# READER'S GUIDE

**GENERAL NOTE:** The Twelfth Edition of *Worldmark Encyclopedia of the Nations* (WEN) is comprised of five volumes. Volume 1 is dedicated to the United Nations and its related agencies. Volumes 2 through 5, "Africa," "Americas," "Asia and Oceania," and "Europe," contain entries on the countries of the world.

Reflecting the ever-changing status of the world geopolitical situation, the Twelfth Edition includes entries for 194 countries, one more than the previous edition. This reflects the 2006 decision of Montenegro to dissolve its relationship with Serbia to become an independent nation in its own right. Seven entries describe dependencies. This edition no longer includes volume 6, which was entitled *World Leaders*.

Some notable changes in previous editions include the Eleventh Edition's inclusion of an entry on East Timor, coverage of the aftermath of the terrorist attacks of 11 September 2001, and the expansion of the European Union and the North Atlantic Treaty Organization (NATO). Changes in the Tenth Edition included recording of the change in status for Macau; as of December 1999 Macau came under Chinese authority, and thus Macau was incorporated into the China entry (previously it was described under Portuguese Asian Dependency). Similarly, the entry for United Kingdom Asian Dependency (Hong Kong) was eliminated with the Ninth Edition; as of 1997 Hong Kong came under Chinese authority and, like Macau, is described in that country's entry. Also with the Tenth Edition, the introduction of the euro as currency in the nations of the European Union was noted. The Eighth Edition of this encyclopedia (1995) reported on the dramatic changes in the world in the early 1990s, including the dissolution of the USSR, Czechoslovakia, and Yugoslavia; the unification of Germany; the unification of Yemen; and the independence of Eritrea. These changes resulted in twenty-five new country articles. Whereas the First Edition of the *Worldmark Encyclopedia of the Nations*, in one volume, contained 119 articles, the present Twelfth Edition now contains 201.

In compiling data for incorporation into the *Worldmark Encyclopedia of the Nations*, substantial efforts were made to enlist the assistance of the government of every nation in the world, as well as of all pertinent UN agencies, who cooperated by supplying data and by revising and updating materials relevant to their sphere of interest. Material received from official sources was reviewed and critically assessed by the editors as part of the process of incorporation. Materials and publications of the UN family and of intergovernmental and nongovernmental organizations throughout the world provided a major fund of geographic, demographic, economic, and social data.

In compiling historical, economic, and political data, primary materials generated by governments and international agencies were supplemented by data gathered from numerous other sources including newspapers (most notably *The European*, the *Financial Times*, the *New York Times*, and the *Wall Street Journal*); periodicals (most notably *Current History*, *Elections Today*, *The Economist*, the *Far Eastern Economic Review*, *Foreign Affairs*, and *World Press Review*); and thousands of World Wide Web sites hosted by government agencies and embassies.

The reader's attention is directed to the Glossary of Special Terms for explanations of key terms and concepts essential to a fuller understanding of the text.

**COUNTRY NAMES:** Country names are reported (as appropriate) in three forms: the short-form name (generally conformed to the U.S. Central Intelligence Agency's *World Factbook 2006*), as commonly used in the text; the English version of the official name (generally conformed to the United Nations list of country names); and the official name in the national language(s). When necessary, textual usages of some short-form names have been rectified, usually through the substitution of an acronym for the official name, in order to strike a better balance between official usages and universal terminology. Thus the following short-form names have been adopted throughout (except in historical context to preserve accuracy): DROC (Democratic Republic of the Congo—known as Zaire prior to the Ninth Edition); ROC (Republic of the Congo); FRG (Federal Republic of Germany); North Korea: DPRK (Democratic People's Republic of Korea); and South Korea: ROK (Republic of Korea). In addition, Vietnam has replaced Viet Nam to reflect common usage.

**MAPS:** Spellings on the individual country maps reflect national usages and recognized transliteration practice. To clarify national boundaries and landforms, dark shading has been applied to waters, and lighter shading to lands not within that nation's jurisdiction. Cross-hatching has been used to designate certain disputed areas. Rivers that run dry during certain times of the year are indicated by dashed instead of solid lines.

**FLAGS AND NATIONAL EMBLEMS:** All depictions of flags, flag designations, and national emblems have been reviewed and, where necessary, corrected or changed to reflect their official usage as of 2006. In general, the term "national flag" denotes the civil flag of the nation.

**CURRENCY:** In most cases, currency conversion factors cited in the Twelfth Edition are as of the first quarter of 2006.

**WEIGHTS AND MEASURES:** The general world trend toward adoption of the metric system is acknowledged through the use of metric units and their nonmetric (customary or imperial) equivalents throughout the text. The two exceptions to this practice involve territorial sea limits, which are reported in nautical miles, and various production data, for which (unless otherwise stated) units of measure reflect the system in use by the country in question. All tons are metric tons (again, unless otherwise indicated), reflecting the practice of the UN in its statistical reporting.

**HOLIDAYS:** Except where noted, all holidays listed are official public holidays, on which government offices are closed that would normally be open. Transliterations of names of Muslim holidays have been standardized. For a fuller discussion on these points, and for a description of religious holidays and their origins and meanings, see the Glossary of Religious Holidays in this volume.

**GEOGRAPHIC INFORMATION:** To update the sections on Location, Size, and Extent; Topography, Climate, Flora and Fauna, and Environment, the following print publications (and their publishers) were used: *Geo-Data: The World Geographical Encyclopedia* (Gale Group), *World Development Indicators 2005* (The World Bank), and *World Resources* (Oxford University Press). Additional data was acquired from these websites: Library of Congress, *Country Studies: Country Profiles* (<http://lcweb2.loc.gov/frd/cs/profiles.html>); *Ramsar Convention on Wetlands* (<http://www.ramsar.org>); *UNESCO World Heritage Centre* (<http://www.whc.unesco.org>); *United Nations Environment Programme* (<http://www.unep.org>); *Weather Channel: Averages and Records* (<http://www.weather.com/common/home/climatology.html>); *World Conservation Union: Species Survival Commission* (<http://www.iucn.org/themes/ssc>); *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>).

**POPULATION DATA:** Data for the four rubrics describing population (Population, Migration, Ethnic Groups, Languages) were compiled from numerous publications of the U.S. Department of State, the World Bank, the United Nations, and the Organization for Economic Co-Operation and Development (OECD), specifically its publication *Trends in International Migration*. Also consulted were *The State of the World's Refugees* (Oxford University Press) and *International Committee of the Red Cross Annual Report* (International Committee of the Red Cross)

**RELIGIONS:** Data for this section were compiled in large part from the *2005 International Religious Freedom Report* released by the Bureau of Democracy, Human Rights, and Labor, U.S. Department of State. This is an annual report to Congress compiled in compliance with Section 102(b) of the International Religious Freedom Act (IRFA) of 1998. The *2005 Report* covers the period from 1 July 2004 to 30 June 2005 and includes the work of hundreds of State Department, Foreign Service, and other U.S. government employees. The authors gathered information throughout this period from a variety of sources, including government and religious officials, nongovernmental organizations, journalists, human rights monitors, religious groups, and academics.

**TRANSPORTATION:** Sources consulted for updated information on transportation include publications of the American Automobile Manufacturers Association, the International Road Transport Union, specifically its publication *World Transport Data*, and the *World Factbook 2006*.

**HISTORY:** In writing the History rubric, a variety of news and background information sources on each country were used. Full country profiles—including information on the history, economy, political institutions, and foreign relations on most nations of the world—are provided by the U.S. Library of Congress and by the U.S. Department of State; similar formats are published by the *BBC News International* version and *The Economist's* Country Briefings feature. In consulting news sources for up-to-date information on events, only reported facts (not editorials) were used. The *New York Times* and the *Washington Post* are more comprehensive than the *Wall Street Journal*, whose focus is placed on financial and business news. While the website of the United Nations was used extensively in compiling Volume 1 “United Nations,” of the *Worldmark Encyclopedia of the Nations*, its coverage of such problems as politics in the Middle East and global terrorism pertained to and supported the updating of history rubrics of a number of countries. Other organizations that publish journals or studies on global current events, foreign policy, international relations, and human rights include Amnesty International; Human Rights Watch; *Foreign Affairs*, published by the Council on Foreign Relations; and *Great Decisions*, published by the Foreign Policy Association. In addition, the official websites of each nation were consulted critically for information that could be gleaned from a state's view of its own history and place in the world.

**GOVERNMENT:** The Government rubric is constructed by outlining the institutions of government as they were formed throughout a nation's modern history, up to those existing under the present constitution. *Countries of the World and Their Leaders Yearbook 2006* (Thomson Gale) outlines the form of government and provides information on political conditions. The U.S. Library of Congress and the U.S. Department of

State chronicle constitutional changes and also provide information on the form of government. Electionworld and the *World Factbook 2006* provide information on officeholders in place at the time of publication. The *BBC News International* “Country Profiles” cover current leaders and their political parties, and *The Economist* is comprehensive in its coverage of political structures and political forces in place and at work in the nations it profiles. The official government websites of individual nations were also consulted.

**POLITICAL PARTIES:** *Countries of the World and Their Leaders Yearbook 2006* not only lists the political parties present in each nation, but provides additional information on the political parties in its “History” and “Government and Political Conditions” sections. *The Economist* also has sections in its country briefings labeled “political structure” and “political forces,” which describe the political climate of each nation the magazine profiles. In addition, *The Economist* provides a brief history of the nation, which often includes the history of political parties. Editors reviewed the profiles of selected nations prepared by the U.S. Library of Congress, which include comprehensive coverage of politics and political parties. The *World Factbook 2006* was consulted for a list of political parties, and often, their leaders. The website, Electionworld.org, describes the major political parties and their leaders, and also lists minor and defunct parties. Political Resources on the Net, a website, compiles links to a variety of sites useful to the researcher with a critical eye.

**LOCAL GOVERNMENT:** *Countries of the World and Their Leaders Yearbook 2006* lists the administrative subdivisions in each nation of the world; as does the U.S. State Department in its *Background Notes*, and the U.S. Central Intelligence Agency in its *World Factbook 2006*. *The Economist* was consulted for a description of regional legislatures. The U.S. Library of Congress “Country Profiles” briefings describe administrative divisions and provincial and local government.

**JUDICIAL SYSTEM:** *Countries of the World and Their Leaders Yearbook 2006*, *Background Notes*, and the *World Factbook 2006* all provided basic information on each nation’s judicial system. *The Economist* was consulted for a description of the legal systems of each nation it profiles. The U.S. Library of Congress “Country Profiles” briefings provided more in-depth detail about judicial power and structure in the nations it profiles. Jurist, a web-based legal news and real-time legal research service based out of the University of Pittsburgh School of Law in Pittsburgh, Pennsylvania, was consulted as well for concise information on each nation it profiles.

**ARMED FORCES:** Statistical data on armed forces was compiled from the *World Factbook 2006*, *The Military Balance* (The International Institute for Strategic Studies), the *SIPRI Yearbook* (Stockholm International Peace Research Institute), and other print and online sources including *Current World Nuclear Arsenals* maintained by the Center for Defense Information.

**INTERNATIONAL COOPERATION:** This section was updated using data provided by news agencies and the following websites: *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>) and *Background Notes* (<http://www.state.gov/t/pa/ei/bgn>).

**ECONOMY:** In addition to numerous official online sources, data on the economies of the world were compiled from the most recent editions of the following U.S. government publications: *National Trade Estimate on Foreign Trade Barriers*, *Country Commercial Guides*, and *Economic Policy and Trade Practices*. *The Economist* was consulted for detailed information on economic structures and select indicators in its “Country Profiles” archive; it also included economic and political forecasts for the nations it profiled. The U.S. Library of Congress “Country Profiles” provided a brief historical overview of the economies of the countries it profiled, in addition to detailing the current state of various sectors of those economies. *The Index of Economic Freedom* (Heritage Foundation) was also consulted for its measurement of independent variables into broad factors of economic freedom.

**INCOME:** Statistics on national income were obtained from sources published by the United Nations, The World Bank, and the U.S. Central Intelligence Agency (CIA). CIA figures are for gross domestic product (GDP), defined as the value of all final goods and services produced within a nation in a given year. In most cases, CIA figures are given in purchasing power parity terms.

**LABOR:** Labor statistics were compiled from *World Employment* and *Yearbook of Labour Statistics* (International Labour Office—ILO) and the ILO’s website *Child Labor Statistics by Country* (<http://www.ilo.org/public/english/standards/ipecc/simpoc/countries.htm>); the World Bank publication *World Development Indicators 2004*; and the U.S. State Department’s *Human Rights Reports 2005*.

**AGRICULTURE, FISHING AND FORESTRY:** In addition to government sources, statistical data for these sections was compiled from the following yearbooks published by the Food and Agriculture Organization of the United Nations: *Trade; Fishery Statistics: Commodities; Fisheries; Production; Agriculture*; and *Forest Products*.

**MINING:** Data on mining and minerals production came from various online sources and from statistics compiled by the Minerals Information office of the U.S. Geological Survey, U.S. Department of the Interior, including Volume III of the *Minerals Yearbook*. This volume of the *Minerals Yearbook* is published both electronically on the Internet and in various print formats available from the U.S. Government Printing Office Superintendent of Documents. The *Yearbook* provides an annual review of mineral production and trade and of mineral-related government and industry developments in more than 175 countries.

**ENERGY AND POWER:** Key sources consulted include *Country Analysis Briefs* (U.S. Energy Information Administration, U.S. Department of Energy), *Key World Energy Statistics* (International Energy Agency), and *World Development Indicators* (The World Bank).

**INDUSTRY :** The primary source material for the Industry rubric was the U.S. State Department's *Country Commercial Guides*, which provide a comprehensive look at countries' commercial environments, using economic, political, and market analysis. *Background Notes* were consulted for the information on the industrial history and climate of each country profiled. Also useful was information contained in the "Country Profiles" published by the U.S. Library of Congress. The *World Factbook 2006* provides a list of key economic indicators. *The Economist* and, to a lesser extent, *BBC News* were useful in providing background material for the Industry rubric.

**SCIENCE AND TECHNOLOGY:** The following print sources were consulted: *The Nature Yearbook of Science and Technology* (Palgrave Macmillan Publishers Ltd.); *NIRA's World Directory of Think Tanks* (National Institute for Research Advancement); in addition, the following websites were accessed: *International Science and Technology Activity* (maintained by Industry Canada, Government of Canada); *Economics Departments, Institutes, and Research Centers in the World* (maintained by the Department of Economics, University of Connecticut); *Science and Technology Statistics* (maintained by UNESCO Institute for Statistics); *World Development Indicators* (maintained by The World Bank); and *Annual Statistics* (patent and trademark information, maintained by the World Intellectual Property Organization).

**DOMESTIC TRADE:** Source material for the Domestic Trade rubric came from the U.S. State Department's *Country Commercial Guides*, *Background Notes*, and the United Nations publication, *International Trade Statistics Yearbook*. Also used was information contained in the "Country Profiles" published by the U.S. Library of Congress. *The Economist* and, to a lesser extent, the *BBC* were consulted in providing background material for the Domestic Trade rubric. The World Bank's service "Doing Business" database and the U.S. Commercial Service's "Buy USA" website were consulted for information on conducting business in a nation, which included business hours and business regulations. Finally, most nations' government websites provided information on domestic trade.

**FOREIGN TRADE:** Sources consulted included *2005 International Trade Statistics Yearbook* (Department of Economic and Social Affairs, Statistics Division, United Nations) and *Direction of Trade Statistics* (Real Sector Division, IMF Statistics Department, International Monetary Fund). The U.S. Department of State's *Country Commercial Guides* and *Background Notes* were also used. *The Economist* and the *World Factbook 2006* were consulted in listing import and export partners and key products traded. Various UN bodies—such as UNCTAD and UNESCO—provided up-to-date trade statistics.

**BALANCE OF PAYMENTS:** Balance of payments tables were computed from the International Monetary Fund's *Balance of Payments Statistics Yearbook*. In some cases, totals are provided even though not all components of those totals have been reported by the government of the country. Accordingly, in some instances numbers in the columns may not add to the total. Supplementing the IMF's *Balance of Payments Statistics Yearbook* were *The Economist's* "Country Briefings," the *World Factbook 2006*, and information taken from the U.S. State Department, in particular, the *Country Commercial Guides*. "Country Profiles" from the U.S. Library of Congress were also used. Also consulted was the United Nations publication *National Accounts Statistics: Main Aggregates and Detailed Tables*.

**BANKING AND SECURITIES:** Statistical data on securities listings and market activity was compiled in part from *Emerging Stock Markets Factbook, 2005* (Standard and Poor's) as well as from the websites *Country Forecasts* ([www.countrywatch.com](http://www.countrywatch.com)) and *International Banking Statistics* ([www.bis.org/statistics/bankstats.htm](http://www.bis.org/statistics/bankstats.htm)). Various websites specific to the individual countries of the world were also consulted.

**INSURANCE:** Primary sources for information on insurance include the online resources of the Insurance Information Institute, Rowbotham and Co. LLP, PricewaterhouseCoopers, the Swiss Reinsurance Company, and J. Zakhour & Co., as well as numerous national websites dealing with insurance.

**PUBLIC FINANCE:** In addition to official government websites, analytical reports from the U.S. Department of Commerce, and news reports, the following publications were consulted for standardized statistical data: *World Factbook 2006*, *International Financial Statistics Yearbook, 2002* (International Monetary Fund), and *Government Finance Statistics Yearbook, 2002* (International Monetary Fund).

**TAXATION:** Information on Taxation was compiled from country data sheets published by international accounting firms (Deloitte and Ernst & Young). Additional information was obtained from the U.S. Commerce Department and the government websites of the countries of the world.

**CUSTOMS AND DUTIES:** Information on Customs and Duties was compiled from country data sheets published by the accounting firms of Deloitte and Ernst & Young. Additional information was obtained from the U.S. Commerce Department, the World Trade Organization and the government website of the countries of the world.

**FOREIGN INVESTMENT:** Source material for the Foreign Investment rubric included the U.S. State Department's *Country Commercial Guides*, which provided a comprehensive analysis of the foreign direct investment environments of the countries of the world, as did the World Bank publication, *A Better Investment Climate for Everyone*. The International Monetary Fund's publications *International Financial Statistics Yearbook* and *Balance of Payments Statistics Yearbook*, and the U.S. State Department's *Background Notes* were consulted for the information on foreign direct investment. Also used was information contained in the "Country Profiles" published by the U.S. Library of Congress. *The Economist* was consulted in providing basic FDI figures and other relevant data.

**ECONOMIC DEVELOPMENT:** Source material for the Economic Development rubric included the U.S. State Department's *Country Commercial Guides* and *Background Notes*. *The Economist* was consulted for economic and political forecasts for selected nations. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries profiled, in addition to detailing the current state of various sectors of those economies. The *Index of Economic Freedom* was also consulted for its broad description of economic freedom and development. Information on foreign aid was taken from the print publications and websites of the International Monetary Fund, World Bank, and the United States Agency for International Development (USAID).

**SOCIAL DEVELOPMENT:** Publications consulted in the preparation of this rubric include *2005 Country Reports on Human Rights Practice* (<http://www.state.gov/g/drl/rls/hrrpt/2005/index.htm>), *International Save the Children Alliance Annual Report 2004* (Cambridge House), *The State of the World's Children* (Oxford University Press), and the *World Development Report* (Oxford University Press). Additional information was obtained from country-specific websites and general news publications.

**HEALTH:** Statistical sources consulted include *Country Health Briefing Papers* (a series of reports produced by IHSD Limited and DFID Health Systems Resource Centre for the United Kingdom Department for International Development); *Health Care Systems in Transition* (European Observatory on Health Care Systems, World Health Organization Regional Office for Europe); *Health in the Americas*, Volume II (Pan American Health Organization, World Health Organization) as well as numerous websites on the individual nations of the world. In addition, country-specific health profiles published by the World Health Organization and the World Bank were consulted.

**HOUSING:** The latest government population and housing census information available was used for each country through access of official government websites. Also of use was the World Bank publication *World Development Indicators 2005*. Topics accessed on the World Bank's website included *Countries and Regions*, *Urban Development*, and *Housing and Land*. Other websites consulted included Habitat for Humanity (<http://www.habitat.org>), United Nations Human Settlements Programme (<http://unhabitat.org>) and the U.S. Agency for International Development (USAID—<http://www.usaid.gov>). USAID topics accessed included *Locations* and *Urban Programs*).

**EDUCATION:** Data on Education was obtained from various UNESCO publications including *World Education Report*, *Global Education Digest*, *Education for All Global Monitoring Report 2005*, and the UNESCO *Statistical Yearbook*. Also consulted was *EdStats* compiled by the World Bank (<http://devdata.worldbank.org/edstats/>), the *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>), the UNESCO website's *Country and Regional Profiles* (<http://www.uis.unesco.org/profiles/>), and *World Data on Education* (International Bureau of Education).

**LIBRARIES AND MUSEUMS:** Some information concerning libraries and museums was accessed through official government websites of various countries when links were available to tourism, education, and/or cultural ministries or departments. In addition, the following websites were consulted: American Library Association (<http://www.ala.org>); International Federation of Library Associations and Institutions (<http://www.ifla.org>); Museums of the World (<http://www.museum.com>); and United Nations Educational, Scientific, and Cultural Organization (<http://www.unesco.org>).

**MEDIA:** Primary sources for this section include the annual *Editor & Publisher* publication *International Year Book*, online data provided by UNESCO, and the media sections of the "Country Profiles" featured on the website of *BBC News*. The UNESCO profiles provide key statistics and indicators on education, science and technology, and culture and communication. In addition, government and other websites related to the

countries of the world were consulted. Additional sources consulted include the publications *World Development Indicators 2005* (World Bank), *World Media Handbook* (United Nations), *World Factbook 2006*, and *2005 Country Reports on Human Rights Practices*.

**ORGANIZATIONS:** Lists of member countries were obtained through the official websites of a variety of prominent international organizations and associations, such as the International Federation of Red Cross and Red Crescent Societies, Amnesty International, Kiwanis International, the World Alliance of YMCAs, the World Organization of the Scout Movement, etc. *Associations Unlimited* (Thomson Gale) was also consulted.

**TOURISM, TRAVEL, AND RECREATION:** Statistical sources consulted include *Yearbook of Tourism Statistics* and *Compendium of Tourism Statistics*, both published by the World Tourism Organization. Tourism websites of the individual countries were also consulted, as well as the United Nations publication *Schedule of Daily Subsistence Allowance Rates* and the U.S. Department of State per diem travel allowances published online at [www.state.gov/r/pa/ei/bgn](http://www.state.gov/r/pa/ei/bgn).

**FAMOUS PERSONS:** Entries are based on information available through March 2006. Where a person noted in one country is known to have been born in another, the country (or, in some cases, city) of birth follows the personal name in parentheses.

**DEPENDENCIES:** Source material for the Dependencies rubric was taken from *Background Notes* and from the website of the United Nations. The Library of Congress's "Country Profiles" archive provided up-to-date information on dependencies. *The Economist* and the website of *BBC News* were also consulted, as was *Countries of the World and Their Leaders Yearbook 2006*.

**BIBLIOGRAPHY:** Bibliographical listings at the end of country articles are provided as a guide to further reading on the country in question and are not intended as a comprehensive listing of references used in research for the article. Effort was made to provide a broad sampling of works on major subjects and topics as covered by the article; the bibliographies provide, wherever possible, introductory and general works for use by students and general readers, as well as classical studies, recent contributions, and other works regarded as seminal by area specialists. The country article bibliographies were supplemented with information obtained from a search conducted in July 2006. An extensive bibliography listing key references related to the facts in this encyclopedia follows. However, it is not a complete listing since many fact sheets, brochures, World Wide Websites, and other informational materials were not included due to space limitations.

FROM THE  
**PREFACE**  
TO THE SEVENTH EDITION

Carved in stone, opposite the home of the United Nations, is an inscription taken from Isaiah: “. . . and they shall beat their swords into plowshares, and their spears into pruning hooks: nation shall not lift up sword against nation, neither shall they learn war any more.” The Prophets’ sense of moral justice, which was the foundation of their vision of peace as expressed in this inscription, has not yet been accepted as a basis for political behavior. Indeed, developments in recent years have cast a dark shadow over the United Nations. The passage of resolutions and the toleration of practices inconsistent with the spirit of the Charter have not only instilled doubt about the effectiveness of the organization as a political instrument but have also undermined the spirit of fairness and cooperation that once characterized the work of the specialized agencies. In the 1930s, the world witnessed the loss of moral force and then the political decline of the League of Nations. No friend of peace could wish its successor a similar fate. It is the fervent hope of the editors of this encyclopedia that political influences will not further undermine the substantive achievements of the United Nations.

The problems of peace preoccupy the minds of people everywhere. The ever-intensifying complexities of our times, while serving to increase the responsibility of a larger number of persons, often also augment the individual’s feeling of helplessness. Yet, knowledge of other lands and ability to see their people as fellow human beings can enable the individual to overcome this feeling of helplessness and to act for himself and others. In this spirit this work was conceived and is offered, with the hope that it may not only find many specific uses, but may bring into focus a broader world view for the reader, and thus contribute to international understanding.

MOSHE Y. SACHS  
Editor and Publisher, First through Seventh Editions

**FOREWORD**  
TO THE FIRST EDITION

This encyclopedia is different from all others produced in recent years. It is not simply a collection of miscellaneous facts for ready reference. It resembles more the pioneer work of those encyclopedists who ushered in the era of enlightenment in 18th-century France, in that it mirrors the life of men and nations at a great turning point in history, when the national state system of absolute sovereignties has to find new adjustments under the sovereignty of science. The old safeguards for security—mountains and oceans—no longer hold against the impact of an atomic age. The United Nations is the mirror of this new world in which international life becomes more and more interdependent. The political framework is therefore filled in by a comprehensive survey of the major interests of people everywhere. Such an encyclopedia should prove a valuable guide to the understanding not only of the United Nations but of our time.

JAMES T. SHOTWELL  
*6 August 1874–17 July 1965*  
Chairman, Editorial Advisory Board First Edition

# FOREWORD

Although the United Nations is often in the news, its basic nature, its possibilities and its limitations are not widely understood. In its first fifty years the organization has enormously expanded, both in membership and in the scope of its work. During that period, both governments and the public have made it responsible for a variety of dangerous and complex problems, usually without providing adequate means to tackle them. This has meant that the United Nations is mostly better known for its shortcomings than for its achievements.

At its foundation the main functions of the UN were the maintenance of international peace and security, disarmament, and various forms of post-war reconstruction. The founders, however, recalling that the part which economic and social disorder had played in creating the conditions for the second world war, provided, in the Charter, a resounding mandate for the promotion of “the economic and social advancement of all peoples” as well as of human rights and fundamental freedoms. The shortcomings of this side of the UN’s work, by far the largest part in terms of staff and programs, is perhaps the most serious disappointment of the organization’s first fifty years.

The UN itself is only the instrument of its member governments. Apart from the leadership, and the limited powers of initiative, of the Secretary General, the organization depends for its effectiveness and for its development on the support and the political will of the governments. Peacekeeping operations and the intermediary role of the Secretary General have spasmodically enjoyed such support, although there is now a serious controversy as to how much the UN ought to become involved in human disasters which are not threats to international peace. On the economic and social side there has been a far greater reluctance to give the UN a leading role.

The UN is now going through the most important transition of its history. Virtually all of its recent peace and humanitarian operations are concerned with violent situations within the boundaries of a single state, rather than with conflicts between states as in the past. The media and the public seem increasingly to see the organization as the police and rescue organization of a world community that does not yet exist. However reluctant governments may be to authorize and to provide the necessary resources for such a role, there can be little doubt that if the UN fails to carry it out, along with a far more effective lead in economic and social matters, the organization will become increasingly irrelevant to the great global problems which will determine the future of the human race. We already have many problems of “one world.” If the UN does not begin to deal with them effectively, it will cease to be useful, and the future will be correspondingly more hazardous.

The so-called UN system covers, in theory at any rate, virtually the entire range of human activity. After fifty years it needs reorganization, reform and renewal. However, its Charter and its fundamental institutions are sound. If the world organization is to be strengthened to meet the enormous challenges of coming years, it is essential that the public understand it, so that it can be both intelligently criticized and strongly supported. This Encyclopedia provides a comprehensive and accessible basis for such understanding.

Scholar-in-Residence, The Ford Foundation  
August 1994

FROM THE

# INTRODUCTION

TO THE FIRST EDITION

The swift course of domestic and world events, part of a hastened process of change, requires an enormous increase of basic understanding by peoples of the multiple factors influencing the tempo and direction of national developments. The pattern of intercultural penetration and cross-fertilizing exchanges of scientific and technological knowledge rests upon a concept of fundamental unity of diverse approaches to the central objective of all human endeavors: the creation of a better world, with general equality of opportunity to all individuals, everywhere.

Within a planet shrunk into community bounds by the progress of communications there are no substantial sectors of mankind still completely isolated from the main currents of 20th-century thought and action. A growing sense of identification among men is fostered by the adoption of certain basic standards of human rights and the slow growth of supranational law rooted in the fundamental principles that are common to all juridical systems.

No period in history has witnessed such accelerated search for adequate answers to the riddles that have so long beset humanity. Metaphysical explanations of the universe and of the individual's place within it vie with each other in the vast and only superficially explored realm of emotions; rationalized conceptions of economic and social philosophies contend in the marketplace of personal loyalties with a violence that frequently threatens to rend asunder the fabric of overall unity; and the march forward of freedoms and improvements in the status of people throughout our earth is largely clouded by the supercharged treatment of political affairs in the media of mass communication.

At a time when people everywhere are truly eager for accurate, comprehensive, and timely information about themselves and their neighbors in the closely related various geographic areas, the vastness and multiplicity of the field to be covered promotes reporting that serves little the needs of the average person: it is either too detailed in breadth and depth, so that only specialists can profit from its availability, or sketchy and fragmentary, to the point where it contributes more to confusion than enlightenment of the users.

A specific reason has made necessary a new approach to analytical and basic data on each country, as a separate political unit, and as a member of the vast family of nations all constitute together: the universality of their interest in the maintenance of international peace and security through the joint exercise of agreed-upon powers to restrain violence; to police disturbed areas where peaceful relations are endangered; to promote the application of legal procedures to the adjudication of their differences; and to strike at the very sources of controversy, which are rooted in the deep chasms among their economic and social standards and their consequent basic inequalities of status.

So-called realists may continue to voice their belief that conflict among nations is an outgrowth of their dynamic development, and that only practical arrangements which create "balances" of power can establish an equilibrium within the diverse segments of the world; and theorists of the biological inevitability of war still proclaim the materialistic concept that only a concentration of authority in the hands of some overwhelmingly strong state can eliminate actual armed conflict and bring to subjected peoples the "benefits" of a freedomless "pax romana." But mankind has made great strides since the days of empires, the conquest of colonial dependencies, the plagues and misery that fixed the general expectation of human life under thirty years, and the spiritual darkness of illiteracy and isolation from the mainstreams of culture of variegated philosophical, religious, and scientific concepts.

Under principles of ethics the peoples and the nations emerged as possessors of rights and bearers of responsibilities, and morality took its place in the councils of power. The advancement toward a universal rule of law has been too slow for the idealists and yet most encouraging to those who believe that peaceful evolutionary progress achieves more durable results than violent revolutionary change. The steady process of codification of generally recognized juridical principles and the formulation of new ones through general consensus constitute one of the most hopeful signs of this restless era of change. International compacts such as the Covenant of the League of Nations and the Charter of the United Nations incorporate moral concepts side by side with legal standards. They recognize that there are both ethical and juridical duties and rights that must be observed by states in their reciprocal relations and in respect of their inhabitants, subjects, and citizens.

So far-reaching are the changes already wrought within the world community, particularly for its less developed segments, that the normal processes of history have lost considerable significance in the face of new realities recently created.

Feeling that none of the encyclopedias and specialized sources of information do sufficient justice to these accomplishments in political freedom, economic development, social progress, and the practice of international cooperation, Worldmark Press, Inc., decided to publish a basically new encyclopedia devoted to the nations.

After identifying the outward symbols of each state: the capital, a map, the flag, the national anthem, the monetary unit, the system of weights and measures, holidays, and time, each article proceeds to cover, as thoroughly as available data permit, 50 individual phases of the country's life, so as to furnish an overall picture of its present as rooted in the past evolution of its institutions, customs, and traditions. A precise definition of location, size, and extent of the individual territory is given, so that the reader can visualize, as a living reality, that which the map depicts graphically. Topography, climate, and flora and fauna supplement the other natural physical features of the respective nation.

More than by any other factor, countries are what they are because of man's exertions to create his own environment, so population, ethnic groups, and language are the next items covered. Together with the section devoted to religion, they give a basic understanding of the demographic phenomena that determine the basic institutions, political, economic, and social, of each sovereign unit.

Transportation and communications follow in the description of the positive factors working for the consolidation of each country's internal unity and of the reconstruction of the wider oneness of mankind.

Next there is a historical survey, in most cases kept brief because of the availability of comprehensive ones in other sources of general information.

As a result of the individual national experience various types of governmental authority have been either adopted from the similar experience of other peoples or created to meet different requirements. In the operation of governments, there are diverse types of machinery which correspond to particular political philosophies and which the citizens control through political parties.

Local governmental structures supplement the system of deliberative and executive authorities in charge of public interests.

Knowledge of the organizational pattern of the judiciary acquires considerable importance for all kinds of individual and corporate activities within a particular nation, so information is furnished thereon.

The internal stability of a country and its international security are made clear by adequate data on the organization and potential of the armed forces.

Because the pattern of migrations has undergone great changes, information on their effect upon demographic developments in each state is of deep significance for any evaluation of manpower prospects and consumer potentials.

No nation is an isolated unit itself. The extent to which each government engages in international cooperation is a useful indicator of its concern with the peaceful handling of potential sources of tensions and conflicts.

One of the phases of internal development with an international impact relates to the wide range of the economy. This encyclopedia deals comprehensively with income, labor, agriculture, animal husbandry, fishing, forestry, mining, energy and power, industry, domestic trade, foreign trade, balance of payments, banking, insurance, securities, public finance, taxation, customs and duties, foreign investment, and economic policy.

It also gives information on health, social welfare, and housing, important in the economically less developed nations as a mainspring of economic activity and financial investment for what is called the infrastructure, vital as a prerequisite of other actions to promote production, employment, higher standards of living and, in general, a broader enjoyment of basic human rights and fundamental freedoms.

The domestic activities mentioned in the two previous paragraphs aim to help in the struggle against illiteracy which, even in more advanced countries, reduces the number of citizens actively engaged in political life and is instrumental in the growth and maintenance of discriminatory practices and arbitrary stereotypes within each nation and between many nations. It is of the utmost importance to know the educational facilities available for supplying trained political leaders, administrators, economists, social workers, medical personnel, and technicians. And to data on teaching establishments is added information on libraries and museums and on the organizations set up by the people of each country to promote their collective interests and welfare.

The press and other media of information and enlightenment constitute an important index of the cultural standing of the people; the degree of their freedom is the best evidence of the intellectual maturity of

government and governed, and a significant indicator of the degree to which essential human rights in the field of opinion are truly respected.

Perhaps the most effective way to advance reciprocal understanding is by contacts among peoples of different countries and with each other's natural environment. The conditions which must be met for the purposes of tourism are fully explained.

Dependencies for which each individual state assumes international responsibilities are described in detail. Finally a brief roll of famous persons is a biographical listing of national figures. An up-to-date bibliography closes each nation's description.

But in our day and era nations are not islands unto themselves, busy solely with internal problems of varying magnitude. The field of exclusively domestic concern is shrinking under the tremendous impact of easy communications among nations.

While the United Nations and regional organizations of states, directly or through their subsidiary or associated organs, may and do deal with practically every field of human interest, other organizations restrict their jurisdiction to the more specific areas of economic or social matters. They handle issues at the universal and at the close neighborhood levels and, large or small, they each play a part in the process of international cooperation to improve and give constructive meaning to the relations among peoples. Even military pacts have gradually broadened the scope of their concern as a result of the finding that merely negative aims do not afford by themselves the stability and coherence for which they were brought into being. The Secretary-General of the United Nations, Mr. Dag Hammarskjöld, has repeatedly stated his views that any collective action conducted outside the United Nations, but consonant with the spirit of its charter, can be considered as cooperation toward the fundamental objectives of the world organization.

Because we live under the impact of global issues that affect every individual, for good or for ill, and because also of the advance of democratic processes domestically and internationally, more and more people are now actively concerned with the course of world affairs. The best channels to voice their hopes are the governments democratically elected and responsible to the wishes of the citizenry. When the people disagree with their authorities, whose judgment must necessarily take into account factors not always of public knowledge, the people then can use their nongovernmental bodies to express their prevailing views.

The *Worldmark Encyclopedia of the Nations* is a pioneer effort. It is our earnest hope that this first edition may prove a truly useful tool to everyone.

# GLOSSARY OF RELIGIOUS HOLIDAYS

## BUDDHIST HOLIDAYS

Buddhist religious practice stems from the Hindu belief that every new moon or full moon day should be set apart for observance. In Buddhism, the half-moon days also have special status. In Sri Lanka, each Poya day—the day of the rise of the full moon of each month of the Buddhist calendar—is a public holiday. The following observances are common in Southeast Asia.

**Songran.** The Buddhist New Year is a three-day springtime water festival, in which images of the Buddha are bathed.

**Vesak.** This last full moon day of Visakha highlights a three-day celebration of the birth, enlightenment, and death of the Buddha. It falls in April or May.

**Waso (Varsa; Vassa).** This holiday begins the Buddhist equivalent of Lent, a period between July and October (the rainy season in Southeast Asia), during which Buddhist monks may not leave their cloisters. The season starts with the full moon of the month of Asalha and ends with a festival during the full moon of the month of Thadingyut.

## CHRISTIAN HOLIDAYS

The chief Christian holiday is **Easter**, the annual celebration of the resurrection of Jesus Christ. Like Passover, the Jewish feast from which it is derived, the date of observation is linked to the phases of the moon. Since the Christian calendar is a solar one rather than a lunar one, the date of Easter changes from year to year. Easter is celebrated on the first Sunday after the first full moon following the spring equinox; in the Gregorian calendar, it can occur as early as 22 March or as late as 25 April. The Easter date determines the date of many other Roman Catholic holidays, such as Ash Wednesday, Ascension, and Pentecost.

Important Christian celebrations and feasts that invariably occur on Sunday are not listed as holidays in the country articles because Sunday itself is a holiday (“holy day”) in predominantly Christian countries. In these lands, it is the day of rest and worship, occurring on the day after the Jewish Sabbath, from which it is derived, in commemoration of Christ’s resurrection on Easter Sunday.

The names and dates of the Christian holidays listed below are almost all based on Roman Catholic observances. Some of these holidays are also observed by Protestant denominations. By contrast, all countries where Eastern Orthodox rites predominate are Communist-ruled except Greece and the Greek-held portion of Cyprus; in the Communist countries, Christian holidays are not national holidays. For religious celebrations, some Eastern Orthodox churches retain the Julian calendar, which is 13 days behind the Gregorian calendar. Eastern Orthodox holidays do not fully correspond to the list of church holidays given below.

**Solemnity of Mary, Mother of God.** Observed on 1 January, this celebration was, before a 1969 Vatican reform, the Feast of the Circumcision of Our Lord Jesus Christ.

**Epiphany of Our Lord.** Traditionally observed on 6 January but now observable on the Sunday falling between 2 January and 7 January, this feast commemorates the adoration of the Magi, who journeyed to the place of Jesus’ birth. In the Orthodox churches, however, it is the feast celebrating Jesus’ baptism.

**St. Dévôte Day.** Observed on 27 January in Monaco in honor of the principality’s patron saint, this day celebrates her safe landing after a perilous voyage, thanks to a dove who directed her ship to the Monaco shore.

**Candlemas.** A national holiday on 2 February in Liechtenstein, this observation is now called the Presentation of the Lord, commemorating the presentation of the infant Jesus in the Temple at Jerusalem. Before a 1969 Vatican reform, it commemorated the Purification of Mary 40 days after giving birth to a male child in accordance with a Jewish practice of the time.

**St. Agatha’s Day.** On 5 February is celebrated the feast day of the patron saint of San Marino. St. Agatha is also the patron saint of nurses, firefighters, and jewelers.

**Shrove Monday and Shrove Tuesday.** These two days occur just prior to the beginning of Lent (a term which derives from the Middle English *lente*, “spring”), the Christian season of penitence that ends with Easter Sunday. These are days of **Carnival**, public holidays of feasting and merriment in many lands. Shrove Tuesday is also known as **Mardi Gras**.

**Ash Wednesday.** The first day of Lent, observed 46 days before Easter, is so called from the practice of placing ashes on the forehead of the worshiper as a sign of penitence. In the Roman Catholic Church, these ashes are obtained from burning palm branches used in the previous year’s **Palm Sunday** observation. (Palm Sunday commemorates the entry of Jesus into Jerusalem a week before Easter Sunday, and it begins **Holy Week**. On Ash Wednesday, the ashes are placed on the forehead of the communicant during Mass. The recipient is told, “Remember that you are dust, and unto dust you shall return” or “Turn away from sin and be faithful to the Gospel.”

**St. Patrick’s Day.** This holiday, observed on 17 March, is celebrated in Ireland to honor its patron saint.

**St. Joseph’s Day.** The feast day in honor of Mary’s husband is observed on 19 March as a public holiday in several countries.

**Holy (Maundy) Thursday.** The Thursday preceding Easter commemorates the Last Supper, the betrayal of Jesus by Judas Iscariot, and the arrest and arraignment of Jesus. In Rome, the pope customarily performs a ceremony in remembrance of Jesus’ washing of his apostles’ feet (John 13:5–20).

**Good Friday.** The day after Holy Thursday is devoted to remembrance of the crucifixion of Jesus and is given to penance and prayer.

**Holy Saturday.** This day commemorates the time during which Jesus was buried and, like Good Friday, is given to solemn prayer.

**Easter Monday.** The day after Easter Sunday is a public holiday in many countries.

**Prayer Day.** This Danish public holiday is observed on the fourth Friday after Easter.

**Ascension.** One of the most important Christian feasts, Ascension is observed 40 days after Easter in commemoration of Jesus' ascension to heaven.

**Pentecost Monday (Whitmonday).** This public holiday in many countries occurs the day after Pentecost (derived from the ancient Greek *pentekostos*, "fiftieth"), or **Whitsunday**, which commemorates the descent of the Holy Spirit upon Jesus' apostles on the seventh Sunday after Easter and is derived from the Jewish feast of Shavuot. It was an important occasion for baptism in the early church, and the name "Whitsunday" originated from the white robes worn by the newly baptized.

**Corpus Christi.** This holiday in honor of the Eucharist is observed on the Thursday or Sunday after **Trinity Sunday**, which is the Sunday after Pentecost. In the Roman Catholic and Eastern Orthodox Churches, the Eucharist is a sacrament in which the consecrated bread and wine literally become the body and blood of Jesus Christ, a belief stemming from New Testament accounts of the Last Supper.

**Sacred Heart.** The Friday of the week after Corpus Christi is a holiday in Colombia. The object of devotion is the divine person of Jesus, whose heart is the symbol of his love for mankind.

**Day of St. Peter and St. Paul.** This observance, on 29 June, commemorates the martyrdom of the two apostles traditionally believed to have been executed in Rome on the same day (c. AD 67) during the persecution of Christians ordered by Emperor Nero.

**St. James' Day.** Observed on 25 July, this day commemorates St. James the Greater, one of Jesus' 12 apostles. St. James is the patron saint of Spain.

**Feast of Our Lady of Angels.** This feast, on 2 August, is celebrated as a national holiday in Costa Rica in honor of the Virgin Mary. Pilgrimage is made to the basilica in Cartago, which houses a black stone statue of the Virgin.

**Assumption.** This holiday, observed on 15 August in many countries, celebrates the Roman Catholic and Eastern Orthodox dogma that, following Mary's death, her body was taken into heaven and reunited with her soul.

**Crowning of Our Lady of Altagracia.** Another holiday in honor of Mary, this day is celebrated in the Dominican Republic on 15 August with a pilgrimage to her shrine. (**Altagracia Day**, 21 January, is also a holiday in the Dominican Republic.)

**Day of Santa Rosa of Lima.** The feast day in honor of the first native-born saint of the New World, declared patron saint of South America by Pope Clement X in 1671, is 23 August, but in Peru, she is commemorated by a national holiday on 30 August.

**Day of Our Lady of Mercy (Las Mercedes).** Another holiday in honor of Mary, this observance on 24 September is a holiday in the Dominican Republic.

**All Saints' Day.** On 1 November, a public holiday in many countries, saints and martyrs who have no special festival are commemorated. In the Middle Ages, it was known as **All Hallows' Day**; the evening of the previous day, October 31, was called **All Hallow Even**, from which the secular holiday **Halloween** is derived.

**All Souls' Day.** This day, 2 November, is dedicated to prayer for the repose of the souls of the dead.

**Immaculate Conception.** This day, 8 December, celebrates the Roman Catholic dogma asserting that Mary's conception, as the future mother of God, was uniquely free from original sin. In Paraguay, it is observed as the Day of Our Lady of Caacupé.

**Our Lady of Guadalupe.** This Mexican festival, on 12 December, celebrates a miracle that the Virgin Mary is believed to have performed on this day in 1531, when she appeared before an Amerindian peasant and told him to build a shrine in her honor. The shrine is now the site of a basilica in the Mexico City area.

**Christmas.** The annual commemoration of the nativity of Jesus is held on 25 December. A midnight Mass ushers in this joyous celebration in many Roman Catholic churches. The custom of distributing gifts to children on **Christmas Eve** derives from a Dutch custom originally observed on the evening before **St. Nicholas' Day (6 December)**. The day after Christmas—often called **Boxing Day**, for the boxed gifts customarily given—is a public holiday in many countries.

**St. Stephen's Day.** The feast day in honor of the first martyred Christian saint is 26 December, the day after Christmas. St. Stephen is the patron saint of Hungary.

## HINDU HOLIDAYS

Hindu holidays are based on various lunar calendars, with an extra month inserted at intervals that vary from year to year, in order to keep festivals from shifting in relation to the seasons. The bright half of the month is that in which the new moon advances to the full moon; the dark half lasts from full moon to new moon. It is said that no nation has more festivals than India. Most are of only local or regional importance, but the following are national holidays in India and other countries with large Hindu populations.

**Raksha Bandhan.** During this festival, which usually falls in August, bracelets of colored thread and tinsel are tied by women to the wrists of their menfolk, thus binding the men to guard and protect them during the year. It is celebrated on the full moon of Sravana.

**Ganesh Chaturthi.** The festival, honoring Ganesh (Ganesha), god of prosperity, is held on the fourth day of the bright fortnight of the month of Bhadrapada, corresponding to August or September.

**Durga Puja.** This holiday honors the Divine Mother, wife of Shiva and the principle of creation, in her victory over the demon Mashishasura. It is held during the first 10 days of the bright fortnight of Asvina (Navaratri), a period corresponding to September or October. The last day is Dussehra, an autumn festival that celebrates the victory of the god Rama over Ravana, king of demons.

**Dewali (Deepavali; Diwali).** Dewali is the Hindu Festival of Lights, when Lakshmi, goddess of good fortune, is said to visit the homes of humans. The four- or five-day festival comes at the end of Asvina and the beginning of Karttika, a time corresponding to October or November.

**Shivarati (Mahashivarati).** Dedicated to the god Shiva, this holiday is observed on the 13th day of the dark half of Magha, corresponding to January or February.

**Thaipusam.** A holiday in Malaysia, Thaipusam honors Subramanya, son of Shiva and an important deity in southern India.

The three-day festival is held in the month of Magha according to when Pusam, a section of the lunar zodiac, is on the ascendant.

**Holi.** A festival lasting 3 to 10 days, Holi closes the old year with processions and merriment. It terminates on the full moon of Phalguna, the last month, corresponding to February or March.

## JEWISH HOLIDAYS

The basic Jewish holy day is the **Sabbath**, the seventh day of each week, starting at sundown on Friday and ending at nightfall on Saturday. This is a day of rest and is devoted to worship, religious study, and the family.

Other Jewish holidays (all starting at sundown and ending at nightfall) occur on specific days of specific months of the Jewish calendar, which consists of 12 alternating months of 29 or 30 days (two months are variable), conforming to the lunar cycle of roughly 29½ days. In order to reconcile the lunar year of 353, 354, or 355 days with the solar year of 365¼ days, a 30-day month (Adar Sheni) is added 7 times within a 19-year cycle. In this way, Jewish festivals retain their seasonal origins. The following list, arranged in the order of the Jewish calendar, shows Jewish religious holidays observed in the State of Israel.

**Rosh Hashanah.** The Jewish New Year is celebrated on 1 Tishri, the first month. In synagogues, the sounding of the shofar (ram's horn) heralds the new year. Rosh Hashanah begins the observance of the Ten Penitential Days, which culminate in Yom Kippur. Orthodox and Conservative Jews outside Israel celebrate 2 Tishri, the next day, as well.

**Yom Kippur.** The Day of Atonement, spent in fasting, penitence, and prayer, is the most solemn day in Judaism. It takes place on 10 Tishri.

**Sukkot.** This ancient Jewish harvest festival, which begins on 15 Tishri, recalls the period in which harvesters left their homes to dwell in the fields in sukkot, or booths—small outdoor shelters of boards, leaves, and branches—in order to facilitate gathering the crops before the seasonal rains began. In religious terms, it commemorates the 40 years of wandering in the desert by the ancient Hebrews after their exodus from Egypt. The 8th day of Sukkot and the 22d day of Tishri is **Shmini Azeret/Simhat Torah**, a joyous holiday in which the annual cycle of reading the Torah (the Five Books of Moses) is completed and begun anew. Outside of Israel, Simhat Torah and the beginning of a new reading cycle are celebrated on the next day, 23 Tishri.

**Hanukkah.** The Festival of Lights, corresponding roughly to the winter solstice, is celebrated over an eight-day period beginning on 25 Kislev, the third month. Also known as the Feast of Dedication and Feast of the Maccabees, Hanukkah commemorates the rededication of the Temple at Jerusalem in 164 BC. According to tradition, the one ritually pure container of olive oil, sufficient to illuminate the Temple for one day, miraculously burned for eight days, until new oil could be prepared. A feature of the Hanukkah celebration is the lighting in each Jewish home of an eight-branched candelabrum, the menorah (hanukkiah). This festival, though not a public holiday in Israel, is widely observed with the lighting of giant hanukkiot in public places.

**Purim.** This holiday, celebrated on 14 Adar (Adar Sheni in a leap year), joyously commemorates the delivery of the Jews from potential annihilation at the hands of Haman, viceroy of Persia, as described in the Book of Esther, which is read from a scroll (me-

gillah). The day, though not a public holiday in Israel, is widely marked by charity, exchange of edible gifts, and feasting.

**Pesach (Passover).** Pesach, lasting seven days in Israel and eight outside it, begins on 15 Nisan, at roughly the spring equinox, and recalls the exodus of the Hebrews from Egypt and their delivery from bondage. The chief festival of Judaism, Pesach begins with a ceremonial family meal, or seder, at which special foods (including unleavened bread, or matzoh) are eaten and the Passover story (Haggadah) is read.

**Shavuot.** This festival, on 6 Sivan, celebrates the presentation of the Ten Commandments to Moses on Mt. Sinai and the offering of the first harvest fruits at the temple in Jerusalem. The precursor of the Christian Pentecost, Shavuot takes place on the 50th day after the first day of Pesach.

**Tishah b'Av.** This holiday, which takes place on 9 Av, commemorates the destruction of the First Temple by the Babylonians (Chaldeans) in 586 BC and of the Second Temple by the Romans in AD 70. It is observed by fasting.

The Jewish calendar begins with the traditional date of Creation, equivalent to 3761 BC on the Christian calendar.

## MUSLIM HOLIDAYS

Like the Jewish calendar, the Islamic calendar consists of 12 months alternating between 29 and 30 days. A normal year is 354 days; a leap day is added to the last month (Dhu'l-Hijja) 11 times during a 30-year cycle in order to keep the calendar in conformity with the phases of the moon. Like the Jewish day, the Islamic day runs from sundown to sundown. Unlike the Jewish calendar, however, the Islamic calendar makes no attempt to align itself with the solar year by the periodic addition of an extra month; therefore, over the course of time, Islamic festivals may occur at any season. Like the Christian and Jewish calendars, the Islamic calendar has a seven-day week. Friday is the principal day of worship; although work is not forbidden on that day, it is suspended during the midday prayer session. The following list gives Muslim holy days that are observed as public holidays in one or more of the predominantly Muslim countries. Except where noted, a transliteration style reflecting pronunciation practice in the Arab countries is given. Not given here are certain special Muslim holidays in Iran, the only Muslim country in which the Shi'i form of Islam predominates.

**Muslim New Year.** Although in some countries 1 Muharram, which is the first month of the Islamic year, is observed as a holiday, the new year is in other places observed on Sha'ban, the eighth month of the year. This practice apparently stems from pagan Arab times. Shab-i-Bharat, a national holiday in Bangladesh on this day, is held by many to be the occasion when God ordains all actions in the coming year.

**Ashura.** This fast day was instituted by Muhammad as the equivalent of the Jewish Yom Kippur but later became voluntary when Ramadan replaced it as a penitential event. It also commemorates Noah's leaving the ark on Mt. Ararat after the waters of the Great Flood had subsided. In Iran, the martyrdom of Husayn, grandson of Muhammad, is commemorated with passion plays on this day.

**Milad an-Nabi.** The traditional birthday of Muhammad is celebrated on 12 Rabi al-Awwal, the third month of the Islamic year.

**Laylat al-Miraj.** This holiday, celebrated on 27 Rajab, the seventh month, commemorates the night of Muhammad's miraculous ascension to heaven, during which he received instructions from Allah on the requirements for daily prayer.

**Ramadan.** The first day of Ramadan (the ninth month) is a public holiday in many countries, although the religious festival does not officially begin until the new moon is sighted from the Naval Observatory in Cairo, Egypt. The entire month commemorates the period in which the Prophet received divine revelation and is observed by a strict fast from sunrise to sundown. This observance is one of Islam's five main duties for believers.

**Laylat al-Qadr (Night of Power).** This commemoration of the first revelation of the Koran (Qur'an) to Muhammad usually falls on 27 Ramadan.

**'Id al-Fitr.** The Little Festival, or Breaking-Fast-Festival, which begins just after Ramadan, on 1 Shawwal, the 10th month, is the

occasion for three or four days of feasting. In Malaysia and Singapore, this festival is called Hari Raya Puasa; in Turkey, Şeker Bayrami.

**'Id al-'Adha.** The Great Festival, or Sacrificial Feast, celebrates the end of the special pilgrimage season, or Hajj, to Mecca and Medina, an obligation for Muslims once in their lifetime if physically and economically feasible. The slaughter of animals pays tribute to Abraham's obedience to God in offering his son to the Lord for sacrifice; a portion of the meat is supposed to be donated to the poor. The feast begins on 10 Dhu'l-Hijja and continues to 13 Dhu'l-Hijja (14 Dhu'l-Hijja in a leap year). In Malaysia and Singapore, this festival is celebrated as Hari Raya Haji; in Indonesia, Lebaran Haji; in Turkey, Kurban Bayrami.

The Islamic calendar begins with the entry of Muhammad into Medina, equivalent to AD 622 on the Christian calendar.

# GLOSSARY OF SPECIAL TERMS

The following is a selected list, with brief definitions and explanations, of terms that appear frequently in these volumes. Not included below are UN organs and related agencies, which are discussed under their own headings elsewhere.

**adult literacy:** the capacity of adults to read and write, as defined by divergent national criteria of age and ability.

**ad valorem tax:** a levy based on a fixed percentage of an item's value; ad valorem taxes include sales taxes, property taxes, and the majority of import duties.

**African Development Bank:** IGO founded in 1963 and with its headquarters at Abidjan, Côte d'Ivoire; coordinates its members' development finances and provides loans.

**African Union (AU):** IGO founded in July 2002 as a successor to the amalgamated African Economic Community (AEC) and the Organization of African Unity (OAU). With headquarters in Addis Ababa, Ethiopia, the AU aims to have a single currency and a single integrated defense force, as well as other institutions of state, including a cabinet for the AU Head of State. The purpose of the organization is to help secure Africa's democracy, human rights and a sustainable economy, especially by bringing an end to intra-African conflict and creating an effective common market.

**animism:** the belief that natural objects and phenomena have souls or innate spiritual powers.

**Asian Development Bank:** IGO founded in 1966 and with its headquarters at Manila, Philippines; seeks to encourage economic growth in Asia and the Far East and provides long-term, large-scale loans, with emphasis on the developing countries.

**Association of South-East Asian Nations (ASEAN):** IGO founded in 1967 and with its headquarters at Jakarta, Indonesia; promotes economic cooperation among its members.

**balance of payments:** a systematic record of all financial transactions between one country and the rest of the world.

**bank of issue:** a bank empowered to issue currency.

**capital account:** all additions to or subtractions from a stock of investment.

**Caribbean Community and Common Market (CARICOM):** IGO founded in 1973 and with its headquarters in Georgetown, Guyana; seeks the establishment of a common external tariff and common trade policy among its members and promotes increased cooperation in agricultural and industrial development in the Caribbean region.

**cash economy:** see **money economy**.

**central bank:** a financial institution that handles the transactions of the central government, coordinates and controls the nation's commercial banks, and regulates the nation's money supply and credit conditions.

**Colombo Plan:** formally known as the Colombo Plan for Cooperative Economic Development in Asia and the Pacific, a multi-

national mutual assistance program that took effect in 1951 and has its headquarters in Colombo, Sri Lanka.

**commercial bank:** a bank that offers to businesses and individuals a variety of banking services, including demand deposit and withdrawal by check.

**Commonwealth of Nations:** voluntary association of the United Kingdom and its present dependencies and associated states, as well as certain former dependencies and their dependent territories. The term was first used officially in 1926 and is embodied in the Statute of Westminster (1931). Within the Commonwealth, whose secretariat (established in 1965) is located in London, England, are numerous subgroups devoted to economic and technical cooperation.

**constant prices:** money values calculated so as to eliminate the effect of inflation on prices and income.

**Council of Europe:** IGO founded in 1949 and with its headquarters in Strasbourg, France; promotes consultation and cooperation among European countries.

**crude birthrate:** the number of births in a year per 1,000 estimated midyear population.

**crude death rate:** the number of deaths in a year per 1,000 estimated midyear population.

**currency in circulation:** the tangible portion of a nation's money supply, composed of bank notes, government notes, and coins.

**current account:** the flow of goods and services, as measured by payments for and receipts from imports and exports, including interest and dividends.

**current prices:** money values that reflect prevailing prices, without excluding the effects of inflation.

**customs duty:** a tax imposed on the importation or exportation of goods.

**customs union:** an arrangement between governments to establish a common tariff policy and remove customs barriers between them.

**demand deposit:** a bank deposit that can be withdrawn by the depositor without previous notice to the bank.

**direct tax:** a tax that cannot be shifted from the original payer to the ultimate consumer of a good or service; direct taxes include the income tax and the poll tax.

**Economic Community of West African States (ECOWAS):** IGO founded in 1975 and with its headquarters at Lagos, Nigeria; seeks to establish a common tariff policy and promote economic cooperation among its members.

**economically active population:** see **labor force**.

**endangered species:** a type of plant or animal threatened with extinction in all or part of its natural range. For the Seventh Edition, listings of endangered animal species are as compiled for each country by the International Union for Conservation of Nature and Natural Resources.

**European Free Trade Association (EFTA):** customs union established in 1960 and with its headquarters in Geneva, Switzerland.

**European Union (EU):** name for a supranational organization established in 1992 by the Maastricht Treaty. The EU encompasses, among other entities, the European Coal and Steel Community, established in 1952; the European Economic Community (EEC, or European Common Market), founded in 1958; and the European Atomic Energy Community (EURATOM), also established in 1958. All EU members also participate in the European Parliament, which meets in Strasbourg, and the Court of Justice, which sits in Luxembourg.

**factor cost:** a concept used in determining the value of the national product in relation to the economic resources employed.

**fertility rate:** the average number of children that would be born to each woman in a population if she were to live through her childbearing lifetime bearing children at the same rate as women in that age range actually did in a given year.

**fly:** the part of a flag opposite and parallel to the one nearest the flagpole.

**foreign exchange:** all monetary assets that give residents of one country a financial claim on another.

**gross domestic product (GDP):** the total gross expenditure, in purchasers' values, on the domestic supply of goods and services (final use).

**gross national product (GNP):** the total monetary value of all final goods and services that a nation produces.

**Group of 77 (G-77):** IGO founded in 1967 to represent the interests of the developing countries and taking its name from the 77 developing nations that signed the Joint Declaration of the first UN Conference on Trade and Development (UNCTAD).

**Gulf Cooperation Council (GCC):** IGO founded in 1981 and with its headquarters in Riyadh, Saudi Arabia; aims at increasing cooperation among nations of the Persian (Arabian) Gulf region in matters of security and economic development.

**hoist:** the part of a flag nearest the flagpole.

**indirect tax:** a tax levied against goods and services; sales taxes, excise taxes, and import duties are generally regarded as indirect taxes.

**infant mortality rate:** the number of deaths of children less than one year old per 1,000 live births in a given year.

**installed capacity:** the maximum possible output of electric power at any given time.

**Inter-American Development Bank (IDB):** IGO established in 1959 and with its headquarters in Washington, D.C.; provides technical assistance and development financing to member nations in Latin America and the Caribbean.

**intergovernmental organization (IGO):** a body, such as the UN, to which only governments belong.

**international reserves:** cash and other international assets readily convertible into cash for the settlement of international accounts by a government.

**invisibles:** exports and imports of services (e.g., shipping charges, banking services, royalties, rents, and interest).

**labor force:** the number of people in a population available for work, whether actually employed or not.

**Latin American Integration Association (LAIA):** IGO founded in 1980 as the successor to the Latin American Free Trade As-

sociation and with its headquarters in Montevideo, Uruguay; seeks to foster economic cooperation among Latin American nations.

**League of Arab States (Arab League):** IGO founded in 1945 and with its headquarters in Tunis, Tunisia (formerly in Cairo, Egypt); attempts to coordinate national and international political activities of its members, to revive and diffuse the cultural legacy of Arabs, and to develop Arab social consciousness.

**life expectancy:** the expected life span of a newborn baby at any given date.

**lingua franca:** a language widely used as a means of communication among speakers of other languages.

**Marshall Plan:** formally known as the European Recovery Program, a joint project between the United States and most Western European nations under which \$12.5 billion in US loans and grants was expended to aid European recovery after World War II. Expenditures under the program, named for US Secretary of State George C. Marshall, were made from fiscal years 1949 through 1952.

**money economy:** a system or stage of economic development in which money replaces barter in the exchange of goods and services.

**most-favored-nation clause:** a provision in commercial treaties between two or more countries that guarantees that all partners to the agreement will automatically extend to each other any tariff reductions that they offer to nonmember countries.

**Net material product:** the total net value of goods and "productive" services, including turnover taxes, produced by the economy in the course of a given time period.

**net natural increase:** the difference between the crude birthrate and the crude death rate.

**nongovernmental organization (NGO):** a body, such as the International Chamber of Commerce or Amnesty International, in which organizations and individuals participate, often without government control or sponsorship.

**Nordic Council:** IGO founded in 1952 and with its headquarters in Stockholm, Sweden; a consultative body on matters of common interest to the Nordic (Scandinavian) countries.

**North Atlantic Treaty Organization (NATO):** IGO established in 1949 and with its headquarters in Brussels, Belgium; fosters cooperation in defense and other matters.

**Organization of American States (OAS):** IGO founded in 1948 and with its headquarters in Washington, D.C.; seeks to achieve peaceful settlement of members' disputes, promote solidarity in defense matters, and foster cooperation in the health, economic social and cultural fields.

**Organization for Economic Cooperation and Development (OECD):** IGO established in 1961 as the successor to the Organization for European Economic Cooperation and with its headquarters in Paris; attempts to promote economic growth, social welfare, higher living standards, and financial stability in member countries.

**Organization of Petroleum Exporting Countries (OPEC):** IGO founded in 1960 and with its headquarters in Vienna, Austria; seeks to coordinate its members' production and pricing of crude petroleum.

**Pan American Health Organization (PAHO):** IGO founded in 1902 as the International Sanitary Bureau; its headquarters are

now in Washington, D.C. An OAS affiliate, PAHO seeks to improve health and environmental conditions in the Americas.

**per capita:** per person.

**proved reserves:** the quantity of a recoverable mineral resource (such as oil or natural gas) that is still in the ground.

**public debt:** the amount owed by a government.

**retail trade:** the sale of goods directly to the consumer.

**smallholder:** the owner or tenant of a small farm.

**subsistence economy:** the part of a national economy in which money plays little or no role, trade is by barter, and living standards are minimal.

**supranational:** transcending the limitations of the nation-state.

**time deposit:** money held in a bank account for which the bank may require advance notice of withdrawal.

**turnkey project:** a factory or other installation wholly built by a company of one country at a site in another country, which then assumes complete operational control over it, paying the builder in cash, credits, or a share of the proceeds.

**turnover tax:** a tax on transactions of goods and services at all levels of production and distribution.

**value added by manufacture:** the difference, measured in national currency units, between the value of finished goods and the cost of materials needed to produce them.

**value-added tax (VAT):** *see ad valorem tax.*

**visibles:** international transactions involving movement of tangible goods.

**wholesale trade:** the sale of goods, usually in bulk quantities, to intermediaries for ultimate resale to consumers.

**work force:** *see labor force.*

# EDITORIAL STAFF

*Editors:* Timothy L. Gall, Jeneen M. Hobby

*Associate Editors:* Rachel Babura, Karen Ellicott, Susan Bevan Gall, James Henry, Daniel M. Lucas, Maura E. Malone, Michael A. Parris, Ayad Rahim, Seth E. Rosenberg, Susan Stern, Jeanne Marie Stumpf, Kimberly Tilly, George Vukmanovich, Sarah Wang, Rosalie Wieder, Daiva Ziedonis

*Graphics Editor:* Daniel Mehling

*Proofreaders:* Nicole Balant, Jan Davis, Jane Hoehner, Deborah Ring

*Cartographers:* Maryland Cartographics, Inc.; Scott B. Edmonds, President: Stephanie K. Clark, Deborah G. Freer, Tracy R. Morrill, Justin E. Morrill, Judith G. Nielsen, John P. Radziszewski; *Consultant on boundaries for Serbia and Montenegro:* John W. Donaldson, International Boundaries Research Unit, Durham University, United Kingdom

# CONTRIBUTORS

Shown below are contributors to the present and previous editions, in most cases followed by their affiliation or status at the time the contribution was made.

**AHMED, BASHIR.** Researcher/Writer.

**AKINOLA, OLUFEMI.** Department of Local Government Studies, Obafemi Awolowo University, Nigeria.

**ALBA, VICTOR.** Author, *Transition in Spain: From Franco to Democracy*.

**ALISKY, MARVIN.** Director of Center for Latin American Studies and Professor of Political Science, Arizona State University.

**ANTHONY, JOHN.** Assistant Professor of Middle East Studies, School of Advanced International Studies, Johns Hopkins University.

**ARMANDT, KRISTEN.** Department of Political Science, Loyola University Chicago.

**ARNADE, CHARLES W.** Chairman, The American Idea, and Professor of History, University of South Florida.

**ASHFORD, DOUGLAS E.** Department of Political Science, Cornell University.

**AUMANN, MOSHE.** Counselor, Embassy of Israel, Washington, D.C.

**AYTAR, VOLKAN.** Binghamton University.

**BARBER, WILLIAM J.** Associate Professor of Economics, Wesleyan University.

**BARRON, MURIEL T.**

**BASS, ELIZABETH M.** Economist-Editor, Research Project on National Income in East Central Europe, New York.

**BENITEZ, ALBERTO.** Department of Economics, Florida International University.

**BENNETT, NORMAN.** Professor of History, Boston University.

**BERG, ELLIOT J.** Professor of Economics, University of Michigan.

**BERG, NANCY GUINLOCK.**

**BERNELL, DAVID.** Johns Hopkins University.

**BERNSTEIN, MARVIN.** Professor of History, State University of New York at Buffalo.

**BIRNS, LAURENCE R.** Director, Council on Hemispheric Affairs.

**BONGIORNO, JOSEPH A.** St. John's University.

**BONIN, PHILIPPE.** Department of Romance Studies, Cornell University.

**BOSTON UNIVERSITY, AFRICAN STUDIES CENTER.** John Harris, Professor of Economics and Director of African Studies Center; James C. Armstrong, Head, African Studies Library, Editors; Norman Bennett, Professor of History, Boston University; Valerie Plave Bennett, Energy Resources Co.; Heinz A. Bertsch; Edouard Bustin, Professor of Political Science, Boston University; Sid A. Chabawe;

Tobias Chizengeni; William D. Coale; Leon Cort; Bernardo P. Ferraz, Fellow, Massachusetts Institute of Technology; Kathleen Langley, Associate Professor of Economics, Boston University; Jay I. Mann; Sandra Mann; Marcos G. Namashulua, Instructor, Political Science, Brandeis University; Jeanne Penvenne; Stella Silverstein; Henry Steady; Dominique Western.

**BOUCHAER, TOUFIC.** Second Secretary, Embassy of Syria, Washington, D.C.

**BOXILL, IAN and BOXILL, RACHAEL.** University of the West Indies.

**BRADBURY, R. W.** Professor of Economics, College of Business Administration, University of Florida.

**BRAVEBOY-WAGNER, JACQUELINE ANNE.** Department of International Studies, City University of New York.

**BROCK, LIZA.** Researcher/Writer.

**BRODY, ALAN J.** Department of Political Science, Cleveland State University.

**BUTWELL, RICHARD.** Dean for Arts and Science, State University of New York at Fredonia.

**CARPADIS, CHRISTINA.** Researcher/Writer, Cleveland, Ohio.

**CARTER, GWENDOLEN M.** Director, Program of African Studies, Northwestern University.

**CASTAGNO, ALPHONSO A.** Director, African Research and Studies Program, Boston University.

**CASTAGNO, MARGARET.** Author, *Historical Dictionary of Somalia*.

**CELIK, AYSE BETUL.** Binghamton University.

**CHANG, A. S.** Hong Kong Correspondent, Institute of Foreign Studies, Tokyo; formerly Professor of Economics, National Chi-nan University, Shanghai.

**CHEN, NANCY.** Population Division, United Nations Department of Economic and Social Information.

**COLEMAN, JAMES S.** Director, African Studies Program, and Professor of Political Science, University of California, Los Angeles.

**COLLINS, ROBERT O.** Professor of History, University of California, Santa Barbara.

**COMPTON, ROBERT W., JR.** Western Kentucky University.

**CORBIN, PETER B.** Interregional Adviser, UN Department of Technical Cooperation and Development.

**CORDERAS, DESCÁRREGA, JOSÉ.** Royal Geographical Society, Valverde (Spain).

**COUFOUDAKIS, VAN.** Indiana University-Purdue University.

**COWAN, L. GRAY.** Dean, School of International Affairs, State University of New York, Albany.

**CUMINGS, BRUCE G.** Professor of Political Science, Swarthmore College.

**CZIRJAK, LASZLO.** Associate, Columbia University.

**DALL, CHRISTOPHER.** College of William and Mary.

**DAMIRAS, VASSILIOS.** International Relations, Loyola University Chicago.

**DE GALE, SIR LEO.** G.C.M.G., C.B.E., Governor-General, Government of Grenada.

**DELGADO, ALESSANDRA.** International Relations, University of Chicago.

**DOCKING, TIMOTHY W.** Boston University.

**DUNBAR, CHARLES F.** President, Cleveland Council on World Affairs.

**DUNKLE, JOHN R.** Associate Professor of Geography and Physical Science, University of Florida.

**EINHORN, ERIC.** University of Massachusetts at Amherst.

**ENGEL, DAVID.** New York University.

**EVANS, LAURENCE.** Professor of History, Harpur College.

**EYEK, F. GUNTHER.** Professorial Lecturer in History and International Relations, American University.

**EZRA, MARKOS.** Population Studies and Training Center, Brown University.

**FALL, BERNARD B.** Professor of Government, Howard University.

**FERETTI, EVELYN.** Department of Agricultural Economics, Cornell University.

**FINLAND, GOVERNMENT OF.** Statistical Office, Helsinki.

**FLETCHER, N.E.W.** Personal Assistant to the Governor-General, Government of Grenada.

**FLETCHER, WILLARD ALLEN.** Professor and Chairman, Department of History, College of Arts & Sciences, University of Delaware.

**FONER, PHILIP S.** Professor of History, Lincoln University.

**FRY, GERALD W.** University of Oregon.

**FULLER, BENNET, Jr.** Researcher/Writer.

**GALLIS, PAUL E.** Congressional Research Service, Library of Congress.

**GAGNON, V. P., JR.** Ithaca College.

**GANJI, MOHAMMAD H.** Chancellor, Amir Showkatul-Mulk University, Birjand, Iran.

**GILBERT, ERIK O.** Arkansas State University.

**GITTELMAN, ELIZABETH.** Researcher/Writer.

**GOBLE, PAUL A.** Carnegie Endowment for International Peace.

**GOLKOWSKA, KRYSZYNA.** Russian Department, Cornell University.

**GOLOVINA, ALLA.** Jackson School of International Studies, University of Washington.

**GOUTTIERRE, THOMAS E.** Dean, International Studies and Programs; Director, Center for Afghanistan, University of Nebraska at Omaha.

**GOVEA, RODGER M.** Associate Professor, Department of Political Science, Cleveland State University.

**GRAYBEAL, N. LYNN.** Researcher/Writer.

**GREEN, KATHRYN L.** California State University, San Bernardino.

**GREENHOUSE, RALPH.** US Information Agency.

**GROELSEMA, ROBERT.** Civil Society Analyst, Africa Bureau, US Agency for International Development, US Department of Agriculture

**GRUNDY, KENNETH W.** Marcus A. Hanna Professor of Political Science, Case Western Reserve University.

**GUENDELSBERGER, JOHN W.** Professor of Law, The Claude W. Pettit College of Law, Ohio Northern University.

**GUENDELSBERGER, NESE.** Attorney at Law, Ada, Ohio.

**GUPTA-CARLSON, HIMANEE.** University of Hawaii.

**HAGERTY, HERBERT G.** Foreign Service Officer (ret.), US Department of State.

**HALE, PATRICIA.** Researcher/Writer, West Hartford, Connecticut.

**HEANEY, JAMES J.** Managing Editor, *Webster's New World Dictionary*.

**HEILMAN, BRUCE.** University of Dar es Salaam, Tanzania.

**HEINTZEN, HARRY.** African Department, Voice of America.

**HIDALGO-NUNEZ, Claudio.** Researcher/Writer.

**HISPANIC AMERICAN REPORT.** Ronald Hilton, Editor; Donald W. Bray, Ronald H. Chilcote, James Cockcroft, Timothy F. Harding, Sir Harold Mitchell, Assistant Editors; Ann Hartfiel, Andrew I. Rematore, Editorial Assistants; Eugene R. Braun, Marjorie Woodford Bray, Lee Ann Campbell, Jorge Caprista, Manuel Carlos, Frances Chilcote, Nancy Clark, Richard L. Cummings, Carlos Darquen, Anthony Dauphinot, Nicholas H. Davis, Joan E. Dowdell, Jerome Durlak, Pan Eimon, Peter L. Eisenberg, Richard Eisman, Claire E. Flaherty, Charles Gauld, Hugh Hamilton, Timothy Harding, Paul Helms, Raymond D. Higgins, Saul Landau, Wendy Lang, Joyce Lobree, Thomas Marks, Marilyn Morrison, Frank Odd, Molly Older, D. Wingeate Pike, Gabriel Pinheiro, Luis Ponce de León, Kenneth Posey, James Purks, Lawrence L. Smith, Maud Maria Straub, Linda Striem, David F. Thompson, Pamela Throop, Alice Wexler, Ann Wyckoff, Allen Young, Michael J. Zimmerman, Contributors.

**HOFFMAN, GEORGE W.** Professor of Geography, University of Texas at Austin.

**HUNSBERGER, WARREN S.** Professor of Economics, American University (with the assistance of Alan D. Smith, Information Officer, Consulate-General of Japan, New York).

**HVIZDOS, SCOTT.** Researcher/Writer.

**HWANG, S. MARTIN.** Binghamton University.

**INDOCHINA RESOURCE CENTER.** Washington, D.C., D. Gareth Porter, Director.

**INGHAM, KENNETH.** Director of Studies, Royal Military Academy, Sandhurst.

**INGRAMS, HAROLD.** Adviser on Overseas Information, Colonial Office, London.

**INTERNATIONAL INSTITUTE FOR AERIAL SURVEY AND EARTH SCIENCES.** F. J. Ormeling, Head of Cartography Department; C. A. de Bruijn, P. Hofstee, A. B. M. Hijl, Department of Urban Surveys.

**IONESCU-HEROIU, MARCEL.** Department of City and Regional Planning, Cornell University.

**ITZKOWITZ, NORMAN.** Associate Professor of Oriental Studies, Princeton University.

**JUDD, KAREN.** Researcher/Writer, New York, New York.

**JUNION-METZ, GAIL.** President, Information Age Consultants.

**KALIPENI, EZEKIEL.** Department of Geography, University of Illinois at Urbana-Champaign.

**KANTOR, HARRY.** Professor of Political Science, Marquette University.

**KAPLAN, FREDRIC M.**

**KARCH, JOHN J.** Professorial Lecturer, Institute for Sino-Soviet Studies, George Washington University.

**KATZ, MARK N.** Associate Professor of Government and Politics, George Mason University.

**KATZMAN, KENNETH.**

**KIM, JULIE.** Congressional Research Service, Library of Congress.

**KING, MAE C.** Harvard University.

**KINGSBURY, ROBERT C.** Assistant Professor of Geography, Indiana University.

**KIRLI, CENGIZ.** Binghamton University.

**KIROS, TEODROS.** Boston University.

**KISH, GEORGE.** Professor of Geography, University of Michigan.

**KITIGWA, MIRAJI.** University of Dar es Salaam, Tanzania.

**KOLEHMAINEN, JOHN I.** Chairman, Department of Political Science, Heidelberg College.

**KOLINSKI, CHARLES J.** Professor of History, Florida Atlantic University.

**KOPECKY, DEAN.** Researcher/Writer.

**KOSTANICK, HUEY LOUIS.** Professor of Geography, University of Southern California.

**KRANZ, WALTER.** Press and Information Officer, Principality of Liechtenstein.

**KURZER, PAULETTE.** Department of Political Science, University of Arizona.

**KYLE, DAVID.** Texas A&M University.

**LAATIKAINEN, KATIE VERLIN.** Wilkes University.

**LAYACHI, AZZEDINE.** St. John's University.

**LAZERSON, JOSHUA.** Researcher/Writer.

**LEE, ROBERT H.G.** Assistant Professor of History, State University of New York at Stony Brook.

**LEMARCHAND, RENE.** Director, African Studies Center, University of Florida.

**LENGYEL, EMIL.** Professor of History, Fairleigh Dickinson University (in collaboration with Catherine Logan Camhy).

**LEWIS, H. A.** G.O.B.E., Fellow, Royal Geographical Society (United Kingdom).

**LEWIS, STEVE.** Researcher/Writer.

**LEWIS, WILLIAM H.** Department of Anthropology and Sociology, American University.

**LICHTENSTADTER, ILSE.** Center for Middle Eastern Studies, Harvard University.

**LINDO, WILLIAM.** Government Information Services, Government of Belize.

**LOBBAN, RICHARD A., JR.** Department of Anthropology, Rhode Island College.

**LOBOS, IGNACIO A.** Journalist, Honolulu, Hawaii.

**LODRICK, DERYCK O.** Visiting Scholar, Center for South Asian Studies, University of California, Berkeley.

**LONGMAN, TIMOTHY.** Vassar College.

**LUX, WILLIAM R.** Assistant Professor of History, University of Alabama.

**LYNCH, CATHERINE.** Assistant Professor, Department of History, Case Western Reserve University.

**MA, JUNLING.** Researcher/Writer.

**MARCUS, LAWRENCE.** Washington University.

**MARKS, HENRY S.** Professor of History, Northeast Alabama State Junior College.

**MATHEWS, THOMAS G.** Secretary-General, Association of Caribbean Universities and Research Institutes, Puerto Rico.

**McCANN, JAMES C.** Boston University.

**McDONALD, JAMES L.** Senior International Policy Analyst, Bread for the World.

**McGUIRE, CARL.** Professor of Economics, University of Colorado.

**McHALE, VINCENT.** Chairman, Department of Political Science, Case Western Reserve University.

**McINTIRE, ROBERT C.** Associate Professor and Chairman, Department of Political Science, Millikin University.

**McLELLAN, ROBERT S.** US Information Agency.

**MacLEOD, MURDO.** University of Florida.

**McLOUGHLIN, GLENN.** Specialist in Science and Technology Policy, Congressional Research Service, Library of Congress.

**MENDELL, MARCIA EIGEN.**

**METZ, RAYMOND E.** Interim Director, University Libraries, Case Western Reserve University.

**MILLER, NATHAN.** Associate Professor of History, University of Wisconsin, Milwaukee.

**MILLETT, ALLAN R.** Mason Professor of Military History, The Mershon Center, The Ohio State University.

**MILNE, R. S.** Professor of Political Science, University of British Columbia.

**MIRANTE, EDITH.** Project Maje, Portland, Oregon.

**MONCARZ, RAUL.** Professor, Department of Economics, Florida International University.

**MORTIMER, MOLLY.** Former Commonwealth Correspondent, *The Spectator*, London.

**MOSELEY, EDWARD.** Assistant Professor of History, University of Alabama.

**MUNRO, ALLISON DOHERTY.**

**NAVIA, PATRICIO.** Department of Politics and Center for Latin American Studies, New York University.

**NETOS, ELEFTHERIOS.** Candidate, Kent State University.

**NEW YORK UNIVERSITY, DEPARTMENT OF POLITICS.** I. William Zartman, Editor; John Entelis, Oladipo Coles, Jeffrey Knorr, Marie-Daniele Harmel, Contributors.

**NICHOL, JAMES.** Congressional Research Service, Library of Congress.

NICHOLSON, NORMAN L. Professor of Geography, University of Western Ontario.

NOROOZI, TOURAJ. University of Utah.

O'DELL, ANDREW C. Professor of Geography, University of Aberdeen.

OH, JOHN K. C. Professor of Political Science, Marquette University.

OLCOTT, MARTHA BRILL. Professor, Department of Political Science, Colgate University.

OLIVER, ROBERT T. Head, Department of Speech, Pennsylvania State University.

PANORAMA DDR. Berlin.

PAPP, TIBOR. Columbia University.

PATAI, RAPHAEL. Editor, The Herzl Press.

PAYNE, WALTER A. Professor of History, University of the Pacific.

PENIKIS, ANDREJS. Columbia University.

PETROV, VICTOR P. Professor of Geography, California State College.

PETROVA, TVESTA. Department of Government, Cornell University.

POLAND, EMBASSY OF. Washington, D.C.

POLK, WILLIAM R. Director, Adlai E. Stevenson Institute, University of Chicago.

PRAGOPRESS. Prague.

PRECHT, HENRY. Adjunct Associate Professor, Department of Political Science, Case Western Reserve University.

PRICE, GEORGE. Premier, Belize.

RANAHAN, JOHN. Lake Ridge Academy.

RASHID, TAUFIQ. Indiana University.

RASHIDUZZAMAN, M. Professor of Political Science, Glassboro State College.

REINES, BERNARD. Researcher/Writer.

REYNOLDS, JONATHAN T. Livingstone College.

RIEDINGER, JEFFREY M. Michigan State University.

RITTERBUSH, DEACON. Researcher/Writer.

ROBINSON, KENNETH E. Director, Institute of Commonwealth Studies, and Professor of Commonwealth Affairs, University of London.

ROBINSON, RICHARD D. Lecturer on Middle Eastern Studies, Center for Middle Eastern Studies, Harvard University.

ROSEBERG, CARL G., JR. Associate Professor of Political Science, University of California.

ROSEWATER, GAIL. Researcher/Writer, Cleveland, Ohio.

ROTBURG, ROBERT I. Professor of Political Science and History, MIT.

Ruiz-Casares, Monica. Cornell University.

RUPEN, ROBERT A. Associate Professor of Political Science, University of North Carolina.

RUS, VLADIMIR. Department of Slavic Literature (ret.), Case Western Reserve University.

**ZULU, LEO.** Department of Geography, University of Illinois at Urbana-Champaign.

# ACKNOWLEDGMENTS

A basic part of the editorial preparation of the *Worldmark Encyclopedia of the Nations* consists of keeping continuously abreast of the work of governments. The editors wish to express their gratitude to the many government officials the world over who so kindly gave their cooperation. Grateful acknowledgment is made for the invaluable material, used throughout the encyclopedia, drawn from the mass of documents issued by the United Nations and its specialized agencies. Gratitude is expressed for the assistance given by numerous officials of the UN, the specialized agencies, and the intergovernmental and nongovernmental organizations.

The editors would like to specifically thank the staffs of the United Nations Public Inquiry Unit (headed by Ms. M. Hosali) and the Dag Hammarskjöld Library (headed by Ms. Rima Bordcosh) for the many hours they spent tracking down answers to particularly obscure questions. Special thanks is extended to the following individuals and units for substantive contributions on the work of their organizations: Jackie Aid-enbaum and Mary Lou Murphy, DHA; Marie Paul Aristy, Chief Information, Communication and Documentation Unit, INSTRAW; Vera Azar and Lina Arafat, ESCWA, United Nations; Nassrine Azimi, UNITAR; Max Bond, UN University; Sabine Bauer and Sylvie Bryant, UNDCP; Borjana Bulajic, Social Affairs Officer, INSTRAW; Michael Cassandra, Centre for Disarmament Affairs, United Nations; Mary Covington, ILO; Padraig Czajkowski, Centre for Human Rights, United Nations; Jacqueline Dauchy, Director, Codification Division, Secretariat of the Commission on International Law, United Nations; Shalini Dewan, Chief, Editorial and Publications Section, Division of Communications, UNICEF; Allen Dorsey, ICRC Delegation to the UN; Fred Eckhard, Rolando Gomez, and Jane Gaffney, Office of Spokesman for the Secretary-General; Lynn Failing, Deputy Chief, Public Information Office, UNRWA; Donald E. Fitzpatrick, Special Assistant to the Under Secretary General for Administration and Management, United Nations; Hirut Gebre-Egzi-abher, Project Officer, Division of Information, UNICEF; Christine Graves, FAO; Marilla B. Guptil, United Nations Archives; H. J. Frick, Chief, Official Relations Branch, ILO; Nandasiri Jasentuliyana, Director, Office for Outer Space Affairs, United Nations; Maurice Jorgens, DOALOS; Mary Lynn Hanley, Chief, Editorial and Audio Visual Branch, Division of Public Affairs, UNDP; James T. Hill, Senior Economist, and Marva Coates, FAO; Margaret A. Kelly, Secretary, ECOSOC, United Nations; George Kell and Nina Weckstrom, UNCTAD; Julie A. Kimbrough, Media and NGO Liaison Officer, IFAD; Roger Kohn, Head of Information Office, IMO; Pamela Maponga, Secretariat of the Special Committee on Apartheid, United Nations; Luciana Marulli-Koenig, Chief Information Support Unit, Dept. of Policy Coordination and Sustainable Development, United Nations; William Lee, UNRWA; Ian McDonald, Chief Editor, IMF; Mehri Madarshahi, Department of Administration and Management, UN; Isabelle Marsalles, Electoral Assistance Division; Alex Marshall and Stirling Scruggs, UNFPA; Allegra Morelli, Director, Information Division, IFAD; Ozdinch Mustafa, Senior Political Affairs Officer, Trusteeship Council, United Nations; Marie Okabe, Senior Liaison Officer, UNHCR; Lisa Pachter, International Relations Officer, Office of the Vice President, United Nations Affairs, World Bank Group; Sarah Parkes, ITU; Carrie Power, UNIFEM; Andrew Radolf, UNESCO; Aurora Rodriguez, UNIDO; Ann Rogers, Senior Economist, Department of Policy Coordination and Sustainable Development, United Nations (for information on the World Food Council); Simeon Sahaydachny, Legal Officer, International Trade Law Branch, Office of Legal Affairs, UNCITRAL; Sunil Saigal, Acting Chief, Division of Resources Mobilization, Bureau for Resources and External Affairs, UNDP; Samir Sanbar, Under Secretary General, Department of Public Information, United Nations; Wesley Scholz, United States Department of State (for information on the Law of the Sea Convention); Jim Snissen, UNEP; Maria-Sabina Yeterian-Parisi, Economic Affairs Officer, Policy Coordination and External Relations Service, UNCTAD; Dorothy Thibodeau, Public Affairs Division, IMF; Celinda Verano, WHO Office at the UN; D. Williams, WMO; David J. Woods, Director, Information Division, GATT; External Relations Division, UNIDO; Communications and External Relations Section, UNIFEM; Division of External Relations, UNHCR; Adrienne Cruz, Publications, Dissemination and Reference Centre, UNRISD; Department of Public Information, UPU; Department of Public Relations and Information, WIPO; and the Secretariat of the World Meteorological Organization.

This encyclopedia greatly benefited from statistics and information requested of the governments of the nations profiled in these volumes. The following persons, personally or through the auspices of their offices, graciously responded to our request for information: Mr. Arben Tashko, Embassy of the Republic of Albania; Mr. Hamid Belhadj, Embassy of the Democratic and Popular Republic of Algeria; Ms. Debbie O. Proffer, Embassy of Antigua and Barbuda; Mr. Garnik Ashotovich Nanagulian, Embassy of the Republic of Armenia; Mr. Christopher Sweeney, Embassy of Australia; Mr. Martin G. Eichtinger, Embassy of Austria; Mr. Djeikhoun Nazim Molla Zade, Embassy of the Republic of Azerbaijan; Mrs. Diane A. Dean, Embassy

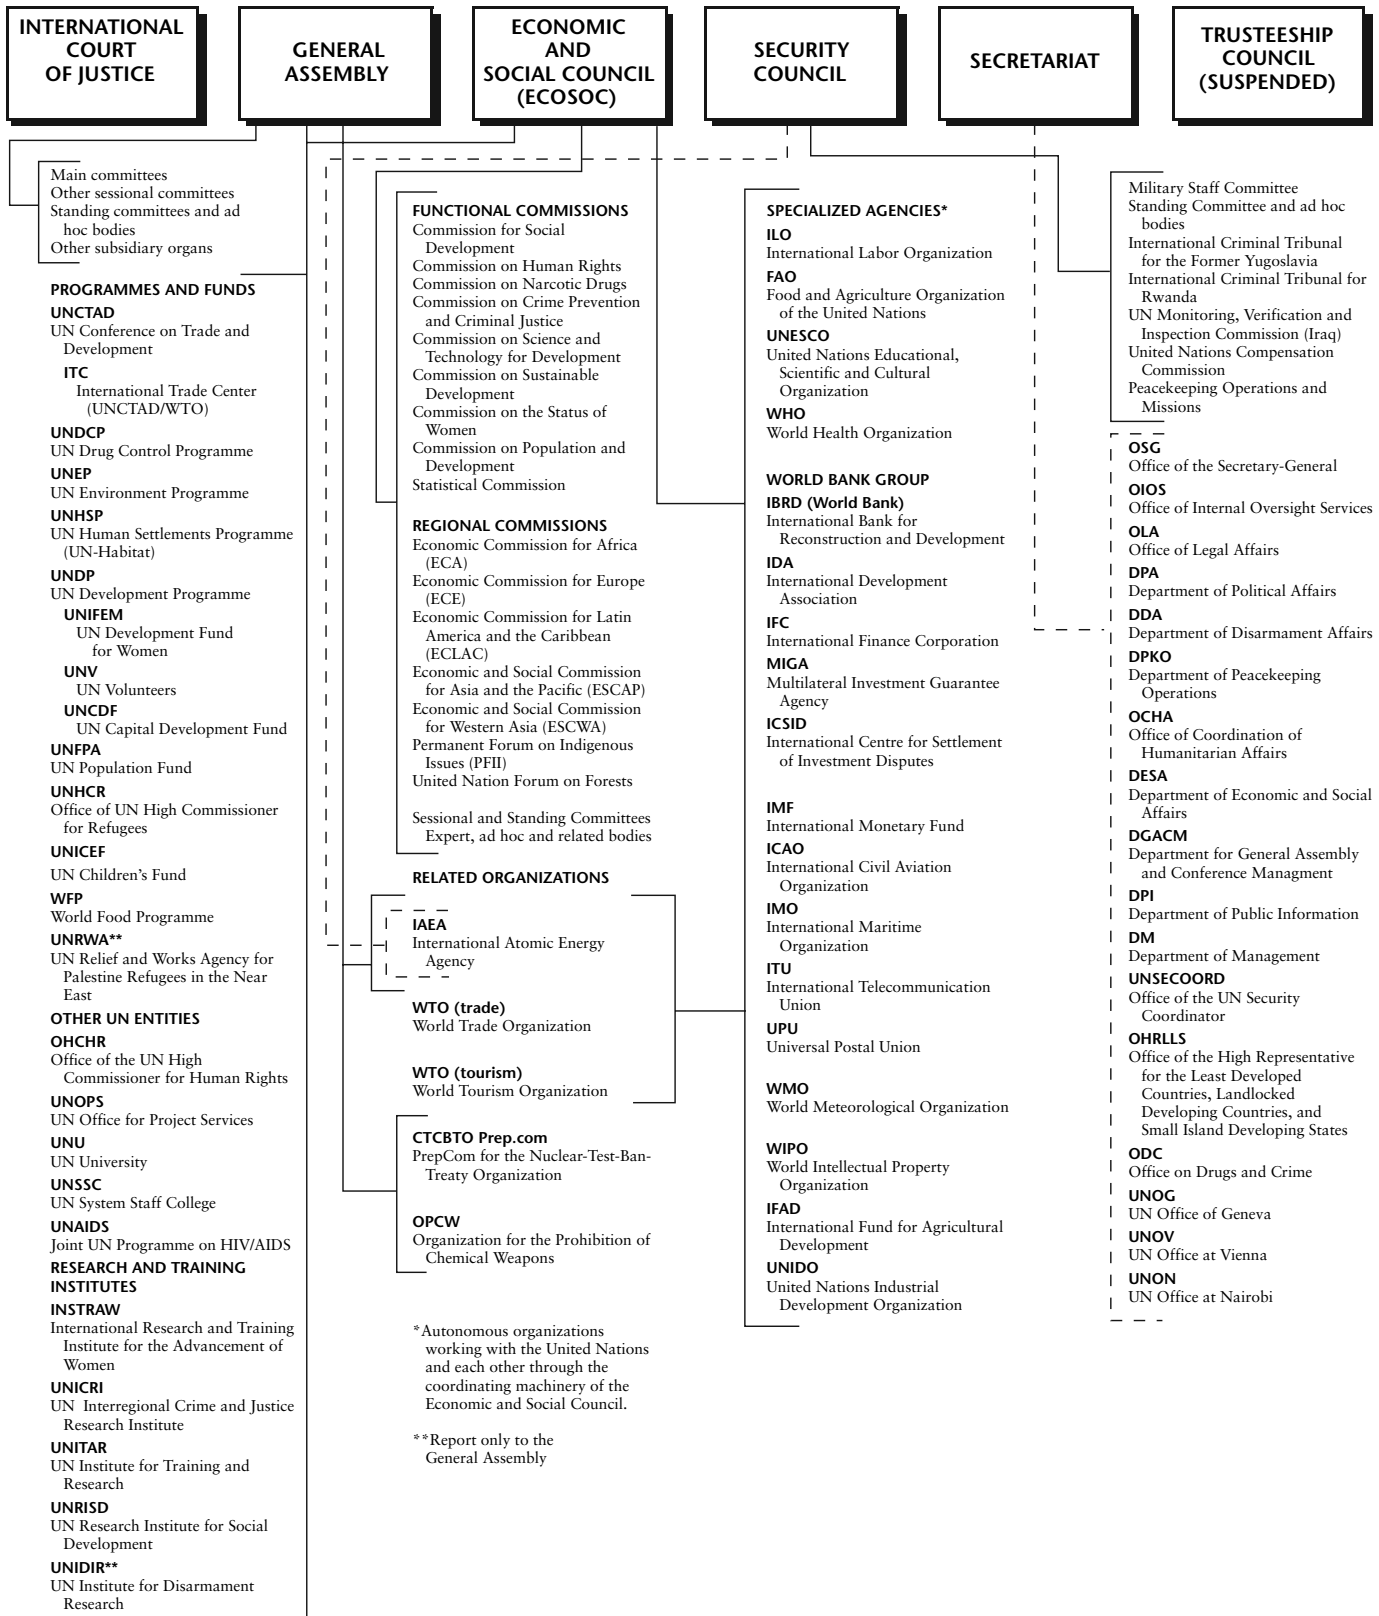

of the Commonwealth of the Bahamas; Mr. Othman Abdulla Mohammed Rashed, Embassy of the State of Bahrain; Mr. K. M. Ejazul Huq, Embassy of the People's Republic of Bangladesh; Mr. Charles Chesterfield Burnett, Embassy of Barbados; Mrs. Gisele Louise Eggermont, Embassy of Belgium; Mrs. Yvonne Sharman Hyde, Embassy of Belize; Mr. Augustine Moipolai Pone, Embassy of the Republic of Botswana; Mr. Eduardo Botelho Barbosa, Brazilian Embassy; Mr. Ahmad Hajjugin, Embassy of the State of Brunei Darussalam; Ms. Djeneba Yasmine Traore, Embassy of Burkina Faso; Mr. Pierre Ndzengue, Embassy of the Republic of Cameroon; Mr. L. Ian MacDonald, Embassy of Canada; Mrs. Maria I. M. Correa Reynolds, Embassy of Chile; Mr. Antonia F. Copello, Embassy of Colombia; Mr. Kresimir Cosic, Embassy of the Republic of Croatia; Mr. Miltos Miltiadou, Embassy of the Republic of Cyprus; Mr. Joergen Grunnet, Royal Danish Embassy; Mr. Issa Daher Bopuraleh, Embassy of the Republic of Djibouti; Dr. Dario Suro, Embassy of the Dominican Republic; Mr. Kamel Abdel Hamid Mohamed Ahmed, Embassy of the Arab Republic of Egypt; Mr. Eerik Niiles Kross, Embassy of Estonia; Mr. Demissie Segu Segu, Embassy of Ethiopia; His Excellency Pita Kewa Nacuva, Embassy of the Republic of Fiji; Mrs. Pirkko Liisa O'Rourke, Embassy of Finland; Mr. Jean Mendelson, Embassy of France; Mr. Gott-fried Haas, Embassy of the Federal Republic of Germany; Miss Mara Marinaki, Embassy of Greece; His Excellency Kenneth Modeste, Embassy of Grenada; His Excellency The Most Reverend Agostino Cacciavillan, Apostolic Nunciature; Mr. Rosny Montoya Flores, Embassy of Honduras; Miss Klara Breuer, Embassy of the Republic of Hungary; Mr. Jon Egill Egilsson, Embassy of Iceland; Mr. Sanjay Bhatnagar, Embassy of India; Mr. Subekti Dhirdjosaputro, Embassy of the Republic of Indonesia; Mr. Nimrod Barkan, Embassy of Israel; Mr. Alessandro Vaciago, Embassy of Italy; Mr. Seiichi Kondo, Embassy of Japan; Mr. Marwan J. Muasher, Embassy of the Hashemite Kingdom of Jordan; Mr. Byong Suh Lee, Embassy of Korea; Dr. Ali Ahmad Al Tarrah, Embassy of the State of Kuwait; Mr. Ints Upmacis, Embassy of Latvia; Mr. Tsepiso Jeffrey Malefane, Embassy of the Kingdom of Lesotho; Dr. Alfonse Eidintas, Embassy of the Republic of Lithuania; Miss Colette Kinnen, Embassy of Luxembourg; Mr. Robert B. Mbaya, Embassy of Malawi; Mr. Alfred M. Falzon, Embassy of Malta; Mr. Banny DeBrum, Embassy of the Republic of the Marshall Islands; Mr. Amadou Diaw, Embassy of the Islamic Republic of Mauritania; Mr. Joaquin Gonzalez Casanova, Embassy of Mexico; Mr. Kodaro M. Gallen, Embassy of the Federated States of Micronesia; Mr. Nadmidyn Bavuu, Embassy of Mongolia; Mr. Antonio Paulo Elias Matonse Jr., Embassy of the Republic of Mozambique; Mr. Japhet Isaack, Embassy of the Republic of Namibia; Mr. Frans L.E. Hulsman, Embassy of the Netherlands; Mr. Robert Carey Moore Jones, Embassy of New Zealand; Mr. Enrique Vanegas, Embassy of Nicaragua; Mr. Adamou Abdou, Embassy of the Republic of Niger; Mr. Tore Tanum, Royal Norwegian Embassy; Mr. Salim Al Mahrooqy, Embassy of the Sultanate of Oman; Mr. Malik Zahoor Ahmad, Embassy of Pakistan; Miss Lerna L. Llerena, Embassy of the Republic of Panama; Mr. Christopher Mero, Embassy of Papua New Guinea; Mr. Jose M. Boza, Embassy of Peru; Mr. Boguslaw M. Majewski, Embassy of the Republic of Poland; Professor Maria Graca S. Almeida Rodrigues, Embassy of Portugal; Mrs. Natal'ya P. Semnikhina, Embassy of the Russian Federation; Mr. John P. Irish, Embassy of St. Kitts and Nevis; Ms. Undine George, Embassy of Saint Lucia; Ms. Cecily A. Norris, Embassy of Saint Vincent and the Grenadines; Dr. Hamad Ibrahim Al Salloom, Embassy of Saudi Arabia; Mr. Marc R. Marengo, Embassy of the the Republic of Seychelles; Miss Siong Fun Lim, Embassy of the Republic of Singapore; Mr. Jaroslav Smiesny, Embassy of the Slovak Republic; Mr. Gregor S. Zore, Embassy of the Republic of Slovenia; Mr. Atukoralalage A. Wijetunga, Embassy of the Democratic Socialist Republic of Sri Lanka; Mr. Abdalla Khidir Bashir, Embassy of the Republic of the Sudan; Mrs. Lindiwe Audrey Nhlabatsi, Embassy of the Kingdom of Swaziland; Mr. Ingmar J. Bjorksten, Embassy of Sweden; Mr. Francois Barras, Embassy of Switzerland; Ms. Souad Mourazen Al Ayoubi, Embassy of the Syrain Arab Republic; Mr. Ally O. Mjenga, Embassy of the United Republic of Tanzania; Mr. Oussama Romdhani, Embassy of Tunisia; Mr. Ahmet Mahfi Egilmez, Embassy of the Republic of Turkey; Mr. Dmitro Y. Markov, Embassy of Ukraine; Mr. Atiq Mubarak Marzoog Khamis, Embassy of the United Arab Emirates; Mr. Nicholas W. Browne, British Embassy; Mr. Carlos Maria Irigaray, Embassy of Uruguay; Mr. Ramon Hernandez, Embassy of the Republic of Venezuela; Mr. Lazarous Kapambwe, Embassy of the Republic of Zambia; Mr. Mark Grey Marongwe, Embassy of the Republic of Zimbabwe. Special acknowledgment goes to Margaret Hunter, Embassy of Turkmenistan and Veronica Rentmeesters, Embassy of Eritrea for their help in providing current information on their respective countries.

The following individuals and agencies deserve special acknowledgment for their generous assistance: Ernest Carter, USDA, Foreign Agricultural Service; Orlando D. Martino, Chief, Branch of Latin America and Canada, US Department of the Interior, Bureau of Mines, Division of International Minerals; Bernadette Michalski, Energy Analyst, US Department of the Interior, Bureau of Mines, Division of International Minerals; Hendrik G. van Oss, Economic Geologist, US Department of the Interior, Bureau of Mines, Division of International Minerals; Lowell Feld, Energy Information Administration, Energy Markets and Contingency Information Division; Matthew E. Brosius, Deputy Head of Center, Organization for Economic Co-operation and Development; Rosario Benevides, Salomon Brothers; Sarah Baker, BP America, Reference Center.

# THE UNITED NATIONS SYSTEM

# THE UNITED NATIONS FAMILY OF ORGANIZATIONS

---

# STRUCTURE OF THE UNITED NATIONS SYSTEM

The UN system is often referred to as a “family” of organizations. The charter of the UN, signed in San Francisco on 26 June 1945, defined six main organs of the new world body, each with specific tasks and functions. However, because it was impossible to foresee all the demands that might be made on the organization, provision was made for extending its capacities as the need arose. Thus, three of the main organs are specifically empowered to establish “such subsidiary organs” as may be considered necessary for the performance of their functions. In addition, Article 57 of the charter provides that the various specialized agencies established by intergovernmental agreement and having international responsibilities in economic, social, cultural, educational, health, and related fields “shall be brought into relationship” with the UN. Since the signing of the charter, the UN has established numerous subsidiary organs and has entered into relationship with various independent organizations. Reproduced is a chart showing the various organs and bodies within the UN system.

For assistance in interpreting the chart, a brief survey of the UN’s main organs, the different categories of subsidiary organs, and the related agencies is given below. A detailed description of the functioning of each of the main organs and an account of the work of selected subsidiary organs are contained in later chapters of the first section of this volume. The structure and work of the UN specialized and technical agencies are described in the second section.

## MAIN ORGANS OF THE UN

1. *The General Assembly*, composed of representatives of all member states, is the UN’s central deliberative body, empowered to discuss and make recommendations on any subject falling within the scope of the charter itself. It also approves the UN’s budget and determines—alone or with the Security Council—part of the composition of the other main organs, including the Security Council.
2. *The Security Council*, a 15-member body, has primary responsibility for maintaining international peace and security. In times of crisis, it is empowered to act on behalf of all member states and to decide on a course of collective action that is mandatory for the entire membership. The charter names five states as permanent members of the Security Council: China, France, the United Kingdom, Russian Federation, and the United States (those that were chiefly responsible for the defeat of the Axis powers in 1945). The remaining Security Council members are elected by the General Assembly for two-year terms.
3. *The Economic and Social Council (ECOSOC)* is assigned the task of organizing the UN’s work on economic and social matters and the promotion of human rights. It consists of 54 members elected for overlapping three-year terms by the General Assembly.
4. *The Trusteeship Council* operated the UN trusteeship system

established under the charter. It was originally composed of member nations administering trust territories, the permanent members of the Security Council, and a sufficient number of other members, elected by the General Assembly for three-year terms, to ensure an equal division of administering and nonadministering powers. After 1975, it was composed of the five permanent members of the Security Council—the United States, the sole remaining administering power, and the four permanent nonadministering powers. The last trust territory, the Pacific island of Palau, voted for affiliation with the United States in late 1993. The Trusteeship Council voted in 1994 to suspend operation, convening only at the request of its President, a majority of its member states, the General Assembly, or the Security Council.

5. *The International Court of Justice* is the principal judicial organ of the UN. It consists of 15 judges elected to nine-year terms by the General Assembly and the Security Council voting independently. It may not include more than one judge of any nationality. The Members of the Court do not represent their governments but are independent magistrates.
6. *The Secretariat* is the administrative arm of the organization. It is headed by a Secretary-General appointed by the General Assembly upon the recommendation of the Security Council for a five-year, renewable term.

## SUBSIDIARY ORGANS OF THE UN

The UN Charter specifically confers the right to create subsidiary organs upon the General Assembly, the Security Council, and the Economic and Social Council. The subsidiary bodies fluctuate in number from year to year, according to the changing requirements of the main organ concerned. Both the General Assembly and the Economic and Social Council, for instance, often create subsidiary bodies to assist them in new fields of concern and dissolve others that have completed their work. Some of the subsidiary organs in turn set up their own subsidiary units—working groups, subcommittees, and the like.

### Subsidiary Organs of the General Assembly

The General Assembly’s subsidiary organs range in complexity and status from temporary committees to semiautonomous institutions that maintain their own secretariats or administrative departments. The names of the institutions or programs in existence in 2006, most of which were set up under the joint aegis of the General Assembly and the Economic and Social Council and operate through ECOSOC, appear in the lower left-hand column of the UN Family of Organizations chart. The remaining subsidiary organs are too numerous to list; the chart merely indicates their principal types: main and other sessional committees, stand-

ing committees and ad hoc bodies, and other subsidiary organs and related bodies.

The main and sessional committees comprise representatives of all member states and are formally reconstituted at each regular General Assembly session to discuss the various items on the agenda for that year. Two sessional committees are not committees of the whole—the 28-member General Committee, which reviews the General Assembly's agenda prior to its adoption at each session, and the nine-member Credentials Committee, which examines the credentials of delegations sent to each General Assembly session.

There are many standing committees, ad hoc bodies, and other subsidiary organs and related bodies. Some of the more important of these are:

- the Advisory Committee on Administrative and Budgetary Questions (ACABQ), a 16-member expert committee which reviews the budgets submitted by the Secretary-General;
- the Committee for Programme and Coordination, a 34-member committee, that reviews the programmatic aspects of the Secretary-General's budget;
- the 18-member Committee on Contributions, which recommends the scale of assessments that nations are required to pay as their share of the United Nations budget;
- the Chief Executives Board (CEB) for Coordination, formerly the Administrative Committee on Coordination (ACC), established by ECOSOC in 1946. It is composed of the Secretary-General and the executive heads of 26 member organizations and is assisted by two high-level committees, the High Level Committee on Programmes (HLCP) and the High Level Committee on Management (HLCM). Its purpose is to promote cooperation on all of the substantive and management issues facing the UN system.

Substantive committees have been set up by General Assembly resolutions to study specific subjects of interest—for example, the peaceful uses of outer space, South Africa's former system of apartheid, and independence for colonial territories. Such committees, whose members are elected by the General Assembly or appointed by its president, usually meet several times a year. At each regular session, they report on their deliberations. They continue as long as is considered necessary. Even when their mandate seems completed, they are not necessarily formally disbanded but may be adjourned indefinitely and reactivated when the need arises. It is through these committees that the General Assembly accomplishes most of its work outside the spheres of responsibility that are specifically entrusted to the Economic and Social Council, the Trusteeship Council, or the various semiautonomous bodies referred to above.

#### Subsidiary Organs of the Security Council

The Military Staff Committee was established by the charter to advise the Security Council on the military aspects of maintaining international peace. However, the Military Staff Committee secretariat, though it holds regular formal meetings, has never been consulted on any of the UN's peacekeeping operations. The other subsidiary bodies shown on the chart in the lower right-hand column were set up, as their names suggest, to conduct the council's peacekeeping operations in the areas specified. Between June 1948 and May 2006, there were 60 peacekeeping operations, of which

45 were complete. (For further information on the work of these bodies, see the chapter on International Peace and Security.)

The Security Council maintains two standing committees, each including representatives of all Security Council member states: Committee of Experts on Rules of Procedure (studies and advises on rules of procedure and other technical matters); and Committee on Admission of New Members. Additionally, there are various ad hoc committees, established as needed; these comprise all council members and meet in closed session. Ad hoc committees include the Security Council Committee on Council meeting away from Headquarters; Governing Council of the United Nations Compensation Commission established by Security Council resolution 692 (1991); and Committee established pursuant to Resolution 1373 (2001) concerning Counter-Terrorism.

The Security Council, acting under Chapter VII of the charter, which deals with "action with respect to threats to the peace, breaches of the peace, and acts of aggression," may set up committees to monitor compliance by member states with its resolutions. These committees include: in 1966, when it imposed mandatory economic sanctions against the illegal regime in Southern Rhodesia; in 1977, when it imposed a mandatory arms embargo against South Africa; in 1991, after Iraq's unsuccessful invasion of Kuwait, to supervise the elimination of Iraq's weapons of mass destruction; in 1992, concerning the situations in the Libyan Arab Jamahiriya and Somalia; in 1993, concerning Angola; in 1994, concerning the volatile situation created by Hutu rebels in Rwanda; in 1995, concerning Liberia; in 1997, in the wake of years of civil war in Sierra Leone; in 1998, concerning an arms embargo on Yugoslavia, including Kosovo; in 1999, concerning Afghanistan; in 2000, concerning the situation between Eritrea and Ethiopia; in 2001 and 2003, again concerning Liberia; in 2004, concerning the Democratic Republic of the Congo; in 2004, concerning Côte d'Ivoire; and in 2005, concerning the Sudan.

#### Subsidiary Organs of the Economic and Social Council

As indicated on the chart, there are four types of subsidiary organs of the Economic and Social Council:

1. the semiautonomous bodies (organizations, programs, and funds);
2. regional commissions;
3. functional commissions; and
4. sessional, standing, and ad hoc committees.

### UN SPECIALIZED AND TECHNICAL AGENCIES

The specialized and technical agencies are separate autonomous organizations with their own policy-making and executive organs, secretariats, and budgets. The precise nature of their relationship with the UN is defined by the terms of special agreements that were established with the Economic and Social Council and subsequently approved by the General Assembly, as provided for in Article 63 of the charter. Since Article 63 also empowers the Economic and Social Council to coordinate the activities of the specialized agencies through consultation and recommendations, they are required to report annually to it.

Mention should be made here of the special status of the General Agreement on Tariffs and Trade (GATT), which was succeeded

by the World Trade Organization. At its inception in 1948, GATT was a treaty establishing a code of conduct in international trade and providing machinery for reducing and stabilizing tariffs. The treaty was concluded pending the creation of a specialized agency to be known as the International Trade Organization, whose draft charter was completed in 1948 but was never ratified by the important trading powers. With the successful conclusion of the Uruguay Round of GATT, a new body, the World Trade Organization, supplanted it in 1995. (For further details, see the chapter on the World Trade Organization.)

The International Atomic Energy Agency (IAEA) is distinguished from the other agencies in that it was specifically established under the aegis of the UN and is therefore considered in a category by itself. The IAEA reports annually to the General Assembly and only “as appropriate” to the Economic and Social Council. Because of the nature of its work, the IAEA also reports to the Security Council, again only “as appropriate.”

### THE BRETTON WOODS INSTITUTIONS

These institutions were created before the United Nations itself, at a conference at Bretton Woods, New Hampshire, in the United States in 1944. In the UN Charter, however, they were considered to be an integral part of the system of UN agencies. However, their agreements with the UN bind them only loosely to the rest of the system. The nature of these organizations is very different from the one country, one vote basis of the UN and the other specialized agencies (*see* World Bank and International Monetary Fund [IMF] in the second part of this volume). Membership in the Bretton Woods institutions is subject to financial subscription, and voting is weighted according to members’ shares, effectively giving wealthy countries more control than poorer countries. When the World Bank became affiliated with the United Nations, it maintained its complete independence as far as coordination,

refused to provide regular information to the UN, limited UN attendance at its meetings, and insisted on a clause eliminating any UN involvement in its budgets. While there is growing cooperation between the World Bank and some UN technical cooperation funds, like the United Nations Development Programme (UNDP), a 1993 study by the Joint Inspection Unit found that there was not much operational cooperation between the UN system organizations and the World Bank organizations.

### THE SIZE AND COST OF THE UN SYSTEM

Since the early 1980s, the United Nations has been criticized for being a “vast, sprawling bureaucracy,” and politicians have not hesitated to call it “bloated” or “swollen.” This perception led to a drive for reform in the mid-1980s during which major contributing countries initiated a 13 percent staff cut. Another round of “rationalization” of the system and its secretariats was initiated in 1991. Tightening the budget remained a focus throughout the 1990s. The proposed UN budget for the 2002–03 biennium was us\$2.519 billion. This represented a 0.5% real resource reduction from the 2000–2001 biennium. During the previous six years, the UN had no budgetary growth. Even in dollar terms, the UN’s total budget was lower in 2002 than it was in 1994–1995. For the 2002–2003 budget, small increases were made in areas such as: international peace and security; the promotion of sustained economic growth and sustainable development; the development of Africa; the promotion of human rights; the coordination of humanitarian assistance efforts; the promotion of justice and international law; disarmament; drug control; crime prevention; and combating international terrorism. For the 2006–07 biennium, the General Assembly adopted a budget of us\$3.79 billion, while limiting first-year expenditures by the Secretary-General, who pledged further reform.

---

# COMPARISON WITH THE LEAGUE OF NATIONS

The League of Nations grew out of the catastrophe of World War I (1914–18). Though the idea of the establishment of a body in which the nations of the world could settle their disagreements had been put forth periodically since antiquity, the League, created at the 1919 Paris Peace Conference, was the first organization of sovereign states designed to be universal and devoted to the settlement of disputes and the prevention of war. The League's failure to prevent the outbreak of World War II in 1939 did not destroy the belief in the need for a universal organization. On the contrary, it bred a determination to learn from the mistakes of the past and to build a new world body more adequately equipped to maintain international peace in the future.

The differences between the League of Nations and the UN begin with the circumstances of their creation. First, whereas the Covenant of the League was formulated after hostilities were ended, the main features of the UN were devised while war was still in progress. The more comprehensive powers assigned to the UN for the preservation of peace may owe something to the urgent conditions in which it was conceived. Second, the Covenant was drawn up in an atmosphere of divided attention at the Paris Peace Conference and was incorporated as part of the peace treaty with Germany. Although countries were permitted to ratify the Covenant and the treaty separately, the link between them was not good psychology and contributed, for example, to the unwillingness of the US Senate to ratify the Covenant. In contrast, the UN Charter was drafted as an independent legal instrument at a conference especially convened for the purpose. Third, the Covenant was hammered out behind closed doors, first by the five major powers of the era—France, Italy, Japan, the United Kingdom, and the United States—and eventually in conjunction with nine other allied nations. The final text of the UN Charter, on the other hand, was the product of combined efforts of 50 nations represented at the 1945 San Francisco Conference and therefore took into account the views of the smaller nations, especially their concern to give the new organization far-reaching responsibilities in promoting economic and social cooperation and the independence of colonial peoples.

## VOTING

Under the Covenant, decisions of the League could be made only by unanimous vote. This rule applied both to the League's Council, which had special responsibilities for maintaining peace (the equivalent of the UN's Security Council), and to the all-member Assembly (the equivalent of the UN's General Assembly). In effect, each member state of the League had the power of the veto, and, except for procedural matters and a few specified topics, a single "nay" killed any resolution. Learning from this mistake, the founders of the UN decided that all its organs and subsidiary bod-

ies should make decisions by some type of majority vote (though, on occasion, committees dealing with a particularly controversial issue have been known to proceed by consensus). The rule of unanimity applies only to five major powers—France, China, the United Kingdom, the United States, and the Russian Federation—and then only when they are acting in their capacity as permanent members of the Security Council. The Security Council also proceeds by majority vote, but on substantive (though not on procedural) matters, it must include the concurring votes of all the permanent members. (See the section on Voting in the chapter on the Security Council.)

## CONSTITUTIONAL POWERS TO PREVENT WAR AND END AGGRESSION

The Charter was designed to remedy certain constitutional defects and omissions in the Covenant that the founders of the UN believed had been partly responsible for the League's inability to halt the drift toward a second world war in the 1930s. These defects and omissions included the absence of any provision imposing a total ban on war, the provision of an overly rigid procedure for negotiating disputes between states, and the failure to vest the League's Council with sufficient powers to prevent the outbreak of hostilities or to terminate hostilities that had already begun.

The Covenant forbade military aggression but did not reject the limited right of a state to start a war, provided that it had first submitted the dispute to arbitration, judicial decision, or the Council of the League. If one party accepted the findings of the negotiating body and the second did not, the first might then resort to war legally after a "cooling-off" period.

The Charter recognizes no circumstances under which a nation may legally start a war. Article 51 does guarantee the right to individual or collective self-defense, which is a right to respond to an illegal armed attack but not to initiate one. If the Security Council decides that a "threat to the peace" exists, it has the power to order collective enforcement measures. These are mandatory for all member states and may include economic sanctions or military measures, but the power rarely has been invoked. (See the chapter on International Peace and Security.)

## MEMBERSHIP

The League never became the universal organization that had been envisaged. Moreover, it failed to secure or retain the membership of certain major powers whose participation and cooperation were essential to make it an effective instrument for preserving the peace. Despite President Wilson's advocacy, the United States did not join, and the USSR joined only in 1934, when the League had already shown itself unable to contain the aggressive policies of Germany, Italy, and Japan. The three aggressor states themselves

withdrew their membership during the 1930s to pursue their expansionist aims. The UN, on the other hand, is approaching the goal of universality, with only a few smaller countries still unrepresented. By November 2002, its membership had reached 191.

### PROMOTION OF HUMAN WELFARE

The UN Charter not only lays down specific injunctions for international economic and social cooperation, based on respect for the principle of equal rights and self-determination of peoples, but also has established a special organ—the Economic and Social Council—to conduct the organization's activities in this sphere. Throughout its existence, the UN, together with its specialized agencies, has gradually assumed primary responsibility for assisting the economic and social development of nonindustrialized member nations, most of them former colonial territories that joined the world body long after it was founded. The UN's many projects have become the cornerstone of the development policies adopted by almost all these countries. Since the Covenant of the League contained no provisions for a coordinated program of economic and social cooperation, there can be no comparison between the respective achievements of the two organizations in this respect. Nevertheless, the League performed valuable work in several fields: notably, working to eliminate the illegal sale of women and children, the "white slave" trade; providing assistance for refugees; reducing traffic in opium and other dangerous narcotics; and getting nations to lessen trade restrictions.

### ADMINISTRATION OF COLONIAL TERRITORIES

Instead of sharing the colonial possessions of their defeated enemies as the traditional spoils of victory, the founding members of the League, with admirable foresight and restraint, regarded these territories as international mandates, and certain member states were designated to administer them on behalf of the world organization. This mandate system in a modified form was continued in the trusteeship system evolved by the founders of the UN. However, unlike the Covenant, the Charter expressly stipulates that the administering countries have an obligation to promote the progressive development of the territories placed in their charge toward self-government or independence.

### BALANCE SHEET OF THE LEAGUE OF NATIONS

The League failed in its supreme test. It failed to contain the aggressive action of the Axis powers—Japan, Germany, and Italy—and thus failed to halt the drift toward a new world war. Beginning in 1931, Japan, a permanent member of the League's Council, waged a war of aggression against China, in defiance of both the Council and the Assembly. Although the League did impose economic sanctions against Italy, another permanent member of the Council, when it wantonly invaded Ethiopia in 1935, support was halfhearted and the action unsuccessful. The League was unable to do anything against the illegal reoccupation of the Rhineland in 1936 by Germany, still another permanent member of the Council; nor could it offer more than verbal protests against German and Italian intervention in the Spanish Civil War or the forcible

incorporation of Austria into Germany in March 1938 and of Czechoslovakia into Germany the following year. The cumulative effect of these failures strengthened Hitler's belief in the impotence not only of the League itself but also of its principal remaining members. During the summer of 1939, when the world moved ever closer toward war, and even when Hitler's armies marched into Poland on 1 September 1939, not a single member called for a meeting of the League's Council or Assembly.

The League's balance sheet in political matters was not wholly negative, however. It was able, for example, to settle the dispute between Finland and Sweden over the Åland Islands, strategically located in the Gulf of Bothnia; the frontier controversy between Albania, Greece, and Yugoslavia; the potentially explosive border situation between Greece and Bulgaria; and the dangerous conflicts between Poland and Germany over Upper Silesia and between Germany, Poland, and Lithuania over Memel. Through the League's Permanent Court of International Justice, a border controversy between Czechoslovakia and Poland was settled, as were the disputes between Great Britain and Turkey over the Mosul area and between France and Great Britain over the nationality of Maltese residents in the French protectorates of Morocco and Tunisia. The League also stopped the incipient war between Peru and Colombia over territorial claims in the upper Amazon basin.

In addition to these successful peacekeeping activities, the League financially assisted the reconstruction of certain states, notably Austria, and was responsible for administering the Free City of Danzig and the Saar Territory. (The latter was transferred to Germany following a plebiscite in 1935.) It also carried out important humanitarian work. Some of its nonpolitical activities continued throughout World War II, and its secretariat did valuable preparatory work for the emerging UN. The League of Nations was not officially dissolved until April 1946, five months after the new world body came into being.

### THE UN'S GREATER SCOPE

The field of activity and the responsibilities of the UN are considerably more extensive than those of the League. Of the specialized agencies in the UN system, only three—the ILO, the ITU, and the UPU—antedate the UN. The League, furthermore, never sponsored any such enterprises as those undertaken by, for example, the UN Development Program, the UN Environment Program, or the World Food Program. Membership in the League did not oblige a nation to join the Permanent Court of Justice, whereas all members of the UN are automatically parties to the Statute of the International Court of Justice, which is an integral part of the Charter.

Like the League, the UN has recorded several important successes in halting local armed conflicts and the spread of disputes: for example, in the Congo, Kashmir, and, over long periods, Cyprus. However, it has often proved unable to take effective action in any situation where the interests of either the United States or the former USSR are closely involved or where the two giant powers seem committed to opposite sides of disputes involving smaller nations. Thus, it was unable to check the Soviet invasion of Hungary in 1956 and of Czechoslovakia in 1968; it was unable to take any action to halt the fighting that raged in Indochina dur-

ing most of its existence; and, though progress has been made, it has not succeeded in finding a permanent solution to the prolonged crisis that has periodically erupted in Arab-Israeli wars in the Middle East.

The UN's ineffectuality in such situations caused a loss of confidence in its relevance in international political relations. Nor was it a source of consolation that there was no discernible drift toward a world war, for in most cases where the United States and the former USSR found themselves almost at the point of actual confrontation, as in the 1962 Cuban missile crisis, they tended to resolve their differences bilaterally, not under the aegis of the UN.

On the other hand, if the two great powers did not always find it convenient to allow the UN to play too decisive a role in politi-

cal matters, they found it equally impractical to bypass the world organization altogether.

Unlike the League, the UN is the center of a network of organizations whose activities reach into many aspects of the national life of every member state. As such, it has come to be regarded as an indispensable part of the machinery for conducting multi-level international relations. In a world transformed by the collapse of the former Soviet bloc, the UN is coming of age and may begin to fulfill the dreams of its founders. While its authority continues to be challenged by countries that remain on the fringe of the world community, the United Nations may be seen as an embryonic world government.

---

# THE MAKING OF THE UNITED NATIONS

The creation of the UN at the San Francisco Conference in June 1945 was the culmination of four years of concentrated preparation. During these years, the idea of a world organization to replace the League of Nations was first debated and then fleshed out. Many of the important principles of the UN adopted at San Francisco were derived from earlier conferences.

## DEVELOPMENTS LEADING TO THE SAN FRANCISCO CONFERENCE

1. *The Inter-Allied Declaration (London Declaration) of 12 June 1941.* In a dark hour of World War II, representatives of the United Kingdom, Australia, Canada, New Zealand, and the Union of South Africa and of the governments-in-exile of Belgium, Czechoslovakia, France, Greece, Luxembourg, the Netherlands, Norway, Poland, and Yugoslavia assembled at St. James's Palace in London. It was there that each pledged not to sign a separate peace document and declared: "The only true basis of enduring peace is the willing cooperation of free peoples in a world in which, relieved of the menace of aggression, all may enjoy economic and social security..." Ten days later, Hitler launched his attack against the Soviet Union.
2. *The Atlantic Charter of 14 August 1941.* British Prime Minister Winston S. Churchill and US President Franklin D. Roosevelt met aboard the cruiser USS *Atlanta* off the coast of Newfoundland and signed a declaration giving the first indication that the two powers would strive for the creation of a new world organization once peace was restored. In it, they announced "certain common principles ... of their respective countries ... for a better future for the world: the need for a secure peace; the abandonment by all nations of the use of force; the disarmament of aggressors; and the establishment of a wider and permanent system of general security."
3. *The Declaration by United Nations of 1 January 1942.* With the Japanese attack on Pearl Harbor on 7 December 1941 and the entry of the United States into the war, the conflict assumed even wider dimensions. Japan's initial successes were staggering, and it was clear that the coalition against the Axis powers (Germany, Italy, Japan, and their allies) would need to be strengthened.  
On New Year's Day 1942 in Washington, D.C., representatives of 26 states signed a declaration whose preamble called for subscription "to a common program of purposes and principles embodied in the ... Atlantic Charter" and explicitly referred to the need for promoting respect for human rights on an international basis. In that declaration, the phrase "united nations" was first used. It had been coined by President Roosevelt to express the unity of the signatory nations in their determination to withstand the onslaught of the Axis powers. The declaration was subsequently signed by the governments of 21 additional states.
4. *The Moscow Declaration of 30 October 1943.* This declaration laid the foundation for the establishment of a new world body to replace the League of Nations. Meeting at a time when victory seemed in sight, the US, British, and Soviet foreign ministers and an ambassador from China drew up the Declaration of Four Nations on General Security, which recognized "the necessity of establishing at the earliest practicable date a general international organization based on the principle of sovereign equality of all peace-loving States, and open to membership by all such States, large and small, for the maintenance of international peace and security."
5. *Dumbarton Oaks Conference, Washington, 21 August–7 October 1944.* The Dumbarton Oaks conference was the first big-power meeting convoked specifically to discuss the establishment of a new world organization. At the beginning of the conference, the delegations offered widely differing proposals. On some of these divergent views they eventually reached agreement. For example, the British and Soviet delegations accepted an American position that favored a strong role for the General Assembly, in which all member states would be represented and which, therefore, would be the most "democratic" of the UN organs. There was agreement that a small Security Council should be "primarily responsible for the maintenance of international peace and security" and that the big powers should have the right of veto in that body. However, a deadlock developed over a Soviet proposal that a big power might exercise this right in disputes in which it was itself involved. This the United States and the British refused to accept.
6. *Yalta Conference, February 1945.* The resultant deadlock was resolved at a meeting in Yalta attended by Prime Minister Churchill, President Roosevelt, and Marshal Stalin. The "Yalta formula," actually a compromise proposed by the United States and rejected by the USSR at Dumbarton Oaks, provided that if any of the Big Five powers was involved in a dispute, it would not have the right to veto Security Council recommendations for peaceful settlement of the issue but would be able to veto a Security Council decision to invoke sanctions against it. After some initial objections from Churchill, the three leaders at Yalta also managed to agree on the basic principles of a trusteeship system for the administration of certain dependent territories under the aegis of the projected world body.  
On 11 February 1945, the three leaders announced that a conference would be convened in San Francisco on 25 April 1945 for the "earliest possible establishment of a general international organization" along the lines proposed at Dumbarton Oaks.

## THE SAN FRANCISCO CONFERENCE, 25 APRIL–26 JUNE 1945

Despite the sudden death of President Roosevelt in early April, the United Nations Conference on International Organization convened as scheduled. President Roosevelt had been working on his speech to the conference before he died. That never-delivered address contains the often-quoted words: “The work, my friends, is peace; more than an end of this war—an end to the beginning of all wars; ... as we go forward toward the greatest contribution that any generation of human beings can make in this world—the contribution of lasting peace—I ask you to keep up your faith....”

China, the USSR, the United Kingdom, and the United States acted as the sponsoring powers, and 46 other states participated, comprising all those that had signed the Declaration by United Nations of 1 January 1942 or had declared war on the Axis powers by March 1945. The huge conference was attended by 282 delegates and 1,444 other officially accredited persons from those 50 countries and by representatives of scores of private organizations interested in world affairs (50 from the United States alone). The daily output of documents averaged half a million pages.

### Major Modifications in the Dumbarton Oaks Draft for the UN Charter

After much debate, the smaller and medium-sized nations succeeded in restricting the Big Five’s use of the veto in the Security Council. Herbert V. Evatt, then deputy prime minister of Australia, who was in the forefront of that fight, declared: “In the end our persistence had some good effect. The Great Powers came to realize that the smaller powers would not accept a Charter unless certain minimum demands for restriction of the veto were accepted, viz., that there should be no veto upon the placing of items on the [Security Council] agenda and no veto on discussion [in the Security Council] .... If this vital concession had not been won, it is likely that discussion of matters in the open forum of the Security Council would have been rendered impossible: If so, the United Nations might well have broken up.”

Another major change resulted from the desire of the smaller nations to give the world organization more responsibilities in social and economic matters and in colonial problems. Accordingly, the Economic and Social Council and the Trusteeship Council were given wider authority than was provided for in the Dumbarton Oaks draft, and they were made principal organs of the UN.

### Creation of a New World Court

The San Francisco Conference also unanimously adopted a constitution—called the Statute—for an International Court of Justice to be incorporated as a main organ of the UN and to succeed the Permanent Court of International Justice established by the League of Nations. The Statute, which had originally been drafted by jurists from 44 nations meeting in Washington in April 1945, became part of the Charter of the UN.

### Unanimous Acceptance of the Charter

The UN Charter touches on so many delicate and complex matters that its unanimous acceptance has often been ascribed to the particularly auspicious circumstances prevailing in the spring of 1945. In spite of some dissonance, the San Francisco Conference was imbued with a spirit of high mission. The Charter was worked out within two months. It was signed by 50 nations in all its of-

ficial languages in an impressive ceremony on 26 June 1945. The five official languages at that time were Chinese, English, French, Russian, and Spanish. The sixth official UN language, Arabic, was not adopted until 1973.

## ESTABLISHMENT OF THE UN, 24 OCTOBER 1945

The new world body officially came into being on 24 October 1945, when the Charter had been duly ratified by all permanent members of the Security Council and a majority of the other original signatory powers. This date is universally celebrated as United Nations Day.

## SUBSEQUENT CHARTER AMENDMENT

Like other political constitutions, the UN Charter contains provisions for its own amendment. Amendments to the Charter come into force when they have been adopted by a vote of two-thirds of the members of the General Assembly and ratified by two thirds of the UN member states, including all the permanent members of the Security Council.

The amendments that have been adopted are essentially adjustments made to take account of the huge increase in UN membership, which has almost quadrupled since 1945. As originally constituted, the 11-member Security Council and the 18-member Economic and Social Council were considered adequate to reflect the different interests of the various geographical groupings of states within the organization. However, the admission to the UN during the late 1950s and early 1960s of large numbers of newly independent African, Asian, and Caribbean countries created additional groupings. To accommodate their interests without jeopardizing those of the older groups, the General Assembly, in 1963, adopted amendments to Articles 23, 27, and 61 of the Charter. The first amendment enlarged the membership of the Security Council to 15; the second required that decisions of the Security Council be made by an affirmative vote of nine members (formerly seven); the third enlarged the membership of the Economic and Social Council to 27. All three amendments officially came into force on 31 August 1965.

The Economic and Social Council was enlarged to 54 by an amendment to Article 61 of the Charter, which was adopted by the General Assembly in 1971 and became operative on 24 September 1973.

*Charter Review.* Under the Charter, a general conference of UN members “for the purpose of reviewing the Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and a vote of any seven members [amended to nine, as of 1965] of the Security Council.” In addition, the Charter provided that if such a conference was not held by the tenth regular assembly session (in 1955), the proposal to call such a conference should be placed on the agenda. Accordingly, the 1955 General Assembly considered the matter and decided that a general review conference should be held at an “appropriate” but unspecified date in the future. A committee consisting of the full UN membership was established to consider the time and place at which the conference should be held. The Security Council concurred in the General Assembly’s decision by a vote of 9 to 1, with 1 abstention. The committee met every two years until September 1967 without recommending a conference. It then be-

came inactive, recommending that any member state might request it to meet.

At its 1974 session, the General Assembly established a 42-member Ad Hoc Committee on the Charter to consider specific proposals from governments for “enhancing the ability of the United Nations to achieve its purposes.” The committee reported to the 1975 Assembly session that there was a fundamental divergence of opinion on the necessity for carrying out a review of the Charter and made no recommendations for action. The General Assembly decided, however, to continue the committee as a Special Committee on the Charter of the UN and on the Strengthening of the Role of the Organization and increased its membership to 47. In pursuit of its mandate, the committee has met every year since 1975 and has reported to each session of the General Assembly.

For example, in 1988 the Special Committee recommended, and the General Assembly adopted, a “Body of Principles for the Protection of All Persons under Any Form of Detention or Imprisonment”; in 1990 it proposed the rationalization of existing UN procedures, which were adopted by the General Assembly; and in 1991, the Special Committee considered the final text of the *Handbook on the Peaceful Settlement of Disputes between States*. That same year the General Assembly requested that the Secretary-General publish and disseminate the handbook.

The Special Committee also considers proposals concerning cooperation between the United Nations and regional organizations in the maintenance of international peace and security, conciliation rules of the United Nations, and assistance to other states affected by the imposition of sanctions by the decision of the Security Council, pursuant to Article 50 of the Charter.

---

# PURPOSES AND PRINCIPLES

The main aims of the UN are set forth in the Preamble to the Charter, in which “the peoples of the United Nations,” assembled in San Francisco in June 1945, expressed their determination

“to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, ...

“to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, ...

“to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

“to promote social progress and better standards of life in larger freedom....”

To accomplish these goals, they agreed

“to practice tolerance and live together in peace with one another as good neighbors, ...

“to unite their strength to maintain international peace and security, ...

“to ensure by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

“to employ international machinery for the promotion of the economic and social advancement of all peoples ....”

## PURPOSES

The aims of the UN are embodied in a set of purposes and principles contained in Articles 1 and 2 of the Charter, summarized as follows:

- to maintain international peace and security and, to that end, to take effective collective measures for the prevention and removal of threats to the peace and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations that might lead to a breach of the peace;
- to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;
- to achieve international cooperation in solving international economic, social, cultural, or humanitarian problems and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and
- to be a center for harmonizing the actions of nations in attaining these common ends.

## PRINCIPLES

In pursuit of these purposes, the Charter stipulates that the UN and its members are to act in accordance with the following principles:

- that the organization is based on the sovereign equality of all its members;
- that all members are to fulfill in good faith their Charter obligations;
- that they are to settle their international disputes by peaceful means and without endangering peace, security, and justice;
- that they are to refrain in their international relations from the threat or use of force against other states;
- that they are to give the UN every assistance in any action that it takes in accordance with the Charter and shall not assist states against which the UN is taking preventive or enforcement action;
- that the UN shall also ensure that states that are not members act in accordance with these principles insofar as is necessary to maintain international peace and security; and
- that nothing in the Charter is to authorize the UN to intervene in matters that are essentially within the domestic jurisdiction of any state, though this principle is not to prejudice the application of enforcement measures made necessary in the event of a threat to or breach of the peace.

---

# MEMBERSHIP

As of May 2006, the UN had 191 member states, including 51 charter members (the 50 countries that sent representatives to the San Francisco conference, plus Poland, which ratified the charter shortly afterward) and 140 states that have joined the organization since 1945, the great majority of them former colonial territories that have achieved independence. The table in this chapter shows the growth of UN membership, the roster lists the members of the UN in alphabetical order and gives the dates of their admission to the UN. The roster does not take account of the several federations or unions of states that were created or dissolved during membership.

Thus, Syria, an original member, ceased independent membership on joining with Egypt to form the United Arab Republic in 1958. On resuming its separate status in 1961, Syria also resumed separate membership, which is still officially dated from the country's original day of entry. Tanganyika and Zanzibar joined the UN as separate states in 1961 and 1963, respectively, but in 1964 merged to form the United Republic of Tanzania, with a single membership officially dated from Tanganyika's day of entry.

Similarly, The Federation of Malaya joined the United Nations on 17 September 1957. On 16 September 1963, its name was changed to Malaysia, following the admission to the new federation of Singapore, Sabah (North Borneo), and Sarawak. Singapore became an independent state on 9 August 1965 and a member of the United Nations on 21 September 1965.

The Federal Republic of Germany and the German Democratic Republic were admitted to membership in the United Nations on 18 September 1973. Through accession of the German Democratic Republic to the Federal Republic of Germany, effective from 3 October 1990, the two German states have united to form one sovereign state.

The unification of the two Germanys began a process of realignment of nations that intensified as communist governments collapsed throughout Eastern Europe. In only two years 15 separate states from the former USSR were admitted to membership. As a result of this sweeping change, the former Union of Soviet Socialist Republics (an original member of the United Nations) became the Russian Federation. In a letter dated 24 December 1991, Boris Yeltsin, then president of the Russian Federation, informed the Secretary-General that the membership of the Soviet Union in the Security Council and all other United Nations organs was being continued by the Russian Federation with the support of the 11 member countries of the Commonwealth of Independent States.

Czechoslovakia also was an original member of the United Nations. On 10 December 1992, its Permanent Representative informed the Secretary-General that the Czech and Slovak Federal Republic would cease to exist on 31 December 1992 and that the Czech Republic and the Slovak Republic, as successor states, would apply for membership in the United Nations. Following the receipt of their applications, the Security Council, on 8 January

1993, recommended to the General Assembly that both the Czech Republic and the Slovak Republic be admitted to United Nations membership. Both were admitted on 19 January 1993.

In 1993, the proposed admission of a part of the former Yugoslavia, which had been known as the Republic of Macedonia, formed the subject of protest from the government of Greece, which considers the name "Macedonia" to pertain to one of its internal states. Now bearing the unwieldy name of "The Former Yugoslav Republic of Macedonia," the new country became a member on 8 April 1993.

The Socialist Federal Republic of Yugoslavia was an original member of the UN until its dissolution following the establishment and subsequent admission as new members of Bosnia and Herzegovina, the Republic of Croatia, the Republic of Slovenia, The Former Yugoslav Republic of Macedonia, and the Federal Republic of Yugoslavia, which was admitted on 1 November 2000; in February 2003, the country changed its name to Serbia and Montenegro.

## ADMISSION OF MEMBERS

In the words of Article 4 of the Charter, membership in the UN is open to all "peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the Organization, are able and willing to carry out these obligations." The original members are the states that participated in the San Francisco Conference, or that had previously signed the Declaration by United Nations, of 1 January 1942, and subsequently signed and ratified the Charter.

The procedure of admission is as follows. A state wishing to join submits an application to the Secretary-General, in which it formally states its acceptance of the Charter obligations. The application is forwarded to the Security Council. If the Security Council, by a vote of at least nine members (formerly seven), including all the permanent members, recommends the application, membership becomes effective on the day that it is approved by a two-thirds majority of the General Assembly. In other words, if any one of the Security Council's permanent members vetoes it, or if it fails to obtain a sufficient majority in the Security Council, the application does not reach the General Assembly at all.

Up to 1955 there were bitter controversies and years of stalemate in the Security Council over the applications of some countries. Usually one or more of the Big Five was on bad terms with the applying state, or it would choose to withhold consent as a bargaining point against the other big powers. Finally, on 14 December 1955, by a compromise, 16 countries were admitted together. Since then, new applications rarely caused controversy. Most of the applicants have been newly independent states that applied for membership immediately after attaining independence. In most cases they have been admitted by unanimous vote.

The outstanding exceptions were the applications of the Republic of Korea (ROK), which applied in January 1949; the Democratic People's Republic of Korea (DPRK), which applied in February 1949; South Vietnam, which applied in December 1951; and North Vietnam, which applied in December 1951. The two Vietnams and the ROK sought action on their applications in 1975. The Security Council, by a narrow vote, decided not to take up the ROK's application, and the United States subsequently vetoed membership for the Vietnams, citing as a reason the Security Council's earlier refusal to consider the membership application of the ROK. In response to a General Assembly recommendation, however, the Security Council in 1977 recommended the admission of the newly established Socialist Republic of Vietnam, and that country became a member in September 1977. The DPRK and the ROK maintained observer status at the General Assembly until September 1991, when both were admitted to membership simultaneously.

### WITHDRAWAL FROM MEMBERSHIP

While the Covenant of the League of Nations contained provisions for the legal withdrawal of members, the UN Charter deliberately omits all reference to the subject. The majority feeling at the San Francisco Conference was that provisions for withdrawal would be contrary to the principle of universality and might provide a loophole for members seeking to evade their obligations under the Charter.

Thus, when the first—and so far the only—case of withdrawal arose, the procedure had to be improvised. On 1 January 1965, Indonesia, which then was pursuing a policy of confrontation against the newly formed Federation of Malaysia, announced that it would withdraw from the UN and its related agencies if Malaysia were to take its elected seat on the Security Council. Three weeks later, Indonesia's foreign minister officially confirmed withdrawal in a letter to the Secretary-General, who, after consultations with the Indonesian mission to the UN, merely noted the decision and expressed hope that Indonesia would in due time "resume full cooperation" with the world body. Following a coup later in 1965, Indonesia sent a telegram to the Secretary-General, just before the opening of the 1966 General Assembly session, announcing its decision to "resume full cooperation with the UN and to resume participation in its activities."

Arrangements were made to ensure that Indonesia's reentry would take place with minimum formality. Hence, it was decided that Indonesia need not make a formal reapplication via the Security Council but that the matter could be handled directly by the General Assembly. Citing the telegram as evidence that Indonesia regarded its absence from the UN as a "cessation of cooperation" rather than an actual withdrawal, the General Assembly's president recommended that the administrative procedure for reinstating Indonesia could be taken. No objections were raised, and Indonesia was immediately invited to resume its seat in the General Assembly. In short, the problems raised by the first case of withdrawal from the UN were solved by treating it as if it had not been a matter of withdrawal at all.

Although South Africa withdrew from three of the UN's related agencies—UNESCO, FAO, and the ILO—because of the anti-apartheid sentiments of their members, it did not withdraw from the UN itself, despite numerous General Assembly resolutions

condemning apartheid and recommending stringent sanctions. South Africa rejoined UNESCO and the ILO in the late 1990s.

### SUSPENSION AND EXPULSION

The Charter provides that a member against which the Security Council has taken preventive or enforcement action may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. However, only the Security Council, not the General Assembly, has the power to restore these rights. Any member that "has persistently violated the Principles" of the Charter may be expelled from the UN by the same procedure. As of May 2006, no cases of suspension of rights or expulsion had been recommended by the Security Council.

Many states called for the expulsion of South Africa because of its apartheid policies, but no formal proposal to this effect was made. In 1974, the General Assembly called upon the Security Council to review the relationship between the UN and South Africa in the light of the constant violation by South Africa of the principles of the Charter and the Universal Declaration of Human Rights. The Security Council considered a draft resolution submitted by Cameroon, Iraq, Kenya, and Mauritania that would have recommended to the General Assembly the immediate expulsion of South Africa under Article 6 of the Charter. Owing to the negative votes of three permanent members (France, United Kingdom, United States), the draft resolution was not adopted. After the council had reported back to the General Assembly on its failure to adopt a resolution, the president of the General Assembly, Abdelaziz Bouteflika of Algeria, ruled that the delegation of South Africa should be refused participation in the work of the General Assembly. His ruling was upheld by 91 votes to 22, with 19 abstentions. Although remaining a member of the UN, South Africa was not represented at subsequent sessions of the General Assembly. Following South Africa's successful democratic elections of May 1994, after 24 years of refusing to accept the credentials of the South African delegation, the General Assembly unanimously welcomed South Africa back to full participation in the United Nations on 23 June 1994. It also deleted its agenda item on "the elimination of apartheid and the establishment of a united, democratic and nonracial South Africa."

### REPRESENTATION OF NATIONS IN THE UN

The members of the UN are nations, not governments. Whereas the UN may concern itself with the character of a government at the time that a nation applies for admission and may occasionally defer admission on these grounds (Spain under the Franco government, for example, applied for membership in 1945–46 but was not admitted until 1955), once a nation becomes a member, any governmental changes thereafter do not affect continuance of membership—provided, of course, that the nation continues to fulfill its Charter obligations. Nor, under the Charter, is the admission of a new nation dependent upon whether other nations individually recognize and have diplomatic relations with the government concerned. Though the relations of individual members with a nation applying for membership will affect the voting in the Security Council and the General Assembly, strictly speaking, the only consideration enjoined by the Charter is the judgment by

		2000	Tuvalu, Serbia and Montenegro
		2002	Switzerland, Timor-Leste

the members that the applying nation as represented by its government is "willing and able" to carry out its UN obligations. As a result, there are several nations in the UN that do not recognize or have diplomatic relations with each other.

Nations have to be represented at UN proceedings by delegations that are specifically authorized by their governments to speak on their behalf. Thus, when a new ambassador appears, or when a new session of a UN organ convenes, it is necessary to examine the credentials of persons claiming to represent member states. The nine-member Credentials Committee, appointed by the General Assembly at the beginning of each session, must be satisfied that the person was duly appointed by his or her government and that that government is the official government of the respective member nation. The matter can become controversial at the UN

if, for example, two rival governments both claim to be the only legitimate government of a member state and each demands that its own representative be seated.

A case in point was China. The long unresolved issue of its representation in the UN had been one of the most important and controversial items on the General Assembly's agenda. In 1971, however, the General Assembly decided "to restore all its rights to the People's Republic of China and to recognize the representatives of its government as the only legitimate representatives of China to the United Nations, and to expel forthwith the representatives of Chiang Kai-shek from the place which they unlawfully occupy at the United Nations and in all the organizations related to it."

# UNITED NATIONS HEADQUARTERS

## THE HEADQUARTERS BUILDINGS

When the UN came into being on 24 October 1945, it had no home. On 11 December 1945, the US Congress unanimously invited the UN to make its headquarters in the United States. In February 1946, the General Assembly, meeting for its first session in London, voted for the general vicinity of Fairfield and Westchester counties, near New York City, but sites near Philadelphia, Boston, and San Francisco also were considered during 1946. Then came the dramatic offer by John D. Rockefeller, Jr., to donate \$8.5 million toward the purchase of properties along the East River in midtown Manhattan. The City of New York rounded out the zone and granted rights along the river frontage. By November 1947, the General Assembly approved the architectural plans, and nine months later, the UN concluded a \$65 million interest-free loan agreement with the US government. The director of planning for UN headquarters was Wallace K. Harrison of the United States. The international board of design consultants included G. A. Soil-leux, Australia; Gaston Brunfaut, Belgium; Oscar Niemeyer, Brazil; Ernest Cormier, Canada; Ssu-ch'eng Liang, China; Charles le Corbusier, Switzerland; Sven Markelius, Sweden; Nikolai D. Bas-sow, USSR; Howard Robertson, United Kingdom; and Julio Vil-amajo, Uruguay.

The first structure to be completed, in the spring of 1951, was the 39-story marble and glass Secretariat building. In 1952, the conference building (with the three council halls and a number of conference rooms) and the General Assembly building were ready.

Thus, it was five or six years before the UN was permanently housed. In the interim, the Secretariat was established provisionally at Hunter College in the Bronx, New York, and in August 1946, the UN moved to the Sperry Gyroscope plant at Lake Success, Long Island. Several General Assembly sessions took place in the New York City Building at Flushing Meadow, and in 1948 and 1951, the body met at the Palais de Chaillot in Paris.

A library building at the headquarters site, erected and equipped through a \$6.6 million donation by the Ford Foundation, was dedicated in 1961 to the memory of former Secretary-General Dag Hammarskjöld.

Various furnishings and works of art for the conference and General Assembly buildings and the library have been donated by member governments. Adjoining the public lobby in the General Assembly building is the Meditation Room, dedicated to those who have given their lives in service to the UN. It includes a stained glass window by Marc Chagall on the theme of "Peace and Man." The public gardens north of the General Assembly building contain sculpture and plantings donated by governments and individuals.

The United Nations headquarters was designed to serve four major groups: delegations, who now represent 191 member states and who send more than 3,000 persons to New York each year

for the annual sessions of the General Assembly; the Secretariat, numbering nearly 15,000 throughout the world; visitors, who average 1,500 a day; and journalists, of whom more than 450 are permanently accredited while twice that number are present during major meetings.

For a small fee, visitors may join one of the Secretariat's tours of the headquarters buildings, conducted daily in 20 languages by some 50 guides from around 30 countries.

### Capacity

Because of the increase in the number of member states, the seating capacity of the conference rooms and the General Assembly Hall has been enlarged. A major expansion of office and meeting facilities at UN headquarters was undertaken in the 1980s.

About 61,000 men and women from some 170 countries work for the UN and its related organs and agencies—about one-third of them at UN headquarters and the other two-thirds at offices and centers around the globe. (See also the chapter on the Secretariat.)

### Conference Services

UN headquarters, together with the organization's offices in Geneva and Vienna, provide the interpreters, translators, writers, editors, and conference personnel required for the many UN meetings throughout the world, as well as for other meetings held under UN auspices.

### Telecommunications System

The UN has its own telecommunications system. UN headquarters is linked by radio with the offices in Geneva and Vienna, which, in turn, provide liaison with UN organs and offices in different parts of the world.

### Computer System

As part of the fundamental modernization and reorganization of the United Nations, the organization's bank of IBM mainframes was replaced in stages by an Integrated Management Information System (IMIS). The first phase of the replacement, completed in early 1994, implemented a personnel system covering recruiting, hiring, promotions, and moving. Four hundred users at the headquarters were connected to Unix servers with personal computers using Windows software. Eventually all administrative applications were transferred to four Unix systems organized in client-server architecture. Other users, such as the United Nations Development Program (UNDP), the United Nations Children's Fund (UNICEF), and the International Labor Organization (ILO), had progressively adapted the software to their special requirements. In late 1998, a report of independent experts, initiated at the General Assembly's request, favorably evaluated IMIS from both the technical and cost perspectives. Their recommendations, as well

as those of the General Assembly and the Board of Auditors, were subsequently addressed.

#### UN Postal Administration

UN stamps are issued under separate agreements with the postal authorities of the United States, Switzerland, and Austria and are valid for postage only on mail deposited at UN headquarters in New York and at the UN offices in Geneva and Vienna. UN stamps may be obtained by mail, over the counter, or automatically through the Customer Deposit Service in New York, Geneva, or Vienna. Only revenue from the sale of stamps for philatelic purposes is retained by the UN. In addition to producing revenue, UN stamp designs publicize the work of the organization and its related agencies.

## RECORDS AND DOCUMENTS

### Library

The Dag Hammarskjöld Library contains approximately 400,000 books, 14,500 maps, over 80,000 periodicals and newspapers, and several hundred thousand documents and microfiches. The collection includes not only UN materials but also League of Nations records in its Woodrow Wilson Reading Room, as well as a general reference library on subjects related to the work of the UN. The library is for use by delegations, permanent missions, and the Secretariat and by scholars engaged in advanced research.

### Archives

The United Nations Archives, located at 345 Park Avenue South in New York, dates from the establishment of the United Nations. Its 35 linear feet of holdings include both inactive administrative records created by Secretariat offices, as well as archival records that constitute the organization's institutional memory. Each year, approximately 50 researchers cull its archives for information about the UN's predecessors, the Secretary-General's "good offices" role, and the organization's mediating and peacekeeping activities.

The earliest records emanate from predecessor organizations, including the International Penal and Penitentiary Commission (1893–1951); United Nations Relief and Rehabilitation Administration (1943–48), which assisted liberated areas devastated by World War II; United Nations War Crimes Commission (1943–49) whose 17 Allied members together developed procedures for apprehending and punishing war criminals; and the United Nations Conference on International Organization (1945), at which the United Nations was chartered.

From its very beginning, a number of regional conflicts required that the new organization assume the role of peacekeeper. Consequently, the UN Archives maintains records associated with a wide variety of peacekeeping missions, ranging from the UN Special Committee on Palestine (1947), to the organization's electoral mission in Cambodia. Issues arising from colonialism also required early UN involvement. Archival holdings document the establishment of trusteeships for supervising elections and the transition to independence. The organization's technical assistance function in international social and economic development is, likewise, reflected among the archives' records.

Records are generally open for research at the end of 20 years. Strictly confidential records, or those with special restrictions (such as the War Crimes Commission records), require express

authorization for access. Those wishing to research UN Archives records should submit the Archives Researcher Application form to the Archives and Records Centre, 304 East 45th Street, Ground Floor, New York, New York 10017. Fax: (212) 963-4414. Telephone: (212) 963-8683; (212) 963-8612. E-mail: arms@un.org.

### Documents Services

UN headquarters houses one of the world's largest photocopying and printing plants. Most UN documents are produced in photocopy form for the use of members and the Secretariat. Some documents, as well as many reports and studies, are issued as UN publications for sale to the public. They are available in the bookshop at UN headquarters and from distributors worldwide.

In the United States and Canada, Bernan Associates (formerly UNIPUB) distributes UN publications and publishes scholarly books by the United Nations University Press. It also distributes the publications of the Food and Agricultural Organization (FAO), International Atomic Energy Agency (IAEA), World Trade Organization (WTO), and the United Nations Educational, Scientific and Cultural Organization (UNESCO). Bernan is located in Lanham, Maryland, and can be reached from the United States at (800) 274-4888 or via email at order@bernan.com. The Bernan Associates web site can also be accessed at www.bernan.com. Other UN publications are available from the United Nations Publications Sales Section at UN Headquarters, (212) 963-8302 or (800) 253-9646 (for North America, Latin America, the Caribbean, and Asia and the Pacific); and from the Publications des Nations Unies (in Geneva), (41 22) 917 2600 or (41 22) 917 2614 (for Europe, Africa, and the Middle East). The UN Publications office also has a web site at <http://www.un.org/Pubs/sales.htm>, where the searchable catalog of UN publications may be accessed and orders placed.

## PUBLIC INFORMATION SERVICES

At its first session, in 1946, the General Assembly decided to create a special Department of Public Information (DPI) in the Secretariat. Recognizing that the UN's aims cannot be achieved unless the world is fully informed of its objectives and activities, the General Assembly directed that DPI should work to promote the fullest possible informed understanding of UN affairs. Accordingly, the UN provides a steady stream of information on its activities, covering virtually all media—press, publications, radio, television, films, photographs, and exhibits.

### Press, Publications, and Photographic Services

DPI provides information to news correspondents and facilitates their access to meetings, documents, and other news sources. In any given year, several thousand press releases are issued at UN headquarters, including accounts of meetings, texts of speeches, announcements of special programs, and background or reference papers. DPI holds daily briefings and helps to arrange press conferences for members of delegations and senior members of the Secretariat and the specialized agencies.

Booklets, pamphlets, and leaflets covering the work of the UN are published in many languages. The *UN Chronicle*, issued quarterly in the six official languages of the UN, reports on UN activities. The *Chronicle* now has its own web site at [www.un.org/Pubs/chronicle](http://www.un.org/Pubs/chronicle), which includes information on the contents of individual issues as well as links to selected articles and cover im-

ages from the magazine. DPI also issues a *Yearbook of the United Nations*.

To illustrate UN activities in the field, photo missions are periodically undertaken throughout the world. The photographs obtained, together with extensive coverage of events at UN headquarters and other principal conference centers, are widely used by newspapers, periodicals, book publishers, and government information agencies. Posters and photo display sets are prepared for exhibition at UN headquarters and for worldwide distribution.

DPI press releases, background information releases, and other public information documents are available on the Internet by accessing <http://www.un.org/news/>. United Nations documents (major reports, and resolutions of the General Assembly, Security Council, and ECOSOC) can be accessed by Internet users. In the United States, many large libraries provide a free window onto the Internet, allowing access to some of the UN documents.

### Radio, TV, and Film Services

A major responsibility of DPI is to assist the accredited correspondents of national and commercial broadcasting organizations in their coverage of the UN's work. In radio, correspondents may use studios and recording equipment at UN headquarters, and New York is linked with distant capitals by shortwave or radio-telephone. Film and television correspondents may receive visual coverage of principal meetings of the Security Council and the General Assembly, as well as of press conferences and briefings. Satellite transmissions carry this material around the world.

DPI broadcasts meetings of principal UN organs by shortwave and produces its own radio programs in the six official UN languages (Arabic, Chinese, English, French, Russian, and Spanish), reaching listeners in more than 100 countries. UN films and programs are produced not only for television but also for groups in schools, universities, and nongovernmental organizations.

### Public Inquiries Unit

The Public Inquiries Unit handles individual inquiries from researchers and the general public seeking specific information about the United Nations and its subsidiary organizations. The unit can refer callers to the appropriate UN department or organization, and send by mail UN documents such as reports by the Secretary-General to the General Assembly or Security Council.

### UN Information Centers

The network of United Nations Information Centers (UNICs), Services (UNISs) and Offices (UNOs) links Headquarters with the people of the world. Located in 77 countries, these branch offices of the United Nations Department of Public Information help local communities obtain up-to-date information on the United Nations and its activities. As of May 2006, 45 UNICs had created their own web sites, in local languages. The list of UNIC web sites follows: Algiers, Algeria (French) [www.unic.org.dz](http://www.unic.org.dz); Ankara, Turkey (English/Turkish) [www.un.org.tr/unic.html](http://www.un.org.tr/unic.html); Antananarivo, Madagascar (French/Malagasy) [www.onu.dts.mg](http://www.onu.dts.mg); Baku, Azerbaijan (English) [www.un-az.org/dpi](http://www.un-az.org/dpi); Bangkok, Thailand (English) [www.unescap.org/unis](http://www.unescap.org/unis); Beirut, Lebanon (English/Arabic) [www.escwa.org.lb](http://www.escwa.org.lb); Bogota, Colombia (Spanish) [www.onucolombia.org](http://www.onucolombia.org); Bucharest, Romania (Romanian) [www.onuinfo.ro](http://www.onuinfo.ro); Buenos Aires, Argentina (Spanish) [www.unic.org.ar](http://www.unic.org.ar); Cairo, Egypt (English) [www.unic-eg.org](http://www.unic-eg.org); Dakar, Senegal (French) [www.cinudakar.org](http://www.cinudakar.org);

These sites post calendars of events sponsored by the Centers along with information on major UN activities, such as the General Assembly Special Session on the World Drug Problem and the establishment of the International Criminal Court. The centers maintain up-to-date reference libraries of UN publications and documentation and answer public inquiries. DPI material is translated into local languages by the centers, which work closely with local media, information agencies, educational authorities, and nongovernmental organizations in their area. The centers also inform UN headquarters about local UN activities, which, in turn, are publicized by DPI. In 1996, the UN began integrating the functions of its information centers into the office of the UN representative/resident coordinator in the respective host country.

## PRIVILEGES AND IMMUNITIES

The charter provides that in all territory of its member states, the UN shall hold whatever legal capacity, privileges, and immunities are necessary for the fulfillment of its purposes and that representatives of member states and officials of the UN shall have a status allowing them independent exercise of their functions. On 13 February 1946, the General Assembly adopted the Convention on the Privileges and Immunities of the United Nations. As of May 2006, 191 countries, including the United States, had acceded to this convention. UN staff on official business can travel on a *laissez-passer* issued by the UN.

Countries that have acceded to the convention exempt the salaries of UN officials from taxation, except for the United States and several other countries, where special reservations apply. These salaries, however, are subject to a "staff assessment," an internal

UN taxation. The UN itself is exempt from all direct taxes, customs duties, and export and import restrictions on articles for official use.

Virtually all member states have established permanent missions to the UN in New York. Their personnel enjoy privileges and immunities similar to those of diplomatic missions.

## **HEADQUARTERS AGREEMENT BETWEEN THE UN AND THE US**

A special headquarters agreement, signed by Secretary-General Trygve Lie and US secretary of state George C. Marshall at Lake Success on 26 June 1947, has been in force since 21 November 1947. It defines the 18 acres of land in New York City located between 42nd and 48th Streets and First Avenue and the Franklin D. Roosevelt Drive as the Headquarters District of the United Nations. Subsequently, by supplemental agreements between the UN and the United States, additional office space located in buildings in the vicinity has been included in the Headquarters District. The Headquarters District is “under the control and authority of the United Nations as provided in this agreement.” It is the seat of the UN, and the agreement stipulates that the district “shall be inviolable.” Federal, state, and local personnel on official duty may enter it only with the consent of the Secretary-General. The UN may make regulations for the area. US federal, state, and local law, insofar as it is inconsistent with UN regulations, does not apply here; otherwise, the US courts would have jurisdiction over actions and transactions taking place in the Headquarters District. The UN may expel persons from the district for violations of regulations.

In such cases, and generally for the preservation of law and order, US authorities have to provide a sufficient number of police if requested by the Secretary-General. “No form of racial or religious discrimination shall be permitted within the Headquarters District.” Other detailed provisions in the agreement between the UN and the US deal with the important matter of the accessibility of the seat of the UN to non-US citizens.

## **EMBLEM AND FLAG OF THE UN**

The General Assembly adopted an official seal and emblem for the organization. The UN emblem depicts in silver against a light blue background a map of the earth, projected from the North Pole, and encircled by two symmetrical olive branches. It is a slight modification of a design selected by the US Office of Strategic Services for buttons used at the San Francisco Conference in 1945. The particular shade of blue is now officially called United Nations blue. The emblem is used only for UN publications and conferences and other officially approved purposes.

The first UN flag was used in Greece in 1947 in a region where there was fighting. The flag has the UN emblem in white against a background of United Nations blue.

The flag may be displayed not only by the UN and the specialized agencies and by governments but also by “organizations and individuals to demonstrate support of the United Nations and to further its principles and purposes.” It is considered “especially appropriate” to display the UN flag on national and official holidays; on UN Day, 24 October; and at official events in honor of the UN or related to the UN.

# THE UNITED NATIONS BUDGET

Under the Charter, it is the task of the General Assembly to “consider and approve the budget of the Organization” and to apportion the expenses of the UN among the member nations. From an administrative standpoint, the expenditures of the UN may be said to fall into two categories: expenditures that are included in what is termed the “regular budget,” to which all members are obliged to contribute; and expenditures for certain high-cost items or programs, for which are established separate, or “extrabudgetary,” accounts or funds financed by special arrangements that do not necessarily involve obligatory payments by UN members.

Included in the regular budget are the costs of services and programs carried out at UN headquarters and all overseas UN offices; the expenses of the International Court of Justice; and debt services charges, which are also listed as “special expenses.”

Outside the regular budget, member states also are assessed, in accordance with a modified version of the basic scale, for the costs of peacekeeping operations. The number and cost of these operations has been aggravated in recent years, in large part due to political instability in Eastern Europe, Western Asia, and Africa. In the period 1992–93, the Secretary-General estimated the cost for these operations increased sixfold. In a report to the Economic and Social Council, he stated, “It would be mistaken to try to attach an order of importance or priority between peace and security on the one hand, and economic and social development on the other. The two are so closely interlinked as to be indivisible.” This underlying philosophy provides the rationale for the growth in the number of peacekeeping operations and the expansion of their mandates beyond the previously traditional observer status, to activities such as disarming and demobilization of forces, humanitarian assistance, human rights monitoring, electoral verification, and civilian police support. Each peace-keeping operation is approved and budgeted separately.

Following is a list of 15 UN observation or peacekeeping operations under way as of May 2006, along with the original starting date: United Nations Truce Supervision Organization (UNTSO), June 1948; United Nations Military Observer Group in India and Pakistan (UNMOGIP), January 1949; United Nations Peacekeeping Force in Cyprus (UNFICYP), March 1964; United Nations Disengagement Observer Force (UNDOF) in Golan Heights, June 1974; United Nations Interim Force in Lebanon (UNIFIL), March 1978; United Nations Mission for the Referendum in Western Sahara (MINURSO), April 1991; United Nations Observer Mission in Georgia (UNOMIG), August 1993; United Nations Interim Administration Mission in Kosovo (UNMIK), June 1999; United Nations Organization Mission in the Democratic Republic of the Congo (MONUC), November 1999; United Nations Mission in Ethiopia and Eritrea (UNMEE), July 2000; United Nations Mission in Liberia (UNMIL), September 2003; United Nations Operation in Côte d’Ivoire (UNOCI), April 2004; United Nations

Stabilization Mission in Haiti (MINUSTAH), June 2004; United Nations Operation in Burundi (ONUB), June 2004; and United Nations Mission in the Sudan (UNMIS), March 2005.

As of 31 December 2005, unpaid contributions for the peacekeeping operations with separate assessed budgets amounted to US\$2.92 billion. Shortfalls in the receipt of assessed contributions were met by delaying reimbursements to states that contributed troops, thus placing an unfair burden on them.

United Nations activities that are financed mainly by voluntary contributions outside the regular budget include: the United Nations Development Programme (UNDP), the World Food Program (WFP), the Office of the United Nations High Commissioner for Refugees (UNHCR), the United Nations Children’s Fund (UNICEF), the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), and the United Nations Population Fund (UNFPA).

The member states of the specialized agencies decide on each agency’s budget and scale of assessments separately from the United Nations itself.

## COMMITTEES ASSISTING THE GENERAL ASSEMBLY IN FINANCIAL MATTERS

In 1946, the General Assembly established two permanent subsidiary organs concerned with administrative and budgetary affairs. The Advisory Committee on Administrative and Budgetary Questions is responsible for expert examination of the UN bud-

### Appropriations (Gross) 1946–2007 (in us\$)

get and the administrative budgets of the specialized agencies. The committee's 16 members, elected by the General Assembly for staggered three-year terms, serve as individuals, not as government representatives. The Committee on Contributions advises the General Assembly on the apportionment of the expenses of the UN among the member nations. Its 18 members are elected for three-year terms and also serve as individuals.

**PROCEDURE FOR DETERMINING THE REGULAR BUDGET**

Every other year, the Secretary-General presents detailed budget and appropriations estimates for the following biennium. (Until 1974 there were annual budgets.) These estimates are reviewed and sometimes revised by the Advisory Committee. The programmatic aspects are reviewed by the 34-member Committee for Program and Coordination.

Aside from the regular budget, the General Assembly also allocates a certain amount of money for unforeseen and extraordinary expenses and determines the level of the UN's Working Capital Fund, to which member nations advance sums in proportion to their assessed contributions to the regular budget. The fund is used to finance appropriations pending receipt of contributions and may also be drawn upon by the Secretary-General for other purposes determined by the General Assembly.

Since the expenses of the organization can never be precisely predicted, the Secretary-General reviews actual expenditures for the current year at each regular session of the General Assembly and proposes adjustments in the original appropriations. Usually, a supplemental budget is voted, but occasionally the General Assembly votes reductions.

**INCOME ESTIMATES**

It was estimated that expenditures for 2004–05 would be offset in the amount of us\$443,851,900, to be derived as follows:

1. *income from staff assessment*: us\$415,613,700;
2. *general income*: us\$24,009,500
3. *services to public*: us\$4,228,700.

Under UN regulations, a percentage of the earnings of the entire UN staff is deducted in lieu of taxes and credited to "income." In order to avoid double taxation of staff members of US nation-

ality, they are reimbursed by the UN for the taxes (federal, state, and city) levied on their UN earnings. The withholdings from the salaries of UN personnel of all other nationalities are credited to the member states' accounts against their assessed contributions. After taking into account staff assessments and other items of income, the net estimated amount remaining must be raised through assessed contributions from member states.

### ASSESSED CONTRIBUTIONS OF MEMBER STATES TO THE REGULAR BUDGET

The scale of contributions of member states is established by the General Assembly on the recommendation of its Committee on Contributions. The basic original criterion for the apportionment of UN expenses was the ability to pay, with comparative estimates of national income taken as the fairest guide. Other factors, such as the comparative income per capita, the ability of contributors to obtain foreign exchange, and, until 1974, the dislocation of national economies arising out of World War II, also were taken into account. In this way, the US share was at first 39.89 percent, gradually declining to 31.52 percent for 1971–73.

In 1972, the General Assembly established a ceiling on the rate of assessment of the highest contributor, set at 25 percent. At the same time, it lowered the minimum rate of assessment to 0.02 percent (later lowered to 0.01 percent and in 1997 lowered again, to 0.001 percent) and requested the Committee on Contributions to give attention to the special economic and financial problems of developing countries. In 2000, the General Assembly adopted a new scale of assessments, lowering the ceiling of the amount to be paid by any single country from 25 to 22 percent.

In an effort to introduce what it termed greater fairness and equity in the scale of assessments, the General Assembly, in 1981, requested the Committee on Contributions to prepare a set of guidelines for the collection of more uniform and comparable data and statistics from member states and to study alternative methods of assessing “the real capacity of member states to pay.”

The top ten contributors for 2005 were assessed at the following rates (percentages):

United States: 22.0%  
 Japan: 19.468%  
 Germany: 8.662%  
 United Kingdom: 6.127%  
 France: 6.03%  
 Italy: 4.885%  
 Canada: 2.813%  
 Spain: 2.52%  
 China: 2.053%  
 Mexico: 1.883%

### PROPOSALS TO EASE THE UN'S FINANCIAL DIFFICULTIES

By and large, the regular budget has never created major disputes among the member states, and most governments have usually paid their dues relatively punctually. However, beginning in 1963, the USSR refused as a matter of principle to contribute to certain items in the regular budget, such as the UN Commission for the Unification and Rehabilitation of Korea until its dissolution by a consensus vote of the 1973 Assembly, or to those parts of the reg-

ular budget devoted to the redemption of UN bonds (a method of raising funds for certain UN peacekeeping operations). France has taken a similar stand in connection with the redemption of the bonds. In addition, a number of countries have refused to contribute to the special accounts for peacekeeping operations. It was chiefly these controversial expenditures which precipitated the UN's financial emergency in the mid-1960s.

In July 1962, the International Court of Justice, at the request of the General Assembly, issued an advisory opinion in which it declared that the expenses of the first UN Emergency Force in the Middle East and the UN Force in the Congo constituted expenses of the organization within the meaning of Article 17, paragraph 2, of the Charter and should thus be borne by member states as apportioned by the General Assembly. The Assembly accepted the court's opinion in December 1962, but debate over peacekeeping operations and the financial difficulties continued. A number of other factors, moreover, contributed to the precariousness of the financial position of the organization, notably the lateness of many member states in paying their assessed contributions, the currency fluctuations of the 1970s (marked by two devaluations of the US dollar, on which the UN budget is based), and inflation.

A Group of High-Level Intergovernmental Experts to Review the Efficiency of the Administrative and Financial Functioning of the UN, appointed by the General Assembly in 1985, submitted to the General Assembly in the following year its recommendations for enhancing the efficiency and reducing the expenditures of the organization. Implementation of the group's recommendations was the condition which a number of states, including the United States, placed on further payment of their assessments.

Among the solutions proposed in 1985 were an increase in the Working Capital Fund to us\$200 million, the issue of certificates of indebtedness in the amount of the arrears—in effect, borrowing from member states—and borrowing on the open market.

In 1992, Secretary-General Boutros Boutros-Ghali requested that the Ford Foundation assemble an independent advisory group to recommend ways to create a secure, long-term financial base for the organization. The group, co-chaired by Shijuro Ogata, former Deputy Governor of the Japan Development Bank, and Paul Volcker, former Board of Governors' Chairman of the United States Federal Reserve Bank, issued its report in February 1993. Entitled “Financing an Effective United Nations,” it suggested the following measures:

- Dividing UN expenditures into three categories: a regular budget financed by assessed contributions; peacekeeping financed by a separate assessment; and humanitarian and development activities financed largely by voluntary contributions.
- Requiring UN member states to pay dues in four quarterly installments, instead of a single lump sum at the beginning of the year; and granting the organization authority to charge interest on late payments.
- Appropriation by some nations of their UN contribution earlier in the year.
- Acceptance by member states of significantly increased peace-keeping costs over the next few years, and financing future cost from national defense budgets.
- Creation by the UN of a \$400 million revolving reserve fund for peacekeeping; and consideration of a unified peacekeeping budget, financed by a single annual assessment. The re-

port concluded that proposals for additional, nongovernmental sources of financing the UN were “neither practical nor desirable.”

Also in 1993, the Joint Inspection Unit (JIU) of the Secretariat issued a report declaring: “The old financial malaise is emerging with renewed evidence. What was a chronic illness is becoming a critical one.” Among JIU proposals:

- Governments should adjust their national legislations to avoid obstacles to paying their UN contributions in full and on time.
- Replenishment of the proposed UN Peace Endowment Fund could take advantage of initiatives, such as the issuance of special stamps by member states, with revenues turned over to the organization.

- Countries could turn over to peacekeeping operations funds earmarked for aid to developing countries in which the existing critical situation is an impediment to using those funds.
- In parallel with financing, cost saving is indispensable to solving the financial crisis. Fighting waste and reducing expenses must take place in all areas of the organization.

The fundamental requirement for the essential financial stability of the UN, however, remained the full and timely payment by all member states of their assessments, in accordance with Article 17, paragraph 2, of the Charter, which states that: “The expenses of the Organization shall be borne by the Members as apportioned by the General Assembly.”

In 1994, the UN General Assembly created the Office of Internal Oversight Service (OIOS) as a department within the Secretariat to independently monitor reports of waste, fraud, and mismanagement within the UN. OIOS focuses on high-risk activities, such as peace-keeping operations, humanitarian activities, and procurement while simultaneously providing oversight to all activities of the UN. OIOS provides oversight through internal auditing, management consulting, investigations, monitoring, inspection, and evaluation.

In 1996, efforts at managerial reform targeted five areas of management: cost structure, human resources, information, technology, and work programs. This approach has required reductions and redeployment of staff. Between 1984–95 and 1996–97, the UN eliminated 2,046 positions, and about 1,000 of the budgeted posts that exist now are kept vacant. Travel was reduced by 26% in 1996, and printing costs were reduced by 27% in early 1996, as more than 270,000 UN documents have become available electronically.

On 23 March 2000, Under-Secretary-General for Management Joseph E. Connor told the General Assembly's Fifth Committee (Administrative and Budgetary) that in 1999 the United Nations "took a step back from the financial brink." While regular budget and tribunals assessments were as expected, there was an increase in peacekeeping assessments in 1999, he added. Even with that increase, the obligatory cost to member states for all UN activities in 1999 was the lowest in six years: the actual assessment for 1999 came to just over US\$2 billion. The UN had more cash than the previous year largely because of payments made by the United States to avoid losing its vote in the General Assembly. Total available cash at the end of 1999 jumped to some US\$1.093 billion, from US\$736 million in 1998. Amounts owed to the United Nations were also lower, at US\$1.758 billion, down from US\$2.031 billion a year earlier. And the level of the United Nations debt to its member states—some US\$800 million—was also significantly lower than the previous three years.

---

# THE GENERAL ASSEMBLY

The first of the UN organs established by the charter, the General Assembly is the pivot of the organization. All member states are represented. Each country, large or small, has one vote, and each country chooses its own representatives.

## FUNCTIONS AND POWERS

The central position of the General Assembly is firmly established in a series of charter provisions encompassing a wide range of functions and powers. First are the provisions setting forth its powers as the major deliberative body of the UN. With two exceptions (described below), the General Assembly has the right to discuss and make recommendations on any subject that falls within the scope of the charter itself, including the functions and powers of the other organs. Hence, it is in the General Assembly that all of the UN's important projects (except for the Security Council's peacekeeping operations) originate—those dealing with political questions, disarmament, economic and social development, human rights, decolonization of dependent territories, and development of international law.

The second group of charter provisions defining the pivotal position of the General Assembly concerns the financing of the UN. The General Assembly is empowered to “consider and approve” the budget of the organization (which includes that of the International Court of Justice at The Hague), and it also has the right to determine how the expenses shall be apportioned among the member nations.

Lastly, the General Assembly's position is secured by provisions that give it specific powers in relation to the other organs. Thus, both the Economic and Social Council and the Trusteeship Council are constituted under the direct authority of the General Assembly to carry out designated tasks in their respective spheres. The administrative arm of the UN, the Secretariat, is also at the disposition of the General Assembly. The General Assembly's powers, however, are much more limited where the Security Council and the International Court of Justice are concerned. Designed in some respects to be more powerful than the General Assembly, the Security Council is in no way answerable to the body for its activities—although it is required to make an annual report and, when necessary, special reports. Also, whereas the General Assembly is empowered to make recommendations to the council concerning the maintenance of international peace, it cannot give the council instructions. In the case of the International Court of Justice, any attempt to render its activities answerable to the General Assembly would have prejudiced the independent status that is normally accorded to judiciary bodies throughout the world. Nevertheless, inasmuch as the General Assembly not only has budgetary power but also elects the nonpermanent members of the Security Council and, concurrently with the Security Council, all the judges of the International Court, it can be said to exercise an appreciable degree of indirect control over both these bodies.

Thus, the one UN organ on which all member states have the constitutional right to be represented is able to make its will felt throughout the organization, and indeed the entire UN system. Because its powers closely resemble those of a national parliament, the General Assembly has been described as a “world parliament.” Parliamentary powers are not to be confused, though, with governmental powers. Except insofar as the Economic and Social Council, the Trusteeship Council, and the Secretariat are bound to carry out its requests, the General Assembly has no power to legislate and cannot enforce its decisions upon individual member nations. The only sanctions that the General Assembly can wield against an uncooperative member are the suspension of the rights and privileges of membership and expulsion from the organization, but even these sanctions can be invoked only on the recommendation of the Security Council. In effect, then, all General Assembly decisions are purely recommendations that reflect world public opinion; they have moral, though not legal, force. At the end of this chapter, an attempt is made to assess their effectiveness on this score.

## Charter Restrictions on the Assembly's Power to Discuss and Recommend

The charter imposes two major restrictions on the General Assembly's powers to discuss and make recommendations. The first is embodied in the principle set out in Article 2, paragraph 7 of the charter, which states: “Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement...” This principle is not so restrictive as it might seem, for whether a given issue is or is not of a domestic character is decided by the General Assembly itself. It can and often does override by majority vote the attempt of a member nation to bar a particular topic from debate by invoking Article 2, paragraph 7 of the charter. The most notable case in point was the General Assembly's annual discussion of South Africa's apartheid policy (before it was abolished) despite South Africa's contention that the matter was within its domestic jurisdiction. (See section on “Apartheid in South Africa” in the chapter on Human Rights.)

The second restriction is to be found in Article 12 of the Charter, which states that while the Security Council is exercising its functions in respect to any international dispute or situation, “the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.” This stipulation, then, clearly establishes the absolute primacy of the Security Council over the General Assembly in times of crisis. Here, the main object of the founders of the UN was to ensure against the possibility of the smaller nations forming a majority bloc to interfere with any decisions that might be made by the Big Five acting in concert as permanent members of the Secu-

rity Council, where each possesses the right of veto. (For a discussion of the veto right, see the chapter on the Security Council.)

#### Extension of the Assembly's Power to Discuss and Recommend through the Uniting for Peace Resolution

Designed to secure maximum unity of action in moments of acute danger, Article 12, in fact, proved to be the chief obstacle to action of any kind during successive crises in the years just after World War II. The effectiveness of the entire system presupposed a spirit of unanimity among the great powers in their determination to end a particular dispute that appeared to threaten international peace and security. However, on each postwar occasion when the great powers might have been expected to display unanimity, the USSR and the four other permanent members of the Security Council took opposite sides in the dispute. As a result, precisely because each of them possessed the veto, all council action was deadlocked. Meanwhile, the General Assembly, prevented from taking action of its own accord because of Article 12, was forced to stand by helplessly.

It was the seriousness of the Korean crisis that finally impelled the General Assembly to take steps to break through its constitutional straitjacket. Following a deadlock in the council in 1950, when the USSR vetoed a United States-sponsored resolution in connection with the entry of the People's Republic of China into the Korean conflict on the side of North Korea, the General Assembly adopted a resolution that enabled it to circumvent the restrictions imposed by Article 12. This act, which came to be known as the "Uniting for Peace Resolution," provides that if the Security Council, because of lack of unanimity among its permanent members, fails to exercise its primary responsibility in the maintenance of peace, in a case where there appears to be a threat to the peace, breach of the peace, or act of aggression, the General Assembly shall consider the matter immediately with a view to making recommendations to members for collective measures, including if necessary the use of armed force. Although the Uniting for Peace Resolution thus considerably extends the General Assembly's powers with respect to maintenance of international peace and security, it in no way represents an attempt to usurp the Security Council's prerogatives. Nor does it attempt to arrogate to the General Assembly the enforcement powers that the charter accorded to the Security Council alone. Even under the Uniting for Peace Resolution, the General Assembly can only recommend that members undertake collective peacekeeping measures; it cannot oblige them to do so. Nor can it impose peacekeeping action against the will of the parties to a dispute. It must obtain their explicit consent to the presence of UN personnel-observer commissions, mediators, troops-in their territories.

The Uniting for Peace Resolution has been invoked in several major crises: the Middle East (1958, 1967), Hungary (1956), Suez (1956), the Congo (1960), Afghanistan (1980), Palestine (1980, 1982), Namibia (1981), the occupied Arab territories (1982) and illegal Israeli actions in occupied East Jerusalem and the rest of the occupied Palestinian Territory (1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004). In all cases, the emergency special sessions addressed situations in which the Security Council found itself deadlocked. (See the discussion of peacekeeping operations in the chapter on International Peace and Security.)

## ORGANIZATION

### Sessions

The General Assembly meets once a year in regular sessions that begin on the third Tuesday in September. Usually these sessions last about three months, ending before Christmas, but there is no fixed time limit, and many times the General Assembly has adjourned, continuing the session after the holidays. Special sessions on a particular topic may be held at the request of the Security Council, or of a majority of UN members, or of one member if the majority of members concur. An emergency special session may be called within 24 hours by the Security Council on the vote of any nine members, or by a majority of UN members, or by one member if the majority concurs.

Through 2005, the Assembly convened 28 special sessions on issues that demanded attention over the years, including problems of Palestine, UN finances, Namibia, disarmament, international economic cooperation, apartheid, drugs, the environment, population, children, the advancement of women, sustainable development of small island developing states, and the 60th commemoration of the liberation of the Nazi concentration camps.

### Sessional Committees

Most of the substantive work during regular session is conducted through seven "Main Committees," which are reconstituted at every session. Each is composed of representatives of all member nations.

- The *First Committee* deals with disarmament and related international security matters.
- The *Second Committee* deals with economic and financial matters.
- The *Third Committee* is concerned with social, humanitarian, and cultural matters and human rights.
- The *Fourth Committee* handles special political questions and questions concerning the granting of independence to colonial territories.
- The *Fifth Committee* deals with the administrative and budgetary matters of the organization.
- The *Sixth Committee* debates legal questions, including the general development and codification of international law.
- The *Special Political Committee* was created in 1948 as an ad hoc committee of the whole to discuss the Palestine question. It was subsequently absorbed by the Fourth Committee.

The General Assembly maintains two other sessional committees, both of which deal with General Assembly procedure. However, neither is a committee of the whole. The 28-member *General Committee*, composed of the General Assembly president, the 21 vice presidents, and the chairmen of the six main committees (see Election of Officers, below), examines the provisional agenda of each session and makes recommendations on the inclusion or exclusion of items and on their assignment to the appropriate main committee. The *Credentials Committee* is a nine-member body appointed by the General Assembly at the beginning of the session to examine the credentials of representatives and to work out any problems that might arise in this connection.

### Plenary Meetings

Since all the main committees are committees of the whole, the distinction between the General Assembly meeting in committee

and meeting in plenum is largely one of protocol. Always conducted by the president or a vice president, plenary meetings are much more formal affairs. Normally, no one below the rank of head of delegation may actively participate in the proceedings, and no one is allowed to speak from his or her chair but must go to the speaker's rostrum. (None of the conference rooms in which the committees meet is provided with a speaker's rostrum.) The Assembly Hall itself is reserved for plenary meetings and is rarely used by the committees.

It is in plenary meetings that all formal or ceremonial functions occur: opening and closing of the General Assembly session, election of officers and members of other organs, adoption of resolutions and decisions on all agenda items, and addresses by heads of state or government or by other high national officials who visit the UN while the General Assembly is in session. Plenary meetings also constitute the forum for the statements of general policy that the head of each member delegation is entitled to make as part of what is known as the "general debate," which takes place during the first three weeks or so of the regular session. Because of the great number of questions which the General Assembly is called upon to consider (156 agenda items at the 2005-06 session) it allocates most questions to its six main committees.

#### Voting Procedure

Each member of the General Assembly and its committees has one vote. Article 18 of the charter decrees that decisions on "important" questions shall be made by a two-thirds majority of the members present and voting. Among the important questions specified are recommendations with regard to maintenance of peace and security; election of the nonpermanent members of the Security Council and of the members of the Economic and Social Council and the Trusteeship Council; admission of new UN members, suspension of rights and privileges of membership, and expulsion of members; questions relating to the operation of the trusteeship system; and budgetary questions. Decisions on other questions, including the determination of additional categories of important questions requiring a two-thirds majority vote, are made by a simple majority of the members present and voting. The phrase "members present and voting" means members casting either affirmative or negative votes; members who abstain are considered as not voting. Thus, although the number of abstentions is usually listed for information purposes, it does not count in the final tally as to whether a resolution has received the requisite majority—provided that the rules of quorum have been observed. A quorum is constituted when a majority of the members are present; no decision may be taken without one. The president of the General Assembly, however, may declare a meeting open and permit the debate to proceed when at least one-third of the members are present. The chairman of a main committee may open a meeting when one-quarter of the members are present.

Voting may be by a show of hands, by roll call, or, in certain instances such as elections, by secret ballot. The normal method was intended to be by a show of hands, but any member can request a roll call. There has been an increasing tendency to do so, especially on the more contentious issues. Before a roll-call vote is taken, a lot is drawn to determine the country that is to vote first. Starting with that country, voting proceeds according to the alphabetical order of the official names of states in English. Mechanical vot-

ing equipment was installed in the Assembly Hall and first used at the 1965 session. Similar equipment is used in some conference rooms.

#### Seating Arrangements

The charter allows each member state a maximum of five representatives in the General Assembly. Most members, in addition to their five representatives, send five alternative representatives and a number of advisers to each session. Six seats are assigned to every delegation in the Assembly Hall. Both in the hall and in conference rooms, delegations are seated in alphabetical order according to the official names of the countries in English. The seating is rearranged before each session by drawing lots to select the country with which the alphabetical seating will start.

#### Election of Officers

At each regular session, the General Assembly constitutes itself anew. During the opening meetings, the main officers are elected, who serve until the end of the session. If a special or emergency session is called, it is normally presided over by officers elected in the previous September.

The first officer to be elected is the president. Delegates vote by secret ballot, and a simple majority suffices. In choosing the president, regard has to be paid to the equitable geographical rotation of the office among the following groups of states: African, Asian, Eastern European, Latin American, and Western European and other states. By tacit agreement, no representative of a permanent member of the Security Council ever is elected president of the General Assembly or chairman of a committee.

Following the election of the president, the main committees are officially constituted and retire to elect their own officers. Here again the matter of equitable geographical representation arises, and it is precisely regulated by a resolution adopted by the General Assembly in 1963. Of the six committee chairmen, one must be chosen from African, Asian, Eastern European, Latin American or Caribbean, and Western European or other states. The sixth chairmanship rotates over a period of twenty sessions between African, Asian, and Latin American and Caribbean states.

The final officers to be elected are the 21 vice presidents. Of these, 16 are elected in accordance with a geographical pattern: six from African states, four from Asian states, three from Latin American and Caribbean states, two from Western European and other states, and one from an Eastern European state. (The election of the president of the General Assembly has the effect, however, of reducing by one the number of vice presidencies allocated to the region from which the president is elected.) The remaining five vice presidents represent the permanent members of the Security Council: China, France, the Russian Federation, the United Kingdom, and the United States.

## AGENDA OF THE ASSEMBLY

Under the General Assembly's rules of procedure, the provisional agenda for a regular session must be issued no later than 60 days before the opening. However, up to 30 days before the opening, the Secretary-General, any of the other principal organs of the UN, or any member of the UN may request the inclusion of sup-

### General Assembly Presidents

1.	1946	Paul-Henri Spaak	Belgium
2.	1947	Oswaldo Aranha	Brazil
3.	1948	Herbert V. Evatt	Australia

35.	1980	Rüdiger von Wechmar	Federal Republic of Germany
36.	1981	Ismat T. Kittani	Iraq
37.	1982	Imre Hollai	Hungary
38.	1983	Jorge E. Illueca	Panama
39.	1984	Paul J. F. Lusaka	Zambia
40.	1985	Jaime de Piniés	Spain
41.	1986	Humayun Rasheed Choudhury	Bangladesh
42.	1987	Peter Florin	German Democratic Republic
43.	1988	Dante M. Caputa	Argentina
44.	1989	Joseph Nanven Garba	Nigeria
45.	1990	Guido de Marco	Malta
46.	1991	Samir S. Shihabi	Saudi Arabia
47.	1992	Stoyan Ganev	Bulgaria
48.	1993	Samuel R. Insanally	Guyana
49.	1994	Amara Essy	Côte d'Ivoire
50.	1995	Diogo Freitas do Amaral	Portugal
51.	1996	Razali Ismail	Malaysia
52.	1997	Hennadiy Udovenko	Ukraine
53.	1998	Didier Opertti	Uruguay
54.	1999	Theo-Ben Gurirab	Namibia
55.	2000	Harri Holkeri	Finland
56.	2001	Han Seung-soo	Republic of Korea
57.	2002	Jan Kavan	Czech Republic
58.	2003	Julian Robert Hunte	St. Lucia
59.	2004	Jean Ping	Gabon
60.	2005	Jan Eliasson	Sweden

Note: General Assembly presidents normally preside over special and emergency special sessions of the world body during their tenure. The exceptions were: José Arce of Argentina, who presided over the second special session in 1948, and Rudecindo Ortega of Chile, who presided over the first and second emergency special sessions held in 1956.

plementary items. Additional items may also be included at any time if a majority of the General Assembly agrees.

Normally, the agenda includes well over 100 items. The great majority of substantive (that is to say, nonprocedural) items arise out of decisions made by previous sessions, and their inclusion in the agenda is automatic. Thus, the General Assembly frequently requests the Secretary-General, a special committee, or another UN organ to submit a special report on a given topic. The report, at the time that it is due, automatically becomes part of the agenda item on the topic. There also are several items that the General Assembly is obliged to consider at each session under the Charter—for example, the annual report of the Secretary-General on the work of the UN and the reports of the three councils.

#### Adoption of the Agenda

The adoption of the agenda is not a mere formality. The General Assembly has to approve the entire agenda and may amend or delete any item by majority vote. A decision to reject a particular member's request to have an item placed on the agenda could have considerable political significance. It is the function of the General Committee (which could be described as the steering committee) to make recommendations to the General Assembly on the inclusion of requested items in the agenda. Most of the pros and cons of including a controversial item in the agenda are thrashed out in this committee rather than in plenary, and the committee's proceedings sometimes afford a preview of the positions that countries will take on certain questions when they come up for substantive debate. Another important function of the General Committee is to recommend the assignment of agenda items to the various main committees for debate. It may also recommend that an important item be debated in plenary without being referred to a committee.

#### EFFECTIVENESS OF THE ASSEMBLY

Depending on the nature of the question and on the views of the majority, General Assembly debates may lead to one or a combination of the following: recommendations, phrased in varying degrees of urgency, to individual countries or to all countries; initiation of studies and reports; creation of new UN organs, committees of inquiry, and permanent special bodies that are assigned specific tasks; and adoption of international covenants, treaties, and agreements.

#### Significance of the Enlarged Membership and Changing Voting Patterns

Since 1960, when the impact of the number of newly independent African and Asian nations first began to make itself felt in the UN, the General Assembly's voting patterns have undergone a marked alteration. Until then, the majority of controversial resolutions had tended essentially to reflect a simple East-West division of opinion. In the resulting lineup of votes, the Western view, marshaled under the leadership of the United States, easily attained comfortable majorities on most issues, since it was supported not only by the countries of Western Europe but by the Latin American states as well. The formation of what has come to be known as the "Afro-

Asian group," coupled with the general detente in East-West relations, introduced a new element into the voting equation.

Interested in wielding influence within the world body and preoccupied with the problems of development and decolonization rather than with cold war issues as such, African and Asian countries sought to unite themselves into an independent or "non-aligned" voting bloc. On occasion, the unity of the group is split by divided interests. This division occurs most frequently in major political issues of special importance to the big powers, when some small countries may find it expedient to associate themselves with the big power on which they are dependent for financial aid. At other times, notably on items connected with economic development, African and Asian nations may join the developing countries of the Latin American group in order to create a formidable voting bloc that can force through requests to which the highly developed nations, from East and West alike, may be reluctant to accede.

Then again, the emergence of what is in effect a floating third voting force in the General Assembly has resulted in the creation of special alliances as occasion demands. For example, the former Soviet bloc and the nonaligned groups often combined to defeat or hurry the West on colonial issues. This development also opened up possibilities for striking voting bargains on individual draft resolutions. Accordingly, one group might support an initiative taken by a second group in exchange for the latter's support on a different item.

The indiscriminate wielding of voting strength by small nations is subject to the law of diminishing returns. Indeed, many small nations have shown indications of growing restraint, realizing that there is little point in pushing through resolutions requiring, for example, increased expenditure on economic development if the big powers, which make the largest financial contributions, are not prepared to implement them. Similarly, these nations have recog-

nized that there is little to be gained from trying to compel the big powers to go beyond their own pace in agreeing upon measures for disarmament or for resolving their differences on peacekeeping issues.

One important outcome of the growing recognition by the small nations of the practical limitations of their voting strength, coupled with the realization by the Western powers that they no longer can be certain of majority support, even on items of particular importance to them, has been a general recourse wherever possible to compromise resolutions that command unanimous or nearly unanimous support. However, notwithstanding this partial solution to the problems created by the emergence of a floating third voting force in the General Assembly, the big powers, especially those from the West, have become increasingly dissatisfied with this situation, and some of their leaders have come to question the principle of "one country, one vote."

While the decisions of the General Assembly have no legally binding force for governments, they carry the weight of world opinion on major international issues, as well as the moral authority of the world community. Even so, the fact that a resolution receives an overwhelming majority vote does not guarantee its effectiveness. Nor does the fact that a resolution was adopted by a slender margin necessarily mean that it will serve no purpose. In general, it may be said that a resolution will be effective insofar as its adoption is not regarded by any country as inimical to its national interests. The most effective resolutions, then, are those that concern matters on which all members are prepared to accept a degree of compromise (though this acceptance may not necessarily be reflected in the actual voting) and that establish goals all members are eager to achieve or to which they have no objection. Like the UN itself, resolutions can be only as effective as the membership wants them to be.

---

# THE SECURITY COUNCIL

Under the UN charter, the member States give the Security Council primary responsibility for maintaining international peace and security. To facilitate its work and to ensure quick and effective action when required, the council has certain powers and attributes not accorded the other organs of the UN. Thus, the council is empowered by the charter to enforce its decisions and prescribe them as a course of action legally binding upon all UN members. However, these prerogatives can be invoked only in times of gravest crisis and under explicit conditions laid down in the charter. Otherwise, the Security Council, like the General Assembly, can only recommend and advise.

Another distinctive feature of the council is the membership and voting privileges accorded to the five countries that were chiefly responsible for the defeat of the Axis nations in World War II and, at the time of the San Francisco Conference, were regarded as militarily the most powerful countries in the world. By the terms of these privileges, China, France, the USSR, the United Kingdom, and the United States were each accorded permanent membership on the Security Council and the right to veto any substantive decision adopted by the majority of the other members. The underlying consideration here was the desire to preserve the unanimity of the Big Five—that is, to ensure that no peacekeeping action would be taken against the will of a country considered sufficiently powerful to oppose the council's decision with military force and so open up the possibility of a third major international war.

Since all five countries were actually specified by name in the relevant charter provisions, an amendment or revision of the charter would be required to name different nations as permanent Security Council members. In turn, a charter amendment requires ratification by all five permanent members of the Security Council before it can come into force. In 1971, a major change was brought about without altering the names of permanent members. The General Assembly voted that the right to represent China belonged to a delegation that the People's Republic of China would name and expelled the delegation from the Republic of China (Taiwan). On 24 December 1991, Boris Yeltsin, president of the new Russian Federation, sent a letter to the Secretary-General informing him that the Russian Federation, as the "continuing state" of the former USSR, would occupy the seat of the former USSR on the Security Council. The letter stated that the Russian Federation had the support of the 11 member countries of the Commonwealth of Independent States, most of whom subsequently became members of the United Nations. The precedent for this switch was cited as the 1947 accession of the newly independent India to the UN membership held by the former British India.

## MEMBERSHIP

To expedite decision and action, the membership of the Security Council was deliberately restricted to a small number. Originally

an 11-member body, it was subsequently enlarged to 15 members by a charter amendment that came into effect on 31 August 1965.

With five seats permanently assigned, the remaining 10 are filled by other UN members elected by secret ballot in the General Assembly for two-year terms. Five seats on the Security Council become vacant each year. Nonpermanent members of the council are ineligible for immediate reelection upon retirement. In electing the nonpermanent members of the Security Council, the General Assembly is required to pay due regard to the past and potential contribution of nations to the maintenance of international peace and security, as well as to equitable geographical distribution. In view of the power of the council, nations attach great importance to the choice of the nonpermanent members.

The problem of ensuring equitable geographical distribution of members elected to the Security Council has not been easy to resolve. Prior to the council's enlargement, there had been a long-standing difference of views on a "gentlemen's agreement" reached in the early days of the UN that was intended to guarantee that the six nonpermanent seats would be so distributed that one of the seats would always be held by a Soviet bloc country. However, until 1960, only Poland and the Ukraine were elected, and each served for only one two-year term. In the 1959 election, Poland and Turkey competed for the nonpermanent council seat for the two-year term 1960-61. After 52 ballots, the General Assembly gave the seat to Poland on the basis of the following compromise: though elected for two years, Poland would resign its seat at the end of the first year and Turkey would be the sole candidate to fill the unexpired term. Under a similar arrangement, Romania held a seat for 1962, resigning it for 1963 to the Philippines. To avoid the recurrence of such situations after the enlargement of the council, the General Assembly established a fixed pattern for the geographical distribution of the 10 nonpermanent seats: five from African and Asian nations, one from East European nations, two from Latin American and Caribbean nations, and two from West European and other nations.

The accession of the Russian Federation, a vastly less powerful state than the former USSR, to a permanent seat on the Security Council set off a discussion among the UN membership about the need to make changes to the structure of the Security Council to better reflect the radical changes in the world and the organization's overall membership. The 48th General Assembly established an Open-Ended Working Group on the Question of Equitable Representation on and Increase in the Membership of the Security Council, which held its first meeting in New York on 19 January 1994. The Working Group submitted an informal report to the Secretary-General summarizing the results of its survey of the membership. It found that virtually all member states of the UN favored an increase in the membership of the Security Council. There was little unanimity, however, on the criteria for revising the council's composition. Responses received by the Working Group

proposed increasing membership by as few as four (to 19) or more than doubling its size (to 31). Some members suggested the number of permanent members be increased at least by one (to six), or perhaps as much as seven (to 12). Most states responding to the survey agreed that an increase in membership should not diminish the council's efficiency. While most members favored continuing the categories of permanent and nonpermanent memberships, new categories were suggested: permanent seats without power of veto; rotating permanent seats, with or without power of veto; and semipermanent seats or extended membership. Some of the possible criteria put forward for new Security Council permanent membership included size of peacekeeping and financial contributions, the size of population and territory, economic potential, regional importance, geopolitical situation, and military capability.

In 2006, the Security Council consisted of the five permanent members: China, France, the Russian Federation, the United Kingdom, and the United States; the 10 nonpermanent members, elected for a two-year period, were Argentina, the Republic of the Congo, Denmark, Ghana, Greece, Japan, Peru, Qatar, Slovakia, and the United Republic of Tanzania.

## ORGANIZATION OF THE COUNCIL

The Security Council is organized to function continuously and to meet as often as necessary. Hence, a representative from each member state must always be available so that in an emergency the council can convene at once. Chairmanship rotates among the council's member states according to their English alphabetical order, a new president (as the chairman is called) presiding every month. It is up to the president to decide whether to preside during the discussion of a question that directly concerns his own country.

Council members normally are represented by the heads of their permanent missions to the UN, who have the rank of ambassador. Any state that is not currently a council member but is a party to a dispute under consideration by the council must be invited to send representatives to participate in the proceedings, though without the right to vote. (In these circumstances, the disputing states concerned usually send a high government official, very often the foreign minister.) When the council is discussing a matter other than an actual dispute, the decision to invite the participation of any UN member states whose interests are directly affected is left to its discretion. The council has usually acceded to requests for such invitations. It has also granted representatives of national liberation organizations the opportunity to speak at a number of meetings.

The Security Council has held sessions away from its New York headquarters on two occasions, in Addis Ababa, Ethiopia, in 1972, to consider questions relating to Africa, and in Panama City, Panama, in 1973, to consider questions relating to Latin America.

## VOTING

Each member of the Security Council has one vote. On questions of procedure, a motion is carried if it obtains an affirmative vote of any nine members. On substantive matters, a resolution requires the affirmative votes of nine members, including the concurring votes of the permanent members. However, any member, whether permanent or nonpermanent, must abstain from voting in any

decision concerning the peaceful settlement of a dispute to which it is a party.

### The Veto

The veto power and its exercise by permanent members remains a central characteristic of the mechanism of the Security Council, although, since the end of the cold war, a new climate of collegiality has made its use rare. Though the word "veto" does not occur in the charter, it is the common-usage term for the power of any of the five permanent members to defeat a resolution by voting "nay."

Negative votes cast in the council by its permanent members constitute an exercise of their veto power only on substantive questions, not on procedural matters. Moreover, by long-standing practice, the charter provision stipulating that all substantive resolutions must obtain the concurring votes of the permanent members has been interpreted to mean that, provided a permanent member does not actually vote "nay," a resolution may still be carried.

The veto power, then, is the constitutional instrument for giving expression to the requirement—discussed at the opening of this chapter—that before the Security Council invokes its authority in peacekeeping action, the big powers should first resolve their differences on how a particular crisis should be handled. However, although the principle of ensuring unanimity among the big powers was the major consideration underlying the institution of the veto, it was not the only one. A complementary consideration was the need of the major powers to ensure that their decisions would not be overridden by a majority vote of the smaller nations. In effect, conferring the right of veto upon a few powerful countries was tacit acknowledgment of the natural conflict that exists between their interests and those of the less powerful nations. It was a recognition of the fact that, despite differing social systems and power rivalry, the large countries often share more interests with each other than they do with smaller nations having social systems and tenets similar to their own. And it was for exactly this reason that the smaller countries represented at the San Francisco Conference made strenuous but unsuccessful efforts to prevent the institution of the veto power in the charter.

## FUNCTIONS AND POWERS

The functions and powers assigned to the Security Council under the charter are the following:

- to maintain international peace and security in accordance with the principles and purposes of the UN;
- to investigate any dispute or situation that might lead to international friction and to recommend methods of adjusting such disputes or the terms of settlement;
- to determine the existence of a threat to the peace or an act of aggression and to recommend what action should be taken;
- to call on members to apply economic sanctions and other measures not involving the use of force in order to prevent or stop aggression;
- to take military action against an aggressor; and
- to formulate plans for the establishment of a system to regulate armaments.

The Security Council also is empowered to exercise the trusteeship functions of the UN in areas designated as "strategic" (only the Trust Territory of the Pacific Islands was so designated).

Finally, the Council recommends to the General Assembly the admission of new members and the appointment of the Secretary-General and, together with the General Assembly, elects the judges of the International Court of Justice.

## MAINTAINING INTERNATIONAL PEACE AND SECURITY

By the very act of joining the UN, all members "confer on the Security Council primary responsibility for the maintenance of international peace and security and agree that in carrying out its duties under this responsibility the Security Council *acts on their behalf*" (italics added). They also consent "to accept and carry out" the decisions of the council on any peacekeeping action that may be required. Under Article 39 of the charter, the Security Council's powers to take such enforceable decisions come into effect only when a definite "threat to the peace," an actual "breach of the peace," or a particular "act of aggression" has occurred. Only if the council decides that one of these circumstances prevails may it invoke its power to take a course of enforcement action that constitutes a legally binding commitment on all UN members. With regard to disputes between states that, in the opinion of the council, have not yet led to a definite threat to the peace or do not constitute an actual breach of the peace or an act of aggression, it may simply recommend measures for a peaceful settlement.

The extreme caution with which the founders of the UN assigned governmental prerogatives to the Security Council is reflected in the fact that its peacekeeping powers are set out in two quite separate chapters of the charter. Chapter VI establishes the council's advisory functions in assisting the peaceful settlement of disputes. Chapter VII defines the kind of action that it may take in the event of threats to the peace, breaches of the peace, and acts of aggression.

### Peaceful Settlement of Disputes

Under Chapter VI of the charter, the parties to any dispute "the continuance of which is likely to endanger the maintenance of international peace and security" are enjoined to seek a settlement of their own accord by peaceful means, including "negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, or resort to regional agencies or arrangements...." When can the Security Council itself intervene? On this point, the charter is as unrestrictive as possible. By no means does every "situation" of conflicting interests lead to an actual dispute. Yet the council need not wait until a situation has given rise to friction before taking action. It may take the initiative of investigating any dispute, or any situation that might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security. Moreover, any nation, whether a member of the UN or not, has the right to bring any dispute or threatening situation before the Security Council (or before the General Assembly). Should the parties to a dispute fail to settle their differences by peaceful means of their own choice, they are

bound under the terms of the charter to refer the problem to the council.

Once the council has decided to intervene in a dispute, it can take several courses of action. It may recommend one of the methods of settlement listed in the charter; it may itself determine and recommend other "procedures or methods of adjustment" that it deems appropriate; or, if it considers that the continuance of the dispute is likely to endanger international peace and security, it can decide to recommend substantive terms of settlement.

### Threats to the Peace, Breaches of the Peace, and Acts of Aggression

If, in its opinion, there is a threat to the peace, the Security Council has the duty to maintain peace and security by preventing the outbreak of actual hostilities. If there has been a breach of the peace or an act of aggression, its duty is to restore international peace and security.

The Security Council is empowered by the charter to call upon the parties to comply with any provisional measures that it deems necessary or desirable. Such immediate instructions to the quarreling states are intended, without prejudice to the rights of the parties, to prevent an aggravation of the conflict. For example, the council may demand the immediate cessation of hostilities and withdrawal of the forces from the invaded territory. If either or both parties do not comply with these demands, the council "shall duly take account" of the failure to comply. In this event, the farthest-reaching prerogative of the Security Council can come into play—namely, its right to institute sanctions against the recalcitrant state or states.

Here again, the discretion of the Security Council is very wide. When the council finds that a threat to the peace, breach of the peace, or act of aggression exists, it is authorized, though not compelled, by the charter to invoke sanctions. Even if its first provisional demands are not heeded, it may continue to press for peaceful settlement or take various other actions, such as the dispatch of a commission of inquiry, short of sanctions. On the other hand, the Security Council is free to invoke whatever enforcement measures it may consider necessary under the circumstances. It need not begin with the mildest but may, as in the Korean conflict, immediately start with the severest type of sanction—namely, the use of military force—if it considers that less drastic measures would be inadequate.

*Types of Sanctions.* The charter does not provide an exhaustive list of sanctions that the Security Council may invoke, but it mentions two types: sanctions not involving the use of armed forces, and military sanctions.

Sanctions not involving the use of armed forces may be of two kinds. One is the severance of diplomatic relations with one or more of the belligerent states. The other is economic sanctions, including partial or complete interruption of economic relations and communications, such as rail, sea, and air traffic, postal and telegraphic services, and radio. The purpose is to isolate the country or countries against which they are directed, physically, economically, and morally. For example, a would-be aggressor that is denied certain strategic materials may be compelled to cease hostilities. If successful, such measures have great advantages over military sanctions. They impose fewer burdens on the participating countries and fewer hardships on the population of the areas

of conflict. They also avoid the danger that once military action on behalf of the UN has been taken, war may spread.

Military sanctions, the charter stipulates, may include demonstrations by air, sea, or land forces; blockade; or “other operations by air, sea, and land forces,” the latter including actual military action against the offending country or countries.

Once the Security Council has decided on specific sanctions, all members of the UN are under legal obligation to carry them out. The council may, however, at its discretion, decide that only certain member states shall take an active part, or it may demand that even nonmember states participate in economic sanctions to make them effective. The charter also stipulates that before any member state not represented on the Security Council is called upon to provide armed forces, that country must, upon its request, be invited to participate in the council’s deliberations, with a right to vote on the employment of its own contingents.

The Security Council has invoked its powers to impose sanctions judiciously.

In December 1966, the council imposed mandatory economic sanctions against the illegal Smith regime in Southern Rhodesia (now Zimbabwe).

The council instituted a voluntary arms embargo against South Africa in 1963 on the grounds that arms supplied to that country were being used to enforce its policy of apartheid. In November 1977, it imposed a mandatory arms embargo against South Africa. Although the General Assembly requested the Security Council to consider mandatory economic sanctions (in 1977) and a mandatory embargo on oil and oil products (in 1979), the council did not act. (The General Assembly passed a resolution calling for a mandatory oil embargo and economic sanctions against South Africa at its 44th session in 1989.)

On 6 August 1990, in response to Iraq’s invasion of Kuwait, the Security Council, in its Resolution 661, imposed tight sanctions: a full trade embargo barring all imports from and exports to Iraq, excepting only medical supplies and humanitarian food aid. The Security Council further indicated its resolve by passing Resolution 665 on 25 August 1990, authorizing member states to use force to block shipments of goods to Iraq. Finally, on 25 September, it passed Resolution 670 mandating a complete air transport blockade of Iraq. Beginning in 1995 (Resolution 986) an “oil-for-food” program was established in Iraq, enabling the country to sell up to \$1 billion of oil every 90 days and use the proceeds for humanitarian supplies. Subsequent resolutions (1051, 1111, 1115, 1129, 1134, 1137, 1143, 1153, 1158, 1175, 1194, 1210, 1242, 1266, 1281, 1284, 1302, and 1409) dealt with the extension of the oil-for-food program established under Resolution 986, and with IAEA inspections of Iraqi weapons of mass destruction programs. After the defeat of the Saddam Hussein government in March-April 2003 by US and British forces, the UN adopted Resolution 1483 on 22 May 2003, under which the Security Council decided that, except for the sale or supply to Iraq of arms and related material, all prohibitions related to trade with Iraq and other sanctions measures established by Resolution 661 and subsequent resolutions no longer applied. As of 28 May 2003, some \$28 billion worth of humanitarian supplies and equipment had been delivered to Iraq under the oil-for-food program, including \$1.6 billion worth of oil industry spare parts and equipment. An additional \$10 billion worth of supplies were in the production and delivery

pipeline. After the lifting of sanctions established by Resolution 1483, a UN special representative was tasked with the job of working with the occupying forces in rebuilding Iraq, opening the way for the resumption of oil exports, and providing for the termination of the oil-for-food program. The oil-for-food-program (which subsequently became the object of intense criticism due to charges of bribery, fraud, and kickbacks paid to the Hussein regime) was phased out on 21 November 2003.

In 1991, at the request of the foreign minister of Yugoslavia, the Security Council imposed its first mandatory arms embargo in Europe in an effort to quell the rising tide of insurrection between ethnic groups in that country. By 30 May 1992, Yugoslavia had dissolved into four states: Slovenia, Croatia, Bosnia-Herzegovina, and the Federal Republic of Yugoslavia (Serbia and Montenegro). At that time, Slovenia, Croatia, and Bosnia-Herzegovina were admitted to UN membership. The Security Council, in Resolution 757, imposed mandatory trade sanctions against the Federal Republic of Yugoslavia, excepting only shipments of food and medicine for humanitarian purposes. Resolution 942 (1994) imposed sanction against the Bosnian Serbs, including freezing Bosnian Serb financial assets held abroad, and prohibiting trade with any entity owned or controlled by Bosnian Serb forces, except for relief supplies. Beginning with Resolution 943 (1994), the UN suspended certain sanctions on the FRY; Resolution 1022 (1995) and Resolution 1074 (1996) terminated sanctions against the FRY and the Bosnian Serbs.

On 31 March 1992, the Security Council adopted an arms and air traffic embargo on Libya (Resolution 748) in response to requests by France, the United Kingdom, and the United States. Those countries sought to force Libya to extradite two Libyan nationals indicted in those countries for the 21 December 1988 bombing of Pan Am Flight 103 over Lockerbie, Scotland, in which 270 persons died, and the bombing of UTA Flight 772 on 19 September 1989 in Niger, in which 171 persons died. On 11 November 1993, the Security Council voted to widen those sanctions (Resolution 883) to include freezing Libyan bank accounts, closing the offices of Libyan Arab Airlines, and prohibiting the supply of materials for construction and maintenance of airports. The sanctions also banned the supply of pumps, turbines, and motors used at export terminals and oil refineries. The two Libyans indicted for the Lockerbie bombing were later tried in a Scottish court sitting in the Netherlands: one of the suspects was convicted for his role in the bombing. Libya subsequently took responsibility for the actions of its officials with regard to the bombing, renounced terrorism, and arranged for payment of appropriate compensation for the families of the victims. In response, the Security Council adopted Resolution 1506 (2003), formally lifting sanctions against Libya.

On 16 June 1993, the Security Council adopted wide-ranging economic and trade sanctions (Resolution 841) against the military regime in Haiti which had unseated Haitian president Jean-Bertrand Aristide in 1991. President Aristide had been elected to office in a UN-supervised election. The council acted in conjunction with similar sanctions imposed by the Organization of American States. In brief, the Security Council directed members not to sell oil, weapons, ammunition, military vehicles, military equipment, and spare parts to Haiti. In addition, it authorized members to blockade the country to prevent those items from being

delivered to Haiti. It also authorized member countries to freeze Haitian funds. The sanctions were briefly lifted when negotiations produced the Governors Island agreement of 3 July 1993, in which the military regime agreed to restore President Aristide with the assistance of a UN peacekeeping mission (called the UN Mission in Haiti or UNMIH). On 11 October 1993 the first deployment of UNMIH was prevented from landing at Port au Prince and the sanctions were reinstated three days later. On 6 May 1994, the Security Council adopted an expansion of sanctions (Resolution 917) against Haiti. Multinational forces were peacefully deployed in Haiti on 19 September 1994, and President Aristide returned shortly thereafter. On 29 September 1994, the Security Council suspended the sanctions (Resolution 944).

On 30 May 1993, in its Resolution 918, the Security Council imposed an arms embargo on Rwanda. It imposed the embargo in an effort to protect its UN Assistance Mission for Rwanda (UN-AMIR) and other international humanitarian relief workers, as well as the civilian population, from the rampant lawlessness and violence that had broken out in connection with the resumption of that country's civil war between ethnic Hutu and Tutsi factions. In May 1994, violence broke out between the factions, and killings were widespread. In July 1994, the Security Council established a commission of experts to investigate violations of international humanitarian law (Resolution 935), and an International Tribunal was established on 8 November 1994 (Resolution 955) to prosecute persons responsible for the genocide.

On 8 October 1997, in its Resolution 1132, the Security Council imposed a petroleum and arms embargo on Sierra Leone. It did this following the military coup of 25 May 1997 led by the army in conjunction with the Revolutionary United Front (RUF), to address the violence and loss of life that surrounded the coup, and to demand the military junta relinquish power, restore the democratically elected government, and return to constitutional order. In June 1998, the Security Council established the United Nations Observer Mission in Sierra Leone (UNOMSIL), after the democratically elected president, Alhaji Dr. Ahmed Tejan Kabbah, was returned to power in March of that year. Fighting continued, however, and the Security Council established the United Nations Mission in Sierra Leone (UNAMSIL) on 22 October 1999, a new and larger mission with a maximum of 6000 military personnel. In 2000 and 2001, the numbers of military personnel involved in the mission increased to 11,100 and 17,500 respectively. In order to stop the flow of rough diamonds from Sierra Leone other than those controlled by the government, the Security Council passed Resolution 1306 on 5 July 2000, extended by Resolution 1385 on 19 December 2001. This action was undertaken due to the link between the diamond trade and human rights abuses, in particular in the case of the RUF, which committed killings, amputations, abductions, and torture of civilians.

On 31 March 1998, the Security Council placed an arms embargo on the Federal Republic of Yugoslavia (Resolution 1160), to resolve the crisis in Kosovo, between Serbian forces and ethnic Albanian Kosovars. The North Atlantic Treaty Organization (NATO) launched air strikes against Serbian targets beginning on 24 March 1999, and lasting until 10 June of that year, to stop the practice of ethnic cleansing of the Albanian Kosovars by the Serbs. On 10 June, the Security Council established an international civil and security presence in Kosovo (Resolution 1244). In October

2000, Yugoslav President Slobodan Milosevic was voted out of office. On 10 September 2001, the Security Council terminated the prohibitions preventing the sale of arms and related material to the Federal Republic of Yugoslavia, by adopting Resolution 1367.

On 15 October 1999, the Security Council imposed a limited air embargo and funds and financial assets embargo on the Taliban regime in Afghanistan (Resolution 1267). With Resolution 1333 passed on 19 December 2000, it placed an air and arms embargo on the country, placed restricted travel sanctions on it, and froze funds of Osama bin Laden and his associates in Afghanistan. Following the defeat of the Taliban by the US-led coalition in November 2001, the Security Council lifted restrictions imposed upon Ariana Afghan Airlines (Resolution 1388) on 15 January 2002. And on 16 January (Resolution 1390), the Security Council modified its sanctions on the Taliban, Al-Qaeda, and Osama bin Laden, holding that all states should freeze the economic resources of these individuals, organization, and former regime, prevent their entry into or transit through their territories, and prevent the supply, sale, and transfer of arms and related material to them.

In response to the war between Ethiopia and Eritrea that began in 1998 as a border dispute in the region around Badme claimed by both countries, the Security Council on 17 May 2000 placed an arms embargo on the two countries, and established a sanctions committee to address the situation (Resolution 1298). Once there was a cessation of hostilities in June 2000, the Security Council established the UN Mission in Ethiopia and Eritrea (UNMEE), sending 4,200 military personnel to monitor the ceasefire and assist in ensuring observance of security commitments.

With Resolution 1343, the Security Council on 7 March 2001 applied an arms embargo on Liberia, blocked Liberian diamond sales, and restricted international travel by top Liberian officials, in response to fighting between the Liberian government and armed insurgents, which began in the remote northern Lofa County in 1998 and intensified during 2000. The sanctions were applied due to international condemnation of Liberian President Charles Taylor's trafficking in illicit diamonds from mines in Sierra Leone, for destabilizing neighboring countries, and for widespread human rights abuses against local populations. With Resolution 1408 on 6 May 2002, the Security Council extended the sanctions on Liberia for another 12 months and established a panel of experts to address the situation. Resolution 1497 (2003) authorized the deployment of a multinational force to Liberia, subsequently known as UNMIL (United Nations Mission in Liberia). Resolution 1532 (2004) froze the assets of Charles Taylor, and Resolution 1638 (2005) authorized UNMIL to "apprehend and detain" Taylor to facilitate his transfer to the Sierra Leone Special Court for prosecution. Resolution 1647 (2005) renewed timber, travel, arms, and diamond sanctions against Liberia. It also called upon Ellen Johnson-Sirleaf, Liberia's first elected president since the end of the war in 2003, to reform existing logging concessions and commission "independent external advice" to manage the country's diamond resources. Charles Taylor on 29 March 2006 was arrested in Nigeria and delivered to UN authorities in Sierra Leone. The next day, the Sierra Leone Special Court requested that the International Criminal Court in The Hague carry out the trial with proceedings still to be under the direction of the Special Court.

Beginning with Resolution 864 (1993), the Security Council imposed an oil and arms embargo against the National Union for

the Total Independence of Angola (UNITA). Subsequent resolutions extended the sanctions against the organization. However, in 2002, with the Angolan war at a close, the UN suspended sanctions against UNITA through Resolutions 1412, 1439 and 1448.

An arms embargo was also imposed on Somalia in 1992 (Resolution 733). Resolution 1407 (2002) established a team of experts to improve the enforcement of the arms embargo. Resolution 1519 (2003) established a monitoring group to refine and update information on those who violate the arms embargo. The monitoring group was reestablished in Resolution 1630 (2005).

By Resolution 1572 (2004), the Security Council imposed an arms embargo on Côte d'Ivoire, where civil war was ongoing; these sanctions were renewed by Resolution 1643 (2005).

With Resolution 1591 (2005), the Security Council set up a committee to designate individuals impeding the peace process in the Sudan, constitute a threat to stability in Darfur and the region, commit violations of international humanitarian or human rights law or other atrocities, or violate measures implemented in accordance with Resolution 1556 (2004), which demanded the government of the Sudan disarm Janjaweed militias and apprehend and bring to justice Janjaweed leaders, among other measures.

The Security Council's previous reluctance to invoke its ultimate prerogatives is attributable to two main factors. There is a very strong argument that in most cases punitive measures are ineffective and may even harm chances for a peaceful settlement. The provisions on the UN security system make it clear that peace is to be preserved whenever possible without recourse to force. The second major factor is that, before the end of the cold war, one or two of the permanent members would take different positions from the other three or four, so that in most cases the council's sympathies were divided between the opposing parties. Not only did division between the permanent members preclude punitive measures against one side, but it also seriously inhibited definitive action of any kind. For example, the initial action of sending a UN command into Korea was made possible only by the absence of the USSR from the council at the time (in protest against the council's decision on Chinese representation). Had the Soviet Union been there, it would presumably have vetoed the necessary resolutions. An example of the reverse situation is the issue of South Africa's apartheid policies. Beginning in 1960, the African nations appealed regularly to the Security Council to institute mandatory economic sanctions against South Africa in the hope of forcing it to terminate the apartheid system. The former USSR frequently expressed itself in favor of such a move, but the Western permanent members—in particular, South Africa's major trading partners, the United Kingdom and the United States—were reluctant to impose economic sanctions.

In the post-cold war era of collegiality in the Security Council, the Russian Federation and the United States rarely found themselves on opposite poles of an argument, and imposing sanctions as a method to force other member states to comply with Security Council directives was much easier to accomplish.

#### **Armed Forces for the UN**

Although the charter contains provisions to equip the Security Council with armed forces in case of need (the Covenant of the League of Nations contained no such provisions), these requirements have not been implemented. Under the charter, all UN

members “undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.” These agreements were to determine the number and types of military forces to be provided by the nations, their degree of readiness, their location, and so on, and they were to come into effect only after ratification by the countries concerned according to their respective constitutional requirements. (With this provision in mind, the United States Congress in December 1945 passed the “UN Participation Act,” authorizing the president of the United States to negotiate a special agreement with the Security Council on the detailed provision of United States forces; the agreement would then require approval by legislative enactment or joint resolution of the United States Congress.) The troops and weapons would remain part of each country's national military establishment. They would not become international forces, but they would be pledged to the UN and, at the request of the Security Council, would be placed at its disposal.

However, the plan to place armed forces at the disposition of the Security Council required wide international agreement on a number of steps before it could be put into operation. The charter provides for the establishment of a Military Staff Committee composed of the chiefs of staff (or their representatives) of the five permanent members to advise and assist the council on all questions relating to its military requirements. The first task that the council assigned the Military Staff Committee was to recommend the military arrangements to be negotiated with member states. The committee was never able to reach agreed positions that could serve as the basis for negotiation and at an early date took on the characteristics of a vestigial organ.

#### **Peacekeeping**

Peacekeeping operations are not mentioned in the charter, yet they, as opposed to enforcement measures, are the means that the Security Council has most frequently used to maintain the peace. It has dispatched observer missions and troops in several crises. (The council's major peacekeeping operations and those undertaken by the General Assembly are described in the chapter on International Peace and Security.) Although the arrangements for the provision of armed forces foreseen in the charter have not been realized, the UN has nevertheless been able to establish peacekeeping forces on the basis of voluntary contributions of troops by member states.

Until the end of the cold war, the formula had always been that the disputants themselves must expressly invite the council to take peacekeeping measures (the special situation of Korea being the only exception—see the chapter on International Peace and Security.) With the eruption of ethnic and nationalistic conflicts in Eastern Europe and Africa after the end of the cold war, the Security Council recognized that the increasing number and complexity of peacekeeping operations warranted review. In May 1993, it requested the Secretary-General to submit a report containing specific new proposals to improve the capacity of the UN in peacekeeping. The Secretary-General submitted his report on “Improving the capacity of the United Nations for peacekeeping” in March 1994. In response to this analysis, on 3 May 1994, the Security Council issued a statement setting forth factors to be con-

sidered in establishing UN peacekeeping operations. The factors to be considered in the establishment of new peacekeeping operations included:

- whether a situation exists that presents a threat to international peace and security;
- whether regional or subregional organizations already exist and can assist in resolving the situation;
- whether a cease-fire exists and whether the parties have committed themselves to a peace process intended to reach a political settlement;
- whether a clear political goal exists and whether it can be reflected in the mandate;
- whether a precise mandate for a United Nations operation can be formulated; and
- whether the safety and security of UN personnel can be reasonably insured; in particular, whether the parties to a dispute offer reasonable guarantees of safety to UN personnel.

The council also required an estimate of projected costs for the initial 90 days of a new peacekeeping operation, and for its first six months, and an estimate of the total annual cost, before authorizing any new missions. In the case of mission extensions, it also required estimates of the financial implications.

In both "An Agenda for Peace" (1992) and his March 1994 report, the Secretary-General proposed that a new mechanism had to be developed to enable a quick response to international crises. Under normal circumstances, the process of designing a mission, obtaining commitments for troops and equipment, establishing a budget, and obtaining approval for new peacekeeping missions could take as long as three months. The Security Council welcomed the Secretary-General's proposal to devise stand-by arrangements under which member states would maintain an agreed number of troops and equipment ready for quick deployment. A Stand-by Arrangements Management Unit was established to keep track of units and resources available for this purpose.

## SUBSIDIARY ORGANS

Besides supervising peacekeeping operations (listed in the chapter on International Peace and Security), the Security Council also has established various standing committees and ad hoc bodies.

### United Nations Special Commission (UNSCOM)

After the UN-sanctioned multinational force repulsed Iraq from Kuwait in April 1991, the Security Council passed Resolution 687 setting forth the terms for an official cease-fire. This resolution led the UN into previously uncharted waters. It required Iraq to "unconditionally accept the destruction, removal or rendering harmless of ... all chemical and biological weapons and stocks of agents and all ballistic missiles with a range greater than 150 kilometers..." Iraq also was forced to agree to place all its nuclear weapons materials under the custody of the International Atomic Energy Agency (IAEA). The resolution gave Iraq 15 days to submit a complete inventory of all its weapons of mass destruction.

To verify and implement this condition, the Security Council created the United Nations Special Commission (UNSCOM). Its mandate was to carry out immediate on-site inspections of Iraq's biological, chemical, and missile capabilities; to take possession for destruction, removal, or rendering harmless of all chemical and biological weapons and all materials for research, develop-

ment, support, and manufacture of such weapons; to supervise the destruction by Iraq of all its ballistic missiles with a range greater than 150 km, including major parts, repair, and production facilities; and to monitor and verify Iraq's compliance with its undertaking not to use, develop, construct, or acquire any of the items specified above. UNSCOM also worked with inspectors of the IAEA, who were charged with similar tasks in the area of nuclear armaments.

In October 1991, UNSCOM reported to the Security Council that Iraq at first adopted an attitude of noncooperation, concealment, and outright falsification. The Security Council responded with Resolution 707 (1991) condemning Iraq's violation of Resolution 687 and making nine specific demands. In March 1992, Iraq declared that it was no longer in possession of any of the weapons described in Resolution 687, but the Security Council did not accept this. In June 1992, Iraq again supplied what it said were "full, final and complete reports," on the weapons programs covered by Resolution 687. These reports also were considered to be suspect. Using aggressive surprise inspection techniques, UNSCOM and IAEA were able to compile significant information on Iraq's weapons capabilities.

UNSCOM's investigations revealed that Iraq had acquired a massive stockpile of weapons of mass destruction and ballistic missiles. The international community was horrified to learn that Iraq had established a military research program to develop biological weapons that had long been banned by international disarmament agreements (to which Iraq was ostensibly a party). UNSCOM discovered that the microorganisms involved in this research program included anthrax, botulin toxin, and gas gangrene. Although no facilities for the production of these biological weapons were found, UNSCOM did discover huge stockpiles of deadly chemical weapons, including warheads, aerial bombs, and artillery shells meant to deliver a variety of nerve gas agents, tear gas, and mustard gas.

IAEA/UNSCOM inspections also revealed three clandestine uranium enrichment programs and found conclusive evidence of a nuclear weapons development program aimed at an implosion-type weapon. The secret development of these materials, bypassing regular inspections by the IAEA, put Iraq in violation of its undertakings as a member of IAEA. The IAEA also found that Iraq had violated its obligations under the Nuclear Non-Proliferation Treaty. By mid-1992 the IAEA had removed and destroyed most of the materials and facilities and forced Iraq to destroy its nuclear complex at al-Athir, where most of the nuclear weapons research had taken place. The IAEA transported Iraq's nuclear fuel to Russia, where it was diluted from weapons grade to civilian reactor quality.

In 1998, Iraq ceased all cooperation with UNSCOM and the IAEA. No monitoring, inspection, or verification of weapons of mass destruction and ballistic missiles took place as of December of 1998.

In December 1999, the phase-out of UNSCOM was announced: The Security Council adopted Resolution 1284, establishing the new United Nations Monitoring, Verification and Inspection Commission (UNMOVIC) to assume the responsibilities of monitoring the elimination of weapons of mass destruction in Iraq. UNMOVIC took over UNSCOM's assets, liabilities, and archives and was mandated to "establish and operate a reinforced, ongoing

monitoring and verification system, address unresolved disarmament issues, and identify additional sites to be covered by the new monitoring system.”

On 8 November 2002, the Security Council adopted Resolution 1441, deploring the absence of weapons inspectors since 1998 in Iraq and its refusal to cooperate with the IAEA and UNMOVIC, decided that Iraq was in material breach of its obligations under previous relevant Security Council resolutions. The Security Council accorded Iraq a final opportunity to comply with its disarmament obligations, and set up an enhanced inspections regime to operate in the country. Iraq was given 30 days to submit a detailed report of all of its programs of chemical, biological, and nuclear weapons, and ballistic missile and other delivery system development, reports of weapons and agents stocks, and locations and work of research, development, and production facilities. Any false statements or omissions from this report would constitute a further material breach of its obligations. Iraq was to allow unimpeded, unconditional, and unrestricted access to UNMOVIC and the IAEA of its weapons facilities. Any interference by Iraq to comply with the weapons inspections, or false reports of its stockpiles and programs that it might make, would cause the Security Council to convene immediately to “consider” the situation and the need for full compliance with the previous resolutions, “in order to secure international peace and security.” Dr. Hans Blix of Sweden served as UNMOVIC’s executive chairman from 1 March 2000 to 30 June 2003. Demetrius Perricos was named acting executive chairman on 1 July 2003, and 16 individuals were appointed by the Secretary-General to serve on a College of Commissioners to advise the acting executive secretary. Although its inspectors were withdrawn from Iraq on the eve of the Iraq war which began on 19 March 2003, UNMOVIC continues to operate with respect to those parts of its mandate it can implement outside of Iraq and has maintained a degree of preparedness to resume work in Iraq. As of 2006, it maintained a roster of more than 300 experts ready to serve and continued to conduct training.

### War Crimes

*International Criminal Tribunal for the former Yugoslavia (ICTY).* Reports of widespread violations of international humanitarian law in the bloody conflict among the states of the former Yugoslavia led the Security Council to establish a Commission of Experts in October 1992. The commission was established to investigate the reports and submit its findings to the Security Council. In January 1993 the commission sent a first report describing the discovery of a mass grave in Croatia, and thousands of allegations of grave breaches of the Geneva Conventions and international humanitarian law. In February 1993, the Security Council adopted Resolution 808, establishing an international tribunal for the prosecution of persons responsible for the crimes discovered by the Commission, the first such tribunal since the war crimes trials conducted after World War II. By May 1993, the Secretary-General had submitted a detailed report to the Security Council setting forth the tribunal’s legal basis, method of proceeding, and its statute. It was established as a subsidiary organ of the Security Council under Chapter VII of the charter. Its headquarters would be at The Hague, Netherlands.

On 25 May 1993, the Security Council passed Resolution 827, approving the report and establishing the tribunal “for the sole

purpose of prosecuting persons responsible for the serious violations of international humanitarian law committed in the territory of the former Yugoslavia between 1 January 1991 and a date to be determined by the Security Council upon restoration of peace....” The General Assembly elected 11 judges to the tribunal in September 1993. However, it was not until 7 July 1994 that South African judge Richard Goldstone was chosen to lead the prosecution team and he served until 30 September 1996, after which Louise Arbour of Canada became chief prosecutor. Carla Del Ponte of Switzerland was chief prosecutor as of April 2006 (she took office in 1999). As of April 2006, the ICTY president was Fausto Pocar (Italy) and the vice-president was Kevin Parker (Australia); presiding judges were Patrick Lipton Robinson (Jamaica), Carmel A. Agius (Malta), and Alponus Martinus Maria Orie (the Netherlands); judges were Mohammad Shahabuddeen (Guyana), Mehmet Güney (Turkey), Liu Daqun (China), Andresia Vaz (Senegal), Theodor Meron (United States), Wolfgang Schomburg (Germany) O-Gon Dwon (South Korea), Jean-Claude Antonetti (France), Iain Bonomy (United Kingdom), Christine Van Den Wyngaert (Belgium), and Bakone Justice Moloto (South Africa); and ad litem judges were Joaquín Martín Canivell (Spain), Krister Thelin (Sweden), Albin Eser (Germany), Hans Henrik Brydensholt (Denmark), Claude Hanoteau (France), Janet M. Nosworthy (Jamaica), Frank Hoepfel (Austria), Stefan Trechsel (Switzerland), and Árpád Prandler (Hungary).

As of April 2006, 161 persons had been indicted for serious violations of humanitarian law in the territory of the former Yugoslavia; 133 of the accused had appeared in proceedings before the ICTY and proceedings against 89 persons had been concluded; 48 of the accused were in custody; 23 were released; state arrest warrants had been issued against all accused and were outstanding on 6 people, including former Bosnian Serb leader Radovan Karadzic and Karadzic’s army chief Ratko Mladic; 44 of the accused had been found guilty; 8 of the accused had been acquitted; 19 of the accused were transferred to serve sentence; 16 sentences had been served; 28 indictments had been withdrawn; 8 of the accused had died, and 3 of the accused had died after the commencement of proceedings, one of whom was former Yugoslav President Slobodan Milosevic. Milosevic had been standing trial for violating the laws or customs of war, crimes against humanity, breaches of the 1949 Geneva Conventions, and 2 counts of genocide and complicity in genocide, for acts committed in Bosnia-Herzegovina, Croatia, and Kosovo. He died of a heart attack on 11 March 2006 after five years in prison in The Hague with just 50 hours of testimony left before the conclusion of the trial. Prison terms for those found guilty ranged from several years to 46 years. The heaviest sentence to date had been handed on 2 August 2001 to Radislav Krstic, who was found guilty “by virtue of his individual criminal responsibility” on one count of genocide, one count of crimes against humanity, and one count of violations of the laws or customs of war. Updates on the proceedings were being posted regularly on the UN’s web site at <http://www.un.org/icty/index.html>.

*International Criminal Tribunal for Rwanda (ICTR).* On 1 July 1994, the Security Council requested the Secretary-General establish a three-member Commission of Experts to investigate allegations of mass killings of civilians and genocide in Rwanda, during the re-eruption of civil war in that country in April 1994. It had been reported that as many as 250,000 civilians may have died in

ethnic violence. On 8 August 1994, the new government of Rwanda, led by members of the Tutsi ethnic group, notified the Secretary-General that it would cooperate with an international war crimes tribunal. The new government hoped that the promise of an international tribunal under the auspices of the UN would allay the fears of hundreds of thousands of ethnic Hutu citizens who were refusing to return to Rwanda from refugee camps in neighboring countries due to fear of reprisals and prosecution by the new government.

On 8 November 1994 the Security Council passed Resolution 955, establishing the tribunal and empowering it to prosecute persons responsible for serious violations of international humanitarian law in Rwanda and Rwandan citizens responsible for such violations committed in neighboring states during 1994.

Following the election of the first judges, the tribunal began its work in November 1995. Progress was initially slow and the tribunal was criticized for incompetence. In 1998 Judge Lennart Aspegren (of Sweden) announced his resignation, protesting bad management and inadequate working conditions. Meanwhile, Rwanda had begun to hold trials of its own. In a press conference held 5 March 1999, Louise Arbour, then chief prosecutor of the UN tribunals for the former Yugoslavia and for Rwanda, told correspondents that the contrast was becoming increasingly dramatic between the remarkable willingness to endorse and support the work of the tribunals on the African continent and the tolerated non-compliance in the case of the states of the former Yugoslavia: Of the more than 70 suspects who were indicted by the Rwanda Tribunal, more than 60 were arrested and transferred to a detention unit at Arusha, Tanzania. This was in dramatic contrast to the lack of cooperation that the tribunal for the former Yugoslavia was experiencing, in which numerous arrest warrants remained outstanding.

As the Rwandan death toll mounted (approaching one million dead), the tribunal pressed on with its work. In 1999 the Security Council appointed Carla Del Ponte (Switzerland) as the tribunal's chief prosecutor; she began work 11 August of that year. As of April 2006, Erik Møse (Norway) was president of the ICTR and Arlette Ramaroson (Madagascar) was vice-president; presiding judges were Fausto Pocar (Italy), William Sekule (United Republic of Tanzania), and Khalida Rachid Khan (Pakistan); appeals chamber judges were Mohamed Shahabuddeen (Guyana), Mehmet Güney (Turkey), Liu Daqun (China), Andresia Vaz (Senegal), Theodor Meron (United States), and Wolfgang Schomburg (Germany); trial chamber judges were Jai Ram Reddy (Fiji), Ser-

gei Alekseevich Egorov (Russia), Inés Mónica Weinberg de Roca (Argentina), Charles Michael Dennis Byron (St. Kitts & Nevis), and Asoka Nihal De Silva (Sri Lanka); ad litem judges were Solomy Balungi Bossa (Uganda), Flavia Lattanzi (Italy), Lee Gacugia Muthoga (Kenya), Florence Rita Arrey (Cameroon), Emile Francis Short (Ghana), Karin Hökborg (Sweden), Taghrid Hikmet (Jordan), Seon Ki Park (South Korea), and Gberdao Gustave Kam (Burkina Faso).

As of May 2005, the ICTR had handed down a total of 19 judgments involving 25 accused. Another 25 accused were on trial. The tribunal had handed down several judgments, including that of Jean Kambanda, the former prime minister of Rwanda, who pleaded guilty to and was sentenced to life imprisonment for crimes of genocide, and Jean Paul Akayesu, Georges Anderson Ndrubumwe Rutaganda, Clement Kayishema, and Alfred Musema, who were sentenced to life imprisonment. The Akayesu judgment and the Kambanda sentencing were the first ever by an international court for the crime of genocide. Tribunal updates were being posted on the ICTR's web site at <http://www.icttr.org/>.

### Terrorism

Following the terrorist attacks on the United States on 11 September 2001, the Security Council established a Counter Terrorism Committee (CTC) pursuant to its Resolution 1373 adopted 28 September 2001 concerning counter-terrorism. Resolution 1373 called upon states to prevent and suppress the financing of terrorist acts; to refrain from providing any support to entities or persons involved in terrorist acts; to deny safe haven to those who finance, plan, support, or commit terrorist acts; to bring those individuals or entities to justice; and to exchange information on the actions or movements of terrorists or terrorist networks. The CTC is composed of all 15 members of the Security Council. Subsequent Security Council resolutions were adopted regarding threats to international peace and security caused by terrorist acts, including Resolution 1377 adopted 12 November 2001, Resolution 1438 adopted 14 October 2002, and Resolution 1440 adopted 24 October 2002. Security Council resolution 1535 (2004) established the Counter-Terrorism Committee Executive Directorate (CTED). On 14 September 2005 the Security Council adopted resolution 1624, which deals with the issue of incitement to commit acts of terrorism and expands the Committee's mandate to include monitoring its implementation. Press releases and updates on the work of the CTC were posted at <http://www.un.org/Docs/sc/committees/1373/>.

---

# THE ECONOMIC AND SOCIAL COUNCIL

Many of the most outstanding accomplishments of the UN to date are in the economic and social fields. Under Article 55 of the charter, the organization is committed to promote the following goals:

- “(a) higher standards of living, full employment, and conditions of economic and social progress and development;
- “(b) solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and
- “(c) universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.”

The responsibility for UN activities aimed at the achievement of these goals is vested in the General Assembly and, under its authority, the Economic and Social Council.

## FIELDS OF ACTIVITY

The activities of the Economic and Social Council, carried out through its subsidiary bodies in cooperation with the specialized agencies, have touched on all aspects of human well-being and affected the lives of people everywhere. A list of the major spheres of activity supervised by the council is given below; the chapters on Economic and Social Development, Technical Cooperation Programs, Social and Humanitarian Assistance, and Human Rights contain further information on matters directly under its purview.

*Economic Development.* Although this field encompasses both developed and developing nations, emphasis is on the problems of the latter group. The activities of the council include evaluating long-term projections for the world economy; fostering international trade, particularly in commodities, between industrialized and nonindustrialized countries; improving the international flow of private and public capital; promoting industrialization and the development of natural resources; resolving related political and legal issues, such as permanent sovereignty over natural resources and land reform; developing programs of technical cooperation for developing nations; and applying the latest innovations of science and technology to improve the industrialization of developing countries.

*Social Progress.* Among the social problems handled under the aegis of the council are housing, population, international traffic in narcotic drugs, the welfare of children in the developing countries, and the status of the world's refugees, the aging, and the disabled. Particular attention is paid to the role of women in development.

*Human Rights.* The council and its subsidiary organs have elaborated a series of important principles for the promotion of fundamental freedoms. Measures include the Universal Declaration

of Human Rights and a number of declarations and recommendations on specific rights—for example, the rights of women, freedom of information and the press, and racial equality. The most recent declaration was adopted in Vienna in June 1993, namely, the “Vienna Declaration and Programme of Action.”

*Related Special Problems.* An example of a special problem of interest to the council is the improvement of statistical techniques, since efficient statistics are essential to economic and social development. Work in this field includes techniques to improve world statistics in specific economic branches, such as industry and finance; standards of national statistical services; and methods of comparing statistics from different countries.

*Problems Dealt with by the UN Related Agencies.* The specialized agencies, the World Trade Organization (WTO), and the International Atomic Energy Agency (IAEA) undertake a wide range of activities in the economic and social fields. It is a function of the council to coordinate these activities. Accounts of each of the related agencies are given in the separate chapters devoted to them.

## FUNCTIONS AND POWERS

Under the charter, the council is authorized to make or initiate studies, reports, and recommendations on economic, social, cultural, educational, health, and related matters; to make recommendations to promote respect for, and observance of, human rights; to prepare draft conventions for submission to the General Assembly on matters within its competence; to call international conferences on matters within its competence and in accordance with rules prescribed by the UN; to enter into agreements, subject to the approval of the General Assembly, with specialized agencies; to coordinate the activities of the specialized agencies and obtain regular reports from them; to perform, with the approval of the General Assembly, services at the request of member nations or the specialized agencies; to consult with nongovernmental agencies whose work is related to matters dealt with by the council; to set up subsidiary organs to assist its work; and to perform any other functions that may be assigned to it by the General Assembly.

## COMPOSITION

Originally, the Economic and Social Council consisted of 18 members, but the amendments to the charter that came into force on 31 August 1965 raised the number to 27. Another amendment that came into force on 24 September 1973 increased the membership to 54.

When the council was constituted in January 1946, the General Assembly elected the council's first 18 members for staggered terms: 6 members each for one, two, and three years, respectively. Subsequently, all terms were changed to three years, so that each year one-third of the membership is elected by the General Assembly.

The General Assembly resolutions adopting the amendments to the charter that increased the membership of the council also laid down an equitable pattern for the geographical distribution of the additional seats. The 54 members are elected with respect to geographic representation (i.e., to include members from African states, Asian states, Latin American states, Middle Eastern States, and European and other states). Elections are by a two-thirds majority vote on a secret ballot in the General Assembly, and immediate reelection of members is permissible. Although the permanent members of the Security Council have no privileged position on the Economic and Social Council and the charter does not guarantee them membership in the council, it has been the custom to reelect them continuously. In general, the General Assembly has less difficulty in agreeing on its Economic and Social Council selections than in filling Security Council vacancies. Moreover, if, in the opinion of the council, a matter on its agenda is of particular concern to a UN member not represented on the council, it may invite that state to participate in its discussions but without a vote.

In 2006, ECOSOC had the following members: Albania, Angola, Armenia, Austria, Australia, Bangladesh, Belgium, Belize, Benin, Brazil, Canada, Chad, China, Colombia, Costa Rica, Cuba, Czech Republic, Democratic Republic of the Congo, Denmark, France, Germany, Guinea, Guinea-Bissau, Guyana, Haiti, Iceland, India, Indonesia, Italy, Japan, Lithuania, Madagascar, Mauritania, Mauritius, Mexico, Namibia, Nigeria, Pakistan, Panama, Paraguay, Poland, Republic of Korea, Russian Federation, Saudi Arabia, South Africa, Spain, Sri Lanka, Thailand, Tunisia, Turkey, United Arab Emirates, United Kingdom, United Republic of Tanzania, United States.

## PROCEDURE

In 1993, the Economic and Social Council undertook a major restructuring. Whereas it used to hold two sessions each year, one at UN headquarters in the spring and one in Geneva in the summer, it now holds only one substantive (4-week long) meeting per year in summer, rotating each year between Geneva and New York. A president and four vice-presidents are elected by the council for each year. The council also holds an organizational session in January to plan its program of work for the year.

Each of the 54 members of the council has one vote. The big powers possess no veto or other special voting privilege. A proposal or motion before the council may be adopted without a vote unless a member requests one. When a vote is taken, decisions are carried by a simple majority of the members present.

## SUBSIDIARY ORGANS

The council accomplishes its substantive work through numerous subsidiary organs in the form of commissions, committees, and ad hoc and special bodies. In Article 68, the charter specifically states that the council "shall set up commissions in economic and social fields and for the promotion of human rights...." Several types of commissions and other organs have been set up within this provision, including the regional commissions, to deal with economic and social problems in the different geographical areas

of the world, and the functional commissions, to handle social, human rights, and environmental questions.

### Regional Commissions

There are five regional commissions: the Economic Commission for Europe (ECE); the Economic and Social Commission for Asia and the Pacific (ESCAP); the Economic Commission for Latin America and the Caribbean (ECLAC); the Economic Commission for Africa (ECA); and the Economic and Social Commission for Western Asia (ESCWA). Each has its own staff members, who are considered part of the regular staff of the UN. Regional commission expenditures come out of the regular UN budget. The regional commissions are discussed in the chapter on Economic and Social Development.

### Functional Commissions

Since 1946, the council established functional commissions and subcommissions to advise and assist it in its work.

The *Statistical Commission*, with 24 members, assists in developing international statistical services, promoting the development of national statistics and improving their comparability, coordinating the statistical work of the specialized agencies and the central statistical services of the UN Secretariat, and advising the UN organs on general questions relating to the collection, analysis, and dissemination of statistical information.

The *Commission on Population and Development*, with 47 members, studies population changes, including migration, and their effect on economic and social conditions and advises on policies to influence the size and structure of populations and on any other demographic questions on which the UN or its specialized agencies may seek advice.

The *Commission for Social Development*, with 46 members, advises the council on social policies in general and on all matters in the social field not covered by the specialized agencies; it gives priority to the establishment of objectives and programs and to social research in areas affecting social and economic development.

The *Commission on Human Rights*, with 53 members, makes recommendations and prepares reports to the council on human rights questions, including the status of women, the protection of minorities, the prevention of all forms of discrimination, and the implementation of international conventions on human rights. Its various working groups are composed of experts nominated by members to explore problems such as arbitrary detention, involuntary disappearances, and the rights of indigenous peoples.

The Commission on Human Rights has also established working groups on specific human rights questions, including slavery, indigenous populations, minorities, enforced or involuntary disappearances, and mental health detainees. It also encompasses a Subcommission on Prevention of Discrimination and Protection of Minorities.

The *Commission on the Status of Women*, with 45 members, prepares reports on matters concerning the promotion of women's rights in the political, economic, social, and educational fields and makes recommendations to the council on matters requiring immediate attention in the field of women's rights. The commission has established a working group on communications concerning the status of women.

The *Commission on Narcotic Drugs*, with 53 members, advises the council and prepares draft international agreements on all

matters relating to the control of narcotic drugs. Over the years, the commission has established five subsidiary bodies. The Sub-commission on Illicit Drug Traffic and Related Matters in the Near and Middle East and the Meeting of Heads of National Drug Law Enforcement Agencies (HONLEA), Asia and the Pacific, were the first subsidiary bodies to be established; both were convened for the first time in 1974. The need for similar coordination in other regions of the world led to a global network of HONLEA meetings: the Meeting of HONLEA, Africa, was established in 1985; the Meeting of HONLEA, Latin America and the Caribbean, in 1987; and the Meeting of HONLEA, Europe, in 1990.

*The Commission on Science and Technology for Development.* The United Nations has been concerned with the effects of advances in science and technology to world peace and social development since its inception in 1945 at the dawn of the nuclear era. In 1963 the first United Nations Conference on the Application of Science and Technology for the Benefit of the Less Developed Countries met in Geneva and began to form an agenda for international action. This was followed in 1979 by the United Nations Conference on Science and Technology for Development, held in Vienna, which produced the Vienna Programme of Action. In affirmation of the conference's program, the General Assembly established an Intergovernmental Committee on Science and Technology for Development, open to all states, to draw up policy guidelines, monitor activities within the United Nations system, promote implementation of the Vienna Programme, identify priorities, and mobilize resources. In 1989, on the tenth anniversary of the 1979 Conference, the General Assembly expressed its disappointment with the implementation of the Vienna Programme of Action and eventually decided to transform the Intergovernmental Committee and its subsidiary body, the Advisory Committee on Science and Technology for Development, into a functional commission of ECOSOC (General Assembly Resolution 46/235).

The Commission on Science and Technology for Development met for the first time in May 1993. It has 33 members elected by ECOSOC for a term of four years on the principle of equitable geographic distribution. At its first session, the commission recommended to ECOSOC that it be charged with the following tasks:

- (a) assisting the council in providing science and technology policy guidelines and recommendations to member states, in particular developing countries;
- (b) providing innovative approaches to improving the quality of coordination and cooperation in the area of science and technology within the United Nations system, with a view to ensuring optimum mobilization of resources;
- (c) providing expert advice to other parts of the United Nations systems.

*The Commission on Crime Prevention and Criminal Justice* was established in December 1991 by General Assembly Resolution 46/152. An existing ECOSOC Committee on Crime Prevention and Control was dissolved, and its funds were made available to the new commission, which met for the first time in April 1992. The new commission is charged with developing, managing, monitoring, and reviewing implementation of the Crime Prevention and Criminal Justice Programme created at a Ministerial Meeting held

in Versailles, France, in 1991. In addition, it will consult member states on the drafting of a convention on crime prevention and criminal justice. Priority areas of the commission include: national and transnational crime; organized crime; economic crime, including money laundering; the role of criminal law in the protection of the environment; crime prevention in urban areas; and juvenile and violent criminality. The main difference between the former committee and the new commission is that the decisions of the commission will be decisions of the governments, rather than of independent experts. Decisions at this level were considered essential to tackle the problems of drug trafficking, illegal arms sales, terrorism, dumping of industrial waste, and criminal negligence resulting in environmental degradation, corruption, and financial offences. The commission has 40 members.

*The Commission on Sustainable Development.* As a result of the UN Conference on Environment and Development (UNCED) held in Rio de Janeiro in 1992, the council established a new functional commission in February 1993: the Commission on Sustainable Development. The 53-member commission began its work of monitoring the implementation of UNCED's Agenda 21 action plan with its first session in New York in June 1993. The commission's mandate includes: monitoring progress towards the UN target of providing 0.7 percent of gross national product of industrialized countries for official development assistance; considering information on the implementation of environmental conventions; and recommending action to the General Assembly. The commission will interact with other UN intergovernmental bodies, regional commissions, and development and financial institutions. A high-level Advisory Board, consisting of eminent persons from all regions of the world, will provide input to the commission and the council through the Secretary-General.

*The United Nations Forum on Forests.* At the 1992 UN Conference on Environment and Development (UNCED) the forest issue was among the most controversial, polarizing developing and developed countries. At the meeting, the governments of UNCED came up with a set of principles regarding the management, conservation, and sustainable development of forests. Subsequently, a panel, forum, and further proposals for action were established, culminating in the creation of the Forum on Forests in 2000. The forum's goals are to combat deforestation and degradation of forests, to work for forest conservation and protection of unique types of forests and fragile ecosystems, working on rehabilitation and conservation strategies for countries with low forest cover, working for the promotion of natural and planted forests, and considering the economic, social, and cultural aspects of forests, among other items.

#### Other Subsidiary Organs

Article 68 of the charter provides that, in addition to the commissions specifically mentioned in the charter, the council should establish "such other commissions as may be required for its functions." However, the other subsidiary organs created have not been given the name "commission." Instead, they are called "standing committees" or "expert bodies."

In 2006, ECOSOC had the following standing committees and expert bodies: Committee for Programme and Coordination, Commission on Human Settlements, Committee on Non-Governmental Organizations, Committee on Negotiations with In-

tergovernmental Agencies, Ad hoc Open-ended Working Group on Informatics, Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals, United Nations Group of Experts on Geographical Names, Committee for Development Policy, Meeting of Experts on the United Nations Programme in Public Administration, Ad Hoc Group of Experts on International Cooperation in Tax Matters, Committee on Economic, Social and Cultural Rights, the Permanent Forum on Indigenous Issues, and the Ad Hoc Open-Ended Intergovernmental Group of Experts on Energy and Sustainable Development. Two other related bodies are the International Narcotics Control Board and the Board of Trustees of the International Research and Training Institute for the Advancement of Women.

Semiautonomous bodies, which generally report both to the council and to the General Assembly, include the following: Committee for Programme and Coordination, High-level Committee on the Review of Technical Cooperation among Developing Countries, United Nations Children's Fund (UNICEF), United Nations Conference on Trade and Development (UNCTAD), United Nations Development Fund for Women, United Nations Development Programme (UNDP), United Nations Environment Programme (UNEP), Office of the United Nations High Commissioner for Refugees (UNHCR), United Nations Population Fund (UNFPA), United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), and the World Food Programme (WFP).

## RELATIONS WITH NONGOVERNMENTAL ORGANIZATIONS

The charter empowers ECOSOC to make arrangements to consult with international organizations of private citizens, known as nongovernmental organizations (NGOs) and distinguished from intergovernmental organizations. Consultations with NGOs bring informed opinion other than that of governments and their officials before the council and provide it with a source of special experience and technical knowledge. NGOs granted consultative status are divided into two categories. Those in Category I are organizations with a general interest in the work of the council, and their activities are particularly germane to it and to the UN as a whole. Those in Category II are organizations with an interest in some particular aspect of the work of the council. In May 1987, 35 NGOs were listed in Category I and 299 in Category II. Another 490 were listed on the NGO roster for consultation as the occasion arises. By the late 1990s, more than 100 NGOs were listed in Category I, more than 600 in Category II, and more than 800 were listed on the roster for occasional consultation, for a total of more than 1,500 NGOs in consultative status. In 2006 there were 2,719 NGOs in consultative status with the ECOSOC. All such officially recognized organizations may send observers to the public meetings of the council and its commissions and may submit memoranda for circulation. Representatives of Category I organizations are entitled to participate in council debates and propose items for the agenda. Representatives of Category II organizations may, with the permission of the chair, make oral statements at council meetings.

Consultative status in Category II has been granted to nearly all important international business associations, cooperative so-

cieties, farmers' organizations, trade unions, and veterans' organizations; to leading professional groups, such as associations of architects, engineers, lawyers, newspaper publishers and editors, social welfare workers, tax experts, and many others; and to various women's and youth associations. Many associations formed along denominational lines—Greek Orthodox, Jewish, Muslim, Protestant, and Roman Catholic—also have consultative status. Most organizations that enjoy such official UN standing are international, in that they have members in more than one country. An organization whose membership is restricted to one particular country may obtain consultative status in the council only with the consent of the country's government.

The participation of NGOs in the work of the council took a historic turn during preparations for the Conference on Environment and Development (UNCED) held in 1992 in Rio de Janeiro. More than 1,400 NGOs participated in UNCED, and their contributions to the historic conference were acknowledged to be invaluable. In view of this remarkable participation, the Secretary-General recommended that relevant and competent NGOs be accorded unusual participation in and access to ECOSOC's new functional commission, the Commission on Sustainable Development, which will monitor the progress of implementation of UNCED's Agenda 21 action plan.

Since many delegations expressed the need to transform the United Nations into a forum that was more accessible to NGOs, ECOSOC established a Working Group on the Review of Arrangements for Consultations with Non-Governmental Organizations in 1993. The Working Group held its first session in June 1994 with a mandate to review the arrangements for consultation with nongovernmental organizations, arrangements which had not been revised since they were first adopted by the council in 1968.

In his 1994 *Agenda for Development* Secretary-General Boutros Boutros-Gali noted that NGOs undertake development projects valued at more than US\$7 billion annually. He stated: "The time has arrived to bring NGO and United Nations activities into an increasingly productive relationship of consultation and cooperation." In 1996 ECOSOC adopted a resolution regarding consultation with NGOs that recognized the growth of national and regional NGOs, the broadening role of the Committee on Non-Governmental Organizations, and the adoption of standard rules for the participation of NGOs in UN international conferences. ECOSOC recommended that the General Assembly examine the question of participation of NGOs in all areas of work in the UN.

## ORGANIZATION OF INTERNATIONAL CONFERENCES

In accordance with a charter provision, the council from time to time calls for international conferences on special world problems falling within its sphere of competence. Thus, in the 1990s, the UN held conferences on such subjects as the environment, population, food, housing, and the status of women. In the early- to mid-2000s, the UN held conferences against racism, xenophobia, and related forms of intolerance, on the problem of HIV/AIDS, on sustainable development, disarmament, narcotic drugs, water, biodiversity, and sustainable cities, among other issues. These conferences led to the establishment of the UN Environment Program, the World Food Council, the Center for Human Settlements

(Habitat), and other programs and to the adoption of world plans of action for the environment, clean water, population, the aging, the disabled, and other subjects of international concern.

## PROPOSED RESTRUCTURING

In his 1992 *Agenda for Peace*, Secretary-General Boutros Boutros-Ghali issued a wide-ranging strategy for the future of the United Nations system, including proposals for changes in ECOSOC. It was suggested that those would reflect changes in the very definition of economic and social progress that had naturally resulted from the dissolution of the former USSR. In addition, a wealth of information now existed on successful and unsuccessful efforts at development, information that in itself called for a fundamental change in the structure of the United Nations so that it could respond more effectively to its members' needs in the area of economic and social development.

In his *Agenda*, the Secretary-General proposed that ECOSOC report to the Security Council on economic and social developments that might pose threats to international peace and security. He also urged the creation of a high-level, intersessional mechanism to enable ECOSOC to react in a timely way to new developments. He also called for lines of communication between the General Assembly and ECOSOC to be clarified and streamlined. In addition, the Secretary-General urged that the relationship between ECOSOC and its subsidiary bodies be redefined. For example, he reported to the General Assembly in 1992 (A/47/434) that members of ECOSOC were frustrated by discussing the same issues four times in the same calendar year: in the council's subsidiary body, in the committee session, in the council plenary, and in the General Assembly.

Intense negotiations occurred during a resumed session of the 47th session of the General Assembly in June 1993. A draft package of reforms was proposed that had as its main aim eliminating duplication of work in the General Assembly and ECOSOC and providing guidelines for a division of labor. For example, it was suggested that the governing bodies of the UN Development Programme (UNDP), UN Population Fund (UNFPA), and the UN Children's Fund (UNICEF) be transformed into smaller executive boards under the overall authority of ECOSOC. Other proposals would have affected the procedures of ECOSOC and would have

subsumed the council's two subcommittees (on economic and social issues) into the plenary body.

Although there was clearly a consensus on the need for reform and rationalization, the developing countries (in particular those countries that make up the Group of 77) blocked passage of the package because of concerns over the numerical and regional composition of governing bodies of the different funds and programs of the United Nations. The smallest countries felt that the drastic reduction in representation would exclude them from participation in the decision-making processes of these bodies. In March 1996 Secretary-General Boutros Boutros-Gali emphasized ministerial participation and increasing involvement of the new global leaders for the revitalization of ECOSOC. In July 1996 he noted that ongoing reform efforts produced significant improvements but that ECOSOC's capacity to monitor and coordinate the work of the UN system needed to increase.

In his acceptance speech on 17 December 1996, Secretary-General-designate Kofi Annan outlined certain goals for UN reform under his tenure. He pledged to make the UN leaner, more efficient and more effective, more responsive to the wishes and needs of its members and more realistic in its goals and commitments. One of his first reforms was the creation of the Department of Economic and Social Affairs (DESA) on 17 March 1997. DESA was created as the result of the consolidation of the Department for Policy Coordination and Sustainable Development, the Department for Economic and Social Information and Policy Analysis and the Department for Development Support and Management Services. DESA's program is to provide substantive support to the Second and the Third Committees of the General Assembly and to ECOSOC and its subsidiary bodies. As well, as part of continuing reform, ECOSOC initiated in 1998 a tradition of meeting each April with finance ministers heading key committees of the Bretton Woods institutions—the World Bank and the International Monetary Fund. These consultations initiated inter-institutional cooperation that paved the way for the holding of an International Conference on Financing for Development, held in March 2002 in Monterrey, Mexico. At that conference, ECOSOC was assigned a primary role in monitoring and assessing follow-up to the Monterrey Consensus.

---

# THE TRUSTEESHIP COUNCIL

Unlike the other main organs of the UN, the Trusteeship Council was established for the purpose of executing a closely defined system of operations. This is the trusteeship system, which was devised to adapt the League of Nations mandate system to meet the requirements of a new era.

The 1990s witnessed the graduation of the last of the Trusteeship Territories to independence or free association status. This historic achievement represents the official end of colonization as an official political system. In only 50 years the Trusteeship Council presided over the orderly, democratic transfer of power from developed nations to their former colonies.

The Trusteeship Council voted in 1994 to convene only at the request of its president, a majority of its member states, the General Assembly or the Security Council.

## THE MANDATE SYSTEM OF THE LEAGUE OF NATIONS

In its political aspect, the history of the world could be read as the history of the creation and disintegration of successive empires, a chain of vicious cause and effect that has brought much bloodshed and wretchedness. After World War I, however, a concerted effort was made for the first time, in a limited way, to break the chain. Recognizing that colonies are a source of friction and jealousy among wealthy nations, the victorious Allies decided not to appropriate for themselves the colonies of their defeated enemies. Instead, those territories belonging to imperial Germany and the Ottoman Empire that were considered unable to function as independent states were placed under international administration supervised by the League of Nations.

The founders of the League created three types of mandates for the administration of these territories by nations acting as “Mandatories of the League of Nations.” Class A mandates covered territories that were considered to be ready to receive independence within a relatively short period of time. These territories were all in the Middle East: Iraq, Palestine, and Transjordan, administered by the United Kingdom; and Lebanon and Syria, administered by France. Class B mandates covered territories for which the granting of independence was a distant prospect. These territories were all in Africa: the Cameroons and Togoland, each of which was divided between British and French administration; Tanganyika, under British administration; and Ruanda-Urundi, under Belgian administration. To the territories classified under Class C mandates virtually no prospect of self-government, let alone independence, was held out. These territories included South West Africa, administered by the Union of South Africa; New Guinea, administered by Australia; Western Samoa, administered by New Zealand; Nauru, administered by Australia under mandate of the British Empire; and certain Pacific islands, administered by Japan.

The terms of the mandate system implied an acknowledgment of the right of the peoples of the colonial territories belonging to

states defeated in war to be granted independence if they were thought to have reached a sufficiently advanced stage of development. However, no provision was made in the League Covenant specifying that the countries designated to administer the mandated territories should take steps to prepare these peoples for eventual self-determination.

## THE UN TRUSTEESHIP SYSTEM

Although the Covenant of the League forbade wars of aggression—that is, wars of conquest—the League’s founding members did not see the need to underwrite this provision in a positive assertion of the principle of equal rights and self-determination of peoples. The UN Charter embodies an implicit recognition of the belief that denial of equal rights and the right of peoples to self-determination is a potential cause of war.

Thus, Article 1 of the Charter sets forth as a basic purpose of the UN “to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to *take other appropriate measures to strengthen universal peace*” (italics added). Article 76, which sets out the main objectives of the international trusteeship system that was to replace the mandate system of the League, leaves no doubt of the value attached to its role as a means of helping the UN, in the words of the Preamble to the Charter, “to save succeeding generations from the scourge of war.” The article reads as follows:

“The basic objectives of the trusteeship system, in accordance with the Purposes of the United Nations laid down in Article 1 of the present Charter, shall be:

“(a) to further international peace and security;

“(b) to promote the political, economic, social, and educational advancement of the inhabitants of the trust territories, and their progressive development towards self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

“(c) to encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion, and to encourage recognition of the interdependence of the peoples of the world; and

“(d) to ensure equal treatment in social, economic, and commercial matters for all Members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice....”

Thus, in addition to emphasizing the importance of the trusteeship system as an instrument for peace, Article 76 defines the framework for the elaboration of obligations that the countries designated to administer the territories placed under UN trusteeship must undertake toward the peoples concerned. In essence, these obligations amount to a pledge on the part of the adminis-

tering authorities to work toward the liquidation of the trusteeship system itself by preparing the peoples in trust territories for independence, or at least self-government.

#### The Trust Territories and Their Administering Authorities

The Charter does not specify the actual territories to be placed under UN trusteeship. Article 77 merely states that the system shall apply to three categories: (1) territories still under mandate, (2) territories “detached from enemy states as a result of the Second World War,” and (3) territories voluntarily placed under the system by states responsible for their administration.

On the question of designating the administrators of trust territories, the Charter is equally nonspecific. It states simply that the individual trusteeship agreements shall designate the authority in each case, which may be “one or more states or the Organization itself.” The provision that the UN itself may serve as an administering authority is a compromise solution that was adopted when it was decided at the San Francisco Conference to abandon an ambitious plan, originally proposed by China and initially supported by the United States, to make the UN directly responsible for the administration of all trust territories.

It was decided that the powers that had administered mandates on behalf of the League of Nations were to conclude agreements with the new world organization and administer the same territories that were still dependent. There was one exception. The Pacific islands, which after World War I had been given to Japan as Class C mandates, were, by a special arrangement embodied in the Charter, classified as a strategic area to be administered by the United States under a modified trusteeship.

As a result of agreements worked out by the General Assembly, 11 trust territories were placed under UN trusteeship, and seven countries were designated as administering authorities. These figures exclude the former German colony of South West Africa, which after World War I had been mandated to the Union of South Africa, because South Africa refused to place the territory under UN trusteeship. The distribution of the territories and their respective administering authorities was as follows:

*in East Africa:* Ruanda-Urundi administered by Belgium, Somaliland by Italy, and Tanganyika by the United Kingdom;

*in West Africa:* Cameroons administered by the United Kingdom, Cameroons by France, Togoland by the United Kingdom, and Togoland by France;

*in the Pacific:* Nauru, administered by Australia and on behalf of New Zealand and the United Kingdom, New Guinea by Australia, Western Samoa by New Zealand, and the Pacific islands of the Marianas, Marshalls, and Carolines by the United States.

In September 1975, when New Guinea acceded to independence, the Trust Territory of the Pacific Islands became the only Territory on the agenda of the Trusteeship Council.

By virtue of a Trusteeship Agreement approved by the Security Council in 1947, the Territory was placed under United States administration as a strategic area under the terms of Article 83 of the Charter. In compliance with the provisions of that Article, the Trusteeship Council reported to the Security Council on all matters concerning the Territory, which was comprised of four entities (Northern Mariana Islands, the Federated States of Micronesia, the Marshall Islands and Palau).

Negotiations on the future political status of the Trust Territory of the Pacific Islands began in 1969. In 1975, the Northern Mariana Islands, in a referendum observed by the Trusteeship Council, chose to become a Commonwealth of the United States. In a series of referendums held in 1983 and duly observed by the Trusteeship Council’s Visiting Missions, the Federated States of Micronesia and the Marshall Islands opted for a status of Free Association with the United States, while in Palau, the 75% majority required under its Constitution for the approval of the compact of Free Association with the United States could not be obtained in that and six later referendums.

In 1986, the Trusteeship Council, noting that the “peoples of the Federated States of Micronesia, the Marshall Islands, the Northern Mariana Islands and Palau have established constitutions and democratic political institutions providing the instruments of self governments,” recommended an early termination of the Trusteeship Agreement.

In December 1990, the Security Council considered the status of the Trust Territory of the Pacific Islands and adopted, by 14 votes to 1, resolution 683 (1990). By that resolution, the Council determined the objectives of the Trusteeship Agreement had been fully attained with respect to those three entities and that therefore the applicability of the Trusteeship Agreement to them had been terminated. Palau, therefore, remained the only entity under the 1947 Trusteeship Agreement. The Trusteeship Council at its annual regular sessions continued to review the situation in Palau.

In November, 1993, the Pacific island of Palau, the last of the islands remaining under the Trusteeship Agreement, succeeded in passing a referendum for the approval of the compact of Free Association with the United States. In January 1994, the Council requested the United States and Palau to agree on a date on or about 1 October 1994 for the full entry into force of the Compact of Free Association, and expressed the hope that, in the near future, the Trusteeship Agreement would be terminated by the Security Council (see chapter on Independence of Colonial Peoples).

## THE TRUSTEESHIP COUNCIL

The fact that the Trusteeship Council was made a main organ of the UN is evidence of the importance attached to the role of the trusteeship system. The Council’s functions, however, are decidedly more limited than those of the other main organs, for it acts, as the case may be, under the direct responsibility of the General Assembly in respect to trusteeships not involving areas designated as strategic or of the Security Council in respect to trusteeships relating to areas designated as strategic. The Charter provisions make it clear that the Trusteeship Council only “assists” the General Assembly and the Security Council in implementing the trusteeship system. It had a purely executive capacity in supervising the day-to-day operations of the system.

### Composition

The Charter provides that the Council is to be composed of three groups of members: the countries administering trust territories, permanent members of the Security Council that do not administer trust territories, and a number of other UN members elected for three-year terms by the General Assembly to ensure an equal

division between administering and nonadministering countries in the Council.

Until 1960, the Council consisted of 14 members: 7 administering members; 2 permanent nonadministering members; and 5 other nonadministering countries elected for three-year terms by the Assembly. As the various trust territories gained independence, the size and composition of the Council changed. The Assembly decided that after 1968, the Council would be composed only of administering powers and the nonadministering permanent members of the Security Council. On 16 September 1975, when Papua New Guinea, which includes the former trust territory of New Guinea, achieved independence, Australia ceased to be a member of the Council. This change left a membership of five: one administering power, the United States, and four nonadministering permanent members of the Security Council—China, France, the USSR (today, the Russian Federation), and the United Kingdom.

#### Procedure

Each member of the Trusteeship Council has one vote. Decisions are made by a simple majority vote. The permanent members of the Security Council have no veto or other special voting privileges. Before 1968, the Council held two regular sessions a year, and afterwards, one. Special sessions may be called on the decision of the majority of the members or at the request of the Security Council or the General Assembly. The president and vice-president are elected at the beginning of each regular session and serve for one year.

#### Powers

In carrying out its supervisory and administrative functions, the Council was specifically authorized under the Charter to consider reports submitted by the administering authority; to accept petitions and examine them in consultation with the administering authority; to provide for periodic visits to the trust territories at times agreeable to the respective administering authorities; and to formulate a questionnaire on the political, economic, social, and educational progress in each trust territory, which the administering authorities were required to answer.

## OPERATION OF THE TRUSTEESHIP SYSTEM

### Trusteeship and Strategic Area Agreements

Since trusteeship territories were merely entrusted to the administering authorities, the precise terms of the agreement had to be carefully prescribed for each territory and approved by a two-thirds vote of the General Assembly, or by the Security Council in the case of a strategic area.

Article 82 of the Charter provided that there may be designated in any trusteeship agreement a strategic area or areas, which may include part or all of the trust territory concerned. In such cases, all trusteeship functions of the UN were to be exercised by the Security Council.

In fact, there exists only one strategic area agreement—that concluded between the UN and the US government on the Pacific islands mandated to Japan after World War I. Most of the general

provisions of the other trusteeship agreements are included in it, but the right of accessibility to the area is curtailed, and supervision by the UN is made dependent on US security requirements. The United States is also authorized to close certain areas for security reasons.

### The Role of the Administering Authorities

Administering countries were given full legislative, administrative, and judicial powers over the territories entrusted to them. If they so desired, they could administer the trust territory in conjunction with one of their own colonies. Thus, the trust territory of Ruanda-Urundi was united administratively with the Belgian Congo, and Australia established an administrative union between the trust territory of New Guinea and its own dependency, Papua. However, UN trusteeship territories were never considered to be under the sovereignty of the administering authorities, which governed them only on behalf of the UN.

### The Work of the Trusteeship Council

In essence, the work of the Council consists in the exercise of the powers specifically granted to it by the Charter for the purpose of supervising the operation of the trusteeship system and ensuring that the administering authority is carrying out its obligations as laid down by the trusteeship agreement.

The work of the Trusteeship Council has diminished progressively as, one by one, the 11 trust territories either achieved independence or, on being granted self-determination, chose to unite with another independent state.

In November 1993, Palau, the last remaining Trusteeship Territory succeeded in passing a referendum approving a Compact of Free Association with the United States. In January, 1994, at its sixty-first session, the Council requested the United States, in consultation with the Government of Palau, the last remaining Trusteeship Territory, to agree on a date on or about October 1, 1994 for the full entry into force of the Compact of Free Association.

The council considered that the United States had satisfactorily discharged its obligations under the terms of the Trusteeship Agreement and that it was appropriate for that Agreement to be terminated with effect from the date referred to above, as agreed upon by the two Governments.

At that session the Trusteeship Council also amended its rules of procedure 1 and 2, which were replaced by the following:

“The Trusteeship Council shall meet as and where occasion may require, by decision of the Trusteeship Council, or by decision of its president, or at the request of a majority of its members, or at the request of the General Assembly, or at the request of the Security Council acting in pursuance of the relevant provisions of the Charter.”

The Trusteeship Council suspended operation on 1 November 1994 after Palau became independent. The Council amended its rules of procedure to drop the obligation to meet annually and agreed to meet as occasion required—by its decision or the decision of its president, or at the request of a majority of its members or the General Assembly or the Security Council. As of 2006, the Council remained suspended but there had been no decision by the General Assembly to dissolve it.

---

# THE INTERNATIONAL COURT OF JUSTICE

The International Court of Justice was established at the San Francisco Conference in 1945. It is a successor to and resembles the Permanent Court of International Justice created at the time of the League of Nations, but its competence is wider, because membership in the League did not automatically require a nation to join the Permanent Court. The International Court, however, is a principal organ of the UN, so that all UN members automatically become parties to its statute, which, modeled on that of the Permanent Court, was adopted as an integral part of the Charter. By joining the UN, each country binds itself, in the words of the Charter, “to comply with the decision of the International Court of Justice in any case to which it is a party.” If any party to a case violates this obligation, the other party “may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.”

The Charter further provides that nonmembers of the UN may become parties to the statute of the court “on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.” Two such countries—Nauru and Switzerland—became parties to the statute in this way.

The rules under which the court is constituted and by which its functions are laid down in the statute and detailed in rules adopted by the court itself. The seat of the court is the Peace Palace at The Hague in the Netherlands, but it can meet elsewhere if it so desires. The judges are bound “to hold themselves permanently at the disposal of the Court.”

The court is funded from the regular budget of the UN, to whose members its services are otherwise free of charge.

## JUDGES OF THE COURT

The court consists of 15 independent judges, known as “members” of the court. They are elected “from among persons of high moral character” without consideration of nationality, except that no two judges of the same nationality may serve concurrently. They must be persons possessing the qualifications required in their respective countries for appointment to the highest judicial offices or be jurists of recognized competence in international law. No judge of the International Court of Justice may exercise any political or administrative function or engage in any professional occupation. When engaged in the business of the court, judges enjoy diplomatic privileges and immunities. A newly elected judge must “make a solemn declaration in open court that he will exercise his powers impartially and conscientiously.” A judge cannot be dismissed except by a unanimous decision of the other judges that

“he has ceased to fulfill the required conditions.” No such dismissal has ever occurred.

As in any court, a judge may disqualify himself from sitting on a particular case. The statute enumerates certain conditions under which this disqualification is obligatory—for example, if a judge was previously involved in the case as a member of a commission of inquiry.

## SIGNIFICANCE OF NATIONALITY OF JUDGES

The statute declares specifically that a judge has the right to sit on a case in which his own country is a party. Furthermore, any country that is a party to a case before the court may add a person to sit as judge on that case if there is not already a judge of its nationality on the court. If there are “several parties in the same interest,” they may add only one judge to the bench. Such ad hoc judges are chosen by the respective states themselves and may, or may not, be nationals of the states choosing them.

## NOMINATION AND ELECTION OF JUDGES

Two international conferences at The Hague, in 1899 and 1907, contemplated the establishment of a permanent international court, but the conferees were unable to agree on a system for electing judges. They did agree, however, on a convention establishing a Permanent Court of Arbitration. That convention provides that each country that is a party to it shall name four jurists as arbitrators who will be available to consider a concrete matter for international arbitration. When the Permanent Court of International Justice was established after World War I, a solution was found for the difficult problem of electing judges. The legal experts named as potential arbitrators under the Hague convention were given the right to nominate candidates, and the League of Nations elected the judges from among these nominees. This system has in essence been preserved by the UN. To ensure that candidates are not mere government nominees, they are proposed by the groups of jurists already established in the Permanent Court of Arbitration or by similar groups specially constituted in countries not members of that court; no national group may nominate more than four persons, and only two of those may bear the nationality of the group.

The list of candidates so nominated then goes to the UN. To be elected to a judgeship on the court, a candidate must obtain an absolute majority in the Security Council and the General Assembly, both bodies voting independently and simultaneously. If more than one candidate of the same nationality obtains the required votes, the eldest is elected. In electing judges to the court, delegates are requested to bear in mind that “the main forms of

civilization” and “the principal legal systems of the world” should be represented at all times on the international tribunal.

## TERMS OF JUDGESHIPS

Judges are elected for nine years. To stagger the expiration of terms, the terms of five of the judges named in the first election (1946) expired at the end of three years, and the terms of five others at the end of six years, as determined by lot. Hence, five judges are now elected every three years. Reelection is permissible and frequently occurs. Every three years, the court elects its president and vice-president from among the judges. Unless reelected, judges chosen to fill a casual vacancy serve only for the remainder of their predecessor's term.

The composition of the court as of 6 February 2006 was as follows: President Rosalyn Higgins (United Kingdom); Vice-President Awn Shawkat Al-Khasawneh (Jordan); Judges Raymond Ranjeva (Madagascar); Shi Jiuyong (China); Abdul G. Koroma (Sierra Leone); Gonzalo Parra-Aranguren (Venezuela); Thomas Buergenthal (United States of America); Hisashi Owada (Japan); Bruno Simma (Germany); Peter Tomka (Slovakia); Ronny Abraham (France); Kenneth Keith (New Zealand); Bernardo Sepúlveda Amor (Mexico); Mohamed Bennouna (Morocco); Leonid Skotnikov (Russian Federation).

Normally, all judges sit to hear a case, but nine judges (not counting an ad hoc judge) constitute a quorum. The statute of the court makes provision for the formation of chambers for summary procedure, for particular categories of cases, or for an individual case. A Chamber for Environmental Matters were established by the court in July 1993. Since 1945, seven cases were referred to a chamber-in 1982, 1985, two in 1987, 1993, and two in 2002. A judgment delivered by a chamber is considered as rendered by the court.

## PROCEDURE OF THE COURT

All questions are decided by a majority vote of the judges present. If the votes are equal, the president has the casting, or deciding, vote. The judgments have to be read in open court and are required to state the reasons on which they are based and the names of the judges constituting the majority. Any judge is entitled to append to the judgment a personal opinion explaining his or her concurrence or dissent. All hearings are public unless the court decides, whether at the request of the parties or otherwise, that the public should not be admitted.

Judgments are final and without appeal. An application for revision will be considered by the court only if it is based on the discovery of some decisive fact that at the time of the judgment was unknown to both the court and the party seeking revision. Should a dispute arise concerning the meaning or scope of a judgment, the court shall interpret it at the request of any party.

In order to simplify and expedite recourse to it, the court amended its Rules of Court in 1972. A completely overhauled set of rules, incorporating those amendments, was adopted in 1978. The latest version of the rules dates from 5 December 2000.

## COMPETENCE AND JURISDICTION OF THE COURT

Only states can be parties in cases before the court. Hence, proceedings may not be instituted by or against an individual, corpo-

ration, or other entity that is not a state under international law. However, if certain rules are satisfied, a state may take up a case involving one of its nationals. Thus, the *Nottebohm Case* (*Liechtenstein v. Guatemala*), in which a judgment was rendered on 6 April 1955, involved a claim by Liechtenstein in regard to injuries sustained by a German-born, naturalized citizen of Liechtenstein as a result of certain measures that Guatemala had taken during World War II.

All countries that are parties to the statute have automatic access to the court and can refer any case they wish to the court. In addition, the Security Council may recommend that a legal dispute be referred to the court.

Under the Charter, nations are not automatically obliged to submit their legal disputes for judgment. At the San Francisco Conference, it was argued by some that the court should be given compulsory jurisdiction and that UN members should bind themselves to accept the court's right to consider legal disputes between them. This proposal would have meant that if one member filed a case against another member, the court would automatically, and without reference to the second member concerned, have the right to try the case. The proposal was rejected because some delegates feared that such a provision might make the statute unacceptable to their countries. Moreover, it was generally felt that since the disputants in an international court are sovereign states, they should not be summoned against their will to submit to the court's jurisdiction. Thus, the court cannot proceed to adjudicate a case unless all parties to the dispute have consented that it should do so. Such consent comes about mainly in one of the following three ways.

- There can be a specific agreement between the parties to submit a dispute to the court. This is the simplest method and the one employed in several recent cases.
- There can be specific clauses contained in treaties and conventions. Many treaties and conventions expressly stipulate that disputes that may arise under them, such as a claim by one country that a treaty has been violated by another country, will be submitted to the court for decision. More than 430 treaties and conventions, including peace treaties concluded after World War II, contain clauses to this effect, a fact which attests to the readiness of countries to agree in advance to accept judicial settlement.
- There can be voluntary recognition in advance of the compulsory jurisdiction of the court in specified types of disputes. Article 36 of the statute states that all parties to the statute “may at any time declare that they recognize as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the Court in all legal disputes concerning: (a) the interpretation of a treaty; (b) any question of international law; (c) the existence of any fact which, if established, would constitute a breach of an international obligation; (d) the nature or extent of the reparation to be made for the breach of an international obligation.”

Such declarations may be made for only a limited period if desired and with or without any conditions, or they may state that they will become operative only when a particular country or number

of countries accept the same obligation. The most far reaching reservation that has been attached to a declaration is the condition that the court must not adjudicate any dispute that the country itself determines to be an essentially domestic matter. In effect, this reservation leaves the country free to deny the court's jurisdiction in most cases in which it might become involved. In general, the practical significance of many of the declarations is severely limited by the right to make conditions. As of February 2006, declarations recognizing the compulsory jurisdiction of the court had been made by 66 states, with a number of them excluding certain categories of dispute.

The jurisdiction of the court therefore comprises all legal disputes which the parties to the statute refer to it and all matters specifically provided for in the UN Charter or in treaties and conventions in force. In the event of a dispute as to whether the court has jurisdiction, the statute provides that the matter shall be decided by the court. Article 38 of the statute requires that in deciding the disputes submitted to it, the court shall apply the following: (1) international conventions establishing rules recognized by the contesting states; (2) international custom as evidence of a general practice accepted as law; (3) the general principles of law recognized by civilized nations; and (4) judicial decisions and teachings of the most highly qualified publicists of the various nations as a subsidiary means for determining the rules of law. In certain cases, however, if the parties concerned agree, the court may decide a case *ex aequo et bono*— that is, by a judgment in equity taken simply on the basis of what the court considers is right and good.

### ADVISORY OPINIONS

The Charter provides that the General Assembly and the Security Council may request the court to give an advisory opinion on any legal question and that other UN organs and specialized agencies, when authorized by the General Assembly, may also request advisory opinions on legal questions arising within the scope of their activities. In such cases, the court does not render a judgment but provides guidance for the international body concerned. Thus, advisory opinions by their nature are not enforceable, and, although the bodies may receive them with respect, they may not necessarily find it politic to act on them. In some cases, however, the requesting body will be committed to abide by the court's decision.

### EXTRAJUDICIAL FUNCTIONS OF THE COURT

Many international conventions, treaties, and other instruments confer upon the International Court of Justice or its president the function of appointing umpires or arbitrators in certain eventualities. Furthermore, even when no treaty provision to this effect exists, the court or individual judges may be requested to carry out functions of this nature.

#### Review of the Role of the Court

In 1970, citing the relative lack of activity of the court, nine member states sponsored a General Assembly agenda item on a review of the role of the court. In an explanatory memorandum, they noted that the situation at that time was "not commensurate with either the distinction of the judges or the needs of the international community." Proposals for remedying the situation included a revision of the court's statute and rules of procedure, the appoint-

ment of younger judges and/or shorter terms of office, and wider acceptance of the court's compulsory jurisdiction.

The subject was debated at four subsequent sessions of the General Assembly, culminating in the adoption in 1974 of a resolution designed to strengthen the role of the court. The recommendations included the possible insertion of clauses in treaties that would provide for submission to the court of disputes arising from differences in their interpretation or application; acceptance of the compulsory jurisdiction of the court with as few reservations as possible; and greater recourse to the court by UN organs and specialized agencies for advisory opinions.

### SURVEY OF COURT PRACTICE

Since the court's inauguration in 1946, states have submitted more than 100 legal disputes to it, and international organizations have requested 25 advisory opinions.

### LEGAL DISPUTES

Of the cases submitted to the court by states, some were withdrawn by the parties or removed from the list for some other reason. In still others, the court found that, under its statute, it lacked jurisdiction. The remaining 92 cases on which the court has rendered judgment encompassed a wide range of topics, including sovereignty over disputed territory or territorial possessions, the international law of the sea, and commercial interests or property rights either of states or of private corporations and persons. (Examples of these types of disputes are given in the case histories below.)

Many of the cases, including some that fall into the three categories just described, involve differences in interpretations of specific bilateral or multilateral treaties and other legal instruments. Thus, in the case of the rights of US citizens in Morocco (*France v. United States*), the court found, on 27 August 1952, that the prohibition of certain imports into Morocco had violated US treaty rights. However, it rejected the US claim that its citizens were not subject in principle to the application of Moroccan laws unless they had received the United States's prior assent.

### ADVISORY OPINIONS

The 25 advisory opinions requested by the General Assembly, Security Council, or authorized specialized agencies likewise have dealt with a variety of matters. The court, on 16 October 1975, rendered an opinion in response to a request made by the General Assembly at its 1974 session. The question concerned Western Sahara, which was passing from Spanish administration. Morocco, Mauritania, and Algeria, all bordering states, took conflicting positions on ties of sovereignty that might have existed before the territory came under Spanish administration. The court concluded that no ties of territorial sovereignty between Western Sahara and the Kingdom of Morocco or the Mauritanian entity had existed. In the decolonization of the territory, therefore, the principle of self-determination through the free expression of the will of its people should apply in accordance with the relevant General Assembly resolution.

Another opinion concerned the question of whether the costs of the peacekeeping operations in the Middle East and the Congo could, within the scope of Article 17 of the Charter, be regarded as expenses of the organization to be financed by contributions of

member states, as assessed by the General Assembly. In its opinion, issued on 20 July 1962, the court concluded that the expenses of both operations could be regarded as expenses of the UN within the meaning of Article 17 of the Charter.

Recent advisory opinions were rendered in July 1996 in response to a request made by the World Health Organization on the Legality of the Use by a State of Nuclear Weapons in Armed Conflict; and a request made by the UN General Assembly on the Legality or Use of Nuclear Weapons.

## CASES PENDING

As of February 2006, 10 cases were pending:

1. Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Bosnia and Herzegovina v. Serbia and Montenegro)
2. Gabcikovo-Nagymaros Project (Hungary/Slovakia)
3. Ahmadou Sadio Diallo (Republic of Guinea v. Democratic Republic of Congo)
4. Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Croatia v. Serbia and Montenegro)
5. Maritime Delimitation between Nicaragua and Honduras in the Caribbean Sea (Nicaragua v. Honduras)
6. Territorial and Maritime Dispute (Nicaragua v. Colombia)
7. Certain Criminal Proceedings in France (Republic of the Congo v. France)
8. Sovereignty over Pedra Branca/Pulau Batu Puteh, Middle Rocks and South Ledge (Malaysia/Singapore)
9. Maritime Delimitation in the Black Sea (Romania v. Ukraine)
10. Dispute regarding Navigational and Related Rights (Costa Rica v. Nicaragua)

## SOME CASE HISTORIES OF DISPUTES SUBMITTED TO THE COURT

### Disputes over Territorial Claims and Territorial Possessions

In the Case Concerning Sovereignty over Certain Frontier Land (*Belgium v. Netherlands*), the court traced developments that had begun before the 1839 separation of the Netherlands from Belgium, and in its judgment, on 20 June 1959, it decided that sovereignty over the disputed plots belonged to Belgium.

In a dispute regarding sovereignty over certain islets and rocks lying between the British Channel island of Jersey and the French coast, the Minquier and Ecrehos Islands Case, the United Kingdom and France invoked historical facts going back to the 11th century. The United Kingdom started its argument by claiming title from the conquest of England in 1066 by William, Duke of Normandy. France started its argument by pointing out that the dukes of Normandy were vassals of the king of France and that the kings of England after 1066, in their capacity as dukes of Normandy, held the duchy in fee from the French kings. The court decided, on 17 November 1953, that “the sovereignty over the islets and rocks of the Ecrehos and Minquier groups, insofar as these islets and rocks are capable of appropriation, belongs to the United Kingdom.”

In 1980, in a case brought by the United States concerning the seizure of its embassy in Teheran and the detention of its diplomatic and consular staff, the court held that Iran must release the hostages, hand back the embassy and make reparations. However, before the court fixed the amount of reparation, the case was withdrawn following agreement reached between the parties.

In the first frontier dispute between two African states, by a special agreement Burkina Faso and Mali submitted to a chamber of the court in October 1983 the question of the delimitation of part of the land frontier between them. In January 1986, the court ordered interim measures of protection in order to restore peace between the two states following armed hostilities at the end of 1985. The court gave its final judgment in December 1986, establishing the coordinates for the delimitation of the frontier.

In 1984, Nicaragua alleged that the United States was using military force against it and intervening in its internal affairs. The United States denied that the court had jurisdiction. After written and oral proceedings, the court found, however, that it had jurisdiction and that Nicaragua’s application was admissible. The United States refused to recognize either this ruling or the subsequent 1986 judgment in which the court determined that the United States had acted in breach of its obligations toward Nicaragua, must desist from the actions in question, and should make reparation. The request by Nicaragua that the court determine the form and amount of reparation was withdrawn in 1991.

In a case between Libya and Chad, the two countries submitted to the court a territorial dispute relating to the Aozou Strip in the Sahara. Libya’s claim as made in the case extended far to the south of that strip of land. The court, in a judgment of 3 February 1994, found wholly in favor of Chad. After an agreement on the implementation of the judgment had been concluded between the two parties, Libyan forces, monitored by an observer force deployed by the Security Council, withdrew from the Aozou strip by 31 May 1994.

### Disputes Relating to the Law of the Sea

The Corfu Channel Case (*United Kingdom v. Albania*), the first case decided by the court, was brought before it at the suggestion of the Security Council. On 22 October 1946, two UK destroyers passing through the Corfu channel off the Albanian coast struck mines whose explosion caused the death of 46 seamen and damage to the ships. The British thereupon mineswept the channel. Albania claimed that it had not laid the mines. The court found Albania “responsible under international law for the explosions ... and for the damage and loss of human life that resulted therefrom” and determined the compensation due to the United Kingdom at £843,947, equivalent to approximately US\$2.4 million at that time. The court also found that the British mine-sweeping activities in Albanian territorial waters had violated international law. The unanimous rejection by the court of the British claim that the action was justified under the principle of “self-protection” constituted the first judicial finding that the use of force for self-help is in certain circumstances contrary to international law.

In 1981, Canada and the United States submitted to a chamber of the court a question as to the course of the maritime boundary dividing the continental shelf and fisheries zones of the two countries in the Gulf of Maine area. In its judgment of 12 October 1984, the chamber of the court established the coordinates of

that boundary. On 3 June 1985, the court delivered a judgment in a dispute relating to the delimitation of the continental shelf between Libya and Malta that had been referred to the court in 1982 by means of a special agreement specifically concluded for that purpose. On 14 June 1993, the court delivered a judgment in a maritime delimitation dispute between Denmark and Norway. On 16 March 2001, the court delivered a judgment in a maritime and land dispute between Bahrain and Qatar. On 10 October 2002, the court decided a case between Cameroon and Nigeria over the question of sovereignty over the Bakassi Peninsula, over the maritime boundary between the two states, and over sovereignty over part of Cameroon in the area of Lake Chad.

#### **Disputes Involving Commercial Interests and Property Rights**

The Anglo-Iranian Oil Co. Case grew out of a law passed by Iran on 1 May 1951, terminating the concessions of the Anglo-Iranian Oil Co. and expropriating the company's refinery at Abadan, the largest in the world. On 5 July, the court ordered important "interim measures" enjoining the two governments to refrain from any action that might aggravate the dispute or hinder the operation of the company. The company was to continue under the same management as before nationalization, subject to such modification as agreed to by a special supervisory board, which the court requested the two governments to set up. A year later, however, on 22 July 1952, the court, in its final judgment, ruled that it lacked jurisdic-

tion and lifted the "interim measures." The court found that the 1933 agreement, which gave the Iranian concession to the Anglo-Iranian Oil Co. and which the United Kingdom claimed had been violated by the act of nationalization, was merely a concessionary contract between Iran and a foreign corporation. The court ruled that the interpretation of such a contract was not one of the matters in regard to which Iran had accepted the compulsory jurisdiction of the court. The controversy was settled by negotiations in 1953, after the Mossadegh regime in Iran had been replaced by another government.

The Barcelona Traction Case (Belgium v. Spain) arose out of a 1948 adjudication by a provincial Spanish law court of the bankruptcy of a company incorporated in Canada with subsidiaries operating in Barcelona. Belgium was seeking reparation for damages alleged to have been sustained by Belgian shareholders in the company as a result of the Spanish court's adjudication, which Belgium claimed was contrary to international law. The court, on 5 February 1970, found that the Belgian government lacked the standing to exercise diplomatic protection of Belgian shareholders in a Canadian company with respect to measures taken against that company in Spain.

(The complete text of all of the Court's decisions—from 1946 up to the present date—can be accessed at the ICJ's web site at [www.icj-cij.org/icjwww/idecisions.htm](http://www.icj-cij.org/icjwww/idecisions.htm).)

---

# THE SECRETARIAT

## CHARTER REQUIREMENTS

The charter lays down very few requirements governing the establishment of the sixth main organ of the UN—the Secretariat. Such requirements as are specified, in Chapter XV, may be conveniently listed under the following headings.

*Composition.* The charter states simply: “The Secretariat shall comprise a Secretary-General and such staff as the Organization may require.”

*Appointment of Staff.* With regard to the Secretary-General, the charter stipulates that the person to hold the position “shall be appointed by the General Assembly upon the recommendation of the Security Council.” In other words, the Security Council first must agree on a candidate, who then must be endorsed by a majority vote in the General Assembly. The other members of the Secretariat are to be appointed by the Secretary-General “under regulations established by the General Assembly.” The charter stipulates that the “paramount consideration” in the employment of staff “shall be the necessity of securing the highest standards of efficiency, competence, and integrity.” However, to this consideration is added an important rider—namely, that “due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.”

*Functions of the Secretariat.* The duties of the general staff are not specified beyond an instruction that an appropriate number shall be permanently assigned to the Economic and Social Council and the Trusteeship Council and, “as required, to other organs of the United Nations.” With respect to the functions of the Secretary-General, the charter states only that he shall be “the chief administrative officer of the Organization,” shall “act in that capacity” at all meetings of the General Assembly and the three councils, and shall also perform “such other functions as are entrusted to him by these organs.” Apart from these general requirements, the charter accords the Secretary-General one specific duty and one specific power: to make an annual report to the General Assembly on the work of the organization, and he has the right to bring to the attention of the Security Council any matter that “in his opinion may threaten the maintenance of international peace and security.”

The single restriction on the Secretariat is that “in the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization,” and that “they shall refrain from any action which might reflect on their position as international officials responsible only to the Organization.” As a corollary to this injunction, the charter puts member nations under the obligation to “respect the exclusively international character of the responsibilities of the Secretary-General and the staff and not to seek to influence them in the discharge of their responsibilities.”

## APPOINTMENT OF THE SECRETARY-GENERAL

Since the charter does not specify the qualifications for Secretary-General and the term of office, these decisions had to be made by the first General Assembly, in January 1946. It was agreed that, in making its recommendations to the General Assembly, the Security Council should conduct its discussions in private and vote in secret, for the dignity of the office required avoidance of open debate on the qualifications of the candidate. The General Assembly also decided that the term of office would be five years (the Secretary-General of the League of Nations was elected for 10 years) and that the Secretary-General would be eligible for reappointment.

The permanent members of the Security Council have tacitly agreed that the Secretary-General should not be a national of one of their own countries.

## STRUCTURE AND COMPOSITION OF THE SECRETARIAT

The Secretariat services the other organs of the UN and administers the programs and policies laid down by them. As the scope and range of UN activities have widened, the staff of the Secretariat has increased in number and its organizational pattern has increased in complexity. The major elements of the Secretariat, variously designated as offices, departments, programs, conferences, and the like, are headed by officials of the rank, but not necessarily the title, of under secretary-general or assistant secretary-general. In 1987 there were 48 officials at those two levels in the Secretariat.

As the United Nations grew from its original 51 members in 1945 to 191 members in 2002, the Secretariat necessarily changed and evolved. Between 1945 and 1994 major reform of the Secretariat’s structure was undertaken five times: 1953–56; 1964–66; 1974–77; 1985–86; and 1992–94. The latest round of restructuring was requested by the General Assembly in numerous resolutions beginning in 1988 (41/213; 44/200; 45/254; 46/232, and 47/212A). Secretary-General Boutros Boutros-Ghali began the restructuring process upon his entry into office in January 1992. In 1991 there were 48 high-level posts (1 director general, 26 undersecretary-generals, 20 assistant secretary-generals) reporting directly to the Secretary-General, by the 1996–1997 biennium that number had been reduced to 21 under secretary-generals and 15 assistant secretary-generals for a total of 36. In 2006, the activities of the Secretariat were organized in the following departments:

*The Department of Political Affairs (DPA).* The functions of five previous offices and units were integrated into the DPA. The department oversees the organization’s efforts in preventive diplomacy and peacemaking, collects and analyzes information to alert the General Assembly and Security Council of impending crises, and carries out mandates handed down by the General Assembly

and Security Council. DPA provides secretariat services to both bodies. It also provides electoral assistance to countries requesting help in strengthening the democratic process.

*The Department of Peacekeeping Operations (DPKO).* This department supervises the operations of the United Nations peacekeeping missions around the world. The work of the United Nations in this area has grown exponentially in size and complexity since the end of the cold war. In December 1991, peacekeeping missions involved approximately 11,000 troops and 4,000 civilian personnel with a combined budget of US\$500 million. At its peak in 1995 (when UN peacekeeping personnel were heavily deployed in the former Yugoslavia), the Department of Peacekeeping Operations was supervising approximately 70,000 military and civilian personnel, whose annualized budgets approached US\$3 billion. In the reorganization, the Field Operations Division, which had been part of the Department for Administration and Management, was transferred to its main client, the Department of Peacekeeping Operations. The annual budget was subsequently reduced to about US\$1 billion.

*The Department for Disarmament Affairs (DDA).* This department was originally established in 1982, and continued until 1992. It was reestablished in January 1998. The DDA furthers the goal of nuclear disarmament and non-proliferation and disarmament of chemical and biological weapons. It promotes disarmament efforts for conventional weapons, especially land mines and small arms. It has five branches: the Conference on Disarmament Secretariat and Conference Support Branch; the Weapons of Mass Destruction Branch; the Conventional Arms Branch; the Regional Disarmament Branch; and the Monitoring, Database and Information Branch.

*The Office for the Coordination of Humanitarian Affairs (OCHA).* From September 1992 to April 1996, the UN launched 64 consolidated inter-agency appeals for humanitarian assistance seeking some US\$11 billion in relief programs. To handle the increasing number of emergencies the organization's membership requested it to manage, the Secretary-General created the Department of Humanitarian Affairs (DHA), incorporating the functions of the UN Disaster Relief Office (UNDRO) and 11 other units of the Secretariat. Two new units were created: the Complex Emergencies Branch and the Inter-Agency Support Unit. In January 1998, the DHA was renamed the OCHA, as part of the Secretary-General's reform program at the time. The new body took steps to encourage more active inter-agency cooperation, and streamlined procedures for support of field coordination. The OCHA works to improve the delivery of humanitarian assistance to victims of disasters and other emergencies. It also acts as an advocate for humanitarian activities being considered by inter-governmental bodies. It was designed to provide quick needs assessments, field situation analyses, and early negotiations on access to emergency situations. A major feature of this department is interagency coordination that allows all the organizations of the UN system to make consolidated appeals for humanitarian assistance and to better track contributions from donor governments, UN agencies, and nongovernmental organizations.

*The Department of Economic and Social Affairs (DESA).* This department was a consolidation of the Department for Policy Coordination and Sustainable Development, the Department for Economic and Social Information and Policy Analysis and the

Department for Development Support and Management Services. The DESA aims to promote broad-based and sustainable development through an integrated approach to economic, social, environmental, population, and gender-related aspects of development. It has the following divisions: Advancement of Women; Africa and the Least Developed Countries; Development Policy Analysis; Economic and Social Council Support and Coordination; Population; Public Economics and Public Administration; Social Policy and Development; Statistics; Sustainable Development; and Financing for Development.

*The Department for General Assembly and Conference Management (DGACM).* This department consists of three divisions and one service. The Central Planning and Coordination Service provides central planning services for meetings and documentation, and coordinates conference services worldwide. The General Assembly and ECOSOC Affairs Division provides secretariat services and assistance to the General Assembly, the Economic and Social Council (ECOSOC), and the Trusteeship Council. The Interpretation, Meetings and Publishing Division provides interpretation services for all of the six official languages of the UN from and into each other. It also prepares verbatim records of meetings of the General Assembly, Security Council, and other bodies, and prepares and prints documents and other publications. The Translation and Editorial Division is responsible for translating all official United Nations documents, meeting records, publications and correspondence, from and into the six official languages. It also provides reference services and terminology services for authors, editors, interpreters, translators, and verbatim reporters.

*The Department of Public Information (DPI).* Under the reorganization, the Dag Hammarskjöld Library and the publishing services of the organization were transferred from the Office of Conference Services to DPI. The department, which creates press releases, publications, and radio and video programs publicizing the work of the organization, also took on the activities that had been handled by the former Office of the Spokesman for the Secretary-General. Many of DPI's field offices were integrated into the field offices of the UN Development Programme (UNDP) for substantial savings. DPI's work was facilitated by the installation of an electronic mail system connecting peacekeeping missions, information centers and UNDP offices—increasing headquarters' contact with its far-flung staff.

*The Department of Management (DM).* This department has a number of offices and divisions, including: the Treasury; the Office of Human Resources Management; the Integrated Management Information System Project; the Procurement Division; and the Archives and Records Management Section.

*The Office of Internal Oversight Services (OIOS).* In August 1993, the Secretary-General announced the creation of a new Office of Inspections and Investigations, headed by an assistant secretary-general, which would incorporate various former units of the DAM dealing with audit, management advisory services, evaluation, and monitoring. In July 1994, the General Assembly strengthened the office, and changed its name to the Office of Internal Oversight Services (resolution A/218B [29 July 1994]). The General Assembly stipulated that the head of the new office, at the level of under-secretary-general, should be an expert in the fields of accounting, auditing, financial analysis and investigations, management, law, or public administration. It further stipulated that the individual

# ORGANIZATIONAL STRUCTURE OF THE UNITED NATIONS SECRETARIAT

## LISTING OF KEY ORGANIZATIONAL UNITS

OSG	Office of the Secretary-General	OHRLLS	Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries, and Small Island Developing States
OIOS	Office of Internal Oversight Services	ODC	Office on Drugs and Crime
OLA	Office of Legal Affairs	UNOG	United Nations Office at Geneva
DPA	Department of Political Affairs	UNOV	United Nations Office at Vienna
DDA	Department of Disarmament Affairs	UNON	United Nations Office at Nairobi
DPKO	Department of Peacekeeping Operations	ECA	Economic Commission for Africa
OCHA	Office of Coordination of Humanitarian Affairs	ECE	Economic Commission for Europe
DESA	Department of Economic and Social Affairs	ECLAC	Economic Commission for Latin America and the Caribbean
DGACM	Department of General Assembly and Conference Management	ESCAP	Economic and Social Commission for Asia and the Pacific
DPI	Department of Public Information	ESCWA	Economic and Social Commission for Western Asia
DM	Department of Management		
UNSECORD	Office of the UN Security Coordinator		

should serve only one five-year term, and that the post would not be subject to geographical distribution limits. The watchdog office was given wider independence to investigate possible fraud and abuse within the organization. It is assisted in its task by the Integrated Management Information System (IMIS), a major hardware and software upgrade that allows greater monitoring and audit capabilities through electronic audit trails. The creation of this office had long been sought by industrialized countries concerned that their contributions to the United Nations were being wasted by fraud and abuse.

*The Office of Legal Affairs (OLA).* This office advises the organization and the Secretary-General on legal matters. For example, the OLA has provided advice on numerous activities related to the International Criminal Tribunals for the former Yugoslavia and for Rwanda. Under the 1992 reorganization, it also assumed responsibility for the Office for Ocean Affairs and Law of the Sea. The OLA also provides a range of advice and assistance on issues relating to treaty law and technical aspects of treaties.

Besides the above departments, the Centre for Human Rights, formerly a division, had its activities greatly expanded by a series of new mandates by the General Assembly, ECOSOC, the Commission on Human Rights, and expert groups in the human rights field. It is the principal entity of the UN Secretariat dealing with human rights issues, and is responsible for supervising the ratification and implementation of the international human rights agreements. The Secretary-General, in his 1993 report (A/48/428), stated that the activities of the Centre for Human Rights were evolving from standard-setting to furthering the implementation of a universal culture of human rights. The center is responsible for following up the recommendations of the Second World Conference on Human Rights held in Vienna in June 1993. Recognizing this, the 47th session of the General Assembly authorized additional financial resources for the center. The center is headed by an assistant secretary-general who reports directly to the Secretary-General.

Directly below the ranks of undersecretary-general and assistant secretary-general are directors of main subdepartments and chiefs of specific bureaus within the major organizational units. Below them is the professional staff: personnel with qualifications as administrators, specialists, technical experts, statisticians, translators, editors, interpreters, and so on. Staff in the category of general services include administrative assistants, clerical workers, secretaries, typists, and the like. Manual workers, such as building maintenance staff, are separately classified.

Personnel at the professional level and above are recruited in the various member countries of the UN and, when serving outside their own country, are entitled to home-leave travel, repatriation grants, and related benefits. General service personnel include a number of nationalities, but they are recruited locally and are not selected according to any principle of geographical representation. The majority of general service staff employed at UN headquarters are US citizens.

#### **Organizational Distribution of Staff**

As of 2005, the global work force stood at approximately 8,900 posts, down from 12,205 in 1984–85. Some posts currently are be-

ing kept vacant as a result of the General Assembly's decision to increase vacancy rates.

#### **Problems of Staff Appointment According to Equitable Geographical and Gender Distribution**

All UN senior staff members are appointed by the Secretary-General under regulations established by the General Assembly. Some of the appointments, such as the UN High Commissioner for Refugees, are subject to confirmation by the General Assembly. Staff recruitment, in general, is handled by the Office of Personnel, salary scales and other conditions of employment being determined by the General Assembly.

UN member governments attach great importance to having a fair proportion of their nationals employed in the Secretariat. The 1962 General Assembly recommended that in applying the principle of equitable geographical distribution, the Secretary-General should take into account members' financial contributions to the UN, the respective populations of the member countries, the relative importance of posts at different levels, and the need for a more balanced regional composition of the staff at the director level. It further recommended that in confirming permanent contracts (UN staff are initially hired on the basis of one-year contracts), particular account should be taken of the need to reduce underrepresentation of some member states.

The 1975 General Assembly reaffirmed previously defined aims for UN recruitment policy and mentioned the following specifically: development of an international civil service based on the highest standards of efficiency, competence, and integrity; equitable geographic distribution, with no post, department, or unit to be regarded as the exclusive preserve of any member state or region; the recruitment of a greater number of qualified women for professional and senior-level posts; and the correction of imbalances in the age structure of the Secretariat.

One of the United Nations' most disturbing lapses relates to the status of women within the organization's own secretariat. The equality of men and women is a principle enshrined in the UN charter. However, while more than half of the Secretariat's general service (nonprofessional) posts are filled by women, until the 1990s, few women were appointed to the highest levels of management. No woman has even been seriously considered for the position of Secretary-General. The General Assembly called in 1978 for an increase in the number of women in posts at the professional level to 25% of total staff. The Secretary-General reported in 1987 that the number of women in the professional and higher categories had increased to 25.7% of the total, compared to 17.9% in 1977. In 1985, at the end of the United Nations Decade for Women, the number of women in professional posts (designated as P-1, P-2, P-3, P-4, P-5, D-1 and D-2) had risen to 29%. However, women held only 8% of the highest administrative posts (director level, including assistant secretary-general and undersecretary-general; designated D-1 and D-2). In response, the General Assembly raised its goal for women to 35% of all professional level posts, with 25% in the senior, D-level posts by 1995. Some of the United Nations' semiautonomous subsidiary bodies already achieved progress in equitable gender representation in their own secretariats. The United Nations Population Fund (UNFPA) reported in 1992 that 43% of its professional posts were occupied by women and set a goal of 50% of professional posts to be

filled by women by the year 2000. UNICEF, which had women in 24.6% of its professional posts in 1986, increased that level to 35% in 1992. By June 1996, women accounted for 17.9% of the high level posts, and had received 40.3% of promotions within the last year. In 1992, in an effort to further strengthen the position of all women in the Secretariat, the first guidelines on sexual harassment were issued.

The International Civil Service Commission, established by the General Assembly in 1972, is responsible for making recommendations to that body for the regulation and coordination of service within the UN, the specialized agencies, and other international organizations that are part of the UN system. The commission is composed of 15 independent experts, appointed in their individual capacities for four-year staggered terms.

## THE EVOLVING ROLE OF THE SECRETARIAT

The UN's administrative arm has developed largely in accordance with the demands made upon it. In the process, it has evolved a distinctive character of its own, in keeping with its status as a constitutionally defined organ of the world body.

The Secretary-General has played the main role in shaping the character of the Secretariat. As chief administrative officer, the Secretary-General has wide discretionary powers to administer as he thinks fit. As Eleanor Roosevelt, a former chairman of the UN Commission on Human Rights, noted in 1953, the Secretary-General, "partly because of the relative permanence of his position (unlike the president of the General Assembly who changes every year) and partly because of his widely ramified authority over the whole UN organization, tends to become its chief personality, its embodiment and its spokesman to the world."

Each Secretary-General tries to develop the positive functions of the Secretariat. Although each has had his own views on the role of the office, all have shared the belief that the Secretariat is the backbone of the UN system. The most eloquent statement of that belief was probably made by Dag Hammarskjöld in a 1955 address at the University of California: "... the United Nations is what member nations made it, but within the limits set by government action and government cooperation, much depends on what the Secretariat makes it." In addition to the Secretariat's function of providing services and facilities for governments in their capacity as members of the UN, he said, the Secretariat also "has cre-

ative capacity. It can introduce new ideas. It can, in proper forms, take initiatives. It can put before member governments findings which will influence their actions." Stressing the fact that members of the Secretariat serve as international officials rather than as government representatives, Hammarskjöld concluded that "the Secretariat in its independence represents an organ, not only necessary for the life and proper functioning of the body, but of importance also for its growth."

In response to mounting criticism of the UN bureaucracy, the mismanaged and scandal-ridden oil-for-food program (see the discussion of the oil-for-food program in the chapter on the Secretary-General under "Developments Under Kofi Annan"), and reports of sexual abuses committed by peacekeeping forces, in 2006 Secretary-General Kofi Annan put forth a radical overhaul of the Secretariat entitled *Investing in the "UN: For A Stronger Organization Worldwide."* The report deals with the management of the Secretariat and confirms that the UN needs a significant investment in how it recruits, develops, and retains its people, how it procures goods and sources services, and how it manages and accounts for taxpayer funds in its overall pursuit of efficiency and results. The report focuses on transforming the UN into a more efficient and accountable organization in a way that reflects the fact that more than 70% of its \$10 billion annual budget in the 2000s relates to peacekeeping and other field operations, up from around 50% of a \$4.5 billion budget in the 1990s. By 2006, over half of the UN's civilian staff served in the field—not only in peacekeeping, but also in humanitarian relief, criminal justice, human rights monitoring and capacity-building, assistance with a cumulative total of more than 100 national elections, and in the battle against drugs and crime. Among the specific recommendations of Kofi Annan's report were: the 25 departments and other entities reporting directly to the Secretary-General should be reorganized to significantly reduce the reporting span; a major new leadership development plan is needed, covering recruitment, training and career development, to build middle and senior management capacity; the creation of the post of the Chief Information Technology Officer at the Assistant Secretary-General level, to oversee the creation and implementation of an effective information management strategy; an urgent upgrading of Secretariat-wide ICT systems; shortening the cycle for reviewing and adopting the budget, and consolidating budget appropriation from 35 sections into 13 parts; and consolidating peacekeeping accounts and streamlining trust fund management.

---

# THE SECRETARY-GENERAL

From the outset, the secretary-general of the UN has played an important role in helping to settle crises that have troubled nations since the end of World War II. In practice, the role has gone far beyond what might be anticipated from a reading of the terse Charter provisions for the office. Yet the role has been developed precisely through a skillful exploitation of the potentialities inherent in those provisions.

The deliberative organs of the UN are political bodies intended to function as forums where the interests of governments can be represented and reconciled. The secretary-general and the Secretariat embody the other aspect of the UN: the organization is also intended to be a place where people may speak not for the interests of governments or blocs but as impartial third parties. The secretary-general is consistently working in a political medium but doing so as a catalytic agent who, in person or through special missions, observers, and mediators, uses his influence to promote compromise and conciliation.

Under the Charter, the secretary-general has the right to bring to the attention of the Security Council any matter that, in his opinion, might threaten international peace and security. This right goes beyond any power granted the head of an international organization before the founding of the UN. The Charter requires that he submit to the General Assembly an annual report on the work of the organization. In this report, he can state his views and convey his voice to the world's governments. The secretary-general's role has also been considerably enhanced by exploiting the Charter provision that he shall perform "such other functions" as are entrusted to him by the main organizational units of the United Nations.

## THE ROLE OF THE UN SECRETARY-GENERAL

In 1986, then Secretary-General Pérez de Cuéllar was invited to give the Cyril Foster Lecture at Oxford University. His thoughts on the institution of the secretary-general in an era of international evolution deserve attention.

First, he suggested that a secretary-general must avoid two extremes: "On one side is the Scylla of trying to inflate the role through too liberal a reading of the text [of the Charter]: of succumbing, that is, to vanity and wishful thinking. On the other is the Charybdis of trying to limit the role to only those responsibilities which are explicitly conferred by the Charter and are impossible to escape: that is, succumbing to modesty, to the instinct of self-effacement, and to the desire to avoid controversy. Both are equally damaging to the vitality of the institution. I submit that no secretary-general should give way to either of them."

Pérez de Cuéllar stated that he used the annual report to the General Assembly as a way to initiate action and galvanize efforts in other parts of the UN system. He pointed out that the secretary-general sometimes remains the only channel of communication

between parties in conflict, and therefore must be able to improvise in the context of "good offices" missions. A disciple of "quiet diplomacy," Pérez de Cuéllar said that the secretary-general must not only be impartial, but must be perceived to be so. He observed that a secretary-general needs enormous patience; he does not have the option of being frustrated or discouraged. He suggested that the secretary-general must "try to understand the roots of insecurity, the fears and resentments and the legitimate aspirations which inspire a people or a state to take the position they do."

He delineated four priority areas for attention by the world body: (1) disarmament, and particularly, nuclear disarmament; (2) human rights; (3) "the shaming disparity of living standards between those who live in the developed world-the North-and their less fortunate brethren in the developing world-the South"; and (4) the world response to natural and man-made disasters.

In closing, Pérez de Cuéllar set forth his own essential requirements for a secretary-general:

The Secretary-General is constantly subjected to many and diverse pressures. But in the last analysis, his office is a lonely one. He cannot stand idle. Yet helplessness is often his lot. The idealism and hope of which the Charter is a luminous expression have to confront the narrow dictates of national policies. The Secretary-General's efforts must be based on reason but, behind many a government's allegedly logical position, there are myths and silent fears. The voice of the Charter is often drowned by clashes and conflicts between states. If the Secretary-General is to rise above these contradictions in international life, two qualities are essential.

One is faith that humanity can move-and indeed is moving-towards a less irrational, less violent, more compassionate, and more generous international order.

The other essential quality is to feel that he is a citizen of the world. This sounds [like] a cliché, but the Secretary-General would not deserve his mandate if he did not develop a sense of belonging to every nation or culture, reaching out as best he can to the impulse for peace and good that exists in all of them. He is a world citizen because all world problems are *his* problems; the Charter is his home and his ideology, and its principles are his moral creed.

The role of the secretary-general has varied with the individual and with the time and circumstances. This chapter contains an outline account of the initiatives taken by the seven secretaries-general in various international crises and areas of conflict. Ad-

ditional discussion of some of the main areas of conflict may be found in the chapter on International Peace and Security.

## THE SECRETARIES GENERAL

The first secretary-general, Trygve Lie of Norway, was appointed for a five-year term on 1 February 1946. On 1 November 1950, he was reappointed for three years. He resigned on 10 November 1952 and was succeeded by Dag Hammarskjöld of Sweden on 10 April 1953. On 26 September 1957, Hammarskjöld was appointed for a further five-year term beginning on 10 April 1958. After Hammarskjöld's death in a plane crash in Africa on 17 September 1961, U Thant of Burma was appointed secretary-general on 3 November 1961, to complete the unexpired term. In November 1962, U Thant was appointed secretary-general for a five-year term beginning with his assumption of office on 3 November 1961. On 2 December 1966, his mandate was unanimously renewed for another five years. At the end of his second term, U Thant declined to be considered for a third. In December 1971, the General Assembly appointed Kurt Waldheim of Austria for a five-year term beginning on 1 January 1972. In December 1976, Waldheim was reappointed for a second five-year term, which ended on 31 December 1981. He was succeeded by Javier Pérez de Cuéllar of Peru, who was appointed by the Assembly in December 1981 for a five-year term beginning on 1 January 1982. He was reappointed for a second five-year term beginning on 1 January 1987. In late 1991, Pérez de Cuéllar expressed his wish not to be considered for a third term. On 3 December 1991, the General Assembly appointed Boutros Boutros-Ghali of Egypt to a five-year term beginning on 1 January 1992. On 17 December 1996, Kofi Annan of Ghana was appointed to a five-year term that began on 1 January 1997. Annan was reappointed for another five-year term that began on 1 January 2002.

### Trygve Lie

Born in Oslo, Norway, 1896; died in Geilo, Norway, 30 December 1968. Law degree from Oslo University. Active in his country's trade union movement from the age of 15, when he joined the Norwegian Trade Union Youth Organization. At 23, became assistant to the secretary of the Norwegian Labor Party. Legal adviser to the Norwegian Trade Union Federation (1922-35). Elected to the Norwegian Parliament (1935). Minister of justice (1935-39). Minister of trade, industry, shipping, and fishing (1939-40). After the German occupation of Norway in 1940 and until the liberation of Norway in 1945, he was, successively, acting foreign minister and foreign minister of the Norwegian government in exile in London. A prominent anti-Nazi, he rendered many services in the Allied cause during World War II. For example, he was instrumental in preventing the Norwegian merchant marine, one of the world's largest, from falling into German hands. Reelected to Parliament in 1945. Headed the Norwegian delegation to the San Francisco Conference. Secretary-General, 1946-1952.

### Dag Hjalmar Agne Carl Hammarskjöld

Born in Jönköping, Sweden, 1905; died in a plane accident while on a peace mission near Ndola, Northern Rhodesia (now Democratic Republic of the Congo), 17 September 1961. Studied at Uppsala and Stockholm universities; Ph.D., Stockholm, 1934. Secretary of Commission on Unemployment (1930-34). Assistant professor of political economy, Stockholm University (1933).

Secretary of the Sveriges Riksbank (Bank of Sweden, 1935-36); chairman of the board (1941-45). Undersecretary of state in the Swedish ministry of finance (1936-45). Envoy extraordinary and financial adviser to the ministry of foreign affairs (1946-49). Undersecretary of state (1949). Deputy foreign minister (1951-53). Delegate to the Organization for European Economic Cooperation (OEEC; 1948-53). Vice-chairman of the Executive Committee of the OEEC (1948-49). Swedish delegate to the Commission of Ministers of the Council of Europe (1951-52). Hammarskjöld was a member of the Swedish Academy, which grants the Nobel prizes, and vice-president of the Swedish Tourist and Mountaineers' Association. Secretary-General, 1953-1961.

### U Thant

Born in Pantanaw, near Rangoon, Burma (now Myanmar), 1909; died in New York, 25 November 1974. Educated at University College, Rangoon. Started career as teacher of English and modern history at Pantanaw High School; later headmaster. Active in development and modernization of Burma's educational system. Author and free-lance journalist. Books include a work on the League of Nations (1932), *Democracy in Schools* (1952), and *History of Post-War Burma* (1961). After Burma's independence, became Burma's press director (1947), director of broadcasting (1948), and secretary in the ministry of information (1949-53). Chief adviser to his government at many international conferences. Member of Burma's delegation to the 1952 General Assembly. In 1957, moved to New York as head of Burma's permanent delegation to the UN. Secretary-General, 1961-1971.

### Kurt Waldheim

Born in Sankt Andrä-Wördern, Austria, 21 December 1918. Studied at the Consular Academy of Vienna and took an LL.D. at the University of Vienna. Member of the delegation of Austria in negotiations for Austrian State Treaty, London, Paris, and Moscow (1945-47). First secretary of Austria's legation to France (1948-51). Counselor and head of personnel division, ministry of foreign affairs, Vienna (1951-55). Permanent observer of Austria to the UN (1955-56). Minister, embassy to Canada, Ottawa (1956-58), and ambassador (1958-60). Director-general, political affairs, ministry of foreign affairs, Vienna (1960-64). Ambassador and permanent representative of Austria to the UN (1964-68 and 1970-71). Austrian minister of foreign affairs (1968-70). Unsuccessful candidate for the presidency of Austria in 1971. UN Secretary-General, 1972-1981. Guest Professor of Diplomacy, Georgetown University, Washington, D.C., 1982-84. Author of *The Austrian Example*, on Austria's foreign policy in 1973; *Building the Future Order*, in 1980; *In the Eye of the Storm*, 1985.

In 1986, during his second campaign for the Austrian presidency, information about Waldheim's record as a German Army lieutenant in World War II was reported for the first time in the international press. Despite his previous assertions that he had been wounded at the Russian front in 1941 and then returned to Vienna to study law, it was discovered he had served as a lieutenant in the high command of Army Group E, whose commander, General Alexander Loehr, was later hanged for atrocities. The reports indicated that Waldheim had served in Yugoslavia and Greece, a fact that he had hitherto concealed, at a time when reprisals, deportations, and other war crimes were being carried out by the German Army. In 1987, the US Justice Department, on the basis

of an examination of US files and of the records of the War Crimes Commission in the UN archives, placed Waldheim on a watch list, which is used to bar entry to the United States for people linked to war crimes.

An international commission of historians appointed by Waldheim, after his election to the presidency of Austria in 1986, reported in February 1988 that it had found evidence that Waldheim was aware of war crimes during his service in the Balkans and had concealed his record but had found no evidence that he himself had committed any crime. The commission's report created a national crisis in the government of Austria and deeply divided the Austrian people. A national poll showed that, while the majority of people did not wish him to resign (as many prominent intellectuals and politicians were loudly insisting), most indicated that they would not vote for him again. Waldheim himself insisted that the commission cleared him of the charge of committing war crimes.

However, the debate over which countries did (or did not) know the facts about Waldheim's war service before or during his tenure as secretary-general continued to surface in the press periodically. There was general agreement that public knowledge of the real nature of Waldheim's war service would have disqualified him for consideration for the post of secretary-general. In August 1994, Representative Carolyn B. Maloney, Democrat of Manhattan, introduced the War Crimes Disclosure Act, H.R. 4995, with the intention of forcing the Central Intelligence Agency to disclose parts of the Waldheim dossier which it has withheld, citing national security interests.

Waldheim served as president of Austria for one term, from 1986 to 1992. In July 1994, Pope John Paul II, a long-time friend of Waldheim's, awarded him the Knighthood of the Order of Pius "for outstanding service as secretary-general of the United Nations." The honor is awarded to Catholics or non-Catholics for outstanding services to the church or society, and is largely symbolic.

#### **Javier Pérez de Cuéllar**

Born in Lima, Peru, 19 January 1920. Graduated from the law school of Catholic University, Lima (1943). Joined Peruvian ministry of foreign affairs (1940) and the diplomatic service (1944). Served as secretary at Peruvian embassies in France, the United Kingdom, Bolivia, and Brazil. Returned to Lima (1961) as director of legal and personnel departments, ministry of foreign affairs. Served as ambassador to Venezuela, USSR, Poland, and Switzerland. Member of Peruvian delegation to the 1st General Assembly (1946) and of delegations to the 25th through 30th sessions (1970-75). Permanent representative of Peru to the UN (1971-75). Served as UN secretary-general's special representative in Cyprus (1975-77); UN undersecretary-general for special political affairs (1979-81); and secretary-general's personal representative in Afghanistan (1981). After resigning from the UN, he returned to the ministry of foreign affairs and voluntarily separated from the service of his government on 7 October 1981. UN Secretary-General, 1982-1991. In 1992 UNESCO named him chairman of its World Commission on Culture and Development. The lawyer and career diplomat retired in the late 1990s. He is a former professor of diplomatic law at the Academia de Guerra Aérea del Peru. Author

of *Manual de derecho diplomático (Manual of International Law)*, 1964.

#### **Boutros Boutros-Ghali**

Born in Cairo, Egypt, 14 November 1922. Graduated from Cairo University in 1946 with a Bachelor of Law. Received his Ph.D. in international law in 1949 from Paris University. From 1949-77 he was Professor of International Law and International Relations and head of the Department of Political Science at Cairo University. Boutros-Ghali was a Fulbright Research Scholar at Columbia University in 1954-55. He served as director of the Centre of Research of The Hague Academy of International Law from 1963-1964, and was a visiting professor at the Faculty of Law of Paris University from 1967-68. In 1977 he became Egypt's Minister of State for Foreign Affairs, and was present at the Camp David Summit Conference during the negotiations that led to the Camp David accords between Egypt and Israel in 1978. He continued as Minister of State for Foreign Affairs until 1991, when he became Deputy Prime Minister of Foreign Affairs. He became a member of the Egyptian parliament in 1987 and was part of the secretariat of the National Democratic Party since 1980. From 1980-92 he was a member of the Central Committee and Political Bureau of the Arab Socialist Union. From 1970-91 he was a member of the UN's International Law Commission. His professional affiliations include membership in the Institute of International Law, the International Institute of Human Rights, the African Society of Political Studies and the Académie des Sciences Morales et Politiques (Académie Française, Paris). He founded the publication *Al Ahram Iktisadi* and was its editor from 1960 to 1975. Boutros-Ghali has authored more than 30 books and over 100 articles on international affairs, international law, foreign policy, diplomacy, human rights, and economic and social development. UN Secretary-General, 1992-1996.

#### **Kofi Annan**

Born in Kumasi, Ghana, on 8 April 1938. Studied at the University of Science and Technology in Kumasi, Ghana, and in 1961 completed his undergraduate work in economics at Macalester College in St. Paul, Minnesota. During 1961-62, he undertook graduate studies in economics at the Institut universitaire des hautes études internationales in Geneva. Having worked with the UN for over 30 years in various capacities, he is considered the first Secretary-General to rise from within the organization. His first assignment with the United Nations was in 1962 as an Administrative Officer and Budget Officer at the World Health Organization (WHO) in Geneva. As a Sloan Fellow in 1971-72 at the Massachusetts Institute of Technology, he received a Master of Science in Management. He returned to Ghana from 1974 to 1976 and was the Managing Director of the Ghana Tourist Development Company, serving on both its board and on the Ghana Tourist Control Board. In the UN, he held the position of Deputy Director of Administration and Head of Personnel in the Office of the UN High Commissioner for Refugees during 1980-83, Director of the Budget in the Office of Financial Services during 1984-87, and then as Assistant Secretary-General in the Office of Human Resources Management and Security Coordinator for the UN system during 1987-90. From 1990 to 1992 he served as Assistant Secretary-General for Program Planning, Budget and Finance and Controller of the UN. After the invasion of Kuwait by Iraq in

1990, he was sent to Iraq to facilitate the repatriation of over 900 international staff, and became engaged in negotiations for the release of Western hostages. He also helped bring attention to the situation of the 500,000 Asians stranded in Kuwait and Iraq. He also headed the UN team that negotiated the possible sale of Iraqi oil to buy humanitarian aid. In 1992 he was appointed Assistant Secretary-General for Peacekeeping Operations, and became Under-Secretary-General in the same department in March 1993. He also served as a Special Representative of the Secretary-General to the former Yugoslavia and as Special Envoy to the North Atlantic Treaty Organization (NATO) during the transitional period that followed the signing of the Dayton Peace Agreement. Began term as UN Secretary-General, January 1997, and was reappointed on 29 June 2001 for a second term beginning on 1 January 2002.

## DEVELOPMENTS UNDER TRYGVE LIE, 1946-1952

Trygve Lie had not yet been in office three months when he took the initiative of advising the Security Council on the Secretariat's interpretation of the Charter. The Council was considering its first case, the Iranian complaint against the USSR. The secretary-general delivered a legal opinion that differed sharply from that of the Security Council. The Council did not accept his interpretation, but it upheld his right to present his views. After setting this precedent, Lie submitted legal opinions on other matters.

During Lie's first term as secretary-general, East-West tension charged the UN atmosphere. As the world situation became increasingly threatening, the political role of the secretary-general expanded. Lie took definite stands on three issues, each of which earned him the dislike of some permanent members of the Security Council. The issues were Chinese representation, a plan for the general settlement of the cold war, and UN military action in the Korean War.

*Chinese Representation.* By the end of 1949, a number of states, including the USSR and the United Kingdom—permanent members of the Security Council—had recognized the mainland government, the People's Republic of China. In January 1950, the USSR representatives, having failed to obtain the seating of the representatives of the People's Republic, began boycotting UN meetings at which China was represented by delegates of the Republic of China, based on Taiwan. In private meetings with delegations, Lie tried to solve the impasse. He adduced various reasons, including a ruling of the International Court of Justice, for the thesis that nonrecognition of a government by other governments should not determine its representation in the UN.

*Trygve Lie's Twenty-Year Peace Plan.* Lie developed an extraordinary initiative during the first half of 1950. In a letter to the Security Council dated 6 June 1950, approximately two weeks before the outbreak of the Korean War, he said: "I felt it my duty to suggest a fresh start to be made towards eventual peaceful solution of outstanding problems." In his *Twenty-Year Program for Achieving Peace Through the United Nations*, Lie proposed new international machinery to control atomic energy and check the competitive production of armaments and also proposed the establishment of a UN force to prevent or stop localized outbreaks of violence.

Armed with these proposals and other memoranda, including the one on Chinese representation, Lie journeyed first to Washington, then to London, to Paris, and finally to Moscow. He held

conversations not only with foreign ministers and high-ranking diplomats but also with US president Harry S. Truman, British Prime Minister Clement Attlee, French President Vincent Auriol, and Soviet Premier Joseph Stalin. Lie's reception was cordial in Moscow, warm in Paris, and friendly in London, but cool in Washington.

The international picture changed abruptly, however, with the outbreak of the Korean War. The attitude of a number of governments toward Lie changed dramatically as well.

*The Korean War.* An outstanding example of a secretary-general taking a stand on an issue was Lie's intervention in the emergency meeting of the Security Council on 24 June 1950. He unequivocally labeled the North Korean forces aggressors because they had crossed the 38th parallel, declared that the conflict constituted a threat to international peace, and urged that the Security Council had a "clear duty" to act. After the Council (in the absence of the Soviet delegate) had set in motion military sanctions against North Korea, Lie endorsed this course of action and rallied support from member governments for UN military action in Korea. These moves brought him into sharp conflict with the USSR, which accused him of "slavish obedience to Western imperialism" and to the "aggression" that, in the Soviet view, the United States had committed in Korea.

As the Korean conflict grew more ominous with the intervention of the People's Republic of China, Lie played an active role in getting cease-fire negotiations underway in the field. At the same time, he fully identified himself with military intervention in Korea on behalf of the UN.

*Extension of Lie's Term as Secretary-General.* Lie's first term as secretary-general was to expire on 31 January 1951. In the Security Council, the USSR vetoed a resolution recommending him for a second term and subsequently announced that it would accept anyone other than Lie who was acceptable to the other members of the Council. The United States announced that it would veto anyone but Lie. The Council was unable to recommend a candidate for the office of secretary-general to the General Assembly, a situation unforeseen in the Charter. A resolution in the Assembly to extend Lie's term by three years, beginning on 1 February 1951, was carried by 46 votes to 5, with 8 abstentions. The negative votes were cast by the Soviet bloc.

The USSR maintained normal relations with Lie until the expiration of his original term on 31 January 1951. Thereafter, it stood by its previous announcement that the extension of the term was illegal and that it would "not consider him as secretary-general." By the fall of 1951, however, its nonrecognition policy toward Lie subsided. However, other complications were facing Lie, and on 10 November 1952, he tendered his resignation to the General Assembly.

## DEVELOPMENTS UNDER DAG HAMMARSKJÖLD, 1953-1961

Hammarskjöld's activities in the political field were more numerous and far-reaching than Lie's had been. Both the General Assembly and the Security Council repeatedly relied on his initiative and advice and entrusted important tasks to him.

The 1954 General Assembly set a precedent when it asked the secretary-general to seek the release of 11 US fliers held prisoner by mainland China. The Assembly resolution left the course of ac-

tion entirely to his judgment. After various preparations, Hammarskjöld flew to Peking (now Beijing) for personal negotiations with that government, and the 11 fliers were released. This success greatly increased the readiness of the Assembly to rely on the secretary-general as a troubleshooter.

*The Suez Crisis.* Grave responsibilities were entrusted to the secretary-general by the General Assembly in connection with the establishment and operation of the UN Emergency Force (UNEF). On 4 November 1956, at the height of the crisis resulting from British, French, and Israeli intervention in Egypt, the secretary-general was requested to submit a plan within 48 hours for the establishment of a force “to secure and supervise the cessation of hostilities.” The Assembly approved his plan and, at his suggestion, appointed Major-General E. L. M. Burns, Chief of Staff of the UN Truce Supervision Organization, as the chief of UNEF. The Assembly authorized the secretary-general to take appropriate measures to carry out his plan, and an advisory committee of seven UN members was appointed to assist him. Hammarskjöld flew to Egypt to arrange for the Egyptian government’s consent for UNEF to be stationed and to operate in Egyptian territory. He was given the task of arranging with Egypt, France, Israel, and the United Kingdom the implementation of the cease-fire and an end to the dispatch of troops and arms into the area and was authorized to issue regulations and instructions for the effective functioning of UNEF.

*Hammarskjöld’s Views on Developing the Role of Secretary-General.* Even before the Middle East crisis of 1956, Hammarskjöld had pointed to the need for the secretary-general to assume a new role in world affairs. On his reelection to a second term, Hammarskjöld told the General Assembly that he considered it to be the duty of the secretary-general, guided by the Charter and by the decisions of the main UN organs, to use his office and the machinery of the organization to the full extent permitted by practical circumstances. But he then declared: “I believe it is in keeping with the philosophy of the Charter that the secretary-general be expected to act also *without such guidance*, should this appear to him necessary in order to help in *filling a vacuum* that may appear in the systems which the Charter and traditional diplomacy provide for the safeguarding of peace and security.” (Italics added.) In other words, inaction or a stalemate either at the UN or outside of it may be justification for the secretary-general to act on his own.

Thus, in 1958, Hammarskjöld took an active hand in the Jordan-Lebanon crisis. After a resolution for stronger UN action failed to carry in the Security Council, he announced that he would nevertheless strengthen UN action in Lebanon and “accept the consequences” if members of the Security Council were to disapprove; none did. In the fall of 1959, the USSR made it known that it did not favor a visit by the secretary-general to Laos and, in particular, the assignment of a special temporary “UN ambassador” there. Yet Hammarskjöld did go to Laos to orient himself on the situation in that corner of Southeast Asia, and he assigned a high UN official as the head of a special mission to Laos. In March 1959, Hammarskjöld sent a special representative to help Thailand and Cambodia settle a border dispute. He acted at their invitation without specific authorization by the Security Council or the General Assembly. The dispute was settled.

In his report to the 1959 Assembly, he said: “The main significance of the evolution of the Office of the Secretary-General ... lies

in the fact that it has provided means for smooth and fast action ... of special value in situations in which prior public debate on a proposed course of action might increase the difficulties ... or in which ... members may prove hesitant....”

*The Congo Crisis.* By far the greatest responsibilities Hammarskjöld had to shoulder were in connection with the UN Operation in the Congo (now Zaire).

On 12 and 13 July 1960, respectively, President Joseph Kasavubu and Premier Patrice Lumumba of the newly independent Congo each cabled the secretary-general, asking for UN military assistance because of the arrival of Belgian troops and the impending secession of Katanga. At Hammarskjöld’s request, the Security Council met on the night of 13 July. He gave his full support to the Congo’s appeal and recommended that the Council authorize him to “take the necessary steps” to set up a UN military assistance force for the Congo, in consultation with the Congolese government and on the basis of the experience gained in connection with the UNEF in the Middle East. The Security Council so decided.

Since the Congo operation thus initiated was of much greater dimensions than the UNEF operation, the responsibilities imposed upon the secretary-general were correspondingly heavier, for, although the Security Council and the General Assembly guided Hammarskjöld, he himself had to make extraordinarily difficult decisions almost daily, often on highly explosive matters that arose as a result of serious rifts within the Congolese government and many other factors.

Various member governments, including the USSR and certain African and Western countries, criticized Hammarskjöld for some actions that the UN took or failed to take in the Congo. At times, he had to face the possibility that some country that had contributed military contingents to the UN force would withdraw them.

When it became known in February 1961 that Lumumba, who had been deposed by Kasavubu early in September 1960 and later detained by the Léopoldville authorities, had been handed over by them to the Katanga authorities and subsequently murdered, Hammarskjöld declared that the UN was not to blame for the “revolting crime.” However, several delegates claimed that he should have taken stronger measures to protect Lumumba.

*The “Troika” Proposal.* The USSR had asked for Hammarskjöld’s dismissal long before the assassination of Lumumba. Premier Khrushchev, as head of the Soviet delegation to the 1960 General Assembly, accused Hammarskjöld of lacking impartiality and of violating instructions of the Security Council in his conduct of the UN operation in the Congo. He also proposed a basic change in the very institution of the secretary-general, arguing that since the secretary-general had become “the interpreter and executor of decisions of the General Assembly and the Security Council,” this one-man office should be replaced by a “collective executive organ consisting of three persons, each of whom would represent a certain group of states”—namely, the West, the socialist states, and the neutralist countries; the institution of a “troika,” he declared, would guarantee that the UN executive organ would not act to the detriment of any of these groups of states.

Hammarskjöld rejected the accusations against his impartiality, declared that he would not resign unless the member states for which the organization was of decisive importance or the uncommitted nations wished him to do so, and received an ovation from the overwhelming majority of the delegations. He also stated that

to replace the one-man secretary-general by a three-man body would greatly alter the character and limit the scope of the UN.

Outside the Soviet bloc there had been little support for the "troika" proposal, but some "subtroika" proposals were advanced. Hammarskjöld in turn suggested that his five top aides, including a US and a Soviet citizen, advise the secretary-general on political problems. Discussions of the question were interrupted by his death.

*Death of Dag Hammarskjöld.* Because of dangerous developments in the Congo, Hammarskjöld flew there in September 1961. On the night of 17 September, the plane carrying him from Léopoldville to a meeting with the Katanga secessionist leader at Ndola, Northern Rhodesia, crashed in a wooded area about 16 km (10 mi) west of Ndola airport. Hammarskjöld and all 15 UN civilian and military personnel traveling with him, including the crew, were killed. The exact cause of the tragedy has not been determined. An investigation commission appointed by the General Assembly reported several possibilities: inadequate technical and security preparations for the flight, an attack on the plane from the air or the ground, sabotage, or human failure by the pilot.

## DEVELOPMENTS UNDER U THANT, 1961-1971

U Thant's approach to his office was different from that of Hammarskjöld, whose dynamic conception of the secretary-general's political role had aroused such opposition in the Soviet bloc. Thant did not take the same initiatives as his predecessor, but he consistently sought to use the prestige of his office to help settle disputes. Moreover, both the General Assembly and the Security Council assigned him to mediate extremely delicate situations. In his annual reports, he put forth proposals on basic issues, such as disarmament and economic and social cooperation and many of his suggestions were adopted.

An early example of a successful initiative taken by U Thant was in connection with the long-standing dispute between Indonesia and the Netherlands over the status of West Irian. The territory, formerly known as West New Guinea, had belonged to the Dutch East Indies, and Indonesia now claimed it as its own. In December 1961, fighting broke out between Dutch and Indonesian troops. Appealing to both governments to seek a peaceful solution, the secretary-general helped them arrive at a settlement. That settlement, moreover, brought new responsibilities to the office of the secretary-general: for the first time in UN history, a non-self-governing territory was, for a limited period, administered directly by the world organization.

*The Cyprus Operation.* Intercommunal clashes broke out in Cyprus on Christmas Eve 1963 and were followed by the withdrawal of the Turkish Cypriots into their enclaves, leaving the central government wholly under Greek Cypriot control. A "peace-making force" established under British command was unable to put an end to the fighting, and a conference on Cyprus held in London in January 1964 ended in disagreement. In the face of the danger of broader hostilities in the area, the Security Council on 4 March 1964 decided unanimously to authorize U Thant to establish a UN Peacekeeping Force in Cyprus (UNFICYP), with a limited three-month mandate to prevent the recurrence of fighting, to help maintain law and order, and to aid in the return to normal conditions. The force was to be financed on the basis of volun-

tary contributions. The Council also asked the secretary-general to appoint a mediator to seek a peaceful settlement of the Cyprus problem. The report of U Thant's mediator, Galo Plaza Lasso, was transmitted to the Security Council in March 1965 but was rejected by Turkey. Plaza resigned in December 1965, and the function of mediator lapsed.

Another crisis occurred in November 1967, but threatened military intervention by Turkey was averted, largely as a result of US opposition. Negotiations conducted by Cyrus Vance for the United States and José Rolz-Bennett on behalf of the secretary-general led to a settlement. Intercommunal talks were begun in June 1968, through the good offices of the secretary-general, as part of the settlement. The talks bogged down, but U Thant proposed a formula for their reactivation under the auspices of his special representative, B. F. Osorio-Tafall, and they were resumed in 1972, after Thant had left office.

*The India-Pakistan War of 1965 and Conflict of 1971.* Hostilities between India and Pakistan broke out in Kashmir in early August 1965 and soon spread along the entire length of the international border from the Lahore area to the sea. At the behest of the Security Council, whose calls on 4 and 6 September for a cease-fire had gone unheeded, U Thant visited the subcontinent from 9 to 15 September. In his report to the Council, the secretary-general proposed certain procedures, including a possible meeting between President Ayub of Pakistan and Prime Minister Shastri of India, to resolve the problem and restore the peace.

The Council, on 20 September, demanded a cease-fire and authorized the secretary-general to provide the necessary assistance to ensure supervision of the cease-fire and withdrawal of all armed personnel. For this purpose, U Thant strengthened the existing UN Military Observer Group in India and Pakistan (UNMOGIP), stationed in Kashmir, and established the UN India-Pakistan Observation Mission (UNIPOM) to supervise the cease-fire and withdrawal of troops along the border outside Kashmir.

At a meeting organized by Soviet Premier Kosygin in January 1966 in Tashkent, USSR, the leaders of India and Pakistan agreed on the withdrawal of all troops; this withdrawal was successfully implemented under the supervision of the two UN military observer missions in the area. UNIPOM was disbanded in March 1966, having completed its work.

Following the outbreak of civil strife in East Pakistan in March 1971 and the deterioration of the situation in the subcontinent that summer, U Thant offered his good offices to India and Pakistan and kept the Security Council informed under the broad terms of Article 99 of the Charter. When overt warfare broke out in December, the Security Council appealed to all parties to spare the lives of innocent civilians. Pursuant to a decision by the Council, U Thant appointed a special representative to lend his good offices for the solution of humanitarian problems after the cease-fire of 18 December 1971, which was followed by the independence of Bangladesh.

*U Thant's Stand on the Vietnam War.* Throughout his tenure, U Thant was deeply concerned with the question of Vietnam. By tacit consent, the question was never formally debated in the General Assembly and only cursorily touched upon in the Security Council. Until the opening of the Paris peace talks in 1968, the secretary-general was unremitting in his efforts to persuade the parties in the conflict to initiate negotiations on their own. In 1966, he put

forward a three-stage proposal to create the conditions necessary for discussion, but it was ignored by the United States.

After the Paris talks began, U Thant deliberately refrained from making any public statements on Vietnam “in order to avoid creating unnecessary difficulties” for the parties. He broke this silence only once, on 5 May 1970, when he expressed his deep concern “regarding the recent involvement of Cambodia in the war.”

*U Thant's Second Term.* U Thant's second term of office was dominated by the protracted Middle East crisis that arose in the aftermath of the Six-Day War in 1967. His quick action in removing UNEF troops from the Suez area at the request of the United Arab Republic just before that war began occasioned much criticism and some misunderstanding.

Of the two other major political conflicts during the period 1967-70, the civil war in Nigeria and the Soviet invasion of Czechoslovakia on 20 August 1968, only the latter was debated at the UN. The political aspects of the Nigerian situation were never raised in either the General Assembly or the Security Council out of deference to the African countries themselves, whose main objective was to keep external intervention to a minimum. However, as the troops of the Federal Republic of Nigeria began to penetrate more deeply into the eastern region (which had announced its secession from Nigeria and proclaimed itself an independent state under the name of Biafra), the various humanitarian organs of the UN became increasingly concerned about the plight of the people there. Accordingly, in August 1968, the secretary-general took the initiative of sending a personal representative to Nigeria to help facilitate the distribution of food and medicine.

At the request of its six Western members, the Security Council decided to debate the situation in Czechoslovakia, despite the protests of the USSR. On 23 August 1968, 10 members voted for a resolution condemning the Soviet action, which the USSR vetoed. Another resolution, requesting the secretary-general to send a representative to Prague to seek the release of imprisoned Czechoslovak leaders, was not put to a vote. In view—as one UN text puts it—of the “agreement reached on the substance of the problem during the Soviet-Czechoslovak talks held in Moscow from August 23 to 26,” no further action was taken by the Council. However, it is worth noting that U Thant was among the first world figures to denounce the invasion publicly. At a press briefing on 21 August at UN headquarters, he expressed unequivocal dismay, characterizing the invasion as “yet another serious blow to the concepts of international order and morality which form the basis of the Charter of the United Nations ... and a grave setback to the East-West détente which seemed to be re-emerging in recent months.”

## DEVELOPMENTS UNDER KURT WALDHEIM, 1972-1981

Two overriding concerns shaped Waldheim's secretary-generalship: concern for the preservation of the peace and concern for the evolution of world economic arrangements that would effect a more equitable distribution of the world's wealth. Two other issues were also of special concern to Waldheim: the financial position of the UN and terrorism. The financial position of the UN had been rendered precarious by the practice of some member states, including the USSR, France, and the United States, of withholding or threatening to withhold their share of UN funds for activities that they questioned. When Waldheim took office, the crisis had

become an emergency, and he dealt with it vigorously throughout his tenure. In September 1972, he placed the question of terrorism on the agenda of the General Assembly against the wishes of many member states. It was the first time a secretary-general had ever placed a substantive item on the Assembly's agenda.

*Peacemaking.* In 1972, on his own authority, Waldheim undertook a number of missions on behalf of peace. Visiting Cyprus, he temporarily calmed the Turkish community's concern over reported arms shipments to the Greek-dominated government. He visited the island again in 1973 in pursuit of reconciliation. After the hostilities in 1974, he was able to bring Greek and Turkish leaders together for negotiations, and he presided over the Geneva talks regarding Cyprus.

Waldheim's efforts to conciliate in the Vietnam War were rebuffed by both sides in 1972. He then tried, without success, to end the war through action by the Security Council. He visited the two Yemens to try to mediate a border dispute in 1972, and in the same year, he tried to mediate between India and Pakistan.

In the long-standing Arab-Israeli dispute, Waldheim made many efforts toward a satisfactory settlement and organized the UN Emergency Force as a buffer between the armies of Egypt and Israel at the request of the Security Council in October 1973.

*Striving for a New International Economic Order.* The sixth special session of the Assembly, in the spring of 1974, and the seventh special session, in September 1975, resulted in a number of decisions and proposals for bridging the gap between the rich and the poor nations and building a “new international economic order.” The seventh special session was, in Waldheim's words, “a major event, even a turning point, in the history of the United Nations and showed a new and highly promising capacity of the organization to achieve practical results through consensus and through negotiation.”

*Financial Status of the UN.* Waldheim acted both to reduce the costs of running the UN and to bring in contributions from member nations.

The US contribution to the UN, historically the highest single assessment, by the early 1970s stood at 31.5% of the budget. In October 1973, the US Congress reduced the US share to 25% of the UN budget; 116 other nations also had their contributions reduced by the UN. The difference was made up by increasing the assessments of Japan, China, and 10 other members and by admitting to membership the two Germanys. Waldheim helped to bring these changes about, fostering the notion that any country paying more than 25% of the UN's expenses could wield excessive influence.

*Terrorism.* Incidents of terrorism increased in the early 1970s. In September 1972, during the XXth Olympiad in Munich, 11 Israeli athletes were killed by Palestinians of the Black September group. Waldheim expressed himself strongly about the event and put the question of terrorism on the agenda of the 1972 General Assembly. A number of Arab and African countries took exception to his initiative, arguing that attention should be focused on the causes of terrorism. Although the Assembly had earlier condemned aerial hijacking, the resolution that it adopted on terrorism did not condemn the practice but called for a study of its causes. After OPEC officials were attacked by terrorists in 1975, the sentiment for more ample UN action against terrorism grew among third-world countries.

*Waldheim's Second Term.* Waldheim entered his second term of office in January 1977 with few illusions about the United Nations. To some extent, he wrote, it was still in search of its identity and its true role: "It tends to react rather than foresee, to deal with the effects of a crisis rather than anticipate and forestall that crisis." The history of the UN since its founding, he wrote, "has essentially been the story of the search for a working balance between national sovereignty and national interests on the one hand and international order and the long-term interests of the world community on the other." He said he was not discouraged, however, and he urged governments—particularly the major powers—to turn away from the age-old struggle for spheres of influence and to honor and respect their obligations and responsibilities under the Charter.

In 1978, Waldheim called for an effort to improve and streamline the workings of the UN, beginning with the General Assembly, the agenda of which should be reviewed, he said, and items of lesser interest removed. He noted that the Assembly had grown in three decades from a body of 50 members with an agenda of 20 items to a gathering of some 150 members and an agenda of more than 130 items.

Waldheim traveled extensively in East Asia in early 1979 and again in 1980 to get a firsthand view of developments in that area, particularly Indo-China, where, in the aftermath of the Vietnam war, there was an exodus of refugees, by land and sea, from that country. With the tide of these and other refugees from Laos and Kampuchea rising daily, Waldheim convened a meeting in Geneva in June 1979 to help alleviate the problem.

In May 1979, pursuing a "good offices" mission in Cyprus, Waldheim convened a high-level meeting calling for a resumption of intercommunal talks. The talks were subsequently resumed but broke down shortly thereafter. Waldheim again exerted his best efforts beginning in late 1979, as did the UN itself, in search of solutions to unexpected crises touched off by the Soviet invasion of Afghanistan and the taking of US diplomatic personnel as hostages in Iran. From the outset, his efforts were directed at freeing the hostages and settling relations between Iran and the United States, and, for this purpose, he went to Tehran himself, as did a UN commission of inquiry. Waldheim noted that the war between Iran and Iraq, which began in September 1980, had resisted all efforts, both within and outside the UN, at finding a peaceful solution. He offered his own good offices for this purpose and appointed Olof Palme, former Swedish prime minister, as his special representative. In regard to the Afghanistan crisis, he appointed Javier Pérez de Cuéllar of Peru as his personal representative.

## DEVELOPMENTS UNDER JAVIER PÉREZ DE CUÉLLAR, 1982-1991

Secretary-General Pérez de Cuéllar presided over the United Nations during one of the most remarkable decades in the political history of the world. During his tenure, the stalemate imposed on the United Nations by the rivalries of the Cold War came to an end. The political map of Europe, which had remained stable for more than 40 years since the end of WWII, was completely redrawn when the Soviet Union collapsed in 1989. East and West Germany were united and the Berlin Wall was reduced to rubble. Historic achievements in bilateral arms control and disarmament negotia-

tions lowered the level of confrontation between the West and the East for the first time since the dawn of the nuclear era. A new atmosphere of consensus enabled the Security Council to begin providing the kind of leadership envisioned for it by the founders of the organization, as enshrined in the UN Charter. Long-standing political problems in Namibia, Cambodia, and Latin America were resolved with success by United Nations peacekeeping missions, and the evolution of the organization's activities in helping organize and monitor free and fair elections in new democracies began. The winds of change were also blowing strongly in South Africa, where the *apartheid* system was beginning to crumble after more than 30 years of condemnation by the United Nations.

The story of Pérez de Cuéllar's 10-year term as secretary-general straddles this historic evolution of the world scene at the *fin de siècle*. Upon leaving office in December 1991, in his report on the work of the United Nations, he set forth his own feelings about his experience as secretary-general:

"Peace has won victories on several fronts.... New vistas are opening for States to work together in a manner they did not do before. The earlier posture of aloofness and reserve towards the Organization has been replaced by more ardent participation in its endeavors. An era of law and justice may not be around the corner but the United Nations has defined the direction.... Today there are far more solid grounds for hope than there are reasons for frustration and fear. The hope arises both from the enduring relevance of the philosophy of the Charter and from the vastly strengthened credentials of the Organization. My credo is anchored in that philosophy and it will remain so. With its return from the doldrums, and with its role no longer peripheral, the United Nations has come nearer to the vision of its Charter. Everyone who contributed to the process is entitled to a measure of exultation and I, for my part, to a feeling of fulfillment. I profoundly appreciate the confidence placed in me through this testing phase of international affairs. I close on that note of faith and gratitude."

The situation had been very different when Pérez de Cuéllar first took office, in 1982. In his first report to the General Assembly, in September 1982, on the work of the organization, Pérez de Cuéllar commented on the inability of the UN to play an effective and decisive role in its capacity to keep the peace and serve as a forum for negotiations. The Falkland Islands crisis and the invasion of Lebanon by Israel, both major events of 1982, were clear examples of the failure of the international community, and its organization, to use the mechanisms of diplomacy to prevent international conflict. Countries seemed unwilling or reluctant to use the United Nations' peacekeeping mechanisms to help them resolve their difficulties without resorting to violence. Time after time, he said, "we have seen the Organization set aside or rebuffed, for this reason or for that, in situations in which it should and could have played an important and constructive role." He saw this trend as dangerous for the world community and for the future and criticized the tendency of governments to resort to confrontation, violence, and even war in pursuit of what were perceived as vital interests.

Another clear indication of the organization's lack of stature was the crippling budgetary problems caused by some member states' continuing practice of withholding part or all of their assessed contributions, placing the work of the entire organization in a constant state of uncertainty. Clearly, at the beginning of his term, the United Nations stood in need of a rebirth.

### The Middle East

*The Iran-Iraq War.* In regard to the prolonged war between Iran and Iraq, which had started in 1980 and taken an enormous toll in human lives, Pérez de Cuéllar considered it to be his overriding responsibility under the Charter not only to seek an end to the conflict but also, until that goal was achieved, to try, under international humanitarian rules, to mitigate its effects in such areas as attacks on civilian population centers, use of chemical weapons, treatment of prisoners of war, and safety of navigation and civil aviation. On four occasions between 1984 and 1986, he dispatched specialists to investigate charges of the use of chemical weapons, initially against Iranian forces but later injuring Iranian civilians and Iraqi forces as well. In 1984 and 1985, two UN teams investigated allegations of violations of promises by the two countries to cease deliberate attacks on purely civilian population centers, and in January 1985, the secretary-general dispatched a fact-finding mission to Iran and Iraq to investigate the treatment of prisoners of war and civilian detainees. He himself visited Tehran and Baghdad in April 1985 to discuss proposals he had drawn up to initiate movement toward a comprehensive settlement of the war, and he continued to search for new approaches to this goal.

In July 1987, the Security Council unanimously adopted a resolution (598/1987) asking the secretary-general to send UN observers to verify and supervise a cease-fire between Iran and Iraq and withdrawal to internationally recognized boundaries. Pérez de Cuéllar was also asked by the Council to explore the question of entrusting to an impartial body the task of inquiring into responsibility for the conflict. Subsequent discussions with the two governments in their capitals reaffirmed his conviction that his good offices could be used to facilitate the restoration of peace and stability in the region. On 20 August 1988, the fighting stopped and UN military observers took up the challenge of monitoring compliance with the cease-fire. The secretary-general and his representative continued a "good offices" mission to build confidence and lay the basis for a lasting peace in the region.

*The Gulf War.* In August 1990, Iraq invaded Kuwait with 100,000 troops and took complete control of the small, under-defended country within 48-hours. In the four months following the invasion the Security Council responded with historic speed and unanimity. It passed 12 resolutions condemning the invasion, invoking Chapter VII of the Charter to impose economic sanctions on Iraq, and addressing aid to refugees and Iraq's taking of hostages. Pérez de Cuéllar remarked in his 1990 annual report that the council "has established that such actions, which are in direct contravention of the principles of the Charter and international law, cannot be committed with impunity." On 29 November 1990, after three weeks of debate, the Security Council passed Resolution 678 "authorizing Member States cooperating with the Government of Kuwait, unless Iraq on or before January 15, 1991, fully implements ... the foregoing resolutions, to use all necessary means to implement Security Council Resolution 660 and all subsequent

relevant resolutions to restore international peace and security in the area."

With the phrase "all necessary means," a new chapter in the history of the UN began. A 680,000-strong multi-national military force, led by 410,000 United States troops, was authorized by this resolution to impose the Security Council's will upon Iraq and restore the national sovereignty of Kuwait. On 16 January 1991, the allies began a six-week aerial bombardment of Iraq and Kuwait in preparation for a land attack on Kuwait. On 25 February, the ground attack began. Twelve days later the allied forces had decisively defeated Iraq's army of occupation, decimating it and pushing surviving units back into Iraq. Iraqi casualties were estimated in the hundreds of thousands. The United States lost 309 lives, some in pre-combat incidents. On 6 April, Iraq's parliament officially accepted the terms of Resolution 687, which it characterized as "unjust."

Resolution 687 had established a 200-kilometer-long demilitarized zone along the Iraq-Kuwait border, extending 10 kilometers into Iraq and five kilometers into Kuwait, to be patrolled by the UN Iraq-Kuwait Observer Mission (UNIKOM). The secretary-general reported that UNIKOM's 1,400 troops from 36 countries had been fully deployed on 9 May 1991.

In his 1991 report on the work of the organization, Pérez de Cuéllar pointed out that the experience of the Gulf action, moving as it did into areas undefined by the charter, suggested the need for "collective reflection on questions relating to the future use of the powers vested in the Security Council under Chapter VII. In order to preclude controversy, these questions should include the mechanisms required for the Council to satisfy itself that the rule of proportionality in the employment of armed force is observed and the rules of humanitarian law applicable in armed conflicts are complied with." He also warned that the use of Chapter VII measure should not be "overextended," since the imposition of mandatory economic sanctions necessarily created hardships for third-party nations (nations not party to the conflict, but who have important economic partnerships with the sanctioned state).

*The Arab-Israeli Conflict.* In mid-1982, Israeli forces moved into Lebanese territory, bypassing the UN Interim Force in Lebanon (UNIFIL). In August of that year, at the request of Lebanon and with the authorization of the Security Council, Pérez de Cuéllar deployed military observers to monitor the violence in and around Beirut. He also put forward proposals for expanding the role of UNIFIL—deploying the force, with elements of the Lebanese army and internal security forces, in areas vacated by Israeli forces as they withdrew from Lebanon, and working out arrangements to ensure that southern Lebanon became a zone of peace under the sovereignty and authority of the Lebanese government. These proposals were not accepted by Israel.

Pérez de Cuéllar also attempted to pursue the long-standing goal of convening a peace conference on the Middle East, holding numerous consultations with the parties involved. In December 1987, the diplomatic stalemate was shaken by a massive Palestinian uprising, the *intifadah*, in the Israeli-occupied territories that forced the Palestine National Council (the PLO's parliament in exile) to formally recognize Israel. However, the Israeli government declined to reciprocate. Yasser Arafat, the head of the PLO, was asked to address an emergency session of the Security Council, which had to be held in Geneva, since it was feared the United

States would deny him an entry-visa. At that session, the United States vetoed the dispatch of a UN mission to the occupied territories to monitor the treatment of Palestinians by Israeli security forces.

In 1990 and 1991, the United States took the lead in trying to reconvene a peace conference. In October 1991, US Secretary of State James Baker made history by convening in Madrid the first-ever direct negotiations between all parties to the conflict. A key group interested in the talks were the former Palestinians, who since 1967 had been residing in territories under the control of Israelis and were represented by the PLO. Since the Israelis had insisted on their exclusion from the Madrid talks, little progress was made. In December 1991, the General Assembly repealed its Resolution 3379 (1975) which had equated Zionism with racism. This was only the second time in the history of the UN that the General Assembly had voted to rescind a resolution.

### Afghanistan

The secretary-general and his personal representative, Diego Cordovez, acting as mediator, were continuously involved, until early 1988, in discussions and consultations aimed at negotiating a settlement of the situation in Afghanistan that had been brought about by Soviet military intervention in that country in late 1979 and had affected neighboring countries, particularly Pakistan, to which many Afghan refugees had fled. The negotiations revolved around four points: agreement on noninterference and nonintervention; the voluntary return of refugees; international guarantees on the settlement, to be given by the United States and the USSR; and the withdrawal of foreign troops.

The General Assembly supported these efforts and appealed to all states and national and international organizations to extend humanitarian relief assistance to alleviate the hardships of the Afghan refugees, in coordination with the UN high commissioner for refugees.

The negotiation efforts met with success in early April 1988, when agreement was reached on a treaty under which the USSR would withdraw its 115,000 troops from Afghanistan, Pakistan and Afghanistan would cease all interference in each other's internal affairs, Afghan refugees would be given a safe return to their country, and Afghanistan would become a neutral and nonaligned state guaranteed by the USSR and the United States. A small UN military observer team (UNGOMAP) was to be sent to Afghanistan to monitor compliance with the treaty, which was signed in Geneva on 14 April by Afghanistan, Pakistan, the USSR, and the United States. The USSR withdrew its troops in February 1989, however fighting continued, and rebel forces continued to receive aid from the United States and Pakistan. The USSR, for its part, continued to prop up the Marxist government in Kabul. UNGOMAP's mandate ran out in March 1990 and the secretary-general replaced it with a smaller high-level Office of the Secretary-General in Afghanistan and Pakistan, funded out of the UN's regular budget. This office's purpose was to advise the secretary-general on the military and political situation in order to assist him in finding a settlement.

### Central America

In Central America, Pérez de Cuéllar and the secretary-general of the Organization of American States extended, in November 1985, a joint offer of services to the five Central American coun-

tries concerned—Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua—as well as to those of the Contadora Group, bringing to their attention the resources that the two organizations could provide, separately and together, to facilitate resolution of the region's problems and complement the Contadora process. The two leaders visited the area in January 1986 in an effort to reactivate the negotiating process. Pérez de Cuéllar welcomed the proposal of President Oscar Arias Sánchez of Costa Rica for a peace plan, put forward in February 1987 and agreed to that August in Guatemala City by the five Central American countries. He agreed to serve as a member of the International Committee for Verification and Follow-up created by the Guatemala agreement and offered to extend any additional assistance that would be appropriate under the UN Charter.

As a result of this initiative, the countries concerned joined in a framework agreement, Esquipulas II, which gave the UN a mandate to verify the commitments made by the parties to each other. In 1989, the secretary-general established the UN Observer Mission (ONUVEN) to supervise the electoral process in Nicaragua. It was the first time the UN had been directly involved in electoral supervision. The UN Observer Group in Central America (ONUCA) was charged with overseeing the demobilization of the Contra guerrillas in Nicaragua. In December 1989, the secretary-general brought together the five Central American presidents in order to resume a dialogue between the government of El Salvador and the FMLN guerrillas. By July 1990, the San José Human Rights Accord was concluded, in which the government of El Salvador agreed to have its compliance monitored by a UN mission (UN Observer Mission in El Salvador-ONUSAL). After 20 months of negotiations, on his very last day in office, Pérez de Cuéllar witnessed the signing of a cease-fire agreement in the 12-year civil war in El Salvador, on 31 December 1991.

The success of the United Nations in monitoring the elections in Nicaragua encouraged Haiti to request the organization to monitor its elections in December 1990. The General Assembly granted the request, and created the UN Observer Group for Verification of Elections in Haiti, known by its French acronym, ONUVEH. Jean-Bertrand Aristide was elected president in elections declared by the United Nations to be free and fair. However, in September 1991, President Aristide was overthrown by a military coup, creating an intransigent problem for Pérez de Cuéllar's successor.

### Cambodia

Hostilities between Cambodia (at that time Kampuchea) and Vietnam had broken out in 1978. The United Nations became deeply involved in a humanitarian mission to assist refugees in the conflict along the border of Thailand and Cambodia. In January 1989, the revitalized Security Council began to take a more active role in the 11-year-old civil war. The secretary-general's special representative, Under Secretary Rafeuddin Ahmed, played an essential role in the negotiating the framework for a settlement leading to a specific blueprint for the restoration of peace. In August 1989 the Paris Conference on Cambodia was convened, but was suspended within a month. Meetings in New York and Paris in 1990 finally secured the agreement of all the parties to the framework agreement developed by the Security Council. The agreement was signed on 23 October 1991, and two more UN missions were created: the UN Transitional Authority in Cambodia (UNTAC), and

the UN Advance Mission in Cambodia (UNAMIC). The scale and cost of the mandate for these missions was unprecedented. It included repatriation of refugees from the Thai border camps, cantonment of all military forces and demobilization of 70% of these troops, registration of voters, supervision of elections for a Constituent Assembly, and supervision of the process of drafting and ratifying a new constitution.

### Namibia

The change in the players on the world stage led to the resolution of this long-standing issue, nearly twenty-five years after the General Assembly first denounced South Africa's attempted annexation of South West Africa (now Namibia), and a dozen years after the Security Council laid out the settlement plan for its independence. The Security Council's resolution 435 of 1978 had called for a cease-fire in Namibia, the abolition of apartheid laws, the withdrawal of South Africa from Namibia, the election of a constituent assembly, and the establishment of the United Nations Transitional Assistance Group (UNTAG) to oversee free and fair elections. However, the presence of Cuban troops in Namibia in support of the liberation movement, the South West Africa Peoples' Organization (SWAPO), created another stalemate between East and West. In 1988, the change in the political climate between the two superpowers produced an agreement that led to the withdrawal of the Cuban troops and the implementation of UNTAG. The transition began in April 1989 and 97% of the registered voters participated in elections in November. On 21 March 1990, Namibia became an independent state, with SWAPO leader Sam Nujoma as its president. UNTAG withdrew from Namibia in March 1990. As Pérez de Cuéllar reported in 1990, "UNTAG turned out to be something far more than its somewhat pedestrian name implied. It established the workability of democratic procedures even in a terrain which at first looked most unpromising. It also proved the executive ability of the United Nations in successfully managing a complex operation which brought together 8,000 men and women from more than 100 nations...."

### Apartheid

The dramatic events that led to the dismantling of the apartheid system and the birth of a new South African nation are chronicled in the chapter on International Peace and Security. However, it was during Pérez de Cuéllar's tenure as secretary-general that the General Assembly held its 16th Special Session (12-14 December 1989) devoted to the question of apartheid. On 11 February 1990, South African President F. W. de Klerk released Nelson Mandela after 27 years of imprisonment. In response to the assembly's Resolution S-16/1, the secretary-general sent a high-level mission to South Africa in June 1990 to investigate the progress that had been made toward dismantling *apartheid*. By the end of his tenure, the process of change that would bear fruit in 1994, was firmly established.

### Other Major Developments

Besides the problems of international peace and security listed above, the secretary-general's reports to the General Assembly made it clear he observed a growing appreciation in the international community of the need for cooperative action on a number of problems that transcend country borders and defy the ability of states to solve them independently. The recognition of the HIV/

AIDS pandemic, its link to the plague of drug abuse and drug trafficking, and the concomitant links to international terrorism and organized crime all urgently required the attention of the world organization.

It was in the final years of Pérez de Cuéllar's tenure that the stage was set for what he called a new evolution in global society, in which humankind would make international covenants, not only between individuals and nations, but also between human-kind and the environment: the 1987 Montreal Protocol on Substances that Deplete the Ozone Layer came into force in 1989; the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal was adopted in March 1989; the Second World Climate Conference was held in late 1990; and in February 1991, the first negotiations by the International Negotiating Committee on a framework convention on climate change began. Those negotiations would lead to the historic UN Conference on Environment and Development (UNCED), held in Rio de Janeiro in 1992 and dubbed the "Earth Summit." It was during the final years of the 1980s that an entirely new concept for the UN's work was developed: sustainable development.

## DEVELOPMENTS UNDER BOUTROS BOUTROS-GHALI 1992-1996

Secretary-General Boutros Boutros-Ghali took office in an air of general euphoria over the accomplishments of the United Nations in the post-Cold War era. However, his first two years in office witnessed the proliferation of intractable and appalling regional conflicts in Haiti, Somalia, the former Yugoslavia and Rwanda, among others. The multiplicity and savagery of these conflicts cast a pall on the much hoped-for "new world order" which the end of the Cold War had inspired.

Soon after Boutros-Ghali's inauguration, in January 1992, the Security Council met in its first-ever summit session, at which the heads of states of all the members of the council convened in New York, in person. On 31 January 1992, they requested that the secretary-general submit to the Security Council "an analysis and recommendations on ways of strengthening and making more efficient within the framework and provisions of the Charter the capacity of the United Nations for preventive diplomacy, for peacemaking and for peacekeeping." Boutros-Ghali's *An Agenda for Peace* set forth an analysis of the world organization's new situation at a time of global transition with respect to international peace and security. This document is more fully explained in the chapter on International Peace and Security.

In May 1994, Boutros-Ghali responded to a 1992 request of the General Assembly to submit a similar report on development under the agenda item "Development and International Economic Cooperation." He declared that development was not only a fundamental human right, but also the most secure basis for peace. Although the UN had accomplished remarkable achievements in many areas, it was undeniable that after decades of efforts to assist the developing world, the poorest nations were falling even further behind, strangled by debt and social upheaval. Boutros-Ghali said that, although concerns had been expressed that the United Nations put greater emphasis on peacekeeping than development, the numbers of staff and the regular budgetary allocations did not support this fear. He posited that development could not proceed without a fundamental basis in peace, and went on to describe

the ideal evolution of a peacekeeping/humanitarian aid operation into a situation of sustainable development.

Boutros-Ghali further maintained that protection of the environment was another fundamental concept for development. "In the developing world, ecological pressure threatens to undermine long-term development. Among many countries in transition, decades of disregard for the environment have left large areas poisoned and unable to sustain economic activity in the long term. Among the wealthiest nations, consumption patterns are depleting world resources in ways that jeopardize the future of world development," observed Boutros-Ghali. The concept of "sustainable development," as elaborated by UNCED in 1992, had to be strengthened as a guiding principle of development. Social justice and democracy were posited as the other pillars of a successfully developing country.

### Haiti

Elected in UN-supervised elections in December 1990 and deposed by a military coup in September 1991, Haiti's President Jean-Bertrand Aristide turned to the United Nations and the Organization of American States for assistance. In its Resolution 46/7 (September 1991), the General Assembly strongly condemned the "attempted illegal replacement of the Constitutional President of Haiti" and demanded that President Aristide be restored to power. It requested that the secretary-general cooperate with the Organization of American States (OAS) to restore the legally elected government in Haiti. A trade embargo and a halt to bilateral assistance were imposed on the illegal government, but there was little progress in negotiations. In December 1992, the secretary-general appointed Dante Caputo as Special Envoy for Haiti. The OAS also endorsed Caputo in January 1993. In its Resolution 47/20B (20 April 1993), the General Assembly mandated a joint UN/OAS International Civilian Mission to Haiti (known by its French acronym, MICIVIH) to be deployed throughout Haiti to report on the human rights situation there. On 16 June 1993, the Security Council imposed sanctions on Haiti. In July, talks were held on Governors Island, New York, and an agreement reached on specific measures relating to the return of President Aristide. In August 1993, the Security Council passed a resolution (862/1993) approving the dispatch of an advance team to prepare the way for the UN Mission in Haiti (UNMIH) which would supervise the transition. On 25 August 1993, the Haitian parliament ratified President Aristide's appointment of Robert Malval as prime minister-delegate during the transition period, as provided by the Governors Island Agreement. The Security Council then suspended the sanctions against Haiti.

On 27 September, the Security Council approved the deployment of UNMIH. However, on 11 October, armed civilians (known as "attachés") prevented the mission from debarking upon its arrival in Haiti. The attachés were known to be terrorizing the population through assassinations, attacks on the offices of the prime minister, and a general strike against UNMIH. It was also reported that police had facilitated, and in some cases participated in, these actions.

It became apparent that the military government was reneging on its promises under the Governors Island Agreement. On 13 October 1993, the Security Council reimposed its oil and arms embargo. That same month, most of the personnel of MICIVIH

were evacuated, leaving a small administrative team to report on the alarming violence and violations of human rights being perpetuated, particularly against supporters of President Aristide.

In May 1994, the Security Council imposed expanded sanctions on Haiti, including a ban on commercial air travel. On 31 August 1994, the Security Council, in its resolution 940 (1994), authorized the use of a multinational force similar to the one used to repel Iraq from Kuwait. Specifically, the Security Council authorized UN members to: "form a multinational force under unified command and control and, in this framework, to use all necessary means to facilitate the departure from Haiti of the military leadership, consistent with the Governors Island Agreement, the prompt return of the legitimately elected President and the restoration of the legitimate authorities of the Government of Haiti, and to establish and maintain a secure and stable environment that will permit implementation of the Governors Island Agreement, on the understanding that the cost of implementing this temporary operation will be borne by the participating Member States." By the same resolution, the Security Council approved the eventual deployment of the 6,000-strong UNMIH force to assist with the restoration of democracy in Haiti.

The multinational force succeeded in landing in Haiti without significant bloodshed, pursuant to a last-minute negotiation headed by former United States President Jimmy Carter at the request of then President Bill Clinton. By October 1994 President Aristide was able to safely return to Haiti. On 16 November 1995 the Security Council commended UNMIH on the substantial progress it had made towards fulfilling its mandate as set out in Resolution 940 in 1994. After a phased reduction of the military and civilian police personnel, 4,000 military and 300 civilian police remained in the mission area by February 1996.

### Somalia

The downfall of Somalia's President Siad Barre in January 1991 resulted in a power struggle and clan warfare in many parts of Somalia. In November 1991, the fighting intensified causing widespread death and destruction, and forcing hundreds of thousands of civilians to flee their homes. Almost 4.5 million people in Somalia—over half the estimated population—were threatened by severe malnutrition. It was estimated that as many as 300,000 people had died since November and at least 1.5 million were at immediate risk. The United Nations had instituted humanitarian operations in Somalia, but due to the deteriorating situation, it had been obliged to withdraw its personnel from the country.

In early 1992, Under Secretary-General for Political Affairs, James O. C. Jonah led a team to Somalia for talks aimed at bringing about a cessation of hostilities and securing access by the international relief community to civilians caught in the conflict. During that visit, unanimous support was expressed by all faction leaders for a United Nations role in bringing about national reconciliation. On 23 January 1992, the Security Council (Resolution 733/1992) urged all parties to cease hostilities, called for an embargo on military equipment, and requested the secretary-general to contact all parties involved in the conflict. In February, the secretary-general obtained the agreement of the two main factions in Mogadishu to an immediate cease-fire and on 3 March 1992, Interim President Ali Mahdi and General Mohamed Farah Aidid signed an "Agreement on the Implementation of a Cease-fire." The

agreement also included acceptance of a United Nations security component for convoys of humanitarian assistance and deployment of 20 military observers on each side of Mogadishu to monitor the cease-fire.

On 24 April 1992, the Security Council adopted resolution 751 (1992) and established a UN Operation in Somalia (UNOSOM). The total strength of UNOSOM was eventually established at 4,219 troops to protect the representatives of the six main UN organizations at work in Somalia coordinating humanitarian efforts (FAO, UNDP, UNICEF, UNHCR, WFP and WHO). In addition, more than 30 non-governmental organizations were working in Somalia as “implementing partners” of the UN. However, in October the security situation deteriorated, as some factions refused to agree to the deployment of UN troops to assure delivery of humanitarian aid to people in great need. According to some estimates, as many as 3,000 persons a day were dying of starvation, while warehouses remained stocked with food supplied by the humanitarian agencies. On 3 December 1992, the Security Council unanimously adopted Resolution 794 (1992) authorizing the use of “all necessary means to establish as soon as possible a secure environment for humanitarian relief operations in Somalia.” A Unified Task Force (UNITAF), led by United States troops, was deployed in Mogadishu on 9 December 1992.

On 3 March 1993, the secretary-general recommended the Security Council establish a new force, UNOSOM II, to take over from UNITAF, which had deployed approximately 37,000 troops in southern and central Somalia. The secretary-general appointed Admiral Jonathan T. Howe (Ret.) of the United States as his new Special Representative for Somalia to oversee the transition from UNITAF to UNOSOM II. A Conference on National Reconciliation in Somalia was convened on 15 March 1993 in Addis Ababa, Ethiopia. It was attended by the leaders of 15 Somali political movements and representatives of regional organizations. After two weeks of intensive negotiations, the 15 Somali leaders signed an Agreement for disarmament and security, rehabilitation and reconstruction, restoration of property and settlement of disputes, and transitional mechanisms.

UNOSOM II took over from UNITAF on 4 May 1993, and proceeded to fulfill its mandate to disarm the Somali factions who were terrorizing the people and obstructing humanitarian activities. This provoked the hostility of a few clan leaders. On 5 June, 25 Pakistani soldiers were killed, 10 were missing and 54 were wounded in a series of ambushes and armed attacks against UNOSOM II troops throughout Mogadishu. The Security Council reaffirmed that the secretary-general was authorized to take all necessary measures against those responsible for armed attacks, and on 12 June 1993, UNOSOM II initiated decisive military action in south Mogadishu.

On 3 October 1993, United States Rangers, deployed in support of UNOSOM II, but not under UN command, launched an operation in south Mogadishu aimed at capturing a number of key aides of General Aidid who were suspected of complicity in the 5 June attack, as well as subsequent attacks on UN personnel and facilities. Two US helicopters were shot down by Somali militiamen using automatic weapons and rocket-propelled grenades. While evacuating the detainees, the Rangers came under concentrated fire, and 18 US soldiers were killed and 75 wounded. The bodies of the US soldiers were subjected to humiliating treatment. Follow-

ing these events, the United States both reinforced its Quick Reaction Force in Somalia and announced its intention to withdraw its forces from Somalia by 31 March 1994.

On 9 October 1993, General Aidid’s faction declared a unilateral cessation of hostilities against UNOSOM II, but the situation remained tense. It was reported that the major factions were rearming in anticipation of renewed fighting. UNOSOM II’s mandate to force the factions to disarm was unenforceable.

The leaders of the two main Somali factions signed a Declaration of National Reconciliation on 24 March, committing themselves to repudiate any form of violence. A National Reconciliation Conference was scheduled for 15 May 1994; however, this conference was postponed. By March 1995, UNOSOM II withdrew from Somalia. In August 1995 a wide range of

Somali factions held consultations at Nairobi, Kenya and agreed to work out a common political platform and to start a process of national reconciliation. General Aidid rejected the calls for national reconciliation, and intense fighting broke out against the militia of Ali Mahdi. Aidid’s forces occupied Baidoa and Hoddur, and a stalemate between faction leaders continued into 1996.

### The Former Yugoslavia

In June 1991, the Republics of Croatia and Slovenia declared themselves independent from Yugoslavia. Fighting broke out when Serbs living in Croatia, supported by the Yugoslavian Army, opposed this move. European Community efforts to end hostilities were unsuccessful. On 25 September 1992, the United Nations Security Council unanimously adopted resolution 713 (1991) calling on all states to implement an arms embargo to Yugoslavia. Then Secretary-General Pérez de Cuéllar appointed former US Secretary of State Cyrus Vance as his personal envoy for Yugoslavia. Vance undertook several missions to Yugoslavia and discussed with the parties the feasibility of deploying a UN peacekeeping operation. An unconditional cease-fire was signed on 2 January 1992, and the Security Council approved the dispatch of a group of 50 military liaison officers to Yugoslavia to use their good offices to promote maintenance of the cease-fire. However, some political groups in Yugoslavia objected to the UN plan for a peacekeeping mission. Nevertheless, on 21 February 1992, the Security Council established the United Nations Protection Force (UNPROFOR) as an interim arrangement to create conditions of peace and security required for the negotiation of an overall settlement of the Yugoslav crisis.

On 30 April 1992, the secretary-general deployed 40 military observers to the Mostar region of Bosnia and Herzegovina in response to the deteriorating security situation there. However, fighting between Bosnian Muslims and Croats on one side, and Bosnian Serbs on the other, intensified. UNPROFOR, which had established its headquarters in Sarajevo, the capital, was obliged to relocate to Zagreb, the capital of Croatia.

A situation tragically similar to that in Somalia quickly developed. UN humanitarian convoys could not reach civilians trapped in the conflict. The Security Council, in its resolution 770 (1992) once again invoked Chapter VII of the Charter and called on states to “take nationally or through regional agencies or arrangements all measures necessary” to facilitate the delivery of humanitarian assistance to Sarajevo and other parts of Bosnia and Herzegovina. The situation continued to deteriorate and the Security

Council declared a “no-fly zone” to prevent the bombing of Sarajevo and other villages. On 13 March 1993 three unidentified aircraft dropped bombs on two villages, the first time that the “no-fly zone” had been violated since its declaration. On 31 March the Security Council extended its ban on flights, and authorized NATO to enforce the no-fly zone. Between the establishment of the no-fly zone and April 1994, 1,620 violations of the ban on flights over Bosnian airspace were registered. On 28 February 1994, NATO fighters in the airspace of Bosnia and Herzegovina shot down four of six jets which had defied the international ban on military flights and ignored two warnings.

On 27 April 1994, the Security Council increased the strength of UNPROFOR to 33,891. Negotiations for a resolution of the crisis in the former Yugoslavia continued in July 1994.

#### **The General Framework Agreement for Peace in Bosnia and Herzegovina (The Dayton Agreement)**

Following a mortar attack on Sarajevo’s Makale commercial district on 28 August 1995, the North Atlantic Treaty Organization (NATO) conducted air strikes against Bosnian Serb positions near Sarajevo. The air strikes were authorized by the United Nations Peace Forces, and deterred any further attacks on safe areas. By October 1995, a country-wide cease-fire was in place, arranged by a delegation from the United States. The cease-fire included civilian provisions, such as humane treatment of detained persons, freedom of movement, and the right of displaced persons to return to their homes.

On 21 November 1995, a series of agreements to restore peace in Bosnia and Herzegovina concluded in Dayton, Ohio. The General Framework Agreement for Peace in Bosnia and Herzegovina (known as the Dayton Agreement) was initiated by the governments of the Republic of Bosnia and Herzegovina, the Republic of Croatia, and the Federal Republic of Yugoslavia. During the talks, several non-NATO countries, such as the Russian Federation, agreed to participate in the implementation of the Bosnian peace plan. The United Nations was not officially represented during the talks.

The economic sanctions against the Federal Republic of Yugoslavia and the Bosnian Serb party were suspended following the signing of the Dayton Agreement. In his 1996 annual report, Secretary-General Boutros Boutros-Ghali indicated that “the value of sanctions as a means of conflict resolution was amply demonstrated in the former Yugoslavia, where the conclusion of peace accords has been facilitated by the effective implementation of a sanctions regime.”

After the signing of the Dayton Agreement, it seemed possible to solve the problem of repatriation for the estimated two million Bosnian refugees and displaced persons. The UN High Commissioner for Refugees (UNHCR) was designated as the agency in charge of planning and carrying out the repatriation of the Bosnians who wanted to return. However, by June 1996, only 70,000-80,000 refugees and internally displaced persons had returned to their homes.

#### **Cambodia**

The UN Transitional Authority in Cambodia (UNTAC) successfully undertook its mission to conduct elections and repatriate more than 360,000 refugees. Its 21,000 military, police, and civilian personnel were fully deployed by mid-1992. Elections were

held in May 1993, and 96% of the eligible population, nearly 4.7 million people, registered to vote. Despite concerns about disruption by the National Army of Democratic Kampuchea, which had withdrawn from the process, a six-week election campaign in which 20 political parties took part was successfully held. On 10 June, the secretary-general’s special representative declared his view that the elections had been free and fair. The newly elected Constituent Assembly held its inaugural meeting on 4 June 1993 to begin its task of drafting and adopting a new constitution. The four Cambodian political parties that won seats in the election agreed to join in an interim administration for the remainder of the transitional period. UNTAC’s mandate terminated in November 1993. A small Military Liaison Team remained in the country for six months as observers. The liaison team’s mandate expired on 15 May 1994, and they were replaced by three military officers assisting the secretary-general’s special representative in Cambodia.

#### **DEVELOPMENTS UNDER KOFI ANNAN, 1997-**

Secretary-General Kofi Annan came to power at a time of differences between the UN and the US government concerning financial matters. At the end of 1996, the United States was US\$376.8 million in arrears, but the government was reluctant to pay the debt because of the belief that the UN had not been thrifty with its budget. The United States held the position that the UN should be reduced in size, but Annan took a strong stand against further budget and staff cuts. Nevertheless, Annan took action to reform the UN. In 1998, the organization announced it stood “poised, finally, to undertake sweeping structural change.” The then 185 member states gave strong backing to a plan to overhaul the organization, making it more efficient and responsive to the world scene in the post-cold war era. The secretary-general was credited with mobilizing the General Assembly behind the “ambitious program” while member states were lauded for not allowing individual concerns to “override their common recognition that strategic changes were essential to ensure the relevance and vibrancy of the organization in meeting current global challenges.” Reforms included consolidation of some offices and revisions to the charter to allow for further streamlining.

The Annan-led reform efforts helped strengthen relations between the UN and its headquarters host country, the United States, which by the time the reorganization was announced was more than US\$1 billion in arrears to the international body. President Clinton praised the reform and issued strong statements of support for the new secretary-general. Further, the US president promised to work out a plan with Congress to pay the nation’s debt to the UN. Faced with losing its vote and influence in the organization (at the end of 1999), the United States later made good on the promise, which, combined with initiatives to ensure zero-growth budgets, relieved the international body’s long-standing financial crisis.

However, relations between the United States and the UN were strained over US military action (including the Clinton administration’s attacks on suspected terrorist bases in Afghanistan in August 1998, and US-British bombings of Iraqi targets in May 2000) and inaction: Faced with wars on several fronts in Africa, in mid-May 2000, Kofi Annan said that the UN peacekeeping efforts needed the kind of military help that the United States was un-

willing to provide. The United States had offered only to transport troops from other countries to confront the crisis in Sierra Leone, where hundreds of UN peacekeepers were being held hostage.

Indeed, Sierra Leone was one of four peacekeeping missions added in 1999 alone. The others were in Kosovo, East Timor, and the Democratic Republic of the Congo (formerly Zaire). In a press statement about the emerging situation in Africa, Annan called for a “new style of peacekeeping force for a different age.” The secretary-general described it as one needing “rapid-reaction contingents” who would be on-call from countries with well-trained and well-equipped troops, ready to move fast to pave the way for peacekeeping forces. He also cited the need for better intelligence and more intelligence sharing, admitting the UN was “completely sleeping on the issue of intelligence.” While world health, the environment, the status of women, and nuclear nonproliferation were the emphasis of the UN’s program at the turn of the 21st century, the peacekeeping initiatives continued to take center stage—posing formidable hurdles for the UN leadership.

*The Global Compact.* In an address to the World Economic Forum on 31 January 1999, Kofi Annan proposed an international initiative called the “Global Compact,” that would bring companies together with UN agencies, labor, non-governmental organizations and other actors to pursue good corporate citizenship or responsibility. The focus of the initiative is to allow companies to develop and promote “values-based management,” rooted in internationally accepted principles. The Global Compact was launched at a meeting in New York on 26 July 2000, which brought together senior executives from about 50 major corporations and the leaders of labor, human rights, environment, and development organizations. Hundreds of companies and organizations have participated in the initiative, and the private-sector participants represent virtually all industry sectors on every continent. The Global Compact is supported by four UN agencies: the United Nations Environment Programme (UNEP); the Office of the High Commissioner for Human Rights (OHCHR); the International Labour Organization (ILO); and the United Nations Development Programme (UNDP).

*Millennium Declaration.* In September 2000, at the UN Millennium Summit, world leaders, led by the secretary-general, agreed to set a timetable for achieving eight major goals by 2015. The first is to eradicate extreme poverty and hunger, by reducing by half the proportion of people living on less than one dollar a day, and by reducing by half the proportion of people who suffer from hunger. The second goal is to ensure that all boys and girls complete a full course of primary education. The third goal is to promote gender equality and empower women, by eliminating gender disparity in primary and secondary education. The fourth goal is to reduce the child mortality rate by 2/3 for children under five. The fifth goal is to reduce by 3/4 the maternal mortality ratio. The sixth goal is to stop and reduce the spread of HIV/AIDS, and to stop and reverse the incidence of malaria and other major diseases. The seventh goal is to ensure the sustainability of the environment, by reducing the loss of environmental resources, by reducing by half the proportion of people without sustainable access to safe drinking water, and to achieve significant improvement in the lives of at least 100 million slum dwellers, by 2020. The eighth and final goal is to develop a global partnership for development, by first developing a rule-based and non-discriminatory open trading and financial

system; by addressing the least developed countries’ special needs, including tariff- and quota-free access for their exports, enhanced debt-relief for heavily indebted poor countries, the cancellation of bilateral debt, and more generous assistance for countries committed to poverty reduction; by addressing the special needs of landlocked and small island developing states; by developing decent and productive work for youth; by providing access to affordable essential drugs in developing countries, in cooperation with pharmaceutical companies; and by making available, with the cooperation of the private sector, the benefits of new technologies, especially information and communications technologies. Kofi Annan’s report on the project was entitled “We the Peoples: The Role of the United Nations in the 21st Century.”

In 2005, the Secretary-General issued a report to be presented at the 60th session of the General Assembly, called “In Larger Freedom: Towards Development, Security, and Human Rights for All.” World leaders came together to review progress made on the Millennium Development Goals since 2000. “In Larger Freedom” focused on the following issues: 1) Freedom from want, which includes strategies for reducing extreme poverty; financing for development; focusing on the Doha round of trade negotiations, by which member states are to provide duty-free and quota-free access for all exports from Least Developed Countries; and debt relief. 2) Freedom from fear, which includes preventing catastrophic terrorism; progress on disarmament and non-proliferation, including biological, chemical, and nuclear weapons; reducing the prevalence and risk of war; and arriving at principles to be used in deciding the use of force. 3) Freedom to live in dignity, including respect for the rule of law; strengthening the office of the High Commissioner for Human Rights; and creating a Democracy Fund to provide assistance to countries seeking to establish or strengthen democracy. 4) Strengthening the United Nations, including the General Assembly, the Security Council, the Economic and Social Council, the Secretariat, and a proposed Human Rights Council.

With regard to section three (Freedom to Live in Dignity) of “In Larger Freedom,” under the rule of law, the Secretary-General introduced a concept called the “responsibility to protect” as a basis for collective action against genocide, ethnic cleansing and crimes against humanity. The doctrine of the “responsibility to protect” is in fact a restatement of international law: the world community has the right to take military action in the case of national authorities manifestly failing to protect their populations from genocide, war crimes, ethnic cleansing, and crimes against humanity. It is a recognition that states do not have the right to do whatever they wish within their own borders. Therefore, the hitherto inviolable principle of absolute national sovereignty becomes compromised by the doctrine of humanitarian intervention.

In addition to the “responsibility to protect” doctrine, other efforts toward UN reform arrived at during the 2005 world summit included the creation of a Peacebuilding Commission to supervise the reconstruction of countries after wars; the replacement of the discredited UN Commission on Human Rights by a more forceful Human Rights Council; and reform of the Security Council. Reform of the Security Council hinged on calls to enlarge its membership. Three different proposals were floated over the summer prior to the September 2005 summit. One from the African Union would have added 11 seats to the 15-member Council—six perma-

ment ones, including two for Africa with veto power, and five rotating ones. A second measure, from a group of mid-tier countries including Italy and Pakistan, called for a 25-member Council with 10 new rotating seats. The most heavily-promoted plan came from the so-called “Group of Four”—Brazil, Germany, India, and Japan. This plan posited a 25-member Council with three new members that would have two-year rotating terms and six permanent seats for the four sponsors, along with two unnamed African states. Enlargement of the Security Council did not take place as expected, however, due to later surfacing of national rivalries, regional divisions, and great power objections to reform.

*Nobel Peace Prize.* On 10 December 2001, the secretary-general and the United Nations received the Nobel Peace Prize. In conferring the Prize, the Nobel Committee said Mr. Annan “had been pre-eminent in bringing new life to the Organization.” The Committee noted the secretary-general’s attention to peace and security, and his regard for human rights. It also praised his work in combating HIV/AIDS and international terrorism, and his efficient handling of the UN’s modest resources. The Committee also stated that Mr. Annan “has made clear that sovereignty can not be a shield behind which member states conceal their violations.”

#### Peace and Security

*Nigeria.* The secretary-general was supportive of Nigeria’s peaceful transition from military rule under General Sani Abacha to a democratic government in 1999. President Olusegun Obasanjo was elected president of Nigeria in February 1999 as the first civilian leader in 15 years.

*East Timor.* On 25 October 1999, the UN established UNTAET, the United Nations Transitional Administration in East Timor, following an independence referendum voted upon by the people of East Timor. Ninety-eight percent of East Timorese voted for independence. UNTAET was established to administer the territory, to exercise legislative and executive authority during the period of transition to independence and to support the move to self-government. Violence led by militias in favor of integration with Indonesia, with the support of Indonesian security forces, had erupted in East Timor following the independence vote; many East Timorese were killed, and as many as 500,000 were displaced from their homes. The secretary-general and the Security Council undertook strong diplomatic efforts to halt the violence. A large-scale humanitarian relief effort was launched by UN agencies. With Security Council Resolution 1272, UNTAET was established as a peacekeeping operation to administer the territory in its transition to independence. When East Timor became an independent state on 20 May 2002, UNTAET’s mandate expired, and a successor mission, known as the United Nations Mission of Support in East Timor (UNMISSET), was installed to support East Timorese authorities in the post-independence era, while undertaking the gradual withdrawal of UN forces.

*Middle East.* On 24 May 2000, Israel withdrew its forces from Lebanon and redeployed them south of the international border, or the “blue line” designated by the UN as separating the two countries. This line was fixed in 1923 by colonial France and Great Britain, and is the one UN cartographers have drawn as the border. The secretary-general issued a report on 16 June concluding that Israel had fulfilled its obligations under Security Council Resolution 425 regarding withdrawal. The border was controlled by

Hezbollah guerrillas, however, who did not surrender their arms. According to Resolution 425, the U.N. would take action to fill the vacuum created following the withdrawal of Israeli forces, and deploy appropriate armed forces to restore effective authority in the area. UNIFIL forces (United Nations Interim Force in Lebanon), in place since 1978, were reconfigured periodically, and the UNIFIL mandate has been extended every six months.

After Israel’s withdrawal from Lebanon, Israeli Prime Minister Ehud Barak and PLO leader Yasser Arafat met in July 2000 at the U.S. presidential retreat at Camp David, Maryland, with the guidance of President Bill Clinton, to discuss peace. For two weeks the leaders attempted to come up with acceptable solutions to questions such as the status of Jerusalem, the right of return of Palestinian refugees, security, Israeli settlements in the occupied territories, and borders. No agreement was reached, and the talks failed. On 28 September, Ariel Sharon, leader of the Likud Party, toured the al-Aqsa/Temple Mount complex in Jerusalem, one of the holiest sites to both Jews and Muslims. Sharon’s critics saw it as a highly provocative move. Palestinian demonstrations followed, and developed into what became known as the al-Aqsa intifada.

The conflict escalated over the course of 2001, with an increasing number of Palestinian suicide bombings directed at Israeli civilians, and harsh reprisals by Israel. In the early months of 2002, the situation came to a head. Israel reoccupied major parts of the West Bank held by the Palestinian Authority, surrounded Yasser Arafat’s compound in Gaza, and eventually attacked it. In March 2002, Secretary-General Kofi Annan criticized Israel for its actions, and sent a letter to Ariel Sharon (who had become Israeli Prime Minister in February 2001), stating that Israeli forces had been waging what appeared to be an all-out conventional war on Palestinian civilians. “Judging by the means and methods employed by the [Israeli Defense Forces]-F-16 fighter bombers, helicopter and naval gunships, missiles and bombs of heavy tonnage—the fighting has come to resemble all out conventional warfare,” Annan wrote Sharon. “Israel is fully entitled to defend itself against terror,” Annan wrote. “But this right does not discharge it of its obligation to respect the fundamental principles and rules of international humanitarian law and the law of armed conflict with respect to the treatment and protection of civilians in occupied territories.”

In June 2002, US President George Bush called for the creation of an independent Palestinian state living side by side with Israel. This call formed the basis for what became known as the “Road Map”, a peace plan proposed by the so-called “Quartet”: the UN, the EU, the United States, and Russia. In exchange for statehood, under the road map the Palestinians would renounce terrorism and make democratic reforms. For its part, Israel would accept the emergence of a Palestinian government, and end settlement activity in the West Bank and Gaza as the terrorist threat dissipated. On 1 July 2003, Sharon and Palestinian Prime Minister Mahmoud Abbas held a ceremonial opening to peace talks. As a symbolic end of a long era, Yasser Arafat died on 11 November 2004. In February 2005, the leaders of Israel, the Palestinian Authority, Jordan, and Egypt pledged their continuing support for the road map. In a move widely endorsed around the world, in August 2005, Sharon’s planned withdrawal of Israeli settlements from the Gaza Strip began, and the process was completed by September 2005. Sharon suffered a massive stroke in January 2006, and was

declared “permanently incapacitated” in April 2006 by the Israeli cabinet, which formally ended Sharon’s term as prime minister.

Following a Hamas victory in the January 2006 Palestinian elections, the Quartet announced that future aid to the Palestinians would be tied to three principles: that Hamas renounce violence, that it recognize Israel’s right to exist, and that it express clear support for the Middle East peace process, as outlined in the 1993 Oslo Accords. Hamas leaders rejected these demands as unfair.

*Iraq.* Since the expulsion of UN weapons inspectors (the UN Monitoring and Verification Mission or UNMOVIC) from Iraq in November 1998, the status of Iraq’s development programs, facilities for, and stocks of weapons of mass destruction (WMD) were unknown. Following the lead of the United States, which was determined to see Iraq either removed of its potential chemical, biological, and nuclear weapons programs, or to see a regime change in Iraq, the UN Security Council adopted Resolution 1441 on 8 November 2002, deciding Iraq was in material breach of its obligations under previous relevant Security Council resolutions concerning disarmament. Iraq was to comply with its disarmament obligations, and to set up an enhanced inspections regime to operate in the country, allowing unimpeded access to UNMOVIC and the International Atomic Energy Agency (IAEA) to its weapons facilities. Any interference by Iraq to comply with the weapons inspections, or false reports of stockpiles and programs that it might make, would cause the Security Council to convene immediately to “consider” the situation. Secretary-General Annan, in praising the unanimous resolution, stated: “I urge President Saddam Hussein to comply fully with the Council’s demands, for the sake of his people, regional security and world order.”

Efforts to diplomatically resolve the Iraq crisis ended in failure, and on 19 March 2003 the United States launched air strikes against Baghdad, beginning the Iraq War. Within three weeks Iraqi forces had been defeated, and President Bush declared “major combat operations” had been completed on 1 May 2003. However, on 19 August 2003 a truck bomb exploded outside the UN headquarters in Baghdad. The top UN envoy in Iraq, Brazilian Sergio Vieira de Mello, was killed during the explosion, along with more than 20 others. Kofi Annan said the UN would not be distracted by what he called a senseless and brutal act, but also expressed disappointment that the US-led military forces had failed to create a secure environment for the UN’s work. The fighting in Iraq escalated over the years with the rise of an Iraqi insurgency, and, later, intense sectarian violence. On 16 September 2004, Annan, speaking about the US-led invasion, said, “I have indicated it was not in conformity with the UN charter. From our point of view, from the charter point of view, it was illegal.”

The UN’s “oil-for-food” program, established in 1995 with Resolution 986, allowed Iraq to sell oil to finance the purchase of humanitarian goods, in order to ease comprehensive sanctions imposed by the UN in 1990 (Resolution 661) following Iraq’s invasion of Kuwait. The \$64 billion “oil-for-food” program was in operation from 1996 to 2003, when it was phased out after war intervened and oil exports under the program ended. It was the largest, most complex, and most ambitious humanitarian relief effort in the history of the UN. But the program was manipulated by Saddam Hussein, and it generated illicit profits, causing it to become the subject of intense criticism. In April 2004, an independent inquiry committee, led by Paul A. Volcker, former chairman

of the US Federal Reserve, was charged by the Secretary-General and the Security Council with the task of thoroughly reviewing the management of the program. The investigation concluded in September 2005 that Annan failed to curb corruption and mismanagement at the UN, but it did not find evidence to support charges that he improperly influenced the oil-for-food program. The committee found that Annan failed to look more thoroughly into the activities of his son, Kojo Annan, to see if his working for a company that received an oil-for-food contract posed a conflict of interest for his father. It also found that the amount of Hussein’s profits from kickbacks and surcharges connected to the program amounted to \$1.8 billion, while smuggling amounted to \$10.99 billion. The general conclusion of the 847-page report was that the UN is inefficient, over-politicized, corrupt, and in need of immediate repair. The day after the report was issued, Kofi Annan took personal responsibility for the management failures indicated in the report, and urged adoption of fundamental changes in the way the UN is administered.

*Darfur.* Beginning in February 2003, a conflict in the western Darfur region of the Sudan erupted. After the 2002 ceasefire agreement between the Sudan People’s Liberation Movement (SPLM) and the Sudanese government to bring an end to the 19-year old civil war between North and South, non-Arab rebels in Darfur claimed the government in Khartoum was neglecting the region. An Arab “Janjaweed” militia, recruited from local tribes and armed by the Sudanese government, combated non-Arab groups and committed systematic killings and rapes of African villagers in the region: hundreds of thousands of refugees fled to neighboring Chad. In September 2004, US Secretary of State Colin Powell described the killings as genocide. The UN described the conflict as one of the world’s worst humanitarian crises, but stopped short of calling it genocide. By 2005, some 2 million people were living in refugee camps, and at least 180,000 people were estimated to have died as a result of the conflict.

*Terrorism.* In the wake of the terrorist attacks carried out by Osama bin Laden and his al-Qaeda network on the United States on 11 September 2001, the UN Security Council established a Counter Terrorism Committee (CTC) pursuant to its Resolution adopted 28 September concerning counter-terrorism. Resolution 1373 called upon states to prevent and suppress the financing of terrorist acts; to refrain from providing any support to entities or persons involved in terrorist acts; to deny safe haven to those who finance, plan, support, or commit terrorist acts; to bring those individuals or entities to justice; and to exchange information on the actions or movements of terrorists or terrorist networks. Subsequent Security Council resolutions were adopted regarding threats to international peace and security caused by terrorist acts. In November 2002, in speaking with President George Bush, the secretary-general stated: “[E]very region and people of every faith have also been victims of terrorists. This is a scourge that affects all of us, regardless of region or religion. And we need to stand together to defeat terrorism. And this is where the work of the United Nations and effective implementation of this Resolution 1373 is absolutely crucial. We need to work to deprive terrorists of the opportunities by not giving them haven, by not giving them financial and logistical support. And I think the counterterrorism committee of the Security Council is doing a good job in trying to make sure we all work together on it.”

---

# INTERNATIONAL PEACE AND SECURITY

The first purpose of the UN, as stated in Article 1 of its charter, is the maintenance of international peace and security. To this end, the organization is required “to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means ... adjustment or settlement of international disputes or situations which might lead to a breach of the peace.” The UN has undertaken this heavy responsibility with varying levels of success over the years. However, in the nuclear era, international security in the absence of an organization like the United Nations is unimaginable. As of 31 March 2006, 2,247 UN peacekeepers had died in the service of international peace and security since 1945. In recognition of their invaluable contribution to world peace, the United Nations peacekeeping forces were awarded the Nobel Peace Prize in 1988.

## BASIC CHARTER PROVISIONS

The basic provisions of the charter defining the functions of the Security Council and the General Assembly are summarized here, but fuller accounts will be found in the chapters on those bodies, which complement the present chapter.

1. *Relative Powers of the Security Council and the General Assembly.* Under Article 24 of the charter, the Security Council has “primary responsibility” in questions of peace and security. It is invested with special powers enabling it to decide, on behalf of the entire UN membership, to take collective action when peace is threatened (Articles 39–42) and is empowered to negotiate agreements with individual members of the UN for the provision of armed forces necessary to maintain international security and to determine how many members shall participate in any collective action undertaken (Articles 43–48).

The General Assembly, on the other hand, is empowered only to consider and make recommendations, either to the Security Council or to particular states, on matters pertaining to peace and security. Moreover, under Articles 11 and 12, it may discuss but may not make actual recommendations on any special dispute between nations that is currently under consideration by the Security Council. However, though the Assembly is not expressly empowered to take action, neither is it expressly prohibited from doing so. In the only charter provision touching on the subject, paragraph 2 of Article 11—which is the focus of conflicting interpretation in the long-standing constitutional controversy on the financing of certain General Assembly-sponsored peacekeeping operations—the actual wording is as follows: “Any such question [of international peace and security] on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.”

2. *Bringing a Dispute or Serious Situation Before the UN.* Although the charter firmly establishes the primacy of the Security Council over the General Assembly in matters of peace and secu-

urity, it does not stipulate that disputes or serious situations must be discussed in the Security Council before they are discussed by the General Assembly. A dispute may be brought before the UN in a variety of ways specified in the charter without order of preference. One or more of the disputing parties may bring the matter before the Security Council voluntarily, or the council itself may choose to exercise its constitutional right to investigate a dispute at its own discretion; or any UN member, whether or not it is involved in the dispute, may propose the matter for discussion by the General Assembly; or a non-UN member that is a party to the dispute may—under certain conditions—bring it to the attention of the General Assembly; or the Security Council may ask the General Assembly to discuss the matter.

Despite these liberal provisions, the charter does not stipulate that all political disputes between states should be brought before the UN. Article 33, for example, enjoins UN members “first of all” to seek a solution to their differences on their own initiative (though if they fail to take this initiative, the Security Council is empowered to call upon them to do so). Only after their efforts to achieve a peaceful settlement have proved fruitless are the disputing parties obliged by the charter to refer the matter to the Security Council. Again, the UN was never intended by its founders to be regarded as the sole international agency for dealing with political disputes. Thus, Article 52 states that nothing in the charter “precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action” and that members participating in such regional arrangements or agencies “shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.”

## POLITICAL BACKGROUND TO THE UN’S PEACEKEEPING ACTION

The UN’s efforts to preserve international peace and security are the most contentious aspect of its entire work, because of the inherently political nature of its role and the fact that both the Security Council and the General Assembly are essentially political bodies, not courts of law that apportion blame and impartially hand down judgments drawn from a set of established legal codes. Their task in disputes brought before them is to find a compromise solution that is at once satisfactory to all parties, based on the political realities of the world situation and consistent with the principles of the charter. In this way, each local dispute brought before the UN automatically becomes a dispute involving the entire membership, as nations express differing views on the appropriate action to be taken by consensus of the membership.

The involvement of the general membership in all disputes is precisely what the founders of the UN intended—as a means of ensuring collective international responsibility for political solu-

tions that are both just and realistic. However, in order to provide a counterweight to the unavoidable taking of sides, they established the principle of unanimity among the great powers by bestowing the right of veto on the permanent members of the Security Council. The workability of this principle in practice presupposed a basic measure of cooperation among the great powers. As events turned out, however, unanimity among the great powers proved to be a chimera. Within a year of the signing of the charter, the world was in the throes of the cold war, and the United States and USSR were engaged in a power struggle. The effects of this unexpected political development on the UN's work in maintaining international peace and security were immediate and devastating. Each dispute between the smaller nations that came before the UN was subsumed under the developing power struggle between the giants. As a result, between 1945 and 1990, the Security Council was deadlocked again and again by 279 vetoes. Furthermore, the charter requirements for agreement on the provision of armed forces for the UN could not be met.

Whereas the USSR looked to the Security Council and the veto as its power instrument in the UN, the United States looked to the support of the majority vote in the General Assembly. In order to circumvent the Soviet veto in the Security Council, and being at that time confident of majority support for most of its substantive policy objectives, the United States spearheaded a drive to turn the General Assembly into a body for action in periods of international crisis. This drive culminated in the adoption in 1950 of the Uniting for Peace Resolution, which empowered the General Assembly to undertake collective measures for maintaining or restoring peace when the Security Council found itself unable to act in times of emergency (for the terms of the resolution, see the chapter on the General Assembly). It was the United States, represented by Secretary of State Dean Acheson, that originated the proposal for the resolution. Although some of the small nations expressed reservations about certain clauses, most of them were eager to participate more fully in the UN's peace and security responsibilities. Only India and Argentina abstained in the vote, and only the Soviet bloc voted against the resolution, branding it as illegal and contrary to the charter.

The Uniting for Peace Resolution has been invoked in three major crises: the Korean War, the Suez crisis, and the Congo crisis (discussed under Case Histories below). In all three instances, the Security Council found itself deadlocked, and General Assembly action was deemed essential by the majority of members. Nevertheless, despite its proven usefulness as an instrument of restoring peace in these instances, the resolution seems unlikely to be invoked in future disputes. Certain countries questioned the legality of the resolution and of the General Assembly's action taken under it, and they felt justified on these grounds in refusing to contribute to the costs of the Suez and Congo peacekeeping operations.

At the end of the 1980s, the demise of the Soviet Union and the cold war dramatically changed this state of affairs. Within a few short years the entire Soviet bloc was dissolved and a new era of cooperation between the United States and the Russian Federation raised hopes that the Security Council would begin to fulfill the function foreseen for it by the organization's founders. However, the political vacuum created by the collapse of the East-West stalemate was followed by an eruption of intransigent, deadly regional conflicts and civil wars, particularly in Africa and Eastern

Europe. While 13 operations were established between 1948 and 1988, more than 40 new operations have been authorized since 1988. At its peak in 1995, total deployment of UN military and civilian personnel reached almost 70,000 from 77 countries. By the end of 1996, 16 peacekeeping operations were severely taxing the ability and political will of member states to respond with personnel and financial contributions. And in 2006, the number of current peacekeeping missions was holding steady at 15.

## TYPES OF ACTION TAKEN BY THE UN

The UN has two main responsibilities with respect to the political disputes that are brought before it by states: helping the parties concerned to arrive at a peaceful settlement of the issue that caused the dispute, and maintaining the peace if animosities threaten to erupt into violence or restoring the peace if hostilities have already broken out.

### An Agenda for Peace

In response to the profoundly altered global political situation, on 31 January 1992, the Security Council met in a historic summit session attended by 13 heads of state and two foreign ministers. At that session, the Security Council requested Secretary-General Boutros Boutros-Ghali to prepare an analysis and recommendations on ways to strengthen UN peacekeeping efforts. In June 1992 the Secretary-General submitted *An Agenda for Peace*. This important document challenged member states to adapt their world organization to the new international situation with more effective and rational peacekeeping procedures. The document began by defining four types of peace-related activities:

*Preventive Diplomacy.* Defined as action to prevent disputes from arising and to prevent existing disputes from escalating into conflicts. The Secretary-General listed a number of different actions that constituted preventive diplomacy: confidence building (exchange of military missions, opening channels for the exchange of information, and providing monitoring for regional arms reduction agreements), fact-finding missions, early warning from regional organizations with observer status at the United Nations, preventive deployment of a UN force before hostilities occur, and the establishment of demilitarized zones.

*Peacemaking.* Action to bring hostile parties to agreement through peaceful means like those outlined in Chapter VI of the UN Charter, namely: negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement or appealing to regional organizations.

The Secretary-General suggested that the International Court of Justice remained an underused resource for peaceful settlement of international disputes. He recommended that member states that had not accepted the general jurisdiction of the International Court of Justice, do so before the end of the UN Decade of International Law in the year 2000. Another tool for peacemaking was the imposition of economic sanctions under Article 41 of the charter. The main difficulty with this tool was compensating member states that would find their own economies crippled by the imposition of sanctions on an offending state.

*Peacekeeping.* Defined as the deployment of a UN force to the field, usually with the consent of the parties to the conflict. Peacekeeping could involve military, police, and civilian personnel. The UN pioneered this new form of military deployment during the

early conflicts in the Middle East and the Congo. Peacekeeping troops serve at the request of all the parties to a conflict, for example, to monitor implementation of a cease-fire, or to prevent shipments of weapons across borders. They may also serve to monitor a demilitarized zone and provide a buffer between combatants. Peacekeeping forces, however, are only lightly armed and authorized to use force only in self-defense. By its very nature, peacekeeping implies an even-handed treatment of all the parties in a conflict.

*Peace Enforcement.* Although not officially defined as a separate concept in *An Agenda for Peace*, the Secretary-General did propose the creation, under Article 43 of the charter, of forces which could respond quickly and forcefully to imminent or out-right aggression. In fact, the UN had sometimes been called upon to send forces to restore a cease-fire. In the Secretary-General's proposal, these troops would be maintained and specially trained by the armed forces of member states. When called upon, they would be more heavily armed than peacekeeping forces and authorized to use deadly force to stop combatants. The Secretary-General proposed that these special units would be on call for quick response to the early stages of an international crisis. In the post-cold war era, peace enforcement had already found expression in the Security Council's authorization of a multinational force (sanctioned by the UN but not, however, under UN administration) led by the United States to suppress Iraq's 1991 invasion of Kuwait.

However, the concept of peace enforcement remains controversial, as some experts and member countries maintain that there is no basis in the UN charter for an organization dedicated to international peace to settle disputes with military force. Under the charter, member states are meant to settle their disputes by peaceful means.

On the other hand, Article 43 of the charter provides for member states to make military forces available to the Security Council. In fact, it was originally envisioned that the United States alone would provide twenty divisions (over 300,000 troops), a very large naval force, 1,250 bombers, and 2,250 fighters. These provisions were never implemented due to lack of consensus.

In 1993, former Undersecretary-General Brian Urquhart, who participated in the management of 15 peacekeeping operations during his 40-year tenure at the United Nations, proposed the creation of an elite UN-trained military force made up of international volunteers, not soldiers seconded from national forces. Urquhart suggested that such a volunteer force would give the Security Council the ability to back up preventive diplomacy with immediate peace enforcement. "Clearly, a timely intervention by a relatively small but highly trained force, willing and authorized to take combat risks and representing the will of the international community, could make a decisive difference in the early stages of a crisis," said Urquhart in the journal "Foreign Policy." Urquhart suggested that such a force might have been used effectively, for example, during the attempted deployment of the UN Mission in Haiti (UNMIH). When the United States naval ship carrying the first deployment of troops arrived at Port au Prince in October 1993, the ship was prevented from landing by a disorganized and violent demonstration of armed civilians at the port. By August 1994, the escalating crisis in Haiti had led the Security Council to authorize a multinational force, similar to that used in the Iraq-Kuwait crisis, to restore the democratically elected government of

Haiti. The escalation might have been prevented if UNMIH had been enabled to carry out its mandate.

*Peace Building.* Defined as "action to identify and support structures which will tend to strengthen and solidify peace in order to avoid a relapse into conflict."

The UN had already begun to develop the concept of "peace building" as early as 1990, when the UN Observer Group in Central America supervised Nicaraguan elections which were certified to be "free and fair" by the UN Observer Mission to Verify the Electoral Process in Nicaragua (ONUVEN).

Since then the demand for UN electoral assistance has grown enormously. Before 1992, the UN supervised elections in Haiti, Namibia, and Nicaragua. However, between January 1992 and June 1994, the United Nations received 56 requests for electoral assistance. The organization's Electoral Assistance Unit was established in 1992 and operates within the Department of Peace-keeping Operations. Following is a list of member states requesting and receiving assistance from 1989 to 1999: Albania, Algeria, Angola, Argentina, Armenia, Azerbaijan, Bangladesh, Belarus, Benin, Brazil, Burundi, Burkina Faso, Cambodia, Cameroon, Cape Verde, Central African Republic, Chad, Colombia, Comoros, Congo, Democratic Republic of the Congo, Côte D'Ivoire, Croatia, Djibouti, Dominican Republic, East Timor, El Salvador, Equatorial Guinea, Eritrea, Estonia, Ethiopia, Fiji, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Guyana, Haiti, Honduras, Hungary, Indonesia, Kenya, Kyrgyzstan, Latvia, Lesotho, Liberia, Macedonia, Madagascar, Malawi, Mali, Mexico, Moldova, Mozambique, Namibia, Nepal, Netherlands Antilles, Nicaragua, Niger, Nigeria, Pakistan, Panama, Paraguay, Peru, Philippines, Romania, Russia, Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, South Africa, Sudan, Swaziland, Tanzania, Togo, Uganda, Ukraine, Uzbekistan, Western Sahara, Yemen, and Zambia. The Electoral Assistance Unit is supported by the UN Trust Fund for Electoral Observation, which is a voluntary fund. Besides building peace by strengthening a country's democratic infrastructure, the Secretary-General also included the following activities under the concept of peace building: clearing land-mines so that agriculture and transportation may be resumed safely; disarming the warring parties; taking custody of and destroying weapons; repatriating refugees; training security personnel; educational and cultural exchanges; and joint projects to develop agriculture, improve transportation, or utilize shared natural resources.

### The Cost of Waging Peace

In *Renewing the United Nations System* (Dag Hammarskjöld Foundation, 1994), co-authors Brian Urquhart and Erskine Childers (former senior adviser to the UN Director General for Development and International Cooperation) cite the following figures: "By early 1993 the UN was deploying four times the number of troops, 70 times more police and over 100 times the number of civilian personnel as in 1987, at nearly 10 times the annual cost. As of 30 April 1994 the UN had contributions from 66 countries of 65,838 troops, 2,400 military observers, and 1,307 civilian and police personnel, with possible further deployments (and costs) evolving almost weekly relative to situations like those in Haiti, Rwanda and the former Yugoslavia. The projected costs of peace-

keeping rose from some US\$600 million in 1991 to an estimated US\$2.3 billion for 1993.”

In fact, in May 1994, the Secretary-General was unable to obtain 5,500 troops from African nations to protect refugees and international aid workers caught in the bloody Rwandan civil war. He attributed this to donor fatigue among the countries that frequently assign troops to UN operations.

As of 28 February 2006, more than 1 million soldiers, police officers, and civilians had served under the UN flag since the establishment of the first peacekeeping mission in 1948. As of 28 February 2006, 107 countries were contributing a total of some 72,800 uniformed personnel (military and police). There were also about 5,300 international civilian personnel, 1,600 UN volunteers and more than 10,000 local civilian staff.

As the world has increasingly turned to the UN to deal with conflicts, the cost of peacekeeping has risen accordingly. The annual approved resources for all peacekeeping operations from 1 July 2005 to 30 June 2006 amounted to about US\$5.03 billion. The estimated total cost of UN peacekeeping operations from 1948 to 30 June 2006 was approximately \$41.04 billion. However, global military expenditures in the mid-2000s amounted to around US\$1 trillion per year. Of course, these monetary figures do not adequately take into account the tragic price paid in human death and suffering during war.

Most UN peacekeeping operations are not financed from the organization's regular budget, but from special accounts established by the organization to fund each particular operation. Each member is then assessed for a share of the mission's estimated cost. Special assessments for peacekeeping are divided into three categories. The five permanent members of the Security Council pay about 22 percent more than the regular scale of assessments because of their greater influence over Security Council decisions (by virtue of holding the power of veto). Other developed industrial states pay the same share for peacekeeping as they pay for the regular budget. Wealthier developing countries pay one-fifth of their regular budget share for peacekeeping. The poorest nations (least developed countries, or LDCs) pay one-tenth of their regular share. There are certain inequities to this arrangement. For example, a number of “developing” states with per capita GNPs of \$5,000 or more still are assessed only one-fifth of their regular budget assessment for peacekeeping (which have included the United Arab Emirates, Kuwait, Qatar, Brunei, Singapore, Bahamas, Israel, Cyprus, Barbados, Bahrain, Saudi Arabia, Malta, Greece, Libya, and Oman).

A recurrent and critical problem for UN peacekeeping has been the consistent shortfall in the payment of members' assessed contributions. As of 31 December 2005, member states owed the UN a total of US\$2.92 billion in current and back peacekeeping dues.

Since 1945, over 130 nations have contributed personnel at various times; 107 were providing peacekeepers as of 28 February 2006. As of 31 December 2005, the top 10 contributors of personnel to ongoing peacekeeping missions were Bangladesh, Pakistan, India, Jordan, Nepal, Ethiopia, Ghana, Uruguay, Nigeria, and South Africa. The small island nation of Fiji has taken part in virtually every UN peacekeeping operation, as has Canada.

For the above reasons, the Secretary-General suggested in his *Agenda for Peace* that contributions to UN peacekeeping operations be financed from defense budgets, rather than from foreign

affairs budgets. Other innovative proposals in the agenda included obtaining standing commitments from member states as to the numbers and kinds of skilled personnel they can offer the United Nations as new operations arise; new arrangements for training peacekeeping personnel, including indispensable civilian and police staff; stockpiling basic peacekeeping equipment (vehicles, communications equipment, generators, etc.); and air and sea lift capacity to be provided by member states either free of cost or at lower than commercial rates.

### Genesis of a Peacekeeping Mission

Many missions are planned in response to a crisis, so the steps in mounting them happen more or less simultaneously. When more time is available, the following sequence of events is usually adhered to:

- **Mediation.** The Secretary-General may be instructed to dispatch field survey missions, or may choose to send his own special representative to help achieve a political settlement.
- **Initial Design.** The mission concept is presented to the Security Council for its preliminary approval.
- **Security Council Directive.** The Security Council directs the Secretary-General to report back within a specified amount of time with a plan for the mission that includes its size, structure, duties, and timeline.
- **Mission Design.** Units of the Department of Peacekeeping Operations put together a plan for the mission.
- **Security Council approval obtained.**
- **Creation and verification of the mission budget.**
- **Submission of the budget to the Fifth Committee (Financial).**
- **Fifth Committee submits the budget to the General Assembly for approval.**
- **Assessment letters are sent to the member states.**

Until approved by the General Assembly, the Secretary-General cannot make contractual commitments for equipment, transport, or other services in excess of a US\$10 million annual spending authority for special circumstances. The length of the approval process creates a devastating time lag when an international crisis develops that requires a timely response.

### Chronology of Peacekeeping Operations

Between 1945 and 28 February 2006, there were 60 UN peacekeeping or observer missions. The following is a list of the UN peacekeeping operations, arranged in chronological order. Unless otherwise noted, figures are accurate as of February 2006.

#### UNTSO-United Nations Truce Supervision Organization

*Duration:* May 1948 to present.

*Headquarters:* Government House, Jerusalem.

*Strength:* 153 military observers.

*Fatalities:* 44.

*Mandate:* Initially to supervise the original truce of 1948; in 1949, following the conclusion of armistice agreements between Israel and its Arab neighbors (Egypt, Jordan, Lebanon, and Syria), its responsibility became to assist the parties in supervising the application and observance of those agreements. However, over the years, its activities and responsibilities have expanded to cover a number of UN-supervised emergency situations in Israel, Syria, and Lebanon.

*Composition:* UNTSO's military observers come from 23 contributing countries: Argentina, Australia, Austria, Belgium, Canada, Chile, China, Denmark, Estonia, Finland, France, Ireland, Italy, Nepal, Netherlands, New Zealand, Norway, Russian Federation, Slovakia, Slovenia, Sweden, Switzerland, and United States.

*Six-month appropriations for 2006:* Approximately US\$14.66 million.

#### **UNMOGIP-United Nations Military Observer Group in India and Pakistan**

*Duration:* January 1949 to present.

*Location:* The cease-fire line between India and Pakistan in the state of Jammu and Kashmir.

*Strength:* 44 military observers.

*Fatalities:* 11.

*Mandate:* To observe developments pertaining to the strict observance of the cease-fire of 17 December 1971 and report to the Secretary-General.

*Composition:* UNMOGIP's military observers come from nine countries: Belgium, Chile, Croatia, Denmark, Finland, Italy, Republic of Korea, Sweden, and Uruguay.

*Six-month appropriation for 2006:* Approximately US\$3.87 million.

#### **UNEF I-First United Nations Emergency Force**

*Duration:* November 1956 to June 1967.

*Location:* Initially the Suez Canal sector and the Sinai peninsula; later, along the Armistice Demarcation Line in the Gaza area and the Egyptian side of the international frontier in the Sinai peninsula.

*Strength:* At peak: 6,073; at end: 3,400.

*Fatalities:* 107.

*Mandate:* To secure and to supervise the cessation of hostilities, including the withdrawal of the armed forces of France, Israel, and the United Kingdom from Egyptian territory, and to serve as a buffer between the Egyptian and Israeli forces.

*Composition:* Brazil, Canada, Colombia, Denmark, Finland, India, Indonesia, Norway, Sweden, and Yugoslavia.

*Total cost:* Approximately US\$214 million.

#### **UNOGIL-United Nations Observation Group in Lebanon**

*Duration:* June 1958 to December 1958.

*Location:* Beirut, Lebanon.

*Strength:* 591 military observers (maximum).

*Fatalities:* None.

*Mandate:* To ensure that there was no illegal infiltration of personnel or supply of arms across the Lebanese border.

*Composition:* Forces from 21 countries.

*Total cost:* Approximately US\$3.7 million.

#### **UNOC-United Nations Operation in the Congo**

*Duration:* July 1960 to June 1964.

*Location:* Leopoldville (now Kinshasa), Republic of Congo (now Zaire).

*Strength:* Peak: 19,828.

*Fatalities:* 250.

*Mandate:* Initially, to ensure withdrawal of Belgian forces and assist the government in maintaining law and order; later, to

maintain territorial integrity and independence of the Congo and to prevent the occurrence of civil war.

*Composition:* Argentina, Brazil, Canada, Denmark, Ethiopia, Ghana, Guinea, India, Indonesia, Ireland, Italy, Liberia, Malaysia, Mali, Morocco, Netherlands, Nigeria, Norway, Pakistan, Sudan, Sweden, Tunisia, Yugoslavia.

*Total cost:* Approximately US\$400 million.

#### **UNSF-United Nations Security Force in West New Guinea (West Irian)**

*Duration:* October 1962 to April 1963.

*Location:* Hollandia, West Irian (now Jayapura, Indonesia).

*Strength:* 1,576.

*Fatalities:* None.

*Mandate:* To maintain peace and security in the territory under the UN Temporary Executive Authority established by agreement between Indonesia and the Netherlands while the administration of the territory was transferred to Indonesia.

*Composition:* Canada, Pakistan, United States.

*Total cost:* Approximately US\$26.4 million (cost borne by Netherlands and Indonesia).

#### **UNYOM-United Nations Yemen Observations Mission**

*Duration:* July 1963 to September 1964.

*Location:* Sana'a, Yemen.

*Strength:* 25 military observers; 114 members of a reconnaissance unit; 50 members of an air unit.

*Fatalities:* None.

*Mandate:* To observe and certify the implementation of the disengagement agreement between Saudi Arabia and the United Arab Republic (now Egypt and Syria).

*Composition:* Canada, Yugoslavia.

*Total cost:* Approximately US\$1.8 million (cost borne by Saudi Arabia and Egypt).

#### **UNFICYP-United Nations Peacekeeping Force in Cyprus**

*Duration:* March 1964 to present.

*Location:* Cyprus.

*Strength:* 923 troops and civilian police, and 143 international civilian personnel and local civilian staff.

*Fatalities:* 176.

*Mandate:* To prevent a recurrence of fighting between Turkish-backed Cypriots and Greek-backed Cypriots; to contribute to the maintenance and restoration of law and order.

*Composition:* The operational elements of UNFICYP are provided by Argentina, Australia, Austria, Canada, Croatia, Finland, Hungary, India, Ireland, the Netherlands, Slovakia, the United Kingdom, and Uruguay. The Argentine contingent included soldiers from Bolivia, Brazil, Chile, Paraguay, Peru, and Uruguay.

*Annual cost:* Approximately US\$46.51 million.

#### **DOMREP-Mission of the Representative of the Secretary-General in the Dominican Republic**

*Duration:* May 1965 to October 1966.

*Location:* Santo Domingo, Dominican Republic.

*Strength:* Two military observers.

*Fatalities:* None.

*Mandate:* To observe the situation and to report on breaches of the cease-fire between the two *de facto* authorities.

*Composition:* None.

*Total cost:* US\$275,831 (through UN regular budget).

#### UNIPOM-United Nations India-Pakistan Observation Mission

*Duration:* September 1965 to March 1966.

*Location:* Lahore, Pakistan, and Amritsar, India (deployed along the India/Pakistan border between Kashmir and the Arabian Sea).

*Strength:* 96 military observers (maximum).

*Fatalities:* None.

*Mandate:* To supervise the cease-fire along the India/Pakistan border (except the State of Jammu and Kashmir where UNMO-GIP operates) and the withdrawal of all armed personnel to the positions held before 5 August 1965.

*Composition:* Australia, Belgium, Brazil, Burma, Canada, Chile, Denmark, Ethiopia, Finland, Ireland, Italy, Nepal, Netherlands, New Zealand, Nigeria, Norway, Sweden, Sri Lanka, Venezuela.

*Total cost:* US\$1,713,280.

#### UNEF II-Second United Nations Emergency Force

*Duration:* October 1973 to July 1979.

*Location:* Suez Canal sector and later the Sinai peninsula.

*Strength:* Peak: 6,973; end: 4,000.

*Fatalities:* 55.

*Mandate:* To supervise the cease-fire between Egyptian and Israeli forces; later, to supervise the redeployment of those forces and act as a buffer between them.

*Composition:* Australia, Austria, Canada, Finland, Ghana, Indonesia, Ireland, Nepal, Panama, Peru, Poland, Senegal, Sweden.

*Total cost:* Approximately US\$446.5 million.

#### UNDOF-United Nations Disengagement Observer Force

*Duration:* June 1974 to present.

*Location:* Syrian Golan Heights.

*Strength:* 1,066 troops, assisted by approximately 57 military observers.

*Fatalities:* 43.

*Mandate:* To maintain the cease-fire between Israel and Syria; supervise the disengagement of Israeli and Syrian forces; supervise the areas of separation and limitation.

*Composition:* Originally composed of Austrian and Peruvian infantry units and Canadian and Polish logistic elements. Currently composed of contingents from Austria, Canada, Japan, Nepal, Poland, and the Slovak Republic.

*Annual cost:* Approximately US\$43.71 million.

#### UNIFIL-United Nations Interim Force in Lebanon

*Duration:* March 1978 to present.

*Location:* Southern Lebanon.

*Strength:* 1,980 troops and approximately 50 military observers; 401 local and international civilian staff.

*Fatalities:* 256.

*Mandate:* To confirm the withdrawal of Israeli forces from southern Lebanon; restore international peace and security; assist the government of Lebanon in ensuring the return of its effective authority in the area.

*Composition:* Troops provided by France, Ghana, India, Ireland, Italy, Poland, and Ukraine.

*Annual cost:* Approximately US\$99.23 million.

#### UNGOMAP-United Nations Good Offices Mission in Afghanistan and Pakistan

*Duration:* April 1988 to March 1990.

*Location:* Kabul, Afghanistan, and Islamabad, Pakistan. *Strength:* 50 military observers.

*Fatalities:* None.

*Mandate:* To assist in monitoring the implementation of the 1988 peace settlement between Afghanistan and Pakistan.

*Composition:* Austria, Canada, Denmark, Finland, Fiji, Ghana, Ireland, Nepal, Poland, and Sweden.

*Total cost:* Approximately US\$14 million.

#### UNIIMOG-United Nations Iran-Iraq Military Observer Group

*Duration:* August 1988 to February 1991.

*Location:* The 740-mile border between Iran and Iraq (headquarters in both Baghdad, Iraq, and Teheran, Iran).

*Strength:* 400 military personnel; 93 local staff. *Fatalities:* 1.

*Mandate:* To verify, confirm, and supervise the cease-fire and withdrawal of troops.

*Composition:* Argentina, Australia, Austria, Bangladesh, Canada, Denmark, Finland, Ghana, Hungary, India, Indonesia, Ireland, Italy, Kenya, Malaysia, New Zealand, Nigeria, Norway, Peru, Poland, Senegal, Sweden, Turkey, Uruguay, Yugoslavia, Zambia.

*Total cost:* Approximately US\$178 million.

#### UNAVEM I-United Nations Angola Verification Mission I

*Duration:* January 1989 to June 1991.

*Location:* Luanda, Angola.

*Strength:* Peak: 70 military observers; 22 international staff; 15 local staff.

*Fatalities:* None.

*Mandate:* To monitor the withdrawal of Cuban troops from Angola.

*Composition:* Algeria, Argentina, Brazil, Congo, Czechoslovakia, India, Jordan, Norway, Spain, Yugoslavia.

*Total cost:* Approximately US\$16.4 million.

#### UNTAG-United Nations Transition Assistance Group

*Duration:* April 1989 to March 1990.

*Location:* Windhoek, Namibia.

*Maximum strength:* Approximately 4,500 military personnel; 1,500 police; 2,000 civilian personnel; 1,000 election observers.

*Fatalities:* 19.

*Mandate:* To monitor and supervise the Namibia independence plan, including supervision of elections to a Constituent Assembly.

*Composition:* Argentina, Australia, Austria, Bangladesh, Canada, Denmark, Finland, Ghana, Hungary, India, Indonesia, Ireland, Italy, Kenya, Malaysia, New Zealand, Nigeria, Norway, Peru, Poland, Senegal, Sweden, Turkey, Uruguay, Yugoslavia, Zambia.

*Total cost:* Approximately US\$368.5 million.

#### ONUCA-United Nations Observer Group in Central America

*Duration:* November 1989 to January 1992.

*Location:* Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua (headquarters in Tegucigalpa).

*Strength:* Peak: 1,195; end: 338.

*Fatalities:* None.

*Mandate:* Initially, to verify the compliance of the five Central American countries with their security undertakings (the Esquipulas II Agreement, 1987) to cease aid to insurrectionist movements in the region and not to allow their territory to be used for attacks on other states; later, to monitor the demobilization of the Nicaraguan resistance (the "Contras").

*Composition:* Argentina, Brazil, Canada, Colombia, Ecuador, India, Ireland, Spain, Sweden, Venezuela.

*Total cost:* Approximately US\$89 million.

#### UNIKOM-United Nations Iraq-Kuwait Observation Mission

*Duration:* April 1991 to October 2003.

*Location:* The demilitarized zone along the boundary between Iraq and Kuwait.

*Strength:* Peak: 1,187 all ranks, including 254 military observers supported by international and local civilian staff. Due to repeated Iraqi incursions, in 1993 UNIKOM's mandate was expanded to include taking action against such incursions.

*Fatalities:* 18.

*Mandate:* To monitor the Khawr 'Abd Allah waterway between Iraq and Kuwait and the demilitarized zone; deter violations of the boundary; observe any hostile action; and, as expanded by Security Council resolution 806 (1993), to resist attempts to prevent it by force from discharging its duties.

*Composition:* Argentina, Austria, Bangladesh, Canada, Chile, China, Denmark, Fiji, Finland, France, Germany, Ghana, Greece, Hungary, India, Indonesia, Ireland, Italy, Kenya, Malaysia, Nigeria, Norway, Pakistan, Poland, Romania, Russian Federation, Senegal, Singapore, Sweden, Switzerland, Thailand, Turkey, United Kingdom, United States, Uruguay, and Venezuela.

*Total cost:* Approximately US\$600 million.

#### UNAVEM II-United Nations Angola Verification Mission II

*Duration:* June 1991 to February 1995.

*Location:* Angola.

*Strength:* 350 military observers, 126 police observers, 400 electoral observers, 80 international civilian staff and 155 local staff.

*Fatalities:* 3.

*Mandate:* Initially, monitor the cease-fire between the Angolan Government and UNITA, until general elections were held in 1992; observe the elections scheduled for September 1992. When fighting broke out again after the elections, UNAVEM II's mandate was expanded to include monitoring the new cease-fire between the government and UNITA. However, the political situation continued to deteriorate, until in 1993 UNAVEM II had to evacuate 45 of its 67 monitoring locations. Its mandate was extended three months at a time, as it had become an essential factor in a continuous UN effort to facilitate the resumption of negotiations and support humanitarian activities in the country. Following the signing of 20 November 1994 by the Government of Angola and UNITA of the Lusaka Protocol, UNAVEM II verified the initial stages of the peace agreement.

*Composition:* Military and police personnel are contributed by Argentina, Brazil, Congo, Guinea-Bissau, Hungary, India, Ireland,

Jordan, Malaysia, Morocco, Netherlands, Nigeria, Norway, Slovak Republic, Spain, Sweden, and Zimbabwe.

*Total cost:* US\$175.8 million.

#### ONUSAL-United Nations Observer Mission in El Salvador

*Duration:* July 1991 to April 1995.

*Location:* El Salvador.

*Strength:* Approximately 380 military observers, 8 medical officers, 631 police observers; there was also a provision for some 140 civilian international staff and 180 local staff.

*Fatalities:* 5.

*Mandate:* Initially, to verify compliance with the San José Agreement on Human Rights by the government of El Salvador and the Frente Farabundo Martí para la Liberación Nacional (FMLN); monitor the human rights situation in El Salvador; investigate specific cases of alleged human rights violations; promote human rights in the country; make recommendations for the elimination of violations; and report on these matters to the Secretary-General. Subsequent to final peace agreements which were signed in 1992, ONUSAL's mandate was expanded to include verification of the cease-fire and separation of forces; and monitoring the maintenance of public order while a new National Civil Police force was set up. Finally, ONUSAL's mandate was expanded to observe national elections for the presidency, the legislative assembly, mayors, and municipal councils in March 1994.

*Composition:* ONUSAL military observers are provided by Brazil, Canada, Colombia, Ecuador, India, Ireland, Spain, Sweden, and Venezuela. Police observers come from Austria, Brazil, Chile, Colombia, France, Guyana, Italy, Mexico, Spain, and Sweden.

*Total cost:* Approximately US\$107 million.

#### MINURSO-United Nations Mission for the Referendum in Western Sahara

*Duration:* April 1991 to present.

*Location:* Western Sahara. *Strength:* 197 military observers, 28 troops, supported by 224 international and local staff.

*Fatalities:* 14.

*Mandate:* To verify a cease-fire between the government of Morocco and the Frente Popular para la Liberación de Saguia el-Hamra y de Rio de Oro (Frente Polisario); monitor the confinement of Moroccan and Frente Polisario troops to designated locations; ensure release of all political prisoners or detainees; oversee exchange of prisoners of war; implement a repatriation program; identify and register qualified voters; organize and ensure a free referendum to enable the people of Western Sahara to exercise their right to self-determination, to choose between independence and integration with Morocco.

*Composition:* Military observers and support personnel are provided by Argentina, Austria, Bangladesh, China, Croatia, Denmark, Egypt, El Salvador, France, Ghana, Greece, Guinea, Honduras, Hungary, Ireland, Italy, Kenya, Malaysia, Mongolia, Nigeria, Pakistan, Poland, Republic of Korea, Russian Federation, Sri Lanka, and Uruguay.

*Annual cost:* Approximately US\$47.95 million.

#### UNAMIC-United Nations Advance Mission in Cambodia

*Duration:* October 1991 to March 1992.

*Location:* Cambodia.

*Strength:* 1,504 military and civilian personnel.

*Fatalities:* None.

*Mandate:* To immediately deploy a small advance mission to assist the Cambodian parties to maintain a cease-fire while preparations were made for the larger UNTAC force. UNAMIC consisted of civilian and military liaison staff, a military mine-awareness unit, and logistics and support personnel. Its mandate was expanded in January 1992 to include training Cambodians in mine-clearing.

*Composition:* Algeria, Argentina, Australia, Austria, Bangladesh, Belgium, Canada, China, France, Germany, Ghana, India, Indonesia, Ireland, Malaysia, Netherlands, New Zealand, Pakistan, Poland, Russian Federation, Senegal, Thailand, Tunisia, United Kingdom, United States, And Uruguay.

*Total cost:* See UNTAC, below.

#### **UNPROFOR-United Nations Protection Force**

*Duration:* March 1992 to December 1995.

*Location:* Bosnia and Herzegovina, Croatia, the Federal Republic of Yugoslavia (Serbia and Montenegro), and the former Yugoslav Republic of Macedonia.

*Strength:* 38,599 military personnel, 684 UN military observers, 803 civilian police, 2,017 international civilian staff, and 2,615 local staff.

*Fatalities:* 167.

*Mandate:* In the wake of the end of the cold war, fighting broke out among ethnic and religious factions in the former Yugoslavia. In January 1992, Secretary-General Boutros Boutros-Ghali sent 50 military liaison officers to Yugoslavia to promote maintenance of cease-fire by facilitating communication. In February, although some political groups in Yugoslavia were still expressing objections to a UN plan for a peace-keeping operation, the Security Council established UNPROFOR for an initial period of 12 months to create the conditions of peace and security required for the negotiation of an overall settlement of the Yugoslav crisis. UNPROFOR's operational mandate extends to five republics of the former Yugoslavia, as indicated above. In the rapidly deteriorating situation, its mandate has been enlarged in all five republics to include such things as security at Sarajevo airport; protection of humanitarian convoys; monitoring of a "no-fly zone" banning all military flights in the airspace of Bosnia and Herzegovina; border control; the creation of "safe areas" to protect civilians from armed attack. UNPROFOR monitored the implementation of a cease-fire agreement signed by the Bosnian government and Bosnian Croat forces in February 1994. UNPROFOR also monitored the arrangements for a cease-fire negotiated between the Bosnian government and Bosnian Serb forces which became effective on 1 January 1995.

*Composition:* Military and/or civilian police personnel are provided by Argentina, Australia, Bangladesh, Belgium, Brazil, Canada, Colombia, Czech Republic, Denmark, Egypt, Finland, France, Ghana, Ireland, Jordan, Kenya, Luxembourg, Nepal, Netherlands, New Zealand, Nigeria, Norway, Poland, Portugal, Russian Federation, Slovak Republic, Spain, Sweden, Switzerland, Tunisia, Ukraine, United Kingdom, United States, and Venezuela.

*Total cost:* Approximately us\$4.6 billion.

#### **UNTAC-United Nations Transitional Authority in Cambodia**

*Duration:* March 1992 to September 1993.

*Location:* Cambodia.

*Strength:* (Peak) 22,000 military and civilian personnel.

*Fatalities:* 78.

*Mandate:* To monitor and help implement the Paris Agreements signed in 1991 between the various political entities in Cambodia. The mandate included aspects relating to human rights, the organization and conduct of free and fair general elections, military arrangements, civil administration, the maintenance of law and order, the repatriation and resettlement of the Cambodian refugees, and rehabilitation of essential Cambodian infrastructure. During its mission the Security Council requested UNTAC to play many roles, including human rights oversight and investigation of allegations of human rights abuses during the transitional period; implementing a legal framework for the electoral process; stabilizing the security situation; and ensuring a neutral political environment conducive to free and fair elections. After elections were held in May 1993 and a newly elected Constituent Assembly began work on 14 June 1993, a withdrawal schedule for UNPROFOR was established, leaving a smaller contingent of military police officers and medical units to continue the work of mine clearance and training.

*Composition:* UNTAC military and/or civilian police personnel were provided by Algeria, Argentina, Australia, Austria, Bangladesh, Belgium, Brunei Darussalam, Bulgaria, Cameroon, Canada, Chile, China, Colombia, Egypt, Fiji, France, Germany, Ghana, Hungary, India, Indonesia, Ireland, Italy, Japan, Jordan, Kenya, Malaysia, Morocco, Namibia, Nepal, Netherlands, New Zealand, Nigeria, Norway, Pakistan, Philippines, Poland, Russian Federation, Senegal, Singapore, Sweden, Thailand, Tunisia, United Kingdom, United States, and Uruguay.

*Total cost:* The total cost of both UNAMIC and UNTAC for the period was approximately us\$1,621 million.

#### **ONUMOZ-United Nations Operation in Mozambique**

*Duration:* December 1992 to December 1994.

*Location:* Mozambique.

*Strength:* 6,625 troops and military personnel, 354 military observers and 1,144 civilian police; there were also some 355 international staff and 506 local staff; in addition, during the polling, ONUMOZ sent out about 900 electoral observers.

*Fatalities:* 24.

*Mandate:* To help implement the General Peace Agreement signed in 1992 in Rome, after 14 years of devastating civil war between the Republic of Mozambique and the Resistência Nacional Moçambicana (RENAMO). ONUMOZ's mandate included four important elements: political, military, electoral, and humanitarian. ONUMOZ military wing would monitor and verify the cease-fire, the separation of forces of the two parties, their demobilization and the collection, storage, and destruction of weapons. It would authorize security arrangements for vital infrastructures and provide security for United Nations and other international activities. ONUMOZ's Electoral Division would monitor and verify all aspects and stages of the electoral process. ONUMOZ's humanitarian component would function as an integrated component of ONUMOZ to make available food and other relief for distribution to soldiers in the assembly area. After successful presidential and legislative elections in October 1994, and the installation of Mozambique's new Parliament and President, ONUMOZ's mandate ended on 9 December 1994.

*Composition:* The military component includes 302 military observers and some 6,250 infantry and support personnel from Argentina, Bangladesh, Botswana, Brazil, Canada, Cape Verde, China, Czech Republic, Egypt, Guinea-Bissau, Hungary, India, Italy, Japan, Malaysia, Netherlands, Portugal, Russian Federation, Spain, Sweden, Uruguay, and Zambia.

*Total cost:* Approximately US\$471 million.

#### **UNOSOM I-United Nations Operation in Somalia I**

*Duration:* April 1992 to March 1993.

*Location:* Somalia.

*Strength:* Originally 50 military observers; expanded to include 3,500 security personnel, and further expanded to include 719 personnel in logistical units; there were also some 200 international staff.

*Fatalities:* 8.

*Mandate:* To monitor a cease-fire in the capital, Mogadishu; provide protection for UN personnel, equipment, and supplies at the seaports and airports; escort deliveries of humanitarian supplies from there to distribution centers in the city and its immediate environs.

*Composition:* Observers were sent from Australia, Austria, Bangladesh, Belgium, Canada, Czechoslovakia, Egypt, Fiji, Finland, Indonesia, Jordan, Morocco, New Zealand, Norway, Pakistan, and Zimbabwe.

*Total cost:* Approximately US\$42.9 million.

#### **UNOSOM II-United Nations Operation in Somalia II**

*Duration:* March 1993 to March 1995.

*Location:* Somalia.

*Strength:* 28,000 military personnel and 2,800 civilian staff.

*Fatalities:* 147.

*Mandate:* To establish a secure environment throughout the whole of Somalia; provide assistance to the Somali people in rebuilding their economy and social and political life; help reestablish the country's institutional structure; monitor that all factions continued to respect the various agreements; prevent resumption of violence and, if necessary, take appropriate action against any faction that violated the cessation of hostilities; maintain control of heavy weapons; seize small arms of all unauthorized elements; secure and maintain security at all ports, airports, and lines of communications; protect personnel, installations, and equipment belonging to the UN and other international organizations; take forceful action to neutralize armed elements that attacked or threatened to attack such facilities; assist in repatriation of refugees; continue the program of mine clearance begun under UNISOM I. UNISOM II also sought to assist the Somali people in rebuilding their economy and society, based on a democratic government. In February 1994, after several violent incidents and attacks on UN soldiers, the Security Council revised the mandate to exclude use of coercive methods. UNISOM II was withdrawn in March 1995.

*Composition:* Military personnel are provided by Australia, Bangladesh, Belgium, Botswana, Canada, Egypt, France, Germany, Greece, India, Ireland, Italy, Kuwait, Malaysia, Morocco, Nepal, New Zealand, Nigeria, Norway, Pakistan, Republic of Korea, Romania, Saudi Arabia, Sweden, Tunisia, Turkey, United Arab Emirates, United States, and Zimbabwe.

Note: The United States forces deployed in Mogadishu to support UNOSOM I and UNOSOM II were not under United Nations command or authority. The Unified Task Force (UNITAF) spearheaded by the United States was deployed in Mogadishu on 9 December 1992 and included military units from Australia, Belgium, Botswana, Canada, Egypt, France, Germany, Greece, India, Italy, Kuwait, Morocco, New Zealand, Nigeria, Norway, Pakistan, Saudi Arabia, Sweden, Tunisia, Turkey, United Arab Emirates, United Kingdom, and Zimbabwe.

*Total cost:* Approximately US\$1,643 million.

#### **UNOMUR-United Nations Observer Mission in Uganda-Rwanda**

*Duration:* June 1993 to September 1994

*Location:* Uganda side of the Uganda-Rwanda border.

*Strength:* 81 military observers, 17 international staff, and 7 locally recruited personnel.

*Fatalities:* None.

*Mandate:* To verify that no lethal weapons and ammunitions are transported across the border from Uganda into northern Rwanda. The tragic slaughter in Rwanda in April 1994 prevented UNOMUR from fully implementing its mandate. However, the Observer Mission played a useful role immediately after the conclusion of the Arusha Peace Agreement.

*Composition:* Military observers were provided by Bangladesh, Botswana, Brazil, Canada, Hungary, Netherlands, Senegal, and Zimbabwe.

*Total cost:* (From inception to December 1993): US\$2.3 million; US\$8 million net.

#### **UNOMIG-United Nations Observer Mission in Georgia**

*Duration:* August 1993 to present.

*Location:* Georgia.

*Strength:* Authorized: 122 military observers and 12 police supported by 292 international and local civilian staff.

*Mandate:* To verify compliance with a cease-fire agreed to on 27 July 1993 between the government of Georgia and separatists in its northwestern region, Abkhazia. It would also investigate reports of cease-fire violations and attempt to resolve such incidents; and report to the Secretary-General about such violations. Before UNOMIG could be fully deployed, the cease-fire broke down, and, in accordance with the instructions of the Security Council resolution 858 (1993), deployment was halted. In May 1994, the Georgian and Abkhaz sides agreed to a cease-fire and separation of forces. UNOMIG then was to monitor the implementation of that agreement, and to verify the exit of troops and military equipment from the security zone. In December 1996, a human rights office was opened in Abkhazia to investigate reported or alleged violations.

*Composition:* Albania, Austria, Bangladesh, Croatia, Czech Republic, Denmark, Egypt, France, Germany, Greece, Hungary, Indonesia, Jordan, Republic of Korea, Pakistan, Poland, Romania, Russian Federation, Sweden, Switzerland, Turkey, United Kingdom, United States, and Uruguay.

*Annual cost:* US\$36.38 million.

#### **UNOMIL-United Nations Observer Mission in Liberia**

*Duration:* September 1993 to September 1997.

*Location:* Liberia.

*Strength:* 92 military personnel during electoral period (July 1997).

*Mandate:* To verify the Cotonou Peace Agreement signed in Cotonou, Benin, between the parties to the Liberian conflict that broke out in 1990 when the Liberian president, Samuel Doe, was overthrown, causing a complete breakdown of law and order. The UNOMIL was created at the invitation of the Economic Community of West African States (ECOWAS), which has taken various initiatives to peacefully settle the conflict, including the establishment of its own military observer group, ECOMOG. UNOMIL was to work with ECOMOG in implementing the Cotonou Peace Agreement. ECOMOG has primary responsibility for the implementation of the agreement's provisions, and UNOMIL's role is to monitor the implementation procedures to verify their impartial application.

*Composition:* The military component was composed of personnel from Austria, Bangladesh, Belgium, China, Congo, Czech Republic, Egypt, Guinea-Bissau, Hungary, India, Jordan, Kenya, Malaysia, Nepal, Pakistan, Poland, Russian Federation, Slovakia, Sweden, and Uruguay.

*Total cost:* Approximately US\$81.4 million.

#### **UNMIH-United Nations Mission in Haiti**

*Duration:* September 1993 to June 1996.

*Location:* Haiti.

*Strength:* 1,200 troops and military support personnel, and 300 civilian police; there was also a provision for about 160 international staff, 180 local staff, and 18 UN volunteers.

*Fatalities:* 6.

*Mandate:* Pending the creation of a new police force, assist the government in monitoring the activities of those members of the armed forces involved in carrying out police functions; provide guidance and advice; monitor the conduct of police operations; ensure that legal requirements are fully met. However, the advance unit of UNMIH was prevented from landing at Port au Prince on 11 October 1993. After the Haitian Constitutional government was restored in October 1994, UNMIH assisted the democratic Haitian government in securing stability, training the Haitian armed forces, and creating a separate police force. UNMIH also helped the legitimate constitutional government to organize free and fair elections for the summer of 1995.

*Composition:* Djibouti, France, Mali, Netherlands, Pakistan, Russian Federation, Togo, Trinidad and Tobago, and United States.

*Total cost:* Estimated at US\$315.8 million.

#### **UNAMIR-United Nations Assistance Mission for Rwanda**

*Duration:* October 1993 to March 1996.

*Location:* Rwanda.

*Strength:* 2,548 military personnel, 60 police officers, 110 international civilian staff, and 61 locally recruited civilian staff.

*Fatalities:* 26.

*Mandate:* In the context of the Arusha peace agreement concluded in August 1993 between the government of Rwanda and the Rwandese Patriotic Front (RPF), UNAMIR originally was to contribute to the establishment and maintenance of a climate conducive to the secure installation and subsequent operation of the transitional government; assure the security of the capital city, Kigali; monitor a cease-fire agreement, including establishing an ex-

panded demilitarized zone and demobilization procedures; monitor the security situation leading up to elections; assist with mine clearance. UNAMIR would also investigate alleged noncompliance with provisions of the peace agreement and provide security for the repatriation of Rwandese refugees. It would also escort and protect humanitarian activities. After renewed fighting in April 1994, UNAMIR's mandate was altered to permit intermediary action between warring parties, and to provide security for refugees and civilians at risk. After the cease-fire and installation of the new government, UNAMIR was adjusted to ensure stability and security in the northwestern and southwestern regions of Rwanda, to monitor and encourage the return of displaced persons, and support humanitarian aid, and national reconciliation.

*Composition:* At its peak strength UNAMIR was to be composed of 2,217 formed troops and 331 military observers provided by Argentina, Austria, Bangladesh, Belgium, Canada, Congo, Ecuador, Egypt, Fiji, Ghana, Malawi, Mali, Nigeria, Pakistan, Russian Federation, Senegal, Tanzania, Togo, Tunisia, Uruguay, and Zimbabwe.

*Total cost:* Estimated at US\$437.4 million.

#### **UNASOG-United Nations Aozou Strip Observer Group**

*Duration:* May 1994 to June 1994.

*Location:* Aozou Strip, Republic of Chad.

*Strength:* 9 military observers and 6 international staff.

*Fatalities:* None.

*Mandate:* Established to verify the departure of the Libyan administration and forces from the Aozou Strip in accordance with the decision of the International Court of Justice. UNASOG accomplished its mandate after both Chad and Libya declared the withdrawal complete.

*Total cost:* US\$67,471.

#### **UNMOT-United Nations Mission of Observers in Tajikistan**

*Duration:* December 1994 to May 2000.

*Location:* Tajikistan.

*Strength:* 81 military observers, (as of June 1998), supported by international and local civilian staff.

*Fatalities:* 7.

*Mandate:* Established to monitor the implementation of the agreement between the Tajik government and the opposition on a temporary cease-fire along the Tajik-Afghan border, and to investigate reports of violations and report them to the UN and to the Joint Commission. UNMOT also served as a political liaison and coordinate services that help the efficient deployment of humanitarian assistance by the international community.

*Composition:* Austria, Bangladesh, Bulgaria, Czech Republic, Denmark, Ghana, Hungary, Indonesia, Jordan, Nepal, Nigeria, Poland, Switzerland, Ukraine, and Uruguay.

*Total cost:* Approximately US\$50 million.

#### **UNAVEM III-United Nations Angola Verification Mission III**

*Duration:* February 1995 to June 1997.

*Location:* Angola.

*Strength:* 283 military observers, 7,869 troops and other military personnel, and 288 civilian police as of 30 June 1997.

*Mandate:* On 1 February 1995 the Secretary-General recommended to the Security Council that UNAVEM III take over from UNAVEM II to help adversarial parties in Angola restore peace

and achieve national reconciliation. UNAVEM III was to provide mediation between the government and the UNITA party, to monitor and confirm the provision of legitimate government administration throughout Angola, and promote national reconciliation. UNAVEM III also was to control and verify the elimination of forces, monitor the cease-fire, and ensure the neutrality of the Angolan National Police.

*Composition:* Algeria, Bangladesh, Brazil, Bulgaria, Congo, Egypt, France, Guinea Bissau, Hungary, India, Jordan, Kenya, Malaysia, Mali, Namibia, Netherlands, New Zealand, Nigeria, Norway, Pakistan, Poland, Portugal, Republic of Korea, Romania, Russian Federation, Senegal, Slovak Republic, Sweden, Tanzania, Ukraine, Uruguay, Zambia.

*Fatalities:* 32.

*Total cost:* More than US\$800 million.

#### UNCRO-United Nations Confidence Restoration Operation

*Duration:* March 1995 to January 1996.

*Location:* Croatia.

*Strength:* 6,581 troops, 194 military observers and 296 civilian police, supported by international and locally recruited staff.

*Fatalities:* 16.

*Mandate:* UNCRO replaced UNPROFOR in Croatia, and was established to carry out the functions planned in the cease-fire agreement of March 1994 and the economic agreement of December 1994. UNCRO also monitored and reported the crossing of military personnel, supplies, equipment, and weapons over international borders between Croatia and Bosnia and Herzegovina, and Croatia and the Federal Republic of Yugoslavia (Serbia and Montenegro) at the border crossings. The mandate also facilitated the delivery of humanitarian aid to Bosnia and Herzegovina through the territory of Croatia, and monitored the demilitarization of the Prevlaka peninsula.

*Cost:* See UNPROFOR, above.

#### UNPREDEP-United Nations Preventive Deployment Force

*Duration:* March 1995 to February 1999.

*Location:* The Former Yugoslav Republic of Macedonia.

*Strength:* 1,040 troops, 35 military observers, and 26 civilian police, 203 local and civilian staff.

*Mandate:* UNPREDEP was established on 31 March 1995 to replace UNPROFOR, but the mandate was basically the same: to monitor and report any developments in the border areas that could affect confidence and stability in the Former Yugoslav Republic of Macedonia.

*Composition:* Argentina, Bangladesh, Belgium, Brazil, Canada, Czech Republic, Denmark, Egypt, Finland, Ghana, Indonesia, Ireland, Jordan, Kenya, Nepal, New Zealand, Nigeria, Norway, Pakistan, Poland, Russian Federation, Sweden, Switzerland, Turkey, Ukraine, and United States.

*Fatalities:* 4.

*Total cost:* Approximately US\$200 million.

#### UNMIBH-United Nations Mission in Bosnia and Herzegovina

*Duration:* December 1995 to December 2002.

*Location:* Bosnia and Herzegovina.

*Maximum strength:* 2,047 civilian police and military liaison personnel.

*Fatalities:* 17.

*Mandate:* The Security Council established the UN International Police Task Force (IPTF) in December 1995 in accordance with the peace agreement signed by the leaders of Bosnia and Herzegovina, Croatia, and the Federal Republic of Yugoslavia (Serbia and Montenegro). The IPTF monitored law enforcement facilities and activities, advised and trained law enforcement personnel, assessed threats to public order, advised authorities in Bosnia and Herzegovina on operating effective civilian law enforcement agencies, and accompanied law enforcement personnel in some responsibilities.

*Composition:* Argentina, Austria, Bangladesh, Bulgaria, Canada, Chile, China, Czech Republic, Denmark, Egypt, Estonia, Fiji, Finland, France, Germany, Ghana, Greece, Hungary, Iceland, India, Indonesia, Ireland, Italy, Jordan, Kenya, Lithuania, Malaysia, Nepal, Netherlands, Nigeria, Norway, Pakistan, Poland, Portugal, Romania, Russian Federation, Senegal, Spain, Sweden, Switzerland, Thailand, Turkey, Tunisia, Ukraine, United Kingdom, United States, and Vanuatu.

*Total cost:* US Final figures were not available as of 28 February 2006.

#### UNMOP-United Nations Mission of Observers in Prevlaka

*Duration:* January 1996 to December 2002.

*Location:* Prevlaka peninsula, Croatia.

*Strength:* 28 military observers, supported by 9 international and local civilian staff.

*Mandate:* With the termination of UNCRO's mandate in January 1996, UNMOP became a continuation of the mission to monitor the demilitarization of the Prevlaka peninsula.

*Composition:* Argentina, Bangladesh, Belgium, Brazil, Czech Republic, Denmark, Egypt, Finland, Ghana, Indonesia, Ireland, Jordan, Kenya, Nepal, New Zealand, Nigeria, Norway, Pakistan, Poland, Russian Federation, Switzerland, and Ukraine.

*Annual cost:* Included in UNMIBH, above.

#### UNTAES-United Nations Transitional Administration in Eastern Slavonia

*Duration:* January 1996 to January 1998.

*Location:* Eastern Slavonia, Baranja, and Western Sirmium, Croatia.

*Strength:* A total of 2,847 personnel, consisting of 2,346 troops, 97 military observers, and 404 civilian police as of 21 October 1997.

*Mandate:* UNTAES was set up with both military and civilian components. The military part supervised and assisted in the demilitarization of the region, monitored the return of refugees in cooperation with the UNHCR, and contributed to maintaining the peace by its continuing presence. The civilian part was to set up a temporary police force, monitor the prison system, promote the return of refugees, and to organize and verify elections.

*Composition:* Argentina, Austria, Bangladesh, Belgium, Brazil, Czech Republic, Denmark, Egypt, Fiji, Finland, Ghana, Indonesia, Ireland, Jordan, Kenya, Lithuania, Nepal, Netherlands, New Zealand, Nigeria, Norway, Pakistan, Poland, Russian Federation, Slovak Republic, Sweden, Switzerland, Tunisia, Ukraine, and United States.

*Annual cost:* US\$285.8 million.

*Total cost:* Not available.

**UNSMIH-United Nations Support Mission in Haiti**

*Duration:* July 1996 to July 1997.

*Location:* Haiti.

*Strength:* 225 civilian police and 1,300 military personnel funded for a total of some 1,525 military personnel on 10 July 1997. The mission was supported by international and local civilian staff. A number of UN Volunteers also participated in the mission.

*Mandate:* UNSMIH was established to help the government of Haiti in the professionalization of the police and to assist in the creation and training of an effective national police force.

*Composition:* Civilian police personnel: Algeria, Canada, France, India, Mali, Togo, United States. Military personnel: Canada, Pakistan.

*Total cost:* US\$57.2 million (estimate).

**MINUGUA-United Nations Verification Mission in Guatemala**

*Duration:* January to May 1997.

*Location:* Guatemala.

*Strength:* Mission total of 188 uniformed personnel, comprising 145 military observers and 43 civilian police.

*Mandate:* The peacekeeping mission within the larger civilian and humanitarian MINUGUA mission was established by the Security Council in resolution 1094 (1997) on 20 January 1997 for a three-month period to verify agreement on the cease-fire between the government of Guatemala and the Unidad Revolucionaria Nacional Guatemalteca (URNG), which was signed at Oslo on 4 December 1996.

*Total cost:* US\$4.6 million (estimated).

**MONUA-United Nations Mission of Observers in Angola**

*Duration:* July 1997 to February 1999.

*Location:* Angola.

*Strength:* 240 personnel all ranks; consisting of 222 troops, 12 military observers, and 6 civilian police monitors; and supported by international and locally recruited civilian staff as of May 1999.

*Fatalities:* 14 (as of 31 December 1998).

*Mandate:* MONUA was set up to assist the Angolan parties in consolidating peace and national reconciliation, enhancing confidence-building and creating an environment conducive to long-term stability, democratic development, and rehabilitation of the country.

*Composition:* Bangladesh, Bolivia, Brazil, Egypt, Ghana, India, Jordan, Pakistan, Poland, Portugal, Romania, Russian Federation, Senegal, Uruguay, Zambia, and Zimbabwe.

*Total cost:* Approximately US\$225.6 million.

**UNTMIH-United Nations Transition Mission in Haiti**

*Duration:* August to November 1997.

*Location:* Haiti.

*Strength:* 250 civilian police personnel and 50 military personnel.

*Mandate:* To assist the government of Haiti by supporting and contributing to the professionalization of the Haitian National Police (HNP).

*Composition:* Argentina, Benin, Canada, France, India, Mali, Niger, Senegal, Togo, Tunisia, and United States.

*Total cost:* US\$20.6 million.

**MIPONUH-United Nations Civilian Police Mission in Haiti**

*Duration:* December 1997 to March 2000.

*Location:* Haiti.

*Strength:* 300 civilian police personnel, including a special police unit, supported by a civilian establishment of some 72 international and 133 local personnel and 17 United Nations Volunteers.

*Mandate:* MIPONUH's main task was to assist the Government of Haiti in the professionalization of the Haitian National Police. MIPONUH, which succeeded the previous United Nations Missions in Haiti in December 1997, placed special emphasis on assistance at the supervisory level and on training specialized police units.

*Composition:* Argentina, Benin, Canada, France, India, Mali, Niger, Senegal, Togo, Tunisia, and United States.

*Total cost:* Not available.

**UNPSG-United Nations Civilian Police Support Group**

*Duration:* January 1998 to October 1998.

*Location:* Croatia's Danube region (Eastern Slavonia, Baranja, and Western Sirmium).

*Strength:* As of 30 September 1998, mission total: 114 police, supported by about 200 international and local civilian staff.

*Mandate:* UNPSG took over policing tasks on 16 January 1998 from UNTAES after that mission's mandate expired. The function of UNPSG was to continue monitoring the performance of the Croatian police in the Danube region, particularly with respect to the return of displaced persons, for a single nine-month period.

*Composition:* Argentina, Austria, Denmark, Egypt, Fiji, Finland, Indonesia, Ireland, Jordan, Kenya, Lithuania, Norway, Poland, Russian Federation, Sweden, Switzerland, Ukraine, and United States.

*Total cost:* Approximately US\$30 million.

**MINURCA-United Nations Mission in the Central African Republic**

*Duration:* April 1998 to February 2000.

*Location:* Central African Republic. *Strength:* Maximum authorization: 1,350 troops; 25 civilian police.

*Mandate:* Assisted in maintaining and enhancing security and stability in Bangui and immediate vicinity and in maintaining law and order there; supervised and controlled storage, and monitored the final disposition of weapons retrieved in disarmament exercise; ensured security and freedom of movement of UN personnel; assisted in capacity-building efforts of the national police; provided advice and technical support regarding conduct of legislative elections.

*Composition:* Benin, Burkina Faso, Cameroon, Canada, Chad, Côte d'Ivoire, Egypt, France, Gabon, Mali, Portugal, Senegal, Togo, and Tunisia.

*Annual cost:* US\$33.3 million.

**UNOMSIL-United Nations Mission of Observers in Sierra Leone**

*Duration:* July 1998 to October 1999.

*Location:* Sierra Leone.

*Strength:* Military component as of 30 July 1999: 51, consisting of 49 military observers and 2 troops, supported by a 2-person medical team. Civilian component as of 4 June 1999: 53, consisting of 29 international civilian personnel and 24 locally recruited staff.

*Mandate:* UNOMSIL's military element was to monitor the military and security situation; monitor the disarmament and demobilization of former combatants concentrated in secure areas of the country. UNOMSIL's civilian element was to advise, in coordination with other international efforts, the government of Sierra Leone and local police officials on police practice, training, re-equipment and recruitment; advise on the reform and restructuring of Sierra Leone's police force and monitor progress; report on violations of international humanitarian law and human rights in Sierra Leone and assist the government in its efforts to address the country's human rights needs.

*Composition:* Bangladesh, Croatia, the Czech Republic, Denmark, Egypt, France, India, Indonesia, Jordan, Kenya, Kyrgyzstan, Malaysia, Nepal, New Zealand, Norway, Pakistan, Russian Federation, Sweden, Thailand, the United Republic of Tanzania, United Kingdom, Uruguay, and Zambia.

*Annual cost:* US\$40.7 million.

#### **UNMIK-United Nations Interim Administration Mission in Kosovo**

*Duration:* June 1999 to present.

*Location:* Kosovo province of Yugoslavia.

*Strength:* About 1,957 personnel of UN and partner organizations on the ground, including about 1,297 UN civilian staff. Plus 3,159 civilian police deployed in all five regions of the province and at four border crossings as of 27 April 2000.

*Mandate:* In the wake of the Kosovar conflict, in which the Yugoslav government used hard-handed tactics to control an independence movement in the southern province, the UN Security Council set up UNMIK. Unprecedented in its scope, UNMIK encompasses the activities of three non-UN organizations under the UN's overall jurisdiction. UNMIK's mandate is to provide police and justice functions, and an interim civil administration (UN-led), spearhead reconstruction, including rebuilding the infrastructure (EU-led), and reestablish institutions (OSCE-led). A NATO-led force is to provide an international security presence.

*Annual cost:* US\$456.4 million as of 2000.

#### **UNTAET-United Nations Transitional Administration in East Timor**

*Duration:* October 1999 to May 2002.

*Location:* East Timor.

*Strength:* Maximum military component, 9,150; civilian police component, 1,640.

*Fatalities:* 17.

*Mandate:* As Portugal gave up its claim to East Timor in 1975, Indonesian troops moved in; the half-island territory was ruled by Indonesia from then until it became the independent state of East Timor on 20 May 2002. At elections on 30 August 1999, the people of East Timor voted for independence. UNTAET was established to administer the territory and exercise legislative and executive authority during the transition period. UNTAET consulted and worked in close cooperation with the East Timorese people.

*Composition:* Argentina, Australia, Austria, Bangladesh, Benin, Bolivia, Bosnia and Herzegovina, Brazil, Canada, Cape Verde, Chile, China, Denmark, Egypt, Fiji, France, Gambia, Ghana, Ireland, Italy, Jordan, Kenya, Korea (Republic of), Malaysia, Mozambique, Namibia, Nepal, New Zealand, Niger, Nigeria, Norway, Pakistan, Papua New Guinea, Philippines, Portugal, Russian

Federation, Samoa, Senegal, Singapore, Slovakia, Slovenia, Spain, Sri Lanka, Sweden, Thailand, Turkey, Ukraine, United Kingdom, United States, Uruguay, Vanuatu, Zambia, and Zimbabwe.

*Annual cost:* US\$476.8 million.

#### **UNAMSIL-United Nations Mission in Sierra Leone**

*Duration:* October 1999 to December 2005.

*Location:* Sierra Leone.

*Maximum strength:* 17,500 military personnel, including 260 military observers, and up to 170 police personnel.

*Fatalities:* 188.

*Mandate:* UNAMSIL was to cooperate with the government and the other parties in implementing the Lome Peace Agreement and to assist in the implementation of the disarmament, demobilization, and reintegration plan. On 7 February 2000, the Council revised the mandate of the Mission and expanded its size, as it did once again on 19 May 2000 and 30 March 2001.

*Composition:* Australia, Bangladesh, Bolivia, Cameroon, Canada, China, Croatia, Czech Republic, Denmark, Egypt, France, Gambia, Germany, Ghana, Guinea, India, Indonesia, Jordan, Kenya, Kyrgyzstan, Malawi, Malaysia, Mali, Mauritius, Namibia, Nepal, New Zealand, Niger, Nigeria, Norway, Pakistan, Russian Federation, Senegal, Slovakia, Sri Lanka, Sweden, Tanzania, Thailand, Turkey, Ukraine, United Kingdom, United States, Uruguay, Zambia, and Zimbabwe.

*Total cost:* US\$2.8 billion.

#### **MONUC-United Nations Organization Mission in the Democratic Republic of the Congo**

*Duration:* 30 November 1999 to present.

*Location:* Democratic Republic of the Congo and the subregion, including Namibia, Rwanda, Uganda, Zambia, and Zimbabwe.

*Strength:* 16,920 total uniformed personnel, including 15,019 troops, 729 military observers, and 1,072 police; supported by 856 international, 1,419 local civilian personnel, and 471 UN volunteers.

*Fatalities:* 83.

*Mandate:* After Democratic Republic of the Congo and five regional states signed the Lusaka Cease-fire Agreement in July 1999, the UN Security Council (in November 1999) set up MONUC to maintain liaison with the parties and carry out other tasks, incorporating UN personnel authorized in earlier resolutions. On 24 February 2000, the Council expanded the mission's mandate and size.

*Composition:* Algeria, Argentina, Bangladesh, Belgium, Benin, Bolivia, Bosnia and Herzegovina, Burkina Faso, Cameroon, Canada, Central African Republic, Chad, China, Côte d'Ivoire, Czech Republic, Denmark, Egypt, France, Ghana, Guatemala, Guinea, India, Indonesia, Ireland, Jordan, Kenya, Madagascar, Malawi, Malaysia, Mali, Mongolia, Morocco, Mozambique, Nepal, Netherlands, Niger, Nigeria, Norway, Pakistan, Paraguay, Peru, Poland, Romania, Russian Federation, Senegal, Serbia and Montenegro, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Tunisia, Turkey, Ukraine, United Kingdom, Uruguay, Vanuatu, Yemen, and Zambia.

*Annual cost:* US\$1,153.89 million.

#### **UNMEE-United Nations Mission in Ethiopia and Eritrea**

*Duration:* 31 July 2000 to present.

*Location:* Eritrea and Ethiopia.

*Strength:* 3,359 military personnel, including 206 military observers; supported by 183 international and 226 local civilians, and 65 UN volunteers.

*Fatalities:* 13.

*Mandate:* UMEE was established following the cessation of hostilities between Eritrea and Ethiopia in June 2000, to maintain liaison with the parties and establish the mechanism for verifying the cease-fire. In September, UNMEE's role was expanded to monitor the cessation of hostilities and assist in ensuring observance of security commitments. In August 2002, UNMEE engaged in demining in key areas to support demarcation, and provided administrative and logistical support for the Field Offices of the Boundary Commission.

*Composition:* Algeria, Austria, Bangladesh, Bosnia and Herzegovina, Bulgaria, China, Croatia, Czech Republic, Denmark, Finland, France, Gambia, Germany, Ghana, Greece, Guatemala, India, Jordan, Kenya, Malaysia, Namibia, Nepal, Nigeria, Norway, Paraguay, Peru, Poland, Romania, Russian Federation, South Africa, Spain, Sweden, Switzerland, Tanzania, Tunisia, Ukraine, United States, Uruguay and Zambia.

*Annual cost:* US\$185.99 million.

#### **UNMISSET-United Nations Mission of Support in East Timor**

*Duration:* 20 May 2002 to 20 May 2005.

*Location:* East Timor.

*Peak strength:* 4,776 military personnel and 771 civilian police, supported by 465 international and 856 local civilians.

*Fatalities:* 25.

*Mandate:* East Timor became an independent state on 20 May 2002. UNMISSET was established by the Security Council to provide assistance to East Timor until all operational responsibilities are fully devolved to the East Timor authorities, including law enforcement and security.

*Composition:* Argentina, Australia, Austria, Bangladesh, Benin, Bolivia, Bosnia and Herzegovina, Brazil, Bulgaria, Canada, Chile, China, Croatia, Denmark, Egypt, Fiji, Gambia, Ghana, Ireland, Japan, Jordan, Kenya, Republic of Korea, Malaysia, Mozambique, Namibia, Nepal, New Zealand, Niger, Nigeria, Norway, Pakistan, Peru, Philippines, Portugal, Russian Federation, Samoa, Senegal, Serbia and Montenegro, Singapore, Slovakia, Slovenia, Spain, Sri Lanka, Sweden, Thailand, Turkey, Ukraine, United Kingdom, United States, Uruguay, Vanuatu, Zambia, and Zimbabwe.

*Total cost:* Approximately US\$565.5 million.

#### **UNMIL-United Nations Mission in Liberia**

*Duration:* September 2003-present

*Location:* Liberia

*Strength as of 31 January 2006:* 16,065 total uniformed personnel, including 14,832 troops and 205 military observers; 1,028 police supported by 549 international civilian personnel, 844 local staff and 242 United Nations volunteers.

*Fatalities:* 68

*Mandate:* UNMIL was established by Security Council resolution 1509 (2003) to support the implementation of the ceasefire agreement and the peace process; protect United Nations staff, facilities and civilians; support humanitarian and human rights activities; as well as assist in national security reform, including

national police training and formation of a new, restructured military.

*Composition:* Argentina, Bangladesh, Benin, Bolivia, Bosnia and Herzegovina, Brazil, Bulgaria, China, Croatia, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Ethiopia, Fiji, Finland, France, Gambia, Germany, Ghana, Indonesia, Ireland, Jamaica, Jordan, Kenya, Kyrgyzstan, Malawi, Malaysia, Mali, Moldova, Namibia, Nepal, Niger, Nigeria, Norway, Pakistan, Paraguay, Peru, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Samoa, Senegal, Serbia and Montenegro, Sierra Leone, Sri Lanka, Sweden, Togo, Turkey, Uganda, Ukraine, United Kingdom, United States, Uruguay, Yemen, Zambia, and Zimbabwe.

*Annual Cost:* US\$760.57 million.

#### **MINUCI-United Nations Mission in Côte d'Ivoire**

*Duration:* May 2003-April 2004.

*Location:* Côte d'Ivoire

*Strength as of 29 February 2004:* 75 military observers supported by 54 international civilian personnel and 55 local staff.

*Mandate:* Having determined that the situation in Côte d'Ivoire constituted a threat to international peace and security in the region, the Security Council set up, on 13 May 2003, a political mission-MINUCI-to facilitate the implementation by the Ivorian parties of an agreement signed by them (the Linas-Marcoussis Agreement) and to complement the operations of the peacekeeping force of the Economic Community of West African States and French troops. On 4 April 2004, MINUCI was replaced by a UN peacekeeping operation-the United Nations Operation in Côte d'Ivoire (UNOCI).

*Composition:* Austria, Bangladesh, Benin, Brazil, Gambia, Ghana, India, Ireland, Jordan, Kenya, Nepal, Niger, Nigeria, Pakistan, Paraguay, Philippines, Poland, the Republic of Moldova, Romania, Russian Federation, Senegal, Tunisia and Uruguay.

*Annual Cost:* US\$29.9 million.

#### **UNOCI-United Nations Operation in Côte d'Ivoire**

*Duration:* April 2004-present.

*Location:* Côte d'Ivoire

*Strength as of 31 January 2006:* 7,594 total uniformed personnel, including 6,702 troops, 195 military observers; 697 police supported by 362 international civilian personnel, 424 local staff and 202 United Nations volunteers.

*Fatalities:* 15.

*Mandate:* Having determined that the situation in Côte d'Ivoire continued to pose a threat to international peace and security in the region and acting under Chapter VII of the UN Charter, the Security Council, by its resolution 1528 of 27 February 2004, decided to establish the United Nations Operation in Côte d'Ivoire (UNOCI) as from 4 April 2004. UNOCI replaced the United Nations Mission in Côte d'Ivoire (MINUCI), a political mission set up by the Council in May 2003 with a mandate to facilitate the implementation by the Ivorian parties of the peace agreement signed by them in January 2003.

*Composition:* Bangladesh, Benin, Bolivia, Brazil, Cameroon, Canada, Central African Republic, Chad, China, Croatia, Djibouti, Dominican Republic, Ecuador, El Salvador, France, Gambia, Ghana, Guatemala, Guinea, India, Ireland, Jordan, Kenya, Lebanon, Madagascar, Moldova, Morocco, Namibia, Nepal, Niger, Nigeria, Pakistan, Paraguay, Peru, Philippines, Poland, Portugal, Ro-

mania, Russian Federation, Senegal, Serbia and Montenegro, Sri Lanka, Togo, Tunisia, Turkey, Uganda, Uruguay, Vanuatu, Yemen and Zambia.

*Annual Cost:* us\$438.17 million.

#### **MINUSTAH-United Nations Stabilization Mission in Haiti**

*Duration:* June 2004-present

*Location:* Haiti

*Strength as of 31 January 2006:* 9,295 total uniformed personnel, including 7,519 troops and 1,776 police, supported by 455 international civilian personnel, about 516 local civilian staff and 161 United Nations volunteers.

*Fatalities:* 17

*Mandate:* Having determined that the situation in Haiti continued to constitute a threat to international peace and security in the region and acting under Chapter VII of the UN Charter, the Security Council, by its resolution 1542 of 30 April 2004, decided to establish the United Nations Stabilization Mission in Haiti (MINUSTAH) and requested that authority be transferred from the Multinational Interim Force (MIF), authorized by the Security Council in February 2004, to MINUSTAH on 1 June 2004.

*Composition:* Argentina, Benin, Bolivia, Bosnia and Herzegovina, Brazil, Burkina Faso, Cameroon, Canada, Chad, Chile, China, Croatia, Ecuador, Egypt, El Salvador, France, Ghana, Guatemala, Guinea, Jordan, Malaysia, Mali, Mauritius, Morocco, Nepal, Niger, Nigeria, Pakistan, Paraguay, Peru, Philippines, Romania, Russia, Senegal, Sierra Leone, Spain, Sri Lanka, Togo, Turkey, United States, Uruguay, Vanuatu, Yemen and Zambia.

*Annual Cost:* us\$541.30 million.

#### **ONUB-United Nations Operation in Burundi**

*Duration:* June 2004-present

*Location:* Burundi

*Strength as of 31 January 2006:* 5,410 total uniformed personnel, including 5,153 troops, 170 military observers and 87 police, supported by 318 international civilian personnel and 389 local civilian staff and 135 United Nations volunteers.

*Fatalities:* 20

*Mandate:* Having determined that the situation in Burundi continued to constitute a threat to international peace and security in the region and acting under Chapter VII of the UN Charter, the Security Council, by its resolution 1545 of 21 May 2004, decided to establish the United Nations Operation in Burundi (ONUB) in order to support and help to implement the efforts undertaken by Burundians to restore lasting peace and bring about national reconciliation, as provided under the Arusha Agreement.

*Composition:* Algeria, Bangladesh, Belgium, Benin, Bolivia, Burkina Faso, Cameroon, Chad, China, Egypt, Ethiopia, Gambia, Ghana, Guatemala, Guinea, India, Jordan, Kenya, Kyrgyzstan, Madagascar, Malawi, Malaysia, Mali, Mozambique, Namibia, Nepal, Niger, Nigeria, Pakistan, Paraguay, Peru, Philippines, Portugal, Republic of Korea, Romania, Russia, Senegal, Serbia and Montenegro, South Africa, Spain, Sri Lanka, Thailand, Togo, Tunisia, Uruguay, Yemen and Zambia

*Annual Cost:* us\$307.69 million

#### **UNMIS-United Nations Mission in the Sudan**

*Duration:* March 2005-present

*Location:* Sudan

*Strength as of 31 January 2006:* 6,300 total uniformed personnel, including 5,308 troops, 593 military observers, and 399 police supported by 579 international civilian personnel, 1,075 local civilian and 80 United Nations volunteers.

*Fatalities:* 1.

*Mandate:* The Security Council, by its resolution 1590 of 24 March 2005, decided to establish the United Nations Mission in the Sudan (UNMIS) to support implementation of the Comprehensive Peace Agreement signed by the Government of Sudan and the Sudan People's Liberation Movement/Army on 9 January 2005; and to perform certain functions relating to humanitarian assistance, and protection and promotion of human rights.

*Composition:* Argentina, Australia, Austria, Bangladesh, Belgium, Benin, Bolivia, Brazil, Burkina Faso, Cambodia, Canada, China, Croatia, Denmark, Ecuador, Egypt, El Salvador, Fiji, Finland, Gabon, Germany, Ghana, Greece, Guatemala, Guinea, India, Indonesia, Italy, Jamaica, Jordan, Kenya, Kyrgyzstan, Malawi, Malaysia, Mali, Moldova, Mongolia, Mozambique, Namibia, Nepal, New Zealand, Nigeria, Norway, Pakistan, Paraguay, Peru, Philippines, Poland, Republic of Korea, Romania, Russia, Rwanda, Samoa, Sri Lanka, Sweden, Switzerland, Tanzania, Thailand, Turkey, Uganda, Ukraine, United Kingdom, United States, Yemen, Zambia, and Zimbabwe.

*Annual Cost:* us\$969.47 million.

## **SOME CASE HISTORIES OF UN ACTION**

The cases are arranged in order of the dates when the disputes were first brought before the UN.

### **The Middle East**

*Establishment of Israel.* In April 1947, the General Assembly, at a special session, established a Special Committee on Palestine to make recommendations for the future status of the British mandate. The resulting partition plan, which divided Palestine into an Arab and a Jewish state, with an international regime for the city of Jerusalem, was adopted by the General Assembly in November of the same year. A UN Palestine Commission was established to carry out the recommendations, and the Security Council was requested to implement the plan. The date for termination of the British mandate and withdrawal of British troops was 1 August 1948. However, violent fighting broke out between the Arab nations and the Jewish community in Palestine. The Security Council thereupon established a Truce Commission consisting of Belgium, France, and the United States, while the General Assembly authorized a UN Mediator for Palestine to replace the Palestine Commission.

On 14 May 1948, the Jewish state of Israel was proclaimed. Almost immediately, the Arab nations instituted full-scale armed action. Following a four-week truce at the request of the Security Council, hostilities were renewed on 8 July. This time, the Security Council, invoking Chapter VII of the charter, ordered the governments concerned to desist from further military action and proclaimed a cease-fire.

Through the UN mediator, Count Folke Bernadotte, the Security Council then established a UN Truce Supervision Organization (UNTSO) of military observers from different countries, with headquarters in Jerusalem, and assigned it the task of patrolling the frontiers. Fighting continued, however, and Count Bernadotte

was assassinated in September 1948. During its regular session in the fall of 1948, the General Assembly established a three-member Conciliation Commission (France, Turkey, and the United States) to negotiate a settlement and also established the UN Relief for Palestine Refugees (later replaced by UNRWA). Following negotiations with the acting UN mediator, Ralph Bunche, in the first half of 1949, Israel, Egypt, Jordan, Lebanon, and Syria signed armistice agreements. The agreements provided for mixed armistice commissions to check on their implementation. UNTSO continued in operation to observe the cease-fire and is still in existence, investigating complaints of armistice violations and reporting to the Security Council. The Conciliation Commission also continues to function, still trying to fulfill its mandate from the General Assembly to assist the parties concerned to negotiate a final settlement of all issues.

*The Suez Crisis.* In July 1956, Egypt nationalized the Suez Canal. In September, after Egypt's rejection of the London Conference plan for international control of the canal, France and the United Kingdom informed the Security Council that Egypt's attitude was endangering the peace. Israel invaded Egypt's Gaza Strip the following month, and a Security Council resolution calling for a cease-fire and the withdrawal of Israeli troops was vetoed by France and the United Kingdom. France and the United Kingdom began armed intervention in the area, and thereafter the situation was handled exclusively by the General Assembly under the Uniting for Peace Resolution. In November 1956, the General Assembly established the UN Emergency Force (UNEF) to secure and supervise cessation of hostilities. Since Israel would not permit UNEF contingents on territory under its control, the force was stationed on the Egyptian side of the demarcation line. Withdrawal of British and French forces was completed by December 1956 and of Israeli forces by March 1957. The canal was cleared by April of the same year, and Egypt declared it open to international traffic (Israeli ships were barred, however).

*The Six-Day War, 1967.* By the mid-1960s, the tension between Israel and the Arab countries had begun to manifest itself in frequent and sometimes major hostilities across the various armistice borders. On 18 May 1967, the United Arab Republic (UAR), which two days earlier had begun deploying troops to the armistice demarcation line in the Sinai peninsula, officially requested Secretary-General U Thant to withdraw all UNEF units from the area. After consultations with the UNEF Advisory Committee, U Thant ordered the withdrawal of the force that evening.

U Thant's prompt compliance with the UAR's request aroused severe criticism in Israel and other quarters. His view was that both legal and practical considerations required him to act without delay. In subsequent reports, he pointed out that UNEF was not an enforcement operation ordered by the Security Council but a peacekeeping operation dependent on the consent of the host country. His unilateral decision to disband the force was, however, probably the most controversial of his career as Secretary-General. Some of his critics challenged the legal validity of his stand, while many others believed that he could have used his office to try to persuade the UAR at least to agree to a postponement of its request for UNEF's withdrawal, which they felt only helped pave the way for the crisis that followed.

The UAR occupied the fortress Sharm el-Sheikh, which commands the Strait of Tiran at the mouth of the Gulf of Aqaba. On

22 May 1967, it declared the gulf closed to Israeli ships and to other ships bound for Israel with strategic goods. Israel found its sole direct access to the Red Sea blockaded and considered the blockade, together with the military agreement that the UAR had recently signed with Jordan, a justified *casus belli*. Regarding the assurances of help that it had received from Western countries in the course of concentrated diplomatic activity intended to avert the impending war as insufficient, it simultaneously attacked the UAR, Jordan, and Syria on 5 June. Within three days, it had deeply penetrated the territory of each country.

The Security Council, in emergency session, demanded a cease-fire on 6 June 1967. Israel announced that it would accept a cease-fire provided that the other parties accepted it. Jordan announced acceptance on 7 June, the UAR on 8 June, and Syria on 9 June, and a cease-fire accordingly took effect on 10 June. Violations of the cease-fire, especially along the Israel-Syria border, continued until 13 June, when Secretary-General U Thant was able to report the "virtual cessation" of all military activity. By then, Israel had voluntarily withdrawn its forces from much of the territory that it had occupied but had retained control of several areas regarded as essential to its security—namely, the whole of the UAR's Sinai peninsula up to the Suez Canal, including Sharm el-Sheikh and the Gaza Strip; the Jordanian part of the city of Jerusalem and the West Bank area of the Jordan River; and the Golan Heights, in Syrian territory overlooking the Sea of Galilee. On 14 June, the Security Council adopted a resolution calling upon Israel to ensure the "safety, welfare and security" of the inhabitants of the occupied areas and upon the "governments concerned" scrupulously to respect the humanitarian principles governing the treatment of prisoners of war contained in the 1949 Geneva Convention.

An emergency special session of the General Assembly, held from 19 June to 21 July 1967, failed to produce a resolution that might serve as the frame of reference for a settlement. The division of opinion between the supporters of the Arabs, including the Soviet bloc and several African and Asian countries, and the supporters of the Israeli position, including the United States and several Western countries, was too deep to be bridged. However, the General Assembly did adopt, by a vote of 99 in favor with 20 abstentions, a resolution declaring invalid Israel's proclamation on 28 June that Jerusalem would thenceforward be a unified city under Israeli administration.

*Resolution 242.* For many months, the Security Council was equally unsuccessful in the attempt to devise an acceptable formula for establishing permanent peace in the area. Finally, on 22 November 1967, after weeks of quiet diplomacy and closed discussions, it adopted Resolution 242, which provided the basis of UN efforts to achieve a definitive settlement. The resolution, based on a British draft, establishes certain principles for a peaceful settlement without going into contentious specifics or prescribing priorities. The principles include withdrawal of Israeli forces from occupied areas (the text deliberately avoided requesting withdrawal from "all" occupied areas, in view of Israel's declaration that it would not give up certain strategic places, including Jordanian Jerusalem); an end to states of belligerency; respect for the rights of all states in the area to peaceful existence; and an affirmation of the need to guarantee free navigation through international waterways, settle the long-standing Palestine refugee problem, and guarantee the territorial integrity and political independence

of the countries involved. All parties—except, initially, Syria—accepted the formula.

*The October War, 1973.* Full-scale hostilities broke out again in the Suez Canal and Israel-Syria sectors on 6 October 1973. The Security Council met four times without considering any draft resolutions and on 12 October decided to reconvene at a later date after consultations. It did so on 21 October at the request of the United States and the USSR and the next day adopted Resolution 338, which called for the immediate cessation of all military activities. It also decided that negotiations between the concerned parties for a just and durable peace should begin at once. China did not participate in this or other votes on the question. Israel, Syria, and Egypt agreed to comply, each stating conditions.

A second UN Emergency Force (UNEF II) was established by the Security Council on 25 October 1973. Its personnel were to be drawn from member states, with the exception of the permanent members of the council, and its eventual strength was to be 7,000. As the force was assembled, it took up stations in zones of disengagement between Israel and Egypt.

A peace conference on the Middle East was convened in December 1973 in Geneva under the auspices of the UN and the co-chairmanship of the United States and the USSR. The work of the conference came to fruition at kilometer 101 on the Cairo-Suez road on 18 January 1974, when the chief of staff of the Egyptian Armed Forces and the chief of staff of the Israel Defense Forces signed an Agreement on Disengagement of Forces, with the UNEF commander as witness. The agreement came into effect on 25 January 1974.

It was not until 31 May 1974, in Geneva, that Syria and Israel signed an Agreement on Disengagement, which called for the creation of a UN Disengagement Observer Force (UNDOF) and specified that it did not represent a peace agreement but a step toward peace. On the same day, after the signing, the Security Council adopted a resolution jointly sponsored by the United States and the USSR that set up UNDOF. China and Iraq did not participate in the vote. The strength of UNDOF was to be 1,250, its components to be drawn from members of the UN that were not permanent members of the Security Council. In 2006, UNDOF comprised some 1,000 troops, provided by Austria, Canada, Japan, Nepal, Poland, and the Slovak Republic, deployed between the Israeli and Syrian forces on the Golan Heights.

*Developments in Lebanon.* On 15 March 1978, following a Palestinian commando raid in Israel, Israeli forces invaded southern Lebanon. On 19 March, the Security Council called on Israel to cease its military action against Lebanese territory and decided to establish a UN Interim Force in Lebanon (UNIFIL) to confirm the withdrawal of Israeli forces and assist the Lebanese government in ensuring the return of its effective authority in the area.

The mandate of the 6,000-man UNIFIL has been extended by the Security Council since then. Perhaps its greatest crisis occurred on the morning of 6 June 1982, when Israeli forces, comprising two mechanized divisions with air and naval support, moved into Lebanese territory, bypassing positions occupied by UNIFIL. The Israeli invasion was followed by a few days of intensive exchanges of fire with PLO and Syrian forces and by Israeli air attacks on targets in the Beirut area. In subsequent days and weeks, the Security Council met numerous times to demand

a cease-fire, withdrawal of Israeli forces, and respect for the rights of the civilian population.

UNIFIL's mandate was enlarged to extend protection and humanitarian assistance to the population of the area; an international survey mission was established to assess the situation on the spot; a UN observer group was deployed in and around Beirut to ensure that a cease-fire was fully observed by all concerned; and, at Lebanon's request, a 4,000-man multinational force, composed of contingents from France, Italy, and the United States (and later the United Kingdom), was deployed in the Beirut area. The force was withdrawn in 1984.

As of 31 January 2006, UNIFIL comprised some 1,980 troops, provided by France, Ghana, India, Ireland, Italy, Poland, and Ukraine. It has continued to assist the Lebanese government in ensuring the return of its effective authority in southern Lebanon.

*The Question of Palestinian Rights.* Concurrently with its consideration of the situation in the Middle East and of the role of peacekeeping forces in the region, the UN has been concerned with the question of Palestinian rights. In 1968, the General Assembly established the Special Committee to Investigate Israeli Practices Affecting the Human Rights of the Population of the Occupied Territories, which reports annually to it, and in 1974, it reaffirmed "the inalienable rights of the Palestinian people" to unhindered self-determination, national independence, and sovereignty. The General Assembly recognized the Palestinian people as a principal party in the establishment of a just and durable peace in the Middle East, and it invited the PLO to participate as an observer in its work and in UN conferences.

In 1975, the General Assembly established the Committee on the Exercise of the Inalienable Rights of the Palestinian People and asked it to recommend a program for the implementation of those rights. The committee recommended that a timetable be established by the Security Council for the complete withdrawal of Israeli forces from the areas occupied in 1967. The evacuated areas, with all properties and services intact, would be taken over by the UN, which, with the cooperation of the League of Arab States, would subsequently hand them over to the PLO as the representative of the Palestinian people. The General Assembly has endorsed the committee's recommendations at successive sessions since 1976, but the Security Council has not acted on them.

An International Conference on the Question of Palestine, held in Geneva in the summer of 1983, adopted a declaration on Palestine and a program of action for the achievement of Palestinian rights, which was later endorsed by the General Assembly. The conference also called for the convening of an international conference on the Middle East, a proposal which the General Assembly endorsed.

At its 1987 session, the General Assembly reaffirmed its conviction that "the question of Palestine is the core of the conflict in the Middle East and that no comprehensive, just and lasting peace in the region will be achieved without the full exercise by the Palestinian people of its inalienable national rights and the immediate, unconditional and total withdrawal of Israel from all the Palestinian and other Arab occupied territories." The General Assembly again called for the convening of an international peace conference on the Middle East under the auspices of the UN and at the invitation of the Secretary-General, with the participation of the

five permanent members of the Security Council and all the parties to the Arab-Israeli conflict, including the PLO.

### Korea

At the end of World War II, the Allied powers agreed that Soviet troops would accept the Japanese surrender north of the 38th parallel in Korea and that United States forces would accept it south of that line. The two occupying powers established a joint commission to set up a provisional government for the country, but the commission could not come to an agreement, and the United States brought the matter to the General Assembly in September 1947. In November, the General Assembly created a Temporary Commission on Korea to facilitate nationwide elections. However, since the commission was denied access to northern Korea, it was only able to supervise elections in the southern half of the country. These elections took place in May 1948, and in August, the United States transferred governmental and military functions to the duly elected government of the Republic of Korea (ROK). Meanwhile, a separate government was established in the north. In December 1948, the General Assembly, over the objection of the USSR, established a seven-member UN Commission on Korea (UNCOK) to replace the Temporary Commission and to seek reunification.

On 25 June 1950, both UNCOK and the United States informed the Security Council that the Democratic People's Republic of Korea (DPRK) had attacked the ROK that morning. The council met on the same day and (the USSR being absent at the time in protest against a council decision on Chinese representation) declared the attack to be a breach of the peace. It called for a cease-fire, withdrawal of DPRK forces to the 38th parallel, and the assistance of member states to the ROK. As the fighting continued, the Security Council, on 27 June, recommended that UN members furnish assistance to the ROK to repel the attack and restore peace and security. On the same day, the United States announced that it had ordered its own air and sea forces to give cover and support to the South Korean troops. On July 7, the Security Council voted to recommend that states make forces available to a UN Unified Command under the United States. (It should be noted that although the council had used the language of Chapter VII of the charter—"breach of the peace," etc.—it did not specifically invoke the chapter itself or use its constitutional power thereunder to order all states to comply with its decision.) In all, 16 nations supplied troops: Australia, Belgium, Canada, Colombia, Ethiopia, France, Greece, Luxembourg, Netherlands, New Zealand, Philippines, Thailand, Turkey, South Africa, the United Kingdom, and the United States; the ROK also placed its troops under the UN Command.

On 1 August 1950, the USSR returned to the Security Council (having by then been absent for six months) and declared that all the actions and decisions that had previously been taken by the council were illegal. On 6 November, the USSR vetoed a resolution proposed by the United States. As a result of the ensuing deadlock, the General Assembly virtually took over the handling of the entire situation (the Security Council even agreeing unanimously, on 31 January 1951, to remove the item from its agenda). The legalistic device by which the General Assembly voted itself competent to continue with collective measures that under the

charter are the exclusive preserve of the Security Council was the Uniting for Peace Resolution.

Even before the Security Council became deadlocked, the General Assembly had considered an agenda item entitled "The Problem of the Independence of Korea." Under this item, it established the Commission for the Unification and Rehabilitation of Korea (UNCURK) to replace UNCOK. Then, on 6 November 1950, events were given a new twist when the People's Republic of China entered the war on the side of the DPRK. The General Assembly promptly added the agenda item entitled "Intervention of the Central People's Government of the People's Republic of China in Korea." Under this item, the General Assembly established the UN Korean Reconstruction Agency (UNKRA) and a three-member Cease-fire Group that included the president of the General Assembly to determine a basis for ending hostilities. Following China's refusal to cooperate, the General Assembly, in February 1951, adopted a resolution that that government had engaged in aggression. It also established a Good Offices Committee and an Additional Measures Committee to supplement the Cease-fire Group. Truce negotiations began in July 1951, but fighting continued until 1953, when an armistice agreement was signed on 27 July. A year later, the General Assembly called for the political conference that had been provided for in the armistice agreement. The conference was held between April and June 1954, but it failed to resolve problems and negotiate reunification of the country. UNKRA ceased operations in 1960, and UNCURK was dissolved by a consensus vote of the 1973 General Assembly.

On 18 November 1975, the General Assembly adopted two resolutions—one with Western support, the other with that of the Communist states—which were to some extent conflicting but which both favored dissolution of the UN Command at an early date. The first resolution called for negotiations among the DPRK, the ROK, China, and the United States. The second called for negotiations between the DPRK and the United States. The DPRK declared that it would not participate in negotiations with the ROK.

As of April 2006, the UN Command was still in operation, and the Military Armistice Commission (MAC), set up to implement the armistice terms, continued to meet regularly in the Joint Security Area, commonly known as the Truce Village of Panmunjom.

### Kashmir

Kashmir (officially, Jammu and Kashmir) was originally one of the princely states of British India. Under the partition plan and the Indian Independence Act of 1947, it became free to accede to either India or Pakistan, on both of which it borders. On 1 January 1948, India reported to the Security Council that tribesmen were invading Kashmir with the active assistance of Pakistan. After the invasion had begun, the maharajah of Kashmir had requested accession to India and India had accepted on the understanding that, once normal conditions were restored, the question of accession would be settled by a plebiscite. Pakistan declared that Kashmir's accession to India was illegal.

The Security Council, after asking the parties to mediate, called for withdrawal of Pakistani nationals, reduction of Indian forces, and arrangement of a plebiscite on Kashmir's accession to India. A UN Commission for India and Pakistan (UNCIP) was sent to

mediate in July 1948. By 1949, UNCIP had effected a cease-fire and was able to state that principles on a plebiscite had been accepted by both governments. In July 1949, agreement was reached on a cease-fire line, and UNCIP appointed a group of military observers to watch for violations. However, it was unable to reach agreement on terms for the demilitarization of Kashmir prior to a plebiscite.

In March 1951, after several attempts at further negotiation had failed, the Security Council decided to continue the observer group—now called the UN Military Observer Group in India and Pakistan (UNMOGIP)—to supervise the cease-fire within Kashmir itself. Despite continued mediation, the differences between the parties remained. The Security Council repeatedly considered the matter without achieving appreciable progress.

In August 1965 there was a sudden outbreak of serious hostilities. UNMOGIP reported clashes between the regular armed forces of both India and Pakistan, and fighting continued into September, although the Security Council had twice called for a cease-fire. Following a report that fighting had spread to the international border between India and West Pakistan, the council, on September 20, requested that both sides issue orders for a cease-fire within two days and withdraw their forces to their previously held positions. The cease-fire was accepted by both states, but continuous complaints of violations were made by each side. Accordingly, the Council requested Secretary-General U Thant to increase the size of UNMOGIP and to establish the UN India-Pakistan Observation Mission (UNIPOM) on the India-West Pakistan border.

On 5 November 1965, the Security Council urged that a meeting between the parties be held as soon as possible and that a plan for withdrawal containing a time limit for execution be developed. U Thant appointed a representative to meet with authorities of both countries on the question. On 17 February 1966, he informed the council that a plan and rules for withdrawals had been worked out. He also stated that, on 10 January, the prime minister of India and the president of Pakistan had agreed at Tashkent, where they had met at the initiative of the USSR, that their respective forces would be withdrawn to their original positions by 25 February. Thus, though the crisis remains quiescent, the conflict itself is unresolved, and UNMOGIP is still in operation, with some 40 military observers stationed in the area.

In 1971, another conflict between the two countries broke out, this time in connection with the civil strife in East Pakistan, which later became the independent state of Bangladesh. As nearly 10 million refugees streamed into neighboring India, tension increased in the subcontinent. U Thant conveyed his serious concern to the president of Pakistan and the prime minister of India and, with the consent of the host governments, set up two large-scale humanitarian programs. One of these, with the UN high commissioner for refugees as the focal point, was for the relief of the refugees in India. The other was for assistance to the distressed population in East Pakistan. U Thant's actions were subsequently unanimously approved by the General Assembly.

On 20 July 1971, the Secretary-General drew the attention of the president of the Security Council to the steady deterioration of the situation in the region, which he described as a potential threat to peace and security. He noted that humanitarian, economic, and

political problems were involved, and he indicated that the UN should play a more forthright role to avert further deterioration. In October of that year, he offered his good offices to the governments of India and Pakistan, but India declined. Clashes broke out between the two countries, and on 3 December, U Thant notified the Security Council under Article 99 of the charter that the situation in the region constituted a threat to international peace and security.

After a cease-fire had put an end to the fighting on 17 December 1971, the Security Council adopted a resolution demanding the strict observance of the cease-fire until withdrawal of all armed forces to their previous positions should take place. The council also called for international assistance to relieve the suffering and for the appointment of a special UN representative to lend his good offices for the solution of humanitarian problems. During 1972, the refugees, with UN assistance, returned to their homeland. The UN relief operation helped pave the way for the rehabilitation of the shattered economy of Bangladesh, which became a member of the UN in 1974.

As of 31 January 2006, UNMOGIP consisted of 44 military observers from nine countries: Belgium, Chile, Croatia, Denmark, Finland, Italy, the Republic of Korea, Sweden, and Uruguay.

### The Congo (Zaire)

One week after the Democratic Republic of the Congo (formerly Zaire), a former Belgian colony, had become independent on 30 June 1960, troops of the Force Publique mutinied against the Belgian officers, demanding higher pay and promotions. As violence and general disorder spread rapidly throughout the country, Belgium rushed troops to the area to protect its extensive mining interests. On 11 July, Katanga, the richest province of the country by virtue of its Belgian-controlled copper mines, proclaimed its secession from the new state. On the following day, President Kasavubu and Prime Minister Patrice Lumumba appealed for UN military assistance “to protect the national territory against acts of aggression committed by Belgian metropolitan troops.”

In a series of meetings, the Security Council called for the withdrawal of Belgian troops and authorized Secretary-General Hammarskjöld to provide the Congolese government with such military and technical assistance as might be necessary until the national security forces, through the efforts of the government with UN assistance, might be able, in the government's opinion, to meet their tasks fully.

Within two days, contingents of a UN force provided by a number of countries, including Asian and African states, began to arrive in the Congo, followed by UN civilian experts to help ensure the continued operation of essential services. Over the next four years, the task of the UN Operation in the Congo (UNOC) was to help the Congolese government restore and maintain the political independence and territorial integrity of the country, maintain law and order, and to put into effect a wide and long-term program of training and technical assistance.

At its peak strength, the UN force totaled nearly 20,000 officers and men. The instructions of the Security Council to the force were strengthened early in 1961 after the assassination of Lumumba in Katanga. The force was to protect the Congo from outside interference, particularly by evacuating foreign mercenaries and

advisers from Katanga and preventing clashes and civil strife, by force if necessary as a last resort.

Following the reconvening of the Congolese parliament in August 1961 under UN auspices, the main problem was the attempted secession, led and financed by foreign elements, of the province of Katanga, where secessionist gendarmes under the command of foreign mercenaries clashed with UN forces. Secretary-General Hammarskjöld died on 17 September 1961, when his plane crashed on the way to Ndola (in what is now Zambia), where talks were to be held for the cessation of hostilities.

In February 1963, after Katanga had been reintegrated into the national territory of the Congo, a phasing out of the force was begun, aimed at its termination by the end of that year. At the request of the Congolese government, however, the General Assembly authorized the stay of a reduced number of troops for a further six months. The force was completely withdrawn by 30 June 1964. Civilian aid continued in the largest single program of assistance undertaken by the UN up to that time, with some 2,000 experts at work in the nation.

### Cyprus

Cyprus was granted independence from British rule in 1960 through agreements signed by the United Kingdom, Greece, and Turkey. Under these agreements, Cyprus was given a constitution containing certain unamendable provisions guaranteeing specified political rights to the Turkish minority community. The three signatory powers were constituted guarantors of Cyprus's independence, each with the right to station troops permanently on the island.

The granting of independence had been preceded by a prolonged conflict between the Greek and Turkish communities on the future status of Cyprus. The Greek Cypriots, comprising 80 percent of the total population, originally had wanted some form of union with Greece, thereby provoking a hostile reaction among the Turkish Cypriots, who countered by demanding partition. Each side was supported in its aims by the country of its ethnic origin. Independence did nothing to alleviate dissension on the island. Both sides were dissatisfied with the constitution that had been granted them, but their aims were diametrically opposed. The Turks wanted partition or a type of federal government, whereas the Greeks wanted a constitution free of outside controls and of provisions perpetuating the division between the two communities.

After three years of continuous tension, the Cyprus government, under Greek Cypriot president Makarios, complained to the Security Council on 27 December 1963 that Turkey was interfering in its internal affairs and committing acts of aggression. Against a background of mounting violence on the island, the council considered the matter but did not immediately take any peacekeeping action.

With the consent of Cyprus, British troops had been trying to restore order during the crisis. However, in mid-February 1964, the United Kingdom informed the Security Council that its efforts to keep the peace would have to be augmented. Accordingly, on 4 March 1964, the council unanimously authorized the establishment of the UN Peacekeeping Force in Cyprus (UNFICYP) for a three-month period and at the same time requested Sec-

retary-General U Thant to designate a UN mediator to promote a substantive settlement. UNFICYP became operational on 27 March 1964, with a mandate to prevent the recurrence of fighting, help maintain law and order, and promote a return to normal conditions.

A coup d'état on 15 July 1974 by Greek Cypriot and Greek elements opposed to President Makarios forced him to flee the country. This was quickly followed by military intervention by Turkey, whose troops subsequently established Turkish Cypriot control over the northern part of Cyprus. Four days after a cease-fire went into effect on 16 August 1974, the UN high commissioner for refugees was asked to coordinate humanitarian assistance in Cyprus, where more than 200,000 persons had been dislocated as a result of the hostilities.

Concurrently with the functioning of UNFICYP, the UN has been active in promoting a peaceful solution and an agreed settlement of the Cyprus problem. This task, first entrusted to a mediator, has been carried out since 1968 through the good offices of the Secretary-General. Within that framework, a series of intercommunal talks between representatives of the Greek and Turkish Cypriot communities, as well as high-level meetings, were held, beginning in 1974, in an effort to reach a just and lasting solution. The intercommunal talks were discontinued after the Turkish Cypriot authorities, on 15 November 1983, proclaimed a "Turkish Republic of Northern Cyprus," a step which the Security Council called legally invalid. Secretary-General Pérez de Cuéllar met separately with representatives of the two sides in an effort to resume the negotiating process. Settlement talks headed by the UN continued in the 1990s.

UNFICYP has continued its task of supervising the cease-fire and maintaining surveillance over the buffer zone between the cease-fire lines. As of 31 January 2006, the force numbered 923 total uniformed personnel, including 854 troops and 69 police; supported by 33 international civilian personnel and 110 local civilian staff.

### Apartheid in South Africa

The racial policy of apartheid practiced by the South African government not only violated the political and human rights of its African citizens, it also destabilized the entire southern African region. The government of South Africa's policies towards the independence of surrounding African nations, the flight of South African freedom fighters to those countries, and the possibility that the technologically advanced government of South Africa might acquire nuclear capabilities, led the United Nations to consider apartheid in South Africa as a real threat to international peace and security. More than four decades of effort by the United Nations bore fruit in April 1994, when Nelson Mandela was elected president of South Africa in democratic elections open to South African citizens of all races.

The racial policies of the government of South Africa were a major concern of the UN since its earliest years. Over more than four decades, the General Assembly and the Security Council called for measures by the international community aimed at bringing about the end of apartheid, an Afrikaans word meaning "separateness," and at enabling the Africans of South Africa, who outnumber the whites by more than 4 to 1, to exercise political, economic,

and all other rights in their country. In the words of a 1982 General Assembly resolution, the goal of the UN with regard to South Africa was “the total eradication of apartheid and the establishment of a democratic society in which all the people of South Africa as a whole, irrespective of race, color, sex or creed, will enjoy equal and full human rights and fundamental freedoms and participate freely in the determination of their destiny.”

The question of South Africa’s racial policies was first raised in the General Assembly in 1946, when India complained that the South African government had enacted legislation discriminating against South Africans of Indian origin. The General Assembly expressed the view that the treatment of Indians in South Africa should conform with South Africa’s obligations under agreements concluded between that country and India and its obligations under the UN Charter.

The wider question of racial conflict in South Africa arising from that government’s apartheid policies was placed on the General Assembly’s agenda in 1952. On that question and on India’s original complaint, the South African government maintained that the matter was essentially within its domestic jurisdiction and that, under the charter, the UN was barred from considering it.

The Security Council took up the question for the first time in 1960, following an incident at Sharpeville on 21 March in which South African police fired on peaceful demonstrators protesting the requirement that all Africans carry “passes”; 69 people were killed and 180 wounded. The council stated that the situation in South Africa had led to international friction and, if continued, might endanger international peace and security. The council called on the South African government to abandon its policy of apartheid, which it termed “a crime against the conscience and dignity of mankind.”

In order to keep the racial policies of South Africa under review, the General Assembly decided, in 1962, to establish the Special Committee Against Apartheid. The committee, composed of 18 members, was subsequently given a wider mandate to review all aspects of South Africa’s policies of apartheid and the international repercussions of those policies.

The committee’s work included the following activities: holding of meetings and hearings; the sending of missions to member states to gain support for the struggle against apartheid; the organization of international conferences, special sessions, and seminars; and the implementation of the resolutions of the General Assembly and the Security Council, particularly by promoting sports, cultural, consumer, and other boycotts and, with the UN Center Against Apartheid, cooperating with governments, inter-governmental organizations, trade unions, women’s organizations, religious leaders, student and youth movements, and anti-apartheid groups in mobilizing international public opinion in support of action against apartheid.

The General Assembly also established, in 1965, the UN Trust Fund for South Africa, which, through voluntary contributions, made grants to organizations for legal aid to persons persecuted under South Africa’s apartheid laws, relief to such persons and their families, and relief for refugees from South Africa. In 1967, the General Assembly established the UN Educational and Training Program for Southern Africa, which granted scholarships to

students from South Africa and Namibia for study and training abroad.

*Arms Embargo and Other Sanctions.* A voluntary arms embargo against South Africa was instituted by the Security Council in 1963. Noting that some of the arms supplied to South Africa were being used to further its racial policies and repress the African people, the council called on all states to stop the sale and shipment of arms, ammunition of all types, and military vehicles to South Africa. Subsequently, in 1970, the Security Council condemned violations of the arms embargo and called on all states to strengthen and implement it unconditionally; withhold the supply of all vehicles, equipment, and spare parts for use by South African military and paramilitary forces; revoke all licenses and patents granted for South African manufacture of arms, aircraft, or military vehicles; prohibit investment or technical assistance for arms manufacture; and cease military cooperation with South Africa.

Both the Security Council and the General Assembly condemned the shooting, on 26 June 1976, of Africans, including schoolchildren, demonstrating in the township of Soweto.

The following year, the Security Council made the arms embargo against South Africa mandatory, the first time that such action had been taken against a member state under Chapter VII of the charter, which provides for enforcement action in the face of threats to international peace and security. Concerned that South Africa was at the threshold of producing nuclear weapons, the Security Council also decided that states should refrain from any cooperation with South Africa in the manufacture and development of such weapons. It established a committee to keep under constant review the implementation by states of the mandatory arms embargo.

Meanwhile, the General Assembly, in 1970, urged states to terminate diplomatic and other official relations with South Africa, as well as economic and all other types of cooperation, as an expression of international rejection of South Africa’s policy of apartheid, which the General Assembly called “a crime against humanity.” In 1973, the General Assembly adopted the International Convention on the Suppression and Punishment of the Crime of Apartheid (see the section on Racial Discrimination in the chapter on Human Rights).

In 1974, the General Assembly rejected South Africa’s credentials and recommended that South Africa be totally excluded from participation in all international organizations and conferences held under UN auspices until it abandoned its policies of apartheid.

The International Conference on Sanctions Against South Africa, held in Paris in May 1981, called for further international action to isolate South Africa, including the imposition, under Chapter VII of the charter, of sanctions “as the most appropriate and effective means to ensure South Africa’s compliance with the decisions of the United Nations.” The need for sanctions, including disengagement of transnational corporations operating in South Africa and disinvestment in companies doing business with South Africa, remained the focal point of UN efforts to end that country’s policies of apartheid.

Other measures included a sports boycott, embodied in the International Declaration Against Apartheid in Sports, which was adopted by the General Assembly in 1977, and the International Convention Against Apartheid in Sports, which was adopted in 1985 and came into force on 4 April 1988.

*Other Action.* Other action taken by the UN in support of the African majority of South Africa and against that country's policies of apartheid included:

- condemnation of South Africa's policy of destabilization in southern Africa through its armed incursions into neighboring independent African states that support and assist the efforts of the African majority of South Africa;
- rejection of South Africa's policy of establishing "homelands" as "independent" entities within South Africa where Africans are forced to resettle;
- recognition of the African liberation movements of South Africa—the African National Congress of South Africa (ANC) and the Pan Africanist Congress of Azania (PAC), both banned by South Africa—as "the authentic representatives of the over-whelming majority of the South African people"; and support for persons imprisoned or detained in South Africa for their opposition to apartheid.

*The Final Stages.* In April 1989, the Special Committee against Apartheid and the Intergovernmental Group to Monitor the Supply of Shipping of Oil and Petroleum Products to South Africa met in New York and recommended that the Security Council impose a mandatory oil embargo. It also recommended that pending action by the Security Council, all oil-producing, shipping, and handling states should enact legislation to stop the flow of oil to South Africa.

On 12–14 December 1989, the General Assembly held a Special Session on Apartheid and its Destructive Consequences in South Africa. It adopted by consensus a historic declaration which listed the steps that the South African regime should take to restore political and human rights in that country. It suggested guidelines for negotiations and for drawing up a new constitution based on the principles of the United Nations Charter and the Declaration of Human Rights. The declaration called upon all South Africans, as a matter of urgency, to join together to negotiate an end to the apartheid system and agree on all the measures necessary to transform their country into a nonracial democracy.

In February 1990, in a dramatic development, most political prisoners in South Africa, including Nelson Mandela, deputy president of the ANC, were released, and the ANC, PAC, and the South African Communist Party were recognized by the government. On 22 June 1990, Nelson Mandela addressed the General Assembly, thanking the United Nations for its efforts to secure his release and that of other South African political prisoners. He urged the UN and individual governments to continue the sanctions which they had imposed on South Africa. In May 1990, the government of South Africa and the ANC adopted the Groote Schuur Minute, which granted indemnity to political exiles and refugees, and paved the way for their return to South Africa. In August 1990, both parties agreed to the Pretoria Minute under which the government undertook to review emergency and security matters, while the ANC suspended armed actions.

On 1 February 1991, South African president F. W. de Klerk announced that the basic laws of apartheid would be repealed during that session of Parliament. He also issued a Manifesto for the New South Africa, stating that the new nation should be based on justice. The basic laws of apartheid were repealed on 5 June 1991, and later that month a peace summit was held by religious and business leaders, and some of the major parties to political violence. As a result, a preparatory committee, including the government and the ANC, was established and became known as the National Peace Initiative. In August 1991, the National Peace Initiative released a draft national peace accord. Also in August, the government and the office of the UN High Commissioner for Refugees (UNHCR) agreed on a plan for the voluntary repatriation of an estimated 40,000 South African refugees and political exiles.

In spite of the commencement of formal negotiations on constitutional reforms in December 1991, not all political parties participated and violence in the townships continued to escalate. In June 1992, 50 people died in the Boipatong massacre and the ANC suspended its participation in the talks until the government took more decisive action to put an end to the violence.

In July 1992, several political players in South Africa were invited to come and apprise the Security Council of the situation in their country. Subsequently, the Security Council authorized the Secretary-General to appoint a special representative to go to South Africa to find out first hand what was going on in the country, so that it could be determined how the international community could assist in bringing an end to the violence and create conditions for a peaceful transition in South Africa. As a result of this mission, the Security Council adopted Resolution 772 (1992) authorizing the Secretary-General to deploy the UN Observer Mission in South Africa (UNOMSA), charged with the task of assisting with strengthening the structures set up under the 1991 peace accords. The resolution also invited other international organizations such as the Organization of African Unity (OAU), the Commonwealth and the European Union to consider deploying their own observers in coordination with the United Nations. The first group of 50 UNOMSA observers was deployed in September 1992. It was widely agreed by all parties in South Africa that the presence of international observers greatly helped to reduce political tension, limit violence, and improve the climate for the negotiation process.

In April 1993, a new negotiating framework, the Multiparty Negotiating Council (MPNC) brought together 26 parties and was the most representative gathering in the history of South Africa. After several months of protracted negotiations, in November 1993, the MPNC adopted a number of constitutional principles and institutions to guide the country during a transitional period lasting until 27 April 1999. This interim constitution set forth plans for elections of a Constitutional Assembly that would draft a new national constitution. In response to all the positive developments, on 8 October 1993, in its Resolution 48/1 (1993), the 184-member General Assembly unanimously ended its 31-year ban on economic and other ties with South Africa in the areas of trade, investment, finance, travel, and transportation. Member states were asked to lift the sanctions they had imposed over the years under numerous UN resolutions and decisions. On 15 Oc-

tober 1993, the Nobel Peace Prize was awarded to South African president F. W. de Klerk and ANC president Nelson Mandela.

Although incidents of violence continued, and some parties to the negotiations threatened to withdraw from the election process, the elections were held successfully from 26–28 April 1994. At the request of the South African Transitional Executive Committee, the Security Council increased the UNOMSA contingent to approximately 1,800 during the election period. Another approximately 900 international observers from foreign governments and international organizations also were deployed across the country to observe the balloting. The UNOMSA observers determined whether voters enjoyed free access to voting stations, whether the secrecy of the vote had been guaranteed, and that ballot boxes had been properly sealed, protected, and transported. It also witnessed the counting of the ballots and the communication of the results to South Africa's Independent Electoral Commission, the body

responsible for organizing, administering, and monitoring all aspects of the elections to verify that they were free and fair.

*A New Era Dawns.* On 27 April 1994 the new six-color flag of a South Africa liberated from apartheid was unfurled at United Nations headquarters in New York. On 10 May 1994, Nelson Rolihlala Mandela was inaugurated as the new president of the Republic of South Africa. On 25 May 1994, the Security Council lifted the mandatory arms embargo it had imposed on South Africa in 1977. On 21 June 1994, the General Assembly, in its Resolution 48/258 (1994), declared that the mandate of the Special Committee against Apartheid had been successfully concluded, and terminated its existence. By the same resolution, it removed the agenda item on the elimination of apartheid from the agenda of its next (49th) session. On 23 June 1994, South Africa was welcomed back to full participation in the work of the General Assembly, after 20 years of banishment.

---

# ARMS REGULATION AND DISARMAMENT

Only days after the signing of the Charter, the world entered the nuclear age. On 6 and 9 August, 1945, respectively, atomic bombs destroyed the Japanese cities of Hiroshima and Nagasaki. The newly formed UN was thus confronted with unprecedented military and political problems. The Charter had envisaged arms limitation and disarmament elements in the progressive establishment of an international security system. It empowered the General Assembly to consider “principles governing disarmament and the regulation of armaments” and assigned to the Security Council the task of formulating plans to establish an appropriate system of controls for the “regulation of armaments,” to be submitted to the members of the UN. However, the revolutionary changes brought about by the discovery of atomic power gave the need for disarmament greater immediacy and an enhanced place in the sphere of international politics and security. The UN has reacted progressively to this unfolding of events while the peoples of the world have begun to live under the threat of nuclear annihilation.

Sixty years after the founding of the organization, the tensions that dominated the international political situation during the Cold War period had eased, significant progress was achieved in the field of disarmament, and new opportunities opened for the international community to achieve security at lower levels of arms. At the same time, new challenges confronted the members of the UN as the focus of tensions among nations turned from the international to the regional and local level.

In the course of the past six decades, the UN has used a variety of methods, techniques, and approaches in the search for disarmament.

## INITIAL EFFORTS

Under Article II of the UN Charter, the General Assembly is empowered to consider “principles governing disarmament and the regulation of armaments” and to recommend action to be taken by member states or the Security Council or both. The General Assembly has undertaken this kind of consideration at every one of its regular sessions since it first met in 1946. The General Assembly’s very first resolution, adopted on 24 January 1946, addressed the question of disarmament. It sought the elimination of atomic weapons and other weapons of mass destruction and the assurance that, from then on, atomic energy would be used only for peaceful purposes, and it established the Atomic Energy Commission. In a resolution adopted in December 1946, the General Assembly recognized the connection between the questions of disarmament and of international peace and security.

In 1947, the Security Council set up the Commission for Conventional Armaments in order to regulate armaments and armed forces under an international system of control and inspection, and it called upon the two commissions to take immediate action.

Despite the urgency of the matter, the two commissions did not make much progress. In 1952, the General Assembly, in an

attempt to break the impasse, consolidated them into a single 11-member Disarmament Commission, which was entrusted with the task of preparing proposals for the regulation, limitation, and balanced reduction of all armed forces and armaments, by stages, in a coordinated, comprehensive program.

The early debates in the Disarmament Commission ended inconclusively in October 1952. In November, the first hydrogen bomb, with a force that dwarfed that of the Hiroshima-type atomic bomb, was tested by the United States at Eniwetok (now Eniwetok), in the Pacific. The following August, a hydrogen bomb was exploded by the USSR.

A subcommittee of the Disarmament Commission, set up by the General Assembly in 1953 and consisting of representatives of Canada, France, the USSR, the United Kingdom, and the United States, held a number of meetings, but by the autumn of 1955, efforts aimed at drawing up a comprehensive disarmament plan ended in deadlock. The subcommittee’s efforts to consider partial disarmament measures also came to a stalemate over the next two years. In 1957, the General Assembly enlarged the Disarmament Commission from 11 to 25 nations. It was again enlarged, in 1959, to comprise all members of the UN, but it convened only one further time, in 1965.

In 1959, the General Assembly unanimously adopted the first resolution ever to be sponsored by all member states. In it, the General Assembly declared that it was “striving to put an end completely and forever to the armaments race,” and it stated that “the question of general and complete disarmament is the most important facing the world today.” The resolution aimed at having all proposals and suggestions made during the General Assembly debate transmitted to the Disarmament Commission “for thorough consideration.”

Substantive differences in the approach taken to disarmament by the Western powers and the USSR emerged during the subsequent period. A Ten-Nation Committee on Disarmament, based on equal East-West representation, was set up in 1960 outside the framework of the UN to discuss general and complete disarmament but became deadlocked on issues of partial or general measures. As a result, the UN began to pursue disarmament efforts in two ways. While the ultimate goal remained, as it has ever since, “general and complete disarmament under effective international control,” measures that would bring about partial disarmament were viewed as integral to that goal and not as hindrances to its achievement. It was felt that devoting parallel, and at times even primary, attention to “collateral” measures designed to reduce tension and build confidence would facilitate the complex task of achieving general and complete disarmament. The immediate hopes and expectations of the majority of nations centered on two such measures: the discontinuance of nuclear-weapon tests and the prevention of the spread of nuclear weapons. By the mid-

1960s, the elaboration of partial disarmament measures within the UN began to overshadow all-embracing, long-range efforts.

In 1961, John I. McCloy of the United States and Valerian A. Zorin of the USSR, representing their respective nations in formal disarmament talks, submitted to the General Assembly a Joint Statement of Agreed Principles of Disarmament Negotiations. These eight principles, which were unanimously endorsed by the General Assembly, dealt with: (1) the stated goal of negotiations—a program ensuring that disarmament was to be “general and complete” and was to be accompanied by reliable procedures for the maintenance of peace; (2) the reduction of non-nuclear weapons and facilities to such levels as might be agreed to be necessary for the maintenance of internal order and the provision of personnel for a UN peacekeeping force; (3) an agreed elaboration of the main elements of the disarmament program; (4) implementation of the program in agreed stages, which were to have specified time limits; (5) balance so that at no stage could any state or group maintain an advantage; (6) the need for international control under an international disarmament organization to be created within the framework of the UN; (7) the need during and after disarmament to strengthen institutions for maintaining world peace; and (8) the need to achieve and implement the widest possible agreement in the shortest possible time.

At the same time, the General Assembly also endorsed an agreement to set up, in place of the Ten-Nation Committee, an Eighteen-Nation Committee on Disarmament. When the committee first met in Geneva in early 1962, one member, France, decided not to participate, explaining that it hoped that it might be possible later for the disarmament problem to be discussed among the powers that could contribute effectively to its solution. At the outset, the committee decided to organize so as to permit simultaneous work on general and complete disarmament, confidence-building (collateral) measures, and the discontinuance of nuclear-weapon tests.

In 1969, the committee’s membership was enlarged to 26, and its name changed to the Conference of the Committee on Disarmament (CCD). The General Assembly requested the CCD, as the multilateral negotiating body, to work out, while continuing its negotiations on collateral measures, a comprehensive program to deal with the cessation of the arms race and general and complete disarmament under effective international control. In 1975, the CCD was further enlarged, to 31 members, with France still declining to take its seat.

The scant results and continuing difficulties in disarmament negotiations, among other things, led, also in 1969, to the General Assembly’s adoption of a resolution declaring the 1970s as a Disarmament Decade. The 1980s and 1990s were also later declared as disarmament decades.

## SPECIAL SESSIONS OF THE GENERAL ASSEMBLY ON DISARMAMENT

### First Special Session, 1978

By 1976 it was clear that no real progress had been made to halt the arms race. World military expenditure was estimated at many times more than the amount spent globally on health, education,

and economic development. While the nuclear-weapon powers were the major competitors in the arms race, military spending by countries outside the two main military alliances was also rising. Since the end of the Second World War, many millions of people have been killed by conventional weapons in more than 100 wars, most of them fought in the developing areas of the world.

In 1976, the General Assembly, deploring the “meagre achievements” up to that time of the first Disarmament Decade in terms of truly effective agreements, decided, primarily at the initiative of developing countries, to hold a special session in 1978 devoted entirely to disarmament. The aim of the session was to set a new course in international affairs, turn states away from the nuclear and conventional arms race, and obtain agreement on a global strategy for disarmament.

The first special session on disarmament, held at UN headquarters from 23 May to 1 July 1978, was the largest, most representative meeting of nations ever convened to consider the question of disarmament. For the first time in the history of disarmament endeavors, the international community of states as a whole achieved a consensus on a comprehensive disarmament strategy, which was embodied in the Final Document adopted at the session.

The Final Document stressed the central role and primary responsibility of the UN in the field of disarmament and placed disarmament issues in a more comprehensive perspective than had ever been done before. It reaffirmed the fundamental importance of disarmament to international peace and security and stated that “disarmament and arms limitation agreements should provide for adequate measures of verification satisfactory to all parties.” It contained specific measures intended to strengthen the machinery dealing with disarmament within the UN system. Composed of four parts—an introduction, a declaration, a program of action, and a section on machinery—the Final Document set out goals, principles, and priorities in the field of disarmament.

The *Introduction* stated that while the final objective should continue to be general and complete disarmament under effective international control, the immediate goal was the elimination of the danger of a nuclear war and the implementation of measures to halt and reverse the arms race.

The *Declaration* stated that “the increase in weapons, especially nuclear weapons, far from helping to strengthen international security, on the contrary weakens it, ... heightens the sense of insecurity among all states, including the non-nuclear-weapon states, and increases the threat of nuclear war.” It further stated that “genuine and lasting peace can only be created through the effective implementation of the security system provided for in the Charter of the United Nations and the speedy and substantial reduction of arms and armed forces.” It emphasized that, in the adoption of disarmament measures, the right of each state to security should be kept in mind and that, at each stage of the disarmament process, “the objective should be undiminished security at the lowest possible level of armaments and military forces.”

The *Program of Action* listed priorities and measures that states should undertake as a matter of urgency in the field of disarmament. Priorities included nuclear weapons; other weapons of mass destruction, including chemical weapons; and conventional weapons, including any that might be deemed to be excessively

injurious or to have indiscriminate effects. The program called for agreements or other measures to be “resolutely pursued on a bilateral, regional and multilateral basis with the aim of strengthening peace and security,” and it recommended that measures be taken and policies pursued to strengthen international peace and security and to build confidence among states. The urgency of preventing the proliferation of nuclear weapons and of halting nuclear tests was stressed. The program called for full implementation of the 1967 Treaty of Tlatelolco, prohibiting nuclear weapons in Latin America, and recommended steps to put into effect the proposals for the establishment of other nuclear-weapon-free zones. Other measures included prohibition of the development, production, and stockpiling of chemical weapons; limits on the international transfer of conventional weapons; agreed reduction of military budgets; and further study of the question of verification. The program also listed measures to be undertaken to mobilize world public opinion on behalf of disarmament.

The final section, on *Machinery*, noted the urgency of revitalizing the disarmament machinery and outlined the consensus reached on the strengthening or establishment of appropriate forums, of suitably representative character, for disarmament deliberations and negotiations, as well as for other activities to be undertaken, including research.

Acting on the recommendations of the special session, the General Assembly established, as a specialized, subsidiary deliberative body, a revitalized Disarmament Commission composed of all UN members. It was assigned the mandate of making recommendations on disarmament problems as requested by the General Assembly, and to follow up the relevant decisions and recommendations of the special session on disarmament.

The special session recognized the continued need for a single multilateral negotiating forum on disarmament and recognized that the Committee on Disarmament in Geneva should continue to fulfill this role and to carry on the work of its predecessors—the Ten-Nation Committee on Disarmament (1959–60), the Eighteen-Nation Committee on Disarmament (1962–69) and the Conference of the Committee on Disarmament (1969–78). Known as the Conference on Disarmament since 1979, it has a membership of 65 countries, including the five nuclear-weapon states and most of the militarily powerful states of the world’s regions.

Other results of the General Assembly’s first special session included the establishment of a program of fellowships on disarmament; an increased flow of information on disarmament to governments, nongovernmental organizations, the media, and the general public; and the designation of the week beginning 24 October (UN Day) to be observed each year as Disarmament Week (see also under Studies, Research, Information, and Training below).

In order to enable the UN to fulfill its role in the field of disarmament and to carry out the tasks assigned to it, the special session took steps to strengthen the role of the section of the UN Secretariat handling disarmament affairs, the Centre for Disarmament Affairs. The centre’s main tasks include maintaining a database on conventional armaments transfers, supporting ongoing deliberations and negotiations in New York, Geneva, and elsewhere, fos-

tering regional confidence and security building initiatives, and disseminating information to sources outside the UN.

In 1979, the General Assembly declared the 1980s as the Second Disarmament Decade, stating that its goals should remain consistent with the ultimate objective of general and complete disarmament. The basic goals of the Second Disarmament Decade were set out as follows: halting and reversing the arms race; conclusion of agreements on disarmament according to the objectives and priorities of the 1978 Final Document; strengthening international peace and security in keeping with the UN Charter; and reallocating resources from military to development purposes, particularly in favor of developing countries.

In the four years following the first special session, the international situation in fact deteriorated: numerous events beyond effective UN influence evolved in such a way as to hinder international arms-limitation efforts, particularly in the early 1980s, when military expenditures increased and a lack of confidence permeated disarmament discussions and affected negotiations. After some initial progress, negotiations stalled on virtually every important disarmament issue, and the 1978 Program of Action remained substantially unimplemented.

#### Second Special Session, 1982

The second special session of the General Assembly devoted to disarmament was held at UN headquarters from 7 June to 10 July 1982. Given the international tension and armed conflicts prevailing at that time, the atmosphere did not bode well for the reaching of further accords on sensitive, substantive issues then relating to the perceived national security interests of states.

At the time of the first special session in 1978, the General Assembly had reaffirmed the goal of general and complete disarmament, a concept that had received considerable attention even before that in the framework of the UN. The emphasis placed on general and complete disarmament slowly gave way to another approach, known as the comprehensive program of disarmament. The intent of the approach was to elaborate a program which would place partial measures of disarmament into a carefully considered plan, setting out objectives, priorities, and timeframes, with a view to the achievement of disarmament on a progressive basis.

A main agenda item of the session—to elaborate the strategy of the 1978 Program of Action into a Comprehensive Program of Disarmament—was not achieved. Thus, the General Assembly did not agree, as it had in 1978, on a formula for specific action. In the Concluding Document of the session, however, the General Assembly unanimously reaffirmed the validity of the Final Document of the first special session on disarmament. It expressed its profound preoccupation over the danger of war, particularly nuclear war, and urged member states to consider as soon as possible proposals for ensuring prevention of such a war. The General Assembly also stressed again the need for strengthening the central role of the UN in the field of disarmament, for implementing the security system provided for in the Charter of the UN, and for enhancing the effectiveness of the multilateral negotiating body, the Committee on Disarmament.

The committee and then the Conference on Disarmament continued to negotiate the draft comprehensive program of disarmament until 1989. At the end of the conference's session that year, it was agreed to suspend work on the program until the circumstances were more propitious for progress.

Among the other decisions of the second special session was the launching of a World Disarmament Campaign to increase public awareness of disarmament issues (see also under Studies, Research, Information, and Training below). The General Assembly also decided to convene a third special session on disarmament (subsequently scheduled to be held in 1988 at UN headquarters).

### Third Special Session, 1988

The third special session took place in 1988 against the background of a considerably improved international climate. The progress that had been recorded in some important fields of disarmament, in particular nuclear disarmament, was welcomed throughout the debates during the session.

The 1987 *Treaty between the former Soviet Union and the United States on the Elimination of Their Intermediate-Range and Shorter-Range Missiles* (INF Treaty); the achievements of the 1986 Stockholm Conference on Confidence- and Security-Building Measures and Disarmament in Europe; and the 1986 *South Pacific Nuclear Free Zone Treaty* (Treaty of Rarotonga) were indicative of the favorable trends in arms control and disarmament.

The progress reported on the negotiations that had begun before the commencement of the special session, between the former Soviet Union and the United States, on a treaty on the reduction and limitation of strategic offensive arms (START) (see below), as well as progress made in the Conference on Disarmament on the complete elimination of chemical weapons, also were highly welcomed. All this notwithstanding, member states were unable to adopt by consensus a final document setting the pace and direction for future negotiations.

In December 1995, the General Assembly decided to convene a Fourth Special Session devoted to disarmament in 1997. However, as the Disarmament Commission completed its 1998 session, it had not come to agreement on the objectives and agenda of the proposed fourth special session, then pushed back to 1999. In December 1999, the General Assembly decided anew to convene the fourth session on disarmament and requested the Secretary-General to seek the views of the member states on the objectives, agenda, and timing. A fourth session on disarmament had not taken place as of April 2006.

## DISARMAMENT MACHINERY

### General Assembly

The General Assembly, as the main deliberative body of the UN, takes up questions concerning disarmament and related international security matters at each of its annual sessions, through its First Committee, and makes recommendations. In the late 1980s and into the 1990s, some 25–30% of the resolutions adopted by the General Assembly have been concerned with disarmament and related international security matters; many of these resolutions give mandates to the Disarmament Commission or make requests to the Conference on Disarmament (formerly the Committee on Disarmament) to take into consideration various ideas or questions under negotiation. Both the Disarmament Commis-

sion and the Conference on Disarmament report to the General Assembly each year.

### Disarmament Commission

The revitalized Disarmament Commission established after the first special session of the General Assembly on disarmament is composed of all members of the UN. It provides a deliberative forum for consideration of specific disarmament issues when the General Assembly is not in session. A subsidiary organ of the General Assembly, it meets annually at UN headquarters for approximately four weeks, usually in spring, to make recommendations to the General Assembly on specific disarmament problems and to follow up mandates given to it.

### Conference on Disarmament

As a result of its first special session on disarmament, the General Assembly mandated the Committee on Disarmament to fulfill the role of a single multilateral negotiating forum and to carry on the work of earlier committees. It enlarged the membership of the committee to 40 countries, including all five nuclear-weapon states (China, France, the USSR, the United Kingdom, and the United States). Redesignated the Conference on Disarmament at the end of 1983, it meets in Geneva for approximately six months each year, usually when the General Assembly is not in session. Its Secretary-General is appointed, upon consultation, by the Secretary-General of the UN and also serves as that individual's personal representative. In 2006, the Conference on Disarmament was composed of 65 member states.

The Conference on Disarmament has a unique relationship with the UN. It defines its own rules of procedure and develops its own agenda, taking into account the recommendations made by the General Assembly. It agreed on a permanent agenda of 10 items in 1979, and from those items it chooses an annual agenda and fixes its program of work for the year. Its work in plenary meetings and also in subsidiary bodies dealing with specific items is conducted by consensus, since international agreements, if they are to be effective, must be generally acceptable.

### Department for Disarmament Affairs (DDA)

As a result of the General Assembly's second session on disarmament, the Department for Disarmament Affairs was established in 1982, and it continued until 1992. The Department was reestablished in 1998. It provides substantive and organizational support for norm-setting in the area of disarmament through the work of the General Assembly's First Committee, the Disarmament Commission and the Conference on Disarmament. It is structured in five branches. The CD Secretariat and Conference Support Branch provides organizational and substantive servicing to the Conference on Disarmament (CD). The Weapons of Mass Destruction Branch (WMD) supports and participates in multilateral efforts to strengthen the non-proliferation of nuclear, chemical, and biological weapons. The Conventional Arms Branch (CAB) focuses on all weapons not considered WMD, to curb the flow of small arms in regions of tension, and to develop measures of practical disarmament. The Regional Disarmament Branch (RDB) provides support and advisory services to member states and regional and subregional organizations on disarmament and security matters. It oversees and coordinates the activities of three regional centers: one in Africa, one in Asia and the Pacific, and one in Latin Amer-

ica and the Caribbean. And the Monitoring, Database and Information Branch (MDI) organizes a wide variety of special events and programs in the field of disarmament, produces DDA publications such as the Disarmament Yearbook, and maintains the database for specialized areas.

## MAIN ACHIEVEMENTS

### Multilateral Agreements

After World War I, intense efforts were made to translate the 1874 Brussels Declaration and the subsequent Hague Conventions into a ban on chemical weapons and “the use of projectiles, the sole object of which is the diffusion of asphyxiating or deleterious gases.” Although a total ban is still to be attained, one of the first achievements, in 1925, was the Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare, generally referred to as the Geneva Protocol. It bans “the use in war of asphyxiating, poisonous or other gases and of all analogous liquids, materials or devices,” as well as “the use of bacteriological methods of warfare.” The Geneva Protocol, with 133 states parties in 2005, is the point of departure in current efforts toward a ban on the production, possession, and stockpiling of chemical weapons and helped establish the convention banning bacteriological weapons in 1972 (see below).

Concerted efforts by the UN and by governments since 1945 at both the multilateral and bilateral levels, as well as on a regional basis, have led to a body of important agreements, treaties, and conventions committing their parties to various arms limitation and disarmament measures. The multilateral instruments concluded so far are given below (the number of states parties as of 15 April 2006 is shown in parentheses after each title).

- The 1959 *Antarctic Treaty* (45) provides for the demilitarization of Antarctica and is the first treaty to put into practice the concept of the nuclear-weapon-free zone, later applied to Latin America and the South Pacific, as well as to the seabed and outer space. It prohibits any military maneuvers, weapon tests, building of installations, or disposal of radioactive wastes in the Antarctic region.
- The 1963 *Treaty Banning Nuclear Weapon Tests in the Atmosphere, in Outer Space and Under Water* (Partial Test-Ban Treaty) (124) bans all nuclear weapon tests in the three environments designated but does not ban underground tests. Since 1963, the General Assembly has repeatedly urged conclusion of a comprehensive treaty banning all nuclear tests, including those conducted underground.
- The 1967 *Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies* (Outer-Space Treaty)(98) bans nuclear and other weapons of mass destruction from the earth’s orbit and prohibits the military use of celestial bodies and the placing of such weapons on those bodies.
- The 1967 *Treaty for the Prohibition of Nuclear Weapons in Latin America* (Treaty of Tlatelolco) (33) creates the first nuclear-weapon-free zone in a densely populated area and is the first arms-limitation agreement to provide for control and verification by an international organization, the Agency for the Prohibition of Nuclear Weapons in Latin America, as well as through the safeguards system of the International Atomic Energy Agency (IAEA).
- The 1968 *Treaty on the Non-Proliferation of Nuclear Weapons* (Non-Proliferation Treaty) (189) aims at preventing the spread of nuclear weapons to non-nuclear-weapon states, at guaranteeing all countries access to nuclear technology for peaceful purposes, and at promoting the process of nuclear disarmament. The treaty defines a nuclear-weapon state as one that had manufactured and exploded a nuclear weapon or other nuclear explosive device prior to 1 January 1967. With the broadest adherence of all treaties, it has helped so far to maintain the number of nuclear-weapon states at five.
- The 1971 *Treaty on the Prohibition of the Emplacement of Nuclear Weapons and Other Weapons of Mass Destruction on the Sea-Bed and the Ocean Floor and in the Subsoil Thereof* (Sea-Bed Treaty) (92) bans the placement of nuclear and other weapons of mass destruction and facilities for such weapons on or under the seabed outside a 12-mile coastal zone.
- The 1972 *Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction* (155) is the first international agreement providing for actual disarmament, that is, the destruction of existing weapons.
- The 1977 *Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques* (72) prohibits the use of techniques that would have widespread, long-lasting, or severe effects in causing such phenomena as earthquakes, tidal waves, and changes in weather and climate patterns.
- The 1979 *Agreement Governing Activities of States on the Moon and Other Celestial Bodies* (11) goes further than the 1967 Outer-Space Treaty in prohibiting the use of the moon and other celestial bodies for military purposes.
- The 1981 *Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects* (100) restricts or prohibits the use of mines and booby traps, incendiary weapons, and fragments not readily detectable in the human body. These rules range from a complete ban on the use of such weapons to restrictions on their use in conditions that would cause incidental loss of life or injury to civilians or damage to civilian objects.
- The 1985 *South Pacific Nuclear-Free-Zone Treaty* (Treaty of Raratonga) (13), exemplifies a positive regional limitation measure. Its geographical limits are contiguous with those of the two other major zonal treaties, the Treaty of Tlatelolco and the Antarctic Treaty, the three instruments covering a significant portion of the earth’s surface.
- The 1990 *Treaty on Conventional Armed Forces in Europe* (CFE Treaty) (30), was a considerable post-Cold War breakthrough achieved at a summit meeting of the Conference on Security and Cooperation in Europe (CSCE). It was adopted in Paris in November 1990. The treaty entered into force on 9 November 1992, after it was signed by the original 22 participating states, joined by seven of the new republics formed from the former Soviet Union. It established limits for five categories of weapons within its area of application, which stretches from the Atlantic to the Urals. Chosen for limitation were those cat-

egories of weapons systems that would eliminate disparities in force levels and the capability of launching surprise attack or large-scale offensives. The treaty was the first in Europe to provide for the actual reduction of conventional weapons. As called for in the treaty, negotiations among the states party to the CFE Treaty soon began, aimed at limiting the personnel strength of armed forces. Known as the *CFE-1A Agreement*, it was signed in July 1992 at the summit meeting of the CSCE at Helsinki.

- The 1992 *Treaty on Open Skies* (31) establishes a regime of unarmed aerial observation flights over the entire territory of its participants. The Open Sky Treaty is the most wide-ranging international effort to date to promote openness and transparency of military forces and activities. The treaty entered into force in 2002.
- The 1993 *Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and their Destruction* (Chemical Weapons Convention) (178), is the first disarmament agreement that would eliminate an entire category of weapons. Such chemical weapons exist in large quantities, are possessed by many countries, and have been used in combat even in recent years. The convention was ratified by 65 countries and entered into force on 29 April 1997.
- The 1995 *Southeast Asia Nuclear Weapon Free Zone (SEAN-WFZ) Treaty* (Treaty of Bangkok) (10) bans the research, development, manufacture, stockpiling, acquisition, possession or control over any nuclear explosive device by any means in Southeast Asia.
- The 1996 *African Nuclear Weapon Free Zone Treaty* (Pelindaba Treaty) (19) establishes a nuclear-weapon-free zone on the continent of Africa and all island states considered by the former Organization of African Unity to be part of Africa.
- The 1996 *Comprehensive Test-Ban Treaty* (CTBT Treaty) (132) goes further than the 1963 Partial Test-Ban Treaty in that it prohibits any nuclear explosion whether for weapons or peaceful purposes.
- The 1997 *Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on Their Destruction* (Mine-Ban Convention) (148) bans the use and development of anti-personnel mines, and commits states to destroy them.
- The 1997 *Inter-American Convention Against the Illicit Manufacturing of and Trafficking in Firearms, Ammunition, Explosives and Other Related Materials* (Inter-American Convention)(26) was spearheaded by the member states of the Organization of American States to address the problem of illicit firearms trafficking, including ammunition, bombs, grenades, rockets, rocket launchers, missiles, and missile systems.
- The 1999 *Inter-American Convention on Transparency in Conventional Weapons Acquisitions* (9) was designed to contribute more fully to regional openness and transparency in the acquisition of conventional weapons by exchanging information regarding such acquisitions, for the purpose of promoting confidence among states in the Americas.

### Bilateral Agreements

Over the same period, bilateral negotiations between the USSR/Russian Federation and the United States have produced a number of agreements between the two powers, including those described below.

- The 1972 *Treaty on the Limitation of Anti-Ballistic Missile Systems* (ABM Treaty and part of the SALT I agreements) restricts in general the development of sea-based, air-based, space-based, or mobile land-based antiballistic missile (ABM) systems and specifically limits development of ABM systems to two sites with no more than 100 launchers each. By a protocol of 1974, the deployment of ABM systems is further limited to a single area, with no more than 100 launchers. On 13 June 2002, the United States withdrew from the ABM Treaty in order to pursue the development of missile defenses that would have been banned by the agreement.
- The 1972 *Interim Agreement on Certain Measures with Respect to the Limitation of Strategic Offensive Arms* (commonly regarded as SALT I) establishes limitations for a five-year period—with a provision for extension—on the number of launchers of strategic weapons.
- Under the 1973 *Agreement on the Prevention of Nuclear War*, the two parties agree to make the removal of the danger of nuclear war and of the use of nuclear weapons an objective of their policies and to make all efforts toward guaranteeing stability and peace.
- The 1974 *Treaty on the Limitation of Underground Nuclear-Weapon Tests* (Threshold Test-Ban Treaty) establishes a nuclear threshold by prohibiting underground nuclear-weapon tests having a yield exceeding 150 kilotons.
- The 1976 *Treaty on Underground Nuclear Explosions for Peaceful Purposes* prohibits the carrying out of any individual nuclear explosion for peaceful purposes having a yield exceeding 150 kilotons or any group explosion with an aggregate yield exceeding 1,500 kilotons, and it includes on-site verification procedures.
- The 1979 *Treaty on the Limitation of Strategic Offensive Arms* (SALT II) establishes limits on the number and types of strategic nuclear-delivery vehicles (launchers and bombers) to 2,400 on each side. The treaty also set limits on the numbers of MIRVed launchers. In 1986, President Ronald Reagan announced that the United States would no longer be bound by the SALT II limits because of Soviet violations of its arms control commitments.
- The 1987 *Treaty between the Two States on the Elimination of Their Intermediate Range and Shorter-Range Missiles* (INF Treaty) provides for the elimination of an entire class of nuclear weapons with a range between 55 and 5,500 kilometers (3,410 miles). The treaty entered into force on 1 June 1988 and its provisions were implemented before the 1 June 1991 date set by the treaty.
- The 1991 *Treaty on the Reduction and Limitation of Strategic Offensive Arms* (START Treaty) places limits on the two sides' strategic nuclear forces, i.e., inter-continental ballistic missiles (ICBMs). This treaty established an unprecedented reduction of 35% to 40% of the states' overall nuclear forces at the time and created an elaborate system for verification of compliance. Through the Lisbon Protocol signed in 1992,

- Kazakhstan, Belarus, Ukraine, and Russia became parties to START I as successor states to the Soviet Union.
- The 1993 *Treaty on Further Reduction and Limitation of Strategic Offensive Arms* (START II), once implemented, was to bring about deep reductions in the overall levels of ICBMs, submarine-launched ballistic missiles (SLBMs), nuclear armed heavy bombers and nuclear air-launched cruise missiles (ACLMs). The United States and Russia ratified START II in 1996 and 2000, respectively, although Russia made entry into force conditional on U.S. Senate consent to ratification of the 1997 protocol and approval of two Agreed Statements outlining limits on the testing of theater missile defense (TMD) systems. On 14 June 2002, one day after the U.S. withdrew from the ABM Treaty, Russia announced that it would no longer consider itself to be bound by START II provisions.
  - The 2002 *Treaty on Strategic Offensive Reductions* (SORT) (commonly referred to as the Treaty of Moscow) states that both the United States and Russia will reduce their numbers of operationally deployed nuclear warheads to between 1,700–2,200 within ten years. It establishes a Bilateral Implementation Commission, scheduled to meet at least twice a year, to discuss and review the treaty's implementation. The document does not require the destruction of strategic delivery systems, specify what is to be done with the warheads once they have been removed from launchers, or constrain the development of ballistic missile defenses.

## MAJOR ISSUES AND DISARMAMENT NEGOTIATION EFFORTS

### The Threat of Nuclear Weapons

When the first atomic bombs were exploded on 6 and 9 August 1945, their immense destructive power confronted the world with military and political problems of unprecedented magnitude.

The catastrophic consequences of the use of nuclear weapons would not be confined to the nuclear adversaries but would threaten civilization on a global scale. According to a 1984 World Health Organization (WHO) report on the effects of nuclear war on health and health services, as many as 10,000 megatons of nuclear bombs could be exploded globally in an all out nuclear war—90% of them in Europe, Asia, and North America and 10% in Africa, Latin America, and Oceania. As a result, half of the world's population could instantly become war victims. About 1.5 billion people could die and 1.1 billion could be injured. In addition, millions of immediate survivors of an attack would die of radiation effects, disease, cold temperatures, and starvation over the following few years. Thus, the greatest threat to humanity comes from nuclear arsenals, whose total destructive power has reached a level equivalent to more than 1 million Hiroshima bombs. Yet, each of the nuclear powers, albeit with expressed reluctance, considers it essential, either as a strategy or a necessary policy of credible deterrence of war, to possess operational nuclear weapons as long as the others have them.

A 1988 UN study on the climatic and potential physical effects of nuclear war concluded that a major nuclear war would entail the high risk of a global environmental disruption. A 1990 UN report captured the sense of the turning point in history brought about by the development of nuclear weapons. According to that

report, nuclear weapons represented a historically new form of weaponry, which, by their multiple and far-reaching effects, provided a means of warfare whose mass destructive potential was unparalleled in human experience. Nuclear technology had made it possible to release more energy in one microsecond from a single nuclear weapon than all the energy released by conventional weapons used in all wars throughout history. The same expert group estimated that, by 1990, the arms race had led to the gradual deployment on land and on the high seas of some 50,000 nuclear warheads. They also estimated that the world stockpile of nuclear weapons was equivalent to some 13,000 million tons of TNT, and that its explosive capacity was 1 million times the explosive energy of the Hiroshima atomic bomb.

In 1945, only the United States had developed the technology to produce nuclear weapons, but by 1949, the USSR had also developed a nuclear-weapon capability, followed by the United Kingdom in 1952, France in 1960, and China in 1964. Throughout the Cold War era, the United States and the former Soviet Union, among the five nuclear-weapon states, held the vast majority of nuclear weapons and the most advanced delivery systems. Indeed, the UN, in a consensus document adopted at the first special session of disarmament in 1978, recognized the special responsibility that these two states bore with respect to nuclear disarmament.

Over the years, concerns have been expressed in UN forums that some non-nuclear-weapon states might develop nuclear-weapon programs (the issue of so-called “threshold” states). After the end of the war in the Persian Gulf in April 1991, it came to light that some of the concerns expressed, at least in the case of Iraq, were warranted. In November 2002, the UN Security Council passed Resolution 1441 calling for immediate and unconditional disarmament on the part of Iraq, including the possible existence of nuclear weapons development programs. After the invasion of Iraq by US-led forces in 2003, no weapons of mass destruction were found in Iraq. In 1993–94 the defiance of the Democratic Peoples' Republic of Korea (DPRK) touched off an international crisis. The DPRK refused to allow access to IAEA inspectors charged with monitoring peaceful nuclear facilities (see chapter on IAEA). Since 1994 the IAEA activities were largely limited to monitoring the “freeze” of the DPRK's graphite-moderated reactors and related facilities as requested by the United Nations Security Council and as foreseen in the “Agreed Framework” of October 1994 between the DPRK and the United States. Under the so-called Agreed Framework, the DPRK promised to abandon its nuclear program, and disavow similar nuclear activity, in return for the U.S.-led construction of two modern, light-water reactors and 500,000 tons of fuel oil a year until the reactors were completed. In October 2002, the DPRK announced that it was undertaking a uranium-enrichment program. These developments challenged the UN, especially its Security Council, and the IAEA to unprecedented action. In January 2003, the DPRK announced it was withdrawing from the NPT, and in April, the DPRK announced it had nuclear weapons. In August 2003, the DPRK agreed to take part in six-party talks with the United States, South Korea, Russia, China, and Japan. In September 2004, the DPRK said it had turned plutonium from 8,000 spent fuel rods into nuclear weapons. Then, in September 2005, North Korea stated it would give up its nuclear weapons program and rejoin the NPT.

By the mid-2000s, another state looking to develop nuclear weapons capability was Iran. In January 2002, US President George W. Bush labeled Iran, Iraq, and North Korea an “axis of evil” seeking to threaten the world with weapons of mass destruction, among other ill deeds. In September of that year, Russian technicians began construction of Iran’s first nuclear reactor at Bushehr despite strong objections from the United States. Subsequently, following a series of back and forth assertions by Iran that it was suspending its nuclear enrichment program or resuming uranium conversion for peaceful purposes, in September 2005 the IAEA found Iran in violation of the NPT. In January 2006, Iran broke IAEA seals at its Natanz nuclear research facility. In February, the IAEA voted to report Iran to the Security Council over its nuclear activities. In April 2006, Iran announced it had succeeded in enriching uranium at Natanz.

With the dissolution of the Soviet Union at the end of 1991, its nuclear weapons were left on the territories of four of the newly independent states: Belarus, Kazakhstan, Russian Federation, and Ukraine. This state of affairs created a new set of challenges to the international community in the control of nuclear weapons.

Over the years, many measures have been proposed in the UN and other multilateral forums to limit, reduce, and eliminate nuclear weapons and their delivery systems; to assure non-nuclear-weapons states that nuclear weapons will not be used or even threatened to be used against them; to prevent the spread of nuclear weapons to non-nuclear-weapons states; to bring about a halt to all nuclear testing; to ensure the non-use of nuclear weapons; to bring about the cessation of the production of nuclear weapons as well as the production of fissionable material for weapons purposes; to restrict the deployment of nuclear weapons by nuclear-weapon states, and to foster cooperation in the peaceful uses of nuclear energy.

With the close of the Cold War era, a turning point in international political history had been reached and the dramatic international events that occurred had direct repercussions in the area of nuclear disarmament. Bilateral negotiations between the Russian Federation and the United States led to several agreements which, when fully implemented, will result in unprecedented reductions in the nuclear forces of both sides.

These developments served to codify the end of the Cold War and helped to pave the way for further control over the nuclear arsenals of the two major nuclear-weapon states, as well as to encourage the other three declared nuclear-weapon states towards further efforts in the field of nuclear weapons.

#### **Bilateral Nuclear Arms Reduction Agreements**

Although the United Nations did not take part in the historic bilateral negotiations between the former USSR and the United States from 1969 to 2002, member states of the UN have responded with encouragement to the initiatives of the two major powers and have appealed to them to conduct their negotiations with the utmost determination to prevent nuclear war, reduce nuclear arsenals, prevent an arms race in outer space—a longstanding UN objective—and halt the arms race. Other nuclear-weapon states have declared that they would join the process of reducing nuclear weapons once the major powers have reduced theirs. In this context, it is appropriate to review here the sequence of events that

brought these negotiations to such a salutary conclusion and their far-reaching implications for global security.

#### **The SALT Treaties**

The Strategic Arms Limitation Talks (SALT), which the former Soviet Union and the United States initiated in 1969, led in their first phase to the signing on 26 May 1972 in Moscow of two agreements: the *Treaty on the Limitation of Anti-Ballistic Missile Systems* (ABM Treaty), subsequently amended by a protocol of 3 July 1974, and the *Interim Agreement on Certain Measures With Respect to the Limitation of Strategic Offensive Arms*, with a protocol attached. Both the ABM Treaty and the Interim Agreement entered into force on 3 October 1972.

By signing the ABM Treaty, the United States and the former Soviet Union undertook not to develop, test, or deploy mobile land-based, sea-based, air-based, or space-based ABM systems. They also agreed to limit ABM systems to two sites with no more than 100 launchers at each site. In that way, they would not build nationwide ABM systems, which each side viewed as destabilizing. In 1974, the treaty was amended by a protocol which limited each side to one ABM deployment area only. The former Soviet Union chose to maintain its ABM system in the area centered on its capital, Moscow, and the United States chose to maintain its system in an intercontinental ballistic missile (ICBM) deployment area in North Dakota. On 13 June 2002, the United States withdrew from the ABM Treaty in order to pursue the development of missile defenses that would have been banned by the agreement.

The second phase of the talks (SALT II) began in November 1972 and ended in June 1979 with the signing in Vienna of the *Treaty on the Limitation of Strategic Offensive Arms*, a protocol which was an integral part of the treaty, and a *Joint Statement of Principles and Basic Guidelines for Subsequent Negotiations on the Limitation of Strategic Arms*. The treaty, designed to remain in force to the end of 1985, defined and identified specific weapons and included numerous detailed limitations on the testing, deployment, modernization and replacement, and conversion of particular weapons systems. A Standing Consultative Commission was set up by the two countries in 1972 to deal with any questions or doubts about compliance with SALT II. Although SALT II was not ratified by either party, each side declared its intention to abide by the provisions of the treaty as long as the other did. In 1986, President Ronald Reagan announced that the United States would no longer be bound by the SALT II limits because of Soviet violations of its arms control commitments.

#### **The INF Treaty**

Early in the 1980s, the United States and the former Soviet Union opened two new sets of negotiations, one on intermediate-range nuclear forces (INF) and one on the reduction of strategic arms (START). After their discontinuation in December 1983, owing to the strained political situation between the two sides on the question of intermediate forces in Europe, the two powers agreed in January 1985 to hold negotiations on the complex questions concerning space and nuclear arms—both strategic and intermediate range—in order to work out an agreement for preventing an arms race in space and terminating it on earth, at limiting and reducing nuclear arms, and at strengthening strategic stability. This process led first to the signing in December 1987 in Washington of the

*Treaty between the Two States on the Elimination of Their Intermediate-Range and Shorter-Range Missiles* (INF Treaty). It provided for the elimination of an entire class of nuclear weapons, namely, those nuclear forces with a range of between 500 and 5,500 kilometers. (Nuclear weapons with a range of more than 5,500 kilometers were considered to be strategic, while those with a range of less than 500 kilometers belonged to the category of tactical nuclear weapons.) The treaty entered into force on 1 June 1988. The INF Treaty is considered the first nuclear disarmament treaty, as it brought about the first actual reductions in the nuclear weapons of the two major powers. It also was considered an important turning point with respect to the strict verification schedule that it established, which included mutual arrangements for on-site inspections. Its provisions were fully implemented before June 1991, the date set by the treaty.

### The START Treaties

In parallel to the negotiations being conducted on intermediate nuclear force, a complex series of talks were also held on reducing significantly the two sides' strategic nuclear weapons, in particular inter-continental ballistic missiles (ICBMs). These negotiations were finalized by the signing, at a summit meeting between President Bush and President Gorbachev in Moscow on 31 July 1991, of the *Treaty on the Reduction and Limitation of Strategic Offensive Arms* (START Treaty). The main objective of the treaty was to increase stability in the nuclear relationship between the former USSR and the United States. The interrelated limits and sublimits on the two sides' strategic nuclear forces established by the treaty amounted to an unprecedented reduction of 35% to 40% of their overall nuclear forces at the time. Furthermore, an elaborate system, including a full range of notifications, inspections, and permanent monitoring, was adopted for the verification of compliance with the terms of the treaty.

At the same time as efforts were being carried forward to ratify the START Treaty and to deal with the problems raised by the dissolution of the former Soviet Union, the Russian Federation and the United States intensified their negotiations on their strategic nuclear weapons. As a result, on 3 January 1993, President Bush and President Yeltsin signed the *Treaty on Further Reduction and Limitation of Strategic Offensive Arms* (START II). The treaty, once implemented, was to bring about deep reductions in the overall number of nuclear warheads of the two sides including in their levels of inter-continental ballistic missiles (ICBMs), submarine-launched ballistic missiles (SLBMs), nuclear armed heavy bombers and nuclear air-launched cruise missiles (ACLMs).

Entry into force of the START I Treaty was complicated by the breakup of the USSR in 1989. The Russian Federation ratified the treaty on condition that the new republics of Belarus, Kazakhstan, and Ukraine also ratify the treaty and join the Nuclear Non-Proliferation Treaty (NPT). The START I Treaty was ratified by the United States Senate (1 October 1992), the Russian parliament (4 November 1992), the Belarus parliament (4 February 1993), the Kazakhstan parliament (2 July 1992), and the Ukrainian parliament (3 February 1994). Belarus joined the NPT on 22 July 1993. Kazakhstan joined the NPT on 14 February 1994. Ukraine joined the NPT on 5 December 1994. On that date, START I entered into force. On 5 December 2001, the United States and the Russian

Federation successfully reached the START I levels of 6,000 deployed warheads.

The START II treaty provided that, in a two-phased process, the Russian Federation would reduce the number of its strategic nuclear weapons to 3,000 and the United States to 3,500, by the year 2003. START II was ratified by the U.S. Senate in January 1996, and by the Russian parliament in April 2000. On 14 June 2002, one day after the U.S. withdrew from the ABM Treaty, Russia announced that it would no longer consider itself to be bound by START II provisions. In effect, the START II treaty was superseded by the Moscow Treaty (SORT) of 2002, in which both sides agreed to reduce operationally deployed strategic nuclear warheads to 1,700 and 2,200 by 2012.

### Unilateral Initiatives

In addition to the joint efforts of the two major powers to reduce the level of nuclear confrontation between them, a broad set of unilateral nuclear initiatives was announced by President Bush on 27 September and by President Gorbachev on 5 October 1991, which affected the entire spectrum of nuclear weapons of the United States and the former Soviet Union. The broad unilateral initiatives announced the destruction by both sides of their tactical nuclear weapons throughout the world, as well as other significant moves with respect to their nuclear forces. At the same time, President Gorbachev declared a one-year moratorium on nuclear weapons testing.

Upon the dissolution of the former Soviet Union at the end of 1991, its nuclear arsenal, which was subject to the reductions and limitations agreed under the START Treaty, passed into the jurisdiction of four newly formed states: Belarus, Kazakhstan, the Russian Federation, and Ukraine. To address the questions raised by the new situation, the four states, together with the United States, signed on 23 May 1992 in Lisbon, a protocol to the 1991 START Treaty. In the document, the four states, as successor states of the former USSR, agreed to assume the obligations of the former Soviet Union under the treaty, including working out arrangements among themselves to comply with the limits and restrictions contained in the treaty. While the Russian Federation assumed the status of nuclear-weapon state inherited from the former USSR, Belarus, Kazakhstan, and Ukraine committed themselves to adhere to the non-proliferation treaty as non-nuclear-weapon states in the shortest possible time. They did so in 1993 and 1994. In 1996, Belarus joined Ukraine and Kazakhstan in removing and transferring to the Russian Federation the last of the remaining former Soviet nuclear weapons located within their territories.

### Cessation of Nuclear Testing

It is widely considered that a comprehensive test ban would inhibit the proliferation of nuclear weapons. It would make it difficult, if not impossible, for the nuclear-weapon states to develop new weapon designs and would place constraints on the refinement of existing ones. On the other hand, nuclear-weapon states, including the United States, tend to regard at least some form of testing as necessary so long as their security is at all dependent on a strategy of nuclear deterrence.

The question of the discontinuance of nuclear testing has been discussed in the General Assembly since 1945. An estimated 1,622 nuclear-test explosions were detonated between 16 July 1945 and

31 December 1986—815 by the United States, 597 by the USSR, 140 by France, 40 by the United Kingdom, 29 by China, and 1 by India, which stated that its nuclear test was an experiment strictly for peaceful purposes.

Despite ongoing unilateral and international efforts to ban nuclear testing, it continued in the 1990s. Notably, in early October 1995, France (despite its assurances that it would not) conducted a nuclear test on Fangataufa Atoll in the Pacific. The blast triggered a wave of protest throughout the region. Ongoing tests by nuclear-weapons states prompted the General Assembly on 12 December 1995 to issue a statement saying it “strongly deplored all current nuclear testing and strongly urged the immediate cessation of all such testing” and had adopted a resolution by a vote of 85 in favor to 18 against, with 43 abstentions, commending those nuclear-weapon states observing testing moratoriums and urging them to continue the moratoriums pending the entry into force of a comprehensive nuclear test-ban treaty. In spring 1998, India and Pakistan, whose dispute over the Kashmir region continued, each conducted underground nuclear tests, causing scientists to move the hands of the infamous Doomsday Clock closer to midnight (the point of annihilation). These events highlighted the urgency of reaching consensus on nuclear non-proliferation and testing and underscored the role of the UN in bringing the parties to the table.

#### Partial Test Ban Treaty

Late in 1958, the nuclear powers (then the USSR, the United Kingdom, and the United States) began negotiations in Geneva on the discontinuance of nuclear-weapon tests. Although they accomplished nothing definitive, related and subsequent efforts in the General Assembly and the Eighteen-Nation Committee on Disarmament and, finally, further negotiations led to the signing in Moscow on 5 August 1963 of the *Treaty Banning Nuclear Weapons Tests in the Atmosphere, in Outer Space, and Under Water* (Partial Test-Ban Treaty). The treaty prohibits any nuclear explosions for weapons testing or for any other purpose in the atmosphere or beyond its limits, including outer space; or under water, including territorial waters or high seas. Its prohibitions also extend to nuclear explosions in any other environment if such an explosion produces radioactive debris outside the territorial limits of the state under whose jurisdiction or control the explosion is conducted. Further to the main provisions of the treaty, which did not prohibit the testing of nuclear devices underground, the parties to the treaty also confirmed their intention to seek an end to all testing of nuclear weapons and to continue negotiations towards that end, and declared their desire to end radioactive contamination of the environment.

The treaty was the first international agreement to regulate nuclear arms worldwide, and it has been recognized as an important instrument in reducing international tensions and decreasing radioactive pollution. It also helped to create a climate in which negotiations on other nuclear-arms limitation agreements, notably the *Treaty on the Non-Proliferation of Nuclear Weapons*, were able to take place.

France and China did not become parties to the treaty, but France announced in 1974 that it would not conduct any further atmospheric tests.

#### Bilateral Agreements on Nuclear Testing

In 1963, the nonaligned states in particular made strenuous efforts to persuade the USSR and the United States to extend the Partial Test Ban Treaty to include a ban on underground tests. Disagreement about verification prevented such an extension. Even after the Partial Test Ban Treaty came into effect, extensive underground testing continued, particularly by the USSR and the United States.

Two bilateral treaties, between the former Soviet Union and the United States, placed limits on their underground nuclear tests. These were the 1974 *Treaty on the Limitation of Underground Nuclear Weapon Tests* (known as the threshold test-ban treaty) and the 1976 *Treaty on Underground Nuclear Explosions for Peaceful Purposes*. Each party agreed not to test explosives yielding more than the 150-kiloton limit. Because of difficulties with the verification provisions and technology associated with the two treaties, they remained unratified for many years, although the two powers complied with their provisions. Following three years of bilateral negotiations from November 1987 to 1 December 1990 on nuclear testing verification and yield measurement methodology, the two powers exchanged instruments of ratification of the two treaties. The verification arrangements set out in conjunction with those two treaties were unprecedented in their openness and transparency, and helped to set the stage for even greater cooperation between the two major powers in agreements on the reduction of their nuclear-weapon arsenals.

#### Comprehensive Test Ban Treaty

The question of the complete cessation of all nuclear-weapon tests or of all nuclear explosive tests has been considered as a separate issue in UN bodies since 1963 and is the subject of many General Assembly resolutions. Between 1977 and 1980, the USSR, the United Kingdom, and the United States also undertook trilateral negotiations on a comprehensive test-ban treaty but again did not succeed in completing one. Questions of how to verify compliance with a ban on nuclear-weapon tests, how to treat nuclear explosions for peaceful purposes under the conditions of a ban, and whether to seek to ban all nuclear explosions presented difficulties both in the Conference on Disarmament, which was the main focus of efforts since 1980, and in the bilateral discussions that commenced in July 1986 between the USSR and the United States.

In an effort to add impetus to the ongoing efforts, the USSR halted all nuclear explosions for an 18-month period, from August 1985 to February 1987. The United States did not reciprocate because it believed that such an unverifiable measure was not a substitute for a negotiated, binding treaty.

At the 1995 Non-Proliferation Treaty Review and Extension Conference, the first measure agreed to was the completion of a Comprehensive Nuclear-Test-Ban Treaty (CTBT) no later than 1996. On 24 September 1996, the CTBT was opened for signature. As of 15 April 2006, it had been signed by 176 states, including all five nuclear-weapon states, and ratified by 132 states. However, the treaty had not yet entered into force since not all the states whose ratification is required for its entry into force had done so, including the United States, which rejected ratification in fall 1999.

### Unilateral Actions Towards an End to Nuclear Testing

With the end of the Cold War and the improvement in international political climate, important political strides towards the achievement of a comprehensive nuclear test ban were registered. In the early 1990s the number of underground nuclear tests being conducted by the nuclear-weapon states began to decrease considerably. In October 1991, the former Soviet Union declared a unilateral moratorium on nuclear tests, which was extended by the Russian Federation indefinitely. In April 1992 France suspended its nuclear testing. In October 1992 the United States enacted a law which not only declared a unilateral moratorium on its nuclear tests, but also directed that after September 1996, the United States government could no longer conduct nuclear tests. However, although the United States in January 2002 stated that it had no plans to resume nuclear testing, the U.S. Defense Department made a decision to “try and upgrade our testing infrastructure,” especially “if the strategic circumstances in the world changed dramatically.” The United Kingdom, which has conducted for several decades its nuclear-weapon tests at the nuclear testing site in the United States, has respected the declared moratorium of the United States and has not conducted any nuclear tests since November 1991. However, China conducted nuclear tests in June and October 1994. France resumed its nuclear testing program in the Pacific by conducting six under-ground tests during a five month period that began in September of 1995. Nuclear weapons tests broke out on the South Asian subcontinent in 1998. India announced that it conducted five underground nuclear explosions on 11 and 13 May 1998, its first nuclear tests since 1974. In response, Pakistan announced that it conducted five underground nuclear explosions on 28 May and another on 30 May 1998. These events undermined the progress that had been made to halt all nuclear weapons testing.

### Prevention of Nuclear Proliferation

In the early years of the atomic era, it was widely assumed that only a few highly industrialized nations would be able to afford to manufacture nuclear weapons. However, by the mid-1960s, advancing technology and simplification of nuclear production processes, particularly for electric-power generation, had led to the categorization of some 20 nations, including relatively small ones, as countries possessing a nuclear capability; there are now some 30 so-called “threshold” states. The fear of horizontal nuclear proliferation has thus spawned much discussion in the General Assembly. During 1965 and 1966, the greater part of the General Assembly’s debates on disarmament was devoted to this issue, especially with the emergence of China as a nuclear-weapon power.

In 1967, the United States and the USSR, after prolonged negotiations, put forward identical draft non-proliferation treaties in the Eighteen-Nation Committee on Disarmament, and in 1968, after further negotiation, a final joint draft was commended overwhelmingly by the General Assembly as the *Treaty on the Non-Proliferation of Nuclear Weapons*. The treaty came into force in March 1970. By 15 April 2006, it had been ratified by 189 countries, including the five declared nuclear-weapon states: China, France, the Russian Federation, the United Kingdom, and the United States. Though the treaty had received a great deal of sup-

port as reflected by the number of ratifications to it, challenges to its objectives remained.

The Non-Proliferation Treaty (NPT) prohibits the spread of nuclear weapons, employing the safeguards system of the IAEA to provide assurance against any diversion or misuse of nuclear materials by non-nuclear-weapon states. It also contains provisions for promoting the peaceful uses of nuclear energy; for making nuclear equipment, materials, and information available on a nondiscriminatory basis to non-nuclear-weapon states for peaceful purposes; and for the pursuit of negotiations relating to the cessation of the nuclear-arms race and to nuclear and general disarmament. All the non-nuclear-weapon parties to the treaty must accept safeguards, through separate agreements, with the IAEA. The safeguards system provides for international inspection of all their nuclear installations. Several states that are not parties to the treaty have also signed safeguards agreements with the IAEA covering all or most of their installations.

Following the disintegration of the former Soviet Union at the end of 1991, the nuclear weapons left on its former territory had fallen under the jurisdiction of Belarus, Kazakhstan, the Russian Federation, and Ukraine. While the Russian Federation assumed the treaty obligations of the former Soviet Union, in a special agreement, the Lisbon Protocol, Belarus, Kazakhstan, and Ukraine agreed to become non-nuclear-weapon states party to the NPT. They did so in 1993 and 1994. In 1996, Belarus joined Ukraine and Kazakhstan in removing and transferring to the Russian Federation the last of the remaining former Soviet nuclear weapons located within their territories. Only India, Israel, Pakistan and Cuba remain outside the NPT regime.

In the wake of the war in the Persian Gulf, the UN Special Commission (UNSCOM), appointed to eliminate Iraq’s capability to use weapons of mass destruction, uncovered the existence of a clandestine nuclear weapons program in that country. This revelation further challenged the NPT regime and in particular the inspection procedures employed by the IAEA.

Seven conferences have been held to review the operation of the treaty—in 1975, 1980, 1985, 1990, 1995, 2000, and 2005. In accordance with the terms of the treaty, a conference is to be held 25 years after its entry into force to decide whether it shall continue in force indefinitely or shall be extended for an additional fixed period or periods. Since the treaty’s entry into force, the parties and the General Assembly have called in various contexts for universal adherence to the treaty as the best means of further strengthening the non-proliferation regime.

Some of the aspects that are of crucial importance to the extension of the NPT and the strengthening of the non-proliferation regime revolve around the issue of efforts being made towards the cessation of the nuclear arms race and nuclear disarmament. In that connection, the question of the achievement of a comprehensive nuclear test ban treaty has taken on paramount importance for many non-nuclear-weapon states. In addition, the issue of the granting of guarantees to non-nuclear-weapon states that nuclear weapons will not be used against them would make an important contribution to the reinforcement of the NPT structure. Many states have for years supported the call for the nuclear-weapon states to cease production of fissionable material for weapons purposes, which they consider would contribute significantly in a qualitative manner to the ending of the nuclear arms race.

Notwithstanding the above caveats, the Non-Proliferation Treaty remains effective as the cornerstone of an international non-proliferation structure that has grown to embrace the overwhelming majority of countries of the world.

#### Nuclear-Weapon-Free Zones

The establishment of nuclear-weapon-free zones in various parts of the world has long been considered a possible means for curbing horizontal nuclear proliferation and enhancing peace and security for non-nuclear-weapon states on a regional basis.

#### Outer Space

The 1967 *Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies*, while not strictly belonging to that body of law which bans nuclear weapons from a particular area, is relevant nonetheless to the concept of nuclear-free zones. Among other things, it provides that states parties will not place any objects carrying nuclear weapons or any weapon of mass destruction in orbit around the earth, install these weapons on celestial bodies, or station them in outer space.

#### The Seabed

The 1972 *Treaty on the Prohibition of the Emplacement of Nuclear Weapons and Other Weapons of Mass Destruction on the Sea-Bed and the Ocean Floor and in the Subsoil Thereof* provides that states parties undertake not to place on or under the seabed, beyond the outer limit of a 12-mile coastal zone, any nuclear or other weapons of mass destruction or any facilities for such weapons.

#### Antarctica

The 1959 *Antarctic Treaty* was the first international agreement to provide for the absence of nuclear weapons in a specified area by having established a demilitarized zone in the Antarctic. Under the terms of the treaty, Antarctica is to be used exclusively for peaceful purposes. All military activity, nuclear explosions, or disposal of radioactive waste in the area are prohibited. The provisions of this treaty appear to have been scrupulously observed.

#### Latin America and the Caribbean

The *Treaty for the Prohibition of Nuclear Weapons in Latin America and the Caribbean* (Treaty of Tlatelolco), signed on 14 February 1967 at Tlatelolco, Mexico, was the first treaty establishing a nuclear-weapon-free zone in a densely populated area. It is also the first regional agreement to establish its own system of international verification and a permanent supervisory organ, the Agency for the Prohibition of Nuclear Weapons in Latin America (known by its Spanish acronym OPANAL), which was set up in June 1969. States parties to the treaty agree to use any nuclear material or facilities under their jurisdiction exclusively for peaceful purposes and to prohibit the presence of nuclear weapons in their territories, under any circumstances. They also agree not to engage in, encourage, authorize, directly or indirectly, or in any way participate in, the testing, use, manufacture, production, possession, or control of any nuclear weapon. The treaty's verification system includes the requirement that safeguards agreements be concluded with IAEA in respect of all the nuclear activities undertaken by

the parties. Annexed to the treaty are two Additional Protocols. Under Additional Protocol I, France, the Netherlands, the United Kingdom, and the United States agree to guarantee nuclear-weapon-free status to those territories for which they are, *de jure* or *de facto*, internationally responsible. In August 1972, the protocol was signed by France, thus giving it full force as all four countries had now signed. Under Additional Protocol II, nuclear-weapon states pledge to respect fully the denuclearization of Latin America and not to use or threaten to use nuclear weapons against parties to the treaty. By 1979, all five nuclear-weapon states had become parties to it.

#### The South Pacific

The states party to the 1986 *South Pacific Nuclear Free Zone Treaty* (Treaty of Rarotonga) have undertaken not to manufacture or acquire any nuclear explosive device; to control the export of fissionable material; to ensure that their nuclear activities are exclusively for peaceful and nonexplosive purposes and are conducted under strict safeguards; to ban the testing of nuclear explosive devices in the South Pacific; to prohibit the stationing of nuclear explosive devices in their territories; and to prevent the dumping at sea, in the region, of nuclear waste.

The treaty has three protocols, which are integral to its purposes. Protocol 1 obliges France, the United Kingdom, and the United States to apply the terms of the treaty in respect of the territories for which they are responsible in the region, especially with regard to prohibitions on the manufacture, stationing, and testing of any nuclear explosive device. Protocol 2 commits the five nuclear-weapon states not to use or threaten to use any nuclear explosive device against parties to the treaty. Protocol 3 commits the five nuclear-weapon states not to test any nuclear explosive device anywhere within the zone covered by the treaty. The United States, along with the United Kingdom and France, signed all three protocols on 25 March 1996. Russia (with understandings) and China signed and ratified Protocols II and III; neither has zonal territories that would require adherence to Protocol I. France ratified the protocols on 20 September 1996, and the United Kingdom ratified the protocols on 19 September 1997.

#### Southeast Asia

The 1995 *Southeast Asia Nuclear Weapon Free Zone (SEANWFZ) Treaty* (Treaty of Bangkok) bans the research, development, manufacture, stockpiling, acquisition, possession or control over any nuclear explosive device by any means in Southeast Asia. The area designated as a nuclear free zone comprises the territories of all states in Southeast Asia, namely, Brunei Darussalam, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam, and their respective continental shelves and exclusive economic zones. Each state party also agrees not to dump at sea or discharge into the atmosphere any radioactive material or wastes in the region. The Treaty of Bangkok has one protocol, specifying that all five nuclear weapons states undertake not to use or threaten to use nuclear weapons against any state party to the treaty, nor to use or threaten to use nuclear weapons within the Southeast Asia Nuclear Weapon-Free Zone. As of 2006, none of the nuclear weapons states had signed the protocol, largely due to U.S. and French objections regarding the unequivocal nature of

security assurances and over the definitions of territory, including exclusive economic zones.

#### Africa

The 1996 *African Nuclear Weapons Free Zone Treaty (ANWFZ)* (commonly known as the Treaty of Pelindaba) establishes a nuclear-weapon-free zone on the continent of Africa and all island states considered by the former Organization of African Unity to be part of Africa. The treaty has three protocols. Under Protocol I, the five nuclear powers are to agree not to use or threaten to use a nuclear explosive device against any treaty party or against any territory of a Protocol III party within the African zone. Under Protocol II, those five powers are to agree not to test or assist or encourage the testing of a nuclear explosive device anywhere with the African zone. Protocol III is open to states with dependent territories in the zone and obligates them to observe certain provisions of the treaty with respect to these territories; only Spain and France may become parties to it. All five nuclear weapons states signed the three protocols in 1996, but as of April 2006, only China, France, and the United Kingdom had ratified Protocols I and II. France ratified Protocol III in 1997.

#### Proposals for Nuclear-weapon-free Zones

In addition to those areas and zones mentioned above, where there has been success in elaborating treaties prohibiting the use of nuclear weapons, the General Assembly has also discussed, with varying degrees of success, proposals for creating nuclear-weapon-free zones in many other regions of the world. These discussions have covered a number of geographic zones, including the Balkans, the Mediterranean, Northern Europe, Central Europe, the Middle East, and South Asia.

#### Security Assurances to Non-nuclear-weapon States

Since the conclusion of the NPT in 1968, the non-nuclear-weapon states have repeatedly insisted that their promise not to acquire nuclear weapons should be met with an assurance that nuclear weapons would not, under any circumstances, be used against them. On 19 June 1968, the Security Council recognized that aggression using nuclear weapons, or the threat of doing so, against a non-nuclear-weapon state would warrant immediate action by the Security Council, above all its nuclear-weapon state permanent members. The Security Council also reaffirmed the provision of the UN Charter that declares that a state, if the victim of an armed attack, has a right to act in individual or collective self-defense until such time as the Security Council could take action to maintain peace and security.

At the 1978 special session on disarmament, four of the five nuclear-weapon states individually declared their intention not to use, or threaten to use, nuclear weapons against non-nuclear-weapon states, which met the conditions outlined in their respective declarations. At that session also, China reiterated the declaration it made when it conducted its first nuclear test—that it would never use nuclear weapons against a non-nuclear-weapon state. The nuclear-weapon states have refined and reasserted their respective security guarantees several times since then.

Since 1979, the Conference on Disarmament has considered proposals for effective international arrangements that would assure non-nuclear-weapon states against the use, or threat of use, of

nuclear weapons. Non-nuclear-weapon states have expressed the view that further assurances, in legally binding form, are necessary in order to effectively guarantee their security against nuclear attack. The Western nuclear-weapon states and their allies have been of the view that, in order to receive such negative security assurances, states must have demonstrated a commitment not to acquire nuclear weapons, by forming part of a nuclear-weapon-free zone or by adhering to the Nuclear Non-Proliferation Treaty. Those non-nuclear-weapon states that are party to the NPT considered the issue of pivotal importance to the outcome of the 1995 NPT Conference.

#### Prohibition of the Production of Fissionable Material

An approach to nuclear disarmament which has received much international attention over the years has been to stop the production of fissionable material for weapons purposes.

The United States submitted proposals on this subject to the Eighteen-Nation Committee on Disarmament and the General Assembly during the 1960s, which included plans for inspection of certain types of nuclear reactors and separation plants; the dismantling of a number of nuclear weapons by both the United States and the former Soviet Union, to be carried out in the presence of observers; and the transfer or conversion of fissionable material to industries or forms in which it could be used for peaceful purposes.

In 1992 the United States announced a unilateral cessation of its national production of plutonium and highly enriched uranium for nuclear weapons. Among the nuclear-weapon states, both the Russian Federation and the United States have expressed support for reaching an international agreement to halt the production of weapons-grade fissionable material in the interests of non-proliferation. In 1993, the General Assembly adopted without a vote a resolution recommending negotiation in the most appropriate international forum of a non-discriminatory, multilateral, and internationally and effectively verifiable treaty banning the production of material for nuclear weapons or other nuclear explosive devices.

In 1995, the UN Conference on Disarmament agreed to establish a mandate for an ad hoc committee based on the 1993 General Assembly resolution. The mandate was included in the “Shannon Report,” named after then-Canadian Ambassador to the UN Gerald Shannon who led consultations on this issue. Because several countries resisted limiting the treaty to a ban only on the future production of fissile material, the Shannon Report explicitly states that the mandate to negotiate a halt to the production of fissile materials for nuclear weapons does not preclude any country from including the past production of fissile material. The Conference on Disarmament also agreed in 1998 to convene an ad hoc committee to negotiate a ban on the production of fissile materials.

## OTHER WEAPONS OF MASS DESTRUCTION

In 1946, the General Assembly envisaged not only the elimination of atomic weapons, but also of all other major weapons of mass destruction. The dangers of such weapons to humanity can-

not be underestimated. Even in World War I, “first-generation” chemical agents caused some 1.3 million casualties, of which over 100,000 were fatal. In 1948, the Commission for Conventional Armaments, in setting out the limits of its jurisdiction, also defined weapons of mass destruction as including, besides atomic explosive weapons, radioactive material weapons, lethal chemical and biological weapons, and any weapons developed in the future with comparable destructive effects.

### Chemical and Biological Weapons

As mentioned earlier, the powerful sense of outrage generated by the use of chemical weapons during the First World War resulted in the signing of the Geneva Protocol of 1925 banning the use, but not the production, possession, or stockpiling, of chemical or bacteriological weapons. As a consequence, possession and acquisition, particularly of chemical weapons, has continued and, indeed, in recent years has proliferated. Many parties to the Geneva Protocol have included reservations or statements with their signatures that open the door to the possible retaliatory use of such weapons.

The protocol also did not provide for mechanisms to verify compliance or for procedures to deal with violations. Recognizing the shortcomings of the protocol, the international community continued its quest for a complete ban on chemical and biological weapons. Although treated as a single issue previously, it was agreed in 1971 to separate consideration of chemical and biological weapons in the hope that an early ban on biological weapons could be achieved.

### Biological Weapons

The *Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction* entered into force on 26 March 1975 and was hailed as a first step towards a comprehensive ban on biological weapons.

The convention prohibits the development, production, stockpiling, acquisition, or retention of microbial or other biological agents, or toxins whatever their origin or methods of production, of types and in quantities that have no justification for prophylactic, protective, or other peaceful purposes. It also prohibits weapons, equipment, or means of delivery designed to use such agents or toxins for hostile purposes or in armed conflict. The agents, toxins, weapons, equipment, and means of delivery held by states that became party to the convention should be destroyed or diverted to peaceful purposes not later than nine months after the entry into force of the convention for that state. Furthermore, any state party that finds that any other state party is not complying with the provisions of the convention may lodge a complaint with the Security Council.

In 1986, states parties decided to initiate a set of confidence-building measures in the form of a voluntary exchange of information and data. The information to be exchanged included data on high-risk research centers and laboratories; outbreaks of infectious diseases; publication of results of biological research; and the promotion of contacts among scientists in biological research.

In 1991, the states parties established an Ad Hoc Group of Governmental Experts to identify and examine potential verification measures from a scientific and technical standpoint. A majority

of states parties have requested a special conference to review the results of the expert group.

In December 1996, the Fourth Review Conference of States Parties to the Biological Weapons Convention held a two-week session. The conference supported intensified work by an ad hoc group to design a verification protocol for the international treaty. The conference expressed hope that the group would reach agreement on a draft protocol to be considered by a special conference of states parties to the convention as soon as possible and before the Fifth Review Conference.

The Fifth Review Conference was convened from 19 November to 7 December 2001. Due to persisting divergent views and positions on certain key issues, however, the conference decided to adjourn its proceedings and resume its work in November 2002. The conference was reconvened from 11 to 15 November 2002 in Geneva. States parties adopted a final report that included a decision to hold annual meetings in the next three years leading up to a Sixth Review Conference in late 2006. The Fifth Review Conference was held against a background of heightened global concern about the threat of biological agents such as anthrax being used as weapons. Extensive negotiations and drafting sessions were held as the international treaty’s states parties sought to respond to recent developments and demands that the Biological Weapons Convention be vigorously and thoroughly enforced. Ninety-one of 144 States parties attended the session.

### Chemical Weapons

In 1966, with the adoption of its first resolution on the question of chemical and bacteriological (biological) warfare, the General Assembly commenced a long process of international discussions and negotiations on issues relevant to the question. The adoption of the resolution reflected growing international awareness of the dangers involved with the possible use of such weapons of mass destruction.

The question of chemical and biological weapons was treated as a single issue requiring a unified approach before 1971. After agreement had been reached on the Biological Weapons Convention in 1972, attention turned more to the chemical weapons aspect and numerous proposals were put forward in the multilateral negotiating body in Geneva, including the complete texts of drafts conventions. In 1980, the Conference on Disarmament began working toward a convention on chemical weapons, but progress was evident only late in the decade. The former Soviet Union and the United States, the only states that had admitted to possessing stockpiles of chemical weapons, began a series of bilateral contacts that led to agreement between them on sensitive issues of verification of implementation of a convention, including the question of challenge and on-site inspection.

The actual use of chemical weapons during the war between Iraq and the Islamic Republic of Iran in the 1980s, confirmed by an investigative team appointed by the Secretary-General, focused greater international attention on the need to reach early agreement on the prohibition of these weapons. In 1991, the war in the Persian Gulf and the possibility that chemical weapons might again be used added even greater urgency to the efforts to rid the world of chemical weapons as soon as possible. On 8 November 2002, the Security Council adopted Resolution 1441 calling on Iraq to immediately disarm itself of chemical, biological, and

nuclear weapons. The threat posed by Iraq's weapons of mass destruction was regarded by the UN as great, and the resolution included language that did not preclude the use of force against Iraq for noncompliance. Force was indeed used against Iraq beginning on 19 March 2003 when US-led forces invaded Iraq, marking the start of the Iraq War. No significant presence of weapons of mass destruction was found in Iraq after the invasion.

The *Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on Their Destruction* was opened for signature on 13 January 1993 in Paris, France. The required number of ratifications (65) was completed in October 1996 and the treaty entered into force 29 April 1997, by which time a total of 87 countries had ratified it, including the United States (which ratified it 24 April 1997). One year later, a total of 108 states were party to the convention. By that time the Organization for the Prohibition of Chemical Weapons (OPCW), headquartered in The Hague, Netherlands, had already worked with nine cooperating states that provided the OPCW with information on past or existing chemical weapons programs. The OPCW had completed almost 200 inspections and witnessed the destruction of approximately 1,000 tons of nerve agents in its first year. By April 2006, 178 countries had ratified the chemical weapons convention.

The convention is considered a genuine disarmament measure in that it provides for the elimination of an entire category of weapons of mass destruction. Its importance lies in the fact that these weapons exist in large quantities, have been used in combat in the past, and are believed to be possessed by a large number of countries. Further, the verification system provided for under the convention is the most comprehensive to have been formulated for a multilateral agreement in the field of disarmament.

By the terms of the convention, states parties undertake never, under any circumstances, to use chemical weapons, nor to develop, produce, otherwise acquire, stockpile, or retain chemical weapons, or transfer them, directly or indirectly, to anyone. They also commit themselves never to engage in any military preparations to use chemical weapons nor to assist, encourage, or induce, in any way, anyone to engage in any activity prohibited under the convention. Within a period of 10 years, each state party undertakes to destroy chemical weapons and production facilities that it may own or possess, or that are located in any place under its jurisdiction or control, as well as all chemical weapons it has abandoned on the territory of another state party. The convention also bans the use of riot control agents as a method of warfare.

The states parties are required to submit detailed declarations on any chemical weapons they might possess, on old and abandoned chemical weapons they might have on their territory, and on any related chemical weapons production facilities, as well as on the plans and implementation of the destruction of such. They have agreed to a comprehensive and graduated system of routine inspections for international monitoring of the implementation of their obligations under the convention. Also provided for is a system of short-notice, challenge inspections, by which each state party may request an international inspection team to monitor any facility or location in the territory of another state party, which is obliged to allow the inspection, for the purpose of clarifying and resolving any questions concerning possible non-compliance. An

inspected state party may protect activities and installations that it considers unrelated to the inspection request.

### **New Weapons of Mass Destruction**

The question of new weapons of mass destruction has been under consideration since the mid-1970s in the General Assembly and the Conference on Disarmament, which have stated that effective measures should be taken to prevent the emergence of such weapons. The former USSR and other nations supported a general agreement precluding laboratory development of weapons of mass destruction, as well as specific agreements as relevant possibilities are identified; other states feel that meaningful, verifiable agreements are practical only for specific, emergent weapons or systems.

A list of specific types of potential weapons of mass destruction presented by the former USSR in 1979 included the following: radiological weapons, using radiological materials, a possibility already foreseen in 1948; particle-beam weapons, using charged or neutral particles to affect biological targets; and infrasonic "acoustic radiation" weapons and electromagnetic weapons operating at certain radio frequencies, either of which could have injurious effects on human organs.

### **Radiological Weapons**

At the 1976 session of the General Assembly, the United States proposed an instrument prohibiting radioactive weapons. This proposal led to bilateral negotiations with the USSR and the submission in 1979 of an agreed joint initiative for consideration by the then Committee on Disarmament.

Since 1980, the multilateral negotiating body has considered proposals for reaching agreement on a convention to prohibit the development, production, stockpiling, or use of radiological weapons. Some nonaligned and neutral states of the Conference on Disarmament, while recognizing the potential danger of the development of radiological weapons, considered that a military attack on a civilian nuclear power installation represented a more dangerous risk of mass destruction caused by the release of radiological substances. The former Soviet Union and the United States felt this idea altered the basic concept and content of the joint initiative.

Finding an acceptable way to cover both a ban on radiological weapons in the traditional sense and a prohibition of attacks against peaceful nuclear facilities has since been the main problem in efforts to negotiate a radiological weapons convention. This question has remained on the agenda of the Conference on Disarmament and the General Assembly, but differences of view concerning the question of the prohibition of attacks against nuclear facilities have persisted. In the wake of the 11 September 2001 terrorist attacks on the United States, the Conference on Disarmament put more attention on the problem of radiological weapons. The possibility of terrorists obtaining possession of radiological material and constructing a radiation dispersion weapon or "dirty bomb" was one taken seriously by the Conference. The IAEA and other bodies were working on ways of improving the physical control of such material in 2006.

## PROTECTING THE ENVIRONMENT FROM MILITARY ACTIVITY

In recent history, the world has viewed with mounting concern the specter of deliberate destruction of the environment as a method of warfare. The damage inflicted on the environment during the war in the Persian Gulf in 1991 and 1992 led to the inclusion of a new item on the agenda of the General Assembly, entitled "Exploitation of the environment as a weapon in times of armed conflict and the taking of practical measures to prevent such exploitation."

### Prohibition of Environmental Modification

In July 1974, following a summit meeting between the United States and the USSR, the two powers advocated measures to preclude the use of environmental modification techniques for hostile military purposes. This proposal led to consideration of the question in the General Assembly and the Conference of the Committee on Disarmament and the opening for signature on 18 May 1977 of the Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques. The convention entered into force in 1978. In essence, the convention bolsters existing provisions in international law protecting the environment by outlawing environmental modification techniques that would cause widespread, long-lasting, or severe effects to another state. During the process that led to the convention, many states decided it too narrowly defined the scope of the techniques to be banned. By April 2006, the convention had acquired only 72 signatures.

The convening of the UN conference in Rio de Janeiro in 1992 and the specter of oil wells set ablaze and a massive oil spill in the Persian Gulf during the Gulf War of 1991–92 intensified the debate over the environmental consequences of war. Some of the states parties to the convention made it known that they would ask the Secretary-General of the UN, as depositary (the holder of the legal, certified copies of the treaty), to convene a consultative committee of experts to provide views on the scope and application of the provisions of the convention. The states parties also have confirmed that the use of herbicides as an environmental modification technique was a method of warfare that fell within the scope of the prohibition of the convention if such use upset the ecological balance of a region, thus causing widespread, long-lasting, and severe effects.

## CONVENTIONAL WEAPONS

It is a painful reality that, throughout the nuclear era and the cold war, and now in the post-cold war world, all armed conflicts—almost every one of them in developing countries—have been fought with conventional weapons. More than 20 million people have died in those wars. Every year, armed conflicts are waged in some 30 locations on the planet, all fought with conventional weapons. Conventional weapons and armed forces account for some four-fifths of global military expenditures and for approximately 80% of the world arms trade.

Thus, while consideration of nuclear questions has dominated disarmament debates in the UN and other forums, the problems posed by the conventional arms race and arms transfers have come increasingly to the fore, particularly in the 1980s. In the disarmament forums at the UN, discussions of the issue of conventional

disarmament have focused on four main elements: (a) limitations on conventional weapons themselves; (b) transparency in international arms transfers and the establishment of a UN Register on Conventional Arms; (c) the regional approach and the building of military confidence and security among states; and (d) the strengthening of international humanitarian and disarmament law with respect to inhumane weapons, including the question of land mines.

In 1986, "conventional disarmament" was considered as a separate item on the agenda of the General Assembly for the first time, and, as a result, in 1987 it appeared on the agenda of the Disarmament Commission, indicating an increasing acceptance of the view that nuclear and conventional disarmament should proceed simultaneously.

When the question of prohibiting the use of certain conventional weapons, such as napalm and other incendiaries, was first raised in the General Assembly in the late 1960s, there were numerous proposals for banning various weapons, such as mines and booby traps, that also were deemed to cause unnecessary suffering or have indiscriminate effects. Considerable work, including some under the auspices of the International Committee of the Red Cross and of diplomatic conferences on protocols to the Geneva Convention of 1949 relating to humanitarian law in armed conflicts, was done in the late 1960s and the 1970s. As noted above, in 1980, a UN conference at Geneva adopted the *Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects*; the convention was opened for signature in 1981 and came into force in December 1983.

### UN Register of Conventional Arms

On 1 January 1992 the *UN Register of Conventional Arms* was officially established and the first reports on arms transfers during 1992 were due to be received by the UN Centre for Disarmament Affairs by 30 April 1993. In October of 1993, the Secretary-General presented a consolidated report on the first year of operation of the register to the General Assembly, which brought the information presented by states into the public domain. Information was received from 87 states, including most of the major supplier countries, on arms imports and exports in seven categories of heavy conventional weapons—battle tanks, armored combat vehicles, large caliber artillery systems, combat aircraft, attack helicopters, warships, and missiles and missile launchers. Submissions to the register, which are on a voluntary basis, are to be made by 30 April of each year. Upon the request of the General Assembly, the Secretary-General convened a group of experts in 1994 to examine the continuing operation of the register and its further development. In that connection, many states asserted that the information shared should include information on military holdings, on procurement through national production, and on weapons of mass destruction. They believed that these additions to the register would help to attract wider universality in reporting.

The establishment of the Register of Conventional Arms by the UN was a ground-breaking endeavor. The exchange of information enacted by means of the register has the potential to foster confidence among states and create an atmosphere more conducive to self-restraint and real measures of disarmament. The successful further development and operation of the register could

provide the member states of the UN with an effective instrument of preventive diplomacy.

Also in relation to openness and transparency in military matters, the Disarmament Commission completed its work on guidelines and recommendations for objective information on military matters, which were endorsed by the General Assembly. Also in 1992, the Conference on Disarmament took up for the first time an item dealing with conventional weapons under a new agenda item entitled "Transparency in Armaments." It continued consideration of the item in 1993 and 1994 in the framework of a subsidiary body of the conference, and presented a report to the General Assembly on its work in 1993.

In October 2002, the UN held a symposium to mark the 10th anniversary of the UN Register of Conventional Arms. As of April 2006, 169 governments had reported to the Register at least once.

### Inhumane Weapons

Early international humanitarian laws dealt with the effects of inhumane conventional weapons. The St. Petersburg Declaration of 1868 recognized that the object of warfare would not be served by the use of weapons that uselessly aggravate the suffering of disabled soldiers. The "dum-dum" bullet, developed a few years later, was banned by the 1899 Hague Conference as contrary to the St. Petersburg Declaration. Principles enunciated in the St. Petersburg Declaration of 1868 and the Hague Conferences of 1899 and 1907 were repeated in the Geneva Conventions of 1949, prohibiting the employment of weapons, projectiles, and material and methods of warfare of a nature to cause superfluous injury or unnecessary suffering. Between 1974 and 1977, two protocols were negotiated to the Geneva Conventions, but were not considered effective at adopting any prohibitions or restrictions on conventional weapons.

In 1977, the General Assembly decided to convene a UN conference with the aim of reaching an agreement on prohibitions or restrictions of use of certain conventional weapons. The UN Conference, held at Geneva in 1979 and 1980, adopted the convention, which entered into force on 2 December 1983. Annexed Protocol I prohibits the use of any weapons that injure with fragments that are not detectable by X-rays. Protocol II prohibits or sets out restrictions on the use of mines (excluding anti-ship mines), booby-traps, and other delayed action devices. Protocol III prohibits or outlines restrictions on the use of incendiary weapons, that is, weapons designed with the primary purpose of setting fire to objects or causing injury by means of fire.

Among other items of discussion with respect to the review of the convention, the vast toll in civilian life and bodily injury, together with the devastation of societies and economies in post-conflict situations caused by the massive and indiscriminate use of land mines, has been receiving greater international attention. In 1993, the General Assembly called upon all states to adopt a moratorium on the export of antipersonnel land mines. In a related resolution, the General Assembly requested the Secretary-General to prepare a report on the problems caused by the increasing presence of mines and other unexploded devices resulting from armed conflicts and on the manner in which the United Nations' contribution to the solution of problems relating to mine clearance could be strengthened.

As part of Secretary-General Kofi Annan's reform, the United Nations Mine Action Service (UNMAS) was created to coordinate the mine-related activities of 11 UN departments and agencies. Wholly funded by the Voluntary Trust for Assistance in Mine Action, UNMAS spearheaded the development of the Mine Action and Effective Coordination: The United Nations Policy, a document that serves as the basis for the coordinated, systemwide approach to mine action. While UNMAS focused its efforts on removing existing land-mines, the 1997 Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on Their Destruction aimed to eliminate, or at least reduce the number of, new land-mines. The convention entered into force March 1999.

## CONFIDENCE-BUILDING MEASURES

### Regional Confidence-Building

The objective of confidence-building measures is to contribute toward reducing or eliminating the causes for mistrust, fear, tensions, and hostilities, which are significant factors behind the international arms buildup. A UN study on confidence-building measures, issued in 1981, represented an attempt to clarify and develop the concept of confidence-building and to provide guidelines to governments for introducing and implementing confidence-building measures and promoting public awareness of the concept so as to advance negotiations and enhance peace and security. In that same year, the General Assembly invited all states to consider the possible introduction of confidence-building measures in their particular regions and, where possible, to negotiate among themselves in keeping with conditions and requirements prevailing in the respective regions. In fact, multilateral negotiations on these issues had been under way since the early 1970s.

The Vienna Talks on the Mutual Reduction of Forces and Armaments and Associated Measures in Central Europe, which commenced in 1973 among the member countries of NATO and the Warsaw Pact, were aimed at enhancing stability in the central region of the two alliances and in Europe as a whole while reducing armed forces and equipment but maintaining undiminished security. After decades of unsuccessful efforts in that framework, the two sides agreed to close down the talks in 1989 to pursue efforts in the context of a new set of talks on conventional force reductions within the security pillar of the Conference on Security and Cooperation in Europe (CSCE), ongoing since the adoption of the 1975 Helsinki Act.

The CSCE, held in Geneva and Helsinki from 1972 to 1975 and involving 33 European countries, as well as Canada and the United States, further developed the concept of confidence-building measures on a non-UN regional basis; its Final Act, issued at Helsinki in August 1975, included provisions on security, human rights, and scientific cooperation. The final Stockholm Document, adopted in September 1986, constituted the first security agreement for Europe among the 35 states participating in the conference that adopts militarily significant, politically binding, and verifiable confidence-building measures. Under its terms, the CSCE states agreed to a new set of standards on the notification and observation of certain military activities, and, most important, they agreed upon verification of compliance by means of mandatory on-site inspection arrangements.

Reviewed during 1977–78 in Belgrade and again from 1980 to 1983 in Madrid, the conference led to the Stockholm Conference on Confidence- and Security-Building Measures and Disarmament in Europe, held from 1984 to 1986, with the same states participating.

In Vienna in 1989, at the same time that negotiations between the two military alliances were initiated on conventional armed forces in Europe, a new set of negotiations began on confidence and security-building measures (CSBMs) among all the CSCE participating states. The talks led to the adoption of the Vienna Document of 1990, which incorporated and expanded the provisions of the Stockholm Document. Among its provisions are an exchange of military information among its parties on the command structure of their military forces, plans for the deployment of major weapon and equipment systems, and the military bud- plans for the forthcoming year. The CSCE held a summit meeting in Paris immediately following the adoption of the Vienna CSBM document and adopted the Charter of Paris. Among other results, the participating CSCE states decided to establish a Crisis Prevention Centre in Vienna, which became essentially the operational component of the CSBM document.

In order to consolidate further the achievements of the 1990 Charter of Paris, the CSCE held a summit meeting in 1992. It issued an important document relating to confidence-building entitled the *Helsinki Document–1992–The Challenges of Change*, adopted unanimously by its full membership. In Helsinki, the states parties decided *inter alia* to start a new negotiation on arms control, disarmament, and confidence- and security-building; established a new CSCE Forum for Security Cooperation; and strengthened the Conflict Prevention Centre set up in Vienna.

In the interest of improving openness and transparency, and facilitating monitoring and compliance with existing or future arms control agreements and to strengthen the capacity for conflict resolution and crisis management in the CSCE, a *Treaty on Open Skies* was signed in March 1992 by 24 of the CSCE participating states. Covering an area from Vancouver to Vladivostok, the treaty allows observation flights by a state party over the territory of other state parties.

The UN has contributed to the process of confidence-building in a number of ways. The Secretary-General has assisted states parties to arms limitation agreements, at their request, in exchanges of information. This is the case for the newly formed Register of Conventional Arms, for the maintenance of an international system for standardized reporting of military expenditures, for the biological weapons convention as well as for the seabed treaty.

The Secretary-General also has contributed to confidence building within regions by stimulating informal discussions of regional and global disarmament issues at seminars and conferences organized under the auspices of the Centre for Disarmament Affairs. Further, in order to promote cooperation among regional states towards arms limitation and disarmament, the UN has established three regional centers as follows: UN Regional Centre for Peace and Disarmament in Africa (Lomé, Togo); UN Regional Centre for Peace and Disarmament in Asia and the Pacific (Kathmandu, Nepal), and the UN Regional Centre for Peace, Disarmament and the Development in Latin America and the Caribbean (Lima,

Peru). The centers focus their activities on dissemination of information, training, and regional meetings.

### Zones of Peace

The 1971 Declaration of the Indian Ocean as a Zone of Peace is considered annually by an ad hoc Committee on the Indian Ocean, which has proposed the convening of a conference of the regional states. There also have been proposals for zones of peace and cooperation in various other regions, including the Mediterranean and the South Atlantic.

## ECONOMIC AND SOCIAL CONSEQUENCES OF THE ARMS RACE

Since the 1950s, the General Assembly has appealed for the reduction of military spending and has suggested that the money thus saved be redeployed for economic and social development activities. A 1981 UN expert study on the relationship between disarmament and development saw a triangular relationship between disarmament, security, and development and concluded that the world could either continue to pursue the arms race or move toward a more sustainable international and political order; it could not do both. A 1982 expert study on the economic and social consequences of the arms race and of military expenditures concluded that UN mechanisms for peaceful settlement of disputes should be strengthened, that the use of the world's finite resources for military ends should be discouraged, and that there should be extensive diversion of these resources from military applications to socioeconomic development.

### Conference on Disarmament and Development

In 1984, the General Assembly decided to convene an International Conference on the Relationship Between Disarmament and Development. The conference, which took place at UN headquarters in August–September 1987, considered ways and means of enhancing security and of releasing additional resources for development purposes through disarmament measures.

In particular, the conference called upon the UN to make greater efforts to promote collective knowledge of the nonmilitary threats to international security; to establish an improved and comprehensive database on global and national military expenditures; to continue to analyze the impact of global military expenditures on the world economy and the international economic system; to monitor trends in military spending, and to facilitate an international exchange of views and experience in the field of conversion from military to civilian production. To carry out the above work, a high-level task force was set up within the UN Secretariat. The Secretary-General reports each year to the General Assembly on the efforts carried out in this regard.

The improvement in the East-West relations in the late 1980s and the beginning of significant reductions in armed forces and armaments in the 1990s drew considerable attention to the issue of conversion of weapons, weapons testing and production facilities, and redeployment of armed forces. At its 44th session in 1989, the General Assembly, for the first time, adopted a resolution dealing with the subject of conversion of military resources.

Beginning with the 1990 international conference in Moscow on Conversion: Economic Adjustments in an Era of Arms Reduction, a number of similar conferences on different aspects of

conversion of military resources to civilian production have been organized by the Centre for Disarmament Affairs and other interested UN bodies in cooperation with various host countries. The conference in Moscow was followed by an international conference on International Cooperation in Peaceful Uses of Military Industrial Technology in Beijing, China, in 1991. This was followed by yet another international conference on aerospace complex conversion held in Moscow in 1992.

The UN Institute for Disarmament Research (UNIDIR) submitted to the General Assembly at its 47th session in 1992, through the Secretary-General, a study entitled *Economic Aspects of Disarmament: Disarmament As An Investment*. It found that on the cost side disarmament required a fundamental reallocation of resources from military to civilian production, which could result in major problems of unemployment or underemployment of labor, capital, and other resources. Economic dividends of disarmament were likely to be small in the short term, it concluded. In the long term, however, disarmament would lead to significant benefits in the civilian sector through the production of goods and services made possible through the reallocation of resources from the military sector. Thus, in its economic aspects, the report said, disarmament was like an investment process involving short-run costs and long-run benefits.

#### Reduction of Military Budgets

Proposals for the reduction of military budgets, based on the conviction that such measures would facilitate the disarmament process and help release resources for economic and social development, were made in the General Assembly during the 1950s and 1960s. Throughout the 1970s and 1980s, the General Assembly pursued this question on two tracks. There were those states that pressed for the identification and elaboration of principles for freezing and reducing military budgets, while other states favored an effort by the General Assembly to broaden participation in the standardized reporting system.

During the same period, the General Assembly initiated a series of expert studies and established an Ad Hoc Panel on Military Budgeting, aimed at arriving at a generally acceptable conceptual definition of military budgets and the development of a standardized system of measuring and reporting the military expenditures of states.

An international system for the standardized reporting of military expenditures was introduced in pursuance of resolution 35/142 B of 17 December 1980. A 1982 study reaffirmed that the reporting instrument was a practical method for monitoring and reporting on military expenditures and strongly recommended its continuous use. On the basis of national reports on military expenditures received, the Secretary-General has submitted annually to the General Assembly a document on the operation of the reporting system. The General Assembly also has continued to recommend that member states use the reporting instrument to forward annually to the Secretary-General military expenditures for the latest fiscal year for which data are available.

The Disarmament Commission also considered the reduction of the military budgets from 1979 until 1989. Despite the progress and refinement made on the reporting system, basic differences in approach to the problem of reducing military budgets remained.

In the 1986 session of the Disarmament Commission, provisional agreement was achieved on a text embodying a set of principles to govern the action of states in freezing and reducing military budgets. However, there was disagreement on the use of the standardized reporting instrument. The item has not been on the agenda of the Disarmament Commission since 1990.

In 1992, the General Assembly endorsed a set of guidelines and recommendations for objective information on military matters as adopted by the Disarmament Commission at its 1992 session. The "Guidelines" are intended *inter alia* to encourage openness and transparency on military matters, to facilitate the process of arms limitation, reduction, and elimination, as well as to assist verification of compliance with obligations undertaken by states in these fields.

## STUDIES, RESEARCH, INFORMATION, AND TRAINING

### Studies and Research

Since the early 1960s, the UN has prepared studies on disarmament issues mandated by the General Assembly, usually with the assistance of experts and consultants. The purpose of these studies is to assist the negotiating process through analysis of specific questions, as well as to provide information in order to facilitate better understanding of the issues.

The *UN Institute for Disarmament Research* (UNIDIR), which was established in October 1980 as an autonomous institution within the UN framework, conducts independent research on disarmament problems, aimed at encouraging disarmament by expanding accessible information on proposals and concepts. Located in Geneva, UNIDIR is funded principally by voluntary contributions from governments and public and private organizations.

The *Advisory Board on Disarmament Matters* functions as the board of trustees of UNIDIR. Its other major functions include advising on programs for disarmament studies and research and on implementation of the UN Disarmament Information Programme. It may also advise the Secretary-General of the UN on specific disarmament and related questions.

### Information

The Department for Disarmament Affairs (DDA) was created during the UN's late 1990s reform efforts to coordinate the UN's activities in this area. As part of this effort, the DDA issues the *UN Disarmament Yearbook* and a variety of other publications. The Website [www.disarmament.un.org](http://www.disarmament.un.org) keeps track of news and developments in disarmament, including the latest treaty ratifications as well as pertinent UN resolutions and decisions.

### Training

A disarmament fellowships program for young diplomats and public officials from various countries, particularly developing countries, was established by the General Assembly at its first special session on disarmament. The program is aimed at preparing students for work with their governments in the field of disarmament and at enhancing and broadening diplomatic expertise. Disarmament fellows are trained each year under the auspices of the Department for Disarmament Affairs.

---

# PEACEFUL USES OF OUTER SPACE

In October 1957, the USSR launched the first *Sputnik* into orbit around the earth. In the following year, the General Assembly for the first time debated the question of outer space. Two items were proposed for inclusion on the agenda: “The Banning of the Use of Cosmic Space for Military Purposes, the Elimination of Foreign Bases on the Territories of Other Countries, and International Cooperation on the Study of Cosmic Space,” proposed by the USSR; and a “Program for International Cooperation in the Field of Outer Space,” proposed by the United States. The very titles of these items indicate the differences that initially existed between the two powers in regard to an international accord on the uses of outer space. The USSR proposed that the first order of business should be a ban on armaments in space but wished to link this goal with the dismantling of US overseas military bases. The United States preferred to avoid the disarmament issue altogether in this connection and wished merely to emphasize that it was the common aim of mankind to ensure the use of outer space for peaceful purposes. This disagreement provoked a series of disputes over the composition and terms of reference of the special UN body that should be established to deal with outer space problems. The USSR wanted a body with East-West parity, while the United States preferred a body more broadly geographical in representation.

Owing to these differences, the 1958 General Assembly merely set up an 18-member ad hoc committee to deal with questions of outer space. It included only three member states from the Soviet bloc, which, because of the composition of the committee, declared that they would not take part in its work. The committee eventually was reduced to 13 participants.

After intensive negotiations, the 1959 General Assembly set up the permanent 24-nation Committee on the Peaceful Uses of Outer Space (UNCOPUOS). Its membership was increased to 28 in 1962, 37 in 1973, 47 in 1977, and 53 in 1980. As of 2006, there were 67 member states in the committee. In 1962, the committee organized itself into two subcommittees of the whole, one to deal with scientific and technical cooperation and the other with the task of evolving outer space law. The committee has also set up working groups of the whole to deal with navigation satellites, direct broadcasting satellites, remote sensing satellites, and the use of nuclear power sources in outer space. The UN Office of Outer Space Affairs (UNOOSA) is the office that serves as the secretariat for UNCOPUOS.

## DEVELOPMENTS IN SCIENTIFIC AND TECHNICAL COOPERATION

Scientific and technical cooperation within the framework of the UN grew out of General Assembly action on the basis of recom-

mendations of the committee and has increased over the years. It covers various fields of activity, including the following.

*Exchange of Information.* The UN Secretariat produces annual reports on national and cooperative international projects. Since 1961, a growing number of countries and international organizations have provided the committee with information on space activities and programs.

*Public Registry of Launchings of Space Vehicles.* An essential requirement for international cooperation in outer space development is that launchings of space vehicles, together with scientific data on the results of such launchings, be made public. In 1961, the General Assembly decided unanimously that the UN “should provide a focal point” for such information and requested the Secretary-General to open a public registry for this purpose. The information is transmitted to the Committee on the Peaceful Uses of Outer Space for review and is then placed in the registry.

The Russian Federation and the United States regularly supply appropriate data, as do Australia, Canada, China, France, Germany, India, Italy, Japan, the United Kingdom, and the European Space Agency (ESA).

*Cooperation with Specialized Agencies and Other International Organizations.* By the terms of its 1961 resolution on outer space, the General Assembly requested the WMO to submit reports to the Committee on the Peaceful Uses of Outer Space on the international cooperation required in weather research. In the following year, it endorsed steps taken under WMO auspices that resulted in the establishment of the World Weather Watch, incorporating meteorological satellites into its operational system. The same resolution also requested the ITU to submit reports on cooperation required to develop effective space communications. In the ensuing years, this cooperative effort embraced other agencies and international organizations having special interests in matters related to outer space, including UNEP, FAO, UNESCO, ESA, the International Telecommunications Satellite Organization (INTELSAT), and the International Maritime Satellite Organization (INMARSAT).

*Education and Training.* The General Assembly has emphasized the need to train personnel from countries not yet advanced in space activities. The secretariat distributes a periodically revised directory of information taken from UN documents and carries out an educational program on space applications. The program creates an awareness of the potential of space applications for development, especially in developing countries, through technical advisory services, seminars, and workshops and the administration of fellowships offered by member states and international organizations for education and training.

Under the United Nations Programme on Space Applications, the latest efforts are being directed towards the development and enhancement of knowledge and skills in the discipline through

the establishment and operation of centers for space science and technology education at the regional level.

### **INTERNATIONAL SPACE YEAR AND THE UNITED NATIONS CONFERENCE ON ENVIRONMENT**

In 1989, the General Assembly recommended that more attention be paid to all aspects related to the protection and preservation of the outer space environment, especially those potentially affecting the earth's environment. In the same year, the General Assembly also endorsed the designation of the year 1992 as International Space Year and its use as a vehicle for promotion of international cooperation, which should be carried out for the benefit and in the interests of all states, with particular emphasis on the needs of developing countries.

Numerous programs were carried out in support of International Space Year and culminated in 1992. "Mission to Planet Earth," which was a central focus of the International Space Year, saw scientists worldwide using space technologies to assess such threats to the earth's environment as global warming, deforestation, and ozone depletion. Subsequently, the General Assembly recommended that the United Nations should actively encourage the continuation of activities initiated for International Space Year and promote broader involvement in those activities by more nations.

Reflecting the growing concern of the international community on environmental security, the United Nations Conference on Environment and Development took place also in 1992 at Rio de Janeiro. Such concern for the protection of environment also was a focus of the activities for International Space Year. The following year, the Secretary-General suggested in his report that it might also be time to examine ways to formalize international cooperation in the utilization of space systems and space technology for environmental purposes, particularly the implementation of the programs recommended in Agenda 21. The product of the Rio conference, Agenda 21 lays out a detailed program of action to be taken by the United Nations, other international organizations, national governments, and intergovernmental organizations. In response to the request by the Committee on the Peaceful Uses of Outer Space, which was subsequently endorsed by the General Assembly, the Secretary-General prepared an analytical report on the role that the committee could play in view of the decisions and recommendations of the United Nations Conference on Environment and Development.

### **UN CONFERENCES ON OUTER SPACE**

Originally recommended by the General Assembly in 1959, the first UN Conference on the Exploration and Peaceful Uses of Outer Space was held in August 1968 in Vienna, with 78 states and a large number of international organizations attending. The conference examined the practical benefits to be derived from space research and the opportunities for international cooperation available to nations without space capability, with special reference to the needs of the developing countries. The participants submitted some 200 papers dealing primarily with space applications. They reviewed 10 years of space research in practical applications—in

communications, meteorology, navigation, and education—and practical benefits, as well as economic and legal questions pertaining to international cooperation.

In August 1982, the Second UN Conference on the Exploration and Peaceful Uses of Outer Space (called UNISPACE 82) was held in Vienna, with 94 state participants and 45 observers representing intergovernmental and nongovernmental organizations. The conference dealt with the entire gamut of space sciences, technologies, and applications from scientific, technical, political, economic, social, and organizational points of view. It also considered the legal implications of issues on the agenda and discussed growing international concern relating to military activities in outer space.

The report of the conference, adopted by consensus, dealt with questions relating to the prevention of an arms race in space, the needs and possibilities for technology transfer, coordination in the use of the geostationary orbit, remote sensing of earth resources from space, the use of direct-broadcasting satellites, space transportation and space platform technologies, protection of the near-earth environment, the role of the UN, and other matters. The recommendations of the conference were seen as an agenda for nations and organizations to follow in carrying out space activities.

The Third United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE III) was held in Vienna, Austria (headquarters of OOSA since 1993), on 19–30 July 1999. The program included technical and space generation forums as well as a space exhibition and global conferences. The key objective was to create a blueprint for the peaceful uses of outer space in the 21st century. At the time of the conference there were five UN treaties covering a range of space activities. At a UNISPACE III plenary meeting, the Vienna Declaration on Space and Human

Development and its related Action Plan were adopted. The Declaration and Plan were the outcome of the coordinated work of attendees, including representatives of governments, intergovernmental bodies, civil society, and, for the first time, the private sector, to create a practical framework for cooperation and action to protect the planet and prepare for the "space millennium." The program involves using space applications for human security, protecting the outer space environment, increasing developing countries' access to space science and its related benefits, raising public awareness of the importance of the peaceful use of outer space, strengthening the UN's space activities, and promoting international cooperation.

Recommendations included creating a voluntary United Nations fund for UNISPACE III implementation; proclaiming a World Space Week, which is now held annually from 4 to 10 October; encouraging improved access by states to the International Space Station; supporting regional centers for space science and technology education set up under the auspices of the UN; and exploring the legal aspects of space debris, the use of nuclear power sources in space, intellectual property rights for space-related technologies, and ownership and access to the resources of celestial bodies.

## DEVELOPMENT OF INTERNATIONAL LAW ON OUTER SPACE

The early work of the legal subcommittee of the Committee on the Peaceful Uses of Outer Space was marked by disputes that delayed progress on the development of outer space law. The majority of members stressed the dangers of spectacular scientific advances without corresponding legal obligations and safeguards.

In originally proposing the formulation of an international legal code on outer space, the General Assembly had recommended that such a code be based, insofar as possible, on the existing body of international law (including the UN Charter) and the principle of freedom of space exploration for all states. But the USSR and the United States differed on certain fundamental issues from the time that the question was first debated in the General Assembly in 1959. The most important difference was on the relation between the prevention of armaments in space and disarmament on earth.

The breakthrough in this quasi-procedural deadlock first came as part of the general East-West détente that followed the partial nuclear test-ban treaty signed in August 1963. During its 1963 session, the General Assembly was able to adopt by acclamation two important measures relating to restricting the use of outer space to peaceful purposes. The first was a resolution calling upon all states to refrain from placing in orbit objects carrying nuclear weapons or other weapons of mass destruction. The second was a resolution embodying a Declaration of Legal Principles Governing the Activities of States in the Exploration and Use of Outer Space. Though not an agreement with binding force, as the USSR had wished, it was regarded as the forerunner to a full legal treaty.

The *Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies*, which the General Assembly unanimously acclaimed in 1966 and which came into force on 10 October 1967, was based on drafts submitted individually by both the United States and the USSR. The 17 articles of the treaty state that the exploration and use of outer space shall be carried out for the benefit of all countries and shall be the province of all mankind, that outer space and celestial bodies are not subject to national appropriation by claim of sovereignty or any other means, and that exploration shall be carried on in accordance with international law. Parties to the treaty undertake not to place in orbit any objects carrying nuclear weapons, install such weapons on celestial bodies, or otherwise station them in outer space. The moon and other celestial bodies shall be used by all parties exclusively for peaceful purposes, and military bases or maneuvers on celestial bodies shall be forbidden. States shall regard astronauts as envoys of mankind in outer space and shall render them all possible assistance in case of accident, distress, or emergency landing. Parties launching objects into outer space are internationally liable for damage caused by such objects or their component parts. The principle of cooperation and mutual assistance shall be followed in space exploration. Harmful contamination of the moon and other celestial bodies shall be avoided. All stations, installations, equipment, and space vehicles on the moon and other celestial bodies shall be open for inspection to representatives of other states on a reciprocal basis.

Under the 1967 *Agreement on the Rescue of Astronauts, the Return of Astronauts, and the Return of Objects Launched into Outer Space*, which came into force on 3 December 1968, contracting

parties agree to procedures for assistance to spacecraft personnel in the event of an accident or emergency landing and for the return of space objects.

The 1971 *Convention on International Liability for Damage Caused by Space Objects*, which came into force on 1 September 1972, provides a procedure for the presentation and settlement of claims.

Under the 1974 *Convention on Registration of Objects Launched into Outer Space*, which came into force on 15 September 1976, a central register of objects launched into space was established and is maintained by the UN Secretary-General, with mandatory registration, as well as notification to the Secretary-General of voluntary markings of such objects. Assistance is provided to states requesting help in the identification of hazardous objects or those causing damage.

The *Agreement Governing Activities of States on the Moon and Other Celestial Bodies*, adopted by the General Assembly on 5 December 1979, describes the moon and its natural resources as the common heritage of mankind, and it reserves the moon for exclusively peaceful purposes. It bars the emplacement of nuclear or other weapons of mass destruction on the moon and also prohibits the placing in orbit, or in any other trajectory to or around the moon, of objects carrying such weapons and the establishment of military bases, the testing of any type of weapons, and the conduct of military activities on the moon.

The General Assembly has adopted three more sets of principles based on the work of the Committee on the Peaceful Uses of Outer Space. The *Principles Governing the Use by States of Artificial Earth Satellites for International Direct Television Broadcasting*, adopted in 1982, condition the establishment of direct-broadcasting satellite services on the prior consent of receiving states. The *Principles Relating to Remote Sensing of the Earth from Outer Space*, adopted in 1986, provide for international cooperation and participation in remote sensing; they specify that such activities will be permitted without the consent of the states being sensed but that the latter will have the right to receive data and information concerning their resources.

Finally, after many years of difficult debate and negotiation within the Committee, the General Assembly adopted in 1992 the *Principles Relevant to the Use of Nuclear Power Sources in Outer Space*. They provide guidelines and criteria for safe use of nuclear power sources in outer space, including the requirement that a safety review be made prior to launching of any nuclear power source and that results of such review be made public through the Secretary-General of the United Nations, who should also be notified of any re-entry of radioactive materials to the earth.

Reflecting the changes in the international political and security environment, which provide new possibilities for the utilization of space technology to promote international peace, there were more constructive discussions within the committee in the 1990s and 2000s on the enhancement of international cooperation in various aspects. The committee and its Legal Subcommittee continued their considerations on the matters relating to the definition and delimitation of outer space and to the character and utilization of the geostationary orbit and on legal framework for sharing the benefits of space exploration by all states.

---

# LAW OF THE SEA

The earth is essentially a liquid planet, with more than 70% of its surface covered by water. Although geographically divided and labeled as continents, islands, seas, and oceans, the earth, when viewed from outer space, appears as one large body of water interspersed with lesser land masses. The world's oceans thus provide a common link for the more than 110 nations whose shorelines are washed by their waters. Despite these universal characteristics, however, this last earthly frontier had become an arena for disputes over such matters as fishing rights and varying claims of national jurisdiction, exploitation of deep sea mineral resources, responsibility for the protection of the environment, the right of innocent passage of ships, and free access to the sea for landlocked countries.

For centuries the doctrine that governed ocean space and resources was “freedom of the seas”; coastal state claims were restricted within narrow limits. The first change in this regime came with the emergence of the doctrine of the continental shelf, spurred by the development of offshore oil and gas fields. The United States, in 1945, was the first to proclaim jurisdiction over the natural resources of its continental shelf “beneath the high seas” (that is, beyond US territorial limits). Other nations were quick to follow suit, many of them seeking to extend their jurisdiction over fisheries. In order to clarify accepted norms and codify state practice, the UN, in 1958, convened the First Conference on the Law of the Sea. Working on the basis of drafts prepared by the International Law Commission (see the chapter on International Law), the conference adopted the Convention on the Continental Shelf, thus establishing the new doctrine in international law. The conference adopted three other conventions—on the territorial sea and contiguous zone, the high seas, and fishing and conservation of living resources. A further attempt made in 1960, at the Second Conference on the Law of the Sea, failed to define the limits of the territorial sea.

A sense of urgency was again given to problems connected with the deep seas in 1967, when Malta warned the General Assembly that there was a danger that advanced, industrialized countries who were so equipped might wish to appropriate the ocean floor for their national use, not only to develop its immense resources but also for defense and other purposes. Malta's delegate, Arvid Pardo, remarked that the “dark oceans” were “the womb” of life: life had emerged from the protecting oceans. Man was now returning to the ocean depths, and his penetration “could mark the beginning of the end for man, and indeed for life as we know it ... it could also be a unique opportunity to lay solid foundations for a peaceful and increasingly prosperous future for all peoples.”

Reacting to the Maltese call for international solutions, the General Assembly set up the Committee on the Peaceful Uses of the Seabed and the Ocean Floor Beyond the Limits of National Jurisdiction, called the Seabed Committee, to study various aspects of the problem and to indicate practical means to promote

international cooperation. The principal results of the committee's work were embodied in a Declaration of Principles, adopted by the General Assembly in 1970, proclaiming that the seabed and ocean floor and its resources beyond the limits of national jurisdiction “are the common heritage of mankind” and that no nation should exercise sovereignty or rights over any part of the area. The declaration also called for the establishment of an international regime to govern the exploration and exploitation of the sea's resources for the benefit of mankind.

Recognizing that the problems of ocean space are interrelated and need to be considered as a whole, the General Assembly also decided, in 1970, to convene a new UN Conference on the Law of the Sea to prepare a single comprehensive treaty. The Seabed Committee, in preparation for the conference, thus had to deal not only with the international seabed area but also with such issues as the regime of the high seas, the continental shelf and territorial sea (including the question of limits), fishing rights, preservation of the marine environment, scientific research, and access to the sea by landlocked states.

## THIRD LAW OF THE SEA CONFERENCE

The Third UN Conference on the Law of the Sea opened at UN headquarters in New York in December 1973 with a brief organizational session. Its real work commenced the following year in Caracas, Venezuela, with the important decision to proceed on the basis of a negotiated “package deal”—meaning no one provision or section would be formally approved until all others were in place. This informal approach was dictated not only by the interdependence of the issues involved but also by the need to produce ultimately an overall balance that could command the widest support. The first informal text, as the agreed basis for negotiations, was prepared in 1975. It was followed by a series of revisions.

## UN CONVENTION ON THE LAW OF THE SEA

The final text of the UN Convention on the Law of the Sea (UNCLOS) was approved by the conference at UN headquarters on 30 April 1982, by a vote of 130 in favor, with 4 against (Israel, Turkey, United States, and Venezuela) and 17 abstentions. Following the signing of the Final Act of the conference in Jamaica on 10 December 1982, the UNCLOS entered into force on 16 November 1994. As of 5 April 2006, 149 nations were keeping parties to the convention.

The UNCLOS created three international institutions dealing with specific areas of the Law of the Sea: the International Seabed Authority (ISBA), the International Tribunal for Law of the Sea (ITLOS), and the Commission on the Limits of the Continental Shelf (CLCS).

## THE CONTENTIOUS ISSUE OF DEEP SEA MINING

Although the United States had been a leader in the international community's effort to develop an overall legal framework for the oceans in the Third United Nations Conference on the Law of the Sea, deep divisions arose between developing and developed nations over the establishment of an international organization to regulate the exploration of deep sea mining in international waters (Part XI of the Treaty). These divisions were so deep that the United States and other industrialized countries declined to formally sign the treaty, although endorsing the consensus that had been reached by the conference on other areas covered by the treaty.

On the economic and commercial front, the industrialized nations sought a more market-oriented regime. They objected to provisions for mandatory technology transfer, production limitations from the seabed, what they perceived as onerous financial obligations on miners, and the establishment of a subsidized international public enterprise that, it was postulated, would compete unfairly with other commercial enterprises.

In July 1990, the Secretary-General of the UN undertook informal consultations aimed at achieving universal participation in UNCLOS. Fifteen meetings were convened in the period 1990 to 1994, resulting in major amendments to the seabed mining portion of UNCLOS. In early 1993, the Clinton administration in the United States decided to take a more active role in the reform effort, deciding that the merit of actively participating would not be to find an answer to every future question regarding the uses of the oceans, but to create a framework and channel discussions of new issues along lines more acceptable to the industrialized nations.

The Agreement Relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea (hereafter referred to as the "agreement") concluded on 3 June 1994. The agreement avoids establishing a detailed regime anticipating all phases of activity associated with mining of the deep seabed. However, it sets forth economic and commercial principles consistent with a free market philosophy to form the basis for developing rules and regulations at such time as commercial mining develops in international waters.

The agreement retains the institutional outlines of Part XI of the treaty, but scales back the structure and links the activation and operation of institutions to the actual development of concrete interest in seabed mining.

The agreement limits assistance to land-based producers of minerals to adjustment assistance financed out of a portion of royalties from future seabed mining. It also replaces the production control regime of Part XI by the application of GATT principles on subsidization. The agreement further replaces the detailed financial obligations imposed on miners by a future system for recovering economic rents based on systems applicable to land-based mining, and provides that it be designed to avoid competitive incentives or disincentives for seabed mining.

At the conclusion of the informal consultations, only the Russian Federation made a statement reserving its position, since some of its proposals had not been incorporated into the agreement. It was then decided to convene a resumed 48th session of the General Assembly from 27–29 July 1994 for the purpose of adopting and opening for signature the agreement, at which time most of the

abstaining industrialized nations signed the treaty. It entered into force on 28 July 1996 having received 40 ratifications.

### Provisions of UNCLOS

The convention covers almost all human uses of the seas—navigation and overflight, resource exploration and exploitation, conservation and pollution, fishing, and shipping. Its 321 articles and nine annexes constitute a guide for behavior by nations in the world's oceans, defining maritime zones, laying down rules for drawing boundaries, assigning legal duties and responsibilities, and providing machinery for settlement of disputes. Some of the main provisions of the convention are the following.

*Territorial Sea.* Coastal states would exercise sovereignty over their territorial sea of up to 22.2 km (12 naut mi) in breadth, but foreign vessels would be allowed "innocent passage" through those waters for purposes of peaceful navigation.

*Straits Used for International Navigation.* Ships and aircraft of all countries would be allowed "transit passage" through straits used for international navigation, as long as they proceeded without delay and without threatening the bordering states; states alongside the straits would be able to regulate navigation and other aspects of passage.

*Archipelagic States.* Archipelagic states, consisting of a group or groups of closely related islands and interconnecting waters, would have sovereignty over a sea area enclosed by straight lines drawn between the outermost points of the islands; all other states would enjoy the right of passage through sea lanes designated by the archipelagic states.

*Exclusive Economic Zone.* Coastal states would have sovereign rights in a 370-km (200-naut mi) exclusive economic zone with respect to natural resources and certain economic activities and would also have certain types of jurisdiction over marine science research and environmental protection; all other states would have freedom of navigation and overflight in the zone, as well as freedom to lay submarine cables and pipelines. Land-locked and other geographically disadvantaged states would have the opportunity to participate in exploiting part of the zone's fisheries when the coastal state could not harvest them all. Highly migratory species of fish and marine mammals would be accorded special protection.

*Continental Shelf.* Coastal states would have sovereign rights over the continental shelf (the national area of the seabed) for the purpose of exploring and exploiting it; the shelf would extend at least 370 km (200 naut mi) from shore and 648 km (350 naut mi) or more under specified circumstances. Coastal states would share with the international community part of the revenue that they would derive from exploiting oil and other resources from any part of their shelf beyond 370 km (200 naut mi). A Commission on the Limits of the Continental Shelf would make recommendations to states on the shelf's outer boundaries.

*High Seas.* All states would enjoy the traditional freedoms of navigation, overflight, scientific research, and fishing on the high seas; they would be obliged to adopt, or cooperate with other states in adopting, measures to conserve living resources.

*Islands.* The territorial sea, exclusive economic zone, and continental shelf of islands would be determined in accordance with rules applicable to land territory, but rocks that could not sustain

human habitation or economic life would have no economic zone or continental shelf.

*Enclosed or Semienclosed Seas.* States bordering enclosed or semi-enclosed seas would be expected to cooperate on management of living resources and on environmental and research policies and activities.

*Landlocked States.* Landlocked states would have the right of access to and from the sea and would enjoy freedom of transit through the territory of transit states.

*International Seabed Area.* A “parallel system” would be established for exploring and exploiting the international seabed area. All activities in this area would be under the control of an International Seabed Authority, to be established under the convention. The authority would conduct its own mining operations through its operating arm, called the “Enterprise,” and would also contract with private and state ventures to give them mining rights in the area, so that they could operate in parallel with the authority. The first generation of seabed prospectors, called “pioneer investors,” would have guarantees of production once mining was authorized.

*Marine Pollution.* States would be bound to prevent and control marine pollution from any source and would be liable for damage caused by violation of their international obligations to combat marine pollution.

*Marine Scientific Research.* All marine scientific research in the exclusive economic zone and on the continental shelf would be subject to the consent of the coastal state, but coastal states would

in most cases be obliged to grant consent to foreign states when the research was to be conducted for peaceful purposes.

*Development and Transfer of Marine Technology.* States would be bound to promote the development and transfer of marine technology “on fair and reasonable terms and conditions,” with proper regard for all legitimate interests, including the rights and duties of holders, suppliers, and recipients of technology.

States would be obliged to settle their disputes over the interpretation or application of the convention by peaceful means. They would have to submit most types of disputes to a compulsory procedure entailing decisions that would be binding on all parties. Disputes could be submitted to an International Tribunal for the Law of the Sea, to be established under the convention; to the International Court of Justice; or to arbitration. Conciliation also would be available, and, in certain circumstances, submission to conciliation might be compulsory.

### **International Acceptance**

The new legal regime for the seas is now firmly established throughout the world: by September 1998, 133 states had established 12-nautical-mile territorial limits and 106 states had declared exclusive economic zones. Nineteen states had declared fishing zones of 200 nautical miles. Most such national legislation is derived directly from the provisions of the convention. The General Assembly is concerned with ensuring maximum conformity in state practice and each year examines the status of the convention and reviews developments relating to its application.

---

# ECONOMIC AND SOCIAL DEVELOPMENT

Article 55 of the charter, on international economic and social cooperation, calls on the UN to promote higher standards of living, full employment, and conditions of economic and social progress and development. The fostering of economic and social development, however, was only one of several objectives specified in the charter, and no special emphasis was accorded to it. The League of Nations and the early ILO were concerned primarily with defensive or protective action, such as the protection of countries against diseases that might cross international frontiers, prevention of international traffic in women and children and in illicit drugs, and protection of workers against unfair and inhumane conditions of labor. Such early action in the economic and social fields was taken in a climate of thought that hardly recognized the concept of economic and social development.

Toward the middle of this century, however, the concept took root as a major objective of international cooperation, and the primary goal of the UN and the specialized agencies in the economic and social fields came to be promoting the development of the less developed countries.

## THE RICH AND THE POOR NATIONS

The UN's preoccupation with development is tied to the division of its membership between rich and poor nations, a division that the Secretary-General has frequently characterized as a leading long-term threat to world peace and security.

In 1945, when the UN was established, this sharp dichotomy could not be drawn. The wealth of Europe had been wasted by the ravages of war. Only the United States could claim to be rich, and even the United States, with the depression of the 1930s still a fresh memory, could not be confident of lasting prosperity. What made the challenge of development central to the thinking of every aspiring country was the rapidity with which the countries of Western Europe recovered their prosperity and went on to attain higher levels of economic and social well-being than they had ever experienced. Meanwhile, economic expansion continued apace in the more prosperous countries that had not been directly hurt by the war—the United States, Canada, Australia, and New Zealand. And within a few years, in Asia, the miracle of Japan's recovery and growth was matching Europe's postwar record.

Nothing comparable occurred among the colonial peoples and former colonial peoples. Tropical Asia, Africa, and Latin America had been cultivated in preceding generations largely as appendages to industrial Europe and North America—on the one hand, supplying essential primary commodities not commonly found in the temperate regions and, on the other hand, serving as profitable markets for consumer goods produced in the temperate regions. The peoples of these economically underdeveloped areas made rapid political progress in the postwar era. Significant economic progress also was recorded in a number of these countries, so that by the late 1950s, it was considered not only tactful but also prop-

er to refer to them as “developing” rather than “underdeveloped” nations. As a group, however, the developing countries were far outdistanced in economic growth by the temperate zone industrialized countries, which were finding the postwar era the most propitious in history for their development. Before the UN had completed its first 15 years, it was abundantly evident that a very disturbing gap had opened up between the industrialized and the developing nations and that, despite very substantial foreign aid efforts, the gap was growing broader year by year.

## SCOPE OF THE UN'S WORK

The international community was not slow to recognize the political and economic dangers inherent in such an imbalance of national wealth. As early as 1946, when “recovery” rather than “development” dominated UN thinking on economic matters, the General Assembly requested the Economic and Social Council to study ways and means of furnishing advice to nations desiring help in developing their resources. As a result, the UN, in cooperation with the specialized agencies of the UN system, began its first programs of technical assistance.

This chapter describes the principles and goals of the UN development effort. It also discusses some of the factors influencing development, such as science and technology, the role of transnational corporations, and the use of natural resources, and it summarizes the work of the regional commissions. Programs of technical cooperation undertaken by the UN and its related organizations are described in the chapter on Technical Cooperation Programs, and social and humanitarian programs in the chapter on Social and Humanitarian Assistance. The work of the specialized agencies in supporting economic and social development is described in the separate chapters on those agencies.

## FIRST UN DEVELOPMENT DECADE

The first UN Development Decade was launched by the General Assembly in December 1961. It called on all member states to intensify their efforts to mobilize support for measures required to accelerate progress toward self-sustaining economic growth and social advancement in the developing countries. With each developing country setting its own target, the objective would be a minimum annual growth rate of 5% in aggregate national income by the end of the decade.

The economically advanced states were asked to pursue policies designed to enable the developing countries to sell more of their products at stable and remunerative prices in expanding markets in order to finance more of their economic development, and to follow policies designed to ensure developing countries an equitable share of earnings from extraction and marketing of their natural resources by foreign capital. Industrialized states were also called on to pursue policies that would lead to an increase in the flow of developmental resources and stimulate the flow of private

capital to developing countries on mutually acceptable terms. The General Assembly recommended that the flow of international capital and assistance to developing countries should be about 1% of the combined national incomes of the economically advanced countries.

Throughout the decade of the 1960s, however, the growth rate in the economically advanced market economies accelerated, and the gap between the per capita incomes of the developing countries and those of the developed countries widened. Two-thirds of the world's population living in the less developed regions of the world still had less than one-sixth of the world's income. In 1962, annual per capita income in those regions averaged \$136, while that of the economically advanced market economies in North America and Western Europe averaged \$2,845 and \$1,033, respectively.

In a report issued in 1969, Secretary-General U Thant noted that the slower progress in development had been accompanied by the emergence or aggravation of major imbalances that imperiled future growth. Without greater progress in food production and the more effective control of communicable diseases, the necessary conditions for steady economic and social development could hardly be said to have been created. At the same time, the Secretary-General pointed out, the experience of a few countries had demonstrated that "given a favorable constellation of circumstances and policies, an adequate and sustained pace of development can be achieved," and acceptance of development as a fundamental objective had gradually wrought a desirable change in attitudes and modes of action on the part of developing countries. Public decisions were no longer made solely in response to expediency, and policies and programs previously decided upon in relative isolation were gradually being integrated and harnessed to a common purpose. At the international level, the Secretary-General noted, the institutional machinery for the review and advancement of international policies had been considerably strengthened by the creation of such bodies as the UN Conference on Trade and Development and the Committee for Development Planning.

The first UN Development Decade ended in December 1970 with one of its major goals, the attainment of a 5% growth rate, unattained in the developing countries. During the period 1960–67, those countries achieved an annual rate of increase in their total domestic product of about 4.6%, but, because of the population increase, the increase in their per capita gross product was only about 2%. The General Assembly concluded that one of the reasons for the slow progress was the absence of a framework of international development strategy.

## SECOND UN DEVELOPMENT DECADE

At its 25th session, in 1970, the General Assembly adopted a resolution outlining an international development strategy for the second UN Development Decade—the 1970s. The main objectives of the plan were to promote sustained economic growth, particularly in the developing countries; ensure a higher standard of living, and facilitate the process of narrowing the gap between the developed and developing countries. The General Assembly declared that the developing countries bore primary responsibility for their development but that their efforts would be insufficient without

increased financial assistance and more favorable economic and commercial policies on the part of the developed countries.

Under the goals and objectives of the second decade, the General Assembly stated that the average annual rate of growth in the gross product of the developing countries as a whole should be at least 6%, with the possibility of attaining a higher rate in the second half of the decade. Such a rate of growth would imply an average annual expansion of 4% in agricultural output and 8% in manufacturing output.

The General Assembly also stated that it was essential to bring about a more equitable distribution of income and wealth in order to promote social justice and efficiency of production; to raise the level of employment substantially; to achieve a greater degree of income security; to expand and improve facilities for education, health, nutrition, housing, and social welfare; and to safeguard the environment. Thus, qualitative and structural changes in society should go hand in hand with rapid economic growth, and existing disparities—regional, sectoral, and social—should be substantially reduced. The General Assembly believed that developing countries must bear the main responsibility for financing their development. To this end, they were asked to pursue sound fiscal and monetary policies and to remove institutional obstacles through the adoption of appropriate legislative and administrative reforms. At the same time, each economically advanced country was called upon to endeavor to provide annually to developing countries financial resource transfers of a minimum net amount of 1% of its gross national product (GNP). A major part of financial resource transfers to the developing countries should be provided in the form of official development assistance.

Progress achieved during the first half of the decade was reviewed by the General Assembly in 1975. It noted that the gap between the developed and the developing countries had increased alarmingly during the first half of the decade, but it found the generally gloomy picture lightened by one element—the developing countries had emerged "as a more powerful factor, as a necessary consequence of the new and growing perception of the reality of interdependence." The General Assembly also found that some of the aggregate targets set in the strategy for the decade had been met or exceeded, "owing mainly to the developing countries' own efforts and, to a certain extent, to external factors such as the commodity boom" (a short-lived rise in commodity prices between 1972 and 1974). Those aggregates, however, did not reflect the variation in achievement among developing countries, for many countries did much worse than the average. A major area of shortfall was in agriculture, where less than half the target rate of 4% annual growth was realized by the developing countries as a whole.

The General Assembly further noted that the net flow of financial resources from developed countries in the form of official development assistance had decreased in real terms and as a percentage of GNP. At the same time, the burden of debt-service payments of developing countries had continued to increase in relation to their export earnings.

## NEW INTERNATIONAL ECONOMIC ORDER

In September 1973, in Algiers, the Arab petroleum-exporting countries discussed the possible uses of oil as a political weapon. When a new Arab-Israeli conflict broke out on 6 October, the Arab countries reduced the flow of oil to Europe and Japan and

suspended exports to the United States, the Netherlands, and Portugal. The embargo against the United States was lifted in March 1974, that against the Netherlands in July 1974, and that against Portugal after a new regime instituted a policy leading to independence for African territories under Portuguese administration in 1974 and 1975. However, the measures taken by the petroleum-exporting countries marked a turning point for the world economy. Members of the Organization of Petroleum-Exporting Countries (OPEC) undertook a long-term study of the collective fixing of oil prices and increased them periodically thereafter.

On 31 January 1974, President Boumediene of Algeria requested a special session of the General Assembly to consider the question of all raw materials and relations between developed industrial and developing states. Within two weeks, 70 nations endorsed his proposal.

*Sixth Special Session of the General Assembly.* The special session, held in April–May 1974, adopted a declaration and program of action on the establishment of a new international economic order. The declaration and program of action called for a fundamental change in the international economic order, in the absence of which the gap between developing and developed countries would only continue to widen. Such a change would require the industrial countries to make adjustments in their policies and economies for the benefit of the poorer countries, which in turn were determined to control their own resources.

The program of action called for efforts to link the prices of exports of developing countries to the prices of their imports from developed countries. It suggested the formation of producers' associations, orderly commodity trading, increased export income for producing developing countries, and improvement in their terms of trade. It also looked to the evolution of an equitable relationship between the prices of raw materials, primary commodities, and semi-manufactured goods exported by developing countries and the raw materials, primary commodities, food, manufactured and semi-manufactured goods, and capital equipment imported by them.

In the declaration, UN member states proclaimed their determination to work urgently for "the establishment of a new international economic order based on equity, sovereign equality, interdependence, common interest, and cooperation among all states, irrespective of their economic and social systems, which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development in peace and justice for present and future generations."

Though the program and declaration were adopted without a vote and enthusiastically supported by almost all developing and socialist countries, most Western European and other industrialized states with market economies entered reservations, often very far-reaching. They warned against constraints to the flow of trade that might result from the establishment of producers' associations and argued that nationalization should be carried out in accordance with the existing rules of international law.

*Charter of Economic Rights and Duties of States.* At its regular session in 1974, the General Assembly adopted a charter of Economic Rights and Duties of States. The charter affirmed that every state has the right to exercise freely full permanent sovereignty

over its wealth and natural resources, to regulate foreign investment within its national jurisdiction, and to nationalize, expropriate, or transfer the ownership of foreign property. The charter provided that appropriate compensation should be paid in cases of nationalization and that any controversies should be settled under the domestic laws of the nationalizing states unless all states concerned agree to other peaceful means. It also set forth the right of states to associate in organizations of primary producers in order to develop their national economies.

*Seventh Special Session of the General Assembly.* The General Assembly held a seventh special session devoted to development and international cooperation in September 1975. The polemical atmosphere in which the program and declaration on the new international economic order and the charter on the economic rights and duties of states had been adopted was replaced by a pragmatic approach. Negotiations were carried on chiefly in private meetings between "contact groups" representing the developing countries and the Western European and other states with market economies. Since the market economy states were the buyers of approximately three-quarters of the exports of the developing countries, agreement between the two groups was essential to significant progress. At the close of the session, Secretary-General Kurt Waldheim declared that it had been "about *change* rather than the smoother management of the status quo."

The results of the special session were embodied in a resolution that proposed a large number of initiatives and was unanimously adopted by the General Assembly. It reaffirmed the target, originally defined in the strategy for the second Development Decade, of 1% of the GNP of developed countries to be devoted to official assistance to the developing countries, and it called for the accumulation of buffer stocks of commodities in order to offset market fluctuations, combat inflationary tendencies, and ensure grain and food security.

In 1979, the General Assembly called for the launching, at the third special session on development in 1980, of a round of global and sustained negotiations on international economic cooperation for development. The negotiations, however, failed to achieve the hoped-for progress at the special session held in September 1980, but at the regular session that year, an international development strategy for the third UN Development Decade was adopted.

### THIRD UN DEVELOPMENT DECADE

In the new international development strategy adopted by the General Assembly for the third UN Development Decade, beginning on 1 January 1981, governments pledged themselves, individually and collectively, to fulfill their commitment to establish a new international economic order based on justice and equity. They agreed to subscribe to the goals and objectives of the strategy and to translate them into reality by adopting a coherent set of interrelated, concrete, and effective policy measures in all sectors of development.

The strategy set forth goals and objectives for an accelerated development of the developing countries in the period 1981–90, including the following: (1) a 7% average annual rate of growth of gross domestic product (GDP); (2) a 7.5% annual rate of expansion of exports and an 8% annual rate of expansion of imports of goods and services; (3) an increase in gross domestic savings to reach about 24% of GDP by 1990; (4) a rapid and substantial

increase in official development assistance by all developed countries, to reach or surpass the target of 0.7% of GNP of developed countries; (5) a 4% average annual rate of expansion of agricultural production; and (6) a 9% annual rate of expansion of manufacturing output. Other goals and objectives of the strategy included the attainment, by the year 2000, of full employment, of universal primary school enrollment, and of life expectancy of 60 years as a minimum, with infant mortality rates no higher than 50 per 1,000 live births.

The strategy also set out a series of policy measures—in international trade, industrialization, food and agriculture, financial resources for development, international monetary and financial issues, science and technology for development, energy, transportation, environment, human settlements, disaster relief, and social development, as well as in technical cooperation, including cooperation among developing countries themselves, and special measures for the least-developed countries and for geographically disadvantaged countries, such as island and landlocked developing countries.

In fact, the 1980s was a terrible decade for the economies of developing countries. By 1990 only five donor countries had met the UN's target of donating 0.7% of their GNP to development: Norway, the Netherlands, Denmark, Sweden, and France. Canada and Germany had achieved a level of 0.4% of their GNP. The United States, which had never agreed to the UN target, had given 0.2% of its GNP. Intransigent recession in the industrialized world, declining commodity prices, rising interest rates, trade barriers, and crippling international debt meant human suffering for the vast majority of the world's population. By 1990 4.2 billion of the world's 5.3 billion people lived in developing countries. Overall growth in these nations shrank to about 3% annually, and per capita growth to 1%, compared to averages of 5.5% in the 1960s and 3% in the 1970s. Lending by the IMF and World Bank group of institutions often came with requirements for "restructuring" that carried a heavy price in terms of human sacrifice. Debt-laden developing countries found themselves spending vastly more on debt service than on social services.

This dismal result was illustrated by the fact that the number of countries designated by the General Assembly as "least developed" had grown from 24 in 1972 to 47 in 1991.

#### FOURTH UN DEVELOPMENT DECADE

In 1990, the General Assembly concluded that its goals for the Third UN Development Decade had not been attained. It set new priorities and goals for the growth of the developing member nations with its International Development Strategy (IDS) for the Fourth United Nations Development Decade (1991–2000). Within one year of its passage, however, the former USSR had dissolved, forever changing the landscape of international economic relations. Many of the assumptions on which the IDS had been based were upset by the historic forces that were thus set in motion.

In September 1990, the Second United Nations Conference on the Least Developed Countries set targets for official development assistance (ODA) to those nations. The General Assembly, through the new IDS, urged industrialized countries to reach or surpass those targets. It also recommended that developing countries try to raise their rate of industrialization by 8–10% and increase their annual food production by 4%.

The General Assembly set forth six goals for the new IDS that amounted to an early manifestation of a new philosophy of "sustainable" development that would be vigorously developed at the historic UN Conference on Environment and Development (UNCED), two years later. The goals of the IDS were:

- To speed up the pace of economic growth in the developing countries;
- To devise a development process that meets social needs, reduces extreme poverty significantly, develops and uses people's capacity and skills, and is environmentally sound and sustainable;
- To improve the international systems of money, finance, and trade;
- To strengthen and stabilize the world economy and establish sound macroeconomic management practices, nationally and internationally;
- To strengthen international cooperation for development;
- To make a special effort to deal with the particular problems of the least developed countries.

The philosophy for the new IDS was based on the principle that, because the developed countries have the greatest influence on the international economic environment, they have a special responsibility for the success of development efforts. It also recognized that speeding up development would require strenuous efforts by developing countries to increase domestic savings, raise investment and investment returns, hold down inflation, exercise monetary and fiscal discipline, maintain realistic exchange rates, and allocate resources more efficiently.

Improving the state of international trade was paramount for any development plan. The Uruguay Round of the GATT talks were stalled and protectionism was on the rise in the developed nations. The strategy proposed that the following actions be taken to accelerate international trade in the 1990s:

- Stand by the commitment made in 1986 to halt and reverse protectionism;
- Liberalize trade and improve developing countries' access to all markets by reducing or removing tariff barriers;
- Free up trade in tropical products and products based on natural resources;
- Bring trade in textiles under the normal rules of GATT;
- Substantially reduce agricultural subsidies and other protective policies;
- Implement and improve the generalized system of preferences under which some developing countries' exports are admitted to industrialized countries at reduced rates or duty-free;
- Ensure that regional economic arrangements and trade blocs conform with GATT rules;
- Make sure that GATT contracting parties adhere strictly to the agreement's rules and principles.

Other provisions of the IDS included establishing more stable commodity markets, obtaining concessional terms for the transfer of technology to developing countries, and finding agreement on a way that the intellectual property system (which protects own-

ership of copyrights, trademarks, industrial designs, and patents) can promote development while protecting intellectual property. It also recommended that work on international rules and standards to govern the exchange of technological information (the code of conduct on the transfer of technology), which had come to a halt at the end of the 1980s, should be completed.

The underlying causes of economic stagnation also were decried. The IDS called for the eradication of poverty, hunger, adult illiteracy, lack of basic education for women, and runaway population growth in developing countries, and noted the catastrophic deterioration of the environment by shortsighted development projects.

In 1992, the Secretary-General gave the General Assembly a guardedly optimistic report on the progress of the IDS to that point. The developed market economies themselves had grown by only about 1% in 1991. Although a recovery had begun in 1992, it was considered to be weak. There was concern that the urgent needs of the newly independent countries of the former USSR, often referred to as “economies in transition,” would divert assistance from developing countries. Per capita incomes remained stagnant or declined in all the developing regions, except South and East Asia and China. The debt crisis of the developing countries had not worsened, but little progress had been made in terms of debt relief and forgiveness. However, some of the Latin American countries had again become creditworthy.

The 1993 *Report on the World Social Situation*, commissioned by the General Assembly to review the implementation of the Declaration on Social Progress and Development made 20 years earlier, also was cautiously optimistic. It noted the positive direction of reform in the United Nations system towards coordination between various UN agencies with operations in the same countries. “Although the major development goals, proclaimed more than 20 years ago in the Declaration on Social Progress and Development, have not changed significantly, the priorities, approaches and emphases have been reviewed and renewed, as the understanding of the forces behind development have deepened. Thus, emphasis is now on assisting the recipient countries to strengthen their institutional capacity to sustain the development process” the report said. In other words: helping them learn how to help themselves.

In October 1999, as the Second Committee began consideration of sustainable development and economic cooperation in the year 2000, it reviewed a report evaluating the implementation of the commitments and policies agreed on in the IDS. The report concluded that though there were improvements in the 1990s, economic growth had not accelerated in all developing countries. The Uruguay Round had led to progress being made with the betterment of the global trading system, but the international financial system had not been stabilized. Nor had there been a marked improvement in international development cooperation. The world’s least developed countries had seen “negligible” economic and social advancement during the decade. For future purposes, the report went on to differentiate between growth, which may carry with it negative social consequences, and development, which means more than simply increased purchasing power (as reflected in gross domestic product per capita). According to the report, development also pertains to education, health, and environmental standards, as well as to social (including gender) equity. For this reason, “the spotlight is now shifting from a focus on

macroeconomic challenges to a number of institutional preconditions, including good governance, transparency and accountability, decentralization and participation and social security,” said the UN report. Acceptable and viable development strategies in the new millennium would have to take into account the prevailing circumstances in developing countries, which could not be expected to keep pace with industrialized, developed societies in the North.

The economic and social initiatives of the 1990s had highlighted that neither growth nor development necessarily eliminates poverty, which was one of the key objectives of IDS. The UN concluded that sustainable development, of both urban and rural human settlements, was directly linked to the alleviation of poverty, which became the focus of economic and social development at the dawn of the 2000s. At the October 1999 meeting of the Second Committee, the Group of 77 developing countries and China presented draft resolutions for the first United Nations Decade for the Eradication of Poverty (which technically began in 1997 and extended through 2006). On 9 December 1999 the General Assembly voted to implement the Decade and called on all nations to formulate and implement “outcome-oriented national strategies and programs” and set time-bound targets for poverty reduction. The Assembly further called on developed countries to strengthen their efforts to achieve the agreed target of 0.7% of their gross national product for overall official development assistance, and within that target to “ earmark 0.15% to 0.20% of their gross national product for the least developed countries.” Acknowledging the information age, the Assembly resolution highlighted the importance of strengthening the cooperation between developed and developing nations in order to “promote capacity-building and facilitate access to and transfer of technologies and corresponding knowledge.”

## THE EARTH SUMMIT—AGENDA 21

The United Nations Conference on Environment and Development (UNCED), popularly dubbed the “Earth Summit,” brought together 117 heads of state and government in Rio de Janeiro, Brazil, on 3–14 June 1992. The product of this historic meeting, an 800-page document called “Agenda 21,” set forth global measures to protect the planet’s environment while guaranteeing sustainable economic growth. An important statement of the basic principles of sustainable development, *The Rio Declaration on Environment and Development*, was adopted by acclamation. The conference also spawned a new functional commission of ECOSOC, the Commission on Sustainable Development, which has a mandate to monitor international treaties on the environment, provide policy direction, and coordinate action within the United Nations system to achieve the goals of Agenda 21.

In addition to Agenda 21, two important conventions on the environment were opened for signature and received widespread endorsement: the Global Warming Convention, which set guidelines for regulating emissions of gases believed to cause global warming, was signed by 153 nations; and the Biodiversity Convention, which committed signatory nations to protection of endangered species and cooperation on genetic and biological technology, was signed by representatives of 150 countries. The Biodiversity Convention became legally binding in December 1993, after 30 countries had ratified it. Two important documents setting forth

the principles behind the concept of sustainable development also were widely adopted at the Earth Summit: the Statement on Forest Principles, recommending preservation of world forests and monitoring of development impact on timberlands; and the Declaration on Environment and Development, a statement of principles that emphasized the coordination of economic and environmental concerns.

More than two years were spent preparing for the Earth Summit and drafting the documents that would achieve widespread international acceptance. However, many controversial propositions had to be deleted or scaled down in the final documents to achieve the final consensus. For example, negotiators removed or excluded specific targets on pollution controls, resource protection, and financial aid to developing countries that restrain their economic development in order to protect their natural resources. Developing countries had sought to establish a “green fund” to support their efforts to implement environmentally sustainable development. However, the G-7 group of industrialized countries succeeded in specifying that such development funds would be channeled through the World Bank’s Global Environment Facility (GEF), effectively retaining control of funding in the hands of the industrialized world. The European Community had recommended a tax on fossil fuels in industrialized nations, but, opposition from oil-producing countries killed this provision. Also de-emphasized in the final documents were references to population control. Passages referring to contraception were completely deleted at the insistence of an odd coalition that included the Holy See (Vatican), Roman Catholic countries, and Moslem countries.

The sense of urgency that brought 35,000 accredited participants and 117 heads of state to Rio de Janeiro for the Earth Summit is perhaps well summed up by the UNCED secretary-general, Canadian Maurice Strong: “The Earth Summit must establish a whole new basis for relations between rich and poor, North and South, including a concerted attack on poverty as a central priority for the 21st Century. We owe at least this much to future generations, from whom we have borrowed a fragile planet called Earth.”

At the Earth Summit+5 meeting held in June 1997 in New York City, the objectives were to revitalize and energize commitments to sustainable development, to recognize failures and identify their causes, to recognize achievements (there were many Agenda 21 success stories that were highlighted during the event), to define priorities for the post-97 period, and to raise the profile of issues addressed insufficiently by Rio. In addition to assessing progress since the last meeting and outlining areas requiring urgent action, attendees called for greater cooperation and adherence among intergovernmental organizations and developed a program of work for the Commission on Sustainable Development for the years 1998–2002. The program included a comprehensive review of the program of action for the sustainable development of Small Island Developing States (SIDS), developing integrated management and planning of land resources, and developing strategic approaches to freshwater management.

## THE 1994 AGENDA FOR DEVELOPMENT

The 47th General Assembly requested the Secretary-General to consult with member states and prepare an “agenda for development.” After obtaining submissions from member states, agencies

of the UN system and public and private sources worldwide, he presented his report to the 49th General Assembly in 1994. Entitled *Development and International Economic Cooperation: An Agenda for Development*, this wide-ranging document summarized the basic tenets of the experience gained during the UN’s 50 years of development work. The agenda was intended to offer guidelines for thought and action by member states.

One reason put forward for creating such a document was that with the end of the cold war, funding development projects as a mechanism for establishing spheres of influence also had ended. The fundamental social, political, and economic changes that had altered the map of Europe and provided a new atmosphere of consensus at the United Nations, also threatened to bewilder and exhaust the potential donors to UN programs for development. Some quarters had even suggested that the UN was expending more for its many new peacekeeping operations than for development. The Secretary-General produced statistics in an annex to the agenda that demonstrated that this was not the case, even exempting the funds expended by the specialized agencies.

Several major themes of the agenda set forth a new underlying philosophy regarding international development programs.

- National governments bear the major responsibility for development. However, the United Nations’ vast experience and global reach made it a unique resource for the developing nations. The United Nations could act as facilitator and communicator, but it could not substitute for the commitment of individual states and their domestic and international partners.
- However, national governments could no longer be assumed to be paramount economic agents. The internationalization of trade and the ascendance of the market system worldwide meant that governments must, however, provide a regulatory framework for effective operation of a competitive market system. They must also invest in human capital by ensuring that social safety nets are in place.
- Economic growth should promote full employment and poverty reduction, not just economic growth as an end in itself. If, despite national economic improvement, great poverty continued in a nation, no development effort could be sustainable.
- No mechanism exists by which the major economies could be induced to make globally beneficial structural change in their own economies, or to adopt more globally responsible economic, fiscal, and monetary policies. This single point represents a sea change in philosophy from the “new international economic order” of the 1970s.
- UNCED’s historic Agenda 21 demonstrated that the environment had finally been recognized by the international community as a resource for development that must be nurtured and protected. Governments had the responsibility to provide the leadership and regulatory structure to protect their natural environment. Successful development required policies that incorporate environmental considerations. The Secretary-General pointed out that pioneering efforts were being made to make local inhabitants incentive partners rather than simply collateral beneficiaries of sustainable development programs. As the keyword and rallying cry of the Earth Sum-

mit, “sustainability” must be the guiding principle of development, to be achieved by a true partnership of governments, international organizations, and nongovernmental organizations; a true partnership between humanity and nature.

- No development could be considered sustainable in the presence of poverty, disease, illiteracy, great unemployment, discrimination against women, armed conflict, or lack of social integration; the manifestations of social integration being discrimination, fanaticism, intolerance, and persecution.
- Democracy and development are processes (not events) that are fundamentally linked because people’s participation in the decision-making processes that affect their lives gives legitimacy to governments and their development programs.

In his conclusions, the Secretary-General admitted that, over the years, absence of clear policy guidance from the General Assembly and the lack of effective policy coordination by ECOSOC had resulted in an overall lack of focus in the UN development system. The fundamental changes under way included the restructuring of development efforts to be channeled through UNDP resident coordinators, by means of the development of one comprehensive “country strategy note.” This alone would bring about better (if not perfect) coordination and more rational use of available funds.

However, the Secretary-General also noted the growth of other obstructions to the urgent need for social and economic development in the developing countries: “At present the UN mechanism is caught in a confining cycle. There is a resistance to multilateralism from those who fear a loss of national control. There is a reluctance to provide financial means to achieve agreed ends from those who lack conviction that assessments will benefit their own interests. And there is an unwillingness to engage in difficult operations by those who seek guarantees of perfect clarity and limited duration. Without a new and compelling collective vision, the international community will be unable to break out of this cycle.”

## MILLENNIUM SUMMIT

The UN’s Millennium Summit was held from 6-8 September 2000 in New York City. The largest-ever gathering of world leaders came up with a document, the “United Nations Millennium Declaration,” which contained a statement of values, principles and objectives for the international agenda for the 21st century. It also set deadlines for many collective actions. The leaders declared that the central challenge of today was to ensure that globalization becomes a positive force for all, acknowledging that at present both its benefits and its costs are unequally shared. The Declaration called for global policies and measures, corresponding to the needs of developing countries and economies in transition. The Summit Declaration cited freedom, equality (of individuals and nations), solidarity, tolerance, respect for nature and shared responsibility as six values fundamental to international relations for the 21st century. There are eight Millennium Development Goals:

1. Eradicate extreme poverty and hunger.
  - a. Reduce by half the proportion of people living on less than a dollar a day
  - b. Reduce by half the proportion of people who suffer from hunger
2. Achieve universal primary education.

- a. Ensure that all boys and girls complete a full course of primary schooling
3. Promote gender equality and empower women.
  - a. Eliminate gender disparity in primary and secondary education preferably by 2005, and at all levels by 2015
4. Reduce child mortality.
  - a. Reduce by two thirds the mortality rate among children under five
5. Improve maternal health.
  - a. Reduce by three quarters the maternal mortality ratio
6. Combat HIV/AIDS, malaria, and other diseases.
  - a. Halt and begin to reverse the spread of HIV/AIDS
  - b. Halt and begin to reverse the incidence of malaria and other major diseases
7. Ensure environmental sustainability.
  - a. Integrate the principles of sustainable development into country policies and programs; reverse loss of environmental resources
  - b. Reduce by half the proportion of people without sustainable access to safe drinking water
  - c. Achieve significant improvement in lives of at least 100 million slum dwellers, by 2020
8. Develop a global partnership for development.
  - a. Develop further an open trading and financial system that is rule-based, predictable and non-discriminatory, includes a commitment to good governance, development and poverty reduction-nationally and internationally
  - b. Address the least developed countries’ special needs. This includes tariff- and quota-free access for their exports; enhanced debt relief for heavily indebted poor countries; cancellation of official bilateral debt; and more generous official development assistance for countries committed to poverty reduction
  - c. Address the special needs of landlocked and small island developing states
  - d. Deal comprehensively with developing countries’ debt problems through national and international measures to make debt sustainable in the long term
  - e. In cooperation with the developing countries, develop decent and productive work for youth
  - f. In cooperation with pharmaceutical companies, provide access to affordable essential drugs in developing countries
  - g. In cooperation with the private sector, make available the benefits of new technologies-especially information and communications technologies

## JOHANNESBURG SUMMIT

From 26 August to 4 September 2002 in Johannesburg, South Africa, the UN held the Johannesburg Summit 2002, or the World Summit on Sustainable Development, to continue the efforts begun by the 1992 Earth Summit, and to adopt concrete steps and identify quantifiable targets for better implementing Agenda 21. The Summit also pledged to further implement the Millennium Goals set forth by the UN in 2000, including: eradicating extreme poverty and hunger; achieving universal primary education; promoting gender equality and empowering women; reducing child mortality; improving maternal health; combating HIV/AIDS, ma-

alaria and other diseases; ensuring environmental sustainability; and developing a global partnership for development.

It was recognized that progress on sustainable development since the Earth Summit had been disappointing, with poverty deepening and environmental degradation worsening. No agreements that would lead to new treaties were established, but new targets were set, such as:

- to halve the proportion of people without access to safe drinking water and basic sanitation by 2015
- to halve the proportion of people whose income is less than \$1 a day by 2015
- to use and produce chemicals by 2020 in ways that do not lead to significant adverse effects on human health and the environment
- to maintain or restore depleted fish stocks to levels that can produce the maximum sustainable yield on an urgent basis and where possible by 2015
- to achieve by 2010 a significant reduction in the current rate of loss of biological diversity.

Over 300 voluntary initiatives were launched by governments, NGOs, intergovernmental organizations, and businesses. One hundred eight heads of state addressed the Summit and more than 22,000 people participated in it, including more than 10,000 delegates, 8,000 NGOs and representatives of civil society, and 4,000 members of the press.

## WORLD SUMMIT ON THE INFORMATION SOCIETY

The UN General Assembly Resolution 56/183 (21 December 2001) endorsed the holding of the World Summit on the Information Society (WSIS) in two phases. The first phase took place in Geneva from 10 to 12 December 2003 and the second phase took place in Tunis, from 16 to 18 November 2005. A WSIS Plan of Action sets time-bound targets to turn the vision of an inclusive and equitable Information Society into reality. The objectives of the Plan of Action are to build an inclusive Information Society; to put the potential of knowledge and information and communication technologies (ICTs) at the service of development; to promote the use of information and knowledge for the achievement of internationally agreed development goals, including those contained in the Millennium Declaration; and to address new challenges of the Information Society, at the national, regional and international levels.

Targets include:

- to connect villages with ICTs and establish community access points;
- to connect universities, colleges, secondary schools and primary schools with ICTs;
- to connect scientific and research centers with ICTs; to connect public libraries, cultural centers, museums, post offices and archives with ICTs;
- to connect health centers and hospitals with ICTs; to connect all local and central government departments and establish websites and email addresses;
- to adapt all primary and secondary school curricula to meet the challenges of the Information Society, taking into account national circumstances;

- to ensure that all of the world's population have access to television and radio services;
- to encourage the development of content and to put in place technical conditions in order to facilitate the presence and use of all world languages on the Internet;
- to ensure that more than half the world's inhabitants have access to ICTs within their reach.

The objective of the 2005 Tunis phase was to put Geneva's Plan of Action into motion as well as to find solutions and reach agreements in the fields of Internet governance, financing mechanisms, and follow-up and implementation of the Geneva and Tunis documents.

## DEVELOPMENT PLANNING

Almost all the organizations in the UN family contribute in one way or another to development planning—by helping to evolve and introduce new planning methods, by assisting governments in establishing realistic growth targets, and by trying to ensure that overall plans take account of the needs of the different sectors of society.

Within the UN, problems relating to development planning are the concern of the Economic and Social Council's Committee for Development Policy. The 24-member committee, established in 1966, is a consultative body that meets annually to consider problems encountered in implementing development plans.

The UN Secretariat provides an account of the state of the world economy through its annual publication of the *World Economic and Social Survey*, which has appeared every year since 1948. Since 1990 UNDP has stimulated debate about the concept of human-centered development through the publication of the annual *Human Development Report*, written by an independent team of development specialists and published by Oxford University Press. Statistical data, considered indispensable for economic and social development planning, also appears in a number of UN publications, including the *Statistical Yearbook*, *Demographic Yearbook*, *Yearbook of National Accounts Statistics*, *Yearbook of International Trade Statistics*, *World Energy Supplies*, *Commodity Trade Statistics*, *Population and Vital Statistics Report*, and *Monthly Bulletin of Statistics*.

## WORLD FOOD COUNCIL (WFC)

The world food situation in the early 1970s was marked by extreme food shortages in many developing countries in Africa and parts of Southeast Asia, by a general lack of progress in the world fight against hunger and malnutrition, and by very slow progress in the creation of a system of internationally coordinated cereal reserves to meet crop shortfalls and other abnormal situations.

It was against this background that the General Assembly decided, in 1973, to convene a conference to deal with global food problems. The UN World Food Conference, held in Rome in November 1974, called for the creation of a 36-member ministerial-level World Food Council to review annually major problems and policy issues affecting the world food situation and to bring its political influence to bear on governments and UN bodies and agencies alike.

Each year up through 1992 the WFC met in plenary session at the invitation of one of its member states. The council, as a subsidiary body of the UN General Assembly, reports annually to it through the Economic and Social Council.

At first, the WFC's approach to solving world food problems was to encourage the adoption of national food strategies by developing countries. Under this plan, each country would assess its present food situation, including needs, supply, potential for increasing food production, storage, processing, transport, distribution, marketing, and the ability to meet food emergencies. In the early 1980s, this concept was taken over by the World Bank.

In 1989, at its 15th session held in Cairo, Egypt, the WFC delineated a Programme of Co-operative Action with four main goals for UN member countries within the next decade: the elimination of starvation and death caused by famine; a substantial reduction of malnutrition and mortality among young children; a tangible reduction in chronic hunger; and the elimination of major nutritional-deficiency diseases. The Programme of Co-operative Action contained proposals for immediate action to be taken on food-for-work programs in rural areas where employment opportunities are not available and measures to make specific food items affordable to the poor. Over the longer term, the WFC recommended projects to create production and employment opportunities in rural and urban areas; community initiative projects designed to enable the communities themselves to identify and implement projects; vocational training schemes; retraining schemes; food stamp schemes. In the area of nutrition, the WFC recommended the implementation on an emergency basis of supplementary feeding programs for children; primary health care programs, including programs to improve sanitation and drinking water; family planning programs; nutritional education programs; and support to food and nutrition programs undertaken by WHO, UNICEF, and other international agencies.

At its 16th session in 1990, held in Bangkok, Thailand, the council observed that most countries had not yet set specific goals and targets to implement its call to action. However, by 1991 those goals had been adopted by all UN member states as part of the International Development Strategy for the Fourth United Nations Development Decade.

The WFC also considered the coordination of the activities of some 35 international agencies that have programs significantly related to hunger problems. The WFC observed that its own role was that of providing a central, undivided focus on hunger and recommended the creation of an inter-secretariat consultative mechanism among the four Rome-based food organizations (FAO, IFAD, WFC, and WFP). In 1991, meeting in Helsingor, Denmark, it reiterated this support. It noted with concern the great financial difficulties facing these international organizations.

The 18th session of the WFC met in 1992 in Nairobi, Kenya. Its report to the General Assembly noted that although most developing regions made some headway during the 1980s in reducing hunger and malnutrition, this was not the case for the peoples of Africa where disastrous droughts and civil disturbances had caused widespread starvation in recent years. The council praised the IFAD Special Programme for Sub-Saharan African Countries Affected by Drought and Desertification. In response to the disastrous problems of Africa, the WFC called for a "New Green Revolution," and the intensified transfer of technology to accomplish such a revolution. It recommended that substantial increases in investments in research, extension, and training were needed, particularly in Africa.

In 1992 the WFC also noted the problems of millions of people in Eastern Europe and the Commonwealth of Independent States (formerly the USSR) in gaining access to adequate food as a result of the dislocation of their economies.

In the context of the efforts of the General Assembly to streamline the activities of the United Nations, the WFC considered its future role within the framework of the restructuring process. With disarming frankness, the council stated: "We agree that the council has fallen short of achieving the political leadership and coordination role expected from its founders at the 1974 World Food Conference." It concluded that, in a rapidly changing world, the continuation of the status quo for the World Food Council and the United Nations as a whole was not possible. It established an ad hoc committee to review the mandate and future role of the WFC, which met in New York on 14–15 September 1992 and submitted its report to the 47th Session of the General Assembly (1992). However, the committee could not reach agreement on what the council's future role should be. Views ranged from abolishing it to strengthening it and integrating its mandate with another intergovernmental body. With this the committee referred the matter to the General Assembly, which requested the council members to continue attempts to agree on appropriate measures to be taken. After informal meetings from January to May 1993, the council reported to the General Assembly that "Council members are agreed on a set of principles to guide the United Nations response to global food and hunger problems, but disagreements continue to exist concerning the most effective institutional response to these principles."

In 1993 no formal WFC session was held, nor were any substantive documents prepared by the WFC secretariat. In fact, in December 1993, the secretariat in Rome was abolished as a result of the restructuring of the United Nations. Responsibility for servicing any future meetings of the WFC was given to the newly formed Department for Policy Coordination and Sustainable Development (DPCSD) in New York.

In November 1993 the president of the World Food Council held informal consultations with other WFC ministers of agriculture during the biennial FAO Conference in Rome about the possibility of scheduling the next (19th) session of the council. The consultations were inconclusive and the future of the WFC was not taken up at the General Assembly's 48th regular session in light of these ongoing discussions.

At a General Assembly plenary meeting on 26 May 1996 it was recommended that the World Food Council be discontinued and its functions absorbed by the Food and Agriculture Organization (FAO) and World Food Program (WFP). To eliminate duplicative and overlapping efforts, this recommendation was heeded and the WFC was dissolved. The move was generally hailed as a sign that the Assembly was rededicating itself to better use of its resources. As the FAO and WFP became heirs to the World Food Council's initiatives, the restructuring was also viewed as a reinforcement of ECOSOC's development-related activities. (For more information on the UN's ongoing work to combat hunger around the globe, please see the chapter on the Food and Agriculture Organization.)

## SCIENCE AND TECHNOLOGY FOR DEVELOPMENT

A major event of the first UN Development Decade was the UN Conference on the Application of Science and Technology for the Benefit of the Less Developed Countries, held in Geneva in 1963. The conference focused world attention on the practical possibilities of accelerating development through the application of advances in science and technology and on the need for reorienting research toward the requirements of the developing countries.

A second conference, the UN Conference on Science and Technology for Development, held in Vienna in 1979, adopted a program of action (the Vienna Programme) designed to put science and technology to work for the economic development of all countries, particularly the developing countries. It recommended the creation by the General Assembly of a high-level intergovernmental committee on science and technology for development, open to all member states, and the establishment of a voluntary fund to be administered by UNDP.

The Geneva Conference was a predominantly technical or pragmatic conference at which developed countries provided developing countries with state-of-the-art reports on developed-country technologies. By contrast, the Vienna Conference reflected the 1970s discussions between developed and developing countries over a more equal access of the latter to the world's science and technology. Thus science and technology were placed within the context of international diplomacy. The result, the Vienna Programme of Action was a compromise that did not fully meet the expectations of the developing countries.

The Vienna Programme of Action was divided into three target areas: strengthening the science and technology capacities of developing countries; restructuring the existing pattern of international scientific and technological relations; and strengthening the role of the UN system in the field of science and technology and the provision of increased financial resources.

Endorsing the recommendations of the Vienna conference, the General Assembly decided to establish an Intergovernmental Committee on Science and Technology for Development (ISTD), to be open to all states, and to create within the UN Secretariat a Center for Science and Technology for Development (CSTD) to provide substantive support to the committee and to coordinate activities within the UN system. In 1982, the General Assembly established the UN Financing System for Science and Technology for Development to finance a broad range of activities intended to strengthen the endogenous scientific and technological capacities of developing countries. In 1986, it transferred the responsibilities and resources of the financing system to a newly created UN Fund for Science and Technology for Development, administered by UNDP. In 1992, this new voluntary fund amounted to US\$1.56 million and had funded six policy meetings in Cape Verde, Jamaica, Pakistan, Togo, Uganda, and Vietnam.

In 1989, on the tenth anniversary of the Vienna Conference, the General Assembly expressed its disappointment with the implementation of the Vienna Programme. As part of the effort to rationalize and reform the entire United Nations system, in April 1992, the General Assembly decided to transform the ISTD into a functional commission of ECOSOC, the Commission on Science and Technology for Development. The activities of the Centre for Science and Technology for Development were incorporated into

the new Department of Economic and Social Development, within its Division of Science, Technology, Energy, Environment and Natural Resources.

Major objectives of the commission, which held its first session in April 1993, included:

- Assisting ECOSOC in providing science and technology policy guidelines and recommendations to member states, in particular developing countries;
- Providing innovative approaches to improving the quality of coordination and cooperation in the area of science and technology within the United Nations system, with a view to ensuring optimum mobilization of resources;
- Providing expert advice to other parts of the UN system.

The commission also requested that the Secretary-General prepare proposals to improve the coordination of the different bodies in the UN system, including the World Bank, which are involved in science and technology activities.

Developments, such as the United Nations Conference on Environment and Development in 1992—which had substantial science and technology components—and changing attitudes within intergovernmental bodies regarding the role of government and the private sector in view of the end of the cold war, led to the need for a major restructuring of the United Nations in the economic and social sector (including science and technology). While the General Assembly confirmed the continued validity of the Vienna Programme of Action in its resolution on science and technology for development in December 1993, its objectives were merged with the Technology Programme of the UN Conference on Trade and Development (UNCTAD). UNCTAD thus became responsible for science and technology within the United Nations system. Major program elements of the revised work program include:

- Endogenous capacity-building and resource mobilization in the area of science and technology for development;
- Technology assessment and information services;
- Issues related to investment and technology transfer.

The Commission on Science and Technology also decided to adopt themes for study by working groups during the two-year periods between its sessions. For 1993–95, these included technology for small-scale economic activities to address the basic needs of low-income populations, the gender implications of science and technology for developing countries, and the science and technology aspects of work being considered by the Commission on Sustainable Development. The commission also considered studying a variety of other issues, including the role of technology in military conversion, the effect of new and emerging technologies on industrialization, and the role of information technologies in developing countries.

In October 1998, it was recommended that the membership of the Commission on Science and Technology for Development, along with three other subsidiaries of the Economic and Social Council, be reconstituted. The commission's membership was subsequently reduced from 53 to 33, with the following geographic distribution: eight members from African states; seven from Asian states; six from Latin America and the Caribbean; four from Eastern Europe; and eight from Western European and other states. The body remains a functional commission of the Council, with members holding office for four years.

At its Fourth Session, held in May 1999 in Geneva, the focus was on science and technology partnerships and networking for national capacity-building; particular attention was paid to biotechnology and energy. During the meeting, the commission discussed the concept of global entitlement to knowledge, the changing role of the state in the development of science and technology, and the role of networking and partnership in a multi-disciplinary approach to science and technology. In summarizing the proceedings, the moderator concluded that since sustainable development can be thought of as composed of economic growth, social equity, and an adequate use of the environment, and since government is viewed as a “key articulator” of these, the role of science and technology in the near future should be to establish reliable frameworks for consistent communication, effective fore-casting, and the dissemination of knowledge.

### Transnational Corporations

Since the end of World War II, the role of multinational or transnational corporations in international commerce has been growing, but information on their activities has been fragmentary and often closely held. Many of these corporations are household names. They conduct a large portion of their business outside their host country, often recruiting management from their overseas subsidiaries and recruiting shareholders around the world. Some of these corporations command resources greater than those of most governments represented at the UN. In 1989, estimated sales by foreign affiliates of transnationals worldwide were US\$4.5 trillion. In comparison, world exports were only US\$3 trillion. In 2000, the top 200 transnational corporations' combined sales were larger than the combined economies of all 191 countries in the world minus the largest nine (the United States, Japan, Germany, France, Italy, the United Kingdom, Brazil, Canada, and China). The combined GDPs of the other 182 countries was \$6.9 trillion, and the combined sales of the top 200 transnational corporations was \$7.1 trillion. The relationship of transnational corporations with developing countries frequently has been troubled, but they can provide capital, managerial expertise, and technology that are all urgently required for development and often would be hard to come by in any other way.

In 1972, the Economic and Social Council requested the Secretary-General to appoint a group of eminent persons to study the impact of transnational corporations on development and international relations. The group of 20 economists, government officials, and corporation executives from all parts of the world met in 1973 and heard testimony from 50 witnesses in public hearings—a procedure new to the UN. Its report, issued in 1974, recommended the creation of a permanent commission on transnational corporations under the Economic and Social Council and an information and research center in the UN Secretariat.

In December 1974, the council established an intergovernmental Commission on Transnational Corporations as a standing committee (not a functional commission) to furnish a forum within the UN system regarding such corporations; promote an exchange of views about them among governments, intergovernmental organizations, business, labor, and consumers; assist the council in developing the basis for a code of conduct on the activities of transnational corporations; and develop a comprehensive information system on their activities.

The 48-member commission meets annually. At its second session, held in Lima in March 1976, it gave priority to the elaboration of a code of conduct and recommended that the Economic and Social Council establish an Intergovernmental Working Group on a Code of Conduct. The code was to be the first multilaterally agreed framework governing all aspects of the relations between states and transnational corporations, with standards to protect the interests of both the host countries and investors in those countries. The working group held a number of negotiating sessions between 1977 and 1982. Negotiations continued in meetings of a special session of the commission, open to all states.

In April 1991, the commission approved a text authorizing the preparation of recommendations on encouraging TNCs to cooperate in efforts to protect and enhance the environment in all countries for submission to the UN Conference on Environment and Development (UNCED) in 1992. The commission agreed that the following issues should be addressed: internationally agreed standards; improving management and regulation of industrial processes; transferring environmentally sound technologies to developing countries on favorable terms; using environment and development accounting and reporting methods; international environmental management; preventive measures to minimize risks to human life, property, and the environment; and the question of reparations for damage. It directed its secretariat, the Center on Transnational Corporations, to prepare its submission to UNCED. However, in early 1992, the center's functions were absorbed into a new department of the Secretariat and eventually transferred altogether to UNCTAD (see below).

At its 1994 Substantive Session, the commission recommended to ECOSOC that it be integrated into the institutional machinery of the UN Conference on Trade and Development (UNCTAD). ECOSOC decided to transmit this recommendation to the General Assembly for action.

An Intergovernmental Group of Experts on International Standards of Accounting and Reporting, established by the Economic and Social Council in 1982, reviews issues that give rise to divergent accounting and reporting practices of transnational corporations and identifies areas where efforts at harmonization appear necessary.

The four other priorities for the commission's program of work were: establishment of an information system to advance understanding of the nature of transnational corporations and their effects on home and host countries; research into the effects of their operations; technical assistance; and work leading to a more precise definition of the term *transnational corporations*.

The UN Center on Transnational Corporations was established by the Economic and Social Council in 1974 as part of the UN Secretariat. The functions of the center were to develop a comprehensive information system on the activities of transnational corporations, using data from governmental, corporate, and other sources; to analyze and disseminate the information to all governments; to provide technical assistance and strengthen the capacity of host countries (especially developing countries) in their dealings with transnational corporations; and to carry out political, legal, economic, and social research, particularly research to help in devising a code of conduct. By 1985, the center had established that the 350 largest transnational corporations (half of which were based in the United States) had combined sales of US\$2.7 trillion,

a sum which was larger than the combined GNP of all the developing countries, including China.

In 1990 ECOSOC requested the Center on Transnational Corporations to undertake a survey of corporate environmental management to document the most advanced practices as models for companies that had not yet created environmental programs and to submit the results to UNCED. The "Benchmark Corporate Environmental Survey," was submitted to the UNCED preparatory meeting in August 1991. Twenty percent of the 163 firms surveyed responded. The center recommended UNCED consider the following recommendations in preparing its Agenda 21: increased international cooperation to better inform TNCs of the impact of their operations on the greenhouse phenomenon; include TNCs in the consultative process surrounding climate change studies; treat dioxins and PCBs as international, not just local, pollution problems; transnational affiliates in developing countries should handle toxic wastes according to the same rules as in developed countries; TNCs should create safety zones around their facilities to lessen the potential impact of accidents; the oceans should be protected from land-based pollution; TNCs should sponsor programs to save wetlands and rainforests and protect biodiversity; TNCs should help develop a code of conduct on biotechnology. The center also pointed out that environmental rules and regulations differed from country to country. The companies that responded to the survey were interested in the UN setting international guidelines, although many of them were unaware of the existence of current international guidelines.

In 1992, as part of the comprehensive restructuring of the UN secretariat, the functions of the center were incorporated into a new unit: the Transnational Corporations and Management Division of the Department of Economic and Social Development. In May 1993, the General Assembly transferred responsibility for the transnational program again to the secretariat of UNCTAD.

In 2000, the UNCTAD Advisory Service on Investment and Technology, based on the joint work of the secretariat Divisions on Transnational Corporations and Investment and on Science and Technology, was working to help developing countries expand "their enterprise sector in conjunction with wider national trade, technology, and investment strategies." UNCTAD provided analysis of the role of the largest transnational corporations (TNCs) in foreign direct investment (viewed as critical to development) and emphasized that TNCs must exercise social responsibility in order to support sustainable development.

## NATURAL RESOURCES AND ENERGY

The importance of natural resources for economic development was emphasized in 1970 when the Economic and Social Council established the Committee on Natural Resources. The committee develops guidelines for advisory services to governments, reviews arrangements to coordinate UN activities in natural resources development, and evaluates trends and issues concerning natural resources exploration and development, as well as prospects for selected energy, water, and mineral resources.

During the 1970s, the Committee on Natural Resources played an important role in focusing world attention on the status of the global stock of water resources to meet human, commercial, and agricultural needs. As a result of an initiative of the committee, the UN Water Conference was convened in 1977 in Mar del Pla-

ta, Argentina. The conference adopted an action plan to guide international efforts to effectively manage, develop, and use water resources. To give impetus to the Mar del Plata Action Plan, the General Assembly, in 1980, launched the International Drinking Water Supply and Sanitation Decade (1981-90).

In 1973, the General Assembly established the UN Revolving Fund for Natural Resources Exploration, which began operation in 1975. The fund, financed from voluntary contributions, is intended to provide additional risk capital for mineral exploration in developing countries. In 1981, the fund was authorized to extend its exploration activities to geothermal energy.

During the 1970s, with the rise in and volatility of costs for petroleum, affecting the economies of all countries, particularly those of the poorer countries, and the growing awareness that known supplies of petroleum would, in the long run, be unable to meet global requirements, more attention was focused on new and renewable sources of energy. This led to the General Assembly's decision to convene, in Nairobi in August 1981, the UN Conference on New and Renewable Sources of Energy. The conference examined alternative forms of energy, including solar, bio-mass, geothermal, and ocean energy; wind power; hydropower; fuel-wood and charcoal; peat; and the use of draft animals for energy purposes. It adopted the Nairobi Program of Action for the Development and Utilization of New and Renewable Sources of Energy as a blueprint for national and international action. The Nairobi Program identified five broad areas for concentrated action: energy assessment and planning; research, development, and demonstration; transfer, adaptation, and application of mature technologies; information flows; and education and training.

Endorsing the Nairobi Program later that year, the General Assembly set up an interim committee to launch immediate implementation and, in 1992, established the Committee on the Development and Utilization of New and Renewable Sources of Energy, open to the participation of all states as full members. Later in 1992, in response to the requirements of implementing UNCED's Agenda 21, this committee was combined with the energy portion of the Committee on Natural Resources and Energy, and became a new standing committee of ECOSOC: the Committee on New and Renewable Sources of Energy and on Energy for Development. The Committee on Natural Resources now concentrates mainly on water and mineral resources. Each committee had a membership of 24 government-nominated experts who are elected by ECOSOC.

The first session of the new Committee on New and Renewable Resources and Energy met in New York from 7-18 February 1994. The Secretary-General reported to the committee that in 1990 new and renewable energy sources accounted for 17.7% of the total energy consumption. The drop in oil prices during the 1980s had led to a decline in investment in renewable energy resources, but growing concern for the fragile state of the world's environment lent urgency to efforts to find alternatives to burning fossil fuels and wood, which were contributing to the threat of global warming.

At its first session, the committee noted that the Nairobi Program had led to progress in the application of large-scale technologies, such as hydropower and geothermal energy, and had helped bring to maturity solar energy and wind technologies. However, the overall impact of these new technologies remained insignifi-

cant. The committee identified four domains for action by member states: more efficient use of energy and energy-intensive material; increased use of renewable sources of energy; more efficient production and use of fossil fuels; and fuel substitution from high carbon to low carbon-based fuels. It also called for integrated national action programs for developing energy systems; for removing subsidies on conventional sources of energy; establishing support for new, environmentally sound technologies; and finding ways to use wasted energy, such as waste heat from industrial processes. Its report to ECOSOC also recommended the establishment of regional “centers of excellence” to provide training, technology support, and resource data.

Another positive development in this field in the 1990s was the increasing recognition by the World Bank and the International Monetary Fund (IMF) that energy conservation makes good economic and environmental sense. Public outcry over displacement of local populations by big dams and destruction of rain forests for grazing projects funded by the World Bank had led it to institute an environmental assessment on every project it undertook. In 1992 the IMF also began to study the impact of its policies on its member nations’ environment. The bank also branched out into supporting new sources of energy, for example by lending Mauritius US\$15 million to support a program to generate 10–20% of that nation’s future energy needs by burning sugar-cane waste product readily available in that country.

Addressing another important area in the energy field—the use of nuclear energy for the economic and social development of developing countries—the General Assembly, in 1977, set in motion arrangements for an international conference on the subject. The first global effort in this field, the UN Conference for the Promotion of International Cooperation in the Peaceful Uses of Nuclear Energy, was held in Geneva in 1987. Although unable to reach agreement on principles acceptable to all, the participants at the conference exchanged views and experience on topics ranging from the production of electricity to the various applications of nuclear techniques in food and agriculture, medicine, hydrology, research, and industry.

The first session of the newly reconstituted Committee on Natural Resources was held in early 1993. Its second session met in New York in early 1994. In the 1990s the focus of the Committee on Natural Resources became the implementation of the recommendations of Agenda 21, particularly measures to promote the more rational and sustainable use of natural resources. In the chairman’s summary of the meeting, he noted that mineral and water resources had to be seen as finite and valuable resources, and that their production and consumption affected other constituents of the environment. Therefore, a holistic approach was required to the planning and management of natural resources within the geographical boundaries of each country and also in the consideration of the global impact of national policies or measures. A continued call was made for integrated approaches to water and land management. The committee emphasized the need to consider natural resources as a whole, rather than by individual sectors, such as agriculture and industry.

The committee also noted that the fundamental importance of mineral resources to economic development and quality of life had not been adequately reflected in Agenda 21. It recommended

that the need to ensure the sustainable supply of minerals should be a key issue for deliberations on Agenda 21.

The committee’s discussion on mineral resources was influenced by the impact of privatization of state mineral enterprises on people in the developing countries and economies in transition. While there seemed to be a new trend toward closer understanding between these countries and transnational corporations, the committee stated that governments should promote measures to reduce destruction of the environment from private mining operations. It also recommended that governments promote measures to encourage better use of existing resources through recycling and substitution.

In 1998 the Committee on New and Renewable Sources of Energy and on Energy for Development and the Committee on Natural Resources were merged into one expert body—the Committee on Energy and Natural Resources for Development, which served as a subsidiary body of ECOSOC. The committee, which met biennially for two weeks, was made up of two subgroups of 12 experts each; one sub-group dealt with energy and the other with water resources. The geographical distribution of the 24 members was: six members from African States; five from Asia; four from Latin American and the Caribbean; three from Eastern Europe; and six from Western European and other states. The term of office was four years.

The reconstituted committee met for the first time in April 1999, during which it worked to prepare a draft paper for the next, eighth, session of the Commission on Sustainable Development. The committee had before it various reports from the Secretary-General, including: a report on environmentally sound and efficient fossil energy technologies, which highlighted the need to increase efficiency of fossil energy use, improve environmental compatibility of fossil technologies, and shift to fossil fuels with lower environmental impacts, such as natural gas; the report on renewable sources of energy, which emphasized wind energy and stressed the importance of continued research and development in this area; the report on rural energy policies, which stated that service to rural areas remains inadequate (of the estimated 3.1 billion people in rural areas, approximately 2 billion had no access to electricity); the report on energy and transportation, which reviewed global transportation trends in both developed and developing nations; and the report on spatial planning of land (including minerals) and water resources, which identified emerging issues and highlighted the finite nature of the earth’s resources.

In 2002, the work of the Committee on Energy and Natural Resources for Development was transferred to the Commission on Sustainable Development by the Plan of Implementation of the World Summit on Sustainable Development. The UN Commission on Sustainable Development held its fourteenth session in May 2006.

## REGIONAL COMMISSIONS

The five regional commissions—serving Europe and the Commonwealth of Independent States, Asia and the Pacific, Latin America and the Caribbean, Africa, and Western Asia—have been established by the Economic and Social Council in recognition of the fact that many economic and social problems are best approached at the regional level. The commissions work to raise the level of economic and social development activity in their re-

spective regions, as well as to maintain and strengthen relations among countries within and outside regions. All actions taken by the commissions are intended to fit within the framework of overall UN economic and social policies. The commissions also are empowered, with the agreement of the governments concerned, to make recommendations directly to member governments and to the specialized agencies.

The commissions are subsidiary organs of the Economic and Social Council, to which they report annually. The secretariats of the commissions—each headed by an executive secretary with the rank of undersecretary-general—are integral parts of the UN staff, and their budgets form part of the regular UN budget.

An important part of the work of all the regional commissions is the preparation of regional studies and surveys, particularly annual economic and social surveys that are published at the headquarters of each commission. Supplementing these are bulletins and periodicals covering a wide range of subjects—such as agriculture, population, transportation and communications, energy, industry, and housing and construction—that are widely used as sources of information by governments, business and industry, educational institutions, other UN organs, and the press.

In the early 1990s, under pressure from both developing and industrialized countries to reform and rationalize the scattered development activities of the United Nations system, Secretary-General Boutros Boutros-Ghali proposed that the activities of all United Nations organs be coordinated. In December 1992, the General Assembly adopted his proposal with its historic Resolution A/47/199 that stressed the need for development activities to “be streamlined and rationalized, especially in the interrelated areas of programming, execution, decentralization, monitoring and evaluation, thus making the UN system more relevant and responsive to the national plans, priorities and objectives of developing countries, and more efficient in its delivery systems.” Under this plan, many of the functions carried out by various committees and boards of the specialized agencies and UN funds were transferred away from headquarters (in New York, or, in the case of the specialized agencies, Geneva or Vienna), to the regional commissions (headquartered in major cities of each region) and the office of the UNDP resident coordinator in the specific countries that were to be served by development programs. As this strategy developed, the role of the regional commissions became more and more central to the work of the United Nations system.

#### **Economic Commission for Europe (ECE)**

The Economic Commission for Europe (ECE), with headquarters in Geneva, was established in 1947 to help mobilize concerted action for the economic reconstruction of postwar Europe and to increase European economic activity among countries both within and outside the region. To these goals was added that of providing governments with economic, technological, and statistical information. Begun as an experiment at a time when severe postwar shortages of some commodities and surpluses of others made economic cooperation in Europe a necessity, ECE soon became the only multilateral forum to deal with cooperation between Eastern and Western Europe. The ECE provides a systematic means of intergovernmental cooperation among the countries of Europe,

the United States, Canada, Israel, and the republics of the former Soviet Union.

ECE priority objectives include the development of trade, scientific and technical cooperation, improvement of the environment, and long-term planning and projections as a basis for formulation of economic policy. Through meetings of policy-makers and experts, publication of economic analyses and statistics, and study tours and exchanges of technical information, the commission provides a link between governments having different economic and social systems and belonging to different subregional organizations.

Plenary meetings of the commission are held annually; its subsidiary organs meet throughout the year.

ECE works closely with a number of specialized agencies, particularly the ILO and FAO; with other intergovernmental organizations; and with nongovernmental organizations, which ECE has consulted frequently for their expertise in particular subjects.

The analytical work of the ECE provides both a macro- and micro-economic picture of the state of the region. It publishes statistical bulletins and special reports on the state of markets in industry, timber, and human settlements. It has also published guides for the management of joint ventures, privatization and conditions for foreign direct investment.

The network of committees and working parties mentioned above carries on the ECE's technical cooperation work. The ECE has formulated regionwide strategies and legal instruments in the fields of environment and transportation. One of its most significant accomplishments is the establishment of a standard for electronic data interchange (the UN/EDIFACT or United Nations Electronic Data Interchange for Administration, Commerce and Transport). This international standard for communication between networks of computers paves the way for the development of paperless international trade in the twenty-first century.

The events of 1989–91, during which the entire face of Europe changed beyond recognition, provided enormous challenges for the ECE. War in the former Yugoslavia and the resulting economic sanctions and displacement of 3 million people made a somber picture. The ECE provided technical cooperation to the countries of Eastern Europe in transition to a market economy. By 1994, these countries made up fully one-half of its expanded membership. Hundreds of workshops on transition issues were conducted by the ECE in these countries (1994–95). The program of workshops was supplemented by the introduction of regional advisory services in each of the ECE's major fields of activity.

#### **Membership**

As of April 2006, the following 55 countries were members of ECE: Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Canada, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Netherlands, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia and Montenegro, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, the Former Yugoslav Republic of Macedonia,

Turkey, Turkmenistan, Ukraine, United Kingdom, United States, and Uzbekistan.

#### **Economic and Social Commission for Asia and the Pacific (ESCAP)**

The Economic and Social Commission for Asia and the Pacific (ESCAP), with headquarters in Bangkok, Thailand, and a Pacific Operations Center based in Port Vila, Vanuatu, serves a region that contains more than half the world's population. It was established in 1947 as the Economic Commission for Asia and the Far East to promote reconstruction and economic development of the region. Its name was changed in 1974 to reflect equal concern with economic growth and social progress and to clarify its geographic scope. The commission meets annually.

ESCAP's activities help identify common problems and facilitate cooperation for economic and social development at the regional level. It provides technical assistance and advisory services to governments on request, carries out research on regional issues, and acts as a clearinghouse of information.

One of ESCAP's most significant meetings in the 1990s was the Fourth Asian and Pacific Population Conference (Bali, August 1992). The conference was cosponsored by ESCAP and UNFPA, in recognition of the fact that population issues were inextricably linked to the cycles of poverty and the struggle for development. The conference adopted the Declaration on Population and Development (known as the "Bali Declaration"). By this declaration, ESCAP's member countries set goals for themselves to adopt strategies to attain replacement-level fertility (around 2.2 children per woman) by the year 2010 or sooner. They also agreed to reduce the level of infant mortality to 40 per thousand live births or lower by the same time.

In the late 1990s, with more than 50 years of experience, ESCAP described itself as a regional think tank and acknowledged that its ultimate challenge lay in bringing some 830 million of the region's poor into the economic mainstream, "enabling everybody to achieve a better standard of life as envisaged in the Charter of the United Nations."

*Membership.* As of April 2006, the 53 member states of ESCAP were: Afghanistan, Armenia, Australia, Azerbaijan, Bangladesh, Bhutan, Brunei Darussalam, Cambodia, China, Democratic People's Republic of Korea, Fiji, France, Georgia, India, Indonesia, Islamic Republic of Iran, Japan, Kazakhstan, Kiribati, Kyrgyzstan, Lao People's Democratic Republic, Malaysia, Maldives, Marshall Islands, Micronesia (Federated States of), Mongolia, Myanmar, Nauru, Nepal, Netherlands, New Zealand, Pakistan, Palau, Papua New Guinea, Philippines, Republic of Korea, Russian Federation, Samoa, Singapore, Solomon Islands, Sri Lanka, Tajikistan, Thailand, Timor-Leste, Tonga, Turkey, Turkmenistan, Tuvalu, United Kingdom of Great Britain and Northern Ireland, United States of America, Uzbekistan, Vanuatu, and Vietnam. It also had nine associate members: American Samoa, Guam, New Caledonia, Cook Islands, Hong Kong (China), Niue, French Polynesia, Macao (China), and Northern Mariana Islands.

#### **Economic Commission for Latin America and the Caribbean (ECLAC)**

The Economic Commission for Latin America and the Caribbean (ECLAC), with headquarters in Santiago, Chile, was established in 1948 as the Economic Commission for Latin America. In

1983, it formally incorporated the Caribbean region into its name. ECLAC's aim is to help the governments of the region promote the economic development of their countries and improve living standards. To this end, it collaborates with the governments of the region in the investigation and analysis of regional and national economic problems, and provides assistance in the formulation of development plans. It organizes and convenes regional intergovernmental meetings on topics in the field of economic and social development. ECLAC conducts research, executes studies, disseminates information, provides technical assistance, participates in seminars and conferences, and gives training courses.

ECLAC's initial stress on economic growth and trade was later complemented with emphasis on employment, income distribution, and other social aspects of development. In recent years, the commission has expanded its activities to include research in such areas as the environment, the development and transfer of technology, and the role of transnational corporations.

In 1999, ECLAC had divisions and units dealing with the following: planning and operations; economic development; social development; international trade and finance development; production, productivity, and management; statistics and economic projections; environment and human settlements; and natural resources and infrastructure. It also had a documents and publications division. ECLAC also has two sub-regional headquarters (in Mexico and Port of Spain), and offices in Bogota, Brasilia, Buenos Aires, Montevideo, and Washington, D.C.

ECLAC meets biennially; a committee of the whole carries on intersessional work.

Two other organizations are part of the ECLAC system: the Latin American and Caribbean Institute for Economic and Social Planning (ILPES) in Santiago, Chile; and the Latin American Demographic Center (CELADE), also in Santiago. ILPES was established in 1962 and undertakes research and provides training and advisory services, as well as furthering cooperation among the planning services of the region. CELADE was established in 1957, but became an integral part of the commission in 1975. It collaborates with governments in formulating population policies and provides demographic estimates and projections, documentation, data processing, and training facilities.

The commission carries out its work in close cooperation with UNDP, the International Trade Center (UNCTAD/GATT), UNESCO, the International Maritime Organization (IMO), UNICEF, and the International Telecommunications Union (ITU).

*Membership.* As of April 2006, ECLAC had 42 members: Antigua and Barbuda, Argentina, Bahamas, Barbados, Belize, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Ecuador, El Salvador, France, Germany, Grenada, Guatemala, Guyana, Haiti, Honduras, Italy, Jamaica, Mexico, Netherlands, Nicaragua, Panama, Paraguay, Peru, Portugal, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Spain, Suriname, Trinidad and Tobago, United Kingdom of Great Britain and Northern Ireland, United States of America, Uruguay, and Venezuela. It also had seven associate members: Anguilla, Aruba, British Virgin Islands, Montserrat, Netherlands Antilles, Puerto Rico, and United States Virgin Islands.

### Economic Commission for Africa (ECA)

The Economic Commission for Africa, with headquarters in Addis Ababa, Ethiopia, was established in 1958. It was the first intergovernmental organization in Africa whose geographical scope covered the whole of a continent in which economic and social conditions differed widely and where many countries and dependent territories were among the poorest in the world. ECA's chief objective is the modernization of Africa, with emphasis on both rural development and industrialization. Its work has been marked by a sense of urgency and a determination to match the rapid pace of African political progress with economic and social progress. In carrying out its functions, ECA works closely with the Organization of African Unity and various organizations of the UN system.

The commission's sessions are held annually at the ministerial level and are known as the Conference of Ministers.

The approach of ECA is primarily at the level of its five subregions: North Africa, East Africa, Central Africa, Southern Africa, and West Africa. ECA members have made it clear that the subregional approach is to be regarded as a necessary first step and that pan-African economic integration remains the goal. For that reason, five multinational programming and operational centers have been established: in Tangier, Morocco, for North Africa; in Niamey, Niger, for West Africa; in Lusaka, Zambia, for Southern Africa; in Yaounde, Cameroon, for Central Africa; and in Kigali, Rwanda, for Eastern Africa.

Work priorities for the 1990s and beyond included the broadened concept of food security and poverty alleviation through sustainable development with emphasis on capacity building; the promotion of economic cooperation among African countries and between African and other developing countries; the physical integration of the continent in line with the goals of the UN Transport and Communications Decade for Africa (1991–2000); and greater control and sovereignty over natural resources and environment. In the field of industrial development, ECA implemented the UN Second Industrial Development Decade in Africa (IDDA) by strengthening the technological and entrepreneurial capabilities of African countries. Special attention was paid to subregional and regional cooperation in small-scale cottage and rural industries and to highly advanced technology.

In 1992 ECA issued a technical publication evaluating the impact of the 1992 European economic integration measures on African agriculture. The publication discussed the various factors underlying the European single market. The publication underscored the need for galvanizing the cooperation of African nations in the face of moves to strengthen economic integration in other regions, notably Europe and North America. ECA also consulted with the OAU and the African Development Bank on the establishment and functioning of an African Economic Community (AEC).

ECA supervised the African Training and Research Centre for Women, which assisted ECA member states in improving the socioeconomic conditions of African women and enhancing their participation in development. ECA pursued its efforts to establish a regional Federation of African Women Entrepreneurs and a Bank for African Women to support women's entrepreneurial activities. ECA developed a Pan-African Development Information System that provides training, advisory services, data base devel-

opment, and network-building, and produces studies and publications for ECA member states, institutions, and nongovernmental organizations.

Beginning in July 1995, ECA embarked on major institutional and managerial reforms, resulting in a new strategic focus, which it defined by five core programs and two cross-cutting themes. The core programs were facilitating economic and social policy analysis; ensuring food security and sustainable development; strengthening development management; harnessing information for development; and promoting regional cooperation and integration. The themes were: fostering leadership and empowerment for women in Africa and enhancement of ECA capacities (with regard to information and technology, staff training, communication, and public awareness of programs through the mass media).

*Membership.* As of April 2006, the following 53 countries were members of ECA: Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Côte d'Ivoire, Democratic Republic of the Congo, Djibouti, Egypt, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Equatorial Guinea, Kenya, Lesotho, Liberia, Libya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Republic of the Congo, Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Togo, Tunisia, Uganda, United Republic of Tanzania, Zambia, and Zimbabwe.

### Economic and Social Commission for Western Asia (ESCWA)

A regional economic commission for the Middle East was first proposed in 1947–48. A commission that would include the Arab nations and Israel proved to be out of the question, however, and in 1963, the UN Economic and Social Office in Beirut (UNESOB) was set up. For 11 years, UNESOB assisted governments in economic and social development and provided them with consultants in such fields as community development, demography, industrial development planning, and statistics.

In 1972, Lebanon revived the issue of a regional commission for the area, and in August 1973, the Economic and Social Council established the Economic Commission for Western Asia to supersede UNESOB. In 1984, it was renamed the Economic and Social Commission for Western Asia (ESCWA) to reflect the importance of the social aspect of its activities.

The commission began operations on 1 January 1974, with provisional headquarters in Beirut. As defined by the resolution establishing the commission, its task is to initiate and participate in measures for facilitating concerted action for the economic reconstruction and development of Western Asia, for raising the region's level of economic activity, and for maintaining and strengthening the economic relations of countries of the region both among themselves and with other countries of the world.

ESCWA undertakes or sponsors studies of economic and social issues in the region, collects and disseminates information, and provides advisory services at the request of countries of the region on ESCWA's fields of activities. Much of ESCWA's work is carried out in cooperation with other UN bodies. The commission conducts industrial studies for individual countries in conjunction with UNIDO. It cooperates with FAO in regional planning, food security, and management of agricultural resources. UNDP supports ESCWA's work on household surveys in Western Asia and the Arab Planning Institute in Kuwait. Work is also undertaken

with UNFPA and UNIFEM in population and women's programs, with ILO in statistical surveys on labor, with AGFUND in rural development, with UNCTAD in development planning and maritime transport training, with UNEP in integrating environmental aspects (particularly control of desertification) into development programs, and with OIC in natural resources, industry, and trade issues.

The sessions of the commission (held every two years) are attended by representatives of member states and bodies, UN bodies and specialized agencies, regional and intergovernmental organizations, and other states attending as observers.

In 1992, the commission called for the establishment of an Arab and international interagency coordinating committee on environment and development to promote the goals of the UN Conference on Environment and Development's (UNCED) Agenda 21.

In May 1994, during the Commission's seventeenth ministerial session in Amman, ESCWA member states voted to move the permanent headquarters to Beirut. The 8-story UN house was built in the Beirut Central District for this purpose.

ESCWA maintains close liaison with other UN organs and specialized agencies and with intergovernmental organizations in the region, such as the League of Arab States and the Arab Fund for Economic and Social Development.

In 1976, ESCWA decided to move its operations to Amman, Jordan, for one year because of the conflict in Lebanon. Later the same year, it decided to accept the offer of the government of Iraq for Baghdad to be the site of its permanent headquarters. It moved to Baghdad in 1982, only to relocate to Amman during the Gulf War between Iraq and Kuwait in 1991. The permanent headquarters were later moved back to Beirut in 1997. ESCWA had established six working committees by the early 2000s; they were: statistical, social development, energy, water resources, transport, and liberalization of foreign trade and economic globalization.

*Membership.* As of April 2006, there were 13 members of ESCWA: Bahrain, Egypt, Iraq, Jordan, Kuwait, Lebanon, Oman, Palestine (Palestine Liberation Organization), Qatar, Saudi Arabia, Syria, United Arab Emirates, and Yemen.

---

# TECHNICAL COOPERATION PROGRAMS

The International Development Strategy for the third UN Development Decade called for a renewed emphasis on technical cooperation and a significant increase in the resources provided for this purpose. It recognized that technical cooperation contributes to the efforts of developing countries to achieve self-reliance by facilitating and supporting investment, research, and training, among other things.

UN programs of technical cooperation may be grouped in three categories: (1) the UN regular program, financed under the portion of the UN regular budget set aside for technical cooperation activities; (2) activities funded by the UN Development Programme (UNDP); and (3) extrabudgetary activities financed by contributions provided directly to the executing agencies by multilateral funding organizations within or outside the UN system, other than UNDP, and by contributions from governments and nongovernmental organizations.

To consolidate the responsibilities and resources within the UN Secretariat in support of technical cooperation activities, the UN General Assembly in March 1978 set up the Department of Technical Cooperation for Development (DTCD). In 1993, under further restructuring of the United Nations, this became the Department for Development Support and Management Services (DDSMS).

DDSMS provided technical and managerial support and advisory services to member states of the UN, relevant research, and parliamentary services to expert groups and intergovernmental bodies. It had a twofold mandate: (i) to act as an executing agency for programs and projects relating to institution-building and human resource development in areas such as development policies and planning, natural resources and energy planning, governance and public management, and financial management and accounting; (ii) to act as a focal point for the provision of management services and implementation functions for technical cooperation.

In 1997 DDSMS was merged with the Department for Policy Coordination and Sustainable Development and the Department for Economic and Social Information and Policy Analysis to form the Department of Economic and Social Affairs (DESA). DESA provides policy analysis and facilitates international dialogue on development issues in the General Assembly, Economic and Social Council and the specialized inter-governmental bodies reporting to them. It also provides technical assistance to member states at the national and sub-regional level. DESA's staff researches and analyses a broad range of economic and social data and information on development issues and trends. It also advises and supports countries in implementing their development strategies, with the aim being to help build national capacities as well as to strengthen economic and technical links among developing countries.

## UNITED NATIONS DEVELOPMENT PROGRAMME (UNDP)

Since its earliest days, the UN system has been engaged in a growing effort that has two main thrusts. The first, and most important, is supporting the vigorous drive of the world's developing countries to provide their own people with the essentials of a decent life—including adequate nutrition, housing, employment, income, education, health care, consumer goods, and public services. The second aim, which is closely related, is to help these countries increase their output of commodities, raw materials, and manufactured items, which the world increasingly needs, as well as to ensure them a fair return.

The United Nations Development Programme (UNDP) is the UN's major arm—and the world's largest channel—for international technical cooperation for development provided on a grant basis. Working with the government of nearly every country—and with more than 30 international agencies—UNDP supports the development efforts of 166 countries and territories in Africa, Asia and the Pacific, Latin America and the Caribbean, the Arab states, and Europe and the Commonwealth of Independent States. Under the overall framework of “sustainable human development,” the programs it supports focus primarily on building national capacities to eliminate poverty, protect and regenerate the environment, create employment, and empower women. The ultimate goal is to improve the quality of human life.

### Evolution of UNDP

Although UNDP came into formal existence only in January 1966, it really began 20 years earlier, for it grew out of two long-established UN institutions.

In 1948, the UN General Assembly (GA) had decided to appropriate funds under its regular budget to enable the UN Secretary-General to supply teams of experts, offer fellowships, and organize seminars to assist national development projects at the request of governments. About the same time, many of the specialized agencies had begun to undertake similar projects. However, no sooner had the Regular Programs of Technical Assistance, as they were called, begun to operate than it became apparent that the money that could be spared from the regular budget would not meet demand. In 1949, the General Assembly set up a separate account for voluntary contributions toward technical assistance and decided to make it a central account to finance the activities not only of the UN itself but also of the specialized agencies. Machinery was established for distributing financial resources and coordinating projects, and the whole enterprise was called the Expanded Programme of Technical Assistance (EPTA), to distinguish it from the UN's technical assistance financed under the regular budget. The venture proved remarkably successful. Ten years after it had begun operations, EPTA was financing technical assistance in some 140 countries and territories. Between 1950 and 1960, the

number of governments contributing funds had grown from 54 to 85, and the total annual contributions had risen from \$10 million to \$33.8 million.

In 1958, the General Assembly felt that it would be desirable to broaden the scope of UN technical assistance to include large-scale preinvestment surveys and feasibility studies on major national development projects that would lay the groundwork for subsequent investment of capital. These surveys and studies involved a much greater financial outlay than the kind of technical assistance then being undertaken, and the General Assembly decided to set up a new institution that would be run along lines similar to those of EPTA. Thus, the Special Fund was established to act as a multilateral channel for voluntary contributions to preinvestment projects, and as a coordinating center for the work of the various UN agencies. The Special Fund began operations in 1959; within three years, 86 governments had pledged over \$110 million.

In January 1964, the Secretary-General formally proposed to the Economic and Social Council that EPTA and the Special Fund be merged into a single enterprise. The advantages to be derived from the merger were a pooling of resources, a simplification of procedures, improvement in overall planning, elimination of duplication, reduction in administrative costs, and a general strengthening of UN development aid. By August 1964, the Council had adopted recommendations for the merger, but because of the stalemate at the 1964 General Assembly, no action could be taken until the following year. On 22 November 1965, the General Assembly unanimously voted to consolidate the two operations, effective 1 January 1966, as the United Nations Development Programme.

### Structure and Organization

*Administrator and Executive Board.* UNDP is headed by an administrator, appointed by the UN Secretary-General and confirmed by the General Assembly, who is responsible to a 36-nation Executive Board for all aspects of program operations. The board—representing every geographical region and both contributor and program countries—reports to the General Assembly through the Economic and Social Council. In addition to setting overall policy guidelines, the Executive Board examines and approves the volume of assistance allocated to each country over successive five-year cycles and must similarly approve all country programs. (The Executive Board began its work in 1994, replacing the 48-nation UNDP/UNFPA Governing Council, which had a similar composition and function. The Governing Council's decision-making almost always took place by "consensus" rather than by recorded voting.)

*Regional Bureaus.* Regional bureaus, located at UN headquarters, cover Africa, Asia and the Pacific, Latin America and the Caribbean, and the Arab states. There is also a Division for Europe and the Commonwealth of Independent States. These offices serve as the administrator's principal links with the program countries. Together with bureaus or divisions for strategic planning, program policy and evaluation, program development and support, and finance and administration, they furnish UNDP's country-based Resident Representatives with day-to-day operational support.

*Resident Representatives.* Resident Representatives heading more than 140 program country offices function as field-level

leaders of the UN development system. They are responsible for seeing that UNDP-assisted country programs are carried out effectively and efficiently. They act as chief liaison officers between government planning authorities and the executing agencies, help blueprint all activities from formulation to follow-up, and are responsible for ensuring that personnel, equipment, and facilities are utilized to best advantage.

Resident Representatives and other staff in UNDP's country offices also perform a variety of non-project-related development activities that make a significant contribution to UNDP's goals, and to the needs of its national partners. These include engaging in policy dialogue with national officials and providing them with development planning advice; furnishing technical advisory and general problem-solving services, often at the request of concerned sectoral ministries; assisting in mobilizing investment from both internal and external sources, as well as with follow-up investment advice and services; acting as a focal point for government needs in emergencies caused by natural or man-made disasters; assisting in the formulation, management, and evaluation of UNDP country programs; and, upon request, participating in the coordination of external assistance from other sources and in the preparation of well-balanced, effective national development programs.

Training and other support is offered on issues of special concern: UNDP's Division for Gender in Development helps to ensure that programs consider women's needs and interests; the Division for Nongovernmental Organizations promotes increased participation of NGOs and community groups in development activities; the Environment and Natural Resources Group ensures that the environmental impact of all programs is weighed; the Short-Term Advisory Services program sends skilled advisers to provide top-level technical and managerial advice in such sectors as agriculture, transportation, and industry.

### Functions and Guiding Principles

The nature of UNDP and its activities has changed over the years. In part, this has been in response to the evolving requirements and interests of the program countries. The changes also have reflected global concerns for particular development problems and issues.

In the early 1970s, UNDP had to demonstrate its ability to replace a basic structure, which had served it well in its formative stages, with a "second generation" mechanism designed to determine the nature of UNDP's market with greater discrimination, and to deliver the required product with more efficiency. The cumulative impact of a number of intensive inquiries into development and development assistance—by the Pearson Commission, the UN Committee for Development Planning, Sir Robert Jackson's study of the capacity of the UN development system, and by some of the major donor countries individually—helped to fashion a new look for UNDP. The various studies agreed on needs for more deliberate matching of country requests for assistance with available resources; the introduction of forward and coordinated planning and programming; more careful and appropriate project design; and greater quality, timeliness, and efficiency of implementation.

The consideration of these matters by the UNDP Governing Council in 1970 produced a consensus on the future of UNDP

that was endorsed by the General Assembly in the same year, translated into organizational and procedural changes in 1971, and brought substantially into effect during the next few years. The pivotal change was the introduction of “country programming.” This involved the forward programming of UNDP assistance at the country level for periods of up to five years, identification of the role UNDP inputs would play in specified areas related to a country’s development objectives, and the phasing of these inputs. Country programming, together with a similar approach to regional, interregional, and global activities, is designed to achieve the most rational and efficient utilization of resources.

A necessary counterpart to the introduction of UNDP country programming was administrative reform. The most important change involved decentralization—a substantial shift of power and responsibility for effective UNDP technical cooperation at all stages away from headquarters and into the program countries, where the UNDP Resident Representatives often play a lead role in UN development system activities within a country. Guidelines for the selection of these officials imply that, first and foremost, they should be effective managers, for it is they who cooperate directly with the governments to ensure the smooth functioning of development programs. In addition, they must intervene to help ensure more efficient implementation and more effective use of the results of project assistance. Upon request, they must be ready to play a vital part in the coordination of assistance from other sources with that provided by UNDP. In fact, under the restructuring of the UN development system mandated by the General Assembly, most UNDP Resident Representatives also are designated by the UN Secretary-General as Resident Coordinators of all UN operational assistance for development.

In 1975, UNDP further revised its programming principles to include “new dimensions” in technical cooperation, designed primarily to foster greater self-sufficiency among developing countries by relying more heavily on their own skills and expertise for development activities. Accordingly, UNDP redefined its role in technical cooperation to stress results achieved, rather than inputs required from the industrialized nations.

Seen from this perspective, the purpose of technical cooperation is to promote increasing autonomy with regard to the managerial, technical, administrative, and research capabilities required to formulate and implement development plans in the light of options available.

In the 1990s, UNDP made other changes that had a substantial impact on its programming, as well as on development thinking in general. In 1990 the Governing Council directed UNDP to focus its activities on six themes: poverty eradication and grass roots participation; environment and natural resources management; technical cooperation among developing countries (TCDC); management development; transfer and adaptation of technology; and women in development. UNDP has also adopted a “program approach,” whereby funding is provided for comprehensive programs with integrated components rather than distinct, separate projects. This enables UNDP to deliver assistance that is more focused and has greater impact and sustainability.

Another change has been UNDP’s promotion of “human development,” which puts people at the center of development, enlarging their choices and creating opportunities through which they can realize their potential and express their creativity. Hu-

man development does not measure a country’s progress solely by its Gross National Product, but takes into account such factors as its people’s access to health services, level of education, and purchasing power. Since 1990 UNDP has stimulated debate about this concept through the publication of an annual Human Development Report, written by an independent team of development specialists and published by Oxford University Press. Since then, a growing number of countries have received UNDP assistance in incorporating human development concerns into planning and the allocation of budgets.

Linking human development with its traditional emphasis on building self-reliance, UNDP has now embraced the concept of “sustainable human development” as the guiding principle underlying all its work. As defined by UNDP’s administrator, James Gustave Speth, who took office in July 1993:

“Sustainable human development is development that not only generates economic growth but distributes its benefits equitably; that regenerates the environment rather than destroying it; that empowers people rather than marginalizing them. It gives priority to the poor, enlarging their choices and opportunities and providing for their participation in decisions affecting them. It is development that is pro-poor, pro-nature, pro-jobs and pro-women. In sum, sustainable human development stresses growth, but growth with employment, environment, empowerment and equity.”

Within this framework, UNDP identified three priority goals: (1) strengthening international cooperation for sustainable human development and serving as a substantive resource on how to achieve it; (2) building developing countries’ capacities for sustainable human development; and (3) helping the United Nations become a powerful, unified force for sustainable human development.

With the creation of the Millennium Development Goals (MDGs) in 2000, the UNDP allows itself to be guided by the UN Core Strategy on MDGs and focuses on:

- Campaigning and mobilization: Supporting advocacy for the MDGs and working with partners to mobilize the commitments and capabilities of broad segments of society to build awareness on the MDGs;
- Analysis: Researching and sharing best strategies for meeting the MDGs in terms of innovative practices, policy and institutional reforms, means of policy implementation, and evaluation of financing options;
- Monitoring: Helping countries report advancement towards the MDGs and track progress;
- Operational activities: Goal-driven assistance to support governments to tailor MDGs to local circumstances and challenges; address key constraints to progress on the MDGs.

From its inception, UNDP has been called upon to make its assistance available to all countries where it can be effective in helping to meet priority needs, provided that those countries are members of the UN or one of its affiliated agencies. This broad frame of reference is essential for protecting two of UNDP’s most

valuable assets—its universality and its large measure of freedom from political problems and pressures.

### Planning and Programming

In the planning and programming of UNDP assistance, the largest role is played by the developing countries themselves. The process involves three basic steps.

First, an estimate is made of the core financial resources expected to be available to UNDP over a five-year period. This estimate is then divided up into Indicative Planning Figures (IPFs) for each country assisted, and for regional, interregional, and global programs. The IPFs are approved, and adjusted from time to time, by UNDP's Executive Board.

Second, with its IPF as a guide, each government draws up a "country program," outlining its priorities for UNDP assistance and allocating its share of UNDP resources among those priorities. Country program formulation—in which the UNDP's Resident Representative and locally based officials of other UN agencies usually participate—takes a number of factors into account. Among these are a country's overall development plans, the domestic resources that it can call upon for carrying out those plans, and the assistance expected from external sources other than UNDP. Each country program is then submitted to the Executive Board for approval.

The third step involves preparation of individual project requests—again usually in consultation with advisers from the UN system. These requests delineate each project's main objectives, its duration, its cost, and the respective responsibilities of the government and the UN system.

### Allocation of Funds

UNDP IPFs for 1972–76, the first programming cycle, were largely determined by applying the same percentage of total UNDP resources actually committed to each country from 1967 through 1971 to the total of projected UNDP resources for the years 1972 through 1976.

Completely new criteria were established by the Governing Council for the 1977–81 "second cycle." Of the country programming resources expected to be available during those years, 92.5% was allocated largely on the basis of a formula involving each country's population and its per capita gross national product (GNP)—with this second factor being given somewhat greater weight in calculating each country's allocation.

Under the new criteria, about 13% of total resources was devoted to regional programs aimed at fostering development cooperation among neighboring countries or at achieving economies by making expertise available to several governments from a single regional base. There was also a separate IPF for global and interregional programs, such as "breakthrough" research on high-yielding strains of staple food grains.

On an overall basis, during the third cycle (1982–86), countries with per capita GNPs of \$500 a year or less received 80% of total UNDP funding, as compared with 52% in the 1977–81 period and 40% in the 1971–76 period.

In 1985, the Governing Council decided that for the fourth programming cycle (1987–91), countries with 1983 per capita GNPs of \$750 or less a year were to receive 80% of IPF resources, reflecting UNDP's emphasis on assisting the poorer countries.

In the fifth programming cycle (1992–96) countries with yearly per capita GNPs of \$750 or less received 87% of national IPF resources.

For the period 2001–03, 12% of IPF resources went to 74 middle-income countries, and 88% of IPF resources were distributed to 70 low-income countries, with yearly per capita GNPs of \$900 or less.

### Implementation in the Field

UNDP is primarily a funding, programming, monitoring, and coordinating organization. Over the years, the bulk of the field work it has supported has been carried out by UN agencies and regional commissions, and by regional development banks and funds. Increasingly, UNDP is also calling upon national institutions and nongovernmental organizations for project execution.

The executing agencies, as they are called, perform three major functions. They serve as "data banks" of development knowledge and techniques in their respective specialties. They help governments plan the individual sectors in their country programs for UNDP assistance. As a rule, they recruit the international experts, purchase the equipment, and procure the specialized contract services needed for project execution.

The choice of a particular agency to implement any given project is made by UNDP in consultation with the government of the developing country. Though a single agency is always in charge of a particular project, often two or more collaborate in providing the services required.

Through its Office for Project Services, UNDP directly implements those activities that are not carried out by other executing agencies, providing a full range of management services, including procurement and finance.

The progress of field work is monitored through periodic reviews, involving UNDP country office staffs, government officials, and experts of the executing agencies. A modern computer-based management information system provides a continuous flow of operational data from the field. When required, special missions are sent to program countries to evaluate project work.

Systematic efforts are made to stimulate follow-up investments on surveys, feasibility studies, and other appropriate projects. These activities—which often begin at very early stages of project implementation—involve cooperation with all likely and acceptable sources of development finance—internal and external, public and private.

In a larger sense, however, most projects have a "built-in" follow-up component because they are deliberately planned to create permanent institutions or facilities that will be taken over by national personnel. Thus, many projects—particularly in training, applied research, and development planning—not only continue, but also significantly expand their work after UNDP support ends.

Typically, some 5,000 projects, ranging from two to five years in duration, have been under way in any given year. Since 1993, however, UNDP has been making a deliberate attempt to sharpen its focus. It became more selective in what it would finance, concentrating in particular on capacity-building initiatives that gave priority to the poor, to creating employment, to advancing women, and to regenerating the environment.

**Financing and Expenditures**

UNDP is financed in several ways. First, the developing countries themselves pay a large share of the costs of their UNDP-assisted projects. Their funds are used for the salaries of local personnel, construction and maintenance of project buildings and facilities, and the purchase of locally available supplies and services. Second, almost every member of the UN and its associated agencies makes a yearly voluntary contribution to UNDP's core resources. Third, cost-sharing contributions make up a growing portion of UNDP's income. These are resources provided in convertible currency by program country governments, or by another country or organization to share in the costs of particular programs. In 1994 it became clear that the biennial budget would have to be reduced further to keep administrative costs in line with declining core program resources. Between 1992 and 1995 US\$53.6 million was cut from the administrative budget, primarily through a 26% staff reduction at headquarters and 8% at the country level. Between 1992 and 1997, UNDP reduced its administrative budget by 19% in real terms and decreased total regular staff by nearly 15%. Regular staffing at headquarters was decreased by 31%. As of the late 1990s, a zero-growth budget policy was in effect and resources were being deployed from headquarters to the country offices.

In 2004, the UNDP's total income for the year was approximately \$4 billion. At \$842 million, regular resources exceeded the \$800 million interim target set for the year in the 2004-07 Multi-Year Funding Framework (MYFF). This marked the first time since 1997 that regular resources surpassed this level. Other (non-core) contributions to UNDP also rose significantly in 2004, from almost all sources. Donor co-financing topped \$1.5 billion in 2004, resulting in a total of \$2.4 billion in income from donors. Local resources, channeled through UNDP by program country governments in support of their own development programs, totaled close to \$1.4 billion. Preliminary figures for local resources from the top ten program countries in 2004 were: Argentina, Brazil, Honduras, Panama, Guatemala, Peru, Bulgaria, Egypt, Paraguay, and El Salvador.

**Major contributors to UNDP's core resources in 2004  
(In millions of us\$)**

COUNTRY	VOLUNTARY CONTRIBUTION
United States	\$98.71
Norway	97.77
Netherlands	93.74
Japan	86.77
Sweden	85.19
United Kingdom	72.31
Denmark	60.28
Canada	47.88
Switzerland	41.27
Germany	33.25
France	20.06
Italy	18.27
Finland	17.15
Belgium	15.87
Ireland	15.79
Spain	8.15
Austria	5.48
Australia	5.03

**Associated Programs**

The UNDP administrator also is responsible for several associated funds and programs:

*United Nations Capital Development Fund* provides limited amounts of "seed financing" for such social infrastructure as low cost housing, water supply systems, rural schools, and hospitals; and for such "grass roots" productive facilities as agricultural workshops, cottage industry centers, cooperatives, and credit programs.

*United Nations Drylands Development Center (formerly the UN Sudano-Sahelian Office)* was created in 1973 in response to the severe effects of recurrent droughts in the Sahel, and became widely known by its acronym, UNSO. For many years, UNSO delivered a range of drought relief and development services in the Sahel under the management of UNDP. In 1995, UNSO took on a global mandate and began to branch out from sub-Saharan Africa to all parts of the world affected by desertification and drought. At that time it changed its name to UNDP's Office to Combat Desertification and Drought, but retained the acronym UNSO. Since 1995, UNSO (now the Drylands Development Center) has supported 29 countries in Africa, 22 in Asia and 19 in Latin America and the Caribbean to develop national and sub-regional action plans to combat desertification and mitigate the effects of drought.

*United Nations Development Fund for Women* provides direct assistance to innovative and potentially replicable projects involving women, including those to reduce workload and increase income; helps to raise women's status in society; and works to ensure their involvement in mainstream development activities. (see UNIFEM).

*United Nations Volunteers* program, established by the General Assembly in 1971, is administered by UNDP from its Geneva, Switzerland, office. Volunteers from more than 100 professions serve in both UNDP and UN-assisted projects, as well as in development programs carried out directly by host governments. Recruited globally, they are sent to a country only at the request, and with the approval, of the host government. Volunteers serve for two years and receive a monthly allowance to cover necessities. The average age of UNV specialists is 39, with an average of 10 years' experience in their field of specialization. The actual age ranges from the mid-20s to the 60s and 70s, as retirees are welcomed for their experience. In the first 35 years of the UNV's existence, more than 30,000 specialists had completed thousands of assignments.

The skills most in demand for UNV specialists are: agriculture, agronomy, animal husbandry, appropriate technology, audiovisual arts, business management, cartography, community development, computer programming, construction trades, data processing, demography, development administration, disaster preparedness, economics, education, electronics, employment for the disabled, engineering, environment, export promotion, fisheries, forestry, handicrafts, HIV/AIDS prevention, home economics, horticulture, logistics, marketing/trade promotion, medicine, nursing/midwifery, printing/bookbinding, public administration, public health, social work, statistics, teacher training, teaching English language, teaching math/science, technical trades/skills, urban/regional planning, vehicle/fleet maintenance, veterinary science, vocational training, women in development, and youth work.

In 2004, some 7,300 and women of 166 nationalities were serving in 140 developing countries as volunteer specialists and field workers. UNV professionals work alongside their host country peers in four main areas: technical cooperation; community-based initiatives for self-reliance; humanitarian relief and rehabilitation; and support to electoral and peace-building processes.

## UN CONFERENCE ON TRADE AND DEVELOPMENT (UNCTAD)

The first UN Conference on Trade and Development, which met in Geneva in the spring of 1964, recommended the establishment of a permanent UN body to deal with trade in relation to development. The General Assembly, noting that international trade was an important instrument for economic development and that there was a widespread desire among developing countries for a comprehensive trade organization, decided to establish UNCTAD as one of its permanent organs in December 1964.

The main purpose of UNCTAD is to promote international trade, particularly that of developing countries, with a view to accelerating economic development. UNCTAD is one of the principal instruments of the General Assembly for deliberation and negotiation in respect to international trade and international economic cooperation. It formulates principles and policies on international trade, initiates action for the adoption of multilateral trade agreements, and acts as a center for harmonizing trade and development policies of governments and regional economic groups. The 1992 conference reaffirmed UNCTAD's functions to be policy analysis, intergovernmental deliberation, consensus building, negotiation of international agreements, monitoring, implementation, follow-up, and technical cooperation.

UNCTAD has 192 member states and has granted observer status to a number of organizations. There have been 11 sessions of UNCTAD at approximately four-year intervals: Geneva (1964); New Delhi (1968); Santiago (1972); Nairobi (1976); Manila (1979); Belgrade (1983); Geneva (1987); Cartagena de Indias, Colombia (1992); Midrand, South Africa (1996); Bangkok, Thailand (2000); and São Paulo, Brazil (2004).

At the ninth session of UNCTAD, in May 1996, UNCTAD's new mandate sought to deal with:

- the interests of developing countries;
- competition and its relation to the law and the environment in developing countries;
- support for small and medium-sized enterprises;
- and to consolidate the Trade Point Network.

The outcome of the ninth session was a comprehensive agreement by the member governments of UNCTAD on the treatment of development and a concrete program of work, to be implemented by UNCTAD before the next general session in 2000.

In his closing statement of UNCTAD-X, Secretary-General Rubens Ricupero concluded that to date global integration had affected only a dozen developing countries. He called for "real reciprocity," a new international order that would remove massive barriers to trade in agriculture, textiles and clothing; give developing countries recognition for their efforts in promoting economic solidarity—to "strengthen the move towards positive economic integration"; and transform existing international economic insti-

tutions so that they can "bridge the interests of both developed and developing countries."

UNCTAD's eleventh session ended with the adoption of the São Paulo Consensus, which once again placed UNCTAD at the center of the trade and development debate. The official conference theme was "Enhancing coherence between national development strategies and global economic processes towards economic growth and development, particularly of developing countries." This focus on coherence was examined from the following four angles, each one corresponding to a subtheme: development strategies in a globalizing world economy; building productive capacity and international competitiveness; assuring development gains from the international trading system and trade negotiations; and partnership for development.

### Structure

The continuing work of the organization is carried out between sessions by the Trade and Development Board (TDB), UNCTAD's executive body, established by the General Assembly. The TDB implements conference decisions and initiates studies and reports on trade and related development problems. The TDB reports annually to the General Assembly through the Economic and Social Council. It also serves as the preparatory body for sessions of the conference.

The Trade and Development Board has several standing committees that review trends and make recommendations in specific areas, including the Commission on Trade in Goods, Services, and Commodities; the Commission on Investment, Technology and Related Financial Issues; and the Commission on Enterprise, Business Facilitation and Development.

### Secretariat

The UNCTAD secretariat is located at Geneva. It provides service to the conference, the TDB, and its subsidiary bodies. The Secretary-General of UNCTAD is appointed by the Secretary-General of the UN and confirmed by the General Assembly.

In May 1993 the UN General Assembly assigned the UNCTAD secretariat responsibility for servicing two subsidiary bodies of the Economic and Social Council: the Commission on Transnational Corporations and the Commission on Science and Technology for Development (see the section on "Economic and Social Development").

The UNCTAD secretariat also provided technical assistance to developing countries in connection with the Uruguay Round of multilateral trade negotiations which took place under the auspices of the General Agreement on Tariffs and Trade (GATT). It continues to provide such services for Doha Round of trade negotiations in connection with the World Trade Organization, the successor body to GATT.

### Export Promotion and Marketing

Export promotion and marketing are the responsibility of the International Trade Center in Geneva, which is operated jointly by UNCTAD and GATT. The center focuses attention on export market opportunities and helps developing countries to train personnel in marketing and export-promotion techniques and to set

up the institutions and programs necessary to build up modern export-promotion services.

### Commodities

In 1980, the Agreement Establishing the Common Fund for Commodities was adopted by the UN Negotiating Conference on a Common Fund. International agreements also have been concluded for nine commodities—cocoa, coffee, tin, olive oil, sugar, natural rubber, wheat, jute and jute products, and tropical timbers. The fund came into operation in September 1989.

At its 1976 session in Nairobi, UNCTAD adopted an Integrated Program for Commodities aimed at setting prices for the primary commodities of developing countries that would take into account world inflation, monetary changes, and the cost of manufactured imports. As part of the program, the Nairobi session agreed that steps would be taken to negotiate a common fund for the financing of buffer stocks that would be held or sold as conditions required, thus helping to end the wide fluctuation in commodity prices that has plagued developing countries dependent on these products as exports.

The eighth session of UNCTAD in 1992 recognized the need to formulate an effective international commodity policy for the 1990s. Commodity markets remained extremely depressed and most of the commodity agreements achieved by UNCTAD in the 1980s had lapsed. In 1993 UNCTAD began to develop a micro-computer-based commodity analysis and information system (MICAS), which provides comprehensive, up-to-date information on all aspects of commodity use, production, trade, and consumption. The system assists developing countries in managing their economies and competing more effectively in world markets.

### Preferential Tariffs for Developing Countries

UNCTAD adopted the General System of Preferences (GSP) in 1968, giving preferential tariff treatment in developed countries to manufactured goods exported by developing countries. By 1999, operating programs gave preferential treatment to more than US\$70 billion worth of exports a year from more than 100 developing countries. However, the conference recognized that the more advanced developing countries benefited most from the system, and in 1992 efforts were undertaken to include more agricultural products and some “sensitive” industrial products. There are currently 13 national GSP schemes notified to the UNCTAD secretariat. The following countries grant GSP preferences: Australia, Belarus, Bulgaria, Canada, Estonia, the European Union, Japan, New Zealand, Norway, the Russian Federation, Switzerland, Turkey and the United States.

### Shipping

UNCTAD initiated the development of the 1978 UN Convention on the Carriage of Goods by Sea (called the Hamburg Rules). By July 1993, the Hamburg Rules had received 21 ratifications and entered into force on 1 November 1993.

*The Convention on a Code of Conduct for Liner Conferences (1974)* provides for the national shipping lines of developing countries to participate on an equal basis with the shipping lines of developed countries. This convention became effective in 1983. In 1991 the conference reviewed this convention and adopted guidelines towards its more effective implementation. Technical and structural changes in liner shipping since 1974 were taken into ac-

count. By November 2005 there were 80 contracting parties to the convention.

*The UN Convention on International Multimodal Transport of Goods (1980)* establishes a single liability organizational structure for the international carriage of given consignments of goods entailing use of more than one mode of transport. By November 2005 it had received 11 ratifications (entry into force requires 30 contracting parties). As of that date, the convention was not yet in force.

*The UN Convention on Conditions for Registration of Ships (1986)* introduces new standards of responsibility and accountability for the world shipping industry and defines the elements of the genuine link that should exist between a ship and the state whose flag it flies. By November 2005, 14 ratifications had been received (entry into force requires 40 contracting parties accounting for 25% of the world's tonnage). As of 2006, the convention was not yet in force.

*The UN International Convention on Maritime Liens and Mortgages (1993)* entered into force in September 2004. As of July 2005, there were 11 contracting parties to the convention. The convention was designed to address the need to improve conditions for ship financing and the development of national merchant fleets, recognizing the desirability of international uniformity in the field of maritime liens and mortgages.

*The UN International Convention on the Arrest of Ships (1999)* aims to regulate the circumstances under which ships may be arrested or released from arrest. It covers issues such as claims for which a ship may be arrested, ships that can be subject to arrest, release from arrest, right of rearrest and multiple arrests, liability for wrongful arrest and jurisdiction on merits of the case. As of July 2005, the convention was not yet in force: entry into force requires 10 contracting parties, and as of 2005 there were seven.

UNCTAD also provides technical cooperation and specialized training projects financed in part by UNDP. Training courses cover multimodal transport, improving port performance, and the use of the Advance Cargo Information System (ACIS) to enable shipping lines and railway companies to track the movement of cargo.

### Other Multilateral Agreements and Conventions

*The Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices (1980)* establishes international means for the control of restrictive business practices, including those of transnational corporations, adversely affecting international trade, in particular the trade and economic development of developing countries.

Negotiations were begun in 1978 on an International Code of Conduct on the Transfer of Technology. The provisions of the proposed code fall into two broad groups: those concerning the regulation of the transfer of technology transactions and of the conduct of parties to them, and those relating to steps to be taken by governments to meet their commitments to the code. In 1991 consultations were held on setting up an intergovernmental group of experts to prepare ground for the resumption of negotiations on the code of conduct.

As a result of these consultations, the Trade and Development Board acknowledged that it was impossible at that time to obtain consensus on the outstanding issues for a draft code of con-

duct. In 1993 the Trade and Development Board established an Ad Hoc Working Group on Interrelationship between Investment and Technology Transfer to examine and encourage new initiatives on investment and technology policies that would facilitate technology transfer. This group adopted a work program aimed at examining issues of investment flows, transfer of technology and competitiveness, technological capacity-building in developing countries, and transfer and development of environmentally sound technologies. In light of the ongoing work of this group, the Secretary-General of UNCTAD recommended to the General Assembly in 1993 that further consultations on the code of conduct take place after the completion of the activities of the Ad Hoc Working Group.

UNCTAD also elaborated the Modes Clauses on Marine Hull and Cargo Insurance, which assists the insurance markets in developing countries to produce their own insurance policy clauses and conditions. UNCTAD also has prepared minimum standards for shipping agents that serve as guidelines for national authorities and professional associations establishing standards.

#### Debt Relief

In the area of money and finance, UNCTAD devotes particular attention to the debt problems of developing countries and has negotiated measures of debt relief for the poorer among those countries, as well as a set of agreed guidelines for dealing with future debt problems. At its 1987 session in Geneva, UNCTAD recommended a number of policy approaches and measures to deal with debt problems, resources for development, and related monetary issues; commodities; international trade; and the problems of the least developed countries—all aimed at revitalizing development, growth, and international trade in a more predictable and supportive environment through multilateral cooperation.

UNCTAD and the World Bank developed a joint program to extend technical cooperation to developing countries in the field of debt management. UNCTAD is responsible for the software component of the project. The assistance is based on the development and distribution of the Debt Management and Financial Analysis System (DMFAS), software designed to enable debtor countries to analyze data, make projections, and plan strategies for debt repayment. UNCTAD trains operators to use the software. It also provides training for senior officials in raising their awareness of institutional reforms that might be necessary for effective debt management.

#### Least Developed Countries (LDCs)

In 2004 50 countries were classified as least developed countries (LDCs). UNCTAD has taken a lead role in mobilizing support for LDCs by organizing three UN conferences on LDCs. The first, held in Paris in 1980, adopted the Substantial New Program of Action (SNPA), which defined measures to be taken by LDCs to promote their own development. The second, also held in Paris, in 1990, reviewed the implementation of the SNPA and strengthened the program. The third conference held in Brussels in 2001 focused on the eradication of poverty (see below).

UNCTAD has given political impetus to the setting of official development assistance at 0.7% of the GNP of donor countries. It also has recommended improvement of International Monetary Fund's compensatory financing facility for export earnings short-

falls of developing countries and the creation of special drawing rights for LDCs.

The eighth session of UNCTAD in 1992 requested that detailed analyses be made of the socioeconomic situations and domestic policies of the LDCs, their resource needs, and external factors affecting their economies. The ninth session of UNCTAD in 1996 adopted the Midrand Declaration, which called for greater partnership between developed, developing, and the least developed countries.

From 14–20 May 2001, the UN held the Third United Nations Conference on the Least Developed Countries—LDC III. The eradication of poverty was the main agenda on the program. In 2002, UNCTAD released a report on poverty in LDCs, “Escaping the Poverty Trap,” which was the first international comparative analysis of poverty in the LDCs. It is based on a new set of poverty estimates, which enable empirically based analysis of the relationship between poverty, development and globalization.

#### Trade in the 21st Century

The 1992 conference identified four priority areas to be analyzed.

1. *New International Partnership for Development.* To assist developing countries and countries in transition to market economies increase their participation in the world economy.
2. *Global Interdependence.* Emphasis to be placed on the international implications of macroeconomic policies, the evolution of international trading, monetary and financial systems, effective management at the international level, and the consequences of enlarged economic spaces and regional integration processes.
3. *Paths to Development.* The conference called for studies of national development experiences with a view to deriving useful lessons to inform future action. The studies would include consideration of general economic management and the relationships between economic progress and market orientation.
4. *Sustainable Development.* The interaction between trade and environmental policies was to be considered. The promotion and implementation of environmentally sound technologies as elaborated at the UN Conference on Environment and Development in 1992 were stressed.

The 1992 conference also discussed trade efficiency and the use of electronic data interchange to reduce the cost of transactions. In July 1995, UNCTAD organized a World Symposium on Trade Efficiency in Columbus, Ohio. The symposium was subtitled “New Technologies for Efficient Global Trade; UNCTAD's Trade Point Network.” The symposium united trade ministers, chief executives, and senior officials in focusing on new technologies in the fields of banking, insurance, transportation, telecommunications, and information for trade. The promotion of international standards for electronic commerce was a key component of the symposium. The symposium also launched a worldwide process of alleviating technical and procedural barriers that prevent poorer countries from fully participating in world trade. UNCTAD is developing a Trade Point Network of 100 operational trading points to facilitate this process. At the end of 1999, 114 countries were participating in UNCTAD's Trade Point Program.

In November 2002, UNCTAD handed over its Trade Point Program to the program's beneficiaries, represented by the World Trade Point Federation (WTPF). The WTPF was established in November 2000, with its objectives being to open international markets to new participants and to make them more competitive by giving them access to the most advanced e-commerce technologies and information networks. The WTPF aims to develop the Trade Point network in close cooperation with member states while adhering to its developmental goals and assistance to weaker players in international trade.

## WORLD FOOD PROGRAM (WFP)

The World Food Program, which the UN sponsors jointly with the Food and Agriculture Organization (FAO), began operations in 1963. It has since grown from a small experimental program to become the largest multilateral food distributor in the world. In 2004, approximately 113 million people in 80 countries received direct assistance through WFP emergency operations and development projects.

Between 1946 and 1960, several attempts were made to establish an international body to regulate international trade and to deal with surpluses produced by food exporting countries. None of these attempts were successful, mainly because some countries objected to interference in their trade relations. In 1955, a study called, "Uses of Agricultural Surpluses to Finance Economic Development in Under-developed Countries," provided the breakthrough. The report posited that agricultural surpluses could finance additional investment in developing countries without competing with the sales of domestic products or with imports from other countries.

At the 1961 FAO Conference, George McGovern, the head of the US delegation, formally proposed establishing a multilateral program with a fund of US\$100 million in commodities and cash, to which the United States was willing to contribute US\$40 million. This initiative led the FAO and the UN to establish the World Food Program on a three-year experimental basis (January 1963 to December 1965).

WFP uses food commodities, cash, and services contributed by UN member states to back programs of social and economic development, as well as for emergency relief. At the request of governments, WFP provides food aid for development projects to increase agricultural production, rehabilitate roads and other vital infrastructure, protect the environment and improve health and education. WFP food assistance also provides basic sustenance for refugees and other victims of disasters. The aim of the WFP is to apply food aid in ways that will eventually make the recipients self-sufficient in obtaining or producing food. The success of the program's work should ultimately be judged by the number of people who, over time, are able to feed themselves.

In the first three decades of its existence, the program invested approximately US\$14 billion (43 million tons of food aid) to combat hunger and to promote economic and social development in the developing world. More than 1,600 development projects and 1,200 emergency operations were assisted by the WFP during that period. However, in the mid-1990s, emergency operations dominated the WFP's work. In 2001 alone, WFP delivered 2.7 million metric tons of emergency food aid to nearly 77 million people in 82 countries.

WFP supplies for development purposes are used in a variety of ways. Early projects included a land-settlement project in Bolivia, the development of nomadic sheep husbandry in Syria, resettling nomads in Egypt, land reclamation and development in Morocco, and land settlement in Tanzania. Other projects contributed directly to the development of human resources by providing food for school children, expectant and nursing mothers, hospital patients, and adults attending education centers.

The program gave special attention to creating employment and income through food-for-work programs. In Bangladesh, a vulnerable-group development project, begun in 1975, continues to provide training in health, literacy, and income-generation for women. Similar projects were started in Bolivia and Mexico, while major land-development programs commenced in Egypt, Sudan, Korea, and China. The largest single dairy project ever undertaken, "Operation Flood," in India increased milk production by 50% and benefited 30 million people.

Early in its operations, recipient governments had a major problem in covering the non-food costs of a project, including transport storage and other expenses. The early success of the program (28 formal requests for aid in May 1963 rose to 193 requests by November 1964) led donor countries to increase their contributions to cover these costs. Indeed, the WFP's ability to quickly transport large quantities of food, at short notice, to remote areas of the world, is one of its most important areas of expertise.

In 1973 a worldwide food shortage created a serious lack of resources, and the WFP governing body was unable to approve any new projects that year. The number of existing recipients and the size of their rations also were cut. Despite these measures there was a shortfall of 160,000 tons of commodities. A concerted effort was made to find new funds, and in 1974 King Faisal of Saudi Arabia offered US\$50 million, the largest cash donation ever made. This marked a turning point because the donation came from a nonindustrial developing country that was, and still is, a net importer of food commodities. It also marked an important change in the nature of donations, away from the idea of surplus disposal and toward a wider sharing of responsibility for those in need.

In 1975 the UN General Assembly established the International Emergency Food Reserve (IEFR), to be placed at the disposal of WFP. This reserve, which receives contributions from all governments, has a minimum annual target of 500,000 tons, enabling WFP to quickly respond to emergency situations.

In 1988 donor commitments for development activities reached a high point of US\$778 million, which represented two-thirds of WFP resources. By 1993 this trend had reversed and emergency situations were consuming more than 60% of WFP's resources. Part of this increase is directly attributable to the program's new relationship with the UN body that supervises refugee relief. In January 1992, the UN High Commissioner for Refugees (UNHCR) worked out an agreement giving the WFP the responsibility to procure and deliver food commodities to UNHCR-managed refugee feeding operations.

In the last 40 years, WFP has witnessed the graduation of former food-aid recipients to the status of potential donors. The Republic of Korea, Singapore, Venezuela, Greece, Hungary, and Mexico are all former recipients who now boast growing economies. The program has also developed ways to use its cash contributions creatively. For example, by buying more food in developing coun-

tries for relief and development activities it has encouraged and expanded trade between developing countries. In 1993 the WFP was the largest UN purchaser of goods in developing countries.

WFP has its headquarters in Rome and development projects in 80 countries worldwide; over half of the WFP's staff are employed on a temporary basis. Permanent staff members (numbering 8,829 in 2004) were employed at headquarters (802 people) and in the field (8,027 people). It is administered by an executive director. Its governing body is the 36-member Bureau of the Executive Board. Half of the members of the board are elected by ECOSOC, the other half by the FAO Council. In 2006, the 18 members of the executive board elected by ECOSOC were: Australia, China, Cuba, Denmark, Ethiopia, France, India, Indonesia, Japan, Mexico, Norway, Pakistan, Russian Federation, Senegal, Tunisia, Ukraine, United Kingdom, and Zimbabwe. Executive board members elected by the FAO Council were Algeria, Angola, Austria, Bangladesh, Canada, Colombia, Congo (Republic of), Germany, Guatemala, Haiti, Kuwait, Netherlands, Niger, Slovenia, Switzerland, Syrian Arab Republic, Tanzania, and United States of America.

In 2004, WFP had US\$2.9 billion in expenditures. Of that amount, 91% was spent on relief aid, and 9% on development aid. Of the 5.1 million metric tons of food distributed, 1.8 million tons went for emergency operations, 557.5 thousand tons went for development projects, 1.2 million tons went for protracted relief and recovery operations, and 1.6 million tons for the Iraq bilateral operation.

In 2005, the WFP conducted one of its most complex emergency operations ever, to respond to the Indian Ocean tsunami, triggered by a massive undersea earthquake on 26 December 2004, which killed hundreds of thousands of people across Indonesia, Sri Lanka, India, the Maldives, Thailand, Myanmar and Somalia, and left hundreds of thousands more without their homes or livelihoods. In response, the WFP used helicopters, aircraft, cargo ships, landing craft and traditional trucks to provide essential food aid to 1.75 million tsunami survivors, averting starvation and widespread malnutrition in the wake of the disaster.

## UNITED NATIONS POPULATION FUND (UNFPA)

The UN has been concerned with population questions since its earliest years, establishing the Population Commission in 1947 as one of the functional commissions of the Economic and Social Council. The early work of the UN on population questions concentrated on the improvement of demographic statistics, which were lacking for many areas of the world, and then began to focus on the application of statistical data in analytical studies and in the preparation of worldwide population estimates and projections. The first *Demographic Yearbook* was published by the UN Statistical Office in 1948.

In the 1960s, however, the extraordinarily rapid rate at which the world's population was growing became an urgent concern (between 1950 and 1960, the world population increased from 2.5 billion to over 3 billion, and by 2000 it had doubled—reaching 6 billion). In a resolution adopted in 1966, the General Assembly authorized the UN to provide technical assistance in population matters, and the following year, the General Assembly established a Trust Fund for Population Activities, renamed in 1969 the Unit-

ed Nations Fund for Population Activities (UNFPA), to provide additional resources to the UN system for technical cooperation activities in the population field. In 1972, the fund was placed under the authority of the General Assembly, which designated the Governing Council of UNDP as its administering body. By its resolution number 1763 (LIV) of 18 May 1973, the Economic and Social Council of the United Nations defined the mandate of UNFPA, and, in 1979, the General Assembly affirmed that the UNFPA was a subsidiary organ. In 1987, the fund's name was changed to the United Nations Population Fund, but the acronym UNFPA was retained. In 1993, the General Assembly transformed the Governing Council of UNDP into the UNDP/UNFPA Executive Board, which provides intergovernmental support to and supervision of the UNFPA in accordance with overall policy guidance of the General Assembly and ECOSOC of the United Nations.

The first World Population Conference, held in Bucharest in 1974, adopted a World Population Plan of Action (WPPA) that stressed the relationship between population factors and overall economic and social development. The General Assembly affirmed that the plan was “an instrument of the international community for the promotion of economic development” and urged that assistance in the population field should be expanded, particularly to UNFPA, for the proper implementation of the plan.

The International Conference on Population, held in Mexico City in August 1984, reaffirmed the validity of the WPPA and adopted recommendations for its further implementation. Target mortality rates were adjusted, and emerging issues, such as migration, urbanization, computerized data processing, and aging of populations, were addressed. Also considered was the need for an intersectoral approach to population and development, for policies that respect individual and family rights, and for improvement in the status of women, including their increased participation in all aspects of development.

The third decennial conference, the International Conference on Population and Development, was held in Cairo, 5–13 September 1994. The Programme of Action adopted at the Cairo conference recommended that population concerns be fully integrated into development planning, in order to meet the needs and improve the quality of life of present and future generations. The program builds upon the considerable international awareness and knowledge that has developed since the Bucharest and Mexico City conferences regarding the linkages among population issues, sustained economic growth, and sustainable development. The program also addresses the reproductive health and educational needs of individuals, especially of girls and women, and calls for increased investment in the social sectors, from donor agencies and recipient governments alike.

UNFPA supports a broad range of population activities. Nearly half of the fund's assistance is used for maternal and child health care and family planning programs. Another 20% is used for population and family planning communication and education. UNFPA also supports developing countries in their efforts to collect and analyze population data, conduct population censuses, formulate population policies, and undertake research on fertility, mortality, and migration and their relationship to development, as well as on linkages between population and sustainable development. The fund supports special programs concerning women, youth, the aged, HIV/AIDS, and population and development.

UNFPA is the leading source of population assistance within the United Nations system. The fund's resources come from voluntary contributions from governments.

#### UNFPA's Work

A major component of UNFPA's work is disseminating information based on its data and analysis of population trends. In the *State of the World Population 1999* report, UNFPA called the dawn of the 21st century a time of choices and it urged governments to action. With global population quadrupling during the 20th century, surpassing 6 billion in 1999, UNFPA stated that how fast the next billion people are added, what the effect will be on natural resources and the environment, and the quality of life will depend on policy and funding decisions that are made over the next 5 to 10 years. The population report pointed to the issue of below replacement-level reproduction in some 60 countries, which, UNFPA predicted, would put pressures on these developed nations to provide support and medical care for the elderly. Meanwhile, HIV/AIDS is taking a higher toll in some parts of the world (particularly sub-Saharan Africa) than it is elsewhere, lowering life expectancy and "erasing decades of progress in child mortality" in these regions. Finally, the report highlighted unbalanced consumption patterns around the globe, concluding that it will combine with continued population growth to cause environmental damage—including the collapse of fisheries, shrinking forests, rising temperatures, and the extinction of numerous plant and animal species. In summary, UNFPA warned that unless nations rededicate themselves to combating issues of overpopulation, continuing poverty, gender discrimination, threats such as HIV/AIDS, environmental changes, and shrinking (relative to the population) resources, the benefits of lower fertility that were realized in the second half of the 20th century would be wiped out. UNFPA urged governments to commit action and funding to the 20-year Programme of Action endorsed by the world's governments in 1994 at the International Conference on Population and Development.

In its *World Population 1999* report, UNFPA focused on global women's issues and youth at risk. In both areas the organization called for stepped-up educational and health programs. UNFPA stated that despite progress, far too many women are denied education, contraception, and decent health care, and that violence against women is "endemic in all countries." The report went on to say that hundreds of millions of women continue to suffer needlessly from gender-based violence, unwanted pregnancies, unsafe abortions, and poor health. Similarly, UNFPA stated that "today's young people are frequently at risk of unwanted pregnancy, HIV/AIDS and other sexually transmitted diseases, sexual exploitation, and alienation from parents and communities." The organization warned that ignoring the issues confronting women and youth incurs high costs—"in ill health, wasted opportunities, and social disruption." According to UNFPA, studies have shown that family life education should begin early to help young people through the years when they are beginning to be interested in sex. Further, the benefits of education for girls and women had been well-documented during the 1900s, yet in 1999 in developing countries, girls comprised two-thirds of the 130 million children not attending school. The call for schooling was seen to have the double benefit of educating young women and postponing childbirth.

While UNFPA releases the report annually, the 1999 document was expected to have far-reaching influence in that it was issued as the world turned its attention to considering the next millennium, in a year when a critical population threshold (6 billion) was crossed, and it was followed, in 2000, by several conferences that used the 1999 report as the basis for discussion and program development. Among the major conferences that took place in 2000 were Beijing+5 Review (New York, 5–9 June 2000), the World Summit for Social Development and Beyond (Geneva, Switzerland, 26–30 June 2000), and Millennium Summit: The Role of the United Nations in the 21st Century (New York, 6–8 September 2000).

#### Budget and Organization

Regular and other income in 2004 totaled us\$506.1 million, compared to \$397.9 million in 2003. Regular income in 2004 totaled us\$331.6 million, an increase of 13.4% compared to the 2003 income of us\$292.3 million. This includes us\$322.5 million in voluntary contributions from donor governments, us\$3.5 million in interest income, and other income of us\$5.6 million. Project expenditures (regular resources) in 2004 totaled us\$221.9 million, as compared to us\$176.4 million in 2003. The 2004 figure includes us\$181.6 million for country programs, compared to us\$140.5 million in 2003; and us\$40.3 million for intercountry (regional and interregional) programs, compared to us\$35.9 million for 2003. The 2004 figures also include us\$6.4 million for administrative and operational services. Technical advisory program expenditures amounted to us\$19.4 million.

In 2004, UNFPA provided support to 126 developing countries, areas and territories and countries with economies in transition: 45 in sub-Saharan Africa, 37 in the Arab States and Europe, 21 in Latin America and the Caribbean, and 23 in Asia and the Pacific. The region of sub-Saharan Africa received the largest percentage of UNFPA assistance at us\$78.1 million, followed by Asia and the Pacific at us\$65.9 million, the Arab States and Europe at us\$28.7 million and Latin America and the Caribbean at us\$21.1 million. Interregional assistance amounted to us\$28.1 million.

UNFPA publishes a range of products in a variety of media. Public service announcements are broadcast on national and international television networks around the world. The definitive publication is the annual *The State of World Population*, a comprehensive demographic study of patterns in population growth and distribution. UNFPA also publishes the annual *AIDS Update*, which highlights assistance provided by UNFPA for HIV/AIDS prevention and control activities undertaken in line with national AIDS policies and programs and within the global strategy of the Joint and Co-sponsored UN Program on HIV/AIDS.

#### UN ENVIRONMENT PROGRAM (UNEP)

In the course of the twentieth century, and especially after World War II, the increase in the earth's population and the advance of technology, with concomitant changes in patterns of production and consumption, led to pressure on the environment and threats to its stability that were new in human history. For a long time, the implications of these phenomena were largely ignored. In the decade of the 1960s, however, problems such as soil erosion; air, water, and marine pollution; the need for conservation of limited resources; and desiccation of once-fertile zones became acute

enough to awaken the consciousness of governments and people in all parts of the world, but especially in the industrialized countries, to the urgency of the situation. The UN responded with the decision of the 1968 General Assembly to convene a world conference on the human environment.

The first UN Conference on the Human Environment was held in Stockholm in June 1972. The conference was a focus for, rather than the start of, action on environmental problems. At its conclusion, the participants, representing over 90% of the world's population, adopted a declaration and a 109-point plan of action for the human environment that became the blueprint for a wide range of national and international programs. The broad intent of the action plan was to define and mobilize "common effort for the preservation and improvement of the human environment." The preamble to the declaration conveys the urgency, magnitude, and complexity of that task.

Later in 1972, on the basis of the conference's recommendations, the General Assembly created the UN Environment Program (UNEP), to monitor significant changes in the environment and to encourage and coordinate sound environmental practices. With headquarters in Nairobi, Kenya, UNEP is the first global UN agency to be headquartered in a developing country. Its mission is to provide leadership and encourage partnership in caring for the environment by inspiring, informing, and enabling nations and peoples to improve their quality of life without compromising that of future generations.

Twenty years after its inception, UNEP's mandate was reaffirmed and strengthened in 1992 at the UN Conference on Environment and Development (UNCED), held in Rio de Janeiro, Brazil. Out of that conference came an ambitious plan of action—Agenda 21—with an emphasis on integrating development and environment into all United Nations program areas.

The UNEP secretariat is headed by an executive director who is elected by the UN General Assembly for a four-year term, upon the recommendation of the Secretary-General. Besides its Nairobi headquarters, UNEP maintains regional offices in Africa, Europe, Asia and the Pacific, Latin America and the Caribbean, West Asia, and North America.

UNEP's Governing Council is composed of 58 states elected by the General Assembly for four-year terms on the basis of equitable geographic representation (16 African seats, 13 Asian seats, 10 Latin American and Caribbean seats, 6 seats for Eastern European states, 13 seats for Western European and other states). The Governing Council generally meets every two years.

Member states on the Governing Council over the 2004-07 period were: Antigua and Barbuda, Argentina, Bahamas, Bangladesh, Belgium, Brazil, Bulgaria, Burkina Faso, Cameroon, Canada, Cape Verde, Chad, China, Colombia, Congo, Costa Rica, Cuba, Czech Republic, France, Germany, Ghana, Greece, Hungary, India, Indonesia, Iran (Islamic Republic of), Israel, Japan, Kazakhstan, Kenya, Kyrgyzstan, Mexico, Monaco, Morocco, Myanmar, Namibia, Netherlands, Nicaragua, Nigeria, Poland, Republic of Korea, Romania, Russian Federation, Saudi Arabia, Senegal, Somalia, Sudan, Sweden, Switzerland, Syrian Arab Republic, Turkey, Tuvalu, United Kingdom of Great Britain and Northern Ireland, United Republic of Tanzania, United States of America, Uruguay, Zambia, and Zimbabwe.

The Council's functions and responsibilities include promoting international cooperation in the field of environment and recommending policies to that end, providing general policy guidance for environmental programs within the UN system, keeping the world environmental situation under review so as to ensure that emerging problems requiring international assistance receive adequate consideration by governments, promoting the contribution by international scientific and other professional communities to knowledge about the environment and the technical aspects of UN environmental programs, keeping under review the impact of national and international development policies, and reviewing and approving the utilization of the resources of the Environment Fund.

The Environment Fund was set up under the authority of the Governing Council to finance wholly or partly the costs of new environmental initiatives within the UN system. It is made up of voluntary contributions. Since 2000, annual contributions to the Environment Fund have been growing in US dollar terms at a rate of between 9% and 10%. The number of donor countries has also been increasing. In 2003, 126 countries pledged or paid a total of \$52.7 million. In 2004, contributions continued to increase. Total annual contributions for 2004 were estimated at \$59.1 million.

For its first 20 years, UNEP's policy, as set by the Governing Council, has been focused on the three broad areas of environmental assessment, environmental management, and international environmental law. Many parts to the program evolved under these three themes. There was the environmental monitoring capacity built up in the Global Environment Monitoring System (GEMS), and the establishment of a computer-based store of data in the International Register of Potentially Toxic Chemicals (IRPTC). More computer-based capability was developed to show how both natural and human resources are distributed in the Global Resource Information Database (GRID). In addition, UNEP.net, a web-based interactive catalogue and multifaceted portal, offers access to environmentally relevant geographic, textual, and pictorial information. Another key information system is INFOTERRA, UNEP's international network for the retrieval of global environmental information. It is a worldwide network with national focal points in 177 countries, providing governments, industry, and researchers with access to a vast reservoir of environmental data and information gathered from about 6,800 institutions and experts in more than 1,000 priority subject areas.

Environmental management and legal instruments were developed. The most successful example of international environmental law can be seen in the instruments used to protect the ozone layer: the 1985 Vienna Convention and the 1987 Montreal Protocol. Expert groups convened by UNEP, with the World Meteorological Organization (WMO), the scientific community, and industry, led to the development of the Vienna Convention for the Protection of the Ozone Layer, which was adopted in March 1985. In September 1987 the Montreal Protocol on Substances that Deplete the Ozone Layer was signed, setting limits for the production and consumption of chlorofluorocarbons (CFCs) and halons. The Montreal Protocol came into force on 1 January 1989 and was amended in London in June 1990, in Copenhagen in 1992, and in Vienna in 1995 after research showed that ozone depletion was even more severe than previously feared. Industrialized countries succeeded in phasing out the production and consumption of ha-

lons by 1 January 1994, and were well on the way to the phase-out of chlorofluorocarbons by the end of 1995. The consumption of CFCs in industrialized countries decreased from about 1,000,000 tons in 1987 (when the Protocol was signed) to about 13,000 tons in 1996. Developing countries, although mandated to begin phase-out only in 1999, began making progress before that time. A multilateral fund, involving UNEP, UNDP, and the World Bank, was established to help developing countries meet the costs of complying with the revised protocol and to provide for the necessary transfer of technology. By 2001, the fund had already disbursed US\$1.2 billion to developing countries for transition to ozone-safe technology.

The Mediterranean Action Plan has been the model as UNEP's Regional Seas Programme has spread. Today, nearly 140 countries take part in Regional Seas Programmes catalyzed and coordinated by UNEP. Action Plans cover the Mediterranean, the Kuwait region, the Red Sea, the Caribbean, the Atlantic coast of West and Central Africa, the Eastern African seaboard, the Pacific coast of South America, the islands of the South Pacific, the East-Asian region, the South Asian region, the Black Sea, the North-West Pacific and the South-West Atlantic. An Action Plan for the Caspian Sea is being developed. Coordination is provided through the UNEP Water Branch.

UNEP provides the secretariat for the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), which entered into force in 1975 and prohibits or regulates trade in some 30,000 endangered species. The protection of endangered species under the CITES Convention has seen successful international cooperation to stamp out trade in rare plants and animals.

UNEP also provides the secretariat for the Convention on the Conservation of Migratory Species of Wild Animals (CMS), which came into force in 1983. UNEP supports the World Conservation Monitoring Center (WCMC), which assesses the distribution and abundance of the world's species. Action plans for African elephants and rhinos, Asian elephants and rhinos, primates, cats, and polar bears have been published by UNEP and IUCN.

UNEP also has contributed to the drawing up of global conventions on hazardous waste, climate change, biodiversity, and desertification and of international guidelines, including those on international trade in chemicals, protection of marine environment from land-based activities, environmental impact assessment and shared natural resources.

In March 1989, the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, drafted by UNEP, was adopted by 116 governments and the European Community. The convention entered into force on 5 May 1992. Its immediate target is to impose strict controls on the international movement of hazardous wastes and eventually to reduce their production. As of August 2005, 168 countries were parties to the convention.

In June 1992, the Convention on Biological Diversity was signed during the UN Conference on Environmental and Development in Rio de Janeiro. The convention was prepared by an Intergovernmental Negotiating Committee, set up by UNEP's Governing Council and assisted by UNEP, FAO, UNESCO, and IUCN. Its main aims are to conserve biological diversity and to ensure that its benefits to mankind are shared equitably.

UNEP also supports the International Board for Plant Genetic Resources (IBPGR), which has established a network of gene banks in 30 countries to house the world's 40 base collections. More than 100 countries collaborate and more than 500,000 plant species have been collected, evaluated, and deposited.

A joint venture between UNEP, UNDP, and the UN Sudano-Sahelian Office (UNSO) assisted 22 Sudano-Sahelian countries to fight desertification. In spite of these efforts, implementation of the Plan of Action to Combat Desertification was slow. UNEP's Plan of Action to Combat Desertification was succeeded by the Convention to Combat Desertification, which entered into force in 1996. The UNSO was later renamed the UN Drylands Development Center. UNEP's activities in desertification control focus on achieving strong support and effective implementation of the convention.

UNEP, along with the World Meteorological Organization (WMO), established the Intergovernmental Panel on Climate Change to provide scientific assessments on the magnitude, timing, and potential environmental and socioeconomic consequences of climate change and realistic response strategies. Negotiations begun in early 1991 led to the formulation of the United Nations Framework Convention on Climate Change, which was signed by 154 governments in Rio de Janeiro during the 1992 United Nations Conference on Environment and Development. It entered into force on 21 March 1994.

The organization also is responsible for UN activities involving freshwater. Among regional initiatives are the Action Plan for Latin America and the Caribbean and the program for environmentally sound management of inland waters in the Zambezi Basin.

UNEP, along with UNDP and the World Bank, administers the US\$3 billion Global Environment Facility (GEF), and is responsible for GEF's Scientific and Technical Advisory Panel (STAP). GEF was established as a three-year pilot in 1991 to oversee funding for global environment protection in the areas of climate change, biodiversity, international waters, and ozone depletion. In 1992, a restructuring process began that resulted in agreement on fundamentally altered institutional arrangements for the facility, now known as GEF II. UNEP will play the primary role in catalyzing the development of scientific and technical analysis and in advancing environmental management in GEF-financed activities. It also will be responsible for establishing and supporting the Scientific and Technical Advisory Panel as an advisory body to the GEF. The UNDP is responsible for technical assistance activities and capacity building. The World Bank, the GEF Trust Fund's repository, plays the primary role in ensuring the development and management of investment projects while also mobilizing private sector resources that are consistent with GEF objectives and national sustainable development strategies. The GEF provides the interim funding mechanism for the conventions on climate change and biological diversity, until parties to those conventions agree on a permanent arrangement.

UNCED and Agenda 21 marked a new beginning for the world community as a whole. Agenda 21 reaffirmed UNEP's role as the principal environment body in the UN system and expanded UNEP's role to encompass a vast range of world environmental needs and problems, with an emphasis on regional delivery.

Five years later, at the nineteenth session of the Governing Council of UNEP in 1997, as part of the ongoing reform process

of the United Nations system, UNEP's Governing Council adopted the Nairobi Declaration, again asserting the role and mandate of UNEP as the leading global environmental authority and calling for assurances of financial stability for the implementation of its agenda.

Specifically, the Nairobi Declaration set out the following as core elements of the focused mandate of a revitalized UNEP:

- To analyze the state of the global environment and assess global and regional environmental trends;
- To further the development of its international environmental law aiming at sustainable development;
- To advance the implementation of agreed international norms and policies;
- To strengthen its role in the coordination of environmental activities in the United Nations system in the field of environment;
- To promote greater awareness and facilitate effective cooperation among all sectors of society and actors involved in the implementation of the international environmental agenda;
- To provide policy and advisory services in key areas of institution building to Governments and other relevant institutions.

UNEP's integrated work program emphasizes relationships between socio-economic driving forces, environmental changes, and impacts on human well-being. Equipped with a stronger regional presence and marked by a process of continuous monitoring and assessment of its implementation, UNEP's program of work focuses on the following areas: sustainable management and use of natural resources; sustainable production and consumption; a better environment for human health and well-being; and globalization of the economy and the environment.

In 2000, the fifth special session of the UNEP Governing Council and the subsequent 20th session of the Governing Council elaborated UNEP's areas of concentration, which included environmental monitoring, assessment, information, and research (including early warning); enhanced coordination of environmental conventions and development of environment policy instruments; freshwater; technology transfer and industry; and support to Africa. To support these initiatives, UNEP initiated a restructuring that was expected to trim administration costs while developing the Nairobi facility as a critical UN administrative office.

At the ninth special session of the UNEP Governing Council, held in Dubai in 2006, major policy areas included: energy and the environment; chemicals management; and tourism and the environment. The ninth special session was held in part as a follow-up to the 2002 UN World Summit on Sustainable Development.

## UN HUMAN SETTLEMENTS PROGRAM (HABITAT)

UN concern with the problems of human settlements, particularly with the deteriorating quality of living conditions in developing countries and the need to link urban and regional development programs with national development plans, led to the convening of the first international conference on the question in Vancouver, Canada, in May–June 1976. The declaration and plan of action adopted by Habitat: UN Conference on Human Settlements

(Habitat I) represented an important commitment on the part of governments and the international community to improve the quality of life for all people through human settlements development. The plan of action contained 64 recommendations for national action concerning settlement policies and planning; provision of shelter, infrastructure, and services; land use and land tenure; the role of popular participation; and effective institutions and management.

Habitat I also recommended the strengthening and consolidation of UN activities in a single organization concerned exclusively with human settlements. Acting on this recommendation, the General Assembly established in 1978 the UN Center for Human Settlements (Habitat, also UNCHS), with headquarters in Nairobi, Kenya, to serve as a focal point for human settlements action and to coordinate human settlements activities within the UN system.

The center provides technical assistance to governments; organizes expert meetings, workshops, and training seminars; issues print, audio visual, and electronic publications; and disseminates information worldwide. In 1993 the center had under execution 257 technical cooperation programs and projects in over 90 countries, with an overall budget in excess of US\$42 million for the year.

In 1982, the General Assembly proclaimed 1987 as the International Year of Shelter for the Homeless. The objectives were to improve the shelter situation of the poor and disadvantaged at both individual and community levels, particularly in developing countries, and to demonstrate means of continuing those efforts as ongoing national programs beyond 1987.

Beginning in 1986, the tenth anniversary of Habitat I, World Habitat Day has been observed each year on the first Monday in October. As lead agency in the UN system for coordinating activities related to the Global Strategy for Shelter to the Year 2000, the center continues to work toward its goal of facilitating adequate shelter for all by that date.

The Habitat II Conference met in Istanbul, Turkey, in 1996, 20 years after Habitat I. Subtitled "A Summit for Cities," the UN Conference on the Future of Cities has as its goal making the world's cities, towns, and villages healthy, safe, just, and sustainable. The two central themes were "sustainable human settlements in an urbanizing world" and "adequate shelter for all."

The follow-up conference took place from 6–8 June 2001; "Istanbul+5: Reviewing and Appraising Progress Five Years after Habitat II" was a special session of the UN General Assembly. At the special session, the General Assembly adopted the Declaration on Cities and Other Human Settlements in the New Millennium, which reaffirmed the Istanbul declaration, undertook a review and assessment of the Habitat Agenda, and proposed further actions for attaining the goals of adequate shelter for all and sustainable development of human settlements.

In 2002, the agency's mandate was strengthened and its status elevated to that of a fully fledged program of the UN system. Key recommendations and fine tuning of the agenda are now underway as strategy clusters for achieving the urban development and shelter goals and targets of the Millennium Declaration—the UN's development agenda that reaches to the years 2015–2020.

## UN RESEARCH INSTITUTE FOR SOCIAL DEVELOPMENT (UNRISD)

The UN Research Institute for Social Development (UNRISD) was created in 1963 as an autonomous agency within the UN system. It engages in multidisciplinary research on the social dimensions of contemporary problems affecting development. Its work is guided by the conviction that, for effective development policies to be formulated, an understanding of the social and political context is crucial. The institute attempts to provide governments, development agencies, grass roots organizations, and scholars with a better understanding of how development policies and processes of economic, social, and environmental change affect different social groups.

Working through an extensive network of national research centers, UNRISD aims to promote original research and strengthen research capacity in developing countries.

The UNRISD program for the 2000–05 period included work in the following areas: social policy and development; democracy, governance, and human rights; identities, conflict and cohesion; civil society and social movements; technology, business, and society.

In 1996, UNRISD conducted the War-Torn Societies Project, which focused on post-conflict rebuilding and rehabilitation. The project sought to identify novel and integrated policy responses to the complex interactions between peacekeeping, relief, rehabilitation, and development activities.

The UNRISD Internship Program provides a limited number of graduate students from around the world the opportunity to gain valuable experience in an international research institute setting. Interns are selected on the basis of their academic experience and interests. Students selected for the unpaid internships spend a minimum of two months at UNRISD assisting project coordinators in developing project proposals, compiling annotated bibliographies, organizing research seminars, translating correspondence, and carrying out various tasks in the Reference Centre. As part of its mandate, UNRISD issues newsletters, books, and other publications, some of which are available online at <http://www.unrisd.org/>.

By 2005, the institute had approximately 50 staff members at its headquarters in Geneva, and is financed entirely by voluntary contributions.

## UN INSTITUTE FOR TRAINING AND RESEARCH (UNITAR)

In 1963, the General Assembly requested the Secretary-General to establish a UN Institute for Training and Research as an autonomous body within the framework of the UN. UNITAR commenced functioning in March 1965. It is headed by an executive director and has a board of trustees appointed by the UN Secretary-General in consultation with the president of the General Assembly and the president of the Economic and Social Council. UNITAR originally had its headquarters in New York and a European office in Geneva. In 1993 UNITAR's headquarters was transferred to Geneva. It maintains a liaison office in New York to coordinate training activities.

The mandate of UNITAR is to enhance the effectiveness of the UN in attaining its major objectives—particularly the maintenance of peace and the promotion of economic and social de-

velopment—through training and research. Its functions include ensuring liaison with UN organizations and strengthening cooperation with academic institutions; conducting training programs in multilateral diplomacy and international cooperation for diplomats accredited to the United Nations and national officials; and carrying out a wide range of training programs in social and economic development. In addition, UNITAR responds to ad hoc requests for training. For example, in 1993 UNITAR received requests for programs from UNDP, UNEP, and other UN bodies.

In the late 1990s, UNITAR offered courses in the following areas: debt, economic, and financial management; foreign economic relations; international affairs management; international migration policy; peacemaking and preventive diplomacy; applications of environmental law; chemicals and waste management; climate change; decentralized cooperation; and information and communication technologies.

In a typical year, UNITAR designs and conducts some 150 different training programs on five continents for the benefit of more than 8,000 national staff and government officials. In the early 1990s training programs in diplomacy, negotiation, foreign affairs management, and debt and financial management were developed for newly independent countries in Europe and Central Asia; countries in transition in Africa, Asia, and Europe; and for the Palestinian negotiating team.

The institute's research program originally concentrated on three main areas: UN institutional issues, peace and security issues, and economic and social issues. After restructuring in 1992, basic research on training was conducted only if extrabudgetary funds were provided.

UNITAR is supported by voluntary contributions from governments, intergovernmental organizations, foundations, and other nongovernmental organizations.

## UN UNIVERSITY (UNU)

In 1969, Secretary-General U Thant proposed that a UN university be established. The Founding Committee was set up two years later, and in December 1973, the General Assembly approved a charter for the university. The following spring, the UNU Council, composed of academic leaders and prominent persons from 24 countries, was appointed. Members of the university council serve in their individual capacities rather than as representatives of governments. UNU commenced operations in September 1975. For 17 years the university maintained its headquarters in a high-rise office building in Tokyo. In 1992 it moved to a new building in the Shibuya district of Tokyo constructed and made available by the government of Japan. The university maintains a liaison office in New York.

UNU is an autonomous organ of the General Assembly. It is jointly sponsored by the UN and UNESCO, whose Secretary-General and Director General, respectively, together appoint the rector and members of the university council. Its charter guarantees academic freedom and emphasizes the primacy of scholarly excellence over any other considerations—for example, choices of programs and personnel—in determining its activities.

Like traditional universities, UNU is concerned with the advancement of knowledge. Unlike traditional universities, however, it has no students of its own, no faculty, and no campus. It is a completely new institution: an international community of schol-

ars engaged in research, postgraduate training, and the dissemination of knowledge to help solve, in the words of its charter, "pressing global problems of human survival, development and welfare." It operates through worldwide networks of academic and research institutions and individual scholars who work together on projects concerned with such problems as peace, development, the environment, science, and technology. The UNU's areas of concentration are: peace; governance; environment; science, technology, and society; and development.

The academic activities of the university are carried out primarily through a network of its research and training centers: UNU World Institute for Development Economics Research (UNU/WIDER), Helsinki, Finland; UNU Maastricht Economic and Social Research and Training Center on Innovation and Technology (UNU-MERIT), Maastricht, the Netherlands; UNU International Institute for Software Technology (UNU/IIST), Macau, China; UNU Institute for Natural Resources in Africa (UNU/INRA), Accra, Ghana; UNU Institute of Advanced Studies (UNU/IAS) in Yokohama, Japan; UNU Program for Biotechnology in Latin America and the Caribbean (UNU/BIOAC) in Caracas, Venezuela; UNU International Leadership Institute (UNU/ILI) in Amman, Jordan; UNU International Network on Water, Environment and Health (UNU/INWEH) in Hamilton, Ontario, Canada; UNU Food and Nutrition Program for Human and Social Development (UNU-FNP) at Cornell University in Ithaca, New York (United States); UNU Fisheries Training Program (UNU/FTP), Iceland; UNU Program on Comparative Regional Integration Studies (UNU/CRIS), Bruges, Belgium; UNU Geothermal Training Program (UNU/GTP) in Reykjavik, Iceland; and UNU Institute for Environment and Human Security (UNI-EHS) in Bonn, Germany.

Between 1976 and 1996, some 1,450 UNU fellows received postgraduate training through the university's network. Fellows are selected after recommendation from their home institutions, which must be working in an area of concern to the university, and must be committed to returning to work at those institutions.

The UNU Press publishes scholarly works on the United Nations system in the areas of peace studies, regional studies, technology and development, human and social development, international law, food and nutrition, energy technology, and natural resources and environment. The UNU Press publishes one periodical, *The Food and Nutrition Bulletin*, issued quarterly. UNU publications are distributed in North America by UNIPUB based in Lanham, Maryland.

UNU is supported by voluntary contributions from governments, foundations, and individuals. Its principal source of support is investment income from an endowment fund that ensures academic freedom and financial independence. The annual budget in 2005 was approximately US\$40.7 million.

## UNIVERSITY FOR PEACE

The University for Peace was established in 1980 in San Jose, Costa Rica, to promote postgraduate studies and research on peace. A General Assembly resolution called on member states, NGOs, and intergovernmental bodies, as well as interested individuals and organizations, to contribute to the university's Trust Fund.

In 2000, the University for Peace was in the process of major change and transition in which its programs, priorities, and ad-

ministrative practices were being reviewed and a new strategy and program was being developed. At the time, its programs included Culture for Peace and Democracy in Central America; Natural Resources and Peace; Communications for Peace; Human Rights and Education for Peace; International World Center of Research and Information for Peace (in Montevideo, Uruguay); Gandhi Television Center for Communication and Peace; Radio for Peace International; and CEDIPAZ, a center for documentation and information for peace as well as the UPEACE library. In 2001 UPEACE's charter was amended, and master's programs were being offered in the following areas: Environmental Security and Peace; Gender and Peace Building; International Law and Human Rights; International Law and the Settlement of Disputes; International Peace Studies; Media, Conflict and Peace Studies; Natural Resources and Sustainable Development; and Peace Education.

## INTERNATIONAL RESEARCH AND TRAINING INSTITUTE FOR THE ADVANCEMENT OF WOMEN (INSTRAW)

The United Nations International Research and Training Institute for the Advancement of Women (INSTRAW) was established by the Economic and Social Council in conformity with an earlier decision of the General Assembly, which was based on a recommendation made by the World Conference of the International Women's Year held in Mexico City from 19 June to 2 July 1975. In 1984, INSTRAW's statute, submitted by INSTRAW's Board of Trustees, its governing body, was approved by *Economic and Social Council resolution 1984/124* and then by *General Assembly resolution No. 39/249*. INSTRAW is the only autonomous research and training vehicle at the international level in order to contribute to the advancement and mobilization of women in development, to raise awareness of women's issues worldwide, and to better assist women to meet new challenges and directions. INSTRAW has been based in Santo Domingo since 1983, at the invitation of the Government of the Dominican Republic.

INSTRAW and its work are governed by the Board of Trustees, which is composed of eleven members nominated by Member States and appointed by the Economic and Social Council, based on their personal capacity and the principle of equitable geographical distribution. A representative of the Secretary-General, the Director of the Institute, a representative of each of the Regional Commissions of the Economic and Social Council, and a representative of the Host Country are *ex officio* members of the Board of Trustees. The Institute and its work are funded by voluntary contributions received from States, inter-governmental organizations, non-governmental organizations, and private sources. The main responsibilities and tasks of the Board of Trustees are: to formulate principles, policies, and guidelines for the activities of the Institute; to consider and approve the work program and budget proposals of the Institute on the basis of recommendations submitted by the Director of the Institute; to make necessary or desirable recommendations for the operation of the Institute; and to report periodically to the Economic and Social Council and to the General Assembly.

INSTRAW's research and training programs are aimed at placing issues relevant to the advancement of women into the economic and political decision-making process. It does this by holding national training workshops and conducting joint research

and training programs and projects in collaboration with specialized United Nations agencies, the Commission on the Status of Women, United Nations Focal Points for Women, and especially, regarding data and statistics, with the Statistical Division of the United States Secretariat. INSTRAW's training program, supported by data and its research findings, aims at developing training materials that will include women in the development process, especially in developing countries.

Two billion people in remote rural areas and urban slums of the developing world—half of whom are women—lack safe drinking water and even rudimentary sanitation facilities. Because of the critical need to address the question of water for human survival, INSTRAW produced in 1986, and updated in 1991, a training package on “Women, Water Supply and Sanitation,” which has been the focus of ten national, regional, and international training seminars organized by the Institute from 1987 to 1994 in some African, Asian, and Latin American countries. The package illustrates the importance of women's participation on all aspects of water resources, including agriculture, human resources development and water resources management. INSTRAW's modular training program is crucial due to negative effects that water and sanitation problems have on a large number of the world's population.

Considering the importance of waste disposal for reasons of health and environmental sanitation, INSTRAW prepared an additional module to include in the “Women, Water Supply and Sanitation” package, aimed at sensitizing the decision makers on the needs and ways of including women in waste management schemes. Produced in 1994, the new training module of “Women and Waste Management” has been used in Namibia (first ever training seminar ever conducted in Namibia), Guyana, and Ecuador (where five national follow-up seminars were conducted with a total of 159 participants), with an average of 40 participants in each country. This training module presents an integrated approach to environmental sanitation and provides practical guidelines and checklists for integrating women at the designing, implementation, operation and maintenance, monitoring, and evaluation phases. The module provides numerous examples of successful community waste management and other initiatives in the area of environmental sanitation around the world.

The multimedia training package, “Women and New and Renewable Sources of Energy” (NRSE), was first developed by INSTRAW in 1989 (and updated in 1995). The main objective is to contribute with a new approach in the organization of NRSE systems by including women's needs as well as their participation in the planning, technical operations, maintenance, assessment, and implementation of environmentally sound NRSE programs and projects.

INSTRAW produced in 1995 a modular training package in “Women, Environmental Management and Sustainable Development.” It was developed for senior officials of Ministries of Environment, Natural Resources, Planning, Women's Affairs, Education, Health; development planners and provincial or local authorities in charge of environmental programs and projects; engineers in charge of designing new technologies; university professors, trainers and managers of national training institutes and educational institutions training staff on various aspects of women, environmental management, and sustainable development,

and representatives of nongovernmental and women's organizations involved in environmental projects.

In 1995, INSTRAW produced a training package on “Gender Statistics and Policy.” The most important feature of this training package is that it is designed to provide statisticians and development planners with hands-on exercises on the actual use of existing data in policy designs. This package contains a pre-workshop module, which is designed to familiarize the users with gender issues and their relevance to National policy goals, better preparing them for the actual training; illustration of how gender-specific statistics and indicators affect policy goals/targets; computerized statistical policy models which visually describe direct impact of certain variables on target policy indicators. This module includes statistical models that can be adapted at the national level.

During 1993, INSTRAW adapted existing computer models in order to assist policy makers in understanding the relationship between certain sectoral policies and the advancement of women. This was completed in collaboration with the Population Division of the former Department of Economic and Social Development. The two models, entitled “Urban Women in Development Model” and “Rural Women in Development Model” are designed as teaching tools and conceptual framework that can serve as a basis for recognizing the multisectoral approach needed to ensure equitable participation of women and men in development. The models come with an instruction manual, sample exercises, and a computer diskette containing the program information.

The United Nations leadership in recognizing women's equal rights as prerequisite for their full participation in sustainable development is not as well known as it deserves to be. INSTRAW attempted to address this situation in the first module of the “Gender Training Portfolio,” published in 1993. This Portfolio is designed to describe and disseminate information on women/gender and development for use in a variety of situations. As the world works toward the goal of sustainable development, people become more aware of the interaction of gender relations in development planning and its effect on the status of women worldwide. INSTRAW's aim is to promote the sharing and effective utilization of such knowledge to positively influence development policies and help make them more responsive to the needs of both women and men.

In 2004 and 2005, INSTRAW was carrying out a series of activities designed to measure the global progress made on the achievement of 12 critical areas set forth in the Beijing Declaration and Platform for Action (PFA) in 1995. The Beijing PFA was established by UN Member States during the Fourth World Conference on Women in Beijing, China, in 1995. The 12 critical areas set forth in the PFA were: the persistent and increasing burden of poverty on women; inequalities and inadequacies in and unequal access to education and training; inequalities and inadequacies in and unequal access to health care and related services; violence against women; the effects of armed or other kinds of conflict on women, including those living under foreign occupation; inequality in economic structures and policies, in all forms of productive activities and in access to resources; inequality between men and women in the sharing of power and decision-making at all levels; insufficient mechanisms at all levels to promote the advancement of women; lack of respect for and inadequate promotion and protection of the human rights of women; stereotyping of women and

inequality in women's access to and participation in all communication systems, especially in the media; gender inequalities in the management of natural resources and in the safeguarding of the environment; and persistent discrimination against and violation of the rights of the girl child.

### UNITED NATIONS DEVELOPMENT FUND FOR WOMEN (UNIFEM)

In 1976, the UN General Assembly established the Voluntary Fund for the United Nations Decade for Women. The fund was created to provide direct support for women's projects and to promote the inclusion of women in the decision-making processes of mainstream development programs. In 1985 the New York-based organization formally joined the UN family of agencies as UNIFEM.

UNIFEM reports directly to the administrator of UNDP. It is overseen by a five-member Consultative Committee representing UN member states from the world's five principal regional groups. The committee approves large projects and advises on the use of the fund's resources. UNIFEM is administered by a director.

In order to support efforts of the women of the developing world to achieve their objective for economic and social development and for equality, and by so doing to improve the quality of life for women and men alike, the fund supports microprograms run by women in developing countries. For example, UNIFEM estimates that although women grow, process, and market between 50% and 80% of the food consumed in developing countries, governments rarely record these inputs or support them with financial credit. UNIFEM's programs include: training women in improved agricultural techniques; transfer of appropriate food technologies such as grinding mills, graters, oil presses, solar driers, and fish smokers; obtaining for women increased access to credit for seeds, fertilizers, and equipment; and support for micro-enterprises. UNIFEM works with the UN High Commissioner for

Refugees (UNHCR) in assisting African refugees. At any one time it manages a portfolio of approximately 150 projects and has supported over 750 projects in 100 developing countries. As of 2006, UNIFEM focused its activities on four strategic areas: (1) feminized poverty, (2) ending violence against women, (3) reversing the spread of HIV/AIDS among women and girls, and (4) achieving gender equality in democratic governance in times of peace as well as war.

In 1991 UNIFEM collaborated on the publication of *The World's Women 1970–90: The Trends and Statistics*. Coauthored by the UN Statistical Office, UNICEF, and UNFPA, this publication gathered statistics and interpreted trends on women, families, and households; women in public life and leadership; the status of education and training for women; health and childbearing; housing, human settlements, and the environment; and women's work and the economy. In 2000, UNIFEM published a report tracking actions of the governments of the world in support of women's rights entitled *Progress of the World's Women in 2000*. In 2001, UNIFEM contributed analysis to frameworks UN agencies will use in evaluating gender equality. A new edition of *Progress of the World's Women*, entitled *Progress 2002: Volume 2*, was released in May 2003. *Progress 2002* acknowledges the difficulty in analyzing international progress in the area of women's rights, and discusses the UN's Millennium Development Goals (set at the September 2000 Millennium Summit) in relation to gender equality.

Financing is provided by the governments of both industrialized and developing countries, by nongovernmental organizations, foundations, corporations, private individuals, and from UNIFEM's growing number of national committees. The budget for the year ending 31 December 2004 saw UNIFEM take in \$51.15 million in total income, and expend \$32.431 million. The excess income of \$18.719 million was allocated to multiyear-funded projects which last through 2006.

---

# SOCIAL AND HUMANITARIAN ASSISTANCE

International disaster relief, the special problems of children, refugees, the elderly, youth, the disabled, and families are all subjects for which member states have directed the UN to provide international leadership and expert guidance. The global nature of trade in illicit narcotic drugs and the internationalization of criminal activities were social ills that became so destabilizing at the end of the twentieth century that member states requested their international organization to implement innovative global programs to maintain security and social justice.

## INTERNATIONAL DISASTER RELIEF

### Background

The international community is faced with the growing challenge of preventing, mitigating the effects of, and providing humanitarian assistance to affected populations in crises that require rapid and effective response. The 1990s saw a dramatic increase in “complex emergencies” that often involved ethnic and civil strife. In mid-1994 more than 30 million people in 29 countries were in dire need of emergency assistance. Severe drought threatening over 20 million people in sub-Saharan Africa added an additional element of suffering to that already faced by millions in Burundi, Liberia, Rwanda, Somalia, southern Sudan, and Zaire. A study released at the World Conference on Natural Disaster Reduction, convened by the General Assembly in May 1994, showed that the previous three decades had seen a steady and rapid increase in the number of significant natural disasters—and in the numbers of people affected. As of the mid-2000s, there was an increasing human vulnerability in crisis situations—both in natural disasters (200 million affected in 2003) and in complex emergencies (45 million in need of life-saving assistance in 2003).

### Office of the United Nations Disaster Relief Coordinator (UNDRO)

Beginning in 1965, proposals were put forward in the General Assembly to increase the UN’s ability to help people stricken by disasters, but it was the disasters of 1970 that brought international concern for emergency relief to a head. In 1971, the General Assembly established the Office of the United Nations Disaster Relief Coordinator (UNDRO), with headquarters in Geneva.

UNDRO was not designed to assume all the responsibilities of meeting disasters from its own resources. Its principal function was that of catalyst and coordinator of donors of aid and services. Its data bank and independent telecommunications system, supplemented by the worldwide UN system, gave it the capacity to define the specific needs arising from a disaster and to respond rapidly by identifying potential sources of relief. It directed and mobilized aid emanating from the UN system and coordinated aid from other sources.

UNDRO’s mandate also included assisting governments in preventing disasters or mitigating their effects by contingency plan-

ning, in association with similarly concerned voluntary organizations. It promoted the study, prevention, control, and prediction of natural disasters and gathered and disseminated information relevant to disaster relief.

Between its inception in 1972 and 1987, UNDRO helped coordinate relief and raise money for emergency aid in more than 380 major disasters.

### The Office for the Coordination of Humanitarian Affairs (OCHA)

In December 1991, the General Assembly, by its Resolution 46/182, recognized the need to strengthen coordination for rapid response to humanitarian emergencies. Over the years ad hoc arrangements had sprung up in many of the UN departments and specialized agencies to deal with emergency relief. Sometimes these arrangements were found to be working at cross-purposes or competing for financial support from the same potential donors. The General Assembly requested the Secretary-General to designate an emergency relief coordinator, supported by a secretariat, to ensure that the entire UN system was better prepared for, and more capable of rapid and coherent response to national disasters and other humanitarian emergencies. The resolution also stipulated guiding principles of humanity, neutrality and impartiality for the provision of humanitarian assistance. It also stressed respect for the sovereignty, territorial integrity and national unity of states.

In April 1992, the Secretary-General established the Department of Humanitarian Affairs (DHA), incorporating UNDRO, various UN units that had been dealing with specific emergency programs, and the secretariat for the International Decade for Natural Disaster Reduction. The Secretary-General appointed an Emergency Relief Coordinator to head the new department. The DHA had its headquarters in New York and an office in Geneva.

Resolution 46/182 gave the DHA three tools to speed up the response of the international community to emergencies: the Inter-Agency Standing Committee (IASC) to formulate and coordinate policy; the Central Emergency Revolving Fund (CERF) as a quick source of emergency funding; and the Consolidated Inter-Agency Appeals Process (CAP), which assesses the needs of a critical situations and prepares a comprehensive interagency response strategy.

With UN reforms in the late 1990s, the Office for the Coordination of Humanitarian Affairs (OCHA) was established to manage complex emergencies (through the Consolidated Appeals Process), natural disasters, and other humanitarian crises. OCHA replaced the Department of Humanitarian Affairs (DHA). The core functions of OCHA are supported by 1,140 staff members in New York, Geneva and in the field. OCHA’s 2006 budget was approximately US\$128.5 million. As the successor organization to DHA,

OCHA took over management and coordination of DHA's programs including IASC, CERF, and CAP.

The IASC is chaired by the Emergency Relief Coordinator and is composed of the executive heads of the following UN organizations: the United Nations Development Programme (UNDP); the Office of the UN High Commissioner for Refugees (UNHCR); the UN Children's Fund (UNICEF); the World Food Program (WFP); the World Health Organization (WHO), and the Food and Agriculture Organization of the UN (FAO). Other humanitarian organizations such as the International Committee of the Red Cross (ICRC), the International Federation of Red Cross and Red Crescent Societies (IFRC), and the International Organization for Migration (IOM) also take part in the IASC. Representatives of relevant nongovernmental organizations (NGOs) are invited to participate.

In addition to coordinating overall policy on humanitarian assistance, the IASC addresses issues such as: access to victims, security of personnel and relief supplies, ensuring humanitarian imperatives in conflict situations, examining special needs arising from application of UN sanctions, demobilization of combatants, de-mining, resource mobilization, assistance to internally displaced persons, field coordination of international humanitarian responses, and ensuring transition from relief to development.

The Central Emergency Revolving Fund (CERF) of US\$50 million was created under the terms of Resolution 46/182 as a cash-flow mechanism for use by operational organizations, especially during the critical initial stages of emergencies. The CERF is financed by voluntary contributions and managed by the Department of Humanitarian Affairs. Agencies draw on the CERF and repay the advances they receive as donors respond to their own fundraising efforts. On 15 December 2005, the General Assembly adopted resolution A/RES/60/1241, upgrading the former Central Emergency Revolving Fund to the Central Emergency Response Fund. This Fund will ensure a more predictable and timely response to humanitarian crises. The revamped Fund aims to achieve an overall target of \$500 million and will add to the current \$50 million revolving facility, a grant facility of \$450 million.

The Consolidated Appeals Process (CAP), coordinated and monitored by OCHA, is an interagency exercise by which UN system organizations and other humanitarian organizations assess the full range of requirements for responding to emergencies. The CAP helps the international community to identify the most critical needs of affected people and to determine the most appropriate ways to provide assistance. This process enables donors and agencies to concentrate their efforts where they are needed most and eliminates wasteful competition among agencies for donor funds. From 1995 through 2002, appeals were launched for countries including Afghanistan, Albania, Angola, Bosnia and Herzegovina, Burundi, Colombia, Congo, Democratic Republic of the Congo, Côte d'Ivoire, Croatia, Ecuador, Eritrea, Ethiopia, Fiji, Georgia, Guinea, Guinea-Bissau, India, Indonesia, Iraq, Japan, Kenya, Democratic People's Republic of Korea, Lebanon, Liberia, the Former Yugoslav Republic of Macedonia, Occupied Palestinian territory, Pakistan, Russian Federation, Rwanda, Sierra Leone, Somalia, South Africa, Sudan, Tajikistan, Uganda, United Republic of Tanzania, and Yugoslavia. Appeals are often made by region as well—including for the Caucasus, Great Lakes Region of Africa, and Southeastern Europe (including the Kosovo province of Yu-

goslavia). On average, some 20 appeals are launched annually to meet the requirements of nearly 40 million people. For 2006, 18 programs required a total of \$4.7 billion to ensure that 31 million people in 26 countries got the best available protection and assistance, on time. The year 2005 was marked by devastating disasters—the Indian Ocean tsunami in the final days of 2004 and the South Asia earthquake of October 2005, on top of a disastrous hurricane season—which stretched all humanitarian agencies to their maximum capacity. Funding, led by private donations for the tsunami, reached unprecedented worldwide totals—but because the majority of funds were earmarked for the tsunami, most agencies and nongovernmental organizations (NGOs) still lacked sufficient funding to assist millions of people struck by other crises.

OCHA's work takes place where the fields of international security, political affairs, and humanitarian concerns converge. An important responsibility entrusted to OCHA involves humanitarian diplomacy in efforts to prevent emergencies and in negotiation with parties to conflicts aimed at ensuring access to those in need. OCHA's staff is involved in policy planning and early warning functions, emergency operational support and relief coordination, and disaster mitigation. The OCHA maintains close contact with the UN Departments of Political Affairs and Peacekeeping Operations in order to coordinate the security, political, and humanitarian aspects of complex emergencies.

#### New Initiatives

To help manage its efforts, OCHA set up Relief Web, available at <http://www.reliefweb.int>. The Internet site provides up-to-date information on complex emergencies and natural disasters collected from over 170 sources. Users from over 150 countries access an average of 200,000 documents each month. In addition, OCHA runs the Humanitarian Early Warning System (HEWS), which identifies crises with humanitarian implications. Through analysis of field-based information and the evaluation of trends, HEWS informs decision-makers at headquarters about the likelihood and extent of crises. An extensive database of information for more than 100 countries supports this activity. The Integrated Regional Information Network (IRIN), at Nairobi, was set up in 1995 to analyze and synthesize data on developments in Africa's Great Lakes region. It issues daily reports and thematic studies for over 2,000 primary subscribers in more than 50 countries. IRIN at Abidjan was set up in 1997 and began providing similar reports covering West Africa. IRIN coverage was expected to be expanded in the late 1990s to cover southern Africa, Central Asia and the Caucasus region, as well as the Balkans.

OCHA also facilitates the work of the Geographic Information Support Team (GIST), which is an inter-agency initiative that promotes the use of geographic data standards and geographic information systems in support of humanitarian relief operations. GIST members are technical experts and information specialists from the UN and donor agencies involved in disaster management and/or humanitarian assistance. Another arm of OCHA is the International Search and Rescue Advisory Group (INSARAG), a global network of more than 80 countries and disaster response organizations. INSARAG deals with urban search and rescue (USAR) related issues. INSARAG aims at establishing standards for international USAR teams and methodology for international coordination in earthquake response. Members of INSARAG are

both earthquake-prone and responding countries and organizations. INSARAG was established in 1991, following initiatives of international search and rescue teams that responded to the 1988 Armenia earthquake. The Field Coordination Support Section (FCSS) in the Emergency Services Branch (ESB) of the UN Office for the Coordination of Humanitarian Affairs (OCHA) in Geneva functions as INSARAG Secretariat.

### International Decade for Natural Disaster Reduction

Between 1960 and 1990 deaths from natural disasters rose by a factor of 10, with 90% of casualties occurring in developing countries ill prepared to respond to natural disasters. Although the World Meteorological Organization has shown that each dollar spent on disaster preparedness is equivalent to 100 dollars spent after a disaster, no mechanisms existed to transfer the huge body of knowledge on disaster preparedness and prevention from the industrialized countries to developing countries. For example, an earthquake of 6.6 magnitude on the Richter scale in California in January 1994 caused fewer than 100 deaths. An earthquake of 6.4 magnitude in India's Maharashtra State in September 1993 caused 10,000 deaths. Most of the deaths in the Indian tragedy were caused by the collapse of homes while people slept. By contrast, California has long been a proving ground for earthquake-resistant architectural innovations.

In 1989, the General Assembly declared the 1990s the International Decade for Natural Disaster Reduction to reduce loss of life and property damage resulting from natural disasters. It established a high-level council of 10 internationally renowned personalities, a scientific and technical committee of 24 scientists from around the world, and approximately 120 national committees to promote the decade and the formulation of disaster preparedness programs. 13 October was declared "International Day for Natural Disaster Reduction," and observed by public gatherings and publicity to raise awareness of the need to implement disaster preparedness.

In May 1994, the World Conference on Natural Disaster Reduction was convened in Yokohama, Japan. Representatives from 147 countries and 37 nongovernmental organizations and observers from UN specialized agencies participated in the conference, which both reviewed implementation of the General Assembly's recommendations during the first half of the decade and adopted the "Guidelines for Natural Disaster Prevention, Preparedness and Mitigation," also called the "Yokohama Strategy." It noted that the first half of the decade had seen some improvement in the field of disaster response, but that the goals for disaster prevention and preparedness had not received wide publicity.

The conference document stated that, while natural phenomena that cause disasters are outside human control, vulnerability of populations was a result of human activity (or nonactivity). In its "Strategy for the Year 2000 and Beyond," the conference called for a global culture of prevention and a policy of self-reliance in each vulnerable country and community. Other elements of the strategy included education and training in disaster prevention, strengthening research and development for disaster reduction and mitigation, and improving awareness in vulnerable communities through more active use of media. Finally the conference called on all countries to express the political commitment to re-

duce their vulnerability by means of legislation and policy decisions at the highest levels to mobilize domestic resources, develop risk assessment programs, and emergency plans and to design projects for subregional, regional, and international cooperation. It also recommended an improvement in communications capabilities on natural disasters among countries for preparedness and early warning systems.

Through its resolution A/RES/58/214, the General Assembly convened a second World Conference on Disaster Reduction (WCDR) held in Kobe, Hyogo, Japan, from 18-22 January 2005, to coincide with the commemoration of the 10th anniversary of the Great Hanshin-Awaji earthquake that occurred on 17 January 1995, killing more than 6,400 people and injuring more than 40,000. The WCDR was to take stock of progress in disaster risk reduction accomplished since the Yokohama Conference of 1994 and to make plans for the next ten years. The WCDR aimed to increase the international profile of disaster risk reduction, promote its integration into development planning and practice, and strengthen local and national capacities to address the causes of disasters that hamper development in many countries. Discussions at the WCDR resulted in two negotiated documents: a program outcome document entitled "Building the resilience of nations and communities to disasters: Hyogo Framework for Action 2005-2015," and the Hyogo Declaration. Delegates also took note of the "Review of the 1994 Yokohama Strategy for a Safer World and its Plan of Action" and adopted a "Common statement on the Special Session on the Indian Ocean Disaster: Risk Reduction for a Safer Future."

### Man-made Humanitarian Disasters

Perhaps the thorniest problem for OCHA (then the DHA) was the increase in and complexity of humanitarian disasters caused by internal civil strife in places like Angola, the former Yugoslavia, and Rwanda. In the largest exodus ever known, 2 million people in Rwanda abandoned their homes in one week during the resumption of a civil war and the organized slaughter of hundreds of thousands of civilians in that country in the summer of 1994. The exodus overwhelmed the capacity of international aid organizations to deal with the crisis, and thousands of people died of cholera, dysentery, and other diseases in makeshift camps hurriedly set up along Rwanda's border with other countries. In August 1994, the UN agencies appealed to member states for US\$470 million to respond to the disaster. The initial response to the appeal yielded US\$137 million. In his report to the 49th General Assembly on "Strengthening of the Coordination of Emergency Humanitarian Assistance" (A/49/177), the Secretary-General stated:

Complex emergencies are presenting serious new challenges to humanitarian organizations and others involved in providing relief assistance. Disregard for fundamental humanitarian principles, serious violations of humanitarian law and threats to the safety and protection of relief personnel have underscored the need for enhancing awareness of all involved in complex emergencies—including the Security Council—of humanitarian concerns and objectives and for appropriate measures to protect humanitarian mandates in conflict situations. *While the new generation of multifaceted United Nations operations*

*require close interaction between the political, military and humanitarian dimensions, it is important, at the same time, to ensure that the humanitarian component can preserve its unique identity by maintaining neutrality and impartiality.* (emphasis added).

In this connection, the IASC established a set of guidelines for humanitarian missions in conflict situations:

- The need for humanitarian relief assistance to be undertaken in accordance with the principles of impartiality, neutrality, and humanity;
- Reaffirmation of free, safe, and unimpeded access for humanitarian assistance and the role of humanitarian diplomacy in that regard;
- The need for greater collaboration with nongovernmental organizations engaged in humanitarian relief;
- The need to ensure security and protection of all relief personnel;
- The need to apprise the Security Council fully on relevant humanitarian issues that should be appropriately reflected in its decisions on complex emergencies;
- The importance of shielding humanitarian assistance against the effects of sanctions, particularly in relation to vulnerable groups.

#### **United Nations Drylands Development Center**

Another UN undertaking in disaster relief developed in response to the desiccation of the Sudano-Sahelian zone of West Africa. Many years of drought in Burkina Faso, Chad, Mali, Mauritania, Niger, and Senegal had, by 1973, resulted in a crisis and the threat of mass starvation in the region. In May, the Secretary-General, acting under resolutions of the General Assembly and the Economic and Social Council, designated FAO as the “focal point” of an emergency operation of the UN system to provide and transport rations, seeds for sowing, animal feed, and vaccines to victims in the six countries. The following month, the UN Sahelian Office (UNSO) was created to promote medium- and long-term recovery in cooperation with the Permanent Interstate Committee on Drought Control in the Sahel, known by its French acronym CILSS and composed of nine affected states—Burkina Faso, Cape Verde, Chad, Gambia, Guinea-Bissau, Mali, Mauritania, Niger, and Senegal.

In 1977, UNSO’s mandate was expanded to assist the UN Environment Programme (UNEP) in implementing the Plan of Action to Combat Desertification in the Sudano-Sahelian Region. From 1995 to 2002, UNSO managed us\$18 million to support 29 countries in Africa, 22 in Asia and 19 in Latin America and the Caribbean to develop national action plans to combat desertification and drought. UNSO mobilized general and earmarked contributions to promote sustainable management of the natural resources in arid and semi-arid lands. It helped governments plan and coordinate natural resource management and implement field projects on soil and water conservation and integrated land management. The UNSO was later renamed the UN Drylands Development Center.

#### **UN CHILDREN’S FUND (UNICEF)**

The UN International Children’s Emergency Fund (UNICEF) was established by the General Assembly on 11 December 1946 to provide emergency relief assistance in the form of food, medicine, and clothing to the children of postwar Europe and China. In December 1950, the General Assembly extended the life of the fund for three years, changing its mandate to emphasize health and nutrition programs of long-range benefit to children of developing countries. In October 1953, the General Assembly decided that UNICEF should continue its work as a permanent arm of the UN system, and charged the organization to emphasize programs giving long-term benefit to children everywhere, particularly those in developing countries who are in the greatest need. The organization’s name was changed to the UN Children’s Fund, but the acronym “UNICEF” was retained. The UNICEF Executive Board reaffirmed its mandate in January 1996, when it adopted a statement on the mission of UNICEF saying that UNICEF “is guided by the Convention on the Rights of the Child and strives to establish children’s rights as enduring ethical principles and international standards of behavior towards children.”

In 1959 the General Assembly unanimously adopted the Declaration of the Rights of the Child, affirming the right of children to special protection and opportunities and facilities for healthy, normal development.

Following a global study of the needs of children in 1961, UNICEF increased the scope and flexibility of its approach to children to include projects that promote the role of children as an invaluable “human resource” in national development, thus making it possible to provide aid for education.

UNICEF was awarded the Nobel Peace Prize in 1965. In November 1989, the General Assembly voted to transform the rights and obligations under the 1959 Declaration into the Convention on the Rights of the Child (CRC), the most comprehensive treaty ever to address the individual rights of children and set universally accepted standards for their children. The convention entered into force as international law in September 1990. In 2002, UNICEF reported that the convention had been ratified by every country in the world except two (the United States and Somalia), and “therefore uniquely places children center-stage in the quest for the universal application of human rights.” As of May 2006, the United States and Somalia were still the only two countries in the world that had not ratified the CRC.

As the only United Nations agency devoted exclusively to the needs of children, UNICEF promoted the full implementation of the Convention on the Rights of the Child by 1995. UNICEF also participated in the World Conference on Human Rights in Vienna in June 1993, speaking out forcefully on behalf of children and against violation of their rights.

UNICEF also participated in the International Conference on Population and Development in Cairo, Egypt, in September 1994; the World Summit for Social Development in Copenhagen, Denmark, in March 1995; the Fourth World Conference on Women in Beijing, China, in September 1995; the Habitat II World Assembly of Cities and Local Authorities in Istanbul, Turkey, in June 1996; and the World Congress against Commercial Sexual Exploitation of Children in Stockholm, Sweden, in August 1996, strongly promoting measures for child survival, protection, and development. UNICEF was one of the host organizations and core participants of Beijing+5, the first follow-up meeting to the watershed Fourth

World Conference on Women (1995). Convened in June 2000 in New York City, Beijing+5 (also called Women 2000) was set up to review progress and establish action plans for the next five years. More than 150 countries and thousands of non-governmental organizations participated in programs at UN headquarters. UNICEF focused on four key themes at the event: gender equality starts early; women's rights and girls' rights are independent (laws and structures that protect women also need to be made to protect girls); children's rights cannot be achieved without girls' rights; and community partnerships are needed to end violence and prevent HIV/AIDS. In support of women's issues, UNICEF funded a news web site, <http://www.womenswire.org>, to publicize areas of concern and advance public understanding of the issues.

### Purposes and Scope of Work

Combining humanitarian and development objectives, UNICEF's primary goal is to help children of the poorest and least developed countries. It helps them directly, by supporting government programs to improve child health, nutrition, education, and social services, and indirectly, by serving as child advocate, appealing to governments and to the consciences of individuals worldwide to find and commit the resources required to protect and prepare children adequately.

UNICEF's mandate from the General Assembly's 1946 resolution for "strengthening ... the permanent child health and welfare programs of the countries receiving assistance" has been developed and continuously adapted to current conditions. It places strong emphasis on community participation in the development and operation of services for children and has increasingly focused on community-based action. As a funding agency—as distinct from a specialized agency—UNICEF is able to work with various ministries and nongovernmental organizations, maintaining an intersectoral approach to community action in meeting the needs of children.

In 1976, UNICEF adopted an approach to the provision of basic health and welfare services, the key element of which was community participation. This new approach resulted from experiences in economically and politically diverse developing countries showing that services are likely to be not only cheaper but also more effective when community members are involved, because they mobilize hitherto unused abilities within the community and the services can be run at recurrent costs that the country and community can afford. Integration of women into the establishment of community-based services is especially important, since their participation can have a significant impact on the quality of life for their children.

UNICEF gives priority to the establishment of long-term programs and places special emphasis on the use of national expertise wherever feasible.

UNICEF cooperates with developing countries in several ways: it assists in the planning and extension of services benefiting children and in the exchange of experience between countries; it provides funds to strengthen the training and orientation of national personnel, complementing, wherever possible, the work of specialized agencies; and it delivers technical supplies, equipment, and other aid for extending services.

In September 1990, the Convention on the Rights of the Child entered into force, less than one year after its adoption by the General Assembly. That month, UNICEF organized the World Sum-

mit for Children, attended by representatives from more than 159 countries, including 71 heads of state or government. It produced a Declaration and a Plan of Action, which recognized the rights of the young to "first call" on nations' resources and set goals for the year 2000, including:

- A reduction of the 1990 infant and under-five child mortality rates by one third or to 50 to 70 per 1,000 live births respectively, whichever is lower;
- A reduction by half of the 1990 maternal mortality rate;
- A reduction by half of the 1990 rate for severe malnutrition among children under the age of five;
- Universal access to safe drinking water and to sanitary means of excreta disposal, and
- Universal access to basic education and completion of primary education by at least 80% of school-age children.

In September 1996, the Secretary-General of the UN reported to the General Assembly that significant progress was made toward the World Summit goals in some 90 countries in the previous 6 years. Over 150 countries had drawn up National Programs of Action (NPAs) to implement the goals.

Recognizing that survival and development of children is intricately linked to the status of women in developing countries, the Executive Board, at its annual meeting in May 1994, requested the executive director to give high priority to UNICEF efforts to develop gender-sensitive indicators in each sectoral area of development and to set gender-specific goals in national programs of action. UNICEF supports gender equality, organized participation of women at all levels, and capacity-building and mobilization of youth for a more gender-equitable society.

At the Fourth World Conference on Women in Beijing, China, in September 1995, UNICEF advocated more attention and resources to girls' education and the linkage between goals for girls and women. It drew attention to the complementary objectives of the Convention on the Rights of the Child and the Convention on the Elimination of All Forms of Discrimination against Women.

As a result of the Beijing conference, UNICEF identified the following areas of concern or emphasis: women and poverty; education and training of women; women's health, including safe motherhood and reproductive health (including HIV/AIDS); violence against women, including family violence and harmful traditional practices (such as female genital mutilation), sexual abuse, and exploitation and trafficking in women and girls; women and armed conflict; women in power and decision-making; institutional mechanisms for the advancement of women; human rights of women; women and the media; and women and the environment.

In May 2002, the UN General Assembly Special Session on Children was held, the first global gathering of world leaders and children's advocates since the 1990 World Summit. UNICEF was instrumental in furthering children's participation in the event, and throughout the year hosted or supported regional consultations and other events related to the special session. In April 2001, UNICEF had launched the "Say Yes for Children" pledge campaign for voluntary contributions. By May 2002, when the organizers presented their achievements to the special session, nearly 100 million people in 194 countries had joined the grass-roots campaign. Education was a top priority of the campaign.

### Organization

UNICEF is an integral part of the UN, with semiautonomous status. The Executive Board, which is the governing body of UNICEF, meets once a year to establish policy, review programs, and approve expenditures. It also holds regular sessions between the annual formal meetings. The Executive Board has 36 members, elected for a three-year term with the following regional allocation of seats: eight African states, seven Asian states, four Central and Eastern European states, five Latin American and Caribbean states, and 12 Western European and other states (including Japan). The board year runs from 1 January to 31 December. In 2006, the board members included: from Africa—Algeria, Burkina Faso, Burundi, Djibouti, Malawi, Mozambique, Rwanda, Senegal; from Asia—Bangladesh, China, Democratic People's Republic of Korea, Lebanon, Myanmar, Pakistan, Republic of Korea; from Central and Eastern Europe—Belarus, Russian Federation, Serbia and Montenegro, Ukraine; from Latin America and the Caribbean—Argentina, Bolivia, Colombia, El Salvador, Guatemala; and from Western Europe and other states—Australia, Austria, Canada, Denmark, Finland, Germany, Italy, Japan, Netherlands, Spain, Sweden, United States.

The executive director of UNICEF is appointed by the UN Secretary-General in consultation with the Executive Board. The administration of UNICEF and the appointment and direction of staff are the responsibility of the executive director, under policy directives laid down by the Executive Board, and under a broad authority delegated to the executive director by the Secretary-General. The executive director as of 2006 was Ann M. Veneman of the United States.

UNICEF has a network of country and regional offices serving 155 countries and territories. UNICEF maintains headquarters offices in New York, Geneva, Brussels, Tokyo, Florence (site of the Innocenti Research Centre, available at <http://www.unicef.org>), Copenhagen, and Huningue (France). Eight regional offices serve Latin America and the Caribbean, Central and Eastern Europe (including Commonwealth of Independent States and Baltic States), East Asia and the Pacific, Eastern and Southern Africa, Middle East and North Africa, South Asia, and West and Central Africa.

In 2006, UNICEF employed a total staff of approximately 10,000 people, 85% of which were in the field.

In 1985, only 27% of international professional posts were filled by women. By 1996, that figure had been raised to 40%. In 2000, UNICEF reported that it endorsed its own policy of gender equality and empowerment of women and girls by mobilizing and organizing women for participation in its programs. The organization paid particular attention to ensuring that women, both in its offices and in the field, were in decision-making roles that would help guide UNICEF's work.

UNICEF is supported by 37 National Committees, mostly in the industrialized countries, whose more than 100,000 volunteer members raise money through various activities, including the sale of greeting cards. The committees also undertake advocacy, education for development, and information activities. About 30% of the organization's budget is contributed through the National Committees.

In 2006 the National Committees maintained offices in Andorra, Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hong Kong, Hungary, Iceland, Ireland, Israel, Italy, Japan, Republic of Korea, Latvia, Lithuania, Luxembourg, Netherlands, New Zealand, Nor-

way, Poland, Portugal, San Marino, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

### Cooperation with Other Agencies

UNICEF collaborates closely with the specialized agencies, including the International Labour Organization (ILO), Food and Agriculture Organization (FAO), the United Nations Education, Scientific and Cultural Organization (UNESCO), and World Health Organization (WHO), as well as with the units of the UN Secretariat concerned with services benefiting children. It also works with the funding agencies and programs of the UN system—such as United Nations Development Programme (UNDP), United Nations Population Fund (UNFPA), World Food Programme (WFP), the World Bank, International Fund for Agricultural Development (IFAD), and United Nations Environment Programme (UNEP)—to exchange information, discuss policies of cooperation affecting the situation of children, and explore potential program collaboration.

Close working relations are maintained with the UN Office for the Coordination of Humanitarian Affairs (OCHA) and with the United Nations High Commissioner for Refugees (UNHCR) in emergency relief and aid to refugees, respectively. UNICEF also works with regional development banks and the regional economic and social commissions and with bilateral aid agencies.

Of particular importance is UNICEF's cooperation and collaboration in programs with nongovernmental organizations (NGOs), both national and international. The NGO Committee on UNICEF comprises over 100 international professional and voluntary groups involved with children and either directly or indirectly, through concern with aspects of social development. A roster of international and national correspondent organizations is continuing to grow, particularly from developing countries. Some 400 organizations participate in activities and share information through UNICEF/NGO liaison offices in New York and Geneva. Many of these organizations have become important supporters of UNICEF by providing a channel for advocacy on behalf of children and by participating in fund-raising and in UNICEF programs.

### Financing

UNICEF's work is accomplished with voluntary contributions from both governments and nongovernmental sources. Total contributions for 2004 amounted to us\$1,978 million. Contributions from governments and intergovernmental organizations accounted for 68% of this income; 29% was from nongovernmental and private sources; and 3% was derived from a variety of other sources. The United States remained the largest donor to UNICEF, providing a total of us\$263 million. The United Kingdom was the second largest government donor in total funds, with \$188 million, followed by Japan at \$156 million and Norway at \$135 million. The Netherlands, Sweden, Canada, Denmark, Australia, and Italy were the next largest donors of total funds. Norway, Sweden, and the Netherlands were the top contributors in total funds per capita. (For a list of the top 20 donor nations and their contributions to regular resources, see the following table.) Additionally, the United Nations Foundation, Inc., established in 1997 by American businessman Ted Turner with a us\$1 billion grant, approved more than us\$18 million in funds for UNICEF in 1998. In 2001, UNICEF was the recipient of more than \$60 million from

**Top 20 Donors to UNICEF Regular and Other Resources 2004 (in thousands of US dollars)**

Republic of Korea	3,100

the sale of a collection of modern art at the bequest of Mme. René Gaffé, the collection's owner.

### Expenditure

UNICEF's total expenditure in 2004 amounted to us\$1,606 million, of which \$1,508 went directly to programs and \$92 million was spent on administration and other charges. Expenditure by program sector was as follows: early childhood development (34%); immunization plus (22%); girls' education (21%); child protection (10%); HIV/AIDS (9%); and other (4%).

### Programs

Through its extensive field network in developing countries UNICEF undertakes, in coordination with governments, local communities, and other partners, programs in health, nutrition, education, water and sanitation, the environment, women in development, and other activities that improve the well-being of children. Emphasis is placed on community-based programs in which people participate actively and are trained in such skills as health care, midwifery, and teaching.

UNICEF facilitates the exchange of programming experience among developing countries, and encourages governments to undertake a regular review of the situation of their children and to incorporate a national policy for children in their comprehensive development plans. It also places emphasis on national capacity building and the use of national expertise wherever possible.

UNICEF provides assistance on the basis of mutually agreed priorities for children in collaboration with the governments concerned. Priority is given to the world's most vulnerable—almost all its resources are therefore invested in the poorest developing countries, with the greatest share going to children under five years old. As of 2004, UNICEF maintained programs in 157 countries.

### Health

#### Immunization

In cooperation with the World Health Organization (WHO), UNICEF supports the expanded Program on Immunization that each year prevents an estimated 2.5 million child deaths from six diseases—diphtheria, measles, poliomyelitis, tetanus, tuberculosis, and whooping cough. However, in 2001 more than 30

million children remain unprotected against common vaccine-preventable diseases. In October 1991, UNICEF and the WHO announced that their goal of protecting 80% of the world's children before their first birthday had been achieved (compared to less than 5% in 1975, when the program was launched). UNICEF and WHO made an effort to raise immunization coverage for the six diseases to this level in all countries, eliminate neonatal tetanus, poliomyelitis and substantially reduce measles deaths and cases by the end of 1995. As a result, a large majority of countries have reached the immunization coverage goal of 80% for all antigens except tetanus toxoid; polio has been eradicated in many countries; major progress has been made towards elimination of neonatal tetanus; and measles mortality and morbidity have been reduced in some regions. UNICEF procures 40% of the world's doses of vaccines for children and is the main supplier to developing countries. The global procurement of 2.8 billion doses of vaccines amounted to \$374 million in 2004. Also in 2004, UNICEF procured 2.1 billion doses of polio vaccine, valued at \$203 million, due to the fact that in 2003 and 2004, wild poliovirus spread rapidly from Nigeria across West and Central Africa and into Sudan, paralyzing children in 12 previously polio-free countries.

#### Oral rehydration therapy

UNICEF works closely with WHO to control diarrheal dehydration, which is the single largest cause of death among children under five years of age in the developing world. UNICEF-assisted programs for the control of diarrheal diseases promote the manufacture and distribution of prepackaged salts—oral rehydration salt (ORS)—or homemade solutions. The use of oral rehydration therapy (ORT) has significantly increased from 17% in 1985 to 85% at present, and is believed to prevent more than 1.5 million deaths each year.

#### Acute respiratory infections (ARI)

ARI, in particular pneumonia, are the single biggest cause of child mortality in the world and account for over 2 million deaths among children under five years of age in developing countries. UNICEF has adopted a comprehensive approach to control ARI, including helping countries to develop national plans and infrastructures; decentralizing activities to substantial level; training health workers; supporting access to essential drugs and appropriate technological devices; and helping with monitoring and communication.

#### Safe motherhood

In the 1990s it was estimated that more than a half million women die every year from causes related to pregnancy and childbirth. In cooperation with WHO, UNICEF worked to reduce maternal mortality by 50% by the year 2000, to improve prenatal care, and to ensure safe delivery for all pregnant women and access by all couples to family planning services. It also focuses on information, education, and communication on birth-spacing, responsible parenthood, and discouraging early marriage and early pregnancy.

#### HIV/AIDS

By December 2002, 3.2 million children (800,000 in new infections in 2002) had been infected with the human immunodeficiency virus (HIV), the vast majority of whom lived in sub-Saharan Africa. A report by the Joint United Nations Programme on HIV/AIDS (UNAIDS) indicated that the majority of the 5 million newly infected adults in 2002 were under 25 years old, nearly half of them women. It was estimated that in 2002, 42 million people were HIV-infected worldwide. There were 3.1 million AIDS deaths in 2002, of which 610,000 were children. By the end of

2005, there were approximately 15 million children who had been orphaned by HIV and AIDS.

UNICEF works closely with governments and supports prevention programs such as youth health and development promotion; school-based interventions; sexual and reproductive health promotion; family and community care; and mass communication and mobilization. It also helps AIDS-infected families and AIDS orphans. UNICEF supported HIV/AIDS prevention for adolescents in 71 countries in 2001. That year, more than 720,000 children contracted HIV from their mothers. UNICEF thus supports “prevention of mother-to-child transmission” (PMTCT) of HIV/AIDS in 47 countries. UNICEF contributed research and logistical support to the UN General Assembly Special Session on HIV/AIDS held in June 2001. In 2004, UNICEF procured \$18.4 million of antiretroviral medicine, and supplied HIV and AIDS-related test kits and diagnostic equipment worth \$2.9 million.

UNICEF participates in UNAIDS, cosponsored by the UN Development Fund (UNDF), UN Population Fund (UNFPA), UN Educational, Scientific and Cultural Organizations (UNESCO), World Health Organization (WHO), and the World Bank.

### **Nutrition**

In 1996, 174 million children were malnourished as a result of frequent bouts of diarrhea and other illnesses, bottle-feeding of infants and poor weaning practices, low birth-weight, infrequent feeding and micronutrient deficiencies. On average, over 50% of young child deaths in developing countries are associated with malnutrition. In 2000, UNICEF’s statistics showed that 30% of the world’s children were moderately to severely underweight and 11% were wasting. UNICEF fights malnutrition by empowering communities; protecting and promoting breastfeeding and appropriate child feeding practices; controlling the three main forms of micronutrient deficiencies—iron, iodine, and vitamin A; improving nutrition information system; and helping countries to reach consensus as to the causes of malnutrition. It aims to achieve universal salt iodization to prevent iodine deficiency disorders, and to eliminate vitamin A deficiency.

UNICEF participated in the International Conference on Nutrition held in Rome in December 1992 and contributed to the formulation of the World Declaration on Nutrition and the Plan of Action for Nutrition adopted by the conference. The declaration identified children under five years of age as the group most affected by malnutrition.

### **Breastfeeding**

In coordination with WHO, UNICEF launched in June 1991, a “baby-friendly hospital initiative” to promote breastfeeding. The initiative aims at empowering women to breastfeed by ending the distribution of free and low-cost supplies of infant formula in hospitals and maternity facilities. As of 1996, 8,120 hospitals and maternity facilities had become “baby-friendly” by implementing the “Ten Steps to Successful Breastfeeding” recommended by UNICEF and WHO. Baby-friendly hospitals encourage mothers to initiate breastfeeding immediately after birth and to continue exclusive breastfeeding, and they do not accept free and low-cost formula from companies.

### **Water supply and sanitation**

Polluted water is estimated to affect the health of more than 1.2 billion people, and to contribute to the death of an average 15 million

children every year. In 1994, WHO estimated the number of people without access to clean drinking water at 1.3 billion. By 2000, nearly 1.2 billion people lacked access to clean water, while 2.4 billion lacked access to adequate sanitation services. Two of every five Africans lack access to an improved water supply. Throughout Africa, rural water services lag far behind urban services. At the beginning of 2000, two-fifths of the world’s population (2.4 billion people) lacked access to improved sanitation facilities. The majority of those people lived in Asia and Africa, where fewer than half of all Asians have access to improved sanitation.

To meet the goals of universal access to safe drinking water and to sanitary means of excreta disposal, and elimination of guinea worm disease by the end of the decade, UNICEF allocates a large portion of its income to this sector (for the amount see section on expenditure). In addition to provision of effective low-cost water supply and sanitary services, UNICEF promotes hygiene education and environmental protection. UNICEF is working to eliminate the water-borne guinea worm disease (dracunculiasis).

### **Basic education**

In its 1999 Annual Report, UNICEF stated that nearly a billion people would enter the 21st century unable to read a book or sign their names and that two-thirds of them were women. The total included more than 130 million school-age children, 73 million of them girls, who were growing up in the developing world without access to basic education. UNICEF works to improve access to primary education and to reduce drop-out rates. It gives priority to the education of girls, with the aim of reducing gender disparities. At the Habitat II in Istanbul, Turkey in June 1996, UNICEF advocated for the inclusion of children’s concerns in the Global Action Plan adopted by the assembly.

At the Fourth World Conference on Women in Beijing in 1995, UNICEF made a successful effort to include girls’ education in the Platform for Action adopted by the conference. Also at the conference, UNICEF promised to more than double its resources to basic education during the 1990s, with special attention to girls’ education. The organization reported on its progress at the Beijing+5 conference, in New York in June 2000. In 2002, UNICEF was helping 74 countries break down barriers that exclude girls from education. In 2001, 21 countries reported improvements in school enrollment and retention for girls.

UNICEF supports the UN Millennium Development Goals for education: by 2015, all girls and boys were to be able to complete a quality primary and secondary education; by 2005, girls and boys were to be equally represented in the classroom.

### **Urban basic services**

Almost half of the developing world’s urban dwellers are children whose vulnerability has increased with the rapid growth of towns and cities amid economic and environmental crisis and recurring conflict. UNICEF revised its policy in 1993 by focusing on poverty reduction, primary environmental care, rehabilitation, and preventive approaches for urban children in especially difficult circumstances. It also provides advocacy and technical support and emphasizes the need for concerted effort at all levels—national, subnational, and community.

### **Children in especially difficult circumstances**

Around the world, millions of children are at special risk because of acute poverty, wars, natural calamities, disabilities, and other

circumstances. Children in such situations often become separated from their relatives, left without the protection and security families provide and vulnerable to terrible forms of exploitation and abuse.

Over 250 million children in the world work, many of them are at risk from hazardous exploitative labor, in factories, in domestic services, on the streets, or in degrading conditions of sexual exploitation. An estimated one million children are believed to work as prostitutes. UNICEF supports special projects for children affected in these ways, by helping provide education, reuniting families, and counseling to help heal trauma. It vigorously advocates against the exploitation of children by working with governments international organizations, and non-governmental organizations to protect child rights as set forth in the Convention on the Rights of the child. At the World Conference against Commercial Exploitation of Children that convened in Stockholm in August 1996, UNICEF strongly called for the immediate end to commercial exploitation of children everywhere in the world.

#### **Emergency relief and rehabilitation**

Although most UNICEF activities focus on the “silent” emergencies that claim 12 million children’s lives every year, natural disasters and armed conflicts constitute the main “loud” emergencies that challenge the organization’s resources. In any emergency situation, UNICEF works closely with other UN agencies and many nongovernmental organizations (NGOs).

#### **Removal of Land Mines**

The scale of the land mine problem almost defies imagination. Due to the persistence of armed conflicts throughout the world, it is estimated that there are more than 110 million land mines in 68 countries around the world, or one mine for every 20 children in the world today. An estimated 25,000 people are killed or maimed every year by land mines—90% of these victims are civilians and 5,000–6,000 are children. The countries most devastated by land-mines are Afghanistan, Angola and Cambodia. Afghanistan has an estimated 10–15 million mines in place. In Africa, countries with high numbers of lands mines are Mozambique and Somalia, but land mines are also destroying the lives of children in Asia, Central America, the Middle East, and Central and Eastern Europe. The UN has established a voluntary trust fund through which countries can share the burden of mine clearance. As of 2006, UNICEF was undertaking mine action in 30 mine-affected countries worldwide, coordinating a variety of programs focused on mine risk education, advocacy, and survivor assistance.

UNICEF strongly advocates for a total ban of the production, marketing, and use of land mines and supports land mine awareness programs. In November 1995, UNICEF executive board director Carol Bellamy announced UNICEF’s commitment to not deal with companies manufacturing or selling land mines.

#### **Debt swaps**

Since 1989, UNICEF has assisted in the conversion of foreign debt in developing countries to funds that supplement UNICEF’s ongoing contributions to child survival and development in basic education, primary health care, and water and sanitation. The essential feature of the program is that the government concerned agrees to spend local currency on programs for children rather than using its scarce foreign exchange to service the debt.

#### **Major UNICEF Publications**

*The State of the World’s Children* (annual). *The Progress of Nations* (annual, first appeared 1993). Ranks the nations of the world according to their achievements for children in health, nutrition, and education, as well as progress in the field of family planning and in women’s development. *UNICEF Annual Report*.

### **OFFICE OF UN HIGH COMMISSIONER FOR REFUGEES (UNHCR)**

The UN Relief and Rehabilitation Administration (UNRRA) was established on 9 November 1943, to bring material aid to war-stricken areas of the world. Through its services, some 6 million displaced persons were repatriated. The constitution of a successor agency, broader in scope, the International Refugee Organization (IRO), was approved by the General Assembly on 15 December 1946. In addition to the relief and repatriation assistance provided by UNRRA, the IRO was charged with the protection of refugees and displaced persons and with resettlement responsibilities. The IRO Preparatory Commission became operative on 30 June 1947; by 31 December 1951, when IRO’s operational activities ceased, more than 1 million persons had been resettled.

As part of a series of initiatives designed to address refugee problems following the dissolution of the IRO, the General Assembly, in December 1949, agreed on the necessity of setting up a body primarily responsible for the international protection of refugees and the search for durable solutions to their plight. As a consequence, the Office of the UN High Commissioner for Refugees (UNHCR) was established as of 1 January 1951 for a limited period of three years. It was soon evident, however, that international assistance was needed, and as new situations that created refugees have continued to arise, UNHCR’s mandate has been renewed by the General Assembly for successive periods of five years.

UNHCR was awarded the Nobel Peace Prize in 1954 and again in 1981.

#### **Organization**

The UN High Commissioner for Refugees is elected by the General Assembly on the nomination of the Secretary-General and follows policy directives given by the General Assembly. The Executive Committee of UNHCR meets annually to review activities in the fields of protection and material assistance, approve assistance projects to be included in the next year’s annual program, and provide overall guidance. The high commissioner reports to the committee on the implementation of special tasks that he or she may have been called upon to carry out—often at the request of the Secretary-General—and on the administration of special trust funds. In July 1994, ECOSOC recommended that the General Assembly increase the membership of the Executive Committee to 50 states. In 2006, the Executive Committee had been extended to 66 member countries.

UNHCR headquarters are in Geneva, Switzerland. As of May 2006, the organization had offices in 116 countries and a worldwide staff of 6,540 of whom about 85% were at work in the field.

By the end of 2004, 19.2 million people fell under the concern of the UNHCR. They included 9.2 million refugees, 676,000 asylum seekers, and 7.6 million internally displaced persons (IDPs), returned IDPs, stateless persons, and others of concern.

### Financing

The financial arrangements made at the creation of UNHCR reflected the fundamental difference between it and the IRO. The IRO's budget was separate from that of the UN, while a very limited amount of the basic administrative costs of UNHCR is covered by the regular UN budget, since UNHCR is an integral part of the Secretariat, rather than a specialized agency. Its substantive activities in the field of protection and material assistance, however, depend entirely on voluntary contributions.

At the outset, UNHCR was not allowed to appeal to governments for funds without the express authorization of the General Assembly. The first funds of any magnitude put at the high commissioner's disposal came from the Ford Foundation in 1952 in the form of a grant of US\$2.9 million (later increased to US\$3.1 million) for a pilot program of projects intended to promote the local settlement of some 100,000 refugees in Europe through such measures as low-rent housing, small loans, vocational training, and rehabilitation of the handicapped. Subsequently, in 1954, the General Assembly authorized the high commissioner to appeal to governments for a four-year US\$16 million program oriented toward permanent solutions and modeled on the Ford experimental undertaking. The target was eventually reached through US\$14.5 million in contributions by governments and over US\$2 million by private organizations.

Clearing refugee camps in Europe was the main objective of UNHCR at this time, and the funds needed to finish this task were raised to a large extent through World Refugee Year (1959/60), a campaign that extended to 100 countries and areas. In 1957, UNHCR's capacity to react effectively to unexpected situations was enhanced when the General Assembly authorized the high commissioner to establish an emergency fund not to exceed US\$500,000. This innovation grew out of the experience of 1956, when some 200,000 refugees from Hungary crossed into Austria and Yugoslavia within a matter of weeks, prompting the high commissioner to appeal for funds for the emergency. By 1993, the emergency fund's ceiling was raised to US\$25 million, with up to US\$8 million available for a single emergency in a given year.

With the exception of a very limited subsidy from the United Nations regular budget (which is used exclusively for administrative costs), UNHCR's assistance programs are funded by voluntary contributions from governments, intergovernmental and nongovernmental organizations, and individuals. These so-called "voluntary funds" finance all UNHCR assistance programs worldwide. UNHCR's annual voluntary funds expenditure rose rapidly during the last decades of the 1900s, surpassing an annual budget of more than US\$1 billion for a fifth consecutive year in 1998. The 1999 budget also surpassed the billion-dollar mark; the US\$1.17 billion budget was revised to cover the Kosovo emergency. In 2004, the budget was approximately \$928.9 million.

### The High Commissioner's Responsibilities

The high commissioner's primary responsibility is international protection. In addition, he or she promotes durable solutions to the problems of refugees through voluntary repatriation, local integration, or resettlement in another country. Whatever the field of activity, he or she and his or her staff are always guided by humanitarian and strictly nonpolitical considerations. UNHCR's ability to adhere to this policy over the years since its inception in 1951 has led the General Assembly to extend the scope of its

material assistance activities, in many cases to persons who do not necessarily meet the definition of refugees contained in the high commissioner's statute. This definition describes refugees as persons who, owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion, are outside their country of nationality and are unable or unwilling, because of such fear, to avail themselves of the protection of that country. In recent years, UNHCR has increasingly been called on to help not only refugees but also persons uprooted by man-made disasters and displaced either outside or within their country of origin. However, UNHCR's competence does not extend to refugees already receiving help from another UN organization, notably the Arab refugees from Palestine who are cared for by UNRWA (see separate section).

From its outset, UNHCR's work was intended to be undertaken jointly with other members of the international community. UNHCR draws on the expertise of other United Nations organizations in matters such as food production (FAO), health measures (WHO), education (UNESCO), child welfare (UNICEF), and vocational training (ILO). It also cooperates closely with the World Food Programme in providing basic food supplies to refugees, and with the World Bank and the International Fund for Agricultural Development (IFAD) in implementing projects that aim to promote self-reliance. Over the decades, the most sustained and devoted service to the cause of refugees has been provided by nongovernmental organizations (NGOs). Over 200 NGOs cooperate in UNHCR's relief and legal assistance programs. In 1993, the Nansen Medal, awarded for outstanding service to the cause of refugees, recognized the valuable collaboration of one such NGO, Médecins sans Frontières (Doctors without Borders).

Since refugees no longer enjoy the protection of the countries they have fled, they must rely on the international community to provide it. The main vehicle for international protection is the 1951 Convention Relating to the Status of Refugees and its 1967 protocol, which lays down minimum standards for the treatment of refugees by countries that have acceded to it. By 1 July 2004, 145 states were party to either the convention or its protocol.

One of the most important provisions of the 1951 convention is that refugees must not be sent back to a country where they may face persecution on grounds of race, political opinion, religion, nationality, or membership in a particular social group (the principle of *non-refoulement*). The convention also defines the rights of refugees in the country of asylum with respect to such matters as the right to work, education, access to courts, and social security. Moreover, it provides for the issuance of travel documents by the country of residence to compensate for the fact that refugees are not in a position to use their national passports.

By its statute and under the 1951 convention, UNHCR is given specific responsibility for supervising the application of the provisions of the convention. It is also available to supply technical advice to governments on appropriate legal and administrative measures to give effect to the stipulations of the convention.

Another important legal instrument concerning refugees is the Convention Governing the Specific Aspects of Refugee Problems in Africa, adopted by the Organization of African Unity in 1969. This convention, which came into force on 20 June 1974, emphasizes that the granting of asylum is a peaceful and humanitarian act that should not be regarded as unfriendly by any member state. A similar provision can be found in the Declaration on Ter-

ritorial Asylum adopted by the General Assembly in December 1967 (see the section on Other Declarations in the chapter on Human Rights).

Asylum is the key aspect of the protection work of the high commissioner's office. A conference of plenipotentiaries convened by the General Assembly in 1977 "to consider and adopt a convention on territorial asylum" failed to achieve its objectives, and the absence of such a convention remains a gap in the legal basis for the protection of asylum-seekers.

In 1975, UNHCR undertook new duties in the field of protection on a provisional basis, following the entry into force on 13 December of the 1961 Convention on the Reduction of Statelessness. Under the terms of the convention, stateless persons may apply to national authorities to have nationality accorded to themselves or to their children or may ask UNHCR's assistance in presenting a claim.

#### Material Assistance Activities

UNHCR's material assistance activities include emergency relief, assistance in voluntary repatriation or local integration, and resettlement through migration to other countries, as well as social services.

#### Africa

UNHCR's involvement in Africa dates from 1957, when thousands of people fled from the fighting in Algeria to Morocco and Tunisia. Working in conjunction with the League of Red Cross Societies, UNHCR provided both immediate and long-term assistance and helped to organize the repatriation of some 200,000 refugees in 1962, after the cessation of hostilities.

By 1967 there were an estimated 750,000 refugees in Africa, many of them victims of the struggles for independence in Guinea-Bissau, Angola, and Mozambique. In 1974–75, UNHCR assisted in repatriating many of these refugees to their newly independent countries. A large-scale repatriation and rehabilitation program involving some 200,000 refugees and displaced persons in Zimbabwe was coordinated by UNHCR in 1980, and a major repatriation to Chad was completed in 1982.

By the early 1990s, Africa harbored over 6 million refugees, or around one-third of the global refugee population. During the previous decade, refugee situations persisted or erupted in the Horn of Africa, West Africa, and southern Africa. In some cases, such as for Mozambican refugees in Malawi and in the Horn, these situations were exacerbated by drought.

A number of refugees were able to return home, notably Namibians, Ethiopians, and Ugandans in the Sudan, and Somalis in Ethiopia. The repatriation of some 1.7 million Mozambicans got under way in mid-1993. In the Horn, a cross-border approach was put into action aimed at creating conditions conducive to the voluntary repatriation of refugees and safe return of internally displaced persons. This approach has been characterized by the use of "quick impact projects" (QIPs). QIPs entail the execution of small-scale projects, such as the repair and reconstruction of essential facilities; the provision of livestock, seed, and processing machinery; and the establishment of small-scale businesses. The projects are designed to bridge the gap between relief and development by helping returnees and their communities regain self-sufficiency. In certain areas such as North-West Somalia and Mozambique, however, repatriation has been bedeviled by the presence of landmines in the areas of return.

In 1993, violent upheavals in the central African state of Burundi drove some 580,000 persons to seek refuge in neighboring countries. The following year, bloodshed engulfed neighboring Rwanda, creating, by May 1994, over 800,000 refugees. UNHCR launched emergency assistance programs to cope with refugees from both situations.

In 2003, fighting erupted in Sudan's western region of Darfur. Hundreds of thousands of people were uprooted by the conflict. By late 2004, some 200,000 Sudanese had fled across the border to neighboring Chad and an estimated 1.6 million were displaced within Darfur, where militias reportedly killed, raped and forced hundreds of thousands from their homes.

UNHCR estimated the cost of the annual program budget for Africa in 2006 at US\$449.4 million.

#### Central and Southwest Asia, North Africa, and the Middle East

In August 1974, following events in Cyprus, the high commissioner was designated to coordinate humanitarian relief for 241,300 people who had been uprooted and displaced. In the absence of a political settlement, aid is still being channeled to the island.

Events in Afghanistan in the late 1970s and the 1980s provoked a tremendous exodus from the country. Despite the unprecedented repatriation of 1.5 million Afghans in 1992, at the beginning of 1995 over 2.7 million Afghans remained in exile (1.6 million in Iran and 1.5 million in Pakistan). Hopes for their continued repatriation were stymied by a resurgence of fighting in Afghanistan in April 1992. In that year, Afghanistan itself became a country of asylum when some 60,000 Tajiks escaping from their country's civil war found sanctuary in northern Afghanistan. By 1995, there were still some 18,800 Tajik refugees in Afghanistan.

Following the terrorist attacks on the United States on 11 September 2001, the US-led campaign (Operation Enduring Freedom) against the Taliban and Osama bin Laden's al-Qaeda organization in Afghanistan began on 7 October 2001. At the beginning of 2002, nearly 200,000 Afghans joined 3.5 million countrymen already living abroad as refugees, and an additional 511,000 civilians became 'internally displaced persons' (IDPs) within Afghanistan. During the first quarter of 2002, however, the number of Afghan asylum-seekers dropped by 33% across Europe, due most likely to the changes in Afghanistan following 11 September. During the previous decade, the average monthly applications of Afghan asylum-seekers submitted in Europe increased five-fold.

In 1991, the Gulf War led to a situation of mass displacement, creating, by May 1991, some 1.4 million refugees in Iran and 400,000 on the border with Turkey. UNHCR mounted a massive emergency assistance program for these groups, as well as for internally displaced Kurds in northern Iraq. By the end of 1991, most of the Iraqis in Iran and on the Turkish border had returned home. However, due to a decade of repression under Iraqi President Saddam Hussein, 530,100 Iraqis were refugees in Iran as of 2001. As of 2002, Iraqi asylum-seekers replaced Afghans as the top nationality seeking asylum in Europe. Following the US-led attack on Iraq and the fall of the Hussein government in March 2003, UNHCR returned to Iraq to assist the estimated 500,000 refugees and 800,000 internally displaced persons. UNHCR established support for organized voluntary repatriation, since the majority of Iraqi refugees desired to return to their homes.

On 8 October 2005, a massive Himalayan earthquake struck Pakistan. The damage was huge with thousands killed, many more

injured, and several million homeless. The estimated death toll from the earthquake—which measured around 7.6 on the Richter scale—climbed from 10-15,000 during the first day, to more than 50,000 after the first two weeks. Although India was also badly affected, the vast majority of casualties occurred in Pakistan-administered Kashmir—where the epicenter was located—and parts of neighboring North-West Frontier Province (NWFP).

UNHCR estimated the cost of the annual program budget for Central and South West Asia, North Africa, and the Middle East in 2006 at us\$137.1 million.

### Asia and the Pacific

In May 1971, the high commissioner was appointed “focal point” for UN assistance to millions of Bengali refugees from East Pakistan (later Bangladesh) in India. More than us\$180 million in cash, goods, or services was channeled through this focal point, mainly for emergency relief in India but also for the repatriation operation that began early in 1972, following the creation of Bangladesh. The operation involved the transfer of non-Bengalis from Bangladesh to Pakistan and of Bengalis from Pakistan to Bangladesh. By the time it was concluded in July 1974, 241,300 people had been moved, nearly all by air, across the subcontinent in either direction.

Another major crisis erupted in mid-1978, when nearly 200,000 refugees from the Arakan state of Burma flooded into Bangladesh. UNHCR was again designated as coordinator of UN assistance. Following an agreement concluded with the Burmese government in July 1978, repatriation began in November of that year. The UNHCR program included assistance to the returnees once they were back in their country of origin.

Early in 1975, the conflict that for almost three decades had involved Vietnam, Cambodia, and Laos came to an end with changes of regime in the three countries of Indochina. Since that time, over 2.8 million Vietnamese, Cambodians, and Lao have left their homes and sought asylum in neighboring countries. These mass movements reached their peak in 1979, when some 393,560 people arrived by boat or overland in various asylum countries throughout the region, and in early 1980, when additional large numbers of Kampuchean moved into the border area with Thailand to escape hostilities in their own country.

UNHCR has undertaken to provide temporary assistance for Indochinese in various countries of Southeast Asia, to ask governments to extend permanent resettlement opportunities, and to facilitate voluntary repatriation where feasible. In addition, large numbers of displaced persons in the Thai-Kampuchean border area have been assisted by other UN agencies and the ICRC. By the beginning of 1994, some 2.7 million Indo-Chinese Refugees and displaced persons had been resettled, repatriated, or integrated locally, while around 88,000 remained in camps throughout the region.

Under the terms of a memorandum of understanding concluded with the Vietnamese government in May 1979, UNHCR has been coordinating a program of orderly departure from Vietnam. A further coordinating role has been played by UNHCR in the funding of a major program to combat piracy against refugee boats and other vessels in the South China Sea. In 1995, there were an estimated 341,600 Vietnamese refugees, mostly seeking asylum in China or Hong Kong.

The Comprehensive Plan of Action for Indo-Chinese Refugees (CPA) was adopted in June 1989 with the objective of discouraging clandestine departures; assuring access to status determination procedures for all asylum-seekers; providing resettlement opportunities for bona fide refugees; and ensuring a safe and dignified repatriation for those not determined to be refugees. The CPA had the effect of dramatically reducing the numbers of Lao and Vietnamese asylum-seekers; the number of Vietnamese asylum-seekers, for example, dropped from 71,364 in 1989 to a mere 55 in 1992.

The repatriation of Cambodians from Thailand, which began in March 1992, resulted in the return home of some 387,000 refugees, or nearly the whole caseload in Thailand. Returnees and the communities receiving them were assisted, in some cases, by means of QIPs (see the section on Africa, above), to consolidate their reintegration.

In 1991–92, around 250,000 mainly Muslim refugees fled Myanmar to Bangladesh. At the request of the government of Bangladesh, UNHCR began assisting this group in February 1992. At the beginning of 1995, there were some 203,900 refugees from Myanmar seeking asylum, mostly in Thailand and Bangladesh.

Some 140,000 Sri Lankan Tamils sought safety from their country’s communal violence in the Indian State of Tamil Nadu. In Sri Lanka, UNHCR assists both the returnees and internally displaced persons. In 2002, UNHCR was assisting 66,000 refugees in the government-run refugee camps in south India for repatriation. Over 70,000 internally displaced people had also returned to their homes in the northeast of Sri Lanka since the beginning of 2002, and the trend had increased after a ceasefire accord was signed early that year.

On 26 December 2004, an undersea earthquake in the Indian Ocean set off a series of tsunamis that affected Indonesia, Sri Lanka, India, Thailand, Somalia, and other countries. As of May 2006, casualties included approximately 187,000 dead and 43,000 missing, for a total of 230,000 affected. Although UNHCR is not normally involved in natural disasters, the sheer magnitude of the destruction, the fact that UNHCR had on-the-ground presence and emergency capacities to respond quickly, and the fact that many of the affected populations were of concern to the Office, prompted the organization to take action. In January 2005, a flash appeal went out for an initial \$977 million to aid 5 million affected people in a six-month period. UNHCR’s requirements were \$75.8 million for its activities in Indonesia, Sri Lanka, and Somalia.

UNHCR estimated the cost of the annual program budget for Asia and the Pacific for 2006 at us\$53.8 million.

### Latin America and the Caribbean

Originally, Latin America was a primary resettlement area for European refugees. However, the events in Chile in September 1973 involved UNHCR in major assistance measures for Latin American refugees. UNHCR had to contend first with the problem of several thousand refugees of various nationalities in Chile, providing relief, care, and maintenance and helping establish “safe havens” where they could live until their resettlement could be arranged.

In addition to ongoing assistance to Chilean refugees, UNHCR was called on to assist an increasing number of Nicaraguans in Costa Rica, Honduras, and Panama in late 1978. By 1979, the number of Nicaraguan refugees receiving such assistance had ris-

en to 100,000. However, following the change of government in Nicaragua in July 1979, voluntary repatriation began, and UNHCR launched a special program to facilitate both the return itself and the rehabilitation of returnees through assistance in areas such as agriculture, health, and housing.

In the early 1980s, Central America became an area of increasingly grave concern to UNHCR. By the end of 1980, 80,000 refugees from El Salvador had sought refuge in neighboring countries. The International Conference on Central American Refugees (CIREFCA), which was convened in May 1989, proved to be of considerable help in facilitating a convergence towards durable solutions for uprooted populations. The move towards democratization in the region, the success of regional peace initiatives, and the CIREFCA process resulted in a reduction in refugee numbers as a result of attainment of durable solutions. In Haiti, however, the overthrow of the country's democratically elected president in September 1991 led to an exodus of Haitians seeking asylum in the region. Despite UNHCR's plea to governments in the region to uphold the principle of *non-refoulement*, Haitian asylum-seekers continued to be interdicted on the high seas. Beginning in 1992, political violence prompted many Guatemalans to go into exile. At the start of 1995, UNHCR was assisting over 42,000 Guatemalan refugees who had gone to neighboring Mexico. About 10,000 Guatemalans per year have returned as the situation became conducive to repatriation. Due to civil war in Colombia during the late 1990s and into the new millennium, UNHCR was working to address the worsening humanitarian situation of internally displaced people (IDPs) in Colombia. Thousands of Colombians, the majority of whom are women and children, have been displaced in a country where the total number of displaced people since 1995 has been estimated at over two million.

UNHCR estimated the cost of the annual program budget for the Americas and the Caribbean for 2006 at us\$33.3 million.

### Europe

When UNHCR came into existence in 1951, it inherited responsibility for some 120,000 persons still living in refugee and displaced persons' camps, mainly in the Federal Republic of Germany, Austria, Italy, and Greece. The great majority of these persons had been uprooted during World War II, primarily through the Nazi policies of removing people from occupied territories for forced labor and forcibly shifting populations for racial reasons. Particularly deplorable was the situation of the children born in the camps. Clearance of those camps was long delayed, mainly for lack of funds. Eventually, some 100,000 people, refugees since World War II, were settled as a result of UNHCR's programs.

New movements of refugees have, however, continued to occur. One of the largest of these was the result of the Hungarian crisis in 1956. The high commissioner was called on, in October 1956, to coordinate the activities of governments and voluntary organizations on behalf of the 200,000 Hungarians who sought refuge in Austria and Yugoslavia. From October 1956 until the end of 1959, about 180,000 Hungarian refugees arrived in Austria, and 19,000 in Yugoslavia. The total movement involved 203,100 persons. Of these, 18,000 eventually chose to return to Hungary, 9,600 elected to remain in Austria, 65,400 went to other European countries, and 107,400 emigrated overseas; the whereabouts of 2,700 are unknown.

In November 1991, UNHCR received a mandate from the United Nations Secretary-General to act as the lead United Nations agency to provide protection and assistance to those affected by conflict in the former Yugoslavia, then estimated at half a million people. By the beginning of 1995, there were 843,000 refugees from the former Yugoslavia seeking asylum, mostly in Croatia, Serbia, and Germany. There also were 1,282,000 internally displaced persons in Bosnia-Herzegovina and 307,000 in Croatia.

The war between Armenia and Azerbaijan in the early 1990s created some 663,100 displaced Azeris and some 299,000 refugees from Azerbaijan seeking asylum in Armenia at that time, and 201,500 refugees from Armenia seeking asylum in Azerbaijan. The military conflict in Georgia created around 280,000 refugees and displaced persons. UNHCR, in coordination with the United Nations Department of Humanitarian Affairs and other UN agencies, operated emergency response programs in all three countries. In May 1996, UNHCR convened a regional conference to address the problems of refugees, displaced persons, and returnees in the countries of the Commonwealth of Independent States (CIS). UNHCR estimated at that time there were 2.4 million refugees and internally displaced persons in the CIS countries.

As of May 2002, around 900,000 refugees had returned to Kosovo since June 1999, when UN peacekeeping troops entered the province. But the vast majority of these were from the Kosovo Albanian majority in the province. Around 231,000 people from Kosovo, mostly Serbs, were in the Federal Republic of Yugoslavia, and there were around 22,000 people from minorities still displaced inside Kosovo itself.

Fighting in the Former Yugoslav Republic of Macedonia (FYROM) took place in early 2001, when an ethnic Albanian guerrilla group emerged in Macedonia and began clashing with government security forces. By June 2001, some 48,000 people had fled Macedonia for Kosovo. By mid-2002, more than 150,000 of the 170,000 persons displaced during the spring and summer of 2001 had returned home.

UNHCR estimated the cost of the annual program budget for Europe in 2006 at us\$110.2 million.

### UN RELIEF AND WORKS AGENCY FOR PALESTINE REFUGEES IN THE NEAR EAST (UNRWA)

The plight of Palestine refugees has been a serious concern of the UN ever since the Arab-Israeli War of 1948. When a cease-fire came into effect early in 1949, hundreds of thousands of Arabs who lived in the territory that is now Israel were stranded on the other side of the armistice line from their homes. The Arab states claim that the refugees were driven out by the Israelis or fled in fear of reprisals. Israel, on the other hand, asserts that the Arab states told the Arab population to evacuate the area temporarily so that their armies could more easily drive the Israelis into the sea. (For the political background, see the section on the Middle East in the chapter on International Peace and Security.)

The refugees were given emergency relief at first by the ICRC, the League of Red Cross Societies, and the American Friends Service Committee, using money and supplies provided by the temporary UN Relief for Palestine Refugees, established in December 1948. In December 1949, the General Assembly created a special agency, the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), to provide relief and works

projects in collaboration with the local governments. In the following year, the General Assembly extended UNRWA's mandate to June 1952 and instructed it to carry out development projects that would enable the refugees to be absorbed into the economy of the region. As originally conceived, UNRWA was a large-scale but definitely temporary operation, to be terminated by the end of 1952. The General Assembly accordingly asked Israel and its neighbors to secure "the permanent reestablishment of the refugees and their removal from relief." In carrying out programs of resettlement, however, all parties concerned, including UNRWA, were to act without prejudice to the rights of those refugees who "wished to return to their homes and live in peace with their neighbors." These were to "be permitted to do so at the earliest practicable date"; those who chose not to do so were to be compensated for their losses.

These goals were not achieved by 1952 and have not been met since then. Large-scale development projects to induce the refugees to leave the camps and enable them to become self-supporting in their host countries were approved by the General Assembly but never realized. Since 1952, UNRWA's mandate has been repeatedly extended.

For more information on UNRWA, see the chapter on International Peace and Security.

## YOUTH

Concern for youth has been expressed within the UN system ever since its inception and particularly since the adoption by the General Assembly in 1965 of the Declaration on the Promotion Among Youth of the Ideals of Peace, Mutual Respect and Understanding Between Peoples. In that declaration, the General Assembly stressed the importance of the role of youth in today's world, especially its potential contribution to development, and proposed that governments give youth an opportunity to take part in preparing and carrying out national development plans and international cooperation programs.

Other recommendations made to member states by the General Assembly relate to the preparation of youth, through education, for full participation in all aspects of life and development; health policies and programs to ensure that young people are able to take advantage of opportunities open to them; the adoption of all possible means to increase employment for youth; the opening up of channels of communication between the UN and youth organizations; and measures aimed at promoting human rights and their enjoyment by youth.

The World Youth Assembly, held at UN headquarters in July 1970, was the first international youth convocation organized by the UN. It brought together some 650 young people to express their views on issues relating to world peace, development, education, and the environment and to discuss ways in which they could support the UN.

In 1979, the General Assembly decided to designate 1985—the twentieth anniversary of the 1965 Declaration—as International Youth Year, with the three themes of participation, development, and peace. The objectives of the year were to bring about widespread awareness of the situation of young people and of their problems and aspirations, and to engage them in the development process. International Youth Year resulted in the endorsement by the General Assembly of guidelines for strategies and activities in

favor of youth at the national, regional, and international levels in coming years.

In observance of the tenth anniversary of International Youth Year, in 1995, the General Assembly devoted a plenary meeting to the subject of youth to set forth goals for a world youth program of actions towards the year 2000 and beyond. Its principal objective was to provide a global framework for national and regional action. The plan of action was drafted by the UN secretariat following the submission of proposals by member states, organizations of the UN system, and nongovernmental organizations.

A trust fund established for International Youth Year and renamed the UN Youth Fund is used to support projects involving young people in the development of their countries.

## AGING AND THE ELDERLY

In the 75 years between 1950 and the year 2025, the world elderly population is projected to increase from 8% to 14% of the total global population, or 1.2 billion persons. While the total world population will have grown by a factor of a little more than three, the elderly will have grown by a factor of six and the very old by a factor of 10. The developing countries are projected to age more quickly in the coming decades, and are concerned by two factors: a weak institutional infrastructure for accommodating the elderly, and the uncertainty that families will be able to continue providing traditional care for the elderly.

In 1948, Argentina first presented a draft declaration on old age rights to the General Assembly, which referred it to ECOSOC. ECOSOC requested the Secretary-General to draft a report on the matter, and in 1950 he submitted a report entitled "Welfare of the Aged: Old Age Rights." However, the rapid change in the world's population structure was not evident in 1950, and an interval of 20 years elapsed before Malta tabled another initiative on the agenda of the General Assembly in 1969. This initiative was followed throughout the 1970s and led to the convening of the World Assembly on Aging in 1982.

In 1973, the General Assembly considered a comprehensive report that noted the demographic increase in the absolute and relative size of the older populations of the world (a trend that was expected to continue because of medical advances and decreases in birth and death rates) and estimated that the number of persons 60 years of age or over throughout the world would double between 1970 and the year 2000. The General Assembly recommended guidelines to governments in formulating policies for the elderly, including development of programs for the welfare, health, and protection of older people and for their retraining in accordance with their needs, in order to maximize their economic independence and their social integration with other segments of the population.

In 1978, the General Assembly decided to convene a world assembly for the purpose of launching "an international action program aimed at guaranteeing economic and social security to older persons," as well as opportunities for them to contribute to national development. The General Assembly later decided that the conference should also consider the interrelated issue of the aging of whole populations.

The World Assembly on Aging, held in Vienna in July–August 1982, was attended by representatives of more than 120 countries. It adopted an international plan of action, both to help the aging

as individuals and to deal with the long-term social and economic effects of aging populations. Recommendations contained in the plan of action covered (1) the need to help the elderly lead independent lives in their own family and community for as long as possible, instead of being excluded and cut off from all activities of society; (2) the importance of giving the elderly a choice in regard to the kind of health care they receive and the importance of preventive care, including nutrition and exercise; (3) the need to provide support services to assist families, particularly low-income families, to continue to care for elderly relatives; and (4) the need to provide social-security schemes, to assist the elderly in finding (or returning to) employment, and to provide appropriate housing. The plan of action also included recommendations for meeting the needs of particularly vulnerable persons, such as elderly refugees and migrant workers.

The Commission for Social Development, which is entrusted with reviewing implementation of the plan of action every four years, noted in 1985 that by the year 2025, more than 70% of persons over 60 years of age would live in developing countries. In 2025, experts estimate that the elderly population of the world will number 1.2 billion, six times more than the 200 million elderly worldwide in 1950. The commission listed priorities for action, including the creation of national committees on aging, coordinated planning, strengthening of information exchange, training, research, and education programs.

In 1988, the UN established the International Institute on Aging in Valetta, Malta, to conduct training, research, collection and publication of data, and technical cooperation in the field of aging. In 1990, the General Assembly designated 1 October as the International Day for the Elderly. In 1991, the General Assembly adopted a set of 18 United Nations "Principles for Older Persons" clustered under five themes: independence, participation, care, self-fulfillment, and dignity. The principles mandate that older persons should have the opportunity to work and to determine when to leave the work force; remain integrated in society and participate actively in the formation of policies that affect them; have access to health care to help them maintain the optimum level of physical, mental, and emotional well-being; be able to pursue opportunities for their full development; and be able to live in dignity and security.

In 1992, the General Assembly gave its patronage to the privately-created Banyan Fund Association's World Fund for Aging, in Torcy, France, which assists developing countries, at their request, in activities aimed at formulating and implementing policies and programs on aging. Also in 1992, the General Assembly devoted four special plenary meetings in October to a conference on aging. It issued a Proclamation on Aging (resolution A/47/5), which reaffirmed its previous resolutions and established the year 1999 as the International Year of the Elderly "in recognition of humanity's demographic coming of age and the promise it holds for maturing attitudes and capabilities in social, economic, cultural and spiritual undertakings, not least for global peace and development in the next century." In its Resolution 47/86, the General Assembly adopted a set of global targets on aging for the year 2001 as a practical strategy for countries to provide for the needs of the elderly.

On 5 October 2000, the UN held a 10th Annual Celebration of the International Day of Older Persons, sponsored by the UN/NGO Committee on Aging in collaboration with the UN Depart-

ment of Public Information and the UN Department of Economic and Social Affairs. The conference raised the issue of interdependence between generations.

## DISABLED PERSONS

Under the charter principles of the dignity and worth of the human being and the promotion of social justice, the General Assembly has acted to protect the rights of disabled persons. In 1971, it adopted the Declaration on the Rights of Mentally Retarded Persons, and in 1975, the Declaration on the Rights of Disabled Persons (see the section on Other Declarations in the chapter on Human Rights). In 1976, the General Assembly decided to proclaim 1981 as International Year of Disabled Persons, and it called for a plan of action for the year at the national, regional, and international levels.

The year's purpose, and its theme, was the promotion of "full participation and equality," defined as the right of disabled persons to take part fully in the life and development of their societies, to enjoy living conditions equal to those of other citizens, and to have an equal share in improved conditions resulting from socioeconomic development. Other objectives of the year included increasing public understanding of disability and encouraging disabled persons to organize themselves to express their views effectively.

During the year, national committees were set up in more than 140 countries to map out plans of action to implement the objectives of the year. Regional seminars—for Asia and the Pacific, Africa, Latin America, Western Asia, and Europe—held during the year discussed regional cooperation on behalf of disabled persons. At the international level, organizations of the UN system and other intergovernmental organizations, as well as nongovernmental organizations (NGOs), discussed ways in which the world community could aid the disabled through technical cooperation and other means.

The year's activities were followed by the General Assembly's adoption, in 1982, of a World Program of Action Concerning Disabled Persons, aimed at continuing long-term programs at the national, regional, and international levels. To provide the necessary time frame for implementation of the program, the General Assembly proclaimed the period 1983–92 as the UN Decade of Disabled Persons.

The World Program of Action has proved to be a valuable guide for improving the social, economic, and physical conditions of disabled persons by defining disability issues in the context of human rights and recommending measures aimed at equalizing opportunities for the full participation of disabled persons in society. The program has offered a new approach on disability, representing a step forward in social thinking on such aspects as prevention of disabilities, rehabilitation, equalization of opportunities, and participation of disabled persons in all aspects of life.

During the first five years of the Decade of Disabled Persons, 1983–87, there was a significant growth in the number of organizations of disabled persons throughout the world, which were able to articulate and identify their needs. Governments, NGOs, and regional bodies reported an increased awareness by disabled persons of their rights. There was also an increase in research and exchange of information on the prevention of disabilities and the

rehabilitation of the disabled, on the mobility of the disabled, and on their participation in leisure and sports activities.

At the same time, obstacles impeding the implementation of the World Program of Action were identified, including the demographic increase in the number of disabled persons worldwide because of poverty, malnutrition, wars, civil unrest, and deteriorating social and economic conditions in many countries. Because of these obstacles, the General Assembly drew up a set of priority activities to ensure the effective implementation of the program of action during the remaining half of the decade.

Although several specialized agencies in the UN system had prepared guidelines and manuals on key disability issues, those guidelines were not incorporated into national programs in the majority of countries. In order to make the World Program of Action more operational, the General Assembly called for a long-term strategy setting out standard rules on the equalization of opportunities for disabled persons. In 1990 ECOSOC passed Resolution 1990/26 authorizing the Commission for Social Development to establish a working group to create a set of standard rules for submission to the General Assembly in 1993. This new instrument offered governments clear policy options on how to implement measures for full equalization of opportunities for disabled persons.

In 1992, the last year of the designated decade, Secretary-General Boutros-Ghali reported that the 1981 Year for Disabled Persons was so successful in getting the issue of disability and the concerns of disabled people on national agendas that it had come to be regarded as a milestone in the long struggle of disabled people for equal rights. Four plenary sessions of the General Assembly in October 1992 were devoted to a celebration and evaluation of the progress made during the decade. Prior to then, an International Conference of Ministers Responsible for Disability met in Montreal to seek consensus on a framework for action to continue the momentum generated by the decade.

It was clear that the major achievement of the decade was increased public awareness of disability issues among policy-makers, planners, politicians, service providers, parents, and disabled persons themselves. For example, information on disability issues is now included in censuses and some 55 countries now maintain statistical information on disability. In 1960, such information was available in only 15 countries. Several European countries set up computerized information networks to share disability-related information. It was also observed that nongovernmental organizations dedicated to the welfare of disabled people were able to increase their influence and gain the respect of their communities. The Voluntary Fund for the United Nations Decade of Disabled Persons had supported 161 projects by the end of 1991, for a total of approximately US\$2.9 million. By its resolution 47/88, the General Assembly decided that the fund would continue in the period beyond the Decade as the United Nations Voluntary Fund on Disability, and that its terms of reference would include support for action to achieve the target of a "society for all" by the year 2010. During the 20-month period of 1 January 1998 to 31 August 1999, the fund provided nearly US\$1 million in grants to 35 disability-related projects.

However, despite its relative success, by the end of the decade, it was estimated that 300 million people with disabilities lived in

developing countries and that only 1% of these had access to basic health, education, and adequate sanitation services.

## THE FAMILY—SOCIETY'S BUILDING BLOCK

Although many of the UN's resolutions and instruments deal tangentially with the needs of families, the General Assembly's first formal recognition of the family unit's special status as the basic building block of civilized society came in 1989 when it passed resolution A/44/82 (1989) proclaiming 1994 as the first International Year of the Family. The theme of the year was "Family: resources and responsibilities in a changing world," and its motto was "Building the smallest democracy at the heart of society." In 1993, the General Assembly declared 15 May 1994 the first International Day of Families, to be celebrated annually thereafter.

The General Assembly sought to raise the awareness of governments at the national, local, and regional levels about the threat posed to families and the possible consequences to society of the fragmentation and disintegration of the family unit. The erosion of social safety nets around the world had placed tremendous burdens on families. Abject poverty, which affected 20% of the world population, contributed to the destruction of families, for example, when members left the family unit to search for employment. Studies showed that within the space of a few decades the traditional extended family had shrunk to the nuclear family and finally to the single-parent family. In the United Kingdom alone, half of all births in 1990 were to single women. UN agencies called for recognition of the family's contribution towards achieving human development, alleviating poverty, and providing health care, nutrition, education, shelter, and employment for family members. The UN called for governments to formulate "family-sensitive" national policies and to assess how decisions would affect families.

Rather than try to narrowly define the family, the General Assembly took the broadest possible approach, encouraging celebration of the vast diversity observed in families throughout the world. A study showed that average family size varied from 2.2 members in Sweden to 7.1 members in Iraq. In all industrial countries except the former Soviet Union, the average household size shrank between 1970 and 1990. In the United States the average household shrank from 3.1 persons in 1970 to 2.6 persons in 1990. On the other hand, households grew in size in Africa, south Asia, and the Middle East. In Algeria, for example, average household size grew from 5.9 persons in 1966 to 7 persons in 1987. Despite the many cultural and economic differences in families around the world, according to the Secretary-General, some elements of an international consensus regarding families emerged:

- The family is the natural and fundamental group unit of society and is entitled to protection by society and the state;
- Various concepts of the family exist in different social, cultural, and political systems, but it is recognized that families are basic to the social structure and development of all societies. It is also recognized that families around the world exhibit many common problems.
- Gender equality, women's equal participation in employment, and shared parental responsibilities are essential elements of modern family policy;
- Families are the fullest reflection, at the grass-roots level, of

the strengths and weaknesses of the social and developmental environment; and

- Families, as basic units of social life, are major agents of sustainable development at all levels of society, and their contribution is crucial for its success.

Besides four regional preparatory meetings and two nongovernmental events held in 1993 to prepare for the International Year of the Family, the General Assembly held an International Conference on Families in October 1994. The secretariat for the International Year, based in Vienna, coordinated technical cooperation projects in Africa and the countries of the former Soviet Union. A world forum of nongovernmental organizations (NGOs) held in Malta in late 1993 called for the UN and its member nations to enter into an ongoing process of building a family-friendly society. It also called for the elaboration of a declaration on the rights and responsibilities of families in the follow-up to the International Year of the Family.

Some of the most important existing international instruments that refer to the family are:

- the 1948 Universal Declaration of Human Rights;
- the 1966 International Covenant on Economic, Social and Cultural Rights;
- the 1979 Convention on the Elimination of All Forms of Discrimination Against Women;
- the 1981 Declaration on the Elimination of All Forms of Intolerance and of Discrimination Based on Religion or Belief; and
- the 1989 Convention on the Rights of the Child.

## CRIME PREVENTION AND CRIMINAL JUSTICE

The work of the UN in the field of crime prevention and criminal justice has two main purposes: to lessen the human and material costs of crime and its impact on socioeconomic development and to formulate international standards and norms in crime prevention and criminal justice and promote their observance.

By 1990, United Nations statistics showed that worldwide incidence of assaults had risen from around 150 per 100,000 population in 1970 to nearly 400 per 100,000 population in 1990. The incidence of thefts had more than tripled in the same period. In addition, the number of adults held in legal detention worldwide increased from around 1 million in 1975 to 1,100,000 in 1980, a 10% jump. Another UN study showed that developed countries were spending an average of 2 to 3% of their budgets on crime control, while developing countries were devoting an average of 9 to 14% of their precious national resources to crime control. Traffic in illicit drugs was estimated to total US\$500 billion a year. The intertwined expansion of transnational organized crime and the traffic in illicit drugs, and their link to international terrorism, provided the most powerful arguments for international cooperation.

### Historical Background

Evidence of systems of criminal justice date back to the dawn of human civilization. Clay tablets from 2400 BC listing a code of conduct have been unearthed in Syria. The ancient civilization of Sumeria left an elaborate set of laws dating back to the twenty-first century BC. Standards for imposing penalties on criminals were

handled more informally, rarely being codified into law before the advent of the modern era. The earliest form of international cooperation between sovereign nations may have been efforts to control piracy on the high seas. However, it was the nineteenth century that saw the development of widespread concern about the growth of urban crime, and the proliferation of reformatories and penal institutions.

The First International Congress on the Prevention and Repression of Crime was held in London in 1872 to consider the proper administration of prisons, possible alternatives to imprisonment, modes of rehabilitating criminals, treatment of juvenile offenders, extradition treaties, and the “means of repressing criminal capitalists.” These subjects continue to challenge the international community at the end of the twentieth century. The London congress established the International Prison Commission with a mandate to collect penitentiary statistics, encourage penal reform, and convene international conferences every five years. The IPC established an affiliation with the League of Nations and, in 1935, was renamed the International Penal and Penitentiary Commission (IPPC). For 75 years, the IPPC did invaluable work in the collection of research materials; however, at the 1935 congress, it became dominated by adherents of the Nazi government in power in Germany. During the war years a substantial part of its funding came from the Axis powers, and it became a publicist for Fascist theories on the biological roots of crime and draconian measures for its control. When the United Nations was established at the close of World War II, it declined to accept affiliation with the IPPC. The UN did, however, decide that the control and prevention of crime would be one of its areas of concern.

### United Nations Activities

On 1 December 1950, by its resolution 415(V), the United Nations dissolved the IPPC and officially assumed its functions. These functions include the convening of international congresses every five years, the formulation of policies, and the development of international programs of action. To discharge these responsibilities, the General Assembly, in 1950, authorized the UN Congress on the Prevention of Crime and the Treatment of Offenders to be convened every five years.

In its resolution 415(V), the General Assembly also created an Ad Hoc Advisory Committee composed of seven experts to formulate programs for study and action in the field of crime prevention and treatment of offenders. This ad hoc committee eventually became the Committee on Crime Prevention and Control (CCPC), established in 1971 in response to the 1970 crime congress (held in Kyoto, Japan), which broadened considerably the scope of issues relating to criminal justice policy. The CCPC had 27 members who were nominated by their governments and elected by ECOSOC. It was charged with coordinating the efforts of UN bodies and prepared for the international crime congresses. It frequently drafted proposed texts for international standards and guidelines concerning criminal justice policy.

In November 1991, a Ministerial Summit, attended by 114 state ministers, was held in Versailles, France, and called for creation of a new UN crime prevention and criminal justice program. The General Assembly responded by transforming the CCPC into a functional commission of ECOSOC: the Commission on Crime Prevention and Criminal Justice. The commission held its first

session in April 1992 at Vienna. It is charged with developing, monitoring, and reviewing the UN's program on crime prevention and mobilizing support from member states. It coordinates the activities of the UN's regional and interregional institutes on crime prevention and criminal justice. It also is responsible for preparing for UN crime congresses.

#### The Office on Drugs and Crime (ODC)

This branch of the UN Secretariat, headquartered in Vienna, is the UN's central repository of technical expertise in matters of crime prevention, criminal justice, criminal law reform, and major criminological concern. It prepares studies and reports for the quinquennial congresses and for the Center for International Crime Prevention. The branch collects and analyzes statistics and provides technical assistance to member states and regional institutes. It prepares periodic country-by-country surveys of crime trends and criminal justice policies. The branch issues two regular publications: *The International Review of Criminal Policy*, a journal of applied criminology published annually since 1952, and the *Crime Prevention and Criminal Justice Newsletter*, which disseminates information on United Nations activities in the field.

The Office on Drugs and Crime also works closely with various regional centers, a research institute and an international computer information network. The international standards proposed by the UN are meant as springboards to for appropriate national action. Differences in history, culture, economic structures, and governmental institutions dictate against a wholesale adoption of UN guidelines and standards. Regional centers can take into account the differing cultures and traditions of geographically linked countries and can better guide and harmonize national policies.

The *United Nations Interregional Crime and Justice Research Institute (UNICRI)* is based in Rome. It was founded in 1968, in response to concerns voiced by the 1965 Stockholm crime conference, under the name United Nations Social Defence Research Institute. UNICRI is housed in the heart of the old section of Rome, in an edifice built at the order of Pope Innocent X as a model prison for the replacement of dungeons used in the Middle Ages. The Italian government modernized the building's interior and made it available to UNICRI.

UNICRI carries out field research in conjunction with local institutions and experts. The institute is often charged with specific research projects in preparation for international crime congresses. It also holds international seminars and workshops. Its experts execute technical cooperation missions to assist member countries in implementing specific projects. It has a small but highly specialized library on criminology, penology, and related fields of law, sociology, and psychology. It also maintains a collection of United Nations and Council of Europe documents concerning criminal justice affairs. It publishes major research papers and an annual catalog of relevant research from around the world. UNICRI has computerized its *World Directory of Criminological Resources*, and it has created the software and user manual for a computerized international expert roster. It has taken the lead in developing a UN global information network (see UNCJIN, below).

The *African Regional Institute for the Prevention of Crime and the Treatment of Offenders (UNAFRI)* was established in January 1987, in temporary quarters at Addis Ababa, Ethiopia. It is now based in Kampala, Uganda. It organizes training courses and re-

search and brings together criminal justice officials and development planners from all over Africa. It has conducted a feasibility study on the establishment of a regional, computerized information network to link up with the United Nations Criminal Justice Information Network (UNCJIN) (see below). UNAFRI operates under the auspices of the Economic Commission for Africa with financial assistance from the United Nations Development Program.

The *Asian and Far East Institute for the Prevention of Crime and the Treatment of Offenders (UNAFEI)* was established in 1961 and is based in Tokyo, Japan. It provides facilities for training courses and sends its staff to countries within the region to conduct classes in cooperation with host governments. UNAFEI publishes a regular newsletter and studies such as *Forms and Dimensions of Criminality in Asian Countries*, *Alternatives to Imprisonment in Asia*, and *Criminal Justice in Asia—the Quest for an Integrated Approach*. Although UNAFEI was initially a joint venture between the United Nations and the government of Japan, financial assistance from the UN was discontinued in 1970. The director of UNAFEI is assigned by the government of Japan in consultation with the UN.

The *European Institute for Crime Prevention and Control (HEUNI)* was established in 1981 in an agreement between the United Nations and the government of Finland. It is based in Helsinki. Its funds are provided by the government of Finland with assistance from other governments. HEUNI conducts training seminars and holds expert meetings to study regional issues in depth. Its expert meetings are often convened in order to offer a European perspective on draft documents of UN criminal justice policy. HEUNI has been actively involved with plans for a global UN information system on crime and criminal justice. Its publications include: *Criminal Justice Systems in Europe*, *The Role of the Victim of Crime in European Criminal Justice Systems*, and *Non-Custodial Alternatives in Europe*.

The *Latin American Institute for the Prevention of Crime and the Treatment of Delinquency (ILANUD)* was established in 1975 and is based in San José, Costa Rica. ILANUD devises practical strategies taking into account UN recommendations in criminal justice. It organizes regular training courses, workshops, seminars, and conferences for personnel in the criminal justice systems of Latin American governments. In 1987 it established an Agrarian Justice Program that aimed at improving procedures governing agricultural production. ILANUD also implemented a computerized data base in its documentation center. ILANUD was established with financial assistance from the United Nations, but now is supported mainly by the government of Costa Rica.

In 1989, the *United Nations Crime and Justice Information Network (UNCJIN)* began operating under the auspices of the Criminal Justice Branch. UNCJIN is a computer network accessible by modem and gopher technology on the Internet. The UNCJIN gopher was resident on the computer system of the State University of New York at Albany. UNCJIN is funded in part by the United States Bureau of Justice Statistics, the State University of New York at Albany, and the Research Foundation of the State University of New York. UNCJIN's goal is to establish a worldwide network to disseminate and exchange information concerning criminal justice and crime prevention issues. Information available through the UNCJIN is constantly evolving and expanding. UNCJIN data

and documents (many in PDF, portable document format) are available on their web site at <http://www.uncjin.org/>. In 2000 it included: criminal justice profiles of more than 120 countries; basic constitutional documents of countries; summaries of the latest United States Supreme Court decisions; international criminal justice statistics from the UN World Crime Surveys; United States Bureau of Justice Statistics reports; the entire CIA Factbook; and an annotated list of publication outlets in criminal justice and criminology. One can also search the on-line library catalogs of major criminal justice and law libraries around the world, examine all the major United Nations rules and guidelines on criminal justice, and access to other UN online resources.

### UN Congresses on Prevention of Crime and Treatment of Offenders

Participants in UN crime congresses include criminologists, penologists, and senior police officers as well as experts in criminal law, human rights, and rehabilitation. Representatives of UN member states and of intergovernmental and nongovernmental organizations also attend. Eight crime congresses were held between 1955 and 1990. The tenth congress was held in Vienna, Austria, in April 2000.

The *first congress*, held in Geneva in 1955, was attended by delegates from 51 governments and representatives from the ILO, UNESCO, WHO, the Council of Europe, and the League of Arab States. The topics of the first congress reflected the pressing concerns of Europeans recovering from the turmoil of World War II. Many delegates had experienced brutality and deprivation while incarcerated in their own countries by the occupying Fascist powers. It adopted 95 standard minimum rules for the Treatment of Prisoners, which set out what is accepted to be good general principle and practice in the treatment of prisoners and are also intended to guard against mistreatment. An additional rule, adopted in 1977, provides that persons arrested or imprisoned without charge are to be accorded the same protection as persons under arrest or awaiting trial and prisoners under sentence. The success of the Standard Minimum Rules paved the way for many other international models, standards, norms, and guidelines touching on every aspect of criminal justice. The prevention of juvenile delinquency was also considered at the congress, since so many children were growing up abandoned or orphaned.

The *second congress*, held in London in 1960, was attended by representatives of 70 governments and delegates from 60 nongovernmental organizations. In all, there were 1,131 participants. The second congress dealt with a wider range of issues than the first congress. It considered the growing problem of juvenile delinquency, as well as questions of prison labor, parole, and after-care. The addition of new member states to the United Nations required the expansion of the largely European perspective that dominated the first congress. The congress analyzed crime and criminal justice in relation to overall national development. Experts warned that economic improvement alone was not a one-way street leading away from crime. Tumultuous economic growth could lead to a greater prevalence of crime.

The *third congress*, held in Stockholm in 1965, addressed the ambitious theme of "Prevention of Criminality." Topics on the agenda included a continuation of the discussion on social change and criminality; social forces and the prevention of crime; com-

munity-based preventive action; measures to curtail recidivism; probation policies; and special preventive and treatment programs for young adults. A total of 1,083 participants, representatives of 74 governments and 39 nongovernmental organizations, attended the third congress. The influence of the increasing numbers of developing member nations made itself felt in 1965. The congress asserted that developing nations should not restrict themselves to mechanically copying criminal justice institutions developed in Western countries.

The *fourth congress*, held in Tokyo in 1970, was the first to take place outside of Europe. Although the number of participants declined slightly, to 1,014, the number of governments represented rose to 85. The fourth congress was convened under the slogan "Crime and Development," reflecting the dramatic increase in the number of developing countries who had become members of the UN during the 1960s. It stressed the need for crime control and prevention measures (referred to as "social defense policies") to be built into development planning. The third congress expanded the theme of community-based prevention, noting the successful utilization of civic involvement in the host nation, Japan. The congress also investigated the nation-by-nation implementation of the Standard Minimum Rules for the Treatment of Prisoners, relying on results of a questionnaire submitted to member states before the opening of the congress.

The *fifth congress*, held in Geneva in 1975, the number of nations represented increased to 101 and the participation of the specialized agencies was augmented by the presence of Interpol and the Organization for Economic Cooperation and Development (OECD). The congress's theme was "Crime Prevention and Control: the Challenge of the Last Quarter of the Century." Among the many topics considered were:

- changes in the form and dimension of criminality at national and transnational levels;
- crime as a business and organized crime;
- the role of criminal legislation, judicial procedures, and other forms of social control in the prevention of crime;
- the addition of crime-prevention activities to the traditional law enforcement roles of police;
- the implementation of the Standard Minimum Rules for the Treatment of Offenders;
- the economic and social consequences of crime;
- alcohol and drug abuse;
- victim compensation as a substitute for retributive criminal justice.

The fifth congress was responsible for two documents that rank in importance with the standard minimum rules: the "Declaration on the Protection of All Persons from Being Subjected to Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment," which was adopted by the General Assembly by its Resolution 3452 (XXX); and the "Code of Conduct for Law Enforcement Officials," which has been called a Hippocratic oath for police professionals. The code was adopted by the General Assembly in 1979. The declaration on torture was given binding legal form in 1984, when the General Assembly adopted a convention on the same subject (see the section on Other International Human Rights Conventions in the chapter on Human Rights).

The *sixth congress*, held in Caracas in 1980, was the first UN crime congress to be hosted by a developing nation and the first held in the western hemisphere. Delegations from 102 nations, the ILO, WHO, the Council of Europe, Interpol, the League of Arab States, the Organization for African Unity, and the Pan-Arab Organization for Social Defence attended. The congress's theme was "Crime Prevention and the Quality of Life." It considered the following matters:

- new trends in crime and appropriate prevention strategies;
- the application of juvenile justice measures;
- offenses by the powerful, who quite often stand beyond the effective reach of the law;
- deinstitutionalization of correction measures;
- the role of UN guidelines and standards in criminal justice;
- capital punishment;
- the importance of international cooperation.

A working group of experts from Latin America and the Caribbean contributed an innovative approach on the classification of crimes. It suggested that the scope of criminal law statutes should be broadened to include willful actions harmful to the national wealth and well-being—destruction of the ecology, or participation in drug trafficking, or trafficking in persons. By way of corollary, the working group recommended a decrease in the number of statutes covering petty crimes or crimes that had little socially destructive effect.

The *seventh congress*, held in Milan in 1985, adopted the Milan Plan of Action as a means of strengthening international cooperation in crime prevention and criminal justice. The plan was approved later the same year by the General Assembly, which also approved international instruments and principles adopted by the Milan Congress. These were the UN Standard Minimum Rules for the Administration of Juvenile Justice (the Beijing Rules), the Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power, Basic Principles on the Independence of the Judiciary, and a Model Agreement on the Transfer of Foreign Prisoners.

The Beijing Rules aim at promoting juvenile welfare to the greatest possible extent, thereby minimizing the necessity of intervention by the juvenile justice system. The rules set minimum standards for the handling of juvenile offenders, enumerate the rights of juveniles, and include principles for adjudication and disposition of juvenile offenses and for institutional and noninstitutional treatment of juvenile offenders.

The Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power defines "victims" as persons who, individually or collectively, have suffered harm, including physical or mental injury, emotional suffering, economic loss, or substantial impairment of their fundamental rights, through acts or omissions that are in violation of criminal laws or constitute violations of internationally recognized norms relating to human rights. It sets forth the rights of such victims and their families to restitution, compensation, and social assistance.

The Basic Principles on the Independence of the Judiciary stipulate that the judiciary shall have jurisdiction over all issues of a judicial nature and that judges shall decide matters before them impartially, without any restrictions, improper influences, or in-

terference. The right of everyone to be tried by ordinary courts or tribunals is reaffirmed.

The Model Agreement on the Transfer of Foreign Prisoners is aimed at promoting the social resettlement of offenders by facilitating the return of persons convicted of crimes abroad to their country of nationality or residence to serve their sentence at the earliest possible stage.

The Milan Congress also considered questions relating to human rights in the administration of justice and to the prevention of juvenile delinquency and domestic violence.

The *eighth congress* was held in Havana, Cuba, from 27 August to 7 September 1990. The congress was attended by 1,400 participants from 127 countries, five intergovernmental organizations, and 40 nongovernmental organizations. Its overall theme was "International cooperation in crime prevention and criminal justice for the twenty-first century." The congress considered five topics: (1) crime prevention and criminal justice in the context of development; (2) criminal justice policies in relation to problems of imprisonment, other penal sanctions, and alternative measures; (3) effective national and international action against organized crime, terrorist criminal activities; (4) prevention of juvenile delinquency and protection of the young; and (5) United Nations norms and guidelines in crime prevention and criminal justice.

The eighth congress adopted a number of new instruments and resolutions that the General Assembly promptly approved. These included model treaties on extradition, mutual assistance in criminal matters, the transfer of proceedings in criminal matters, and the supervision of offenders conditionally sentenced or conditionally released. Other instruments passed were:

- A model treaty for the prevention of crimes against a peoples' cultural heritage;
- Basic Principles on the Use of Force and Firearms by Law Enforcement Officials;
- Basic Principles on the Role of Lawyers;
- Guidelines on the Role of Prosecutors;
- United Nations Standard Minimum Rules for Non-custodial Measures (the Tokyo Rules);
- Basic Principles for the Treatment of Prisoners;
- Guidelines for the Prevention of Juvenile Delinquency (the Riyadh Guidelines); and
- Rules for the Protection of Juveniles Deprived of Their Liberty.

The conference also adopted resolutions on computerization, prevention of urban crime, protection of the environment, corruption in government, racketeering and illicit trafficking in narcotic drugs and psychotropic substances, computer-related crimes, measures against drug addiction, organized crime and terrorism, domestic violence, and the instrumental use of children in criminal activities. The congress also requested that guidelines be prepared on the management of prisoners infected with human immunodeficiency virus (HIV) and those with acquired immunodeficiency syndrome (AIDS).

The eighth congress called for the elaboration of an effective international crime and justice program to assist countries in combating problems of national and transnational crime. An im-

portant outcome was the creation of the Commission on Crime Prevention as a functional commission of ECOSOC.

Substantive topics at the *ninth congress* (in 1995) included the fight against transnational organized crime; the elimination of violence against women; improvements in the administration of justice and the rule of law; migration and crime; technical cooperation and coordination of activities.

The *tenth congress* (2000) took as its title “Crime and justice, meeting the challenges of the 21st century.” The congress discussed the following topics: (1) how to promote the rule of law and to strengthen the criminal justice system; (2) international cooperation in combating transnational organized crime; (3) effective crime prevention—keeping pace with the new developments; and (4) offenders and victims—accountability and fairness in the justice process. In addition, four workshops were held on combating corruption, crimes related to the computer network, community involvement in crime prevention, and women in the criminal justice system. At the tenth congress, a “Vienna Declaration on Crime and Justice” was adopted, in which delegates pledged to take measures to combat terrorism, trafficking in human beings, illicit trade in firearms, smuggling of migrants and the estimated \$600 billion money laundering business. Considerable attention was paid to the need to address the rising tide of computer-related crime and crime resulting from xenophobia and ethnic hatred.

The *eleventh congress* (2005) took as its theme “Synergies and responses: strategic alliances in crime prevention and criminal justice.” Major issues discussed included: effective measures to combat transnational organized crime; international cooperation against terrorism and links between terrorism and other criminal activities in the context of the work of the United Nations Office on Drugs and Crime; corruption-threats and trends in the twenty-first century; economic and financial crimes-challenges to sustainable development; and making standards work-fifty years of standard-setting in crime prevention and criminal justice. The following workshops were held: Workshop 1: Enhancing international law enforcement cooperation, including extradition measures; Workshop 2: Enhancing criminal justice reform, including restorative justice; Workshop 3: Strategies and best practices for crime prevention, in particular in relation to urban crime and youth at risk; Workshop 4: Measures to combat terrorism, with reference to the relevant international conventions and protocols; Workshop 5: Measures to combat economic crime, including money-laundering; and Workshop 6: Measures to combat computer-related crime.

## INTERNATIONAL COOPERATION FOR NARCOTIC DRUGS CONTROL

*“...Let us resolve that at this special session of the General Assembly, words lead to action and that this action leads to success. Drug abuse is a time bomb ticking away in the heart of our civilization. We must now find measures to deal with it before it explodes and destroys us.”*

—Secretary-General Javier Pérez De Cuéllar (From remarks to the 17th Special Session of the General Assembly, 20 February 1990)

Until the end of the 19th century, trade in narcotics was considered a legitimate business. Misuse of addiction-producing sub-

stances—opium, coca leaf, and Indian hemp—was thought to be the result of ingrained habits in particular areas of the world. The problem was considered a domestic one. However, modern technology and the expansion of transport and world trade introduced a new dimension. An increasing number of alkaloids and derivatives were being produced from opium and coca leaves and easily distributed. In addition, a large number of psychotropic substances (depressors of the central nervous system such as barbiturates, stimulants of the central nervous system such as amphetamines, and hallucinogens such as lysergic acid diethylamide, or LSD) were developed and their consumption increased enormously; hence, problems once considered local became global.

The UN exercises functions and powers relating to the worldwide control of narcotic drugs in accordance with a number of international treaties concluded since 1912, when the first International Opium Convention was signed at The Hague. By 1994, the majority of countries were parties to one or more of the treaties. The international control system is based on the cooperation of the states that are bound by these treaties in controlling the manufacture and sale of drugs within their jurisdiction. The treaties stipulate that these states are bound to adopt appropriate legislation, introduce necessary administrative and enforcement measures, and cooperate with international control organs as well as with each other.

### Narcotics Control Under the League of Nations

The League of Nations Covenant provided that League members should “entrust the League with the general supervision over agreements with regard ... to the traffic in opium and other dangerous drugs.” The first League Assembly created an Advisory Committee on Traffic in Opium and Other Dangerous Drugs to assist and advise the League’s Council in its supervisory tasks in the field. The League established a Permanent Central Board, later renamed the Permanent Central Narcotics Board, to supervise the control system introduced by the second International Opium Convention, which came into force in 1928. The board was composed of independent experts, to whom League members were required to submit annual statistics on the production of opium and coca leaves and on the manufacture, consumption, and stocks of narcotic drugs and quarterly reports on the import and export of narcotic drugs. Specific governmental authorizations were required for every import and export of narcotic drugs.

The Convention for Limiting the Manufacture and Regulating the Distribution of Narcotic Drugs, signed at Geneva in 1931, created a new technical organ, also composed of independent experts, the Drug Supervisory Body. The aim of the 1931 convention was to limit world manufacture of drugs to the amount actually needed for medical and scientific purposes.

The Convention for the Suppression of the Illicit Traffic in Dangerous Drugs, signed at Geneva in 1936, called for severe punishment of illicit traffickers in narcotics and extradition for drug offenses.

A protocol signed on 11 December 1946 (and which entered into force on 10 October 1947) transferred to the United Nations the functions previously exercised by the League of Nations under the pre-World War II narcotics treaties.

## The United Nations and International Drug Control

### Historical Background

The functions of the League's Advisory Committee were transferred to the United Nations Commission on Narcotic Drugs (CND), established in 1946 as a functional commission of the Economic and Social Council. Over the years a number of bodies were created to carry out the work of the United Nations in the field of narcotics control, including the International Narcotics Board (INCB), the Division of Narcotic Drugs (part of the United Nations Secretariat), and the United Nations Fund for Drug Abuse Control (UNFDAC). In addition, several specialized agencies, notably the World Health Organization (WHO) and the United Nations Educational, Scientific and Cultural Organization (UNESCO), also were called on to contribute to the war on illegal drugs.

By the mid-1980s the General Assembly recognized that, while several important treaties had been elaborated (see under The Treaty System below), the system had not produced the desired result. Illicit traffic in drugs had achieved crisis proportions all over the world, threatening the stability of governments and regional peace and security in Africa, Southeast Asia, Latin America, and the Caribbean. In 1984, the General Assembly requested the CND to elaborate a new treaty to explicitly treat the problem of illegal drug trafficking. In 1985 the General Assembly decided to convene an International conference on Drug Abuse and Illicit Trafficking in Vienna in June 1987. That Conference adopted a Declaration and a Comprehensive Multidisciplinary Outline of Future Activities in Drug Abuse Control.

However, the 1987 annual report of INCB revealed that drug-trafficking syndicates now held enough financial power to challenge the elected authorities of some South American countries. In addition, the spread of Acquired Immune Deficiency Syndrome (AIDS) and the HIV virus had assumed pandemic proportions, due in large part to the sharing of infected needles by drug abusers. The INCB noted that international drug traffic was financed and organized by criminal organizations with international links and with accomplices in financial circles who helped "launder" money obtained through the drug trade. Member states proclaimed 26 June 1988 as the first International Day Against Drug Abuse, to begin to focus public attention on the worldwide scope of the problem.

In February 1988, a plenipotentiary conference of the United Nations member states was convened in Vienna. It adopted the 1988 United Nations Convention Against Illicit Trafficking in Narcotic Drugs and Psychotropic Substances (see under The Treaty System below), which was immediately ratified by 43 nations. However, for lack of sufficient ratifications and accessions, the convention did not come into effect until December 1990.

### The Global Programme of Action Against Drug Abuse

In November 1989, the General Assembly expressed its alarm at the slow pace of accessions holding up the entry into force of the 1988 convention. To consolidate international efforts, the General Assembly held a four-day special session (its seventeenth special session) in February 1990 to adopt a Political Declaration (A/RES/S-17/2) affirming the determination of the international community to band together to fight drug trafficking. In its declaration the General Assembly recognized the links between drug trafficking and the economic and social conditions of the countries produc-

ing drugs. It also voiced its concern about the link between drug trafficking and international terrorism, and the threat posed by transnational crime organizations that corrupted elected governments. The member states resolved to "protect mankind from the scourge of drug abuse and illicit trafficking in narcotic drugs and psychotropic substances...." They reaffirmed their commitment to support the international effort to eradicate drug trafficking both financially and by bringing national laws into line with the various United Nations treaties on narcotics control. The document also noted that international cooperation in restraining drug trafficking should be conducted in accordance with the principles of national sovereignty embodied in the United Nations charter. The General Assembly concluded the document by adopting a Global Programme of Action and declaring the period 1991–2000 the United Nations Decade Against Drug Abuse.

The 100-paragraph Global Programme of Action contained proposals for worldwide cooperation to stem the rising tide of drug abuse. Some of its provisions were based on the Multidisciplinary Outline mentioned above, and included:

- Raising national priorities for drug abuse prevention and reduction programs;
- Commissioning an analysis of the social causes generating drug demand;
- Providing UN financial support to prevent drug abuse by children, and the use of children in the drug trade in developing countries;
- Having the UN act as a global information clearinghouse on treatment and rehabilitation of drug addicts;
- Using high resolution satellite imagery and aerial photography (with the agreement of producing countries) to identify illegal narcotic cultivation;
- Convening an international conference to elaborate ways to prevent the diversion of the chemicals and substances used to process the raw materials of illicit drugs;
- Developing international mechanisms should be developed to prevent drug money laundering and to confiscate funds and property acquired with drug money;
- Promoting through the UN the exchange of information among states on the flows of drug money; coordinating anti-drug operation training.

On 15 February 1990, just before the General Assembly's special session, the United States, Bolivia, Colombia, and Peru met in Cartagena, Colombia, and signed the Cartagena Declaration, agreeing to cooperate to stem the flow of drugs to the United States. The four countries, representing the world's largest consumer (the United States) and the largest suppliers of illicit cocaine, agreed to wage a war on drugs on three fronts: demand reduction, consumption reduction, and supply reduction. The United States agreed to financially support alternative development to replace the coca-growing economy in Peru and Bolivia and to fund emergency social programs. The multilateral cooperation begun at the Cartagena summit was extended in 1992 at a summit held in San Antonio, Texas, to include Mexico in the international struggle against drug trafficking organizations.

### 1990 World Ministerial Summit

The government of the United Kingdom, in association with the United Nations, organized a three-day World Ministerial Summit to Reduce the Demand for Drugs and to Combat the Cocaine Threat. The summit was held in London from 9–11 April 1990, and was attended by 650 delegates, most at the ministerial level, from 124 countries. The summit adopted the London Declaration committing the nations to giving higher priority to prevention and reduction of illicit drug demand at national and international levels. The London summit produced a consensus that, whereas producing countries had previously felt that drug abuse did not threaten their own populations, developing countries now realized that drug abuse had become a worldwide phenomenon cutting across national boundaries, class, race and income levels.

Some of the London Declaration's provisions include:

- Drug abuse prevention and treatment should be part of national health, social, education, legal and criminal justice strategies;
- Drug education should be developed at all school stages;
- Prevention programs in the workplace should be developed and implemented;
- Mass media campaigns against drugs should be used;
- The United Nations Fund for Drug Abuse Control (later the United Nations International Drug Control Program, see below) should be provided the funds to devise a strategy for the Andean sub-region, where most of the world's coca is grown and illicitly processed into cocaine.
- Nations that had not yet done so should ratify or accede to the 1988 United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, and, in the meanwhile, they should try to apply its terms provisionally.

In October 1993, China, Laos, and Myanmar (referred to as the "Golden Triangle") signed a Memorandum of Understanding, expanding existing cooperation on drug control, in cooperation with the UNDCP. The countries aimed to eliminate opium poppy cultivation through economic and social development programs; curb traffic in narcotic drugs and essential chemicals used in manufacturing drugs; and implement programs to reduce the demand for illicit drugs.

Despite the growing alarm of nations, the phenomenon of illicit drug trafficking and drug abuse continued to rise. The 1994 report of the INCB stated that the worldwide drug menace had broken past geographic limits and outgrown its traditional classification as a criminal or social issue and penetrated the spheres of international politics and world economics. Drug organizations had become illegal transnational corporations. In 1994 the CND concluded that UNDCP should, once again, review existing international drug control instruments and activities in order to identify ways to strengthen the system and make appropriate changes. In June 1994, the International Conference on Preventing and Controlling Money Laundering and the Use of the Proceeds of Crime was held in Italy (see Crime Prevention and Criminal Justice, above).

### UN Bodies Concerned With Narcotics Control

#### The United Nations International Drug Control Programme

In December 1990, the General Assembly requested that the Secretary-General merge the various units of the organization that were concerned with drug control into a single, integrated program. In 1991, the United Nations International Drug Control Programme (UNDCP) integrated the functions of the Division of Narcotic Drugs, UNFDAC, and the secretariat for the INCB. Headquartered in Vienna, UNDCP is charged with the responsibility of coordinating and leading United Nations drug control activities. UNDCP is headed by an executive director. The program publishes a quarterly *Bulletin on Narcotics* as well as information letters, scientific notes, and publications on drug abuse control activities. UNDCP's budget comes from both the UN regular budget and from the voluntary Fund of UNDCP.

UNDCP's *Global Programme Against Money Laundering* assists governments to confront criminals who launder dirty drug money through the international financial system. The program provides training in financial investigation to business, law enforcement and judicial professionals.

UNDCP's *Global Assessment Programme (GAP)* supplies current statistics on illicit drug consumption worldwide. And UNDCP's *Legal Assistance Programme* works with states to implement drug control treaties by helping to draft legislation and train judicial officials. More than 1,400 key personnel have received legal training and over 130 countries worldwide have received legal assistance.

#### The Commission on Narcotic Drugs (CND)

The Commission on Narcotic Drugs is the main policy-making body within the United Nations system for all issues pertaining to international drug abuse control. It analyzes the world drug abuse situation and develops proposals to strengthen international efforts. It is one of the functional commissions of the Economic and Social Council. In addition, it prepares such draft international conventions as may be necessary; assists the council in exercising such powers of supervision over the application of international conventions and agreements dealing with narcotic drugs as may be assumed by or conferred on the council; and considers what changes may be required in the existing machinery for the international control of narcotic drugs and submits proposals thereon to the council. In addition, the commission has special functions under the 1961 Single Convention on Narcotic Drugs (see under The Treaty System, below), such as placing drugs under international control and making recommendations for the implementation of the aims and provisions of the convention, including programs of scientific research and the exchange of scientific or technical information. The commission also reviews implementation of the Global Programme of Action, provides policy guidance to UNDCP, and monitors its activities. The commission meets annually in regular or in special sessions.

#### The International Narcotics Control Board (INCB)

The International Narcotics Control Board is responsible for promoting compliance with the provisions of drug control treaties. It was created by the 1961 Single Convention on Narcotic Drugs as a successor to the Permanent Central Board and the Drug Supervisory Body. The members of the board are not government representatives but experts acting in their private, individual capacities.

The board has important functions to perform under the treaties. It watches over statistics of drug production, manufacture, trade, and consumption and also over the estimates needed for the coming year that states are required to furnish to it; if a state does not send estimates, the board makes them itself. The board may request any state to explain a condition that in its view indicates an improper accumulation of narcotic drugs. It may even recommend, in case of difficulties created by a country for the international control, that other states stop the shipment of drugs to that country. A most effective means of ensuring compliance is publicity: the reports of the board (and of other international bodies) ensure that the public is made aware of any situation that may contribute to the spread of drug abuse.

#### **Other United Nations Bodies Cooperating with UNDCP**

The *United Nations Interregional Crime and Justice Research Institute (UNICRI)* was formerly known as the United Nations Social Defence Research Institute. UNICRI carried out a four-year research study funded by UNDCP on the interaction between criminal behavior and drug abuse and on control measures adopted in individual countries. It conducts research, surveys, and workshops on the criminal aspects of drug abuse for UNDCP. UNICRI is more fully described above, under the Office on Drugs and Crime.

The *International Labour Organization (ILO)* carries out activities on drug-related problems in the workplace and on the vocational rehabilitation of recovering drug addicts. WHO and UNDCP prepared a multi-media resource kit to assist enterprises in developing solutions to those problems.

The *World Health Organization (WHO)* carries out activities related to drug dependence and other drug control activities assigned to it by international drug control treaties. WHO plays an integral role in determining which substances should be placed under international control, in accordance with the provisions of the 1961 Single Convention on Narcotic Drugs and the 1971 Convention on Psychotropic Substances. WHO's Global Programme on Drug Dependence cooperates with member states in the prevention, treatment, and management of drug addiction. WHO also develops guidelines and manuals for teachers and health professionals.

The *United Nations Educational, Scientific and Cultural Organization (UNESCO)* focuses on the prevention of drug abuse through public education and awareness. UNESCO works with media organizations in producing radio and television programs. With the support of UNDCP, UNESCO is carrying out research projects on drug use and prevention in Africa, Asia and the Pacific, and Latin America and the Caribbean.

The *International Maritime Organization (IMO)* is concerned with the transportation of illicit drugs by ships. IMO has compiled guidelines on the prevention of drug smuggling on ships engaged in international traffic. The guidelines set out security precautions, methods of concealments, actions to be taken when drugs are discovered, identification of addicts, and cooperation with customs.

The *International Civil Aviation Organization (ICAO)* seeks to counteract the shipment of illicit drugs by air. It develops technical specifications and guidance material for civil flights, and suggests measures to ensure that commercial carriers are not used to transport illicit drugs.

The *Universal Postal Union (UPU)* has carried out studies to establish international measures covering the shipment of illicit drugs through the mails.

The *Food and Agriculture Organization of the United Nations (FAO)* manages several multidisciplinary programs financed by UNDCP. FAO covers the agricultural aspects of the drug crisis. Its programs are aimed at raising the income level of farmers, and thereby reducing the incentive to cultivate narcotic crops. It has participated in UNDCP-financed projects in Bolivia, Myanmar, and Pakistan. FAO and UNDCP are studying the potential of remote sensing techniques and satellite imagery (already in use by FAO to predict droughts and other international crop statistics) in the detection of illicit crops.

The *United Nations Development Programme (UNDP)* incorporates drug abuse control programs into its development projects in Asia and the Pacific, and Latin America and the Caribbean. UNDP's resident coordinators and resident representatives work closely with the UNDCP in countries where serious drug problems exist.

The *United Nations Children Fund (UNICEF)* focuses on the world's 100 million street children, who are often drug abusers and/or drug sellers. UNICEF has programs in Latin America and the Caribbean to strengthen families and provide services to children in need. UNAIDS works with countries to help prevent the spread of HIV and help those already afflicted with the virus. The virus can infect drug abusers who share syringe needles.

#### **The Treaty System**

One of the tasks of the UN in drug control is to adapt international treaty machinery to changing conditions. Six agreements have been drawn up under United Nations auspices.

*The Paris Protocol of 1948.* The prewar international conventions on narcotics applied to all addictive products of three plants—the opium poppy, the coca bush, and the cannabis plant—and to products belonging to certain chemical groups known to have addictive properties. By the end of World War II, however, a number of synthetic narcotics not belonging to the defined chemical groups had been developed. A protocol signed in Paris on 19 November 1948 authorized WHO to place under international control any new drug not covered by the previous conventions that was or could be addictive. The Paris protocol came into force on 1 December 1949.

*The Opium Protocol of 1953.* Despite earlier international treaties on opium, its production continued and found its way into illicit channels. The Commission on Narcotic Drugs first proposed an international opium monopoly, with production quotas and a system of international inspection. It was impossible, however, to obtain agreement on such important questions as the price of opium and inspection rights.

A compromise was worked out by the United Nations Opium Conference, held in New York in May–June 1953, and was embodied in a Protocol for Limiting and Regulating the Cultivation of the Poppy Plant, the Production of, International Trade in, and Use of Opium. Under this protocol, only seven states—Bulgaria, Greece, India, Iran, Turkey, the USSR, and Yugoslavia—were authorized to produce opium for export. Producing states were required to set up a government agency to license opium poppy cultivators and designate the areas to be cultivated. Cultivators were to deliver all opium immediately after harvesting to this agency,

the only body with the legal right to trade in opium. The Permanent Central Narcotics Board, under the protocol, was empowered to employ certain supervisory and enforcement measures and, with the consent of the government concerned, to carry out local inquiries. The protocol came into force in December 1964.

*The Single Convention on Narcotic Drugs, 1961.* On 30 March 1961, a conference at United Nations headquarters adopted and opened for signature the Single Convention on Narcotic Drugs, 1961. This convention, which came into force on 13 December 1964, was a milestone in international narcotics control.

The first objective of the convention—codification of existing multilateral treaty law in this field—was almost achieved. The second goal—simplification of the international control machinery—was achieved: the Permanent Central Board and the Drug Supervisory Body were combined as the International Narcotics Control Board, as described earlier. The third goal was extension of control to cover cultivation of plants grown for narcotics. The treaty continued controls on opium, including national opium monopolies and the obligation of governments to limit production to medical and scientific purposes. Provisions dealing with medical treatment and rehabilitation of addicts were quite new as treaty obligations. Opium smoking, opium eating, coca-leaf chewing, hashish (cannabis) smoking, and the use of cannabis for non-medical purposes were prohibited. The convention required states that are parties to it to take special control measures for particularly dangerous drugs, such as heroin and ketobemidone. Earlier treaty provisions, requiring (1) that exports and imports of narcotic drugs be made only on government authorization from both sides, (2) that governments report on the working of the treaty, and (3) that they exchange, through the Secretary-General, laws and regulations passed to implement the treaty, were retained. Provisions for controlling the manufacture of narcotic drugs and the trade and distribution of narcotic substances also were continued, together with measures for controlling new synthetic drugs.

*The Convention on Psychotropic Substances, 1971.* During the 1960s there was increasing concern over the harmful effects of such drugs as barbiturates, amphetamines, LSD, and tranquilizers. WHO and the Commission on Narcotic Drugs recommended that governments take legislative and administrative control measures.

On the basis of a draft drawn up by the Commission on Narcotic Drugs, in close collaboration with WHO, a plenipotentiary conference for the adoption of a protocol on psychotropic substances met in Vienna in 1971, with 71 states represented. On 21 February 1971, it adopted and opened for signature the Convention on Psychotropic Substances, 1971. The convention has been in force since 1976.

The 1971 convention was a major step in the extension of international drug control. It contains a number of prohibitive measures for hallucinogens that present a high risk of abuse and have no therapeutic application. Special provisions regarding substances such as LSD prescribe, among other things, prohibition of their use except for research authorized and supervised by governments.

The requirement of licenses for manufacture, trade, and distribution, the supervision of these activities, and the repression of acts contrary to laws and regulations are applied to all of the drugs enumerated in the 1971 convention. Governments may lim-

it or prohibit the import (and export) of any psychotropic drug. With this regulatory system, governments can protect themselves against unwanted drugs. Psychotropic drugs used in therapy but with great abuse potential, such as sleeping pills, are controlled by requiring medical prescriptions and by supervision of export-import activity. International trade in the most dangerous stimulants—the amphetamines—is subject to a more stringent authorization system. Strict record-keeping of drug movements and statistical reports to the International Narcotics Control Board are also required.

A humane provision in the treaty requires that “all practicable measures for the prevention of abuse, the early identification, treatment, education, after-care, rehabilitation, and social reintegration of persons involved” be taken and that “either as an alternative to conviction or punishment or in addition to conviction or punishment, such abusers shall undergo measures of treatment, education, after-care, rehabilitation, and social reintegration.”

*The Protocol Amending the 1961 Single Convention on Narcotic Drugs, 1972.* A plenipotentiary conference adopted, on 25 March 1972, amendments to strengthen the international narcotics control system and to include new concepts and means.

The International Narcotics Control Board was increased from 11 to 13 members, to serve for five years instead of three. Technical measures included in the protocol concern limitation of the production of opium, seizure and destruction of illicitly cultivated opium poppies, and the option of the board to recommend technical or financial assistance to governments. The protocol, like the 1971 Convention, provides for after-care and rehabilitation of drug abusers. Also, drug offenders are made extraditable in any extradition treaty. The protocol came into force on 8 August 1975.

*Convention Against Illicit Trafficking in Narcotic Drugs and Psychotropic Substances, 1988.* In recognition of the increasing difficulty faced by law enforcement and other government agencies in coping with the expansion of illicit drug trafficking, the General Assembly, in 1985, requested the Commission on Narcotic Drugs to prepare a new convention covering areas not adequately regulated by existing treaties.

In 1988, the United Nations convened a conference in Vienna that was attended by representatives of 106 nations. The conference adopted the new convention, which was immediately ratified by 43 nations. The convention entered into force on 11 November 1990.

World leaders met in New York 8–10 June 1998 in a special session of the UN General Assembly to adopt a worldwide plan to substantially reduce drug demand and supply by the year 2008. The session addressed guiding principles on reducing demand for illicit drugs, eradication of illicit crops and alternative development, amphetamine-type stimulants (stated as a priority requiring urgent action), money laundering, controlling precursor chemicals (intermediate substances used to manufacture drugs), and judicial cooperation to promote drug control. By February 2006, 179 states had ratified the 1988 convention.

The 34-article convention addresses the issues of tracing, freezing, and confiscating proceeds and property derived from drug trafficking. Courts may seize bank, financial, or commercial records, without the imposition of bank secrecy laws. The convention also provides for extradition of major drug traffickers, mutual legal assistance between states on drug-related investigations,

and transfer of proceedings for criminal prosecution. The convention also commits states to eliminate or reduce illicit demand for narcotic drugs and psychotropic substances. One of the most important provisions of the treaty, Article 12, sets forth two tables of substances used to manufacture illicit drugs and agrees to implement controls on the manufacture and shipment of such substances. In essence, Article 12 imposed the same controls on the chemicals used to manufacture illicit drugs as are imposed on the raw materials like opium and cocaine. The substances controlled by the convention included ephedrine, ergometrine, ergotamine, lysergic acide, 1-phenyl-2-proanone, pseudoephedrine, acetic anhydride, acetone, anthranilic acide, ethyl ether, phenylacetic acide, and piperidine.

#### Narcotic Drugs Under International Control

*Opium and Its Derivatives.* Opium, the coagulated juice of the poppy plant *Papaver somniferum L.*, was known to the Sumerians living in lower Mesopotamia in 3000 BC. It was used by the Greeks and Arabs for medicinal purposes and was probably introduced into China by the Arabs in the ninth or tenth century. The opium poppy can be grown in most of the habitable parts of the world and is often cultivated for its beautiful flowers or its seeds, which are a valuable food. As an addictive drug, opium was originally eaten or drunk as an infusion. The practice of smoking opium is only a few hundred years old.

The best-known derivatives of opium are morphine, codeine, and diacetylmorphine, more commonly called heroin. While morphine and codeine have valuable medicinal properties, heroin has no medical uses for which less dangerous analgesics cannot be substituted, and upon the recommendation of the Commission on Narcotic Drugs, its manufacture has been banned in most countries. A number of drugs are derived from morphine or are compounded with it, including ethylmorphine and benzylmorphine. Some morphine derivatives, such as apomorphine, are not addictive in themselves.

The most important drugs in national and international illicit traffic are still opium and its derivatives, in particular morphine and heroin. As a result of effective international controls, there has been little diversion of opium or opiates from legitimate channels into the illicit trade. There is, however, illicit production of opium in some countries. From these supplies, clandestine factories manufacture morphine that is converted into heroin. Opium contains as an average 10% of morphine, which is made into diacetylmorphine or heroin in equal weight by relatively simple methods. Clandestine factories have been moving closer to the opium-producing areas. Morphine can be extracted from poppy capsules whether or not the opium has been extracted; at least 30% of licit morphine comes from this process. When Turkey, in 1974, resumed cultivation of the opium poppy, which had been stopped two years earlier, it decided not to produce opium but to use the "poppy-straw method" for extraction of morphine. About 90% of the licit morphine is used to make codeine, whereas 90% of illicit morphine is used to make heroin. An effective way of eradicating heroin is to stop illicit poppy cultivation. This is the intent of the international treaties and also of crop substitution undertaken in several countries with the support of the UNDCP.

*Coca Leaf and Cocaine.* Coca leaves grow on an evergreen shrub, *Erythroxylon coca*, native to the mountainous western region of South America. The leaves are the raw material for the manufacture of cocaine. The leaves themselves have been chewed by some of the Andean peoples for centuries to help combat hunger and overcome the fatigue and exhaustion caused by the high altitude.

The Commission on Narcotic Drugs concluded that coca-leaf chewing is a dangerous habit and constitutes a form of addiction. In 1954, the Economic and Social Council recommended that the countries concerned should gradually limit the cultivation and export of coca leaf to medical, scientific, and other legitimate purposes and should progressively abolish the habit of coca-leaf chewing. At the same time, it was recognized that there was little chance of eliminating coca-leaf addiction unless the living conditions of those among whom the habit was widespread could be improved and that the problem must be attacked on this front as well.

Coca leaves are used to make licit cocaine, the production of which has declined to about one ton a year, but they are also used for the illicit market that supplies increasing quantities of this dangerous drug to North America, Western Europe, and other regions.

A new, more addictive, and more deadly form of cocaine called "crack" is an inexpensive, potent form of the base drug in crystalline form. It is usually smoked, giving a quick, intense high, which lasts only a few minutes. "Crack" is harmful to the brain, heart, lungs, and nervous system and produces serious psychological effects.

*Cannabis (Marijuana).* The plant *Cannabis sativa*, or the crude drug derived from it, is known under almost 200 different names—marijuana, hashish, Indian hemp, charas, ganji, kif, bhang, and maconha, to name a few. Widely used as an intoxicant by millions of people for at least 4,000 years, it can be grown in most parts of the inhabited world. Depending on the soil and cultivation, the plant grows to a height of one to 20 feet. The narcotic resin is found in the flowering tops.

Cannabis is used as a narcotic in many parts of Africa, the Middle East, and the Americas. Because the plant grows wild and is easy to cultivate illicitly, traffickers have little difficulty in obtaining cannabis. Statistics on users are not available, but their number must run well in the millions.

*Synthetic Narcotic Drugs.* A number of synthetic substitutes, especially for morphine, are widely used. They were placed under control by the 1948 protocol. They may and do give rise to abuse but in a relatively limited way, and there is little, if any, illicit traffic in them. The most widely known are pethidine and methadone.

*Psychotropic Substances.* Psychotropic substances placed under international control by the 1971 convention are listed, like narcotic drugs, in treaty schedules that may be modified from time to time by the Commission on Narcotic Drugs. They have widely different characteristics, and, according to complex criteria having to do with the dangers they present to the individual and society, they have been placed in four schedules with decreasing severity of control. In Schedule I are found mainly hallucinogens, such as LSD, mescaline, and psilocine. All are made by synthesis, but the last two are also found in plants, the peyotl cactus and the hal-

lucinatory mushroom, respectively. Schedule II contains mainly drugs of the amphetamine type that stimulate the central nervous system. They have limited therapeutic value but are widely abused, especially by young people who inject them intravenously, possibly causing psychoses. In Schedule III are found mainly the most powerful depressants of the central nervous system—barbiturates used as hypnotics (sleeping pills) by a very large number of consumers everywhere. These drugs, if used without therapeutic necessity, produce a form of addiction that can be extremely dangerous. Barbiturates are often used in association with heroin, with alcohol (with an especially dangerous interaction), and even with stimulants. Schedule IV has some barbiturate depressants and a number of tranquilizers. These constitute a very large body of medicaments supposed to eliminate anxiety and nervousness. Large quantities of such drugs as meprobamate and diaze-

pam are consumed without therapeutic need and may alter mood and behavior.

*Methamphetamines, amphetamines and other stimulants* are covered by the 1971 convention. In November 1996 UNDCP declared that the global rise in the abuse of amphetamine-type stimulants was likely to be a major drug problem in the 21st century. By 2000, the prediction had already been borne out. These stimulants have the potential to pose more health problems to society than heroin or cocaine because they are simple to produce and the necessary precursor materials are readily accessible. Phenyl-2-propanone (P2P) is an immediate precursor that can be easily synthesized into methamphetamine. Amphetamine-type stimulants are usually taken orally or injected. Crystalline d-methamphetamine hydrochloride, commonly referred to as “ice” or “crystal meth,” is ingested by smoking.

---

# HUMAN RIGHTS

In the Preamble to the Charter, “the peoples of the United Nations” express their determination “to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small.” Article 1 of the Charter states that one of the purposes of the UN is to promote and encourage “respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion.” In Article 56, “all Members pledge themselves to take joint and separate action in cooperation with the Organization for the achievement” of this purpose. The Charter vests responsibility for assisting in the realization of human rights and fundamental freedoms in three of the principal organs: the General Assembly, the Economic and Social Council, and the Trusteeship Council. The Charter also provides for the establishment of commissions for the promotion of human rights as subsidiary bodies of the Economic and Social Council. As early as 1946, two such commissions were created: the Commission on Human Rights and the Commission on the Status of Women.

## THE INTERNATIONAL BILL OF RIGHTS

At the San Francisco Conference, a proposal to embody an international bill of rights in the Charter itself was put forward but was not pursued because it required more detailed consideration. The idea of establishing an international bill of rights, however, was regarded as inherent in the Charter. Even before the Charter was ratified and had entered into force and before the UN as an organization was established, steps were taken toward this goal. The Preparatory Commission of the UN and its Executive Committee, meeting in the fall of 1945, both recommended that the work of the Commission on Human Rights should be directed, in the first place, toward the formulation of an international bill of rights. The General Assembly agreed with these recommendations in January 1946. Accordingly, when the terms of reference of the Commission on Human Rights were laid down in February 1946, “an international bill of rights” was the first item on its work program.

When the Commission on Human Rights and its drafting committee started work on this ambitious project, it turned out that there was disagreement among the members about the form that the draft bill of rights should take. Some members thought the bill should be a “declaration” or “manifesto” that would be proclaimed by a resolution of the General Assembly. Others urged that it take the form of an international treaty, which, in addition to being approved by the General Assembly, would have to be opened for signature and for ratification or accession by governments and would be binding only on those governments that had ratified it or acceded to it. The relevant report of the drafting committee records that it was agreed by those who favored the declaration form that the declaration should be accompanied or followed by one or more conventions. It was also agreed by those who favored the convention form that the General Assembly, in recommending a

convention to member nations, might make a declaration wider in content or more general in expression. As a consequence, drafts of a “declaration” and of a “convention” were prepared, and studies were undertaken for the creation of international supervisory and enforcement machinery, called “measures of implementation.”

Eventually, the decision emerged that the international bill of rights should not be produced by one single, comprehensive, and final act but should consist of two or more international instruments, namely, a declaration and a convention (or covenant), and measures of implementation. Later, it was decided that there should be not one but two covenants—one on civil and political rights and the other on economic, social, and cultural rights—and that the provisions on the measures of implementation should be embodied in the texts of the covenants. The latter decision was modified somewhat in 1966, when the provisions regulating one specific aspect of the implementation arrangements, the right of petition (communication), were included in a separate optional protocol.

## The Universal Declaration of Human Rights

The Universal Declaration of Human Rights was prepared by the Commission on Human Rights in 1947 and 1948 and adopted and proclaimed by the General Assembly on 10 December 1948 by a vote of 48 in favor, none against, with 6 abstentions. Two representatives were absent. One of them stated later that, if he had been present, he would have voted in favor.

The Universal Declaration consists of a preamble and 30 articles. It proclaims—and in this regard it differs from the traditional catalog of the rights of man that are contained in various constitutions and fundamental laws of the 18th and 19th centuries and the first decades of the 20th century—not only civil and political rights but also rights that were eventually regulated in the International Covenant on Economic, Social and Cultural Rights.

The declaration proclaims, in Article 1, that all human beings are born free and equal in dignity and rights and, in Article 2, that everyone is entitled to all the rights and freedoms set forth in the declaration “without distinction of any kind, such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status” and that “no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.”

In Articles 3 to 21, the declaration deals with the traditional civil and political rights, including the right to life, liberty, and security of person; freedom from slavery and servitude; freedom from torture or cruel, inhuman, or degrading treatment or punishment; equality before the law and equal protection of the law; freedom from arbitrary arrest, detention, or exile; the right to be presumed innocent until proved guilty; the right to protection against arbi-

trary interference with one's privacy, family, home, or correspondence and to protection against attacks upon one's honor and reputation; freedom of movement and residence; the right to leave any country, including one's own; the right to seek and enjoy in other countries asylum from persecution; the right to a nationality and the right to change one's nationality; the right of men and women of full age to marry, without any limitation due to race, nationality, or religion; freedom of thought, conscience, and religion; the right to own property and not to be arbitrarily deprived of it; freedom of opinion and expression; the right to peaceful assembly and association; the right to take part in the government of one's country; and the right to equal access to public service.

Economic, social, and cultural rights (Articles 23 to 27) are introduced by Article 22, which states generally that "everyone, as a member of society, has the right to social security" and is entitled to the realization of "economic, social and cultural rights indispensable for his dignity and the free development of his personality." The article implies, however, that those economic, social, and cultural rights are not everywhere and immediately achievable. It states that the "realization" of these rights is to be brought about "through national effort and international cooperation and in accordance with the organization and resources of each state."

The declaration affirms everyone's right to work, to free choice of employment, to just and favorable conditions of work, and to protection against unemployment. It affirms the right of everyone to equal pay for equal work; to "just and favorable remuneration"; to form and join trade unions; to "a standard of living adequate for the health and well-being of himself and of his family"; and to "rest and leisure, including reasonable limitation of working hours and periodic holidays with pay." It also proclaims "the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond [one's] control." Everyone has the right to education, which "shall be free, at least in the elementary and fundamental stages" and compulsory on the elementary level. The declaration affirms everyone's right "freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits."

Article 28 asserts that "everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized." In the exercise of individual rights and freedoms, everyone shall be subject only to such limitations as are determined by law. Such limitations, according to Article 29, shall be "solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order, and the general welfare in a democratic society." Article 30 states that nothing in the declaration may be interpreted as implying for any state, group, or person "any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms" set forth in the declaration.

The Universal Declaration of Human Rights was adopted, not in the form of an international convention that, when ratified, is legally binding on the states that are parties to it, but in the form of a resolution of the General Assembly, as "a common understanding" of the rights and freedoms that member states have pledged themselves to respect and observe and as "a common standard of achievement for all peoples and all nations." In the view of most of

those who were instrumental in its preparation and adoption, the declaration was not meant to be a "binding" instrument. However, as soon as the declaration was adopted, it began to be used as a code of conduct and as a yardstick to measure the compliance by governments with the international standards of human rights.

In countless allegations of human rights violations that it has been called upon to examine, the UN has had recourse to the declaration, whether it was dealing with allegations of forced labor, with discrimination in non-self-governing and trust territories, with customs and practices inconsistent with the dignity of women, or with other violations of human rights. The declaration also has played an important role in the activities of specialized agencies, such as the ILO, UNESCO, and ITU, and in regional organizations, such as the OAS, the Council of Europe, and the OAU.

The declaration has thus acquired a validity beyond that originally contemplated in 1948. The international community, both the states that had been instrumental in its creation and those that later achieved independence, used the declaration for the purpose of fulfilling an assignment greater and more far-reaching than that originally carved out for it. Today, the declaration has acquired the status of customary international law and is valid for all states that have ratified it.

### The International Covenants on Human Rights

The Commission on Human Rights, the Economic and Social Council, and the General Assembly devoted 19 years (1947–66) to the preparation of the International Covenants on Human Rights. One problem that created a considerable amount of controversy, particularly in the early years, was whether the treaty that would give legal effect to the rights and freedoms set forth in the Universal Declaration of Human Rights should regulate only those rights that traditionally have been guaranteed in national constitutions or catalogs of rights and are known as "civil and political rights" or whether the treaty should also set forth "economic, social and cultural rights."

As already indicated, it was eventually decided that there should be two covenants dealing with the two sets of provisions, respectively. The principal reason for having two separate instruments regulating the two groups of rights was the fundamentally different character of the rights concerned, which led some even to question whether "economic, social and cultural rights" are, technically, rights at all—in the sense of enforceable and justiciable rights. The different character of these rights made it necessary to provide for a difference in the type of international obligations to be undertaken by states that are parties to one or the other, or both, of the two covenants. Another reason for establishing two different covenants was thought to be the necessity to adjust the arrangements for international supervision—the "measures of implementation"—to the different character of the rights.

In the International Covenant on Civil and Political Rights, each state party undertakes to *respect* and to *ensure* to all individuals within its territory and subject to its jurisdiction the rights recognized in that covenant. In the International Covenant on Economic, Social and Cultural Rights, each state party undertakes only to *take steps*, individually and through international assistance and cooperation, to the maximum of its available resources, *with a view to achieving progressively* the full realization of the rights recognized in that covenant. Subject to certain exceptions and

modifications, the International Covenant on Civil and Political Rights imposes upon states parties the obligation to maintain defined standards. The states parties to the International Covenant on Economic, Social and Cultural Rights assume the obligation to promote an objective—the achievement of human rights.

By and large, the two covenants between them cover the rights proclaimed in the Universal Declaration of Human Rights, as they have been described above, but there are considerable differences between the Universal Declaration and the covenants.

The provisions of the Universal Declaration proclaiming that everyone has a right to own property and that everyone has the right to seek and to enjoy in other countries asylum from persecution have no counterpart in the covenants. On the other hand, the covenants deal with a number of questions in regard to which the declaration contains no provision. An example is the provision of both covenants that all peoples have the right to self-determination “by virtue of which they freely determine their political status and freely pursue their economic, social, and cultural development.”

The International Covenant on Civil and Political Rights, but not the declaration, protects aliens against expulsion, entitles everyone not to be compelled to testify against himself or herself or to confess guilt, provides for a right to compensation for miscarriage of justice, and also provides that no one shall be liable to be tried or punished again for an offense for which he or she has already been finally convicted or acquitted. The covenant prohibits any propaganda for war and any advocacy of national, racial, or religious hatred. It provides for the protection of ethnic, religious, and linguistic minorities. The declaration does not contain corresponding provisions.

The International Covenant on Economic, Social and Cultural Rights contains provisions on the right to work and to enjoy just and favorable conditions of work; the right to form and join trade unions and, subject to the law of the land, the right to strike; the right to social security, including social insurance and the protection of the family; the right to an adequate standard of living and freedom from hunger; the right to the enjoyment of the highest attainable standards of physical and mental health; the right to education; and the right to take part in cultural life.

The International Covenant on Economic, Social, and Cultural Rights and the International Covenant on Civil and Political Rights are legally binding human rights agreements. Both were adopted by the General Assembly in 1966 and entered into force ten years later, making many of the provisions of the Universal Declaration of Human Rights effectively binding. As of 19 April 2006, 153 states were party to the Covenant on Economic, Social, and Cultural Rights; and 156 states were party to the Covenant on Civil and Political Rights.

### Measures of Implementation

The states parties to the Covenant on Economic, Social and Cultural Rights undertake to submit to the Economic and Social Council reports on the measures that they have adopted and the progress made in achieving the observance of the rights recognized in that covenant. Until 1986, the Economic and Social Council entrusted the task of examining such reports to a working group. Since then, this task has been carried out by the Committee on Economic, Social and Cultural Rights, an eight-member group of experts elect-

ed by the council to serve in their personal capacity. The committee submits to the council a summary of its consideration of the reports of states parties and makes suggestions and recommendations of a general nature.

Under the International Covenant on Civil and Political Rights, a Human Rights Committee was established to consider reports submitted by states parties on measures taken to implement the covenant's provisions and also to consider communications alleging violations under the Optional Protocol, which provides for consideration of communications from individuals who claim to be victims of violations of any rights set forth in the covenant. However, only claims against states parties to the protocol can be considered. The Optional Protocol entered into force 23 March 1976, and as of 19 April 2006, 105 states were party to it. The Second Optional Protocol to the International Covenant on Civil and Political Rights, which aims to abolish the death penalty, was adopted by the General Assembly 15 December 1989 and entered into force roughly two years later, when 10 states had ratified it. As of August 2002, 47 states were party to it.

Apart from the right of individual complaint under the specific procedure of the Optional Protocol, thousands of letters and reports alleging human rights violations are received each year by the UN. Communications containing complaints of violations of human rights are summarized and sent confidentially to the members of the Commission on Human Rights and its Subcommittee on Prevention of Discrimination and Protection of Minorities; copies of the complaint also are sent to the member states named. The identity of the writers is not disclosed unless they have consented to disclosure. Any replies from the government are forwarded to the commission and subcommission.

The subcommission, if it finds that the communications appear to reveal “a consistent pattern of gross and reliably attested violations” of human rights, may refer the situation to the commission, which, in turn, can decide to carry out a thorough study of the situation or to name an ad hoc committee to investigate it. All these procedures are confidential and are dealt with in private meetings until a report, if any, is made by the Commission on Human Rights to the Economic and Social Council.

The Commission on Human Rights and its subcommission also consider in public session each year the question of violations of human rights and fundamental freedoms, including racial discrimination and apartheid, in various countries and territories. For example, since 1967, an ad hoc working group of experts of the commission has reported regularly on allegations of ill-treatment of opponents of apartheid and other racist policies, and on the treatment of political prisoners and detainees, in South Africa and Namibia.

Since 1968, the commission has been considering the question of the violation of human rights in the territories occupied by Israel as a result of the 1967 hostilities in the Middle East, including violations of the 1949 Geneva Convention concerning the protection of civilian persons in time of war.

In 1975, the commission established a five-member working group to study the human rights situation in Chile. The group visited Chile in 1978 and submitted a report to the General Assembly and the commission. After the completion of the group's mandate, the commission appointed a special rapporteur in 1979 to continue to study the situation. The commission has also requested

that studies or reports be prepared by special rapporteurs or by the Secretary-General on the human rights situation in Afghanistan, Bolivia, El Salvador, Equatorial Guinea, Guatemala, Iran, and Poland.

In addition, the commission and its subcommission have studied specific phenomena of particularly serious violations of human rights. Thus, working groups have been established—on southern Africa, on enforced or involuntary disappearances, on slavery, and on indigenous populations—and special rapporteurs have been appointed to examine the question of summary or arbitrary executions and questions concerning torture, religious intolerance, and the use of mercenaries.

## OTHER HUMAN RIGHTS CONVENTIONS

The UN and two of the specialized agencies, the ILO and UNESCO, have prepared and put into force a number of conventions in the human rights field that, while not as comprehensive as the International Bill of Rights, deal with important specific rights. (Conventions on racial discrimination and on the status of women are discussed in separate sections below.)

### Prevention and Punishment of Genocide

In 1948, the General Assembly adopted the Convention on the Prevention and Punishment of the Crime of Genocide. The convention entered into force in 1951. As of 19 April 2006, it had been acceded to or ratified by 138 states. Under the convention, genocide means any of the following acts committed with intent to destroy in whole or in part a national, ethnic, racial, or religious group as such: (a) killing members of the group; (b) causing serious bodily or mental harm to members of the group; (c) deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part; (d) imposing measures intended to prevent births within the group; and (e) forcibly transferring children of the group to another group. One result of the convention is that the states parties place it beyond doubt that genocide (and conspiracy, incitement, and attempt to commit it and complicity in it), even if perpetrated by a government in its own territory against its own citizens, is not a matter essentially within the domestic jurisdiction of states but one of international concern. States parties confirm that genocide, whether committed in time of peace or in time of war, is a crime under international law that they undertake to prevent and to punish. Any contracting party can call upon UN organs to intervene.

### Freedom of Association

The Freedom of Association Convention of 1948 (in force since 1950) was the first major achievement of the joint efforts of the UN and the ILO in the field of international legislation on human rights problems. By this convention, states parties undertake to give effect to the right of workers and employers, without distinction whatsoever, to establish and join organizations of their own choosing without previous authorization. In exercising the rights provided for in the convention, workers and employers and their respective organizations, like other persons or organized groups, shall respect the law of the land. However, the law of the land shall not be such as to impair, nor shall it be so applied as to impair, the guarantees provided in the convention.

Under the Right to Organize and Collective Bargaining Convention of 1949 (in force since 1951), workers shall enjoy ad-

equated protection against acts of antiunion discrimination in their employment, particularly in respect to acts calculated to make the employment of a worker subject to the condition that the worker shall not join a union or shall relinquish trade union membership.

### Freedom of Information

Out of the very ambitious legislative program of the UN and the specialized agencies to guarantee through international instruments the right set forth in Article 19 of the Universal Declaration of Human Rights to seek, receive, and impart information and ideas through any medium and regardless of frontiers, only the Convention on the International Right of Correction has been adopted. At a UN Conference on Freedom of Information held in 1948, two additional conventions in this field were drafted—a general Convention on Freedom of Information and a Convention on the International Transmission of News—but these have not yet been opened for signature and ratification, although the General Assembly has approved the latter convention.

The idea underlying the Convention on the International Right of Correction, which was opened for signature in 1953 and has been in force since 1962, is the attempt to transfer to the international level an institution that has been part of national law in a great number of countries. In the convention, the contracting states agree that in cases where a contracting state contends that a news dispatch capable of injuring its relations with other states or its national prestige or dignity, transmitted from one country to another by correspondents or information agencies and published or disseminated abroad, is false or distorted, it may submit its version of the facts (called a communiqué) to the contracting states within whose territories such dispatch has been published or disseminated. The receiving state has the obligation to release the communiqué to the correspondents and information agencies operating in its territory through the channels customarily used for the release of news concerning international affairs for publication.

### Protection of Refugees and Stateless Persons

In the Convention Relating to the Status of Refugees of 1951 (in force since 1954, with a protocol of 1967) and the Convention Relating to the Status of Stateless Persons of 1954 (in force since 1969), far-reaching provisions for the protection of refugees and stateless persons were enacted. Two principles are the basis of both conventions: (1) there shall be as little discrimination as possible between nationals on the one hand and refugees or stateless persons on the other, and (2) there shall be no discrimination based on race, religion, or country of origin at all among refugees and stateless persons.

In 1961, a conference of plenipotentiaries adopted the Convention on the Reduction of Statelessness, which entered into force in 1975.

### Abolition of Slavery, the Slave Trade, and Forced Labor

The fight against slavery has been an international concern since the beginning of the 19th century. In more recent times, under the auspices of the League of Nations, the Slavery Convention of 1926 was enacted, by which the contracting parties undertook to prevent and suppress the slave trade and to bring about “progressively and as soon as possible” the complete abolition of slavery in

all its forms. Under UN auspices, the Supplementary Convention on the Abolition of Slavery, the Slave Trade, and Institutions and Practices Similar to Slavery was adopted in 1956 and has been in force since 1957. Under the convention, states parties undertake to bring about, also “progressively and as soon as possible,” the complete abolition or abandonment not only of slavery but also of other objectionable practices, such as debt bondage and serfdom.

By the Convention Concerning the Abolition of Forced Labor, adopted by the International Labor Conference in 1957 and in force since 1959, states parties undertake to suppress and not to make use of any form of forced or compulsory labor as a means of political coercion or education or as a punishment for holding or expressing political views or views ideologically opposed to the established political, social, or economic system; as a punishment for having participated in strikes; or as a means of racial, social, national, or religious discrimination.

#### **Equality in Employment and Occupation**

By the Convention on Discrimination in Employment and Occupation, adopted by the International Labor Conference in 1958 (in force since 1960), each state party undertakes to declare and pursue a national policy designed to promote, by methods appropriate to national conditions and practices, equality of opportunity and treatment with respect to employment and occupation, with a view to eliminating discrimination. The fulfillment of the obligations undertaken by this convention is subject to the supervisory arrangements that apply under the constitution of the ILO.

#### **Equality in Education**

In 1960, the General Conference of UNESCO adopted the Convention Against Discrimination in Education (in force since 1962). Like the Discrimination (Employment and Occupation) Convention, the Convention Against Discrimination in Education prohibits any distinction, exclusion, limitation, or preference based on race, color, sex, language, religion, political or other opinion, national or social origin, economic condition, or birth that has the purpose or effect of impairing equality of treatment in education. The establishment or maintenance of separate educational systems or institutions for pupils of the two sexes is not prohibited, provided that these systems or institutions offer equivalent access to education and provide teaching staffs meeting the same standards of qualification. A special protocol adopted in 1962 institutes a Conciliation and Good Offices Commission to be responsible for seeking a settlement of any disputes that may arise between the states parties to the convention.

#### **Non-Applicability of Statutory Limitations to War Crimes and Crimes Against Humanity**

In 1968, the General Assembly adopted the Convention on the Non-Applicability of Statutory Limitations to War Crimes and Crimes Against Humanity. The convention, in force since 1970, provides that no statutory limitation shall apply to war crimes and crimes against humanity, irrespective of the date of their commission. It also revises and extends the concepts of war crimes and crimes against humanity as they were defined in 1945 in the Charter of the International Military Tribunal and were applied and interpreted by the tribunal. The states parties to the 1968 convention undertake to adopt all necessary domestic measures with a view

to making possible the extradition of persons who have committed such crimes.

#### **WAR CRIMES RECORDS**

Records of the International Military Tribunal (Nuremberg) and the International Military Tribunal for the Far East (Tokyo) are in the UN Archives in New York. Also deposited there are the records of various national military tribunals that were submitted to the UN War Crimes Commission established in London by a meeting of Allied and Dominion representatives in October 1943, two years before the UN was created. The following 17 countries were members of the commission: Australia, Belgium, Canada, China, Czechoslovakia, Denmark, France, Greece, India, Luxembourg, Netherlands, New Zealand, Norway, Poland, United Kingdom, United States, and Yugoslavia. The commission's primary task was to collect, investigate, and record evidence of war crimes and to report to the governments concerned those instances where the material available appeared to disclose a prima facie case. The commission took no part in the detention of persons listed or in the prosecution of the cases. It ended its work in March 1948 and deposited its records in the UN Archives with the stipulation that access to the records be limited to requests by governments for information on specific individuals. Following consultations among representatives of the former members of the commission in September/October 1987, its chairman recommended to the UN Secretary-General that the files be opened to governments for research into and investigation and prosecution of war crimes and to individuals, with the permission of the government of which they are nationals or permanent residents, for research into the history and work of the commission and into war crimes.

#### **Prevention and Punishment of Crimes Against Internationally Protected Persons**

In 1973, the General Assembly adopted the Convention on the Prevention and Punishment of Crimes Against Internationally Protected Persons, Including Diplomatic Agents. The convention, in force since 1977, aims at preventing the commission of acts of terrorism against heads of state, heads of government, ministers of foreign affairs, representatives of states, and officials of international organizations, as well as members of their families who accompany them or form part of their households. Each state party to the convention agrees to make murder, kidnapping, or other attacks upon the person or liberty of an internationally protected person or a violent attack upon his official premises, private accommodations, or means of transport a punishable crime. States agree to cooperate in the prevention of these crimes and in the prosecution and punishment of offenders.

#### **Prevention of Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment**

In 1975, the General Assembly proclaimed the Declaration on the Protection of All Persons from Being Subjected to Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment. The declaration spells out in greater detail the provisions of the Universal Declaration of Human Rights and the International Covenant on Civil and Political Rights that no one may be subjected to torture or to cruel, inhuman, or degrading treatment or punishment.

The declaration was given binding legal form in 1984, when the General Assembly adopted the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment. In the convention, which came into force on 26 June 1987, torture is defined as any act by which severe physical or mental pain is intentionally inflicted by, at the instigation of, or with the acquiescence of someone acting in an official capacity, whether to obtain information or a confession; to punish, intimidate, or coerce; or for reasons based on discrimination. It does not include pain or suffering arising only from, inherent in, or incidental to lawful sanctions. States parties undertake to prevent torture in their jurisdictions and ensure that it is legally punishable. No exceptional circumstances, such as war, the threat of war, internal political instability, or any other emergency, may be invoked to justify torture, nor can a torturer be excused by virtue of having acted under orders. The convention provides for extradition of persons believed to have committed acts of torture and for protection and compensation for torture victims. As of 19 April 2006, 141 states were party to this convention.

#### **Convention on the Rights of the Child**

In November 1989, the General Assembly adopted the Convention on the Rights of the Child, based on the draft proposed by the Commission on Human Rights in March of that year. The convention, which came into force in September 1990, had 192 states party to it as of 19 April 2006 (the two states not party to the convention as of that date were the United States of America and Somalia). The convention recognizes and protects a wide range of civil rights and liberties. It acknowledges the importance of a secure and healthy family or alternative environment; provides for education, leisure, and cultural activities; and states that children in emergencies are entitled to special protection and that children who are in conflict with the law must be guaranteed basic rights. The convention also stipulates that children should be protected from any form of exploitation.

In accordance with article 43 of the Convention, a Committee on the Rights of the Child was established in February 1991. The committee meets twice a year to consider periodic reports submitted by states which give details of their effective implementation of the provisions of the convention. The committee submits to the General Assembly, through the Economic and Social Council, a report on its activities every two years.

#### **International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families**

In December 1990, the General Assembly adopted a convention that takes into account the importance and extent of the migration phenomenon, which involves millions of people and affects a large number of states in the international community. In particular, the convention stipulates that all migrant workers and members of their families have the same right to equality with nationals of the state where they are engaged in remunerated activity. The convention entered into force on 1 July 2003; as of April 2006, 34 states were party to it.

## **REGIONAL HUMAN RIGHTS INSTRUMENTS**

The work of the UN in the human rights field, for which the provisions of the Charter have been the point of departure, has also in-

spired important developments in the protection of human rights on the regional level by the Council of Europe, the Organization of American States, and the Organization of African Unity (now African Union).

#### **The European Convention on Human Rights**

Under the auspices of the Council of Europe, the European Convention on Human Rights was signed in 1950 and entered into force in 1953. The convention is based on an early draft of what is now the International Covenant on Civil and Political Rights. It was concluded by the governments of European countries "to take the first steps for the collective enforcement of certain of the rights stated in the Universal Declaration of Human Rights." It was subsequently supplemented by five additional protocols. As far as the substantive provisions are concerned, the European Convention and the International Covenant on Civil and Political Rights cover, more or less, the same ground, although there are a number of important differences between the two instruments.

The European Convention established two internal organs "to ensure the observance of the engagements undertaken by the High Contracting Parties in the present Convention"—that is, the European Commission on Human Rights and the European Court of Human Rights. Any party to the convention has the right to refer to the commission any alleged breach of the convention by another party. The commission may also receive petitions from any person, nongovernmental organization, or group of individuals claiming to be the victim of a violation, by one of the parties, of the rights set forth in the convention and in the relevant protocols. The exercise of this power by the commission is subject to the condition that the state against which the complaint is directed has recognized this competence of the commission.

If the commission does not succeed in securing a friendly settlement on the basis of respect for human rights as defined in the convention, it draws up a report on the facts and states its opinion as to whether the facts found disclose a breach by the state concerned of its obligations under the convention. The final decision is taken either by the Committee of Ministers of the Council of Europe, a political organ, or, if it has jurisdiction and the matter is referred to it, by the European Court of Human Rights.

#### **The European Social Charter**

The European Social Charter is the European counterpart to the International Covenant on Economic, Social and Cultural Rights. The provisions of the European Social Charter, however, are more specific and detailed. It has established a reporting procedure. The reports are examined by a committee of independent experts, which submits its conclusions to a governmental social subcommittee. The Consultative Assembly of the Council of Europe is consulted. In the final stage, the Committee of Ministers may make any recommendation that it considers necessary to any contracting party in the areas of economic, social, and cultural rights.

#### **The American Convention on Human Rights**

In 1948, several months before the adoption by the General Assembly of the Universal Declaration of Human Rights, the Ninth International Conference of American States, meeting in Bogotá, adopted the American Declaration of the Rights and Duties of Man. This declaration was followed in 1969 by the signing in

San José, Costa Rica, of the American Convention on Human Rights. The convention, in force since 1978, is a very comprehensive instrument, similar to both the European Convention on Human Rights and the International Covenant on Civil and Political Rights. The organs of implementation of the Pact of San José are the Inter-American Commission on Human Rights (corresponding to the European Commission and to the Human Rights Committee under the International Covenant on Civil and Political Rights) and the Inter-American Court of Human Rights. While the right of petition of individuals is optional under the European Convention and the International Covenant on Civil and Political Rights, in the inter-American system, every state party accepts the right of petition automatically.

#### **The African Charter on Human and Peoples' Rights**

In 1981, the Assembly of Heads of State and Government of the Organization of African Unity (now African Union), meeting in Nairobi, Kenya, adopted the African Charter on Human and Peoples' Rights. The charter, which came into force on 21 October 1986, provides for an African Commission on Human and Peoples' Rights, composed of 11 members elected by the assembly, to promote and protect the rights set forth in the charter. The provisions of the charter are similar to those of the Universal Declaration of Human Rights but with special reference to African traditions of rights and freedoms, including the right to self-determination and the right of peoples to dispose of their wealth and natural resources.

### **THE FIGHT AGAINST RACIAL DISCRIMINATION**

The idea of the equality of races emerged as the one that, more than any other, has dominated the thoughts and actions of the post-World War II period. The aim of racial equality has permeated the lawmaking and the standard-setting activities of the UN family of organizations and also the day-to-day work of many of its organs. The Charter, the Universal Declaration of Human Rights, and the two International Covenants on Human Rights prohibit discrimination on the grounds of race or color, as do the conventions against discrimination in employment and occupation and in education that have already been described.

#### **The Declaration on the Elimination of All Forms of Racial Discrimination**

In 1963, the General Assembly proclaimed the Declaration on the Elimination of All Forms of Racial Discrimination, which affirms that discrimination between human beings on the grounds of race, color, or ethnic origin is an offense to human dignity, a denial of Charter principles, a violation of the rights proclaimed in the Universal Declaration of Human Rights, and an obstacle to friendly and peaceful relations among peoples.

#### **The International Convention on the Elimination of All Forms of Racial Discrimination**

In 1965, the General Assembly adopted the International Convention on the Elimination of All Forms of Racial Discrimination which entered into force in January 1969. As of 19 April 2006, it had been acceded to or ratified by 170 states. Under the convention, states parties undertake not only to condemn racial discrimination and pursue a policy of eliminating it in all its forms but also

to prohibit and bring to an end, by all appropriate means, including legislation as required by circumstances, racial discrimination by any individual, group, or organization. States parties undertake to declare it an offense punishable by law to disseminate ideas based on racial superiority or hatred or that are an incitement to racial discrimination. They also commit themselves to declare illegal and prohibit organizations that promote and incite racial discrimination and to recognize participation in such organizations as an offense punishable by law. The convention provides for the establishment of international supervisory machinery similar to that laid down in the International Covenant on Civil and Political Rights but contains tighter provisions.

Under the convention, an 18-member Committee on the Elimination of Racial Discrimination was established, which, like the Human Rights Committee provided for in the International Covenant on Civil and Political Rights, has the function of considering reports by states and allegations by a state party that another state party is not giving effect to the provisions of the convention. States parties to the convention also may recognize the competence of the Committee on the Elimination of Racial Discrimination to receive and consider petitions (communications) from individuals or groups of individuals. In the last instance, the International Court of Justice can be apprised of disputes with respect to the interpretation and application of the convention.

#### **The International Convention on the Suppression and Punishment of the Crime of Apartheid**

In 1973, the General Assembly adopted the International Convention on the Suppression and Punishment of the Crime of Apartheid which entered into force in July 1976. By 19 April 2006, it had been acceded to or ratified by 106 states. The convention provides that international responsibility for the crime of apartheid shall apply to individuals, members of organizations and institutions, and representatives of a state, whether residing in the state in which the acts are perpetrated or elsewhere. Persons charged can be tried by any state party to the convention. A three-member group of the Commission on Human Rights meets each year to review progress in implementing the convention.

#### **The International Declaration and the International Convention Against Apartheid in Sports**

The International Declaration Against Apartheid in Sports, adopted by the General Assembly in 1977, calls on states to take all appropriate action to cease sporting contacts with any country practicing apartheid and to exclude or expel any such country from international and regional sports bodies.

The International Convention Against Apartheid in Sports, adopted by the General Assembly in 1985, gave the provisions of the declaration a binding legal form. It entered into force in April 1988. As of 19 April 2006, it had been acceded to or ratified by 59 states.

#### **Other Action to Combat Racism and Racial Discrimination**

In 1972, the General Assembly decided to launch a Decade for Action to Combat Racism and Racial Discrimination, to begin on 10 December 1973, the 25th anniversary of the Universal Declaration of Human Rights, and in 1973, the General Assembly approved a comprehensive and ambitious program for the decade. Among its goals were the following: to promote human rights for all without

distinction of any kind on grounds of race, color, descent, or national or ethnic origin, especially by eradicating racial prejudice, racism, and racial discrimination; to arrest any expansion of racist policies; to identify, isolate, and dispel the fallacious and mythical beliefs, policies, and practices that contribute to racism and racial discrimination; and to put an end to racist regimes.

While there was not necessarily complete unanimity in the General Assembly on every phrase and formulation of the relevant decisions on the decade adopted in 1972, 1973, and 1974, there was a general consensus in support of its goals. However, at the 1975 session of the General Assembly, a resolution was adopted by which the General Assembly determined that "Zionism is a form of racism and racial discrimination." The resolution was adopted by 72 votes to 35, with 32 abstentions. Among those strongly opposed were the nine members of the European Economic Community, as well as the United States, Canada, Australia, and New Zealand, and other states of Western Europe, Latin America, and Africa. Many of these states declared that the resolution radically changed the concept of the decade and would therefore change their attitude toward it.

The midpoint of the decade was marked by a world conference held in Geneva in August 1978. The conference adopted recommendations for comprehensive mandatory sanctions against the racist regimes of southern Africa, elimination of all discriminatory laws and practices, adoption of laws to punish dissemination of ideas based on racial superiority or hatred, and promotion of the rights of indigenous peoples and migrant workers. In 1979, the General Assembly adopted a program for the remaining four years of the decade, and in 1982, it decided that a second conference would be held in 1983.

The Second World Conference to Combat Racism and Racial Discrimination, held in Geneva in August 1983, was attended by representatives of 128 states, as well as of UN organs and specialized agencies and of intergovernmental and nongovernmental organizations. The conference adopted a declaration and a program of action in which it noted that "in spite of the efforts of the international community during the Decade, at the national, regional and international levels, racism, racial discrimination and apartheid continue unabated and have shown no sign of diminishing." The program of action contained practical suggestions on matters such as action to combat apartheid; education, teaching, and training; dissemination of information and the role of the mass media in combating racism and racial discrimination; measures for the promotion and protection of the human rights of minority groups, indigenous peoples, and migrant workers who are subject to racial discrimination; recourse procedures for victims of racial discrimination; implementation of the International Convention on the Elimination of All Forms of Racial Discrimination and other related international instruments; national legislation and institutions; seminars and studies; action by nongovernmental organizations; and international cooperation.

On the recommendation of the conference, the General Assembly proclaimed the Second Decade to Combat Racism and Racial Discrimination, on 22 November 1983, and called for renewed and intensified efforts and for implementation of the program of action approved by the conference.

On 20 December 1993, the General Assembly proclaimed the Third Decade to Combat Racism and Racial Discrimination

(1994–2003). Also in 1993, the Commission on Human Rights appointed a special rapporteur on contemporary forms of racism, racial discrimination, xenophobia and related intolerance. The special rapporteur reports on institutionalized and indirect forms of racism and racial discrimination against national, racial, ethnic, linguistic and religious minorities and migrant workers. The rapporteur's mandate also emphasizes new manifestations of racism and xenophobia in developed countries. The Third Decade took a broad view of racism, noting that all societies in the world are afflicted by racial discrimination. The roots of racism were addressed, as were changes necessary to prevent eruption of conflicts caused by racial discrimination. Ethnic cleansing and genocide came under consideration, as well as the institutionalization of xenophobia.

In 1997, the General Assembly decided to convene the Third World Conference against Racism, Racial Discrimination, Xenophobia, and Related Intolerance, which took place from 31 August to 8 September 2001 in South Africa. The UN slogan for the World Conference was "United to Combat Racism: Equality, Dignity, Justice." Five themes were identified for the conference: (1) the sources, causes, forms and contemporary manifestations of racism, racial discrimination, xenophobia and related intolerance; (2) victims of racism, racial discrimination, xenophobia and related intolerance; (3) measures of prevention, education and protection aimed at the eradication of racism, racial discrimination, xenophobia and related intolerance at the national, regional, and international levels; (4) provision of effective remedies, recourses, redress and other measures, at the national, regional and international levels; and (5) strategies to achieve full and effective equality, including international co-operation and enhancement of the UN and other international mechanisms in combating racism, racial discrimination, xenophobia and related intolerance.

## THE WORK OF THE UN RELATING TO THE STATUS OF WOMEN

The work of the UN relating to the status of women, aimed at achieving equal rights for men and women, is an important part of the UN's efforts to promote and to encourage respect for human rights and fundamental freedoms. The organ given the main responsibility in this field is the Commission on the Status of Women, a functional commission of the Economic and Social Council, established in 1946. Almost all the achievements of the UN in this matter are due to the initiative and work of the commission.

### The Convention on the Political Rights of Women

The Convention on the Political Rights of Women, adopted in 1952 and in force since 1954, represented the culmination of the endeavors of generations of fighters for women's rights. It provides that women shall be entitled to vote in all elections, that they shall be eligible for election to all publicly elected bodies, and that they shall be entitled to hold public office and to exercise all public functions on equal terms with men and without any discrimination.

### The Convention on the Nationality of Married Women

The Convention on the Nationality of Married Women, adopted in 1957 and in force since 1958, provides that neither the celebration nor the dissolution of marriage between a national and an

alien, nor the change of nationality by the husband during marriage, shall automatically affect the nationality of the wife.

#### **The Convention on Consent to Marriage, Minimum Age for Marriage, and Registration of Marriages**

The Convention on Consent to Marriage, Minimum Age for Marriage, and Registration of Marriages, adopted in 1962 and in force since 1964, provides that no marriage shall be legally entered into without the full and free consent of both parties, such consent to be expressed by them in person after due publicity and in the presence of the authority competent to solemnize the marriage. States parties to the convention are committed to take legislative action to specify a minimum age for marriage. All marriages shall be registered in an official register by a competent authority.

In a recommendation on the same subjects as those of this convention, adopted in 1965, the General Assembly stated that the minimum age shall be not less than 15 years.

#### **The Declaration on the Elimination of Discrimination Against Women**

In 1967, the General Assembly solemnly proclaimed the Declaration on the Elimination of Discrimination Against Women. The declaration states that discrimination against women, denying or limiting as it does their equality of rights with men, is fundamentally unjust and constitutes an offense against human dignity. Work was started on a convention to put the principles of the declaration into binding legal form.

#### **The Convention on the Elimination of All Forms of Discrimination Against Women**

On 18 December 1979, the General Assembly adopted the Convention on the Elimination of All Forms of Discrimination Against Women. The convention came into force in September 1981; as of 19 April 2006, 182 states had ratified the convention.

Under the convention, states parties undertake to adopt all appropriate measures to abolish existing laws, regulations, customs, and practices that are discriminatory against women and to establish legal protection of the rights of women on an equal basis with men. The convention contains detailed provisions concerning equal rights for women in voting and holding public office and in education, employment, and health care. It provides for equality before the law and for the elimination of discrimination against women in all matters relating to marriage and family relations.

The convention established a Committee on the Elimination of Discrimination Against Women to periodically examine reports by states parties on measures that they have taken to implement the convention. The 23-member committee meets annually to consider the reports, which are due within one year of ratification or accession to the convention and every four years thereafter. The committee makes recommendations and observations to states parties on the basis of its consideration of the reports.

#### **International Women's Year**

In 1972, the General Assembly proclaimed the year 1975 as the International Women's Year. In 1974, the Economic and Social Council decided to convene an international conference to examine to what extent the organizations of the UN system had implemented the recommendations for the elimination of discrimination against women made by the Commission on the Status of

Women since its establishment and to launch an international action program aimed at achieving the integration of women as full and equal partners with men in the total development effort, eliminating discrimination on grounds of sex, and achieving the widest possible involvement of women in strengthening international peace and eliminating racism and racial discrimination.

The World Conference of the International Women's Year took place in June/July 1975 in Mexico City. It was the most representative meeting on women's issues held to date, bringing together more than a thousand representatives, about 70% of them women, from more than 130 countries. The conference adopted the "Declaration of Mexico on the Equality of Women and Their Contribution to Development and Peace, 1975"; a world plan of action for implementation of the objectives of the International Women's Year; regional plans of action; and a great number of decisions on concrete problems. In the Declaration of Mexico, the conference affirmed its faith in the objectives of the International Women's Year—equality, development, and peace.

#### **UN Decade for Women**

Later in 1975, the General Assembly endorsed the proposals of the Mexico conference and proclaimed the period 1976–85 as the UN Decade for Women: Equality, Development, and Peace. The General Assembly called for the decade to be devoted to effective and sustained action to implement the world plan of action, and it decided to convene in 1980, at the midpoint of the decade, another world conference to review and evaluate the progress made.

The second world conference, held in Copenhagen in July 1980, adopted a program of action for the second half of the decade, 1980–85, to promote the three objectives of equality, development, and peace, with special emphasis on the subtheme—employment, health, and education. It called for specific action to ensure that the objectives of the world plan were met by the end of the decade.

The program of action was endorsed later in 1980 by the General Assembly, which decided to convene in 1985 a world conference to review and appraise the achievements of the decade.

#### **1995 Fourth World Conference on Women**

The Fourth World Conference on Women was held in Beijing, from 4–15 September 1995, subtitled "Action for Equality, Development and Peace." At preparatory meetings in 1994, the Secretary-General said a turning point had been reached in the cause of women worldwide. The conference represented a vital continuation of the work on development issues begun during the United Nations Conference on the Environment and Development (UNCED) in June 1992 and the World Conference on Human Rights held in Vienna in June 1993, and tied in with the International Conference on Population and Development, held in Cairo (5–13 September 1994) and the World Summit for Social Development, held in Copenhagen (11–12 March 1995).

Besides receiving reports from virtually all UN organizations on their programs relating to the status of women, the conference addressed gender issues in the context of a new vision of the 21st century as one in which gender equality would be achieved. It also focused on the problems of rural women and the need to facilitate access to resources so that they can improve their lives and, in turn, the lives of their families and communities.

### 2000 Beijing + 5 Conference

The twenty-third special session of the General Assembly on “Women 2000: Gender Equality, Development and Peace for the 21st century” took place at UN Headquarters in New York from 5–9 June 2000. Also referred to as “Beijing + 5,” it was a special session to review progress made since the Fourth World Conference on Women (FWCW) held in Beijing in 1995. The Beijing + 5 session adopted a document and political declaration that would take further actions and initiatives to implement the Beijing Declaration and Platform for Action emerging from the FWCW. The special session was addressed by representatives of 148 member states, including two prime ministers, four vice-presidents, ministers and vice-ministers. Certain areas received focused attention. These included; education; social services and health, including sexual and reproductive health; the HIV/AIDS pandemic; violence against women and girls; the burden of poverty on women; vulnerability of migrant women including exploitation and trafficking; natural disaster and environmental management; the development of strong, effective and accessible national machineries for the advancement of women; and the formulation of strategies to enable women and men to reconcile and share equally work and family responsibilities.

### The Nairobi Forward-Looking Strategies

The World Conference to Review and Appraise the Achievements of the UN Decade for Women was held in Nairobi, Kenya, in July 1985, attended by representatives of 157 states, as well as observers from specialized agencies and other organizations. The major achievement of the conference was the adoption, by consensus, of the Nairobi Forward-Looking Strategies for the Advancement of Women to the Year 2000. Measures recommended included technical cooperation, training and advisory services, institutional coordination, research and policy analysis, participation of women in activities at the international and regional levels, and dissemination of information on goals and objectives for the advancement of women.

### The Declaration on the Participation of Women in Promoting International Peace and Cooperation

The Declaration on the Participation of Women in Promoting International Peace and Cooperation was adopted by the General Assembly in 1982. It states that women and men have an equal and vital interest in contributing to international peace and cooperation and that, to this end, women must be enabled to exercise their right to participate in the economic, social, cultural, civil, and political affairs of society on an equal footing with men.

## OTHER DECLARATIONS IN THE HUMAN RIGHTS FIELD

### The Declaration of the Rights of the Child

In 1959, the General Assembly adopted the Declaration of the Rights of the Child, which proclaims that every child, without distinction or discrimination on account of race, color, sex, language, religion, political or other opinion, national or social origin, property, birth, or other status, whether of the child or of the child's family, shall enjoy special protection and be given opportunities and facilities to develop physically, mentally, morally, spiritually, and socially in a healthy and normal manner and in conditions of

freedom and dignity. Every child shall be entitled from birth to a name and nationality and shall enjoy the benefits of social security. The child who is physically, mentally, or socially handicapped shall be given the special treatment, education, and care required by his or her particular condition. Every child is entitled to receive education that shall be free and compulsory, at least in the elementary stages. Every child shall be protected against all forms of neglect, cruelty, and exploitation and from practices that may foster racial, religious, or any other form of discrimination.

### The Declaration on the Granting of Independence to Colonial Countries and Peoples

The Declaration on the Granting of Independence to Colonial Countries and Peoples, adopted by the General Assembly in 1960, declares that the subjection of peoples to alien subjugation, domination, and exploitation constitutes a denial of fundamental human rights, is contrary to the Charter, and is an impediment to the promotion of world peace and cooperation. The declaration proclaims that all peoples have the right to self-determination.

In 1961, the General Assembly established a Special Committee on the Situation with Regard to the Implementation of the Declaration. (See also the chapter on Independence of Colonial Peoples.)

### The Declaration on Territorial Asylum

The Declaration on Territorial Asylum, adopted by the General Assembly in 1967, supplements Article 14 of the Universal Declaration of Human Rights and provides that asylum granted by a state, in the exercise of its sovereignty, to persons entitled to invoke Article 14 of the Universal Declaration, including persons struggling against colonization, shall be respected by all other states. It rests with the state granting asylum to evaluate the grounds for asylum. Where a state finds difficulty in granting or continuing to grant asylum, states individually or jointly or through the UN shall consider, in the spirit of international solidarity, appropriate measures to lighten the burden on that state. No person entitled to invoke Article 14 of the Universal Declaration shall be subjected to measures such as retention at the frontier or, if he has already entered the territory in which he seeks asylum, expulsion or compulsory return to any state where he may be subjected to persecution.

### The Declaration on Social Progress and Development

In 1969, the General Assembly solemnly proclaimed the Declaration on Social Progress and Development, which sets forth the principles, objectives, means, and methods to eliminate obstacles to social progress, particularly inequality, exploitation, war, colonialism, and racism. The declaration shows the close connections between social development policies and endeavors to promote respect for human rights. Article 1 provides that all peoples and all human beings, without distinction as to race, color, sex, language, religion, nationality, ethnic origin, family or social status, or political or other conviction, shall have the right to live in dignity and freedom and to enjoy the fruits of social progress and should, on their part, contribute to it.

### The Declaration on Principles of International Law Concerning Friendly Relations and Cooperation Among States

On 24 October 1970, the 25th anniversary of the entry into force of the Charter, the General Assembly adopted the Declaration on

Principles of International Law Concerning Friendly Relations and Cooperation Among States in Accordance with the Charter of the United Nations. One of the principles thus proclaimed is that states “shall cooperate in the promotion of universal respect for, and observance of, human rights, and fundamental freedoms for all, and in the elimination of all forms of racial discrimination and all forms of religious intolerance.”

#### **The Declaration on the Rights of Mentally Retarded Persons**

The Declaration on the Rights of Mentally Retarded Persons, adopted in 1971, proclaims that the mentally retarded person has, to the maximum degree of feasibility, the same rights as other human beings: the right to proper medical care and physical therapy, education, training, rehabilitation, and guidance; the right to economic security and to perform productive work; and the right, when necessary, to a qualified guardian and to protection from exploitation, abuse, and degrading treatment. Whenever mentally retarded persons are unable to exercise all their rights in a meaningful way or if it should become necessary to restrict or deny them, the procedure used must contain proper safeguards against abuse.

#### **The Declaration on the Protection of Women and Children in Emergency and Armed Conflicts**

In 1974, the General Assembly proclaimed the Declaration on the Protection of Women and Children in Emergency and Armed Conflicts. The declaration states that attacks on civilians, “especially on women and children, who are the most vulnerable members of the population,” shall be prohibited and condemned and that states involved in armed conflicts shall make all efforts “to spare women and children from the ravages of war.”

#### **The Declaration on the Rights of Disabled Persons**

The Declaration on the Rights of Mentally Retarded Persons was confirmed and expanded by the Declaration on the Rights of Disabled Persons, adopted in 1975. The term “disabled person” means any person unable to ensure by himself or herself wholly or partly the necessities of a normal individual and/or social life, as a result of a deficiency in his or her physical or mental capacities. While the formulation of some of the rights set forth in the Declaration on the Rights of Disabled Persons occasionally differs from that contained in the earlier instrument, there are no differences as regards the principles and purposes, except that the later declaration applies also to persons who are physically, not mentally, handicapped.

#### **The Declaration on the Use of Scientific and Technological Progress in the Interests of Peace**

In 1975, the General Assembly adopted the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of Mankind. The declaration provides that all states shall promote international cooperation to ensure that the results of scientific and technological developments are used in the interests of strengthening international peace and security, freedom, and independence and that they are also used for economic and social development and the realization of human rights and freedoms. The declaration calls on all states to help prevent the use of scientific and technological developments to

limit or interfere with the enjoyment of the human rights of the individual.

#### **The Declaration on the Elimination of All Forms of Religious Intolerance**

The Declaration on the Elimination of All Forms of Intolerance and of Discrimination Based on Religion and Belief, prepared by the Commission on Human Rights and adopted by the General Assembly in 1981, states that everyone shall have the right of freedom of thought, conscience, and religion and that no one shall be subject to discrimination on the grounds of religion or other beliefs.

#### **The Declaration on the Human Rights of Individuals Who Are Not Nationals of the Country in Which They Live**

In 1985, the General Assembly adopted the Declaration on the Human Rights of Individuals Who Are Not Nationals of the Country in Which They Live. The declaration defines the term “alien” as any individual who is not a national of the state in which he or she is present. It declares that all aliens shall enjoy a wide range of civil rights, as well as the right to safe and healthy working conditions, fair wages, and equal remuneration for work of equal value; the right to join trade unions and other associations; and the right to health protection, medical care, social security, education, rest, and leisure. No alien shall be deprived of his or her lawfully acquired assets, and aliens shall be free at any time to communicate with the consulate or diplomatic mission of the state of which they are nationals.

#### **The Declaration on the Right to Development**

The Declaration on the Right to Development was adopted by the General Assembly in 1986. In the declaration, the right to development is proclaimed as an inalienable human right by virtue of which every person and all peoples are entitled to participate in, contribute to, and enjoy economic, social, cultural, and political development, in which all human rights and fundamental freedoms can be fully realized. The right to development also implies the full realization of the right of peoples to self-determination, including their inalienable right to exercise full sovereignty over all their natural wealth and resources.

#### **Declaration on the Rights of Persons belonging to National or Ethnic, Religious and Linguistic Minorities**

In December 1992, the General Assembly reaffirmed that one of the basic aims of the United Nations was to promote and encourage respect for human rights and fundamental freedoms for all, without distinction as to race, sex, language, or religion. The Declaration on the Rights of Persons belonging to National or Ethnic, Religious and Linguistic Minorities invites states to protect the identity of minorities within their respective territories, in particular through appropriate legislation.

#### **Declaration on the Protection of All Persons from Enforced Disappearance**

In December 1992, the General Assembly also adopted the Declaration on the Protection of All Persons from Enforced Disappearance, which urges states to contribute by all means to the prevention and eradication of this gross offense to human dignity and flagrant violation of human rights. Acts of enforced disappearance should be considered offenses under criminal law punishable by

appropriate penalties that take into account their extreme seriousness. The victims of acts of enforced disappearance, and their families, have the right to obtain redress and adequate compensation, including complete rehabilitation.

**Declaration on the Right and Responsibility of Individuals, Groups and Organs of Society to Promote and Protect Universally Recognized Human Rights and Fundamental Freedoms**

In December 1998, the General Assembly adopted the Declaration on the Right and Responsibility of Individuals, Groups and

Organs of Society to Promote and Protect Universally Recognized Human Rights and Fundamental Freedoms, which acknowledged the role of individuals, groups, and associations in contributing to the elimination of violations of human rights. The declaration is designed to protect the rights of human rights defenders from summary executions, forced disappearances, torture, and arbitrary detentions, and to support the rights of those who have exercised legitimately and peacefully their freedom of opinion and expression.

---

# INDEPENDENCE OF COLONIAL PEOPLES

Since the creation of the UN, more than 80 territories that were formerly under foreign rule have become sovereign states and members of the UN. In this radical transformation of the world's political map, the UN has played a significant role that stems from the basic precepts of its charter as laid down in Article 1, which states that one of the purposes of the UN is to "develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, ..." Chapters XI, XII, and XIII of the charter are devoted specifically to measures that are designed to promote the welfare of dependent peoples.

In its efforts to implement these measures, the UN has dealt with two types of territories: (1) former colonial territories administered by designated member states as UN trust territories pending independence, and (2) non-self-governing dependencies or colonies of UN member states. Since the UN powers and responsibilities differ considerably in regard to the two categories of territories, this chapter has been divided into two sections.

## TRUST TERRITORIES

The main features of the trusteeship system are outlined in the chapter on the Trusteeship Council. What follows here is a brief description of the territories originally placed under UN trusteeship in 1946.

### Trust Territories That Have Achieved Independence

Three types of countries became part of the UN's trusteeship system: (1) territories still administered by a nation under a League of Nations mandate, (2) territories detached from enemy states as a result of the Second World War, and (3) territories voluntarily placed under the system by states responsible for their administration. All 11 territories that were placed under the trusteeship system in 1946 have since achieved the goals of the charter, either as independent states or as parts of independent states.

Following is a list of the territories that have achieved independence. The territories are listed under their administering powers.

#### Australia

*Nauru* (coadministered with New Zealand and the United Kingdom). The territory became independent on 31 January 1968, in accordance with a 1965 General Assembly resolution setting this date as the target for accession to independence.

*New Guinea*. The trust territory of New Guinea was administered by Australia together with the non-self-governing territory of Papua until the two were united and became the independent state of Papua New Guinea in 1975.

#### Belgium

*Ruanda-Urundi under Belgian administration*. In a special session convened in June 1962, the General Assembly approved separate independence for the two territories, which were established on 1 July 1962 as the Republic of Rwanda and the Kingdom of Burundi.

#### France

*Togoland*. In 1958, with the agreement of France, the UN supervised elections, and the territory became the independent state of Togo on 27 April 1960.

*Cameroons*. Following a notification in 1958 by its legislative assembly of the desire of the territory to become independent and acting upon the recommendation of the Trusteeship Council, the General Assembly, in agreement with France, resolved that on 1 January 1960 trusteeship status would end and the territory would become independent as Cameroon.

#### Italy

*Somaliland*. In union with the dependency of British Somaliland, the territory became the sovereign state of Somalia on 1 July 1960.

#### New Zealand

*Western Samoa*. In agreement with the administering authority, the UN conducted a plebiscite in May 1961, following which the territory attained independence on 1 January 1962.

#### United Kingdom

*Togoland*. To ascertain the freely expressed wishes of the people as to their political future, the UN, in agreement with the United Kingdom, conducted a plebiscite in 1956. As a result of the plebiscite, the territory united in March 1957 with the former Gold Coast to form the independent state of Ghana.

*Cameroons*. Both the northern and southern sectors of the territory were administered as part of the federation of Nigeria, a British dependency. Following a plebiscite held under UN supervision in March 1961, the northern sector became part of newly independent Nigeria on 1 June 1961. Following a similar plebiscite, the peoples of the southern sector joined the newly independent state of Cameroon on 1 October 1961.

*Tanganyika*. Following negotiations between the United Kingdom and African leaders, the territory attained independence on 9 December 1961. It united with Zanzibar in 1964 to become the United Republic of Tanzania.

#### United States

*Trust Territory of the Pacific Islands*. By the end of 1975, only the Trust Territory of the Pacific Islands remained under the UN trusteeship system. It was administered by the United States un-

der an agreement approved by the Security Council. Because it is a “strategic” trust territory, it was under the ultimate authority of the Security Council rather than the General Assembly. (See the chapter on the Trusteeship Council.)

The Pacific Islands, collectively known as Micronesia, include the former Japanese-mandated islands of the Marshalls, the Carolines, and the Northern Marianas (except Guam, which was ceded to the United States by Spain in 1898). In 1975, a covenant for political union with the United States was approved by the people of the Northern Marianas. In February 1976, the United States Congress gave final approval for granting commonwealth status to the Northern Marianas. The Commonwealth Covenant with the Northern Marianas came into force on 3 November 1986.

In a referendum held on 12 July 1978, Kosrae, Pohnpei, Truk, and Yap—in the Caroline archipelago—approved and ratified a draft constitution for a proposed Federated States of Micronesia. The four districts subsequently held elections, and the Congress of the Federated States of Micronesia was inaugurated on 10 May 1979. The Compact of Free Association with the Federated States of Micronesia also came into force on 3 November 1986.

On 21 December 1978, the Marshall Islands Constitutional Convention approved a draft constitution, and in a referendum held on 1 March 1979, the voters of those islands adopted it by a substantial majority. Legislative power in the Marshall Islands was vested in the Nitijela (legislature); the first general election under the new constitution took place on 10 April 1979. The Compact of Free Association with the Marshall Islands came into force on 21 October 1986.

On 2 April 1979, the Constitutional Convention of Palau adopted a draft constitution, which was approved by a referendum on 9 July. Elections were held on 4 November 1980, and the new constitution came into force on 1 January 1981. However, since its constitution required a 75% majority for the approval of the Compact of Free Association with the United States, Palau was unable to obtain approval for the compact in seven different referendums over the next 10 years.

In November 1992, Palau held a constitutional amendment referendum and changed the requirement for approval to simple majority (50% plus 1). Thereafter, the eighth plebiscite was held in November 1993 and the compact was approved by 68 per cent of Palauans voting in favor. In January 1994, the United States informed the Trusteeship Council that its government and the government of Palau intended to implement the compact as soon as practicable. Planning for the smooth transition to Palau’s new status was under way. In late 1994 the two countries implemented the Compact of Free Association and with it came the official end of Palau’s status as a trusteeship territory.

### Non-self-governing Territories

The delegates attending the 1945 San Francisco Conference, at which the UN was founded, included many spokesmen for anti-colonialist sentiment. As a result of their efforts and generous proposals by Australia and the United Kingdom (which possessed the world’s largest colonial empire at the time), the charter incorpo-

rates a pledge on the part of the colonial powers to assume certain obligations toward the peoples of their dependencies.

### CHARTER DECLARATION ON NON-SELF-GOVERNING TERRITORIES

The pledge takes the form of a declaration regarding non-self-governing territories that is embodied in Article 73, Chapter XI, of the charter. Under Article 73, all UN members “which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, ...” This general obligation is then divided into five specific obligations: (a) to “ensure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses”; (b) to “develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples ...”; (c) to “further international peace and security”; (d) to “promote constructive measures of development ...”; and (e) to “transmit regularly to the Secretary-General for information purposes, subject to such limitations as security and constitutional considerations may require, statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible....”

Today, when so many of these people have claimed and won their independence, the obligations contained in the declaration may not seem very far-reaching. For example, nothing is said about preparing non-self-governing territories for actual independence—indeed, the word “independence” appears nowhere in the declaration. Although due account is to be taken of the “political aspirations of the peoples,” all that is explicitly acknowledged is the obligation to develop “self-government,” which does not necessarily imply independence.

However, the validity of the declaration must be considered in the context of its era. Few people at the San Francisco Conference foresaw how intense or universal the desire of colonial peoples for full political sovereignty would be. All told, the obligations included in the declaration probably represented the maximum that reasonably could be expected from colonial countries at that time. Moreover, in the circumstances then prevailing, the agreement by the colonial nations, under paragraph (e) of Article 73, to submit information to an international body concerning their own territories—in effect, to yield up a degree of their sovereignty—was a considerable concession.

### TERRITORIES COVERED BY THE DECLARATION

The somewhat unwieldy term “non-self-governing territory” was chosen primarily because it was broad enough to include the various constitutional designations given by administering powers to

their dependencies—colony, protectorate, and so on—as well as all stages of political development short of actual self-government or independence. The declaration includes all those territories “whose peoples have not yet attained a full measure of self-government.” However, the precise meaning of the phrase “a full measure of self-government” was not specified in the charter, an omission that left the door open for subsequent dispute and controversy.

At the outset, it was considered the responsibility of the eight colonial powers that were UN members to identify the dependencies they regarded as non-self-governing within the meaning of Article 73 of the charter. At its first working session, in 1946, the General Assembly adopted a resolution enumerating 74 non-self-governing territories that the administering countries had identified as falling within the provisions of the declaration. The eight colonial countries were Australia, Belgium, Denmark, France, the Netherlands, New Zealand, the United Kingdom, and the United States. The combined population of their dependencies—which ranged from tiny Pitcairn Island, with a population of 100 persons, to the Netherlands Indies, with 73 million—was estimated at 215 million. The dependencies of Spain and Portugal could not be included in the 1946 list, since these two colonial powers were not UN members at the time. (For the non-self-governing territories listed by the General Assembly in 1946 and subsequently, see Table 1.)

## THE ROLE OF THE UN

The charter does not assign any particular task to the UN with respect to non-self-governing territories. It does not even specify what should be done with the information transmitted to the Secretary-General. Hence, the General Assembly has considered itself free to define its own functions.

Since, even in the very beginning, the majority of UN members were vehemently anticolonial, the immediate task that the General Assembly set for itself was to induce the colonial countries by every means in its power to fulfill their obligations under the charter declaration. Judging from the disputes and controversies that arose even as early as 1946, it seems safe to assume that this development was totally unforeseen by the colonial countries at the time of the San Francisco Conference.

Although the General Assembly lacks the power to enforce its recommendations, the colonial powers had no wish to see themselves recorded as being in constant opposition in majority decisions. Consequently, they fought from the start to maintain the right to take the initiative in affairs concerning their own territories and to prevent the UN from expanding its role in colonial matters. However, they were fighting a losing battle against an irreversible trend of world opinion; in effect, the story of the UN's role has essentially been one of increasing involvement in the process of decolonization.

### Disputes over the Transmission of Information

The first dispute that arose between the colonial powers and the other UN members concerned the General Assembly's desire to discuss the reports that had been submitted on the various territories. Some of the colonial governments, particularly Belgium, contended that the mere submission of reports fulfilled the charter's requirements under paragraph (e) of Article 73. Disregarding these protests, the 1947 General Assembly set up a special com-

mittee to report on the information received. In 1949, this committee was established as the Committee on Information from Non-Self-Governing Territories, composed of an equal number of administering and nonadministering countries. In the same year, the General Assembly adopted a standard questionnaire, which the administering powers were expected to answer in annual reports. The questionnaire covered virtually every aspect of the social, economic, and educational conditions in the territories. However, because of the controversies discussed below, the committee received reports on only 56 of the 74 territories.

### Cessation of Information

By 1949, some of the administering powers had unilaterally interpreted paragraph (e) of Article 73 to mean that when they themselves considered a territory to have attained self-government, they no longer needed to submit reports on it to the UN. On this basis, the United Kingdom ceased sending information on Malta after its first report in 1946. Likewise, France, after 1946, stopped sending reports on certain of its territories, including Guadeloupe, Martinique, and New Caledonia, that it regarded as overseas departments with rights equal to those of the metropolitan departments of France or as having reached a requisite stage of “internal autonomy.” Nor did the United States send reports on the Panama Canal Zone after 1946 (though this decision may have been made because Panama itself contested classification of the Canal Zone as a non-self-governing territory). Concerned about these developments, the 1949 General Assembly, over the opposition of the colonial powers (the United States abstaining), decided that it was “within the responsibility of the General Assembly to express its opinion on the principles which have guided or which may in future guide the Members concerned in enumerating the territories for which the obligation exists to transmit information under Article 73 (e) of the Charter.”

The General Assembly, in 1952, established a special committee to draw up a list of criteria of self-government and, at its next session, voted itself competent to decide on the basis of this list whether reports were due on a given territory. Since that time, the General Assembly has formally approved the cessation of reports on a number of territories, finding that they had “attained a full measure of self-government.” However, in each case the administering power in question had already announced, prior to that approval, that it would no longer transmit information on these territories. The territories and the dates of General Assembly approval were as follows: from 1953 to 1955, Puerto Rico (United States), Greenland (Denmark), Suriname and Curaçao (Netherlands); in 1959, Alaska and Hawaii (United States); in 1965, the Cook Islands (New Zealand); and in 1974, Niue (New Zealand).

It should be noted, however, that so long as a territory is not actually independent, the General Assembly considers that it has the right to reopen the question of the territory's status at any time. Thus, although France ceased transmitting information on New Caledonia in 1947, the General Assembly decided on 2 December 1986 that New Caledonia was a non-self-governing territory within the meaning of Chapter XI of the charter and it was again included in the list of such territories.

In 1967, the United Kingdom announced that since a number of its small Caribbean dependencies—namely, Antigua, Dominica, Grenada, St. Kitts-Nevis-Anguilla, and St. Lucia—had achieved

the status of associated states with a “full measure of self-government,” it would no longer submit reports on those territories. The General Assembly did not, however, accept the territories’ new status as constituting full self-government and continued to consider them as non-self-governing. (All the associated states except Anguilla subsequently attained independence, and the United Kingdom resumed transmission of information regarding Anguilla in 1984.) A similar situation arose with respect to Brunei, in 1972, when the United Kingdom informed the Secretary-General that the territory had attained full internal self-government and that, consequently, the United Kingdom considered the transmission of information about it to be no longer appropriate. (Brunei became independent in 1984.)

### Refusal to Transmit Information

Until the General Assembly began to assert a competence in the matter, the inclusion of a territory in the list of non-self-governing territories to which Article 73 applies was at the discretion of the administering power concerned. For instance, in 1946, the United Kingdom did not include Southern Rhodesia in the list of dependent territories under its administration because the territory was self-governing but subsequently changed its position after the unilateral declaration of independence by the white-majority regime in 1965.

When Spain and Portugal became UN members in 1955, they also refused to transmit information on their overseas territories, maintaining that these were not colonial possessions but “overseas provinces.” Spain retreated from this position in 1960, to the “satisfaction” of the General Assembly, and began to submit reports. However, Portugal maintained its stand until 1974, when an internal upheaval brought about a change of government.

These differences concerning the obligation to transmit information under Article 73 (e) led the Assembly in 1960 to adopt a resolution that defined a “full measure of self-government” to mean one of three specific conditions: (1) emergence of the territory as a sovereign independent state, (2) free association with an independent state, or (3) integration with an independent state, both (2) and (3) to be the result of a free and voluntary choice of the people concerned and the people to possess certain specified rights and safeguards in their new status. Unless one of these three conditions pertained, the General Assembly asserted, the administering power had an obligation to transmit information on any territory that is “geographically separate and is distinct ethnically and/or culturally from the country administering it.”

## THE 1960 ASSEMBLY DECLARATION ON THE ENDING OF COLONIALISM

Throughout the 1950s, the various disputes with colonial powers over the transmission of information on non-self-governing territories took place against a background of steady decolonization. Whether gracefully granted or bitterly fought for, sovereignty was achieved by a growing number of former colonial dependencies. In 1946, at the first working session of the General Assembly, only a handful of members had memories of recent foreign rule: India, the Philippines, and the four Arab countries that had been League of Nations mandate territories (Iraq, Jordan, Lebanon, and Syria). By 1959, eight Asian countries (Burma, Cambodia, Ceylon, Indonesia, Laos, Malaya, Nepal, and Pakistan) and two African

countries (Ghana and Guinea) had become sovereign independent states. As these nations joined the UN, many of them after years of struggle against their former masters or with humiliating memories of the indignities of foreign rule, anticolonialist sentiment became increasingly bitter and significantly influenced the tone of the debates in the General Assembly. Wholeheartedly supported by the Soviet-bloc nations, the newly independent nations began a drive to put a speedy end to colonialism altogether, thus going far beyond anything specifically spelled out in the charter.

The 1960 General Assembly proved to be decisive for the triumph of the anticolonialist forces in the UN. At the opening of that session, 16 new African states and Cyprus became members, thereby bringing the total number of African and Asian nations to 44 out of a total UN membership of 100. In addition, members of the Afro-Asian Group, as it was called, knew that they could count on the support of the Soviet bloc, many Latin American countries, and the Scandinavian countries. By the end of the session, they had drafted the text of a Declaration on the Granting of Independence to Colonial Countries and Peoples that was designed to serve as the UN’s basic framework for its work in colonial matters, complementing the charter declaration.

### Main Provisions of the Declaration

Whereas the charter declaration had been a gentlemanly agreement among masters to look after the welfare of their subjects, the General Assembly declaration, in effect, was an assertion of the right of these subject peoples to be subjects no longer. Written from the viewpoint of the colonial peoples themselves, the declaration in its preamble recognizes “the passionate yearning for freedom in all dependent peoples”; the existence of “increasing conflicts resulting from the denial ... of the freedom of such peoples, which constitute a serious threat to world peace”; and “the important role of the United Nations in assisting the movement for independence in Trust and Non-Self-Governing Territories.” The declaration then lists seven provisions: (1) the subjection of peoples to alien domination “is contrary to the Charter of the United Nations and is an impediment to the promotion of world peace and cooperation”; (2) “all peoples have the right to self-determination”; (3) inadequacy of preparedness “should never serve as a pretext for delaying independence”; (4) all armed action or repressive measures against dependent peoples “shall cease in order to enable them to exercise peacefully and freely their right to complete independence”; (5) “immediate steps shall be taken ... to transfer all powers to the peoples of those territories, without any conditions or reservations”; (6) any attempt to disrupt the national unity and territorial integrity of a country “is incompatible with the purposes and principles of the Charter”; and (7) all states “shall observe faithfully and strictly” the provisions of the Charter, the Universal Declaration of Human Rights, and “the present Declaration” on the basis of equality, noninterference in the internal affairs of states, and respect for the sovereign rights of all peoples.

Although the phrase “colonial powers” does not appear, the declaration was clearly and firmly directed against those countries. Nevertheless, such was the force of anticolonial sentiment that no colonial power cared to record a negative vote. Accordingly, on 14 December 1960, the Declaration on the Granting of Independence to Colonial Countries and Peoples was adopted 89–0, with only nine abstentions (Australia, Belgium, the Dominican Republic,

lic, France, Portugal, South Africa, Spain, the United Kingdom, and the United States).

#### Establishment of the Special Committee

A year after the adoption of the declaration, the USSR took the initiative by asking the General Assembly to discuss the problem of implementing it. The ensuing debate led to the creation of a 17-member Special Committee on the Situation with Regard to the Implementation of the Declaration on the Granting of Independence to Colonial Countries and Peoples. Because of the importance attached to its work, seven additional members were added in the following year. Since that time, the composition of the Special Committee (in its early days called “the Special Committee of 24”) has changed slightly when certain countries have withdrawn for various reasons, to be replaced by countries representing the same geopolitical grouping as the outgoing members. Originally, the committee included three colonial or administering powers—Australia, the United Kingdom, and the United States—but France, Spain, and the two most recalcitrant administering countries, Portugal and South Africa, were never members. In later developments, both the United Kingdom and the United States suspended their cooperation. Thus, the committee’s deliberations have always been anticolonialist in tone.

In 1963, the committee’s functions were expanded to include the work of the 1947 Committee on Information from Non-Self-Governing Territories, which was dissolved. At the same time, the General Assembly gave the committee the right to apprise the Security Council of any developments in any territory that it had examined that might threaten international peace and security. (Normally, subsidiary bodies do not have this right but must act through the General Assembly.) In addition, the General Assembly empowered the committee to examine information on the trust territories, as well as on non-self-governing territories—although the Trusteeship Council continued to exercise its normal functions until the graduation of the last trusteeship territory in 1994. The committee was also empowered to send visiting missions to dependent territories. Hence, since 1963, the committee has been the General Assembly’s chief executive arm in colonial matters.

Besides considering problems connected with individual colonial territories, the committee debates topics of a more general nature assigned to it by the General Assembly—for example, the role played by foreign economic and military interests that are impeding the attainment of independence or exploiting the natural resources of the territories that rightfully belong to the indigenous inhabitants. The committee has been particularly active in the dissemination of information on colonial problems and in mobilizing international support and assistance for the colonial peoples and their efforts to achieve self-determination and independence.

In 1988, the General Assembly declared the decade 1990–2000 the Decade for the Eradication of Colonialism. In 1991, it approved a plan of action for the Special Committee which it hoped would achieve the total elimination of colonialism by the year 2000. The plan of action called for the Special Committee to, among other things: formulate specific proposals for the elimination of the remaining manifestations of colonialism, and to report its findings each year to the General Assembly; to make concrete suggestions to the Security Council about developments in colonial territories

that threaten international peace and security; to pay special attention to small territories, and dispatch visiting missions to those territories to gather information firsthand; and to continue to collect, prepare, and disseminate studies and articles on the problems of decolonization, including continuation of the periodical *Objective: Justice* and the special series called *Decolonization*. In 2001, the General Assembly declared the period 2001–2010 the Second International Decade for the Eradication of Colonialism.

In January, 1986, the United Kingdom informed the Special committee’s chairman that it would no longer take part in the Committee’s work, since, in its own opinion, all the remaining territories under its administration had chosen to remain in close association with the United Kingdom. However, the United Kingdom agreed to continue to fulfill its obligations under the charter and to transmit information to the committee under Article 73e. The United Kingdom also reiterated to the Fourth Committee in 1990 that it would respect the wishes of the people of any of its 10 remaining territories, no matter what the size of their population.

In February 1992, the United States suspended its cooperation with the Special Committee, claiming that it had focused on an outmoded agenda instead of new approaches aimed at addressing the needs of the few remaining non-self-governing territories.

In 2006, the following countries were represented on the Special Committee: Antigua and Barbuda, Bolivia, Chile, China, Congo, Côte d’Ivoire, Cuba, Ethiopia, Fiji, Grenada, India, Indonesia, Iran, Iraq, Mali, Papua New Guinea, Russian Federation, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Sierra Leone, Syrian Arab Republic, Tunisia, United Republic of Tanzania, and Venezuela.

#### PROGRESS OF DECOLONIZATION

In the 10 years following the adoption of the declaration on the ending of colonialism (1960 to 1970), 27 territories (with a total population of over 53 million) attained independence. Some 44 territories (with a population of approximately 28 million) remained under foreign rule or control, however, and the General Assembly’s work in hastening the process of decolonization was far from completed. In Africa, an ever-widening confrontation had emerged between the colonial and white-minority regimes and the roughly 18 million Africans in Portuguese Guinea (now Guinea-Bissau), Angola, Mozambique, Cape Verde, and São Tomé and Príncipe; in Southern Rhodesia, which was legally still a British possession; and in the old League of Nations mandate territory of South West Africa, officially designated as Namibia by the UN. Resisting all efforts by the UN to bring an end to white-minority rule by peaceful means, these regimes refused to change despite pressures brought upon them both by the international community and by the demands of the African peoples of the territories.

This refusal had led to the emergence of African national liberation movements within the territories and to a series of armed conflicts that were seen by independent African states as a menace to peace and stability and as the potential cause of a bloody racial war engulfing the whole of Africa. Armed conflict, beginning in 1960 in Angola, had, in fact, spread to all the Portuguese-controlled territories on the African mainland and, as the African liberation movements gained strength and support, had developed into full-scale warfare in Angola, Portuguese Guinea, and Mo-

zambique, engaging large Portuguese armies and putting a serious strain on Portugal's economy.

In Southern Rhodesia and Namibia, armed struggle for liberation was slower to develop, but despite the essential differences in the problems presented by these territories, the General Assembly—partly in response to a growing collaboration between South Africa, Portugal, and the white-minority regime in Southern Rhodesia—had come to view them as aspects of a single consuming issue of white-minority rule versus black-majority rights.

The strategy advocated by the Afro-Asian Group, supported by the Soviet-bloc countries and many others, for rectifying the situation in these territories was essentially to obtain recognition and support for their African national liberation movements and to seek the application, through a Security Council decision made under Chapter VII of the charter, of mandatory enforcement measures, including full economic sanctions and military force as circumstances warranted. However, in each case, except partially in that of Southern Rhodesia, the use of mandatory enforcement measures was decisively resisted by two permanent members of the Security Council, the United Kingdom and the United States, which, together with several other Western nations, felt that they could not afford to embark upon a policy of confrontation with the economically wealthy white-minority regimes of southern Africa.

Despite this resistance, the African and Asian nations continued to maintain the spotlight of attention on issues of decolonization. Year after year, one or another of the cases mentioned above was brought before the Security Council. Each session of the General Assembly, and of the Special Committee on decolonization, was the scene of lengthy and often acrimonious debates. This constant pressure led to greater recognition and status for the national liberation movements of the territories in Africa and brought about widespread condemnation and isolation of the white regimes. In 1971, for the first time, a mission of the Special Committee visited the liberated areas of Guinea-Bissau at the invitation of the African liberation movement concerned and found that the liberation movement had established an effective administration.

In 1972, the General Assembly affirmed for the first time that “the national liberation movements of Angola, Guinea-Bissau and Cape Verde, and Mozambique are the authentic representatives of the true aspirations of the peoples of those territories” and recommended that, pending the independence of those territories, all governments and UN bodies should, when dealing with matters pertaining to the territories, ensure the representation of those territories by the liberation movements concerned. In the following year, the General Assembly extended similar recognition to the national liberation movements of Southern Rhodesia and Namibia.

On 25 April 1974, largely as a result of internal and external pressures resulting from its colonial wars, a change of regime occurred in Portugal that had major repercussions on the situation in its African territories. The new regime pledged itself to ending the colonial wars and began negotiations with the national liberation movements. By the end of 1974, Portuguese troops had been withdrawn from Guinea-Bissau and the latter had become a UN member. This was followed by the independence and admission to UN membership of Cape Verde, Mozambique, and São Tomé and Príncipe in 1975 and Angola in 1976.

### Southern Rhodesia (now Zimbabwe)

The problem of Southern Rhodesia, which in 1977 had a population of almost 7 million, of whom 6.5 million were Africans, was not resolved until the end of the decade.

Southern Rhodesia had been given full internal self-government by the United Kingdom in 1923, although under a constitution that vested political power exclusively in the hands of the white settlers. Hence, the United Kingdom did not include this dependency in its original 1946 list of non-self-governing territories and did not transmit information on it to the UN. Although, by the terms of the 1923 constitution, the United Kingdom retained the residual power to veto any legislation contrary to African interests, this power was never used, and no attempt was made to interfere with the white settlers' domination of the territorial government.

UN involvement in the question of Southern Rhodesia began in 1961, when African and Asian members tried, without success, to bring pressure to bear upon the United Kingdom not to permit a new territorial constitution to come into effect. While giving Africans their first representation in the Southern Rhodesian parliament, the 1961 constitution restricted their franchise through a two-tier electoral system heavily weighted in favor of the European community.

In June 1962, acting on the recommendation of the Special Committee, the General Assembly adopted a resolution declaring Southern Rhodesia to be a non-self-governing territory within the meaning of Chapter XI of the charter, on the grounds that the vast majority of the people of Southern Rhodesia were denied equal political rights and liberties. The General Assembly requested the United Kingdom to convene a conference of all political parties in Rhodesia for the purpose of drawing up a new constitution that would ensure the rights of the majority on the basis of “one-man, one-vote.” However, the United Kingdom continued to maintain that it could not interfere in Rhodesia's domestic affairs. The 1961 constitution duly came into effect in November 1962.

On 11 November 1965, the government of Ian Smith unilaterally declared Southern Rhodesia independent. The United Kingdom, after branding the declaration an “illegal act,” brought the matter to the Security Council on the following day, and a resolution was adopted condemning the declaration and calling upon all states to refrain from recognizing and giving assistance to the “rebel” regime. On 20 November, the council adopted a resolution condemning the “usurpation of power,” calling upon the United Kingdom to bring the regime to an immediate end, and requesting all states, among other things, to sever economic relations and institute an embargo on oil and petroleum products. In 1968, the Security Council imposed wider mandatory sanctions against Southern Rhodesia and established a committee to oversee the application of the sanctions. The General Assembly urged countries to render moral and material assistance to the national liberation movements of Zimbabwe, the African name for the territory.

On 2 March 1970, Southern Rhodesia proclaimed itself a republic, thus severing its ties with the United Kingdom. After Mozambique became independent in 1975, guerrilla activity along the border with Southern Rhodesia intensified; the border was then closed, further threatening the economy of Southern Rhodesia, already hurt by UN-imposed sanctions.

In 1977, Anglo-American proposals for the settlement of the Southern Rhodesian problem were communicated to the Security Council by the United Kingdom. The proposals called for the surrender of power by the illegal regime, free elections on the basis of universal suffrage, the establishment by the United Kingdom of a transitional administration, the presence of a UN force during the transitional period, and the drafting of an independence constitution. The proposals were to be discussed at a conference of all political parties in Southern Rhodesia, white and African. However, the regime rejected the idea of such a conference. Attempts by the regime in 1978 and early 1979 to draft a new constitution giving some political power to Africans but maintaining effective control by the white minority failed, and the struggle by forces of the liberation movement, called the Patriotic Front, intensified.

In August 1979, British prime minister Margaret Thatcher stated at the Conference of Commonwealth Heads of State and Government that her government intended to bring Southern Rhodesia to legal independence on a basis acceptable to the international community. To this end, a constitutional conference was convened in London on 10 September, to which representatives of the Patriotic Front and the Rhodesian administration in Salisbury were invited. On 21 December, an agreement was signed on a draft independence constitution and on transitional arrangements for its implementation, as well as on a cease-fire to take effect on 28 December. Lord Soames was appointed governor of the territory until elections, which took place in February 1980 in the presence of UN observers. On 11 March, Lord Soames formally appointed Robert G. Mugabe, whose party had received the majority of seats in the House of Assembly, as prime minister. The independence of Zimbabwe was proclaimed on 18 April 1980, and on 25 August, Zimbabwe became a member of the UN.

### Remaining Colonial Issues

The 16 remaining dependent territories are almost all small islands scattered about the globe. Their tiny populations and minimal economic resources render it almost impossible for them to survive as viable, fully independent states. The 16 remaining dependent territories in 2006 were: Western Sahara, Anguilla, Bermuda, British Virgin Islands, Cayman Islands, Falkland Islands (Malvinas), Montserrat, St. Helena, Turks and Caicos Islands, United States Virgin Islands, Gibraltar, American Samoa, Guam, New Caledonia, Pitcairn, and Tokelau. At the end of this chapter, Table 1 sets forth all the former non-self-governing territories that have become independent or joined neighboring independent states. Table 2 lists the remaining self-governing territories according to their colonial powers.

Although the administering powers joined with the rest of the UN membership in asserting that the peoples of these small territories have an inalienable right to the exercise of self-determination, the leaders of the drive to end colonialism have doubted the genuineness of the preparations for achieving this goal. As evidence to justify their skepticism, the African and Asian nations pointed out that military bases were established in some of the small territories, which they declared "incompatible with the purposes and principles of the Charter." Moreover, in the case of territories that the administering powers have declared their intention of preparing for self-governing status rather than for full independence, the majority of UN members feel that the Gener-

al Assembly should be granted an active role in ascertaining the wishes of the inhabitants and furnished with more comprehensive information on conditions prevailing in the territories. The General Assembly has approved numerous resolutions requesting the administering states to allow UN missions to visit the remaining non-self-governing territories to ascertain, firsthand, the wishes of the inhabitants, but has met with little cooperation.

Two of the territories that have been brought under the General Assembly's surveillance through the Special Committee are United Kingdom possessions in which the issue of decolonization is complicated by conflicting claims of sovereignty by other nations—the Falkland Islands (Malvinas), also claimed by Argentina, and Gibraltar, also claimed by Spain.

With regard to another territory, Western Sahara, Spain informed the Secretary-General in 1976 that it had terminated its presence in the territory and considered itself henceforth exempt from any international responsibility in connection with its administration. Western Sahara, however, continued to be listed by the General Assembly as non-self-governing.

The Special Committee annually reviews the list of territories to which the declaration on decolonization is applicable. In 1986, France, the administering power of New Caledonia, refused to recognize the competence of the committee over the territory or to transmit to the UN the information called for under Article 73(e) of the charter. France has, however, asserted that it will respect the wishes of the majority of the people of New Caledonia, in accordance with the provisions of the Matignon Agreement agreed to by all the parties in 1988. As a result of the Nouméa Accord of 1998, the New Caledonian parties opted for a negotiated solution and progressive autonomy from France rather than an immediate referendum. The transfer of powers from France began in 2000 and will continue for 15 to 20 years, when the territory will opt for full independence or a form of associated statehood. As of 2006, New Caledonia continued to vote in French presidential elections and to elect parliamentary representatives to the French Senate and National Assembly. However, new political institutions were formed in New Caledonia as a result of the Nouméa Accord.

### The Problem of Namibia (South West Africa)

The status of South West Africa (officially designated as Namibia by the General Assembly in June 1968), a pre-World War I German colony that was administered by South Africa under a League of Nations mandate beginning in 1920, has preoccupied the General Assembly almost from the first moment of the UN's existence. In 1946, South Africa proposed that the Assembly approve its annexation of the territory. Fearing that the South African government would seek to extend its apartheid system to South West Africa, the General Assembly did not approve the proposal and recommended instead that the territory be placed under the UN trusteeship system. In the following year, South Africa informed the General Assembly that while it agreed not to annex the territory, it would not place it under trusteeship. Although South Africa had reported on conditions in the territory in 1946, it declined to submit further reports, despite repeated requests from the General Assembly.

In 1950, the International Court of Justice, in an advisory opinion requested by the General Assembly, held that South Africa continued to have international obligations to promote to the ut-

**United Nations**

Namibia (formerly South West Africa)<sup>1</sup>

**United States**

Trust Territory of the Pacific Islands (Federated States of Micronesia, Marshall Islands, Northern Mariana Islands), Palau (in free association with the United States)

<sup>1</sup> In 1966, the General Assembly terminated South Africa's mandate over South West Africa and placed the territory under the direct responsibility of the UN. In 1968, the General Assembly declared that the territory would be called Namibia, in accordance with its people's wishes. Until independence, the legal administering authority for Namibia was the UN Council for Namibia.

most the material and moral well-being and social progress of the inhabitants of the territory as a sacred trust of civilization, and that the UN should exercise the supervisory functions of the League of Nations in the administration of the territory. South Africa refused to accept the court's opinion and continued to oppose any form of UN supervision over the territory's affairs.

In October 1966, the General Assembly, declaring that South Africa had failed to fulfill its obligations under the League of Nations mandate to ensure the well-being of the people of the territory and that it had, in fact, disavowed the mandate, decided that the mandate was therefore terminated, that South Africa had no other

right to administer the territory, and that thenceforth the territory came under the direct responsibility of the UN. In May 1967, the General Assembly established the UN Council for South West Africa (later renamed the UN Council for Namibia) to administer the territory until independence "with the maximum possible participation of the people of the territory." It also decided to establish the post of UN Commissioner for Namibia to assist the council in carrying out its mandate. Later in the same year, in the face of South Africa's refusal to accept its decision and to cooperate with the UN Council for Namibia, the General Assembly rec-

Remaining Non-Self-Governing Territories Listed by the General Assembly, as of 2002

<b>France</b> <sup>2</sup>	New Caledonia
<b>New Zealand</b>	Tokelau Islands
<b>Spain</b>	Western Sahara <sup>3</sup>
<b>United Kingdom</b>	Anguilla
	Bermuda
	British Virgin Islands
	Cayman Islands
	Falkland Islands (Malvinas)
	Gibraltar
	Montserrat
	Pitcairn Islands
	St. Helena
	Turks and Caicos Islands
<b>United States</b>	American Samoa
	Guam
	United States Virgin Islands

<sup>2</sup> On 2 December 1986, the General Assembly decided that New Caledonia was a non-self-governing territory within the meaning of Chapter XI of the UN Charter.

<sup>3</sup> Spain informed the Secretary-General on 26 February 1976 that as of that date, it had terminated its presence in the territory of the Sahara and deemed it

necessary to place the following on record: "Spain considers itself henceforth exempt from any responsibility of an international nature in connection with the administration of the territory in view of the cessation of its participation in the temporary administration established for the territory." On 5 December 1984, and in many subsequent resolutions, the General Assembly reaffirmed that the question of Western Sahara was a question of decolonization, which remained to be resolved by the people of Western Sahara. In August 1988 the Kingdom of Morocco and the Frente Popular para la Liberación (Polisario Front) agreed in principle to the proposals put forward by Secretary-General Perez de Cuéllar and the Organization of African Unity. By its Resolutions 658 (1990) and 690 (1991) the Security Council adopted a settlement plan for Western Sahara that included a referendum for self-determination by the people of the country. In September 1991, the UN achieved a cease-fire in Western Sahara between the factions, through the establishment of the UN Mission for the Referendum in Western Sahara (MINURSO). In 1994, MINURSO began the process of identifying potential voters. In May 1996, the Secretary-General suspended the identification process and most MINURSO civilian staff were withdrawn. The military component remained to monitor and verify the ceasefire. In October 1998, in an attempt to move the process of a referendum forward, the Secretary-General presented a package of measures to the parties, which included a protocol on identification of those remaining applicants from the three tribal groupings. Frente POLISARIO accepted the package the following month, and the government of Morocco accepted in principle in March 1999. As of 2006, the identification process had been completed, but the parties continued to hold divergent views regarding an appeals process, the repatriation of refugees and other aspects of the plan.

ommended that the Security Council take measures to enable the UN Council for Namibia to carry out its mandate.

In its first resolution on the question, in 1969, the Security Council recognized the termination of the mandate by the General Assembly, described the continued presence of South Africa in Namibia as illegal, and called on South Africa to withdraw its administration from the territory immediately. In the following year, the Security Council explicitly declared for the first time that "all acts taken by the government of South Africa on behalf of or concerning Namibia after the termination of the mandate are illegal and invalid." This view was upheld in 1971 by the International Court of Justice, which stated, in an advisory opinion requested by the Security Council, that "the continued presence of South Africa in Namibia being illegal, South Africa is under obligation to withdraw its administration from Namibia immediately and thus put an end to its occupation of the territory." South Africa, however, again refused to comply with UN resolutions on the question of Namibia, and it continued to administer the territory.

To secure for the Namibians "adequate protection of the natural wealth and resources of the territory which is rightfully theirs," the UN Council for Namibia enacted a Decree for the Protection of the Natural Resources of Namibia in September 1974. Under the decree, no person or entity may search for, take, or distribute any natural resource found in Namibia without the council's permission, and any person or entity contravening the decree "may be held liable in damages by the future government of an independent Namibia." The council also established, in the same year, the Institute for Namibia (located in Lusaka, Zambia, until South Africa's withdrawal from Namibia) to provide Namibians with ed-

ucation and training and equip them to administer a future independent Namibia.

In 1976, the Security Council demanded for the first time that South Africa accept elections for the territory as a whole under UN supervision and control so that the people of Namibia might freely determine their own future. It condemned South Africa's "illegal and arbitrary application ... of racially discriminatory and repressive laws and practices in Namibia," its military buildup, and its use of the territory "as a base for attacks on neighboring countries."

In the same year, the General Assembly condemned South Africa "for organizing the so-called constitutional talks at Windhoek, which seek to perpetuate the apartheid and homelands policies as well as the colonial oppression and exploitation of the people and resources of Namibia." It decided that any independence talks regarding Namibia must be between the representatives of South Africa and the South West Africa People's Organization (SWAPO), which it recognized as "the sole and authentic representative of the Namibian people." In 1977, the General Assembly declared that South Africa's decision to annex Walvis Bay, Namibia's main port, was "illegal, null, and void" and "an act of colonial expansion," and it condemned the annexation as an attempt "to undermine the territorial integrity and unity of Namibia."

At a special session on Namibia in May 1978, the General Assembly adopted a declaration on Namibia and a program of action in support of self-determination and national independence for Namibia. Expressing "full support for the armed liberation struggle of the Namibian people under the leadership of the SWAPO," it stated that any negotiated settlement must be arrived at

with the agreement of SWAPO and within the framework of UN resolutions.

*The UN Plan for Namibian Independence.* In July 1978, the Security Council met to consider a proposal by the five Western members of the council—Canada, France, the Federal Republic of Germany, the United Kingdom, and the United States—for a settlement of the Namibian question. The proposal comprised a plan for free elections to a constituent assembly under the supervision and control of a UN representative, assisted by a UN transition assistance group that would include both civilian and military components. The council took note of the Western proposal and requested the Secretary-General to appoint a special representative for Namibia. In September 1978, after approving a report by the Secretary-General based on his special representative's findings, the council, in Resolution 435 (1978), endorsed the UN plan for the independence of Namibia, and it decided to establish, under its authority, the UN Transition Assistance Group (UNTAG) to ensure the early independence of Namibia through free and fair elections under UN supervision and control.

The Secretary-General's report stated that the implementation of the UN plan would be carried out in three stages: (1) cessation of all hostile acts by all parties; (2) the repeal of discriminatory or restrictive laws, the release of political prisoners, and the voluntary return of exiles and refugees; and (3) the holding of elections after a seven-month pre-electoral period, to be followed by the entry into force of the newly adopted constitution and the consequent achievement of independence by Namibia.

Since 1978, the General Assembly has continually reaffirmed that Security Council Resolution 435 (1978), in which the council endorsed the UN plan for the independence of Namibia, is the only basis for a peaceful settlement. It has condemned South Africa for obstructing the implementation of that resolution and other UN resolutions, for "its manoeuvres aimed at perpetuating its illegal occupation of Namibia," and for its attempts to establish a "linkage" between the independence of Namibia and "irrelevant, extraneous" issues, such as the presence of Cuban troops in Angola. In furtherance of the objective of bringing to an end South Africa's occupation of Namibia, the General Assembly has called upon all states to sever all relations with South Africa, and it has urged the Security Council to impose mandatory comprehensive sanctions against South Africa. The General Assembly also has continued to authorize the UN Council for Namibia, as the legal administering authority for Namibia, to mobilize international support for the withdrawal of the illegal South African administration from Namibia, to counter South Africa's policies against the Namibian people and against the UN, to denounce and seek the rejection by all states of South Africa's attempts to perpetuate its presence in Namibia, and to ensure the nonrecognition of any administration or political entity installed in Namibia, such as

the so-called interim government imposed in Namibia on 17 June 1985, that is not the result of free elections held under UN supervision and control.

In April 1987, the Secretary-General reported to the Security Council that agreement had been reached on the system of proportional representation for the elections to be held in Namibia as envisaged in Council Resolution 435 (1978). Thus, he noted, all outstanding issues had been resolved, and the only reason for the delay in the emplacement of UNTAG and an agreement on a cease-fire was South Africa's unacceptable precondition that the Cuban troops be withdrawn from Angola before the implementation of the UN plan for Namibian independence.

In December 1988, after eight months of intense negotiations brokered by the United States, Angola, Cuba, and South Africa signed agreements on the withdrawal of Cuban troops from Angola and the achievement of peace in south-western Africa. On 16 January 1989 the Security Council officially declared that Namibia's transition to independence would begin on 1 April 1989 (Security Council Resolution 628/1989). The council also authorized sending the UNTAG to Namibia to supervise the transition (Security Council Resolution 629/1989).

In one short year, from 1 April 1989 to 21 March 1990, the 8,000-member UNTAG force established 200 outposts, including 42 regional or district centers and 48 police stations. During the transition the UN High Commissioner for Refugees (UNHCR) had supervised the repatriation of 433,000 Namibian exiles who had been scattered throughout 40 countries. UNTAG supervised the registration of more than 700,000 voters, more than 97% of whom cast ballots in the historic election from 7–11 November 1989 that marked the end of Namibia's colonial history. The Special Committee also dispatched a visiting mission to observe and monitor the election process. In that election Sam Nujoma, head of SWAPO, was elected the country's first president. The mission reported to the Special Committee that the people of Namibia had, in accordance with Security Council resolution 435 (1978), exercised their inalienable right to self-determination by choosing their representatives to a constituent assembly that was charged with drafting a constitution for an independent Namibia.

In March 1990, Secretary-General Perez de Cuéllar administered the oath of office to the new Namibian president at a historic celebration. In a moving show of good faith, President F. W. DeKlerk of South Africa took part in the inauguration ceremony. Nelson Mandela, then leader of South Africa's African National Congress party and only recently released from prison in South Africa, also attended, as did hundreds of dignitaries from 70 countries.

On 23 April 1990 Namibia became the 159th member of the United Nations.

---

# INTERNATIONAL LAW

The idea of developing international law through the restatement of existing rules is not of recent origin. In the last quarter of the eighteenth century, Jeremy Bentham proposed a codification of the whole of international law. Since his time, numerous attempts at codification have been made by private individuals, by learned societies and by governments. Enthusiasm for the “codification movement”—the name sometimes given to such attempts—generally stems from the belief that written international law would remove the uncertainties of customary international law by filling existing gaps in the law, as well as by giving precision to abstract general principles whose practical application is not settled.

## MODERN ANTECEDENTS OF THE INTERNATIONAL LAW COMMISSION

The intergovernmental effort to promote the codification and development of international law made an important advance with the resolution of the assembly of the League of Nations of 22 September 1924, envisaging the creation of a standing organ called the Committee of Experts for the Progressive Codification of International Law, which was to be composed so as to present the “main forms of civilization and the principal legal systems of the world.” This committee, consisting of 17 experts, was to prepare a list of subjects “the regulation of which by international agreement” was most “desirable and realizable” and thereafter to examine the comments of governments on this list and report on the questions which “were sufficiently ripe,” as well as on the procedure to be followed in preparing for conferences for their solutions. This was the first attempt on a worldwide basis to codify and develop whole fields of international law rather than simply regulating individual and specific legal problems.

After certain consultations with governments and the League Council, the League Assembly decided, in 1927, to convene a diplomatic conference to codify three topics out of the five that had been considered to be “sufficiently ripe,” namely: (1) nationality; (2) territorial waters; and (3) the responsibility of states for damage done in their territory to the person and property of foreigners. Delegates from 47 governments participated in the Codification Conference which met at The Hague, from 13 March to 12 April 1930. Unfortunately, nationality was the only subject for which an international instrument was agreed on. No further experiment in codification was made by the League of Nations after 1930, but on 25 September 1931, the League Assembly adopted an important resolution on the procedure of codification, the main theme of which was the strengthening of the influence of governments at every stage of the codification process.

## PROVISIONS OF THE UNITED NATIONS CHARTER

Article I of the UN Charter calls for the adjustment or settlement of international disputes by peaceful means in conformity with

the principles of justice and international law. In Article 13, the charter also requires the General Assembly to “initiate studies and make recommendations for the purpose of ... encouraging the progressive development of international law and its codification.” To help it fulfill this mandate, the General Assembly set up two law commissions.

The International Law Commission was established in 1947 as a permanent subsidiary organ with its own separate statute. It began meeting in 1949 and since that time has completed a significant body of work.

At its 1966 session, the General Assembly established another commission with the specific object of promoting the harmonization and unification of international law in the field of trade. The UN Commission on International Trade Law (UNCITRAL) held its first meeting in 1968.

## INTERNATIONAL LAW COMMISSION

Like the judges of the International Court of Justice, the 34 (originally 15) members of the International Law Commission are not representatives of governments. Instead, they are chosen in their individual capacity “as persons of recognized competence in international law” and with due consideration to representation of “the main forms of civilization” and “the principal legal systems of the world.” No two members of the commission may be nationals of the same country. They are elected for five-year terms by the General Assembly, from a list of candidates nominated by UN member states.

The members of the International Law Commission do not serve in a full-time capacity on the International Law Commission and need not give up their other professional activities. Until 1997, they met each year, normally in Geneva, for a session of approximately 12 weeks. In 1997, the General Assembly authorized the commission to hold its 50th session in two parts: the first to be held in Geneva from 27 April to 12 June 1998, and the second in New York, from 27 July to 14 August 1998. In 1998 the commission was authorized to convene one 12-week session in 1999, which was held in Geneva. Geneva was again the site in 2000, but the General Assembly saw fit to divide the commission’s work into two parts for this, its 52nd session. In 2006, the commission’s 58th session was held in two parts, from 1 May to 9 June, and from 3 July to 11 August. The various topics under consideration are usually assigned to individual members, who then serve as special rapporteurs on the item concerned, carry out the necessary studies between sessions, and submit reports to the commission at its annual sessions.

### Functions

Although the UN Charter does not lay down any principles for determining a desirable “progressive development” of international law, Article 1 of the Statute of the International Law Commission

provides that the “Commission shall have for its object the promotion of the progressive development of international law and its codification.” From the outset the discussions in the International Law Commission and the General Assembly have made very clear the main considerations involved. The traditional legal norms prevailing at the time of the San Francisco Conference were inherited from an era when world politics was dominated by a handful of Western European nations. As a consequence, international law itself reflected the values and interests of those nations. In essence, therefore, what has been required is an adjustment of the entire international legal order so as to take account of the interests and traditions of a much broader community of nations.

Article 15 of the Statute of the International Law Commission defines “progressive development” as the preparation of draft conventions on subjects which have not yet been regulated by international law, or in regard to which the law has not yet been sufficiently developed in the practice of states. It defines “codification” as meaning the more precise formulation and systemization of rules of international law in fields where there already has been extensive state practice, precedent, and doctrines.

*Progressive Development.* Under the Statute of the International Law Commission, proposals for the progressive development of international law are not formulated by the commission, but are referred to it by the General Assembly, or by members of the United Nations and other authorized agencies. On the other hand, the commission itself may select topics for codification.

Progressive development of international law is a conscious effort towards the creation of new rules of international law, whether by means of the regulation of a new topic or by means of the comprehensive revision of existing rules. Accordingly, the drafters of the statute considered that when the commission is engaged in the progressive development of any branch of law, the consummation of the work could be achieved only by means of an international convention. Thus the statute contemplates that the commission prepares a draft convention, and the General Assembly then decides whether steps should be taken to bring about the conclusion of an international convention.

*Codification.* On the other hand, when the commission’s task is one of codification (the mere precise formulation and systematization of existing customary law), the statute envisages two other possible conclusions to its work: (a) simple publication of its report; and (b) a resolution of the General Assembly, taking note of or adopting the report. The statute also lays down the specific steps to be taken by the commission in the course of its work on progressive development and on codification.

#### Methods of Work

The commission follows essentially the same method for both progressive development and codification. A “special rapporteur” is appointed for each topic; an appropriate plan of work is formulated; where desirable, governments are requested to furnish the texts of relevant laws, decrees, judicial decisions, treaties, and diplomatic correspondence; the special rapporteur submits reports; the commission approves a provisional draft based on those reports in the form of articles, with a commentary setting forth precedents, any divergence of views, and alternative solutions considered. The provisional draft is issued as a commission document and submitted to the General Assembly, and also to governments

for their written observations. On the basis of comments received from governments, together with any comments made in the debates of the Sixth Committee of the General Assembly, the special rapporteur submits a further report, recommending the changes in the provisional draft that seem appropriate. The commission then, on the basis of that report and the comments, adopts a final draft. The final draft is submitted to the General Assembly with a recommendation regarding further action.

*Special Assignments.* The General Assembly has from time to time requested the International Law Commission to examine particular texts or to report on particular legal problems. For example, at the specific request of the General Assembly, the commission dealt with the following topics: draft declaration on the rights and duties of states (1949); formulation of the Nürnberg principles (1950); questions of international criminal jurisdiction (1950); the question of defining aggression (1951); reservations to multilateral conventions (1951); draft code of offenses against the peace and security of mankind (1951 and 1954); extended participation in general multilateral treaties concluded under the auspices of the League of Nations (1962); question of the protection and inviolability of diplomatic agents and other persons entitled to special protection under international law (1972); and review of the multilateral treaty-making process (1979). The commission’s reports on some of these topics were presented in the form of draft articles with commentaries. Conclusions reached on some other topics did not lend themselves to draft articles.

#### Scope of the Commission’s Work

The General Assembly does not assign all legal issues with which it is concerned to the International Law Commission. Thus, the legal aspect of an agenda item that relates to another sphere of the General Assembly’s work is often handled by a special committee set up to study that particular subject. This is the case, for example, with the legal aspects of the peaceful uses of outer space and with many matters of human rights and economic and social development. On occasion, too, the General Assembly has established a special committee to consider certain legal topics that directly affect the conduct of nations in the area of international peace and security and are therefore highly political. Thus, the agenda item entitled “Consideration of principles of international law concerning friendly relations and cooperation among states in accordance with the Charter of the United Nations” was assigned to a special 31-member committee. After eight years of discussion, the committee completed a draft declaration, as requested, in time for the commemorative session to celebrate the UN’s 25th anniversary in 1970. The declaration embodies seven principles: the nonuse of force, peaceful settlement of disputes, nonintervention, sovereign equality, the duty to cooperate, equal rights and self-determination, and fulfillment of obligations under the charter.

Another example of a legal topic having a strongly political character is the definition of aggression. The International Law Commission originally was asked to draw up a definition of aggression. The task was taken over by the General Assembly only after the commission had failed to reach agreement. A special committee of the General Assembly drafted the text of the Definition of Aggression, which was adopted by the General Assembly in 1974.

Another special committee of the General Assembly drafted the International Convention on the Taking of Hostages, which

was adopted in 1979, and still another prepared the draft of what became, after being approved by the General Assembly in 1982, the Manila Declaration on the Peaceful Settlement of International Disputes. A special committee, originally established by the General Assembly in 1977, completed a draft Declaration on the Enhancement of the Effectiveness of the Principle of Refraining from the Threat or Use of Force in International Relations, which the General Assembly approved in 1987. The General Assembly also has established an ad hoc committee to recommend practical measures for elimination of the problem of international terrorism. The committee, in 1979, submitted its final report and recommendations to the General Assembly, which welcomed the results achieved. In 1980, the General Assembly established an ad hoc committee on the drafting of an international convention against the recruitment, use, financing, and training of mercenaries. The committee completed its work in 1989. In the same year, the General Assembly adopted a convention on the subject. In 1993, the General Assembly entrusted an ad hoc committee with the task of elaborating an international convention dealing with the safety and security of United Nations and associated personnel, with particular reference to responsibility for attacks on such personnel. The ad hoc committee held its first session in March–April 1994.

In 1996 the General Assembly established an ad hoc committee to elaborate an international convention for the suppression of terrorist bombings and, subsequently, an international convention for the suppression of acts of nuclear terrorism. This mandate continued to be renewed and revised on an annual basis by the General Assembly in its resolutions on the topic of measures to eliminate international terrorism. In December 2001, the ad hoc committee resolved to continue to elaborate a comprehensive convention on international terrorism as a matter of urgency, and to formulate a joint organized response of the international community to terrorism in all its forms and manifestations.

In 2001, the General Assembly established an ad hoc committee for the purpose of considering the elaboration of an international convention against the reproductive cloning of human beings. The ad hoc committee met from 25 February to 1 March 2002 to consider the elaboration of a mandate for the negotiation of such an international convention. Also in 2001, the General Assembly established an ad hoc committee on the scope of legal protection under the Convention on the Safety of United Nations and Associated Personnel, to strengthen and enhance the protective legal regime for United Nations and associated personnel.

#### Topics Selected for Codification

At its first session, in 1949, the commission considered 25 topics for possible study. It selected 14 of these for codification. The list was only provisional, and it was understood that changes might be made after further study by the commission or in compliance with the wishes of the General Assembly. The list, however, still constitutes the commission's basic long-term program of work.

Topics on which the commission has completed its work and submitted final drafts or reports to the General Assembly include the following: rights and duties of states; ways and means for making the evidence of customary international law more readily available; formulation of Nürnberg principles; the question of international criminal jurisdiction; reservations to multi-

lateral conventions; the question of defining aggression; nationality, including statelessness; law of the sea; arbitral procedure; diplomatic intercourse and immunities; extended participation in general multilateral treaties concluded under the auspices of the League of Nations; law of treaties; special missions; relations between states and international organizations; succession of states in respect of treaties; question of protection and inviolability of diplomatic agents and other persons entitled to special protection under international law; the most-favored-nation clause; succession of states in respect of matters other than treaties; question of treaties concluded between states and international organizations or between two or more international organizations; status of the diplomatic courier and the diplomatic bag not accompanied by diplomatic courier; jurisdictional immunities of states and their property; nationality in relation to the succession of states; responsibility of states for internationally wrongful acts; and international liability for injurious consequences arising out of acts not prohibited by international law (prevention of transboundary damage from hazardous activities).

The Sixth Committee itself sometimes functions as a codification body. On two occasions, with regard to the topics "Special Missions" and "Draft Convention on the Prevention and Punishments of Crimes against Diplomatic Agents and other Internationally Protected Persons," the Sixth Committee was assigned the finalization of the relevant conventions. The General Assembly subsequently adopted both conventions.

In 1994, the General Assembly, on the recommendation of the Sixth Committee, established an ad hoc committee to elaborate an international convention dealing with the safety and security of UN personnel. The committee's task was to consolidate, in a single document, the set of principles and obligations contained in existing treaties as well as to codify customary international law. The Sixth Committee also convened in New York in 1995 a United Nations Congress on Public International Law as part of the activities of the UN Decade for International Law (1990–1999).

#### Extended Participation in Multilateral Treaties Concluded Under the Auspices of the League of Nations

The commission's conclusions on the question of extended participation in multilateral treaties concluded under the auspices of the League of Nations were submitted to the General Assembly in 1963. On the basis of those conclusions, the General Assembly decided that it was the appropriate organ of the UN to exercise the functions of the League Council with respect to 21 general multilateral treaties of a technical and nonpolitical character concluded under the auspices of the former world body.

#### Law of Treaties

The most far-reaching task undertaken by the International Law Commission has been its work on the law of treaties—the laws governing the way in which treaties are to be negotiated, adopted, altered, and abrogated. The commission, which began work on this project in 1949, finally completed it in 1966, after 18 sessions. Throughout this period, the commission regularly submitted provisional draft articles to the General Assembly's Sixth Committee and to individual governments for comment. Accordingly, the final draft of 75 articles adopted by the commission and submitted to the General Assembly's 1966 session included many revisions. At a conference that met in two sessions in Vienna in 1968 and

1969, the Vienna Convention on the Law of Treaties was adopted. It came into force in 1980.

During the preparation of the draft articles on the law of treaties, the commission considered whether the articles should apply not only to treaties between states but also to treaties concluded by other entities, particularly by international organizations. The commission decided to confine its work to treaties between states, but following adoption of the Vienna Convention on the Law of Treaties, it took up, in consultation with the principal international organizations, the question of treaties concluded between states and international organizations or between two or more international organizations.

At a conference that met in Vienna in 1986, the Vienna Convention on the Law of Treaties Between States and International Organizations or Between International Organizations was adopted.

#### **Law of the Sea**

In accordance with its 1949 program, the commission worked for a number of years on the codification of the law of the sea. Following a request of the 1954 General Assembly, the commission grouped together the articles that it had previously adopted and submitted a final draft on the law of the sea in 1956. The General Assembly called a special conference on the law of the sea at Geneva in 1958. At that conference, four conventions were adopted: (1) the Convention on the High Seas, which came into force on 30 September 1962; (2) the Convention on the Continental Shelf, on 24 April 1964; (3) the Convention on the Territorial Sea and the Contiguous Zone, on 10 September 1964; and (4) the Convention on Fishing and Conservation of the Living Resources of the High Seas, on 20 March 1966. (See also the chapter on the Law of the Sea.)

#### **Reduction of Statelessness**

In 1954, the commission prepared two drafts, one for a convention on the elimination of statelessness and another, which would impose fewer obligations on states, on the reduction of statelessness. General Assembly discussions showed that the first and more sweeping draft had no chance of acceptance. Even the measures on which countries would have to agree in order to reduce the number of stateless persons raised so many problems that two special conferences were eventually required, one in 1959 and one in 1961, to arrive at a Convention on the Reduction of Statelessness. It came into force in 1975.

#### **Diplomatic and Consular Relations**

In 1959, the commission adopted final draft articles on diplomatic intercourse and immunities. The General Assembly endorsed the drafts and convened an international conference, which met in Vienna in 1961 and adopted the Vienna Convention on Diplomatic Relations and two optional protocols, one concerning acquisition of nationality and the other compulsory settlement of disputes. The convention adapts to twentieth century requirements the rules for diplomatic intercourse formulated by the 1815 Congress of Vienna, which since that time have essentially governed diplomatic relations. It came into force on 24 April 1964.

Final draft articles on consular relations were submitted by the commission to the General Assembly in 1961. On the basis of these drafts, an international conference, held in Vienna in 1963,

adopted the Vienna Convention on Consular Relations and two protocols. It came into force in 1967.

#### **Special Missions**

In 1968 and 1969, the General Assembly considered the question of a draft convention on special missions on the basis of draft articles prepared by the commission. On 8 December 1969, the General Assembly adopted the Convention on Special Missions and an optional protocol concerning the compulsory settlement of disputes. The convention, which came into force on 21 June 1985, provides rules applying to forms of ad hoc diplomacy—*itinerant envoys*, diplomatic conferences, and special missions sent to a state for limited purposes—that are not covered by the Vienna conventions of 1961 and 1963 relating to diplomatic and consular relations among states.

#### **Protection of Diplomats**

In 1973, the General Assembly adopted the Convention on the Prevention and Punishment of Crimes Against Internationally Protected Persons, Including Diplomatic Agents, on the basis of draft articles prepared by the commission. The convention's preamble states that crimes against diplomatic agents and other internationally protected persons, jeopardizing their safety, create a serious threat to the maintenance of normal international relations necessary for cooperation among states. It came into force on 20 February 1977.

#### **Relations Between States and International Organizations**

On the basis of draft articles prepared by the commission, the Vienna Convention on the Representation of States in Their Relations with International Organizations of a Universal Character was adopted in 1975 by an international conference.

#### **Succession of States**

Work on the subject of the succession of states was begun by the commission in 1962. Succession of states deals with cases in which dependent territories gain independence, as well as those involving the transfer of territory and the union, dissolution, and separation of states. In 1967, the commission divided the subject into three subtopics: succession in regard to treaties; in regard to matters other than treaties; and in regard to membership of international organizations.

Subsequently, two conferences were convened by the General Assembly to consider the subject on the basis of drafts prepared by the commission. The first conference, held in April 1977 and resumed in August 1978, adopted the Vienna Convention on Succession of States in Respect of Treaties. The second, which met in March–April 1983, adopted the Vienna Convention on Succession of States in Respect of State Property, Archives and Debts. In 1999 the commission adopted draft articles on the nationality of natural persons in relation to the succession of states.

#### **Jurisdictional Immunities of States and Their Property**

The commission completed its work on this topic in 1991 and recommended that the General Assembly convene an international conference to examine the 22 draft articles and conclude a convention. The Sixth Committee examined the draft articles in a working group in 1992 and 1993 in order to resolve differences of views on some of the substantive issues raised. Then, the General Assembly, in resolution 55/150 of 12 December 2000, decided

to establish an ad hoc committee on jurisdictional immunities of states and their property, to further the work done, consolidate areas of agreement and resolve outstanding issues undertaken by the International Law Commission at its 43rd session, and also on discussions of the Sixth Committee. The ad hoc committee was convened at United Nations Headquarters from 4 to 15 February 2002, and met again in 2003 and 2004.

### International Criminal Court

In 1992 the UN General Assembly requested that the Commission elaborate a Draft Statute for an International Criminal Court, which could prosecute persons for serious crimes under international law. The commission completed the draft statute in 1994, and included crimes under general international law such as genocide, aggression, serious violations of humanitarian law, crimes against humanity, unlawful seizure of aircraft, apartheid, and hostage taking. The Rome Statute of the International Criminal Court was adopted by a diplomatic conference of plenipotentiaries on 17 July 1998. The statute was to remain open for signature in Rome until 17 October 1998, after which it remained open for signature at the UN Headquarters in New York until 31 December 2000. The Rome Statute entered into force on 1 July 2002. As of 14 November 2005, 100 states were parties to the statute.

## TOPICS PENDING BEFORE THE GENERAL ASSEMBLY

### Diplomatic Protection

The commission completed its work on the topic of the diplomatic courier in 1989 and recommended that the General Assembly convene an international conference of plenipotentiaries to examine the draft articles and conclude a convention on the subject. The Sixth Committee of the General Assembly considered the issue in 1990, 1991, and 1992 and decided to return to it at its 49th session in 1995. The 50th session of the General Assembly in 1996 invited governments to submit comments regarding the commission's suggestion to include diplomatic protection as a topic. At its 54th session in 2002, the commission considered the report of a drafting committee on diplomatic protection, adopted amended draft articles and commentaries to the articles.

### Current Topics

The following items were on the agenda of the commission at its 58th session (in 2006): diplomatic protection; international liability for injurious consequences arising out of acts not prohibited by international law (international liability in case of loss from transboundary harm arising out of hazardous activities); responsibility of international organizations; shared natural resources; unilateral acts of states; reservations to treaties; expulsion of aliens; effects of armed conflicts on treaties; the obligation to extradite or prosecute (*aut dedere aut judicare*); fragmentation of international law: difficulties arising from the diversification and expansion of international law.

## UN COMMISSION ON INTERNATIONAL TRADE LAW (UNCITRAL)

Like the International Law Commission, UNCITRAL is a permanent subsidiary organ of the General Assembly, which elects its members, observing the principle of balance among the geo-

graphical regions and the main economic and legal systems of the world.

In contrast to the International Law Commission, whose members serve in their individual capacities, the UN Commission on International Trade Law (UNCITRAL) is composed of the representatives of 60 (originally 29) states. Members serve six-year terms and are eligible for reelection. States not members of UNCITRAL, representatives of United Nations organs (the IMF and the World Bank), and some other international organizations (for example, the Inter-American Development Bank and the former Organization of African Unity, now African Union) may attend its sessions as observers.

The commission holds one regular session a year. As of 14 June 2004, the members of UNCITRAL (and the years their memberships expire) were: Algeria (2010), Argentina (2007), Australia (2010), Austria (2010), Belarus (2010), Belgium (2007), Benin (2007), Brazil (2007), Cameroon (2007), Canada (2007), Chile (2007), China (2007), Colombia (2010), Croatia (2007), Czech Republic (2010), Ecuador (2010), Fiji (2010), France (2007), Gabon (2010), Germany (2007), Guatemala (2010), India (2010), Iran (Islamic Republic of) (2010), Israel (2010), Italy (2004), Japan (2007), Jordan (2007), Kenya (2010), Lebanon (2010), Lithuania (2007), Madagascar (2010), Mexico (2007), Mongolia (2010), Morocco (2007), Nigeria (2010), Pakistan (2010), Paraguay (2010), Poland (2010), Qatar (2007), Republic of Korea (2007), Russian Federation (2007), Rwanda (2007), Sierra Leone (2007), Singapore (2007), South Africa (2007), Spain (2010), Sri Lanka (2007), Sweden (2007), Switzerland (2010), Thailand (2010), The former Yugoslav Republic of Macedonia (2007), Tunisia (2007), Turkey (2007), Uganda (2010), United Kingdom of Great Britain and Northern Ireland (2007), United States of America (2010), Uruguay (2007), Venezuela (2010), and Zimbabwe (2010).

Between sessions, working groups designated by the commission meet on specific topics such as electronic commerce, international contract practices, arbitration, and insolvency law.

### Functions

A clear understanding of the respective rights and obligations of buyers, sellers, and other commercial parties facilitates the flow of trade from one country to another. When the laws of countries in this field are at variance, impediments may arise. In establishing UNCITRAL, the UN recognized that there was a need for it to play a more active role in removing or reducing legal obstacles to international trade.

UNCITRAL is charged with the task of seeking to resolve differences in national laws by providing texts that may become the basis of international conventions or other agreements. The 1966 General Assembly resolution establishing UNCITRAL invests it with seven specific functions in the furtherance of "progressive harmonization and unification of the law of international trade": coordinating the work of international organizations active in this field; promoting wider participation in existing international conventions, preparing new international conventions; promoting the means of ensuring the uniform interpretation and application of international conventions, collecting and disseminating information on national legislation and legal development in the field of international law; maintaining a close collaboration with UNC-

TAD; and maintaining liaison with other concerned UN organs and specialized agencies.

### **The Work of UNCITRAL**

The commission draws up its own program of work, subject to the approval of the General Assembly. It selects topics that are both intrinsically capable of unification and ripe for final settlement by virtue of a sufficiently close convergence in their treatment among bodies of national law. Three topics have been given priority: the international sale of goods, international payments, and commercial arbitration.

The first treaty elaborated under the auspices of UNCITRAL was the Convention on the Limitation Period on the International Sale of Goods, adopted in 1974 and called the "Limitation Convention." The convention fixes at four years the period of time in which parties to a contract for the international sale of goods may sue under the contract, and it regulates various matters in regard to the commencement, prolongation, and termination of that period.

Other treaties elaborated by UNCITRAL include the UN Convention on the Carriage of Goods by Sea, adopted at Hamburg,

Germany, in 1978 (the "Hamburg Rules"), which entered into force in 1992; the UN Convention on Contracts for the International Sale of Goods, adopted in 1980 (the "United Nations Sales Convention"); the 1988 Convention on International Bills of Exchange and International Promissory Notes (the "UNCITRAL Bills and Notes Convention"); the 1991 United Nations Convention on the Liability of Operators of Transport Terminals in International Trade (the "United Nations Terminal Operators Convention"); and the 1995 United Nations Convention on Independent Guarantees and Stand-by Letters of Credit.

A growing area of work for UNCITRAL in the 1990s was model laws, which become the basis or guidelines for national legislation. Model laws have been issued on international credit transfers (in 1992); procurement of goods, construction, and services (1994); electronic commerce (1996); and cross-border insolvency (1997).

UNCITRAL also conducts a substantial training and technical assistance program, designed to disseminate information concerning UNCITRAL legal texts to government officials, legislators, practicing lawyers, judges, traders, and academics.

---

# UNIVERSAL DECLARATION OF HUMAN RIGHTS

On 10 December 1948 the General Assembly of the United Nations adopted and proclaimed the Universal Declaration of Human Rights. Following this act, the Assembly called upon all member countries to publicize the text of the Declaration and “to cause it to be disseminated, displayed, read and expounded principally in schools and other educational institutions, without distinction based on the political status of countries or territories.” The full text of the final authorized version follows. The UN celebrated the declaration’s 50th anniversary in 1998 with a special program of events at its headquarters.

## PREAMBLE

*Whereas* recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

*Whereas* disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

*Whereas* it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law,

*Whereas* it is essential to promote the development of friendly relations between nations,

*Whereas* the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom,

*Whereas* Member States have pledged themselves to achieve, in co-operation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms,

*Whereas* a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge,

Now, Therefore,

## THE GENERAL ASSEMBLY

*proclaims*

## THIS UNIVERSAL DECLARATION OF HUMAN RIGHTS

as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and free-

doms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

### Article 1

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

### Article 2

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

### Article 3

Everyone has the right to life, liberty and security of person.

### Article 4

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

### Article 5

No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

### Article 6

Everyone has the right to recognition everywhere as a person before the law.

### Article 7

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

### Article 8

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

### Article 9

No one shall be subjected to arbitrary arrest, detention or exile.

### Article 10

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

**Article 11**

(1) Everyone charged with a penal offense has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defense.

(2) No one shall be held guilty of any penal offense on account of any act or omission which did not constitute a penal offense, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offense was committed.

**Article 12**

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honor and reputation. Everyone has the right to the protection of the law against such interference or attacks.

**Article 13**

(1) Everyone has the right to freedom of movement and residence within the borders of each state.

(2) Everyone has the right to leave any country, including his own, and to return to his country.

**Article 14**

(1) Everyone has the right to seek and to enjoy in other countries asylum from persecution.

(2) This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

**Article 15**

(1) Everyone has the right to a nationality.

(2) No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

**Article 16**

(1) Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

(2) Marriage shall be entered into only with the free and full consent of the intending spouses.

(3) The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

**Article 17**

(1) Everyone has the right to own property alone as well as in association with others.

(2) No one shall be arbitrarily deprived of his property.

**Article 18.**

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and

in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

**Article 19**

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

**Article 20**

(1) Everyone has the right to freedom of peaceful assembly and association.

(2) No one may be compelled to belong to an association.

**Article 21**

(1) Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.

(2) Everyone has the right of equal access to public service in his country.

(3) The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

**Article 22**

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

**Article 23**

(1) Everyone has the right to work, to free choice of employment, to just and favorable conditions of work and to protection against unemployment.

(2) Everyone, without any discrimination, has the right to equal pay for equal work.

(3) Everyone who works has the right to just and favorable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.

(4) Everyone has the right to form and to join trade unions for the protection of his interests.

**Article 24**

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

**Article 25**

(1) Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness,

disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.

(2) Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

#### Article 26

(1) Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.

(2) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.

(3) Parents have a prior right to choose the kind of education that shall be given to their children.

#### Article 27

(1) Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.

(2) Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

#### Article 28

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

#### Article 29

(1) Everyone has duties to the community in which alone the free and full development of his personality is possible.

(2) In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

(3) These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

#### Article 30

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

# UNITED NATIONS ONLINE DATABASES

Readers with access to a computer and modem can access online sources of information about the United Nations via the internet. Current United Nations press releases, resolutions, and documents and breaking information on the UN's international conferences are maintained on the Internet at [www.un.org/News](http://www.un.org/News). Many UN databases are accessible over the Internet at [www.un.org/databases](http://www.un.org/databases). They include:

## **UNBISnet** <http://unbisnet.un.org>

Catalogue of UN publications and documentation indexed by the UN Dag Hammarskjöld Library and the Library of the UN Office at Geneva. Also included are non-UN publications held in the collection of the Dag Hammarskjöld Library. UNBISnet coverage is primarily from 1979 forward, however, indexing for resolutions of the General Assembly, Economic and Social Council, Security Council and Trusteeship Council are included back to 1945. Also included on UNBISnet are voting records for all resolutions which were adopted by the General Assembly beginning with its 38th session (1983–) and the Security Council beginning with its 1st year (1946–). Citations to speeches made in the General Assembly beginning with its 38th session (1983–), the Security Council beginning with its 38th year (1983–), the Economic and Social Council beginning in 1983 and the Trusteeship Council beginning with its 15th special session (1982) can also be found on UNBISnet.

## **UN-I-QUE (UN Info Quest)**

<http://lib-unique.un.org/lib/unique.nsf>

Provides quick access to document symbols/sales numbers for UN materials (1946 onwards). It does not give full bibliographic details nor does it replace existing bibliographic databases (UNBISnet, UNBIS Plus on CD-ROM) produced by the Dag Hammarskjöld Library. UN-I-QUE focuses upon documents and publications of a recurrent nature: annual/sessional reports of committees/commissions; annual publications; reports periodically/irregularly issued; reports of major conferences; statements in the General Debate.

## **UNISPAL (United Nations Information System on the Question of Palestine)** <http://domino.un.org/unispal.nsf>

Provides users with full-text documents of the UN system relevant to the question of Palestine and the Arab-Israeli conflict in the Middle East since 1946.

## **United Nations Treaty Collection** <http://untreaty.un.org/>

This collection includes: status of multilateral treaties deposited with the Secretary-General; the United Nations treaty series; texts of recently deposited multilateral treaties; photographs of treaty signature ceremonies; titles of the multilateral treaties deposited with the Secretary-General in the UN official languages; summary of practice of the Secretary-General as depositary of multilateral treaties; treaty handbook; monthly statements of treaties and international agreements; depositary notifications (CNs) by the Secretary-General; United Nations treaty series cumulative index; notes verbales from the legal counsel relating to the depositary practice and the registration of treaties pursuant to Article 102 of the Charter.

## **Millennium Indicators Database**

[http://unstats.un.org/unsd/mi/mi\\_goals.asp](http://unstats.un.org/unsd/mi/mi_goals.asp)

A framework of 8 goals, 18 targets and 48 indicators to measure progress towards the Millennium Development goals established in 2000. Each indicator is linked to millennium data series as well as to background series related to the target in question.

## **Social Indicators**

<http://unstats.un.org/unsd/demographic/social/default.htm>

Social indicators covering a wide range of subject-matter fields compiled by the UN Statistics Division, Department of Economic and Social Affairs of the United Nations Secretariat, and from many national and international sources in the global statistical system. The indicators are: population; youth and elderly populations; human settlements; water supply and sanitation; housing; health; child-bearing; education; illiteracy; income and economic activity; and unemployment.

## **InfoNation**

<http://www.un.org/cyberschoolbus/index.html>

A global learning project for middle and secondary students with statistical information on countries.

**United Nations Population Information Network****<http://www.un.org/popin/>**

A guide to population statistics on UN system websites. Includes data, information on publications, conferences, and organizations.

**ReliefWeb <http://www.reliefweb.int/w/rwb.nsf>**

A source of information from OCHA (UN Office for the Coordination of Humanitarian Affairs) and its news agency. Contains information on the latest updates in humanitarian issues, including emergencies and natural disasters. Also contains background information by country.

**Department of Public Information/Non-governmental Organizations Section <http://www.un.org/dpi/ngosection/index.html>**

Serves as the liaison between the Department of Public Information and NGOs associated with DPI. These organizations disseminate information about the UN to their constituencies, building

knowledge of and support for the organization at the grassroots level. Currently, close to 1,600 NGOs from all regions of the world are associated with DPI.

**Readex AccessUN****<http://www.newsbank.com/intl/accessun.html>**

Although not available for free on the internet, for extensive UN documentation, Readex AccessUN, published by NewsBank, is used by academic libraries, law school libraries, UN depository libraries, and government information centers. AccessUN offers four comprehensive date ranges: 1952–present, 1966–present, 1991–present and 1998 onward. It includes: links to related full-text documents/sites; access to masthead documents and official records; indexed periodical articles and UN treaties; voting records in selected summary record and provisional verbatim documents.

# EMPLOYMENT AT THE UN

As of 2006, the UN Secretariat and regional commissions employed some 14,000 people. The mandatory retirement age for staff appointed since January 1990 is 62. The UN offers attractive remuneration packages and benefits. Starting salaries are based upon academic and professional qualifications, as well as the level of the post. The base salary scales are set by the General Assembly. There is also a post adjustment element based on the cost of living and the rate of exchange of local currency vis-à-vis the US dollar at each duty station.

The Charter of the UN contains the principle of equality of men and women as it relates to the recruitment of all staff. Accordingly, the General Assembly set out clear directives aimed at promoting the appointment of women to professional posts as one of the main objectives of recruitment policy, with the view of achieving a more equitable balance between men and women among the staff.

Vacancies in the Professional category call for persons with professional qualifications in fields related to the work of the UN. Special attention is paid to the development and maintenance of a proper balance among member states. Entry-level posts, as a rule, are filled through competitive recruitment examinations and interviews organized on a rotational basis for nationals of inadequately represented member states. Candidates for posts in the Professional category are expected to have an advanced university degree in addition to the relevant professional experience. Vacancies for the Professional category occur in the following occupations: administration; economics; electronic data processing; finance; language and related work; legal and related work; library; public information; social development; and statistics.

Vacancies in the category of General Service occur in the following occupational groups: secretarial and clerical positions; text processors; and accounting and statistical clerks. The General Service staff of each major office away from UN headquarters is recruited locally, that is, from the area in which the particular office is located.

The specialized agencies (i.e. UNESCO, FAO, IAEA, etc.) conduct their own recruitment programs. Their clerical and secretarial staff are recruited locally from among the residents of the area in which a particular agency is located.

## DEMOGRAPHICS OF THE SECRETARIAT

As of 2005, approximately 3.3% of staff were in the Director category, 35.1% in the Professional category, and 61.1% in the General Service and related categories. More than 72.2% of all staff came from 24 member states that each had more than 100 na-

tionals as staff members. There were more than 400 nationals in the Secretariat from each of the following six member states: Ethiopia, France, Kenya, the Philippines, the United Kingdom, and the United States. Of the 191 member states, 177 were represented in all staff categories as compared with 174 for staff in posts subject to geographical distribution. A total of 14 member states were unrepresented (Angola, Brunei Darussalam, Comoros, Kiribati, Liechtenstein, Marshall Islands, Monaco, Nauru, Palau, Samoa, São Tomé and Príncipe, Timor-Leste, Turkmenistan, and the United Arab Emirates). The global gender distribution of Secretariat staff showed an almost evenly balanced female/male staff distribution (51.5/48.5). This figure, however, does not indicate significant differences in gender representation by grade, category, and department or office. In spite of a general increase in all categories, the two most senior grades of the Secretariat (Under-Secretary-General and Assistant Secretary-General) had a low female representation (23.7%). Female staff were also poorly represented in the Director category (33.25%). In the Professional category, the proportion of female staff was 41.3%. It was higher at entry levels, where numbers were close to or above the General Assembly mandate of gender parity. Female staff constituted the majority in the General Service category. As of 30 June 2005, the average age of the staff was 46 years. More than half—57%—of all Secretariat staff were older than 45, 27.5% were younger than 40, and only 4.6% were younger than 30. The average length of service for staff with permanent appointments was 20.7 years (23.7 years for Directors, 16 years for Professionals, and 25 years for staff in the General Service and related categories).

## STAFF FIGURES FOR SELECTED UN BODIES AND RELATED AGENCIES (2006 ESTIMATES)

# AGENCIES OF THE UNITED NATIONS SYSTEM

The following organizations are often called part of the United Nations “family.” The previous chapters have been concerned with the organs, programs, or funds of the United Nations that are directly governed by the General Assembly and/or the Security Council, and which have the Secretary General as their executive head. The following organizations all have their own separate member states, governing bodies, executive heads, and secretariats. While these organizations are bound to the UN by legal agreements, they are not governed directly by UN organs.

Most organizations in the system are related to the United Nations through legal agreements executed pursuant to Articles 57 and 63 of the Charter. A key purpose of these special agreements, as stated in Article 58, was coordination of activities in the pursuit of economic, social, and cultural objectives. However, some provisions have never been fully implemented.

## The Specialized Agencies

The ILO, FAO, UNESCO and WHO all had predecessor organizations in the League of Nations but were re-established as part of the UN system between 1946–1994. UNIDO became a full specialized agency in 1985. Voting in the main governing bodies of these agencies is on the same one-nation-one-vote principle as in the United Nations.

## Technical Agencies

Among this group are the very first truly international organizations, such as the International Telecommunications Union (ITU) and the Universal Postal Union (UPU), which were both established over a century ago. This group of agencies has a very specific focus, and countries are often represented by the head of the national ministry in charge of the relevant area, such as weather, telecommunications, postal service, intellectual property.

However, the International Atomic Energy Association (IAEA) was established in 1956 by the United Nations General Assembly, and is legally bound directly to the General Assembly. The other specialized and technical agencies report to the United Nations through the Economic and Social Council (ECOSOC).

## GATT/WTO

The World Trade Organization (WTO) is the successor to the General Agreement on Tariffs and Trade (GATT), and serves as the legal and institutional foundation of the multilateral trading system. The WTO helps to legally determine how governments frame and carry out domestic trade legislation and regulations. The WTO also serves as a forum on which international trade relations can develop through collective debate, negotiation, and adjudication.

## The Bretton Woods Institutions

The IMF and the World Bank Group are structured very differently from the specialized agencies. These agencies were established

under the charter of the United Nations at a special conference held at Bretton Woods, New Hampshire in 1944. The World Bank Group comprises five separate organizations: the IBRD, the IDA, the IFC, MIGA, and the ICSD. Members of the IBRD can choose which of the four remaining organizations they wish to join.

One of the most fundamental differences between the UN and the Bretton Woods institutions is that voting in these organizations is governed according to the number of shares held by each member state. Therefore, the wealthier countries have more voting power.

IFAD, while not a Bretton Woods institution, is a more recent addition to the specialized agency family that deals with capital funding operations. It raises money through replenishments. Its governing council is made up of three groups of countries—industrialized, oil-producing, and other developing countries. Each group has equal voting rights.

## THE AGENCIES IN CHRONOLOGICAL ORDER—WITH EFFECTIVE DATES OF ESTABLISHMENT

- Universal Postal Union 1 July 1875
- International Labor Organization 11 April 1919
- International Telecommunication Union 1 January 1934
- Food and Agriculture Organization of the United Nations 16 October 1945
- World Bank (originally International Bank for Reconstruction and Development) 27 December 1945
- International Monetary Fund 27 December 1945
- United Nations Educational, Scientific and Cultural Organization 4 November 1946
- International Civil Aviation Organization 4 April 1947
- World Health Organization 7 April 1948
- World Meteorological Organization 23 March 1950
- International Atomic Energy Agency 29 July 1957
- International Maritime Organization 17 March 1958
- World Intellectual Property Organization 26 April 1970
- International Fund for Agricultural Development 30 November 1977
- United Nations Industrial Development Organization 1 January 1986
- World Trade Organization (formerly General Agreement on Tariffs and Trade) 1 January 1995

The arrangement of articles on the United Nations related agencies follows the order of the chart on the Structure of the United Nations System shown in the first chapter. Each article is structured in the following sections: Background, Creation, Purposes, Membership, Structure, Budget, Activities, Bibliography.

---

# THE INTERNATIONAL ATOMIC ENERGY AGENCY (IAEA)

**BACKGROUND:** The UN came into existence at the beginning of the atomic age. Human beings' success in harnessing atomic energy has made the UN's objectives not only important but even indispensable. The primary purpose of the UN is to prevent war. A major war involving the use of atomic weapons would be not simply catastrophic but very probably suicidal. The second objective of the UN is to promote the economic and social welfare of peoples throughout the world. Atomic energy promises to contribute greatly to worldwide prosperity. Although "atoms for peace" has been a continuing concern of the UN itself, and although a number of organizations of the UN family, such as FAO and WHO, have been concerned with specific aspects of peaceful uses of atomic energy, it was not until 1957 that a special organization, the International Atomic Energy Agency, came into being for the express purpose of accelerating and enlarging the contribution of atomic energy to peace, health, and prosperity throughout the world.

---

## CREATION

Addressing the UN General Assembly in December 1953, US president Dwight D. Eisenhower called for the establishment of an international atomic energy organization to "serve the peaceful pursuits of mankind." The president said that he hoped the atomic powers, through such an organization, would dedicate "some of their strength to serve the needs rather than the fears of mankind."

President Eisenhower stated that the USSR "must, of course, be one" of the countries principally involved in the proposed organization. Accordingly, as a first step, the US State Department in the spring and summer of 1954 submitted a series of memoranda to the USSR suggesting the principles that should be incorporated in the statute of such an agency. It was, however, impossible for the two powers to reach agreement at that time. The USSR maintained that the issues of disarmament and peaceful uses of atomic energy were inseparable and that agreement on a general prohibition of nuclear weapons would have to precede the creation of the agency. The United States countered with the argument that effective international control of nuclear weapons would have to precede their prohibition, and it announced that it was prepared to go ahead with international negotiations even without the participation of the USSR.

In the summer of 1954, the United States issued invitations to seven other countries, including both "atomic powers" and important uranium-producing states—Australia, Belgium, Canada, France, Portugal, South Africa, and the United Kingdom—to meet with it in Washington, D.C., to prepare a draft statute for the proposed agency. In September, the USSR reversed its previous position. It announced its willingness to separate the issues of disarmament and peaceful uses of atomic energy and to accept the eight-power draft statute as a basis for further negotiations and guidance.

In December 1954, the General Assembly unanimously adopted an "Atoms for Peace" resolution expressing the hope that the International Atomic Energy Agency would be established "without delay" in order to assist "in lifting the burdens of hunger, poverty and disease." An international conference on the statute was convened at UN headquarters in New York on 20 September 1956, with the participation of 81 nations, including some, such as the Federal Republic of Germany, that were not yet members of the UN itself. After adopting a number of amendments, proposed for the most part by the atomic "have-not" powers, the conference unanimously adopted the statute as a whole on 26 October 1956.

On 29 July 1957, the statute came into force after 26 states had deposited instruments of ratification, and the International Atomic Energy Agency officially came into existence. The first General Conference of the IAEA was held in Vienna in October 1957, at which time it was decided to make Vienna the permanent headquarters site of the agency. The address of the IAEA is Wagramer Strasse 5, P.O. Box 100, A-1400 Vienna, Austria.

Additionally, the IAEA maintains field and liaison offices in Canada, Geneva, New York, and Tokyo; operates laboratories in Austria and Monaco; and supports a research center in Trieste, Italy, which is administered by the United Nations Educational and Scientific Organization (UNESCO).

The IAEA and its Director General Mohamed El Baradei were jointly awarded the 2005 Nobel Peace Prize for "their efforts to prevent nuclear energy from being used for military purposes and to ensure that nuclear energy for peaceful purposes is used in the safest possible way."

## PURPOSES

According to the statute of the IAEA, the agency "shall seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world. It shall ensure, so far as it is able, that assistance provided by it or at its request or under

its supervision and control is not used in such a way as to further any military purpose.”

The IAEA acts as a clearinghouse for the pooling and coordination of experience and research in the peaceful uses of nuclear power. It helps its member countries acquire the necessary skills and materials to share in the benefits of the atomic age. In practice, the IAEA has been particularly concerned with bringing the advantages of atomic energy to underdeveloped regions.

The IAEA is obliged under its statute to “ensure, so far as it is able,” that all the activities in which it takes part are directed exclusively to civilian uses. A second important task of the IAEA, then, is to establish a system of supervision and control to make certain that none of the assistance programs that it fosters and none of the materials whose distribution it supervises are used for military purposes. This aspect of the work assumed significance far beyond its primary objective when the Treaty on the Non-Proliferation of Nuclear Weapons came into force in March 1970, since the IAEA is the body responsible for the necessary control system under that treaty.

## MEMBERSHIP

Any member of the UN or of any of the specialized agencies that signed the statute within 90 days after 26 October 1956 thereby became a charter member of the IAEA upon ratification of the statute. Other countries, even if not members of the UN or any of the specialized agencies, may be admitted by the General Conference of the IAEA upon recommendation of the Board of Governors.

As of November 2005, the IAEA had 139 members.

## STRUCTURE

The three organs of the IAEA are the General Conference, the Board of Governors, and the secretariat, headed by a Director-General.

### General Conference

The General Conference consists of all members, each having one vote. It meets once a year at IAEA headquarters in Vienna. Special sessions may be convened by the director-general at the request of the Board of Governors or a majority of the IAEA members. The General Conference elects 22 of the 35 members of the Board of Governors for a period of two years. It considers the board’s annual report and approves reports for submission to the UN and agreements with the UN and other organizations. It approves the budget recommended by the board and the appointment of the director-general. The General Conference may discuss any matter concerning the IAEA and may make recommendations to the Board of Governors or to any of the member states.

### Board of Governors

The 35-member Board of Governors is the body actually vested with “the authority to carry out the functions of the Agency in accordance with (the) Statute.” The board generally meets five times each year. It is composed as follows: the outgoing Board of Governors designates for membership on the board the 13 members most advanced in the technology of atomic energy and the production of source materials and the member most advanced in the technology of atomic energy and the production of source materials in two of the following areas in which none of the aforesaid 13 is located—North America, Latin America, Western Europe,

Eastern Europe, Africa, the Middle East and South Asia, Southeast Asia and the Pacific, and the Far East.

The General Conference also elects to membership of the Board of Governors the following: (1) 20 members, with due regard to geographical representation, so that the board at all times will include in this category 5 representatives of Latin America, 4 representatives of Western Europe, 3 representatives of Eastern Europe, 4 representatives of Africa, 2 representatives of the Middle East and South Asia, 1 representative of Southeast Asia and the Pacific, and 1 representative of the Far East; (2) in addition, 1 further member from among the members of the following areas: the Middle East and South Asia, Southeast Asia and the Pacific, and the Far East; (3) and 1 further member from among the members in the following areas: Africa, the Middle East and South Asia, and Southeast Asia and the Pacific.

Member States represented on the Board of Governors for 2005-2006 were: Algeria, Argentina, Australia, Brazil, Belarus, Belgium, Canada, China, Colombia, Cuba, Ecuador, Egypt, France, Germany, Ghana, Greece, India, Indonesia, Japan, Republic of Korea, Libya, Norway, Portugal, Russian Federation, Singapore, Slovakia, Slovenia, South Africa, Sri Lanka, Sweden, Syria, United Kingdom of Great Britain and Northern Ireland, United States of America, Venezuela, and Yemen.

### Director-General and Secretariat

The staff of the IAEA is headed by a director-general, appointed by the Board of Governors with the approval of the General Conference for a term of four years. The statute describes the director-general as “the chief administrative officer of the Agency,” but it closely limits his independent powers by providing that he “shall be under the authority and subject to the control of the Board of Governors.” The director-general is responsible for “the appointment, organization, and functioning of the staff.”

The first director-general, who held the post from 1957 to 1961, was Sterling Cole of the United States, a former congressman. Dr. Sigvard Eklund, a Swedish physicist and administrator, served as director-general from 1961 to 1981. He was succeeded by Dr. Hans Blix of Sweden, a former foreign minister, who was reappointed in 1993 for a fourth four-year term. On 1 December 1997, Blix was succeeded by Dr. Mohamed El-Baradei (of Egypt) as Director General. El-Baradei has been a senior member of the Secretariat since 1984. He heads a staff of about 2,200 from some 95 countries.

### Position in the UN System

The IAEA is an autonomous international organization occupying its own position in the UN family of organizations. Under the relationship agreement between the UN and the IAEA, the IAEA is recognized as being “responsible for international activities concerned with the peaceful uses of atomic energy.” One of the statutory objectives of the IAEA is to ensure that none of the assistance it gives to member states is “used in such a way as to further any military purpose,” and the IAEA has a staff of inspectors to report violations of this rule. In case of noncompliance, the agency’s Board of Governors reports to the Security Council and the General Assembly of the UN.

IAEA has established strong cooperation arrangements with many of the key UN development agencies in order to advance the contribution of nuclear science and technology in the fields

of agriculture, human health, industry, environmental protection, and other sectors. Principal partners in are the Food and Agriculture Organization (FAO), the United Nations Development Programme (UNDP), the World Health Organization (WHO), the United Nations Environment Programme (UNEP), the World Meteorological Organization (WMO), the International Fund for Agricultural Development (IFAD), the United Nations Educational, Scientific and Cultural Organization (UNESCO), and the United Nations Industrial Development Organization (UNIDO). The agency also develops cooperative arrangements with multilateral development banks, bilateral donors, and non-governmental organizations and institutes such as the Inter-American Nuclear Energy Commission, the Agency for the Prohibition of Nuclear Weapons in Latin America, the League of Arab States, the African Union, the Nuclear Energy Agency of the OECD, and the European Atomic Energy Community. Finally, the IAEA maintains contact with a number of nongovernmental organizations having consultative status with it.

## BUDGET

The IAEA is financed by regular and voluntary contributions from member states. For 2006, the IAEA General Conference approved a regular budget of €273.6 million (on the basis of an exchange rate of us\$1.00 to €1.00). The target for voluntary contributions to finance the IAEA program of technical cooperation was about us\$77.5 million for 2006.

## ACTIVITIES

### A. Assistance to Member States

The initial program of the IAEA, unanimously adopted by the 1957 General Conference, emphasized activities that could be undertaken while the IAEA's experience and resources were still relatively limited. High priority was given "to those activities which will give the maximum possible benefit from the peaceful applications of atomic energy in improving the conditions and raising the standard of living of the peoples in the underdeveloped areas."

In the light of these considerations, two of the IAEA's major objectives are to help member states prepare for the eventual use of nuclear power and to encourage them in the wider use of radioisotopes. Although it cannot undertake actual programs of development for its members, it can assist them in initiating and carrying out such programs. By the 1990s IAEA was active in assisting its developing members in an impressive number of fields:

#### *Basic human needs*

- water resources development
- agriculture (mutation breeding, fertilizer and soil nutrition, pest control, use of agrochemicals)
- livestock (reproduction, health, nutrition)
- health care (radiation therapy, nuclear medicine and diagnostics)

#### *Industrial applications*

- nondestructive testing
- hydrology (silt movements, geothermal studies)

- radiation processing (surface coating, radiation sterilization, food preservation, sterilization of medical products)
- isotopic tracers for industry
- nuclear gauging for industry (paper, steel, food processing, mining industries)
- radioisotope and radiopharmaceutical production
- research reactor design and use

#### *Electricity generation*

- geology, mining and processing of nuclear raw materials
- fuel element fabrication
- metallurgy and materials testing
- power reactor design
- reactor electronics instrumentation and control
- reactor engineering and quality assurance
- electricity system planning

#### *Support activities*

- nuclear centers and laboratories
- nuclear safety (regulation, safety standards, radiation protection, waste management, safety assessment)
- physics (atomic, nuclear, high-energy and solid-state physics)
- chemistry (nuclear, radio, radiation, and nuclear analytical chemistry)

### **Technical Cooperation**

The IAEA has been providing technical assistance to developing member countries since 1959, in the form of expert services, equipment, and training, with the objective of facilitating technology transfer in various fields related to nuclear energy. The major fields in which assistance is provided are nuclear safety, the application of isotopes and radiation in agriculture, and nuclear engineering and technology. Other important areas for assistance are general atomic energy development, nuclear physics and chemistry, prospecting for and mining and processing of nuclear materials, and the application of isotopes and radiation in industry and hydrology, in medicine, and in biology.

Financial support for the IAEA's technical cooperation programs comes mainly from its own voluntary technical assistance and cooperation fund; other sources are extrabudgetary donations and contributions in kind from member states and UNDP. In 2006, technical allocations increased to us\$78.5 million from us\$59.1 million in 2000.

### **Provision of Materials**

Under the IAEA statute, any member desiring to set up an atomic energy project for peaceful purposes "may request the assistance of the Agency in securing special fissionable and other materials." The IAEA acts, on request, as an intermediary in arranging the supply of reactor fuel and specialized equipment from one member state to another. Argentina, the Democratic Republic of the Congo, Finland, Japan, Mexico, Norway, Pakistan, and Uruguay, among other countries, have been beneficiaries of such arrangements. Small quantities of special fissionable materials have also been supplied to a number of countries for research purposes.

### **Training of Technical Personnel**

The IAEA's training program has retained its importance, not only because the need for trained staff is pressing but also because less

elaborate preparations are required for assistance of this kind than for technical assistance operations involving the provision of expert services and demonstration equipment.

To meet the shortage of scientific and technical workers, the IAEA has initiated a fivefold program:

1. *Fellowships.* Fellowships are awarded in all subjects involving the peaceful uses of atomic energy, such as nuclear physics; the production, handling, and application of isotopes in agriculture, industry, medicine, biology, and hydrology; nuclear chemistry; the planning, construction, and operation of research and power reactors; health physics; and radiological protection.
2. *Assignment of experts and consultants.* The program provides for scientists and engineers to give advice and in-service training to developing countries on various subjects.
3. *Survey of available facilities in member states.* The IAEA collects detailed information from its member states about their training and research programs, training facilities, and the experts that they are prepared to make available to the IAEA. It is thus in a position to act as an international clearinghouse for training in atomic energy and to promote technical cooperation among developing countries.
4. *Training courses.* Regional and interregional courses have been organized on such subjects as the application of isotopes and radiation in medicine, nuclear instrumentation for laboratory technicians, the use and maintenance of nuclear and related electronic equipment, radiological and safety protection, physics, the utilization of research reactors, nuclear-power projects and other high-technology subjects, the preparation and control of radiopharmaceuticals, and uranium prospecting and ore analysis.
5. *Expanded training programs.* A number of developing countries, faced with the need to introduce nuclear power, require special assistance in the training of their key staff; the agency has therefore initiated an expanded training program on nuclear-power project planning, implementation, and operation. Special training courses contribute to the development of efficient legal and organizational infrastructures for nuclear-power programs, including instruction in quality assurance and safety aspects. In addition, on-the-job training is arranged on subjects for which no formal courses are available.

### B. Exchange of Information

While its assistance programs are directed primarily to the needs of economically developing areas, the IAEA's program of conferences and exchange of information is designed to benefit all of its members—even the most technically advanced.

The International Nuclear Information System (INIS), set up by the agency in 1970, provides worldwide coverage of the literature dealing with all aspects of peaceful uses of atomic energy and is the first fully decentralized computer-based information system. Countries and organizations participating in the INIS collect and process all the relevant literature within their geographic areas and send it to the IAEA. In Vienna, the information is checked, merged, and further processed, and the resulting output is distributed to individuals and organizations around the world. The

major products of the system are the magnetic tape service, the *INIS Atomindex*, and the direct availability of the INIS data base on-line from the IAEA computer in Vienna. The magnetic tapes and the on-line service, available to member states and participating organizations only, contain bibliographic descriptions, subject indexing, and abstracts and are utilized for current selective dissemination of information and retrospective searching. The *INIS Atomindex*, an international nuclear abstract journal, is published twice a month and is available to the public on a subscription basis. An additional service is the provision on microfiche of texts of all nonconventional literature submitted to the system. In 2006, INIS membership included over 100 countries and some 20 international organizations; it reported on over 2.5 million documents. Beginning in 1992 the INIS data base was made available to INIS member states on CD-ROM disks.

The IAEA also cooperates with FAO in the provision of a similar information system for agriculture, known as *AGRIS*.

A second important information service of the IAEA concerns nuclear data—numerical and associated information on neutron cross-sections, related fission, capture, and scattering parameters of neutron-induced reactions, as well as other nuclear physical constants. The IAEA maintains an efficient system for collection of these data and, together with three other regional centers, in France, the Russian Federation, and the United States, issues *CINDA*, an index to the literature on microscopic neutron data. It also compiles *WRENDA*, the world request list for nuclear-data measurements needed both for the development of fission and fusion reactors and for nuclear-material safeguards.

The IAEA plays a leading role in promoting the dissemination of scientific and technical information by organizing each year 15 to 20 conferences, symposia, and seminars and a large number of smaller technical meetings. The IAEA has organized major international meetings dealing with specific aspects of the peaceful uses of nuclear energy. For example, some important 2000 meetings included: International Conference on the Safety of Radioactive Waste Management (Córdoba, Spain); International Symposium on the Uranium Production Cycle and the Environment, (Vienna); 18th IAEA Fusion Energy Conference (Sorrento, Italy); International Symposium on Nuclear Techniques in Integrated Plant Nutrient, Water, and Soil Management (Vienna); International Symposium on Radiation Technology in Emerging Industrial Applications (Beijing); International Conference of National Regulatory Authorities with Competence in the Safety of Radiation Sources and the Security of Radioactive Materials (Buenos Aires); Seminar on Nuclear Science and Technology for Diplomats (Vienna); Seminar on Nuclear Law; and Latin America International Seminar on Implementation of Systems to Prevent and Detect Unauthorized Uses of Nuclear and Radioactive Materials (Vienna).

### C. Research

The International Center for Theoretical Physics, in Trieste, set up by the IAEA in 1964, brings together specialists from developing and developed countries to carry out research and to enable scientists from developing countries to keep abreast of progress without having to leave their own countries permanently or for long periods. Fellowships are awarded to candidates from developing countries for training and research, and an international fo-

rum is provided for personal contacts. Associate memberships are awarded by election to enable distinguished physicists to spend one to three months every year at the center. Senior and junior positions are offered by invitation, and a federation scheme is designed to forge a partnership with institutions in developing countries. Assistance has been given by Italy and by the university and city of Trieste. Further aid has come from the Ford Foundation and from UNESCO, which in 1970 undertook joint management of the center.

The IAEA has three laboratories: a small one at its headquarters in Vienna, the main laboratory at Seibersdorf (20 miles from Vienna), and one at Monaco for research on the effects of radioactivity in the sea. The laboratories undertake work in agriculture, hydrology, medicine, physics, chemistry, low-level radioactivity, and environment.

A research contract program has been established with various institutions in member states. The subjects include nuclear power and reactors; physics and chemistry; radioisotope and radiation applications in agriculture, food technology, industry, and medicine; water resources development; protection of humans against ionizing radiation; radiation biology; medical and biological radiation dosimetry; health physics and radiation protection; environmental contamination; and waste treatment and disposal.

To keep abreast of scientific developments, members of the IAEA's scientific staff visit institutions in member states and conduct various studies. The IAEA has made a survey of research trends in the sterilization of food and drugs by ionizing radiation, a problem of considerable interest to both developed and developing countries.

#### D. Nuclear Power

Nuclear power is already an important source of electrical generation, particularly in industrialized countries, and technically and economically ripe for an even larger application worldwide. As of April 2006, there were 443 nuclear power plants in operation worldwide and 27 additional plants under construction.

In response to the interest of developing countries in nuclear power, the IAEA has played an increasing role in objective nuclear-power planning studies for individual member states. Energy planning methodologies have been developed and made available. The IAEA has cooperated with interested member states in applying these methodologies to specific country cases and in assessing the economic role of nuclear power in meeting increasing requirements for electricity. IAEA efforts to help strengthen infrastructures for the planning, implementation, and operation of nuclear-power projects take the form of inter-regional and national training courses; technical assistance projects, often in cooperation with the World Bank; advisory missions to interested countries; and the publication of guidebooks.

The IAEA started to collect operating experience data from nuclear-power plants in the late 1960s and has now established a Power Reactor Information System (PRIS), which monitors the performance of the nuclear-power plants in operation in the world. In addition to performance indices and data on energy production, the system contains information about full and partial plant outages affecting plant operation and about power-reactor operating experience in the world. Periodic publications by the IAEA make this information available to planners and operators in member

states. In 1995, a new version, called PRIS-PC, was made available online for direct access through the public telephone network. Internet access became available at the end of 1996.

As an increasing number of countries are interested in the use of nuclear plants for heat-only production and cogeneration (for example, desalination combined with electricity generation), the IAEA periodically reviews progress in this area. In addition, scientific meetings on nuclear power are organized to discuss such matters as economic competitiveness of nuclear power, integration of nuclear-power plants in electric grids, operating experience, introduction of small and medium power reactors, development of fast-breeder and high-temperature reactors, and fusion technology.

In 2000, in response to the IAEA member states' requests under two resolutions at that year's General Conference, the IAEA initiated "International Projects on Innovative Nuclear Reactors and Fuel Cycles (INPRO)." The project complements the U.S. Department of Energy's (DOE) Generation IV International Forum (GIF), in its focus on future nuclear technologies. The activities of INPRO focus on developing long-term user requirements for future nuclear technologies from the point of view of safety, non-proliferation, environment, nuclear wastes, and economic competitiveness. The IAEA held an International Conference on Innovative Nuclear Technologies in 2003. Some of the symposia and conferences held by the IAEA in 2006 were: on effective nuclear regulatory systems; on management of spent fuel from nuclear power reactors; on verification challenges; on quality assurance and new techniques in radiation medicine; and on the decommissioning of nuclear facilities.

#### E. Nuclear Safety

Although each state is responsible for nuclear safety with regard to nuclear activities within its own territory, nuclear safety is a field in which international cooperation can be very helpful, particularly in developing safety standards and providing assistance. The IAEA's activities in the field of nuclear safety include plant siting and design, the transport of radioactive waste, emergency planning and preparedness, and decommissioning. The IAEA also began work on an historic Nuclear Safety Convention in 1991, the text of which was finalized at a major international conference held in Vienna in June 1994. (See Nuclear Law below.)

The IAEA maintains a 24-hour Emergency Response System (ERS) staffed by 30 emergency duty officers. In 1992 the system underwent its second comprehensive exercise to test procedures developed in support of the conventions on early nuclear accidents signed as a result of the 1986 Chernobyl incident (see below). In addition to periodic comprehensive tests, the communication systems used for notifications and requests for assistance are tested at least once a day.

Regulations for the safe transport of nuclear material were developed by the IAEA in 1961. These were followed by Basic Safety Standards for Radiation Protection, which have been extensively revised in accordance with the new system of dose limitation recommended by the International Commission on Radiological Protection. The revised safety standards, carried out jointly with the ILO, WHO, and the Nuclear Energy Agency of the OECD, mark an important milestone in establishing international stan-

dards for radiation protection. In 1992 IAEA published the first in a series of radioactive waste management research abstracts.

The IAEA's Nuclear Safety Standards program provides member states with internationally acceptable safety codes and guides on the many aspects of safety associated with nuclear-power plants. The program, which deals with protection against the harmful effects of ionizing radiations, is based on experience in safety practices gained by countries advanced in nuclear technology. Two types of safety documents—codes of practice and safety guides—are being developed in the areas of government organization, siting, design, operation, and quality assurance of nuclear-power plants. For each area there is a code of practice and a number of related safety guides. The codes outline basic objectives and minimum requirements that must be fulfilled to provide an adequate safety level. The safety guides recommend procedures and acceptable technical solutions to implement the requirements and achieve the objectives of the codes.

In recognition of the increasing emphasis on operational safety, the IAEA initiated the Operational Safety Review Team (OSART) program in 1983 to assist regulatory authorities in the review of operating nuclear-power plants. The program provides an opportunity for member states to benefit from outside expertise and experience. An Operational Safety Review Team is composed of about 10 experts, including IAEA staff, to cover subject areas common to all reactor types, and consultants to cover those areas that are reactor-specific. Experts from developing countries have frequently been included. The reviews, which take up to three weeks, help provide an international frame of reference for regulatory and operating personnel and also provide the IAEA with valuable insights in regard to updating its regular and technical assistance programs.

Additional highlights of IAEA safety activities are: work on the management of severe accidents and on emergency response; the man-machine interface; probabilistic safety assessment; and advanced safety technology. There is also a nuclear incident reporting system and an International Nuclear Event Scale Information Service (INES). There is also a program called the Assessment of Safety Significant Events Teams (ASSET), which complements OSART. ASSET missions assess, upon invitation, safety significant events involving nuclear power plants. In recent years, there has been a greater emphasis on evaluation and assistance to improve the safe operation of Eastern European nuclear reactors.

As the number of reactor years of operation increases, the feedback of experience is becoming a valuable means of enhancing safety and reliability. Systematic reporting and evaluation of safety-related events can make it possible to identify necessary plant modifications and develop improved plant procedures. To facilitate the exchange of experience, both the Nuclear Energy Agency of the OECD and the IAEA have established incident reporting systems to collect and examine details of events submitted by national organizations. National coordinators screen accounts of all events, passing on to the OECD and the IAEA the most important data.

#### **Response of the IAEA to the Chernobyl Accident**

In response to the accident that occurred in the fourth unit of the Chernobyl nuclear-power station in the USSR on 26 April 1986, resulting in loss of life, injuries, and considerable radioactive re-

leases, the IAEA's Board of Governors met to elaborate proposals for expanded international cooperation in nuclear safety and radiological protection. Through a group of experts who convened in July–August 1986, it prepared drafts of two international conventions on nuclear accidents; at a post-accident review meeting convened by the IAEA in late August, about 600 experts from 62 countries and 21 international organizations discussed a comprehensive report presented by the USSR delegation. In September 1986, a special session of the IAEA's General Conference, attended by delegates from 94 countries and 27 national and international organizations, adopted the two draft conventions: the Convention on Early Notification of a Nuclear Accident and the Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency. The two conventions were immediately signed by more than 50 countries. By 17 January 2006, the Early Notification Convention had 98 parties. The Accident Assistance Convention had 96 parties as of 27 January 2006. In 1989, the IAEA and many other sister organizations embarked on the International Chernobyl Project, to assess the measures taken to enable people to live safely in areas affected by radioactive contamination. It involved more than 200 experts from 23 countries and marked the beginning of ongoing cooperation between intergovernmental organizations regarding nuclear safety.

In March 1994, an international expert safety assessment team examined the safety situation at Chernobyl, at the invitation of the Ukrainian government. It concluded that there were numerous safety deficiencies in the two units of the plant that remain operational, noting that the shelter enclosing the destroyed reactor was experiencing deterioration. The IAEA recommended that the government of Ukraine hold a meeting on the situation at the Chernobyl reactor. At that meeting, the Ukrainian government pleaded severe economic hardship and an impending shortage of energy as a reason to delay closing the damaged plant. It asserted that, with international financial assistance, safety conditions at the plant could be improved. The government also asserted that the output of the Chernobyl station was a least-cost alternative for energy supply in the immediate future. In 1994, five new nuclear plants were planned or under construction; as of 2000, two had received sufficient funding to be completed, by 2004 and 2006; construction on the other three had been suspended indefinitely. In 2000, representatives of the European Bank for Reconstruction and Development (EBRD) concluded that significant safety improvements had been achieved in the fourteen nuclear power plants in Ukraine since 1994.

In March 2001, the Ukrainian government selected a design for a new shelter to be built around the Chernobyl "sarcophagus." The EBRD agreed to the design, which would allow for the work to begin.

#### **F. Radioactive Waste Management**

Safe management of radioactive wastes produced in all the stages of the nuclear fuel cycle is essential for the growth of nuclear power. The IAEA has been active since its establishment in all aspects of this field, including the publication of *Safety Series* and *Technical Reports*, which give guidelines and recommendations; the holding of seminars, symposia, and conferences; and the arranging of study tours for the benefit of member states. Major areas currently being studied by the IAEA are underground dispos-

al, waste handling and treatment, and environmental aspects of waste disposal.

Safety standards and codes of practice have been prepared on the management of wastes produced by users of radioactive materials; the management of wastes from the mining and milling of uranium and thorium ores; the disposal of wastes in shallow ground, rock cavities, and deep geological formations; and criteria for underground disposal of wastes.

### G. Nuclear Law

From its inception, the IAEA has been faced with the need for international coordination and harmonization of the principles governing third-party liability in the event of nuclear damage. The absence of special legislation might leave injured victims without redress. Great difficulties might arise if different nations were to incorporate different principles and procedures in their legislation concerning third-party liability.

Some steps toward worldwide harmonization of compensation for damage arising from nuclear operations were taken through the adoption of two international conventions: the Brussels Convention on the Liability of Operators of Nuclear Ships (1962) and the Vienna Convention on Civil Liability for Nuclear Damage (1963). These two conventions set the minimum standards concerning the liability of the operator of a nuclear installation or a

nuclear ship in the event of accidents occurring during the international transport of nuclear materials.

Another convention was adopted in 1971: the Convention on Civil Liability in the Field of Maritime Carriage of Nuclear Matter, which came into force on 15 July 1975. This convention exonerates shipowners from liability under international maritime law in the case of nuclear damage falling within the purview of the Paris Convention on Third Party Liability in the Field of Nuclear Energy (1960), which came into force in 1968, or the Vienna Convention on Civil Liability for Nuclear Damage (1963), which came into force in 1977, whenever the carriage of nuclear material is involved; it thus eliminates what was previously a serious impediment to sea transport of such material. A joint protocol relating to the application of the Vienna Convention and the Paris Conventions entered into force on 27 April 1992.

The Convention on the Physical Protection of Nuclear Material was adopted on 26 October 1979 at a meeting of governmental representatives held at IAEA headquarters. The convention, which came into force on 9 February 1987, is designed to ensure that the prescribed levels of physical protection are applied to potentially hazardous nuclear materials during international transport.

As already noted, two conventions on nuclear accidents were adopted at a special session of the IAEA's General Conference in September 1986, in the aftermath of the Chernobyl accident in April of that year: the Convention on Early Notification of a Nuclear Accident, which came into force on 27 October 1986; and

the Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency, which came into force on 27 February 1987.

In 1991, in recognition of the interdependence of nations in the nuclear fuel cycle, the General Conference supported the idea of an international nuclear safety convention. A draft convention elaborated by legal and technical experts from more than 50 countries was submitted to the General Conference at that time. In June 1994, delegations from 83 member states and four international organizations met in Vienna to consider and adopt the final text of the International Nuclear Safety Convention. The main features of the convention are the establishment of a reporting system on the implementation by contracting states of the obligations of the convention; the assurance of a proper legislative and regulatory framework to govern the safety of nuclear installations; general safety considerations to reinforce the priority of safety; sufficient financial and human resources; quality assurance; radiation protection, and emergency preparedness. The Nuclear Safety Convention came into force on 24 October 1996. The first review meeting was held in April 1999 in Vienna; it was attended by 45 of the 50 states that had by then ratified the convention.

In conjunction with the increasing number of states embarking on nuclear programs, there has also been a growing awareness of the necessity for establishing both a proper legislative framework and specialized regulations for the licensing and control of nuclear installations. The IAEA has provided advisory services to several developing countries in the framing of statutory and regulatory provisions in such areas as the establishment of competent bodies on atomic energy; radiation and environmental protection; transport of radioactive materials; licensing of nuclear installations; nuclear liability; and nuclear merchant ships.

## H. Safeguards

The basic science and technology of nuclear energy are the same for both peaceful and military purposes. Therefore, the IAEA statute requires the agency “to establish and administer safeguards” to ensure that materials, services, equipment, facilities, and information that the IAEA makes available are not used “in such a way as to further any military purpose.” Such safeguards may also be applied, “at the request of the parties, to any bilateral or multilateral arrangement, or, at the request of a state, to any of that state’s activities in the field of atomic energy.”

Under the IAEA safeguards system, which was first developed by the Board of Governors on the basis of these statutory provisions in 1961 and has been continuously revised to cover all major aspects of the fuel cycle, the IAEA exercises its control either over assistance provided directly by it or under its auspices, or over items placed voluntarily under IAEA safeguards by any state or group of states—for instance, over reactors, their fuel, and fuel-reprocessing plants.

A major development greatly affecting the significance of the IAEA’s work was the coming into force in 1970 of the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), under which states without nuclear weapons and party thereto agreed to accept IAEA safeguards on all their peaceful nuclear activities.

The objective of safeguards applied under agreements concluded in connection with the NPT is the timely detection of diversion of significant quantities of nuclear material from peaceful nuclear

activities for the manufacture of nuclear weapons or other nuclear explosive devices or for purposes unknown, and the deterrence of such diversion by the risk of early detection. This objective is achieved by the independent verification of the findings of the national system of accountancy and control of nuclear materials, which a state without nuclear weapons must establish and maintain under the agreement. IAEA verification is accomplished by material accountancy, containment, and surveillance, including inspections, whose number, intensity, and duration must be kept to the minimum consistent with the effective implementation of safeguards.

The NPT was made permanent in 1995. As of 1 May 2006, it had 188 state parties (including the withdrawal of the Democratic People’s Republic of Korea in 2003). With several complementary regional treaties (including the Treaty for the Prohibition of Nuclear Weapons in Latin America, also called the Treaty of Tlatelolco; and the South Pacific Nuclear Free Zone, or Rarotonga Treaty), the NPT provides the foundations of legally binding non-proliferation commitments by countries around the world.

The (1991) discovery of a clandestine nuclear weapons development program in Iraq after the Gulf War, however, demonstrated the limitations of the IAEA safeguards system to detect possible undeclared nuclear activities. This discovery—along with the emergence of new countries with new security perceptions at the end of the Cold War, and the 1996 report that the Democratic People’s Republic of Korea was not in compliance with its obligations under the NPT safeguards agreement—was viewed as a call to action by IAEA member states. By mid-1997 a strengthened safeguards system was put in place to provide the international community with early warning about the possible diversion or clandestine production of nuclear materials that could be used for weapons purposes. At that time, the IAEA stated that the strength of the safeguards system depended on three interrelated elements: the extent to which the IAEA is aware of the nature and locations of nuclear and nuclear-related activities; the extent to which IAEA inspectors have physical access to relevant locations for the purpose of providing independent verification of the exclusively peaceful intent of a state’s nuclear program; and the will of the international community, through IAEA access to the United Nations Security Council, to take action against States that are not complying with their non-proliferation commitments.

The IAEA also applies safeguards to some of the peaceful nuclear activities in five nuclear-weapon states—China, France, the Russian Federation, the United Kingdom, and the United States—under voluntary offer agreements. India and Pakistan, both nuclear-weapon states as of 1998, are not parties to the Nuclear Nonproliferation Treaty and have not accepted “comprehensive” IAEA safeguards. Nor has Israel, with a well-developed nuclear program and the technological capability to build nuclear explosive devices.

In the aftermath of the 11 September 2001 terrorist attacks on the U.S., the IAEA Board of Governors approved a plan designed to upgrade world-wide protection against acts of terrorism involving nuclear and other radioactive materials, including those that could be used to make “dirty bombs.” The Board acknowledged that strong physical protection of nuclear facilities and materials is needed.

In October 2002, the Democratic People's Republic of Korea (DPRK) announced that it had underway an uranium-enrichment program, in violation of its 1994 "Agreed Framework" with the U.S. In January 2003, North Korea gave notice of its withdrawal from the NPT, which became effective that April. North Korea thus became the first state ever to withdraw from the treaty. In February 2005, the DPRK announced it possessed nuclear weapons, and pulled out of six-party talks with the Republic of Korea, China, Russia, the United States, and Japan. However, later that

year it indicated it would agree to a preliminary accord by which it would renounce its weapons program, with conditions.

In 2006, Iran, a party to the NPT, announced it had resumed activity of a uranium enrichment program, ostensibly for civilian purposes. The United States and the European Union accused Iran of reactivating this program to covertly develop a nuclear weapons program, in violation of the NPT. In February 2006, the Board of Governors of the IAEA voted to report Iran to the UN Security Council.

---

# THE INTERNATIONAL LABOUR ORGANIZATION (ILO)

**BACKGROUND:** The ILO is the only major organization originally part of the League of Nations system that has existed from the founding of the League in 1919 down to the present day. Its name is actually too narrow, for it is an organization neither of nor for labor alone. As the late James T. Shotwell, president emeritus of the Carnegie Endowment for International Peace, pointed out long ago, the ILO might more accurately have been termed an International Organization for Social Justice. Furthermore, as the organization's responsibilities have widened, it has given increasing attention to measures designed to help raise general standards of living. Its work now even includes activities such as productivity training courses for management personnel and high government. Michel Hansenne, Director General of the ILO from 1989 to 1999, said, "Employment—the best possible employment for all—has always been, and will remain, the principal objective of our Organization, whose mission is to link economic growth, social justice and the creation and distribution of wealth."

---

## CREATION

The International Labour Organization (ILO) was created by the 1919 Peace Conference that followed World War I. Its original constitution, which formed part of the Treaty of Versailles, established it on 11 April 1919 as an autonomous organization associated with the League of Nations.

A statement made in the constitution's preamble—"Conditions of labor exist involving such injustice, hardship, and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled"—was not mere rhetoric. World War I had shaken many countries to their foundations. The revolution in Russia had succeeded. All over the world there was labor unrest, and the conviction of the need to improve the lot of working people was by no means limited to labor itself. Organized labor, however, had been especially active during the war in demanding that the peace treaty include recognition of the rights of labor and that labor be given a voice in international matters. The American Federation of Labor (AFL) and other powerful trade-union bodies demanded in particular an international organization of labor that would wield "tremendous authority."

At the 1919 Paris Peace Conference, the president of the AFL, Samuel Gompers, was chairman of the conference's Commission on Labor Legislation. The Peace Conference, instead of establishing an international organization of labor, created an organization in which labor, employers, and governments were to be represented on an equal footing. As so constituted, the ILO was, and still is, unique among international governmental organizations—the only one in which private citizens, namely representatives of labor and of employers, have the same voting and other rights as are possessed by governments.

The ILO's principal function was to establish international labor and social standards through the drafting and adoption of international labor conventions. Prior to the existence of the ILO, only two international labor conventions had been adopted: one, de-

signed to protect the health of workers in match factories, prohibited the use of white phosphorus, a poison, in the manufacture of matches; the other prescribed modest restrictions on night work by women. Neither of these was widely ratified. By contrast, more than 182 international labor conventions and 190 recommendations have been adopted by the ILO since 1919. International labor standards are used as a benchmark by which the rights and conditions of human beings have been measured.

## PURPOSES

The aims and objectives of the ILO were set forth in the preamble to its constitution, drawn up in 1919. The preamble declares that "universal and lasting peace can be established only if it is based upon social justice." Hence, the basic objective of the organization is to help improve social conditions throughout the world. The following examples of concrete measures "urgently required" are specifically mentioned in the preamble: regulation of the hours of work, including the establishment of a maximum working day and week; regulation of the labor supply; prevention of unemployment; provision of an adequate living wage; protection of the worker against sickness, disease, and injury arising out of his or her employment; protection of children, young persons, and women; provision for old age and injury; protection of the interests of workers when employed in countries other than their own; recognition of the principle of equal remuneration for work of equal value; and recognition of the principle of freedom of association.

International action in these matters is required, the preamble makes clear, because "the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries." Finally, in agreeing to the ILO constitution, the member governments declare in the preamble that they are "moved by sentiments of jus-

tice and humanity as well as by the desire to secure the permanent peace of the world.”

Meeting in Philadelphia in 1944, the International Labour Conference adopted a declaration that rephrased and broadened the “aims and purposes” of the ILO and “the principles which should inspire the policy of its members.” President Roosevelt stated that the Declaration of Philadelphia, as it was called, summed up the aspirations of an epoch that had known two world wars and that it might well acquire a historical significance comparable to that of the US Declaration of Independence. The declaration, which was incorporated into the amended constitution of the ILO, affirms that labor is not a commodity; that freedom of expression and association are essential to sustained progress; that poverty anywhere constitutes a danger to prosperity everywhere; and that the war against want must be carried on not only with unrelenting vigor within each nation but also by “continuous and concerted international effort in which the representatives of workers and employers, enjoying equal status with those of Governments, join with them in free discussion and democratic decision with a view to the promotion of the common welfare.”

The Declaration of Philadelphia recognizes the “solemn obligation” of the ILO to further among nations of the world programs that will achieve the following:

- full employment and the raising of standards of living;
- employment of workers in the occupations for which they are best suited and where they can make their greatest contribution to the common well-being;
- facilities for training and the transfer of labor, including migration for employment and settlement;
- policies in regard to wages and earnings, hours, and other conditions of work calculated to ensure a just share of the fruits of progress to all and a minimum living wage to all employed and in need of such protection;
- effective recognition of the right of collective bargaining, the cooperation of management and labor in the continuous improvement of productive efficiency, and the collaboration of workers and employers in the preparation and application of social and economic measures;
- extension of social security measures to provide a basic income to all in need of such protection and comprehensive medical care;
- adequate protection for the life and health of workers in all occupations;
- child welfare and maternity protection;
- adequate nutrition, housing, and facilities for recreation and culture; and
- assurance of equality of educational and vocational opportunity.

Since 1994 the ILO has been involved in a process of modernizing and strengthening its labor standards system.

## MEMBERSHIP

Originally, ILO membership was identical with League of Nations membership, since adherence to the League carried with it participation in the ILO. However, several countries that were not members of the League were admitted to the ILO, notably the United

States, which joined in 1934. In 1946, the ILO became the first specialized agency associated with the UN. The constitution of the ILO now provides that any nation that is a member of the UN can become a member of the ILO by unilaterally notifying the Director General that it accepts the obligations of the ILO constitution. Other nations may be admitted to ILO membership by a two-thirds vote of the International Labour Conference.

The ILO constitution originally made no provision for the expulsion of a member. However, two amendments adopted by the International Labour Conference in 1964 would have empowered the ILO membership, by a two-thirds vote, to expel or suspend any member that had been expelled or suspended by the UN or that had been found by the UN to be flagrantly and persistently pursuing by its legislation a policy of racial discrimination. The amendments were adopted in response to South Africa’s policy of apartheid. These amendments never came into force for lack of ratifications. However, in 1972, the conference adopted another Instrument of Amendment about expulsions, which came into force on 1 November 1974.

A state may withdraw from the ILO by formal notification of its intent to do so, such withdrawal to be effective two years after the ILO receives the notification. Germany, one of the original members, withdrew in 1935. South Africa notified the organization of its intent to withdraw before the amendments that could have led to its expulsion were adopted. Its withdrawal became effective on 11 March 1966. South Africa rejoined the ILO on 26 May 1994. Albania withdrew in 1967. Vietnam withdrew in 1985, but rejoined in 1992. Fourteen other countries withdrew their membership at various times (11 of them during the World War II period), but all sooner or later rejoined the organization. The rules that govern original admission to membership also apply to readmission.

In November 1975, the United States filed a two-year notice of intent to withdraw, stating at the same time that it did not desire or expect to leave the ILO but hoped to help the ILO “return to basic principles.” US Secretary of State Henry Kissinger said that the ILO had been “falling back” in four fundamental areas: workers’ and employers’ groups in the ILO falling under the domination of governments; an “appallingly selective” concern for human rights; “disregard of due process” in condemning member states “which happen to be the political target of the moment”; and “increasing politicization of the organization.” The notice of intent to withdraw was allowed to run its course, thereby ending US membership in the ILO in November 1977. On the return of the United States to membership in February 1980, President Jimmy Carter said: “As a member of the ILO and with the support of other countries, the United States will seek to ensure that the ILO continues to serve the interests of the world’s working men and women by promoting more and better jobs while protecting human rights and dignity.” As of 10 November 2005, the ILO had 178 members.

## STRUCTURE

The principal organs of the ILO are the International Labour Conference, the Governing Body, and the International Labour Office, headed by a Director General.

### International Labour Conference

The International Labour Conference is the organization’s policy-making and legislative body, in which every member state is

represented. It holds one session a year at ILO headquarters in Geneva.

Each member country sends to the International Labour Conference a national delegation consisting of four delegates. Two represent the government, one represents the country's employers, and one represents the country's workers. Alternates and advisers may be sent as well. Each delegate has one independent vote. Discussing this system of tripartite representation in 1959, the Director General noted that the ILO is "the only intergovernmental agency in whose work nongovernment delegates take part on an equal footing with government representatives as a matter of constitutional right. Representatives of employers' and workers' organizations are included in its policy-making, standard-setting, and executive machinery and participate, with full voting rights, in all these aspects of its work."

The government, employers', and workers' representatives to the conference act in many respects as three separate groups, functioning somewhat as political parties function in a national legislature: the three groups meet separately for informal discussions of strategy; they hold caucuses; and, voting separately, they elect the government, the employers', and the workers' delegates to the Governing Body and to tripartite committees. If the tripartite system is to function as intended, it is essential that employers' and workers' delegates be true representatives of their respective groups. The ILO constitution provides that governments must appoint these delegates in agreement with the "most representative" organizations of employers or workers "if such organizations exist."

### Governing Body

The Governing Body is the executive council of the ILO. It is composed of 56 titular members (14 representing employers, 14 representing workers, and 28 representing governments) and 66 deputy members (19 representing employers, 19 representing workers, and 28 representing governments).

Members of the Governing Body are elected by the corresponding groups in the International Labour Conference, except that 10 of the government representatives are appointed by countries that do not participate in the election of the other government representatives since these 10 countries are entitled to permanent seats as "states of chief industrial importance." The 10 governments permanently represented on the Governing Body are Brazil, China, France, Germany, India, Italy, Japan, the Russian Federation, the United Kingdom, and the United States of America. The remaining government members, elected for three years by the 2005 conference were from Argentina, Australia, Belarus, Cameroon, Canada, Cuba, El Salvador, Kenya, Malawi, Morocco, Nigeria, Peru, Philippines, Romania, Saudi Arabia, South Africa, Spain, and Sri Lanka.

The 14 employers' representatives on the governing body, elected for three years by the 2005 conference, included leading industrialists from Argentina, Australia, Brazil, Burkina Faso, France, Germany, Japan, Mauritius, Pakistan, Saudi Arabia, Sweden, Tunisia, United Kingdom, and United States.

The 14 members of the workers' group, elected in 2005 for three years, were ranking trade union officials from Algeria, Australia, Barbados, Canada, Colombia, Germany, Guinea, India, Japan, Ni-

geria, Russian Federation, Sweden, United Kingdom, and United States.

Under amendments to the ILO constitution adopted by the International Labour Conference in 1986—to become effective when ratified or accepted by two-thirds of the members, including 5 of the 10 permanent members of the Governing Body—the members of the Governing Body will be increased to 112 (56 representing governments, 28 representing employers, and 28 representing workers) and the 10 permanent seats will be eliminated. As of 2006, this amendment had not yet entered into force.

Meeting several times a year, the Governing Body coordinates and in many ways shapes the work of the organization. It draws up the agenda for each session of the International Labour Conference; while the conference is empowered to change this agenda, it rarely does. The Governing Body appoints the Director-General of the International Labour Office. It examines the proposed budget submitted to it each year by the Director-General and approves it for adoption by the conference. The Governing Body also is responsible for convening the scores of other conference and committee meetings held under ILO auspices every year in various parts of the world and decides what action ought to be taken on their resolutions and reports.

### International Labour Office and Director-General

The International Labour Office in Geneva, headed by the Director-General, is the ILO's headquarters and its permanent secretariat. As of 2000, its staff consisted of about 1,900 persons from more than 110 countries in Geneva and in 40 field offices.

During World War II, when for a time Switzerland was entirely surrounded by Axis forces, the International Labour Office and a skeleton staff were temporarily moved to Montreal, where, thanks to the hospitality of the Canadian government and McGill University, the office was able to continue its more urgent work.

The International Labour Office services the sessions of the conference, the Governing Body, and the various subsidiary organs and committees. It prepares the documents for these meetings; publishes periodicals, studies, and reports; and collects and distributes information on all subjects within the ILO's competence. As directed by the conference and the Governing Body, it carries out ILO operational programs that have been decided on in various fields.

The ILO has had nine Directors General—Albert Thomas, France, 1919–32; Harold Butler, United Kingdom, 1932–38; John G. Winant, United States, 1939–41; Edward J. Phelan, Ireland, 1941–48; David A. Morse, United States, 1948–70; Wilfred Jenks, United Kingdom, 1970–73; Francis Blanchard, France, 1973–89; Michel Hansenne, Belgium, 1989–99; Juan Somavia, Chile, 1999 to present.

## THE ISSUE OF INDEPENDENT WORKER AND EMPLOYER REPRESENTATION

Since its early days, the ILO has been troubled by a basic constitutional issue: can the organization, without violating its own principles, countenance the seating of workers' and employers' dele-

gates from countries where workers' and employers' organizations are not free from domination or control by the government?

### Challenges to the Credentials of Workers

When, in the early 1920s, a member of the Italian Fascist labor corporations appeared at Geneva to take his seat as the workers' member of the Italian delegation to the ILO, his credentials were challenged, though unsuccessfully, by the workers' group, which maintained that he was not a true spokesman for Italian labor. Every session of the conference from 1923 to 1938 saw the credentials of one or more workers' delegates challenged on the grounds that these delegates did not represent an independent labor point of view. Among them were workers' delegates from Austria, Bulgaria, Germany, Greece, Italy, Latvia, Lithuania, and Poland. In all cases, however, the delegates were seated.

Since World War II, the conference has on several occasions actually refused to seat a workers' delegate whose credentials had been challenged. In 1945, it refused to seat the workers' delegate chosen by the Perón regime in Argentina on the ground that work-

ers' organizations in Argentina did not at that time enjoy freedom of association, action, or speech. In 1950, it refused to seat the workers' delegate appointed by the government of Venezuela on the ground that the delegate could not have been nominated in agreement with the country's most representative workers' associations since the government had at that time dissolved all trade unions. Challenges to the credentials of Argentinian and Venezuelan workers' delegates on other occasions were overruled by the credentials committee, however, as was a 1955 challenge to the credentials of the Chilean workers' delegate.

### The Question of Employers' Delegates from Communist Countries

Much greater difficulties arose in the past over the seating of employers' delegates from former communist countries. When the first employers' delegate from the USSR, Mr. Kaoulin of the People's Commissariat of Water Transport, appeared at the 1936 maritime conference, the employers' group acquiesced in his seating but requested an examination of the constitutional questions in-

volved. A study duly carried out by the International Labour Office concluded that the ILO constitution did not require an employer to be a private person and that in countries where the state was the chief employer, it was for the state to choose the employers' delegate. The employers' group at the conference voted unanimously to reject this interpretation.

At the 1945 International Labour Conference, held in Paris shortly after the end of World War II, two constitutional amendments were proposed that aimed at increasing the size of the national delegations so as to give representation to both the public and private sectors of the economy. Both proposed amendments were, for a variety of reasons, rejected by the conference. The employers' group, however, issued a declaration stating that if the USSR, which had withdrawn from the ILO in 1940, were to resume membership, "it would naturally appoint as employers' delegates a representative of the socialized management of the USSR."

At the 1953 conference, the employers' group challenged the credentials of the Czechoslovakian employers' delegate and, when the USSR did rejoin the organization in 1954, challenged those of the Soviet employers' delegate as well. On both occasions, the group was overruled by the credentials committee, which held that the delegates in question performed executive and managerial functions corresponding to those normally exercised by employers under other economic systems.

When the Governing Board met in November 1954, it was sharply divided on the question of employers' delegates from countries with nationalized economies. In hopes of facilitating a compromise, it appointed a special fact-finding committee, headed by Sir Arnold McNair, former president of the International Court of Justice, to report on the "extent of the freedom of employers' and workers' organizations" in ILO member countries "from government domination or control." The lengthy report, which the committee submitted in February 1956, was based on a study of the situation in 59 countries, including five in the Soviet bloc.

The report recognized at the outset that the unique feature of the ILO—cooperation among representatives of government, employers, and workers—could only be meaningful if the latter represented their constituents in the true sense of the word and had the right "to speak and vote freely without government control." On the other hand, the report noted, major changes had occurred in the economic structure of many countries since 1919, with governments participating in their countries' economic and social life in a wide variety of new ways. The ILO had long maintained that the principle of freedom of association is violated if the right to organize is subject to government authorization. However, the report found, the constitutions of no less than 21 ILO countries subjected the right of association to statutory regulation.

The Hungarian uprising of 1956 had sharp repercussions in the ILO, which were reflected in the credentials dispute. The Governing Body expressed solidarity with the Hungarian workers "who were struggling to secure their fundamental rights," and the 1957 International Labour Conference rejected the credentials of the employers' and workers' delegates appointed by the Kádár government, which had, in effect, restored the Hungarian status quo ante. In 1958 and 1959, the conference took the unprecedented step of not only rejecting the credentials of the Hungarian workers' and employers' delegates, but also refusing admission to the government delegates.

In the meantime, various attempts were made to find a general solution to the problem that would satisfy all concerned, including the Western employers' delegates. Involved in the problem was the fact that, under the International Labour Conference rules, each group—government, employers, and workers—could refuse to seat delegates whose credentials it did not accept. In 1959, acting on a plan proposed by a tripartite committee headed by Roberto Ago of Italy, the ILO established a five-member Appeals Board composed of persons of "internationally recognized independence and impartiality" to rule on such matters.

The demise of the Soviet bloc in the late 1980s heralded the arrival of a new era of consensus. Now that so many formerly communist governments no longer adhere to a managed economy, challenges to credentials are much less significant.

## BUDGET

The ILO's activities are financed by a biennial budget fixed by the International Labour Conference and raised from the governments of member states according to a scale of contributions approved by the conference. The scale ranges from 0.001% for the least developed countries (LDCs) to 5.45% for the United Kingdom, 6.37% for France, 9.62% for Germany, 19.22% for Japan, and 22% for the United States. In addition, the ILO receives for its technical assistance programs a share of the funds raised from voluntary government contributions to UNDP.

The 2004-05 expenditure budget amounted to US\$529.6 million, with an income budget for the same amount.

## ACTIVITIES

### A. International Labor Standards

One of the principal achievements of the ILO has been the formulation of an extensive international labor code through the drafting and adoption of various standard-setting conventions and recommendations. The first international convention adopted was the 1919 Hours of Work Convention, establishing the eight-hour day and the six-day week in industry.

A convention is similar to an international treaty and is subject to ratification. Recommendations do not require ratification. They serve as guidelines for national policy.

By 2006, the various sessions of the International Labour Conference had built up the edifice of the international labor code through the adoption of 185 conventions and 195 recommendations, covering such questions as the following:

- employment and unemployment: employment services, national development programs, and provisions for unemployment;
- various aspects of conditions of work: wages, hours, weekly rest periods, annual holidays with pay, and allied topics;
- employment of children and young persons: minimum age of admission to employment, medical examination for fitness for employment, vocational training and apprenticeship, and night work;
- employment of women: maternity protection, night work, and employment in unhealthy work;
- industrial health, safety, and welfare;
- social security;

- industrial (i.e., management-labor) relations;
- labor inspection;
- social policy in nonmetropolitan areas and concerning indigenous and tribal populations;
- protection of migrants; and
- trade unionism and collective bargaining.

At first, the effort to build up minimum labor and social standards that would be internationally valid was considered by many as utopian. In these fields, international action used to be virtually unknown. But the freely accepted conventions and recommendations and the ILO machinery of mutual supervision have helped to improve working conditions and management-labor relations, protect the fundamental rights of labor, promote social security, and lessen the frequency and intensity of labor conflicts.

The international labor code is continually being revised and extended, not only to broaden its scope but also to keep pace with advancing concepts of social and economic welfare. The following conventions represent the heart and soul of the organization's commitment to its mandate to social justice:

#### Selected ILO Conventions

NUMBER	NAME
No. 29	Forced Labor Convention (1930)
No. 87	Freedom of Association and Protection of the Right to Organize (1948)
No. 98	Right to Organize and Collective Bargaining Convention (1949)
No. 100	Equal Remuneration Convention (1951)
No. 105	Abolition of Forced Labor Convention (1957)
No. 111	Discrimination (Employment and Occupation) Convention (1958)
No. 122	Employment Policy Convention (1964)
No. 135	Workers' Representatives Convention (1971)
No. 141	Rural Workers' Organizations Convention (1978)
No. 144	Tripartite Consultation (International Labor Standards) Convention (1976)
No. 151	Labor Relations (Public Service) (1978)
No. 155	Occupational Safety and Health Convention (1981)
No. 169	Indigenous and Tribal Peoples Convention (1989)
No. 174	Prevention of Major Industrial Accidents Convention (1993)
No. 182	Worst Forms of Child Labor Convention (1999)
No. 184	Safety and Health in Agriculture Convention (2001)

Other important conventions are, for example, the 1960 convention and a recommendation on the protection of workers against ionizing radiations. These instruments, in essence, provide for the establishment of maximum permissible doses and amounts of radioactive substances that may be taken into the body. Appropriate radiation levels are fixed for workers over 16. Under these international instruments, workers under 16 are prohibited from working in direct contact with ionizing radiations.

In pursuit of ILO efforts to help extend the scope of social security coverage throughout the world and eliminate discrimination based upon nationality, the 1962 International Labour Conference adopted a convention on the equal treatment of nationals and non-nationals in social security. Under this convention, a rati-

fying country shall give to nationals of other ratifying countries, within its territory, equal treatment with its own nationals under its social security legislation. Countries may accept the obligations of the convention in any or all of the following types of social security: medical care, sickness benefits, maternity benefits, unemployment benefits, and family allowances.

The adoption of protective standard measures against occupationally caused cancer was taken up at the 1974 session of the International Labour Conference. Two international agreements were drawn up, aimed at limiting the use and the adverse effects of carcinogenic (cancer-causing) substances and strengthening protective measures to be used against them.

In 1983, a convention was adopted on the rights of handicapped people, aimed at increasing employment opportunities for the disabled. In 1986, a convention to protect workers against serious risks from the use of asbestos was adopted.

The following recommendations are representative of the ILO's work during the end of the 20th century and the beginning of the 21st century.

No. 175	Safety and Health in Construction Recommendation (1988)
No. 176	Employment Promotion and Protection against Unemployment Recommendation (1988)
No. 177	Chemicals Recommendation (1990)
No. 178	Night Work Recommendation (1990)
No. 179	Working Conditions in Hotels, Restaurants and Similar Establishments (1991)
No. 180	Protection of Workers' Claims in the Event of the Insolvency of Their Employer (1992)
No. 181	Prevention of Major Industrial Accidents (1993)
No. 184	Home Work Recommendation (1996)
No. 188	Private Employment Agencies Recommendation (1997)
No. 191	Maternity Protection Recommendation (2000)
No. 195	Human Resources Development Recommendation (2004)

For a complete listing of ILO conventions, visit their Internet site [www.ilo.org](http://www.ilo.org). Recommendations are also listed at the site.

#### B. Obligation of Members after Adoption of International Labor Standards

The ILO, it should be borne in mind, is not a world lawgiver. The International Labour Conference cannot pass legislation that by itself is binding on any country. However, ingenious arrangements have been written into the ILO constitution to make sure that conventions and recommendations adopted by the International Labour Conference are not regarded as mere pious pronouncements. Member governments must report back to the ILO on the measures they have taken to bring the ILO convention or recommendation before their competent legislative authorities, and they must also keep the ILO informed of decisions made by those authorities.

### **Supervision of Application of Ratified Conventions**

Once a convention has been ratified and has come into force, every country that ratified it is obligated to take all necessary measures to make its provisions effective.

By ratifying a convention, a country automatically agrees to report every year to the International Labour Office on how the convention is being applied in its territory. These reports are much more than a formality. For each convention, the Governing Body formulates a number of questions that include requests for information on the results of labor inspection, relevant court decisions, and statistics on the number of persons covered. Copies of each annual report prepared by a government are to be sent to the country's most representative employers' and workers' organizations, and the report, as finally submitted to the ILO, has to state whether the government has received any comments from them on the practical implementation of the convention in question.

These annual reports on the application of ratified conventions are first considered by a committee of independent experts and then by an employer-worker-government committee, which in turn reports to the full International Labour Conference. The object of this whole system of supervision is to enable the conference to determine what progress has been made in implementing the standards set forth in the conventions. On the basis of the intelligence it receives, the conference may, if it feels this to be necessary, make "observations" to governments, that is, suggest to them ways in which they may overcome discrepancies between the provisions of the conventions that they have ratified and existing national laws or practices.

The effectiveness of this supervisory machinery depends, naturally, on the cooperation of member governments in submitting their annual reports. On the whole, an increasing number of governments have been living up to their obligations in this respect. If required reports are not forthcoming or if the reports submitted by certain countries are not really informative, the ILO supervisory committees express their dissatisfaction in polite but quite unmistakable terms. These criticisms are included in the printed reports of the committees and may occasion debates in the conference itself, thus giving the matter further publicity.

The ILO constitution provides two other procedures that may be followed to induce governments to carry out the provisions of conventions that they have ratified. First, workers' or employers' organizations may make representations to the International Labour Office if they believe that any government, even their own, has failed to live up to a convention that it has ratified. If the government concerned fails to provide a satisfactory answer to the allegation, the Governing Body may decide to publish the allegation and, if one has been submitted, the government reply. Second, any ILO member government may file a complaint against any other member for alleged noncompliance with a ratified convention. The ILO constitution provides that, in this event, a commission of inquiry shall examine the matter, report on its findings, and recommend such remedial steps as it thinks proper. The fact that the ILO constitution provides for specific machinery to take up such complaints itself has contributed to the observance of ratified international labor conventions on the part of member governments.

In his report to the 81st ILC in 1994, Director-General Michel Hansenne reported that in the preceding 30 years, close to 2,000

cases of progress were recorded by supervisory bodies. "That means 2,000 situations in which national legislation and policy have been brought into line with the requirements of ratified Conventions," said the Director-General.

### **Reports on Recommendations and Unratified Conventions**

Recommendations adopted by the International Labour Conference, unlike the conventions that it adopts, are not international treaties and are not subject to ratification. Hence, these recommendations can never be binding on a member government in the sense that the provisions of a ratified convention are binding. Nevertheless, the recommendations constitute an important part of the international labor code, and, since 1948, the Governing Body of the ILO has had the right to ask member governments periodically to what extent they have given or intend to give effect to conventions not ratified and to recommendations. In such case, the governments also have to state the reasons that have so far prevented or delayed the ratification of conventions and the modification of national law and practices according to recommendations.

### **Ratifications**

The number of ratifications that a given convention has received is not, in itself, an accurate measure of its acceptance or impact. The fact that a convention has not been ratified by a particular country does not necessarily mean that that country has not met the standards prescribed in the convention. The United Kingdom, for example, advised the ILO that it did not intend to propose parliamentary ratification of the convention requiring a minimum 24-hour weekly rest period for commercial and office workers. It explained that such workers in the United Kingdom were already assured a rest period of at least that length through established custom and that it was not the policy of the government to intervene in matters that had already been satisfactorily settled by the parties concerned.

New Zealand, which in many ways has pioneered in labor legislation, waited until 1938 to ratify the eight-hour-day, six-day-week convention of 1919. At the same time, New Zealand also ratified the more restrictive 40-hour-week convention of 1935 and, in fact, remained for 18 years the only country ratifying it. Ratifications may be withheld for various reasons by a country for a number of years, after which a number of ratifications may be approved at once. Thus, in 1962 alone, Peru ratified 31 different international labor conventions.

Very often, countries do not ratify conventions on subjects that they feel do not concern them. The various maritime conventions, for example, are primarily of interest to nations with sizable merchant marine fleets. Occasionally, however, countries as a matter of principle ratify conventions on conditions quite alien to them. Thus, Switzerland ratified the 1957 Convention on the Abolition of Forced Labor on the recommendation of the Swiss Federal Council, which called for ratification because of the convention's humanitarian significance, although "forced labor in any of the forms mentioned in the Convention has never existed in Switzerland."

For a growing number of workers in an increasing number of countries, wages, working conditions, vacations, and so-called fringe benefits are being determined not through government legislation but through collective bargaining. The international standards embodied in the ILO's conventions, even though they may

not show on the statute books, frequently serve as guides for labor-management agreements. The widening impact of ILO standards owes much to the various arrangements that have been worked out to make the provisions of the international labor code more widely known to employers' and workers' organizations.

The significance of the sharply increased rate at which governments have been ratifying ILO conventions since 1960 is very great. Ratification, particularly in a developing country, regularly signifies a step forward.

### C. The ILO as a Promoter of Human Rights

#### **Freedom of Association**

World War II stimulated the growth of trade unions and increased their responsibilities. In many countries, labor was recognized as an equal partner in the effort that won the war. Nevertheless, in various parts of the world, the position of unions was far from secure, and in many countries, such a basic freedom as the worker's right to join a union of his choice was respected neither in law nor in practice.

In 1948, the International Labour Conference adopted the Convention on Freedom of Association and the Right to Organize, and in 1949, it adopted the Convention on the Right to Organize and Collective Bargaining. These conventions stipulate that all workers and employers shall possess the right to establish and join organizations of their own choosing without having to obtain government authorization. Such organizations shall have the right to function freely and without interference from public authorities; they may be dissolved or suspended only by normal judicial procedure and never by administrative authority. Workers must be protected against discrimination on the grounds of union membership or activities; thus, a worker may not be discharged because he joins or is active in a union. Employers and workers must not interfere in the establishment or operation of one another's organizations; this provision outlaws such devices as employer-dominated unions. By 2 May 2006, the first of the two conventions had been ratified by 145 countries and the second by 154.

The ILO Committee on Freedom of Association (CFA) has recorded a dramatic rise in the numbers of complaints lodged under this convention: before 1990 a total of 61 complaints were received; 49 complaints were received in 1990 alone. In total, the CFA handles hundreds of cases each year. Cases are received even when the government concerned has not ratified the ILO's freedom of association convention.

The ILO has been particularly concerned with safeguarding the rights enumerated in these two conventions. It has made full use of its regular procedure to ascertain whether all member states have presented the conventions to the appropriate domestic authorities for ratification and to supervise the implementation of the conventions by states that have ratified them. In addition, the International Labour Conference has conducted reviews concerning the extent to which member states, whether bound by the conventions or not, have put their provisions into effect.

In 1969, a special review was made, in connection with the 50th anniversary of the ILO, of the problems and prospects of ratification of 17 key conventions. Special bodies were set up to deal with complaints against governments for violation of trade-union rights: a committee of the Governing Body, known as the Committee on Freedom of Association, composed of government,

employer, and worker representatives; and the quasi-judicial Fact-Finding and Conciliation Commission, composed of nine independent persons serving as individuals. The Fact-Finding and Conciliation Commission is authorized to make on-the-scene investigations, but it cannot consider a case unless the government concerned gives its consent. Japan, in 1964, was the first to do so; Greece was the second, in 1965. The government-employer-worker Committee on Freedom of Association, however, not being a semi-judicial body, may consider complaints whether or not the government concerned gives its consent.

Feeling that fuller factual information was needed about conditions in various countries affecting freedom of association, the ILO Governing Body decided in 1958 to inaugurate a worldwide survey to be carried out through on-the-spot studies. The first country to invite such a survey was the United States; the second was the USSR. An ILO survey mission visited both countries in 1959. At the invitation of the governments of Sweden, the United Kingdom, Burma, and Malaya, surveys on freedom of association in those countries were made in 1960 and 1961.

The Committee on Freedom of Association considered complaints of infringements of trade union rights in Poland following the proclamation of martial law in that country in December 1981 and in response to measures taken against the Solidarity trade union. In November 1982, the Governing Body urged the Polish government to lift martial law; it noted with deep concern that the government had dissolved all existing trade unions, including Solidarity, and deplored the fact that fundamental provisions of the new Polish labor law did not conform with ILO principles of freedom of association and collective bargaining. A commission of inquiry set up by the ILO in 1983 reported in the following year that Poland had infringed trade union rights laid down in two ILO conventions to which it was a party, and it rejected Poland's objection to its inquiry.

#### **Forced Labor**

Before World War II, ILO's efforts in regard to forced labor, including the adoption of the 1930 Convention on Forced Labor and the 1936 Convention on Recruiting of Indigenous Workers, were directed primarily toward stamping out abuses in non-self-governing territories. A convention adopted in 1939 prescribed that contracts for the employment of indigenous labor must always be made in writing, and an accompanying recommendation called for regulation of the maximum period of time for which an indigenous worker could bind himself under contract. Another convention adopted in 1939 required all penal sanctions exacted against indigenous labor for breach of contract to be progressively abolished "as soon as possible"; when applicable to juvenile workers, the sanctions against breach of contract were to be abolished without delay.

After World War II, emphasis shifted from protection against exploitation in colonial areas to the abolition of systems of forced labor wherever they occur, as part of the promotion of human rights. The first step in this broader attack was an impartial inquiry into the nature and extent of forced labor, including prison labor, gang labor, labor service, and the like. A joint UNILO committee studied the existence in the world of systems of forced or "corrective" labor as a means of political coercion or as punishment for political views. In 1953, the committee reported that it

had found two principal forms of forced labor existing in fully self-governing countries: one used mainly as a means of political coercion or political punishment, and the other used mainly for economic reasons.

In 1957, the International Labour Conference, by a vote of 240 to 0, with 1 abstention, adopted the Convention on the Abolition of Forced Labor. The convention outlaws any form of forced or compulsory labor (a) as a means of political coercion or education or as punishment for political or ideological views, (b) as a means of obtaining labor for economic development, (c) as a means of labor discipline, (d) as punishment for participation in strikes, or (e) as a means of racial, social, national, or religious discrimination. The convention, one of the farthest-reaching adopted by the ILO, has been in force since 17 January 1959.

#### **Discrimination in Employment and Occupation**

The Convention on Discrimination in Employment and Occupation, adopted by the International Labour Conference in 1958, constitutes another effort to promote the principle of equal rights. The convention defines such discrimination as any distinction, exclusion, or preference based on race, color, sex, religion, political opinion, national extraction, or social origin that impairs equal access to vocational training, equal access to employment and to certain occupations, or equal terms and conditions of employment. Measures affecting a person justifiably suspected of being engaged in activities prejudicial to the security of the state are not to be deemed discrimination, provided such a person is guaranteed the right of appeal. Furthermore, special measures of protection or assistance required because of sex, age, disablement, family responsibility, or social or cultural status are not to be considered discriminatory, but workers' and employers' organizations must in certain cases be consulted on such measures.

Every state ratifying the convention thereby undertakes to declare and pursue a national policy designed to promote, by methods appropriate to national conditions and practice, equality of opportunity and treatment in respect of employment and occupation, with a view to eliminating discrimination. This goal is to be accomplished through cooperation with employers' and workers' organizations, through legislation, and through educational programs. Ratifying states also agree to pursue nondiscriminatory public employment policies and to ensure the observance of such policies by public vocational guidance, training, and placement services.

#### **D. Maritime Questions**

The problems of merchant sailors differ in many respects from those of other workers. When plans for an international labor organization were being worked out in 1919, world seafarers' organizations urged the creation of a separate "permanent general conference for the international regulation of maritime labor" and of a separate "supervisory office for maritime labor." Although it was eventually decided to include maritime questions as falling within the purview of the ILO, special ILO machinery was established to deal with them, including special maritime sessions of the International Labour Conference and a Joint Maritime Commission.

Maritime sessions of the International Labour Conference are periodic full-scale sessions of the conference devoted exclusively to maritime questions. The first such conference was held in 1920. Since then, some 50 conventions and recommendations concern-

ing seafarers have been adopted, pertaining to conditions of employment, health and safety, welfare, and social security. Together, these conventions and recommendations form the International Seafarers' Code, which is binding on all subscribing countries.

The Joint Maritime Commission keeps questions regarding the merchant marine under review on a year-to-year basis. Since it began its work in 1920, the commission has been enlarged several times, mainly to provide wider geographical representation.

#### **Conditions of Employment**

The first of the ILO's maritime conventions, adopted in 1920, forbids the employment of children under 14 at sea, except on family-operated vessels. A convention adopted in 1936 raises the minimum age to 15. A convention adopted in 1926 prescribes the standard form and content of seafarers' articles of agreement or employment contracts, signing procedures, and the conditions under which such contracts may be terminated.

At the 1987 maritime session of the International Labour Conference, a number of conventions and recommendations were adopted, some of which revised and updated earlier instruments. A 1926 convention guaranteeing repatriation of seafarers was broadened to take into account developments in the shipping industry. The new instrument lists the circumstances under which repatriation rights shall apply, including cessation of employment, illness, shipwreck, and bankruptcy of the shipowner. Another revision of previous instruments was adopted on seafarers' welfare at sea and in port. States ratifying it will undertake to ensure that cultural and recreational facilities and information services are provided in appropriate ports and on board ship. A convention on health protection and medical care aims at providing seafarers with care comparable to that which is generally available to workers ashore.

#### **Social Security for Seafarers**

The first step toward social insurance for seafarers was taken by a 1920 convention which required a shipowner to pay two months' wages to crew members of a lost or foundered vessel.

Three conventions affecting seafarers were adopted at the 1976 maritime session: continuity of employment, annual leave with pay, and merchant shipping (minimum standards). The third convention provides that a state which has ratified the convention and in whose port a ship calls may take account of a complaint or evidence that the ship does not conform to the standards of the convention.

A new convention adopted in 1987 revised a number of existing instruments dealing with social security and insurance against illness; it requires ratifying states to provide seafarers with social security protection not less favorable than that enjoyed by shore workers for which the state has legislation in force. Member states would be bound to apply either minimum standards, as specified in the Social Security (Minimum Standards) Convention, or superior standards, as laid down in other ILO instruments.

The standards set by these conventions, even when not ratified by many countries, have an influence on collective agreements, national statutes, and regulations.

#### **E. Technical Cooperation**

Member states have always been able to count on the direct cooperation of the ILO. The expression "technical assistance" is to be found in an ILO report as early as 1930. ILO officials who were

then sent on consultative missions to governments were the precursors of today's experts.

Depending on priority programs established by governments, the activities of consultants have become an increasingly integral feature of national development plans. Among these priorities are the development of human resources, the raising of living standards, and the promotion of full employment. The ILO works actively with the authorities to set up and put into effect concrete cooperative projects. These tasks range from brief preliminary missions to major projects, such as the setting up of networks of vocational training or management development centers, to the establishment of full-scale rural development programs.

A cooperative project is deemed a success when it can be fully taken over by the national counterparts of the country concerned after the ILO experts have left. To encourage this trend, the ILO has made it possible for national officials to complete their training overseas. Many cooperative projects also provide for study grants and the organization of training courses and seminars. The supply of specialized equipment for certain services is another form of ILO aid—for example, equipment to set up vocational training centers.

The international technical cooperation effort is financed in part by UNDP. Some of the industrialized countries also make funds available to the ILO for cooperative projects.

The ILO concentrates its efforts on activities that produce maximum long-term results, such as the creation of institutions of various kinds or of training centers for trainers. It also seeks to enlist the aid of employers and workers in the technical cooperation effort.

Technical cooperation is linked to action promoting adherence to international labor standards, such as aid in the area of labor legislation and administration. This policy improves workers' conditions while taking into account the realities of the situation in the country concerned.

#### **Unemployment and Underemployment**

The ILO considers help to member states in the struggle against unemployment to be one of its major responsibilities. Much work has been carried out in this area. Guided by international labor standards, and often with the practical aid of the ILO, many countries have taken steps to ease the lot of the unemployed, to organize employment bureaus, and to develop vocational training facilities. However, these measures are far from enough to solve the immense unemployment problem facing the world today.

A coherent set of measures is needed to solve the unemployment and underemployment problem: development of rural areas, as well as urban industrialization; training of citizens in modern employment techniques; and taking a census of the active population and concentrating the development effort on the sectors and techniques calculated to absorb the maximum number of workers. In short, employment does not automatically flow from economic expansion unless it is geared to a policy designed to promote employment systematically. The International Labour Conference recognized this point when, in 1964, it adopted a convention and a recommendation on unemployment policy; the promotion and planning of employment are now an integral part of the development effort. Faced with the unemployment crisis, the ILO launched the World Employment Program in 1969. This

program was the starting point in the ILO's efforts to help combat unemployment and underemployment.

It was in keeping with the recognition that growing world poverty required new initiatives that the World Employment Conference was held in 1976. The resulting declaration of principles and program of action called the world's attention to the need for full employment and an adequate income for every inhabitant in the shortest possible time.

The ILO-developed concept of basic needs is paramount to the effort to get to the root of poverty. Basic needs include two elements: certain minimum requirements of a family for private consumption—adequate food, shelter, and clothing are obviously included, as would be certain household equipment and furniture; and essential services provided for the community at large, such as safe drinking water, sanitation, public transportation, and health and education facilities.

The program of the 1976 conference emphasized that strategies and national development plans and policies should include explicitly, as a priority objective, the promotion of employment and the satisfaction of the basic needs of each country's population. The people should participate in making the decisions that affect them through organizations of their own choice. The concept of freely chosen employment is an integral part of a basic needs strategy. Among measures to be taken by governments to meet the target of creating sufficient jobs for all in developing countries by the year 2000 are ratification of selected ILO conventions; selection of development projects with a view to their employment and income distribution potential; and implementation of active labor market policies, with consideration given to social policies designed to increase the welfare of working people, especially women, the young, and the aged.

ILO operational activities and advisory missions remain important elements of the program. Regional employment teams in Asia, Africa, and Latin America provide technical advisory services and training courses in response to requests from a large number of countries.

Technical cooperation projects in the fields of employment planning, personnel planning, and labor-market information range from multiexpert, long-term projects to short-term consultancies and special advisory missions.

ILO technical advisory missions for special public works programs not only help governments define and, where appropriate, expand the scope of special public works programs and determine the technical feasibility of projects and organizational and staffing needs, but also assist in the preparation of technical cooperation components and in management reviews of ongoing programs.

At the 78th Session of the ILC in 1991, Director General Michel Hansenne raised the issue of the "working poor," the approximately 300 million people around the world who work in jobs that fall into what is called the "informal sector." Almost one-third of the world's gross domestic product is believed to be contributed by these millions working on the fringes of the recognized labor market. Such activities range from small manufacturing enterprises to a single person selling rolled cigarettes on a street corner. Generally, products of the informal sector require a low level of capital investment, technology, and skills. Low productivity or low wages imply that very long hours have to be worked to achieve a subsistence income.

The ILO initiatives focused on the informal sector are the Regional Employment Program for Latin America and the Caribbean (PREALC) and the Jobs and Skills Program for Africa (JASPA). These initiatives include gathering data, providing training and technical cooperation, promoting income-generating projects for specific vulnerable groups, studying ways to open traditional apprenticeship and training for production schemes to women, and examining case studies of regulatory barriers.

#### **Development of Human Resources**

In an age when production techniques and structures are rapidly changing, simultaneously with a rapid increase in the world's active population, the entire concept of labor and vocational training must be viewed in a new light.

Many trades for which young people are being prepared will undergo radical transformation, and the qualifications that workers hold today will be obsolete without frequent refresher courses. Moreover, there will be a steady increase in the number of workers switching from one sector to another—for example, from agriculture to industry or from industry to commerce.

Any modern conception of developing human resources must take these factors into account by extending and diversifying vocational training facilities: apprenticeships, technical training and education, advanced training, and refresher courses. Vocational guidance must be developed not only to aid young people to make a wise choice of a career but also to retrain adult workers for different jobs. A coherent policy aimed at utilizing human resources must, therefore, include measures that make it possible for the worker to continue education and training, depending on the person's aptitudes and the opportunities in the labor market.

Vocational training is one of the key elements of ILO's technical cooperation program. Hundreds of projects have been mounted on all continents, some designed to create or strengthen national vocational training systems and others aimed at specific sectors of the economy: specialized industries, agriculture, handicrafts, commerce, the hotel trade, and tourism, among others.

The ILO also cooperates in projects for management development and is active in the field of vocational rehabilitation. Its long-standing interest in handicapped people was expressed anew in 1983 with the adoption of a recommendation and a convention recognizing the importance that it attaches to the formulation and implementation of coherent national policies. The convention emphasizes collective participation—notably that of the representatives of employers' and workers' organizations and of the disabled themselves—in determining needs and developing vocational rehabilitation services at national as well as community levels.

The ILO's International Training Centre at Turin trained over 90,000 men and women from some 170 countries from 1965 through 2002.

#### **Social Institutions**

The ILO's efforts to foster social justice in order to improve working and living conditions and to encourage balanced economic and social development would be wasted if there were no social structures promoting large-scale participation.

To assist governments, employers' associations, and trade unions in building or consolidating the necessary institutions and mechanisms, the ILO is active in such fields as labor law and ad-

ministration, labor relations, workers' education, promotion of cooperatives, and rural institutions.

The ILO's work in standard-setting has had a formative effect on social legislation and labor law throughout the world. The ILO also has supplied expert advice to countries requesting it on the measures needed to bring their legislation up to the level of international labor standards or to solve certain social problems. Many developing countries have sought ILO help in establishing or codifying their labor and social legislation. To ensure that the legislation is effectively applied, a country must have a labor administration that includes the necessary services. To meet this need and to help labor ministries play an active role in designing a development policy, the ILO has mounted an increasing number of projects in this field.

The ILO has always been keenly concerned with labor-management relations and with the relations among trade unions, employers' organizations, and governments. When such relations are cordial, they foster a climate conducive to economic and social progress. When they are unsatisfactory, they can impede united national development. The ILO considers labor relations to be good when they are based on the full recognition of freedom of association, in law and in practice, and when they permit labor, management, and government representatives to handle common problems.

Here again, technical cooperation is an extension of the action designed to set up standards and guidelines. ILO help is increasingly being sought in the field of industrial relations. Bipartite ILO missions comprising trade-union and management experts from industrialized countries have been sent to developing nations to encourage the establishment of a healthy working relationship between workers and employers. Study courses and seminars have been organized in various parts of the world.

Adequate training of workers' representatives is a prerequisite if they are to play an effective role in economic and social life. The trade unions themselves are aware of this fact and are increasing their own training programs accordingly. To assist them in this task, the ILO established a workers' education program to enable trade unions and workers' education bodies to develop their services and to provide workers and their representatives with the social and economic training they need. ILO efforts have been directed to such objectives as the training of unionists to help them take part in the planning and execution of development policies, the encouragement of cooperative action, and the organization of union research and information services.

As part of this program, the ILO has organized seminars, study courses, and technical discussions, often on a regional basis. An average of 50 courses of this type, including discussions on such matters as population and family planning, are held each year in different parts of the world. There is also a publications program, consisting of handbooks, booklets, bulletins, and educational material, in addition to a film and filmstrip lending library.

Since its earliest days, the ILO has played an important role in developing the cooperative movement. Its range of activities in this field has grown with the introduction of the cooperative system in many developing countries. The governments of these countries recognize that cooperatives provide an instrument that can facilitate social and economic advancement. With their built-in system of controls and internal management, their freely elect-

ed councils, and public discussion of their programs, cooperatives can be compared to grass-roots civics classes, giving their members a true sense of responsibility and involvement in national development. They are a unifying agent in bringing men and women together for constructive tasks, and they contribute to training for leadership. Above all, cooperatives are a key factor in rural development, for both production and marketing.

The creation of processing cooperatives in rural areas for handling produce, as well as the organization of cooperatives for small enterprises and handicraft workshops, can aid progress toward industrialization. Whatever form they take, cooperatives raise living standards and increase employment opportunities. At the request of the governments, and with the financial support of UNDP, ILO experts are helping countries set up or develop cooperative movements.

The interregional project for the production of materials and techniques for cooperative management training ended in 1990 after 13 years of operation. The terminal evaluation considered the project to have achieved results of high quality and relevance, with almost 200,000 people having been trained in more than 60 countries.

#### **Enterprise and Cooperative Development**

A major program to promote the establishment and effective operation of enterprises in the formal and informal sectors, in both rural and urban areas, was implemented in 1991. The Entrepreneurship and Management Development Program (now the Management and Corporate Citizenship Program) seeks to develop managerial resources at various levels and in various sectors of the economy in an environment characterized by rapid change.

Projects in operation focus on four major areas: productivity and competitiveness; management systems and decent work; International Labor Standards and good management practices; and socially responsible enterprise restructuring.

#### **F. Problems of Key Industries**

During World War II, and even earlier, it was felt that a gap existed in the structure of the ILO: special machinery was needed for the detailed and continuing study of specific industries by people with a thorough practical knowledge of their particular problems. Acting on a plan prepared by British Minister of Labour and National Services Ernest Bevin, submitted in 1943 by the UK government, the Governing Body established seven ILO industrial committees in 1945 "to provide machinery through which the special circumstances of the principal international industries [could] receive special and detailed consideration." By 1946, industrial committees had been created to deal with the problems of the following key industries: inland transport; coal mines; iron and steel; textiles; petroleum; building, civil engineering, and public works; and chemicals. In 1994 a total of 12 industrial committees were active: the Inland Transport; Coal Mines; Iron and Steel; Metal Trades; Textiles; Building, Civil Engineering, and Public Works; Chemical Industries; Committee on Work on Plantations; Advisory Committee on Salaried Employees and Professional Workers; Hotel, Catering and Tourism; Forestry and Wood Industries; Food and Drink Industries.

Other ILO committees that deal with special problems of international significance include the Advisory Committee on Salaried Employees and Professional Workers, the Permanent Agricultural

Committee, and the Committee on Work on Plantations. The ILO has also established Asian, African, and inter-American advisory committees, which provide information on special regional problems. The ILO industrial committees are, in effect, small-scale specialized international labor conferences.

Resolutions adopted by these committees may call for further action on the part of the ILO. They may also be designed for the guidance of employers' associations and trade unions in their collective bargaining, and they may contain suggestions addressed to the UN, to other specialized agencies, or to governments. The following are a few examples of subjects concerning which important resolutions or recommendations have been adopted:

*Inland transport:* prevention of accidents involving dock labor; inland transport working conditions in Asia and Africa; automatic coupling of railway cars; transport and handling of dangerous goods; limitation of loads carried by one person; marking of weights on loads; and interport competition;

*Coal mines:* principles for incorporation in a coal miners' charter; coal miners' housing; productivity in coal mines; safety in coal mines; and the social consequences of fuel and power consumption trends;

*Iron and steel:* regularization of production and employment at a high level; dismissal pay and payment for public holidays; and cooperation at the industry level;

*Metal trades:* regularization of production and employment at a high level; and long-term estimates of raw material requirements;

*Textiles:* disparities in wages in the textile industries of different countries;

*Building, civil engineering, and public works:* reduction of seasonal unemployment in the construction industry; social aspects of the world timber situation and outlook; and national housing programs;

*Work on plantations:* the place of the plantation in the general economy of the countries concerned; living and working conditions as related to plantation productivity; and the need for international action on commodity regulation; and

*Salaried employees and professional workers:* rights of the inventor who is an employee; migration of salaried and professional workers; hygiene in shops and offices; employment problems of musicians, actors, and other public performers; employment conditions of teachers; professional problems of journalists; problems involved in collective bargaining for white-collar and professional workers; wages and working conditions of hospital and health-service staff; and wages and working conditions of civil servants.

#### **G. Other Activities**

##### **The Occupational Safety and Health Information Center (CIS)**

In 1976, the ILO launched the International Program for the Improvement of Working Conditions and Environment (PIACT), aimed at giving governments and employers' and workers' organizations help in drawing up and implementing programs for the improvement of working conditions and environment. The various means of action included standard-setting; technical cooperation, including the sending of multidisciplinary teams to member states at their request; tripartite meetings, particularly meetings of industrial committees, regional meetings, and meetings of experts; action-oriented research and studies; and gathering and dis-

semination of information, particularly through the International Occupational Safety and Health Information Center.

The International Occupational Safety and Health Information Center (CIS) has as its objective to collect and disseminate world information that can contribute to the prevention of occupational accidents and diseases. The center is assisted by more than 120 national centers representing all continents. The CIS also offers on-line compact disc and microcomputer databases.

The conditions in which men and women work are at the very heart of the ILO's mandate. Despite the progress achieved, the working conditions of a great many workers remain arduous or give rise to new problems as a result of technological developments. In this arena the ILO is concerned with the safety and healthfulness of the working environment, working time, organization and content of work, working conditions and choice of technology, and working and living environment.

In 1991, with the assistance of a grant from the German government, the International Program on the Elimination of Child Labor (IPEC) was launched. More than 80 projects with government institutions, trade unions, employers' organizations, and non-governmental organizations (NGOs) were implemented in at least 12 countries.

#### **International Health Hazard Alert System**

A new approach to dealing with newly discovered or suspected occupational hazards, which spread very quickly around the world, is the ILO's International Health Hazard Alert System, established in 1977. When a new hazard is discovered, an alert is sent out by the ILO to the participating countries for their assessment and reply. For example, the communication concerning possible health hazards in the use of carbonless copy papers was widely disseminated in several countries. In 1993 the Health Hazard Alert Sys-

tem circulated requests to member states for up-to-date information on major occupational health hazards and their prevention.

#### **Tripartite Declaration Concerning Multinational Enterprises and Social Policy**

The 1977 Tripartite Declaration Concerning Multinational Enterprises and Social Policy applies to the fields of employment, training, conditions of work and life, and industrial relations. Already operational in the ILO, where it will continue to affect its purposes, it was foreseen as the employment and labor chapter of the proposed UN Code of Conduct on Transnational Corporations that has been the subject of prolonged debate. In the early 1990s the General Assembly decided to discontinue work on this subject. However, the matter of a code of conduct for transnational corporations continues to be raised. In 1996, UNCTAD Secretary-General Rubens Ricupero stated it would be particularly important "within the context of how to establish a balance between the rights and obligations of the countries that are the source of investments and the countries that receive the investments." The declaration stresses the positive contributions that multinational enterprises can make to economic and social progress and aims at minimizing and resolving the difficulties that their various operations may create. The principles are commended to governments and employers' and workers' organizations of home and host countries and to the multinational enterprises themselves for their voluntary observance.

The subject areas covered by the declaration conform to the areas of substantive competence of the ILO within the overall program of the UN. There are 22 ILO conventions and 27 recommendations referenced in the declaration. The declaration is universal in scope; it is addressed to all of the parties in the ILO's tripartite structure; it ascribes a leading role to multinational enterprises when they operate in developing countries; and, finally, it is voluntary.

---

# THE FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS (FAO)

“To the millions who have to go without two meals a day the only acceptable form in which God dare appear is food.”  
Mahatma Gandhi

**BACKGROUND:** Hunger is still the most urgent problem confronting the greater part of humanity. Hundreds of millions of the world’s inhabitants are seriously and chronically undernourished. Not only is their diet quantitatively insufficient, but it is qualitatively insufficient as well, lacking the protein essential to health and vigor. In 2006 it was estimated that more than 850 million people did not have enough to eat.

---

## CREATION

From the mid-19th century, reflecting a growing recognition of the interdependence of nations in agriculture and associated sciences, international conferences were held at which there were exchanges of knowledge relating to biology, biochemistry, crop diversification, and animal health. However, it was not until 1905 that these individually valuable but unrelated efforts were coordinated with the founding of the International Institute of Agriculture (IIA).

One of the institute’s aims, which were necessarily modest because of public and governmental apathy, was “to get the farmer a square deal.” The words were those of David Lubin, a prosperous California dry-goods dealer, born in a Polish ghetto, who almost single-handedly founded the institute. Depressed by the plight of his farmer customers during the agricultural crisis of the 1890s, he bought and managed his own fruit farm in order to study their problems. Rebuffed in his adopted country, he toured the chancelleries of Europe, preaching the importance of a healthy agriculture as a requisite of a healthy international society. Finally, Lubin found a sympathetic listener in King Victor Emmanuel III of Italy. Under his patronage, the institute started functioning in Rome in 1908 as a center for the dissemination of farming news, trends, prices, statistics, and techniques. Though lacking the capacity to initiate or directly assist projects in the field, the IIA’s experience as a “head office” for the collection, collation, analysis, and dissemination of data formed a useful platform for the later launching of FAO’s similar but wider reaching activities in agriculture.

The League of Nations did not directly concern itself with agriculture, but work done under its auspices in the relatively new field of nutrition proved of great practical significance. Ironically, Nazi Germany, although a sardonic critic of the League, was the first country to base its wartime rationing system on the scientific standards of diet drawn up by the League for heavy workers, expectant mothers, children, and others. Soon, other countries did

the same, often with striking results. In the United Kingdom, for example, the meager and often uninteresting but balanced diet dictated by the ration card actually led to an improvement in the nation’s nutritional health.

FAO was the end product of a series of conferences held during World War II. In 1941, the US Nutrition Conference for Defense, attended by 900 delegates, resolved that it should be a goal of the democracies to conquer hunger, “not only the obvious hunger that man has always known, but the hidden hunger revealed by modern knowledge of nutrition.” In line with President Franklin D. Roosevelt’s call in 1942 for the Four Freedoms, the Australian economist Frank McDougal proposed the creation of a “United Nations program for freedom from want of food” and urged the president that food be the first economic problem tackled by the UN system being proposed for establishment when the war ended.

President Roosevelt convened the UN Conference on Food and Agriculture at Hot Springs, Virginia, in May and June 1943. The first UN conference, antedating the San Francisco Conference by two years, it established an Interim Commission on Food and Agriculture, headed by Lester B. Pearson of Canada. The commission drew up a draft constitution for FAO, thus paving the way for the first FAO Conference, held in Quebec in October 1945 and attended by 44 nations and a number of observers. On 16 October 1945, 34 nations signed the constitution that brought FAO into existence. By the end of the conference, the new organization, headed by British nutritionist Sir John Boyd Orr, had 42 member nations.

## PURPOSES

As expressed in the preamble to the FAO constitution, member states are pledged to promote the common welfare through separate and collective action to raise levels of nutrition and standards of living, improve the efficiency of the production and distribution of all food and agricultural products, better the conditions of

rural populations, and thus contribute toward an expanding world economy and ensure humanity's freedom from hunger. Specifically, FAO is charged with collecting, evaluating, and disseminating information relating to nutrition, food, and agriculture and associated areas, including fisheries, marine products, forestry, and primary forestry products.

FAO is committed to promoting and, where appropriate, recommending national and international action with respect to the following: (a) scientific, technological, social, and economic research relating to nutrition, food, and agriculture; (b) improvement of education and administration relating to nutrition, food, and agriculture and the spread of public knowledge of nutritional and agricultural science and practice; (c) conservation of natural resources and the adoption of improved methods of agricultural production; (d) improvement of the processing, marketing, and distribution of food and agricultural products; (e) adoption of policies for the provision of adequate agricultural credit, national and international; and (f) adoption of international policies on agricultural commodity arrangements. The FAO also plays a major role in dealing with food and agricultural emergencies such as drought, famine, plant diseases, and insect plagues.

Other functions of FAO are to furnish such technical assistance as governments may request; to organize, in cooperation with the governments concerned, such missions as may be needed to assist them in fulfilling obligations arising from their acceptance of the recommendations of the UN Conference on Food and Agriculture and of its constitution; and, generally, to take all necessary and appropriate action to implement the purposes of the organization as set forth in the preamble.

## MEMBERSHIP

The 45 countries represented on the interim commission were entitled to original membership. The Russian Federation retained the entitlement to original membership previously held by the USSR, which was made effective on 11 April 2006 through the ratification of FAO's constitution.

Any nation may withdraw after four years. Among the countries that have withdrawn and later rejoined are Czechoslovakia (withdrew 1950, rejoined 1969), Poland (withdrew 1951, rejoined 1957), Hungary (withdrew 1952, rejoined 1967), and South Africa (withdrew 1964, rejoined 1993). Taiwan withdrew in 1952.

As of 11 April 2006, FAO had 190 member nations. In addition, Puerto Rico was an associate member. The European Union was a member organization.

## STRUCTURE

The principal organs of FAO are the FAO Conference, the FAO Council, and the secretariat, headed by a Director General.

### FAO Conference

The supreme body of FAO is the all-member FAO Conference, which holds its regular biennial sessions in Rome in odd-numbered years. The conference determines the policy of FAO and adopts its budget. It makes recommendations relating to food, agriculture, fisheries, forestry, and related matters to member nations and to other international organizations. It approves conventions and agreements for submission to member governments. It may establish commissions, working parties, and consultative

groups and may convene special conferences. It periodically elects the Director General, as well as the member nations to be represented on the FAO Council. Each FAO member has one vote in the conference.

### FAO Council

The FAO Council, consisting of 49 member nations elected by the FAO Conference for three-year terms on a rotating basis (one-third of the membership stands down each year), meets at least once a year, under an independent chairman, as an interim governing body between meetings of the conference.

### Director General and Secretariat

Under the supervision of the conference and the Council, the Director General has full power and authority to direct the work of FAO. Edouard Saouma of Lebanon was Director General from 1975 to 1993. Dr. Jacques Diouf of Senegal began a six-year term as Director General in January 1994. Reelected for a second term in 2000 and a third term in 2006, he heads a staff of more than 3,700, including more than 2,000 persons working in various development projects in the field.

*Headquarters and Regional Offices.* FAO headquarters were in Washington, D.C., until 1951. Since then, they have been located in Rome on extraterritorial grounds near the Colosseum and the Baths of Caracalla. The headquarters building was planned originally by the government of Mussolini, but construction was halted by World War II. Completed after the war, it was leased by the Italian government for the "permanent use and occupancy" of FAO at an annual rental of US\$1.

Growth in staff and activities over the years created a need for more work space. Aside from additions to the main complex, office space was for some time rented away from the headquarters building. In 1993, the Italian government completed a major expansion of headquarters facilities, bringing all FAO staff together at the Terme di Caracalla address for the first time in 32 years.

Aside from headquarters in Rome, which also serves as the European regional office, FAO has regional offices for Africa in Accra, Ghana; Asia and the Pacific in Bangkok, Thailand; Latin America and the Caribbean in Santiago, Chile; and the Near East in Cairo, Egypt. There are also five liaison offices—in Geneva (Switzerland); Washington, D.C., and New York; Brussels (Belgium); and Yokohama (Japan).

### The Organization

The FAO comprises eight departments: Economic and Social Policy, Agriculture, Fisheries, Forestry, Sustainable Development, Technical Cooperation, Administration and Finance, and General Affairs and Information. The Technical Cooperation and Sustainable Development Departments were created in 1994 through a process of restructuring to respond more effectively to evolving needs among the organization's member nations.

## BUDGET

FAO's biennial internal budget, or Regular Programme, covers internal operations, including the maintenance of the highly qualified staff who conduct field work, advise governments on policy and planning, and service a wide range of development needs. The Regular Programme is financed by contributions from member nations. It covers the costs of the organization's secretariat,

its Technical Cooperation Programme, and part of several special action programs. The budget for the 2006–07 biennium was US\$765.7 million.

The Technical Cooperation Program (TCP) was initiated in 1976. It enables the organization to provide speedy assistance to, for instance, a country when disasters affect its food and agricultural situation; practical and vocational training to complement training financed from trust funds and other sources; and short-term, small-scale supplementary technical assistance and policy advice that can be immediately useful to a country's food and agricultural situation. The amount of funds allocated to TCPs has been increasing in each FAO budget; funds rose to US\$103.1 million in 2006–07 from US\$91.5 million in 2001–02 and US\$77.4 million in 1992–93.

The Field Programme implements FAO's development strategies and provides assistance to governments and rural communities. Projects are usually undertaken in cooperation with national governments and other agencies. Nearly half of Field Programme finances come from national trust funds and just over 40% is provided by the United Nations Development Program. FAO contributes about 10% from the Regular Programme budget through its Technical Cooperation Programme. An increasing amount of money comes from donor countries that ask FAO to carry out part of their aid activities for them. Many of these countries also assign and finance young technicians to work in FAO projects.

## ACTIVITIES

FAO collects, analyzes and disseminates information, provides policy and planning advice to governments, offers direct development assistance, and acts as an international forum for debate on food and agriculture issues.

Despite considerable progress in recent decades, the world still falls short of the goal of adequate food and nutrition for all. FAO estimated in 2005 that 842 million people in the developing world are chronically undernourished, consuming too little food to meet even minimal energy and protein needs. Millions suffer from lack of essential micronutrients; their symptoms include blindness, vulnerability to infectious diseases, anemia, and mental retardation. Those most at risk include the poor, the elderly, refugees and displaced persons, drought-prone populations, and children. According to data gathered between 1987 and 1998, two out of five children in the developing world are stunted, one in three is underweight, and one in 10 is wasted. FAO advocates equitable, participatory rural development as the key to eradication of poverty, the first and foremost cause of undernutrition and food insecurity.

Widespread hunger and malnutrition are not simply problems of inadequate food production; they are the most critical and cruel elements of poverty. Farmers in the developing world are discouraged from increasing food production by the lack of purchasing power among rural and urban populations as much as by a lack of technical assistance or inputs such as improved seeds and fertilizers. People go hungry because they do not have the money to buy food, rather than because local farmers cannot produce more. The fight against world hunger is a major part of the battle against world poverty. Building up a country's agriculture provides both food for the hungry and jobs for the rural populace; it contributes to the overall prosperity of the nation.

## Food Security

The goal of eradicating hunger and malnutrition and ensuring food security for all is central to FAO's mandate. Following the serious depletion of world grain reserves caused by poor harvests in 1972, FAO saw the need to develop an international system to maintain minimum world food security and offset the effects of crop failures. The organization made a proposal under which all countries, be they developed or developing, would cooperate in building up national food reserves under a structure of international cooperation. Special efforts were called for to increase the self-reliance of developing countries. The proposal was endorsed by the World Food Conference held in Rome in November 1974, and FAO was requested to prepare an International Undertaking on World Food Security. In 1976, the organization established the Food Security Assistance Scheme to carry out the work of the International Undertaking.

In 1983, FAO's Committee on World Food Security adopted a broader concept of world food security, with the ultimate objective of ensuring that all people at all times have both physical and economic access to the food they need, and in 1986, the FAO Council endorsed a World Food Security Compact, which provides a clearly defined moral basis for action by governments, organizations, and individuals directed toward securing food supplies for all. The compact urged developing countries to promote domestic food production as the first line of defense and to re-examine, and if necessary revise, national policies to ensure adequate incentives to farmers, particularly small-scale producers. It recommended that governments of developing countries prepare to maintain food security in times of shortage by such measures as early-warning systems and emergency food reserves and to promote rural development that helps increase the purchasing power of the poor. Developed countries, both importers and exporters, were asked to consider world as well as national interests when setting policies concerning food production, stocks, imports, and prices. They were encouraged to continue providing emergency food aid to less fortunate countries, as well as to assist in increasing agricultural production in those countries, and to help low-income countries to secure imports of food, fertilizers, and other agricultural inputs in times of difficulty. They were also requested to take into account, in negotiations on trade questions, the fact that the food security of many developing countries depends on their ability to export agricultural and other products in order to meet the cost of food imports.

The World Food Security Compact called on nongovernmental organizations to help stimulate public interest in food-security issues, thereby facilitating additional action by governments, and it called for a commitment to food security on the part of individuals throughout the world. The individual was called upon not only to work for his own food security and that of his family but also to recognize that he has "a sacred obligation" to concern himself with the food security of those less fortunate than himself. "Failure to provide succor when it is needed," the compact stated, "is a betrayal of man's duty to his fellow men."

In 1992, the International Conference on Nutrition (ICN) was convened at FAO headquarters in Rome. Organized jointly by FAO and WHO, the conference brought together almost 1,400 delegates from 159 countries and the European Economic Community (EEC) to address ways of channeling greater resources to

the eradication of hunger and malnutrition worldwide. The ICN addressed eight important nutritional issues: preventing micronutrient deficiencies; preventing and managing infectious diseases; improving household food security; promoting healthy diets and lifestyles; enhancing the capacity for care; improving food quality and safety; assessing, analyzing, and monitoring nutrition situations; and incorporating nutrition objectives in development policies. Attention was drawn to the fact that, though enough food is produced yearly to provide an adequate diet for all, the distribution of these resources is very uneven.

FAO's activities are increasingly focused on food security as a question of household access to food as much as of overall food availability. In this context, proper identification of vulnerable groups is fundamental. FAO is developing, at national and sub-regional levels, an Aggregate Household Food Security Index. The conceptual basis for the index was approved by the FAO Council in 1993. It serves as a tool to help monitor food security trends worldwide. In November 1996, the FAO hosted 194 heads of state or government at a World Food Summit to discuss and combat world hunger. Leaders pledged to reduce the number of hungry people to 400 million by 2015. That pledge was reaffirmed at the June 2002 "World Food Summit: Five Years Later." But according to the State of Food Insecurity in the World 1999, the rate of progress (a reduction of 8 million undernourished people a year) means there is no hope of meeting the goal. Further, there is not uniform progress throughout the world: In the first half of the 1990s, only 37 countries achieved a reduction in the number of undernourished, totaling 100 million people; while across the rest of the developing world, the number of hungry people actually increased by almost 60 million. By 2005, in 19 developing countries, the number of the chronically hunger dropped by 80 million over 10 years. But in developing nations overall, hunger is still on the rise.

### Information for Agriculture

Among its information functions, FAO provides technical information for specialists through an active publishing program in the form of statistical yearbooks, periodicals, technical reports, scientific monographs, training materials, and other studies of agriculture worldwide (see Bibliography). Most of these publications are translated from their original language into at least one of the organization's other official languages: Arabic, Chinese, English, French, and Spanish.

FAO's David Lubin Memorial Library serves as a coordinating center for the Worldwide Network of Agricultural Libraries (AG-LINET). It houses over 1 million items covering agriculture, statistics, economics, food and nutrition, forestry, fisheries, and rural development. The library's computerized facilities supply on-demand bibliographies to field projects, individuals, and institutions in FAO's member nations.

FAO's filmstrips and its radio, television, and video programs cover a wide range of topics from improved farming techniques to animal husbandry, aquaculture, and soil conservation. Translation of these materials into local languages is encouraged in order to reach small farmers and extension workers unable to use one of the five official languages. In addition, the organization provides users with access to over 40 databases on agriculture, fisheries, and forestry, as well as satellite-based information on climate

that is crucial to monitoring and responding in a timely fashion to signs of drought, crop failure, and insect plagues.

Every decade, FAO sponsors a worldwide agricultural census, continuing and expanding the first world census carried out by the International Institute of Agriculture in 1930.

FAO has made considerable efforts to identify future demands on agriculture and how these demands might be met, based on the results of data collection and analysis, policy reviews, and practical knowledge of agricultural development. In 1969, FAO published a provisional World Plan for Agricultural Development, an attempt to analyze the major issues that would confront world agriculture in the 1970s and early 1980s. Building on this base, FAO submitted to the FAO Conference in 1979 a study entitled *Agriculture: Toward 2000*. The study's main purpose was to provide a framework for the analysis of options and consideration of policy issues relevant to the development of world agriculture until the end of the century. The study was global in scope, but the major emphasis was on developing countries. Approximately 90 developing countries, which, excluding China, together accounted for over 98% of the population of the developing countries, were studied individually.

In 1993, the FAO Conference launched *Agriculture: Towards 2010*, the revised and updated version of a study originally published by FAO in 1987. Designed to address how the future may unfold, rather than how it ought to develop, the document analyzes trends in food security, nutrition, and agricultural development to determine the most likely outcomes by the year 2010. Among the success stories, it foresees that world agricultural growth, although lower than in the past, will continue to outpace population increases. Also, the majority of people in the developing countries are expected to experience improvement in their per capita food availability and nutritional situation. At the policy level, the study notes a growing awareness of—and greater capabilities to respond to—the need to increase agricultural sustainability. Trade agreements are also seen as becoming more liberal and less trade-distorting, even though the progress may not be smooth.

Yet despite these favorable predictions, many problems are foreseen as remaining, especially for the less developed nations. Significant chronic undernutrition will continue to prevail in many countries and will likely affect significant proportions of the population in entire regions such as sub-Saharan Africa. According to the study, if present trends continue, sub-Saharan Africa will replace South Asia as the global area with the highest number of chronically undernourished people—close to 300 million by the year 2010. Though improvements will be made in South Asia, that region will still have 200 million undernourished.

The pressures on agriculture, on forest and fisheries resources, and on the environment will continue to build. Coupled with this, there will be few prospects for expansion of the main agricultural exports of the developing countries. The study presents detailed assessments of land resources potential for future crop production in the developing countries. These assessments are accompanied and sustained by maps illustrating the dominant land classes for each major geographical area. Aside from providing projections, the study proposes to assist planning at the national and international level, making recommendations designed to aid people and governments in taking early action to reverse negative trends.

While doing so, it calls for continued vigilance and preparedness to deal with newly emerging problems.

To help in assessing potential food availability, FAO and UNESCO published in 1978 the Soil Map of the World. By combining the data in the Soil Map with inputs on climate and population, institutes undertaking global studies on climate change, agricultural production, and soil degradation can make efficient projections. In 1992, FAO completed a digitized version of the Soil Map in a form that allows it to be used as an input into climate change models. The data was also updated and the symbols were modified to make it accessible to nonspecialists. The Soil Map is part of FAO's Geographic Information System (GIS), which also provides data on vegetation cover and other aspects of land use.

The locust and grasshopper menace that periodically threatens Africa has given urgency to FAO's efforts to improve its Rome-based Global Information and Early Warning System for Food and Agriculture. The system, established in 1975 to monitor the world's food supply, sounds the alarm when food security is threatened. FAO prepares monthly, quarterly, and annual reports that provide comprehensive, up-to-date analyses of the world food situation and identify countries threatened by shortages. The reports also serve as a guide to potential donors and help avoid food crises.

FAO's Remote Sensing Center collects and interprets data and helps establish data-receiving stations, particularly in Africa; these stations can interpret information on precipitation, soil moisture, and biomass in order to forecast harvests and can transmit the information to national early-warning systems. ARTEMIS, FAO's Africa Real Time Environmental Monitoring Information System, uses high frequency environmental satellite data to produce, at regular intervals, images indicating the rainfall situation and the development of vegetation at continental scales. In combination with data from other sources, ARTEMIS enables specialists to make assessments of crop growing conditions, detect droughts at an early stage, and locate potential breeding grounds for desert locusts. ARTEMIS is an important tool for the GIEWS.

*Research and Technical Information.* FAO has stressed the importance of agricultural research in developing countries, where the shortage of trained personnel for research remains a major problem. Its Research and Technology Development Division, established in 1984, helps developing countries make the best use of their research resources and assists in the transfer of the fruits of research and technology to developing countries.

The Information System for the Agricultural Sciences and Technology (AGRIS) and the Current Agricultural Research Information System (CARIS) are two worldwide networks coordinated by FAO in support of research and development programs in food and agriculture. In 2002, 241 national, international and inter-governmental centers participated in AGRIS and CARIS centers around the world.

FAO operates the world's most comprehensive bank of agricultural information and statistics. Originally called AGROSTAT, FAOSTAT brings together FAO's major data files, including data compiled since 1961 on annual supplies and utilization of crops, livestock, and fishery and forest products, as well as on producer prices, population, and other topics. Other important statistical information maintained by FAO's technical divisions include the Fisheries Statistical Database (FISHDAB), the Globefish Data-

bank and Electronic Library, the Forest Resources Information System (FORIS), and the Geographic Information System (GIS).

To meet increasing demand for agricultural data, FAO has prepared the World Agricultural Information Center (WAICENT). WAICENT gives governments, institutions, universities, and individuals easy, economical access to information from over 40 FAO databases. Users can access the composite database employing a variety of methods including diskette, CD-ROM, computer networks, and telephone lines.

#### Advice to Governments

One of FAO's important mandates is to provide member nations with advice on agricultural and food topics. This involves a very broad range of technical, policy, and planning support, principally aimed at building awareness towards key issues, generating appropriate action, and helping countries to develop their own capacities. The restructuring of FAO's Policy Formulation, Investment Centre, and Field Operations divisions into a Technical Cooperation Department is intended to provide a consolidated base at headquarters for the provision of direct assistance to member nations in policy, investment, and implementation of field operations.

FAO's Food Security Assistance Scheme (FSAS) helps member countries formulate comprehensive food security program. A fundamental aspect of the FSAS methodology is the use of national multidisciplinary teams of experts in program planning and implementation. This approach contributes to accurate diagnosis of problems, realistic formulation of solutions, capacity building at the national level and anchoring of programs within the national institutional framework.

FAO's Investment Center helps developing countries construct sound development programs and projects for funding by multilateral organizations, linking the interests of governments and donors to forge viable partnerships. During project identification, the center carefully assesses the development priority of investment proposals, working closely with local staff to promote self-sufficiency and to complement national expertise. This is followed by detailed project preparation for consideration by financing institutions.

The prime source of funding for FAO-assisted investment projects is the World Bank, particularly the IDA, but the Investment Center also cooperates with most of the principal multilateral financing institutions, including the International Fund for Agricultural Development (IFAD) and regional development banks. Rural poverty alleviation is especially important in projects formulated in conjunction with IFAD.

FAO assists governments in using pesticides safely and rationally through the International Code of Conduct on the Distribution and Use of Pesticides. The code includes a clause for Prior Informed Consent (PIC), which establishes a mechanism for information exchange, enabling importing countries to decide whether they want to receive pesticides that have been banned or severely restricted because of threats to human health or the environment.

The Codex Alimentarius (a joint commission of FAO and WHO) is an international code of food standards. It is designed to guide the world's food industry and to protect the health of consumers by establishing definitions and requirements for foods, as-

sisting in their harmonization, and, in doing so, facilitating international trade.

The Codex Alimentarius also responds to changes or trends in food production. For example, in 1999 it set up the Ad Hoc Intergovernmental Task Force on Foods Derived from Biotechnology, which met for the first time in March 2000 to “develop standards, guidelines, or other principles, where appropriate” for these products. The task force, whose members include government representatives from Codex Alimentarius member countries, scientists, consumer and industry organizations and international non-governmental organizations, was given a four-year mandate by FAO and WHO. FAO is involved in a continuous process of consultation with its member governments, providing information, advice, and technical assistance that can help them make the best choices in promoting sustainable rural development.

#### **Development Assistance**

To promote sustainable agriculture and contribute to development that will provide long-term solutions to the fundamental problems of poverty and hunger, FAO gives practical help to developing countries through a wide range of technical assistance projects. The organization encourages an integrated approach, with environmental, social, and economic considerations included in the formulation of development projects. By encouraging people's participation, FAO aims to draw on local expertise and ensure a cooperative approach to development.

#### **Emergency Assistance and Rehabilitation**

FAO's Office for Special Relief Operations (OSRO) began operations in 1973 in response to the disastrous drought in 1972–73 in the semiarid countries on the southern edge of the Sahara Desert. In 1975, following an improvement in the Sahel situation, FAO's work was extended to cover emergencies elsewhere. The emphasis in these operations is on speedy approval and delivery of assistance. When disaster strikes a country, the FAO representative assesses needs in close collaboration with local authorities and with other UN agencies. At the request of the government, emergency missions are organized by FAO to assess in detail the damages and losses and to prepare assistance projects for consideration by multilateral and bilateral agencies. Most emergency projects are funded by governments, nongovernmental organizations, and UN agencies. In many cases, FAO, through its Technical Cooperation Program, offers an immediate source of funding for special relief operations. Supplies and equipment provided include seeds, fertilizers, pesticides, and livestock supplies and equipment, as well as logistical support. Disaster-prone countries may also receive preventive assistance to cope with calamities.

Through its Agricultural Rehabilitation Program for Africa, conceived in 1984 at the height of the Ethiopian famine, FAO helped channel some US\$194 million into 25 countries to supply farmers with seeds and fertilizers, repair irrigation systems, and rebuild cattle herds.

Since the early 1950s, FAO has coordinated the campaign against the destructive desert locust, which intermittently swarms in the Middle East, Africa, and other regions. Campaigns were almost continuous until 1963, when the pest was brought under control. There have, however, been serious outbreaks of swarms since then, particularly between 1967 and 1970, and in 1978 in desert areas in India.

In 1986, FAO led the battle against the grasshopper and locust plagues that threatened to devastate crops in all parts of Africa. The Emergency Center for Locust Operations (ECLC), established at FAO headquarters, directed what was to become a US\$50 million continent-wide campaign that helped save more than 90% of crops in the Sahel alone. FAO monitored breeding areas with satellite imagery, implemented projects carrying out spraying missions, sent pest-control experts to advise African authorities, and helped set up coordinating committees of government and donor representatives in the most directly threatened countries. More than 40 donors, including both developed and developing countries, UN agencies, and nongovernmental organizations, contributed to the fight in 13 countries. The center was deactivated in the spring of 1989 when locusts were brought under control in some 40 countries in Africa, the Near East, and Southwest Asia. In late 1992, with the reappearance of the desert locust on the coastal plains around the Red Sea, the ECLC was immediately brought back into full operation.

FAO continues to strengthen its ability to prevent and respond to emergencies caused by pests and diseases, placing special emphasis on locusts and rinderpest.

## **INCREASING FOOD AND AGRICULTURAL PRODUCTION**

FAO devotes a large share of the resources of its field and regular programs each year to increasing the output of crops, livestock, food fish, and forest products.

#### **Crop Production and Protection**

FAO's work in crop production includes collecting, conserving, and evaluating genetic resources; improving seed quality, production, and distribution; increasing crop output; and preventing losses before harvest. Particularly important in developing countries is the supply of high-quality food-crop seed to small farmers, who are responsible in some countries for more than 90% of domestic food production. National seed services and centers often are crucial for the supply of seeds to farmers, and much of FAO's seed development work is concerned with building up these national institutions.

Many countries give high priority to cash crop production, and urban populations often have easier access to imported cereals, including wheat, than to traditional staples, such as cassavas, breadfruit, sweet potatoes, yams, and plantains. The danger of these trends is twofold: increased dependency on food imports and lagging production of traditional crops often used in rural communities as insurance against food scarcity and famine. FAO activities to combat these trends range from training sessions for extension staff to pilot projects, such as helping women's groups to start home vegetable gardens and working on ways to improve processing and storage of perishable vegetables. FAO also has helped develop varieties of wheat and barley suited to arid conditions, as well as more nutritive varieties.

Requests for technical assistance in horticulture are a constant on the FAO agenda. FAO projects cover, for example, citrus production in the Mediterranean, date palm production in the Near East and the Mediterranean, protected cultivation of vegetables in the Near East and North Africa, promotion of tropical fruit-tree

production in humid and subhumid areas, and improved vegetable production in tropical semiarid and humid regions.

FAO has played a pivotal role in international crop protection activities for over four decades. The International Plant Protection Convention (IPPC) was vested in FAO in 1951. In order to strengthen FAO's role as coordinator, an IPPC secretariat was created in 1992–93. FAO's general objective in this field is to reduce or if possible prevent crop losses caused by pests. Specific objectives include reducing the spread of pests across national borders and promoting Integrated Pest Management (IPM), which consists of a "best mix" of natural control methods with a need-only based use of selective pesticides (see Pest Control). In cooperation with the World Health Organization, FAO is conducting studies on the effects of pesticide residues on humans.

Plant diseases remain one of the major checks on crop production. The easiest and most economical way of coping with plant parasites is to breed varieties that are resistant to them. FAO-supported research has been aimed at breeding varieties with durable or long-term resistance. FAO recently established a Plant Genetic Resources Information and Seed Exchange Unit, which disseminates technical information and exchanges seeds and planting material samples for experimental purposes. The main beneficiaries are national and international research centers, plant breeders, and FAO field projects. On a national level, FAO advises governments on seed production and legislation.

Examples of FAO activities aimed at increasing crop output include:

- Integrated Pest Management (IPM) programs account for the majority of the FAO's field projects. IPM involves farmers and field staff from national and local governments and from nongovernment institutions. Insofar as it has provided farmers with better training, it has had socioeconomic benefits beyond plant protection.
- Since the early 1950s, FAO has coordinated the campaign against the destructive desert locust, which intermittently swarms in the Middle East, Africa, and other regions (see Emergency Assistance and Rehabilitation). FAO's Emergency Center for Locust Operations is fundamental in conducting these campaigns.
- The Global Information and Early Warning System (see Information for Agriculture) also contributes to crop protection, warning against potential difficulties and disasters.
- The Global System on Plant Genetic Resources supports international and regional networks for *in situ* and *ex situ* conservation under the auspices of FAO. The system also promotes evaluation, management, and enhanced use of plant genetic resources (PGR), and prepares periodic reports on the state of the world's PGR. The Commission on Genetic Resources for Food and Agriculture (CGRFA) coordinates the Code of Conduct for Biotechnology applied in the conservation and use of PGR, as well as work on farmers' rights and support for an international fund for PGR.
- FAO's agricultural research program strengthens countries' capabilities to generate and develop appropriate technology for crop protection and production. Special attention is given to traditional technologies and their use by farmers, as well as the role of rural women and the constraints they face.

- The Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture operates a laboratory at Seibersdorf, near Vienna. The division's program is based on two fundamental approaches. Under the first, the movements and transformations of isotopically labeled chemical compounds of importance in relation to soils, water, air, plants, and livestock are studied. This information is used to improve management of soils and water, nutrition of plants and animals, and the safety of agrochemical use. The second approach uses ionizing radiation to induce mutations for selection of useful traits in plants, to sterilize insects for control purposes, and to improve the safety and preservation of food.
- FAO provides information on crops through a global database of crop environmental requirements, with data for hundreds of species.

### Animal Production and Health

Livestock often forms a key component of the "production systems approach" promoted by FAO in agricultural development schemes. The approach is based on the principle that the production of different commodities is often linked and that increased production of one may result in increased output of another. In India, for example, the production of food grain increased markedly in villages where dairy cooperatives function. Milk sales provide the small farmer with the cash income to purchase fertilizers, improved seeds, and irrigation water essential for increased grain yields. Thus, increased milk production has led to significant improvements in farm output and living standards. This approach also is being applied to sheep, goat, poultry, and rabbit production.

FAO's International Dairy Development Program is designed to help low-income countries modernize the complex chain linking milk producers and consumers. It helps coordinate efforts aimed at improving all aspects of the dairy industry, from farmers' organizations and veterinary services to processing plants and marketing channels. The program is aimed at assisting in the planning, coordination, and implementation of model projects for integrated dairy development, with the full participation of small-scale milk producers, the firm commitment of cooperating governments, and the active involvement of donors, and at making dairying a more effective force in rural development through its socioeconomic impact in rural areas and its contribution to nutrition.

FAO also works to improve livestock feeding and management by reducing to a minimum the amount of grain consumed by animals and making maximum use of pasture and fodder, crop residues, and agro-industrial by-products. An FAO database entitled *Tropical Feeds* offers concise and updateable information on over 500 tropical feed materials in published form and on diskette. This information is updated regularly.

Rapidly expanding human populations are increasing the demand for agricultural products—among them livestock—and in response, production is being intensified. To help foresee and forestall possible negative side effects of intensified production and enhance positive ones, FAO is conducting studies on the influence of livestock development practices on the natural resource base. These studies involve livestock feed quality, use of biomass for animal fodder, avoidance of overgrazing, manure management, animal waste disposal, domestic animal genetic diversity,

plant and animal wildlife diversity, and integration of cropping and livestock systems.

FAO has joined hands with animal welfare organizations to initiate joint activities that will promote humane treatment of slaughter animals while heightening the quality of meat products and by-products. The organization also has helped boost the efficiency of village-level meat processing by developing modular designs for slaughtering and processing facilities. The designs employ affordable, easily available materials and modules that can be selected and adapted by users according to their needs. Use of the facilities helps reduce losses and limit contamination while increasing employment—particularly for rural women—as well as income for small producers.

Disease continues to check animal production in most developing countries. FAO focuses concerted attention on animal health involving the control of important diseases such as foot-and-mouth, rinderpest, swine fever, Rift-valley fever, trypanosomiasis, and Newcastle disease. In 1994 FAO established the Emergency Prevention System (EMPRES) for Transboundary Animal and Plant Pests and Diseases in order to minimize the risk of animal disease emergencies. Veterinary policy development and education also are stressed.

FAO and the International Atomic Energy Agency (IAEA) have established a laboratory to promote nuclear-based methodology and related molecular techniques for diagnosis of livestock diseases. Accurate diagnosis is fundamental to disease control and eradication. The laboratory cooperates closely with national and international organizations to promote standardization and transfer of techniques designed specifically for the difficult conditions often experienced in less advanced countries. Priority is being given to the diseases of greatest importance such as rinderpest, trypanosomiasis, and foot-and-mouth disease.

In 1993, FAO and UNEP first published the *World Watch List for Domestic Animal Diversity* to document the state of global livestock genetic diversity. Monitoring, describing, and characterizing existing breeds constitute a vital part of conservation, allowing people to understand each species' status, as well as its members' unique qualities and potential. The *World Watch List* is the voice of the Global Early Warning System for Animal Genetic Resources in helping prevent erosion and encouraging a more effective use of farm animal genetic diversity. The third edition (published in 2000) was a result of ten years of data collection in 170 countries, covering 6,500 breeds of domesticated mammals and birds.

### Fisheries

In the 1970s, the concepts of national sovereignty over marine resources off the shores of coastal countries began to emerge. FAO assumed a key role in helping member nations to develop priorities and build up capacities to assess, allocate, exploit, and manage fisheries resources through a comprehensive Programme of Assistance in the Development and Management of Fisheries in Exclusive Economic Zones.

To respond to the demands arising from this situation, FAO convened a World Conference on Fisheries and Development in 1984. The conference was the largest of its sort ever assembled, bringing together representatives of nearly 150 countries and over 60 international organizations to confront the fundamental problems and potential of world fisheries as a vital source of food, employment,

and income. Principles and guidelines for fisheries management were endorsed by the conference to cover the contribution of fisheries to national economic, social, and nutritional goals; improved national self-reliance in fisheries management and development; national management and optimum use of fish resources; the special role and needs of small-scale fisheries; international trade in fish and fishery products; investment in fisheries; and international cooperation in fisheries management and development.

FAO's fisheries policy is based on the five programs of action endorsed by the conference: fisheries planning, management, and development; small-scale fisheries; aquaculture; international trade in fish and fishery products; and the use of fish in alleviating undernutrition.

To aid in fisheries management, FAO collects statistics, monitors fishing trends in the world fishing fleet, collects biological information on resources, and assists member countries in the areas of fishery analysis, research, and management.

A network of regional fishery bodies established under the auspices of FAO provides an important framework for coordinating fisheries development and management. The first of these regional fishery bodies, the Indo-Pacific Fisheries Commission (IPFC), and now called the Asia-Pacific Fishery Commission (ASFC), was established in 1948. There are now nine regional bodies as well as three other FAO and UN bodies—the Advisory Committee on Fisheries Research (ACFR), Coordinating Working Party on Fishery Statistics (CWP), Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) and the joint commission (with IMO, UNESCO, WMO, WHO, IAEA, and UNEP). Within the FAO framework, these commissions work to facilitate and secure the long-term sustainable development and utilization of the world's fisheries and aquaculture. As part of this effort, the FAO publishes the *State of World Fisheries and Aquaculture*, the only worldwide watch on fishery resources; runs the Species Identification and Data Programme; and maintains FishBase, a global information system on fishes (which can be accessed at [www.fishbase.org](http://www.fishbase.org)). The FAO fisheries departments has also been instrumental in assisting developing nations in mapping their Exclusive Economic Zones (EEZs) in order to better manage their coastlines and resolve disputes.

National fish inspection and quality assurance programs have been upgraded in several countries. This is an area of some urgency because of more stringent health and sanitary requirements imposed in recent years by major importing countries, such as the United States and Japan.

In March 1999, during an international conference held by the FAO in Rome, representatives of some 120 countries expressed their growing concern about “over-fishing of the world's major marine fishery resources, destructive and wasteful fishing practices, and excess capacity.” There are too many vessels or vessels with too much harvesting power in a growing number of fisheries. This leads to fewer fish in the sea for reproduction. In response, the FAO developed the Plan of Action on Fishing Capacity to achieve “an efficient, equitable and transparent management of fishing capacity.” The FAO urged states to limit existing levels of fishing and progressively reduce fishing capacity. Between 2003 and 2005 each country supporting the international Plan of Action was to develop a national plan to manage fishing capacity and, if necessary, reduce it. According to the UN agency, only 6% of all major marine

fisheries are under-exploited, 20% moderately exploited, 50% fully exploited, 15% over-fished, 6% depleted, and 2% recovering.

The 1999 Plan of Action on Fishing Capacity was part of the FAO's ongoing effort to promote activities that protect the world's oceans, which are now recognized as a natural resource that must be preserved. Earlier (in 1994), the FAO prepared the technical guidelines for fishing operations as part of its Code of Conduct for Responsible Fishing. The code is intended to address unregulated fishing and to counteract negative effects on marine ecosystems.

As capture fisheries reach their peak, aquaculture is helping to fill gaps in supply. FAO promotes aquaculture development in rural communities as a valuable source of animal protein as well as of income and export earnings. The organization is supporting the development of a system to report aquaculture data separately from catch statistics, while concentrating on fish nutrition and breeding strain selection.

Reliable market information is a key ingredient of successful trade development for fish and fish products. The Fish Marketing Information Service set up by FAO establishes contacts between buyers and sellers, provides price and market information, and offers technical assistance and advice on post-harvest aspects of fisheries including handling, processing, equipment selection, and quality.

### Forestry

The importance of forests has become increasingly recognized, especially for people in developing countries. One problem is that more than 250 million rural people throughout the world practice some form of shifting cultivation. They slash and burn trees against a backdrop of rapidly disappearing forests. FAO has a number of community forestry projects aimed at settling shifting cultivators or integrating their activities into rural development plans.

Another problem is that wood, which is the major source of energy in developing countries, is in chronically short supply and women and children often have to walk many miles a day to gather it. With inadequate, and expensive, fuel supplies, many people are unable to cook their food properly, and lack of fuel-wood can lead directly to malnutrition and disease. As the people harvest whatever woodland is available, the trees disappear, to be replaced by rangelands or deserts. In Nepal, for example, the loss of soil-protecting trees used mainly for fuelwood and animal fodder has led to landslides in the foothills and the loss of lives, homes, and crops. The situation is being improved, however, through projects to restore and manage the watersheds and to bring the population together in community forestry development, including the establishment of plantations of quickly maturing trees to provide fodder and fuelwood.

FAO's Tropical Forests Action Programme is fundamental in contributing to the objectives set forth in UNCED's Agenda 21 (developed at 1992's Earth Summit). The program is a major international undertaking uniting 90 partners in the battle to combat deforestation and to promote the conservation and sustainable development of tropical forests. Together, the partners are following an international strategy to integrate forestry into farming systems, develop waste forest industries, increase supplies of fuelwood, and conserve tropical forest ecosystems while helping countries solve social and economic problems.

FAO's Forest Resources Assessment 1990 Project analyzed satellite images and existing survey data of 179 countries to assess deforestation between 1981 and 1990. The next periodic report was Global Forest Resources Assessment 2000; it constituted the most ambitious assessment to date and included new parameters on ecological aspects of forests, sustainable forest management, and non-wood goods and services. These assessments provide the factual information to frame international discussion on forestry: the reports detail the location and extent of forest resources, as well as highlight the net changes in extent, quantity, and quality over time.

The organization has carried out a wide variety of studies to develop participatory approaches and mechanisms for the management, production, and utilization of renewable natural resources—and of forests in particular—by rural people. FAO's Forests Trees and People Programme promotes self-reliance of rural groups in the sustainable management of forest resources.

Other forestry priorities include planning and policy formulation, national resources assessment, fire prevention and control, tree planting, conservation of genetic resources, plantation development, seed improvement, and development of harvesting and wood industries. Wildlife conservation and utilization also receive attention.

## IMPROVING HANDLING AND DISTRIBUTION

Inadequate distribution of agricultural products causes waste of precious outputs and hinders agricultural development by reducing farmers' economic returns. FAO is involved at every stage in the distribution chain, from prevention of food losses in storage to attempts to bring about more equitable international trade. Programs deal with reduction of post-harvest losses, development of marketing skills, and promotion of trade terms that will help producers and exporters get a fair return.

### Prevention of Post-Harvest Losses

In 1978, FAO began operations of its Action Program for the Prevention of Food Losses (PFL), designed primarily to reduce post-harvest losses of staple foods. The program focuses particular attention on women, major actors in the post-harvest system, through specific training activities and promotion of suitable technologies. Activities range from the development of adequate facilities for handling, drying, and storage to research on post-harvest practices that will protect harvests while reducing or avoiding the use of pesticides. For instance, FAO has successfully helped the Pacific Island nations develop control measures that will allow them to discontinue the use of ethylene dibromide, a pesticide banned by the major importers of fresh fruits and vegetables produced by the island countries.

### Marketing

Poor marketing of local agricultural products often seriously impedes distribution and trade. Assistance is given to people involved in marketing from the grass-roots level to the senior management of marketing boards, as well as to officials responsible for marketing policy, legislation, and infrastructure. Direct assistance to marketing boards is aimed primarily at strengthening their management capacity and systems. FAO's field projects also sup-

port development of rural marketing centers and strengthening of the role of cooperatives.

In the 1990s, FAO developed the computerized version of *FAO Agri-Market*. This computer software program helps governments develop and perfect their price information systems, particularly during the transition from centrally planned to market-based economies. The organization also produces Marketing Extension Training Series videos focusing on techniques to be used by extension officers in providing marketing support to farmers.

### Commodities and Trade

FAO's work on commodities and trade covers three main areas: commodity and trade policy, early warning, and food security.

In commodity policies and trade, FAO plays a lead role in the development of agricultural commodity projections. FAO's Intergovernmental Commodity Groups debate on developments in national policies, particularly those relating to protectionism, to analyze problems in commodity development and develop programs of work and projects.

FAO's Global Information and Early Warning System is housed in the Commodities and Trade Division (see Information for Agriculture). The preparation of information for the GIEWS entails continuous fielding of crop and food supply assessment missions to individual countries. GIEWS collects and analyzes a great variety of information from member nations, the private sector, and organizations active in the food, agriculture, and rural sectors, primarily in developing countries. When there are indications of unsatisfactory conditions, GIEWS intensifies its monitoring, most often involving on-the-spot missions to affected countries.

In the area of food security, FAO relies on national teams and workshops to derive and internalize realistic policy conclusions. The growing realization that food security is as much a question of household access to food as overall food availability has led to the development of composite indices of household food security in countries worldwide. These serve as a tool to governments in addressing the needs of vulnerable groups. The Food Security Assistance Scheme (see Advice to Governments) supports member nations in the formulation of comprehensive national food security programs.

## SUSTAINABLE AGRICULTURAL RESOURCES DEVELOPMENT

In November 1991, the FAO Conference launched the International Cooperative Framework for Sustainable Agriculture and Rural Development. The SARD framework, as it has come to be known, supports the integration of sustainability criteria in the programs and activities of the organization. Guidelines for achieving SARD were set down in the Den Bosch Declaration at a major international conference organized by FAO and the Netherlands in 1991. Preparations for the Den Bosch Conference also contributed to FAO's input to the UN Conference on Environment and Development in 1992.

FAO helps member countries plan and implement environmentally positive projects through sustainability assessment and review of policies and plans in the agriculture and related natural resources sectors. Assessment and preparation of investment projects by FAO's Investment Center focus on sustainability criteria. At the same time, FAO is the "task master" for the "land cluster" of

Agenda 21: water resources, forests, fragile mountain ecosystems, and sustainable agriculture and rural development. The organization also chairs two UN sub-committees to coordinate the implementation of Agenda 21 chapters on oceans and water resources.

To meet growing needs for food, FAO advocates equitable, participatory rural development as the key to eradication of poverty, the first and foremost cause of undernutrition. At the same time, FAO's approach includes fine-tuning programs and projects to the continuing challenges of balancing increased production with environmental and sustainability concerns.

The FAO set up the Virtual Extension Research Communication Network (VERCON), which uses information and communication technologies to improve linkages among collaborating research and extension institutions.

### Land and Water Management

Among the most basic of resources for agriculture, water and soil are quickly reaching their limits. As burgeoning populations demand more food, the realization of the finiteness of resources, and of the need to manage them carefully, becomes increasingly acute. The effects of soil and water degradation are especially severe in the developing countries, and in particular among the rural poor who have the most limited access to these vital resources. FAO has initiated many research projects to help farmers in developing nations make the most of the resources available to them.

FAO helps national and nongovernmental institutions and organizations study the effects of erosion on soil productivity, develop methods for soil reclamation, improve management of arid and semi-arid soils, disseminate appropriate tillage techniques, and monitor soil micro-organisms and bacteria as well as waterlogging and salinity. The organization also helps rural communities combat deforestation and concomitant soil degradation, developing knowledge and self-reliance that makes them more efficient managers of the resources under their custody.

On the information side, in addition to providing data on soil use for scientists, FAO's digitized version of the Soil Map of the World (see Information for Agriculture) has been modified to make it accessible to nonspecialists. FAO contributes to technical seminars and general policy conferences on various aspects of soil and water management. For instance, the organization played a key role in the International Conference on Water and the Environment held in Dublin in 1992. The Dublin Statement emphasized water's economic value, and warned that this resource cannot be taken for granted.

The FAO maintains two computer programs designed as tools for increasing the efficiency of water use in agriculture. AQUASTAT is a global database on water use in agriculture and rural development. Though irrigation is the major issue, AQUASTAT provides information on such diverse aspects as drainage, environmental impact of water resources development, and water balance to users worldwide. The other computer-based system, SIMIS (Scheme for Irrigation Management Information System), was developed to help reduce losses in irrigation systems. Many complex and shifting factors must be considered in irrigation schemes. Designed to be adaptable to diverse local situations in the developing world, the SIMIS system covers a range of irrigation management topics, from human resources administration, to information on climate, crops, soils, and machinery, to accounting codes. SIMIS

can process information on one or several projects, making rapid and precise calculations to assess needs and possibilities while streamlining routine activities such as billing and registration.

Through the International Action Plan on Water and Sustainable Agricultural Development, FAO has launched programs in numerous member nations to help them manage water resources efficiently and meet the water needs of rural people.

A joint FAO/IAEA/SIDA research program uses neutron moisture meters to measure how water is used by crops and crop varieties. The study has shown that some varieties of cereals, for example, are up to three times more efficient in water use than others. The possibility of choosing water-efficient varieties provides farmers in water-scarce areas with welcome relief.

### Nutrient Management

After land and water, fertilizers are the most important input for increasing agricultural yield. Increased efficiency in fertilizer use can cut farmers' costs while helping to protect the environment, increase yields, and heighten consumer satisfaction. One of the Agenda 21 missions spearheaded by FAO is the achievement of increased food production through improvements in plant nutrition systems. In 1993, the organization renamed its Fertilizer Programme to reflect essential changes in approach. The Plant Nutrition Programme focuses on the application of Integrated Plant Nutrition Systems (IPNS).

Under the program, FAO promotes IPNS activities at the farm level for sustainable nutrient management based on a comprehensive vision of the cropping cycle. The objective is to help farmers establish the best association of biological (manure, crop residues), mineral, and naturally occurring (soil) nutrients to achieve a balanced supply while controlling losses and enhancing labor productivity.

Breeding research for improved plant nutrition concentrates on selecting and incorporating traits that will enhance a variety's nutrient uptake and utilization. In addition, the Plant Nutrition Programme helps governments develop sound policies and strategies at the national level, encouraging them to adapt or create institutions and organizations for the regulation of nutrient production, supply, and use.

### Pest Control

FAO has numerous programs and projects aimed at reducing and rationalizing use of potentially harmful pesticides. The International Code of Conduct on the Distribution and Use of Pesticides (see Advice to Governments) identifies potential hazards and sets standards for those engaged in the regulation, distribution, and use of pesticides—governments, industry, traders, and users—to increase safety, efficacy, and economy.

FAO focuses its field work in plant protection on the application of the IPM strategy (see Crop Production and Protection) at the farm level, encouraging governments to support farmers who seek to improve production using these integrated methods. In Asia, over half a million rice growers have been able to minimize pesticide use and raise profits using techniques learned in IPM field schools. FAO has organized study tours to help plant protection specialists from countries in Africa, Latin America, and the Near East learn from the Asian experience. During the last two decades of the 20th century, pesticide use, combined with crop intensifica-

tion practices and the use of fertilizers, substantially increased rice yield by farmers in developing countries.

## PROMOTING RURAL DEVELOPMENT

### Agrarian Reform and Rural Development

The World Conference on Agrarian Reform and Rural Development (WCARRD), sponsored by FAO in cooperation with other agencies of the UN system, was held at FAO headquarters in Rome in 1979. It was attended by more than 100 ministers and deputy ministers and some 1,400 other delegates from 145 countries. The conference approved a Declaration of Principles and a Program of Action to provide a framework for the reorientation of development policy and strategy toward greater participation and equity for rural people in the development process. FAO is the UN's lead agency for the implementation of the WCARRD program of action. Much of the work involves field projects to promote agrarian reform, land tenure improvement, and land settlement.

FAO helped to establish three regional centers to assist countries in the implementation of the program of action, and more generally, to coordinate activities in the area of integrated rural development at national level. The Centre on Integrated Rural Development for Asia and the Pacific (CIRDAP) is located in Dacca, Bangladesh; the Centre on Integrated Rural Development for Africa (CIRDAFRICA) is located in Arusha, Tanzania; and the Centre for Agrarian Reform and Rural Development for the Near East (CARDNE) is located in Amman, Jordan.

Activities related to rural development form an integral and permanent part of FAO's mainstream program. Every four years, the secretariat assists governments in the preparation of progress reports on implementation of the WCARRD program of action. FAO has organized intergovernmental consultations on WCARRD follow-up in Africa, Asia and the Pacific, and Latin America and the Caribbean. Interagency and Expert Consultations have been convened by FAO regional offices. Finally, at the request of member countries, FAO has fielded high-level WCARRD follow-up missions to assist governments in reviewing national rural development and agrarian reform strategies.

This support is especially crucial in the context of the transition from central planning and control to market orientation being undergone by numerous countries.

### Aid to Small Farmers

Close to half of the world's population lives in the rural areas of the developing countries. The majority of these people can be considered poor, they have very small agricultural holdings from which to derive their existence. It is often difficult for small farmers to make their voices heard in the social, economic, and political power structures.

FAO has numerous programs devoted to helping small farmers, taking into consideration the smallholders' needs, motivations, capabilities, risks, and resources, and how these factors affect the production and marketing of produce or its use by the farm family. Governments are encouraged to consider the rural poor in their policies and planning, providing the necessary inputs at the right time, in reasonable quantities, and at acceptable prices. Emphasis is also placed on building collective strength among farmers for identifying and finding solutions to their problems and preparing production plans on the basis of their particular needs and

priorities. Farmer self-help organizations are assisted in planning and managing their credit requirements, and improved access to credit is stressed.

### The Role of Women

Women play a crucial role in agricultural development, yet they are perhaps the least integrated of the players in the development process. FAO recognizes the vital importance of the full integration of women, and has developed a Plan of Action for the Integration of Rural Women into the Development Process. The plan outlines four principal areas of activity, focusing on the civil status, economic, social, and decision-making spheres of rural women. The plan of action outlines activities in each of these spheres to remove existing barriers to women and foster their potential. FAO's approach involves implementation of projects directed ex-

clusively at women, as well as support for the concerns of women in all FAO's projects and activities.

### Nutrition

FAO plays a key role in helping countries improve nutrition, promote healthy diets, and ensure access to safe food. Prime areas of interest include food quality control; handling, processing, and storage; household food security; forestry, fisheries, crop production, and local foods; and nutrition monitoring, assessment, planning, education, and information.

In 1992, the organization cosponsored with WHO the International Conference on Nutrition (see Food Security). The conference adopted a Declaration and Plan of Action for Nutrition. The countries at the conference composed a World Declaration on Nutrition and pledged their adherence to a plan of action for the

coming decades. The World Declaration reaffirmed that “poverty and lack of education, which are often the effects of underdevelopment, are the primary causes of hunger and undernutrition.”

It emphasized the need to identify the groups most in need, targeting nutritional resources first and foremost to alleviating their lot. It also stressed that food should not be used as a tool for political pressure. The importance of building knowledge among vulnerable groups through nutrition education was highlighted, as was the need for better preparedness for food emergencies resulting from civil strife and natural disasters.

The plan of action provides guidelines for governments, acting in partnership with NGOs, the private sector, local communities, families and households, and the international community. It contains recommendations on policies, programs, and activities identified through the intensive ICN consultative process and brings together a wide range of expert opinion from around the world. The 159 nations that participated in the ICN committed themselves to developing national nutrition plans with attainable goals and measurable targets. In the continuing follow-up to the ICN, FAO is assisting many governments in preparing national plans of action for nutrition. To support the process, the document “Guidelines for Developing National Plans of Action for Nutrition” was distributed to member governments.

Many FAO nutrition projects work towards improving knowledge of nutrition within households, and particularly among women. Awareness of the need to improve the frequency and

quality of meals is built up through participatory, pilot-family programs concentrating on nutrition education and home gardening. Households are encouraged either to grow the foods they need to fill their dietary gaps or to use income from home gardens to purchase vitamin-and-mineral-rich fruits and vegetables they cannot easily cultivate.

FAO has produced country nutrition profiles for 100 developing countries to provide a concise view of their food and nutrition status, agricultural production, and economic and demographic situation. Country profiles are used by governments and institutions for planning and training. FAO advocates incorporating nutritional information in early warning networks to supplement agricultural production data.

The Codex Alimentarius (see Advice to Governments) contributes to raising nutritional status by developing international standards, codes of practice, and other recommendations for food quality to protect consumer health and encourage fair trading practices in the food trade. As of 2006, 173 countries were members of the Codex Alimentarius Commission.

FAO's World Food Survey, published about once a decade, provides as complete a picture as possible of the world food and nutrition situation. It includes food balance sheets for almost all countries and, increasingly, household food-consumption surveys for developing countries.

---

# THE UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION (UNESCO)

**BACKGROUND:** “Since wars begin in the minds of men,” the preamble to the UNESCO constitution states, “it is in the minds of men that the defenses of peace must be constructed.” As also stated in the preamble, “the great and terrible war which has now ended was a war made possible by the denial of the democratic principles of the dignity, equality and mutual respect of men and by the propagation, in their place, through ignorance and prejudice, of the doctrine of the inequality of men and races.” World War II was too recent of an event when UNESCO was created for its founders to forget that fact. UNESCO’s purpose as a member of the UN family of organizations is “to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world, without distinction of race, sex, language or religion, by the Charter of the United Nations.”

---

## CREATION

Occasional attempts at international cooperation in educational, scientific, and cultural matters were made before World War I, but no machinery existed to promote these efforts on a worldwide scale. Even the League of Nations Covenant, when it was drawn up after the war, failed to mention international cooperation in these matters. However, thanks in great part to the efforts of the Belgian delegate Henri La Fontaine, a League of Nations Committee on Intellectual Cooperation was formed. Composed of 12 eminent persons, the committee met for the first time in the summer of 1922 under the chairmanship of the French philosopher Henri Bergson. Among those who served on the committee were Marie Curie, Gilbert Murray, and Albert Einstein. The intellectual atmosphere that prevailed in the committee was a lofty one, but at the same time the committee established precedents in practical matters that have proved useful to UNESCO. Thus, the 40-odd national committees on intellectual cooperation whose creation this committee promoted were a precedent for the national commissions now operating in 191 countries and associate members (as of March 2005) to further the work of UNESCO. The International Institute of Intellectual Cooperation, established with the aid of the French government and located in Paris, began work early in 1926 and provided a permanent secretariat for the committee.

The League was thus provided with a technical body to promote international activity and was active in many fields, especially those of interest to scholars, professionals, learned societies, librarians, and the like. Numerous conferences and symposia were held under the auspices of the International Institute in Paris. Among the topics taken up by these conferences as the world situation became more menacing were the psychological causes of war and methods of promoting peaceful change as a substitute for war.

More intensive international cooperation in the field of educational problems began during World War II itself. A Conference of Allied Ministers of Education was convened in London in November 1942 to consider how the devastated educational systems of the countries under Nazi occupation could be restored after the war. The first meeting of the conference was attended by representatives of eight governments in exile and the French National Committee of Liberation. The conference met at frequent intervals throughout the war, with the participation of a growing number of representatives of other allied governments. The United States delegation to the April 1944 meeting of the conference included J. William Fulbright, then congressman and later senator from Arkansas, and the poet Archibald MacLeish, at that time Librarian of Congress, who was later to participate in the drafting of UNESCO’s constitution.

It was decided at San Francisco that one of the objectives of the UN should be to promote international cultural and educational cooperation. Addressing the closing plenary session, President Truman declared: “We must set up an effective agency for constant and thorough interchange of thoughts and ideas, for there lies the road to a better and more tolerant understanding among nations and among peoples.”

The conference creating UNESCO was convened by the United Kingdom and France in London in November 1945. It was decided that the new organization should deal not only with the transmission of existing knowledge but also with the pursuit of new knowledge. Hence, the encouragement of natural and social sciences through international cooperation was one of the principal tasks assigned UNESCO. UNESCO’s constitution was adopted by the London conference after only two weeks of discussion and went into effect on 4 November 1946, when 20 states had deposited instruments of acceptance with the United Kingdom government.

## PURPOSES

UNESCO's functions, as prescribed in its 1945 constitution, are as follows:

- “to collaborate in the work of advancing the mutual knowledge and understanding of peoples through all means of mass communication;
- to give fresh impulse to popular education and to the spread of culture by collaborating with members, at their request, in the development of educational activities; by instituting collaboration among the nations to advance the ideal of equality of educational opportunities without regard to race, sex, or any distinctions, economic or social; and by suggesting educational methods best suited to prepare the children of the world for the responsibilities of freedom; and
- to maintain, increase, and diffuse knowledge by ensuring the conservation and protection of the world's heritage of books, works of art, and monuments of history and science; by encouraging cooperation among the nations in all branches of intellectual activity, including the international exchange of persons active in the fields of education, science, and culture and the exchange of publications, objects of artistic and scientific interest, and other materials of information; and by initiating methods of international cooperation calculated to give the people of all countries access to the printed and published materials produced by any of them.”

Since UNESCO's constitution specifically emphasizes the need to preserve “the independence, integrity and fruitful diversity of the cultures and educational systems” of the member states, the organization cannot impose any particular standard either on all its members or on any of them, and it is “prohibited from intervening in matters ... within their domestic jurisdiction.”

## MEMBERSHIP

Any UN member may join UNESCO. Other states may be admitted to UNESCO membership upon the recommendation of the organization's Executive Board and the approval of its General Conference by a two-thirds majority. Austria, Hungary, and Japan joined UNESCO years before entering the UN.

Under a United Kingdom-proposed amendment to the constitution adopted in 1951, territories or groups of territories not responsible for their international relations can be admitted as associate members upon application of member states or other authorities responsible for their international relations. Associate members do not have the right to vote.

A state may withdraw from UNESCO by notifying the organization's director-general of its intention to do so; the withdrawal takes effect as of the end of the respective calendar year. South Africa withdrew in December 1956 but rejoined in December 1994. Czechoslovakia, Hungary, and Poland suspended their participation in UNESCO activities in 1952 but returned as active participants in 1954. Portugal withdrew in 1972 but returned in 1974. In November 1974, a vote dominated by Arab and Communist delegations excluded Israel from UNESCO's European regional group and withheld aid from it on the ground that it persists “in altering the historic features” of Jerusalem during excavations—an allegation not sustained by UNESCO's archaeological expert.

At the end of 1984, the United States withdrew from UNESCO, stating that “trends in the policy, ideological emphasis, budget, and management of UNESCO were detracting from the organization's effectiveness.” One year later, the United Kingdom and Singapore withdrew (the United Kingdom rejoined in 1997). In February 1994, the *New York Times* reported that the United States State Department had recommended that the United States rejoin UNESCO, which had cut its staff by nearly 1,800 people and changed its stand on the controversial New World Information and Communications Order (NWICO). Until its departure, the United States had been responsible for 25% of UNESCO's budget. The United States rejoined UNESCO in 2003.

As of March 2005, UNESCO had 191 members and 6 associate members.

## STRUCTURE

UNESCO is an autonomous organization affiliated with the UN through a relationship agreement signed in 1946. Its three principal organs are the General Conference, the Executive Board, and the secretariat, headed by a director-general.

### General Conference

All UNESCO members have the right to be represented in the General Conference, which determines UNESCO's policies and decides on its major undertakings. Each member state has one vote in the conference but may be represented by five delegates. The constitution of UNESCO requires that member governments are to consult with national educational, scientific, and cultural bodies before selecting these delegates; in countries where UNESCO commissions have been established, these too are to be consulted.

From 1946 through 1952, the General Conference met every year. Since then it has met generally every two years. As a rule, the conference takes place in Paris, but it has also met in Mexico City, Beirut, Florence, Montevideo, New Delhi, Nairobi, Belgrade, and Sofia.

Decisions of the General Conference are made by a simple majority vote, except for certain constitutionally specified matters that require a two-thirds majority, such as amending the UNESCO constitution or adopting an international convention. Member nations are not automatically bound by conventions adopted by the General Conference, but the UNESCO constitution requires them to submit such conventions to their appropriate national authority for ratification within one year. The same applies to recommendations, which the General Conference is empowered to adopt by simple majority vote.

### Executive Board

Elected by the General Conference, the Executive Board is one of three constitutional organs of UNESCO and consists of 58 member states serving a four-year term. It supervises the execution of UNESCO's program. It meets at least twice a year. Before the General Conference convenes, the Executive Board reviews the budget estimates and work program for the following two-year period, as prepared by the director-general. It submits these with its recommendations to the General Conference and prepares the agenda for the conference.

Originally, the UNESCO constitution provided that “although the members of the Executive Board are representatives of their

respective governments, they shall exercise the powers delegated to them by the General Conference on behalf of the Conference as a whole.” Until 1993, the members of the board were not member states, but personalities designated by name. UNESCO’s constitution only designated that the General Conference should “endeavor to include persons competent in the arts, the humanities, the sciences, education and the diffusion of ideas.” In 1993, the General Conference changed this criteria. Since that time, the member states of the Executive Board are requested to appoint a person qualified in one or more of the fields of competence of UNESCO and with the necessary experience and capacity to fulfill the administrative and executive duties of the board. The General Conference, in electing member states to the Executive Board, must also take into account the diversity of cultures and balanced geographical distribution.

Following a constitutional amendment adopted by the General Conference in 1972, board members are elected for four years and are not immediately eligible for a second term. At each session, the General Conference elects members to succeed those whose terms end with that session. A system of electoral groups of member states, governing only elections to the Executive Board, was established in 1968.

#### Director-General and Secretariat

The secretariat carries out UNESCO’s programs. It is headed by a director-general, nominated by the Executive Board and elected by the General Conference. The staff members are appointed by the director-general. Julian Huxley of the United Kingdom was UNESCO’s first director-general. Federico Mayor Zaragoza of Spain was elected director-general in November 1987, succeeding Amadou-Mahtar M’Bow of Senegal, who had held the post since 1974. At the 1993 General Conference, Mr. Mayor was elected for a second six-year term. Koichiro Matsuura of Japan was appointed Director-General for a six-year term at the General Conference on 12 November 1999, and reelected on 12 October 2005 for a four-year term.

*Headquarters.* UNESCO’s first headquarters were in the Hotel Majestic, in Paris, a building which, ironically, had served as the headquarters for the German army during its occupation of France. In 1958, the organization’s headquarters were transferred to a 3-hectare (7.5-acre) site, located at 7 place de Fontenoy, donated to UNESCO by the government of France.

UNESCO headquarters originally consisted of a conference building, a secretariat building, and a building for the permanent delegations assigned to UNESCO. In 1965, a new building constructed around underground patios was added, and in 1970 and 1977, two supplementary buildings. The buildings were designed and approved by several leading architects. Works by contemporary artists are an integral part of the headquarters.

#### Field Offices

UNESCO has been criticized by the United States since the 1980s for the concentration of its staff at its headquarters office in Paris, rather than in the field. A 1992 report by the US State Department said that 73% of UNESCO’s total staff of 2,697 persons were located in Paris. The same report also conceded that, despite this fact, 44% of the organization’s regular and extra-budgetary resources were spent in the field. This disparity, however, may simply reflect the vastly different nature of UNESCO’s mandate, as

opposed to the mandate of technically-oriented specialized agencies. In 2005, UNESCO had a staff of 2,160, of which 680 worked in 58 field offices. The percentage of staff working in the field had not markedly changed since 1980, though the number of field offices had increased until a decentralization plan was adopted in the mid-2000s.

*In Africa,* UNESCO offices are located in Bujumbura, Burundi; Yaounde, Cameroon; Brazzaville, Congo; Kinshasa, Democratic Republic of the Congo; Addis Ababa, Ethiopia; Libreville, Gabon; Accra, Ghana; Nairobi, Kenya; Bamako, Mali; Maputo, Mozambique; Windhoek, Namibia; Abuja, Nigeria; Kigali, Rwanda; Dakar, Senegal; Dar es Salaam, United Republic of Tanzania; and Harare, Zimbabwe.

*In the Arab world,* UNESCO offices are located in Cairo, Egypt; Amman, Jordan; Beirut, Lebanon; Rabat, Morocco; Ramallah, West Bank (Palestine); and Doha, Qatar.

*In Asia and the Pacific,* UNESCO offices are located in Kabul, Afghanistan; Dhaka, Bangladesh; Phnom Penh, Cambodia; Beijing, China; New Delhi, India; Jakarta, Indonesia; Tehran, Iran; Almaty, Kazakhstan; Kathmandu, Nepal; Islamabad, Pakistan; Apia, Samoa; Bangkok, Thailand; Tashkent, Uzbekistan; and Hanoi, Vietnam.

*In Europe and North America,* UNESCO offices are located in Venice, Italy; Bucharest, Romania; Moscow, Russian Federation; Geneva, Switzerland; and New York, United States.

*In Latin America and the Caribbean,* UNESCO offices are located in Brasilia, Brazil; Santiago, Chile; San Jose, Costa Rica; Havana, Cuba; Quito, Ecuador; Guatemala City, Guatemala; Port-au-Prince, Haiti; Kingston, Jamaica; Mexico City, Mexico; Lima, Peru; and Montevideo, Uruguay.

#### National Commissions for UNESCO

The UNESCO constitution requests every member state to associate “its principal bodies interested in educational, scientific, and cultural matters with the work of the Organization, preferably by the formation of a National Commission....” By 2005, 191 member states had established such broadly representative national commissions to collaborate with UNESCO in attaining its objectives. These commissions are not official UNESCO organs, but they provide a vital link between UNESCO and the public at large. They advise their governments and the delegations that attend the UNESCO General Conference on pertinent matters and serve as liaison agencies and information outlets.

The various national commissions vary greatly in size and composition. Often the country’s minister of education is the commission’s president, and its members may include high government officials, leaders in the fields of education, science, and the arts, and representatives of professional organizations. Through meetings, publications, broadcasts, contests, and exhibitions, the commissions stimulate public interest in specific UNESCO projects. National UNESCO commissions of several countries often meet for regional conferences. National commissions are frequently given contracts to translate UNESCO publications and to handle printing and distribution of these translations.

#### Cooperation with Nongovernmental Organizations

The constitution of UNESCO states that “a peace based exclusively upon the political and economic arrangements of governments would not be a peace which could secure the unanimous, lasting

and sincere support of the peoples of the world” and that “peace must therefore be founded, if it is not to fail, upon the intellectual and moral solidarity of mankind.”

In order to attain that objective, the founders of UNESCO sought ways of associating the peoples of the world as closely as possible in the preparation and implementation of the organization’s aims and programs. Thus, from its inception, UNESCO has sought the collaboration of international nongovernmental organizations (NGOs). The NGOs with which UNESCO cooperates have activities and interests paralleling those of the organization, ranging from specialized or scholarly organizations (of teachers, scientific researchers, philosophers, sociologists, journalists, writers, and legal experts) to mass organizations (trade unions, cooperatives, women’s associations, and youth movements) and denominational organizations.

UNESCO consults and cooperates with NGOs so as to receive the broadest possible assistance from them in the preparation and implementation of its programs, thus strengthening international cooperation in the fields of education, science, and culture.

## BUDGET

For the biennium 2006–07, the General Conference approved a regular budget of us\$610,000,000. The organization has increased financing for its programs while reducing administrative costs. us\$107,802,100 was for Education; us\$55,994,500 was for Natural Sciences; us\$30,838,000 was for Social and Human Sciences; us\$50,574,600 was for Culture; us\$32,950,400 was for Communication and Information; us\$38,660,100 was for General Policy and Direction; and us\$177,681,900 was for program execution and administration.

UNESCO’s budget is financed through contributions assessed against member states on a sliding scale. For the biennium 2002–03, these assessments ranged from a minimum of 0.01% of the total amount to 25%. UNESCO receives funds from other specialized agencies of the UN system—mainly UNDP, UNFPA, UNEP and the World Bank—and regional banks for operational assistance to member states.

## ACTIVITIES

UNESCO’s work is carried out principally in the fields of education, the natural sciences, the social and human sciences, culture, and communication.

At the 27th session of the General Conference (1993), a broad consensus emerged on the need to concentrate efforts on two of the objectives common to the United Nations system as a whole—the consolidation of peace and the promotion of sustainable human development. The General Conference also underlined the importance of UNESCO’s role in promoting international intellectual cooperation, that is, acting as an international “think tank.”

The Organization’s Constitution outlines UNESCO’s fundamental mission of promoting access to, and the transfer and sharing of knowledge. UNESCO’s continued role of offering guidance, advice, and assessment when needed calls for strengthening activities in the following areas: anticipating and preparing innovative strategies, gathering and circulating reliable information on the present situation and probable trends in the Organization’s fields of competence; and encouraging political leaders at the highest level to make firm commitments.

UNESCO’s recent actions have been largely determined by commitments made at the major intergovernmental conferences it has recently convened—solely or jointly with other UN agencies—or in which it has participated, in particular the World Conference on Education for All, held in Jomtien, Thailand, in March 1990, the United Nations Conference on Environment and Development (UNCED), held in Rio de Janeiro, Brazil, in June 1992, the United Nations Fourth World Conference on Women, held in Beijing, China, in September 1995, and the World Summit on Sustainable Development held in Johannesburg, South Africa, in August and September 2002.

The increasingly global nature and growing complexity of the problems in today’s world call for a multidisciplinary or transdisciplinary approach in many of UNESCO’s activities. A good example is the interdisciplinary project “Environment and Population Education and Information for Human Development,” conceived following the Rio Conference and aimed at the adoption of an integrated approach in order to achieve a development that is people-centered, equitable, and sustainable.

UNESCO’s transdisciplinary Action Programme to Promote a Culture of Peace was created in 1993 to initiate activities in favor of the consolidation of peace following conflict. This involves reconstituting social infrastructures, fostering national reconciliation, reintegrating displaced persons, constructing a basis for a democratic citizenship, helping to create endogenous capabilities and ensuring the broadest possible involvement of the population in development efforts.

Since the fall of the Berlin Wall in 1989, UNESCO has been at the forefront of UN and international action in Central and Eastern Europe. The 26th Session of the General Conference (1991) called for UNESCO “to establish intersectoral coordination to support the introduction of democratic reforms” and “to establish close cooperation for carrying out this activity with international intergovernmental and non-governmental organizations, funds and other bodies” in support of Central and eastern Europe and in the newly independent states of the former Soviet Union. It was decided that the many existing activities in the region could be better focused if they were brought together under a single program, and the Programme for Central and Eastern European Development (PROCEED) was created.

Finally, the Organization’s action in recent years has been focused on satisfying the needs of three priority target groups—the least developed countries, the UNESCO member states of Africa, and women.

### A. Education

UNESCO’s largest sectoral activity, education, is the field for constant but changing endeavor. From originally helping to reconstruct educational systems in war-torn Europe and carrying out isolated, modest projects elsewhere, UNESCO has progressed to large-scale undertakings, such as literacy campaigns, rural development, science teaching, educational planning and administration, and teacher training.

UNESCO’s major education activities have focused on basic education, the renewal of educational systems and educational advancement and policy.

In activities following up the 1990 World Conference on Education for All, UNESCO has assisted member states in diagnosing

basic learning needs, setting national education-for-all (EFA) objectives, and devising effective strategies to move towards EFA.

In cooperation with UNFPA, UNESCO organized the International Congress on Population Education and Development (Istanbul, April 1993) which adopted the Istanbul Declaration and Action Framework for Population Education on the Eve of the Twenty-first Century.

Emergency assistance programs and reconstruction operations in the field of education were carried out in such countries as Afghanistan, Albania, Angola, Bosnia and Herzegovina, Cambodia, Croatia, Iraq, Lebanon, Mozambique, Slovenia, and Somalia. Following the international meeting on “Peace, the day after,” held in Granada, Spain in December 1993, activities aimed at the rebuilding of Palestinian educational and cultural institutions were initiated.

The Scheme of Humanitarian Assistance for Refugee Education (SHARE) (1993–96) responded specifically to the needs of refugee children. The program went beyond the urgent but short-term goal of providing shelter, food, and medicines, to develop a coherent policy of refugee education in cooperation with local and national authorities. After initial experiences in Cambodia, Somalia, and Afghanistan, SHARE activities were also carried out in Slovenia and Croatia.

UNESCO also promotes studies and teaching in the fields of drugs, population, and the environment. In cooperation with WHO, the Organization has elaborated a joint prototype curriculum for AIDS education in schools and disseminated documents and guidelines to support AIDS education programs in member states.

The UNITWIN/UNESCO Chairs Programme was launched in 1991 to strengthen cooperation between universities through twinning arrangements and promote the development of inter-university networks in order to facilitate the exchange of knowledge and improve teacher training. As of May 2006, there were 24 UNITWIN networks.

*The World Education Report*, a biennial first published in 1991, presents a broad but concise analysis of major trends and policy issues in education, including many tables, graphs, and a unique set of statistics—“World Education Indicators”—which give a country-by-country summary of key aspects of education in over 180 countries.

In January 1993, UNESCO set up the International Commission on Education for the Twenty-First Century, under the Chairmanship of Jacques Delors, President of the Commission of the European Community, to study and reflect on the challenges facing education in the coming years, and to make recommendations that can serve as an agenda for renewal, innovation, and action for policy-makers. The Commission focused its reflection on one central question—what kind of education is needed for what kind of society of tomorrow?—in its report at the end of 1995.

The Associated Schools Project (ASP), an international network set up to experiment with ways and means for enhancing the role of education in preparing young people to live in a world community, was launched in 1953. As of 2006, it included some 7,800 educational institutions in 175 countries, which conduct pilot projects to enhance education for a culture of peace. ASPnet schools focus on any of four main themes of study: World Concerns and the role of the United Nations system; Human Rights,

Democracy, and Tolerance; Intercultural Learning; and Environmental Concern.

Closely linked with the Associated Schools Project, often carrying out joint projects in crucial fields such as literacy work and the environment, are the 5,000 UNESCO associations, centers and clubs, the first of which was founded in 1947. Found in some 120 countries, with members from all age groups, they are set up in schools, universities, as associations or as permanent centers and, since 1981, are grouped together as part of the World Federation of UNESCO Clubs, Centers and Associations (WFUCA).

In specific educational areas, UNESCO’s work is supported by three separate institutes which conduct research and training programs. The International Bureau of Education (IBE), located in Geneva, serves as an international center for studies and publications on comparative education. The International Institute for Educational Planning (IIEP), in Paris, organizes an annual nine-month training program for education planners and administrators, and offers training courses in the planning, financing and management of education. The Institute for Education (UIE), located in Hamburg, focuses on adult and non-formal education, within the framework of lifelong learning.

## B. The Natural Sciences

UNESCO is the only organization within the UN system to have a mandate for the basic sciences. This mandate implies UNESCO’s commitment to the promotion of multilateral, international, and regional cooperation for the training of specialists from developing countries in university science education and basic research in the four core areas of basic science, namely mathematics, physics, chemistry, and biology. Projects to be implemented in these and allied, interdisciplinary areas are selected for the impact they will have on strengthening national capacities, enabling access to current scientific information, human resources development, and their real or potential impact on sustainable development.

One of the main accomplishments of the Rio Conference on Environment and Development was Agenda 21, an international program of action for global sustainable development into the 21st century. Because of its broad mandate and long experience, UNESCO is implicated in many aspects of UNCED follow-up, with particular emphasis on Agenda 21 and the conventions on biological diversity and climate change.

In UNESCO’s Natural Sciences sector, priority is therefore being given to implementing the recommendations of Agenda 21 by promoting multidisciplinary scientific programs which combine training, information and research and which are at the interface between environment and development. Special attention is also being accorded to the promotion of teaching (especially at the university level) and research in the basic sciences and engineering.

Environment and development problems have been a major focus of the Organization’s work for the past 50 years. Beginning with the Arid Zone Programme in 1951, numerous UNESCO programs have been launched to address research, education, training, and policy needs related to specific environment and development issues, such as water resources management and the conservation of biological diversity and ecological systems such as islands, tropical forests, and arid lands.

The activities of the Intergovernmental Oceanographic Commission (IOC), with 129 countries participating in 2006, primar-

ily center around narrowing down the uncertainties about the role of the ocean in climate and global systems. In response to Agenda 21, the IOC adopted new strategies and action plans, especially in the field of oceanography.

IOC has developed global and regional ocean science programs related to living and non-living resources, and marine pollution research and monitoring, and enhanced the efficiency of the International Tsunami Warning System in the Pacific. It also organizes training and assistance and provides information, together with WMO, to coastal and island member states on events in the oceans and adjacent seas through a quarterly “Products Bulletin of the Integrated Global Ocean Services System,” a precursor of the Global Ocean Observing System (GOOS).

The International Hydrological Decade, another intergovernmental program, was launched by UNESCO in 1965. In 1975 it became a long-term endeavor, the International Hydrological Programme (IHP). In its sixth phase (2002–07), the IHP is devoted to the topic “Water Interactions: Systems at Risk and Social Challenges.” It outlined five broad themes on which to concentrate: global changes and water resources; integrated watershed and aquifer dynamics; land habitat hydrology; water and society; and water education and training.

Under the “Diversitas” program, in cooperation with the International Union of Biological Sciences (IUBS) and the Scientific Committee On Problems of the Environment (SCOPE) of the International Council for Science (ICSU) (formerly International Council of Scientific Unions), UNESCO is promoting worldwide coordinated research on, and inventories and the monitoring of, biological diversity.

A Biotechnological Information Exchange System (BITES) has also been developed.

The Man and the Biosphere (MAB) Programme was launched in 1971 as an international program of applied research on the interactions between man and his environment. The program aims to provide the scientific knowledge and trained personnel to manage natural resources in a rational and sustained manner, giving priority to work in the field at the local level, within general frameworks for scientific cooperation at the international level. Based on a network of 144 MAB national committees, the program monitors the international biosphere reserve network, and has developed a number of problem-oriented research programs involving specialists from developing countries.

The International Geological Correlation Programme is a joint environmental activity between UNESCO and the International Union of Geological Sciences (IUGS), whose objectives are increasing knowledge of geological processes through correlation studies of many locations around the world, developing more effective ways of finding and assessing energy and mineral resources, and improving research methods and techniques. The transfer of traditional and new technologies, such as computerized information handling (GIS, DAS and PANGIS) and remote sensing analysis (e.g. GARS) to developing countries is privileged.

### C. The Social and Human Sciences

UNESCO encourages the development of the social and human sciences at the international and regional levels by promoting training and research activities, as well as international exchanges.

In the fields of peace, human rights, and democracy, UNESCO's activities are aimed at the promotion and protection of human rights, consolidation of peace and democracy, as well as at the prevention and elimination of all forms of discrimination by means of research and education, dissemination of information and publications, and organization of meetings in cooperation with governments, intergovernmental and non-governmental organizations. UNESCO's activities in this field have led to the elaboration of important international instruments.

The emergence of multicultural and multiethnic societies, urbanization, and globalization are the transformation processes at the heart of the Management of Social Transformations Programme (MOST), established by the 1993 General Conference to foster policy-relevant, interdisciplinary and comparative social science research in three fields—the management of multiethnic societies, cities as arenas of accelerated social transformations, and coping locally and regionally with transnational phenomena.

The International Bioethics Committee, composed of specialists in biology, genetics, medicine, law, philosophy, and the social and human sciences, was set up to meet the ethical concern arising from progress in life sciences.

Within the framework of a UNESCO/UNFPA project, research is conducted on socio-cultural factors affecting demographic change.

UNESCO has an extensive program on the improvement of women's condition, stressing the principle of equality between men and women and against all forms of discrimination. This program provided input for the Fourth UN World Conference on Women: Action for Equality, Development and Peace (Beijing, September 1995), and for its follow-up conference, “Beijing + 5: Women 2000” held in June 2000 in New York.

The organization's youth program deals with the analysis of problems and dissemination of information concerning youth, enrollment of young people in the service of international cooperation, development and peace, and action on behalf of disadvantaged young people. To counteract splintering of various and scattered information sources and networks on youth and to help implement youth policies from global to local levels, in 1991 UNESCO set up the INFOYOUTH Network, a clearing house and information service for members states and partners.

### D. Culture

UNESCO's main cultural activities are devoted to safeguarding the cultural heritage, preserving and fostering respect for cultural identities and diversity, and promoting creative and intellectual expression. Almost two thousand projects were launched worldwide in the context of the World Decade for Cultural Development (1988–97), including projects on the “Maya World,” “Espaces du Baroque,” “Slave Route” and “Iron Road.” “The Silk Roads: Roads of Dialogue” project continues to assess the findings of four expeditions carried out in previous years and a joint UNESCO/

World Tourism Organization project for cultural tourism on the Silk Roads in Central Asia was launched in 1993.

#### **Safeguarding of Cultural Heritage**

Under the terms of its constitution, UNESCO was entrusted with the task of “ensuring the preservation and protection of the world heritage of works of art and monuments of historic or scientific interest.”

Training activities aimed at strengthening the application of the 1954 Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict and the 1970 Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property continue to be an important part of UNESCO’s activities in this field.

UNESCO’s activities in safeguarding the world’s cultural heritage are best known through its campaigns to mobilize international support. The first such campaign was devoted to safeguarding the monuments of Nubia, in Egypt, and led to the successful reconstruction of the Temple of Abu Simbel, a US\$40 million undertaking. Another project, successfully brought to a conclusion in 1983, was the restoration of Borobudur in Indonesia. A second Egyptian campaign was devoted to the creation of museums in Aswan and Cairo. As of May 2006, the World Heritage List in Danger included 34 sites around the world, including one in the United States—Everglades National Park.

The growing determination of member states to preserve their national cultural heritage has led to an increase in museum development and in activities to preserve historical monuments and sites, works of art, and other cultural property. UNESCO’s contribution in this field has consisted mainly in the provision of consultant services, equipment, supplies, and financial assistance to individual projects throughout the world. Improving the training of specialists in the conservation, preservation, and presentation of cultural heritage has involved the provision of lecturers and fellowships for international, regional, and subregional training projects.

UNESCO’s activities have also resulted in the adoption of a number of conventions and recommendations, such as the International Convention Concerning the Protection of the World Cultural and National Heritage—called the World Heritage Convention—adopted by the General Conference in 1972. The convention provides, for the first time, a permanent legal, administrative, and financial framework for international cooperation. It also relates sectors that had previously been considered very different—the protection of cultural heritage and that of natural heritage—and introduces the concept of “world heritage,” transcending political and geographical boundaries. The convention aims to foster a greater awareness among all peoples of the irreplaceable value of world heritage and the perils to which it is exposed. It is intended to complement, assist, and stimulate national endeavors without either competing with or replacing them. By 3 May 2006, the convention had been ratified or accepted by 178 member states. The World Heritage Committee has thus far included 812 cultural and natural sites on the World Heritage List and has regularly approved financial support for technical cooperation through the World Heritage Fund.

Under its research, study, and information exchange activities, UNESCO has contributed to the advancement and spread of spe-

cialized knowledge concerning heritage preservation. It has issued a series of technical manuals on such subjects as museums, underwater archaeology, preserving and restoring monuments and historic buildings, the man-made landscape, conservation standards for works of art in transit and on exhibition, and conservation of stone. In response to the need for more elementary and accessible practical guidance, particularly in developing countries, a new series of technical handbooks was launched in 1975. The quarterly, *Museum International*, published since 1948, is an international forum of information and reflection on museums of all kinds.

#### **Study and Dissemination of Cultures**

An important part of UNESCO’s activities in the field of culture focus on cultural identity, including the preparation of general histories and works on various geocultural areas.

By 2006, UNESCO had published more than 10,000 titles in English, French, Spanish, Russian, Chinese, and Arabic, published under its own imprint or co-published. The organization publishes some 160 new titles each year and has distributors in 110 countries. For young readers, the World Heritage series is a bestseller with over 1.3 million copies printed in English, French, and Spanish. Large-scale international projects involving specialists from different countries have resulted in major works such as *The General History of Africa*, *History of Humanity*, *History of Civilizations of Central Asia*, *History of Latin America*, and *History of the Caribbean*.

#### **Cultural Development**

The Universal Declaration of Human Rights asserts that everyone has the right to participate freely in the cultural life of society. This principle implies the right of people in different societies to share in the cultural heritage of the world community, and it implies that culture cannot be the privilege of an elite few but must be regarded as a dimension of human life. In this spirit, since the end of the 1960s, UNESCO has attached increased importance to cultural policies and activities related to cultural development. The principles governing UNESCO’s activities in the field of culture stress the strengthening of the cultural dimension of development, that is, viewing culture not only in itself but also in relation to certain key areas of development, such as educational systems (including the cultural content of education and the adaptation of teaching models to local culture), the environment, science, and communication.

In 1970 the Intergovernmental Conference on Institutional, Administrative, and Financial Aspects of Cultural Policies, held in Venice, examined the role of public authorities in defining and achieving the objectives of cultural development and acknowledged for the first time the responsibility of governments to provide and plan for the cultural needs of society by implementing appropriate cultural policies. The Venice conference was followed by a series of regional conferences on cultural policies. Discussions at these meetings reflected a need to locate humanity and culture at the heart of the development process, rather than considering development as only economic progress.

The World Conference on Cultural Policies, held in Mexico City in 1982, took stock of the experience acquired in policies and practices in the field of culture and gave new impetus to the worldwide action carried out under UNESCO’s auspices. The conference unanimously adopted the Mexico City Declara-

tion on Cultural Policies, which proclaimed the guiding principles for promoting culture and strengthening the cultural dimension of development.

The World Commission on Culture and Development, under the Chairmanship of former UN Secretary-General Javier Pérez de Cuéllar was set up in December 1992 to focus on interrelations between culture and development in general and cultural policies and development models in particular. The Commission, composed of 12 members and five honorary members, presented its final report at the end of 1995 to the UN General Assembly and UNESCO's General Conference. The Commission's work is centered around five fundamental questions: the impact of cultural and socio-cultural factors on development; the impact of social and economic development on culture; the relationship between culture and models of development; the influence of cultural development on individual and collective well-being; and the role of cultural activities and artistic creativity in development and international cooperation.

### E. Communication, Information, and Informatics

UNESCO is enjoined by its constitution to "collaborate in the work of advancing the mutual knowledge and understanding of peoples, through all means of mass communication." It is also authorized to recommend international agreements to facilitate "the free flow of ideas by word and image" and to encourage the international exchange of persons active in intellectual affairs and the exchange of "publications, objects of scientific interest, and other materials of information."

#### **New World Information and Communication Order (NWICO)**

In the 1970s, developing countries began to express their concern that the world's news media were predominantly Western-controlled. Major syndicated newspapers, press agencies like UPI, Reuters and Agence France Presse, the US networks, the BBC, and the ORTF of France, were seen to be innately biased in their reporting on third world countries. It was felt that those organizations were able to greatly influence public opinion both in their own nations and in the developing countries themselves. The new nations of the UN system called for a New World Information and Communication Order (NWICO) which would allow them greater access to the sources of global information. At that time, UNESCO considered it a constitutional responsibility, and one especially pertinent to communication, to contribute to the removal of imbalances and inequalities in the capacity to produce, disseminate, and receive messages, and to eliminate the obstacles to a wider and better balanced flow of information.

In 1976, following a decision of the General Conference inviting UNESCO to undertake a review of all the problems of communication in contemporary society in the context of technological progress and recent developments in international relations, an international commission was appointed to study communication problems. The commission's recommendations were published by UNESCO in 1980 under the title *Many Voices, One World*. The General Conference considered the commission's report in 1980 and proposed 11 considerations on which a New World Information and Communication Order could be based. It also urged UNESCO "to contribute to the clarification, elaboration and ap-

plication of the concept of a New World Information and Communication Order."

In 1978 the General Conference adopted the Declaration on Fundamental Principles Concerning the Contribution of the Mass Media to Strengthening Peace and International Understanding, to the Promotion of Human Rights and to Countering Racism, Apartheid and Incitement to War. This declaration raised alarm in Western media organizations and governments. The declaration was interpreted as implying controls on press freedom. In later debates some Soviet countries proposed the licensing of journalists. However these proposals were never adopted, and no program of action based on them was ever put into action.

In the belief that high tariffs were an obstacle to the free flow of information, a UNESCO Working Group on Telecommunication Tariffs, established in 1979, recommended special tariffs under a Development Press Bulletin Service and a Conventional Press Bulletin Service to be applied to developing and developed countries, respectively.

The 1980 General Conference urged UNESCO "to contribute to the clarification, elaboration and application of the concept of a New World Information and Communication Order." However, the acrimonious public debate about NWICO had already damaged UNESCO's image in the West, and prompted the United States Congress to insert provisos in its 1982-83 appropriation for UNESCO stating that the funds would be withheld: "if that organization implements any policy or procedure the effect of which is to license journalists or their publications, to censor or otherwise restrict the free flow of information within or among countries, or to impose mandatory codes of journalistic practice or ethics."

Although the General Conference's espousal of NWICO was not cited in the United States' 1984 decision to withdraw from UNESCO (see Membership), concern over the "politicization" it represented was emblematic of the suspicion with which the Western countries (in particular the United States and the United Kingdom) regarded Soviet influence in the developing world. Now that developing nations greatly outnumbered industrialized nations, it was perceived that programs of action could be passed in UNESCO that were contrary to the interests of the West.

In 1989 the General Conference decided, by general agreement, to adopt a "New Strategy" in communication. The objective of this new strategy is "to render more operational the concern of the Organization to ensure a free flow of information at international as well as national levels, and its wider and better balanced dissemination, without any obstacle to the freedom of expression, and to strengthen communication capacities in the developing countries, so that they can participate more actively in the communication process." This last goal is implemented through UNESCO's International Program for the Development of Communication.

In February 1990, UNESCO organized an informal meeting of East-West media representatives to learn more about the needs of an independent press in Eastern Europe and how it could help to meet them. Since then, a number of regional seminars have been held to secure international support for strengthening press freedom and diversity.

**Members of UNESCO (as of 17 March 2005)**

Afghanistan	Ecuador	Madagascar	Sierra Leone
Albania	Egypt	Malawi	Slovakia
Algeria	El Salvador	Malaysia	Slovenia
Andorra	Equatorial Guinea	Maldives	Solomon Islands
Angola	Eritrea	Mali	Somalia
Antigua and Barbuda	Estonia	Malta	South Africa
Argentina	Ethiopia	Marshall Islands	Spain
Armenia	Fiji	Mauritania	Sri Lanka
Australia	Finland	Mauritius	Sudan
Austria	France	Mexico	Suriname
Azerbaijan	Gabon	Micronesia	Swaziland
Bahamas	Gambia	Moldova, Republic of	Sweden
Bahrain	Georgia	Monaco	Switzerland
Bangladesh	Germany	Mongolia	Syrian Arab Republic
Barbados	Ghana	Morocco	Tajikistan
Belarus	Greece	Mozambique	Thailand
Belgium	Grenada	Myanmar	The Former Yugoslav Republic of Macedonia
Belize	Guatemala	Namibia	Timor-Leste
Benin	Guinea	Nauru	Togo
Bhutan	Guinea-Bissau	Nepal	Tonga
Bolivia	Guyana	Netherlands	Trinidad and Tobago
Bosnia and Herzegovina	Haiti	New Zealand	Tunisia
Botswana	Honduras	Nicaragua	Turkey
Brazil	Hungary	Niger	Turkmenistan
Brunei Darussalam	Iceland	Nigeria	Tuvalu
Bulgaria	India	Niue	Uganda
Burkina Faso	Indonesia	Norway	Ukraine
Burundi	Iran	Oman	United Arab Emirates
Cambodia	Iraq	Pakistan	United Kingdom
Cameroon	Ireland	Palau	United Republic of Tanzania
Canada	Israel	Panama	United States

Cayman Islands  
Macau  
Netherlands Antilles  
Tokelau

**The Windhoek and Other Declarations**

In April 1991, UNESCO and the United Nations convened a round table for media professionals in Windhoek, Namibia. Participants assessed the situation of the press in Africa and, on 3 May, adopted the Windhoek Declaration, which declared that “independence, pluralism and diversity” were essential for the media in democracy. The United Nations declared May 3rd, the anniversary of the signing of the Windhoek Declaration, as International Press Freedom Day. UNESCO Director-General Federico Mayor declared in a speech to the World Press Freedom Committee in 1992: “UNESCO is fully committed to the advance of press and media freedom. This means leaving codes of journalistic ethics

and similar issues in the new and emerging democratic systems strictly within the purview of the press and media professionals themselves.” As a follow-up to the Windhoek Declaration, similar regional meetings were held in Almaty, Kazakhstan, in 1992 and in Santiago, Chile, in 1994.

Other similar declarations have been made since Windhoek, notably the Alma Ata Declaration (Kazakhstan, 1992) on promoting independent and pluralistic media in Asia; the Sana'a Declaration (Yemen, 1996) on promoting independent and pluralistic media in the Arab world; and the Sofia Declaration (Bulgaria, 1997), which declared that the move toward democracy in Central and Eastern European states would promote a climate that would

foster independent and pluralistic media. In May 2001, UNESCO celebrated World Press Freedom Day in Windhoek. A conference of journalists, editors, and representatives of NGOs and professional organizations marked the 10th anniversary of the Windhoek Declaration. UNESCO celebrated World Press Freedom Day 2006 (3 May) in Colombo, Sri Lanka.

#### **Communication Technologies for Development**

UNESCO has been particularly concerned with the problem of disparities in communication existing between the developed and developing countries, which the great strides in communication technologies have only served to emphasize. In this field, UNESCO relies on two programs for the implementation of its activities: the International Programme for the Development of Communication (IPDC) and the Information for All Programme (IFAP).

One of the most important ways of improving information flow is by building up the resources of developing countries. The International Programme for the Development of Communication (IPDC), set up in 1980, aims to strengthen the resources of developing countries in terms of both personnel and equipment, to facilitate production and dissemination of news and other programming, thereby diminishing the imbalances that exists in the flow of information. At the 17th session of the IPDC Intergovernmental Council in March 1997, the Council concentrated on the questions of the role, crisis, and problems of media in societies in transition and the role of press freedom and independence of media in democracy. At its 18th session, held in Paris in March 1998, the IPDC decided that its fellowship program would particularly promote young journalists. At the 25th session held in March 2006, the IPDC decided to help fund 78 new media projects.

The General Information Programme (PGI) was launched in 1976 to assist member states, particularly in the developing world, to increase their capacity to gather, organize, diffuse and utilize information. The PGI assists member states in establishing national information policies. It also helps governments recognize the value of public records as a strategic resource for public administration through the Records and Archives Management Program (RAMP). It provides access to knowledge and technical know-how in the treatment of information and research, by training specialists and coordinating information systems in developing countries. It also undertakes the "Memory of the World" project, aimed at safeguarding library collections and archives.

UNESCO's Intergovernmental Informatics Programme (IIP) carries out regional and national activities in its priority areas of training, computer networking, software production, informatics research and development, and national informatics strategies. Among the projects approved by the IIP Bureau in the 1990s were the "Computer network for the countries of the Maghreb—MaghrebNet" and the "Strengthening of the Regional Informatics Network for Eastern Europe—RINEE."

In the 1990s, the Organization reinforced its program in favor of independent and pluralist media, notably through the International Freedom of Expression Exchange Network (IFEX). UNESCO encourages movements towards the liberalization of media in Africa, Asia (including Central Asia), and Central and Eastern Europe, by assisting member states in restructuring their broadcasting systems, preparing appropriate legislation, and training media specialists.

Infrastructural projects supported by the United Nations, UNHCR and professional organizations for peace-building have been carried out in Cambodia, South Africa, and the former Yugoslavia.

#### **Other Activities in Communications**

Many of UNESCO's activities in the field of communications involve extensive data collection, analysis, and dissemination. The *World Communication Report*, a reference tool which focuses on trends in information and communication technologies and their impact on the work of media professionals and on society at large, was published in 1989; an updated version was published in 1996.

An agreement with the International Telecommunication Union (ITU) came into effect in 1993 and a joint study on telecommunication tariffs in the field of education, science, and culture was completed.

UNESCO also prepared the booklet *Island Agenda*, which analyzes the problems facing small island states and the way in which UNESCO's expertise in education, science, culture, and communication can be used to catalyze sustainable development.

In preparation for the Fourth World Conference on Women in Beijing in September 1995, UNESCO organized regional workshops on the theme of women in the media. It equally participated in the "Beijing +5" conference in New York in June 2000. In addition, a World Summit on the Information Society was held in Geneva in December 2003 and in Tunis in November 2005.

#### **F. Agreement on the Importation of Educational, Scientific, and Cultural Materials**

The states that are parties to the Agreement on the Importation of Educational, Scientific, and Cultural Materials and its protocol, adopted by the General Conference of UNESCO at Florence in 1950 and at Nairobi in 1976, respectively, exempt all the following materials from customs duties and any other importation charges: books, newspapers, and periodicals; various other categories of printed or duplicated matter; manuscripts, including typescripts; music; geographical, hydrographic, and astronomical maps and charts, irrespective of language and destination; works of art (paintings, drawings, and sculpture) and antiques, defined as articles more than 100 years old; visual and auditory materials, such as films, filmstrips, microfilms, sound recordings, glass slides, models, wall charts, and posters of an educational, scientific, or cultural character; and scientific instruments and apparatus, under the conditions that they be intended exclusively for educational purposes or pure scientific research, that they be consigned to public or private institutions approved by the importing country as entitled to exemption from customs duty, and that instruments or apparatus of equivalent scientific value not be manufactured in the importing country. Books and other publications for the blind and other materials of an educational, scientific, or cultural character for the use of the blind are also exempt.

#### **G. The UNESCO Coupon Program**

UNESCO coupons are a type of international money order permitting persons living in countries with foreign-exchange restric-

tions to purchase from abroad books and many other articles of a scientific or cultural nature.

A person living in a country that participates in the UNESCO coupon plan who wishes to obtain from another participating country an item covered by the plan buys the required UNESCO coupons, pays for them in local currency at the official UN rate, and mails them abroad without having to go through any formalities. To redeem the coupons, the seller sends them to Bankers Trust Company in New York (for the Americas), the Japan Society for the Promotion of Science in Tokyo (for Asia and the Far East), or to UNESCO's headquarters in Paris (for Europe and Africa). They are redeemed in the seller's national currency at the official UN exchange rate, after the deduction of a handling charge.

#### **H. Encouragement of International Exchanges**

As a means of promoting education, research, and international understanding, UNESCO aids and encourages various forms of exchange between its member states. It acts as a clearinghouse for governments, as well as international organizations, on all questions of exchange; administers its own program of fellowships and

exchange of experts; and promotes study, training, and teaching abroad with the cooperation of governments and organizations.

The principal publication issued by the exchange service is *Study Abroad*, a trilingual publication issued every two years, listing opportunities for subsidized higher education and training abroad through a wide variety of fellowships, scholarships, and educational exchange programs of nearly 3,000 awarding agencies in some 120 different countries and territories.

#### **I. Cooperative Action Program**

UNESCO's Cooperative Action Program (Co-Action) enables individuals and groups to make direct contributions to community development projects such as schools, libraries, and vocational institutions for the disabled in developing countries. An illustrated catalog of selected Co-Action projects describing some of the priority needs and estimated costs is issued by UNESCO.

Direct "people-to-people" relationships are established between donors and recipients that often develop into lasting friendships; the program has special appeal for school groups.

---

# THE WORLD HEALTH ORGANIZATION (WHO)

**BACKGROUND:** In taking the pulse of global health in 1974, WHO member states concluded that despite vaccines, antibiotic drugs, and a host of extraordinary advances in medical technology, the world was far from healthy. There was a “signal failure,” the 27th World Health Assembly concluded, to provide basic services to two-thirds of the world’s population, particularly to rural inhabitants and the urban poor, who, despite being the most needy and in the majority, were the most neglected. That assessment—made 24 years after WHO’s establishment—led to a reorientation of WHO’s outlook and to the adoption of the goal of “health for all by the year 2000” through the approach of primary health care. Although WHO’s great achievement remained the eradication of smallpox, the HIV/AIDS pandemic and a virulent resurgence of preventable diseases like malaria and tuberculosis posed grave challenges to the goal of “health for all” as the 21st century dawned. The main task of WHO since its founding has been to work to ensure that people everywhere have access to health services that will enable them to lead socially and economically productive lives.

---

## CREATION

During the 19th century, waves of communicable diseases swept Europe, accompanying the growth of railways and steam navigation. Yet the first international sanitary conference, attended by 12 governments, was not held until 1851. An international convention on quarantine was drawn up, but it was ratified by only three states. Progress was slow.

The limited objectives of the nations participating in these early conferences also militated against the success of international health efforts. International public health did not come of age until the 20th century. The first international health bureau with its own secretariat was established by the republics of the Americas in 1902—the International Sanitary Bureau. The name was changed in 1923 to the Pan American Sanitary Bureau.

The idea of a permanent international agency to deal with health questions was seriously discussed for the first time at the 1874 conference, but it was not until 1903 that the establishment of such an agency was recommended. By that time, scientific discoveries concerning cholera, plague, and yellow fever had been generally accepted. The agency, known as the Office International d’Hygiène Publique (OIHP), was created in December 1907 by an agreement signed by 12 states (Belgium, Brazil, Egypt, France, Italy, the Netherlands, Portugal, Russia, Spain, Switzerland, the United Kingdom, and the United States). The OIHP was located in Paris, and its first staff consisted of nine persons. Originally a predominantly European institution, the OIHP grew to include nearly 60 countries and colonies by 1914.

World War I left in its wake disastrous pandemics. The influenza wave of 1918–19 was estimated to have killed 15 to 20 million people, and in 1919, almost 250,000 cases of typhus were reported in Poland and more than 1.6 million in the USSR. Other disasters also made heavy demands on the OIHP, which found itself overburdened with work.

Early in 1920, a plan for a permanent international health organization was approved by the League of Nations. United official action to combat the typhus epidemic then raging in Poland was urged by the League’s Council. The OIHP, however, was unable to participate in an interim combined League-OIHP committee. This was partly because the United States, which was not a member of the League, wished to remain in the OIHP but could not if the OIHP were absorbed into a League-connected agency. The OIHP existed for another generation, maintaining a formal relationship with the League of Nations.

The OIHP’s main concern continued to be supervision and improvement of international quarantine measures. Smallpox and typhus were added to the quarantinable diseases by the International Sanitary Convention in 1926. Also adopted were measures requiring governments to notify the OIHP immediately of any outbreak of plague, cholera, or yellow fever or of the appearance of smallpox or typhus in epidemic form.

The League of Nations established a permanent epidemiological intelligence service to collect and disseminate data worldwide on the status of epidemic diseases of international significance. The Malaria Commission was founded and adopted a new international approach: to study and advise on control of the disease in regions where it existed rather than to work out the conventional precautions needed to prevent its spread from country to country. The annual reports of the League’s Cancer Commission on such matters as results of radiotherapy in cancer of the uterus became an important source of international information on that disease. Other technical commissions included those on typhus, leprosy, and biological standardization.

Most of the work of the OIHP and the League’s health units was cut short by World War II, although the *Weekly Epidemiological Record* continued. Fear of new postwar epidemics prompted the Allies to draw up plans for action. At its first meeting in 1943, the newly created United Nations Relief and Rehabilitation Adminis-

tration (UNRRA) put health work among its “primary and fundamental responsibilities.”

At its first meeting, in 1946, the UN Economic and Social Council decided to call an international conference to consider the establishment of a single health organization of the UN. The conference met in New York and on 22 July adopted a constitution for the World Health Organization, which would carry on the functions previously performed by the League and the OIHP.

WHO did not come into existence until 7 April 1948, when its constitution was ratified by the required 26 UN member states. In the meantime, UNRRA was dissolved, and a WHO Interim Commission carried out the most indispensable of UNRRA's health functions. The first WHO assembly convened in June 1948.

Among the severe problems that beset the Interim Commission was a cholera epidemic in Egypt in 1947. Three cases were reported on 22 September; by October, 33,000 cases were reported in widely separated areas on both sides of the Red Sea and the Suez Canal. Urgent calls for vaccine were sent out by the Interim Commission within hours after the first three cases were reported, and by means of a history-making cholera airlift, 20 million doses of vaccine were flown to Cairo from the United States, the USSR, India, and elsewhere, one-third of them outright gifts. The cholera epidemic claimed 20,472 lives in Egypt by February 1948. During the epidemic the number of countries ratifying WHO's constitution increased by almost 50%.

## PURPOSES

WHO's main functions can be summed up as follows: to act as a directing and coordinating authority on international health work, to ensure valid and productive technical cooperation, and to promote research.

The objective of WHO is the attainment by all peoples of the highest possible level of health. Health, as defined in the WHO Constitution, is a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity. In support of its main objective, the organization has a wide range of functions, including the following:

- To act as the directing and coordinating authority on international health work;
- To promote technical cooperation;
- To assist Governments, upon request, in strengthening health services;
- To furnish appropriate technical assistance and, in emergencies, necessary aid, upon the request or acceptance of Governments;
- To stimulate and advance work on the prevention and control of epidemic, endemic, and other diseases;
- To promote, in cooperation with other specialized agencies where necessary, the improvement of nutrition, housing, sanitation, recreation, economic or working conditions, and other aspects of environmental hygiene;
- To promote and coordinate biomedical and health services research;
- To promote improved standards of teaching and training in the health, medical and related professions;
- To establish and stimulate the establishment of international standards for biological, pharmaceutical, and similar products, and to standardize diagnostic procedures;
- To foster activities in the field of mental health, especially those activities affecting the harmony of human relations.

WHO also proposes conventions, agreements, and regulations and makes recommendations about international nomenclature of diseases, causes of death, and public health practices. It develops, establishes, and promotes international standards concerning foods and biological, pharmaceutical, and similar substances.

## MEMBERSHIP

UN members can join WHO by unilateral, formal notification to the UN secretary-general that they accept the WHO constitution. A non-UN member may be admitted if its application is approved by a simple majority vote of the World Health Assembly. Territories or groups of territories “not responsible for the conduct of their international relations” may be admitted as associate members upon application by the authority responsible for their international relations.

As of May 2006, WHO had 192 member states.

## STRUCTURE

The principal organs of WHO are the World Health Assembly, the Executive Board, and the secretariat, headed by a director-general.

### World Health Assembly

All WHO members are represented in the World Health Assembly. Each member has one vote but may send three delegates. According to the WHO constitution, the delegates are to be chosen for their technical competence and preferably should represent national health administrations. Delegations may include alternates and advisers. The assembly meets annually, usually in May, for approximately three weeks. Most assemblies have been held at WHO headquarters in Geneva. A president is elected by each assembly.

The World Health Assembly determines the policies of the organization and deals with budgetary, administrative, and similar questions. By a two-thirds vote, the assembly may adopt conventions or agreements. While these are not binding on member governments until accepted by them, WHO members have to “take action” leading to their acceptance within 18 months. Thus, each member government, even if its delegation voted against a convention in the assembly, must act. For example, it must submit the convention to its legislature for ratification. It must then notify WHO of the action taken. If the action is unsuccessful, it must notify WHO of the reasons for nonacceptance.

In addition, the assembly has quasi-legislative powers to adopt regulations on important technical matters specified in the WHO constitution. Once such a regulation is adopted by the assembly, it applies to all WHO member countries (including those whose delegates voted against it) except those whose governments specifically notify WHO that they reject the regulation or accept it only with certain reservations.

WHO is empowered to introduce uniform technical regulations on the following matters:

- sanitary and quarantine requirements and other procedures designed to prevent international epidemics;

- nomenclature with respect to disease, causes of death, and public health practices;
- standards with respect to diagnostic procedures for international use;
- standards with respect to safety, purity, and potency of biological, pharmaceutical, and similar products in international commerce; and
- advertising and labeling of biological, pharmaceutical, and similar products in international commerce.

The assembly, at its first session in 1948, adopted World Health Regulation No. 1, *Nomenclature with Respect to Diseases and Causes of Death*. This regulation guides member countries in compiling statistics on disease and death and, by providing for a standardized nomenclature, facilitates their comparison. World Health Regulation No. 2 deals with quarantinable diseases.

Each year, the assembly doubles as a scientific conference on a specific topic of worldwide health interest, selected in advance. These technical discussions are held in addition to other business. They enable the delegates, who as a rule are top-ranking public health experts, to discuss common problems more thoroughly than formal committee debates would permit. Governments are asked to contribute special working papers and studies to these discussions and, if practicable, to send experts on the matters to be discussed with their delegations.

#### Executive Board

The World Health Assembly may elect any 32 member countries (the only rule being equitable geographical distribution) for three-year terms, and each of the countries elected designates one person “technically qualified in the field of health” to the WHO Executive Board. The countries are elected by rotation, one-third of the membership being replaced every year, and may succeed themselves. Board members serve as individuals and not as representatives of their governments.

The Executive Board meets twice a year, for sessions of a few days to several weeks, but it may convene a special meeting at any time. One of its important functions is to prepare the agenda of the World Health Assembly. The WHO constitution authorizes the board “to take emergency measures within the functions and financial resources of the Organization to deal with events requiring immediate action. In particular, it may authorize the director-general to take the necessary steps to combat epidemics and to participate in the organization of health relief to victims of a calamity.”

#### Director General and Secretariat

The secretariat comprises the technical and administrative personnel of the organization. It is headed by a director-general, appointed by the World Health Assembly. The first director-general of WHO was Dr. Brock Chisholm of Canada. He was succeeded in 1953 by Dr. Marcolino G. Candau of Brazil and in 1973 by Dr. Halfdan T. Mahler of Denmark. Dr. Mahler served WHO for 15 years and was declared Director-General Emeritus upon his retirement in 1988. Dr. Hiroshi Nakajima of Japan was elected Director General in 1988 and re-elected to a second five-year term

in 1993. Dr. Gro Harlem Brundtland succeeded him in 1998. In 2003, Lee Jong-wook of South Korea became Director General.

WHO is staffed by some 3,500 health and other experts in both professional and general service categories, working at headquarters and in the regional offices. WHO has six regional offices, each covering a major geographic region of the world. These are located in Cairo for the Eastern Mediterranean area, in Manila for the Western Pacific area, in New Delhi for the Southeast Asia area, in Copenhagen for Europe, in Brazzaville for the African area, and in Washington, D.C., where the directing council of the Pan American Health Organization acts as the regional committee of WHO in the Americas.

While all work of direct assistance to individual member governments is decentralized to the regional offices, the Geneva headquarters is where the work of the regions is coordinated and worldwide technical services are organized, including collection and dissemination of information. The headquarters cooperates with the UN, the other specialized agencies, and voluntary organizations and is responsible for medical research.

WHO assistance is given in response to a request from a government. Member governments meet annually in regional committees to review and plan WHO activities for their areas. Requests are consolidated by the regional directors and forwarded to the director-general, who incorporates regional programs and their estimated costs into the overall WHO draft program and budget. The program and budget, after review by the Executive Board, are submitted to the World Health Assembly.

#### BUDGET

For 1949, the first year of WHO's existence, its regular budget amounted to us\$5 million. A regular working budget of us\$951,083,000 was approved by the World Health Assembly for the 2006–07 biennium. Voluntary contributions totaled us\$2,234,021,000. WHO reported that among programs supported were the following: malaria prevention and control; addressing the global AIDS pandemic; control of a resurgence of tuberculosis; fighting cancer, cardiovascular diseases and diabetes, especially in poor and transitional economies; addressing the health and economic aspects of tobacco; maternal health; food safety; mental health; safe blood programs, to fight HIV/AIDS and deal with the growing disease burden among women, children, and accident and trauma victims; and development of effective and sustainable health systems. WHO's emergency and humanitarian relief operations also received additional funds, reflecting the increased demands by the world community on all UN organizations to respond to natural and man-made disasters.

#### ACTIVITIES

Under the global “health for all” strategy, WHO and its member states have resolved to place special emphasis on the developing countries. Nevertheless, the benefits of WHO's international health work are reaped by all countries, including the most developed. For example, all nations have benefited from their contributions to the WHO programs that led to the global eradication of smallpox and to better and cheaper ways of controlling tuberculosis.

Prevention is a key word in WHO. The organization believes that immunization, which prevents the six major communicable

diseases of childhood—diphtheria, measles, poliomyelitis, tetanus, tuberculosis, and whooping cough—should be available to all children who need it. WHO is leading a worldwide campaign to provide effective immunization for all children in cooperation with UNICEF.

Provision of safe drinking water and adequate excreta disposal for all are the objectives of the International Drinking Water Supply and Sanitation Decade proclaimed by the UN General Assembly in 1980 and supported by WHO.

WHO is also active in international efforts to combat the diarrheal diseases, killers of infants and young children. The widespread introduction of oral rehydration salts, together with improved drinking water supply and sanitation, will, it is hoped, greatly reduce childhood mortality from diarrhea.

WHO's program for primary health care comprises eight essential elements:

- education concerning prevalent health problems and the methods of preventing and controlling them;
- promotion of food supply and proper nutrition;
- maintenance of an adequate supply of safe water and basic sanitation;
- provision of maternal and child health care, including family planning;
- immunization against the major infectious diseases;
- prevention and control of locally endemic diseases;
- appropriate treatment of common diseases and injuries; and
- provision of essential drugs.

These eight elements were defined in the Declaration of Alma-Ata, which emerged from the International Conference on Primary Health Care, held in Alma-Ata, USSR, in 1978.

#### A. Disease Research, Control and Prevention

##### **UNAIDS Programme**

The Acquired Immune Deficiency Syndrome (AIDS) pandemic is an international health problem of extraordinary scope and urgency. The mission of UNAIDS is to mobilize an effective, equitable, and ethical response to the pandemic. It strives to raise awareness, stimulate solidarity, and unify worldwide action. UNAIDS works with countries to develop programs to prevent HIV transmission and reduce the suffering of people already affected. It provides technical and policy guidance to governments, other United Nations agencies, and non-governmental organizations. It also promotes and supports research to develop new technologies, interventions, and approaches to AIDS prevention and care. Its inception in 1988 was first as the Global Programme on AIDS. UNAIDS combines the efforts of six other UN system organizations, including UNDP, the World Bank, UNICEF, UNFPA, WHO, and UNESCO. Since January 1996, the joint and co-sponsored UN Programme on HIV/AIDS, or UNAIDS, has been operational to better coordinate fund raising and prevention efforts.

WHO estimated that in 2005 approximately 40.3 million people were living with HIV/AIDS. It was also estimated that during 2005, 4.9 million people (including 700,000 children under the age of 15) became infected. It was estimated that in 2005, 3.1 million adults and children died because of HIV/AIDS. In 2005, approximately 570,000 of these deaths occurred among children.

The total number of deaths worldwide due to HIV/AIDS since the beginning of the epidemic until the end of 2005 was more than 25 million. Of the 40.3 million people living with HIV/AIDS in 2005, 25.8 million (approximately 70%) lived in Sub-Saharan Africa, the region that has been hardest hit by AIDS/HIV.

The disease is caused by a virus which destroys the body's innate capacity to withstand disease (the immune system). As the immune system is weakened, infected persons can no longer resist diseases which cause diarrhea, fatigue, severe weight loss, and skin lesions. Eventually, the AIDS-related illnesses cause death. Persons become infected with the HIV virus by contact with body fluids like semen (during sexual intercourse) or blood (if they receive contaminated blood during a transfusion). Intravenous drug users who share hypodermic needles have been shown to be at great risk for contracting HIV. HIV cannot be transmitted by air or simple touch. The insidious nature of the disease contributed to its silent explosion into the world population, since infected persons do not show signs of infection for as many as six to ten years.

AIDS was already an international epidemic (a "pandemic") by the time it was first recognized in 1981. In late 1983, WHO held the first international meeting on AIDS in Geneva. In February 1987, WHO established its Special Programme on AIDS in order to develop a global strategy for AIDS control, obtain financial resources, and begin implementation of the program. In 1988, the Executive Board renamed it the Global Programme on AIDS (GPA). Today it is known as UNAIDS Programme. The main objectives of the global strategy are:

- to prevent HIV infections;
- to reduce the personal and social impact of HIV infection; and
- to mobilize and unify national and international efforts against AIDS.

The global strategy was updated in 1992 to place increased emphasis on:

- health care for AIDS patients;
- treatment for sexually transmitted diseases;
- improving the status of women in developing countries in order to reduce the risk of infection;
- providing more frank information about AIDS;
- planning for the socio-economic impact of the pandemic;
- overcoming stigmatization and discrimination directed at persons infected with HIV/AIDS.

A World Summit of Ministers of Health on Programmes for AIDS Prevention was held in London in January 1988. The summit proclaimed 1 December as World AIDS Day. In 1989 the World Health Assembly resolved to make World AIDS Day the annual focus for worldwide efforts against AIDS. That same year, WHO established a Global Commission on AIDS to provide the Director General with broad policy and scientific guidance from eminent experts representing a wide variety of disciplines. By the end of 1991, AIDS programs had been established in every WHO member country.

In June 2001, the General Assembly held a Special Session on HIV/AIDS, at which 189 member states adopted a “Declaration of Commitment,” setting forth a plan to establish time-bound targets to which governments and the UN might be held accountable. They included the goal to reduce by 2005 HIV prevalence among young men and women aged 15 to 24 in the most affected countries by 25%, and by 25% globally by 2010. Also, it was hoped that by 2005, an overall target could be reached of annual expenditure on the epidemic of between US\$7 billion and US\$10 billion in low and middle-income countries and those countries experiencing or at risk of experiencing rapid expansion for prevention, care, treatment, support and mitigation of the impact of HIV/AIDS.

On 12 December 2002, a new international alliance, the International HIV Treatment Access Coalition (ITAC), was launched in Geneva and Dakar. It aims to boost efforts to provide access to antiretroviral drugs to the growing number of people with HIV/AIDS in low and middle income countries.

In 2003, the WHO and UNAIDS launched a program called the “3 by 5 Initiative.” It was a global target to provide 3 million people living with HIV/AIDS in low- and middle-income countries with life-prolonging antiretroviral treatment by the end of 2005. It was a step toward the goal of making universal HIV/AIDS prevention and treatment accessible to all who need them as a basic human right.

#### **Tuberculosis**

In April 1993, WHO declared a tuberculosis (TB) global emergency. WHO said that 35 years of neglect by governments, and a linkage to the HIV/AIDS pandemic, had led to a resurgence of the bacillus that causes tuberculosis. In New York City, the incidence of TB rose 150% between 1980 and 1993, prompting WHO to declare a global TB epidemic. The link between HIV/AIDS and tuberculosis, which were fueling each other, was so pronounced that by 1994 WHO called the phenomenon a co-epidemic. The breakdown in health services, the spread of HIV/AIDS, and the emergence of strains of TB that are multidrug-resistant contributed to the worsening impact of the disease. As of 2005, although estimated per capita TB incidence was stable or falling in five out of six WHO regional areas, it was still growing at 0.6% annually. Tuberculosis was killing approximately 1.7 million people a year. Health experts estimated that between 2000 and 2020, nearly one billion people would be newly infected, 200 million people would get sick, and 35 million would die from TB if the disease was not controlled.

Tuberculosis is an age-old killer, traces of which have been found in the lungs of 3,000-year-old Egyptian mummies. It is caused by a bacillus that infects the lungs, forming knobby lesions called “tubercles.” Up until the 20th century it was commonly called “consumption.” Today the bacillus responsible for TB is called *Mycobacterium tuberculosis*. The first diagnostic test was discovered in 1905 and the first vaccine was created in France in 1921. The first antibiotic effective against TB, streptomycin, was discovered in 1944 in the United States. By 1960, chemotherapy for TB was so effective, sanatoria in mountain areas which had been used for more than a century to care for TB patients were closed. TB was presumed dead, at least in the industrialized world: public health measures for TB control were dismantled, and funding for research fell to a trickle. However, multidrug-resistant (MDR)

strains began to flourish as patients being treated with antibiotics neglected to completely finish a course of treatment. In New York City, MDR strains accounted for only 7% of all TB strains in the early 1980s. By 1992, more than one-third of the strains tested were resistant to one drug, and almost one-fifth were resistant to the two main drugs.

WHO contends that the rise of tuberculosis in the industrialized world is linked not only to HIV/AIDS, but also to inadequate funding of international programs to combat tuberculosis in the developing world. The organization has insisted that it will be impossible to control TB in the industrialized countries unless it is sharply reduced in Africa, Asia, and Latin America.

The WHO Tuberculosis Programme aimed to cut the annual death toll from TB from 3 million deaths in 1992 to 1.6 million by 2002, but that goal was not reached. WHO predicts that about US\$100 million needs to be spent each year to provide medicines, microscopes, and a modest infrastructure enabling poor countries to undertake successful tuberculosis programs. WHO reports that in the developing world, a complete cure could cost as little as US\$13 per patient. However, the treatment of a patient with a multidrug-resistant strain of TB in New York City could cost US\$180,000 per patient.

As of 2006, WHO targets were to detect 70% of new infectious TB cases and to cure 85% of those detected. By 2015, WHO aimed to reduce TB prevalence and death rates by 50% relative to 1990, and by 2050, to eliminate TB as a public health problem (1 case per million population). In 2006, the WHO launched the new Stop TB Strategy. The core of this strategy is DOTS, a TB control approach launched by the WHO in 1995. Since then 22 million people had been treated under DOTS-based services.

#### **The Tropical Disease Research Programme**

The UNDP/World Bank/WHO Special Programme for Research and Training in Tropical Diseases (TDR) was set up in 1975 to target malaria, schistosomiasis (bilharzia or “snail fever”), leishmaniasis, African trypanosomiasis (sleeping sickness), American trypanosomiasis (Chagas disease), lymphatic filariasis (which leads to elephantiasis), onchocerciasis (river blindness), and leprosy. Almost 500 million people, nearly all of them in developing countries, suffer from these diseases, which can cause terrible anguish, deformity, and death. At the same time, they cause considerable economic losses and frequently interfere with development projects (particularly water projects such as dams and irrigation schemes, and planned and unplanned forestry).

The death toll from the diseases—particularly among children from malaria in Africa—is expected to double by 2010, possibly reaching four million lives a year, unless radical solutions are found. Population increase, the spread of parasite resistance, mass migrations, environmental disturbance, and disruption of control programs through economic devastation, civil unrest, and wars, all contribute to the tropical disease problem.

TDR has a mandate to:

- Develop new methods of preventing, diagnosing, and treating tropical diseases, methods that would be applicable, acceptable, and affordable by developing countries, require minimal skills or supervision, and be readily integrated into the health services of these countries.

- Strengthen—through training in biomedical and social sciences and through support to institutions—the capability of developing countries to undertake the research required to develop and apply these new methods.

In this work, TDR collaborates closely with WHO's Division of Control of Tropical Diseases (CTD), and with many other WHO programs and outside bodies concerned with tropical disease research and control.

TDR acts to some extent like a research council, supporting investigator-initiated projects selected by peer-review, and to some extent as a pro-active agency commissioning the research required to reach its objectives. A quarter of TDR's funds goes to research capability strengthening (RCS) in developing countries. This RCS work is being increasingly combined with the performance of needed research: "training by doing."

Over the eighteen years of TDR's existence, a large number of drugs, diagnostic techniques, vector control agents, and other products have been developed, and in conjunction with national and international control programs there has been considerable success in applying these to reduce (or potentially reduce) the burden of some of the tropical diseases—notably leprosy, onchocerciasis, and Chagas disease. The other diseases still pose major problems, either globally or regionally.

TDR's research targets, and the appropriate management and decision-making structure to reach those targets was thoroughly reviewed in 1992–93. A new structure, initiated in 1994, gave the program greater focus on priority targets and more flexibility to identify and respond to the practical health and control needs of populations. The structure is divided into three functional areas: basic and strategic research (STR); product research and development (PRD); and research capability strengthening (RCS).

*Basic and Strategic research.* STR activities are divided into three areas, each of which is managed through a steering committee: pathogenesis and applied genomics; molecular entomology; and social, economic and behavioral research. The pathogenesis and applied genomics committee emphasizes using genome information and advances in functional genomics to understand the mechanisms leading to disease and to the survival of parasites and viruses. The molecular entomology committee focuses on malaria and dengue research, aiming to develop ways to replace natural mosquitoes in the wild with mosquitoes that are unable to support the development of malaria parasites or the dengue virus. The third committee supports research to investigate how social, behavioral, political, economic, and health factors affect disease patterns and control.

*Product research and development.* This arm of TDR is divided into three areas. Product discovery focuses on the discovery of new compounds, and the research is managed by a drug research committee and a vaccine research committee. Product development develops molecules to the regulatory approval and registration stage. And diagnostics research and development combines discovery and the development of new diagnostics.

*Research Capability Strengthening.* This program of TDR was established to strengthen the capacity of disease-endemic countries to carry out and sustain research. Specifically, RCS aims to promote and fund research training and institution development, and

increase the participation of developing countries' TDR research and development agenda.

TDR's particular strength is that, as part of the United Nations system, it enjoys a world view of the tropical disease scene and the standing conferred by a lack of partisan or profit-making motivation. These assets explain in large measure TDR's rapid success in creating an international network of over 5000 scientists, which gives it access to a broad range of expertise and scientific disciplines.

Through its WHO connection, TDR has ready access to programs and units working in related fields and—most importantly, with its new focus on the field and on national control programs—to WHO's 192 Member States. TDR can call on government support in endemic regions in order to engage populations and facilities in multi-center field trials rapidly and at very low cost.

### **Leprosy**

Leprosy, also known as Hansen's disease, has been a serious public health problem in the developing countries. But the widespread use of multidrug therapy (MDT) has reduced the disease burden dramatically. In the last 15 years of the 20th century, 10 million leprosy patients were cured, the prevalence rate dropped by 85%, and the number of countries where leprosy remained a public health problem dropped from 122 to 24. The prevalence rate at the global level was reduced to less than one case per 10,000 persons in 2000, and health experts believe there will be a natural interruption of transmission over time and future generations will not contract the disease.

At the end of the 20th century, the prevalence rate at the global level was 1.4 cases per 10,000 people. At the beginning of 2005, the number of leprosy patients in the world was around 286,000, which was a 20% annual decrease in new cases detected globally since 2001. Approximately 410 000 new cases of leprosy were detected during 2004 compared to a peak of 804 000 in 1998. At the beginning of 2005, 290,000 cases were undergoing treatment. In nine countries in Africa, Asia and Latin America, leprosy is still considered a public health problem; these countries account for about 75% of the global disease burden. Intensive efforts are still needed to reach the leprosy elimination target in five countries: Brazil, India, Madagascar, Mozambique, and Nepal.

In order to eradicate leprosy, WHO stated that political commitments needed to be strengthened in countries where leprosy remained a public health problem. Additionally, it said that strong leadership by ministries of health was absolutely necessary, particularly in some of the major endemic countries. Finally, the organization estimated that US\$100 million was needed for the period 2000–05, of which US\$54 million had been pledged through 1998.

### **Malaria**

As of 2002, WHO reported that malaria was a public health problem in more than 90 countries, inhabited by a total of some 2.4 billion people or roughly 40% of the world's population. At the time, worldwide prevalence of the disease was estimated to be approximately 300 clinical cases a year, with more than 90% of the cases occurring in sub-Saharan Africa. Up to 30% of malaria deaths in Africa occur in the wake of war. Of those contracting the disease, an estimated 100,000 die each year, with the majority of deaths occurring among young African children. WHO stated that other

high-risk groups were pregnant women, and non-immune travelers, refugees and other displaced persons, and workers entering endemic areas.

Malaria has been a priority for WHO since its founding in 1948. Control activities are coordinated by WHO's Programme on Communicable Diseases (CDS). The four basic technical elements of WHO's global control strategy are: provision of early diagnosis and prompt treatment for the disease; planning and implementation of selective and sustainable preventive measures; early detection for the prevention or containment of epidemics; and, strengthening local research capacities to promote regular assessment of malaria situations, in particular the ecological, social and economic determinants of the disease.

In 1992, WHO convened a Ministerial Conference on Malaria in Amsterdam which was attended by health leaders from 102 countries and representatives of United Nations bodies and non-governmental organizations. The conference endorsed a global malaria control strategy. WHO planned to implement control programs in 90% of the countries affected by the disease no later than 1997. The target was to reduce mortality by at least 20% between 1995 and 2000.

WHO has published many books in support of its fight against malaria, including: *A Global Strategy for Malaria Control*, *Basic Malaria Microscopy*, *Parasitic Diseases in Water Resources Development*, and books in many languages on the diagnosis and treatment of malaria.

#### **Smallpox**

The eradication of smallpox is among the finest achievements of WHO, which coordinated the international effort to combat this disease. It is the first time in history that a human malady has ever been totally eliminated. This became feasible because the virus causing the disease was transmitted only by direct human contagion; there were no animal reservoirs or human "carriers." Victims of the disease were immune to further attacks, while successful vaccination at three-year intervals gave essentially complete protection.

Eradication was based on a twofold strategy of surveillance containment and vaccination. Rapid detection of cases, their immediate isolation, and the vaccination of anyone with whom the patient could have come in contact during the infective period, lasting about three weeks after the onset of rash, prevented further transmission. Implementation of these procedures, coupled with the basic immunity level attributable to routine immunization, resulted in the eradication of smallpox everywhere in the world.

Although a global program of eradication was initiated in 1959, it was not until 1967, when a special WHO budget with increased bilateral and multilateral support was prepared, that a definitive target date of 10 years was set for global eradication. By the end of 1977, this goal was achieved.

In 1967, 131,776 cases of smallpox were reported from 43 countries, 31 of which were classified as smallpox-endemic; however, the actual number of cases was estimated to have been between 10 million and 15 million, among whom possibly 1.5 to 2 million died. Since that time, WHO has convened many international commissions which certified smallpox eradication in 79 recently endemic countries. The global eradication of the disease was declared by the World Health Assembly in 1980. By 1985, all WHO

member states had discontinued routine smallpox vaccination, and no country required smallpox vaccination certificates from international travelers.

By 1993, the complete nucleotide sequence of the genomes of several strains of the virus had been determined, fulfilling the requirements set in 1990 for the final destruction of the remaining stock of variola virus. On 9 September 1994, an expert committee agreed that the destruction of the remaining clinical specimens of variola virus should take place on 30 June 1995, after confirmation by the May 1995 meeting of the World Health Assembly. The committee also recommended that 500,000 doses of smallpox vaccine be kept by WHO in case of an emergency and that the vaccine seed virus be maintained in the WHO Collaborating Centre on Smallpox Vaccine in Bilthoven, Netherlands.

In the wake of the 11 September 2001 terrorist attacks on the United States, many countries began to take definitive steps toward preventing such attacks, including those that might come from biological weapons. Five people in the United States died as a result of anthrax sent through the U.S. postal system in late 2001. Those events led to concern about the possibility of smallpox being used as a biological weapon. After UN Security Council Resolution 1441 was passed on 8 November 2002, calling on Iraq to immediately disarm itself of all weapons of mass destruction (nuclear, biological, and chemical), and to allow UN and IAEA weapons inspectors to enter the country, the United States announced a policy of smallpox vaccination. Smallpox vaccinations were given to select groups of Americans, including 500,000 military personnel and 500,000 civilian health care workers. The vaccine given to this population was the same as that used to eradicate smallpox as of 1980. Once a new vaccine was to be manufactured and licensed, it would be made available free to Americans who want it.

In 2002, the WHO announced that an approximate 200 million smallpox vaccine doses were available around the world, in addition to new purchases made by the United States. Much of the vaccine was old, frozen for several decades, but new types had been produced. Countries seen as likely terrorist targets were undertaking precautions against possible smallpox attacks. In 2002, they included Australia, which bought 50,000 doses of smallpox vaccine, and dedicated US\$11.4 million to anti-bioterrorism measures; Israel, which offered 15,000 emergency workers voluntary smallpox inoculations in 2002, and stated it had enough vaccine for everyone in the country, including the West Bank and Gaza; the United Kingdom, which announced it had plans to vaccinate emergency workers and to stockpile vaccine; Germany, which asked its states to buy smallpox vaccine for every resident, and itself purchased 6 million doses in 2002 (enough to vaccinate 24 million individuals when diluted); and Japan, which by 2002 spent US\$47.5 million on bioterror preparations, and planned to obtain 10 million smallpox doses by 2003.

#### **Cholera**

In 1961, cholera caused by *Vibrio cholerae* 01 *El Tor* began to spread from its endemic locations and gradually invaded practically all countries in the Western Pacific and Southeast Asia regions, most of which had been free from cholera for many years. Cholera continued to spread westward, reaching Pakistan, Afghanistan, Iran, and Uzbekistan (USSR) in 1965 and Iraq in 1966. In 1969 and 1970, it created great problems in the Middle

East, North and West Africa, and Europe and has since spread to most countries of Africa, becoming endemic in many of them. Its spread has been facilitated by the fact that most of the persons who come in contact with *El Tor vibrio* become mild cases or carriers of the disease. Between 1984 and 1990, reported cases of cholera had increased from 28,893 to 70,084, a 142% increase. By 1991, cholera had completed its spread around the globe and appeared in Latin America for the first time in this century. Extensive epidemics also recurred in Africa. In 1991, reports received by WHO indicated that 594,694 people contracted cholera, and of that number, 19,295 people died, more than in the previous five years combined.

Numerous field and laboratory studies showed that the control measures were not sufficiently effective. The anticholera vaccines in use, when tested in controlled field trials, were shown to protect at most about half the persons vaccinated and for less than six months. Some vaccines provided no protection at all.

In view of these findings, WHO intensified its research activities in improving treatment and vaccines; it also worked to reinforce the ability of governments to face the problem of cholera within the framework of control programs directed against diarrheal diseases in general.

A simple and inexpensive oral-rehydration treatment, proven effective in the 1970s for all acute diarrhea, has made cholera treatment substantially easier. As most of the cases of *El Tor vibrio* cholera cannot be differentiated from other diarrheal diseases on clinical grounds, WHO has developed a comprehensive and expanded program for the control of all diarrheal diseases, including cholera.

In April 1991, WHO created a Global Task Force on Cholera to strengthen global control efforts and improve preparedness. A new strain *Vibrio cholerae* O139 emerged in the period 1992–93, causing new epidemics and largely replacing *El Tor vibrio*. Reinforced efforts around the globe brought the disease under control during the 1990s: In 1998, the number of new cases dropped to 293,121, of which 10,586 died; in 2000, the raw figures decreased again—to some 140,000 cases resulting in approximately 5,000 deaths. Africa accounted for 87% of these cases. In 2004, a total of 56 countries reported to the WHO 101,383 cases and 2,345 deaths.

#### **Other communicable diseases**

WHO continues to monitor and sponsor research on influenza, viral hepatitis, arthropod-borne viruses, yellow fever, Japanese encephalitis, bubonic plague, meningitis, Legionellosis, and streptococcal infections.

#### **Diseases Transmissible Between Animals and Man (Zoonoses) and Related Problems**

Since its inception, WHO has been developing veterinary public health programs in cooperation with its member states. In the 1970s, WHO's veterinary public health program was reoriented toward more direct collaboration with member states in the development of national and intercountry programs in which zoonoses and food-borne disease control receive the highest priority. This action was justified because these diseases have become increasingly prevalent in many countries mainly as a result of the following factors: the greatly expanded international and national trade in live animals, animal products, and animal feedstuffs, which facilitates the spread of infection; the growth of urbaniza-

tion, coupled with the increased numbers of domestic and half-wild animals living in close association with city populations, which exposes more people to zoonoses; and changing patterns of land use, such as irrigation, together with new systems of animal farming, which may lead to changes in the ecology that disseminate and increase animal reservoirs of zoonoses.

The 1978 World Health Assembly adopted a resolution on "prevention and control of zoonoses and food-borne diseases due to animal products" in which member states were invited to formulate and implement appropriate country-wide programs for the control of zoonoses; to strengthen cooperation between national veterinary and public health services in improving the surveillance, prevention, and control of these diseases; and to collaborate further in ensuring the appropriate development of zoonoses centers. The resolution also requested the director-general of WHO to continue development of national, regional, and global strategies and of methods for the surveillance, prevention, and control of zoonoses, and to promote the extension of the network of zoonoses centers in all regions so that the necessary support could be provided to country health programs dealing with these diseases.

WHO cooperates with member states in planning, implementing, and evaluating their national zoonoses and food-borne disease control programs. WHO centers, such as those in Athens (Mediterranean Zoonoses Control Center) and Buenos Aires (Pan American Zoonoses Control Center), play an increasing role in direct collaboration with countries and in organizing intercountry technical cooperation.

#### **Global Epidemiological Surveillance**

In the *Weekly Epidemiological Record*, WHO publishes notes on communicable diseases of international importance and information concerning the application of international health regulations. In the past, the publication was chiefly a summary of the weekly or daily notifications of diseases under the regulations, with declarations of infected areas or of freedom from infection when attained. It then became the vehicle for timely reports, narrative summaries, and interpretative comments on a variety of communicable disease topics. Annual, semiannual, or quarterly summaries are published on major trends in diseases and on special programs, such as those on malaria and AIDS. Data from special surveillance programs, such as the global influenza program, the European program for salmonella, and dengue-hemorrhagic fever surveillance, are summarized and published at appropriate intervals. The *Weekly Epidemiological Record* also communicates important changes in international health regulations and policies of member states.

#### **Global Programme for Vaccines and Immunization**

Immunization, one of the most powerful and cost-effective weapons of disease prevention, remains tragically underutilized. Preventable diseases such as neonatal tetanus and poliomyelitis, which have been virtually eliminated in most of the developed world, continue to take a heavy toll in developing countries. Measles, whooping cough, diphtheria, and tuberculosis are serious health threats to children in developing countries, causing blindness, deafness, and even death. In 1993, WHO reported that 8 million children were dying annually in developing countries from

viral and bacterial illnesses, and 900 million were becoming severely ill.

*The Expanded Programme on Immunization (EPI)*. In 1974, with the help of UNICEF, UNDP, national donor agencies, and voluntary agencies, WHO initiated the Expanded Programme on Immunization, with the goal of providing immunizations for all children of the world by 1990.

In 1974, it was estimated that immunization coverage in the developing world was less than 5%. By 1987, coverage of children in developing countries in their first year of life with one dose of BCG and measles vaccines and three doses of DPT and poliomyelitis vaccines was reported to be between 45% and 55%. That level of immunization coverage was preventing over 1 million deaths and almost 200,000 cases of paralytic poliomyelitis a year in the developing world. In its coordinating role, WHO gave priority to the managerial training of health workers and the development of cold-chain systems in order to provide for the establishment of vaccine delivery mechanisms capable of achieving high coverage of susceptible populations with vaccines known to be safe and effective. WHO estimated that in 1990 alone, immunization programs reached more than 100 million infants each year, and saved 3.2 million children annually from measles, neonatal tetanus and pertussis. However, approximately 2.1 million children were still dying each year from the preventable diseases included in the EPI. Little progress had been made in extending coverage to hard-to-reach populations, and coverage in Africa had even begun to decline.

In 1993, WHO, UNICEF, UNDP, the World Bank, and the Rockefeller Foundation founded the *Children's Vaccine Initiative (CVI)*. The Initiative undertook the research and development of a heat-stable oral poliomyelitis vaccine, a single-dose tetanus toxoid vaccine, and an improved measles vaccine which could be given earlier in life. In 1994, the EPI and the Children's Vaccine Initiative were merged into the *Global Programme for Vaccines and Immunization (GPV)*, which also took over the activities of the WHO/UNDP Programme for Vaccine Development. The GPV was established to sustain the accomplishments of the EPI and the CVI, to achieve the goals for immunization and disease control set by the World Health Assembly and the World Summit for Children, and to add new and improved vaccines as they become available.

By 1999 the Global Programme for Vaccines and Immunization became the Department of Vaccines and Biologicals. Based on World Health Assembly targets, three major objectives were defined for the department: (1) innovation, including facilitating the development of new vaccines, simplifying immunization, and accelerating the introduction of new or improved vaccines (pneumococcal, Hib, rotavirus, and hepatitis B vaccines were given top priority); (2) establishing immunization systems, including increasing coverage to 90%, strengthening the system for epidemiological surveillance, and assuring the safety of vaccines; and (3) accelerated disease control through the eradication of polio by 2000, reducing measles cases by 90%, eliminating neonatal tetanus, and eliminating vitamin-A deficiency.

In June 2002, the European Region of the WHO was certified "polio free." That region included 870 million people living in 51 member states, stretching from Iceland to Tajikistan, and including the Russian Federation. Despite this achievement, the Polio Eradication Initiative faced an increase in global cases in 2002

over 2001. In 2002, 1,919 cases were reported compared to 483 in 2001. This increase was attributed to an epidemic in India, and a further increase in cases in Nigeria.

On 20 November 2002, the *State of the World's Vaccines and Immunization* report was launched, which highlights the importance of immunization as one of the most effective public health initiatives, and advocates for international support to speed progress for child health and disease control in developing and industrialized countries. The report examines the progress made in the field of immunization, and outlines the vaccines research agenda for the 21st century. It also offers policy options for promoting investment into immunization systems.

## B. Prevention and Control of Noncommunicable Diseases

### Cancer

Cancer, a noncommunicable disease, has been ranked as the second or third main cause of death globally among persons who survive the first five years of life. Contrary to the general belief that cancer occurs mainly in the industrialized world, it is estimated that more than half of all cancer patients today are in developing countries. By the year 2015, the annual figure is expected to reach 15 million cases, and by 2020, 20 million new cases. Some 70% of these are expected to occur in developing countries, which, as of the late-1990s, together had less than 5% of the resources for cancer control. Dramatic increases in life expectancy, combined with changes in lifestyles, were expected to lead to global epidemics of cancer and other chronic, non-communicable diseases. In 1997 alone, cancer claimed more than 6 million lives, or 12% of all deaths worldwide, and these figures continued to rise through the end of the decade.

Cancer Strategies for the New Millennium, an international conference, was convened in London in October 1998. It was attended by more than 100 professionals from 26 countries. At the event, WHO Cancer Programme chief Karol Sikora said action was needed from national governments working in close partnership with the private sector. WHO announced plans to work to reduce the global incidence of cancer by five million per year and reduce mortality by six million per year by 2020. "It's imperative that the private sector play its part since resources have become overstretched and the lives of millions of people are seriously at risk. Together, we can make a difference," said Sikora. WHO Director-General Dr. Gro Harlem Brundtland added that these goals were attainable given new strategies that are aimed at an integrated approach to cancer prevention, early detection, curative treatment, and palliative care. At the core of these strategies is the "cancer priority ladder," which provides internationally accepted priorities for developing effective national control program. The steps of the ladder include tobacco control, a curable cancer program, a healthy eating program, effective pain control, referral guidelines, clinical care guidelines, nurse education, a national cancer network, clinical evaluation, a clinical research program, a basic research program, and an international aid program. WHO said it would support such efforts by offering to its 191 member states a comprehensive program of expertise, channeled through national ministries of health and health departments.

The International Agency for Research on Cancer, located in Lyons, France, is associated with WHO and conducts research on

identification of carcinogenic factors in the environment, as well as lifestyle factors in cancer development.

#### **Cardiovascular Diseases**

*The MONICA Project.* WHO coordinated the Monitoring of Trends and Determinants of Cardiovascular Diseases (MONICA) which was established in 1979 and became operational in 39 collaborating centers located in 26 countries in October 1984. The MONICA project was the largest collaborative epidemiological study of these diseases ever carried out. It followed 25 million people between 25 and 64 years of age over a 10-year period, collecting data on coronary deaths, non-fatal heart attacks, coronary risk factors, and coronary care. By 1993, the main results from the MONICA study were: cross-sectional comparisons of risk factor levels; relations between various risk factors; five-year trends in risk factors; acute coronary care; medical services; cross-sectional comparisons of incidence rates for stroke; and management of stroke around the world. Several optional studies are being carried out in connection with MONICA on nutrition, anti-oxidant vitamins, polyunsaturated fatty acids, physical activity and psychosocial studies, and drug monitoring.

The MONICA data center was established at the National Public Health Institute in Finland, and prepared the data collection instruments and methodology for the study. It receives and analyzes the data collected. In 1993 the MONICA study entered its final stage of data collection. The final results of the study were made available in 1998 and were made accessible online at [www.ktl.fi/monica](http://www.ktl.fi/monica).

#### **Substance Abuse**

*Tobacco Use.* Cigarette smoking is one of the principal preventable causes of premature mortality and ill health, particularly in industrialized countries but also in developing countries, where it is spreading. As of 2006, more than 1 billion people in the world smoked, or 1 in 3 adults. According to WHO estimates, there are 5 million deaths a year from tobacco, a figure expected to rise to about 10 million by the 2020s or early 2030s. By that date, based on smoking trends, tobacco was predicted to be the leading cause of disease burden in the world, causing about one in eight deaths. Seventy percent of those deaths were expected to occur in developing countries. Smoking has been shown to be linked with circulatory complications in women using oral contraceptives, cause lower body weight in newborns of smoking mothers, decrease male and female fertility, and be associated with cancers of organs other than the lungs. Passive smoking causes a higher frequency of upper respiratory tract infections in children exposed to tobacco smoke. In adults, it is associated with a significantly higher risk of lung cancer among exposed nonsmokers. Tobacco chewing causes cancer of the mouth.

Tobacco use is considered as a dependence disorder in WHO's International Classification of Diseases. WHO has taken the lead in international action to stem the spread of smoking and its harmful health consequences. It collaborates with numerous national smoking and health associations around the world, as well as with nongovernmental organizations and other UN agencies. WHO collaborating reference centers assist in analyses of toxic components of cigarettes. Seminars and conferences muster scientific knowledge and political support.

In 1988, the World Health Assembly declared 31 May as a "World No Tobacco Day" to focus public attention and recognize contributions to healthy life-style free from tobacco use. In 1989 the WHA approved a plan of action on a program called "Tobacco or Health." The program promoted national tobacco control programs; provided advocacy and information services; and acted as a clearinghouse for activities in the field.

To improve the global response to tobacco as an important health issue, in July 1998, WHO Director-General Dr. Gro Harlem Brundtland established the Tobacco Free Initiative (TFI). The long-term mission of global tobacco control is to reduce smoking prevalence and tobacco consumption in all countries and among all groups, thereby reducing the burden of disease caused by tobacco. In support of this mission, the stated goals of the TFI are to: strengthen global support for evidence-based tobacco control policies and actions; build new partnerships and reinforce existing partnerships for action; heighten awareness of the social, human and economic harm of tobacco in all sectors of society, and the need to take comprehensive actions at all levels; accelerate national, regional, and global strategic planning, implementation and evaluation; commission policy research to support rapid, sustained, and innovative actions; mobilize adequate resources to support action; integrate tobacco into the broader agenda of health and development; and facilitate the development of an effective Framework Convention for Tobacco Control and related protocols. In achieving these goals, WHO stated that TFI would build strong internal and external partnerships with each WHO cluster and regional and country offices, and with a range of organizations and institutions around the world. WHO has also been instrumental in heightening awareness of World No-Tobacco Day (May 31 each year).

*Alcohol and Drug Abuse.* WHO is the executing agency for the United Nations Fund for Drug Abuse Control. In collaboration with the International Narcotics Control Board and the United Nations Division of Narcotic Drugs, WHO has prepared guidelines on drug-abuse reporting systems that give special attention to data on health, to complement the law enforcement data that are traditionally gathered. In 1991, WHO held an Inter-regional Meeting on Alcohol-Related Problems in Tokyo, which recommended a number of actions to reduce alcohol dependence in member states. In the 1992/93 biennium, the Abuse Trends Linkage Alerting System (ATLAS) was set up to gather health-related data from a variety of sources in order to assist in mobilizing efforts to reduce demand for dependence-producing substances. In 1993, WHO supplied global data on substance abuse for the World Bank's publication of *World Development Report 1993: Investing in Health*.

To better lead the fight against substance abuse, WHO established a Substance Abuse Department (SAB), which promoted the agency's "health for all" concept by working to reduce the incidence and prevalence of substance abuse. In the 1990s SAB began developing programs, coordinating research, and working with existing health departments and other organizations to curtail demand for alcohol and drugs (psychoactive substances). SAB placed emphasis on intervention research on the effects of urbanization and drug abuse among young people; developing a global database of model program and best practices; strengthening country capacity to reduce alcohol abuse; and reducing HIV/

AIDS-associated risks and consequences of substance abuse. In 2000, the Substance Abuse Department was merged with the Department of Mental Health (see “Mental Health” below) to form the Department of Mental Health and Substance Dependence.

### C. Primary Healthcare and Health Building

#### Family Health

“Health for all” requires that special attention be paid to specific population groups whose health and welfare have profound social, demographic, and economic implications for society. The health of mothers and children is particularly important because of the special biological and psychosocial needs inherent in the rapid process of human growth, needs which must be met in order to ensure the survival and healthy development of the fetus and the child, as well as to maintain the health and development of the mother. The health of young people is also important, since the energy and idealism of youth are important resources that can be channeled to the benefit of their societies.

WHO assists governments in the application of preventive, curative, and rehabilitative measures aimed at promoting and protecting the health of women and children and at strengthening the role of all family members in health care and child rearing. WHO's primary approaches are the following: (1) to identify the extent and nature of the major health needs of mothers, children, and young people; (2) to develop and adapt methods for the promotion of healthy behavior and the protection of women, children, and adolescents during vulnerable periods of rapid physiological and social changes, particularly relating to reproduction; (3) to provide technical guidance in the planning, management, and evaluation of preventive and curative programs of maternal and child health, including family planning; (4) to introduce and adapt training approaches for improving knowledge and skills in interpersonal and group communication and counseling, the health rationale for family planning, and innovative maternal and child health/family planning technologies; (5) to disseminate information on the health needs of women, children, and adolescents and on new ways of addressing those needs; (6) to identify and support research in basic clinical and applied aspects of pediatrics, adolescent medicine, gynecology and obstetrics, social psychology, and health systems; (7) to collaborate in the activities of national and international organizations concerned with maternal and child health/family planning and young people; and (8) to contribute to the development of intersectoral policies and programs.

In 1992, the World Health Assembly established the Global Commission for Women's Health (GCWH). The commission is composed of eminent persons from different professional fields and acts as an advisory body to the Directory General, providing independent scientific and technical advice on policies and strategies relating to women's health. The commission meets once a year.

At the commission's fifth meeting, in February 1997, US First Lady Hillary Rodham Clinton joined the GCWH in setting out a comprehensive agenda on the issue of maternal morbidity: According to WHO, the annual global estimated toll is close to 600,000 deaths (one woman dying every minute of every day) and eight million cases of disability from pregnancy-related causes. The GCWH dedicated itself to future advocacy to ensure that the tragedy of women dying in childbirth was not ignored. The First

Lady noted WHO's progress in women's health made since 1995's Beijing World Conference on Women. The Platform for Action, adopted by the Beijing Conference, highlighted the need to ensure universal access to appropriate, affordable and quality health care and services for women and girls as one of the 12 critical areas of concern requiring urgent attention by governments and the international community.

The agenda for women's health was furthered at the Beijing+5 conference, “Women 2000: Gender Equality, Development and Peace for the Twenty-first Century,” held June 2000 in New York City. Among the topics that were discussed at the forum were death during childbirth, HIV/AIDS and other sexually transmitted diseases, women in control of their own fertility, and malnutrition.

#### Reproductive Health

In 1993, the WHO Global Policy Council approved the following definition of reproductive health to provide a basis for action in this field. “Within the framework of WHO's definition of health as a state of complete physical, mental and social well-being, and not merely the absence of disease or infirmity, reproductive health addresses the reproductive processes, functions, and system at all stages of life. Reproductive health implies that people are able to have a responsible, satisfying, and safe sex life and that they have the capability to reproduce and the freedom to decide if, when, and how often to do so. Implicit in this last condition are the right of men and women to be informed of and to have access to safe, effective, affordable, and acceptable methods of fertility regulation of their choice, and the right of access to appropriate health care services that will enable women to go safely through pregnancy and childbirth and provide couples with the best chance of having a healthy infant.”

#### Nutrition

In addition to developing criteria and norms for assessing nutritional status, WHO strives to strengthen the capacities of countries to assess and evaluate their nutritional problems and associated factors and to develop and implement sectoral strategies to deal with the causes of those problems. Increasing the awareness of the world community of those problems for which solutions have been designed and tested has resulted in a significant increase in national programs to control iodine-deficiency disorders and vitamin A deficiency. At the same time, improvements in factors that have an influence on nutrition, such as disease prevention and management, food production, and education, have resulted in a decreased prevalence of undernutrition.

The International Conference on Nutrition, held in Rome in December 1992, was the culmination of more than two years' joint effort by WHO and FAO to promote awareness of the extent and seriousness of nutritional and diet-related problems. The conference was attended by more than 1,300 people representing 159 governments and some 160 international and nongovernmental organizations. The conference adopted the *World Declaration and Plan of Action for Nutrition* which declared its determination to eliminate hunger and reduce all forms of malnutrition, and called on the United Nations to declare an International Decade of Food and Nutrition. The conference attendees estimated that 780 million people in developing countries do not have access to enough food to meet their daily needs. It reaffirmed the right of women and adolescent girls to adequate nutrition. The conference set

ambitious goals of eliminating famine and famine-related deaths by the end of the decade and reducing starvation and widespread chronic hunger, especially among children, women, and the aged. It also called for the total elimination of inadequate sanitation and poor hygiene, including unsafe drinking water. Governments were urged to promote national plans of action based on the strategies developed at the conference and to allocate the financial and human resources needed to implement the necessary programs. In its report, the conference referred to the nutritional goals set by the Fourth United Nations Development Decade and the World Summit for Children.

In 1995, WHO reported that 31% of the world's children under the age of five who live in developing countries were underweight. A 1994 report urged member nations to implement the International Code of Marketing of Breast-milk Substitutes, adopted by the WHA in 1981, to protect women in developing world from being manipulated into feeding their infants breast-milk substitutes, a practice which had been shown to put infants at risk. A wide range of illnesses and nutrition-related disorders are prevented by breast-feeding children. WHO considers direct advertising of infant formula to mothers with infants in the first four to six months of life singularly inappropriate. The 1994 report stated that large sums were being spent misguidedly to provide breast-milk substitutes to the countries of Central and Eastern Europe within the context of food aid programs. The report noted that an adequate diet is more crucial in infancy than at any other time of life because infants have a high nutritional requirement in relation to body weight. Faulty nutrition during the first months has been proved to influence future health and development.

At the end of the century, WHO reported that overall progress in reducing protein-energy malnutrition among infants and young children was "exceedingly slow," and that the year-2000 goal of a 50% reduction in 1990 prevalence levels would not be met. This projected goal aimed at reducing global malnutrition by only 14.3% (89.8 million) in malnourished children under 5 years of age. In the year 2000, WHO reported an estimated 26.7% of the world's children under age 5 (149.6 million children) were still malnourished when measured in terms of weight for age. Nevertheless, this clearly represented significant progress when compared with the 31% who were underweight in 1995 and the 37.4% (accounting for 175.7 million children) who were malnourished in 1980. Geographically, more than 70% of children who suffer from protein malnourishment live in Asia, 26% in Africa and 4% in Latin America and the Caribbean. In 2006, one out of four preschool children suffered from under-nutrition, which can severely affect a child's mental and physical development. One out of three people in developing countries were affected by vitamin and mineral deficiencies.

#### **Rehabilitation of the Disabled**

Since the early 1950s, WHO has had a program for rehabilitation of the disabled. The program was initially set up to increase awareness of the problems faced by war veterans and to stimulate governments to provide increased services for this group.

During the 1970s, the program was reoriented to promote rehabilitation in developing countries. A new policy was accepted by the World Health Assembly in 1976, making rehabilitation part of primary health care services. WHO then developed a whole series

of teaching-training materials to be used at the community level. All of this material has been published in a manual entitled *Training in the Community for People with Disabilities*.

The basic idea governing the program is that training for disabled people can be successfully given by family members, under the guidance and supervision of a local health worker. Referral services are needed for some 30%, mostly for short-term interventions. The program stresses the importance of involving the family and community in rehabilitation.

New plans concentrate on development of the personnel needed for providing community-based rehabilitation services at the community and district levels. The aim is to broaden the population coverage so that most people with disabilities will have access to at least the essential services.

#### **Occupational Health**

WHO's Occupational Health Program has four main aims: (1) health protection of the underserved working populations who constitute the bulk of the economically productive persons in developing countries; (2) strengthening of general health services through the application of occupational health technologies and approaches; (3) workers' participation in their health care delivery systems; and (4) development of occupational health science, technology, and practice.

The program incorporates identification and control of "work-related diseases," recognition of neurobehavioral changes from occupational exposure to health hazards, control of occupational impairment in reproductive functions and other delayed effects and of adverse occupational psychosocial hazards, and the application of ergonomics as a factor in health promotion. WHO cooperates with countries in the development of their institutional framework for the health care of working people. Special attention is given to occupational health concerns of employed women, children, the elderly, migrant workers, and other groups.

#### **Environmental Health**

Safe drinking water, proper community sanitation (sewage disposal systems), rural and urban development, and housing standards are among the priorities of WHO's environmental health program. Many of WHO's projects in this area are carried out in collaboration with other United Nations agencies, including UNICEF, the World Bank, UNDP, and FAO.

Beginning in 1986, WHO sponsored a series of international consultations on cost recovery in community water supply and sanitation. Its *Guidelines for Drinking-water Quality* have been applied in developing countries. WHO has studied the technical aspects of wastewater reuse in agriculture and collaborated with UNEP, the World Bank, and FAO in formulating guidelines and defining strategies for safe wastewater reuse in agriculture.

WHO is also concerned with prevention and control of environmental pollution, and has produced technical manuals on the disposal of hazardous waste. The WHO/ILO/UNEP International Programme on Chemical Safety (IPCS) was established in 1980. It provides information on the risks to human health and the environment of potentially toxic chemicals, and guidance in the safe use of chemicals. The IPCS was designated by UNCED as the nucleus for international cooperation on environmentally sound management of toxic chemicals.

In 1992, the WHO Commission on Health and the Environment published *Our Planet, Our Health*, one of several documents that served as the basis of WHO's contribution to the United Nations Conference on Environment and Development (the Earth Summit) held in Rio de Janeiro in June 1992. The WHO endorsed a new global strategy for health and environment based on the Commission's recommendations. In August and September 2002, the UN hosted a World Summit on Sustainable Development (WSSD) in Johannesburg, South Africa, as a 10-year follow-up to the 1992 Earth Summit. The WHO's contributions to WSSD focused on both overall, long-term benefits for social, economic, and environmental development that resulted from investment in people's health, and on the health aspects of specific issues on the summit's agenda. Its emphases included:

- The positive impact of health both as a good in its own right and as a means of advancing economic development and poverty reduction.
- The direct impact of environmental degradation and unsustainable use of natural resources on people's health, as well as the indirect impact on the livelihoods (and, therefore, health) of the poor.
- The need to assess the impact on people's health of development policies and practices.
- The importance of partnerships and alliances as a means of addressing threats to health and promoting sustainable development.

In the interest of helping member states pursue programs of sustainable development and healthy environments, WHO set up the Protection of the Human Environment (PHE) program and web site <http://www.who.int/peh/>. To organize its efforts, the WHO has distinguished between environmental threats to human health that are "traditional hazards" (those associated with lack of development) and threats that pose "modern hazards" (those associated with unsustainable development). Traditional hazards, which are related to poverty and lack of development, include lack of access to safe drinking-water; inadequate basic sanitation in the household and community; food contamination with pathogens; indoor air pollution from cooking and heating; inadequate solid waste disposal; occupational injury hazards in agriculture and cottage industries; and natural disasters, including floods, droughts, and earthquakes. Modern environmental hazards, which are related to excessive development (development without regard to adequate health and the environment and which requires the unsustainable consumption of natural resources) include water and air pollution; hazardous waste accumulation and disposal; chemical and radiation hazards; deforestation and land degradation; climate change; and depletion of the ozone layer.

WHO's environmental health activities include risk assessment and research, which help provide evidence for legislators to formulate laws and standards. In this work, WHO collaborates with national health and environment authorities. WHO also supports analysis of the current environmental situation and trends to assist in the development of international initiatives to combat hazards that cross national boundaries.

### Mental Health

In 2006 the WHO estimated that approximately 25% of individuals would be affected by mental, neurological, or behavioral problems at some stage in life. The vast majority of these people are believed to suffer from depression, anxiety disorders, schizophrenia, dementia, and epilepsy. One-third may be affected by more than one neuropsychiatric ailment and three-quarters of those affected live in developing countries.

In the 1990s World Health Organization substantially expanded its investment in mental health; the Department of Mental Health represented one of its major arms for this purpose. The mission of the department was to mainstream mental health within the UN system and the health sector of its member states; to increase parity between physical and mental health, and between the rights of those affected by mental problems and those not affected; to design effective mental health policies promoting social cohesion; and to identify, disseminate, and implement cost-effective interventions.

In 2000, the Department of Mental Health was merged with the Substance Abuse Department to form the Department of Mental Health and Substance Dependence. With respect to mental health, the department has two broad objectives: closing the gap between what is needed and what is currently available to reduce the burden of mental disorders worldwide, and promoting mental health. The department leads the mhGAP (mental health Global Action Programme) focusing on forging strategic partnerships that will enhance countries' capacity to address the stigma and burden of mental disorders and promote the mental wellbeing of populations. Over 100 centers around the world collaborate with the WHO in pursuing mental health objectives.

A number of international collaborative studies have been sponsored and coordinated by WHO. These have focused on the form and course of mental disorders in different cultures, the development of prevention and treatment methods, the operation of mental health services, and psychosocial aspects of health and health care. International exchange of information is fostered through publications, training courses, seminars, and networks of collaborating research and training centers in some 40 countries.

The mental health program also includes projects concerned with the development of standardized procedures, diagnostic classifications, and statistics necessary for an improved mental health information system and collaboration in mental health research, and a major program concerned with the prevention and treatment of alcohol and drug dependence.

In the late 1980s WHO launched an Initiative of Support to People Disabled by Mental Illness, intended to facilitate the dissemination of information about good practice in community services for people with chronic mental illnesses. The initiative seeks to reduce the disabling effects of chronic mental illness and highlight social and environmental barriers which hinder treatment and rehabilitation. The Initiative sought to involve the patient in decisions affecting his or her care. The prerequisites to that involvement were considered to be: the right to be empowered; the right to representation; the right to have access to one's own medical records; the right to be free of stigmatizing labels.

In 1989, WHO began a major study to investigate the types and frequency of psychological problems in 14 countries. By 1992, it had screened 25,000 patients aged 18 to 65. The patients were clas-

sified in different categories according to the symptoms, and their progress was followed for a one-year period.

In December 1991, the United Nations General Assembly, in its resolution 46/119, approved the Principles for the Protection of Persons with Mental Illness and the Improvement of Mental Health Care. This gave mental health advocacy groups a tool to publicize their views on empowerment. The Initiative has produced publications, including *Schizophrenia: Information for Families*, which has been translated into 15 languages.

WHO considers the promotion of mental health—that is, the improvement of the position that mental health occupies in the scale of values of individuals, communities, and societies—as one of its fundamental tasks and as being essential for human development and the quality of life.

#### D. Pharmaceuticals

##### **Pharmaceutical Products in International Commerce**

Since 1964, WHO has studied ways of ensuring that all drugs exported from a country comply with its domestic drug quality requirements. A Certification Scheme on the Quality of Pharmaceutical Products Moving in International Commerce was adopted by the World Health Assembly in 1969, and a revised version in 1975. According to the scheme, in which about 124 countries are participating, the health authorities of the exporting countries provide a certificate that the product is authorized for sale in the exporting country and that the plant in which the product is produced is subject to regular inspection to ensure that it conforms to good practices of manufacture and quality control as recommended by WHO. Also under the scheme, the importing country may request from the authorities of the exporting country additional information on the controls exercised on the product. In addition to the product certificate issued by the competent authority of the exporting country, batch certificates, stating that the quality of the batch complies with quality specifications and indicating the expiration date and storage conditions, may be issued either by the competent authority of the exporting country or by the manufacturer.

##### **International Biological Standardization**

Biological substances cannot be characterized entirely by physical or chemical means. Their activity can be controlled only by tests in which laboratory animals, microorganisms, cell cultures, or antigen-antibody reactions are used. Such assays use biological reference materials which have previously been determined, usually under the form of an international unitage system, by calibration against appropriate international reference materials.

Much work in this field was done under League of Nations auspices. By 1945, 34 international biological standards had been established for such substances as antibiotics, antibodies, antigens, blood products and related substances, and hormones. Since then, WHO has enlisted the collaboration of more than 100 laboratories to conduct international collaborative studies, and there are now more than 200 international standards available to national control authorities throughout the world.

The work on biological standardization has expanded considerably and comprises a number of additional activities, including the establishment of international reference reagents, mainly for the purpose of diagnosis and identification. Furthermore, in or-

der for manufacturers and national control authorities to achieve the production of biological substances which are safe and potent, international requirements on production and control have been prepared and are published in the *Technical Report Series*, released each year by the WHO Expert Committee on Biological Standardization. Such requirements are kept up to date in the light of developing technology. By the end of 1999, 48 sets of international requirements had been published. In addition, guidelines have been published on such subjects as the setting up of biological standards, the testing of kits used for the assay of biological substances, and the use of interferon therapy.

A complete list of international standards and international reference reagents is published by WHO in *Biological Substances*.

##### **Pharmaceutical Quality Control**

*International Pharmacopoeia.* Attempts to establish internationally agreed-upon specifications for therapeutic agents have been made since the 1850s. By 1910, limited agreements were reached concerning certain potent drugs. Since 1951, WHO has published the *International Pharmacopoeia*, which provides internationally acceptable standards for the purity and potency of pharmaceutical products moving in international commerce that are available for adoption by member states in accordance with the WHO constitution and resolutions of the World Health Assembly.

The first edition, consisting of two volumes and a supplement, was issued between 1951 and 1959. The second edition was published in 1967; a supplement was added in 1971 and additional monographs in 1972. Work on the third edition, started in 1975, aims to accommodate the needs of developing countries by offering sound standards for the essential drugs. Five volumes were issued in 1979, 1981, 1988, and 1994, and 2003.

*International Nonproprietary Names for Pharmaceutical Substances.* Many pharmaceutical substances are known not only by their nonproprietary, generic, or scientific names but by various trade names as well. In order to identify each pharmaceutical substance by a unique, universally available nonproprietary name, WHO has set up a procedure to select international nonproprietary names for pharmaceutical substances. Such names are published regularly in the *WHO Chronicle*. By the end of 1987, over 5,400 names had been proposed and published in 48 lists. A ninth cumulative list was published in 1996, and includes over 6,500 names.

*WHO Collaborating Center for Chemical Reference Substances.* As a further service in the area of drug quality control, the WHO Collaborating Center for Chemical Reference Substances was established in Sweden, at the Apotekens Centrallaboratorium, in 1955. Its function is to collect, assay, and store international chemical reference substances and to make them available free to national and nonprofit laboratories and institutes and, for a nominal fee, to commercial firms. About 140 chemical reference substances needed for tests and assays described in the *International Pharmacopoeia* are available.

*Good Practices in the Manufacture and Quality Control of Drugs.* To assist member states with technical advice on adequate control processes in drug manufacture, the World Health Assembly, in 1969, recommended the requirements in a publication entitled *Good Practices in the Manufacture and Quality Control of Drugs*. A revised text was adopted in 1975 by the assembly. Today it is pub-

lished in two volumes as *Quality Assurance of Pharmaceuticals: A Compendium of Guidelines and Related Materials*. The text contains requirements pertaining to personnel, premises, and equipment of manufacturing establishments and general hygienic and sanitation measures. Special requirements pertain to raw materials, manufacturing operations, and labeling and packaging of products. The organization and duties of a quality-control department and a quality-control laboratory are specified.

*Essential Drugs.* As early as 1975, the WHA had received reports of the experiences of a few countries who had adopted schemes of basic or essential drugs. The purpose was to help people in developing countries whose basic health needs could be met through the existing supply system by giving them access to the most necessary drugs. The WHA recommended that member states draw up national drug policies to ensure that the most essential drugs were available at a reasonable price, and to stimulate research and development to produce new drugs adapted to the real health requirements of developing countries. There was recognition that developing countries could not afford to waste scarce resources on drugs which either did not meet majority needs, or which were priced at a level which their societies could not afford.

In 1977, a WHO committee of experts met to determine how many drugs were really needed to ensure a reasonable level of healthcare for as many people as possible. It was determined that, in country after country, a surprisingly uniform picture of drug selection emerged. At the village health post or dispensary level, 10 to 15 drugs meet immediate needs. At the health center level, where the diagnostic and local facilities are better and the staff more highly trained, about 30 to 40 drugs will suffice for 80% to 90% of all complaints. District and provincial hospitals may need around 100 to 120 drugs, and the large referral and teaching hospitals the full range of 200 to 400. The committee's first *Model List of Essential Drugs* appeared in 1977 and contained some 200 items. By 1994 the list numbered 270 drugs. All of the drugs and vaccines on the list were of proven safety and efficacy, and possessed well understood therapeutic qualities. Most were no longer protected by patent and could be produced in quantity at reasonable cost. The *Model List* is revised every two years in order to respond to evolving needs and pharmaceutical advances. The list is not meant to be definitive, but to serve as a guideline for each country to pick and choose from in order to adopt a list of essential drugs according to its own priorities. The 14th edition was published in 2005: it contains 312 medicines.

In 1981, WHO launched its Action Programme on Essential Drugs to help narrow the list of drugs that would be essential for small medical units in developing countries. This program assists countries in developing their own legislation and methods of financing comprehensive drug programs. It also assists them in implementing the quality control monitoring regimes mentioned above. The Action Programme also provides support for training personnel in the areas of drug management and rational use. It supports national and regional seminars at which hundreds of health staff from countries throughout the world receive practical training. In the area of research, the program encourages research aimed at filling gaps in existing knowledge about the best means of selecting, procuring, and distributing drugs. This research seeks to discover how providers make decisions on which drugs to prescribe, or how and why patients use—or fail to use—medicines.

This research has direct bearing on the ways in which vital medicines can be made available and accessible to the greatest number of people. More than 100 countries have adapted the Model List to match their own patterns of disease and financial resources.

#### E. Research Promotion and Development

Through its advisory committees on medical research—one for each of the six WHO regions and one at the global level—WHO provides guidelines for research planning, execution, and implementation in health programs directly linked to national priorities. The committees also offer an appropriate forum for the discussion of national and regional experiences and for the detailed formulation of scientific and technological policies in the field of health. Research programs and activities are developed in close coordination with medical research councils or analogous bodies, with particular emphasis on the strengthening of managerial capacities at all levels.

WHO's coordinating role in research calls for the development of a system for the exchange of scientific information and the enlistment of the collaboration of groups of scientists and research workers in various areas on solving key problems and developing methods for most effectively combining their efforts.

Over the years, more than 1200 institutions with the necessary expertise and facilities have been designated by WHO as "WHO Collaborating Centers." WHO also designates expert advisory panels. Financial assistance is sometimes provided by WHO through technical services agreements, partially offsetting the much larger expenses borne by the centers themselves.

In order to increase the research potential of member countries, WHO has developed a program to train research workers. The duration of grants varies, but as far as possible, they are made sufficiently long to permit the candidate to gain an adequate knowledge of methods and techniques and, very often, to carry out, under supervision, a specific piece of research.

Communication among scientists is also promoted. A scientist from one country is enabled to visit scientists in other countries for a period of up to three months, thus facilitating personal contact and the exchange of ideas.

WHO promotes meetings, symposia, seminars, and training courses in special techniques, bringing together scientists from various parts of the world. Reports of such meetings are circulated, when appropriate, to the scientific community.

#### F. Health Personnel Development

WHO's role in health personnel development is to collaborate with member states in their efforts to plan, train, deploy, and manage teams of health personnel made up of the numbers and types that are required (and that they can afford) and to help ensure that such personnel are socially responsible and possess appropriate technical, scientific, and management competence.

WHO is attempting to raise the political, economic, and social status of women as health care providers in the formal and informal health care system and in the community and to ensure that they receive the education, training, and orientation to enable them to expand the scope and improve the quality of the health care that they provide to themselves, each other, their families, and other members of the community.

Promotion of community-oriented educational programs with team and problem-based methods of teaching/learning is another

approach. The programs are designed to prepare personnel to perform tasks directly related to identified service requirements of specific concern to the country. Appropriate teaching and learning materials, including those for self-teaching and audiovisual purposes, adapted to different cultures and languages, are promoted for all categories of health personnel.

Fellowships occupy an important place in WHO's program as one of the ways to provide opportunities for training and study in health matters which are not available in the fellow's own country and for the international exchange of scientific knowledge and techniques relating to health. WHO encourages the nomination, selection, and evaluation of fellows based on and determined by a member state's personnel development policy, in line with its national policy for health development, so that fellowships can con-

tribute to the training of the type and amount of personnel needed to achieve the global target of "health for all." WHO awards fellowships preferably to candidates who will be directly involved in primary health care programs.

In many countries, however, the problem is no longer one of shortage of health professionals, but rather of establishing or maintaining the right balance between them to ensure that the necessary knowledge and skills are available. WHO is sponsoring studies to develop information systems and methods to help countries achieve this balance.

*Nursing.* The WHA, in 1992, recommended that each country develop a national action plan for nursing. A global advisory group on nursing and midwifery was established by the 45th WHA, and held its first meeting in 1992. It recommended that, as the larg-

est group of health personnel in any country, nursing and midwifery be declared a priority area for WHO action. A WHO study group on nursing beyond the year 2000 convened in July 1993. It adopted the Nursing Declaration of Alma-Ata, which recognizes that a multiprofessional, multidisciplinary approach is needed to prepare healthcare providers to work in a rapidly changing environment. As a starting point, every health ministry was urged to establish a position of chief nurse, with appropriate staff and budget.

#### G. Public Information and Education for Health

To integrate health education and information for health, WHO established the Division of Public Information and Education for Health. Its major tasks, in close cooperation with all regions, are to work with governments in developing coordinated information/education programs aimed at promoting healthy behavior and increasing self-reliance among individuals and communities, and to work with technical units in planning, developing, and implementing an information/education component in their programs.

The need for promotion, advocacy, and greater public awareness of health issues is a recurring theme in virtually all WHO programs. WHO considers health education as the sum of activities that will encourage people who want to be healthy to know how to stay healthy, to do what they can individually and collectively to maintain health, and to seek help whenever it may be needed.

WHO has developed many computerized information resources over the years, including WHOLIS, the WHO library information system, which is available on diskette and on the Internet. WHODOC, a regular listing of new WHO publications and documents is also available on diskette and on the Internet. See United Nations Databases for a descriptive listing of WHO's computerized databases.

#### H. Health Legislation

While WHO is aware of the importance of health and related legislation to the delivery of personal and environmental health services in countries, it has no mandate to propose model legislation. On the other hand, it recognizes member states' need for relevant and timely information. WHO is mandated to maintain an awareness of all significant new laws and regulations in the field of health, and to disseminate information thereon as rapidly as possible. The main vehicle for information transfer is its *International Digest of Health Legislation* which is now issued only in an electronic form. A demand for information on HIV/AIDS legislation prompted WHO to develop a computerized database that covers relevant legislation as well as literature on the legal, ethical, and judicial aspects of AIDS. Data on other subjects, such as legislation to combat smoking, have also been computerized.

In February 1994, the First International Conference of Medical Parliamentarians was held in Bangkok, organized by the Asian Forum of Parliamentarians on Population Development and the International Medical Parliamentarians Organization in close cooperation with WHO. More than 80 medical parliamentarians from 33 countries attended the conference to discuss five specific areas: environmental health, population and development; narcotics drug abuse; organ transplantation; public health and development; and maternal and child health and AIDS. The conference adopted the Bangkok Declaration and Call for Action which set forth goals and priorities for the establishment of national legislation in the five subject areas.

The International Medical Parliamentarians Organization (IMPO) was admitted into official relations with WHO in 1995, joining the ranks of the numerous NGOs that have working relationships with WHO. In 1999, IMPO had individual members in more than 30 countries, including many developing nations.

---

# THE INTERNATIONAL CIVIL AVIATION ORGANIZATION (ICAO)

**BACKGROUND:** In 1910, a conference on international air law code, attended by representatives of 18 European nations, was convened in Paris, France. In 1919, following World War I, the Paris Peace Conference created the International Air Convention to govern aspects of civil aviation. The Convention, ratified by 38 nations, began the process of creating an International Commission for Air Navigation (ICAN); ICAN established headquarters in Paris in December 1922, with Albert Roper as general secretary. Following World War II (in November 1944), 32 nations signed a Convention on International Civil Aviation establishing the permanent International Civil Aviation Organization (ICAO) to oversee international cooperation on regulations, standards, and procedures governing civil aviation. It took three years for the ratification process, but in 1947 ICAO took over the ICAN offices in Paris.

---

## CREATION

The first international civil aviation conference, held in 1910 and attended by European governments only, since transoceanic flight was then regarded as no more than a wild dream, was a failure. Almost another decade elapsed before an international convention, signed in Paris in 1919, created the International Commission for Air Navigation. The commission was to meet at least once a year and concern itself with technical matters. An international committee of jurists was also established, to concern itself with the intricate legal questions created by cross-border aviation. In 1928, a Pan-American convention on commercial aviation was adopted at a conference held in Havana to deal with problems then emerging as international flights became more frequent in the Western Hemisphere. Although some progress in obtaining agreement on international flight regulations had been made by the end of the 1930s, most nations still granted very few concessions to each other's airlines, and no agreement existed permitting foreign planes to fly nonstop over the territory of one country en route to another country.

### The Chicago Conference of 1944

The tremendous development of aviation during World War II demonstrated the need for an international organization to assist and regulate international flight for peaceful purposes, covering all aspects of flying, including technical, economic, and legal problems. For these reasons, in early 1944, the United States conducted exploratory discussions with its World War II allies, on the basis of which invitations were sent to 55 allied and neutral states to meet in Chicago in November 1944.

In November and December 1944, delegates of 52 nations met at the International Civil Aviation Conference in Chicago to plan for international cooperation in the field of air navigation in the postwar era. It was this conference that framed the constitution

of the International Civil Aviation Organization—the Convention on International Civil Aviation, also called the Chicago Convention. This convention stipulated that ICAO would come into being after the convention was ratified by 26 nations. To respond to the immediate needs of civil aviation, a provisional organization was created and functioned for 20 months until, on 4 April 1947, ICAO officially came into existence.

In essence, the conference was faced with two questions: (1) whether universally recognized navigational signals and other navigational and technical standards could be agreed upon, and (2) whether international rules concerning the economics of air transport could be established. One group of countries, led by the United States, wanted an international organization empowered only to make recommendations regarding standard technical procedures and equipment. In its economic aspects, these countries believed, air transportation should be freely competitive. This policy would also best serve the interests of the “consumer nations” that had no international airlines of their own. Another group of countries, led by the United Kingdom, favored a stronger organization, which would have a great deal to say about the economics of civil aviation. It would be empowered to allocate the international routes that the airlines of different countries would be allowed to fly, regulate the frequency of flights, and fix rates. A radical proposal, advanced by New Zealand and supported by Australia, called for international ownership and operation of international air transport.

The Convention on International Civil Aviation finally adopted by the conference was something of a compromise between the American and British positions. The convention established for the first time an independent international body, the International Civil Aviation Organization, to supervise “order in the air,” obtain maximum technical standardization for international aviation, recommend certain practices that member countries

should follow, and carry out other functions. Countries ratifying or acceding to the convention thereby agreed in advance to conform to the greatest possible extent to ICAO-adopted civil aviation standards and to endeavor to conform to ICAO-adopted recommendations.

In the economic field, ICAO has no regulatory powers, but one of its constitutional objectives is to “prevent economic waste caused by unreasonable competition.” In addition, under the convention, member states undertake to have their international airlines furnish ICAO with traffic reports, cost statistics, and financial statements showing, among other things, all receipts from operations and the sources of such revenues.

The Chicago Convention affirms every state’s “complete and exclusive sovereignty over the airspace above its territory.” It provides that nonscheduled flights may, subject to certain permissible conditions and limitations, be made by the civil aircraft of one country into or over the territory of another. Scheduled international air service, however, may be operated from one country into or over the territory of another country only with the latter’s authorization, and member states are permitted to establish areas prohibited to foreign aircraft as long as these regulations are non-discriminatory. Pilotless as well as conventional aircraft are covered by these provisions. The term *airspace* is not precisely defined, however, and with the development of rockets and long-range missiles, the problem of deciding where a country’s airspace ends and where outer space begins has become a matter of practical concern. This problem has come under study by the UN Committee on the Peaceful Uses of Outer Space.

An important matter considered by the Chicago conference was the question of the exchange of commercial rights in international civil aviation. It was not possible to reach an agreement satisfactory to all states attending the conference. Hence, the question was covered not in the Convention on International Civil Aviation that serves as ICAO’s constitution but in two supplementary agreements adopted by the conference: the International Air Services Transit Agreement and the International Air Transport Agreement. These two treaties do not form part of the ICAO constitution and are binding only on the ICAO member states that have ratified them.

The International Air Services Transit Agreement guarantees (1) the freedom of civil aircraft to fly over foreign countries and territories as long as they do not land, and (2) the freedom of civil aircraft to make nontraffic landings, for refueling or overhaul only, in foreign territory. The agreement thus established for the first time the principle of automatic right of transit and of emergency landing.

The International Air Transport Agreement, also known as the Five Freedoms Agreement, affirms, in addition to the two freedoms covered by the transit agreement, three other freedoms of the air: (3) freedom to transport passengers and cargo from an aircraft’s homeland to other countries, (4) freedom to transport passengers and cargo from other countries to an aircraft’s homeland, and (5) freedom to carry air traffic between countries other than the aircraft’s homeland.

Because the Chicago Convention was adopted in December 1944, ICAO possesses a constitution older than the UN Charter. Countries were much slower in ratifying the Chicago Convention, however, than they were in ratifying the UN Charter. For this rea-

son, ICAO did not come into being until 4 April 1947, 30 days after the convention had been ratified by the required 26 states.

## PURPOSES

ICAO’s aims and objectives, as stated in the Chicago Convention, are to foster the planning and development of international air transport so as to ensure the safe and orderly growth of international civil aviation throughout the world; encourage the arts of aircraft design and operation for peaceful purposes; encourage the development of airways, airports, and air navigation facilities for international civil aviation; meet the needs of the peoples of the world for safe, regular, efficient, and economical air transport; prevent economic waste caused by unreasonable competition; ensure that the rights of contracting states are fully respected and that every contracting state has a fair opportunity to operate international airlines; avoid discrimination between contracting states; promote safety of flight in international air navigation; and promote generally the development of all aspects of international civil aeronautics.

## MEMBERSHIP

As of 9 May 2006, ICAO had 189 member states.

## STRUCTURE

The three main organs of ICAO are the assembly, the council, and the secretariat, headed by the Secretary General.

### Assembly

The all-member assembly meets every three years. Every member state has one vote in the assembly, and decisions are made by a simple majority vote unless otherwise specified by the Chicago Convention. Sessions have been held in many different cities.

The assembly makes policy recommendations, reviews the work of ICAO, offers guidance to other ICAO bodies, elects the council, and determines the budget. The assembly may amend the ICAO constitution by a two-thirds majority vote, and it has done so on several occasions. But amendments come into force for the states that ratify them only after they have been ratified by at least two-thirds of the ICAO member states as specified by the assembly. In other words, the assembly may feel that it would not be fair to introduce a particular innovation in international civil aviation unless certain states would abide by it. On the other hand, the assembly possesses a rather unusual prerogative to induce wide ratification of an amendment it has adopted: if a member state does not ratify a particular amendment within a given period of time, the assembly has the right to revoke that country’s membership in ICAO. However, this provision (Article 94[b]) has never been invoked.

### Council

The council is a permanent body, composed of 36 member states elected by the assembly for three-year terms. In selecting the membership of the council, the assembly is required by the Chicago Convention to give adequate representation to nations of major importance in air transport, to nations that provide the largest share of facilities for international civil air navigation, and to na-

tions whose inclusion on the council will ensure broad geographical representation.

Assad Kotaite of Lebanon has been president of the council since 1976.

The council's powers are unusually broad, as compared with those of the executive councils of most other specialized agencies. It adopts international standards and recommended practices regarding civil air navigation and transport. It may act as arbiter between member states on disputes relating to the interpretation or application of the Chicago Convention and its annexes. It may investigate any situation that presents avoidable obstacles to the development of international air navigation. In general, it may take whatever steps are necessary to maintain the safety and regularity of operation of international air transport.

#### Secretary General and Secretariat

The ICAO secretariat is headed by a Secretary General, who is appointed by the council. The Secretary General appoints the staff of the ICAO secretariat and supervises and directs its activities. The Council appointed Dr. Taïeb Chérif of Algeria Secretary General for a three-year term beginning 1 August 2003.

ICAO headquarters are at 999 University Street, in the center of Montreal, occupying a 15-story tower with an adjoining complex offering complete conference facilities. ICAO maintains regional offices in Paris, Bangkok, Cairo, Mexico City, Nairobi, Lima, and Dakar to assist member states in providing aeronautical services.

#### BUDGET

The program budget for the 2005-07 triennium was US\$197 million. Contributions by member states are assessed on a sliding scale determined by the assembly.

#### ACTIVITIES

##### A. International Standards and Recommended Practices

By joining ICAO—that is, by accepting the Chicago Convention—states undertake to collaborate in securing the highest practicable degree of uniformity in regulations, standards, procedures, and organization in all matters in which such uniformity will facilitate and improve air navigation. Hence, one of ICAO's chief tasks is to adopt such international standards and recommendations and to keep them up-to-date through modifications and amendments.

A standard, as defined by the first ICAO Assembly, is “any specification for physical characteristics, configuration, material, performance, personnel, or procedures, the uniform application of which is recognized as *necessary* for the safety or regularity of international air navigation and to which member states *will conform*.” Standards may thus include specifications for such matters as the length of runways, the materials to be used in aircraft construction, and the qualifications to be required of a pilot flying an international route. A recommendation is any such specification, the uniform application of which is recognized as “*desirable* in the interest of safety, regularity, or efficiency of international air navigation and to which member states *will endeavor to conform*.”

Preparing and revising these standards and recommendations is largely the responsibility of ICAO's Air Navigation Commission, which plans, coordinates, and examines all of ICAO's activities in the field of air navigation. The commission consists of 15 persons, appointed by the council from among persons nominated

by member states. If the council approves the text, it is submitted to the member states. While recommendations are not binding, standards automatically become binding on all member states, except for those who find it impracticable to comply and file a difference under Article 38 of the Chicago Convention.

#### Annexes to the Chicago Convention

The various standards and recommendations that have been adopted by ICAO are grouped into 18 annexes to the Chicago Convention. The aim of most of the annexes is to promote progress in flight safety, particularly by guaranteeing satisfactory minimum standards of training and safety procedures and by ensuring uniform international practices. The 18 annexes are the following:

1. *Personnel Licensing*—licensing of flight crews, air traffic controllers, and aircraft maintenance personnel.
2. *Rules of the Air*—rules relating to the conduct of visual and instrument flights.
3. *Meteorological Services*—provision of meteorological services for international air navigation and reporting of meteorological observations from aircraft.
4. *Aeronautical Charts*—specifications for aeronautical charts for use in international aviation.
5. *Units of Measurement*—dimensional systems to be used in air-ground communications.
6. *Operation of Aircraft*—Part I: International Commercial Air Transport; Part II: International General Aviation; Part III: International Operations—Helicopters. These specifications will ensure in similar operations throughout the world a level of safety above a prescribed minimum.
7. *Aircraft Nationality and Registration Marks*—requirements for registration and identification of aircraft.
8. *Airworthiness of Aircraft*—certification and inspection of aircraft according to uniform procedures.
9. *Facilitation*—simplification of customs, immigration, and health inspection regulations at international airports.
10. *Aeronautical Telecommunications*—standardization of communications equipment and systems and of communications procedures.
11. *Air Traffic Services*—establishment and operation of air traffic control, flight information, and alerting services.
12. *Search and Rescue*—organization and operation of facilities and services necessary for search and rescue.
13. *Aircraft Accident Investigation*—uniformity in the notification, investigation, and reporting of aircraft accidents.
14. *Aerodromes*—specifications for the design and equipment of aerodromes.
15. *Aeronautical Information Services*—methods for the collection and dissemination of aeronautical information required for flight operations.
16. *Environmental Protection. Vol. I: Aircraft Noise*—specifications for aircraft noise certification, noise monitoring, and noise exposure units for land-use planning; Vol. II: Aircraft Engine Emissions—standards relating to vented fuel and emissions certification requirements.
17. *Security*—specifications for safeguarding international civil aviation against acts of unlawful interference.

18. *Safe Transport of Dangerous Goods by Air*—specifications for the labeling, packing, and shipping of dangerous cargo.

### B. Air Navigation

It is evident that air navigation covers an extremely broad spectrum of activities, ranging from short take-off and landing airplanes to supersonic transports, from security questions to the impact of aviation on the environment, from training and operating practices for pilots to the facilities required at airports.

ICAO's program regarding the environment provides a case in point. Growing air traffic and increased use of jet engines have heightened public awareness of the environmental impact of civil aviation. In 1968, ICAO instituted activities aimed at reducing aircraft noise. The first measures involved development of internationally agreed standards for the noise certification of aircraft (contained in Vol. I of Annex 16 to the Chicago Convention), which resulted in a quieter generation of jet aircraft.

Comparable studies of aviation's share in air pollution have resulted in the development of standards (Vol. II of Annex 16) relating to the control of fuel venting and of smoke and gaseous emissions from newly manufactured turbojet and turbofan engines for subsonic airplanes.

Concern about the continuing threat of violence against international civil aviation and its facilities, including the unlawful seizure and the sabotage of aircraft, led to adoption by the council of Annex 17 to the Chicago Convention, containing standards and recommended practices aimed at safeguarding international civil aviation against acts of unlawful interference. In addition, comprehensive guidance material on the subject has been developed. As part of its continuing effort to improve air safety, ICAO has adopted standards for the safe transport of dangerous goods by air. These form Annex 18 to the Chicago Convention. ICAO studies many other important subjects, such as all-weather operations, supersonic operations, application of space techniques to aviation, automated-data interchange systems, and visual aids.

### C. Facilitation of International Air Transport

From the beginning of ICAO's history, the need to facilitate international air transport—to remove obstacles that would impede the free passage of aircraft, passengers, crew, baggage, cargo, and mail across international boundaries—was evident. This need is inherent in the speed of air travel itself; if, for example, customs, immigration, public health, and other formalities require one hour at each end of a transoceanic flight of six hours, the total duration of the trip is increased by 33%.

ICAO has therefore developed, over the years, a comprehensive facilitation program that is reflected in the international standards and recommended practices of Annex 9 to the Chicago Convention, as well as in the recommendations and statements of the ICAO Council and the Facilitation Division. Broadly speaking, the program aims at eliminating all nonessential documentary requirements, simplifying and standardizing the remaining forms, providing certain minimum facilities at international airports, and simplifying handling and clearance procedures. The program is concerned with such measures as liberalization of visa requirements and entry procedures for temporary visitors; the development of machine-readable passports and visas; speedy handling

and clearance procedures for cargo, mail, and baggage; and the elimination, as far as possible, of requirements for documentation or examination in regard to transit traffic.

In addition to reducing procedural formalities, ICAO's efforts are aimed at providing adequate airport terminal buildings for passengers and their baggage and for air cargo, with all related facilities and services. Special attention is given to improving the accessibility of air transport to elderly and disabled passengers. The continuous growth in air traffic makes it necessary for airport administrations to review the adequacy of their facilities at regular intervals. When modifications in existing terminals or the building of new ones are contemplated, close coordination and cooperation between planners and users must be established from the earliest moment, even before any design is made. Proper airport traffic flow arrangements, with a sufficient number of clearance channels, baggage delivery positions, and cargo handling facilities, are necessary for the speedy processing of traffic through clearance control.

### D. Regional Planning for Air Navigation

While worldwide uniformity is desirable for certain matters pertaining to civil aviation, others are best approached on a regional basis, since operating conditions vary a great deal from region to region. In the North Atlantic region, for example, long-range ocean flying predominates, whereas in Europe many international flights are short overland jumps. To deal with these different conditions and to facilitate detailed planning, ICAO has mapped out the following regions: Asia/Pacific, Middle East, Europe, Africa, Latin America and the Caribbean, South America, North Atlantic, and North America, which all have Planning and Implementation Regional Groups (PIRGs). At meetings held for each of them, detailed plans are drawn up for the facilities, services, and procedures appropriate to that region. The regional plans specify the air navigation facilities and services that are required, and the locations where they are required, for communications, air traffic control, search and rescue, meteorology, and so on. ICAO's plans for the nine regions are regularly revised or amended to meet the needs of increasing traffic and to take into account technical developments in civil aviation.

ICAO's regional offices are its principal agents in advising and assisting states in regard to implementation. The offices direct as much of their resources as possible to giving practical help, among other ways through frequent visits to states by members of the technical staff. In addition, ICAO allots funds for long-duration advisory implementation missions to help member countries overcome local deficiencies.

Shortcomings are taken up by the regional offices and the ICAO secretariat with the governments concerned. More complex cases may require study by the Air Navigation Commission and, if necessary, by the ICAO Council. The problem of eliminating deficiencies in navigational services and facilities is one that ICAO considers critical.

The major difficulties are lack of funds for facilities and services, a shortage of trained personnel, and administrative and organizational difficulties. ICAO has encouraged governments to upgrade their facilities through loans for capital expenditures, technical assistance, and other means. It also produces manuals and other documentation to assist states in setting up aviation training pro-

grams for flight and ground personnel and offers advice on maintenance and improvement of technical standards.

#### E. Jointly Operated or Financed Services

Under the Chicago Convention, every ICAO member state is required to provide air navigation facilities and services on its own territory. Navigational facilities and services must also be provided for air routes traversing the high seas and regions of undetermined sovereignty. The ICAO Council is constitutionally authorized at the request of a member state to “provide, man, maintain, and administer any or all of the airports and other air navigation facilities, including radio and meteorological services, required in its territory for the safe, regular, efficient, and economical operation of the international air services of the other contracting states.” The council also may act on its own initiative to resolve a situation that might impair the “safe, regular, efficient, and economical operation” of international air services. Although ICAO has not yet undertaken the actual supervision of any nation’s international air navigation facilities and services, two international agreements are in effect to furnish such services and facilities in parts of the North Atlantic region through so called “joint-support” programs.

Under these joint-support agreements, the nations concerned provide services, facilities, or cash payments based on the use by their own aircraft of the routes involved. The two existing agreements are the Agreement on the Joint Financing of Certain Air Navigation Services in Greenland and the Faroe Islands and the Agreement on the Joint Financing of Certain Air Navigation Services in Iceland.

The vast majority of aircraft that utilize the special traffic-control, navigational, and meteorological services furnished from Iceland and Greenland for transatlantic crossings are neither Icelandic nor Danish. Hence, some 20 countries, including Iceland and Denmark, provide the funds necessary for the operation of these services.

ICAO administers these two agreements, the Secretary General having certain responsibilities and the ICAO Council having others. A special standing body, the Committee on Joint Support of Air Navigation Services, advises the council in these matters. The operation and costs of the services are constantly reviewed, and international conferences are held. In the early 1970s, charges for the use of the aeronautical facilities and services were imposed on all civil aircraft crossing the North Atlantic. These “user charges” covered only 40% of the costs allocable to civil aviation but were increased to 50% for the years 1975 to 1978, 60% for 1979 and 1980, 80% for 1981, and 100% thereafter.

#### F. Technical Assistance

In recognition of the importance of the airplane for international and domestic transport in countries where road and railway services are lacking, and as a means of aiding these countries in their social and economic development, ICAO has, from its inception, operated technical assistance programs through UNDP and other UN organs.

Assistance programs executed by ICAO fall into three main categories. UNDP obtains its funds from donor countries and allocates these funds among recipient countries in the form of country, intercountry, and interregional projects. The Funds-in-Trust

program provides financial assistance for specific projects in the country receiving the technical assistance. The Associate Experts program provides experts from certain countries to work under ICAO guidance.

Each civil aviation project may include one or more of the following forms of assistance: experts to provide specialist advice to the civil aviation administration or national airline; fellowships to allow nationals to be trained abroad in civil aviation disciplines, often at civil aviation training centers that have been established through ICAO technical assistance; and equipment, such as radio navigational aids or communication facilities, to ensure safe and regular air service.

Fellowships have been awarded in many fields, including training as pilots, aircraft maintenance technicians, air traffic controllers, radio and radar maintenance technicians, communication officers, airport engineers, electronics engineers, air transport economists, aeronautical information officers, aeronautical meteorologists, aviation medicine specialists, accident investigation experts, flight operations officers, airport fire officers, and instructors.

Major types of equipment provided include air traffic control, radar, and flight simulators; training aircraft; radio communication and radar systems; distance-measuring equipment; very high frequency omni radio ranges; instrument landing systems; nondirectional beacons; “navaid” flight-test units; airworthiness data-acquisition systems; language laboratories; audiovisual aids; visual approach slope indicator systems; and firefighting vehicles.

Major training institutions assisted by ICAO include civil aviation training centers in Egypt, Ethiopia, Gabon, Indonesia, Kenya, Mexico, Nigeria, Singapore, Thailand, Trinidad and Tobago, and Tunisia.

#### G. International Conventions Prepared Under ICAO

The increasing number of incidents of unlawful interference with civil aviation, beginning in the 1960s—aircraft hijacking, the placing of bombs on board aircraft, and attacks on aircraft, passengers, and crew members at airports—led to the adoption of three conventions.

- *The Tokyo Convention of 1963.* The Convention on Offenses and Certain Other Acts Committed on Board Aircraft does not define specific offenses, but it does have the virtue of ensuring that there will always be a jurisdiction (namely, that of the state of registry of the aircraft) in which a person who has committed an offense on board an aircraft can be tried. The convention also provides for the powers and duties of the aircraft commander and others respecting restraint and disembarkation of the suspected offender. It provides a detailed code of behavior for states in whose territory the suspected offender has disembarked and also stipulates the steps to be taken in the event of the hijacking of an aircraft.
- *The Hague Convention of 1970.* The Convention for the Suppression of the Unlawful Seizure of Aircraft defines the offense of unlawful seizure and provides for universal jurisdiction over, and arrest and custody of, the suspected offender. It also stipulates that prosecution or extradition of the suspected offender should take place without many restrictions.

- *The Montreal Convention of 1971.* The Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation defines a number of acts of unlawful interference directed against international civil aviation. It provides for universal jurisdiction over the offender and, in general, contains rules for custody, extradition, and prosecution similar to those in the Hague Convention.

All three conventions are concerned with the preservation of the means of international communication and provide specifically that in the case of the unlawful seizure of an aircraft, any contracting state in which the aircraft or its passengers or crew are present shall facilitate the continuation of the journey of the passengers and crew as soon as practicable and shall return the aircraft and its cargo to the person lawfully entitled to possession.

The cooperative international action contemplated by the Tokyo, Hague, and Montreal conventions is intended to eliminate safe havens for hijackers and saboteurs.

Two additional international instruments in the field of aviation security have been developed under the auspices of ICAO.

- *The Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation, Supplementary to the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation.* The protocol was signed at Montreal on 24 February 1988 and came into force as of 6 August 1989. This protocol adds to the definition of “offence” given in the Montreal Convention of 1971, including actions that are likely to endanger airport safety. It establishes universal jurisdiction over the offender and applies the Montreal Convention’s rules of custody, extradition, and prosecution.
- *The Convention on the Marking of Plastic Explosives for the Purposes of Detection,* opened for signature at Montreal in 1991 and came into force on 21 June 1998. This convention requires that each state party prohibit and prevent the manufacture of unmarked plastic explosives. Four detection agents are defined in the convention’s technical annex. The convention also requires each state party to prevent the movement of unmarked explosives out of its territory. It also provides for the destruction of certain kinds of existing stocks of plastic explosives.

#### **Regime and Liability of Air Carriers**

Much of ICAO’s work has been devoted to keeping up-to-date the regime and limits of liability of air carriers in the case of death of, or injury to, passengers and in the carriage of cargo and postal items by air.

- *The Warsaw Convention of 1929.* The Convention on the Unification of Certain Rules Relating to International Carriage by Air, adopted during the early days of aviation, dominated the field of aviation passenger liability for almost half a century. It limits the liability, except in cases of gross negligence on the part of the carrier, to a maximum of 125,000 Poincaré gold francs (about us\$10,000). The Hague Protocol of 1955 doubled the existing limits of liability. In 1971, by the Guatemala City Protocol, the rule of the Warsaw Convention based on presumption of fault yielded to *strict* liability, irrespective of

fault. However, it will be some time before the 1971 protocol comes into force because at least 30 states, including five with major air traffic, must ratify it. (As of May 2002, only 7 states had ratified the protocol). An interesting feature of the Guatemala City Protocol is that although it provides for a limit of about us\$100,000 per passenger, there is also provision for a domestic supplement if a state that is party to the protocol wishes to have a higher limit. In 1975, an International Conference on Air Law, convened under the auspices of ICAO, adopted new amendments to the Warsaw Convention, as amended by the Hague Protocol. Under the new provisions, the carrier is responsible for cargo damage, irrespective of fault. Another major change concerns the method of calculating the liability limits by turning from a solely gold monetary basis to a dual system, allowing countries that are members of the IMF to base passenger, baggage, and cargo liability on Special Drawing Rights, whereas countries not members of the IMF would declare liability limits in monetary units based on gold.

- *The Guadalajara Convention of 1961.* The Guadalajara Convention, supplementary to the Warsaw Convention, contains rules with regard to carriage performed by other than the contracting carrier, that is to say, by a carrier that had not issued the ticket to the passenger, or the air waybill to the consignor. In this case, both the contracting carrier and the actual carrier would be held jointly and severally liable under the Warsaw Convention or that convention as amended by the Hague Protocol.
- *The Rome Convention of 1952.* The Convention on Damage Caused by Foreign Aircraft to Third Parties on the Surface includes the principle of absolute liability of the aircraft operator for damage caused to third parties on the surface but places a limitation on the amount of compensation, expressed in Poincaré gold francs and calculated in relation to the aircraft concerned. However, a diplomatic conference convened in 1978 under ICAO auspices adopted a protocol for the amendment of the Rome Convention. The basic feature of the protocol is a substantial increase in the limits of liability and the expression of the limits in the Special Drawing Rights of the IMF.
- *The Geneva Convention of 1948.* The Convention on the International Recognition of Rights in Aircraft was prepared in order to promote the use of loans in financing the sale of aircraft by providing protection of the lender’s rights in an aircraft whenever the aircraft is in the territory of another state that is party to the Geneva Convention.

Other legal subjects on ICAO’s work program include the establishment of a legal framework for global navigation of satellite systems; expediting the ratification of Montreal protocols Nos. 3 and 4 of the “Warsaw System”; study of the instruments of the “Warsaw System”; liability rules that might be applicable to air traffic services providers; and the implication of the UN Convention on the Law of the Sea for the application of ICAO’s Chicago Convention.

---

# THE UNIVERSAL POSTAL UNION (UPU)

**BACKGROUND:** Every day, more than 1.2 billion letters are posted for delivery within national borders, accounting for more than 430 billion letters each year. In addition, each day, close to 20 million pieces of mail cross international boundaries, accounting for nearly 7.4 billion items posted in international service (over a third of them by developing countries) and are swiftly and safely delivered to their destinations. To handle this traffic, postal services employ more than 6 million employees who work at or out of some 700,000 permanent post office outlets around the globe. The orderly and economical movement of international mail is made possible by the Constitution and Convention of the Universal Postal Union, the basic Acts under which the UPU operates. Since 190 countries now come under these Acts, the provisions affect virtually the entire world population. Under the Constitution, UPU member countries form a single postal territory for the reciprocal exchange of letter-post items, and freedom of transit is guaranteed throughout the entire territory of the Union.

---

## CREATION

Although generally taken for granted, present-day postal service is of relatively recent origin. The use of postage stamps for prepayment of postage was not introduced until 1840, when the United Kingdom established a unified postage charge, the famous penny rate, to be paid by the sender of a letter regardless of the distance it had to travel. Until that year, the postal fee based on distance was often very high and was not paid by the sender but by the addressee. If the addressee could not pay, the letter was returned. Gradually, other countries introduced adhesive stamps, and their use spread to international mail. In 1863, on the initiative of the United States, representatives of 15 postal administrations met in Paris to consider the problem of standardizing international postal practices.

The decisive development came with the meeting of the first international Postal Congress at Bern in 1874, at the suggestion of the German government. The Bern Congress was attended by delegates from 22 countries: 20 European countries (including Russia), Egypt, and the United States. The congress adopted a treaty concerning the establishment of a General Postal Union—commonly known as the Bern Treaty—signed on 9 October 1874. This was the forerunner of the series of multilateral Universal Postal Union conventions and came into force in the following year, when the union was formally established, on 1 July 1875, to administer its operative regulations.

The 1874 Convention provided for subsequent postal congresses to revise the convention in the light of economic and technical developments. The second congress, held in Paris in 1878, changed the name of the General Postal Union to the Universal Postal Union (UPU). Four more congresses were held prior to World War I: Lisbon, 1885; Vienna, 1891; Washington, 1897; and Rome, 1906. There were five congresses between the wars:

Madrid, 1920; Stockholm, 1924; London, 1929; Cairo, 1934; and Buenos Aires, 1939. The first post-World War II congress met in Paris in 1947 and arranged for the UPU to be recognized as a specialized agency of the UN family in 1948. Other congresses met at Brussels, 1952; Ottawa, 1957; Vienna, 1964; Tokyo, 1969; Lausanne, 1974; Rio de Janeiro, 1979; Hamburg, 1984; Washington, 1989; Seoul, 1994, Beijing, 1999; and Bucharest, 2004.

## PURPOSES

The basic objective of the union was stated in the 1874 Convention, reiterated in all successive revisions, and embodied in the constitution: “The countries adopting this Constitution comprise, under the title of the Universal Postal Union, a single postal territory for the reciprocal exchange of letter-post items.” The 1924 congress added: “It is also the object of the Postal Union to secure the organization and improvement of the various international postal services.” The 1947 congress added another clause: “and to promote the development of international collaboration in this sphere.”

In recognition of the union’s continued interest and newly assumed responsibilities in the field of development aid, the congress held in Vienna in 1964 enlarged the UPU’s goals to include the provision of postal technical assistance to member states. Under the single-territory principle, all the union’s member countries are bound by the constitution and convention to observe certain fundamental rules pertaining to ordinary mail. Ordinary mail under the Lausanne Convention includes letters, postcards, printed papers, small packets, and literature for the blind, such as books in Braille. Although the convention lays down basic postage rates for ordinary mail sent to addresses in UPU territory, variations are permitted within generous limits. Postal authorities of all member states are pledged to handle all mail with equal care, regardless of its origin and destination, and to expedite mail originating in

other UPU countries on a level comparable to the best means of conveyance used for their own mail.

In the past, foreign mail was delivered to its destination without charge to the country where it was posted, and each country retained the postage collected on international mail. Since mid-1971, however, where there is an imbalance between mail sent and received, the postal administration of the country receiving the larger quantity is authorized to ask for repayment at a standard rate (fixed by the Postal Congress) to offset its excess costs. However, each country reimburses, at standard rates fixed by the Universal Postal Congress, all intermediary countries through which its mail passes in transit.

Freedom of transit—the basic principle of the union—is guaranteed throughout UPU territory. Specific regulations provide for the dispatch of mail and for the return of undeliverable mail to the sender. Certain articles, such as opium and other drugs and inflammable or explosive agents, are excluded from the international mails.

Four optional postal agreements supplement the convention. They cover parcel mail, money orders, giro (postal checks), and cash on delivery.

## MEMBERSHIP

The original treaty allowed “overseas” countries to be admitted to the union subject to the agreement of administrations having postal relations with them. The 1878 congress decreed, however, that any country could accede directly to the union merely by unilateral declaration and communication of that declaration to the Swiss government. This system was revised by the Paris congress of 1947, which ruled that applications for membership in the union could be filed only by sovereign states and had to be channeled through the Swiss government. Approval is then required by at least two-thirds of the full membership. At the 1964 Vienna Congress, it was also decided that any member nation of the UN could accede directly to the UPU by a formal declaration addressed to the Swiss government. Since Washington Congress 1989, the government of the country concerned will address it directly to the Director General of the International Bureau, who will notify the member countries of the accession or consult with them on the application for admission, as the case may be.

Dependent territories were granted collective membership by a special postal conference held in Bern in 1876. Membership in the UPU as of May 2006 had reached 190 independent states.

## RESTRICTED POSTAL UNIONS

Members of the UPU may establish restricted unions and make special agreements concerning the international postal service, provided always that they do not introduce provisions less favorable to the public than those provided for by the Acts of the UPU to which the member countries concerned are parties. Restricted unions are the Association of European Public Postal Operators (POSTEUROP), the Arab Permanent Postal Commission (APPC), the European Postal Financial Services Commission (CSFPE), the Conference of Postal and Telecommunications Administrations of Central Africa (CAPTAC), the European Conference of Postal and Telecommunications Administrations (CEPT), the African Posts and Telecommunications Union (APTU), the Baltic Postal Union (BPU), the Postal Union of the Americas, Spain and Por-

tugal (PUASP), the African Postal Union (APU), the Pan African Postal Union (PAPU), the Asian-Pacific Postal Union (APPU), the Nordic Postal Union (NPU), and the South and West Asian Postal Union (SWAPU).

## STRUCTURE

The permanent organs of the UPU are the Universal Postal Congress, the Council of Administration, the Postal Operations Council, and the International Bureau.

### Universal Postal Congress

The Universal Postal Congress brings together the plenipotentiaries of all member countries and is the supreme authority of the Universal Postal Union. The congress meets in principle every five years. One of the major accomplishments of congresses held since the first Berne Congress in 1874 has been to allow UPU member countries to develop and integrate new products and services into the international postal network. In this way, such services as registered letters, postal money orders, international reply coupons, small packets, postal parcels, and expedited mail service, have been made available to the great majority of the world's citizens.

The congress' main function is legislative. However beginning in the late 1990s, the tendency was to increasingly delegate regulatory power to the two UPU councils, leaving the congress to focus on broad policy issues.

### Council of Administration

The Council of Administration (CA), formerly called the Executive Council, consists of a chairman and 40 member countries and meets in principle each year at UPU headquarters in Berne. (The chairmanship of the Council of Administration is given automatically to the host country of the preceding Congress.) It ensures the continuity of the union's work between congresses, supervises union activities, and studies regulatory, administrative, legislative and legal issues of interest to the UPU. In order to ensure the agency's ability to react quickly to changes in the postal environment, the CA has been given the power to approve proposals from the Postal Operations Council for the adoption of regulations or new procedures until the next congress has decided on the matter. The CA can also take measures necessary to resolve urgent matters. The CA approves the annual budget and accounts of the UPU, as well as yearly updates of the UPU's Programme and Budget. It is also responsible for promoting and coordinating all aspects of technical assistance among member countries.

### Postal Operations Council

The Postal Operations Council (POC), formerly called the Consultative Council for Postal Studies, is the technical and operational body of the UPU and consists of 40 elected member countries. It deals with the operational, economic, and commercial aspects of international postal services. At its first meeting after each Congress, the POC revises the regulations. It promotes the introduction of new postal products by collecting, analyzing, and making public the results of experiments with new products undertaken by some postal services. It also prepares and issues recommendations to member countries concerning standards for technological, operational, or other processes where uniformity of practice is essential. The POC's program focuses on helping postal services to modernize and upgrade their products, including not only let-

### Members of the UPU (as of May 2006)

Afghanistan	Ecuador	Lithuania	Sierra Leone
Albania	Egypt	Luxembourg	Singapore
Algeria	El Salvador	Madagascar	Slovakia
Angola	Equatorial Guinea	Malawi	Slovenia
Antigua and Barbuda	Eritrea	Malaysia	Solomon Islands
Argentina	Estonia	Maldives	Somalia
Armenia	Ethiopia	Mali	South Africa
Australia and Australian territories	Fiji	Malta	Spain
Austria	Finland	Mauritania	Sri Lanka
Azerbaijan	France and French overseas departments and territories	Mauritius	Sudan
Bahamas	Gabon	Mexico	Suriname
Bahrain	Gambia	Moldova	Swaziland
Bangladesh	Georgia	Monaco	Sweden
Barbados	Germany	Mongolia	Switzerland
Belarus	Ghana	Morocco	Syrian Arab Republic
Belgium	Greece	Mozambique	Tajikistan
Belize	Grenada	Myanmar	Tanzania, United Republic of
Benin	Guatemala	Namibia	Thailand
Bhutan	Guinea	Nauru	The Former Yugoslav Republic of Macedonia
Bolivia	Guinea-Bissau	Nepal	Timor-Leste
Bosnia and Herzegovina	Guyana	Netherlands	Togo
Botswana	Haiti	Netherlands Antilles and Aruba	Tonga
Brazil	Honduras	New Zealand and New Zealand territories	Trinidad and Tobago
Brunei Darussalam	Hungary	Nicaragua	Tunisia
Bulgaria	Iceland	Niger	Turkey
Burkina Faso	India	Nigeria	Turkmenistan
Burundi	Indonesia	Norway	Tuvalu
Cambodia	Iran (Islamic Republic of)	Oman	Uganda
Cameroon	Iraq	Pakistan	Ukraine
Canada	Ireland	Panama	United Arab Emirates
Cape Verde	Israel	Papua New Guinea	United Kingdom
Central African Republic	Italy	Paraguay	United Kingdom overseas territories
Chad	Jamaica	Peru	United States
Chile	Japan	Philippines	United States territories
China (including Hong Kong and Macao)	Jordan	Poland	Uruguay
Colombia	Kazakhstan	Portugal	Uzbekistan
Comoros	Kenya	Qatar	Vanuatu
Congo, Republic of	Kiribati	Romania	Vatican
Congo, Democratic Republic of the	Korea, Democratic People's Republic of	Russian Federation	Venezuela
Costa Rica	Korea, Republic of	Rwanda	Vietnam
Côte d'Ivoire	Kuwait	St. Kitts and Nevis	Yemen
Croatia	Kyrgyzstan	St. Lucia	Zambia
Cuba	Lao People's Democratic Republic	St. Vincent and the Grenadines	Zimbabwe
Cyprus	Latvia	Samoa	
Czech Republic	Lebanon	San Marino	Independent countries whose situa- tion with regard to the UPU has not yet been settled: Andorra, Marshall Islands, Micronesia (Federated States of), Palau.
Denmark (including Faroe Islands and Greenland)	Lesotho	São Tomé and Príncipe	
Djibouti	Liberia	Saudi Arabia	
Dominica	Libyan Jamahiriya	Senegal	
Dominican Republic	Liechtenstein	Serbia and Montenegro	
		Seychelles	

ter post but also expedited mail service, postal parcels, and postal financial services.

The chairmanship of the Postal Operations Council for the period between congresses is decided through election by the council.

#### International Bureau

The International Bureau, established by the Treaty of Berne in 1874, is located in Berne and provides secretariat and support facilities for the UPU's bodies. It serves as liaison, provides information and consultation services, and promotes technical cooperation among UPU members. It also acts as a clearing house for the settlement of accounts between postal administrations for inter-

administration charges related to the exchange of postal items and international reply coupons.

The International Bureau is responsible for ensuring the representation of the UPU in its external relations, notably with international organizations. However, it does not intervene in relations between postal administrations and their customers.

In the new UPU structure approved by the Seoul Congress (1994), the International Bureau took on a stronger leadership role in certain activities, including the application of Electronic Data Interchange (EDI) technology and monitoring the quality of postal service on a global scale. To carry out its activities, the International Bureau implemented modern management techniques including total quality management, a strategic planning

process, and a performance evaluation system based on individual objectives.

## BUDGET

Since 1992, the UPU has pursued zero real growth budgeting, maintaining its annual budget increases at or below the level of inflation. The 1996 budget was set at 35 million Swiss francs, where, as of 2006, it remained. The UPU's budget expenses are financed jointly by member countries, based on a contribution class system. Upon admission to the UPU, new member countries are free to choose one of ten contribution classes ranging from one to 50 units. An additional contribution class of one-half unit is reserved for the least developed countries. There are at present five countries with the maximum of 50 contribution units.

## ACTIVITIES

### A. Clearing accounts for international services

The UPU acts as a central office for the international postal traffic carried on by its members. In principle, UPU member states retain the revenue they derive from the sale of postage stamps and from other fees and charges for foreign-bound mail. Administrations must, however, reimburse one another for the transportation of foreign mail in intermediate transit and for the imbalance between international mail sent and received (terminal dues). At the end of each year, the International Bureau draws up an annual general clearing account for transit and terminal charges, stating the balances due.

Every two years the International Bureau publishes a general clearing account for the international reply coupons that it supplies to facilitate payment of international correspondence. Some 165 countries now sell these coupons, and all countries must accept them as payment for postage.

### B. Information services

The UPU acts as an international clearinghouse for postal information. At the request of postal administrations, the International Bureau circulates inquiries concerning the operation of the various postal systems and makes the replies available to all UPU members. Inquiries may concern domestic, as well as international, postal practices and cover subjects as diverse as the texts of propaganda permitted on letters and packages, mobile post offices on motorboats, the opening of new offices of exchange, introduction of summer time, and national regulations for the dispatch of radioactive substances.

The International Bureau publishes a number of international postal handbooks, including the following: *Postal Statistics* (internal and international); *List of Prohibited Articles* (prohibited from the mails); and the *Multilingual Vocabulary of the International Postal Service*, designed to ensure that terms used by different national postal services convey an identical meaning. The bureau also prepares an annotated edition of UPU legislation, which includes discussion of principles, opinions, decisions, and practices underlying current international postal procedures and the present organization of the union.

### C. Arbitration and interpretation of international postal rules

If a difference of opinion on the interpretation of UPU legislation between two or more postal administrations cannot be resolved

by direct negotiations, the matter is settled by in-house arbitration. The countries concerned may also designate a single arbitrator, such as the International Bureau of the UPU.

### D. Revision of rules and adoption of guidelines for international services

The main function of the Universal Postal Congress, as noted above, is to study and revise the acts of the union on the basis of proposals put forward by member countries, the Council of Administration, and the Postal Operations Council. At the 23rd Congress, held in Bucharest, Romania, in 2004, the most important decisions taken were: the adoption of the Bucharest World Postal Strategy, a four-year roadmap for governments, postal operators, and the bodies of the UPU; the creation of a Consultative Committee, a new UPU body that represents the interests of external stakeholders and private sector partners in the work of the UPU; the adoption of a complete package of proposals aimed at making the system used to compensate postal administrations for processing and delivering letter mail coming from other countries (called terminal dues) more country-specific and reflective of real costs; the approval of a new country classification system that is in line with that of the UN Development Programme (UNDP); the introduction of a Quality of Service Fund that will ensure that the countries most in need get more funds for improving their postal infrastructure and quality of service; the adoption of a worldwide quality of service standard and targets for international mail services; the adoption of a series of resolutions highlighting the need to improve security, combat terrorism and money laundering through the use of the mail network; decisions to modernize and expand postal financial services through the use of modern technology such as electronic fund transfers and computerized accounting methods; the adoption of a proposal to amend the UPU Convention to legally define the Electronic Postmark (EPM), formally recognizing it as a new optional postal service; the adoption of a resolution ruling that items sent through extraterritorial offices of exchange (ETOE) are to be considered as commercial items not subject to the UPU Acts, and that any country or operator wishing to set up an ETOE on the territory of a UPU member country must obtain prior agreement from the host country; measures to make postal parcels more competitive; and measures to enhance awareness of environmental protection. The 24th Congress is due to be held in Nairobi, Kenya, in 2008.

### E. Technical assistance

The principle of technical assistance is contained in Article 1 of the UPU constitution; it was couched in general terms in order to give the union flexibility in the use of all forms of technical cooperation, present and future.

Requests for UPU assistance in technical cooperation matters cover all sectors: planning, organization, management, operations, training, and financial services. The aid provided comes in three forms: recruiting and sending experts, consultants, or volunteers; granting vocational training or further training fellowships for individual or group courses; and supplying equipment and training or demonstration aids.

The UPU executes country and intercountry projects covering all aspects of the postal services and the three components of experts, fellowships, and equipment. Projects common to several countries, which form a very important part of this program,

make it possible to solve, economically and rationally, the problems that arise in a given region, especially by setting up inter-country postal training schools. These regional and interregional projects are carried out in conjunction with the restricted postal unions and the UN regional commissions.

In the 1990s, the UPU undertook a global Electronic Data Interchange (EDI) project. Through the development of computer applications that facilitate international mail processing and allow exchange of electronic data, postal services have the ability to track mail shipments from end to end and to provide customers with tracking information on time-certain products such as expedited mail service (EMS). It is expected that within a few years, exchanges of postal data via EDI will become a common feature of the majority of postal services.

Funds from the UPU budget make it possible to provide additional assistance to that of UNDP—namely, in the form of short consultant missions of three months at most, at the request of the postal administration concerned. A noteworthy feature is that, for many missions, the consultants' countries of origin also share the cost of this form of technical cooperation by continuing to pay all or part of the salaries of their officials during the mission. At the same time, since 1991 the UPU also has funded integrated projects incorporating short-term consultants' missions, vocational training fellowships, and items of minor equipment. The UPU Special Fund, set up in 1966 and maintained by voluntary contributions from member countries, is mainly designed to finance training and to further training activities in the form of fellowships, equipment, and training courses or study cycles. Some developed countries provide the International Bureau with funds for the management of associate experts in order to supplement the staff of ongoing projects and to give young people with sufficient training the opportunity to improve their professional qualifications.

Lastly, under a resolution adopted by the Council of Administration in 1967, governments may avail themselves of technical assistance instead of payment, which they finance themselves from funds in trust; the International Bureau then undertakes to manage the projects implemented in this way. Of course, the UPU, through the International Bureau, continues to act as an intermediary, wherever expedient, for supplying assistance in kind to developing countries on the basis of offers from developed countries. It also has made a special effort in the field of vocational training by assessing the needs to be met and listing the facilities available in the various member countries. This effort is reflected in the establishment or reinforcement of national or multinational schools and the organization of study cycles for the further training of senior staff and of instructor-training courses; with this aid, a large number of postal administrations now have qualified postal instructors.

#### F. Postal Studies

The 1989 Washington Congress adopted the practice of having major UPU studies divided into specific sub-study areas. The major technical studies covered the following areas: the post and its markets (commercial strategies, delivery network and customer analysis, press and publishing, parcel-post products/services), development of rapid services (EMS and electronic mail), operations and quality of service (improvement of the postal system, monitoring, mail circulation standards), modernization (automation, coding, telematics, technology research), management (international accounting, productivity indices, security, decentralization), human resources (adapting to the demands of competition, training), and postal development.

UPU reports are published as the *Collection of Postal Studies*, which is available in four languages.

---

# THE INTERNATIONAL TELECOMMUNICATION UNION (ITU)

**BACKGROUND:** The International Telecommunication Union is the oldest of the intergovernmental organizations that have become specialized agencies related to the UN. In 1865, a convention establishing an International Telegraph Union was signed in Paris by the plenipotentiaries of 20 continental European states, including two extending into Asia—Russia and Turkey. Three years later, a permanent international bureau for the union was established in Bern, Switzerland. This bureau, which operated until 1948, was the forerunner of the present General Secretariat of the ITU. In 1885, at Berlin, the first regulations concerning international telephone services were added to the telegraph regulations annexed to the Paris convention. By the end of the nineteenth century, radiotelegraphy, or “wireless,” had been developed, and for the first time it was possible to communicate directly between shore stations and ships at sea. Rival wireless companies frequently refused to accept one another’s messages, however. In 1903, an international conference was called to consider the problem, and in 1906, in Berlin, 29 maritime states signed the International Radiotelegraph Convention, establishing the principle of compulsory intercommunication between vessels at sea and the land. The International Radiotelegraph Conference, which met in Washington in 1927, drew up for the first time a table of frequency allocations.

---

## CREATION

Two plenipotentiary conferences were held in 1932 at Madrid—one covering telephone and telegraph and the other radiotelegraph communication. The two existing conventions were amalgamated into a single International Telecommunication Convention (the word *telecommunication* signifying “any transmission, emission or reception of signs, signals, writing, images and sounds, or intelligence of any nature by wire, radio, optical, or other electromagnetic systems”). The countries accepting the new convention, which came into force on 1 January 1934, formed the International Telecommunication Union.

The International Telecommunication Convention of 1932 has been revised six times. The Plenipotentiary Conference of the ITU, meeting in Atlantic City in 1947, radically changed the organization to keep up with developments in telecommunication: for example, a new permanent organ, the International Frequency Registration Board, was created to cope with the overcrowding of certain transmission frequencies; and an agreement was drawn up under which the ITU was recognized by the UN as the specialized agency for telecommunication. The convention was further modified in certain respects by plenipotentiary conferences in 1952, 1959, 1965, 1973, and 1982.

In 1989, the Plenipotentiary Conference held in Nice created a High-Level Committee to propose wide-ranging recommendations about the role of ITU in a world totally transformed by the convergence of telecommunications and computer technology and the globalization and privatization of telecommunications providers. An historic Additional Plenipotentiary Conference was convened in Geneva in December 1992 to adopt far-reaching structural changes to the union and a thoroughly revised constitution and convention. The new constitution officially entered into force on 1 July 1994. However, the structural changes were con-

sidered so important to maintaining the organization’s relevance in the rapidly changing technological world that the new structure was implemented as of 1 March 1993. The Constitution has been amended at subsequent plenipotentiary conferences.

## PURPOSES

The new Constitution of the International Telecommunication Union (Geneva, 1992) cites the following purposes for the union:

- to maintain and extend international cooperation between all members of the union for the improvement and rational use of telecommunications of all kinds;
- to promote and to offer technical assistance to developing countries in the field of telecommunications;
- to promote the development of technical facilities and their efficient operation;
- to promote the extension of the benefits of the new telecommunication technologies to all the world’s inhabitants;
- to harmonize the actions of members in the attainment of these ends;
- to promote, at the international level, the adoption of a broader approach to telecommunications issues, an approach that includes other world and regional organizations and nongovernmental organizations concerned with telecommunications.

## MEMBERSHIP

As of May 2006, ITU had 190 member nations. Although membership in the union itself is open only to sovereign states, the union’s three sectors and their various conferences are open to telecommunications companies, scientific organizations, industrial groups, financing and development institutions, internation-

al and regional telecommunication organizations, and the United Nations itself as well as its specialized agencies. Indeed, the 1992 constitution makes it clear that the participation of private sector organizations in the union's work is encouraged. In the late 1990s, some 360 members (scientific and industrial companies, public and private operators, broadcasters, regional/international organizations) took part in ITU's ongoing standardization work.

## STRUCTURE

The new structure of ITU combines the activities of its previous bodies into three "pillars" supporting the work mandated by the Plenipotentiary Conference: the Radiocommunication Sector, the Telecommunication Standardization Sector, and the Development Sector. Each sector's work is directed by international and regional conferences, supported by a bureau under the administration of a director. The bureau directors are assisted by "Advisory Groups" that are open to representatives of national telecommunication administrations, authorized organizations, and study groups. The Plenipotentiary Conference also elects the ITU Council, which acts as an intersessional administrative body guiding the work of the organization in the four-year intervals between conferences. The organization's General Secretariat, headquartered in Geneva, is administered by a Secretary-General, assisted by a Deputy Secretary-General as well as the directors of Radiocommunication Bureau, Telecommunication Standardization Bureau, and the Telecommunication Development Bureau. Yoshio Utsumi of Japan was elected ITU Secretary-General by the Minneapolis Plenipotentiary Conference (October 1998).

### Plenipotentiary Conference

The supreme body of the ITU is the Plenipotentiary Conference, in which each member has one vote. Previously, it met at intervals of five or more years—in Atlantic City in 1947, Buenos Aires in 1952, Geneva in 1959, Montreux in 1965, Torremolinos in 1973, Nairobi in 1982, and Nice in 1989. In 1992 the extraordinary Additional Plenipotentiary Conference met in Geneva to fundamentally revamp the organization. The first session of the Plenipotentiary Conference after the restructuring was held in Kyoto, Japan, in September 1994. The Plenipotentiary Conference convened in Minneapolis in 1998 and in Marrakesh in 2002. In 2006, the Plenipotentiary Conference was due to be held in Antalya, Turkey.

The Plenipotentiary Conference sets general policies for fulfilling the purposes of the union; receives reports on the organization's activities since the previous conference and takes decisions on those reports; establishes the budget in light of decisions taken by the ITU Council; fixes salary scales; elects member nations to the ITU Council; elects the secretary-general; the deputy secretary-general; the directors of the bureaus of the three sectors, and the members of the Radio Regulations Board; considers and adopts amendments to the constitution and the convention; concludes agreements between ITU and other organizations that may be concluded by the ITU Council. In general the conferences focus on long-term policy issues.

### The ITU Council

The ITU Council (formerly called the Administrative Council) traces its history back to the New Jersey Plenipotentiary Conference of 1947. It is composed of 46 member nations elected by the

plenipotentiary along a regional formula: the Americas have eight seats, Western Europe has eight seats, Eastern Europe has five seats, Africa has 13 seats, and Asia and Australasia has 12 seats. The council members hold office until the next plenipotentiary, at which time they may be reelected.

The ITU Council guides the work of the union between sessions of the plenipotentiary. It approves the budgets of the union and controls its finances. It is responsible for the coordination of ITU's work with other United Nations organizations.

The members of the ITU Council for 2002-06 were: Region A (Americas): Argentina, Brazil, Canada, Cuba, Mexico, Suriname, United States, Venezuela; Region B (Western Europe): France, Germany, Italy, Norway, Portugal, Spain, Switzerland, Turkey; Region C (Eastern Europe): Bulgaria, Czech Republic, Poland, Romania, Russia; Region D (Africa): Algeria, Burkina Faso, Cameroon, Egypt, Ghana, Kenya, Mali, Morocco, Nigeria, Senegal, South Africa, Tunisia, Uganda; and Region E (Asia and Australasia): Australia, China, India, Indonesia, Iran (Islamic Republic of), Japan, Korea (Republic of), Malaysia, Pakistan, Saudi Arabia, Thailand, Vietnam.

### The Radiocommunications Sector

#### World Radiocommunication Conferences

World Radiocommunication Conferences (WRCs) revise the radio regulations and any associated frequency assignment and allotment plans; address any radiocommunication matter of worldwide character; instruct the Radio Regulations Board and the Radiocommunication Bureau, and review their activities; and determine questions for study by the Radiocommunication Assembly and its study groups in preparation for future Radio-communication Conferences. WRCs are normally convened every two or three years.

#### Radiocommunication Conferences and Assemblies

Every two to three years the Radiocommunication Conference and a Radiocommunication Assembly meet to review and revise the Radio Regulations on the basis of an agenda adopted by the ITU Council. Radiocommunication conferences are open to all ITU member administrations and to the United Nations and its specialized agencies, regional telecommunication organizations, and intergovernmental organizations operating satellite systems. In addition, telecommunication operators authorized by their country to participate in the work of the Radio Sector are admitted to the conferences.

The Radiocommunication Assemblies provide the technical basis for the work of the conferences. The assemblies create study groups of experts and decide on the priority, urgency, and time-scale for study of specific issues. The study groups are made up of experts from both administrations and public/private sector entities.

#### Radiocommunication Bureau

The Radiocommunication Bureau, or BR, is the executive arm of the Radiocommunication Sector, and is headed by an elected director. The director of BR acts as Executive Secretary to the Radio Regulations Board, and is responsible for the coordination of the work of the sector. The BR provides administrative and technical support to radiocommunications conferences, assemblies, and

study groups; records and registers frequency assignments and orbital characteristics of space services; provides advice to member states on the fair and effective use of the radio-frequency spectrum and satellite orbits, and assists in resolving cases of harmful interference; prepares and edits publications developed within the sector; provides technical information, and works closely with the Telecommunication Development Bureau in assisting developing countries.

#### **Radio Regulations Board**

The Radio Regulations Board is a part-time, 12-member body of experts that approves the rules of procedure to register radio frequency assignments and equitable utilization of the geo-stationary satellite orbit. It also investigates complaints by ITU members about frequency interference, and formulates recommendations to resolve such problems. It holds up to four meetings a year in Geneva. The board members, elected at the Plenipotentiary Conference, serve as custodians of international public trust and not as representatives of their respective member states or region, hence they cannot be part of national delegations at conferences. The Radio Regulations Board replaced the former five-member International Frequency Registration Board (IFRB), which was a full time body.

#### **Radiocommunication Advisory Group**

The Radiocommunication Advisory Group (RAG) has the following duties: to review the priorities and strategies adopted in the Radiocommunication Sector; to monitor progress of the work of Study Groups; to provide guidance for the work of Study Groups; and to recommend measures for fostering cooperation and coordination with other organizations and other ITU sectors. The RAG provides advice on these matters to the Director of the Radiocommunication Bureau. Radiocommunication Assemblies may refer specific matters within its competence to RAG.

### **The Telecommunication Standardization Sector**

#### **World Telecommunication Standardization Assemblies**

These assemblies are held every four years to approve, modify, or reject draft standards (called "Recommendations" because of their voluntary character). The conferences set the work program for the study groups that elaborate these recommendations. The Telecommunication Standardization Study Groups are groups of experts in which administrations and public/private sector entities participate. They focus on the standardization of telecommunication services, operation and performance of equipment, systems, networks, services, tariffs, and accounting methods.

#### **Telecommunication Standardization Bureau**

The bureau is headed by a director elected by the plenipotentiary. It prepares for assemblies and meetings and processes and publishes information received from administrations about the application of the International Telecommunication Regulations. This information includes international telephone routes, statistics, notifications, and operational bulletins. It also is responsible for updating the documents and data bases of the Telecommunication Standardization Sector.

### **The Telecommunication Development Sector**

#### **World and Regional Telecommunication Development Conferences**

These conferences fix objectives and strategies for balancing worldwide and regional development in telecommunications. They serve as a forum for studying policy, organization, operation, regulatory, technical, and financial questions related to the needs of developing countries. A World Telecommunication Development Conference is held every four years and a number of Regional Telecommunication Development Conferences are held within that same period. The resolutions, decisions, recommendations, and reports of the conferences are submitted to the plenipotentiary. The development conferences direct the work of the Telecommunications Development Bureau. The conferences also set up study groups on issues specific to developing countries.

#### **The Telecommunication Development Bureau**

This body is the administrative arm of the Development Sector. Its duties and responsibilities cover a variety of functions including program supervision, technical advice, collection and processing of relevant information for publication in machine-readable and other formats. The bureau is headed by an elected director who organizes and manages the work of the Sector.

#### **General Secretariat**

The General Secretariat is at ITU headquarters in Geneva, Switzerland. It handles arrangements for ITU conferences and meetings and maintains liaison with member states and with the UN, the specialized agencies, and other international organizations. It also carries out the ITU's extensive publication program. It is headed by the secretary-general. Yoshio Utsumi of Japan was elected ITU Secretary-General by the Minneapolis Plenipotentiary Conference in 1998.

The Secretariat also organizes an international commercial telecommunications exhibition called TELECOM, held in Geneva every four years. It also cosponsors regional telecommunications exhibitions with member administrations (Asia TELECOM, Africa TELECOM, Americas TELECOM, and Europa TELECOM). These trade shows feature a comprehensive display of telecommunication equipment and services, including digital transmission, switching technologies, and digital networks. In conjunction with TELECOM, ITU sponsors a FORUM which deals with emerging trends in telecommunications technology, administration, management, financing, research, and equipment supply.

### **BUDGET**

The ordinary budget includes expenditures pertaining to the ITU Council, the Geneva headquarters, and the various conferences and meetings. The technical cooperation special accounts budget includes administrative expenditure for technical assistance to developing nations and is financed by the UNDP. The publications budget includes production costs of all publications and is self-financed through sales.

At each Plenipotentiary Conference, member countries choose a class of contribution. The lowest classes are reserved for countries designated least developed countries by the United Nations. The ordinary budget is then divided by the number of units as-

signed to each member. However, regional radio conferences require additional contributions.

All other organizations (private enterprises, international organizations, etc.) that take part in the work of the union's three sectors must also choose a contribution class; however, their units are 1/5th the value of the member countries' contributory unit. Separate contributions must be made for participation in any of the various conferences of the union.

The total budget for 2004–05 amounted to SFR 328,872,000.

## ACTIVITIES

### Background

In the early 1980s ITU members recognized that advances in technology were fundamentally changing the nature of telecommunications and the very principles upon which the union was founded. These fundamental changes were behind the restructuring of the union, which was completed in 1994. An understanding of these changes is fundamental to understanding ITU's activities in the rapidly evolving world of telecommunications.

From 1900 to the 1980s telecommunication was generally understood to mean essentially the transmission of voice telephone signals. Governments and the telecommunications industry shared easily communicable goals: provide telephone service for every business and home and arrive at international technological standards that would allow telephone connections between all countries. Until the 1980s telecommunication equipment technology evolved comparatively slowly, allowing enough time for ITU's international bodies to set standards without inhibiting the progress of technology development. In the area of pricing (tariffs) there was widespread acceptance that densely populated areas would produce enough income for telephone companies to cover their expenses for providing coverage for remote, sparsely populated areas.

In the 1980s technological advances in the digitization of telephone signals, software control, component miniaturization, and sharply decreasing switching and transmission costs brought about an explosion in products and services that could now transmit not only voice, but also data, text, image, and video information. Telecommunications became less a stand-alone industry and more intimately connected with the computer industry. It could be said that the two technologies had "converged," fundamentally reshaping the way all kinds of information services could be delivered to people and businesses. Similarly, wired and "wireless" telecommunications also began to converge. Wireless systems (cellular telephones, for example) began to compete with existing networks at every level through terrestrial and satellite-based communications systems.

At the same time, the equipment supply industry was transformed by shorter innovation cycles and global marketing efforts. This drastically shortened the time available for consultation and adoption of international standards. Finally, the profitability ethic of the computer industry began to replace the universal coverage ethic of the telecommunications industry. Businesses began to demand cost-based pricing, which would reduce their costs in increasingly competitive global markets. However, the growth of cost-based pricing would effectively deny telecommunications

to isolated or sparsely populated countries or regions, since they could never afford to pay enough to be as profitable as densely populated areas. In other words, the competitive environment produced "islands" of high telecommunication capability where profitable customers existed and "deserts" of low telecommunication capability where profitable returns could not be achieved.

This trend strengthened towards the end of the 1980s with the end of the cold war. An international consensus emerged that market-based economies were the most efficient way to deliver goods and services and promote economic growth. Previously, most of the world's countries had government-controlled telecommunications departments.

In the new atmosphere of deregulation and privatization, many state-owned telecommunications departments would become state-owned corporations, and perhaps eventually private corporations. Telecommunications companies in industrialized countries found their main opportunity for growth was to change from offering only domestic services to offering services region-wide or even globally, competing with the domestic services of other nations.

ITU's Secretary-General, Dr. Pekka Tarjanne, told an international gathering in Tokyo in 1994 that: "Today's ITU does not fully reflect the dramatic changes that have taken place in telecommunications. The Union remains largely the preserve of dominant carriers, with little active participation by new players in the telecommunications industry or by major users. This trend strongly suggests the need for greater private sector participation by the new players in the telecommunications industry.... How can non-governmental players be given a greater voice in ITU decision-making processes without infringing on the sovereign rights of nations?" The future evolution of the organization and its activities will revolve around this dilemma.

The activities of the organization were defined in the 1992 constitution as:

- allocating bands of the radio frequency spectrum, allotting radio frequencies, registering radio frequency assignments, and registering orbital positions in the geostationary-satellite orbit in order to avoid harmful interference between radio stations of different countries;
- coordinating efforts to eliminate harmful interference between radio stations of different countries;
- facilitating the worldwide standardization of telecommunications;
- delivering technical assistance to developing countries that want to create, develop, and improve their telecommunications systems;
- fostering collaboration among its members to establishing rates at levels as low as possible while ensuring efficient service;
- promoting measures that would save lives through the cooperation of telecommunications services; and
- promoting the establishment of preferential and favorable lines of credit from international financial and development organizations for extending telecommunications services to the most isolated areas in countries.

## PUBLICATIONS

One of the most important duties of ITU headquarters is to collect and collate essential telecommunication data and to edit and publish the numerous documents essential for the day-to-day operation of the various telephone, telegraph, and broadcasting systems of the world. Among the documents regularly issued by the ITU are the *International Frequency List*; the quarterly *High Frequency Broadcasting Schedules*; yearly radio statistics; lists of coast, ship, and fixed stations; codes and abbreviations in general use; lists of radiolocation stations; an alphabetical list of call signs; summaries of international monitoring information; the *ITU Newsletter* (formerly the *Telecommunication Journal*) and similar publications, all generally issued in English, French, and Spanish editions, or in a single trilingual edition. A new bi-weekly publication was launched in 2000, the *BR International Frequency Information Circular*. Published in CD-ROM format, the circular represents a consolidated regulatory snapshot of activities in the satellite and

terrestrial radio markets. Many of ITU's technical documents are available in electronic forms: online as part of ITUDOC, on CD-ROM discs, or on other computer-readable media.

### **Telecom Information Exchange Services (TIES) and ITUDOC**

This on-line computer communication service is based at ITU headquarters for telecommunications-related information exchange. The system offers electronic mail, bulletin boards, document interchange, computer conferencing, and distributed access to ITU data bases such as global telecom services and tariffs, as well as notification of telecommunication information. It also contains a terminology infobase of 30,000 telecommunications terms in English, French, and Spanish.

ITUDOC allows users of the Internet to retrieve ITU documents and publications from a central computer server at ITU headquarters. It also allows participants in ITU's work to submit their contributions electronically.

**ITU MEMBER COUNTRIES (as of May 2006)**

Afghanistan	Djibouti	Lesotho	San Marino
Albania	Dominica	Liberia	São Tomé and Príncipe
Algeria	Dominican Republic	Libya	Saudi Arabia
Andorra	Ecuador	Liechtenstein	Senegal
Angola	Egypt	Lithuania	Serbia and Montenegro
Antigua and Barbuda	El Salvador	Luxembourg	Seychelles
Argentina	Equatorial Guinea	Madagascar	Sierra Leone
Armenia	Eritrea	Malawi	Singapore
Australia	Estonia	Malaysia	Slovakia
Austria	Ethiopia	Maldives	Slovenia
Azerbaijan	Fiji	Mali	Solomon Islands
Bahamas	Finland	Malta	Somalia
Bahrain	France	Marshall Islands	South Africa

# THE WORLD METEOROLOGICAL ORGANIZATION (WMO)

**BACKGROUND:** The practical uses of meteorology are to instruct, advise, and warn mankind about the weather. Thus, it can help prevent devastation caused by flood, drought, and storm; it can also assist the peoples of the world in best adapting their agriculture and industry to the climatic conditions under which they live.

For meteorology, international cooperation is indispensable. The reasons are expressed in the following words of President John F. Kennedy: "... there is the atmosphere itself, the atmosphere in which we live and breathe and which makes life on this planet possible. Scientists have studied the atmosphere for many decades, but its problems continue to defy us. The reasons for our limited progress are obvious. Weather cannot be easily reproduced and observed in the laboratory. It must, therefore, be studied in all of its violence wherever it has its way. Here, new scientific tools have become available. With modern computers, rockets and satellites, the time is ripe to harness a variety of disciplines for a concerted attack.... The atmospheric sciences require worldwide observation and, hence, international cooperation."

---

## CREATION

Beginning in 1853, many of the world's leading maritime countries tried to establish an international system for collecting meteorological observations made by ships at sea.

The first international meteorological congress was held in Vienna in 1873; it led to the founding of the International Meteorological Organization, composed of directors of meteorological services from various countries and territories throughout the world. This body carried out ambitious programs to perfect and standardize international meteorological practices.

As transportation, communications, agriculture, and industry developed in the 20th century, they increasingly relied on meteorology, while meteorology itself relied to an increasing extent on advances in science and technology to perfect its methods of observing and predicting weather phenomena. Hence, the closest possible collaboration was called for between the International Meteorological Organization and other international bodies.

A conference of directors of national meteorological services met in Washington in 1947 under the auspices of the International Meteorological Organization and adopted the World Meteorological Convention, establishing the World Meteorological Organization as a UN specialized agency. On 23 March 1950, after 30 signers had ratified or acceded to the convention, it came into force. The first WMO congress opened in Paris on 19 March 1951.

## PURPOSES

As set forth in the World Meteorological Convention, the purposes of the WMO are sixfold:

- to facilitate worldwide cooperation in the establishment of

networks of stations for meteorological, hydrological, and other geophysical observations and to promote the establishment and maintenance centers charged with the provision of meteorological and related services;

- to promote the establishment and maintenance of systems for rapid exchange of weather information;
- to promote standardization of meteorological and related observations and ensure uniform publication of observations and statistics;
- to further the application of meteorology to aviation, shipping, water problems, agriculture, and other human activities;
- to promote activities in operational hydrology and cooperation between meteorological and hydrological services; and
- to encourage research and training in meteorology and, as appropriate, to assist in coordinating the international aspects of such research and training.

## MEMBERSHIP

Membership in the WMO is not limited to sovereign states; it may include territories that maintain their own meteorological services. Membership is open to any of the 45 states and 30 territories attending the 1947 conference in Washington that signed the convention or to any member of the UN with a meteorological service. Any of these automatically becomes a member of the WMO upon ratifying or acceding to the convention. Any other state, territory, or group of territories maintaining its own meteorological services may become eligible for membership upon approval of two-thirds of the WMO membership. As of May 2006, the WMO had 189 members.

## STRUCTURE

The WMO is headed by a president and three vice-presidents, elected by the World Meteorological Congress. There is also an Executive Council and a secretariat.

### World Meteorological Congress

The World Meteorological Congress is the supreme body of the organization and is composed of the delegates representing its member states and territories. (According to the World Meteorological Convention, the principal delegate of each member “should be the director of its meteorological service.”) The congress, which meets every four years, determines changes in the constitution and functions of the various WMO bodies, adopts regulations covering meteorological practices and procedures, and determines general policies for carrying out the purposes of the organization and related matters. It also establishes the regional associations and technical commissions.

Each member of the congress has one vote. Election of individuals to serve in any capacity in the organization is by a simple majority of the votes cast; other questions are decided by two thirds of the votes cast for and against. On certain subjects, only members that are states may vote.

### Executive Council

The Executive Council has 47 members: the president and the three vice-presidents of the WMO; the presidents of the six regional associations; and 37 directors of meteorological services from the member countries, elected by the congress. Meeting at least once a year, the council carries out the activities of the organization and the decisions of the congress. Its own decisions are reached by a two-thirds majority.

### Regional Associations

There are six regional associations: one each for Africa, Asia, South America, North and Central America, the Southwest Pacific, and Europe. The regional associations are composed of the WMO members whose meteorological networks lie in or extend into the respective regions. They meet when necessary and examine from a regional point of view all questions referred to them by the Executive Council. Each association has the responsibility for coordinating meteorological activity.

### Technical Commissions

The technical commissions are composed of experts in meteorology. They study various meteorological problems and make recommendations to the executive committee and the congress. The WMO has established eight commissions for the following areas: basic systems; instruments and methods of observation; atmospheric sciences; aeronautical meteorology; agricultural meteorology; marine meteorology; hydrology; and climatology. Each commission meets every four years.

### Secretary-General and Secretariat

The secretariat, in Geneva, completes the structure of the WMO. Its staff, under the direction of a Secretary-General, undertakes studies, prepares publications, acts as secretariat during meetings of the various WMO bodies, and provides liaison between the various meteorological services of the world. The Secretary-General

is Michel Jarraud of France, elected for a four-year term beginning on 1 January 2004. He is assisted by a staff of about 250.

## BUDGET

Contributions to the WMO's regular budget are assessed upon members by the congress. The maximum expenditure for the financial period 2004–2007 as approved by the Fourteenth World Meteorological Congress is SFr 253.8 million. Extrabudgetary resources support scientific components of programs such as technical cooperation, education and training, improvement of the World Weather Watch, and some urgent environmental and climatological monitoring, research, and cooperative work. Extrabudgetary expenditures are funded through UNDP, the WMO Voluntary Cooperation Program, and funds-in-trust.

## ACTIVITIES

### A. World Weather Watch

The World Weather Watch (WWW) was established by the Fifth World Meteorological Congress, held in Geneva in 1967. Its purpose is to make available to each national meteorological service meteorological and related environmental information required in order to enjoy the most efficient and effective meteorological and related environmental services possible in both applications and research. No other scientific discipline has such international interdependence. The WWW has three essential elements:

1. The Global Data-Processing System provides meteorological analyses and forecast products to all meteorological services. It is composed of three world meteorological centers, in Melbourne, Moscow, and Washington, D.C.; 26 regional meteorological centers; and more than 150 national meteorological centers.
2. The Global Observing System provides observational data from surface-based observing stations and platforms and from meteorological satellites of its space-based subsystem.
3. The Global Telecommunication System consists of telecommunication facilities and arrangements necessary for the rapid and reliable exchange of the observational data and processed products required by meteorological services. The system is organized into the main telecommunication network (the core of the system), six regional meteorological telecommunication networks, and national meteorological telecommunication networks that interconnect meteorological centers through approximately 240 data links.

The WWW also has two support functions:

1. WWW Data Management is concerned with the overall real-time management of data and product selection and presentation to recipients in appropriate standard formats and codes and with the monitoring of the data availability, quality, and operational status of the WWW system.
2. WWW Systems Support Activities make available to WMO members information on new WWW technology, operational experience, and proven methodology.

Also grouped under the WWW umbrella are WMO's satellite and emergency response activities. Emergency response activities involve the coordination and implementation of procedures and response mechanisms in case of nuclear accidents, as well as the Instruments and Methods of Observation Programme and the Tropical Cyclone Programme (TCP). The TCP, is designed to assist more than 50 countries in areas vulnerable to tropical cyclones to minimize destruction and loss of life by improving forecasting and warning systems, and disaster preparedness measures.

### B. World Climate Programme

The World Climate Programme (WCP) established by the eighth WMO Congress in 1979 comprises four major component programs: the World Climate Applications and Services Programme (WCASP); the World Climate Data and Monitoring Programme (WCDMP); the World Climate Research Programme (WCRP); and the World Climate Impact Assessment and Response Strategies Programme (WCIRP).

The objectives of the WCP are:

- facilitate the effective collection and management of climate data and the monitoring of the global climate system, including the detection and assessment of climate variability and changes;
- foster the effective application of climate knowledge and information for the benefit of society and the provision of climate services, including the prediction of significant climate variations both natural and as a result of human activity;
- assess the impacts of climate variability and changes that could markedly affect economic or social activities and advise governments thereon and contribute to the development of a range of socioeconomic response strategies that could be used by governments and community;
- improve the understanding of climate processes for determining the predictability of climate, including its variability and change; identifying the extent of human influence on climate; and developing the capability for climate prediction.

WMO is directly responsible for WCASP and WCDMP and for the overall coordination of the WCP, but has joint responsibility with the International Council for Science (ICSU) and the Intergovernmental Oceanographic Commission (IOC) of UNESCO for the WCRP. UNEP is responsible for the WCIRP. Several other international organizations such as FAO, UNESCO, WHO, and UNDP are actively involved.

The close cooperation required for the WCP, which is complex and multidisciplinary, is achieved through interagency meetings and through the Climate Exchange Co-ordination Activities. Within the program, priority attention is given to the food, water, and energy sectors.

The World Climate Programme provides an interagency, interdisciplinary framework to address the full range of climate change issues, including research into the economic and social consequences of climate change. It is the major international program supporting the work of the Intergovernmental Panel on Climate Change, the process of implementation of the Framework Convention on Climate Change, and relevant to the implementation

of Agenda 21, the seminal statement of the 1992 UN Conference on Environment and Development (the "Earth Summit").

The eleventh World Meteorological Congress decided that the WCP should be supported by the Global Climate Observing System (GCOS) as an essential activity associated with the World Climate Programme.

The basic objectives of the WCRP are to increase understanding of climate mechanisms and to determine to what extent climate can be predicted and the possible influence of man's activities on climate. Achieving these objectives requires input from many scientific disciplines. To assist in this, coordination and overall guidance is provided by the WMO/ICSU Joint Scientific Committee. The eleventh WMO Congress decided that UNESCO's Intergovernmental Oceanographic Commission (IOC) should be invited to join in WCRP. Continuing efforts are made at model development and global climate analysis, in particular the assessment of cloud prediction schemes and the representation of ocean-atmosphere interface fluxes in atmospheric general circulation models. Projects to assemble quality-controlled, consistent global climatological sets of sea-surface temperature and precipitation also have been established. Continual support is given to WCRP activities concerned with the study of climate forcing, including research on radiation codes used in climate models, aerosol sensitivity investigations and the global ozone research and monitoring projects.

### C. Applications of Meteorology

The WMO's Aeronautical Meteorology Programme serves to further the application of meteorology to aviation. It is keyed to ensure, jointly with ICAO, the continuous development of regulatory and guidance material required for the provision of services to aviation in accordance with the operational requirements of aviation. It also contributes to the implementation and improvement of meteorological services necessary to ensure the safety, regularity, and efficiency of air transport.

The overall purpose of the WMO's Marine Meteorological Programme is the promotion of the required marine meteorological services over the high seas and coastal areas, including specialized ocean services and the application of marine climatological information for planning marine activities. The program also includes development of a comprehensive marine environmental monitoring service, a coordinated ocean data management system, and activities within the Integrated Global Ocean Services System, a joint venture of the WMO and the Intergovernmental Oceanographic Commission until 1999, when the two organizations merged.

The purpose of the Agricultural Meteorology Programme is to help WMO members develop the capability to provide the agricultural community with practical information—based on knowledge of the climate, recent weather, and short-, medium-, and long-term forecasts—that can be used to improve production, reduce risks and crop losses, decrease pollution by agricultural chemicals, diminish costs, and increase the efficiency of the use of energy in agriculture. In turn, these immediate goals can help members achieve self-sufficiency in food production and increase export earnings from agriculture. At the international and regional levels, the program helps to identify requirements for information in agricultural meteorology, assess the impact of weather and climate fluctuations on food production, and apply agrometeorology

**Members of the World Meteorological Organization (as of May 2006)**

Afghanistan	Czech Republic	Lao People's Democratic Republic	Rwanda
Albania	Denmark	Latvia	St. Lucia
Algeria	Djibouti	Lebanon	Samoa

logical methods to improve land use, crop selection, and management practices.

The Public Weather Services Programme (PWS) of WMO was established in 1994. Its main purpose is to assist the National Meteorological and Hydrological Services to provide comprehensive and reliable weather and related services to the public. The PWS assists members to communicate weather information and forecasts to the users and warns them of severe weather. The PWS exchanges and coordinates hazardous weather information among neighboring countries. It also works to improve public understanding of meteorological events and engages in education and training programs.

#### D. Atmospheric Research and Environment Programme

The purpose of the Atmospheric Research and Environment Programme (AREP) is to contribute to the advancement of atmo-

spheric sciences and to assist members in providing better meteorological services by fostering research in meteorology and related environmental fields. It also is aimed at ensuring that members have relevant information and guidance to make the best use of the results of research applied for the benefit of their national economies and quality of life. The transfer of technology is ensured through support, within available resources, for the participation of scientists from developing countries in AREP.

AREP has five main components: the Global Atmosphere Watch (GAW); the Programme on Short- and Medium-Range Weather Prediction Research; the Programme on Long-range Forecasting Research; the Tropical Meteorology Research Programme (TMRP); and the Programme on Physics and Chemistry of Clouds and Weather Modification Research (PCCWMR).

*Global Atmosphere Watch (GAW)*. This worldwide system integrates most monitoring and research activities involving the mea-

surement of atmospheric composition. It is intended to serve as an early warning system to detect further changes in the ozone layer and in long-range transport of pollutants, including acidity and toxicity of rain, as well as the atmospheric burden of aerosols. The instruments of these globally standardized observations and related research are the WMO Global Ozone Observing System (GOOS), operating about 140 stations in more than 60 countries, and the WMO Background Air Pollution Monitoring Network (BAPMoN), which has nearly 200 stations in more than 90 countries. GAW is the main contributor of data on chemical composition and physical characteristics of the atmosphere to the Global Environment Monitoring Systems (GEMS) of UNEP. GAW will be a main component of the Global Climate Observing System (GCOS). Through GAW, WMO collaborates with the UN Economic Commission for Europe (ECE) and is responsible for the meteorological part of the Monitoring and Evaluation of the Long-Range Transmission of Air Pollutants in Europe. In this respect WMO has arranged for the establishment of two Meteorological Synthesizing Centers (in Oslo and Moscow) that provide daily analysis of the transport of pollution over Europe. GAW also gives attention to atmospheric chemistry studies, prepares assessments, and encourages integrated environmental monitoring.

*Weather Prediction Research Programs (WPRP).* These programs assist members in improving their weather services by exchanging the results of research on weather prediction. It accomplishes this goal by means of international conferences, technical reports, and progress reports on numerical weather prediction. The Programme on Short- and Medium-Range Weather Prediction Research aims at strengthening members' research with emphasis on improving the accuracy of short- and medium-range weather forecasting, including forecasting of local weather phenomena (particularly severe phenomena). The main objective of the Programme on Long-Range Forecasting Research is to foster members' research efforts in the development, introduction, and improvement of operational long-range weather forecasting systems.

*Tropical Meteorology Research Programme.* This program aims at the promotion and coordination of members' efforts into such important problems as monsoons, tropical cyclones, droughts in the arid zones of the tropics, rain-producing tropical weather systems, and the interaction between tropical and mid-latitude weather systems. The goal is to be of economic benefit to tropical countries by improving members' forecasting abilities.
