Success in chess, as in all sports, requires not only skill but other qualities such as determination and a positive mental attitude. I thoroughly recommend Simon Webb's book **Chess for Tigers** for help in developing the best attitudes for competitive success.

For many years, British players were regarded as a "*soft-touch*" by foreign masters because they lacked stamina and determination and were too eager to accept draws. Obviously, if a draw is all you need to win the tournament, then it would be silly to play all-out for a win, but in general, if you want to succeed in chess you need to get into the habit of always playing to win and always being prepared, mentally and physically, to play long, hard games. Some quotations to inspire you:

IM Simon Webb in **Chess for Tigers**: "*A game of chess is never drawn until it's drawn. (...) All too frequently players agree draws in level positions, without realising that there are ways of winning these positions against a careless opponent.*"

American GM Andrew Soltis in **Confessions of a Grandmaster**: "*A few years ago, John Fedorowicz was described as having become 'one of the deepest*

strategic thinkers in American chess'. When I told 'the Fed' about that, he replied, 'Yeah? Well, my new strategy is just to stop taking draws.'"

Soltis again, referring to the advice of American IM Norman Weinstein: "*You can't expect to go through a tournament without losing. Losing is part of the game, like hitting your clock and writing down the moves. And you can't expect to do well just by offering draws when you think you're in trouble or in an unknown position.' I realized that I had become more concerned with not losing than with winning. I decided to stop worrying about norms and ratings and the gnawing feeling you get when you lose, and see what happened. It worked.*"

Canadian IM Lawrence Day writing recently in the top American magazine **Inside Chess**: "*Imagine two guys, one who always draws and the other who alternates winning six and losing six. After a year, they have the same number of points and the same ratings. The difference is that the risk player has a big pile of money, while the drawmaster made nothing.*"

2) The will to win

From a discussion on the internet, plus some ideas gleaned from Ariel Mengarini:

Many people love chess but somehow when they sit down to play a match or tournament game, they find it difficult to produce their best effort. Somehow they find it difficult to stay focused and to summon up the necessary concentration. It is as if the will to win has drained away.

Do this every time. Before you start play, think of these 3 things:

- 1) How much time and effort and money you have already spent on chess.
I'd better win, otherwise that was all pretty stupid of me
- 2) All the other things that you could be doing instead.
I'd better win, otherwise I am stupid right now for wasting my time
- 3) How bad it feels to lose.
I'd better win, because I hate the feeling I get when I lose!

NERVES

OK, you've decided to give it your best shot, you've worked on building up your will to win. The problem is, you now feel nervous and jittery, and now that is affecting your concentration! What should

you do?

You have to be able to come to terms with an important paradox:

a) you have decided to devote some hours of your life every week to chess; your time is valuable, therefore it is worth giving it your very best, so concentrate!

b) yet, you must admit, in the "*great scheme of things*", in the "*big picture*", the result of one game of chess is utterly trivial, so RELAX!

So, the ideal is relaxed concentration.

Fear of losing

Everybody hates losing, but for good results it is important during the game to play without any FEAR of losing. Negative emotions affect your motivation and depress your level of brain efficiency. A game of chess is a fight; you must learn to love the fight itself, and play fearlessly.

Best Wishes,

--

Phil Adams

Exeter Chess Club: Rules for attack

Steinitz' rules of attack (from Kotov/Chernev)

1. In chess, only the attacker wins. Defenders win only when the attacker makes a mistake, OR if the attacker had no right to attack in the first place. Even then, the defender must become the attacker to win.
 2. The right to attack belongs only to that side which has the better position - a positional advantage of some sort.
 3. If you have the advantage, you have not only a right to attack, but also a duty to attack, otherwise there is the risk of losing the advantage.
 4. The attack is to be directed against the weakest spot in the opposing position.
 5. The defending side must be prepared to defend and make concessions, or take a risk and try a counter-attack.
 6. An attack undertaken without sufficient positional basis must be repelled with best play, and will lead to a disadvantage for the prospective attacker.
-

Vukovic's Guidelines for attack

1. If you attack the king, make sure that either your opponent cannot counterattack, or at least that your attack is more quick or more dangerous.
2. So, you must look at the whole board, and the chances for both sides, when deciding whether to attack or not.
3. Security in the centre lends support to a wing attack. A central pawn blockade prevents or limits counter-attacks, and makes a pawn attack easier.
4. This is particularly true of attacks with pawns, which must creep forward more slowly than other pieces. If you can make an attack with pieces alone, leave your pawns at home.
5. If you already have a pawn advanced, e.g. to f5, which may block your bishop on the diagonal b1-h7, then you might be better off going for a pawn storm by advancing the g-pawn.
6. As a rule, it is difficult to break through with pawns against the unweakened castled king's position. This is because the pawn wave can be blockaded.
7. So, it is usually important to weaken the castled position first (e.g. by ganging up on h7 you might force ...g6 or ...h6).
8. Pawns don't half get in the way of rooks. If you cannot open a file, you can often get your rooks into action in front of your pawns, for example, by

playing them to the third rank.

9. Pawn advances loosen your position, and may be a disadvantage in the ending.
10. Although you must be careful before starting an attack, once you have started you must go in as hard and fast as you can. This is even more important if you realise you shouldn't have started the attack quite yet - if you try to back out you will only make things worse.

[Dr. Dave](#)

Exeter Chess Club:The Very Slow King's-side Attack

I often talk about "clockwork attacks". They are characterised by:

- closed or at least stable centre
- King's-side attack based on stereotyped attacking plan
- attack based not so much on domination of space and time but on lack of opponent's counterplay.

These attacking lines are to be found in many openings

- [Stonewall Attack and Stonewall Variation of the Dutch Defence](#)
- [Ruy Lopez, Andersson-Steinitz variation](#)
- [Ruy Lopez, Delayed Exchange Variation](#)
- [Closed Sicilian](#)
- [Grand Prix Attack against the Sicilian](#)
- [King's Indian Defence and King's Indian Attack](#)

You may be able to think of other "system" openings which often yield an easy-to-play attack, like the [Colle System](#), [London System](#) and perhaps the [Torre system](#). To some extent the standard h-file attack against a King castled behind a fianchettoed Bishop also fits into this category, as seen in the [Dragon Variation of the Sicilian](#) and the [Pirc Defence](#).

As an attacker, the idea is to keep moving pieces up to the King's-side until you checkmate your opponent. The reason these often work so well in club play is that the defending side will often play sensible-looking solid moves until it is far too late to stop the defences collapsing. A much more vigorous approach is required in defence.

So, as defender, you must do at least one of the following:

- arrange a powerful counterattack against the opponent's King (as in the [Sicilian Dragon](#))
- arrange a powerful counterattack against the opponent's Queen's-side (as in the [Closed Sicilian](#) and [King's Indian Attack against the French Defence](#))
- arrange an explosion in the centre (often in the [Sicilian](#) and [London System](#))
- avoid committing your King to the side where it may be attacked

So, as the attacker, you must keep an eye on your opponent's counterplay.

As you see from the links above, you can find examples of these clockwork attacks throughout the [Openings handouts](#), but the examples here should give you the idea:

Kortchnoi,Viktor - Fischer,Robert J (blitz) [E97] 1970

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. Be2 O-O 6. Nf3 e5 7. O-O Nc6 8. d5 Ne7 9. Nd2 c5 10. a3 Ne8 11. b4 b6 12. Rb1 f5 13. f3 f4

The centre is completely blocked, and so all the play is going to be on the wings. Any pawn move by White on the King's-side will leave him with further points of attack for Black, so White presses on on the Queen's-side.

14. a4 g5 15. a5 Rf6 16. bxc5 bxc5 17. Nb3 Rg6 18. Bd2 Nf6 19. Kh1 g4
20. fxg4 Nxg4 21. Rf3 Rh6

22. h3 Ng6 23. Kg1 Nf6

24. Be1 Nh8 25. Rd3 Nf7 26. Bf3 Ng5 27. Qe2 Rg6 28. Kf1

28... Nxf3 29. gxf3 Bxf3+ 30. Kf2 Ng4+ 31. Bxg4 Bxg4 0-1

It is easy to understand the appeal of the King's Indian after such a game.

Fischer, Robert J - Miagmarsuren, Lahmsuran (Sousse) 1967

1. e4 e6 2. d3 d5 3. Nd2 Nf6 4. g3 c5 5. Bg2 Nc6 6. Ngf3 Be7 7. O-O O-O 8.
e5 Nd7 9. Re1 b5 10. Nf1 b4 11. h4 a5 12. Bf4 a4

This is the same idea, with White. There are differences:

Black has adopted a more modest central posture than White does in the King's Indian Defence

the central pawn structure is more fluid

Black has gone hard on the Queen's-side and is starting to make real gains; so, White must pause for a defensive move. White's next was seen as innovative at the time:

13. a3! bxa3 14. bxa3 Na5

[14... Nd4 15. Ne3 Ba6 16. c4 dxc4

[Fritz gives 16... Nb3 17. cxd5 Nxa1 18. Qxa1 exd5 19. Nxd5 Bxd3 20. e6 Nf6 21. Nxe7+ Qxe7 22. Ne5 Bg6 23. Nc6 Qb7 24. Bd6]

17. Nxd4]

15. Ne3 Ba6 16. Bh3 d4

Which way should White jump?

17. Nf1 Nb6 18. Ng5 Nd5

White's Queen has access to h5, which makes Black decide to concede B for N. This leaves White with the idea of assaulting the dark squares.

19. Bd2 Bxg5 20. Bxg5 Qd7 21. Qh5 Rfc8 22. Nd2 Nc3

23. Bf6 Qe8

[23... gxf6 24. exf6 Kh8]

24. Ne4 g6 25. Qg5 Nxe4 26. Rxe4

They think it's all over...

26... c4 27. h5 cxd3 28. Rh4 Ra7 29. Bg2 dxc2 30. Qh6 Qf8 31. Qxh7+ 1-0 ...it is now.

Psakhis - Kasparov (La Manga) 1990

1. c4 g6 2. Nc3 Bg7 3. g3 Nc6 4. Bg2 d6 5. Nf3 e5 6. d3 f5 7. O-O Nf6 8. Rb1 h6

The mutual control of d4/d5 means that although the central pawns are not locked, the centre is likely to remain closed. So we have a battle on each wing.

9. b4 O-O 10. b5 Ne7 11. a4 Be6 12. Ba3 Rc8 13. Nd2 b6

Again, a prudent measure. White will have to re-arrange to get in a5, so changes tack

**14. e3 g5 15. d4 exd4 16. exd4 f4 17. Re1 Bg4 18. Nf3 Qd7 19. c5 Rce8
20. Rc1 Nf5 21. Qd3 Kh8 22. cxd6 cxd6 23. Rxe8 Qxe8 24. Rf1 Qh5**

There is a dark storm cloud over White's King.

25. Ne4 Nxe4 26. Qxe4 Bh3 27. Ne5 Bxg2 28. Kxg2 g4 29. Bxd6 Rf6 30. Bb8

Qh3+ 0-1

Rogers, I - Carton, N [A26] London

1. c4 Nf6 2. Nc3 e5 3. g3 g6 4. Bg2 Bg7 5. e4 d6 6. Nge2 Nc6 7. d3 O-O 8. O-O

This is an interesting formation, kin to the Closed Sicilian. White clamps the centre shut and goes creeping up on the King's-side. Black's prospects of successful Queen-side counterplay are less than in the Closed Sicilian because of the pawn on c4. Here Black decides to slug it out toe to toe on the King's-side, but in this game White's initiative prevails.

8... Nh5 9. f4 f5

10. Be3 Be6 11. Nd5 Qd7 12. Qd2 Rae8 13. Rae1 Nf6 14. Kh1 Rf7 15. b3 fxe4 16. dxe4 Bh3 17. Nxf6+ Rxf6 18. Nc3 exf4 19. gxf4 Bxg2+ 20. Qxg2 Rfe6 21. Bd2 Nd4 22. Rd1 b5 23. f5

1-0

Exeter Chess Club: Dutch Stonewall

Playing Black against QP openings

An Exeter Junior Chess Club Booklet

P.S. I had another think about this and the Cambridge springs and came up with the more comprehensive [Playing Black against 1. d4](#) booklet, which has more examples and variations, including [Unusual variations of the Dutch Defence](#). That is for better players and older juniors, I think; this one is just to get you started.

The Stonewall as White

Reuben Fine gives this magnificent line as an example of what you are trying to do in the Stonewall system: **1. d4 d5 2. e3 Nf6 3. Bd3**

3... c5

4. c3 Nc6 5. f4

This the basic Stonewall set-up.

5... e6 blocks the Bc8
6. Nf3 Bd6 7. O-O O-O 8. Ne5 Qc7
9. Nd2 Re8 10. g4

with a crushing attack

Great! Got the idea? Well, it's not always like that, Black has several improvements: **1. d4 d5 2. e3 Nf6 3. Bd3**

[3. f4 is sometimes played to avoid the 3...Nc6 line]

3... c5

[3... Nc6 4. f4

[4. c3 e5]

4... Nb4 5. Nf3 Nxd3+ 6. cxd3 g6 7. Nc3 Bg7 8. O-O O-O=]

4. c3 Nc6 5. f4

5... e6 blocks the Bc8

so [5... Bg4 6. Nf3 e6 7. Nbd2 Bd6 8. h3 Bh5 9. b3 cxd4 10. cxd4 Rc8

and Black is comfortable]

6. Nf3 Bd6 7. O-O O-O 8. Ne5 Qc7

Ne5 needs some better response; Black could also try to occupy e4

Anyhow, that's the inspiration. Pillsbury even found a way to impose this sort of attack on the Queen's Gambit, with the Bc1 developed actively at g5, and [this idea](#) is worth looking at one day too.

The Stonewall as Black

Because of these improved Black lines, you don't see the Stonewall Opening much, and, since Black has also learned how to play the Queen's Gambit Declined, you don't see the related Pillsbury formation often either. One place where the Stonewall formation will not go away is Black playing it in the Dutch Defence. Why hasn't this line died too?

White, starting first, is usually trying to get an advantage and won't play just to equalise with moves like Bf4, Bxd6, Ne5 and f4. Instead, White will often adopt an attacking formation on the Queen's side to start with and so there is a tendency for each side to attack on opposite sides.

White often plays g3 and Bg2, creating a slow game with a slightly weakened King's side. Black can hope to get the ...f4 break in at some point.

This may help explain why you see the Stonewall is a better idea played a move behind in the Dutch Defence than played straight away as White. Perhaps the real reason is that World Champion Mikhail Botvinnik kept playing and winning with it for decades. Take a look at this:

Rabinovitch - Botvinnik (Ussr Ch'p, 1927)

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Be7 5. Nc3 O-O 6. Nf3 d5 7. O-O c6 8. Qc2 Qe8 9. Bf4 Qh5 10. Rad1 Nbd7 11. b3 Ne4 12. Ne5 Ng5

[12... Bf6 is better, says MB]

13. h4

[13. f3 Nh3+ 14. Bxh3 Qxh3 15. e4 += MB]

13... Ne4 14. Bf3 Qe8 15. Nxd7 Bxd7 16. Kg2 Bb4

White seems to have defended more than got on with his own plans. He now makes a mistake: 17. Bxe4 ?

17... fxe4 18. Rh1 Qh5 19. f3 Qg6 20. Kf1 e5 21. dxe5 Rxf4 22. gxf4

Black has some clear achievements: the open g-file, the two bishops, the upset White King.

22... Qg3 threatens ...Bc5/...e3

23. Nxe4 dxe4 24. Rxd7 Bc5 25. e3 Qxf3+ 26. Qf2 Qxh1+ 27. Ke2 Qh3 28. f5 Qg4
+ 29. Kd2 Rf8 30. e6 Qxf5 31. Qxf5 Rxf5 32. Rxb7 Rf2+ 33. Ke1 Rf6 34. b4 Bxe3
0-1

Another decisive King's side attack:

Steiner - Botvinnik, Groningen, 1946

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Bb4+ 5. Bd2 Be7 6. Nf3 d5 7. Nc3 c6 8. O-O O-O 9. Bf4 Qe8 10. Qc2
Qh5 11. Rae1 Nbd7 12. Nd2

Aiming at e4, but too slowly. Another plan is to attack c6 with the b-pawn.

12... g5 13. Bc7 Ne8 14. Be5 Nxe5 15. dxe5 f4

Black's plans are well-advanced; e4 will now be answered by ..f3

16. gxf4 gxf4 17. Nf3 Kh8 18. Kh1 Ng7 19. Qc1 Bd7 20. a3 Rf7 21. b4 Rg8

Making use of the open g-file

22. Rg1 Nf5 23. Nd1 Rfg7

Black has a winning position

24. Qxf4 Rg4 25. Qd2 Nh4 26. Ne3 Nxf3 27. exf3 Rh4 28. Nf1 Bg5

if the Q moves, ...Bf4 forces mate, so... 0-1

Here's an important game against a powerful rival.

Flohr - Botvinnik (10) Match, 1933

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Be7 5. Nc3 d5 6. Nf3 c6 7. O-O O-O 8. b3

[8. Bf4 is better, says Botvinnik, or 8. Qc2 Qe8 9. Bg5 with Bxf6]

8... Qe8 9. Bb2 Nbd7 10. Qd3

[10. Ng5 Bd6 11. f4 Botvinnik]

10... Qh5 11. cxd5

[11. Bc1 Botvinnik]

11... exd5 12. Nd2

[12. Ne1 and f4]

12... Ne4 13. f3

[13. f4 is now met by 13... Nxd2 14. Qxd2 Nf6 when White cannot really hope to get the N to e5]

13... Nxc3 14. Bxc3 f4 ! 15. Rfe1 Bd6 16. Nf1 Rf7 17. e3 fxg3 18. Nxg3 Qh4 19. Nf1 Nf6 20. Re2 Bd7 21. Be1 Qg5 22. Bg3 Bxg3 23. Nxg3 h5!

the final phase 24. f4 Qg4 25. Rf2 h4 26. Bf3

[26. h3 Qe6 27. Nf1 Ne4 is still -+]

26... hxg3 27. Bxg4 gxf2+ 28. Kg2 Nxf4 29. h3 Nf6 30. Kxf2 Ne4+ 0-1

And lastly, a more complicated game from an early tournament:

Yudovitch - Botvinnik, Leningrad 1934

1. c4 f5 2. d4 Nf6 3. g3 e6 4. Bg2 Be7 5. Nf3 d5 6. O-O O-O 7. Nc3 c6 8. Qc2 Qe8 9. Bf4

[9. Bg5 Chekhover]

9... Qh5 10. b3 Nbd7 11. Rad1 Kh8 12. Kh1 a loss of tempo, and perhaps not even a better square

12... Rg8 13. e3 g5 14. Bc7 Ne8 15. Be5+ Nxe5 16. Nxe5 Nf6 17. f3

the right plan

17... Bd6 18. e4 Nd7 19. g4

[19. Nxd7 Bxg3]

19... Qe8 20. Nxd7 Bxd7 21. e5 Bb4 22. gxf5 exf5 23. cxd5

23... Bxc3 24. dxc6 risky 24... Bxc6 25. Qxc3 Qe6 26. Qd2 Bd5 27. Rc1 Rg7 28. Rc2 f4 29. Qc1 Rag8
 30. h3 h5 31. Kg1 g4 32. hxg4 hxg4 33. Kf2 Rh7 34. Rh1 g3+ 35. Ke1 Rxh1+ 36. Bxh1 Qh6 37. Bg2

the last move before the time-check 37... Bc6

[37... Be6]

38. a4 Bd7 going for complications instead

[38... Bd5]

39. d5 Bf5 40. Rc7 Qh2 41. Qb2 Qg1+ 42. Bf1 Qe3+ 43. Be2 Be6 44. Qc2 Rg7

45. dxe6

[45. Rc8+ Bg8 46. Qf5 and Rxc8+, getting perpetual]

45... Qf2+ 46. Kd2 Qd4+ controlling d8 47. Ke1 Rxc7 0-1

It's rare that you get the chance to play the Stonewall and related formations in the King-pawn openings, but as you improve you will meet more players who use this 1.d4 line. They are well worth knowing about, if only to enjoy these terrific games!

Robert Bellin wrote a good book on the Classical Dutch which is now sadly out-of-print; otherwise you might want to consult a book like BCO2 for the latest piece placements and move orders.

The Stonewall has in fact undergone something of a resurgence recently, with top GMs like Short and Yusupov adding it to their repertoire. The modern treatment for both sides has improved: Whites now know about Petrosian's idea of installing Knights on f3 and d3 where they support both White's attack and defence; similarly, players of Black have experimented with different placings of the Bishops, trying out the Bc8 on b7 after ...b6 (thinking about ...c6-c5 later), and also playing the Bf8 to d6, which, if White tries to exchange with Bc1-a3, can be followed with ...Qd8-e7. Now, if White still insists on the exchange, the time-consuming a2-a4 and Nb1xa3-c2 are necessary. With this time available, Black can think about ...e6-e5. If White hasn't met the Dutch defence before, it's likely they will just play their usual old moves: the London system, the classical system or a Gambit.

The London system *d2-d4, Ng1-f3, Bc1-f4* is just asking for Black to play ...e7-e5, with a good game.

If White plays a classical Queen's Pawn game with *d2-d4 c2-c4 Ng1-f3 Nb1-c3 Bc1-g5 e2-e3 Bf1-d3* Black can get a good game with normal Dutch moves:

1.d4 f5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Be7 5.e3 0-0 6.Bd3 b6 7.Nge2 Bb7 8.0-0 Nh5 9.Bxe7 Qxe7 10.Ng3 Nxg3 11.hxg3 d6 12.f4 Nc6= (0-1,54) *Harrwitz,D - Morphy,P (5) Paris match, 1858.*

1.d4 e6 2.Nf3 f5 3.c4 Nf6 4.Bg5 Be7 5.Nc3 0-0 6.e3 b6 7.Bd3 Bb7 8.0-0 Qe8 9.Qe2 Ne4 10.Bxe7 Nxc3 11.bxc3 Qxe7 12.a4 Bxf3 13.Qxf3 Nc6 14.Rfb1 Rae8 =+ (1-0,52) *Capablanca,Jose - Tartakower,Savielly [A40] New York (06), 1924.* White went on to win this famous ending, but according to Robert Bellin, sometime British Champion and longtime Dutch defender, Black has the advantage because of his better Pawn structure.

When the Indian Defences were first mooted they were considered suspect - fancy giving away the centre like that, when White can fill it up with pawn moves like c2-c4, and e2-e4. While there are defenders of this classical viewpoint, all White players of 1.d2-d4 have learned to respect the counterpunching power of the Indian defences and many Black players use them.

So now there is another school of thought, saying White players can get better practical chances by avoiding the main lines after 2. c2-c4, and instead play with a more solid centre for activity on the wings, or perhaps playing a simple developmental move and only playing in the centre when Black's activity has been limited.

One other common theme is to play the Bc1 out early, to exchange off the Black Knight on f6 (the best defender of the castled King) and perhaps create weaknesses. We can see all these themes at work in the following game, where the wily Korchnoi leads the young Karpov up an unfamiliar alley and duffs him up:

Korchnoi-Karpov, Hastings 1974-5.

1. d4 Nf6 2. Nf3 e6 3. Bg5 b6 4. e4 h6 5. Bxf6 Qxf6 Black has the two bishops and an apparently easy game.

6. Bd3 Bb7 7. Nbd2 d6 8. Qe2 Now ...O-O-O will be met strongly by Ba6 and a2-a4. **8...a6 9. O-O-O Nd7 10. Kb1 e5 11. c3 Be7 12. Nc4 O-O 13. Bc2 Rfe8?! 14. d5 c5**

(Apparently sealing the fate of the White Bc2, but better was 14... c6: now the centre is closed on the Black bishops too and a King's-side attack appears out of nowhere)

**15. Ne3 Bf8 16. g4 Qd8 17. g5! h5! 18. g6 fxg6 19. Rhg1 Qf6 20. Ng5 Be7
21. Ne6 Nf8! 22. Nc7 Qf7 23. Rdf1 b5 24. Nxa8 Bxa8?!**

More counterplay was to be had through transferring the rook across. Karpov is now doomed to await his fate.

**25. c4 Rb8 26. Bd3 Qe8 27. Rc1 Bf6 28. Rg2 Rb6?! 29. Rcg1! Rb8 30. Qf1
b4 31. Be2 h4 32. Rxc6! Qxc6 33. Rxc6 Nxc6 34. Bg4 Nf4 35. Qd1 b3 36.
axb3 Bb7 37. Ng2(!) Bc8 38. Bxc8 Rxc8 39. Qg4 Re8 40. Nxf4 exf4 41.
Qxf4 Be5 42. Qxh4 Rf8 43. b4 Bd4 44. bxc5 1-0**

A. Colle System

1. d4 Nf6 2. Nf3 and; 3. e3

White will play slowly for the e2-e4 break, opening up the game.

There is a [booklet on the Colle](#) somewhere in circulation.

Landau - Book, Kemer, 1937

1. d4 d5 2. Nf3 Nf6 3. e3 e6 4. Bd3 c5 5. c3 Nbd7 6. Nbd2 Bd6 7. O-O O-O
8. Re1 Qc7 9. e4 cxd4 10. cxd4 dxe4 11. Nxe4 Nxe4 12. Rxe4 Re8 13. Rh4
Nf8 14. Ng5 h6 15. Qh5 e5 16. Bd2 exd4 17. Rc1 Qe7 18. Ne4

18... Ng6 (else Bxh6) **19. Bg5 Qe5**

[19... hxg5 20. Qh7+ Kf8 21. Qh8+ Nxh8 22. Rxh8#]

20. f4 Qd5 *[20... Qa5 21. b4]*

White now lands two good punches

21. Nf6+ gxf6 22. Bxg6

Black's pawn cover has suddenly disappeared.

22... Bf8 The alternatives didn't convince:

[22... fxg6 23. Qxg6+ Kf8 24. Qxf6+ Qf7 25. Bxh6+ Kg8 26. Qg5+ Kh8 27. Bg7+ Kg8 28. Rh8#]

[22... fxg5 23. Qxh6 gxh4 24. Bh7+ Kh8 25. Be4+ Kg8 26. Bxd5]

23. Rc7 Be6 24. Bxf6 Qxh5 Ordinarily, exchanging queens is an important achievement for the defence.

25. Bxh5 Rec8 26. Bxf7+ and still they come! **26... Kh7** *[26... Bxf7 27. Rg4+ Kh7 28. Rxf7+ Bg7 29. Rg4+ Kh8 30. Rg6#]* **27. Rxc8 Bxc8 28. Bxd4** Cashing in **28... Bf5 29. Rh5 1-0**

B. London System

1. d4 Nf6 2. Nf3 and; 3. Bf4

White holds the centre and develops quickly, attacking on either side as the opportunity arises.

Pribyl - Penrose (Nice) 1974

1. d4 d5 2. Nf3 Nf6 3. Bf4 c5 4. c3 e6 5. e3 Be7 6. Nbd2 O-O 7. Bd3 b6 8. Ne5 *A common theme in the London: White can also try here [8. O-O Bb7 9. a4 or 9. Ne5]*

8... Bb7 9. Qf3 Nc6 10. Qh3 g6 11. Bh6 Re8 12. f4 Nd7 *[12... Nxe5 13. fxe5 Ne4 14. Bxe4 dxe4 15. O-O with a strong attack: White can contemplate Rxf7!]*

13. O-O f5 14. Ndf3 Ncxe5 15. fxe5 Bf8 16. Ng5 Bxh6 17. Qxh6 Nf8

[17... Qe7 18. g4 Qg7 19. Qxg7+ Kxg7 20. Bb5 Rad8 21. gxf5 gxf5 22. Nh3 with an endgame plus]

18. Rf3 Re7 19. g4 Rg7 20. Raf1 Qd7 21. Kh1 Qe7 22. h4 Bc8 23. Rg3 a5 24. Rfg1 Ra7...1-0 **DIAGRAM** Black fiddles while the King's side burns... White won an endgame in about 40 moves.

C. Torre Attack/Torre System vs. King Fianchetto

1. d4 Nf6 2. Nf3 and; 3. Bg5

We saw this in action in the introductory game. The founder of this system scored a famous victory over Lasker with a 'windmill' combination. It has similar ideas to the London System, and chooses perhaps a better square for the Bishop. It also tempts Black to chase the bishop, as we can see in this line against a King Fianchetto system.

Smyslov, V - Nunn, J [A48] (Tilburg), 1982

1. d4 Nf6 2. Nf3 g6 3. Bg5 Bg7 4. Nbd2 O-O 5. e4 d6 6. c3 h6 7. Bh4 Does driving the bishop back have any effect in this formation? Yes - it does further weaken the kingside fortress.

7... Nc6 8. Bb5 Bd7 9. O-O a6 10. Bc4 e5 11. dxe5 dxe5 12. Re1! Overprotection of e4 frees up the minor pieces for more useful tasks.

12... Qe8

[12... b5 13. Bf1 followed by an eventual a2-a4 would put strong pressure on the queenside.]

13. a4 Nh5 14. Nb3 g5 15. Bg3 Rd8 16. Nfd2

DIAGRAM White's pieces have been quickly transferred to the queenside. Black's pieces, especially the offside knight, cannot get there so quickly.

16... Nxc3 17. hxc3 Kh8 18. Qe2 Qe7 19. Nf1!

The exchange of the Black knight for the Bg3 has created new opportunities on the kingside. Smyslov is the master of harmonic play - his pieces are often ready to switch to new targets quickly.

19... Qf6 20. Nc5 Bc8 21. Ne3 Ne7 22. a5 Qg6 Black has chosen to sue the Bc8 to defend the queenside, but the heavy guns are all on the kingside, and White controls a bit more of the center. But before foraging on the queenside, Smyslov squashes the counterplay.

23. g4! b6?! Black is paralyzed on the kingside, unable to transfer the knight to f4 due to the placement of the queen at g6. But this sacrifice of a queenside pawn leads to disaster. There is nothing more rueful than a lost pawn formation. Black could resign without remorse

24. Nf5! Nxf5 [24... bxc5 25. Nxe7 Qd6 26. Nxc8 Rxc8 27. Bxa6+/-] **25. gxf5 Qc6 26. Nxa6 Bxa6 27. Bxa6 bxa5 28. Rxa5**

Now White has an extra pawn and better bishop. The rest is easy for a player of Smyslov's caliber.

28... Ra8 29. Rea1 Rfd8 30. Bc4 Rxa5 31. Rxa5 Kg8 32. Ra6 Qd7 33. Bd5 Qe7 34. Qh5 Rd6 35. Rxd6 cxd6 36. b4 1-0 Resigns; a tale of two bishops...

D. Trompovsky

1. d4 Nf6 2. Bg5

An even earlier Bishop move, and now only ...e6 and ...Ne4 can stop White from kicking a hole in the Black pawn formation. In the 'seventies Hort and Jansa often adopted it with a positional approach, but the brawling style seen below has been more characteristic of Hodgson's revival of the line in the 'nineties.

Vaganian-Botterill, Hastings 1974

1. d4 Nf6 2. Bg5 g6 Consciously provocative.

3. Bxf6 exf6 4. e3 Bg7 5. Ne2 b6 6. Nf4 d5 7. h4 h5 8. c4 dxc4 9. Bxc4 Bb7

 hxc6 26. hxc6+ Kg8 27. g7 Rfc8 28. Qxf6 Bxa2+ 29. Ka1 1-0

E. Systems with g3**1. d4 Nf6 2. g3**

Transpositional except against the King's Indian where the double fianchetto system is known (with b2-b3).

Against the ...e6 systems it usually transposes into the Catalan, where Black may have problems whether the centre is closed (Botvinnik) or open (Keene).

Botvinnik,M - Padevsky,N [E07] Monte, 1968

1. Nf3 Nf6 2. c4 e6 3. g3 d5 4. Bg2 Be7 5. O-O O-O 6. d4 Nbd7 7. b3 b6 8. Bb2 Bb7 9. cxd5 exd5 10. Nc3 Re8 11. Ne5 Bd6 12. f4 Ne4 13. Nxe4 dxe4 14. e3 Nf6 15. a3 c5 16. Qe2 cxd4 17. Bxd4 Qe7 DIAGRAM 1

White has a central grip

18. b4 a5 19. b5 Bxe5 20. Bxe5 Nd7 21. Bd4 Nc5 22. f5 Nd7 **DIAGRAM 2**

White turns his advantage into attack.

23. f6 Qe6 24. Qh5 Ne5 25. Rf5 Ng6 26. fxg7 Rad8 27. Qxh7+ 1-0

Keene,R - Robatsch,K [E08] Madrid, 1971

1. c4 Nf6 2. Nf3 e6 3. g3 d5 4. Bg2 Be7 5. O-O O-O 6. d4 Nbd7 7. Qc2 b6 8. Nc3 Bb7 9. cxd5 Nxd5 10. Nxd5 Bxd5 11. e4 Bb7 12. Bf4

Black now tries to break up the centre, but White offers a pawn sacrifice based on his more active pieces.

12... c5 13. d5 exd5 14. exd5 Bf6

[14... Bxd5 15. Rad1 Nf6 16. Ng5] [14... Nf6 15. Rad1 Nxd5]

15. h4 Re8 16. Ng5 Nf8 17. Rad1 Bd4 18. Be3 h6 19. Ne4 Bxe3 20. fxe3 Ng6 21. Rxf7 Kxf7 22. Rf1+ Ke7 23. d6+ Kd7 24. Rf7+ Ne7 25. Qa4+ Kc8 26. d7+ Qxd7 27. Bh3 1-0

F. Systems with a delayed c4

Even if White has c2-c4 lines in their repertoire, it may reduce Black's options to delay

this, e.g. in the Catalan

1. d4 Nf6 2. Nf3 e6 3. g3 d5 4. Bg2 Be7 5. O-O O-O 6. c4

avoids the active Black system with

1. d4 Nf6 2. c4 e6 3. g3 d5 4. Bg2 dxc4

Fyllingen Roy - Tisdall Jonathan D (8) [E05] Ch Norway, Namsos (Norway), 1995

1. d4 d5 2. c4 e6 3. Nf3 Nf6 4. g3 Be7 5. Bg2 O-O 6. O-O dxc4 7. Qc2 a6 8. a4 Bd7 9. Rd1 Bc6 10. Nc3 Bb4

DIAGRAM: Black's pieces are actively contesting central squares. White now finds an ingenious way of shedding a piece.

11. e4 Bxc3 12. d5 exd5 13. exd5 Bxd5 14. Ng5 c6 15. bxc3 h6 16. Ne4 Nxe4 17. Bxe4 Bxe4 O-1

We can see both the g3 and delayed c4 ideas in the following game:

Speelman,J - Mestel,J [D02] Hastings, 1979

1. Nf3 d5 2. d4 e6 3. g3 c5 4. Bg2 Nc6 5. O-O cxd4 6. Nxd4

6... Bc5 7. Nb3 Bb6 8. c4 Nf6 9. cxd5 Nxd5 10. Nc3 Nxc3 11. Qxd8+ Nxd8
 12. bxc3 Bd7 13. c4 Bc6 14. Ba3 Bxg2 15. Kxg2 Nc6 16. Rfd1 Rd8 17. e3
 f6 18. Bd6 Rd7 19. Rab1 Kd8 20. c5 Bc7 21. Nd4 Nxd4 22. Rxb7 Bxd6 23.
 Rxd7+ Kxd7 24. Rxd4 Kc6 25. Rxd6+ Kxc5 26. Rxe6 a5 27. Re7 g6 28.
 Rb7 Kc6 29. Rf7 f5 30. a4 Re8 31. Rxh7 Re4 32. Rh4 Rxh4 33. gxh4 Kc5
 34. f4 Kb4 35. e4 fxe4 36. Kf2 1-0

G. Stonewall Opening

1. d4 2. e3 3. Bd3 4. f4

White locks up the centre and rolls down the King's-side

1. d4 d5 2. e3 Nf6 3. Bd3

[3. f4 is sometimes played to avoid the 3...Nc6 line, but then Black can always play ...Bf5]

3... c5 4. c3 Nc6 5. f4 e6

blocks the Bc8; probably not best. The dangers in this line can be seen in this line, given by Fine:

6. Nf3 Bd6 7. O-O O-O 8. Ne5 Qc7

Ne5 needs some response; Black could also try to occupy e4

9. Nd2 Re8 10. g4 DIAGRAM with a crushing attack

Black can usually see this coming but it (and the Stonewall Dutch) is still played:

Aldrete, Jorge - Ramirez, P (2) [D45] Tel Aviv ol prel, 1964

1. d4 Nf6 2. e3 d5 3. Bd3 e6 4. Nd2 c5 5. c3 Nc6 6. f4 Bd6 7. Ne2 O-O 8. O-O Qc7 9. Nf3

DIAGRAM

9... c4 10. Bc2 b5 11. Ng3 Rd8 12. Ne5 Bf8 13. Bd2 a5 14. Be1 g6 15. h4

Ba6 16. h5 Ne7 17. hxg6 hxg6 18. Qf3 Bg7 19. Nh1 Bb7 20. Qh3 Kf8 21. Bh4 Nf5 22. Bxf6 Bxf6 23. g4 Nd6 24. g5 Bg7

25. Bxg6 fxg6 26. Qxe6 Bxe5 27. fxe5+ Kg7 28. Qf6+ Kh7 29. exd6 Qc8 30. Qf7+ Kh8 31. Rf2 Qg4+ 32. Rg2 Rd7 33. Qf6+ 1-0

Lots of these Bf4/Bg5 systems can be played with the Stonewall-style attack in mind but having the dark-squared bishop the other side of the f-pawn (Burgess below), and of course Harry Pillsbury imported it into the Queen's Gambit.

Burgess Graham - Johannesson Larus (8) [A46] It, 1995

1. d4 e6 2. Nf3 Nf6 3. Bg5 Be7 4. Nbd2 d5 5. e3 O-O 6. Bd3 b6 7. Ne5 c5 8. c3 Qc7 9. f4 Bb7 10. Qf3 h6 11. h4 Nc6 12. Rh3

seems familiar!

12... Nxe5 13. fxe5 Ne4 14. Nxe4 dxe4 15. Bxe4 Bxe4 16. Qxe4 Qd8 17. Bxe7 Qxe7 18. O-O-O c4 19. Rf1 b5 20. Rf6 Kh8 21. Rg3 b4 22. Qf4 bxc3 23. Qxh6+ 1-0

Pillsbury, Harry N - Marco (Paris, 1900)

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nf3 b6 7. Bd3 Bb7 8. cxd5 exd5 9. Ne5 Nbd7 10. f4 c5

This is the basic formation which Pillsbury often steered for against the ...b6 lines.

11. O-O c4 12. Bc2 a6 13. Qf3 b5 14. Qh3 g6 15. f5 b4 16. fxg6 hxg6

Black's king's side has been weakened.

17. Qh4 bxc3 18. Nxd7 Qxd7 19. Rxf6 a5 20. Raf1 Ra6 21. Bxg6

DIAGRAM Black didn't need to be shown any more: 1-0

H. The Richter-Veresov system

1. d4 Nf6 2. Nc3 d5 (Other moves transpose into e.g. the Pirc or French)

This is another system emphasising piece play - again with the threat of doubling the f-pawns, or reserving King's-side chances. In the following game we see both:

Bellin-Penrose, British Ch'p 1974

1. d4 d5 2. Nc3 Nf6 3. Bg5 h6 4. Bxf6 exf6 5. e3 c6 6. Bd3 Bd6 7. Qf3 O-O
 8. Nge2 Re8 9. O-O-O b5 10. g4 Nd7 11. h4 b4 12. Na4 g6 13. Rdg1 Be7
 14. g5 fxg5 15. h5 g4 16. Rxg4 g5 17. Rgg1! Qa5 18. b3

Black has a decision, to counterattack or defend passively, but Bellin says both lose. In the game Black defended:

18...Nf6

(or 18... Nb6 19. Nc5 Qxa2 20. Kd2 explains the idea behind move 17. If instead 19... Bxc5 20. dxc5 Qxc5 21. Qf6 Re6 22. Rxc5+ hxc5 23. Qxc5+ Kh8 24. Qd8+ Kg7 25. h6+ Rxh6 26. Rxh6 Kxh6 27. Qf6+ Kh5 28. Nf4+ Kg4 29. Be2#)

19. Ng3 Bg4 20. Qg2 Kh8 21. Bf5 Bxf5 22. Nxf5 Bf8 23. f4 Ne4 24. fxg5 Nxc5 25. Rh4 Re4 26. Rf4 Rae8 27. Nxc5 Bxc5 28. Rf6 Qd8 29. Rxh6+ Kg7 30. Rxc6 f6 31. Qf1 Rxe3 32. Rxc5+ fxg5 33. Rg6+

(221) Torre,C - Lasker,Em [A46] Moscow, 1925

1.d4 Nf6 2.Nf3 e6 3.Bg5 c5 4.e3 cxd4 5.exd4 Be7 6.Nbd2 d6 7.c3 Nbd7 8. Bd3 b6 9.Nc4 Bb7 10.Qe2 Qc7 11.O-O O-O 12.Rfe1 Rfe8 13.Rad1 Nf8 14. Bc1 Nd5 15.Ng5 b5 16.Na3 b4 17.cxb4 Nxb4 18.Qh5 Bxg5 19.Bxg5 Nxd3 20.Rxd3 Qa5 21.b4 Qf5 22.Rg3 h6 23.Nc4 Qd5 24.Ne3 Qb5

And the famous finale:

**25.Bf6 Qxh5 26.Rxg7+ Kh8 27.Rxf7+ Kg8 28.Rg7+ Kh8 29.Rxb7+ Kg8 30.
Rg7+ Kh8 31.Rg5+ Kh7 32.Rxh5 Kg6 33.Rh3 Kxf6 34.Rxh6+ Kg5 35.Rh3
Reb8 36.Rg3+ Kf6 37.Rf3+ Kg6 38.a3 a5 39.bxa5 Rxa5 40.Nc4 Rd5 41.Rf4
Nd7 42.Rxe6+ Kg5 43.g3 1-0**

All these systems can be met in practical play, and apply to both the East and West Indian systems (with ...d6/...g6 or ...e6/...b6). One can combine these ideas in defence, but we'll leave that to another session.

Chess Openings Handouts

Openings

N.B.

The example games used in the openings handouts are kept in a [separate database](#). If you can't find something you are looking for here, it may be among my [old r.g.c. posts](#).

- [General Opening Principles](#) {D}
- [Openings for Beginners](#) {D}
- [Open Games](#) with 1.e4 e5 {D}
- [Semi-Open Games](#) with 1.e4 {C}
- [Closed Games](#) with 1.d4 d5 {B}
- [Semi-Closed Games](#) (Indian and Hypermodern) {A}
- The London Chess Centre has published a whole bunch of introductory stuff on [Openings](#), but you have to pay for any meat. [A Lynx-hostile site]

General Opening Principles {D}

[10 rules for the opening](#) {D}

The central dogmas of opening theory, and some other complementary notes.

[Choosing an opening repertoire](#) {DCBA}

Some brief and basic advice.

[The Ideas behind some Chess openings](#) {D/C}

- that is, the ones the BCF thinks juniors should know a bit about. But please, juniors, adults and anybody else, [No more Old Stodge!](#)

[Four choices in the opening](#) {B/A}

Putting together a repertoire that suits you.

[Gambit Play](#) {C/D}

In memoriam, Ken Smith

[The secret arts of castling](#) {C/D}

"Castle because you will or because you must; but not because you can." -- Pillsbury.

[Tales of the Unexpected](#) {C}

Some simple but often overlooked advice on dealing with unusual openings.

[The Hypermodern Approach](#) {B}

(Not for beginners!)

Endgame Openings

Openings played with a view to exchanging Queens early on.

Openings for Beginners {D}

- Once you have played for a while you might want to look at some specific variations: for example, [The Italian Game](#) {D} (80K) for White or Black is probably all you need to know for the next year (Word 6 version with [Tilburg font](#) for download [here](#)).

- After that you might want to look at [Playing White against odd Black lines {C}](#), [Playing Black against 1. e4 {D}](#) [incl. Two Knights' Defence (*)] and [Playing Black against 1. d4 {C}](#). I also have a sneaking fondness for [the Petroff Defence for Beginners {C}](#) as Black. [(*) I'm delighted to say that the Wilkes-Barre/Traxler line has its own web pages at [Echecs](#).]

N.B. Some of these booklets convert to hundreds of Kb of HTML with 8x8 GIF elements, so, I've used [text-only diagrams](#) here.

19 Jan 2000: By popular request, you can now have these four documents with the usual diagrams.

- o [Playing the Italian Game with White](#)
- o [Playing White with 1.e4 against Black's other choices](#)
- o [Playing Black after 1.e4](#)
- o [Playing Black after 1.d4](#)

I hesitated to put these up with full diagrams before, since they are so big, but the Web has got a lot faster since then, and thanks to all the "developments" in Web software since 1993, people have got used to waiting ages for stuff to download ; -).

If you are curious to expand your repertoire, having got the hang of attacking play and tactics, you might want to reconsider your basic [Four choices in the opening](#) {C}. Also, [Steve Martinson](#) described some openings to look at if you have had enough of 3. Bc4.

Playing 1. d2-d4 at junior level

I got started writing booklets in the first place because I have always been concerned about juniors and beginners playing 1.d2-d4. I generally advise *don't*, but some will do anyhow. So, I've now got three booklets: (1) why you shouldn't play **1.d2-d4**, (2) what to do if you insist on playing **1.d2-d4**,

and (3) what you can do if your opponent plays **1.d2-d4**.

(1) why you shouldn't play **1.d2-d4** ([Playing 1.d2-d4 at junior level](#))

(2) what to do if you insist on playing **1.d2-d4**

One of my first booklets was on [the Colle System](#) {C}, which is based on some notes by Fine with example games. [To see what this one looks like on paper there is 700k of PostScript on [FTP](#)]

(3) what you can do if your opponent plays **1.d2-d4**.

I keep scratching this itch!

First, look in the revised booklet [Playing 1.d2-d4 at junior level](#)

I often recommend Botvinnik's treatment of the *Dutch Stonewall*, for juniors: [Playing Black against 1. d4: the Dutch Stonewall](#) {D} **30K**.

I had another think about this and the Cambridge springs for better players {C/B} and came up with the [Playing Black against 1. d4](#) booklet mentioned [elsewhere](#).

[A minor openings survey](#) {D/C} 30 Apr 98

How do people actually play, and why?

Open Games {D}

[No more Old Stodge!](#) {D}

Instead, play...

[The Italian Game](#) {D}

The Giuoco Piano and Evans' Gambit are ideal for juniors, beginners and other players. [Lytham Ex Chess Club](#) have some information for club-players on the Scotch Gambit.

[Playing Black against odd 1.e4 Openings](#) {B}

The Two Knights' Defence, and a repertoire for Black against 1.e4 if White does not play the Italian.

[Petroff's Defence](#) {C}

An excellent defence for beginners and Grandmasters

[Lessons in Philidor's Defence](#) {C/D}

Some tactical ideas in a tricky opening

[The Ruy Lopez](#) {B/C}

Spanish Torture?

[Ruy Lopez Exchange Variation](#)

An opening played with a view to the endgame! There are [Other Endgame Openings](#)

The King's Gambit {B}

The latest addition to these opening guides is [The Ideas behind the King's](#)

[Gambit {B}](#), with an accompanying handout on the [Variations of the King's Gambit {B}](#). [*I incline more to Lombardy's view that "**at the amateur level, anything is playable**" than the master view [[\(1\)](#), [\(2\)](#)] that all such openings suck. Well perhaps they do, [at master level.](#)]*

[The Modern Italian Game {B}](#)

A modern positional approach to some old tactical openings (Giuoco Piano, Bishop's Opening and Two Knights' Defence).

Semi-Open Games {C}

[Playing White against odd Black openings](#)

If your opponents do not reply with a view to playing the Italian Game, here is a choice of three repertoires against the main half-open defences, and some suggestions against unusual Black systems after 1...e5.

[The French Defence for Beginners {C} \(over 100k\)](#)

This is mostly on the variations: there is another one on the [Ideas behind the French Defence {C}](#), which has example games in.

[An Introduction to the Sicilian Defence {B}](#)

Some basics with examples: includes [An Introduction to the King's Indian Attack {C}](#).

This booklet emerged out of a couple of discussions with our better juniors, who were interested in knowing a bit more about the Sicilian Defence, and more particularly, [what to play against it at White](#). Bob Martin was kind enough to send me [Five Sicilians from Club Play](#) with notes describing his assessment and thinking during play.

[See also [Introduction to the Sicilian](#), [Steve Spurgeon's page](#) at Bath, and the (Sicilian) [Dragon's Lair](#).]

[Closed Sicilian with ...e5 {A} 12k ASCII](#)

Some notes by my esteemed colleague Chris Bellers

Closed Games {B}

[Playing 1.d2-d4 at junior level](#)

- Don't!

"It is a piece of dead flesh kept over long on ice....more the tool of a coward than an adventurer." -- Tony SANTASIERE

[the Colle System {C}](#)

...which is based on some notes by Fine with example games. [To see what

this one looks like on paper there is 700k of PostScript on [FTP](#)]

[Playing Black against 1. d4: the Dutch Stonewall](#) {D} 30K.

I had another think about this and the Cambridge Springs for better players {C/B} and came up with...

[Playing Black against 1. d4](#)

A choice of solid or more active defences based on 1...d7-d5.

[The Isolated Queen's Pawn in the Queen's Gambit Accepted](#) {B}

Some thematic notes by Peter Lane

[The Blackmar-Diemer Gambit](#) {C}

There are a few things stirring on the net relevant to [the BDG](#) from [Ryan Ripley](#), which led to something from [me](#) and from [me again](#). These may now be compared with the [variation index](#) of [BDG World](#) magazine. Ryan's initiative was an attempt to get some newsgroup discussion going about opening choices, but not many folk contributed constructively and the thread died. Over to you!

I also posted something on [Gary Lane's book](#) (an author I usually admire, and a book which [Tim Harding](#) has praised).

There are some dedicated pages on the BDG from [Jyrki Heikkinen](#) (alongside superb stuff on the [Diemer-Duhm Gambit](#), a related Anti-French line: this is a model of how to present chess openings on the Web), [Tom Purser](#) (editor of [Blackmar-Diemer Gambit World](#) magazine) and [David Flude](#). There is even a [BDG newsgroup](#) in existence, but there is little or no relevant traffic on it. Tom recently organised a [BDG theme e-mail tournament](#), and you can read about [my adventures](#) if you're interested.

Semi-Closed Games {A}

[Custer's Last Stand](#) (over 100k) {C} {B}

Playing Anti-Indian systems: an introduction for White

[Beating the Anti-Indians](#) {B} {A} (about 200k)

Playing Black against Anti-Indian systems: strategies for players of Indian systems with ...e6 or ...g6 .

[You know when you've been Benko'd](#): {A} an introduction to the Benko Gambit from Black's point of view

Examples with light notes from my colleague Steve Homer

The Ideas behind [The English Opening](#) {A/B}

Someone should have talked me out of writing this one...

Chris Bellers gave the lie to the idea that the English is a bit slow by taking

us through a collection showing the sharper side of the [Deadly English](#)

Exeter Chess Club: Choosing an Opening Repertoire

1. [The Bottom Line](#) {D}
 2. [Comments on openings](#) {C}
 3. [Putting together a repertoire of variations](#) {B}
 4. [Playing Black and White](#) (recent relevant [post](#)) {A}
-

The Bottom Line {D}

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player.

"A beginner should avoid the Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game"

- RICHARD RETI, Masters of the Chessboard

See also a recent [post](#).

Comments on openings {C}

(following [ECO codes](#))

A: Irregular openings

- 1. Lines without 1. e4, 1. d4;
- 1. d4 Lines without 1 ...d5, 1... Nf6;
- 1. d4 Nf6 2. Lines without 2. c4;

- 1. d4 Nf6 2. c4 Lines without 2... e6, 2... g6

Dr.Dave's advice: Leave these alone except to work out what to do if someone played them against you. Mostly these are good for surprise value, but you can only surprise me once, and next time I'll be ready for you. The main lines are the main lines because they are the strongest openings. Avoid theory, sure, but don't handicap yourself.

The honorable exception to this among these openings are the lines of the Reti/English complex (1.Nf3/1.c4), which are slow but deep and strong. I'd still leave them alone until you are sure you know what you are doing. **Be prepared to defend against them as Black:** I recommend using a [Dutch](#) formation.

B: Semi-open games

- 1. e4 Lines without 1... c5, 1... e6, 1... e5
- 1. e4 c5

Dr.Dave's advice: Play these second after you have got the hang of **C: Open Games**. This section includes some of the most exciting and important openings in chess, like the [Sicilian](#), but they are not IMHO for beginners.

C: Open Games (and French Defence)

- 1. e4 e6
- 1. e4 e5

Dr.Dave's advice: Play these first - this is what Reti advises above. The anomaly is the French - a half-open defence that ECO groups under C. Despite Reti's admonition, I would not object to a relative beginner playing the [French](#) - it is a solid defence in which most of the [ideas](#) are easy to understand, and Black's pieces often come to similar squares in each line.

D: Closed Games (and Grunfeld Defence, a semi-closed line)

- 1. d4 d5
- 1. d4 Nf6 2. c4 g6 + d7-d5

Dr.Dave's advice: Play these last of all; they are among the most demanding of openings. They are slow, which may lead you to think they are safer, but things can go horribly wrong for the novice and there is no point trying these until you are sure you know what you are doing - say, that you are familiar with the material in the 'Strategy' section of the [canon](#). There are one or two 'open' lines that start 1.d4, like the [Colle System](#).

E: Semi-Closed Games

- 1. d4 Nf6 2. c4 e6
- 1. d4 Nf6 2. c4 g6 ' d7-d5

Dr.Dave's advice: Play these third; they are, like the semi-open defences, very tasty, but rather strong meat for inexperienced players. You will need to know what to play against 1.d4 as Black, particularly as you improve, and my recommendation is to adopt a counter-attacking line like the Budapest Gambit or the [Stonewall Variation of the Dutch Defence](#)

Putting together a repertoire of variations {B}

What do you hope for when you play 1.e4? Which opening you choose after 1...e5 will depend on what sort of player you are. What I'd like to do below is suggest how you might proceed if Black doesn't reply 1...e5. First you need to choose a basic plan of campaign:

- Fast attacking game with pieces

- Slower attacking game with f4

- King's Indian Attack with g3

- **Fast attacking game with pieces**
 - Giuoco Piano (my main recommendation for junior players) or
 - Scotch Game
- **Slower attacking game with f4**
 - Vienna Gambit or
 - King's Gambit)

- **King's Indian Attack with g3**

- KIA with (1. e4 e5 2. Nf3 Nc6 3. g3 or
- in the Vienna (1. e4 e5 2. Nc3 Nc6 3. g3)

Which sort of player are you? Larry Evans used to say, **The Crunch or the Crouch?** Hopefully, one of these set-ups appeals to you more than the others: the brisk, the direct, or the more flexible?

[Sadly, the KIA lines haven't a lot of force and are not very good lines to adopt against 1...e5.]

But the point is, how well does your chosen repertoire fit together? Once I used to play the following lines, together with the King's Gambit:

Alekhine (1. e4 Nf6)

Chase variation (1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. c5 Nd5 5. Bc4 e6 6. Nc3)

Caro-Kann (1. e4 c6)

Panov-Botvinnik Attack (1. e4 c6 2. d4 d5 3. exd5 cxd5 4. c4)

French (1. e4 e6)

Advance Variation (1. e4 e6 2. d4 d5 3. e5)

Pirc/Modern (1. e4 ...d6/...g6)

King's Indian Attack (1. e4 d6 2. d4 Nf6 3. Nc3 g6 4. Nge2 and 5. g3, 6. Bg2)

Sicilian (1. e4 c5)

Chamaeleon Variation (1. e4 c5 2. Nc3 ... 3. Nge2)

This was an awful lot to keep track of, but more importantly, it didn't really combine well. Against the Alekhine I played fast, against the Caro I played medium, against the French and Pirc I played slow; the Panov line is main-line established theory with lots to learn and keep track of, the Chamaeleon is a new and obscure line where you have to think at the board.

Now, I'm sure a better idea, and the right idea, is to play similarly against each opening. For example, if you like **gambits** and play the Danish Gambit against 1...e5, try and find a gambit against the lot...

Alekhine (1. e4 Nf6)

(1. e4 Nf6 2. Bc4 Nxe4 3. Bxf7+ Kxf7 4. Qh5+ g6 5. Qd5+)

or Blackmar-Diemer (1. e4 Nf6 2. Nc3 d5 3. d4 dxe4 4. f3)

Caro-Kann (1. e4 c6)

Fantasie Variation (1. e4 c6 2. d4 d5 3. f3 e5 4. Nf3 exd4 5. Bc4)

French (1. e4 e6)

Variation, Milner Barry Gambit (1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 6. Bd3 cxd4 7. cxd4 Bd7 8. O-O Nxd4 9. Nxd4/9. Ng5!?)

Pirc/Modern (1. e4 ...d6/...g6)

I don't know any gambits for White in the Pirc but against the Modern you can try... the Monkey's Bum! (1. e4 g6 2. Bc4 Bg7 3. Qf3 e6 4. d4 Bg7 5. Nc3 Bxd4) [An invention of

Streatham Chess Club, who showed it to one member who said "Well, if that works, I'm a monkey's bum!"]

Sicilian (1. e4 c5)

Morra Gambit: (1. e4 c5 2. d4 cxd4 3. c3 dxc3 4. Nxc3 or 3. ... Nf6 4. e5 Nd5 5. Bc4 Qc7 6. Qe2)

I don't think the Monkey's Bum is really any good (2...d6), but at least we're thinking along the right lines, even if this isn't the repertoire we settle on.

" A 1500 player will lose a pawn anyway about every 15 moves, so you might as well invest a pawn to sharpen your tactics."

-- Tim Sawyer

Here's a repertoire based on **pawn advances and space advantages**:

Alekhine (1. e4 Nf6)

Four pawns variation (1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. d4 d6 5. f4)

Caro-Kann (1. e4 c6)

Advance Variation (1. e4 c6 2. d4 d5 3. e5)

French (1. e4 e6)

Advance Variation (1. e4 e6 2. d4 d5 3. e5)

Pirc/Modern (1. e4d6/...g6)

Three Pawns Attack (1. e4 d6 2. d4 Nf6 3. c3 g6 4. f4)

Sicilian (1. e4 c5)

Big Clamp Variation (1. e4 c5 2. d3 (...) 3. f4)

Now, what sort of player are you? Whether you like lively piece attacks, slow pawn advances that you can use to force open lines or more flexible systems, there is a repertoire here for you.

Note: I simply haven't the courage to take on a repertoire which includes the **Open Sicilian** , and my experience of playing the Black side of the Sicilian is that not many White club players have either! So I'll leave those lines to you and any time you have to do your own research. I have a feeling it's something you come to study as your chess improves. Mine has yet to improve enough...

Let's have a look at some variations that fit together.

Piece attack

Alekhine (1. e4 Nf6) (1. e4 Nf6 2. Nc3 d5 3.exd5 Nxd5 4. Bc4)

Caro-Kann (1. e4 c6)

Main line with 7.Nh3 (1. e4 c6 2. d4 d5 3.Nc3 dxe4 4. Nxe4 Bf5 5. Ng3 Bg6 6. h4 h6 7. Nh3)

French (1. e4 e6)

Alekhine-Chatard Attack (1. e4 e6 2. d4 d5 3.Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. h4

Pirc/Modern (1. e4 ...d6/...g6)

Austrian Attack (1. e4 d6 2. d4 Nf6 3.Nc3 g6 4. f4)

Sicilian (1. e4 c5) Closed: without d4

Rossolimo Variation (1. e4 c5 2. Nf3 and 3.Be2 (idea 4. c3) or 3. Bb5(+))

Slow attack with f4

Alekhine (1. e4 Nf6)

(Irregular) (1. e4 Nf6 2. d3 and 3.f4 (sadly, this line has no real force and is not a very good line to adopt)

Caro-Kann (1. e4 c6)

(Irregular) (1. e4 c6 2. Nc3 d5 3.f4 (a line of the Dunst opening, (1.Nc3)

French (1. e4 e6)

(Irregular) (1. e4 e6 2. Nc3 d5 3.f4 (a line of the Dunst opening, (1.Nc3)

Pirc/Modern (1. e4 ...d6/...g6)

(1. e4 d6 2. d4 Nf6 3.Nc3 g6 4. f4 (Austrian Attack)

Sicilian (1. e4 c5) Closed: without d4

(1. e4 c5 2. f4 (Grand Prix Attack) or

(1. e4 c5 2. Nc3 Nc6 3. g3 with 4. Bg2, 5. d3, 6. f4 (Closed Variation)

King's Indian Attack

Alekhine (1. e4 Nf6)

KIA vs. Alekhine (1. e4 Nf6 2. d3 and 3.g3/Bg2 (sadly, this line has no real force and is not a very good line to adopt)

Caro-Kann (1. e4 c6)

KIA vs. Caro-Kann (1. e4 c6 2. d3 d5 3.Nd2)

French (1. e4 e6)

KIA vs. French(1. e4 e6 2. d3 d5 3.Nd2)

Pirc/Modern (1. e4 ...d6/...g6)

King Fianchetto Variation(1. e4 d6 2. d4 Nf6 3.Nc3 g6 4. Nge2 and 5. g3, 6. Bg2)

Sicilian (1. e4 c5) Closed: without d4

KIA vs. Sicilian(1. e4 c5 2. Nf3 and 3.g3)

There are some wrinkles to be ironed out of these suggestions, but I hope they set you thinking in the right way.

Playing Black and White {A}

It makes a lot of sense for your Black repertoire to be in keeping with your White one.

The easy way out is to play Black openings in reverse, of which the commonest and best of these is probably the King's Indian Attack. But psychologically it's not the same and practically it's not as effective. (See remarks on the [Stonewall Dutch](#)).

The right idea I think is to play openings which have the same ideas - either the same **structure** or at least the same **attitude**. So if you play the English with g3, a line which is structurally similar is the Hyper-Accelerated Fianchetto variation of the Sicilian (1. e4 c5, 2. Nf3 g6), and against 1.d4 the same 'square game' can be had in the Nimzo-Indian, although this is structurally very different. There are king's fianchetto lines in most openings, and strongpoint lines too.

Some suggestions if you are...

1. An attacking player who plays 1. e4, try:
 - *Against 1.d4*: Budapest Gambit, Benoni, Grunfeld
 - *Against 1.e4*: Open Lopez, Petroff, Sicilian Dragon (with ...g6)
2. An attacking player who plays 1. d4/2.c4, try:
 - *Against 1.d4*: King's Indian, Dutch
 - *Against 1.e4*: French Winawer, Closed Lopez,
3. An attacking player who plays the Colle System, try:
 - *Against 1.d4*: Semi-Slav Defence or Cambridge Springs (same structure as Colle)
 - *Against 1.e4*: Sicilian Paulsen (with ...e6)
4. A solid player who plays 1. e4, try:
 - *Against 1.d4*: Nimzo-Indian, QGD, Tarrasch Defence, Old Indian
 - *Against 1.e4*: Petroff, Philidor (structure like Old Indian)
5. A solid player who plays 1. d4, try:
 - *Against 1.d4*: Slav, Queen's Gambit Orthodox Defence.
 - *Against 1.e4*: Caro-Kann, Classical French

I would be interested to know about other's preferences. I stuck to the same opening repertoire for the best part of ten years: English Opening with g3 as White, Sicilian and English Defence as Black - all aiming to hit at an opponent's centre, and of course with a strong structural link between the English and Sicilian. The English Defence "feels" more like the English Opening to me than the Queen's-side defence which is structurally most similar, the Benoni.

I think my current recommendation for myself [which must also be true for you :-)], is two fold:

1. **Be prepared to play any sort of position.** To be prepared to play any sort of position [if not any opening] for either colour is the ideal; you may always have strengths and weaknesses, but avoiding certain sorts of positions altogether seems unhealthy. Try them out in friendly and blitz games, and see if the rest of your game improves.
2. **Be prepared to play main lines.** They are the main lines because they are the best moves, and you may be surprised to find how many players will avoid a main line 'on principle' - perhaps choosing a playable alternative, but often an inferior one.

I find that the combination of the two is quite liberating, at least in friendly games, and I'm sure I'm a more rounded player for it. I haven't quite had the courage (or foolhardiness) to walk into my opponent's main lines when titles are at stake, you are going to get my favourite defence, but it's quite satisfying to invite the club gambiteer to play a gambit and then outplay them in their own game.

>English.
>But I'd also like to find something that is flexible, and useful
>against
>a wide variety of black/white responses. Anyone have some
>suggestions?

Sounds like you're half-way there:

Hypermodern with g3/g6 and c4/c5

=====

White: English with g3
Black against 1.e4: Sicilian with ...g6
Black against 1.d4: Benoni

Hypermodern with g3/g6

=====

White: King's Indian Attack

Black against 1.e4: Pirc/Modern

Black against 1.d4: King's Indian/Modern

Hypermodern with b3/b6

=====

White: Nimzo-Larsen 1. b3

Black against 1.e4: Owen's Defence 1...b6

Black against 1.d4: English Defence 1...b6

Open game with piece play:

=====

White: Lopez with early d4, or Scotch Opening

Black against 1.e4: Two Knights', Open Morphy Lopez

Black against 1.d4: Budapest Gambit, Grunfeld

>I also understand the theory of strongpoint type openings fairly well. Are

>there

>any systems that fit in this framework?

"Flexible" and "strongpoint" seem to me to be a contradiction!

Strongpoint on d4/d5

=====

White: Colle System or London System

Black against 1.e4: French or Gurgenedze (...g6/...c6)

Black against 1.d4: Slav or Orthodox QGD

Strongpoint on e4/e5

=====

White: Bishop's Opening

Black against 1.e4: Philidor's Defence

Black against 1.d4: Old Indian, Old Benoni

All this for 2 cents...

D

[Dr. Dave](#)

Exeter Chess Club: Post on C19th openings

Article < mattg.66.0C7302D4@indirect.com > of rec.games.chess.analysis

Many of the posts here on r.g.c.a. take the form "*what should I play against...*" or the related, but very different, "*what's a good line against...*". I've been thinking about this a lot lately, both for myself, and, more especially, for my students, who range in strength from beginner to class A, and I've come up with some thoughts that I'd like to share and invite feedback on.

I believe it was [Reti](#) who first advanced the thesis that the development of the individual should follow the course of the development of chess itself. In other words that a player will first (Greco et al.) learn some cute tactical tricks, then (Morphy, Anderssen) become competent at deeper tactics, and concepts such as rapid development; next (Steinitz, Tarrasch) will come a fairly rigorous learning of positional concepts, etc.

Surprisingly, I have never seen the parallel thesis that **A player's opening repertoire should similarly follow historical trends**. Therefore one should start by learning a "19th century" opening repertoire based upon open games, then move on to a "Classical" repertoire, leaning heavily on the Lopez and Queen's Gambit, and only adopt hypermodern and post-war openings much later. The more I think about this, the more it makes sense. Early in a chess career, tactics predominate, and piece mobility is the primary strategical consideration. (Remember that pieces lose mobility drastically and permanently if they are captured.) Therefore we should adopt openings that will reward rapid mobilization. (A specific example: after 1.e4 e5 2.Nf3 Nc6 3.Bc4 6 4.Ng5 I have taught several of my students (rated < 1300) to play 4...Bc5!? [\(*\)](#) The result? an absolute 100% success rate, with not a single White King making it to move 25! White always grabs f7 and h8, and then perishes miserably. my players have not memorized reams of analysis, but have instead been shown a couple of key ideas, and then unleashed.)

Once a player has achieved a certain level of competence playing these open games, then she is ready for openings that will teach and reward certain specific types of strategic knowledge. A second rule applies here: **The greater the strategical complexity of an opening, the higher rated you need to be before playing it**. Again, an example: Two openings frequently recommended to

players in about the 1400-1800 range are the Torre Attack and the Stonewall. These recommendations are usually based on the superficial truth that "*It's easy to learn- White plays the same moves no matter what Black does.*" However, in the Stonewall, it is almost true to say that there is only one strategical idea at work- "*Keep the centre closed, occupy e5, and attack on the K-side*". By contrast, White's strategical options in the Torre are numerous, and which plan to adopt frequently depends upon fairly subtle understanding of Black's defensive scheme. Therefore, I believe, despite the fact that White does make the same first half-dozen or so moves against almost any Black setup, the Torre is a very hard opening to learn to play well.

Maybe the hardest openings to play well are those that require not only broad based strategical understanding, but also a willingness to engage in tactical pyrotechnics at the appropriate moment. The systems (predominantly subvariations of the Sicilian, KID and maybe Slav) probably should not be attempted by players lower rated than 2000. The fact that many of these are currently popular at Super-GM level proves the point. After all, if a 2650 is trying to set problems too hard for a peer to solve, the chance of an 1800 understanding anything about the position must be pretty low.

Another, seemingly paradoxical, question that must be asked before an opening is selected is this: "*Do I want to win, or do I want to become a better player?*" If the primary goal is short-term maximization of results, then a variation should be selected **which maximizes those strengths that the player already possesses**. However, if the goal is long-term improvement, then the selection task becomes more difficult. It is necessary to evaluate overall playing strengths and weaknesses, choose an appropriate goal (eg. "*Learning to play more patiently*") and then select variations which will reward patient play. It is in this area that a higher rated colleague or coach may be of help - both in determining what is an appropriate strategic task to work on, and in selecting variations to help accomplish the task. The short-term results of such an approach may be painful, but the long-term improvement will be worth it.

Conclusions:

- 1) Selection of an opening repertoire can be a powerful tool for improvement.
- 2) The question "what should I play against..." cannot be adequately answered without further data. (rating, previously used systems, goals, etc.)
- 3) There are good reasons to believe that individual progression of opening understanding can and should mirror historical progression.

I welcome any discussion or criticism of the theories I have outlined above, and I hope that the readers of r.g.c.a find this article both interesting and useful.

Exeter Chess Club: Complete ECO codes

Complete ECO codes, from ECO A-E first edition

-- as posted on rec.games.chess: Revised 7 Feb 97 -- DR

-- if you have seen this list on Steve Pribut's pages, it's the same one, but I didn't take it uncredited from him.

Notes:

1. checks are not indicated - an ECO quirk
2. I have been sparing with the qualifications (lines with and without certain moves) as they are implicit in the classification anyhow.
3. I have typed all the castling moves with capital 'O's not zeroes (0).
4. Volunteers to proofread take one step forward.
5. They aren't international standards but someone could paint it up with names of the openings: Hooper and Whyld's Companion gives over 1000 names of lines.

Exeter Chess Club: Four choices in the opening

- [Introduction: your four choices](#)
- [Playing Aggressively or Solidly as White and Black](#)
- [Changing your opening repertoire](#)
- [A simple openings map.](#)
 - [Openings without 1.d4 or 1.e4](#)
 - [Openings with 1.d4](#)
 - [Indian Defences \[e.g...](#)
 - [Openings with 1.e4](#)
 - [Semi-Open Defences \[e.g...](#)
 - [Double Queen Pawn Openings](#)
 - [Double King Pawn Openings](#)
 - [Key](#)

Introduction: your four choices

There are four basic choices to be made before sitting down at a chessboard.

You must decide whether to open as White with 1. e4, with 1.d4 or with a Reti/English system

(and have something in mind against each semi-open or Indian defence)

You must decide how to respond to 1. e4 as Black

You must decide how to respond to 1. d4 as Black

You must decide how to respond to the Reti/English system as Black.

What you choose may depend on whether you like to attack or to play more solidly, and whether you prefer to play open or more closed positions.

You should also consider how it fits with what else you have chosen. For

example, if you adopt the Dutch or English Defences with the move order 1. d4 e6, you must be prepared to play the French. Or, if you like to play the Slav with ...c6, you might feel the Caro-Kann with ...c6 is a nice fit.

The commonest - and many would say the best - opening move is 1. e4, and 1. d4 is also a good first move. But almost every other first move has been played and advocated at some time or another, and almost every legal Black move has been tried in reply to 1.e4/1.d4.

I enclose an openings map below. Even if you learned this off by heart, there are still over 1000 more openings, defences and variations listed in the *Oxford Companion to Chess*. This is a map, not so you can go charging off everywhere, but so if someone shows you something, you can look it up. You should know that each opening has a plan (or if it doesn't, it's not a very good opening!) You will easily find things not on this list - either mainstream (e.g. last time I visited a bookshop it had a new book on the *Torre Attack 1.d4 Nf6 2.Nf3 and 3.Bg5*), and or amongst the 'fringe' (e.g. the *Vulture 1.d4 Nf6 2.c4 c5 3.d5 Ne4*). Moreover, as GM LOMBARDY once said (cited above),

"All openings offer good winning chances in amateur play".

I used to know a Henry who was known as H.4.Stewart because of his inclination to 1.h4 as an opening move, and I'm sure it saved him a lot of time sweating over the latest line in the Sicilian Dragon. How should you reply to this? If faced with 1. h4, or anything else unusual, just keep playing good chess - keep calm, keep developing, keep your eye on the centre, and keep your wits about you.

The variety of openings can be daunting. I think there is a trick to coping with this, which is expressed in Reti's famous statement:

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game" - RICHARD RETI

The development of a chessplayer should naturally progress through stages just as chess has passed through stages in its history. MacDonnell and LaBourdonnais (and even Steinitz and Tchigorin) lashed at each other with the Evans Gambit; by the time Steinitz played Lasker we saw more of the Ruy Lopez. The titanic Capablanca-Alekhine struggle was fought out mainly with the Queen's Gambit

Declined (whereas the era of Steinitz was more concerned with the Gambit Accepted). The Euwe matches saw the French, a Semi-Open defence, and Indian Defences like the Dutch, Grunfeld and Nimzo-Indian adopted as main choices at World Championship level for the first time. By the time of Botvinnik we saw the Caro-Kann, the King's Indian and the flank openings (Reti and English) appearing in matches, while Karpov and Kasparov seem to have played everything.

From this we can draw up a hierarchy, on each side of the board:

- 1. Open games and Gambits with 1. e4 e5; Queen's Gambit Accepted.*
- 2. Ruy Lopez; Queen's Gambit Declined.*
- 3. French; Dutch, Grunfeld, Queen's and Nimzo-Indian.*
- 4. Flank openings; King's Indian.*

There is no doubt in my mind that only once you have served your apprenticeship with the earlier and strategically more simple openings should you venture out to play in the jungles of the later ones.

Also, if you do want to move down the list, I think you should not move through dissatisfaction or fear with your current repertoire, but preferably from boredom, or the experience that opponents at your level know all about how to play the openings you practice. One might also remember that Bobby Fischer rarely departed from 1. e4 throughout his career, and that the Giuoco Piano was played by Karpov against Kortchnoi.

Playing Aggressively or Solidly as White and Black

Did I say four choices? There is another choice which you need to make first: do you wish to play solidly or aggressively? Reti and I suggest that you play open games, which more or less obliges an aggressive style. It is in these games that you can practice attacking play and learn to spot tactics, without which there is not much point considering more strategically complex systems. However, if you feel you have been through this apprenticeship, there are some more solid, strategical choices available.

For example, the Italian Game generally results in fewer draws than the English Opening, and more draws than the King's Gambit, although the percentage score from each opening may be similar, according to databases I have examined:

Italian Game: 41% White wins, 26% drawn, 33% lost by White (total 54%)
English Opening: 37% White wins, 36% drawn, 27% lost by White (total 54%)
King's Gambit: 47% White wins, 15% drawn, 38% lost by White (total 54%)
 Within the Giuoco Piano alone, playing d2-d4 instead of d2-d3 reduces the proportion of draws by 10%. So, you have quite a lot of influence over the style of the game by your opening choices, although these are always negotiated (as it were) with your opponent!

Here is a sorted list of common opening systems, from which you can make your four choices.

- Playing White with 1. e4
 - Playing aggressively as White with 1. e4
 - After 1...e5: Danish Gambit, Giuoco Piano with d2-d4/Max Lange, King's Gambit, Vienna Gambit, Bishop's Opening (Urusoff Gambit), Ruy Lopez with an early d4
 - Against semi-open defences: early d2-d4, advance variations, transposition to Blackmar-Diemer Gambit or other Gambits (e.g. Morra).
 - Playing solidly as White with 1. e4
 - After 1...e5: Centre Game, Bishop's Opening/Giuoco Piano with d2-d3, Ruy Lopez with d2-d4 late or never, Vienna Game,
 - Against semi-open defences: advance variations, King's Indian Attack.
- Playing White with 1. d4
 - Playing aggressively as White with 1. d4
 - After 1...d5: Blackmar-Diemer Gambit, Queen's Gambit with Queen's-side castling,
 - Against Indian defences: King's-side Pawn storms e.g. Samisch vs. King's Indian.
 - Playing solidly as White with 1. d4
 - After 1...d5: Queen's Gambit Declined with O-O, Queen's Pawn games without c2-c4.
 - Against Indian defences: Queen's-side Pawn storms e.g. Classical King's Indian.
- Playing White with the Reti/English
 - Playing (relatively) aggressively as White with the Reti/English
 - King's Indian Attack, Botvinnik system of English.
 - Playing solidly as White with the Reti/English
 - Queen's-side Pawn storms, systems with b2-b3.
- Playing Black
 - Playing Black against 1. e4
 - Playing aggressively as Black against 1. e4

- Sicilian, Alekhine's, Pirc/Modern
- Playing solidly as Black against 1. e4
 - Petroff or other lines with 1...e5, French, Caro-Kann, Modern with ...c6
- Playing Black against 1. d4
 - Playing aggressively as Black against 1. d4
 - Tarrasch Defence, Budapest Gambit, Benko/Benoni, King's Indian, Grunfeld
 - Playing solidly as Black against 1. d4
 - Slav Defence, Queen's Gambit Declined e.g. Tartakower, Nimzo/Queen's Indian
- Playing Black against the Reti/English
 - Playing aggressively as Black against the Reti/English
 - Reversed Sicilian, Dutch systems, King's Indian
 - Playing solidly as Black against the Reti/English
 - Slav, London System

If you don't know what these openings are yet, you might look them up below, but you will need more information than this to play them properly!

Changing your opening repertoire.

It may be from reading things like this that you are thinking about changing your opening choices. There are some things to consider:

- Don't try and change your whole repertoire from a given date. It's much better to experiment with part of your repertoire at a time, and you don't have to play your new line in every game.
- The first thing to do is to get hold of a good verbal summary of the ideas behind the new line(s). [*Don't spend a fortune on specific monographs until you are committed to the line; you are better off owning more general, inclusive titles until you pass 1400 ELO (Class C).*] Reuben Fine's *The Ideas behind the chess openings* is a great place to start, but it is terribly dated. [*He disparages some openings which, fifty years on, are believed to be very playable.*] If you have access to this book, and can bend the ear of a couple of players who are a couple of classes or more above you, this is probably all you need.
There are some brief explanations which are quite nice in "BCO2", the second edition of *Batsford Chess Openings*.

There are also some monographs which cover a variety of openings and which are designed to explain the ideas: some of the best of these are also rather old and out of print like the RHM series "Understanding the ...", or books which cover several openings at once [e.g. *The Italian Game*, Botterill/Harding].

- The next thing is to find some example variations and games. BCO2 is fine for variations, and there are [game databases](#) on the internet for [different openings](#). All of these are totally unannotated. Play over a few lines or games to get a "feel" for the opening - which squares your pieces often come to, and which side of the board to play on.
To get hold of annotated games, try magazines, and games collections like, say, *Alekhine's Best games of Chess*.
- So, now you should know the ideas behind the openings, some of the main lines, and have a feel for how the game may go. The next step is to try it out. Play friendly "quick" games using this opening at your club, or on one of the chess servers; it's nice to find an opponent who will cooperate by agreeing to play your chosen opening. [*I say quick rather than blitz: I have a prejudice that 5-minute chess (G/5) is useless for learning openings, but 10-15 minute chess is very useful. Every so often in the opening you will need to stop and think for 2-3 minutes, which you can do at G/10.*]
This should let you know what the basic variations are that you will meet most often in practice, and the plans most often adopted.
- Then introduce it into your serious games. Again, you don't have to play it in every game; I've been experimenting with **1. e4** as a replacement for the English **1. c4** in my games, but I still play the English if:
 1. a draw is more important than a win, or
 2. my opponent is a known skilful attacking player who hates slow games, or
 3. my opponent is a junior who is likely to be inexperienced in the English, or
 4. my opponent plays a defence to 1.c4 which I like to play against, or
 5. my opponent plays a defence to 1.e4 which I don't like, or
 6. I feel like it!
- Playing a couple of **postal** games with your new opening is very good practice.

A simple openings map.

- [Key](#)

Openings without 1.d4 or 1.e4

There are hundreds of tried and untried moves. I recently came across Larsen's Gambit 59: 1. g3 e5 2. Bg2 d5 3. b4!? Bxb4 4. c4! Stefan Bucker of Norwalde, Germany, has actually invented a little trio of related defensive systems for Black. Amazingly, they occur after some very familiar initial moves:

They are:

The Vulture: 1. d4 c5 2. d5 Nf6 3. c4 Ne4

The Habichd: 1. d4 c5 2. d5 Nf6 3. Nf3 c4

The Woozle: 1. d4 c5 2. d5 Nf6 3. Nc3 Qa5 (idea ...b5)

(The "Habichd" comes from the German phrase for "I've got you" (maybe we would say in English: Gotcha!), and the "Woozle" comes perhaps from English slang "woozy", meaning drunk or befuddled.)

There are some morals to be drawn from the existence of these openings: one gloomy, one cheerful.

1. You cannot anticipate everything. Time spent trying to come up with a "complete", failsafe opening repertoire is doomed to failure. You will get locked inside an arms race where the only winners are the publishers. You are better off studying chess than openings!

2. There is always scope for originality in the opening. Even if you feel yourself being drawn into your opponent's preparation you may be able to head off into untheoretical territory - not by playing a bad-looking move, but perhaps with an odd-looking one, or a good-looking one that just isn't in the books. Tartakower used to say, "Unfashionable, therefore playable"!

1. Na3 *Durkin Opening* (a.k.a. Sodium Attack). Supports c4 but isn't really going anywhere. I recommend 1...e5 in reply. I can't guarantee you will emerge equal but it's a natural way to try.

1. Nc3 *Dunst Opening*. One of the better non-standard lines: White can hit out with e4 or go solid with g3.

1. Nf3    *Reti Opening*. White invites Black to set up a pawn centre;

White can follow up with g3/c4. (The  is for the difficult and subtle nature of many of the main lines - save it for later in your career. This applies also to other modern openings like the English and Catalan.)

1. Nh3   *Amar Opening (Paris Gambit)*. Usually intending 1.Nh3 d5 2. g3 e5 3. f4 Bxh3 4. Bxh3 exf4. [Tartakower played this and even won] but don't you play it until you're as good as Tartakower.

1. a3  *Anderssen Opening*. A way of reserving options. White may follow up naturally with 2.b3 or 2.b4, transposing.

1. a4 [?!] *Meadow Hay Opening*. The name is insulting (implying, a yokel opening). Not really going anywhere: 1...e5 equalises.

1. b3 [!?] *Nimzo-Larsen Opening* a.k.a. Queen Fianchetto Opening. White will allow Black to set up a pawn centre [which can then be used as a target.

1. b4 [!?] *Sokolsky Opening* a.k.a. Polish Opening a.k.a. Orang-Utan Opening. Black is again allowed a pawn centre, but is not given the freedom of ...c5.

1. c3  *Saragossa Opening*. A way of reserving options. 1...e5 should equalise.

1. c4   *English Opening*. A major opening complex. Black can reply

1 ... c5 - Symmetrical Variation

1 ... e5 - Reversed Sicilian

1 ... Nf6 - Indian-style variations

1. d3   *King's Indian Attack*, a.k.a. Mieses Opening. The KIA requires a follow-up with Nf3,g3,Bg2,O-O and then e4 or c3/a4. You can also get into it via 1. Nf3 or 1.e4, and these are more common in practice.

- [Key](#)

Openings with 1.d4

1. d4 

1. d4 Na6  (never seen by your inexperienced author: may intend ...c5)

1. d4 Nc6 [?!] may transpose into the *Kevitz-Trajkovic Defence*: 1.d4 Nf6 2.c4 Nc6.

1. d4 Nf6   leads to various

Indian Defences [e.g...

1. d4 Nf6 2. c4 c5 (with ...e6) - *Modern Benoni Defence*. 

1. d4 Nf6 2. c4 d6 - *Old Indian Defence*. 

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 - *Nimzo-Indian Defence*. 

1. d4 Nf6 2. c4 e6 3. Nf3 b6 - *Queen's Indian Defence*. 

1. d4 Nf6 2. c4 e6 3. Nf3 Bb6 - *Bogo-Indian Defence*. 

1. d4 Nf6 2. c4 e6 3. Nf3 Ne4 - *Dory Defence*. 

1. d4 Nf6 2. c4 e6 3. g3 - *Neo-Catalan Opening*. 

1. d4 Nf6 2. c4 e5 - *Budapest Gambit*. [!?] 

1. d4 Nf6 2. c4 g6 3. Nc3 d5 - *Grunfeld Defence*. 

1. d4 Nf6 2. c4 g6 3. Nc3 d6 - *King's Indian Defence*. 

1. d4 Nh6  (never seen)

1. d4 a5 [?!] (never seen)

1. d4 a6 [!?] (usually intended as a transposition to ...b5 lines)

1. d4 b5 [!?] *Polish Defence*. Black intends ...Bb7 without allowing a block by c4/d5

1. d4 b6 [!?] *English Defence*. Black tempts c4 and e4 which can be undermined with e.g. ...f5

1. d4 c5  *Old Benoni Defence*.

1. d4 c6  (usually transposes to e.g. Slav Defence to Queen's Gambit)

1. d4 d5  (leads to main-line Queen Pawn openings)

1. d4 d6 (usually transposes to e.g. King's Indian Defence)

1. d4 e5 *Englund Gambit.* (a.k.a. Charlick Gambit) Vigorous but unsound. 1.d4 e5 2.dxe5 Nc6 3. Nf3 Qe7 4. Qd5! += (4.Bf4 Qb4+ can lead to trouble).

1. d4 e6 (usually transposes [e.g. to Nimzo-Indian or French Defence])

1. d4 f5 *Dutch Defence.* Black stakes out space on the King's side.

1. d4 f6 *Onc's Defence.* Intends ...Nh6-f7.

1. d4 g5 (loses a pawn: see 1...h6)

1. d4 g6 *Modern Defence.* Black invites White to make a centre with c4/e4 which can then be attacked.

1. d4 h5 [?!] (never seen)

1. d4 h6 [?!] *Borg Defence.* (Grob reversed) Black will play ...g5,...Bg7 and probably ...c5 or ...d5.

1. e3 *Van't Kruij's Opening.* A way of reserving options.

-
- [Key](#)

Openings with 1.e4

1. e4

1. e4 Na6 [?!] (never seen - Benjamin and Schiller call it the *Lemming*)

1. e4 Nc6 [!?] *Nimzovitch Defence*. Black can counter-punch with ...d5 or ...e5, sometimes transposing.

1. e4 Nf6 *Alekhine's Defence*. Black invites 2.e5 Nd5 3.d4, after which ...d6 strikes back at the extended centre.

1. e4 Nh6 [?!] (never seen: may intend ...f5)

1. e4 a5 [?!] (never seen)

1. e4 a6 [!?] *St.George's Defence* (a.k.a. Baker's Defence). Black intends ...b5, ...Bb7 and probably ...e6,...c5 and ...Nf6

1. e4 b5 (loses a pawn: see 1...a6)

1. e4 b6 [?!] *Owen's Defence* a.k.a. Queen Fianchetto Defence. Black invites White to set up a pawn centre which can then be attacked.

1. e4 c5 *Sicilian Defence*. Black will exchange if White plays d4.

1. e4 c6 *Caro-Kann Defence*. Black will counter-punch with ...d5.

1. e4 d5 *Centre Counter Defence* a.k.a. Scandinavian Defence.

1. e4 d6 *Pirc Defence*. Black will develop first] and strike out in the centre later.

1. e4 e5 (leads to the main King Pawn games)

Defences to 1. e4 other than 1...e5 are generally referred to as

Semi-Open Defences

and include the Alekhine, Sicilian, Caro-Kann, Pirc and French.

1. e4 e6 😐 😊 *French Defence.* Black will counter-punch with ...d5.

1. e4 f5 🏹 *The Fred Defence.* Ugh.

1. e4 f6 🏹 *Onc's Gambit.* 2.d4 e5 3. dxe5 Nc6 4.exf6 Nxf6. Ugh.

1. e4 g5 [?!] *Borg Defence.* (Grob reversed). see 1.d4 h6.

1. e4 g6 🏹 *Modern Defence.* (a.k.a. Kotov/Robatsch Defence) Black invites 2. d4; the centre can then be used as a target.

1. e4 h5 🏹 (never seen)

1. e4 h6 [?!] see Borg Defence above.

1. f3 🏹 *Barnes Opening.* Rude players have even followed this up with 2.Kf2 (known as the *Pork Chop*).

1. f4 😐 *Bird's Opening.* Not bad; White can play as if playing the Dutch or follow up with 2.b3.

1. g3 😐 *Benko Opening* a.k.a. King Fianchetto Opening. Often transposes.

1. g4 [!?] 🏹 *Grob's Opening.* Intends a gambit with 1 ... d5; 2 Bg2 Bxg4 (2 ... c6 is safer) 3.c4!

1. h3 😞 *Clemenz Opening.* English IM Michael Basman has played this, along with other 'odd' moves like a3 and g4/b4 (and the same for Black), as a way of

reserving options and tempting opponents to over-commit themselves.

1. h4 *Desprez Opening* a.k.a. Reagan Opening ('*Thoroughly unmotivated and creates weaknesses with only vague promises of future potential*' - BENJAMIN and SCHILLER).

- [Key](#)

Double Queen Pawn Openings

1. d4 d5 (leads to main-line Queen Pawn openings)

1. d4 d5 2. e3 *Colle System*. White is aiming for a 1.e4-style game after Nf3, Bd3, Re1 and e4

1. d4 d5 2. e4 (dxe4 3. Nc3 Nf6 4. f3) *Blackmar-Diemer Gambit*. Tricky and with something of a cult following.

1. d4 d5 2. f4 (or 2.e3+ 3.f4) *Stonewall Opening*. Playing for a slow K-side attack, but leaves weak points. Not good enough, really.

1. d4 d5 2.Nc3 (2...Nf6 3.Bg5) [!?] *Veresov Opening* a.k.a. Richter-Veresov. White often aims for e4, sometimes with f3, although can play more quietly.

1. d4 d5 2.c4 *Queen's Gambit*. The main weapon of 1.d4 players

1. d4 d5 2.c4 Nc6 [!?] *Queen's Gambit, Tchigorin Defence*. Tricky, trappy difficult chess.

1. d4 d5 2.c4 Nf6 [!?] *Queen's Gambit, Marshall Defence*. Often played by beginners, and not to be rushed at.

1. d4 d5 2.c4 c5 [?!]  *Queen's Gambit, Symmetrical Defence.* White should be able to preserve an advantage.

1. d4 d5 2.c4 c6 [!?]  *Queen's Gambit, Slav Defence.* A good defence, combining solidity with possibilities for playing for a win.

1. d4 d5 2.c4 dxc5 [!?]  *Queen's Gambit Accepted.* More open and fighting approach than the Orthodox.

1. d4 d5 2.c4 e5   *Queen's Gambit, Albin Counter-Gambit.* A difficult gambit line, usually mistrusted, sometimes tried with success.

1. d4 d5 2.c4 e6   *Queen's Gambit Declined, Orthodox Defence.* The main highway of the QGD, with many sub-variations.

1. d4 d5 2.c4 e6 3. g3    *Catalan Opening.* Slow, solid, subtle.

- [Key](#)

Double King Pawn Openings

1. e4 e5  (leads to main-line King Pawn openings)

1. e4 e5 2. Bc4   *Bishop's Opening.* Under-rated for many years, now taken more seriously. Often played at GM level in a very solid way, which I don't think you should imitate until you have a good few years experience.

1. e4 e5 2. Nc3   *Vienna Game and Vienna Gambit (3.f4).* Worth a look:

not a real kick-and-rush opening but has its points.

1. e4 e5 2. Ne2  *Alapin's Opening*. Intends f4 without loss, but is too slow a move for this stage of the game.

1. e4 e5 2. Nf3 Nc6 3. Bb5   *Ruy Lopez*. Very large opening system: the main weapon of many 1.e4 players. An opening for life.

1. e4 e5 2. Nf3 Nc6 3. Bc4  (generally) *Italian Game*. Just the sort of open, tactical chess you should be playing.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5   *Giuoco Piano*. A good training ground for your early chess games.

1. e4 e5 2. Nf3 c6 3. Bc4 Bc5 4. b4   *Evans' Gambit*. A sharp and enterprising line, which sadly has not really survived Lasker's scrutiny.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Be7   *Hungarian Defence*. Unnecessarily passive, but not bad.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6   *Two Knights' Defence*. A good counter-attacking line.

1. e4 e5 2. Nf3 Nc6 3. Be2  *Taylor Opening*. Recently explored, but no great discovery.

1. e4 e5 2. Nf3 Nc6 3. Nc3 Bb4  *Three Knights' Game*. A way of trying to avoid the Four Knights. (3...Bc5 is not good)

1. e4 e5 2. Nf3 Nc6 3. Nc3 Nf6  *Four Knights' Opening*. Solid, square, often

stodgy.

1. e4 e5 2. Nf3 Nc6 3. c3  *Ponziani Opening*. Slow, but some interesting lines if Black stirs things up.

1. e4 e5 2. Nf3 Nc6 3. d4   *Scotch Opening*. Fashionable recently, worth looking at.

1. e4 e5 2. Nf3 Nc6 3. d4 exd4 4. c3  *Goring Gambit*. Not fashionable [but also worth looking at.

1. e4 e5 2. Nf3 Nc6 3. g3   *King's Indian Attack*. Slow but aggressive: not at its best in this form but often used against the half-open defences such as the French and Caro-Kann.

1. e4 e5 2. Nf3 Nf6  *Petroff Defence*. Recently very fashionable, enough to make people look at the Bishop's Opening to avoid it.

1. e4 e5 2. Nf3 d5  *Queen's Pawn Counter-Gambit*. Unsound.

1. e4 e5 2. Nf3 d6  *Philidor's Defence*. Solid but nothing special: may lead to a slower game than White would prefer.

1. e4 e5 2. Nf3 f5  *Latvian Counter-Gambit*. The line with 3. Bc4 probably wins for White, although 3. Nxe4 Qf6 4. Nc4 is +=

1. e4 e5 2. Nf3 f6  *Damiano's Defence*. Unsound.

1. e4 e5 2. d4 exd4 3. Qxd5  *Centre Game*. 3...Nc6 simply gains time and White will struggle to equalise against accurate play by Black.

1. e4 e5 2. d4 exd4 3. c3   *Danish Gambit*. The way to liven up the Centre Game, although Black can decline or return the gambit with good chances.

1. e4 e5 2. f4   *King's Gambit*. Bold, vigorous, dangerous. Black can decline or return the gambit pawn, and even offer a gambit with ...d5, but in no case can Black avoid a complex game with a full board.

Key

Recommendation

Popular opening [books or other support material readily available]

Good opening for juniors

[!?] Interesting or tricky

[?!] Dubious or difficult

Too risky

Not recommended

Definitely not recommended

Style

Solid - won't get you into trouble

Active (White) or counterattacking (Black)

Trappy

Introduction

The Senior American Master Ken Smith, who died last month (February 1999), was an advocate of gambits. He was a noted practitioner of the Morra Gambit against the **Sicilian** , viz.: **1. e4 c5 2. d4 cxd4 3. c3**), which some American players still refer to as the Smith-Morra Gambit.

Moreover, Ken also recommended that players, as part of their development, should adopt, at least temporarily, a repertoire of gambits. He thought that gambit play was not only generally good training in the arts and whiles of attack and defence, but also gambits give the whole endeavour a certain urgency. When you are a Pawn down, you must look at every move critically, and play with the greatest energy and incisiveness, or you will surely lose. It's that extra urgency that Ken feels you gain most from later in your development. He actually put the argument a little more strongly on his website (<http://www.chessdigest.com>) where he writes:

"STUDY AND MASTERY OF THE OPENINGS COME IN THIS ORDER:.

A.Forcing Opening and Defenses (Minor/Inter players, USCF classes D/C)

B.Basic Opening System (Major/County players, USCF classes C/B)

C.Add Gambits (County Players , Class A & above)

D.Sharp critical lines-the so called "long variations"

E.Evolution to closed lines, if this suits your style "

He goes on to say about Class A players:

"Now is the time the boys will be separated from the men. It is the biggest decision you must be willing to make in your chess career. YOU MUST ADD GAMBITS TO YOUR OPENING SYSTEM (Note: I said ADD-NOT GIVE UP your basic system). You must play them, win with them, and lose with them. There is no substitute. Being a pawn down, you will have to dig into each position on each move. You will learn to use that extra space and tempo. You will develop that "killer instinct" and learn to handle open positions-being ready when that closed position will surely become open. Those than cannot stand to lose games and rating points because they are converting to gambit play ARE HOPELESS in my book. Do not cry with them when they are on "that chess hill they can't climb", and do not feel sorry when they start slipping backward. For with stubbornness and cowardice, they did not play gambits and dug their own chess graves!"

Tell 'em, Ken! I'm not entirely persuaded of that - there are many roads to Rome - but that players should understand how to of play for and against gambits is not in question.

Timoschenko,G - Karpov,A, Moscow (1), 1967

1.e4 e5 2.Bc4 Nf6 3.d4 exd4 4.Nf3 Nxe4 5.Qxd4 Nf6 6.Bg5 c6 7.Nc3 d5
8.0-0-0 Be7 9.Rhe1

Totally developed inside 9 moves - what a great gambit! White even won (54 moves) although at the moment Black is safe enough.

Principles of gambit play

There are a variety of principles to get to grips with:

Principle 1. A gambit is a sacrifice of a Pawn to gain some return - quicker development, greater command of the centre, or both.

We can see this perhaps most clearly in the Danish Gambit:

1.e4 e5 2.d4 exd4 3.c3 dxc3 4.Bc4 cxb2 5.Bxb2

For an investment of two Pawns White has two pieces developed and a greater command of the centre. White's Bishops are nicely placed to put pressure on the centre and King's-side, and the open lines are avenues along which White hopes to attack using the advantages in development and mobility. Great development, great control of the centre - all for two Pawns. Is it worth it?

It used to be said that three tempi are worth a Pawn. By this valuation White is about four tempi behind (or a Pawn and a tempo). The advantage in development is not to be assessed in the immediate aftermath of a gambit, because the gambiteer may have so much activity that the opponent may have to waste time untangling before developing. So, don't count developing moves made, but moves yet to be made to complete development. This is very clear in the Morra:

1. e4 c5 2. d4 cxd4 3. c3 dxc3 4. Nc3

Now all Black has to do is develop a piece and he is simply a Pawn up - right?

4...Nc6

No, it's not so simple, because Black cannot develop normally. For a start, White can develop both Bishops without further pawn moves, whereas Black must make two Pawn moves to develop the Bishops. Also, straightforward developing moves can lead to White being able to strike immediately:

5.Nf3 d6 6.Bc4 Nf6? 7.e5! +/-

e.g. 7...Nxe5?? 8.Nxe5 dxe5 9.Bxf7+ or 7...dxe5? 8.Qxd8+ Nxd8 9.Nb5 with a strong attack

and back in the Danish:

"Richard Hall, a 51 year old solicitor specialising in licensing law, has won the British CC Championship. Richard receives a prize of £200, the title of British CC Champion until the next championship is decided, and the British Master title for life." -- Reg Gillman, British Chess Magazine

Danish Gambit

1.e4 Nc6 2.d4 e5 3.Nf3 exd4 4.c3 dxc3 5.Bc4 cxb2 6.Bxb2 d6 7.Nc3 Be7 8.Qb3 Nh6 9.Nd5 f6 10.Nf4

Much stronger than: [10.0-0 Na5 Csom-Barczay, Hungary 1967]

10...Bf8 11.0-0 Ne5 12.Nd4 Nxc4 13.Qxc4 c6 14.Rae1 Nf7 15.Nfe6 Ne5 16. Qb3 Bxe6 17.Nxe6 Qd7 18.f4 Ng6

19.e5

This, coupled with White's next, completely breaks up Black's defensive set-up.

19...fxe5 20.Ba3 Be7 21.Nxg7+ Kd8 22.fxe5 d5 23.e6 Qc7 24.Bxe7+ Nxe7
25.Qa3 b5 26.Rf7 b4 27.Qf3 Qd6 28.Qf6 Qc5+ 29.Kh1 h6 30.Qf4 1-0

[Notes by Richard Hall, BCM 117 (8), pp.438-439]

Principle 2. The best way to refute a gambit is to accept it (Steinitz)

We are told as juniors:

Don't snatch Pawns in the opening, it's not worth falling behind in development

This is probably good advice, in that it concentrates the mind on *development*

It is probably better to say:

Don't snatch material in the opening, but destroying central pawns is allowed

There are *two* aims to the opening: development is one, central control is the other - and in those terms, taking central Pawns is quite encouraged.

It surprises me how often I see gambits *declined* at club level. Sometimes I hear people say they declined "on principle". There is **no** principle that says, " *decline free Pawns* ". In fact, there is advice that says **always take a central Pawn if it is offered** (Lasker).

It's interesting that the GM approach to the Morra Gambit is often " *yum yum, a free Pawn* " (see, for example, Gallagher's *Beating the Anti-Sicilians*). [Karpov has also commented that there is no need to gambit a Pawn against the Sicilian because White gets an attack anyway!]

The thing is, **don't** try and hang on to it, let your opponent waste time trying to get it back - or give it back yourself with an early ...d5 to get on with your own development (see below).

In fact it's not just central Pawns that should be grabbed, if you know what you are doing. If you know not just about development, but also the initiative and

central control, we can start to see how lines like the Sicilian Najdorf Poisoned Pawn can be viable:

Nunn,J - Kasparov,G Brussels (1), 1986

1.e4 c5 2.Nf3 d6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 a6 6.Bg5 e6 7.f4 Qb6 8.Qd3 Qxb2 9.Rb1 Qa3

Here we are, the World Champion breaking every opening rule in the book against one of the world's top theoreticians and most feared tacticians, our very own John Nunn. And yet... 0-1 (27 moves). Black has no weaknesses, central control, and White must attack with the urgency that a long-term material disadvantage obliges.

Principle 3. Do not hang on to accepted material, but let your opponent tie themselves up trying to get it back, then return it for other advantages in development or co-ordination

At the opening of the twentieth century, gambit play was already in decline, and here's why:

Mieses-Maroczy, Monte Carlo 1902.

1.e4 e5 2.d4 exd4 3.c3 dxc3 4.Bc4 cxb2 5.Bxb2

White's pawn sacrifices have yielded a dangerous attacking position. How should you defend against a gambit like this?

5...d6 6.Ne2 [6.f4] 6...Nc6 7.O-O Be6

neutralising the glare of the Bishop towards f7 and seeking exchanges

8.Bd5 Nf6 9.Qb3 Qc8 10.Nf4 Bxd5 11.exd5 Ne5 12.Re1

How would you play here?

12...Be7 !

absolutely the correct and modern idea. Black returns material to complete development, and will emerge with the upper hand

13.Bxe5 dxe5 14.Rxe5 Qd7 ! 15.Qg3

[15.Qxb7 0-0 when White's position is uncoordinated and under-developed]

15...0-0-0 16.Qxg7 Qd6 17.Qg5 Rhe8 18.Nd2 Nd7

Black has exchanged his extra material for a superior position. White's strategy has been a shambles, and must concede the exchange.

19.Rxe7 Qxe7 20.Qg3 Qb4 21.Nf3 Rg8 22.Qh4 Qc3 23.Rb1 Qxf3 resigns

The exact moves have been improved on since, but this strategy of Black was the death-knell for the romantic sacrificial openings. Line

Principle 4. Other best ways to refute gambits include declining them

All right, you don't have to take everything you are offered. If you know the 3...Nf6 system against the Morra backwards, it might make more sense to play that than accept the gambit.

I've given Richard Towers a fair amount of stick in the past for inevitably pushing past gambited Bishop Pawns, e.g.

1.e4 e5 2.Nf3 Nc6 3.d4 exd4 4.c3 d3!?

or

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 e3!?

The attractions are that you "avoid theory" and "don't open a file for attack", but the reasons for the stick are various:

(a) By declining you may just as easily fall into a dangerous or disadvantageous line, if you don't know the theory. For example, Alan Maynard says his opponents often declined the Goring Gambit, but not by pushing past, so he could quickly play c3xd4 with a monster Pawn roller in the centre.

There are good and bad ways of declining gambits!

Even the 4...d3 line is reckoned to be += by BCO2.

1.e4 e5 2.Nf3 Nc6 3.d4 exd4 4.c3 d3?! 5.Bxd3 d6

In terms of opening goals - smooth active development, a stake in the centre, having space for manoeuvre and so on - Black is scoring zero out of three. [The same thing applies to the line 4...e3 in the Blackmar-Diemer.]

6.Bf4 Be7 7.h5 Nf6 8.Nbd2 Bd7 9.Qc2 +=

This passive position for Black may suit Richard but it's not my style.

Perhaps try instead

1.e4 e5 2.Nf3 Nc6 3.d4 exd4 4.c3 d5!?

Now **5. exd5 Qxd5 6. cxd4 Bg4**

...and Black is way ahead in development with a positive plan of campaign against the IQP in the middle- and end-game.

7. Be2 Nf6 8. Nc3 Bb4 9. Bb2 Bxc3 10. Bxc3 Bxf3 11. Bxf3 Qc4!

Isn't that better? At least two out of three, I reckon.

(b) If you do know the theory, play the strongest moves, whether they involve acceptance or declining of gambit Pawns. **Play the strongest moves you can**, regardless of what you think your opponent knows. (After all, they might know how to refute your second-rate choice as well, as above)

(c) Although I did hear of one ex-Soviet GM (Gurevich?) being faced with the Blackmar-Diemer as Black, and playing, you guessed it:

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 e3!?

Was this the recommendation of top-secret Russian research? No, " *I hadn't seen this before and taking the Pawn looked complicated*

ILLUSTRATIVE GAMBIT LINES

1.e4 e5

[1...d5 2.d4 dxe4 3.Nc3 Nf6 4.f3 e3 (4...exf3 5.Nxf3 Bg4)

1...c5 2.d4 (2.Nf3 d6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 a6 6.Bg5 e6 7.f4 Qb6) 2...cxd4 3.c3 dxc3 4.Nxc3 Nc6 5.Nf3 d6 6.Bc4 **A)** 6...Nf6 7.e5 Nxe5 (7...dxe5 8.Qxd8+ Nxd8 9.Nb5) 8.Nxe5 dxe5 9.Bxf7+;

B) 6...a6]

2.d4

[2.Nf3 Nc6

A) 3.Bc4

A1) 3...Nf6 4.d4 exd4 5.0-0 Bc5 is the principled line of the Max Lange, genuinely unclear and a good way to win (5...Nxe4 is a successful way for Black to equalise but is a poor way to play for a win with Black

A2) 3...Bc5 4.c3 Nf6 5.d4 exd4 6.cxd4 Bb4+ 7.Nc3

A2a) 7...Nxe4 (iv) don't snatch material in the opening, but destroying central pawns is allowed 8.0-0 Nxc3 9.bxc3 Bxc3

a famous gambit position (9...d5 (i) don't be afraid to return material to complete your development 10.Ba3 and now Black's greed for material must be tempered with caution (10.Qb3) 10...Bxa1 yields a fine attacking position for White;

A2b) 7...d5 (iii) don't snatch material in the opening 8.exd5 Nxd5 9.0-0;

B) 3.d4 3...exd4

B1) 4.Bc4 Scotch Gambit 4...Bc5 5.0-0 d6 6.c3 dxc3 7.Nxc3 Be6 (7...Nf6 8.Bg5) 8. Bxe6 fxe6 9.Qb3 Qc8 10.Be3 Bxe3 11.fxe3 Nf6 12.Ng5 Nd8 13.Rac1 a6 14.Na4 Qd7 15.e5 h6 (15...dxe5 16.Nc5;

15...b5 16.exf6 bxa4 17.Qc2 gxf6 18.Ne4 0-0 19.Nxf6+ Rxf6 20.Rxf6) 16.Nf3 b5 (16...Nd5) 17.exf6 bxa4 18.Qc2 gxf6

19.Qg6+ Ke7 ? (19...Qf7 20.Qxf7+ Nxf7 21.Rxc7 0-0 20.Ne5 dxe5 21.Qxf6+ Staunton-von Jaenisch, 1853;

B2) 4.c3 the Goering gambit 4...dxc3 (4...d3 is not quite satisfactory according to modern theory 5.Bc4 Nf6 (5...cxb2 6.Bxb2 Bb4+ 7.Nc3 Nf6 8.Qc2 d6 9.0-0-0 yields a vigorous initiative for the pawns 6.Nxc3

6...Bb4 7.0-0 Bxc3 8.bxc3 d6 9.e5 dxe5 10.Ng5 Be6 11.Bxe6 fxe6 12.Qb3 with some initiative and a promise to regain the pawn;

2.f4 exf4 3.Nf3 g5 (3...Be7 a more modern approach like the Cunningham Variation is more awkward for White 4.Bc4 g4

the famous Muzio Gambit: White does not shrink from sacrifice of pieces as well as pawns 5.0-0 gxf3 6.Qxf3 Qf6 7.e5 Qxe5

interestingly, the most promising line may be to sacrifice some more

A) 8.Bxf7+ the double Muzio Gambit - outrageous! 8...Kxf7 9.d4 Qxd4+ (9...Qf5 10.g4 Qg6 11.Bxf4 Nf6 12.Be5 d6 13.Bxf6 Bxg4 14.Qg2 Rg8 15.Kh1 Bf5 16.Qd5+) 10.Be3 Qf6 11.Nc3 Ne7 12.Nd5

with an attack for the material - is it enough? 12...Nxd5 13.Qxd5+ Qe6 14.Rxf4+ Kg8 15.Qg5+ Qg6 16.Rxf8+ Kxf8 17.Rf1+;

B) 8.d3 8...Bh6 9.Nc3 Ne7 10.Bd2 Nbc6 11.Rae1

still with some initiative]

2...exd4 3.c3 dxc3

[3...d3 4.Bxd3 declining the gambit in this way is quite common, although probably not the best method in this case]

4.Bc4 cxb2 5.Bxb2

White's pawn sacrifices have yielded a dangerous attacking position. How should you defend against a gambit like this? **5...d5** (i) do not be afraid to return some or all of your gains in order to catch up in development

[5...d6 6.Ne2 (6.f4) 6...Nc6 7.O-O Be6 neutralising the glare of the Bishop towards f7 and seeking exchanges 8.Bd5 Nf6 9.Qb3 Qc8 10.Nf4 Bxd5 11.exd5 Ne5 12.Re1

12...Be7 ! absolutely the correct and modern idea. Black returns material to complete development, and will emerge with the upper hand 13.Bxe5 dxe5 14.Rxe5 Qd7 ! 15.Qg3 (15.Qxb7 O-O when White's position is uncoordinated and under-developed 15...O-O-O 16.Qxg7 Qd6 17.Qg5 Rhe8 18.Nd2 Nd7

Black has exchanged his extra material for a superior position. White's strategy has been a shambles, and must concede the exchange. 19.Rxe7 Qxe7 20.Qg3 Qb4 21.Nf3 Rg8 22.Qh4 Qc3 23.Rb1 Qxf3 resigns: Mieses-Maroczy, Monte Carlo 1902. The exact moves have been improved on since, but this strategy of Black was the death-knell for the romantic sacrificial openings.]

6.Bxd5 Bb4+

[6...Nf6 7.Bxf7+ Kxf7 8.Qxd8 Bb4+ 9.Qd2 Bxd2+ 10.Nxd2 Re8

the rival majorities look exciting, but the opposite-coloured bishops dampen it a little. Chances in any event are even]

7.Nc3 Bxc3+ 8.Bxc3 Nf6 (ii) seek to reduce the attacking potential of your opponent through exchanges **9.Qf3 Nxd5 10.exd5 O-O**

white still has some attacking chances but Black looks secure (no weaknesses and has an extra pawn: =+ Keres

Exeter Chess Club: Contempt for Pawns

"The most important feature of the chess position is the activity of the pieces. This is absolutely fundamental in all phases of the game (opening, middlegame and especially endgame)." -- Michael STEAN, in Simple Chess.

"One of the main aims has been to highlight the differences in approach between a Grandmaster and a weaker player, and to try and narrow the gap. To some extent this comes down to technical matters - more accurate analysis, superior opening knowledge, better endgame technique and so forth; but in other respects the difference goes deeper and many readers will find that they need to rethink much of their basic attitude to the game. One example of this would be the tremendous emphasis which is placed on the dynamic use of the pieces, if necessary at the expense of the pawn structure, or even of material. This is no mere question of style; it is a characteristic of the games of all the great players." -- Peter GRIFFITHS, Introduction to Secrets of Grandmaster Chess (Nunn/Griffiths).

Introduction

A while ago I bought a collection of the writings of Cecil Purdy, to whom I was introduced by Irving Chernev. Chernev is better known, but Purdy was the better player (a world correspondence champion) and at least as good a writer. I'm always quoting his "*Examine moves that smite!*", and while reading his book came across another memorable piece of advice:

"We all play a great deal of rotten chess - some more than others - and one of the roots of the trouble is the tyranny of the Pawn.

"There are still many players whose idea of winning a game consists in grabbing a Pawn and struggling through somehow to an endgame - where, they fondly believe, a Pawn plus is an automatic win. Here we see the tyranny of the Pawn in its vilest and most nauseating form. But there are degrees, and even in master play we find weak moves being made through an insufficient contempt for Pawns."
- CJSP

What is on Purdy's mind is the same thought expressed more temperately by Stean and Griffiths above. Pawns are no use without active pieces.

Capablanca,J - Lasker,E [C80] St.Petersburg, 1914

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.O-O Nxe4 6.d4 b5 7.Bb3 d5 8.dxe5 Be6 9.Nbd2 Nc5 10.c3 d4 11.cxd4 Nxd4 12.Nxd4 Qxd4 13.Bxe6 Nxe6 14.Qf3 Rd8 15.a4 Qd5 16.Qxd5 Rxd5 17.axb5 axb5 18.Ra8+ Nd8 What would you play here?

19.Ne4!!

hitting c5, allowing f2-f4, threatening Nc3...

[19.Nf3 "Tarrasch says that 99 players out of hundred would have played this"]

19...Rxe5 Now White's pieces get into good positions. **20.Rd1 Be7 21.f3**

"This quiet move shows how silly it is to lose your head just because you have given up a Pawn."

21...Rf5

"(?) *Black caves in*" - Tydoki & Long.

22.Rc8

"*And Black must give up the c-Pawn*"

It remains to be seen if White's continuing initiative is enough to bring more than recovery of the Pawn deficit.

22...0-0 23.Rxc7 Bb4 24.Be3 Ne6 25.Rcd7 Rc8 26.R1d5 Rxd5 27.Rxd5 Rc2 28.b3 Rb2 29.Rxb5 Rxb3 30.Bd2 Bc5+ 31.Rxc5 Nxc5 32.Nxc5 Rb2 33.Be3 Re2 34.Bf2 f6 35.Kf1 Ra2 36.g4 Kf7 37.Ne4 h6 38.Kg2 Ra3 39.f4 Rb3 40. Ng3 Ra3 41.Nf1 Rd3 42.Ne3 Rc3 43.Kf3 Ra3 44.f5 Ra2 45.Nd5 Rb2 46.Nf4 Ra2 47.h4 Ra5 48.Bd4 Ra3+ 49.Be3 Ra5 50.Nh5 Ra4 51.Ng3 Kg8 52.Ne4 Kf7 53.Bd2 Ra1 54.Bc3 Rf1+ 55.Nf2 Rc1 56.Bd4 Re1 57.Ne4 Rf1+ 58.Bf2 Ra1 59.Kf4 Ra4 60.Bc5 Rc4 61.Kf3 Rc1 62.Bf2 Ra1 63.Kf4 Ra4 64.Kf3 Ra3 + 65.Be3 Ra5 66.Nc5 Ra1 67.Ne6 Ra3 68.Ke4 Ra4+ 69.Bd4 Rb4 70.Kd3 Rb3+ 71.Ke4 Rb4 72.Kd5 Rb1 73.g5 hxg5 74.hxg5 fxg5 75.Nxg5+ Kg8 76. 27.cxb7+ Kb8 28.Bxh3 Rxh3 29.Qe8+ 1-0

A deeply imperfect game, of course, but one which I hope shows the spirit if not the rigour of Purdy's advice.

We can and should sacrifice Pawns for:

- Development
- Open lines for the attack
- Initiative
- Activity

- Counterplay
- To make a mess

We can see examples of all of these below.

Pawn sacrifices for development in the opening

1.e4 e5 2.d4 exd4 3.c3 dxc3

[3...d3 4.Bxd3 declining a gambit in this way is quite common, although probably not the best method in this case]

4.Bc4 cxb2 5.Bxb2

White's pawn sacrifices have yielded a dangerous attacking position. How should you defend against a gambit like this?

5...d5

(i) do not be afraid to return some or all of your gains in order to catch up in development

[5...d6 6.Ne2 (6.f4) 6...Nc6 7.0-0 Be6 neutralising the glare of the Bishop towards f7 and seeking exchanges 8.Bd5 Nf6 9.Qb3 Qc8 10.Nf4 Bxd5 11.exd5 Ne5 12.Re1

12...Be7 !

absolutely the correct and modern idea. Black returns material to complete development, and will emerge with the upper hand

13.Bxe5 dxe5 14.Rxe5 Qd7 ! 15.Qg3 (15.Qxb7 0-0 when White's position is uncoordinated and under-developed) 15...0-0-0 16.Qxg7 Qd6 17.Qg5 Rhe8 18.Nd2 Nd7

Black has exchanged his extra material for a superior position. White's strategy has been a shambles, and must concede the exchange.

19.Rxe7 Qxe7 20.Qg3 Qb4 21.Nf3 Rg8 22.Qh4 Qc3 23.Rb1 Qxf3 resigns: Mieses-Maroczy, Monte Carlo 1902.

The exact moves have been improved on since, but this strategy of Black was the death-knell for the romantic sacrificial openings.]

6.Bxd5 Bb4+

[6...Nf6 7.Bxf7+ Kxf7 8.Qxd8 Bb4+ 9.Qd2 Bxd2+ 10.Nxd2 Re8

the rival majorities look exciting, but the opposite-coloured bishops dampen it a little. Chances in any event are even]

7.Nc3 Bxc3+ 8.Bxc3 Nf6

(ii) seek to reduce the attacking potential of your opponent through exchanges

9.Qf3 Nxd5 10.exd5 0-0

white still has some attacking chances but Black looks secure (no weaknesses and has an extra pawn: =+ keres

Related ideas in other gambit openings:

[2.Nf3 Nc6

A) 3.Bc4 Bc5 4.c3 Nf6 5.d4 exd4 6.cxd4 Bb4+ 7.Nc3

7...Nxe4

(iv) don't snatch material in the opening, but destroying central pawns is allowed

(7...d5

(iii) don't snatch material in the opening

8.exd5 Nxd5 9.0-0)

8.0-0 Nxc3 9.bxc3 Bxc3

a famous gambit position (9...d5

(i) don't be afraid to return material to complete your development)

10.Qb3 or 10.Ba3 and now Black's greed for material must be tempered with caution since 10...Bxa1 yields a fine attacking position for White (Bernstein);

B) 3.d4 3...exd4

B1) 4.Bc4 Scotch Gambit 4...Bc5 5.0-0 d6 6.c3 dxc3 7.Nxc3 Be6 (7...Nf6 8.Bg5) 8. Bxe6 fxe6 9.Qb3 Qc8 10.Be3 Bxe3 11.fxe3 Nf6 12.Ng5 Nd8 13.Rac1 a6 14.Na4 Qd7 15.e5 h6

(15...dxe5 16.Nc5; 15...b5 16.exf6 bxa4 17.Qc2 gxf6 18.Ne4 0-0 19.Nxf6+ Rxf6 20.Rxf6)

16.Nf3 b5 (16...Nd5)

17.exf6 bxa4 18.Qc2 gxf6

19.Qg6+ Ke7 ? (19...Qf7 20.Qxf7+ Nxf7 21.Rxc7 0-0 +/-)

20.Ne5 dxe5 21.Qxf6+ Staunton-von Jaenisch, 1853;

B2) 4.c3

the Goering gambit 4...dxc3 (4...d3 not quite satisfactory according to modern theory) 5.Bc4 Nf6

(5...cxb2 6.Bxb2 Bb4+ 7.Nc3 Nf6 8.Qc2 d6 9.0-0-0 yields a vigorous initiative for the pawns)

6.Nxc3

6...Bb4 7.0-0 Bxc3 8.bxc3 d6 9.e5 dxe5 10.Ng5 Be6 11.Bxe6 fxe6 12.Qb3 with some initiative and a promise to regain the pawn;

2.f4 exf4 3.Nf3 g5

(3...Be7 a more modern approach like the Cunningham Variation is more awkward for White)

4.Bc4 g4

the famous Muzio Gambit: White does not shrink from sacrifice of pieces as well as pawns 5.0-0 gx f3 6.Qxf3 Qf6 7.e5 Qxe5

interestingly, the most promising line may be to sacrifice some more

A) 8.Bxf7+ the double Muzio Gambit - outrageous! 8...Kxf7 9.d4 Qxd4+

(9...Qf5 10.g4 Qg6 11.Bxf4 Nf6 12.Be5 d6 13.Bxf6 Bxg4 14.Qg2 Rg8 15.Kh1 Bf5 16.Qd5+)

10.Be3 Qf6 11.Nc3 Ne7 12.Nd5

with an attack for the material - is it enough? 12...Nxd5 13.Qxd5+ Qe6 14.Rxf4+ Kg8 15.Qg5+ Qg6 16.Rxf8+ Kxf8 17.Rf1+;

B) 8.d3 8...Bh6 9.Nc3 Ne7 10.Bd2 Nbc6 11.Rae1

still with some initiative]

Pawn sacrifices for open lines

Gausel,E - Davies,N [B06] *Oslo, 1988, 1988

1.d4 d6 2.e4 g6 3.Nc3 Bg7 4.Bc4 Nc6 5.Be3 Nf6 6.h3 e5

 2. [Lasker Ed. - Thomas \(London\), 1912](#)

What can we infer from Pillsbury's advice? Castling is desirable: it whips the King out from under the central battle, and it gets a Rook into play where lines may be opened. But it is also a move which must be weighed against other moves. Careless, automatic castling can waste time that could be better spent on other things, and you can also castle from the frying pan into the fire. Below I'll look at the whys and

wherefores of castling.

Castling not at all

I show this game to all the juniors. Get your King out of the way! And if your opponent doesn't castle, open up lines to the uncastled King for your Rooks.

Wojciechowski - Weiss (Munich) [C15]

1. e4 e6 2. d4 d5 3. Nc3 Bb4 4. Nge2 dxe4 5. a3 Bxc3+ 6. Nxc3 f5

?! The only way to hang on to the pawn, but it would have been safer to let it go. (Nimzo and Weiss did know this, but must have thought themselves capable of the defence.)

7. f3 exf3 8. Qxf3 Qh4+

[8...Qxd4 9.Qg3 Nf6 10.Qxg7 Qe5+ 11.Be2 Rg8 12.Qh6 Rg6 13.Qh4 Bd7 14.Bg5 Bc6 15.0-0-0 Bxg2 16.Rhe1 Be4 17.Bh5 Nxh5 18.Rd8+ Kf7 19.Qxh5 Kg7 20.Nxe4 fxe4 21.Bh6+ Kf6 22.Rf8+ 1-0 Alekhine Alexander-Nimzowitsch Aaron/Bled 1931]

9. g3 Qxd4 10. Be3 Qg4 11. Qg2

White must preserve the Q having sacrificed two pawns

11... Nf6 12. Be2 Qg6 13. O-O-O Nc6 14. Nb5 Qf7 15. Bc5 a6 16. Bf3 Nd8
17. Qd2 Nd5 18. Bxd5! axb5 19. Rhe1

White's major pieces are the main artillery in the attack against the uncastled King

19... Bd7 20. g4 Nc6 21. gxf5 Qxf5 22. Bxe6 Bxe6 23. Qd7+ 1-0

Castling into it

This is the opposite fault: castling into an area where lines are more easily opened up against you.

Blackburne - Blanchard (London) [C30] , 1891

1. e4 e5 2. f4 Bc5 3. Nc3 Nc6 4. Nf3 exf4 ? 5. d4 Bb4 6. Bxf4 d5 7. e5 Bxc3 + 8. bxc3 Be6 9. Bd3 h6 10. O-O Nge7 11. Rb1

a rook's first duty is to seize the open files (or half-open ones)

11... b6 12. Qd2 O-O

optimistic!

13. Bxh6

sacrifices like this don't take much thought...

13... gxh6 14. Qxh6 Ng6 15. Ng5 Re8 16. Rxf7

[16. Qh7+ or 16.Bxg6 both win]

16... Bxf7 17. Qh7+ Kf8 18. Qxf7# 1-0

Dubois - Steinitz Wilhelm (London (England)) [C55] 1862

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. O-O Nf6 5. d3 d6 6. Bg5 h6

Black, not having castled, can advance on the King's-side with impunity.

**1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 a6 6. Bg5 e6 7. f4 Be7 8.
Qf3 Qc7 9. O-O-O O-O?!**

Nigel Holloway's infamous Suicide Variation of the Najdorf Sicilian.

10. Bd3!? critical

10... Nc6 11. Nxc6 bxc6 12. e5 dxe5 13. Qh3

[13. Ne4 Nd5 14. Bxe7 Nxe7 15. Ng5 h6 16. Nh7 Rd8-/+ Helman-Holloway, NCC 1973]

13... h6 14. Bxh6 gxh6 15. Qxh6 Rd8 and 16. g4 [16. Rhe1 "or almost anything else" and no-one could find a decisive line for White]

[10. Qg3 Nbd7 11. Bd3 b5 12. Rhe1 b4 13. Nd5 exd5 14. Nf5+- Hartston-Holloway, GB chp 1973 - "being Bill Hartston, he claimed that he thought of this over the board".]

Hoffmann - Petroff (Zt, Warsaw (Poland)) [C53] castling: into it?, 1844

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. e5 Ne4 7. Bd5 Nxf2 8. Kxf2 dxc3+ 9. Kg3 cxb2 10. Bxb2 Ne7 11. Ng5 Nxd5 12. Nxf7

12... O-O! 13. Nxd8 Bf2+ 14. Kh3 d6+ 15. e6 Nf4+ 16. Kg4 Nxe6 17. Nxe6 Bxe6+ 18. Kg5 Rf5+ 19. Kg4 h5+ 20. Kh3 Rf3# 0-1

Castling Queen's-side

nn - nn [B75] castling: castling Queen's-side, 1993

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. Be3 Bg7 7. f3 Nc6 8. Qd2 a6 9. O-O-O Bd7 10. g4 Rc8 11. Be2 O-O 12. h4

Opposite-side castling and asymmetric pawns/files usually adds up to a race to mate the opponent's King. Both sides will throw pawns forward to open up lines for the attack.

12... Nxd4 13. Bxd4 Qa5 14. Kb1 e5 ! 15. Be3 Be6 16. a3 Rfd8 17. Bg5 Rd7 18. h5 Rdc7 19. h6 Rxc3 !? 20. hxg7 R8c6 21. Bxf6 Rb6

! exciting stuff!

22. Bb5 !! 22... Rxb5 23. Qxd6 Rc8 24. Qf8+ Rxf8 25. gxf8=Q+ Kxf8 26.

Rxh7 1-0

Castling into it Queen's-side

Keres,Paul - Botvinnik,Mikhail (ch_URS) (03) [E35] , 1941

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. Qc2 d5 5. cxd5 exd5 6. Bg5 h6 7. Bh4 c5

8. O-O-O Bxc3 9. Qxc3 g5 10. Bg3 cxd4 11. Qxd4 Nc6 12. Qa4 Bf5 13. e3 Rc8 14. Bd3 Qd7 15. Kb1 Bxd3+ 16. Rxd3 Qf5 17. e4 Nxe4 18. Ka1 O-O 19. Rd1 b5 20. Qxb5 Nd4 21. Qd3 Nc2+ 22. Kb1 Nb4 0-1

Castling late

Castling late runs the risk of not being able to castle at all, because your King gets trapped in the middle. However I was very struck watching Jon Speelman on TV many years ago, refraining from castling to give an extra tempo for the attack. This is characteristic of no-one so much as Petrosian.

Speelman - Mestel (BBC TV) [A42] castling: delayed castling, 1979

1.d4 d6 2.c4 g6 3.Nc3 Bg7 4.e4 e5 5.d5 Nd7 6.Be2 a5 7.a3 Ngf6 8.Bg5 0-0 9.Rb1

"Speelman, an original player, is trying a novel plan here. He delays castling, and uses the extra move to make progress on both wings."

9...h6 10.Be3 Nc5 11.Bf3 Bd7 12.b4 axb4 13.axb4 Na4 14.Nge2 Ne8 15. Nxa4 Rxa4 16.Qc1 Kh7 17.Nc3 Ra8 18.h4!

18...h5 19.Bd1 f5 20.exf5 Bxf5 21.Bc2 Nf6 22.Bg5 Qd7

23.0-0!

"Finally! Now Black can no longer counter with a general advance of the King's-side Pawns." -- James/Barden

23...c6 24.dxc6 Qxc6 25.Bxf5 gxf5 26.Nd5 a Pawn sac! 26...Nxd5 27.cxd5 Qxd5 [27...Qd7] 28.Rd1 Qe4 29.Rxd6 f4 30.f3 Qe2 31.Rb2 Qb5 32.Qb1+

Kh8 33.Rbd2 e4 34.Bh6 Qe5 35.Qxe4 Rfe8? 36.Bxg7+ Qxg7 [36...Kxg7 37. Qg6+] 37.Qxf4 Ra1+ 38.Kh2 Rf8 39.Qxf8+ Qxf8 40.Rd8 Kg7 41.Rxf8 Kxf8 42.Rd7 1-0

Terpugov,E - Petrosian,T (Moscow Zenit_Spartak m) , 1957

1. d4 Nf6 2. Nf3 d6 3. Nc3 Bg4 4. e4 c6 5. h3 Bxf3 6. Qxf3 Nbd7 7. Be3 e6 8. g4 d5 9. e5 Ng8

In closed position it is difficult to open lines against the King, and if there are no other open lines it may not be essential to connect the Rooks.

10. O-O-O b5 11. Bd3 Nb6 12. Kb1 Nc4 13. Bc1 Qb6 14. g5 Ne7 15. h4 c5 16. dxc5 Qxc5 17. Rhe1 g6 18. b3 Bg7 19. bxc4 bxc4 20. Bf1

Only now does Black castle, having spent each of his precious ration of moves in the most effective way.

Yates Frederick D - Alekhine Alexander (San Remo) [C71] , 1930

This is the record-holder, I think!

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 d6 5. Nc3 Bd7 6. d3 g6 7. Nd5 b5 8.
Bb3 Na5 9. Bg5 f6 10. Bd2 c6 11. Ne3 Nxb3 12. axb3 Nh6 13. b4 f5 14.
Qe2 Nf7 15. Nf1 Qe7 16. Ng3 f4 17. Nf1 g5

Neither side seems able to castle with safety on either wing!

18. Bc3 h5 19. N3d2 Bg4 20. f3 Be6 21. d4 Bg7 22. Qd3 exd4 23. Bxd4 Ne5 24. Qe2

Finally, Black commits the King.

24... O-O 25. h3 c5 26. Bc3 cxb4 27. Bxb4 Nc6 28. Bc3 Bxc3 29. bxc3 Qf6 30. e5 Nxe5 31. Ne4 Qe7 32. Nfd2 Bc4 33. Nxc4 Nxc4 34. Rd1 Qe5 35. Qd3

Rf5

And now White:

36. O-O d5 37. Qxd5+ Qxd5 38. Rxd5 Rxd5 39. Nf6+ Kf7 40. Nxd5 Rd8 41. Nb4 Rd2 42. Ra1 a5 43. Nc6 Rxc2 44. Nxa5 Ne3 45. Rb1 Rxc2+ 46. Kh1 Rg3 47. Nc6 Rxc2+ 0-1

Castling not at all (reprise)

Basman - Wall (UK chp Eastbourne) (2) [A00] , 1990

1. h3 e5 2. a3 d5

Basman has made a career out of this sort of thing.

3. c4 c6 4. cxd5 cxd5 5. g4 Nc6 6. Bg2 Be6 7. d3 Nge7 8. Nc3 Ng6 9. Nf3

Be7 10. g5 f5 11. gxf6 gxf6 12. Rg1 Qd7 13. h4 h5 14. Qa4 O-O-O

Basman has argued that Kings are safe in the middle as long as you don't move the central pawns. It all depends on whether your opponent can open lines, which depends on pawn mobility.

So White must restrain the Black central pawns.

15. b4 b6 16. Bd2 Kb8 17. b5 Na5 18. Na2 Nb7 19. Nb4 Bxb4 20. axb4 Nd6

White starts a pincer movement.

21. Bh3 Bxh3 22. Rxc6 Rxc6 23. Rxc6 Rxc6 24. Bg5 Qc8 25. Rc1 Rc7 26. Rc6 1-0

And while MJB can get away with this sort of thing, it still involves definite risks.

Bryson - Basman (Cr) [B00], 1986

1. e4 g5 2. d4 h6 3. Bd3 d6 4. Ne2 c5 5. c3 Nf6 6. O-O Nc6 7. Kh1 Bg4 8. f3 Bh5 9. Be3 e6 10. Nd2 Be7 11. a3 cxd4 12. cxd4 d5 13. e5 Nh7 14. Qc2 Nf8 15. b4 Bg6 16. f4 Rc8 17. Rac1 a6

A bit French, which is odd for Basman, whose games usually look Martian... If you know about the French, you may feel that White's position looks better - Black lacks Queen's-side counterplay against the attack.

18. f5 exf5 19. Bxf5 Bxf5 20. Qxf5 Rh7 21. Nc3 Rc7 22. Nb3 Rd7 23. Na4

Rc7 24. Nac5 Bxc5 25. Nxc5

Black has blockaded the central files, but the Bishop files are haemorrhaging. **25... Ne7 26. Qf6 Rc6 27. e6 Nxe6 28. Nxb7 Qc7 29. Rxc6 Qxc6 30. Nc5 Nxc5 31. dxc5 Qe6 32. Bd4 Kd7 33. Qf2 f5 34. Re1 Qc6 35. Qe2 f4 36. a4 Qxa4 37. Qe6+ Kd8 38. Qb6+ Kc8 39. Bf6 Rf7 40. Qe6+**

Fittingly, the decision comes down the King's e-file. 1-0

Castling tactics

Unusually, castling can be used as a positive element in a tactical idea. It's worth knowing about this, because it is easy to overlook.

Mikhailov,V - Weteschnik,M (FS IM A, Budapest) (5), 1995

1. d4 d5 2. c4 dxc4 3. Nf3 c5 4. Nc3 e6 5. Bf4 Nf6 6. e4 a6 7. a4 Nc6 8. dxc5 Bxc5 9. Qxd8+ Kxd8 10. Bxc4 Bb4

11. e5 Ne4 12. O-O-O+ 1-0

Thanks to mig for this game, and to others who contributed games with the same theme, including Joshua Bromberg, Dan Scoones, and Matt Guthrie. There are many reasons to like the internet, and [chess](#) is one of them.

A curiosity:

[Dr. Dave](#)

Exeter Chess Club: Tales of the Unexpected: how to handle unorthodox openings.

"All openings offer good winning chances in amateur play" -- LOMBARDY.

I used to know a Henry who was known as H4 Stewart because of his inclination to 1.h4 as an opening move, and I'm sure it saved him a lot of time sweating over the latest line in the Sicilian Dragon. How should you reply to openings like this? If faced with 1.h4, or anything else unusual, just keep playing good chess - keep calm, keep developing, keep your eye on the centre, and keep your wits about you.

Let's put a bit of detail alongside that.

First thing is, there's usually two games going on: the chess and the kiddology. An unusual opening is a challenge. It may be a trick. Depending on the move, your opponent may be thumbing their nose at you, saying: *I can beat you even with this rubbish. You aren't worth taking seriously.*

Unless and until you are losing, play the board, play good chess, and play to your strengths. I'll review this and some of the other responses I have seen with examples.

Playing the first move that comes into your head.

This is of course asking to fall into a trap. Here are two which continue to provide good business for their perpetrators:

Blackburne's Shilling Gambit: 1.e4 e5 2.Nf3 Nc6 3.Bc4 Nd4 4.Nxe5? [4.c3 Nxf3+ 5.Qxf3] 4...Qg5 5.Nxf7 Qxg2 6.Rf1 Qxe4+ 7.Be2 Nf3#

The Englund-Charlick Gambit: 1.d4 e5 2.dxe5 Nc6 3.Nf3 Qe7 4.Bf4? (4.Nc3; 4.Qd5) 4...Qb4+ 5.Bd2 Qxb2 6.Bc3 Bb4 7.Qd2 Bxc3 8.Qxc3 Qc1#

Also there are numerous dodgy lines based on long diagonal cheapos:

Grob's Gambit: 1. g4 d5 2. Bg2 Bxg4?! (2...c6) 3. c4 c6 4. cxd5 cxd5 5. Qb3 and Black may have to return two Pawns.

N.B. The parallel Sokolsky line **1. b4 e5 2. Bb2 Bxb4 3. Bxe5 Nf6** is nothing like so awkward for Black, and is a good equalising try.

Morals:

Every move may have (or be given) a point.

Look before you lunch.

Expect your opponent to play the best move next move, even if they have just played one real lemon.

The parallel mistake in attitude is:

Playing any old move assuming that your position will win itself.

This risks missing the point of your opponent's opening - in effect, falling into a positional trap - or perhaps overlooking some important tactical point later. A common example of this is to dismiss **1. h4** with a snort and then play **1...e5, 2...Nf6** and maybe something like **...Bc5, ...Nc6, ...d6, ...O-O**, only to look up and find your opponent has played **b3, Bb2, e3, Ne2, Ng3, Bd3** and you have castled into a clockwork attack. It's happened to better players than you! *Always play with a plan.*

Lasker,Em - Bauer,I (Amsterdam) [A03], 1889. 1.f4 d5 2.e3 Nf6 3.b3 e6 4.Bb2 Be7 5.Bd3 b6 6.Nf3 Bb7 7.Nc3 Nbd7 8.0-0 0-0 9.Ne2 c5 10.Ng3 Qc7 11.Ne5 Nxe5 12.Bxe5 Qc6 13.Qe2 a6 Black has done nothing to interrupt White's clockwork attack **14.Nh5 Nxh5 15.Bxh7+ Kxh7 16.Qxh5+ Kg8 17.Bxg7** this was the first time such a sacrifice was played; now, we would call this part of technique **17...Kxg7 18.Qg4+ Kh7 19.Rf3 e5** White will recover his investment with interest **20.Rh3+ Qh6 21.Rxh6+ Kxh6 22.Qd7 Bf6 23.Qxb7 Kg7 24.Rf1 Rab8 25.Qd7 Rfd8 26.Qg4+ Kf8 27.fxe5 Bg7 28.e6 Rb7 29.Qg6 f6 30.Rxf6+ Bxf6 31.Qxf6+ Ke8 32.Qh8+ Ke7 33.Qg7+ 1-0**

Trying to punish your opponent's play immediately.

I do like a problem-setting style, so this is perhaps our best idea so far, but we may walk into your opponent's preparation. However, you may be reassured that (a) you are probably playing moves which are at least critical and probably best, and (b) your opponent may rarely if ever meet this line in practice, if everyone else avoids the main lines out of fear! This approach essentially requires that you prepare the opening like you would the Sicilian: *have some homework done, and be prepared to think at the board.* Your problem is keeping the lines fresh in your mind if you meet a given line rarely - which you will do unless your club has a fanatic. So *keep it simple.*

So, against the **Sokolsky Opening**, I once prepared the *Outflank Defence*. **Brodie-Regis** (Thetford Major, 1979) went **1.b4** Now **1...c6** with three ideas: ...a5, ...Qb6 or simply ...e5. **2.Bb2 a5!** [2...Qb6?! 3. a3 a5 4.c4 axb4 5.c5!] **3.a3 axb4 4.axb4 Rxa1 5.Bxa1 Qb6 6.Bc3? Na6** and I was already winning a Pawn: **7. e3 Nxb4-+**. If 7.Qc1 Nxb4! 8.Qb2 Nd5 9.Bxg7? Bxg7 10.Qxg7 Qxb1# Some analysis goes 6.c3 d5 7.Nf3 Bf5 8.d3= [Not **8.g3? Qa7 9.Nh4 Be4 10.f3 Bxf3 11.Nxf3 Qxa1**]. However, in the following round **Osland-Regis** (Thetford Major, 1979) went **2. e3!** (the theoretically recommended reply) and I was already frowning.

[I do like structural advantages, so I also prepared **1. g4 e5 2. Bg2 h5!** Similarly, a better try for White is 2.d3!]

Let's have a look at how you can go about busting **1. e4 e5 2. Nf3 f6** *Damiano's Defence*. We can say safely that this is unsound, but can you prove it?

OK, start **3.Nxe5 fxe5 4.Qh5+ Ke7** (not 4...g6 5.Qxe5+ Qe7 6.Qxh8) **5.Qxe5+ Kf7 6.Bc4+ d5 7.Bxd5 + Kg6** winning easily. Next move? Lots of folk have played 8.d4?? Bd6. Try instead **8.h4 h6 9.Bxb7 Bd6** (9...Bxb7 10.Qf5#) **10.Qa5 Nc6 11.Bxc6 Rb8** which becomes the Five Pawn Gambit(!) if you fancy **12.Qxa7**.

So, well done, you've won that game, but next round your opponent goes **3...Qe7**. Now think for goodness' sake, and don't snap out **4.Qh5+?? g6 5.Nxg6 Qxe4+ 6.Be2 Qxg6!** Be satisfied with a small advantage after **4. Nf3**. So, I think you can play 3. Nxe5 with confidence: there are two traps but they are both pretty straightforward. If you are confident of working out the tactics at the board, then all you need do is remember (1) 3. Nxe5 is playable, (2) there are two traps.

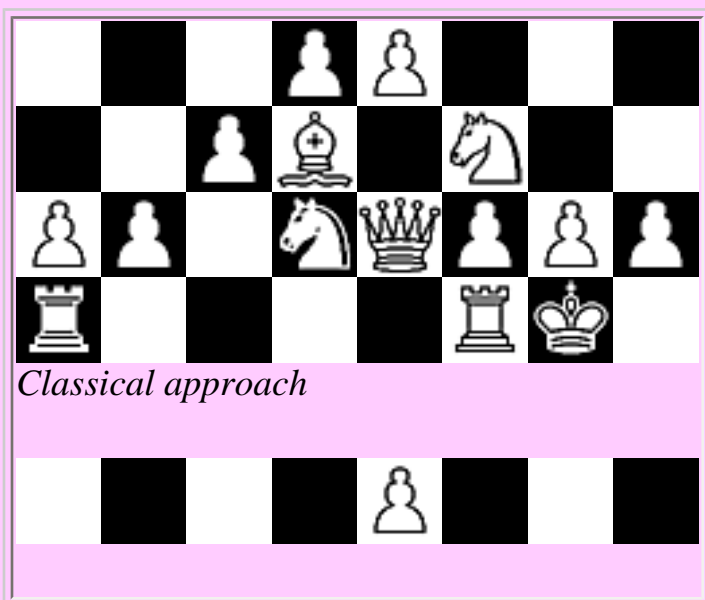

So, this is OK if you can do your homework, but keep your powder dry - brush up on it occasionally. Also, you must accept that, unless you are also learning some cute tactical ideas, most of your time is going to be pretty well wasted, so *keep the time spent and the memorising done down to a minimum.* Since adopting this approach I have lost one game to an unorthodox opening, and been in trouble against another, but have *won every other game.*

There are some very hairy gambits which you don't need to refute, but instead you can play conservatively and expect to outplay your opponent thereafter. So **Regis-Bax, 1982** went **1. e4 e5 2. Nf3 f5**. Now Black was all ready to snap out his analysis after the critical tactical line **3. Bc4 fxe4 4. Nxe5**

Qg5 but he visibly slumped after I played a positional line of Nimzovitch's: 3. Nxe5 Qf6 (Nimzo played 4. Nc4 and eventually d2-d3) 4. d4 d6 5. Nc4 fxe4. [Although this line isn't very sharp it is crucial for the success of the Gambit. So it is still "theory", but I knew the ideas and he didn't.]

Play a known solid system

If you are faced with an unusual line in a strategic opening (and most tactical ones) you can normally play something sensible and survive. I remember a club game of Pete's going **1. d4 Nf6 2. Nf3 b5!?** which he met with a straight bat: **3. Bg5** and won in about 12 moves! If we are content to try for a minimal plus there are certain standard formations which are playable against almost any unorthodox opening by White or Black. They won't refute the system you are facing but should leave you with a playable and familiar set-up. It's my belief that this is the approach adopted by the majority of stronger players.

King's Indian approach (or Benoni: Pc4)

Orthodox approach (or Slav: with Pc3, Pe3)

The exceptions are pretty obvious: you can't nonchalantly play ...c7-c5 after b2-b4, and ...Nf6 may walk into g2-g4-g5. But you can rehearse your favourite system against most dodgy stuff from your

opponent, and find an alternative for the exceptions.

Oddly, if your opponent is trying to *stop* you trotting out 10 moves of a standard opening by playing something odd like **1.a4**, it may be that your best response is to do exactly that!

Playing by analogy.

One route to picking the best move is to think about transposing into a type of position where your opponent's odd move is irrelevant or actually bad. *Do not play routinely: pay attention to differences.* [I once caught Ben Beake in a 5-minute game with **1. e4 c5 2. Nc3 Nc6 3. Nge2 e6 4. Bg2 Nge7 5. O-O**, now Ben played the routine **5...g6?** when **6. d4!**, exposed the d6 point.]

For example, how do you respond to **1. a4**? It depends on what you play ordinarily, but try **1...e5**. Now, in most lines of standard defences to 1.e4, Black never plays 1...a5 and often wants to play 1...a6 - think about the *Ruy Lopez* and *Sicilian Defence*. The only line of the *Reversed Ruy* I can think of where you can make a virtue of 1. a4 is the cheapo **1.a4 e5 2.e4 Nf6 3.Nc3 Bb4 4.Na2?!** hoping for **4...Ba5** (4... Be7) **5.b4 Bb6 6.a5 Bd4 7.c3**, although I wouldn't be ready to resign just yet after **7...Bxf2+ 8.Kxf2 Nxe4**

+! The only defence I can think of where Black actually want to play 1...a5 is a line of the *French Advance* (1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 6. a3 a5, and even then it's not the best move!), so as long as you don't insist on a reversed version of that you should be OK.

But see what we are doing here: we are taking the exact position in front of us seriously, we are weighing up the advantages and disadvantages of our opponent's moves, and we are playing chess and not kiddology. (My Dad has this lovely term *persaudo-intellectual*, which is how he pronounces *pseudo*.)

Exeter Chess Club: From the opening into the endgame

What is an endgame, and what is a queenless middlegame? I'll look at a couple of the latter, then a game of mine which moved from one into the other. Lastly, I include some examples of lines to practice with.

Anon - Barcza (Debrecen) 1934

1. e4 Nc6 2. d4 d5 3. exd5 Qxd5 4. Nf3 Bg4 5. Nc3 ? 5... Bxf3 6. Nxd5 Bxd1 7. Nxc7+ Kd7 8. Nxa8 Bxc2 9. Bf4 e5 10. dxe5 Bb4+

The key themes of this position: rapid development, open lines, exposed king and giving up material or development - have little to do with the ending (pawn majority, rook on the seventh, active king, etc.)

11. Ke2 ?

[11. Bd2 Bxd2+ 12. Kxd2 Bf5 with about equal material]

11... Nge7 12. Nc7 Nd4+ 13. Ke3 Nef5# 0-1

Hubner - Benko (Hungary) 1976 [Mednis]

1. d4 g6 2. c4 d6 3. Nc3 Bg7 4. e4 e5 5. dxe5 dxe5 6. Qxd8+ Kxd8

A more complex queenless middlegame in modern master play

7. f4 Nd7 8. Nf3 c6 9. Be2 f6 10. O-O Ke8 11. g3 Nh6 12. Kg2 Nf7 13. Be3 Bf8 14. Rad1 b6 15. a3 Be7 16. Ne1 Bc5 ?!

Black was afraid of Nd3 and; b4

17. Nc2 Bxe3 18. Nxe3 h5 19. b4 Bb7 20. Kg1 Rd8 21. h4 Nf8 22. c5

White is better developed and starts to open lines - again, classic middlegame ideas, but not so much in the ending when direct attacks have little chance of success.

22... Rxd1 23. Bxd1 bxc5 24. Bb3 Nd7

[24...cxb4 25. axb4 and Rd1]

25. Rd1 Bc8 26. b5

still working for open lines

26... cxb5 27. Nxb5 exf4 28. gxf4 Nb6 29. Nxa7 Bb7 30. Nb5 Ke7 ?

[30... Bxe4 31. Bxf7+ Kxf7 32. Nd6+]

[30... Bc6]

31. Bxf7 Kxf7 32. Nd6+ Ke7 33. Nxb7 Ra8 34. Nxc5 Rxa3 35. Kf2 Rc3 36. Rb1 1-0

Regis,D - Dobber,P (Paignton #3)

1. e4 d6 2. d4 e5 3. dxe5

[3. Nf3 of course transposes to the Philidor, but I thought the text was critical]

3... dxe5 4. Qxd8+ Kxd8 5. Bc4 f6 6. Be3 c6

[6... Nd7 ! 7. Nc3 Bc5 this idea my opponent showed me the following day; I think it equalises 8. Bxc5 Nxc5 9. O-O-O+ Nd7 10. f4 exf4]

7. Nc3 Kc7 8. O-O-O Nd7 9. f4 Bb4 10. Nf3 Ne7 11. fxe5 fxe5 12. Rhf1 Ng6

White is better mobilised but needs a breakthrough. The next phase shows White trying various ideas and angles ...

13. Ng5

[13. h4 h5 14. Bf7 Ne7 15. Be6 Bxc3 16. bxc3 Nf6 17. Bxc8 Raxc8 18. Nxe5 Rcd8]

13... Nf6 14. Bf7

[14. Nf7 Rf8 15. Bg5 Bxc3 16. Bxf6 gxf6 17. bxc3 Bg4 18. Rd2 Nf4 19. g3 Be2 20. Bxe2 Nxe2+ 21. Rxe2 Rxf7 22. Ref2 Raf8 23. g4 h6]

14... Ne7 15. Be6

[15. Ne6+ Bxe6 16. Bxe6 was worth a punt - next game!]

15... h6 16. Bxc8 Raxc8

[16... hxg5 17. Be6 Bxc3 18. bxc3 Rae8 19. Bxg5 Rxh2 20. Bxf6 gxf6 21. Rd7+ Kb6 22. Bf7]

17. Nf7 Ng4 18. Bg1 Rhf8 19. h3 Nf6 20. Nxe5 Bxc3 21. bxc3 Rcd8

White has a pawn but it is very vulnerable

22. Bc5

[22. Rxd8 Rxd8 23. Nf7 is interesting: 23... Rd7 24. Bh2+ Kb6 25. e5 Nfd5 26. Kb2 Ne3]

22... Rxd1+ 23. Rxd1 Re8

how to keep the pawn?

24. Bd6+ Kb6 25. Nc4+ Ka6 26. Rd4 Ng6 27. e5 Nd5 28. Rg4

determined but inadequate: ...b5 will bring the house down

28... Re6 29. Kd2 b5 30. Nb2 Nxe5 31. Bxe5 Rxe5 32. Rxc7

32... Rg5

Knight endings are harder to draw than rook endings but Black hoped to sac the knight for the K-side pawns and blockade on the Queen's-side

[32... Nf4 draws, I'm pretty sure 33. Rf7 Nxf2 34. Rf6 Rh5 35. Rxc6+ Kb7 36. Rg6 Nf4 37. Rg7+ Kb6 may even be better for Black]

33. Rxf5 hxf5 34. g3 Nf6 35. h4 Ne4+ 36. Kd3 Nxf3 37. hxf5 Kb6

some careful footwork secures the win

38. c4 Kc5 39. cxb5 cxb5 40. g6 Nh5 41. Ke4 Kb4

[41... Kd6 42. Kf5 Ke7 43. Kg5 Ng7 44. Nd3 Ne6+ 45. Kh6 Kf6 46. Nf4]

42. Nd3+ Kc3 43. Nf4 Nf6+ 44. Ke5 Ng8

[44... Ng4+ 45. Kf5 Nh6+ 46. Kg5 Ng8 47. Nd5+ Kxc2 48. Nf6 Ne7 49. g7 Kb2 50. Nd5 Ng8 51. Kg6 a5 52. Kh7 b4 53. Kxg8 b3 54. axb3 Kxb3]

45. Nd5+ Kxc2

[45... Kb2 saves a move, but is still too late]

46. Nf6 Ne7

[46... Nh6 47. Kf4 Kb2 48. Kg5 Ng8 49. Nxf8 a5 50. Nf6]

47. g7 1-0

Endgame Openings

King's Indian Defence

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. Nf3 O-O 6. Be2 e5 7. dxe5 dxe5

8. Qxd8 Rxd8 9. Bg5

English Opening, Andersson-Book line

1. c4 Nf6 2. Nc3 d5 3. cxd5 Nxd5 4. Nf3 g6 5. e4 Nxc3 6. dxc3 Qxd1+ 7. Kxd1

English Opening, Double Fianchetto

1. c4 c5 2. Nf3 Nf6 3. g3 b6 4. Bg2 Bb7 5. O-O g6 6. b3 Bg7 7. Bb2 O-O 8. Nc3 d5 9. Nxd5 Nxd5 10. Bxg7 Kxg7 11. cxd5 Qxd5 12. d4 cxd4 13. Qxd4+ Qxd4 14. Nxd4 Bxg2 15. Kxg2

Levy/Keene, *An Opening Repertoire for the Attacking Club Player*

Walker, *Chess Openings for Juniors*

Various magazines and other books

Introduction

This is an updated and expanded version of a booklet first written in 1994. The major change is the conversion of the 'example games' section to a much larger 'ideas and traps' section.

The trouble with the Giuoco Piano (is the Giuoco Pianissimo)

The name *Giuoco Piano* means 'quiet game', but it is not really quiet. When it got its name, people were still playing the bloodthirsty variations of the King's Gambit like the *Muzio Gambit* (1. e4 e5 2. f4 exf4 3. Nf3 g5 4. Bc4 g4 5. O-O gxf3 6. Qxf3). Compared to that, I suppose the Giuoco Piano **is** quiet! But there is a variation to be avoided, which is the *Giuoco Pianissimo*. That means 'very quiet game'.

It looks like this:

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. Nc3 Nf6 5. d3 d6

Junior players can usually get to this point safely but often don't really enjoy the game that results. The position is blocked, the sides are equal and it's hard to get things going. It can take a long time to beat worse players because things are so solid. Also, it may be that almost every game you play ends up something like this, and perhaps you would like some variety.

Why does this go wrong? Well, you should know that Plan A in the opening (for White and Black) is to play e4 and d4. If you both play sensibly 1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 White cannot play d4, so you both continue sensibly 4. Nc3 Nf6 5. d3 d6. Which is where we came in. If you really want to play like this, see the last section, but I don't think it's a good way to play.

Knowing this can happen, you need to know the two great ways to avoid it, which lead to open exciting games:

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4.c3

This is the main line of the Giuoco Piano. The idea is to play c3, d4 and only after ...exd4,cxd4 do you play Nc3. You then have your old-fashioned centre and good prospects of a quick attack down the centre or on the K-side. I often call this **Plan A**.

Black can use the temporary weakness of e4 to play 4...Nf6 when it is difficult to

stop Black upsetting your plan a little.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4!?

This is the Evans' Gambit, the "*gift of the gods to a languishing chess world*". After 4...Bxb4, 5. c3 Bc5 6. d4 you have gained a move on Plan A, although you are a Pawn down. The Evans' is more dangerous than the Giuoco Piano - for both sides!

Enterprising chess players still occasionally trot this one out at master level: Bobby Fischer and John Nunn have played it with success.

So, let's have a look at some ideas in these more exciting lines. I'll show you

1. first, the basic ideas
2. secondly, some important traps
3. lastly, some variations

You should read and play over the examples with a board, and do them in the order above: (1) ideas, (2) traps, and only then (3) variations. This is how to study any opening.

Basic ideas in the Italian Game

I've described some of them above.

bring your Bishop onto the a2-g8 diagonal, eyeing up the tender f7 point

play c2-c3 and d2-d4 to take over the **centre**

develop your other pieces **rapidly**, bring your King's Rook to e1. If you have a lead in development, **break open lines** to get at the Black position

keep the opponent's pieces from settling with **central pawn stabs**. Usually we say, don't make time-wasting pawn moves, like h2-h3. But if you play e4-e5 attacking a Knight on f6, the Knight has to move, and so you haven't given Black a chance to catch up in development, and you may have dislodged an important defender. It's odd that, because Pawns are worth the least, nothing can resist their attacks!

try and catch the opponent's **King in the middle**, or, if it escapes by castling, **attack on the King's-side**.. Usually, only the Evans' Gambit and Moller Attack in the Giuoco Piano are fast enough to catch the King in the middle.

if your attack doesn't come about, fast development and siezing the central files may give you an **advantage in the endgame**

Because the basic layout is similar for both sides, some of these ideas also apply to playing Black: in addition Black should strive for:

rapid **development**

castle into safety

counter with ...**d5**

play for **counterattack** on the King's-side or an **endgame advantage** First, I'll show you an example game which includes the ideas I have listed above.

All the basic ideas: White,R - Al Marif,S [C51 Evans' Gambit] (London LB), 1990

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. O-O!? d6 7. d4 exd4
8. cxd4

Central advantage: the Plan A pawn centre with **good development**.

8...Bb6 9. Re1

The Rook comes to e1, giving the King a Hard Stare.

9...Bg4

White's next points both Bishops at the King's-side.

10. Bb2 Qf6 11. e5 dxe5 12. dxe5

Raiding by centre pawns. The Pawn wins time by the attack on the Queen, and then **breaks open lines** by a further step forward.

12... Qf4 13. e6 Bxf3

Black hopes to gain time by taking a piece with an attack on the Queen.

14. exf7+

Not a bit of it! - Check stops everything. In fact White never moves the Queen or takes the Bishop!

Attack on f7 along the "Italian Diagonal"

14... Kf8 15. fxg8=Q+ Rxc8 16. Ba3+ Ne7 17. Bxe7+

The **King caught in the middle**. Black resigns... **1-0**

An exciting game! Let's have a look at each of these ideas again in actual play, and how to play when you are Black.

Ideas mainly for White

Develop rapidly and take over the centre

You should know this idea already. Get your pieces out and fighting - if they are on the back rank you might as well not have them! And of course, they are most effective in the centre.

The way to take over the centre is with your e- and d-pawns. These pawns can make little steps down the middle towards the Black King, and on the way stamp on the toes of the Black pieces to make them jump out of the way!

The raid with central pawns: Boleslavsky - Scitov [C54 Giuoco Piano] (Moscow) 1933

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb6

This move gives White too much of a free hand. The "Plan A" pawn centre just rolls over the Black position.

7. e5 Stamp!

7...Ng4 8. h3 Stamp!

8...Nh6 9. d5 Stamp!

9...Ne7 10. d6 Stamp!

10...Ng6

The Pawns have marched forward, causing the Black pieces to scatter. Time to develop a piece...

11. Bg5 f6

12. exf6 gxf6

White can win a piece, but:

13. Qe2+ Kf8 14. Bxh6# 1-0

Isn't that better than the Giuoco Pianissimo?

The raid with central pawns: Morphy, Paul - Laroche, H [Evans' Gambit, C52] Paris, 1859

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 Nf6

Now a little Pawn stab.

7. dxe5 Ng4 8. Bg5 f6 9. exf6 Nxf6 10. e5

Another awkward Pawn raid.

10... h6 11. exf6 hxg5 12. fxg7 Qe7+ 13. Qe2 1-0

The raid with central pawns: Morphy, Paul(bl_sim) - Cunningham [Giuoco Piano, C54] London, 1859

1. e4 e5 2. Bc4 Bc5 3. c3 Nc6 4. Nf3 Nf6 5. d4 exd4 6. e5 Qe7 7. O-O Ng8
8. cxd4 Bb6 9. d5

This we would call a *central pawn roller*.

9... Qc5 10. Na3 Nd4 11. Be3 Nxf3+ 12. Qxf3 Qf8 13. Bxb6 axb6 14. Nb5
Kd8 15. Rac1

Black is getting squashed by those Pawns.

15... d6 16. exd6 cxd6 17. Qe3 Ra6 18. Nc7 Qe7

Black wants to exchange Queens.

19. Ne6+! fxe6 20. Bxa6 Bd7 21. Bb5 Ke8 22. dxe6 Nf6 23. Rc8+ 1-0

Central advantage: Bastian,Herbert - Eng,Holger (10) [Giuoco Piano, C54] Bad Neuenahr ch-DE, 1984

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2 Bxd2+ 8. Nbx d2 d5 9. exd5 Nxd5 10. Qb3 Nce7 11. O-O O-O 12. Rfe1

This is the Main line position. Most of the Pawns have disappeared, but Black must be careful not to let the White pieces dominate the central squares and the e-file.

12... Nb6 13. Bd3 Bf5 14. Rxe7 Bxd3 15. Rae1 Bg6 16. Nh4 Nc8

White has far more active pieces and control of the e-file. This is an easy game to understand, and, hopefully, imitate.

17. Nxg6 hxg6 18. R7e5 Qxd4 19. Nf3 Qd7 20. Ng5 Nd6

Black is starting to get sorted out but White's next move tempts the f-pawn to move...

21. Qb4 f6 22. Re7 Qb5 23. Rxc7+ Kxc7 24. Re7+ Rf7 25. Rxf7+ Nxf7 26. Ne6+ 1-0

Catch the Black King in the middle

As I said, this is mostly an idea for the Evans' Gambit. White's pieces charge out before Black can play ...Nf6 and ...O-O, and before the defence can get organised.

The King caught in the middle (and Central advantage): Morphy - Hampton, H [Evans' Gambit, C52] (London) 1858

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. O-O d6 7. d4 exd4 8. cxd4 Bb6 9. Nc3

This simple developing move is best, but not much played before Morphy. Instead they used to rush with 9. d5 or hesitate with 9. h3.

9... Nf6 10. e5 dxe5 11. Ba3

Stops the Black King castling.

11...Bg4 12. Qb3 Bh5 13. dxe5 Ng4 14. Rad1 Qc8

White has a model position, while Black's pieces are disorganised and the King vulnerable.

15. e6 f6 16. Qb5 Bg6 17. Bd5 1-0

King caught in the middle: Fischer - Fine RH [Evans' Gambit, C52] (New York) 1963

This game was played as a 'friendly' game at Fine's house.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. O-O dxc3

"A little too greedy", said **Modern Chess Openings**, and Fischer agreed.

8. Qb3 Qe7 9. Nxc3

White has a massive lead in development. Now $9... Qb4$ is the most awkward. Fischer's reply does not lose time because Black must respond to the attack on the Queen, and, after the exchange, the Knight.

9... Nf6 10. Nd5 Nxd5 11. exd5 Ne5 12. Nxe5 Qxe5 13. Bb2 Qg5

Fischer now finds a nice deflecting move.

14. h4 Qxh4 15. Bxg7 Rg8 16. Rfe1+ Kd8 17. Qg3

1-0

Another, conclusive deflection. The Black Queen cannot defend the f6 square, so if 17...Qg3 18. Bf6 mate.

King caught in the middle: Anderssen, Adolf - Dufresne, J [Evans' Gambit, C52] Berlin 'Evergreen', 1852

This is a very famous game, published in newspapers all over the world at the time.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. O-O d3 8. Qb3 Qf6 9. e5 Qg6 10. Re1 Nge7 11. Ba3 b5 12. Qxb5 Rb8 13. Qa4 Bb6 14. Nbd2 Bb7 15. Ne4 Qf5 16. Bxd3 Qh5 17. Nf6+ gxf6 18. exf6 Rg8

In playing his next move, Anderssen must have seen the mate at the end. Superb!

19. Rad1 Qxf3 20. Rxe7+ Nxe7 21. Qxd7+ Kxd7 22. Bf5+ Ke8 23. Bd7+ Kf8 24. Bxe7# 1-0

King caught in the middle: Romero Holmes,Alfonse - Estremera Panos,Serg [Giucoco Piano, C54] Leon, 1989

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. b4

An unusual line.

6... Bb6 7. e5 d5 8. exf6 dxc4 9. b5 Na5

White has yet to show anything for his efforts.

10. Qe2+ Be6 11. fxg7 Rg8 12. Nxd4 Bxd4 13. cxd4 Qxd4 14. Bb2

This move hangs on to the g-pawn, without which Black would be OK. It's still all very muddy!

14... Qd3 15. Bf6 Qg6 16. Qf3 Rxc7 17. Nd2

Black jumps at a loose Pawn...

17... Qxg2 18. Qa3 1-0

The King's-side attack.

Of course, if Black is not greedy you may see the Black King flee to the King's-side. But all the things that make the attack on the uncastled King work - better development, central control and open lines - also make a King's-side attack work!

King's-side attack: Morphy, Paul - Amateur [Giuoco Piano, C51] London, 1858

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Bc5 6. d4 exd4 7. cxd4 Bb6 8. Bg5 Nge7 9. Nc3 O-O 10. d5 Na5

Black has castled, but White is still out get the King.

11. d6 cxd6 12. Nd5 Nac6 13. Nxe7+ Nxe7 14. Qxd6 Re8 15. Rc1 Ba5+

White's next move is an important one: he will have to win the game without his King's Rook!

16. Kf1 Kf8 17. Qf4 d5 18. Bb5 Bd7 19. Ne5

A well-judged sacrifice.

19... Bxb5+ 20. Kg1 f5 21. exf5 Qb6 22. f6 Ng8 23. f7 Rec8 24. fxg8=Q+ Kxg8 25. Qf7+

White has got his attack going nicely now.

25... Kh8 26. Rxc8+ Rxc8 27. Qxd5 h6 28. Nf7+ Kh7 29. Qf5+ Qg6 30. Qxc8 Qb1+ 31. Qc1 Qf5 32. Be3 Qxf7 33. Qb1+ 1-0

Littlewood - Paish (Blindfold) 1993

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2 Bxd2+ 8. Nbx d2 d5 9. exd5 Nxd5 10. Qb3! Nce7 11. O-O O-O

12. Rfe1 c6 13. a4

Fritz knows about several alternatives here: h6, Qb6, Qb7, Rb8, b6 and so on. Littlewood's opponent found a new one, but the decentralising ...Qa5 does little towards getting Black's position sorted.

13... Qa5 14. Ne4 Rd8 15. Ne5 Nf5 16. Qd3 Be6 17. Ng5 g6 18. Qh3 Nd6 19. Qxh7+

The entry of the Queen decides.

19... Kf8 20. Nxe6+ fxe6 21. Bxd5 and Nxc6+ 1-0

This was one of eight games played blindfold by Paul - that is, he played by calling out moves to eight opponents, each of whom had a board!

King's-side attack: Euwe,Max - O'Hanlon,John [Giuoco Piano, C54] Hastings, 1919

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4 8. O-O Bxc3 9. d5 Bf6 10. Re1 Ne7 11. Rxe4 d6 12. Bg5 Bxg5 13. Nxg5 O-O

White now plays a break-up sacrifice.

14. Nxh7! Kxh7 15. Rh4+ Kg8 16. Qh5 f5 17. Re1 Ng6 18. Rh3 f4 19. Re6 Rf6

Black has no time to organise a defence of all of his weaknesses.

20. Qh7+ Kf8 21. Qh8+ Nxh8 22. Rxh8+ Kf7 23. Rxd8 c6 24. Ree8 Bd7 25. dxc6+ Be6 26. Bxe6+ Rxe6 27. Rxa8 Rxe8 28. Rxe8 Kxe8 29. cxb7 1-0

The Fried Liver raid: Morphy, Paul(bl_sim) - Forde, A [Evans' Gambit, C52] New Orleans, 1858

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. O-O Nge7 7. Ng5 d5
8. exd5 Nxd5

You may know the Fried Liver Attack - here is a version of it in the Evans' Gambit.

9. Nxf7 Kxf7 10. Qf3+ Ke6 11. Ba3 Bb6 12. Re1 Na5

How can White get at the King?

13. Rxe5+! Kxe5 14. d4+ Ke6 15. g4 g6 16. Qe4+ Kf7 17. Bxd5+ Kg7 18. Be7 Re8 19. Qe5+ Kh6 20. g5+ Kh5 21. Bf3+ Bg4 22. Qg3 Qd7 23. Qh3# 1-0

This too was one of a number of games played by Morphy without sight of the board.

The Queen's-side attack.

Black's Queen's-side may be late coming out, and may be a target for a direct attack by e.g. Qd1-b3xb7. But if the Black King cannot feel entirely safe on the King's-side, and not at all in the centre, perhaps your opponent will castle Queen's-side? This is usually easier to attack than the King's-side, because you won't mind moving your Queen's-side Pawns forward!

Move to the Queen's-side: Szecsi - Szarka [Giuoco Piano, C54] cr, 1987

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4 8. O-O Bxc3 9. d5 Bf6 10. Re1 Ne7 11. Rxe4 d6 12. Bg5 Bxg5 13. Nxc3 h6 14. Qe2 hxg5 15. Re1 Be6 16. dxe6 f6 17. Re3 c6 18. Rh3 Rxh3

19. gxh3 g6 20. b4

This move is quite cute: White realises Black will castle Queen's-side, and so arranges a welcome for the Black King...

20... Qb6 21. Qb2 O-O-O

Told you!

**22. b5 Rf8 23. a4 Qa5 24. Rc1 Qxa4 25. bxc6 b6 26. Bb5 Qe4 27. c7 Kb7
28. Qa3 a5 29. Qxd6**

Black is cut to shreds. It's an interesting point that this was played in recent years by post, so Black had plenty of time to work out the best opening variation and the best defence to the attack!

1-0

Ideas for Black

Of course, you need to know how to play the Black side of the Italian Game.

Hit back with ...d5

This is the most important idea. Black's problems in the games we have looked at stem from (a) poor development, (b) poor control over the centre.

The ...d5 break is crucial, releasing the Bc8 and getting a share of the centre (or at least breaking up White's pawns). This goes some way to solving both problems. If you can play ...d5 as Black without immediate disaster you usually get an even game at least.

Black hits back with ...d5: Marache,N - Morphy,Paul [Evans'

Gambit, C52] New York, 1857

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 exd4 7. e5

White swings a punch into the air. Black responds with one on the chin.

7... d5 8. exd6 Qxd6 9. O-O Nge7 10. Ng5 O-O 11. Bd3

White has no reason to expect these attacking gestures to succeed. Black sensibly develops, connecting the Rooks, and soon moves over to the attack.

11... Bf5 12. Bxf5 Nxf5 13. Ba3 Qg6 14. Bxf8 Qxg5 15. Ba3 dxc3 16. Bc1 Qg6 17. Bf4 Rd8 18. Qc2 Ncd4 19. Qe4

19... Ng3! 0-1

Black hits back with ...d5: Treiber, Timo - Kurz, Ralf (07) [Giuoco Piano, C54] Baden Baden, 1990

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4 8. O-O Bxc3 9. d5 Bf6 10. dxc6 bxc6 11. Re1

Black whips the King out of the way of the Rook...

11... O-O 12. Rxe4

12... d5

...And the ...d5 blow recovers the piece.

13. Rf4 dxc4 14. Qa4 c3 15. bxc3 Bxc3 16. Rb1 Qd3

White is getting into a right mess.

17. Rbb4

[17. Qb3 Rb8 18. Rd4 Rxb3 19. Rxd3 Rxb1]

17... Ba6 18. Rbc4 Bxc4 19. Rxc4 Rab8 0-1

Catch the White King in the middle

If you are developing as fast as you can, and White isn't, you may find that you are ahead in development. In this case you have every right to attack the White King, and if this is still in the middle, so much the better!

**Black catches the King in the middle: Noa,Josef - Kopylov
[Evans' Gambit, C52] Leningrad, 1937**

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. d4 d6 7. Bg5 Nf6 8.

Qa4 exd4 9. Nxd4 Bb6 10. Bb5 O-O 11. Nxc6 bxc6 12. Bxc6

White has tried to cash in straight away before completing development.

12... Bxf2+ 13. Ke2

[13. Kxf2 Ng4+ 14. Kf1 Qxg5 15. Bxa8 Qc1+ 16. Ke2 Qxh1]

13... Rb8 14. Rf1 Rb2+ 15. Nd2

Black now finds a neat move to exploit White's loose position.

15... Nxe4! 16. Qxe4 Qxg5 17. Kxf2 Bf5 18. Qf3 Bg4 19. Qe4 d5 0-1

Counterattack on the White King's-side

Similarly, if you are ahead in development or have some other advantage, you can (and should!) think about a King's-side attack.

Black's King's-side counterattack: Mongredien, A - Morphy, Paul (07) [Evans' Gambit, C52] Paris m, 1859

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Ba5 6. O-O Nf6 7. d4 O-O

White tries a pawn stab, but things are pretty solid. No quick raid will be possible, which is bad news for

the Gambit player.

**8. d5 Ne7 9. Qd3 d6 10. h3 Ng6 11. Nh2 Nh5 12. Bb3 Ngf4 13. Bxf4 Nxf4
14. Qf3 f5**

This move announces to White that it is Black who holds the initiative.

15. exf5 Bxf5 16. g4 Bd3 17. Qe3 Bb6 18. Qd2 Qh4 0-1

Black's King's-side counterattack: Saint Amant - Morphy, Paul [Giucoco Piano, C54] Paris, 1858

**1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Bd2
Bxd2+ 8. Nbxtd2 d5 9. exd5 Nxd5 10. O-O O-O**

White follows the limp 10. O-O with a time-wasting and weakening Pawn move.

11. h3 Nf4 12. Kh2 Nxd4 13. Nxd4 Qxd4 14. Qc2 Qd6

Threatening several nasties.

15. Kh1 Qh6 16. Qc3 Bf5 17. Kh2 Rad8 18. Rad1

"And now for my last trick:"

18... Bxh3 19. gxh3 Rd3 20. Qxd3 Nxd3 21. Bxd3 Qd6+ 22. f4 Qxd3 0-1

Black's chances in the endgame

It is actually quite difficult to take over the attack and mate White. This is nearly always true if the Queens are exchanged. But very often, once White's initiative blows itself out, you may be left with better placed pieces. Then there may be open lines that you can use to attack White Pawns. White may have given up a pawn for the attack, or may have advanced one or two Pawns beyond easy reach of White's pieces, but within easy reach of yours. Then Black can look forward to a very promising endgame.

Black's endgame chances: Hammond, G - Morphy, Paul [Giuoco Piano, C54] New York, 1857

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. e5

As ever, Black must hit back hard:

6... d5 7. Bb3 Ne4 8. cxd4 Bb6 9. O-O Bg4 10. Be3 O-O 11. Qd3 Bxf3 12. gxf3 Ng5 13. Qf5

White is doing his best to attack.

13... Nxd4 14. Bxd4 Bxd4 15. Nc3 g6 16. Qg4 h5 17. Qg2 Bxe5 18. Nxd5
c6 19. Rfe1 Re8 20. f4 cxd5 21. fxe5 Ne6 22. Qxd5 Qxd5 23. Bxd5 Nf4 24.
Bxb7 Rab8 25. Bc6 Re6 26. Bd7 Re7 27. Rad1 Rxb2

The attack has blown out leaving Black's pieces very well placed. White is losing at least a Pawn...

28. Re4? Rxd7 0-1

...if not the game!

Some traps in the Italian Game

I hope that's given you a feel for the way to play these positions. Now I'd like to look at some specific variations, because in these lively lines you have to watch your step! Here are some of the most important traps, the tactical ideas behind some of the main lines.

These are taken 'wholemeal' (rather than piecemeal) from Znosko-Borovsky's *Traps on the Chessboard*. I think this is out of print (I have a 1940s copy) but worth trying to find if you read *descriptive notation*. In fact, that goes for all Z-B's books! Many of them are issued in inexpensive editions by Dover.

A poor line for White in the Closed Variation of the Giuoco Piano

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Qe7 5. O-O?!

[5. d4 is best]

5... d6 6. d4 Bb6 7. h3 Nf6 8. dxe5?!

Just because your opponent plays slowly doesn't mean you can relax.

[8. d5 may have been better]

8... Nxe5 9. Nxe5 Qxe5 10. Nd2

White has done everything possible to encourage Black!

10... Bxh3 11. gxh3 Qg3+ 12. Kh1 Qxh3+ 13. Kg1 Ng4 14. Nf3 Qg3+ 15. Kh1 Bxf2

--+

Another trap in the Closed Variation of the Giuoco Piano

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Qe7 5. O-O?! d6 6. d4 Bb6 7. Bg5 f6?!
8. Bh4 g5?! 9. Nxcg5 fxg5

I said above that you usually can't afford to do this in front of your castled King.
It's also not safe in front of your uncastled King!

10. Qh5+ Kd8 11. Bxg5

Is White's attack worth a piece?

11... Nf6 12. Qh6 Rf8 13. f4 exd4

Else White fatally opens the f-file.

14. e5! dxc3+ 15. Kh1 cxb2

16. exf6 Rxf6 17. Qxf6 bxa1=Q 18. Qxa1+-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O

White sometimes plays this uncommon alternative to avoid the main lines after 6. cxd4.

6...Nxe4?

[6...d6]

7. cxd4 Be7 8. d5 Nb8 9. Re1 Nd6 10. Bb3 O-O 11. Nc3 Ne8 12. d6

A very clever move.

12... cxd6

[12... Bxd6 13. Bg5 Nf6 14. Nd5 Nc6 15. Nxf6+ gxf6 16. Bh6+-]

[12... Nxd6 13. Rxe7 Qxe7 14. Bg5 Qe8 15. Qd3 Nc6 16. Re1+-]

13. Rxe7 Qxe7 14. Bg5 Nf6 15. Nd5 Qd8 16. Qd4 Nc6 17. Qh4+-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O O-O?

[again, 6...d6 is most reliable]

7. cxd4 Bb6 8. d5 Ne7 9. e5 Ne8 10. d6 cxd6 11. exd6 Ng6 12. Bg5 Nf6 13. Nc3 h6 14. Qd3

A terrific example of the central pawn raid.

14... Kh7

[14... hxg5 15. Qxg6]

15. Bxf7! Rxf7 16. Ne5 hxg5 17. Qxg6+ Kg8 18. Qxf7+ +-

Trap in the Main Line of the Giuoco Piano with 6. O-O

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. O-O dxc3

A little greedy.

7. e5

Black's next is often the right idea, but doesn't work here because of the lag in development and castling.

7... d5 8. exf6 dxc4 9. Qxd8+ Nxd8 10. fxg7 Rg8 11. Nxc3 Rxc3 12. Bf4 Ne6 13. Rfe1 c6 14. Ne4 Be7 15. Rad1 +/-

could you win from here as White? Black cannot afford to play

15... Nxf4

because of

16. Nf6+ Kf8 17. Rd8+ Bxd8 18. Re8#

Trap in the Main Line of the Giuoco Piano with 6. cxd4

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4

This is the normal continuation.

6... Bb6?

This isn't! The Pawns push forward.

[6... Bb4+ is best]

7. d5 Ne7 8. e5 Ne4 9. d6 Nxf2 10. Qe2 Nxh1 11. Bg5

11... Bf2+

Black intends to get the Queen out via c7

12. Kd1!

[12. Kf1 Nf5 13. Bxd8]

[or 13. Qe4 Nhg3+ 14. Kxf2 Nxe4+ 15. Ke1 Nxg5-+]

13... Ne3+ 14. Qxe3 Bxe3-/+ and Black is in the clear]

12... c5 13. Bxe7 Qb6 14. Ng5 Rf8 15. Qh5 g6 16. Qxh7+-

Trap in the Moller Attack

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3 Nxe4 8. O-O Bxc3 9. d5

The Moller Attack

9... Ne5?!

[9... Bf6!]

10. bxc3 Nxc4 11. Qd4 Ncd6?

[11... f5]

12. Qxg7 Qf6 13. Qxf6 Nxf6 14. Re1+

14... Kf8

[14... Kd8 15. Bg5 Nde8 16. Rxe8+ Kxe8 17. Re1+! Kf8 18. Bh6+ Kg8 19. Re5 d6 20. Rg5#]

15. Bh6+ Kg8 16. Re5 Nfe4 17. Re1 f5 18. Re7+-

"and wins", says Znosko-Borovsky. Have a go!

18... a5 19. Nd4 b5 20. f3 Nxc3 21. Rg7+ Kf8 22. Rxd7+ Kg8 23. Rg7+ Kf8
24. Rxc7+ Kg8 25. Rg7+ Kf8 26. Ra7+ Kg8 27. Rxa8 +-

Bernstein's Trap in the Moller Attack

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3 Nf6 5. d4 exd4 6. cxd4 Bb4+ 7. Nc3
Nxe4 8. O-O Nxc3 9. bxc3 Bxc3 10. Qb3

10... Bxa1?

Black is being terribly greedy.

[10... d5 11. Bxd5 O-O 12. Bxf7+ Kh8 13. Qxc3 Rxf7 14. Ne5 Nxe5 15. dxe5
Be6<-/->]

11. Bxf7+ Kf8 12. Bg5 Ne7 13. Ne5 Bxd4 14. Bg6 d5 15. Qf3+ Bf5 16. Bxf5
Bxe5 17. Be6+ Bf6 18. Bxf6+-

Some Variations in the Italian Game

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5

We will look at the Giuoco Piano with 4.c3, and Evans' Gambit with 4. b4.

A. Main line Giuoco Piano 4. c3

4... Nf6

The alternatives 4...Bb6, and 4...d6 give White a free hand. We'll have a look at 4...Bb6, the Closed Variation in section B later.

5. d4 exd4

6. cxd4

White has alternatives:

[6. e5 d5 is no good]

[You might try one day 6. b4 Bb6 7. e5 d5 8. exf6 dxc4

For example 9. b5 Na5 10. Qe2+ Be6 11. fxg7 Rg8 12. Nxd4 Bxd4 13. cxd4 Qxd4 14. Bb2 Qd3 15. Bf6 Qg6 16. Qf3 Rxc7 17. Nd2 Qxc2 18. Qa3

which is wonderfully messy]

[Lastly, White has 6. O-O hoping for 6...dxc3 7. Nxc3 with a big lead in development. There are examples of this line in the section on Traps, but it is neglected in many books on the opening]

After 6. cxd4 Black must reply

6... Bb4+

[6... Bb6 does nothing to slow White's plan - see the game by Boleslavsky in the ideas section if you are not convinced!]

Now White can play the risky 7. Nc3 or the safe 7. Bd2.

Risky main line 7. Nc3

7. Nc3

7... Nxe4

[Instead 7... d5 can be tried, which is probably not as good: e.g.

8. exd5 Nxd5 9. O-O Be6 10. Bg5 Be7 11. Bxd5 Bxd5 12. Nxd5 Qxd5 13. Bxe7 Nxe7 14. Re1 f6 15. Qe2 Qd7

Black's King is caught in the centre, and cannot easily leave.

Now White can try either:

16. Qe4 or

16. Rac1

For example: 16. Rac1 c6 17. d5 cxd5 18. Nd4 Kf7 19. Ne6 Rhc8 20. Qg4 g6 21. Ng5+ Ke8 22. Rxe7+ Kf8 23. Rf7+ Kg8 24. Rg7+ Kh8 25. Rxh7+ Kg8 26. Rg7+ Kh8 27. Qh4+ Kxg7 28. Qh7+ Kf8 29. Qh8+ Ke7 30. Qg7+ Ke8 31. Qg8+ Ke7 32. Qf7+ Kd8 33. Qf8+ Qe8 34. Nf7+ Kd7 35. Qd6#

An attractive 'swallowtail mate' in a game which Fritz produced from memory]

White continues in bold style with

8. O-O

Black has a further choice:

8...Bxc3, the Moller attack

8...Nxc3, avoiding the Moller

We'll look at the avoiding line first, as it's such a good example of how quickly White can win in the Giuoco Piano.

Black avoids the Moller

8...Nxc3

White has to play

9. bxc3

when Black has another choice

Greedy 9...Bxc3

Safer 9...d5

Bernstein's line: greedy 9...Bxc3

Reply

10. Ba3

[10. Qb3 is also fun: see the Traps section]

This is Bernstein's line, and Black no longer has a satisfactory reply. When I came across this line as a junior I fell in love with it, and always tried to play it.

The most important one to deal with is the most obvious:

10... Bxa1

11. Re1+ Ne7 12. Bxe7 Qxe7 13. Rxe7+ Kxe7 14. Qe1+ Kf8 15. Qxa1

with extra material, and White's attack is far from over. Black must back out earlier.

10... d6

is also insufficient

11. Rc1 Ba5 12. Qa4 a6 13. Bd5 Bb6 14. Rxc6 Bd7 15. Re1+ Kf8 16. Rxd6 cxd6 17. Bxd6+ Kg8 18. Bxf7+ Kxf7 19. Qb3+ Kg6 20. Ne5+

20...Kf6 [20... Kh5 21. Qf3+ Kh6 22. Nf7+ Kg6 23. Nxd8 Bxd8 24. Qxb7]

21. Qf7+ Kg5 22. Qxg7+ Kh5 23. g4+ Bxg4 24. Qxg4+ Kh6 25. Nf7#

10... d5

Often a good idea but here is no good either:

11. Bb5 Bxa1 12. Re1+ Be6 13. Qa4 Qc8 14. Bxc6+ bxc6 15. Qxc6+ Kd8 16. Ng5 Qb8

10... Qf6

Not even close

11. Rc1 Bb4 12. Bxb4 Nxb4 13. Re1+

10... Ne7

best: the game might go

11. Qb3 d5 12. Qxc3 dxc4 13. Rfe1 Be6 14. Bxe7 Kxe7 15. d5 Qxd5 16. Rad1 Qc5 17. Re5 Qb6

White now can finish nicely:

18. Rxe6+ Qxe6

else Qxg7+ is terrible

19. Re1 Qxe1+ 20. Qxe1+ Kd8 21. Ne5

when White should be able to handle the Pawns, which lack support from the Rooks.

Bernstein: the safer 9... d5

This may be really where Black should back out.

10. cxb4 dxc4 11. Re1+

[A safer line for White here is 11. b5 Ne7 12. Ba3 O-O 13. Qe2 Re8 14. Qxc4]

11... Ne7

12. Qe2

[John Walker suggests the piece sacrifice with 12. Bg5 f6

[not 12... Be6 13. Bxe7 Qxe7 14. d5]

13. Qe2 fxe5 14. Nxe5

...which certainly puts Black under pressure, but it's not my style.]

After 12. Qe2 Fritz wanted to play out a game it knew about, which ran:

**12... Be6 13. Bg5 Qd7 14. Qe5 c6 15. Qxg7 O-O-O 16. Ne5 Qd5 17. Qf6
Ng6 18. h4 Rhg8 19. Nxe6 hxg6 20. Rac1 b5 21. a4 Qxd4 22. axb5 Qxf6
23. Bxf6 Rd3 24. bxc6 Kc7 25. Rxe6 fxe6 26. Rxc4**

White's exchange deficit is compensated by the pawns

If you don't fancy this you can always play *11.b5*.

Moller attack

8... Bxc3

Now the key reply is 9. d5, although we will look at 9. bxc3 below.

9. d5

9... Bf6

Neither

[9... Na5 ?]

nor

[9... Nd6 ?]

are any good.

[9... Ne5 is better, but after 10. bxc3 Nxc4 11. Qd4 f5 Keene and Levy give 12. Qxc4 d6 13. Nd4 O-O 14. f3 Nc5 with advantage

(Alert and anxious reader: "What about 11...Ncd6? What about 11...O-O?" [What indeed?](#))

]

[And after 9... Ne7 White continues logically 10. bxc3 O-O 11. Re1 Nf6 12. Bg5 Ng6 13. d6 h6 14. Qd3 hxg5 15. Qxg6 cxd6 16. Nxc5 Qc7 17. Bxf7+ Kh8 18. Re3

winning]

After 9...Bf6, the only try is

10. Re1

[If 10. dxc6 bxc6 11. Re1 Black can continue 11...O-O 12. Rxe4 d5 13. Rf4 dxc4 14. Qa4 c3 15. bxc3 Bxc3 16. Rb1 Qd3 17. Rbb4 Ba6 18. Rbc4 Bxc4 19. Rxc4 Rab8 -+]

10... Ne7 11. Rxe4 d6 12. Bg5 Bxg5 13. Nxg5

13... O-O

[BCO reckons a better line is 13... h6 14. Qh5 O-O 15. Rae1 Nf5 16. Nxf7

[16. Ne6 fxe6 17. dxe6 Ne7 -+ BCO2]

16... Qf6[[ophyphen]] Zak]

14. Nxh7 Kxh7

[or 14... Bf5 15. Rh4=]

15. Qh5+ Kg8 16. Rh4 f5 17. Re1 Re8

[We saw ...Ng6 in the Traps section above]

18. Re6 Kf8 19. Be2 Nxd5 20. Qxf5+ Kg8 21. Qh7+ Kf7 22. Rxe8 Kxe8 23. Qg8+ Kd7 24. Bg4+ Kc6 25. Qxd8 winning

If this is all a bit much, White can go instead

9. *bxc3*

when 9... *d5*

is OK for Black.

White is still ahead in development but Black still has a pawn. At Grandmaster level they have given up

on this line, thinking White cannot get enough of an attack going. At club level, though, there may be enough meat left to chew.

Let's look at two example lines, to see how games might go.

10. Bb5 O-O 11. Qc2 Bf5 12. Bd3 Bg6 13. Rb1 Nd6 14. Ba3 b6 15. Ne5 Bxd3 16. Qxd3 Ne7 17. Rfe1 f6 18. Ng4 Qd7 19. Qh3 Rad8 20. Rb2 Ng6 21. Qf3 Rfe8 22. Rbe2 Rxe2 23. Rxe2 Ne4 24. h3 Qa4 25. Bb2 Qxa2 26. Ne3

when it has all gone minty for White.

So White can try instead

10. Be3 dxc4 11. Re1 f5 12. Nd2 Kf7 13. Nxe4 fxe4 14. Rxe4 Qf6 15. Qe2 Bf5 16. Qxc4+ Kg6 17. Re3 Rae8 18. Rae1 Rxe3 19. Rxe3 h5 20. h3 h4 21. d5 Ne5 22. Qxc7 Nd3 23. Qxb7 Bc8 24. Qc6 Qxc6 25. dxc6 Nf4 26. Re7 a6

when White has enough pawns to account for the piece, but their scattered placing makes it hard to play for a win.

If you are not convinced by any of these lines (and while they are worth a punt in practice the theory is against them) you can always play safe on move 7. So let's look at that next.

Safe main line 7. Bd2

7. Bd2

7... Bxd2+ 8. Nbx d2 d5

Of course.

9. exd5 Nxd5

[A solid line is 10. O-O O-O 11. Nb3]

10. Qb3 Nce7 11. O-O O-O

White has several alternatives in this well-known position:

[12. Ne5]

[12. Ne4]

[12. Bxd5]

[12. Rae1]

[12. Rfe1]

For an example of 12. Rfe1 see the games section.

The closed variation 4...Bb6

4... Bb6 5. d4 Qe7

[6. O-O+ = is good enough, but try instead...]

6. Bg5

This continuation was discovered by Jonathan Mestel and helped him win the UK Championship in 1975. Of course, Black doesn't want to weaken the King's-side with ...f6, when Nxe5 looks very dangerous.

6... Nf6 7. d5 Nd8 8. d6 cxd6

The capture with 8...Qxd6 9. Qxd6 cxd6 is no safer for Black.

9. Na3 a6 10. Nc2 Bxf2+ 11. Ke2 Bc5 12. Nh4 Ne6 13. Nf5 +-

Mestel-Doyle '75; White has a large positional advantage and may be winning.

Evans' Gambit 4. b4

4. b4

Evans' Gambit Declined (4...Bb6)

4... Bb6

The best way to refute a gambit is to accept it.

5. a4 a6 6. Nc3 d6

[6... Nf6 7. Nd5 Nxd5 8. exd5 e4 9. dxc6 exf3 10. Qxf3 Qe7+ 11. Kd1 dxc6 12. Re1 Be6 13. Bb2 + = / +- estrin]

7. Nd5 Ba7 8. d3 h6

[8... Nce7 Fritz]

9. Be3 +=

With an edge for White - Panov/Estrin]

Evans' Gambit Accepted (4...Bxb4)

4... Bxb4

[If instead 4... Nxb4 5. c3 Nc6 6. d4

transposes to the 5...Bc5 variation]

5. c3

Black has three choices:

5... Ba5

5... Bc5

5... Be7

Evans' Gambit with 5... Bc5

5... Bc5 6. d4 exd4 7. O-O

7...d6

[7... d3 8. Ng5 Nh6 9. Nxf7 +- BCO2 9... Nxf7 10. Qh5]

8. cxd4 Bb6 9. Nc3 Na5 10. Bg5 Ne7

[10... f6 11. Bf4 Nxc4 12. Qa4+ Qd7 13. Qxc4 Qf7 14. Nd5]

14... g5 15. Bg3 Be6 16. Qa4+ Bd7 17. Qa3 Rc8 18. Rfe1 g4 19. Nxb6 axb6 20. Nd2 Be6 21. f4 gxf3 22. Nxf3 Ne7 23. e5 fxe5 24. dxe5 d5 25. Rf1 Nf5 26. Nd4

when it's still awkward for Black

Now an old analysis goes:

11. Bxf7+ Kxf7 12. Nd5 Re8 13. Bxe7 Rxe7 14. Ng5+ Kg8 15. Qh5 h6 16. Qg6 hxg5 17. Nf6+ Kf8 18. Nh7+ Kg8 19. Nf6+

with a draw by perpetual check - Tchigorin

Evans' Gambit with 5..Be7

5... Be7

6. d4

[6. Qb3 Nh6 7. d4 Na5 8. Qb5 Nxc4 9. Bxh6 gxh6 10. Qxc4

unclear: Harding-Hodgson corr. 1975]

6... Na5 7. Nxe5 Nxc4 8. Nxc4 d5 9. exd5 Qxd5 10. Ne3 Qd7 11. O-O Nf6
12. c4 O-O

[12... b5 = Nunn]

13. Nc3 c6 14. d5 cxd5 15. Ncxd5 Nxd5 16. Nxd5

+ = Nunn-Larsen 1980

White has a small edge.

The most famous recent example of this line is of course:

Kasparov, Gary-Anand, Viswanathan, Riga 1993

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4 Bxb4 5. c3 Be7 6. d4 Na5 7. Be2

A new move

7... exd4 8. Qxd4 Nf6 9. e5 Nc6 10. Qh4 Nd5 11. Qg3 g6 12. O-O Nb6

The Black king never escapes the centre

13. c4 d6 14. Rd1 Nd7 15. Bh6 Ncxe5 16. Nxe5 Nxe5 17. Nc3

Develop before attacking with a move like Bg7

17... f6 18. c5 Nf7 19. cxd6 cxd6 20. Qe3 Nxe6 21. Qxe6 Bf8

White's lead on development could hardly be greater

22. Qe3+ Kf7 23.

Nd5 Be6 24. Nf4 Qe7 25. Re1 1-0

[25... Qd7 26. Bb5 Qxb5 27. Qxe6+ Kg7 28. Nd5 Qb2 29. Rab1]

[25... Re8 26. Nxe6 Qxe6 27. Qxe6+ Rxe6 28. Bc4]

[25... Bh6 26. Bc4]

An amazing destruction of the current world No.3 and his PCA championship challenger.

Evans' Gambit with 5... Ba5

This is the best line.

6. d4 d6

Lasker's Defence, which led to some disillusionment with the Gambit.

7. Qb3

Black has three tries here, but only the last is trustworthy:

A. 7... Qe7

B. 7... Nxd4

C. 7... Qd7

Lasker's Defence with 7... Qe7

7... Qe7

The trouble with this move is that the Nc6 has no good retreat, and must advance. This leads to trouble. The game might go:

8. d5 Nd4 9. Nxd4 exd4 10. Qa4+ Kd8 11. Qxa5 Qxe4+ 12. Kd2 Qxg2 13. Re1 Nf6 14. Bd3 Qxf2+ 15. Re2 Qg1

16. Na3 Bg4 17. Bb2 dxc3+ 18. Bxc3 Qb6 19. Bxf6+ gxf6 20. Qc3 Kd7 21. Bb5+ c6 22. dxc6+ bxc6 23. Bxc6+ Kd8 24. Qxf6+ Kc7 25. Re7+ Kxc6 26. Rc1+

26... Qc5 27. Rxc5+ Kxc5 28. Qc3+ Kb6 29. Qb4+ Kc6 30. Qb5#

Lasker's Defence with 7... Nxd4

7... Nxd4

8. Nxd4 exd4 9. Bxf7+ Kf8 10. O-O dxc3 11. e5 Qe7

If White consolidates, Black's lost King will die.

12. Bxg8 Rxc8 13. exd6 Qe5 14. Na3 Be6 15. Qxb7 Bd5 16. Qb5 Bb6 17. Nc4 Qe4 18. Ne3

This move holds the game for White.

18... Bc6

[18... Bxe3 19. fxe3+ Bf7 20. dxc7]

19. Qb3 cxd6 20. Ba3 g6 21. Rad1 Kg7 22. Qxc3+ Kh6 23. Bc1 Kh5

24. Nd5

Lasker's Defence with 7... Qd7

This is the only satisfactory line.

7... Qd7

covers f7

Now as far as I can find out the best try for White here is:

8. dxe5!

Now Black has:

CI: 8...dxe5

CII: 8...Bb6

Variation CI: 8... dxe5

9. O-O Bb6 10. Rd1 Qe7 11. a4 a6

[11... a5 is less safe:

12. Bd5 Bg4 13. Rd3 Be6 14. Ba3

+ - Shaposhnikov-Veltmader 1958]

12. Ba3 Qf6

13. a5 Bxa5 14. Bd5 Bb6 15. Nbd2 Nge7 16. Nc4 Ba7 17. Rd2 8/=

With enough compensation for the material, according to Estrin.

Variation CII: 8... Bb6

This may be the best line for Black.

9. Bb5 a6 10. Ba4 Qe6 11. Bxc6+ bxc6 12. O-O Rb8 13. Qxe6+ fxe6 14. exd6 cxd6 15. Ba3

+ =

In this endgame, White has a slight advantage, according to Estrin.

Appendix 1. Why is it called "Italian"?

The play most characteristic of the late 1700s and later was dominated by the style of the Italian MODENESE SCHOOL - Italian players and writers like DEL RIO, LOLLI and PONZIANI, through whom the *Italian Game* (*Gioco Piano* and related openings) came into prominence. Fast development followed by *attack* was the name of the game, and beyond this it is difficult to see much theory at all; players were concerned with direct attack - to mate, or lose gloriously in the attempt. From this period we inherit all the older tactical variations of the *King's Gambit* and *Gioco Piano*, where sacrifices were common and their acceptance almost routine. This period should not be thought of as artless - it produced legions of fine analysts and several games of genius, and much was learned about the art of attack.

Sadly, when players learned to decline or return sacrificed material, a lot of the steam went out of these openings. e.g. an old line of the *Danish Gambit* goes **1 e4, e5; 2 d4, exd4; 3 c3, exc3; 4 Bc4, cxb2; 5 Bxb2**. If Black clings to the material White will have a good time, but MIESES showed **5...d5; 6 Bxd5, Nf6** secures open lines and probably the two Bishops. The best line for White here is probably **7 Bxf7+ Kxf7; 8 Qxd8, Bb4+ 9 Qd2, Bxd2+** when Black has no extra material but can play to win the ending with the *Queen's-side majority*. Technique was replacing romance in chess.

The play of the American Paul MORPHY brought some additional science to all this, not that everyone recognised it at the time. Through his games he showed that a successful attack must be based on a lead in *development*. Similarly, he showed that a player who is behind in development must not open lines to 'free their position', since these lines will provide avenues along which the better-developed side will attack - instead, they should keep things closed until they have caught up a bit. Morphy's play was the Italian game perfected, and I have used many of his games in this booklet.

Appendix 2. Oh, if you must... some ideas for playing the Giuoco Pianissimo

If you must play the **Giuoco Pianissimo**, here are some quick hot tips for this line.

Don't be in a hurry to castle: your opponent may play ...Bg4 (or Bg5) and pin your knight against the Queen. If you have castled you probably won't be able to play h3 (or ...h6) without dangerously weakening your king. Steinitz discovered that the sacrificial idea 6. O-O, Bg4; 7. h3, h5! 8. hxg4, hxg4 was playable for Black in many positions (see below) because of the attack on the King down the open h-file: once the Queen gets to h5 White is finished. Even playing 1.e4, e5; 2. Nf3, Nc6; 3. Bc4, Bc5; 4. Nc3, Nc6; 5. d3, d6; 6.h3 is not advisable as Black may play the standard sacrifice ...Bxh3 at some point, or lever open your king's side with ...g7-g5-g4.

The key question in this line is: *how are you going to develop your queen's bishop?* White on move six can go 6. Be3 hoping for 6...Bxe3; 7. fxe3 when there is a juicy half-open f-file to attack along. Black is better off calmly retreating with 6...Bb6 or even leaving the Bishop at c5.

The analysts gradually agreed that 6.Bg5, the **Canal Variation**, is the best move. One line of this goes 6...h6; (this is OK for Black before castling) when the main line goes 7.Bxf6, Qxf6; 8.Nd5, Qd8. White has given up the Bishop pair to achieve a bit of initiative. [There is a hairy line with 6.Bg5, h6; 7.Bxf6, Qxf6; 8.

Nd5, Qg6!? **9.Nxc7+** which is supposed to be poor for Black if White plays **9.Rg1** instead, but White has to prove it!] Other ways to play for Black are to hit the other bishop with **6...Na5** (as in the final game) or to play himself **6...Be6**.

in the Canal Variation: to *emphasise the pin on the Nf6*, if you're allowed, with moves like Nd5, and otherwise threaten to give Black doubled, and therefore weak, f-pawns. I played a miniature with this theme at the British Universities' Congress some years ago:

Regis (Exeter) - Orpwood (Salford), 1987.

1. e4 e5 2. Bc4 Nc6 3. Nc3 Nf6 4. d3 Bb4 5. Nge2 O-O 6. O-O d6 7. Bg5 Na5 8. Bxf6! gxf6 9. Nd5 Bc5 10. b4 Nxc4 11. dxc4 c6 12. bxc5 cxd5 13. cxd5 dxc5 **DIAGRAM**

14. Ng3 Kh8 15. Qh5 Qd7? 16. Qh6 Qd6 17. Nh5 Rg8 18. Nxf6 Rg7 19. Qxg7+ 1-0

(Ne8+ will leave White a rook ahead)

again in the Canal Variation: move the Nc3 to e.g. d5 and *play for c3 and d4* with a central space advantage. The knight on c3 can relocate to e3...

try to open up the f-file with f4: this will require you to play Be3 to stop a check from the Bc5 and to move the other Knight e.g. Nh4. From h4 the Knight can threaten to go to f5 when Black may be reluctant to remove it by ...g6 which will create weaknesses. A Queen's Knight that has travelled from c3-d5-e3 also puts pressure on this square, and if Black does play g6 then Ne3-g4 hits all the soft spots.

And here are some traps:

A trap in the Giuoco Pianissimo

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. d3 d6 5. Nc3 Nf6 6. Bg5 h6 7. Bxf6 Qxf6
8. Nd5 Qd8 9. c3

9... Be6 ?

[better is 9... Ne7]

10. d4 +/- 10... exd4 11. cxd4 Bb4+ 12. Nxb4 Bxc4 13. Nxc6 bxc6 14. Qc2

Another trap in the Giuoco Pianissimo

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. d3 Nf6 5. Nc3 O-O?!

too early

[better is 5... d6]

6. Bg5 h6 7. Bh4 Bb4 8. O-O Bxc3 9. bxc3 g5

Normally you cannot afford to do this in front of your castled King.

10. Nxg5 hxg5 11. Bxg5 Kg7 12. f4+-

with a strong attack

One more trap in the Giuoco Pianissimo

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. O-O?!

[better is 4. c3]

4... Nf6 5. d3 d6 6. Bg5?

[better is 6. Be3]

6... h6 7. Bh4 g5 8. Bg3 h5! 9. Nxg5 h4

10. Nxf7 Bg4 11. Qd2 Nd4 12. Nc3

[12. Nxd8 hxg3 13. fxg3

[13. hxg3 Nf3+ 14. gxf3 Bxf3-+]

13... Nf3+ 14. Kh1 Rxh2#]

12... Nf3+ 13. gxf3 Bxf3-+

...and Black wins.

Even armed with all these ideas it's really not that good a line to play. I include one last game which is intended to put you off it for life!

Example Game in the Giuoco Pianissimo: Chambers-Vorhees (Dayton, Ohio) 1972

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. d3 d6 5. O-O

Too early: invites ...Bg4.

5...Nf6

This is a prime example of how not to play for this position for White.

6. Ng5

Premature.

6...O-O 7. Bxf7+ Rxf7 8. Nxf7 Kxf7

White has snatched what he can.

9. h3

Well, this does stop ...Bg4, but invites a worse fate.

9... Be6 10. Nc3 Qd7 11. Qf3

Not good enough, I'm afraid.

11...Nd4 12. Qd1

12... Bxh3 13. gxh3 Qxh3 14. Be3 Nf3+ 0-1

Exeter Chess Club: Steve Martinson on 30 maxims of chess

30 Maxims of chess

1. _____

2. The King plays a most important part in the endgame and gains in power and activity as the number of pieces on the board diminishes
3. Castle when you will, or if you must, but not when you can

4. Pawn snatching with the Queen is an art -- when it succeeds
5. Pawn promotions are frequently an integral part of Queen and Pawn endings

6. The genesis of a Rook: occupy the file, take the seventh rank, double on the file, make room for the second rook, double on the seventh rank
7. The Rook's place is behind the passed Pawn.

8. Bishops are better than Knights in open positions
9. Do not place your Pawns on the color of your Bishop

10. A Knight on the rim is dim
11. Develop Knights before Bishops

12. Every Pawn is a potential Queen
 13. The passed Pawn is a criminal, who should be kept under lock and key; mild measures, such as police surveillance, are not sufficient.
 14. A passed Pawn increases in strength as the number of pieces on the board diminishes
-
15. Gaining the exchange is one thing, making it pay is another
 16. To study opening variations without reference to the strategic concepts that develop from them in the middlegame, is, in effect, to separate the head from the body
 17. Never move a piece twice before you have moved every piece once.
 18. The art of treating the opening stage of the game correctly and without error is basically the art of using time efficiently
 19. Your only task in the opening is to reach a playable middlegame
 20. Attack! Always attack!
 21. Expeditious return of material is a mark of the master
 22. If I win it was a sacrifice. If I lose, it was a blunder.
 23. After an attack has been repulsed, the counterattack is generally decisive.
 24. The direct exploitation of an open file is sometime impossible. But its indirect exploitation -- denial of counterplay and the opportunity to operate in another sector -- can often prove advantageous, too.
 25. The control of the centre confers the possibility of influencing activity on both wings at one and the same time.
 26. Weak points or holes in the opponent's position must be occupied by pieces, not Pawns.
 27. Reduce when ahead.
 28. Spot the weakness! Mobilise against it! Rack up the point!
 29. It is not one move, even a very sharp one, that must be sought, but rather a workable strategy.
 30. Always assume your opponent will make the correct reply.
 31. No-one has ever one by resigning.

[Dr. Dave](#)

Exeter Chess Club: Steve Martinson on Pawn Structure

Pawn Structure

Isolated Pawn

Pawn having none of its own force's Pawns in immediately adjacent files. Weakness commonly exploited by placing a Pawn or piece immediately in front and then attacking.

Doubled Pawn

Two Pawns of the same color in the same file. Weakness exploited much the same as an isolated Pawn, with the attack being on the Pawn(s) not supported by a neighbouring Pawn.

Pawn Islands

Number of groups or single Pawns which are not connected by Pawns. In the diagram, White has 3 Pawn islands and Black has 2. Each island should be considered a separate chance of attack hence the more islands, the weaker the Pawn structure.

Passed Pawn

Pawn which has no enemy Pawn in front of it and those in adjacent files have advanced beyond it (meaning it can no longer be captured by a Pawn). Remember the adage: "Push passed Pawns".

Connected Passed Pawns

Two Pawns, both of which are passed Pawns, which are in files adjacent to each other. Such a situation should result in costing the opponent some piece in most cases.

Backward

Pawn which has had each of the Pawns in adjacent files advance before it. Weakness exploited by placing a piece on the weak square which is immediately in front of it.

Exeter Chess Club: Steve Martinson on Ruy Lopez

Ruy Lopez

1. e4 e5 2. Nf3 Nc6 3. Bb5

Goals for White:

pressure Black's centre, especially Pawns - d4 is important; plan to get a Knight to d5 or f5 using the e4 Pawn as an anchor; generally attack be will to King's-side; usually plays O-O

Goals for Black:

maintain strong centre - keep e5 if possible or counterattack quickly if centre is lost; counterattack is frequently on Queen's-side where Pawn thrust (...a6, ...b5) occurs; usually plays ...O-O because of a6/b5 weakening if ...O-O-O; ...d5 will be useful but difficult to attain

Common continuations:

3... a6 4. Ba4 Nf6 5. O-O Be7 6. Re1 b5 7. Bb3 O-O 8. c3 d5 9. exd5 Nxd5

Marshall Gambit

3... a6 4. Ba4 Nf6 5. O-O Be7 6. Re1 b5 7. Bb3 d6 8. c3 O-O 9. h3 Bb7

Steinitz [Impertinent note from typesetter: I would call this the Archangelsk Variation and not the Steinitz]

3... Nd4 4. Nxd4 exd4 5. O-O Bc5 6. Bc4 d6 7. c3 Ne7 8. cxd4 Bxd4

Bird's Defence

3... a6 4. Bxc6 dxc6 5. O-O f6 6. d4 exd4 7. Nxd4 c5 8. Nb3 Qxd1 9. Rxd1

Exchange Variation

Exeter Chess Club: Steve Martinson on Queen's Indian Defence

Queen's Indian Defence

1. d4 Nf6 2. c4 e6 3. Nf3 b6

Goals for White:

will try to make the thrust e4 to dominate the center; Qc2 is played to prepare for e4; if c4-d4-e4 is allowed, d4-d5 will block in Black's b7 Bishop

Goals for Black:

if e4 is allowed, Black must either (a) effectively attack the Pawn center with his PIECES, or (b) break the center with f5; delaying d5 is often most effective, waiting for disruption at e4; c5 is also used early to bust the center

Common continuations:

4. g3 Bb7 5. Bg2 Be7 6. O-O O-O 7. Nc3 Ne4

Classical Fianchetto

4. g3 Ba6 5. b3 Bb4+ 6. Bd2 Be7 7. Bg2 c6 8. Bc3 d5

Exeter Chess Club: Steve Martinson on King's Indian Defence

King's Indian Defence

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7

Goals for White:

attack is on the Queen's-side, on the open c-file after cxd5 or with Pawn thrust; e4-e5 Pawn chain is vital to central dominance and huge space control; premature Nc6 by Black (without e5 or e6) should be met with d5

Goals for Black:

attack is on King's-side; f5 may be needed to take out White's e4 post -- White should NOT play exf5 for Black to reply ...gxf5, ...Kh8, ...Rg8 taking the file of White's castled King -- and possibly push with ...f4 and ...f3; if White plays dxe5 in response to e5, Black must try to post a Knight at d4 where no Pawn can force it out; ...a6 and ...b5 can be used to attack c4

Common continuations:

4. e4 d6 5. Nf3 O-O 6. Be2 e5 7. O-O Nc6 8. d5 Ne7

[Dr. Dave](#)

Exeter Chess Club: Steve Martinson on Benko Gambit

Benko Gambit

1. d4 Nf6 2. c4 c5 3. d5 b5

Goals for White:

can gain the a-Pawn by accepting the gambit; KB will be a problem to develop -- playing g3/Bg2 is passive but safe; may want to break center with e4-e5; sharpest lines involve declining the Gambit

Goals for Black:

gambit gives lead in development and Queen's-side pressure, particularly against the White b-Pawn; as with all gambits, Black must effectively develop or the Pawn is wasted

Common continuations:

Exeter Chess Club: Steve Martinson on French Defence

French Defence

1. e4 e6 2. d4 d5

Goals for White:

GENERAL: tries to maintain d4/e5 with c2-c3 and f2-f4 as support; attack usually on the King's-side; can maintain a big space advantage and openly develop; **ADVANCE:** causes unnatural development, not aggressive but hopes to cramp Black; **EXCHANGE:** drawish, no advantage likely; **CLASSICAL:** difficulty in holding Pawn center; **MACCUTCHEON:** strong position but watch out for possible pawn push on castled King's-side; **WINAWER:** will attack on the King's-side, try to block Black Pawns on light squares (where there is no Bishop to defend the dark squares); consider f2-f4, g2-g4-g5 and f4-f5; Queen may come out early; sharp play for both sides; **TARRASCH:** avoids ...Bb4 pin and allows c-Pawn to protect d4; eventually plan to post a piece on d-file to block the Black isolated d-Pawn

Goals for Black:

GENERAL: must attack with c5 (and not play ...c5-c4); do not play ...Nc6 before ...c5; difficulty developing QB; frequently does not castle and when castling occurs, it is as likely to be ...O-O-O as ...O-O; ADVANCE: want to counterattack quickly with good development; EXCHANGE: development without problems; CLASSICAL: must be able to defend "unprotected" castled King; MACCUTCHEON: seldom castles, difficult to develop efficiently; WINAWER: seldom castles because ...c5 weakens the Queen's-side and White has a strong King's-side attack, chances are on the c-file; TARRASCH: will end up with an isolated d-Pawn which is best used as a post anchor or to apply pressure, development seldom a problem, positional in nature -- revolves around isolated d-Pawn; if White attacks it better and Black is better

Exeter Chess Club: Steve Martinson on Modern Benoni

Modern Benoni

1. d4 Nf6 2. c4 c5 3. d5 e6 4. Nc3 exd5 5. cxd5 d6

Goals for White:

enjoys spatial freedom; should target d6 to weaken chain and possibly create a passed Pawn; may be forced in the middle game to weaken castled King's position with a King's-side majority Pawn storm

Goals for Black:

Queen's-side Pawn majority will break with ...b5; pressure on open e-file; d6 is backward but important in holding Pawn chain; King's Bishop goes to g7

Common continuations:

6. e4 g6 7. Nf3 Bg7 8. Be2 O-O 9. O-O Re8

[Dr. Dave](#)

Exeter Chess Club: An openings survey at East Devon - Minor and Intermediate Sections

By Dave Regis, with interruptions from the group

Note: This piece prompted an immediate response from [Eric Petrusic](#), which was interesting. [See also [Strategy and Tactics](#) - DR]

Note for visitors: the Minor section has a grade ceiling of BCF 100 (ELO=1400, USCF class D), and the intermediate has a ceiling of BCF 125 (ELO=1600, USCF class C).

Summary:

How should we open a game of chess? Here's an opening repertoire from **Chess Openings for Juniors**, suitable for juniors and presumably Minor/Intermediate players:

Main opening: Main line Giuoco Piano with 4. c3

Two Knights' Defence: Max Lange

French Defence: Classical, & Alekhine Gambit against Winawer

Sicilian Defence: Morra Gambit

Caro-Kann Defence: Main lines with 3.Nc3

Pirc Defence: Pseudo-Samisch 4. f3

Black against King's Gambit: Accepted, Modern defence 3...d5

Black against Ruy Lopez: Open Morphy Defence with 9...Bc5

Black against GP: Main Line Two Knights' Defence with 6...Na5

Black against 1.d4: Cambridge Springs Defence

Black against hypermodern: London system

I played pretty much strictly from this repertoire for a while and would recommend it to anybody. It aims at open games emphasising piece play, perhaps with a view to tactics and attacking play, but as we all know "*tactics flow from a superior position*" (Fischer). [If you don't have this book I have expanded on some similar opening suggestions for [White systems](#) and [Black Defences](#), including playing [against 1. d4](#).]

Another opening repertoire aimed at club players is offered by Nigel Davies in his **Dirty Tricks** video:

Main opening: pick a 19th century gambit like the King's or Danish

French Defence: Wing Gambit

Sicilian Defence: Deferred Wing Gambit

Caro-Kann Defence: Two Knights' Variation

Pirc Defence: System with Bc4

Black against Ruy Lopez: Modern Steinitz Variation with ...Bg4, Exchange Variation with ...Bg4, Bird's Defence, or maybe even the Nimzovitch Defence with **1...Nc6**

Black against 1.d4: Tchigorin Defence

Black against hypermodern: London system

Lastly, there are two editions of 'An opening repertoire for the attacking club player' by Keene and Levy, and a book of the same name by Gufeld.

| | Keene/Levy I | Keene/Levy II | Gufeld |
|----------------------------------|---------------------------------|------------------------------------|-------------------|
| Main opening | Scotch Gambit | Scotch Game | Vienna Game |
| French Defence | Winawer 4. a3
Steinitz 4. e5 | Advance, 5. Be3 | Advance, 6. Be2 |
| Sicilian Defence | Alapin Variation | Alapin Variation | Grand Prix Attack |
| Caro-Kann Defence | Panov/Gunderam | Advance | Advance |
| Pirc Defence | Byrne system | Byrne system | Austrian Attack |
| Black against 1. e4 | Pirc Defence | Scandinavian | Sicilian Dragon |
| Black against 1.d4 | Benko Gambit | Tchigorin Defence | Leningrad Dutch |
| Black against hypermodern | Dutch systems | English: Dutch; Reti: ...d6/...Bg4 | Dutch systems |

To summarise: all offer a mix of systems with a common theme - open, aggressive play. Why are we recommended to play like this?

"A knowledge of tactics is the foundation of positional play. This is a rule which has stood its test in chess history and one which we cannot impress forcibly enough upon the young chess player. A beginner should avoid Queen's Gambit and French Defence and play open games instead! While he may not win as many games at first, he will in the long run be amply compensated by acquiring a thorough knowledge of the game." -- RICHARD RETI

- and, I might add, it's a lot more fun! The trouble with playing stodgy stuff is you can get stuck and bored and lose through losing patience, or perhaps you will never understand why you lose.

Tom: "I always play gambits!"

Dave: "Good for you! We might run through a few afterwards. You don't have to play a gambit to get an open game, and there can be other problems. When we look at the Sicilian later, I'll say some more about this."

So much for the books. How do people actually play, and how do they fare? (This survey has two points: firstly to see what's there, but also to model an approach to looking at your own games.) I looked at 253 games from East Devon 1995 (Minor & Intermediate sections), and found:

The results are weighted in favour of White

| Value Label | Value | Frequency | Percent | Valid Percent | Cum Percent |
|-------------|-------|-----------|---------|---------------|-------------|
| | .00 | 87 | 34.4 | 34.4 | 34.4 |
| | .50 | 54 | 21.3 | 21.3 | 55.7 |
| | 1.00 | 112 | 44.3 | 44.3 | 100.0 |
| | | ----- | ----- | ----- | |
| | Total | 253 | 100.0 | 100.0 | |

...but more strongly than GM games in the minor section

| Summaries of Variable Cases | RESULT Value | By levels of Label | TOURN Mean | Std Dev |
|-----------------------------|--------------|--------------------|------------|---------|
| For Entire Population 253 | | | .5494 | .4416 |
| TOURN i 119 | | intermediate {c} | .4874 | .4291 |
| TOURN m 132 | | minor {d} | .6061 | .4499 |

Hint: get your Black act together in the Minor.

Try and get White in Round 2!

| Summaries of Variable Cases | RESULT Value | By levels of Label | ROUND Mean | Std Dev |
|-----------------------------|--------------|--------------------|------------|---------|
| ROUND 47 | 1 | | .5213 | .4539 |
| ROUND 52 | 2 | | .6058 | .4240 |
| ROUND 52 | 3 | | .5288 | .4688 |
| ROUND 50 | 4 | | .5300 | .4450 |
| ROUND 50 | 5 | | .5600 | .4361 |

...Or Round 5...

| Summaries of Variable Cases | RESULT Value | By levels of Label | SECTION Mean | Std Dev |
|-----------------------------|--------------|--------------------|--------------|---------|
| SECTION 24 | i1 | | .4792 | .4293 |
| SECTION 23 | i2 | | .5217 | .4123 |
| SECTION 25 | i3 | | .5000 | .4564 |
| SECTION 23 | i4 | | .4783 | .4390 |
| SECTION 24 | i5 | | .4583 | .4403 |
| SECTION 23 | m1 | | .5652 | .4839 |
| SECTION 29 | m2 | | .6724 | .4284 |
| SECTION 27 | m3 | | .5556 | .4870 |
| SECTION 27 | m4 | | .5741 | .4537 |
| SECTION 26 | m5 | | .6538 | .4188 |

The gore in Round two I think is as a result of the Swiss system, and the last round is clearly the crunch one. Still...

...Again, it's mostly in the Minor section that the advantage of White is seen.

Openings lean on ECO B and D

...rather than C, which is perhaps how we are supposed to play

| Value Label | Value | Frequency | Percent | Valid Percent | Cum Percent |
|---------------------------|-------|-----------|---------|---------------|-------------|
| Hypermodern and irregular | a | 45 | 17.8 | 17.8 | 18.6 |
| Semi-open games | b | 78 | 30.8 | 30.8 | 49.4 |
| Open games (and French) | c | 52 | 20.6 | 20.6 | 70.0 |
| Close games | d | 67 | 26.5 | 26.5 | 96.4 |
| Indian defences | e | 9 | 3.6 | 3.6 | 100.0 |
| | | ----- | ----- | ----- | |
| | Total | 251 | 100.0 | 100.0 | |

I also looked at 400 e-mail correspondence games from the IECG from categories D and E and found the following distribution:

There are obvious peaks and clusters at:

A00-A05 Irregular openings

A45 Unusual replies after 1. d4 Nf6

B00-B30 Semi-open defences (Irregular, Nimzovitch, Caro-Kann)

C00-odd French defence and irregular defences with 1...e6, e.g. Owen's

C40-C70 Open games

D00-odd Irregular closed games (Stonewall, Colle)

D30 Queen's Gambit

E90-odd King's Indian

These e-mail games also feature B and D prominently, although I got more Cs here than in the East Devon sample. So, we have very much the same pattern of openings, which despite the 25% of open games, we are flying pretty much against what Reti recommends for beginners.

So, just when are you good enough to stop playing open games? Minor? Intermediate? I think the answer is, when you are getting bored with them.

Ray: "Too right! I got bored playing the same old positions in the Moller and Max Lange against the same players each season, and so these days I like to play slow systems like Bird's Opening."

Dave: "Fine! Ray, we know you can attack when you want to or when you need to, as I remember you winning in about 20 moves with a double piece sacrifice in the Jamboree in September. To coin a phrase, you've served your apprenticeship in the open games, and can move on. But there is a lot of scope for exploration in the old Italian Game; Evans Gambit is far from played out. There are at least three good systems for Black in reply to 4. Ng5 in the Two Knights (Traxler/Wilkes Barre, Ulvestad/Fritz and the main line gambit), and two good replies in the Max Lange. And if anyone is bored like Ray, remember, you can move on to other open games which means you can hang on to a lot of your repertoire. Play the Scotch, or the Scotch Gambit, or the Ruy Lopez. "

Alan: "I've been doing very well with the Goring Gambit this season"

Dave: "I have a problem with the Goring, because I think 4...d5 equalises easily. But until your opponents start playing that, enjoy it! What do they do, decline and push past with 4...d3 I suppose?"

Alan: "No, they do decline, but they let me play 4. cxd4, when I get a pawn roller!"

Dave: "Go for it, then!"

Fred: "Isn't there an appalling lot to remember in all these openings?"

Dave: "Well, you've got to learn how to play open stuff and tactics if you are going to improve. You can play one of the [closed 'System' openings](#) to keep your book learning down (and maybe study tactics at home), but there's nothing like getting stuck in to improve. There isn't really that much to learn, and I don't think your opponents will know

it any better than you - look at how Alan's opponent's are reacting, they not only don't know the Goring Gambit, they don't seem to be playing according to any sort of logic in the opening at all. I'm not insisting you play open games - if you are happy playing what you do now at the level you do now, you have no problems!"

But I also suspect that the main reasons that players don't play open games is, not boredom with the same old positions, but fear of losing, or too many painful tactical oversights. Instead of getting good enough at tactics to live and thrive among open games, some players prefer to play closed games without an immediate clash of forces so that fewer Loose Pieces Drop Off. It can happen, even to the best of us...

Karlsson,AS - Gustavsson,C, 1994: 1.e4 e5 2.f4 Bc5 3.Nf3 d5 4.Nxe5 dxe4 5.c3?! Nf6 6.d4 exd3 7. Bxd3 0-0 8.Qf3 Re8 9.Be3 Bg4 10.Qg3 Rxe5 11.Bxh7+ Kxh7 0-1

I might be wrong, but I think this is half of what all these A00 and D00 openings are about: playing a stereotyped closed setup so that we get through the first 10 moves (a) without dropping any pieces, and (b) without having to think!

1. d4 2. e3 3. Bd3 4. f4 5. Nf3 6. O-O 7. Ne5 8. Qf3 9. g4... (or 8. Rf3 9. Bxh7+...)

1. g3 2. Bg2 3. d3 4. Nf3 5. O-O 6. Nbd2 7. Qe1 8. c3 9. e4...

I can see the attractions, but one-idea openings like the Stonewall are so easy to see coming and avoid with only a moment or two of preparation.

1. d4 d5 2. e3 Nf6 3. Bd3 Bg4! 4. f3 Bh4 and ...Bg6

1. d4 d5 2. e3 Nf6 3. Nf3 Bf5! or ...Bg4!

1. d4 d5 2. e3 Nc6! 3. Bd3 e5

1. d4 d5 2. e3 Nc6! 3. Bd3 Nf6 4. f4 Bg4 5. Nf3 e6 6. O-O Bf5!

And, if your 'system' opening doesn't go according to plan, you may be in one of those stodgy positions where the plaintive cry goes up "I don't know what to do here".

Alan: "I like the King's Indian Attack as a system".

Dave: "So do I! The thing is about the KIA is that you can play it with more than one idea in mind, and it's not easy for Black to cut across your plans because you aren't committed to one plan. I'll come back to this later."

A count of all openings and results:

mean=0.5000 means White scored 50% in that opening

My statistics software clipped the names off most of the openings, but you find the [full names elsewhere](#).

Intermediate and minor players choose different openings:

...Intermediate avoid D and E in favour of more A and B

| | Count | | | |
|------------------|---------|----------|-------|-------|
| | Row Pct | intermed | minor | |
| hypermodern | a | 25 | 20 | 45 |
| | | 55.6 | 44.4 | 17.8 |
| semi-open | b | 49 | 29 | 78 |
| | | 62.8 | 37.2 | 30.8 |
| open/french | c | 26 | 26 | 52 |
| | | 50.0 | 50.0 | 20.6 |
| closed | d | 16 | 51 | 67 |
| | | 23.9 | 76.1 | 26.5 |
| indian (semi-clo | e | 3 | 6 | 9 |
| | | 33.3 | 66.7 | 3.6 |
| Column | | 119 | 132 | 253 |
| Total | | 47.0 | 52.2 | 100.0 |

Whatever minor players should be playing, I guess it's not closed openings.

Also, I'm not right impressed with anyone in the club, let alone players in the intermediate, playing hypermodern systems unless it's one you can interpret in a fairly direct King's-side attack sort of way, like the Botvinnik system or King's Indian Attack.

I can see a role for the semi-open systems at club level, they are unbalanced and often exciting.

Also, intermediate players follow the main lines more

You find them in ECO B90 or B09 rather than ECO B00.

White scores best in ECO A and D openings

...which might explain why we play all this funny A00/D00 stuff

There's no arguing with results... as long as you are happy with your results. There's clearly a reinforcement here for getting your act together as Black against these unusual openings. We'll lay on a repeat of "**Beating the Anti-Indians**" towards this end.

Alan: "Surely it's better to play something you half-know than something you don't know at all - particularly if your opponent doesn't know it!"

Dave: "Yes, indeed - a player with a plan will always beat a player without one, particularly if you know some of the variations. But I fear in D00 openings the plan will go astray because the plan is too simple, and in A00 it will go astray because the positions are too complex."

The Stonewall & similar systems are played quite often

...but may even perform below average at minor level

| Variable | Value | Label | Mean | Std Dev |
|---------------|-------|-------|-------|---------|
| Cases | | | | |
| NON-STONEWALL | .00 | | .5521 | .4392 |
| 238 | | | | |
| TOURN | i | | .4870 | .4264 |

| | | | | |
|---------------|---|-------|-------|-------|
| 115 | | | | |
| TOURN | m | | .6138 | .4473 |
| 123 | | | | |
| STONEWALL etc | | | | |
| 1.00 | | .5000 | .5000 | 13 |
| TOURN | | | | |
| i | | .5000 | .5774 | 4 |
| TOURN | | | | |
| m | | .5000 | .5000 | 9 |

I wouldn't stake much on a sample of 13 games, but it's clear it's nothing special.

Ray: "I used to play the Stonewall but used to get a lot of draws."

Dave: "I can well believe that. The Stonewall is a one-idea opening (playing for a clockwork King's-side attack with pressure on h7 from a Bishop on d3) and if your opponents see it coming they can avoid this by 3...Bf5 or 3...g6."

Ray: "Yes, that's what happened. You then get a blocked position which neither side is going to enjoy much, and things often get bogged down and drawish. If you are prepared to think a bit in the opening, I still think the Colle (D04) is playable, because you still get an attack of sorts against 3...g6, and after 3...Bf5 you can switch plans with 4.c4 and 5. Qb3. White has pressure on b7 and can open the c-file."

Dave: "That's the type of flexibility I'd expect to see in the Major; unfortunately in the Minor you are more likely to get a clockwork reaction like 3...Bf5 4. Bd3 Bxd3 5. Qxd3, which is usually a big yawn (because neither player realises they can open a file)."

Whites mostly avoid open Sicilians

Open Sicilians 5

Other Sicilians 22

...Maybe with good reason!

Open Sicilians White scores 40%

Other Sicilians White scores 73%

So in the interests of playing Black we could usefully lay on a session on **Beating The Anti-Sicilians**. If only there was a suitable book available...

The single most common way of avoiding the Sicilian is the Morra Gambit

6 in Intermediate, 2 in Minor

However, while the accepted form is the more successful, most people decline it

Accepted: 2/2

Declined: 21/2/6

...so I'd say think about another system!

The Open Sicilian is obviously critical and a bit scary, but surely the best way to play for a win as White. Tal used to say that he preferred meeting 1.e4 c5 than 1.e4 e5 because it was easier to get an open game; Karpov has also commented that there is no need to gambit a Pawn against the Sicilian because white gets an attack anyway! So, there's no need to play a gambit.

Also, the GMs usually reckon the Morra is a nice free Pawn, and the best way to play for a win as Black. So why decline anyway? I guess this has a lot to do with club players:

a. being frightened of their opponent's book knowledge (justifiably or not), and/or

b. being frightened of being attacked

a. being frightened of their opponent's book knowledge (justifiably or not)

I do see a lot of gambits declined at club level - remember what Alan was saying about the Goring. Sometimes I hear people say they declined "on principle". There is **no** principle that says "decline free Pawns". In fact, there is a principle that says **always take a central Pawn if it is offered**. The thing is,

don't try and hang on to it, let your opponent waste time trying to get it back - or give it back yourself with an early ...d5 to get on with your own development.

Play the strongest moves you can, regardless of what you think your opponent knows. (After all, they might know how to refute your second-rate choice as well...)

Despite all this, Blacks are being rewarded for declining! However, this might have something to do with the small numbers we are looking at here, or maybe which players are doing the declining. It does suggest, however, that you are getting a less open game by playing a gambit instead of the Open Sicilian, because Blacks are being panicked into declining! This may be true for other gambits as well.

b. being frightened of being attacked

I think we need to brush up a bit on attack and defence.

You mustn't ignore genuine threats, but don't be panicked or distracted by them - especially when faced with a King's-side attack [when you must pursue your own attack with extra vigour.].

Don't worry needlessly, resulting in panic and retreat - you need to keep active and keep counterplay.

Take nothing for granted. Don't fret needlessly - analyse and find out if there is a win for your opponent. I often say, "Oh, Black's only going to threaten mate", by which I mean, the best they can achieve is a one move threat that can be easily contained. When they make that threat, you do need to react, but don't worry needlessly; carry on with your own plans. There are some "clockwork" attacks (like the h-file assault against the fianchettoed King, or the King's Indian Attack) that will eventually produce checkmate if left alone, but usually the best recipe is to counterattack, even if you do have to stop from time to time to counter a mating threat.

In particular, don't panic and refuse sacrificed material that you could have for free. Don't decline "on principle". This is declining from fear, not knowledge. Play the strongest move, which may well be to take the material and make your opponent prove their judgement was correct.

Neither be over-impressed by your own threats. An attack by one piece on another is meaningless in itself - it may distract an important defender. Equally, don't assume that a stock combination or sacrifice works for you in the position you have today - small differences can make it fail. Don't hope vainly - analyse and find out.

Alan: "But the other reason people like to play cautiously is if they are playing for a team.

If you do lose in 15 moves you feel you've let your team down."

Dave: "You might be right, but remember these statistics are from tournaments where people are playing on their own behalf, not for a team. Maybe there is an argument for trying to hold the margin of the draw when playing for a team - after all, Reti cautions us that we " may not win as many games at first". But I think there is also an argument for having fun - and some of the closed 'system' openings look awfully stodgy. "Above all, to yourself be true"!"

Note: This piece prompted an immediate response from [Eric Petrusic](#), which was interesting. [See also [Strategy and Tactics](#) - DR]

Subject: "An openings survey at East Devon" and other thoughts

[e-mail slightly edited by DR]

Hi Dave,

This evening, after some carousing, I dropped by and was reading "An openings survey at East Devon." It strikes me that so often a great fuss is made about playing open games first, then playing closed games once you are stronger. Probably this has a lot to do with the advice Reti and other grandmasters have given about learning the tactics and so on.

Not to say that Reti doesn't know what he's talking about, but I disagree with this "natural" progression. My experience goes like this: when I first started playing, one of the earliest influential books I read was *My System*. Six months into my chess odyssey, I learned all about positional chess and took it to heart. "Play open games!" the masters said, and "Faugh!" replied I. My opening repertoire was built around 1.d4, the French defense, basically anything Reti told me not to do, because I'm stubborn and like to do things my way.

Predictably, my chess skills grew around my opening choices. I became a fairly strong positional player for my skill level, but was weaker and unsure of myself in more open games. I favored strategy over tactics; probing of weak points over sacrificial pyrotechnics; Capablanca over all.

Then, I began to get bored. You mention in your article about how it might be time to change from the open to the closed games when you start to get bored with the open games, but in my case the reverse occurred - I began to play around with the open games more and more when the Queen's Gambit Declined sapped my will to live. After reading *My 60 Memorable Games*, I started playing around with the Sicilian and a little 1.e4. After reading *Tal-Botvinnik 1960*, I started thirsting for the attack. I started studying tactics tirelessly, and all of a sudden, my opening repertoire didn't suit me anymore. Now it's 1.e4, 1...e5 or 1...c5, and g6 Indians. Come-and-get-me chess instead of quiet, controlled buildup chess. Use

your aggressive feelings, boy!

And now I feel like I'm a stronger, more complete player than ever. The thing is, I don't see my early closed game experience as the wrong path, or wasted time - I feel like my positional background has, if anything, made me a much stronger attacking player since it gives me a better instinct of how and where to arrange my pieces. There's also a great benefit in being able to weigh whether I should play quietly or "noisily" in a given situation, and being comfortable in either.

I think what is really critical is for players to understand how to play in *both* open and closed games. Tactics are indeed vitally important, but perhaps not less so is a positional sense. Was it not Spielman who said, "I can see the combinations as well as Alekhine, but I can not get into the same positions."? The order of learning may not be so important as the fact that both are learned.

Furthermore, no one ever seems to consider that Reti was pushing his own rhetoric constantly in his "advice" - it certainly furthers the hypermodern cause to portray the closed openings as a higher calling than the silly romantic gambit tripe of the old-schoolers.

By the way, I think too much emphasis is placed on opening knowledge. It is definitely important to understand the principles of the opening, but not nearly important as publishers would have you think to know the exact moves. Play anything! Inspired by Bronstein, I started playing damn near anything a couple of months ago. I find that you learn a lot more by thinking on your own than relying on Informant's latest novelty. Shocking, I know.

Anyway, it's nearly 2 am here in the States, so I'm off to bed. Hope you can extract some nuggets of wisdom from my diatribe.

later.

--

Eric A. Petrusic

"It's people like you
what cause unrest"

Exeter Chess Club: Complete ECO codes with variation names

Notes:

1. checks are not indicated - an ECO quirk
2. I have been sparing with the qualifications (lines with and without certain moves) as they are implicit in the classification anyhow.
3. I have typed all the castling moves with capital 'O's not zeroes (0).
4. Volunteers to proofread take one step forward.
5. English variation names added Spring 1997

Introduction

The Spanish priest Ruy Lopez, who was the strongest player of his day, described the opening which bears his name in the 1500s. At least, the British and Americans know it as the Ruy Lopez: in Europe they are more likely to call it the Spanish Game, and Tartakower wryly referred to it as Spanish Torture. (Because I was brought up in East Anglia and not Spain, I described it for years as the "Royal Opez", but it is properly pronounced more like "Ree Lop'eth".)

It remains the most important of the King's-side openings, and is still generally considered the best way to keep White's initiative going after **1...e5**. It is no accident that most of the games in Bronstein's book "**200 Open Games**" begin with the Ruy Lopez opening.

The ideas for each side in the Ruy Lopez are very many and varied; I hope below to introduce some of the basic concepts and give you some landmarks for your own exploration of this fine opening.

The first few moves of the Ruy Lopez opening are easy to follow: **1. e4 e5 2. Nf3 Nc6** is very natural. The moves often played by juniors here, *3. Bc4* and *3. d4*, are also easy to understand, but may not be the strongest. *3.d4*, the Scotch Opening, leads to an early clash but perhaps also an early simplification, with a loss of tension and thus winning chances for both sides. The Italian game with *3. Bc4*, hitting *f7* and hoping to deter ...*d5*, paradoxically rather invites ...*d7-d5* and an early exchange in the centre, with equality. This is because the logical follow-up *3. Bc4 Bc5 4. c3 Nf6*, results in Black regaining control of the *d5* point.

The Ruy Lopez move, **3. Bb5**, keeps the idea of taking over the centre with *d2-d4* (or with *c2-c3* and *d2-d4*), but first does a number of important other jobs. Like in the Italian Game, the Bishop clears the way for White to castle, and then play *Rf1-e1*. But on *b5* rather than *c4* the Bishop cannot be hit by ...*d7-d5*. If Black does ever move the *d*-Pawn, the half-pin of the Knight on *c6* becomes a full pin, undermining Black's control of *e5* and *d4*.

In the short term there is an immediate threat: the Bishop attacks the Knight that defends the pawn

attacked by the Knight (the house that Ruy built). It would be great for White if it worked so simply, but after **3...(pass); 4 Bxc6, dxc6! 5 Nxe5?! Qd4!** Black will regain his pawn through the *double attack*. So, the immediate threat to the Pawn isn't quite so deadly, but once White has castled and/or protected the e-Pawn the threat will become real. Also, the Pawn on e5 is a lot easier to get at than the one on f7, and Black can get badly tied up or just stiff and cramped trying to hold on to a share of the centre.

The other tactical point to note is that the counterattack by Black on e4 by ...Nf6 can be met by White castling, since after ...Nf6xe4 White has Rf1-e1: if White does not win a piece, it is at least often awkward for Black to get the King's-side sorted. So : **1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O! Nxe4 5. d4!** and White has an edge.

The most natural sequence of moves trying to hold onto e5 leads to trouble for Black: after **1 e4, e5; 2 Nf3, Nc6; 3 Bb5, d6; 4 d4, Bd7; 5 Nc3, Nf6; 6 O-O, Be7; 7 Re1, exd4; 8 Nxd4, O-O; 9 Bf1!** (to stop the exchanges threatened by 9...Nxd4) when Black has lots of pieces but not enough space.

Why does Black play **7...exd4** when I said the idea is to hold on in the centre? Tarrasch's famous trap showed that Black cannot play **7...O-O** because of the forcing continuation **8.Bxc6 Bxc6 9.dxe5 dxe5 10. Qxd8 Raxd8 [10...Rfxd8 allows 15 Kf1 - see later 11.Nxe5 Bxe4 12.Nxe4 Nxe4 13.Nd3 f5 14.f3 Bc5+ 15.Kf1] 11.Nxe5 Bxe4 [11...Nxe4 12.Nxc6] 12.Nxe4 Nxe4 13.Nd3 f5 14.f3 Bc5+ 15.Nxc5 [15.Kf1 Bb6 16.fxe4 fxe4+; 15.Kh1 Nf2+ 16.Nxf2 Bxf2 17.Rf1] 15...Nxc5 16.Bg5 Rd5 [16...Rde8 17.Be7] 17.Be7 Re8 18.c4 winning the exchange. (If instead **10...Rexd8** White would have **15 Kh1 (15...Rxd3; 16 fxe4).**) Tarrasch won a game with this against Marco AFTER publishing it as analysis! **1-0** wins the exchange. (If instead **10...Rexd8** White would have **15 Kh1 (15...Rxd3; 16 fxe4).**)**

These lines had a strong effect on players who started to realise just how good the Ruy Lopez is. The Giuoco Piano is a great opening for your early chess years; the Ruy Lopez is an opening for life.

Black has many lines, which fall into basically two approaches (as usual): **defence** or **counterattack**. Defence of the strong point at e5 we have looked at with **3...d6**, the *Steinitz Defence*, (or **3...a6; 4 Ba4, d6**, the *Deferred Steinitz Defence*), but we have seen that the point cannot be held for long; counterattack may be attempted with **3...Nf6**, the *Berlin Defence*, or **3...a6; 4 Ba4, Nf6**; the *Morphy Defence*. The Morphy move 3...a6 was an important refinement of Black's resources, making the Bishop choose its diagonal and allowing the pin-breaking ...b5. Reuben Fine gives an instructive comparison of variations with and without ...a6:

In reply to the Morphy the obvious **5 Nc3** is rather boring, but White can play **5 O-O** since, as we have seen, Black cannot really win the e4 pawn. The Morphy has itself a strong point line, **5 O-O, Be7; 6 Re1, b5; 7 Bb3, d6**, the *Closed Morphy Defence*, and a counter-attacking line, **5 O-O, Nxe4; 6 d4, b5; 7 Bb3, d5**, the *Open Morphy Defence*. These are systems of great richness, and the Closed Morphy best avoided until your chess understanding is well advanced.

The Ideas behind the Ruy Lopez

White plays for an immediate break in the centre

5 d4 or **5 Qe2** (idea O-O and Rd1) or **5.Qe2/6.Qe2** lead to more familiar open and attacking e-pawn styles of game. An example: **1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. d4 exd4 6. O-O Be7 7. Re1 b5 8. Bb3 d6 9. Bd5 Nxd5 10. exd5 Ne5 11. Nxd4 O-O**

This is about even, and, I hope, a game juniors would enjoy playing as either colour; these variations are a good introduction to the Ruy Lopez.

Black plays for an immediate break in the centre

This is probably a good way to play the Ruy for Black in your early career. The Open Morphy Defence relies above all on piece activity, and obeys two good general opening rules for Black:

(a) If your opponent lets you take a central Pawn, take it off if you do not lose a piece (viz. **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Nxe4** and now after **6. Re1** Black is in no pin, so 6...Nc5 or 6...Nd6 are quite all right.)

(b) Aim to play ...d5 yourself if you can

Grandmaster theory suggests that Black is taking on rather a lot of weaknesses when playing this way, but that may not be so important if you are not playing Grandmasters. Siegbert Tarrasch, who was so effective playing the Ruy as White, preferred to play this way as Black, and since then Max Euwe, Victor Kortchnoi, Artur Yusupov, Jan Timman and Viswanathan Anand have all been happy to play the Open Morphy at World Championship and Candidates' level, so you can see that this is not very much of a handicap.

The veteran English player Vernon Dilworth suggested the most aggressive way of playing the Open Morphy as Black:

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Nxe4 6.d4 b5 7.Bb3 d5 8.dxe5 Be6 9.c3 Bc5 10.Nbd2 0-0 11.Bc2 Nxf2

Black sacrifices two active pieces for a Rook while White is still getting the Queen's-side organised. Black will follow up with ...f6, attacking down the f-file.

Black can play more calmly at move 11 (*11...Bf5* is fashionable since Kortchnoi adopted it), or earlier play *9...Be7* (Euwe's preference) or *9...Nc5* (Kortchnoi's other preference). These lines are all rather complex and there is a lot of theory on them, but until your opponents know all the theory, get stuck in!

There are several other lines where we see an early ...d5 by Black:

...d5 in the Marshall Gambit, a favourite of club players: **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 0-0 8.c3 d5 9.exd5 Nxd5 10.Nxe5 Nxe5 11.Rxe5 c6**, e.g. **12.d4 Bd6 13.Re1 Qh4 14.g3 Qh3 15.Be3 Bg4 16.Qd3 Rae8 17.Nd2 f5 18.f4 Kh8 19.Bxd5 cxd5 20.Qf1 Qh5 21.Qg2 Re4 22.a4 bxa4 23.Rxa4 g5 24.Nxe4 fxe4 25.Rxa6 gxf4 26.Rxd6 fxe3 27.Rxe3 Bh3 28.g4 Qxg4 29.Rg3 Qd1 + 0-1**, Kosten-Hebden, 1982.

...d5 in the normal Closed Morphy: e.g. Kasparov,G (2800) - Karpov,A (2730) [C92] Wch35-KK5 USA/FRA (New York) (8), 1990 **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Nd7 10.d4 Bf6 11.a4 Bb7 12.Be3 Na5 13.Bc2 Nc4 14.Bc1 d5! TN**

...d5 in the Classical Defence: **1.e4 e5 2.Nf3 Nc6 3.Bb5 Bc5 4. c3 d5?!!** Or more sanely, **Unzicker - Fischer Leipzig 1960 1.e4 e5 2.Nf3 Nc6 3.Bb5 Bc5 4.c3 Nf6 5.d4 Bb6 6.0-0 0-0 7.Re1 exd4 8.cxd4 d5 9.e5 Ne4 10.Nc3 Bg4 11.Bxc6 bxc6 12.Nxe4 dxe4 13.Rxe4 Bxf3 14.Qxf3 Bxd4 15.Be3 Bxb2 16.Rb1 f5 17.exf6 1/2-1/2**

And wherever else White is slack, e.g. **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5. Nc3** or **5. d3** when Black should get castled and look for **...d7-d5**. Tiviakov,S (2625) - Sokolov,I (2665) [C86]Wijk (10), 1996 **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.Qe2 Be7 6.c3 0-0 7.0-0 b5 8.Bb3 d5 9.d3 Re8 10.Re1 h6 11.Nbd2 Be6 12.Nf1 Bc5 13.Ng3 a5 (...0-1, 41),**

White's outpost on d5

Tal - Bronstein [C96] 1956

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Na5 10. Bc2 c5 11.d4 Nc6 12.Nbd2 Qb6 13.dxc5 dxc5 14.Nf1 Be6 15.Ne3 Rad8 16.Qe2 g6 17.Ng5 c4 ! 18.a4 Kg7 19.axb5 axb5 20.Rb1 Na5 21.Nf3 Qc7

Every White piece is queuing up behind the e-pawn, waiting for...

22.Nd5 ! 22...Bxd5 23.exd5

White's pieces control many central squares, and the Bishops have new avenues of attack.

23...Rfe8 24.Qxe5 Qxe5 25.Nxe5 Nxd5 26.Ra1 Nb3 27.Bxb3 cxb3 28.Bh6+ ! 28...Kg8 ?! 29. Nc6 Rc8 30.Rad1 Rxc6 31.Rxd5 f6 32.Rxb5 g5 33.Rxb3 Kf7 34.Rb7 Re6 35.Rxe6 Kxe6 36. h4 Rg8 37.f4 Bc5+ 38.Kf1 gxh4 39.Rb5 Rc8 40.f5+ Kd6 41.b4 h3 42.Rxc5 h2 43.Bf4+ 1-0

White's outpost on f5

This is a simple way to play all closed double King's-Pawn positions: park a Knight on f5 and play for a King's-side attack.

Teichmann,R - Schlechter,C [C90] Karlsbad, 1911

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.d3

White plays quietly in the centre, hoping to avoid distractions there.

9...Na5 10.Bc2 c5 11.Nbd2 Qc7 12.Nf1 Nc6 13.Ne3 Bb7 14.Nf5 Rfe8 15.Bg5 Nd7 16.Bb3 Nb6 17.Bxe7 Nxe7 18.Bxf7+ Kxf7 19.Ng5+ Kg8 20.Qh5 Nxf5 21.Qxh7+ Kf8 22.Qxf5+ Kg8 23.Qg6 Qd7 24.Re3 1-0

White's central play

You should never forget that one of the key aims for White in the e-Pawn openings is to take over the centre with c3 and d4. If Black takes his eye off the ball White can switch to this plan with effect, and in fact White can win a lot of games through simple domination of the centre. More space and more manoeuvrability means chances of attack:

Fischer,R - Barczay,L [C95] Sousse izt Rd: 1, 1967

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Nb8 10.d4 Nbd7

11.Nh4 exd4 12.cxd4 Nb6 13.Nf3 d5 14.e5 Ne4 15.Nbd2 Nxd2 16.Bxd2 Bf5 17.Bc2 Bxc2 18.Qxc2 Rc8 19.b3 Nd7 20.e6 fxe6 21.Rxe6 c5 22.Ba5 Qxa5 23.Rxe7 Qd8 24.Ng5 1-0

White's King's-side attack

The Bishop that lurks on c2 is an ace up White's sleeve: while Black is distracted elsewhere White can suddenly whip out a King's-side attack. A glorious example of this was:

Kasparov,G (2800) - Karpov,A (2730) [C92] (20), 1990

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Bb7 10. d4 Re8 11.Nbd2 Bf8 12.a4 h6 13.Bc2 exd4 14.cxd4 Nb4 15.Bb1 c5 16.d5 Nd7 17.Ra3 f5 18. Rae3 Nf6 19.Nh2 Kh8 20.b3 bxa4 21.bxa4 c4 22.Bb2 fxe4 23.Nxe4

23... Nfxd5 24.Rg3 Re6 25.Ng4 Qe8 26.Nxh6 c3 27.Nf5 cxb2 28.Qg4 Bc8 29.Qh4+ Rh6 30. Nxh6 gxh6 31.Kh2 Qe5 32.Ng5 Qf6 33.Re8 Bf5 34.Qxh6+ [34.Nf7+ is Mate in 6! 34...Qxf7 35. Qxh6+ Bh7 36.Rxa8 Ne7 37.Rxf8+ Ng8 38.Rgxf8+ Qxf8 39.Qxh7#] 34...Qxh6 35.Nf7+ Kh7 36.Bxf5 + Qg6 37.Bxg6+ Kg7 38.Rxa8 Be7 39.Rb8 a5 40.Be4+ Kxf7 41.Bxd5+ 1-0

White can also say nonchalantly that: Black is cramped, and so will find it difficult to organise a defence, so I will attack the King in any event. The situation is usually more complex than this bluntness implies, but the core plan is still played:

Nunn - Short (Brussels) [C98] 1986 [JDMN]

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0

[8...Na5 9.Bc2 c5 10.d4 Qc7 11.h3 Nc6 12.Be3 0-0 13.Nbd2 Rd8 14.Rc1 Bd7 15.Nf1 b4 16.d5 Na7 17.c4 Nc8 18.g4 Nb6 19.b3 a5 20.Ng3 g6 21.Kh2 a4 22.Rg1 axb3 23.axb3 Bf8 24.Qd2 Ra2 25.Bg5 Bg7 26.Qe3 Rda8 27.Bb1 R2a3 28. 9.h3 Na5 10.Bc2 c5 11.d4 Qc7 12.Nbd2 Nc6 13.d5 Nd8 14.Nf1 Ne8

"In olden times White would often attack by g4 and Ng3 in the Closed Spanish; once in a while White would break through with a Nf5 sacrifice, but now it is recognised that so long as all Black's pieces can reach the King's-side, a direct attack should not work. Thus, the emphasis has switched to diversionary Queen's-side play, with a King's-side attack being reserved for a favourable moment when Black's pieces have been lured away. Moreover, the King's-side attack is usually based on f4 rather than g4, since only f4 offers the chance of activating the light-squared Bishop on c2."

"White's preliminary a4 gives him control of the a-file; this may not appear relevant to the conduct of a King's-side attack, but watch what happens later!"

15.a4

[15.g4 g6 16.Ng3 Ng7 17.Kh2 f6 18.Be3 Bd7 19.Qd2 Nf7 20.Rg1 Kh8 21.Raf1 Rg8 22.Ne1 Raf8 = Robatsch-Padevsky, Amsterdam 1972]

Black's Queen's-side attack

Of course, what else may distract Black from defence of the King's-side is an opportunity to attack the Queen's-side, and this attack can succeed against the best opposition:

Kasparov,G (2700) - Karpov,A (2720) [C92] Wch32-KK2 Moscow (5), 1985

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Bb7 10.d4 Re8 11.Nbd2 Bf8 12.a4 Qd7 13.axb5 axb5 14.Rxa8 Bxa8 [14...Rxa8?! 15.Ng5±] 15.d5 Na5

16.Ba2!? N 16...c6 17.b4 Nb7! 18.c4 Rc8!? [18...Nd8+=] 19.dxc6?! [19.Qe2] 19...Qxc6= 20.c5?! [20.Bb2] 20...Nd8 21.Bb2

21...dxc5! =+ 22.bxc5 Qxc5 23.Bxe5 Nd7 24.Bb2 Qb4! 25.Nb3?! [25.Qb1] 25...Nc5-/+

Black has the advantage but there is still a lot of tension in the position.

26.Ba1 Bxe4 27.Nfd4 Ndb7 28.Qe2 Nd6 29.Nxc5 Qxc5 30.Qg4 Re8 31.Rd1 Bg6 32.Qf4 Qb4 33.Qc1 Be4 34.Re1 Qa5 35.Bb3 Qa8 36.Qb2 b4 37.Re3 Bg6 38.Rxe8 Qxe8 39.Qc1 Ne4 40.Bd5 Nc5 41.Nb3 Nd3 0-1

White's Queen's-side attack

Often, Black will stake out some space on the Queen's-side with ...a6 and ...b5. Whether in a given position this represents Queen's-side counterplay or Queen's-side weaknesses is one of the key Ruy Lopez questions!

Karpov - Westerinen,H [C87] 1974

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 d6 5.0-0 Bd7 6.d4 Nf6 7.c3 Be7 8.Nbd2 0-0 9.Re1 Re8 10.Nf1 h6 11.Ng3 Bf8 12.Bd2

Modest, but White is not so much concerned to point a battering-ram at a weak spot (there aren't any) as to maintain a flexible position where Black will be less able to re-arrange the pieces to counter White's latest idea.

12...b5 13.Bc2 Na5 14.b3 c5 15.d5 Nh7 16.h3 Be7 17.Nf5 Nb7 18.a4 bxa4 19.b4 a5 20.Bxa4 axb4 21.cxb4 Bf8 22.Bc6 Qc7 23.b5 Nf6 24.Qc2 Reb8 25.Ne3 Bc8 26.Nc4 Be7 27.b6 Qd8

28.Ra7

The point of using an open file is to provide invasion points for rooks, although it's unusual for a Rook to arrive on the seventh, supported by a Pawn. Black cannot bear this, but the exchange concedes a monster pawn on a7.

28...Nd7 29.Qa4 Rxa7 30.bxa7 Ra8 31.Qa6 Qc7

Black's pieces are standing on each other's toes and cannot escape the attack of White's pieces. The Black Rook has nowhere to move to.

32.Bxd7 Qxd7 [32...Bxd7 33.Nb6] 33.Nb6 Nd8 34.Qa1 1-0

(see also the first game of the Deep Blue-Kasparov return match in 1997)

Black's King's-side attack

Not a common occurrence but there are several attacking plans for Black. There are several ...Bg4 lines where an incautious h2-h3 can be met by ...h7-h5!

1.e4 e5 2.Nf3 Nc6 3.Bb5 d6 4.c3 Bg4 5. h3 h5! or

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4. Bxc6 bxc6 5. O-O Bg4 6. h3 h5!

A more complex line is seen in the Archangel Variation: **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.O-O b5 6.Bb3 Bb7 7. Re1 Bc5 8.c3 d6 9.d4 Bb6 10.Bg5 h6 11.Bh4 Qd7**

Black announces his intention to abandon all subtlety and play for a King's-side attack.

12.a4 0-0-0 13.axb5 axb5 14.Bxf6

[14.Na3 g5 15.Bg3 h5 16.dxe5 (16.h4 gxh4 17.Bxh4 Rh6 18.Nxb5 Rg8 19.Qd3 exd4 20.cxd4 Nb4) 16...h4 17.exf6 hxg3 18.hxg3 g4 19.Nd4 Rh7 20.Bd5 Rdh8 =+ BCO2]

14...gxf6 15.Bd5 Rhg8 16.Kh1 Qg4 17.Rg1 exd4 18.cxd4 f5 19.Nc3 fxe4 20.Nxe4 Qf5 21.Nc3 Nb4 22.Bxb7+ Kxb7 Klovans-Shirov 87 = BCO2

Black also has some gambit lines: as well as the Marshall Attack (see above), Black has several opportunities to play ...f5. The immediate 3...f5 (or 3...a6 4. Ba4 f5) is often frowned upon but also often played, and if White is a little slow in the Steinitz Variation Black may play the Siesta Variation, a far from sleepy line.

Reti,R - Capablanca,J [C74] Berlin (14), 1928

1.e4 e5 2.Nf3 Nc6 3.Bb5 d6 4.c3 a6 5.Ba4 f5 6.d4 fxe4 7.Ng5 exd4 8.Nxe4 Nf6 9.Bg5 Be7 10.Qxd4 b5 11.Nxf6+ gxf6 12.Qd5 bxa4 13.Bh6 Qd7 14.0-0 Bb7 15.Bg7 0-0-0 16.Bxh8 Ne5 17.Qd1 Bf3 18.gxf3 Qh3 0-1

Some Key Variations of the Ruy Lopez

Variations of the Ruy Lopez without 3...a6

These are less important at GM level than the main lines with 3...a6, but at club level they have many virtues: less theoretical, less well-known, and often simpler to understand. Moreover, I often find that club players when faced with 3...a6 often play 4. Bxc6, and if they do play 4. Ba4, after 4...Nf6 they cannot be trusted to play 5.O-O, and instead play some clod-hopping move like 5. d3 or 5. Nc3. While these are not particularly strong lines they may be more stodgy than you would wish to play against as Black, and many of these old lines may lead to more open games at club level. They may be grouped as follows:

Strong-point lines with ...d6, ...Nge7 and/or ...g6.

Black can hold the centre without 3...a6 using or some combination of these moves. White's strongest plan in each case is undoubtedly to play an immediate c3 and d4, with or without O-O. Black can then hope to slug it out in a roughly equal position (although Black has not yet castled and may find it awkward if he has not castled and the centre open up.)

Hindermann Felix - Yudkovsky Yair [C60/02] 05 European Youth U14 Boys, Tallinn EST, 1997

1.e4 e5 2.Nf3 Nc6 3.Bb5 Nge7 4.c3 g6 5.d4 exd4 6.cxd4 d5 7.e5 Bg7 8.Bg5 0-0 9.h3 Bf5 10. Nc3 Be4 11.Nxe4 dxe4 12.Bxc6 bxc6 13.Nd2 h6 14.Bxe7 Qxe7 15.Nxe4 Rad8 16.Qa4 Qh4 17.Qxc6 Rxd4 0-1

Active lines with ...Bc5 and/or ...Nf6

Both Fischer and particularly Spassky have experimented with the Classical Variation (3...Bc5), and the related Berlin Classical 3...Nf6 4. O-O Bc5 . Again White is best advised to go for central break, and again it is reasonable for Black to hope for equality.

Ady JJ - Spassky BV [C65] London, 1984

1.e4 e5 2.Nf3 Nc6 3.Bb5 Nf6 4.O-O Bc5 5.Nxe5 Nxe5 6.d4 a6 7.dxe5 axb5 8.exf6 Qxf6 9. Nc3 c6 10.Qh5 d6 11.Bg5 Qg6 12.Qh4 h6 13.Bf4 b4 14.Ne2 0-0 15.Ng3 Re8 16.Rfd1 d5 17. Variations of the Ruy Lopez with 3...a6

The Exchange Variation

We have seen that after **1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6** White cannot win a pawn with **5. Nxe5** because of **5....Qd4**.

What you may not know is that White can play this line to win, because in some sense, he is *already* a pawn up!

Let me explain.

If you have an extra pawn, you should:

- exchange off pieces, not pawns
- create a passed pawn
- advance the passed pawn and either:
 - force your opponent to give up material to stop it queening, or
 - force your way into the opponent's position to take material yourself (usually pawns)

With this in mind, let's look at the pawn formation after **1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6 5. d4 exd4 6. Qxd4 Qxd4 7. Nxd4**:

Now, if there were only Kings on the board, White could easily create a passed pawn with f4, e5 and f5 and e6.

But Black cannot do the same on the other side, unless White allows all the front pawns to come to a4, b4 and c4, when there is a trick with ...b3! e.g. axb3, c3! bxc3 and ...a3. As long as White avoids that trap, the passed pawn on the King's side should win.

This is what I mean by already being a pawn up. You have an extra pawn on the King's-side, and Black's extra Queen's-side pawn is useless. This is not the only thing going on in the position (else the Lopez would be an easy win for White) but it is a constant fallback plan for White.

Emanuel Lasker played this several times, and more recently, Bobby Fischer discovered that you could also play **5. O-O!** with an awkward moment for Black, because now there really is a threat to the e5 pawn which is not easy to meet.

Lasker,E - Tarrasch,S [C68] Duesseldorf, 1908

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Bxc6 dxc6 5.d4 exd4 6.Qxd4 Qxd4 7.Nxd4 c5 8.Ne2 Bd7 9. b3 Bc6 10.f3 Be7 11.Bb2 Bf6 12.Bxf6 Nxf6 13.Nd2 0-0-0 14.0-0-0 Rd7 15.Nf4 Re8 16.Nc4 b6 17.a4 a5 18.Rxd7 Nxd7 19.Rd1 Ne5 20.Nxe5 Rxe5 21.c4 Re8

The Closed Morphy Defence

This is the classic battle ground in the Ruy. Black may find it difficult to hold tight in the closed Morphy, but perhaps not as difficult as it is for White to keep everything under control. There are some classic positional themes here, determined by the pawn formation:

1. Space: Apart from any commitment to passive play being bad match tactics, as long Black has a Pawn on d6 it will always be a little more easy for White to manoeuvre than Black, for the Black position has a bottleneck on the d-file. Stean explains that this is why White spends so much time in the opening avoiding the exchange of the light-squared Bishop: while Black retains all four minor pieces, this slight cramp will be most clearly felt.

2. Flexibility: Moreover, it is extremely important to have good manoeuvring skills, because at any point the Pawn formation can shift: from the basic formation (a) we can go at least four different ways (b-e)...

Another line of thought I found useful:

Nunn - Olafsson (Teesside) [C54] 1982

1.e4 e5 2.Bc4 Nf6 3.d3 Nc6 4.Nf3 Bc5 5.0-0 d6 6.c3 Qe7 [6...0-0 7.Nbd2 a6 8.Bb3 Ba7] 7.Nbd2 a6 8.Bb3 0-0 9.Re1 Be6 10.Nf1 [10.Bc2] 10...Ba7 11.Bc2

"...why is the Ruy Lopez (which this opening has virtually become) so difficult for Black to combat? Look at the present position: Black's pieces are sensibly developed; he has as much space as White; his pawns are strong. Yet he has problems."

"The answer seems to be that in this type of Ruy Lopez position Black can easily get caught in a situation where his game cannot unfold. Here for instance, White has his plans of Ng3-f5 and later d4, but it is less easy for Black to find something profitable to do without weakening himself or making some serious concession. His pieces may look reasonably placed, but they cannot readily achieve anything constructive or relevant. I should make it clear that this does not have to happen in a Lopez; it is far from being a bad opening for him. But in practice one error (6...Qe7) can leave him in misery. And so, if a player seems to have a respectable game (in a Ruy Lopez or any other opening for that matter), yet still loses, his misfortune may often be traced back to this lack of life in his position." -- NUNN AND GRIFFITHS

We also recognise that the tension may even be added to by Black playing ...c5, (the Tchigorin line) – see later.

(a) Closed KP centre, Tension form (Ruy Lopez)

Black may resolve the tension by playing ...e5xd4 (c3xd4) which results in an unbalanced position where White has an extra central Pawn (b).

(b) Double Pawn centre, KP unopposed

These adjacent Pawns in a more open position confer a bigger advantage, but in a more open position may be more vulnerable to attack e.g. along the e-file.

White may resolve the tension in the first formation, by playing either d4-d5 (giving a closed centre (c) with an advanced d-Pawn), or by playing d4xe5 (...d6xe5) with a balanced, semi-open KP centre (d).

(c) Closed centre with advanced d-Pawn.

The advanced d-Pawn gives a space advantage, particularly on the Queen's-side. To play for a win the c-Pawn and maybe b-Pawn should be advanced, to seize more space and perhaps open lines on that side. The opponent may consider an advance of the f-Pawn to undermine the d-Pawn and counter-attack on the King's-side.

(d) Balanced, semi-open KP centre

This is a very common formation in KP openings. If neither side can achieve a sharp advance of the f-Pawn, play will be dominated by piece play on either wing. There are natural posts for Knights on d5 and f5 (d4 and f4 for Black), and

if Black's c-Pawn has pushed to c5 earlier, the d5 point is even more attractive. Control of the d-file is a good idea but can usually be countered, resulting in exchanges. Occupation of the mutual outposts f5 and f4 by Knights is less straightforward to counter, and while your opponent is sorting out that threat, it may be that you can get the d-file then.

(e) Semi-open unbalanced KP centre.

The e-Pawn confers a space advantage and attacking prospects on the King's-side, which may be added to by f2-f4. The e-Pawn is exposed on the half-open file, and should be restrained (e.g. by ...Re8) from breaking open lines for the attack by e4-e5. Black's break ...d6-d5 is a natural plan to dissolve the centre.

The Tchigorin Counterattack

So, as a result of facing all this hassle, Black developed a plan of Queen's-side counterplay in the closed Morphy:

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Na5 10. Bc2 c5 11.d4

Black's idea is two-fold: to maintain the e5 point in the centre, while attacking on the Queen's-side.

Almost every legal move has been tried here:

11...Qc7 was Tchigorin's original recipe

11...Nd7 was famously tried by Keres

11...Bb7 is a good idea but may be squashed by d4-d5, so Black may prefer to preface this with 11...cxd4. After 12. cxd4 as well as 12...Bb7 we also see two new ideas: 12...Nc6 and 12...Bd7

As we have seen White has a variety of plans in response:

(a) just to manoeuvre, keeping the tension as long as possible and improving the position of your own pieces, relying on the slight extra space referred to above

(b) break up the Queen's-side with a2-a4,

(c) seal the centre with d4-d5 (a Ruy Lopez formation which has a lot in common with the King's Indian!),

(d) open up the d5 outpost with dxc5 (or dxe5). However, White is not yet terribly close to putting a Knight on d5, and Black can now think about a plan like ...c5-c4, and ...Na5-b7-c5-d3, with a monster Black Knight on d3. In fact, Black can aim for ...c4 whether or not White exposes the d5 point, and can play for it from formations other than the main line Tchigorin.

Kasparov-Karpov (1990), m14

So this is a formation that requires some delicate footwork by both players.

Modern variations in the Closed Morphy.

More recently Black has experimented with more restrained plans than the Tchigorin, hoping to avoid the disadvantages of this line (decentralised Knight on a5, potential Queen's-side weaknesses) and instead manoeuvre more adroitly to secure adequate play across the board. These lines have included, after **1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3**:

The Breyer Variation, **9...Nbd7**, where Black hopes to reorganise his pieces smoothly at a time when White is by no means well-developed. This was the 'grower' when I was a boy, and is still an important line.

The Smyslov Variation, **9...h6**, waiting for White to show his hand, a line which has been superseded by...

The Flohr-Zaitsev Variation, **9...Bb7**, which has been the height of current fashion since Zaitsev showed that the old plan with ...Na5 (e.g. Fischer,RJ - Stein,L, 1967) was less safe than re-organising with ...Re8 and ...Be7. This is a pretty heavyweight GM line outside my own experience and I won't comment further, but you will see it about:

Kasparov,G (2700) - Karpov,A (2720) [C92] WCh32-KK2 Moscow (9), 1985

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Bb7 10. d4 Re8

[If White wants, there is a draw to be had by *11. Ng5 Rf8 12. Nf3*]

11.Nbd2 Bf8 12.a4 h6 13.Bc2 Nb8 14.Bd3 c6 15.Nf1 Nbd7 16.Ng3 Qc7 17.Bd2 g6 18.Qc1 Kh7 19.b3 Bg7 20.Qc2 Nf8 21.Be3 Ne6 22.Rad1 Rac8 23.Bf1 Bf8 24.Rd2 Qb8 25.Qb1 Ba8 26.b4 Bb7

Amazing: 26 moves without any exchanges. And it has been suggested that White's 27th was inferior to Qa2!

27.axb5 axb5 28.Red1 Qc7 29.Rc1 Bg7 30.Rcd1 Rcd8 31.dxe5 dxe5 32.Rxd8 Rxd8 33. Rxd8 Nxd8 34.c4 bxc4 35.Bxc4 Ne8 36.Qa2 Nd6 37.Bb3 Nb5 38.h4 Nd4 39.Bxd4 exd4 40. h5 Qe7 41.Qd2 c5 42.Qc2 cxb4 43.hxg6+ fxg6 44.Qc4 h5 45.e5 Bxf3 46.gxf3 Bxe5 47.f4 Bxf4 48.Qg8+ Kh6 49.Bc2 Qg7 50.Qxd8 Bxg3 51.fxg3 Qe5 52.Qf8+ Kg5 53.Kg2 1/2-1/2

Exeter Chess Club: The ideas behind the King's Gambit

Introduction

The King's Gambit has a romantic reputation which is both attractive and misleading. It has had a romantic history, but has not passed through chess history unchanged. On the contrary, each generation has had its own opinions and favourite variations, and the King's Gambit has evolved into a fully modern opening. It does have some peculiarities, but this makes it a useful hunting ground for the specialists like Joe Gallagher and the Spanish GM Illescas. But Nunn and Short have also dabbled with it, and its virtues have been defended in correspondence play by Bangiev.

Below, I will introduce the main ideas for each side, but try to draw out some of the development of modern positional ideas.

1-0

The King's Gambit Endgame

King's Gambit endgames sometimes seem to be a law unto themselves, with Black often having an extra Pawn they can't make use of - namely, a backward f-Pawn. White may have some returns for the Pawn in central control and extra piece activity, and out of these a win can be spun. These are of course all good general positional principles, rather than anything peculiar to the gambit, it's just that entering an ending a Pawn up is usually more promising!

Spassky B - Matanovic A [C32] Belgrade, 1964

1. e4 e5 2. f4 d5 3. exd5 e4 4. d3 Nf6 5. dxe4 Nxe4 6. Be3 Qh4+ 7. g3 Nxc3 8. Nf3

8... Qe7 9. hxg3 Qxe3+ 10. Qe2 Qxe2+ 11. Bxe2

Black has two Bishops but White has better central control, better development and will find good posts for the Knights. The upshot is that White can make better progress with his Pawn majority.

11... Bg4 12. Nc3 Bb4 13. Ng5 Bxe2 14. Kxe2 Bxc3 15. bxc3 h6 16. Kd3 Rf8 17. Nf3 Na6 18. Rae1+ Kd7 19. c4 f6 20. Kd4 b6 21. f5 Nc5 22. Nh4 Rfe8 23. Re6!

23... g5 24. Ng6

[24. Ng2 Nxe6+ 25. fxe6+ Ke7 26. Ne3 Rh8 27. g4]

24... Nxe6+ 25. fxe6+ Rxe6 26. dxe6+ Kxe6 27. Rxh6 Kf7 28. Ne5+ fxe5+ 29. Kxe5 c5 30. Kf5 Ke7 31. Kxg5 Rf8 32. Rh2 Kd6 33. g4 Rg8+ 34. Kf4 Rf8 + 35. Kg3 Ke5 36. Re2+ Kd4 37. g5 Kxc4 38. Kg4 Kc3 39. g6 c4 40. Kg5 b5 41. g7 Q

Ideas for Black

The vulnerable White King

LaBourdonnais L - Cochrane J [C37] Paris, 1821

1. e4 e5 2. f4 exf4 3. Nf3 g5 4. Bc4 g4 5. Ne5 Qh4+ 6. Kf1 f3 7. g3 Qh3+ 8. Kf2 Qg2+ 9. Ke3

9... Bh6+ 10. Kd3 d5 11. Bxd5 Na6 12. c3 c6 13. Bxf7+ Ke7 14. Bb3 Nc5+ 15. Kc2 Nxe4 16. Qf1 Bf5 17. Qxg2 Nf2+ 18. d3 fxg2 19. Rg1 Rd8

20. Bxh6 Nxh6 21. Rxc2 Nxd3 22. Nxd3 Bxd3+ 23. Kc1 Rf8 24. Nd2 Nf5
25. Bd1 Ne3 26. Rg1 Bf1 27. b3 Rf2

28. Rxf1 Nxf1 29. Nxf1 Rxd1+ 30. Kxd1 Rxf1+ 0-1

The vulnerable White King's diagonal e1-h4

We can see this in its simplest form in the Classical: **2...Bc5** *3. fxe5??* and *3...Qh4+* reminds White that the f-Pawn opens up the King's-side with risks for both Kings. This is why White nearly always plays **3. Nf3**, or, if not, a move of the Queen or Bishop to create a flight square.

A more complex instance of the same thing is seen in the Cunningham:

Now **4. Nc3** **Bh4+** and we have more trouble for the King (by no means fatal here).

4. Bc4 and now rather than snatch at the check, **4..Nf6!** (Euwe) and now **5. e5**

Ng4!, with 6. h3 being ruled out because of the vulnerable diagonal.

Hang on to the f-Pawn

Kinlay,J - Nunn,J [C36] London, 1977

1. e4 e5 2. f4 exf4 3. Nf3 d5 4. exd5 Nf6 5. Bb5+ c6 6. dxc6 Nxc6 7. d4 Bd6 8. O-O O-O 9. Nbd2 Bg4 10. c3 Bc7 11. Nc4 Ne7 12. Ba4 b5 13. Bxb5 Qd5 14. Na3 Qh5

The play on the Queen's-side has distracted White's pieces, and the f-Pawn forms the apex of a King's-side attack.

15. Bd3 Ned5 16. Nc4 Rae8 17. h3 Ne3 18. Bxe3 fxe3 19. hxg4 Nxg4 20. Nce5 Rxe5 21. dxe5 e2 22. Bxe2 Bb6+ 23. Qd4 Qh6 24. Rae1 Rd8 25. Bc4 Rxd4 0-1

Central counter

Spielmann,R - Bogoljubov,E [C33] Carlsbad, 1923

1. e4 e5 2. f4 exf4 3. Bc4 Nf6 4. Nc3 c6 5. d4 Bb4 6. Qf3 d5!

In so many King's-Pawn openings, this is the recipe for Black.

7. exd5 O-O 8. Nge2 cxd5 9. Bd3 Bg4

10. Qxf4 Bxe2 11. Kxe2 Nc6 12. Be3 Re8 13. Rhf1 Qe7 14. Rf3 Rad8 15. Kf1 Rd6 16. Qh4

The game approaches its crisis.

16... Bxc3 17. Bg5 Bxd4! 18. Bxf6 Qxf6 19. Qxh7+ Kf8 0-1

Return the Pawn for development (counter-sacrifice)

Hartston,William - Spassky,Boris [C36] Hastings, 1966

1. e4 e5 2. f4 exf4 3. Nf3 d5 4. exd5 Nf6 5. Bb5+ c6 6. dxc6 Nxc6 7. d4 Bd6 8. Qe2+ Be6

Black has developed with lightning speed.

9. Ne5 O-O 10. Bxc6 bxc6 11. Bxf4 Nd5 12. Bg3 f6 13. Nf3 Bxg3+ 14. hxg3 Re8

White's development still lags.

15. Kf2 Bf5 16. Qc4 Kh8 17. Nc3 Ne3 18. Qc5 Ng4+ 19. Kg1 Qd7 20. Rf1 Bxc2 21. Rh4 Ne3 22. Rc1 g5 23. Rh6 Bg6 24. Na4 Ng4 25. Rh3 Qe6 26.

Qc3 Qxa2 27. Nc5 Re3 28. Qd2 Rae8 0-1

The flight to the Queen's-side

Rubinstein A - Hromadka K [C30] Mährisch Ostrau, 1923

1. e4 e5 2. f4 Bc5 3. Nf3 d6 4. Bc4 Nc6 5. Nc3 Nf6 6. d3 Bg4 7. h3 Bxf3 8. Qxf3 Nd4 9. Qg3 Qe7 10. fxe5 dxe5 11. Kd1 c6 12. a4 Rg8 13. Rf1 h6 14. Ne2 O-O-O

Although in this game Black falls prey to Rubinstein's mastery, the switch must always be anticipated by White.

15. Nxd4 Bxd4 16. c3 Bb6 17. a5 Bc7 18. Be3 Kb8 19. Kc2 Ka8 20. Rf3 Nd5 21. Bg1 Nf4 22. Qf2 Bb8 23. g3 Nxh3 24. Rxf7 Qd6

And a blow long anticipated by White makes fitting use of the f-file invasion:

25. Qb6 Rd7 26. Bc5 Rxf7 27. Bxd6 Rf2+ 28. Qxf2 Nxf2 29. Bc5 1-0

The development of the King's Gambit

The Romantic King's Gambit

The playing-over of games like these is always a pleasure.

Anderssen,A - Kieseritzky,L [C33] London "Immortal game", 1851

1. e4 e5 2. f4 exf4 3. Bc4 Qh4+ 4. Kf1 b5 5. Bxb5 Nf6 6. Nf3 Qh6 [6... Qh5] 7. d3 (?) [7. Nc3] 7... Nh5 (?) [7... Bc5] 8. Nh4? [8. Rg1 ^ 9.g4 8... Qb6 9. Nc3 c6 10. Bc4 Qc5 11. Qe2+-] but not [8. The Classical King's Gambit

This is not to say that nineteenth-century games were without science. As well as being spiced with a fiery imagination, the Gambit of this era was also tempered and hardened with cold reasoning.

Morphy,P - Medley,G, London, 1858

1. e4 e5 2. f4 exf4 3. Nf3 g5 4. h4 g4 5. Ne5 Nf6 6. Bc4 d5 7. exd5 Bd6 8. d4 Nh5

9. Nc3!

Morphy so often showed how the correct path in an opening was to ignore the immediate attack in favour of development.

[9. Bb5+ trying to force a win, was previously played]

9... Bf5 10. Ne2 Qf6 11. Nxf4 Ng3 12. Nh5 Nxh5 13. Bg5 Bb4+ 14. c3 Qd6 15. O-O Ng7

16. Rxf5 Nxf5 17. Qxg4 Ne7 18. Re1 h5 19. Qf3 Rh7 20. Bb5+ c6 21. dxc6
bxc6 22. Nxc6 Nbxc6 23. Bxc6+ ... 1-0

Steinitz V - Zukertort I [C39] it, 1882

1. e4 e5 2. f4 exf4 3. Nf3 g5 4. h4 g4 5. Ne5 Nf6 6. Bc4 d5 7. exd5 Bg7 8.
Nc3 O-O 9. d4 Nh5 10. Ne2 c5

This is a move of Paulsen's, whose positional sense was surprisingly modern. The motive is to break up the White centre, which here crashes with disastrous results for the White King.

11. c3 cxd4 12. cxd4 Nd7 13. Nxd7 Bxd7 14. Qd3 Rc8 15. Nxf4 Re8+ 16.

"A fascinating game, and because of its surprising twists, quite foreign to present-day play. ... We can appreciate the ability of the old-time masters to assess far quicker than we are able today, a sound evaluation of intricate variations of this nature." -- Konig.

The Modern King's Gambit

In the last Gambit tournament in 1914 the King's Gambit was not played once. Had the opening died?

Rubinstein, the arch-classicist, Reti, the hypermodernist, and Spielmann, the last Romantic, were invited to revise the *Larobok i Schach* after the war. They thought they had only to add a few wrinkles to the old lines, but found that many lines were incompatible with the new views of the centre. Rubinstein in particular took up the variation to defend his conclusions in practice, and added many brilliancies to the canon of the Gambit. The Swede Stoltz read and believed...

Stoltz,G - Samisch,Fritz [C39] Swinemunde, 1932

1. e4 e5 2. f4 exf4 3. Nf3 g5 4. h4 g4 5. Ne5 Nf6

6. d4

Rubinstein concluded that this was the correct way to proceed, although the move was known to Philidor.

[6. Bc4, played previously, is met of course by 6...d5]

6... d6 7. Nd3 Nxe4 8. Bxf4 Qe7 9. Qe2 Bg7 10. c3 h5 11. Nd2! Nxd2 12. Kxd2 Qxe2+ 13. Bxe2 Bf5 14. Rhf1 Nd7

Despite the Queen exchange, the attack thunders on.

The Contemporary King's Gambit

Our understanding of the positional ideas behind the Gambit has not advanced much, but progress continues to be made. The positional advantages that the Gambit offers can be pursued through modern endgame technique as well as if they arose through any other opening (Bronstein-Ragozin), and the sundry variations are by no means exhausted.

So these days, you can play to out-prepare (Hebden-Geller) or out-play (Polgar-Flear) your opponent. Even if the preparation goes astray (Spassky-Fischer), the win for Black will not be always a matter for technique, as the game remains open and complex.

Bronstein D I - Ragozin V [C36] izt, 1948

Exeter Chess Club: Variations of the King's Gambit

```
t S l D j L s T
X x X x + x X x
- + - + - + - +
+ - + - X - + -
- + - + p P - +
+ - + - + - + -
p P p P - + p P
R n B q K b N r
```

Here's a zip-through the main lines of the King's Gambit, using complete games. I have tried where possible to use games from Joe Gallagher's popular book.

There are three basic classes of defence:

- accept the Pawn
- counter-gambit
- get on with development

Accept the Pawn

Steinitz always said that the best way to refute a gambit is to accept it, and accepting the Gambit is probably the most popular response at all levels. Steinitz would hang on to Pawns with total commitment, but the pragmatic Lasker advised letting your opponent waste time and effort getting it

back, when you may have material equality but a superior position.

Because of the check at h4, White normally plays 3. Nf3, but there are some alternatives.

King's Bishop's Gambit

Polgar,J - Flear,C [C33] Hastings/SW,11,22, 1989

1. e4 e5 2. f4 exf4 3. Bc4 Nf6

After 3...d5 the Polgars have been playing 4. exd5, getting into a line of the Modern Defence.

4. d3

```

t S l D j L - T
X x X x + x X x
- + - + - S - +
+ - + - + - + -
- + b + p X - +
+ - + p + - + -
p P p + - + p P
R n B q K - N r

```

This modest move intends to reach a playable middlegame with an extra central Pawn. Black is objectively equal but can be outplayed.

4... d5 5. exd5 Nxd5 6. Nf3 Nb6 7. Bb3 Bd6 8. Qe2+ Qe7 9. Nc3 Bg4 10. Qxe7+ Kxe7 11. Ne4 Bxf3 12. gxf3 Nc6 13. Nxd6 cxd6 14. Bxf4 Nd4 15. Kf2 Nxb3 16. axb3 a6 17. Ra5 Kd7 18. b4 Rhe8 19. c4 Re6 20. b5 axb5 21. Rxb5 Kc6 22. Rc1 Ra2

King's Knight's Gambit

Again, there is a basic choice of strategy:

hang on to the Pawn (Kieseritsky Variation (3...g5), Becker Variation (3...h6))

central counter (Modern Defence (3...d5))

get on with development (Schallop Defence (3...Nf6), Defence with 3...Nc6, Cunningham Variation (3...Be7))

Kieseritsky Variation (3...g5)

Holmes,D - Hebden,Mark [C39] British Championship, 1989

1. e4 e5 2. f4 exf4 3. Nf3 g5 4. h4

The alternative 4. Bc4 leads most often to the Hanstein variation, which JG reckons is no winning attempt after e.g.

Groeneveld K - Jerabek P (corres TT/88\3, 1991): 1.e4 e5 2.f4 exf4 3.Nf3 g5 4. Bc4 Bg7 5.h4 h6 6.d4 d6 7.c3 Nc6 8.0-0 Bg4 9.Qb3 Na5 10.Bxf7+ Kf8 11.Qa3 Kxf7 12.Qxa5 Bxf3 13.Rxf3 c5 = (Hoi) 14.Qxd8 Rxd8 15.d5 Be5 16.g3 g4 17.Rf1 f3 18.Bf4 Bxf4 0-1

Oddly, BCO2 gives the archaic Double Muzio Gambit the nod e.g.

Shirov,A - Lapinski,J: Daugavpils, 1990: 1.e4 e5 2.f4 exf4 3.Nf3 g5 4.Bc4 g4 5.0-0 gxf3 6.Qxf3 Qf6 7.e5 Qxe5 8.Bxf7+ Kxf7 9.d4 Qxd4+ [9...Qf5] 10.Be3 Qf6 11.Bxf4 Ke8 12.Nc3 Nc6 13.Nd5 Qg6 14.Rae1+ Be7 15.Bd6 Kd8 16.Qf8+ Bxf8 17.Bxc7# 1-0

4...g4

5. Ne5

The Allgaier gambit

5. Ng5 h6 6. Nxf7

is a brave but probably insufficient try; the idea though is sound in other positions (see 3...h6).

Terry - Barlow B (corres GBR, 1988)

1.e4 e5 2.f4 exf4 3.Nf3 g5 4.h4 g4 5.Ng5 h6 6.Nxf7 Kxf7 7.Nc3 d6 8.Bc4+ Kg7 9.d4 Be7 10.Bxf4 Bxh4+ 11.g3 Bg5 12.Qd2 Bxf4 13.gxf4 Bd7 14.0-0-0 a5 15.f5 Be8 16.Nd5 Nd7 17.e5 Ra6 18.Nf4 1-0

White gets good practical chances in any event; the line reminds me of Cochrane's line in the Petroff. (1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nxf7).

5...Nf6 6. d4 d6 7. Nd3 Nxe4 8. Bxf4 Qe7 9. Qe2 Nc6 10. c3 Bf5

```
t + - + j L - T
X x X - D x + x
- + s X - + - +
+ - + - + l + -
- + - P s B x P
+ - P n + - + -
p P - + q + p +
R n + - K b + r
```

This is the critical line of the Kieseritsky. Black does not stand badly and the most that JG claims for

White here is that *Black* will find it difficult to win after 13. Nxe4 (!). The main game is widely cited as the antidote to White's plans. I offer some recent experiences as a starting point for folk who hope to win as White with it.

Modern Defence (3...d5)

Long thought an effective reply, but I sense players of Black are finding this less promising than other lines. White has two Bishop moves at move 5, and JG claims both are good.

Kinlay,J - Nunn,J [C36] London, 1977

1. e4 e5 2. f4 exf4 3. Nf3 d5 4. exd5 Nf6 5. Bb5+ c6 6. dxc6 Nxc6 7. d4 Bd6 8. O-O O-O 9. Nbd2 Bg4 10. c3 Bc7 11. Nc4 Ne7 12. Ba4 b5 13. Bxb5 Qd5 14. Na3 Qh5

Fischer Defence (3...d6)

This move was Fischer's famous "bust", hatched after a stinging defeat by Spassky. He describes it as a "high-class waiting move". After some peculiar digressions, players of White have settled on a fair strategy with 4. d4/ 5. h4, although JG suggests an interesting alternative with 4. Bc4/5. d3.

Gallagher J - Jackson S [C34] GBR-ch Blackpool, 1988

1. e4 e5 2. f4 exf4 3. Nf3 d6 4. d4 g5 5. h4 g4 6. Ng1 Bh6 7. Nc3 c6 8. Nge2 Qf6 9. g3 f3 10. Nf4 Qe7 11. Bd3 Bg7 12. Be3 h5 13. Qd2 Nd7 14. O-O-O

t + l + j + s T

Counter-Gambits

If the Gambit is not accepted, it is usually met by one of these lines. For

years the Falkbeer held centre stage, but White seems to have good chances in

the main lines. But the recent fashion has been for 3...c6, attributed to Nimzo.

Falkbeer Counter-Gambit

Note from Ignacio

Ignacio sent me a generous note recently, to which I replied:

```
> However, I think we are two poles of what chess is:  
> you are teaching people the orthodoxy and I am trying to make them  
aware  
> that real chess is quite more complicated than what the books (and  
indeed  
> your pages!) say.
```

I think that's absolutely right. I was reading things on your pages which said more or less the opposite of what I was saying and yet were completely correct! e.g. on romantic openings. Hence my salty comments. But of course, I am a 1900 player writing for juniors, and you are a master writing for me. That's actually a better way to put it, and I might tweak the link accordingly. I'm sure you know your style and comments are widely appreciated, by me also.

"Nimzovitch became then for me more or less the author of the only book which could help me get away from these Euwe books, which, I admit, are very good for the ordinary club player. But once you've reached a certain strength you get the impression that everything that Euwe writes is a lie."

-- Bent LARSEN, in KEENE, **Nimzowitsch: a reappraisal.**

Introduction

Let us open **1. e4** and after **1...e5**, **2. Nf3**

All square?

As many juniors already know, we can continue with moves like *Bc4*, *d3*, *Nc3* and *Be3/Bg5* followed by *O-O*, White has achieved an easy development. However, this system of development puts no pressure on Black whatsoever, and Black's only task is to keep up with White's development. For example, after **2. Nf3** Black might reply **2...Nc6**, then after **3. Bc4 Bc5 4. d3 Nf6 5. Nc3 d6** (*Giuoco Pianissimo*) we can try **6. Be3 Bb6!** when Black has an easy game, while after **6. O-O Bg4!** White may even feel that the King has been committed too soon (**7. h3 h5!?**). **6. Bg5** may give Black a few ways of going wrong but basically the impression is that this game with Knights on their natural squares of c3 and f3 is not a difficult system for Black to equalise against because Black can develop easily.

Going for d2-d4?

In order to put early pressure on Black, White cannot use the pieces alone. Plan A must include development by d2-d4 at some point. This will put pressure on the Black Pawn at e5 and give a few more possibilities for both sides.

The immediate **3. d4 exd4 4. Nxd4** leads to release of central tension and denies White the opportunity of ever achieving a 'perfect' centre with Pawns on e4 and d4. This is a perfectly reasonable opening (*Scotch Game*), but perhaps we can do better:

Preparing d2-d4 with c2-c3

Supporting the d4 Pawn with c2-c3 seems a good idea, so that ...e5xd4 can be met with c3xd4. Then our Knight on b1 could go to c3 anyway. However, **3. c3** (*Ponziani's opening*) has been thought for a long while to offer White little: it is a well-motivated move but for the moment does not restrict Black at all. Black can make an immediate nuisance by either **3...Nf6** or perhaps even **3...d5**, when the natural **4.exd5 Qxd5** cannot be met by tempo-gaining 5.Nc3.

The old Italian Game with c2-c3

There can be little objection to the Italianate **3. Bc4**, which restricts ...d5, enables castling by White, and after **3...Bc5** (*Giuoco Piano*) **4.c3!** is an excellent way to proceed, since after the spoiling attempt **4...Nf6**, **5.d4!** can follow in any event. These are well-known lines, which perhaps do not offer White much more than equality in theory, but in practice usually lead to an open game where Black has lots of chances to go wrong. This old-fashioned Italian Game, concentrating on fast development and attacking play, is a great choice for your first chess opening system.

Euwe Max - Van Mindeno H [C54], It "AVRO", Netherlands, 1927

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6 5.d4 exd4 6.cxd4 Bb4+ 7.Nc3 Nxe4 8.0-0 Bxc3 9.d5 Bf6 10. Re1 0-0 11.Rxe4 Ne7 12.d6 cxd6 13.Qxd6 Nf5 14.Qd5 d6 15.Bg5 Bxg5 16.Nxg5 Qxg5 17.Qxf7+ 1-0

However, this is not the way most folk play the opening these days.

If there is a problem with 3. Bc4 it is **3...Nf6** (*Two Knights' Defence*), which does not allow us to play 4. c3/5. d4. **4. d4!?** (the *Max Lange Attack*) can be tried as a reply, but this again detracts from the goal of setting up Pawns on d4 and e4.

Garcia C - Taulbut Shaun M It active, 1982

1. e4 e5 2. Nf3 Nc6 3. Bc4 Nf6 4. d4 exd4 5. O-O Nxe4 6. Re1 d5 7. Nc3 dxc4 8. Rxe4+ Be7 9. Nxd4 f5 10. Bh6 Kf7 11. Qh5+ g6 12. Nxc6 bxc6 13. Qf3 Bd6 14. h4 Be6 15. Rxe6 1-0

Again, the play is open and unclear, which is fine for those with an adventurous spirit and a good memory (for this line is very well researched), but we may prefer to avoid this.

Getting to d4 in two moves: the modern Italian Game

However, if after 3...Nf6, **4. d3** seems an admission of failure, this may be only a temporary setback. 4. d3 may be followed by protecting the e-Pawn (with Nbd2, or castling and Re1), and then we can play c2-c3 and d3-d4 as originally planned. This slightly delayed occupation of the centre may be stronger than doing so immediately, because it is more solid.

The most important test in this position is, of course, the simple **4...d5**: if this equalises then White will have to try something else. In fact, it seems that after 5. *exd4 Nxd4* 6. *O-O* and 7. *Re1* Black can experience some difficulty defending the e-Pawn. So this idea of d3, c3 and only later d4 seems quite playable.

Also, after **3...Bc5 4. c3 Nf6 5. d3!** we enter similar lines. The main variations of the Giuoco Piano with 5. d4 are well-explored and well-known, so your opponent may equalise without much thought if they know the book lines, whereas these lines with d3 are less familiar and offer more scope for original play.

In any event, the system with c3 and d3 may be more interesting than a Four Knights' type of system with Nc3 and d3. The Queen's Knight can play first to d2, which looks a little slow, but, because the centre is solid, it can then plan grand tours like Nd2-c4-e3-d5 or Nd2-f1-g3-f5, or some other combination like Nd2-f1-e3. If a general King's-side push is being considered, once the King's Knight on f3 moves, the Queen's Knight can pop around from d2 to f3.

There has been much Grandmaster interest in this apparently slow style of playing these old openings. What can Black do in response to this plan?

Plans for the d-Pawn for both sides in the modern Italian Game

We have considered four central formations for White above:

d3 only (with Nc3), which in itself may be too slow

d4 only, which in itself may be too early

c3 and d4, which may be vulnerable to ...Nf6

d3 and c3 with d4 later, which may be the best plan so far

Black of course has all these plans available from the other side:

...d6 and ...Nc6

...d5 only

...c6 and ...d5

...d6 and ...c6 (with maybe ...d5 later)

Because Black may be trying only to equalise, lack of aggression in these different plans may be no great drawback.

White is going to stick the King's Bishop on c4, while Black has yet to commit it to a square: ...Bc5 is natural, ...Be7 is solid, and some folk have tried it on g7.

This combination of different possible plans by White and by Black is rather interesting. It is this strategic complexity and relatively slow unfolding of plans which has led to a growth of interest in these lines, together with a re-appraisal of some old variations.

The modern Italian Game and the Bishop's Opening

A point of order: I have introduced these lines from a move order with 2. Nf3. But it may be interesting to play 2. Bc4 instead: the *Bishop's Opening*. After 2. Bc4 we can reach the same lines after either 2... Nf6 3. d3 Nc6 4. Nf3 or 2...Nc6 3. Nf3 or 2...Nc6 3. d3 Bc5 4. Nf3. Are there advantages to playing 2. Bc4 instead of 2. Nf3? In the early 1980s when interest was growing in 2. Bc4, *Petroff's Defence* (the reply 2...Nf6 to 2. Nf3) was proving to be a good equalising try for Black at all levels of chess. The Bishop's Opening move order obviously avoids this defence, and one or two others besides (like *Philidor's Defence* and the *Latvian Gambit*). So, yes, there may be practical advantages in starting out with 2. Bc4.

The growth of interest in Bishop's Opening actually began with Bent Larsen's researches in the 1960s. [He wanted to get into a line of the *Vienna Opening*: 1. e4 e5 2. Nc3 Nf6 3. Bc4 Nc6 4. d3 without encouraging the wild 3...Nxe4 4. Qh5, so introduced the line with 2. Bc4.] He discovered, amongst other things, that after 1. e4 e5 2. Bc4 Nf6 3. d3 d5 Black has no easy time of it. The other theoretical development, published in a little Tim Harding book, was a series of correspondence games by Koch in which he showed that the supposed equalising line 1. e4 e5 2. Bc4 Nf6 3. d3 c6 4. Nf3 d5 5. Bb3 Bd6 6. Nc3 Be6 7. Bg5 Qa5 8. O-O Nbd7 led to a position in which, hypermodern style, Black was left defending an overambitious centre against strong pressure from White's minor pieces.

There are old-fashioned 'Italian' and gambit approaches to Bishop's Opening - for example, White can essay the *Boden-Kieseritsky Gambit* [1. e4 e5 2. Bc4 Nf6 3. Nf3!?] or the *Urusoff Gambit* [1. e4 e5 2. Bc4 Nf6 3. d4!?], both of which have yet to be refuted and the latter actually claimed a scalp of the young Karpov. But here I am interested mostly in the modern treatments.

The Bishop's Opening and the Ruy Lopez

Before getting stuck into the details, there is another general point to consider: the strategically heavyweight lines of the *Ruy Lopez* are generally reckoned to be one of the most important battlegrounds in chess, being complex and offering White good chances to play for an advantage, and, indeed, giving both sides chances to win. These positions in fact have parallels in the modern lines of the Bishop's opening. For example, the main lines of the Ruy Lopez include the old *Tchigorin Defence*:

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Na5 10.Bc2 c5 11. d4 Qc7 [Kasparov - Donchenko, 1976]

and the modern *Breyer system*:

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Nb8 10.d3 Nbd7 [Vasiukov - Karpov, 1971]

Now, positions similar to these can readily be reached through Bishop's opening: after:

1. e4 e5 2. Bc4 Nf6 3. d3 Nc6 4. Nf3 Be7 5. O-O O-O 6. Bb3 d6 7. c3 h6 8. Nbd2 Re8 9. Re1 Bf8 10. Nf1 Na5 11. Bc2 c5 [Kosten-Cooper, 1988]

...we have a formation similar to the Tchigorin; to find a parallel system to the Breyer we can try:

1. e4 e5 2. Bc4 Nf6 3. d3 Be7 4. Nf3 d6 5. O-O c6 6. c3 Nbd7.

These parallels help explain the GM interest in the old Bishop's opening. The differences between the parallel lines lie principally in White's more restricted route for the Bishop: Bf1-c4-b3-c2 rather than Bf1-b5-a4-b3-c2 in the Ruy Lopez, chased by Black's a- and b-Pawns. Whether these advances represent Queen's-side counterplay more than Queen's-side weaknesses has yet to be resolved!

Pawn formations in Bishop's opening

What is going on strategically in Bishop's Opening types of positions? You will find layers of tactical details (like the attack on f7) when you look at master games in this opening, which can obscure what is going on underneath the surface. The easiest way to think about the plans in different lines is to consider the Pawn formations. If White succeeds in playing d3, c3 and d4 we create a tense pawn formation (a), in which the tension can be resolved in a number of ways. Before White can do this, it is possible for Black to set up such a formation, so we have all the possibilities available to both sides. The possibilities of a quick shift to another formation will be better handled by the side with the more advanced and more flexible development.

(a) Closed KP centre, Tension form (Ruy Lopez)

The tension may even be added to by Black playing ...c5, analogous to the Tchigorin line. In the long term, the adjacent central Pawns should confer a space advantage, so exchanges should be avoided by the side trying to maintain them.

Black may resolve the tension by playing ...e5xd4 (c3xd4) which results in an unbalanced position

where White has an extra central Pawn (b).

(b) Double Pawn centre, KP unopposed

These adjacent Pawns in a more open position confer a bigger advantage but in a more open position may be more vulnerable to attack e.g. along the e-file.

White may resolve the tension in the first formation, by playing either d4-d5 (giving a closed centre (c) with an advanced d-Pawn), or by playing d4xe5 (...d6xe5) with a balanced, semi-open KP centre (d).

(c) Closed centre with advanced d-Pawn.

The advanced d-Pawn gives a space advantage, particularly on the Queen's-side. To play for a win the c-Pawn and maybe b-Pawn should be advanced, to seize more space and perhaps open lines on that side. The opponent may consider an advance of the f-Pawn to undermine the d-Pawn and counter-attack on the King's-side.

(d) Balanced, semi-open KP centre

This is a very common formation in KP openings. If neither side can achieve a sharp advance of the f-Pawn, play will be dominated by piece play on either wing. There are natural posts for Knights on d5 and f5 (d4 and f4 for Black), and if Black's c-Pawn has pushed to c5 earlier, the d5 point is even more

attractive. Control of the d-file is a good idea but can usually be countered, resulting in exchanges. Occupation of the mutual outposts f5 and f4 by Knights is less straightforward to counter, and while your opponent is sorting out that threat, it may be that you can get the d-file then.

If Black anticipates the d3-d4 advance with ...d7-d5, after e4xd5 and ...Nf6xd5 we have a semi-open unbalanced KP centre (e), typical of the Steinitz variation of the Ruy Lopez with colours reversed.

(e) Semi-open unbalanced KP centre.

The e-Pawn confers a space advantage and attacking prospects on the King's-side, which may be added to by f2-f4. The e-Pawn is exposed on the half-open file, and should be restrained (e.g. by ...Re8) from breaking open lines for the attack by e4-e5. Black's break ...d6-d5 is a natural plan to dissolve the centre.

If neither side ventures d4/...d5, then we have a balanced, closed KP centre (f).

(f) balanced, closed KP centre

Unless one side or the other goes for a pawn break we get a slow game where play on the wings is dominant: on the Queen's-side we may see a pawn rush, but on the King's-side we are more likely to see more modest plans like the occupation of f5 or f4 by a Knight.

The flexibility of the Bishop's Opening is such that you can end up playing any of these Pawn formations, and playing each side of the unbalanced ones [a,b,c and e] as either White or Black! Interestingly, White often ends up playing against a Black preponderance in the centre. Let's see:

Variations with (a) Closed KP centre, Tension form (Ruy Lopez)

1. e4 e5 2. Bc4 Bc5 3. Nf3 Nc6 4. c3 Bb6 5. d4 Qe7 6. O-O d6 [closed Giuoco Piano]

Variations with (e) Semi-open unbalanced KP centre.

1. e4 e5 2. Bc4 Nf6 3. d3 d5 4. exd5 Nxd5 [Larsen-Berger, 1964]

1. e4 e5 2. Bc4 Nf6 3. d3 Be7 4. Nf3 d6 5. O-O c6 6. h3 Nbd7 7. a4 O-O 8. Re1 Nc5 9. Nc3 h6 10. d4 exd4 11. Nxd4 [Vogt-Tseshkovsky, 1981]

Variations with (f) balanced, closed KP centre

1. e4 e5 2. Bc4 Nf6 3. d3 c6 4. Nf3 d6 [Paulsen's Defence with ...d6]

This flexibility and variety is the final clue to understanding the GM interest in the old Bishop's opening - because it can be interpreted in a fully modern way by both sides.

[\[Examples of pawn formations\]](#)

Variations of Bishop's Opening.

After

1. e4 e5 2. Bc4

Black can adopt a variety of systems. The Black King's Knight nearly always goes to f6, so assume **2... Nf6** will be played. White responds **3. d3** to play in the modern style. Now Black has a choice:

3...Bc5 (Giuoco Piano)

3...Nc6 (Two Knight's Defence)

3...c6 (Paulsen's Defence to the Bishop's Opening)

3...Bc5 (Giuoco Piano)

3...Bc5 4. Nf3 usually transposes to the Giuoco Piano. Black can be expected to play ...Nc6 and ...d6. We can see a typical interpretation of this line by Karpov below, but the most precise move-order as far as I am aware is seen in the game Torre-Kamsky, where White avoids having to defend against ...Nf6-g4 with h2-h3 (then Nd2-f1-e3), by playing instead Nd2-c4-e3, keeping watch on g4.

3...Nc6 (Two Knight's Defence)

3...Nc6 4. Nf3 invites the Two Knights' Defence, assuming Black does not play ...Bc5. Black can play ...d6 or ...d5. Playing ...d5 immediately seems to leave Black's e-Pawn exposed (Nunn-Garcia), although if White prepares d2-d4 with an early c2-c3, Black may show the d-Pawn is weaker after ...d5 (Yudasin-Ivanchuk), so White does best to preserve options until Black shows where the d-Pawn will go (Kosten-Cooper). Black cannot successfully delay entirely a move of the d-Pawn (Taulbut-Rumens), nor trick White by playing ...d6 and then ...d5 (Kosten-Conquest).

3...c6 (Paulsen's Defence to the Bishop's Opening)

3...c6 4. Nf3 is a pure Bishop's Opening, a line known as Paulsen's Defence. Black can play ...d5 or more modestly with ...d6. **4...d5 5. Bb3** leaves Black defending a big centre in a complex middle-game (Nunn-Murey). Black cannot seem to simplify without disadvantage (Taulbut-Westerinen, Larsen-

Nunn).

Because of this Black may prefer to play modestly in the style of Philidor's Defence, with ...c6 and ...d6. This is rather playing White's own game, thinking about ...d5 in two moves. White has some prospects of advantage (Vogt-Chekhov) in a slow position.

[\[Examples of variations\]](#)

Example Games

Examples of pawn formations

(a) Closed KP centre, Tension form (Ruy Lopez)

No games here - really, the whole point of this formation is that it can become another. With the tension generated by these unresolved choices, neither side can commit themselves to very much. Only when there is some decision made might some plan be readily undertaken, although a phase of manoeuvring may follow the establishment of such a centre. So, several of the games below maintain this formation for a move or two, and I will note this with "[RLTF]".

(b) Double Pawn centre, KP unopposed

"But already this opening has certain puzzling aspects. Why should White consistently maintain his initiative, both in the variations we have looked at and in those to come? Why should Black's position be so awkward? The question really boils down to a more basic one: why is the Ruy Lopez (which this opening has virtually become) so difficult for Black to combat? Look at the present position: Black's pieces are sensibly developed; he has as much space as White; his pawns are strong. Yet he has problems.

"The answer seems to be that in this type of Ruy Lopez position Black can easily get caught in a situation where his game cannot unfold. Here for instance, White has his plans of Ng3-f5 and later d4, but it is less easy for Black to find something profitable to do without weakening himself or making some serious concession. His pieces may look reasonably placed, but they cannot readily achieve anything constructive or relevant. I should make it clear that this does not have to happen in a Lopez; it is far from being a bad opening for him. But in practice one error (6...Qe7) can leave him in misery. And so, if a player seems to have a respectable game (in a Ruy Lopez or any other opening for that matter), yet still loses, his misfortune may often be traced back to this lack of life in his position." -- NUNN AND GRIFFITHS

Exeter Chess Club: Five Sicilians from Club Play

by **Bob Martin**

Bob sent me these games with his own notes to illustrate both some nice amateur games with the Sicilian Defence, but also to illustrate what sorts of thinking and assessment goes on at club level. Bob is about an {A} player, so if that's where you want to be, this is the level of judgement you should be capable of. Thanks, Bob!

(28) Martin,R [B78]

1997

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 g6

(1) This initiates a dark-square game.

Black will try to keep White's center dark squares clear of pawns and pieces.

5.Nc3 Bg7

(2) With my king bishop on g7, I will do everything I can to open the long diagonal h8-a1, and avoid exchanging the bishop unless I can secure an overwhelming advantage with its loss.

This bishop will be my second most powerful piece in this type of opening.

6.Be3 Nf6 7.f3

(3) This is a key move in the Yugoslav attack against the Sicilian Dragon.

It does three things for him: a) reinforces e4, b) keeps the black knight off of g4 where it could challenge the Be3, c) prepares g2-g4-g5 with a kingside pawn storm attack.

7...Qa5

(4) An early queen move, but it does three things for me: a) shifts the queen to the queenside where my attack will come later, b) helps watch the kingside and center, c) to chase the queen White will have to

put the knight on b3 where it will be subject to harassment by a later Black a7-a5-a4.

8.Bc4 0-0 9.Qd2 d6 10.0-0-0 Bd7

11.h4

(5) Too soon.

White is not prepared for this early attack.

He should get his king off the half-open "c" file with Kb1 instead.

Believe it or not my next move is a direct attack on his king

(an x-ray attack).

11...Rac8 12.h5

(6) Better is Kb1 now.

12...Ne5

(7) If instead Nxf5 White will play RxN and have an open "h" file for a ready made attack; thus sayeth Fischer.

Amen! Believe me, if you do it, it will come.

Ne5 begins my queenside attack since I already have an open file.

13.Bb3 Nc4 14.Bxc4 Rxc4 15.g4

(8) The last chance to get the king to b1 and off the hot "c" file.

My pieces now become too active.

15...Rxc3 16.Nb3

(9) This move gives him more problems than it gives me, better was QxR.

But even then I'll clean up on all his pawns: QxQ, Nxg4, Bxg4, Bxc3, Bxh5.

In the Sicilian, Black usually has the better endgame pawn structure.

16...Rxc2+ 17.Qxc2 Qxa2 18.Kd2 Rc8

(10) After this White will have no protection for his king.

Count the number of Black pieces that can attack the white king: queen, rook, bishop

(g7), knight, and bishop

(d7) = five pieces, but I must be prepared for the coming Ra1.

19.Ra1 Nxe4+

(11) Opens the diagonal and brings down the curtain on the White king.

There are too many open lines into the White position.

20.fxe4 Rxc2+ 21.Kxc2 Qxb2+ 0-1

(29) Martin,R [B73]

1997

1.e4 c5

(1) Black's strategy will be to fight for the dark squares, especially d4.

2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 g6

(2) I will put the bishop on g7 and work to control the a1-h8 diagonal.

I won't exchange this bishop without some sort of advantage in return.

In most cases, the bishop on g7 will be almost as powerful as the queen.

5.Nc3

(3) If White exchanges knights on c6 I will capture with bxc6 and have more central influence with my pawns.

5...Bg7 6.Be3 d6

(4) Getting control of e5 and vacating d7 for the bishop.

Also, if Nf6 instead of d6, then White can play Nxc6 bxc6, e5 and my knight must return to g8.

I don't like the looks of that.

7.Be2 Nf6 8.0-0 0-0

(5) The plans for both sides are fairly simple: Black will use the half-open "c" file for possible queenside expansion, and White will use the "d" file and center for his attack.

White must prepare his attack carefully so that his pawns don't become weak, and Black must watch that White doesn't lock the queenside.

9.a3

(6) A waiting move and making preparations to stop Black queenside tricks.

This move is not as good as f4.

9...Bd7 10.Qd2 Rc8

(7) Black has the classic Sicilian Dragon attacking position.

I need to decide how to start my attack.

I should consider d5.

11.Rad1

(8) If White had castled queenside

(as in the last game) this rook would already be here and he would be a move ahead.

But with kingside castling he takes a more cautious approach to the game since his king will not be worried about the bishop on g7 and rook on c8.

11...Ne5 12.f4

(9) Black must now play aggressively before the White pawns get too far into his position.

But this move brings with it a weakness: the e4 pawn is only defended by the knight on c3, and the f4 pawn blocks the bishop on e3.

12...Nc4

(10) Forces an exchange of pieces

(always good for the defender).

I would now consider Ng4 instead of Nc4.

13.Bxc4 Rxc4

(11) Black should have decided the rook's ultimate fate before the recapture on c4 since it will be subject to attack here and to move it again will only help White's coming attack.

14.f5

14...Rxc3

(12) This exchange sacrifice forces White to make a long range decision: a) ruin his queenside pawns and subject them to attack by Black's queen on a5, and rook on c8 or b) recapture with queen and wait for Black to attack with the bishop on g7, queen on a5 and rook on c8.

Either way he must be careful.

15.bxc3 Nxe4

(13) The point of the rook sacrifice on c3.

White's pawns are an endgame nightmare.

He must go for a middlegame win.

16.Qd3 d5

(14) Look at the bishop on g7 and its potential on the open long diagonal.

17.fxg6 hxg6 18.c4

(15) This allows Black to establish two connected passed pawns on open diagonals.

Certainly nothing to sneeze at.

18...Nc5 19.Qe2 e5 20.Nb3

(16) This repairs the doubled pawns, but Black's center pawns will become monsters.

20...Nxb3 21.cxb3 d4

(17) It's been a dark-square game from the beginning; where does he put the bishop: on f2 or d2 a rook gets blocked.

22.Bc1 Qb6 23.b4

(18) This solves one problem, but doesn't do anything about the center.

23...d3+

24.Qe3

(19) The only move.

Be3 doesn't work.

24...Qxe3+ 25.Bxe3 e4

(20) The real purpose behind Qb6.

White thinks the bishop will blockade the pawns.

26.h3

(21) Wastes time.

White is worried about Bg4 and a future f5.

26...Ba4

(22) The bishops have more freedom of movement than do the two White rooks.

Notice how White doesn't have time to pick off the pawn on a7.

27.Rd2 Bc3 28.Rdf2

(23) He thinks he can tie the remaining Black rook to the defense of f7, but the bishops show their stuff.

28...Bb3 29.c5

(24) Now the bishop holds f7 and frees the rook for pile driving duty.

29...Rd8 30.b5 d2

(25) White loses material.

0-1

(30) Martin,R [B20]

1997

1.e4 c5

(1) Begins the fight for the dark squares, especially d4 **2.Bc4**

(2) The only problem with this move is it allows Black to play an early d5

(knights before bishops).

If I had played 1.

e5 it would be okay.

2...e6 3.f4 Nc6 4.Nf3

(3) Nc3 would strengthen his grip on d5 and prevent my next move.

4...d5

(4) Frees Black's game and forces White to move the bishop again.

5.exd5 exd5 6.Bb5 Bd7 7.0-0 Be7 8.Nc3 Nf6 9.d3

(5) Maybe d4 would be better.

9...0-0 10.Bxc6

(6) Three moves invested in the bishop and now he has nothing to show for it.

10...Bxc6 11.Ne5 Rc8 12.b3

(7) In view of a possible d4 this move is a waste of time.

The bishop should go to d2 not b2.

The e3 square will become an outpost

(a la Nimzowitsch) for four pieces! **12...Re8 13.Bb2 d4 14.Nxc6**

(8) Pretty much forced.

White can't leave the bishop on the open diagonal since he has no way to oppose it.

14...Rxc6

(9) The rook replaces the bishop and can swing to the kingside if necessary.

What replaced white's knight and bishop? Nothing.

White has nothing to show for the six moves invested in those pieces.

15.Ne2

(10) If instead Ne4 then Black still plays Nd5.

15...Nd5

(11) Heading for e3 ever since 13 d4.

16.Bc1

(12) Somehow White must try to hold e3.

The early 3.

f4 looks a bit silly now.

16...Bf6

(13) To give e3 additional support from the Re8

(overprotect) and prevent a possible c3 pawn break.

17.g3

(14) Supports f4 but creates another open diagonal into the king position.

It's difficult to find good moves for White now.

17...Ne3 18.Bxe3 Rxe3

(15) Black replaces each piece traded with another.

White on the other hand develops a piece then trades it off.

19.Rb1

(16) With the bishop of f6, White is afraid to leave the rook on a1.

White has no plan, he is simply reacting move by move to Black's threats.

Black has been centering his play around the e3 square.

19...Rce6

(17) Threatening the knight on e2, but actually reinforcing his grip on e3.

White's position is rather sewn shut.

Black must now focus on the weak kingside.

20.Rf2 Qe8 21.Kf1 Qc6

(18) The real reason for Qe8.

Black wants the h1-a8 diagonal that his bishop used to own.

22.Kg1

(19) White has given Black two free moves: Qe8 and Qc6.

The position is the same as on White's 20.

Rf2, except now Black's queen has gone from d8 to c6! **22...h5**

(20) This pawn will probe the kingside.

23.Qd2 Rf3

(21) To make e3 available to the other rook.

If 24.

RxR, then QxR with the rook going to e3 anyway.

24.f5 Ree3 25.Nf4 h4

(22) White must prevent hxg.

If 26.

gxh, then Bxh4 with other problems, while h3 sets up mating threats on g2 with the Black queen.

26.g4 Bg5

(23) White must be extremely careful, the bishop attacks the knight and threatens the White queen.

27.Ng2 h3 28.Ne1

(24) If NxR, then dxe gets a free piece or the queen.

28...Rxe1+ 29.Qxe1 Be3

(25) The fourth piece to use the e3 square.

30.Qxe3 dxe3 31.Re2 Rf2 0-1

(31) Martin,R [B20]

1997

1.e4 c5 2.Bc4

(1) Knights before bishops! At this point in the game where is the best square for the bishop? It's too early for the bishop move here.

2...e6 3.Nf3 d5

(2) Center pawn break, creates a pawn duo and forces the bishop to move again.

4.exd5

(2a) This gives Black the only center pawns.

4...exd5 5.Bb5+

(3) What does check do for White? For Black it get another piece in the game.

5...Bd7 6.a4

(4) What does this do for his piece development? **6...Nf6 7.d3 Be7**

8.Bxd7+

(5) White invested three moves in the bishop and now removes it from the board and gets another Black piece in the game.

8...Nbx d7

(6) This also helps hold the White knight off e5.

9.h3

(7) What does this move and a4 have in common? h3 weakens the kingside pawn cover.

9...0-0 10.d4

(8) White now has four pawn moves that do nothing to further his development; d4 gives Black the e4 "outpost".

10...Re8 11.0-0 Qc7 12.Qd3 Ne4 13.g3

(9) After this, what protects h3? White's kingside pawns are very weak.

13...Ndf6 14.Bf4

(10) e3 would have been a better square at this point; what is the bishop going to do here? **14...Bd6 15. Bxd6**

(11) Just like the king's bishop, the queen's bishop suffers the same fate: two moves invested in the piece are now gone.

15...Qxd6 16.Ne5 cxd4 17.f4

(12) Now what is the fate of the knight? It was either this or move the knight again.

17...Nh5

(13) The Black knights begin to overwhelm the kingside pawns.

18.Nd2 Nexg3

(14) Black is basically finished.

19.Ndf3 Nxf4

(15) The winning combinations begin to appear.

20.Nxf7 Re2

(16) Does Black need his queen at this point? **0-1**

(32) Martin,R [B21]

1997

1.e4 c5 2.d4

(1) White gambits a pawn.

In exchange for material White will get open lines and a lead in development.

2...cxd4

(2) Black accepts the offered pawn.

His strategy should be: a) rapid development and quick castling, keep the extra pawn and go for an endgame advantage by trading pieces, or b) develop his pieces, castle as soon as possible and return the

pawn to catch up in development.

3.c3

(3) If Black declines this pawn White will have a center pawn duo.

By taking the pawn he aids White's development.

3...dxc3 4.Nxc3 e6

(4) Opens a diagonal for the bishop, but seriously weakens d6.

Better is d6.

5.Nf3 Nc6 6.Bc4

(5) The most aggressive square for this bishop.

The gambiteer must be aggressive.

6...a6

(6) Prepares a later b5 to chase the bishop on c4, but really prevents a knight excursion by: Nc3-Nb5-Nc7 along with a White rook on c1.

7.0-0

(7) White has an ideal position; he has all the open attacking lines.

He needs to decide where to place the queen bishop and queen.

If Black allows an e5 push by White then d6 is doomed.

7...Nge7

(8) This does two things: allows the knight to go to g6 to hold back White's coming e5, and might allow Black to get in d5 especially if the other knight can get to b4.

8.Bg5

(9) Prevents Ng6 and d5.

In order to chase the bishop Black must weaken a pawn around the king.

d6 is staring White is the face shouting "Use Me!!!" How many pieces does Black have in play? How many moves is he from castling? **8...b5**

9.Bxb5

(10) Is this really a threat? Examine the consequences in your mind's eye.

Write down variations on paper to keep track of the moves.

9...f6

(11) Black saw the results of axBb5 and didn't like the knight on b5 after the recapture.

Instead, he makes the weakening pawn move anticipated by eighth move.

At this point Black is too cramped, and White has too many pieces in play for him to play timidly.

White needs to open lines to the Black king even if he has to sacrifice additional material.

10.Bxc6 Nxc6

(12) Better than dxB If dxB, then White could play: 12.

Qe2 fxB, 13.

Rfd1 Qc7?, 14.

Nxg5 with a later Qf3, e5 and Nce4.

11.Bh4 Bc5

(13) The wrong square for the bishop.

Black needs to bolster his king position to ward off any White attack.

Better was Be7 which would prevent White's next move.

12.e5

(14) Vacates e4 for the knight, attacks f6 and puts additional pressure on d6.

White has several options: Ne4 with Rc1.

A knight on e4 would also allow White to pressure f6.

Notice that the e5 pawn is immune to capture because of the pin on f6.

g5 by Black would allow White's queen in through the open h5-e8 diagonal.

12...Be7

(15) Too late for this now.

Examine Black's position if he had made this move instead of Bc5 and White had pushed e5 anyway.

Black could have responded with f5, forced a piece trade and castled on his next move.

13.exf6

(16) This forces the Black queen to a bad square and brings another White piece into the vicinity of Black's king.

13...Bxf6 14.Bxf6 Qxf6 15.Ne4

(17) The real point behind e5.

With the Black king bishop gone, White can attack from d6.

15...Qxb2

(18) The last thing he should do is waste moves on white pawns.

Every pawn Black removes opens another possible attacking option.

16.Nd6+ Ke7 17.Rb1

(19) Rb1 gives White new ideas: Nb7 BxN, and RxB together with the queen on d7.

17...Qa3 18.Nf5+

(20) If Kf7, then Nd6+, NxB and Rb7; or Kd8, then Nxg7, Nxe6+; or Kf8, then Rb6, Rxc6, and Qd8.

18...exf5 19.Re1+ Kf6 20.Rb3

(21) This rook can go to g3, or d3 then d6.

20...Qxa2 21.Qd6+ Kf7 22.Ng5+ 1-0

Introduction

R*BQK*NR

PP*-PPBP

-*NP-*P*

-p--*-

-*-*pp-*

-np-p-

ppp*-*bp

(1) as a model of how to approach attacking positions with a closed centre; compare many lines of the King's Indian Attack and Ruy Lopez;

(2) as a common system (e4 with Bg2) in many openings - for example, we see the same approach at work in many lines of the English Opening.

Basically, White aims to concentrate enough firepower in the K-side to force a quick checkmate. In doing so, Black has a natural counterattack in ...Rb8, ...b7-b5-b4 and possibly also ...c5-c4.

There are many ways for White to play the position - for example, the dark-squared Bc1 could go to g5, e3 or even d2. The Ng1 could go to e2, f3 or h3. It is also possible to put the light-squared bishop somewhere on the other diagonal - c4 or b5 - as well as on g2. I will concentrate on one important line where the central blockade is most obvious (Black plays ...e5), but I also include an example of games with the bishop on each of these two alternative squares c4 (Hodgson-Ady) and b5 (Hebden-Large), in variations of the Grand Prix Attack.

Black also has a wide variety of choices. Fianchettoing the Bf8 is not necessarily the best way to play - even if it is played, Black could play e6 or e5, with the Ng8 going to e7 or f6.

The Closed Sicilian with 6...e5 7. Nh3

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. f4

[6. Be3 is the most commonly-seen alternative, although Nge2 has often been played too]

```

î*èñô*äí
PP*-*PBP
-*NP-*P*
*-P-P-*
--*pp-*
*-np*-p-
ppp*-*bp
r-bqk-nr

```

6... e5

[6... e6 is the main line 7. Nf3 Nge7 8. O-O O-O 9. Be3 Nd4 else d4 may follow; this complex position has been the Grandmasters' starting point for many years]

Diagram A

```

R*BQK*NR
PP*-*PBP
-*NP-*P*
*-P-P-*-
-**-*pp-*
*-np*-pn
ppp*-*bp
r-bqk-*r

```

7. Nh3 (Diagram A)

This is relatively recent and has the advantage of bolstering f4, and leaving the f-file open for the rook(s). It also avoids the pin ...Bg4, and allows a retreat of the Nc3 to e2 if White wants to attack d4 or play c2-c3. A rather drastic example of how White wants to play is as follows:

Holland-Whiteley, 1995

```

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. f4 e5 7. Nh3
(diagram A) 7... Nge7 8. O-O O-O (?)

```

[latest theory suggest that this is premature: 8... Nd4 9. f5!? [9. Rf2 is safer for both sides!] 9... gxf5 10. Qh5 h6 [10... Nxc2 11. Rb1 with compensation (Lane) NOT (Plaskett)] 11. Rf2 += Spassky-Hort 1978 ...1-0 in the ending(!)]

```

9. f5 gxf5 10. Qh5 f6

```

looks ugly, but it seems to be fairly standard in this line - how else to prevent Ng5?

```

11. exf5 Nd4

```

```

R*BQ-RK*
PP*-N-BP
-**-P-P-*
*-P-Pp*q
-**-N-**-*
*-np*-pn
ppp*-*bp
r-b-*rk-

```

Thematic, and seemingly powerful, threatening ...Nxc2 and ...Nxf5

12. Nd5 Nxc2 13. Ng5 Bxf5

[13... fxc3 e.g. 14. f6 Nxd5 15. Bxd5+ Kh8 16. fxc3+ Kxc3 17. Rxf8 Qxf8 18. Bxc3 Kh8 19. Rf1]

14. Rxf5 fxc3 15. Rxf8+ Qxf8 16. Bxc3 Ng6 17. Rf1

somehow the rook, which looked doomed on a1, escapes

17... Qc8 18. Be4 Qd7 19. Ne7+ 1-0

Black never had a chance to take the rook on a1, let alone create Q-side counterplay by advancing the a- and b-pawns. What went wrong? The whole position after f5 and Qh5 looks very good for White, and whether or not it is a forced win, we would all prefer to be White.

Crickmore-Bellers 1983

1. e4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 5. d3 d6 6. f4 e5 7. Nh3 (diagram A) 7... Nge7 8. O-O O-O 9. f5 (all as before) 9... f6

Black allows f5 but not Qh5

10. g4 Nd4 11. Be3

White's idea - common in the Closed Sicilian - is to follow with Qd2 and doubling rooks on the f-file

11... Rb8 (the standard counter-attack) 12. Qd2 b5 13. Nd1

An interesting choice: 13. Ne2 keeps the rooks connected but allows exchanges; the text covers b2 and allows c3 with tempo. Note that a4 or a3 do not stem the tide of Black's counterplay

13... b4 14. c3 bxc3 15. bxc3 Ndc6 16. Rf2 Qc7 17. Nb2 Nd8 18. Raf1

-RBN-RK*

P-Q-N-BP

-*-P-PP*

-P-Pp-

-*-*p*p*
*-ppb-*n
pn-q-rbp
--*rk-

Mission accomplished - now Black's position looks critical

18... Nf7 19. g5 gxf5 20. exf5 d5

The classic central response to a wing attack - possible because of the position of the Knight on b2 not c3

21. gxf6 Bxf6 22. Qe2 d4 23. cxd4 cxd4 24. Qg4+ Kh8 25. Bg5 Nxf5 26. Nxf5 Nxf5 27. Rxf5 Bxf5

[27... Rxb2 appears to win the exchange without allowing a perpetual check 28. Qh5 Bxf5]

28. Qxf5 Bxg5 29. Qxg5 Rxf1+ 30. Kxf1 Rxb2 drawn

Variation with 6...e5 7. Nh3 exf4

Actually, Black can also prevent f5, and apparently equalise immediately, with

Exeter Chess Club: The Queen's Gambit Accepted/Isolated Queen's Pawn

Peter Lane, 2nd March 1998

'...a system, imperfect though it may be, is preferable to move to move improvisation' -- KONIG

Studying opening theory is one of the best and worst tasks for the ambitious chess player: the best, because catching your opponent with a prepared tactical or strategical plan gives you a headstart to victory; the worst, because no- one likes mugging up variations.

I long ago gave up the idea of memorising openings -- sets of moves simply do not remain in my head long enough; once I've looked up the correct reply to **4.Bd3** in the French Winawer, it may be 6 months before the position appears again on the board! And so I avoid this unpleasant aspect of openings, though I'm sure it pays dividends to those with a good memory.

Instead I prefer to combine work on opening theory with attempts to master basic strategical concepts. My favourite strategical concepts are pawn centres and the theories of Nimzowitsch. One topic that is key in almost any of the literature is that of the Isolated Queen's Pawn (IQP). And this topic often occurs in games between top ranking masters.

This session will examine some games in the Queen's Gambit Accepted (QGA), and so illustrate the key themes of play for and against an IQP.

I : THEORY

First, we must get an idea of the characteristic *motifs*. The basic structure is shown in the diagram:

The IQP is the White pawn on d4. The basic features of the position which stand out are:

1. White has more space
2. Black has two pawn islands to White's three
3. White has a strong square on e5 -- f6 would weaken the e-pawn
4. Black has an outpost on d5
5. the c-file is open.

The combination of (1) and (3) basically mean White has the better middle game chances, and especially to whip up an attack on the Black king. The combination of (2) and (4), coupled with the isolation of the White d-pawn, mean Black has the better endgame chances. (5) can be useful to both players.

OVERALL CONCLUSION: a dynamic imbalance -- either player may win!

(The IQP is also frequently found with a Black pawn on c6 instead of e6; the evaluation is unchanged, although White may have better attacking chances.)

The IQP can arise from numerous openings, which is why it is a strategem worth studying; no matter your opening repertoire, there is bound to be some variation in which it could (or does) arise.

The basic move-order is a Queen's Gambit Accepted: *1.d4 d5 2.c4 dxc4 3.Nf3 Nf6 4.e3 e6 5.Bxc4 c5 6.*

O-O Be7 7.cxd4 exd4. Also possible is the line: *1.d4 d5 2.c4 dxc4 3.e3 e5 4.Bxc4 exd4 5.exd4 Nf6 6.Nf3* etc.

The Slav complex, (*1.d4 d5 2.c4 c6*) also gives rise to similar positions, and Matthew Sadler frequently plays the QGA and Slav, perhaps for this reason.

Popular lines of the Nimzo-Indian (*1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 4.e3 c5 5.Bd3 d5 6.Nf3 O-O 7.O-O Nc6*) and the Tarrasch (*1.d4 d5 2.c4 e6 3.Nc3 c5*) lead to a characteristic clash of c and d-pawns, which can lead to an IQP on either side.

The e-pawn openings are not immune either: from the French Defense there is: *1.e4 e6 2.d4 d5 3.exd5 exd5 4.c4* or *1.e4 e6 2.d4 d5 3.Nd2 c5 4. exd5 exd5*, and from the Caro-Kann: *1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4*, and from the Petroff, after *1. e4 e5 2. Nf3 Nf6 3. Nxe5 d6 4. Nf3 Nxe4 5. d4 d5 6. Bd3* and a later c2-c4

II : PLAYING AGAINST THE IQP

'For Black the following are desirable.

(i) All cases (ceteris paribus) of a pronounced end game character.

(ii) Those where Black has played Nd5xNc3; bxc3, with the idea of pinning down White's Pc3 from the start and of laying siege to it.' -- NIMZOWITSCH

First up, a game to illustrate how the endgame can go in Black's favour, played by that maestro of clear-cut strategy, Dr.Lasker.

Akiba Rubinstein vs Dr.E.Lasker, Moscow 1925.

1.d4 d5 2.c4 c6 3.e3 Nf6 4.Nc3 e6 5.Nf3 Nbd7 6.Bd3 dxc4 7.Bxc4 b5 8.Be2 a6 9.O-O Bb7 10.b3 Be7 11.Bb2 O-O 12.Ne5 c5 13.Bf3 Qc7 14.Nxd7 Nxd7 15.Ne4 Rad8 16.Rc1 Qb8 17.Qe2 cxd4 18.exd4

I have skipped over the opening stage, which illustrates one transposition into a basic IQP position. Black has begun to gain some space on the queen-side, and now, through exchanges, removes any attacking ideas White may have in order to work on the IQP itself.

18...Rc8 19.g3 Qa8 20.Kg2 Rfd8 21.Rxc8 Rxc8 22.Rc1 Rxc1 23.Bxc1 h6 24.Bb2 Nb6 25.h3 (White is trying to avoid further exchanges) **Qc8 26.Qd3 Nd5!**

Thematically sitting on the outpost square, with a threat,

27.a3 Nb6!

which White prevents (...Nb4), but at the cost of weakening b3, which Black now seizes upon. One of the problems when playing with one weakness, the IQP, is that you are liable to create further weaknesses elsewhere; Nimzowitsch calls these '*reflex weaknesses*'.

28.Kh2 Bd5 29.Kg2 (White's oscillation of the king does not appear as worthwhile as Black's oscillation of his knight!) **Qc6 30.Nd2 a5! 31.Qc3**

Finally submitting to the exchange of queens, but the '*reflex weaknesses*' will tell.

31...Bxf3+ 32.Nxf3 (not 32.Qxf3 Qc2) **Qxc3 33.Bxc3 a4! 34.bxa4 bxa4 35.Bb4** (the threat was ...Nc4) **Bxb4 36.axb4 a3 37.Nd2 Nd5**

and Black will win the endgame,

e.g. **38.b5 Kf8 39.Kf1 Ke7 40.b6 Nxb6 41.Ke2 Nd5 42.Kd3 a2 43.Nb3 Kf6 44.Kc2 Kf5 45.Kb2 Ke4 46.Kxa2 Nc3+- e2 etc.**

As a further illustration of this theme, we follow:

M.M. Botwinnik vs M. Euwe, Hastings, 1934-5.

1.c4 c6 2.e4 d5 3.exd5 cxd5 4.d4 Nf6 5.Nc3 Nc6 6.Bg5 e6 7.Nf3 dxc4 8.Bxc4 Be7 9.O-O O-O

A standard position for this system. White would like to play Qe2, but cannot because of the d-pawn weakness. Ideally the B now sat proudly on g5 would be on e3, but to retreat is to lose face, and time.

10.Rc1 a6 11.Bd3 h6!

An important move, aiming for control of f4. A mistake would be 11...b5 12.Ne4! Bb7 13.Bxf6 Bxf6 14.Nc5

12.Be3

Instead, a better move is 12.Bh4 Nb4 13.Bb1 b5 14.a3 Nbd5 15.Qc2 would force g6 or g5.

12...Nb4 13.Bb1 b5 14.Ne5 Bb7 15.Qd2 Re8

Preventing sacrifices on h6 by enabling ...Bf8 to cover.

16.f4 Nbd5 17.Nxd5 Qxd5 18.f5 Bd6 19.fxe6 Rxe6

Black's play can be recommended as a model for the defense. White's Ne5 is now unable to retreat, due to the weakness of g2.

20.Bf5 Re7 21.Bh3 Bxe5 22.dxe5 Qxe5 23.Bf4 Qd5 24.Qxd5 Nxd5

and Black went on to win with his extra pawn (in 56 moves).

Finally, a game to illustrate how easy it is to defend a structurally sound position against an opponent aiming to attack *'no matter what'*.

D.Janowski vs. Dr.E.Lasker, Match Game, 1910

1.d4 d5 2.Nf3 Nf6 3.e3 c5 4.c4 e6 5.Bd3 Nc6 6.O-O dxc4 7.Bxc4

Transposing to the QGA, but with loss of time for White.

7...a6 8.a4

Creates a hole on b4 -- and watch Lasker make a point of it!

8...Be7 9.Nc3 O-O 10.b3 dxc4 11.exd4 Nb4! 12.Bb2 b6 13.Qe2 Bb7 14.Rad1 Nfd5 15.Ne5

Black's pieces are perfectly positioned, and the Bb7 compares favourably with its counterpart, the Bb2. Because of b3 and d4, any endgame would be lost for White, and so he must attack, 'no matter what'. Nevertheless, Lasker provokes.

15...Nf4 16.Qg4 Nbd5!

And not 16...Nxg2? 17.d5! Nh4 18.dxe6 f5 19.Qg3 with advantage to White. The d-pawn must be kept securely blockaded.

17.Nxd5 Nxd5 18.Rfe1 Bb4!

This move keeps White on his toes. The rook moved to allow f4, without Black forking his rooks. This bishop move drives the R to e2, where Nc3 forks become a combinative motif. Further, it allows Black to defend his k-side along the second rank.

19.Re2 Rc8 20.f4 Rc7!!

I think Black's last move is a beauty. By defending the Bb7, it also threatens ...h5:Qf3 Nc3! winning the exchange.

21.f5

'Leading to the loss of a pawn or the exchange; but Janowski prefers to lose the game his own way: a somewhat dubious satisfaction.' - - REINFELD.

21...h5 22.Qxh5 Nf4 23.Qg4 Nxe2+ 24.Qxe2 exf5 25.Qh5

Threatening?

25...Bd5!

Cold-blooded -- occupy the outpost square, stop Ng6 with 'mate!

26.Rd3 f6 27.Rh3

'Janowski's first logical move in the whole game, as the situation obviously calls for hara-kiri!' -- REINFELD

27...fxe5 28.Qh7+

'In return for the piece, Janowski obtains two P's and four checks.' -- REINFELD

28...Kf7 29.Qxf5+ Ke8 30.Qh5+ Bf7 31.Qxe5+ Qe7 1-0

If 32.Qxg7 Qe1+ 33.Bf1 Qxf1+ 34.Kxf1 Bxc4+ 35.Kg1 Rf1 'mate.

'One of those remarkable games in which Lasker makes his opponent look childish.' -- REINFELD

After all that, why does White take on an IQP?

III : PLAYING FOR THE IQP

'In general it may be said that the two following cases are worth striving for by White.

(i) When White has effected d5, exd5; a piece xd5, and thereby gets the better, because a centralised position. (ii) When White has built up a position in the c-file.' -- NIMZOWITSCH

How should the White pieces place themselves with regard to the isolani? I quote Nimzowitsch as, although his piece placements in themselves are not always followed, the spirit certainly should be!

'Many players with an isolani proceed much too violently, but it seems to me that there is no objective motive for "plunging" on a desperate attack. At first the utmost solidity is called for. The attack will come of itself in good time, for instance when Black has withdrawn his Nf6, which he will at some time

naturally do, since the N wants to get to d5. In the development stage, we would therefore recommend the solid construction, Be3 (not Bg5), Qe2, R's c1 and d1 (not d1 and e1), further Bd3 or b1 (not b3). ... A solid position aimed at maintaining the security of the Pd4 is the one and only right course, and it must ever be remembered that the Be3 belongs to the Pd4 as does a nurse to a suckling child!

'It is only when Black has withdrawn his pieces from the K-side that White may sound the attack, and this, if he will, he may carry out in sacrificial style.'

As an illustration we will follow:

Timman-Panno, Mar del Plata 1982:

1.d4 d5 2.c4 dxc4 3.Nc3 e5 4.e3 exd4 5.exd4 Nf6 6.Bxc4 Be7 7.Nf3 O-O 8.h3 Nbd7 9.O-O Nb6 10. Bb3 c6 11.Re1 Nfd5

A good standard position. Black's last move occupies his outpost and offers an exchange of knights, but moves one piece away from the king-side. White, with the isolani, avoids the exchange and moves his knight closer to the king-side.

12.Ne4!

Can attacking chess be so simple? If you follow basic precepts, yes!

12...Re8 13.Bd2 Bf5 14.Ng3 Be6 15.Bc2 Nd7 16.a3 Nf8 17.Bd3 g6?!

According to Timman, 17...f6 was better, but White would still have the initiative. Note how White studiously avoids exchanges, and Black makes concessions in order to exchange.

18.Bh6 Nf6 19.Qd2 Bd5 20.Ne5 (avoid Bxf3) Ne6 21.Bc2 (avoid Nxd4) Nd7 22.Ng4 (avoid Nxe5) Bg5 23.Bxg5 (OK, one got away, but look at those dark squares) Qxg5 24.Qb4 Nf6 25.Re5 Qh4 26.Nxf6+ Qxf6 27.Ne4 Qd8

Missing a chance to simplify with 27...Bxe4 28.Bxe4 Re7. Note though that White is always calling the tune, and Black is still hoping to sit through to the endgame. This sort of manoeuvring by White (moves 13-22) can look difficult, until you realise he's merely avoiding piece exchanges, and controlling the dark squares! White now makes a more concerted attacking attempt.

28.Bb3! a5 29.Qc3 Bxb3 30.Qxb3 Qxd4 31.Nf6+ Kh8 32.Rae1 Reb8?!

Here's the signal for White to attack. Any takers for a continuation?

33.R1e4 Qd8 34.Rxe6! fxe6 35.Qc3 Qe7 (35...Qf8 36.Nxh7+ Kxh7 37.Rh4+ Qh6 38.Qf6! is given by Timman) 36.Nh5+ Kg8 37.Rxe6 Qf7 38.Nf6+ Kf8 (38...Kh8 39.Re7) 39.Qc5+ Kg7 40.Re7 Kxf6 41.Qe5 'mate

A game to remember!

If you are in an ultra-aggressive mood, and find all that waiting around for Black's pieces to move away from the king-side etc etc a bit of a drag, then you might prefer the more direct approach of the following game:

1.d4 d5 2.c4 dxc4 3.e3 e5

(Note that Black cannot keep his pawn: 3...b5 4.a4 c6 5.axb5 cxb5 6.Qf3!)

4.Bxc4 exd4 5.exd4 Nf6 6.Nc3 Be7 7.Nf3 O-O 8.h3 c6 9.Be3 Bf5

White's development is a model of restraint, Be3 just as Nimzowitsch prescribes. 8.h3 is useful, preventing the pin of the Nf3. But how does that Black Bf5 fit in?

10.g4!?

Scrub that last comment! '*White's restrained development*'? Can White really attack like this? Perhaps this is why 9...Nbd7 is a more popular choice for Black.

10...Bg6 11.Ne5! Nbd7 12.Nxg6 hxg6 13.h4!

White cannot waste any time, as the open nature of the position would give Black ample opportunity to counterattack -- if he can get organised.

13...Nb6 14.Bb3 Nfd5 15.h5 Nxe3 16.fxe3 Bh4+ 17.Kd2 gxh5 18.Qf3 Bg5

If you can find White's next move, you have my full permission to play like this.

19.Raf1!!

'Never forget your queen's rook' -- easy?!

19...Qxd4+ 20.Kc2 Qf6 (20...Qxg4 21.Bxf7+ Kh7 22.Qxg4) 21.Rxh5! Qg6+

(If 21...Qxf3 22.Rxf3 Be7 23.Rhf5 {note, shift the attack to the f7 pawn} Bf6 24.g5 Bxc3 25.bxc3 Nd5 26.e4! Also, 21...g6 22.Qh3 gxh5 (22...Qe5 23.Rf5) 23.Rxf6 Bxf6 24.Qxh5 with g5-g6 to follow.)

22.e4 Nd5 23.Rfh1 Bh6 24.g5! f5 25.Nxd5 cxd5 26.Bxd5+ Kh7 27.Rxh6+ Qxh6 28.gxh6 1-0

No prizes for guessing this is in 'ye olde style' -- it is in fact the 15th game of the first match between La Bourdonnais and McDonnell, played in 1834. In the 85(!) games these two amassed, the Queen's Gambit Accepted featured prominently in La Bourdonnais' arsenal, and thereby were some wonderful victories gained!

OPENING EVALUATION for UNDER 2200 PLAYERS (To Be Know As OEU2200 From Here On)

After following the rec.games.chess.analysis thread for nearly a year now, I came up with an idea. Why not go ahead and direct a thread that explains exactly what we all want to know about. Opening preparation is a vital part of your training for tournaments. So let's get to work. I will be using past posts, along with new ideas and evaluations to begin with. Let's begin with an opening that has appeared in the news group recently. The Blackmar-Diemer Gambit is a brash opening that tends to open up the game quickly, leading to wild tactical games. The gambit is not seen much at the master level, but is quite dangerous to the unprepared opponent.

BLACKMAR-DIEMER GAMBIT

1.d4 d5 2.e4!? (I give the move e4 !? because this opening is under a persistent cloud.) 2...dxe4 3.Nc3 (3.f3 is refuted by 3...e5! 4.dxe5 Qxd1+ 5.Kxd1 Nc6 6.Bf4 Nge7 with an advantage for black.) 3...Nf6 (Popiel's Lember Counter Gambit 3...e5 is met by Be3 exd4 5.Bxd4! Nc6 6.Bb5 Bd7 7.Nge2 Nxd4 8.Qxd4 c6 9.Bc4 Nf6 10.0-0-0 Be7 11.Rhe1 0-0 12.Ng3 with an advantage for white.) 4.f3 exf3 (4...Bf5 5.fxe4! (5.g4 Bg6 6.h4 h6 with an unclear position) 5...Nxe4 6.Qf3

Nd6 7.Bf4 e6 8.0-0-0 c6 <A> 9.d5? cxd5 10.Nxd5 Be4 (10...exd5 11.Bxd6 with a better position for white) 11.Qe3 exd5 12.Rxd5 f5 13.Bb5+ Nc6 14.Nf3 Be7 15.Rxd6 Bxd6 16.Rd1 0-0 with an unclear position. 9.g4 Bg6 10.Qe3 Be7 11.Nf3 Nd7 12.d5 cxd5 13.Nxd5 exd5 14.Bxd6 Rc8 15.Rxd5 Bxc2 16.Kd1 with slightly better chances for white.) Here is where many forks in the road. You can either continue Nxf3, or Qxf3. With both continuations leading to interesting positions which allow for further research and improvements. A. 5.Nxf3 Bf5 6.Ne5 e6 7.g4 Bg6 (7...Be4 8.Nxe4 (8.Rg1 Bb4 9.d3 Nc6 10.Be3 Nxe5 11.dxe5 Bxd3=) 8...Nxe4 9.Qf3 Qxd4! 10.Qxf7+ Kd8 11.Qf4 Bb4+ (11...g5? 12.c3 Qd5 13.Nf7+ Ke8 14.Qf3 Rg8 15.Bg2 with an advantage for white) 12.c3 Bxc3 (12...g5 13.Qe3) 13.bxc3 Qxc3+ 14.Kd1 with an advantage for white) 8.Qf3 c6 (9.g5 Ng8 10.Bd3 Qxd4 11.Nxg6 hxg6 12.Bf4 c5 13.Rf1 e5 14.Qe2 Ne7 15.Bxe5 Qe3 16.Qxe3?! (16.Ne4) 16...Bxe3 with an unclear position) A1. 5.Nxf3 Bg4 (Other defenses are: <A> 5...e6 6.Bg5 h6 (or...c5) 7.Bxf6 Qxf6 8.Bc4 Bd6 9.0-0 Qd8 10.Qe2 advantage for white. 5...g6 6.Be4 Bg7 7.Ne5 0-0 8.Bg5 Nd7 (8...Nc6 9.Nxc6 bxc6 10.0-0-0 advantage for white) 9.0-0 c6 10.Kh1 Nb6 11.Nb3 a5 =) 6.h3 Bxf3 7.Qxf3 c6 8.Be3 e6 (<A> 9.Bd3 Be7 10.g4 Nd5 11.Rf1 0-0 12.Ne4 Nd7 = 9.Bd3 Nbd7 10.0-0 Be7 11.Rf2 Qa5 12.g4 0-0 =) B. 5.Qxf3 g6 (5...Qxd4 is double-edged and not fully explored 6.Be3 (6.Nb5 Qe5+ 7.Be2 Na6 with the advantage to white. 6...Qb4 7.a3 Qb6 8.Bc4 Bg4 9.Qg3 Nxc6 with an unclear position.) 6.Be3 c6 7.Bc4 Bg7 8.Nge2 Nbd7 (9.0-0-0 Nb6 10.Bb3 a5 11.a3 Bg4 with advantage to black)

Well, here is what all of the “opening books” have to offer. Unfortunately, there are very few complete games available on the “net” that concerns the Blackmar-Diemer Gambit. Here is where the group comes in. OEU2200 is meant to cultivate thought, and to build complete theoretical articles about opening play. These articles will include middlegame patterns, and possible endgame play. To achieve this, your help is needed. Please contribute. If you are rated 2000 or even 200, your input is extremely valuable. The articles will be kept at my chess homepage. (<http://www.crown.net/~miker>) Feel free to suggest future openings for discussion. (miker@crown.net) Thanks for your help and input.

Before I get stuck in, this thread surely belongs in rec.games.chess.analysis. Please follow-up there and not rec.games.chess.misc.

I have three follow-ups

1. editing only
2. editing with alternatives given in Gary Lane's book
3. review of GL book

>BLACKMAR-DIEMER GAMBIT

Firstly:

- a. can we lay this out more like a tree in a book? I've had a go!
- b. names and references would also be helpful when quoting from other sources
- c. the size of advantage is important: I suggest the ASCII scale
 - = equal
 - += slight plus
 - +/- clear plus
 - +- large plus, probably winning
 - & unclear
 - &/= with compensation
- d. for consistency, should it be O-O (letters) or 0-0 (zeroes)?

So: all the material below is Ryan's, edited by me
All unattributed text is Ryan's/MCO/BCO 1(?)

1.d4 d5 2.e4!? (I give the move e4 !? because this opening is under a persistent cloud.) 2...dxe4 3.Nc3

(3.f3 is refuted by 3...e5! 4.dxe5 Qxd1+ 5.Kxd1 Nc6 6.Bf4 Nge7 with an advantage for black.)

3...Nf6

(Popiel's Lember Counter Gambit 3...e5 is met by Be3 exd4 5.Bxd4! Nc6 6.Bb5 Bd7 7. Nge2 Nxd4 8.Qxd4 c6 9.Bc4 Nf6 10.0-0-0 Be7 11.Rhe1 0-0 12.Ng3 with an advantage for white.)

4.f3

(1) The Gambit Declined

(2) The Gambit Accepted

(1) The Gambit Declined

A 4...Bf5 5.fxe4!

(5.g4 Bg6 6.h4 h6 with an unclear position)

5...Nxe4 6.Qf3 Nd6 7.Bf4 e6 8.0-0-0 c6 and now:

<A1> 9.d5? cxd5 10.Nxd5 Be4

(10...exd5 11.Bxd6 with a better position for white)

11.Qe3 exd5 12.Rxd5 f5 13.Bb5+ Nc6

14.Nf3 Be7 15.Rxd6 Bxd6 16.Rd1 0-0 with an unclear position.

<A2> 9.g4 Bg6 10.Qe3 Be7 11.Nf3 Nd7 12.d5 cxd5 13.Nxd5 exd5

14.Bxd6 Rc8 15.Rxd5 Bxc2 16.Kd1 with slightly better chances for white.)

(2) The Gambit Accepted

4...exf3

Here are many forks in the road. You can either continue Nxf3, or Qxf3. Both continuations lead to interesting positions which allow for further research and improvements.

1A. 5. Nxf3

>BLACKMAR-DIEMER GAMBIT

The material below is Ryan's (RR), edited by me (DR) and with comments based on Gary Lane's book (GL). [To find out what I've added either run Unix diff or grep for GL/DR or just print them both out single-sided and hold them up to the light!] The GL book I found maddening - see separate post.

All unattributed text is Ryan's/MCO/BCO 1(?) It would be helpful if Ryan or someone else with these books could mark up the lines.

1.d4 d5 2.e4!?
(I give the move e4 !? because this opening is under a persistent cloud.)

(0) Attempts at avoiding the Gambit after 1.d4 d5 2.e4!?

(In practical play Black often tries to avoid the Gambit with 2...e6, the French Defence, or 2...c6, The Caro-Kann. The French may be met by 3. Be3, the Alapin Gambit. DR)

2...dxe4 3.Nc3
(3.f3 is refuted by 3...e5! 4.dxe5 Qxd1+ 5.Kxd1 Nc6 6.Bf4 Nge7 with an advantage for black.)

3...Nf6
(0A Popiel's Lember Counter Gambit 3...e5 is met by Be3 exd4 5.Bxd4! Nc6 6.Bb5 Bd7 7. Nge2 Nxd4 (7...Qh4 = GL)
8.Qxd4 c6 9.Bc4 Nf6

10.0-0-0 Be7 11.Rhe1 0-0 12.Ng3 with an advantage for white.)
(0B 3...Nc6 leads to a well-known line of the Nimzovitch Defence)
(0C 3...e6 offers transposition to the Rubinstein French 4. f3)
(0D 3...c6 offers transposition to the main lines of the Caro-Kann:
4. Bc4 Nf6 5. f3 keeps the Gambit offer going.)

4.f3

- (1) The Gambit Declined
- (2) The Gambit Accepted

(1) The Gambit Declined

A 4...Bf5 {Vienna Defence}

(also known are:

- B. 4...e3
- C. 4...Nf6
- D. 4...Nc6)

5.fxe4!

(5.g4 Bg6 6.h4

(6. g5 GL)

6...h6 with an unclear position)

5...Nxe4

(5...Bxe4 GL)

6.Qf3 Nd6

(6...Nxc3 7. bxc3 Qc8 GL)

7.Bf4 e6 (Unzicker) 8.0-0-0 c6 and now:

<A1> 9.d5? cxd5 10.Nxd5 Be4

(10...exd5 11.Bxd6 with a better position for white)

11.Qe3 exd5 12.Rxd5 f5 13.Bb5+ Nc6

14.Nf3 Be7 15.Rxd6 Bxd6 16.Rd1 0-0 with an unclear position.

<A2> 9.g4 (Strobel) 9...Bg6 10.Qe3 Be7 11.Nf3 Nd7 12.d5 cxd5 13.Nxd5 exd5

14.Bxd6 Rc8

(14...Be6 GL)

15.Rxd5 Bxc2 16.Kd1 with slightly better chances
for white.)

(2) The Gambit Accepted

4...exf3

Here are many forks in the road. You can either continue Nxf3, or Qxf3. Both continuations lead to interesting positions which allow for further research and improvements.

1A. 5. Nxf3

A1 5. Nxf3 Bf5

A2 5. Nxf3 Bg4

A3 5. Nxf3 e6

A4 5. Nxf3 g6

1B. 5. Qxf3

A. 5. Nxf3

A1. 5.Nxf3 Bf5

5.Nxf3 Bf5 6.Ne5 e6 7.g4 Bg6

(7...Be4 8.Nxe4

(8.Rg1 Bb4 9.d3 Nc6 10.Be3 Nxe5 11.dxe5 Bxd3=)

8...Nxe4 9.Qf3 Qxd4! 10.Qxf7+ Kd8 11.Qf4 Bb4+

(11...g5? 12.c3 Qd5 13.Nf7+ Ke8 14.Qf3 Rg8 15.Bg2

with an advantage for white.

Leisebein-Petzold (Corr 1989) went only as far as

15...Nd6 16. Qe2 1-0 GL)

12.c3 Bxc3(? GL)

(12...g5 (! GL) 13.Qe3)

13.bxc3 Qxc3+ 14.Kd1 with an advantage for white)

8.Qf3 c6

(8...Nbd7 GL)

9.g5 Ng8 (Taimanov)

(9...Nd5)

10.Bd3 Qxd4 11.Nxg6 hxg6 12.Bf4 c5

(typo? 12...Bc5 is given by GL)

13.Rf1 e5 14.Qe2 Ne7 15.Bxe5 Qe3 16.Qxe3?! (16.Ne4 += GL)

16...Bxe3 with an unclear position)

A2. 5.Nxf3 Bg4

5.Nxf3 Bg4

(Other defenses are:

<A3> 5...e6 6.Bg5 h6 (or...c5) 7.Bxf6 Qxf6

(GL gives 8. Qd2 and 8. Bb5+ as better)

8.Bc4 Bd6 9.0-0 Qd8 10.Qe2 advantage for white.

<A4> 5...g6 6.Bc4 (not e4! DR) 6...Bg7 7.Ne5

(GL gives 7. Bg5 and 7. 0-0 0-0 8. Qe1)

7...0-0 8.Bg5 Nd7

(8...Nc6 9.Nxc6 bxc6 10/11. Qd2/0-0-0 advantage for white - RR,
= GL as in a Diemer-Studier game)

9.0-0 c6 10.Kh1 (!? GL)

(10. Bb3 GL)

10...Nb6 11.Nb3 a5 =)

6.h3 Bxf3 7.Qxf3 c6 8.Be3 e6 9. Bd3 and now:

<A21> 9...Be7 10.g4 Nd5 11.Rf1 0-0 12.Ne4 Nd7 =

<A22> 9...Nbd7 10.0-0 Be7 11.Rf2 Qa5 12.g4 0-0 =

B. 5.Qxf3

5.Qxf3 g6

(5...Qxd4 is double-edged and not fully explored 6.Be3

(6.Nb5 Qe5+ 7.Be2 Na6 with the advantage to white)

6...Qb4 (? GL)

(6...Qg4! e.g. 7. Qf2 e5 8. a3 Nc6 9. Nf3 Bd6 10. 0-0-0 a6 GL)

7.a3

(7. 0-0-0 e.g. 7...Bg4? 8. Nb5!! GL)

7...Qb6 8.Bc4 Bg4 9.Qg3 Nxc6 with an unclear
position.)

6.Be3

(6...Bg7 7. 0-0 GL)

6...c6 7.Bc4 Bg7 8.Nge2 Nbd7 9.0-0-0 Nb6 10.Bb3 a5 11.a3

Bg4 with advantage to black)

Exeter Chess Club: My adventures with the Blackmar-Diemer Gambit

Introduction

If you haven't met this splendid opening before, do check out Tom Purser's [BDG World](#) magazine for games, variations, stories and a chance to meet the characters of the BDG community.

The opening is named for *Blackmar*, who described the gambit **1. d4 d5 2. e4 dxe4 3. f3** , and for *Diemer*, who improved the line by avoiding the defence *3...e5*, suggesting and practicing instead **3. Nc3 Nf6 4. f3** [*4...e5 e.g. 5. d5*].

I have a [book](#) and a [database](#) on the BDG, and in each White scores about 80%! This must be too good to be true, I thought (and it is), but certainly worth a look. So, I entered Tom Purser's [BDG e-mail theme tournament](#) to find out more about this opening, which survives despite the scepticism. Here are my games in a preliminary section (BDG-P01, 1997) [where, for the record I used Andres Valverde's cracking little [ECTOOL](#) programme to keep track of the games.].

1. [Dave Regis 0-1 Unes Hassim : BDG Vienna Defence](#)
2. [Dave Regis 1-0 Volker Druieke : BDG Bogolyubov Defence](#)
3. [Dave Regis 1-0 Kevin Kent : BDG Vienna Defence](#)
4. [Volker Druieke 0-1 Dave Regis : BDG Euwe Defence](#)
5. [Unes Hassim 1/2-1/2 Dave Regis : BDG Langeheinecke Defence](#)
6. [Kevin Kent 0-1 Dave Regis : BDG Bogolyubov Defence](#)
7. [Summary:](#)

One key line I didn't get to try was the Teichmann Defence, *5...Bg4*. During the tournament I played the BDG in blitz against an IM, and guess what he came straight back with? Anyhow, here's how the games went. I won't get into the opening theory too much, apart from noting known or speculative alternatives, and will concentrate on what I thought were the critical moments of the games. When he knew I was planning this session, Pete Lane e-mailed me the following quote:

'It should also be noted that there are openings where I feel the chances for theoretical rebirth are extremely poor. An obvious example is the Blackmar-Diemer Gambit: 1.d4 d5 2.e4. Sacrificing a prime central pawn for a tempo in the face of a healthy, solid Black

position cannot be sound.' -- MEDNIS

There is of course, LOMBARDY'S Defence to Mednis' System:

"At amateur level, all openings are sound."

I remain like Mednis a sceptic about the theoretical status of the line, but no player from a country where also lives Mike Basman can possibly dismiss the practical chances afforded by unorthodox lines.

Anyhow, I enjoyed the games, and I learned not just about the BDG but some general lessons as well. Check out the games from the links above.

Summary of lessons:

1. play with a plan: plausible or visually appealing moves are not good enough, OTB or CC
2. Playing by analogy is OK but notice the differences.
3. you can accept a gambit Pawn and win
4. "Don't believe all you read" and
5. "Look before you leap!"
6. Play good moves, not good-looking ones.
7. Don't drift, waiting for your opponent to build up: hit back when you can!
8. Don't panic! You must search for an answer to your opponent's threats. Juniors are sometimes very worried by opponent's king's-side attacks, and go into a hedgehog posture, and it's the posture that kills them. I sometimes say, oh, don't worry about that, they're only threatening mate.
9. Fight back! You must not drift when you are worse, you must fight a way to create problems, and think seriously about our opponent's counters.
10. "Don't believe what you read!" (again)
11. Passive play is difficult; Mednis calls it "awaiting the undertaker"
12. Maybe it's really true, the only way to refute a gambit is to accept it!
13. Long aside...
14. Don't hope, don't fear: analyse and find out!

This document (.html) was last modified on by

[Dr. Dave](#)

Exeter Chess Club: Openings\bdgtour2.html

Dave Regis 0-1 Unes Hassim

My first game did not proceed quite the way it goes in the Books. White's attack doesn't get started and the counterattack was rapid and lethal.

BDG Vienna Defence

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 Bf5

Black aims to pick up the Pe4 without developing the Ng1.

5.fxe4

[5.g4!? I tried in my other match with this defence. Several of the games rapidly slid out of the gambit accepted (which surprised me, as this must be the real test of the line) so I played the text move which turns the game back into a gambit again!]

5...Nxe4 6.Qf3 Nxc3 7.bxc3 Qc8 8.Bc4

[8.Bd3! 1-0 Leisebein P-Kneipp G/DDR/M\927 1989 (20 moves) "very good for White" - Theo. Hommeles.;

8.Rb1 1-0 Dahlen-Alfredson/Stockholm 1963 (16);

8.Ba3 1/2-1/2 Evers,L-Cramling,Pia/Essen-Simultanveranstaltung (+24,=6,-5) 1987 (55);

8.Bb5+ 1/2-1/2 Cody P-Burk D/corr ESMT 1988/9 (01) 1989 (25)]

8...e6

[8...c6 1-0 Zechiel David-Brodersen BF/corr Golden Knights SFs 1982 (41);

8...g6 1-0 Schmidt H-Wolfram R/corres-GT 118 1983 (19);

8...Bg6 1-0 Peilen M-Koons C/ESMT prelim 1988 (21)]

9.Nh3

[9.Ne2!? untested 9...Be7 (9...c6 10.0-0 Nd7 11.h4 Nb6? 12.Bd.. /em> Lane 12...Qd7 13.Bxf5 exf5 14. Qxf5 Qxf5 15.Rxf5 Bd6=) 10.Ng3 Bxc2 (10...Bg6) ;

9.Rb1 As played by Diemer himself in two short wins e.g. 1-0 Diemer Emil-Stehle/Schwenningen 1937 (18). It seemed to me the Rook would be better placed immediately on the King's-side without exposing itself to later discomfort after ...Bxc2, but what do I know.;

9.g4 0-1 Laengl-Varga Z/Nuernberg (3-6) 1989 (28)]

9...Bd6

[9...Nd7 1-0 Sammet-Bachmann/Biel cc 1952 (24);

9...Be7 1/2-1/2 Voelker James-Echert Doug/Crestwood March Rapids 1992 (32) 10.Qg3]

10.0-0

[10.g4 Bxc2 (10...Bg6 11.Ng5 h6) 11.0-0 0-0 12.Ng5 Bg6 13.d5 e5]

10...0-0

[Now this next one was encouraging: 10...Nd7 11.Ng5 0-0 (11...h6? 12.Nxf7) 12.g4 Bg6 13.h4 Nf6 14. h5 Bxc2 15.h6 Be7 16.hxg7 Kxg7 17.Bd3 Bxd3 18.Qxd3 Rh8 19.Qf3 Qg8 20.Ba3 Nd5 21.Bxe7 Nxe7 22. Nxe6+ 1-0 Diemer Emil-Synave H/SMX Ghent 1956: after Ng5 White's position looked great!]

CRITICAL POSITION: White needs to come up with an attacking plan.

11.Ng5?!

In this position, rather an aimless swing. Playing by analogy is OK but notice the differences.

[11.g4!? Bxc2 (11...Bg6) ;

11.d5!? c6! 12.Ng5 cxd5 13.Bxd5 Bxc2 (13...Bg6) ;

11.Nf4?! Bxc2 12.Nh5]

11...h6! 12.g4 Bg6

[12...Bxc2?! rather invites 13.Nxf7 ;

the apparently awkward defence 13...Bg6 fails to 14.Nxd6 cxd6 15.Bxe6+ Qxe6 16.Qxf8+ Kh7;

12...hxg5? 13.gxf5 exf5 (13...e5 14.f6 g4 15.Qe3) 14.Qxf5 Qxf5 15.Rxf5]

I played the obvious reply without much thought:

13.Ne4

Now I think this is rather good for Black; the Knight is almost in the way here.

13...Nd7 14.h4 Nb6

Best, I thought. In fact I had the dubious merit of predicting almost all of my opponent's remaining moves, without seeming to break out of the spell!

[14...f5 15.Bxe6+; 14...Kh8; 14...Bxe4 15.Qxe4]

15.Bd3?!

I realised Black's reply would be very strong here but I didn't know what else to play!

[15.Bb3 a5 16.a4 Be7 (16...Bxe4 17.Qxe4 c5 may be awkward) 17.g5 looks unconvincing]

15...f5!

[15...e5 16.h5]

16.Nxd6

[16.gxf5 looked the right one to analyse first. I became discouraged after 16...Bxf5! and Black should be able to cover everything. (17.Rb1; 17.h5; 17.Qg2 Kh8 18.Be3 Qd8)]

16...cxd6 17.Bd2

[17.Ba3? Qxc3 18.Bxd6?? Qxd4+;

17.h5? Qxc3]

17...Nc4! 18.Bxc4

[18.Rad1 Nxd2 19.Rxd2 Qxc3]

18...Qxc4 19.h5

[19.Qxb7 fxg4 20.Qe7 leaves Black completely in control.]

19...Be8 20.g5

[20.gxf5 Bc6]

20...hxg5 21.Bxg5 Rc8

White is still down by his gambit Pawn and the counterattack is starting to boil over. Black always has ... Bc6 available.

22.Rae1

[22.Be7 Rf7 23.Bxd6 Qxc3; 22.Bf4]

22...Qxc3

[22...Qxa2; or 22...Bc6 23.Qg3 Qd5 24.h6 Qh1+ 25.Kf2- +]

23.Rxe6 *Hoping for a blunder more than anything else*

[23.Qxc3 *If White heads immediately for the exchange of Queens 23...Rxc3 24.Be7 Rf7 25.Bxd6 Rxc2 26.Rf2 Rxf2 27.Kxf2 Bd7 he soon runs out of counterplay*]

23...Qxd4+!

[*But if Black goes for the endgame 23...Qxf3 24.Rxf3 Bxh5 25.Ra3 a6 26.Rxd6 White may be escaping*]

24.Be3 Qh4 25.Rxd6

[25.h6 Rxc2; 25.Rf2?? Bc6]

25...Rc4 *Black is taking over. Everything wins...*

[25...Rxc2; 25...Bxh5]

26.Bf4 Bc6 0-1

Lessons:

- *play with a plan: plausible or visually appealing moves are not good enough, OTB or CC*
- *Playing by analogy is OK but notice the differences.*
- *you can accept a gambit Pawn and win*

[Dr. Dave](#)

Exeter Chess Club: Openings\bdgtour3.html

Dave Regis 1-0 Volker Drucke

An abrupt end; in a slightly uncommon line White moves pieces across to the King's-side until a combinational break can be launched.

All according to plan, but for a moment White's edifice may have proved vulnerable to a Black central break.

BDG Bogolyubov Defence

1.d4 d5 2.e4 dxex4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 g6 6.Bc4 Bg7 7.0-0 0-0 8.Qe1 Bg4 9.Qh4 Bxf3

[9...Nc6 often transposes]

10.Rxf3 Nc6

This is a very well-known type of position for the BDG fraternity, although the combination of an immediate ...Bxf3 and ...Nc6 is not so common. Conventional attacking approaches risked playing into my opponent's hands, so I resolved to play a less commonly-tried approach.

11.Ne2 Qd7

[11...Nd5 has been tried a few times, e.g. 1-0 Schuh H FM-Kohler/Baden Team CS 1982 (23);

11...e5 12.Bg5+/-]

12.Bg5

[12.Rh3? Qg4-+;

12.Bh6? Qg4]

12...Ng4

[12...Rad8 13.c3 Na5 14.Bd3 Rfe8 15.Raf1 Qc6 16.b4 Nc4 17.Kh1 Nb6 18.Rh3 h5 19.Rhf3 Nbd7 20.b5 Qe6 21.h3 Nf8 22.R1f2 Qd7 23.Bc4 Ne6 24.Nf4 Nxf4 25.Rxf4 Rf8 26.Qg3 c6? 27.Bxf6 Bxf6 28.Qxg6+ Kh8 29.Qxh5+ Kg8 30.Rg4+ 1-0 Hall A-Wells PK/London 1977;

12...h6 I was quite worried by this move during the game, perhaps needlessly e.g. 13.Bxh6 Nxd4 14.Nxd4 Bxh6 15.Rd3 Bg7 16.Ne6!]

13.c3

[13.Rh3?! h6 (13...Bxd4+ 14.Nxd4 Qxd4+ 15.Be3 Qxe3+ 16.Rxe3 Nx.../em> 14.c3 transposes below.;

13.h3? Bxd4+;

13.d5? Nce5]

13...h6

CRITICAL POSITION: *Quite right! Now what is White to do?*

I knew 14.Bf4 had a precedent but I thought I had to be sure before playing it... but in fact, I'm still not sure!

14.Bf4!?

Alternatives:

[14.Raf1?! hxg5 15.Qxg5 Nge5 (15...Nf6 16.Qxg6 Nd8 17.Rg3 Ne8 18.Rh3 Nf6 19.Rxf6 Qxh3 20.gxh3 exf6 21.Nf4) 16.dxe5 Nxe5 17.Rh3 Qg4! (17...Nxc4 may also be good enough) 18.Qxg4 Nxc4 19.Rg3 (19.Nf4 Ne5 20.Bb3-+) 19...Ne5 20.Bb3 Rad8 21.Nf4 e6 22.h4 Bh6 23.h5 Kg7 24.hxg6 Bxf4 25.Rxf4 Nxc4 26.Rb4 b6 27.Rc4 c5 28.Ra4 a5 29.Bc4 Rd1+ 30.Bf1 Rfd8 31.b4 cxb4 0-1 Mondragon-Gu Muller/correspondence BDG 1975;

14.Rg3!? cf. Mondragon above *14...hxg5! 15.Qxg5 (15.Qxg4 Qxg4 16.Rxg4 Bf6 17.Ng3 e5 18.d5 Na5 19.Bd3 Be7) 15...Nge5 16.dxe5 Nxe5 17.Bb3 Bf6-+;*

14.Rh3-+ e5! 15.Rd1]

14...h5!?

[14...g5!? was the line to check: *15.Bxg5 hxg5 16.Qxg5 Nf6 (16...Nh6 17.Raf1 Kh8 18.Rh3 Qd6 19.Bxf7 Rad8 20.Rg3 Rg8 21.Bxg8 Rxc8 22.Qh5+/-) 17.Rg3 Ne8 18.Nf4!?* (idea Nh5)

A) 18...e6!? Opening up the second rank to defend g7 looks the toughest defence; the Black Knights prove very awkward for White. 19.Nh5 f6! 20.Qh6 Rf7 21.Rxg7+ (21.Re1 Nd8) 21...Nxg7 22.Nxf6+ Rxf6 23.Qxf6 Rf8;

B) 18...Nxd4?! 19.Nd5 Nc6 20.Re1]

So I might have been quite wrong to offer the Bishop, and Volker was wrong to trust me (or Sneiders).

15.Raf1?!

Just to be different, but without immediate threats. Shades of the last game, I fear: a good-looking move rather than a good one. Black has a window of opportunity...

[15.Qg3? e5 16.dxe5 Ncxe5-+;

[15.Qg5? e5-+]

[Sneiders, to whom credit or blame for the idea of sacrificing the Bishop is due, had played a game with: 15.h3!? Nf6 16.Qg3 e6 (16...Kh7) 17.Re1 (17.Raf1 Ne4 18.Qh4 Ne7 19.g4&=) 17...Ne4 18.Qh2 This position didn't appeal to me at all. 18...Rae8 19.Bb5 e5 20.dxe5 Qd5 21.Bxc6

A) 21...bxc6 1/2-1/2 Sneiders E-Frings/corres I.BDG Weltt 1968. Although a draw was agreed here I quite like White's position. 22.Re3 f6 (22...Bxe5 23.Bxe5 Rxe5 24.Nf4+/-) 23.Ng3+= But:

B) 21...Qxc6! *seemed better to me 22.Re3 (22.Nd4 Qd5 23.Rfe3 Bxe5 24.Bxe5 Rxe5 25.Nf3 Re7) 22...Qb6 23.Nd4 f5 24.exf6 Nxf6 25.Bxc7 Rxe3 26.Rxe3 (26.Bxb6 Rxe1+ 27.Kf2 Ng4+) 26...Qxb2-+]*

15...Na5

Decentralising but not bad, I think.

[15...e5? 16.Bg5 intending Be7 with an attack on f7 (16.h3 e4) 16...exd4 (16...Nd8 17.Be7 Re8 18.Bxd8 Qxd8 19.Qxd8 Rxd8 20.Rxf7 Ne3 21.Rxc7+ Nxc4 22.Rxc4 Rd7 23.dxe5 Bxe5) 17.Rxf7 Rxf7 18.Rxf7 Qxf7 19.Bxf7+ Kxf7 20.h3 dxc3 21.Nxc3 Bd4+ 22.Kf1;

15...Rad8;

15...Nf6 16.Qg5 Kh8;

15...Rac8!? *looking after c7 also looked OK to me, when White still has it all to prove. However, I was most afraid of the text move.]*

16.Bd3 b6?!

[The move that I was anxious about at the time was 16...e5!?

17.dxe5 (17.Bg5 Rae8; 17.Bg3 exd4) 17...Nxe5 18.Bxe5 Bxe5 when I could see nothing very convincing for White; Black needs to avoid to obvious knockouts however and on second glance may not find it easy to do so.

19.Qg5 Rfe8 (19...Nc6 20.Bc4!; 19...Rae8 20.Bxg6! fxg6 21.Rxf8+ Rxf8 22.Rxf8+ Kxf8 23.Qxe5) 20.Rxf7 Qxd3 21.Qh6 Qe3+ 22.Qxe3 Bxh2+ 23.Kxh2 (23.Kf2 Rxe3 24.Kxe3) 23...Rxe3]

After Black has declined (or missed) this oppportunity, White is allowed to build up a powerful attack.

17.h3

Back to the Sneiders game, more or less.

17...Nf6

[17...e5 obviously now fails to 18.hxg4 exf4 19.gxh5+-;

17...Nh6 looked interesting but unnatural]

18.Ng3

[18.Be5 first could have been tried, or 18.Qg3]

18...c5

looks the right strategy, trying to break up White's centre and get some active play, because there seems no immediate prospect of Black achieving exchanges.

[18...Nc6 19.Bg5 was another critical line. I didn't analyse it much at the time, waiting for Volker's actual choice to arrive.

A) 19...e5?? 20.Bxf6;

B) 19...Nh7 20.Nxh5 gxh5 (20...Nxd4) 21.Bxh7+ Kxh7 22.Qxh5+ Kg8 23.Bh6;

C) 19...Rad8 20.Bxf6 exf6 21.Nxh5 Nxd4 22.Nxf6+ Bxf6 23.Rxf6 Ne6]

19.Be5

[19.dxc5; 19.Bg5]

19...cxd4

[19...Nc6 now meets the same reply.]

20.Bxf6 1-0

This move provoked Black (who perhaps anticipated the immediate recapture on d4) into resigning(!). Black is certainly beset with threats but can hope to steer out into a simplified if inferior position. The variations are I guess quite thematic for the BDG but I'm not confident that I haven't missed something familiar to readers.

But let us look at what might have happened:

20...exf6!

White now has a choice of sacrificial lines:

[20...Bxf6?! 21.Rxf6

A) 21...dxc3 22.R6f3 Rac8 23.Nf5 f6 24.Rg3 c2 25.Qxh5 Kf7 (25...e5 26.Nh6+) 26.Qxg6+ Ke6 27.Re3+ Kd5;

B) 21...exf6 22.Nxh5 gxh5 23.Qg3+ Kh8 24.Rxf6]

21.Bf5!?

getting the Bd3 out of the way of the Qd7

[21.Rxf6? is not the right one at all: 21...Bxf6 22.Qxf6 Qe6;

21.Nxh5!? was the one I looked at first and longest 21...dxc3! exposing the Bd3 (21...Nc6 22.Nxg7 Kxg7 23.Qxf6+ Kg8 24.Bc4 Nd8 25.Qxg6+ Kh8 26.Qh6+ Kg8 27.Rg3+;

21...gxh5 22.Qxh5 Rfe8 23.Qh7+ Kf8 24.Rg3 Ke7 25.Rxg7 Qe6 26.Bg6 Rf8 27.cxd4 Ke8 28.Bxf7+ Rxf7 29.Qg8+ Ke7 30.Rxf7+ Qxf7 31.Re1+;

21...Qd6!? covering g3 and f6, not to mention d4, but allowing White to capture on f6 with gain of time. 22.Nxf6+ Bxf6 23.Rxf6 Qe5 24.Bxg6)

Now 22. Qxf6 is an idea, or 22.Nxg7 Kxg7 23.Qxf6+ Kg8 24.Rf4 Qc6 (24...Qe6 25.Qxe6 fxe6 26.bxc3)

25.bxc3 is worse for Black but not losing. So White should think again:(25.Rh4 Qxf6 26.Rxf6 cxb2;

25.Qxc6 Nxc6 26.Be4 Rac8)]

21...Qd6!

covering d4, g3 and f6 again, and without being exposed to Rxf6. White has to spend a while organising a threat on the g-file.

[21...gxf5? 22.Nxf5 dxc3 (22...Rfe8 23.Qg3) 23.Nxg7;

21...Qa4? 22.Nxh5 gxh5 23.Qxh5 Rfe8 24.Qh7+ Kf8 25.Rg3 Ke7 26.Qxg7! (26.Rxg7 Qxa2) 26...Qxa2 27.Re1+ Kd6 28.Qxf6+]

22.Nxh5 gxh5 23.Rg3

[23.Qxh5 Rfd8]

23...Rfd8

[23...Nc6 24.Rff3 Ne5 25.Rxg7+ Kxg7 26.Qg3+ Kh8 27.Qf4 Ng6 28.Qh6+ Kg8 29.Bxg6 fxg6 30.Qxg6 + Kh8 31.Rf5 Qe7 32.Rxh5+ Qh7 33.Rxh7#]

24.Rff3 Kf8

[24...dxc3 25.Qxh5 Kf8 26.Qh7 Qc5+ 27.Kh2 cxb2 28.Qxg7+ Ke8 29.Qxf6 Qd6 30.Re3+]

25.Qxh5

Does White really win in all variations from here?

25...dxc3 26.Qh7

which looks very risky for Black, e.g.

26...Qc5+ 27.Kh2 Nc4

[27...c2 28.Re3]

28.Qxg7+ Ke7 29.Bg6 Rf8 30.Qxf6+ Kd7 31.Bf5+ Kc7 32.Rxc3...

Lessons:

- *"Don't believe all you read" and*
- *"Look before you leap!"*
- *Play good moves, not good-looking ones.*
- *Don't drift, waiting for your opponent to build up: hit back when you can!*

[Dr. Dave](#)

Exeter Chess Club: Openings\bdgtour4.html

Dave Regis 1-0 Kevin Kent

This was a fairly smooth game where for once I saw the problem coming and successfully avoided it.

BDG Vienna Defence

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 Bf5 5.g4 Bg6 6.g5 Nd5 7.Nxe4

Here I ran to the databases for some guidance. White has no Pawn deficit but needs a plan. The model game is Tartakower's, but Black can improve.

[7.Nxe4 e6 8.c4

A) 8...Bb4+ 9.Ke2 (9.Kf2? Nb6 10.c5 Bxe4 11.fxe4 Bxc5-+) 9...Nb6 10.c5 Nd5 11.a3 Ba5 12.Qa4+ Nc6 13.Qc4 Bxe4 14.fxe4 Nde7 15.Be3 1-0 Gedult #-Gorfinkel/Vittel 1973;

B) 8...Nb6 9.Be3 Nc6 (9...N8d7 10.h4) 10.a3 (10.h4) ;

C) 8...Ne7 9.Ng3 (9.Bg2 1-0 Sneiders E-Vashegyi E/corres ICCF/m 1969 (27)) 9...Nbc6 10.Be3 Nf5 11.Nxf5 Bxf5 12.Bh3 Bxh3 13.Nxh3

C1) 13...Ne7! Muller 14.Qd2 Nf5 15.Bf2 a5

C1a) 16.c5 b6 17.Rd1 (17.Nf4) ;

C1b) 16.a3 ;

C2) 13...Be7?! 14.Qa4 Bb4+ 15.Kf2 0-0 16.Rad1 (16.c5 e5) 16...Bd6 17.c5 Be7 18.Rhg1 Rb8 19.Rg4 Qd5 20.Nf4 Qf5 21.Ne2 Rbd8 22.b4 a6 23.Nc3 Rd7 24.h4 Rfd8 25.Kg2 Bf8 26.Qb3 Ne7 27.Re4 Nd5 28.Ne2 Nxe3+ 29.Qxe3 Qd5 30.Nc3 Qf5 31.Rd2 Qg6 32.Ne2 Qf5 33.Rb2 Qd5 34.Nc3 Qc6 35.a4 b5 36.axb5 axb5

Black is being strangled. I love to play this way as White, even more perhaps than winning by a Queen sacrifice! Tartakower now gets in through the a-file while Black is too cramped to oppose it.

37.Qd3 Rb8 38.Ra2 Qb7 39.Re1 c6 40.Rea1 Rbd8 41.Ra7 Qb8 42.Rxd7 Rxd7 43. Qe4 g6 44.Ra6 Qd8 45.Ne2 Rd5 46.Rxc6 Bg7 47.Ra6 Bf8 48.Rb6 h6 49.f4 hxg5 50. hxg5 Bg7 51.Kg3 Bxd4 52.Nxd4 Rxd4 53.Qe5! Rd3+ 54.Kh4 Qe8 55.c6 Rd8 56.c7 Rc8 57.Qd6 Kh7 58.Rb8 Kg7 59.Qd8 1-0, Tartakower-Simonovitch, Paris 1954]

7...e6 8.c4 Nb6 9.Be3 Nc6

... This reminds me of an Alekhine's Defence: Black has no central foothold but White's centre is loose and may be undermined.

10.h4 Bb4+ 11.Kf2

[11.Ke2 0-0 12.c5 Nd5 13.a3]

11...0-0 12.Rc1

[12.c5 Nd5 13.a3 Ba5 14.b4 f5 15.gxf6 Bxe4

A) 16.fxe4 Qxf6+ 17.Nf3 (17.Kg2 Nxe3+;

17.Ke2 Nc3+) 17...Nc3 18.Qe1 Qxf3+;

B) 16.fxg7 16...Rxf3+ 17.Nxf3 Nxe3 18.Kxe3 Bxf3 19.Kxf3 (19.Qxf3 Qxd4+ 20.Ke2 Qxa1) 19...Qd5+ 20.Kg3 Qxh1]

...all looked fine for Black. Since then I hear from [Jyrki Heikkinen](#) that he can improve with 12.c5 Nd5 13.a3 Ba5 14.Qd3...

12...Bxe4

[12...e5 13.d5]

13.fxe4 f5

[13...f6]

14.exf5

[14.gxf6 e5 (14...Qxf6+ 15.Nf3 e5 16.Bg5 Qg6 17.c5) 15.c5 Qxf6+ 16.Nf3;

14.c5 fxe4+;

14.e5]

14...exf5

[14...Rxf5+ 15.Nf3 e5 16.Bd3 (16.Bh3 Rf8 17.Kg2)]

15.Nf3

[15.c5 f4]

15...f4

[15...g6 16.d5 Ne7 17.a3; 15...Qe7; 15...Qe8; 15...Be7 16.d5 Nb4]

16.Bd2 Qe7

[16...Bxd2 17.Qxd2 Qe7 18.Bh3 Qe3+ 19.Qxe3 fxe3+ 20.Ke2 (20.Kxe3 Rae8+ 21.Ne5 Nxe5 22.dxe5 Rxe5+ 23.Kd4 Rfe8=+) 20...Rae8 21.d5 Ne5 22.Nxe5 Rxe5 23.Be6+ Kh8 24.Rhf1;

16...Be7 17.Bc3+ =]

Now the position reminds me of a King's Gambit!

CRITICAL POSITION: Black has an advanced protected passed Pawn, but needs to find a way of making use of it - or else he will be driven back. I spent a long time analysing this move, because if a planned finesse at move 21 doesn't work, this is the place to repair it.

17.Bh3

[17.d5 Ne5 18.Bxb4 (18.Nxe5 Qxe5 19.Bxb4 Qe3+ 20.Kg2 Qg3#) 18...Qxb4 19.Nxe5 Qxb2+ -+]

17...Bxd2

[17...Rae8 18.Re1 Qf7 (18...Qd6 19.Rxe8 Rxe8 20.c5) 19.Bxb4 Nxb4 is also critical;

White may still be able to claim an edge because of the unstable Black Knights. 20.a3]

18.Qxd2 Qe3+ Tempting but probably mistaken.

[18...Rae8 19.Rhe1 Qf7 20.d5 Rxe1 (20...Nd8) 21.Qxe1 Nd8 22.Ne5 (22.b3 Re8 23.Qa5 a6;

22.Qd2 Re8 23.b3) 22...Qe8 23.b3 Kh8 24.Rd1 Nf7 25.Nxf7+ (25.Be6 Nxe5 26.

Qxe5 Qh5 27.Rh1 c6) 25...Qxf7 26.Be6 Qh5]

19.Qxe3 fxe3+ 20.Ke2

[20.Kxe3 Rae8+ didn't detain me long, so White must concede the Pawn another step forward. I think Black must have mis-assessed this line with Ke2, or surely he would have chosen something else earlier.]

20...Rae8

Now Black has a little opportunity to play ...Rxf3 and ...Nd4+, so White must anticipate this by enabling Be6+ interfering with the line of the Re8.

21.d5!?

[21.b3 Rxf3 22.Kxf3 Nxd4+ 23.Kg2 e2 24.Kf2 h5 25.gxh6 gxh6]

21...Ne5

[21...Rxf3!/? looked alarming but 22.Kxf3 (22.dxc6 Rf2+) 22...Nd4+ 23.Kg2 e2 (else Rd1) 24.Be6+ and I think White comfortably survives to win.]

22.Nxe5 Rxe5

[22...Rf2+ 23.Kxe3 Rxb2 24.Be6+]

23.Be6+ Kh8 24.Rhf1

Now it's all over: White will consume the e-Pawn and the poor Knight still has nowhere to go. Black has rather drifted into this lost position without having a definite plan for counterplay. Don't drift, but fight back!

24...Rd8

[24...Rf2+ 25.Rxf2 exf2+ 26.Kxf2 Re4 27.Kg3! (27.c5 Na4 28.b3 Nb2 29.Rf1) 27...Rxc4 (27...Nxc4 28.Rf1 Re3+ 29.Kg2;

27...h6 28.g6 Re3+ 29.Kg2 Re2+ 30.Kg1) 28.Rf1]

25.Rf3 g6

[25...c6?? 26.Rcf1 h5 27.g6 Nd7 28.Bxd7]

26.Rcf1

[26.Rxe3 Rxe3+ 27.Kxe3 Kg7 (27...c6 28.Ke4 Kg7) 28.b3 (28.Ke4 Rf8) 28...Re8 29.Kd4 Rf8 30.c5 Nc8 31.Ke5 Ne7]

26...h5

[26...Nxc4 27.Rf8+ Rxf8 28.Rxf8+ Kg7 29.Rg8#;

26...c6 27.Rf8+ Rxf8 28.Rxf8+ Kg7 29.Rg8#]

27.Rf8+

[27.b3 c6 28.Rxe3 Rxe3+ 29.Kxe3 cxd5 30.cxd5 Nxd5+ 31.Bxd5 Rxd5 32.Rf7]

27...Rxf8 28.Rxf8+ Kg7 29.Rf7+ Kh8 30.Rxc7+- Re4

[30...Na4]

31.b3 Rxh4 32.Kxe3 Rh2 33.c5 Nxd5+

[33...Rxa2 34.cxb6 axb6 35.d6 Rg2 36.d7]

34.Bxd5 Rxa2 35.Rxb7 Rc2 36.c6 1-0

Lessons:

- **Don't panic! You must search for an answer to your opponent's threats. Juniors are sometimes very worried by opponent's king's-side attacks, and go into a hedgehog posture, and it's the posture that kills them. I sometimes say, oh, don't worry about that, they're only threatening mate.**
- **Fight back! You must not drift when you are worse, you must fight a way to create problems, and think seriously about our opponent's counters.**

11.Qe1 a6

CRITICAL POSITION 1: That's a funny little move by Black: can you see what the idea is?

12.Qh4 Qb4!

Ha! Now White has to exchange Queens or throw in another Pawn.

13.Nd4

[13.Ne4]

13...Qxb2 14.Nce2 Ne5 15.a4 Qb6

CRITICAL POSITION 2: You're nearly on your own here: there is only one recorded game, where White won in twenty moves after 16. Rxf6. What do you do?

16.Rxf6?

Nearly on your own, but not quite. I fear Volker hasn't seen Joe Gallagher's "*Beating the Anti-Indians*", which analyses this move. In fact, he assesses White's position as simply lost even before this move! So White has to bale out before somewhere earlier, or, if you don't believe JG, then find an improvement here.

[16.Be3; 16.Rab1 Qd8;

16.Bxf6!? Drueke 16...gxf6 17.Rab1 Qc7 which still has some play in it, however White cannot preserve the Bd3 by 18.Be4? f5!]

16...gxf6!

[16...gxf6! White now assessed his chances as zero and **resigned**, which may be appropriate if Gallagher was playing all the rest of my moves, but I'd have to start thinking for myself soon! I had to check all the lines before and after this point, of course, or I might fall into the very trap that I hoped Volker was making - of trusting the books.

16...Nxd3? 17.Rff1 f6 18.Be3 Nc5? (18...Ne5) 19.Nb3 Qc6 20.Bxc5 Bxc5 21.Qh5+ 1-0 Sneiders E-Breunig O/corr 1BDGW 1970/71 (02) 1971 I guess Volker was hoping to go all the way down the line following this game.]

Possible continuation: 17.Bxf6

[17.Be3 there might be some nibbles in this line still: 17...Nxd3 18.cxd3 Bd7 19.Nf5 Qd8 20.Ng7+ Kf8 21.Qh6 (21.Bh6) 21...Kg8 22.Rf1 Qf8]

17...Qd8! 18.Rf1 ("what else?", asks JG)

[18.Bxe7 Qxe7 19.Qg3 Nxd3 20.cxd3 Bd7 e.g. 21.Qc7 Bc6 22.Qb6 Rc8 23.Rc1 Bxg2+ 24.Kxg2 Rxc1 25.Nxc1 Qg5+ 26.Kf2 Qxc1 27.Nxe6 Qd2+ 28.Kf3 Qxd3+ 29.Kf4 Qd2+ 30.Kf5 Qd5+]

18...Bxf6 19.Rxf6 Ng4!-+ 20.Nxe6

[20.Qxg4 Qxf6 21.Ng3 (21.Nf4 Qxd4) 21...Bd7 22.Nh5 Qe5]

20...Qxf6 21.Nc7+ Kd8 0-1

Lessons:

- **"Don't believe what you read!" (again)**

Unes Hassim 1/2-1/2 Dave Regis

Black wimps out of accepting the BDG to try a solid defence and the hope of gaining some small positional pluses later. Just when Black starts to feel more confident the Queen discovers she cannot settle, and the game ends in a draw by repetition.

BDG Langeheinecke Defence

1.d4 d5 2.e4 dxe4 3.Nc3 Nf6 4.f3 e3 5.Bxe3 e6

[I had played my first ever BDG against my esteemed Exeter clubmate Richard Towers. Rich seems to have made a move from gambit play to anti-theoretical and solid chess, hoping to outplay his opponent in the middlegame, and so I made a determined effort to play very actively against him by playing 1. e4, which of course met with his Scandinavian 1...d5, "*sucking all the life out of the position*" as someone once said. Now 2.d4: I assumed Rich knows no more about the Caro or French than I do, but that need not be true. 2...dxe4 3.Nc3 Nf6 4.f3 e3 5.Bxe3 c6 Still playing the Scandinavian! 6.Bd3 (6.Bc4) 6...Nbd7 7.Nge2 e6 (7...e5?!) 8.0-0 Nd5 To develop the Bc8, but shedding another tempo. (8...Nb6; 8...Bd6 9.Ne4 Bc7 10.c4; 8...Be7) 9.Nxd5 exd5 10.Re1 Be7 11.Ng3 0-0 12.Nf5 (12.Qe2; 12.c4) 12...Bf6 13.Qd2 Nb6 14.b3!?

CRITICAL POSITION: Should Black go solid or try to force the issue here?

[On 14...c5!? I had resolved to play 15.dxc5 Bxa1 16.cxb6 Bf6 (16...Qf6?! 17.Nd4 Bb2 18.c3 Ba3 19.bxa7 Be6?? 20.Bg5) 17.bxa7 when I thought White had good compensation and has succeeded in unbalancing the game]

14...Be6 15.c3 Nc8 (15...Qd7 16.Qc2) 16.Re2 Ne7 17.Ng3 g6 18.Rae1 Qd7 19.Bg5 Bg7 (19...Bxg5 20.Qxg5) 20.Qf4 Rae8

I've seen Richard win happily from dozens of these passive-but-solid positions.

21.Bf6 (This took me 20 minutes!) Another

CRITICAL POSITION: can you find a way to hold the line?

21...Kh8??

(21...Nf5; 21...Bxf6; 21...a5!?"Pass".; 21...Nc8! (idea Qd6/Qe7))

22.Nh5 It took me ages to realise (a) that Nh5 was a useful candidate (it was useless before), and (b) that it won, although the first move I thought of was Qh6!

22...gxh5 23.Qh6 1-0

Richard might well have battled on after e.g. 21...Nc8! but White has an easy game to play; the way to play for a result is with moves like 14...c5!

Lessons:

- **Passive play is difficult; Mednis calls it "awaiting the undertaker"**

[21.Nd4 Be7]

21...Qb6 22.Qe1 Be7 23.Bf2

[23.Bd6]

23...Qc7 24.Bg3

[24.Nd4]

24...Qb6 It is difficult for White to play for a win and the Black Queen has no comfortable hiding place; if the c5 point is conceded Black may find himself worse.
1/2../strong>

Lessons:

- **Maybe it's really true, the only way to refute a gambit is to accept it!**
- **Long aside...**

...Steinitz said, The best way to refute a gambit is to accept it, and Lasker added, especially centre Pawns. But I sometimes imagine that accepting a gambit is the best way to fall into the main idea of something nasty that your opponent knows all about. That may still be true, but I'm starting to think that Steinitz is absolutely right. That is, if you want only equality, decline by all means, but if only who dares wins. There are one or two gambit lines which I am seeing in junior matches that I cannot see a good way to play for a win against by declining, which seem relevant here.

I was looking at the Max Lange attack and was struck by Black's fundamental choice at move 5:

1.e4 e5 2.Nf3 Nc6 3.Bc4 Nf6 4.d4 exd4 5.O-O: now: 5...Bc5 or 5...Nxe4 ?

5...Bc5 just seems a glorious mess, just the sort of thing to be avoided, but I couldn't see a way for Black to play for a win after 5...Nxe4

e.g. 5...Nxe4 6.Re1 d5 7.Nc3 dxc3 [7...dxc4 8.Rxe4+ Be7 9.Nxd4 f5 10.Rf4 0-0 11.Nxc6 Qxd1+ 12.Nxd1 bxc6 13.Rxc4 Bd6 14.Nc3 = Botvinnik] 8.Bxd5 Be6 [or 8...Bf5 9.Bxe4 Bxe4 10.Rxe4+ Be7] 9.Bxe4 Bb4 10.b3 Qxd1 11.Rxd1 Rd8 12.Be3 a6: Black has an extra pawn which is hard to keep and hard to make use of.

Also after 1.e4 e5!? 2.Nf3 Nc6 3.d4 exd4 4.c3 The Goring Gambit. Black can readily equalise with 4...d5 but cannot hope for a win. The moral is once again, that the best way to refute a gambit may be to accept it.

[Dr. Dave](#)

Exeter Chess Club: Openings\bdgtour7.html

Kevin Kent (0-1) Dave Regis

This was a good scrap; White was always one move short of landing the final blow and Black wriggles out into a better endgame. This is I guess how you are supposed to play with Black; easier in correspondence than OTB! It also confirms my prejudices about the line: in my games Black scored 2/3 in the gambit accepted!

BDG Bogolyubov Defence

1.d4 d5 2.e4 dxex4 3.Nc3 Nf6 4.f3 exf3 5.Nxf3 g6 6.Bc4 Bg7 7.0-0 0-0 8.Qe1 Nbd7

This is a well-known position, and both sides have tried several alternatives. I was heading for a position which Harding assesses as =+ but White is by no means obliged to comply.

9.Qh4 Nb6

[9...c5 looks the only realistic alternative here.]

10.Bb3 a5 11.a4 Nbd5

This is the first CRITICAL POSITION. White has an apparent opportunity to win back the Pawn, but Harding thinks this gives Black slightly the better position.

12.Nxd5 Nxd5 13.Bxd5 (13.c4) 13...Qxd5 14.Qxe7 Qc6 (14...Bxd4+ 15.Nxd4 Qxd4+ 16.Be3 Qd7;

14...Qd7) 15.c3 Be6 16.Bf4 Rac8 17.Ne5 Qd5 = Lane, =+ Harding

I hoped White would try and win the e-Pawn, but instead he goes for a slow build-up in the familiar manner. All the books give only 12. Nxd5, but White actually has lots of alternatives:

(12.Bg5; 12.Bh6; 12.Ne5 Be6 13.Bh6 c6; 12.h3; 12.Ng5 h6)

12.h3

An interesting move, the motivation of which it is worth pondering. Black often has trouble developing the Bishop on c8, and in the BDG it is often useful to send this Queen's-side piece out to g4 and exchange it for the dangerous Knight on f3.

I probably wouldn't have gone for ...Bg4: I don't really approve of giving up the two Bishops like this and the offer to bring the Rf1 into play on f3 also seems unnecessarily helpful.

12...c6

[12...Qd6 13.Nxd5 Nxd5 14.c4 Nf6 15.Bf4 Qb6;

12...Be6 13.Ng5 Ra6?? 14.Nxd5 Bxd5 15.Rxf6]

13.Bh6

[13.Ng5 h6]

13...Nxc3

Black has many alternatives here but this looked clearest.

14.bxc3

[14.Ng5 Ne2+ 15.Kh1 Qxd4]

Another CRITICAL POSITION: White has a straightforward plan of Ng5, Bxg7, Rxf6 and Qxh7

against routine tries by Black. So Black must both avoid this idea and make sure nothing worse awaits him.

14...Nh5

It was hard to see much else. I looked at a long forcing line here which White played straight down the middle of. Black can and should have confidence in the position to face attacks like this, look them in the eye, and find the way to safety. Neither hope nor fear are friends to the chess player, only judgement and analysis!

15.Bxg7

With hindsight White should have preferred:

[15.Bg5 or; 15.Be3, when it's still a fight]

15...Kxg7 16.Ng5

[16.g4 Nf6 17.Ng5 h6 18.Nxf7 Rxf7 19.Bxf7 g5 20.Qg3 Kxf7 when Black might make something out of the material imbalance. 21.Rab1]

16...e6

provocative! - but importantly pins the Knight to the Queen

17.g4

[17.Nxe6+ Bxe6]

17...h6 18.Nxe6+

[18.Nf3 Qxh4 19.Nxh4 Nf6;

18.gxh5 hxg5 (18...Qxg5+ 19.Qxg5 hxg5 20.hxg6 Kxg6) 19.h6+ Kh7 20.Qe4 f5 (20...Qd6 21.Rf3) 21.Qe3 Qf6 22.Rae1 Bd7 23.Bxe6 Rae8]

18...Bxe6 19.Qxd8 Raxd8 20.Bxe6 Ng3! 21.Rf3 Ne2+ 22.Kf2 Nxc3 23.Rxc3

[23.Bb3 Ne4+ 24.Ke3 Ng5 (24...f5 25.gxf5 gxf5 26.Rg1+ Kf6 27.Rgf1 Nd6 28.c4 Rde8+ 29.Kd3) 25.Rg3 Rfe8+ 26.Kd3 Ne4 27.Rf3 Nc5+ 28.Kc4 Nxb3 29.Rxb3 is rather like the game continuation in the end!]

23...fxe6+

... and Black has wangled his extra pawn back. If I had been frightened of the attack at move 14-18 I might have had to back out of the whole line, but I couldn't see a way through, and wanted to prove the point. This is easier in correspondence than OTB, I admit, but you must have this attitude. Even if you are wrong and are proved wrong about the variations, your attitude is still right.

24.Ke3 e5! 25.dxe5 Rd5 26.Rb1

Probably best?

[26.Ke4; 26.Rb3]

26...Rxe5+ 27.Kd4 Rd5+ 28.Kc4??

throwing away another Pawn because of the loose Rb1. White seemed to lose heart here but some of the Rook endgames could have been awkward for Black.

[28.Ke4! and Black has to decide if he is going to go passive or try for activity. Although the books say in general you should go for activity I think uncoiling from a stonewall is Black's best hope here. 28... Re8+ 29.Kf3 Re7 30.Rcb3 Rdd7 Now Black can transfer the King to c8 and get a Rook free to harass White's loose Pawns.]

28...Rf4+ 29.Kb3 Rb4+

[29...b5 30.Rxc6 (30.axb5 cxb5) 30...Rxa4 31.Re1 looked less in control]

30.Ka2 Rxa4+ 31.Kb2 Rb4+ 32.Ka2

[32.Rb3; 32.Kc1]

32...Rdb5

forcing an exchange and on Black's terms.

33.Rxb4

[33.Rd1 Ra4+ 34.Ra3 Rxa3+ 35.Kxa3 Kf6]

33...Rxb4 34.Rd3

[34.Rc5 Rb5 35.Rc4 Kf6]

34...Kf6

Just in time. The Queen's-side Pawns are all little monsters; White cannot stop them without bringing

the Rook back, and if he brings the Rook back, the Black King will nibble the King's-side Pawns.

35.c3 Rc4 36.Kb3 b5 37.Kb2 a4 38.Ka3 Ke5 39.Kb2 h5 40.gxh5 gxh5 41.Ka3? Ke4 42. Rg3 h4 0-1

Lessons:

- **Don't hope, don't fear: analyse and find out!**

Exeter Chess Club: The ideas behind the English Opening

I don't like doing so many sessions on Openings, because we all play different ones, but while Rex was asking me about the English it occurred to me that I have played more English Opening games than any other over the last 15-20 years, but I have never tried to teach anybody about it. So I sat down and tried to put together this session.

I immediately realised why it wasn't such a natural thing to do, because the damn thing is so diffuse and complex. [I wouldn't dream of doing a session which I had narrowed down to "1.d4", even less so if there were vast transpositional possibilities.] Anyhow, here's tuppence-worth:

- [A. The English Opening for White](#)
 - [A1. Fools rush in...](#)
 - [A2. An early break in the centre](#)
 - [A3. Delayed occupation of the centre](#)

A. The English Opening for White

A1. Fools rush in...

The fundamental hypermodern insight is that White can afford to delay occupation of the centre, since if Black tries to take advantage of the delay by trying to seize the centre then White's counterattack will be swift and effective. This is most convincingly seen perhaps in the Grunfeld Reversed: not an English variation I know, but shows what White can allow with confidence. So, after **1. Nf3 d5 2. g3 c5 3. Bg2 Nc6:**

Korchnoi - Mecking, Augusta (Match), 1974: 4. d4 e6 5. O-O cxd4 6. Nxd4 Bc5 7. Nb3 Bb6 8. c4 Nf6 9. cxd5 Nxd5 (...) 63. Be5 1-0
 Korchnoi - Pomar, Stockholm, 1962: 4. d4 Nf6 5. O-O Bf5 6. c4 e6 7. Nc3 Be7 8. cxd5 Nxd5 (...) 41. Ke3 Ra3+ 1-0

The English is a more balanced strategy combining early restraint (of ...d5) with later ambitions for expansion.

A2. An early break in the centre

The hypermodern movement has been most associated with the fianchetto, but Reti's interpretation of the English was a little different. After **1. c4 e5 2. Nc3 Nf6** he would play not **3. g3** but **3. Nf3**, and after **3...Nc6**, **4. d4!**

[EG: Reti,R - Rabinovich,I \[A28\] Moscow-Wch, 1925](#)

This may seem out of keeping with the hypermodern idea, but let's listen to Reti's own account:

"Now I will propose a thesis, the proof of which the reader and I can seek together. It is known that the significance of a single tempo, and thus the significance of development, is greatest in open positions. In closed positions it plays almost no role. Consequently, it would seem to be in White's interest to open the game (without loss of tempo, of course). How can this be achieved? Most likely by exposing and attacking the opponent's strong points. One would expect Black's strongest point in the center to be d5 since, unlike e5, it has natural protection by the queen. Therefore, the ideal initial move is 1. c4, immediately taking aim at d5. Should Black support d5 by 1...Nf6, then White reinforces the attack by 2. Nc3. Let's assume that Black answers 2...e5. This weakens d5 and reveals his intention of building his position around e5 by such moves as ...Nc6 and ...d6. (Even with 2...e6 he could not control d5 in the long run.) Now White need not continue attacking d5, which Black abandoned without a fight, by 3. g3 and 4. Bg2. Rather, following the logic given above, White should strike the new bastion e5 by 3. Nf3 and (in reply to 3...d6 or ...Nc6) 4. d4, and he thereby achieves an advantage."

*[reprinted in **Virginia Chess**, Sept/Oct 1993][Jerry Lawson].*

It's not much played any more (but may be worth a punt now and then); we are more likely to see the same idea (of playing for a central break and development advantage) in a different setting in the English:

[EG: Kasparov, Gary - Beliavsky, A \(9\) Linares, 1991](#)

[EG: Kasparov, Gary - Korchnoi, Viktor, Skelleftea, 1989](#)

You will remember Chris showing a dozen miniatures from the English Opening in a coaching session last month, when we saw how racy attacks can be obtained even with this apparently slow opening.

A3. Delayed occupation of the centre

This is more how we play the English these days.

My first experiments with the English opening had a distinguished English pedigree: Howard Staunton often practiced the English with the system **1. c4 2. Nc3 3. g3 4. Bg2** and **5. e3**, with a break using d2-d4 in mind. I enjoyed the following game where Black seems to be playing 100% according to the guidelines for opening play:

Korchnoi-Szabo, 1963

1.c4 e5 2.Nc3 Nf6 3.g3 Bc5 4.Bg2 O-O 5.e3 Re8 6.Nge2 Nc6 7.O-O d6

Black has apparently posted his pieces and Pawns with classical purity, but gets rapidly squashed.

8.d4 Bb6 9.h3 Bf5 {?} 10.d5 Nb8 11.g4 Bd7 12.Ng3 h6 13.Kh2 a5 14.f4 exf4 15.exf4 Nh7

Nothing is left of Black's early central occupation, and White seems to have at least nine Pawns harrassing Black's pieces...

16.g5 Na6 17.gxh6 Qh4 18.hxg7 Nf6 19.f5 Be3 20.Nce4 {!} 20...Nxe4 21. Nxe4 Bxc1 22.Rxc1 Nc5 23.Qg4 Rxe4 24.Bxe4 Qxg4 25.hxg4 Nxe4 26. Rce1 Nc5 27.f6 Re8 28.Rxe8+ Bxe8 29.Re1 Ba4 30.Re3 (threat Rh3) 1-0

The light squares like d3 in the Staunton system are not so very weak because Black cannot occupy or fix the Pawns. The most obvious way to try is to get a Pawn to e4, but this cannot be sustained:

Shatskes gives:

Botvinnik M - Simagin Vladimir (RUS) [A25] Ch URS, Moscow (Russia), 1952

1. c4 e5 2. Nc3 Nc6 3. g3 f5 4. Bg2 Nf6 5. e3 Be7 6. d4 e4 7. f3 O-O! 8. Nge2

[8. fxe4 fxe4 9. Nxe4 Nxe4 10. Bxe4 Bb4+ 11. Bd2 Qe7]

8... Bb4 9. O-O Bxc3 10. Nxc3 exf3 11. Qxf3 d6 12. Bd2 Bd7 13. Rae1 Qe8

14. Qd1! Qg6 15. Nd5 Nxd5 16. cxd5 Ne7 17. Qb3 b6 18. Rc1 Rac8 19. Rc3!
+/- (...) 43. Kd1 1/2-1/2

I was able to implement these ideas many years ago against Bob Richmond, when after 1. c4 e5 2. Nc3 d6 3. g3 f5 4. d4 e4 5. Nh3 Nf6 6. Bg2 Be7 7. O-O O-O 8. Bg5 c6 9. f3 White had good prospects: Black's centre is under pressure. See also the Keres system, **B5a** below.

This Staunton approach can lead to some interesting and finely balanced positions. I once got into a real mess against Richard Nash of Barnstable playing this approach...

1. c4 e5 2. g3 g6 3. Bg2 Bg7 4. Nc3 Ne7 5. e3 Nbc6 6. Nge2 d6 7. d4

I immediately looked it up to see what I had done wrong. I have an old book by Shatskes which quotes an analysis from Botvinnik, and a new book by Ribli and Kallai. Are two heads better than one? They both identified my mistake but then gave completely opposite advice!

7... exd4 8. Nxd4?! An error. 8... O-O 9. O-O Re8

[9... Bd7 10. Nde2 Qc8 11.Nf4 Ne5 12. Qe2 Re8 13. Bd2 c6 14. Ne4 Qc7 15. Bc3 Rad8 16. h3 d5 += smyslov-radulovic 1964]

10. b3 ? 10... Nxd4 11. exd4 Nf5 =+ (...) 40. 1/2-1/2

[Better is

8. exd4! O-O 9. O-O

But what now?

9... Nf5 "?" botvinnik "!" ribli

(9 ... Bg4"!" = botvinnik "?" ribli - although there are probably still finesses to be found:

Now if 10. h3 Bxe2 11. Nxe2 Nf5 12. d5 Ne5 13. Qc2 Re8 ("!" shatskes) 14. Bd2 a5 15. Rad1 ("!" ribli) 15... Qb8 16. Bc1 Qa7 17. Be4 Ne7 18. Be3 Qa6 19. b3 a4 20. Nc3 axb3 21. axb3 b6 22. Nb5 Qc8 23. Kh2 Nd7 24. Rfe1 Nc5 25. Bf3 Nf5 26. Bg4 ! += uhlmann-taimanov 1984]

10. d5 Ne5 11. b3 a5 ?

(11 ... a6; 12 Bb2, b5; 13 cxb5, axb5; 14 Qc2, b4; 15 Ne4, Ba6 botvinnik ; 11 ... b5!?! seirawan)

12. Bb2 Nd7 13. a3 Nc5 14. b4 Nd7 15. Qb3 botvinnik-reshevsky 1938]

This is why the English is such a fine opening: there is great flexibility and scope for creativity for each side, which is why old foxes like Viktor Kortchnoi can win from either side.

One last example of a delayed occupation proving effective

[EG: Speelman Jonathan - Xu Jun \[A35\] Luzern 48/50, 1989](#)

A4. The Queen's-side attack

The White set-up with g3 can also be seen in Black's main system in the Closed Sicilian, where a Queen's-side attack can be pursued, based on the fianchettoed Bishop.

[EG: Miles-Belyavsky.](#)

A5. Botvinnik system for White

This is an interesting system pioneered by Nimzovitch and Botvinnik, conceding an apparently permanent weak point at d4 but gaining a firm grip on the centre and hoping to keep Black's activity to a minimum while seeking a break with b2-b4 or f2-f4. I have played this on many occasions and have often won by direct attack on the King's-side. Perhaps the best advertisement for this system at club level is the fact I always find it difficult to play against, even if I know what's coming!

[EG: Botvinnik, Mikhail - Scherbakov, Vitaly \[A16\] , Moscow ch-SU Round: 3 Year:](#)

[1955](#)

[EG: Benko,Pal - Botvinnik,Mikhail \[A10\] , Monte Carlo Year: 1968](#)

[EG: Williams,SK \(1990\) - Regis,D. \(1935\) \[A36\] 1994](#)

A6. The Maroczy bind

One common positional theme against the symmetrical English is the Maroczy Bind: Black found this difficult to play against for years because of lack of prospects for active play, although recently the 'hedgehog' formation has proved its resilience.

[EG: Fischer,R - Spassky,B \(8\) \[A39\] Reykjavik-Wch, 1972](#)

[EG: Regis,D. - Richard Dixon \(Corr_92/93\) \[B36\] Devon Vs. Glos.\(Ward-Higgs I\), 1993](#)

[EG: Vukic Milan - Suba Mihai \[A30\]Vinkovci, 1977](#)

There is an interesting formation where White immediately threatens the Maroczy even when Black has not fianchettoed the Bf8:

[EG: Korchnoi V - Spassky B \[A33\] Beograd m/3, 1977](#)

Exeter Chess Club:

B. Playing against the English opening.

There are three major branches after 1. c4: 1...e5, 1...c5, and 1...Nf6. (There are others, like 1...g6 and 1...e6, or 1...f5 or 1...c6 or 1...g5 ...)

It depends on what style you prefer to play, and how you like to reply to 1. d4.

1...e5 would suit a 1.e4 player who likes to attack, especially if they play (as White) the Closed Sicilian or (as Black) the Dutch or King's Indian. I think this is the best approach for beginners.

1...c5 would suit a Sicilian player who has the patience for a longer game but doesn't mind drawing occasionally.

1...Nf6 would suit a player who is angling for a version of their favourite Indian defence.

Of the others the most important is 1...e6 (or 1...Nf6, 2...e6), an invitation to transpose into the Queen's Gambit; if Black also plays the Tarrasch Defence it can be hard for White to avoid transposing into it, since the main line of the Tarrasch involves g2-g3!

After 1. c4 c6 2. Nf3 d5 I don't often play 3.cd; rather, after 1. c4 c6 2. Nf3 d5 3. b3, we are in a position that is meat and drink to the English/Reti player. It's not easy for Black to get organised without either taking on a space disadvantage, or going for more space but exposing their centre to attack. It's a solid enough line but a little difficult to handle, and I would push club players and juniors towards more active and counter-attacking lines. The choice that each player has over their set-up reminds me of the old Arabic version of chess, where pre-determined formations (*mansubat*) could be chosen separately by either side.

B1. An early break in the centre for Black

Black can play ...Nf6 and ...d5 immediately (Grunfeld reversed) or try and combine it with an early ...e5 or ...c5. White cannot stop ...d5 on move 2 or 3 so all of these systems are playable:

1. c4 Nf6 2. Nc3 d5 3. cxd5 Nxd5 4. g3

1. c4 Nf6 2. Nc3 d5 3. cxd5 Nxd5 (now 4. e4 Nb4 5. Bc4 is a fun line!)

1. c4 Nf6 2. Nc3 e5 3. Nf3 (or 3. g3) **3...d5 4. cxd5 Nxd5** (the Reversed Open Sicilian)

Provided Black is not too ambitious, this can't be a bad idea, but if you know how important a tempo can be to Black in the normal Open Sicilian, it's a good arena in which White can play for a win.

[EG: Karpov, Anatoly - Hjartarson, Johann \[A22\] , Seattle m Round: 2 Year: 1989](#)

[EG: Botvinnik, Mikhail - Portisch, Lajos \[A22\] , Monte Carlo Round: 7 Year: 1968](#)

[EG: Kasparov, Gary - Kortchnoi, V \(1\) \[A34\] Skelleftea, 1989](#)

1. c4 Nf6 2. Nc3 c5 3. Nf3 d5 4. cxd5 Nxd5

1. c4 Nf6 2. Nc3 c5 3. g3 d5 4. cxd5 Nxd5

This last line can lead to...

B2. An early occupation of the centre: the Maroczy Bind for Black(!)

This system is named the Rubinstein system but is also associated with Botvinnik.

1. c4 Nf6 2. Nc3 c5 3. g3 d5 4. cxd5 Nxd5 5. Bg2 Nc7

Black now can hope to arrange ...e5 with a Maroczy Bind.

[EG: Goldberg, G - Botvinnik, Mikhail M \[A34\] USSR, 1945](#)

[EG: Langeweg - Korchnoi, Amsterdam, 1972](#)

B3. An early occupation of the centre: solid

Of course, if Black is hoping to equalise first rather than play for an ambitious centre, the systems with ...d5 supported by the c- or e-Pawn offer a serious challenge to White: can White do any better than transpose to a normal Queen's-Pawn opening? The usual bids to retain separate lines of play involve

b2-b3, with variations that are usually classified as part of Reti's system.

[EG: Kasparov, G \(2740\) - Karpov, An \(2700\) \(24\) \[A14\] Wch34-KK4 Sevilla, 1987](#)

[EG: Fischer, Robert - Filip, Miroslav \[A14\] Palma de Mallorca iz Rd: 4, 1970](#)

B4. Symmetrical play by Black

After **1. c4 c5 2. Nf3 Nf6** either side can try an early break with the d-Pawn (e.g. **1. c4 c5 2. Nf3 Nf6 3. d4 cxd4 4. Nxd4 e5!? 5. Nb5!?**). However, the fundamental position of the symmetrical English occurs after

1. c4 c5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7

This is the **Main Line Closed Symmetrical English**. In this position White has tried many plans: Queen's-side attack with 5. a3 or 5. Rb1, Staunton system with 5. e3, Botvinnik system with 5. e4 are all common approaches, and Black has tried each in defence (e.g. **5. e3 e5**, Staunton vs. Botvinnik!). Fischer often practiced the Staunton system as Black:

[EG: Smyslov,V - Fischer,R \[A36\] Palma de Mallorca izt, 1970](#)

[EG: Petrosian,T - Fischer,R \(2\) \[A37\] Belgrade URS-WORLD, 1970](#)

This is undoubtedly a good defense for Black: its biggest defect is that 5. e3 e6 (Staunton vs. Staunton) is often taken as an implicit draw offer, since **6. Nge2 Nge7 7. O-O O-O 8. d4 cxd4 9. Nxd4 Nxd4 10. exd5 d5** is hard to see as anything else. Ulf Andersson has tried to find a way through here by delaying castling (7. *d4 cxd4 8. Nxd4 d5 9. cxd5 Nxd5 10. Nxd5 Nxd4 11. Nc3 Nc6 12. Qxd8+ Nxd8 13. Bd2 + =*) and beat Tony Miles with it. The same approach in a different line can be seen in Ulf's game against Tempone below.

One of the most popular modern systems for Black is the Hedgehog: allowing White the Maroczy bind while retaining a flexible position and angling for a break with ...d5 or ...b5. White's Pawn formation seems to be well-placed to counter these plans, and indeed it is - this is what gives the Maroczy Bind its teeth - but it does not sit totally comfortably with the Bishop on g3. On d3 it would inhibit ...b5 and support f4-f5, while on g3 it certainly discourages ...d5 but White can not as easily find a positive plan.

B5. Unbalanced play by Black: the King's English with ...Nf6

1. c4 e5 is the most radical and least transpositional of Black's replies. It is of course at least as rich as the Sicilian, although most players of Black are more bashful about taking on the White position. This is really worth a book but I'll outline a few of the most common ideas for Black. One way of looking at the systems are whether Black aims to keep things closed with ...Nc6 (and often ...Nge7), or instead tries

to develop the King's-side starting with ...Nf6.

B5a. Seeking early central control with ...c6 and ...d5

This system bears the name of Keres. It is perhaps the most successful implementation of Black's plan to occupy the centre.

[EG: Hartston W R - Basman M J \[A23\] It, Hastings, 1967](#)

There is even an evil gambit for Black in this line...

[EG: Baker,C - Birnboim,N \[A20\] London, 1987](#)

B5b. Seeking rapid flexible development

1. c4 e5 2. Nc3 Nf6 3. Nf3 Bb4

1. c4 e5 2. Nc3 Nf6 3. g3 Bb4

...In each case enabling an early King's-side castling. This and related systems have been featured in World Championship matches.

That subtle player Smyslov developed a system **1. c4 e5 2. Nc6 d6** which seeks a useful early development of the other Bishop with **...Bg4** or **...Be6**.

[EG: Olafsson, Fridrik - Smyslov, Vasily V \(2\) \[A21\] Yugoslavia ct, 1959](#)

[EG: Petrosian T - Smyslov V \(03\) \[A21\] JUG ct, 1959](#)

B6. Unbalanced play by Black: the King's English with ...Nc6

The equivalent fundamental positions of the King's English occur after:

1. c4 e5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7 (The main line Closed King's English) or

1. c4 e5 2. Nc3 Nc6 3. Nf3 Nf6 (English Four Knights' Game)

B6a. The main line Closed King's English

1. c4 e5 2. Nc3 Nc6 3. g3 g6 4. Bg2 Bg7

Again White has a choice of systems. The Staunton approach has a little more sting here than in the Symmetrical. This is of course similar to the Closed Sicilian...

[EG: Psakhis - Kasparov \[A10\] La Manga, 1990.](#)

B6b. English Four Knights' Game

1. c4 e5 2. Nc3 Nc6 3. Nf3 Nf6

This rich position has many possibilities for each side. We have seen 4. d4 above, which is OK for Black these days...

[EG: Knee - Povah N \[A28\] Hereford, 1978](#)

After 4. g3 Black has been fairly successful with another Smyslov system, 4...Bb4, when Black fancies the Nimzo approach of doubling the c-Pawns and blockading the position against the Bishops. So successful, in fact, that White had tried a variety of ways of avoiding it, most notably with 4. e3. Now here 4...Bb4 is of course still a perfectly reasonable idea, but White can now sidle the Queen across with 5. Qc2 to avoid the doubled Pawns.

This and related systems have been featured in World Championship matches.

[EG: Kasparov,G \(2740\) - Karpov,An \(2700\) \(04\) \[A29 \] Wch34-KK4 Sevilla, 1987](#)

[EG: Kasparov,G \(2740\) - Karpov,An \(2700\) \(16\) \[A29\] Wch34-KK4 Sevilla, 1987](#)

[EG: Kasparov,G \(2740\) - Karpov,An \(2700\) \(02\) \[A29\] Wch34-KK4 Sevilla, 1987](#)

B7. Indian-style defences:

B7a. Grunfeld style

See above (early break in the centre for Black): if Black plays ...c5 or ...e5 we will transpose; there are ways for White to avoid the transposition with an early e2-e4.

[EG: Andersson Ulf - Tempone Marcelo \[A16\] 04, Buenos Aires, 1979](#)

B7b. King's Indian style

This is a very resilient and flexible system which invites transposition to the Fianchetto system of the King's Indian. This may be the best idea for White; I have found it hard to play standard English plans against the King's Indian. The Staunton approach in particular does not present Black with many problems, and playing for a Queen's-side attack always gives White anxious moments when the counter-attack sets in.

[EG: Petrosian, T - Vasiukov, E Moscow ch, 1956](#)

I have enjoyed the Botvinnik system against the King's Indian, and Black Kings, if they cannot see f2-f4-f5 coming, can be equally brutally dismissed.

B7c. Nimzo-Indian style

Given the flexibility and solidity of the Nimzo, it makes a lot of sense to apply the same strategy against the English. The play is significantly different in that White can play d2-d3, and if White avoids the doubled Pawns with a Queen move, there is no Pawn on d4 to counterattack. Korchnoi had this to say:

"Nearly five years ago I started to use the opening system 1. c4 e5. This is quite a good system with which to reach an equal position, but when it had been analysed to death by other GMs I became bored with it and adopted a different system using my own move order. The play has some delicate features I don't fully understand..."

[EG: Langeweg-Korchnoi, 1976](#)

B7d. Queen's Indian style

Karpov refined many of the ideas in this system in early matches against Korchnoi. It seems Black can achieve equality.

[EG: Kortschnoj,V - Karpov,An \(03\) \[A17\] Moscow cf \(Wch\), 1974](#)

B7e. Dutch style

It is also possible to play the 1...e5 line with an early ...f5, rather like the White system against the Sicilian developed by Vincken and often known as the Grand Prix Attack.

[EG: Saidy,Anthony - Fischer,Robert \[A25\] New York, 1969](#)

[EG: Kool - Hodgson \[A21\] London, 1989](#)

[EG: Smart - Hodgson \[A21\] England, 1984](#)

This presents many of the same challenges as the King's Indian-style system: if White will not occupy the centre and transpose into the main lines of the Dutch, Black may have a freer hand to play the King's-side attack. White must pursue the attack on the Queen's-side with extra vigour...

[EG: Miles,T - Chaves,J \[A27\] Sao Paulo, 1977](#)

However, I believe that White's extra move and Black's early commitment will probably allow White to absorb the aggression and attack the Black Pawns, as I described in the section on the Staunton System, and it is better to play without such a fixed idea of a King's-side attack.

There are several interesting early deviations by Black after 1. c4 e5, including the evil Bellon Gambit, as we see in the example games:

[EG: Uhlmann W - Dobosz H \(0.17\) \[A22\] DDR-Polska, 1974](#)

[EG: Plaskett J - Hempson P W \[A22\] It, ENG, 1988](#)

[EG: Reshevsky,S - Bellon Lopez,J \[A22\] Palma, 1971](#)

[EG: Karpov,Anatoly - Anand,Viswanathan \(2\) Linares, 1991](#)

Exeter Chess Club:

Playing against the English opening.

An early break in the centre for Black (B1)

Karpov, Anatoly - Hjartarson, Johann [A22] EO 3.4, Seattle m Round: 2
Year: 1989

1. c4 e5 2. Nc3 Nf6 3. g3 d5 4. cxd5 Nxd5 5. Bg2 Nb6 6. Nf3 Nc6 7. O-O
Be7 8. a3 Be6 9. b4

This is the modern approach with the White pieces; analogous to the Sicilian, White seeks pressure on the c-file.

9... O-O 10. Rb1 f6 11. d3 Qd7 12. Ne4 Nd5 13. Qc2 b6 14. Bb2 Rac8 15.
Rbc1 Nd4 16. Bxd4 exd4 17. Qc6 Qxc6 18. Rxc6 Bd7

19. Nxd4 Bxc6 20. Nxc6 Rce8 21. Rc1 f5 22. Nd2 Nf6 23. Nxa7 Bd6 24. e3
c5 25. Nc4 Bb8 26. Nc6 b5 27. N4a5 cxb4 28. axb4 Nd7 29. d4 g5 30.
Nxb8 Rxb8 31. Rc7 Nf6 32. Nc6 Rb6 33. Ne7+ Kh8 34. Nxf5 Ra6 35. Rc1
Ra2 36. h3 Rb2 37. e4 Rxb4 38. g4 h5 39. e5 hxg4 40. exf6 gxh3 41. Bxh3
Rxf6 42. Rc8+ Kh7 43. Rc7+ Kg6 44. Rg7+ Kh5 45. f3 1-0

**Botvinnik, Mikhail - Portisch, Lajos [A22] EO 3.5, Monte Carlo Round: 7
Year: 1968**

**1. c4 e5 2. Nc3 Nf6 3. g3 d5 4. cxd5 Nxd5 5. Bg2 Be6 6. Nf3 Nc6 7. O-O
Nb6 8. d3 Be7 9. a3 a5 10. Be3 O-O**

Black's position is not bad and club players may be attracted to the easy development, but it is sometimes hard for Black to come up with a plan.

11. Na4 Nxa4 12. Qxa4 Bd5 13. Rfc1 Re8 14. Rc2 Bf8 15. Rac1 Nb8

Edging White on to take the c7 Pawn. Botvinnik conceives a brilliant refutation.

16. Rxc7 Bc6 17. R1xc6 bxc6 18. Rxf7 h6 19. Rb7 Qc8 20. Qc4+ Kh8 21. Nh4 Qxb7 22. Ng6+ Kh7 23. Be4 Bd6 24. Nxe5+ g6 25. Bxg6+ Kg7 26.

Bxh6+ 1-0

Kasparov, Gary - Kortchnoi, V (1) [A34] Skelleftea, 1989

1. c4 Nf6 2. Nc3 c5 3. Nf3 d5 4. cxd5 Nxd5 5. e4 Nb4

White plays for fast development and open lines.

6. Bb5+ N8c6 7. d4 cxd4 8. a3 dxc3 9. Qxd8+ Kxd8 10. axb4 cxb2 11. Bxb2 f6 12. e5 Bg4 13. Bxc6 bxc6 14. Nd4 fxe5 15. Nxc6+ Kc7 16. Nxe5 Bh5 17. O-O Be8 18. Rfc1+ Kb7 19. Nc4 e5 20. Bxe5 h5 21. Na5+ Kb6 22. Bc7+ Ka6 23. Nc6+ 1-0

An early occupation of the centre: the Maroczy Bind for Black (!) (B2)

Goldberg, G - Botvinnik, Mikhail M [A34] USSR, 1945

1. c4 Nf6 2. Nc3 c5 3. g3 d5 4. cxd5 Nxd5 5. Bg2 Nc7 6. Nf3 Nc6 7. O-O e5
8. b3 Be7 9. Bb2 O-O 10. Rc1 f6 11. Ne1 Bf5 12. Na4 Na6

Black has adopted the Maroczy Bind as Black(!).

In 1945 Botvinnik commented that the exchange Bxc6 was evidently not good for White in this type of position, but Suetin suspects later he changed his mind.

13. Nc2 Qd7 14. Ne3 Be6 15. d3 Nd4 16. Qd2 Rad8 17. Nc3 Nb4 18. Ba1 f5

Black moves from his strong base to a more aggressive posture.

19. Nc4 Bf6 20. Rfd1 b5 21. Nb2 e4 22. e3 Nf3+ 23. Bxf3 exf3 24. Qe1 Rc8 25. d4 cxd4 26. exd4 Bg5 27. d5 Bf7 28. a3 Rfe8 29. Qf1 Bxc1 30. Rxc1 Nxd5 31. Nd3 Nxc3 32. Bxc3 Bxb3 33. Nf4 Bc4 0-1

Langeweg - Korchnoi, Amsterdam, 1972

1. c4 c5 2. Nf3 Nf6 3. Nc3 d5 4. cxd5 Nxd5 5. g3 Nc6 6. Bg2 Nc7 7. a3 g6 8. d3 Bg7

Black does not insist on the Bind but develops his King's-side.

9. O-O O-O 10. Qa4 Nd4 11. Nxd4 cxd4 12. Ne4 Bd7 13. Qb3 b6 14. Ng5 Rc8 15. Bd2 h6 16. Nf3 Ne6 17. a4 Nc5 18. Qd1 Qe8 19. b3 Be6 20. Ra3 Na6 21. b4 Qd7 22. Re1 Nc7 23. Qa1

14... f4 15. Ncxe4 fxe3 16. fxe3 Nxe4 17. Nxe4 Bf5 18. Bd3 Nd5 19. O-O Nxe3 20. Rf3 Qh4 21. g3 Qg4 22. Rxe3 Rxa3 23. Qxa3 Bxd4 24. Kg2 Qh3+ 25. Kh1 Bxe4+

0-1

Saidy,Anthony - Fischer,Robert [A25] New York, 1969

1. c4 e5 2. Nc3 Nc6 3. g3 f5 4. Bg2 Nf6 5. d3 Bc5 6. e3 f4

Audacious, even arrogant. Gik had published some analysis on this line ... for White against the Sicilian, but mostly people weren't convinced even in that situation. Nowadays of course the theme has become well-known.

7. exf4 O-O 8. Nge2 Qe8 9. O-O d6 10. Na4 Bd4 11. Nxd4 exd4 12. h3 h5 13. a3 a5 14. b3 Qg6 15. Nb2 Bf5 16. Qc2 Nd7 17. Re1 Nc5

Black has a grip on both sides of the board.

18. Bf1 Ra6 19. Bd2 Rb6 20. Bxa5 Rxb3 21. Bd2 Ra8 22. a4 Ra6 23. a5 Kh7 24. Red1 b6 25. Be1
bxa5 26. Na4 Rxd3 27. Bxd3 Bxd3 28. Qa2 Nb4 29. Qa3 Nc2 30. Qb2 Nxa1 31. Rxa1 Nxa4 32. Rxa4
Qe4 33. Bxa5 Rxa5 34. Rxa5 Qe1+ 35. Kh2 Qxa5 0-1

Kool - Hodgson [A21] London, 1989

1. c4 e5 2. Nc3 Bb4

Hodgson's fondness for the Grand Prix Attack makes this line an obvious choice. 3. g3 Bxc3 4. bxc3
Ne7 5. Bg2 O-O 6. d3 Nbc6 7. Nh3 d6 8. O-O f5 9. f4 Qe8 10. Rb1 Rb8 11. d4 e4 12. e3 Na5 13. Qe2
c5 14. Nf2 b6 15. Nd1 Ba6

Of course, Black is not forced to win on the King's-side; he has a very good version of the Nimzo-Indian!

16. Nb2 Qf7 17. Rd1 Nxc4 0-1

Smart - Hodgson [A21] England, 1984

1. c4 e5 2. Nc3 Bb4 3. Nd5

White need not submit to the doubling of the c-Pawns in this line.

3... Ba5 4. b4 c6 5. bxa5 cxd5 6. e3 Nf6 7. Qa4 dxc4 8. Bxc4 Nc6 9. Nf3 e4 10. Ng5 d5 11. Bb5 Bd7 12. O-O h6 13. a6! hxg5 14. axb7 Rb8 15. Bxc6 Qc7 16. Bxd7+ Nxd7 17. f4! exf3 18. g3 Rxb7 19. Ba3 Qc4? 20. Rac1 1-0

"A frequent picture in the Hedgehog. White's position looks ideal. That's the naked truth about it, but the 'ideal' has by definition one drawback - it cannot be improved." -- SUBA

Suba is quite mysterious about 'potential'. But as evidence, his book **Dynamic Chess Strategy** contains many practical examples of this Hedgehog Sicilian-style opening against the English (1. c4), where Black's flexible position threatens to erupt on ...b5 or ...d5. White finds it difficult to threaten anything on his own part without allowing Black's game to unfold suddenly

15... Rad8 16. h3 g6 17. Kh2 Bg7 18. Qe2 Qb8 19. Qc2 Rc8 20. Qd2 Nc5 21. Re1 Qa8 22. f3 Qb8 23. Rcd1 Ba8 24. Nde2 Red8 25. Nd4 Ncd7 26. Qf2 Ne5 27. Qe2 Nc6 28. Nc2 Nh5 29. f4 b5 30. cxb5 axb5 31. SOLTIS **Black to play and win with 1...g6** (Chess Digest)

The basic idea behind the Modern Defence:

First Black allows White to set up a Pawn centre.

(This is the simplest kind of Pawn centre that White can set up.)

Then Black hits back at it.

Black's pieces are all on good squares and Black even has a share of the centre. White can try and grab more of the centre than this, but the more White tries to grab, the bigger target you have got!

This is quite a fun idea and often leads to more unbalanced battles than boring old **1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5...**

[I must add that there are lots of ways to unbalance the old Italian game (4. c3, 4. b4) and you can always try something else at move 3 (3. Bb5, 3. d4)]

Good points for Black about the Modern Defence:

- It is unusual and White may not have a clue how to behave
- It is difficult and unbalanced and so is a good system to play for a win with.

Good points for White in the Modern Defence:

- White is given a free hand to set up the centre just as they like.
- White holds the centre so it is much easier for White to get pieces from one side to the other.

- White can use the big centre to attack down the middle of the board with e4-e5 or f4-f5
- Black has weakened the King's-side and White has a little start towards a King's-side attack down the h-file.

Bad points about the Modern Defence:

The Modern Defence is one of the most difficult and awkward defences played by Grandmasters, and you can often lose games without ever understanding why you lost.

Juniors and amateurs may have much more fun, and learn much more about the basics of chess, when playing the familiar open games beginning 1. e4 e5. One more caution:

Non-governmental health warning

One of the first times I ever saw the Modern Defence played was in 1980 at the Cambridge Open. Local expert Erik Teichmann had the Black pieces against an opponent, who, while a strong County player, was graded far below Erik.

Game 1: Charity,A - Teichmann,E [B09] (Cambridge Open), 05.1980

1.e4 g6 2.d4 Bg7 3.Nc3 d6 4.f4 Nf6 5.Nf3 0-0

White plays a direct attacking line against Black's hypermodern opening.

6.Bd3 Nc6

White breaks in the centre.

7.e5 dxe5 8.dxe5 Nd5 9.Bd2 Nb6 10.O-O f6

Black shouldn't open lines on the King's-side, that's just what White wants!

11.exf6 Bxf6 12.Ng5 e6

White plays a temporary sacrifice: White's centralised pieces can attack Black's King while the Black Queen's-side pieces cannot get back to defend.

13.Nxh7! Kxh7 14.Qh5+ (at this point Erik ceremoniously tore up his score sheet) 14...Kg8 15.Qxg6+ Bg7 16.Qh7+ Kf7 17.Bg6+ Ke7 18.Qxg7+ Kd6 19.Ne4+ Kd5 20.Qc3 Qe7 21.Qb3+ Nc4 22.Qb5+ Kd4 23.Bc3+ (Resigns)

[23.Bc3+ Ke3 24.Rae1#]

1-0

Rather an abrupt game. Now, most of your opponents can't play as well as Alec Charity, but if Erik can be blown away using this defence so can you. What went wrong here? Well, if you think about it, White's most basic plan in the opening is:

1. Develop quickly and grab as much of the centre as you can

2. Use your development and space advantage to attack the opponent's King

3. Attack by opening up lines for your better pieces.

Now, in the Modern Defence Black seems to help White do all these things! All right, it isn't quite that simple, but if White is determined to attack Black it is very difficult to stop it happening, and there are several sharp White systems which come very close to delivering mate almost by force. All you need is one little mistake and Black is finished.

In playing the Modern Defence you are playing a very risky, dangerous system with rules all of its own. To rub this point in, I give below a few master games where strong Black players just get smashed right out of the opening (*Hue-Donner, Hessmer-Haefner, Fischer-Udovcic*). You must be aware that this can happen to you, and what the do's and don'ts are of these positions.

Here's Steve Haataja:

Good lines, in some sense, are ones that your usual opponents cannot refute. If you are having trouble dealing with early queen sorties, then your opponents are playing "good lines" by bringing out the queen early. If handling this situation gives you trouble, I suggest playing more offhand games against players who do this, and trying it out some yourself. You will learn how to deal with such situations by a combination of observing others handle it and good old trial and error.

Here is a personal example. When I began playing the Modern Defence, things went pretty well at first. But then I ran into a fellow at the club who would quickly castle Queen's-side, play h2-h4, then h5. The h-file would open up and he'd checkmate me in maybe fifteen more moves. These were five-minute games, BTW. He did this to me several times that first night.

It became terribly frustrating. Nobody else attacked as savagely as he did, and I did fine against less violent variations. He went so far as to play 1.e4 g6 2.h4 (a slap in the face) a couple times, with great success. But after about four weeks of beatings, I finally timed the counter-punch in the centre correctly (the general principle: counter a flank attack with play in the centre). His attack lost steam and I won. He soon stopped single-mindedly playing for checkmate down the h-file as

I was winning every such game. That was one of the best chess lessons I ever learned. Quickly hitting back in the centre became an instinctive reaction to the dreaded h2-h4. You can read the principle 100 times in books, but until you actually experience it firsthand, it's just somebody else's theory. -- Steve Haataja

Exeter Chess Club: The Ideas behind the Modern Defence

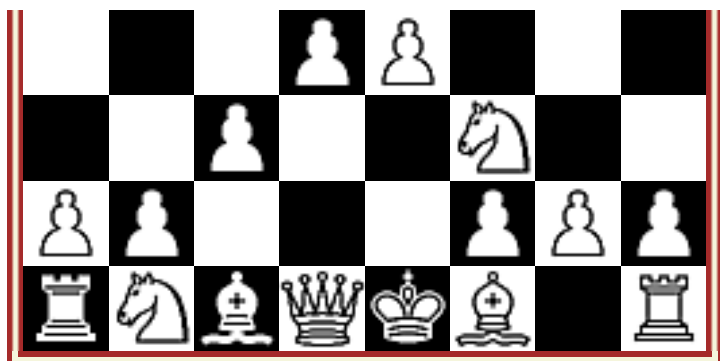

White Pawn centres

Classical centre

This is the most modest centre that White can build up. Black can easily get a share of the centre with ...e7-e5 but that doesn't do the Bg7 any good, so Black must also be careful to keep White's pieces under control and look for any active play that is going. It's actually quite an annoying system to play against! (See the games Cramling-Yrjola, and Kauranen-Richardson)

Geller system

This is another quiet system - White does not bite off more than can be chewed, and supports the d-Pawn against any pressure from the Bg7. Black can play ...c7-c5 and/or ...e7-e5 which may open up the long dark diagonal again. (See Filip-Bronstein).

Three-Pawn centre

This centre takes a little while to set up but is quite solid and can be dangerous once White gets some pieces behind it. Black must hit back with moves like ...c7-c5 and ...e7-e5. (See the games Stein-Suttles and Byrne-Donner below.)

Pseudo-Austrian centre

This is one of the most dangerous systems for White (as we saw in Charity-Teichmann), and many Black players try to move into a solid Hedgehog or Gurgendidze system in response (Games: Hedgehog: Barczay-Ivkov, Keres-Navarovsky, Engedal-Davies, Gurgendidze: Herrera-Garcia)

Pseudo-Samisch centre

White can play quietly behind this centre but can also use it to launch a King's-side Pawn storm with moves like g2-g4 and h2-h4. Black must try to keep this storm under control while hitting back in the centre or on the Queen's-side.

Averbakh centre

White can transfer the weight of the attack to the Queens'-side by playing c1- c4 before developing the Queen's Knight. This can be very like - even become - lines of the King's Indian Defence (*Games: Korchnoi-Fischer*).

Ideas for Black

Dark square strategy

This is the most common sort of central counter-attack. Black must be careful to get the King out of the way before opening up lines in the centre. (*Games: Kauranen-Richardson, Cramling-Yrjola*)

Light square blockade (Gurgenidze)

This is a very solid system which Black players often play against dangerous White systems like the Pseudo-Austrian. Black should aim to hold things tight on the King's-side and gradually move into White's Queen's-side.

This is almost a separate opening, and can actually arise commonly from the Caro-Kann Defence. Below I give several whole games to give you a feel for this way of playing, and if you want to take up this strategy, I recommend you play over all of them (*as notes to Herrera-Garcia*).

Queen's-side attack

Black hopes to make trouble on the Queen's-side - either opening a file or nudging the Knight away from the defence of e4. Black must be careful though, because White can also try to make use of open lines there if White has not castled Queen's-side. But if the White King is to be found there, the Black Bg7 is already pointing straight at him!

(Games: *Crawley-Hodgson, Nunn-Shirov, Polajzer-Davies*)

Hedgehog strategy

Black can set this arrangement up against more or less any White system. It is not a strategy in itself, just a way of waiting. It is very flexible and Black can try to make a break at any point on the board, but Black can get stuck without any active play because Black cannot get enough pieces to any one spot on the board. White can then pick a time and place to break through. So Black cannot just curl up, but should aim to break up White's centre with moves like ...c7-c5 (*Games: Barczay-Ivkov, Keres-Navarovsky, Engedal-Davies*).

Variations of the Modern and Pirc Defences

Byrne variation: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Bg5

White can play with pieces or follow up with f2-f4.

System with Be3: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Be3

Usually White plays Qd2, maybe with a Samisch-style centre, maybe not.

System with h3: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Nf3 Nf6 5. h3 O-O 6. Be3

One idea is to play a sort of classical variation with Bc4.

Classical variation: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Nf3 Nf6 5. Be2

A modest system aiming for quick development and a small edge.

Austrian Attack: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. f4

An aggressive line grabbing space in the centre and King's-side.

Gurgenidze system: 1. e4 g6 2. d4 Bg7 3. Nc3 c6 4. f4 d5

A blockading line, useful against the Austrian Attack.

Monkey's Bum: 1. e4 g6 2. d4 Bg7 3. Nc3 c6 4. Bc4 d6 5. Qf3

An anti-Gurgenidze idea: "*If that works, then I'm a Monkey's Bum!*" (*Nunn-Shirov*)

System with Bc4: 1. e4 g6 2. d4 Bg7 3. Nc3 (or 3. Nf3) 3...d6 4. Bc4 Nf6 5. Qe2

White often follows with e4-e5; with early Nf3 White may play quietly with c3

Geller's system: 1. e4 g6 2. d4 Bg7 3. c3 d6 4. Nf3

Another modest system hoping to blot out the Bg7

King Fianchetto variation: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Nge2 Nf6 5. g3

A quiet line with slow play: Black can play standard moves.

Three Pawns attack: 1. e4 g6 2. d4 Bg7 3. c3 d6 4. f4

Another space-grabbing line, but not very good on piece development.

Variations with an early Be2: 1. e4 g6 2. d4 Bg7 3. Nc3 d6 4. Be2

White intends to follow up with h2-h4 or g2-g4, hoping for an attack.

Averbakh Variation: 1. e4 g6 2. d4 Bg7 3. c4 d6

A move towards Queen's-side openings like the King's Indian or Benoni

P.S. The Modern Defence and related openings.

The Modern Defence is just the fianchetto of the King's Bishop while delaying the development of the King's Knight. If the King's Knight is played to f6 early on, we may have transposed into one of two other openings: the Pirc Defence or the King's Indian Defence.

The **Pirc Defence** is usually played with the move order **1. e4 d6 2. d4 Nf6 3. Nc3**, which stops White moving into a Queen's-side opening with c2-c4. With a Modern Defence move order White can play something like **1. e4 g6 2. d4 Bg7 3. c4** when a later ...Nf6 will transpose into the **King's Indian Defence**. This is a good fighting defence to the Queen's-side openings, which many Grandmasters like to play, and usually begins **1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4** (see *Korchnoi-Fischer*).

If you don't like playing the King's Indian Defence (it is very complicated - whole books have been written about single variations of the Defence!) but still want to play the Modern Defence, you don't have to play ...Nf6 and instead you can find some other move after **1. e4 g6 2. d4 Bg7 3. c4 d6 4. Nc3**, like 4...Nc6, 4...Nd7

or even 4...f5. On the other hand, Black's side in these various lines of the Averbakh Variation can be tricky to handle.

One clever move order is **1. e4 g6 2. d4 d6 3. c4** when **3...e5** is the idea. If White now pushes on here with **4. d5** you can play 4...f5, and if White plays **4. dxe5 dxe5 5. Qxd1+ Kxd1** then your King's Bishop can come out to c5 instead of being stuck on g7. If you don't want to White to be able to move over to a Queen's-side opening at all, you can always play the Pirc Defence with an early ... Nf6 and Nb1-c3.

Exeter Chess Club: The Ideas behind the Modern Defence

Example games:

White's King's-side attack

Game 2: Liu Wen Hue - Donner H [B07] Buenos Aires ol. FS, 1978

1.e4 d6 2.d4 Nf6 3.Nc3 g6 4.Be2 Bg7 5.g4 h6?

Weakening the King's-side even more; 5...c6 6. g5 Nfd7 is better, or 5...Na6 planning ...c5.

Oddly, in reply to 5. **h4**, Black can reply 5...**h5**, because it is difficult for White to open a file without creating weaknesses in White's own position. 5...**c5**, hitting back in the centre, is also a good reply.

6.h3 c5 7.d5 0-0?

Having weakened the King's-side so much, that's the last place Black should put his King! Perhaps Jan thought that White had given up the idea of a King's-side attack after 6.h3, but...

8.h4! e6

9.g5 hxg5 10.hxg5 Ne8 11.Qd3 exd5 12.Nxd5 Nc6 13.Qg3 Be6 14.Qh4

14...f5 15.Qh7+ Kf7 16.Qxg6+! Kxg6 17.Bh5+ Kh7 18.Bf7+ Bh6 19.g6+ Kg7 20.Bxh6+

[20.Bxh6+ Kh8 21.Bxf8+ Qh4 22.Rxh4#]

1-0

Game 3: (75) Hessmer - Haefner Th. [B09] Corr., 1986

1.e4 d6 2.d4 Nf6 3.Nc3 g6 4.f4 Bg7 5.Nf3 0-0 6.e5 Nfd7 7.h4 c5 8.h5 cxd4 9.hxg6

9...dxc3 10.gxf7+ Rxf7 11.e6 cxb2 This may win by force but Black is taking an awful risk playing this way. This game was played by correspondence, so he may have thought he could find his way out of any trouble, or he may just have trusted his books...

[11...Rf6 12.exd7 Bxd7 13.Bd3 h6 14.bxc3 Nc6[[threesuperior]]]

12.exf7+ Kf8 13.Bxb2 Bxb2 14.Bc4 Qa5+ 15.Kf1 Nf6 16.Rb1 Qc3 17.Bb3!?

[17.Ne5 Bf5; 17.Bd3 Bg4]

17...Bg4 "with great advantage to Black" - Botterill & Keene. **18.Ng5! Bxd1**

[18...Qxb3 "better, but still winning for White" - Nunn]

19.Rxh7 Nbd7 20.Ne6# 1-0

Game 4: (77) Fischer,R - Udovcic,M [B06] Rovinj/Zagreb Rd: 12, 1970

1.e4 g6 2.d4 Bg7 3.Nc3 d6 4.f4 Nc6 5.Be3 Nf6 6.h3 0-0 7.g4

An enormously bold - even arrogant - way of playing. White intends to swamp the Black King's-side.

The first rule of these positions is:

Hit back in the centre!

7...e5! 8.dxe5 dxe5 9.f5 gxf5 10.gxf5 Nd4

Exchanging Queens first was safer! **11.Nf3 c5 12.Bg5 Qb6 13.Bxf6 Qxf6 14.Nd5 Nxf3+ 15.Qxf3 Qh4+ 16.Ke2 Be6 17.Ne3 Rad8 18.Rg1**

Black has some ideas for counterplay, but is in too much trouble on the open g-file. **18...Kh8 19.fxe6 fxe6 20.Qg3 Qf6 21.Qxg7+ Qxg7 22.Rxg7 Kxg7 23.Ng4 Rf4 24.Ke3 Rdf8 25.Be2 h5 26.Nxe5 Rh4 27.Rg1+ Kh7 28.Rh1 Rhf4 29.Nd3 R4f7 30.Nxc5 Rc8 31.Nxe6 1-0**

Black's dark-square strategy

Game 5: Kovacevic,V - Seirawan,Y [B07] Wijk, 1980

1.d4 g6 2.e4 d6 3.Nc3 Bg7 4.Be2 Nf6 5.g4 c6 6.g5 Nfd7 7.h4 b5 8.h5 Rg8
9.hxg6 hxg6 10.Nf3 b4 11.Nb1 a5 12.a4 c5 13.d5 Nb6 14.c4 Kd7 15.Nbd2
Rh8 16.Rg1 Kc7 17.Rb1 Rh3 18.b3 Qh8

Black's control of the dark squares is complete. **19.Nf1 N8d7 20.Bf4 Ne5 21.
Nxe5 Bxe5 22.Bxe5 Qxe5**

The disappearance of Black's monster Bishop has not saved White, the dark squares still belong to Black. **23.f3 Bd7 24.Qc2 Qd4 25.Rg2 Rh1 26.Rf2 Qh8 27.f4 Qh4 28.Rd1 f6 29.gxf6 exf6 30.e5 fxe5 31.fxe5 Rf8 32.exd6+ Kb7 33.Bd3 Re8+ 34.Be2 Rxf1+ 35.Kxf1 Qh1# 0-1**

Game 6: Cramling,D - Yrjola,J [B08] It shv., 1984

1.e4 g6 2.d4 Bg7 3.Nc3 d6 4.Nf3 Nf6 5.Be2

[5...h3 0-0 6.Be3 a6 7.a4 b6 (7...Nc6; 7...d5!?)]

5...0-0 6.0-0 Bg4

[6...c6]

7.Be3 Nc6 8.Qd2 e5

This standard position has been largely abandoned by White, while bored Blacks have been experimenting with an early ...c6. **9.dxe5**

[9.d5 Ne7 10.Rad1 Bd7 11.Ne1 b5! 12.a3 (12.Bxb5 Nxe4) 12...a5 13.Nd3 c6 14.dxc6 Bxc6 15.Bh6 b4 16.Bxg7 Kxg7 17.axb4 axb4 18.Nb1 Qb6 19.Kh1 Rab8 Barlov-Jansa, Bor 1985: Black is at least equal, according to John Nunn]

9...dxe5 10.Rad1 Qc8 11.Qc1 Rd8 12.Rxd8+ Qxd8

[12...Nxd8!?]

13.Rd1 Qf8 14.h3 Bxf3 15.Bxf3

15...h5!? with the idea of exchanging the B on h6. **16.Nb5 Rc8 17.c3**

[17.Nxa7 Nxa7 18.Bxa7 b6 and the Bishop is buried]

17...Kh7 18.Na3 Bh6 19.Bxh6 Qxh6 20.Qxh6+ Kxh6 21.h4 Kg7 22.Nc4 a5 23.Kf1 Kf8

This is quite OK for Black. 24.Ke2 Ke7 25.Ke3 b5 26.Na3 Na7 27.Be2 c6 28.Nb1 Ne8 29.Nd2 Nd6 30.g3 Rd8 31.f4 exf4+ 32.gxf4 Nac8 33.Nf3? Nc4+ 34.Kf2 Rxd1 35.Bxd1 Nxb2 36.Be2 Na4 37.c4 b4 38.Nd4 Kd7 0-1

Knocking out White's big centre

Game 7: Stein ,L - Suttles,D [B06] Sousse Tunisia, 1967

1.e4 g6 2.d4 Bg7 3.c3 d6 4.f4 c5

A bold but hopefully temporary Pawn sacrifice. 5.dxc5 Nf6!? 6.cxd6 exd6 7.e5

[7.Nf3 0-0 8.Bd3 Black can exploit the fact that he has already castled: 8...Nxe4! 9.Bxe4 Re8]

7...dxe5 8.Qxd8+ Kxd8 9.fxe5 Re8 10.Nf3

Duncan Suttles may have chosen wrongly here: **10...Nc6?**

[10...Ng4!? (Botterill/Keene) 11.Bg5+ f6 12.Bh4 (12.Bf4 fxe5 13.Bg5+ Kc7) 12...Nxe5 e.g. 13.Nxe5 Rxe5+ 14.Kf2 Rf5+! with easy equality, since White has no good square for his King.]

11.Bb5 Bd7 12.Bxc6 Bxc6 13.0-0 Ng4 14.Bg5+ Kc8 15.Nbd2 h6 16.Bf4 g5 17.Bg3 Ne3 18.Rf2 Nf5 19.Nc4 Bd5 20.Nfd2 Nxc3 21.Nd6+ Kd7 22.Nxe8 Rxe8 23.hxg3 Bxe5 24.Rd1 Kc6 25.Nb3 b6 26.Nd4+ Kc5 27.g4 Bf4 28.Nf5 Re5 29.g3 Rxf5 30.gxf5 Bxg3 31.Rfd2 Bf3 32.Rf1 Bf4 33.Rxf3 Bxd2 34.Rd3 Bf4 35.Rh3 Kd5 36.Rxh6 Ke5 37.Rh7 f6 38.Rxa7 Kxf5 39.Kf2 Bd6 40.Rb7 Bc5+ 41.Kg2 1-0

Game 8: Byrne ,R - Donner ,J [B07] San Juan Puerto Rico, 1969

1.e4 g6 2.d4 Bg7 3.c3 d6 4.f4 Nf6 5.Bd3 e5 6.Nf3 exf4 7.Bxf4 0-0 8.0-0 c5 9.Nbd2 cxd4 10.cxd4 Nc6

White still has his centre but none of the advantages that can go with it. Black has good development and an equal game. **11.Qb3 d5 12.e5 Ne4 13.Nxe4 dxe4 14. Bxe4 Nxd4 15.Qe3 Ne6 16.Bg3 Qb6 17.Qxb6 axb6 18.b4 b5 19.Rf2 Re8 20. Rc2** 1/2../strong>

Game 9: Filip,M - Bronstein,D [B07] Moskva, 1967

1.Nf3 g6 2.d4 Bg7 3.e4 d6 4.c3 Nf6 5.Nbd2 0-0 6.Be2 b6

Preparing ...c5 7.0-0 e6 8.Re1 Bb7 9.Bd3 c5 10.dxc5 bxc5 11.e5 dxe5 12. Nxe5 Nc6 13.Ndc4 Nxe5 14.Nxe5 Qc7 15.Qe2 Rab8

Black's split Pawns are not weak because White is not organised to attack them - in fact, the half-open b-file gives Black a little initiative. 16.Bd2 Ba8 17.Nc4 Nh5 18.Be4 Bd5 19.b3 Rfd8 20.Rad1 Nf6 21.Bc2 Qb7 22.Na5 Qb6 23.Nc4 Qa6 24.Ne3 Qxe2 25.Rxe2 Bc6 26.f3 a5 27.Be1 Rxd1 28.Nxd1 a4 29.bxa4 Ra8 30.Bf2 c4 31.Bd4 Nd5 32.Bxg7 Kxg7 33.Be4 Rxa4 34.Bxd5 Bxd5 35.Ne3 Bc6 36.Rc2 Kf6 37.Kf2 Ke7 38.Ke1 Kd6 39.Kd2 Kc5 40.Kc1 Ra8 41.Rd2 f5 42.Rd4 Ra4 43.Kb2 e5 44.Rd8 Ra8 45.Rxa8 Bxa8 46.Nd1 Bc6 47.Kc1 g5 48.Kd2 Bd7 49.Ke2 f4 50.Nb2 h5 51.Kf2 g4 52.g3 Bc6 53.fxg4 hxg4 54.gxf4 exf4 55.Kg1 Bf3 56.Kf2 Be4 57.Kg1 Bc2 58.Kf2 Bb1 59.a3 Bc2 60.Ke1 Kd5 61.Kf1 Bd3+ 62.Kf2 Bg6 63.Nd1 Be8 64.Nb2 Bb5 65.Ke2 Ke4 66.Kf2 Kf5 67.Kg1 Kg5 68.Nd1 Kh4 69.Kg2 Ba4 70.Nf2 g3 71.hxg3 + fxg3 72.Kg1 Bc2 73.Kf1 gxf2 74.Kxf2 Kg5 75.Ke3 Kf6 76.Kd4 Bb3 77.Kc5 Ke7 78.a4 Kd7 79.a5 Kc7 80.Kb5 Kb7 81.Kc5 Ka6 82.Kb4 Ba2 83.Ka4 Bb1 84.Kb4 Bd3 85.Ka4 Bc2+ 0-1

Black's Queen's-side play

Game 10: Nunn John D M,J - Shirov Alexei,A [B06] Bundesliga, 1996

1.e4 g6 2.d4 Bg7 3.Nc3 c6 4.Bc4 d6 5.Qf3 e6 6.Nge2 b5 7.Bb3 a5 8.a3 Ba6 9.O-O Nd7 10.Bf4 Qe7 11.Rad1 e5 12.Bg5 Ngf6

Black insists on a share of the centre as well as a counter-attack on the Queen's-side. 13.d5 c5 14.a4 b4 15.Nb5 Nb6 16.Qd3 c4 17.Bxc4 Nxa4 18. Ra1 Nxb2 19.Qb3 Nxc4 20.Qxc4 Rc8 21.Qd3 Qd8 22.c4 0-0 23.Ra2

A tense position where all the play is on the Queen's-side, and Black must be pleased with the two connected passed Pawns. Black sacrifices the exchange to remove White's last Queen's-side Pawn... 23...Rxc4 24.Bxf6 Bxf6 25.Qxc4 Qb6 26.Qc7 Qxb5 27.Qxd6 Kg7 28.Rc1 Rd8 29.Qc6 b3 30. Rb2 Qd3 31.Rcb1 Rc8 32.Qa4 Rc2 33.Rxb3 Qxe2 34.Rf3 Bd3 35.Qd7 Bxe4

36.Rxf6 Kxf6 37.Qd6+ Kf5 38.Rf1 Bd3 39.Qd7+ Kf6

Black has nibbled in a circle all the way around the board to finish off the White King! 0-1

Game 11: Crawley ,G - Hodgson,J [B07] 1989

1.e4 d6 2.d4 Nf6 3.Nc3 c6 4.g3 g6 5.Bg2 Bg7 6.a4 0-0 7.h3 b6 8.Nge2 Bb7 9.0-0 Nbd7 10.Bg5 a6 11.Re1

An unusual opening by White: Black starts his Queen's-side play as usual.

11...b5 12.Qd2 b4 13.Nd1 a5 14.Bh6 e5 15.Bxg7 Kxg7 16.Ne3 c5 17.d5
Ba6 18.c4 bxc3 19.Nxc3 c4 20.Nb5 Nc5 21.Qc2 Rb8 22.Nxc4 Bxb5 23.axb5
Rxb5 24.Bf1 Nb3 25.Ra3 Nd4 26.Qc3 Qb8

Black has a comfortable initiative on the Queen's-side.

27.Kg2 Rc8 28.Rxa5 Rb3 29.Qc1 Qb4 30.Ra6 Rxb2 31.Qxb2 Qxe1 32.f3
Nxf3 33.Ra1 Qxe4 34.Nxd6 Rc2+ 0-1

Black's light-square blockade

0-1

Black's King's-side attack

Game 18: Kauranen,R - Richardson,K [B08] CC WM 10,F FS 1978

This game was played in the world correspondence championship.

1.e4 g6 2.d4 Bg7 3.Nf3 d6 4.Be2 Nf6 5.Nc3 0-0 6.0-0 Bg4 7.Be3 Nc6 8.Qd3

e5 9.d5 Ne7 10.Rad1 Bd7

Black wants to keep the 'good' light-squared Bishop on the board. It's not quite a King's Indian but in this game Black eventually fires off a classic KI-style King's-side attack. (Compare Korchnoi-Fischer 1970) 11.Nd2 Nh5 12.g3 a6 13.Bf3 b5 14.a3 Qe8 15.Qe2 Nf6 16.b4 h5 17.Nb3 Ng4 18.Nb1 f5 19.exf5 gxf5

Recapturing with a Pawn leaves Black in control of lots of central squares,

and gives him the g-file to attack down. 20.Bg5 Bf6 21.Bxf6 Nxf6 22.Bg2 Qf7 23.Qd2 Kh7 24.Na5 Rg8 25.c4 bxc4 26.Nc3 h4 27.Kh1 Qh5 28.Qe2

28...Ng4 29.Bf3 Qh6 30.Bxg4 Rxd4 31.f3 Rg7 32.gxh4 Rag8 33.Nxc4 Qxh4 34.Ne3 f4 35.Ng4 Nf5 0-1

Game 19: Kortchnoi,V - Fischer,R [E97] 1970

This exciting game was played in a blitz tournament.

1.d4 Nf6 2.c4 g6 3.Nc3 Bg7 4.e4 d6 5.Be2 0-0 6.Nf3 e5 7.0-0 Nc6 8.d5 Ne7 9.Nd2 c5

Black blocks the Queen's-side so it is harder for White to attack there. 10. a3 Ne8 The Knight gets out of the way of the f-Pawn. 11.b4 b6 12.Rb1 f5 13.f3 f4 14.a4 g5

In this typical King's Indian position with a blocked centre, it's as if each side has their own private arena for action. 15.a5 Rf6 16.bxc5 bxc5 17. Nb3 Rg6 18.Bd2 Nf6 19.Kh1 g4 20.fxg4 Nxc4 21.Rf3 Rh6 22.h3 Ng6 23. Kg1 Nf6

24.Be1 Nh8 The real Grandmaster touch. 25.Rd3 Nf7 26.Bf3 Ng5 27.Qe2 Rg6 28.Kf1 Nxe3 29.gxe3 Bxe3+ 30.Kf2 Ng4+ 31.Bxe4 Bxe4 It's easy to see the appeal of the KID after such a game. 0-1

Exeter Chess Club: Schematic thinking

Schematic thinking

Recently, I was analysing an endgame with Steve Webb and at one point just pushed a bishop from b4 to d4, obliterating the chances of the Knight at a4 which can now only move to leave a lost K+P ending. What made me do that? Well, you have to have seen the pattern before, but obviously ...Bb4-d4 is not a legal move. The point is that thinking in this way stops you getting bogged down in move orders, and focuses your attention on what must be done soon.

Schematic thinking 1: Bott and Morrison, The Chess Apprentice

Thomas, G-Monticelli 1933: 1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 d6 5. Bxc6 + bxc6 6. d4 f6 7. Be3 Ne7 8. Qd2 Ng6 9. Nc3 Be7 10. h4

Thomas-Monticelli, 1933

There are some lovely sections in **The Chess Apprentice** called *'Winning Advantages'* and *'The forces move into position'*, which have lots of these schematic diagrams in. They genuinely changed the way I looked at a chessboard.

10...O-O 11. h5 Nh8 12. O-O-O Nf7 13. Rdg1 Bd7 14. g4 exd4 15. Nxd4

27. Qg7 1-0

Schematic Thinking 2: Capablanca

"Once in a lobby of the Hall of Columns of the Trade Union Centre in Moscow a group of masters were analysing an ending. They could not find the right way to go about things and there was a lot of arguing about it. Suddenly Capablanca came into the room. He was always find of walking about when it was his opponent's turn to move. Learning the reason for the dispute the Cuban bent down to the position, said 'Si, si,' and suddenly redistributed the pieces all over the board to show what the correct formation was for the side trying to win. I haven't exaggerated. Don Jose literally pushed the pieces around the board without making moves. He just put them in fresh positions where he thought they were needed."

"Suddenly everything became clear. The correct scheme of things had been set up and now the win was easy. We were delighted by Capablanca's mastery..."

KOTOV, Think like a Grandmaster, tr. Cafferty, pub. 1971 Batsford.

Capablanca - Ragozin (Moscow) [E22], 1936

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. Qb3 Nc6 5. e3 d5 6. Nf3 O-O 7. a3 dxc4 8. Bxc4 Bd6 9. Bb5 e5 10. Bxc6 exd4 11. Nxd4 bxc6 12. Nxc6

This gain of a pawn ultimately decides the game.

Exeter Chess Club: One weakness or Two?

The Principle of two weaknesses - one weakness or two?

One sick pawn can lose you the game, but you need two points of attack to win. How does this add up?

Both are true. In order to win against one weakness you need to attack the weak point, gain an advantage in space or mobility through this, and use your mobility to force through on a second front. Then one or other point will crack because your opponent's pieces won't be able to cover both attacks. *Chekhover-Rudakowsky* is a nice example of this.

In fact defensive play is so awful that your opponent will probably give you an extra target out of carelessness or frustration (*Hutchings-Keene, Vogt-Anderssen*). But if not, you will have to open up another front (*Lasker-Capablanca*). It may be that before going for your primary target you should take time out to create a second weakness for later (*Hug-Barle*). The key to understanding space advantages is that you can use it to create weaknesses where none existed (*Tarrasch-Mieses*).

Chekhover-Rudakowsky, 1945

1. d4 d5 2. c4 e6 3. Nf3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nc3 Nbd7 7. Qc2 c6 8. Bd3 dxc4 9. Bxc4 Nd5 10. Bxe7 Qxe7 11. O-O b5 12. Be2 a6 13. Ne4 Bb7 14. Ne5 Rac8 15. Nxd7 Qxd7 16. Nc5 Qc7 17. Rfd1 Rcd8 18. Rac1 Bc8 19. Qe4 Nf6 20. Qh4 Qa5 21. a3 b4

White has an advantage in space and mobility: Chernev suggests counting up the legal moves available to the pieces on each side.

22. a4 Nd7 23. b3 Nxc5 24. Rxc5 Qb6 25. Rdc1 Bb7 26. a5 Qa7 27. Bd3
DIAGRAM

White forces a weakness just as we learned above - but was only able to do so because he attacked c6 first.

27...g6 28. Qf6 Rd6 29. Qe7 Rfd8 30. h4 R8d7 31. Qf6 Qa8 32. Be4 Qe8

Exeter Chess Club: The Fianchetto: a user's guide

Fianchetto basics

A Bishop developed in *fianchetto* reaches deep into the opponent's position and influences two important central squares.

We can see this effect in IQP positions.

Commonly in isolated Queen-Pawn positions Black has a cramped position and White has chances for attacking the King.

When an IQP faces a fianchetto, Black has two advantages over the standard formation: extra pressure on the isolated Pawn, and an extra-strong defensive phalanx on the light squares.

We can see this in Rubinstein's line in the Tarrasch Defence. **1. d4 d5 2. c4 e6 3. Nc3 c5 4. cxd5 exd5 5. Nf3 Nc6 6. g3**

If the opponent tries to block the long diagonal with Pawns, you can lever open the line again with your own Pawns.

This is a simple plan which can be played by either side. I have played dozens of games like this.

A castled fianchetto position can be a very hard nut to crack - for example, h7 is difficult to get to. The Pawns cover the dark squares and the Bishop covers the light squares.

However, there is a recipe for attacking the castled King's fianchetto position.

The weaknesses created by the g2-g3 move can be used by the opponent to get at the King: either by getting pieces into the holes (f3 and h3), or by using the h-Pawn to lever open the h-file, or some combination of these ideas. If the Bishop is removed, all that will be left is a network of holes.

Black has correctly tried to get at the King through the h-file, particularly h3. If White plays Bxh3, the Black Queen will leap onto the doorstep of the White King. Another clever point is: Black has held the Bishop on h3 while advancing the h-Pawn, so White cannot meet ...h7-h5 with h2-h4, blockading the h-file.

Here Black should play **1...hgx3** with the idea of **2. hxg3 Bxg2 3. Kxg2 Qh3+** mating.

This attacking scheme is not very quick to set up, but works like clockwork.

"I had won hundreds of five-minute games in similar positions and had it down to a science: lever open the h-file... sac, sac ... and mate!" - Bobby Fischer

Lee,R - Holmes,D [E82] BCCC 1969-70 **1.d4 Nf6 2.c4 g6 3.Nc3 Bg7 4.e4 d6 5.f3 0-0 6.Be3 b6 7.Qd2 c5 8.d5 Na6 9.0-0-0 Nc7 10.Bh6 a6 11.g4 b5 12.h4 bxc4 13.Bxc4 Nb5 14.Nge2 Nxc3 15.Nxc3 Bd7 16.h5 Qe8 17.hxg6 fxg6 18.Bxg7 Kxg7 19.Qh6+ Kh8 20.e5 dxe5 21.d6 exd6 22.Rxd6 Qe7 23.Rxf6 Rxf6 24.Nd5 Qg7 25.Nxf6 1-0**

Homer,S - Wilde,T [B07] Devon vs. Cornwall, 06.02.1999 **1.e4 d6 2.d4 Nf6 3.Nc3 g6 4.Be2 Bg7 5.h4 h6 6.Be3 0-0 7.h5 Kh7 8.hxg6+ fxg6 9.Qd2 Ng8 10.0-0-0 Nc6 11.Nf3 Qe8 12.Rh4 h5 13.g4 Nf6 14.gxh5 gxh5 15.Rdh1 Rh8 16.Nd5 Nxd5 17.Rxh5+ Kg8 18.Rxh8+ Bxh8 19.Rg1+ Bg7 20.exd5 Nd8 21.Bh6 1-0**

I must emphasise the importance of this plan. There are several standard attacks which you must be able to play - this is one of them - and where it often seems the attack is easier to play than the defence. If you ever intend to play a fianchetto system, your opponents can trot out this plan almost without thinking, and if you get your counterattack wrong you will almost certainly be checkmated. In every opening where there is a King's-side fianchetto you can expect to find a critical line where the opponent tried to checkmate down the h-file.

Having placed your Bishop on the long diagonal you need to be careful how you place your central Pawns. If they sit about in front of the Bishop they limit its reach until they move; if they become blocked they can choke it for a long while.

On the other hand, leaving your central Pawns unmoved leaves the centre free for your opponent! So fianchetto openings are difficult to handle, particularly in how you play in the centre. This is part of the attraction of fianchetto systems: they are difficult and so grandmasters can hope for their GM opponents to go astray at some point.

Fianchetto Openings

Fianchettoes turn up frequently in closed Queen's-Pawn openings, and there is a Fianchetto Variation for White in each of the Indian Defences (semi-closed openings).

King's Indian: **1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. Nf3 O-O 5. g3**

Grunfeld: **1. d4 Nf6 2. c4 g6 3. g3 d5**

Queen's Indian: **1. d4 Nf6 2. c4 e6 3. Nf3 b6 4. g3**

And most recently, Kasparov has experimented with:

Nimzo Indian: **1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. g3**

But the history of the fianchetto is particularly bound up with the history of the flank (hypermodern) openings.

Reti and his contemporaries rejoiced in the fianchetto, arguing that you did not need to occupy the centre as White as long as you controlled it.

The diagram is from Reti-Lasker, New York 1924. We can see that Reti has allowed Lasker to occupy the centre but Reti has fianchettoed both Bishops to hit back at this, and has even backed up his Bb2 with a Queen on a1!

1.Nf3 d5 2.c4 c6 3.b3 Bf5 4.g3 Nf6 5.Bg2 Nbd7 6.Bb2 e6 7.O-O Bd6 8.d3 O-O 9.Nbd2 e5 10.cxd5 cxd5 11.Rc1 Qe7 12.Rc2 a5 13.a4 h6 14.Qa1 Rfe8 15.Rfc1

This is the outline of the Catalan Opening (**1. d4**, **2. c4**, **3. g3**). White combines a fianchetto with both a central stake on d4 and pressure on Black's centre with c2-c4. Black can try to reinforce d5 with moves like ...e6 and ...c6, but this is rather passive.

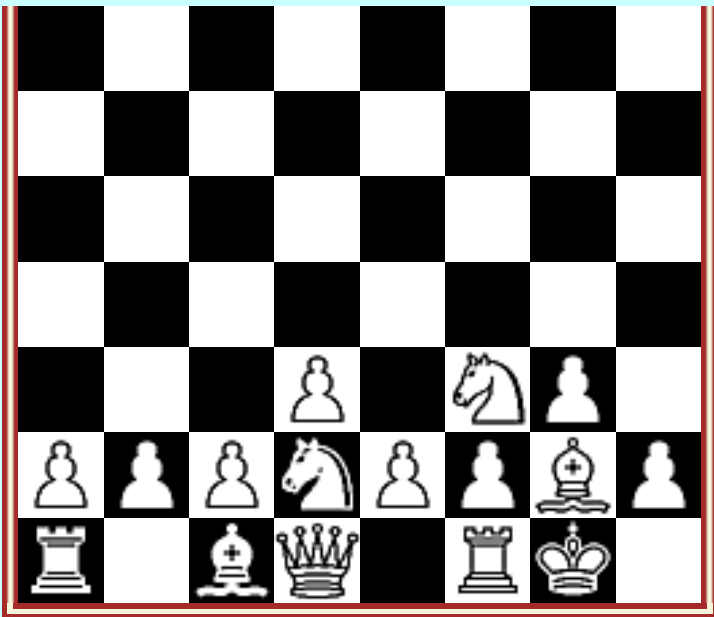

Black can stop the fight for the d5 point by ...d5xc4, but this gives White a central majority and opens up the long light diagonal.

This is a development we often see in the English Opening (**1.c4**). White uses the pressure of the fianchettoed Bishop to strike at the Black Queen's-side.

Having plonked a Pawn on c4, it makes sense to let the light-squared Bishop peer around the side of it; we see the same development by Black in many closed Sicilian systems and in the Benoni and Dutch Defences, where Black fianchettoes to avoid the Bishop's Pawn. In each case the fianchettoed Bishop can be used to support a Pawn advance.

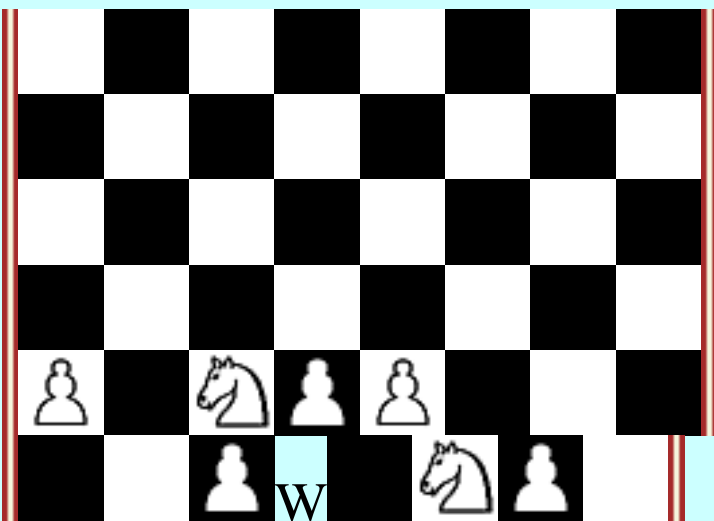

The Reti-Barcza system beginning with **1. Nf3** reserves all White's options.

This is a rather slow, subtle opening system which is difficult for all players to handle.

White can expand on the King's-side, centre or Queen's-side (west, south-west, south).

The King's-side expansion is known as the King's Indian Attack, and is often played by players of 1.e4 against half-open defences like the French. It's another clockwork attack.

The fianchetto can also be tried in e-Pawn games, particularly the half-open defences - we have mentioned the King's Indian Attack against the French, and the Pirc and Modern Defences are based upon a Black King's-side fianchetto. White has also tried a fianchetto of the King's Bishop in many lines of the Sicilian, Open and Closed.

Closed Sicilian: **1. e4 c5 2. Nc3 Nc6 3. g3 g6**

Open Sicilian: **1. e4 c5 2. Nf3 e6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 d6 (Scheveningen Variation) 6. g3**

Sicilian: 1. e4 c5 2. Nf3 e6 3. b3

1.e4 c5 2.Nf3 d6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 g6

In the open Sicilian, Black may post the dark-squared Bishop on the long diagonal without fear that it may be stifled by Pawns. The Dragon Bishop is a fearsome creature, particularly if White castles Queen's-side hoping to carry out the clockwork attack against Black's King's-side. Black already has a half-open c-file against White's own King!

Conclusion

The fianchetto is one of the basic building-blocks of chess thinking. Although it is associated with some of the most complex opening systems that are played by GMs, you are bound to come across it, and should at least know how to attack a castled King which is also hiding behind a fianchetto.

Exeter Chess Club: Opposite-coloured Bishops in the endgame and the middle-game

by Phil Adams, Three Cs, Oldham (=Children's Chess Club)

OCBs in the endgame

(1)

Black is a pawn down. Should he keep pieces on and try to get counterplay, or bring about exchanges?

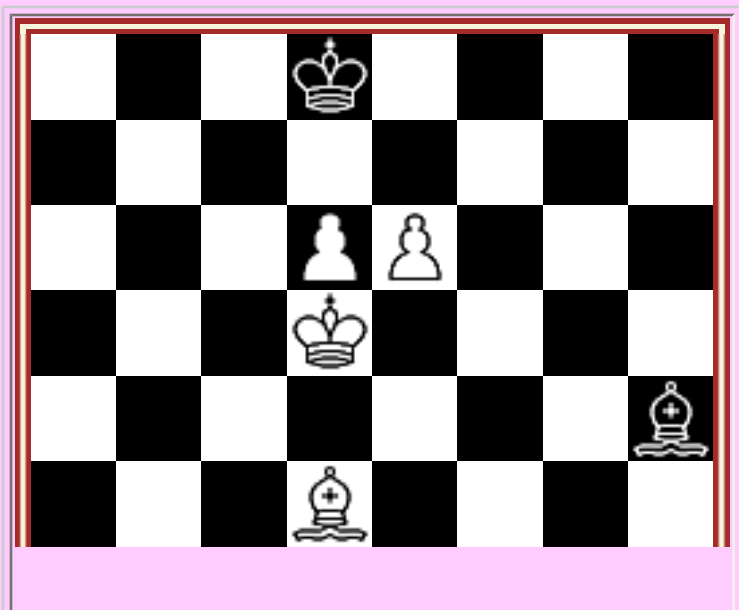

1...Nxc3! 2.Bxc3 [2.bxc3 would be better; White has better chances of using his extra pawn if he keeps rooks on.] **2...Rxd2! 3.Bxd2 Kg8**

In an opposite-coloured bishops ending, one pawn up is normally not enough to win, unless there are other advantages. Here Black can draw easily.

4.Bc3 f6 5.f3 Kf7 6.Kf2 Ke6 7.Ke3 Kd5 8.Bb4 g6 9.Bf8 h5 10.Be7 f5 11.Bd8 Bb5 12.h4 Bf1 13.g3 Bb5 14.b3 Ke5 15.Bc7+ Kd5 16.Kf4 Ke6 17.Kg5 Kf7 18.a4 Bc6 19.Kf4 Ke6 It has become clear that White cannot make progress.

(2)

With a two pawn advantage in an opposite bishops ending, the winning chances are much better.

When the two extra pawns are connected, the main points to remember are:

a) to have any chance of a draw the weaker side's king must be in front of the pawns;

b) the pawns usually win if they can reach the sixth rank; with the pawns further back, the weaker side has good chances of a draw.

1.Bb5 Bf6 2.Ke4 The plan is simple; get the king to f7 and push the e-pawn. **2...Bg5 3.Kf5 Bh4 4.Kg6** Black is in zugzwang; the white king does not even have to get to f7 now. **4...Kc8 5.e7 +-**

(3)

To draw, Black must prevent the pawns from reaching the 6th. The only way is to prepare to give up his bishop for both pawns by Bg4 or Bf7; does it make any difference which Black chooses? **1...Bf7!** is a simple draw. The e-pawn cannot advance to e6 without the support of the white king, but the king

cannot leave the defence of the d5 pawn, so White can make no progress. All Black has to do is shuffle his bishop between f7 and g8.

[Note that 1...Bg4? is weaker, since White can manoeuvre with his king and achieve the advance e6, e.g.. 2.Ke4 and now **A**) 2...Bh3 3.Kf4 Ke7 (3...Bg2 4.e6+ Kd6 5.Bb4+ Kxd5 6.e7+-) 4.Bb4+ Kd7 5.Kg5 Bg2 6.e6+; **B**) 2...Ke7 3.Bb4+ Kd7 4.Kf4 Bh3 5.Kg5]

(4)

In an opposite coloured bishops ending, two split pawns up, the ideas to remember are:

a) the further apart the pawns are, the greater the chance of winning;

b) only one file apart, the pawns cannot win;

c) to win, the stronger side's king must be able to break through to support the advance of one of the pawns; the defending side must try to prevent this.

1.Kd5 Kf6! 2.Bg4 Bg3! [2...Ke7? 3.Ke4 Kd6 4.Bd7 Ke7 5.f4 Kf6 6.f5 Ke7 7.Kd5 Kf6 8.Kc5 Ke7 9.Kb5 Kf6 10.Ka6 Ke7 11.Kb7 Kd8 12.f6 Bd6 13.f7] **3.Kc5 Bc7! 4.Kb5 Ke7 5.Ka6 Kd8 6.Kb7 Bf4**
 White can make no progress. =

We have now covered the basics of opposite coloured bishops in the endgame, which, as we have seen, can often present drawing chances to the weaker side.

(Main sources: Averbakh/Mednis)

In the middlegame it is a different story altogether. In the middlegame opposite coloured bishops favour the side with the initiative.

(5) King,D - Menzel [C15]

Junior game, 1979

1.e4 e6 2.d4 d5 3.Nc3 Bb4 Opposite coloured bishop middlegames are quite frequent in the Winawer French. **4.Nge2** An interesting way of avoiding main lines, favoured by Lasker.

4...dxe4 5.a3 Bxc3+ [5...Be7 6.Nxe4] 6.Nxc3 Nc6 7.Bb5 Nge7 8.Bg5! f6 9.Be3 0-0 10.Qd2 [White is happy to sacrifice the pawn for development and attacking chances. If 10.Nxe4? f5! (threat f5-f4.)] **10...f5 11.0-0-0 a6 12.Bxc6 Nxc6 13.Bf4**

[A typical position in this line; Black has decided to hold his extra pawn with f7-f5; the price he pays is a weakness on the dark squares. White must open a file so that his heavy pieces can combine with his powerful unopposed bishop.] **13...Ne7** [13...b5 14.d5! Ne7 15.dxe6 Bxe6 16.Qxd8 Rfxd8 17.Bxc7+/- (King.)] **14.f3! exf3 15.gxf3 Ng6? 16.Bg5 Qd6 17.h4!** [In positions with opposite-sides castling, whoever gains the initiative is likely to win; exactly the same is true of middle-games with opposite-coloured bishops. In this position, therefore, attack is more important than material.] **17...Rf7** [Black takes precautions against the coming attack against g7.] **18.h5 Nf8 19.Bf4 Qd8 20.Rdg1 Nd7 21.Rg3 Nf6 22.Be5** [White probes the Black defenses. He knows he wants to attack g7 but he is not yet sure of his best attacking formation.] **22...Nd7 23.Bf4!** [White realises that it is important to keep his powerful dark squared bishop] **23...Nf6** [Black is on the defensive and is happy to repeat moves.] **24.Bg5** [White tries another tack.] **24...Bd7** [Notice that this bishop is helpless to defend the dark squares that will soon be threatened.] **25.Rhg1 Kh8** [How can White strengthen his attack?] **26.Ne2!** [Since Black is on the defensive, White realises that the knight is not needed on the queenside for defense; instead it can join in the attack on the king-side.] **26...c5 27.Nf4 h6** [27...Rc8 28.Ng6+! hxg6 (28...Kg8 29.Ne5+-) 29.hxg6 Rf8 30.Rh3+ Kg8 31.Rgh1] **28.Ng6+ Kh7** [28...Kg8 29.Bxh6 Nxh5 30.Rh3 Nf6 31.Bg5 Rf8 32.Rh8+ Kf7 33.Rxf8+-] **29.Ne5 Re7** [29...Rf8 30.Bxh6!] **30.Bxf6 gxf6 31.Qg2!** [31.Qg2 Qf8 (31...fxe5 32.Rg7 + Kh8 33.Qg6; 31...Qh8 32.Ng6) 32.Ng6 Qf7 33.Nxe7 Qxe7 34.Rg7+] **1-0**

A few years later, a remarkably similar game was played by Britain's first Grandmaster, Tony Miles.

(6) Miles,A - Reefschlager,H [C15]

Porz/Koln, 1981

1.e4 e6 2.d4 d5 3.Nc3 Bb4 4.Nge2 dxe4 5.a3 Bxc3+ 6.Nxc3 Nc6 7.Bb5 Nge7 8.Bg5! f6 9.Be3 0-0 10.Qd2 [White is happy to sacrifice the pawn for development and attacking chances.] **10...a6 11.Bxc6 Nxc6 12.0-0-0 f5?!** [This is probably too greedy. Black weakens his black squares, which is just what White wants, since it makes his bishop a very dangerous piece - it has no opponent!] [12...b6 13.Nxe4 Bb7 14.Qd3] **13.Bg5 Qe8 14.f3!** [White opens lines to enable his rooks to fire at the Black king.] **14...exf3 15.gxf3 Nd8 16.Rhg1!**

[Simple chess; White intends to double rooks on the g-file and then point his bishop at g7. Notice that the Black bishop is unable to help in the defence.] **16...c6 17.Rg3 Rf7 18.Rdg1 b5 19.Bf6!** [Black is already in deep trouble.] **19...Raa7** [19...Rxf6 20.Rxg7+ Kh8 21.Qg5 Rg6 (21...Rf8 22.Rxh7+ Kxh7 23.Qh4+) 22.Rxg6 hxg6 23.Qh6+-] **20.Qh6 Qf8 21.Be5!** [Withdrawing the powerful bishop to a safer firing point.] **21...Kh8 22.Rh3! Qg8 23.Ne2!** [Bringing up the reserves; the plan is simply Ne2-f4-g6.] **23...f4 24.Rxg7! Rxg7 25.Nxf4 Nf7 26.Ng6#**

A lovely finish! **1-0**

Introduction

"That's what this match is all about - Pawns, isolated or hanging. They might just as well play without pieces." -- Eddie GUFELD, considering yet another IQP position in the 1974 Karpov-Korchnoi match (Game 16, position after White's 24th move)

The English GM David Norwood once said that he made an offer to analyse and comment on some club players' games. They expected him to offer some brilliant analysis, showing them where they had missed golden opportunities, but his advice was more simple: "*remember Pawns can't move backwards*". Now, that is one of the first things any chess player learns, so they were very disappointed - why was he telling them what they already knew? Well, they may have known, but they were playing as if they didn't know. They were advancing pawns too far, too fast, too often. They were moving pawns forward which got surrounded and caught, they moved pawns forward which created holes near their king, they moved pawns forward which became the focus of a sacrifice. And once they had moved them forward, they couldn't move them back. So be careful with your Pawns!

The two principal problems with poor Pawn formations are:

- (1) opportunities provided to the opponents pieces (e.g. occupation of 'holes')
- (2) weaknesses of the Pawns themselves.

Let us start with a notable example:

Weak pawns: the ultimate collection: Deep Blue - Kasparov, 1996

Just horrible: every one of the six Black Pawns is isolated, or isolated and doubled! The b-Pawns are also blockaded. Kasparov staked everything on a King's-side hack but after **25. b3!** Deep Blue just grabbed the material and steered clear of the tactics.

There is a lot of meat in this game, which I append if you want to go over it, but it should tell you one thing if nothing else: weak Pawns can lose you the game.

Could Kasparov have defended everything instead of trying to hack? Well, no. It's a bit like Franklin's "*For the want of a nail...*": for the want of a friendly neighbour, a d-Pawn is weak; to look after the d-Pawn, the Knight is assigned guard duty; for the want of the Knight, the initiative is lost; for the want of active play, ground is lost on both sides of the board; for the want of pieces free from defence, more weakness are conceded... Once you have more than one weakness, the problem snowballs, and your Pawns fall like ripe fruit into the arms of your opponent.

Playing against Pawn weaknesses needs some persistence but also some flexibility: this **transformation of advantages** is seen in several games below.

Spielmann,R - Nimzowitsch Aaron (San) (9) [B29] 1911

Black develops pressure against the hanging Pawns.

16... Ba6 17. Rac1 Rac8 18. Qb3 f6

Tension is now high: White initiates a tactical sequence to avoid losing the c-Pawn, which Black is happy to see to a conclusion.

19. Qa4 fxe5 20. dxe5 Ba3 21. Qxa3 Bxc4 22. Re4 Qd7 23. h3

23... Bd5

The hanging Pawns have vanished. Has White equalised? By no means. Black has a superior Bishop, a Queen's-side Pawn majority, and one of those odd minority Pawn formations on the King's-side which make it difficult for White to make use of his majority. There is still a lot of play in the position, and Black won.

...0-1 (42)

As well as transformation of positional advantages, you can see changes in the Pawn structure - which may be sought by both sides. One well-known sequence may transform an isolated Pawn structure to one with hanging Pawns:

Rubinstein-Nimzovich

1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.Bf4 cxd4 7.Nxd4 Bb4
(isolated pawn)

8.e3 Nf6 9.Nxc6 bxc6 (pawn island)

10.Bd3 O-O 11.O-O Bd6 12.Bg3 Bxg3 13.hxg3 c5 (hanging pawns)

The game continued:

14.Rc1 Be6 15.Qa4 Qb6 16.Qa3 c4 17.Be2 a5 18.Rfd1 Qb4 19.Rd4 Rfd8 20.
Rcd1 Rd7 21.Bf3 Rad8 22.Nb1 {?!} 22...Rb8 23.R1d2 Qxa3 24.Nxa3 Kf8 25.
e4 dxe4 26.Rxd7 Nxd7 27.Bxe4 Nc5 28.Rd4 Nxe4 29.Rxe4 Rxb2 30.Nxc4
Rb4 31.Nd6 Rxe4 32.Nxe4 Bxa2 {... 0-1}

A bit of theory

There is one general problem with Pawn moves: the creation of holes, which your opponent's pieces can occupy. Tarrasch used to say, "*Every Pawn move loosens the position*". So the first and simplest form of weakness in a Pawn formation is the **hole**.

There are four principal varieties of weak Pawn:

backward Pawn

doubled Pawns

isolated Pawn

hanging Pawns

And there is one further idea which you should know about:

Pawn islands.

Fine's comment on the title page is in his endgame book, which may give you a clue that the weakness of weak Pawns is most important in the endgame: this is true. It may also give you a clue that in the middlegame there may be some compensations for having weak Pawns: this is also true, and is the basis for Tarrasch's famous dismissal of the supposed weakness of the isolated Queen's Pawn:

"Before the endgame, the Gods have placed the middle-game."

The most miserable Pawn is the backward Pawn. There are very few compensations for having a backward Pawn. On the other hand, I have enjoyed demonstrating the positive side of hanging Pawns more than once; these are probably the least miserable of the lot. Almost any variety of weak Pawn is more miserable if it is blockaded or otherwise cannot move out of the way of an attack: this is the meaning of Fine's last warning about **blockaded Pawns**. I'll consider each type of Pawn weakness and discuss their advantages and if appropriate their compensations.

Backward Pawn.

Black has a backward Pawn at d6.

White has a potentially backward Pawn at c3.

Disadvantages of Backward Pawns:

The Pawn on d6 is exposed to attack along the d-file but can neither be supported by a friendly Pawn nor easily be moved out of the way. The square in front of it (d5) is a potential outpost for a White Knight.

Possible compensations with Backward Pawns:

They may support neighbouring Pawns which are strong: above, Black has a strong central point at e5.

Doubled Pawns

White has doubled Pawns at c3/c4 and g2/g3.

Disadvantages of Doubled Pawns:

The hindmost Pawn at c3 is effectively backward, but it is the Pawn on c4 which is most difficult to defend, as no Rook at c1 can support it.

Possible compensations with Doubled Pawns:

Doubling of Pawns should yield an open file: here the b-file might not offer much but the h-file might be worth something. Capturing towards the centre may give an extra ounce of influence over some central squares: here the d-Pawn is both supported by a Pawn at c3 while the d5 square is covered by the Pawn

at c4.

Isolated Pawn

White has an isolated Pawn at d4.

Black has an isolated Pawn on h7

Disadvantages of Isolated Pawns:

The isolated Pawn, like a backward Pawn, cannot be defended and often cannot advance easily. It is therefore weak, and the square in front of it is a potential outpost for opposing Knights.

Possible compensations with Isolated Pawns:

The Pawn may support other pieces e.g. Knight on e5, and in the example the Pawn on d4 gives extra space and mobility to White. This is not true of Black's Pawn on h7, which is only weak.

Hanging Pawns

White has hanging Pawns at c4 and d4.

Disadvantages of Hanging Pawns:

The Pawns are not quite isolated but have the same sorts of problems, for, if one advances to be supported by the other, the hindmost

Possible compensations with Hanging Pawns:

Hanging Pawns on d4 and c4 confer a space advantage, which can be nurtured for attack. An advance of one or other Pawn may open lines for the attack, or result in a Passed Pawn.

Pawn islands

White has two Pawn islands to Black's three.

Disadvantages of extra Pawn islands:

The Pawns on the edges of Pawn islands are not isolated, but they are slightly exposed. We might call them "semi-detached"; there is only one Pawn which can protect them, and only one Pawn which can protect the square in front of them. This looseness can be exploited to create more obvious weaknesses.

Possible compensations with extra Pawn islands:

Gaps between Pawn islands may be useful half-open files. I also alluded, in the Spielmann-Nimzovitch game above, to a split minority possibly being better at restraining an opponent's majority than an intact majority.

Winning against holes in the Pawn formation

Steinitz,W - Blackburne,J London, 1876

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. d3 d6 6. c3 Be7 7. h3 O-O 8. Qe2 Ne8 9. g4 b5 10. Bc2 Bb7 11. Nbd2 Qd7 12. Nf1 Nd8 13. Ne3 Ne6 14. Nf5 g6 15. Nxe7+ Qxe7

Morphy and his contemporaries would probably have been very much surprised if anybody had told him that only ten moves later White pieces would be settled permanently on f6 and h6.

16. Be3 N8g7 17. O-O-O c5 18. d4 exd4 19. cxd4 c4 20. d5 Nc7 21. Qd2 a5
22. Bd4 f6 23. Qh6 b4 24. g5 f5 25. Bf6

Here we are...!

25... Qf7 26. exf5 gxf5 27. g6 Qxg6 28. Bxg7 Qxh6+ 29. Bxh6 Rf6 30. Rhg1
+ Rg6 31. Bxf5 Kf7

[31... Rxg1 32. Rxg1+ Kh8 33. Bg7+ Kg8 34. Be5+ Kf7 35. Rg7+ Ke8 36. Rxc7]

32. Bxg6+ hxg6 33. Ng5+ Kg8 34. Rge1 1-0

Winning against a Backward Pawn

Bogoljubow, Efim - Capablanca, Jose (New York) (09) [D05] 1924

1. d4 Nf6 2. Nf3 d5 3. e3 e6 4. Bd3 c5 5. b3 Nc6 6. O-O Bd6 7. Bb2 O-O 8. Nbd2 Qe7 9. Ne5 cxd4 10. exd4 Ba3 11. Bxa3 Qxa3 12. Ndf3 Bd7 13. Nxc6 Bxc6 14. Qd2 Rac8

There is some anxiety developing about White's c-Pawn. His next move is probably a mistake.

15. c3 a6 16. Ne5 Bb5 17. f3 Bxd3 18. Nxd3 Rc7 19. Rac1 Rfc8 20. Rc2 Ne8 21. Rfc1 Nd6 22. Ne5 Qa5 23. a4

With straightforward moves Black has put a lot of pressure on the c-Pawn. His next is a little tactical finesse, which creates a double attack on two neighbouring Pawns.

23... Qb6 24. Nd3 Qxb3 25. Nc5 Qb6 26. Rb2 Qa7 27. Qe1 b6 28. Nd3 Rc4 29. a5 bxa5 30. Nc5 Nb5 31. Re2

White has been wobbling dreadfully, and finally topples.

31... Nxd4 32. cxd4 R8xc5 0-1

Winning with a Backward Pawn

Zinn - Sveshnikov, Decin [B33] 1974

1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 e5 6. Ndb5 d6

One of the most puzzling of modern variations: didn't the games on Knight outposts suggest that Black is virtually lost? Well, he is if White proceeds smoothly, exchanges all the right pieces, and Black has no counterplay.

7. Bg5 a6 8. Na3 b5 9. Bxf6 gxf6 10. Nd5

All according to plan A, but there are some differences: Black has an interesting collection of K-side pawns which may allow ...f6-f5 and ...Rg8, and White's Knight on a3 is taking no part in the struggle.

10... f5 11. Bd3 Be6 12. Qh5 Bg7 13. O-O f4 14. c3 O-O 15. Nc2 f5

Black is making maximum use of the f-pawns and White looks at least as loose as Black.

16. Ncb4 Nxb4 17. Nxb4 d5 18. exd5 Bd7 19. Bc2 Be8 20. Qe2 Kh8 21. Rad1 Qh4 22. f3 Rf6 23. Qe1 Qg5 24. Qxe5 Bd7 25. Qe7 Rg8

Black follows his pawn sacrifice with a Bishop!

26. Qxd7 Rf7

The f-pawns keep White's pieces from defending the King, and White has no answer to the vacating sacrifice ...Bd4.

0-1

Winning against Doubled Pawns

Mattison - Nimzovich (carlsbad) CHERNEV [E21] 1929

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. Nf3 Bxc3+ 5. bxc3 d6 6. Qc2 Qe7 7. Ba3 c5 8. g3 b6 9. Bg2 Bb7 10. O-O O-O 11. Nh4 Bxg2 12. Kxg2 Qb7+ 13. Kg1 Qa6 14. Qb3 Nc6 15. Rfd1 Na5

White has a problem with the front c-Pawn, which can be patched up only at the cost of creating holes. Black's Knights leap about all over the White Pawns.

16. Qb5 Qxb5 17. cxb5 Nc4 18. Bc1 a6 19. bxa6 Rxa6 20. dxc5 bxc5 21. Ng2 Nd5 22. Rd3 Rfa8 23. e4 Ne5

"The centre cannot hold..."

0-1

Winning with Doubled Pawns

Bhend, E - Hort, V (Kecsemet) [B00] 1964

1. e4 c6 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nf6 5. Nxf6+ gxf6

All a bit early to call - we observe the Pawn differences, but not much else. Black has a doubled Pawn, and an extra open file.

6. c3 Bf5 7. Nf3 e6 8. Bf4 Bd6 9. Bg3 Qc7 10. Qb3 Nd7 11. Be2 O-O-O 12. Nd2 Nb6 13. a4 a5 14. O-O Rhg8

Black's Rooks have done their duty in occupying the files: Black now executes a simple King's-side attack.

15. Rfe1 Bxg3 16. hxg3 h5 17. Bf3 Bg4 18. Be2 h4 19. gxh4

Some brisk tactics finish the job.

19... Bh3 20. Bf1 Rxcg2+ 21. Bxcg2 Rg8 22. Kf1 Rxcg2 23. Nf3 Qf4 24. Re3 Nd5 25. c4 Nxe3+ 26. Qxe3 Rg1+ 0-1

Winning against an Isolated Pawn

Lasker-Reshevsky, Nottingham 1936

Here's another isolated/hanging pawn game, showing the weakness of the pawn being turned to attack.

1. d4 d5 2. c4 dxc4 3. Nf3 Nf6 4. e3 e6 5. Bxc4 c5 6. Nc3 a6 7. O-O b5 8. Bd3 cxd4 9. exd4 Bb7 10. Bg5 Be7 11. Qe2 O-O 12. Rad1 Nbd7 13. Ne5 Nd5

Always this blockade: here it also offers desirable exchanges.

14. Bc1 Nxc3 15. bxc3 Nf6 16. a4 Qd5 17. Nf3 Rfc8 18. Bb2 Ne4 19. Rc1 Ng5

Black has developed strong pressure along the long diagonal.

20. axb5 axb5 21. Bxb5 Nxf3+ 22. gxf3 Qg5+ 0-1

One might ask:

why does the side attacking the IQP blockade the square in front of it?

and why should the side with the IQP avoid exchanges?

Simple answers: you blockade the IQP because it may advance to d5 and blow up your position, and you avoid exchanges if you have an IQP because the endings are bad for you and you might make use of the extra space to create an attack.

Winning with an Isolated Pawn

Stoltz - Thomas, Zaandamk [D40]1946

1. d4 Nf6 2. c4 e6 3. Nc3 d5 4. Nf3 c5 5. e3 Nc6 6. a3 cxd4 7. exd4 dxc4 8. Bxc4 Be7 9. O-O O-O 10. Re1 a6 11. Ba2 b5

White's advantage seems trifling - a good Rook on e1, and the move - but is rapidly converted through the characteristic d4-d5 break. White can see no tactical opportunity in particular, but a general optimism based on open lines **12. d5 exd5 13. Nxd5 Nxd5 14. Qxd5 Qd6**

[14... Bb7 15. Bg5 with a strong initiative based on his more active pieces 15... Bxg5

[or 15... Na5 16. Qf5 Bxg5 17. Nxg5 g6 18. Nxf7]

16. Nxg5 Qxd5 17. Bxd5 h6 18. Ne4]

15. Rxe7 Qxe7 16. Qxc6 Bg4 17. Be3 Rac8 18. Qd5 Rfd8 19. Qg5 Qxg5 20. Nxg5

White has secured two pieces for a rook, and his initiative endures.

20... Rd7 21. f3 Bf5 22. g4 Bd3 23. Rd1 Rcd8 24. Bb6 Bc4 25. Rxd7 Rxd7
26. Bxc4 bxc4 27. Ne4 f5 28. gxf5 Kf7 29. Ba5 Rd5 30. Bc3 h5 31. Kf2 Kg8
32. f6 1-0

Winning against Hanging Pawns

Fischer - Spassky WCh (6) [D59] 1972

1. c4 e6 2. Nf3 d5 3. d4 Nf6 4. Nc3 Be7 5. Bg5 O-O 6. e3 h6 7. Bh4 b6 8.
cxd5 Nxd5 9. Bxe7 Qxe7 10. Nxd5 exd5 11. Rc1 Be6 12. Qa4 c5 13. Qa3
Rc8 14. Bb5 a6 15. dxc5 bxc5 16. O-O Ra7 17. Be2 Nd7

Black seems to have supported his Pawns nicely, but Fischer's next three moves exploit the remaining looseness to create a new formation in which White has the better minor piece, prospects of attack, and an enduring initiative.

18. Nd4! Qf8 19. Nxe6 fxe6 20. e4! d4 21. f4 Qe7 22. e5 Rb8 23. Bc4 Kh8 24. Qh3 Nf8 25. b3 a5 26. f5 exf5 27. Rxf5 Nh7 28. Rcf1 Qd8 29. Qg3 Re7 30. h4 Rbb7 31. e6 Rbc7 32. Qe5 Qe8 33. a4 Qd8 34. R1f2 Qe8 35. R2f3 Qd8 36. Bd3 Qe8 37. Qe4 Nf6 38. Rxf6 gxf6 39. Rxf6 Kg8 40. Bc4 Kh8 41. Qf4 1-0

Winning with Hanging Pawns

Bertok - Fischer [D59] 1962

1. d4 d5 2. c4 e6 3. Nc3 Be7 4. Nf3 Nf6 5. Bg5 O-O 6. e3 h6 7. Bh4 b6 8. cxd5 Nxd5 9. Bxe7 Qxe7 10. Nxd5 exd5 11. Be2 Be6 12. O-O c5 13. dxc5?! 13... bxc5 14. Qa4 Qb7!

White is not well-placed to harass the pawns, while Fischer is making use of his own trumps - like the half-open b-file.

15. Qa3 Nd7 16. Ne1 a5 17. Nd3 c4

This is a very committal move. The b-Pawn is pinned down, the d-Pawn becomes backward, and the fourth rank becomes blocked.

18. Nf4 Rfb8 19. Rab1 ? (Nxe6) 19... Bf5 20. Rbd1 Nf6 21. Rd2 g5

White is terribly short of ideas. It's "make your mind up" time!

22. Nxd5

[22. Nh5 Ne4 23. Rc2 Qb4]

22... Nxd5 23. Bxc4 Be6 24. Rfd1? 24... Nxe3 (oops) 25. Qxe3 Bxc4 26. h4 Re8 27. Qg3 Qe7 28. b3 Be6 29. f4 g4 30. h5 Qc5+ 31. Rf2 Bf5 0-1

Winning against extra Pawn islands

Capablanca,Jose - Kupchik,Abraham (Havana) (07) [C49] 1913

1. e4 e5 2. Nf3 Nc6 3. Nc3 Nf6 4. Bb5 Bb4 5. O-O O-O 6. Bxc6 bxc6 7. Nxe5 Qe8

8. Nd3 Bxc3 9. dxc3 Qxe4

[9... Nxe4 10. Re1]

10. Re1 Qh4 11. Qf3 Ba6 12. Bf4 Rac8 13. Be5 (idea \wedge Nc5) 13... Bxd3 14. cxd3 Qg4 15. Bxf6 Qxf3 16. gxf3 gxf6

Assessment, +/-: better Pawns, fewer Pawn islands, more active pieces. The weakest spot in the Black position is the isolated a-Pawn, and it is here that an attack should be directed.

17. Re4

First, Capablanca mobilises and centralises his pieces. There is never any sense of rush when Capa plays an ending. This ease of mobilisation is a dynamic advantage to add to the static ones just listed.

17... Rfe8 18. Rae1 Re6 19. R1e3 Rce8 20. Kf1 Kf8 21. Ke2 Ke7

Now, White can attack the a-pawn.

22. Ra4 Ra8 23. Ra5

restrains the Pawns

23... d5!?

I can sympathise with the bid for space but this is not forced and has the disadvantage of leaving the c-Pawns without support - backward, although not exposed on a file. White quickly blockades the Pawns.

24. c4! Kd6

[24... dxc4 leaves all Black's Pawns isolated and most of them doubled!]

[24... d4 25. Re4 Kd6 26. b4 Re5 27. Ra6 'hopeless', said Capa]

25. c5+ Kd7 26. d4

Black's pawns have become fixed, cutting off the Queen's-side.

26... f5

Hoping to nip out to h6 with some play.

27. Rxe6! fxe6 28. f4

Clearing the third rank for a Rook

28... Kc8 29. Kd2 Kb7?!

Black has achieved a solid defence of the a-Pawn and White can achieve little else there. But White has access to both sides of the board via the third rank. [29... Rb8!? 30. Kc3

[30. b3 blocks the third rank]

[30. Kc2 Rb4 31. Kc3 Rc4+ 32. Kd3 Rb4]

30... Rb7 may have been better]

30. Ra3 Rg8 31. Rh3 Rg7

This defence from the side keeps the Black Rook more active than moving it to defend from h8, but I'm sure Black also considered ...Rg1!?, giving up a Pawn to get the Rook active. It looks a bit speculative here but is the right sort of idea to have in mind.

32. Ke2 Ka6 33. Rh6 Re7 34. Kd3 Kb7 35. h4 Kc8 36. Rh5 Kd7 37. Rg5 Rf7

Again, Black has achieved a solid, if passive, defence. White now returns his attention to the Queen's-side.

38. Kc3 Kc8 39. Kb4 Rf6 40. Ka5 Kb7 41. a4 a6 42. h5 Rh6

White is poised on both fronts but can improve the position of his pieces no further. It is time to try and force the issue.

43. b4 Rf6 44. b5!?

[44. Rg7! Rh6 first would have been better, according to Capa: 45. b5 axb5 46. axb5 cxb5

[46... Rxh5 47. b6]

47. Kxb5 e.g. 47... Rxh5 48. c6+ Kb8 49. Ka6]

44... axb5 45. axb5 Rf8

Off to sieze the a-file!

[45... Rf7 46. h6 Re7 47. Rg7 is hopeless: so Black must counterattack.]

46. Rg7 Ra8+ 47. Kb4 cxb5 48. Kxb5 Ra2

Black has gained some activity. Of course, White does not retreat and defend with Rg2.

49. c6+ Kb8 50. Rxh7

White has an h-pawn. Can the lone Black Rook do enough to compensate?

50... Rb2+ 51. Ka5 Ra2+ 52. Kb4 Rxf2 53. Re7 Rxf4?!

Natural, but not exact.

[53... Rb2+! 54. Kc3 Rh2 55. Rxe6 Ka7 56. h6 Kb6 which isn't great but Black is also fighting with the King now]

[53... Rh2? 54. Rxe6 Rxh5 55. Re5 Ka7 56. Kc5]

54. h6 Rxd4+ 55. Kb5 Rd1 56. h7

A Pawn on the seventh seems worth three in the bush! Black can only hope to harass the King with checks, but these are soon exhausted.

56... Rb1+ 57. Kc5 Rc1+ 58. Kd4 Rd1+ 59. Ke5 Re1+ 60. Kf6 Rh1 61. Re8 + Ka7 62. h8=Q Rxh8 63. Rxh8 Kb6 64. Kxe6 Kxc6 65. Kxf5 Kc5 66. Ke5 c6 67. Rh6 Kb5 68. Kd4 1-0

Winning with extra Pawn islands

This ought to work rather like the extra files in doubled Pawn positions, but damned if I could find any convincing complete games. I did dig a couple of examples out of my opening files, though:

Geller's Quiet System - Bronstein [B06] 1993

1. e4 g6 2. d4 Bg7 3. c3 d6 4. Nf3 Nf6

5. Nbd2

[5. Bd3 (best)]

5... O-O 6. Be2

[6. h3 b6 7. Bc4 e6 8. O-O Bb7 9. Qe2 c5 10. dxc5 bxc5 11. e5 dxe5 12. Nxe5 Nd5 13. Ndf3 Nd7 14. Bg5 Qc7 15. Nxd7 Qxd7 16. Rad1 Qc7 17. Rfe1 Nb6 18. Bd3 c4 19. Bc2 Nd5

Simagin-Bronstein, Moscow 1967

[0-1,44]

6... b6 7. O-O e6

(To stop e4-e5-e6 and discourage d5 in reply to the coming ...c5. Benko has in fact played 7...Bb7 without immediate harm, but this is safer)

8. Re1 Bb7 9. Bd3 c5 10. dxc5 bxc5 11. e5 dxe5 12. Nxe5 Nc6 13. Ndc4 Nxe5 14. Nxe5 Qc7

= + K/B

(Better bishops, possibilities of play on b-file, and some central influence from Pe6; moreover, the Queen's-side majority cannot really get going, as there is no real 'candidate' for promotion)

15. Qe2 Rab8 16. Bd2 Ba8 17. Nc4 Nh5 18. Be4 Bd5 19. b3 Rfd8 20. Rad1 Nf6 21. Bc2 Qb7 22. Na5 Qb6 23. Nc4 Qa6 24. Ne3 Qxe2 25. Rxe2 Bc6 26. f3 a5

Filip-Bronstein, Moscow 1967

Exeter Chess Club: Weak Squares

Chris Bellers, Exeter Chess Club

This session comes out of a remark by ex-World Champion Tigran Petrosian, to be found in an excellent book, **'Opening Preparation'** by Mark Dvoretsky and Artur Yusupov. In the middle of annotations to a game by Henrique Mecking in 1972 the authors quote Petrosian:

"Mecking does not understand the significance of weak and strong squares. I have played him three times. In 1969 he lost to me owing to the weakness of his light squares. A year later he presented me with all the dark squares and again suffered defeat. And in the San Antonio tournament of 1972, Grandmaster Mecking again let me have dark-square control, and with it - victory. What distinguishes Mecking is lively piece play, but he has no genuine grasp of the underlying nature of a position; this is what makes me have doubts about his future as a player."

So what are weak and strong squares? Generally, a weakness on squares of a particular colour usually results from exchange of a Bishop, and/or placing Pawns on the same colour squares as the Bishop. Here's another lesson Mecking failed to learn about squares.

Polugaevsky Lev - Mecking H [A11], Mar del Plata, 1971

1. c4 c6 2. Nf3 d5 3. e3 Nf6 4. Nc3 e6 5. b3 Nbd7 6. Bb2 Bd6 7. d4 O-O 8. Bd3 Re8 9. Qc2 e5 10. cxd5 cxd5 11. dxe5 Nxe5 12. Nxe5 Bxe5 13. Ne2 Qd6 14. Bxe5 Qxe5 15. O-O Bd7 16. Nd4 Rac8 17. Qe2 Qd6

18. Qb2

The Queen goes on the opposite coloured squares to the Bishop, covering the Queen's-side squares, and preparing to advance the Pawns there if opportunity allows.

18... a6 ?!

Placing a Pawn on the same colour as his Bishop.

19. Rac1 Ng4 20. Nf3 Qb6 21. Rxc8 Rxc8 22. Rc1 Nf6 23. Rxc8+ Bxc8 24. Qc3 Bd7 25. Nd4 Ne8 26. a4 !

On its way to a5.

26... Qc7

[26... a5 27. Bb5 Bxb5 28. Nxb5 and things are ready to drop.]

27. Qxc7 Nxc7 28. a5 Kf8 29. Kf1 Ke7 30. Ke2 g6 (a further weakness) 31. Kd2 Ne6 32. Nxe6

[32. Kc3]

32... fxe6 33. f4 e5 34. g3 Kd6 35. Kc3 Be6 36. Kb4 exf4

[36... d4]

37. gxf4 Bg4 38. Kc3 Bf3 39. Kd4 Bg2 40. h4 Bf3 41. b4

following the well-known endgame rule, *'do not hurry'*.

41... Bh1 42. Be2 Bg2 43. Bg4 Be4 44. Bc8 Kc7 45. Be6 Kd6 46. Bg8 h6 47. Bf7 h5 48. Be8 Bc2 49. Bf7 Be4 50. f5 !

50... Bxf5 51. Bxd5 Bc8 52. e4 Ke7 53. Ke5 g5 54. hxg5 h4 55. g6 h3 56. g7 h2 57. g8=Q h1=Q 58. Qf7+ Kd8 59. Qf8+ 1-0

Another excellent example is contained in **'Think Like a Grandmaster'** by Kotov. The game Kotov-Pilnik, Stockholm 1952 was adjourned after 41 moves:

Kotov,A - Pilnik,H (Sweden izt) (09) [D56] , 1952

1. d4 Nf6 2. c4 e6 3. Nc3 d5 4. Bg5 Be7 5. e3 O-O 6. Nf3 h6 7. Bh4 Ne4 8. Bxe7 Qxe7 9. Qc2 c6 10. Be2 Nd7 11. O-O Nef6 12. Rad1 a6 13. a3 b5 14. cxd5 cxd5 15. a4 b4 16. Na2 Rb8 17. Nc1 b3 18. Nxb3 Qb4 19. Na1 Qxb2 20. Rb1 Qxc2 21. Nxc2 Ne4

22. Bd3 Nc3 23. Rxb8 Nxb8 24. a5 Bb7 25. Ra1 Rc8 26. Kf1 Kf8 27. Nd2
 Ne4 28. Ke2 Nxd2 29. Kxd2 Rc7 30. Nb4 Ke7 31. Be2 Kd8 32. Nd3 Nd7 33.
 f4 Bc8 34. g4 Nf6 35. Bf3 Rb7 36. Kc3 Rc7+ 37. Kb3 Rb7+ 38. Nb4 Rc7 39.
 g5 hxg5 40. fxg5 Nd7 41. h4 g6

'I offer a draw,' said the Argentinian. My reply was, 'I want to play on a bit yet,' although I felt in my bones that I should win from this position. Pilnik then insisted, 'You have no advantage, except perhaps a bit more space. On the other hand my Pawns are safely guarded.' I could not resist asking him, 'Guarded by what?'

'By my Bishop,' he replied, and I could not make my mind up whether he was serious or joking. Just in case I decided not to spoil his illusions, lest he should suddenly find a way of rearranging his Pawns.

White's advantages are:

1. All of the Black Pawns are on the colour of his Bishop, restricting its mobility so much that in effect it can take no part in the game.
2. All White's pieces are mobile, while Black's are huddled together in the last two ranks.

3. Black has two significant weaknesses at a6 and f7, and by combining attacks on them White should be able to force win of material.

The correct plan is clear: after suitable preparation advance h5 and after gxf5 Bxf5 pile up winning pressure on f7.

42. Be2 Nb8 43. Nd3 Ke7 44. Ne5 Nc6 45. Kb2

planning Nxc6 and Ra1-c1, when the Bishop ending will be lost

45... Rb7+ 46. Kc3 Kd6 47. Nxc6 Rc7 48. Kd2 [Another source gives 48. Kb3] Rxc6 49. Rf1 Rc7 50. h5 gxf5 51. Bxf5

Of course, the only square from which the Black Bishop can actually defend both weak Pawns is d9!

51... Rb7(+) **52. Kc3 Rc7+** [53. Kb3 Rb7+ 54. Kc3 Rc7+ this sequence is omitted by one source] **55. Kd2 Rb7**

White wins a Pawn and the game.

56. Rxf7 Rb2+ 57. Ke1 Rg2 58. Rg7 Bd7 59. Bf3 Rh2 60. Rg8 Ke7 61. Rg7 + Kd6 62. Be2 Rh1+ 63. Kf2 Rh2+ 64. Kf3 Be8 65. g6 Rh8 66. Bxa6 e5 67. dxe5+ Kxe5 68. Bb7 Rf8+ 69. Kg3 Kf6 70. Rc7 Bxg6 71. a6 d4 72. exd4 Rg8 73. Kf2 1-0

Weak squares arise where there is a chain of Pawns on the same coloured squares, as the Pawns deprive themselves of control over the other coloured squares, and these squares become accessible to the enemy pieces. These weaknesses can be decisive if there is no Bishop defending these squares either, and is even worse if the only Bishop for that side travels on the same colour squares.

In the following position:

8/3B3P/P2K2P1/1P1P2p1/1p1k1p2/3n4/p5p1/8

Black has obvious dark square weaknesses. However, it is worth bearing in mind that this dark square weakness is a weakness of the light squares too. An attack along the dark squares involves White putting pieces on dark squares and attacking the Black pieces, which are on light squares but have nowhere to go. White wins with ease:

1. Nc5 Bc8 2. g3 (a tempo move to Zugzwang Black) **2...Bc5 3. Nxa6 Bc8 4. Nc5 Bf5 5. Nd3 Bc8** (the K and P endgame is lost) **6. Nf2 Bf5 7. Nd1 Bd7 8. Nc3 Bc6 9. a3** forces the win of a second Pawn.

An identical position arose in Karpov-Hort except that White had a Bishop, rather than a Knight on d3.

Karpov, Anatoly - Hort, Vlastimil (2), Budapest, 1973

1. e4 e6 2. d4 d5 3. Nd2 Nf6 4. e5 Nfd7 5. c3 c5 6. Bd3 Nc6 7. Ne2 Qb6 8. Nf3 cxd4 9. cxd4 f6 10. exf6 Nxf6

Bronstein commented that it is a tribute to White's defensive resourcefulness that he can hold the game - two Pawns up!

1/2-1/2

You should be aware of another possibility in some King's Indians, once the f-Pawn have moved, of playing ...Bh6, answering Bxh6 with ...Qh4+ and ...Qxh6

easing Black's game because of the weakened dark squares in the White position.

Returning to the start of this session, what of Petrosian's three games against Mecking? The first game is given in full, not only because it is a masterpiece, but because I leave it for you to work out where Mecking went wrong. The second ended as follows:

Here Mecking played 57...h4, and resigned. His Bishop is buried and the dark squares surrendered.

The third game went into the following endgame:

Petrosian (Black here) says that Mecking let him have dark square control. Often, as here, this is not the whole story. After all, the matter of four Pawn islands to Petrosian's two is relevant. However, the critical factor is the inability of White's Bishop to protect both Queen's-side Pawns, even though they are both on light squares. Black's King position also helps.

**62. Ke2 Kf4 63. h4 g5 64. hxg5 Kxg5 65. Ke3 Ng4+ 66. Kf3 h4 67. Bd1 Nf6

Exeter Chess Club: Doubled c-pawns

Is a doubled c-pawn worth a Bishop?

Peter Lane

 1. [Debbage, I - Lane, PC \(Thamesdown vs. Exeter\)](#)
 2. [Thomas, N - Lane, PC](#)
3. [Summary](#)

This is one of the great themes of the Nimzo-Indian and French Winawer. We will look at it in both contexts: First, the Nimzo-Indian.

Doubled c-pawns and the Bishop pair in the Nimzo-Indian

Spassky,B (2660) - Fischer,R (2785) (05) [E41] Wch28-Reykjavik, 1972

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. Nf3 c5 5. e3 Nc6 6. Bd3 Bxc3+

This method, developed by Huebner, forces the exchange before White can escape by castling. Black then creates a blockade on the dark squares.

7. bxc3 d6 8. e4 e5

Black tempts d4-d5.

9. d5 Ne7 10. Nh4 h6 11. f4

White tries to open up the King's-side for attack, hoping to use the Bishops.

11... Ng6!

Black exchanges White's remaining Knight, leaving White with two Bishops but in a closed position where Bishops lack scope.

Black is not tempted by [11...exf4 12. Bxf4 g5 13. e5 Ng4 14. e6! Nf6 15. Bg3 => with a strong attack]

12. Nxcg6 fxcg6 13. fxe5 dxe5 14. Be3 b6 15. O-O O-O 16. a4

Still trying to get some play.

16... a5

Another Black weakness but the last opportunity for White to develop any activity. And if White cannot or does not attack b6, it is not really weak!

17. Rb1 Bd7 18. Rb2 Rb8 19. Rbf2

Perhaps White would have been better sticking to pressure on the b-file.

19...Qe7 20. Bc2 g5 21. Bd2 Qe8 22. Be1 Qg6

Only Black can undertake anything in this position.

Impertinent note from typist: when I first came across this game as an example of weak pawns I was confused - whose pawns are supposed to be weak? The answer really is White's, because his Bishops are hemmed in, and can neither easily defend the White weaknesses nor attack the Black ones - hence the Black weakness are more apparent than real.

23. Qd3 Nh5 24. Rxf8+ Rxf8 25. Rxf8+ Kxf8

With the Rooks off White can only wait and defend.

26. Bd1 Nf4 27. Qc2??

Under pressure, White blunders.

27... Bxa4 0-1

What does our noted theoretician, Nimzovitch himself, have to say about this?

With this pawn formation White might plan c2-c3, d3-d4-d5, c3-c4, b2-b4 and c4-c5.

But here d4-d5 and c3-c4 can be met with ...b7-b6. So this formation lacks dynamism. But this dynamic weakness is counter-balanced by a static strength, as a Pawn on d4 cannot be forced to advance, being propped up by the c-Pawn. (However, adding to this we see c4 is weak and hard to defend, and the a-pawn is isolated. These factors lend Black an endgame advantage.

We can now make a few comments about Spassky's play:

Firstly, White obligingly pushed d4-d5 blocking the game, whereas any attempt by Black to exchange on d4 would open the position for the Bishop pair.

Secondly, the Knight's development on f3 impedes the push of the f-Pawn

Thirdly, the rapid blocking of the position by fxe5 and a2-a4 worked against the Bishops.

Lastly, a continued assault on b6 was needed to constrain Black's deployment in some way.

Let us consider an alternative system of development based upon the Deferred (Closed) Saemisch Variation, a sometime recommendation of Keene, and a game with an interesting strategic point.

Peter Lane - RJJ Gibbons, Exeter Vs. Kingston, 1995

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5

White loses a move playing a3 to force the chosen formation.

5. a3 Bxc3+ 6. bxc3 O-O

(too early? - DR's notes from the Express and Echo)

7. Bd3 d6 8. Ne2 e5 9. e4 Qc7

White leaves the f-pawn free to advance; Black's reply avoids the pin on g5.

10. O-O Nc6

(Black is playing normal Nimzo-Indian moves, but White's opening (with Ne2 rather than Nf3) is too dangerous for normal methods. ...Ne8 and f5 was called for - DR)

11. f4 Bg4?

[11... cxd4 12. cxd4 Nxd4 13. Nxd4 exd4 14. Bb2 Qb6 15. Qc2 and e5]

Anyone else want to call this a losing move? Note that Black threatens to exchange on e2, and take at d4. If White takes dxc5 and fxe5, c4 and e4 become vulnerable to the Knights. Otherwise White must play d5 - but doesn't this lead to a blocked position with White's Bishop ineffectual as we saw before?

12. d5! Ne7 13. f5!

Isn't the first commandment, "*Bishop like open spaces, Knights like closed positions*"? - But White controls so much of the board, can you find a good square for a Knight? Note that fxe5, "opening the position", would have been a serious error, allowing ...Nd6 and ...Ba6.

13...Nd7 (else Bg5) 14. Qe1 Bxe2 15. Bxe2 f6 16. Qh4!

Now Black sees the idea!

16...Rfd8 17. Rf3 Nf8 18. Rg3 Nc8?

Dropping a vital Pawn, but:

[18...Nd7 19.Qh6 g6 20.fxg6 hxg6 21.Rh3;

18...Kh8 19.Bh6

A) 19...g5 20.Bxg5 fxg5 21.Qxg5 Neg6 22.fxg6 Nxg6 (22...hxg6 23.Rh3+ Kg8 24. Bg4) 23.h4;

B) 19...Ng8 20.Bxg7+;

18...Kf7 19.Bh5+ g6 20.fxg6+ hxg6 (20...Nexg6 21.Rf3 Qe7 22.Bg5 Nd7 23.Raf1 anyone fancy Black?) 21.Rf3 Ng8 22.Bxg6+ Kxg6 23.Rg3+ Kf7 24.Qh5+ Ke7 25. Rg7#]

19. Qxf6 Rd7 20. Qg5 Qd8

21. Qxd8 Rxd8 22. Bg5 Rd7 23. f6 Ng6 24. Bg4 Rc7 25. Be6+ Kh8 26. Rf1 gxf6 27. Bxf6+ Rg7 28. Bxg7+ Kxg7 29. Rf7+ 1-0

The 'interesting strategic point' is that while the Knights still always require outpost squares in blocked positions, the Bishops can work around all but the

tightest blockade to find a diagonal (*unless they are required for defence of pawns attacked by active enemy Knights - DR*).

Lane, PC - Bartlett, J

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5 5. a3 Bxc3+ 6. bxc3 O-O 7. Bd3 d6 8. Ne2 e5 9. e4

9... Re8 10. Ng3 Nc6 11. d5 Ne7

[11... Na5 12. Bg5 h6 13. Bxf6 Qxf6 14. Qa4]

12. Bg5 Ng6 13. Nh5 Bg4 14. Nxf6+ gxf6 15. Bxf6 Bxd1 16. Bxd8 Rxd8 17. Rxd1 Nf4 18. Bf1!

Hanging on to the Bishop! 18... Kf8 19. g3 Nh5 20. Bh3

White went on to win: the 'bad' Bishop has a fine diagonal and the Knight has no good squares.

...1-0

The ideal structure for Black actually looks quite different to the Huebner, with f7-f5 in place of d6/e5, and an assault on e4, i.e. forget about blocking the Bishops, and instead fight for chances in a more dynamic set-up.

Doubled c-pawns and the Bishop pair in the French Winawer

Debbage, I - Lane, PC (Thamesdown vs. Exeter)

1. e4 e6 2. d4 d5 3. Nc3 Bb4 4. e5 Qd7 5. a3 Bxc3+ 6. bxc3 b6 7. Qg4 f5 8. Qg3 Ba6 9. Bxa6 Nxa6 10. Qd3?!

[10. Ne2! Nb8!? 11. Nf4 Nc6! 12. Nxe6!? "Discuss..."]

10... Nb8

[10... Qa4 prevents c4 11. Nf3 Ne7 12. Ng5 Kd7 13. h4 Nb8 14. Rg1 Nbc6 15. g4

Na5 16. Rb1 Nc4 White's King's-side counterplay is not enough: -+ Atkinson-Cooke 1965]

11. Ne2 Nc6 12. O-O Na5 13. Nf4 Nc4 14. Qe2 O-O-O 15. Nd3 h6 16. a4 a5 17. Nb2 Qc6 18. Nxc4 Qxc4 19. Qxc4 dxc4 20. f4?? Ne7 21. Rf3 Nd5

Black wins with a Queen's-side advance: the Bishop is very bad and the Knight holds sway on both sides of the board. As in the Spassky-Fischer game, the White Pawns have become blocked and an obstruction to his own pieces.

...0-1

Thomas, N - Lane, PC

1. e4 e6 2. d4 d5 3. Nc3 Bb4 4. e5 Qd7 5. Qg4 f5 6. Qh5+ Qf7 7. Qf3 b6 8. h4 Ba6 9. Bxa6 Nxa6 10. Qd3 Bxc3+ 11. bxc3

[11. Qxc3]

11... Nb8 12. Nh3 Nc6

13. c4!

makes good use of the Queen on d3

[13. Nf4 Na5 and Black has achieved a favourable blockade]

13... dxc4 14. Qxc4 Qd7

White's Bishop still has some problems, and the struggle for dominance by the minor pieces is still determined by the pawn structure, the legacy of the exchange on c3.

15. Be3 Na5 16. Qb4 Qc6 17. Nf4 Ne7 18. c4 Nxc4 19. Rc1 b5 20. Nxe6 Nd5 21. Qc5 Qxc5 22. Nxc5 Kf7

Dynamic equality: Black's knights have achieved favourable outposts but Black has not enough play on the Queen's-side for a win, given the backward c-pawn and strong White Knight. (The weak c-Pawn prevents a5-b4-a4-b3 and White managed to create play on the King's-side.)

1/2-1/2

Summary

I find that in the Winawer, White's small spatial advantage allows Black's Knights room to manoeuvre and blockade the doubled Pawns. In the Nimzo-Indian it is harder for the Knights to get to work.

The Pawns are not good or bad in themselves, only in how they determine the relative strengths of the opposing pieces.

Silman's 'Re-assess your chess' advises:

When considering an exchange of Bishop for Knight, ask yourself:

1. *is the position open or closed?*
2. *Will there be support points for the Knight(s)? and if so:*
 1. *can the Knight(s) get there?*
 2. *does it matter if they do? [i.e. are they away from the main arena of play?]*
 3. *what can you do in the meantime with the Bishop(s)?*

Exeter Chess Club:

Queen against Pawn

Not much of a contest? Well, this can be tricky if the Pawn is nearly a Queen itself - as might happen if you had a Pawn each and both were racing to promote. If your Pawn became a Queen, could you still win by stopping the opponent's Pawn? This sheet tells you how - if it can be done at all.

Case 1. Centre Pawn on the Sixth

If White can blockade the Pawn by putting the Queen or the King in front of the Pawn (say, d1) White will win, of course.

Even if the Queen and the King are both distant, White still wins.

Bring the Queen in with checks and make the Black King blockade or lose the Pawn; then bring in the King.

1. Qd5 d2 2. Kd7 Kc2 3. Qc4+ Kb1 4. Qd3+ Kc1 5. Qc3+ Kd1

Now White can move the King:

6. Ke7 Ke1 7. Qe3+ Kd1 8. Ke6...

The King creeps forward until it gets within range (Case 2)...

Case 2. Centre Pawn on the seventh

With the White King close, White wins by attacking the Pawn with the King.

1. Qc3+ Kd1 2. Ke3 Ke1 3. Qxd2+ Kf8 4. Qf2#

Case 3. Rook's Pawn on the seventh

With the White King distant, a Rook's Pawn (a-Pawn or h-Pawn) draws:

1. Qb4+ Ka1

...and White has no time to move the King closer because of stalemate.

Case 4. Knight's Pawn on the seventh

With the White King distant, b-Pawn (or g-Pawn) loses.

White wins as in case 2: there is no stalemate trap.

Case 5. Bishop's Pawn on the seventh

With the White King distant, a c-Pawn (or f-Pawn) draws:

1. Qb3+ Ka1!

...BUT...

Case 5b. Bishop's Pawn on the seventh

With White King not so distant, and on same side as the Black King, White wins (just!) by threatening mate:

1. Kc2 f1=Q 2. Qd2#

Other squares can also work: Kc1 and Ke3 in the diagram above.

63.Re1

"Draw claimed; draw agreed" says my score sheet. Thereby hangs a tale: I was the last board to finish, with two minutes to his one, and White decided I was trying to win a drawn position just on time, and claimed a draw.

I was indeed trying to win, and the clock may have helped, but White has lots of ways to lose: his last move was actually the last chance to draw!

Quite exactly why we'll see in a bit, but on the day a bit of discussion broke out amongst the audience (*yertis notisnt yertis notisnt...*) and we decided we'd had enough.

It's certainly true that some very similar positions are drawn, and are maybe even claimable under the "two minute" rule, but not this one! The interesting thing is, nobody there knew it well enough to carry the day, and I've had positions like this lots of times. If my opponent knew how to draw it he would never have played Re1; Capablanca won two positions similar to this where his opponent did not know the drawing technique in one year, 1931 (one against Turover). Moral: know your onions!

Another thing that decided me on having another crack at a session on Rook endings is, well, a bit of a tease:

"...the number of positions that must be known exactly is relatively small. It is only in Rook endgames that it is essential to memorise thirty or forty concrete positions; in other types of endgame there are even fewer."

Mark Dvoretsky in Dvoretsky & Yusupov, ***Technique for the Tournament Player***

Forty sounds quite a few to me, but, OK Mark, which forty? He doesn't say! I still don't know, really, but here is my suggestion for some of them.

One way to work your way into this is to get a chessboard and a few pieces and see if you can work out some of the basic rules for yourself. You should quickly discover that, in common with many other endings, two passed Pawns pretty well always win, and so situations with a single Pawn are most critical. Also, if both Kings are distant, one Rook can't force through a Pawn against another Rook (not like Queens, for instance).

So, we quickly get to our first two critical positions out of Dvoretsky's forty, where the Kings are in range: Lucena's position and Philidor's position. Oh, and you need to know about Rook's Pawns, and checking distance.

Position 2: Lucena 1496

White has control of the sixth/seventh with the King and the Black King is cut off: **Lucena's position** is won for White is two ways...

First, White can get the Pawn to the seventh:

1...Kc7 2.Rc2+ Kb6 3.e6 Rd1 4.Ke8 Rg1 5.e7 Rf1

Now what?

6.Rc4 the critical manoeuvre: 'BUILDING A BRIDGE'

[6.Rh2 although the 'bridge' manoeuvre is always emphasised in the books, there is also a win by getting the king out on the short side, e.g. 6...Kc7 7.Rh7 Rf2 8.Rf7 Rh2 9.Rf8 Rh7 (9...Re2 10.Kf7) 10.Rf1 Rh8+ 11.Kf7 Rh7+ 12.Kf8 Rh8+ 13.Kg7 Re8 14.Kf7 This is important because the bridge-building manoeuvre may not be available]

6...Rf2 7.Kd7 Rd2+ 8.Ke6 Re2+ 9.Kd6 Re3 10.Rb4+ Ka7 [10...Ka5 11.Rb8] 11.Rb5 Rd3+ 12.Ke6 Re3+ 13.Re5 1-0

Position 3: Philidor's position

Black's King holds the Queening square, and the Black Rook holds the sixth rank. This is **Philidor's position**, which is drawn without too much trouble by Black.

Once the White Pawn goes to the sixth, Black runs back to the first rank:

1.Kf5 Rb1 2.e6 now there is no shelter on the board from the checks

[2.Ke6 Rb6+ 3.Kd5 Rb1]

2...Rf1+ 3.Ke5 Re1+ 4.Kd6 Rd1+ 5.Kc6 Re1 1/2-1/2

Position 4: Rook's Pawns

Rook's Pawns are a strong drawing factor.

So, here, even with the Black King distant, White can force nothing.

Oddly, Black must not try to approach with the King because of Ra8-h8; instead the Black King sticks to g7/h7, and the Rook checks the White King when it approaches.

1.Kf3 Ra4 2.Ke3 Kh7 3.Kd3 Kg7 4.Kc3 Kh7 5.Kb3 Ra1 6.Kb4 Kg7 7.Kc5 Rc1 + 8.Kb6 Rb1+ 9.Kc6 Ra1 10.Kb7 Rb1+ 11.Kc7 Ra1 1/2-1/2

Position 5: Rook's Pawns

With the Pawn further back White can create trouble with the King because it can hide on e.g. a6 from check on the files (Tarrasch), but Black can then check along the ranks. Euwe and Alekhine struggled

with one of these in their 1935 match. Although we can't easily summarise the analysis of this type of position there is a summary of results possible.

If the White King is closer than the marked area, White wins: in the marked area, Black should draw.

Even further back, and we're into a lot of ifs and buts...

Position 6: checking distance

You can draw without getting Philidor's position, by checking along the ranks. With a central Pawn this is just possible as long as you take the furthest possible file: here the a-file.

1...Ra8+ 2.Kd7 Ra7+ 3.Kd6 Ra6+ 4.Kd5 Ra5+ 5.Kc6 Ra6+ 6.Kb7 Re6 1/2-1/2

Checking distance is *three empty files*.

Position 7: checking dist. (2)

The b-file (two empty files) fails by a whisker:

1...Rb8+ 2.Kd7 Rb7+ 3.Kd6 Rb8 4.Kc7 Ra8 5.Ra1! 1-0

It is popularly supposed that Q vs. R is difficult: it surely is difficult against an opponent who plays perfectly, like a computer (as GM Browne once discovered), but in actual play it may be easier. Black can be herded to the edge, when a Rook on the third (sixth) rank must keep out the White King. You can achieve positions like the following:

Position 8: Aside: Queen vs. Rook

1.Kg5

The Black Rook is shut out from the third rank, and is vulnerable to forks:

[1...Rh1 2.Qc8+ Kf7 3.Qb7+;

1...Ra6 2.Qc8+;

1...Rh2 2.Qd6+]

And if **1...Rh8 2.Kg6 Rg8+ 3.Kf6 1-0**

Position 9: Study (Lasker)

Here is an instructive study: Black to move.

A tense position: on whose side will it resolve? 5-piece Rook endings (KRP/KR) all hinge around access of the sixth and seventh ranks in front of the P by the attacking King - if it can be kept out, the defence holds, but if not...

1...Re1

[1...Rh6+ 2.e6 +-;

1...Rd1+ 2.Ke6 Kf8 (2...Kd8 3.Ra8+ Kc7 4.Ke7 Rh1 5.e6) 3.Ra8+ Kg7 4.Ke7 Rd2 5.e6 +-;

1...Rh2 2.Ra8+ Kf7 3.e6+ Kf6 4.Rf8+ Kg7 5.e7 +-]

2.Ke6 Kf8

Critical - on the other side the Black King gets in the way of checks from the Black Rook, and the White King can make a little shelter for itself behind the Pawn. When the defending king *'takes the short side'* there is no refuge for the White King.

3.Ra8+ Kg7 4.Re8 [4.Kd6 Kf7 =] 4...Ra1 5.Rd8

[5.Kd7 Ra7+ 6.Kc6 Ra6+ 7.Kb7 Ra1 =]

5...Re1 6.Re8 Ra1 = the White K is in, but has no escape from the checks! **1/2-1/2 Remember this type of draw, we'll be meeting it later.**

Position 10: Meanwhile...

Now, back in Liskeard, how do we compare? We can see that compared to the last few drawing ideas White is badly placed: the defending Rook is passive (no harassing checks) and the King threatened with mate. White must run for the short side with the King, and send the Rook away to draw:

[63.Kg1! f4 64.Re8 (64.Ra6) 64...Rb1+ 65.Kh2 Kf2 66.Ra8 f3 67.Ra2+ Ke1 68.Kg3;

Instead **63.Re1? f4!** wins for Black:

A) 64.Kg1 Kg3 65.Rc1 (65.Kf1 Rh2 66.Re8 Rh1+ 67.Ke2 f3+ 68.Kd3 Rd1+ 69.Kc2 f2) 65...f3 66.Ra1 Rh2 67. Kg1 f2+;

B) 64.Ra1 64...Kg3 **B1)** 65.Kg1 f3 66.Rc1 (66.Kf1 Rh2) 66...Rg2+ 67.Kf1 Rh2;

B2) 65.Ra8 65...Rb1+ 66.Ke2 f3+ 67.Ke3 Re1+ 68.Kd2 f2;

[63.Ke1? on the long side is an obvious no-no: 63...f4 64.Re8 Rb1+ 65.Kd2 Kf2 66.Rf8 f3 67.Kd3 Kf1 68.Ke3 Rb3+ 69.Kd2 f2 70.Rg8 Rb5]

For other positions it really depends who can get their King in first, or at all; if the side with the Pawn can keep out the defending King they can win. John Nunn has written a whole book about positions with just one Pawn on the board, so you will forgive me, I hope, if I say they are sometimes tricky. We have seen a hint of this when we looked at Rook's Pawns above. There is, however, a guiding principle:

Position 11: The rule of five

If the sum of the number of the rank on which the Pawn stands and the number of files that separate the Black King from the Pawn is five or less, then it's a draw; greater than five, it's a win. (Dvoretsky)

Here the Black King is cut off by three files = 3

The Pawn is on the third rank = 3

The sum is = 6

6 > 5, so it should be a win. But how? White keeps out the Black King and advances the Pawn; Black defends with harassing checks, this time from the front. The White Rook would be even better placed on f7, cutting the Black King off from the last rank and ready to intervene on the other side.

OK, how are we doing? Could you bear another Pawn on the board? Positions with a Pawn on each side may readily simplify to some fairly obvious simpler state, but not always...

Position 12: Lasker, 1890

draw?

1... Rb2+ 2.Ka7 Rc2 3.Rh5+ Ka4 4.Kb6 Rb2+ 5.Ka6 Rc2 6.Rh4+ got the idea? we've gained another rank 6...Ka3 7.Kb6 Rb2+ 8.Ka5 Rc2 9.Rh3+ Ka2

10.Rxh2 ! 10...Rxh2 11.c8Q 1-0

What about another Pawn on the same side? I claimed above that two passed Pawns on the board pretty well always win, and so they do. The exceptions, as we might expect, involve Rooks Pawns.

Position 13: drawn RP+NP (same side)

This is an important blockade: White, oddly, can do nothing.

Consider the drawn position with just an a-Pawn above, and now add a Pawn:

Position 14: drawn RP+NP

1...Ra5 the a-pawn is nearly there, but with a distant White King everything can (just) be held

[1...Kxg6?? 2.Rg8+]

1/2-1/2

With the Pawns further back we have another realm of headaches: White is generally better placed to manoeuvre and Black less well.

Position 15: won RP+BP

This is quite different - with the other White Pawn further away from the short side there is a skewer opportunity. once you know you can steer for this one you can win from more complex positions **1.f6+ Kf7 2.Rh8 Rxa7 3.Rh7+ 1-0**

Position 16: win with a - pawn + 2 f-pawns

1.Kd1 DIAGRAM

- (1) break the blockade
- (2) win the f-pawn
- (3) win as we know how

1...Kh7 2.Kc1 Kg7 3.Kb1 Ra3 4.Kb2 Ra4 5.Kb3 Ra1 6.Kb4 Ra2 7.Kb5 Ra1 8. Kc6 Ra5 9.Kd6 Kh7 10.Ke7 Ra6 11.Kf7 Ra4 12.Ke6

this is the critical bit: zugzwang!

12...Ra5 13.Kf6 Ra1 14.Kxf5

nearly there now

14...Ra5+ 15.Ke4 Ra4+ 16.Kd3 Ra3+ 17.Kc2 Ra2+ 18.Kb3 Ra1 19.f5 1-0

Smyslov, V - Botvinnik, M [C17] 1954

1.e4 e6 2.d4 d5 3.Nc3 Bb4 4.e5 c5 5.a3 Ba5 6.b4 cxd4 7.Nb5 Bc7 8.f4 Ne7 9.Nf3 Nbc6 10.Bd3 Bb8 11.Nbxd4 a6 12.Be3 Ba7 13.0-0 Nxd4 14.Bxd4 Bxd4+ 15.Nxd4 Qb6 16.Kh1 Bd7 17.c3 Rc8 18.Qe1 h6 19.a4 a5 20.Nb3 Qc7 21.Nc5 Bc6 22.Qf2 0-0 23.Nb3 Bd7 24.Qc5 Qxc5 25.Nxc5 Rc7 26.Nxd7 Rxd7 27.bxa5 Ra8 28.a6 bxa6 29.c4 dxc4 30.Bxc4 Rd4 31.Be2 Nd5 32.g3 Nc3 33.Bf3 Rb8 34.Ra3 Nb1 35.Ra2 Nd2 36.Rf2 Nc4 37.h4 g5 38.hxg5 hxg5 39.fxg5 Nxe5 40.Be2 Rb1+ 41.Kg2 a5 42.Rc2 Rb3 43.Rf4 Rd5 44.Re4 Kg7 45.Bh5 Ng6 46.Rg4 Re3 47.Bxg6 Kxg6 48.Rf2 Rf5 49.Rxf5 exf5 50.Rc4 Re4 51.Rc7 Rxa4 52.Ra7 Ra3

A relevant position has arisen. In the event Black won quickly:

53.Kh3? f4 54.Kh4 fxg3 55.Ra6+ Kf5 56.Rf6+ Ke4 57.Kh3 Rf3 58.Ra6 Rf5 0-1

But White did not pick the best defence! Let's try another:

Position 17: analysis of Smyslov-Botvinnik (RP+BPs)

53.Kf2 (Euwe's suggestion)

53...a4 54.Kg2 Ra1 55.Kf3 a3 56.Kg2

(56.Kf4 a2 57.Kf3 Rf1+)

56...a2 57.Kh2 Kxg5 58.Kg2 Kf6 !

(58...f4? only draws)

59.Ra5 Ke6 60.Kh2 f4 61.gxf4 f5

which we should know how to win.

(58...f4? 59.gxf4+ Kg4 60.f5 f6 61.Ra5

no zugzwang is now possible with the White Pawn on the 5th)

My faithful analyst Fritz successfully embarked on:

**62.Kg2 Kd6 63.Kh2 Kc6 64.Kg2 Kb6 65.Ra8 Kc5 66.Ra4 Kb5 67.Ra8 Kc4
68.Kh2 Kd4 69.Ra4+ Kd3 70.Kg2 Ke3 71.Kh2 Kf3 72.Ra8 Kxf4**

As you might expect, adding a *Rook's Pawn* to a Rook's Pawn doesn't make it much more promising.

Karpov An - Yusupov A [A18] Linares 51/18, 1991

**1.c4 e6 2.Nc3 Nf6 3.e4 d5 4.e5 d4 5.exf6 dxc3 6.bxc3 Qxf6 7.d4 e5 8.Nf3

47.Kf1 Ra2 48.Ke1 Ke8 49.Kd1 Kd8! 50.Rg6 c5 51.Kc1**

"There comes a point when you have to stop making your moves by common sense, and instead, after analysing a concrete path to a draw, you must force events." - AY

51...Kc7! 52.Rxg7+ Kb6 53.Rg6+ Ka7 54.Rc6

[54.Rxh6 Rxf2]

54...Rxf2 55.Rxc5 Rxf4

[55...Kxa6 may be better, except that Black would have to keep thinking carefully how to draw with time running out.]

56.Rc6 Rg4 57.Kd2 Rg5 58.Rxh6 f4 59.Ke2

Position 18: Karpov-Yusupov 1991 (RP+RP)

59...f3+

"Black has absolutely no need for this Pawn, then try not to be distracted by non-essential details (like, a 'non-essential' Pawn)" - AY

Artur has confidence because he has studied this position. GM Gurevich actually managed to lose one of these in the US Championship in 1989 (and I don't think he was the first). Miles wrote it up in NIC, commenting: "This ending is of course drawn, but the defence is not easy". Dvoretsky interjects: "No, it is very easy" - if you know what to do!

60.Kxf3 Rc5 61.Rh8

(adjourned: the game could be given up here but Karpov saw no reason not to test Yusupov's technique.)

White will attack the side away from the defending King with his own King. Black

cannot touch the Pawn with the King here, but will keep the Rook away from the opposing King for checking distance: here the c-file is best so it can check from the seventh rank.

The White Rook is passively placed which is the downfall of his winning hopes. Black draws just as he would without the a-Pawn on the board.

(N.B. With the White Rook active and the Black Rook passive White can and should win by getting the King in.)

61...Rg5 62.Ke4 Rc5 63.Kf4 Rc4+ 64.Ke5 Rc5+ 65.Ke6 Rg5 66.Kf7 Rc5!

[66...Rd5? lacks checking distance and loses 67.h6 Rd6 68.h7 Rd7+ 69.Ke6]

67.Rh7

[67.h6 Rc7+! (67...Rh5? 68.Kg7) 68.Kf6 Rc6+]

67...Kxa6 68.h6 Rc7+ 1/2-1/2

Now, adding a *Bishop's Pawn* on the same side as Rook's Pawn is a real borderline case: theoretically drawn, but quite possible to lose it if you're muddle-headed.

Marshall, F - Rubinstein, A [D32] San Sebastian (4), 1911

1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.Bg5 Be7 7.Bxe7 Ngxe7 8.e3 cxd4 9.Nxd4 Be6 10.Nxe6 fxe6 11.Qg4 Nf5 12.e4 d4 13.0-0-0 Qh4 14.Qxh4 Nxh4 15.Nb5 0-0-0 16.e5 Rhf8 17.Nd6+ Kb8 18.f4 g5 19.Bb5 gxf4 20.g3 Nf3 21.Bxc6 bxc6 22.Rhf1 fxg3 23.hxg3 Kc7 24.Ne4 Kb6 25.b4 Rf5 26.Nd6 Rff8 27.Ne4 Kb5 28.Nc5 Nxe5 29.Rxf8 Rxf8 30.Nxe6 Rf2 31.Rxd4 Rxa2 32.Nc7+ Kb6 33.Ne6 Rg2 34.Ng5 Rxg3 35.Nxh7 Kb5 36.Kc2 Nc4 37.Rd7 Ra3 38.Rb7+ Nb6 39.Nf6 Kxb4 40.Nd7 Kb5 41.Kb2 Ra4 42.Kb3 c5 43.Ne5 Rb4+ 44.Kc3 a5 45.Rb8 Ka4 46.Kc2 Nd5 47.Rc8 Kb5 48.Nd7 Rc4+ 49.Kb2 Nb6 50.Nxb6 Kxb6

Position 19: Marshall-Rubinstein 1911 (RP+BP)

This is the game that made this type of ending notorious; not the first time that it had occurred, but Rubinstein, such a master of endings and particularly Rook endings, may have fancied his chances here...

51.Kb3 Rb4+ 52.Kc3 Kb5 53.Rb8+ Ka4 54.Rc8 Rb3+ 55.Kc2 Rb5 56.Rh8 Kb4 57.Rh1 a4 58.Kb2 a3+ 59.Ka2 Ka4 60.Rc1 Ra5 61.Rb1 c4 62.Rb8 Rc5 63.Ra8+ Kb4 64.Rxa3 c3 65.Rb3+ Kc4 66.Rb8

[Dr. Dave](#)

Exeter Chess Club:

Capablanca,J - Janowsky,D [C48] New York INT (3), 1913

This game was discussed at Exeter Chess Club training sessions on 13th/20th October 1998. The notes are based on those of Irving Chernev (Capablanca's 60 Best Chess Endings (OUP)) and liberally supplemented by comments and questions of the group, led by Tony Dempsey.

1.e4 e5 2.Nf3 Nc6 3.Nc3 Nf6 4.Bb5

Less experienced players are likely to be more comfortable in the open positions that arise after 4. d4, the Scotch Four Knights Game.

4...a6

The challenge to the Bishop, routine on move 3 of a Ruy Lopez, is here rather dubious. White has more than one way to maintain an advantage. Preference should be given to one of the alternatives:

[4...Bb4 is the reliable main line 5.0-0 0-0 6.d3 d6 7.Bg5 threatening Nd5 7...Bxc3 Defending against the threat; as ever, Black must be wary of maintaining symmetry for long. 8.bxc3 Black now unpins (the Metger unpin) 8...Qe7 9.Re1 Nd8 10.d4 Ne6 11.Bc1 is preferable and recommended by theory (11. Bh4?! is dubious due to the sensitivity of the f4 square. 11...Nf4 12.Nd2 Kh8 13.Bf1 Kamsky-Timman, 1991) 11...c5 12.Bf1

Most of you may be scratching your heads wondering what White is up to. According to theory the position is fairly balanced with both sides having opportunities for active play. But how confident would you be about handling White's position in practice? Do you close the centre with d4-d5, exchange with dxe5 or maintain the tension? How do you activate your Rooks and Bishops? Are those queen's-side Pawns going to be liabilities?;

4...Bc5 unusual 5.0-0 0-0 6.Nxe5 Nxe5 7.d4 Bd6 8.f4 Nc6 9.e5 with unclear complications 9...a6 10.Be2 Bb4 11.d5 Bc5+ 12.Kh1 Nxd5 13.Nxd5 d6 14.Bd3 dxe5 15.fxe5 Nxe5 16.Bxh7+ Kxh7 17.Qh5+ Kg8 18.Qxe5 Bd6 19.Qh5 f6 20.Bf4 Be6 21.Rad1 Bf7 22.Qf3 Bxf4 23.Nxf4 Qc8 24.Nd5 Bxd5 25.Qxd5+ Rf7 26.Rd3 c6 27.Qh5 Re7 28.Rh3 Qf8 29.Qh8+ Kf7 30.Rg3 Ke8 31.Rd1 g5 32.Qh5+ Qf7 33.Qh8+ Qf8 34.Qh5+ Qf7 35.Qh8+ Qf8 36.Rh3 Rg7 37.Re3+ 1-0 Short Nigel D-Adams Michael/Ch England (play-off), England 1992;

4...Nd4 Rubinstein's dynamic move]

5.Bxc6 dxc6 6.0-0

Capablanca characteristically opts for a quieter, more positional, approach to the position, one in which is however sufficient to retain some advantage.

[After 6.Nxe5! Black maintains material equality with 6...Nxe4 7.Nxe4 Qd4 8.0-0 Qxe5 but after 9.Re1 Be6 10.d4

Black's uncastled King and lack of development portend a winter of discontent

A) 10...Qf5 has been tried several times 11.Bg5 is natural, continuing development while preventing castling 11...Bd6 (11...h6!? 12.Qd3! and White's initiative persists) 12.Qd2 h6 (12...0-0? 13.Nxd6 cxd6

14.Be7) 13.Bh4 g5 14.Nxd6+! cxd6 15.Bg3 White enjoyed a clear plus in Yudasin-Sagalchik, Kemerov 1995;

B) 10...Qd5 was tried, but after 11.Ng5 (11.Bg5 plays for an attack on the King 11...Kd7 (idea ...Re8) 12.Rc1!? intending c2-c4 (Nunn)) 11...0-0-0 12.Nxe6 fxe6 13.Qg4 Qxd4 14.Qxe6+ Qd7 15.Qxd7+ Rxd7 16.Re8+ Rd8 17.Rxd8+ Kxd8 18.b3 Bc5 19.Bb2 Rf8 20.Rd1+ Kc8 21.Rd2 the resultant endgame, typical of the Ruy Lopez Exchange Variation, was better for White, there being no compensation for the doubled c-Pawns.; 6.d3 is possible refinement of White's plan, keeping open the option of castling long.]

6...Bg4 7.h3 Bh5

[7...Bxf3 submissive relinquishment of the Bishop pair hardly comes into the question, certainly for a two-Bishop man like Janowsky. 8.Qxf3 White would calmly prepare the pawn break f2-f4 as in the game.]

8.Qe2

[8.g4 "Winning the e-Pawn" with 8...Nxf4 (8...Bg6 9.Nxe5 does merit consideration, as the extra Pawn appears to outweigh the loosening of the castled King's defences, but Janowsky would undoubtedly have sacrificed a piece for two Pawns) 9.hxg4 Bxf4 Janowsky would be in his element pursuing the initiative against the exposed White King.]

8...Bd6 9.d3 Qe7

How should White proceed?

10.Nd1!

Once familiar with the Metger unpin manoeuvre, the purpose of this slightly surprising move will be quite clear. As the position is going to remain closed for some time yet, Capablanca needn't be in a hurry to develop the queen's-side, particularly when it is not yet clear where they belong.

[10.Bg5 attracted some support on the night, but, as usual, it is inadvisable to pin the opponent's King's Knight when we have castled but our opponent has not. In the absence of a threat to capture, the Bishop sortie would merely provoke ...h6 and ...g5-g4, with an initiative for Black against the White King.;

10.Be3 was also suggested. But what is the plan? A future d3-d4 might prove double-edged, opening the position for the Black Bishops and Rooks. Black might restrain the advance with ...c6-c5: although the d6 Bishop looks none too attractive, White has still to solve the problem of the pin on the Nf3.]

10...0-0-0

Janowsky optimistically seeks to hold on to the Bishop pair, but to no avail.

[10...Nd7 was proposed by Lasker to seek counterplay 11.Ne3 Bxf3 12.Qxf3 g6 with the idea of ...f7-f5]

11.Ne3 Bg6 12.Nh4 Rhg8 anticipating the attack on g7 by a Knight on f5

13.Nef5 Qe6

14.f4!

The tactical threat is 15. Nxd6+ Qxd6 16. f5 Bh5 17. g4 and Black's once-proud Bishop is caught in a Noah's Ark Trap. The strategical idea is to open the f-file, when White will have no doubt where the Rooks are headed.

14...Bxf5 15.Nxf5 exf4 16.Bxf4 Bc5+ 17.Be3 Bf8

The Bishop is passively placed but plays an important role in shoring up the King's-side. Capa elects to exchange it off.

18.Qf2 Rd7 19.Bc5 Bxc5 20.Qxc5

threat Qc5-a7-a8+

20...Kb8

The Pawn position is in White's favour, and he plans to turn it to account like this:

(a) to double Rooks on the f-file to induce the inevitable advance ...f7-f6;

(b) to exchange Queens and Knights,

(c) to advance the g-Pawn to g5, eliminate the f-Pawn and create a passed White e-Pawn. [If Black recaptures with the Pawn on f6, he will then acquire a permanent weakness; this minority attack by White has a subtle sting]

(d) then - well, the rest is a matter of endgame technique, which, even then, Capablanca had at his fingertips.

21.Rf2

idea Ra1-f1 and Nxc7!, winning a Pawn

21...Ne8 22.Raf1 f6

sooner or later this move had to be made

[22...Qxa2? 23.Ne7 Rh8 24.Rxf7 lets the enemy into camp]

23.b3 Nd6 24.Rf4

Black now faces a critical decision - to stay in a middlegame or exchange into an ending. It's not unusual for errors to be made at this key moment...

24...Nxf5?

Janowsky undoubtedly recognised that he stood worse, but evidently felt he would be less badly off in the double-Rook ending, underestimating White's chances. Moral: studying the ending improves your handling of the middlegame. Recommended reading: MEDNIS, From the Middlegame to the Endgame.

25.Qxf5 Qxf5 26.Rxf5 Re8

White has several advantages (active Rf5, pressure on f6, potentially more active King which will run to e3 supporting the central Pawns). Black's Rooks are hampered by being defensive. [The activity of the Rooks is key in these endgames.]

The hobbled c-Pawns cannot be easily dissolved since ...b6 is met by b3-b4. Capa plans to create a passed e-pawn, which will be his winning trump. He will move the King to e3, advance the g-Pawn, and then advance the central Pawns. He will do this while restraining any attempt by Black to become active on the queen's-side.

27.g4!

The first step in the process. Note that with Queens still on the board, the minority attack would involve the liquidation of the White King's Pawn cover. This would probably mean that another plan would have to be found for White, unless the King could first be separated over to the Queen's-side. This same strategy - the minority attack - is also seen in the Queen's Gambit Exchange Variation. There the White b-Pawn advances to strike a target at c6. Black's preferred response would be a minority attack with ...f7-f5-f4, though, due to the positioning of the minor pieces, this is difficult to achieve.

The Tao of Potboilers - R D Keene.

27...b6

hoping for something like ...c5, ...Kb7-c6, ...b5 and ...c4, liquidating the doubled Pawns and empowering the Rooks.

28.b4! Stopping any undoubling of the Pawns. Capablanca must expose his Pawns trying to restrain Black, and could make this move only after carefully calculating that this looseness could not be exploited. **28...Kb7 29.Kf2 b5** Planning now to open the a-file. **30.a4! Rd4**

[30...bxa4 31.Ra1]

31.Rb1 What's this? The White Rook forced to be passive? Back at move 28 this is what White had to calculate: that, temporarily, White drops the Rook back, so the Black Rook can next be expelled, and the White Rook returned to active duty.

31...Re5 32.Ke3 Rd7

[32...Rxf5 33.gxf5 Rd7 34.d4 and White is winning]

33.a5!

fixes Black's Pawns on the Queen's-side, and lets White concentrate on the King's-side.

33...Re6

34.Rbf1

"I'm back!". Recommended reading for Black: The Book of Common Prayer.

34...Rde7 35.g5 fxe5

[35...Rf7 36.d4 with Rf1-f4 and e4-e5]

36.Rxe5

Capablanca says at this point that his chances of winning are excellent. He cites these advantages:

- (a) he has a passed Pawn;
- (b) his King position is ideal, eyeing d4, c5 and the King's-side
- (c) his Rook commands the only open file.

36...Rh6 37.Rg3 Rhe6

restraining d3-d4

[52...Rh4 53.Kc3 Rh3+ 54.Kb2 Rh4 55.c3 Rh2+ 56.Kb3]

53.bxc5 Ra3 54.d5 1-0

[54.d5 Rxa5 55.Rf7+ Kd8 56.c6 b4 57.Rf8+ Ke7 58.d6+! cxd6 (58...Kxf8 59.dxc7) 59.c7 winning]

"*Capablanca's play was beyond reproach, and he executed his plan in a very able manner.*" said Lasker. It is also important to note that Black's unsuccessful attempt to generate play on the queen's-side in the end left an embarrassing set of weaknesses - c5,c6,a6 - each of which played its own role in his demise. Could Janowsky have improved his defence around moves 27-29?

1-0

 8. [Marshall-Capablanca, 1909](#)
 9. [Democrito - DrDave: EICS rated blitz game EICS, Aarhus, Denmark \(-\), 1997](#)
-

Target 100: winning from drawn endgame positions.

Two observations:

1.

When you look at the games of club players, you often see draws agreed in positions which are clearly better for one side, e.g.:

Blackmore - Isaac (116) (3), 1995

Black to move

Move chosen: draw agreed

Better move(s): 33...c4

Commentary:

Black has generally better pieces and two Bishops, while White has little play. If you look around the position there are lots of little ideas for Black (...Rb3, ...Be2) and few for White. The pawn move suggested gives the Black Knight a superb post and releases the Bishop on e7. I don't mean to pick on Mark, I've done the same myself (more than once!), but the point must be made.

2.

When you read books about Capablanca, you read comments like:

"Whether this advantage is decisive or not does not interest Capablanca. He simply wins the ending! That's why he is Capablanca!" -- EUWE

Can we become more like Capablanca?

Most people would say no, because Capa is a genius, with almost faultless insight into the theory of endgames. But you don't need to be a genius to win drawn endgames. Have a look at this one from

"Chess for Tigers":

Miles,AJ - Webb,S (Birmingham) 1975

(wKg2,Qd4,Rb1,d1,Pa2,f2,g3,h2; bKg7,Qf5,Rc8,f7,Pa7,f6,g6,h7)

Webb was surprised and I guess a little peeved that Miles refused a draw in this position.

23... Rc2 24. a3 Qc5 25. Rb3 Qxd4?

Simplifying but going on the defensive - a needless concession.

[25... Re7]

[25... Rc7 26. Rf3 Qc6]

26. Rxd4 Re7 27. Ra4 Kf7 28. Ra6

White has contrived a little threat, which costs nothing, and Black might be careless...

28... Rce2 29. Rb4

[29. Rf3 R2e6]

29... Rd7 30. Rba4 Ree7 31. g4! h5?

Creating targets on the King's-side - another concession. Holding tight would have allowed a weakened square on f6 but White has no way through.

[31... Kg7 32. h4 Kf7 33. g5 fxg5 34. hxg5 Kg7 35. Rf6]

32. gxh5 gxh5 33. R4a5 Kg6 34. h4

Now, this is probably still drawn, but Black has slipped a long way back since the first diagram.

34... Rc7? Careless.

[34... Rf7]

35. Rg5+ Kf7 36. Rxh5 Kg7

Now it's lost. The technical phase may give White problems, but that's not the point: Black should never have lost the Pawn.

37. Rf5 Rf7 38. Kg3 Rc3+ 39. f3 Rc1 40. Rfa5 Rcc7 41. Kg4 Rc4+ 42. f4 Rcc7 43. Kf5 Rb7 44. a4 Rbc7 45. h5 Rb7 46. h6+ Kxh6 47. Rxf6+ Kg7 48. Rxf7+ Kxf7 49. Ra6 Rc7 50. Kg5 Kg7 51. f5 Rd7

52. a5 Rc7 53. Rd6 Kf8 54. Rd8+ Ke7 55. Rh8 Kd6 56. Kg6 Rc1 57. Ra8 Ke5 58. Re8+ Kf4 59. f6 Rg1+ 60. Kf7 Ra1 61. Kg7 Kf5 62. f7 Rg1+ 63. Kf8 Kg6 64. Re6+ 1-0

What's going on here? It's not chess theory or insight, but psychology.

White was playing as though he was going to win. He kept trying to put pressure on the opponent, collecting little advantages, looking for opportunities.

Black was playing as though he was trying to draw. In fact, he tried and failed. He kept solid, but passive, and kept making little concessions - and the biggest concession really was his attitude.

Black should have been playing much more assertively, not thinking about the result, but the position, trying to play the strongest and most active moves, making concessions only when forced to. In fact, it is said in truth that the best way to draw is to play for a win. Not in a reckless way that Tarrasch wryly termed "playing for the loss", but rather like Miles did - keep playing actively - and not like Webb did - don't give an inch that you aren't forced to.

Once we have realised this, we can see it in other games:

Cooper - Hebden (Lutterworth) 1986

(wKg1,Qf4,Rf2,Pa2,b2,g2,h2; bKg8,Qe6,Rf8,Pa7,f7,g7,h6)

Completely drawn, but probably so is the starting position of a game of chess! You must play actively, make the most of your assets, and set your opponent problems. White has a Queen's-side majority, which must be advanced. Black must advance his majority on the King's-side.

1. b3 Rd8 2. Qf3 Rc8 3. g3 Rc1+ 4. Kg2 Re1 5. Qa8+ Kh7 6. Qf3

[6. Qxa7 Qe4+]

6... Kg6 7. Qd3+ f5 8. Qf3

White is just hacking about, perhaps thinking vaguely about perpetual check, waiting for the draw to turn up. These hopeful checks are actually time-wasters, and hope gradually fades...

8... Re3 9. Qb7 Kh7 10. Rf3 Re1 11. Rf2 h5 12. Qf3 g6 13. Qb7+ Kh6 14. Qf3

Black is making progress, White none. Compare the first diagram!

14... Re4 15. Qc3 g5 16. Qh8+ Kg6 17. Qc3 Qd5 18. Kg1 h4 19. Qd2 Rd4 20. Qe2 Rd1+ 21. Rf1 Qd4
+

White is almost lost.

22. Kh1

[22. Qf2 Qxf2+ 23. Kxf2 Rd2+ loses a Pawn, but that may have been the best chance.]

22... Qd5+ 23. Kg1 Rd2

Winning? White must go for perpetual, Black must make a break for the Queen's-side.

24. Qe8+ Kg7 25. Qe7+ Kh6 26. Qf6+ Kh5 27. Qh8+ Kg4 28. Rf4+ gxf4 29. Qxh4+ Kf3 30. Qxf4+ Ke2 31. Qf1+ Ke3 32. Qf4+ Kd3 0-1

And, if you will forgive the immodesty, once you have seen this done, you can even imitate it.

Wilcox, RJ (154) - Regis, D (168) (Paignton #3) 1996

I did have the advantage earlier, but was now struggling to draw.

40. b4 Re4

Time control, and I offered a draw. Declined! So, Black must fight like fury. Activity is everything, going passive is equivalent to resigning.

41. b5

[41. Rf1]

41... Qd3 42. Qa2

I had to seal a move here. While I was fiddling with envelopes, Peter overheard him say to a friend of his "*I should win this won pretty quickly*" (!). Black is genuinely in difficulty (once that Pawn takes another step, Black can start to worry!) But Black has the move.

42... Re2 (Sealed)

43. Qa8+?

This "hopeful check" actually just exposes the Rook.

43...Kh7 44. Rf1 Re7

White obviously hoped Rf1 was strong; he and his colleagues had overlooked Black's best reply. This can be seen as a simple oversight, but also as reward for Black using his pieces as actively as possible.

45. Qf3 Qxb5 46. Qf6=

OK, we have have now a new phase. This is objectively a drawn position, I believe. I thought this at the time, but was happy to play on, knowing that White had to adjust his mood to suit the new situation. I had the example of the Miles-Webb game very much in my mind while playing.

46...Qe2 47. Ra1 Qe6! 48. Qd4

[48. Qxe6 fxe6 obtaining a passed Pawn is very much what I hoped for]

48... Qe5!? (bluff)

49. Qa4?

[49. Qxe5 Rxe5 50. Ra7= is absolutely level. Normally you try to keep pieces on when trying to draw, but while Black has an extra Pawn, with Pawns on only one side, it's a draw. White should have known this.]

49... Qd5 50. Rf1?

Passive. *[50. Rd1]*

50... Re2 51. Rg1 Re3 52. Kh2 Qe5+ 53. Kh1

[53. g3 Re2+ 54. Rg2 Rxe2+ 55. Kxe2 Qe2+ 56. Kg1 Qf3 57. Kh2 Qf2+ 58. Kh1 Qxe3-+]

53... Qf5 54. Qa2 h4

Collecting another advantage (weak g-Pawn, maybe a passed f-Pawn if White exchanges g- for h-Pawn).

[54... Rc3 55. Qe2 Rc2]

55. Qd2?

Another do-nothing move, and this time it's fatal. The position is still interesting and may be no more than drawn, but I hope you can see the same attitudes at work here.

55... Qe4 56. Qf2 Rxe3# 0-1

A couple from Capa: the first is the game about which Euwe made his remark.

Capablanca, Jose - Vidmar, Milan sr [New York] (12) [C98] 1927

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. O-O Be7 6. Re1 b5 7. Bb3 d6 8. c3 Na5 9. Bc2 c5 10. d4 Qc7 11. Nbd2 O-O 12. h3

These days played before d2-d4, otherwise a fairly typical Lopez position.

12... Nc6 13. d5 Nd8 14. a4

A typical undermining thrust in the Ruy Lopez; Black's Pawns offer a target for White and counterplay for Black!

14... b4 15. Nc4 a5

16. Nfxe5! Ba6 17. Bb3 dxe5 18. d6 Bxd6 19. Qxd6 Qxd6 20. Nxd6 Nb7 21. Nxb7 Bxb7

White has the two Bishops and pressure against Black's advanced but rather immobile Queen's-side Pawns.

"Whether this advantage is decisive or not does not interest Capablanca. He simply wins the ending! That's why he is Capablanca!" -- EUWE

22. cxb4 cxb4 23. f3 Rfd8 24. Be3 h6 25. Red1 Bc6 26. Rac1 Be8 27. Kf2

KUFTE - "King Up For The Ending"!

27... Rxd1 28. Rxd1 Rc8

Poor Black's Rook has no entry point, as the unmoved White Pawn on b2 secures the c3 square. This is a concrete example of Tarrasch's statement that every Pawn move loosens the position.

29. g4 Bd7 30. Bb6

Decisive. Now there are a couple of exchanges, which leave only White's best piece (Bb6) and Black's worst piece (Nf6) on the board! 30... Be6

[30... Ra8 31. Bc7 snookering the Rook [31. Rc1 and Rc5]]

31. Bxe6 fxe6 32. Rd8+ Rxd8 33. Bxd8 Nd7 34. Bxa5 Nc5

35. b3 Nxb3 36. Bxb4 Nd4 37. a5 1-0

Capa seemed born with this facility at endgames.

Capablanca, Jose - Corzo y Principe, Juan (Havana m) (09) [A83] 1901

1. d4

This is the ninth game of the match for the Cuban Championship, which Capa played at the age of 12. He took 24 minutes over this game.

1... f5 2. e4 fxe4 3. Nc3 Nf6 4. Bg5 c6 5. Bxf6 exf6 6. Nxe4 d5 7. Ng3 Qe7+ 8. Qe2 Qxe2+ 9. Bxe2 Bd6 10. Nf3 O-O 11. O-O Bg4 12. h3

Black could try to play for a win with the two Bishops, but instead exchanges apparently seeking a draw.

12... Bxf3 13. Bxf3 Bxg3 14. fxg3 Nd7 15. Rfe1 Rae8 16. Kf1 f5 17. Rxe8 Rxe8 18. Re1 Rxe1+ 19. Kxe1 Nf6

20. Kd2 (tempting...) Ne4+ 21. Ke3 Nd6

[21... Nxc3 22. Kf4 Ne4

[22... Nf1 23. Be2 Nd2 24. Kxf5]

23. Kxf5]

22. Be2 Kf7 23. Kf4 Kf6

Chernev comments "*The position may look drawish, but it is to Capablanca's liking; he often manages to squeeze a win out of a theoretical draw*". I haven't seen a GM assessment of this position and Chernev (by no means a weak player) does not commit himself as to the 'proper' result of this endgame. Without wishing to enter the (possibly fruitless) debate about whether this position is in fact drawn, White does have the advantage of Bishop over Knight, with play on both sides of the board. If White can create tension in more than one area of the board, Black's Knight will find itself over-committed. While all the Black Pawns are on the board and are all on light squares, White's Bishop lacks scope, but if things open up a little, the Black Pawns may become vulnerable.

24. h4 g6

[24... h6 25. h5]

25. g4 h6 26. g5+ hxc5+ 27. hxc5+ Ke7 28. g4 fxg4 29. Bd3

Now the King's-side has opened up the strength of the Bishop begins to show itself.

29... Nf5

concedes a passed Pawn

[29... Kf7 (Hooper) 30. Kxg4 Nb5 31. c3 Nc7 "with good drawing chances"; neither Bishop nor King have an obvious entry point.]

30. Kxg4 Nxd4

[30... Ke6 31. Bxf5+ gxf5+ 32. Kf4 and who has the most tempi to lose on the Queen's-side? Chernev assumes Black will run out of moves, but it's worth being sure! Perhaps..

32... a5

[32...b6 33. b4 a6

[33... a5 34. bxa5 bxa5 35. a4]

34. a4 a5 35. bxa5 bxa5 36. c3]

47. Be2 Ng7 48. Kd5 Ne8

[48... Kd7 49. Bg4+]

49. Kc6 Ng7 50. Kb7 Kd6

White attacks the Pawn chain at the base!

51. Kxa7 Kc7 52. Ka6 Ne8 53. Bf3 Ng7 54. Bd5 Ne8

[54... Nf5 55. Be4 Ng7 56. Kb5 Ne8 57. a5 Nd6+ 58. Ka6 Nxe4 59. axb6+ Kb8 60. g7 Nf6 61. Kb5 Kb7 62. Kxc5 Ng8 63. Kxd4]

55. Bf7 Ng7 56. Kb5

Now the White King covers the break at a5, and the Pawns at b6 and d5. **56... Nf5**

57. a5 Nd6+

[57... bxa5 58. Kxc5]

58. Ka6 bxa5

[58... Nf5 59. axb6+ Kb8 60. Kb5]

59. g7 1-0

Two last examples, which illustrate the same problem, although at rather different levels of the game...

Marshall-Capablanca, 1909

1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.g3 Be6 7.Bg2 Be7 8.O-O Nf6 9.Bg5 Ne4 10.Bxe7 Qxe7 11.Ne5 Nxd4 12.Nxe4 dxe4 13.e3 Nf3+ 14.Nxf3 exf3 15.Qxf3 O-O 16.Rfc1

"He should have advanced his K-side pawns at once to counterbalance the advance of Black on the Q-side. White's inactivity on his stronger wing took away all the chances he had of drawing the game."
 CAPABLANCA

16...Rab8 17.Qe4 Qc7 18.Rc3 b5 19.a3 c4 20.Bf3 Rfd8 21.Rd1 Rxd1+ 22.Bxd1 Rd8 23.Bf3 g6 24. Qc6 Qe5 25.Qe4 Qxe4 26.Bxe4 Rd1+ {!} 27.Kg2 a5 28.Rc2 b4 29.axb4 axb4 30.Bf3 Rb1 31.Be2 b3 32.Rd2 Rc1 33.Bd1 c3 34.bxc3 b2 35.Rxb2 Rxd1 36.Rc2 Bf5 37.Rb2 Rc1 38.Rb3 Be4+ 39.Kh3 Rc2 40.f4 h5 41.g4 hxg4+ 42.Kxg4 Rxh2 43.Rb4 f5+ 44.Kg3 Re2 45.Rc4 Rxe3+ 46.Kh4 Kg7 47.Rc7+ Kf6 48.Rd7 Bg2 49.Rd6+ Kg7 0-1

There are some bones to pick in the details of this game, but the flow of it is very convincing. I believe that it is helpful to play over the whole of games like this quite quickly to start with, and then go back over the moves more slowly. Knowing what happens later can help you unpick the thread of the game to the point where a mistake was made, although here Capa points his finger firmly at the move of the King's Rook to defend the King's-side.

Democrito - DrDave: EICS rated blitz game EICS, Aarhus, Denmark (-), 1997

1. e4 e5 2. Nf3 Nc6 3. Bb5 Bc5 4. Nc3 Nf6 5. d3 O-O 6. O-O d6 7. Bg5 h6 8. Bxf6 Qxf6 9. Nd5 Qd8 10. c3 a6 11. Ba4 b5 12. Bc2 Ne7 13. Ne3 f5 14. exf5 Nxf5 15. Nxf5 Bxf5 16. d4 Bxc2 17. Qxc2 exd4 18. Nxd4 Qf6 19. Rad1 Rae8 20. Rfe1 d5 21. Qd2 Bd6 22. Nf3 c6 23. Qd4 Qxd4 24. Nxd4 Rxe1+ 25. Rxe1 c5 26. Nf3 Kf7 27. Ne5+ Bxe5 28. Rxe5 Rd8

Very much analogous, I think. Black can create a passed Pawn straight away, but I would advise White to try and create trouble or at least force some exchanges with f2-f4, Kg1-f2, g2-g4 and so on. Instead, my opponent plays "safe", which is actually fatal!

29. Kf1?! Kf6 30. Re2?

That Rook was fine where it was.

30...d4 31. cxd4 cxd4 32. f3?

Again, merely solid, not active.

[Dr. Dave](#)

Exeter Chess Club: The Queen's-side attack

The King's-side attack is so exciting and pleasurable that it is sometime hard to remember that games can be won on the other side of the board. I can remember some youthful indignation when playing against the French Defence, when my ambitions on the King's-side came to nothing, while my opponent's pussyfooting manoeuvres snuck in for a touchdown on the neglected Queen's-side.

What is there to aim for in a queen-side attack? The aim is not mate, but to win or weaken the opponent's pawns on that side. Queen's-side attacks are more modest but more safe than attacking the King's-side, and, because there is no requirement to mate, may endure after an exchange of Queens.

One of the most familiar, although rather difficult, Queen's-side attacks is the minority attack, often seen in the Queen's Gambit (Exchange variation), when the pawn structure invites it. There are two examples below, but I have started some examples of Queen's-side attacks in symmetrical positions from Capablanca and Alekhine, and close with a splendid tactical coup from Garry Kasparov.

Contents

1. [Capablanca,Jose - Alekhine,Alexander \(1\) \[D30\] the queen's-side attack: \(St Petersburg \), 1913](#)

Smyslov, Vasily V - Keres, Paul (Moscow Wch) (17) [D51] The queen's-side attack: minority attack, 1948

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 c6 5. e3 Nbd7 6. cxd5 exd5 7. Bd3 Be7 8. Nf3 O-O 9. Qc2 Re8 10. O-O Nf8

The classic starting-point for a minority attack. Black has a majority of Pawns on the Queen's-side but no open file; the half-open c-file means that White can attack there more easily than Black! White is not obliged to go in for the minority attack, but it is a good way to play for a win.

11. Rab1 Ng6 12. b4

The characteristic manoeuvre of the minority attack.

12... Bd6 13. b5 Bd7 14. bxc6 Bxc6 15. Qb3 Be7 16. Bxf6 Bxf6 17. Bb5 Qd6 18. Rfc1 h5 19. Ne2 h4 20. Bxc6 bxc6 21. Qa4 Ne7

White's attack has yielded a weak pawn to aim at, while Black's King's-side feint has yet to produce fruit.

22. Rb7

Some commentators suggested this may be inaccurate, but that is what open files are for

22... a5 23. h3 Reb8 24. Rcb1 Rxb7 25. Rxb7 c5

Black must try this move before White can gang up on the pawn

26. Rb5 cxd4 27. Nexd4

the weakness on c6 has vanished, but there is a new weakness on d5 and the a5 pawn is still under threat

27... Rc8 28. Nb3 Bc3 29. Qxh4 Rc4 30. g4 a4 31. Nbd4 Bxd4 32. Nxd4 Qe5 33. Nf3 Qd6 34. Ra5 Rc8 35. Rxa4 Ng6 36. Qh5 Qf6 37. Qf5 Qc6 38. Ra7 Rf8 39. Rd7 d4 40. Rxd4 Ra8 41. a4

1-0

Alekhine, Alexander - Euwe, Max (Amsterdam) (2) [D17] the queen's-side attack: minority attack, 1935

1. d4 d5 2. c4 c6 3. Nf3 Nf6 4. Nc3 dxc4 5. a4 Bf5 6. Ne5 Nbd7 7. Nxc4 Qc7 8. g3 e5 9. dxe5 Nxe5 10. Bf4 Nfd7 11. Bg2 Be6 12. Nxe5 Nxe5 13. O-O Be7 14. Qc2 Rd8 15. Rfd1 O-O 16. Nb5 Rxd1+ 17. Rxd1 Qa5 18. Nd4 Bc8

Black's Queen's side majority is a potential asset but because it cannot yet be advanced it is mostly a target.

19. b4

Alekhine is always tactically alert

19... Qc7

[19... Qxb4/19...Bxb4 drop the Ne5]

20. b5 c5 21. Nf5 f6 22. Ne3 Be6 23. Bd5

Although the c-Pawn is passed Black's pawns are blocked and awkward. With the disappearance of Black's good bishop White's pieces start to create threats across the board, and the blockade of the c-Pawn stops Black creating any nuisance with it.

23... Bxd5 24. Rxd5 Qa5 25. Nf5 Qe1+ 26. Kg2 Bd8 27. Bxe5 fxe5 28. Rd7 Bf6 29. Nh6+ Kh8 30. Qxc5

A symbolic final move

1-0

Kasparov, Gary - Larsen, B (8) [A55] the queen's-side attack: Bugonjo, 1982

1. d4 Nf6 2. c4 d6 3. Nc3 e5 4. Nf3 Nbd7 5. e4 Be7 6. Be2 O-O 7. O-O c6 8. d5 Nc5 9. Qc2 cxd5 10. cxd5 Qc7 11. Nd2 Bd7 12. a4 Rac8 13. Ra3 Ne8 14. Rd1 Bg5 15. b4 Na6 16. Qb3 f5 17. Nc4 Bxc1 18. Rxc1 fxe4 19. Nxe4 Bf5 20. Ng3 Qd7 21. h3 Nf6 22. Raa1 Bg6 23. Ne3 Rxc1+ 24. Rxc1 Rc8

White is better, but the resource Kasparov finds is remarkable

**25. Rc6 bxc6 26. dxc6+ Qf7 27. Bc4 d5 28. Nxd5 Kh8 29. Nb6 (the point)
29... Qc7 30. Nxc8 Qxc8**

White has not sacrificed so much after all, and the Queen's-side pawns are rampant.

31. b5 Nc5 32. Qa3 Nce4 33. Qe7 Nxg3 34. c7 Bf5 35. fxg3 h5 36. a5 e4

Exeter Chess Club: Capablanca - Master of the Attack

Peter Lane, 23 March 1998

"...go back a quarter of a century and look for the culmination of the art of the attack on the king in the play of Alekhine and Capablanca"

-- Vladimir VUKOVIC, *The Art of Attack in Chess* (1965).

Alekhine's attacking prowess is well known, but what about Capablanca's? Here, to redress the balance, are some examples from Capablanca. The first two games show a surprise knock-out from what may look a fairly balanced position, and a shock sacrifice leading to an overwhelming positional bind. The last two games show sustained attacking play, with sacrifices to open up the king, relying on relative piece mobility to force the checkmate. All the games are taken from **The Unknown Capablanca** by Hooper and Brandreth (H&B) -- notes are based on their comments.

84) Capablanca,J - Funaroff,M [C66]

New York, 17.06.1918

1.e4 e5 2.Nf3 Nc6 3.d4 d6

The Scotch opening aims for open play, and black's attempt to keep the game closed can only be a temporary measure.

4.Nc3 Nf6 5.Bb5 Bd7 6.O-O Be7 7.Re1 exd4

This move is now forced -- after white's defense of his e-pawn he is threatening Bxc6 Bxc6: dxe5. The pressure on e5 is a recurring theme in e-pawn openings.

8.Nxd4 Nxd4

Trying to simplify, but encouraging white's better centralisation. Best is 8... O-O.

9.Qxd4 Bxb5 10.Nxb5 O-O 11.Qc3

"Instead of applying the old principle of developing his pieces as quickly as possible" RETI -- Capablanca puts each piece to optimum effect. Thinking about the position we might be attracted by a 'mate on g7: the N is bound for f5, and the Q for g3. Subtle ...

11...c6

This move weakens d6 and encourages the Nb5 to move as planned. Maybe ... Ne8 with ...Bf6, but white maintains a space advantage.

12.Nd4 Nd7 13.Nf5 Bf6 14.Qg3 Ne5 15.Bf4 Qc7 16.Rad1 Rad8

"Playing on the basis of a spatial advantage is in a sense a question of blind faith."
STEAN

White's pieces exert maximum impact, but it is hard to see how this could be increased. Indeed, black's only weakness is at d6 -- put the c-pawn back to c7 and all is perfect -- but who would dream of a decisive combination in this position? The key is the inter-relation of g3, f5 and e5 with d6 and g7. Even when you know, the next move is stunning.

17.Rxd6

"As usual, tactics flow from a positionally superior game." FISCHER

17...Rxd6 18.Bxe5

The bishop strikes through to c7 and g7 -- note now white has taken over black's e5 strong-point.

18...Rd1

A spirited counterblow. 18...Bxe5 19. Qxe5 with 'mate on g7 or an extra piece after Qxd6. 18...Qa5 was best, when 19. f4 Bxe5 20.fxe5 Rg6 21.Ne7+ leaves white an extra pawn, but many problems in converting it.

19.Rxd1 Bxe5

And now white moves his queen, and either h2 or b2 falls, with equality... Not likely!

20.Nh6+ Kh8 21.Qxe5 Qxe5 22.Nxf7+

A beautifully clear theme: back-rank 'mate.

1-0

85) Capablanca,J - Chase,A [C33]

New York, 23.02.1922

1.e4 e5 2.f4 exf4 3.Qf3

Surely the queen is in the way here?

3...Nc6 4.c3 Nf6 5.d4 d5 6.e5 Ne4 7.Bxf4 g5 8.Be3 h5

"The one inconvenient feature of this position is the awkward situation of his queen in the centre of the board. This can be easily removed, if the queen is sacrificed."
TAL

I wonder whether Tal would say the same about this position?

9.Nd2

"Is that sound?" CHERNEV

"Wait and see." JRC

9...Bg4 10.Nxe4 Bxf3 11.Nf6+ Ke7 12.Nxf3 Bh6 13.Nxg5 Bg7 14.Bd3 Bxf6 15.O-O

White's position is quite secure, with pressure on the f-file. If now 15...Bxe5 16.Nxf7 with a winning attack.

15...Qg8 16.Rxf6 Rf8 17.Raf1 Nd8

Black's pieces are powerless. White begins a Q-side break.

18.b4 Qg7 19.h4 Ke8 20.b5 b6 21.Be2 Ne6 22.Bf3 Nxg5 23.Bxg5 Qh7 24.Bxd5 Qd3 25.Bc6+

If 25...Ke7/d8 26.Rxf7+ Kc8 27.Rxf8+ Rxf8 28.Rxf8 'mate.

1-0

83) Capablanca, J - Anon [D37]

New York, 11.01.1916

1.d4 d5 2.Nf3 Nf6 3.c4 e6 4.Nc3 Bd6

This bishop is mis-placed, better 4...Be7

5.Bg5 c6 6.e3 0-0 7.Rc1 dxc4 8.Bxc4 Nbd7 9.Bd3 Be7

If 9...e5 10.Ne4, see move 4!

10.0-0 b6 11.Qc2 Bb7 12.Ne5 g6

White threatened Nxd7 Qxd7: Bxf6 Bxf6: Bxh7+, but 12...h6 looks less weakening.

13.Bh6 Re8 14.Rfd1

Capablanca loves piece play: 14.f4-f5 looks strong.

14...Nxe5 15.dxe5 Nd5 16.Nxd5 exd5

Not 16...cxd5 17.Bb5 winning the exchange. White is well centralised, looking at some holes on black's K- and Q- sides. The dark squares around the black king look especially tender, but how to get at them? Here we see the pre-conditions for an attack, and can now watch Capablanca exploit them.

17.e6 f5

Avoiding 17...fxe6 18.Bxg6 hxg6 19.Qxg6+ Kh8 20.Qg7 'mate.

18.Bxf5 gxf5 19.Qxf5 Bf6

Averting the threat of Qg4/f7+ - g7 'mate.

20.e4 Qe7 21.exd5 cxd5

Perhaps 21...Rac8 is sounder, when white has compensation for the piece, e.g. 22.Rc4 cxd5 23.Rf4 Bxb2 24.Qg4+ Kh8 25.Rf7 Qxe6 26.Rf8+ Rxf8 27. Qxe6. White's next move is not too obvious -- forcing black to surrender his dark-square control.

22.Rc7 Qxc7 23.Qxf6

In this game we have a 'real' rook sacrifice, i.e. there is no forced sequence leading to 'mate', and so the evaluation depends on our feel for combinations. They say two connected passed pawns on the 6th are worth a rook, and I think one on the 6th is worth an out-of-play piece!

23...Qe7

Most natural. H&B give 23...Re7 24.Rd3 Rg7 25.Rc3 (25.Bxg7?? Qc1 and 'mate!') Rxc3+ 26.Kxc3 d4+ 27.f3 dxc3 28.e7 and wins, e.g. 28...Bxf3+ 29.Kxf3 Qb7+ 30.Kf2 with Qf8+.

Tarrasch claimed the sacrifices as unsound due to: 23...Rac8 but then 24.Qg5+ Kh8 25.Re1! (Qf6+ draws for the nervous) when a) 25...Re7 26.Qf6+ Kg8 27.Bf4 and b) 25...Qe7 26.Qe5+ Kg8 27.f4 each give white a strong attack. Worth a rook? Think about f4-f5-f6.

24.Qe5 Rf8 25.Rd3 Qf6 26.Rg3+ Kh8 27.Bg7+

Brilliant -- and part of a 32-board simultaneous display!

1-0

Capablanca,J - Stahr,J [D05]

Chicago, 26.03.1915

1.d4 d5 2.Nf3 Nf6 3.e3 e6 4.Bd3 c5 5.c3

"For his less serious encounters Capablanca often played this opening. It was later invented by Colle." B&H

White plans Nbd2:O-O:Qe2 and e4. The delayed punch in the centre often causes Black problems.

5...c4

Black should never release the central tension -- it gives white a free hand to attack. Better are ...Nc6 or ...Be7

6.Bc2 Bd6 7.Nbd2 Nbd7 8.Qe2 Qc7 9.e4 dxe4 10.Nxe4 Nxe4 11.Qxe4 Nf6 12.Qh4 h6

If 12...O-O 13.Bg5! Black's knight exchange on e4 has brought the white queen out, and castling is impossible. The first game shows a similar mis-timed exchange, with catastrophic consequences.

13.O-O b5 Now if 13...O-O 14.Bxh6! **14.a4 b4 15.cxb4 Bxb4 16.Bf4 Bd6 17. Be5 Bb7**

Black begins a nearly successful counterattack -- "*the best policy against a simultaneous player*" B&H.

18.Bxf6 gxf6 19.Qxf6 Rg8 20.a5 Bxh2+ 21.Kh1 Bd6 22.Rfe1 Bxf3

Not 22...Qd8 23.Rxe6+ fxe6 24.Ba4+ or 22...Rg6 23. Rxe6+ fxe6 24.Ba4+ etc. But 22...Qe7 with an ending was sound. Black's king is stuck in the centre, and Capablanca treats us to a long attack leading to a central breakthrough -- always careful, as his own king is none-too-safe.

23.Qxf3 Qd8 24.Kg1 Rc8 25.Ba4+ Ke7 26.d5 Rg6 27.dxe6 fxe6

And not 27... Rxe6 28.Rxe6+ fxe6 29.Re1 when black has lost a defender of e6

and the g-file. e.g. 29...Rc5 30.Qg4 or 29...Qg8 30.Qe3.

28.Rad1 Qxa5 29.Qe4

Prepares the combination, now that all the pieces are in play. If immediately 29. Qb7+ Qc7.

29...Rcg8 30.Qb7+ Bc7 31.Rd7+ Kf6 32.Qf3+ Qf5

Black has defended well, and the anticipated 33.Qxf5+ exf5 34.Rxc7 Rxc7+ 35. Kh1 Rxf2 or even 33. Qc3+ Be5 34.Rxe5 Rxc7+ (...Qxe5 35.Rf7+ Kxf7 36.Qxe5 wins) lead to draws. But look again for Capablanca's heart-stopper.

33.Rxe6+ Kxe6 34.Qc6+ Ke5 35.Rd5+ 1-0

"As 35...Kf4 36.Qxc4+ Qe4 27.Qc1+ Kg4 38.Bd1+ Kh4 39. Rh5 is 'mate.'"

"Yet another rook sacrifice to open up a king, this time into the centre of the board. The backward moves of the Q and B should be noted, they are often the ones missed when calculating a combination. Capablanca's breakup of the black king's pawn-shelter is instructive, especially in the face of threats to the white king down the g-file."

Summary

What we have seen is a genius at play -- admiration is natural. But a lot can be learned from such games. Our combinations may not be as deep or as imaginative, but we can play for sound positional advantages and keep an eye out for the odd brilliancy. Capablanca's sacrifices are unnerving, but if we try to understand the judgement that stands behind the sacrifice -- the trade-off between material value and activity -- we will learn a lot about the dynamics of chess combat. Above all, Capablanca's games are about the initiative -- once he has the initiative, he will attack whatever weakness exists to force a resignation.

Exeter Chess Club: What makes a difference?

"There is really only one mistake in chess - underestimating your opponent"

-- TARTAKOVER

I found this session hard to prepare, and might try again! I have tried to find mistakes that are **typical** of a certain level of player - that is, mistakes of a characteristic kind, that better players no longer (or only rarely) make.

The hope is that these are the sorts of error most easily avoided. This document is subject to two caveats:

1. All chessplayers make mistakes all the time. Moreover, you cannot extract a win from a position by effort alone, or the application of only your genius, your opponent must make a mistake.

2. There are some mistakes that everybody makes. These probably include misjudging (or simply failing to spot) combinations and other opportunities, attacking without justification, inadequate technique, and thinking only for yourself.

So, mistakes are inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. I'm sure becoming more efficient or more consistent would for most of us result in a rise in grade without any great new insights being gained.

I originally started out trying to find examples of **good** ideas unique to each level (e.g. to find a good move by a Major player that a Minor player couldn't have found) but this was much harder. Instead, I have given in the County player section, examples that we might all aspire to, and also offer a 'good' game for each lower level ("the player at their best") which shows decent play using ideas which we may be able to see at all levels.

{D} Minor BCF 80-100 (1240-1400 ELO)

The games of Minor players are often marred by tactical oversights, and the games are often decided that way. Is there any point in commenting further? Yes, because of two very important reasons:

firstly, Alexander's observation that blunders only occur in losing positions (not always, but more than a grain of truth), and

secondly, that there are other things about their games which could be improved by greater understanding, even while blunders may appear.

In the opening, development is often started well and general rules are followed (e.g. move each piece once) but is at times too straightforward and is not always complete. After this the game may appear episodic, with not all the pieces being used to effect. In the endgame there may be some caution about using the King and theory is often not properly understood, but can win and advance pawns properly.

The Minor player at their best:

Morgan,A - Cooke,S (Exeter Juniors vs Exeter College, 1995)

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. Nf3 Nc6?!

Too straightforward - the c7 pawn needs to counterattack with c5.

6. e3 h6

7. Bf4?!

again, not very crisp: either Bxf6 or Bh4 are better

7... Nh5 8. Be5 Bd6

[8... Nxe5 9. Nxe5 Nf6]

9. Bxd6 cxd6?! hard to understand 10. cxd5 exd5 11. Nxd5 Qa5+ 12. Nc3 Nf6 13. Bd3 O-O 14. O-O Bg4

15. h3?!

[15. Qe2 is usually the right square for this bit; you can then uncoil with h3 and e4]

15... Bh5 16. a3 a6 17. Be2

score reconstructed from here

17... Rfe8 18. Qc2 Rac8 19. Rac1 Ne7 20. Qd1 Ned5 21. Nxd5 Nxd5 22. Rxc8 Rxc8

White has let Black become very active

23. Qb3 Rc7 24. Qd3 Bg6 25. e4 Nf6

[25... Nf4 26. Qe3 Rc2 27. Qxf4 Rxe2 28. Qxd6]

26. Nd2 Re7 27. Bf3 d5 28. b4?!

this gives Black an extra move to attack e4

28... dxe4?!

[28... Qd8 29. Re1 Qe8 recovers the pawn]

29. Nxe4 Qf5 30. Nxf6+ Qxf6 31. Qc4

from my score

31... Qe6 32. d5 Qd7 33. Rd1 Qc7

34. Qc5

A good-looking move but White did have one stronger.

[34. Qxc7 Rxc7 35. d6 Rd7 36. Bxb7 Rxb7

[36... Bf5 37. Bxa6 is killing]

37. d7 Rxd7 38. Rxd7 Be4 39. Rd6]

34... Rd7

35. Qxc7 Rxc7 36. d6 Rd7 37. g4

[37. Bxb7 is still right. I think Andrew saw it early enough but thought if he waited it would get better]

37... f5 38. a4 Kf7 39. Bxb7! fxg4 40. hxg4 Bc2 41. Bc6 Rd8 42. Rd2 Bb3 43. Rd4 Ke6 44. d7 Ke7 45. a5 Be6 46. b5 axb5 47. Bxb5 Rb8 48. a6 Kd8 49. a7 Ra8

50. Rd6

[50. Rf4 Kc7 51. Re4 Bxd7 52. Re7 Rxa7 53. Rxd7+ Kb6 54. Rxa7 Kxa7 55. f4]

50... Bxg4 51. Rb6 Bxd7 52. Bxd7 Kxd7

White lost on time

0-1

Unfortunate, but it shows what Minor players can turn on given the chance - I thought both players fought well.

The Minor Player at work in the Opening

Example: Smith-Moulton, 1996

1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6

White to move

Moves chosen: 4. d3 Bb4+

Better move(s):

4. O-O, 4. d4;

4...Bc5, 4...d6

Commentary:

These are common beginners' mistakes: 4. d3 is much too slow - White loses the advantage of the first move here - and 4...Bb4+ is pointless. Juniors also often end up in dismal Four Knights'/Giuoco Pianissimo lines which are blocked and static.

The Minor Player at work in the Middle Game

Example: Harding-Brown, 1996

White to move

Move chosen: 15. Qd7

Better move(s): 15. Rad1

Commentary:

White is obviously winning here but the mistake I think is common: I would bring the Rooks into play before starting an attack.

Example: Moulton-Teasdale

Black to move

Move chosen: 10... Ng4

Better move(s): 10... Re8; 10... Bxc3; 10...Nxd4!

Commentary:

Same again: you have no right to attack unless (a) you are fully developed, and/or (b) you have some other advantage.

The Minor Player at work in the Endgame

Example: Kennedy-Morgan, 1995

Black to move

Move chosen: 39...Kd7

Better move(s): 39... Kd6!

Commentary:

It should become second nature to take this square.

{C} Intermediate BCF 100-120 (1400-1560 ELO)

Intermediate players are usually pretty efficient - solid, get their pieces out properly, play sensibly against odd moves and have mastered the King's-side hack. There is a tendency to adopt fortress-like defensive blockades in the middle-game, and may overlook unobvious moves, or tactics in quiet positions. They know basic book wins in the endgame but may only defend rather than seeking counterplay.

The Intermediate player at their best:

Rosseinsky,J (2840) - Collins,C (1800) [B71] (Spectrum Torquay #2, 1996)

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. f4

6...Bg7? 7. e5 dxe5 8. fxe5 Ng8 9. Bb5+ Bd7 10. e6 Bxb5 11. exf7+ Kxf7
12. Qf3+ Nf6 13. Ncxb5!

Quality move

13...Qd7 14. O-O

14...Re8!?

[14... a6 15. Qb3+ Ke8

[15... e6 16. Nxe6 Qxe6 17. Qxe6+ Kxe6 18. Nc7+ Kf7 19. Nxa8]

16. Ne6 axb5 17. Nxc7+]

15. Qb3+ e6 16. Nf3

[16. Bf4! Kg8 17. Nxe6 [17. Rad1]]

**16... Nc6 17. Bf4 Kg8 18. Rad1 Qe7 19. Nc7 Ng4 20. Bg3 Kh8 21. Nxa8
Rxa8 22. Rd6 e5 23. Rd2**

[23. Re6!? Qc5+ 24. Kh1 Rf8 25. h3

[25. Rd1]

25... Nd4]

23... Re8

[23... Rf8!?!]

24. Bh4 Qc5+ 25. Kh1 Rf8 26. Rd5 Qe3 27. Qxb7 Nd4 28. Rd7 Qh6

[28... Nxf3 29. Rf7 Rxf7]

29. Rf7 Nxf3 30. Rxf8+ Bxf8 31. Qxf3 Be7 32. Bxe7??

[32. Qxg4! Qxh4

[32... Bxh4 33. Qc8+ Bd8 34. Qxd8+ Kg7 35. Qf8#]

33. Qxh4 Bxh4 34. g3 Bf6 35. Re1 Kg7 36. c4]

32... Qxh2# 0-1

Tragedy!

The Intermediate Player at work in the Opening

Example: Regis-O'Grady 1996

Black to move

Move chosen: 2...d6?!

Better move(s): 2...Bc5

Commentary:

This apparently solid attempt is in fact a serious concession. White rapidly built up an attacking position on the King's-side where Black had little counterplay.

Good defence needs active pieces.

The Intermediate Player at work in the Middle Game

Example: Kruse-Regis, 1977

White to move

Move chosen: 10. Qc2?!

Better move(s): 10. Nbd2

Commentary:

White ignores the positional elements of the position. Black whipped back 10...Bxf3 pretty quickly, and a few moves later had achieved the following crushing position - although only drew through inadequate technique. Lack of experience on both sides - White not imagining the positional trouble he could get into, Black not being able to take advantage of the trouble.

The Intermediate Player at work in the Endgame

Example: Blackmore - Isaac (116) (3), 1995

Black to move

Move chosen: draw agreed

Better move(s): 33...e4, 33...c4

Commentary:

Black has generally better pieces and two Bishops, while White has little play. Either pawn move gives the Black Knight a superb post.

Good reading for Intermediate players:

Simple Chess - Michael Stean

{B} Major BCF 120-150 (1560-1800 ELO)

Major players usually have a well-worked-out opening repertoire and can set their opponents problems in each phase of the game. Even 200-grade players cannot dismiss the better Major contenders as easy prey.

There are standard plans and "clockwork" attacks which the Major player understands and plays well. Where a solid formation is adopted there is usually also a view to some flexibility and keeping the pieces at least potentially active. They will seek counterplay and know how to limit the play of their opponents. They usually notice all the relevant features of the position even if they choose the wrong move/plan.

The Major player at their best:

Abbott,M - Rudall,D (Exeter vs. Teignmouth, 1994)

1. d4 d6 2. c4 Nf6 3. Nc3 g6 4. e4 Bg7 5. Be2 O-O 6. Bg5 Nbd7 7. Nf3 c5 8. d5 a6 9. a4 Qa5 10. O-O Qc7 11. Qd2 Re8 12. Bf4

White inaugurates the standard attack and Black is crushed without mercy.

12...Nh5 13. Bh6 Ndf6 14. Bxg7 Nxg7 15. h3 Rf8 16. Qh6 Qb6 17. Rab1
Qc7 18. Ng5 Nge8 19. f4 Bd7 20. e5 Bf5 21. exf6 Nxf6 22. Rbd1 Qb6 23.
Rd2 Qb4 24. g4 Bc8 25. Nce4 Rd8 26. Nxf6+ exf6 27. Qxh7+ Kf8 28.
Qxf7# 1-0

The Major Player at work in the Opening

Example: Regis-Rivett, 1977

1. d4 d5 2. Nf3 Nf6 3. c4 c6 4. Nc3 dxc4 5. a4

Black to move

Move chosen: 5... Bd7

Better move(s): 5...Bf5, 5...Na6, 5...Bb4

Commentary:

This is an interesting attempt in a well-known position. I suspect all three 'book' moves were known to

Black, but chose this 'inferior' alternative in order to set White a problem: how to recover the c-pawn? I still think the move is a mistake, but it is an intelligent one.

The Major Player at work in the Middle Game

Example: Tart-Regis, 1996

Black to move

Move chosen: 14...O-O (15. Nf6+)

Better move(s): 14...h6 (15. Bf6 O-O)

Commentary:

The alternative continuation does concede the dark-squared Bishop but that is not fatal. Why did Black imagine he would be able to survive the Knight coming in on f6? Because there was no refutation within the horizon of Black's analysis. This failure of vision is I think typical, and results from lack of experience in attacking/defensive positions.

The Major Player at work in the Endgame

Example: Regis-Greet, 1995

White to move

Move chosen: 44. Kf4 and offered draw

Better move(s): 44. Kf4 and glare at opponent.

Commentary:

This is, of course, completely won for White...

44. Kf4 Ra3 45. Ke5 Kf7

[or 45... Rxc3 46. Kf6 h6 47. Kg6 Kf8 48. f6]

46. Ra7+ Ke8 47. Ke6 Kd8 48. f6

Post-time-control nerves played a part here, but also lack of confidence in the analysis or technique of the endgame. [At each level I looked at I found examples of games just stopping with a draw in a won endgame.]

Good reading for Major players:

Specialist monographs e.g. *The Complete...*

Practical Chess Endings - Keres

Batsford Chess Endings - Speelman et al.

Secrets of Grandmaster Play - Nunn/Griffiths

Reading as for intermediate players too.

{A} County BCF 150-180 (1800-2040 ELO)

The County player is an alert player of openings - they will often know some of the theory outside their own repertoire, and play their own lines with some depth - in fact, they play any sort of position pretty well.

They are beginning to master the art of analysis, being able to sustain assessment of a main line with variations throughout a tactical game, and in complex positions can isolate a theme and crystallise it. They defend much better than weaker players and swindle well.

In the endgame they do know a bit of theory, and can calculate well enough to improvise a strategy for unknown positions. How often I have embarked optimistically on a slightly worse endgame against county-strength players, only to be ground down without mercy. I often feel there are three games to be played at this level before you can secure the whole or half- point: once in the opening, middle and endgame.

Obviously there are still things that separate the lower from the higher (approaching 200) boards of county teams: things like judging positions on their merits rather than by analogy, and the coordination of their pieces. And of course, all the common threads (depth of analysis, thinking for the opponent, knowledge of theory) can all be expected to be stronger in the better player.

The County player at their best:

Peter Lane - Einar Einarsson (1995)

1. d4 Nf6 2. c4 c5 3. d5 e6 4. Nc3 exd5 5. cxd5 d6 6. e4 g6 7. f4 Bg7 8. Bb5 + Nfd7 9. a4 O-O 10. Nf3 Re8

a mistake, said Peter

11. O-O Na6 12. f5!

An unobvious move - Agust queried it, but Peter knew it was a winner.

12... Nb4 13. Bg5 Qc7 14. f6 Bf8 15. Qd2 Qd8 16. Bh6 Qxf6 17. e5

17... Rxe5

[17... dxe5 18. Bxf8 Rxf8 19. Ne4]

18. Nxe5 Bxh6 19. Rxf6 Bxd2 20. Nxd7 a6 21. Nb6 1-0

A crush against a strong opponent.

The County Player at work in the Opening

Example: Peter Lane - RJJ Gibbons, Exeter vs. Kingston, 1995

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5 5. a3 Bxc3+ 6. bxc3 O-O (too early?) 7. Bd3 d6 8. Ne2 Qc7 9. e4 e5 10. O-O

Black to move

Move chosen: 10...Nc6

Better move(s): 10...Ne8

Commentary:

This is the difference between a general and a specific understanding of the position. Generally, ...Nc6 is the right sort of idea. But White's opening (with Ne2 rather than Nf3) is too dangerous for normal methods, so ...Ne8 and f5 was called for. I think even if you don't know what White has in mind (if you haven't been playing the Nimzo long) I would expect a good County player to see f2-f4-f5 coming and do something about it.

The County Player at work in the Middle Game

Example: Timms-Regis 1996

Black to move

Move chosen: 15...Nf4

Commentary:

It's not a very hard move to spot or play, but it was necessary to envisage the forcing game continuation:

15... Nf4 16. Bxf4 exf4 17. Ne6 Bxe6 18. dxe6 Bxc3 19. bxc3 Qe7 20. Re1 Nc6 and ...Ne5

I think White had seen the Knight coming in to e6 and just jumped at the chance without really thinking it through; Black however anticipated the line in its entirety. When you can regularly see main lines like this and assess the resulting positions properly then you can expect good results against club players.

The County Player at work in the Endgame

Example: French-Greely, 1996

Black to move

Move chosen: 41...d4

and we saw only seven more moves: 42.cxd4+ exd4 43.Kd3 Kb4 44.Kd2 Re4 45.Kc2 Re3 46.Rg1 Rxb3 47.a5 bxa5 48.Ra1 Rc3+ 0-1

Commentary:

At last a won endgame which was won! How did you react when you saw the diagrammed position? Did you think White not much worse (level material)? Or did you think Black had a straightforward win? Black has a number of advantages which add up to a win: better King, better Rook, central control and a passed pawn. I think when you have the control and understanding to win these technical positions, you are well on your way to being a classy player.

French,P (1890) - Greely,P (1840)

 - [Books with annotated amateur games](#)

Last year, I led a session on "[What makes a difference? How 120-graded players beat 100s](#)", and another following up [last year's simul](#) by IM Gary Lane. This is an attempt to do the two at once. The conclusions, but not the examples, from that other session are appended.

Also, last year I tried to stress the **differences in quality** between classes (e.g. county players play on in endgames); and this time I want to look more perhaps at the **differences in degree** - like, we all play theory, but the better players play more of it as a rule. It's mostly opening and middlegame stuff this time (he didn't have to play too many endgames...). Gary commented that the play was of quite high standard: he may say that to all the boys, but we did take 3 1/2 points off him which is probably 3 1/2 more than he drops some nights!

He also commented that he was in more trouble when in unfamiliar openings. The most spectacular example of that was in [Chris'](#) game, but others also gave him trouble. Now that does not mean avoiding theory at all costs - unfamiliar means unfamiliar to Gary, not unknown to theory or unorthodox. When we played unorthodox (like the *Hedgehog*) we usually struggled ([Robin](#), [Bruce](#), [Eddie](#), [Ray](#)). When we played well-founded openings that we knew a bit about, we lasted longer ([Matthew](#), [Dave](#)).

Trouble also arose when the opponent had counterplay - this is almost what we mean by '*trouble*'. This is the problem with the *Hedgehog* - it's solid enough but you never know where your counterplay is coming from. Masters can make use of this system but club players tend to drift. In other formations you know what sort of plans are usually going to be available (*French*: attack on d4; *Sicilian*: attack on e4/down the c-file). Our play in the *Hedgehog* is more hopeful than well-founded; curling up and hoping may delay the end but cannot affect the result!

The second positional theme, which you can see in the games with the *Hedgehog* and other openings, was *share of centre*: you need to grab some of it (easiest: see the games by [Hunshank](#) and [Matthew](#)) or plan to disrupt it ([Bruce](#), [Sean](#)) or have a go at it later (harder: see [Dave's](#) treatment of the Modern).

The other problems we had were tactical: one over-cautious and one over-optimistic. Two problems with the same cure: analyse and live in knowledge, rather than guess and live in hope.

I think there were one or two Gary Lane sacrifices which were played more from inspiration than calculation ([Hunshank](#), [Robin](#)). Our response was to decline - on principle? This is declining from fear, not knowledge. Analyse and find out if there is a win for your opponent, don't panic and refuse material that you could have for free. You may get it wrong if you analyse, but you may guess wrong if you try to make some overall judgement. You can see some grown-up decisions in the games by [Dan](#) and [Chris](#).

The other problem was just the opposite: letting Gary get off a snap attack ([Alan](#) (not given below) and [Dave](#)). We seemed to hope that we would be OK, but were proved wrong. This may be poor positional judgement, but in fact analysing a couple of moves deeper may have revealed what sort of trouble we were getting into. Again, this is playing in hope, not knowledge.

Statistics

| Player | Grade | Result | Moves | Theory | W | Castled | B |

The gallant losers

Lane, G - Rowston, B (89), (1-0, 17)

1.d4 Nf6 2.Nc3 e6 3.e4

3...Bb4 [3...d5]

There is no reason to avoid playing into healthy theory with ...d5, which also insists on a share of the centre. In this game Black hits back straightaway with ...c5, but in other games the challengers were more generous with the centre.

4.Bd3 c5! 5.dxc5 b6?! [5...Na6 6. Be3 Qa5] 6.cxb6 Bxc3+ 7.bxc3 Qxb6 8.Nf3 Bb7 9.Qe2 d6 10.O-O Nbd7 11.Be3 Qa5 12.Bd2 Nc5 13.e5 Bxf3 14.Qxf3 Nd5 15.exd6 O-O 16.Rfd1

Black is worse, but...

16...Nxc3 17.Bxc3 1-0

...that's fatal. This three-mover is a characteristic type of error: *after the forced sequence which I want to make, can my opponent then spring a trap?* This three-mover is also the sort of thing that I expect we would all come up with in answer to: why can't Black take the Pc3?

We all make mistakes in calculation (in consecutive rounds of the U170 Paignton congress this year my opponents missed mates in one, and I missed a disrupting check at the start of a combination one round later!).

It is plain that better players make fewer errors. This is partly experience (better players often play more, or played a lot more as juniors) but there are some habits we could all adopt. Kotov's recommends "**Blumenfeld's rule**" - before you play a move, write it down, and have another, fresh, look - "*through the eyes of a patzer*" - what have I missed?

Lane, G - Coates, AE, (106), (1-0, 18+)

1.e4 c6 2.d4 d5 3.Nd2 dxe4 4.Nxe4 Nd7 5.Nf3 [5.Bc4] 5...Ngf6 6.Bd3 [6.Ng3, 6.Nxf6 are known to theory] 6...Nxe4 7.Bxe4 Nf6

Black's handling of White's opening has been exemplary; White loses a tempo or the Bishop pair. I might venture the same comment as above; there was no reason to avoid the recommendations of theory.

8.Bd3 Bg4 9.c3 e6 10.h3 Bh5 11.O-O Be7 12.Re1 O-O 13.Bf4 Qd5 14.g4 Bg6 15.Bf1 h5 16.Ne5 hxg4 17.hxg4 Bh7 18.Bg2 ... more? 1-0

Lane, G - Bazley, RJ (110), (1-0, 29)

1.d4 e6 2.e4 g6 [2...b6] 3.Nc3 Bg7 4.Be3 c6 [4...b6] 5.Nf3 h6 6.Be2 Ne7 7.O-O d6 8.Qd2

Black's set-up has some positive points but this hedgehog approach places no difficulties in White's way except to decide where to point his cannons. Black needs to expand or create some counterplay somewhere, or else White will be able to pile up on a point that Black is too cramped to defend properly. Gary had this type of advantage in several games, and his approach was usually to sit on his plus and prevent Black breaking out, rather than rush to attack.

8...b6 score says ...P-QB3 [8...Nd7] **9.a4 Bd7 10.h3 a5 11.Bf4 Qc7 12.d5 Bxc3 13.Qxc3 e5 14.Nxe5 Rh7 15.Nxd7 Nxd7 16.Rad1 c5 17.Bb5 0-0-0 18. Qg3 Nf6 19.Qf3 Nh5 20.Bh2**

20...Ng8 [20...f5?!; 20...Rf8!?!]

Same problem: Black cannot curl up and hope, he needs space and counterplay.

21.e5 dxe5 22.d6 Qb7 23.Bc6 Qa6 24.Bxe5 Kb8 25.d7+ Ka7 26.Bc7 Ne7
27.Bxd8 Nxc6 28.Qxc6 Qb7 29.Bxb6+ 1-0

Lane, G - Cubbon, R (ug), (1-0, 32)

1.e4 e5 2.Nf3 Nc6 3.Bb5

3...Nge7 [3...Bc5; 3...d6] 4.Nc3 [4.c3]

I don't know who was avoiding what here; **3...Nge7** (Cozio Defence) is (just) known to theory but **4. Nc3** is not considered a testing reply. However, in response to an unknown variation a solid response is most practical.

4...d6 5.O-O a6 6.Ba4 Bg4 7.h3 Bd7 8.Re1

8...h6 [8...g6; 8...Ng6] 9.Bb3 Ng6 10.d4 exd4 11.Nxd4 Be7 12.Nf5 Bf6 13.Nd5 Nge7 [13...0-0]

In his *Art of Attack*, Vukovic blames late castling for most of the slaughter that goes on at simul. That's not really true for most of this simul., but Black here is a bit too shy of it. The opposite fault is also seen ("*castling into it*"), but usually you can and should castle as soon as possible - not just to protect the King, but also to connect the Rooks, so you can contest open files.

14.Nxf6+ gxf6 15.Qh5 Ne5 16.Bxh6 Bxf5 17.exf5 Qd7

18.Rxe5 0-0-0

I can see a check on f7 coming, I can see Black in trouble, but I can't see the mate. Accepting had to be tried in the absence of a forced win, because declining is a forced loss. Also, a sacrifice to get at the King is a Frying Pan where both sides feel the heat, but giving up material is a Fire where only Black burns.

[18...fxe5 19.Qxf7+ (19.Bxf7+ Kd8 20.Be6 Qb5 21.Bb3 Qe8 22.Qxe8+ Kxe8; 19.Be6 Qc6 20.Qxf7+ Kd8 21.Bg5 Qe8 22.Qf6) 19...Kd8 20.Qg7 Re8 21.Bf7 Nxf5 22.Qg5+]

19.Qxf7 Melodramatic; retreating the Rook was OK too. **19...fxe5** Mistimed! **20.Be6 Rxd6 21.Bxd7+ Kxd7 22.f6 Re8 23.fxe7 Rxe7 24.Qf5+ Rhe6 25.Re1 c6 26.Re3 Kc7 27.Rg3 b5 28.Rg6 Rxd6 29.Qxd6 a5 30.h4 e4 31.h5 e3 32.fxe3 Rxe3 1-0**

Lane, G - Czerniawski, E (ug), (1-0, 33)

1.e4 d6 2.d4 Nf6 3.Nc3

3...e6 [3...g6, 3...c6]

Again, I think the hedgehog approach is giving White just what he wants.

4.Nf3 h6 5.Be2 a6 6.O-O Be7 7.Be3 Bd7 8.h3 b5 9.a3 Bc6 10.d5 exd5 11. exd5 Bd7 12.Nd4 Qc8 13.Bf3 g5 14.Be2

14...Bxh3?!

Brave but misguided: White is better developed and should be able to shrug off the attack.

15.gxh3 Qxh3 16.Bf3! g4 [16...Nbd7 17.Bg2 Qh4 18.Nf3 Qh5 19.Qd4+-] 17. Bg2 Qh4

This next bit is a shame, but Black didn't really have much reason to be optimistic.

18.Nf5 Qh5 19.Ng7+ Kd8 20.Nxh5 Nxh5 21.Qxg4 Nf6 22.Qf5 Nbd7 23.Bd4 Rg8 24.Rfe1 Rg5 25.Qf3 Rb8 26.Ne4 Rg6 27.Nxf6 Bxf6 28.Qe4 Ne5 29.Kf1 Kc8 30.f4 Nc4 31.Qe8+ Kb7 32.Qc6+ Kc8 33.Bh3+ 1-0

Lane, G - Ehtesham, YAH (84), (1-0, 38)

1.d4 e6 2.e4 d5 3.e5 c5 4.c3 Nc6 5.Nf3 Qb6 6.Be2 cxd4 [6...Nh6: the exchange gives White the chance of Nc3] 7.cxd4 Nge7 8.Nc3 Nf5 9.Na4 Qc7 10.O-O Bd7 11. Be3 Na5 12.Rc1 Qd8 13.Nc5 Bc6 14.b4 Nc4?! 15.Bxc4 dxc4 16.Rxc4

Black has dropped a Pawn, and is behind in development, but plans to put the White centre under pressure with good French moves. But right now...

16...Bd5 [16...Bb5!? 17. Nxb7 Qd5! and I think Black is better] **17.Rc2 b6 18. Nd3 Be7 19.Nf4 Be4 20.Rc1 0-0 21.a3 Bxf3 22.Qxf3 Nxd4**

Black breathes a sigh of relief! And soon picks up another one...

23.Qe4 Nf5 24.Rfd1 Qe8 25.Rc7 Rd8 26.Rdc1 Qa4 27.h3 Qxa3 28.Nh5 Nxe3 29.fxe3 Bxb4

30.Nxg7 [30. Qg4 is natural but 30...Qxe3+ and 31...Qxe5]

Was this bluff, miscalculation, inspiration, or necessity? White's pieces are good-looking but the Black Pawns will win the game, given time.

30...Bc5?!?

The first ? is for declining. Don't take his word for it! If you can't see a mate, make him show you! But the ! is for a move with a good point - disconnecting the Rooks and hitting the e-Pawn. Yet, the Knight can hop out with a threat to come to f6, and with a Rook on the seventh, White suddenly has a winning attack.

[30...Kxg7 31.Qg4+ Kh8 32.Qg5 Be7! [32...Bc5!?!] 33.Rxe7 Qxc1+ 34.Kh2 Qf1]
31.R1xc5 bxc5 32.Nh5 Qa1+ 33.Kh2 f5 34.exf6 Rf7 35.Qg4+ Kf8 36.Rxf7+ Kxf7 37.Qg7+ Ke8 38.Qe7# 1-0

You can see from the game and the overall statistics that Hunshank played out of his skin - our visitor may have felt lucky to get away with this.

Lane, G - Hill, D (160), (1-0, 38)

1.e4 e6 2.d4 d5 3.Nd2 Nf6 4.e5 Nfd7 5.c3 c5 6.f4 Nc6 7.Ndf3 Qa5 [7...Qb6; 7...Nb6] 8.Be3

8...cxd4 9.Nxd4 Nxd4 10.Bxd4

I'm no expert in this line but the exchanges seem to have helped White.

10...Qc7 11.Bd3 Nc5 12.Bc2 Bd7 13.Nf3 Ne4 14.0-0 f5

Black isn't over-developed but the strangle on e4 cannot be ignored. We now get one of the standard French Pawn formations.

15.exf6 Nxf6 16.Ne5 Bd6 17.Qf3 0-0 18.Rae1 Bc5 19.Bb1 Bxd4+ 20.cxd4 Bb5 21.Rf2 Qb6 22.Rd2 Rac8 23.h3 Rc7 24.Kh2 Qa5 25.Rdd1 Qb4 26.Qf2

White has been angling for a King's-side attack for some time - however, Black has started to make concrete progress on the other side. I wouldn't be brave enough to play Black's next, but it was played I think from *calculation* and not from either blind faith or desperation, and is (whatever its "objective" merits) to be applauded.

26...g5! 27.Qg3 [27.Nf3 g4 28.Nh4=+] 27...Qxb2 28.fxg5 [28.Qxg5+ Kh8 opens the g-file for Black] 28...Nh5 29.Qg4 Nf4 30.Nf3 Be2 winning the exchange

...more moves were played; Black is winning but eventually lost. Towards the end, the few survivors get put under increasing pressure!

31.Rd2 Qxd2 32.Nxd2 Bxg4 33.hxg4 Rc3 34.Nb3 b6 35.Nd2 Nd3? 36.Re3

oops **36...Rf2 37.Nf3 Nf4 38.Rxc3 Rxc3 1-0**

Lane, G - Regis, D (168), (1-0, 41)

1.e4 g6 2.d4 d6 3.Nc3 c6 4.g3 Nf6 5.Bg2 Bg7

This is not a hedgehog: Black has some very concrete plans to attack the White centre. The set-up with ...c6 is not particularly recommended against White's system, but Black believes he deterred the dangerous Austrian attack because of the finesse **4.f4 d5!?**

6.Nge2 0-0 7.h3 Nbd7 8.0-0 e5 9.Be3 exd4 10.Bxd4 c5

Exposing the d5 point, but Black reckons to get enough pieces covering it to play ...d5. This is correct, but only just!

11.Be3 Ne5 [threat ...Bxh3] 12.f4 Nc4 13.Bc1 Be6 14.b3 Nb6 15.Be3 Qe7 16.a4 Rad8 17.a5 Nc8

Black shouldn't have sat still for this, or should have tried ...Nb4.

18.Qd2 Rfe8 19.g4 d5

Black has to play this or die: White controls every other inch of the board. Because it threatens ...d4 Black gets some exchanges and his pieces start to come out.

20.e5 Nxg4 21.hxg4 d4 22.Nxd4 cxd4 23.Bxd4 Bxg4 24.Nd5 Qd7 25.Qf2 Bh3

White still dominates the board.

26.c4 Bxg2 27.Qxg2 Qf5 28.Rad1 h5 29.Ne3 Qe6 30.Qxb7 f6

Again, Black must try this. He eventually gets his pieces out but has shed a lot of Pawns by then. Nonetheless, this is a much better approach than curling up and hoping.

31.exf6 Bxf6 32.Bxf6 Qxf6 33.Qf3 Rxd1 34.Rxd1 Qc3 35.Qd5+ Kg7

Black has counterplay but the poor Knight still lives in early retirement. Black allows the King to be exposed, and dies accordingly.

36.Ng2 Re2 37.f5 Qc2 38.Rf1 gxf5 (38...Ne7) 39.Rxf5 Ne7 40.Qd4+ Kh6 41.Qh8+ 1-0

A noble draw

Lane, G - Pope, S (156), (1/2-1/2, 40)

1.e4 d5 2.exd5 Nf6 3.d4 Nxd5 4.Nf3 g6 5.Be2 Bg7 6.0-0 0-0 7.c3 c5!

Belt that centre!

8.dxc5 Na6 9.Bc4 Be6 10.Qe2 Nxc5 11.Rd1 Nf4 12.Qc2 Qc7 13.Bxe6 Ncxe6

With the disappearance of the centre Pawns Black can even claim to be better mobilised.

14.Be3 Rfd8 15.Na3 a6 16.Rxd8+ Rxd8 17.Rd1 Nd5 18.Bc1 b5

A minority attack based more on opportunism than exploitation of a file; the Rooks in fact soon come off the board.

19.h3 b4 20.cxb4 Nxb4 21.Rxd8+ Qxd8 22.Qb3 Nd3 23.Qc2 Nec5 24.Nc4 Nb4

Black nabs a Pawn; White may have hoped that the Knights would get in a tangle.

25.Qe2 Nxa2 26.Bg5 Ne6 27.Be3 Nb4 28.Ne1 Qd5 29.Kf1 Bd4 30.b3 Qe4
31.Qd2 Nc6 32.Nc2 Bxe3 33.N4xe3 Ne5 34.Qa5 Qd3+ 35.Kg1 Qb5 36.Qa3
Nc6 37.b4 Ncd4 38.Qb2 Nxc2 39.Nxc2 Qe2 40.Qc3

1/2-1/2

You can't blame GL for offering the draw, or Sean for accepting it, but don't do this in a match, will you?

The glorious winners

Lane, G - Leigh, M (152), (0-1, 33)

1.e4 e6 2.d4 d5 3.e5 c5 4.c3 Nc6 5.Nf3 Bd7 6.Be2 f6 7.O-O cxd4 8.cxd4
Qb6 9.Nc3 Rc8 10.Re1 fxe5 11.dxe5 Bb4

Black places his pieces actively; White doesn't seem to have got going yet.

12.Bd2 Nge7 13.a3 Bxc3 14.Bxc3 Nf5 15.Bd3 O-O 16.Qe2 h6 17.Rac1 Ncd4
18.Nxd4 Nxd4 19.Qg4 Nf5 20.Bb4 Rf7

White seems to be doing better (two Bishops, etc.) but Black shows that his position is not without

chances, despite the dismal light-squared Bishop.

21.Qg6 Rxc1 22.Rxc1 Qd4 23.Bb1 Qxe5 24.g4 Rf6 25.Qh5 Qxb2 26.Rf1 Ne3 27.fxe3 Rxf1+ 28.Kxf1 Bb5+ 29.Kg1 Qxb1+ 30.Kf2 Qf1+ 31.Kg3 Be2

The light-squared Bishop has got the other side of the Pawns and now roams without hindrance - or opposition.

32.Qe5 [32.Qe8+ Kh7 33.Qxe6 Qf3+ 34.Kh4 g5+ 35.Kh5 Qh3#] 32...Qf3+ 33.Kh4 Qxg4# 0-1

Lane, G - Homer, S (129 - ha! 160?), (0-1, 29)

1.d4 Nf6 2.Nc3 c5 3.e3 b6 4.Nf3 e6 5.Bd3 Be7 6.O-O O-O 7.e4 cxd4 8.Nxd4 Bb7

Sicilianish: no idea how they got that out of that start!

9.Re1 d6 10.Kh1 Nc6 11.Be3 Nxd4 12.Bxd4 e5

In all these later games White is not allowed to dominate the centre. White tries again to occupy space with f2-f4, but it is snapped off, giving a situation where both central pawns are isolated.

13.Be3 Rc8 14.f4 exf4 15.Bxf4 Rc5 16.Be3 Re5 17.Bd4 Rg5 18.Qf3 Ng4 19. Qe2 Bf6 20.Bg1 Be5 21.h3 Nf6 22.Be3 Nh5

White's nicely centralised pieces look a bit aimless; Black's risky attack pays off.

**23.Kg1 Nf4 [23...Bf4] 24.Qf3 Rxd2+ 25.Kf1 Nxd3 26.Qxg2 Nxe1 27.Kxe1 f5
28.Kd2 f4**

29.Bd4 [29.Bf2] 29...Bxd4 0-1

Lane, G - Bellers, C (162), (0-1, 25)

1.e4 g6 2.d4 Bg7 3.Nc3 c5 4.Nf3 Qa5

In an unfamiliar opening, White plays something active rather than something solid [5. **Be2**] and comes badly unstuck. Chris nabs a piece but doesn't just go solid but tries to create problems at every turn, and gradually gets the initiative. There are lots of little tactical points which Chris had steer around - at an increasing rate as others fell by the wayside.

5.Bc4? cxd4 6.Nxd4 Qc5 7.Bxf7+ Kxf7 8.Be3 Qa5 9.O-O Nf6 10.f4 d6 11. Nb3 Qh5 12.Qd3 Ng4 13.h3 Nxe3 14.Qxe3 Nc6 15.Rae1 Bxc3 16.Qxc3 Be6 17.f5 gxf5 18.exf5 Bd5 19.Qd3 Nb4 20.Qb5 Rhg8 21.Rf2 Qxh3 22.Ree2 Rg5 23.Qd7 Nc6 24.c4 Ne5

25.Qc7 25...Bxg2 0-1

[25...Bxg2 26.Rxg2 Nf3+ 27.Kf1 Qh1+ 28.Kf2 Rxg2+

A) 29.Kxf3 Qh3+ **A1)** 30.Kf4 Rg4#; **A2)** 30.Ke4 Rg4+ 31.Kd5 Qf3+ 32.Re4 Qxe4#;

B) 29.Ke3 Qg1+ 30.Kxf3 Qf1+ 31.Ke3 Rxe2+]

A classy combinational finish, some of which Chris saw at the time! The Bishop sac. is more or less forced anyhow, so that wasn't the hard bit.

What makes a difference? Thumbnail sketches of classes of player

Minor BCF 80-100 (1240-1400 ELO)

The games of Minor players are often marred by tactical oversights, and the games are often decided that way. Is there any point in commenting further? Yes, because of two very important reasons:

firstly, Alexander's observation that blunders only occur in losing positions (not always, but more than a grain of truth), and

secondly, that there are other things about their games which could be improved by greater understanding, even while blunders may appear.

In the opening, development is often started well and general rules are followed (e.g. move each piece once) but is at times too straightforward and is not always complete. After this the game may appear episodic, with not all the pieces being used to effect. In the endgame there may be some caution about using the King and theory is often not properly understood, but can win and advance pawns properly.

Good reading for Minor players:

An Opening Repertoire for the Attacking Player - Keene/Levy

Chess Openings for Juniors & Attacking the King - John Walker

Logical Chess - Irving Chernev

Chess Endings: Essential Knowledge - Averbach

Winning Endgames - Tony Kosten

Winning Chess - Chernev/Reinfeld

Intermediate BCF 100-120 (1400-1560 ELO)

Intermediate players are usually pretty efficient - solid, get their pieces out properly, play sensibly against odd moves and have mastered the King's-side hack. There is a tendency to adopt fortress-like defensive blockades in the middle-game, and may overlook unobvious moves, or tactics in quiet positions. They know basic book wins in the endgame but may only defend rather than seeking counterplay.

Good reading for Intermediate players:

Repertoire books e.g. *Winning with...*

Think/Play like a Grandmaster - Kotov

Rate Your Endgame - Mednis/Crouch

Test Your Chess IQ (Book 1) - Livshitz

The Middle Game (I/II) - Euwe & Kramer

Simple Chess - Michael Stean

Major BCF 120-150 (1560-1800 ELO)

Major players usually have a well-worked-out opening repertoire and can set their opponents problems in each phase of the game. Even 200-grade players cannot dismiss the better Major contenders as easy prey.

There are standard plans and "clockwork" attacks which the Major player understands and plays well. Where a solid formation is adopted there is usually also a view to some flexibility and keeping the pieces at least potentially active. They will seek counterplay and know how to limit the play of their opponents. They usually notice all the relevant features of the position even if they choose the wrong move/plan.

Good reading for Major players:

Specialist monographs e.g. *The Complete...*

Practical Chess Endings - Keres

Batsford Chess Endings - Speelman et al.

Secrets of Grandmaster Play - Nunn/Griffiths

Reading as for intermediate players too.

County BCF 150-180 (1800-2040 ELO)

The County player is an alert player of openings - they will often know some of the theory outside their own repertoire, and play their own lines with some depth - in fact, they play any sort of position pretty well.

They are beginning to master the art of analysis, being able to sustain assessment of a main line with variations throughout a tactical game, and in complex positions can isolate a theme and crystallise it. They defend much better than weaker players and swindle well.

In the endgame they do know a bit of theory, and can calculate well enough to improvise a strategy for unknown positions. How often I have embarked optimistically on a slightly worse endgame against county-strength players, only to be ground down without mercy. I often feel, as was once said about Alekhine, there are three games to be played at this level before you can secure the whole

or half- point: once in the opening, middle and endgame.

Obviously there are still things that separate the lower from the higher (approaching 200) boards of county teams: things like judging positions on their merits rather than by analogy, and the coordination of their pieces. And of course, all the common threads (spotting tactics, depth of analysis, thinking for the opponent as well as oneself, knowledge of theory of opening and endgame) can all be expected to be stronger in the better player.

To conclude:

1. All chessplayers make mistakes all the time. Moreover, you cannot extract a win from a position by effort alone, or the application of only your genius, your opponent must make a mistake.

2. There are some mistakes that everybody makes. These probably include misjudging (or simply failing to spot) combinations and other opportunities, attacking without justification, inadequate technique, and thinking only for yourself.

So, mistakes are inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. I'm sure becoming more efficient or more consistent would for most of us result in a rise in grade without any great new insights being gained.

This document (simul2.html) was last modified on 28th Oct 96 by

[Dr. Dave](#)

Exeter Chess Club: Meat and potatoes - three phases of a tough game.

Peter Lane and Dave Regis

Introduction:

Dave thought this would be a good idea to do as a coaching session because:

- *we're often looking at master games, not club games*
- *when we do look at a master game, we often play through it pretty quickly and often use it to illustrate only one chess point*
- *when we see master annotations, they tend to give a reassuring and definitive judgement about a position, instead of a hesitant assessment about which there may be disagreement*

A nice book on the 1972 Fischer-Spassky match is **Both Sides of the Chess Board**, where Robert Byrne and Ivo Nei both annotated the games, and you see their notes side by side. It's reassuring when they agree, and it's interesting when they don't! So, with this as a model, here is one amateur chess game, annotated in some depth by one of the players and one of the spectators, with all the mess apparent. I also showed it to Fritz, and where interesting I've included its annotations.

[The phrase 'meat and potatoes' I borrowed from Bobby Fischer's M60MG]

M.Beveridge (BCF174) - P.C.Lane (BCF174)

National Club Championship, Round 1

Hereford vs Exeter, 1996

Annotations: (PCL) [DR/Fritz2&3]

Fritz gives annotations like [RR4...Bb4+ Fritz3 0.16 (8/29): (00:04:51)]

TODAY'S LESSON: It was said of Alekhine that to win a game from him required you to win three games: once in the opening, again in the middlegame, and another in the endgame. This is a good goal to set yourself: make it as tough for your opponent as you can, and seek counterplay at every stage. (DR)

1.e4

THE OPENING: White chooses an interesting variation, but underplays his hand. (DR)

1...e6

"I have never played the French Defence, which is the dullest of all openings" -- STEINITZ (DR)

A caricature: White wants an open, attacking game, and so plays e2-e4; Black prefers to play solidly and conservatively, and so plays the French, ...e7-e6. White groans, forced to play a closed game... but wait! We find lurking in the openings manuals a line which guarantees an open game, although promises no advantage. White, much cheered up, plays: (DR)

2.d4 d5 3.exd5 exd5 4.c4

One of White's more dynamic tries in the Exchange French, and also found after 4.Nf3 Bd6 5.c4, with transposition into a QGA (1.d4 d5 2.c4 dc 3.e3 e5 4.Nc3 ed 5.ed Nf6 6.Bxc4 Be7); similar structures can also be found in the Petroff. Black can play as in the game, or ...Bb4+...Ne7 with ...Bg4 as appropriate. (PCL)

What are the characteristics of this position? We will probably soon see an isolated Queen's Pawn position (White having more space, outpost on e5, possible break with d4-d5, attacking chances if he avoids exchanges, etc.). There are many of these IQP lines, but this one has some distinctive features. In the classical Queen's Gambit, Black often has a Pawn on e6, obliging the Bc8 to seek a home on the long diagonal.

Here, there is no such barrier, but a White Bishop on c4 is also unimpeded; it may be the Bc8 is actually best placed on b7, and Black may prefer not to have to restrain d4-d5 by ...c7-c6. (DR)

[1.d4 d5 2.c4 dxc4 **A**) 3.e4 c5 (3...e5 4.Nf3 exd4 5.Bxc4) ; **B**) 3.e3 e5 4.Bxc4 exd4 5.exd4 Nf6 6.Qb3 Qe7+ 7.Be3 PLaskett-Lukin, Plovdiv 1984; **C**) 3.Nf3 3... Nf6 4.e3 e6 5.Bxc4 c5 6.0-0 a6 7.a4 cxd4 8.exd4 Nc6] (DR)

4...Nf6 [RR4...Bb4+ Fritz3 0.16 (8/29): (00:04:51)] **5.Nc3** [RR5.cxd5 Fritz3 0.22 (8/30): (00:10:22) 5...Nxd5 6.Be2 Bb4+ 7.Bd2 Bxd2+ 8.Nxd2 Nf4 9.g3 Ng2+; 5.Nf3] **5...Be7** [RR5...dxc4 Fritz3 0.13 (8/26): (00:03:04) 6.Bxc4 Be7 7.Nf3 Nbd7 8.0-0; 5...Bb4]

For educational reasons I like to head for this position as often as possible - for

both sides! (PCL)

This is commendable: taking on both sides of a position in blitz and against computers is one of Karpov's training methods! (DR)

6.Bd3 ? (PCL)

attracted by the thought of 6: ...O-O 7.Nxd5 with Bxh7+, but this merely loses a tempo. It is normal in the QGD to delay moving the king's bishop as long as possible, thus: 6.Nf3 O-O 7.Be3 c6 8.Bd3 dc 9.Bxc4 Nbd7 10.O-O Nb6 11.Bb3 Bg4 or Nbd5 12.Ne5 Be6 with equality.

Because the Bishop must be moved sometime, White may think to clarify the situation as early as possible & play Re1 (DR).

6...dxc4

Gaining a tempo, although conceding the centre. Both sides must now develop, placing their pieces very carefully, although there are probably several sound continuations for each side. Pete actually puts his pieces on the most solid and least ambitious squares available, which is not my style, but Black can look to long-term chances if we can survive the early middlegame. (DR)

7.Bxc4 Nbd7

8.Nge2 ?! (DR)

Presumably to avoid ...Bg4, but the knight is passive on this square, unable to move to (or defend) e5. A better avoidance is simply 8.h3. (PCL)

I see no virtues in this move over Nf3. Many of the themes of the IQP - outpost on e5, attacking the King's-side - seem suited to Nf3 much more than Ne2. The e-file is closed and the Bf8 committed to e7 over b4. (DR)

8...Nb6 9.Bb3 0-0 10.0-0 c6

Perhaps ...Nbd5 first is more accurate, to prevent Bf4. (PCL)

Restraint of the d-Pawn. The classic Steinitz plan (seen in his Championship match with Zukertort) is to blockade the d-Pawn by occupying d5, then seeking exchanges to expose the weakness of the Pawn and defuse any attack. There is a lot of play left, but broadly that is the Black approach.

11.Bf4

[11.Re1 Fritz3 - a reasonable try, seeing what Black will do before placing the

Bc1.] (DR)

11...Nbd5 12.Be5

Looks a good post for the Bishop, but a Knight would benefit more from this support. In fact, the Bishop proves to be exposed to exchange here - not a tragedy, but may lead to other awkwardness. (DR)

[12.Nxd5 Nxd5 13.Bxd5 cxd5 Fritz3 is a typically junky computer suggestion, which is all in Black's favour: exchanging pieces and giving up the Bishop pair is emphatically not in White's interests!] (DR)

12...Be6

THE EARLY MIDDLEGAME: White seeks a way to an advantage, but drops a Pawn. (DR)

Both sides need to find some ideas. Black's main concern is the pair of White bishops, and I expected 13.h3 to prevent ...Ng4, though the game shows White hoped to utilise d6 for a knight after the Nxe5 dxe5 exchange. Black may try ...Qb6...Rad8 to play ...c5. (PCL)

13.Rc1

Nimzovitch in **My System** suggests Be3 Qe2 Rd1 Rc1 (and Nf3!) as White's ideal set-up. (PCL)

[RR13.Re1 Fritz3: Fritz's seems a more natural choice. White has three basic alignments for the Rooks: c1/d1, d1/e1, or c1/e1 (or maybe doubling, but that is unusual). Each is appropriate in some position or another: what about here? I'd suggest one on the open e-file, supporting the post on e5, and one behind the d-Pawn - in fact, not one on c1 at all!] (DR)

13...Ng4

Black is safely developed and is tempted by the exposure of the Bishop. (DR)

14.Ne4 !? (DR)

This sort of move is normally a good idea, typical of IQP positions, moving a piece nearer the King's-side. It's also the sort of move you need to keep coming up with in tense, complex positions if you are going to take on players in the 170+ class. Here it looks particularly good, since after an exchange on e5 the square d6 beckons, but... (DR)

14...Qb6

Getting the Queen out from under the central battle-zone, but I might have gone for a Rook move. (DR)

[RR14...Nxe5!? Fritz3 0.72 (8/26): (00:02:57) ...is a typically robust Pawn-grabbing attempt by the computer. Computers are great for finding (and making) moves like this; humans like Pete may be more cautious! It's actually not a move I'd think about for long even if I spotted the ...Qb8 idea, because White's pieces looked pretty active at the end of the analysis. 15.dxe5 Qb8 16.Nd4 (16.Qd4 Rd8; 16.f4 Ne3) 16...Qxe5 17.Re1; 14...Re8] (DR)

15.Bd6 ? (PCL) ? (DR)

White is looking at the dark squares d6 and c5, and natural would be 15.N2c3-a4-c5, additionally activating that knight on e2. I planned 15.N2c3 Nxe5 16.dxe5 Rad8 as if 17.Na4 Qc7 and e5 looks weak (the lack of the Nf3 is felt). Instead,

White tries, ambitiously, to win the dark squares by exchanging the relevant Black bishop... (PCL)

Fails to a two-mover. Why, or how, was it overlooked? Sometimes these questions cannot be answered, even by the blunderer, but this one has a familiar theme. (DR)

[RR15.Bg3 Fritz3 -0.34 (8/25): (00:03:14)Is certainly safer, but also an admission that White's opening play has come to naught, and is psychologically difficult to play for that reason.] (DR)

15...Bxd6 16.Nxd6

16...Qc7 ! (PCL) ! (DR)

A mischievous retreat. I'm going to guess that White missed this, because it's a retreat by a piece that is already developed. (DR)

Very pleasant to play: pinning the knight to the h2-pawn ... (PCL)

17.h3 Qxd6

...and winning it. Note 17: ...Ne3 18.fxe3 Nxe3 19.Qd3 Nxf1 20.Ne4 Qh2+ 21.Kxf1 Qh1+ 22.Ng1 and 20: ...Nh2 21.Qg3 leaves Black down two knights for a

rook. (PCL)

[17...Nge3?! is an obscure punt but you can have at least one point for noticing it. The main line "works" in that Black gets a Rook for two Knights but there is an amazing spuddle by sacrificing the Queen. Fritz3 ignored all this but Fritz2 fancied it! 18.fxe3!? (18.Nb5? Qb6 19.fxe3 Nxe3-+) 18...Nxe3 19.Nxf7!? Nxd1 20.Bxe6 Rae8 (20...Qe7! PCL) 21.Ng5+ Kh8 22.Rcxd1 (22.Rfxd1 h6; 22.Rxf8+ Rxf8 23.Rxd1 Qe7) 22...Rxf1+ 23.Rxf1 (23.Kxf1 Rxe6 24.Nxe6 Qf7+ 25.N2f4 g5 26.Nxg5 Qxf4+ 27.Nf3) 23...h6 24.Nf7+ Kh7 25.Nf4 g5 (25...Qb6) 26.Bf5+ Kg8 27.Nxh6+ Kg7] (DR)

18.hxg4 Bxg4

19.Qd2

“There exists a wide-spread and therefore dangerous delusion that with an extra pawn the win is achieved automatically.” BRONSTEIN (PCL)

So Black is a pawn up and the win is a matter of technique? If you insist, but I am not a strong enough player to lay claim to reliable technique, and it is worth detailing the thinking processes.

Firstly, the extra pawn is a bonus, but it only matures in the(distant) future, and must be disregarded for the present. White should obviously make every effort to

attack.

Secondly, the exchanges have removed a lot of the potential in White's position, and relieved the cramp in Black's. The plan must be an active one, and with dark-squared bishops I would perhaps attack the d-pawn, placing my bishop on f6, and hence defending g7 and e7. With light -squared bishops, doubling on the e-file with a view to entry on e2 is more logical. (PCL)

The endgame where such a Pawn may be converted is still some way off, and an extra h-Pawn is without doubt the most useless type of extra Pawn you can have. (DR)

THE LATE MIDDLEGAME: Black seeks central posts for the major pieces which prompts exchanges; White should have retained the Queens. (DR)

19...Rae8

I don't understand the Rook placements in this game. I'd have gone for two other moves over this one! (DR)

P.S. Black cannot win a Pawn with 19...Bxe2 20. Qxe2 Nf4 21. Qf3 Qxd4? 22. Rc4, but if he considered the Ne2 to be a more useful piece than the Bg4 he might have considered the exchange in any event. I have often heard strong players say 'this sort of position is all about what pieces you want to keep on', and while I don't think the Knight looks any better than the Bishop, Mike van Wissen was convinced that the exchange was good for Black!

20.Ng3 Re7 21.Rfe1 Rfe8 22.Rxe7 Rxe7 23.Re1

Black can go wrong with ...Qb4 24.Qxb4 Nxb4 25.Rxe7 and ...Qf4 24.Rxe7 Qxd2 25.Re8 'mate (both ideas drifted through my mind). (PCL)

23...Rxe1+ 24.Qxe1 Qe7

25.Qxe7 ? (PCL)

White's toughest line of resistance is 25.Qa5 b6 26.Qa4 Qd7 with a long struggle in prospect. Although exchanging rooks was necessary to remove the aggressive potential of the Black position, exchanging queens was an unnecessary simplification. (PCL)

Here I think White can dodge, because the Black Queen has no entry point; the complications produced by the presence of Queens may produce some counterplay. I think this error is crucial, and is one of the main instructional points of this game. [25.Qd2 idea Bxd5/Qa5; 25.Qa5!?] (DR)

25...Nxe7 26.Ne4

26...Nd5 [26...b6?! 27. Nd6 Bh5 28. f3!]

THE ENDGAME: after some difficult manoeuvres in which both sides make mistakes, Black obtains a winning game. Over the next few moves Fritz preferred alternatives at each step. We are entering a phase where the machine is suggesting moves that are good-looking but often unmotivated. (DR)

We now have a simplified ending where Black's win should be a matter of time. And accuracy I must add, as unfortunately Black plays some poor moves, and White grabs (nearly) every chance he is given! (PCL)

27.f3

[RR27.Nd6 Fritz3 -0.91 (9/18): (00:01:38) This is more active and probably better; 27. Bxd5 is probably also critical, tying White to the d5 Pawn at least for a while, but requires some courage!] (DR)

27...Be6 28.Kf2

[28.Nc5 Again, no harm in trying to mess Black up before either side activates the King.] (DR)

28...h6 ? (PCL) ?! (DR)

Error number 1, the king must be brought into play as a matter of urgency:
 28: ... Kf8 29.Nd6 b6 30.Nc4 Ke7 31.Ne5 Kd6 with an ideal setup, and not fearing
 29.Ng5 h6 30.Nxe6 fxe6. 'Centralise the king' is a basic maxim for the endgame,
 and the present sin must be justified - ...h6 was played with the aim of restricting
 the White knight's options, admirable in itself but misconceived, as the knight is
 only interested in the queen side - and another lesson is learnt. (PCL)

*[RR28...Kf8 Fritz3 1.03 (9/18): (00:03:25) 29.Ng5 Bf5 preserves the Bishop
 without loss of time.] (DR)*

29.Nc5

*[29.Nd6 b6 and Black will gain a tempo by attacking the Knight with the King.]
 (DR)*

29...b6 ? (PCL)

Error number 2, and now White has realistic drawing chances! ...Bc8 allows the
 king to centralise without any weakening of the queen side. Note 29.Nd6 b6 (now
 forced) 30.Nc4 Nc7 (31.Ne5 Bd5) was possible, but in Black's favour. (PCL)

*Stephan Gerzadowicz says that if you have a choice between a piece move and a
 Pawn move, and you can't decide: then **move the piece**, because you can't undo
 a poor Pawn move! (DR)*

30.Nd3 Nc7

This is all but forced. 30: ...Kf8 31.Ne5 c5 32.dc bc 33.Nd3 regains the pawn, or if
 31: ... Ne7 32.Bxe6 fxe6 and the knight on e5 is very strong, bearing down on the
 queen side. 30: ...f6 31.Nb4 Nxb4 32.Bxe6+ also is not simple. (PCL)

31.Bxe6 Nxe6

A Knight ending has arisen, where Black still has his extra h-Pawn and White's d-Pawn is still isolated. Guess what type of Pawn Knights find it most difficult to defend against? Right, Rook's Pawns! (DR)

32.Ke3 f6

stopping Ne5: if Nb4 Nxd4; Kxd4 c5+ (PCL)

33.Ke4 Kf7

34.d5 ! (PCL) ! (DR)

White's king is almost enough for him to consider winning the game by infiltrating the queen side: this is the punishment for Black's 28th and 29th moves - 34:... cxd5+ 35.Kxd5 and the king walks over to a7. Black must blockade the centre to allow time to sort his pieces out, even at the cost of a White passed pawn on d5. (PCL)

34...Ng5+ 35.Kd4 c5+ ! (DR)

A grown-up winning attempt: a lesser player would have feared giving White the passed d-Pawn. [35...cxd5 36.Kxd5 h5 37.Kc6 with better chances for White] (DR)

36.Kc4 Ke7

Along with his passed Pawn White has some goals (exchanging off Pawns) and some choices (play with K+N on Q-side, or send K to Q-side and N to K-side, or what?) (DR)

37.b4

Seeing 37.Kb5 Kd6 38.Nf4 Ke5! and Black takes the advantage, White tries to lift the queen side blockade, and gain b4 for his knight. (PCL)

37...cxb4 38.Nxb4 Kd6? (PCL) [38...Kd7]

Error number 3. A very poor move, and an instructive error: d6 is a knight's move from b5 which is a knight's move from a7, the destination of the White knight. The aim of the king move is to take a step over to the queen side and potentially defend the b6/a7 pawn. This could be accomplished without being a tempo-gaining target with Kd7!

The game should now be drawn. (PCL)

39.Nc6 h5

40.Nd4 ? (PCL) ? (DR)

And White backs out of 40.Nxa7 Nxf3 41.gxf3 h4, though with 42.Nb5+ he gets back in time. Black would have to play 40:... Nf7-d6 (41.Kb5 Kc7 etc), when he is probably still better due to the king-side majority.

Unfortunately for White, having made the most out of his chances thus far, he flinches from the final realisation, and the delay is critical. (PCL)

He who says 'A' must say 'B', advises Tarrasch. Although Nxa7 is committal, it does offer counterplay. (DR)

[RR40.Nxa7! 40...Nxf3!? (40...h4 41.f4; 40...Kd7) 41.gxf3 h4 42.Nb5+ Kd7 43.Nd4 (43.Nc3 h3 44.Ne2) 43...h3 44.Ne2 h2 45.Ng3 f5 46.f4 g5 47.fxg5 f4 48.Nh1 saves it: White had to anticipate this save at move 40] (DR)

40...g6

against not only Nf5 but also f3-f4-f5, crippling the majority.(DR)

The game should now be won (PCL)

41.f4 ? (PCL)

Natural enough, but weakens the pawns. (cf. Black's error on move 29). White cannot now take the a7-pawn: 41.Nb5+ Kd7 42.Nxa7 Nxf3 43.Kb5 h4 44.Kxb6 Ne1xg2 queens the h-pawn in time. White has to defend against ...a6...h4...h3: gxh3 Nxh3-f4xd5, which is not easy, as creating a second chance on the queen side is time consuming. White obviously wants to regain his pawn, without allowing the line above. (PCL)

f4-f5 is no longer a threat, but ...Nxf3 may be (DR)

41...Ne4 42.Nb5+ Kd7 43.Nxa7

At this point White (audibly) asked his match captain whether a draw would be sufficient, or should he be playing for a win! Meanwhile Black, contemplating an attack on four weak pawns with an active knight, can finally claim to be winning. (PCL)

White finally gets the courage to play this, but Black is better than previously. (DR)

43...Ng3 !(!) (PCL) ?! (DR)

This is an interesting moment where our analysis and judgement differed. After careful consideration of my ?! Pete gave his move another exclamation mark! (DR)

The position we both reached is obviously critical. The details of the analysis actually decide the point, but they shouldn't obscure some principles in the position:

- because White has a passed Pawn it must be blockaded, preferably by the King because the King also attacks the Pawn
- the Black Knight goes around hitting White Pawns weakened by loosening moves

(PCL)

If now 44.Kb5 Ne2 45.Kxb6 Nxf4 46.a4 Nxc2 47.a5 Nf4 48.a6 Nxd5+- c7 or 48.Nb5 Nxd5+ 49.Kc5 Ne7-c8 and the King's-side pawns win (though this appears the line with most chances - the winning moves with the knight, leaving the king alone, would have been hard to find). Or 44.Nb5 Ne2+ 45.f5 g5 with ...Nf4: g3 Ne2 to follow.

White instead gives up the least disastrous pawn... (PCL)

[RR43...Nd6+!? Fritz3 0.25 (11/24): Going backwards is not the idea in endgames usually, but it keeps the King out, and comes at the King's-side from what looked like a better angle, although the two approaches converge. (DR)

A check is easier to respond to, so 43...Ng3 must be the better move order! (PCL)

A) 44.Kd4 Nf5+ 45.Ke4 (45.Kc4 Ne3+ 46.Kb5 Nxc2 47.f5 g5!) 45...Nh4 46.g3 Nf5 47.Kf3 (*) Kd6 (*I thought this won, but Pete found a draw for White by liquidating Pawns after 48. Nc8+ Kc5 49. d6 Nxd6 50. Ne7 g5 51. Ng8 Ne8 52. Ke4 e.g. 52...Kb4 53. Kf5 h4 54. gxh4 gxh4 55. Kg4 Ka3 56. Ne7 Kxa2 57. Nd5=; however Black can still win by 47...Nd4+! 48. Ke4 Ne2 or 48. Kf2 Nc2 49. Nb5 Nb4 50. Nc3 Kd6-+ e.g. 51. Ne4+ Kxd5 52. Nxf6 Ke6 53. Ne4 Nxa2*);

B) 44.Kd3 Nf5 45.Ke2 (45.Ke4 Nh4 46.g3 Nf5 47.Kf3 Kd6 is the same position (*) as in (A); 45. Kc4 Ne3+ 46. Kb5 Nxc2 47. Nxc2 47. f5 g5 -+) 45...Ne7-+(PCL); 43...h4-+] (DR)

44.Kd4 ?! (PCL)

Putting the King where it can be easily checked. Knight endings are very tiresome, needing exact calculation more than general plans. [RR44.Kd3! Fritz3 -0.50 (11/22): (00:02:00) 44...Nf5!] (DR)

45. Ke2 Ne7-+ or 45. Ke4 Nh4 46. g3 Nf5 47. Kf3 returns us to the position (*) above. I saw 44. Nb5 Ne2 45. f5 g5 when ...Nf5-e2 wins. I also saw 44. Kb5!? Ne2 45. Kxb6 Nxf4 when I hoped I was better! (outside passed Pawn); afterwards I found 46. a4 Nxg2 47. a5 Nf4 48. Nb5 (48. a6 Nxd5+ and ...Nc7) 48...Nxd5+ 49. Kc5 Ne7 and ...Nc8-+ (PCL)

44...Ne2+! 45.Ke4 [45.Ke3 Nc3] 45...Nc3+ 46.Kd4 Nxa2 47.Nb5 Nc1

With the removal of the a-pawn, all Black's problems are over. The White King and Knight have no effective target, and it remains for Black to coordinate his pieces, and move on to the king side in earnest. First step is to return the knight to d6. (PCL)

48.Nc3

48...Nb3+ ?! (DR)

Drives the King forward! [48...h4!?!; 48...Kd6] (49. d6+! (PCL)) (DR)

These alternatives look less constructive! (PCL)

49.Kc4 Nc5 50.Kb5 Kc7 51.Kc4

Note: 51.d6+ Kxd6 52.Kxb6 h4! 53:...Nd3-e1 wins a pawn. (PCL)

The King was OK where it was, I thought. (DR)

51...Nb7 52.Nb5+ Kd7 53.Kd4 Nd6 54.Nc3 Nf5+

and now back to the king side... (PCL)

55.Ke4 Kd6

White is running out of moves! (DR)

56.Kd3

loses contact with the d-Pawn, but there wasn't much else (DR)

56...Nh4 57.g3 Nf5 58.Ne4+ Kxd5 59.Nxf6+ Ke6 60.Ne4

White has lost the asset of the d-Pawn, and allowed Black to exchange an extra near h-Pawn for a distant Passed b-Pawn. (DR)

60...Nd6 61.Nf2

Of course the exchange must be declined. (DR)

61...Kf5 62.Kd4 Nb5+ 63.Kd5

? (PCL)

... makes it easy, but if 63. Kd3 Black has two winning plans, ...h4 ...Kxf4-g3xh4 with two passed pawns, or ...Nxf4 : gxf4 Kxf4 with three pawns vs one knight! (PCL)

[63.Kd3 h4 or maybe ...Nc7-e6xf4] (DR)

63...Nc3+ 64.Kc6 Ne2

That's how it works: while your opponent battles with the Passed Pawn you eat the King's-side. (DR)

65.Kxb6 Nxg3 66.Kc6 [66.Kc5] 66...Kxf4 [66...h4 67.Kd5 Ne2] 67.Kd5 Nf5 [67...g5 is probably better, but it doesn't matter]

O-1

A long and hard struggle, typical of some of the complexities possible in endgame play. In particular note how a strong player will find resources in any position, and how accuracy must be maintained throughout.

The numerous errors are instructive: Black's delay in centralising his king, leading to queen side weaknesses. These weaknesses gave White the initiative, but he backed out of realising this to its optimum. (PCL).

This was a good game in many respects: exciting and close-fought, with more good ideas found by both sides than errors (no amateur game is really free of the latter.)

There are lots of instructional points here: the need for counterplay (25. Qxe7? 40. Nd4?) and the need for the courage of your convictions (35...c5+! 40. Nxa7!) being two that we didn't spend a lot of time on in the notes.

Perhaps the most instructional point of all is: I asked Peter if he would annotate this game for us, and discovered that he had already put a lot of time and effort into it for his own study.

Original analysis of our own games - not self-serving but hard work, checked and worried about - is perhaps the most valuable sort of study we can do. (DR)

STOP PRESS:

Good News:

There is a brand new book out by Ali Mortazavi which is all about swindling

Bad News:

The book was strongly criticised when reviewed by Jonathan Rogers in [KingPin](#) magazine.

Good News:

The review article in itself is very good reading on swindles, and would make a good complement to this document.

Bad News:

The diagrams in this document are a bit of a mix - sorry if it's slow or hard to read. [It looks OK on paper, is my only defence!]

Good News: *Also, Simon Webb's book "Chess for Tigers" is excellent for swindles.*

By swindling I do not mean:

- (a) hanging on grimly until your opponent blunders (this is Pure Luck)
- (b) setting one last trap (this is Desperation)

(c) defending the position well until the game turns in your favour (this is Proper Grown-Up Defending)

...although swindling contains elements of all of these. Real Swindling is where (1) your position is lost or losing, and (2) your opponent errs because of **something you have done**. So you do need to be lucky, but you have to make your own luck, or at least stack things a little less in your opponent's favour. Swindling has a similar appearance to **active defence**, but has a rather more urgent feel about it. "Setting a trap" is the simplest level of swindling, and in fact swindling is all about setting traps: some tactical, some positional, and some psychological. Successful swindling is also about setting traps well before things are desperate.

Some of the world's best players have always been great swindlers: Frank Marshall brought off so many that fans coined the term 'Marshall swindle', and Lasker won so many 'lost' positions that they speculated about witchcraft or hypnotism (psychological play was always a big part of Lasker's normal game, even if he wasn't losing).

Let's have a look at some general points, some simple examples, and then some deeper examples. I'd be happy if everyone had a go at the first two sections, which are mostly common sense, and then gradually work their way through the later parts.

Some general points

Swindlers' attitudes

If you are going to turn a game around, you must **admit you are losing**: be objective, don't kid yourself about your position, and do something about it before it really is too late.

If you are losing, **do something about it**: if the game continues normally you will lose.

Doing something about it means playing **differently**: you must throw the game off-course, and this probably means playing the move that is not objectively the best

Keep your eyes open: you must make the most of any and every opportunity.

Swindlers' methods

You must avoid losing: you can often decide on the right move by a process of elimination. If your opponent is going to win by promoting a passed Pawn in four moves, it's got to go! But never make simple concessions, make a mess.

Keep playing actively: you must have some activity to give yourself any chance of getting back into the game, or at least set your opponent some sort of problems (without which they will never go wrong!).

These and other principles are explained below:

1. [a. avoiding losing](#)
2. [b. creating opportunities for a swindle](#)
3. [c. exploiting your advantages](#)
4. [d. getting the initiative](#)
5. [e. giving up the exchange](#)
6. [f. exploiting psychological factors](#)
7. [g. being awkward](#)
8. [h. defending the endgame](#)

Playing the opponent and not the board.

Timely draw offers: when your counterplay is at its peak, or your opponent has already made one bad mistake, offer a draw in case their confidence has gone

Swindle-proofing your game:

Difficult moves to consider (look again!):

long moves

retreats

geometry (playing off the cushions)

Dangerous moments (look again!):

deceptively calm positions (may explode in your face)

deceptively familiar positions (are always slightly different)

reassuring moves (may drop you right in it)

while you are attacking (your opponent also has a right to exist)

after a crisis (danger may not be past)

when victory is in sight (vigilance is required)

Playing the board not the opponent

This of course is the opposite of the swindling strategy. If your opponent bears a lowly grade, or plays badly or incomprehensibly, don't assume your position will win itself, **keep playing chess**.

Health educators are given to considering four different aspects of human mind and activity in promoting healthy choices: knowledge, attitude and behaviour. Here's some advice on healthy chess from Amazia Avni:

Knowledge to keep in your mind:

- * **every game can be lost**
- * **every position can be ruined**
- * **details are important**

Attitudes to cultivate:

- * **constructive paranoia**

- * **self-criticism**

Behaviour to practice during play:

- * **active searching**
- * **thinking for your opponent**
- * **looking for the worst case**

Training for between games:

- * **studying positions with counterplay** as a main feature e.g. Open Sicilians
-

Swindling for beginners: some simple examples

Swindling: a simple example

Regis,D - Greet,An [A10] Torbay Open #5, 1994

1. c4 g6 2. g3 Bg7 3. Bg2 d6 4. Nc3 Nf6 5. e4 O-O 6. Nge2 e5 7. O-O c6 8. d3 a6 9. a4 ANG thought this a mistake **9... a5 10. f4 ?? [10. h3]10... Qb6+ 11. Kh1 Ng4 12. Qe1 Na6 13. Nd1 Nc5 14. f5 Nb3 15. Ra3 Nxc1 16. Nxc1 Bh6 17. h3 Bxc1 18. hxg4 Bxb2**

Now, White is absolutely busted here, a Pawn down and haemorrhaging on the Black squares. 'Sensible' passive play would be useless here. White must find some way of throwing the game off course: Black must be given a position where he can make a mistake.

19. Qd2!? [19. Ra2 Bc1] **19... Bxa3** **20. f6 Kh8** **21. Qh6 Rg8** **22. Bf3 g5?** [22... Bc1!] **23. g5 Qd8** **24. Kg2** **23. Kg2 Rg6** **24. Qf8+ Rg8** **25. Qh6 1/2**

A very simple example, but it does reinforce points about successful swindling, viz. giving your opponent a chance to go wrong, and playing actively.

Approaching a swindle

To be swindled your opponent must fall into some *tactical* or *positional* muddle. We'll look briefly at both. Here's how to approach a *tactical* swindle:

Bellers-Regis, 1997

Black has sacrificed a piece to expose the King, but there is no mate (...*h5-h4* fails to *Qxf7+*), so Black is losing. How can one approach a swindle in this position?

Start with: what can go wrong for White?

A. *hopes of perpetual check (1) by a standard pattern (...Re1+)*

B. *hopes of perpetual check (1) by exposing the King (although the White King may escape to the Queen's-side if the White Queen can interpose)*

C. if the Queen does interpose (1) this may lead the Queen into trouble (Kf5 Qe6 +)

D. if the Queen does interpose (2) this may leave the Rook loose (...Qh2+)

So, we have four basic swindles to try for. You have to **weigh up quickly which is your best chance**, and play a move quickly (a) to make your opponent decide, and (b) give them as little time as possible to find what you have found. In this case (B) looks very achievable but uncertain to produce a desired change in fortune; the others are in their own ways certain, but difficult to achieve. You have to decide which is the most likely and go for that.

The actual game was adjourned here, so I resigned(!), but in a game I think I would have played quickly the non-committal ...Qf4, when I still have some hope of bringing off (B) and also I have some new chances of (A) (C) or (D). (A reality check suggests that simply Qb7-b4 holds, which is not that hard to find OTB, after which Black has to go for ...Rxf3+, but you have to try these things).

The other swindling considerations are **positional**: you must strive to make your pieces as active as possible and drive or tempt your opponent's into bad positions.

For example: you need to get from this lost position I had as White one day:

...to this:

27...Rh8 28.Kg2 Kc7 29.Re1 Kd6 30.Re4 Rb8 31.b3 Rf8 32.Ra4 Bc8 33.Rg4 Rf6 34.Rh4 e5 35.Rh8 Kc7 36.Rh7+ Kb6 37.Rh8 Bb7 38.Re8

Black's King and Bishop have got lost and the White Rook has been going around bullying Pawns... **1/2-1/2** Draw agreed! (a Timely Draw Offer). White has a nasty trap (...Rf5; g4, Rg5?? Kg3! e4) which ensures the win of a Pawn, and Black thought he'd bale out before things got worse! [*Black may still be winning but his confidence had gone.*]

How do you do this? Like I did: play actively, keep making threats, let your opponent lose the thread.

What's the odds?

Thinking about swindles always reminds me of those **games played at odds**. The fact that you can win a game at Queen odds must give you some hope!

Here's a vigorous example of odds-play by the great German:

Tarrasch- Schroeder, Nuremberg 189?

1.e4 e5 2.f4 d6 3.d3 f5 4.Nc3 fxe4 5.dxe4 a6 6.fxe5 dxe5 7.Nf3 Bb4 8.Bg5 Qd6 9.Rd1

Here Tarrasch relies on the opponent to be too greedy to give any material back and simplify.

9...Qg6? [9...Qxd1+!] 10.Rd8+ Kf7 11.Bc4+ Be6 12.Nxe5# 1-0

There are other approaches to chess than Tarrasch's...

Nimzovich - Leelaus, Riga (Remove White's Queen & Black's g8 Knight), 1912

1.b3 e5 2.Bb2 f6 3.e4 c6 4.Nc3 Bb4 5.0-0-0 Bxc3 6.dxc3 0-0 7.Ba3 Re8? 8. Bd6 Qb6 9.Nf3 Qxf2 10.h4 h6 11.Bc4+ Kh7 12.h5

Nimzo plays in blockading style, even at these odds!

12...b5 13.Bf7 Re6 14.Nh4 Rxd6 15.Rxd6 Qc5 16.Rhd1 Qxc3 17.R1d3 Qe1 + 18.Kb2 Qxh4 19.Bg6+ Kg8 20.Re6 1-0

Examples of swindles and other false results

1. Pure Luck (or mostly pure)

Every so often your opponent just self-destructs. If you don't resign but hang around and watch this can be fun. When do you do this? When your opponent looks either over-confident or under-confident! Let's see some examples to clarify this.

Botvinnik,M - Bronstein,D (Wch19_Moscow, 09) [A91] 1951

1. d4 e6 2. c4 f5 3. g3 Nf6 4. Bg2 Be7 5. Nc3 O-O 6. d5 Bb4 7. Bd2 e5 8. e3 d6 9. Nge2 a6 10. Qc2 Qe8 11. f3 b5 12. Qb3 Bc5 13. cxb5 Bd7 14. Na4 Ba7? 15. b6! Bxa4 [15... cxb6 16. Nxb6 Bxb6 17. Qxb6 is simply winning.]16. b7 Bxb3 17. bxa8=Q Bb6 18. axb3 Qb5 19. Nc3 Qxb3

White is a Rook up: I am tempted to say, simply a Rook up, but Botvinnik complicates matters immediately.

20. Rxa6? Nxa6 21. Qxa6 Nxd5

Now it's one Pawn for a piece! This 'simplification' hardly helped matters.

22. Qa4? [22. Nxd5 Qxd5 23. Ke2] 22... Qxa4 23. Nxa4 Bxe3 Two Pawns... also unnecessary. 24. Bf1 Ra8 25. b3 Bxd2+ 26. Kxd2 Kf8 27. Bd3 g6 28. Rc1

White is still winning but there are some difficulties.

**28... Rb8 29. Nc3 Nb4 30. Be2 Ra8 31. Na4 c6 32. Rc4 Rb8 33. Bd1 Ke7
34. Nb2 d5**

**35. Rh4? [35. Rc5!] 35... h5 36. g4 hxg4 37. fxg4 f4 38. g5 Rf8 39. Rh7+
Kd6 40. Rg7 e4 41. Rxc6+ Ke5** Black may even be better here...! **1/2-1/2**

It's hard to know what is going on here, maybe it's more than one thing. Perhaps we can get some more insight into it when considering this example:

Petrosian-Korchnoi, 1962

*"For a long time I had regarded my position as a winning one. Thus the whole opening phase of the struggle, when Korchnoi was unable to get out of trouble, had psychologically attuned me to the idea that the ending would be favourable to me ... and here comes the oversight **35 Rxc6??** I did not even see the threat ... **f4-f3**, possibly because it was in contrast to Black's hopeless position. Personally, I am of the view that if a strong master does not see such a threat at once he will not notice it, even if he analyses the position for twenty or thirty minutes." - PETROSIAN.*

Your opponent also has a right to exist... I should add again that here is the

value of the 'write it down and take a fresh look' advice - you are trying to give yourself a chance to un-stick yourself from any false assumptions.

Anyhow, one more example:

"The world no 10 was a little bit too casual in round one and loses a piece and a pawn for little compensation. Unabashed, he carries on as if nothing has happened and somehow wins quite smoothly." -- PEIN

Wynarczyk,R - Adams,M ICI-Katalco QP

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.Qe2 b5 6.Bb3 Bc5 7.a4 b4? 8.Bxf7 +! Kxf7 9.Qc4+ d5 10.Qxc5 Qd6?? 11.Qxc6! Bd7 12.Qxd6 cxd6 13.d3 Rac8 14.c3 h6 15.exd5 Nxd5 16.c4 Bf5 17.Ke2 Nf6 18.Nbd2 Rhe8 19.Re1 Nd7 20.Nb3 d5 21.c5 Nxc5 22.Nxc5 Rxc5 23.Be3 Rc2+ 24.Kf1 d4 25.Bxd4 exd4 26.Nxd4 Bxd3+ 27.Kg1 Rxe1+ 28.Rxe1 Rxb2 29.f4 b3 30.Re3 Bc4 31.Rc3 Bd5 32.g3 Rb1+ 33.Kf2 b2 34.Rc7+ Kf6 35.g4 Rh1 36.g5+ hxg5 37.fxg5+ Kg6 0-1

We can see a lot of the same features here (giving back material, making concessions) as in the BB game.

2. One Last Desperate Trap

Not the best way to play but you can sometimes bring it off:

Regis, D - Tyton, Adam (Devon U175 vs. GMCCA, 1997), Position after 32.Qe3

What would you play here as Black?

32...e5!?

This is a filthy move positionally, but a good practical choice. Moves like

[32...Qh7; 32...Qf7] are just awaiting the undertaker: e.g. 32...Qf7 33.Bxh5 gxh5 34.Qh6+ Qg7+ 35.Qxg7+ Kxg7 36.Rxh5]

Although the move chosen exposes the Pawns to attack, it does activate the Black Queen and create some sort of activity in the centre, maybe threatening to open the c-file. White has only a few minutes left: he spots a trap: *[33.dxe5 fxe5 34.Qxe5 Qxh3]* and avoids it... but falls for:

33.Bxh5 gxh5 34.Rxh5?? Qg4+ 1-0

On reflection:

[34.Qh6+ Qg7+ 35.Qxg7+ Kxg7 36.Rxh5 exd4 37.cxd4 Rc2 is not an easy win because of the activity of the Black Rooks on the c-file, but;

34.dxe5! fxe5 35.Rf3+ Kg8 36.Qxe5 Rg6+ 37.Kh1 is winning [37...Qg4? 38.Rg3]

3. Proper Grown-Up Defence

Another booklet's-worth, I think, but here's an example from the borderlands between defending and swindling:

Lasker,Em - Janowski,D (Berlin), 1910

1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Be6 6.e4 dxe4 7.Nxe4 Nc6 8. Be3 cxd4 9.Nxd4 Qa5+ 10.Nc3 0-0-0

"The White Knight on d4 stands badly, and this must be White's undoing" -- TARRASCH

"One of the most famous 'won' positions in the story of chess" -- EUWE and KRAMER.

What is lost at master level is often worth plugging away in at club level. But the same approaches apply:

11.a3 Nh6? 12.b4 Qe5 13.Ncb5 Nf5! [13...a6 is to play into a characteristic Lasker trap 14.Qc1 axb5 15.Nxc6 bxc6 16.Qxc6+ Qc7 17.Qa6+ Qb7 18.Rc1+ Kb8 19.Bf4+] **14.Rc1!**

White's only hope is counterattack. With vigorous play, an iron nerve and some tactical alertness, Lasker pulls it off.

14...Nxe3 15.fxe3 Qxe3+ 16.Be2 Be7 17.Rc3! Bh4+!? [17...Qxc3+!] **18.g3 Qe4** [18...Qxc3+!?] **19.O-O Bf6 20.Rxf6! gxf6 21.Bf3 Qe5 22.Nxa7+ Kc7 23. Naxc6 bxc6 24.Rxc6+ Kb8 25.Rb6+ Kc8 26.Qc1+ Kd7 27.Nxe6 fxe6 28.Rb7 + Ke8 29.Bc6+ 1-0**

I wouldn't call that a swindle as such, but there's no doubt Lasker was a wizard at making his own luck through disrupting sacrifices and active play.

4. Real swindles

a. avoiding losing

Beckett,T - Regis,D [A04] King's Lynn vs. Cambridge Univ, NMCC, 1981

1. Nf3 c5 2. b3 Nc6 3. Bb2 d6 4. e4 e5 5. Nc3 Nge7 6. Bc4 g6 7. Ng5

Black, misled by White's quiet first move, is more or less lost. I could submit meekly to $7...Be6$ and the loss of a Pawn, but the bare light squares would lead inevitably to defeat. Instead: $7...d5!?$ is a good randomising move. Black is still losing, but White doesn't yet know how, and has to work it out!

8. exd5 Nd4 9. d6 Nd5 10. Nxd5 Qxg5 11. Bxd4 exd4 [11... Qxg2 12. Nf6+ Kd8 13. Bd5] 12. Nc7+ Kd8 13. Qf3 Bxd6 14. Nxa8

Black has undoubtedly gone from losing at move 7 to being even more lost, but now the rot sets in for White. He is behind in development, beset with choices, and starts eating up clock time.

14...Re8+ 15. Kf1 Bg4 16. Qxb7 Qxd2 17. f3 Bf5 18. Qd5 Re6 19. Qb7 Re7 20. Qc6 10 minutes left! 20... Bf4 21. Qd5+ Bd7 22. Nb6 axb6 23. Qa8+ Kc7 24. Qa7+ Kc6 25. Qa8+ 1/2-1/2

b. creating opportunities for a swindle

Give yourself a chance!

Alatsortev, Vladimir - Botvinnik, Mikhail (Leningrad training) [E52] 1933

1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. Nf3 b6 5. e3 Bb7 6. Bd3 O-O 7. O-O d5 8. cxd5 exd5 9. a3 Bd6 10. b4 Nbd7 11. Nb5 Be7 12. Ne5 a6 13. Nc3 c5 14. bxc5 bxc5 15. Rb1

15... Qc7?? 16. Nxd7 Nxd7 17. Qb3 Rab8 18. Nxd5 Bxd5 19. Qxd5 Rxb1 20. Bxb1

How Good is Your Swindling?

20... c4! Good Point 1: White now has an important decision to make, which is taxing anyhow... **21. Bxh7+?**

[21. Qe4! Nf6 22. Qc2 with the advance of the central Pawns. Note that Black's position here is worse than if he had chosen 20...cxd, but it's still 20...c4!" [20...cxd4 21. exd4 Nf6 22. Qf5 Rd8 is technically better]]

21... Kxh7 22. Qe4+ Kg8 23. Qxe7

with two Pawns, but... **23... c3** ... the other result of Black's 20th is Good Point 2: counterplay. **24. e4**

[24. a4 c2 25. Ba3 Rb8 26. Rc1 Qc6 27. h3 Qxa4 which is comfortable for Black]

24... c2 25. d5? Rb8 26. g3 Qc8

Not over yet, but Black's practical decision has transformed his chances.

27. Qg5 Qc4 28. f3 Rb3 29. Qd2 Rd3 30. Qe2 Ne5 31. Kg2 Rd1 32. Qxc4 Nxc4 33. d6 Kf8 34. a4 Ke8 35. Kf2 Nd2 36. Re1 Nxf3 37. Rf1 Nxf2 38. Re1 Nf3 39. Rf1 Nd2 40. Re1 Nb3 41. Ba3 c1=Q 42. Bxc1 Rxc1 43. Rxc1 Nxc1 0-1

c. exploiting your advantages

Bracher, AR (Pembroke) - Keene, RD (Trinity) 1967

Games like this are often referred to as swindles, but bear many similarities to Proper Grown-Up Defence. Perhaps the difference is in the assessment of the position as lost at move 18: Black is busted.

1. d4 Nf6 2. Nc3 g6 3. e4 d6 4. Bg5 h6 5. Bxf6 exf6 6. f4 Bg7 [6... f5] 7. Nf3 c6?! 8. Bd3 Qb6? "Too extravagant." 9. O-O! Qxb2 10. Qd2 Qb6 11. Kh1 Bg4 12. Rab1 Qc7 13. Nh4! Nd7! 14. h3 g5! 15. Nf5! Bxf5 16. exf5 O-O-O 17. Rb3 d5

18. Nb5!!

"A brilliant move which convinced me that it was time to offer a draw."

[18. Nxd5 Qd6 19. Nc3 Nb6 unclear] **18... cxb5** [18... Qb8 19. Qa5 a6 20. Nd6+!! Qxd6 21. Rxb7!+- "A real piece of Morphy."] **19. Rc3 a6 20. Rxc7+ Kxc7 21. Qc3+ Kb8 22. a4! Rc8 23. Qb3?** [23. Qa5+-] **23... Nb6 24. axb5 a5**

"Setting up a temporary defence. From here I had to move at lightning speed to force White through two more time controls and avoid adjudication."

Black has *avoided losing*. The next few moves show Black gradually uncoiling while White fiddles about. He gets his dead Bishop out, holds the Queen's-side and brings his Rooks to the central files.

25. Qa3 a4 26. Qd6+ Ka7 27. Qb4 Kb8! 28. Qd6+ Ka7 29. Qb4 Kb8 30. Qa5 Kc7 31. Ra1? [31. c4! idea Rc1 +-] **31... Bf8 32. Rxa4 Bd6 33. Ra1 Bxf4 34. Qb4 Bd6 35. Qb3 Rhe8 36. Rf1 Kd7**

"Suddenly Black is back in the game... White found himself in continuous time pressure and a few more errors sufficed to lose."

37. Qb1 h5! 38. Re1? Bg3! 39. Rf1 Re7 40. Qd1 h4 41. Qf3 Kd6 42. Kg1 Rce8 43. Rd1 Re1+ 44. Rxe1 Rxe1+ 45. Bf1 Nc4 46. b6 Ne3 0-1

d. getting the initiative

Gray,T (1695) - Regis,D [A40] Ian Miles Chp., Andover CC, 1983

1. d4 e6 2. c4 b6 3. Nf3 Bb7 4. e3 f5 !? 5. Nc3 Bb4 !? 6. Be2 Nf6 7. Qb3 ! 7... a5 (7 ... Na6!?) 8. a4 O-O 9. O-O Bxc3 10. bxc3 Qe7 [10... Ba6] 11. Ba3 d6 12. c5 Nbd7 13. cxd6 cxd6 14. Ne5 ! (zok) 14... Ne4 15. Rad1 Kh8 16. Bb5! (pow)

Black's opening set-up has been exposed as a hollow sham. Time for one of those randomising moves:

16... Nec5 17. dxc5 Nxe5 18. c6 (ugh) 18... Nxc6 19. Bxd6

How good is your swindling?

19... Qg5 !?

This hardly conceals its tactical point, but more seriously, Black also steals the

initiative. Once White takes a step back he never regains momentum.

20. Bf4

[20. g3 Rfe8 21. Bc7 Rac8 22. Bxb6 Qg4 23. Rd7!? Ne5! 24. Rxb7 Nf3+ 25. Kg2 draws by perpetual 25... Nh4+ 26. Kg1 Nf3+ 27. Kg2]

20... Qg6 21. f3 e5 22. Bg3 f4 23. exf4 exf4 24. Be1 Ne5 25. c4 Rac8 26. Qa3 Qf7 27. Rd6 Nxc4 28. Bxc4 Qxc4 29. Rxb6 Ba6 30. Rf2 Rfe8 31. Rb1 Re3 32. Qa1 Qc5 33. Kh1 ? [33. Rd1 Rce8 34. Qb1 Re2 35. Qa1 Qe3 36. h3] 33... Bd3??

Surprisingly, still enough to win a piece

[33... Rxe1+! 34. Rxe1 Qxf2] 34. Rb7 [34. Rd1 Rxe1+ 35. Rxe1 Qxf2 36. Re7 Rg8] 34... Qe5 35. Qxe5 Rxe5 36. Bc3 ?! 36... h6 ! 37. g3 Rxc3 38. gxf4 Rf5 39. Kg2 Rxf4 40. Kg3 g5 41. Rd2 Kg8 42. Ra7 Rxa4 43. Rb2 Rb4 44. Ra2 Be4 45. R2xa5 Rxf3+ 46. Kg4 Rf4+ 0-1

[46... Rf4+ 47. Kh5 Rh4#] [47. Kh3 Rb3#] [47. Kg3 Rb3#]

e. giving up the exchange

Giving up the exchange is often a good idea. It is a good randomising move, unbalancing the position, keeping the piece count the same, often achieving definite short-term compensation, as Rooks are often very hard to develop and use properly..

Grist, H-Regis, D, East Devon 5, 1994

1. e4 g6 2. d4 Bg7 3. Nf3 d6 4. h3 c6 5. Be3 b5 6. Be2 Nf6 7. Nbd2 Nbd7 8. O-O O-O 9. c3 a5 10. a4 b4? (10... bxa4 11. Rxa4) 11. c4

White has a clear plus; Black has no answer to White's dominant pawn centre.

11...e5 12. dxe5 dxe5 13. c5 Qe7 14. Rc1 Rd8 15. Qb3 Nf8 16. Bc4 Nh5
(Slightly desparate; more natural is 16... Be6 17. Ng5 Bxc4 18. Nxc4 Ne6 19.

Nxe6 Qxe6 20. Qc2 Nh5) 17. Ng5 Be6 18. Nxe6 Nxe6 19. Bxe6 fxe6 20. Rfd1 Nf4 21. Kf1 Rd3 22. Qc2

Now the plausible ...Rad8 is met by Nc4-d6.

22...Rxe3 A spanner in the works. **23. fxe3 Nh5 24. Nf3 Rf8 25. Kg1 Bh6 26. Re1 b3** Cheeky... to tempt White's Q off the second rank. **27. Qc3** (it worked)
Now for another exchange sacrifice: **27...Rxf3 28. gxf3 Qh4 29. Qxe5**

29...Qxh3?? Sadly I was too short of time to find 29... Nf4! 30. Qb8+ Kf7 31. Qc7+ Kg8 32. Qc8+ Bf8 33. exf4 Qg3+ 34. Kf1 Qxf3+ 35. Kg1 Qg3+ with perpetual check. **30. Kf2 Qh4+ 31. Ke2 Ng3+ 32. Kd3 Qd8+ 33. Kc4 Qc8 34. Qxg3 1-0**

f. exploiting psychological factors

Regis,D (1940) - Abbott,M (1750) Exeter vs. Tiverton, 1996

White is a Pawn down for nothing.

21. Rfe1 c6 22. bxc6 bxc6 23. Ne2 Qf5 (Black is keen to exchange Queens)
24. Qc3 Ne6 25. Qe3 Bxb2 26. Rxb2

I played for this simplified position hoping that Black would seize the opportunity to exchange Queens...

26... Qe4+ 27. Qxe4 dxe4 ...But now Black has given up his strong Queen and his protected passed Pawn, and has also lost the initiative. 28. Rb6 Nxc5 29. Nc3 Ra6 30. Rxa6 Nxa6 31. Nxe4 Kg7 32. Ra1 Nb4 33. Ra7 Nd3 34. Rc7 c5 35. Nxc5 Nxc5 Q

g. being awklard

Adams, M - van Wely, L (Tilburg) 1997

1. d4 Nf6 2. Bg5 Ne4 3. Bf4 d5 4. e3 Bf5 5. f3 Nf6 6. c4 c5? 7. cxd5 Nxd5 8. Bxb8 oops 8... Nxe3 [8... Rxb8 9. e4 Bxe4 10. fxe4 Nf6] 9. Bb5+ Bd7 10. Bxd7+ Qxd7 11. Qe2 Nxc2+ 12. Qxc2 Rxb8 13. dxc5

Black has a Pawn for the piece. but has given it up in the most awklard way.

13... g6 14. Nc3 Bg7 15. Nge2 Qc6

16. Qg5?

After the f-Pawn falls White's King will never be safe and Black has definite compensation.

[16. Qf2+-]

16... Qxf3 17. Rf1 Qh3 18. Rf2 O-O 19. Rd1 Qe6 20. Nd5 Bxb2 21. Qxe7 Qxe7 22. Nxe7+ Kg7

Black has two Pawns for the piece, but now White is running out of candidates for promotion. White returns the piece for two Pawns!

23. c6 Rbe8 24. Rd7 Ba3 25. Nxg6 hxg6 26. cxb7 Rd8 27. Rxd8 Rxd8 28. Rf3

How Good is Your Chess?

28... Bb4+ 29. Kf1 Rd1+ 30. Kg2 Bd6 31. Rb3 Bb8 Black has blockaded the Pawn while keeping the Rook active. Not over yet though: the a-Pawn can support the b-Pawn. **32. a4 Kf6 33. a5 Ra1 34. 56. Nxg5 Simplifying to a known draw. **56... Rxc6** **57. Rc6+ Kf5** **58. Rxa6 Kg4** **59. Kf2** 1/2-1/2

h. defending the endgame

The endgame is real swindler's territory. We have four main weapons:

perpetual check

which we have referred to above. Here's a perpetual I did bring off in the middlegame:

Wildsau (2375) - DrDave (1855) [C57]

31...Rxh3? 32.Rxd6 Qxd6 33.gxh3 Rf3 34.Bxg7+ Kg8 35.Bh8 Qg6+ 36.Kh2

36...Rxh3+ 37.Kxh3 Qh5+ 38.Kg3 Qg5+ 39.Kh2 Qh4+ 40.Kg1 Qg4+ 41. Kh2 Qh4+ 42.Kg1 Qg4+ 43.Kh1 Qh3+ 44.Kg1 Qg4+ Game drawn by repetition 1/2-1/2

Here's an endgame example, from a friendly between Steve Homer (White) and Agust Karlsson:

Maddening!

exchanging into a known drawn endgame

...which we have also seen above. Here's another example, from the master of the swindle (rumour has it that "Hewson" is a contraction of "Houdini's-son")

Lingham,R - Hewson,BWR, Douglas Phillips Quickplay, 1995

1...exf4 2.Bxf4 f5+ 3.gxf5 gxf5+ 4.Kxf5 Bxf4 5.Kxf4 1/2-1/2

the saving power of a passed pawn

...which we have also seen above. Here's a game - not a swindle, because I think Black may have more than one way to draw this position, but a good example of a resource that is often very useful

Rubinstein,Akiba - Capablanca,Jose [A46] Berlin (12), 1928

**24...a5 25.Rd1 a4 26.Rdd7 a3 27.Rxf7 a2 28.Rxg7+ Qxg7 29.Rxg7+ Kxg7
30.Qf6+ Kg8 31.Qg6+ Kf8 32.Qf6+ 1/2-1/2**

the positional draw

below!

There are many examples of more complex but still successful blockades. Kotov gives one that very nearly worked at GM level:

Kotov - Arnlaugsson (Amsterdam), 1954

"Having played Ng4 I went for a stroll. When I came back to the board I did not understand at first what was happening."

84... Qg5 85. Rxc5 fxc5 86. Qe3 Rxc4+ 87. Kg3 Rxc3+!! 88. Kxc3 f6

"Now I looked at the board in dismay. How was I going to win? Where could I force an entry?"

In fact, Kotov did get through in the end, but it's an idea worth knowing: sacrifice for a blockade.

Exeter Chess Club: Club Games from selected sessions.

I have been asking around for club players' games - not necessarily special ones, just games - with the thought that these 'ordinary' games may also be instructive. Some are presented below.

"Why don't you use more club games in the coaching sessions?"

-- This is a common comment. There are some good reasons why not:

1. The reason for showing master games is often to illustrate a particular point of strategy so the games I use are often 'classics' i.e. particularly clear or attractive.
2. These games are usually annotated by the players or other masters, perhaps in more than one publication, so the nuances are readily seen and I have confidence in repeating a comment I have read.
3. Lastly, they are often already typed in by someone else in a database!

But there are also some compelling reasons for using club players' games:

1. the openings, techniques and ideas seem much more accessible to club players who see the games - *"I could do that!"*
2. it is possible to talk through honestly the motivation behind a move, rather than see a maze of variations which may or may not have been seen at the time by the masters, and
3. any flaws may be as instructive to consider as any nuance in a master game.

If you would like to find games appropriate to your own level:

Bruce Rowston is a stalwart of the Minor sections with a BCF grade approaching 100. **Steve Webb** has recently graduated from Intermediate to Major (and may yet go further); **Mark Blackmore** also has made this transition in recent years, and the games below are his set that won the East Devon Major outright this year.

Steve Homer and **Andrew Pickering** are both county players with grades well over 170 - say, 2000 ELO plus.

The sets from Bruce and Mark are a natural sequence. Steve W pucked out some games he just found 'interesting', where he had to make a conscious effort to win. Steve H selected some games which showed a particular positional theme - the *positional sacrifice*. Andrew avoided making generalisations or drawing grand concusions from his experiences, but in his absence I might offer that his play often strikes me as being *enterprising* as opposed to merely competent, and this is why I invited him to show us a few of his adventures.

Andrew also wanted to show Nimzovitch's game against Opocensky, which clearly made an impression, and this is included.

It can be quite daunting to have your games inspected by an audience of your peers, so many thanks are due to these folk for the games and the obvious care that went into the notes.

The notes below are a mix of mine and the player's own; it should be obvious where the join is if it matters. -- Dr. Dave

Exeter Chess Club: Bruce Rowston at work

Bruce Rowston at work

Mason,DR - Rowston,B [E15] East Devon Minor #1, 1996

1. d4 Nf6 2. c4 e6 3. Nf3 b6 4. g3

The main line Queen's Indian position.

4... d5

I can't help thinking this is dubious, immediately blocking the diagonal.

[4... Bb7]

[4... Ba6]

5. cxd5 exd5

[5... Nxd5 6. e4 Nf6 7. Bb5+ Nfd7 8. d5]

6. Bg2 Bb7 7. O-O

7... c5?!

A bit loose - no rush for this, White can't stop it.

[7... Be7]

8. Bg5 Be7 9. Nc3 O-O 10. dxc5 bxc5 11. e3 h6 12. Bxf6 Bxf6 13. Qb3

There is the looseness made plain.

13... Qb6

[13... Qd7 14. Rfd1 Rd8 +/- 15. Rac1 [15. Ne1] [15. Ne4]]

14. Nxd5 Qxb3 15. Nxf6+ gxf6 16. axb3 Na6 17. Rfd1 Rfd8 18. Nh4 Rxd1+ 19. Rxd1 Bxg2 20. Kxg2

20... Nb4

Optically right - occupying the furthest outpost on a file, in front of doubled isolated pawns - but strategically mistaken: where's the plan?

[20... Rb8 21. Rd3 c4 with counterplay]

21. Nf5 Kh7 22. Rd7 Kg6 23. g4 a5 24. Nd6 Nd3 25. Nc4

[25. f4 Nxb2 26. f5+ Kg7]

[26... Kg5 27. Kg3 a4 28. Nxf7#]

27. Rxf7+ Kg8 28. Rxf6]

25... Ne5 (sadly, probably best) 26. Nxe5+ fxe5 27. Rd5 Rb8 28. Rxe5 Rxb3 29. Rxc5 Rxb2

Black was sporting to resign here - I would have been rude enough to play on, having been swindled in such positions myself.

1-0

Rowston,B - Sewell,G [A27] East Devon Minor #2, 1996

1. c4 e5 2. Nc3 Nc6 3. Nf3 g6 4. g3 Bg7 5. Bg2 Nf6 6. O-O O-O 7. Rb1 d6 8. h3 Bf5 9. d3 Qd7 10. Kh2 Rfe8 11. b4 a6 12. a4 e4 13. Ne1

Good - the exchange would come naturally to many players, but the retreat is fine.

13... exd3 14. exd3

[14. Nxd3 Ng4+

[14... Be6 15. Nd5]

15. hxg4 Bxc3 16. gxf5]

14... h6 15. b5 axb5 16. axb5 Na5 17. Nc2 Ra7 18. b6 cxb6 19. Rxb6 Nh7 20. Nd5 Ra6 21. Na3 Rxb6 22. Nxb6

White's standard Queen's-side attack has yielded only a little pressure: White still has the b-pawn to pester.

22... Qe6

[22... Qd8]

23. g4!

Alert

23... Bxd3 24. Qxd3 Qe2 25. Qxe2 Rxe2 26. Nb5 Nxc4?? 27. Nxc4 Be5+

28. f4

[28. Nxe5 dxe5 29. Bxb7]

28... Bf6 29. Nbx6 g5 30. fxg5 hxg5 31. Nxb7 Kg7 32. Nbd6 Nf8 33. Nf5+ Kg6 34. Ncd6 Ne6 35. Ne4 Nf4 36. Bxf4 gxf4 37. Nxf6 Kxf6 38. Rxf4 Kg5 39. Rf1 f6 40. Kg3 Rb2 41. h4+ Kg6 42. h5+ Kg5 1-0

Rowston,B - Penrose,M [A00] East Devon #3

1. c4 Nf6 2. Nc3 d5 3. cxd5 Nxd5 4. Nf3 g6 5. g3 Bg7 6. Bg2 Nxc3 7. bxc3 O-O 8. O-O Nd7 9. d4

[9. Rb1]

9... c6

Pick a plan for White!

10. e3

[10. Rb1]

[10. Ba3]

10... Nb6 11. Qe2 Be6 12. Nd2 Qc7 13. c4 Rfd8 14. Ba3 Rd7 15. Rac1 Rad8 16. Rfd1 Qb8 17. Nb3

Black sacrifices a two pieces for Rook and Pawn. Nominally this is equal but this normally favours the pieces - here Black may have been encouraged by the doubled Rooks, but they bite on granite on d4 while the White Bishops are too powerful

17... Bxc4 18. Rxc4 Nxc4 19. Qxc4

19... b6?

Hugh Alexander had a pet generalisation that players only make blunders in losing positions. I don't know if Black is actually lost but nothing seems attractive, while White has an obvious plan of parking the Knight on c5.

[19... e5 is the only active plan for Black, but it doesn't look promising here

20. Nc5 [20. Bh3]

20. Bxc6 Rc8 21. Rc1 Bf8 22. Qe2 Rdc7 23. d5 e6 24. Bxf8 Kxf8 25. e4

White maintains his bind with some simple moves, which must have been very disheartening for Black!

25... exd5 26. exd5 Re7 27. Qd2 Qd6 28. Nd4 a6 29. Bb7!

A move anyone would be proud of.

29... Rxc1+ 30. Qxc1 Qb4

[30... Rxb7 31. Qc8+ Kg7 32. Qxb7 Qb4 33. Nf3 wins easily

31. Nf3 a5 32. Qc8+ Re8 33. Qc7 Qg4

[33... Re2 34. d6 Qb1+ 35. Kg2 Qxa2!]

34. d6 1-0

Greenhalgh,I - Rowston,B [] East Devon #4

1. e4 e6 2. Nf3 d5 3. exd5 exd5 4. Qe2+ Be7 5. h3 Nf6

6. Qd3

surely d4 first is the way to untangle

6... h6 7. c4 O-O 8. Be2 Nc6 9. a3 a5 10. O-O Be6 11. Qc2 Qd7 12. d3 Bd6 13. Nbd2 b6 14. b3 Rfe8 15. Re1 Nh5 16. Nf1 Nf4 17. Bb2

17... Nxc2

A move that surely deserves a cheer, but exact analysis may sober the crowd a little.

18. Kxc2 Bxh3+ 19. Kg1??

just awful, allowing the Queen in with check.

[19. Kh1 and White should get out in one piece (or with one more piece) 19... Qg4 20. Ng3

[20. Ne3 Rxe3 21. Rg1 Rxf3 22. Rxc4 +/-]

20... Bxc2 21. fxc2 +/- 21... Qxc2

[21... Qh5 22. Nh2]

22. Rg1]

19... Qg4+ 20. Ng3 Bxg3 21. fxc3 Qxc3+ 22. Kh1 Re5 [22... Qg2#] 0-1

Rowston,B - Day,L [] East Devon #5

1. c4 e6 2. Nc3 Nf6 3. Nf3 b6 4. d4 Bb4

A well-known position in the Nimzo-/Queen's Indian complex

5. a3

But this is unusual - Black may take the knight without prompting. 5.a3 is most dangerous when White has the plan f3 and e4 available. I think this is a 'typical' difference, in that I would expect a Major player to have a concrete plan in mind

[5. g3] [5. Bg5] [5. Qb3]

5... Bxc3+ 6. bxc3 h6 over-cautious 7. Bf4

invites ...d6/...e5

7... Bb7 8. e3

[8. Nd2 has f3 and e4 in mind]

8... Ne4 9. Qc2 h5 10. h4 c5 11. Bd3 d5 12. cxd5 Qxd5 13. O-O c4 14. Bxe4 Qxe4 15. Qa4+ Qc6 16. Qxc6+ Bxc6 17. Rfe1

White has an interesting alternative here

[17. Ne5 Bd5

[17... Bb5 18. a4 Ba6 19. Rfd1]

18. e4 Bxe4 19. Nxc4 Bd3 20. Nd6+ Ke7 21. Rfd1 Bc2]

17... Bxf3 18. gxf3 Nc6 19. a4 a5 20. Rab1 Ne7 21. e4 Ng6 22. Bg3 O-O 23. Rxb6 Rfe8 24. f4

White should press on with d4-d5, but this just buries the Bishop.]

24... Reb8 25. Reb1 Rxb6 26. Rxb6 Ne7 27. f3 Nc8 28. Rc6 Rb8 29. Rxc4 Nb6 30. Rc5 Nxa4 31. Rxa5 Nxc3 32. Kf2 g6 33. Ke3 f5 34. Kd3 Nb5 35. Kc4

[35. *Be1Kf7*]

35... Nd6+ 36. Kc5

36... Nb7+ 0-1

[e.g. 36... Nb7+ 37. Kb5 Nxa5+ 38. Kxa5 Rb3 39. Bh2 Rxf3 40. e5 Rh3 41. Bg1 Rxh4 42. Be3 Rh3 43. Bc1 Rd3 44. Bb2 h4 +/-]

Exeter Chess Club: Club Games - Steve Webb at work

Steve Webb at work

Webb, S - Annetts, I [D04] Exeter vs. Tiverton, 1996

1. d4 d5 2. Nf3 Nf6 3. e3 Bf5

A familiar anti-Colle line, making Bd3/e3-e4 difficult. White correctly changes plan.

4. c4 e6 5. Qb3 Qc8

Passive but tenable; White has a harmonious development and an easier game.

6. Nc3 c6 7. Be2

It is common in Queen's Gambit lines for Black to wait for a move of this Bishop before taking the c-Pawn, so gaining a tempo. However, this exchange must be followed by a concrete plan to put White's centre under pressure, as Black has lost the strongpoint d5.

7... dxc4 8. Bxc4 Nbd7 9. O-O Nb6

[9... Be7 idea ...O-O, ...c5]

10. Be2 Bd6 11. Nd2 Bg6 12. e4 Be7

e4-e5 was threatened, but this is an admission that Black is worse.

[12... e5 13. d5 cxd5 14. exd5 Qc5]

13. a4

Rather than try to cash in immediately, White aims to control the whole board and deprive Black's pieces of squares. This is *accumulation theory*: don't try and force the issue, and keep collecting pluses throughout the game.

13... O-O 14. a5 Nbd7 15. f4 h6 16. Bf3

16... Bh5? drops a piece 17. e5 Bxf3 18. exf6 Bxf6 19. Nxf3 c5 20. Be3 cxd4 21. Nxd4

[21. Bxd4 to get the pieces off]

**21... Nc5 22. Qc2 Rd8 23. Rad1 b6 24. axb6 axb6 25. Qe2 Qb7 26. Ndb5
Be7 27. Qg4 Ne4 28. f5 Nf6 29. Qg3 Kh7 30. fxe6 fxe6 31. Bd4 Bc5 32.
Bxc5 bxc5 33. Rd6 Qe7 34. Rfd1 Ne8 35. Qd3+ 1-0**

Webb, S - Pattinson, J [D02] Devon II vs. Leicestershire, 1996

1. d4 d5 2. Nf3 Nc6

The classical argument is that ...Nc6 precludes ...c5 (although ...e5 may be aimed at). In the Colle ...c5 is a good strategy, but usually fits better with ...Nbd7 than ...Nc6. This is because if White plays e3-e4, Black can isolate the d-Pawn with ...cxd4/...dxe4. So White may precede e3-e4 with dxc5, and if so, Black will prefer to recapture ...Nd7xc5 than ...Be7xc5, hitting e4 - DR.

3. e3

[3. c4 is the Tchigorin Defence, which I did not want to go into.]

3... Nf6 4. c3 g6

[4... e6 5. Bd3 Bd6 6. Nbd2 e5]

5. Bb5

[5. Bd3 Bg4]

5... Bd7 6. Nbd2 Bg7 7. Bd3 O-O

[7... Bg4]

8. O-O Re8 9. e4 dxe4 10. Nxe4 e5

=

White has followed Colle principles but this looks pretty level. How can White play for a win?

11. d5!? Nxd5 12. Qb3 Bc8?!

[12... Nb6 13. Neg5 Qe7]

[12... Nf4 13. Bc4 Be6 14. Neg5 Bxc4 15. Qxc4 Ne6]

13. Bg5 Nde7?!

[13... Nf6 14. Rad1 Qe7]

14. Rad1 Be6 15. Bc4 Bxc4

[15... Na5?? 16. Rxd8 Nxb3 17. Rxe8+ Rxe8 18. Bxb3+-]

16. Qxc4 Qc8 17. Nf6+ Bxf6 18. Bxf6

White has been making natural-looking moves and Black has been cowed into making a series of inferior and passive choices, and White now has good compensation for the Pawn.

18... Qf5 19. Qh4 idea g4 19... h5 20. Rfe1 Nc8? 21. Nxe5! Nxe5?? 22.

Rxe5 Qxe5 23. Bxe5 Rxe5 24. Rd8+ Kh7 25. f4 Rf5 26. Qf2 Nb6 27. Rxa8 Nxa8 28. Qxa7 Nb6 29. Qxb7 Nd5 30. g3 c5 31. a4 g5 32. fxg5 Ne3 great idea, but... **33. Qe4 1-0**

Nash, R - Webb, S [B10] Barnstaple vs. Exeter, 1995

1. e4 c6 2. Nc3

[2. d4 d5 3. Nc3 dxe4 4. Nxe4 is the main line approach; now 4... Bf5 5. Ng3 Bg6 6. h4 h6 7. h5 Bh7 8. Nf3 Nf6 9. Bd3 Bxd3 10. Qxd3 with good chances for equality]

2... d5 3. Nf3 dxe4 4. Nxe4 Bf5?!

[4... Bg4]

5. Ng3 Bg6 6. h4 h6 7. Ne5 Qd6!

[7... Bh7? 8. Qh5 g6 9. Qf3 Nf6

[9... Qd5 10. Qxd5 cxd5 11. Bb5+ Kd8 12. Nxf7+]

10. Qb3 Qd5 11. Qxb7 Qxe5+

[11... c5 12. Bb5+ Nbd7 13. Qxd5]

12. Be2 1-0, Lasker-Muller, Zurich 1934]

8. d4 Nd7 9. Nxc6

[9. Bc4 Qb4+ Webb 10. Bd2]

9... Qxc6

White has been successful with his coup and now holds the two Bishops. In order to take advantage of this, White must play actively, deny the Knights central posts, and try to open up lines for the Bishops. In the game none of this happens.

10. Bd3 Qd6

"Hoping to gain a tempo by attacking the d-Pawn" - SW - but risking loss of a tempo because of another Queen move! - DR

11. c3

[11. Be3 idea c2-c4]

11... Ngf6 12. Qe2 e6 13. Nf5

pretty but pointless

13... Qc7 14. Bd2 Nd5 15. g3 O-O-O 16. Ne3 Bd6?! 17. Nc4! Rde8 18. Nxd6 + Qxd6 19. O-O-O

White has the two Bishops but they are poorly placed. Black undogmatically opens lines to make use of his better pieces.

19... e5! 20. dxe5 Nxe5 21. Bf5+ Kb8 22. Kb1 Qc5 23. Qe4 g6! 24. Bh3 Ka8 25. Qg2 Nd3 26. Rhf1 Qb5

27. Kc2 Nxb2 28. Rb1 Qd3+ 29. Kc1

[29. Kxb2 Qxd2+]

29... Nc4 30. Rd1 Nxd2

[30... Nxc3]

31. Rb2 Nxc3 0-1

Exeter Chess Club: Club Games - Mark Blackmore on a roll

Mark Blackmore on a roll

Annotations by the dead chuffed MB, interruptions by DR

Coburn - Blackmore, Mark (142) East Devon Major, 1996

1. d4 Nf6 2. Nf3 e6 3. g3 Be7 4. Bg2 d5 5. O-O O-O 6. a4

I've never seen this before or since. Maybe he felt safe playing something different because of my lower grade. It was an advantage, I think - it's so much easier to beat someone if they refuse to take you seriously.

[6. c4 Nbd7 Catalan main line.]

6... Nbd7 7. c3 a5 8. Na3 c6 9. Qc2 Bxa3

Aggression being the better part of valour, I thought I'd get my queenside advance in first.

[Impertinent note from typesetter: I thought giving up this Bishop was very risky]

10. Rxa3 b5 11. Bf4 Nb6 12. axb5 cxb5 13. Ne5 Nc4 14. Nxc4 bxc4 15. Rfa1 Bd7

This is the good bit. My Bishop, currently attracting Norris McWhirter's attention as the world's worst piece, is about to become Man of the Match.

16. b3 Bb5 17. e4 cxb3 18. Qxb3 Bc4 19. Qc2 Nxe4 20. Bxe4 dxe4 21. Qxe4 Bd5

Ha! However, Bishop aside, I felt that White still had the edge. But those light squares will eventually prove fatal.

22. Qd3 Qb6 23. c4 Bb7 24. Bd2 Qc6 25. f3 a4 26. Kf2 Rfc8 27. c5

Now, I'm well aware that I'm more of a tactician than a strategist, but this struck me as a terrible positional error. Now those pawns are going nowhere, and the light squares are mine to do with as I please.

[Impertinent note from typesetter: Mark is clearly more of a strategist than his opponent! the rest of the game is a nice illustration of the strategical principle that opposite-coloured Bishops are a powerful factor in favour of the attacking side]

27... Ba6 28. Qe4 Bb5

I'd have welcomed a Queen-swap - the b-file would be mine, so my passed Pawn would be quicker, I hoped. But to be fair, Coburn clearly agreed.

29. Bf4 Rd8 30. Bd6

Looks impressive, but I was more concerned with making sure I could challenge on the b-file.

30... Ra7 31. Qg4 Kh8 32. Qe4 Rb7 33. Ke3 Qa6 34. Qc2 Bc6 35. f4

And the King's starting to look draughty.

35... Rb4 36. h4 Qb5 37. Qd3 Qb7

Too late now.

38. Kf2 Rb2+ 39. Kg1 Bb5

I liked this better than ...Bh1.

40. Qf3 Bc6 41. Qe3 Rg2+ 42. Kf1 Qb2 43. R3a2 Qb5+ 44. Re2 Bd5 45. Ke1 Qb4+

Some people are on the pitch! They think it's all over!

46. Kf1 Rxe2

He's dropping a Rook (at least). Possibly my best game, if only because it's the sort of position in which I'm usually convincingly outmanoeuvred.

0-1

Blackmore, Mark - Dean (140) East Devon Major, 1996

1. e4 c6 2. d4 d5 3. e5 Bf5 4. Nf3 e6 5. Bd3

I know this probably isn't the best, but I've had good results with this and feel more comfortable with it.

5... Bxd3 6. Qxd3 Qa5+ 7. c3 Qa6

And Black equalises, Dean told me afterwards. A little optimistic, I felt.

8. Qxa6 Nxa6 9. Be3 c5 10. Nbd2 Rc8 11. O-O

[11. Ke2]

11... Ne7 12. Nb3 b6 13. Rac1 Nc6 14. a3 Be7 15. Ng5

At this point, Dean said, he became convinced I had no idea I was doing. He was probably right.

15... h6 16. Nh3 Nab8 17. f4 Nd7

[17... f5 I thought was better.]

18. f5 Nd8 19. g4 h5 20. g5

Charge!

**20... exf5 21. Rxf5 g6 22. Rf2 Ne6 23. Rcf1 O-O 24. Rg2 Nb8 25. Nf4 Nxf4 26. Rxf4 Nc6 27. h4 c4
28. Nc1 b5 29. Rgf2 a5 30. R4f3 Nd8 31. Ne2 Ne6 32. Bd2 a4**

You think you're bored? Imagine how I felt!

[Impertinent note from typesetter: Black deprives himself of his only active plan, namely ...b4, with this move]

33. Ng3 Kg7 34. Nf1 Rcd8 35. Ne3 Rd7 36. Kh2 Rdd8

If there is a way through it was beyond me. Besides, I could feel myself slipping into a coma.

[The White dark-squared Bishop can put no pressure on the f6/f7 points. - DR]

1/2-1/2

Dobber, P - Blackmore, Mark (136) East Devon Major, 1996

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Bxc6 dxc6 5. O-O Bg4 6. h3 h5 7. d3

Here my knowledge of theory ran out, and I was wary of arsing it up and dropping my Bishop.

7... Bxf3 8. Qxf3 Qd7 9. Be3 O-O-O 10. Nd2 f6 11. Nb3 g5 12. Rad1 g4

Even at the time I was thinking 'this can't work, look at my development', but I'm damned if I can find the refutation. It was worth it just to see the look on Dobber's face, anyway.

13. Qg3

[Impertinent note from typesetter: in these opposite-side castling situations, unless there is an obvious coup in the centre, the medals go to the side who succeeds with an attack on the King. Black's pieces are actually all on the King's-side, where they belong, whereas White's pieces and especially Pawns do not look as though they are ready to attack on the opposite wing]

13... Bd6 Now d3-d4 is ruled out. 14. f4 Nh6 15. f5 gxh3 16. Qxh3 Ng4 17. Kh1 Rdg8 18. Bg1 h4

While this was fun, I couldn't actually find a spectacular win despite the position seeming to beg for one. I decided to get rid of his key defensive piece, after which which the threats from my Knight would be overwhelming.

19. Nd2 Qe7 20. Rf3 Bc5 21. Rdf1 Bxg1

22. Kxg1

[22. Rxg1 Qc5]

22... Qc5+ 23. Kh1 Qxc2 24. Nc4 b5 25. Ne3 Nxe3 26. Rxe3 Qxb2 27. Qh2 Qxa2 28. Qg1 h3 29. g3 h2 30. Qf2 Qxf2 31. Rxf2 a5

Afterwards Rh3 was suggested to me, which I'd missed, but in retrospect I'm glad I did. White would eventually pick up the Black f-pawn, and I'm more than capable of making a mess of that kind of position.

32. Rxh2 Rxh2+ 33. Kxh2 a4 34. Re2 Kd7 35. Ra2 Kd6

0-1

Blackmore, Mark - Pittman (145) East Devon Major, 1996

1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 6. Bd3 Bd7 7. Bc2 h6

To prevent Ng5 after ...O-O-O.

8. O-O O-O-O 9. a3 g5 10. b4?

Oops. I spent bloody ages working out why Pittman couldn't play ...Nxd4 after ...g4, Ne1, completely forgetting that he could play ...Qxd4 instead and my Rook is hanging. Desperate measures are now required.

10... cxd4 11. cxd4 g4 12. b5

[12. Ne1 Nxd4

[12... Qxd4]

13. Be3]

12... Na5 13. Ne1 Bxb5 14. Bd3 Qxd4 15. Qc2+ Bc4

Letting me off the hook.

[15... Nc4 stops Bb2]

16. Bb2 Qc5 17. Nd2 Kb8 18. Rc1 Rc8 19. Bxc4 Nxc4 20. Nd3 Qc7 21. Qa4?!

21... Nxb2

[21... Nxd2 may have been better]

22. Nxb2 Qd8 23. Nd3 Rxc1 24. Rxc1 h5

Even with two extra Pawns, Black now looks distinctly unhealthy. Still, the choice was fairly stark: win it now, or get stuffed in the endgame.

25. Nb3 Ne7 26. Nbc5 Nc8

I could hardly sit still at this point. Cheapo ahoy!

27. Nd7+ Ka8 28. Rxc8+ Qxc8 29. Nb6+ Kb8 30. Nxc8 Kxc8 31. Qe8+

More luck than judgement, admittedly.

[Typesetter again: but there were some grown-up decisions taken to throw the game out of a particular 'natural' continuation]

1-0

Spiegel, Jack - Blackmore, Mark (144) East Devon Major #5, 1996

1. e4 e5 2. Bc4 Nc6 3. Nf3 Be7

[3... Nd4 The Shilling Gambit was tempting, but with 150 pounds at stake I felt it wasn't really the game.]

4. d3

[4. d4]

4... Nf6 5. Be3 O-O 6. c3 d6 7. Nbd2 Be6 8. O-O h6 9. Qe2 Bxc4 10. dxc4

Some people would say that this move is an intelligent attempt to induce strategic weaknesses in my position. I, however, would say that this move is a pile of pants.

10... Nh7 11. Rad1 f5

Hey, I never claimed to be subtle.

12. exf5 Rxf5 13. Ne4 Qc8 14. c5 Qe6 15. cxd6 cxd6 16. c4 Rf7

So I can play ...Nf6 without stranding my Rook.

17. Ne1

[Impertinent note from typesetter: White starts to drift. He should pick a plan and go for it hard. This is what Black did, and is why Black won.]

17... Nf6 18. Nc3 Raf8 19. Nd5 Ng4

Viking Chess

20. Nxe7+ Rxe7

[20... Nxe7]

21. Nf3 Ref7

It's hard not to laugh at my transparency, but at the same time route one seems to be fairly effective.

Spiegel, certainly, was a nervous wreck at this point. **22. b3 Nxe3 23. Qxe3 Rf4**

He offered me a draw at this move. I politely declined.

24. Rd5 Qg4 25. Ne1 e4

The final insult. White's whole plan has been based around winning my d-pawn, and I don't even have

the decency to defend it.

26. Qg3

[26. Rxd6]

26... Qe2 27. Qc3 Rxf2

And that was that.

0-1

Exeter Chess Club: Club Games - Andrew Pickering at work

Andrew Pickering at work

Taylor, M (1605) - Pickering, A (2000) (1503) [A21] Exeter vs. Rainham

1. c4 e5 2. g3

[2. Nc3]

2... f5 3. Bg2 Nf6 4. e3

(This is a good formation, going for a central roller, but obviously you need to look out for weak squares)

4... Nc6 5. Nc3 g6 6. d4 e4 7. f3

(could have been saved up; Black isn't playing ...d5 yet)

7... exf3 8. Nxf3

(White has a central pawn but must aim at e2-e4)

8... d6 9. O-O Bg7 10. b3 O-O 11. Bb2 Re8

(highlighting the down side of Bb2)

12. Re1 Bh6

(Black now formed the plan of putting a Knight on d3 supported by the Pawn on e4. What Pawn on e4? Watch!)

13. d5 Ne5 14. Nxe5 dxe5 15. Qd3 e4 16. Qd4 Bg7 17. Ne2 Qe7 18. Qd2 Ng4 19. Bxg7 Qxg7 20. Nd4 Ne5

(getting there)

21. Bf1 c5

(I think this move is a nice example of why Andrew is better than most of us. Black has a great Knight and no weaknesses, but has no other assets and no obvious way of making use of the Knight. This move, seeking open lines, suddenly opens up all sorts of possibilities for the Rooks and Bishop.)

22. dxc6

[22. Nb5]

22... bxc6 23. Be2 Rd8 24. Qc2 c5 25. Nb5 Nd3 26. Bxd3 exd3

Black is winning.

27. Qc3 Qe7 28. Qd2 Bb7 29. Nc3 Rd6 30. Kf2 Re8 31. Rad1 Qf6 32. Nb5 Rdd8 33. Qc3

Exeter Chess Club: Simple Chess for Club Players

Mark Blackmore

The aim of this session is to suggest some simple rules for how to get from 100 grade to the dizzy heights of 150. If applied firmly, I am convinced they will lead to better results without any extra study.

This first game is more or less the opposite of how you ought to model your play: an unattainable standard of mayhem...

Ivanchuk,V - Yusupov,A [E67] (cm 1/4), 1991 [MB]

1.c4 e5 2.g3 d6 3.Bg2 g6 4.d4 Nd7 5.Nc3 Bg7 6.Nf3 Ngf6 7.O-O O-O 8.Qc2 Re8 9.Rd1 c6 10.b3 Qe7 11.Ba3 e4 12.Ng5 e3 13.f4

13...Nf8 14.b4 Bf5 15.Qb3 h6 16.Nf3 Ng4 17.b5 g5 18.bxc6 bxc6 19.Ne5 gxf4 20.Nxc6 Qg5 21.Bxd6 Ng6 22.Nd5 Qh5 23.h4 Nxh4 24.gxh4 Qxh4 25. Nde7+ Kh8 26.Nxf5 Qh2+

That's the first move I've expected so far!

27.Kf1 Re6 28.Qb7 Rg6 29.Qxa8+

[29.Bxf4 Qxf4+ 30.Kg1 Qh2+ 31.Kf1 Qh1+ 32.Bxh1 Nh2+ 33.Ke1 Rg1#]

29...Kh7 30.Qg8+ Kxg8 31.Nce7+ Kh7 32.Nxg6 fxc6 33.Nxg7 Nf2 34.Bxf4 Qxf4 35.Ne6 Qh2 36.Rdb1 Nh3 37.Rb7+ Kh8 38.Rb8+ Qxb8 39.Bxh3 Qg3 0-1

Wonderful, exciting chess - but not, I believe, the way to get results. In fact, not even Yusupov believes this is the way to get results - this was actually a quickplay tie-break where nerves count as much as chess. Normally, Yusupov prefers the bear-hug.

Fischer, although very sharp, was also a very strong positional player, achieving good results with apparently straightforward means. As an example, we can cite:

Fischer - Panno, 1970

1.c4, Black resigns

After a solid opening by White, Black found he was unable to organise a defence. This illustrates how you needn't do anything very complicated to win games, just

applying good sense may be enough.

Let's see that approach at work in a slightly longer game.

Fischer - Spassky WCh [D59] (we (6), 1972 [MB])

1.c4 e6 2.Nf3 d5 3.d4 Nf6 4.Nc3 Be7 5.Bg5 0-0 6.e3 h6 7.Bh4 b6 8.cxd5
Nxd5 9.Bxe7 Qxe7 10.Nxd5 exd5 11.Rc1 Be6 12.Qa4 c5 13.Qa3 Rc8 14.
Bb5 a6 15.dxc5 bxc5 16.0-0 Ra7 17.Be2 Nd7 18.Nd4 Qf8

19.Nxe6 fxe6 20.e4! d4 21.f4 Qe7 22.e5 Rb8 23.Bc4 Kh8 24.Qh3 Nf8 25.
b3 a5 26.f5 exf5 27.Rxf5 Nh7 28.Rcf1 Qd8 29.Qg3 Re7 30.h4 Rbb7 31.e6
Rbc7 32.Qe5 Qe8 33.a4 Qd8 34.R1f2 Qe8 35.R2f3 Qd8 36.Bd3 Qe8 37.Qe4
Nf6 38.Rxf6 gxf6 39.Rxf6 Kg8 40.Bc4 Kh8 41.Qf4 1-0

This game makes chess seem so smooth, so easy - even so attainable.

If nothing else it should reinforce the importance of positional sense. Why did Gary Lane beat us all in the Simul., without seeming to do anything remarkable? I think one of the biggest obstacles to good positional play is muddy thinking - and I think there are three rules to avoid muddiness and improve your game.

Blackmore, M - Lane, P [C02] (Exeter Club Ch'p (6)), 1997 [MB]

The three rules of good positional play:

- (1) respect your opponent (don't play for cheapos)
- (2) ask yourself: what will the reply be?
- (3) think about a move before you make it - not after (Taimanov).

From Game 1 we can add Rule (0): don't hack!

1.e4 e6 2.d4 d5 3.e5 c5 4.c3 Nc6 5.Nf3 Bd7 6.Bd3 Rc8 7.a3 f6 8.O-O fxe5 9.Nxe5 Nf6

Illustrating the importance of rules (1) and (2). Peter was never going to miss the cheapo, so what else would he play?

[9...cxd4 10.cxd4 Nxd4 11.Qh5+]

10.Bg5 c4 11.Bxf6 Qxf6

Rules (1) and (3): White sees an opportunity to prevent Black from castling.

12.Nxd7 Kxd7 13.Bc2 Bd6 14.f4

Rule (2).

14...Kc7

The Black King is perfectly OK here.

15.a4 Rule (2) again:

15...Rcf8 If White was hoping for ...a5 he was disappointed.

16.Na3 Rule (2) again: what one-move threat does this move make, and what one-move reply is at least adequate?

16...a6 17.b4 Rule (2): White again is hopeful (...cxb3 e.p.)

17...Bxf4 18.Qg4 Rule (2): does this move really embarrass Black?

18...Be3+ 0-1

Of course, you can argue that I was always going to lose to Pete, but I think my point stands. If I'd followed my own rules, I would at least have put up a better fight.

Ayress - Blackmore, M [C02] (5), 1997

The way to improve, I believe, is to do simple things well. Solid, harmonious moves, emphasising good piece play and good defence, provides the best basis for attacking and can win games just on its own merits. The ability to do this is, I am convinced, the main difference between a 100-grade and a 150-grade player.

1.e4 e5 2.Nf3 Nc6 3.c3 Nf6 4.d3 Be7 5.Be2 0-0 6.0-0 d6 7.Nbd2 Bg4 8.h3 Bh5 9.Nh2 Bxe2 10.Qxe2 d5 11.a3 dxe4 12.Nxe4 Nxe4 13.dxe4 Bc5 14. Be3 Qe7 15.Rad1 Rad8 16.Nf3 Kh8 17.Rd2 Rxd2 18.Nxd2 Rd8 19.Kh2 Bxe3 20.Qxe3 Qd7 21.Nb3

Without trying at all hard, Black has been gained a nice juicy open file. **21...b6 22. f3 a5 23.Rf2 Qd1 24.Nc1 f6 25.Re2 a4 26.Re1 Qd7 27.Re2 Na5** Adding to his collection of advantages. **28.Qf2 h6 29.Qe3 Nc4 30.Qf2 Qd1 31.Na2 c5 32. Rc2 Rd7 33.Kg3**

33...Rd2 34.Rxd2 Nxd2 winning because of the embarrassed White Knight. But it gets better: **35.Kg4 Nxe4 36.Qe3 Qd7+ 37.Kh4 g5+ 38.Kh5 Ng3+ 0-1**

Now here I obeyed all the rules and the game fell into my lap. Do the same, along with plenty of practice and you'll find you've picked up a lot of the basic positional stuff Dave keeps banging on about.

I'm convinced your results will improve.

Exeter Chess Club: Towards Simpler Chess

...or, Walk before you run!

"(There has been) created a large population of people ... who have been educated far beyond their capacity to undertake analytic thought." - Sir Peter MEDAWAR, The Art of the Soluble, p.90.

"The reason that Capablanca was supreme during this period was not that his way of playing was more correct than that of his opposition, just that he was more effective in his execution of strategy. ... (Capablanca was) ruthless at exploiting the positional errors which his opponents continued to make in relatively simple positions. Reti, Nimzovitch and Breyer all greatly excelled Capablanca in imagination ... Alas, they lived in the age of Capablanca, the perfect chess machine, whose remorseless play seemed more than an argument against new ideas." - Bill HARTSTON, Kings of Chess, p.101.

"For players in your situation, I recommend studying classical positional chess and improving tactical vision." - GM Nigel DAVIES, to DR, personal communication.

A slightly provocative session, this, I think. I was prompted to put together these games partly through the last comment quoted above, but also two other observations:

1. How often club games (especially by juniors) are decided through **simple tactical errors**
2. How many games I had seen hypermodern openings treated effectively by **contemptuous attacking play**
3. How many times I had missed the **strategical** point of a position

The moral I think, is make sure you can walk before you run. There's not much point in studying the delicate handling of complex Ruy Lopez or Nimzo-Indian positions if you keep dropping pieces. A player with a plan will always beat one without, and it may be a simple plan will do fine.

Here, then, are a few games where the more simple-minded player wins, and fit one of the second two classes; it may be you can supply a couple of games decided through tactical errors?

- [\(31\) Charity,A - Teichmann,E \[B09\]](#) Hack your way to Success, or, if you want to lose to someone graded way below you, what should you do?
- [\(73\) Oddie,A - Cock,J \[B88\]](#) Hack your way to Success II, or, play with a plan, however

straightforward!

- [\(9\) Capablanca,J - Reti,R \[C14\]](#) Doing simple things well.
- [\(47\) Clissold,R \(1755\) - Regis,D \(1740\) \[A01\]](#) Playing with, and without, a plan.
- [\(45\) Booth,C \(1800\) - Regis,D \(1825\) \[A42\]](#) Missing the point.

(31) Charity,A - Teichmann,E [B09]

(Cambridge Open), 05.1980 [*DR (Dragon 1980)*]

1.e4 g6 2.d4 Bg7 3.Nc3 d6 4.f4 Nf6 5.Nf3 0-0

White plays a direct attacking line against Black's hypermodern opening. **6.Bd3 Nc6 7.e5 dxe5 8.dxe5 Nd5 9.Bd2 Nb6 10.0-0 f6 11.exf6 Bxf6 12.Ng5 e6**

(Wild cheering from crowd, etc.) 13.Nxh7 Kxh7 14.Qh5+ (at this point Erik ceremoniously tore up his score sheet) 14...Kg8 15.Qxg6+ Bg7 16.Qh7+ Kf7 17.Bg6+ Ke7 18.Qxg7+ Kd6 19.Ne4+ Kd5 20.Qc3 Qe7 21.Qb3+ Nc4 22.Qb5+ Kd4 23.Bc3+ (Resigns)[23.Bc3+ Ke3 24.Rae1#] 1-0

(73) Oddie,A - Cock,J [B88]

(Cambridge vs. Hertford), 1970 [AJO Dragon 1971]

1.e4 c5 2.Nf3 d6 3.d4 "Isn't this like a cheap trap?" Bent Larsen. 3...cxd4 4.Nxd4 Nf6 5.Nc3 Nc6 6.Bc4 e6 This was the first open Sicilian I had played for six years. At lunch on the day of the match I was instructed by AH Williams how to deal with this system: "Develop your lumps, play P-g4-g5, Qh5, R-d3-h3 and Qxh7 mate". 7.Bb3 Be7 8.Be3 0-0 9.Qe2 a6 10.0-0-0 Nxd4 11.Bxd4 Qa5 12.Rhg1 b5 13.g4

13...b4 14.g5 Ne8 15.Qh5 bxc3 16.Rd3 e5 17.Bxc3 Qc7 [17...g6 18.Qh6 Qc7 19.f4 exf4 20.Ba4 Bd7 21. Rh3 Bxh3 22.Bxe8 f6 23.Bxg6 Bd8 24.gxf6] 18.g6 hxg6 19.Rxg6 Rb8 20.Rdg3 Rxb3 21.Rh6 g6

[21...Bg5+ 22.Rxg5 g6 23.Rh8+ Kg7 24.Qh6+ Kf6 25.Rxg6+ fxg6 26.Qxf8+ Qf7 27.Qxf7+ Kxf7 28. axb3] **22.Rhxg6+ fxg6 23.Qxg6+ 1-0**

(9) Capablanca,J - Reti,R [C14]

New York (21), 1924

It is important to study this game to answer two questions:

- (1) Why is White winning in the final position? and
- (2) Where did Black go wrong?

1.e4 e6 2.d4 d5 3.Nc3 Nf6 4.Bg5 Be7 5.e5 Nfd7 6.Bxe7 Qxe7 7.Qd2 0-0 8.f4 c5 9.Nf3 Nc6 10.dxc5 Nxc5 11.Bd3 f6 12.exf6 Qxf6 13.g3 Bd7 14.0-0 Nxd3 15.cxd3 Be8 16.Rfe1 Bg6 17.Nb5 e5 18.Nc3 d4 19.Ne4 Bxe4 20.Rxe4 exf4 21.Rxf4 Qd6 22.Re1 Rxf4 23.Qxf4 Qxf4 24.gxf4

An endgame has arisen in which White may appear to have looser Pawns, although the Pd4 is easier to

attack. This is the sort of 'simple' position at which Capa excelled, and while you may be able to predict the result of this game, can you guess how it is decided? **24...Kf8 25.Re4 Re8 26.Kf2 h6 27.Ne5 Nxe5 28.fxe5**

White's "loose" f-Pawn has become a passed e-Pawn. **28...Kf7 29.Kf3 Rd8 30.Rg4 g5 31.h4**

31...Kg6 32.hxg5 hxg5 33.Ke4 Kh5 34.Rg1 Kh4 35.e6 g4 36.e7 It is hard to imagine at move 24 that the game would end so suddenly and through such apparently simple means; and if this position at move 24 is bad for Black, where should Black have deviated? Reti, it must be remembered, was an endgame artist of some note. **1-0**

(47) Clissold,R (1755) - Regis,D (1740) [A01]

(Devon vs. Cheshire II) (1/4), 1993

1.b3 This is far from a one-idea opening, but my opponent said he often interpreted it as such - and with cooperation from Black like I gave him, whose to argue? **1...e5 2.Bb2 Nc6 3.c4** [3.e3 (or 3 g3) 3...d6 (the main lines involve 3...Nf6 and 4...d5)] **3...f5** (better must be ...Nf6 or ...d6) **4.e3 Nf6 5.d4** ?! [5. Nf3 d6 6.Be2 Be7 7.0-0 0-0 8.d4 e4 9.Ng5 +- BCO] **5...exd4** [5...d6 6.Nf3 e4 7.d5] **6.exd4 Bb4+ 7.Nd2 Ne4 8.Ngf3 Qe7 9.Qe2 0-0 10.a3 Nxd2** [10...Bc3 =/+ Fritz] **11.Nxd2 Bxd2+ 12.Kxd2 Qg5+** [12...Re8 = Fritz] **13.Kc2 Ne7 ?** [13...Rf7 14.Re1 Re7 15.Qd1 d6 16.d5 Ne5] **14.h4 Qf6 15.d5 Qf7 16.h5 h6 17.f4 d6 18.Rh3 Kh7 19.Rg3**

The one idea fulfilled. **19...g5 20.Re1 Ng8 21.fxg5 hxg5 22.Rxg5 Nf6 23.Rg6 Ne4 24.Rg7+ Qxg7 25. Bxg7 Kxg7 26.Qf3 Bd7 27.Bd3 Rae8 28.Bxe4 fxe4 29.Qg3+ Kh8 30.Qg6 e3 31.Qh6+ Kg8 32.Rxe3 Rf2+ 33.Kc3 Rxe3+ 34.Qxe3 Rxg2 35.Qxa7 Rg3+ 36.Kb4 c5+ 37.dxc6 Bxc6 38.Qb8+** (he was very proud of this game, and I wasn't) **1-0**

(45) Booth,C (1800) - Regis,D (1825) [A42]

National Major Plate Final, 1996

1.d4 g6 2.c4 Bg7 3.Nc3 d6 4.e4 Nc6 5.Be3 e5 6.d5 Nce7 7.g4 f5 8.gxf5 gxf5 9.Qh5+ Kf8 [9...Ng6 10. exf5 Qh4] **10.Bg5 Nf6 11.Bxf6 Bxf6 12.Bh3 a6 13.Nf3 Qe8 14.Qxe8+ Kxe8 15.Rg1 Kf7 16.exf5 Bxf5 17.Bxf5 Nxf5 18.Ne4**

This isn't totally straightforward because of the messy King's-side, but in all these King's Indian positions with a good Knight on e4, White can hope to saddle Black with a bad Bishop and break through with c5. I've known this for ages... **18...Rhg8 19.Kd2 Nh4 [19...Bh4] 20.Ke2 Nxf3 21.Kxf3 Raf8 22.b4 b6 23.a4 a5 [23...Bh4 24.a5] 24.Rxg8 Kxg8 25.bxa5 bxa5 26.Rb1 h5 27.Ke3 Bh4 28.Rb5**

Black is busted. **28...Rf4 29.Rxa5 Bxf2+ 30.Nxf2 Rxc4 31.Ne4 h4 32.Nd2 Rc3+ 33.Ke4 Kf7 34.Ra7 Kf6 35.a5 c6 [35...h3] 36.dxc6 Ke6 37.Rd7 Rxc6 38.Rd8 Rc3 39.Re8+ Kf7 40.Rh8 Ra3 [40...h3] 41.Nc4 Ra4 42.Kd5 Ra1 43.Rxh4 Rd1+ 44.Kc6 e4 45.Nxd6+ 1-0**

Exeter Chess Club: Clock control for club players

Or, The Thirty-Third Piece

A. Introduction

Chess is played not with 32 pieces, but 33: the handling of the extra piece, the clock, sometimes being the deciding factor.

Time trouble is the most obvious manifestation of clock difficulties but there are other symptoms: I remember Brian Hewson being irritated just on principle that I had played an automatic move in a tense position - after the game it became clear that I had missed a mate in three at that point.

So, below I'll talk around time trouble but also time management in general, and what you might want to do about it. Often, simply diagnosing a problem is to start curing it.

-

B. Time trouble

Time trouble is time pressure that you cannot bear or want to be rid of: different players have different views about what is tolerable. The Grandmaster and psychologist Krogius gives a horror show of time trouble examples in his book on chess psychology. He classifies the examples as follows:

B1. Causes of time trouble

Inadequate theoretical preparation

Cures: better theoretical preparation (duh) but also improved experience: with more experience of different types of position you will have improved general assessment/intuition. It is an unrealistic goal to set yourself to be able to play any type of position, but if you have a weakness, work on it.

On the other hand it is not a complete cure: Bronstein has encyclopaedic knowledge, wonderful intuition... and a marked time trouble habit.

Inadequate practical preparation

Cures: more practice, practice at speed chess

A genuinely complicated game

"This is 'normal' time trouble and I have no intention of giving it up." - Botvinnik.

There is no doubt that some good players are prepared to put in a good half-hour or so in the early middlegame in the belief that the position deserves it and the expectation that it will be rewarded by an easier - maybe winning - game later.

I remember when Kramnik beat Kasparov on the Black side of a Semi-Slav he criticised Kasparov for making a move after only quarter of an hour or so. He said that this was too fast, and that he would have taken what the position deserved - *"maybe one hour"* (!).

Conscious entry into time trouble

In order to upset the normal run of events. - See Game 1.

Doubts concerning analysis

"Do not search for objectively the best move because frequently there is no such move. In most cases it is simply a matter of taste - simply look for a good move!" - Spielmann

In a complex position, do not always try to resolve it tactically, but maybe just play a good positional move. (Nimzovitch)

Cure: Have confidence in your own judgement and ability, at least the courage to learn from any mistake you might be making.

Doubts linked to own style

In World Championship matches Botvinnik very often fell into time trouble in complex, dynamic positions conjured up by those wizards of the chessboard, Bronstein and Tal. Bronstein's time trouble, by contrast, was in relatively simple positions where Botvinnik had a small - maybe insignificant - positional advantage.

Cure: Go for positions you feel at home in; study positions you need to feel at home in.

Doubts linked to opponent's style

e.g. against opponent who has a large plus score against you.

Cure: win a game...!

Doubts linked to importance of the game

e.g. this move is too important, I must be 110% sure...

Cure: put such thoughts aside if you can; play the board.

Doubts linked to previous course of the game

e.g. I should have won earlier: see Game 2

Cure: think about the position in front of you!

Doubts linked to own experience

e.g. a little knowledge dangerously distracting you from your own judgement

Cure: Have confidence in your own judgement and ability, at least the courage to learn from any mistake you might be making.

B2. Effects of time trouble

Failure to react to changes in the position Inclination towards obvious moves

Cure: Think if you can for a moment longer, try not to get in a rut of thinking.

Seeking exchanges
Postponing decisions
Playing safe and solid moves
Reliance on constant elements of the position

e.g grabbing back material too soon

Cure: To combat all of these tendencies, try to play the move that you think best meets the requirements of the position, not the requirements of your nerves.

Less strategy, more tactics

Cure: You do need to check for concrete traps, but as Nimzo says, you can sometimes short-circuit analysis of variations by a good positional move. This is appropriate even in quickplay finishes where you do not want to prolong the game.

Temptation to blitz the time-troubled opponent

Game 3: *"I made the last move instantaneously - as if seized by the time pressure of my opponent. I had formerly seen that I would win the exchange, but I had but to think a little; then I would have come up with the absolutely correct idea: the other Rook must go to c8 (winning the exchange but keeping the b7 Pawn.)"* - TAL

["Here it is: the hypnotic power of 'natural' moves!" - Krogius]

"It could be noticed from my opponent's expression that he had been rather surprised by the unexpected turn of events, but in spite of intense time pressure he successfully responded to the reversal of the conditions and immediately found the best continuation." - Tal

Cure:

"Instead, thoroughly analyse a plan several moves deep and play the moves rapidly" - Krogius

"Set a trap and play the moves rapidly." - Webb

It is even possible to use your opponent's propensity to time trouble: see Games 4 and 5

B3. Treatment of time trouble

"Time trouble is a completely surmountable difficulty... not only (through) training in chess technique, but chiefly with psychological training." - Krogius

Self-control is often a key to success in chess.

Follow the principal rules about chess thinking: what is my opponent's idea?

Diagnose your own causes of time trouble, and make a conscious attempt to develop your decisions and resilience in those circumstances.

Use your opponent's time: work out a provisional reply for each move, and use your opponent's time for looking at the clock

Botvinnik recommends playing training games where what you are trying to improve is use of time - making it more even or at least more appropriate to the position. He says that 90% of time trouble addicts can be cured using this method, although Averbakh adds "*if so, then it seems I am among the remaining 10%... and perhaps so is the author of the method...*"

C. Time management

You do see a variety of strategies for the use of time in club play: players who routinely use too much or too little time, players who have a marked "stop-go" cycle, and players who seem to be just haphazard in their use of time.

Undoubtedly you can't comment on this without respect to the position, but it is worth reflecting on your own patterns of chess play. I have routinely marked the times taken by myself and my opponent for years - a minor additional distraction and I have found it valuable food for thought. I believe it has led to me making better use of the clock, which is to say, to use time when I need to use it, and get on with it when I don't.

There are marked differences in the way people use the clock, but I might be permitted a general observation or two:

Better players use more of their time than worse ones. Moral: chess is hard, and the longer you think the better, provided you have something to think with - that is, you have an understanding of that type of position and have ideas about the issues at stake.

Better players think when they are supposed to: that is, when there is something to think about - as opposed to just dithering in a level position. They are better at judging the critical moments and turning points of a game, so that when they are short of time later, the moves may be easy to find because the game is decided by that point.

Here are a few natural histories of the chess clock:

C1. Regis, Hampton, 1993 (Game 2)

Regis-Hampton, 1993 - Total Time chart

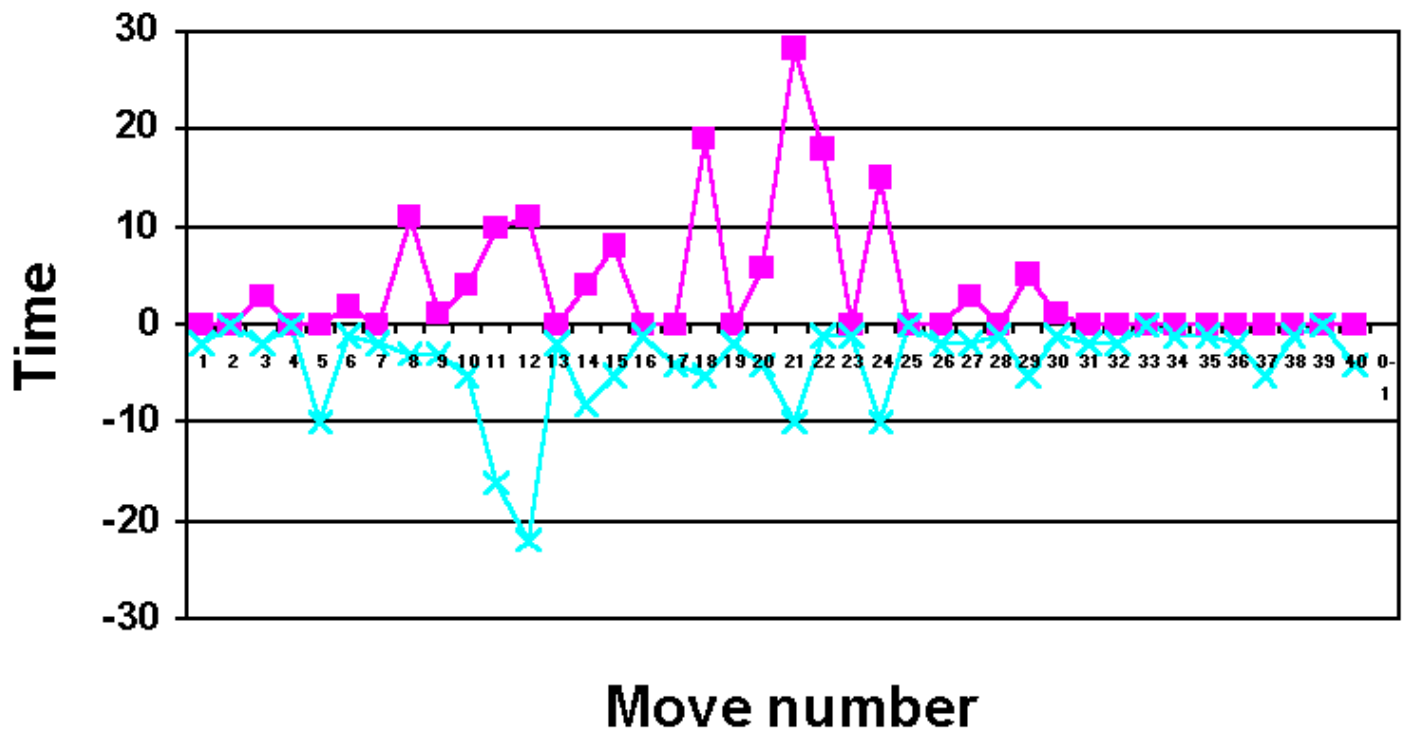

White's total elapsed time is shown above, and Black's below; control at 40 moves in 100 minutes. White lost on time at move 39.

This is the only game I have ever lost on time, and some of the reasons are to be found in the notes. It was quite in Krogius' class of *doubts linked to the earlier course of the game*.

But on the graph you can also see some interesting features of the use of time: Black having some periods of slow play, followed by fast play, whereas White's use is much more even - however, White was unable to speed up at the end of the game when approaching the time control. It may be the ideal style is more even than Black's and less even than White's!

C2. Tal-Bronstein 1960 (Game 6)

Tal-Bronstein 1960: Time per move Chart

This chart shows the time taken for each move rather than total time, and is taken from the Furstenburg/Bronstein title "**The Sorcerer's Apprentice**". White above the line and Black below. Who won?

"...Tal played the first seven moves with great confidence, accepting my Pawn sacrifice. With his next five moves he tried to justify his decision."

"With hindsight one can see that from moves 18 to 24 Tal used a lot of time, trying to reduce the pressure of the Black pieces, but it was in vain. It would have been better to use this amount of time, about one hour, to play the opening more carefully."

"This is only one example and the reader who is interested in this aspect of chess should start recording times; it might well be that his chess improves immediately."

C3. Botvinnik-Tal 1960 (Game 7)

Move by move, with notes by Tal:

W13: "The text move is the most precise, but the time spent in thinking about it proved that Botvinnik had not played competitively for some time. Why was it necessary to waste ten minutes out of an allotted two and one-half hours to play the most evident and surely the strongest continuation of the previous move?"

B14: "Black took a long time to choose which plan he would use in the middle game."

B18: "A rather long think for this move - sixteen minutes. Black was calculating whether or not he should temporarily pass on his idea and carry it out later."

B23: "It is interesting that Black spent fifteen minutes thinking about the move that immediately followed the piece sacrifice. ... This is but a confirmation, if it can be expressed this way, of an intuitive sacrifice, a confirmation of the fact that Black did not calculate all of the variations beginning with the sacrifice and ending with mate."

B28: "(After disturbance by spectators) I consciously chose the less strong but safer continuation."

B36: "Beginning with the 26th move, Black has been playing lightning chess."

B41: "Forty moves had been made but the opponents remained in their places. Obviously, Botvinnik considered that since Black was playing at such a rapid speed, he must have made a mistake somewhere, and

as for me, I was still full of energy."

Game 1: (59) Korchnoi - Suetin [C83] Moscow (XXVII USSR Ch.), 1960

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6 5.O-O Nxe4 6.d4 b5 7.Bb3 d5 8.dxe5 Be6 9.Oe2 Be7 10.c3 O-O 11.Nd4 Qd7 12.f3 Nc5 13.Bc2 f6 14.exf6 Bxf6 15.Nxe6 Qxe6 16.Qxe6+ Nxe6 17.Bb3 Rad8 18.Rd1 Ne7 19.Nd2 Kf7 20.Rf1 c5u

Suetin has gained the advantage and steadily increases the pressure. Korchnoi was able to divert his opponent from the measured tempo if his play only by provoking his own time trouble.

21.f4 c4 22.Bd1 Nc6 23.Nf3 d4 24.Ng5+ Bxg5 25.fxg5+ Ke7 26.Re1 Kd6 27.cxd4 Nxd4 28.Bd2 Rde8 29.Rc1 Kd5 30.b3 Rxe1+ 31.Bxe1 Ne5 32.bxc4+ bxc4 33.Rb1 Rc8 34.Bc3 Nb5 35.Ba1 c3 36.a4 Nd6 37.Bb3+ Ke4 38.Re1+ Kf5 39.Bc2+ Ke6 40.Bb3+ Kf5 41.Bc2+ Ke6 42.Re3 Ndc4 43.Rxc3 Rd8 44.h3 g6 45.Bb3 Kf5 46.Kh2 Rc8 47.Rc2 Rc6 48.Re2 Rb6 49.Bc2+ Ke6 50.Bd4 Rd6 51.Bc3 Rb6 52.Kg3 Kd5 53.Kf4 Nc6 54.Re1 Rb7 55.Be4+ Kc5 56.Rc1 Rb3 57.Bg7 Nb4 58.Bf8+ Kd4 59.Rd1+ Nd3+ 60.Rxd3+ Rxd3 61.Bg7+ 1-0

Suetin incorrectly believed that he had the chance of an early win, began to hurry, committed some serious errors and lost. This game decided first place in the championship.

Game 2: Regis,D (1935) - Hampton,M (1900) [E91]

Clock control: Devon vs. Wilts devon vs. wilts, 1993

1.e4 Om 1...g6 Om 2.d4 1m 2...Bg7 Om 3.c4 1m

Black was visibly upset by this move.

I know from playing the Modern myself that few 1. e4 players will transfer to a Queen's-side opening, but that's always been where my heart is.

3...d6 1m **4.Nc3** 1m **4...Nf6** 2m The game is now more or less a King's Indian... [4...Nc6 Keeps in independent 'Modern' lines.]

5.Be2 2m **5...O-O** 2m **6.Nf3** 2m **6...c5** 6m

...or a Benoni. [6...e5 is the King's Indian]

7.d5 5m **7...Bg4** 10m **8.Nd2** 6m Over-eager. In any event, Black now starts a phase of thinking for a long while over his moves.

[8.Ng1 Bxe2 9.Ngxe2]

8...Bxe2 14m **9.Qxe2** 8m **9...Nfd7** 14m **10.O-O** 10m **10...Na6** 15m **11.f4** 11m **11...Qa5** 30m **12.Nf3** 15m

I was feeling quite pleased here: that I had both a chess and a psychological initiative out of the opening. I don't think I have played Benonis any more often than my opponent but have looked at this type of position and felt at ease with it. **12...Nc7** 36m

[12...Bxc3 13.bxc3 Qxc3 14.Bb2 Qa5 15.e5]

13.e5 20m **13...a6** 44m **14.Bd2** 23m **14...Qb6** 45m **15.e6** 29m looks good but perhaps I was not sufficiently developed for this...

[15.b3]

15...fxe6 46m **16.dxe6** 29m **16...Nf6** 47m

Black now has another long thinking phase, which leaves him in time trouble for the rest of the game. **17.Ng5** 35m

[17.Rae1 or 17 b3 17...Qxb2 18.Rb1 Qc2 19.Rxb7 Nfe8 20.Rc1 Qf5 21.Nd5]

17...d5 51m **18.cxd5** 35m **18...Nfxd5** 53m **19.Qf3** 42m **19...Nxc3** 68m **20.Bxc3** 43m **20...Bxc3** 75m **21.bxc3** 46m [21.Qxc3 Rf6 22.Qh3 h5 23.f5 c4+ 24.Kh1 Raf8 25.Nf7] **21...c4+** 83m **22.Kh1** 46m **22...h6** 84m **23.Nf7** 56m **23...Nxe6** 87m [23...Kg7 24.f5] **24.Nxh6+** 58m **24...Kh7** 88m **25.f5** 63m

[25.Qh3 Nxf4 26.Rxf4 Rxf4 27.Nf7+ (27.Re1 Kg7 28.Ng4 Rf7 29.Qh6+ Kg8-+;

27.Nf5+ Kg8 28.Nxe7+ Kg7 29.Nd5 Qb2 30.Rd1u) 27...Kg8 28.Qh8+ Kxf7[[threesuperior]] 29.Qxa8]

25...Kxh6 91m **26.Qh3+** 64m **26...Kg7** 91m **27.fxe6** ?m saves the pawn but now Black has a strong initiative.

White now starts to consume time in great forkfuls: I remember finding it very hard to forget the earlier part of the game where I thought I had done enough to win, and couldn't get on and defend.

27...Rxf1+ m **28.Rxf1** ?m **28...Rf8** m **29.Rg1** 79m [29.Re1 Qf2] **29...Rf2** 93m **30.Qh4** 81m **30...Qc5** 95m **31.a4** 83m **31...b5** 96m **32.a5** 84m which made me think ...b5 was wrong **32...Re2** 97m **33.Re1** 91m **33...Rf2** m **34.h3** 93m **34...Rf6** m **35.Qe4** 96m **35...Qf2** m **36.Rg1** ?m [36.Qe5 Qf5] **36...Qf5** m **37.Qb7** ?m **37...Rxe6** m **38.Rd1** ?m **38...Qe5** m **39.Qd7** ?m **39...Qe2** m **White lost on time**; I had even put 36...Qf5 down as a White move and was one out! [39...Qe2 40.Qd4+] **O-1**

Game 3: Botvinnik ,M - Tal ,M [E10]: Match, Moscow (Russia) Match, Moscow (Russia) (8), 1960

[Dr. Dave](#)

Exeter Chess Club: Lessons from Rubinstein

Peter Lane, 10 June 1997

Akiba Rubinstein made enormous contributions to the game of chess. In the first place, our opening books contain Rubinstein's lines in the Nimzo-Indian (**1.d4 Nf6 2.c4 e6 3.Nc3 Bb4 4.e3**), the Tarrasch Defense (**1.d4 d5 2.c4 e6 3.Nc3 c5 4.cxd5 exd5 5.Nf3 Nc6 6.g3**), the Four Knights' Game (**1.e4 e5 2.Nf3 Nc6 3.Nc3 Nf6 4.Bb5 Nd4**) and the French Defense (**1.e4 e6 2.d4 d5 3.Nc3 dxe4**). Secondly there is the legacy of his games, containing some superb endgames (Reuben Fine believing he ranked above Capablanca in this respect) and a middlegame style based upon a preference for the attack.

The games selected here will focus upon Rubinstein's attacking skill. My reasons for this are twofold. Firstly, I have been reading Vukovic's **'Art of Attack in Chess'**, and you can see this selection as my attempt to understand some of the principles! Secondly, his combinational style was a method which permeated all areas of the game, as we will see in his clash with Capablanca.

2rr2k1/1b3ppp/pb2p3/1p2P3/1P2BPnq/P1N3P1/1B2Q2P/R4R1K

22. ... Rxc3! 23.gxh4

if 23.Bxc3 Bxe4+ 24.Qxe4 Qxh2 'mate, or 23.Bxb7 Rxg3 24.Rf3 Rxf3 25.Bxf3 Nf7 + 26.Kg1 Ne4+ 27.Kf1 Nd2+ 28.Kg2 Nxf3 29.Qxf3 Rd2+ etc.

23. ... Rd2!! 24.Qxd2

if 24.Qxg4 Bxe4+ 25.Rf3 Rxf3 etc, 24.Bxc3 Rxd2 with Rxh2 'mate or Bxe4+ 'mate to follow, or 24.Bxb7 Rxe2 25.Bg2 Rh3! etc.

24. ... Bxe4+ 25.Qg2 Rh3! 0-1

'mate in three follows, 26.Rf3 Bxf3 27.Bd4 Bxd4 and Rxh2 'mate.

This game is breathtaking, but Rubinstein also played games in a style which is perhaps more easy to interpret and emulate. The next three I hope come into this category.

Game 2 : Refuting Unsound Opening Play

A.R. vs Dr. Tartakower, Kissingen 1928, Budapest Defense.

1.d4 Nf6 2.c4 e5 3.dxe5 Ng4 4.Bf4 Bb4+ 5.Nd2 Nc6 6.Nf3 f6

Black avoids the mainline, 6...Qe7 7.a3 Ngxe5 8.Nxe5 Nxe5 9.e3 Bxd2+ 10.Qxd2 and White is visibly superior. White's line is a recommendation of Dr. Bernstein, and designed to retain the two bishops - an important point for A.R., as we will see.

7.exf6 Qxf6 8.g3!

This is the Rubinstein touch - offering back the pawn in exchange for superior development.

8. ... Qxb2 9.Bg2 d6 10.O-O O-O

r1b2rk1/ppp3pp/2np4/8/1bP2Bn1/5NP1/Pq1NPPBP/R2Q1RK1

11.Nb3!

This move is quite subtle. Black's opening is based upon the hope of active piece play, but now his pieces are looking uncoordinated, and White is well developed. In situations of this kind, it is important to gain and keep the initiative, primarily through attacking and removing your opponent's best pieces. With this in mind, A. R. plans to exchange the Bb4 for a knight, drive back the Ng4, and use his two bishops and central control to break through.

11. ... Qf6 12.Ng5 h6 13.Ne4 Qf7

if 13. ... Qe7 14.a3 Bc5 (not Ba5 15.Nxa5 and Qd5+) 15.Nexc5 dxc5 16.Qd5+ Be6 17.Qxc5 Qxc5 18.Nxc5 Bxc4 19.Rfc1 Bxe2 20.Nxb7 wins a pawn.

14.a3 Ba5 15.Nxa5 Nxa5 16.h3! Ne5

We begin to see some of Black's problems: 16...Nf6? 17.Nxf6+ Qxf6 18.Qd5 +xa5 or 17...gxf6 18.Bxh6

17.c5!

showing that e5 is not a strong point for the knight, only a cover for the d6 pawn. Notice how Black's pieces are kept on the run.

17. ... g5?

Black should centralise: 17...Nac4 18.cxd6 Rd8 maintains complications.

18.Bd2 d5 19.Nxg5 hxg5 20.Bxa5 Be6 21.Bc3 Nc6

r4rk1/ppp2qpp/2n1b3/2Pp2p1/8/P1B3PP/4PPB1/R2Q1RK1

Now watch A.R. infiltrate with his queen.

22.Qd2 Qf5 23.g4 Qf4 24.Bxd5 Bxd5

of course, 24...Qxd2 25.Bxe6+. Notice the deflection of the overloaded Black queen.

25.Qxd5+ Kh7 26.e3! Qf3 27.Qxg5 Qxh3 28.Qg7 'mate

(If 27...Q/Rf7 28.Qh4+ and 'mate.)

This game demonstrates three very important principles of Rubinstein's play:

- 1. Use of the bishops, note the Bf4-d2-c3 manoeuvre, changing the attack point from d6 to g7.**
- 2. Attacking the opponent's pieces to prevent development and consolidation.**
- 3. By maintaining the initiative in the centre, a weakened king's side can be punished with a swift kill.**

Game 3 : Causing Chaos

A.R. vs Dr. Tarrasch, Hastings 1922, Dutch Defense.

1.d4 e6 2.c4 f5 3.g3 c5

This line looks an active central attack, but creates weaknesses. Nf6 or Bb4+ are superior. Notice how A.R. develops smoothly, not attempting a refutation.

4.Nf3 cxd4 5.Nxd4 Nf6 6.Bg2 Nc6 7.O-O Bc5 8.e3 O-O 9.Nc3 a6

Neither b6 nor d6 are playable due to Nxc6, and Qc7 is met by Nb5, but this passive move gives A.R. the chance to gain some queen side space.

10.a3 Qc7 11.b4 Be7 12.Bb2 Ne5

if 12...d6 13.e4 opens the game to White's advantage, but this tempting line is flawed. Vukovic gives a useful comment to bear in mind: 'the use of force from a weaker position usually prompts a still more forceful reply from one's opponent'.

13.c5 Nc4

r1b2rk1/1pqp1pp/p3pn2/2P2p2/1PnN4/P1N1P1P1/1B3BP/R2Q1RK1

14.Nxf5!

And this is it! Qb3 would follow the capture of the knight, but that is not the full story...

14. ... Bxc5 15.bxc5 Qxc5 16.Nh6+

This is the real point. The combination has removed the dark square bishop, wrecked the Black king side, and gained the initiative, at the cost of a pawn. (Note 14...Nxb2 15.Nxe7+ and Qb3 won a pawn, but 15...Nxb2 16.Ne7+ Kf7 17.Qe2 seems no worse than the game, and White has lost a bishop.)

16. ... gxh6 17.Bc1 Qe5? 18.Qd3! Qc5

Oh dear, but if 18...Nb6 19.Bb2, or 18...d5 19.e4. Better was 17...d6 or Rb8 to continue developing.

19.a4! d6 20.e4

This is now playable, because his previous move prevented ...b5 **20. ... Kg7 21. Nd1!**

Painfully simple chess - the Nc4 must go!

21. ... Bd7 22.Ne3 b5 23.Nxc4 bxc4 24.Qd2 Ne8 25.e5!

r3nr2/3b2kp/p2pp2p/2q1P3/P1p5/6P1/3Q1PBP/R1B2RK1

The final disorganisation - a blow in the centre. White's bishops dominate the board. The Bc1 aims at h6, and threatens to move to a3 at an opportune moment; the Bg2 strikes down to a8, and is anxious to play a bigger role!

25. ... Rab8 26.Qxh6+ Kg8 27.Qg5+ Kf7 (if 27...Kh7 28.Qe7!) 28.Bf3! Rg8 29.Qh5+ Kg7 30.Be4! Qxe5

what else? 30...Rh8 31.Bh6+ Kg8 32.Qg5+ Kf7 33.Qf4+ wins.

31.Qxh7+ Kf8

if 31...Kf6 32.Qxg8 Qxe4 33.Bg5+ Kf5 34.Qh7+ etc.

32.Qxd7 Qxe4 33.Bh6+ 1-0

as White wins a rook after 33...Ng7 34.Bxg7+ Rxc7 35.Qxd7+xb8

This game shows the same three characteristics:

- 1. The bishops reign supreme.**
- 2. Removing the opponent's better pieces (Be7 and Nc4).**
- 3. Taking the initiative, and not letting it go.**

Game 4 : Pawn Storm

A.R. vs Teichmann, Vienna 1908, Queen's Gambit Declined.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Nbd7 5.e3 Be7 6.Nf3 O-O 7.Qc2 b6

Better is 7...c5. For this line to be playable, Black must keep the queen's knight at home to cover the White squares, and play ...h6 in preference.

8.cxd5 exd5 9.Bd3 Bb7 10.O-O-O c5 11.h4

r2q1rk1/pb1nbppp/1p3n2/2pp2B1/3P3P/2NBPN2/PPQ2PPQKR3R

11. ... c4?

This move always seems to be a critical error by Black in Queen's side openings - it blocks the position, and White's attack is quicker. The position is one of opposite side castling, and the central formation is, at the moment, fixed. Therefore the plan is one of pushing pawns at the opponent's king. This is not because the pawns make the best attackers - pieces prefer to deliver 'mate' - but because we need to open lines of attack, especially files for the rooks. Black's plan is therefore indicated: 11...cxd4 to open the c-file, followed with ...Rc8...a6...b5

12.Bf5 Re8 13.Bxf6!

This is most instructive. When playing an attack involving a pawn storm every tempo becomes critical, and it is particularly important to prevent your opponent making good defensive moves. In this position Black wants to cover his h7 pawn with the move ...Nf8. White's plan is to push his g-pawn, and for this purpose the Bg5 is an obstruction. It would also be pleasant if the move g5 were to gain a tempo against a Nf6. Therefore this move, which gets rid of the obstruction, prevents the defensive Nf8, and forces Black to keep a knight on f6 ready to be attacked by the advancing pawn. Finding moves like this is necessary if your attack is to keep on rolling!

Finally we must remember to be flexible in attack, if Black had played 12...g6 13. Bxd7 and Bh6 would have followed.

13. ... Nxf6 14.g4 Bd6 15.g5 Ne4 16.h5 Qe7

The pawns just keep moving up the board, and Black has yet to move on the queen-side. Note: 16...Nxg5 17.Nxg5 Qxg5 18.Bxh7+ Kf8 19.h6 gxh6 20.Rdg1 and `etc' say the commentators. After 20...Qf6 21.Rh5 Qe6 22.Rgh1 does look good.

17.Rdg1 a6

r3r1k1/1b2qppp/pp1b4/3p1BPP/2pPn3/2N1PN2/PPQ2P2/2K3RR

This is the crucial point. White has brought all his pieces into optimal places, and the pawns are only a step from the enemy defenses, but how to break through? 18.g6 fxg6 ...h6 or 18.h6 g6 will not do. Of course, if the f-g-h pawns were removed, White would be up by two rooks, because the Black rooks cannot shield their king.

Therefore, White is free to sacrifice a piece to prevent any blockade.

18.Bxh7+! Kxh7 19.g6+ Kg8

if 19...fxg6 20.Nxe4 dxe4 21.Ng5+ Kg8 22.Qxc4+ or 21...Kh6 22.Nf7+ Qxf7 23.hxg6+ etc

20.Nxe4 dxe4 21.h6 f6?

Tougher is 21...fxg6 22.Nh4 g5 23.Ng6 Qf6 24.h7+ Kf7 25.h8(Q) Rxh8 26.Nxh8 + Ke7 leaving White to extricate his knight.

A.R. missed 21.Ng5 Bd5 22.gxf7+ Bxf7 23.f3! Bd5 (else 24.fxe4-e4) 24.h6! coupling a central break through with the king-side attack,

e.g. 24...Rac8 25.fxe4 Bxe4 26.h7+ Kh8 27.Qxe4! Qxg5 28.Qxe8+ wins.

22.hxg7 exf3

if 22...Qe6 23.Rh8+ Kxg7 24.Rh7+ and Rgh1 will force 'mate.

23.Rh8+ Kxg7 24.Rh7+ Kg8 25.Qf5 c3

if 25...Qe6 26.Qh5

26.Rxe7 1-0

as 26...Rxe7 27.Qxf6 and Rh1 'mates.

Game 5 : A Clash of Titans

A.R. vs J.R. Capablanca, San Sebastian 1911, Tarrasch Defense.

1.d4 d5 2.Nf3 c5 3.c4 e6 4.cxd5 exd5 5.Nc3 Nc6 6.g3

Black's opening was held by Tarrasch: *`to be the best, although I must add that I am almost completely alone in holding that opinion. It is based upon the undeniably correct idea that in the Queen's Gambit ...c5 is the freeing move for Black, and must therefore be made as soon as possible. With this defense Black gets a fine free game for his pieces, at the cost of isolating his Queen's Pawn'.*

And for those who worry about that `cost'? *`He who fears an isolated Queen's Pawn should give up chess'.* (Tarrasch referred to this debate as *Tarrasch contra mundum*).

A.R.'s enduring contribution was a plan involving a fianchetto of the king's bishop, bringing it to bear on the pawn at d5. This simple scheme was used by Karpov to defeat Kasparov twice in 1985.

6. ... Be6

Capablanca used this line against Marshall in 1909, winning his *`most accurate game'*, but 6...Nf6 7.Bg2 Be7 8.O-O O-O is preferable.

7.Bg2 Be7 8.O-O Rc8 9.dxc5 Bxc5 10.Ng5!

White can begin an attack while Black still lacks two moves for castling. Notice that the initiative is used to make the most of a development edge.

10. ... Nf6 11.Nxe6 fxe6 12.Bh3

Again, the mobile bishop - h3-c8 is now the crucial light diagonal.

12. ... Qe7 13.Bg5 O-O

Black has finally caught up in development, but A.R. has been preparing his middle game plans - watch the board explode!

14.Bxf6 Qxf6 15.Nxd5!

2r2rk1/pp4pp/2n1pq2/2bN4/8/6PB/PP2PP1P/R2Q1RK1

15. ... Qh6

Of course, 15...exd5 16.Qxd5+ and Bxc8 or 15...Bxf2+ 16.Kg2 Qh6 17.Nf4 and 18.Bxe6+xc8 win quickly for White. Instead Capablanca puts another piece under attack, and prepares to pin the knight: who's winning?

16.Kg2 Rcd8 17.Qc1!!

A.R. of course! 17...Rxd5 fails to 18.Qxh6 and 19.Bxe6+, so White wins at least a pawn.

17. ... exd5 18.Qxc5 Qd2 19.Qb5 Nd4 20.Qd3 Qxd3 21.exd3 Rfe8

3rr1k1/pp4pp/8/3p4/3n4/3P2PB/PP3PKP/R4R2

22.Bg4

Black's better development make White's win hard work, at best. 22.Rae1 Nc2 23.Rxe8+ Rxe8 leaves both Nb4 and Ne1+xd3 threatened. White must work up something with his rooks, and try to dislodge that knight on d4. Both players are legends in the endgame, and the following moves unfold an epic battle.

22. ... Rd6 23.Rfe1 Rxe1 24.Rxe1 Rb6 25.Re5!

Rooks must be active. 25.b3 Ra6 and 25.Rb1 would be deplorably passive.

25. ... Rxb2 26.Rxd5 Nc6

as 26...Nb5 27.Rd8+ Kf7 28.Rd7+xb7 loses and 26..Nc2 leaves the knight out of the game. Now watch the White pieces jockeying for the best places: the rook to attack the pawns on the 7th rank, the bishop to cover the a2 pawn, not forgetting to drive the defending king away!

27.Be6+ Kf8 28.Rf5+ Ke8

if 28...Ke7 29.Bc4 with Rf7 to come.

29.Bf7+ Kd7

The king must come forward now to gain counterplay.

30.Bc4 a6

To prevent Rb5 swapping the rooks, and now White is free to gain some pawns.

31.Rf7+ Kd6 32.Rxg7 b5 33.Bg8 a5 34.Rxh7 a4 35.h4 b4 36.Rh6+

The Black pawns are beginning to look worrying, and White must take counter measures.

36. ... Kc5 37.Rh5+ Kb6 38.Bd5? b3?

Missing the chance to play 38...Rxa2! as 39.Bxa2 b3 40.Bxb3 axb3 will queen the pawn, but 39.Bc4 Rc2 40.Rb5+ Kc7 41.Bg8 is still winning.

On White's side a better line was 38.Bc4 b3 39.Rb5+ Kc7 40.Bxb3 axb3 41.axb3 winning comfortably.

We now get a finely calculated finish.

39.axb3! a3 40.Bxc6! Rxb3

if 40...a2 41.Rb5+ Ka6 42.Rb8

41.Bd5 a2 42.Rh6+ 1-0

because 42...Ka5/a7 43.Rh8-a8, or if 42...Kb5 43.Bc4+ and Ra6.

Lessons From Lasker

Peter Lane, 30 October 1997

Dr. Emanuel Lasker was not only World Champion for 27 years from 1894 to 1921, but was also one of the great thinkers of the game. He introduced and regularly used many strategical concepts decades before Nimzowitsch's formulations in 'My System' and 'Chess Praxis'. He is known as one of the great fighters, and, in his games, we see no attachment to dogma or 'correctness'; the point of a game is to win. I imagine Simon Webb of 'Chess for Tigers' learnt a lot from Lasker.

In particular, club players can learn from Lasker's approach to each individual move. Often Lasker seemed less concerned with the objective evaluation of a move, and more with the competitive edge it would give him. His skill in defense is reflected in the attitude: 'a position can never be so bad as not to offer some means of defense'. Further, he stressed the importance of success in the final rounds in a tournament, when the prizes are decided.

How does Lasker win games? If his opponent made bad opening mistakes, he would gain an advantage and move over to the attack. If a weakness was created, he would fix a hold on that weakness, create a second weakness, and then force a breakthrough. Against passive play, he would work out a blockade of his opponent's aggressive possibilities, and then force his own attack through. With strong players he would create an ever-widening front of conflict, encouraging his opponent to think of winning, but also opening the possibility that the point could go either way. These four 'winning strategems' are demonstrated in the four games below.

The games here are taken from Fred Reinfeld and Reuben Fine 'Lasker's Greatest Chess Games : 1889-1914'. I initially found the games heavy going, intricate in their strategy. Of help is Nimzowitsch's 'Chess Praxis', which explains in detail many of the strategic themes.

- [1. Attack from Strength](#)
- [2. Accumulating Advantages](#)
- [3. Taking Control](#)
- [4. When Only a Win Will Do](#)

1. Attack from Strength

W.Steinitz vs Dr E.Lasker (London, 1899, Vienna Game)

'The player who has the advantage must willy-nilly go over to the attack. ... when you have an advantage you must of necessity attack.'

STEINITZ

In this game against Steinitz, we see Lasker build up a superior position due to opening errors by his opponent. From this position of strength, according to Steinitz, an attack must be made; and Lasker dutifully does so.

1.e4 e5 2.Nc3 Nf6 3.f4 d5 4.d3 Nc6

Steinitz liked this line (4.d3), but did badly with it in later years. The most common response was 4:...d4.

5.fxe5 Nxe5 6.d4 Ng6 7.exd5 Nxd5 8.Nxd5?

This wastes time: 7.e5 Ne4 8.Bd3 Nxc3 9.bxc3 or 8.Bc4 Nxc3 9.bxc3 Qh4+ 10.g3 Qe4+ 11.Qe2 are both fairly even.

8. ... Qxd5 9.Nf3 Bg4 10.Be2 O-O-O 11.c3?

11.O-O Bxf3 12.Rxf3! preserved the balance

11. ... Bd6 12.O-O Rhe8

2krr3/ppp2ppp/3b2n1/3q4/3P2b1/2P2N2/PP2B1PP/R1BQ1RK1

Black has a model development, and white now has problems on the queen-side. For example, if 13.c4 Qe6 14.Bd3 Nf4 15.Bxf4 Bxf4 leaves the centre weak. White now tries to force back the black pieces and gain some initiative on the king-side, based on the f-file, but his lack of development and central control give Lasker the chance for a surprise combination.

13.h3 Bd7 14.Ng5 Nh4! 15.Nf3

For a moment white's prospects brightened, but if 15.Rf2 Bg3, or 15.Bf3 Nxf3+ 16. Nxf3 Bb5 17.Re1 Bg3; 16.Qxf3 Qxf3 17.Rxf3 Re1+ 18.Rf1 Rde8 19.Bd2 Rxa1 20. Rxa1 Re2 21.Rd1 Bc6 22.Nf3 f6 with advantage to black because of his two bishops and piece pressure. This last line is a good illustration of the possibilities a centralised development can make available.

But now white has wasted several moves and weakened his king-side, which allows Lasker a decisive combination:

15. ... Nxg2! 16.Kxg2 Bxh3+!! 17.Kf2

17.Kxh3 allows Qf5+ 18.Kg2 Qg4+ 19.Kh1 Qh3+ 20.Kg1 Qg3+ 21.Kh1 Re4 27. Bg5 Rg4 23.Rg1 Qh3+ 24.Nh2 Qxh2 'mate.

17. ... f6!!

Not content with taking the rook, Lasker threatens to simply move some pawns up

the king-side. This calm approach to winning is very frustrating for the opponent: 'whatever you do, I'm going to get you'.

18.Rg1 g5 19.Bxg5 fxg5 20.Rxg5 Qe6

2krr3/ppp4p/3bq3/6R1/3P4/2P1N1b/PP2BK2/R2Q4

White has returned his extra material, but the Black position is still centralised, and the white king position is unsafe.

21.Qd3 Bf4 22.Rh1

If instead 22.Rh5 Qg4; 22.Rg7 Bf5 23.Qb5 Qe3+ 24.Ke1 Qxf3 etc.

22. ... Bxg5 23.Nxg5 Qf6+ 24.Bf3 Bf5 25.Nxh7 Qg6 26.Qb5

A last-ditch attempt at complications, but such 'attacks' (from a worse position) are doomed to failure even by Steinitz's theories.

26. ... c6 27.Qa5 Re7! 28.Rh5

If 28.Qxa7 Rg8 29.Qa8+ Kc7 30.Qa5+ Kb8 and wins.

28. ... Bg4 29.Rg5 Qc2+ 30.Kg3 Bxf3 0-1

An attractive game, showing the effect simple development has against opening errors. The combination followed simply from superior coordination. Noteworthy is Lasker's willingness to maintain his positional edge based on a centralised development.

2. Accumulating Advantages

A. Burn vs Dr E. Lasker (Paris 1900, Queen's Gambit Declined)

This game shows how to exploit a single weakness in the opponent's position.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Nf3 c5 5.cxd5 cxd4

We call this Tarrasch's Defense now, 5: ...Nxd5 6.e4 Nxc3 7.bxc3 cxd4 8.cxd4 is the semi-Tarrasch; or 6.Nxd5 Qxd5 7.Be3! Na6 8.g3 cxd4 was equal in Kashdan-Alekhine (Folkestone, 1933).

6.Qxd4

Instead 6.Qa4+ Bd7 (Qd7 7.dxe6) 7.Qxd4 exd5 8.Nxd5 wins a pawn for white. This is the Tarrasch Gambit, dangerous against weak defenders, as black gains a strong development edge.

6:...Nxd5 7.e4 Nxc3 8.Qxd8+ Kxd8 9.bxc3 Bc5

rnbk3r/pp3ppp/4p3/2b5/4P3/2P2N2/P4PPP/R1B1KB1R

Burn was obviously playing for a draw, and was therefore happy to exchange queens, even at the cost of his Q-side pawn structure. Instead, 7.Nxd5 Qxd5 8. Qxd5 exd5 9.Be3 allows white to gang up on the isolated queen pawn. In order to gain half a point, it is usually the case that you have to first play for the full point!

10.Ne5 Ke7!

Black avoids 10:...Ke8 11.Bb5+ Nd7 12.Ke2 a6 13.Bxd7+ Bxd7 14.Nxd7 Kxd7 15. Be3! either removing the bishops, when a draw is likely, or posting the bishop well for attack and defense.

This typical precision from Lasker prompts white to further entangle himself.

Instead, more secure was, 10.Nd4 Ke7 11.Be3 etc.

11.Nd3 Bb6 12.Ba3+ Ke8 13.Ne5 Nd7 14.Bb5

If 14.Nc4 Bc5 15.Nd6+ Ke7 16.Bxc5 Nxc5 17.e5 Bd7 when black's pawns are still better, though the Nd6 prevents Rc8. White prefers to look for further exchanges.

14:...Bc7! 15.Nd3

The difference is in the bishops. If instead 15.Bxd7+ Bxd7 16.Nxd7 Kxd7-c6 and black has much the better ending.

White's pieces are now pushed away.

15:...a6 16.Ba4 b5 17.Bb3 Bb7 18.f3 Rc8! 19.Kd2

Impossible is 19.c4 bxc4 20.Bxc4 Ba5+, and so c3 is fixed as a weakness.

19:...a5 20.Rab1 Bc6 21.Bc2

White retreats voluntarily before the planned ...Nb6...a4...Nc4+, but thereby allows black to organise his king-side attack.

21:...f6 22.g3?

To develop the king's rook, but this is a further weakening. Best is 22.Nc5 Nb6 23. Bd3 or 22:...Nxc5 23.Bxc5 Bf4+ 24.Ke2 Bxe4 25.Bxe4 Rxc5 26.Rxb5! level.

22:...Kf7 23.Ke2 g5! 24.g4 h5!

One weakness leads to another. The h-pawn is again weak, but 24:...g4 had to be stopped. Now Lasker will open the king-side at his leisure, meanwhile uncovering Q-side threats. Lasker is therefore playing according to the principle of two weaknesses.

25.h3 Bb8 26.Bb2 Nb6 27.Nc5 Be8 28.Nb3 Nc4! 29.Bc1

White is forced backwards off the board, if 29.Ba1 Na3 30.Rc1 hxg4 31.fxg4 Bf4 32.Nd2 Bc6 and white runs out of moves.

29:...hxg4 30.fxg4 Be5!

2r1b2r/5k2/4pp2/pp2b1p1/2n1P1P1/1NP4P/P1B1K3/1RB4R

The first direct attack on the c3-pawn; it can only be defended indirectly.

31.Nd4 Bxd4 32.cxd4 Na3!

Lasker forces two extra Q-side pawns - the opposite colour bishops not being a problem with the help of the rooks.

33.Bxa3 Rxc2+ 34.Kd3 Rxa2 35.Bd6 b4 36.Rbc1 Bb5+ 37.Ke3 Kg6!

Leaves white with nothing. 37:...Rxb3 38.Rxb3 Ra3+ 39.Kf2 Rxb3 40.Rc7+ Kg6 41.Bf8 Rh7 42.Rxb7 Kxb7 is less clear, though still a win.

38.Rc5 Ra3+ 39.Kf2 Bd3 40.Re1 Rxb3 41.Rc7 Ra2+ 42.Kg1 Rh4 43.e5 Rxb4+ 44.Kh1 Be4+ 0-1

A beautifully played endgame by Lasker, patiently and methodically exploiting his opponent's errors: 6.Qxd4 and 10.Ne5 were tame, and 22.g3? weakening, but black's position looked harmless enough. It was only as Lasker uncoiled that the lack of scope in white's position became evident. In particular, c3 always looked the lame point in white's position, but the one time Lasker attacked the pawn, it managed to jump to the d-file!

Lasker built his position up gradually, starting with Burn's weak opening play, and he employed prophylaxis against c4, to paralyse white's Q-side. Added to this, he opened the h-file, enabling the use of the principle of two weaknesses. After exploiting pressure against c3 to break through, he curtailed any counterplay with 37:...Kg6, and concluded with an attack on the king!

3. Taking Control

J.H. Blackburne vs Dr E.Lasker (London 1899, Queen's Pawn Opening)

One of the more important lessons to learn when playing competitive chess is how to improve this prospects in a level position. A good player will understand which are the key squares in a position, bring his pieces into connection with them, and, if his opponent cannot counter this reorganisation, will thereby gain the advantage.

In this game, the opening finishes fairly level, but Blackburne plays without a concrete plan, and Lasker can tie up the queen-side in a restriction operation later to become classic. Having thwarted his opponent's activity, Lasker can walk down the other side of the board.

1.d4 d5 2.Nf3 Nf6 3.e3 e6 4.Bd3 Nbd7 5.Nbd2 Bd6 6.e4 dxe4 7.Nxe4 b6 8.O-O Bb7 9.Nxd6+ cxd6

```
r2qk2r/pb1n1ppp/1p1ppn2/8/3P4/3B1N2/PPP2PPP/R1BQ1RK1
```

This position is as level as they come: two bishops for white, the extra central pawn for black. White should perhaps try c4,b3,Bb2 to give his second bishop a good diagonal. Black might play e5 and for c-file pressure. But the position is still a little fluid, and it is very easy to drift into an inferior position.

10.Re1 O-O 11.Bg5 Qc7 12.c3 Rfe8 13.Bb5 Bc6!

To avoid the doubling of the f-pawns after Bxf6, but striking in that he should allow the exchange of this bishop.

Blackburne has managed to drift and the Bg5 seems wasted, unless exchanged on f6 the bishop reaches a bad diagonal, but perhaps he didn't expect Lasker to exchange his own lovely bishop?!

Lasker had already foreseen the weakness of the light squares d5,c4,b5, (therefore the bishop exchange) which allows him to blockade the Q-side and make the Bg5 of little effect. The following sequence of moves, binding up the Q-side, should be studied carefully (and more may be found on the subject in 'Chess Praxis').

14.Bxc6 Qxc6 15.Qd3 h6 16.Bh4?

16.Bxf6 was indicated - this bishop is now useless.

16...Rac8 17.Rad1 Nd5!

A hypermodern move - piece occupation of the centre, and not pawn to d5. Note that pieces, especially knights, have an impact forward of an outpost, whereas the pawn can only sit tight.

18.Bg3 b5 19.Nd2 N7b6 20.a3 a5 21.Rc1 a4

2r1r1k1/5pp1/1nqpp2p/1p1n4/p2P4/P1PQ2B1/1P1N1PPP/2R1R1K1

Nimzowitsch would have been proud. The Q-side blockade allows Lasker the freedom to advance his majority on the other wing. White has been a bystander in the game - not comprehending, and so unable to counter, his opponent's strategy.

22.h4

A woefully late try to hold back the deluge, but the pawn merely becomes a target.

22...f5! 23.Bh2 Qd7 24.Qg3 f4 25.Qd3 e5 26.c4?

Cannot be good, giving up e4-control. But what else? White is practically a piece down.

26...bxc4 27.Nxc4 e4! 28.Qf1

Black wins after 28.Rxe4 Rxe4 29.Qxe4 Qb5 and 28.Nxb6 Rxc1 29.Rxc1 exd3 30.Nxd7 d2!

28...Nxc4 29.Rxc4 Rb8 30.Rc2 Kh8!

These last two moves of Lasker's form a vital part of the winning strategy. White had ideas of playing against e4 or d5 after a rook exchange, so Lasker gains a move by forcing defense of b2, then moves his king off the critical diagonal. Qc4 is now met by Rec8.

31.Rec1 Qg4! 32.f3 Qxh4 33.fxe4 Rxe4 34.Rc8+ Rxc8 35.Rxc8+ Kh7 36.Qb1 Nf6 37.d5

Obviously carefully calculated by Lasker. If 37.Re8 d5 ... Ng4 won, but now Re8 is threatened.

37...g6 38.Rc7+ Kh8!

Precision chess - if 38:...Kg8? the rook could not move, because of Qxg6+.

39.Rc1

Or 39.Rc8+ Kg7 40.Rc7+ Kf8 and a walk to the d-file.

39:...Re2 40.Kh1 Ng4 41.Rc8+ Kg7 42.Rc7+ Kf6 0-1

When I first played through this game, I knew it was good, but I didn't really understand it. The Q-side restraining operation is clear, I might even recognise it as an option before it turns up, and I could manage the K-side attack at the end, perhaps also cope with the white counterplay, but ... how to move from the one to the other? As I played through the game a few more times, I began to understand the 'bridging' passage from moves 26-30. It reminds me of the modulation between keys in a piece of music; without the bridge, the change falls flat.

Note the calmness of the strategical player. Having transformed the restrained Q-side into a central preponderance, Lasker takes time to rearrange his pieces, counter threats, and hit at the fresh targets. If you wonder how great players preserve a slight initiative and turn it into a crushing attack, it's because they find moves like 29...Rb8 and 30...Kh8.

4. When Only a Win Will Do

Dr A.Alekhine vs Dr E.Lasker (St.Petersburg 1914, Ruy Lopez)

The finish to this tournament is one of the great stories in Lasker's career. Entering a double-round final with Alekhine, Capablanca, Tarrasch and Marshall, Lasker was a full point and a half behind Capablanca. In order to win the tournament, every game had to be played to a win. And he succeeded! How?

‘The immortal Lasker playing his fourth move at St.Petersburg. Bishop takes knight, most drawish of all the variations in the Lopez, and there was Lasker needing a win but playing bishop takes knight against Capablanca. Psychological chess. Capablanca sweating away at the thought of a new wrinkle. Lasker sitting like a stone.’

from LAST ROUND by Kester Svendsen

What I think Lasker understood is that the only drawish variations are those forcing lines leading to a perpetual, all other variations preserve a balance, and enable either or both players to disturb the balance and play a full game. This is Lasker's big secret, if you like: in a balanced position he will not play the objectively best move, but will instead disturb the balance. The risk is not great, as the position is level; instead of a stand-off, we get a dynamic equilibrium. In a stand-off, it is easy to stand still, in equilibrium, you have to do a lot of work. In chess, if you don't do the necessary work, you lose. And this is what is meant by Lasker's psychological chess.

The game against Alekhine was played immediately before the one against Capablanca, but makes his winning technique far clearer.

1.e4 e4 2.Nf3 Nc6 3.Bb5 a6 4.Bxc6 dxc6 5.Nc3 f6 6.d4 exd4 7.Qxd4

What is white up to in this opening? He has conceded the two bishops in order to double black's c-pawns. In a pawn endgame, white would win due to his extra king-side pawn, and therefore he exchanges queens.

Of course, ‘Before the endgame, the Gods have placed the middlegame’, and black has his two bishops; furthermore, his only weakness, the queen-side pawns, is easily defended by the king after O-O-O.

7. ... Qxd4 8.Nxd4 Bd6 9.Be3 Ne7 10.O-O-O O-O

Defend the Q-side? Yes, but Lasker takes the chance of provoking Alekhine to attack - remember, Lasker must win this game!

11.Nb3 Ng6

Black must concede c5, as 11:...b6 fails to 12.Bxb6!

12.Bc5 Bf4+ 13.Kb1 Re8 14.Rhe1 b6 15.Be3 Be5 16.Bd4 Nh4 17.Rg1 Be6

A good option was 17:...g5 with a king-side bind.

18.f4! Bd6 19.Bf2 Ng6 20.f5! Bxb3 21.axb3

Better than 21.fxg6 Be6 22.gxh7+ Kh8 23.Bxb6 Bxh2 etc.

21. ... Nf8 22.Bxb6 Bxh2 23.Rh1 cxb6 24.Rxh2 b5 25.Re1 Nd7 26.Nd1 a5!

r3r1k1/3n2pp/2p2p2/pp3P2/4P3/1P6/1PP3PR/1K1NR3

Lasker decides to play for a Q-side attack, and not against the weak e-pawn (much to Tarrasch's surprise!). The reason is, white can defend e4 as often as black can attack it, and so there is no gain. Lasker encourages the e-pawn to advance, widens the playing area to include the Q-side, and looks for

complications, which may be to his favour. This is how to play for a win, when a draw is of no interest.

27.Rh3 b4 28.Nf2 Nc5 29.Rhe3 a4 30.bxa4 Nxa4 31.e5 fxe5 32.Rxe5 Reb8!

Decentralising! But with threats, e.g. 33.R1e4 Nc3+ 34.bxc3 bxc3+ 35.Kc1 Ra1 'mate.

33.Ne4 b3 34.Re2 Nb6 35.cxb3 Nd5 36.g4 h6 37.g5 hxg5 38.Nxg5 Nf6

Avoiding 38: ...Rxb3? 39.Re8+ with 'mate.

39.Re7

Here, R5e3 or Rc5 or Rc2 give a draw, but the Re7/Rg2/Ne6 combination seems irresistible... **39. ... Rxb3 40.Rg2 Nd5**

Where to play the rook?

41.Rd7?

No, anywhere but there! 41.Re1 held the draw.

41. ... Rd3!! 42.Rxd5

Sad but true. Nc3+ winning the exchange is threatened. If 42.Rb7 Rd1+ 43.Kc2 Ne3+, or if 42.Kc1 Ra1+ 43.Kc2 Nb4 'mate.

42. ... Rxd5 43.Ne6 Kf7 44.Rxg7+ Kf6 45.Rc7 Rd6 46.Nc5 Kxf5

r7/2R5/2pr4/2N2k2/8/8/1P6/1K6

How to go about winning this? The trick is in piece play, black must get his king into the opposing position, and this becomes very easy if the white rook is exchanged. The play is therefore based around restriction of piece activity.

47.Rf7+ Ke5 48.Kc2 Rh6 49.Nd3+ Kd6 50.Rf5 Rb8 51.Kc3 Kc7 52.Rf7+ Kb6 53.Rd7 Rh3 54.Rd4 Rbh8

The knight's best square is d3, covering b2; other squares are passive (d1) or exposed (c4). Black will attack the knight with his rooks, the threat now being ... R8h4...Rh5...Rd5, forcing the exchange of rooks.

55.Rb4+ Kc7 56.Kc2 R8h4 57.Rb3 Rh2+

Tarrasch suggests 57: ...c5 58.Rc3 Kd6 59.Ra3 c4 60.Ra6+ Kd5 61.Nb4+ Kd4 and a quick win for black: *'But we must bear in mind that the advance of the QBP determines first prize! ... And the advance would still be possible if the other methods turned out to be insufficient.'*

58.Kc3 R4h3 59.Rb4 Rh5 60.Rg4 R2h3 61.Kc2 Rd5 62.Nf4 Rc5+

Not 62: ...Rd4 63.Rg7+ and wins!

63.Kb1 Rh1+ 64.Ka2 Ra5+ 65.Kb3 Rb5+ 66.Kc3 Kb6 67.Nd3 Rh3 68.Kc2 Rd5 69.Rb4+

Note that Lasker has gained a move, 69.Nf4 in this position allows 69:...Rd4, and therefore the rook must take up a passive position.

69. ... Kc7 70.Rb3 Rh2+ 71.Kc3 Kd6 72.Ra3 Rg2 73.Ra1 Rg3 74.Rd1 Kc7 75.Rd2 Kb6 76.Rd1 Kb5 77.Kc2

If 77.Rd2 Rc5+ 78.Kb3 (78.Kd4 Rc4+ 79.Ke5 Re3+ 80.Kf5 Rd4) Rd5 79. Kc2 Rf5 80.Rd1 c5 81.Rd2 Rh3 82.Rd1 Re3 83.Rd2 Rfe5 and exchanges rooks.

77. ... Kc4 78.b3+ Kb5

Black has now forced a serious weakness.

79.Rd2 Rh3 80.Rd1 Rh2+ 81.Kc3 Rd8 82.Rg1 Rh3 83.Rd1 Rdh8 84.Rg1

84.Rd2 Rh2 85.Rd1 Rh1 86.Rd2 R8h2 87.Nf2 Rf1

84. ... Rhh5 85.Kc2 Rd5 86.Rd1 Rg5 87.Rd2?

Another error. Correct was 87.Rf1, when black would double rooks on the seventh rank and attack the b-pawn. The win would still be quite difficult.

87. ... Rhg3 88.Nc1 Rg2 89.Ne2 Kb6! 0-1

As Re5 will force the rooks off, when black has an easy win.

Exeter Chess Club: Lessons from Capablanca

Peter Lane, 22 January 1997

On Studying Master Games - a short digression

Polugayevsky, in the beginning of his book 'Grandmaster Performance', quotes some advice he was given when a young player:

"If you want to play well, in the first instance study games. Your own and other peoples'. Examine them from the viewpoint of the middlegame and the endgame, and only then from the viewpoint of the opening. This is more important than studying textbooks."

This advice can be found in many sources, and, as an aspiring player, I am happy to follow it. But how exactly should we "study games"? How to derive the maximum benefit from watching somebody else, given our own knowledge and preferences? A useful start might be the players' own analysis. However, I find John Nunn opaque at best, Bobby Fischer more teasing than explanatory, and try Capablanca:

r4rn1/pppbqpkp/4p1p1/3nN3/3P4/3B1N2/PP1Q1PPP/2R2RK1

[Capablanca-Alekhine, St.Petersburg 1913]

His explanation of **18. Be4** is that it exchanges:

"the almost useless B for a most valuable Kt. It would take a good many lines to explain this move properly, and then I might not be clearly understood, so I leave the student to work it out by himself".

Analysis seems more accessible when by the lesser lights: Irving Chernev springs readily to mind, and also writers more involved with teaching, such as Dvoretsky and co. Why is this?

Obviously, the mental makeup of a great player is different to that of a teacher, and their combination is a great rarity. Capablanca's comment *"where you guess, I know"* points very clearly at the existence of a gulf in understanding between the average player and the genius. This is all very well, but I still want some guidance on techniques of self-study, especially as printed analysis cannot be all things to all readers.

What we need (any psychologists listening?) is a method to help the individual identify, not only the crucial points of a game, but more those points from which the individual can learn. And this requires a skill at self-evaluation, which the injunction to study your own games is designed to develop. One method I use, with which I invite argument, is derived from a rule in the computer study of intelligence known as Martin's Law: *"You cannot learn anything unless you almost know it already"*. In the games below, I have tried to pick out those where it is possible to almost follow what is happening, and it is these where most can be learnt. At each point we must ask: - how does Capablanca assess the features in a position? - how do these features get drawn into a plan for the game?

Game 1 : Stages in an attack J.R.C. - D. Janowski (Manhattan, 1918)

1. d4 d5 2. Nf3 Nf6 3. c4 e6 4. Bg5 Nbd7 5. e3 c6 6. Nbd2

This is an interesting idea of Capablanca's: aiming after ... dxc4 to play Nxc4-e5. It has the downside of taking away pressure from d5, a move white often makes after ...c5.

6. ... Be7 7. Bd3 dxc4 8. Nxc4 O-O 9. O-O c5 10. Rc1 b6 11. Qe2 Bb7 12. Rfd1

r2q1rk1/pb1nbppp/1p2pn2/2p3BQNP4/3BPN2/PP2QPPP/2RR2K1

This is a fairly typical position for white in the Queen's Gambit, with the exception of the N on c4. Any 1.d4 player should take note of the disposition of forces.

12. ... Nd5 13. Nd6!

r2q1rk1/pb1nbppp/1p1Np3/2pn2B1/3P4/3BPN2/PP2QPPP/2RR2K1

As black is not going to play 13. ... Bxg5 14. Nxb7 Qc7 15. Nxc5 Qxb7 16. Bxh7+ Kh8 17. Qh5 with a quick win for white, 13. ... Bc6 is forced. What is the purpose of this? To drive the B into the firing line of the Rc1! Capablanca comments: "*Later on it will be seen how this little advantage now acquired is largely the cause of Black's defeat.*"

13. ... Bc6 14. Ne4 f5 15. Bxe7 Qxe7 16. Ned2 e5

Forced in many ways, as else Nc4-e5 follows.

17. dxe5 Nxe5 18. Nxe5 Qxe5 19. Nf3 Qe7

r4rk1/p3q1pp/1pb5/2pn1p2/8/3BPN2/PP2QPPP/2RR2K1

If instead 19. ... Qf6 20. Bc4 Rad8 21. e4 fxe4 22. Qxe4 Rfe8 23. Rxd5! Rxe4 24. Rxd8 'mate. 19. ... Qe6 looks better, though 20. Bc5 leaves white the edge.

20. Nd4! cxd4 21. Rxc6 Nb4

r4rk1/p3q1pp/1pR5/5p2/1n1p4/3BP3/PP2QPPP/3R2K1

White's Rxc6, made possible by move 13, gives him a comfortable position from which to work up an attack.

22. Bc4+ Kh8 23. Re6 d3 24. Rxd3 Qc5 25. Rd4 b5 26. Bxb5 Nxa2 27. Bc4 Nb4

r4r1k/p5pp/4R3/2q2p2/1nBR4/4P3/1P2QPPP/6K1

The scattered black forces can offer no resistance. White now creates some tactical threats.

28. Qh5 g6 29. Rxg6 Rad8 30. Rg7 1-0

if 30. ... Kxg7 31. Qg5+ Kh8 32. Rxd8 when 33. Qf6 'mate can only be stopped by 32. ... Nd5 33. Rxf8+ Qxf8 34. Bxd5 winning easily.

My introduction made the point that we must begin looking at a master's game when we almost know what is going on, but perhaps we are missing some key feature of the position, or merely uncertain about whether we would make the moves ourselves. My tactic is to work backwards. Take the game above where I have supplied a number of diagrams. Beginning from the opening, we may wonder which of many plans would be most relevant, and despair of finding the answer. Beginning from the end, we should all see the tactics which lead black to resign ... so we have our opening into understanding the game. Go back one stage further, and ask whether we understand how to generate the position in which those tactics are playable. As our understanding improves, we can work back further in the game, and begin to see the various elements of strategy leading to the final assault as potentialities out of the opening.

Game 2 : Schematic thinking J.R.C. - Ragozin (Moscow, 1936)

5k2/r1p2ppRb2p/8/8/P4N1P/1P3PPQR3K1

This position, with a clear pawn extra and no worrying counterattack, looks like a trivial win for white, and indeed it should be. But ... how many times have such positions ended in draws? The simplicity

leaves each move transparent: we do not have to worry about the 'why' of each move, only the 'how do we think of it in the first place'. Have you seen the long detailed plans Alekhine gives of some of his endgames (the one against Znosko-Borovsky, Paris 1933 is a case in point)? Ever wondered what happens to the plan if the opponent deviates slightly? What is actually needed is something simpler, confined to the concerns of the present position, and with sufficient flexibility to allow for change. Capablanca has the following to say about this position:

"White's plan is to prevent the advance of the c-pawn (after which the b-pawn could become weak) and to control the entire board up to the fifth rank. This is achieved by moving the king to e3, and by placing the rook at c3, the knight at d4, and the pawns at b4 and f4. After he has attained such a position, White will be able to advance his Q- side pawns".

This is what is known as endgame technique, and involves thinking schematically: a concrete assessment of the position, a desired piece configuration, and no variations. I give the sequel in brief. The point is to watch the improvement in piece position - once the pieces are superior, the pawns can move up.

1. Nd4 Rb7 2. b4 Bd7 3. f4 Ke7 4. Kf2 Ra7 5. Rc3 Kd6 6. Rd3 Ke7 7. Ke3 Ra4 8. Rc3 Kd6 9. Rd3 Ke7 10. Rc3 Kd6

White has his desired position. To advance the Q-side pawns, he moves the king to their aid.

11. Ne2 g6 12. Rd3+ Ke6 13. Kd4 Ra6 14. Re3+ Kd6 15. Nc3 f5 16. b5 Ra8 17. Kc4 Be6+ 18. Kb4 c5+ 19. bxc6 Bg8 20. Nb5+ Kxc6

Black's king-side 'advance' has left the pawns weak. Capablanca now uses this, and not the a-pawn, to force a decision.

21. Rd3 g5 22. Rd6+ Kb7 23. fxg5 hxg5 24. Rg6 Rf8 25. Rxg5 f4 26. Nd4

stopping any counterplay with ... f3.

26. ... Rc8 27. Rg7+ Kb6 28. Rg6+ Kb7 29. Nb5 Rf8 30. Nd6+ Kb8 31. h4 1-0

Note the passed a-pawn is still on a3! And so what part did the extra pawn play? The potential of its advance led black to abandon the K- side, which allowed Capablanca to step in and win the game there instead. This is otherwise known as the "principle of two weaknesses".

Game 3 : Tactical resolution J.R.C. - B. Villegas (1914)

1. d4 d5 2. Nf3 Nf6 3. e3 c6 4. Bd3 Bg4 5. c4 e6 6. Nbd2 Nbd7 7. O-O Be7

Black might have tried ...e5

8. Qc2 Bh5 9. b3 Bg6 10. Bb2

r2qk2r/pp1nbppp/2p1pnb1/3p4/2PP4/1P1BPN2/PBQN1PPP/R4RK1

White obviously has a good development. He has placed his pieces on good squares, and been left alone to do just that! Black played a little passively, in not trying for ...c5/...e5 as quickly as possible, and has wasted time with the bishop. White is now intending to play e4 and open the position up.

10. ... Bxd3 11. Qxd3 O-O 12. Rae1 Qc7 13. e4 dxe4

Black feels obliged to exchange in the centre, as else white may play e5 or exd5 at his leisure.

14. Nxe4 Nxe4 15. Rxe4 Bf6

The rook is in an imposing position, and black wants to frighten it with the idea of ...Nc5 : dxc5 Bxb2 and a good position. Note that 15. ... Nf6 would have

encouraged 16. Rh4 and d5 with a sharp attack.

16. Qe3 c5

Black at last makes his bid for freedom ... What is white intending to do about it?

17. Ne5 cxd4

r4rk1/ppqn1ppp/4pb2/4N3/2PpR3/1P2Q3/PB3PPP/5RK1

Black is now expecting 18. Bxd4 Nxe5 19. Bxe5 Bxe5 20. Rxe5 Rfd8 with control of the d-file in a major piece ending, but ...

18. Nxd7!

A surprise queen sacrifice: if now ...dxc3 19. Nxf6+ gxf6 20. Rg4+ Kh8 21. Bxf6 'mate ... Kh8 20. Rh4 h6 21. Rxh6+ gxh6 22. Ne8+xc7 with two pieces for a rook.

18. ... Qxd7 19. Bxd4 Bxd4 20. Rxd4 Qc7

r4rk1/ppq2ppp/4p3/8/2PR4/1P2Q3/P4PPP/5RK1

Black has now been forced into a major piece ending with WHITE controlling the d-file! White additionally has a Q-side majority, and has a simple plan: push the pawns, create a passed one, and queen it. This is the kind of game I find most instructive and impressive: white has an obvious way of playing for a win, but how can he be sure of winning? How to stop black counterattacking? The schematic play is rather like the ending given above, but here the advantage is maintained by short tactical sequences, involving definite calculations. (The difference is that the single advantage here is sufficient to win, whereas above, a second was required.)

21. Rfd1 Rfd8 22. b4 Rxd4 23. Qxd4 b6

Black must defend the a7 pawn, and also tries to cover c5, so that white's b4-c5 push leads to a weaker pawn earlier. Notice how white now: creates a hole for his king, and then puts his rook behind the (potential) passed pawn.

24. g3 Rc8 25. Rc1 Rd8

Where does the queen go?

26. Qe3!

One of those important moves to focus on. What does it do? It covers the rook on c1, it stops black playing Rd2, and still aims at c5. Note that white is now happy to give up the d-file, the action will be on the c-file.

26. ... Kf8 27. c5 bxc5

if now 28. bxc5 Qc6 stops the pawn

28. Qe4!

Another delightful queen move. Now controlling c6, the next port of call for the c-pawn.

28. ... Rd5 29. bxc5 g6 30. c6 Kg7 31. a4!

8/p1q2pkp/2P1p1p1/3r4/P3Q3/6P1/5P1P/2R3K1

And the final piece of genius. White's plan is Qb4-b7, but if played now, after ...Qxb7 : cxb7 Rb5 stops the pawn (which is why black played Kg7 and not Kg8, the latter allowed Rc8+). So, Capablanca covers the b5 square in advance!

31. ... Rd6

... puts the pawn under lock and key, but out comes the dynamite.

32. Qe5+! f6 33. Qxd6 Qxd6 34. c7 1-0

Simple, clear and logical. Notice the queen moves: Qd4-e3-e4-e5xd6, and the prophylactic a4. It is this careful attention to detail which made many balanced positions look a forced win in Capablanca's hands.

"Against Alekhine you never knew what to expect; against Capablanca you knew

what to expect, but you couldn't prevent it!" Sir George Thomas

Game 4 : Switching the attack J.R.C. - Allies, (Buenos Aires, 1914)

1. f4 e5 2. e4 Bc5 3. Nf3 d6 4. Nc3 Nc6 5. Na4 Bb6 6. Bb5 Bd7 7. Nxb6
axb6 8. d3 Nge7 9. O-O O-O 10. f5

Capablanca has played a forthright opening, and his intentions are securely set on the king-side. If black could at all achieve ...d5 he would break out of the grip, but Capablanca maintains a close hold on the position.

10. ... f6 11. Bc4+ Kh8 12. a3 Be8 13. Be6 Bh5 14. Qe1 Qe8 15. Qh4 Nd8
16. Ba2 Bf7 17. c4 c5 18. g4

r2nqr1k/1p2nbpp/1p1p1p2/2p1pP2/2P1P1PQ/P2P1N2/BP5P/R1B2RK1

The king-side attack gathers momentum. The g-pawn's threat to move to the sixth rank will lead to an open file.

18. ... Ng8 19. Bd2 b5 20. g5 fxg5 21. Nxg5 Nf6 22. Rf3 bxc4 23. Nxh7!

A sacrifice out of the ordinary. There can be no conception of an immediate win, or forced sequence. Instead, Capablanca realises that, in his attempts to stave off immediate loss, black will bring his pieces into a tight knot around his king. Once this has been achieved, white's superior mobility will enable him to create some other threat.

23. ... Nxb7 24. Rh3 Bg8 25. Bxc4 Rf7 26. Kh1 b5 27. Bd5 Raa7 28. Rg1 Rf6 29. Bg5 Raf7

Now we have the 'tight knot' discussed above. Obviously, Capablanca is not about to release the pressure by taking one of those rooks. In fact, black is approaching a state of Zugzwang, where any move would lead to disaster, but still white needs to apply some extra pressure - but where?

30. b3!

This is almost an underhanded move ... The endgame principle of two weaknesses is known as 'switching the attack' in the middlegame, and you couldn't find a clearer example of it than this. The a-pawn's freedom is the fruit of the pressure down the h- and g-files.

30. ... Qf8 31. a4 bxa4 32. bxa4 Qe8 33. a5 Nc6 34. a6 Nb4

... and now a grand liquidation - even though a piece down. Capablanca's handling of relative piece dynamics makes a mockery of any absolute scale of values.

35. Bxf6 Nxd5 36. Bxg7+ Rxg7 37. Rxg7 Kxg7 38. Qh6+ Kh8 39. Qxd6

... and white won in a few more moves.

Game 5 : Zugzwang! F.J. Marshall - J.R.C., (New York, 1918)

1. d4 d5 2. Nf3 Nf6 3. c4 e6 4. Nc3 Nbd7 5. Bg5 Be7 6. e3 O-O 7. Rc1 c6 8. Qc2 dxc4 9. Bxc4 Nd5

Capablanca's move, leading to freeing exchanges.

10. Bxe7 Qxe7 11. O-O Nxc3 12. Qxc3 b6

This is very important, and, according to Capablanca, is the key to the variation. Black simplifies as much as possible, and then solves the development of his queen's bishop. He intends continuing with Nf6 ... Rfd8 ... Rac8 ... c5, freeing up the position.

13. e4 Bb7 14. Rfe1 Rfd8 15. d5

Marshall is not interested in black's freeing operation, and wants to open the game up for an attack ... 16. dxe6 would leave black with an awkward e-pawn.

15. ... Nc5 16. dxe6 Nxe6 17. Bxe6 Qxe6

Capablanca had thought the attack on a2 would force a defensive move, when ... c5 follows with a better position for black -

18. Nd4!

r2r2k1/pb3ppp/1pp1q3/8/3NP3/2Q5/PP3PPP/2R1R1K1

and if ... Qxa2 : Ra1 wins the queen! ... Qd7 to defend the pawn, and 19. Nf5 f6 20. Qg3 Kh8 (else Rcd1 Qf7 : Nh6+ wins the queen) 21. Rcd1 Qf7 22. h4 with a strong attack.

18. ... Qe5!!

Capablanca is not interested in defensive play, and instead offers a pawn and the queen exchange, but for what?

19. Nxc6 Qxc3 20. Rxc3 Rd2!

... a rook on the seventh! Now, white should play for a draw with 21. Ne7+ Kf8 22. Rc7 Re8 23. Rxb7 Rxe7 24. Rb8+ Re8 25. Rxe8+ Kxe8

21. Rb1 Re8 22. e5 g5!

if 22. f3 f5 23. exf5 Ree2 with double rooks on the seventh "*enough to frighten a man to death*" (Chernev). ... but this is a master move: stopping f4, allowing Kg7, and threatening Bxc6...Rxe5.

23. h4 gxh4 24. Re1

if 24. f4 h3 25. g3 h2+ 26. Kh1 (into the pin) Rc8 (pinning the knight twice) 27. Rbc1 Kf8 28. f5 Ke8 29. e6 (to stop Kd7) fxe6 30. fxe6 Rd6! wins the knight...

24. ... Re6 25. Rec1 Kg7 26. b4 b5

stopping the support of the knight ...

27. a3 Rg6

8/pb3pkp/2N3r1/1p2P3/1P5p/P1R5/3r1PPQR3K1

Note the focus on g2. White's pieces are totally tied up, and he is heading for zugzwang.

28. Kf1 Ra2 29. Kg1 h3 30. g3 a6

And now white must lose something ...

31. e6 Rxe6 32. g4

Knight moves still lose: 32. Nd8 h2+ 33. Kxh2 Rh6+-h1 'mate.

32. ... Rh6 33. f3

... trying to close the long diagonal. If 33. g5 h2+ 34. Kh1 Rxc6 35. Rxc6 Rxf2 to f6 wins with the pin.

33. ... Rd6 34. Ne7 Rdd2 35. Nf5+ (watch the mate threat!) Kf6 36. Nh4 Kg5 37. Nf5 Rg2+ 38. Kf1 h2 39. f4+ (and again!!) Kxf4 40. Resigns

"An ending worth very careful study", says Capablanca.

Conclusion

To finish off, a few points on Capablanca's style. First, rather like Tal, he was no opening theoretician. A number of standard Ruy Lopez or Queen's Gambit Declined positions, but otherwise he plays out of the book fairly quickly. For this reason, his games make good patterns for club players after sound openings, with a minimum of theory. For example, take his game against Tartakover, New York 1924 (yes, with the famous Rook ending!), for a simple and direct way of playing against the Dutch.

Second, there is a good reason why he is known as an endgame expert: a fine feel for piece coordination and clarity in achieving positional objectives are both brought out most starkly when material is reduced. Finally, thinking in small schemes, and making controlled progress towards a goal, but never afraid of the tactical resolution.

3. [Three Endgame Lessons](#)
 1. [Outside passed Pawn \[Tal,M - Yukhtman, Tbilisi sf-ch-SU, 1956\]](#)
 2. [Active King in the Ending \[Tal - Lisitsin \(Stean/Chernev\) \[B71\], 1956\]](#)
 3. [Activity of the pieces \[Tal,M - Djurasevic, Varna tt stud-WM, 1958\]](#)

So many words have been written about Tal that my own observations are perhaps rather superfluous. The brilliance of his play and the dramatic way his wins are often achieved are apparent to all.

For tonight's session, and with their instructional content in mind, I would just like to add that it was interesting to me how some of his most striking wins are introduced by apparently simple means - not striving for complications but building up with classically good moves. This may be partly a reflection of how familiar the GM play of the 1950s is to a club player of the 1990s - the Modern Benoni was by no means a staple when Tal played it - but nonetheless you feel that Capablanca would have chosen many of Tal's moves, even if he would have tried to reach a decision by different means.

Two Opening Lessons

Natural moves in the opening [Walther - Tal,M, Munchen ol, 1958]

1. e4 c5 2. Ne2 Nf6 3. d3 Nc6 4. Nd2

Most curious. It is not unusual to develop one or other Knight to the second rank, but both at once, and before developing either Bishop, is very odd. Any advantage Walther saw in getting Tal out of the books is outweighed by the unnatural formation and the need to get his pieces untangled. Tal does not strike immediately, but develops quietly, waiting for a suitable moment to arise.

4... d5 5. c3 dxe4 6. dxe4 g6 7. Qc2 Bg7 8. a4? O-O 9. Nc4? Na5 10. Nf4

White is trying to get sorted but is a long way from castling. Tal gives White's formation a sharp push, and after some wobbling, it collapses.

10... e5! 11. Nd5 Nxe4 12. Qxe4 Nb3 13. Ra3 Bf5 14. Qe3 Nxc1 15. Qxc5 Re8 16. Qe3

On "body count" Black is a bare Pawn up, but as Bill Hartston says, its the pieces on the board that count, and White's are horribly uncoordinated.

16... Bf8 17. Nb4 a5 18. Nxa5 Qxa5 19. Qxc1 Bxb4 20. cxb4 Qxb4+ 21. Rc3 Qe4+ 22. Be2 Rxa4 23. f3 Qb4 24. g4 e4!

Properly opening up lines against White's uncastled King.

25. f4 Ra2! 26. gxf5 Rxb2 27. O-O!

At last! But Black's nicely centralised and active forces are still in control.

27... Rxe2 28. Rc8 Qb6+ 29. Kh1 Rxc8 30. Qxc8+ Kg7 31. fxg6 hxg6 32. f5 Qf6 33. Qxb7 Qe5

0-1

Trying to refute an opponent's opening [Averbakh - Tal,M, Riga ch-SU, 1958]

1. d4 Nf6 2. c4 e6 3. Nc3 c5 4. d5 exd5 5. cxd5 d6 6. e4 g6 7. Be2 Bg7 8. Nf3 O-O 9. O-O Re8

So far, so typical of the Modern Benoni. At the time this formation was still considered rather suspect (and maybe it still is in some circles), so Averbakh adopts a very active plan to 'punish' this cheeky opening, targeting d6.

10. Qc2 Na6 11. Bf4 Nb4 12. Qb1

White's formation is just for the moment in need of a few moves for perfect comfort. Tal decides the time to strike is now!

12... Nxe4 13. Nxe4 Bf5 14. Nfd2 Nxd5

This sacrifice of a Knight for central Pawns is seen repeatedly in Tal's play, and his practical results have been excellent.

15. Bxd6?!

[15. Bg3 e.g. 15... Qe7 16. Bf3 Rad8]

15... Nf6 16. Bf3 Nxe4 17. Nxe4 Bxe4 18. Bxe4 Qxd6

The scrapping has led to a winning position for Black. Opposite coloured Bishops only draw if they are the only things on the board!

19. Qc2 Re7 20. Bf3 Rae8 21. Rad1 Bd4 22. a4 b6 23. b3 Re5 24. Rd2 h5
25. Re2 Rxe2 26. Bxe2 h4 27. Kh1 Qf4 28. g3 Qf6 29. Qd1 Rd8 30. Bg4
Bxf2 31. Qe2 Rd2 32. Qe8+ Kh7 33. gxh4 Qd4 34. Bh3 Qd3 35. Bg2 Rd1 0-1

Three Middle-Game Lessons

Natural moves in the middlegame [Saigin - Tal,M, Riga, 1954]

1. d4 Nf6 2. c4 c5 3. Nf3 e6 4. g3 cxd4 5. Nxd4 d5 6. Bg2 e5 7. Nf3 d4 8. O-O Nc6 9. e3!? Be7 10. exd4 exd4 11. Nbd2 Be6

White has allowed Black a passed Pawn, hoping that it will become weak.

12. Re1 O-O 13. b3 Qd7 14. Bb2 Rad8 15. a3 a5 16. Ne5 Nxe5 17. Rxe5 b6
18. Nf3 Bc5 19. Qd2 Ng4 20. Ree1 d3 21. Rf1

Black has a nice position, but what to do next?

21... Qd6

"Such quiet and apparently non-constructive moves are among the finest and most difficult to find in a game of chess." - Clarke.

22. Qc3

[22. b4 axb4 23. axb4 Bxb4]

[22. h3 Nxf2 23. Rxf2 Qxg3]

22... f6 23. Rad1 Rfe8 24. Rd2 Bf5 25. Ng5

Surely Black's position has reached its peak of potential. All we need now is a way of translating the good position into a decisive tactical blow - and of that art Tal has always been a master.

25... Ne3!! 26. fxe3

[26. Re1 Nxf2 27. Rxe8+ Rxe8 28. Kxf2 Qc6+ 29. f3

[29. Nf3 Be4]

29... Re1]

26... Bxe3+ 27. Kh1

[27. Rff2 Bxf2+ 28. Kxf2 Qc5+ 29. Kf1 Re1+ 30. Kxe1 Qg1+ 31. Bf1 Re8+]

[27. Rdf2 Bxf2+ 28. Rxf2

[28. Kxf2 Qc5+]

28... d2 29. Bd5+ Qxd5 30. cxd5 d1=Q+]

27... Bxd2 28. Qxd2 Re2 29. Qc3 Rxf2 0-1

[29... Rxf2 30. Kxf2 d2 31. Rd1 Bg4 32. Nf3 Qd3]

A real sacrifice [Tal - Simagin (23rd USSR ch'p) [B07], 1956]

1. e4 c6 2. d4 d6 3. Nc3 Nf6 4. f4 Qb6 5. Nf3 Bg4 6. Be2 Nbd7 7. e5 Nd5 8. O-O Nxc3 9. bxc3

9... e6

[9... Bxf3 10. Bxf3 dxe5 11. fxe5 Nxe5 12. Ba3]

10. Ng5 Bxe2 11. Qxe2 h6

12. Nxf7

Easy to see, hard to play! Simagin undoubtedly expected this move and was deliberately inviting it, judging that Tal was bluffing. Bravery from both players, then!

Spielmann calls this type of move a 'real' sacrifice as opposed to those sacrificial combinations where the hoped-for gain is clear and short-term. We have seen already a Tal sacrifice in the game against Averbakh where the omens may have been good but the precise justification was not obvious.

12... Kxf7 13. f5 dxe5 14. fxe6+ Kxe6 15. Rb1 Qxb1 16. Qc4+ Kd6 17. Ba3 + Kc7 18. Rxb1 Bxa3 19. Qb3 Be7 20. Qxb7+ Kd6

[Now 21. Rd1! +- would have decided]

21. dxe5+ Nxe5 22. Rd1+ Ke6 23. Qb3+ Kf5 24. Rf1+

24... Ke4

[24... Kg6 25. Qe6+ Bf6 26. Qf5+ Kf7 27. Qxe5]

25. Re1+ Kf5 26. g4+ Kf6 27. Rf1+ Kg6 28. Qe6+ Kh7 29. Qxe5 Rhe8 30. Rf7 Bf8 31. Qf5+ Kg8 32. Kf2 Bc5+ 33. Kg3 Re3+ 34. Kh4 Rae8 35. Rxc7+ Kxc7 36. Qxc5 R8e6 37. Qxa7+ Kg6 38. Qa8 Kf6 39. a4 Ke5 40. a5 Kd5 41. Qd8+ Ke4 42. a6 Kf3 43. a7 Re2 44. Qd3+ R6e3 45. Qxe3+ 1-0

Mixing it [Aronson - Tal,M, Moskva ch-SU, 1957]

1. d4 e6 2. c4 f5 3. Nf3 Nf6 4. Nc3 Be7 5. g3 O-O 6. Bg2 d6 7. O-O Qe8 8. Re1 Qg6 9. e4 fxe4 10. Nxe4 Nxe4 11. Rxe4 Nc6 12. Qe2 Bf6 13. Bd2 e5 14. dxe5 dxe5 15. Bc3 Bf5 16. Nh4 Bxh4 17. Rxh4 Rae8

Tal's position looks OK but White's position also has virtues. The game now enters a scrappy phase where Tal's formidable powers of imagination and calculation shine.

18. Qe3 h6 19. b4! Qf6 20. b5 Nd8 21. Bd5+ Kh8 22. f4? exf4! 23. Qd2

Just when White might have thought he was getting somewhere...

23... Qb6+! 24. Bd4 Qg6 25. Qxf4

[25. Rxf4 Ne6 26. Bxe6 Bxe6]

25... Kh7! 26. Qxc7

[26. Qd2]

**26... Bb1 27. Be5 Ne6 28. Qd6 Qf5 29. Bf4 Ng5 30. Qb4 Be4 31. Bxe4 Rxe4
32. Rf1 Re2 33. Qd6 Rxa2 34. Qd5 Qc2 35. c5 Rd8! 36. Bd6 Re8! 0-1 (time)**

[36... Re8 37. Qf5+ Qxf5 38. Rxf5 Re1+ 39. Rf1 Nf3+]

Three Endgame Lessons

Outside passed Pawn [Tal,M - Yukhtman, Tbilisi sf-ch-SU, 1956]

**1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 a6 6. Bg5 Nbd7 7. Bc4 h6
8. Bxf6 Nxf6 9. Qe2 e6 10. a3 Be7 11. Bb3 Bd7 12. O-O Qa5 13. Rad1 Qh5
14. Qe1**

14... g5? 15. e5! Ng4 16. Nf3 Bc6 17. Bd5! Nxe5 18. Nxe5 exd5 19. Nxd5!
Bxd5 20. Rxd5 dxe5 21. Rxe5 O-O 22. Rxe7

Peter Clarke remarks that drawing chances in major piece endings depend on (1) exposed opponent's King, (2) possession of an advanced or passed Pawn, and (3) weak enemy Pawns. Black has none of these!

22... Rac8 23. Qe4 b5 24. Re1 Rcd8 25. c4! bxc4 26. Qxc4 Qg6 27. Ra7 Rfe8 28. Rxe8+ Rxe8 29. g3 Re6 30. Kg2 Rf6 31. Ra8+ Kh7 32. Rd8!

Deliberately inviting...

32... Rxf2+ 33. Kxf2 Qf6+ 34. Ke3 Qxd8 35. Qd3+ Qxd3+ 36. Kxd3

Tal had of course had foreseen this simple win: the outside passed Pawn wins. **36... Kg6 37. Ke4 Kf6 38. g4! Ke6 39. b4 h5 40. gxh5 f5+ 41. Kd4 Kf6 42. a4 g4 43. b5 1-0**

Active King in the Ending [Tal - Lisitsin (Stean/Chernev) [B71], 1956]

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. f4 Nc6 7. Nxc6 bxc6 8. e5 Nd7 9. exd6 exd6 10. Be3 Be7 11. Qf3 d5 12. O-O-O Bf6 13. Bd4 O-O 14. h4 Rb8 15. Qf2 Rb4 16. Bxf6 Nxf6 17. a3 Qb6 18. Qxb6 Rxb6 19. Na4 Rb7 20. Bd3 Nh5 21. Rhf1 Re7

How to save the f-pawn?

22. f5 !

Can't be done, but Tal gives it up for a high price - scrambled pawns. **22... gxf5 23. Rfe1 Rfe8 24. Rxe7 Rxe7 25. Kd2**

In Exeter we say "KUFTE!" (King Up For The Endgame!)

25... Ng3 26. Kc3 f4 27. Kd4 Bf5

And there it is, nicely posted in the middle of a lot of weak Black pawns.

**28. Rd2 Re6 29. Nc5 Rh6 30. Ke5 ! 30... Bxd3 31. cxd3 Rxh4 32. Kd6 Rh6+
33. Kc7 Nf5 34. Kb7 Nd4 35. Rf2 a5 36. Rxf4 Ne6 37. Rg4+ Kf8**

The game is decided all in the position of the two Kings.

38. Kxc6 ! 38... Nxc5+ 39. Kxc5 Re6 40. Kxd5 Rb6 41. b4 axb4 42. axb4 Ke7

Too late

43. Kc5 Rf6 44. Rd4 Rf5+ 45. Kb6 Rf6+ 46. Kc7 Rf5 47. Re4+ Kf6 48. Kc6 Rf2 49. g4 h5 50. gxh5 Kg5 51. b5 f5 52. Rb4 f4 53. b6 f3 54. b7 1-0

[54. b7 Rc2+ 55. Kd5 f2 56. b8=Q f1=Q 57. Qg3+ Kf6 58. Qe5+ Kf7 59. Rb7+ Rc7 60. Rxc7+ Kf8 61. Qh8#]

1-0

Activity of the pieces [Tal,M - Djurasevic, Varna tt stud-WM, 1958]

1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 d6 6. Bg5 e6 7. Qd2 a6 8. O-O-O h6 9. Bf4 Bd7 10. Nxc6 Bxc6 11. f3 Qb6 12. Bc4 O-O-O 13. Be3 Qc7 14. Qf2 Nd7 15. f4 b5 16. Be2 Qb7 17. a3! Be7?

This apparently safe developing move is not to the point.

[17... Nf6]

18. Bf3 Nf6 19. e5 Ne4 20. Nxe4 Bxe4 21. Bxe4 Qxe4

22. Bb6! Rd7 23. Rhe1 Qb7 24. exd6 Rxd6 25. Rxd6 Bxd6 26. Qd4 Bc7

White can grab the pawn on g7, but... Purdy talks about 'contempt for Pawns' - what is more important is to keep active.

27. Bxc7!

"The most important feature of each phase of the game is the activity of the pieces." - Stean.

[27. Qxg7 Bxf4+ 28. Kb1 Re8 29. g3 when Black's active pieces have counterplay.]

27... Qxc7 28. Rd1 Rd8

Biting the bullet!

[28... Qc4 29. Qxc4+ bxc4 30. Rd4]

[28... f6 29. Qd6]

[28... Rg8 29. Rd3 Kb8 30. Rc3 Qd8 31. Qc5 Qd7 32. Qb6+ Qb7 33. Qd6+ Ka8 34. Rc6]

[28... Kb8 29. Rd3 Rc8 30. Rc3 Qb7 31. Rxc8+ Qxc8 32. Qxg7]

29. Qxd8+ Qxd8 30. Rxd8+ Kxd8 31. Kd2 Kd7 32. Kd3 Kd6

The exchanges have led to a position in which Tal again has a Queen's-side majority, but this is by no means a simple win because of the "outside" candidate. The reason this position is won is because the White Queen's-side majority is 3:2 as opposed to 4:3. This simpler formation can yield a passed Pawn more quickly.

Exeter Chess Club:

Lessons from Bobby Fischer

Unfortunately Bobby can't be with us this evening, so I have agreed to stand in.

Fischer's legacy is rather mixed but there are two heirlooms of enormous value: the excitement he imparted to the game of chess in the West, and the quality of his games and annotations.

I can remember sitting with a chess set, on the sea-front with my Uncle Don at Lowestoft, going over the first game of the Fischer-Spassky match in 1972; passers-by knew all about the game! How different that must have been to the matches of the nineteen-fifties. The fact that he went on in the endgame to make what looked to me like a beginner's blunder only added to the attraction of the man.

His book, **My 60 Memorable Games**, was one of the first adult books on chess I bought, and while it was far too hard for me at the time (and still is, I fear) there is much to be mined in its pages. Each time I come back to it I learn something new, and I have selected some positions below which have taught me something in each phase of the game.

Lessons in the Opening

Fischer, Robert J - Celle, O (Davis sim) [C51] opening attack, 1964

In an old-style opening Fischer gives a terrific display of attacking power against an uncastled King - just the sort of thing you want to see at a simultaneous display.

1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. b4

Evans' Gambit, an old favourite.

4... Bxb4 5. c3 Be7 6. d4 d6 7. dxe5 Nxe5 8. Nxe5 dxe5 9. Qh5 g6 10. Qxe5 Nf6 11. Ba3 Rf8 12. O-O Ng4 13. Qg3 Bxa3 14. Nxa3 Qe7!

White has a lead in development, but how can he take advantage of it?

15. Bb5+! c6 (x d6) 16. Nc4 Qe6

17. Rad1!

[17. Qc7 Qd7 18. Nd6+ Ke7 19. Nxc8+ Raxc8 20. Qxd7+ Kxd7]

17... cxb5 18. Qc7 Bd7 19. Nd6+ Ke7 20. Nf5+!

"Material is not what counts now, but open lines"

20... gxf5 21. exf5 Rac8 22. Rxd7+ Qxd7 23. f6+ Nxf6 24. Re1+ Ne4 25. Rxe4+ Kf6 26. Qxd7 Rfd8 27. Qg4 1-0

Petrosian, Tigran - Fischer, Robert (Buenos Aires m [A06] opening, 1971

Many years ago Reti described "Americanism" in the chess of Pillsbury and others, a sort of full-blooded practical-minded style - and in Fischer's play it is easy to see a parallel.

1. Nf3 c5 2. b3 d5 3. Bb2 f6

Now that's what I call a move. Having been reared on Chernev's adulation of Capablanca, I got the idea that you should play in the opening only the most natural and harmonious of moves. Now here is Fischer, in the Candidate's Final to qualify to play Spassky, and he is declaring his intention to refute his opponent's opening using three Pawn moves as Black.

This game had a terrible effect on me, I often still can't resist trying to refute my

opponent's odd moves immediately. Although Petrosian fumbles at the end you can see how Fischer's grip on the game never relaxes.

4. c4 d4! 5. d3 e5 6. e3 Ne7 7. Be2 Nec6! 8. Nbd2 Be7 9. O-O O-O 10. e4 a6 11. Ne1 b5 12. Bg4 Bxg4 13. Qxg4 Qc8 14. Qe2 Nd7 15. Nc2 Rb8 16. Rfc1 Qe8 17. Ba3 Bd6 18. Ne1 g6 19. cxb5 axb5 20. Bb2 Nb6 21. Nef3 Ra8 22. a3 Na5 23. Qd1 Qf7 24. a4 bxa4 25. bxa4 c4 26. dxc4 Nbxc4 27. Nxc4 Nxc4 28. Qe2 Nxb2 29. Qxb2 Rfb8 30. Qa2 Bb4 31. Qxf7+ Kxf7 32. Rc7+ Ke6 33. g4 Bc3 34. Ra2 Rc8 35. Rxc8 Rxc8 36. a5 Ra8 37. a6 Ra7 38. Kf1 g5 39. Ke2 Kd6 40. Kd3 Kc5 41. Ng1 Kb5 42. Ne2 Ba5 43. Rb2+ Kxa6 44. Rb1 Rc7 45. Rb2 Be1 46. f3 Ka5 47. Rc2 Rb7 48. Ra2+ Kb5 49. Rb2+ Bb4 50. Ra2 Rc7 51. Middlegame

Fischer,Robert - Robatsch,Karl (Varna ol final R) [B01] middlegame attack 1, 1962

In one of his games, Fischer describes having the attack on the fianchettoed Black King's position down to a science: open the h-file, "sac, sac, ...mate!"

Once you see it done, you can imitate it with effect. It is less usual for these straightforward attacks to be successful at master level, but among club players my money is on the player with a plan they understand.

1. e4 d5 2. exd5 Qxd5 3. Nc3 Qd8!? 4. d4 g6!?

Two !?s sometimes add up to a ?, sometimes a !

Robatsch's ideas have a hard reception here.

5. Bf4! Bg7 6. Qd2! Nf6 7. O-O-O c6

8. Bh6 O-O? 9. h4 Qa5 10. h5! gxh5

"Horrible, but Black must keep the h-file closed"

11. Bd3 Nbd7 12. Nge2 Rd8 13. g4! Nf8 14. gxh5 Ne6 15. Rdg1 Kh8 16. Bxg7+ Nxg7 17. Qh6 Rg8 18. Rg5 Qd8 19. Rhg1 Nf5?

[19... Qf8 20. d5! Bd7 21. d6 Nf5 22. Qxf8 Rgxf8

[22... Raxf8 23. Bxf5 Rxg5 24. Rxg5 h6 25. dxe7 Rb8 26. Rg3 Bxf5 27. Rf3]

23. Bxf5 h6 24. dxe7 Rfb8 25. Rg7 Bxf5 26. Rxf7]

20. Bxf5 1-0

Fischer,R - Stein,L (Sousse izt) [C92] middlegame attack, 1967

A far more complex attacking game. Lasker once said that no-one can hope to master chess who does not take on the Ruy Lopez in all its manifestations; Fischer's games feature many striking successes in a surprising variety of lines, from the Exchange to the Steinitz, and as below, what we now call the Zaitsev, played by the then Soviet Champion.

1. e4 e5 2. Nf3 Nc6 3. Bb5 a6 4. Ba4 Nf6 5. O-O Be7 6. Re1 b5 7. Bb3 d6 8. c3 O-O 9. h3

9... Bb7

[9... Na5 10. Bc2 c5 Tchigorin]

[9... Nb8 10. d4 Breyer]

10. d4 Na5

Heading for d7, the long way round

[10... Nb8 11. dxe5 dxe5 12. Qxd8 and now 12... Bxd8 is best, but awkward]

11. Bc2 Nc4 12. b3 Nb6 13. Nbd2 Nbd7

Made it! But it has taken a lot of time.

14. b4! exd4

going for counterplay, rather than hanging on to e5

15. cxd4 a5 16. bxa5 c5 17. e5! dxe5 18. dxe5 Nd5 19. Ne4 Nb4! 20. Bb1 Rxa5 21. Qe2!

21... Nb6?

A piece possibly better reserved for defending the King.

[21... Re8]

22. Nfg5!

"The threats are beginning to jell."

Endgame

Gligoric,Svetozar - Fischer,Robert (Yugoslavia ct) [B99] endgame, 1959

This was an interesting game for me. I'd got the hang of Pawn weakness and while I knew that having a weakness didn't mean you should resign, I think it's fair to say I was much more impressed with Pawns than pieces!

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 a6 6. Bg5 e6 7. f4 Be7 8. Qf3 Qc7 9. O-O-O Nbd7 10. g4 b5 11. Bxf6 gxf6 12. f5 Ne5 13. Qh3 O-O

"Black's "ugly" defence is based on sound positional considerations: once he can consolidate, there is strong potential in the two Bishops coupled with the beautifully posted Knight and compact Pawn mass. These assets, in the long run, hopefully should outweigh the temporary weakness of his King and the immobile target on e6. "

14. Nce2 Kh8 15. Nf4 Rg8 16. Rg1 d5 17. fxe6 dxe4 18. Nd5 Qc5 19. Nxe7 Qxe7 20. Nf5 Qxe6 21. Qh6 Bd7 22. Rd6 Nxg4 23. Rxg4 Qxf5 24. Rxg8+?

[Dr. Dave](#)

Exeter Chess Club: The development of chess style

Games are given in the [Style section of the Canon](#), and relevant examples may be found through the [Glossary](#). Steve Lopez has written [pen-portraits](#) of the players at the 1924 NY tournament, and there is a whole site devoted to the [World Champions](#).

[I wrote this to accompany the lollipops in 1994, but it holds up as well as it ever did ;-)]

"We perceive after a careful consideration of the evolution of the chess mind that such evolution has gone on, in general, in a way quite similar to that in which it goes on with the individual chess player, only with the latter more rapidly."

-- Richard RETI

"The delight in gambits is a sign of chess youth... In very much the same way as the young man, on reaching his manhood years, lays aside the Indian stories and stories of adventure, and turns to the psychological novel, we with maturing experience leave off gambit playing and become interested in the less vivacious but withal more forceful manoeuvres of the position player."

-- Emanuel LASKER

I asked elsewhere, what's your style - the *crunch* or the *crouch*? or a bit of both? To help you in this decision, you might be interested to play over some of the exemplary games of the previous World Champions. Which do you admire most, which seem to you to be most logical, which diagrammed positions attract you? You may find that once you understand your strengths and weaknesses better, you can make efforts to steer the game into channels that suit you and not your opponent. Moreover, as Reti and Lasker suggest, that we often start off playing like Morphy, and then start to get interested in slower play; I would not, however, be in too much of a hurry for this. Advanced players might like to play these games over one at a time in between reading the next section on some of the theories behind these games.

- [Further reading](#)
-

The style of the World Champions

Before Steinitz

Before Steinitz, the first official World Champion, the great names of chess are Andre Danican-**Philidor**, Howard **Staunton**, Adolf **Anderssen**, and Paul **Morphy**. We've seen Anderssen's two greatest games [elsewhere](#) - many would say these are two of the greatest games ever, loved by chess romantics everywhere. Staunton played splendid, direct chess, but not in the romantic style of the period - he was much more controlled and effective, as can be seen in his game against Elijah Williams, no mean positional player himself.

[Style section of the Canon](#)

Paul Morphy

Morphy was a razor-sharp attacker, one of the fastest and most accurate talents of the game. I have chosen his famous brilliancy against the great defender Paulsen, which spectators mocked until the game continuation made it obvious to them how much further Morphy had seen. I have given also his effective defensive game against the powerful [Andersson](#); Morphy effectively defined the perfect style for playing open games.

[Style section of the Canon](#)

Wilhelm Steinitz, World Champion 1886-1894

The first great chess thinker, whose often awkward-looking and defensive mature chess style was in total contrast to his dashing, gambiting contemporaries. He could attack when it was needed - indeed, he used to be known as the "*Austrian Morphy*" - but he suppressed his attacking talent in favour of a thoughtful, principled, positional style. His theories, particularly those of the closed game (see part ii below), were adopted and refined by his disciple Siegbert **Tarrasch**, who can be said to have taught the world how to play chess properly. The game against Andersson is characteristic - apparently awkward and cramped opening manoeuvres which gradually uncoil and engulf his opponent. Not until

Nimzovitch did we see more of this.

[Style section of the Canon](#)

Emanuel Lasker 1894-1921

The pragmatic philosopher who was also the wildest combatant in chess history, who was still winning games against the best in the world in his sixties. Although he had a great grasp and appreciation of Steinitz' theories, Lasker always played the man as well as the board. As an example, see his game against the scientific Tarrasch. Wild rumours circulated about his luck in poor positions, but his mastery was not just of chess but of psychology. It was like inviting his opponents to waltz on a cliff-top, confident that his footwork and nerve were stronger. It was a style impossible to imitate - you need always to be the strongest player - but elements of it may prove useful to anyone.

[Style section of the Canon](#)

Jose Capablanca 1921-1927

The game's greatest natural talent, whose elegant and seemingly effortless style awed his contemporaries and has charmed generations since. He made it all look so easy - beating the great Marshall like a child (see elsewhere on **Majorities**), and nudging Bernstein off the board with one of the neatest finishes ever. More than other masters, he was content with small advantages, and content to give them up for other pluses on the board. This capacity for winning with small advantages led Euwe to comment about one game:

"Whether this advantage is theoretically sufficient to win or not does not worry Capablanca. He simply wins the ending. That is why he is Capablanca!"

[Style section of the Canon](#)

Alexander Alekhine 1927-1935, 1937-1946

Alekhine's driving and sometimes unattractive personality powered his chess to bold and brilliant new levels in all phases of the game. His game against Marshall is almost the opposite of Capablanca's - no

less accurate, but a forceful and aggressive drive for mate which looks risky. I've also added a sparkling finish, played blindfold.

Sir George Thomas once remarked: "*Against Alekhine you never knew what to expect. Against Capablanca, you knew what to expect, but you couldn't prevent it!*"

Alekhine had a knack of finding "accidental" opportunities in apparently harmless variations. The "sting in the tail" is the hallmark of an Alekhine combination, but he beat Capablanca on technique, improbable as it seemed at the time.

[Style section of the Canon](#)

Max Euwe 1935-1937

The last real chess amateur and one of the game's great sportsmen, he devoted the rest of his chess life to writing, teaching and organisation. He played many positions well, but had a clear attacking talent. His game against Alekhine which helped secure the title is one of his best and best-known games.

[Style section of the Canon](#)

Mikhail Botvinnik 1948-57,1958-60,1961-63

The first product of the Soviet school, a disciplined and insightful player who remained at the top for decades. No non-Soviet was to win again until 1972. Botvinnik could play clear positions well but was unafraid of complications - perhaps the secret being that they too were clear to Botvinnik. His game against Chekhover is an impressive win, overpowering his opponent by virtue of his grasp of the position; the Matulovic game is much more recent, and shows Botvinnik taking on an apparently unpromising but difficult line from which he emerges better off.

[Style section of the Canon](#)

Vassily Smyslov, 1957-1958

Smyslov's attractively clear style took him to the top but his success served only to motivate Botvinnik

for the re-match. His game against Liberzon is a nice blend of dominating positional play and tactically accurate cashing-in. In the 1980s he had a second wind, playing his bright, crisp, modern chess all the way to the Candidate's Matches where he was stopped by Kasparov.

[Style section of the Canon](#)

Mikhail Tal, 1960-1961

Tal, the whirlwind from Riga, won the hearts of the fans and appalled the critics, all the way to a title match with Botvinnik where Botvinnik's clear head could never seem to keep the board under control for long enough. The game with Barcza is a nice attacking display, and the sacrifice against Smyslov shows that not even his closest rivals could stifle his driving urge to attack. Tal's collection of bold and risky attacking games continued to impress and inspire, but his poor health kept him out of the top rank after the re-match, in which a grim Botvinnik gradually wrenched the crown from Tal's hands.

[Style section of the Canon](#)

Tigran Petrosian, 1963-1968

The slowest, canniest player of recent years, whose boa-constrictor style concealed great strategical insight and tactical skill. His play harks back to the hypermoderns of the 'twenties who challenged what they saw as the dogma of Tarrasch and his school. The games show two sides of Petrosian: a determined if dour endgame from the Championship match, and a nice finish from a much brighter game in one of the matches against Spassky.

[Style section of the Canon](#)

Boris Spassky, 1968-1972

An attacking player with a well-rounded, classical style, he beat Petrosian at the second attempt. I have included two well-known quick wins, where he seemed to storm past world-class opposition in complex attacking games. His slower games also have a breeziness about them.

[Style section of the Canon](#)

Bobby Fischer, 1972-1975

Fischer's turbulent career finally led to the most famous chess match in history. His chess was always razor-sharp, rational and brilliant. One of the best ever. His win against Byrne is well-known but also characteristic - all vigour and straight lines, with active pieces compensating for the isolated d-Pawn. When Byrne resigned, watching grandmasters were still arguing that White was winning - can you find the win for Black? His sporting achievements (11-0 in the US championship, 6-0 in two(!) Candidates Matches) will probably never be equalled.

[Style section of the Canon](#)

Anatoly Karpov, 1975-1986,1993?-

Fischer never agreed to a match, but Karpov's long reign at the top was always totally convincing. A quiet man whose calm and deft chess was an overwhelming force for ten years. The games: GM John Nunn is a very dangerous and active player, but Karpov doesn't let him get started. Kasparov too is dangerous when he gets going, but the game given (from the 1985 Championship match) shows everything under control, and the win was always in hand. Currently Karpov holds the FIDE title. Karpov's style is often compared to Capa's (who he admires); the style of his great rival Viktor Korchnoi was often likened to that of Lasker.

[Style section of the Canon](#)

Garry Kasparov, 1986-present (1994)

To complete the parallel, Kasparov's play reminds us more of Alekhine. A dynamic attacker with a great appetite for work and a forceful opening repertoire, Kasparov has yet to be seriously challenged by anyone but Karpov. Nigel Short may change all that! [HTMLed 1996, written 1994!] The game shows the man at his best - a great 6-piece attack against the king, in the most tense arena of chess, in an opening that Karpov has played and won with for years. The split with FIDE has led to the creation of two 'world champions'.

So, what do you think? What games attracted you? Which ones looked or felt like your games, which do you admire most? Most players have a favourite or a hero in chess, and fondly imagine their play to be '*a bit like Morphy*'; the thing to do is to assess what is real and what is you kidding yourself, but then to see how to improve - how to choose your openings, what your weaknesses are, what sort of positions to steer for and avoid. Players of every style have won the championship. Make your style work for you.

A potted history of chess theory.

Behind this human story of successive champions and rivals is a parallel story of the rise and fall of chess ideas. The parallel is not exact, for although Steinitz' peerless play as Champion was the embodiment of his theories, his title was taken by Lasker, who founded no school; and although the Hypermoderns were the ones to watch in the 'twenties, none held the title.

*"Today we see in chess the fight of aspiring Americanism against the old European intellectual life: a struggle between the technique of Capablanca, a **virtuoso** in whose play one can find nothing tangible to object to, and between great European masters, all of them artists, who have the qualities as well as the faults of artists in the treatment of the subject they devote themselves to: they experimentalise and in striving after what is deep down. they overlook what is near to hand.*

...If Americanism is victorious in chess, it will also be so in life. For the idea of chess and the development of the chess mind we have a picture of the intellectual struggle of mankind." - Reti, MOIC.

A start on theory

Many chess ideas which were taken up later can first be found in the play and writing of PHILIDOR. In his 1749 book **L'Analyse des Echecs**, he discussed *holes*, *blockade*, *prophylaxis*, and the *positional sacrifice*, he described pawn weaknesses such as the *isolated*, *backward*, and *doubled pawns*, and discussed what we now term *pawn islands*. For 90 years he was praised but had no lasting influence on the play of the time, although he was re-discovered from time to time. He emphasised above all else play with the pawns, and said (in French) "*Pawns are the very soul of*

the game."

The Italian game

The play most characteristic of the late 1700s and later was dominated instead by the style of the Italian MODENESE SCHOOL - Italian players and writers like DEL RIO, LOLLI and PONZIANI, after whom the *Italian Game* (*Gioco Piano* and related openings) came into prominence. Fast development followed by *attack* was the name of the game, and beyond this it is difficult to see much theory at all; players were concerned with direct attack - to mate, or lose gloriously in the attempt. From this period we inherit all the older tactical variations of the *King's Gambit* and *Gioco Piano*, where sacrifices were common and their acceptance almost routine. This period should not be thought of as artless - it produced legions of fine analysts and several games of genius, and much was learned about the art of attack.

The play of the American Paul MORPHY brought some additional science to all this, not that everyone recognised it at the time. Through his games he showed that a successful attack must be based on a lead in *development*. Similarly, he showed that a player who is behind in development must not open lines to 'free their position', since these lines will provide avenues along which the better-developed side will attack - instead, they should keep things closed until they have caught up a bit.

Sadly, when players learned to decline or return sacrificed material, a lot of the steam went out of the Italian approach. e.g. an old line of the *Danish Gambit* goes **1 e4, e5; 2 d4, exd4; 3 c3, exc3; 4 Bc4, cxb2; 5 Bxb2**. If Black clings to the material White will have a good time, but MIESES showed **5...d5; 6 Bxd5, Nf6** secures open lines and probably the two Bishops. The best line for White here is probably **7 Bxf7+ Kxf7; 8 Qxd8, Bb4+ 9 Qd2, Bxd2+** when Black has no extra material but can play to win the ending with the *Queen's-side majority*. Technique was replacing romance in chess.

The English school

There was briefly an English school centred around Howard STAUNTON, who directly contradicted the Italian style by playing first for control of the *small centre*, or some other advantage, before any thought of direct attack on the king. Staunton (and his followers like Wyvill) embraced the *Fianchetto*, the *flank openings* (like the *English Opening*), but although he wrote a fine textbook he never defined or discussed his own system, and the style withered when Staunton retired. The attacking style persisted until the Modern era began with Steinitz.

The modern era

Wilhelm STEINITZ of Austria was a great player but also a great thinker and writer, so it was possible for his ideas to become widely known and adopted. He was a theorist primarily of *closed positions* (see the Steinitz Variation of the *Ruy Lopez* for a good example). To him we owe a deal of our understanding about two bishops, about play behind a row of pawns, about weak pawns (see his lines for Black in the *Queen's Gambit Accepted*, playing against an *isolated Queen's pawn*: **1 d4, d5; 2 c4, dxc4; 3 Nf3, Nf6; 4 e3, c5; 5 Bxc4, cxd4; 6 exd4** followed by ...Nc6-b4-d5). He also showed how to play defensively once you have accepted a gambit pawn (that you intend to keep). With Steinitz we associate positional play, accumulating advantages and playing against weaknesses - he did not discover weak points, but he showed that they were more important than had been assumed. By the 1890s most players had been influenced to a greater or lesser extent by Steinitz, and LASKER who took his crown paid tribute to the importance of Steinitz' theories.

Lasker and TCHIGORIN both played superb defensive chess - Lasker on a knife-edge, waiting for his opponent to stumble, and Tchigorin more solidly - it was Tchigorin who founded the great highway of the Ruy Lopez known as the *Closed Morphy* or *Tchigorin Defence* (1 e4, e5; 2 Nf3, Nc6; 3 Bb5, a6; 4 Ba4, Nf6; 5 O-O, **Be7** {just this far is the *Closed Morphy*}; 6 Re1, b5; 7 Bb3, d6; 8 c3, Na5; 9 Bc2, c5 {the Tchigorin Defence; Black can delay the ...Na5/...c5 manoeuvre until after castling}). Tchigorin was a demon attacker, rather in the old Romantic mould. When Steinitz defeated Tchigorin in a match he said ironically "youth has triumphed" - meaning, the Modern Steinitz, much the older of the two, had defeated the Romantic.

Steinitz' awkward-looking chess attracted a lot of criticism, but even if there was no arguing with results there was no arguing with Steinitz, who was as pugnacious an opponent off the board as on it. In 1886 Steinitz played Zukertort for the World Championship, and critics of the day compared the clumsy-looking games unfavourably with the supposedly brilliant, error-free and superior chess of Morphy. Steinitz replied, not just by pointing out in an article Morphy's tactical blunders, but also indicating his **strategical** errors. Steinitz agreed that Morphy was a genius, but added that "*Morphy in 1886, had he been alive, would have beaten the Morphy of 1859*"...

"When it is so freely asserted that Morphy's style was all genius and inspiration ... Morphy possessed that most profound book knowledge of any master of his time, and never introduced a single novelty, whereas since his day the books have had to study the players..."

"We may all learn from Morphy and Anderssen how to conduct a King's side attack, and perhaps I myself may not have learnt enough. But if you want to learn how to avoid such an attack, how to keep the balance of the position on the whole board and how to expose the King

and invite a complicated attack that cannot be sustained in the long run, then you must go to the modern school for information...

"The progress of age can no more be disputed than Morphy's extraordinary genius" - STEINITZ

The technique of chess continued to evolve. His theories were adopted, adapted and publicised by the German player Siegbert TARRASCH, who, while often regarded as dogmatic, played in a fresh, direct style. He would always defend an isolated central pawn if it meant he could develop his pieces freely, and his defence to the Queen's Gambit does just this: **1 d4, d5; 2 c4, e6; 3 Nc3, c5; 4 cxd5, exd4; 5 Nf3, Nf6** and later Pxc5 (or ...cxd4,Nxd4) will give Black the IQP. It was Tarrasch who gave the line **1 d4, d5; 2 c4, e6; 3 Nc3, Nf6** its derisory name of *Orthodox Defence*. In the Ruy, he advocated the *Open Morphy Defence* with 5...Nxe4, again leading to an open position where Black has compensation for messy pawns in activity. This balance between pawn structure and piece activity is perhaps the key question in any chess position, and after Tarrasch we see a continuous exploration of these issues across a variety of positions.

Reti, in **Modern Ideas in Chess**, points to CAPABLANCA as being the first player to subjugate development to playing with a plan. For example, after **1.e4 e6 2.d4 d5 3.Nc3 dxe4 4.Nxe4 Nd7 5.Nf3 Ngf6 6.Nxf6+ Nxf6 7.Ne5** [Capablanca, Jose - Blanco Estera,Rafael [C10]; Havana (02), 1913] instead of another developing move Capa played **7. Ne5**, moving a piece twice but preventing the natural ...b6 and ...Bd7 which would get the Bc8 out of the box.

[The game finished 7...Bd6 8.Qf3 c6 9.c3 0-0 10.Bg5 Be7 11.Bd3 Ne8 12.Qh3 f5 13.Bxe7 Qxe7 14.0-0 Rf6 15.Rfe1 Nd6 16.Re2 Bd7 17.Rae1 Re8 18.c4 Nf7 19.d5 Nxe5 20.Rxe5 g6 21.Qh4 Kg7 22.Qd4 c5 23.Qc3 b6 24.dxe6 Bc8 25.Be2 Bxe6 26.Bf3 Kf7 27.Bd5 Qd6 28.Qe3 Re7 29.Qh6 Kg8 30.h4 a6 31.h5 f4 32.hxg6 hxg6 33.Rxe6 1-0]

Hypermodernismus

NIMZOVITCH founded the HYPERMODERN school, and wrote a very engaging text **My System** in which he expounded his views on the centre, *centralisation*, *prophylaxis*, and various pawn formations. The other Hypermoderns, of whom we may take RETI of Czechoslovakia as an example, proposed no really new theory of the middlegame but revolutionised the treatment of the opening. They said (and showed) that there was no need to try to grab the centre immediately - and in fact, you could safely let your opponent rush into the centre with pawns in the opening, using them as a target for attack. In fact, Reti said, to occupy the centre directly as White merely allowed Black either to blockade or blow up what White had established, whereas keeping things *unfixed* was possibly the most awkward thing White could do.

The hypermoderns would therefore develop the Bishops in *fianchetto*, and use side-swipes like c2-c4 to undermine the centre. For White, the *Reti* (1. Nf3 2. c4) and *Barcza* (1. Nf3 2. g3) openings, and for the Black *Alekhine's Defence* (1. e4 Nf6) and the *Grunfeld Defence*, are good examples of the hypermodern legacy. See the document on [hypermodern openings](#).

Post-war

This century has not produced any great new theories, rather an approach to chess which takes no theory for granted. It was actually Reti who claimed that

"It is the aim of the modern school not to treat every position according to one general law, but according to the principle inherent in the position"

It seems that this claim has become more true as time has gone on. Novel play in the opening has become increasingly sophisticated, and players will defend the most dreadful-looking pawn structures if they get some sort of activity for it. Chess has become more concrete, more dynamic, and more difficult. Let's have a look at a couple of examples:

[These are taken from the [planning handout](#)]

This position, arising after **1 e4, c6; 2 d4, d5; 3 Nc3, dxe4; 4 Nxe4, Nf6; 5 Nxf6, exf6** (now we more often play 5...gxf6); **6 Bc4, Bd6; 7 Qe2, Be7; 8 Nf3, O-O; 9 O-O**, was well-known to players and theorists of the 19th century. Lasker, for example, comments:

"White's plan consists in realising his pawn superiority on the Queen's side while remaining passive on the King's side. Black, on the other hand will attempt to force his opponent to advance one of his pawns on the King's wing, in order to start play against White's King's side with his pawns."

Lasker has in mind moves for White such as c4 and d5 to create a passed pawn, and for Black ...Bg4, ...Bd6, ...f5 and ...Qh5. In fact play went **9 ...Bd6; 10 Re1, Bg4; 11 Qe4! Bh5; 12 Nh4, Nd7; 13 Qf5**. Steinitz and Lasker would undoubtedly have criticised White's crude and 'unjustified' attack. What's going on? Ragozin, a strong and experienced Soviet master, must have been aware of Lasker's views, and of the theories of Steinitz, so why is he playing on the 'wrong' side? He has made in fact a much more dynamic and concrete assessment of the position which notes, not just the Q-side majority, but also: the awkwardly placed bishops, missing Nf6, the compromised f-pawns and White's development and control of space. Given time, Black could no doubt disentangle his pieces. Ragozin gives him no time at all.

13...Nb6; 14 Qxh5, Nxc4; 15 Bh6!! Qd7 (can you find the win after 15...gxh6?); 16 b3, Nb6; 17 Nf5, Kh8; 18 Re4, Bxh2+ 19 Kh1 and Black resigned.

This is the real contribution of the 20th century to chess theory, in which SOVIET players have been dominant. Players look beyond the geometry of pawn formations and have moved to a more flexible and more dynamic style of play. There are no new general principles, because modern players do not believe in general principles. Players like BRONSTEIN and BOLESZLAVSKY turned established ideas on their heads in the 1950s, championing Black's dynamic chances in the King's Indian and Sicilian.

The most dramatic recent example of this is Evgeny Sveshnikov's cherished variation of the Sicilian, sometimes known as the Pelikan: **1 e4, c5; 2 Nf3, Nc6; 3 d4, cxd4; 4 Nxe4, Nf6; 5 Nc3, e5; 6 Nb5, d6; 7 Bg5, a6; 8 Bxf6, gxf6; 9 Na3, f5!?** Black will use the extra central pawns and piece activity to stop White getting a proper hold on the weaknesses on ...d6 and ...f6/...h6.

1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 e5 6. Ndb5 d6 DIAGRAM

Black has an obvious hole on d5; White sets out, in textbook fashion, to occupy it.

7. Bg5 a6 8. Na3 b5 9. Bxf6 gxf6 10. Nd5

Mission accomplished!

But at what cost? The outpost stands unsupported by any other White pieces, and the Na3 is at present a bit lost. Black's pawns are very muddled but control a lot of key squares (c4,d4 and f4). The muddling also gives Black the open g-file.

Let's see how things unfold

10... f5 11. Bd3 Be6 12. Qh5 Bg7 13. O-O f4 14. c3 O-O 15. Nc2 f5
DIAGRAM

The muddled pawns dominate the centre and the King's side, while White's pieces are still looking for a decent plan. Black now attacks down the open g-file. **16. Ncb4 Nxb4 17. Nxb4 d5 18. exd5 Bd7 19. Bc2 Be8 20. Qe2 Kh8 21. Rad1 Qh4 22. f3 Rf6 23. Qe1 Qg5 24. Qxe5 Bd7 25. Qe7 Rg8 26. Qxd7 Rf7** DIAGRAM 0-1

Games like this may make the classically-trained chessplayer despair, but they have added a great richness and excitement to our understanding of the game.

There is another good example of modern planning from Bronstein's superb book on the 1953 Candidates tournament **The Chess Struggle in Practice**.

In this line of the King's Indian, an opening he and Boleslavsky more or less re-invented, White has a significant space advantage, and Black has a 'backward' d-pawn on an open file, although he has covered the outpost on d5. Black has some good pieces: the Bg7 and Nc5 are well-placed, and the Bc8 and Re8 also have some potential.

Bronstein comments:

"I think now is the time to acquaint the reader with the mysteries of the Black d-pawn in the King's Indian. Even though it is situated on an open file and therefore always exposed to attack, it is not a very easy nut to crack. The simplest method for White is apparently to retreat the Knight from d4, but d4 is precisely where the B needs to be: its jobs are to supervise b5, c6, e6, and f5 and to buffer the influence of the Bg7. Only after White has taken steps against possible Black attacks (...a3, ...Be6, ...f5) can his Knight leave the centre, but during that time Black can regroup to cause worries elsewhere.

"So the weakness of the d-pawn proves to be imaginary. Contemporary methods of play in the opening recognise the illusory weakness of such pawns. But it was exactly this 'eternal' weakness of the Pd6 that led to the King's Indian being regarded as dubious.

Further reading

Bronstein's book contains many good examples of this 'modern' type of assessment. Pachman's and particularly Kotov's books are also very good in this respect. After that the best source of training in modern thinking are books of annotated games, among which my own favourites include Botvinnik. Mikhail Tal was not only a popular player, his annotations are also very highly regarded.

These all take periodic assessments of what is going on at key points in the games, and often give a few helpful variations with some commentary. For deeper study, some of the most determined attempts to find out what is going on throughout the whole of a game, together with concrete analysis, are to be found in Nunn and Griffiths' **Secrets of Grandmaster Play**, which can fairly be called a modern classic.

There is a sprinkling of light accounts of chess history in Kosteyev's **40 lessons...** books and Phillips' **The Chess Teacher**, and books which cover its *personalities* include those by Hartston (**Kings of Chess**) and Schoenberg (**Grandmasters of Chess**). The game as a whole has had its history written many times.

The *history of chess ideas* is covered also in several texts, including the excellent and comprehensive **Oxford Companion**. Ones that you may find relevant to this page include Euwe's **The development of chess style**, whose title I swiped, and Imre Konig's superb little book **Chess from Morphy to Botwinnik**.

Exeter Chess Club: Excuses for losing

This is what started it all:

Excuses for losing

Dan Scoones wrote:

Here is my off-the-cuff top ten list:

1. Dog ate scoresheet;
2. Dead batteries in hidden transmitter;
3. Went outside for fresh air, forgot about tournament;
4. Disturbed by own reflection in opponent's sunglasses;
5. Still despondent over 1964 death of Fred Reinfeld;
6. Inexplicably confused ECO A29 line 13 note 87c with ECO A13 line note 87c; lost queen;
7. Unlucky pairing with historical nemesis G. Kasparov;
8. During play, pondered both sides of ICC controversy; lost on time;
9. Studied book **How to Beat Bobby Fischer**; was unprepared for other opponents;
10. After making move, accidentally punched opponent instead of clock.

Having started, they came thick and fast:

"What went wrong with your plan?"

"He didn't follow it!"

-- Post mortem by participants after a Korchnoi simul.

"The player who plays best in a tournament never wins first. He finishes second behind the guy with the most luck. "

-- Savielly TARTAKOWER

"I have never had the satisfaction of beating a completely healthy opponent."

-- Amos BURN

"Analysis: irrefutable proof that you could have won a game that you lost."

-- Boden

"I can see the combinations as well as Alekhine, but I cannot get into the same positions"

-- Rudolf SPIELMANN

Subject: Re: Best Excuses for Losing a Game

From: rook@islandnet.com (Dan Scoones)

A few spares:

1. Adopted Alekhine's training methods; developed uncontrollable DT's;
2. "I'm not gonna pay a lot for these chess lessons!";
3. Two words: opponent's breath.

Dan

- I forgot to bring my favorite pencil which always brings me luck.
- My opponent did not stick to the book.
- The low Elo-rating of my opponent deceived me.

Martin Unger (h8150875@idefix.wu-wien.ac.at)

"I became confused of all the bad moves my opponent made, and that`s the reason I lost the game. "

-- Nils J Schjelderup

- He was scowling at me (if he is twice your size)
- He had a bulge under his armpit (if he is wearing sunglasses and a suit - might be carrying a gun)
- She looked like she was going to cry (a pretty girl)
- I was trying so hard not to laugh (at his stupid blunders) that I did not notice his trap.
- It's not fair! It was a trap!
- It was a cheapo.

Calvin Loh [lohengk@iscs.nus.sg (Loh Weng Keong Calvin)]

I find that I am often distracted by my opponent's time pressure.

--Duif

If "even a bad plan is better than no plan," does that mean that even a poor excuse is better than none? ;)

"j'adoube"

[Made by an opponent of mine when he picked up a piece, then realised he had to move another one]

[all of these i have heard used (or used myself)]

I was put off by my opponents T-shirt

[The complainant later won his state's title at the age of 16]

I got confused over which piece was guarded

[made by the same person, when a total of 6 pieces were left on the board]

I had a won position until I blundered.

I had a won position! It's in my notebook!

[used by guess who?]

He shouldn't have played on in a lost position

The tournament director got the draw wrong, I should have played xxx.

The tournament director got the draw wrong, I should have had white.

I wasn't taking the game seriously because it was only a club match.

I wasn't taking the game seriously because I couldn't win a prize.

I thought it was a different time control.

I don't like short time controls.

I didn't want to adjourn.

I'm playing a "swiss gambit"

I was playing for a draw

[and finally a selection which should meet any need...]

too noisy

too quiet

too hot

too cold

too busy to study opening books

too poor to afford ECO

too dark

too bright

all these from **Peter Ballard**

pballard@radlogic.com.AU Fri Nov 24 05:26:06 1995

And lastly, one of my very own:

"I wanted to adjourn but he made me play a move."

[Dr. Dave](#)

Exeter Chess Club: Is there luck in chess?

From **The Master Game, Book 2**, Jeremy James and William Hartston (1981). London: BBC.

'Chess,' said the Dutch grandmaster, Jan Hein Donner, '*is as much a game of chance as blackjack; or tossing cards into a top hat.*' There was a pained silence, then a polite babel of disagreement: it was a game of the utmost skill; a conflict between disciplined minds in which victory would inexorably go to the more perceptive, the more analytical player; a duel of the intellect in which luck played no part. Donner shrugged, lit another cigarette and said: '*Believe that if you like.*' Bent Larsen smiled the smile of a man who had heard his friend air such iconoclastic arguments in the past but was quite happy to contest them again, when the score of the fifth game of the World Championship match between Karpov and Korchnoi was brought in. Both men pulled out of their inside pockets the wallet sets all grandmasters seem to carry at all times and began to skim through the moves.

It happened that the teleprinter tape had been torn off after Karpov's 54th move as Black [...]. They studied the position for a few moments, mated Karpov in four moves and were surprised when another whole sheet of moves was brought from the teleprinter.

When they saw Korchnoi's 55th move - Be4+ - Larsen's eyebrows went up.

'*There you are,*' Donner said, quietly and without triumph as though some self-evident truth had been revealed, '*pure luck*'.

Kortschnoj,V (2665) - Karpov,An (2725) (05) [E42] Wch29-Baguiu City, 1978

Exeter Chess Club: ow to mate with Bishop and Knight

How to mate with Bishop and Knight.

Danny Sparkes and Norbert Friedrich.

Danny Sparkes recently took us through the technique here, and had some fun at the expense of a range of computers and computer programmes who seem generally clueless about t. I don't have his notes but I do have tucked away some similar notes by Norbert Friedrich, who also has a mild dig at computer technique, and whose notes I have expanded on a little below. (If you have ChessBase 6.0 or above, the database will show some helpful extra detail of the patterns.)

Why bother?

(1) You might have to do it, and under pressure. Susan Lalic was surprised by Galliamova recently, who headed for this endgame as a reasonable drawing attempt. Susan made the mate - in 45!

(2) It also illustrates how to co-ordinate three slightly awkward pieces - perhaps you may never have to prove the mate, but you will have to co-ordinate the activity of your minor pieces, and this is a suitable arena in which to rehearse.

(658) The basic technique [*Norbert Friedrich*]

DRAWING A "W": To win KBN-K you first have to force the king to the 8th rank. If the king escapes to his safe corner then, "drawing an W" is a useful help to remember. The knight moves like a "W" (c7-d5-e7-f5-g7), the bishop does not allow Black's escape to the safe corner and the White king steps towards the winning corner on the 6th rank. Finding the mate then should not create problems anymore. **1.Nc7+ Kb8 2.Bc5 Kc8 3.Ba7 Kd8 4.Nd5 Ke8** Offers more resistance than Kc8

[4...Kc8 5.Ne7+ Kd8 6.Kd6 Ke8 7.Ke6 Kf8 (7...Kd8 8.Bb6+ Ke8 9.Ba5 Kf8 10.Nf5 Ke8 11.Ng7+ Kf8 12.Kf6 Kg8 13.Kg6 Kf8 14.Bb4+ Kg8 15.Bc5 Kh8 Now you must play a check to g8 with the Knight, but not from f6! 16.Nf5 Kg8 17.Nh6+ Kh8 18.Bd4#) 8.Nf5 Ke8 9.Bb6 Kf8 10.Bc7 Ke8 11.Ng7+ Kf8 12.Kf6 Kg8 13.Kg6 Kf8 14.Bd6+ Kg8 15.Nf5 Kh8 16.Be7 Kg8 17.Nh6+ Kh8 18.Bf6#]

5.Kd6 Grit your teeth and allow the King to come forward two squares... **5...Kf7 6.Ne7** Stops the King coming to g6. **6...Kf6**

[6...Kg7 7.Be3]

7.Be3!

The second detail to remember. The King covers the red squares (ChessBase 6 format), the Knight covers the green squares, and the Bishop covers the yellow squares, and the 'net' effect is a box from which the Black King can only escape backwards. Neat, eh? **7...Kf7 8.Bd4** The net effect again. **8...Ke8 9.Ke6 Kd8 10. Bb6+** Again, the Bishop and Knight cooperate to block off all the escape squares on the c-file.. **10...Ke8 11.Nf5 Kf8 12.Bc7 Ke8 13.Ng7+ Kf8 14.Kf6 Kg8 15. Kg6 Kf8 16.Bd6+ Kg8**

Now it's mate in four: we must play check to g8, but not from f6. **17.Nf5 Kh8 18. Be7** A tempo move. **18...Kg8 19.Nh6+ Kh8 20.Bf6# 1-0**

(659) Endgame Data Bases *[Norbert Friedrich]*

Any endgame database (Check those by Ken Thompson) will tell you that there might be faster wins or better defenses. Its mysterious move suggestions might be of scientific interest but are IMO hardly of a practical value: The following was recently posted in rec.games.chess.analysis by Steven Edwards. Note that the bishop is on e3 and the knight on d5, though that should not create a difference. Evaluation: Mate in 20 **1.Bb6** Bc5 Bd4 Bf2 Bf4 Bg1 Nc7+

[After playing the following moves: 1.Nc7+ Kb8 2.Bb6 Kc8 3.Ba7 Kd8 4.Nd5 Kc8 ... Evaluation: Mate in 13 5.Ne7+ Kd8 6.Kd6 Ke8 7.Ke6 Kd8 Kf8 8.Bb6+ Ke8 9.Nf5 Kf8 10.Bc5+ Bd4 Bd8 Be3 Bf2 (10.Be3 Ke8 11.Bg5 Kf8 12.Be7+ Kg8 13.Kf6 Kh7 14.Kf7 Kh8 15.Kg6 Kg8 16.Nh6+ Kh8 17.Bf6#) 10...Ke8

If letting the Black King off the back rank makes you nervous, you will have to see the mate in 6, which starts by threatening mate in one, by shielding the line of the Bishop. 11.Nd6+ Kf8 (11...Kd8 12.Bb6#) 12.Kf6 Kg8 13.Nf5 discovering an attack on the square just vacated. 13...Kh7 14.Kf7 Kh8 15.Kg6 Kg8 16.Nh6+ Kh8 17. Bd4#]

1...Kb8 2.Nc7 Kc8 3.Ba7 Kd8 4.Nd5 Ke8 5.Bd4 Kd6 5...Kd8 Kf7 6.Be5 Kc8 7.Nb6+ Ne7+ 7...Kd8 8.Bf6+ Kd6 8...Ke8 9.Kd6 Kf7 10.Nd5 Kf8 Kg6 11.Ke6 Ke8 12.Bg5 Bh4 Nc7+ Ne3 12...Kf8 13.Be7+ Kg7 14.Nf4 Kg8 Kh7 15.Kf6 Kh7 Kh8 16.Bf8 Kg8 Kh8

A different mate in four. **17.Ne6 Kh7 Kh8 18.Kf7 Kh8 19.Bg7+ Kh7 20.Nf8# Ng5# Line**

(661) Fine No.4/No.5 [RF]

The White pieces are in their worst possible positions. Mate can be achieved only at a8 or h1. As White you have a three-stage plan: (1) drive the King to the edge. (2) drive the King to a corner: it will (or should) head for a1/h8 (3) drive the King across to the other corner. **1...Kc6**

[1...Kc4 2.Bf7+]

2.Nb3 Kd6

[2...Kd5 3.Kb5 Kd6 4.Kc4 Ke5 5.Nc5 Kf5 6.Kd5 Kg5 7.Bf3 Kf5 8.Ne6 Kf6 9.Be4 Ke7 10.Ke5 Kf7 11.Nf4 Kg7 12.Bd5 Kh7 13.Kf6 Kh8 14.Ng6+ Kh7 15.Be6]

3.Kb5 Kd5 4.Bf7+ Ke5

[4...Kd6 5.Bc4 Ke5 6.Kc5 Ke4 7.Kd6 Kf5 8.Bd3+ Kf6 9.Nd2 Kf7 10.Nc4 Kf6 11.Ne5 Kg7 12.Ke7 Kh8 13.Kf6 Kg8 14.Nf7]

5.Kc5 Kf6 6.Bc4 Ke5 7.Nd2 Kf4 8.Kd6 Kf5

[8...Ke3 9.Nb3 Kf4 10.Bd3 Kg5 11.Ke5 Kh6 12.Kf6 Kh5 13.Bf5 Kh4 14.Kg6 Kg3 15.Kg5 Kf3 16.Bc2 Ke3 17.Kg4 Ke2 18.Kf4 Kf2 19.Bd1 Ke1 20.Bf3 Kf2 21.Nd4]

9.Bd3+ Kf6 10.Nf3 Kf7 11.Ke5! Kg7

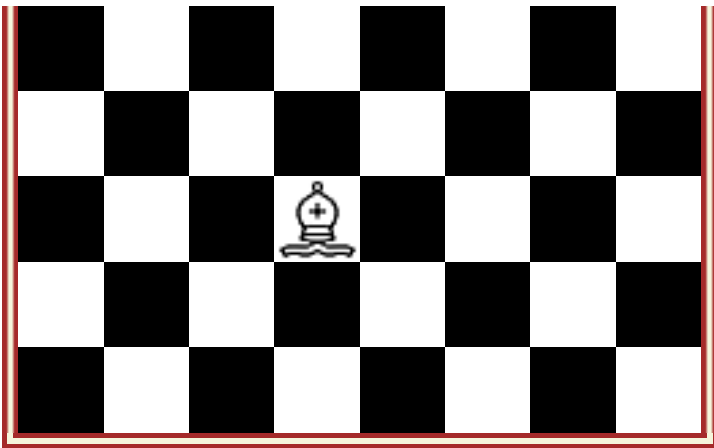

[11...Ke7 12.Bc4]

12.Ng5

[While we are going through, watch how the Knight moves!]

12...Kg8! 13.Kf6 Kf8 14.Nf7 Kg8

No.5 Black is near the 'safe' corner, and we need to get him to a mating corner. The way to do this was first shown by Philidor, and is to be found in the books by Fine and Averbakh. **15.Bf5 Kf8 16.Bh7 Ke8 17.Ne5 Kd8**

[17...Kf8? 18.Nd7+ Ke8 19.Ke6 Kd8 20.Kd6 Ke8 21.Bg6+ Kd8 22.Nc5 Kc8 23. Bd3! Kd8 24.Bb5! Kc8 25.Bd7+ Kb8 26.Kc6 Ka7 27.Kc7 Ka8 28.Kb6 Kb8 29.Na6+ Ka8 30.Bc6#]

18.Ke6 Kc7 19.Nd7! This is the bit you need to understand: it looks like the King has got out, but it hasn't. **19...Kc6?!** This natural move gets mated more quickly. There are a couple of important patterns to remember:

[19...Kb7 20.Bd3! Kc6 The 'net effect' box again. 21.Ba6 Kc7 22.Bb5 and the wall. 22...Kd8 Okay, last trick. The Knight goes to d5 to further restrict the King. 23. Nb6 Kc7 24.Nd5+ Kd8 25.Kd6 Kc8 26.Ke7 Kb7 27.Kd7 Kb8 28.Ba6 Ka7 29.Bc8 Kb8 30.Ne7 Ka7 (30...Ka8 31.Kc7 Ka7 32.Nc6+ Ka8 33.Bb7#) 31.Kc7 Ka8 32.Bb7 + Ka7 33.Nc6#]

20.Bd3! The King is in a little box. **20...Kb7**

[20...Kc7 21.Bb5! The King's escape is walled off. 21...Kc8 22.Kd6 Kd8 23.Nc5 Kc8 24.Bd7+ Kb8 25.Kc6 Ka7 26.Kc7 Ka8 mate in three 27.Kb6 Kb8 28.Na6+ Ka8 29.Bc6#]

21.Kd6 Kc8 22.Nc5 Kb8

[22...Kd8 23.Bb5]

23.Kc6 This is not the fastest but is easier to remember and more artistic.

[23.Kd7 is Fine's slightly quicker method 23...Ka7 24.Kc7 Ka8 25.Kb6 Kb8 mate in

three 26.Ba6 Ka8 27.Bb7+ Kb8 28.Na6#]

23...Kc8 Can you guess White's next Knight move? **24.Nb7** This is why I say it's easier to remember and prettier! **24...Kb8 25.Kb6 Kc8 26.Bf5+ Kb8**

Now its mate in four. **27.Nc5 Ka8 28.Bd7** A tempo move. **28...Kb8 29.Na6+ Ka8 30.Bc6# 1-0**

East Devon Premier 1998: Par for the course

Friday afternoon...

I had no sense of goals or urgency about this congress; just to enjoy it.

I always enjoy the Exeter congress, I can sleep in my own bed, eat my own food and play my own game. So why don't I do better?

Regis,D (1912) - Menadue,J (2064) [A34]

East Devon Premier (1), 27.02.1998

Round 1. An impeccable draw. Jeremy has won this tournament in the past... at least I'm not Black.

I did play JM once before in 1991 in this same tournament. After dozen moves or so Jeremy had played a book Pawn sacrifice, and a bit later offered me a draw. I thought, no, I'm here to beat people like you, refused the draw and went on to lose.

It was really Bent Larsen's fault, but I should have known better. I remember he criticised John Nunn for taking a draw against him in a better position, his argument being: *"You have all the time in the world to win prizes, at this time you should concentrate on becoming as good a player as possible."*

Now, I had been here before. In 1979 I had 4/4 going into the last round of the Thetford Minor, and my nearest rival had 3.5/4. After a few moves he offered the draw, and those fateful words went through my head again: *"You have all the time in the world to win prizes, at this time you should concentrate on becoming as good a player as possible."* So I refused, lost, and instead of 25 pounds won 2 pounds 50. Meanwhile, back in Exeter '98...

1.c4 c5 2.Nc3 b6 3.e4 g6 4.Nf3

[4.d4 cxd4 5.Qxd4 Nf6 6.e5 Nc6 7.Qf4 Nh5 8.Qe4]

4...Bg7 5.d4 cxd4 6.Nxd4 Bb7 7.Be3 d6 8.Be2 Nf6 9.f3 0-0 10.Qd2 Re8 11.0-0 Nbd7 12.Rac1

When I was at school, the Maroczy Bind, especially with the King Bishop developed centrally and not at g2, was reckoned to be more than Black wanted to deal with. However, critical and GM thinking these days recognises more virtues and more possibilities for the Black position.

12...a6

[12...Rc8 13.Rfd1 Qc7 14.b4 Qb8 15.a3 a6 16.Nb3 Bf8 17.Bf1 e6 18.Qf2 Bc6 19.a4 Ba8 20.Kh1 Ne5 21.Bd4 Nfd7 22.Na2 Bc6 1/2-1/2 Gheorghiu,F-Spiridonov/Baile 1982]

13.Nd5

[13.Rfd1 e6]

13...e6 14.Nxf6+

[14.Nc3 would have been more thoughtful]

14...Bxf6 15.Rfd1 Be7

OK, one pair of pieces off for a chance to weaken the Black Pawns. I suspected Jeremy was just going to go to sleep and wait for me to make a mistake, so unless he was going for a break I had time to come up with something myself. I now had a bit of a think and decided I would re-organise my minor pieces to attack the King's-side. First, get the Knight to g4, but via the Queen's-side.

16.Nc2 Qb8 17.Nb4 Qc7 18.Nd3 Rac8 19.Nf2

Clearly Jeremy is not trying to force the pace!

[19.Bf4 Ne5 20.Nxe5 dxe5 21.Be3 Bc5 22.b4 Red8 23.Qc3]

19...Qb8

....he offered me a draw... and I shook his hand off!

[21...dxe5 22.Bxb6 Bxe4 23.c5 Bb7 24.Qa5 Qa8 25.Rd7] 1/2-1/2

Realistically, White has not that much here, if anything. But a reasonable result.

Fewkes,J (1840) - Regis,D (1912) [B06] East Devon Premier (2), 27.02.1998

Jim is one of the nicest guys in South West chess, and that's an area full of pussycats. I drew against Jim with difficulty a year or two ago, and was not confident playing him with Black. We had a Nimzo last time, but I'm still mostly playing the Modern...

Round 2. Pride goeth.

1.d4 g6 2.e4 Bg7 3.Nc3 d6 4.Be3

The best move I think - flexible and dangerous.

4...a6

Nigel Davies has been egging people on to play this - although that's all I knew about it. I have had some terrible games in this line, so anything looked better.

5.Qd2 b5 6.f4

mixing systems. Nowhere in the Austrian Attack is ...a6 and ...b5 a recognised defensive system, although Qd2 is also unusual - White normally rushes to develop the King's-side and get the Rook on f1.

6...Bb7 7.e5!?

Looked premature to me, but presents Black with some concrete problems. It looks now like better judgement than I gave Jim credit for during the game.

7...dxe5 8.dxe5 Qxd2+ 9.Bxd2 Nc6 10.Nf3 Nh6

So far I expected. Black should be able to work up a little initiative here, I thought.

11.Bd3 Nb4?!

Some signs of over-optimism. Black's King's-side pieces are playing no part in the game, so this grab for the two Bishops loses time. It's not uncommon for players to lose sight of issues like development and activity once the Queens are off, but it's not forgivable if you know this already!

[11...0-0-0; 11...Nf5 12.Bxf5 gxf5 13.e6 fxe6 (13...Nd8 14.Nh4) 14.0-0 e5]

12.Ke2 Nxd3 13.cxd3 0-0-0 14.a4

When I saw this my heart sank - Black can only grovel for a draw.

14...f6?

Panicky.

[14...bxa4 15.Nxa4 Nf5 16.Nc5 is not wonderful but may be survived; 14...b4 15.Ne4 a5 is the pig-headed approach to defence]

15.axb5 axb5 16.Nxb5 Bxf3+ 17.gxf3 Nf5 18.Rhc1 fxe5

[18...Nd4+ 19.Nxd4 Rxd4 20.Ba5 fxe5 21.Rxc7+ Kb8 22.Rxe7 is a bust]

19.Rxc7+ Kb8 20.Raa7 Rhe8

[20...exf4 21.Bxf4 e5 22.Rxg7 Nxg7 23.Bxe5+ Kc8 24.Rc7+ Kb8 25.Rxg7+ Kc8 26.Rc7+ Kb8 27.Rxh7+ Kc8 28.Na7#]

21.Bc3 Rd5?

I didn't even see the threat, let alone the defence.

[21...exf4 22.Bxg7 Nxg7 23.Nc3 (23.Rxe7 Nf5 24.Rxe8 Rxe8+ 25.Kd2 Re3) 23...Nf5 24.Na4 Rd6 25.Nc5+-]

22.Rcb7+ Kc8 23.Nc7 Rd7 24.Nxe8 Rxb7 25.Rxb7 Kxb7 26.Nxg7 Nxg7 27.fxe5 Ne6 28.Ke3 Kc6 29.Bb4 Nc7 30.Ke4 Nd5 31.Ba3 e6 32.Bd6 Kb5 33.Kd4 Nf4 34.Ke4 Nd5 35.Bf8 Ka4 36.Kd4 Kb5 37.Bh6 Ne7 38.Bf8 I didn't have the heart for any more.

Another miserable zero to add to my string of results with the Modern. I tell myself, this is just the downside to playing a complex opening which gives Black winning chances. Which is to say, I think if i played more classically, I'd get more draws as Black. **1-0**

Regis,D (1912) - Boulden,J (1644) [B23]East Devon Premier (3), 28.02.1998

Round 3. An entertaining romp where Black played with a certain carefree innocence. I always enjoy games like this where both sides are clearly out to get a result, rather than keeping the margin of the draw.

1.e4 c5 2.Nc3

[2.f4 d5 is a well-known equaliser]

2...Nc6 3.f4 d6

I have a feeling this is inaccurate: the better anti-Grand-Prix systems depend on this move not having been played.

[3...g6 4.Nf3 Bg7 I find White's main Grand Prix tries in this position unconvincing, and I don't know if White would do better to sidle out into either a standard fianchetto system with Bg2, or a reversed Dutch with Be2. The antidotes I have known for 20 years, but are still not always played by my opponents. e.g. 5.Bb5 (5.Bc4 e6! 6.f5 Nge7! 7.fxe6 fxe6! and White's Bishop may get blotted out of the game by Black's Pawns.) 5...Nd4! 6.Nxd4 (6.0-0; 6.a4) 6...cxd4 7.Ne2 Qb6 8.Bd3]

4.Nf3 g6 5.Bc4 Bg7 6.0-0 h5?!

Against a fianchetto system this might be better motivated (see notes to Frost-Regis below.

[6...h5 The idea being: 7.d3 Bg4 8.h3 e6 9.hxg4 hxg4 10.Ng5 (10.Nd2 Bd4+ 11.Rf2 Qh4) 10...Bd4+ 11.Rf2 g3 ...I might have continued unsuspecting down this line - right up to the point where Black didn't move the Bishop when prompted by

h3]

7.d3 Nh6 8.f5!?

I always play this as early as I can, although it concedes the e5 point.

8...Ng4?!

Optimistic!

White may be winning here, and I knew it.

9.fxg6?!

[9.h3! is best

A) 9...Bd4+ 10.Nxd4 cxd4 11.fxg6 fxg6 (11...dxc3 12.Bxf7+ Kd7 13.hxg4 hxg4 14.Qxg4+ Kc7 15.Qg3 Ne5 16.bxc3) 12.Bf7+ Kd7 13.Bxg6 dxc3 14.hxg4 hxg4 15.Bf5+;

B) 9...Nf6 10.Ng5;

9.Ng5!? is more accurate than the text, leaving the target on f7, but 9...Bd4+ 10.Kh1 Nce5 11.fxg6 fxg6 transposes (11...Nxc4 12.gxf7+ Kd7 13.dxc4)]

9...fxg6 10.Ng5 Bd4+ 11.Kh1 Nce5

This position we had both anticipated, but now White has a choice. It may be White has already frittered away any advantage.

12.Bb5+

[12.Nf7 Nxf7 13.Bxf7+ Kd7; 12.Bf7+ Kd7 13.Be6+ Kc7 14.Nd5+ Kb8 15.Nf7 Qf8 16.Bxc8 Qxc8; 12.Qe2]

12...Bd7 13.Ne6 Qc8

[13...Qa5 14.Bxd7+ Kxd7 (14...Nxd7 15.Nd5 Rc8 16.Bd2 Qa4) 15.Nxd4 cxd4 16.Nd5 Rhf8 17.Qe2 Rxf1+ 18.Qxf1 e6 19.b4 Qa4 20.Nf6+ Nxf6 21.Qxf6]

14.Nxd4 cxd4 15.Bxd7+ Qxd7 16.Nd5 0-0-0

Black's position now looks very promising.

17.c3 Rdf8 18.cxd4 Rxf1+ 19.Qxf1 Nxd3! 20.Be3 Nxe3?

Risky

[20...Nxb2 is entertaining 21.Qc1+ Kb8 22.Qxb2 e6 23.Nb6 axb6 24.d5 Rf8 25.Bxb6 exd5 26.exd5 Qf5 27.h3 Ne5 28.Qa3; 20...e6! is probably best, we thought]

21.Nxe3 Nxb2?? 22.Qc1+

And that's about it, I'm afraid.

22...Qc6 23.Qxb2 Qxe4 24.Rc1+ Kb8

[24...Kd8]

**25.Qc2 Qxc2 26.Rxc2 Rf8 27.Kg1 e6 28.Rf2 Rc8 29.Rf6 Rc1+ 30.Kf2 Ra1
31.Rxe6 Rxa2+ 32.Kf3 Kc7 33.Nd5+ Kd7 34.Re7+ Kc8 35.Rc7+ Kd8 36.
Rxb7 g5 37.Nb4 Kc8? 38.Nxa2 Kxb7 39.Ke4 a5 40.Kd5 Kc7 41.Nc3 g4 42.
Nb5+ Kd7 43.Nxd6 h4 44.Nc4 h3 45.gxh3 1-0**

Not a bad result, and I enjoyed the game, but not steady enough. I've got to learn to put these safely away.

Frost,N (1848) - Regis,D (1912) [B24]East Devon Premier (4), 01.03.1998

Round 4. A peccable draw. Nick is a strong and promising junior, which doesn't usually bother me although his grade has just overtaken my own.. I like to play slowly and rely on experience against young players, but juniors these days play so many games that this no longer counts for so much. I beat Nick earlier this year, but I never like playing Black.

1.e4 c5

Nick knew I played the Modern, so why not sidestep - particularly since I saw him play an unusual and rather stodgy Closed line with Nge2 against the Sicilian in a previous round.

2.Nc3 Nc6 3.g3 g6 4.Bg2 Bg7 5.Nge2 d6 6.0-0

*[6.d3 e5 7.Nd5 Nge7 8.c3 Nxd5 9.exd5 sealing the hole on d5 9...Ne7 10.0-0 0-0

f5 0-1 Smyslov, V-Botvinnik, M/Moscow Wch-m 1954]*

6...e5

As in Smyslov-Botvinnik. I play this formation as White and Black in several openings, and feel very happy with it. Moreover, I think the white side offers nothing.

7.d3 Nge7 8.Be3 0-0

[8...h5!? 9.h3 Be6 10.Nd5 Qd7 11.h4 Bxd5 12.exd5 Nd4 13.c3 Ndf5 14.Bg5 0-0 15.a4 Qc7 16.a5 b5 17.axb6 axb6 18.Qb3 b5 19.Rxa8 Rxa8 20.Qxb5 Rb8 21.Qa4 Rxb2 22.Qe8+ Bf8 23.Ra1 Qc8 24.Qxc8 Nxc8 25.Kf1 Nb6 26.c4 Be7 27.Be4 Bxg5 Kharitonov Andrei Y-Psakhis Lev/Cup World (open), Moscow (Russ 1989)]

9.Qd2 Nd4 10.Nd1

I was suffering from my usual emotional journey as Black: fear, relief, and then wild optimism. Hence...

10...f5?

...but there were milder reactions available for one so undeveloped.

[10...Bg4 11.f3 Be6 12.c3 Nxe2+ 13.Qxe2 Rc8 14.f4 exf4 15.gxf4 d5; 10...Be6]

11.Nc1 fxe4 12.Bxd4 exd4

[12...cxd4 13.dxe4 d5]

13.dxe4 d5 14.exd5 Nxd5 15.Nb3!

Oh dear, hadn't seen that preliminary move, so I'm dropping a Pawn. Right, play two aggressive developing moves while his pieces are getting sorted out and offer a draw.

15...Bf5 16.Nxc5

[16.c4!? Nf6 17.Nxc5 Rc8 18.Nxb7 Qd7]

16...Rc8 17.Nd3 Re8

1/2-1/2

Perhaps experience did tell in the end - I'd have looked forward to unravelling this one as White. But that ..f5 move was painful to watch.

Hodge,D (1912) - Regis,D (2040) [B23] East Devon Premier (5), 01.03.1998

Round 5. Hat trick. Another junior, and David's results this year have been excellent. Before the game David reminded me we had played two dull English openings and had two draws. Actually, both were pretty exciting, but I was determined not to draw this one, and so against my better judgement decided to mix it.

1.e4 c5 2.Nc3 Nc6 3.f4 d6 4.Nf3 g6 5.Bc4 Bg7 6.f5!?

It seems this exact position has not often been met before.

[6.0-0 e6 7.f5 gxf5 8.d3 Nge7 9.Ng5 d5 10.Qh5 Ne5 11.exd5 exd5 12.Nxd5 Nxd5 13.Re1 Rf8 14.Nf3 Ne7 15.Nxe5 Qd4+ 16.Be3 Qxe5 17.Bg5 Qd4+ 18.Kh1 Bf6 19.c3 Qd6 20.Bh6 b5 21.Bb3 Rh8 22.Qxf7+ Kd8 23.Bf4 Qc6 24.d4 Bh4 25.dxc5 Rg8 26.Rad1+ Bd7 27.Re2 Qf6 28.Rxe7 Qxf7 29.Rxf7 Be7 30.c6 Ke8 31.Rxd7 Bc5 32.Rxh7 1-0 Watson, W-Gutman, L/Hastings 1984]

6...Nf6 7.0-0 Bd7!?

Looked a bit inconsequential to me. After the game David rattled off a variation showing why he thought it was indispensable, which I instantly forgot.

[7...0-0 8.d3 Na5 9.Bb3 Nxb3 10.axb3 e6 11.Qe1 Ng4 12.fxe6 fxe6 13.Qg3 Ne5 14.Bf4 Nf7 15.e5 dxe5 16.Be3 b6 17.Ne4 Bb7 18.Nfg5 Nfg5 19.Nxg5 Rf6 20.Qh3 h6 21.Nxe6 Bc8 22.Nxd8 Bxh3 23.Rxf6 Bxf6 24.Nb7 Bd7 25.Nd6 Bg7 26.b4 cxb4 27.Bxb6 a6 28.Bc5 Bf8 29.Bxb4 Rb8 30.Ne4 Rxb4 31.Nf6+ Kf7 32.Nxd7 Bd6 33.Ra5 Ke6 34.Nc5+ Bxc5+ 35.Rxc5 Rxb2 36.Rc6+ Kf5 37.Kf2 a5 38.Ke3 Ra2 39.Rc8 Ra4 40.c3 Kf6 41.Rc6+ Jovanovic Sasa-Mujagic R/It, Novi Sad 1988]

8.d3 a6 9.a4 e6

So far, so predictable.

10.fxe6 fxe6 11.Qe1 0-0 12.Bg5 Qb6?!

This was an interesting point in the game. By sending the Queen to the Queen's-side Black is saying that White is bluffing; it's up to White to show that he is not. Actually, I think Black is bluffing, the b-Pawn is a risky meal for Black, allowing White Rb1-b2xb7xd7/g7.

13.e5!?

[13.a5?! Nxa5 14.Rxa5 Qxa5 15.Qh4 Sacrifices an exchange for a tempo, but it's too hard to get the Nc3 and Bc4 over for the attack at the moment. Hence the text move, which does a number of jobs.]

13...dxe5 14.Ne4

White's position suddenly looks a lot better, and can fantasise about winning the e-Pawn if all else fails.

14...Nd5 15.a5

I was pleased to get this in - Black's Queen's-side play is often very powerful in this line, whereas now Black cannot break there easily.

15...Qc7 16.Qh4 Nd4 17.Nxd4 exd4

A critical point.

18.Nf6+!?

[18.Be7!? A quieter approach which may have been more successful: David showed the line

A) 18...Nxe7! best 19.Qxe7 which I thought was a swing in the air, but David saw that it threatens Bxe6 - if I had realised this I might have been tempted. 19...Qc6 (19...Rae8 20.Bxe6+ Kh8 21.Qxd7) 20.Ng5 Rxf1+ 21.Rxf1 Re8 22.Qf7+ Kh8 23.Re1 Rf8 and Black has a draw in hand;

B) 18...Rxf1+ is playing for a loss 19.Rxf1 Qxa5 (19...Ne3 20.Ng5 h6 21.Nxe6 Bxe6 22.Bxe6+ Kh7 23.Rf7) 20.Nxc5 Qc7 21.Qf2; 18.Bf6? Nxf6 19.Nxf6+ Bxf6 20.Rxf6 Rae8 21.Re1? Qxa5; 18.Bh6!? Bxh6 19.Qxh6 Bb5 (19...Ne3 20.Ng5+-) 20.Bxd5 exd5 21.Nf6+ Kh8 22.Nxd5=]

18...Nxf6 19.Bxf6 Bxf6 20.Rxf6 Qe5!

I'd missed this move, defending e6 and attacking f6. White has problems because he is a Pawn down, although Black may have problems realising it.

21.Rxf8+

[21.Raf1 Rxf6 22.Rxf6 Rf8 23.Rxf8+ Kxf8 24.Qd8+ (24.Qh6+ Kg8 25.Kf2) 24...Be8 (24...Kf7 25.Qxd7+ Kf8 26.Kf1) 25.h3 Qe3+ 26.Kh2 Qf4+ 27.Kg1]

21...Rxf8 22.Re1 Qf5 23.h3 Kg7 24.Qg3 Qf4?

Daft - Black had nothing to lose by badgering White for a while, looking for improvements in his position, and waiting for a mistake.

25.Qxf4 Rxf4 26.Bxe6 1/2-1/2

Not a game I ever had a chance to 'put away cleanly', but a good scrap. I felt I had lots of the right ideas, if not the analytical reach to implement them.

CONCLUSIONS:

2 1/2 out of 5 is no more than a par performance, which is not reassuring, because my league chess is usually below par. I had two good draws against two good players, and one not-so-good draw against Nick. I enjoyed the win, which could have been better played, and not the loss, which could have been a lot

better.

For an overall view: the whole thing looks to me now a bit under-committed, over-tired, not digging deep enough. Also, I didn't play very many moves this year - the two bale-out draws also smacked rather of lack of energy and patience, but that's perhaps just how I feel now it's over!

East Devon Premier 1999

Friday afternoon I have been taking a long hard look at my chess this year, because despite all the study and book knowledge (not just opening knowledge) over the last few years, the grade remains static. I've been trying to play more classically, and in a more open style, and with fewer of the over-sophisticated modern openings that I have played so much. So far this has seen a movement in the grade, although it was not so much a movement as a plummet. I had scraped a measly two draws from my last six games for club and county, so I was hoping this tournament was going to see a return to form. Although I've done a lot of thinking about other people's chess in recent years, it may be a case of, *Physician, heal thyself*.

[It would be easy to look to non-chess reasons for the decline; visitors to the Web site will recognise that I have found other calls on my time and energy over the last couple of years, but on the other hand I don't want to excuse poor chess by non-chess arguments.]

Talbot,A (1800) - Regis,D (1912) [D37] East Devon Premier (1), 26.02.1999

Round 1. A matter of taste. Black in Round One, outgrading my opponent, maybe a good time to skip the Modern and play something new.

1.d4 d5

Not usual for me - which is to say, I haven't played this for about 25 years. However, I've been getting some advice from Tony Dempsey, our resident master coach, that this is a better way to play to improve. OK, anything once.

2.c4 e6 3.Nc3 Nf6 4.Nf3 Be7 5.Bf4

Oh dear, don't know much about this, not to worry.

5...0-0 6.e3 c5 7.dxc5 Bxc5 8.Qc2 Na6?

Inaccurate, sidelining the Knight. It also leaves the c-file clear, which deterred my opponent from Queen's-side castling. I'd actually have preferred it if he had - the file is still open!

[8...Nc6! is main-line theory which I could only guess at.]

9.a3 dxc4 10.Bxc4 Bd7 11.Rd1 Qc8 12.Bd3 h6 13.0-0?!

Too slow.

[13.Ne5! immediately, gains the two Bishops or Black must disconnect Rooks]

13...Rd8 14.Ne5

Now Black can organise in peace.

14...Be8! 15.Rd2 Be7 16.b4 Nh5

I was starting to cheer up here: I can recycle my dismal Knight on a6, and have just gained the two Bishops. White is still much more active, though, and as so often in chess that's what counts.

17.Rc1 Nxf4 18.exf4

18...Qc7

Casual...

[18...Nc7]

19.Bxa6 bxa6 20.Nd5!

Ouch - however, Black can survive, not least since the capture on a6 has freed the b7 square. It's hard to notice moves that are not available in the starting position, and White was surprised by my next move.

20...Qb7 21.Nxe7+ Qxe7 22.Rxd8 Rxd8 23.Nc6 Bxc6 24.Qxc6

1/2-1/2

Black has no reason to decline. Depressing - being on the worse of a draw without any active chances is no way to play in a Swiss, let alone any way to enjoy your game. Also, I hoped that playing this way would require lot less theory than other approaches, but I wasn't really finding the right moves by my own thinking.

Regis,D (1912) - Littlejohns,D (1800) [D37] East Devon Premier (2), 27.02.1999

Having avoided each other entirely for the eight years I've played chess in the South West, this is the third time I've played David Littlejohns this year. David's current grade of 150 doesn't reflect his past strength, but we've had a win each earlier, and were both looking for blood, I think.

Round 2: From the back foot **1.e4 c6 2.d4 d5 3.exd5 cxd5 4.c4**

[4.Bd3 is my usual preference, but I've had more advice...]

4...Nf6 5.Nc3 g6

Aagaard claims this is a poor line for Black, but at club level it seems to be thriving.

[I think Aagaard's book (Cadogan) is excellent - each chapter has an 'ideas' section and a theory section, with illustrative games. So often the balance between these is all wrong, but here the recipe is just right. Sadly, I hadn't read this book before the game!]

6.cxd5 Bg7 7.Qb3 0-0 8.Be2 Nbd7 9.Bf3 Nb6 10.Nge2

I have committed a chess sin here - playing a sharp and fashionable variation without understanding the ideas. White's plan here is to return the d-Pawn by d5-d6, and announce that Black's pieces are misplaced. Not knowing this, I had some problems handling the next phase.

10...a5

Unusual and not recommended, but my opponent has had a good time with it.

Alternatives are [10...Bg4; 10...Bf5]

11.a4

[11.0-0 a4 12.Qb5 Bd7 13.Qb4 1-0 Computer \-Haba Zdenek/It (open) 1991 (42)]

11...Qd6

Again, alternatives have been tried like [11...Bf5]

12.Bf4?

Plausible but mistaken.

More to the point is the way Dolmativ plays it:

[12.Nb5! Qb4+ 13.Qxb4 axb4 14.d6 exd6 15.Nxd6 (15.b3 Be6 16.Nc7 Rab8 17.Nxe6 fxe6 18.Bd2 Nbd5 19.0-0 Kf7 20.Rfc1 Rfc8 21.g4 Nc3 22.Nxc3 bxc3 23.Rxc3 Rxc3 24.Bxc3 Nd5 25.Bxd5 exd5 1-0 Dolmatov Sergey-Halldorsson Bragi/It (open) 1988 (54) 15...Rxa4 16.Rxa4 Nxa4 17.0-0 Be6 18.Nf4 Rd8 19.Nxb7 Rxd4 20.Nxe6 fxe6 21.Bc6 b3 22.Be3 Rb4 23.Bd2 Rb6 24.Bxa4 Rxb7 25.Bc3 Nd5 26.Bxg7 Kxg7 27.Ra1 Nf4 28.Kf1 Nd3 29.Ra3 Behling Robert-Derikum Axel/Bundesliga 1984/85 1984]

12...Qb4 13.Qd1 Nfxd5

I hadn't even realised this move was possible! Oh dear, another duff position from an openings experiment.

14.Bd2 Qd6 15.0-0

[15.Ne4 Qc6 16.Nc5 Nc4 and White's Knight looks a bit lonely.]

15...Bf5

Just in case the Ne4 idea re-appears. I felt like I was playing Black here - in a cramped position facing lively pieces.

16.Nxd5 Nxd5 17.Qb3 Be6 18.Qb5 b6 19.Rac1 Rac8

White has got a bit more active now. I had a long think here and came up with a plan to attack the Queen's-side, at cost of the Bishop pair.

20.Bxd5!? Bxd5 21.Bf4 Qe6 22.Bc7

Those were White's opening remarks to the jury; Black's rebuttal starts:

22...Qe4 23.f3 Bxd4+ 24.Kh1!

Black missed this one.

24...Qe3 25.Nxd4 Qxd4 26.Bxb6

White's King dodge means that this move comes with tempo.

26...Qe5 27.Bxa5

White's plan has been a complete success, rather surprisingly.

27...Qf5 28.Bc7 e6 29.b4 Qf6 30.Qc5 Qb2 31.a5 Qa3 32.b5 Qxc5 33.Rxc5 Ra8 34.a6 Rfc8 35.Ra1 Bb7 36.h3 Re8 (time control) 37.Ra5?

After resetting the clocks and stuff, I forgot the point of playing h3! Not to worry, it's still a cruise from here.

[37.axb7! Rxa1+ 38.Kh2 Ra7 (38...Re1 39.Bd6) 39.b8Q Rxb8 40.Bxb8 Rb7 41. Bc7 Kf8 42.b6]

37...Bc8 38.Rc6 Re7 39.Bd6 Rd7 40.Rb6 Rda7 41.Rb8 Rxb8 42.Bxb8 Ra8 43.a7 Kf8 44.b6 Ke8 45.Rc5 Kd7 46.Rc7+ 1-0

Quite satisfying in the end - all too often I collapse when faced with problems, but here I fought my way out.

Lee,N (1984) - Regis,D (1912) [D37] East Devon Premier (3), 27.02.1999

At last an opponent graded higher than me, but I'd sooner be White, of course.

Round 3. The one that got away

1.e4 c5

I've been bullied out of the Modern, so my second-string is the Sicilian. I don't know a lot about it, but I like it.

[1...e6 one day I'll get the courage to try this; Tony D has a theory that it provokes more mistakes from White than Black in club play]

2.Nf3 g6 3.d4 Bg7 4.d5 b5!?

I have known of the possibility of this outrageous move for many years, and as it's the only one that didn't transpose to openings I have never played, it got the vote. Unfortunately, as usual, I'm playing things I have never studied seriously, i.e. I knew the theory as far as move 4!

[4...d6 is a Schmidt Benoni 5.Be2 (5.Nc3)]

5.e5!

[5.Nbd2 a6 6.a4! bxa4 7.Nc4 d6 8.Bd2 Qc7 9.Ba5 Qb7 10.Rxa4 += Kluger-Jeney, Budapest 1962.; 5.c3 a6 6.a4 bxa4 (6...b4 7.cxb4 cxb4 8.a5 Black's QNP is artificially isolated 7.Qxa4 Nf6 8.Nbd2 0-0 9.Qa5 d6 10.Qxd8 Rxd8]

5...a6 6.a4 d6?

Having been caught bluffing I thought I'd sac a Pawn.

[but 6...bxa4! has to be better, when 7.Bf4 f6 8.Nc3 (8.d6 better) 8...fxe5 9.Nxe5 Nf6 10.Be2 0-0 11.Qd2 d6 Schmid-Bilek, Varna Olympiad 1962 12.Nf3 produces a position that offers chances to both sides]

7.exd6 Qxd6 8.axb5 Nf6 9.Nc3?

Developing is natural, but

[9.c4! would have revealed the pawn sac as even more bluff!]

9...0-0 10.g3 Bb7 11.Bf4 e5!?

this has to be tried; White visibly slumped

12.bxa6

[12.Bxe5 is very playable, in fact 12...Re8 13.Be2! (13.Qe2 is less good - although it stops Black getting two pieces for a Rook, it hobbles White's development even more 13...Qb6) 13...Rxe5 14.Nxe5 Qxe5 15.O-O axb5 16.Rxa8 Bxa8 17.Bxb5 With two Pawns, one passed, and probable exchanges coming up, White with the Rook may be better placed than Black with the two pieces.]

12...Nxa6

[12...exf4 13.axb7 Rxa1 14.Qxa1 Re8+ 15.Be2 Nxd5 16.Kf1 Nxc3 17.bxc3 Qe7 18.Bb5 Qxb7 19.Bxe8 Qxf3 20.Rg1]

13.Bg5

I felt the sun was coming out again. Lucky!

[13.Bxe5 Rfe8 14.Qe2]

13...Nb4 14.Rxa8 Rxa8 15.Bxf6 Qxf6 16.Bc4

[16.Bd3]

16...Ra1! 17.Qxa1 Nxc2+ 18.Ke2 Nxa1 19.Rxa1

White, in addition to his other problems, was down to his last ten minutes. Black has problems too: although the material situation is nice, his pieces are passive and White has a very concrete plan to follow by advancing the d-Pawn.

19...e4!?

Activity at any price.

20.Nd2 Qb6 21.Na4 Qb4 22.Ra3

22...Be5?

[22...Bxb2 I didn't fancy this but it may be OK: 23.Rb3 Qxa4 24.Rxb7 (24.Rxb2) ; 22...Bh6! I didn't see this winning move! 23.Rc3]

23.Rb3 Qxa4 24.Rxb7 Bd6

[24...Qc2! - forward rather than backward... 25.d6 Bxd6 26.Rxf7 Kh8 27.b3 Be5 28.Rd7 is still a struggle]

25.b3 Qa8

[25...Qe8]

26.Rb6

White may now be winning, but is down to less than two minutes....

26...Qd8 27.Rc6 f5 28.Ba6 Kf7 29.Nc4 Bc7

Black is slipping back down a slippery slope.

[29...Bf8 30.d6]

30.Rxc5

[30.d6!]

30...f4 31.d6 f3+ 32.Kd1 Bb6 33.Rd5 Bxf2 34.d7 Ke6 35.Re5+

Curiously, I too the e-Pawn here, illegally giving my opponent another two minutes on the clock, for which he was duly grateful.

35...Kf6 36.Rd5 e3

Things are hotting up!

37.Ne5 e2+ 38.Bxe2 fxe2+ 39.Kxe2 Bb6

Maybe I can afford to lose a piece now, having won one.

40.Nc6 Qa8 41.Rd6+ Kg7

[41...Kf5]

42.Nd4 Qb8??

[42...Qe4+ 43.Kd1 Kf7! 44.Nc6 We thought may be a draw at best for Black, but in fact Black may be able to pick up Pawns before White can consolidate. 44...Qb1 + 45.Kd2 Qb2+ 46.Ke1 (46.Kd1 Qxb3+ 47.Kd2 Qe3+) 46...Qf2+ 47.Kd1 Qg1+ 48.Kd2 Qxh2+ 49.Kc1 Qxg3]

43.Rxb6 Qxb6 44.d8Q 1-0

Regis,D (1912) - Piper,S (1864) [D37] East Devon Premier (4), 28.02.1999

Round 4: A hack I always avoid the Open Sicilian, but I like the positions for both sides. Maybe one day I'll get to grips with it, but occasionally I sidle in from other lines, and I do all right.

1.e4 c5 2.Nc3 a6 3.f4

[3.g3 might be a way of querying Black's move order, but I'm usually pleased to face the Closed as Black and I would have felt a fraud playing it.]

3...Nc6 4.Nf3 e6 5.d4

No more Grand Prix ideas left.

5...cxd4 6.Nxd4 Qc7

[6...Nge7 7.Be2 Nxd4 8.Qxd4 Nc6 9.Qf2! is my last idea, a cute retreat which can prove tricky for a Taimanov player. It's probably best not to exchange, or at least not then to chase the Queen, although Jim Plaskett's book says the whole line gives White nothing.]

7.Be2 b5 8.Bf3 Bb7

[8...b4 9.Nce2]

9.Be3

[9.0-0?? Nxd4 10.Qxd4 Bc5]

9...d6 Inconsistent and may be a plain loss of tempo. However, since White has not castled, and also has blocked the f-file, no harm comes of it.

[9...Na5 10.O-O Nc4 11.Bc1 Bc5 12.Kh1 Ne7 13.b3 Nb6 14.Bb2 O-O 15.a4 bxa4 16.Nxa4 Nxa4 17.Rxa4 Qxf4 18.e5 Bxf3 19.Nxf3 Qh6 20.Bc1 Qh5 0-1 Littlewood N-Penrose Jonathan (ENG)/BCF Ch, Whitby 1962 (48)]

10.O-O Nxd4 11.Bxd4 Ne7 12.Qd2 Nc6 13.Be3 Be7 14.Qf2 O-O 15.g4 b4 16.Ne2 Bf6 17.c3 bxc3 18.bxc3

[18.Nxc3 Bxc3 19.bxc3 when the two Bishops might amount to something, but I wanted to keep the Knight for the attack, and use the Bf6 as a target.]

18...g6 19.Rad1 Ne7 20.f5!?

Now or never - if I'm not playinmg this, I'm not in the game at all. White has actually pretty much achieved his opening goals, although Black has blown up the centre and Queen's-side. I actually thought we were likely to draw, since I thought it was likely that exchanges were going to appear.

20...exf5 21.exf5 Bxf3 22.Qxf3

It proves surprisingly hard to challenge the Queen on the long diagonal.

22...gxf5

[22...Bxc3? 23.f6!; 22...Rae8 was suggested by Black after the game, but 23.g5 Bh8 (23...Bxc3 24.f6) 24.f6 Nf5 25.Bf4]

23.gxf5 Kh8

[23...Bxc3 24.f6]

24.Kh1

[24.Kf2 I was worried about an impending Queen exchange, so this might be more likely to produce a result.]

24...Rg8 25.Ng3 Be5?

Not good, but Black has problems.

[25...Qxc3 26.Ne4 Qb2 27.Nxf6 Qxf6 28.Bd4]

26.f6

This has to be good news for White.

26...Ng6 27.Bh6 Rgc8 28.Bg7+ Kg8 29.Nf5 h5 30.Nh6+ Kh7 31.Qxh5

with big threats, which Black variously missed or couldn't cope with. It's not clear that White has got a decisive route through but may pick up enough on the way.

31...Qc6+

[31...Qb7+

A) 32.Kg1 Qa7+ 33.Rf2 Nf4 34.Qf5+ Ng6 35.Nxf7 Qxf7 36.Rg2 Rc5 37.Qh5+ Kg8 38.Qxg6 (38.Rxg6 Bd4+) 38...Qxg6 39.Rxg6 Rxc3 40.h4;

B) 32.Rf3 32...Nf4 the best defence is probably to deflect the Queen (32...Re8 Black can't successfully challenge e7 because there are too many other mates 33.Nxf7+ Kg8 34.Nh6+ Kh7 35.Ng4+ Kg8 36.f7+ Qxf7 37.Nh6+ Kh7 38.Rxf7 Bxg7 39.Nf5+ Kg8 40.Qxg6) 33.Qf5+ Ng6 34.Nxf7 Qxf7 35.Rg1 Rxc3 36.Rxc3 Bxc3 37.Qh5+ Kg8 38.Qxg6 Qxg6 39.Rxg6 with a measly extra Pawn]

32.Rf3 Qe4

[32...Rc7 33.Nxf7+ Kg8 34.Ng5; 32...Nf4 33.Qf5+ Ng6 34.Nxf7 Bf4 35.Qh5+ Kg8 36.Rg1 Qe4 37.Rxg6 Rxc3 38.Bh6+ Kxf7 39.Rg7+ Kxf6 40.Qg5+ Ke6 41.Re7#]

33.Nf5+

[33.Nf5+ Kg8 34.Ne7+ Nxe7 35.Qh8#]

1-0

White,I (1896) - Regis,D (1912) [D37] East Devon Premier (5), 28.02.1999

Round 5. **1.e4 c5 2.Nf3**

We had played before in the Autumn, and I had revealed my 'surprise' move 2...

g6. To avoid homework improvements I had a little think and came up with:

2...Nc6 3.Bb5

A new position for me. If I were playing the English as White, I would play immediately:

3...Qc7 4.Nc3

[4.c3 looks more thematic]

4...e6 5.O-O Nge7 6.d4

[6.Re1 looks more likely to create problems.]

6...cxd4 7.Nxd4 a6 8.Bxc6 Nxc6

I felt cheerful here, having achieved my opening aims. I thought we were improvising freely but this position is well-known to theory and is not at all comfortable for Black. The old Batsford book on this line gives lots of useful White wins and encouraging ideas for White, nothing for Black. As often in the Sicilian, Black is structurally OK but lagging in development, and the latter is more important for the moment.

9.Be3 Be7 10.Nxc6 bxc6

Not unlike the English: Black has grovelled the two Bishops and has kept the Pawns tidy, and needs to unravel while avoiding accidents. Again, White can take much comfort in his extra activity.

11.f4

[11.Qg4]

11...0-0 12.Qf3 d5 13.Rad1 Rb8

[During the game I couldn't resist looking at 13...f5 but 14.exd5! (14.e5 c5) 14...exd5 is no good for Black]

14.b3 a5 15.Rfe1

I now had a rush of blood to the head and decided I was winning by establishing a passed d-Pawn.

15...Bb4 16.Bd2 Qa7+ 17.Qf2! d4 18.Na4 Bxd2 19.Rxd2 c5 20.c3

Now I realised I had misjudged and miscalculated... **20...dxc3**

[20...Rd8? 21.Red1!]

21.Rc2!

I has also missed

21...Bd7 22.Qxc5?

what I was hoping for, frankly

22...Qa6 23.Rxc3

White has given Black all the opportunity he could hope for.

23...Bxa4! (=) Draw offer. The extra Pawn is meaningless and Black can re-organise the position comfortably now.

24.bxa4 Rfc8 25.Qe3 Rxc3 26.Qxc3 Qb6+ 27.Kf1 Qb4 28.Rc1 h6 29.Qc7 Rb7 30.Qc8+ Kh7 31.Qc2 Qd4

I was feeling more and more cheerful here.

32.Rd1 Qe3 33.e5+ g6 34.Qd2 Qxd2 35.Rxd2 Rb4

White is playing for the loss, I reckon

36.Ke2?

time anxiety, although he had three minutes for this last move.

36...Rxf4 37.Ke3 Rxa4 38.Kd3 g5 39.Re2 Kg6 40.Kc3 f5 41.exf6 Kxf6

Should be a win.

42.Kb3 Rb4+ 43.Kc3 e5 44.a3 Rd4 45.Rb2 Ra4 46.Rb6+ Kf5 47.Kb3 Rh4 48.h3 e4 49.Kc2 e3?

hasty - it may not be a bad move but I hadn't thought it through, so "?"

50.Kd3 Ra4

[50...Re4! I thought this was losing but it may be winning! 51.g4+ (51.Rb5+ Kf4 52.g3+ Kf3 53.Rf5+ Kg2) 51...Kf4 52.Rf6+ Ke5 53.Rf5+ Kd6 54.Rf1 e2 55.Re1 Kd5 56.Kc3 (56.Rxe2 Rxe2 57.Kxe2 Kc4)]

51.Kxe3 Rxa3+ 52.Kf2 h5 53.Rb8

this looks awfully drawn, but I fooled around for a while, while I still had some time

53...Ra2+ 4.Kg3 h4+ 55.Kh2 Re2 56.Rf8+ Kg6 57.Rg8+ Kh6 58.Rh8+ Kg7 59.Ra8 Re5 60.Ra7+ Kg6 61.Ra6+ Kh5

[61...Kf7 breaking for the Queen's-side allows the King's-side Pawns to be exchanged. 62.g3 hxg3+ 63.Kxg3 Ke7 64.h4 gxh4+ 65.Kxh4 Kd7 66.Kg4 Kc7 67.Kf4 Rc5 68.Ke4 Kb7 69.Rh6 a4 70.Rh3 Ra5 71.Ra3 Kb6 72.Kd4 Kb5 73.Kc3 Ra6 74.Kb2 Kb4 75.Rd3 is all nonsense for Black]

62.g4+ hxg3+ 63.Kxg3 1/2-1/2

CONCLUSION:

Three from five sounds OK, despite the ones that got away, but I only played one opponent (Nick Lee) who was graded higher than me, and that one I lost. I was desperate to regain a bit of form this tournament, since my league and club chess has been pretty poor, and from that point of view I was satisfied, particularly since I've been messing about with all sorts of new openings and have

given up some old favourites. It feels a little like the Red Queen's race, running hard but standing still.

Realistically, it's only in the longer term can I judge this new classical approach.

I'm happy as White, I think - although the lines I play are a bit sharper than usual, with White you have the luxury of slipping back to equality, and I'm sure this is the style I should be playing, and it's certainly a style I like.

The Black repertoire is a worry, though, I can't bear the Black side of double QP openings. Is this a nettle I need to grasp, or are there better, more unbalanced openings? I fancy the Slav more than the Orthodox, even so. See what happens for next year!

British Chess Federation: Recommended coaching books

A STARTER BOOK FOR ABSOLUTE BEGINNERS

- PURNELL'S CHESS FOR CHILDREN by MJ Richardson (Pergamon)
Some editions have the title PERGAMON'S CHESS FOR CHILDREN
- The alternative is STARTING CHESS by AJ GILLAM

A CO-ORDINATED COURSE FOR BEGINNERS

- MOVE ONE by R James (Faber)
- The alternative recommendation is THE BATSFORD CHESS COURSE by MJ Basman (Batsford), followed by THE SECOND BATSFORD CHESS COURSE by the same author

ADDITIONAL BOOKS FOR ESSENTIAL DAILY PRACTICE

- HOW TO PLAY THE OPENING LIKE A MASTER by MJ Basman
- SIMPLE CHECKMATES by AJ Gillam (Batsford), also SIMPLE CHESS TACTICS
- CHESS SKILLS pamphlets (BCF)

USEFUL BOOKS FOR THE IMPROVING PLAYER

- CHESS TRAPS FOR YOUR UNWARY OPPONENT by MJ Basman
- SPIKE'S CHESS PRIMER by DG Ellison (Crowood)
- CHESS FOR TIGERS by S Webb
- FIND THE MATE by MJ Basman

PLAYING IN SERIOUS COMPETITIONS

The young tournament player should select from the following list:-

- PLAY BETTER CHESS by LW Barden (Octopus)
- CHESSERCIZES by B Pandolfini (Octopus)
- CHESS OPENINGS FOR JUNIORS by JN Walker (OUP)
- ATTACKING THE KING by JN Walker (OUP)
- CHESS ENDINGS - ESSENTIAL KNOWLEDGE by Y Averbach (Pergamon)
- WINNING ENDGAMES by A Kosten (Crowood)
- NIGEL SHORT'S CHESS SKILLS by ND Short (Hamlyn)

- BLUNDERS AND BRILLIANCIES by I Mullen and M Moss (Pergamon)

COLLECTIONS OF GAMES

- WINNING CHESS by I Chernev and F Reinfeld (Faber) **(N.B. Not a game collection but a collection of tactical ideas from actual play - DR)**
- LOGICAL CHESS MOVE BY MOVE by I Chernev (Faber)

FOR PARENTS

- THE COMPLETE CHESS ADDICT by M Fox and R James (Faber)
- THE OXFORD COMPANION TO CHESS by Hooper & Whyld (OUP)

REGIONAL COACHING CONVENTION, 6th March 1999, Bristol
=====

Present:

1. Gary Kenworthy (BCF director for coaching) - e-mail:
gkenworthy@cwcom.co.uk, 17 Buttermere Close, Bletchley, Milton Keynes,
Buckinghamshire, MK2 3DG, evenings 01908 -833096, weekends
01908-646763.
2. Steve Boniface, 11 Henrietta Street, Lower Easton, Bristol.
BS5 6HU. Tel. 01179 - 393262 (answerphone)
3. Jerry Humphreys, 9 Ernestville Road, Fishponds, Bristol.
BS16 3DB. Tel. 0117 - 965 - 0097 (with answering service).
4. Monica Vann, e-mail mvann@marlow.demon.co.uk. 1 Kennedy Close,
Marlow, Bucks. SL7 3JA. Tel: 01628 - 486676
5. Dave Regis, e-mail dregis@exeter.ac.uk, 2 Bagshot Avenue, Exeter,
Devon EX2 4RN. Tel. 01392 - 431785 (answerphone)

APOLOGIES:

Chris Baker (Regional Coach), Neville Belinfante,
John Dunleavy, John Richards, Vic Cross.

1. THE STATE OF PLAY (Gary K)

a. Gary emphasised that he did not see coaching as relevant only for promising juniors. Moreover, a good coach needs to understand both chess and teaching, and courses should recognise these two dimensions.

b. The history of coaching in the BCF is poorly understood, and all sorts of good work has gone on outside any BCF. Record-keeping and communication have been patchy at best and many important documents are not readily available e.g.:

- the old BCF coaching manual
- the revised BCF Certificate of Merit scheme
- the revised BCF coaching framework (titles [National. Master, Regional and Club coaches] , course summaries, criteria, who attended courses, who passed, etc.)

There is a general lack of circulation of these documents, and those that Gary knows about are often in need of revision. Gary appealed for:

- All courses past and present to be properly documented and copies sent to him
- Any other interesting materials or documents also to be sent to him.
- Volunteers for revising and composing documents please make themselves known (Dave R will happily review material).

c. Developments in Child Protection legislation mean that the BCF needs to be a lot more attentive to this area

d. Technology has opened up many new possibilities for coaching e.g. coaching on the Internet, game commentary on cassette tape or telephone, video presentations etc. Probably they all have advantages and disadvantages.

e. The BCF receives a substantial grant from the Government for education -- the better we are and doing and recording our educational work the more likely we are to retain and enhance that income.

2. COACHING AND THE INTERNET (Dave R)

- a. Dave gave an account of chess coaching at Exeter emphasising:
- it is principally an adult-to-adult, self-help group without 'master' input
 - we have tried hard to accompany all the sessions with handouts, which, thanks to advances in computing, are now very easy and cheap to produce
 - all the handouts are available free on the Internet, <http://www.ex.ac.uk/~dregis/DR/chess.html>
 - Exeter's web site has been designed as a place to post and exchange good ideas about coaching, and Dave would be pleased to host any outcomes of the conventions on the site.

b. John Richards of Bristol has composed a helpful and nicely-laid-out summary of key ideas and locations of chess-related materials on the Internet. Gary K took a copy and will circulate it.

c. Dave R has also written an article as a guide to the internet for beginners, published in Westward Ho! (WECU journal, edited by Bob Jones). Gary K took copy and may circulate.

3. TIPS AND TECHNIQUES (Gary K)

Gary discussed:

a. Demo. Boards -- see appendix

b. Pairs chess (tandem chess) -- where master and apprentice play alternate moves (without consultation) against moderate opposition. Useful for making you think!

c. Sparring partners and the developing effects of healthy rivalries

d. Use of video -- see appendix

4. THE LAWS OF CHESS AND COACHING (Steve B)

a. Steve gave an entertaining quiz on the laws, emphasising the special differences between normal play, quickplay, rapidplay and blitz.

b. Points can and are won and lost through players' knowledge of the laws. Coaches should make sure players can conduct themselves properly during the game and do things like claim draws, keep score, and react appropriately to opponent's transgressions, all according to the proper procedures.

c. Steve would *discourage*:

(i) Replying to opponent's moves without writing them down (as is permitted by the current laws), and

(ii) Writing your move down and then thinking for ages -- this is not bad practice when used to briefly check for blunders, but when all or most moves are changed, or the checking takes a long time,

it looks like written analysis and can be penalised accordingly.

d. Dave would discourage young players insisting on a rook move when castling was intended, if the opponent's rook was moved first (although he would object if it happened *twice* in the same game). However, as a claim for ...Rh8-f8 is perfectly correct, do also encourage everyone to use the correct sequence. Steve also would encourage young players to remind their opponents to press their clock after moving, at least as a general rule. Although, after several failures by the opponent, you may be forgiven for forgetting...

e. Touch-move, however, should never be overlooked.

e. Jerry also mentioned that he does not encourage claims for draws in the last two minutes with new players, although mention of the rule is probably necessary since opponents may claim.

f. When talking about the laws there are two wonderful distraction techniques used by audiences: (1) "what if...?" No set of laws can cover all contrived 'what if' circumstances, the point is to cover normal play. (2) "I heard a story that...". These interruptions are more forgivable, but are of more interest to arbiters and perhaps match captains than practical players and coaches. Although probably players do not discuss the laws enough, so if these stories attract interest...

5. COACHING AND THE BRAIN (Gary K)

a. Mednis in 'How to be a Complete Tournament Player' (Cadogan, p. 110) is one of the few authors to touch on the subject of mental and physical fitness.

b. Tiredness, nerves and stress all detract from good play and should not be neglected when coaching.

6. CHESS ASSISTANT (Monica V)

a. Chess Assistant is a relatively inexpensive but complete and comprehensive chess database, flagship of a suite of chess training programmes offered by Convekta.

b. It enables many facilities coaches could want -- analysis of games, setting-up of test positions, test-yourself programmes, imported comments from openings trees. It obviously offers many other facilities e.g. production of encyclopaedia-style trees, which are not directly relevant to coaching.

c. CA emphasises compatibility and reads in several other database formats; it can export information as PGN, RTF or MS Word files. It also links to many popular playing engines sold by third parties (CA has its own analysis engine included).

d. Versions for older machines and operating systems, and cut-down versions for viewing only, are all still available. Test yourself programmes are separate to CA, but CA can be used to test yourself in conjunction with a playing program such as Hiarcs, Rebel or Genius. It may be nice to mention that a trainer or coach with CA could set up training problems or instruction that could be used by the pupil (who does not have the complete CA program) on their computer by means of a free cut-down version of the program.

e. There are pieces of public domain (free) software around, says Dave, but the advantages of having everything in one package, with a wide range of compatibility and support, requiring less computing expertise are not denied.

7. A.O.B.

a. RECOMMENDED BOOKS

i. The Chess Teacher -- Alan Phillips (Oxford UP) -- a series of lessons covering many different aspects of the game in a sequential and cyclical manner -- written for coaches rather than students (Gary K)

ii. Chess Coaching -- John Littlewood (Crowood) -- a brisk review of coaching, bung-full of useful examples. Some of the tactical examples are flawed (poor editing and checking rather than the intended line being wrong) and some of the chapters feel rushed, but otherwise an excellent book with no real competitors (Dave R).

iii. Chess for Tigers -- Simon Webb (Maxwell Macmillan) -- an excellent and amusing practical guide to making the most of your style (Dave R)

iv. Many BCF materials exist and whatever state of revision they are in are worth a look (Gary K/Dave R):

-- "Chess Skills" pamphlet sets (1 & 2) for tactics training -- now issued in algebraic with answers

-- Pamphlet "How to run a school chess club "

-- Pamphlet "Advice for juniors"

-- Pamphlet "Advice for juniors about clubs"

-- Pamphlet "Advice for parents of junior chess players"

b. other materials and resources AVAILABLE

GK issued a revision of the Calendar (BCF 1999) but also strongly recommended consulting Neville Belinfante's calendar of events updated regularly on the Web. (URL??)

c. other materials and resources DESIRABLE:

(i) COACHING GUIDANCE NOTES from the BCF (1-2 sides of A4) on: use of demo. boards, use of video, list of recommended books and other materials, 'de-coaching' lessons (i.e. repairing commonly held misunderstandings).

(ii) Some sense of priority or sequence for the many rules and maxims players are offered. Gary suggested as an outline: (1) King safety (2) dynamic activity - quantity and quality of material (3) capacity to exchange key pieces (4) static and structural features (pawn formation).

APPENDIX ONE: Checklist for use of demonstration boards

=====

1. Choice of board: many types exist in all sizes, not all are suitable for every occasion.

Cost? Design, Wearability (worn slots, adhesion, de-magnetise)

Supply?

Transport? (collapsible)

Storage?

Construction: frames or ladders required? Health and Safety issues?
Visibility from a distance? Contrast of pieces? Reflective when lit?
Removal and departure?

2. Training of operators (and runners at tournaments): perhaps, like demo. boards, many types exist in all sizes, not all are suitable for every occasion!

3. When demonstrating, engage your audience:

- Don't look at the board, don't look at your feet, do look at the audience.
- React to the audience -- see if someone's puzzled or bursting with a question.
- Get them to participate -- ask them questions, ask what they know already, ask what they think is the best move and why, ask them what they think will happen later in the game.

APPENDIX TWO: Checklist for use of videos.

=====

1. Don't turn it on then leave the room. The video needs a minder.
2. Stop regularly and check to see how your audience is doing: see if someone's puzzled or bursting with a question.
3. The ideal condition is to have a demo. board alongside the TV so that when points arise they can be dealt with collectively before moving on.

APPENDIX THREE: Suggested contents of coaching pack

=====

1. Current BCF materials: Certificate of Merit
Coaching Scheme criteria
Notes for Juniors/Parents
2. BCF Materials in need of review/development

3. John Richards' Internet Notes

4. Steve Boniface's Legal Quiz

APPENDIX FOUR: Steve's legal quiz (and, thankfully, answers)

=====

(to follow separately)

(c) Steve Boniface, BCF Arbiter, Bristol

Note: the compositions below contain some matters of interpretation and opinion and should not be thought of as a definite guide, rather than an accompaniment for the official text of the Laws.

COACHING & LAWS I

=====

A) Read the Laws

Be honest. Which of these is most accurate for you?

- 1) I have never actually looked at the Laws of Chess
- 2) I have only consulted the Laws when I need to.
- 3) I have read through the Laws at least once.
- 4) I have read the Laws but don't really understand them.
- 5) I have a fair grasp of the Laws.
- 6) I have a good working knowledge of the Laws.

B) Do you have a copy of the Laws of Chess? Is it...?

- 1) A tiny light-blue paperback.
- 2) Kazic's yellow paperback (Competitor's Handbook
- 3) A small green hardback.
- 4) A small red hardback.
- 5) The BCF Yearbook of 1995.
- 6) A 6 page A4 document dated 1997.
- 7) Stewart Reuben's recent book (Organizer's Handbook)
- 8) I don't own a copy.

C) Are you aware of the changes from 1997?

- 1) What changes?
- 2) I've heard of some.
- 3) I know all the important changes.
- 4) I know all the changes.

COACHING & LAWS II

=====

D) Do you know the difference between the terms...?

- 1) Quickplay
- 2) Rapidplay
- 3) Blitz

E) Are you aware of the difference in the Laws depending on which of the above variations is involved concerning...?

- 1) Illegal positions
- 2) Illegal moves
- 3) Time penalties (for illegality)
- 4) Draw claims (last phase)
- 5) Flag falls
- 6) Recording moves
- 7) Winnable positions
- 8) Arbiter's duties

F) Do you know how to claim a draw in the correct manner, and for what reasons...?

- 1) In the 'normal' phase of a game
- 2) In a quickplay finish
- 3) In a rapidplay game
- 4) In a blitz game

G) MISCELLANEOUS - When can you / should you...?

- 1) Stop the clocks
- 2) Write your last move down
- 3) Claim a draw for repetition or under 50-move rule
- 4) Leave the playing area when it's your turn to move
- 5) Leave the playing venue when still playing

COACHING & LAWS III

=====

The guide to a trouble-free event:

1) Read the brochure carefully. (Beware of information on Teletext or the Web. It may have got there second- or third-hand). Apart from making sure you get to the right venue at the right time, there can be important information about:

- * Start times - these may vary from day to day
- * Rate of play - occasionally this may vary in different rounds
- * Default times - this has traditionally been an hour or half-an-hour, but events can now vary this.

2) Observe Laws and rules scrupulously. It would be devastating to lose an otherwise won game on a technicality or careless breach of the Laws. A few DOs and DON'Ts:

- * DO follow the touch-move rule. There is a myth that it does not apply in rapidplay or blitz. It does.
- * DO move the king before the rook in castling. Technically, you could be forced to move alone. This is rarely enforced but it's still the law.
- * DO keep your score up-to-date as far as possible. This will help you keep in control and avoid missing moves out.
- * DON'T visit the bookstall during play. It looks suspicious.
- * DON'T visit the analysis room during play.
- * DON'T talk to other players, especially not in the playing arena. You might be discussing the weather, but your opponent doesn't know that.

3) KNOWING THE LAWS CAN GAIN YOU POINTS! A surprising fact, but true. A few examples:

REPETITION RULE. Many players have a perfectly valid claim under this rule but spoil it by making the move before claiming. Read the rule

50-MOVE RULE. Much rarer, but in a long ending it may appear. Think twice about making a pawn move which would make the count start again.

CLAIM A DRAW IN THE LAST TWO MINUTES. It's your right. If you DON'T make a claim, you CANNOT be given a draw once your flag has fallen.

RESUMPTION AFTER ADJOURNMENT. Did you know that if your opponent who sealed is not present, you can seal in reply?

COACHING & LAWS IV

=====

The Player and the Arbiter

The main duty of an arbiter is to allow a chess event to happen efficiently and peacefully. He or she will answer questions, give advice, and arbitrate in disputes between the players. He also has almost unlimited powers within the playing area, and can impose penalties including expulsion from events. In this kind of case there would almost certainly be much wider repercussions, such as withdrawal of invitations from future events.

The player should treat the arbiter neither with fear nor with over-friendliness. Even if the controller and player are from the same club, the arbiter has been examined for impartiality, and no favours should be expected. As long as players observe the Laws, the arbiter will not interfere adversely. In fact, as when both players are unable to keep score, he will endeavour to do so for them.

However, if a Law is broken, even if inadvertently, there may be a penalty to suffer. Normally this is no more than loss of a few minutes

on the clock. The most common cause for such a penalty is failure to record the game properly until the last five minutes of a time control. This problem can be coached out of a player by:

- 1) Recording your own and your opponent's move immediately after each is played. The Laws now allow you to do this in retrospect, but for a player with recording problems this is better.

- 2) Some coaches recommend writing the chosen move down before it is played, and then making a final check for errors before executing it. However some players are abusing this method and using it to examine

candidate moves one by one, erasing each move in turn.

ARBITERS ARE NOW TREATING SUCH ABUSE AS WRITTEN ANALYSIS, AND ARE PENALISING IT ACCORDINGLY. Be very careful if you adopt this strategy.

The point is to check briefly for errors, not make notes on your thinking.

3) Train to record moves more accurately by keeping score in rapidplay and blitz games. It's not compulsory, but should leave the player feeling more in control. It may also help positively in draw claims.

If a decision goes against the player, it should normally be accepted with good grace. Occasionally a bad decision will be made, but a polite query is more likely to get results than a violent reaction. Remember that if you ask an arbiter's opinion then you should be prepared to accept it. If you believe it is an error in Law, you should be allowed to appeal to the Chief Controller or an appeals committee. However, this should be used sparingly, and only if you know the Law properly yourself!

COACHING & LAWS V - ANSWERS

=====

D) Do you know the difference between the terms...

- 1) Quickplay - a fast finish to a normal game
- 2) Rapidplay - a fixed-length game from 15 to 60 mins
- 3) Blitz - a fixed-length game under 15 minutes

E) Are you aware of the difference in the Laws depending on which of the above variations is involved concerning...

- 1) Illegal positions
Rapidplay and blitz: after 3 moves played with incorrect positions, board & clock stand
- 2) Illegal moves - Rapidplay: as normal on request
Blitz: loss if claimed before move
- 3) Time penalties (for illegality)
- Rapidplay: as normal on request

Blitz: none (lose or nothing)

4) Draw claims (last phase)

- Rapidplay: as normal

Blitz: no claims

5) Flag falls

- Rapidplay and Blitz. Arbiter does not call.

Both flags down = drawn.

6) Recording moves

- Rapidplay and Blitz: optional

(normal = till last 5m of controls)

7) Winnable positions

- Normal and Rapidplay: drawn if mate impossible with unskilled play.

Blitz: must have 'mating material' i.e. construct unavoidable mate

8) Arbiter's duties

- Rapidplay and Blitz: does not normally interfere unless requested

P.S. You may see that the intended harmonisation of the last set of changes, viz. to unify the laws governing the different rates of play, has been only partly successful.

F) Do you know how to claim a draw in the correct manner, and for what reasons:

1) In the 'normal' phase of a game

- repetition, 50-move, insufficient material

2) In a Quickplay finish

- as normal, plus claims in last two minutes

(i.e. opponent unable/unwilling to try and win by making progress on the board)

3) In a Rapidplay game

- as normal, plus claims in last two minutes

4) In a blitz game

- can't in last two minutes (+ differences in material)

G) MISCELLANEOUS - When can you / should you

1) Stop the clocks

- to summon arbiter

2) Write your last move down

- not later than just before making next
- 3) Claim a draw for repetition
 - when your turn to move or under 50-move rule
- 4) Leave the playing area when - it's your turn to move
 - = with arbiter's consent
- 5) Leave the playing venue when still playing
 - = with arbiter's consent

Exeter Chess Club: A Reader's Guide to Fine's "The Ideas Behind the Chess Openings"

Fine's "The Ideas Behind the Chess Openings" is a great book, but dated.

In understanding the motivations behind the major opening systems, and explaining the reasons behind the various move orders, it's great, but since 1943 judgements about chess openings have moved on a bit. Fine's probably OK on the advantages and disadvantages of a given move, but sometimes moves that he gives a thumbs-down to have been shown to be at least OK. However, I don't know anything more recent that is as good (as deep, as concise).

So, what we need is Fine with footnotes. Where Fine says on p.?? that moving the Bishop to c4 in the Sicilian is useless, we need a footnote (1) saying that "(1) This idea was revived in the 1970s with success, particularly by Fischer."

I don't know if any publisher has plans to do this, but we can do that right here. [Like Larry Evans' BCE corrections].

Page references depend on editions: it would be helpful to quote chapter and verse instead or as well.

Chapter 1:

Comment: Players rated less than 1600 (class C) can often achieve remarkable advantages out of the opening by simply playing "outdated" openings. Part of the reason is that their opponents are playing "lines", while they are playing *concepts*. Many double-K-pawn openings fall in this category. They have faded from master play because, with proper play, White simply doesn't get as much of an advantage as a master aspires to. But, the concepts are relatively clearcut, and in a game between two C players it hardly matters that theory has discovered equalizing resources for Black in all lines.

...Get "Fine". Read it. Follow his suggestions in actual play until:

a) you lose games because of his "out of date" suggestions

AND

b) you understand why "modern" lines are better.(KS)

Chapter ?: Sicilian

Comment: Ok, everyone talks about the inadequacy of the Sicilian section, but points I haven't noticed anyone mention before:

- a) No talk of Yugoslav attack at all
- b) Najdorf lines distributed over Scheveningen and other lines in discussion (EP)
- c) Bc4 approach in Najdorf is underestimated (DR)

Chapter ?: Pirc/Modern

Comment: Fine dismisses this setup in a paragraph under "Irregular Openings". This, if nothing else (other than KID & Sicilian) needs to be mentioned in detail. (EP)

Chapter ?: Scandinavian (Centre Counter)

Comment: Fine says that this "cannot be recommended", although it now seems very playable. We need only recall the WC Kasparov-Anand encounter, for example. (VL)

Chapter ?: Benoni/Benko Gambit.

Comment: These were fledging openings when Fine wrote the book, and he only gives a paragraph or two to each. I would *love* to see an "Ideas" write-up on the Benoni, since I don't understand it at all. (EP) [Also, King's Indian (DR)]

Chapter ?: Catalan System.

Comment: The book considers the closed variation the "main line", whereas the open variation is played much more today. Also, the discussion of the open variation is limited to the 5.Qa4+ lines, with no mention of the (more popular?) 5.Nf3 lines. A further minor note is that he seems to regard the QGA and QGD as the most common ways to get to it as opposed to 1.d4 Nf6 2.c4 e6 3.g3. (EP)

[FRONT COVER]

Ten ways to succeed in the ENDGAME

by

Tim Onions

and

David Regis

Tips for young players on the endgame in chess

"Openings teach you openings. Endgames teach you chess!"

Sergei Gerzadowicz
US Postal Chess Master

Introduction

We have written this book to fill a gap in the reading material for juniors.

We have deliberately aimed at general principles and have also as far as possible avoided looking at variations. We hope that most of the book can be read and followed easily without use of a chess set. However, we do recommend that readers also try out what they learn on a board.

We hope you enjoy this book and that reading it will lead to more confident and better play.

Tim Onions & Dave Regis

[BACK COVER]

Tim Onions is a primary school teacher and manager of the Devon Under-11 Chess Team. He has 10 years experience of working with juniors and regularly organises junior chess tournaments and residential events.

Dave Regis is a researcher in health education who plays chess for Exeter and Devon. He runs coaching for Exeter Chess Club and Exeter Junior Chess Club. He once came last in his class at Art; the cartoons in this booklet are all his fault.

This is their first book.

DCCA Tournament reports: 1999/2000

from Chris Bellers, Competition Secretary, May 2000

Exeter Champions!

Congratulations to Exeter for winning the Bremridge Cup, as well as the Mamhead.

Division One (Bremridge) report

Exeter got off to a poor start in losing to Teignmouth. This was followed by a convincing win over Exmouth all stars (who later against Teignmouth fielded J Sherwin, who is Fischer's first scalp in 'My 60 Memorable Games'). However, a narrow defeat at the hands of Tiverton made ultimate victory considerably doubtful. However, thanks to late signings Jim Parkin and Ian Clarke, wins in the last three matches put the pressure on Tiverton to win their last match. With a weakened team, they could only manage a draw against Teignmouth, and the Cup was Exeter's.

Chris Bellers (unbeaten with 4½) and Dave Regis (4) played in all six matches, but special thanks to Keith Atkins and Tom Stephenson for stepping in with crucial contributions. Sean Pope played in five matches with a very useful 3 points.

Final scores: Exeter 8 (19½ game points), Tiverton 7 (19½ game points), Teignmouth 5 (14½ game points) and Exmouth 4 (18½).

| Exeter | | | Teignmouth | | | Latest | | | Exeter | | | Exmouth | | |

Division Two (Mamhead) report

Congratulations to Exeter for winning the Mamhead Cup.

Exeter started the campaign by overwhelming Teignmouth 3½-½. This was followed by back to back victories against Tiverton, 2½-1½ and 3½-½, which clinched the Cup without the need to win the last match. With a weakened team, the side then lost narrowly to Teignmouth. Final scores: Exeter 6 (11 game points), Teignmouth 5 (8.5) and Tiverton 1 (4.5).

[Dr. Dave](#)

Games from Paignton 1996

In the first of a series of exclusive items for the Devon Chess Record, Gary here analyses his Round 3 win, which went on to be awarded the Best Game Prize.

The veteran Alan Phillips was my opponent in the third round who has recently started playing actively again with promising results. His past record includes a share of the British Championship in 1954 with Leonard Barden and is renowned as the author of the instructive book 'The Chess Teacher'.

White: Gary Lane (2405)

Black: Alan Phillips (2150)

1. e4 e5 2. Bc4

The Bishop's Opening is an old favourite of mine. The game usually transposes to a quiet version of the Giuoco Piano after 2...Nf6 3 d3 Nc6 4 Nf3, but this move-order avoids the Petroff Defence and Latvian Gambit. **2.Nf6**

3. d3 c6

Louis Paulsen introduced this system in 1859 and it has fluctuated in popularity ever since.

4. Nf3 Be7

Clearly Black must be cautious about entering the complications arising from 4...d5 5 Bb3 when the cluster of black pawns in the centre act as targets which can be undermined. After 5...Bd6 6 Nc3 Be 7 Bg5 Qa5 8 0-0 Nbd7 play might proceed:

a) 9 Re1 0-0-0 10 d4!? exd4 11 Nxd4 Bg4 12 Qd2 dxe4? 13 Nxe4 Bc7 14 Nd6+ Kb8 15 Nxf7 h6 16 Bf4 1-0 Lane-Pergericht, Brussels 1990.

b) 9 exd5 cxd5 10 Re1 0-0 11 Qd2 b6 12 Bxf6 Nxf6 13 Nxe5 d4 14 Nb1 Bb4 15 c3 Bxb3 16 cxb4 Qa6 17 b5 Qa4 18 Na3 Bd5 19 Rec1 gives White the advantage, Nunn-Murey, Lucerne Ol 1982.

5. Bb3

Amazingly people still fall for the trick 5 Nxe5?? Qa5+ and the game is over. There is another plan that is worth considering: 5 Nbd2 g6 6 Nf1 Bg7 7 Ng3 Nbd7 8 a3 0-0 9 0-0 Nc5 10 Be3 Ne6 11 Qc1 d5 12 Ba2 Qc7 13 Re1 dxe4 14 dxe4 Bd7 15 Bh6 Nf4 16 Bxg7 Kxg7 17 Qe3 Bg4 18 h3 Bxf3 19 Qxf3= Larsen-Slipak, Mar del Plata 1995.

5.0-0 6. 0-0 d6**7. Re1 Na6**

Also possible 7...Nbd7 8 Re1 Qc7 9 d4 h6 10 Nbd2 Re8 11 Nf1 Nf8 12 Ng3 Be6 += S.Christopher-Milligan, London 1985.

8. c3 Nc5**9. Bc2 Bg4?!**

It is arguably a mistake to pin the knight despite it being such a natural looking move. The point is that after h3 and the usual plan of Nbd2-f1-g3 I will gain time by attacking the bishop.

10. Nbd2 Ne6**11. h3 Bh5 12. Nf1 Ne8****13. Ng3 Bg6 14. d4**

I am content to finally take a chance and exert some influence on the centre. The immediate aim is the simple plan of developing the rest of my forces, while contemplating some action on the kingside. In contrast Black has little room to manoeuvre and must adopt a wait and see policy. The bishop on g6 is out of the game for the moment and might as well just be a big pawn, unless he can play ... d5 to put pressure on e4.

14 ...Bf6

15. Be3 Qc7 16. a4

If he is going to do nothing I might as well try to control space on the queenside.

16 ...a5

17. Qe2 c5?! 18. d5!

I am happy to close the centre because Black will then have great difficulties in conjuring up counter-play. The key is that I can cheerfully line up my pieces on the kingside for the eventual pawn push while Black is simply a spectator.

18. Nf4

19. Qd2 Nh5 20. Nf5

Suddenly the threat of g4 is a worry to Black who has to find room for the knight to retreat.

20. Bd8

21. g4 Nhf6 22. Kh2

Making way for the rooks to add their influence. Patience is a virtue.

22.Qd7

23. c4

It is worth taking time to stamp out the possibility of ...b5.

23. ...h5

The opening of the h-file is to my advantage but Black has become frustrated by the leisurely way I am conducting the attack and decides to increase the tension.

24. Rg1 hxg4

25. hxg4 Nh7 26. Rg3 Nef6

27. Rh1 Re8 28. Bh6!

Black is busted.

28. ..Nxe4

The alternatives do not offer any hope of long-term survival:

a) 28...gxh6 29 Qxh6 Bxf5 30 gxf5+ Kh8 31 Qg7#.

b) 28...Nxf8 29 Rxf8 g5 30 Qxh6 Bf6 31 Kg2 (intending Qxh7#) 31...Nf8 32 Ng5! Qd8 33 Nh7 b6 34 Nxf8 Rxf8 35 Qh7#.

29. Bxe4 g5 30. Qxh6 Bf6

31. Kg2 Qd8 32. g5 Bh8

33. N3h4 Resigns

Final position

I had hoped to finish in style with 33...Nf8 (forced) 34 Qxh8+! Kxh8 35 Nxf6+ + Kg8 36 Rh8#.

White: N. Crickmore (2168)

Black: P. Lane (1992) Exeter

[[Peter Lane's notes to this game](#)]

1. **d4 Nf6** 2. **c4 g6**

3. **Nc3 Bg7** 4. **e4 d6**

5. **f4** Neil's much favoured Four Pawns Attack with which he won Best Game Prize at Paignton last year. 5...**0-0** 6. **Nf3 c5**

7. **d5 e6** 8. **Be2 exd5**

9. **e5**

So far, move for move the same as last year's winner against Roland Cole: the Gunderam Gambit. Obviously Peter Lane doesn't subscribe to the Chess Record which gave Neil's full analysis on this opening.

9. ..**Ne4** Here Cole played **dxe5** 10. **cx d5 Nxc3**

11. **bxc3 Nd7** 12. **e6** Like trench warfare, the white pawns charge the enemy lines, seemingly oblivious to the heavy losses incurred, a typical feature of this opening. 12.**Bxc3+**

13. **Bd2 Bxa1** 14. **Qxa1**

The queen now doesn't move from a1 until the final move, which is exactly where it came to rest in the Cole game. **14.fxe6**

15. dxe6 Nb6 16. Ng5 Qf6

17. Bc3 Qe7 18. Bh8 h6

19. h4 Rxf4 20. g3 Rf8

21. h5 d5 22. hxg6 d4 At last the queen is shut out from that long diagonal, but

there's little hope of respite.

23. Nf7 Rxf7 24. gxf7+ Kxh8

25. Qc1 Resigns

Final position.

All four of black's pieces are helplessly marooned on the wrong side of the board and powerless to defend the isolated king. **1-0**

[\[Peter Lane's notes to this game\]](#)

After a bad start, losing his first two games, Teignmouth / Torquay Boys' Grammar School player David Hodge went on to score 4 from the next 5 games with the help of this fine win in round 5, which was subsequently made Runner-Up for the Best Game prize. Ivor Annetts won the prize for the Best Game outside the Premier.

White: Mark Kambites (2008)

Black: David Hodge (1944) Teignmouth

1. f4 e5 2. e4 exf4 By declining black's e-pawn white finds it lodged awkwardly on f4 for some time

3. Nf3 d5 4. exd5 Nf6

5. Bb5+ c6 6. dxc6 Nxc6

7. d4 Bd6 8. Qe2+ Be6

White is helping black's minor piece development, while fatally neglecting his own.

9. c4 0-0 10. 0-0 Nxd4

11. Nxd4 Qb6 12. Bxf4 Qxd4+

13. Be3 Black's queen and bishop now do a shimmy that keeps white snatching at shadows.

13.Qe5 14. g3 Bc5

15. Re1 a6 16. Ba4 b5

17. cxb5 Ng4

Now black throws another piece into the kingside attack which keeps the queenside pieces from the action. **18. Bxc5 Qxc5+** White's kingside, weakened on move 1, finally crumbles to dust. **19. Kg2 Bd5+** **20. Kh3** The king is hunted whether it goes to f1 or h3 **20.Nf2+**

21. Kh4 Qd4+ **22. g4 Rae8**

23. resigns

Back to [Devon County Chess Association](#) home page, or the [Exeter Chess Home Page](#)

[Dr. Dave](#)

Exeter Chess Club:

N.Crickmore - P.C.Lane

(2/9/96 PAIGNTON {2})

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f4 O-O 6. Nf3 c5 7. d5 e6 8. Be2 exd5 9. e5

Just prior to the game I had seen a copy of Neil's game from the previous year posted in the hallway - but I only read this far!

9... Ne4

[9... dxe5 10. fxe5 Ng4 11. Bg5 and white retains a dangerous d-pawn.]

10. cxd5 Nxc3 11. bxc3 Nd7 12. e6 Bxc3+

Apparently, I was following some analysis which concluded:

[12... fxe6 13. dxe6 Nb6 with good chances for black to win the e-pawn, and play against the weakened queenside.]

I doubted my chances in this line against Neil, and went for a more direct 'refutation'.

13. Bd2 Bxa1 14. Qxa1

White might try:

[14. exd7 Bg7 15. dxc8=Q Qxc8 but black's easy development and queenside majority keep the balance.]

14... fxe6 15. dxe6 Nb6 16. Ng5 Qf6 17. Bc3

White's previous two moves are natural ones, holding the long diagonal and the pawn on e6 to create a bind. Black must play actively to compensate for these.

17... Qe7

Black disdains the draw, losing time but believing the e-Pawn must fall. [17... Qxf4 Both players saw that after 18. Bh8 Other 18th moves for white are bad, e.g.

[18. e7 Re8]

[18. Nf3 Bxe6]

[18. h4 Qf2+ 19. Kd1 Qxg2]

18... Qb4+ he can draw by perpetual.]

18. Bh8

With the possible mate on g7, white indirectly guards the e-pawn, but the bishop's post on h8 removes the dangers to black in opening the h-file.

[18. Bg4 with a direct defence was refuted by 18... Rxf4]

18... h6

Two other options for black are Rxf4 and d5-d4, although if the push of the h-pawn does not win for white, he can only retreat the knight and lose the e-pawn.

19. h4!?

A most imaginative reply, and the only way to maintain the attack, although black comes out ahead after:

[19... hxg5 20. h5

[20. hxg5 Rxf4 21. Bc3

[21. Bf6 Qxe6 22. Rh8+ Kf7 23. Rh7+ Ke8 24. Re7+ Qxe7 25. Bxe7 Kxe7 26. Qg7 + Rf7 27. Qxg6 Bf5]

21... Qxe6 22. Rh8+ Kf7 23. Rh7+ Ke8]

20... Bxe6 21. h6

[21. hxg6 Bg4]

21... Qh7 22. Bg7

[22. Bc3 gxf4.]

22... Rxf4 DR]

and in each case, the attack comes to an end, with decisive material gain to black

19... Rxf4? 20. g3

20... Rf8?

This was the last chance to remove the knight. Only now does black have a lost position.

[20... hxg5 21. gxf4 Bxe6 22. hxg5 Bg4 is winning for black.]

21. h5! d5

[21... hxg5 now 22. hxg6 Bxe6

[22... Nd5 23. Rh7]

23. Rh7 wins]

[21... Nd5 also fails: it has two ideas: 22. hxg6 Nf6

[or 22... Ne3 23. Qc3 Ng2+ [23... Nf5 24. Nf7] 24. Kd1]

23. Nf7]

22. hxg6 d4 23. Nf7 Rxf7

[23... Qxe6 24. Rxh6 and Be5 wins]

24. gxf7+ Kxh8 25. Qc1!

missed this one

[25. Rxh6+ Kg7 26. Qc1 Bxe6 lets Black escape]

25... Qxe6 26. f8=Q+ 1-0

White played his attack in a bold and logical manner, although black avoided the most critical lines. Unless improvements can be found for white, the opening seems to be good for black.

[Dr. Dave](#)

31st Torbay Congress

Toorak Hotel, Torquay

15 - 17 November 1996

Congress secretary John Dunleavy reports: -

A total entry of 233 (6 up on last year) enjoyed a lot of sunshine and first class playing conditions in a hard-fought congress in which not one competitor scored 100%. 31 cash prize winners shared almost [[sterling]]2,000. The top seed, Croatian GM Bogdan Lalic, with a 52 BCF grading point advantage over the next highest graded player, duly won the [[sterling]]250 1st prize, but not without going a pawn down to A. P. Smith in the last round and having to concede a draw. It is a curious coincidence that GM John Nunn suffered similar frustration in this tournament two years ago, when he too was in pursuit of a Leigh Grand Prix maximum.

Results:

Open: (43 entered)

1st B. Lalic (Slough) 4 1/2

2nd= M. J. Franklin (Richmond) 4

E. Lea (Supermarine)

G. Lilley (Prescot)

A. P. Smith (Slough)

Grading prizes:

U175 D. J. Hodge (14yrs) (Teignmouth) 3 1/2

U160 P. Scott (16yrs) (Paignton) 3

Junior Book Prize:

Andrew Greet (Truro School)

Major (Under 155) 53 entered

1st E. B. Sandercock (Chalfont) 4 1/2

2nd= I. D. Evans (Bedford) 4

L. Evbuonwam (Wimbledon)

A. A. Frangleton (Exeter)

A. Wright (18yrs) (Torbay Juniors)

Grading prizes:

U140 I. S. Annetts (Tiverton) 3 1/2

U130 R. N. Allen (Bristol & Clifton)

S. McCabe (Ireland)

Junior Book Prize:

Nick Frost (Tiverton)

Intermediate (Under 125) 71 entered

1st= G. L. Bishop (Metropolitan) 4 1/2

J. Brief (Edgware)

R. Fisher (Sutton & Cheam)

D. R. Rogers (Exmouth)

Grading prizes:

U115= T. J. Chapman (Yeovil) 4

T. Heron (E.E.C.)

U105 P. Rivers (Carlisle)4

Junior Book Prize:

Robbie Scott (Tiverton)

Minor: Under 100 66 entered

1st= D. Buckley (Bushbury) 4 1/2

C. Kerrigan (Didcot)

D. C. Scott (Tiverton)

Grading prizes:

U90= R. Barnett (Stratford on Avon)

I. Greenhalgh (17) (S. Hams)

W. W. Pope (Bodmin)

U80= A. C. Mansfield (Taunton) 3 1/2

I Sarginson (Wellington)

N. Went (Thames View)

Junior Book Prize:

Sean Ariss (Torbay Juniors)

Ralph Newman Cup for the highest score by a Devon player plus a Dinner for 2 at the Toorak

D. R. Rogers (Exmouth) 4 1/2 in the Intermediate

D. C. Scott (Tiverton) 4 1/2 in the Minor

Scott won the prize on a tie-break.

And now for the game from Round 5 that cost Bogdan Lalic a maximum score.

White: A. P. Smith. (190) Slough

Black: B. Lalic (253) Slough

Sicilian Defence

1. e4 c5 2. Nf3 d6

3. d4 cxd4 4. Nxd4 Nf6

5. Nc3 a6 6. Bg5 e6

7. Be2 h6 8. Be3 Be7

9. O-O Nc6 10. f4 O-O

11. Qe1 Nxd4 12. Bxd4 b5

13. Bf3 Bb7 14. Rd1 Qc7

15. e5

There now ensues wholesale exchanges from which Lalic emerges a pawn down and with it the chance of undisputed 1st place and maximum Leigh Grand Prix points.

[Dr. Dave](#)

Tutorial on En Passant

The chess move known as "en passant" (which is a French phrase meaning "in passing") is very specialized and rarely comes up, but it is a legal and valid move, and is a part of chess just as much as castling is.

First, let us explore a brief history of chess relevant to why the en passant capture even exists, which will help in remembering how it works.

Back in the bad old days, chess was not played by modern rules, and was a relatively dull game. Prior to the modern rule changes (which went into effect during the Renaissance period in Europe), the Queen was one of the weakest pieces on the board, as it could only move one square at a time, much like the king. Pawns only moved one square at a time, even on the first move. There was no castling - this had to be done manually. Also, there was no pawn promotion - a pawn reaching the end of the board simply stopped there. This is not a complete list of differences, but it gives an idea as to what chess was like prior to the modern rules.

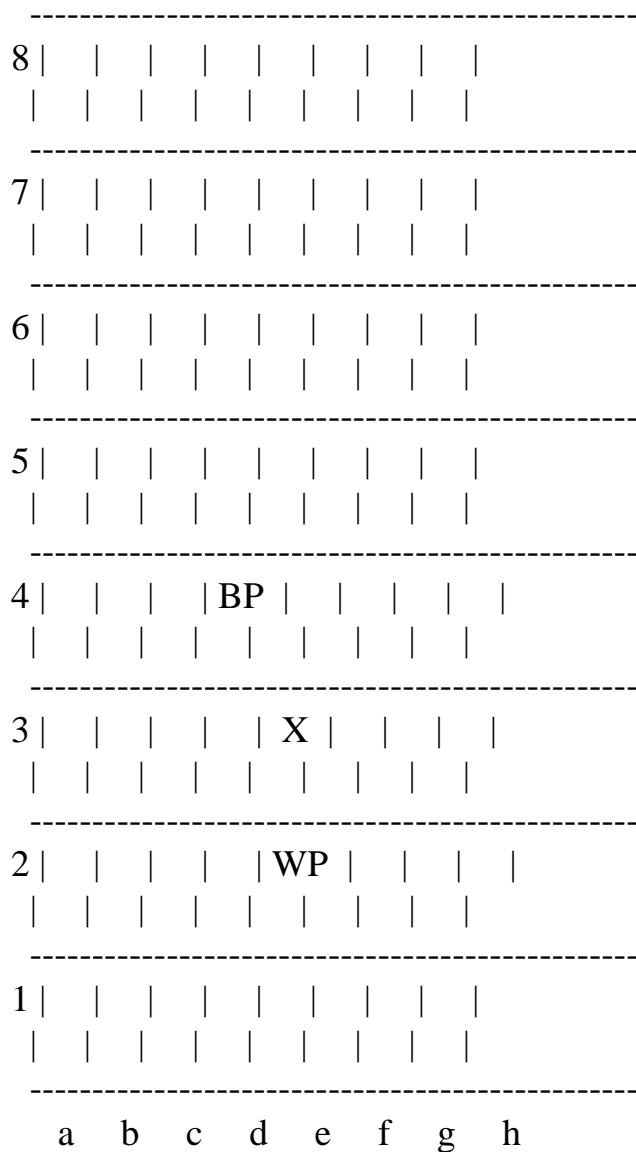

Obviously, the lack of a powerful Queen makes the game less exciting, reducing the possibilities for attack. The lack of pawn promotion, while making games less exciting because this threat did not exist, also resulted in many more drawn games, since there would be no way to checkmate with a king and a lone pawn, or to force it at all with any number of pawns. Also, having to take two turns to move any pawn to the fourth row, plus having to take a minimum of four moves to castle by hand, greatly slowed down the early phases of the game.

The game obviously needed some livening-up. The pieces were given more range, the Queen getting the biggest boost, pawns were allowed to promote, and to get rid of the dead weight at the beginning, castling was made a one-move affair, and pawns could advance two squares on the first move. This meant that contact with the enemy pieces would come much sooner in the game. However, one "problem" arose.

Consider the situation where pawns can only move one square forward. This would mean that assuming no pawns had been captured yet, any pawn proceeding forward must eventually risk being captured by an enemy

pawn. When the rule change involving pawns being able to move forward two squares took place, this was no longer true. Consider this position:

Black

White

where BP = Black Pawn, WP = White Pawn. The letters and numbers along the sides of the board are the coordinates for each square, the lower left being a1, the upper right being h8. The White Pawn is on e2, the Black Pawn on d4.

Notice that the Black Pawn is attacking the square e3, marked with an "X" in the diagram above. No piece can move there without the possibility of being captured by the Black Pawn. Under the old rules,

this would restrict the movement of the White Pawn, as it would have to move from e2 to e3 before it could go any farther. However, under the modern rules, since this White Pawn is on its home square, it has the choice of moving two squares forward, to e4, passing right over the e3 square. This would mean that the pawn on d4 would no longer be able to prevent the pawn on e2 from moving forward. This was a side effect the rule changes were not intended to create, so a solution was invented. That solution is en passant.

When a situation like the above occurs (or the reverse situation for Black, with the Black Pawn at home on e7 and the White Pawn d5, for example), and the Pawn on its home square takes the option of moving two squares forward, passing over the square guarded by the enemy pawn, only at this time can an en passant capture be made. In the above example, after the White pawn moves forward two squares, we reach this position:

Black

| | a | b | c | d | e | f | g | h | |
|---|---|---|---|----|----|---|---|---|---|
| 8 | | | | | | | | | 8 |
| | | | | | | | | | |
| 7 | | | | | | | | | 7 |
| | | | | | | | | | |
| 6 | | | | | | | | | 6 |
| | | | | | | | | | |
| 5 | | | | | | | | | 5 |
| | | | | | | | | | |
| 4 | | | | BP | WP | | | | 4 |
| | | | | | | | | | |
| 3 | | | | | X | | | | 3 |
| | | | | | | | | | |
| 2 | | | | | | | | | 2 |
| | | | | | | | | | |
| 1 | | | | | | | | | 1 |

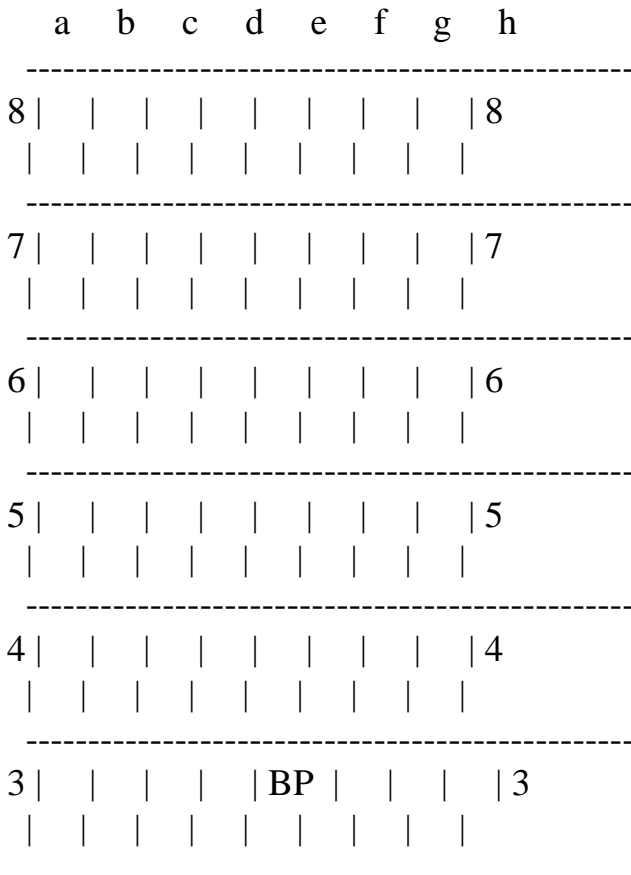

White

In this example, it is now Black's turn. To rectify the problem that has arisen from the rule changes, Black now has the option of capturing White's Pawn en passant. This is true only for the turn immediately following the White Pawn moving two squares forward, otherwise the option to capture en passant is forfeited.

To execute an en passant capture of White's Pawn on the very next turn, Black pretends (he does not physically move White's Pawn) that the White Pawn only moved one square, not two, and captures the Pawn just as if it were actually standing on the square marked with the "X", e3 in this case. The Black Pawn passes behind the White Pawn, to the square marked by the "X", and the White Pawn is removed from the board. The final position would leave the Black Pawn standing alone on e3, like so:

Black

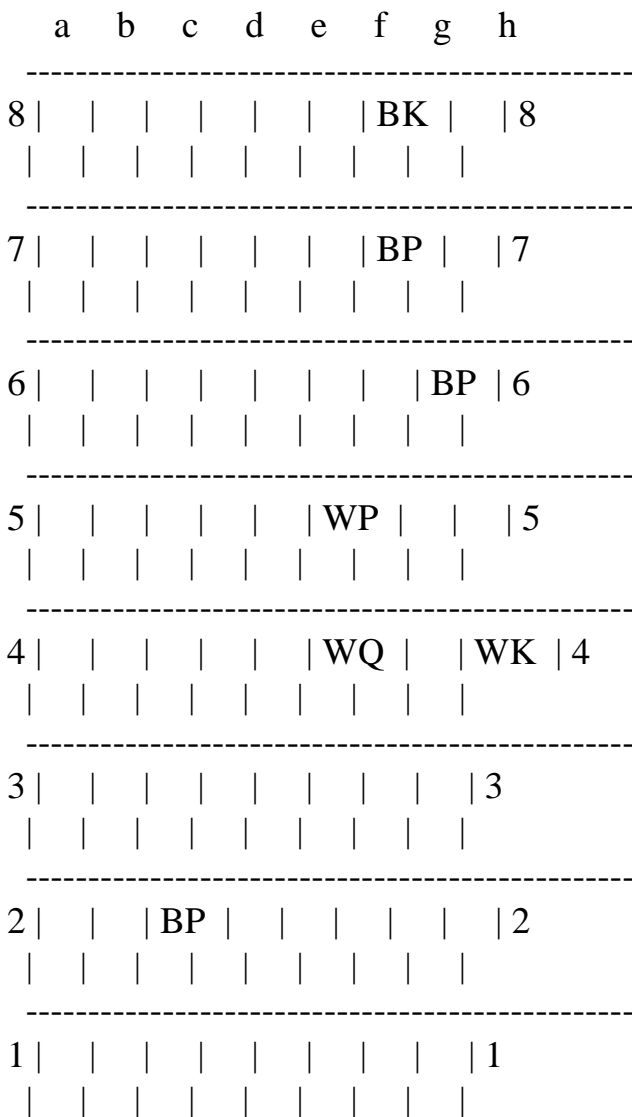

White

As mentioned above, this type of situation does not come up that often, but when it does, knowing about having this option can mean the difference between winning and losing. For example, consider this position, which you may want to set up on a board in order to follow along:

Black

a b c d e f g h

White

W = White B = Black P = Pawn Q = Queen K = King

White is obviously winning here, but Black still has one trick left up his sleeve. He can move his pawn from g7 to g5, giving us the following position:

Black

a b c d e f g h

8 | | | | | | | BK | 8

7 | | | | | | | | 7

6 | | | | | | | BP | 6

5 | | | | | WP | BP | | 5

4 | | | | | WQ | | WK | 4

3 | | | | | | | | 3

2 | | | BP | | | | | 2

1 | | | | | | | | 1

a b c d e f g h

White

This creates a situation known as a fork, when two pieces are attacked simultaneously by a single piece. The White King is in check, and the White Queen is being threatened at the same time. Also, notice that the Pawn on g5 is protected by the Pawn on h6, which means White cannot simply get out of this situation by capturing the Pawn with his King or Queen. Still, the best that White could do, if he did not know about en passant, would be to capture the Pawn on g5 with his Queen (F4-G5). Black would then capture the Queen with his Pawn (H6-G5), giving check a second time. White would then capture the Pawn with his King (H4-G5). It would then be Black's turn, and White would have no way of stopping Black from queening his Pawn on C2 (C2-C1). This would be enough for Black to win easily.

However, if White knows about en passant, the outcome is entirely different. Going back to the above diagram (after Black has just moved his Pawn forward two squares, forking White's King and Queen), White instead uses his Pawn on F5 to capture Black's Pawn en passant (F5-G6). This saves White's Queen, which is guarding the C1 square, and stops Black from successfully queening his Pawn, since now C2-C1 is now answered by F4-C1. Now it is White who has the easy win.

Good Chess Guidelines for Beginning & Amateur Players

First, a quick primer on the relative values of the pieces. These values only have meaning when deciding whether or not to trade pieces. One is not necessarily winning just because one has more material. Having said that, here it is:

Pawn = 1 Knight = 3 Bishop = 3.25 Rook = 5 Queen = 9

The King is never actually captured, and thus is not listed. The Bishop, while slightly more valuable than a Knight in most cases, is often traded on an equal basis with the Knight. Two Bishops, however, is almost always better than Two Knights, as the advantage of the Bishops is additive. In fact, one place they are definitely superior is in the endgame. You can force checkmate with Two Bishops vs. a lone King, but cannot force checkmate with two Knights vs. a lone king. Also, in chess parlance, the Pawn is not considered a "piece" - Pawns and pieces are usually referred to as separate things. Knights and Bishops are considered minor pieces, Rooks and Queens major pieces. If you hear someone say he is "a piece up", that generally means he is a minor piece ahead in material. If he were a Rook or Queen up, he would usually specify which. If you've managed to trade your Knight or Bishop for a Rook, you are said to be up the Exchange. Trading a Bishop for a Rook is called being up the minor Exchange, and trading a Knight for a Rook is called being up the major Exchange, though most often no distinction is made between the two, as the difference is small. Having defined a few terms, on to the guidelines.

1. Start with moving a center pawn 2 squares forward. This occupies and controls the center, meanwhile opening lines for your pieces to get into play (in chess parlance, we say the pieces are "developed" when brought into play). This also allows you to keep the side (or "wing") pawns intact so your King has a safe place to castle later. This rule is here because center-pawn openings are both the easiest to play and to understand, and should be concentrated on by the beginning player. It does not mean other choices are bad, they're just not good ones for beginning players.

2. Make only as many Pawn moves as is necessary in the opening to effectively develop the rest of your pieces or as necessary for

defense. This is usually no more than four in the early opening phase of the game. The end of the opening phase is generally considered to be reached when all the pieces have been developed and the King has castled.

3. Get all your pieces developed as quickly as possible. One piece will not accomplish anything by itself, and you basically can't do anything until you do this first.

4. Develop Knights before Bishops. People will give many reasons for this, but as William Lombardy, a US GrandMaster, once told me, those other reasons are basically so much hot air. The real reason is that Knights move more slowly than Bishops, and take longer to get where they're going. A Bishop can travel long range and be developed almost instantly to the desired square. While I think the other reasons may have some minor impact, I think he's essentially correct.

5. Develop Knights toward the center (not the edges). Remember, "A Knight on the rim is dim." This is because it only has half the scope there as in the center. You can prove this by putting a Knight in the center of the board, and counting the squares it attacks (you should get eight), and then putting it on the side, and counting how many squares it covers (four). Since this placement has a larger effect percentage-wise on the Knight than any other piece (try it - and notice what happens to the Rook!), and the Knight is also a slow moving piece, this rule actually applies to almost all pieces, but especially the Knight.

6. Castle early for King safety and to develop the Rooks, usually immediately after the development of Knights and Bishops, sometimes even before both Knights and both Bishops have come into play, depending on necessity. If you can wait until the Knights and Bishops are in play, however, this gives you the choice of deciding on which side to castle, though sometimes there is only one good choice, as one wing or the other may already be weakened, in which case delaying would give no benefit. See items #1 and #21.

7. Do not move a piece twice in the opening. Doing so delays getting your other pieces developed and delays castling.

8. Do not bring the Queen out too early. It is a valuable piece, and therefore an easy target for lesser pieces. If you bring it out too early, you are likely to find yourself moving the Queen over and over

to get it to safety (repeatedly violating guideline #7), and delaying the development of your pieces while your opponent essentially takes one free turn after another, developing his. If you need to move it so your King can castle queenside, generally moving it up to the second rank just to get it out of the way is ok. Moving it farther than this before you've finished development is usually inviting trouble.

9. Control the center squares. Traffic generally has to run through the center of the board in one way or another. Control the center of the board, and you usually will have more freedom to put your plans into effect than your opponent, as your pieces will have more scope & power from the center of the board, being able to get to any spot on the board relatively quickly.

10. Keep one or more Pawns in the center. This helps you achieve #9 above, as one way to control the center is by occupying it, and Pawns are the most difficult piece to budge.

11. Place your pieces on open lines (open lines are lines of movement that are unobstructed by pawns). Place Bishops on open diagonals, Rooks on open files (files are columns, ranks are rows).

12. Coordinate your pieces to work together. One common way to do this is to double pieces up, such as putting a Queen and Bishop on the same diagonal, or putting two Rooks on the same file or rank. They support each other's movement along the diagonal, file, or rank in question, and are essentially twice as powerful this way.

13. When protecting a piece, use the least valuable piece available to do so. Especially, protect Pawns with Pawns (forming a Pawn chain). Why tie up a valuable piece to protect a Pawn if it's not necessary? Not only does using less valuable pieces for protection free up the more powerful pieces, but the less valuable pieces are less likely to be scared away or dislodged from their defensive posts.

14. Avoid isolated Pawns if possible. Isolated pawns are those that can no longer be protected by an adjacent pawn (because there are no pawns on the adjacent files). Isolated pawns generally occur as a result of Pawn captures being made, so carefully look at the resulting Pawn structure when you have the choice of capturing with a Pawn or another piece. Isolated pawns are weak because they are subject to attack and must be defended by other pieces.

15. Especially avoid doubled isolated Pawns. Doubled Pawns are two pawns of the same color on the same file. The Pawn in back is weak because its movement is inhibited by the Pawn in front. This is not terribly weak by itself. However, doubled isolated Pawns are very weak, as they both cannot be supported by other pawns and cannot move freely, a bad combination.

16. Make moves that threaten, when possible. These moves limit your opponent's choices, and basically allow you to call the shots, as your opponent usually must respond to your threat before proceeding with his own threats. Alternately, do not get carried away with making your own threats to the point that you overlook your opponent's threats. Being the one who is calling the shots is called having the initiative.

17. Don't make pointless threats. This includes checks. Checking or attacking something simply for the sake of doing so has no value. If the threatened piece can simply move away with no detrimental consequences, and there is no advantage to you in making the move in the first place, then the threat is pointless. Doing this can even force your opponent to make a good move. Pointlessly threatening a Knight on the rim just forces your opponent to move it back towards the center of the board, for example. However, if the Knight is trapped there, then attacking it would allow you to win the piece.

18. When ahead in material, exchange pieces. For example, if the total value of your pieces on the board (see relative values listed above) is 16, and the total value of your opponents pieces is 11, this is roughly a 3 to 2 edge. Trade Rooks, however, and now the total value of your pieces is 11, your opponent's pieces have a total value of 6. This is almost a 2 to 1 edge, which is obviously better.

19. When behind in material, don't exchange pieces. This is essentially #18 looked at from the other side of the coin.

20. When you are attacked, try to exchange the attacking pieces to reduce the power of the attack. This takes precedence over #18 & #19, as the safety of the King is more important than anything else.

21. Don't weaken Pawns in front of your castled King. Generally this means don't move them unless you absolutely have to. Once moved forward they become easier targets for attack.

22. Try not to leave your pieces in positions where they are loose (undefended). Loose pieces become targets for attack, and are more likely to be lost than pieces that are defended.
23. Avoid creating holes in your position. A hole is a square that can no longer be defended by a Pawn. Since a Pawn is the most useful piece when it comes to threatening another piece to make it move away from a particular spot, this would mean a piece can lodge itself in this hole and be extremely hard to drive away. This is especially bad if the hole is near where your king is hiding out.
24. Bring your King into action in the endgame. Once the danger of the middle game is over and there are very few pieces on the board, the King need not cower in the corner anymore. He instead becomes a powerful attacking piece.
25. Find your opponent's weaknesses and exploit them. This may be anything from a set of doubled or isolated pawns to a vulnerable King position to something as esoteric (and beyond the scope of this file) as a weak square or a lack of development. To understand how to exploit these weaknesses, play over master games, and watch how they do it. Games of the old masters (Morphy, Tarrasch, Nimzovitch, Lasker, & Capablanca, for example) often illustrate these concepts better than modern games, as they are simply easier to follow and more straightforward in their style of play.
26. Don't sacrifice a piece without a clear reason, like a DEFINITE checkmate. Only masters are justified in making speculative sacrifices, and even they will not generally do so. Speculative sacrifices fail much more often than they succeed. If your name is Mikhail Tal, you can ignore this one.
27. Always assume your opponent will make the best move. Assume he will be fooled, and you will eventually set yourself up for trouble. Only by determining the best moves for both sides can accurate analysis be done.
28. Do not follow any of these preceding guidelines blindly or mechanically. Analysis always supersedes these guidelines. If your analysis says you have checkmate in three moves no matter how your opponent replies (you are said to "have mate in three"), then all the guidelines go out the window. Obviously, it doesn't matter if you

have to put your Knight on the rim to deliver checkmate. If you see a specific reason to break a guideline, such as mate or the win of material, particularly of a piece or more, and you believe your analysis is sound and the benefits outweigh the negatives of breaking that guideline, then by all means break it. These guidelines are simply to help you win, and are not hard and fast rules for every situation. This leads us to #29...

29. Be careful when grabbing material, as it can be used as a way of luring your pieces into positions where they will be useless to prevent an onslaught against your King, or even in preventing your pieces from ever developing and getting into the game. But as Bobby Fischer once said (paraphrased), "If you can't see a good reason not to take a piece, then take it." Simply put, don't get greedy over material at the expense of the safety of your King, but don't refuse outright gifts, either.

30. And fittingly last, if you are playing a game and are a Rook down or more, with no attack, passed pawn (a Pawn whose passage is unopposed by other pawns and thus is a serious threat to promote to a queen), or other significant compensation, against a knowledgeable player who is not likely to blunder badly enough for you to get back in the game, graciously resign and get on with the next game. There are exceptions to this, especially with timed play and/or when tournament prize money is on the line at the amateur level, but it is generally a sign of good sportsmanship to admit when you've been defeated and congratulate your opponent. This almost always occurs at the master level, regardless of circumstance - few would be caught dead playing drearily on until the inevitable mate is delivered. It should always occur when the games are friendly. Also, if you are the victor, be gracious about winning, don't gloat, and compliment your opponent on the things he did right.

Exeter Chess Club: srbc.html

Semi-Random Baseline Chess

(wild style 1 on Free Internet Chess Servers)

White and Black play with piece arrangement, where each side's pieces are shuffled separately at random subject to two constraints:

- (1) because castling is such a big part of the game and adds so much more to planning ("I'll provoke a2-a3 so they won't castle queen's-side") the possibility of castling on either side should be preserved. After that, the pieces are randomly shuffled, subject to
- (2) there being bishops of either colour square.

This yields (I think) 18 different starting arrays, as follows:

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| • |  |  |  |  |  |  |  |  | (Horwitz bishops!) |
| • |  |  |  |  |  |  |  |  | |
| • |  |  |  |  |  |  |  |  | |
| • |  |  |  |  |  |  |  |  | |
| • |  |  |  |  |  |  |  |  | (I think Capablanca suggested
this variant once, just to scupper opening theory) |
| • |  |  |  |  |  |  |  |  | |
| • |  |  |  |  |  |  |  |  | |
| • |  |  |  |  |  |  |  |  | |

Exeter Chess Club Canon

example game - for analysis (QUESTIONS) [E09] analysis: BCF (class III), 1994

1. d4 Nf6 2. c4 e6 3. g3 d5 4. Bg2 Be7 5. Nf3 Nbd7 6. O-O c6

a. Can you suggest a more active line for Black instead of this move?

7. Nbd2 O-O

b. Would 7...dxc4 be better than this move? Give a simple reason for your answer. **8. Qc2 b6 9. e4 Nxe4**

c. This knight move turns out badly for Black: can you suggest a sounder line of play for Black to pursue?

10. Nxe4 dxe4 11. Qxe4 Bb7 12. Re1 Re8 [12... Qc7 13. Bf4 Bd6 14. Ng5 Nf6

d. Is this line with 12...Qc7 better than the line played? Support your answer with two or three moves of analysis.

HINT: 15. Nxe6]

13. Qc2

e. *Is this move a waste of time? Explain your reply briefly.*

13... g6

f-i. *What is the bad effect of this move for Black?*
f-ii. *Do you think 13...c5 would have been better?*

14. Bf4 c5 15. d5

g. Would you give this move a "!", "!?" or "?" ?

15... exd5 16. cxd5 Bf6

h-i. Should Black have played 16...Bxd5?

h-ii. Give 3 or 4 moves of analysis to support your answer.

17. Rxe8+ Qxe8 18. Re1 Qf8

i. How would White have answered instead (i) 19...Rd8, or (ii) 19...Nb8?

19. Qa4 Qd8 20. Nd2 g5 21. Ne4

21... Bxd5

j. How would White have answered 21...gxf4? Give two or three moves of analysis.

22. Rd1 Bd4

k. How would White have answered 22...Be6? Give four or five moves of analysis

23. Bxg5 f6

l. White can now win quite quickly by playing either (A) 24.Bxf6, or (B) 24.Nxf6+, or (C) 24.Rxd4. Give analysis to demonstrate the win in each case. **24. Bxf6 1-0**

Exeter Chess Club: Tactics\practact.html.txt

Exeter Chess Club: Practical Tactics Exeter Chess Club: Practical Tactics Introduction The elements of combination Sight of the board Combinational vision Varieties of error Getting your mind right Candidate moves The calculation of variations Good practice and further reading Bibliography Net reading Introduction "It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired" -- RETI [Coincidentally this document was followed by a useful UseNet post by NM Dan Scoones.] The way it works is this: My mum and dad taught me how to play chess, and when I was about 9 I went to the school chess club. I sat down to play a small boy, took the Black pieces and was mated in four moves (Scholar's Mate). To the best of my recollection I have never fallen for it since, and while I can't ever remember perpetrating that particular sequence on anyone else, I have delivered mate on f7 a number of times. Learning and applying tactics is just that: you learn to recognise a pattern, you see it coming if someone tries it on you, and you can apply it in similar positions in your own games. In fact, once you know the patterns, a lot of the calculation comes pretty easily. "Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one' " -- Richard RETI. It used to be thought - perhaps because of statements like this, and a little early psychological research - that there wasn't much difference in the abilities of strong and weak players at analysis: rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences [see [Simon Webb's panel tests](#)]. So, the patterns and judgements are important, but you must also train yourself to analyse. Sir Peter Medawar once remarked, rather testily: "[the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought](#)". [A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*] No less a tribute may be paid to the editors at [Batsford and Cadogan and Chess Digest](#): there is a population of chessplayers who know about [mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win a Rook Ending. This piece is dedicated to the first of these failings. The elements of combination](#) A combination is a forcing sequence, often involving a temporary sacrifice, which results in an advantage - checkmate, win of material or a winning positional bind. Here's a nice example, which I think is not out of most players' reach: have a go at solving it (White to move and win) before reading on. [Becker-Jung, Eberstadt-Bensheim, 1948 \(wKh1, Qc3,Ne2,e3,Bd3,Ra1,f2,Pa2,b2,c4,e5,f4,g3,h2; bKf7,Qd7,Nc6,g6,Bh3,Ra8,h8,Pa7,b7,c7,d6,f6,g7,h5\) \[t + - + - + - T\] \[X x X d + j X -\] \[- + s X - X s +\] \[+ - + - P - + x\] \[- + p + - P - +\] \[+ - Q b N - P l\] \[p P - + n R - P\] \[R - + - + - + k\]](#) The different combinational themes are often called motifs. The theme or motif of this combination is the fork. There is almost no way you can find the combination in this position if you have not seen this pattern before. First, we examine the position for pointers. The Black pieces are not very well coordinated, and the Black King and Queen seem almost in reach - for example, if we had

protection for e6, we could think about e5-e6+ winning the Queen. In fact, f4-f5_ provides that protection, so 1. f5 (Knight moves) 2. e6+_ looks excellent, except that Knight moves 1...Ng6xe5_ , but it starts to look as though we might be on for something here. More details: we can, by Bxg6+_ , bring the Black King a little closer, and check it by f4-f5_ . In fact, we can check it immediately by e5-e6_ . Maybe some combination of these ideas might allow us to lure Black pieces to e6 and g6, and fork them by f4-f5. So, this fork becomes the idea of our combination. Next, the combination must now be calculated and the correct move order sorted out. We might try 1. Bxg6+ Kxg6 2. e6_ ... but Black might sidestep with 2...Qe7_ , or even take it 2...Qxe6, when 3. f5+ fails to 3...Qxe3_ ... Purdy coined the splendid term smite: you must learn to examine smiting moves, checks and captures. These are the most forcing and the key to starting most combinations. With this in mind we can reconsider our combination: the starting move 1. e6+_ is perhaps surprising, but once we consider the move at all we can see that it is very forcing, and after 1...Kxe6_ or 1...Bxe6_ we can play 2. f5(+) winning a piece. So, Black seems obliged to play 1. e6+ Qxe6_ . Now again, 2. f5_ fails to 2...Qxe3. Humph. The forcing sequence 2. Bxg6 + Kxg6 3. f5+ Bxf5_ seems almost to fizzle out, but then (aha!) 4. Nf4+_ forks King and Queen. Missed anything? No, all looks OK, so, Black has to lose a piece, probably by 1...Bxe6 when a couple of Pawns will be partial compensation. So, the elements of a combination are motif, idea, and calculation. You don't really change gear from one to the other when trying to come up with a combination in practice, but you do need to work on each separately if you are to improve. How did your attempt match up to my account of the solution? Missed the idea? Missed a defence? Muddled the move order? Hopefully what I describe below can improve your performance in each aspect. Even if that one seemed totally beyond you I'll at least show you how such a standard can be approached. _ "A thorough understanding of the typical mating combinations_ makes the most complicated sacrificial combinations leading up to them not only not_ difficult, but almost a matter of course." -- TARRASCH You must_ know all these motifs: K - knight forks L - last rank M - mating pattern N - network nobbled (Nterference) O - overloading P - pins Q - queening R - retreat S - sacrifice at castle gates T - two for the price of one [double attack] U - undermining (removing the guard) U2 - unmasking (discovery) V - vulnerable f7 W - weakening King's-side X - X-ray (skewer) [And there are others, I'm sure]. Once you are aware of these motifs you can apply them in your own games. See also Combinational vision below. "The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?" -- Reinfeld, to Thomas-Euwe, Carlsbad 1929. Sight of the board By which I mean, how deep can you analyse without losing track? The ability to play a game blindfold isn't that good a guide - I can remember a game where both players couldn't "see" that they could play Qa5xQh5 (or Qh5xQa5) for free! Playing a game blindfold against a computer is a test, though, and so is solving problems without moving the pieces. On a good day I can do six-move problems. I'm aiming at seven/eight. (But why do I still make one-move blunders? See below!) You can get this far solving positions one move deep, three moves, five moves and six moves deep. They are all knight forks, if you want a hint, although other motifs may make an appearance. knight fork combination (1), one move

[deep, 1997 \(wKe3,Nd5,Rc4,Pf4; bKe8,Nd7,Ra8,Pb6\) \[t + - + j + - +\] \[+ - + s + - + -\] \[- X - + - + - +\] \[+ - + n + - + -\] \[- + r + - P - +\] \[+ - + - K - + -\] \[- + - + - + - +\] \[+ - + - + - + -\] 1. Nc7+ : if you can't spot that one, don't read on! KFC \(2\) chernev/reinfeld, 1949 \(wKg1,Qa4,Ng3,Pf2; bKg7,Qg4,Nd4\) \[- + - + - + - +\] \[+ - + - + - J -\] \[- + - + - + - +\] \[+ - + - + - + -\] \[q + - S - + d +\] \[+ - + - + - N -\] \[- + - + - P - +\] \[+ - + - + - K -\] 1. Qxd4+ Qxd4 2. Nf5+ 1-0_ This 'decoy' of the Queen onto a forking square is very common in combinations with a Knight Fork motif. KFC \(3\), c/r, 1949 \(wKg1,Qd3,Nf4,Ra1,f1,Pa2,b2,c2,d4,g3,h4; bKg8,Qe7,Nc6,e4,Bd7,Rc8,Pa7,b7,c7,d6,g4,h7\) \[- + t + - + j +\] \[X x X 1 D - + x\] \[- + s X - + - +\] \[+ - + - + - + -\] \[- + - P s N x P\] \[+ - + q + - P -\] \[p P p + - + - +\] \[R - + - + r K -\] 1. Nd5 is an obvious first move for a tactic, and forcing because the Black Knight is loose; once considered, you should be able to wrap it up: 1. Nd5 Qe6 2. Qxe4 Qxe4 3. Nf6+ 1-0_ Black has better moves than 2... Qxe4, but if Black cannot recapture on e4, White wins a piece. KFC \(4\) zukertort - englisch, london, 1883 \(wKg2,Qb3,Nd5,Pc7,f3,g3,h2; bKe8,Qc6,Ne6,Pa7,f6,g7,h6\) \[- + - + j + - +\] \[X - P - + - X -\] \[- + d + s X - X\] \[+ - + n + - + -\] \[- + - + - + - +\] \[+ q + - + p P -\] \[- + - + - + k P\] \[+ - + - + - + -\] You've had your hint! It's a matter of nudging the Black pieces onto the right squares, which White can do neatly: 1. Qb5 Qxb5 2. c8=Q+ Kf7 3. Qxe6+ Kxe6 4. Nc7+ Kd7 5. Nxb5 1-0_ KFC \(5\) kofman-sakketi, corr., 1948 \(wKh1,Nc4,Rd1,e1,Pa2,b2,h3; bKc8,Qg3,Bd4,Pa7,b7,c7,f7,h7\) \[- + j + - + - +\] \[X x X - + x + x\] \[- + - + - + - +\] \[+ - + - + - + -\] \[- + n L - + - +\] \[+ - + - + - D p\] \[p P - + - + - +\] \[+ - + r R - + k\] White actually resigned here, but... 1. Re8+ Kd7 2. Re3 Qg7 3. Rxd4+ Qxd4 4. Rd3 Qxd3 5. Ne5+ 1-0_ Remember, this was a correspondence game, so time wasn't the issue - despair was. KFC \(6\) schlechtermieses, st.petersburg, 1909 \(wKg1,Qc4,Nd1,e2,Rc1,f3,Pa3,b2,d4,e5,g2,h2; bKc8,Qg5,Ng4,Bd6,Rd7,h8,Pa7,b7,c7,e6,f7,g7,h7\) \[- + j + - + - T\] \[X x X t + x X x\] \[- + - L x + - +\] \[+ - + - P - D -\] \[- + q P - + s +\] \[P - + - + r + -\] \[- P - + n + p P\] \[+ - R n + - K -\] Deep breath: 1... Bxe5 2. dxe5 Qh4 3. Rg3 Qxh2+ 4. Kf1 Rxd1+ 5. Rxd1 Qxg3 6. Nxg3 Ne3+_ with an easily winning endgame, so 0-1_ . Can you see the continuation after, say , 3. g2-g3, or other alternatives? \[3.Nf2 Qxh2+ 4.Kf1 Nxe5 5.Qc5 Nxf3 6.gxf3 - +; 3.h3 Qe1+ 4.Rf1 Qxf1+ 5.Kxf1 Rxd1+ 6.Rxd1 Ne3+ -+\] The other resource, besides these tactical problems, is simple chess studies: at their best they can make you pay close attention to the geometry of the board, like this one: chekhover, QN v Q, 1996 \(wKa1,Qh1,Nf3; bKe4,Qb8\) \[- D - + - + - +\] \[+ - + - + - + -\] \[- + - + - + - +\] \[+ - + - + - + -\] \[- + - + j + - +\] \[+ - + - + n + -\] \[- + - + - + - +\] \[K - + - + - + q\] 1. Ng5 is a very vigorous double-check, but the key is: 1. Ne5+_ In an actual game, you just play this straight away as the best winning attempt because there are so many ways for Black to go wrong. But for practice, can you follow it to the finish? These open-field combinations can be hard to keep track of, because of the apparently great number of choices at each turn. 1... Ke3 _ \[1.... Kf4 2. Qf3+ Kg5 3. Qg4 + Kh6 4. Qg6#\] \[1... Kf5 2. Qh3+ Ke4 or \[2... Kg5 3. Qg4+\] 3. Qf3+ Kd4 4. Nc6+\] 2. Qe1+ Kf4 3. Qf2+ Kg5 4. Qg3+ Kf5 5. Qg4+ Kxe5 6. Qg3+ Kf5 7. Qxb8 1-0_ Combinational vision Combinational vision is a product of experience and imagination, both of which broaden the chess mind. Experience_ : Once you have seen something, you might be able to implement an analogous idea in your own games. This is more than knowing the motifs; I mean you should continue to broaden your experience of combinations by examining new examples. An example from my own modest practice: I have known about knight](#)

forks for ages (ever since I kept finding them arriving on c7, checking and forking Ke8/Ra1). But once I had seen the famous finish of a Petrosian-Spassky game (see the entry for Petrosian in the Style section of Canon), I could see the same thing going on in my own game. This rather reminds me of the old psychological tests based on embedded figures; finding combinations seems a bit like that.

Imagination : I used to think that the creative imagination was something mysterious and intangible, which could neither be described nor trained. While there may always be something elusive about artistic creation, some thinking by people like Liam Hudson and Daniel Dennett gave me some cause to hope. Creativity is not a simple product of unfathomable inspiration, but a result of firstly, generating lots of (mostly junky) ideas, and then weeding them out to discover the ones that work. If this is true of the expressive arts, then it surely also applies to chess, where the ideas have such concrete prompts on the board, and the selection of the ideas that work can be put to the simple test of analysis. Put simply, this suggests that someone like Tal can come up with great ideas because they come up with loads of ideas, good, bad and indifferent, and then can select the great one. The problem with most of us is not that we are failing to come up with enough good ideas, but we are failing to come up with enough ideas, full stop. Our ability to spot combinations is limited by our tunnel vision, considering only a few moves of a stereotyped nature, and not having the habit of looking at every thing once, no matter how foolish at first sight. Developing imagination, then, is not a matter of learning how to do something terribly magical, but to some extent involves putting aside what you think you know (retreating pieces is bad, putting your Queen en prise is bad) and considering moves that only very good players - or very bad players! - look at. Varieties of error The way it is supposed to work is: A tactic appears for you: you get it right. But we also see: A tactic appears for you: you miss it. A tactic appears for your opponent: you miss it. A tactic appears for you: you see it but analyse it wrongly. A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome. A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon. A tactic appears for you: you get it right. The idea is easy, but can you analyse it to a finish? Regis,D - Lane,P (1994) [t - - D j + t +] [X x X l S x + q] [- + - + x - - +] [S - + - P - B -] [- + b + - - - +] [+ - P - + n + -] [p P - + - P p P] [+ - K r + - + r] 13. Bxe6 fxe6 14. Qh5+ Kf8 15. Bh6+ Rg7 16. Ng5 Qe8 17. Nh7+ 1-0_ Ah, if only it was all like that... A tactic appears for you: you miss it. Regis,D. - Aston,P (1994) [- + j + - L - T] [X - + t + r X x] [- + - + - - - +] [+ - P x Q - + -] [- + - + - - D] [+ n + - P - - -] [p P p + - + p P] [R - + - - - K -] 21. Qe8+?? _ [21. Qe6 Qd8 22. c6 or even 21. Rxd7 Kxd7 22.Rd1] ...1-0 Patzer sees a check... It didn't affect the outcome in the end but White had to start all over again to build up another combination. A tactic appears for your opponent: you miss it. Oh, how many times... asleep, overconfident or confused, we ignore our opponent's best reply. Regis,D - Stirling,A (1984) 1. e4 Nf6 2. e5 Nd5 3. c4 Nb6 4. c5 Nd5 5. Bc4 e6 6. Nc3 Nf4 _ [t S l D j L - T] [X x X x + x X x] [- + - + x - - +] [+ - P - P - + -] [- + b + - S - +] [+ - N - - - - -] [p P - P - P p P] [R - B q K - N r] 7. Qg4 Qh4 ...0-1_ There are lots of opening traps like that: White bites off more than he can chew. A tactic appears for you: you see it but analyse it wrongly. Regis,D. -Stooks, Charles (1993) [- T l L - + t J] [S - + d + x + x] [- + - X - P x Q] [+ x X n X - + -] [- + p + p + - +] [+ - + p + - P -] [- P - + n + b P] [R - + - + r K -] 19. Nef4? _ (yes, very good but unfortunately 19...exf4; 20 Rxf4, g5!

gets at least a draw! 20 Nxf4 also fails to 20...g5) 19... Nc6?? _ [19... Qb7] 20. Nh3 Qg4 21. Ng5 1-0

Simple over-optimism: I didn't consider 20...g5. A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome. Ward,D - Regis,D (1994) [- + - + t T j +] [+ x X - + - + -] [x + - X - + - X] [+ - + p L s X d] [p + p + n X - +] [+ - + - + p + p] [- P - + q B p +] [+ r + - R - + k] 26... Bd4 27. Bxd4 Rxe4 28. Qxe4 Ng3+ 29. Kg1 Nxe4 30. Rxe4 Re8 31. Rbe1 Rxe4 32. Rxe4 Qf7 33. Re6 Kh7 34. Rf6 _ [34. Kh2! ...when it's all a bit tricky!] 34... Qe8 35. Re6 Qxa4 36. Re7+ Kg6 37. Rxc7 Qd1+ 0-1

The tactic was obvious enough, what I failed to assess was how good White's pieces would be in the ending. A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon. Wilcox, RJ (1830) - Regis, D (1945) (3) [B06] Paignton Challengers, 1996 [- + - + t + j +] [+ - + l T x L -] [- + - + - S x +] [X - + - D - + x] [p + x N p + - +] [N x P - + b + p] [- P - + - Q p +] [+ - + r + r + k] I though I could wrap things up here: 28... Nxe4?! _ was an obvious first choice, trying to win a Pawn. Does it win a Pawn? Oh no, because of Nxc4. No, I was right, it does win a Pawn, because I've always got both ...Bxh4 and ...Bxa4. So... 28... Nxe4?! _ [28... Qc7! wins, I think] 29. Bxe4 Qxe4 30. Nxc4 Qd5

And of course I realised here I'd blown it:30... Bxa4? 31. Nd6! This is very common: stopping analysis at the end of a sequence favourable to you. But after that, it's your opponent's move! As we start to comment more deeply on these examples, we see two sources of error: mistakes or bad habits in analysis, on the one hand, but also misjudgements on the other - errors in the general assessment of the board or the opponent. It is just the first of these I am concerned with here; else we are raising another big issue about attitude. Getting your mind right_ I don't know any exercises to improve your mental attitude, but awareness - particularly self-awareness - is important in eliminating all sources of error, not just tactical ones. I have written and collected material elsewhere about getting your mental attitude right: there are examples (good and bad) in the Psychology section of the Canon, there is some good advice on a Poster for Juniors, and in a compilation of Advice for the middlegame. However, in this document on tactics I'll mention the issue of attitude in this aside, and return to the matter at hand.

Combinations do not usually come out of nowhere - they are based on a superiority in position , and you can tell when a combination is likely to be around: Exposed or "stalemated" Kings are always vulnerable_ Undefended or 'hanging' pieces often lead to trouble . Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised.

. This last category can be hardest to spot, because it is so common. There is some sense in which, as Lasker described, there should be some justice in chess - have you done enough, to deserve to win? that is, have you a big enough advantage? This is to some extent a matter of judgement, but if you feel you have a good advantage in space or mobility, then you should look: "No combination without a considerable plus, no considerable plus without a combination [...] In the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power and will of intellect, because the combination must exist, however deeply hidden." -- LASKER. I like this quote, but it has to be said that while there are 'just' and logical combinations where you (say) carry out a combination based on a campaign against the long-term weakness of a Pawn, there are also 'accidental'

combinations which seem to be based on nothing but the chance arrangement of pieces, and there are also traps - so diligence in searching for tactics is required at almost every move. you must routinely check all positions for tactical opportunities you must think for your opponent as well as yourself How can you make sure that you get better at this? Determination alone may not be enough: we need a bit more theory, and practice. Candidate moves The first bit of theory is the search for candidate moves; I also owe my appreciation of the idea of candidate moves to Kotov. "All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another." -- ALEXANDER KOTOV The idea is, to make sure you don't overlook some vital idea at the start of analysis. Varley - Hewson, WECU Jamboree [B18], 1993 Black has a restricted position and is behind in 'development' (=getting his pieces out) but his pawn structure is very solid. Can Black get away with this, or can White show the flaw in Black's move order by the sacrifice Bxe6? What do you think? [t S - D j + - T] [X x + - + x X I] [- + x L x S - X] [+ - + - + - -] [- + b P - N - P] [+ - + - + - N -] [p P p + q P p +] [R - B - K - + r] 11. Bxe6 An enterprising sacrifice! White hopes to catch Black's King in the centre. 11... O-O! Unflappable Exeter player Brian Hewson calmly sidesteps the main line of a sacrifice (11...fxe6) threatening a pin on the e-file. 12. O-O Bxf4 13. Bxf4 fxe6 14. Qxe6+ Kh8 ... and Black consolidated and won. [0-1] It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move at the outset before analysing any one move deeply. Had White done this he could not fail to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8, and could not fail to realise that it refuted the sac. There is another example or two illustrating the 'candidate move' idea from Simon Webb's panel tests, and the commentary on Nunn's games in the Analysis section of the Canon. There are certain sorts of moves which are easy to spot (or train yourself to spot: like checks, captures, and so on. There are also certain classes of move which are difficult to make yourself consider - here are a few surprising/paradoxical moves. You should (a) make sure you know these models, (b) collect and review other examples, (c) see if there are either types of moves which you or somebody else found difficult to anticipate. Retreats Christiansen - Karpov (1993) 1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6 9.Nxc6 Bxc6 10.Bf4 Nh5 11. Be3 Bd6 (wait for it...) [t + - D j + - T] [X - + x + x X x] [- X I L x + - +] [+ - + - + - + s] [- + p + p + - +] [P - N - B - + -] [- P q + - P p P] [R - + - K b + r] 12.Qd1 1-0 The error made by Karpov above is actually a common one - missing an undeveloping retreat. Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on. Another example: Putting pieces en prise Fischer - Sherwin, USA Ch'p , 1957 [- + - + - T j +] [+ - + - + x X x] [- + - X - + - +] [+ - + b + - D -] [r + - + p + s +] [+ - T - + - + -] [p + - + q + p P] [+ - + - + r + k] 30. Rxf7 Rc1+ 31. Qf1!! h5 32. Qxc1 Qh4 33. Rxf8+ Kh7 34. h3 Qg3 35. hxg4 h4 36. Be6 1-0 How about that one: a Queen moving backwards into a position where it can be captured! 'Silent' sacrifices You can get so used to looking for 'smiting' moves that apparently non-forcing, 'quiet' sacrifices can be surprising: Fischer,R - Benko,P, ch-USA, 1963 [t + - + d T - J] [X x + - + x L x] [- + x

S - + - +] [+ - + - + - + q] [- + - X p + - +] [+ - N b + - + p] [p P p + - + p +] [R - + - + r K -] Obviously, there is a mating attempt at h7 but [19. e5 f5 20. Qxe8 Nxe8 21. Ne2 Bxe5 22. Rxf5 Bf6=] 19. Rf6! This is what I mean: a silent sacrifice of the Rook, which actually leaves Black helpless. Chess may not be an art, but moves like this have a strong aesthetic effect, at least for me - I like the apparent subtlety of the sacrifice without a check or capture, and I like the drama of giving Black an apparently free move for the defence - which he cannot make use of. 19... Kg8 _ [19... h6 20. e5 [20. Rxh6++-] 20... Kg8+-] 20. e5 h6 21. Ne2 1-0 'Creeping moves' I keep alluding to Purdy's advice: "examine moves that smite!" But have a look at this: Spassky - Korchnoi, Kiev, 1968 1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f3 O-O 6. Be3 Nc6 7. Nge2 a6 8. Nc1 e5 9. d5 Nd4 10. Nb3 Nxb3 11. Qxb3 c5 12. dxc6 bxc6 13. O-O-O Be6 14. Qa3 Ne8 15. h4 f6 16. c5 Rf7 17. Qa4 Qc7 18. Bc4 Bxc4 19. Qxc4 Bf8 20. h5 dxc5 21. hxg6 hxg6 22. Qe6 Rd8 23. Rxd8 Qxd8 24. Rd1 Qe7 25. Qxc6 Nc7 DIAGRAM _ [- + - + - L j +] [+ - S - D t + -] [x + q + - X x +] [+ - X - X - + -] [- + - + p + - +] [+ - N - B p + -] [p P - + - + p +] [+ - K r + - + -] The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. Nd5 Qe6! and Black holds. 26. Qb6 _ Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...Qe6 with Bxc5 and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game. 26... Kg7 27. Nd5 Qe6 28. Bxc5 Bxc5 29. Qxc5 Nb5 30. Qe3 Qc6+ 31. Kb1 Nd4 32. Rc1 Qb5 33. Nc7 Qe2 34. Ne6+ Kh7 35. Qh6+ 1-0 _ It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange. Here is a simple example: Wahltuch - Palmer, Manchester, 1912 1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O Nxe4 5. d4 Nd6 (_ Berlin Defence, Rio De Janiero Variation) 6. dxe5 _ [6. Bxc6] 6... Nxb5 7. a4 _ [t + l D j L - T] [X x X x + x X x] [- + s + - + - +] [+ s + - P - + -] [p + - + - + - +] [+ - + - + n + -] [- P p + - P p P] [R n B q + r K -] This is a gorgeously messy line 7... Nd6 _ [better 7... d6] 8. Bg5 f6 9. Re1 fxg5 10. exd6+ Ne7 11. Ne5 cxd6 12. Qh5+ g6 13. Nxc6 Qa5 14. Nxc6 Kd8 _ Have a look at the next diagram and see what you think. [t + l J - L - N] [X x + x S - + x] [- + - X - + - +] [D - + - + - X q] [p + - + - + - +] [+ - + - + - + -] [- P p + - P p P] [R n + - R - K -] 15. Nc3 _ [Obviously not 15. Qf7 Qxe1#] It is tempting to try a forcing move, but none work. "A quiet move in the midst of an attack is the sign of the master" - Du Mont 15... Qf5 (else Qf7) 16. Nb5 Ng6 17. Qxg5+ 1-0 _ The calculation of variations The starting point for any consideration of analysis must be Kotov, again. Candidate moves must be established straight away and they must be clearly enumerated. Once we have established all the candidate moves, we then proceed to work out the variations arising from them one by one. In analysing complicated variations, one must examine each branch of the tree once and once only. This task cannot be split into parts, by examining one move fully and then looking for the next one. _ Kotov gives some example of positions where the analysis gets progressively more detailed: The 'tree of analysis' bare trunk bare trunk with coppice bush side-branch Through practice, I would have thought anyone could master the art of analysing "bare trunks" and "trunk-with-branch" - what is required here is the ability to visualise the board several moves ahead. Also, I think also the "coppice" type of position is not out of most players' reach. What is required here is organisation - to list the moves required at the

outset, and to work through them methodically. What is most challenging is the type of position which is genuinely complex, like the "bush", when it is difficult for most of us to analyse everything relevant. Are they any hints or tips for making best use of the time we have, while our analytical skills are still developing? Yes indeed: we have advice from de Groot, from Nunn/Griffiths, and from Nimzovitch. The chess master and psychologist De Groot, in commenting on transcriptions of players' verbal reflections, used to talk about 'progressive deepening'. If this strategy is to be adopted in must not resemble the feckless meandering described so amusingly by Kotov in his book *Think Like a GM*, switching dissatisfied from one move to another until you run out of time. However it has often seemed to me that rather than work six moves deep down line "A", then six moves each down line "B", it might be better to look (say) two moves deep in each of lines A-G, then go back to "A" and go four moves deep this time, and so on. It may be that you find the key to the position earlier than you would have done by a strictly sequential approach, and in any event, ideas which may be obvious from one line of analysis may come in handy when analysing other lines, where the same idea is not so obvious. There is an example illustrating the idea of 'progressive deepening' from Simon Webb's panel tests. Given a list of candidate moves, which lines do you start with? Purdy again: start with the most forcing moves. But if none look any better than the others? Nunn and Griffiths advise: "Just plunge in"; take a look at this one, where "Black has a decisive attack" but there is no forced mate. Corden - Nunn, Birmingham 1975 [Variation] [t + - + j + - T] [X x + - + x X x] [- + x + - - +] [+ b + x P l + -] [- + - + s + - +] [+ - + k + n + -] [p P p + - D p P] [R n B q + - + r] The first move to look at must be 15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5# ... "and straightaway you have learned a lot about the position". That is, you can regain at least one piece whenever you wish, still keeping the K exposed. After this you can work your way methodically through the other lines, with the conclusions from your quick first assessment already in mind. Sometime you can divert the task of analysis: play a good positional move relatively quickly. nimzovitch - tartakower (karlsbad) [E81], 1929 [t + d + - T - J] [+ - X l + x L x] [- X - X - S - +] [X - S p X - B x] [- + p + p + p +] [+ - N - + p + -] [p P - Q - N - +] [R - - - K b + r] [15. Bxf6 Bxf6 (Nimzo analysed briefly:) 16. Qh6 Bg7 17. Qxh5 h6 18. g5 f5 "now it is necessary to analyse several variations which are roughly equally good:" e.g. 19. gxf6 [or 19. gxh6_] 19... Rxf6 20. Bh3] "all of this is extremely complicated and therefore I played after no more than five minutes' thought"... 15. Bxf6! 15... Bxf6 16. Rxb5 Bg7 17. Nh1_ There followed: 17... f6 18. Qh2 h6 19. Ng3 Kh7 20. Be2 Rg8 21. Kf2 Rh8 22. Rh4 Qe8 23. Rg1 Bf8 24. Kg2 Nb7 25. Nh5_ "with a strong solid game and chances of attack" - NIMZO [...1-0] However, sometimes there is no such resource, and you must simply work your way through the variations as best you can. Good practice So much for theory. How do you put this into practice? Well, you practice! We must cultivate good habits in our analysis. "Let us repeat once more the methods by which we can increase our combinative skill: "(1) by careful examination of the different types and by a clear understanding of their motives and their premises "(2) By memorising a number of outstanding as well as of common examples and solutions "(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination." -- Euwe, *Strategy and Tactics in Chess*. Since Euwe wrote, some other methods have become more available. Gaining practice and

experience through tests: You have probably seen either the British Chess Magazine column Find the Winning Continuation, or the same idea in Chess magazine, called there Winning Combinative Play. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, Winning Chess. If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: Test your chess IQ, Vol.1 (for players up to 160), Test your chess IQ, Vol.2 (for 160-200) and Test your chess IQ, Vol.3 - Grandmaster Challenge (for 200+ grades). They both suffer from the drawback, in my view, of containing only combinations that work - there are no false but tempting opportunities offered to you, which is so often the case during a game. In fact, I believe that mass practice of tactical tests like this can lead to a false sense of optimism when presented with a promising tactical opportunity. Unless these tests have hidden points in the variations you are required to spot, or include 'false' opportunities, they must be supplemented by other activities. Some support for this is found in Gene Thompson's article for Chess Scene . More testing (literally) is the Chess Monthly magazine feature, How Good is your Chess? which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called Test Your Chess.) Here's an easy example of such a test from the B.C.F., with answers. Other Books for study Most of the above is 'practice makes perfect' style with little explanation. The theory of candidate moves and trees of analysis I found in Kotov, Think like a Grandmaster (a summary is also to be found in Kotov, Plan like a Grandmaster). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis. Another important book for theory is Nunn and Griffiths, Secrets of Grandmaster Play. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board. Gaining practice and experience through exercises: One of the best exercises is to play tactical games, against a player of about your own strength or better. If the point is to develop tactics, there can be no better way of doing this for most people than practicing against a computer - that will show you how thorough you really are! Playing-out of positions There are also some good ideas in Dvoretsky, Secrets of chess tactics. In particular, he describes the technique of playing-out of positions for which an analysis has been published. For example, he played on from positions found in the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the clock. This is a realistic test and you can check your conclusions against what Nunn has analysed. Of course, you can use a computer to play positions out. Examining your own games: Always a good idea - and it is quite possible to do so concentrating mostly on the number and type of tactical errors you make. Mistakes are perhaps inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. Also, make sure you are spotting opportunities for your opponent as well as yourself. I'm sure becoming more efficient or more consistent in this regard would result in a rise in grade for most of us, without any great new insights being gained. Blumenfeld's rule for avoiding blunders: After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this

fresh look, then you move. This is called... Blumenfeld's rule: "It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation:- When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a mate in one on, or left a piece or a pawn to be taken. Only when you have convinced yourself that there is no immediate catastrophe for you should you make the planned move." -- KOTOV You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look. I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything at the start_ of your thinking. You are not checking conclusions - you are checking assumptions_ . [If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while.] Net reading:_ Online exercises from John Coffey and David Hayes. Worked example from Gabriel Schwartzmann Kotov's classic Think Like a GM, the first chapter of which has been very influential. A nice piece of self-reflection from an amateur, Chess Scene. Bibliography "The pleasure of a chess combination lies in the feeling that a human mind is behind the game, dominating the inanimate pieces with which the game is carried on, and giving them the breath of life." -- RETI Alexander, The Penguin Book of Chess Positions Avni, Danger in Chess British Chess Magazine_, Find the Winning Continuation Chernev and Reinfeld, Winning Chess Chess_ magazine, Winning Combinative Play Chess_ magazine, How Good is your Chess? (Book of same name by Danny King) Dvoretsky, Secrets of chess tactics Kotov, Think like a Grandmaster)_ candidate moves, tree of analysis, analysis of master games Kotov, Plan like a Grandmaster) Livshits, Test your chess IQ, Vol.1 Livshits, Test your chess IQ, Vol.2 Livshits, Test your chess IQ, Vol.3 - Grandmaster Challenge Nunn and Griffiths, Secrets of Grandmaster Play Back to Chess Coaching Page This document (practact.html) was last modified on 20 Jan 97 by Dr. Dave

Introduction

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired"

-- RETI

4CoNciqeNrabbyrhinqocumeNrwanfobboweqByaunefubUne)er
post by NM Dan Scoones._]

The way it works is this:

My mum and dad taught me how to play chess, and when I was about 9 I went to the school chess club. I sat down to play a small boy, took

the Black pieces and was mated in four moves (Scholar's Mate). To the best of my recollection I have never fallen for it since, and while I can't ever remember perpetrating that particular sequence on anyone else, I have delivered mate on f7 a number of times.

Learning and applying tactics is just that: you learn to recognise a pattern, you see it coming if someone tries it on you, and you can apply it in similar positions in your own games. In fact, once you know the patterns, a lot of the calculation comes pretty easily.

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one'
" -- Richard RETI.

It used to be thought - perhaps because of statements like this, and a little early psychological research - that there wasn't much difference in the abilities of strong and weak players at analysis: rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences [see [Simon Webb's panel tests](http://www.exeterchessclub.org.uk/./webb2.html#RTFTtoC11)]. So, the patterns and judgements are important, but you must also train yourself to analyse.

Sir Peter Medawar once remarked, rather testily:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

[A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*]

No less a tribute may be paid to the editors at Batsford and Cadogan and Chess Digest: there is a population of chessplayers who know about mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win a Rook Ending. This piece is dedicated to the first of these failings.

The elements of combination

A combination_ is a forcing sequence, often involving a temporary sacrifice, which results in an advantage - checkmate, win of material or a winning positional bind.

Here's a nice example, which I think is not out of most players' reach: have a go at solving it (White to move and win) before reading on.

Becker-Jung, Eberstadt-Bensheim, 1948

(wKh1,Qc3,Ne2,e3,Bd3,Ra1,f2,Pa2,b2,c4,e5,f4,g3,h2;
bKf7,Qd7,Nc6,g6,Bh3,Ra8,h8,Pa7,b7,c7,d6,f6,g7,h5)

4P* 0N, *6

4, 0 0 0K6

The different combinational themes are often called motifs.

The theme or motif of this combination is the fork.

There is almost no way you can find the combination in this position if you have not seen this pattern before.

First, we examine the position for pointers. The Black pieces are not very well coordinated, and the Black King and Queen seem almost in reach - for example, if we had protection for e6, we could think about e5-e6+ winning the Queen. In fact, f4-f5_ provides that protection, so 1. f5 (Knight moves) 2. e6+_ looks excellent, except that Knight moves 1...Ng6xe5_, but it starts to look as though we might be on for something here.

More details: we can, by Bxg6+_, bring the Black King a little closer, and check it by f4-f5_. In fact, we can check it immediately by e5-e6_. Maybe some combination of these ideas might allow us to lure Black pieces to e6 and g6, and fork them by f4-f5.

So, this fork becomes the idea of our combination.

Next, the combination must now be calculated and the correct move order sorted out.

We might try 1. Bxg6+ Kxg6 2. e6_ ... but Black might sidestep with 2...Qe7_, or even take it 2...Qxe6, when 3. f5+ fails to 3...Qxe3_...

Purdy coined the splendid term smite: you must learn to examine smiting moves, checks and captures. These are the most forcing and the key to starting most combinations. With this in mind we can reconsider our combination:

the starting move 1. e6+_ is perhaps surprising, but once we consider the move at all we can see that is it very forcing, and after 1...Kxe6_ or 1...Bxe6_ we can play 2. f5(+) winning a piece.

So, Black seems obliged to play 1. e6+ Qxe6_. Now again, 2. f5_ fails to 2...Qxe3. Humph.

The forcing sequence 2. Bxg6+ Kxg6 3. f5+ Bxf5_ seems almost to fizzle out, but then (aha!) 4. Nf4+_ forks King and Queen. Missed anything? No, all looks OK, so, Black has to lose a piece, probably by 1...Bxe6 when a couple of Pawns will be partial compensation.

So, the elements of a combination are motif, idea, and calculation. You don't really change gear from one to the other when trying to come up with a combination in practice, but you do need to work on each separately if you are to improve.

How did your attempt match up to my account of the solution? Missed the idea? Missed a defence? Muddled the move order? Hopefully what I describe below can improve your performance in each aspect. Even if that one seemed totally beyond you I'll at least show you how such a standard can be approached. _

"A thorough understanding of the typical mating combinations_ makes the most complicated sacrificial combinations leading up to them not only not_ difficult,

but almost a matter of course."

-- TARRASCH

You must_ know all these motifs:

- K - knight forks
- L - last rank
- M - mating pattern
- N - network nobbled (Nterference)
- O - overloading
- P - pins
- Q - queening
- R - retreat
- S - sacrifice at castle gates
- T - two for the price of one [double attack]
- U - undermining (removing the guard)
- U2 - unmasking (discovery)
- V - vulnerable f7
- W - weakening King's-side
- X - X-ray (skewer)

4ANqrheReaReorheRn,I'mnuRe6.

Once you are aware of these motifs you can apply them in your own games. See also Combinational vision below.

"The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?"

-- Reinfeld, to Thomas-Euwe, Carlsbad 1929.

Sight of the board

By which I mean, how deep can you analyse without losing track? The ability to play a game blindfold isn't that good a guide - I can remember a game where both players couldn't "see" that they could play Qa5xQh5 (or Qh5xQa5) for free! Playing a game blindfold against a computer is a test, though, and so is solving problems without moving the pieces. On a good day I can do six-move problems. I'm aiming at seven/eight. (But why do I still make one-move blunders? See below!)

You can get this far solving positions
one move deep,
three
moves, five
moves and six moves deep. They are all
knight forks, if you want a hint, although other motifs may make an
appearance.

knight
fork combination (1), one move deep, 1997

40 0 0 0 6

4 0 0k0 06

40 0 0N0 6

4 0 0 0 06

4(0 0 0Q6

1. Ng5 is a very vigorous double-check, but the key is:

1. Ne5+ _

In an actual game, you just play this straight away as the best winning attempt because there are so many ways for Black to go wrong. But for practice, can you follow it to the finish? These open-field combinations can be hard to keep track of, because of the apparently great number of choices at each turn.

1... Ke3 _

41...(f42.+f30(g53.+g40(h64.+g6#6

41...(f52.+h30(e4

or [2... Kg5 3. Qg4+]

3. Qf3+ Kd4 4. Nc6+]

2. Qe1+ Kf4 3. Qf2+ Kg5 4. Qg3+ Kf5 5. Qg4+ Kxe5 6. Qg3+ Kf5 7. Qxb8

1-0_

Combinational vision

Combinational vision is a product of experience and imagination, both of which broaden the chess mind.

Experience_: Once you have seen something, you might be able to implement an analogous idea in your own games. This is more than knowing the motifs; I mean you should continue to broaden your experience of combinations by examining new examples. An example from my own modest practice: I have known about knight forks for ages (ever since I kept finding them arriving on c7, checking and

forking Ke8/Ra1). But once I had seen the famous finish of a Petrosian-Spassky game (see the entry for Petrosian in the ["Canon/canonidx.html#style" Style section of "Canon/canonidx.html" Canon](#)), I could see the same thing going on in my own game.

This rather reminds me of the old psychological tests based on embedded figures; finding combinations seems a bit like that.

Imagination_: I used to think that the creative imagination was something mysterious and intangible, which could neither be described nor trained. While there may always be something elusive about artistic creation, some thinking by people like Liam Hudson and Daniel Dennett gave me some cause to hope. Creativity is not a simple product of unfathomable inspiration, but a result of firstly, generating lots of (mostly junky) ideas, and then weeding them out to discover the ones that work. If this is true of the expressive arts, then it surely also applies to chess, where the ideas have such concrete prompts on the board, and the selection of the ideas that work can be put to the simple test of analysis.

Put simply, this suggests that someone like Tal can come up with great ideas because they come up with loads of ideas, good, bad and indifferent, and then can select the great one. The problem with most of us is not that we are failing to come up with enough good ideas, but we are failing to come up with enough ideas, full stop. Our ability to spot combinations is limited by our tunnel vision, considering only a few moves of a stereotyped nature, and not having the habit of looking at every thing once, no matter how foolish at first sight. Developing imagination, then, is not a matter of learning how to do something terribly magical, but to some extent involves putting aside what you think you know (retreating pieces is bad, putting your Queen en prise is bad) and considering moves that only very good players - or ["../webb2.html#RTFTtoC15">very bad players!](#) - look at.

Varieties of error

The way it is supposed to work is:

A tactic appears for you: you get it right.

But we also see:

A tactic appears for you: you miss it.

A tactic appears for your opponent: you miss it.

A tactic appears for you: you see it but analyse it wrongly.

A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.

A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.

A
tactic appears for you: you get it right.

The idea is easy, but can you analyse it to a finish?

I though I could wrap things up here: 28... Nxe4?!_ was an obvious first choice, trying to win a Pawn. Does it win a Pawn? Oh no, because of Nxc4. No, I was right, it does win a Pawn, because I've always got both ...Bxh4 and ...Bxa4. So...

28... Nxe4?!_
428...+c7!wiNn,IrhiNK6
29. Bxe4 Qxe4 30. Nxc4 Qd5 _

And of course I realised here I'd blown it:30... Bxa4? 31. Nd6!

This is very common: stopping analysis at the end of a sequence favourable to you. But after that, it's your opponent's move!

As we start to comment more deeply on these examples, we see two sources of error: mistakes or bad habits in analysis, on the one hand, but also misjudgements on the other - errors in the general assessment of the board or the opponent. It is just the first of these I am concerned with here; else we are raising another big issue about attitude.

Getting your mind right_

I don't know any exercises to improve your mental attitude, but awareness - particularly self-awareness - is important in eliminating all sources of error, not just tactical ones. I have written and collected material elsewhere about getting your mental attitude right: there are examples (good and bad) in the <A HREF =

[../Canon/canonidx.html#psych](#)>Psychology section of the Canon, there is some good advice on a [Poster for Juniors, and in a compilation of Advice for the middlegame. However, in this document on tactics I'll mention the issue of attitude in this aside, and return to the matter at hand.

Combinations do not usually come out of nowhere - they are based on a superiority in position_, and you can tell when a combination is likely to be around:

Exposed or "stalemated" Kings are always vulnerable_

Undefended or 'hanging' pieces often lead to trouble_.

Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised._.

This last category can be hardest to spot, because it is so common. There is some sense in which, as Lasker described, there should be some justice in chess - have you done enough, to deserve to win? that is, have you a big enough advantage? This is to some extent a matter of judgement, but if you feel you have a good advantage in space or mobility, then you should look:

"No combination without a considerable plus, no considerable plus without a combination [...]

In the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power and will of intellect, because the combination must exist, however deeply hidden."

-- LASKER.

I like this quote, but it has to be said that while there are 'just' and logical combinations where you (say) carry out a combination based on a campaign against the long-term weakness of a Pawn, there are also 'accidental' combinations which seem to be based on nothing but the

chance arrangement of pieces, and there are also traps - so diligence in searching for tactics is required at almost every move.

you must routinely check all positions for tactical opportunities
you must think for your opponent as well as yourself

How can you make sure that you get better at this? Determination alone may not be enough: we need a bit more theory, and practice.

Candidate moves

The first bit of theory is the search for candidate moves; I also owe my appreciation of the idea of candidate moves to Kotov.

"All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another."

-- ALEXANDER KOTOV

The idea is, to make sure you don't overlook some vital idea at the start of analysis.

Varley - Hewson, WECU Jamboree [B18], 1993

Black has a restricted position and is behind in 'development' (=getting his pieces out) but his pawn structure is very solid. Can Black get away with this, or can White show the flaw in Black's move order by the sacrifice Bxe6_?

What do you think?

```
4r# %k0 &6
4$p0 0p$b6
4 0p!p# $6
40 0 0 0 6
4 0B* ) *6

4P*P0Q*P06
4, ' ( 0R6
```

11. Bxe6_

An enterprising sacrifice! White hopes to catch Black's King in the centre.

11... O-O!_

Unflappable Exeter player Brian Hewson calmly sidesteps the main line of a sacrifice (11...fxe6) threatening a pin on the e-file.

12. O-O Bxf4 13. Bxf4 fxe6 14. Qxe6+ Kh8 ..._ and Black consolidated and won. [0-1]

It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move at the outset before analysing any one move deeply. Had White done this he could not fail_ to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8, and could not fail to realise that it refuted the sac.

There is another example or two illustrating the 'candidate move' idea from Simon Webb's panel tests, and the commentary on Nunn's games in the Analysis section of the Canon.](#)

There are certain sorts of moves which are easy to spot (or train yourself to spot: like checks, captures, and so on. There are also certain classes of move which are difficult to make yourself consider - here are a few surprising/paradoxical moves. You should (a) make sure you know these models, (b) collect and review other examples, (c) see if there are either types of moves which you or somebody else found difficult to anticipate.

Retreats

Christiansen
- Karpov (1993)

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6

9.Nxc6 Bxc6 10.Bf4 Nh5 11.Be3 Bd6 (wait for it...) _

4*) ' 0 6

4 *Q0 *P*6

4, 0 (B0R6

12.Qd1 1-0_

The error made by Karpov above is actually a common one - missing an undeveloping retreat.

Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on.

Another example:

Putting

pieces en prise

Fischer

- Sherwin, USA Ch'p , 1957

4P* 0 0P06
40 (R0 0 6

The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. Nd5 Qe6! and Black holds.

26. Qb6 _

Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...Qe6 with Bxc5 and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game.

26... Kg7 27. Nd5 Qe6 28. Bxc5 Bxc5 29. Qxc5 Nb5 30. Qe3 Qc6+ 31. Kb1 Nd4 32. Rc1 Qb5 33. Nc7 Qe2 34. Ne6+ Kh7 35. Qh6+ 1-0_

It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange. Here is a simple example:

Wahl Tuch

- Palmer, Manchester, 1912

1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O Nxe4 5. d4 Nd6 (_Berlin Defence, Rio De Janiero Variation) 6. dxe5 _[6. Bxc6] 6... Nxb5 7.

The calculation of variations

The starting point for any consideration of analysis must be Kotov, again.

Candidate moves must be established straight away and they must be clearly enumerated.

Once we have established all the candidate moves, we then proceed to work out the variations arising from them one by one.

In analysing complicated variations, one must examine each branch of the tree once and once only.

This task cannot be split into parts, by examining one move fully and then looking for the next one._

Kotov gives some example of positions where the analysis gets progressively more detailed:

The

'tree of analysis'

bare trunk bare trunk with coppice bush
side-branch

Through practice, I would have thought anyone could master the art of analysing "bare trunks" and "trunk-with-branch" - what is required here is the ability to visualise the board several moves ahead.

Also, I think also the "coppice" type of position is not out of most

players' reach. What is required here is organisation - to list the moves required at the outset, and to work through them methodically.

What is most challenging is the type of position which is genuinely complex, like the "bush", when it is difficult for most of us to analyse everything relevant. Are there any hints or tips for making best use of the time we have, while our analytical skills are still developing? Yes indeed: we have advice from de Groot, from Nunn/Griffiths, and from Nimzovitch.

The chess master and psychologist De Groot, in commenting on transcriptions of players' verbal reflections, used to talk about 'progressive deepening'. If this strategy is to be adopted it must not resemble the feckless meandering described so amusingly by Kotov in his book [Think Like a GM](http://dab.psi.net/ChapterOne/uscf/browse/thinklike.html), switching dissatisfied from one move to another until you run out of time. However it has often seemed to me that rather than work six moves deep down line "A", then six moves each down line "B", it might be better to look (say) two moves deep in each of lines A-G, then go back to "A" and go four moves deep this time, and so on. It may be that you find the key to the position earlier than you would have done by a strictly sequential approach, and in any event, ideas which may be obvious from one line of analysis may come in handy when analysing other lines, where the same idea is not so obvious. There is an example illustrating the idea of 'progressive deepening' from Simon Webb's panel tests.

Given a list of candidate moves, which lines do you start with? Purdy again: start with the most forcing moves. But if none look any better than the others?

Nunn and Griffiths advise: "Just plunge in"; take a look at this one, where "Black has a decisive attack" but there is no forced mate.

Corden - Nunn, Birmingham 1975 [Variation]

4r0 0k0 &6

4,N'Q0 OR6

The first move to look at must be 15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5# _ ..."and straightaway you have learned a lot about the position". That is, you can regain at least one piece whenever you wish, still keeping the K exposed. After this you can work your way methodically through the other lines, with the conclusions from your quick first assessment already in mind.

Sometime you can divert the task of analysis: play a good positional move relatively quickly.

23. Rg1 Bf8 24. Kg2 Nb7 25. Nh5_

"with a strong solid game and chances of attack" - NIMZO [...1-0]

However, sometimes there is no such resource, and you must simply work your way through the variations as best you can.

Good practice

So much for theory. How do you put this into practice? Well, you practice! We must cultivate good habits in our analysis.

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, Strategy and Tactics in Chess_.

Since Euwe wrote, some other methods have become more available.

Gaining practice and experience through tests:_

You have probably seen either the British Chess Magazine_ column Find the Winning Continuation, or the same idea in Chess_ magazine, called there Winning Combinative Play. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, Winning Chess.

If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: Test your chess IQ, Vol.1 (for players up to 160), Test your chess IQ, Vol.2 (for 160-200) and Test your chess IQ, Vol.3 - Grandmaster Challenge (for 200+ grades).

They both suffer from the drawback, in my view, of containing only combinations that work - there are no false but tempting opportunities offered to you, which is so often the case during a game. In fact, I believe that mass practice of tactical tests like this can lead to a false sense of optimism when presented with a promising tactical opportunity. Unless these tests have hidden points in the variations you are required to spot, or include 'false' opportunities, they must be supplemented by other activities. Some support for this is found in

Gene Thompson's article for Chess Scene_.

More testing (literally) is the Chess Monthly_ magazine feature, How Good is your Chess? which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called Test Your Chess.) Here's an easy example of such a test from the B.C.F., with answers.

Other Books for study_

Most of the above is 'practice makes perfect' style with little explanation. The theory of candidate moves and trees of analysis I found in Kotov, Think like a Grandmaster (a summary is also to be found in Kotov, Plan like a Grandmaster). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis.

Another important book for theory is Nunn and Griffiths, Secrets of Grandmaster Play. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board.

Gaining practice and experience through exercises:_

One of the best exercises is to play tactical games, against a player of about your own strength or better. If the point is to develop tactics, there can be no better way of doing this for most people than practicing against a computer - that will show you how thorough you really are!

Playing-out of positions_

There are also some good ideas in Dvoretsky, Secrets of chess tactics. In particular, he describes the technique of playing-out of positions for which an analysis has been published. For example, he played on from positions found in the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the clock. This is a realistic test and you can check your conclusions against what Nunn has analysed. Of course, you can use a computer to play positions out.

Examining your own games:_

Always a good idea - and it is quite possible to do so concentrating mostly on the number and type of tactical errors you make. Mistakes are perhaps inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. Also, make sure you are spotting opportunities for your opponent as well as yourself. I'm sure becoming more efficient or more consistent in this regard would result in a rise in grade for most of us, without any great new insights being gained.

Blumenfeld's rule_ for avoiding blunders:

After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this fresh look, then you move. This is called...

Blumenfeld's rule:

"It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation:-

When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a mate in one on, or left a piece or a pawn to be taken.

Only when you have convinced yourself that there is no immediate catastrophe for you should you make the planned move."

-- KOTOV

You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look.

I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything at the start_ of your thinking. You are not checking conclusions - you are checking assumptions_. [If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while.]

Introduction

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired"

-- RETI

/ConcidentallythisdocumentwasfollowedbyausefulUseNet post by NM Dan Scoones._]

The way it works is this:

My mum and dad taught me how to play chess, and when I was about 9 I went to the school chess club. I sat down to play a small boy, took

the Black pieces and was mated in four moves (Scholar's Mate). To the best of my recollection I have never fallen for it since, and while I can't ever remember perpetrating that particular sequence on anyone else, I have delivered mate on f7 a number of times.

Learning and applying tactics is just that: you learn to recognise a pattern, you see it coming if someone tries it on you, and you can apply it in similar positions in your own games. In fact, once you know the patterns, a lot of the calculation comes pretty easily.

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one'
" -- Richard RETI.

It used to be thought - perhaps because of statements like this, and a little early psychological research - that there wasn't much difference in the abilities of strong and weak players at analysis: rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences [see [Simon Webb's panel tests](#)]. So, the patterns and judgements are important, but you must also train yourself to analyse.

Sir Peter Medawar once remarked, rather testily:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

[A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*]

No less a tribute may be paid to the editors at Batsford and Cadogan and Chess Digest: there is a population of chessplayers who know about mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win a Rook Ending. This piece is dedicated to the first of these failings.

The elements of combination

A combination_ is a forcing sequence, often involving a temporary sacrifice, which results in an advantage - checkmate, win of material or a winning positional bind.

Here's a nice example, which I think is not out of most players' reach: have a go at solving it (White to move and win) before reading on.

Becker-Jung, Eberstadt-Bensheim, 1948

(wKh1,Qc3,Ne2,e3,Bd3,Ra1,f2,Pa2,b2,c4,e5,f4,g3,h2;
bKf7,Qd7,Nc6,g6,Bh3,Ra8,h8,Pa7,b7,c7,d6,f6,g7,h5)

```
/t+*+*+*T\  
/OoOw+1O*\  
/*+jO*Oj+\  
/+*+*P*+o\  
/*+p+*P*+\  
/+*QbH*Pn\  
/pP*+hR*P\  
/R*+*+*+k\  

```

The different combinational themes are often called motifs.

The theme or motif of this combination is the fork.

There is almost no way you can find the combination in this position if you have not seen this pattern before.

First, we examine the position for pointers. The Black pieces are not very well coordinated, and the Black King and Queen seem almost in reach - for example, if we had protection for e6, we could think about e5-e6+ winning the Queen. In fact, f4-f5_ provides that protection, so 1. f5 (Knight moves) 2. e6+_ looks excellent, except that Knight moves 1...Ng6xe5_, but it starts to look as though we might be on for something here.

More details: we can, by Bxg6+_, bring the Black King a little closer, and check it by f4-f5_. In fact, we can check it immediately by e5-e6_. Maybe some combination of these ideas might allow us to lure Black pieces to e6 and g6, and fork them by f4-f5.

So, this fork becomes the idea of our combination.

Next, the combination must now be calculated and the correct move order sorted out.

We might try 1. Bxg6+ Kxg6 2. e6_ ... but Black might sidestep with 2...Qe7_, or even take it 2...Qxe6, when 3. f5+ fails to 3...Qxe3_...

Purdy coined the splendid term smite: you must learn to examine smiting moves, checks and captures. These are the most forcing and the key to starting most combinations. With this in mind we can reconsider our combination:

the starting move 1. e6+_ is perhaps surprising, but once we consider the move at all we can see that is it very forcing, and after 1...Kxe6_ or 1...Bxe6_ we can play 2. f5(+) winning a piece.

So, Black seems obliged to play 1. e6+ Qxe6_. Now again, 2. f5_ fails to 2...Qxe3. Humph.

The forcing sequence 2. Bxg6+ Kxg6 3. f5+ Bxf5_ seems almost to fizzle out, but then (aha!) 4. Nf4+_ forks King and Queen. Missed anything? No, all looks OK, so, Black has to lose a piece, probably by 1...Bxe6 when a couple of Pawns will be partial compensation.

So, the elements of a combination are motif, idea, and calculation. You don't really change gear from one to the other when trying to come up with a combination in practice, but you do need to work on each separately if you are to improve.

How did your attempt match up to my account of the solution? Missed the idea? Missed a defence? Muddled the move order? Hopefully what I describe below can improve your performance in each aspect. Even if that one seemed totally beyond you I'll at least show you how such a standard can be approached. _

"A thorough understanding of the typical mating combinations_ makes the most complicated sacrificial combinations leading up to them not only not_ difficult,

but almost a matter of course."

-- TARRASCH

You must_ know all these motifs:

K - knight forks

L - last rank

M - mating pattern

N - network nobbled (Nterference)

O - overloading

P - pins

Q - queening

R - retreat

S - sacrifice at castle gates

T - two for the price of one [double attack]

U - undermining (removing the guard)

U2 - unmasking (discovery)

V - vulnerable f7

W - weakening King's-side

X - X-ray (skewer)

/Andthereareothers,I'msure\.

Once you are aware of these motifs you can apply them in your own games. See also Combinational vision below.

"The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?"

-- Reinfeld, to Thomas-Euwe, Carlsbad 1929.

Sight of the board

By which I mean, how deep can you analyse without losing track? The ability to play a game blindfold isn't that good a guide - I can remember a game where both players couldn't "see" that they could play Qa5xQh5 (or Qh5xQa5) for free! Playing a game blindfold against a computer is a test, though, and so is solving problems without moving the pieces. On a good day I can do six-move problems. I'm aiming at seven/eight. (But why do I still make one-move blunders? See below!)

You can get this far solving positions
one move deep,
three
moves, five
moves and six moves deep. They are all
knight forks, if you want a hint, although other motifs may make an
appearance.

knight
fork combination (1), one move deep, 1997

1. Nd5 is an obvious first move for a tactic, and forcing because the Black Knight is loose; once considered, you should be able to wrap it up:

1. Nd5 Qe6 2. Qxe4 Qxe4 3. Nf6+ 1-0_

Black has better moves than

2...Qxe4, but if Black cannot recapture on e4, White wins a piece.

KFC

2. Qe1+ Kf4 3. Qf2+ Kg5 4. Qg3+ Kf5 5. Qg4+ Kxe5 6. Qg3+ Kf5 7. Qxb8

1-0_

Combinational vision

Combinational vision is a product of experience and imagination, both of which broaden the chess mind.

Experience_: Once you have seen something, you might be able to implement an analogous idea in your own games. This is more than knowing the motifs; I mean you should continue to broaden your experience of combinations by examining new examples. An example from my own modest practice: I have known about knight forks for ages (ever since I kept finding them arriving on c7, checking and

forking Ke8/Ra1). But once I had seen the famous finish of a Petrosian-Spassky game (see the entry for Petrosian in the ["Canon/canonidx.html#style" Style section of "Canon/canonidx.html" Canon](#)), I could see the same thing going on in my own game.

This rather reminds me of the old psychological tests based on embedded figures; finding combinations seems a bit like that.

Imagination_: I used to think that the creative imagination was something mysterious and intangible, which could neither be described nor trained. While there may always be something elusive about artistic creation, some thinking by people like Liam Hudson and Daniel Dennett gave me some cause to hope. Creativity is not a simple product of unfathomable inspiration, but a result of firstly, generating lots of (mostly junky) ideas, and then weeding them out to discover the ones that work. If this is true of the expressive arts, then it surely also applies to chess, where the ideas have such concrete prompts on the board, and the selection of the ideas that work can be put to the simple test of analysis.

Put simply, this suggests that someone like Tal can come up with great ideas because they come up with loads of ideas, good, bad and indifferent, and then can select the great one. The problem with most of us is not that we are failing to come up with enough good ideas, but we are failing to come up with enough ideas, full stop. Our ability to spot combinations is limited by our tunnel vision, considering only a few moves of a stereotyped nature, and not having the habit of looking at every thing once, no matter how foolish at first sight. Developing imagination, then, is not a matter of learning how to do something terribly magical, but to some extent involves putting aside what you think you know (retreating pieces is bad, putting your Queen en prise is bad) and considering moves that only very good players - or ["../webb2.html#RTFTToC15">very bad players!](#) - look at.

Varieties of error

The way it is supposed to work is:

A tactic appears for you: you get it right.

But we also see:

A tactic appears for you: you miss it.

A tactic appears for your opponent: you miss it.

A tactic appears for you: you see it but analyse it wrongly.

A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.

A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.

A
tactic appears for you: you get it right.

The idea is easy, but can you analyse it to a finish?

/p+oHp+*+\
/HoP*+b+p\
/*P*+*Qp+\
/+*+r+r+k\
```

I though I could wrap things up here: 28... Nxe4?!_ was an obvious first choice, trying to win a Pawn. Does it win a Pawn? Oh no, because of Nxc4. No, I was right, it does win a Pawn, because I've always got both ...Bxh4 and ...Bxa4. So...

```
28... Nxe4?!_
/28...Qc7!wins,Ithink\
29. Bxe4 Qxe4 30. Nxc4 Qd5 _
```

And of course I realised here I'd blown it:30... Bxa4? 31. Nd6!

This is very common: stopping analysis at the end of a sequence favourable to you. But after that, it's your opponent's move!

As we start to comment more deeply on these examples, we see two sources of error: mistakes or bad habits in analysis, on the one hand, but also misjudgements on the other - errors in the general assessment of the board or the opponent. It is just the first of these I am concerned with here; else we are raising another big issue about attitude.

Getting your mind right_

I don't know any exercises to improve your mental attitude, but awareness - particularly self-awareness - is important in eliminating all sources of error, not just tactical ones. I have written and collected material elsewhere about getting your mental attitude right: there are examples (good and bad) in the [<A HREF =](#)

[../Canon/canonidx.html#psych](#)>Psychology section of the Canon, there is some good advice on a [Poster for Juniors, and in a compilation of Advice for the middlegame. However, in this document on tactics I'll mention the issue of attitude in this aside, and return to the matter at hand.

Combinations do not usually come out of nowhere - they are based on a superiority in position_, and you can tell when a combination is likely to be around:

Exposed or "stalemated" Kings are always vulnerable_

Undefended or 'hanging' pieces often lead to trouble_.

Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised._.

This last category can be hardest to spot, because it is so common. There is some sense in which, as Lasker described, there should be some justice in chess - have you done enough, to deserve to win? that is, have you a big enough advantage? This is to some extent a matter of judgement, but if you feel you have a good advantage in space or mobility, then you should look:

"No combination without a considerable plus, no considerable plus without a combination [...]

In the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power and will of intellect, because the combination must exist, however deeply hidden."

-- LASKER.

I like this quote, but it has to be said that while there are 'just' and logical combinations where you (say) carry out a combination based on a campaign against the long-term weakness of a Pawn, there are also 'accidental' combinations which seem to be based on nothing but the

chance arrangement of pieces, and there are also traps - so diligence in searching for tactics is required at almost every move.

you must routinely check all positions for tactical opportunities
you must think for your opponent as well as yourself

How can you make sure that you get better at this? Determination alone may not be enough: we need a bit more theory, and practice.

Candidate moves

The first bit of theory is the search for candidate moves; I also owe my appreciation of the idea of candidate moves to Kotov.

"All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another."

-- ALEXANDER KOTOV

The idea is, to make sure you don't overlook some vital idea at the start of analysis.

Varley - Hewson, WECU Jamboree [B18], 1993

Black has a restricted position and is behind in 'development' (=getting his pieces out) but his pawn structure is very solid. Can Black get away with this, or can White show the flaw in Black's move order by the sacrifice Bxe6_?

What do you think?

```
/tJ*Wl+*T\  
/Oo+*+oOn\  
/*+oNoJ*O\  
/+*+*+*+*\  
/*+bP*H*P\  
/+*+*+*H*\  
/pPp+qPp+\  
/R*B*K*+r\  

```

11. Bxe6_

An enterprising sacrifice! White hopes to catch Black's King in the centre.

11... O-O!_

Unflappable Exeter player Brian Hewson calmly sidesteps the main line of a sacrifice (11...fxe6) threatening a pin on the e-file.

12. O-O Bxf4 13. Bxf4 fxe6 14. Qxe6+ Kh8 ..._ and Black consolidated and won. [0-1]

It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move at the outset before analysing any one move deeply. Had White done this he could not fail_ to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8, and could not fail to realise that it refuted the sac.

There is another example or two illustrating the 'candidate move' idea from Simon Webb's panel tests, and the commentary on Nunn's games in the Analysis section of the Canon.](#)

There are certain sorts of moves which are easy to spot (or train yourself to spot: like checks, captures, and so on. There are also certain classes of move which are difficult to make yourself consider - here are a few surprising/paradoxical moves. You should (a) make sure you know these models, (b) collect and review other examples, (c) see if there are either types of moves which you or somebody else found difficult to anticipate.

Retreats

Christiansen
- Karpov (1993)

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6

9.Nxc6 Bxc6 10.Bf4 Nh5 11.Be3 Bd6 (wait for it...) _

```
/t+*Wl+*T\  
/O*+o+oOo\  
/*OnNo+*+\  
/+*+*+*+j\  
/*+p+p+*+\  
/P*H*B*+*\  
/*Pq+*PpP\  
/R*+*Kb+r\  
12.Qd1 1-0_
```

The error made by Karpov above is actually a common one - missing an undeveloping retreat.

Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on. Another example:

Putting
pieces en prise

Fischer
- Sherwin, USA Ch'p , 1957

```
/*+*+*Tl+\  
/+*+*+oOo\  
/*+*O*+*+\  
/+*+b+*W*\  
/r+*+p+j+\  
/+*T*+*+*\  
/p+*+q+pP\  
/+*+*+r+k\  
30. Rxf7 Rc1+ 31. Qf1!! h5 32. Qxc1 Qh4 33. Rxf8+ Kh7 34. h3 Qg3 35. hxg4 h4  
36. Be6 1-0_
```

How about that one: a Queen moving backwards into a position where it can be captured!

'Silent' sacrifices

You can get so used to looking for 'smiting' moves that apparently non-forcing, 'quiet' sacrifices can be surprising:

Fischer,R

- Benko,P, ch-USA, 1963

```
/t+*+wT*L\  
/Oo+*+oNo\  
/*+oJ*+*+\  
/+*+*+*+q\  
/*+*Op+*+\  
/+*Hb+*+p\  
/pPp+*+p+\  
/R*+*+rK*\  

```

Obviously, there is a mating attempt at h7 but
/19.e5f520.Qxe8Nxe821.Ne2Bxe522.Rxf5Bf6=\

19. Rf6! _

This is what I mean: a silent sacrifice of the Rook, which actually leaves Black helpless. Chess may not be an art, but moves like this have a strong aesthetic effect, at least for me - I like the apparent subtlety of the sacrifice without a check or capture, and I like the drama of giving Black an apparently free move for the defence - which he cannot make use of.

```
19... Kg8 _  
/19...h620.e5[20.Rxh6++*\  
20. e5 h6 21. Ne2 1-0_
```

'Creeping
moves'

I keep alluding to Purdy's advice:
"examine moves that smite!" But have a look at this:

Spassky
- Korchnoi, Kiev, 1968

```
1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f3 O-O 6. Be3 Nc6 7. Nge2 a6 8.  
Nc1 e5 9. d5 Nd4 10. Nb3 Nxb3 11. Qxb3 c5 12. dxc6 bxc6 13. O-O-O Be6 14. Qa3  
Ne8 15. h4 f6 16. c5 Rf7 17. Qa4 Qc7 18. Bc4 Bxc4 19. Qxc4 Bf8 20. h5 dxc5 21.  
hxc6 hxc6 22. Qe6 Rd8 23. Rxd8 Qxd8 24. Rd1 Qe7 25. Qxc6 Nc7 DIAGRAM_  
/*+*+*NI+\  
/+*J*Wt+*\  

```

```
/o+q+*Oo+\
/+*O*O*+*\
/*+*+p+*+\
/+*H*Bp+*\
/pP*+*+p+\
/+*Kr+*+*\
```

The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. Nd5 Qe6! and Black holds.

26. Qb6 _

Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...Qe6 with Bxc5 and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game.

26... Kg7 27. Nd5 Qe6 28. Bxc5 Bxc5 29. Qxc5 Nb5 30. Qe3 Qc6+ 31. Kb1 Nd4 32. Rc1 Qb5 33. Nc7 Qe2 34. Ne6+ Kh7 35. Qh6+ 1-0_

It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange. Here is a simple example:

Wahl Tuch

- Palmer, Manchester, 1912

1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O Nxe4 5. d4 Nd6 (_Berlin Defence, Rio De Janiero Variation) 6. dxe5 _[6. Bxc6] 6... Nxb5 7.

a4_

It is tempting to try a forcing move, but none work.
"A quiet move in the midst of an attack is the sign of the master" - Du
Mont

15... Qf5 (else Qf7) 16. Nb5 Ng6 17. Qxg5+ 1-0_

The calculation of variations

The starting point for any consideration of analysis must be Kotov, again.

Candidate moves must be established straight away and they must
be clearly enumerated.

Once we have established all the candidate moves, we then proceed
to work out the variations arising from them one by one.

In analysing complicated variations, one must examine each branch
of the tree once and once only.

This task cannot be split into parts, by examining one move fully
and then looking for the next one._

Kotov gives some example of positions where the analysis gets
progressively more detailed:

The
'tree of analysis'

bare trunk bare trunk with coppice bush
 side-branch

Through practice, I would have thought anyone could master the art of
analysing "bare trunks" and "trunk-with-branch" - what is required
here is the ability to visualise the board several moves ahead.

Also, I think also the "coppice" type of position is not out of most

players' reach. What is required here is organisation - to list the moves required at the outset, and to work through them methodically.

What is most challenging is the type of position which is genuinely complex, like the "bush", when it is difficult for most of us to analyse everything relevant. Are there any hints or tips for making best use of the time we have, while our analytical skills are still developing? Yes indeed: we have advice from de Groot, from Nunn/Griffiths, and from Nimzovitch.

The chess master and psychologist De Groot, in commenting on transcriptions of players' verbal reflections, used to talk about 'progressive deepening'. If this strategy is to be adopted it must not resemble the feckless meandering described so amusingly by Kotov in his book [Think Like a GM](http://dab.psi.net/ChapterOne/uscf/browse/thinklike.html), switching dissatisfied from one move to another until you run out of time. However it has often seemed to me that rather than work six moves deep down line "A", then six moves each down line "B", it might be better to look (say) two moves deep in each of lines A-G, then go back to "A" and go four moves deep this time, and so on. It may be that you find the key to the position earlier than you would have done by a strictly sequential approach, and in any event, ideas which may be obvious from one line of analysis may come in handy when analysing other lines, where the same idea is not so obvious. There is an example illustrating the idea of 'progressive deepening' from Simon Webb's panel tests.

Given a list of candidate moves, which lines do you start with? Purdy again: start with the most forcing moves. But if none look any better than the others?

Nunn and Griffiths advise: "Just plunge in"; take a look at this one, where "Black has a decisive attack" but there is no forced mate.

Corden - Nunn, Birmingham 1975 [Variation]

```
/t+*+l+*T\  
/Oo+*+oOo\  
/*+o+*+*+\  
/+b+oPn+*\  
/*+*+j+*+\  
/+*+k+h+*\  
/pPp+*WpP\  

```

/RhBq+*+r\

The first move to look at must be 15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5# _ ..."and straightaway you have learned a lot about the position". That is, you can regain at least one piece whenever you wish, still keeping the K exposed. After this you can work your way methodically through the other lines, with the conclusions from your quick first assessment already in mind.

Sometime you can divert the task of analysis: play a good positional move relatively quickly.

nimzovitch - tartakower (karlsbad) [E81], 1929

/t+w+*T*L\

/+*On+oNo\

/*O*O*J*+\

/15.Bxf6Bxf6(Nimloanalysedbriefly:)16.Qh6Bg717.Qxh5h6

18. g5 f5 "now it is necessary to analyse several variations which are roughly equally good:" e.g. 19. gxf6 [or 19. gxh6_]

19... Rxf6 20. Bh3]

"all of this is extremely complicated and therefore I played after no more than five minutes' thought"...

15. Bxf6!

15... Bxf6 16. Rxh5

Bg7 17. Nh1_ There followed:

17... f6 18. Qh2 h6 19. Ng3 Kh7 20. Be2 Rg8 21. Kf2 Rh8 22. Rh4 Qe8

23. Rg1 Bf8 24. Kg2 Nb7 25. Nh5_

"with a strong solid game and chances of attack" - NIMZO [...1-0]

However, sometimes there is no such resource, and you must simply work your way through the variations as best you can.

Good practice

So much for theory. How do you put this into practice? Well, you practice! We must cultivate good habits in our analysis.

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, Strategy and Tactics in Chess_.

Since Euwe wrote, some other methods have become more available.

Gaining practice and experience through tests:_

You have probably seen either the British Chess Magazine_ column Find the Winning Continuation, or the same idea in Chess_ magazine, called there Winning Combinative Play. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, Winning Chess.

If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: Test your chess IQ, Vol.1 (for players up to 160), Test your chess IQ, Vol.2 (for 160-200) and Test your chess IQ, Vol.3 - Grandmaster Challenge (for 200+ grades).

They both suffer from the drawback, in my view, of containing only combinations that work - there are no false but tempting opportunities offered to you, which is so often the case during a game. In fact, I believe that mass practice of tactical tests like this can lead to a false sense of optimism when presented with a promising tactical opportunity. Unless these tests have hidden points in the variations you are required to spot, or include 'false' opportunities, they must be supplemented by other activities. Some support for this is found in

Gene Thompson's article for Chess Scene_.

More testing (literally) is the Chess Monthly_ magazine feature, How Good is your Chess? which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called Test Your Chess.) Here's an easy example of such a test from the B.C.F., with answers.

Other Books for study_

Most of the above is 'practice makes perfect' style with little explanation. The theory of candidate moves and trees of analysis I found in Kotov, Think like a Grandmaster (a summary is also to be found in Kotov, Plan like a Grandmaster). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis.

Another important book for theory is Nunn and Griffiths, Secrets of Grandmaster Play. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board.

Gaining practice and experience through exercises:_

One of the best exercises is to play tactical games, against a player of about your own strength or better. If the point is to develop tactics, there can be no better way of doing this for most people than practicing against a computer - that will show you how thorough you really are!

Playing-out of positions_

There are also some good ideas in Dvoretsky, Secrets of chess tactics. In particular, he describes the technique of playing-out of positions for which an analysis has been published. For example, he played on from positions found in the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the clock. This is a realistic test and you can check your conclusions against what Nunn has analysed. Of course, you can use a computer to play positions out.

Examining your own games:_

Always a good idea - and it is quite possible to do so concentrating mostly on the number and type of tactical errors you make. Mistakes are perhaps inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. Also, make sure you are spotting opportunities for your opponent as well as yourself. I'm sure becoming more efficient or more consistent in this regard would result in a rise in grade for most of us, without any great new insights being gained.

Blumenfeld's rule_ for avoiding blunders:

After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this fresh look, then you move. This is called...

Blumenfeld's rule:

"It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation:-

When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a mate in one on, or left a piece or a pawn to be taken.

Only when you have convinced yourself that there is no immediate catastrophe for you should you make the planned move."

-- KOTOV

You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look.

I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything at the start_ of your thinking. You are not checking conclusions - you are checking assumptions_. [If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while.]

Introduction

"It is a mistake to think that combination is solely a matter of talent, and that it cannot be acquired"

-- RETI

{CoNciqeNrabbyrhinqocumeNrwanfobboweqByaunefubUneHer
post by NM Dan Scoones._]

The way it works is this:

My mum and dad taught me how to play chess, and when I was about 9 I went to the school chess club. I sat down to play a small boy, took

the Black pieces and was mated in four moves (Scholar's Mate). To the best of my recollection I have never fallen for it since, and while I can't ever remember perpetrating that particular sequence on anyone else, I have delivered mate on f7 a number of times.

Learning and applying tactics is just that: you learn to recognise a pattern, you see it coming if someone tries it on you, and you can apply it in similar positions in your own games. In fact, once you know the patterns, a lot of the calculation comes pretty easily.

"Those chess lovers who ask me how many moves I usually calculate in advance, when making a combination, are always astonished when I reply, quite truthfully, 'as a rule not a single one'
" -- Richard RETI.

It used to be thought - perhaps because of statements like this, and a little early psychological research - that there wasn't much difference in the abilities of strong and weak players at analysis: rather, it was all about judgement and experience. There might not be a lot of difference between GMs and IMs, but there is increasing evidence that among we club players, there are large and important differences [see [Simon Webb's panel tests](http://www.exeterchessclub.org.uk/Tactics/linares.txt)]. So, the patterns and judgements are important, but you must also train yourself to analyse.

Sir Peter Medawar once remarked, rather testily:

"the spread of secondary and latterly of tertiary education has created a large population of people, often with well-developed literary and scholarly tastes, who have been educated far beyond their capacity to undertake analytic thought".

[A sentiment to be found in his splendid demolition of Teilhard de Chardin's *The Phenomenon of Man*, first printed in *Mind*, then collected in *The Art of the Soluble*]

No less a tribute may be paid to the editors at Batsford and Cadogan and Chess Digest: there is a population of chessplayers who know about mysterious Rook moves, Super-Quart Grips, the Inverse Phalanx, and the latest wrinkles in the Sicilian, but who cannot reliably spot three-move tactics or win a Rook Ending. This piece is dedicated to the first of these failings.

The elements of combination

A combination_ is a forcing sequence, often involving a temporary sacrifice, which results in an advantage - checkmate, win of material or a winning positional bind.

Here's a nice example, which I think is not out of most players' reach: have a go at solving it (White to move and win) before reading on.

Becker-Jung, Eberstadt-Bensheim, 1948

```
(wKh1,Qc3,Ne2,e3,Bd3,Ra1,f2,Pa2,b2,c4,e5,f4,g3,h2;  
bKf7,Qd7,Nc6,g6,Bh3,Ra8,h8,Pa7,b7,c7,d6,f6,g7,h5)  
{rdwdwdw4}  
{0p0qdk0w}  
{wdn0w0nd}  
{dwdw)wdp}  
{wdPdw)wd}  
{dw!BHw)b}  
{P)wdN$w)}  
{$wdwdwdK}
```

The different combinational themes are often called motifs.

The theme or motif of this combination is the fork.
There is almost no way you can find the combination in this position if you have not seen this pattern before.

First, we examine the position for pointers. The Black pieces are not very well coordinated, and the Black King and Queen seem almost in reach - for example, if we had protection for e6, we could think about e5-e6+ winning the Queen. In fact, f4-f5_ provides that protection, so 1. f5 (Knight moves) 2. e6+_ looks excellent, except that Knight moves 1...Ng6xe5_, but it starts to look as though we might be on for something here.

More details: we can, by Bxg6+_, bring the Black King a little closer, and check it by f4-f5_. In fact, we can check it immediately by e5-e6_. Maybe some combination of these ideas might allow us to lure Black pieces to e6 and g6, and fork them by f4-f5.

So, this fork becomes the idea of our combination.

Next, the combination must now be calculated and the correct move order sorted out.

We might try 1. Bxg6+ Kxg6 2. e6_ ... but Black might sidestep with 2...Qe7_, or even take it 2...Qxe6, when 3. f5+ fails to 3...Qxe3_...

Purdy coined the splendid term smite: you must learn to examine smiting moves, checks and captures. These are the most forcing and the key to starting most combinations. With this in mind we can reconsider our combination:

the starting move 1. e6+_ is perhaps surprising, but once we consider the move at all we can see that is it very forcing, and after 1...Kxe6_ or 1...Bxe6_ we can play 2. f5(+) winning a piece.

So, Black seems obliged to play 1. e6+ Qxe6_. Now again, 2. f5_ fails to 2...Qxe3. Humph.

The forcing sequence 2. Bxg6+ Kxg6 3. f5+ Bxf5_ seems almost to fizzle out, but then (aha!) 4. Nf4+_ forks King and Queen. Missed anything? No, all looks OK, so, Black has to lose a piece, probably by 1...Bxe6 when a couple of Pawns will be partial compensation.

So, the elements of a combination are motif, idea, and calculation. You don't really change gear from one to the other when trying to come up with a combination in practice, but you do need to work on each separately if you are to improve.

How did your attempt match up to my account of the solution? Missed the idea? Missed a defence? Muddled the move order? Hopefully what I describe below can improve your performance in each aspect. Even if that one seemed totally beyond you I'll at least show you how such a standard can be approached. _

"A thorough understanding of the typical mating combinations_ makes the most complicated sacrificial combinations leading up to them not only not_ difficult,

but almost a matter of course."

-- TARRASCH

You must_ know all these motifs:

K - knight forks

L - last rank

M - mating pattern

N - network nobbled (Nterference)

O - overloading

P - pins

Q - queening

R - retreat

S - sacrifice at castle gates

T - two for the price of one [double attack]

U - undermining (removing the guard)

U2 - unmasking (discovery)

V - vulnerable f7

W - weakening King's-side

X - X-ray (skewer)

{ANqrheReaReorheRn,I'mnuRe}.

Once you are aware of these motifs you can apply them in your own games. See also Combinational vision below.

"The technician, whose vocabulary has been doubled by Dr. Euwe, will find that White could have saved his soul by a desperado combination. Had this failure anything to do with the fact that Dr. Euwe's terminology was not yet existent at that time!?"

-- Reinfeld, to Thomas-Euwe, Carlsbad 1929.

Sight of the board

By which I mean, how deep can you analyse without losing track? The ability to play a game blindfold isn't that good a guide - I can remember a game where both players couldn't "see" that they could play Qa5xQh5 (or Qh5xQa5) for free! Playing a game blindfold against a computer is a test, though, and so is solving problems without moving the pieces. On a good day I can do six-move problems. I'm aiming at seven/eight. (But why do I still make one-move blunders? See below!)

You can get this far solving positions
one move deep,
three
moves, five
moves and six moves deep. They are all
knight forks, if you want a hint, although other motifs may make an
appearance.

knight
fork combination (1), one move deep, 1997

(wKe3,Nd5,Rc4,Pf4; bKe8,Nd7,Ra8,Pb6)

{rdwdkdwd}

{dwdndwdw}

{w0wdwdwd}

{dwdNdwdw}

{wdRdw)wd}

{dwdwIwdw}

{wdwdwdwd}

{dwdwdwdw}

1. Nc7+_: if you can't spot that one, don't read on!

KFC

(2) chernev/reinfeld, 1949

(wKg1,Qa4,Ng3,Pf2; bKg7,Qg4,Nd4)

{wdwdwdwd}

{dwdwdwiw}

{wdwdwdwd}

{dwdwdwdw}

{Qdwhwdqd}

{dwdwdwHw}

{wdwdw)wd}

{dwdwdwIw}

1. Qxd4+ Qxd4 2. Nf5+ 1-0_

This 'decoy' of the Queen onto a forking square is very common in
combinations with a Knight Fork motif.

KFC (3), c/r, 1949

(wKg1,Qd3,Nf4,Ra1,f1,Pa2,b2,c2,d4,g3,h4;
bKg8,Qe7,Nc6,e4,Bd7,Rc8,Pa7,b7,c7,d6,g4,h7)
{wdrdwkd}
{0p0b1wdp}
{wdn0wdwd}
{dwdwdwdw}
{wdw)nHp)}
{dwdQdw)w}
{P)Pdwdwd}
{ \$wdwdRIw }

1. Nd5 is an obvious first move for a tactic, and forcing because the Black Knight is loose; once considered, you should be able to wrap it up:

1. Nd5 Qe6 2. Qxe4 Qxe4 3. Nf6+ 1-0_

Black has better moves than

2...Qxe4, but if Black cannot recapture on e4, White wins a piece.

KFC

(4) zukertort - englisch, london, 1883

(wKg2,Qb3,Nd5,Pc7,f3,g3,h2; bKe8,Qc6,Ne6,Pa7,f6,g7,h6)
{wdwdkdwd}
{0w)wdw0w}
{wdqdn0w0}
{dwdNdwdw}
{wdwdwdwd}
{dQdwdP)w}
{wdwdwdK)}
{dwdwdwdw}

You've had your hint! It's a matter of nudging the Black pieces onto the right squares, which White can do neatly:

1. Qb5 Qxb5 2. c8=Q+ Kf7 3. Qxe6+ Kxe6 4. Nc7+ Kd7 5. Nxb5 1-0_

KFC

(5) kofman-sakketi, corr., 1948

(wKh1,Nc4,Rd1,e1,Pa2,b2,h3; bKc8,Qg3,Bd4,Pa7,b7,c7,f7,h7)

{wdkdwdwd}

{0p0wdpdp}

{wdwdwdwd}

{dwdwdwdw}

{wdNgwdwd}

{dwdwdw1P}

{P)wdwdwd}

{dwdR\$wdK}

White actually resigned here, but...

1. Re8+ Kd7 2. Re3 Qg7 3. Rxd4+ Qxd4 4. Rd3 Qxd3 5. Ne5+ 1-0_

Remember, this was a correspondence game, so time wasn't the issue - despair was.

KFC

(6) schlechter-mieses, st.petersburg, 1909

(wKg1,Qc4,Nd1,e2,Rc1,f3,Pa3,b2,d4,e5,g2,h2;

bKc8,Qg5,Ng4,Bd6,Rd7,h8,Pa7,b7,c7,e6,f7,g7,h7)

{wdkdwdw4}

{0p0rdp0p}

{wdwgpdpd}

{dwdw)w1w}

{wdQ)wdnd}

{)wdwdRdw}

{w)wdNdP}

{dw\$NdwIw}

Deep breath:

1... Bxe5 2. dxe5 Qh4 3. Rg3 Qxh2+ 4. Kf1 Rxd1+ 5. Rxd1 Qxg3

6. Nxc3 Ne3+_ with an easily winning endgame, so

0-1_. Can you see the continuation after, say ,

3. g2-g3, or other alternatives?

{3.Hf2!ph2d4.If1Hpe55.!c5Hpf36.gpf3wd;

3.h3 Qe1+ 4.Rf1 Qxf1+ 5.Kxf1 Rxd1+ 6.Rxd1 Ne3+ -+]

The other resource, besides these tactical problems, is simple chess studies: at their best they can make you pay close attention to the geometry of the board, like this one:

chekhover,
QN v Q, 1996

(wKa1,Qh1,Nf3; bKe4,Qb8)
{w1wdwdwd}
{dwdwdwdw}
{wdwdwdwd}
{dwdwdwdw}
{wdwdkdwd}
{dwdwdNdw}
{wdwdwdwd}
{IwdwdwdQ}

1. Ng5 is a very vigorous double-check, but the key is:

1. Ne5+ _

In an actual game, you just play this straight away as the best winning attempt because there are so many ways for Black to go wrong. But for practice, can you follow it to the finish? These open-field combinations can be hard to keep track of, because of the apparently great number of choices at each turn.

1... Ke3 _

{1...If42.!f3dIg53.!g4dIh64.!g6#}

{1...If52.!h3dIe4

or [2... Kg5 3. Qg4+]

3. Qf3+ Kd4 4. Nc6+]

2. Qe1+ Kf4 3. Qf2+ Kg5 4. Qg3+ Kf5 5. Qg4+ Kxe5 6. Qg3+ Kf5 7. Qxb8

1-0_

Combinational vision

Combinational vision is a product of experience and imagination, both of which broaden the chess mind.

Experience_: Once you have seen something, you might be able to implement an analogous idea in your own games. This is more than knowing the motifs; I mean you should continue to broaden your experience of combinations by examining new examples. An example from my own modest practice: I have known about knight forks for ages (ever since I kept finding them arriving on c7, checking and

forking Ke8/Ra1). But once I had seen the famous finish of a Petrosian-Spassky game (see the entry for Petrosian in the ["Canon/canonidx.html#style"> Style section of \["Canon/canonidx.html"> Canon\]\(#\)](#)), I could see the same thing going on in my own game.

This rather reminds me of the old psychological tests based on embedded figures; finding combinations seems a bit like that.

Imagination_: I used to think that the creative imagination was something mysterious and intangible, which could neither be described nor trained. While there may always be something elusive about artistic creation, some thinking by people like Liam Hudson and Daniel Dennett gave me some cause to hope. Creativity is not a simple product of unfathomable inspiration, but a result of firstly, generating lots of (mostly junky) ideas, and then weeding them out to discover the ones that work. If this is true of the expressive arts, then it surely also applies to chess, where the ideas have such concrete prompts on the board, and the selection of the ideas that work can be put to the simple test of analysis.

Put simply, this suggests that someone like Tal can come up with great ideas because they come up with loads of ideas, good, bad and indifferent, and then can select the great one. The problem with most of us is not that we are failing to come up with enough good ideas, but we are failing to come up with enough ideas, full stop. Our ability to spot combinations is limited by our tunnel vision, considering only a few moves of a stereotyped nature, and not having the habit of looking at every thing once, no matter how foolish at first sight. Developing imagination, then, is not a matter of learning how to do something terribly magical, but to some extent involves putting aside what you think you know (retreating pieces is bad, putting your Queen en prise is bad) and considering moves that only very good players - or ["../webb2.html#RTFTtoC15">very bad players!](#) - look at.

Varieties of error

The way it is supposed to work is:

A tactic appears for you: you get it right.

But we also see:

A tactic appears for you: you miss it.

A tactic appears for your opponent: you miss it.

A tactic appears for you: you see it but analyse it wrongly.

A tactic appears for you: you see it and analyse it correctly, but wrongly assess the outcome.

A tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.

A
tactic appears for you: you get it right.

The idea is easy, but can you analyse it to a
finish?

[34. Kh2! ...when it's all a bit tricky!]

34... Qe8 35. Re6 Qxa4 36. Re7+ Kg6 37. Rxc7 Qd1+ 0-1_

The tactic was obvious enough, what I failed to assess was how good White's pieces would be in the ending.

A

tactic appears for you: you see it and analyse it correctly, but stop analysis too soon.

Wilcox,
RJ (1830) - Regis, D (1945) (3) [B06] Paignton Challengers, 1996

{wdwdrdkd}
{dwdb4pgw}
{wdwdwhpd}
{0wdw1wdp}
{PdpHPdwd}
{Hp)wdBdP}
{w)wdw!Pd}
{dwdRdRdK}

I thought I could wrap things up here: 28... Nxe4?!_
was an obvious first choice, trying to win a Pawn. Does it win a
Pawn? Oh no, because of Nxc4. No, I was right, it does win a Pawn,
because I've always got both ...Bxh4 and ...Bxa4.
So...

28... Nxe4?!_
{28...!c7!wiNn,IrhiNK}
29. Bxe4 Qxe4 30. Nxc4 Qd5 _

And of course I realised here I'd blown it:30... Bxa4? 31. Nd6!

This is very common: stopping analysis at the end of a sequence
favourable to you. But after that, it's your opponent's move!

As we start to comment more deeply on these examples, we see two
sources of error: mistakes or bad habits in analysis, on the
one hand, but also misjudgements on the other - errors in the
general assessment of the board or the opponent. It is just the first
of these I am concerned with here; else we are raising another big
issue about attitude.

Getting your mind right_

I don't know any exercises to improve your mental attitude, but
awareness - particularly self-awareness - is important in eliminating
all sources of error, not just tactical ones. I have written and
collected material elsewhere about getting your mental attitude right:
there are examples (good and bad) in the <A HREF =

[../Canon/canonidx.html#psych](#)>Psychology section of the Canon, there is some good advice on a [Poster for Juniors, and in a compilation of Advice for the middlegame. However, in this document on tactics I'll mention the issue of attitude in this aside, and return to the matter at hand.

Combinations do not usually come out of nowhere - they are based on a superiority in position_, and you can tell when a combination is likely to be around:

Exposed or "stalemated" Kings are always vulnerable_

Undefended or 'hanging' pieces often lead to trouble_.

Pieces which are defended only as often as they are attacked can also lead to trouble, because their defenders are at least partly immobilised._.

This last category can be hardest to spot, because it is so common. There is some sense in which, as Lasker described, there should be some justice in chess - have you done enough, to deserve to win? that is, have you a big enough advantage? This is to some extent a matter of judgement, but if you feel you have a good advantage in space or mobility, then you should look:

"No combination without a considerable plus, no considerable plus without a combination [...]

In the beginning of the game ignore the search for combinations, abstain from violent moves, aim for small advantages, accumulate them, and only after having attained these ends search for the combination - and then with all the power and will of intellect, because the combination must exist, however deeply hidden."

-- LASKER.

I like this quote, but it has to be said that while there are 'just' and logical combinations where you (say) carry out a combination based on a campaign against the long-term weakness of a Pawn, there are also 'accidental' combinations which seem to be based on nothing but the

chance arrangement of pieces, and there are also traps - so diligence in searching for tactics is required at almost every move.

you must routinely check all positions for tactical opportunities
you must think for your opponent as well as yourself

How can you make sure that you get better at this? Determination alone may not be enough: we need a bit more theory, and practice.

Candidate moves

The first bit of theory is the search for candidate moves; I also owe my appreciation of the idea of candidate moves to Kotov.

"All candidate moves should be identified at once and listed in one's head. This job cannot be done piecemeal, by first examining one move and then look at another."

-- ALEXANDER KOTOV

The idea is, to make sure you don't overlook some vital idea at the start of analysis.

Varley - Hewson, WECU Jamboree [B18], 1993

Black has a restricted position and is behind in 'development' (=getting his pieces out) but his pawn structure is very solid. Can Black get away with this, or can White show the flaw in Black's move order by the sacrifice Bxe6_?

What do you think?

```
{rhw1kdw4}  
{0pdwdp0b}  
{wdpgphw0}  
{dwdwdwdw}  
{wdB)wHw)}  
{dwdwdwHw}  
{P)PdQ)Pd}  
{ $wGwIwdR }
```

11. Bxe6_

An enterprising sacrifice! White hopes to catch Black's King in the centre.

11... O-O!_

Unflappable Exeter player Brian Hewson calmly sidesteps the main line of a sacrifice (11...fxe6) threatening a pin on the e-file.

12. O-O Bxf4 13. Bxf4 fxe6 14. Qxe6+ Kh8 ..._ and Black consolidated and won. [0-1]

It is often the case that players will analyse one line very deeply but fail to spot an early alternative - as mentioned above, Grandmaster Kotov advised many years ago to identify each candidate move at the outset before analysing any one move deeply. Had White done this he could not fail_ to notice the possibility of Black castling, and should then spot the classic pattern of Q and K lined up on the e-file which suggests a pin from a Black R on e8, and could not fail to realise that it refuted the sac.

There is another example or two illustrating the 'candidate move' idea from Simon Webb's panel tests, and the commentary on Nunn's games in the Analysis section of the Canon.](#)

There are certain sorts of moves which are easy to spot (or train yourself to spot: like checks, captures, and so on. There are also certain classes of move which are difficult to make yourself consider - here are a few surprising/paradoxical moves. You should (a) make sure you know these models, (b) collect and review other examples, (c) see if there are either types of moves which you or somebody else found difficult to anticipate.

Retreats

Christiansen
- Karpov (1993)

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.a3 Ba6 5.Qc2 Bb7 6.Nc3 c5 7.e4 cxd4 8.Nxd4 Nc6

9.Nxc6 Bxc6 10.Bf4 Nh5 11.Be3 Bd6 (wait for it...) _

{rdw1kdw4}
{0wdpdp0p}
{w0bgpdwd}
{dwdwdwn}
{wdPdPdwd}
{)wHwGwdw}
{w)Qdw)P}
{\$wdwIBdR}
12.Qd1 1-0_

The error made by Karpov above is actually a common one - missing an undeveloping retreat.

Other errors of this sort - hard types of move to spot - include long moves, sideways moves by Queens, captures by Pawns away from the centre, and so on. Another example:

Putting
pieces en prise

Fischer
- Sherwin, USA Ch'p , 1957

{wdwdw4kd}
{dwdwdp0p}
{wdw0wdwd}
{dwdBdw1w}
{RdwdPdnd}
{dw4wdwdw}
{PdwdQdP}
{dwdwdRdK}
30. Rxf7 Rc1+ 31. Qf1!! h5 32. Qxc1 Qh4 33. Rxf8+ Kh7 34. h3 Qg3 35. hxg4 h4
36. Be6 1-0_

How about that one: a Queen moving backwards into a position where it can be captured!

'Silent' sacrifices

You can get so used to looking for 'smiting' moves that apparently non-forcing, 'quiet' sacrifices can be surprising:

Fischer,R

- Benko,P, ch-USA, 1963

{rdwdq4wi}
{0pdwdpgp}
{wdphwdwd}
{dwdwdwdQ}
{wdw0Pdwd}
{dwHBdwdP}
{P)PdwdPd}
{ \$wdwdRIw }

Obviously, there is a mating attempt at h7 but
{19.e5f520.!pe8Hpe821.He2Gpe522.\$pf5Gf6=}

19. Rf6! _

This is what I mean: a silent sacrifice of the Rook, which actually leaves Black helpless. Chess may not be an art, but moves like this have a strong aesthetic effect, at least for me - I like the apparent subtlety of the sacrifice without a check or capture, and I like the drama of giving Black an apparently free move for the defence - which he cannot make use of.

19... Kg8 _
{19...h620.e5[20.\$ph6ddw}20...Ig8dw}
20. e5 h6 21. Ne2 1-0_

'Creeping
moves'

I keep alluding to Purdy's advice:
"examine moves that smite!" But have a look at this:

Spassky
- Korchnoi, Kiev, 1968

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. f3 O-O 6. Be3 Nc6 7. Nge2 a6 8.
Nc1 e5 9. d5 Nd4 10. Nb3 Nxb3 11. Qxb3 c5 12. dxc6 bxc6 13. O-O-O Be6 14. Qa3
Ne8 15. h4 f6 16. c5 Rf7 17. Qa4 Qc7 18. Bc4 Bxc4 19. Qxc4 Bf8 20. h5 dxc5 21.
hxg6 hxg6 22. Qe6 Rd8 23. Rxd8 Qxd8 24. Rd1 Qe7 25. Qxc6 Nc7 DIAGRAM_
{wdwdwgkd}
{dwhw1rdw}

{pdQdw0pd}
{dw0w0wdw}
{wdwdPdwd}
{dwHwGPdw}
{P)wdwdPd}
{dwIRdwdw}

The situation in this Candidates' Match game is tense. Although White undoubtedly holds the advantage, Moscow players analysing while the game was going on could find no clear continuation, e.g. 26. Nd5 Qe6! and Black holds.

26. Qb6 _

Surprising and elegant, this 'creeping move' impressed many, including Kotov who has cited it more than once. The move prepares to answer ...Qe6 with Bxc5 and leads to a swift win. To Kotov, this was a far more brilliant move than the Queen sacrifice that ended the game.

26... Kg7 27. Nd5 Qe6 28. Bxc5 Bxc5 29. Qxc5 Nb5 30. Qe3 Qc6+ 31. Kb1 Nd4 32. Rc1 Qb5 33. Nc7 Qe2 34. Ne6+ Kh7 35. Qh6+ 1-0_

It's hardest of all to spot a 'creeping' move in the middle of a combinational exchange. Here is a simple example:

Wahl Tuch

- Palmer, Manchester, 1912

1. e4 e5 2. Nf3 Nc6 3. Bb5 Nf6 4. O-O Nxe4 5. d4 Nd6 (_Berlin Defence, Rio De Janiero Variation) 6. dxe5 _[6. Bxc6] 6... Nxb5 7.

a4_

{rdb1kgw4}
{0p0pdp0p}
{wdndwdwd}
{dndw)wdw}
{Pdwdwdwd}
{dwdwdNdw}
{w)Pdw)P}
{\$NGQdRIw}

This is a gorgeously messy line

7... Nd6_ [better 7... d6]

8. Bg5 f6 9. Re1 fxg5 10. exd6+ Ne7 11. Ne5 cxd6 12. Qh5+ g6 13. Nxc6 Qa5 14. Nxc8+ Kd8_

Have a look at the next diagram and see what you think.

15. Nc3 _
{OBviounbyNor15.!f7!pe1#}

It is tempting to try a forcing move, but none work.

"A quiet move in the midst of an attack is the sign of the master" - Du Mont

15... Qf5 (else Qf7) 16. Nb5 Ng6 17. Qxg5+ 1-0_

The calculation of variations

The starting point for any consideration of analysis must be Kotov, again.

Candidate moves must be established straight away and they must be clearly enumerated.

Once we have established all the candidate moves, we then proceed to work out the variations arising from them one by one.

In analysing complicated variations, one must examine each branch of the tree once and once only.

This task cannot be split into parts, by examining one move fully and then looking for the next one._

Kotov gives some example of positions where the analysis gets progressively more detailed:

The
'tree of analysis'

bare trunk bare trunk with coppice bush
 side-branch

Through practice, I would have thought anyone could master the art of analysing "bare trunks" and "trunk-with-branch" - what is required here is the ability to visualise the board several moves ahead.

Also, I think also the "coppice" type of position is not out of most

players' reach. What is required here is organisation - to list the moves required at the outset, and to work through them methodically.

What is most challenging is the type of position which is genuinely complex, like the "bush", when it is difficult for most of us to analyse everything relevant. Are there any hints or tips for making best use of the time we have, while our analytical skills are still developing? Yes indeed: we have advice from de Groot, from Nunn/Griffiths, and from Nimzovitch.

The chess master and psychologist De Groot, in commenting on transcriptions of players' verbal reflections, used to talk about 'progressive deepening'. If this strategy is to be adopted it must not resemble the feckless meandering described so amusingly by Kotov in his book [Think Like a GM](http://dab.psi.net/ChapterOne/uscf/browse/thinklike.html), switching dissatisfied from one move to another until you run out of time. However it has often seemed to me that rather than work six moves deep down line "A", then six moves each down line "B", it might be better to look (say) two moves deep in each of lines A-G, then go back to "A" and go four moves deep this time, and so on. It may be that you find the key to the position earlier than you would have done by a strictly sequential approach, and in any event, ideas which may be obvious from one line of analysis may come in handy when analysing other lines, where the same idea is not so obvious. There is an example illustrating the idea of 'progressive deepening' from Simon Webb's panel tests.

Given a list of candidate moves, which lines do you start with? Purdy again: start with the most forcing moves. But if none look any better than the others?

Nunn and Griffiths advise: "Just plunge in"; take a look at this one, where "Black has a decisive attack" but there is no forced mate.

Corden - Nunn, Birmingham 1975 [Variation]

```
{rdwkdw4}
{0pdwdp0p}
{wdpdwdwd}
{dBdp)bdw}
{wdwdndwd}
{dwdKdNdw}
{P)PdW1P)}
```

{ \$NGQdwdR }

The first move to look at must be 15. Ba4 Nd2+ 16. Kc3 Qe3+ 17. Kb4 a5# _ ..."and straightaway you have learned a lot about the position". That is, you can regain at least one piece whenever you wish, still keeping the K exposed. After this you can work your way methodically through the other lines, with the conclusions from your quick first assessment already in mind.

Sometime you can divert the task of analysis: play a good positional move relatively quickly.

nimzovitch - tartakower (karlsbad) [E81], 1929

{rdqdw4wi}
{dw0bdpgp}
{w0w0whwd}
{0whP0wGp}
{wdPdPdPd}
{dwHwdPdw}
{P)w!wHwd}
{ \$wdwIBdR }

{ 15.Gpf6Gpf6(HimzoaNabyneqBRiefby):16.!h6Gg717.!ph5h6
18. g5 f5 "now it is necessary to analyse several variations which are roughly equally good:" e.g. 19. gxf6 [or 19. gxh6_]
19... Rxf6 20. Bh3]

"all of this is extremely complicated and therefore I played after no more than five minutes' thought"...

15. Bxf6!

15... Bxf6 16. Rxh5

Bg7 17. Nh1_ There followed:

17... f6 18. Qh2 h6 19. Ng3 Kh7 20. Be2 Rg8 21. Kf2 Rh8 22. Rh4 Qe8
23. Rg1 Bf8 24. Kg2 Nb7 25. Nh5_

"with a strong solid game and chances of attack" - NIMZO [...1-0]

However, sometimes there is no such resource, and you must simply work your way through the variations as best you can.

Good practice

So much for theory. How do you put this into practice? Well, you practice! We must cultivate good habits in our analysis.

"Let us repeat once more the methods by which we can increase our combinative skill:

"(1) by careful examination of the different types and by a clear understanding of their motives and their premises

"(2) By memorising a number of outstanding as well as of common examples and solutions

"(3) Frequent repetition (in thought, if possible) of important combinations, so as to develop the imagination."

-- Euwe, Strategy and Tactics in Chess_.

Since Euwe wrote, some other methods have become more available.

Gaining practice and experience through tests:_

You have probably seen either the British Chess Magazine_ column Find the Winning Continuation, or the same idea in Chess_ magazine, called there Winning Combinative Play. There are also books of tactical positions for solving, one I quite liked for the basics was Chernev and Reinfeld, Winning Chess.

If you are determined to get better, try the Russian chess training programme contained in three books by Livshits: Test your chess IQ, Vol.1 (for players up to 160), Test your chess IQ, Vol.2 (for 160-200) and Test your chess IQ, Vol.3 - Grandmaster Challenge (for 200+ grades).

They both suffer from the drawback, in my view, of containing only combinations that work - there are no false but tempting opportunities offered to you, which is so often the case during a game. In fact, I believe that mass practice of tactical tests like this can lead to a false sense of optimism when presented with a promising tactical opportunity. Unless these tests have hidden points in the variations you are required to spot, or include 'false' opportunities, they must be supplemented by other activities. Some support for this is found in

Gene Thompson's article for Chess Scene_.

More testing (literally) is the Chess Monthly_ magazine feature, How Good is your Chess? which takes you through a real game and gives you points (There is a book of these under the same name by Danny King; BCM have a similar feature called Test Your Chess.) Here's an easy example of such a test from the B.C.F., with answers.

Other Books for study_

Most of the above is 'practice makes perfect' style with little explanation. The theory of candidate moves and trees of analysis I found in Kotov, Think like a Grandmaster (a summary is also to be found in Kotov, Plan like a Grandmaster). This book also describes how Kotov used to analyse complicated master games, writing down his conclusions for comparison. Both books give test positions with a full tree of analysis.

Another important book for theory is Nunn and Griffiths, Secrets of Grandmaster Play. It is a deliberately educative book, showing, firstly, what a complete analysis of a game looks like, but also giving lots of practical tips and observations, and trying to show how much players really see at the board.

Gaining practice and experience through exercises:_

One of the best exercises is to play tactical games, against a player of about your own strength or better. If the point is to develop tactics, there can be no better way of doing this for most people than practicing against a computer - that will show you how thorough you really are!

Playing-out of positions_

There are also some good ideas in Dvoretsky, Secrets of chess tactics. In particular, he describes the technique of playing-out of positions for which an analysis has been published. For example, he played on from positions found in the Nunn/Griffiths book with his pupils (Yusupov and Dolmatov) as if the position had arisen in a game against the clock. This is a realistic test and you can check your conclusions against what Nunn has analysed. Of course, you can use a computer to play positions out.

Examining your own games:_

Always a good idea - and it is quite possible to do so concentrating mostly on the number and type of tactical errors you make. Mistakes are perhaps inevitable, but to be worked on - for example, try to eliminate one-move mistakes, then two-movers, and so on. Also, make sure you are spotting opportunities for your opponent as well as yourself. I'm sure becoming more efficient or more consistent in this regard would result in a rise in grade for most of us, without any great new insights being gained.

Blumenfeld's rule_ for avoiding blunders:

After you have decided but before moving, write the move down, and before playing it, check it again for any tactical features you may have missed. After this fresh look, then you move. This is called...

Blumenfeld's rule:

"It often happens that a player carries out a deep and complicated calculation, but fails to spot something elementary right at the first move. In order to avoid such gross blunders, the Soviet master B. Blumenfeld made this recommendation:-

When you have finished your calculations, write down the move you have decided upon on the score sheet. Then examine the position for a short time 'through the eyes of a patzer'. Ask whether you have left a mate in one on, or left a piece or a pawn to be taken.

Only when you have convinced yourself that there is no immediate catastrophe for you should you make the planned move."

-- KOTOV

You've all seen people do this. I've also seen people do it badly. The idea is to snap yourself out of the trance of analysis and take a fresh look.

I have seen players write down a losing move while nodding and smirking, look over the board again still nodding, and then play the move. Useless - just going through the motions. I guess they were just revising their latest thoughts on the position. You must jump! snap! start! your thinking again, to see if you have overlooked anything at the start_ of your thinking. You are not checking conclusions - you are checking assumptions_. [If they had genuinely re-started their thinking there would have been a change in body language - not a smooth progression from choosing to writing to blundering, nodding all the while.]

Exeter Chess Club: Compensation for material?

Mostly, situations of material imbalance are fairly clear. Typically extra material wins: even with an otherwise level position, the extra firepower can make an attack pay, or make the opponent's defences overstretched.

Occasionally, normal material values are overturned. This is most obvious in situations of sacrifice: the mutual possibilities of exchange sacrifices $Rh1 \times Nh5$ and $\dots Rc7 \times Nc3$ in the Sicilian Dragon are well-known, if not always easy to judge. The sacrifices remove a key defender and open lines against the King.

These attacking possibilities are not all we need to know. A while ago, I showed you one of my classier messes:

A tactic appears for you: you see it and analyse correctly, but wrongly assess the outcome.

Ward,D - Regis,D (1994)

26... Bd4 27. Bxd4 Rxe4 28. Qxe4 Ng3+ 29. Kg1 Nxe4 30. Rxe4 Re8 31. Rbe1 Rxe4 32. Rxe4 Qf7 33. Re6 Kh7 34. Rf6

[34. Kh2! ...when it's all a bit tricky!]

34... Qe8 35. Re6 Qxa4 36. Re7+ Kg6 37. Rxc7 Qd1+ 0-1

The tactic was obvious enough, what I failed to assess was how good White's pieces would be in the ending. Best was probably to recapture on d4 with the knight on #27.

What is at issue here are situations which suit particular pieces. Here are some unusual exploitations of material imbalance. Some are exceptions to the usual material rules, but perhaps we should rather think of these as illustrations of some unbroken positional rules - Rooks always need open files.

Several of these examples I got from Jan Timman's recent and hugely enjoyable games collection **Selected Games** (cadogan), where I was struck by several games with a material imbalance. I don't know if Jan gets these more often than other GMs or just enjoys them more! Anyhow, I hope you get something out of these examples.

The exchange

Compensation for the exchange: Bronstein, David - Boleslavsky, Isaak (Moskva ch_SU, 1961)

A simple case: an exchange for extra passed Pawns

[C77], 1943**

25. Qc2

25... Rd4 26. Ne2?

[26. Bxd4 cxd4 27. Na4 c5 28. Nb2 and with Nd3 White achieves an ideal blockading position.]

26... Bc8 27. Nxd4 cxd4 28. Bf2 c5 29. Rf1 f5

The Rooks have no open files, while the Bishops give the King a Hard Stare. The d-Pawn is also a constant danger.

30. Bg3 Bd7 31. Rad1 f4 32. Bf2 g5 33. g4?

perhaps White intends to seal the King's-side, but of course Black does not permit this.

[33. a3 and opening a file on the Queen's-side is essential]

33... fxg3 34. Bxg3 Bh3 35. Rf2 h5 36. Rfd2 h4 37. Bf2 Rf8 38. Rd3 Rf4 39. Kh1 Kh7 40. Rg1 Bd8 41. Qe2 Qf7 42. Qd1 Qh5

43. Be3 Qxf3+ 44. Qxf3 Rxf3 45. Bxg5 Rxd3 46. Bxd8 Re3 47. Bb6 Rxe4 48. Bxc5 Re2 49. Rd1 Bg4 50. h3 Bxh3 51. b4 Bf5 52. Bd6 d3 53. bxa5 h3 0-1

Compensation for the exchange: Selesniev Alexey - Alekhine Alexander (Triberg) [A47], 1921

20. Bd3

20... Rb4 21. Bxb4 cxb4 22. Nd2 Nc5?!

[22... Rc8]

23. Nb3 Nd7

Black has great play on the dark squares, especially c5, and a protected passed Pawn. Additionally, the

White Pawns at a4 and c4 are targets.

24. c5

A good bid for counterplay: the Rooks need open lines and the Pawn was blocking the Bishop. However, the Black Queen's-side Pawns now become very dangerous.

24... Bxd3 25. exd3 dxc5 26. Rfe1 Ne5 27. Re3

[27. Qxc5!?!]

27... Rc8 28. Rc1 Qd7 29. d4 Ng4 30. Re4 c4 31. Nc5 Qf5 32. Qe2

32... b3 33. Rxc4 b2 34. Qxb2 Qxg4 35. Rxc4 h5 36. Qc2

The return of the exchange has given White some play...

36... h4

...but this ushers in a new phase of the game: Alekhine has the initiative, and there is no more dangerous prospect for a player!

[...] 74. Nh3+ Kf1 0-1

A complex exchange sacrifice: Portisch L - Timman J (5, Antwerp) [B06], 1992

An imbalance of the exchange is overlaid with a fascinating battle between passed d-Pawns.

26. Qxc5 d3 27. Nb4!

27... d2 28. Nd3 Qb3 29. Nf2 Qa4 30. g3 a6 31. b6 Rdc8 32. b7! Rxc6 33. Qa7 Rxb7 34. Qxb7 Rc1 35. Qf3 Qd4 36. Kg2 Re1! 37. Nd1 Bf8 38. Qf2 Qd5 + 39. Kg1 Rxf1+ 40. Kxf1 f6 41. exf6 Bxd6 42. Qe3 Kf7 43. Ke2 Bc5! 44. Qc3 Qe4+ 45. Kf1 Qh1+ 46. Ke2 Qxh2+ 47. Kf3 Qh1+ 0-1

Queen for Rook and Minor Piece

This is usually a straightforward win. The Queen has problems if it is the only White piece left, and if the defender's position can hold the Queen off.

The Queen in an open position: Euwe, M - Grunfeld, E (Zandvoort) Q vs. RB, 1936

18. Nf6+ Bxf6 19. Rxd8 Bxd8

In this open position the Queen is boss and White wins quickly by direct attack.

20. Ng5 Bxg5 21. Bxg5 Rfe8 22. Re1 Re6 23. Re3 Rae8 24. h4 h6 25. Bf6 g6 26. Qf4

26... Kh7 27. Bg5 f5 28. exf6 0-1

Keres,Paul - Fischer,Robert (Yugoslavia ct Rd: 1 [B99] Q v RN, 1959

12. e5 Bb7 13. exf6 Bxf3

"so I chopped it off!" - RJF

14. Bxf3 Bxf6 15. Bxa8 d5 16. Bxd5 Bxd4 17. Rxd4 exd5 18. Nxd5 Qc5 19. Re1+ Kf8

20. c3 h5 21. f5 Rh6 22. f6

conceding ("*throwing away*" - RJF) a pawn in order to try and keep Black tied up

22... gxf6 23. Nf4 h4 24. Rd8+ Kg7 25. Ree8 Qg1+ 26. Kd2 Qf2+ 27. Ne2 Rg6 28. g3 f5

Keres may have been optimistic about this line but Black is sorted out and can plan the win. The Queen in an open position, with play on both wings, is a monster. Black soon obtains a passed Pawn and play against the exposed King.

29. Rg8+ Kf6 30. Rxc6+ fxc6 31. gxh4 Qxh2 32. Rd4 Qh1 33. Kc2 Ke5 34. a4 Qf1 35. Nc1 Qf2+ 36. Kb3 bxa4+ 37. Ka3 Qc2 38. Nd3+ Kf6 39. Nc5 Qc1 40. Rxa4 Qe3 41. Nxa6

33. Bxc1 1-0

[33. Bxc1 Rxc1 34. Qd2 when the d-pawn falls]

Ivanchuk V - Timman J [13, Tilburg] [A29] Q v RR, 1990

37. R1f7+

"White has no choice but to allow this liquidation, but the two Rooks are much stronger than the Queen."

37... Qxf7 38. Rxf7+ Kxf7

39. Qf4+ Kg6 40. Kxh2 Rh5 41. Qd6+ Nf6 42. Kg1 Rf5 43. Qd3

43... Kh5?

[43... Ree5!? just fails to mate]

[43... Kg7!]

44. g4+! Kxg4 45. Bxe3 Rg8 46. Kh2 Kh4 47. Bg5+

(the move Timman had overlooked; the Black King is persistently misplaced)

47... Kxg5 48. Kxh3 Nh5?

"I was getting short of time at this point, and - worse - was still aiming to win."

[48... Rg6!]

49. Nd5 Rg6 50. Qe3+ Nf4+ 51. Nxf4 Rxf4 52. b6 Kf5 53. Qc5+ Ke4 54. Qe7+ Kf5 55. Qxh7 Re4 56. b7 Re3+ 57. Kh4 1-0

A curiosity

Agust always says that you should teach chess backwards, like the Russians: learn how to mate with the King and two Queens against bare King, then King and Queen, then King and Rook...

Agust also says he is glad he learned to mate with Bishop and Knight, and sorry he neglected the endgame of Bishop and Rook against Rook. Here's another that many of us may have neglected...

Timman J - Speelman J (10, Linares) [D35] KBB v KN, 1992

66. Bxb5

66... Nf5 67. Bf8 Ne3+ 68. Kd4 Ng2 69. Kd3 Nf4+ 70. Kd2 Ng2 71. Bc6+ Kf2 72. Bd6 Nh4 73. Bc5+ Kg3 74. Bb6 Ng2 75. Bd5 Nh4 76. Ke2 Kf4 77. Bb3 Nf5 78. Bc7+ Kg5 79. Be5 Kg4 80. Bc2 Ng3+ 81. Kf2 Nf5 82. Bd1+ Kg5 83. Kf3 Nh4+ 84. Ke4 Nf5 85. Ba4 Ne7 86. Bd7 Ng8 87. Bf4+ Kg6 88. Ke5 Nf6 89. Bb5 Kf7 90. Bc4+ Kg6 91. Ke6 1-0

Timman in his notes regrets that the theory of this endgame indicates a win can be forced only after more than 50 moves, and so there is little incentive, under the restored 50-move rule, to study this type of endgame. He concludes:

"The chess world is becoming dull and superficial" -- Timman

Top 10 Games

1. Reti,R - Bogoljubow,E [A13] Top 10 games: New York, 1924

A game with everything right: strong strategic theme, neat tactical finish. 25 moves of great polish.

1.Nf3 d5 2.c4 e6 3.g3 Nf6 4.Bg2 Bd6 5.0-0 0-0 6.b3 Re8 7.Bb2 Nbd7 8.d4 c6 9.Nbd2 Ne4 10.Nxe4 dxe4 11.Ne5 f5 12.f3 exf3 13.Bxf3 Qc7 14.Nxd7 Bxd7 15.e4 15...e5 16.c5 Bf8 17.Qc2 exd4 18.exf5 Rad8 19.Bh5 Re5 20. Bxd4 Rxf5 21.Rxf5 Bxf5 22.Qxf5 Rxd4 23.Rf1 Rd8 24.Bf7+ Kh8 25.Be8 1-0

2. Byrne,R - Fischer,R [E60] Top 10 games: , 1963

A wonderfully clear, crisp game - everything I like about Fischer's chess.

1.d4 Nf6 2.c4 g6 3.g3 c6 4.Bg2 d5 5.cxd5 cxd5 6.Nc3 Bg7 7.e3 0-0 8.Nge2 Nc6 9.0-0 b6 10.b3 Ba6 11.Ba3 "...at worse completely safe. To turn this into a mating position in eleven more moves is more witchcraft than chess!" -- KIRBY 11...Re8 12.Qd2 e5 13.dxe5 Nxe5 14.Rfd1 Nd3 15.Qc2 15...Nxf2 16.Kxf2 Ng4+ 17.Kg1 Nxe3 18.Qd2 Nxg2 Eliminating the defensive bishop rather than snatching at material 19.Kxg2 d4 20.Nxd4 Bb7+ 21.Kf1 As Byrne resigned, GMs in the press room were still arguing that White was winning. 21...Qd7 White resigns. 0-1

3. Reti,R - Alekhine,A [A00] Top 10 games: Baden Baden (8), 1925

It's not so much the chess by itself that impresses me here as the man: such sustained courage and drive.

1.g3 e5 2.Nf3 e4 3.Nd4 d5 4.d3 exd3 5.Qxd3 Nf6 6.Bg2 Bb4+ 7.Bd2 Bxd2+ 8.Nxd2 0-0 9.c4 Na6 10.cxd5 Nb4 11.Qc4 Nbx5 12.N2b3 c6 13.0-0 Re8 14. Rfd1 Bg4 15.Rd2 Qc8 16.Nc5 Bh3 17.Bf3 Bg4 18.Bg2 Bh3 19.Bf3 Bg4 20. Bh1 h5 21.b4 a6 22.Rc1 h4 23.a4 hxg3 24.hxg3 Qc7 25.b5 axb5 26.axb5 26...Re3 27.Nf3 cxb5 28.Qxb5 Nc3 29.Qxb7 Qxb7 30.Nxb7 Nxe2+ 31.Kh2 Ne4 32.Rc4 Nxf2 33.Bg2 Be6 34.Rcc2 Ng4+ 35.Kh3 Ne5+ 36.Kh2 Rxf3 37. Rxe2 Ng4+ 38.Kh3 Ne3+ 39.Kh2 Nxc2 40.Bxf3 Nd4 0-1

4. Bernstein,O - Capablanca,J [D63] Top 10 games: style: Capablanca the elegant, 1914

A chestnut, but a most deft and elegant chestnut

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Nf3 Be7 5.Bg5 0-0 6.e3 Nbd7 7.Rc1 b6 8.cxd5 exd5 9.Qa4 Bb7 10.Ba6 Bxa6 11.Qxa6 c5 12.Bxf6 Nxf6 13.dxc5 bxc5 14.0-0 Qb6 15.Qe2 c4 16.Rfd1 Rfd8 17.Nd4 Bb4 18.b3 Rac8 19.bxc4 dxc4 20.Rc2 Bxc3 21.Rxc3 Nd5 22.Rc2 c3 23.Rdc1 Rc5 24.Nb3 Rc6 25.Nd4 Rc7 26.Nb5 Rc5 27.Nxc3 Nxc3 28.Rxc3 Rxc3 29.Rxc3 Qb2 0-1

5. Samisch - Nimzovitch [E18] Top 10 games: pawn mobility: restraint, 1923

Neither deft nor elegant, but has the same mark of genius.

1.d4 Nf6 2.c4 e6 3.Nf3 b6 4.g3 Bb7 5.Bg2 Be7 6.Nc3 0-0 7.0-0 d5 8.Ne5 c6

9.cxd5 cxd5 10.Bf4 a6 (idea b5) 11.Rc1 b5 12.Qb3 Nc6 "the ghost!" (idea Na5-c4) 13.Nxc6 Bxc6 14.h3 Qd7 15.Kh2 Nh5 (or Qd2 & Nd7-b6-c4) 16. Bd2 f5 17.Qd1 b4 18.Nb1 Bb5 19.Rg1 Bd6 20.e4 fxe4 ! 21.Qxh5 Rxf2 22. Qg5 Raf8 23.Kh1 R8f5 24.Qe3 Bd3 25.Rce1 h6 0-1 samisch-nimzo. (zugzwang! if Kh2 or g4, Rf3 winning wQ) 26.g4 0-1

6. Bogoljubov Efim - Alekhine Alexander [A90] Top 10 games: Hastings, 1922

The most brilliant game ever played?

1.d4 f5 2.c4 Nf6 3.g3 e6 4.Bg2 Bb4+ 5.Bd2 Bxd2+ 6.Nxd2 Nc6 7.Ngf3 0-0 8.0-0 d6 9.Qb3 Kh8 10.Qc3 e5 11.e3 a5 12.b3 Qe8 13.a3 Qh5 14.h4 Ng4 15. Ng5 Bd7 16.f3 Nf6 17.f4 e4 18.Rfd1 h6 19.Nh3 d5 20.Nf1 Ne7 21.a4 Nc6 22. Rd2 Nb4 23.Bh1 Qe8 24.Rg2 dxc4 25.bxc4 Bxa4 26.Nf2 Bd7 27.Nd2 b5 28. Nd1 Nd3 29.Rxa5 b4 30.Rxa8 bxc3 31.Rxe8 c2 32.Rxf8+ Kh7 33.Nf2 c1Q+ 0-1

7. Tal, M - Simagin (Leningrad ch-SU) [B07] Top 10 games: Lessons from Tal: sacrifice (, 1956

So many Tal brilliancies, but this early (flawed) example remains my favourite.

1.e4 c6 2.d4 d6 3.Nc3 Nf6 4.f4 Qb6 5.Nf3 Bg4 6.Be2 Nbd7 7.e5 Nd5 8.0-0 Nxc3 9.bxc3 9...e6 [9...Bxf3 10.Bxf3 dxe5 11.fxe5 Nxe5 12.Ba3] 10.Ng5 Bxe2 11.Qxe2 h6 12.Nxf7 Easy to see, hard to play! Spielmann calls this a 'real' sacrifice as opposed to those sacrificial combinations where the hoped-for gain is clear and short-term. 12...Kxf7 13.f5 dxe5 14.fxe6+ Kxe6 15.Rb1 Qxb1 16.Qc4+ Kd6 17.Ba3+ Kc7 18.Rxb1 Bxa3 19.Qb3 Be7 20.Qxb7+ Kd6 21.dxe5+ Nxe5 22.Rd1+ Ke6 23.Qb3+ Kf5 24.Rf1+ 24...Ke4 [24...Kg6 25. Qe6+ Bf6 26.Qf5+ Kf7 27.Qxe5] 25.Re1+ Kf5 26.g4+ Kf6 27.Rf1+ Kg6 28. Qe6+ Kh7 29.Qxe5 Rhe8 30.Rf7 Bf8 tal-simagin (23rd USSR ch'p)/sacrifice: unclear ('genuine' - Spielmann) 1956/1-0 (45) 1-0

8. Pillsbury, H - Tarrasch, S [D55] Top 10 games: Hastings Hastings, 1895

That's how to start your international tournament career: an all-out King's-side attack against the great Dr.Tarrasch, burning his boats on the Queen's-side as he goes. I found Pillsbury's vigour and enterprise so exciting when I first came across it, and still do.

1.d4 d5 2.c4 e6 3.Nc3 Nf6 4.Bg5 Be7 5.Nf3 Nbd7 6.Rc1 0-0 7.e3 b6 8.cxd5 exd5 9.Bd3 Bb7 10.0-0 c5 11.Re1 c4 12.Bb1 a6 13.Ne5 b5 14.f4 Re8 15.Qf3 Nf8 16.Ne2 Ne4 17.Bxe7 Rxe7 18.Bxe4 dxe4 19.Qg3 f6 20.Ng4 Kh8 21.f5 Qd7 22.Rf1 Rd8 23.Rf4 Qd6 24.Qh4 Rde8 25.Nc3 Bd5 26.Nf2 Qc6 27.Rf1 b4 28.Ne2 Qa4 29.Ng4 Nd7 30.R4f2 Kg8 31.Nc1 c3 32.b3 Qc6 33.h3 a5 34.Nh2 a4 35.g4 axb3 36.axb3 Ra8 37.g5 Ra3 38.Ng4 Bxb3 39.Rg2 Kh8 40.gxf6 gxf6 41.Nxb3 Rxb3 42.Nh6 Rg7 43.Rxg7 Kxg7 44.Qg3+ Kxh6 45.Kh1 Qd5 46.Rg1 Qxf5 47.Qh4+ Qh5 48.Qf4+ Qg5 49.Rxg5 fxe5 50.Qd6+ Kh5 51. Qxd7 c2 52.Qxh7# 1-0

9. Petrosian, T - Spassky, B [E66] Top 10 games: Wch26-Moscow (10),

1966

The famous finale is but the cymbal crash after a long drum-roll; Petrosian dominates Spassky on the board but also psychologically.

1.Nf3 Nf6 2.g3 g6 3.c4 Bg7 4.Bg2 0-0 5.0-0 Nc6 6.Nc3 d6 7.d4 a6 8.d5 Na5 9.Nd2 c5 10.Qc2 e5 [10...Rb8!?] 11.b3? The finish is attractive, and worth noting. [28...Qxe3 29.Bxf7+ Kf8 30.Qh8+ Ke7 31.Nf5+ Kxf7 32.Qg7+ and 33.Nxe3] 29.Bxf7+ Rxf7 30.Qh8+! 1-0

10. Karpov,A - Kasparov,G [D55] Top 10 games: style: Karpov keeping control (4), 1985

I am not one of those who found Karpov's calm and neat chess disappointing after Fischer's dynamism; on the contrary, his calm and neat chess is wholly admirable.

1.d4 d5 2.c4 e6 3.Nc3 Be7 4.Nf3 Nf6 5.Bg5 h6 6.Bxf6 Bxf6 7.e3 0-0 8.Qc2 Na6 9.Rd1 c5 10.dxc5 Qa5 11.cxd5 Nxc5 12.Qd2 Rd8 13.Nd4 exd5 14.Be2 Qb6 15.0-0 Ne4 16.Qc2 Nxc3 17.Qxc3 Be6 18.Qc2 Rac8 19.Qb1 Rc7 20.Rd2 Rdc8 21.Nxe6 fxe6 22.Bg4 Rc4 23.h3 Qc6 24.Qd3 Kh8 25.Rfd1 a5 26.b3 Rc3 27.Qe2 Rf8 28.Bh5 b5 29.Bg6 Bd8 30.Bd3 b4 31.Qg4 Qe8 32.e4 Black's exposed pawns are given a push. The trouble with having three pawn islands is the same problem plate spinners have: one is easy, two is harder... 32...Bg5 33.Rc2 Rxc2 34.Bxc2 Qc6 35.Qe2 Qc5 36.Rf1 Qc3 37.exd5 exd5 38.Bb1 Qd2 39.Qe5 Rd8 40.Qf5 Kg8 41.Qe6+ Kh8 42.Qg6 Kg8 43.Qe6+ Kh8 44.Bf5 Qc3 45.Qg6 Kg8 46.Be6+ Kh8 47.Bf5 Kg8 48.g3 Kf8 49.Kg2 Qf6 50.Qh7 Qf7 51.h4 Bd2 52.Rd1 Bc3 53.Rd3 Rd6 54.Rf3 Ke7 55.Qh8 d4 56.Qc8 Rf6 57.Qc5+ Ke8 58.Rf4 Qb7+ 59.Re4+ Kf7 60.Qc4+ Kf8 61.Bh7 Rf7 62.Qe6 Qd7 63.Qe5 Black has to let a plate drop. 1-0

Top 10 Authors

1. Botvinnik

the master at work (e.g. *100 Selected Games*)

2. Bronstein

the master at play (e.g. *200 Open Games*)

3. Chernev

warm, witty, impressive breadth of knowledge; his books taught me how to play chess, so he has a lot to answer for (e.g. *Logical Chess*)

4. Clarke

unshowy style but his books are gold (e.g. *Petrosian's Best Games*)

5. Dvoretsky

enormously rich material, nice asides (e.g. *Secrets of Chess Tactics*)

6. Larsen

deep thoughts lightly expressed, candid and playful (e.g. *Selected Games*)

7. Nunn

thorough, brilliant, tells a cracking yarn (e.g. *Best Games*)

8. Purdy

brisk, brilliant, polemic, pedagogic (e.g. *Search for Chess Perfection*)

9. Reti

writing to lift the human spirit (e.g. *Modern Ideas in Chess*)

10. Tal

frank, engaging and entertaining by turns (e.g. *Tal-Botvinnik Match 1960*)

Honourable mention: Nimzovitch

Top 10 Openings

Just ten that I have enjoyed playing over the years.

1. **Giuoco Piano, Bernstein Variation**

My first real opening, and a lesson that greed is a sin in chess, if nowhere else.

2. **Queen's Gambit, Rubinstein Variation**

Wonderful vigorous opening in the style of Pillsbury: sieze the centre, aim at the King, fire!

3. **Trompovsky Opening**

My introduction to closed openings, a little weird wonder and an advert for Knight power, which I sadly had to abandon when it became fashionable.

4. **English Opening, Staunton system**

The drift to the West continued; no need to memorise lines, just a flexible start to a pawn roller that can hit you on any part of the board.

5. **Sicilian Defence**

When I started with this opening, I couldn't believe my luck: lots of chance to win and it didn't fizzle out like 1...e5 does. And having been so struck by the English, it made sense to play it as Black...

6. **Modern Defence**

...except that the Sicilian is a headache to learn, and you keep falling into 'pet systems'. Not with the Modern! I love this opening, no-one knows or cares about the theory, and a great way to play for a win as Black.

7. **King's Indian Attack**

Another bright idea: a pet system to play as White, using all the moves I usually play.

8. **English Opening, Botvinnik system**

After an intermission of several years where I didn't really play chess, I felt on my return like playing something a bit more assertive than all this creepy-mousy stuff. So there was born the new DrDave, playing the the Wrestler's Gambit: step towards your opponent, get hold, and twist until they break...

9. **Blackmar-Diemer Gambit**

I still don't believe a word I read about this outrageous gambit, but I've had a lot of fun with it.

10. **King's Gambit**

A bit more assertive than the English Opening, and an attempt to play more tactically... An opening that made me realise how wobbly club players are: give them a shove and they fall over. Also a lot of fun, but you never get to play it, and there's an awful lot of theory to keep up.

Honourable mention: Two Knight's Defence. I've never played it seriously since I was a junior, but I recommend it to all the juniors. A glorious scrap!

Top 10 Chess Quotes

1. INDIAN PROVERB

"Chess is a sea in which a gnat may drink and an elephant may bathe"

2. Irving CHERNEV

"Of chess it has been said that life is not long enough for it, but that is the fault of life, not chess."

3. Andrew SOLTIS

"Pawns are born free, yet are everywhere in chains..."

4. Richard RETI

"It is the aim of the modern school, not to treat every position according to one general law, but according to the principle inherent in the position."

5. Alexander ALEKHINE

"During a chess competition a chessmaster should be a combination of a beast of prey and a monk."

6. William LOMBARDY

"All openings are sound below master level."

7. Richard RETI

"Now we see wherein lies the pleasure to be derived from a chess combination. It lies in the feeling that a human mind is behind the game dominating the inanimate pieces with which the game is carried on, and giving them the breath of life."

8. Mortimer COLLINS

"There are two classes of men; those who are content to yield to circumstances and who play whist; those who aim to control circumstances, and who play chess."

9. Raymond CHANDLER in *The Long Goodbye*

" as elaborate a waste of human intelligence as you could find anywhere outside an advertising agency."

10. Savielly TARTAKOWER

10. "A chess game is divided into three stages: the first, when you hope you have the advantage, the second when you believe you have an advantage, and the third... when you know you're going to lose!"

Honourable mention: (After White takes another Pawn):

"They're like peanuts, you know." -- Stephan GERZADOWICZ

Exeter Chess Club: Credits

Argh

One of the consequences of moving from [Exeter University](#) was dropping a couple of files behind the back of the monitor, and to my regret one of those files was the credits list. Ten years on from establishing the site there, my recollection is mainly that the list of people I should thank is legion, but sadly my memory isn't up to reconstructing just who. So, to all those people over the years who:

- helped me crack the task of making diagrams automatically, especially Andy Duplain, who enhanced his already-wonderful utility CBASCII for me
- read a pre-release draft of the site, especially jud
- variously:
 - answered my questions on rec.games.chess.*
 - found games or positions for me
 - pointed out my many errors of notation, HTML hacking (yes, the site is still lovingly hand-crafted by craftsmen in Devon), chess understanding, etc. etc
 - sent me kind e-mails, and especially
 - *made a contribution*

...to all, my sincere thanks. Couldn't have done it without you.

Comment on Poe's view of chess

Barry Wood wrote a piece on this, reprinted in Reinfeld's Treasury of Chess Lore.

He suggests (I paraphrase), read Poe's passage.

Now say to yourself: "Poe has only just learned to play chess, and is still unsure of the moves of the pieces".

Read it over again.

Does that fit? Chess is like driving a car, after a bit you don't notice the gear changes and so on, you just enjoy the drive. Poe is still struggling with 'which one's the clutch again?'.

I don't wonder where the pieces go, when I look at a board, the natural moves and sequences of moves just start flowing. It took me a while to get into chess, but it was worth the effort. I don't think Poe ever was shown, or was not good enough to appreciate, what the complexity of chess can do for the beauty of the game (just think of the finish of Bernstein-Capablanca, the "Immortal", the "Evergreen", the Levitsky-Marshall finish - can you imagine a draughts equivalent?)

String quartets can be magnificent, but chess is an orchestra.

[Dr. Dave](#)

Exeter Chess Club: The mind of a Grandmaster

Nigel Short speaks:

"I'm going to give him a good rogering"

"T.D.F." (= Trap, Dominate, Fuck)

"I'm going to give it to him good and hard"

Chapter One, page 9, Dominic Lawson's **The Inner Game**.

If psychoanalytic/psychodynamic/depth psychology approaches to chess interest you, there is Ernest Jones' very well-known account of the life of Paul Morphy, and Cockburn's **Idle Passion: Chess and the dance of death**. Both see the symbolism of chess as strongly patricidal. P.C. Wason in his review in CHESS magazine noted Cockburn's revealing comment that

"My father defeated me in our early games."

and inferred that the author's dismissal of chess was simply jealousy: better players can indulge in far superior patricidal fantasies...

(10) TI: APPERCEPTION IN CHESS PLAYERS LONG-RANGE PLANNING

AU: SAARILUOMA_P, HOHLFELD_M

NA: UNIV HELSINKI,DEPT PSYCHOL,FABIANINKATU 28,SF-00100 HELSINKI
10,FINLAND

UNIV TUBINGEN,DEPT PSYCHOL,W-7400 TUBINGEN 1,GERMANY

JN: EUROPEAN JOURNAL OF COGNITIVE PSYCHOLOGY 1994 Vol.6 No.1 pp.1-22

AB: Chess players' long-range planning or chess-strategic thinking is based on more or less poorly definable and intuitive notions such as weak-square, initiative, space advantage, etc. Since these concepts are fuzzy and thus close to everyday concepts, chess players' long-range planning provides a good environment to study apperception with poorly definable notions. The three experiments provided data indicating that problem subspace abstraction has both benefits and costs. Active representation blockades alternative representations unless subjects restructure. As a result, chess players often make serious cognitive errors by abstracting the wrong problem subspaces. Even in strategical positions, the problem subspaces generated are self-consistent and bound by unconscious content-specific principles.

(11) TI: EXPERTISE AND MEMORY DEVELOPMENT - CROSS-SECTIONAL COMPARISON IN THE DOMAIN OF CHESS

LA: German

AU: GRUBER_H, RENKL_A, SCHNEIDER_W

NA: UNIV MUNICH, INST PADAGOG PSYCHOL & EMPIR PADAG, LEOPOLDSTR 51, D-80802 MUNICH, GERMANY

JN: ZEITSCHRIFT FUR ENTWICKLUNGSPSYCHOLOGIE UND PADAGOGISCHE PSYCHOLOGIE 1994 Vol.26 No.1 pp.53-70

AB: The present paper addresses two main research questions: (1) What are the differences between experts within the domain of chess and dropouts of expert careers? (2) How do chess-specific and general memory skills change within several years? At two measurements times, 27 experts and novices were studied. The subjects' average age was 12 and 16 years, respectively. The dropouts proved to have worse memory performance on chess-specific tasks than experts, even at the time of first measurement. Thus, the assumption of selective dropouts was confirmed which questions the validity of cross-sectional expert-novice comparisons. Both experts and novices improved their chess-specific memory performance between the first and second measurement times. For experts domain-specific factors seem to account for this result, for novices this effect is due to general developmental factors.

(13) TI: ROLE OF HIGH-LEVEL KNOWLEDGE IN MEMORY FOR CHESS POSITIONS

AU: COOKE_NJ, ATLAS_RS, LANE_DM, BERGER_RC

NA: RICE UNIV,HOUSTON,TX,77251

JN: AMERICAN JOURNAL OF PSYCHOLOGY 1993 Vol.106 No.3 pp.321-351

AB: Current theories of chess expertise assume that experts can recall meaningful chess positions so well because their encoding and retrieval relies on prior learning of thousands of specific "chunks" of information. However, these theories neglect the role of high-level knowledge that is more abstract than the perceptual chunk. We investigated the role of high-level information in skilled chess memory in three experiments. In the first two experiments, experienced chess players were presented with a high-level verbal description of the position either before or after its presentation. If this type of knowledge facilitates the perception and subsequent recall of chess positions, then recall performance should be better in the description-before condition in which the information is available at the time of perception. In these two experiments, subjects performed better when given the description prior to viewing the position, supporting the proposal that a level of knowledge, beyond that of a set of chunks, is used to perceive a chess position. In the third experiment, subjects reconstructed multiple positions (between 1 and 9) immediately after seeing the entire set. Results indicated that experienced players could reconstruct multiple positions at a level beyond chance or guessing. Again, these results can be better explained in terms of high-level conceptual knowledge associated with each position than in terms of perceptual chunks.

(14) TI: THE ROLE OF DELIBERATE PRACTICE IN THE ACQUISITION OF EXPERT PERFORMANCE

AU: ERICSSON_KA, KRAMPE_RT, TESCHROMER_C

NA: UNIV COLORADO, INST COGNIT SCI, BOULDER, CO, 80309

MAX PLANCK INST HUMAN DEV & EDUC, BERLIN, GERMANY

JN: PSYCHOLOGICAL REVIEW 1993 Vol.100 No.3 pp.363-406

DT: Review

AB: The theoretical framework presented in this article explains expert performance as the end result of individuals' prolonged efforts to improve performance while negotiating motivational and external constraints. In most domains of expertise, individuals begin in their childhood a regimen of effortful activities (deliberate practice) designed to optimize improvement. Individual differences, even among elite performers, are closely related to assessed amounts of deliberate practice. Many characteristics once believed to reflect innate talent are actually the result of intense practice extended for a minimum of 10 years. Analysis of expert performance provides unique evidence on the potential and limits of extreme environmental adaptation and learning.

AU: SWELLER_J

NA: UNIV NEW S WALES,SCH EDUC STUDIES,POB 1,KENSINGTON,NSW 2033,AUSTRALIA

JN: AUSTRALIAN JOURNAL OF PSYCHOLOGY 1993 Vol.45 No.1 pp.1-8

DT: Review

AB: It has been known for a considerable time that when dealing with complex intellectual tasks, the limited processing capacity of working memory is critical. Nevertheless, many commonly used instructional techniques ignore this factor and consequently impose an excessive cognitive load that interferes with the major learning mechanisms of schema acquisition and automation. For example, when solving unfamiliar problems, strategies are frequently employed that are effective in arriving at a solution but because of the cognitive load imposed, are ineffective with respect to learning. Empirical evidence suggests that if learning is the goal, solving large numbers of conventional problems may not be appropriate. Instead, goal-free problems and worked examples can reduce extraneous cognitive load and facilitate schema acquisition and automation. Similarly, when presenting new material, information structures that require learners to unnecessarily split their attention between multiple sources of information or assimilate redundant material can impose an excessive cognitive load that interferes with learning. Finally, while considerable empirical evidence about these effects is available, it is suggested that they will occur only when material is used which imposes a heavy cognitive load because of its intrinsic structure. Where the intrinsic structure of information imposes a relatively light cognitive load, the cognitive load imposed by instructional design may not be critical.

- (25) TI: ACQUIRING TACTICAL AND STRATEGIC KNOWLEDGE WITH A
GENERALIZED-METHOD FOR CHUNKING OF GAME PIECES
AU: WALCZAK_S, DANKEL_D
NA: UNIV TAMPA,DEPT COMP & INFORMAT SCI,TAMPA,FL,33606
UNIV FLORIDA,DEPT COMP & INFORMAT SCI,GAINESVILLE,FL,32611
JN: INTERNATIONAL JOURNAL OF INTELLIGENT SYSTEMS 1993 Vol.8 No.2
pp.249-270
AB: The physical configuration of playing pieces on a game board
contains a plethora of information which can be used by the game
player. Current computer game programs deal well with some
positional and tactical information that is built into the
program, but are incapable of acquiring and using strategic
information. We present a technique for capturing strategic and
tactical chunks or patterns of pieces in game domains. The
chunking technique models the cognitive method employed by expert
level human game players and acquires knowledge that is mostly
domain independent. Induction is performed on the collection of
chunks captured for a particular adversary to identify the
playing style of that adversary.
KP: CHESS

(29) TI: RECOGNITION OF EXPERTISE IN CHESS PLAYERS

AU: REYNOLDS_RI

NA: YESHIVA UNIV,NEW YORK,NY,10033

JN: AMERICAN JOURNAL OF PSYCHOLOGY 1992 Vol.105 No.3 pp.409-415

AB: What kinds of information facilitate the identification of expert performance? How well can chess players of different performance levels identify the level of players who produced a chess position, or the moves leading to it? Fifteen chess players with U.S. Chess Federation (USCF) ratings from 1300 to 2210 judged six unfamiliar chess positions taken from games between players with USCF ratings from 1400 to 2600. The moves immediately preceding the starting position were successively revealed, with rating and confidence estimations made at each move. Estimation error decreased as a function of number of moves revealed ($p < .001$). Higher rated players consistently made lower estimation errors ($p < .01$). Judges at all personal levels were more accurate about positions arising between players close in rating to themselves. A self-reference heuristic is proposed in which estimation of expertise is made relative to the judge's own projected performance.

(36) TI: THE GENERAL INTELLIGENCE AND SPATIAL ABILITIES OF GIFTED YOUNG
BELGIAN CHESS PLAYERS

AU: FRYDMAN_M, LYNN_R

NA: UNIV ULSTER,DEPT PSYCHOL,COLERAINE BT52 1SA,LONDONDERRY,NORTH
IRELAND

UNIV MONS,B-7000 MONS,BELGIUM

JN: BRITISH JOURNAL OF PSYCHOLOGY 1992 Vol.83 No.Pt2 pp.233-235

AB: Thirty-three tournament-level young Belgian chess players aged 8
to 13 were tested with the French WISC (Wechsler Intelligence
Scale for Children) The mean full scale IQ = 121, verbal IQ = 109
and performance IQ = 129. The results suggest that a high level
of general intelligence and of spatial ability are necessary to
achieve a high standard of play in chess. The high spatial
ability of these young chess players suggested by the high
performance IQs may go some way towards explaining why males tend
to be more numerous than females among high-standard chess
players.

(39) TI: CHILDREN AND CHESS EXPERTISE - THE ROLE OF CALIBRATION

AU: HORGAN_DD

NA: MEMPHIS STATE UNIV,DEPT FDN EDUC,MEMPHIS,TN,38152

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.44-50

AB: Three studies of calibration are reported. Calibration refers to the accuracy with which one can predict one's own performance. In the first study child chess players, non-chess playing parents, and statistics students were asked to predict chances of winning chess games against hypothetical opponents. These subjective probabilities were compared to the actual probabilities, based on the Elo rating system. Better players' predictions were better calibrated. Confidence and ratings are negatively correlated, indicating that with lower ratings, players are overconfident. Skilled child players' predictions were better calibrated than any of the adults'. In the second study subjects were asked to estimate chances of winning in conjunctive situations, e.g., winning all the rounds in a tournament. Again, better child players were more accurate in their predictions and more accurate than adults. In the third study, child players were asked to predict their chances of winning in a non-chess domain after hearing a hypothetical win/loss history. Higher-rated players' predictions were again better calibrated, even though the domain was outside their expertise. The motivational and cognitive implications of calibration are discussed.

(40) TI: LEARNED HELPLESSNESS IN CHESS PLAYERS - THE IMPORTANCE OF TASK SIMILARITY AND THE ROLE OF SKILL

AU: GOBET_FR

NA: CARNEGIE MELLON UNIV,DEPT PSYCHOL,PITTSBURGH,PA,15213

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.38-43

AB: The effects of noncontingency between subjects' responses and outcomes were examined with respect to treatment-and-posttest similarity and skill in the task. The experimental design consisted of three groups. The first group had to solve chess problems with objective solutions and received veridical feedback; each member of the second group faced problems with no objective solutions, and received the same feedback as the member of the first group he was yoked with, but without any control on it; the control group received a waiting task. It was found at the end of the experiment that the group with unsolvable problems was more depressed than the two other groups. The mid-strength players were the most sensitive to the manipulation, and the weakest players showed little effect of learned helplessness. It was also found that the effects were proportional to the degree of similarity between the treatment and the posttest. The results limit the domain of applicability of the learned-helplessness model.

(41) TI: EXPERTISE AND HIERARCHICAL KNOWLEDGE REPRESENTATION IN CHESS

AU: FREYHOF_H, GRUBER_H, ZIEGLER_A

NA: MAX PLANCK INST PSYCHOL RES,LEOPOLDSTR 24,W-8000 MUNICH,GERMANY

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.32-37

AB: In two experiments the structure of knowledge representation in chess experts and average players was examined.

Pattern-recognition theory explains expertise through the existence of many small, unrelated knowledge units. Recent research stresses the structure of knowledge representations. However, the standard paradigm does not allow for the detection of relations between chunks; the theoretical shift has to be accompanied by a methodological shift. In Experiment 1, by means of a partitioning task, evidence was provided for a hierarchical representation of chess positions. Chess masters formed larger and more complex knowledge units than average players. In Experiment 2, the typicality of the positions was varied. The more typical the positions were, the larger and more coherent the constructed knowledge units were. The greatest differences between both groups occurred in more typical positions. This reflects the experts' ability to relate several knowledge units with one another.

(42) TI: ERROR IN CHESS - THE APPERCEPTION-RESTRUCTURING VIEW

AU: SAARILUOMA_P

NA: UNIV HELSINKI,DEPT PSYCHOL,FABIANINKATU 28,SF-00100 HELSINKI
10,FINLAND

JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.17-26

AB: Five protocol-analysis experiments with tactical, endgame, and strategic positions were conducted to study cognitive errors in chess players' thinking. It will be argued that chess players' errors can be only partially explained in terms of unspecified working-memory overload, because the working-memory loads caused by the solution paths are usually small. It is therefore necessary to consider apperceptive mechanisms also, as these control information intake.

Subjects fail either because they are not able to see the right prototypical problem space at all, or because they fail to close them as a result of missing some crucial task-relevant cue. This makes chess players lose their "belief in the idea" and restructure, after which the apperceptive information-selection mechanisms make the finding of the solution still more unlikely.

- (44) TI: STROOP-LIKE INTERFERENCE IN CHESS PLAYERS IMAGERY - AN UNEXPLORED POSSIBILITY TO BE REVEALED BY THE ADAPTED MOVING-SPOT TASK
AU: BACHMANN_T, OIT_M
NA: UNIV TARTU,DEPT PSYCHOL,78 TIIGI ST,TARTU 2400,ESTONIA,USSR
ACAD SCI ESSSR,INST CYBERNET,TAULINN 0108,ESTONIA,USSR
JN: PSYCHOLOGICAL RESEARCH-PSYCHOLOGISCHE FORSCHUNG 1992 Vol.54 No.1
pp.27-31
AB: A group of highly skilled chess players and two control groups of subjects (nonskilled players and nonplayers) participated in a moving-spot task (cf. Attneave & Curlee, 1983). They had to move either a spot or one of several chess pieces within an imaginary grid according to instructions given by the experimenter (the imaginary motion of the imaginary object consisted of a quasirandom sequence of steps in the direction-up, right, left, or down). The general findings were as follows: (1) chess players' error rates were lower than those in the nonplayer group; (2) in a moving-spot condition there were no significant differences in the efficiency of skilled vs. nonskilled player groups; (3) in a moving chess-piece condition, ranges of spatial errors differed for chess-player and nonplayer groups, depending on the symbolic meaning of the chess pieces in the former group; (4) in a moving chess-piece condition we also found tendencies for Stroop-like interference in the group of skilled players (e. g., bishop moving illegally up, fight, etc.); (5) all groups benefitted from the use of a checkerboard instead of an 8 x 8 grid as the imaginary spatial framework within which to move a piece; (6) the post hoc analysis showed that the two small selected subgroups of subjects comprising those who used either pure visual strategy or pure chess-annotation strategy were susceptible to some Stroop-like interference and that the set of pieces with the highest incongruity of moves (bishop, knight) yielded higher error rates than the set of pieces that had congruity of moves (king, rook). Taken together, these results seem to indicate that visuospatial tasks like Attneave and Curlee's (1983) moving-spot task are performed neither on the basis of a static "picture-in-the-head" type of visual image, for which it is just the same whether one or another type of piece is imaginarily moved, nor on the basis of purely symbolic or propositional operations that bear no relation to the visual-configurational and spatial-localizational representations. Imagery seems to constitute a dynamic process of interplay between visuospatial and verbal-propositional codes.

(48) TI: TESTOSTERONE AND CHESS COMPETITION

AU: MAZUR_A, BOOTH_A, DABBS_JM

NA: SYRACUSE UNIV,MAXWELL SCH,SYRACUSE,NY,13244

PENN STATE UNIV,SOCIOL,UNIV PK,PA,16802

GEORGIA STATE UNIV,PSYCHOL,ATLANTA,GA,30303

JN: SOCIAL PSYCHOLOGY QUARTERLY 1992 Vol.55 No.1 pp.70-77

AB: The hormone testosterone (T) has a central role in recent theories about allocation of status ranks during face-to-face competition. It has been methodologically convenient to test the hypothesized T mechanism in physically taxing athletic contests, where results have been supportive, although their generalizability to normal social competition is questionable. Competition among chess players is a step closer to normal social competition because it does not require physical struggle, and it is the arena for tests of the T mechanism which are reported here. We find that winners of chess tournaments show higher T levels than do losers. Also, in certain circumstances, competitors show rises in T before their games, as if in preparation for the contests. These results generally support recent theories about the role of T in the allocation of status ranks.

(49) TI: EFFECTS OF INTERPOLATED PROCESSING ON EXPERTS RECALL OF SCHEMATIC INFORMATION

AU: GARLAND_DJ, BARRY_JR

NA: EMBRY RIDDLE AERONAUT UNIV,DEPT HUMANITIES & SOCIAL SCI,DAYTONA BEACH,FL,32114

UNIV GEORGIA,ATHENS,GA,30602

JN: CURRENT PSYCHOLOGY-RESEARCH & REVIEWS 1992 Vol.10 No.4 pp.273-280

AB: The present study, using schematic sport diagrams, examined the perceptual chunking hypothesis (Chase & Simon, 1973a; 1973b) that visual patterns are represented by labels in a limited-capacity, short-term memory. This study, which employed three subject-skill levels and an interpolated processing paradigm, indicated that for experts, information extracted during an 8-second study period has great longevity and durability. Interpolated processing demands, along with an additional encoding activity of a second diagram presentation, had minimal effects on recall performance. This evidence supports the position that meaningful and familiar information abstracted during a brief exposure period is immediately processed in long-term memory, thus facilitating subsequent retrieval.

(52) TI: VISUOSPATIAL AND ARTICULATORY INTERFERENCE IN CHESS PLAYERS
INFORMATION INTAKE

AU: SAARILUOMA_P

NA: UNIV HELSINKI,DEPT PSYCHOL,FABIANINKATU 28,SF-00100 HELSINKI
10,FINLAND

JN: APPLIED COGNITIVE PSYCHOLOGY 1992 Vol.6 No.1 pp.77-89

AB: Modularity of the human information processing system has been widely accepted. Research based on this theoretical construction has been successful in many areas of cognitive psychology. Surprisingly little work has, however, been done towards understanding the consequences of modularity in thinking skills. In this paper the functions of visuospatial and articulatory processing will be compared in the context of chess skill to obtain information concerning the cognitive resources needed in this skill. Two experiments on chess players' information intake will be made, in which the effects of visuospatial and an articulatory secondary tasks will be compared. In both experiments a visuospatial secondary task causes strong interference, while an articulatory task has no effect on processing. So chess is a highly visual task but articulation, contrary to some pre-theoretical beliefs, has no real significance.

(53) TI: HEMISPHERIC-SPECIALIZATION FOR SKILLED PERCEPTUAL ORGANIZATION BY CHESSMASTERS

AU: CHABRIS_CF, HAMILTON_SE

NA: HARVARD UNIV,DEPT PSYCHOL,1206 WILLIAM JAMES HALL,33 KIRKLAND ST,CAMBRIDGE,MA,02138

JN: NEUROPSYCHOLOGIA 1992 Vol.30 No.1 pp.47-57

AB: The right cerebral hemisphere may be relatively specialized for parsing simple visual stimuli according to default rules, such as the Gestalt laws of perceptual organization, whereas the left cerebral hemisphere may be relatively specialized for overriding such default rules. We extend this model to 'semantically rich domains' by performing a divided-visual-field experiment on 16 chessmasters. Such subjects are able to recall and recognize complex chess positions by chunking the basic elements of the stimuli-the chess pieces-into meaningful groupings according to certain rules that are specific to the semantic structure of the chess domain. We show that the right hemisphere is superior to the left at parsing according to the default rules of chess chunking, but that the left hemisphere is superior to the right at grouping pieces together in violation of those rules. These results suggest that the right hemisphere is better able to acquire and apply new sets of default parsing rules for specific contexts. We conclude, consistent with other neuropsychological evidence, that the right hemisphere is critical for chess skill.

(7) TI: LOCATION CODING IN CHESS

AU: SAARILUOMA_P

NA: UNIV HELSINI,DEPT PSYCHOL,FABIANINKATU 28,SF-00014
HELSINKI,FINLAND

JN: QUARTERLY JOURNAL OF EXPERIMENTAL PSYCHOLOGY SECTION A-HUMAN
EXPERIMENTAL PSYCHOLOGY 1994 Vol.47 No.3 pp.607-630

AB: Whether the chunks used in memorizing chess positions are general and relatively encoded schemata or very precisely coded instances is a problem that has raised some controversy within the psychology of chess skill. As chess research has had a strong impact on expertise research, this problem is important in many areas of skills research other than chess. To resolve it, four experiments were set up. In the experiments it was shown that subjects were better at recalling correctly located non-transposed chunks than transposed chunks, which were similar in structure but incorrectly located on the chessboard. The results imply that the representation of chess-specific patterns in the memory of a chess player contains not only information about the forms of chess-specific patterns, but also about their absolute locations on the chessboard. This provides an explanation for the well-known interaction between skill and type of position and its disappearance in recent experiments by Lories and Saariluoma. It can be argued that the difficulty of recalling random positions is not chiefly caused by the total absence of chunks but by their dislocation.

(8) TI: EXPERT PERFORMANCE - ITS STRUCTURE AND ACQUISITION

AU: ERICSSON_KA, CHARNESSE_N

NA: FLORIDA STATE UNIV,DEPT PSYCHOL,TALLAHASSEE,FL,32306

UNIV WATERLOO,DEPT PSYCHOL,WATERLOO N2L 3G1,ONTARIO,CANADA

JN: AMERICAN PSYCHOLOGIST 1994 Vol.49 No.8 pp.725-747

AB: Counter to the common belief that expert performance reflects innate abilities and capacities, recent research in different domains of expertise has shown that expert performance is predominantly mediated by acquired complex skills and physiological adaptations. For elite performers, supervised practice starts at very young ages and is maintained at high daily levels for more than a decade. The effects of extended deliberate practice are more far-reaching than is commonly believed. Performers can acquire skills that circumvent basic limits on working memory capacity and sequential processing. Deliberate practice can also lead to anatomical changes resulting from adaptations to intense physical activity. The study of expert performance has important implications for our understanding of the structure and limits of human adaptation and optimal learning.

(9) TI: VISUAL PERCEPTUAL AND COGNITIVE DIFFERENCES BETWEEN EXPERT, INTERMEDIATE, AND NOVICE SNOOKER PLAYERS

AU: ABERNETHY_B, NEAL_RJ, KONING_P

NA: UNIV QUEENSLAND,DEPT HUMAN MOVEMENT STUDIES,ST LUCIA,QLD 4072,AUSTRALIA

JN: APPLIED COGNITIVE PSYCHOLOGY 1994 Vol.8 No.3 pp.185-211

AB: The performance of seven expert, seven intermediate, and 15 novice snooker players was compared on a range of general visual tests and sport-specific perceptual and cognitive tests in an attempt to determine the locus of the expert advantage. No significant expert-novice differences were apparent on standard optometric tests of acuity, ocular muscle balance, colour vision, and depth perception, nor on the relative frequency of unilateral and cross-lateral eye-hand dominances. Experts, however, were found to be superior in their ability to both recall and recognize rapidly-presented slides depicting normal game situations, but were no better than novices in recalling information from slides in which the balls were arranged randomly on the table. The expert group's superiority on the perceptual recall and recognition tasks was consistent with a deeper level of encoding for structured (meaningful) material. Experts were also shown, through the use of thinking-aloud and evaluation paradigms, to use a greater depth of forward planning in choosing appropriate shot options and to evaluate existing situations with greater accuracy, discriminability, and prospective planning than did novices. The cognitive advantage is shown to be a potential contributor but not a total explanation of the superior performance of the experts on the perceptual tasks. The findings of this study are consistent with existing works on expertise in board games and 'open' skill sports in indicating that the expert's advantage is not a general but a specific one, arising not from physical capacities but from acquired processing strategies.

Comments

These are quoted comments too long to be included as comments in Fritz 3, which for some reason only allows you a maximum 240 characters. Question not the decisions of programmers, for they work in mysterious ways. [Quotations cited under 'fair use' policy; readers should buy these [books](#) and write nice letters about them to the chess comics.]

Euwe-Keres

"Every positional achievement, in this case the pawn on d6 which engages the attention of the black pieces, is important not in itself but in its link with other combinational factors. In this position the factors for White are:-

- *the unguarded pawn at c5*
- *the weakened cover of the Black king*
- *the constant possibility of advancing the pawn to d7*
- *control over c7 and e7, combined with the attempt to control either the e- or c-file*

For Black the factors are:-

- *the chance to surround the Pd6 on three sides*
- *the attack on the Q-side by a majority of pawns*
- *the possibility Nh5 to drive the Q from her strong post.*

By comparing and weighing the chances for each side the masters normally reach more or less objective conclusions which are called the assessment of the position."

-- BRONSTEIN

(He added that if these factors could be given numbers, chess could be played by machines.)

White should therefore play 22.b3 to slow up the Q-side advance, or 22.Rxe6 fxe6 23.Qe5 with enhanced play against the many Black weaknesses. Instead White plays something inconsequential, and the position fizzled out to a draw.

[It is possible Euwe got the assessment exactly right, but still chose the wrong plan - or thought that **22.a3** was part of the correct plan.]

Nunn-Olafsson

"But already this opening has certain puzzling aspects. Why should White consistently maintain his initiative, both in the variations we have looked at and in those to come? Why should Black's position be so awkward? The question really boils down to a more basic one: why is the Ruy Lopez (which this opening has virtually become) so difficult for Black to combat? Look at the present position: Black's pieces are sensibly developed; he has as much space as White; his pawns are strong. Yet he has problems.

"The answer seems to be that in this type of Ruy Lopez position Black can easily get caught in a situation where his game cannot unfold. Here for instance, White has his plans of Ng3-f5 and later d4, but it is less easy for Black to find something profitable to do without weakening himself or making some serious concession. His pieces may look reasonably placed, but they cannot readily achieve anything constructive or relevant. I should make it clear that this does not have to happen in a Lopez; it is far from being a bad opening for him. But in practice one error (6...Qe7) can leave him in misery. And so, if a player seems to have a respectable game (in a Ruy Lopez or any other opening for that matter), yet still loses, his misfortune may often be traced back to this lack of life in his position."

-- NUNN AND GRIFFITHS

cf. also:

Vukic Milan - Suba Mihai [A30/03], Vinkovci, 1977

"A frequent picture in the Hedgehog. White's position looks ideal. That's the naked truth about it, but the 'ideal' has by definition one drawback - it cannot be improved." -- SUBA
Dynamic Chess Strategy

Suba is quite mysterious about 'potential'. But as evidence, his book **Dynamic Chess Strategy** contains many practical examples of this Hedgehog Sicilian-style opening against the English (1. c4), where Black's flexible position threatens to erupt on ...b5 or ...d5. White finds it difficult to threaten anything on his own part without allowing Black's game to unfold suddenly.

15...Rad8 16.h3 g6 17.Kh2 Bg7 18.Qe2 Qb8 19.Qc2 Rc8 20.Qd2 Nc5 21.Re1 Qa8 22.f3 Qb8 23. Hort-Nunn

"Very often, the side with a large positional advantage has to make a decision as to when to cash it in for some material (a pawn in this case). This is one of the most difficult areas of chess judgement. Too soon, and you will not have extracted the best value for the positional advantage. But it is also possible to manoeuvre too long; the optimum moment passes, and then the defender's chances start to increase again."

"Here I should have been satisfied with winning a pawn by 29...Ra3 (...) when Black should win... The move played is a misjudgement."

-- NUNN

Chiburdanidze-Nunn

"Never reticent when it comes to launching an attack, Chiburdanidze has spotted the slight weakness created by ...h6 and decides to go for the king. Now the game takes on a clear-cut form: White's kingside attack against Black's queenside counterplay."

"There are two common errors when faced by such a direct attack. The first is to be terrified by the attack, resulting in unnecessary and time-wasting defensive moves. The second error is made by players who know perfectly well that such flank attacks shouldn't really succeed and believe that any old plan will be enough to show the opponent the error of his (or her) ways. Both errors can be fatal.

"King's Indian (and Dragon) players have learnt to treat this type of flank attack with contempt, possibly because there isn't much they can do to stop it! The attack usually takes quite a long time to generate serious threats, but this is no excuse for delaying counterplay, since when the threats finally materialise they are usually quite powerful.

"As the subsequent play shows, accurate play by Black should serve to refute the attack, but Chiburdanidze was probably under few illusions about the objective merit of her plan. The motivation for such moves is often psychological; an attacking player prefers (and plays better in) an attacking position, and heads for one regardless of the objective assessment."

13... a4

"The move played involves a pawn sacrifice, but I didn't spend long on the consequences of acceptance because giving up the initiative is not in Chiburdanidze's style."

14. g5 hxg5 15. Bxg5 Qa5 16. Qb1 cxd5 17. cxd5 b5 18. a3 Rfb8 19. h5 b4 20. Nc4 Qc7 21. axb4 Rxb4 22. hxg6 fxg6 23. Bxf6 Bxf6 24. Qc1 Nb3

"Precise calculation was necessary before playing this move; letting the queen in to h6 appears dangerous, but the King's Indian bishop holds the position together."

-- NUNN

Nunn-Marin

"...(like) the Samisch King's Indian, and the Yugoslav Attack against the Dragon. In all three cases White combines a flank attack with a solid central pawn structure."

9. g4 h6 10. O-O-O Bb7 11. Bd3 Ne5 12. Rhe1 Nfd7 13. f4 b4

"Black declines the first sacrifice, only to be offered a larger one next move. The problem with declining such sacrifices is that the attack may gather strength anyway, and you may be forced to accept material later under less favourable circumstances."

-- NUNN

Nunn analyses [13...Nxb4 14. e5 b4! =]

Nunn-Mestel

[18. h6 when:

18...Bh8 19. h7+ Kxh7 20. h5 +-

18... dxc3 19. hxg7 Kxg7 20. Rxd6 +-

18... Bxh6!! 19. Bxh6 Nxb3 20. axb3 dxc3]

Nunn comments about the variations at move 17:

"When conducting a sacrificial attack, it is very important to consider lines in which the defender returns material in order to exchange some attacking pieces. If the attacker has made positional as well as material concessions, then the defender may even be satisfied with a final material balance in the opponent's favour, as he may even have a positional advantage or even a counterattack in compensation."

"The move 18...Bxh6! is very hard to see, because it is very unusual for Black to give up his 'Dragon' bishop voluntarily, least of all for a mere pawn."

-- NUNN

Capablanca's schematic thinking

"Once in a lobby of the Hall of Columns of the Trade Union Centre in Moscow a group of masters were analysing an ending. They could not find the right way to go about things and there was a lot of arguing about it. Suddenly Capablanca came into the room. He was always find of walking about when it was his opponent's turn to move. Learning the reason for the dispute the Cuban bent down to the position, said 'Si, si,' and suddenly redistributed the pieces all over the board to show what the correct formation was for the side trying to win. I haven't exaggerated. Don Jose literally pushed the pieces around the board without making moves. He just put them in fresh positions where he thought they were needed."

"Suddenly everything became clear. The correct scheme of things had been set up and now the win was easy. We were delighted by Capablanca's mastery..."

-- KOTOV, [*Think like a Grandmaster*](#), tr. Cafferty, pub. 1971 Batsford.

Capablanca-Ragozin

"White's plan is to prevent the advance of the enemy c-pawn which might make his own pawn at b2 weak, and to control the whole board as far as the fifth rank. This is achieved by playing the King to e3, the Rook to c3, the Knight to d4 and the pawns to b4 and f4. When this has been achieved White will advance his Q-side pawns"

-- CAPABLANCA, Moscow 1936 Tournament Bulletin, quoted by KOTOV in *Play like a Grandmaster*, tr. Cafferty, pub. 1978 Batsford. ("*Note - no variations!*" KOTOV)

and...

"... I was surprised to see that Capablanca did not initiate any active manoeuvres and instead adopted a waiting game. In the end, his opponent made an imprecise move, the Cuban won a second Pawn and soon the game."

"'Why didn't you try to convert your material advantage straight away?' I ventured to ask the great chess virtuoso. He smiled indulgently: 'It was more practical to wait'."

-- Botvinnik

Tal-Botvinnik

"After the game I demonstrated some very interesting (at least, I thought they were interesting) variations. Mikhail Moiseyevitch, I think only out of politeness, listened to me and then said: "This is all very well, but - at first I was afraid of the piece sacrifice, but later I decided that I should exchange the Rooks, keeping the Queens on the board." I was surprised by these words. This assessment of the position seemed too abstract. But when we began analysing the position, I realised that Botvinnik was absolutely right. If I had exchanged the Queens, White's Pawns would have been stronger than Black's Knight. Provided Black's Queen had remained on the board, however, White's King would have been in real danger.

"Of course, such an abstract approach to evaluating chess positions should not be regarded as a universal remedy; on the other had, in the course of the game one should not rely only on calculation of concrete variations."

-- Tal

#19 Tal.

Najdorf-Bronstein, 1953

"Modern chess strategy has refined and widened many concepts. A player in deciding what move to play does not work on the external appearance of the position, but on a concrete assessment of the various possibilities open to both sides. Thus here Black can occupy d4 with a Knight, but he has to take account of the fact that then he has no real chance to strengthen his position further, while White can get definite Queen's-side threats by Ra1-b1, b2-b4 and so on in conjunction with the pressure exerted by his fianchettoed Bishop.

"One of the most important factors is the immunity from attack of the White Pawn as Black's Knight in fact would shield it from pressure along the d-file. That is why Black instead of the "strategic ...Nc6-d4" prefers the combinative ...Rfd8 aiming at the White d-Pawn."

-- Bronstein.

Kotov-Pilnik, 1952

"I offer a draw,' said the Argentinian. My reply was, 'I want to play on a bit yet,' although I felt in my bones that I should win from this position. Pilnik then insisted, 'You have no advantage, except perhaps a bit more space. On the other hand my Pawns are safely guarded.' I could not resist asking him, 'Guarded by what?' 'By my Bishop,' he replied, and I could not make my mind up whether he was serious or joking. Just in case I decided not to spoil his illusions, lest he should suddenly find a way of rearranging his Pawns.

-- Kotov.

Assessment:

1. Black's bad Bishop, obstructed by Pawns on the light squares.
2. White has more active pieces
3. Black has weaknesses at a6 and f7

Plan

45: Exchange N, play R to c1
combine attacks on two weaknesses
add to pressure on f7 by h4-h5 (threat h5-h6), and after ...g6xh5, Bxh5

Psychology in Chess: Bronstein-Botvinnik

"Instructive examples of correct psychological preconditioning are furnished by Botvinnik's games. During his matches against Bronstein (1951) and Smyslov (1954) the score before the last round was 11 1/2: 11 1/2. A draw would secure the World Championship title for Botvinnik.

"(In the 1951 match) The decisive game began. Bronstein with a smile of cunning on his face advanced his QP: 1 P-Q4. The hall was silent. People made guesses as to what opening Botvinnik would play? Somebody's voice predicted "It will be the Orthodox Defence. True, Black has to defend for a long time, but the position is stable. Botvinnik needs a stable position today."

"But no! The first moves already refute the prognosis. We see the sharp and tense variation known to theory as the "Botvinnik Variation". The champion bravely challenges his opponent, as if saying: "Although I would like a draw I am not going to beg for it myself!"

"I would like to make clear to the reader that I do not wish to deprecate the Orthodox Defence, which was used by Lasker and Capablanca. The point is that Botvinnik hardly ever used to play this system of development. The champion chose the safest, most thoroughly analyzed and, perhaps, the most aggressive continuation in his repertoire. One can only guess what the feelings of his opponent were, but the movements of the White pieces suggest that he was assailed by doubt. One can see a sort of resignation in the action of the White army. Perhaps he was recalling the successful course of his battle in the preceding twenty-third game of the match, or perhaps his balance was upset by Black's coolly executed, precise and relentless attack. The denouement was not long in coming: after gaining a won position the champion offered a draw "just in case". It was accepted.

"[...]

"In my game against Gheorghiu at Sochi in 1964 ... I did not think only of defence. Although a draw would secure me first place and the Grandmaster norm... Gheorghiu did not expect such an aggressive, even if positionally justified, style of play. When the game ended in victory for me he remarked: "I did not think one could play like that when going

for the first place." "Not only 'can', but must" -- I mentally answered the Rumanian."

-- KROGIUS

Ragozin-Boleslavsky

This position was well-known to players and theorists of the 19th century. Lasker, for example, comments:

"White's plan consists in realising his pawn superiority on the Queen's side while remaining passive on the King's side. Black, on the other had will attempt to force his opponent to advance one of his pawns on the King's wing, in order to start play against White's King's side with his pawns."

Lasker has in mind moves for White such as *c4* and *d5* to create a passed pawn, and for Black ...*Bg4*, ...*Bd6*, ...*f5* and ...*Qh5*. In fact play went **9 ...Bd6; 10 Re1, Bg4; 11 Qe4! Bh5; 12 Nh4, Nd7; 13 Qf5**. Steinitz and Lasker would undoubtedly have criticised White's crude and 'unjustified' attack. What's going on? Ragozin, a strong and experienced Soviet master, must have been aware of Lasker's views, and of the theories of Steiniz, so why is he playing on the 'wrong' side? He has made in fact a much more dynamic and concrete assessment of the position which notes, not just the Q-side majority, but also: the awkwardly placed bishops, missing *Nf6*, the compromised f-pawns and White's development and control of space. Given time, Black could no doubt disentangle his pieces. Ragozin gives him no time at all.

Capablanca-Bogolyubov, 1922

"Black's Queen, Rook and Knight are aggressively placed, and compared to White's pieces, have greater freedom. All White's pieces are defensively placed and his c-pawn and e-pawn are subject to attack. The only way to defend both pawns would be Nd2, but then Black could play ...Qb4 and he could advance his a-pawn with no difficulty."

"So far everything has been in Black's favour, and, if there were no other factors in the position, White's game would be lost. However, there is a feature which is very much in White's favour, namely, the position of the Bishop at h7. This Bishop is not only completely cut off from play, but, even worse, there is no way of bringing it into the game. White is playing, as it were, with an extra piece."

-- CAPABLANCA

Sunye Neto-Nunn

"One of the most important chess skills is being able to recognise when the position is turning against you strategically, and to spot this early enough to counter it. Here White intends Nec3 followed by O-O, with a firm grip on the important central squares d5 and e4, so I decided that quick action was necessary. Black must take advantage of the fact that White's King is temporarily stuck in the centre. The only way to do this is to play ...e4, clearing the way for the c6 Knight to jump into f3 via e5. The consequences of this are not at all clear-cut, but I played the move quickly because everything else allows White to consolidate his grip."

-- NUNN

Nunn-Chandler

"As a young player I was puzzled by games in which White played the manoeuvre Nc2-e2-g3 against the Pirc. It seemed to me that the Knight was not very well placed on g3, because Black's g6 pawn prevented the Knight advancing. Indeed its one and only duty seemed to be to defend the pawn on e4. Then, in 1984, I lost a game with Black against Murray Chandler, in which he used precisely this manoeuvre. The crucial distinction is whether White is attacking or defending. If White doesn't hold the initiative then the Knight on g3 is truly inactive, but if White holds the initiative and has pressure in the centre then the Knight can be very useful. The Rooks and Queen operating on the open files are so dangerous for Black that he cannot counter them directly; instead, Black must somehow aim for counterplay. The only weakness in White's position is the vulnerable Pawn on e4. If this is secure, then White has plenty of time to improve his position. The function of the g3 Knight is precisely to support the e4 Pawn and give White the freedom of action he needs to step up the pressure.

In the current position, Black is attacking e4 twice, but at the moment he cannot consider taking the Pawn because of the exposed Knight on d7."

-- NUNN

Nunn-Sokolov

"Conducting an attack requires good judgement. Sometimes the attack demands quick action and there is no time to bring up reinforcements, but sometimes it is better to bring all the pieces into play before attempting a knock-out blow. Which if these holds true depends on whether or not the defender is threatening to consolidate quickly. If his

weaknesses are structural, then the attacker may have time to bring all his reserves into action before the final onslaught. Here, for example, [variations]. It is clear that these lines would both be easy wins for White if he had a Rook on d1, so 18 Rad1 deserves consideration. A few moments' thought shows that Black has nothing better to do than to play 18...h4, but then White can play Nxf6+ having gained an important tempo."

-- NUNN

Nunn-Short

"If White wishes to play for a direct attack he can try 15. g4 [variation]. In olden times White would often attack by g4 and Ng3 in the Closed Spanish; once in a while White would break through with a Nf5 sacrifice, but now it is recognised that so long as all Black's pieces can reach the King's-side, a direct attack should not work. Thus, the emphasis has switched to diversionary Queen's-side play, with a King's-side attack being reserved for a favourable moment when Black's pieces have been lured away. Moreover, the King's-side attack is usually based on f4 rather than g4, since only f4 offers the chance of activating the light-squared Bishop on c2.

White's preliminary a4 gives him control of the a-file; this may not appear relevant to the conduct of a King's-side attack, but watch what happens later!"

-- NUNN

Nunn-Portisch

"The traditional way of assessing such positions is to say that Black has an inferior pawn structure, but in compensation he has the two Bishops (). Looked at this way, Portisch's plan appears strange. However, a static evaluation takes no account of the potential activity of Black's pieces. His main problem is the future of the c8 Bishop; he doesn't want to play ...Bd7, because that would prevent the manoeuvre ...Nd7 and ...Bf6, which is his best chance of activating the other minor pieces. After ...Be6, the Bishop would be a target for a later Nf3-d4 or f2-f4-f5, and it would block the e-file, making it impossible to develop pressure against the e4-pawn by ...Re8. The only real solution is to get rid of the Bishop by ...Bg4 followed by ...Bxf3. This plan has to be executed immediately or else White plays Qd3, preparing to meet ...Bg4 by Nd4. Perhaps there is even an argument for 10. Qd3!?, although this might tempt Black to develop his Bishop another way - by 10...a5 followed by ...Ba6.*

The exchange on f3 not only relieves Black's slightly cramped position, it also gives him a

grip on e5."

-- NUNN

Nunn-Dlugy

"If you want to lose a miniature, then here are three helpful tips. First of all, it is a big help if you are Black. losing in under 20 moves requires a special talent which few possess. Secondly, choose a provocative opening, for example an opening in which you try to realise strategic ambitions, but at the cost of backward development and delayed castling. Thirdly, if something goes slightly wrong, don't reconcile yourself to defending a bad position - seek a tactical solution instead! Don't worry about the fact that tactics are bound to favour the better developed side; just go ahead anyway. Follow this advice and at least you will get home early."

This document (Canon\canon218.html) was last modified on 13 Aug 2005 by

[Dr. Dave](#)

caro - kann defence [B17]BCF 3, 1994

1. e4 c6

Rather than even things up with ...e5 Black sets up a counterblow with ...d5 2. d4 d5 3. Nc3 dxe4 4. Nxe4 Nd7 5. Nf3 Ngf6 6. Ng3 e6 7. Bd3 c5 8. O-O cxd4 9. Nxd4 Bc5 10. Nf3 O-O 11. Qe2

A level game - even a rather dull one - has arisen. =

Back to [Chess Coaching Page](#)

This document (Canon\canon219.html) was last modified on 13 Aug 2005 by

[Dr. Dave](#)

french defence [C14]BCF 3, 1994

1. e4 e6

Another counter-punching line (like the Caro-Kann). It is both better and worse than the Caro: Black has more chances to win, but so does White! 2. d4 d5 3. Nc3 Nf6 4. Bg5 Be7 5. e5 Nfd7 6. Bxe7 Qxe7 7. f4

White has siezed the centre: Black retaliates. 7... O-O 8. Nf3 c5 9. Bd3 f5 10. exf6 Rxf6 11. Qd2 Nc6 12. dxc5 Nxc5

White's central pawns have disappeared and the only hope for advantage is to hold back the e-pawn. =

Back to [Chess Coaching Page](#)

This document (Canon\canon220.html) was last modified on 13 Aug 2005 by

[Dr. Dave](#)

grunfeld defence [D86]BCF 3, 1994

1. d4 Nf6 2. c4 g6 3. Nc3 d5

A good open approach to the Queen's Pawn opening, and one which makes no positional concessions. Rapid development and hitting hard at the centre are the hallmarks of this defence, which make it appeal to sharp players. 4. cxd5 Nxd5 5. e4 Nxc3 6. bxc3 c5 7. Bc4 Bg7 8. Ne2 cxd4 9. cxd4 Nc6 10. Be3 O-O 11. O-O Na5 12. Bd3 Bg4

White's centre is impressive but the White pieces are huddled rather defensively behind it. Black will try and mess up the advance of the pawns and then get the a- and b-pawns rolling to create a passed pawn. =

Fischer, Robert J - Miagmarsuren, Lahmsuran (sousse) [A08] attack: very slow K-side attac, attack: very sl, 1967

1. e4 e6 2. d3 d5 3. Nd2 Nf6 4. g3 c5 5. Bg2 Nc6 6. Ngf3 Be7 7. O-O O-O 8. e5 Nd7 9. Re1 b5 10. Nf1 b4 11. h4 a5 12. Bf4 a4

White's attack is slow but has an important target! Fischer's next move was considered an innovation at the time, making a pawn move in the area of Black's attack, but actually it slows Black up a bit. 13. a3 bxa3 14. bxa3 Na5 [14... Nd4 15. Ne3 Ba6 16. c4 dxc4 [16... Nb3 17. cxd5 Nxa1 18. Qxa1 exd5 19. Nxd5 Bxd3 20. e6 Nf6 21. Nxe7+ Qxe7 22. Ne5 Bg6 23. Nc6 Qb7 24. Bd6] 17. Nxd4] 15. Ne3 Ba6 16. Bh3 d4

Obviously White must move the Knight, but where? 99% of players would choose g4... 17. Nf1 The d1-h5 diagonal is left clear for the Queen. 17... Nb6 18. Ng5 Nd5

With the centre closed White has been quietly shifting over towards the lonely Black King, but he does not want to lose the Bf4. 19. Bd2 Bxg5 20. Bxg5 Qd7 21. Qh5 Rfc8 22. Nd2 Nc3

Black is definitely getting somewhere with his attack, but White is ready for the big push. 23. Bf6 Qe8 [23... gxf6 24. exf6 Kh8] 24. Ne4 g6 25. Qg5 Nxe4 26. Rxe4

Black's attack has ground to a halt, while White powers on. 26... c4 27. h5 cxd3 28. Rh4 Ra7 29. Bg2
An unobvious move, preparing to go to e4. 29... dxc2 30. Qh6 Qf8 31. Qxh7+ 1-0

steinitz - blackburne,vienna (dubois) [C29]accumulation theory, 1882

1. e4 e5 2. Nc3 Nf6 3. f4 d5 4. d3 dxe4 5. fxe5 Ng4 6. Nxe4 Nc6 7. c3 Qd5 8. Qb3 Qxb3 9. axb3 Ngxe5 10. d4 Ng6 11. Bc4

White has emerged from the opening with an advantage in this queenless middle-game. The Queens are off, but the number of other pieces and the character of the play is more like a middle game. 11... Be7 12. Nf3 h6 13. b4 O-O 14. O-O Bf5 15. Nfg5

! A little tactic (Rxf5) to keep a positional advantage - in this case, the fine position of the Ne4. 15...

Bxe4 16. Nxe4

Black has conceded the two bishops. White's doubled b-pawns cannot be attacked and cannot therefore be considered weak - on the contrary, together with the Bc4 and the open a-file, they give White the advantage on the Q-side. 16... Nd8 17. b5 Re8 18. Ng3 Bf8 19. Nf5 Ne7 20. Ne3 Ne6 21. Ng4 Ng6 22. Bd5 Nd8

23. Bxh6 "Tactics flow from a superior position" - Fischer. White wins a pawn. But instead of trying now to swap into a winning endgame, he keeps his two bishops & well-placed rooks moving forward, so when exchanges come he wins quickly. 23... c6 24. bxc6 bxc6 25. Bc4 Re7 26. Bg5 Rd7 27. h4 Be7

28. h5 White works with these little tactics all the time, not to win material, but to win positional advantages. 28... Nf8 White's tactic has resulted in another Black retreat. 29. Be3 Bd6 30. b4

White has the advantage and the initiative on both sides of the board. Black has no rest, and the poor knights hop about in agitation. 30... Nde6 31. Ra6 Rc8 32. h6 Nh7 33. hxg7 Kxg7

Black's pawns are split, his pieces awkward. There is still no need to swap off in order to win the ending.

34. Bh6+ Kg8 35. Bd3 Rcc7 36. Bd2

Idea Bxh7 and Nf6+ 36... Nef8 37. Nh6+ Kh8 38. Be4 Re7 39. Bxc6 Re2 40. Nf5 Rxd2 41. Nxd6 Ng5 42. Re1 Nge6 43. Rf1 Nd8 44. b5 Rd3 45. Rf5 Nfe6 46. Ne4 Ng7 47. Rf6 Kg8 48. Rh6 Nge6 49. d5 Nf4 50. Rh4

White's pressure on the position is such that Black will even help the pawns forward if it will free the game a little. We do now get an end-game type of position, where the play is concerned with passed pawns. 50... Nxc6 51. Nf6+ Kf8 52. Rxc6 Rxc6 53. bxc6 Ng6 54. c7 Rxc3 55. d6 Ne5 56. Re4

A complete crush against a dangerous opponent. 1-0

steinitz - fleissig (dubois) [C00]accumulation theory, 1882

1. e4 e6 2. e5 d5 3. exd6 Bxd6 4. d4 Ne7 5. Bd3 Ng6 6. Nf3 Nc6 7. Nc3 Nb4 8. Bc4 c6 9. Ne4 Bc7 10. O-O O-O 11. Re1

Black should aim to play ...e5. Instead, he hopes to draw the game by holding still and being quiet. White gradually improves his position... 11... Nd5 12. Nc5 Nh4

13. Ne5 White avoids exchanges while Black is cramped. Eventually Black decides he cannot bear the Ne5 and exchanges off his 'good' Bc7 when his Bc8 is hemmed in 13... Nf5 14. c3 Bxe5 15. Rxe5 White has the two bishops and an outpost on e5 (...f6 would weaken e6). 15... Nf6 16. Re1 It is the Nc5 that belongs on e5 16... h6 a weakness that Black should have made only if forced to! 17. Qf3 Nd5 18. Bb3

b6 19. Nd3 Ba6 20. Ne5 Rc8 21. Bc2 Nfe7 22. Qg3 Kh8 23. Qh4 Kg8 24. Qg3 Kh8

White is teasing Black with Bxh6 (that weakness); Black is horribly passive. 25. Qh3 Ng8 26. Qh5 Rc7 27. Bd2 Ndf6 28. Qh3 Nd5 29. c4 Ndf6 30. Rad1

White is on no hurry to try and cash in, and develops his last piece. Each advantage is quietly put in his pocket for later. 30... Qe8 31. Bf4 Rc8 32. Qa3

Classic manoeuvre: when Black is huddled defensively on the K-side, this sudden shift to the Q-side wins. Black suddenly realises his predicament and lashes out on the K-side, but his pieces are too badly placed to worry White. 32... Bb7 33. Qxa7 Ba8 34. Qxb6 g5 35. Bg3 Nd7 36. Qb3 f5 37. f3 Kg7 38. c5 Ndf6 39. Nc4

Black has had enough, even though White has no piece beyond the halfway line 1-0

euwe - thomas and stahlberg_trifunov [D69]bishops: active bishop used fo, bishops: active, 1934

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nf3 Nbd7 7. Rc1 c6 8. Bd3 dxc4 9. Bxc4 Nd5 10. Bxe7 Qxe7 11. O-O Nxc3 12. Rxc3

Black now plays the final part of Capablanca's freeing manoeuvre. 12... e5 13. dxe5 Nxe5 14. Nxe5 Qxe5 15. f4 Qe7

White has a temporary advantage in development, which is particularly clear in the positions of the Bishops. If White does not seize the moment, the advantage will vanish, and Black's last move gives

White the chance he needs. [15... Qf6

This is the right square for the Queen: the rush of the f-pawn is prevented. White can try to support it with the e-pawn but by then Black can get sorted. 16. f5 [16. e4 Rd8 17. Qc2 Be6 18. e5] 16... a5 17. a4 [17. a3 b5 18. Ba2 b4 19. Rc5 Ba6 20. Re1 Bb5] 17... Rb8 18. Qc2 Bd7 [18... b5 19. axb5 cxb5 20. Bxb5 Rxb5 21. Rxc8] 19. Rd3 Rbd8 20. Qd2 b5 [20... Bc8 21. Qxa5 Rxd3 22. Bxd3 Qxb2 23. f6] 21. axb5 [21. Rd6 Bc8] [21. Bxb5 cxb5 22. Rxd7 Rxd7 23. Qxd7 Qxb2 24. Qxb5 Qxb5 25. axb5 Rb8 with meagre chances for White - Euwe] 21... cxb5 22. Bd5 Bc6

23. e4 [23. Bxc6 Rxd3 24. Qxd3 Qxc6 with Black's Queen-side majority being the most important feature of the game] 23... Bxd5 24. exd5 Qb6+ 25. Qf2 Qxf2+ 26. Kxf2 draw agreed, stahlberg-trifunovich, 1951] 16. f5 b5 17. Bb3 b4 18. f6 gxf6 19. Rxc6 Qxe3+ 20. Kh1

Now White can count up several advantages - good Bb3, good Rooks, exposed enemy King. Black may still organise a defence, given time. 20... Bb7 Now each Bishop looks good, but the other advantages have yet to be neutralised. [20... Be6 costs a pawn: 21. Bxe6 fxe6 22. Qg4+ Qg5 [22... Kh8 23. Rc7] 23. Qxe6+ Kh8 24. Rxf6 Rg8 [24... Rfe8 25. Paulsen - Tarrasch (Nimzo) [C02] Pawn chains, 1993

1. e4 e6 2. d4 d5 3. e5 c5

The classic setting for a battle of pawn chains. Nimzo enriched this line with many ideas and beautiful games. He said White should aim for control of d4 and break with f5, rather than play dxc5 or c2-c4 which weaken the centre. 4. c3 Nc6 5. Nf3 Qb6 6. Bd3 [6. a3 or 6 Be2: now both 6...c4 and the modern 6...f6 are played. ...f6 contradicts Nimzo's principle that pawn chains should be attacked at the base, but after exf6, Nxf6 the e6 pawn is not easy to attack and Black gets active play.] 6... cxd4 7. cxd4 Bd7 8. Be2 [8. O-O Because the Bishop seems obliged to move again we now see either the move 6.Be2 straightaway, or the following gambit: 8... Nxd4 9. Nxd4 Qxd4 10. Nc3 a6] 8... Nge7 9. b3 Nf5 10. Bb2 Bb4+ Black's consistent pressure on d4 produces a concession. 11. Kf1 Be7 (...0-0! nimzo) The idea of Be7 is to meet g4 with ...Nh4, keeping the balance of attack and defence of d4. 12. g3 a5 ?! 13. a4 Rc8 14. Bb5 Nb4

White is starting to consolidate after a long period of defence. 15. Bxd7+ ? (15 Nc3! nimzo) That's White's good bishop and Black's bad one. 15... Kxd7 16. Nc3 Nc6 17. Nb5 Na7 18. Nxa7 ? 18... Qxa7 19. Qd3 Qa6 ! Black sizes the opportunity to exchange Queens, as the endgame favours Black (most French endgames do). 20. Qxa6 bxa6 21. Kg2 Rc2 22. Bc1 Rb8 23. Rb1 Rc3 24. Bd2 Rcx3 25. Rxb3 Rxb3 26. Bxa5 Rb2 27. Bd2 Bb4 28. Bf4 h6 29. g4 Ne7 30. Ra1 Nc6 31. Bc1 Rc2 32. Ba3 Rc4 33. Bb2 Bc3 34. Bxc3 Rxc3 35. Rb1 Kc7 36. g5 Rc4

Black's pressure produces results: a particularly clear instance of when two weaknesses are fatal to the defence. 37. gxh6 gxh6 38. Kg3 Rxa4 39. Kg4 Ra3 40. Rd1 Rb3 41. h4 Ne7 42. Ne1 Nf5 43. Euwe - Pilnik (Amsterdam) [D72] pawn mobility: passed Pawn blo, pawn mobility:, 1950

1. d4 Nf6 2. c4 g6 3. g3 Bg7 4. Bg2 d5 5. cxd5 Nxd5 6. e4 Nb6 7. Ne2 c5 8. d5 O-O 9. O-O e6 10. Nbc3 Na6 11. Nf4 e5 12. Nfe2 Nc4! 13. b3 Nd6

"White has a difficult game: his majority has produced a passed Pawn, and is thereby crippled. The blockader radiates influence. On the Queen's-side he can support the advance of his own majority, and on the other flank he puts the re 14. Be3 b6 15. Qd2 Re8 In Keene's book on Nimzovitch, Bent Larsen describes this as a typical Nimzovitch idea: the blockading Knight. 16. f4 (?) [16. f3 idea Rf2, Bf1] 16... Nc7 17. Rf2 (?) [17. h3 Ba6 18. f5 Ncb5 =+] 17... exf4 White's 16th move allows Black to open up the long diagonal. 18. Bxf4 [18. gxf4 Nxe4 19. Bxe4 Rxe4] 18... Ba6 [18... Nxe4 19. Bxe4 Rxe4 20. Nxe4 Bxa1 21. N2c3!] 19. Re1 Qe7 20. g4 Be5 21. Bxe5 Qxe5

The Black Queen is now also blockading, but is not so effective because Queens must always flee from the attack of a less valuable piece. 22. Ng3? [22. Kh1! obliges 22... Bxe2 with some relief of pressure, since [22... f6 23. Ng1 Nf7 24. Nf3 Qd6 25. e5 fxe5 26. Ne4 is good for White]] 22... Re7 23. Bf1 Bc8 24. Be2 Bd7 25. Ref1 Rf8 26. Qc1 Nce8! 27. Kh1 f6 28. Rg1

28... Ng7 [28... Nf7, intending to move the Queen and play the Knights to d6 and e5, is crisper] 29. Bf3 Qg5 30. Qxg5 fxg5 31. Rgf1 Nge8 32. Be2 Rxf2 33. Rxf2 Kg7 34. h3 Nf6 35. Bf3 Be8 36. Re2 Nd7 37. Rd2 Ne5

Now the White Pawns are under "lock and key", Black can turn to his own plans. 38. Be2 b5 39. Rc2

Rc7 40. Nd1 c4 41. bxc4 bxc4 42. Nc3? [42. Nb2 c3 43. Nd3 with some counterplay, hoping to get the e-Pawn under way] 42... Kf6 43. Nb1 Rb7 44. Nd2 Ba4 45. Rc1 Rb2! Black plans to exchange Rooks. 46. Nxc4 Nexc4 47. Bxc4 Bc2 48. Bb3 Rb1 49. Rxb1 Bxb1

White's proud Pawns now fall. 50. Ne2 Bxe4+ 51. Kh2 Ke5 52. Nc3 Bd3 53. Kg3 Ne4+ 54. Nxe4 Bxe4 55. d6 Kxd6

Black is a Pawn up, but not a very good Pawn: what is most important is the better Bishop. 56. Bg8 h6 57. Bf7 Bd5 58. Bxg6 [58. Bxd5 Kxd5 is lost for White] 58... Bxa2 59. h4 a5 60. hxg5 hxg5 61. Kf3 a4 62. Ke3 Be6 63. Kd4 Bxg4 64. Kc3 Bd1 65. Bf5 Ke5 [65... g4 66. Bxg4 Bxg4 67. Kb2 draws by wrong Rook's Pawn] 66. Bd7 Kf4 67. Kb4 Bc2 68. Kc3 Bb3 69. Kb4

69... Bf7 ! wins because of the bad defensive King position and because the Bishop cannot get around the right-hand side of the Pawn (White would need an i-file, and probably a j- and k-file too!) 70. Kxa4 Bg6 71. Kb4 Bf5 72. Bc6 g4 73. Kc5 Be4 74. Bd7 g3 75. Bh3 Ke3 76. Kd6

76... Bf5! 77. Bg2 Kf2 [77... Kf2 78. Bd5 [78. Bh1 Bg4 79. Bd5 Bf3] 78... Bg4 79. Bh1 Bf3] 0-1

webb - hartston,uk ch'p [A31] potential, 1974

I included this game here because I was interested in Bill Hartston's comment at move 14, but I have also included Webb's commentary on the psychological battle. 1. Nf3 Nf6 2. d4 c5 3. c4 cxd4 4. Nxd4 b6 ! "an unusual move... gets an exclamation mark because White is S.Webb. I like to fianchetto my KB in such positions, and this is the one move which prevents me from doing so" (if he thought Bill would play this, he would play 3.g3) 5. Nc3 Bb7 6. f3 d6 7. e4 e6 8. Be2 Be7 9. O-O O-O 10. Be3 Nbd7 which plan? f4/g5? g4/ g5? double rooks on d-file? It's not much use knowing you've got a good position if you don't know what to do with it! 11. Qd2 a6

WRH: "Now the position bears a very strong resemblance to a Sicilian. I felt quite happy now since I seem to have spent half my life playing Sicilian positions of this type, which my opponent, not a 1 e4 player, had to be less 12. Rfd1 ...familiar with the problems" 12... Qc7 13. Rac1 Rac8 14. Bf1 Qb8

WRH: White has made a series of natural moves and maintains a spatial advantage; nevertheless I believe that Black already has the better prospects. The Black pieces... are beautifully placed to leap into action 15. Qf2 Rfe8 ...d6-d5 breakthrough". SW: "By this stage I was definitely running out of things to. I still don't know what I did wrong, apart from choosing the wrong opening!" 16. Kh1 Bf8 17. Nc2 Ne5 18. Bxb6 I would have preferred to defend the c-pawn, but 18. b3 b5 and 18. Na3 d5! are very unpleasant for White. 18... Nxc4 19. Bxc4 Rxc4 20. Ne3 Rc6 21. Ba5 -+, # BB 21... d5 22. exd5 exd5 23. Nf5 [23. Ncxd5 Nxd5 24. Rxd5 Rxc3] [23. Ncxd5 Nxd5 24. zinn - sveshnikov,decin [B33]weak pawns: dynamic chances, 1974

1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 e5 6. Ndb5 d6

One of the most puzzling of modern variations: didn't the games on Knight outposts suggest that Black is virtually lost? Well, he is if White proceeds smoothly and Black has no counterplay. 7. Bg5 a6 8. Na3 b5 9. Bxf6 gxf6 10. Nd5

All according to plan A, but there are some differences: Black has an interesting collection of K-side pawns which may allow ...f6-f5 and ...Rg8, and White's Knight on a3 is taking no part in the struggle.

10... f5 11. Bd3 Be6 12. Qh5 Bg7 13. O-O f4 14. c3 O-O 15. Nc2 f5

Black is making maximum use of the f-pawns and White looks at least as loose as Black. 16. Ncb4 Nxb4 17. Nxb4 d5 18. exd5 Bd7 19. Bc2 Be8 20. Qe2 Kh8 21. Rad1 Qh4 22. f3 Rf6 23. Qe1 Qg5 24. Qxe5 Bd7 25. Qe7 Rg8 Black follows his pawn sacrifice with a Bishop! 26. Qxd7 Rf7

The f-pawns keep White's pieces from defending the King, and White has no answer to the vacating sacrifice ...Bd4. 0-1

Capablanca, Jose - Kupchik, Abraham (Havana) (7) [C49]weak pawns: pawn islands, 1913

1. e4 e5 2. Nf3 Nc6 3. Nc3 Nf6 4. Bb5 Bb4 5. O-O O-O 6. Bxc6 bxc6 7. Nxe5 Qe8

8. Nd3 Bxc3 9. dxc3 Qxe4 [9... Nxe4 10. Re1] 10. Re1 Qh4 11. Qf3 Ba6 12. Bf4 Rac8 13. Be5 (idea IDEA Nc5) 13... Bxd3 14. cxd3 Qg4 15. Bxf6 Qxf3 16. gxf3 gxf6

Assessment: +/- better Pawns, fewer Pawn islands, more active pieces. The weakest spot in the Black position is the isolated a-Pawn, and it is here that an attack should be directed. 17. Re4 First, Capablanca mobilises and centralises his pieces. There is never any sense of rush when Capa plays an ending. This

ease of mobilisation is a dynamic advantage to add to the static ones just listed. 17... Rfe8 18. Rae1 Re6 19. R1e3 Rce8 20. Kf1 Kf8 21. Ke2 Ke7

Now, White can attack the a-pawn. 22. Ra4 Ra8 23. Ra5 restrains the Pawns 23... d5!? I can sympathise with the bid for space but this is not forced and has the disadvantage of leaving the c-Pawns without support. 24. c4! Kd6 [24... dxc4 leaves all Black's Pawns isolated and most of them doubled!] [24... d4 25. Re4 Kd6 26. b4 Re5 27. Ra6 'hopeless', said Capa] 25. c5+ Kd7 26. d4 Black's pawns have become fixed, cutting off the Queen's-side. 26... f5 Hoping to nip out to h6 with some play. 27. Rxe6! fxe6 28. f4 Clearing the third rank for a Rook 28... Kc8 29. Kd2 Kb7?!

Black has achieved a solid defence of the a-Pawn and White can achieve little else there. But White has access to both sides of the board via the third rank. [29... Rb8!? 30. Kc3 [30. b3 blocks the third rank] [30. Kc2 Rb4 31. Kc3 Rc4+ 32. Kd3 Rb4] 30... Rb7 may have been better] 30. Ra3 Rg8

31. Rh3 Rg7 This defence from the side keeps the Black Rook more active than moving it to defend from h8, but I'm sure Black also considered ...Rg1!?, giving up a Pawn to get the Rook active. It looks a bit speculative here but is the right sort 32. Ke2 Ka6 33. Rh6 Re7 34. Kd3 Kb7 35. h4 Kc8 36. Rh5 Kd7 37. Rg5 Rf7

Again, Black has achieved a solid, if passive, defence. White now returns his attention to the Queen's-side. 38. Kc3 Kc8 39. Kb4 Rf6 40. Ka5 Kb7 41. a4 a6 42. h5 Rh6

White is poised on both fronts but can improve the position of his pieces no further. It is time to try and force the issue. 43. b4 Rf6 44. b5!?! [44. Rg7! Rh6 first would have been better, according to Capa: 45. b5 axb5 46. axb5 cxb5 [46... Rxh5 47. b6] 47. Kxb5 e.g. 47... Rxh5 48. c6+ Kb8 49. Ka6] 44... axb5 45. axb5 Rf8 Off to seize the a-file! [45... Rf7 46. h6 Re7 47. Rg7 is hopeless: so Black must counterattack.] 46. Rg7 Ra8+ 47. Kb4 cxb5 48. Kxb5 Ra2

Black has gained some activity. Of course, White does not retreat and defend with Rg2. 49. c6+ Kb8 50. Rxh7 White has an h-pawn. Can the lone Black Rook do enough to compensate? 50... Rb2+ 51. Ka5 Ra2 + 52. Kb4 Rxf2 53. Re7 Rxf4?! Natural, but not exact. [53... Rb2+ 54. Kc3 Rh2 55. Rxe6 Ka7 56. h6 Kb6 which isn't great but Black is also fighting with the King now] [53... Rh2? 54. Rxe6 Rxh5 55. Re5 Ka7 56. Kc5] 54. h6 Rxd4+ 55. Kb5 Rd1 56. h7 A Pawn on the seventh seems worth three in the bush! Black can only hope to harass the King with checks, but these are soon exhausted. 56... Rb1+ 57. Kc5 Rc1+ 58. Kd4 Rd1+ 59. Ke5 Re1+ 60. Kf6 Rh1 61. Re8+ Ka7 62. h8=Q Rxh8 63. Rxh8 Kb6 64. Kxe6 Kxc6 65. Kxf5 Kc5 66. Ke5 c6 67. Rh6 Kb5 68. Kd4 1-0

King, BN. - KingHowToMate Fine No.4/No.5

(wKa5,Na1,Bh5; bKc5)

The White pieces are in their worst possible positions. Mate can be achieved only at a8 or h1. As White you have a three-stage plan: (1) drive the King to the edge. (2) drive the King to a corner: it will head for a1/h8 (3) drive the 1... Kc6 [1... Kc4 2. Bf7+] 2. Nb3 Kd6 [2... Kd5 3. Kb5 Kd6 4. Kc4 Ke5 5. Nc5 Kf5 6. Kd5 Kg5 7. Bf3 Kf5 8. Ne6 Kf6 9. Be4 Ke7 10. Ke5 Kf7 11. Nf4 Kg7 12. Bd5 Kh7 13. Kf6 Kh8 14. Ng6+ Kh7 15. Be6] 3. Kb5 Kd5 4. Bf7+ Ke5 [4... Kd6 5. Bc4 Ke5 6. Kc5 Ke4 7. Kd6 Kf5 8. Bd3+ Kf6 9. Nd2 Kf7 10. Nc4 Kf6 11. Ne5 Kg7 12. Ke7 Kh8 13. Kf6 Kg8 14. Nf7] 5. Kc5 Kf6 6. Bc4 Ke5 7. Nd2 Kf4 8. Kd6 Kf5 [8... Ke3 9. Nb3 Kf4 10. Bd3 Kg5 11. Ke5 Kh6 12. Kf6 Kh5 13. Bf5 Kh4 14. Kg6 Kg3 15. Kg5 Kf3 16. Bc2 Ke3 17. Kg4 Ke2 18. Kf4 Kf2 19. Bd1 Ke1 20. Bf3 Kf2 21. Nd4] 9. Bd3+ Kf6 10. Nf3 Kf7 11. Ke5! Kg7 [11... Ke7 12. Bc4] 12. Ng5 [While we are going through, watch how the Knight moves!] 12... Kg8! 13. Kf6 Kf8 14. Nf7 Kg8

No.5 Black is near the 'safe' corner, and we need to get him to a mating corner. The way to do this was first shown by Philidor, and is to be found in the books by Fine and Averbakh. 15. Bf5 Kf8 16. Bh7 Ke8 17. Ne5 Kd8 [17... Kf8? 18. Nd7+ Ke8 19. Ke6 Kd8 20. Kd6 Ke8 21. Bg6+ Kd8 22. Nc5 Kc8 23. Bd3! Kd8 24. Bb5! Kc8 25. Bd7+ Kb8 26. Kc6 Ka7 27. Kc7 Ka8 28. Kb6 Kb8 29. Na6+ Ka8 30. Bc6#] 18. Ke6 Kc7 19. Nd7! This is the bit you need to understand: it looks like the King has got out, but it hasn't. 19... Kc6?! This natural move gets mated more quickly. There are a couple of important patterns to remember: [19... Kb7 20. Bd3! Kc6 *The box again.* 21. Ba6 Kc7 22. Bb5 *and the wall.* 22... Kd8 *Okay, last trick. The Knight goes to d5 to further restrict the King.* 23. Nb6 Kc7 24. Nd5+ Kd8 25. Kd6 Kc8 26. Ke7 Kb7 27. Kd7 Kb8 28. Ba6 Ka7 29. Bc8 Kb8 30. Ne7 Ka7 [30... Ka8 31. Kc7 Ka7 32. Nc6+ Ka8 33. Bb7#] 31. Kc7 Ka8 32. Bb7+ Ka7 33. Nc6#] 20. Bd3! The King is in a little box. 20... Kb7 [20... Kc7 21. Bb5! *The King's escape is walled off.* 21... Kc8 22. Kd6 Kd8 23. Nc5 Kc8 24. Bd7+ Kb8 25. Kc6 Ka7 26. Kc7 Ka8 *mate in three* 27. Kb6 Kb8 28. Na6+ Ka8 29. Bc6#] 21. Kd6 Kc8 22. Nc5 Kb8 [22... Kd8 23. Bb5] 23. Kc6 This is not the fastest but is easier to remember and more artistic. [23. Kd7 *is Fine's slightly quicker method* 23... Ka7 24. Kc7 Ka8 25. Kb6 Kb8 *mate in three* 26. Ba6 Ka8 27. Bb7+ Kb8 28. Na6#] 23... Kc8 Can you guess White's next Knight move? 24. Nb7 This is why I say it's easier to remember and prettier! 24... Kb8 25. Kb6 Kc8 26. Bf5+ Kb8 27. Nc5 Ka8 28. Bd7 Kb8 29. Na6+ Ka8 30. Bc6# 1-0

Krogius - Gheorghiu [B85] psychology: playing for a win, 1964

I would be happy with a draw, but my opponent would be relying on passivity, and would moreover play all the more strongly for having a moral advantage over me. I therefore resolved to face my opponent not with timidity but with boldness, and to struggle for the initiative from the very first moves. "Do not think about a draw" I kept on saying to myself throughout the battle.

1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 a6 6. Be2 e6 7. O-O Qc7 8. f4 Be7 I played quickly: 9. Qe1 Gheorghiu frowned. 9... Nc6 [9... Qb6] 10. Be3 Bd7 11. Qg3 g6

This signals Black's intention to launch an attack, which is however dubious. White can and should prevail by a central counter, but this requires not faith but precision.

12. Kh1 h5 13. Qe1 h4 14. Bf3 Nh5 15. Nde2 Na5 16. Bd4 "This manoeuvre was based on precise calculation, for at first sight it helps Black double the Rooks." (See move 22!) 16... Rh7 17. b3 Nc6 18. Bf2 Ng3+ "Gheorghiu hurries to force the game." 19. Nxc3 hxc3 20. Bxc3 g5

"Too late!"

21. e5 gxf4 22. exd6 Bxd6 [22... fxg3 23. Qxg3 "and because of the threat of check Black loses."] 23. Nd5 O-O-O 24. Nxc7 fxg3 25. h3 Bxc7 26. Rd1 Rdh8 27. Rxd7 Kxd7 28. Bxc6+ Kxc6 29. Qe4+ Kb6 30. Qd4+ Kc6 31. Rf3 b5 32. Qa7 Rxh3 + 33. gxh3 Rxh3+ 34. Kg2 Rh2+ 35. Kf1 Rh1+ 36. Ke2 Rh2+ 37. Kd3 g2 38. Rxf7 Bb6 39. Qb7+ Kc5 40. b4+ "I did not think one could play like that when going for first place", remarked Gheorghiu. "Not only 'can', but 'must'," - I mentally answered the Roumanian. 1-0

euwe - smyslov (the Hague) [t40errors: unjustified sacrifice, 1948

(wKg1,Qe2,Ne5,f4,Bb1,d4,Pc3,e4,f2,g2,h3; bKh7,Qb7,Na5,g8,Bc4,d8,Pb3,b5,f7,g6,h6)

We'll try this one step at a time. Analyse this for White. 1. Nexg6

This is actually quite OK for White. [1. Qg4 is perfectly adequate and therefore the easiest way to win.] 1... fxg6

Now what do you play?

[1... Bxe2 2. Nf8#] 2. Nxc6 This is a bridge too far. It's natural and tempting but needs analysing concretely: I don't know if White was short of time or just missed the defences, or if he couldn't see the 'quiet' Qg4. [2. Qg4 ! when Black cannot organise a defense against Nxc6 and e5] 2... Kxc6 3. e5+ [3. Qf3 is better, but 3... Be6 4. Qf8 Kh7 5. Qxd8 Nc6 and White has run out of steam] 3... Kf7 4. Qh5+ Kf8 5. f4 [5. Bc5+ Be7 6. Qf5+ Ke8 7. Qg6+ Bf7] 5... Bb6 6. Qf5+ Ke7 7. Qh7+ Kd8 8. Bxb6+ [8. Qxb7 Bxd4+ 9. cxd4 Nxb7] 8... Qxb6+ 9. Kh2 Qe3 10. Qf5 Nc6 0-1

[Dr. Dave](#)

Capablanca, Jose - Kupchik, Abraham [Havana [C49]manoeuvre: a classic endgame s, manoeuvre: a cl, 1913

1. e4 e5 2. Nf3 Nc6 3. Nc3 Nf6 4. Bb5 Bb4 5. O-O O-O 6. Bxc6 bxc6 7. Nxe5 Qe8

8. Nd3 Bxc3 9. dxc3 Qxe4 [9... Nxe4 10. Re1] 10. Re1 Qh4 11. Qf3 Ba6 12. Bf4 Rac8 13. Be5 (idea IDEA Nc5) 13... Bxd3 14. cxd3 Qg4 15. Bxf6 Qxf3 16. gxf3 gxf6

Assessment: +/- better Pawns, fewer Pawn islands, more active pieces. The weakest spot in the Black position is the isolated a-Pawn, and it is here that an attack should be directed. 17. Re4 First, Capablanca mobilises and centralises his pieces. There is never any sense of rush when Capa plays an ending. 17...

Rfe8 18. Rae1 Re6 19. R1e3 Rce8 20. Kf1 Kf8 21. Ke2 Ke7

Now, White can attack the a-pawn. 22. Ra4 Ra8 23. Ra5 restrains the Pawns 23... d5!? I can sympathise with the bid for space but this is not forced and has the disadvantage of leaving the c-Pawns without support. 24. c4! Kd6 [24... dxc4 leaves all Black's Pawns isolated and most of them doubled!] [24... d4 25. Re4 Kd6 26. b4 Re5 27. Ra6 'hopeless', said Capa] 25. c5+ Kd7 26. d4 Black's pawns have become fixed, cutting off the Queen's-side. 26... f5 Hoping to nip out to h6 with some play. 27. Rxe6! fxe6 28. f4 Kc8 29. Kd2 Kb7?!

Black has achieved a solid defence of the a-Pawn and White can achieve little else there. But White has access to both sides of the board via the third rank. [29... Rb8!? 30. Kc3 [30. b3 blocks the third rank] [30. Kc2 Rb4 31. Kc3 Rc4+ 32. Kd3 Rb4] 30... Rb7 may have been better] 30. Ra3 Rg8 31. Rh3 Rg7 This defence from the side keeps the Black Rook more active than moving it to defend

from h8, but I'm sure Black also considered ...Rg1!?, giving up a Pawn to get the Rook active. It looks a bit speculative here but is the right sort 32. Ke2 Ka6 33. Rh6 Re7 34. Kd3 Kb7 35. h4 Kc8 36. Rh5 Kd7 37. Rg5 Rf7

Again, Black has achieved a solid, if passive, defence. White now returns his attention to the Queen's-side. 38. Kc3 Kc8 39. Kb4 Rf6 40. Ka5 Kb7 41. a4 a6 42. h5 Rh6

White can improve the position of his pieces no further. It is time to try and force the issue. 43. b4 Rf6 44. b5!?! [44. Rg7! Rh6 first would have been better, according to Capa: 45. b5 axb5 46. axb5 cxb5 [46... Rxh5 47. b6] 47. Kxb5 e.g. 47... Rxh5 48. c6+ Kb8 49. Ka6] 44... axb5 45. axb5 Rf8 Off to sieze the a-file! 46. Rg7 Ra8+ 47. Kb4 cxb5 48. Kxb5 Ra2

Black has gained some activity. Of course, White does not retreat and defend with Rg2. 49. c6+ Kb8 50. Rxh7 Rb2+ 51. Ka5 Ra2+ 52. Kb4 Rxf2 53. Re7 Rxf4?! Natural, but not exact. [53... Rb2+ 54. Kc3 Rh2 55. Rxe6 Ka7 56. h6 Kb6 which isn't great but Black is also fighting with the King now] [53... Rh2? 54. Rxe6 Rxh5 55. Re5 Ka7 56. Kc5] 54. h6 Rxd4+ 55. Kb5 Rd1 56. h7 A Pawn on the seventh seems worth three in the bush! Black can only hope to harass the King with checks, but these are soon exhausted. 56... Rb1+ 57. Kc5 Rc1+ 58. Kd4 Rd1+ 59. Ke5 Re1+ 60. Kf6 Rh1 61. Re8+ Ka7 62. h8=Q Rxh8 63. Rxh8 Kb6 64. Kxe6 Kxc6 65. Kxf5 Kc5 66. Ke5 c6 67. Rh6 Kb5 68. Kd4 1-0

[Dr. Dave](#)

Capablanca - Treybal (Karlsbad) [D30]manoeuvre: with lots of space, 1929

1. d4 d5 2. c4 c6 3. Nf3 e6 4. Bg5 Be7 5. Bxe7 Qxe7 6. Nbd2 f5 7. e3 Nd7 8. Bd3 Nh6 9. O-O O-O 10. Qc2 g6 11. Rab1 Nf6 12. Ne5 Nf7 13. f4

the Anti-Stonewall formation: White has a Queen's-side initiative 13... Bd7 14. Ndf3 Rfd8 15. b4 Be8 16. Rfc1 a6 17. Qf2 Nxe5 18. Nxe5 Nd7 seeking exchanges... 19. Nf3 ...but not finding them 19... Rdc8 20. c5 Nf6 21. a4 Ng4 a gesture only 22. Qe1 Nh6

Black is defending the Queen's-side quite well: White switches tack. This is the key to understanding

space - although Black can theoretically defend any one point, White can make the Black pieces trip up in their rush to do so. 23. h3 Nf7 24. g4 Bd7 25. Rc2 Kh8 26. Rg2 Rg8 27. g5 Qd8 28. h4 Kg7 29. h5

White has the initiative on both sides of the board: Black's cramped and passive pieces will find it hard to cover everything 29... Rh8 30. Rh2 Qc7 31. Qc3 Qd8 32. Kf2 Qc7 33. Rbh1 Rag8 34. Qa1 Rb8 35. Qa3 Rbg8

Just when Black has had to cover the h-file... 36. b5 ...White opens a file on the Q-side. Black's pieces have to rush back, but get in a tangle because they have so few squares. 36... axb5 [36... cxb5 37. h6 + Kf8 38. c6 +] 37. h6+ Kf8 38. axb5 Ke7 39. b6 Qb8

a sad decision: now Black won't be able to oppose rooks on the a-file. This is the concrete manifestation of what I described earlier: White switching the focus of activity from side to side until Black is wrong-footed. 40. Ra1 Rc8 41. Qb4 Rhd8 42. Ra7 Kf8 43. Rh1 Be8 44. Rha1 Kg8 45. R1a4 Kf8 46. Qa3 Kg8 47. Kg3 Bd7 48. Kh4 White spends a little time wondering where to put his King; he has the luxury of seeing how it looks on a few squares before the final push. 48... Kh8 49. Qa1 Kg8 50. Kg3 Kf8 51. Kg2 Be8

the last ingredient for the breakthrough is the Knight 52. Nd2 Bd7 53. Nb3 Re8 54. Na5 Nd8

Ready or not, here we come 55. Ba6 bxa6 56. Rxd7 Re7 else the a-pawn will simply go after Nb3 57. Rxd8+ Rxd8 58. Nxc6

this 'family' fork is decisive 1-0

regis,d - richard dixon (CORR_92/93) [A36]manoeuvring in club play: Devo, manoeuvring in, 1993

1. c4 g6 (I knew a game of portisch's which I had in mind throughout: it went ...) 2. g3 Bg7 3. Bg2 Nf6 4. Nc3 O-O 5. e4 (new for me this season: I played the e3/ Nge2/d4 plan for years but recently fancied this, which looked more enterprising) 5... d6 6. Nge2 c5 (black had a lot of choice at this point: ...e5/... c6/etc.) [6... c5 7. a3 a5 8. O-O Nc6 9. d3 Ne8 10. Be3 Nd4 11. Bxd4 cxd4 12. Nb5 Qb6 13. a4 Nc7 14. f4 Na6 15. h3 e5 16. f5 Bh6 ! 17. h4 Bd7 18. Kh2 Nc5 19. Bh3 was seirawan-vukic 1979 given in povah's book: best play for both sides?] 7. O-O Nc6 8. d3 Ne8 9. Be3 [9. Be3 Nd4] 9... Nc7 (?! in the books) [9... Nd4 10. Rb1 b6 ?! (10... Nc7 is natural; 10...a5 invites 11 Bxd4, cxd4; 12 Nb5) 11. e5 Nxe2+ 12. Qxe2 Rb8 13. d4 cxd4 14. Bxd4 dxe5 15. Bxe5 Bg4 16. Qe3 Bxe5 17. Qxe5 Qd6 18. Qe3 Nf6 (gurevich-sturua 1981) 19. h3 Be6 20. Rbd1 Qc5 (or ...Qc7,b3 with Nb5/ Nd5) 21. Qxc5 bxc5 22. b3 with weak pawns to go at - povah] 10. d4 ! (in the books) 10... cxd4 11. Nxd4 Ne6 12. Nde2 Ne5

! TN - threatens c4 and e3 via g4 [12... Nc5 13. Rc1 Be6 14. b3 Qa5 15. Qd2 Rac8 16. Nf4 +- and black is in trouble: barcza-szilagy 1967] 13. b3 [13. b3 Ng4 14. Bc1 a6 15. h3 Nh6 16. Be3 b5 (this I thought must be the logical plan for black, to break up the bind) 17. cxb5 axb5 18. Nxb5 Bxa1 19. Qxa1 g5 20. e5] 13... b6 (transposing to a hedgehog formation looks better than szilagy's setup) 14. h3 (stopping the ...Ng4 lines seemed sensible, especially since last move they were possible. The knights now need to get out of the way of the pawn roller) 14... Bb7 [14... Bb7 15. f4 could be played: after 15... Nc6 16. f5 Nc5 17. Rc1 the hole on e5 is too glaring [17... Ne5 ! 18. Qc2] 15. Rc1 (looks slow and a bit aimless with hindsight) 15... Nc5 16. f4 (now I thought I was on the right lines: turn that space into attack, as in the portisch game) 16... Ned7 17. g4 a5 (I would have preferred ...a6) 18. Ng3 (I don't

know where this is going yet, unless black can be obliged or tempted to take on f5 eventually - if not the Ng3 and Bg2 are very passive) 18... Bc6 (! I now wanted the wN back on e2) 19. a4 (this isn't really necessary [19...a4; 20 b4 looked good] but I thought was justified psychologically - what is black's plan now ? the real challenge of course is to find white's plan! The wQ is badly tied to b3 and d3) [19. Bd4 (this was better I thought afterwards) 19... e5 20. Be3 exf4 21. Bxf4 Ne5 22. Rc2 Ned3] 19... Rb8 20. Rf2

(Nicely ambiguous [ideas of Qd2 or Rd2] but d3 is now more tender) 20... Qc8 21. Nd5 (I'm obviously entertaining pushing f4-f5-f6) 21... Re8 22. g5 (not f5 yet) 22... Qb7 (adds to pressure but locks in Bc6) 23. f5 (It's starting to get hard for me to find a plan which doesn't involve f5 but Black can play ...e6 and build up nicely now. I had some fun with 23 f5 and 24 Nh5 in analysis which was all bluff but looked worth starting) [23. f5 (doesn't threaten f6 yet (...Bxd5; fxg7, Bxe4) but does stop ...e6 and I can start to build up myself, I think) 23... Bf8 24. f6] 23... Bf8 (I looked ...Bxd5 and ...Be5 in analysis but this looked most solid. If ...e6 white can afford ...exd5 because exd5 wins the Bc6) 24. Bd4 (24 f6 simply takes a good square away from the knight. Now I have more realistic-looking threats but I must say by this stage I thought it was all starting to slip away) 24... Ne5 25. Rc3 Bg7

(I now entered a short sequence of moves which I thought were most solid and maintained a space advantage despite exchanges) 26. f6 Bf8 27. fxe7 Bxe7 28. h4 Bxd5 (the two bishops are no real advantage here as the Bg2 is inactive) 29. exd5 Bf8 30. Rf4 (else Qf1, Bg7 will threaten ...Nf3+ and ... Bxd4) 30... Bg7 31. Qf1 (both sides have consolidated after some white initiative and I thought we're now in for a phase of manoeuvring) 31... Re7 [31... Rf8 32. Bxc5 bxc5 33. Ne4] 32. Bxc5 [32. Rf6 (did I say manoeuvring? this sacrifice I don't think can be accepted but after declining by eg. ...Rbe8 I don't know where White is going) 32... Bxf6 33. gxf6 Ree8 34. Qf4 Kh8 35. Qh6 Rg8 36. Bxc5 bxc5 37. Ne4 Ng4 38. Qf4 Qd7 39. Rg3 Ne5 40. Bh3 Qc7 41. Qh6] 32... bxc5 (obviously not 32...dxc5; 33 d6) 33. Ne4

(This move cheered me up a little; I felt I had some chances for the initiative) [33. Rf6 (again 33...Rbd8 looks better and now 34 Ne4 doesn't even threaten d6) 33... Bxf6 34. gxf6 Ree8 35. Qf4 Kh8 36. Qh6 Rg8 37. Ne4 (is the same as on move #32)] 33... Rd8 34. Nf6+ [34. Nxc5 (idea d6 again) 34... Qb6] 34... Bxf6 [34... Bxf6 (I wondered if ...Kh8 was better. I would have played ...Bxf6 myself, though, since all the endgame trumps are Black's: N vs. bad B, 3 vs 2 on the K-side while Black's 3 hold White's 4 on the Q-side. Still, after ...Bxf6 I explored: 35. gxf6 Ree8 36. Re4 Qc7 (better might be ...Nd7 or ...Qb4 or ...h5 as game: I favoured ...Nd7) 37. Qf4 Kh8 38. Qh6 Rg8 39. Rh3 Rde8 40. h5 g5 41. Rg3 g4 42. Rf4 Nd7 43. Be4 Rxe4 44. Rxe4 Ne5 ...which is plausible if optimistic)] 35. gxf6 Ree8 36. Re4 h5 (I admit I analysed this only after sending off my last move - I concluded I had some chances of a combinative

breakthrough on the K-side but this couldn't be forced, and I became slightly less alarmed about possible endgames) 37. Rce3 Kh7 38. Qf4

(I couldn't see a way of winning after what I thought was the best line, ...Qb4, but I didn't have to lose either. White can try to contrive a lever with Bh3, Qg5 and now Bf5, but ...Qb4 & ... Rg8 (forces Kh1) slows or stops it [38. Qf4 Qb4 39. Bf3 (this line I examined most closely; there are several good Q+R endings for White after the exchange but the wK is terribly exposed) 39... Qd2 40. Be2 (this tack peters out because of the active bQ and weak Pb3) 40... Rb8 41. Qg3 (threat Bxh5) 41... Qc1+ 42. Kg2 Qc2 43. Kh3 Rxb3] 38... Qc8 (I thought at the time, not as strong as ...Qb4, but realised it's trickier) [38... Qc8 39. Bh3 (and now the crucial line, which I thought would be played, is:-) 39... Ng4 (I analysed a win after this. As 39...Nd7 fails to 40 Re7 I think Black should admit the error by 39...Qb8 with fair chances of holding the blockade) 40. Re7 (I spent a long time looking at 40 Bxg4 to get rid of the dud bishop and dangerous knight but 40...Rxe4 is an annoying intermezzo; 40 Rxe8,Rxe8; 41 Re7 I decided wasn't as strong as the game: 41...Rf8; 42 Qxd6 allows 42...Qf5) 40... Rf8 (Black could let the pawn go but ...Kg8 risks mate after Bxg4 and Qh6) 41. R3e6 Qb8 (41...Rd7; 42 Bxg4, hxg4; 43 h5, Rxe7; 44 fxe7 wins but 43...Qc7; 44 hxg6+ +) 42. Bxg4 hxg4 43. h5 ! (43...gxh5; 44 Qg5 mates and others allow 44 hxg6+ with mating attack; 43...Rg8 abandons the Pf7) 43... Qxb3 44. hxg6+ Kxg6 45. Qxg4+ Kh6 46. Qg7+ Kh5 47. Re5+ dxe5 48. Rxe5+ Kh4 49. Re4+ Kh5 50. Qg4+ Kh6 51. Qh4+ Kg6 52. Rg4+ Kf5 53. Qg5#] 39. Bh3 [39. Bh3 Ng4 40. Rxe8 Rxe8 41. Bxg4 (white still can't do without this, so it transposes) 41... hxg4 42. Re7 Rf8 43. Qxd6 Qf5 44. Re3 !? 44... Qb1+ 45. Kg2 Qc2+ 46. Kg3 Rb8 (or ...Rc8)] 39... Qb8 (if the knight moves don't work this is probably best) 40. Kh1 [40. Bf5 Rg8] 40... Qc7 [40... Rh8 (I was most interested in this line to stop Qh6 for once and for all: I analysed optimistically...) 41. Bf5 Kg8 42. Qg5 Qb4 43. Rg3 Rb8 (not forced by any means) 44. Rxe5 dxe5 45. Bxg6] 41. Bf5 [41. Bf5 Rh8 42. Qg5 (now ...Ng4

loses to Re7) 42... Rde8 (unfortunately there is now no mate or win of a rook after 43 Rg3, Kg8; 44 Bxg6, fxc6; 45 Rxe5+= and in fact 43 Qxh5+ loses the pawn straight back to 43 ...Kg8; 44 Qe2 (not Qg5,Rh5 -+) 44...Qd8; 45 Bh3, Qxf6) 43. Rg3 Kg8 44. Bxg6 fxc6 45. Rxe5 Rxe5 (keeping pawns intact for the ending) 46. Qxg6+ Kf8 47. Qg7+ Qxg7 48. fxc7+ Kg8 49. gxh8=B+ Kxh8 50. Rg6 Re3 51. Rxd6 Rxb3 52. Rc6 Rh3+ 53. Kg2 Rxh4 54. Rxc5 Rd4 55. Rc6 h4 56. d6 Kg8 57. Rc8+ Kf7 58. Rc7+ Ke6 59. c5 Rxa4 60. Re7+ Kf5 61. d7 Ra2+ 62. Kh3 Rd2 63. c6 Rd3+ 64. Kxh4 Rd4+ 65. Kg3 Rd3+ 66. Kf2 Rd2+ 67. Ke3 Rd1 68. c7] 41... Qb8 (I immediately thought this was too resigned) 42. Qg5 (mates in six) [42. Qg5 (I sent some analysis showing a win after ...) 42... Rh8 43. Rg3 (43 Rxe5 is more forcing and does mate in 5; after this Fritz threw in ...Qc8 which stops the mate!) 43... Qc7 44. Rxe5 dxe5 45. Bxg6+ Kg8 (45...fxc6; 46 Qxg6 #) 46. Bf5 + ! 46... Kf8 47. Qg7+ Ke8 48. Qxh8#] 1-0

petrosian - yuchtman [E92]KID: 4 - Wh seals K-side, lessons in KID: 4 - W, 1994

1. d4 Nf6 2. c4 g6 3. Nc3 Bg7 4. e4 d6 5. Be2 O-O 6. Nf3 e5 7. d5 Na6 8. Bg5

Among its other points is the temptation of the K-side pawns. 8... h6 9. Bh4 g5 10. Bg3 Nh5 11. Nd2 Nf4 [11... Nxg3 12. hxg3 f5 13. exf5 Bxf5 14. Nde4 Qe7 15. Bg4] 12. O-O Nc5 [12... Nxe2+ 13. Qxe2 f5 14. exf5 Bxf5 15. Nde4 Qe7 16. a3] 13. Bg4

Exchanging off the good Bishop. Black's natural break with ...f5 will leave White a fine outpost on e4. 13... a5 ? [13... Bxg4 14. Qxg4 h5 15. Qf5 h4 16. Bxf4 exf4 17. Rac1 Qf6 gives Black

some dark squares to chew on.] 14. f3 Ncd3 15. Qc2 c6 16. Kh1 h5 17. Bxc8 Rxc8 18. a3 cxd5 19. cxd5

The Knights look pretty but are lonely. Petrosian, as always, mops up any hint of pressure. 19... Nc5 [19... Qd7 20. Bxf4 Nxf4 21. a4 b3, Nc4, Nb5] 20. Bf2 g4 21. g3 Ng6 22. fxg4 hxg4 23. Be3

No rush - Black's position has weaknesses without compensating counterplay. The f-pawn and Bg7 look pretty sick, and White can also think about a campaign against d6. Black should sit tight and wait for White to commit to a plan... 23... b5 ...but not give up a pawn for nothing. It's amazing how many of Petrosian's opponents crack under the strain of watching Petrosian quietly improve his position while they have no play (see Fischer's comments in M60MG). 24. Nxb5 Qb6 25. a4 Qa6 26. Nc4 f5 27. Rxf5 Rxf5 28. exf5 Qb7 29. Qg2 Nb3

The position is a testament to the success of the white-square campaign. 30. Nbx d6 Qd7 31. Rf1 1-0

J.R.C - B. Villegas {1914} [D04] Lessons from Capa 3 : Tactical, Lessons from Ca

1. d4 d5 2. Nf3 Nf6 3. e3 c6 4. Bd3 Bg4 5. c4 e6 6. Nbd2 Nbd7 7. O-O Be7 8. Qc2 Black might have tried ...e5 8... Bh5 9. b3 Bg6 10. Bb2

10... Bxd3 White obviously has a good development. He has placed his pieces on good squares, and been left alone to do just that! Black played a little passively, in not trying for ...c5/...e5 as quickly as possible, and has wasted time with 11. Qxd3 O-O 12. Rae1 Qc7 13. e4 dxe4 14. Nxe4 Black feels obliged to exchange in the centre, as else white may play e5 or exd5 at his leisure. 14... Nxe4 15. Rxe4 Bf6 The rook is in an imposing position, and black wants to frighten it with the idea of ...Nc5 : dxc5 Bxb2 and a good position. Note that [15... Nf6 would have encouraged 16. Rh4 and d5 with a sharp attack.] 16. Qe3 c5 17. Ne5 cxd4

Black at last makes his bid for freedom ... What is white intending to do about it? 18. Nxd7! A surprise queen sacrifice: if now [18. Bxd4 Black is now expecting 18... Nxe5 19. Bxe5 Bxe5 20. Rxe5 Rfd8 with control of the d-file in a major piece ending, but ...] 18... Qxd7 [18... dxe3 19. Nxf6+ gxf6 [19... Kh8 20. Rh4 h6 21. Rxh6+ gxh6 22. Ne8+ xc7] 20. Rg4+ Kh8 21. Bxf6# 'mate] 19. Bxd4 Bxd4 20. Rxd4 Qc7

Black has now been forced into a major piece ending with WHITE controlling the d-file! White additionally has a Q-side majority, and has a simple plan: push the pawns, create a passed one, and queen it. This is the ki 21. Rfd1 The difference is that the single advantage here is sufficient to win, whereas above, a second was required. 21... Rfd8 22. b4 Rxd4 23. Qxd4 b6 Black must defend the a7 pawn, and also tries to cover c5, so that white's b4-c5 push leads to a weaker pawn earlier. Notice how white now: creates a hole for his king, and then puts his rook behind the (potential) passed pawn. 24. g3 Rc8 25. Rc1 Rd8 Where does the queen go? 26. Qe3! One of those important moves to focus on. What does it do? It covers the rook on c1, it stops black playing Rd2, and still aims at c5. Note that white is now happy to give up the d-file, the action will be on the c-file. 26... Kf8 27. c5 bxc5 if now 28. Qe4! Another delightful queen move. Now controlling c6, the next port of call for the c-pawn. [28. bxc5 Qc6 stops the pawn] 28... Rd5 29. bxc5 g6 30. c6 Kg7 which is why black played Kg7 and not Kg8, the latter allowed Rc8+ 31. a4!

And the final piece of genius. White's plan is Qb4-b7, but if played now, after ...Qxb7 : cxb7 Rb5 stops the pawn. So, Capablanca covers the b5 square in advance! 31... Rd6 ... puts the pawn under lock and key, but out comes the dynamite. 32. Qe5+! f6 33. Qxd6 Qxd6 Simple, clear and logical. Notice the queen moves: Qd4-e3-e4-e5xd6, and the prophylactic a4. It is this careful attention to detail which made many balanced positions look a forced win in Capablanca's hands. "Against Alekhine y 34. c7 0-1

J.R.C - Allies, (Buenos Aires 1914) [C30] Lessons from Capa 4 : Switchin, Lessons from Ca

1. f4 e5 2. e4 Bc5 3. Nf3 d6 4. Nc3 Nc6 5. Na4 Bb6 6. Bb5 Bd7 7. Nxb6 axb6 8. d3 Nge7 9. O-O O-O
10. f5 f6 Capablanca has played a forthright opening, and his intentions are securely set on the king-side.
If black could at all achieve ...d5 he would break out of the grip, but Capablanca maintains a close hold
on the position. 11. Bc4+ Kh8 12. a3 Be8 13. Be6 Bh5 14. Qe1 Qe8 15. Qh4 Nd8 16. Ba2 Bf7 17. c4 c5
18. g4

18... Ng8 The king-side attack gathers momentum. The g-pawn's threat to move to the sixth rank will lead to an open file. 19. Bd2 b5 20. g5 fxg5 21. Nxg5 Nf6 22. Rf3 bxc4 23. Nxh7! Nxh7 A sacrifice out of the ordinary. There can be no conception of an immediate win, or forced sequence. Instead, Capablanca realises that, in his attempts to stave off immediate loss, black will bring his pieces into a tight knot around 24. Rh3 Bg8 25. Bxc4 Rf7 26. Kh1 b5 27. Bd5 Raa7 28. Rg1 Rf6 29. Bg5 Raf7

30. b3! Now we have the `tight knot' discussed above. Obviously, Capablanca is not about to release the pressure by taking one of those rooks. In fact, black is approaching a state of Zugzwang, where any move would lead to disaster, but st 30... Qf8 This is almost an underhanded move ... The endgame principle of two weaknesses is known as `switching the attack' in the middlegame, and you couldn't find a clearer example of it than this. The a-pawn's freedom is the fruit of the pres 31. a4 bxa4 32. bxa4 Qe8 33. a5 Nc6 34. a6 Nb4 ... and now a grand liquidation - even though a piece down. Capablanca's handling of relative piece dynamics makes a mockery of any absolute scale of values. 35. Bxf6 Nxd5 36. Bxg7+ Rxc7 37. Rxc7 Kxc7 38. Qh6+ Kh8 ... and white won in a few more moves. 39. Qxd6 0-1

Capablanca, JR. - Funaroff, Marc [C66] Lessons from Capablanca {2}: attacking, New Yor, 1918

Capablanca : Master of the Attack Peter Lane, 23 March 1998 "...go back a quarter of a century and look for the culmination of the art of the attack on the king in the play of Alekhine and Capablanca" -- V. Vukovic The Art of Attac 1. e4 e5 2. Nf3 Nc6 3. d4 d6 The Scotch opening aims for open play, and black's attempt to keep the game closed can only be a temporary measure. 4. Nc3 Nf6 5. Bb5 Bd7 6. O-O Be7 7. Re1 exd4 This move is now forced -- after white's defense of his e-pawn he is threatening Bxc6 Bxc6: dxe5. The pressure on e5 is a recurring theme in e-pawn openings. 8. Nxd4 Nxd4 Trying to simplify, but encouraging white's better centralisation. Best is 8... O-O. 9. Qxd4 Bxb5 10. Nxb5 O-O 11. Qc3 "Instead of applying the old principle of developing his pieces as quickly as possible" RETI -- Capablanca puts each piece to optimum effect. Thinking about the position we might be attracted by a 'mate on g7: the N is bound for f5, an 11... c6 This move weaken s d6 and encourages the Nb5 to move as planned. Maybe ...Ne8 with ...Bf6, but white maintains a space advantage. 12. Nd4 Nd7 13. Nf5 Bf6 14. Qg3 Ne5 15. Bf4 Qc7 16. Rad1 Rad8

"Playing on the basis of a spatial advantage is in a sense a question of blind faith." STEAN White's pieces exert maximum impact, but it is hard to see how this could be increased. Indeed, black's only weakness is at d6 -- put the 17. Rxd6 "As usual, tactics flow from a positionally superior game." FISCHER 17... Rxd6 18. Bxe5 The bishop strikes through to c7 and g7 -- note now white has taken over black's e5 strong-point. 18... Rd1 A spirited counterblow. 18...Bxe5 19. Qxe5 with 'mate on g7 or an extra pawn, but many problems in converting it. 19. Rxd1 Bxe5 And now white moves his queen, and either h2 or b2 falls, with equality... Not likely! 20. Nh6+ Kh8 21. Qxe5 Qxe5 22. Nxf7+ A beautifully clear theme: back-rank 'mate. 1-0

Janowski,D - Lasker,Emanuel [D30] QGA/IQPd: Against {3} Berlin, Berlin, 1910

'One of those remarkable games in which Lasker makes his opponent look childish.' -- REINFELD 1. d4 d5 2. Nf3 Nf6 3. e3 c5 4. c4 e6 5. Bd3 Nc6 6. O-O dxc4 7. Bxc4 Transposing to the QGA, but with loss of time for White. 7... a6 8. a4 Creates a hole on b4 -- and watch Lasker make a point of it! 8... Be7 9. Nc3 O-O 10. b3 cxd4 11. exd4 Nb4 12. Bb2 b6 13. Qe2 Bb7 14. Rad1 Nfd5 15. Ne5

Black's pieces are perfectly positioned, and the Bb7 compares favourably with its counterpart, the Bb2. Because of b3 and d4, any endgame would be lost for White, and so he must attack, 'no matter what'. Nevertheless, Lasker provokes. 15... Nf4! 16. Qg4 Nbd5! The d-pawn must be kept securely blockaded. [16... Nxg2 17. d5 Nh4 18. dxe6 f5 19. Qg3 And not] 17. Nxd5 Nxd5 18. Rfe1 Bb4 with advantage to White. 19. Re2 Rc8 20. f4 Rc7 ! This move keeps White on his toes. The rook moved to allow f4, without Black forking his rooks. This bishop move drives the R to e2, where Nc3 forks become a combinative motif. Further, it allows Black to defend his k-side along the s 21. f5!!

I think Black's last move is a beauty. By defending the Bb7, it also threatens ...h5:Qf3 Nc3! winning the exchange. 21... h5 22. Qxh5 Nf4 23. Qg4 Nxe2+ 24. Qxe2 exf5 25. Qh5 'Leading to the loss of a pawn or the exchange; but Janowski prefers to lose the game his own way: a somewhat dubious satisfaction. ' -- REINFELD 25... Bd5

Threatening? 26. Rd3 f6 27. Rh3! Cold-blooded -- occupy the outpost square, stop Ng6 with 'mate! 27... fxe5 28. Qh7+ 'Janowski's first logical move in the whole game, as the situation obviously calls for hara-kiri!' -- REINFELD 28... Kf7 29. Qxf5+ Ke8 30. Qh5+ Bf7 31. Qxe5+ Qe7 'In return r the piece, Janowski obtains two P's and four checks.' -- REINFELD [31... Qe7 32. Qxg7 Qe1+ 33. Bf1 Qxf1+ 34. Kxf1 Bc4+ 35. Kg1 Rf1#] 0-1

Flohr,S (2500) - Apscheneek,F [D36]QGD, EV: 3 Third-rank defence, Kemerli, 1939

1. d4 d5 2. c4 e6 3. Nc3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nf3 c6 7. Qc2 Nbd7 8. cxd5 exd5 9. Bd3 Re8 10. O-O Nf8 11. Ne5 Ng4 12. Bxe7 Qxe7 13. Nxg4 Bxg4 14. a3 Rad8 15. Rfe1 Rd6 16. Ne2 Rh6 17. Ng3 Bc8 18. b4 a6

Playing ...a6 to avoid a weak a-Pawn is a sort of minimum defence of the Queen's-side by Black. 19. Rab1 Qc7 20. a4 Nd7 21. Rec1 Nf6 22. Nf1 Ne4 23. b5 axb5 24. axb5 Bd7 25. Qa2 Qd8 26. bxc6 Bxc6 27. Bb5 Rg6 28. Bxc6 bxc6

"The minority attack proper has come to an end with White having inflicted a serious weakness on c6 and in fact controlling the entire left flank. It looks like a fairly simple matter systematically to attack c6 and, if not win it, th 29. Rb2 h5 30. Rbc2 Qd7 31. Kh1 h4 32. h3 Qf5 33. Nh2 Qg5 34. Ng4 f5 35. f4 Qh5 36. Ne5 Rg3

The game approaches its climax, with both themes strongly featured in the variations - White's threats to win a Pawn and Black's threats to win a King! 37. Re1 [37. Rxc6 Rxe3 38. Qxd5+ Kh7 but White faces threats to the King] 37... Rb8 38. Kh2 [38. Rxc6 Rxe3! 39. Rxe3 Qd1+ 40. Kh2 Rb1! 41. Qa8+ Kh7 42. Rh6+! gxh6 43. Qa7+ draws] 38... Kh7 39. Nxc6 [39. Rxc6 was the last chance to play for a win 39... Qe8 but not 40. Qxd5? Rb2] 39... Qg6 40. Rg1 [40. Nxb8 Rxh3+! gives Black at least a draw 41. gxh3 Qg3+ 42. Kh1 Qxe1+ 43. Kg2 Ng3 44. Kf3 Qd1+ 45. Re2 Qh1+ 46. Rg2 Qd1+] 40... Rxe3 41. Nxb8 Qg3+ 42. Kh1 Qxf4 43. Rd1 Ng3+ 44. Kg1 1/2

Atkins - Saunders [E90] Stratford-Upon-Avon, 1925

SHAKESPEARE ANNOTATES A CHESS GAME In a book called Chesslets, by Dr. J. Schumer, all the games are annotated by quotations from various writers. Here is one of the games, with comments by Shakespeare: 1. d4 To show our simple skill, That is the true beginning. 1... Nf6 2. c4 g6 3. Nc3 d6 ... to climb steep hills Requires slow pace at first. 4. e4 Bg7 To be direct and honest is not safe. 5. Nf3 Nc6 6. h3 ... to be forestailed ere we come to fall. 6... O-O 7. Be3 Nd7 ... retire into your trenches. 8. Qd2 e5 9. d5 My purpose, is, indeed, a horse of that colour. 9... Ncb8 There is no virtue like necessity. The better part of valour is discretion. 10. Bh6 By the pricking of my thumbs Something wicked this way comes. To 10... f5 Though this be madness, yet there is method in't. 11. Bxg7 The ripest fruit falls first. 11... Kxg7 . . . would be rid of such an enemy. 12. exf5 gxf5

... food for powder, food for powder 13. Be2 a5 14. g4 Playing the mouse in absence of the cat. 14... Nc5 15. gxf5 Bxf5 16. O-O-O Nba6 17. Rdg1+ Sits the wind in that corner ? 17... Kh8 Thou marshall'st me the way that I was going; 18. Qe3 Qf6 19. a3 Instinct is a great matter; I was a coward on instinct. 19... Bg6 20. Rg5 Defer no time, delays have dangerous ends. 20... Nb4 Some Cupid kills with arrows, some with traps to the noble mind Rich gifts wax poor when givers prove unkind. 21. Nh4 When I shun Scylla, your father, I fall into Charybdis, your mother. 21... Nb3+ Stand not upon the order of your going, But go at once. 22. Kd1 My grief lies onward and my joy behind. 22... Bc2+ Courage mounteth with occasion 23. Ke1

Something is rotten in the state of Denmark 23... Be4 Cassio, I love thee; But never more be officer of mine. 24. Qxe4 ... it goes much against my stomach 24... Qxf2+ Lady, you are the cruell'st she alive. 25. Kd1 One woe doth tread upon another's heel, So fast they follow. 25... Rf4 The Gordian knot of it he will unloose. 26. Rf1 Hoist with his own petar. 26... Qd4+ Striving to better, oft we mar what's well. There is a tide in the affairs of men, Which, taken at the flood, leads on to fortune; Omitted, all the voyage of their life Is bound in shallows and in miseries. 27. Qxd4 What's gone and what's past help Should be past grief 27... Rxd4+ 28. Ke1 . . . to fear the worst oft cures the worse. 28... Nc2+ 29. Kf2 True hope is swift, and flies with swallow's wings. 29... Rxh4 If it were done when 'tis done, then 'twere well It were done quickly. 30. Kg3

... naked as I am, I will assault thee. 30... Rf4 31. Rxf4 Off with his head! 31... exf4+ 32. Kxf4 ... there's a special providence in the fall of a sparrow. 32... Ncd4 33. Rg2 Rd8 Ill blows the wind that profits nobody. 34. Bg4 h6 35. Bd1 Nc5 36. Rd2 Rf8+ 37. Kg4 The eagle suffers little birds to sing. 37... Rg8+ 1/2

Beveridge, M - Lane, PC. [C01] Hereford vs. Exeter, 1997

1. e4 e6 2. d4 d5 3. exd5 exd5 4. c4 @E One of white's more dynamic tries in the Exchange French, and also found after 4.Nf3 Bd6 5.c4, with transposition into a QGA (1.d4 d5 2.c4 dc 3.e3 e5 4.Nc3 ed 5.ed Nf6 6.Bxc4 Be7). Black can play as in the game, or ...Bb4+...Ne7 4... Nf6 5. Nc3 Be7 6. Bd3 @E? attracted by the thought of 6:...O-O 7.Nxd5 with Bxh7+, but this merely loses a tempo. It is normal in the QGD to delay moving the king's bishop as long as possible, thus: 6.Nf3 O-O 7.Be3 c6 8.Bd3 dc 9. Bxc4 Nbd7 10.O-O Nb6 11. 6... dxc4 7. Bxc4 Nbd7 8. Nge2 @E Presumably to avoid ...Bg4, but the knight is passive on this square, unable to move to (or defend) e5. A better avoidance is simply 8.h3. 8... Nb6 9. Bb3 O-O 10. O-O c6 @E Perhaps ...Nbd5 first is more accurate, to prevent Bf4. 11. Bf4 Nbd5 12. Be5 Be6 @E Both sides need to find some ideas. Black's main concern is the pair of white bishops, and I expected 13.h3 to prevent ...Ng4, though the game shows white hoped to utilise d6 for a knight after the Nxe5 dxe5 exchange. Black may 13. Rc1 Ng4 14. Ne4!? Qb6 15. Bd6 @E? White is looking at the dark squares d6 and c5, and natural would be 15.N2c3-a4-c5, additionally activating that knight on e2. I planned 15.N2c3 Nxe5 16.dxe5 Rad8 as if 17.Na4 Qc7 and e5 looks weak (the lack of the Nf3 is f 15... Bxd6 16. Nxd6 Qc7 @E! Very pleasant to play: pinning the knight to the h2-pawn ... 17. h3 Qxd6 @E... and winning it. Note 17:...Ne3 18.fxe3 Nxe3 19.Qd3 Nxf1 20.Ne4 Qh2+ 21.Kxf1 Qh1+ 22.Ng1 and 20:...Nh2 21.Qg3 leaves black down two knights for a rook. 18. hxg4 Bxg4 19. Qd2 @E ``There exists a wide-spread and therefore dangerous delusion that with an extra pawn the win is achieved automatically." BRONSTEIN So black is a pawn up and the win is a matter of technique? If you insist, but I am not a strong 19... Rae8 20. Ng3 Re7 21. Rfe1 Rfe8 @E White regards Nf4-e2 with a subsequent rook invasion as dangerous, and hastens to remove the rooks. 22. Rxe7 Rxe7 23. Re1 @E Black can go wrong with ...Qb4 24.Qxb4 Nxb4 25.Rxe7 and .. .Qf4 24.Rxe7 Qxd2 25.Re8 'mate (both ideas drifted through my mind). 23... Rxe1+ 24. Qxe1 Qe7 25. Qxe7 @E? White's toughest line of resistance is 25. Qa5 b6 26.Qa4 Qd7 with a long struggle in prospect. Although exchanging rooks was necessary to remove the aggressive potential of the black position, exchanging queens was an unnecessa 25... Nxe7 26. Ne4 @E We now have a simplified ending where black's win should be a matter of time. And accuracy I must add, as unfortunately black plays some poor moves, and white grabs (nearly) every chance he is given! 26... Nd5 27. f3 Be6 28. Kf2 h6 @E? Error number 1, the king must be brought into play as a matter of urgency: 28:... Kf8 29.Nd6 b6 30.Nc4 Ke7 31.Ne5 Kd6 with an ideal setup, and not fearing 29.Ng5 h6 30.Nxe6 fxe6. `Centralise the king' is a basic maxim for the 29. Nc5 b6 @E? Error number 2, and now white has realistic drawing chances! ...Bc8 allows the king to centralise without any weakening of the queen side. Note 29.Nd6 b6 (now forced) 30.Nc4 Nc7 (31.Ne5 Bd5) was possible, but in black's favour. 30. Nd3 Nc7 @E This is all but forced. 30:...Kf8 31.Ne5 c5 32.dc bc 33.Nd3 regains the pawn, or if 31:... Ne7 32.Bxe6 fxe6 and the knight on e5 is very strong, bearing down on the queen side. 30:... .f6 31.Nb4 Nxb4 32.Bxe6+ also is not sim 31. Bxe6 Nxe6 32. Ke3 f6 @E Stopping Ne5, and if Nb4 Nxd4 : Kxd4 c5+ 33. Ke4 Kf7 34. d5 @E! White's king is almost enough for him to consider winning the game by infiltrating the queen side: this is the punishment for black's 28th and 29th moves - 34:... cxd5+ 35.Kxd5 and the king walks over to a7. Black must blockad 34... Ng5+ 35. Kd4 c5+ 36. Kc4 Ke7 37. b4 @E seeing 37.Kb5 Kd6 38.Nf4 Ke5! and black takes the advantage, white tries to lift the queen side blockade, and gain b4 for his knight. 37... cxb4 38. Nxb4 Kd6 @E Error number 3. A very poor move, and an instructive error: d6 is a knight's move from b5 which is a knight's move from a7, the

destination of the white knight. The aim of the king move is to take a step over to the queen side and 39. Nc6 h5 40. Nd4 @E? And white backs out of 40.Nxa7 Nxf3 41.gxf3 h4, though with 42.Nb5+ he gets back in time (see note above). Black would have to play 40:... Nf7-d6 (41.Kb5 Kc7 etc), when he is probably still better due to the king-side majori 40... g6 41. f4 @E? Natural enough, but weakens the pawns. (cf. black's error on move 29). White cannot now take the a7-pawn: 41.Nb5+ Kd7 42.Nxa7 Nxf3 43.Kb5 h4 44.Kxb6 Ne1xg2 queens the h-pawn in time. White has to defend against ...a6...h4...h3: 41... Ne4 42. Nb5+ Kd7 43. Nxa7 @EAt this point white (audibly) asked his match captain whether a draw would be sufficient, or should he be playing for a win! Meanwhile Black, contemplating an attack on four weak pawns with an active knight, can finally 43... Ng3 @E! If now 44.Kb5 Ne2 45.Kxb6 Nxf4 46. a4 Nxb6 47.a5 Nf4 48.a6 Nxd5+- c7 or 48.Nb5 Nxd5+ 49.Kc5 Ne7-c8 and the king side pawns win (though this appears the line with most chances - the winning moves with the knight, leaving the ki 44. Kd4 Ne2+ 45. Ke4 Nc3+ 46. Kd4 Nxa2 47. Nb5 Nc1 @EWith the removal of the a-pawn, all black's problems are over. The white king and knight have no effective target, and it remains for black to coordinate his pieces, and move on to the king side in earnest. First step is 48. Nc3 Nb3+ 49. Kc4 Nc5 50. Kb5 Kc7 @ENote: 51.d6+ Kxd6 52.Kxb6 h4! 53:...Nd3-e1 wins a pawn. 51. Kc4 Nb7 52. Nb5+ Kd7 53. Kd4 Nd6 54. Nc3 Nf5+ @Eand now back to the king side... 55. Ke4 Kd6 56. Kd3 Nh4 57. g3 Nf5 58. Ne4+ Kxd5 59. Nxf6+ Ke6 60. Ne4 Nd6 61. Nf2 Kf5 62. Kd4 Nb5+ 63. Kd5 @E? makes it easy, but if 63. Kd3 black has two winning plans, ...h4 ...Kxf4-g3xh4 with two passed pawns, or ... Nxf4 : gxf4 Kxf4 with three pawns vs one knight! 63... Nc3+ 64. Kc6 Ne2 65. Kxb6 Nxb3 66. Kc6 Kxf4 67. Kd5 Nf5 @EA long and hard struggle, typical of some of the complexities possible in endgame play. In particular note how a strong player will find resources in any position, and how accuracy must be maintained throughout. The numerous err 0-1

Petrosian, Tigran - Botvinnik, Mikhail (moscow ch) [A46] defence: exchange sacrifice fo, defence: exchan, 1951

1. d4 Nf6 2. Nf3 e6 3. Bg5 h6 4. Bh4 g5 5. Bg3 Ne4 6. Nbd2 Nxc3 7. hxg3 Bg7 8. c3 d6 9. e3 Nc6 10. Bd3 Bd7 11. Qc2 Qe7 12. O-O-O a5

Black is unimpressed with White's opening and already has the initiative. 13. e4 a4 14. a3 Na5 15. Rde1 O-O-O 16. Kb1 Kb8 17. e5 d5 18. g4 Rc8 19. Qd1 c5 20. Bc2 Qe8 21. dxc5 Rxc5 22. g3 Nc6 23. Re3 Ra5 24. Rhe1 Bf8

25. c4 Insisting on counterplay in the centre (usual recipe) 25... Bc5 26. R3e2 Ne7 27. Ka1 Qd8 28. Rh1

Ba7 29. Qb1 Rc5 30. cxd5 exd5 31. Bf5 Nxf5 32. gxf5 Bb5 33. Ree1 Rc7 34. Rh2 g4 35. Nh4 Qg5

White's situation is critical - the two bishops are a deadly menace when they have open lines like this. White gives up a pawn in the interests of active play. 36. f4 gxf3 37. Nhx3 Qxg3 38. e6 fxe6 39. fxe6

Another characteristic turn: Black returns the pawn in the interest of his attack, but better was 39... Rhc8 [39... Bf2 40. Reh1 Be3] 40. Rxh6 Bf2 41. Reh1 Qg4 42. Rg6 Qf4 43. Rg5 Qd6 44. Qf5 Be3

45. Qxd5 Concedes the exchange, but gets two pawns. 45... Qxd5 46. Rxd5 Bc6 47. Rhh5 Bxd5 48. Rxd5 Re7 49. Re5 Bh6 50. Re4 Rc6 51. Rxa4 Rxe6 52. Re4 Rf6

Sacrificing the exchange maintains the balance of numbers if not value. With the pawns all on one side of the board White will probably draw but still has his owrk cut out. 53. Ka2 Kc7 54. Re7+ Kc8 55. Re2 Rc2 56. Kb1 Rcc6 57. Nd4 Rcd6 58. N2b3 Bg7 59. Ka2 Rf1 60. Nc2 Rf5 61. Rg2 Bf6 62. Nb4 Kd7 63. Rh2 Kc7 64. Nc2 Rg5 65. Nd2 Re6 66. Nb4 Bg7 67. Kb3 Re3+ 68. Ka2 Re6 69. Kb3 Re3+ 70. Ka2 Re8 71. Kb3 Kb8 72. Nb1 Re3+ 73. Nc3 Reg3 74. Rd2

Black is struggling to find a way through 74... Rg2 75. Rxg2 Rxg2 76. Nd3 Rh2 77. Kc4 Rd2 78. a4 Ka7 79. Nb5+ Kb6 80. b4 Rc2+ 81. Kb3 Rg2 82. Nc3 Rg3 83. Kc4 Rg4+ 84. Kb3 Rg3 85. Kc4 Bxc3 86. a5+ Kc7 87. Kxc3 Kc6

Still not simple for White 88. Kc4 Rg4+ 89. Kc3 Kb5 90. Nc5 Rc4+ 91. Kd3 Rxb4 92. Nxb7 Kc6 93. a6 Kd5 94. Nd8 Rd4+ 95. Ke3 Re4+ 96. Kd3 Rf4 97. a7 Ra4 98. Nf7 Rxa7 99. Ng5 Ra3+ 100. Ke2 A familiar draw. 1/2

Exeter Chess Club: Internet Chess Challenge

Press release

As part of the Centenary events organised by Exeter Chess Club, we recently (31st May 1996) held a team consultation match against Hafnarfjardar (near Reykjavic), from where came our distinguished visitor last year, Agust Karlsson. One main game, with 40 minutes each on the clock, and one 'blitz' game were played.

Chess enthusiasts have set up free Internet Chess Servers (ICS) at various points around the world, and there is one in Britain at the University of Warwick (BICS). Although the Warwick machine understands only text messages, software has been written so that you can see a normal 2-D chessboard on your screen, and can make the moves using a mouse. We all had a screen each and when Agust and his team made their move, it appeared simultaneously on our screens in Exeter. The technology worked splendidly, but the teamwork left something to be desired at times and left the poor mouse operator being shouted at from all sides.

We would like to thank the University of Exeter IT Services Unit, Director Laurie Burbridge, for the use of their computing facilities and for the help of Neil Brooks, Computing Development Officer, in setting up the match.

The teams played under the aliases of their two team captains, "freyr" is Bjorn Bjornsson, and DrDave is our own Dave Regis.

freyr - DrDave (main game) BICS, 1996

1. e4 c5 2. Nf3 Nc6

Our two resident experts in the Sicilian lobbied strongly for this line, hoping for...

[3. d4 cxd4 4. Nxd4 e5]

3. Bb5

This is why we have only two players who persist with the Sicilian Defence; White has so many tricky ways to avoid it.

3... g6 4. Bxc6 dxc6

Here the problems of democratic chess became apparent to DrDave: we had two votes for ...bxc6, two for ...dxc6, two didn't care and two hadn't got the screen set up right yet...

5. h3 Bg7 6. d3 e5 7. O-O f6

We set up a solid wall of Pawns hoping to uncoil behind it, believing that White can't rush us before we are ready.

8. Be3 b6 9. Qd2

Putting an end to our hopes of playing ...Nh6-f7.

9... Be6 10. a4 a5 11. Nc3 Ne7 12. Bh6 O-O 13. Bxg7 Kxg7 14. Nh4

White telegraphs an intention to attack the King by opening the f-file; we weren't too worried by this, and took the opportunity to undouble the c-pawns and weaken the d-pawn.

... c4 15. f4 cxd3 16. cxd3 Qd4+ 17. Kh1 Rad8 18. Rf3 exf4 19. Qxf4 f5

Relieving the pressure on the f-file.

20. Qg5 Qf6 21. Qxf6+ Rxf6 22. Raf1

The game was adjourned here so the Icelanders could reconnect their 'phone and order pizza!

22... Rff8 23. Kg1 Bc8 24. exf5 Nxf5 25. Nxf5+ Rxf5 26. Re3 Rxf1+ 27. Kxf1

The exchanges have left Black with the small advantages of Bishop against Knight and pressure against

the isolated d-pawn.

27... Ba6 28. Ke2 Rd7 29. Kd2 Kf6 30. Ne4+ Kf5 31. Kc3 c5 32. Rf3+ Ke5 33. Nf6 Rd4?!

No need for this, but we had about a minute left to our opponents' twenty, and democracy had started to break down...

[33... Rxd3+? engaged us for a while but 34. Rxd3 Bxd3 35. Ng4+ Ke4 36. Nf2+ leaves White a piece up.]

34. Nxh7 Rxa4 35. Nf8 Bb7?? 36. Nxc6+

and the endgame held no more worries for White...

36... Kd6 37. Rf6+ Kc7 38. Nf4 Ra1 39. h4 Rc1+ 40. Kd2 Rb1 41. Kc2 Rh1 42. h5 Rh2 43. Rg6 b5 44. h6 c4 45. Rg7+ Kb6 46. h7 cxd3+ 47. Kxd3 a4 48. g4 b4 49. Nh5 a3 50. bxa3 bxa3 51. h8=Q a2 52. Qd8+ Ka6 53. Rg6+ Black resigned 1-0

DrDave - freyr (return game) BICS, 1996

for the return game we had 15 minutes each.

1. d4 Nf6 2. c4 c5 3. d5 b5

The Benko Gambit

4. cxb5 a6 5. Nc3 axb5 6. e4 b4 7. Nb5 d6 8. Bc4

The infamous "Nescafe-Frappe Attack", in which we had been expertly tutored by team member Steve Homer in a recent coaching session.

8... g6 9. e5 dxe5 10. d6 exd6 11. Bg5 Na6 12. Qf3

Our opponents mournfully typed in, "We seem to have overlooked something."

12... e4 13. Qxf6 Qxf6 14. Bxf6 Rg8 15. O-O-O 1-0

Revenge is sweet, but not fattening.

SEPTEMBER 29, 1993

Exeter strong on home ground

Exeter Chess Club played parallel matches last Saturday,

with the first team playing Totnes over six boards in the Bremridge league, and the second team playing Teignmouth over four for the Mamhead cup. Last to arrive but first to finish was Mark Abbott, who playing third for the second team won a straightforward attacking game against the King's Indian when Black's counterplay failed to materialise. After a win for Teignmouth on two and the last board drew, it was all down to new recruit Dave Redfern who won a fluctuating game played over four hours against Teignmouth captain Pete Halmkin. Result: 21/2-11/2.

In the first division game Devon's two top county team players drew a murky positional struggle on top board, and on two and four Exeter players drew comfortably with Black. Captain Brian Hewson laid a trap to snare Clive Deakin, and your correspondent pulled off a combination in time trouble. After Ken Hills won a King and Pawn ending by the narrowest of margins, the final score became 41/2-11/2.

Games

Mark's quick win - this is Plan A against the King's Indian, or any other line where your opponent is castled behind a fianchettoed bishop: (1) exchange the bishop, (2) invade on the weakened squares like h6, (3) remove the defenders of the King like the Knight on f6, and (4) mate.

Event: Exeter II (Rooks) vs. Teignmouth White: M Abbott, Black: D Rudall. 1. d4 d6 2. c4 Nf6 3. Nc3 g6 4. e4 Bg7 5. Be2 O-O 6. Bg5 Nbd7 7. Nf3 c5 8. d5 a6 9. a4 Qa5 10. O-O Qc7 11. Qd2 Re8 12. OCTOBER 11, 1993

Exeter hold Iles Cup

The annual contest between Exeter and Taunton Chess Clubs for the Iles

Cup ended in a convincing 11-1 win for Exeter. The scoreline hides a number of very close games which were still in doubt in the last few minutes of play. The game was played with an 'allegro' finish, where the whole game has to be finished in a given time - this means in long games both players may be in time trouble from which there is no reprieve by reaching a given number of moves. Top board Ben Beake took a draw rather than push his luck with the clock under these circumstances, and team captain Brian Hewson mated his opponent with only seconds to spare. Exeter fielded a number of new club members and all of them won. The scores and Exeter players in board order were: Beake 1/2, Heath 1, Hills 1, Hewson 1, Lingham 1, Regis 1/2, Lane 1, Leigh 1, Towers 1, Pope 1, Stooks 1, Willis 1. The Taunton team were heavily outgraded but all the games were fiercely contested.

If you haven't seen it before, there was an important type of tactic in my own game. **After 1 e4, g6; 2 d4, Bg7; 3 Nf3, d6; 4 Bc4, c6; 5 Nc3, Nf6; 6 O-O** (DIAGRAM) there was an opportunity to play 6...Nxe4! I didn't play it and chose 6...O-O, but after 7 Re1 suffered from the threat of e5 for the rest of the game. After 6...Nxe4; 7 Nxe4, d5 regains the piece with equality, and the apparently aggressive 7 Bxf7+ simply gives up the bishop pair in an open position.

Date: January 9, 1994

Exeter Chess Teams Bruised by Torquay School

Two war-parties from Torquay Boys Grammar School visited Exeter Chess

Club on Saturday last, and left with a handful of scalps.

The matches included 12 junior players from the two clubs represented, and indeed Exeter's top board for the Gambit Team, Mark Blackmore, won't be expecting his pension for some years yet. Whoever reckons young people of today have got little attention span would have been impressed with the display of silent diligence over the four hours of play that afternoon.

In the Moyle Cup a young team from Torquay won by the narrowest of margins after Exeter anchor man Brian Aldwin lost a close battle that was decided by an extra pawn.

Exeter's new Junior Chess Team had their debut against an older selection of Torquay Boys in the Bloodworth Cup for junior teams, and came away with only a single half-point. Exeter's top board Stefan Butterfield held on with the Black pieces to score a creditable draw, while none of the other players need feel ashamed of what were some hard-fought games.

Richard Reti commanded, many years ago now, that "A beginner should avoid Queen's Gambit and French Defence and play open games instead!" - that is, those games beginning 1 e4 where Black may reply 1 ... e5. These open games provide an exciting training-ground for acquiring an eye for combinational play. Beginning chessplayers often play obediently **1 e4, e5; 2 Nf3, Nc6; 3 Bc4, Bc5; 4 Nc3, Nf6; 5 d3, d6**, which is a line of the Guioco Piano, or from the Ruy Lopez opening **1 e4, e5; 2 Nf3, Nc6; 3 Bb5, a6; 4 Ba4, Nf6; 5 Nc3**. Sadly these rather balanced positions with all four knights nicely placed can be rather drawish. In fact, both sides will often settle for playing their queen's pawn just one square forward, and then these positions will lack a lot of the 'open' character of many lines beginning 1 e4 and can be slow and dull.

There are many alternatives to playing these two lines, but the most important thing that White should know is that in neither line need the e4 pawn be defended by Nc3.

In the Guioco Piano line White can play 4 c3, planning to roll down the centre after 5 d4. If Black plays 5...exd4; 6 cxd4 gives White the c3 square for his knight in any event. Fine gives the example line **4 c3, Nf6; 5 d4, exd4; 6 cxd4, Bb6; 7 d5, Nb8; 8 e5, Ng8; 9 O-O, Ne7; 10 d6, Ng6; 11 Ng5, O-O; 12 Qh5** and wins. Black must react more quickly with 6...Bb4+ when either 7 Nc3, d5 or 7 Bd2, Bxd2+; 8 Nbx2, d5 lead to the kind of open combat that Reti had in mind.

In the Ruy Lopez, after 1 e4, e5; 2 Nf3, Nc6; 3 Bb5, a6; 4 Ba4, Nf6 White can play 5 O-O because Black cannot hold the pawn after 5...Nxe4. Black has a number of ways, though, of slowing the position up, and young players (and older ones who don't tire of the open game) are advised to choose 5 d4 or 5 Qe2 (idea O-O and Rd1) to keep the lines loosened up.

EXETER GAMBITS 11/2-21/2 TORQUAY BOYS

Mark Blackmore 1/2-1/2 Adam Clarke

Eric Soper 0-1 Daniel Horsman

Hunshank Ehtesham 1-0 John Minshall

Brian Aldwin 0-1 John Pescott-Day

Exeter Juniors 1/2-31/2 Torquay Boys

Stefan Butterfield 1/2-1/2 Ivan Delft

Edwin Radway 0-1 S Richards

Reuben Hind 0-1 J Gaywood

Robin Goldsworthy 0-1 A Latchem

Honours even in junior chess tussle.

The first match between Exeter School and their visitors from Exeter

Junior Chess Club ended in a draw. The town club defaulted on the bottom board, and in a series of close games where in each both players can claim to have been winning the scores were 2-1 to the visitors, thus tying the match at 2-2.

Scores (home team first, playing White on even boards): 1 S.Alexander 0-1 N.Frost, 2 E.Hawkins 1-0 S. Butterfield, 3 R.Turton 0-1 E.Radway, 4 R.Sharp 1-0. Ross Sharp turned up a surprise mate in a casual game played during the match: **1 e4, e5; 2 f4, d6; 3 Nf3, Nc6; 4 Bc4, Bg4; 5 Nc3, Nd4?; 6 Nxe5!, Bxd1?; 7 Bxf7+ Ke7; 8 Nd5#**. This is the old Legal's mate, a neat example of cooperation between minor pieces.

The games: on top board Nick Frost lost and then regained a piece against Stephen Alexander, while on board two Stefan Butterfield opened with the Exchange Lopez, a line revived so successfully by Bobby Fischer. The line goes **1 e4, e5; 2 Nf3, Nc6; 3 Bb5, a6; 4 Bxc6**. Now Black usually plays 4...dxc6 (so as to be able to regain the pawn after 5 Nxe5, Qd4), when the old way of playing it was to go 5 d4, exd4; 6 Qxd4, Qxd4; 7 Nxd4 giving White a useful pawn majority on the K-side. Fischer's improvement was to play simply 5 O-O when there is a real threat to win the e5-pawn (6 Nxe5, Qd4; 7 Nf3, Qxe4? 8 Re1) which is awkward to meet. In the game Black went 4...bxc6, and instead of the recommended line 5 d4 White simply took the pawn on e5, and looked well-placed although later ran into trouble. On board three the game was level for a long time, then Black lost a pawn but soon after won the exchange. Despite ignoring a clearing combination (after Kh4 from the diagram) he finished off neatly. Meanwhile Nick Frost won a rook ending, finding a similar clearing line, and in an exciting finish Edward Hawkins found another old mate, the Arab mate, known from manuscripts of the ninth century.

Junior tussle

Torquay Boys Grammar School played hosts for last week's match

in the Bloodworth Junior Chess League against Exeter Juniors, supervised by Exeter coach Dave Regis and Torquay master Trevor Thynne. After some long struggles Exeter (Dr.Dave's Dynamos) were bemused to find themselves the losers to Trevor's Terrors by 4-0, but as both senior observers agreed, this by no means reflected the disparity in strength.

Whoever reckons children these days can't concentrate should have watched these young people sweating it out over the evening. As it happened, the games finished in board order, with the top pairing taking over three hours to play. New Exeter recruit John Holland went down to a brisk central attack by Damien Scarr, although in the final position both players didn't realise it was checkmate! Then Robin Goldsworthy had a neat idea in the opening of running his g-pawn up the board, but fell into a deadly pin from a bishop on h5 that could no longer be driven away. Jeremy Hansell had a good-looking position at one stage and found a neat trick to win a pawn, but gradually went down in a long endgame. In an attempt to unsettle the position on top board, Torquay's Simon Wood spent some time threatening with his queen.

Meanwhile, Exeter's Stefan Butterfield developed solidly and then won a piece with a deft three mover which began by hitting the errant queen with 14. Bc1! . Soon after he went a whole Rook up when he found a knight fork (26. Ne7+!), but went almost immediately astray by missing a point in a series of exchanges. Simon didn't miss it, and when his opponent left a rook unprotected while trying to create counterplay spotted a queen fork which concluded the game and the match. Bloodworth League: Torquay Boys Grammar School vs. Exeter Juniors - Exeter players had White on odd boards and are named first. (1) Stefan Butterfield 0-1 Simon Wood; (2) Jeremy Hansell 0-1 Ian van Delft; (3) Robin Goldsworthy 0-1 Scott Richards; (4) John Holland 0-1 Damien Scarr.

Here is the board one game: your correspondent recognises he didn't play that well at their age! I found some alternative lines at home, but, apart from a couple of mistakes in calculation, both players obviously found a lot of what was going on in the game.

Stefan Butterfield (Exeter Juniors) 0-1 Simon Wood (TBGS). 1. e4 e6 2. d4 d5 3. exd5 exd5 4. Bd3 (4. c4 is fashionable) c5 5. Be3 Qb6!? 6. dxc5 Qxb2 7. Nd2 Nf6 8. Nb3 Nc6 9. Nf3 Bg4 10. O-O Be7 11. h3 Bh5 12. Re1 O-O 13. Bb5! Qa3 14. Bc1! Qb4 15. Bxc6 bxc6 16. Rxe7 Rfe8 17. Re3 Rad8 18. Qd4 Qb8 19. Bd2 Re4 20. Qd3 Bg6 21. Qe2 Bh5 22. Nbd4 Qb2 (Black might have been better risking 22... Rxd4 since after 23. g4 Nxg4 24. hxg4 Rxd4+ 25. Kf1 White's King looks very loose) 23. Bc3 Qa3 24. Nxc6 Rc8 25. Bxf6 gxf6 DIAGRAM 26. Ne7+! Rxe7 27. Rxe7 Rxc5 28. g4 Bg6 29.

Rb1 Rxc2 30. Rb8+ Kg7 31. Qe3 Rc3 32. Rb3 Rxe3 33. Rxe3 (Stefan had anticipated 33. Rxa3 but clearly missed 33...Re3xa3) Qxa2 34. Ra3 Qb1+ 35. Kg2 Qb7 36. Nd4 Qd7 37. f4 f5 38. Rg3 fxg4 39. Rxc4 (39. hxc4 Be4+ 40. Kf2 Qc7) 39... h5 40. Rgg3 Kh6 41. Ra6 Kh7 42. Rf6 (Risky, but 42. Rg5 Qb7 43. Ra2 Qb4 is tough to swallow) 42... Qb7 43. Nf3? Qb2+ 44. Kg1 Qxf6 45. Ng5+ Kh8 46. Rf3 Be4 47. Rf2 0-1

MARCH 2, 1994

Exeter Juniors first win!

The evening started with Exeter School conceding a walkover on bottom

board, leaving them a point down. The rest of the games were drawn leaving Exeter Juniors that point ahead, giving them their first win. Bloodworth League: Exeter Juniors vs. Exeter School - Exeter Junior players had Black on odd boards and are named first. (1) Nick Frost 1/2 Stephen Alexander; (2) Stefan Butterfield 1/2 Edward Hawkins; (3) Robbie Scott 1/2 Roland Turton; (4) Robin Goldsworthy w/o.

Before the break ten-year-old Nick Frost, who has been carrying all before him recently, won a queen for rook, with the other games looking fairly level. On board two Stefan's exchange defence came down to a major piece ending where each side refused draws. Meanwhile on three, a weighty debate on the merits of the Rossolimo line against the Sicilian ensued. Robbie Scott, fresh from his win in the West of England junior speedplay, unraveled a passive position but lost the advantage of the two bishops, finally achieving a murky double-rook endgame with an extra pawn.

After the break, three draws were rapidly agreed: Stephen Alexander found a perpetual check after some casual play by Nick (see game below), and Stefan and Edward finally agreed a draw (although were both embarrassed when Robbie pointed out a mate in one they had missed). Roland Turton was left with the unenviable job of trying to win an ending a pawn down, and the point was eventually shared.

Here is the board one game: **White: Stephen Alexander Exeter School**

Black: Nick Frost Exeter Juniors

1. e4 e6 2. d4 d5 3. e5 c5 4. c3 Nc6 5. Nf3 Qb6 6. b3? (Better are 6.Be2, 6.a3 or the gambit line 6. Bd3 Bd7) 6...cxd4 7. cxd4 Bb4+ 8. Bd2 Nxd4 9. a3 Nxf3+ 10. Qxf3 Bxd2+ 11. Nxd2 Ne7 12. Bd3 O-O 13. O-O f6 14. Rae1 Nc6 15. exf6 Rxf6 16. Qh3 Rh6 17. Qg3 e5 18. Kh1 e4 19. Bc2 Rg6 20. Qh3 Qc7 21. f3 Rh6 22. Qxh6 gxh6 23. fxe4 dxe4 24. Nxe4 Qd8 25. Nf6+ Kg7 26. Ne8+ Kg8 27. Nf6+ Kg7 28. Ne8+ Kg8 29. Nf6+ 1/2-1/2

MAY 2, 1994

Peasants revolt in Exeter chess derby.

In a match between two Exeter teams in the Exeter and District League

it was the heavily outgraded Exeter Pawns who came out on top.

Eric Soper had a quick win, and with Steve Webb finding some tactical resources to compensate for a weak e-pawn it all looked good for the Pawn's fourth successive win. Another win and a draw brought it home, all before the third hour of play had elapsed.

There was an interesting game on Board Two between Mike Blackmore and the Hon. Sec. Geoff Jenkins. Mike unleashed a secret weapon as Black, and both sides went wrong inside the first five moves! In the end, White secured a massive pawn centre but Black sneaked 'round the side to create a headache for White's King, in the end contriving a draw through repetition of moves through alternating threats.

The line in question has a venerable history. It was associated with the player Blackburne, whose bushy black beard and forceful attacking style earned him the nickname 'Black Death'. He used to win games from casual players for the stake of a shilling, and the line became known as 'Blackburne's Shilling Gambit'.

Play it over and see if you would have fallen for it! We start **1. e4, e5; 2. Nf3, Nc6; 3. Bc4**, which is as orthodox as you can wish for. Blackburne (and Mike Blackmore) then whipped out the apparent blunder **3...Nd4**. White may continue blithely **4. Nxe4**, which is met by the equally naive-looking **4...Qg5**. Now **5. Nxf7** is a step too far in the wrong direction - **5...Qxg2; 6. Rf1, Qxe4+** wins the queen after **7. Qe2**, for **7. Be2, Nf3** is mate!

In the game, Geoff took the first pawn, **4. Nxe4, Qg5**, but smelled a rat and retreated with **5.Ng4**. After the game we discovered that this should have lost to **5...d5!** The books give as best for White the simple **4. c3, Nxf3; 5. Qxf3** when White has a healthy lead in development and control of the centre. Another line we unearthed after the game was **4. Nxe4, Qg5; 5.Bxf7+, Kd8; 6. O-O, Qxe5; 7. c3, Nc6; 8. d4** with a pawn-roller as compensation for the sacrificed piece. I'm sure White isn't really better here, but it certainly gives Black a problem in defence, which of course the opposite of the original idea of the line. This is rather like the Cochrane Gambit line against the Petroff Defence, recently revived by Vitolins.

Here's a game of his from 1989, which is a model of how to play with pawns.

Vitolins-Meiers. 1.e4 e5 2.Nf3 Nf6 3.Nxe5 d6 4.Nxf7 Kxf7 5.d4 g6 6.Nc3 Kg7 7.Be2 d5 8.e5 Ne4 9. Nxe4 dxe4 10.0-0 Nc6 11.Be3 h5 12.f3 exf3 13.Rxf3 Be6 14.c4 Bg4 15.Rf4 Bxe2 16.Qxe2 Kh7 17.d5 Qe8 18.dxc6 Qxe5 19.Qf2 Rd8 20.cxb7 c5 21.Rf7+ Bg7 22.Bxc5 Qg5 23.Bd4 Rhg8 24.Bxg7 Rxd7 25. Rxd7+ Kxd7 26.b8Q 1-0

Exeter and District League - Exeter Pawns vs. Exeter Knights (Pawns named first, white on odds):
Shorthose 1-0 Palmer, Blackmore 1/2-1/2 Jenkins, Soper 1-0 , Webb 1/2-1/2 Bazley.

Other recent Exeter results include a draw against Exmouth in the Devon League Division 2 (Mamhead Trophy), and a 5-3 win against Exmouth in the Newman Quickplay League.

Devon chess knock out..

In last Saturday's match Devon were knocked out of the National County

Championship quarter-final by Leicestershire. Sixteen players from each county battled for nearly five hours in the village hall at Frampton-on-Severn, and despite some stiff resistance on the lower boards Leicestershire's strength in depth brought them a deserved 10-6 victory.

Exeter players were out in force, making up six of the sixteen and all of the top four boards. Exeter and Devon top board Ben Beake had to face Grandmaster Mark Hebden, and held out with great determination for many moves after an unfamiliar opening, eventually missing his footing in a queen and pawn ending. Further down Brian Hewson and Richard Lingham went down boxing bravely out of their weight, while Ken Hills let a win slip. Peter Lane had a winning game against the Leningrad Dutch which nearly went astray in mutual time trouble, but some firm manoeuvring brought him the full point. Lastly, Matthew Leigh as White and Dave Regis with Black had the better and the worse of their respective draws against Leicester players.

Our thanks, as always, to non-playing match captain Tim Hay from Kingsteinton, who as well as organising our side of the event also provided some excellent pasties from a store in his mine.

Three winners in Speed Chess Jamboree.

Last week our esteemed member Brian Aldwin organised an internal speed

chess event for all the five Exeter teams that play in the Exeter and District Chess League. The competition was organised on a jamboree basis, with members of one team playing opponents from different teams. Four games were played with 20 minutes on the clock for each player for the whole game. After some exciting tussles the Exeter Bishops were clear winners with 10/16.

Brian had collected a stake from each player for individual prizes: in the end three players had the maximum score of 4/4 and shared the first, second and third prizes. Congratulations to: Ray Bazley of the Knights team, and to William Atiomo and Ian Taggart of the Bishops. And thanks to Brian for organising the event, which was a great way to close the chess season.

Dr. Dave adds: the key things in speed chess are (a) gain time on the clock, if you can, with an opening surprise, (b) sieze the initiative - defensive play, even when material ahead, is always more difficult, and lastly (c) keep calm.

July 1, 1994

Chess Season starts with jamboree

The annual chess season opener, the WECU Jamboree, took place last Sunday.

The West of England counties playing were Wiltshire, Somerset, Devon, Cornwall and Hampshire; a parallel grading-limited competition was contested between teams representing Somerset, Torbay, Exeter, Cornwall.

The victors as last year were Hampshire in the County competition, and Exeter in the graded event. Devon scored with new recruit August Karlsson drawing an intense 20-move King's Indian on top board, and in the same opening Ben Beake had a fluctuating game against old rival Jeremy Menadue of Cornwall, eventually drawing a game that either could have won. Our thanks as ever go to the organisers, particularly J Fewkes.

The neatest finish:

[Event "wecu jamboree"][Site "Taunton"][Date "1994.09.17"][Board "11"]

[White "leigh, m."][Black "smith, a."][Result "1-0"]

1. d4 Nf6 2. c4 e6 3. Nf3 c5 4. d5 b5 5. Nc3 Qa5 6. Bg5 Ne4 7. Bd2 Nxd2 8. Nxd2 b4 9. Nce4 Bb7 10. g3 exd5 11. cxd5 Bxd5 12. Nb3 Bxb3 13. axb3 Qc7 14. Bg2 Nc6 15. Qd5 Rc8 16. O-O Nd4 17. e3 Ne6 18. Rfd1 Be7 19. Ra6 O-O 20. Rda1 Ra8 21. Nd6 Bf6 22. Nb5 Qb8 23. Qxa8 Qxb5 24. Qxa7 Bxb2 25. Rb1 Bc3 26. Bf1 Qb8 27. Qxd7 Rd8 28. Qc6 g6 29. Bc4 Ng5 30. h4 Rc8 31. Qd5 Ne6 32. Qf3 Rf8 33. Rd1 Nc7 34. JULY 15, 1994

Chess for young and old

Two keenly contested matches went according to form recently

but not without some anxious moments for the favourites. Exeter 'A' 3 1/2 vs. Exeter 'B' 2 1/2 (Bremridge League): Karlsson (black) 1/2-1/2 Beake (white), Heath 1/2-1/2 Lingham, Bellars 0-1 Hewson, Lane 1-0 Regis, Towers 1-0 Taggart, Pope 1/2-1/2 Abbott.

Exeter Chess Club has entered two teams in the top Bremridge Devon Chess League this year, and their first fixture this year was against each other.

Brian Hewson scored the only win for the B team with an attack down the g-file in a version of the Gurgenz Defence. Peter Lane, winner of the Paignton Challengers with 7/7, crushed Dave Regis in 20 moves, whereas Richard Towers' win was a more back-and-forth affair.

Among the draws, the top board game was a fascinating struggle in an unorthodox opening (1.Nc3). Chris Heath and Richard Lingham had perhaps the most interesting game of the match after the opening line **1. e4 e5 2. Nf3 Nc6 3. d4 exd4 4. Nxd4 Bc5 5. Nb3 Bb6 6. Nc3 Qf6 7. Qe2 Nge7 8. a4 a6 9. a5 Ba7 10. Nd5 Nxd5 11. exd5+ Ne7 12. h4 h6 13. Ra4 O-O 14. g4 Qd6...** which looked madness to me but both players assured me was known Scotch Opening theory. Just when Richard was about to consolidate against White's loose structure Chris found a saving knight fork. On bottom board an ending that either could have won ended in a draw when both sides succeeded in queening a pawn.

Here's Peter's quick win. After the loosening 6...d5 Black wasn't given a chance.

1. d4 g6 2. c4 d6 3. Nc3 Bg7 4. e4 f5 [I played 4... Nc6 against Peter last year, but I had forgotten the theory, and was afraid he had since looked it up!] 5. Nge2 [two Bilek games in the late 1960s went 5. exf5 Bxf5] 5... fxe4 6. Nxe4 d5 7. cxd5 Qxd5 8. N2c3 Qa5 [Black might try 8... Qxd4 but 9. Qb3 looks very dangerous] 9. Bc4 Nc6 10. Be3 Nh6 11. O-O Nf5 12. Nd5 Nxe3 13. fxe3 Bf5? 14. Rxf5! gxf5 15. Qh5+ Kd8 16. Nc5 Rb8 17. Qxf5 Qxc5 18. dxc5 Rf8 19. Qe6 Be5 20. Rd1 1-0

JULY 31, 1994

Exeter Juniors 0 vs. Torbay Juniors 4 (Bloodworth League): Morgan (black) 0-1 Scott (white),

Butler 0-1 Richards, Goldsworthy 0-1 Hardy, MacKeith-Prince 0-1 Davies.

In the junior Bloodworth League Exeter Juniors were whitewashed 4-0 by an older Torbay side, but the scoreline hides a couple of tough endgames which could have ended very differently.

Three of the games started with the orthodox set-up of Pe4/Nf3/Bc4/Nc3 with a similar formation for Black. Having seen the Scotch opening above, they might be cautious of playing something less solid, but I think they would have more fun with either the 4.c3 variation of the Giuoco Piano (1. e4 e5 2. Nf3 Nc6 3. Bc4 Bc5 4. c3) or even Evans' Gambit 4.b4.

The top board game actually featured the Tarrasch Variation of the French, where White turns the tables on Black's strategy of attacking central pawns. After 1. e4 e6 2. d4 d5 3. Nd2 c5 4. exd5 exd5 5. Bb5+ (5.Ngf3 is more common) Bd7 6. Qe2+ Qe7 7. Bxd7+ Nxd7 8. dxc5 Qxe2+ 9. Nxe2 Andrew Morgan was left defending a typical Tarrasch endgame, hours defending pawn weaknesses, and eventually went down when White promoted a pawn. Nigel Short has recommended the line 1. e4 e6 2. d4 d5 3. Nd2 c5 4. exd5 Qxd5 as a way of avoiding this, but I always have thought that 3... Nf6 4. e4 Nfd7 is more likely to give you positions that are typical of the French, with ...c5,...Nc6 and ...Qb6 to follow.

Here's a quick win by Korchnoi in the French, in a position that could have arisen from the Tarrasch. What should you play after 1. e4 e6 2. d4 d5 3. exd5 exd5 4. Bd3 c5 5. Nf3 Nc6 6. Qe2+ Be7 7. dxc5 Nf6 8. h3 O-O 9. O-O Bxc5 10. c3 Re8 11. Qc2 Qd6 12. Nbd2?

12...Bxh3 is tempting but Korchnoi won after 12....Qg3! 13. Bf5 Re2 14. Nd4 Nxd4 15. cxd4 0-1 since White didn't wait for 15...Bxd4 16. Bxc8 Rxf2

? 1994

Chess summer school

This summer Exeter Chess Club has started a weekly coaching/discussion

session for its members. The programme is organised by Alan Pepler with support from the current club champion, Ken Hills, and the junior coach, Dave Regis. At the moment Dave and Ken take alternate weeks, with Dave going through master games and Ken providing more concrete tasks for the group to go through. Here's an example of each: a game where a positional weakness created by Black leads to his downfall, and a combinational challenge - can you find the continuation played by Alekhine in a simultaneous display?

Here's the game: **Chekhover, V.-Rudakowsky, I. USSR Championship, Moscow, 1945**

1. d4 d5 2. c4 e6 3. Nf3 Nf6 4. Bg5 Be7 5. e3 O-O 6. Nc3 Nbd7 7. Qc2 c6 8. Bd3 dxc4 9. Bxc4 Nd5 10. Bxe7 Qxe7 11. O-O b5 A normal sort of move in this type of position, but Black risks being left with a weak pawn on c6, giving White an outpost on c5. 12. Be2 a6 13. Ne4 Bb7 14. Ne5 Rac8 15. Nxd7 Qxd7 16. Nc5 Qc7 17. Rfd1 Rcd8 18. Rac1 Bc8 This is precisely what Black should have avoided. 19. Qe4 Nf6 20. Qh4 Qa5 21. a3 b4 22. a4 Nd7 23. b3 Nxc5 24. Rxc5 Qb6 25. Rdc1 Bb7 26. a5 Qa7 Now White can exploit his superior mobility in order to weaken the Black King's-side. 27. Bd3 g6 28. Qf6 Rd6 29. Qe7 Rfd8 30. h4 R8d7 31. Qf6 Qa8 32. Be4 Qe8 33. h5 Rd8 34. Bxc6 Bxc6 35. h6 Kf8 36. Rxc6 Rxc6 37. Rxc6 Rd7 If instead 37... Qxc6 38. Qxd8+ Qe8 39. Qd6+ Kg8 40. Qxa6 {threat Qb7} 40... Qe7 41. Qb6 and the a-pawn wins for White. 38. Rc8 Qxc8 39. Qh8+ 1-0

A superb win for White, who never once let Black get his head above water.

New Chess Season for Juniors

This Friday (2nd September) Exeter Junior Chess Club will hold its

first meeting of the new season. Newcomers are welcome at Exeter Community Centre at 6.00p.m. Casual and competition games are available, and senior players are on hand to assist and advise. Last year we also entered the new Bloodworth Junior Chess League, and both players and organisers pronounced the competition a success.

British Juniors have continued to thrive internationally, with 13-year-old Karl Mah picking up the Gold medal for his age range at the European Junior Championships.

Leicester were the unexpected winners of the English Counties' Championship this year, giving Devon the satisfaction of knowing they were beaten only by the winning team.

SEPTEMBER 25, 1994

Exeter Juniors successful in Dawlish chess contest

This weekend the Dawlish Junior Chess Championships were held under

the able leadership of Victor Cross, Peter Lodge and Tim Onions. Over 100 young players, mostly from local towns, played over the two days. Championship titles were awarded for each tournament in different age categories:

Under 9: David Butler (Exeter Prep) 5 1/2 points out of 6

Under 12: Kennedy (Emanuel) & Statham tied on 5 1/2 out of 6

Under 14: Andrew Morgan (St. Peter's) & Robbie Scott (John Stocker) tied on..p>

Prizes were also awarded for best Under-10 and best girl in the U12 tournament.

Andrew Morgan beat four players graded over 100 in a row on his way to the last round but fell foul of zugzwang against Robbie Scott who went from 3/4 to 4/5 to tie. "Zugzwang"? An old German chess term, meaning 'forced move' - it doesn't mean a forced reply, rather it refers to situations where one side is perfectly well placed for the moment, but is forced to take their turn and move, thus disturbing their balance.

This is the position which arose after some 30 moves of a French Defence. White played a5! announcing the zugzwang. Black must go to one side or the other and let the White King in - ...Ke6, Kg4 or ...Kg6, Ke4. White then won a pawn or two and could promote one of his own pawns to Queen.

NOVEMBER 21, 1994

Exeter show well at Torbay Congress

At the annual Torbay congress Exeter players put up a good collective

performance in each section. In the strong Open we saw a cracking pace being set by Oxford's Dr. John Nunn, opening expert and by his own admission a grandmaster "coffee house player", and London-based International Master Aaron Summerscale. They met in the last round, with Nunn as White, and drew after Summerscale's simplifying opening **1. e4 d6 2. d4 Nf6 3. Nc3 e5!? 4. dxe5 dxe5 5. Qxd8+ Kxd8**, thus tying for first/second place. Exeter player Agust Karlsson tied for third on 4/5, and Ben Beake achieved a solid 3 1/2 points.

Exeter players who must have gone home proud included competitors in the Major Mark Abbott and Ian Taggart each with 3/5, in the Intermediate Jim Rossiensky with 3 1/2, and in the Minor Eric Soper 3 1/2, and young Stuart Cooke who, playing in his first ever tournament, scored 4/5 and won a share of £100.

There were a sprinkling of Exeter and other local juniors taking part: Philip Morgan (age 16) took 3 in the Open, Nick Frost (10) took 2 1/2 in the Major, Robbie Scott (10) 2 1/2 in the Intermediate, and David Butler (9) 2 1/2 in the Minor (also his first adult tournament).

The tournament ran as smoothly as ever, and on behalf of myself and other players offer sincere thanks to Phil Short and the other organisers and controllers.

Agust explained to me in the car on the drive over to Torquay on Friday night, that whatever the books say about the King's Indian Attack, White's practical chances are very good because they are aiming at the King. His first round game was a perfect example of that:

Karlsson,A (2350) - George,IM (2000) Torbay Open #1, 1994

1. e4 c5 2. Nf3 e6 3. d3 d5 4. Nbd2 Nc6 5. g3 b6 6. Bg2 Bb7 7. O-O Bd6 8. Re1 Nge7 9. Ng5 O-O 10. Qh5 h6 11. Ndf3 Nd4 12. e5 Bc7 13. Nxd4 cxd4 Black has no counterplay yet and White re-arranges his attack. 14. Nf3 Nf5 15. g4 Ne7 (DIAGRAM) 16. Bxh6 Ng6 17. Bd2 Qb8 18. Ng5 Rd8 19. Bb4 Nf8 20. Qxf7+ Kh8 21. Bxf8 1-0

JANUARY 29 1995

One that got away.

In this tense endgame I agreed a draw (as Black)

- not least because of the clock (White: 20min, Black: 2min left). White could even have played to win on time. **Woodruff,DG (1725) - Regis,D (1855), Devon vs. Somerset, 1995**

In the bar afterward Ben Beake and Brian Hewson dismissed the position as a draw, but Black's pieces are active and if the d-pawn can get going he can think about a win.

I had a quick look at 57. Rxf5 Rxe2 58. Rxa5 d3 59. Rd5 d2 when:

the obvious 60. h4 Re3+ 61. Kf4 Rd3 wins for Black, so White must move the King

so try 60. Kg4 Re1 61. h4 d1=Q+ 62. Rxd1 Rxd1 63. h5 Kd4 64. h6 Ke5 65. Kg5 Rg1+ 66. Kh5 Kf5 wins,

and the trickiest one is 60. Kf4 Re1 61. h4 d1=Q 62. Rxd1 Rxd1 63. h5 Kd4 64. h6 Kd5 65. Kf5 Rf1+ 66. Kg6 Ke6 67. h7 Rg1+ 68. Kh6 Rh1+ 69. Kg7 Rg1+ 70. Kh6 Kf7 winning!

What do readers think?

? 1995

The importance of being active

"The most important single feature of any chess position - is the activity of the pieces... opening, middle-game and ESPECIALLY endgame."

-- MICHAEL STEAN in Simple Chess

Exeter juniors played a match last season where we lost one game by our player not being quite active enough - and won another, where the situation was reversed.

Szymanski,W - Mackeith-Prince,E

1. e4 e5 2. Nf3 Nc6 3. Bc4 d6 [blocks in the Bf8 - you must play as actively as you can: 3...Nf6 and 3...Bc5 are better]

4. h3 [waste of time]

4...Nf6 5. d3 a6 [also a waste of time]

6. Ng5! Be6 7. Nxe6 fxe6 8. Bxe6 Qe7 9. Bc4 O-O-O 10. Nc3 Nd4 11. Be3 Ne6 12. Nd5 Nxd5 13. Bxd5 c6 14. Bc4 Kb8 15. Bxe6 [This is the SIXTH move with this piece!]

15...Qxe6 16. d4 [White must complete development - this adventure just returns the pawn in the end.]

16...d5 17. f3 dxe4 18. c3 c5 [excellent]

19. fxe4 cxd4 20. cxd4 exd4 21. Bf4+ Bd6 22. Bxd6+ Rxd6

All of White's pieces are on their original squares! 23. Qg4 Rg8

Black has played very well so far and has a lead in development and control of the centre - but this move is too passive. Better is 23...Re8! when 24. Qxg7 Qxe4+ wins - White cannot avoid mate]

24. O-O Qxg4 25. hxg4 Re8 26. Rfe1 d3 27. Re3 d2 28. Rd1 Kc7 29. Kf2 Rd4 30. Kf3 Kc6

This ending looks promising for Black, who has a temporary advantage in the advanced d-pawn, but the d-pawn will come under attack. While White is trying to get that attack organised Black must strike elsewhere. The key idea for either side is to attack the enemy pawns on the seventh rank 31. Kg3 Kd6 32. Re2 Kc5 [32...Rxe4 33. Rxe4 Rxe4 34. Rxd2+ Kc6 is clearly level]

33. Rxd2 Rxd2 34. Rxd2 Rxe4 35. Rc2+ [much better is 35. Rd7: White must play in as attacking a fashion as possible]

35...Rc4 36. Rf2 Kd4 37. Rd2+ [again I prefer 37. Rf7]

37...Ke3 38. Rd7 b5 [38...Rb4 39. b3]

39. Ra7 Rc6 40. Rxc7 a5 41. Rxh7 Kd4 42. Kh4 Rc2

The right idea, but a bit late! 43. Rd7+ Kc5 44. Rc7+ [whoops]

44...Kb4 45. Rxc2 a4 46. a3+ Kb3 47. Re2 b4 48. axb4 Kxb4 49. g5 Kc4 50. g6 Kd3 51. Rf2 Ke3 52. Rf3+ Ke2 53. g7 Kd2 54. g8=Q Kc2 55. Rf2+ Kd3 56. Qd5+ Ke3 57. Rf3+ Ke2 58. Qd3+ Ke1 59. Rf1#
1-0 Richards,S - Butler,D Torbay Juniors Vs. Exeter Juniors

1. e4 e5 2. Nf3 Nf6 3. Bc4 d6 [again, blocks the Bf8. Alternatives are (a) 3...Nxe4 the Boden-Kieseritsky Gambit, or (b) 3...Nc6 the safe Two Knights' Defence]

4. d3 Be6 5. Bb3 Nbd7 6. Be3 c6 7. Nbd2 d5 8. Bg5 Qc7 9. h3 a5 10. a3 Bc5 [10...Bd6 is more solid]

11. Qe2

Black has a small advantage based on the more active centre. Over the next few moves Black allows this centre to be fixed and weakened, and eventually destroyed. 11...d4 12. Bxf6 Nxf6 13. Bxe6 fxe6 14. Nc4 Nd7 [much too passive; better is 14...Bd6 threatening ...b5]

15. Ng5 Nf8 16. Qg4 Ke7 17. Nf3 Ng6 18. Qg5+ Kd7 19. Ncxe5+ Nxe5 20. Nxe5+ Kc8 21. Nf3 Qb6 22. Qxg7 Qd8 23. Qe5 Bb6 24. Qxe6+ Kb8

Black is busted, I'm sure you realise. Now White should castle Queen's-side, and then play to advance the e- and f-pawns. Instead he makes some common mistakes:

- (a) he fails to complete development as fast as he can,
- (b) he wastes time playing pointless checks with his Queen, and, most importantly,
- (c) he allows Black's awkward pieces to come to life.

25. Qe5+ Ka7 26. O-O Rc8 27. Nd2 Bc7 28. Qc5+ Bb6 [28...b6 is a cheeky one, keeping the bishop on an active diagonal]

29. Qf5 Rc7 30. Nc4 Rf8 31. Qh5 a4 32. Nxb6 Kxb6 33. b4 axb3 34. cxb3 Ka7 35. Qa5+ [Just checks the king into safety!]

35...Kb8 36. Qb4 Rg8 37. Ra2 c5 38. Qa5 Rxc2+ [superb!]

39. Kh1 Rgg7 40. b4 Qc8 [40...Qh4 immediately is more accurate]

41. Kh2 Qf4+ 42. Kh1 Qf3+ 43. Kh2 Qg2#]

41. Kh2 Rg6 42. Raa1 Rg5 [better 42...Rh6]

43. bxc5 [Pointless, allowing Black to bring his other rook into play with gain of time]

43...Rcxc5 44. Qb4 Rg6!

Threat ...Qxh3+! [The natural 44...Rh5 also wins]

Black's rooks dominate the game, while White's rooks are sitting about on the touchline. 45. Qxc5 Qxc5 46. Rg1 Rxg1 47. Rxg1 Qxa3 48. f4 Qxd3 49. e5 0-1

MAY 27, 1995

On to Birmingham!

Exeter Chess Club are through to the finals of the National Plate

knockout competition, part of the Leigh National Chess Club Championships. In two closely-matched contests Exeter were eventually safe winners in each. The final will be held in Birmingham in July.

Thamesdown Juniors 11/2 Quarter-Final 31/2 Exeter

R Churm 1/2-1/2 BWR Hewson

IA Debbage 0-1 PC Lane

IC To 1-0 D Regis

LJ Debbage 0-1 RC Towers

DA Bridge 0-1 I Taggart

Brian Hewson had another of his famous escapes (leading to further research into the rumour that "Hewson" is in fact a contraction of "Houdini's-son") and Dave Regis is still clearly getting the wrinkles out of his King's Indian Attack, but the rest of the team had good wins.

Kingston 2 Semi-Final 3 Exeter

P Roche 0-1 BWR Hewson PJJ Gibbons 0-1 P Lane MJ Sheehan 1/2-1/2 C Bellars

CRA Clegg 1/2-1/2 D Regis

CJ Mann 1-0 R Towers

Peter Lane - RJJ Gibbons. 1. d4 Nf6 2. c4 e6 3. Nc3 Bb4 4. e3 c5 5. a3 Bxc3+ 6. bxc3 O-O (too early) 7. Bd3 d6 8. Ne2 Qc7 9. e4 e5 10. O-O Nc6 (Black is playing normal moves, but White's opening (with Ne2 not Nf3) is too dangerous for normal methods. ...Ne8 and f5 was called for) 11. f4 Bg4 [11... cxd4 12. cxd4 Nxd4 13. Nxd4 exd4 fails to hold the pawn after 14. Bb2 Qb6 15. Qc2 and e5] 12. d5 Ne7 13. f5 Nd7 14. Qe1 Bxe2 15. Bxe2 f6 16. Qh4 Rfd8 17. Rf3 Nf8 18. Rg3 Nc8 19. Qxf6 Rd7 20. Qg5 Qd8

The exchange of queens does little to reduce the force of White's attack **21. Qxd8 Rxd8 22. Bg5 Rd7 23. f6 Ng6 24. Bg4 Rc7 25. Be6+ Kh8 26. Rf1 gxf6 27. Bxf6+ Rg7 28. Bxg7+ Kxg7 29. Rf7+ 1-0**

Peter's ability to beat opposition of 160+ strength in under 30 moves has been most impressive this season.

Devon pipped at quarter-final post

A Devon team substantially outgraded by Warwickshire on almost every

board came close to their first semi-final place in the English County Championships last week.

We needed 11/2 points from our last 3 games, but could only manage a single 1/2-point, losing in the end 7-9. A single reversal would have done it for us, but the team can be justly proud of their result. Exeter provided 10 of the 16 players and achieved 6 of the 7 points.

The previous week Devon II squeezed through against Cleveland 8 1/2-7 1/2, with young Exeter player Ian Taggart check-mating his opponent in the last game with just three seconds left on his clock!

A simple finish from my own game against Keith Escott (sorry, I don't have the score of anyone else's!).

In this King's Indian, everything has gone minty for White who next plays h3, hoping to break the terrible pin. What should you play as Black?

SOLUTION: 20...Bxf3 was decisive:

21. Qxf3 Nxe4 22. Qxe4 Qxf2+ and mate on d2

21. Kxf3 Nxe4+ 22. Kxe4 Qf5 mate

The game actually went: 21. Bxf3 e4 and Black won with the extra piece.

MAY 27, 1995

The Viking chess invasion!

Our esteemed visitor, Agust Karlsson, who swept the Exeter Chess Club

Championship this year, arranged for members of his home club from Iceland to visit Exeter last week.

A six board match was satisfyingly drawn as follows (visitors' names first):

Bjorn Bjornsson 1/2-1/2 Agust Karlsson

Sigurbjorn Bjornsson 1-0 Ken Hills

Heimir Asgeirsson 1/2-1/2 Michael Zuber

Sverrir Bjornsson 1-0 Brian Hewson

Einar Einarsson 0-1 Peter Lane

Authbergur Magnusson 0-1 Chris Bellars

A six-round Swiss Quickplay was held the following night, where the Viking touch at lightning raids was apparent: a three-way tie resulted for first place on 5/6 between Agust, Bjorn and Heimir.

Peter Lane - Einar Einarsson 1. d4 Nf6 2. c4 c5 3. d5 e6 4. Nc3 exd5 5. cxd5 d6 6. e4 g6 7. f4 Bg7 8. Bb5+ Nfd7 9. a4 O-O 10. Nf3 Re8 (a mistake, said Peter) 11. O-O Na6 12. f5 Nb4 13. Bg5 Qc7 14. f6 Bf8 15. Qd2 Qd8 16. Bh6 Qxf6 17. e5 17... Rxe5 I thought this was the real mistake [17... dxe5 18. Bxf8 Rxf8 19. Ne4 is still tough] 18. Nxe5 Bxh6? And this is a dreadful lemon 19. Rxf6 Bxd2 20. Nxd7 a6 21. Nb6 1-0

JULY 9, 1995

Fifth-hour victory for Exeter Chess Champions

A last-minute win by Richard Towers brought Exeter Chess Club victory

in the Major Plate competition, part of the Leigh Interests National Club Championships. All the finals for each competition were played last weekend in Birmingham, where we had a chance to rub shoulders with Grandmasters Sadler and Watson amongst others.

Over the five boards, first one, then another were drawn, until after four hours play four boards had agreed draws. Meanwhile, the last board game had fluctuated a good deal and even looked as if it may go for a draw by perpetual check. A quick word with the British Chess Federation organisers revealed what we had feared, that if this too was drawn, we all had to sit down and play a half-hour speed match to decide it!

In the end Richard's control over board and clock was better than might have appeared at first sight, and he emerged victorious finding a mid-board mate with both players down to their last few minutes of allowed time. We won a handsome plate, individual shields and a clock for the club.

Our thanks go to John Leake and his team of organisers, and to Leigh Interests for sponsoring the event.

The decisive game, which found its way into a line of the Sicilian Defence, which Richard had never played before. You will see a lot of quick White wins in the Sicilian where White thunders down the King's-side with a decisive attack, and might be forgiven for thinking that the Sicilian is an unacceptably risky defence for Black. But for each of these quick White wins there is a rather longer Black win which is too long for most magazines to publish!

In the position at the first diagram, White looks well-placed for a highly publishable King's-side attack. White's pieces are posted nicely and there is a veritable tidal wave of pawns sweeping up towards the Black King.

But by the second diagram, Black has succeeded in exchanging many pieces, has blocked the King's-side, has gained the exchange (rook for bishop) and White's King's-side pawn advances have left the White King very exposed. White still has a dangerous-looking passed pawn and bishop glaring at the Black King, but Richard deftly consolidates his extra material and finishes off neatly.

Cameron,P (Coddon) - Towers,RC (Exeter), National Plate Final, 1995

1. d4 Nf6 2. Nf3 e6 3. c4 c5 4. Nc3 Be7 5. e4 cxd4 6. Nxd4 d6 7. Be2 a6 8. O-O Nc6 9. Be3 O-O 10. f4 Bd7 11. Rf2 Qc8 12. Nc2 Qc7 13. Qd3 Rad8 14. Raf1 Bc8 15. Bf3 Nd7 16. g4

DIAGRAM 1 16... Nc5 17. Qe2 Bf6 18. e5 Be7 19. b4 Nd7

(it still looks dangerous, but signs of over-reaching are beginning to show)

20. exd6 Bxd6 21. c5 Be7 22. Ne4 Nf6 23. Nxf6+ Bxf6 24. Be4 Nd4 25. Nxd4 Bxd4 26. g5 g6 27. h4 e5 28. f5 Bd7 29. fxg6 hxg6 30. Rf6 Bb5 (picks up the exchange) 31. Qf3 Bxf1 32. Kxf1 Bxe3 33. Qxe3 Qd7 34. Rd6 Qb5+ 35. Bd3 Qxb4 36. Qxe5 Rxd6 37. cxd6 DIAGRAM 2

37... Qd2 38. Bc4?? Qd1+? [38... Qc1+] 39. Kf2 Qd2+

(this is where we were worrying about a draw through perpetual check, with both players needing to reach the time control at #40)

Exeter Chess Club: HON. SECRETARY'S REPORT 1995

The nominal paid-up membership is at an all-time high of 72! This is a remarkable statistic for this time of year, when our publicity machine has been idling; virtually the same position was reached in 1994, history thus repeating itself..... A favourable combination of factors would seem to be at work: a burgeoning reputation, widespread advertising, comfortable premises, out-of-season opening, enforced leisure, etc. The gradual influx of competent players may go some way to offsetting the regretted loss of several senior members.

Successes at national and county levels have already been extensively reported, and these are a tribute to all concerned, especially the winning of the National Major Plate! B. Hewson is to be congratulated on his outstanding match-captaincy. Within the Club there has been increased out-of-season activity, with the new American Tournament and extra quickplays; but the icing on the cake was the unique visit of six Icelanders - thanks to the good offices of our temporarily resident Icelandic International Master, A. Karlsson! The match of the century, Exeter versus Hafnarfjordur, was honourably drawn.....

Senior coaching has continued, with some changes rung, under the able direction of D. Regis, whose hour-long demonstrations have been invariably backed by reams of printed analysis! We should also be grateful, to T. Forbes, who has acted as Thursday keyholder and tried hard to generate interest at his sessions; paralleling this are his latest artistic efforts to create a logo for the Club. As for his earlier drawings of chess pieces, these are now ready for framing prior to being hung in the Polsloe Room.

The Equipment Officer / Librarian, D. Beckwith, has decided to stand down after many years of highly capable and resourceful management, which should ensure a smooth transition of this joint responsibility. We owe him a debt of gratitude.

Separate Finance and Centenary Subcommittee meetings have been held to determine subscription levels and concert centennial plans. The BCF will be informed officially of our impending centenary, and a mention may well appear in Chess Moves in common with other similarly-placed clubs, which might provoke mutual challenges! Exeter would appear to have a strong case for recognition as Club of the Year for 1995-96.

The Secretary, having resigned from three Centre committees at the Centre AGM, has since been co-opted to the Management Committee, being re-elected Vice-Chairman, to represent the Centre on the Community College of Exeter's Governing Body, which now controls Community Education funding. He tied for second place in the number of meetings attended during 1994-95, having reported regularly on the Club's progress, his last action being to get CHESS inscribed on the new menu board at the Centre entrance.

Exeter Chess Club - PUBLICITY OFFICER'S REPORT 1995

The most valuable contribution in this field has been that of the Press Officer, A. Pepler, not forgetting those who have supplied him with copy for publication in the Express & Echo. He has managed to establish a chess column on its bridge page on a weekly basis: a detailed briefing is available for his successor.

A fresh information sheet has been prepared with media contact points as a priority; again, T. Forbes has kindly undertaken to distribute copies to appropriate locations, including - on his own initiative - University Halls. The next phase will be guided by the results of this initiative and by the degree of response to the questionnaire enclosed with the recent circular; but the production of a handbill, in quantity, will be the next innovation.

Meanwhile, there is still a latent membership out there, composed of lapsed members and casual contacts that may still be worth circulating in the near future; but it could be more promising, perhaps, to target the international schools, which ought to welcome invitations to encourage their students to play chess in English !

It was unfortunate that an opportunity had to be missed during Paignton Week to take part in a live discussion at the Centre with Radio Devon; at least, this trend-setting promotion might enable us to contribute a few 'soundbites'..... It is disappointing that we have not picked up more recruits within the Centre, which is visited by hundreds of people during the course of a year. Publicity material will be supplied to anyone able to recommend or introduce prospective members.

19th September, 1995

GJJenkins

Hon. Secretary / Publicity Officer

Exeter Chess Club - ANNUAL REPORT 1994

The past year has seen a fall and rise in membership, from a notional 70 to a buoyant 67, which is set to continue recovering, with an accumulation of 28 contacts, some reportedly resulting from the intensive press coverage that has spearheaded our publicity drive. General pamphleting coupled with specific approaches to University halls will conduce towards realizing a century of members. The recent enrolment of a third lady player is especially welcome, but stronger female representation is needed. A questionnaire may enable us to improve our overall methods of recruitment. Bilateral entry into the National Championships has been initially successful, and excellent results have been obtained in county and district competitions, as will be attested when the trophies are awarded at three successive AGMs. The five local chess congresses have been keenly supported, with several outstanding individual performances. Enthusiasm and enterprise are the keynote qualities in this centennial year.

9th May, 1995

G. J. JENKINS

Hon. Secretary

Exeter Chess Club - 1994 HIGHLIGHTS

Club Championship won by Ken Hills [5.5/6], and General Tournament by Rex Willis [5/6].

The Exeter & District Chess League competitions were won overall by Exeter - in all three divisions! The League came Second in the WECU Jamboree at Taunton, having won it in 1993.

In the DCCA competitions, Exeter won Division I (Bremridge Cup) [20-4] and Division II (Mamhead Cup) [15-5], coming 1st in the Team Quickplay [18/20] and 2nd in the Rapid Play (Newman Cup). The annual match against Taunton (Iles Cup) was also won [11-1].

A phenomenal performance at the Paignton Congress by Peter Lane, who won the Challengers' Section outright [7/7], gaining First Prize [œ250], together with a framed print of Oldway Mansion, which he may hold for one year, by the unprecedented courtesy of the restaurateur!

Gary Lane, IM, of Paignton and Brussels, has accepted our invitation to preside at our Centennial Simultaneous in September / October, 1995: he will be offering his own books as prizes!

The Presidential membership target of 70 was attained during the off-season: a Secretarial target of 100 members by the end of 1995 has been declared to mark our first Centenary!

BCF Direct Membership has remained solid despite the discontinuation of the allowance on Club subscriptions: existing Direct Members should contact me in the Bar when 'omnipresent'.... It is still worth joining this scheme - please contact me for full particulars.

Exeter Junior Chess Club's constitution was passed by the Centre's Management Committee:

meetings were allowed in the Polsloe Room on Fridays (1800-2000) at nominal per capita fees.

Extra session in Polsloe Room - on Thursdays - granted by Community Education Tutor.

Senior coaching was started in the Painting Room on Tuesdays (2000-2100).

Posters have been placed in the Central Library (including the Children's Library) and Branch Libraries, as well as in the Tourist Office / Information Bureau in the Civic Centre, Paris Street.

Our posters may also be seen in Exeter City Council's Bedford Street display cabinets.

Our publicity material may soon be introduced into the Northcott and Barnfield Theatres, and also into

the Exeter & Devon Arts Centre in Gandy Street and at the kiosk in Princesshay.

The Club has been publicized - in the context of the Exeter & District Chess League - by the East Devon District Council in their Directory of Sporting Opportunities in East Devon, 1994/95 [q.v.]; Club representation has also been solicited by the East Devon Sports Association.

Chess coverage, albeit incommensurate, has been accorded us in the Express & Echo; but, after a direct approach - indeed, a reproach - to the Editor, a weekly column has again been offered under Around the Clubs, where the regular Bridge article appears on Fridays. Watch that space!

27th September, 1994

G. J. JENKINS

Hon. Secretary

EXETER CHESS CLUB - FOUNDED 1895

Exeter Chess Club Homepage

[HOME](#) | [COACHING](#) | [CANON](#) | [BOOKS](#) | [LINKS](#) | [QUOTES](#) | [E-MAIL](#)

We are a large, successful and friendly club.

We have a junior wing: [Exeter Junior Chess Club](#). We are affiliated to [Devon County Chess Association](#).

Exeter Chess Club meets Tuesdays 7:00pm at Clifton Road Games (No.16)

Juniors meet 5:30-6:30pm, Fridays Sept-May

Tel.Simon Waters (President) (01395) 233 280 Tel.Sean Pope (Secretary) 436 420 Tel.Dave Regis (Juniors) 431 785

Exeter Chess Club

was established in 1895 and so we celebrated our centenary in 1995.

As part of our centenary activities we held a [Simultaneous Display](#) by IM Gary Lane, which was [repeated in 1996](#).

International Internet Challenge

We have held Internet matches:

- a single-board [consultation match](#) with [Hafnarfjardar](#) ([NEW home page](#)) (Hafnarfjörður), an [Icelandic chess club](#),
- a four-board junior match with the University of West Alabama

Coaching

We run a weekly coaching/discussion group, which include what we think are professional-looking handouts. There is an index of some of the ideas and materials to be found [here](#), namechecked by "the Doc" (John Nunn) in the BCF Yearbook (1997).

- a seven-board match with [Warwick University](#)
- a double-round eight-board match with the [West Wales Internet Chess Association](#)
- We would be interested in hearing from clubs elsewhere to play live team chess via one of the chess servers ([BICS](#) for preference: I know it's quiet but it's very fast!).

We have just published [100-odd years of Exeter Chess Club](#), which we are proud of.

Games of the Year: brillancies and others

The 1994/95 Alexandra Buchanan Brilliancy Prize was won by [Rex Willis](#) ahead of two cheapos by [Dave Regis](#). [Alexandra is MacGregor B's very new daughter!]

[Press releases](#)

An index of selected press releases from the last few years.

[HON. SECRETARY'S REPORT 1995](#)
[PUBLICITY OFFICER'S REPORT 1995](#)
[ANNUAL REPORT 1994](#)
[1994 HIGHLIGHTS](#)

Internal Club Competitions

We run an individual club competition in three sections of Swiss; also held annually are a 10-second tournament and other speed events.

Membership

We have about 40 members at present

[Membership information](#)

Regional and National Competitions

Exeter currently dominates the Exeter and District League, the Devon County Leagues and the Devon County teams. We have recently entered the National Club Championships; in 1995 we won the National Major Plate, and in 1996 won the Intermediate cup and were again finalists in the Major Plate.

Exeter Chess Club Coaching CANON

Exeter Chess Club Canonical Chess Games and Positions.

The [Canon](#) is a personal collection of good examples developed through a discussion group at [Exeter Chess Club](#). It is, as you might expect, rather derivative, but hopefully there are some examples you haven't seen before. The index is about 70K, and has separate sections on [tactical patterns](#) and [opening traps](#) {D}, [guidelines](#) for opening play and [example openings](#) {C} {D}, [model attacking games](#) {D} and [attacking techniques](#) {C} {D}, [defensive](#) play {B} {C}, [positional themes](#) {B} {C} and [planning](#) {B}, the [endgame](#) {all}, the [psychology](#) {all} of chess, and personal [style](#) {all}.

Please let me know if:

- you find an example you cannot follow
- you find names for the players where I have only NN
- you have a suggestion for a good example

Download

If you want to download the complete canon of games in database format, you can have it

- [as pure PGN](#), or
- the main [file](#) and [index](#) for users of ChessBase 1.11 or Fritz versions 1-4, or
- [ChessBase 6.0 Zip file](#) (.cbh and all the others) for CB 6/7 or Fritz 5.
- Games and analysis used in the opening booklets are kept separately; again you can have them as [PGN](#), two [ChessBase 1.11 files](#), or a [ZIP file for CB 6.0](#).

ChessBase files can be used by many other commercial and Public Domain (PD) database programmes, and either the CB or the PGN files can be converted into other database formats using readily available [PD utilities](#).

You can download demonstration versions of ChessBase 1.11 and 6.01 from the [ChessBase Site](#).

You can also get the *whole* of the chess on this site (the Canon and other

games with explanatory notes) as a [gzipped tar file](#) [9Mb file, use TAR and GZIP to unpack].
