 6. d3 Nf6 7. Nc3 O-O 8.

O-O b6

t + l D - T j +
X - + - X x L x
- X x + - S x +
+ - X - + - + -
- + - + p P - +
+ - N p + n + -
p P p + - + p P
R - B q + r K -

White has an obvious plan. And the player with a plan will always beat the player without one.

9. Qe1 Ne8 10. Qh4 Nd6 11. f5 gxf5 12. e5 Ne8 13. Bh6 f6 14. Kh1 Bxh6 15. Qxh6 Ng7 16. Rae1 Be6 17. Ne2 c4 18. Nf4 cxd3 19. cxd3 Bxa2

t + - D - T j +
X - + - X - S x
- X x + - X - Q
+ - + - P x + -
- + - + - N - +
+ - + p + n + -
l P - + - + p P
+ - + - R r + k

Black might as well snatch a pawn, he has achieved nothing to counter White's simple attack.

20. e6 Qc8 21. Re3 Nxe6 22. Nxe6 Bxe6 23. Rxe6 Rf7

[23... Qxe6 24. Ng5 Qf7 25. Nxf7 Rxf7]

24. Rfe1 1-0

And what if Black throws a spanner in the works with 2...d5?

Plaskett - Howell, British Ch'p, 1983[B21]

1. e4 c5 2. f4 d5 3. Nc3 dxe4 4. Nxe4 e6 5. Nf3 Be7 6. Bc4 Nf6 7. Qe2 Nc6
8.
c3 O-O 9. O-O b6 10. d3 Bb7 11. Ng3 Bd6 12. Bd2 Qc7 13. Ng5

t + - + - T j +
X l D - + x X x
- X s L x S - +
+ - X - + - N -
- + b + - P - +
+ - P p + - N -
p P - B q + p P
R - + - + r K -

Black's pieces are nicely placed but going nowhere. White, as usual, knows where he is going!

13... Ne7 14. N5e4

forcing an exchange he had earlier avoided

14... Nxe4 15. dxe4 Ng6 16. Nh5 Kh8 17. Rae1 Rad8 18. Bc1 Rd7 19. e5 Be7 20.

f5 exf5 21. Rxf5 Bd5 22. Bxd5 Rxd5 23. Qg4 Qd7 24. Ref1 Kg8

- + - + - T j +
X - + d L x X x
- X - + - + s +
+ - X t P r + n
- + - + - + q +
+ - P - + - + -
p P - + - + p P
+ - B - + r K -

25. Nxg7 Kxg7 26. Qh5 Kg8 27. Bh6 Qe6 28. Bxf8 Nxf8 29. c4

[29. Rxf7 Rxe5]

29... Rd4 30. Rxf7 Qg6 31. Qf3 Ne6 32. Rxe7 Rf4 33. Rxe6 1-0

Ekebjærg,Ove - Danner,Georg, cr Nielsen-mem, 1987

[B23/07]

**1. Nc3 c5 2. e4 d6 3. f4 g6 4. Nf3 Bg7 5. Bc4 e6 6. f5 Ne7 7. O-O
O-O**

t S l D - T j +
X x + - S x L x
- + - X x + x +

B5. Playing f4 vs. Sicilian (b)Traditional Closed Sicilian

This line has been adopted by three World champions at one time or another:

the young Karpov, the mature Spassky, and by Smyslov throughout his chess

career. And as we shall see, Kasparov knows about the line.

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. f4

t + l D j + s T
X x + - X x L x
- + s X - + x +
+ - X - + - + -
- + - + p P - +
+ - N p + - P -
p P p + - + b P
R - B q K - N r

[6. Be3 e5 7. Qd2 is another popular line; Black gets into trouble after 6...e6 7. Qd2 Nge7?! 8. Bh6 e.g. 8...O-O? 9. h4! or 8...Bxh6 9. Qxh6 Nd4 10. O-O-O]

6... e6 7. Nf3 Nge7 8. O-O O-O 9. Be3 Nd4

is the main line, although Spassky has tried 9. Bd2. After 6...e5 Spassky has experimented with more active 7. Nh3 Nge7 8. O-O Nd4 9. f5!?

Theory is not so critical in the Closed Sicilian because of the non-forcing nature of the line.

Example games B5b

Spassky - Geller, Candidates, 1968

1. e4 c5 2. Nc3 d6 3. g3 Nc6 4. Bg2 g6 5. d3 Bg7 6. f4 Nf6 7. Nf3 O-O 8. O-O

Rb8 9. h3 b5 10. a3 a5 11. Be3 b4 12. axb4 axb4 13. Ne2 Bb7 14. b3

- T - D - T j +
+ l + - X x L x
- + s X - S x +
+ - X - + - + -
- X - + p P - +
+ p + p B n P p
- + p + n + b +
R - + q + r K -

Another defensive move! Is White just going to stand and get punched apart?

14... Ra8 15. Rc1 Ra2 16. g4

- + - D - T j +
+ l + - X x L x
- + s X - S x +
+ - X - + - + -
- X - + p P p +
+ p + p B n + p
t + p + n + b +
+ - R q + r K -

At last an attacking gesture

16... Qa8 17. Qe1 Qa6 18. Qf2 Na7 19. f5

- + - + - T j +
S l + - X x L x
d + - X - S x +

+ - X - + p + -
- X - + p + p +
+ p + p B n + p
t + p + n Q b +
+ - R - + r K -

The characteristic break

19... Nb5 20. fxg6

Opening the f-file (so what? see move 23!)

20... hxg6

[20... fxg6 21. Nf4 Bc8 22. Ng5 Nc7]

21. Ng5 Na3 22. Qh4 Rc8

- + t + - + j +
+ l + - X x L -
d + - X - S x +
+ - X - + - N -
- X - + p + p Q
S p + p B - + p
t + p + n + b +
+ - R - + r K -

the Q-side is about to give, but...

23. Rxf6 exf6 24. Qh7+ Kf8 25. Nxf7 Rxc2

[25... Kxf7 26. Bh6 Rg8 27. Nf4 Rxc2 28. Rf1 Kf8 29. Nxg6+ Kf7 30.

Nf4

or Nh8+

30... Kf8 31. Nh5 Bxh6 32. Qxh6+ Ke7 33. Qh7+ Kd8 34. Nxf6

- + - J - + t +
 + l + - + - + q
 d + - X - N - +
 + - X - + - + -
 - X - + p + p +
 S p + p + - + p
 - + t + - + b +
 + - + - + r K -

is just terrible]

26. Bh6 Rxc1+ 27. Nxc1 Kxf7 28. Qxg7+ Ke8 29. g5

[29. e5 Bxg2 30. e6]

29... f5 30. Qxg6+ Kd7 31. Qf7+ Kc6 32. exf5+

- + t + - + - +
 + l + - + q + -
 d + j X - + - B
 + - X - + p P -
 - X - + - + - +
 S p + p + - + p
 - + - + - + b +
 + - N - + - K -

1-0

32... Kb6 33. Qxb7+ Qxb7 34. Bxb7 Kxb7 35. f6 1-0

Psakhis - Kasparov, La Manga, 1990 [compare B23]

Oddly, one of the best example games I have on file for the Closed Sicilian is this one, from quite a different opening

1. c4 g6 2. Nc3 Bg7 3. g3 Nc6 4. Bg2 d6 5. Nf3 e5 6. d3 f5 7. O-O Nf6

t + l D j + - T
X x X - + - L x
- + s X - S x +
+ - + - X x + -
- + p + - + - +
+ - N p + n P -
p P - + p P b P
R - B q + r K -

8. Rb1 h6 9. b4 O-O 10. b5 Ne7 11. a4 Be6 12. Ba3 Rc8

- + t D - T j +
X x X - S - L -
- + - X l S x X
+ p + - X x + -
p + p + - + - +
B - N p + n P -
- + - + p P b P
+ r + q + r K -

Black does not rush but secures the Q-side.

13. Nd2 b6 14. e3 g5 15. d4 exd4 16. exd4 f4

- + t D - T j +
X - X - S - L -
- X - X l S - X
+ p + - + - X -
p + p P - X - +
B - N - + - P -
- + - N - P b P
+ r + q + r K -

**17. Re1 Bg4 18. Nf3 Qd7 19. c5 Rce8 20. Rc1 Nf5 21. Qd3 Kh8 22. cxd6
cxd6**

23. Rxe8 Qxe8 24. Rf1 Qh5

- + - + - T - J
X - + - + - L -
- X - X - S - X
+ p + - + s X d
p + - P - X l +
B - N q + n P -
- + - + - P b P
+ - + - + r K -

The Black pieces hover like vultures

**25. Ne4 Nxe4 26. Qxe4 Bh3 27. Ne5 Bxg2 28. Kxg2 g4 29. Bxd6 Rf6 30.
Bb8
Qh3+**

- B - + - + - J
X - + - + - L -
- X - + - T - X
+ p + - N s + -
p + - P q X x +
+ - + - + - P d
- + - + - P k P
+ - + - + r + -

0-1

Smyslov - Romanishin, Moscow, 1976 [B23]

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. Nh3 h5

t + l D j + s T
X x + - X x L -
- + s X - + x +
+ - X - + - + x
- + - + p + - +
+ - N p + - P n
p P p + - P b P
R - B q K - + r

The sixth moves on each side are unusual.

7. f4 Bg4 8. Qd2 Nd4 9. Ng1 Qd7 10. h3 Be6 11. Nce2 h4 12. g4 f5 13. exf5 gxf5 14. g5

t + - + j + s T
X x + d X - L -

- + - X l + - +
+ - X - + x P -
- + - S - P - X
+ - + p + - + p
p P p Q n + b +
R - B - K - N r

Black can find no refuge on the King's-side, it is clear.

**14... O-O-O 15. Nxd4 cxd4 16. Ne2 Bf7 17. c3 dxc3 18. bxc3 Kb8 19. Rb1 d5
20. O-O e5 21. fxe5 Bxe5 22. d4 Bc7 23. c4 Ne7 24. c5 Rdg8 25. Qb4 Bd8
26. Rf3
Nc6 27. Qb5 Bh5 28. Rfb3**

- J - L - + t T
X x + d + - + -
- + s + - + - +
+ q P x + x P l
- + - P - + - X
+ r + - + - + p
p + - + n + b +
+ r B - + - K -

White's tripling is very threatening.

28... Rg7 29. Nf4 Bxg5 30. Nxh5 Rxh5 31. Qe2 Bxc1

- J - + - + - +
X x + d + - T -
- + s + - + - +
+ - P x + x + t
- + - P - + - X
+ r + - + - + p
p + - + q + b +

+ r L - + - K -

And the coup de grace:

**32. Rxb7+ Qxb7 33. Qe8+ Kc7 34. Rxb7+ Kxb7 35. Qxh5 Nxd4 36. Kf1
Be3 37. Qh8
Rd7 38. Qe8 1-0**

C. King's Indian Attack against the common half-open defences

Introduction to the King's Indian Attack

"Club

players and home enthusiasts often ask me to recommend an openings system for White which is safe, yet aggressive and does not require a superb memory and months of intense learning. In such cases I invariably recommend the King's Indian Attack" - KEENE

To understand the KIA it is important to understand the standard King's Indian Defence ideas, which you will play as White. Here is an early King's Indian Defence game, which alerted the chess world to a new way of handling the Black pieces.

Belavanets - Bronstein 13th USSR semi-final, 1941

1. d4 Nf6 2. c4 d6 3. Nc3 e5 4. Nf3 Nbd7 5. g3 g6 6. Bg2 Bg7 7. O-O O-O 8. b3 Re8 9. e3 c6 10. Qc2 Qa5 11. a4 Nf8 12. Ba3 Bf5 13. Qb2 Rad8 14. Rfd1 e4 15.

Nd2 Ne6

- + - T t + j +
X x + - + x L x
- + x X s S x +
D - + - + l + -
p + p P x + - +
B p N - P - P -
- Q - N - P b P
R - + r + - K -

The Qa5 is not typical, but we can see several themes here:

fianchetto of the King's bishop

use of the e-pawn to gain an initiative on the K-side

over-protection of the advanced e4-pawn

move all the pieces to the K-side in a committal attack

16. b4 Qc7 17. Rdb1 Qd7 18. c5 Ng5

More over-protection

19. cxd6 Bh3 20. Bh1 Qf5 21. Ne2 Nd5 22. b5 Bg4

- + - T t + j +
X x + - + x L x

- + x P - + x +
+ p + s + d S -
p + - P x + l +
B - + - P - P -
- Q - N n P - P
R r + - + - K b

23. Kf1

Two sword-swipes with the Knights decide the game.

23...Nxe3+ 24. Ke1 Nf3+ 0-1

Now, wouldn't that all be better with an extra move? Let's see now...

Petrosian - Pachman, Bled, 1961

1. Nf3 c5 2. g3 Nc6 3. Bg2 g6 4. O-O Bg7 5. d3 e6 6. e4 Nge7 7. Re1 O-O 8. e5 d6 9. exd6 Qxd6

t + l + - T j +
X x + - S x L x
- + s D x + x +
+ - X - + - + -
- + - + - + - +
+ - + p + n P -
p P p + - P b P
R n B q R - K -

Black seems to have good chances

10. Nbd2 Qc7 11. Nb3 Nd4 12. Bf4 Qb6 13. Ne5 Nxb3

t + l + - T j +
X x + - S x L x
- D - + x + x +
+ - X - N - + -
- + - + - B - +
+ s + p + - P -
p P p + - P b P
R - + q R - K -

Now a very cute intermezzo

14. Nc4 Qb5 15. axb3 a5 16. Bd6 Bf6 17. Qf3 Kg7 18. Re4

[18. Qxf6+ Kxf6 19. Be5+ Kf5 20. Bg7 is already decisive]

18... Rd8

[18... Ng8 19. Bxf8+]

t + l T - + - +
+ x + - S x J x
- + - B x L x +
X d X - + - + -
- + n + r + - +
+ p + p + q P -
- P p + - P b P
R - + - + - K -

Now the blow that made this game famous - not so much for the first move:

19. Qxf6+ Kxf6 20. Be5+ Kg5 21.Bg7 1-0

..but this last one - quiet but deadly.

21... Nf5 22. f4+ Kg4 23. Ne5+ Kh5 24. Bf3# mates

or even easier:

21... e5 22. h4+ Kf5

[22... Kh5 23. Bf3+ Bg4 24. Bxg4#]

23. Bh3#

If you've got the idea, we can look at some concrete variations.

C1. KIA vs. Alekhine 1. e4 Nf6: 1. e4 Nf6 2. d3 and 3. g3/Bg2

Sadly, this line has no real force and is not a good line to adopt. Black can transpose into other openings but can also just go 2...e5.

Example games C1

Kaulfuss,H - Diaz,Joa.C (4) Hessen-ch, 1989[B02]

1. e4 Nf6 2. d3 d5 3. Nd2 dxe4 4. dxe4 e5 5. Ngf3 Bc5 6. Bc4 Bg4

t S - D j + - T
X x X - + x X x
- + - + - S - +
+ - L - X - + -
- + b + p + l +
+ - + - + n + -
p P p N - P p P
R - B q K - + r

Black overlooks a little combination.

7. Bxf7+ Ke7 8. Bb3 Nc6 9. c3 Qe8 10. Qe2 Qh5 11. O-O Rhf8

t + - + - T - +
X x X - J - X x
- + s + - S - +
+ - L - X - + d
- + - + p + l +
+ b P - + n + -
p P - N q P p P
R - B - + r K -

Black has some compensation for the pawn.

12. h3 Bd7 13. Bd1 Bb6 14. Nc4 h6

But White's next shatters any hopes

**15. Nfxe5 Nxe5 16. Qxh5 Nxh5 17. Nxb6 axb6 18. Bxh5 Bb5 19. Rd1 Bc4
20. f4**

1-0

Fischer, Robert J - Fauber, Richard Milwaukee Northwestern, 1957

1. Nf3 Nf6 2. g3 g6 3. Bg2 Bg7 4. O-O O-O 5. d3 d6 6. e4 e5

This could have arisen from an Alekhine Defence

7. Nbd2 Nbd7 8. a4 Re8 9. Nc4 h6 10. Ne1 Nf8

```

t + l D t S j +
X x X - + x L -
- + - X - S x X
+ - + - X - + -
p + n + p + - +
+ - + p + - P -
- P p + - P b P
R - B q N r K -

```

Now the characteristic King's Indian attack starts:

11. f4 d5 12. fxe5 dxc4 13. exf6 Bxf6 14. Bxh6 Bxb2 15. Rb1 Bg7 16. Bxg7 Kxg7

```

t + l D t S - +
X x X - + x J -
- + - + - + x +
+ - + - + - + -
p + x + p + - +
+ - + p + - P -

```

- + p + - + b P
+ r + q N r K -

Of course, dxc4 is an awful move.

**17. Qf3 Qe7 18. d4 Ne6 19. Qc3 Ng5 20. Qxc4 Bh3 21. Rxb7 Bxg2 22. Nxb7 Qxe4
23. Rxc7 Qe2 24. Qxe2 Rxe2**

t + - + - + - +
X - R - + x J -
- + - + - + x +
+ - + - + - S -
p + - P - + - +
+ - + - + - P -
- + p + t + n P
+ - + - + r K -

The exchanges have left White's pieces dominant

25. h4 Nh3+ 26. Kh2 Nf2 27. Nf4 Rd2 28. Kg1 Ng4 29. Ne6+ Kh8 30. Rxf7

1-0

C2. KIA vs. Caro-Kann 1. e4 c6: 1. e4 c6 2. d3 d5 3. Nd2

t S l D j L s T
X x + - X x X x
- + x + - + - +

+ - + x + - + -
 - + - + p + - +
 + - + p + - + -
 p P p N - P p P
 R - B q K b N r

Black has an unusual amount of choice here, because of the non-forcing nature of White's opening. Black has tried:

C2.1. Caro-Kann with 3... dxe4

4. dxe4 e5 5. Ngf3 Bc5

Now for a long while Whites have been playing

6. Bc4

[But what about 6. Nxe5 Bxf2+ 7. Kxf2 Qd4+ 8. Ke1 Qxe5 9. Nc4 Qxe4+ 10. Be2 Qe6

[10... Qxg2 11. Nd6+ Kf8 12. Rf1 Be6 13. Nxf7 Bxf7 14. Qd8#]

11. Nd6+ Ke7 12. Nxc8+ Qxc8 13. Qd4

t S d + - + s T
 X x + - J x X x
 - + x + - + - +
 + - + - + - + -
 - + - Q - + - +
 + - + - + - + -
 p P p + b + p P
 R - B - K - + r

with a great position for White +-]

After the normal 6. Bc4:

6... Nf6 7. O-O Qc7 8. a4

```
t S l + j + - T
X x D - + x X x
- + x + - S - +
+ - L - X - + -
p + b + p + - +
+ - + - + n + -
- P p N - P p P
R - B q + r K -
```

and c3 with a quiet game

C2.2.

Caro-Kann with 3... Nd7

Now logical is

4. Ngf3

[4. f4 is worth considering]

4... Qc7 5. g3 dxe4 6. dxe4 e5 7. Bg2 Bc5

[7... Ngf6 8. O-O g6 9. b3]

8. O-O Ne7

[8... Ngf6 9. Nh4 g6 10. Nb3]

**9. b3 Ng6 10. Bb2 O-O 11. a3 a5 12. Ne1 b6 13. Nd3 Ba6 14. Nf3 Bd6
15. h4**

t + - + - T j +
+ - D s + x X x
l X x L - + s +
X - + - X - + -
- + - + p + - P
P p + n + n P -
- B p + - P b +
R - + q + r K -

with initiative, Olafsson-Eliskases 1960

C2.3. Caro-Kann with 3... Nf6

Straightforward development

4. Ngf3 Bg4 5. h3 Bxf3

[5... Bh5 6. g4 Bg6 7. Ne5 Nbd7 8. Nxd7 Nxd7 9. f4 e6 10. Qe2 Qh4+
11. Qf2 Qxf2+ 12. Kxf2 Bc5+ 13. Kg3

t + - + j + - T
X x + s + x X x
- + x + x + l +
+ - L x + - + -

- + - + p P p +
+ - + p + - K p
p P p N - + - +
R - B - + b + r

when White's game is easier, Gufeld-Birbrager 1963]

6. Qxf3 e6 7. g3 Na6 8. Bg2 Be7 9. O-O O-O 10. Qe2 Nc7

t + - D - T j +
X x S - L x X x
- + x + x S - +
+ - + x + - + -
- + - + p + - +
+ - + p + - P p
p P p N q P b +
R - B - + r K -

and now

11. f4 (Evans) puts White on top.

C2.4. Caro-Kann with 3... e5

This is the most aggressive, but also the most committal. It has been viewed with suspicion since the following:

4. Ngf3 Bd6 5. g3 Ne7 6. Bg2 O-O 7. O-O f5 8. c4!

t S l D - T j +

X x + - S - X x
- + x L - + - +
+ - + x X x + -
- + p + p + - +
+ - + p + n P -
p P - N - P b P
R - B q + r K -

The Black centre suddenly looks hollow.

8... dxe4 9. dxe4 Na6 10. a3 f4 11. b4 c5 12. b5 Nc7 13. Bb2

t + l D - T j +
X x S - S - X x
- + - L - + - +
+ p X - X - + -
- + p + p X - +
P - + - + n P -
- B - N - P b P
R - + q + r K -

C2.5.
Caro-Kann with 3...g6

This has the best reputation.

4. g3 Bg7 5. Bg2 e5 6. Ngf3 Ne7 7. O-O O-O

Now White has tried all sorts of moves here, including:

[8. Re1] [8. b4] [8. a4] [8. b3] [8. Qe2]

Try the natural:

8. c3

8... Nd7 9. Qc2 h6 10. a4

*t + l D - T j +
X x + s S x L -
- + x + - + x X
+ - + x X - + -
p + - + p + - +
+ - P p + n P -
- P q N - P b P
R - B - + r K -*

With a normal slight White advantage,

10... a5 11. b3 b6 12. Ba3 Ba6 13. Rfe1 Re8 14. Rad1

Threat d4

14...c5 15. exd5 Nxd5 16. Nc4 Nxc3!?

17. Qxc3 e4 18. d4 exf3

*t + - D t + j +
+ - + s + x L -
l X - + - + x X
X - X - + - + -
p + n P - + - +
B p Q - + x P -*

- + - + - P b P
+ - + r R - K -

Evans-Donner 1971

Now Evans gives

19. Qxf3 Rxe1+ 20. Rxe1 Rb8 21. d5

- T - D - + j +
+ - + s + x L -
l X - + - + x X
X - X p + - + -
p + n + - + - +
B p + - + q P -
- + - + - P b P
+ - + - R - K -

with advantage.

Example games C2

Fischer - Ibrahimoglu, Siegen, 1970

1. e4 c6 2. d3 d5 3. Nd2 g6 4. Ngf3 Bg7 5. g3 Nf6 6. Bg2 O-O 7. O-O Bg4 8. h3 Bxf3 9. Qxf3 Nbd7 10. Qe2 dxe4 11. dxe4 Qc7 12. a4 Rad8 13. Nb3 b6 14. Be3 c5 15. a5 e5

Black often plays ...e5 in the KIA Caro-Kann line, but here the light squares are very weak

16. Nd2 Ne8 17. axb6 axb6

- + - T s T j +
+ - D s + x L x

R - + - R - K -

1-0

C3. KIA vs. French 1. e4 e6: 1. e4 e6 2. d3 d5 3. Nd2

The lines mostly start with

2. d3 d5

2...c5 is also good; it can transpose to French lines considered below or stray into the Sicilian section.

3. Nd2 Nf6 4. Ngf3

Now after 4...c5 we enter the 'long variation' with

1. e4 e6 2. d3 d5 3. Nd2 c5 4. Ngf3 Nc6 5. g3 Nf6 6. Bg2 Be7 7. O-O O-O 8. Re1

or

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 d5 5. Nbd2 Bd6 6. Bg2 Nge7 7. O-O O-O

See below for examples: all the same ideas and sacrifices crop up over and over again in your own games. The attack is good fun to play for White, and many Black players have come unstuck against it.

The important theory you must know about is, what if Black tries to avoid the long variation? This can be awkward. I recommend you play 4. Ngf3, waiting for ...c5 until you play g3. Let's see why:

C3.1 Variations with 4. g3

Black, having seen you commit yourself to g3, can try and mess you up with either ...dxe4 or ...b6.

C3.1.1 French with 4... dxe4

5. dxe4 e5 6. Ngf3 Bc5 7. Bg2 Nc6

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | j | + | - | T |
| X | x | X | - | + | x | X | x |
| - | + | s | + | - | S | - | + |
| + | - | L | - | X | - | + | - |
| - | + | - | + | p | + | - | + |

+ - + - + n P -
p P p N - P b P
R - B q K - + r

8. O-O O-O 9. Qe2 a5 10. Nc4 Qe7

t + l + - T j +
+ x X - D x X x
- + s + - S - +
X - L - X - + -
- + n + p + - +
+ - + - + n P -
p P p + q P b P
R - B - + r K -

now c3 or Ne3, with only a small White advantage.

C3.1.2 French with 4...b6

5. Bg2 Bb7

[The sneaky 5... Be7 should be met by 6. e5

[not 6. Ngf3 dxe4 7. dxe4 Ba6]

6...Nfd7 7. Ngf3 c5 8. O-O Nc6 9. Re1 Qc7 10. Qe2

t + l + j + - T
X - D s L x X x
- X s + x + - +
+ - X x P - + -
- + - + - + - +
+ - + p + n P -

p P p N q P b P
R - B - R - K -

holding the Pe5]

Now

6. e5 Nfd7

and ...f6 will be awkward.

C3.2 Variations with 4. Ngf6

C3.2.1 French with 4... b6

This is now more easily met, not by

[5. g3 dxe4 6. dxe4 Bb7 7. e5

[7. Qe2 Ba6]

7... Ne4 with an easy game]

nor

5. Qe2 Be7 6. g3 c5 7. Bg2 Nc6 8. O-O O-O 9. e5 Ne8 10. Re1 f5 11. exf6

Bxf6

Rxc4
28. Rad1 Rdg8 29. f7 1-0**

**C4. KIA vs. Pirc/Modern 1. e4 ...d6/...g6: 1. e4 d6 2.
d4 Nf6 3. Nc3 g6 4. Nge2 and 5. g3, 6. Bg2**

*Black has a lot of choice, as usual. In this system with 2. d4
instead of 2.
d3, White means to play in the centre and hold on to the space by
restraining
Black's pawn breaks. When everything is secure and development is
complete,
you can think about where to expand yourself.*

Example games C4

Short - Donner, Amsterdam, 1982 [B07]

1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Nge2 Bg7 5. g3 O-O 6. Bg2 e5 7. O-O

[7. h3 is better]

7... exd4

[7... Nc6 is much better]

8. Nxd4 Nc6 9. Nde2

```
t + l D - T j +
X x X - + x L x
- + s X - S x +
+ - + - + - + -
- + - + p + - +
+ - N - + - P -
p P p + n P b P
R - B q + r K -
```

Avoiding exchanges

9... Re8 10. h3 Nd7 11. Kh2 Nb6 12. a4 a5 13. b3

```
t + l D t + j +
+ x X - + x L x
```

- S s X - + x +
X - + - + - + -
p + - + p + - +
+ p N - + - P p
- + p + n P b K
R - B q + r + -

Black has little counterplay, and can just wait for White to decide how and when to break. Short is a genius in these positions.

**13... Nb4 14. Be3 Nd7 15. Qd2 Nc5 16. Rad1 Qe7 17. Rfe1 Nca6 ?! 18. Nf4 Bd7

+ - + r R - + -

27... Rxe3 28. Rxe3 Ra7 29. Re7 Nb8 30. Qe6+ 1-0

C5. KIA vs. Sicilian

The KIA can be played against all lines of the Sicilian, and in fact many

French variations start off in the Sicilian (e.g. 1.e4 c5 2.Nf3 e6 3.d3).

Again, we won't bother too much about variations and get straight into the games. A few you do need to know about:

C5.1 KIA Sicilian with 2...d6

3. g3 Nc6 4. Bg2

t + l D j L s T
X x + - X x X x
- + s X - + - +
+ - X - + - + -
- + - + p + - +
+ - + - + n P -
p P p P - P b P
R n B q K - + r

C5.1.1 Sicilian with 4... g6

The best way to develop the Bf8.

5. O-O Bg7 6. c3 e5 7. d3 Nge7 8. Nbd2 O-O 9. a4 h6 10. Nc4 Be6 11. Qe2 Qc7

t + - + - T j +
X x D - S x L -
- + s X l + x X
+ - X - X - + -
p + n + p + - +
+ - P p + n P -
- P - + q P b P
R - B - + r K -

Now either 12. Nfd2 or 12. Bd2 with only a small edge.

C5.1.2 Sicilian with 4... Nf6

Forces d3 and avoids c3/d4 lines.

5. d3 g6 6. O-O Bg7 7. Nbd2 O-O 8. a4

t + l D - T j +
X x + - X x L x
- + s X - S x +
+ - X - + - + -
p + - + p + - +
+ - + p + n P -
- P p N - P b P
R - B q + r K -

As in a couple of Bobby Fischer games from the early part of his career.

C5.2 KIA Sicilian with ...e6 and ...g6

If Black plays the Bf8 to e7 or d6 we have French lines. But Nc6 and Ng7 is the best set-up for Black against the Closed Sicilian, and many will play it against the KIA.

After

1. e4 c5 2. Nf3 e6 3. d3 Nc6 4. g3 d5 5. Nbd2 g6 6. Bg2 Bg7 7. O-O Nge7

you can play the traditional

8. Re1 (Yudasin-Jukic, 1989)

or the new and exciting line

8. exd5 (Dvoretsky - Vulfsson, 1986)

Both are given below.

You can also play g3 lines in most variations of the Open Sicilian:

1. e4 c5

2. Nf3 (...) 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 (...) 6. g3.

Example games C5

Fischer, Robert J - Sherwin, James T, New Jersey, 1957

D. A single repertoire for attacking the unusual semi-open defences

D1. Centre Counter (Scandinavian) 1...d5

In recent years several GMs have experimented with this move, and for some it is a regular part of their repertoire. Someone once described this as a line for "Black players who want to suck all the life out of the position".

After 2. exd5 Qxd5 Black will be behind in development for a long time, but will also be very solid. I have been frustrated by trying to beat this annoying defence even with a useful space advantage.

I advise you to make an immediate deviation from theory, with

1. e4 d5 2. Nc3

```

t S l D j L s T
X x X - X x X x
- + - + - + - +
+ - + x + - + -
- + - + p + - +
+ - N - + - + -
p P p P - P p P
R - B q K b N r

```

Black has a choice: advance, exchange, or defend. In practice Black does not usually defend the pawn, and any defence will transpose to lines considered above.

There is precious little published theory on this line and a lot of scope to improvise.

D1.1. Advance with 2...d4

```
t S l D j L s T
X x X - X x X x
- + - + - + - +
+ - + - + - + -
- + - X p + - +
+ - N - + - + -
p P p P - P p P
R - B q K b N r
```

White retreats with

3. Nce2

and plans to play Bc4 with ideas of attacking on the K-side.

Black should probably continue

3...e5 4. Ng3

when there is a lot of choice.

4...g6

is logical, hoping to cramp the Ng3, but the best move here is not known. The Ng3 need not stay cramped...

Van Geet - Guyt [A00] Paramaribo, 1967

1. Nc3 d5 2. e4 d4 3. Nce2 e5 4. Ng3 g6 5. Bc4 Bg7 6. d3 c5 7. Nf3 Nc6 8. c3 Nge7 9. Ng5 O-O

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | D | - | T | j | + |
| X | x | + | - | S | x | L | x |
| - | + | s | + | - | + | x | + |
| + | - | X | - | X | - | N | - |
| - | + | b | X | p | + | - | + |
| + | - | P | p | + | - | N | - |
| p | P | - | + | - | P | p | P |
| R | - | B | q | K | - | + | r |

10. Nh5 Bh8 ? 11. Qf3 Qe8 12. Nf6+ Bxf6 13. Qxf6 dxc3?

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | + | l | + | d | T | j | + |
| X | x | + | - | S | x | + | x |
| - | + | s | + | - | Q | x | + |
| + | - | X | - | X | - | N | - |
| - | + | b | + | p | + | - | + |
| + | - | X | p | + | - | + | - |
| p | P | - | + | - | P | p | P |
| R | - | B | - | K | - | + | r |

13...Na5 was essential

14. Nxf7 Rxf7 15. Bh6 1-0

D1.2.

Exchange with 2...dxe4

White recaptures with

3. Nxe4

*t S l D j L s T
X x X - X x X x*

*- + - + - + - +
+ - + - + - + -
- + - + n + - +
+ - + - + - + -
p P p P - P p P
R - B q K b N r*

and (guess what?) plans to play 4. Bc4 with ideas of attacking on the K-side.

Now 3...c6 and 3...e6 will transpose to lines considered above.

3...Bf5 4. Ng3 Ng6 5. Bc4 e6 can also transpose to the Caro-Kann, or if you want to be independent you can go 6. Bc4 Nd7 7. d3

The best-looking move in reply is of course

3...e5

when we follow up with

4. Bc4

after which at least three correspondence(!) games have continued

4...Be7 5. Qh5 Nh6 6. d3 1-0

More careful is

4...Nc6

[The natural 4...Nf6 is bad after 5. Ng5!]

after which

5. d3 Be7 6. Nf3

6. Ng5 is to be considered; 6...Bxg5 7. Qh5

```

t + l D j + s T
X x X - + x X x
- + s + - + - +
+ - + - X - L q
- + b + - + - +
+ - + p + - + -
p P p + - P p P
R - B - K - N r

```

with the two bishops

6...h6

6...Nf6 7. Neg5 O-O 8. Nxf7 Rxf7 9. Ng5 Nd5 10. Nxf7 Kxf7 11. Qf3
reminds us of the Fried Liver in the Two Knights' Defence

7. Bb5 Qd5 8. c4 Qe6 9.O-O Bd7 10. Re1 O-O-O 11. Nc3

- + j T - + s T
X x X l L x X -
- + s + d + - X
+ b + - X - + -
- + p + - + - +
+ - N p + n + -
p P - + - P p P
R - B q R - K -

+= Van Geet-Sandklef corr 1982

Example games D1

I have included quite a lot of games in this section because they are hard to find in the books and magazines.

We will look at a few games in what is Black's strongest idea in the advance (2...d4) line, then look at a few in the exchange (2...dxe4) lines.

Brouwn,Arnold - Perrenet,Jacob cr, 1971

1. Nc3 d5 2. e4 d4 3. Nce2 e5 4. Ng3 Be6

Else 5. Bc4 will follow. This looks like Black's best idea to me.

5. Nf3 f6 6. Be2 Nh6 7. O-O c5 8. Bb5+ Nd7 9. d3 g6 10. b3 Bg7

t + - D j + - T

```

+ -]

5. Qd4

[5. f3 and 5. Bf4 are alternatives]

After 5. Qd4 White has a nice game.

Example games D3

Goring - NN, Berlin, 1890[B00]

1. Nc3 Nc6 2. d4 d5 3. e4 dxe4 4. d5 Ne5

After an unusual start we arrive at the usual Nimzovitch line

5. Bf4 Bg4

```
t + - D j L s T
X x X - X x X x
- + - + - + - +
+ - + p S - + -
- + - + x B l +
+ - N - + - + -
p P p + - P p P
R - + q K b N r
```

Black provokes a great combination

6. Bxe5 Bxd1 7. Bb5+ c6 8. dxc6

```
t + - D j L s T
X x + - X x X x
- + p + - + - +
+ b + - B - + -
- + - + x + - +
+ - N - + - + -
p P p + - P p P
R - + l K - N r
```

8... Bg4 9. cxb7+ Bd7 10. Bxd7+ Kxd7 11. O-O-O+ Ke6 12. Rxd8 Rxd8 13. b8=Q 1-0

Schlenker,Rainer - Fuchs,D, Germany, 1985 [B00]

1. Nc3 Nc6 2. d4 d5 3. e4 dxe4 4. d5 Ne5 5. Qd4 Ng6

t + l D j L s T
X x X - X x X x
- + - + - + s +
+ - + p + - + -
- + - Q x + - +
+ - N - + - + -
p P p + - P p P
R - B - K b N r

Again the Nimzovitch arises by transposition.

6. h4 e5 7. Qxe4 Nf6 8. Bb5+ c6 9. dxc6

t + l D j L - T
X x + - + x X x
- + p + - S s +
+ b + - X - + -
- + - + q + - P
+ - N - + - + -
p P p + - P p +
R - B - K - N r

Another Queen sacrifice!

9... Nxe4 10. c7+ Qd7 11. Bxd7+ Bxd7 12. Nxe4 Rc8 13. h5

- + t + j L - T
X x P l + x X x
- + - + - + s +

```

+ - + - X - + p
- + - + n + - +
+ - + - + - + -
p P p + - P p +
R - B - K - N r

```

Which way should the night jump?

13... Ne7 14. Nd6# 1-0

Not that way!

D4. Other defences

Rarer continuations include

D4(a) 1...b6 (Owen's Defence)

which can be met with by

2. d4 Bb7 3. Bd3

```

t S - D j L s T
X l X x X x X x
- X - + - + - +
+ - + - + - + -
- + - P p + - +
+ - + b + - + -
p P p + - P p P
R n B q K - N r

```

Black can probably develop each piece but will have trouble finding a

middle-game plan. If the centre is blocked with ...d5, then the Bb7 will suffer, and if the centre is left flexible, Black's cramped pieces may be overrun by White's pawns belting down the centre.

It was discovered that

3...f5 4. exf5 Bxg7 5. Qh5+ g6 6. fxg6 Bg7 7. gxh7+ Kf8
8. Nf3!

(8. hxg8+ is actually better for Black because White must now lose a move:
9. Qg4 Bxh1, 10. h4 Bd5! 11. h5 Be6[[opthyphen]], but 8. Ne2 may also be a strong move)

8...Nf6 9. Qg6! is probably a win for White (9...Bxh1 10. Bh6! or 9...Bxf3 10. Rg1).

So 3. Bd3 is more likely to be met with by

3...e6,

when

4. c4!

is a good reply - 4...f5 doesn't obviously lose but is still currently uncomfortable for Black.

1. e4 b6 2. d4 Bb7 3. Bd3 Nc6

may be best for Black, although White is still better.

D4(b) St. George's Defence 1...a6,

The idea of this move, popularised by Mike Basman, is that in the Owen's lines, the ...f5 sacrificial line is awful and others may lead to your Nf6 getting squashed by e5 Nd5 and c4.

So ...a6 and ...b5 hopefully gives more chances to fight back in the gambit lines, and gives an outpost on d5 if White plays e5. It all looks a bit loose to me, and some of the middle-game awkwardness of the Owen's Defence still holds.

I have always thought

1...a6

deserves to be met with a straight

2. c4 when the gambit 2...b5 3. Bxb5 Bb7 looks easily contained after 4. d3!

More natural is:

2. d4 e6

Now 3. Nc3 or 3. Bd3 lead to normal positions.

But you might fancy 3. Be3 (to slow up ...c5) 3...Bb7 4. f3 when Black is short of obvious counterplay and White may start to fancy 5. c4!. If you grab the c5 pawn, remember, the best way to treat a gambit is to be prepared to return the material to mess up your opponent's position.

1... e6 2. d4 a6 3. Bd3

```
t S l D j L s T
+ x X x + x X x
x + - + x + - +
+ - + - + - + -
- + - P p + - +
+ - + b + - + -
p P p + - P p P
R n B q K - N r
```

Basman has often played

3...b5 4. Nf3 Bb7 5. O-O c5 6. c3 Nf6 7. Re1

```
t S - D j L - T
+ l + x + x X x
x + - + x S - +
+ x X - + - + -
- + - P p + - +
+ - P b + n + -
p P - + - P p P
R n B q R - K -
```

...which he calls the Main Line. Now he has tried

7... h6

Why on earth should he do this? Well, after

7... Qb6

[7... Nc6? 8. d5 exd5 9. exd5+ Ne7 10. d6]

8. a4 cxd4 9. cxd4 Nc6 10. axb5

E. A repertoire for attacking the unusual 1...e5 defences

I assume you will aim for the Giuoco Piano, an opening I expect you won't tire of for a year or two.

1. e4 e5 2. Nf3

This is the natural follow-up, developing the Knight to its best square and attacking the Black e-pawn. Good alternatives include 2. f4 (King's Gambit) and 2. Bc4 (Bishop's Opening), although the Vienna Opening 2. Nc3 has rather fallen from favour.

Black has all sorts of alternatives in reply to 2. Nf3, most of which needn't delay us for long. The Queen's Pawn Counter-Gambit (or Elephant Gambit) 1. e4 e5 2. Nf3 d5 can be met by 3. exd4 e4 4. Qe2 and 5. d3. The Damiano Defence 1. e4 e5 2. Nf3 f6 is refuted by 3. Nxe5! Qe7! 4. Nf3 and now both 4...Qxe4+ 5. Be2 and 4...d5 5. d3 dxe4 6. dxe4 Qxe4+ 7. Be2 leave White about to go further ahead in development with Nc3.

The most important deviations are:

Hungarian Defence with 3...Be7

Petroff's Defence 2...Nf6

This is my current recommendation for junior players against the 1. e4 player; please refer to the separate booklet.

Philidor's Defence 2...d6

This is probably the strongest of the non-standard defences, and is practiced by many strong county players.

Latvian Gambit 2...f5

It is claimed by Levy and Keene that this defence can be defeated by learning the lines that follow 3. Bc4

E1. Hungarian Defence

1. e4 e5 2. Nf3 Nc6 3. Bc4 Be7

```
t + l D j + s T
X x X x L x X x
- + s + - + - +
+ - + - X - + -
- + b + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r
```

This is a solid but passive defence with links to Philidor's Defence. It is quite in order to play

4. d4 d6

and now the books say play

5. h3,

though Spassky (an attacking player) recommends

5. Nc3

and Mednis (an endgame specialist) recommends

5. dxe5.

I think this is the easiest.

Now 5...Nxe5? 6. Nxe5 dxe5 7. Qh5!

```

t + l D j + s T
X x X - L x X x
- + - + - + - +
+ - + - X - + q
- + b + p + - +
+ - + - + - + -
p P p + - P p P
R n B - K - + r

```

!wins a pawn so the line goes

5...dxe5 6. Qxd8+ Bxd8 7. Nc3.

```

t + l L j + s T
X x X - + x X x
- + s + - + - +
+ - + - X - + -
- + b + p + - +
+ - N - + n + -
p P p + - P p P
R - B - K - + r

```

White can complete development with *Be3* and *O-O*, and should aim to keep pieces on with *a3* and/or *h3*. White can then try to open lines to exploit the space advantage and get the rooks into play.

Another line quoted by Mednis is 5. *exd5 exd5* 6. *Bd5!? Bd6* 7. *Ng5! Nh6* 8. *c3!*

E2. Philidor Defence

1. e4 e5 2. Nf3 d6

Now play

3. d4

when Black has a choice between 3...*Nd7*, 3...*Nf6* and 3...*dxe4*. 3...*f5* is occasionally played, too.

E2.1 Philidor Defence with 3...Nd7

1. e4 e5 2. Nf3 d6 3. d4 Nd7

4. Bc4

This line gives Black all sorts of headaches:

E2.1.1 Philidor Defence with 4...Be7

1. e4 e5 2. Nf3 d6 3. d4 Nd7 4. Bc4 Be7

You can now win a pawn with

5. dxe5 Nxe5

(not 5...dxe5?? 6. Qd5!)

6. Nxe5 dxe5 7. Qh5!

```

t + l D j + s T
X x X s L x X x
- + - X - + - +
+ - + - X - + -
- + b P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

```

E2.1.2 Philidor Defence with 4...h6

1. e4 e5 2. Nf3 d6 3. d4 Nd7 4. Bc4 h6

```

t + l D j L s T
X x X s + x X -

```

- + - X - + - X
+ - + - X - + -
- + b P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

Now

5. dxe5 Nxe5 6. Nxe5 dxe5 7.Bxf7+!

t + l D j L s T
X x X - + b X -
- + - + - + - X
+ - + - X - + -
- + - + p + - +
+ - + - + - + -
p P p + - P p P
R n B q K - + r

wins a pawn

Or

5. dxe5 dxe5 6. Bxf7+! Kxf7 7. Nxe5+ Kf6 8. Qd4

with a deadly attack.

E2.1.3 Philidor Defence with 4...Ngf6

1. e4 e5 2. Nf3 d6 3. d4 Nd7 4. Bc4 Ngf6

t + l D j L - T
X x X s + x X x
- + - X - S - +
+ - + - X - + -
- + b P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

Now

5. dxe5 Nxe5

(not 5...dxe5 6. Ng5!)

6. Nxe5 dxe5 7. Bxf7+

wins a pawn:

t + l D j L - T
X x X - + b X x
- + - + - S - +
+ - + - X - + -
- + - + p + - +
+ - + - + - + -
p P p + - P p P
R n B q K - + r

7...Kxf7 8. Qxd8 Bb4+ 9. Qd2 Bxd2+ 10. Nxd2

E2.1.4 Philidor Defence with 4...c6

1. e4 e5 2. Nf3 d6 3. d4 Nd7 4. Bc4 c6

```

t + l D j L s T
X x + s + x X x
- + x X - + - +
+ - + - X - + -
- + b P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K - + r

```

This is the only way to survive, but White can still press hard with 5. Nc3.

After 5...h6 6. a4! is the way to keep the edge. A well-known line goes:

5. Nc3 Be7 6. dxe5 dxe5 7. Ng5 Bxg5

(7...Nh6 8. Ne6! wins)

8. Qh5 g6

(or 8...Qf6 9. Bxg5 Qg6 10. Qh4 +-)

```

t + l + j + s T
X x + s + x X x
- + x + - + d +
+ - + - X - B -

```

```

- + b + p + - Q
+ - N - + - + -
p P p + - P p P
R - + - K - + r

```

Schlechter-Alekhine 1910)

9. Qxg5 Qxg5 10. Bxg5.

```

t + l + j + s T
X x + s + x + x
- + x + - + x +
+ - + - X - B -
- + b + p + - +
+ - N - + - + -
p P p + - P p P
R - + - K - + r

```

This position is much easier to play for White, and when it has been reached

White players have a huge plus score from here. White will play O-O-O and

double rooks on the d-file. There is no way for White to penetrate further

than playing Rd6 just yet, but b2-b4-b5 should either win the c6 pawn or

produce the exchange ...cxb5, Nxb5 with huge pressure.

E2.2 Philidor Defence with 3...Nf6

```

t S l D j L - T
X x X - + x X x

```

- + - X - S - +
+ - + - X - + -
- + - P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

The counterattack on the e-pawn gives Black a moment to get organised.

After

4. Nc3 Nbd7 5. Bc4 Be7

t + l D j + - T
X x X s L x X x
- + - X - S - +
+ - + - X - + -
- + b P p + - +
+ - N - + n + -
p P p + - P p P
R - B q K - + r

and now

6. dxe5

(BCO gives 6.Ng5!?),

then

6...dxe5? seems to be a mistake because of 7. Ng5 O-O 8. Bxf7+ Rxf7 9. Ne6 Qe8 10. Nc7 Qd8 11. Nxa8. Now after 11...b5 12. Nd5! should

win. Instead

6...Nxe5 7. Nxe5 dxe5 7. Qxd8+

or 7. Qe2

gives White the edge. Moves like Rd1 or O-O and f4 will keep Black sweating for some time to come.

E2.3 Philidor Defence with 3...exd4

```

t S l D j L s T
X x X - + x X x
- + - X - + - +
+ - + - + - + -
- + - X p + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

```

Generally this gives Black a long-term space problem, and White can play 4.

Nxd4, 5. Bc4, 6. O-O, 7. Re1 and so on without difficulty.

The line 4. Nxd4 g6 imitates the sharp Dragon Variation of the Sicilian but while White can still execute the standard attack on the Black King's-side (f3, Be3, Qd2, O-O-O, h4-h5, Bh6, etc.), the absence of a half-open c-file for Black makes the counterattack more difficult to get going.

Another way to play for White (as in the famous game Adams-Torre) is 4. Qxd4 Nc6 5. Bb5 Bd2 6. Bxc6 Bxc6 7. Nc3 Nf6 8. Bg5 Be7 9. O-O-O O-O 10. Rhe1

```

t + - D - T j +
X x X - L x X x
- + l X - S - +
+ - + - + - B -
- + - Q p + - +
+ - N - + n + -
p P p + - P p P
+ - K r R - + -

```

with attacking chances.

4. Nxd4 g6 5. Nc3 Bg7 6. Be3 Nf6 7. Qd2 O-O 8. O-O-O Re8

or 8...Nc6 9. f3 Nxd4 10. Bxd4 Be6 11. g4+/- BCO2

9. f3 Nc6

[now 10. g4 is given in BCO2, e.g. 10...Ne5 11. Be2 a6 12. Bh6 Bh8 13. h4 b5 13. h4 b5 14. Bg5 c5 15. Nf5! gxf5 16. gxf5 Bb7 17. Bh6 +-, Owen-Wrinn corr. 1985]

10. h4 !?

```

t + l D t + j +
X x X - + x L x
- + s X - S x +
+ - + - + - + -
- + - N p + - P
+ - N - B p + -

```

*p P p Q - + p +
+ - K r + b + r*

10... Ne5

[10... h5 should also lead to a speedy attack against the black king after, say, Bg5 and a later g4. If you aren't sure about this, play 10. g4]

11. h5 Nxf5

[11... c5

[what else?]

now 12. Nb3 intending 13.Qxd6 or 13.Nxc5]

E2.4 Philidor counter-gambit 3...f5

1. e4 e5 2. Nf3 d6 3. d4 f5

*BC02 denies all knowledge of this option. I discover Tony Kosten covered it in "**Winning with the Philidor.**" He calls it "Mestel's Variation" after JM's use of it at the European Junior Championships in the 1970s.*

Kosten gives a couple of lines like:

[4. exf5 e4 5. Ng5 Bxf5 6. Nc3 d5 7. f3 e3 8. Bxe3 h6 9. Nh3 Bxh3 10. gxh3 Be7 11. Bf2 Bf6 12. Qd2 Ne7 13. O-O-O Nbc6 "...reasonable play for the pawn" KOSTEN]

[or 4. dxe5 fxe4 5. Ng5 d5 6. e6 Nh6 7. Nc3 c6 8. Ngxe4 dxe4 9. Qh5+ g6 10.Qe5 Rg8 11. Bg5 Bg7 12. e7 Qd5 !

Murey's move, which again Kosten reckons is OK for Black.]

But Fritz dismisses the whole thing with

4. Nc3 fxe4 5. Nxe4 d5 6. Nxe5! dxe4 7. Qh5

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | S | l | D | j | L | s | T |
| X | x | X | x | + | - | X | x |
| - | + | - | + | - | + | - | + |
| + | - | + | - | N | - | + | q |
| - | + | - | P | x | + | - | + |
| + | - | + | - | + | - | + | - |
| p | P | p | + | - | P | p | P |
| R | - | B | - | K | b | + | r |

e.g. 7...g6 8. Nxg6 hxg6 9. Qxg6!?! Kd7! 10. Qf5+ Ke8 11. Qe5, getting the rook AND the pawn, with enduring discomfort for the Black King]

E3 Latvian Gambit 2... f5

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| t | S | l | D | j | L | s | T |
| X | x | X | x | + | - | X | x |
| - | + | - | + | - | + | - | + |

+ - + - X x + -
- + - + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K b + r

3. Nxe5

This is the simplest way to gain the advantage

[Keene and Levy claim a win for White after 3. Bc4 fxe4 4. Nxe5 Qg5, but there is much to study here and Black players are likely to be better rehearsed in the traps]

3... Qf6 4. d4 d6 5. Nc4 fxe4 6. Nc3

White has a simple advantage

Example Games E

Darned if I could find any recent games in any of these lines. When they occur White GMs tend to avoid any theory (in case of improvements) and just play solid, hoping the inferior moves chosen by Black will prove disadvantageous in any line.

Alekhine - Marco, Stockholm, 1912

1. e4 e5 2. Nf3 d6 3. d4 Nf6 4. Nc3 Nbd7 5. Bc4 Be7 6. O-O O-O 7. Qe2

[7. h3 is better we now think]

7... c6 8. a4

t + l D - T j +
X x + s L x X x
- + x X - S - +
+ - + - X - + -
p + b P p + - +
+ - N - + n + -
- P p + q P p P
R - B - + r K -

White is not so much concerned for promoting his own position as restricting his opponent's. This is not a totally easy thing to do, and you may see good Black players adopt the Philidor to keep the pieces on and the game closed.

8... h6 9. Bb3 Qc7 10. h3 Kh7 11. Be3 g6 12. Rad1 Kg7

t + l + - T - +
X x D s L x J -
- + x X - S x X
+ - + - X - + -
p + - P p + - +
+ b N - B n + p
- P p + q P p +
+ - + r + r K -

all that to get the Rf8 into play

13. Nh2 Ng8 14. f4 f6 15. Qg4 exd4 16. Bxd4 Nc5 17. f5 Nxb3 18. Qxg6+

Kh8

19. cxb3 Bd7 20. Qg3 Rf7 21. Ng4

t + - + - + s J
X x D l L t + -
- + x X - X - X
+ - + - + p + -
p + - B p + n +
+ p N - + - Q p
- P - + - + p +
+ - + r + r K -

With the threat of e5

21... Qd8 22. Ne2

Aiming at e6

22... Rg7 23. Nf4 Qe8 24. Qh4 Qf7 25. Rd3

Going for mate, rather than winning the pawn at h6

25... Kh7 26. Ng6

t + - + - + s +
X x + l L d T j
- + x X - X n X
+ - + - + p + -
p + - B p + n Q
+ p + r + - + p
- P - + - + p +
+ - + - + r K -

With the striking idea Rf4 and Nxh6, Nxh6; Qxh6+ Kxh6; Rh4+ Kg5 and mate follows

26... Rxg6 27. fxg6+ Qxg6 28. Bxf6 Bxg4 29. Bxe7 Re8 30.Rxd6

The White pieces close in for the kill

30... Qg7 31. Bf6 Nxf6 32. Rxf6

1-0

Introduction

The Petroff is a quiet success story in chess - an old and often forgotten variation which can give Black a safe way of working for equal chances in an open game, while avoiding White's favourite lines. This booklet tries to give an overview of the Petroff from both sides. It has a reputation for being "dull and a draw", but can offer exciting attacking possibilities for either side. There are a couple of general themes I'd like to deal with immediately: symmetry, and the isolated Queen's pawn.

a. Symmetry in chess

Symmetry usually means equality, and likelihood of a draw - no good if you are trying to win. The symmetrical Petroff has reputation for drawishness, but that is not really justified. Look at the Illustrative Games if you still think the Petroff is dull! And what is drawn at Grandmaster level can still have a lot of meat left in it for amateur players (like the Colle system).

```

t S l D j L s T
X x X - + x X x
- + - + - + - +
+ - + x + - + -
- + - P - + - +
+ - + - + - + -
p P p + - P p P
R n B q K b N r

```

For example, after 1. e4 e6 2. d4 d5 3. exd5 exd5 (the Exchange Variation of the French Defence), we

have a symmetrical pawn formation with the likelihood of exchanges of the major pieces down the e-file. In fact, Black wins lots of games in this line, perhaps because it is a line chosen by weak White players seeking a draw against strong Black players. (Perhaps the best way to play for a draw is to go for a win!)

```

t S l D j L - T
X x X - + x X x
- + - + - + - +
+ - + x + - + -
- + - P s + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

```

This line of the Petroff (1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. d4 d5) has perhaps the worst reputation for drawishness, but let's have a look. Black has an aggressive Knight on e4 - it even looks as if Black is a move ahead. White is not necessarily trying to draw in this variation, and it is White to move. White will try to undermine the Ne4 with moves like Bd3, Re1 and c4; Black can try to castle Queen's-side and belt down the other wing. All this can make for exciting and tense struggles in an open game, which might be a lot better than suffering White's favourite line of the Ruy Lopez.

b. The isolated Queen's pawn

Several lines of the Petroff can lead to an isolated Queen's pawn (IQP) position, if White plays to undermine the Black Knight on e4 with c4, and Black later plays ...dxc4. White will have the last remaining central pawn on d4, a situation which is known from many other openings. For example:

The isolated Queen's pawn in the Semi-Tarrasch Defence to the Queen's Gambit

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Nf3

```

t S l D j L - T
X x X - + x X x
- + - + x S - +
+ - + x + - + -
- + p P - + - +
+ - N - + n + -

```

```

p P - + p P p P
R - B q K b + r

```

4... c5 5. cxd5 Nxd5 6. e3 Nc6 7. Bd3 Be7 8. O-O O-O 9. a3 cxd4 10.

exd4 Bf6

```

t + l D - T j +
X x + - + x X x
- + s + x L - +
+ - + s + - + -
- + - P - + - +
P - N b + n + -
- P - + - P p P
R - B q + r K -

```

The isolated Queen's pawn in the Caro-Kann Defence, Panov-Botvinnik Attack

1. e4 c6 2. d4 d5 3. exd5 cxd5 4. c4

```

t S l D j L s T
X x + - X x X x
- + - + - + - +
+ - + x + - + -
- + p P - + - +
+ - + - + - + -
p P - + - P p P
R n B q K b N r

```

4... Nf6 5. Nc3 e6 6. Nf3 Be7 7. cxd5 Nxd5 8. Bd3 Nc6 9. O-O O-O 10. a3

Bf6

Exactly the same!

```

t + l D - T j +
X x + - + x X x
- + s + x L - +
+ - + s + - + -
- + - P - + - +
P - N b + n + -
- P - + - P p P
R - B q + r K -

```

And in the Petroff:

1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. d4 d5 6. Bd3 Be7 7. O-O Nc6 8. c4 Nf6 9. Nc3 dxc4 10. Bxc4 O-O

```

t + l D - T j +
X x X - L x X x
- + s + - S - +
+ - + - + - + -
- + b P - + - +
+ - N - + n + -
p P - + - P p P
R - B q + r K -

```

So the IQP is important to know about, although in the Petroff Black doesn't have the Bc8 stuck behind the e6 pawn. White's ideas will still be the same: develop quickly, use the extra space to dodge about, avoid exchanges (to keep Black cramped), play Ne5, look for a chance to start a King's-side attack using the light-squared bishop, maybe throw in Rf1-e1-e3-h3.

So, let's have a look at some variations.

A. The Classical Variation, 3. Nxe5

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - N - + -
- + - + p + - +
+ - + - + - + -
p P p P - P p P
R n B q K b + r

```

Black must now play 3...d6. Why not 3... Nxe4? White answers 4. Qe2!

```

t S l D j L - T
X x X x + x X x
- + - + - + - +
+ - + - N - + -
- + - + S + - +
+ - + - + - + -
p P p P q P p P
R n B - K b + r
    
```

Now 4... Qe7...

[Not 4... Nf6?? 5. Nc6+!

Variation

```

t S l D j L - T
X x X x + x X x
- + n + - S - +
+ - + - + - + -
- + - + - + - +
+ - + - + - + -
p P p P q P p P
R n B - K b + r
    
```

winning the Q]

...and now 5. Qxe4 d6 6. f4 dxe5 7. fxe5 wins a pawn.

So, from the first diagram in the column:

3... d6

```

t S l D j L - T
X x X - + x X x
    
```

```

- + - X - S - +
+ - + - N - + -
- + - + p + - +
+ - + - + - + -
p P p P - P p P
R n B q K b + r

```

Now, White almost always plays the main line with 4. Nf3, but there are two alternatives: 4. Nxf7, the Cochrane Gambit, and 4. Nc4. I have never seen this last move played, and I don't think it is dangerous, but it does deny Black the natural ...Bg4 pin. BCO recommends 4. Nc4 Nxe4 5. d4 d5 6. Ne3 Qf6 and 7...Be6 with an early ...O-O-O in mind.

So that leaves us with the Cochrane Gambit to examine before we go down the main line.

1. An alternative on move 4 for White: 4. Nxf7, The Cochrane Gambit

```

t S l D j L - T
X x X - + n X x
- + - X - S - +
+ - + - + - + -
- + - + p + - +
+ - + - + - + -
p P p P - P p P
R n B q K b + r

```

Looks crazy? Looks promising? Your chess personality may make you feel confident as White or Black in this position, but either way, you must know about it.

4... Kxf7 5. d4

Black has tried:

[5... Nxe4? 6. Qh5+ g6 7. Qd5+ Be6 8. Qxe4]

[5... d5?! 6. e5 Ne8 7. Bd3 g6 8. h4]

So Black should prefer the safer:

5...g6 6. Nc3

t S l D - L - T
X x X - + j + x
- + - X - S x +
+ - + - + - + -
- + - P p + - +
+ - N - + - + -
p P p + - P p P
R - B q K b + r

Now BCO recommends the odd-looking:

6... Qe8

Other tries seem inadequate, e.g.

6... Bg7 7. Bc4+ Be6 8. Bxe6+ Kxe6 9. f4 Kf7 10. e5 Ne8

[or 10... Re8 11. O-O Nc6 12. exf6 Qxf6 13. Nb5 Re7 14. c3 o'neill-solomon 1985]

11. Qf3 c6 12. Ne4+-

t S - D s + - T
X x + - + j L x
- + x X - + x +
+ - + - P - + -
- + - P n P - +
+ - + - + q + -
p P p + - + p P
R - B - K - + r

... with better chances for White (Makropoulos-Toth 1981).

2. Main line with 4. Nf3

Black should take the chance to recover the pawn with

4... Nxe4.

White has a choice now, between 5.Qe2, the Lasker Variation, leading to an early endgame, or 5. d4, the main line.

1.1 An alternative on move 5 for White: 5. Qe2, Lasker Variation

```
t S l D j L - T
X x X - + x X x
- + - X - + - +
+ - + - + - + -
- + - + s + - +
+ - + - + n + -
p P p P q P p P
R n B - K b + r
```

This pin is not dangerous here with the White Knight on f3, just awkward for the moment.

5... Qe7 6. d3 Nf6 7. Bg5 Nbd7 8. Nc3 Qxe2+ 9. Bxe2 Be7=

```
t + l + j + - T
X x X s L x X x
- + - X - S - +
+ - + - + - B -
- + - + - + - +
+ - N p + n + -
p P p + b P p P
R - + - K - + r
```

White cannot claim any advantage in this endgame, although Black still needs to get fully developed. This variation is why the Petroff is no good when you have to win as Black against a player who knows this line.

1.2 The main line with 5. d4

```
t S l D j L - T
```

```

X x X - + x X x
- + - X - + - +
+ - + - + - + -
- + - P s + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

```

Now Black can get an equal stake in the centre with:

5... d5

And White brings the Bf1 to its best square, so the King can castle.

6. Bd3

```

t S l D j L - T
X x X - + x X x
- + - + - + - +
+ - + x + - + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q K - + r

```

Like White, Black should plan to get the K off the open e-file as soon as possible, and Black has a choice of two squares for the Bf8:

(a) 6...Bd6, a move of Frank Marshall - which looks good but is perhaps trying a bit too hard - or the safe (b) 6...Be7, sealing the e-file.

More recent theory has centred around developing the Queen's-side first with 6...Nc6 and maybe ...Bg4, but let's just look at the development of the King's Bishop.

1.2 (a) 6...Bd6 Marshall Gambit

```

t S l D j + - T
X x X - + x X x
- + - L - + - +
+ - + x + - + -

```

```

- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q K - + r

```

Let us follow the play after the natural moves:

7. O-O O-O 8. c4 Bg4!?

This is Marshall's idea.

9. cxd5 f5 10. Re1?

One natural move too many.

```

t S - D - T j +
X x X - + - X x
- + - L - + - +
+ - + p + x + -
- + - P s + l +
+ - + b + n + -
p P - + - P p P
R n B q R - K -

```

10... Bxh2+ 11. Kxh2 Nxf2 12. Qc2 Nxd3 13. Qxd3 Bxf3

winning, because if Qxf3, then ...Qh4+ will pick up the rook on e1. Instead of falling for this trap White should play:

10. Nc3 Nd7 11. h3 Bh5 12. Nxe4 fxe4 13. Bxe4 Nf6 14. Bf5 +-

```

t + - D - T j +
X x X - + - X x
- + - L - S - +
+ - + p + b + l
- + - P - + - +
+ - + - + n + p

```

```

p P - + - P p +
R - B q + r K -

```

...with advantage, as in the game CHO'D Alexander- HV Mallison from 1938. [H.V. Mallison was champion of Exeter many times before the Second World War]

So the rather boring truth about this line seems to be that back on move eight Black should play instead

8... c6

when theory knows of

9. Nc3 Nxc3 10. bxc3 Bg4 11. cxd5 cxd5 12. Rb1 Nd7 13. h3 +=

```

t + - D - T j +
X x + s + x X x
- + - L - + - +
+ - + x + - + -
- + - P - + l +
+ - P b + n + p
p + - + - P p +
+ r B q + r K -

```

Now, this position is solid but offers so few active possibilities for Black that we should prefer as Black 6...Be7.

1.2 (b) 6...Be7 Main Line

```

t S l D j + - T
X x X - L x X x
- + - + - + - +
+ - + x + - + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q K - + r

```

And now play often goes:

7. O-O Nc6

...when White has a choice:

```

t + l D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + - + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q + r K -

```

Hit at the centre with 8.c4 (b1), or develop with 8.Re1 (b2). (White can also play 8.Re1 and 9.c4, but this allows 8...Bg4.)

1.2 (b1) Main line with 8. c4

```

t + l D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + - + -
- + p P s + - +
+ - + b + n + -
p P - + - P p P
R n B q + r K -

```

What are the alternatives here? Black does not have time for (b1-i) 8...Bg4. The position of the knight is now so wobbly that Black should move it - both

(b1-ii) 8...Nb4, and

(b1-iii) 8...Nf6 have been tried.

(b1-i) 8... Bg4

```

t + - D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + - + -
- + p P s + l +
+ - + b + n + -
p P - + - P p P
R n B q + r K -

```

Like I said, Black really doesn't have time for this.

9. cxd5 Qxd5 10. Nc3 Nxc3 11. bxc3 Bxf3 12. Qxf3 Qxf3 13. gxf3

```

t + - + j + - T
X x X - L x X x
- + s + - + - +
+ - + - + - + -
- + - P - + - +
+ - P b + p + -
p + - + - P - P
R - B - + r K -

```

The two bishops and strong centre give White the advantage in this

ending; White has natural ideas of Rb1 and Re1/Be3 which are difficult to meet.

(b1-ii) 8... Nb4

```

t + l D j + - T
X x X - L x X x
- + - + - + - +
+ - + x + - + -
- S p P s + - +
+ - + b + n + -

```

```

p P - + - P p P
R n B q + r K -

```

Now White usually preserves the bishop with:

9. Be2

[less promising seems 9. *cx*d5 *N*xd3 10. *Q*xd3 *Q*xd5 11. *Re*1 *B*f5 12. *Ne*5 *g*6=
Belyavsky-Smyslov 1986]

After 9.Be2 Black has tried

- (1) 9...Be6
- (2) 9...O-O
- (3) 9...dxc4

(1) 9... Be6

A line quoted by Karpov.

10. c5 Nc6 11. Qa4 a5 12. Ne5 +=

```

t + - D j + - T
+ x X - L x X x
- + s + l + - +
X - P x N - + -
q + - P s + - +
+ - + - + - + -
p P - + b P p P
R n B - + r K -

```

With an advantage for White.

(2) 9... O-O

10. Nc3 Be6

```

t + - D - T j +
X x X - L x X x
- + - + l + - +
+ - + x + - + -
- S p P s + - +
+ - N - + n + -
p P - + b P p P
R - B q + r K -

```

The Grandmasters are still having a think about this one. It's as difficult for White to get an advantage as it is for Black to equalise!

BCO quotes games with 11. Be3, 11. a3, and 11. Nxe4!?. Having just seen the Karpov line above, you might even fancy 11. c5!?

(3) 9... dxc4

This surrender of the centre doesn't seem to work out too well for Black.

10. Bxc4 O-O 11. Nc3 Nd6

12. Bb3+ =

```

t + l D - T j +
X x X - L x X x
- + - S - + - +
+ - + - + - + -
- S - P - + - +
+ b N - + n + -
p P - + - P p P
R - B q + r K -

```

...as in a couple of games from 1985, seems to leave White with a plus in this IQP position. White will plan to complete development, and then play Ne5 with hopes of an attack.

(b1-iii) 8... Nf6

```

t + l D j + - T
X x X - L x X x
- + s + - S - +
+ - + x + - + -
- + p P - + - +
+ - + b + n + -
p P - + - P p P
R n B q + r K -

```

This is a safe and simple move. Play may continue:

9. Nc3 O-O 10. h3 dxc4

11. Bxc4 Na5 12. Bd3 Be6

13. Re1 Nc6 +=

```

t + - D - T j +
X x X - L x X x
- + s + l S - +
+ - + - + - + -
- + - P - + - +
+ - N b + n + p
p P - + - P p +
R - B q R - K -

```

White is held to have a slight advantage in this well-explored position due to the extra central space, although in the ending the d-pawn may become exposed.

1.2 (b2) Main line with 8. Re1

```

t + l D j + - T
X x X - L x X x

```

```

- + s + - + - +
+ - + x + - + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q R - K -

```

White may be able to preserve a small advantage here. Black has a choice of squares for the last minor piece:

(b2-i) 8...Bf5

(b2-ii) 8...Bg4.

(b2-i) 8... Bf5

```

t + - D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + l + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q R - K -

```

Karpov has shown that this is inaccurate.

9. c4 Nb4 10. Bf1

[not 10...dxc4 11. Nc3 +- with clear advantage: Karpov-Portisch]

10... O-O 11. a3 Nc6 12. cxd5 Qxd5 13. Nc3 Nxc3 14. bxc3 Bg6+=

```

t + - + - T j +
X x X - L x X x
- + s + - + l +
+ - + d + - + -

```

```

- + - P - + - +
P - P - + n + -
- + - + - P p P
R - B q R b K -

```

...with a small advantage for White: Karpov-Portisch 1982. Karpov is rather behind in development at the moment but he is threatening to unravel with c4, dominating the centre.

(b2-ii) 8...Bg4

```

t + - D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + - + -
- + - P s + l +
+ - + b + n + -
p P p + - P p P
R n B q R - K -

```

This very well-known position has a reputation for drawishness (which is not really true at amateur level). White can play modestly (1) 9. c3, or ambitiously (2) 9. c4.

(1) Modestly, 9. c3

```

t + - D j + - T
X x X - L x X x
- + s + - + - +
+ - + x + - + -
- + - P s + l +
+ - P b + n + -
p P - + - P p P
R n B q R - K -

```

This rather modest move can lead to an interesting gambit which Black should not be afraid to play

9 ... f5 10. Qb3 O-O 11. Nbd2

(See Lasker-Pillsbury below for 11.Bf4.)

11...Kh8 12. Qxb7 Rf6 13. Qb3 Rg6=

```

t + - D - + - J
X - X - L - X x
- + s + - + t +
+ - + x + x + -
- + - P s + l +
+ q P b + n + -
p P - N - P p P
R - B - R - K -
    
```

(2) Ambitiously, 9. c4

Black's knight is again too wobbly in the centre.

9... Nf6 10. cxd5

```

t + - D j + - T
X x X - L x X x
- + s + - S - +
+ - + p + - + -
- + - P - + l +
+ - + b + n + -
p P - + - P p P
R n B q R - K -
    
```

10... Bxf3

[10... Nxd5 is also known: 11. Nc3 O-O 12. h3 Be6 13. a3 Nxc3 14. bxc3 Bf6 15. Bf4 g6 16. Be4 Na5 17. Ne5 c6 18. Qf3+=

Variation

```

t + - D - T j +
X x + - + x + x
- + x + l L x +
S - + - N - + -
- + - P b B - +
P - P - + q + p
- + - + - P p +
R - + - R - K -

```

After this long sequence, White has a small advantage which will be long-lasting: Tseshkovsky-Barua 1986]

11. Qxf3 Qxd5 12. Qh3 Qxd4 13. Nc3 Rd8 14. Bf5 h5 15. Qg3 Kf8 16. Be3 Qb4 17. a3 Qa5 18. Qf3 g6 19. Bc2 h4

```

- + - T - J - T
X x X - L x + -
- + s + - S x +
D - + - + - + -
- + - + - + - X
P - N - B q + -
- P b + - P p P
R - + - R - K -

```

Another long variation, rather a messy one this time, which BCO assesses as unclear. I prefer White here: Velimirovic-Kurajica 1984]

B. The Steinitz Variation, 3. d4

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - X - + -
- + - P p + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

```

This is the main alternative to 3. Nxe4 and in the late 70s was thought to give White good chances of

advantage. That was because everybody then played (a) 3..exd4. More recently Black has been equalising with (b) 3...Nxe4.

[3...d6 transposes to another opening, Philidor's Defence]

(a) 3...exd4

```
t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - + - + -
- + - X p + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r
```

Now White must try

4. e5 Ne4 5. Qxd4 +=

It has been thought for a long while that White has the edge here.

5... d5 6. exd6 Nxd6 7. Nc3 Nc6 8. Qf4 g6

[or 8... Bf5 when BCO gives 9. Bb5 Qe7+ 10. Be3 Nxb5 11. Nxb5 Qb4+ 12. Qxb4 Bxb4+ 13. c3 Bd6 14. Nxd6+ cxd6 15. O-O-O O-O-O 16. Nd4 Be6 17. b3 a6 18. Ne2+=

Variation

```
- + j T - + - T
+ x + - + x X x
x + s X l + - +
+ - + - + - + -
- + - + - + - +
+ p P - B - + -
p + - + n P p P
+ - K r + - + r
```

when Black's weak d-pawn gives White the better endgame (Gurgenidze-Beim, 1982)]

Natural moves to follow are:

9. Bd3 Bg7 10. O-O O-O+ =

```

t + l D - T j +
X x X - + x L x
- + s S - + x +
+ - + - + - + -
- + - + - Q - +
+ - N b + n + -
p P p + - P p P
R - B - + r K -

```

All the central pawns have disappeared, but White is a little better placed (Short-Murei 1982-3)

(b) 3...Nxe4

```

t S l D j L - T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - P s + - +
+ - + - + n + -
p P p + - P p P
R n B q K b + r

```

Now White usually tries 4. Bd3, but we ought to have a quick look at 4.dxe5 before accepting this as best.

(b1) 4. dxe5

The game may now go:

4...d5 5. Nbd2 Nxd2 6. Bxd2 Be7 7. Bf4 c5 8. c3 Nc6 9. Bd3 Be6=

```

t + - D j + - T
X x + - L x X x
- + s + l + - +
+ - X x P - + -
- + - + - B - +
+ - P b + n + -
p P - + - P p P
R - + q K - + r

```

This position is about equal (Short-Seirawan 1986).

(b2) 4. Bd3

```

t S l D j L - T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - P s + - +
+ - + b + n + -
p P p + - P p P
R n B q K - + r

```

This is probably the best move here as on move 6 of the Classical Variation.

4... d5 5. Nxe5

This variation is both like, and unlike, the Classical. Black's main tries are (b2-i) 5...Nd7 and (b2-ii) 5...Bd6, although 5...Be7 and even other moves have been played.

(b2-i) 5...Nd7

```

t + l D j L - T
X x X s + x X x
- + - + - + - +

```

```

+ - + x N - + -
- + - P s + - +
+ - + b + - + -
p P p + - P p P
R n B q K - + r

```

White has tried all sorts of moves here:

(1) The cheeky 6. Nxf7

(2) The safe 6. Nxd7

(3) The logical 6. Qe2

I'll just give one quick example of each.

(1) Cheeky

6. Nxf7 Kxf7 7. Qh5+ Ke7 8. Qxd5 Ndf6 9. Qb3 Be6 10. Qxb7 Bd5 11. Qa6 Kf7

```

t + - D - L - T
X - X - + j X x
q + - + - S - +
+ - + l + - + -
- + - P s + - +
+ - + b + - + -
p P p + - P p P
R n B - K - + r

```

Nenashev-Baikov 1985: "unclear" says BCO!

(2) Safe

6. Nxd7 Bxd7 7. O-O Qh4 8. c4 O-O-O 9. c5 g5 10. Nc3 Bg7 11. Ne2 f5 12. f3 Rhf8 13. a4 Rde8.

```

- + j + t T - +
X x X l + - L x
- + - + - + - +
+ - P x + x X -
p + - P s + - D
+ - + b + p + -
- P - + n + p P
R - B q + r K -

```

Again, "unclear" says BCO (Sveshnikov-Makarichev, 1987). It does show how Black can play for a win if required.

(3) Logical

6. Qe2 Nxe5 7. Bxe4 dxe4 8. Qxe4 Be6 9. Qxe5 Qd7 10. O-O O-O-O 11. Be3 Bb4 12. Nc3 f6 13. Qg3 Bxc3 14. bxc3 h5 15. h4 g5 16. f3 Rdg8-+

```

- + j + - + t T
X x X d + - + -
- + - + l X - +
+ - + - + - X x
- + - P - + - P
+ - P - B p Q -
p + p + - + p +
R - + - + r K -

```

Not at all unclear: Black won in the famous upset of Karpov-Larsen, 1980

(b2-ii) 5...Bd6

```

t S l D j + - T
X x X - + x X x
- + - L - + - +
+ - + x N - + -
- + - P s + - +
+ - + b + - + -

```

```

p P p + - P p P
R n B q K - + r

```

The balance looks a little tense, but Black seems to be able to hold.

6. O-O O-O 7. c4 Bxe5 8. dxe5 Nc6

```

t + l D - T j +
X x X - + x X x
- + s + - + - +
+ - + x P - + -
- + p + s + - +
+ - + b + - + -
p P - + - P p P
R n B q + r K -

```

This position offers equal chances.

C. White tries to get into the Four Knight's Game, 3. Nc3

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - X - + -
- + - + p + - +
+ - N - + n + -
p P p P - P p P
R - B q K b + r

```

Now, after 3... Nc6 we get into those genuinely dull, drawish variations of the Four Knights Game. I don't care if Short and Nunn have played it, it's a poor line for juniors (in my opinion). It tends to be stodgy and blocked, you probably won't enjoy it and it doesn't give you the sort of training in open games that you need.

Thankfully Janowski[*] found that Black can play

3... Bb4

```

t S l D j + - T
X x X x + x X x
- + - + - S - +
+ - + - X - + -
- L - + p + - +
+ - N - + n + -
p P p P - P p P
R - B q K b + r

```

BCO now gives

4. Nxe5 O-O 5. Be2 Re8 6. Nd3 Bxc3 7. dxc3 Nxe4 =

```

t S l D t + j +
X x X x + x X x
- + - + - + - +
+ - + - + - + -
- + - + s + - +
+ - P n + - + -
p P p + b P p P
R - B q K - + r

```

...with equal chances in a more open game. White's two bishops don't frighten me.

D. The Boden-Kieseritsky Gambit, 3. Bc4

Now Black can steer for the equally promising lines of the Two Knights Defence with 3...Nc6, but to look at that properly will take another booklet.

Two Knight's Defence

```

t + l D j L - T
X x X x + x X x
- + s + - S - +
+ - + - X - + -

```

```

- + b + p + - +
+ - + - + n + -
p P p P - P p P
R n B q K - + r

```

Black has no real reason to avoid:

3...Nxe4

White can try other moves, but the usual try is

4. Nc3 Nxc3 5. dxc3 Be7

```

t S l D j + - T
X x X x L x X x
- + - + - + - +
+ - + - X - + -
- + b + - + - +
+ - P - + n + -
p P p + - P p P
R - B q K - + r

```

Black has no weaknesses, and White will find it difficult to get through. Black will want to get the two bishops working, but must be careful to keep lines *closed* until development is complete. White has tried various plans in this position but they are all pretty unconvincing.

Example games

Lasker - Pillsbury, St. Petersburg, 1895

1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. d4 d5 6. Bd3 Be7 7. O-O Nc6
8. Re1 Bg4 9. c3 f5 10. Qb3 O-O 11. Bf4

```

t + - D - T j +
X x X - L - X x
- + s + - + - +
+ - + x + x + -

```

```
- + - P s B l +
+ q P b + n + -
p P - + - P p P
R n + - R - K -
```

White allows the King's-side to be weakened.

**11... Bxf3 12. gxf3 Ng5 13. Kg2 Qd7 14. Qc2 Ne6 15. Bc1 Bd6 16. Nd2
Rae8 17. Nf1**

```
- + - + t T j +
X x X d + - X x
- + s L s + - +
+ - + x + x + -
- + - P - + - +
+ - P b + p + -
p P q + - P k P
R - B - R n + -
```

Black's pieces are much better placed than White's. If White was hoping to tempt Black into an unsound attack, he has only tempted Pillsbury into a sound one.

17... Nexd4 18. Qd1 Rxe1 19. Qxe1

```
- + - + - T j +
X x X d + - X x
- + s L - + - +
+ - + x + x + -
- + - S - + - +
+ - P b + p + -
p P - + - P k P
R - B - Q n + -
```

Black now starts a king hunt, sacrificing a piece for a couple of pawns.

**19... Nxf3 20. Kxf3 f4 21. Qd1 Ne5+ 22. Ke2 Qg4+ 23. Kd2 Qxd1+ 24.
Kxd1 Nxd3**

```

- + - + - T j +
X x X - + - X x
- + - L - + - +
+ - + x + - + -
- + - + - X - +
+ - P s + - + -
p P - + - P - P
R - B k + n + -

```

Black has recovered his piece, and still has his pawns. White is lost.

**25. Ke2 Ne5 26. f3 Re8 27. b3 Ng4+ 28. Kd2 Ne3 29. Bb2 Ng2 30. h3 Bc5
31. Nh2 Bf2 32. c4 dxc4 33. bxc4 h5 0-1**

```

- + - + t + j +
X x X - + - X -
- + - + - + - +
+ - + - + - + x
- + p + - X - +
+ - + - + p + p
p B - K - L s N
R - + - + - + -

```

If anything, White's position has gone from bad to worse.

Kupreichik - Mikhailchishin, Kujbyshev, 1986

1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. c4!? Nc6 6. d4?!

[Mikhailchishin gives 6. Be2 d5 7. Nc3 Be6]

6... d5 7. Nc3 Bb4 8. Qc2 Qe7 9. Be3 Bf5

Black has the advantage: White cannot easily complete development and his poor Queen is embarrassed.

t + - + j + - T
X x X - D x X x
- + s + - + - +
+ - + x + l + -
- L p P s + - +
+ - N - B n + -
p P q + - P p P
R - + - K b + r

10. Qc1

[10. Bd3?! dxc4 11. Bxc4 Ng3-+]

10... Nxc3 11. bxc3 Ba3 12. Qd2 Nb4!!

t + - + j + - T
X x X - D x X x
- + - + - + - +
+ - + x + l + -
- S p P - + - +
L - P - B n + -
p + - Q - P p P
R - + - K b + r

White is busted. He tries to hang on with Ke2 but it doesn't take much longer with the K stuck in the middle.

13. Ke2 Nc2 14. Rd1 dxc4 15. Ne5 O-O 16. f3 b5 17. g4 Nxe3 18. Qxe3 Bd7 19. Kf2 Rae8 20. Qd2 Bc8 21. Re1 Qh4+ 22. Kg2 f6 0-1

Janowsky - Marshall, 1912

1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. d4 d5 6. Bd3 Bd6

6...Be7 is honestly better

7. c4 O-O 8. cxd5

Castling was a lot better here

8... Bb4+ 9. Kf1 Qxd5 10.

Qc2 Re8 11. Nc3 Nxc3 12. bxc3

```

t S l + t + j +
X x X - + x X x
- + - + - + - +
+ - + d + - + -
- L - P - + - +
+ - P b + n + -
p + q + - P p P
R - B - + k + r

```

12... Qxf3!! 13. cxb4

[13. gxf3 Bh3+ 14. Kg1 Re1+ 15. Bf1 Rxf1#]

13... Nc6 14. Bb2 Nxb4 15. Bxh7+ Kh8 16. gxf3 Bh3+ 17. Kg1 Nxc2 18. Bxc2 Re2 19.

Rc1 Rae8 20. Bc3

```

- + - + t + - J
X x X - + x X -
- + - + - + - +
+ - + - + - + -
- + - P - + - +
+ - B - + p + l
p + b + t P - P
+ - R - + - K r

```

20... R8e3

[brilliant, but 20... Rxc2 21. Rxc2 Re6 was easier]

21. Bb4

[21. fxe3 Rg2+ 22. Kf1 Rxc2+ 23. Ke1 Rxc1+ 24. Kd2 Rxh1]

21... Rxf3 22. Bd1 Rf6 0-1

Dolmatov - Makarichev, Palma, 1989

1. e4 e5 2. Nf3 Nf6 3. d4 Nxe4 4. Bd3 d5 5. Nxe5 Nd7 6. Nxd7 Bxd7 7. O-O Qh4 8. c4 O-O-O 9. c5 g5 10. f3!? Nf6 11. Be3 Rg8 12. Nc3 g4

Black plays with great energy and has a fierce attack.

```

- + j T - L t +
X x X l + x + x
- + - + - S - +
+ - P x + - + -
- + - P - + x D
+ - N b B p + -
p P - + - + p P
R - + q + r K -

```

13. Qe1

[13. Bf2 is better]

13... g3 14. hxg3 Rxc3

```

- + j T - L - +
X x X l + x + x
- + - + - S - +
+ - P x + - + -
- + - P - + - D
+ - N b B p T -
p P - + - + p +
R - + - Q r K -

```

15. Qd2

[not 15. Bf2, as 15...Rxc2+ 16. Kxc2 Qh3+ 17. Kg1 Bd6 18. cxd6 Rg8+ wins]

15... Bxc5 16. dxc5 Rdg8 17. Rad1 d4 18. c6 dxe3 19. cxd7+ Kd8 0-1

```

- + - J - + t +
X x X p + x + x
- + - + - S - +
+ - + - + - + -
- + - + - + - D
+ - N b X p T -
p P - Q - + p +
+ - + r + r K -

```

Black has various threats - ...Rh3, ...Rxc2, ...Qf2+ and so on - which cannot all be met.

"Dull and a draw", eh?

[*] the other originator of this defence, besides Petroff

[Dr. Dave](#)

Exeter Chess Club: No more Giuoco Pianissimo (Old Stodge)

This club is a GP-free zone

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.Nc3 Nf6 5.d3 d6

Support the campaign for d2-d4

by playing 4. c3, 4. b4 or 3. d4!

The position above is the Giuoco Pianissimo.

"*Giuoco Pianissimo*" is an old Italian phrase meaning "very quiet game"; if you can't remember that you might prefer if we just call this line "[Old Stodge](#)"...

It's probably one of the most common ways for games to start, and I think it's one of the worst. What's the problem?

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player.

"A beginner should avoid the Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game."

- RICHARD RETI, Masters of the Chessboard

Beginners (and others) should play open games:

- **open games are more lively and more fun** because of all the tactics
- **open games are easier to get ideas in** because of all the tactics
- **open games are better for learning about the game** because of all the tactics

Open games, with open lines, require the exchange (or sacrifice) of Pawns. White can play for d2-d4 (the easiest and best break) in a variety of ways and this is generally the best plan in the King Pawn openings.

Whatever is happening in Old Stodge, it is most unlikely that lines are going to be opened very soon. Both sides clamp down on the opponent's Queen's Pawn, preventing the opening of the game. The whole position gets bogged down in sticky toffee and both players are often bored and confused by the positions that come about.

It's enough to put you off chess! The position is blocked, the sides are equal and it's hard to get things going. It can take a long time to beat worse players because things are so solid. Also, it may be that almost every game you play ends up something like this, and perhaps you would like some variety.

In fact, probably the best plan in the standard Old Stodge position is to aim for d3-d4 after a sequence like:

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. Nc3 Nf6 5. d3 d6 6. Bg5! h6! 7. Bxf6! Qxf6 8. Nd5 Qd8 9. c3! [see the document on [The Italian game](#)] So, if you are going to play d3-d4 eventually, why not go for a more open game from the start? This document is about, is describing how to try and get an open game, with Pawn exchanges, with either colour.

Securing an open game as White

Play the main line Giuoco Piano

After **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5** play **4. c2-c3** and open up the game or take over the centre with **5. d2-d4**. This is an easy way to get an open game with White.

[More? See the document on [The Italian Game](#)]

Play the Evans' Gambit

After **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5** play **4. b2-b4**. After **4...Bxb4** you can open up the game AND take over the centre with **5. c2-c3** and a later d2-d4. You pay for getting both at once with a Pawn.

[More? See the document on [The Italian Game](#)]

Play the Scotch Game

After **1.e4 e5 2.Nf3 Nc6** play simply **3. d2-d4**. After **3...exd4** you can play a nice open game with **4. Nxd4**, or you can play one or two interesting gambits with **4. Bc4** [Scotch Gambit] or **4. c2-c3** [Goring Gambit]. This is perhaps the easiest way to get an open game as White.

[More? See the document on [Playing Black against 1.e2-e4](#)]

Securing an open game as Black

... is more difficult.

Play the Two Knights' Defence

After **1. e4 e5 2. Nf3 Nc6 3. Bc4** play **3...Nf6**. White cannot head for the GP by **4. Nc3** because of **4...Nxe4!**, although **4. d3** is pretty dull (**4. d3 d5!?** is the right attitude but maybe the wrong move)

Some Black players are frightened to play the Two Knights' because of **4.**

Ng5 but Black can get an open game by sacrificing material in one of three ways: ,

- play the main line with **4...d5 5. exd5 Na5!...**
- or the Ulvestad Variation with **4...d5 5. exd5 b5!...**
- or even the wild Traxler (or Wilkes-Barre) Variation **4...Bc5!?**.

[More? See the document on [Playing Black against 1.e2-e4](#)]

Play the Petroff Defence

After **1. e4 e5 2. Nf3** play **2...Nf6!**. The main lines with **3. Nxe5 d6! 4. Nf3 Nxe4 5. d4 d5 6. Bd3 Be7** and **3. d4 d5!** are both much more open than the Old Stodge.

There is a slight problem if White is frightened into **3. Nc3** because of course we are half-way towards Old Stodge again. Black won't mind if after the obvious **3...Nc6** White opens the game with **4. d4**. We have already seen that **4. Bc4** fails to the trick **4...Nxe4!**, so the only other try is **4. Bb5**, which of course makes it difficult for Black to play ...d5 because of the e-Pawn, and theory suggests that the lively **4...Bc5?!** is not very good for the same reason. One safe move for Black is **4...Bb4**, but to me that looks like another version of Old Stodge, so you might like to try **4...Nd4!?**. According to theory there is no way for White to punish Black for this unusual move, and it may be a way of mixing things up a little. If all this seems a bit much the simple **3.Nc3 Bb4!?** is probably OK.

[More? See the document on [Petroff's Defence](#)]

Play the Centre Counter [Scandinavian] Defence

After **1. e4** play **1...d5!**. This used to be described as "sucking all the life out of the position", and it's absolutely true that I can't bear playing games with **2. exd5 Qxd5** - White can gain a move by kicking the Queen about with **3. Nc3 Qa5** but Black tends to play a solid set-up with ...c6 and ...e6, which can be tough to break down.

But recently Black players have had a few new ideas in the line with **1. e4 d5 2. exd5 Nf6!**

One idea is to play the "Icelandic Gambit" with **1. e4 d5 2. exd5 Nf6! 3.**

c4 e6! The idea is that if White grabs a Pawn with **4. dxe6 Bxe6**, White will have a difficult game because of the backward d-Pawn (*5. Nf3 c5!*), unless White plays **5. d4 Bb4+ e.g. 6. Bd2 Qe7 7. Bxb4 Qxb4+ 8. Qd2 Nc6 9. Nc3 O-O-O**, when Black has raced to nearly complete development, while White has yet to get anywhere near castling. [This is pretty fashionable at club level at the moment.]

Another idea, if White is not so greedy, is to play the Jadoul Variation with **1. e4 d5 2. exd5 Nf6! 3. d4 Bg4!** which can be another gambit with **4. f3 Bf5 5. c4 e6** or a better version of the 2...Qxd5 line after **4. Nf3 Qxd5 5. Nc3 Qf5** (or *5. Be2 Nc6 6. c4 Qd7*) because the Black Queen doesn't get in the way of developing the light-squared Bishop.

If your opponent is really determined to be stodgy, *1. e4 d5 2. exd5 Nf6! 3. d4 Bg4! 4. Be2 Bxe2 5. Qxe2 Qxd5 6. Nf3* is quiet enough, although you may be able to castle Queen's-side, and then throw your King's-side Pawns up to open lines against their King.

White can avoid these lines with **1. e4 d5 2. exd5 Nf6! 3. Bb5+**, or after **1. e4 d5 2. exd5 Nf6! 3. c4 e6** playing **4. d4**, but in both cases we have a more open game than Old Stodge.

[More? There are lots of new books recommending the Scandinavian these days, including the patchy Keene/Levy **An Opening Repertoire for the Attacking Player**, and the more sound John Emms' [The Scandinavian](#)]

The Closed Queen's-Pawn Openings at junior level

Part I - for starters

How many people play 1.d2-d4 (stodgily)

How you should play 1.d2-d4 (open)

How you can play 1. d2-d4 (expertly)

How to avoid the Queen's Pawn game if you think your opponent plays stodgily.

Part II- The theory of playing against 1.d2-d4

II-A: Systems with c2-c4

The Queen's Gambit

Swiss Defence

QGD with 5.Bf4

Exchange variation

Semi-Slav Systems

Catalan Opening

II-B: Systems without c2-c4

Colle System

London System

Veresov System

Stonewall Attack

Blackmar-Diemer Gambit

Most of them I think would find this rather too slow and dull, everything gets bogged down, and often neither side can come up with any ideas of how to win and would have to rely on their opponent overlooking something to win. If you are much better than a beginner, and you like this style of playing, then you can have a go for either side, but my advice is: stick to **1. e2-e4!**

How should you play the London system as White or Black? Black often develops their Bishops on f5 and d6. Because White is going to take a few moves to achieve Bf1-d3, Black may play ...Bc8-f5 first, and the light-squared Bishops come off. Also, Black will often challenge the Bc1-f4 with ...Bf8-d6, and the dark-squared Bishops also come off. We then have a slow game with Knights and Queens.

The first thing to do if you get into this sort of position (whether you are White or Black) is to **open up a file for your Rooks** . As Black, you may not be able to achieve ...e7-e5 very quickly, but it is likely that you can play ...c7-c5. So one good rule for playing Black in these openings is for you to play ...c7-c5 at some point. This means that your Queen's Knight should not be placed straightaway at c6 in front of the c-Pawn, but instead go to c6 only after ...c7-c5. Another idea is to play ...Nb8-d7, which actually supports the ...c7-c5 break.

How you should play 1.d2-d4 (open)

The reason that games with **1.d2-d4** are called "closed" is because the positions are often slow with few open lines. After **1. e2-e4 e7-e5** , all the major openings

set out to achieve the advance $d2-d4$ for White. We can play it straight away (**2. $d2-d4$** , the *Centre Game*) or after **2. $Ng1-f3$ $Nb8-c6$ 3. $d2-d4$** (the *Scotch Game*). Perhaps the best way is to prepare the advance with $c2-c3$ as in the *Giuoco Piano* **1. $e2-e4$ $e7-e5$ 2. $Ng1-f3$ $Nb8-c6$ 3. $Bf1-c4$ $Bc8-c5$ 4. $c2-c3$ $Ng8-f6$ 5. $d2-d4$) or *Ruy Lopez* **1. $e2-e4$ $e7-e5$ 2. $Ng1-f3$ $Nb8-c6$ 3. $Bf1-b5$ $a7-a6$ 4. $Bb5-a4$ $Ng8-f6$ 5. $O-O$ $Bf8-e7$ 6. $Rf1-e1$ $b7-b5$ 7. $Ba4-b3$ $O-O$ 8. $c2-c3$ $d7-d6$ 9. $h2-h3$ $Nb8-d7$ 10. $d2-d4$ White could also play $d2-d4$ on moves 5 or 9).****

But after **1. $d2-d4$** it's not obvious how to achieve $e2-e4$. Obviously White can just play $2.c2-c4$, which is the famous Queen's Gambit. But there is another system, named after the Belgian master Colle, which specifically aims at $e2-e4$ and also leads to a nice open game. If juniors do want to play **1. $d2-d4$** I always tell them about this system.

The idea is:

1. $d2-d4$ 2. $Ng1-f3$ 3. $e2-e3!$

This does block in the $Bc1$ but doesn't mean to leave it that way. Continue:

4. $Bf1-d3$ 5. $Nb1-d2$ 6. $O-O$ 7. $Rf1-e1$ (of course, Black usually moves too!)

8. $e2-e4!$

Now White has good development and will get open lines for the pieces. Like this:

Colle - Buerger [D05] Hastings - (0.158), 1928

1.d4 Nf6 2.Nf3 d5 3.e3 e6 4.Bd3 Be7 5.Nbd2 O-O 6.O-O Nbd7 7.e4 dxe4 8. Nxe4 Nxe4 9.Bxe4 Nf6 10.Bd3 c5 11.dxc5 Bxc5 12.Bg5 Be7 13.Qe2 Qc7 14. Rad1 Rd8 15.Ne5 Bd7 16.Bxh7+ Kxh7 17.Bxf6 Bxf6 18.Qh5+ Kg8 19.Qxf7 + Kh7 20.Rd3 1-0

If you like the look of this, I have some *notes on this system* tucked away somewhere.

How you can play 1. d2-d4 (expertly)

The main Queen's-Pawn openings usually are based around playing c2-c4 rather than e2-e4. In the Queen's Gambit after **1.d2-d4 d7-d5** White puts pressure on the Black centre with **2.c2-c4** and later can play a Rook to the c-file, which is likely to be opened.

When you know a bit more about how to play with each piece, the *Queen's Gambit* is a fine opening to play, but by the time you know enough to play the Queen's Gambit well, your opponent's may start avoiding **1. d2-d4 d7-d5** by playing one of the *Indian Defences* **1. d2-d4 Ng8-f6** . Now there's an idea: you mean, I don't have to go through all this London system stuff? Right! You can play the Black side of the London system or the Colle to win if you fancy it, but you might prefer to have something a little spicier. Not an Indian Defence, but the *Dutch Defence*

How to avoid the Queen's Pawn game if you think your opponent plays stodgily.

The *Dutch Defence* is one of the oldest and most aggressive defences to the Queen's Pawn opening. It goes:

1. d2-d4 f7-f5

Now White has several ways of continuing. If White knows a bit of theory they may know that one of the best ways to play for White is to play a set-up with:

1. d2-d4 2. c2-c4 3. Ng1-f3 4. g2-g3 5. Bf1-g2 6. O-O

After this Black has three systems:

Leningrad system: 1...f7-f5 2...Ng8-f6 3...g7-g6 4...Bf8-g7 5...O-O 6...d7-d6

Classical system: 1...f7-f5 2...Ng8-f6 3...e7-e6 4...Bf8-e7 5...O-O 6...d7-d6

Stonewall system: 1...f7-f5 2...Ng8-f6 3...e7-e6 4...Bf8-e7 5...O-O 6...d7-d5

In each system Black gets a flexible development with chances of a King's-side attack. If you fancy this idea, I have tucked away *some notes on the Stonewall system*

The Stonewall formation is aggressive but as you can tell from its name, it is also quite solid. White cannot hope to make a quick raid on Black's position, while the f5 pawn is a beach-head for your King's-side attack. Ideas for Black include:

- play ...Qe8 and ...Qh4
- play ...Kh8, ...Rg8 and ...g5
- play ...Ne4 and ...Ndf6
- re-organise your bishops with ...Be7-d6 or ...Bd7-e8-h4

Of course, you can combine these ideas. Here's a couple of example games from an early Dutch fan, Mikhail Botvinnik, who later became World Champion.

Abramovic,G - Botvinnik,M [A85] Soviet Union, 1924

1.d4 f5 2.Nf3 Nf6 3.c4 e6 4.Nc3 b6 5.Bg5 Be7 6.e3 Bb7 7.Bd3 0-0 8.0-0 Ne4 9.Bxe7 Qxe7 10.Rc1 Na6 11.a3 Rf6 12.Qa4 Nxc3 13.Rxc3 Bxf3 14.Qxa6 Rg6 15.g3 Qg5 16.Re1 Qh5 17.e4

17...Qxh2+ 0-1

18.Kxh2 Rh6+ 19.Kg1 Rh1#

Steiner Herman - Botvinnik M [A95/12] Ch Europe (juniors), Groningen (Netherl, 1946

1.d4 e6 2.c4 f5 3.g3 Nf6 4.Bg2 Bb4+ 5.Bd2 Be7 6.Nc3 0-0 7.Qc2 d5 8.Nf3 c6 9.0-0 Qe8 10.Bf4 Qh5 11.Rae1 Nbd7 12.Nd2 g5 13.Bc7 Ne8 14.Be5 Nxe5 15.dxe5 f4 16.gxf4 gxf4 17.Nf3 Kh8 18.Kh1 Ng7 19.Qc1 Bd7 20.a3 Rf7 21.b4 Rg8 22.Rg1 Nf5 23.Nd1 Rfg7 24.Qxf4 Rg4 25.Qd2 Nh4 26.Ne3 Nxf3 27.exf3 Rh4 28.Nf1 Bg5 0-1

If you are interested in these lines, or the various gambits...

e.g. *Karayannis-Bellin 1993* : **1. d4 e6 2. c4 f5 3. e4**

....then I have some notes on the ways *White can avoid the Dutch main lines*

Part II- The theory of playing against 1.d2-d4

II-A: Systems with c2-c4

Just as in the 1.e2-e4 openings, it is possible for White to play mainly with pieces in the opening, hoping to save time by not moving any more Pawns. But just as in the 1.e2-e4 openings like *Old Stodge*, it is hard to stop Black getting easy equality without hitting at the Black centre with Pawns, giving them something to worry about.

After 1.e2-e4 e7-e5, White cannot be prevented from playing d2-d4, which White can do straightaway (in the Scotch Game) or after c2-c3 (Giuoco Piano and Ruy Lopez).

But in the 1.d2-d4 d7-d5 openings, it looks like e2-e4 and c2-c4 just lose a Pawn. So juniors and even adult club players often like to play it slow and safe and simple, just getting their pieces out, keeping the centre closed and hoping to arrange a King's-side attack.

White hopes that because the centre is likely to remain closed, Black will find it hard to disturb the White build-up. Black must either swap off the attacking pieces, and/or upset the White centre.

White can always play e2-e4 as a gambit (The *Blackmar-Diemer Gambit*). Also, the c4 point is easy to guard with the Bc1, and so White can play 2.c2-c4, the *Queen's Gambit*, believing that Black will find it hard to get away with snatching the c-Pawn. We will look at all of these systems for White, with and without c2-c4.

All of these openings are dangerous if you don't know what your opponent is trying to do. But only the Queen's Gambit is really strong enough for Grandmasters.

The Queen's Gambit

1. d4 d5 2. c4

The idea behind the opening

I keep saying that it is difficult to put real pressure on your opponent's game without using a Pawn to hit at your opponent's central Pawns. In the Queen's Gambit, White does this straight away.

In gambit openings, White hopes that Black will waste time taking and trying to hold on to the Pawn. In the Queen's Gambit, this is a better idea than usual, since Black cannot hold on to the Pawn at all!

2...dxc4 3. e3 b5 4. a4 c6 5. axb5 cxb5 6.Qf3! +-

Black can try other moves to hang on to the Pawn, but they are all more trouble than the Pawn is worth! So, Black should not try to hang on to the Pawn, but aim to hit back in the centre:

3. e3 e5! or 3.e3 c5!

Now, White need not scramble to get back the Pawn but should try to hold on in the centre. A common sequence is:

3. Nf3 Nf6 4. e3 c5 5. Bxc4 e6 6. O-O

How to play against this opening

If you fancy the "accept then hit back" approach, then this Queen's Gambit Accepted line is easy to learn:

- You should exchange on d4 to give White an isolated d-Pawn.
- You should play ...Nbd7-b6-d5 to stop the d-Pawn advancing.
- You should put pressure on the d-Pawn, to tie White's pieces down to defence.
- You should aim for exchanging pieces, especially the light-squared Bishop, leaving White in a poor endgame, like this one

With colours reversed, this is the classic 'bad Bishop' endgame with an isolated Queen's-Pawn, from a famous Flohr-Capablanca game. Black just managed to hold on, but had a struggle! White can try little tricks on either side of the board, or try to slide the King in on the unprotected dark squares, but Black can only sit and suffer. So, playing Black against the Queen's Gambit, this is what you can hope to get to.

Example game

Salwe,G - Rubinstein,A [D26] Lodz, 1907

1.d4 d5 2.c4 e6 3.Nc3 dxc4 4.Nf3 Nf6 5.e3 c5 6.Bxc4 Nc6 7.O-O cxd4 8. exd4 Be7 9.Bf4 O-O 10.Qd2 b6 11.Rfd1 Nb4 12.Qe2 Bb7 13.Ne5 Nbd5 14.

Bg3 Rc8 15.Rac1...

Now Rubinstein changed the Pawn structure with 15...Nxc3, and went on to win with pressure against the c- and d-Pawns and using the Bishop on the long diagonal.

Swiss Defence

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nf3 Nbd7 7. Rc1 a6

The idea behind the opening

The Swiss Defence is a way of declining the Queen's Gambit. Black develops quietly to start with, but is just ready to uncoil. If White plays the automatic

8.Bd3,

Black hits back with

8...dxc4! 9. Bxc4 b5! 10. Bd3 c5!

In another famous Capablanca game, Black (Alekhine) had an easy time after reaching this position:

I won't give the whole game because it is rather long.

How to play this opening

White may see this Queen's-side counter-punch coming. There are two tries for White:

8. *cx*d5 (The Carlsbad variation - see below) or:

8. c5

After 8. c5 Black should stop the c-Pawn

8...c6

then hit back:

9.b4

9...a5! 10.a3 axb4 11.axb4 b6 12.Bd3 bxc5 13.bxc5 e5 14.Nxe5

(14.*dxe5 Ne8=*;

14.*Bxf6 Bxf6 15.dxe5 Nxe5 16.Nxe5 Bxe5 17.Bxh7+ Kxh7 18.Qh5+ Kg8 19.Qxe5 Ba6! with compensation*)

14...Nxe5 15.dxe5 Nd7 16.Bxe7 Qxe7 17.Qc2 Qh4 18.0-0 Nxe5 19.Be2 Ba6 20.Bxa6 Rxa6 21.Ra1 Qc4=

9.Bd3: *see example game*

Example game

Blodstein,B - Ziatdinov,R (2455) [D63] UZB-ch (9), 1993

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Be7 5.Nf3 0-0 6.e3 Nbd7 7.Rc1 a6 8.c5 c6 9.Bd3 e5!

10.Nxe5

[10.dxe5 Ne8 11.Bf4;

10.Bxf6 Bxf6 11.dxe5 Be7!]

10...Nxe5 11.dxe5 Nd7 12.Bf4 Bxc5 13.h4 Re8 14.Bb1 Bf8 15.Qc2 g6 16.
h5 Nxe5 17.hxg6 hxg6 18.Qd1 Bg7 19.Kf1 Qf6 20.Ne2 Bf5 21.Ng3 Bxb1 22.
Rxb1 Rad8 23.Qd4 Nc4 0-1

QGD with 5.Bf4

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Nf3 Be7 5. Bf4

The idea behind the opening

This is a proper Grandmaster opening and so you will not be able to bash out moves without thinking and expect to get an equal game (as if you ever can!)

How to play against this opening

The usual ideas of developing sensibly then hitting back in the centre are the right recipe here.

4.Nf3 Be7 5.Bf4 0-0 6.e3 (we've developed sensibly, so...) 6...c5 7.dxc5 Bxc5 8.Qc2 Nc6 9.Rd1 Qa5 10.a3 Be7 11.Nd2 e5 12.Bg5 d4 13.Nb3 Qd8 =

Example game

Jussupow,A (2635) - Kortschnoj,V (2630) [D37] Tilburg, 1987

1.d4 Nf6 2.c4 e6 3.Nf3 d5 4.Nc3 Be7 5.Bf4 0-0 6.e3 c5 7.dxc5 Bxc5 8.Qc2 Nc6 9.Rd1 Qa5 10.a3 Be7 11.Nd2 e5 12.Bg5 d4 13.Nb3 Qd8 14.Be2 a5 15.Na4 Ng4 16.Bxe7 Qxe7 17.exd4 Qh4 18.Bxg4 Bxg4 19.Rd2 exd4 20.0-0 Rad8 21.Nac5 d3 22.Qc3 Be2 23.Re1 a4 24.Nxa4 Rfe8 25.h3 Ne5 26.Rdx2 dxe2 27.Nc1 b5 28.Nb6 Rd1 29.Nxe2 Nf3+ 30.gxf3 Rxe2 0-1

Exchange variation

1. d4 d5 2. c4 e6 3. cxd5

This is the classic Exchange, but there is a variation that comes out of the Swiss Defence.

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nf3 Nbd7 7. Rc1 a6 8. cxd5 exd5

This variation, from the Swiss Defence, is known as the Carlsbad Variation.

The idea behind the opening

White simplifies the centre, hoping to make use of slightly more active pieces and the open c-file. In the main Exchange Variation, White often plays Rab1 and pushes the b-Pawn, but in the Carlsbad Variation, this would waste time.

How to play against this opening

In the main line Exchange, Black can play a quick ...Bf5; in the Carlsbad, Black is more likely to head for a normal King's-side counterattack.

Black doesn't get left with an isolated d-Pawn

Black ready for ...e7-e5!

- Black has already played ...c6 which can support ...b5. This gives two ideas:
 1. Quickly play ...dxc4 and ..b7-b5, to try and hang on to the c-Pawn.
 2. Wait until White has moved the Bf1 somewhere, then make it waste a move or two by ...dxc4, Bcx4, ...b7-b5! Black can then play ...c7-c5 and ...Bc8-b7, giving the Bishop a nice long diagonal.

Grabbing the c-Pawn - risky!

Hitting the Bishop after ...dxc4: follow up with Bb7 and c7-c5

How to play this opening

I can't promise that players of d2-d4 will rattle out the same moves game after game like e4 Nf3 Bc4 d3...

There are several lines where the Semi-Slav is seen:

1.d4 d5 2.c4 c6 3.Nf3 e6 or

1.d4 d5 2.c4 e6 3.Nf3 c6

1.d4 d5 2.c4 e6 3.Nc3 c6 4.Nf3 dxc4

1.d4 d5 2.c4 e6 3.Nc3 c6 4.e4 Bb4

1.d4 d5 2.c4 e6 3.Nc3 c6 4.Nf3 Nf6 5.e3 Nbd7 6.Bd3 Bd6

1.d4 d5 2.c4 e6 3.Nc3 c6 4.Nf3 Nf6 5.e3 Nbd7 6.Bd3 dxc4

and if you play the Dutch:

1.d4 d5 2.c4 e6 3.Nc3 c6 4.e3 f5!? [4.Nf3 f5?! is less good because of 5.Bf4,

seizing control of e5]

Example games:

Here's a "grab the c-Pawn" game, although you can see the risks Black takes in the centre:

Collas,D (2280) - Flear,G (2495) [D31] Paris (3), 1992

1.d4 d5 2.c4 e6 3.Nc3 c6 4.Nf3 dxc4 5.a4 Bb4 6.e3 b5 7.Bd2 a5 8.axb5 Bxc3 9.Bxc3 cxb5 10.b3 Bb7 11.bxc4 b4 12.Bb2 Nf6 13.Bd3 Nbd7 14.Qc2 Qc7 15.0-0 0-0 16.Rfc1 Rfc8 17.e4 e5 18.c5 exd4 19.Bxd4 Qc6 20.Nh4 g6 21.f3 a4 22.Qd2 b3 23.e5 Nh5 24.Be4 Qb5 25.e6 Bxe4 26.exd7 Qxd7 27.fxe4 a3 28.Qf2 Nf4 29.Rd1 Qg4 30.Kh1 b2 31.Rab1 a2 32.Qxb2 axb1Q 33.Rxb1 Qxh4 34.g3 Qd8 35.gxf4 Rcb8 0-1

And the other ideas can be seen in this shortie:

Samisch,F - Capablanca,J [D46] Moskva (18), 1925

1.Nf3 Nf6 2.d4 e6 3.c4 d5 4.Nc3 c6 5.e3 Nbd7 6.Bd3 a6 7.0-0 dxc4 8.Bxc4 b5 9.Bd3 c5 10.Qe2 Bb7 11.Rd1 Qc7 12.e4 cxd4 13.Nxd4 Bc5 14.Nb3 Bd6 15.h3 b4 16.Nb1 Ne5 17.Bf4 0-0 18.Bxe5 Bxe5 19.N1d2 Bxb2 20.Rab1 Bc3 21.Nc4 a5 22.e5 Nd7 23.Bxh7+ Kxh7 24.Qd3+ Kg8 25.Qxd7 Qxc4 26.Qxb7 a4 27.Nd2 Qxa2 28.Nf3 Qe2 0-1

Catalan Opening

1. d4 d5 2. c4 e6 3. g3

The idea behind the opening

This is a slow, rather tricky system to play against. White hopes to keep Black under pressure and uncoil slowly.

How to play against this opening

If you like the "grab the c-Pawn" strategy in the Semi-Slav, it looks even better here with White having moved the Bishop off the f1-a6 diagonal.

Example game

Gostisa,L (2410) - Burmakin,V (2530) [D31] Bled op, 1994

1.d4 d5 2.c4 e6 3.Nc3 c6 4.Nf3 dxc4 5.g3 b5 6.Bg2 Bb7 7.a4 a6 8.O-O Nd7 9.e4 Ngf6 10.Qe2 Be7 11.Rd1 O-O 12.Bf4 Re8 13.Ne1 Qb6 14.g4 Nf8 15.g5 N6d7 16.Qg4 Ng6 17.Be3 c5 18.d5 Nde5 19.Qg3 b4 20.a5 Qc7 21.Na4 exd5 22.exd5 Bd6 23.Nb6 Nd3 24.Nxa8 Bxa8 0-1

II-B: Systems without c2-c4

These systems usually emphasise piece play rather than pressure on the centre with Pawns. White has a standard attacking plan which can walk straight through you if you aren't careful. I'll show you one game to worry you, then lots more to show you what to do about these systems.

Burgess Graham - Johannesson Larus (8) [A46] It, 1995

1. d4 e6 2. Nf3 Nf6 3. Bg5 Be7 4. Nbd2 d5 5. e3 O-O 6. Bd3 b6 7. Ne5 c5 8. c3 Qc7 9. f4 Bb7 10. Qf3 h6 11. h4 Nc6 12. Rh3

'Normal' moves from Black have allowed White to set up a favourable 'Stonewall' formation with the dark-squared Bishop outside the Pawn chain. With the centre closed, White shuffles pieces over to the King's-side and mugs the King.

12... Nxe5 13. fxe5 Ne4 14. Nxe4 dxe4 15. Bxe4 Bxe4 16. Qxe4 Qd8 17. Bxe7 Qxe7 18. O-O-O c4 19. Rf1 b5

Now, White does know that the Bc1 must be got out, but will do so later on.

White wants to play the difficult e2-e4, so sets about it in two stages - first, developing pieces around the e4 point, with Bd3, Nbd2, and Re1 or Qe2, and only then breaking with e3-e4, hoping that the White pieces will ambush Black.

How to play against this opening

It is not hard to guess that after e2-e3 White wants to play Bd3. So

3...Bf5

is a nice awkward move, when

4. Bd3 e6!

Is another nice awkward move (Alekhine).

The only way to be awkward back is

4. c4 e6 5. Qb3

but Black can cope with this - White's Bishops are not well-placed to attack. Here

5...Qb6

looks OK, or keep Queens on with

5...Qc8

Example game

Mellen,S - Jarosz,S [D12] Lansing,MI Jan mini, 1990

1.Nf3 d5 2.d4 Nf6 3.e3 Bf5 4.c4 e6 5.Nc3 c6 6.Qb3 Qc8 7.Bd2 Nbd7 8.Rc1 Qb8 9.Be2 Bd6 10.0-0 h6 11.h3 0-0 12.cxd5 exd5 13.Na4 Re8 14.Bb4 Bc7 15.Nc5 Nxc5 16.dxc5 Ne4 17.Nd4 Bd7 18.Bd3 Qc8 19.Qc2 Bxh3 20.Bxe4 Rxe4 21.gxh3 Qxh3 22.f3 Re5 23.f4 Rxe3 24.Rf2 Bxf4 25.Nf5 Re4 26.Bd2 Qxf5 27.Bxf4 Qg4+ 0-1

London System

1. d4 d5 2. Nf3 Nf6 3. Bf4

The idea behind the opening

White is developing smoothly and has some control over the dark squares in the centre. White can play on either side of the board, if allowed. So this is quite a sound, flexible system, and needs some care to play against.

How to play against this opening

As I described above, Black should develop sensibly and look to open lines for Rooks.

Example game

Gross,R - Hoenig,A [D02] NRW-I, 1990

1.d4 d5 2.Nf3 Nf6 3.Bf4 Bf5 4.c3 e6 5.e3 Bd6 6.Bg3 0-0 7.Bd3 Bxd3 8.

Qxd3 c5 9.Nbd2 Nc6 10.O-O a5 11.a4 Ra6 12.Rad1 Bxg3 13.hxg3 cxd4 14. exd4 Rb6 15.b3 h6 16.Rfe1 Qc7 17.Rc1 Rc8 18.Rc2 Nb4 19.cxb4 Qxc2 20. Qxc2 Rxc2 21.bxa5 Rb4 22.Kf1 Nd7 23.Ke2 Rxb3 0-1

Veresov System

1. d4 d5 2. Nc3 Nf6 3.Bg5

The idea behind the opening

White has a number of new ideas in this line: perhaps White can mess up Black's Pawns with Bxf6, or use the pressure against the Knight to play f3 and e4.

How to play against this opening

If you don't want White to mess up your Pawns, then you must play

3...Nbd7!

which may be the best move. But I think Bxf6 is not much to worry about, and that you should get your Bc8 out if you can:

3...Bf5!

4.Bxf6 gxf6

recapture towards the centre if you can

5.e3 c6 6.Bd3 Bxd3 7.Qxd3 e6 8.e4 Nd7 9.Nf3 dxe4 10.Nxe4 f5 =

With Pawns on White squares and a Bishop on dark squares, Black is ready to uncoil.

BCO2 also gives:

4. f3 Nbd7 5. Nxd5 Nxd5 6. e4h6 7. Bh4 N7b6 8. exf5 Ne3! 9. Qd2 Nxf1
10. Kxf1 =/+

Example game

Link,U - Birke,M [D01] Wuert-chT, 1994

1.d4 Nf6 2.Nc3 d5 3.Bg5 Bf5 4.Bxf6 gxf6 5.e3 e6 6.Bd3 Bxd3 7.Qxd3 c6 8.
Nge2 Nd7 9.e4 dxe4 10.Qxe4 f5 11.Qf3 Nf6 12.O-O-O Qc7 13.h3 h5 14.Kb1
O-O-O 15.g4 hxg4 16.hxg4 Rxh1 17.Rxh1 Nxc4 18.Ne4 Bg7 19.Rh7 Bxd4
20.Ng5 Bf6 21.Nxf7 Rd7 22.Nf4 Rxf7 23.Nxe6 Qe5 0-1

Stonewall Attack

1. d4 d5 2. e3 with f2-f4

The idea behind the opening

White hopes to strangle the centre with f4 then kick in the King's-side with Bf1-d3xh7+. It can work - if Black assumes there is no danger! It's also not a bad idea for Black, because White is usually less defensive.

How to play against this opening

If you think about it, White is trying to attack without the Bc1, and that means attacking without the Ra1! Because White has been so obvious, Black can easily organise a defence. But you must organise one - just developing without thinking will let White carry out the plan. Don't be in a hurry to castle into an attack!

One nice idea is

2...Nf6 3. Bd3 Nc6!

Now:

4. f4 Nb4! 5. Be2 Bf5!

4. c3 e5!

If this is not your style, another nice idea is 3...g6, which stops the Bxh7 trick, or play 3...Bg4 with the idea of ...e6 and ...Bf5! or 3...g6 with the idea of ...Bf5.

Oskum - Euwe Scheveningen, 1920

1.d4 d5 2.e3 Nf6 3.Bd3 c5 4.c3 Nc6 5.f4 Bg4 6.Nf3 e6 7.Nbd2 Bd6 8.g3 Rc8 9.O-O Nd7 10.Qe1 O-O 11.e4 cxd4 12.Nxd4 Qb6 13.Qf2 e5 14.exd5 Ne7 15.fxe5 Nxe5 16.Be4 f5 17.Ne6 fxe4 18.Qxb6 Rxf1+ 19.Kxf1 axb6 20.Nxe4 Bb8 21.Nf4 Rd8 22.Be3 Nc4 23.Bd4 Bxf4 24.gxf4 Nxd5 25.b3 Nce3+ 26.Kf2 Nc2 27.Rg1 Nxd4 28.cxd4 Bf5 29.Kf3 Bxe4+ 30.Kxe4 Nc3+ 31.Kd3 Nb5 32.Kc4 Nxd4 33.Rd1 b5+ 0-1

Example game

Provaznik,M - Klimus,V [D00] Moravia op ch, 1994

1.d4 d5 2.e3 Nf6 3.Bd3 c5 4.c3 c4 5.Bc2 Nc6 6.f4 Bg4 7.Nf3 Qd7 8.O-O e6 9.Nbd2 Be7 10.h3 Bh5 11.Qe1 Bg6 12.Bxg6 hxg6 13.Ne5 Qc7 14.Ndf3 Ne4 15.Bd2 Rh6 16.b3 Na5 17.b4 Nc6 18.Ng4 Rh7 19.Nge5 Bf6 20.Qb1 Bxe5 21.fxe5 Ne7 22.Qb2 Nf5 23.Rfe1 Nfg3 24.Reb1 g5 25.Nh2 f5 26.Be1 g4 27.Bxg3 Nxg3 28.hxg4 fxg4 29.Nxg4 Qf7 30.Nh2 Qh5 0-1

Blackmar-Diemer Gambit

1. d4 d5 2. e4

The idea behind the opening

White hopes that Black will take this Pawn and the f-Pawn, giving White extra time and open lines for an attack.

This can work very well:

Sawyer T - Overman A [D00] corr USCF Golden Knights SF, 1990

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 g6 6.Bc4 Bg7 7.O-O O-O 8.Qe1 Nbd7 9.Qh4 e6 10.Bg5 Qe8 11.Rae1 c6 12.Ne5 Nd5 13.Ne4 Nxe5 14.dxe5 Kh8 15.Bxd5 1-0

How to play against this opening

This opening works so well because most club players are rubbish at defence. So, to play against it, you either need to become better at defence then accept the gambit, or decline it and hope you haven't let White get away with anything else.

If you play the French Defence as Black, there can be no arguing with 2...e6 , transposing into your main defence to 1.e4. Or, you can decline it with moves like 4...Bf5 or 4...e3 , or accept it with **4...exf3 5. Nxf3**

I have a feeling the best way is to take it, but don't castle into an attack, first have a hack at the White centre.

Example game

Drueke,V - Regis,D [D00] Section P01 BDG Email Tourney (1), 01.07.1997

**1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 e6 6.Bg5 Be7 7.Bd3 c5 8.
dxc5 Qa5 9.0-0 Qxc5+ 10.Kh1 Nbd7 11.Qe1 a6**

We know have a little dance where Black tries to swap off Queens, and White tries to trap the Black Queen. All this costs White another Pawn.

12.Qh4 Qb4 13.Nd4 Qxb2 14.Nce2 Ne5 15.a4 Qb6

White thinks the time is right to blast a way through to the Black King, but...

16.Rxf6 gxf6 0-1

...17. Bxf6 Qd8!

None of my own work: I read it all in a book.

[Dr. Dave](#)

Exeter Chess Club: Mini Chess Games for Beginning Chess Players

See also some great [active chess games for](#)

[juniors](#) from Sverre.

How should we first learn the game of chess?

Nimzovitch had some interesting things to say about learning chess: rather than learn about all the pieces, do one at a time, and learn its strategical properties:

e.g. The Rook. Moves of the Rook. Control of ranks and files. Doubling on the file. The seventh rank...

and so on - chess rather than mere moves.

Similarly, it has been said that one of the best things about the old Soviet approach is that they used to teach the game backwards: that is,

*first learn to mate with two Queens (and King) against bare King
then mate with one Queen
then mate with one Rook
then two Bishops [[Mate with Two Bishops](#)]
then learn how to win with King and Pawn against King
then King and two Pawns against King and Pawn, etc.*

I don't even know if it's true, but it sounds good: get the basics right at the start.

Anyway, however you learned, here are some exercises to practice. You will find others marked in boxes elsewhere in these pages.

Games for One

- There are very many self-test books and programmes available for tactical play. For Beginners I like Tony Gillam's books **Simple Chess Tactics** and **Simple Checkmates**; after which you can try Chernev and Reinfeld's **Winning Chess**. For club players I know of nothing better than Livshitz' series called **Test Your Chess IQ** - there are volumes for ELO 1600, 2000 and 2200+. On-line there are tactical tests at [Chess Archives](#) for beginners and more advanced players, and there is a demo version of the **Art of Chess Tactics** programme available (look for ctdemo.arj).
- For strategy and endgames the best resources are IMHO the games and notes of the masters. See also **Winning Endgames** by Tony Kosten, **Pandolfini's compete endgame course** and the **Little Chessercises** in Pandolfini's book **Chessercises** .
- Play a computer. If you have a PC computer like an IBM type, Mac or Amiga there should be a version of GNU chess available free via ftp from the [Internet Chess Library](#) ([Chess Space: Programs Index](#)). To start with, make a programme move fast and/or on low level, and it will probably make enough blunders for a beginner to survive.

Games for Two

- Mating Race: Player 1 takes White K+Q against Player 2 Black K only, in starting positions. Black moves first: how many White moves does it take for player 1 to mate? Start again, remove White Q and put Black Q on board, White moves first. How many Black moves?
- Mating Race 2: Same as above with K+R against K.
- Mating Race 3: Same as above with K+B+B against K. [[Mate with Two Bishops](#)]
- Pawn Race: Same as above with K+e-pawn (on e2) against K. Try with White to move first (should be a win!) and with Black (should be a draw!).
Variations: try with f-pawn, g-pawn, h-pawn... try with 2 pawns vs. one, 2 vs. 2 symmetrical, 2(bc) vs. 2(cd).
- Pawn power: play with just your King and pawns each.
Variations:
(1) White plays with only abc pawns, Black with only fgh;
(2) White plays with only abcdefg pawns, Black with only bcdefgh;
(3) play with Ruy Lopez Exchange Variation pawn structure i.e. White pawns on a2,b2,c2,e4,f2,g2,h2, Black pawns on a6,b7,c7,c6,f7,g7,h7. Swap sides in each game.
...etc!
- "*Play the pawn game recommended by GM Lev Alburt and Roman Pelts in their COMPREHENSIVE CHESS COURSE. Set up all pawns in their normal starting positions, with NO OTHER PIECES on the board. Play continues normally, all pawn moves (including en passant) as in a regular game.*

You win the game if: a) You capture all of your opponent's pawns; b) you get any pawn to a queening square; c) your opponent has no legal moves, but you still have a legal move.

The game is drawn if: a) you agree to a draw; b) neither side has a legal move (all pawns are blockaded). This is more challenging than it first appears, and I have had a number of reports from parents of a 5 or 6 year old beating them at the pawn game. ;)" -- Duif

[This is very much like an 8x8 version of the old 3x3 computer game of [hexapawn](#), which you can [play on different sized boards](#)]

- Rook Ending: play with Ke1+Rf1+Pf2 against Ke8+Rf8. **Variations:** try different pawns a-h, two pawns, two pawns vs. one...
- Cut-down chess games: Play with K+8p each and...
 - just the rooks
 - just the bishops
 - just the knights
 - just the queens

- o just the minor pieces (knights and bishops)
- o just the major pieces (queen and rooks)

Exercises

There are also a few chess exercises that are worth checking out:

the well-known **knight's tour** (visit each square on a board ONCE with a knight: there's a [Solution](#) here and a [Windows programme](#) to practice with!) and the [eight queens puzzle](#) (place eight queens on a chessboard so no queen attacks another).

The Number of Knight's Tours Equals 13,267,364,410,532, so you should be able to find one, eh? ([Counting with Binary Decision Diagrams. Abstract: Comments on: Martin Loebbing and Ingo Wegener, The Number P.S.](#)).

There's a couple of evil ones I have come across for Knight and Bishop:

Knight puzzle: Visit in turn the squares a1-h1, h2-a2, a3-h3 WITHOUT ever moving to a square occupied or attacked by a Black Pawn. Not too difficult, but can you beat 5 minutes against the clock?

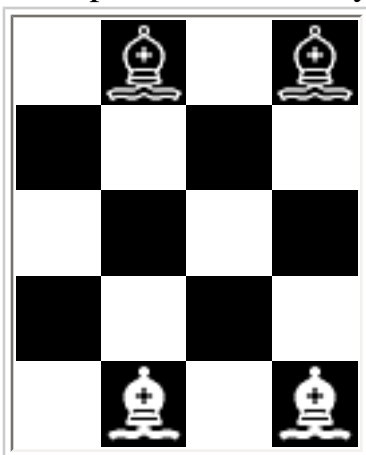

Knight puzzle: Exchange the positions of the White and Black Knights.

[SOLUTION](#) from Alexander Doskey

Bishop puzzle: Exchange the positions of the White and Black Bishops WITHOUT ever allowing a Bishop to be attacked by an enemy Bishop. You may make more than one move for each side at a turn.

[SOLUTION](#) from Alexander Doskey

Does anybody know any puzzles for Rooks or Kings?

Exeter Chess Club: Trawled from the 'Net

From Sverre.Johnsen@dnv.com Fri Nov 21 12:27:48 1997

Anyway these activities are very popular in Norway. When organizing summer camps or larger team competitions we always try to find some time for social/ physical activities like "relay-chess", "basket chess" or "chat-team" competitions. A brief explanation:

RELAY-CHESS

This is a competition between two teams. It is basically an ordinary game of chess where the teams have to run a bit to do their moves. They can each have from 2 to app.12 players. It is not necessary for the teams to have the same number of players.

Both teams are lined up some distance from the board. (10-50 m depending on how long time they are given) They each get e.g. 10 minutes on the chess clock. The first player on team A (white) runs to the board, makes his first move and presses the clock button. When he has started team B's clock, the first player on team B runs to the board, makes his move starts the clock. When he has pressed the button the second player on team A may start running, but only if the first player on the team has found his place at the end of the queue.

As in an ordinary game of chess you can either win on time or by mating. The longer running distance and the shorter time limits the more important it is to run quickly. And the fewer players on each team, the more exhausting it will be. The blunder rate often increases considerably because of the time pressure and because the teams will rarely have a consistent idea behind their moves.

Be sure that the rules are made clear before the game starts: Is it allowed to shout advices to the player to move? What happens if there is an illegal move? Do you have to stop your own clock to claim a win on time?

BASKET CHESS

This too is a typical outdoor activity but between single players. The idea is that if you captures a piece you have to throw it into a

basket before you can press your clock. If you misses you will have to run some penalty rounds. If you misses with a pawn it will be just one round, if you misses with a knight or a bishop it will be three, a rook will be five and a queen will be ten (or nine if you prefer). You can vary the running and throwing distances depending on how "physical" you want the game to be.

Usually this kind of chess is also very entertaining for the spectators. In some time pressure situations you may see players sacrificing their queen on g7 in the hope that their opponent will miss the throwing and have to run the ten penalty rounds.

CHAT TEAMS

This really is multiple consultation games. Contrary to the outdoor activities this may be very instructive in addition to being noisy and entertaining. The basic model is four players on each team but the match being played over five board. The teams are free to communicate and to allocate their players as they want to.

Most usual is to give the strongest player two boards to start with and the others one each. When a game is finished the players move over to other to give advise or take over games from weaker teammates. But I have also seen teams letting their strongest player play simultaneously on all boards just leaving to his teammates to do obvious recaptures and press the clocks.

If you want to give the match a twist you may set different time limits on the different boards or you may let one of the games (perhaps played on an outdoor set) be played for two points (one point for a draw).

I often set one additional rule: After three warnings from the arbiter for shouting or non-constructive criticism a point may be deducted from the team's score.

[Dr. Dave](#)

Exeter Chess Club: Mate with two Bishops

Mate is possible with two Bishops against a bare King.

It is only possible to achieve this in the corner.

This sheet shows you how to get from A to B!

Sometimes when I tell people they need to do this for the BCF I am asked - how often do you ever

have to do this?

Well, it doesn't happen that often but the point of learning it isn't just so you can do it quickly in a match.

By practising this in you learn several things:

- using your King to attack in the endgame
- how the two Bishops can work well together
- how to cut off squares from your opponents King.

These are always useful to you. So let's try from the first diagram:

24.Ke2 The first priority is always to get your King up and working. **24...Kd5 25.Kd3 Ke5 26.Bh3 Kd5 27.Bb2 Kc5 28.Be6**

The two Bishops have shut the Black King in half of the board. **28...Kd6** Gaining time by attacking a Bishop. **29.Bg8 Kc5**

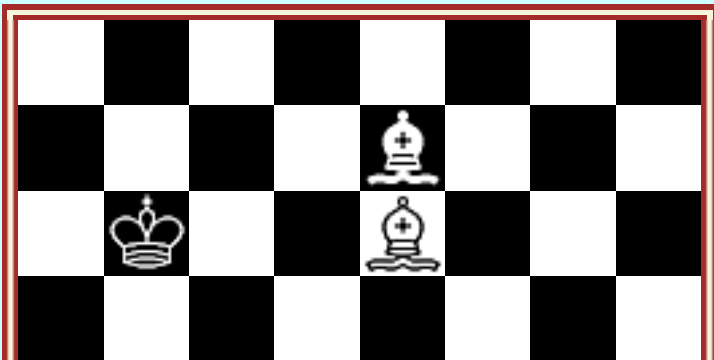

30.Ke4 [30.Ba3+ is also good here: usually if you give a check you let the Black King out, but here the White King stops it getting to d4.] **30...Kb4 31.Kd4 Kb5 32.Ba3 Ka4 33.Be7 Kb5**

34.Be6 White waits with a Bishop move so that the Black King must give way to the White King. **34...Kc6 35.Kc4 Kb6**

36.Bd7 The fence made by the two Bishops is moved another step towards the corner. The Black King tries to gain time by chasing the Bishops, but that doesn't last long. **36...Kc7 37.Be8 Kb6**

38.Bd8+ Another step. **38...Kb7 39.Kb5** The King can at last advance again. **39...Kc8 40.Ba5 Kb7 41.Bd7 Ka7**

One more trick to get force the Black King back. **42.Bc6 Kb8 43.Ka6 Kc8**

Nearly there. Another waiting move: **44.Be8 Kb8 45.Bd7** And the King can't retreat. **45...Ka8**

Now, this is important. The King is now in the corner and our King is cutting off lots of important squares. So we can arrange mate, being careful neither to allow the Black King to escape nor allow

stalemate. **46.Bb4**

[46.Bc7 ...is stalemate! So we must move the dark-squared Bishop to this diagonal with check.]

46...Kb8 47.Bd6+ Ka8 48.Bc6#

Success!

Exeter Chess Club: Knight's Tour P.S.

Gunno Toernberg tells me he has been working on a computer approach to the problem: you can see his endeavours at: <http://w1.859.telia.com/~u85905224/knight/eknight.htm> where you can have ago on his Java board.

Comments on: Martin Loebbing and Ingo Wegener, The Number of Knight's Tours Equals 33,439,123,484,294 --- Counting with Binary Decision Diagrams

Comment by the authors, May 15, 1996:

The number of knight's tours given in the paper is incorrect, since the correct number must be divisible by 4. The method and the running time are correct. We will re-run the computations, which involves the use of many computers, and announce the results here when they are available.

Comment from Brendan McKay, Feb 18, 1997:

I have recomputed the number of knight's tours using another method, and obtained the answer 13,267,364,410,532. A description is available in PostScript. [Technical Report TR-CS-97-03, Department of Computer Science, Australian National University (1997).]

[Dr. Dave](#)

Exeter Chess Club: Solutions to exercises (Alexander Doskey)

Bishops Puzzle:

I hope you will forgive my algebraic notation, but I found it easier to read (since we know every move is a bishop).

White bishops start at b1 and d1,
Black bishops start at b5 and d5.

01. b1-c2
02. d5-a2
03. b5-c4
04. c2-a4
05. a2-b1
06. c4-d3
07. a4-b3
08. b3-d5
09. d3-b5 (board is symmetrical)
10. b1-d3
11. d1-b3
12. b3-a2
13. d3-c2
14. b5-a4
15. a2-c4
16. c2-b1
17. a4-d1
18. c4-b5

This was not the first solution that I found, but I liked it because it was symmetrical. Once you get to step 9 you are basically undoing all the steps you have done.

Alexander Doskey

Knights Puzzle:

1. Nd2 Nb4
2. Nc4 Nc2
3. Na5 Na1
4. Nb2 Nc3
5. Nd3 Na2
6. Nc5 Nc1
7. Nc4 Na2
8. Na3 Nc3
9. Nd3 Nd1
10. Nb5 Nb3
11. Nb4 Nd2
12. Nd5 Nb1

Alexander Doskey solves a harder version with four Knights each!

White Knights start in a1 through d1,
Black Knights start in a5 through d5.

01. b1-d2
02. d1-b2
03. d5-c3
04. a1-c2
05. c2-b4
06. b5-d4
07. c3-b5
08. b4-d5
09. d2-b1
10. c1-a2
11. a2-b4
12. c5-b3
13. b3-c1
14. b2-a4
15. a4-c5
16. a5-c4
17. c4-b2
18. b2-d1
19. b1-d2
20. d2-c4
21. c4-a5
22. b5-a3

23. a3-b1
24. b1-d2
25. d1-b2
26. d5-c3
27. b4-d5
28. d4-c2
29. c2-a1
30. c3-b5
31. d2-b1
32. b2-d1

Solving the knights puzzle wasn't too difficult, but it did take me a few tries.

What was time consuming (extensive enumeration) was trying to find the shortest solution (something that looked elegant, not like just trial and error).

Alexander Doskey

Is this any shorter?

[Dr. Dave](#)

A Disaster in the Stonewall.

Alsop,A - Blundell,J [D00] East Devon Minor (Exeter) (4), 05.03.2000

1.d4 d5 2.e3 Nf6 3.Bd3 Nc6 4.f4 e6 5.Nf3 Bd6 6.Nbd2 0-0 7.0-0 Re8 8.Ne5 Bd7 9.g4 Nb4 10.Be2 b6 11.c3 Nc6 12.g5 Ne4 13.Rf3 Nxd2 14.Bxd2 a5 15.Rh3 Nxe5 16.dxe5 Be7 17.Bd3 g6 18.Qg4 f5 19.exf6 e5 20.f5 gxf5 21.Bxf5 Bxf5 22.Qxf5 Qc8 23.Qxh7+ Kf8 24.Qg7# 1-0

What went wrong here? Play over this game twice, once fairly quickly to see how it went, and then again slowly to see what went on in more detail, and think of other ideas.

Lessons from this game:

1. **Play with a plan** . If you understand the ideas behind your chosen openings you have a big advantage over your opponent and can often win games very quickly. In this game White played with one idea - to lock up the centre then attack the King's-side - and carried it out. Black went from move to move without making any huge mistakes, but this is not enough.
2. **If you think your opponent will stop your plan, play it straight away!** Black did have one chance to play ...c5, but in trying to make it better, lost the chance.
3. **Open a file for your Rooks** . Rooks are worth half a Queen each, and if you don't get them working, it's like being a Queen behind! When you plan where to put your pieces in the opening, you must also think about your Rooks. In this game Black suffered from not getting the c-file open for his Rooks. This started to go wrong at move 3!
4. **Don't castle into an attack** . In this game White was 'pointing' towards the King's-side. If Black had blocked this attack - or not castled King's-side - White's pieces might have been on silly squares.
5. **Swap off your opponent's good pieces, keep your own** . Black swapped his good Ne4 for a duff White piece on d2, but he did have the good idea of exchanging the Nc6 for the Bd3. Without the Bd3 White would be pretty planless.

None of these criticisms are made because Black is a poor player, it's just very hard to play positions where you don't know what to do. It takes a lot of experience before you can plan what to do in positions you haven't seen before, but it is possible to pinch ideas from other people. So, try to play positions you understand, try to understand the positions you play.

Detailed notes:

Alsop,A - Blundell,J [D00] East Devon Minor (Exeter) (4), 05.03.2000

1.d4 d5 2.e3 Nf6 3.Bd3 Nc6

Already I worry about how your Rooks are going to get out! You need to get in ...c7-c5 or ...e7-e5, and after this move I can't see you getting either of these in. This move is actually part of a reasonable plan, but I don't think you played it as part of a plan, I think you just played it!

4.f4

4...e6

Blocking in the poor Bc8.

[4...Nb4 5.Be2 Bf5 6.Na3 c5 7.c3 Nc6 8.dxc5 e5]

5.Nf3 Bd6 6.Nbd2 0-0

Into White's clockwork attack, I'm afraid.

7.0-0 Re8

The Rook has no future here.

8.Ne5 Bd7 9.g4 Nb4 10.Be2

10...b6

[10...c5 immediately!]

11.c3 Nc6 12.g5 Ne4 13.Rf3

13...Nxd2

That was your best piece!

14.Bxd2 a5 15.Rh3

Ready or not, here we come.

15...Nxe5

[15...f6 planning ...e6-e5 might have been worth a try]

16.dxe5 Be7 17.Bd3 g6 18.Qg4 f5 19.exf6 e5 20.f5 gxf5

[20...e4; 20...Qc8]

(T) In effect - we transposed to the opening by a non-standard series of moves.

Last time I came to an U14 jamboree, I sent around some notes, which said:

"You could all do with knowing a defence to 1.d4 and a line for White against the French Defence, and I don't want to see any more Old Stodges."

This year I would say exactly the same!

...except that you also need a line against the Sicilian.

The most common openings were:

Old Stodge [Giuoco Pianissimo] (7 games)

If you are still winning with this wretched opening, it's despite it not because of it. It's horrid, blocked and stodgy and difficult, and I don't think I saw it played properly once by anybody.

That might surprise you, given how often this opening is used by players of all ages. But the more I see of it, the less I like it.

I think you all understand how to play the first 5 moves or so but once the first few pieces are out then the sixth and seventh moves are usually do-nothing moves or are actually mistakes. Ryan (R3) came up with 7.Qe1, which is not part of the normal plans, and Sophie (R2) came up with a3 b3 and h3, all do-nothing moves.

By that stage of the opening you should have a plan and be sticking to it, and I don't think you know, or think up, very good plans in that system.

Also, castling King's-side can be a real mistake! Do you know why?

If your King's Knight gets pinned (Bg5), your opponent threatens to make it hurt after Nd5...

...you want to be able to chase the Bishop away straight away (...h6/...g5)

But if you do that in front of a castled King, you might walk into a deadly Knight sacrifice (Nxg5) or an even more deadly Bishop sacrifice (h4)!

Try these on a board, and find the ideas that can make these sacrifices work. It's part of why I don't like this system, that such a natural move as castling can be a mistake.

There are two basic plans for White that are any good at all:

1. Pin the King's Knight and put pressure on it, and the squares around it.

2. Roll up the centre with c3 and d3-d4

The first move of the Canal Variation [6.Bg5] is a way of starting both plans at once, and is the best move.

Two points mainly for Black

❶ With the Two Knights' move order, Black can stop White playing Old Stodge in the usual way

If White replies 4. Nc3...

...Black can play the surprise temporary sacrifice 4...Nxe4 and gets an easy open game no matter how White responds.

Lots of you missed this trick. It works in lots of similar positions, but not when you have a Bishop on c5 – can you see why?

❷ White sometimes plays Be3 to oppose your best minor piece.

If you swap off, you give White extra control of the centre and a half-open f-file aiming at your King.

Just drop the Bishop back to b6, and all remains safe.

I suppose I give all this detail because I know it will still get played no matter what...

(for more details see: <http://www.ex.ac.uk/sheu/DR/Openings/nomoregp.html>)

Sicilian Defence (4)

1. Only our opponents played this, so I guess you want to know how to play this for White.

2. DON'T play normal Old Stodge moves against unusual openings without thinking about it first

3. You can get your Bishop chased, blocked or even caught by the Black Pawns

4. The Bishop doesn't belong on c4 against the Sicilian Defence unless you have opened up the centre with d4

5. The Bishop doesn't belong on c4 against the French Defence either, it just walks into ...d7-d5

6. And the Bishop doesn't belong on c4 against the Caro-Kann Defence for the same reasons

So what do you play?

There are three basic attacking formations for White against the half-open defences like the French and Sicilian.

❶ Fast attacking game with d4 and open centre. [In the Sicilian, Black will swap off your d-Pawn, or should do!]

❷ Slower attack with f4 and a closed centre, maybe pushing forward with e5 to gain space.

❸ King's Indian Attack with a closed or flexible centre.
