### 3<sup>4</sup> INSURANCE

Before May 1975, life and property insurance coverage was available in the RVN from three small Vietnamese insurance companies and through local representatives of about 70 French, UK, and US insurance firms. By the end of 1975, all private insurance facilities had ceased to operate, and the Vietnam Insurance Co., established in the DRV in 1965, had become the nation's lone insurance firm. In 1981, the main types of insurance offered were motor vehicle, personal accident, hull and cargo, offshore exploration, aviation, and third-party risk. In Vietnam, third-party automobile insurance and employers' liability are compulsory.

In 1997, other insurance companies operating in Vietnam were Hochiminh Insurance Co., Nha Rong Joint-Stock Insurance Co., Petrolimex Joint-Stock Insurance Co., Petrovietnam Insurance Co. (PVIC), Vietnam National Reinsurance Co., and the Yasuda Fire and Marine Insurance Co. As of 2002, foreign insurers were allowed in Vietnam, thus opening up the market. In 2003, the value of all direct insurance premiums written totaled \$550 million, of which life insurance premiums accounted for \$331 million. In 2001, Bao Viet was the country's leading nonlife and life insurer, with gross written nonlife premiums of \$75.5 million and gross written life insurance premiums of \$102.4 million.

### 3<sup>5</sup> PUBLIC FINANCE

The main sources of monetary revenue are income taxes, the sale of SOE's, and customs taxes. Annual deficits are financed by foreign aid. Monetary policy reforms enacted since 1988 helped end the hyperinflationary spiral of the 1980s. Aid from the former Soviet Union, formerly Vietnam's most prominent donor, was greatly reduced after the dissolution of the USSR in 1991. Foreign investment peaked in 1995 after the United States declared an end to

economic sanctions, but quickly receded thereafter. Implementation of a VAT in 2000 was expected to increase revenue.

The US Central Intelligence Agency (CIA) estimated that in 2005 Vietnam's central government took in revenues of approximately \$11.6 billion and had expenditures of \$12.9 billion. Revenues minus expenditures totaled approximately -\$1.3 billion. Public debt in 2005 amounted to 75.5% of GDP. Total external debt was \$19.17 billion.

The International Monetary Fund (IMF) reported that in 2001, the most recent year for which it had data, budgetary central government revenues were D102,223 billion and expenditures were D117,180 billion. The value of revenues was us\$7 million and expenditures us\$8 million, based on a market exchange rate for 2001 of us\$1 = D14,725 as reported by the IMF. Government outlays by function were as follows: general public services, 65.3%; economic affairs, 7.0%; health, 3.6%; education, 13.7%; and social protection, 10.5%.

### 3<sup>6</sup> TAXATION

Individual income is subject to a progressive tax ranging from 0–40%. Individuals realizing capital gains from the right to use land or the transfer of a house are subject to a progressive tax with a top rate of 60%.

The main corporate tax rate is 28%. In addition, companies deriving income from land use rights are subject to a surtax from ranging from 10–25%. Capital gains incurred by companies by the sale of fixed assets are taxed at the corporate rate. Gains stemming from the sale of shares in a foreign-invested company are taxed at a 25% rate. There is no tax on dividends, although income from interest and/or royalties are each subject to a 10% withholding rate.

Other taxes include capital transfer taxes, land and housing taxes, a natural resources tax, technology transfer fees, import and export duties. There are also special consumption taxes applied to tobacco products, spirits, beer, and other items ranging and which range from 15–100%. Vietnam also imposes a value-added tax (VAT) with a standard rate of 10% and which covers all goods and services. Exports however are exempt.

### 3<sup>7</sup> CUSTOMS AND DUTIES

All imports must be authorized by one of the state trading corporations. Customs duty is generally charged on imports and exports, with many exemptions and duty reductions available (including imports related to an aid program and goods to be used for security, national defense, scientific and educational training, or research purposes). Tariff rates are divided into three categories according to the import source country's trade relationship with Vietnam: ordinary rates apply to goods imported from countries that have not exchanged normal trade relations (NTR) agreements with Vietnam; preferential rates apply to goods from countries that have exchanged NTRs with Vietnam; and special preferential rates apply to goods from countries that have made special trade arrangements with Vietnam. Ordinary tariff rates are about 50% higher than preferential rates. Special preferential rates vary by country. There are also special consumption taxes (mostly

on luxury goods) of up to 100%, a value-added tax (VAT) of 0%, 5%, 10% and 20%, and import quotas.

In 1994, the United States lifted its trade embargo on Vietnam and in 1995 the two countries established formal relations. Vietnam is a member of ASEAN and its free trade area (AFTA).

### 38 FOREIGN INVESTMENT

France was the dominant foreign investor in Indochina before World War II. Resident Chinese, however, played a major role in rice milling, retailing, and other activities (and continued to do so in the south through the early 1970s). Following the 1954 partition agreement, the French economic position in the DRV was completely liquidated, and the participation of private foreign investors in the DRV economy was prohibited. The RVN government encouraged the introduction of private capital. In March 1957, a presidential declaration provided guarantees against nationalization and expropriation without due compensation, temporary exemption from various taxes, and remittance of profits within existing regulations. Despite these efforts, because of wartime conditions, relatively little new private foreign investment was attracted to the country, apart from a few ventures by US and Japanese interests. In 1977, the SRV issued a new investment code in an effort to attract private foreign capital to help develop the country. However, because of stringent regulations and a climate of government suspicion of private enterprise, the 1977 code attracted little enthusiasm among potential investors. Only the USSR and France made sizable investments, although Japan subsequently laid the foundation for future investment by bank loans. Beginning in 1984, the regime began to encourage the formation of joint ventures and announced that preparations were under way for a new foreign investment code.

In 1987 the National Assembly passed a liberalized investment law seeking to improve the overall investment climate and emphasize the development of export industries and services. The Vietnamese investment laws were much more liberal than those of other countries in Southeast Asia. The code permitted wholly owned foreign enterprises in Vietnam, levied low taxes on profits, allowed full repatriation of profits after taxes, and guaranteed foreign enterprises against government appropriation. The law also encouraged oil exploration. Factors hindering performance of foreign investors are bureaucracy, lack of management expertise, smuggling and corruption, and an underlying distrust and uncertainty on the part of officialdom.

In early 1994 the government announced three proposals intended to improve the investment environment and increase foreign trade: expedited decisions on small investment projects; the elimination of the requirement for import-export licenses for many commodities; and reduced list of industries that would be off limits to foreign investors. Foreign investments were allowed in insurance companies and brokerages, and reinsurance between companies. Under amendments to the Foreign Investment Law in 1996 more authority over investment licensing was given to local governments.

Total foreign direct investment (FDI) approvals from 1988 to June 2002 amounted to \$38.58 billion, but the total disbursed was a little over \$20 billion, about 52% of approved FDI. Since the 1994 reduction of restrictions, however, actual inflows of FDI have averaged about 70% of the approvals. After the Asian financial crisis,

the level of inflow decreased by about \$900 million a year. From 1998 to 2000, the annual average inflow was \$1.7 billion. The main cause of the decline was reduced investments from other Southeast Asian countries. As of 2003, it was estimated that FDI projects produced 13% of the country's GDP, including 36% of industrial production. As of 1999, Singapore was the largest foreign investor with \$5.9 billion of total investments approved by the Vietnam government between 1988 and 1999 (only \$2 billion actualized). Other major investors included Taiwan, Hong Kong, Japan, South Korea, France, the British Virgin Islands, Russia, the United States, and the United Kingdom. The Vietnamese government controls both upstream and downstream oil and gas industries, but since 1998 foreign investment has been permitted. In 2001, the consortium that included Conoco, the Korean National Oil Company (KNOC), SK Corporation of South Korea, and Geopetrol of France made a major find of oil in the Cuu Long Basin. In 2002, the Japan Vietnam Petroleum Company (JVPC) made its first sizeable discoveries. JVPC is the operator in the joint venture. and holds a 46.5% share.

Vietnam's encouragement of foreign investment includes its ability to attract and utilize large amounts of foreign capital, both in the form of FDI and ODA (official development assistance). As of 2006, Vietnam did not allow significant foreign portfolio investment. For the 2001–05 period, the government set targets for FDI at \$11 billion in disbursements from existing and newly licensed foreign investments and for approximately \$10 to \$11 billion in ODA disbursed by foreign donors for a total of \$21 to \$22 billion from foreign sources. These levels of FDI and ODA were designed to maintain a GDP growth rate of 7.5% per year. By December 2004, Vietnam had attracted nearly \$46 billion in investment commitments since the country was opened to foreign investment in 1988, 58% of which had been disbursed.

Vietnam's primary investors in 2004, in terms of licensed capital, were, in order: Taiwan, South Korea, Japan, Hong Kong, the British Virgin Islands, Canada, Singapore, Malaysia, China, and the United States.

There is little information on Vietnam's direct investment abroad, but according to the government, as of the end of 2004 Vietnam had invested in 113 projects worth about \$226 million in Russia, Singapore, Laos, Japan, Hong Kong, Cambodia, Tajikistan, the Middle East, the United States, Uzbekistan, and Taiwan.

### 39 ECONOMIC DEVELOPMENT

With the defeat of the RVN forces in April 1975, Vietnam faced the task of restoring its infrastructure, damaged by the war, while working toward the goal of a technologically advanced society. Long-range planning centered on the second five-year plan (1976–80), which called for major emphasis on heavy industry and rapid agricultural growth. Due to factors including unfavorable weather, decreased foreign aid, and high military expenditures—combined with managerial inefficiency—the plan was a disaster. Industrial production grew by only 0.6% and agriculture by 1.9%. The third five-year plan (1981–85) was more modest in its objectives. Emphasis was placed on agricultural development and the promotion of consumer goods, with industrial development in the background. Socialist transformation remained a high priority, although a less rapid rate of change was expected than during the previous five years. Although the goals of the new plan were

more realistic than those set for its predecessor, its success was limited. Growth figures in industry (9.5%) and agriculture (4.9%) improved significantly over the previous five years. Production remained spotty in key areas, however, and problems of mismanagement—primarily by the state sector—proliferated.

The fourth five-year plan (1986–90) continued the previous plan's emphasis on agricultural growth and expansion of exports and light industry. Efforts to promote Socialist transformation were to continue, but at a gradual pace and “by appropriate forms.” Development aid continued to come primarily from the former USSR and other CMEA countries. In 1978, the SRV became fully integrated into the CMEA planning and development structure, and its five-year plans were coordinated with those of its CMEA partners. Planned Soviet outlays for the 1986–90 period totaled some \$11–13 billion. This aid and trade waned with the decline of the USSR, with the full cutoff occurring in 1991. The SRV's new economic emphasis, *doi moi* (renovation) was instituted by Nguyen Van Linh following the sixth national party congress (1986). His plan included policy and structural reforms for a market-based economic system: price decontrol (liberalized prices), currency devaluation, private sector expansion through decollectivization of agriculture (food production), legal recognition of private business, new foreign investment laws, autonomy of state enterprises, business accounting methods, devolution of government decision-making in industry to enterprise level, and limiting government participation to macroeconomic issues. Implementation of these policies was achieved with varied success.

Inflation policy and agricultural reform resulted in immediate increases in rice production. Vietnam changed from a net importer of rice to the third major rice exporter after Thailand and the United States. It was the second-largest world rice exporter in 2005.

Industry has replaced agriculture as the main engine of the economy, and by 2005 accounted for 40.9% of GDP. Agriculture remains important, however, accounting for about 21% of GDP and about 65% of the labor force. A privatization program in the early 1990s met with resistance from conservative politicians, companies, and from foreign investors. Conservatives feared that privatization undermined the economic basis of socialism, and foreign investors were wary of poor investments with meager legal underpinnings. Opposition from managers who would lose a “free hand,” and employees whose jobs might be replaced by new equipment also arose. In 1994 the director and deputy director of the textile company that was the flagship for this privatization program were dismissed for alleged corruption.

US president Bill Clinton's lifting of the 30-year-old trade embargo in 1994 opened the way for waiting American companies to do business in Vietnam. International assistance during the mid-1990s was from the World Bank for education and agricultural reforms, the Japan Overseas Economic Cooperation Fund for infrastructure programs, the United Kingdom for soft loans, technical training and refugee resettlement, and from the Asian Development Bank. A continuation of reforms promoting foreign investment and minimizing the state's role in the economy moved slowly in the late 1990s due to political corruption and inefficiencies.

The Asian financial crisis negatively affected investor confidence in the region, severely reducing Vietnam's main focus of economic development. A complete overhaul of the financial regulatory sys-

tem is still necessary in order to stimulate the economy. Vietnam's increasing integration in regional and international economic organization should impel more competitive production methods. At the end of 2001, Vietnam concluded a bilateral trade agreement with the United States, and it is on the path toward accession to the World Trade Organization.

Vietnam by 2006 had largely overcome the negative effects of the Asian financial crisis, with GDP growth ticking along at 7.4% over the 2001–05 period, despite the global economic slowdown of 2001–03. Vietnam must work to promote job creation to keep up with the country's high population growth rate. The government has made progress in reducing poverty: as of 1993, the World Bank declared 58% of the population to be poor, and by 2002, that had fallen to 29%. Nevertheless, the poor remain concentrated in remote, rural districts populated mainly by ethnic minorities, which are areas least touched by the government's reform program. Cities are growing faster than the countryside. Other economic challenges remain, in terms of strengthening the financial sector and the legal framework and reforming state-owned enterprises. Diseases like SARS (severe acute respiratory syndrome) and avian flu, had not made a severe dent in the economy by 2005. Small businesses are booming: by the end of 2002, more than 50,000 new companies had been established. However, Vietnam has few mid-sized private firms between these small family firms and large exporters backed by foreign investors.

#### 40 SOCIAL DEVELOPMENT

A social security plan provides old age, disability and survivorship benefits, as well as worker's injury and medical insurance. All private and public sector employees with employment contracts of at least three months are covered. Pensions are funded by 5% of employee wages, 10% of employer payroll, and government contributions. Maternity benefits are payable at 100% of wages for 120 days, and are also available to women who adopt a newborn baby. Workers' compensation is provided according to the level of disability.

Women have full legal rights under law, but are subject to various forms of social discrimination. Few women are found in senior management or high level government positions, but business and the public sector nevertheless employ many women, and they are an important part of the economy. Women also generally receive lower wages than their male counterparts. Domestic violence against women is common, and women tend to stay in abusive marriages rather than confront the stigma of divorce.

The human rights record is poor, and there are continuing reports of arbitrary detention and the mistreatment of detainees during interrogation. In 2004, the restrictions on the Internet were increasing, with the government closely monitoring activity. Human rights organizations are not permitted to operate in Vietnam.

#### 41 HEALTH

Wars in Vietnam since 1946 have undermined much of the progress made by the DRV, RVN, and SRV in the health field. Damage to urban hospitals in the north was especially severe. A 1976 World Health Organization report indicated the dimensions of that destruction: 24 research institutes and specialized hospitals, 28 provincial hospitals, 94 district hospitals, and 533 community

health centers; all destroyed mainly as the result of US bombing. Three decades of intermittent war has also had a devastating effect on health conditions in the south.

The incidence of tuberculosis, which had been largely controlled rose again in the late 1990s. Commonly reported diseases in Vietnam were diarrheal disease, malaria, and tuberculosis. Venereal and paraveneal diseases were said to have afflicted one million persons in the south (about 5% of the total population) and, WHO claimed, 80% of RVN soldiers. Opiate addiction affected about 500,000 persons. The HIV/AIDS prevalence was 0.40 per 100 adults in 2003. As of 2004, there were approximately 220,000 people living with HIV/AIDS in the country. There were an estimated 9,000 deaths from AIDS in 2003.

During the early 1980s, foreign visitors routinely reported observing severe cases of malnutrition and shortages of medical equipment and supplies. While conditions have generally improved as agricultural production has increased, most Vietnamese continue to live at the minimum level of subsistence. In February of 1996, Vietnam was considering fortification of foods with iron and vitamin A. In 1995, the Vietnamese government issued the National Plan of Action for Nutrition (1995–2000), which aimed to eliminate food insecurity, reduce malnutrition, and reduce micronutrient deficiencies. About 39% of all children under 5 were classified as malnourished in 2000.

Vietnam reported life expectancy in 2005 to be 70.61 years and infant mortality to be 25.95 per 1,000 live births. Maternal mortality was 160 per 100,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 20.9 and 6.1 per 1,000 people. Immunization rates for children up to one year old were tuberculosis, 96%; diphtheria, pertussis, and tetanus, 95%; polio, 95%; and measles, 96%.

Family planning services were provided to 2,157,000 people in 1992. An estimated 75% of married women (ages 15 to 49) were using contraception in 2003. Abortion is available on request. Vietnam's fertility rate in 2000 was 2.2, down nearly 2% from the previous 5-year period.

In 2004, the country had an estimated 53 physicians, 56 nurses, and 18 midwives per 100,000 people. About 97% of the population had access to health care services. Approximately 56% of the population had access to safe drinking water and 73% had adequate sanitation. Total health care expenditure was estimated at 4.8% of GDP.

## 42 HOUSING

Housing is a serious problem in Vietnam, particularly in urban areas of the north where war damage has caused overcrowding and lack of resources has hampered efforts to resolve the problem. By 1986, housing had become a critical problem in Hanoi, particularly in the central sections of the city, where per capita living space was reduced to four sq m. Large flats are gradually being erected in the suburbs to ease the problem. In the meantime, many families live in temporary quarters built directly on the sidewalk or attached to other buildings. Housing is less a problem in the countryside, where many farm families have begun to take advantage of a rising standard of living to build new houses of brick and stone. Similarly, in the south, housing is available to meet the

requirements of the population because building construction had continued at a relatively high level during the war years.

At the 1999 census, about 12.8% of the housing stock were permanent houses, 50.4% were semipermanent, 14.1% were built with a durable wood frame, and 22.7% were temporary houses. The average living area per household (excluding temporary housing) was 47.9 sq m; the average living space per person was 10.4 sq m. About 13% of all households had clean tap water, 10.1% used rain water as a main water source, and 54.9% used some type of filter system or hygienic well. Only 16.4% of all households used a flush toilet. About 77.8% of all households used electricity.

## 43 EDUCATION

After 1975, the educational system in the south was restructured to conform to the Socialist guidelines that had been used in the DRV. The 12-year school cycle was reduced to 10 years, and the more than 20,000 teachers in the south were among those subjected to "reeducation." By 1976, some 1,400 tons of textbooks printed in the DRV had been shipped to the south, and the books used previously under the RVN were destroyed. In addition, more than 1,000 formerly private schools in the south were brought under state control.

Education is free at all levels, and five years of primary education is compulsory. Seven years of secondary school is offered through two cycles of four plus three years. Students progress to the upper level only through completion of an entrance examination. Vocational studies are also offered at the upper secondary level. The academic year runs from September to June.

In 2001, about 43% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2001 was estimated at about 95% of age-eligible students. The same year, secondary school enrollment was about 62% of age-eligible students. It is estimated that about 95.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 25:1 in 2003; the ratio for secondary school was about 26:1.

There are about 90 colleges and three universities in the SRV. The major university is in Hanoi. In 2003, it was estimated that about 10% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 90.3%, with 93.9% for men and 86.9% for women.

As of 1999, public expenditure on education was estimated at 2.8% of GDP.

## 44 LIBRARIES AND MUSEUMS

The École Française d'Extrême-Orient once maintained an extensive research library in Hanoi, which was transferred intact to the DRV; it is now the National Library, housing about one million volumes. The bulk of the present collection has been added since 1954 and includes a substantial number of Russian titles. The General Scientific Library in Ho Chi Minh City (formerly the National Library) maintains a collection of over 800,000 volumes. Vietnam National University at Hanoi Library holds 1.4 million volumes.

The collections of the Musée Louis-Finot, an archaeological and cultural museum established by the French in Hanoi, were transferred intact to the DRV. These collections, now part of the Historical Museum, contain artifacts and related material from archaeological discoveries in Thanh Hoa and Yen Bay, including a

2,500-year-old burial boat and an excellent array of bronze implements. Hanoi's National Art Gallery includes a folk-art collection and Vietnamese Bronze Age artifacts. Notable also is the Museum of the Revolution, grouping memorabilia of Vietnam's struggle for independence from the French since the early 1900s. The Army Museum, housed in the Hanoi Citadel, contains a collection of weapons and documents concerning the Indochina war. The Vietnamese Fine Arts Museum (1966) houses exhibits on the decorative and applied arts, and folk and modern art. The architecture of religious edifices and former Vietnamese imperial structures reflect the country's cultural heritage. The Ho Chi Minh City Museum, founded in 1977, has a section devoted to the revolution and another to ancient arts.

#### 45 MEDIA

Vietnam's postal, telegraph, and telephone services are under the Ministry of Communications. The country made significant progress in upgrading its telecommunications system in the 1990s: all provincial switchboards have been digitized and fiberoptic and microwave transmission systems have been extended from the major cities to the provinces. However Vietnam still lags behind its Southeast Asian neighbors. In 2003, there were an estimated 54 mainline telephones for every 1,000 people. The same year, there were approximately 34 mobile phones in use for every 1,000 people.

Hanoi has a strong central broadcasting station, the Voice of Vietnam, boosted by local relay transmitters. Since 1975, almost the entire country has been blanketed by a wired loudspeaker system. Radio programs beamed abroad include broadcasts in Chinese, English, French, Japanese, Spanish, Thai, Bahasa Indonesia, Russian, Khmer, and Lao, and there are special broadcasts to mountain tribes. Television was introduced into the RVN in 1966, and an extensive service, reaching some 80% of the population, was in operation by the early 1970s. A pilot television station was inaugurated in the DRV in 1971. Many of the major cities now have television stations, all under the guidance of the Ministry of Information, which replaced the State Committee for Radio and Television in 1987. As of 1999, there were 65 AM and 7 FM radio stations. In 1998, there were seven television stations. In 2003, there were an estimated 109 radios and 197 television sets for every 1,000 people. The same year, there were 9.8 personal computers for every 1,000 people and 43 of every 1,000 people had access to the Internet. There were 10 secure Internet servers in the country in 2004.

Most newspapers in the south were shut down by the PRG in 1975, but some papers that had been sympathetic to the NLF/DRV cause were allowed to continue publication. All press is strictly controlled by the Ministry of Culture and Information. Principal Vietnamese dailies (with their affiliation and estimated 2002 circulation) are: *Nhan Dan* (Communist Party, 200,000), *Quan Doi Nhan Dan* (army, 60,000), *Hanoi Moi* (Communist Party, 35,000), and *Saigon Giai Phong* (Communist Party, 100,000). The English-language *Saigon Times* was established in 1995.

Even though the constitution provides for freedom of speech and of the press, the government places major restrictions and regulations on all media and prison time for violators is not uncommon.

#### 46 ORGANIZATIONS

The principal mass organization is the Fatherland Front, which merged in January 1977 with the National Liberation Front and with the Vietnam Alliance of National, Democratic, and Peace Forces. The Fatherland Front draws up single slates of candidates in all elections and seeks to implement the political, economic, and social policies of the Communist Party.

Other organizations that form part of the Fatherland Front are the Peasant Union, with some five million members; the Ho Chi Minh Communist Youth Union, with four million members; and the Vietnamese Women's Union, with 11.4 million members. Industrial and commercial enterprises are represented by the Chamber of Commerce of the SRV in Hanoi.

There are some professional organizations that also serve to promote education and research in specific fields, such as the Chemical Society of Vietnam and the Vietnam Medical Association. There are several charitable organizations, primarily those representing aid from other countries or other major international organizations, such as the Red Cross and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Vietnam possesses a number of historic and scenic areas of interest to tourists. In the north, the beauty of Ha Long Bay, with its countless grottoes and rock spits jutting vertically into the sea, is well known. Hanoi itself, with its historical monuments, its lakes and pagodas, and its extensive French colonial architecture, is extremely picturesque. Hotel facilities are improving in the larger areas and in some resorts.

In 1986 and 1987, the government made plans to expand international and domestic airline service, double hotel capacity in the major cities, simplify the complicated visa restrictions, and grant shore leave passes to passengers on cruise ships stopping at Vietnamese ports. As a result of these measures, tourism grew rapidly. From 20,000 tourists in 1986, visitor arrivals rose to 450,000 in 1992 and 1,715,637 in 1997. In 2000, about 2,140,000 foreign visitors arrived in Vietnam. That year there were 66,700 hotel rooms with 120,800 beds and an occupancy rate of 50%. All visitors need visas and must register with the government within 48 hours of arrival.

In 2005, the US Department of State estimated the cost of staying in Ho Chi Minh City at \$182 per day. Travel costs in Hanoi were estimated at \$176 per day.

#### 48 FAMOUS VIETNAMESE

Important figures in Vietnamese history include the sisters Trung Trac and Trung Nhi, national heroines who led a revolt (AD 40–43) against China when that nation was imperial master of Tonkin and North Annam; Ngo Quyen, who regained Vietnamese independence from China in 938; Tran Hung Dao, who defeated the forces of Kublai Khan in 1288; Emperor Le Loi, national hero and brilliant administrator, in whose reign the Vietnamese legal code was promulgated in 1407; Emperor Gia Long (d.1820), who reunified Vietnam in the early 19th century; and Le Van Duyet (1763–1832), a military leader who helped the emperor to unify the country.

Phan Boi Chau (1875–1940) was Vietnam's first modern nationalist and, like China's Sun Yat-sen, is claimed by Vietnamese

Communists and nationalists alike as their spiritual leader. Ho Chi Minh ("The Enlightener"), born Nguyen That Thanh (1890–1969), was a man of many other pseudonyms. Ho Chi Minh (1890–1969) was a founding member of the French Communist Party in 1920 and founded the Vietnamese Communist Party in 1930. Often referred to as "Uncle Ho," he was president of the DRV from 1945 until his death. General Vo Nguyen Giap (1912–75), a professor of history turned strategist, organized the first anti-French guerrilla groups in 1944, led the Viet-Minh in its eight-year struggle against France, and defeated the French at Dien Bien Phu; subsequently he served as minister of defense, commander in chief of the army, and vice-premier of the DRV. Truong Chinh ("Long March," 1906–88), the DRV's foremost Communist thinker, was secretary-general of the Vietnamese Communist Party from 1940 until 1956, when he was purged from his post for having mismanaged the land reform; exonerated shortly thereafter, he was president of the Council of State (1981–87). Pham Von Dong (1908–2000), a member of the nobility, joined the Vietnamese revolutionary movement at its inception and became minister of foreign affairs in 1954, premier of the DRV in 1955, and premier of the SRV in 1976; he resigned in 1987. Le Duan (1907–86), first secretary of the Communist Party, presided over Vietnam's reunification and the formation of the SRV. Le Duc Tho (1911–90), a member of the Communist Party Politburo but with no post in the government, was the DRV's chief negotiator in talks that led to the 1973 Paris Peace Agreement; for his role, Le shared with US Secretary of State Henry Kissinger the 1973 Nobel Peace Prize.

Prominent political figures in the formation of the RVN included Bao Dai (Nguyen Vinh Thuy; b.France, 1913–97), who had served as nominal emperor of Annam under the Japanese and had attempted to form a unified national government after the war, and Ngo Dinh Diem (1901–63), who served as president of the RVN from its founding on 26 October 1955 until his overthrow and death in November 1963. Nguyen Cao Ky (b.1930), an RVN air force commander, took control of the government in the coup of June 1965. General Nguyen Van Thieu (1923–2001) was elected president of the RVN in the elections of September 1967 (with Ky as his vice presidential running mate), an office he retained until the RVN's defeat in 1975. Both Thieu and Ky left the country in 1975, Thieu taking up residence in Taiwan and Ky in the United States. The new leadership in the south, following the 1975 NLF victory, was headed by Pham Hung (1912–88), chairman of the southern wing of the Communist Party since 1967; Huynh Thanh Phat (1913–89), the PRG premier, who later became a member of the Council of State; and Nguyen Thi Binh (b.1927), the PRG's foreign affairs minister who had headed the NLF delegation at

the Paris talks and who also became a Council of State Member. Pham Hung became premier of the SRV in 1987, and Vo Chi Cong (b.1913?) became president of the Council of State. Nguyen Van Linh (1915–98) became general secretary of the Communist Party in December 1986.

The 13th-century writer Nguyen Si Co is regarded as one of the first truly Vietnamese authors; he is best known for his collection titled *Chieu Quan Cong Ho*. Other leading literary figures are two 15th-century poets, Ho Huyen Qui and Nguyen Binh Khien; the latter's collection, *Bach Van Thi Tap*, is a classic of Vietnamese literature. Nguyen Du (1765–1820) wrote a famous novel in verse, *Kim Van Kieu*. Hoang Ngoc Phach, who wrote the romantic novel *To Tam* (1925), is credited with the introduction of Western literary standards into Vietnamese literature. Duong Thu Huong (b.1947) is a contemporary Vietnamese author and political dissident; her first two books were published in Vietnam, but subsequent novels were only published abroad.

#### 49 DEPENDENCIES

Vietnam has no territories or colonies.

# YEMEN

Republic of Yemen  
*Al-Jumhuriyah al-Yamaniyah*

**CAPITAL:** Ṣanʿā

**FLAG:** The national flag is a tricolor of red, white, and black horizontal stripes.

**ANTHEM:** *Al-Watani (Peace to the Land)*.

**MONETARY UNIT:** The Yemeni riyal (YR) is a paper currency of 100 fils. There are coins of 1, 5, 10, 25, and 50 fils and notes of 1, 5, 10, 20, 50, and 100 riyals. YR1 = \$0.00519 (or \$1 = YR192.67) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is being introduced, but local measures remain in common use.

**HOLIDAYS:** Labor Day, 1 May; Day of National Unity, 22 May; National Day, 14 October; Independence Day, 30 November. Movable Muslim holidays include Laylat al-Miraj, 'Id al-Fitr, 'Id al-'Adha, Milad an-Nabi, and 1st of Muharram.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Yemen is located in the southern part of the Arabian Peninsula. It is slightly larger than twice the size of the state of Wyoming with a total area of 527,970 sq km (203,850 sq mi). Yemen shares boundaries with Saudi Arabia on the n, Oman on the e, Gulf of Aden on the s, and the Red Sea on the w, and has a total land boundary length of 1,746 km (1,085 mi) plus a coastline of 1,906 km (1,184 mi).

## <sup>2</sup>TOPOGRAPHY

The topography of Yemen features a narrow coastal plain backed by flat-topped hills and rugged mountains. Dissected upland desert plains in the center of the country slope into the desert interior of the Arabian Peninsula. The highest known point is the summit of Jabal Hadhur, rising 3,760 m (12,336 ft) above the Red Sea coast. The western part of the country contains fertile soil in its highland plateaus which rise from about 1,200 to 3,000 m (4,000 to 10,000 ft). A system of wadis drain mountain slopes into the desert and into the Gulf of Aden.

In December 2004, an earthquake centered in the Indian Ocean caused a tsunami that affected many of the nearby countries. There were only two confirmed deaths in Yemen, but damage to coastal fishing villages and businesses was severe.

## <sup>3</sup>CLIMATE

Extreme humidity combines with high temperatures—as high as 54°C (129°F) in the shade—to produce a stiflingly hot climate. Winds blowing northwest in summer and southwest in winter bring little rain but cause severe sandstorms. During January and February, however, the temperature averages about 20°C (68°F). The climate of the highlands is generally considered the best in Arabia. Summers are temperate and winters are cool, with some frost. Temperatures vary from 22°C (72°F) in June, the hottest month, to 14°C (57°F) in January. Rainfall in the highlands ranges from 41 cm (16 in) at Ṣanʿā to 81 cm (32 in) in the monsoon area

of the extreme southwest. The average year-round temperature at Ṣanʿā is 18°C (64°F).

## <sup>4</sup>FLORA AND FAUNA

Vegetation is sparse along the coast, but in the highlands and wadis, it is plentiful. Acacia, date palm, and many fruit trees are common. Many varieties of grapes are cultivated. Custard apple, euphorbia, and spurge grow in abundance. Alpine roses, balsam, basil, wild elder, and Judas tree are among the flowers and herbs. Wild mammals include the baboon, gazelle, leopard, and mountain hare. Scorpions and millipedes are everywhere, but snakes are less common. Many varieties of birds are found, including the bustard, hawk, vulture, raven, parrot, hornbill, honeysucker, and weaver finch. More than 27,000 varieties of insects and over 600 specimens of flowering plants have been collected in Yemen. There are at least 66 species of mammals and 93 species of birds found throughout the country.

## <sup>5</sup>ENVIRONMENT

Yemen's main environmental problems have long been scarcity of water, soil erosion, and desertification. Water pollution is a problem due to contaminants from the oil industry, untreated sewage, and salinization. The nation has 4 cu km of renewable water resources with 92% of annual withdrawals used for farming activity and 1% for industrial purposes.

Natural forests in mountainous areas have been destroyed by agricultural clearing and livestock overgrazing. The National Environmental Council, established in 1976, disseminates information on conservation. In response to the nation's environmental needs, the government of Yemen has created laws governing the use of the country's water supply. Law Number 42 (1991) protects water and marine life.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 6 types of mammals, 14 species of birds, 2

types of reptiles, 1 species of amphibian, 11 species of fish, 2 types of mollusks, and 159 species of plants. Endangered species include the northern bald ibis, the South Arabian leopard, slender-billed curlew, and two species of turtle (green sea and hawksbill). Queen of Sheba's gazelle and the Saudi Gazelle have become extinct in the wild.

## 6 POPULATION

The population of Yemen in 2005 was estimated by the United Nations (UN) at 20,727,000, which placed it at number 51 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 103 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 3.3%, a rate the government viewed as too high. Yemen's fertility rate, at 6.8 births per woman, is among the highest in the world. The projected population for the year 2025 was 39,644,000. The overall population density was 39 per sq km (102 per sq mi), with most of the population concentrated in the Tihama foothills and central highlands of Yemen. Most of southern Yemen is very sparsely populated.

The UN estimated that 26% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5.15%. The capital city, *Ṣanāʿ*, had a population of 1,469,000 in that year. Other large cities and their estimated populations include *Taʿizz* (2,363,000), *Al Ḥudaydah* (Hodiedah) (2,004,049), and *ʿAden* (568,700), the chief port.

## 7 MIGRATION

There were 1,168,199 citizens of Yemen working abroad in 1986. Most were working in Saudi Arabia and other Gulf states. When Yemen took Iraq's side in the war that followed its 1990 annexation of Kuwait, Saudi Arabia effectively expelled an estimated 800,000–1,000,000 Yemeni workers by revoking their work privileges. These workers had been sending home some \$3 billion a year in remittances.

Many people from the Wadi Hadramawt in southern Yemen have worked abroad in East Africa, India, and Indonesia for centuries. Following independence and the establishment of a leftist regime in the PDRY, more than 300,000 people fled to the north, including about 80,000 Yemenis from the YAR, and virtually all minority groups left the country. Subsequent political upheavals resulted in further emigration.

In 1992 more than 60,000 Yemenis returned from the Horn of Africa, chiefly because of turmoil in Somalia. In 1998 and 1999, Yemen experienced a significant influx of Somali asylum seekers, who fled their country for economic reasons. They were accommodated in a refugee camp in *Al Ghahain*, near *ʿAden*, supervised by the UN High Commissioner for Refugees (UNHCR). As of 2004, there were 66,384 refugees in Yemen, most from Somalia, and 2,270 asylum seekers and 39 returned refugees.

The net migration rate in 2005 was estimated as zero migrants per 1,000 population, a significant decline from 9.8 per 1,000 in 1990. Worker remittances in 2002 amounted to \$1.2 billion. The government viewed the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

Since independence, the population has been almost entirely Arab. However, there are Afro-Arab concentrations in western coastal locations, South Asians in southern regions, and small European communities in major metropolitan areas. Many ethnologists contend that the purest "Arab" stock is to be found in Yemen. Classified as Joktanic Semites, the Yemenis claim descent from Himyar, great-grandson of Joktan, who, according to the book of Genesis, was descended from Shem, the son of Noah. Yemenis were prominent in the early armies of Islam and thus helped to Arabize much of the Middle East. The Tihama has been subjected to occupation and infiltration by many conquerors, and its people show significant admixtures of other racial types, including Negroid peoples. About 2–5% of the population are Akhdam, a group that is considered to be the lowest social class. This group faces a greater level of poverty and social discrimination than some other minorities. The history of the Yemenite Jews predates by centuries the Islamic Hijra (AD 622). How they came to settle in the region has not been determined.

## 9 LANGUAGES

Arabic, the national language, is spoken in a variety of dialects. In vocabulary and other features there is a considerable difference between the classical language used for writing and formal speaking and the spoken dialect used for ordinary discourse. Traces of the ancient South Arabian languages spoken prior to the coming of Muhammad appear in the dialects of the more remote districts of southern Yemen. *Mahri*, a rare and relatively unstudied language of unknown origins, is spoken in the east. English is widely understood in the former PDRY.

## 10 RELIGIONS

The Republic of Yemen is officially a Muslim country. Almost all of the inhabitants are Sunnis of the *Shafʿi* school, one of the four major schools of Islamic law. They reside chiefly in the coastal plains and the southwestern part of the country. Most of those remaining are Shias of the *Zaydi* sect, who live in the highlands. This sect, originating in the 9th century, takes its name from *Zayd bin ʿAli* (d.740), a descendant of Muhammad, and doctrinally is very close to Sunni Islam. In addition, there is a small minority of *Ismailis*, members of another Shia sect.

Nearly all of the country's once sizable Jewish population has emigrated. There are no legal restrictions on the few hundred who remain, although there are traditional restrictions on places of residence and choice of employment. About 500 Jews live in the villages between *Ṣanāʿ* and *Ṣādah* in northern Yemen. There are also small Christian and Hindu communities. In remote areas there is still evidence of shamanism, animism, and other indigenous forms of religion.

The constitution provides for freedom of religion, but the government does enforce some restrictions. Conversion of Muslims to other religions is punishable by death; non-Muslims are prohibited from proselytizing and holding public office.

## 11 TRANSPORTATION

Through the 1950s, Yemen's transportation system consisted of a few primitive mud tracks connecting the larger towns. Then, in

LOCATION 12°41' to 17°32' N; 42°32' to 53°5' E. BOUNDARY LENGTHS: Oman, 288 kilometers (179 miles); Saudi Arabia, 1,458 kilometers (907 miles); coastline, 1,906 kilometers (1,183 miles).

1961, technicians from China completed a 224-km (139-mi) road between Ṣan'ā' and Al Ḥudaydah, the country's first asphalt highway. Seven years later, the United States finished the 386-km (240-mi) highway linking Ṣan'ā', Ta'izz, and Al-Mukha; the USSR completed a road from Ta'izz to Al Ḥudaydah in 1969. Other paved roads extend from Ṣan'ā' to Ma'rib, from Ṣan'ā' to Sa'idah, from Ta'izz to At-Turba, from the Ṣan'ā'-Ta'izz highway to Al Baydā, and from Ta'izz to Aden (Adan). A direct link between Ṣan'ā' and Wadi Hadhramaut via Marib was completed in 1999. By 2002, Yemen had about 69,263 km (43,040 mi) of roadway, of which only 9,963 km (6,191 mi) were paved. In 2003, passenger cars numbered 290,208, while there were 331,410 commercial vehicles. There are no railways or waterways in Yemen.

Improvements to the main port of Al Ḥudaydah have expanded berthing, storage, and handling facilities and increase cargo capac-

ity to 1,750,000 tons annually. Other ports are Al-Mukha, Aden, and Salif, which have sheltered harbors and deepwater berths capable of taking 10,000-ton ships. In 1999 the 'Aden Container Terminal opened with further expansion plans underway. In 2005, Yemen had a merchant fleet of five ships of 1,000 GRT or more, totaling 19,766 GRT.

Progress in air transportation has been rapid in recent years. In 2004 there were an estimated 44 airports, 16 of which had paved runways as of 2005. The principal airfield, capable of handling modern jet aircraft, is Ar-Rahba International Airport, north of Ṣan'ā'. There are smaller international airports at Al Ḥudaydah, Ta'izz, and Aden. 'Aden International Airport was renovated and Ṣan'ā's renovation was scheduled for late 2001. Yemen Airways (Alyemda), the national airline, operates services between Ṣan'ā', Ta'izz, Al Ḥudaydah, and Al-Bayda and also schedules flights to

Egypt, Ethiopia, Kuwait, Saudi Arabia, and the United Arab Emirates. The airline carried about 844,000 passengers in 2003.

## 12 HISTORY

Classical geographers divided Arabia into three regions: Arabia Petraea ("rocky"), Arabia Deserta ("deserted"), and Arabia Felix ("fortunate"). The last, the southwestern corner, included the territory now occupied by Yemen. The region was the site of a series of rich kingdoms that dominated world trade. The wealthy kingdom of Sheba (or Saba), with its capital at Ma'rib, is the best known of the South Arabian kingdoms. The prosperity of this kingdom (10th to 2d centuries BC) was based on the spice and incense trade. Competition from new trade routes undermined Sabaean prosperity and caused the kingdom to decline. From the 2d century BC to the 6th century AD, the Himyarite dynasty, of ethnic stock similar to that of the Sabaean, ruled in Arabia Felix, and paganism gradually gave way to Christianity and Judaism.

The Himyarite hegemony was ended in 525 by invading Christian Ethiopians, whose rule lasted until 575, when they were driven out by Persian invaders. Islam was accepted in the next century, and Yemen became the battleground of Muslim religious factions. The coastline (Tihama) was held by the Sunnis of the Shafi'i School, while the highlands were controlled by the Zaydis, a Shia sect.

In the 9th century, a Zaydi ruler, Yahya al-Hadi ila'l Haqq, founded a line of imams that survived until the second half of the 20th century. Nevertheless, Yemen's medieval history is a tangled chronicle of contesting local imams. The Fatimids of Egypt helped the Isma'ilis maintain dominance in the 11th century. Saladin (Salah ad-Din) annexed Yemen in 1173. The Rasulid dynasty (Kurdish and Turkish in origin) ruled Yemen, with Zabid as its capital, from about 1230 to the 15th century. In 1516, the Mamluks of Egypt annexed Yemen; but in the following year, the Mamluk governor surrendered to the Ottoman Turks, and Turkish armies subsequently overran the country. They were challenged by the Zaydi imam Qasim the Great (r.1597–1620) and expelled from the interior around 1630. From then until the 19th century, the Ottomans retained control only of the coastal area, while the highlands generally were ruled by the Zaydi imams.

Early in the 19th century, Yemen was overrun by Wahhabis, but in 1818, Ibrahim Pasha, the son of Muhammad 'Ali of Egypt, drove them out of Yemen and reestablished Zaydi control. Egyptian troops occupied the main ports of Yemen until 1840, when they were withdrawn. The Zaydi imams recognized Ottoman suzerainty and paid a large annual subsidy to the Ottoman sultan. After 1840 the situation was anarchic, and law and order in any form was not reestablished until 1872, when the Ottomans again occupied Şan'a and consolidated their control. The northern mountains remained under the control of Zaydi imams from the Hamid ad-Din family. The Ottomans kept a large force in Yemen during World War I, but under the armistice terms evacuated it in 1918 and Yemen became independent.

In 1834 the British had occupied 'Aden as a coaling station on the route to India; the importance of the territory was substantially increased with the opening of the Suez Canal in 1869.

To protect its foothold in 'Aden the United Kingdom had signed a treaty of "protection and advice" with rulers of the tribes and states in the hinterland, leading to the adoption of the names

Western Aden Protectorate (WAP) and Eastern Aden Protectorate (EAP). As long as northern Yemen remained at least nominally a part of the Ottoman Empire, relations on the frontier between the United Kingdom (in the WAP and EAP) and the Turks (in Yemen) were relatively peaceful.

During World War I the British supported the Idrisi tribe's attempt to establish itself in Yemen. In 1919 the United Kingdom occupied Al Ḥudaydah, which came into Idrisi hands when the British withdrew in 1921. The Zaydis, now led by Imam Yahya ibn Muhammad Hamid ad-Din, who had become imam in 1891, waged an armed struggle against the Idrisis that ended when Imam Yahya seized Al Ḥudaydah in 1925. The imam also sought to move into the states of the Western Aden Protectorate in an attempt to reestablish his suzerainty in these territories formerly held by the Yemenis. The Idrisis came under the protection of King Ibn Sa'ud, and in 1934, a war broke out between the Saudis and Yemenis. By the Treaty of Ta'if (May 1934), Yemen lost 'Asir to Saudi Arabia but won British and Saudi recognition of its independence. However, incursions by the Imams against the UK protectorate in 'Aden continued until 1962.

In 1959 the United Kingdom formed the six WAP states into the Federation of Arab Emirates of the South, with others joining later. The inhabitants of 'Aden, who were more politically and economically advanced than those of the protectorates, opposed adherence to the federation. Nevertheless, 'Aden in 1963 was merged into the federation, which then became known as the Federation of South Arabia.

The dispute over the future form and direction of this new political entity, as well as over which other states would join it, resulted in several years of factional violence, as various political parties, labor organizations, and other groups struggled for political ascendancy. Finally, in 1967, the National Liberation Front (NLF) emerged as the strongest political group, and the United Kingdom agreed to negotiate with it concerning future independence. On 30 November 1967 all the states of the WAP and EAP were amalgamated, the last British soldiers withdrew, and the NLF declared the independence of the People's Republic of South Yemen. On 22 June 1969 the head of the NLF, Qahtan ash-Sha'bi, was deposed by a group of young leftists of the NLF. The new regime, headed by a five-man council, renamed the country the People's Democratic Republic of Yemen (PDRY), developed close ties with the USSR, and secured economic aid from it and China. A further political alignment occurred in 1971, when Salim Rubaya 'Ali became head of state and 'Abd al-Fattah Isma'il was named head of the party, in an uneasy rivalry. In 1978 Isma'il, the head of the Yemen Socialist Party (YSP), formerly the NLF, overthrew and executed President 'Ali and assumed the presidency. Isma'il resigned his position in 1980, ostensibly for reasons of health, and went into exile. 'Ali Nasir Muhammad al-Hasani, the prime minister, assumed the presidency.

Meanwhile, Yemen joined the League of Arab States in 1945, and in 1958, it formed a federation, the United Arab States, with the newly established United Arab Republic (UAR). In December 1961 however, the pro forma federal connection with Egypt was severed, and in September 1962 the government of Imam Muhammad al-Badr, only a few days old, was overthrown by revolutionary forces led by Brigadier (later Marshal) 'Abdallah as-Sallal. He proclaimed himself president and commander-in-chief of the

army and declared the establishment of the Yemen Arab Republic. Badr escaped to the northern regions of the YAR, where he organized a counterrevolutionary force.

A civil war between the royalists (defenders of the imamate) and the republican government broke out, and appeals by both sides for support brought about the active intervention of other Arab states. Saudi Arabia supported the royalist cause, and the UAR came to the assistance of the republic, dispatching up to 70,000 troops to the YAR; fighting was particularly bitter during the winter of 1963–64. Eventually the conflict subsided, as the Saudis curtailed their aid to the royalists and the Egyptians to the republicans. Sallal was deposed in November 1967 and replaced by a Republican Council. Talks between republican leaders and Saudi Arabia in March 1970 at Jiddah concluded with an agreement that ended the civil war and left the republicans in control.

In June 1974 'Abd ar-Rahman al-Iryani (who had been president since 1967) resigned, thrusting the country into a state of political confusion. By the end of the year Lieutenant Colonel Ibrahim Muhammad al-Hamdi had emerged as president, heading a government with powers of centralized control that were progressively strengthened. Hamdi was assassinated by unknown assailants in October 1977. His successor, Colonel Ahmad ibn Hussein al-Ghashmi, who formed a civilian government and established the Constituent People's Assembly, met a similar fate in June 1978, in a bomb blast in which PDRY involvement was suspected. Lieutenant Colonel 'Ali 'Abdallah Saleh thereupon became president. In 1982, he inaugurated the General People's Congress as an instrument for popular political mobilization.

Since independence, the PDRY was embroiled in conflicts with all three of its neighbors. A separatist movement was supported in Oman; there were border skirmishes with Saudi forces in 1969 and 1973; and the PDRY fought a brief war with the YAR in February–March 1979. The war ended with a truce, mediated by the Arab League, and with an agreement in principle to seek unification of the two Yemens. On 13 January 1986 PDRY President Muhammad attempted to eliminate his rivals within the YSP. A number of officials were killed, including Isma'il, and Muhammad was forced into exile, along with thousands of his followers. A civil war ensued during the following two weeks, in which about 4,200 died and the supporters of Muhammad were defeated. Haydar Abn Bakr al-'Attas, the prime minister, took over as acting president; Dr. Yasin Sa'id Nu'man was appointed prime minister, and 'Ali Salim al-Bayd was chosen as the new head of the YSP. President al-'Attas was officially elected in November 1986.

In late 1981 a constitution for the two Yemens was drafted. However, implementation was hampered by the continuing insurgency against President Saleh by the leftist National Democratic Front (NDF), which was based in, and reportedly aided by, the PDRY. Saleh was able to defeat the NDF militarily in 1982. Movement toward unification was maintained in repeated declarations and meetings through 1985, but no real progress was achieved. The January 1986 civil war in the PDRY set back relations between the two countries, particularly since 50,000 refugees fled the YAR, but both governments subsequently reaffirmed their commitment to unity.

In 1989 the leaders of the YAR and PDRY approved the 1981 draft constitution and their legislatures ratified it on 21 May 1990. The unified Republic of Yemen was proclaimed the following day.

In the May 1990 election, 121 seats were won by the northern General People's Congress, 62 by Islaah (an Islamist and tribalist party), 56 by the southern Yemeni Socialist Party, 47 by independents, and 15 by five other parties. On 22 May 1990 Ali Abdullah Saleh became the president of Yemen and Haidar Abu Bakr al-Attas the first prime minister, serving until 9 May 1994. A 30-month transition period was set for unifying the different political and economic systems. The army, police, and civil service were not integrated as planned, however. Meanwhile, the economy was hard hit by the consequences of Yemen's support for Iraq after the Kuwait invasion. It is estimated that Saudi Arabia expelled between 800,000 and one million Yemeni workers, thus depriving Yemen of some \$3 billion in foreign exchange. In addition, the Saudis and Gulf states ended \$2 billion in foreign aid. Unemployment in Yemen reached 30%.

Free and fair parliamentary elections were held in April 1992 with President Saleh's General People's Congress (GPC) barely missing a majority victory. A three-party coalition was formed but foundered in late 1993 when Vice President Ali al-Beidh of the Yemen Socialist Party boycotted meetings. Although the quarrel appeared to be patched up with an agreement in February 1994, fighting broke out in May of that year. In a few months, thousands of casualties had been suffered; tribes, clans, and militias were engaged in seeking their own selfish goals and the city of 'Aden was under siege. Some observers attributed the civil conflict to the recent discovery of massive oil reserves in the south and to Saudi Arabia's interest in weakening Yemen by promoting the breakup of the union. The future looked bleak, despite efforts of the UN and some Arab states to promote peace. Meanwhile, on 9 May 1994 Muhammed Said al Attar became acting prime minister until 6 October 1994 when Abdel Aziz Abdel Ghani took office.

Although bloody, the civil war was short-lived, with the north having subdued the rebellious south by July. Restoring civil order was difficult, especially in light of the dire economic straits faced by the country, which in 1995 had 70–90% inflation and a deficit of 17% of GDP. The IMF and World Bank stepped in after the war and instituted structural adjustment programs which brought inflation down below 10%.

In 1997 parliamentary elections were scheduled for May and it was expected that Saleh's GPC would retain its sizable majority. The international community expressed skepticism as to the fairness of the elections but, in the context of the Persian Gulf, they were expected to be reasonably fair. Notably, the YSP, representing the defeated south, announced that it would boycott the elections in protest of the GPC's collusion with Islaah, a tribal and Islamist party, to rig the elections. Saleh maintained the presidency and on 14 May 1997 Faraj Said Bin Ghanem became the new prime minister. On 29 April 1998 Bin Ghanem resigned and Abdel Karim al-Iriani became acting prime minister. In September 1999 President Ali Abdullah Saleh was reelected in Yemen's first direct presidential election. The YSP boycotted the election. Charges of fraud were made by the opposition with allegations of underage voting, multiple balloting, and unauthorized submission of ballots by absentee voters.

Yemen's history of kidnappings, over 100 Westerners the first six years of the 1990s, continued through 2000. In the past the kidnappings were economically motivated, i.e., Yemeni tribesmen asking for money. Later, others appeared ideological—Mus-

lims demanding the release of prisoners held by another Muslim group. Kidnappings damaged Yemen's economy by their impact on its tourist industry. Falling world oil prices also hit Yemen hard since oil accounts the vast majority of Yemen's exports. Yemen attempted to increase economic productivity with a campaign against qat (khat) chewing. Qat is a mild indigenous narcotic plant customarily chewed by some 75% of the Yemeni population. In August 1999 the government led by President Saleh, himself a qat user, launched a campaign to reduce qat usage by swearing off qat and encouraging others to follow his example. Anti-qat campaigns have been politically treacherous as former prime minister Mohsin al-Aini was ousted in 1972 after attempting to stamp out qat-chewing.

On 12 October 2000, two suicide bombers detonated a small boat containing explosives alongside the USS *Cole* as it was refueling in Aden harbor. Seventeen US sailors were killed and 39 others were wounded. Al-Qaeda leader Osama bin Laden praised the attack. Bin Laden, whose father was of Yemeni origin, had been indicted by the United States for the 1998 bombings of the US embassies in Kenya and Tanzania that killed 224 people. In the aftermath of the 11 September 2001 terrorist attacks on the United States, attributed to al-Qaeda, the United States focused attention on governments in the world responsible for harboring and supporting terrorists. Since 1992, the United States has alleged that bin Laden and al-Qaeda targeted US military forces in Yemen, and that al-Qaeda has formed alliances with jihad groups in Yemen. In June 2001, Yemeni officials arrested 9 men believed to be affiliated with the Islamic Army of Aden, a fundamentalist group linked to bin Laden, for the 2000 attack on the *Cole*. The group was responsible for kidnapping 16 Western tourists in December 1998; four of the hostages were killed in a gun battle between the group and Yemeni government troops. The Islamic Army of Aden advocates the imposition of Islamic law in Yemen, is against the United States or other Western states using Yemeni ports or bases, and supports the lifting of international sanctions against Iraq.

In November 2001, President Saleh met with US President George W. Bush, assuring him that Yemen was a partner in the war on terrorism. In December, Yemen detained some 80 foreign students and teachers from an Islamic fundamentalist institute in the Marib province, where Yemeni special forces were searching for al-Qaeda suspects. In February 2002, Yemen expelled more than 100 foreign Islamic scholars, including British and French nationals, in an effort to curb the spread of terrorism. Scores of prisoners being held by the United States as a result of its 2001–02 campaign in Afghanistan are natives of Yemen. In March 2002, the United States was finishing plans to send hundreds of US Special Forces to Yemen, to “advise and assist” Yemeni forces combating armed groups affiliated with al-Qaeda.

On 6 October 2002, the French oil tanker *Limburg* was the target of a terrorist attack in the Gulf of Aden, which killed one crew-member and released 90,000 barrels of oil. An explosives-laden boat hit the tanker, in an attack that was similar to the one on the USS *Cole*. On 3 November, a US CIA-controlled unmanned Predator surveillance plane fired a Hellfire missile into a car in northwest Yemen, killing six al-Qaeda operatives, including Qaed Salim Sunian al-Harethi, considered to be Osama bin Laden's chief operator in Yemen. Al-Harethi was also a suspect in the 2000 bombing of the *Cole*. President Saleh called on al-Qaeda members to

renounce violence and turn themselves in to face trial in Yemen, as opposed to being turned over to the United States.

In December 2002, a North Korean freighter disguised as a Cambodian ship was intercepted in the Arabian Sea and seized at gun point by the US Navy and Spanish marines; the vessel was carrying a shipment bound for Yemen of 15 Scud missiles, warheads, and an agent used in Scud fuel. President Bush ordered the shipment released after concluding the Yemen-North Korean deal was concluded on a legal basis. Also in December, a Yemeni Muslim extremist killed three American doctors and wounded a pharmacist by opening fire in a Baptist hospital in the town of Jibla.

On 20 February 2001, Yemen amended its constitution to extend the presidential term of office from 5 to 7 years, and to reorganize the bicameral parliament. The referendum was passed by 73% of the voting population. Also in February, municipal elections were held for the first time.

In the summer of 2004, government forces battled supporters of an anti-American Shia cleric, Hussein al-Houthi, in the northern part of the country. Estimates of the dead ranged from 80 to 600. According to the government, Al-Houthi's group, called “Believing Youth,” attempted to model itself after Lebanon's Hezbollah, and receives foreign funding. In September 2004, government forces killed al-Houthi. However, from March to May 2005, fighting resumed between government troops and supporters of the slain al-Houthi; more than 200 people were killed. In May, President Saleh announced the leader of the rebellion in the north agreed to renounce the campaign in exchange for a pardon, but some fighting continued, including in the capital Ṣan'ā'.

In July 2005, scores of people across the country were killed in clashes between police and demonstrators protesting a reduction in fuel subsidies. Tanks were deployed in Ṣan'ā'. The poor were most affected.

### 13 GOVERNMENT

The 1970 YAR constitution affirmed Islamic law as the basis of all legislation and established the unicameral Consultative Assembly as the supreme legislative body. The assembly was authorized to name the president and to appoint the ruling Executive Council. In the first national elections, held in 1971, voters selected 119 members of the Consultative Assembly; the president appointed the 40 remaining members. This body was dissolved in 1974, and in 1978, the Constituent People's Assembly replaced it, with 99 members elected and 60 members appointed by the president for a two-year term.

In the General People's Congress (GPC), created in 1982, 700 of the 1,000 members were elected, with the other 300 appointed by the government. Between meetings (held every two years), the GPC's affairs were to be handled by a 75-member standing committee. The president, elected by the Constituent People's Assembly for a five-year term, served as secretary-general of the GPC and commander-in-chief of the armed forces and appointed the prime minister and a ministerial council.

The 1970 constitution of the PDRY was ratified by the general command of the United Political Organization–National Front, which later became the Yemen Socialist Party (YSP). The Supreme People's Council, which had 111 members elected by universal suffrage at age 18, enacted laws; elected a Presidium and its chairman, who served as head of state; and chose the prime minister

and the Council of Ministers. The YSP apparatus and the organs of government were closely intertwined.

The 1990 unity constitution established a political system based on free, multiparty elections. During the transitional period a presidential council was created with five members, three from the North and two from the South, to oversee executive operations. The council appointed a prime minister who picked a 38-member cabinet. A 301-member parliament was also formed, with 159 members chosen from the North, 111 from the South, and 31 at large. Constitutional amendments in 1994 eliminated the presidential council, and provided that the president would be elected by popular vote from at least two candidates selected by the legislature. In 1999, Yemen held its first direct presidential elections.

Legislative elections were again held in 1993, with the GPC maintaining its majority (124 seats). Islaah won 61 seats and the YSP took 55. Independent candidates won 47 and members of the country's dozens of other political/tribal parties took 13 seats. Following the 1994 civil war, the GPC and Islaah formed a unity government. The next parliamentary elections were in April 1997. The GPC maintained its dominance taking 187 of 299 seats. The YSP, the only substantial opposition since the GPC and Islaah joined forces, boycotted the elections, which they said were being managed by the GPC leadership.

On 20 February 2001, new constitutional amendments extended the presidential term of office from five to seven years, and extended the parliamentary term of office to six years. The president may now serve a maximum of two seven-year terms. A bicameral legislature was created, consisting of an upper house, the Consultative Council or Shura Council, with 111 seats appointed by the president; and a House of Representatives composed of 301 members elected by popular vote. The next presidential election was slated for 2006; President Saleh promised he would step down. Suffrage is universal at 18.

## 14 POLITICAL PARTIES

The National Liberation Front, which emerged in 1967 as the strongest faction in the disputes before South Yemen's independence, became the United Political Organization–National Front in 1970 and changed its name to the Yemeni Socialist Party (YSP) in 1978, when two smaller leftist parties were merged with it. This Marxist-Leninist organization, the PDRY's lone political party, was the only group to offer candidates in the 1986 legislative elections and survived to represent southern interests in the unified Yemen.

In preunification north Yemen, political parties in the Western sense played no role. Tribal allegiances were more important political factors. After unity, the northern leader, General Saleh, formed the General People's Congress (GPC), which became the country's largest party. The second-largest bloc in the parliament was held by the Islaah Party (The Yemeni Congregation for Reform), a fusion of tribal and Islamic interests that opposed the unity constitution because it did not sufficiently adhere to Islamic principles. At least 40 smaller parties have been active in the politics of unified Yemen, but the GPC, Islaah, and the YSP are the only ones of national significance. After the 1994 civil war, the GPC and Islaah formed a coalition government to establish civil order.

In the April 1997 legislative election the GPC won a landslide victory and no longer governed in coalition with Islaah. The YSP boycotted the April 1997 legislative election. In addition to these three main parties, the other parties active in the political arena that had fulfilled Yemen's legal procedures to practice political activities were the People's Nasserite Reformation Party, Liberation Front Party, Nasserite Democratic Party, League of the Sons of Yemen, Federation of Popular Forces, National Arab Socialist Baath Party, National Democratic Front, Al Haq Party, Yemen League Party, and the National Social Party. As of 2005, the active parties were GPC, Islaah, Yemeni Socialist Party (YSP), Nasserite Unionist Party, and the National Arab Socialist Baath Party.

In September 1999, Yemen held the first direct presidential elections ever held on the Arabian peninsula. Longtime president Saleh captured 96.3% of the vote; Najeeb Qahtan al-Shaabi, his only opponent, won 3.7% of the vote. Led by the YSP, a coalition of opposition groups boycotted this election. In legislative elections held on 27 April 2003, the GPC won 228 seats in parliament, Islaah 47, YSP 7, Nasserite Unionist Party 3, National Arab Socialist Baath Party 2, and independents 14. The next legislative elections were scheduled for 2009.

## 15 LOCAL GOVERNMENT

The YAR was divided into 11 governorates (*muhafazat*), each headed by a governor. Each governorate contained a varying number of sectors (*nawahi*). Traditional divisions still extant included the *uzlah*, a group of villages (*qura*) of people who belong to the same tribe, headed by a sheikh; and the *mahall*, a group of houses administratively subordinate to a village. The central government retained ultimate authority over local officials, although certain administrative sanctions were granted to traditional local rulers.

In an effort to de-emphasize older loyalties and associations, the PDRY government created a highly centralized state and divided the country into six governorates, all closely controlled by the central authorities. Each had an appointed governor, and each was divided into districts, which were also administered by appointed officials.

The unified government established 17 governorates, subdivided into districts. In the countryside, especially in the north and east, tribal authority is often stronger than formal government institutions. There are 20 governorates, and 326 district municipalities. The government has taken steps to implement decentralization. Municipal elections were held for the first time in February 2001. Authority over local planning, development, and administration is consolidated in municipal councils. The February elections included 26,832 candidates for 6,614 district municipal council seats and over 2,500 candidates for 418 provincial council seats. Those elected served a two-year term.

## 16 JUDICIAL SYSTEM

Under a 1991 decree the separate judicial systems of the former YAR and the former PDRY were unified at the Supreme Court level. A Supreme Judicial Council administers the judiciary, appointing and promoting judges and reviewing policies regarding the structure and functioning of the judicial system. There are courts of first instance, which hear civil, criminal, commercial, and family matters; decisions can be appealed to courts of appeal. The Supreme Court rules on the constitutionality of laws, hears cases

brought against high government officials, and is the last court of appeal for all lower court decisions. The judiciary, especially at the lower levels, is susceptible to pressure and influence from the executive branch. All laws are codified from Shariah, and there are no jury trials. In addition to regular courts, a system of tribal adjudication exists for some noncriminal issues, although the tribal “judges” often hear criminal cases as well.

The former YAR judicial system consisted of Shariah law and courts for criminal and family law areas administered in each district by a hakim and commercial law and courts for business matters. In remote areas, tribal law was applied in tribal courts. The Shariah courts applied Islamic law and litigants could appeal the decision of a *hakim* to another *hakim*, and from him take a final appeal to the *Istinaf*, the highest court of appeal, in *Ṣanāʿ*. Both sets of courts were considered generally fair and impartial. Former YAR state security courts were abolished with unification.

The former PDRY court system was organized in three tiers: magistrate or divisional courts, provincial courts, and military courts. Magistrate courts handled most criminal, juvenile, family, housing, agrarian and other minor civil matters. Provincial courts handled more serious criminal cases, inheritance cases, major civil claims, and appeals from magistrates’ courts. Shariah courts applying Islamic law and tribal courts applying traditional law also existed alongside the modern court system.

## 17 ARMED FORCES

In 2005, the active armed forces of Yemen numbered 66,700. The Army had 60,000 active members, and was equipped with 790 main battle tanks, 130 reconnaissance vehicles, 200 armored infantry fighting vehicles, 710 armored personnel carriers and 1,167 artillery pieces (310 towed). The Navy had 1,700 active personnel. Major naval units included 19 patrol/coastal vessels and 6 mine warfare ships. The Air Force, in 2005 had 5,000 members, including 2,000 air defense personnel. The service had 75 combat capable aircraft, including 41 fighters and 30 fighter ground attack aircraft. The Air Force also had eight attack helicopters. The country’s paramilitary forces totaled 70,000 personnel, which were comprised of 50,000 Ministry of Interior Forces, and tribal levies in excess of 20,000. A coast guard is slowly being established. Yemen’s defense budget in 2005 totaled \$942 million.

## 18 INTERNATIONAL COOPERATION

Yemen was admitted to the United Nations on 30 September 1947; it participates in the ESCWA and several nonregional specialized UN agencies such as the World Bank, the FAO, ILO, UNESCO, UNHCR, UNCTAD, and the WHO. The country is also a member of the Arab Fund for Economic and Social Development, the Arab Monetary Union, the Council of Arab Economic Unity, the Islamic Development Bank, the Arab League, G-77, and the Organization of the Islamic Conference (OIC). Yemen has observer status in the OAS and the WTO.

Yemen is on good terms with both conservative and radical Arab states. The country is part of the Nonaligned Movement, IN environmental cooperation, Yemen is part of the Basel Convention, the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Traditionally an agricultural area, northern Yemen was self-sufficient in food and a net exporter of agricultural product until the Civil War in the 1960s and a prolonged drought in the early 1970s. In the late 1970s and early 1980s many farmers switched from labor intensive food crops to the more profitable cultivation of *qat*, a mild stimulant chewed by many Yemenis that has no significant export market. The economy of southern Yemen developed through foreign assistance (especially from the former USSR). The southern city of Aden, with its port and refinery, is the economic and commercial center of the country. The Yemeni economy depends on imports of wheat, flour, rice, and other foodstuffs. Trade deficits have been offset by remittances from Yemenis working abroad and by foreign aid.

Crude oil is a significant sector of the economy, with exports accounting for over 80% of total exports. In 2004, income from the production and sale of crude oil and natural gas accounted for 72% of total government revenue, which was significantly higher than budgeted income due to higher-than-expected international oil prices. However, with no new significant finds, oil resources could be commercially depleted within 5 to 20 years. Following the unification of the country in 1990, responsibility for development of the oil sector fell to the state-owned general corporation for oil and mineral resources. Civil war in 1994 disturbed output. Oil output has been declining since 1995, and over 200 dry wells have been drilled, suggesting that the industry has passed its peak. In 2005, proven oil reserves totaled 4 billion barrels. Although Yemen’s oil output declined each year from 2003–05, (from 448,288 barrels per day in 2003 to 416,656 barrels per day in the first nine months of 2005) the country hoped to boost output to 500,000 barrels per day in the late 2000s.

When Yemen aligned with Iraq during the Gulf War, Saudi Arabia and the Gulf states, Yemen’s main aid donors and hosts to large numbers of Yemeni workers and their families, ended the Yemenis’ privileged status. The economic impact of lost remittances was estimated at about \$1 billion per year. After the Gulf crisis, Yemen was confronted with high unemployment, lost remittances, halving of US military aid, a sharp cutback in USAID programs, other canceled foreign assistance, and the cost of food imports and social services for the returnees totaling about \$500 million.

Following the civil conflict in 1994, the government began a five-year program in 1995 that removed all controls on the exchange rate and cut the interest rate, as well as initialized trade policy reform, privatization, and the elimination of price controls. The reforms were favorably received by the World Bank and IMF, which agreed to provide aid.

A new liquefied natural gas drilling project promised exploitation of Yemen’s 482 billion cu m (17 trillion cu ft) of gas reserves in subsequent years, although in 2002 US companies ExxonMobil and Hunt Oil withdrew from the project, leaving the French-based company, TotalFinaElf (Total) as the lead investor. However, Hunt later retracted its withdrawal. In 2005, the government approved three liquefied natural gas (LNG) supply agreements for 6.7 million tons per year, with KOGAS, Total, and Tractebel. Yemen subsequently awarded an engineering, procurement, and construction contract for the project. First shipments of LNG could be made available by late 2008, with gas likely to flow to the United States and South Korea.

Gross domestic product (GDP) grew at an average rate of 3.8% from 1988 to 1998. Low oil prices in 1999 held real GDP growth to 3.7% in 1999, and their recovery helped push real growth to GDP to 5.1% in 2000. A stabilization in oil prices combined with declines in the growth of agricultural output, electricity and manufactures, attributable more to the domestic lack of rain than to the global economic slowdown, reduced GDP growth to 3.3% in 2001. Consumer price inflation had fallen to 6% in 1996 and 8% in 1998, but the average from 1999 to 2001 was 11%. An increase to 15.8% inflation was estimated for 2002 reflecting high fuel, electricity, and food prices from both shortages and the lowering or elimination of subsidies.

Yemen's real GDP grew 2.7% in 2004, and was estimated at 2.5% for 2005. In 2005, agriculture made up 13.3% of GDP, industry 47.9% and services 38.8%. Most people are employed in agriculture and herding; services, construction, industry, and commerce account for less than one fourth of the labor force. Yemen is one of the 25 poorest and economically least developed countries in the world with about a third of the population living in poverty. In 2005, the GDP at market exchange rate was \$14.1 billion and \$17.2 billion in purchasing power parity terms (PPP); the per capita GDP (PPP) was \$800. In 2005, the inflation rate was estimated at 9.6%. The unemployment rate was estimated at 35% in 2003. In mid-2005, the government attempted to roll back subsidies on all petroleum products, which led to a 90% increase in the price of gasoline and a 260% increase in the price of diesel fuel; prices on kerosene and cooking gas were also raised. The decision followed sustained pressure on the government from the IMF and World Bank to cut subsidies and introduce a sales tax, with the aim of curtailing government spending. Rioting and demonstrations followed the government's decision to eliminate the subsidies, and 22 people were killed in the violence. In late July 2005, the government rolled back the price increases.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Yemen's gross domestic product (GDP) was estimated at \$17.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$800. The annual growth rate of GDP was estimated at 2.5%. The average inflation rate in 2005 was 9.6%. It was estimated that agriculture accounted for 13.3% of GDP, industry 47.9%, and services 38.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.270 billion or about \$7 per capita and accounted for approximately 11.5% of GDP. Foreign aid receipts amounted to \$243 million or about \$13 per capita and accounted for approximately 2.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Yemen totaled \$7.98 billion or about \$42 per capita based on a GDP of \$11.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.9%. In 2001 it was estimated that ap-

proximately 25% of household consumption was spent on food, 26% on fuel, 3% on health care, and 5% on education. It was estimated that in 2003 about 45.2% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Yemen's workforce was estimated at 5.83 million. According to 1999 figures (the latest year for which data was available), 54.1% of the labor force is employed in agriculture, 34.7% in the services sector, 11.1% in industry, with the remainder in undefined occupations. In 2003, the unemployment rate was estimated at 35%.

United Yemen enacted a new labor code in 1995, (amended in 1997) which guaranteed the rights of unionization and collective bargaining. The government restricts this right by placing government officials in union positions of prominence. The Yemeni Confederation of Labor Unions, the country's only labor confederation, had 350,000 members in 14 unions in 2002. There exists a limited right to strike. All collective bargaining agreements must be reviewed by the minister of labor.

There is no nationally fixed minimum wage. Average wages do not provide a family with a decent standard of living. Although children under the age of 15 are prohibited from working, child labor is common, especially in rural regions. The labor code calls for a maximum eight-hour workday and a 48-hour workweek.

## 22 AGRICULTURE

Yemen, with its wide range of arable climatic zones, has the greatest potential for agricultural development of any nation on the Arabian Peninsula. Agriculture is an important part of the economy (accounting for 15% of GDP in 2003), despite the lack of arable land, scarcity of water, periodic droughts, and difficult terrain. Employment in the agricultural sector accounts for more than 50% of the workforce, but with only 3% of its land area arable, Yemen's potential for agricultural self-sufficiency is very remote. As of 2004, Yemen's agricultural trade deficit was \$947 million.

Traditionally, Yemen was famous for its coffee, shipped from the port of Al-Mukha, from which the English word mocha derives. The main cash crop is qat, a mild stimulant chewed by many Yemenis on a daily basis, but not exported significantly because it is highly perishable. Industrial farming of fruits and vegetables, using modern irrigation techniques, provides a level of production to nearly satisfy domestic demand. As a high-cost producer, Yemen is not yet able to internationally compete in marketing its produce, especially since such exports are often blocked at the borders.

Agriculture output in 2004 (in 1,000 tons) included sorghum, 263; tomatoes, 248; wheat, 105; grapes, 169; bananas, 99; seed cotton, 29; sesame seed, 19; coffee, 11; and cotton, 9.9.

## 23 ANIMAL HUSBANDRY

Animal husbandry is a key sector of the economy, and the export of hides and skins has long been an important source of foreign exchange. In 2001, the livestock population was estimated at 5,029,000 sheep, 4,453,000 goats, 1,400,000 head of cattle, 500,000 donkeys, and 198,000 camels.

Commercial production of poultry in Yemen began in the mid-1970s. Yemen produces about 95% of its annual consumption of

eggs and is emerging as a significant producer of broilers (chicken meat). The brief civil conflict in 1994 hurt the industry by driving up the costs of imported feed and vaccines. About 87,000 tons of poultry and 32,000 tons of eggs were marketed in 2005.

## 24 FISHING

Fishermen work along the Arabian Sea, Gulf of Aden, and Red Sea coasts. The annual fish catch in 2003 was about 159,000 tons. Principal species of that catch included Indian and Spanish mackerel, cuttlefish, lobster, and scavengers. Fish-processing plants are located at Al Hūdaydah and Al-Mukalla. Exports of fish and fish products were valued at \$56.7 million in 2003. Pearl and coral diving have been practiced for centuries.

## 25 FORESTRY

Forest and woodland coverage is negligible. Forests once covered Yemen, but overgrazing by goats and the systematic cutting of timber for fuel and construction have almost completely eliminated the forest cover, especially in the south. Roundwood production totaled 352,700 cu m (12.5 million cu ft) in 2004, all of it used for fuel. Lumber imports amounted to \$86.1 million in 2004.

## 26 MINING

Until the discovery of petroleum, the preeminent segment of the Yemeni economy, the mineral industry, had been limited to the production of cement, dimension stone, gypsum, and salt. In 2004, production of cement amounted to 1,546,300 metric tons. Other mineral commodities produced in 2004 were: marble, 100,000 sq m; gypsum, 44,000 metric tons; and salt, 120,000 metric tons. The government was focusing on creating conditions favorable to foreign investment, to develop the nation's mineral resources. The government had exclusive domain over the precious stone and hydrocarbon industries; mining legislation guaranteed the rights of private property for all other commodities. ZincOx Resources, of the United Kingdom, continued evaluating the Al-Jabail zinc deposit, which Anglo American Corp. had explored in the late 1990s.

## 27 ENERGY AND POWER

Yemen is a small non-OPEC producer of oil and has the potential to be an exporter of natural gas.

Yemen, as of 1 January 2005, had proven reserves of crude oil estimated at 4 billion barrels, according to the Oil and Gas Journal. Oil production in 2005 was estimated at 416,000 barrels per day. With domestic consumption of oil in that year estimated at 83,000 barrels per day, the country was a net exporter of oil. In 2005, net exports were estimated at 333,000 barrels per day. Yemen's crude oil refining capacity, as of 1 January 2005, was estimated at 130,000 barrels per day, based upon a pair of aging refineries, the 'Aden refinery and the Marib refinery. The capacity of the 'Aden refinery had declined from 170,000 barrels per day before the 1994 civil war to 120,000 barrels per day as of 1 January 2005. The newer Marib plant has a capacity of 10,000 barrels daily.

Yemen has proven natural gas reserves estimated, as of 1 January 2005, at 16.9 trillion cu ft. As of 2003, there was no systematic production of natural gas. Whatever gas is produced results from

the oil extraction process and is re-injected. Most of the known reserves are concentrated in the Marib-Jawf fields.

Total electricity production in 2003 was estimated at 3.8 billion kWh, of which 100% was from fossil fuels. Total installed capacity in 2003 was estimated at 800,000 kW, and was entirely based on conventional thermal sources. Demand for electricity in 2003, was estimated at 3.6 billion kWh.

## 28 INDUSTRY

In northern Yemen industry traditionally has been based on food processing, but this subsector has suffered from poor productivity of agriculture and reliance on imported raw materials. Building materials, textiles, leather wear, jewelry, and glass making are other industries in the north. The largest industry in southern Yemen is petroleum refining. Southern manufactures include clothing, processed food, metal products, soap, and perfumes. Industrial production accounts for 47.9% of GDP (2005 est.)

Yemen's main refinery at 'Aden processed 60,000 barrels of petroleum per day in 1994 after sustaining damage in the civil war. Output reached 100,000 barrels per day by the start of 1995 with the repair of the main pumping station and two tapping units. That year, the refinery produced 26.5 million barrels of residual and distillate fuel oil, 10 million barrels of gasoline, and 3.5 million barrels of kerosene. In 2005, Yemen's total refinery capacity was 130,000 barrels per day, most from the 120,000-barrels-per-day-capacity 'Aden refinery operated by the 'Aden Refinery Company (ARC), and the rest from a 10,000-barrels-per-day refinery at Marib operated by Yemen Hunt Oil Company. In December 2002, the government signed an agreement with the Hadhramawt Refinery Company, a Saudi venture, for the construction of a 50,000-barrels-per-day refinery at Al Mukallā costing \$450 million. Another refinery is planned for Ra's Isa with a capacity of 60,000 barrels per day, to be completed in 2007.

Yemen's considerable natural gas reserves—estimated at 480 billion cu m (16.9 trillion cu ft), have not been developed. A liquefied natural gas project was initiated in 1995 by TotalFinaElf (now Total) and several other major multinational oil companies, which established the Yemen Liquefied Natural Gas Company (Yemen LNG). In June 2002, two US companies, ExxonMobil and Hunt Oil, announced they were leaving the consortium, but Hunt later retracted its withdrawal. In 2005, the Yemeni government approved three LNG supply agreements for 6.7 million tons per year, with KOGAS, Total, and Tractebel. The government then awarded an engineering, procurement, and construction contract for the project. The first shipments of LNG were planned for late 2008, with gas likely flowing to the United States and South Korea. In 2004, more than 25 companies bid on a domestic gas utilization and pipeline feasibility study for a proposed 373-mile pipeline that would transport gas from Marib to a power station at Mabar. The World Bank, in cooperation with Yemen's National Coordination Council, was funding this study.

As of 2006, the government was preparing a new investment plan to utilize Yemen's fish wealth, to attract Arab and foreign investment to the sector. Thirty-six sites were identified for fish cultivation. In May 2005, the first factory for the canning and exporting of fish was set up by a Saudi company. There was also German interest in establishing a fish cultivation site in Hadhramawt. Fish production increased to 151,000 tons between January and Sep-

tember 2005, an increase of 18.5% compared with the same period in 2004. Fish exports reached 74,000 tons in 2004, worth \$213 million. Fish sector revenues rank second after oil revenues for the economy. Yemen ranked fourth among Arab fish exporting countries after Morocco, Mauritania, and Egypt in 2004. The fish sector created 315,000 jobs in 2004 compared with 100,000 in 1990. Approximately 1.7 million people were employed in the fish sector as of the end of 2005.

Construction of a 120,000 metric-ton-per-year-capacity rolling mill at Hodaidah for Al-Rahabi Trading Group was expected to be completed in 2005.

The government's economic diversification project would be helped by the development of metal deposits and additional industrial mineral deposits. In 2004, Yemen produced more than 1.5 million metric tons of cement, 44 million metric tons of gypsum, 120,000 metric tons of salt, 630,000 metric tons of sand and gravel, and 2.4 million metric tons of quarried stone.

## 29 SCIENCE AND TECHNOLOGY

The University of 'Aden, founded in 1975 at Al-Mansoorah, has faculties of science, arts, and education; agriculture; engineering; and medicine. Şanā' University, founded in 1970, has faculties of science, medicine and health sciences, engineering, and agriculture.

## 30 DOMESTIC TRADE

At the center of most towns is a market place (*sug*), the lanes of which are lined with open-front booths where food, clothing, and implements are displayed and sold. Some goods are bartered. Others sold for cash, usually after bargaining. The production of *qat*, a mild stimulant which many Yemenis chew, plays an important role in domestic trade. Relying on a highly efficient internal distribution system, the production of *qat* would increase per capita GDP an estimated 15–20% were it included in the national income statistics. Corruption among civil servants is a common element of domestic commerce—soldiers at checkpoints confiscate money or *qat*, and businesses are often obliged to pay off local officials.

Customary business hours are from 8 AM to 1 PM and from 4 PM to 7 PM, Saturday through Thursday. Banks are open from 8 AM to noon (11:30 AM on Thursdays).

## 31 FOREIGN TRADE

Petroleum accounts for about 90% of the country's exports. Income from the production and sale of crude oil and natural gas accounted for 72% of total government revenue in 2004, largely due to the high price of oil on international markets. Other exports in recent years have included coffee and dried and salted fish; imports included food and live animals, machinery and equipment, and manufactured goods.

In 2004, Yemen's primary export partners were: Thailand (33.8%), China (30.3%), and Singapore (7.8%). Primary suppliers were: the UAE (12.2%), Saudi Arabia (9.7%), China (8.8%), France (7.3%), India (4.4%), the United States (4.4%), and Kuwait (4.2%).

## 32 BALANCE OF PAYMENTS

Yemen's balance of payments was adversely affected in the early 1990s, as other nations sought to economically punish Yemen for its support of Iraq during the Persian Gulf War. In 1993, the current account deficit reached a peak of \$1.217 billion, foreign exchange reserves sank to just \$144.6 million, and the trade deficit was \$920 million. Transfers, consisting largely of remittances from Yemenis working in other Gulf states fell by 42% between 1990 and 1993.

As of the early 2000s, Yemen's balance of payments position had substantially improved: its current account surplus stood at \$1.8 billion in 2000, up from a \$455 million deficit in 1998. Yemen's bilateral and multilateral debt situation had also improved, with debt to Russia reduced, debt rescheduling by the Paris Club, and financing from the World Bank and IMF. In 2005, Yemen's outstanding debts stood at approximately \$5.689 billion.

In 2005, total exports were estimated at \$6.387 billion and imports were estimated at \$4.19 billion. The current-account balance was estimated at \$1.282 billion.

### 3<sup>3</sup> BANKING AND SECURITIES

The republican government set up the Yemen Currency Board in 1964 with a capital of YR2 million; in 1971, the Currency Board was replaced by the Central Bank of Yemen (CBY). The state-owned Yemen Bank for Reconstruction and Development (YBRD), founded in 1962, finances development activities, and the International Bank of Yemen, organized in 1980, operates as a commercial bank. In the 1970s, the YBRD dominated the banking business, controlling some 70% of the loans outstanding in the YAR; during the same decade, a number of foreign commercial banks, including ones from Hong Kong, Iraq, Pakistan, the United States, and the United Kingdom, opened offices in Ṣan'ā'.

The economic recovery in 1995 and the partial liberalization of interest rates on bank deposits appear to have succeeded in encouraging the growth in savings as reflected in higher quasi-monetary holdings. In 2002, there were 11 commercial banks (9 private and 2 public) and two public sector specialized banks (Agriculture and Housing) operating under the jurisdiction of CBY. There were also three Islamic banks in operation. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.4 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 15.16%.

There are no securities exchanges in Yemen.

### 3<sup>4</sup> INSURANCE

There were at least 10 insurance firms in the Yemen in 1999. Much of the Yemen's insurance business is transacted abroad. In 1999, there was 18.8 million dollars of premiums written in Yemen, giving the insurance industry a .30% share of the Gross Domestic Product.

### 3<sup>5</sup> PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimated that in 2005 Yemen's central government took in revenues of approximately \$5.6 billion and had expenditures of \$5.7 billion. Revenues minus expenditures totaled approximately -\$103 million. Public debt in 2005 amounted to 35.9% of GDP. Total external debt was \$5.689 billion.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, budgetary central government revenues were YR282,268 million and expenditures were YR310,702 million. The value of revenues was us\$1,813 million and expenditures us\$1,995 million, based on a market exchange rate for 1999 of us\$1 = YR155.718 as reported by the IMF. Government outlays by function were as follows: general public services, 30.8%; defense, 18.8%; public order and safety, 8.3%; economic affairs, 11.5%; housing and community amenities, 1.6%; health, 4.4%; recreation, culture, and religion, 2.8%; and education, 21.8%.

### 3<sup>6</sup> TAXATION

Personal income taxes are levied on wage workers and the self-employed. Taxes on business profits are taxed at a 35% rate. Capi-

tal gains are included in taxable income and are taxed at the corporate rate. Dividends, interest and royalties are each subject to a 10% withholding tax.

Other taxes include excise duties, road and vehicle taxes, port fees, a tax on rents, and telegraph fees. The state also derives income from the confiscated property of the imamate. Another tax is the 2.5% Zakat (the religious charity tax) which is state-enforced, but under the republican regime, its estimation has become a voluntary concern of each individual. Yemeni businessmen have been trying to abolish Zakat as an obligatory levy entirely, leaving it to the discretion of each individual to give to the needy. The chronic budget deficits of the 1980s forced the government to place considerably more emphasis on the traditionally lax collection of taxes. In early 2002 a general sales tax (GST) was signed into law, but its implementation was delayed pending a review of the country's indirect tax system.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Import duties are generally levied at rates varying from 5% on essential goods to 25% on luxury items; medical and agricultural items are duty-free, while tobacco is dutiable at 145%. Surcharges are added to these basic rates to cover defense expenditures, to finance schools and orphanages, and to assist the poor. Export duties are levied on a variety of products. Interestingly, in 1995 the government renounced the secondary and tertiary aspects of the Arab League's boycott of Israel, but will not renounce the primary aspect until the Arab League gives up the boycott completely by consensus of the member nations.

### 3<sup>8</sup> FOREIGN INVESTMENT

Foreign investment is encouraged by the Yemeni government as it is prospecting for more oil and hoping to develop its natural gas reserves. The Yemen General Investment Authority (GIA) was established in 1992, and worked with the World Bank's Foreign Investment Advisory Service, to revise Yemen's Investment Law 22 of 1991 (as amended) to refocus it on promotion rather than regulation of foreign investment. Investment law restructuring is part of the IMF-World Bank-sponsored economic reform program that has been being pursued in Yemen since 1995. The Yemeni Free Trade Zone Public Authority was established in 1991 to develop the 'Aden Free Trade Zone. The port was developed as a joint venture between the Port of Singapore Authority (PSA) and the Bin Mahfouz Group of Saudi Arabia. In Phase II of the program, 30 hectares were made available for lease. Free zone incentives the right to have 100% foreign ownership, no personal income taxes for non-Yemenis, a 15-year corporate tax holiday, renewable for up to 10 years, and the right to 100% repatriation of capital and profit.

There are no reliable statistics on foreign investment in Yemen. US investment has mainly been in the oil and gas sector. The Houston-based Yemen Hunt Oil Company has been operating since 1984. Its pipelines have been repeatedly attacked. Security can not help but be a concern for Western investors given events like the kidnapping of 16 tourists in 1998 (with four killed in the rescue attempt); a bomb explosion at the 'Aden Refinery in 1998, the bombing of the USS *Cole* in 'Aden Harbor in October 2000, with 17 dead, and in 2002, the explosion and fire on the French-flagged tanker the Limburg, with one killed and 90,000

barrels of oil spilled. More hopeful is the settlement of its debt issues with Kuwait and Saudi Arabia, which has thus made Yemen eligible for concessional loans from these neighboring states. In 1995, a consortium was established for the development of natural gas production. In addition to the government's 26% share, Total (France) had 36% equity; Hunt Oil (US), 14.6%; Exxon (US), 14.1%; and Yukong (ROK), 9.3%. In 2002 Exxon (now ExxonMobil) and Hunt Oil withdrew from this enterprise, which has stalled for lack of an identifiable market through which the investors could recoup their investments. However, Hunt later retracted its withdrawal. In 2005, the Yemeni government approved three LNG supply agreements for 6.7 million tons per year, with KOGAS, Total, and Tractebel. The government then awarded an engineering, procurement, and construction contract for the project. The first shipments of LNG were planned for late 2008, with gas likely flowing to the United States and South Korea. In 2004, more than 25 companies bid on a domestic gas utilization and pipeline feasibility study for a proposed 373-mile pipeline that would transport gas from Marib to a power station at Maabar. The World Bank, in cooperation with Yemen's National Coordination Council, was funding this study.

As of 2006, the Chinese Bank for Exports and Imports was considering funding the building of Yemen's first railway. In addition to Chinese investments, an overall increase in foreign investment was projected for the late 2000s. Up to the end of June 2005, the volume of Arab and foreign investment in Yemen reached approximately YR129 billion; investment in the industrial sector had reached YR69.5 billion. The services sector ranked second, at YR51.9 billion.

### 39 ECONOMIC DEVELOPMENT

After unification in 1990, the new government assumed all debts incurred by former governments. Domestic political strains ultimately culminated in civil strife in 1994. As a result, the economy was further burdened with reconstruction costs.

The government launched a major reform program in 1995. The program included revenue mobilization through tax measures, depreciation of the customs valuation rate, the liberalization of cement prices, an increase of petroleum product prices by about 90%, and a 60% rise in electricity tariffs. The government's medium-term goal was to eliminate all subsidies by 1999–2001. Fiscal and monetary measures included the containment of primary nondevelopment budget expenditures, partial reform of the exchange system (including currency depreciation), interest rate reform, and monetary management reforms. Furthermore, transportation and communication charges were deregulated, health and education fees were increased, and privatization programs were initiated. In 1996, 16 public enterprises were targeted for privatization. Laws prohibiting foreign investment in certain industrial sectors were abolished in 1996.

International aid has an ongoing role in the economy's development. In early 1996, the IMF agreed to provide a 15-month standby credit of \$191 million, and the World Bank authorized the loan of \$80 million to support the reform policies. The World Bank also decided to allocate government loans to Yemen worth \$365 million during 1996–99. The EU also pledged grants worth \$61.7 million in 1996/97, including \$30 million in project finance. Yemen benefited when Russia was admitted to the Paris Club (an

organization of countries owed money from past official loans). Approximately 80% of Yemen's debts to Russia, mostly for arms purchases, was forgiven in the debt rescheduling. The remainder of Yemen's debt to Paris Club members was rescheduled under Naples terms (for the poorest countries, this allows for cancellation of 50–66% of eligible sovereign debt), and in 2001, another Paris Club rescheduling provided an "exit treatment" that allowed Yemen to reach a sustainable level of indebtedness.

External debt was brought to a steady average of about 55% GDP for 2000. Yemen's fiscal imbalance has also improved in recent years, helped considerably by recovering oil prices. The fiscal deficit reached 6.4% of GDP in 1998, but then moderated to 0.2% of GDP in 1999, and, with increasing oil prices, soared to a surplus of 8.5% of GDP in 2000. In 2001 and 2002, the government continued to run surpluses of revenues and grants over expenditures, amounting to 2.8% of GDP in 2001 and 0.4% of GDP in 2002. Inflation, however, reached over 15% in 2002 due to increased prices for fuel, electricity and food. By 2005, however, the government had a budget deficit once again, with revenues of \$5.616 billion and expenditures of \$5.719 billion. Public debt was 35.9% of GDP. External debt was \$5.689 billion. The inflation rate was estimated at 9.6%.

In 2002 the parliament signed into law a general sales tax (GST), but implementation of this major tax reform designed to broaden and rationalize the tax base was delayed with IMF approval while more information about the effect of indirect taxation was collected. Yemen remains one of the poorest and least developed countries in the world. With a population growth rate of 3.45% in 2005 and growing, poverty has actually been expanding in recent years. About one-third of households are considered to be living in poverty. Water scarcity poses a severe challenge. The water crisis involves a depletion of groundwater, so that economic activity may become unsustainable in some areas. The growing of *qat*, while lucrative for many rural dwellers, consumes a disproportionately high amount of water, and accounts for half of irrigation water use in Yemen. Areas used for the growing of *qat* have expanded at a rate of 9% a year; the development of income-generating alternative crops that consume less water would create jobs and potentially develop new export commodities. The fertility rate is 6.67 and growing, and illiteracy among women and girls is particularly high—70% of females and 29.5% of males are illiterate—a social deficiency with serious implications for economic development.

In 2005, the World Bank announced it would increase its allocations for Yemen for the following three years, but only if the country's economic performance improved. The World Bank had reduced its funding from \$420 million for three years beginning in 2002, to \$280 million for three years beginning in 2005. In January 2006, the Yemeni government announced a third five-year development plan for poverty reduction, which was geared toward integrating the national economy with the international economy. Yemen hoped for accession to the WTO at that time, and was pushing for trade and industrial development. The five-year plan aimed to set up new industrial zones to improve opportunities for medium and small industries, and to set up a fund for industrial development. The plan also has measures to stimulate investment, including reforming the legal structure. Small industries are to be developed, such as crafts, clothes, and foodstuffs, so that they may compete in foreign markets. The plan called for measures to pro-

tect the environment from pollution, and to meet international standards regarding the protection of the environment.

#### 40 SOCIAL DEVELOPMENT

A social insurance system provides old age, disability, survivor, and workers' compensation benefits. This program covers most employees, including Yemeni nationals working overseas. Workers contribute 6% of their wages, and employers pay 6% of payroll. The government contributes as an employer only. Old age benefits are payable at age 60 with at least 15 years of contributions for men, and age 55 with at least 10 years of contributions for women. A health insurance program exists only for public employees. While the government has expanded its role in providing assistance, traditional means still predominate.

Although the constitution provides for equal rights and opportunity for all, women face considerable official and social discrimination. Polygamy is legal, and the practice of paying large dowries continues to be widespread. Women are required to obtain permission from a male member of the family in order to leave the house, and are rarely allowed to travel unaccompanied. Women have limited access to education. Estimates place the illiteracy rate for women at 67.5%, compared with 27.7% for men. Child marriage is common, and some girls marry as early as 12 years old. Women are permitted to vote, but social customs discourage most women from becoming politically active. The law states that a wife must obey her husband. Violence against women and children is prevalent but considered a family issue and not reported to authorities.

Although reports of arbitrary arrest and detention continue, Yemen's human rights record remained poor, and the government continued to commit serious abuses in 2004. However, some international and domestic human rights organizations operate in Yemen.

#### 41 HEALTH

Malnutrition and the diseases associated with it are major health problems. It was estimated that nearly 30% of children under five were malnourished. Malaria, typhus, tuberculosis, dysentery, whooping cough, measles, hepatitis, schistosomiasis, and typhoid fever are widespread, and sewage disposal of the most rudimentary type constitutes a general health hazard. Approximately 69% of the population had access to safe drinking water and 45% had adequate sanitation. Civil conflict in July 1994 created a shortage of water, food, and medical supplies in 'Aden, exacerbating health problems. As of 2004, there were an estimated 22 physicians, 45 nurses, and 1 dentist per 100,000 people. Total health care expenditure was estimated at 5.6% of GDP.

Immunization rates for children up to one year old were tuberculosis, 62%; diphtheria, pertussis, and tetanus, 57%; polio, 57%; and measles, 51%. Life expectancy in 2005 was estimated at 61.75 years; the infant mortality rate that year was 61.50 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 43 and 9.3 per 1,000 people.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 1,200 people living with HIV/AIDS in the country.

#### 42 HOUSING

Housing is inadequate; about one-fourth of urban housing units are huts, tents, or other makeshift structures. In the hot coastal region, most dwellings, except those of the ruling classes, are straw huts. In the highlands, the poorer people live in huts of stone or baked brick. Wealthier Yemenis live in large houses whose style is unique to southwestern Arabia: the lower part is generally built of sandstone, basalt, or granite, while the upper part, which may rise from two to eight stories, is usually of baked brick with windows outlined in decorative designs. Often a loggia topped with brass and open on all sides rises from the roof. The preliminary results of the 2004 census indicated that there were 2,882,034 dwelling units in the country to serve a total population of 19,721,643 people. There were 7.14 people per household on average.

#### 43 EDUCATION

Early Yemeni education, with regard to medieval disciplines of law, religion, history and poetry, was sophisticated and, for a country of its type, remarkably widespread. Its people contributed nobly to medieval Islamic civilization. The Al-Azhar University of Cairo was well known for its education during the 10th and 11th centuries and it attracted students from nearby countries such as Ethiopia, Arabia, and Somalia. However, in the 19th and 20th centuries, there was slow progress in the field of education. Prior to the 1962 revolution, no proper educational system was in place. Civil war and internal political upheaval only worsened the situation.

In 1990, the literacy rate for the People's Democratic Republic of Yemen was 39.1% (males, 52.8%; females, 26.1%). The rate for the Yemen Arab Republic was 38.5% (males, 53.3%; females, 26.3%). The adult literacy rate for 2004 was estimated at about 49%, with 69.5% for men and 28.5% for women.

Basic education is compulsory for nine years. This may be followed by three years of secondary education, through which students choose either scientific or literary studies at a general school or vocational or agricultural studies at a technical school. Islamic schools focusing on religious studies are also available. The academic year runs from September to June.

Primary school enrollment in 2003 was estimated at about 72% of age-eligible students; 84% for boys and 59% for girls. In 2000, secondary school enrollment was about 34.5% of age-eligible students. It is estimated that about 65.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 30:1 in 2000; the ratio for secondary school was about 14:1.

There are two universities: Şan'a' University (founded in 1970) and the University of 'Aden (established in 1975). Students who score well on the secondary leaving exam (*Al Thanawiya*) may be admitted to university. Over 2,000 Yemenis are being educated at foreign universities. In 1999, it was estimated that about 11% of the tertiary age population were enrolled in higher education programs. As of 2003, public expenditure on education was estimated at 9.5% of GDP, or 32.8% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Yemen National Library is located in 'Aden. The Miswal Library in 'Aden maintains a traveling library to serve citizens. The Library of the Great Mosque of Şan'a' maintains a collection of

10,000 manuscripts, but is not accessible to the public. The British Council maintains two libraries: at 'Aden (3,000 volumes) and at Ṣan'ā' (10,4000 volumes).

The National Museum has branches in 'Aden and Ṣan'ā'. The 'Aden site focuses primarily on ancient, pre-Islamic civilizations. 'Aden is also home to the Crater Military Museum and the Crater Folk Museum. There are local museums in Ta'izz and Zafar.

#### 45 MEDIA

Since unification, efforts have been underway to upgrade the country's telecommunications infrastructure. Two-way radio links Yemen directly with Cairo and Rome. Telephone and telegraph facilities are available in major cities, and a modern dial telephone system has been installed in Ṣan'ā', Ta'izz, and Al Ḥudaydah. In 2003, there were an estimated 28 mainline telephones for every 1,000 people; about 704,800 people were on a waiting list for telephone service installation. The same year, there were approximately 35 mobile phones in use for every 1,000 people.

The government operates or controls all of the broadcast networks through the Ministry of Information and the Public Corporation for radio and Television. As of 1999, there were 4 AM and 1 FM station and 7 television broadcast stations. In 2003, there were an estimated 65 radios and 308 television sets for every 1,000 people. The same year, there were 7.4 personal computers for every 1,000 people. There was one secure Internet server in the country in 2004.

In 2004, there were 6 government-controlled newspapers, 19 independent papers, and 14 party affiliated newspapers. There are approximately 80 magazines in circulation. In 2002 the three major daily newspapers were: *Al-Thawrah* (circulation 110,000), published in Ṣan'ā'; *Al-Jumhuriyah* (100,000), in Ta'izz; and *Ar-Rabi Ashar Min Uktubar* (20,000), published in 'Aden. The English-language weekly, *Yemen Times*, has a circulation of 20,000. All of the press is controlled by the Ministry of Information.

The constitution provides for free speech and press only within the limits of the law. The law includes restrictions on any speech or press against the government, particularly criticism of the head of state.

#### 46 ORGANIZATIONS

The government has encouraged the formation of cooperatives, but private associations with political overtones are suspect. There are chambers of commerce in the major cities. The Federation of Yemen Chamber of Commerce and Industry is located in Ṣan'ā'.

National youth organizations include the Fattah Socialist Youth Union, the General Union of Yemeni Students, General Union of Yemeni Youth, Supreme Student Committee of the Yemen Arab Republic, and the Yemen Scout Association. There are sports associations representing amateur athletes of all ages in a wide variety of pastimes.

The Yemeni Federation of Women's Organizations is based at Ṣan'ā' University. There are national chapters of the Red Crescent Society and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourists can visit historic and religious sites (such as the Ghum-dau Palace and the Great Mosque in Ṣan'ā') and exotic markets, and enjoy scenic areas including the Red Sea coast. Passports and

visas are required by foreign visitors. Vaccination against meningitis is required for pilgrims to Mecca. Precautions against meningitis, typhoid, and hepatitis are recommended for all visitors.

In 2003, there were 154,667 tourist arrivals, almost 39% of whom came from Saudi Arabia. There were 13,280 hotel rooms with 33,816 beds that same year.

According to the 2004 US Department of State estimates, the cost of staying in Ṣan'ā' was \$216 per day. Elsewhere in the country, travel costs were less expensive.

#### 48 FAMOUS YEMENIS

Imam Yahya ibn Muhammad Hamid ad-Din (1869?–1948) ruled during the period when Yemen established its independence; he was assassinated during an uprising. 'Ali 'Abdullah Saleh (b.1942) became president of the YAR in 1978, ending a period of upheaval in which his two immediate predecessors were assassinated. He became united Yemen's first directly-elected president in 1999. Field Marshal 'Abdallah as-Sallal (1920–94) was the first president of the YAR and held power from 1962 until a coup ousted him in 1967. 'Ali Nasir Muhammad al-Hasani (b.1940?) was prime minister of the PDYR in 1980 and president from 1980 to 1986. Haydar Abu Bakr al-'Attas (b.1939) was prime minister of the PDYR during 1985–86.

#### 49 DEPENDENCIES

Yemen has no territories or colonies.

# INDEX TO COUNTRIES AND TERRITORIES

This alphabetical list includes countries and dependencies (colonies, protectorates, and other territories) described in the encyclopedia. Countries and territories described in their own articles are followed by the continental volume (printed in *italics*) in which each appears. Country articles are arranged alphabetically in each volume. For example, Argentina, which appears in *Americas*, is listed this way: Argentina—*Americas*. Dependencies are listed here with the title of the volume in which they are treated, followed by the name of the article in which they are dealt with. In a few cases, an alternative name for the same place is given in parentheses at the end of the entry. The name of the volume *Asia and Oceania* is abbreviated in this list to *Asia*.

# READER'S GUIDE

**GENERAL NOTE:** The Twelfth Edition of *Worldmark Encyclopedia of the Nations* (WEN) is comprised of five volumes. Volume 1 is dedicated to the United Nations and its related agencies. Volumes 2 through 5, “Africa,” “Americas,” “Asia and Oceania,” and “Europe,” contain entries on the countries of the world.

Reflecting the ever-changing status of the world geopolitical situation, the Twelfth Edition includes entries for 194 countries, one more than the previous edition. This reflects the 2006 decision of Montenegro to dissolve its relationship with Serbia to become an independent nation in its own right. Seven entries describe dependencies. This edition no longer includes volume 6, which was entitled *World Leaders*.

Some notable changes in previous editions include the Eleventh Edition's inclusion of an entry on East Timor, coverage of the aftermath of the terrorist attacks of 11 September 2001, and the expansion of the European Union and the North Atlantic Treaty Organization (NATO). Changes in the Tenth Edition included recording of the change in status for Macau; as of December 1999 Macau came under Chinese authority, and thus Macau was incorporated into the China entry (previously it was described under Portuguese Asian Dependency). Similarly, the entry for United Kingdom Asian Dependency (Hong Kong) was eliminated with the Ninth Edition; as of 1997 Hong Kong came under Chinese authority and, like Macau, is described in that country's entry. Also with the Tenth Edition, the introduction of the euro as currency in the nations of the European Union was noted. The Eighth Edition of this encyclopedia (1995) reported on the dramatic changes in the world in the early 1990s, including the dissolution of the USSR, Czechoslovakia, and Yugoslavia; the unification of Germany; the unification of Yemen; and the independence of Eritrea. These changes resulted in twenty-five new country articles. Whereas the First Edition of the *Worldmark Encyclopedia of the Nations*, in one volume, contained 119 articles, the present Twelfth Edition now contains 201.

In compiling data for incorporation into the *Worldmark Encyclopedia of the Nations*, substantial efforts were made to enlist the assistance of the government of every nation in the world, as well as of all pertinent UN agencies, who cooperated by supplying data and by revising and updating materials relevant to their sphere of interest. Material received from official sources was reviewed and critically assessed by the editors as part of the process of incorporation. Materials and publications of the UN family and of intergovernmental and nongovernmental organizations throughout the world provided a major fund of geographic, demographic, economic, and social data.

In compiling historical, economic, and political data, primary materials generated by governments and international agencies were supplemented by data gathered from numerous other sources including newspapers (most notably *The European*, the *Financial Times*, the *New York Times*, and the *Wall Street Journal*); periodicals (most notably *Current History*, *Elections Today*, *The Economist*, the *Far Eastern Economic Review*, *Foreign Affairs*, and *World Press Review*); and thousands of World Wide Web sites hosted by government agencies and embassies.

The reader's attention is directed to the Glossary of Special Terms for explanations of key terms and concepts essential to a fuller understanding of the text.

**COUNTRY NAMES:** Country names are reported (as appropriate) in three forms: the short-form name (generally conformed to the U.S. Central Intelligence Agency's *World Factbook 2006*), as commonly used in the text; the English version of the official name (generally conformed to the United Nations list of country names); and the official name in the national language(s). When necessary, textual usages of some short-form names have been rectified, usually through the substitution of an acronym for the official name, in order to strike a better balance between official usages and universal terminology. Thus the following short-form names have been adopted throughout (except in historical context to preserve accuracy): DROC (Democratic Republic of the Congo—known as Zaire prior to the Ninth Edition); ROC (Republic of the Congo); FRG (Federal Republic of Germany); North Korea: DPRK (Democratic People's Republic of Korea); and South Korea: ROK (Republic of Korea). In addition, Vietnam has replaced Viet Nam to reflect common usage.

**MAPS:** Spellings on the individual country maps reflect national usages and recognized transliteration practice. To clarify national boundaries and landforms, dark shading has been applied to waters, and lighter shading to lands not within that nation's jurisdiction. Cross-hatching has been used to designate certain disputed areas. Rivers that run dry during certain times of the year are indicated by dashed instead of solid lines.

**FLAGS AND NATIONAL EMBLEMS:** All depictions of flags, flag designations, and national emblems have been reviewed and, where necessary, corrected or changed to reflect their official usage as of 2006. In general, the term “national flag” denotes the civil flag of the nation.

**CURRENCY:** In most cases, currency conversion factors cited in the Twelfth Edition are as of the first quarter of 2006.

**WEIGHTS AND MEASURES:** The general world trend toward adoption of the metric system is acknowledged through the use of metric units and their nonmetric (customary or imperial) equivalents throughout the text. The two exceptions to this practice involve territorial sea limits, which are reported in nautical miles, and various production data, for which (unless otherwise stated) units of measure reflect the system in use by the country in question. All tons are metric tons (again, unless otherwise indicated), reflecting the practice of the UN in its statistical reporting.

**HOLIDAYS:** Except where noted, all holidays listed are official public holidays, on which government offices are closed that would normally be open. Transliterations of names of Muslim holidays have been standardized. For a fuller discussion on these points, and for a description of religious holidays and their origins and meanings, see the Glossary of Religious Holidays in this volume.

**GEOGRAPHIC INFORMATION:** To update the sections on Location, Size, and Extent; Topography, Climate, Flora and Fauna, and Environment, the following print publications (and their publishers) were used: *Geo-Data: The World Geographical Encyclopedia* (Gale Group), *World Development Indicators 2005* (The World Bank), and *World Resources* (Oxford University Press). Additional data was acquired from these websites: Library of Congress, *Country Studies: Country Profiles* (<http://lcweb2.loc.gov/frd/cs/profiles.html>); *Ramsar Convention on Wetlands* (<http://www.ramsar.org>); *UNESCO World Heritage Centre* (<http://www.whc.unesco.org>); *United Nations Environment Programme* (<http://www.unep.org>); *Weather Channel: Averages and Records* (<http://www.weather.com/common/home/climatology.html>); *World Conservation Union: Species Survival Commission* (<http://www.iucn.org/themes/ssc>); *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>).

**POPULATION DATA:** Data for the four rubrics describing population (Population, Migration, Ethnic Groups, Languages) were compiled from numerous publications of the U.S. Department of State, the World Bank, the United Nations, and the Organization for Economic Co-Operation and Development (OECD), specifically its publication *Trends in International Migration*. Also consulted were *The State of the World's Refugees* (Oxford University Press) and *International Committee of the Red Cross Annual Report* (International Committee of the Red Cross)

**RELIGIONS:** Data for this section were compiled in large part from the *2005 International Religious Freedom Report* released by the Bureau of Democracy, Human Rights, and Labor, U.S. Department of State. This is an annual report to Congress compiled in compliance with Section 102(b) of the International Religious Freedom Act (IRFA) of 1998. The *2005 Report* covers the period from 1 July 2004 to 30 June 2005 and includes the work of hundreds of State Department, Foreign Service, and other U.S. government employees. The authors gathered information throughout this period from a variety of sources, including government and religious officials, nongovernmental organizations, journalists, human rights monitors, religious groups, and academics.

**TRANSPORTATION:** Sources consulted for updated information on transportation include publications of the American Automobile Manufacturers Association, the International Road Transport Union, specifically its publication *World Transport Data*, and the *World Factbook 2006*.

**HISTORY:** In writing the History rubric, a variety of news and background information sources on each country were used. Full country profiles—including information on the history, economy, political institutions, and foreign relations on most nations of the world—are provided by the U.S. Library of Congress and by the U.S. Department of State; similar formats are published by the *BBC News International* version and *The Economist's* Country Briefings feature. In consulting news sources for up-to-date information on events, only reported facts (not editorials) were used. The *New York Times* and the *Washington Post* are more comprehensive than the *Wall Street Journal*, whose focus is placed on financial and business news. While the website of the United Nations was used extensively in compiling Volume 1 “United Nations,” of the *Worldmark Encyclopedia of the Nations*, its coverage of such problems as politics in the Middle East and global terrorism pertained to and supported the updating of history rubrics of a number of countries. Other organizations that publish journals or studies on global current events, foreign policy, international relations, and human rights include Amnesty International; Human Rights Watch; *Foreign Affairs*, published by the Council on Foreign Relations; and *Great Decisions*, published by the Foreign Policy Association. In addition, the

official websites of each nation were consulted critically for information that could be gleaned from a state's view of its own history and place in the world.

**GOVERNMENT:** The Government rubric is constructed by outlining the institutions of government as they were formed throughout a nation's modern history, up to those existing under the present constitution. *Countries of the World and Their Leaders Yearbook 2006* (Thomson Gale) outlines the form of government and provides information on political conditions.

The U.S. Library of Congress and the U.S. Department of State chronicle constitutional changes and also provide information on the form of government. Electionworld and the *World Factbook 2006* provide information on officeholders in place at the time of publication. The *BBC News International* "Country Profiles" cover current leaders and their political parties, and *The Economist* is comprehensive in its coverage of political structures and political forces in place and at work in the nations it profiles. The official government websites of individual nations were also consulted.

**POLITICAL PARTIES:** *Countries of the World and Their Leaders Yearbook 2006* not only lists the political parties present in each nation, but provides additional information on the political parties in its "History" and "Government and Political Conditions" sections. *The Economist* also has sections in its country briefings labeled "political structure" and "political forces," which describe the political climate of each nation the magazine profiles. In addition, *The Economist* provides a brief history of the nation, which often includes the history of political parties. Editors reviewed the profiles of selected nations prepared by the U.S. Library of Congress, which include comprehensive coverage of politics and political parties. The *World Factbook 2006* was consulted for a list of political parties, and often, their leaders. The website, Electionworld.org, describes the major political parties and their leaders, and also lists minor and defunct parties. Political Resources on the Net, a website, compiles links to a variety of sites useful to the researcher with a critical eye.

**LOCAL GOVERNMENT:** *Countries of the World and Their Leaders Yearbook 2006* lists the administrative subdivisions in each nation of the world; as does the U.S. State Department in its *Background Notes*, and the U.S. Central Intelligence Agency in its *World Factbook 2006*. *The Economist* was consulted for a description of regional legislatures. The U.S. Library of Congress "Country Profiles" briefings describe administrative divisions and provincial and local government.

**JUDICIAL SYSTEM:** *Countries of the World and Their Leaders Yearbook 2006*, *Background Notes*, and the *World Factbook 2006* all provided basic information on each nation's judicial system. *The Economist* was consulted for a description of the legal systems of each nation it profiles. The U.S. Library of Congress "Country Profiles" briefings provided more in-depth detail about judicial power and structure in the nations it profiles. Jurist, a web-based legal news and real-time legal research service based out of the University of Pittsburgh School of Law in Pittsburgh, Pennsylvania, was consulted as well for concise information on each nation it profiles.

**ARMED FORCES:** Statistical data on armed forces was compiled from the *World Factbook 2006*, *The Military Balance* (The International Institute for Strategic Studies), the *SIPRI Yearbook* (Stockholm International Peace Research Institute), and other print and online sources including *Current World Nuclear Arsenals* maintained by the Center for Defense Information.

**INTERNATIONAL COOPERATION:** This section was updated using data provided by news agencies and the following websites: *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>) and *Background Notes* (<http://www.state.gov/r/pa/ei/bgn>).

**ECONOMY:** In addition to numerous official online sources, data on the economies of the world were compiled from the most recent editions of the following U.S. government publications: *National Trade Estimate on Foreign Trade Barriers*, *Country Commercial Guides*, and *Economic Policy and Trade Practices*. *The Economist* was consulted for detailed information on economic structures and select indicators in its "Country Profiles" archive; it also included economic and political forecasts for the nations it profiled. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries it profiled, in addition to detailing the current state of various sectors of those economies. *The Index of Economic Freedom* (Heritage Foundation) was also consulted for its measurement of independent variables into broad factors of economic freedom.

**INCOME:** Statistics on national income were obtained from sources published by the United Nations, The World Bank, and the U.S. Central Intelligence Agency (CIA). CIA figures are for gross domestic product (GDP), defined as the value of all final goods and services produced within a nation in a given year. In most cases, CIA figures are given in purchasing power parity terms.

**LABOR:** Labor statistics were compiled from *World Employment* and *Yearbook of Labour Statistics* (International Labour Office—ILO) and the ILO’s website *Child Labor Statistics by Country* (<http://www.ilo.org/public/english/standards/ipecc/simpoc/countries.htm>); the World Bank publication *World Development Indicators 2004*; and the U.S. State Department’s *Human Rights Reports 2005*.

**AGRICULTURE, FISHING AND FORESTRY:** In addition to government sources, statistical data for these sections was compiled from the following yearbooks published by the Food and Agriculture Organization of the United Nations: *Trade; Fishery Statistics: Commodities; Fisheries; Production; Agriculture; and Forest Products*.

**MINING:** Data on mining and minerals production came from various online sources and from statistics compiled by the Minerals Information office of the U.S. Geological Survey, U.S. Department of the Interior, including Volume III of the *Minerals Yearbook*. This volume of the *Minerals Yearbook* is published both electronically on the Internet and in various print formats available from the U.S. Government Printing Office Superintendent of Documents. The *Yearbook* provides an annual review of mineral production and trade and of mineral-related government and industry developments in more than 175 countries.

**ENERGY AND POWER:** Key sources consulted include *Country Analysis Briefs* (U.S. Energy Information Administration, U.S. Department of Energy), *Key World Energy Statistics* (International Energy Agency), and *World Development Indicators* (The World Bank).

**INDUSTRY :** The primary source material for the Industry rubric was the U.S. State Department’s *Country Commercial Guides*, which provide a comprehensive look at countries’ commercial environments, using economic, political, and market analysis. *Background Notes* were consulted for the information on the industrial history and climate of each country profiled. Also useful was information contained in the “Country Profiles” published by the U.S. Library of Congress. The *World Factbook 2006* provides a list of key economic indicators. *The Economist* and, to a lesser extent, *BBC News* were useful in providing background material for the Industry rubric.

**SCIENCE AND TECHNOLOGY:** The following print sources were consulted: *The Nature Yearbook of Science and Technology* (Palgrave Macmillan Publishers Ltd.); *NIRA’s World Directory of Think Tanks* (National Institute for Research Advancement); in addition, the following websites were accessed: *International Science and Technology Activity* (maintained by Industry Canada, Government of Canada); *Economics Departments, Institutes, and Research Centers in the World* (maintained by the Department of Economics, University of Connecticut); *Science and Technology Statistics* (maintained by UNESCO Institute for Statistics); *World Development Indicators* (maintained by The World Bank); and *Annual Statistics* (patent and trademark information, maintained by the World Intellectual Property Organization).

**DOMESTIC TRADE:** Source material for the Domestic Trade rubric came from the U.S. State Department’s *Country Commercial Guides*, *Background Notes*, and the United Nations publication, *International Trade Statistics Yearbook*. Also used was information contained in the “Country Profiles” published by the U.S. Library of Congress. *The Economist* and, to a lesser extent, the *BBC* were consulted in providing background material for the Domestic Trade rubric. The World Bank’s service “Doing Business” database and the U.S. Commercial Service’s “Buy USA” website were consulted for information on conducting business in a nation, which included business hours and business regulations. Finally, most nations’ government websites provided information on domestic trade.

**FOREIGN TRADE:** Sources consulted included *2005 International Trade Statistics Yearbook* (Department of Economic and Social Affairs, Statistics Division, United Nations) and *Direction of Trade Statistics* (Real Sector Division, IMF Statistics Department, International Monetary Fund). The U.S. Department of State’s *Country Commercial Guides* and *Background Notes* were also used. *The Economist* and the *World Factbook 2006* were consulted in listing import and export partners and key products traded. Various UN bodies—such as UNCTAD and UNESCO—provided up-to-date trade statistics.

**BALANCE OF PAYMENTS:** Balance of payments tables were computed from the International Monetary Fund’s *Balance of Payments Statistics Yearbook*. In some cases, totals are provided even though not all components of those totals have been reported by the government of the country. Accordingly, in some instances numbers in the columns may not add to the total. Supplementing the IMF’s *Balance of Payments Statistics Yearbook* were *The Economist*’s “Country Briefings,” the *World Factbook 2006*, and information taken from the U.S. State Department, in particular, the *Country Commercial Guides*. “Country Profiles” from the U.S. Library of Congress were also used. Also consulted was the United Nations publication *National Accounts Statistics: Main Aggregates and Detailed Tables*.

**BANKING AND SECURITIES:** Statistical data on securities listings and market activity was compiled in part from *Emerging Stock Markets Factbook, 2005* (Standard and Poor’s) as well as from the websites *Country*

*Forecasts* (www.countrywatch.com) and *International Banking Statistics* (www.bis.org/statistics/bankstats.htm). Various websites specific to the individual countries of the world were also consulted.

**INSURANCE:** Primary sources for information on insurance include the online resources of the Insurance Information Institute, Rowbotham and Co. LLP, PricewaterhouseCoopers, the Swiss Reinsurance Company, and J. Zakhour & Co., as well as numerous national websites dealing with insurance.

**PUBLIC FINANCE:** In addition to official government websites, analytical reports from the U.S. Department of Commerce, and news reports, the following publications were consulted for standardized statistical data: *World Factbook 2006*, *International Financial Statistics Yearbook, 2002* (International Monetary Fund), and *Government Finance Statistics Yearbook, 2002* (International Monetary Fund).

**TAXATION:** Information on Taxation was compiled from country data sheets published by international accounting firms (Deloitte and Ernst & Young). Additional information was obtained from the U.S. Commerce Department and the government websites of the countries of the world.

**CUSTOMS AND DUTIES:** Information on Customs and Duties was compiled from country data sheets published by the accounting firms of Deloitte and Ernst & Young. Additional information was obtained from the U.S. Commerce Department, the World Trade Organization and the government website of the countries of the world.

**FOREIGN INVESTMENT:** Source material for the Foreign Investment rubric included the U.S. State Department's *Country Commercial Guides*, which provided a comprehensive analysis of the foreign direct investment environments of the countries of the world, as did the World Bank publication, *A Better Investment Climate for Everyone*. The International Monetary Fund's publications *International Financial Statistics Yearbook* and *Balance of Payments Statistics Yearbook*, and the U.S. State Department's *Background Notes* were consulted for the information on foreign direct investment. Also used was information contained in the "Country Profiles" published by the U.S. Library of Congress. *The Economist* was consulted in providing basic FDI figures and other relevant data.

**ECONOMIC DEVELOPMENT:** Source material for the Economic Development rubric included the U.S. State Department's *Country Commercial Guides* and *Background Notes*. *The Economist* was consulted for economic and political forecasts for selected nations. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries profiled, in addition to detailing the current state of various sectors of those economies. The *Index of Economic Freedom* was also consulted for its broad description of economic freedom and development. Information on foreign aid was taken from the print publications and websites of the International Monetary Fund, World Bank, and the United States Agency for International Development (USAID).

**SOCIAL DEVELOPMENT:** Publications consulted in the preparation of this rubric include *2005 Country Reports on Human Rights Practice* (<http://www.state.gov/g/drl/rls/hrrpt/2005/index.htm>), *International Save the Children Alliance Annual Report 2004* (Cambridge House), *The State of the World's Children* (Oxford University Press), and the *World Development Report* (Oxford University Press). Additional information was obtained from country-specific websites and general news publications.

**HEALTH:** Statistical sources consulted include *Country Health Briefing Papers* (a series of reports produced by IHSD Limited and DFID Health Systems Resource Centre for the United Kingdom Department for International Development); *Health Care Systems in Transition* (European Observatory on Health Care Systems, World Health Organization Regional Office for Europe); *Health in the Americas*, Volume II (Pan American Health Organization, World Health Organization) as well as numerous websites on the individual nations of the world. In addition, country-specific health profiles published by the World Health Organization and the World Bank were consulted.

**HOUSING:** The latest government population and housing census information available was used for each country through access of official government websites. Also of use was the World Bank publication *World Development Indicators 2005*. Topics accessed on the World Bank's website included *Countries and Regions*, *Urban Development*, and *Housing and Land*. Other websites consulted included Habitat for Humanity (<http://www.habitat.org>), United Nations Human Settlements Programme (<http://unhabitat.org>) and the U.S. Agency for International Development (USAID—<http://www.usaid.gov>). USAID topics accessed included *Locations* and *Urban Programs*.

**EDUCATION:** Data on Education was obtained from various UNESCO publications including *World Education Report*, *Global Education Digest*, *Education for All Global Monitoring Report 2005*, and the UNESCO *Statistical Yearbook*. Also consulted was *EdStats* compiled by the World Bank (<http://devdata.worldbank.org/edstats/>), the *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>), the UNESCO

website's *Country and Regional Profiles* (<http://www.uis.unesco.org/profiles/>), and *World Data on Education* (International Bureau of Education).

**LIBRARIES AND MUSEUMS:** Some information concerning libraries and museums was accessed through official government websites of various countries when links were available to tourism, education, and/or cultural ministries or departments. In addition, the following websites were consulted: American Library Association (<http://www.ala.org>); International Federation of Library Associations and Institutions (<http://www.ifla.org>); Museums of the World (<http://www.museum.com>); and United Nations Educational, Scientific, and Cultural Organization (<http://www.unesco.org>).

**MEDIA:** Primary sources for this section include the annual *Editor & Publisher* publication *International Year Book*, online data provided by UNESCO, and the media sections of the "Country Profiles" featured on the website of *BBC News*. The UNESCO profiles provide key statistics and indicators on education, science and technology, and culture and communication. In addition, government and other websites related to the countries of the world were consulted. Additional sources consulted include the publications *World Development Indicators 2005* (World Bank), *World Media Handbook* (United Nations), *World Factbook 2006*, and *2005 Country Reports on Human Rights Practices*.

**ORGANIZATIONS:** Lists of member countries were obtained through the official websites of a variety of prominent international organizations and associations, such as the International Federation of Red Cross and Red Crescent Societies, Amnesty International, Kiwanis International, the World Alliance of YMCAs, the World Organization of the Scout Movement, etc. *Associations Unlimited* (Thomson Gale) was also consulted.

**TOURISM, TRAVEL, AND RECREATION:** Statistical sources consulted include *Yearbook of Tourism Statistics* and *Compendium of Tourism Statistics*, both published by the World Tourism Organization. Tourism websites of the individual countries were also consulted, as well as the United Nations publication *Schedule of Daily Substinence Allowance Rates* and the U.S. Department of State per diem travel allowances published online at [www.state.gov/r/pa/ei/bgn](http://www.state.gov/r/pa/ei/bgn).

**FAMOUS PERSONS:** Entries are based on information available through March 2006. Where a person noted in one country is known to have been born in another, the country (or, in some cases, city) of birth follows the personal name in parentheses.

**DEPENDENCIES:** Source material for the Dependencies rubric was taken from *Background Notes* and from the website of the United Nations. The Library of Congress's "Country Profiles" archive provided up-to-date information on dependencies. *The Economist* and the website of *BBC News* were also consulted, as was *Countries of the World and Their Leaders Yearbook 2006*.

**BIBLIOGRAPHY:** Bibliographical listings at the end of country articles are provided as a guide to further reading on the country in question and are not intended as a comprehensive listing of references used in research for the article. Effort was made to provide a broad sampling of works on major subjects and topics as covered by the article; the bibliographies provide, wherever possible, introductory and general works for use by students and general readers, as well as classical studies, recent contributions, and other works regarded as seminal by area specialists. The country article bibliographies were supplemented with information obtained from a search conducted in July 2006. An extensive bibliography listing key references related to the facts in this encyclopedia follows. However, it is not a complete listing since many fact sheets, brochures, World Wide Websites, and other informational materials were not included due to space limitations.

# GUIDE TO COUNTRY ARTICLES

All information contained within a country article is uniformly keyed by means of small superior numerals to the left of the subject headings. A heading such as "Population," for example, carries the same key numeral (6) in every article. Thus, to find information about the population of Albania, consult the table of contents for the page number where the Albania article begins and look for section 6 thereunder. Introductory matter for each nation includes coat of arms, capital, flag (descriptions given from hoist to fly or from top to bottom), anthem, monetary unit, weights and measures, holidays, and time zone.

## SECTION HEADINGS IN NUMERICAL ORDER

1	Location, size, and extent	27	Energy and power
2	Topography	28	Industry
3	Climate	29	Science and technology
4	Flora and fauna	30	Domestic trade
5	Environment	31	Foreign trade
6	Population	32	Balance of payments
7	Migration	33	Banking and securities
8	Ethnic groups	34	Insurance
9	Languages	35	Public finance
10	Religions	36	Taxation

## FREQUENTLY USED ABBREVIATIONS AND ACRONYMS

AD—Anno Domini	fl.—flourished	m <sup>3</sup> —cubic meter(s)	rev. ed.—revised edition
AM—before noon	FRG—Federal Republic of Germany	mi—mile(s)	s—south
b.—born	ft—foot, feet	Mt.—mount	sq—square
BC—Before Christ	ft <sup>3</sup> —cubic foot, feet	Mw—megawatt(s)	St.—saint
C—Celsius	GATT—General Agreement on Tariffs and Trade	N—north	UK—United Kingdom
c.—circa (about)	GDP—gross domestic products	n.d.—no date	UN—United Nations
cm—centimeter(s)	gm—gram	NA—not available	US—United States
Co.—company	GMT—Greenwich Mean Time	oz—ounce(s)	USSR—Union of Soviet Socialist Republics
Corp.—corporation	GNP—gross national product	PM—after noon	w—west
cu ft—cubic foot, feet	GRT—gross registered tons	r.—reigned	
cu m—cubic meter(s)	ha—hectares		
d.—died	i.e.—id est (that is)		
E—east	in—inch(es)		
e—evening	kg—kilogram(s)		
e.g.—exempli gratia (for example)	km—kilometer(s)		
ed.—edition, editor	kw—kilowatt(s)		
est.—estimated	kwh—kilowatt-hour(s)		
et al.—et alii (and others)	lb—pound(s)		
etc.—et cetera (and so on)	m—meter(s); morning		
F—Fahrenheit			

A fiscal split year is indicated by a stroke (e.g. 1998/99).  
For acronyms of UN agencies and their intergovernmental organizations, as well as other abbreviations used in text, see the United Nations volume.  
A dollar sign (\$) stands for us\$ unless otherwise indicated.  
Note that 1 billion = 1,000 million.

# ALBANIA

Republic of Albania  
*Republika e Shqipërisë*

**CAPITAL:** Tiranë

**FLAG:** The flag consists of a red background at the center of which is a black double-headed eagle.

**ANTHEM:** *Hymni i Flamurit* (*Anthem of the Flag*) begins “Rreth flamurit të për bashkuar” (“The flag that united us in the struggle”).

**MONETARY UNIT:** The lek (L) of 100 qindarka is a convertible paper currency. There are coins of 5, 10, 20, 50 qindarka, and 1 lek, and notes of 1, 3, 5, 10, 25, 50, 100, and 500 leks. L1 = \$0.00970 (or \$1 = L103.07) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; International Women’s Day, 8 March; Independence Day, 28 November; Christmas Day, 25 December. Movable Islamic and Christian religious holidays include Small Bayram, Catholic Easter, Orthodox Easter, Great Bayram.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Albania is situated on the west coast of the Balkan Peninsula opposite the “heel” of the Italian “boot,” from which it is separated on the sw and w by the Strait of Otranto and the Adriatic Sea. It is bordered on the n and e by Serbia and Montenegro and Macedonia, and on the se by Greece, with a total boundary length of 720 km (447 mi). Comparatively, Albania is slightly smaller than the state of Maryland, with a total area of 28,748 sq km (11,100 sq mi) and extends 340 km (211 mi) n-s and 148 km (92 mi) e-w. Albania’s capital city, Tiranë, is located in the west central part of the country.

## <sup>2</sup> TOPOGRAPHY

Albania is predominantly mountainous, with 70% of the territory at elevations of more than 300 m (1,000 ft). The rest of the country consists of a coastal lowland and the lower reaches of river valleys opening onto the coastal plain. The Albanian mountains, representing a southern continuation of the Dinaric system, rise abruptly from the plains and are especially rugged along the country’s borders. The highest peak, Mt. Korabit (2,753 m/9,033 ft) lies in eastern Albania on the Macedonian border. The most important rivers—the Drin, the Buna, the Mat, the Shkumbin, the Seman, and the Vjosë—empty into the Adriatic. Albania shares Lake Scutari (Skadarsko Jezero) with Serbia and Montenegro, Lake Ohrid (Ohridsko Jezero) with Macedonia, and Lake Prespë (Prespansko Jezero) with Macedonia and Greece.

## <sup>3</sup> CLIMATE

Albania has a variety of climatic conditions, being situated in the transition zone between the typical Mediterranean climate in the west and the moderate continental in the east. The average annual temperature is 15°C (59°F). Rainy winters (with frequent cyclones) and dry, hot summers are typical of the coastal plain. Summer

rainfall is more frequent and winters colder in the mountainous interior. Annual precipitation ranges from about 100 cm (40 in) on the coast to more than 250 cm (100 in) in the mountains.

## <sup>4</sup> FLORA AND FAUNA

The mountainous topography produces a variety of flora and fauna. The dry lowlands are occupied by a bush-shrub association known as maquis, in which hairy, leathery leaves reduce transpiration to a minimum. There are some woods in the low-lying regions, but larger forests of oak, beech, and other deciduous species begin at 910 m (2,986 ft). Black pines and other conifers are found at higher elevations in the northern part of the country. There are few wild animals, even in the mountains, but wild birds still abound in the lowland forests.

## <sup>5</sup> ENVIRONMENT

Deforestation remains Albania’s principal environmental problem, despite government reforestation programs. Forest and woodland account for about 38% of the country’s land use. Soil erosion is also a cause for concern, as is pollution of the water by industrial and domestic effluents. While Albania has a comparatively small amount of renewable water resources at 26.7 cu km, 99% of its urban population and 95% of its rural population have access to pure water.

Albania produced 2.9 million metric tons of carbon dioxide emissions in 2000.

As of 2003, about 3.8% of Albania’s lands were protected by environmental laws. As of 2002, there were over 3,000 higher plant species (flowering plants only), 68 mammal species, and 193 species of birds. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammals, 9 species of birds, 4 types of reptiles, 2 species of amphibian, and 17

species of fish. Endangered species include the Atlantic sturgeon, Mediterranean monk seal, and the hawksbill turtle.

## 6 POPULATION

The population of Albania in 2005 was estimated by the United Nations (UN) at 3,170,000, which placed it at number 131 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.9%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 3,509,000. The population density was 110 per sq km (286 per sq mi).

The UN estimated that 42% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.03%. The capital city, Tiranë, had a population of 367,000 in that year. Other important towns and their estimated populations include Durrës, 113,900; Elbasan, 97,000; Shkodër, 90,000; and Vlorë, 85,000.

The population increase in Albania has been exceptionally rapid by European standards. The birthrate, despite a decline from over 40 births per 1,000 of population in the 1950s to 19 in 2000, remains among the highest in Europe. The high birthrate is partially attributed to the ban on birth control during the communist era; as of 2006, the use of birth control remains low, with only 15.3% of married women reported to use contraceptives. Another contributing factor to the population growth is the increase in life expectancy to an average of 74 years of age.

## 7 MIGRATION

In the 19th century, Albanians emigrated to other Balkan countries (Romania, Bulgaria, Turkey, Greece), and to Egypt and Russia. During the first decades of the 20th century, emigration—for economic reasons—was primarily to the United States (largely to Massachusetts), Argentina, Australia, and France. Emigration following World War II occurred on a very limited scale, mainly for political reasons. Between 1945 and 1990, Albania remained virtually isolated from the rest of Europe. In the early 1990s, about two million Albanians lived in Serbia and Montenegro (formerly Yugoslavia).

In 1997, rebel fighting and an Italian-led multinational force of 6,000 foreign peacekeeping troops prevented thousands of Albanians from fleeing into Greece or Italy. After the 1999 peace of Kosovo, government control of migration flows was absent. By 2004, approximately 25% of the total population, or over 35% of the labor force, emigrated. Of the approximately 900,000 emigrants, most reside in Greece (600,000), Italy (200,000), Western European countries, the United States, and Canada. Since the 1990s, migration has been five times higher than the average migration flow in developing countries. Included in this flow was a significant “brain drain” of scholars that became a “brain waste” as they became underemployed in their country of destination. Albania’s net migration rate, estimated in 2005, was -4.8 migrants per 1,000 population. Remittances from Albanians working abroad amounted to \$780 million in 2003.

During the NATO air strikes of 1999, Albania hosted 465,000 refugees from Kosovo. Adoption of the Kosovo Peace Plan on 10

June 1999 prompted the return of an estimated 432,500 refugees to Kosovo from Albania. At the end of 2003, there were around 300 refugees in the country, mainly Albanians from Kosovo and the Former Yugoslav Republic of Macedonia, as well as citizens from Iraq and Turkish Kurds. By the end of 2004 Albania’s refugee population had declined to just 51.

Between 1992–2003 approximately 6,000 foreigners entered Albania as migrant workers employed mainly in construction, trade, service, and education sectors. Around three-fourths of them came from Turkey, China, Egypt, other Arab and Islamic countries, and European Union (EU) countries.

## 8 ETHNIC GROUPS

Generally regarded as descendants of the ancient Illyrians, the Albanians make up about 95% of the population. Ethnic Greeks comprise as much as 3% of the populace. Other groups, including Roma, Vlachs, Bulgarians, Macedonians, and Serbs, make up the remaining 2%. The Albanians themselves fall into two major groups: the Ghegs in the north and the Tosks in the south, divided by the Shkumbin River. The Greeks are located primarily in the south.

## 9 LANGUAGES

Albanian (Shqip), an independent member of the Indo-European family of languages derived from both ancient Illyrian and ancient Thracian, has been greatly modified by Latin, Slavonic, Greek, and Turkish influences. It was not until 1908 that a common Latin alphabet was established for Albanian. In addition to letters of the English alphabet, Albanian uses the diacritics ç (representing the sound of *ch* in *church*) and ë (the sound of *i* in *dirt*). Other unusual letter values are *c* (the sound of *ts* in *gets*), *x* (the sound of *ds* in *woods*), *xh* (the sound of *j* in *jaw*), *j* (the sound of *y* in *yet*), *q* (the sound of *ky* in *stockyard*), and *y* (the sound of the German *ü*). There are two distinct dialects—Gheg, spoken in the north, and Tosk, spoken in the south. During the period between World Wars I and II, Gheg was officially favored as standard Albanian; after World War II, because the principal leaders of the regime were southerners, the Tosk dialect became the standard and is currently the official language. Greek is spoken by a minority in the southeast border area. Vlach, Romani, and other Slavic dialects are also spoken by minority groups.

## 10 RELIGIONS

In 1990 and 1991, official opposition to religious activities came to an end, and churches and mosques that had been closed under the communist regime were selectively allowed to reopen. Albania is now a self-proclaimed secular state; however, the 1998 constitution calls for freedom of religion. It is estimated that 30–40% of the population actively practice a religion.

Historically, Islam has been the most prominent religion of Albania. In the total population, the percentage of Muslims remains stable at roughly 65–70%, including Sunni Islam and members of the Bektashi school (Shia Sufism). Since 1925, Albania has been considered the world center of the Bektashi school. The Bektashi school represents about 25% of the nation’s Muslims. About 20–25% of the population are members of the Orthodox Autocephalous Church of Albania (Albanian Orthodox) and about 10% are Roman Catholic. There are several small Protestant groups.

Geographically, most Muslims are found in the center of the country, with a few groups to the south. Citizens in the south are mainly Orthodox while northerners are generally Catholic. The Greek minority in the south is Orthodox. The four main groups of Sunnis, Bektashis, Orthodox, and Catholics have maintained a heightened degree of social recognition and status due to their historical presence within the country. The State Committee on Cults regulates relations between the government and religious organizations and keeps statistics on groups that contact the Committee for assistance. Registration or licensing is not required for religious organizations.

## 11 TRANSPORTATION

Many roads are unsuitable for motor transport; bicycles and donkeys are common. There had been virtually no private cars in the country, but they have become more common since the opening of the borders. In 2002, there were 18,000 km (11,185 mi) of roads, of which 7,020 km (4,359 mi) were paved. One of the many recent infrastructural projects was the construction of a 241 km (150 mi) four-lane highway linking Durrës with Greece, via Pogradec and Kapshtica.

Railroad construction began in 1947, and lines in 2001 had a total length of 447 km (228 mi) of standard gauge track. Narrow gauge rail includes the Durrës-Tiranë, Durrës-Elbasan, Ballsh Rrogozhinë, Vorë-Shkodër, and Selenicë-Vlorë lines. In 1979, Albania signed an agreement with the former Yugoslavia to construct a rail link between Shkodër and Titograd; the link was opened to international freight traffic in September 1986.

Albania's rivers are not navigable, but there is some local shipping on lakes Shkodër, Ohrid, and Prespë. Coastwise vessels link the ports of Durrës, Vlorë, Sarandë, and Shëngjin. Durrës is the principal port for foreign trade. The merchant fleet of Albania in 2005 consisted of 25 vessels of 1,000 GRT or over, all cargo ships, totaling about 40,878 GRT. A freight ferry service between Durrës and Trieste was inaugurated in 1983.

In 2004, there were an estimated 11 airports, three of which had paved runways, and one heliport (as of 2005). Flights from Tiranë's international airport connect the Albanian capital with Athens, Belgrade, and Switzerland (the latter route opened in June 1986). In 2003, a total of 159,300 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

### Origins and the Middle Ages

The Albanians are considered descendants of ancient Illyrian or Thracian tribes of Indo-European origin that may have come to the Balkan Peninsula even before the Greeks. Although several Greek colonies were established along the coast, the hinterland remained independent. An Illyrian kingdom was formed in the 3rd century BC, and even after it was conquered by Rome in 167 BC, some mountain tribes were never subdued. Among them were the Albani or Albanoi, whose city Albanopolis was mentioned in the 2nd century BC by Ptolemy in his *Geography*. Later, while nominally under Byzantine rule, Albania was raided by Slav invaders in the 6th century and was annexed to Bulgaria in the 9th century. Temporary inroads were made by Venice, which established coastal colonies, and by the Normans, who seized Durrës in 1082–

85. Albanian expansion took place under the Angevin kings of Naples in the 13th century, and again under the Serbs in the 14th century. Short-lived independent principalities flourished during the second half of the 14th century.

### From the Ottomans to Independence

Turkish advances, which began in 1388, were resisted from 1443 to 1468 by Gjerj Kastrioti, better known as Scanderbeg, the Albanian national hero, but by 1479 the Turks attained complete control of the area. Over the succeeding centuries, Islam spread throughout most of the country. Turkish rule continued through the 19th century, which saw an intensification of nationalistic feeling, often erupting into open rebellion. In November 1912, during the First Balkan War, the National Assembly convened in Vlorë under the chairmanship of Ismail Kemal and proclaimed Albania's independence. The proclamation was supported by Austria-Hungary but opposed by Russia, Serbia, Greece, and Turkey. At a conference in London in 1913, Albania's national boundaries were established—they have remained virtually unchanged since that time—and the nation was placed under the tutelage of the great powers. Albania then became a principal battleground during World War I. By the time the war ended, portions of Albania were under Italian, French, and Yugoslav control.

Albania again asserted its independence in 1920, and a provisional government was established, as the Italians and French withdrew. Following a period of unstable parliamentary government (1921–24), Ahmet Zogu, the chief of the Mat district, seized power with Yugoslav support. He proclaimed Albania a republic in 1925, with himself as president, and a kingdom in 1928, with himself as King Zog I. A series of concessions to Italy made Albania a virtual Italian protectorate, and after Zog was forced into exile in April 1939, Italy occupied Albania, uniting it with the Italian crown. During World War II, Communist-led guerrillas under Enver Hoxha resisted Italian and German forces. The Congress of Permeti (24 May 1944) formed Albania's provisional government, naming Hoxha as premier; the congress banned the return of former King Zog, and called for a constituent assembly to meet after the complete liberation of the country. In November 1944, the Hoxha government was established in Tiranë.

### Under Communist Rule

The constitution of 1946 declared Albania a people's republic. Early close relations with Yugoslavia were abruptly severed when the Soviet-Yugoslav break occurred in 1948. Partly because of fundamental differences with Yugoslavia, whose borders included about 1.7 million Albanians, and partly because of ideological divergences, Albanian-Soviet relations worsened at the 22nd Communist Party Congress, and the USSR severed diplomatic relations with Albania in December 1961 and evacuated its naval and submarine bases at Vlorë.

Relations with Communist countries other than China worsened during the 1960s, as Albania ceased to participate in the activities of the Warsaw Treaty Organization by September 1968 following the Soviet invasion of Czechoslovakia. With Yugoslavia, however, there were signs of rapprochement; an Albanian-Yugoslav trade pact was signed in 1970, and trade between the two nations consequently flourished. Gestures were also made to improve relations with Albania's other neighbor, Greece.

Albania's relations with China, its ally and supporter since 1961, seemed to cool somewhat after 1971. China's détente with the United States ran counter to Albania's policy of opposition to the USSR and the United States. China's assistance to Albania ceased when the United States denounced the overthrow of China's "Gang of Four" in October of 1976.

On 28 December 1976, Albania adopted a new constitution that formally established Marxism-Leninism as the dominant ideology and proclaimed the principle of self-reliance. The following year, Albania broke off most of its links with China and accused it of "social imperialist" policies, and in 1978 trade relations were also suspended. In 1983, however, Albania received a Chinese delegation to discuss the resumption of trade relations. Meanwhile, relations with Yugoslavia worsened following the riots by ethnic Albanians in Yugoslavia's Kosovo province in March 1981; Yugoslavia charged that Albania had instigated the protests, and Albania accused Yugoslavia of ethnic discrimination. (Nevertheless, as of 1987 Yugoslavia was Albania's main trading partner, and Albania's first rail connection with the outside world, the Shkoder-Titograd link, was opened in 1986.)

Internally, Albania seemed to be locked in bitter political conflict as the 1980s began. Prime Minister Mehmet Shehu, relieved of his defense portfolio in April 1980, died in December 1981, an alleged suicide. A year later, Hoxha charged that Shehu had been working for the US, Soviet, and Yugoslav secret services and that Shehu even had orders from Yugoslavia to kill him. Western and Yugoslav press accounts speculated that Shehu had favored an opening to the West and had been executed in the course of a power struggle. Throughout 1981–83, an extensive purge of those even remotely connected with Shehu was conducted. This was in keeping with previous purges in the 1950s of those sympathizing with Yugoslavia, in the 1960s of pro-Soviet officials, and in the late 1970s of pro-West and pro-China policymakers. On 25 September 1982, according to Albanian reports, a group of armed Albanian exiles landed on the coast and was promptly liquidated. Hoxha alleged that they had been sent by Yugoslavia.

Hoxha died on 11 April 1985 and was succeeded as first secretary of the Workers Party by Ramiz Alia, who had been chairman of the presidium of the People's Assembly since 1982.

In the mid-1980s, Albania took steps to end its isolation. In 1987, it established diplomatic relations with Canada, Spain, Bolivia, and the Federal Republic of Germany. In August 1987, Albania signed a treaty with Greece formally ending the state of war that had existed between the two countries since World War II.

#### **Democracy and a Free-Market Economy**

As unrest spread in the late 1980s through Central and Eastern Europe in opposition to long-lasting Communist dictatorships, economic hardships in Albania grew ever deeper. Albania's political leadership had to open up more diplomatic and trade relationships with Western nations as the only available source of potential assistance. At the same time, internal unrest and a search for alternative democratic political solutions led by 1990 to mass protests and calls for the government's resignation. Thousands of Albanians wanted to emigrate in spite of imposed restrictions and became refugees housed in foreign embassies waiting for ships to take them abroad, particularly to Italy. President Ramiz Alia initiated the process for reestablishing diplomatic relations with

the United States, discontinued since the 1939 annexation of Albania by Italy. Restrictions on travel abroad were eased and religious practices allowed for the first time since their prohibition in 1944.

President Berisha and his Democratic Party pushed hard for radical reforms to create a market economy and democratic institutions internally, while bringing Albania back into the international mainstream after half a century of isolation. By the end of 1993 barriers to foreign trade had been removed, the Albanian lek made fully convertible, inflation brought under control, the serious productivity decrease halted, and an anticorruption drive mounted. The privatization of the economy had been successfully initiated, particularly in the agricultural sector, with 90% of land distributed to private farmers. Most subsidies were ended except to large industrial enterprises, which still wait for foreign investments that are not yet coming to the unstable Balkan area. The Communist Party government still intended to maintain both its control and its socialist system while allowing for some democracy. But it was not to be, and by December 1990 the opposition Democratic Party was formed. On 7 February 1991, some 8,000 students went on strike in Tiranë demanding economic changes and the government's resignation. In the face of persistent unrest, President Alia scheduled multiparty elections for 31 March 1991. Even with the Communist Party still in control, the Democratic Party managed to win 75 of the 250 People's Assembly seats (mostly in urban areas) with 160 seats won by the Communist Party. Ramiz Alia was reelected president and a still all-Communist Council of Ministers was appointed under Prime Minister Fatos Nano. By June 1991, continuous unrest forced Alia to agree to a first coalition government between its Communist (renamed Socialist) Party and the new Democratic Party. The latter withdrew from the coalition government in December 1991 charging the majority Socialists with preventing any reforms. President Alia then called for new general elections on 22 March 1992, which gave the Democratic Party a majority of seats (92 of 140). Sali Berisha was elected president with Aleksander Meksi his prime minister. Under Berisha, Alia and Nano were arrested and tried for corruption and abuse of power. They were sentenced to long prison terms, but were released within a few years of their convictions.

In foreign relations, Albania, under Berisha's leadership, tried to balance the internal pressure to assist both the repressed Albanian majority in the Kosovo region of Serbia towards its independence, and the sizable Albanian minority in Macedonia to obtain human and political rights. Albania's Western trade partners realized its internal economic and humanitarian needs and have been generous with their assistance that, between mid-1991 and 1993, has amounted to \$1 billion, mostly from European Union countries led by Italy. The United States and Albania also developed very close relations. Albania requested membership in NATO and, even though rejected, continued its cooperation with NATO. Because of its own border problems with Greece, Albania supported the independence of Macedonia and was one of the first nations to recognize Macedonia in spite of Greece's refusal to do so. Albania, a majority (70%) Muslim country, joined the Organization of the Islamic Conference mainly to gain some economic support. Albania also hosted Pope John Paul II's visit in April 1993, having established diplomatic relations with the Vatican in September 1991,

and intensified its traditional good relationship with Italy, whose annexation of Albania in 1939 is by now only a faint memory.

In 1994, the border disputes that have occurred since the creation of Albania flared into violence as Greek and Albanian border guards fought against each other in sporadic clashes. Greece expelled over 1,500 Albanians working in Greece without permits.

Albania's borders also became critical in 1994 as smugglers attempted to evade the embargo imposed on Serbia in consequence of its participation in the war in Bosnia. Fuel was shipped into Albania through the ports of Durrës and Vlorë and then taken by tanker truck inland where it was transported via Lake Shkodër into Montenegro and then into Serbia. Because the oil was legitimately imported into the country it was subjected to import duties, which provided in excess of \$22 million in tax-revenue for the Albanian government in 1994.

Domestically, Albania began to see the beginning fruits of its painful transition to a market economy as consumer goods and café-filled boulevards began to appear for the first time in post-Communist Albania. While wages remained low in comparison with other European countries, living standards were still higher than they had been under Hoxha's Stalinistic economics.

But Albania's efforts to integrate itself into modern Europe suffered a setback when a new constitution, strongly supported by President Sali Berisha, was rejected by voters in November 1994. It would have created a stronger executive and, as a prerequisite for entry into the Council of Europe, would have made Albania a signatory to international human rights treaties. Albania eventually did win acceptance to the Council of Europe in July 1995.

While Albania's parliamentary election in May 1996 returned President Berisha to power, the election was marred by reports of widespread electoral fraud committed by Berisha's Democratic Party and its allies. International observers in Albania to monitor the election confirmed these reports. While the United States and the Organization for Cooperation and Security in Europe expressed private concern over the election tampering, they did not publicly demand that new elections be held. For days after the election, police used truncheons and tear gas to disperse crowds protesting the election fraud and jailed major opposition leaders. In October of 1996 the Democratic Party again won a landslide victory in local elections, but the party was again charged by international observers and opposition parties with massive electoral fraud.

Perhaps the best indicator that the Democratic Party was not as popular as elections indicated came in response to the collapse of several "pyramid schemes" in late 1996 and early 1997, in which at least one-third of the population had invested approximately \$800 million by late 1996. Not only were these schemes a dubious investment value, but they had retarded the development of the legitimate Albanian economy by draining money away from legitimate investments, as even banks offering 16% annual interest had trouble attracting new deposits.

Rightly or wrongly, most Albanians identified the government with the pyramid schemes. It was widely believed that the government had used funds provided by the schemes to finance its campaign and that government ministers were involved with starting and running the schemes. The government's own belated actions in reaction to the pyramid schemes, freezing their assets and arresting fund managers, only further infuriated investors because

LOCATION: 39°38' to 42°39' N; 19°16' to 21°4' E. BOUNDARY LENGTHS: Yugoslavia, 287 kilometers (178 miles); Macedonia, 151 kilometers (94 miles); Greece, 282 kilometers (175 miles); coastline, 362 kilometers (225 miles). TERRITORIAL SEA LIMIT: 15 miles.

it reduced the already slim chances of seeing a return of any of their capital.

Anger over the collapse of the funds initiated the violence that followed throughout the winter and spring, releasing pent-up frustration that quickly spun out of government control and into anarchy. Protests in Tirane in January 1997 calling for the resignation of the government were peaceful, but in provincial areas

Albanians began destroying anything associated with the government and the Democratic Party, including courthouses, police stations, municipal buildings, and property belonging to state-owned industries. Violence was particularly serious in the southern port city of Vlorë, home to many of Albania's smugglers and drug operators who invested heavily in the schemes. Government officials and soldiers were expelled from most of southern Albania, as citizens (mostly gangsters and smugglers armed with weapons from government stockpiles and even with MIG aircraft from a captured military base) took control of the area.

The government attempted to stop the protests by cracking down on opposition groups and protesters. Curfews were imposed, as well as restrictions on the right of assembly and the press. Major opposition leaders were secretly arrested and imprisoned and the offices of the nation's major opposition newspaper were torched by plain-clothes security officers. A military force dispatched to return the south to government control was unable to dislodge the rebel hold on Vlorë.

At the appearance of government impotence in the south, order broke down throughout Albania, and the looting went completely beyond control. Not only were food and goods looted from government and industrial facilities (as well as weapons from government armories), but university libraries and cherished cultural monuments were destroyed by rampaging crowds.

President Berisha eventually accepted the creation of a coalition government with the aim of restoring order and ending the widespread prevailing anarchy. At Berisha's request a "voluntary militia" was created, and Tiranë returned to government control. However, it soon became apparent that the militia was composed mostly of members of the secret police (which Berisha had promised to dissolve) and Berisha loyalists, creating great mistrust among the opposition members of his cabinet.

As the violence came closer to the Albanian capital, there were calls for an international peacekeeping force to restore order. In April, a 6,000-member peacekeeping force led by French and Italian troops was deployed to patrol the countryside and restore order so the country could hold new elections. While the deployment of these troops put an end to the violence that had rocked Albania for over three months and had cost almost 150 lives, the massive looting and destruction left the country in tatters, and the pillaging of government armories meant that nearly every household had an automatic machine gun.

The identification of the Democrats with the corruption of the pyramid schemes hurt them badly in the July 1997 election, and the Socialist Party and its allies won an overwhelming victory. Nano, who had regained control of the Socialist Party after his release from prison, became prime minister. President Berisha resigned, and the Assembly elected Rexhep Mejdani, of the Democratic Party, as his successor. In November 1998, many of the principles embodied in the country's 1991 interim constitution were given permanent status when a new, Western-style constitution defining Albania as a democratic republic was approved in a nationwide referendum.

Albania was thrust into the international spotlight by the Kosovo crisis in the spring of 1999 as approximately 440,000 Kosovar Albanian refugees fled over the border to escape persecution at the hands of the Serbs after NATO began launching air strikes against Yugoslav military targets in March. Albania served as an outpost

for NATO troops. The influx of refugees further strained Albania's weak economy, and millions of dollars' worth of aid was pledged by the World Bank, the European Union, and other sources. By the fall, most of the refugees had returned to their homes, but Albania's struggle with poverty, crime, and corruption continued.

In October 1999, Socialist Prime Minister Pandeli Majko, appointed a year earlier, was ousted after losing favor with senior party leaders; he was replaced by another young, Western-leaning politician, Ilir Meta. Meta immediately moved to modernize the economy, privatize business, fight crime, and reform the judiciary and tax systems. In January 2001, Albania and Yugoslavia re-established diplomatic relations that had been severed during the Kosovo crisis.

Fighting between ethnic Macedonians and ethnic Albanian rebels—largely from the former Kosovo Liberation Army (UCK)—in the northwest region of Macedonia around the town of Tetovo intensified in March 2001 (it had begun in 2000). Fears in Macedonia of the creation of a "Greater Albania," including Kosovo and parts of Macedonia, were fueled by the separatist movement. On 13 August, the Ohrid Framework Agreement was signed by the Macedonian government and ethnic Albanian representatives, granting greater recognition of ethnic Albanian rights in exchange for the rebels' pledge to turn over weapons to the NATO peacekeeping force.

General elections were held in June 2001 and were won by the Socialist Party once again, taking over half of the 140 parliamentary seats. In the elections, the Union for Victory, a coalition of five political parties, came in second. As of September, a coalition government was in place. Meta listed European integration and an end to energy shortages as his priorities. But by December, the Socialist Party was plagued by a rift between Meta and party chairman Nano, after Nano accused Meta's government of corruption and incompetence and demanded that the cabinet be restructured. On 29 January 2002, Meta resigned after failing to resolve the split in the party. Pandeli Majko became the country's new prime minister, but feuding in the Socialist Party leadership continued. In June, parliament elected former Defense Minister Alfred Moisiu as president, replacing Mejdani. His election came after days of political infighting, during which Nano and Berisha were barred from running. In the end, both Nano and Berisha backed Moisiu as the sole consensus candidate for the position. And in August, Nano became prime minister for the fourth time after the Socialist Party decided to merge the roles of prime minister and party chairman.

In November 2002, NATO announced that of 10 countries aspiring to join the organization, 7 would accede in 2004, leaving Albania, Macedonia, and Croatia to wait until a later round of expansion. In January 2003, Albania and Macedonia agreed to intensify bilateral cooperation, especially in the economic sphere, so as to prepare their way to NATO and EU membership. Also that month, the EU and Albania began Stabilization and Association Agreement talks, seen as the first step toward EU membership.

In the spring of 2004, the failure of Nano's government to bring about economic and social improvements for the everyday Albanian led to opposition staged demonstrations in Tiranë asking for his resignation. However, general elections were held, as scheduled, in the summer of the next year. The Democratic Party of Albania (PD) emerged victorious taking 55 out of 140 seats, while

its allies took 18 seats. In spite of having this slim majority in the People's Assembly, the prime minister could not be nominated for another two months due to political wrangling and accusations of rigged elections. Finally, on 3 September 2005, Sali Berisha was nominated as prime minister by president Moisiu. Berisha assured the people he had learned from his past mistakes and pledged to reduce corruption and taxation, improve the economic and social environment, and make progress towards EU and NATO integration.

### 13 GOVERNMENT

Under the 1976 constitution, Albania was a socialist republic. Legislative authority was vested in the unicameral People's Assembly, elected every four years from a single list of candidates. In elections held 2 February 1987, 250 deputies were elected by 1,830,653 voters, with no votes cast against and one vote invalid. Voter participation was allegedly 100%. Suffrage was extended to men and women from the age of 18 and was compulsory. The 1976 constitution specified that "the rights of citizens are indivisible from the fulfillment of their duties and cannot be exercised in opposition to the socialist order."

Through most of the 1990s, Albania's government was based on the 29 April 1991 Law on Constitutional Provisions that established the principle of separation of powers, the protection of private property and human rights, a multiparty parliament, and a president of the republic with broad powers. After defeating a proposed constitutional measure in 1994, Albanian voters approved a new constitution in November 1998 giving the Albanian government a shape more like those of Western nations. Many provisions of the 1991 interim constitution were made permanent in the new document, which guaranteed a number of basic rights, including religious freedom, property rights, and human rights for ethnic minorities. After being cut to 140 members in 1992, the unicameral People's Assembly was expanded to 155 in 1997; it was subsequently reduced to 140 once again. Of these members, 100 are directly elected and 40 are elected by proportional representation. The president is elected by the People's Assembly for a five-year term, and the prime minister is appointed by the president. A Council of Ministers is nominated by the prime minister and approved by the president.

Alfred Spiro Moisiu, of the Socialist Party, was elected to a five-year term as president by the People's Assembly in June 2002. Sali Berisha, who served as president between 1992 and 1997, was appointed to the prime minister post by Moisiu, after his party—the Democratic Party of Albania—won the general elections in July 2005.

### 14 POLITICAL PARTIES

Before the 1990s, the only political party was the Communist Party, which was founded in 1941 and has been known officially as the Workers Party (Partija e Punës) since 1948. As of November 1986, it had about 147,000 members, as compared with 45,382 in 1948. The Albanian Democratic Front was the party's major subsidiary organization; other subsidiary groups included the Union of Albanian Working Youth and the Women's Union of Albania.

Under the 1976 constitution, the first secretary of the Workers Party was commander-in-chief of the armed forces. The constitu-

tion described the Workers Party as the "sole directing political power in state and society."

The primary political parties include the Democrats (led by Sali Berisha), a Western-style conservative party; the Democratic Alliance, a breakaway group of Democrats still largely allied with them; the Socialists (led by Fatos Nano), composed largely of former Communist Party members; and the Social Democrats, a Western-style progressive party largely allied with the socialists.

Although in the early years of post-Communist Albania there were genuine ideological differences between the parties, such distinctions have now blurred. Even the Socialist Party, composed largely of former Communists, has called for budget cuts and an IMF-backed austerity program. As of the election of 4 July 2005, seats in the unicameral National Assembly were distributed as follows: the Democratic Party of Albania (PD), 55; the Socialist Party (PS), 40; the Republican Party (PR), 11; the Social Democratic Party (PSD), 7; the Socialist Movement for Integration (LSI), 5; and other, 22.

### 15 LOCAL GOVERNMENT

Albania is divided into 12 regions (qarqe), 36 districts (rrethe), including the city of Tiranë (or Tirana), 65 cities and towns, and 309 communes (as of 2002). All subdivisions are governed by people's councils. The councils direct economic, social, cultural, and administrative activity in their jurisdictional areas and appoint executive committees to administer day-to-day activities.

International observers deemed local elections held in 2000 to have achieved a certain level of democracy, but identified irregularities that need to be addressed in reforms in the Albanian electoral code. The third round of local elections held on 12 October 2003 did not address these irregularities. Several international organizations noted that international standards for democratic elections have not been met. Partial run-offs were held in November and December, following a boycott by the Democratic Party commissioners. The distribution of votes at the local level was as follows: the Socialist Party of Albania (PS), 34.6%; the Democratic Party (PD), 32.2%; the Social Democratic Party (PSD), 5.3%; the Republican Party (PR), 3.3%; and the Agrarian Environmental Party (PAA), 3.2%.

### 16 JUDICIAL SYSTEM

The judicial system includes district courts, six courts of appeal and a supreme court, or Court of Cassation. The district courts are trial level courts from which appeal can be taken to a court of appeals and then to the Court of Cassation. At each of the three levels, the courts are divided into civil, criminal, and military chambers. Justices of the Supreme Court serve for seven years.

There is also a Constitutional Court (also known as the High Court) with jurisdiction to resolve questions of constitutional interpretation that arise during the course of any case on appeal. In a 1993 decision, the Constitutional Court invalidated a law that would have disbarred lawyers who were active during the Communist era, and ordered the lawyers reinstated. Justices of the Constitutional Court serve a maximum of nine years.

Parliament appoints the seven members of the Court of Cassation and five of the nine judges on the Constitutional Court, with the rest appointed by the president. A Supreme Judicial Council appoints all other judges. In 1992, the Supreme Judicial Council

began to remove judges who had served under the former Communist regime.

Although the constitution provides for an independent judiciary, the system is plagued by a lack of resources and trained staff, and is subject to political pressure, intimidation, and corruption.

## 17 ARMED FORCES

As of 2005, the Albanian armed forces were in the midst of a major restructuring to be completed by 2010. The new army was to consist of five divisions and a commando brigade of three battalions. In 2005, Army personnel numbered more than 16,000 and were armed with 373 main battle tanks, 123 armored personnel carriers, and 1,197 artillery pieces. The Navy had an estimated 2,000 active personnel and was equipped with 20 patrol/coastal vessels, 4 mine warfare and 2 logistical/support vessels. The Albanian Air Force totaled 3,500 active members and had 26 combat capable aircraft, including 15 fighters and 11 fighter ground attack aircraft. The 2005 defense budget totaled \$116 million.

## 18 INTERNATIONAL COOPERATION

Albania, a United Nations member since 14 December 1955, belongs to numerous specialized agencies, such as FAO, IAEA, IFAD, ILO, UNESCO, WHO, WIPO, ICAO, WMO, the World Bank, IFC, IMF, and the WTO (2000). Albania was originally a member of the Council for Mutual Economic Assistance (CEMA) and the Warsaw Pact, but in 1968 it formally announced its withdrawal from both (it had ended participation in CMEA in 1961). The country is a part of the Central European Initiative, the Agency for the French-Speaking Community (ACCT), and one of 12 members of the Black Sea Cooperation Zone. Albania is part of the Council of Europe, the Euro-Atlantic Partnership Council, the International Confederation of Free Trade Unions and the World Federation of Trade Unions, the Islamic Development Bank, and the Organization of the Islamic Conference (OIC).

In November 2002, NATO announced that Albania would have to wait until a later round of expansion to join. As of 2003, Albania had applied for membership in the European Union, although it was not among the 13 candidate countries from eastern and southern Europe being considered for the next round of accession. However, in January 2003, Albania and the European Union began Stabilization and Association Agreement talks, which were regarded as the possible first steps toward EU membership.

Albania joined the OSCE 19 June 1991. The country also participates in the Organization for the Prohibition of Chemical Weapons, the NATO Partnership for Peace, and the Adriatic Charter (2003). In May 2003, Albania and the United States signed a treaty on the Prevention of Proliferation of Weapons of Mass Destruction and the Promotion of Defense and Military Relations. Albania was one of four nations to contribute troops to the combat phase of Operation Enduring Freedom (2004), a US initiative in Iraq.

In cooperation on environmental issues, Albania participates in the Basel Convention (hazardous waste), the Convention on Biological Diversity, Ramsar, the Montréal Protocol (ozone layer protection), and the UN Conventions of the Law of the Seas Climate Change, and Desertification.

## 19 ECONOMY

Albania has always been an underdeveloped country. Before World War II, there were only a few small-scale industrial plants and only a few of the larger towns had electricity. Subsoil resources were potentially rich, but only coal, bitumen, and oil were extracted—by Italian companies. Transportation was poorly developed. Stockbreeding contributed about half of the agricultural output; by 1938, tilled area represented only 23% of the agricultural land. Forests were exploited and reforestation neglected.

After the war, the Communist regime pursued an industrialization program with a centrally planned economy. Development projects received priority, especially mining, industry, power, and transportation. Consumer goods, agriculture, livestock, and housing were relatively neglected. By 1950, Albania had its first standard-gauge railways, a textile combine, a hydroelectric power plant, a tobacco fermentation plant, and a sugar refinery. Mineral extraction, especially of oil, chrome ore (the main export product), and iron-nickel, was increased. Land cultivated under crops or orchards expanded by over 70% from the 1950s to the 1980s. Although collectivized, farmland was again privatized in 1992 and distributed to peasants. But despite significant progress, living standards in Albania were still among the lowest in Europe. When central planning was abandoned, there was no mechanism to take its place, and GDP fell 45% during 1990–92. It rose by at least 5% in 1995, however. After prices were freed, the inflation rate shot up to 226% in 1992, but dropped to 86% in 1993. Consumer prices and unemployment mounted rapidly in 1994.

More trouble followed in 1997 with the countrywide collapse of financial pyramid schemes. The resulting chaos left the government paralyzed, and over 1,500 Albanians died in the ensuing violence that swept the country before an international peacekeeping force restored order. More economic hardship struck Albania in 1999 as the country received 450,000 Kosovar refugees. Western aid helped the Albanians manage the influx.

As Albania entered the 21st century, its economy had begun to improve. Inflation remained low, the economy was expanding at a rate of approximately 7% a year, and foreign direct investment was growing. Economic growth came largely from the transportation, service, and construction sectors. The state was privatizing industries, and as of 2002, nearly all land in Albania was privately owned. However, the country's transition to a free-market economy did not come without difficulties. Unemployment remained high, and the economy remained based on agriculture (around 50%). Crime and corruption were problems, as were governmental bureaucratic hurdles that hamper business activity. The country's infrastructure was still outmoded and in disrepair, and in dire need of funding. Severe energy shortages caused blackouts and were responsible for small businesses failing; in 2003, the country was increasing its imports of electricity.

In 2001, Albania joined Bosnia and Herzegovina, Bulgaria, Croatia, the former Yugoslav Republic of Macedonia, Romania, and Serbia and Montenegro (Yugoslavia) in creating a Balkan free trade zone. Tariffs on selected goods were to be eliminated under the agreement. In September 2000, Albania joined the World Trade Organization, signaling its commitment to the process of economic reform.

By 2003, and 2004, Albania would register some of the highest rates of growth in Europe (around 6%), with a nominal GDP of

\$7.83 billion in 2004. Most of this growth was fueled by an expansion in the services, construction, and transport sectors, as well as by remittances from abroad (a common growth generator in developing countries, especially those that border developed economies), domestic demand, and private investment. The inflation rate in 2004 was 3.2%, the foreign currency reserves rose to \$1.244 billion, while its fiscal deficit declined to 4.9%.

The EU remains Albania's main trading partner, with Italy and Greece taking the lion's share. Although exports have been growing steadily, they have been outpaced by the increase of imports. Thus, in 2004 exports totaled \$ .6 billion, while imports marked \$2.2 billion. Albania's main exports are textiles, footwear, mineral products, and metals; its imports include agricultural products, metals and minerals, and machinery.

Albania has enjoyed a relatively stable environment in the early years of the 21st century, its economic growth has been steady and strong (the GDP is projected to grow in 2005 by 6%), and its moves towards a functional market economy have been courageous. However, the country is still one of the poorest in Europe and remains subject to political instability and economic downside risks, such as shortages of the electricity supply and possible delays in the privatization of large enterprises.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Albania's gross domestic product (GDP) was estimated at \$18.1 billion. However, Albania has a large gray economy that may be as large as 50% of official GDP. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,900. The annual growth rate of GDP was estimated at 6%. The average inflation rate in 2005 was 2.5%. It was estimated that agriculture accounted for 23.6% of GDP, industry 20.5%, and services 55.9%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$889 million or about \$281 per capita and accounted for approximately 15.6% of GDP. Foreign aid receipts amounted to \$342 million or about \$108 per capita and accounted for approximately 5.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Albania totaled \$3.89 billion or about \$1,229 per capita based on a GDP of \$5.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 5.5%. In 2001 it was estimated that approximately 62% of household consumption was spent on food, 13% on fuel, 3% on health care, and 10% on education. It was estimated that in 2004 about 25% of the population had incomes below the poverty line.

## 21 LABOR

The labor force numbered an estimated 1.09 million in 2004, excluding 352,000 emigrant workers. For that same year, agricultural workers accounted for an estimated 58% of the country's

labor force, with those in the private nonagricultural sector accounting for 20% and those in the public sector accounting for 23%. In 2004, Albania's unemployment rate was officially put at 14.4%, however the actual unemployment rate may be in excess of 30%. When communism was abandoned in favor of a free-market economy in 1991, a transitional dislocation of workers and resources took place, resulting in an estimated unemployment rate of 40% in 1992. In 2001, the unemployment rate remained high, up to an estimated 30%.

In 1991, workers were granted the legal right to create independent trade unions. The Independent Confederation of Trade Unions of Albania (BSPSH) was formed as the umbrella organization for several smaller unions. The rival Confederation of Unions, closely tied to the Socialist Party, operates mostly as a continuation of the state-sponsored federation of the Communist era.

As of 2005, all citizens had the right to organize and bargain collectively, except the military and civilian employees of the military. About 20% of the workforce was unionized, but that number is shrinking. Generally, labor unions in Albania operate from a weak position, and those unions that represent employees in the public sector usually negotiate directly with the government. In addition, little privatization has occurred outside the retail and agricultural sectors and few private employees are unionized.

The minimum work age is 14, with restrictions placed on employment of those under 18 years old. Children between 14 and 16 years old may work part-time. Although the labor code sets the maximum workweek at 40 hours, the actual workweek for many is six days/week. There is no legal minimum wage rate for workers in the private sector, although government workers, 18 years of age and older, were paid a minimum wage of about \$118/month in 2005, which does not provide a decent living wage for a family.

The enforcement of occupational health and safety standards and regulations is the responsibility of the Ministry of Labor and Equal Opportunities. However, what regulations and standards that do exist are generally not enforced. In addition, the law provides no remedies for workers who leave the workplace because of hazardous conditions. The enforcement of the labor code is severely limited by the Albanian government's lack of funding.

## 22 AGRICULTURE

In 2004, about 58% of the economically active population was engaged in agriculture, compared with 85% before World War II (1939–45). Although Albania's mountainous terrain limits the amount of land available for agriculture, the cultivated and arable area was about 21% of the total (578,000 hectares/1,428,000 acres) in 2000. Nearly two-thirds of the population is rural, and agriculture provided 25% of value-added GDP in 2003.

The first collective farm was created in 1946, but collectivization did not move forward on a large scale until 1955. By early 1962, 1,263 collectives included about 2,000 villages and covered almost 80% of the cultivated area. Consolidation reduced the collectives to 1,064 by December 1964. State farms, meanwhile, had expanded and by 1960 they accounted for about 12% of the cultivated area. By 1964, only 10% of the cultivated area was privately farmed, and by 1973, 100% of the agricultural land was reported as socialized, either in collective or state farms. Collective farm consolidations and mergers reduced their number to 420 in April 1983, including "advanced type" cooperatives. The cooperatives

accounted for 74% of total agricultural production. By the mid-1980s, the number of collective farmers was about 800,000.

After the government abandoned central planning, the economy collapsed from the void. The decline saw the agricultural sector shrink by 21% in 1991, but agricultural production rebounded in 1992 in response to the privatization of cooperative farms and the elimination of fixed pricing. The number of tractors increased from 359 in 1950 to 4,500 in 1960 and to 12,500 in 1991; 7,915 were in service in 2002. In 2002, irrigation systems covered 59% of the cropland. Artificial fertilizers supplied to farms rose from 8,000 tons of active substance in 1960 to 99,900 tons in 1978. However, fertilizer use fell from 145 kg per hectare in 1983 to about 5 kg per hectare in 2002.

Wheat is the principal crop; corn, oats, sorghum, and potatoes are also important. Greater emphasis is being placed on the production of cash crops—cotton, tobacco, rice, sugar beets, vegetables, sunflowers, and fruits and nuts. FAO estimates of crop output in 2004 (in tons) included wheat, 300,000; corn, 200,000; sugar beets, 40,000; vegetables and melons, 679,100; potatoes, 175,000; grapes, 80,000; oats, 15,000; and oranges, 2,200.

### 2<sup>3</sup> ANIMAL HUSBANDRY

The major problem of Albanian animal husbandry has been a shortage of fodder. As a result, livestock numbers remained virtually constant or increased very slowly in the postwar decades. When central planning was abandoned, uncertain monetary and credit policies caused inflation to soar, which eroded export earnings. Albania, which had been a net exporter of food products, became heavily dependent on food aid. Sheep, originally the most important livestock, numbered 1.84 million in 1946 and 1.8 million in 2004. Additional estimated numbers of livestock for 2004 included poultry, 4,300,000; goats, 1,030,000; cattle, 700,000; hogs, 109,000; and horses, 65,000. Estimates of livestock products in 2004 include 900,000 tons of cows' milk, 70,000 tons of sheep's milk, 65,000 tons of goats' milk, 39,000 tons of beef and veal, 8,500 tons of pork, 12,000 tons of mutton and lamb, and 25,800 tons of eggs.

### 2<sup>4</sup> FISHING

Fishing is an important occupation along the Adriatic coast. In 1958, a development program for inland fisheries was begun, and the results were improved exploitation and conservation as well as increased fish reserves and catches. Annual fish production was estimated at 3,560 tons in 2003 of which 65% came from marine fishing. Exports of fish products amounted to almost \$13.5 million in 2003.

### 2<sup>5</sup> FORESTRY

Forests cover 1 million hectares (2.5 million acres), or about 36% of the total land area. As a result of exploitation, erosion, and neglect, about 70% of the forested area consists of little more than shoots and wild shrubs, and exploitation of the remaining accessible forests exceeds optimum annual limits. Roundwood production in 2003 totaled 296,000 cu m, with about 56% used for firewood. Between 1971 and 1978, 65,310 hectares (161,380 acres)

were forested, compared with a total of 61,900 hectares (153,000 acres) for 1961–70.

### 2<sup>6</sup> MINING

After the abandonment of central planning in 1992, Albania's mineral industry was marginal, with technical difficulties contributing to the decline. Nearly half a century of self-imposed isolation during the Communist era crippled the industry with a shortage of capital, aging and inadequate machinery, over staffing, and environmental damage. In 1995, the government adopted a law to privatize the mineral industry, and administrative preparations for privatization began in 1996.

Mineral deposits traditionally associated with Albania included chromite, copper ore, and nickeliferous iron ore. From the late 1970s through 1990, Albania was the principal chromite-producing country in Europe; the country often ranked second in the world in exports and third in production. In this period, exports of chromite, ferrochromium, and petroleum refinery products constituted the country's chief sources of foreign exchange. For much of the 1990s, the chromite mining and processing industry paralleled the country's moribund economy.

In 2003, chromite production was 220,000 metric tons, down from 300,000 in 1996. The most important chromite mines were at Katjel, Mëmlisht, and Bulqize, in the upper reaches of the Drin River. A chromium-ore enrichment plant was put into operation at Bulqize in 1972. In the 1980s, chromite production amounted to more than one million metric tons per year.

In 2000, the government awarded Hayri Ogelman Madencilik, of Turkey, a long-term concession to upgrade and operate the Kalimash mining and beneficiation complex, and to develop mines at the Perollajt and Vllahane deposits in the northeastern part of the country.

Copper ore concentrate production was 8,691 metric tons in 1999, the last year for which there is any data, according to the US Geological Survey. Copper was mined at Pukë and Rrubig, where the ore was concentrated and smelted. The deposits near Kukës were the richest in Albania.

Production of bauxite in 2002 totaled 71,312 metric tons and was estimated at 229,317 metric tons for 2003. Bauxite deposits were found mostly in central Albania, east of Tiranë, as well as in the northern alpine region, near the border with Serbia. Bauxite reserves were estimated at 12 million tons, with the largest deposit at Daijti. Because of a lack of domestic refining capacity, bauxite was exported.

Albania was one of the few countries producing natural asphalt, mined at Selenicë. All production of asphalt and bitumen in 2002 totaled 4,200 metric tons.

### 2<sup>7</sup> ENERGY AND POWER

Albania has both thermal and hydroelectric power stations to generate electricity, but the latter are more significant and have the greater potential. Total power production increased from 85 million kWh in 1955 to 578 million kWh in 1967, and to 4.9 billion kWh in 1985. In 2004, electricity generation was 5.68 billion kWh. In 2002, 13% came from fossil fuels, 87% from hydropower, and none from other sources. In the same year, consumption of

electricity totaled 5.286 billion kWh, with total capacity at 1.671 million kW. Rural electrification was achieved in 1970.

The 24,000-kW Shkopet plant and the 27,000-kW Bistricë plant became operational in 1962. A 100,000-kW thermal plant at Fier went into operation in 1968, and the Mao Zedong hydroelectric plant was completed in 1971. The “Light of the Party” hydroelectric plant on the Drin River, with a total installed capacity of 500,000 kW, began operations in 1978. The seventh five-year plan (1981–85) provided for construction of a hydropower station at Koman, also on the Drin, with a capacity of 600,000 kW; the first two turbines were installed there by early 1986.

Petroleum production has become significant. Crude oil output rose from 108,000 tons in 1938 to 870,000 tons in 1967, and 3,500,000 tons in 1985. In 2002, production totaled 6,360 barrels per day. Oil refineries are located at Ballsh, Stalin, Fier, and Çerrik. Albania also produced 1.77 billion cu ft of natural gas in 2002. Sizeable coal deposits were discovered near Tiranë in 1969.

## 28 INDUSTRY

Before World War II, industry was confined to a cement plant at Shkodër and to small-scale flour-milling, food-processing, cigarette-making, and fellmongery (processing animal hides). In 1937–39, industry’s contribution to the GNP was only 10%, by far the lowest in Eastern Europe. There was virtually no export of industrial products. After the war, the government emphasized industrial development, primarily development projects. Gross industrial output increased annually by 20% during 1951–60, by 12% during 1961–70, by 9% during 1971–80, by 5% during 1981–85, and by 3% during 1986–90. The socialized sector accounted for over 95% of gross output by the late 1950s and 100% by the 1970s. The industrial labor force, which virtually tripled between 1946 and 1960, continued to increase rapidly during the 1960s and, in 1994, 15% of all wage and salary earners were employed in industry (including mining).

Industrial production fell 44% in 1992 and 10% in 1993, but by 1995 industrial productivity was growing at a rate of 6%. Privatization was proceeding slowly, with joint state-private ventures planned or sale of state enterprises at auction. In 1994, over one-half of the nonfarm workforce was employed by the state. As of 2002, the industrial sector accounted for 27% of GDP. Major industries include food processing, textiles and clothing, lumber, oil, cement, chemicals, and basic metals. Albania has two oil refineries, with a capacity of 26,000 barrels per day in 2002. In 2001, the government privatized a brewery, distillery, dairy, and pharmaceutical company, and planned to sell the Savings Bank of Albania and INSIG, the state-owned insurance company. The construction sector showed potential for growth in 2002–03, as the country had a housing deficit and existing housing is old and in poor condition.

While the importance of agriculture in Albania’s economy has decreased, other sectors (such as services, transport, and construction) have benefited from investment in 2004. The telecommunications industry in particular has grown substantially due to significant inflow of capital from two new mobile companies. Tourism, the only sector to register a net positive trade balance, has the prospective of becoming one of Albania’s main growth engines. Another sector that has good future prospects is mining—due in part to increases in the price of raw materials. In addition to

these developments, there are plans for a 1600-acre Energy Park at Vlora. This park is supposed to respond to Albania’s energy shortages by means of large foreign direct investments. To date, 80% of Albania’s GDP is generated by the private sector.

## 29 SCIENCE AND TECHNOLOGY

The main scientific organization, the Academy of Sciences (founded in 1972 and located in Tiranë), has a scientific library and numerous attached research institutes dealing with various aspects of agriculture, fisheries, and veterinary science; medicine; natural sciences (biology, computer science and applied mathematics, energetics, nuclear physics, hydrometeorology, seismology, and geology) and technology (oil and gas geology and technology, industrial projects studies and design hydraulics, metallurgy, mining, roads and railways, chemistry mechanics, minerals, building technology); and the food industry. The Geologists’ Association of Albania, founded in 1989, has 450 members (as of 1997).

The University of Tiranë, founded in 1957, has faculties in natural science, medicine, and mechanics and electronics. Its Natural Science Museum has exhibits relating to zoology, botany, and geology. Luigi Gurakugi University of Shkodër, founded in 1991 and based on the former Higher Pedagogical Institute founded in 1957, has a faculty in natural sciences. The Agricultural University of Tiranë, founded in 1971, has faculties in agronomy, veterinary science, and forestry. In 1987–97, science and engineering students accounted for 19% of college and university employment. The Fan S. Noli University in Korçë was founded in 1971 as the Higher Agricultural Institute and renamed in 1992. The Centre for Scientific and Technical Information and Documentation in Tiranë was founded in 1981.

In 2002, high technology exports amounted to \$2 million, some 1% of the country’s manufactured exports in that year.

## 30 DOMESTIC TRADE

Wholesale trade became a state monopoly in 1946. Initially, private retail trade played an important role, but by 1970 trade was fully socialized. By December 1990, retail units had been privatized again. All price controls were eliminated except on a few consumer items and monopoly-controlled products.

Shops in Albania are generally small, but department stores and a few larger supermarkets with limited stocks have been established in Tiranë, Durrës, Korçë, and other larger cities. Consumer cooperatives conduct trade in the rural areas. Albania has a small, but growing, advertising sector.

Albanian business hours are Monday through Friday from 8 AM to 6 PM. Shop hours are Mondays and Tuesdays, 7 AM to 2 PM and 5 to 8 PM, and other weekdays, 7 AM to 2 PM. Many shops are open seven days a week, since there is no legislation regulating shop hours. Before 1 January 1959, all sales were for cash. Since then, date limited consumer credit was sanctioned, but most transactions are still in cash.

## 31 FOREIGN TRADE

Before World War II, about 50% of the exports consisted of the entire production of chrome ore and crude oil and some timber; the balance consisted of agricultural goods and fish. Good grains, sugar, and coffee made up about 20% of the imports; textiles, about 24%; and paper, machinery, chemicals, leather, metals, and

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

oil products, about 53%. As the value of imports almost tripled that of exports, the deficit was met largely by Italian loans. Italy received two-thirds of Albanian exports and supplied Albania with up to half its imports. Under the Communist government, foreign trade became a state monopoly. The volume of turnover increased substantially and the structure and orientation changed radically.

As of the year 2000, Albania was running a trade deficit of \$814 million (US dollars), a considerable increase since the 1990s. The expansion in imports was largely due to increased domestic demand for foreign goods, as well as increased demand for electronics. Between 1950 and 1967, trade volume increased six fold, to £1,043 million in 1967. Total trade volume (imports plus exports) rose 49% between 1966 and 1970. In 1960, trade with the socialist states accounted for about 90% of total trade; the Soviet share of this was half. Political and economic differences between Albania and the USSR resulted in suspension of aid to and trade with Albania. In 1961, 54% of total foreign trade was with the USSR and 7% with China; by 1964, trade with the former had ceased entirely, while trade with China had risen to 55%. After the Albanian-Chinese split in the late 1970s, economic contacts with China ceased. Talks aimed at renewing trade between the two nations were held in 1983, resulting in trade agreements worth about \$5–7 million.

In 2000, Albania exported leather products, apparel, footwear components, tobacco products, and metal ores. The production of chromium ore, formerly an integral part of the Albanian export schedule, has plummeted in recent years. Imports in 2000 included raw materials, machinery, transportation equipment, fuel, minerals, metals, and foodstuffs. Albania exported its goods primarily to Italy, Greece, and Germany. The chief sources of Albania's imports were Italy, Greece, Germany, Turkey, Bulgaria, and the Former Yugoslav Republic of Macedonia.

**3<sup>2</sup> BALANCE OF PAYMENTS**

The US Central Intelligence Agency (CIA) reports that in 2002 the purchasing power parity of Albania's exports was \$340 million while imports totaled \$1.5 billion resulting in a trade deficit of \$1.16 billion.

The International Monetary Fund (IMF) reports that in 2001 Albania had exports of goods totaling \$305 million and imports

totaling \$1.33 billion. The services credit totaled \$534 million and debit \$444 million. The IMF attributes the fall in exports in recent years to a decline in industrial production. Recent increases in imports were due to increased domestic demand for imported goods, in addition to large increases in electricity imports. Remittances from abroad have improved Albania's balance of payments.

**3<sup>3</sup> BANKING AND SECURITIES**

The Communist regime nationalized all banking and financial institutions in 1945 and established the Bank of the Albanian State (now simply the Bank of Albania), which became the bank of issue. The bank also controlled foreign transactions, helped prepare financial plans for the economy, accepted savings deposits, financed economic activities, and performed other banking functions. An agricultural bank was created in 1970 to provide credit facilities for agricultural cooperatives.

On 10 August 1949, the Directorate of Savings was established to grant loans and to accept savings deposits in branches throughout the country; the system has grown steadily ever since.

When the Soviet Union collapsed in 1991, Albania decided to develop a market economy. The banking system changed to meet the demands of a free-market economy. However, in October 1996, the Islamic Conference's financing arm, the Islamic Development Bank, made a \$12 million loan to Albania. The logic of the government's Islamic focus is unclear.

The government's position has been weakened considerably as a result of the collapse of four of the country's major pyramid investment schemes, leading to anarchic, nationwide demonstrations by furious investors. In January of 1997, a 20,000-strong crowd marched on Skanderberg Square, where it demanded that the government guarantee all deposits in the companies. Notable pyramid investment companies included VEFA, Kamberi, Populli, Xhaferri, Gervnasi, Gjallica, and Sudja.

The informal financial market has absorbed millions of dollars of savings and remittances in recent years (estimates run as high as \$1 billion), at the expense of the country's inefficient and uncompetitive banking sector. The pyramid investment schemes attracted hundreds of thousands of depositors—local estimates put participation in the companies at about 75% of all households—by guaranteeing to pay high interest rates on cash deposits within a short period of time.

Much of the blame for crisis rested with the government, whose policy towards the companies was not simply cavalier but actively encouraging. It did not pay attention to requests made by the central bank governor to regulate the pyramid schemes more tightly.

The privatization of the three state-owned commercial banks has long been advocated by the International Monetary Fund and the World Bank. The government has privatized the Rural Commercial Bank and the National Commercial Bank, and is working towards privatizing the Savings Bank of Albania, which holds nearly 80% of all Albanian bank deposits. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$997 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.7 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 10.82%.

### 34 INSURANCE

Insurance was nationalized by the Communist government after World War II. Under the jurisdiction of the Ministry of Finance, the program is administered by the Institute for Insurance, created in 1950. Half the profits are earmarked for the state budget, the other half for a reserve fund. In 1990, income from social insurance contributions totaled L967 million. Total expenditures—for temporary disability, pregnancy, childbirth, rest home stay, and pensions—were L1,440 million. In 2002, Albania's parliament passed a law to privatize the insurance agency, hoping to create a competitive industry.

### 35 PUBLIC FINANCE

Albania began its transition from a centrally planned economy to a market driven economy in 1992, after GDP had collapsed by over 50% in 1989. The government elected in 1992 set in motion a series of aggressive economic reforms to light the path towards a market economy. Among the reforms were price and exchange regime liberalization, fiscal consolidation, monetary restraint, and a rigid income policy. Stalling progress in 1997 was followed by a resumption of growth the next year.

The US Central Intelligence Agency (CIA) estimated that in 2005 Albania's central government took in revenues of approximately \$1.9 billion and had expenditures of \$2.3 billion. Revenues minus expenditures totaled approximately -\$417 million. Total external debt was \$1.41 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, general government revenues were L153,197 million and expenditures were L187,109 million. The value of revenues was us\$1,093 million and expenditures us\$1,335 million, based on a market exchange rate for 2002 of us\$1 = L140.15 as reported by the IMF. Government outlays by

### 36 TAXATION

As of 1999, personal income is taxed in six brackets, from 5–30%, with 5% starting at an income of about \$86/month, and the 30% rate, plus a flat fee of about \$45, applied to incomes over about \$1,030/month. The corporate income tax rate is 25%, applied equally to both domestic and on income earned in Albania by foreign-owned companies. Tax preferences previously accorded foreign investors—a four-year tax holiday, and up to a 60% reduction on income from reinvested profits—were removed for future foreign investors on the advice of the IMF and World Bank. There is property tax on agricultural land and buildings. Indirect taxes include a value-added tax (VAT) applied to businesses with annual turnover exceeding five million lek (about \$43,000), small business taxes, and excise taxes on tobacco, alcohol, soft drinks, coffee, gasoline products, perfumes, and deodorants. The VAT rate is 20%. Small businesses with annual turnover of less than two million lek a year pay a yearly lump sum ranging from 15,000 lek to 100,000 lek. Businesses with turnover in the range of two million lek to five million lek pay a 4% of turnover tax. Exports are exempt from both excise and VAT. Financial transactions are exempt from VAT, and liquefied gas is exempt from excise.

### 37 CUSTOMS AND DUTIES

Under the jurisdiction of the Ministry of Trade, the general directorate of customs and duties administers customs regulations. With certain exemptions, all goods are subject to duties ranging from 5–10%, depending on product type. Having become a member of the World Trade Organization in September 2000, Albania

is working with Bulgaria, Croatia, Macedonia, Romania, and Serbia and Montenegro to create a regional free trade zone.

### **3<sup>8</sup> FOREIGN INVESTMENT**

Prior to 1990, no foreign capital was invested in postwar Albania, but various communist states aided the Albanian industrialization program, supplying credit, machinery and equipment, and technicians. Prior to 1961, assistance by Soviet-bloc technicians in geologic surveys, construction, and operation of factories was vital to Albanian economic growth. Following the Soviet suspension of credits, withdrawal of technicians, and elimination of trade, China increased its activity in all these areas. In 1978, China terminated all its economic and military cooperation with Albania and the following year Albania was for the first time without any foreign assistance. In the 1980s, some economic assistance was provided by the FRG.

After the fall of communism, foreign investment was encouraged and 149 joint ventures were agreed upon. A \$10 million Coca-Cola bottling plant set up in 1994 outside of Tiranë (directly employing about 100 people), the European Bank for Reconstruction and Development, and a local Albanian company were early ventures. In 1995, Albania concluded a bilateral investment treaty with the United States. At the end of 1995, foreign investment was projected to rise to about \$600 million, with about one-half of that coming from Italy. However, the prospects for foreign investment dropped sharply in 1997 in the wake of the violence and property destruction that followed the collapse of the pyramid schemes in which many Albanians had sunk their savings. The violent removal of the Prime Minister in 1998 and the influx of Kosovar refugees in 1999 were added deterrents to foreign investment. From 1997 to 1999, foreign direct investment in Albania averaged only \$44.57 million, but in 2000 the rate of inflow tripled to \$143 million and then in 2001 to \$181 million. The rate of investment decreased slightly in subsequent years, but rose again in 2004, reaching \$300 million.

In 2003, the UN Development Program assisted the Albanian government in setting up the Investment Promotion Agency (ANIH) that replaces the Economic Development Agency. Previously, the government had put few restrictions on foreign investment, but had offered no tax or financial incentives beyond national treatment. There are initiatives aimed at attracting foreign investment, but as of now they remain unimplemented or in the planning stage.

While the climate for investors has definitely improved over the past years, there are still a number of inconsistencies that make the investment process rather cumbersome. Thus, the physical and financial infrastructure still requires considerable development, there are frequent shortages of power and water in certain areas, corruption remains a major concern, and the rule of law (especially in questions regarding property ownership) is not as strong as it should be. In 2005, Albania had one of the lowest rates of foreign investment in Europe.

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

Albania formerly had a state-controlled, centrally planned economy, with emphasis on industrial development and socialized agriculture. Under Workers Party directives, short-term and long-range plans were formulated by the Economic Planning Commission, a

government agency. By the mid-1980s, the economy was virtually under complete state control; enterprises were either directly owned by the state or managed through cooperatives.

From 1951, Albanian economic development was directed by five-year plans, most of which stressed heavy industry. A sweeping economic reform program was announced in 1992. It called for widespread private ownership of farmland, state-owned companies and housing, and the removal of trade restrictions and price controls. Yet after nearly a decade of post-Communist rule, Albania remains by far the poorest country in Europe. For much of the 1990s, economic reforms were stifled by rampant corruption. Only after the collapse of pyramid investment schemes did the situation begin to improve. Nevertheless, Albania relies heavily on foreign aid and seeks to secure more funding for infrastructure improvements.

Economic development in the early 2000s was stimulated by the construction and service industries: the lack of housing under communism led to a demand for new housing construction, and the development of tourism in Albania's seaside resorts has fueled the service sector. The country is undergoing an economic restructuring program with the International Monetary Fund (IMF) and World Bank. A three-year Poverty Reduction and Growth Facility program with the IMF was negotiated in 2002, in the amount of some \$38 million. In 2003, Albania entered into negotiations with the European Union (EU) for a Stabilization and Association Agreement.

By 2005, Albania was still one of Europe's poorest countries. Although the economy has registered significant growth rates in the past years, it is lagging behind its neighbors. Unemployment is rampant at 15% (with other estimates placing it at 25%); half of the population is engaged in agriculture, while a fifth is said to be working abroad; the export rate is growing but is still too small; imports are growing at a fast pace and are coming mainly from Italy and Greece—money for those imports are provided through foreign aid and from the money sent home by Albanians working abroad.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

In 1947, the first law providing benefits for disability, old age, survivors, and retirement was introduced. Current pension law sets retirement age at 60 for males and 55 for females, with 35 years of contributions. Mothers with six or more children are eligible at age 50, with 30 years of contributions. The amount of the pension is up to 75% of average net wages during 3 of the last 10 years of employment. Disability pensions provide as much as twice the basic pension or 80% of the last average wage. Employers' contributions are 26% of payroll. Additional sums are provided by employees and by the state budget.

Unemployment benefits introduced in 1993 require at least one year's contributions, and a willingness to undergo training to be eligible. The employer, at 6% of payroll, makes contributions. A flat rate for benefits allows for a minimum standard of living. A program of Family Allowances fully funded by the government was introduced in 1992. Maternity and sickness benefits are also provided, and were last updated in 2003. In 1996/7 the pyramid saving scheme scandal wiped out about 60% of private savings. The scandal coupled with the influx and maintenance of Kosovo refugees, undermined public confidence and trust in the govern-

ment's ability to deliver public services. Corruption remains another major barrier. Social assistance and social welfare systems are in need of fundamental reform.

Albania's constitution prohibits discrimination based on sex. Roughly half of the labor force is comprised of women. The Labor Code incorporates the principle of equal pay for equal work. Women remain underrepresented in higher positions and often are underemployed. Women have equal access to higher education, many obtaining professional positions in the medical and legal fields. However, discrimination in the workplace continues. Abuse, trafficking, and violence against women and children remain significant problems. Albania is a source country for women and children trafficked for the purposes of sexual exploitation. Domestic violence and sexual harassment are prevalent, and are largely unreported. In 2004, in some regions of the country, women are still considered chattel.

Religious tolerance is prevalent, and the constitution provides for coexistence between ethnic groups. The Office of National Minorities was established to monitor Albania's minority issues. Nevertheless, societal discrimination against Roma, the Egyptian community, and homosexuals persists. Blood feuds, or violent rival factions, contribute to an atmosphere of fear in some areas.

#### 4<sup>1</sup> HEALTH

Health care facilities in the 1990s were substandard and much of their equipment obsolete. In 1992 Albania had 16 hospitals, with 14,000 beds. In 1996, hospital beds declined to 9,600. In 2004, there were an estimated 139 physicians and 404 nurses per 100,000 people. There is a medical school in Tiranë (part of the Enver Hoxha University) and some Albanians receive medical training abroad. Tertiary care, available mostly in Tiranë, includes a teaching hospital, an obstetric and gynecological facility, a facility for treating respiratory diseases, and a military hospital. Albania's health care system was strained by the admission of as many as 500,000 Albanian refugees from Kosovo in the spring of 1999.

The general improvement of health conditions in the country is reflected in the lower mortality rate, down to an estimated 6.49 deaths per 1,000 in 2000, as compared with 17.8 per 1,000 in 1938. In 2005, average life expectancy was estimated at 77.24 years, compared to 38 years at the end of World War II. Albania's infant mortality rate, estimated at 21.52 per 1,000 live births in 2005, has also declined over the years since the high rate of 151 per 1,000 live births in 1960. Albania had high immunization rates for children up to one year old: tuberculosis at 94%; diphtheria, pertussis, and tetanus, 99%; measles, 95%; and polio, 99.5%. As of 2002 the number of people living with HIV/AIDS was estimated at less than 100. The leading causes of death are cardiovascular disease, trauma, cancer, and respiratory disease.

#### 4<sup>2</sup> HOUSING

During World II, about 61,000 buildings of all types were destroyed, including 35,400 dwellings. Housing was generally primitive in rural areas and poor elsewhere. After the war, housing continued to be a problem for a variety of reasons: primary emphasis on industrial construction, shortages of materials and skilled labor, and lack of or inadequate assistance for private building. Moreover, the increase of urban population worsened an already desperate situation. Consequently, new housing construction was

concentrated in Tiranë, Vlorë, Elbasan, Shkodër, Durrës, and Korçë, as well as in other industrial and mining sites.

According to the results of a 2001 census, there are about 520,936 residential buildings in the country containing about 785,000 dwellings. Most of the existing stock (29%) was built 1961–80. About 27% of all units were built before 1945. Only about 120,000 (15%) units were built 1991–2001. About 30% of all dwelling spaces (over 50% of urban units) are block flats that were constructed and owned by the government during the Communist era. (Most public housing was privatized during the period from 1992–93.) In 2001, there were 253 dwelling units per 1,000 people and an average of 1 household of about 4.46 people lived in each occupied dwelling. About 13% of all dwellings were vacant in 2001.

A 1998 Household Living Condition survey indicated that about 74% of rural households did not have an indoor toilet and 54% did not have access to running water. In comparison, 18% of urban households were without an indoor toilet and 5% lacked running water. The survey also indicated that about 95% of all units were owned by an occupant. The most common form of housing construction is a concrete frame filled with brick or block in-fill. Tiranë is the largest urban settlement and the site of 17% of the country's housing units (over 134,000 units in 2001).

#### 4<sup>3</sup> EDUCATION

The adult literacy rate for 2004 was estimated at about 98.7%, with 99.2% for males and 98.3% for females. Public expenditures on education were estimated at 2.6% of GDP in 2003.

Preschool training for children ages three through six is common but not obligatory. The basic educational program lasts for eight years (ages 6 to 14) and is divided into two cycles of four years each. In 2003, the average enrollment for primary school was about 95%. The pupil to teacher ratio for primary school was at about 21:1 in 2003. Secondary education consists of a four-year program. Vocational programs of three to five years are also open to students who have passed their basic educational requirements. Enrollment in secondary school was at about 77% in 2003. The academic year runs from October to June. The educational system is regulated through the Ministry of Education and Science.

Institutes of higher learning include two agricultural schools, one institute for fine arts, one institute of physical culture, and three teacher-training institutes. In 1957, the Institute of Sciences was elevated to university rank, and Tiranë State University became the first and only institution of university status in Albania. It was later renamed Enver Hoxha University of Tiranë. In 1971, two more universities were founded—Universiteti I Korie and Universiteti Bujguesor I Tiranës. In 1991, the University of Shkodër was established. Approximately 16% of the adult population was enrolled in tertiary education programs in 2003.

#### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The largest library in Albania is the National Library in Tiranë (1922) with over one million volumes. The University of Tiranë library has 700,000 volumes. Tiranë also has several university libraries with specialized collections, including the Higher Agricultural Institute Library (126,000 volumes) and the Fine Arts Institute Library (40,000 volumes). Albania's Public Assembly maintains a library of 41,000 volumes, also in Tiranë. Public libraries exist in many communities with notable ones in Elbasan

(284,000 volumes), Shkodër (250,000 volumes), Durrës (180,000 volumes), and Korçë (139,000 volumes). The Albanian Library Association (ALA), the nation's first and only national association for libraries and librarians, was established in 1993.

The principal museums are the Museum of Archaeology, the Fine Arts Gallery, the Museum of the Struggle for National Liberation, the Natural Science Museum, and the National Historical Museum, all located in Tiranë. There are some 30 provincial museums, among them the Berat Museum, known for its collection of historic documents; the Museum of Architecture in Berat; the Onufri Iconographic Museum, located in Berat's main castle and housing a distinguished collection of medieval icons; the Museum of Education in Elbasan; the Museum of Albanian Medieval Art in Korce; and the Shkodër Museum in Shkodër, a historical museum tracing Albanian culture to the Neolithic Age. The cities of Berat and Gjirokastër, the first dating from antiquity and the second from the Middle Ages, have been designated "museum-cities."

#### 45 MEDIA

In 2003, there were an estimated 83 mainline telephones for every 1,000 people; about 98,500 people were on a waiting list for mainline phone service installation. The same year, there were approximately 358 mobile phones in use for every 1,000 people.

Radio and TV broadcasting is governed by the National Council of Radio and Television (NCRT), a seven-member bipartisan body elected by the Parliament. There are at least 17 radio stations (13 AM and 4 FM). As of 2005, there were three television broadcast stations. The Albanian Radio and Television (RTSh) was the sole public broadcaster in 2004. About 30% of the station's budget comes from the government and the station tends to devote most of its coverage to government concerns. Television was introduced in 1961, color broadcasts in 1981. About 80% of the population rely on television as a primary source of news and information. In 2003, there were an estimated 260 radios and 318 television sets for every 1,000 people.

There are several daily newspapers published in Tiranë. In 2002 the four major ones were *Koha Jone* (Our Time, circulation 400,000); *Zëri i Popullit* (People's Voice—circulation 105,000), published by the Socialist Party; *Rlindia Demokratike* (The Democratic Revival—circulation 50,000), published by the Democratic Party; and *Bashkimi Kombetar* (circulation 30,000), published by the Democratic Front. There are about 200 publications overall, including daily and weekly newspapers, magazines, newsletters, and pamphlets. At least 18 papers and magazines were published in Greek, with primary distribution throughout the south. *Albanian Newspaper* (circulation 30,000) is published in Italian and *Albanian Daily News* is a daily paper published in English. Agjensia Telegrafike Shqiptare (Albanian Telegraphic Agency) is the official news agency.

Though the law protects freedom of speech and press, nearly all news stories are designed to suit the publisher's political and economic interests. The Albanian Telegraphic Agency is the primary news service.

In 2004, the country had about 455 Internet hosts. In 2003, there were 11.7 personal computers for every 1,000 people and 10 of every 1,000 people had access to the Internet.

#### 46 ORGANIZATIONS

Trade unions in Albania were prohibited until 1991. Before 1991 the official trade unions of the country were responsible for promoting the production goals of the country's Communist government. In 1991, independent trade unions were established to promote the rights of workers. The Union of Independent Trade Unions is the most important umbrella trade organization. Other trade unions operate in the defense, agriculture, food processing, and mining sectors of the economy. The Chamber of Commerce of the republic of Albania promotes the economic and business activities of the country in world markets. Other chambers of commerce are located in Shkoder, Durrës, and Gjirokastër. The Foreign Investors Association promotes foreign investment within the country. The Albanian Consumers Association is based in Tiranë. There are a number of national professional medical organizations, such as the Albanian Medical Association and the Albanian Dental Association. The Organic Agriculture Association was established in 1997 and Tiranë is the site of the Regional Environmental Center for Central and Eastern Europe.

The Open Society Foundation for Albania is a nonprofit organization established in 1992 to encourage the process of the democratization of Albanian society. It is sponsored in part by the Soros Foundation Network, a fund established by American philanthropist George Soros.

There are a number of youth organizations in the country. The Albanian International Youth Committee (AIYC) serves as the major nongovernmental youth platform that encompasses several different youth and student organizations. It is supported by the Albanian Youth Federation (AYF) and seeks to represent the views of organized Albanian youth. A youth scouting movement (Beslidhja Skaut Albania) is active in the country. The World Organization of Scouting opened a national chapter in Albania (Beslidhja Skaut Albania) in 2005. There are also organizations of the YMCA/YWCA.

The Red Cross and the Red Cross Youth have active chapters in the country. There are also chapters of the Lions Club and Kiwanis International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Albania was once the most inaccessible country in Eastern Europe, with tight entry regulations keeping most Western visitors out. In the early 1980s, persons explicitly forbidden to visit the country were US citizens, Soviet citizens, and full-bearded men. However, since the advent of democracy, Albania has slowly become accessible to the outside world. Tourists from the United States, New Zealand, Australia, and members of the European Union and the EFTA no longer have a visa requirement. Upon arrival a three-month entry level visa is issued, which can be extended. Citizens of other countries must obtain a visa prior to arrival from the nearest Albanian embassy. In promoting travel to Albania, the official tourist agency cites the Adriatic beaches, especially at Durrës, Vlorë, and Sarandë, and the picturesque lakes. The most popular sports are football (soccer), gymnastics, volleyball, and basketball.

In 2003, there were 557,210 visitor arrivals; tourists spent a total of \$537 million. Hotel rooms numbered 4,161. The average length of stay was about three nights.

In 2004, the US Department of State estimated the daily cost of staying in Tiranë at \$205. Other areas were estimated at \$106 per day.

#### 48 FAMOUS ALBANIANS

Much Albanian popular lore is based on the exploits of the national hero Gjergj Kastrioti (known as Scanderbeg, 1405–68), who led his people against the Turks.

Ahmet Bey Zogu (1895–1961), shepherd, military commander, minister of the interior, and premier, was elected first president of the new republic in 1925; in 1928, when Albania became a kingdom, he ascended the throne as Zog I. After Italian forces occupied Albania in April 1939, he fled the country, dying in exile in southern France. Two major political leaders were Enver Hoxha (1908–85), postwar Albania's first premier, minister of foreign affairs, and defense minister; and Mehmet Shehu (1913–81), who replaced Hoxha as premier in 1954, when Hoxha became first secretary of the Workers Party's Central Committee.

Albania's written literature of a nationalist character first developed among Italo-Albanians in Calabria in the mid-19th century and among the Albanian intellectuals in Constantinople in the second half of the 19th century. Naim Erashëri (1846–1900), Albania's national poet, belonged to the Constantinople group. His most highly regarded works are *Bagëti e Bujqësi* (*Cattle and Land*), *Histori e Skenderbeut* (*History of Scanderbeg*), and a collection of short poems, *Lulet e Verës* (*Spring Flowers*). Kostandin Kristoforidhi (K. Nelko, 1827–95) translated the Old and New Testaments into Albanian and compiled a standard Albanian-Greek dictionary. Faik Konitza (1875–1942), prewar Albanian minister to Washington, edited a literary review, *Albania*, which became the focal publication of Albanian writers living abroad. Gjergj Fishta (1871–1940), a Franciscan friar who was active in the nationalist movement, wrote a long epic poem, *Lahuta e Malcís* (*The Lute of the Mountains*), which is regarded as a masterpiece of Albanian literature. Bishop Fan Stylian Noli (1882–1965), a political leader in the early 1920s, was Albania's foremost translator of Shake-

peare, Ibsen, Cervantes, and other world classics. Lasgush Poradeci (1899–1987) was a highly regarded lyric poet. Ismail Kadare (b.1926), winner of the Booker International Prize and candidate for the Nobel Prize in Literature, takes as his subjects contemporary Albanian society, the communist regime, and Albanian old traditions (*kanun*). Kadare's works include *Gjenerali i Ushtrisë së Vdekur* (*The General of the Dead Army*) and *Pallati i ëndrrave* (*The Palace of Dreams*).

#### 49 DEPENDENCIES

Albania has no territories or colonies.

# ANDORRA

Principality of Andorra

*Principat d'Andorra*

**CAPITAL:** Andorra la Vella

**FLAG:** The national flag is a tricolor of blue, yellow, and red vertical stripes. On the state flag (shown here) the yellow stripe bears the coat of arms.

**ANTHEM:** The *Himne Andorra* begins “El gran Carlemany mon pare” (“Great Charlemagne my father”).

**MONETARY UNIT:** Andorra has no currency of its own; the euro, adopted by both Spain and France, is used. There are coins of 1, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system and some old local standards are used.

**HOLIDAYS:** New Year’s Day, 1 January; National Festival, 8 September; Christmas, 25 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Landlocked Andorra lies in southwestern Europe on the southern slopes of the Pyrénées Mountains between the French departments of Ariège and Pyrénées-Orientales to the N and the Spanish provinces of Gerona and Lérida to the S, with a total boundary length of 120.3 km (74.6 mi).

Andorra is about 2.5 times the size of Washington, D.C., with a total area of 468 sq km (180 sq mi), extending 30.1 km (18.7 mi) E–W and 25.4 km (15.8 mi) N–S.

Andorra’s capital city, Andorra la Vella, is located in the southwestern part of the country.

## <sup>2</sup> TOPOGRAPHY

Andorra is situated in a single drainage basin, but its main stream, the Riu Valira, has two distinct branches and six open basins; hence the term “Valleys” (Les Valls) was traditionally employed as part of the name of the principality. The section of the river flowing through El Serrat by way of Ordino and La Massánan is the Valira del Nord, while that flowing through Canillo, Encamp, and Les Escaldes is the Valira d’Orient. Most of the country is rough and mountainous, and there is little level surface. All the valleys are at least 900 m (3,000 ft) high, and the mean altitude is over 1,800 m (6,000 ft). There are lofty peaks, of which the highest is Coma Pedrosa (2,946 m/9,665 ft).

## <sup>3</sup> CLIMATE

Because of its high elevation, Andorra has severe winters. The northern valleys are completely snowed up for several months. Most rain falls in April and October. Humidity is very low. Summers are warm or mild, depending on the altitude. There are considerable variations between maximum day and night temperatures.

## <sup>4</sup> FLORA AND FAUNA

The plant and animal life is similar to that found in the neighboring areas of France and Spain. Chestnut and walnut trees grow only in the area around Sant Julià de Lòria, the lowest village. Elsewhere, evergreen oaks still are common. Higher regions and many valleys have pines, firs, and various forms of subalpine and alpine plant life. At the highest altitudes there are no trees, but grass is plentiful during the summer. There are carnations, violets, bellflowers, and daisies, as well as blackberries, wild strawberries, and moss. Bears, wolves, foxes, martens, Pyrenean chamois, rabbits, hares, eagles, vultures, wild ducks, and geese may be found in isolated areas. The mountain streams contain trout, brochet, and crayfish.

## <sup>5</sup> ENVIRONMENT

Andorra was once heavily forested. One explanation for the name of the country is that it came from the Moorish word *aldarra*, meaning “place thick with trees.” Andorra’s mountainous environment attracts 12 million tourists each year. In recent decades, however, the forested area has been decreasing steadily. Overgrazing of mountain meadows by sheep, with consequent soil erosion, is another environmental problem. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammal: the common otter. The Apollo butterfly and the lesser horseshoe bat are vulnerable species.

## <sup>6</sup> POPULATION

The population of Andorra in 2005 was estimated by the United Nations (UN) at 74,000, which placed it at number 183 in population among the 193 nations of the world. In 2005, approximately 13% of the population was over 65 years of age, with another 15% of the population under 15 years of age. According to the UN, the

annual population rate of change for 2005–10 was expected to be 0.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 81,000. The population density was 164 per sq km (426 per sq mi).

The UN estimated that 92% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.35%. The capital city, Andorra la Vella, had a population of 21,000 in that year. Other leading towns are Les Escaldes, Sant Julià de Lòria, Encamp, and La Massánan.

The population is concentrated in the seven urbanized valleys that form Andorra's political districts.

## **7** MIGRATION

Immigration consists mainly of Spanish, Portuguese, and French nationals who intend to work in Andorra; these groups make up some 70% of the population. Spanish nationals account for the largest group of foreign residents, comprising approximately 43% of the population in 1999. There is also a small but rapidly growing group of African immigrants, especially from North Africa, working mostly in agriculture and construction. Immigrant workers are supposed to hold temporary work authorization permits, which are valid only as long as the job exists for which the permit was obtained. However, more than 4,000 immigrants did not have work permits in 1999, due to the fact that the quota for immigration is not as high as the number of workers needed in the country. In 2005, the net migration rate was estimated as 6.53 migrants per 1,000 population. In 2004, approximately 63% of the population was not born in Andorra. The government views the migration levels as satisfactory.

## **8** ETHNIC GROUPS

Native Andorrans made up only about 33% of the total population in 1998; they are of Catalan stock. About 43% of the population was Spanish, 11% were Portuguese, and about 7% were French. About 6% are from other groups.

## **9** LANGUAGES

The official language is Catalan. French, Portuguese, and Castilian are also spoken.

## **10** RELIGIONS

Traditionally, over 90% of all Andorrans are Roman Catholic. Though it is not an official state religion, the constitution acknowledges a special relationship with the Roman Catholic Church, offering some special privileges to that group. The Muslim community is primarily made up of North African immigrants. Other Christian denominations include the Anglican Church, Jehovah's Witnesses, the Reunification Church, the New Apostolic Church, and the Church of Jesus Christ of Latter-day Saints. There is a small community of Hindus.

## **11** TRANSPORTATION

A north-south highway links Andorra la Vella with the Spanish and French borders. Secondary roads and trails also cross the border but are sometimes closed in winter because of deep snows. There were 269 km (167 mi) of roads in 2001, of which 198 km (123 mi) were paved. As of 1995 there were 40,127 motor vehicles,

of which 35,941 were passenger cars and 4,186 were trucks, taxis, and buses.

Buses, the principal means of mass transit, provide regular service to Seo de Urgel and Barcelona in Spain, and to Perpignan in France. Among several cable cars, the most important operates between Encamp and Engolasters Lake. Vehicles from neighboring countries transport most merchandise.

Andorra does not have railways or commercial airports, but the airport at Seo de Urgel is only 20 km (12.5 mi) from Andorra la Vella. The nearest international airports are at Barcelona, Spain, located 215 km (134 mi) from Andorra, and at Toulouse, France, 165 km (103 mi) away. There is daily bus service from the Barcelona and Toulouse airports to Andorra.

## **12** HISTORY

According to one tradition, Charlemagne gave the region the name Andorra for its supposed likeness to the biblical town of Endor. Tradition also asserts that Charlemagne granted the Andorran people a charter in return for their help in fighting the Moors, and that Charlemagne's son Louis I, king of France, confirmed the charter.

It is generally agreed that Charles the Bald, the son of Louis, appointed the count of Urgel (now Seo de Urgel) overlord of Andorra and gave him the right to collect the imperial tribute. The bishop of Urgel, however, also claimed Andorra as part of the endowment of his cathedral. In 1226, the lords of the countship of Foix, in present-day south-central France, by marriage became heirs to the counts of Urgel. The quarrels between the Spanish bishop and the French counts over rights in Andorra led in 1278 to their adoption of a *paréage*, a feudal institution recognizing equal rights of two lords to a seigniorage.

In 1505, Germaine of Foix married Ferdinand V of Castile, thereby bringing the lordship of Andorra under Spanish rule. On taking over the kingdom in 1519, Emperor Charles V granted the lordship of Les Valls, as it was then known, to Germaine of Foix's line in perpetuity. Henry III of Navarre, who was also count of Foix, in 1589 ascended the French throne as Henry IV, and by an edict of 1607 established the head of the French state, along with the bishop of Urgel, as co-princes of Andorra.

In 1793, the French revolutionary government refused the traditional Andorran tribute as smacking of feudalism and renounced its suzerainty, despite the wish of the Andorrans to enjoy French protection and avoid being under exclusively Spanish influence.

Andorra remained neutral in the Napoleonic wars with Spain. Napoleon restored the co-principality in 1806 after the Andorrans petitioned him to do so. French title to the principality subsequently passed from the kings to the president of France.

Long an impoverished land having little contact with any nations other than adjoining France and Spain, Andorra after World War II achieved considerable prosperity through a developing tourist industry. This development, abetted by improvements in transport and communications, has tended to break down Andorra's isolation and to bring Andorrans into the mainstream of European history. Public demands for democratic reforms led to the extension of the franchise to women in the 1970s and to the creation of new and more fully autonomous organs of government in the early 1980s.

Andorra formally became a parliamentary democracy in May 1993 following approval of a new constitution by a popular referendum in March 1993. The new constitution retained the French and Spanish co-princes although with reduced, and narrowly defined, powers. Civil rights were greatly expanded including the legalization of political parties and trade unions, and provision was made for an independent judiciary. Andorra entered into a customs union with the European Communities (now the EU) in 1991 and was admitted to the UN on 28 July 1993. The country has been seeking ways to improve its export potential and increase its economic ties with its European neighbors. The financial services sector of the economy is highly important, given Andorra's status as a tax haven and its banking secrecy laws.

### 13 GOVERNMENT

The governmental system of Andorra is unique. The constitution adopted in 1993 retained the French and Spanish co-princes but reduced their powers. The co-princes are the president of France and the bishop of Urgel, Spain. The co-princes are represented in Andorra by permanent delegates and veguers. Both the delegates and veguers reside in Andorra and acquire Andorran nationality ex officio, but they are not typically native Andorrans.

Legislation is enacted by the General Council, consisting of 28 members (14 members chosen from the national constituency and 14 representing the 7 parishes), elected for a four-year term since December 1981.

As of 2005, the president of the General Council was Marc Forné Molné. The General Council designates as its head a first syndic (*syndic procureur général*) and a second syndic for the conduct of administration; upon election to their four-year terms, these syndics cease to be members of the council.

The right to vote, which at one time was limited to third-generation Andorran males of 25 years of age or over, by 1981 had been extended to include all native Andorrans of Andorran parentage (at age 21) and first-generation Andorrans of foreign parentage (at age 28). In October 1985, the voting age was lowered to 18 years. In October 1992, the suffrage was broadened to include spouses of Andorran citizens and long-term residents.

### 14 POLITICAL PARTIES

Prior to 1993, political parties were illegal in Andorra, though the Democratic Party of Andorra (formed in 1979) was tolerated. There have been two main factions in organized political life—conservatives and liberals. However, in the 2001 elections, three parties with distinct political tenets competed: the conservative Liberal Party of Andorra (PLA), the left-of-center Social Democratic Party (PS), and the Andorran Democratic Center Party (CDA).

The general election of December 1993, in which five parties gained representation, was the first under Andorra's new constitution. The results of the general election held April 2005 were as follows: the Liberal Party of Andorra (PLA), 14 seats; the Social Democratic Party (PS), 12; and the Andorran Democratic Center Party (CDA) 2.

### 15 LOCAL GOVERNMENT

Andorra is divided into seven parishes or districts: Andorra la Vella, Canillo, Encamp, La Massána, Escaldes-Engordany, Ordino,

LOCATION: 42°25' to 42°40' N; 1°25' E. BOUNDARY LENGTHS: France, 60 kilometers (37.3 miles); Spain, 65 kilometers (40.4 miles).

and Sant Julià de Lòria. Eligible voters in each of the districts elect members of its parish council (*comú*).

Parish councils administer local affairs. Each council generally consists of 8 to 14 members elected by universal suffrage for four-year terms at the same time as general councilors. Councils elect a senior consul and a junior consul.

### 16 JUDICIAL SYSTEM

The 1993 constitution guarantees an independent judiciary and the judiciary has in fact been independent. A Superior Council of Justice oversees and administers the judicial system. The Superior Council of Justice has five members. One member each is appointed by the two co-princes, the head of government, the president of the General Council, and members of the lower courts. Members of the judiciary are appointed for six-year terms. The judicial process is fair and efficient.

The new constitution also calls for respect for the promotion of liberty, equality, justice, tolerance, defense of human rights, dignity of the person, and privacy, and guarantees against arbitrary arrest and detention.

Under the current system, civil cases in the first instance are heard by four judges (*battles*). Appeals are heard in the Court of

Appeal. Final appeals in civil cases are brought before the Supreme Court of Andorra at Perpignan, France, or the Ecclesiastical Court of the Bishop of Seu d'Urgell, Spain.

Criminal cases are heard in Andorra la Vella by the Tribunal des Cortes, consisting of the veguers, and the judge of appeal, two judges, and two members of the General Council. Few criminal trials are held, and the principality's jail is used only for persons awaiting sentencing. Sentenced criminals have the choice of French or Spanish jails. The courts apply the customary law of Andorra, supplementing it where necessary with Roman law and customary Catalan law. Traditional laws are compiled in the Manual Digest of 1748 and the Politar of 1763; legal standards are found in the Instructions to Bailiffs of 1740.

## 17 ARMED FORCES

Andorra has no defense force, and the police force is small. The sole military expenses are for ammunition used in salutes at official ceremonies, the lone responsibility of Andorra's small army. France and Spain are pledged to defend Andorra.

## 18 INTERNATIONAL COOPERATION

Andorra was admitted to the United Nations on 28 July 1993. It participates in the ECE, ICAO, ITU, UNESCO, UNCCD, IC-CROM, WHO, WIPO, WTO, and is an observer at the WTO. It is also a member of the Council of Europe, the ICCT, and Interpol. Andorra joined the OSCE on 25 April 1996. As of 1991, Andorra has had a special agreement with the European Union. Andorra is part of the Organization for the Prohibition of Chemical Weapons. In cooperation on environmental issues, Andorra is part of the Basel Convention.

## 19 ECONOMY

The Andorran economy is primarily based on trade and tourism, with the traffic between France and Spain providing most of the revenue. Andorra is attractive for shoppers from France and Spain because of low taxes. However, Andorra's comparative advantage has recently eroded as the economies of France and Spain have been opened up, providing broader availability of goods and lower tariffs. Approximately 10 million tourists visit Andorra each year, drawn by Andorra's summer and winter resorts.

The Andorran banking system is of significant importance as a tax haven for foreign financial transactions and investments.

Prior to the creation of the European Union there was an active trade in consumer goods, which were duty-free in Andorra. With the creation of the EU, Andorran manufactured goods remain tariff free, but Andorran agricultural products are subject to EU tariffs. The production of agricultural goods is limited, though, as only 2% of the land is arable. Most food has to be imported.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Andorra's gross domestic product (GDP) was estimated at \$1.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$26,800. The annual

growth rate of GDP was estimated at 2%. The average inflation rate in 2004 was 4.3%.

## 21 LABOR

Total employment as of 2001 was estimated at 33,000. As of 2000, an estimated 1% were employed in the agricultural sector, with 21% employed in industry and 78% in the services sector. There is virtually no unemployment in Andorra.

Under the constitution passed in 1993, workers were granted the right to form and maintain trade union associations without prejudice, but implementation has not been provided. Associations must register with the government, and in 2002, there were 600 such associations. However, no unions existed as of that year. The right to strike is not covered under the law, nor does it specifically cover collective bargaining. With no business regulation or registration requirements, smuggling goods between France and Spain is a leading source of informal employment.

There are government-mandated health and safety standards, which are regularly enforced with routine inspections. There is a government-set minimum wage, which was \$7.20 per hour in 2005. The minimum working age is 18, with some exceptions allowing 16- and 17-year-olds to work. The workweek is limited to 40 hours, with an additional 66 hours per month of overtime allowed.

## 22 AGRICULTURE

Because of Andorra's mountainous character, only about 2% of the land is suitable for crops. However, until the tourism sector in Andorra experienced an upsurge, agriculture had been the mainstay of the economy. Hay, tobacco, and vegetables must be irrigated; cereals, mainly rye and barley, are dry-cropped. Most of the cropped land is devoted to hay production for animal feed. Since there is insufficient sunlight on northward-facing slopes and the lands in shadow are too cold for most crops, some southward-facing fields high in the mountains must be used even though they are a considerable distance from the farmers' homes.

Tobacco, the most distinctive Andorran crop, is grown on the best lands. Andorran tobacco is usually mixed with eastern tobaccos, because of its strong quality. Other farm products include cereals, potatoes, and garden vegetables. Grapes are used mainly for raisins and for the making of anisette. The lack of modern methods on Andorra's family farms is causing the agricultural sector to decrease in importance. Most food is now imported.

## 23 ANIMAL HUSBANDRY

For many centuries, until eclipsed by tourism and other service industries, sheep raising was the basis of Andorra's economy. Andorran mules are still greatly prized. Cattle, sheep, and goats are raised both in the valleys and in some of the higher areas. Cattle are raised mainly for their meat, and there are few dairy cows. When the cattle move upward in the spring, entire families move to temporary villages in the mountains to herd, mow, and plant. Large droves of sheep and goats from France and Spain feed in Andorra in the summer, and the Spanish-owned animals in particular are looked after by Andorran shepherds. On their way back to their native land, many of the animals are sold at annual fairs; the Spanish fairs are usually held in Andorra in September and

the French in November. Andorra's own animal fairs are also held in the fall.

Livestock includes an estimated 9,000 sheep, 1,100 cattle, and 200 horses. Meat production has increased in recent years, but imports account for about 90% of total meat consumption. The milk produced is sufficient for domestic consumption, and some milk has been exported to Spain.

## 24 FISHING

The streams are full of trout and other freshwater fish, but Andorra imports most fish for domestic consumption from Spain.

## 25 FORESTRY

About 10,000 hectares (24,700 acres), or 22% of the total land area, is forested. Fuel wood may be freely gathered by anyone, but it may not be bought or sold. Wood needed for building purposes is cut in rotation from a different district each year. For centuries logs have been shipped to Spain. Most reforestation is in pines.

## 26 MINING

For hundreds of years, Andorran forges were famous in northern Spain. There are still iron ore deposits in the valley of Ordino and in many of the mountain areas, but access to them is difficult. In addition to iron, small amounts of lead are still mined, and alum and building stones are extracted. The sulfurous waters of Les Escaldes are used in washing wool.

## 27 ENERGY AND POWER

The largest hydroelectric plant, at Encamp, has a capacity of 26.5 MW and provides about 40% of Andorra's electric power needs, with most of the remainder being imported from Spain. The total installed capacity in 1991 was 35,000 kW. Energy production in 1992 totaled 140 million kWh.

There are four gas companies, with Andor Gas supplying propane and the others butane.

## 28 INDUSTRY

Manufacturing accounted for approximately 5% of GDP in 2004. Andorra produces cigars, cigarettes, textiles, leather, building materials, and furniture, both for local use and for export. Woolen blankets and scarves are made at Les Escaldes.

Many enterprises produce frozen foods, pastry, and other commodities. There are distilleries for the production of anisette, vermouth, liqueurs, and brandy.

Several firms manufacture woolen goods. There are a number of construction companies, the largest producing building materials from iron.

## 29 SCIENCE AND TECHNOLOGY

Students wishing to pursue scientific and technical careers usually receive their training abroad. The Andorra Scientific Society in Andorra la Vella was founded in 1983. The National Motor Car Museum in Encamp, founded in 1988, exhibits cars, motorbikes, and bicycles dating from 1898 to 1950.

## 30 DOMESTIC TRADE

Andorra la Vella has many stores where commodities of all kinds and origins may be purchased. The larger villages have small general stores. The French, Spanish, and Andorran animal fairs that take place at Andorra la Vella, Encamp, Ordino, and elsewhere are attended by most Andorrans and by many French and Spanish farmers.

There is a high level of competition between the large department stores and the small shops. There are some 600 retail establishments in the country, of which the department and jewelry stores are the most numerous, followed by food and clothing outlets. Trade in consumer goods is very active, particularly with French and Spanish shoppers who are attracted by the lower tax rates on purchases. Handicrafts, cigars, cigarettes, and furniture are major products manufactured for both domestic and export markets.

There are over 270 hotels and 400 restaurants catering to the thriving tourist trade.

## 31 FOREIGN TRADE

Owing to the large traffic of unaccounted goods across Andorra's borders, official statistics do not reflect the true volume of transactions. Of recorded trade, close to half is with Spain and over one-quarter with France. The majority of imports consist of consumer goods sold to visitors. Reported imports exceed recorded exports by some 26:1.

A customs union with the EC (now the EU) took effect in 1991, allowing industrial goods to pass between Andorra and EC members under a uniform customs tariff. The EU's external tariffs are to be applied by Andorra to its trade with non-EU members.

## 32 BALANCE OF PAYMENTS

Most goods have to be imported, and there is a structural trade deficit. Owing to the large traffic of unaccounted goods across Andorra's borders, official statistics do not reflect the true volume of transactions.

### Principal Trading Partners – Andorra (2002)

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

### **3<sup>3</sup> BANKING AND SECURITIES**

An unofficial Convention of Banks and Bankers periodically attends to financial affairs. The banking system attracts foreign financial transactions and investments because there are no direct taxes in Andorra.

There were six private banks in 1997: Banc Internacional d'Andorra, Banca Mora, Banca Privada d'Andorra, Credit Andorra, Banc Agricol i Comercial d'Andora, and Banca Reig. About half of all deposits are made in pesetas, with one-fourth in francs and the balance in other currencies.

There is no stock exchange, and therefore, stocks and bonds are not traded in Andorra.

### **3<sup>4</sup> INSURANCE**

The principal firm is the Andorra Insurance Co., established in 1951, which provides coverage that includes life, fire, accident, and plate glass. There are several other insurance companies, including Assegurances Bercia, Assegurances GAN, Assegurances Generali France, Assegurances Generals, Assegurances la Catalana, Assegurances La Equitativa, Assegurances Layetana, Assegurances Lepanto, Assegurances Riba, Assegurances Royal Insurance, Assegurances Santamaria Cosan, Assegurances Schweiz, Atlantis Compañia d'Assegurances, CMA, Commercial Union Assegurances, Compañia Andorrana d'Assegurances, Financera d'Assegurances, Generali, Grup Assegurador Catalana Occident, Multinacional Asseguradora, Patrimoine Assegurances, Santamaria Cosan Assegurances, Unio I Aliança de Previsio, and Zürich Delegacio.

### **3<sup>5</sup> PUBLIC FINANCE**

The US Central Intelligence Agency (CIA) estimated that in 1997 Andorra's central government took in revenues of approximately \$385 million and had expenditures of \$342 million. Revenues minus expenditures totaled approximately \$43 million.

### **3<sup>6</sup> TAXATION**

There is no income tax on the individual or corporate level. Employees pay social security taxes at rates of 5-9%; employers pay 13%. As of October 1991, a value-added tax had been enacted and was expected to impose charges of 1-7% on the production and import of goods. Also scheduled for implementation under the 1992 budget law were a registration tax on certain activities, to provide 8.6% of government revenues, and a tax on electricity consumption and telephone services to contribute 1.6% of state revenues.

### **3<sup>7</sup> CUSTOMS AND DUTIES**

Andorra is a member of the EU Customs Union and generally abides by the EU trade regime. However, its agricultural exports are treated as of non-EU origin and, therefore, are subject to ordinary tariffs.

### **3<sup>8</sup> FOREIGN INVESTMENT**

Andorra has no formal investment incentive programs, other than offering some financial support for the development of tourist facilities. Andorran banks attract foreign depositors and investors,

in part due to the lack of taxes but also due to Andorra's bank secrecy laws. As such, this has long made Andorra a tax haven and a refuge for smugglers. In 2004, however, Andorra was obliged to accept the EU's Savings Tax Directive, and as of July 2005, imposes a withholding tax of 15% on return of savings paid to citizens of EU member states, of which 75% is remitted onwards to the states concerned. In 2001, a Department for the Prevention of Money Laundering was established, which is authorized to carry out unannounced inspections and hands information to the public prosecutor's office or to the government.

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

Government policy is to encourage local industries and to promote private investment. In addition to handicrafts, manufacturing includes cigars, cigarettes, and furniture. Tourism accounts for 80% of gross domestic product (GDP), and the banking sector significantly contributes to the economy.

In 2002, Andorra adopted the EU's common currency, the euro. In 2004, Andorra signed a series of accords with the EU in the fields of economic, social, and cultural cooperation.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

There is a social welfare system that was first introduced in 1966. Programs include old-age, disability, and survivors' pensions, health and maternity coverage, and workers' compensation.

There is no legal discrimination against women, although they have only enjoyed full suffrage since 1970 and play only a very minimal role in the country's government. Women's rights advocates have reported that pregnant women frequently lose their jobs. On average, women earn 25% less than men. In 2004, violence against women declined, but there was an increase in child abuse. Children's welfare is promoted by the government.

The constitution prohibits discrimination on the basis of birth, race, sex, origin, religion, or any other personal or social condition. Foreign nationals, primarily from Spain, France, Portugal, and the United Kingdom, account for over 40% of the population. While accorded the same rights and freedoms as citizens, foreigners lack access to some of the social benefits provided by law. Recent legislation has improved living conditions for immigrant workers, but many still have only temporary work permits and face deportation if they lose their jobs.

The rights of freedom of speech, press, peaceful assembly, religion, and movement are provided by the constitution and are respected in practice.

### **4<sup>1</sup> HEALTH**

Infant mortality was estimated at 4.05 per 1,000 births in 2005. Life expectancy for that year was estimated at 83.5 years, the highest in the world. The 1999 birth rate was 10.27 and the overall mortality rate was 5.5 per 1,000 people. In the same year the fertility rate was 1.25. In 2004, Andorra had 259.4 physicians, 302.4 nurses, 1.8 midwives, and 62 dentists per 100,000 people.

### **4<sup>2</sup> HOUSING**

Most Andorran houses are made of stone. Since the flat land is used for farm crops, the rural houses are frequently backed against the mountainsides. The high villages (*cortals*) are situated on a

line between the highest fields and the lowest limits of high-level pastures. Isolated houses (*bordes*) are found at higher elevations. Many families maintain temporary dwellings in the highest pasture areas. All residents have access to safe water and sanitation systems.

### 4<sup>3</sup> EDUCATION

By law, students must attend school between the ages of 6 and 16. There are essentially three coexisting school systems in the country: French, Spanish, and Andorran. The French government partially subsidizes education in Andorra's French-language schools; schools in the southern section, near Spain, are supported by the church. The local language, Catalan, has been introduced at a school under the control of the Roman Catholic Church. About 50% of Andorran children attend French primary schools, and the rest attend Spanish or Andorran school. In general, Andorran schools follow the Spanish curriculum, and their diplomas are recognized by Spain. Primary school enrollment in 2003 was estimated at about 89%; 88% for boys and 90% for girls. The same year, secondary school enrollment was about 71%; 69% for boys and 74% for girls. The pupil to teacher ratio for primary school was at about 12:1 in 2003; the ratio was about 7:1 for secondary classes.

The University of Andorra was established in July 1997. It has a small enrollment and mostly offers long-distance courses through universities in Spain and France. The majority of secondary graduates who continue their education attend schools in France or Spain. In 2003, about 8% of eligible adult students were enrolled in tertiary programs. Virtually the entire adult population is literate. Andorra also has a nursing school and a school of computer science.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library and National Archives founded in 1974 and 1975 respectively are located in Andorra la Vella; the library holds over 45,000 volumes. Small museums reflect a variety of interests. The Museu Nacional de l'Automòbil (National Automobile Museum) is located in Encamp. Museu Postal (Postal Museum) is in Ordino. Also in Ordino is the Nikolai Siadristy Museum—Museum of Miniatures, the first permanent museum of the artist Siadristy's miniatures.

### 4<sup>5</sup> MEDIA

Automatic telephone service was begun in 1967. In 2001, there were 35,000 mainline and 23,500 mobile cellular phones in use. Postal and telegraph services are handled by the Spanish and French administrations; a telex system was installed in 1970.

ORTA (public) and Radio Valira, are radio broadcast stations operated by Andorrans and supervised by the General Council. Andorrans also receive broadcasts from Spain and France. As of 1998, there were 15 FM radio stations. Andorra does not have its own television stations; television transmission is provided through technical accords with the Spanish and French government networks. In 1997 there were 16,000 radios and 27,000 television sets in use throughout the country.

The two main daily papers are the independent publications of *Diari D'Andorra* (*Andorra Daily*—2002 circulation 3,000) and *El*

*Peridico de Andorra*. *Poble Andorra* is a major weekly publication with a circulation of about 3,000. Other newspapers, with smaller circulations, are the dailies *Independent* and *Informacions Diari*, and the weeklies *Correu Andorra* and *Informacions*. French and Spanish newspapers are also widely available.

As of 2001, there were an estimated 24,500 Internet users. In 2004, there were about 4,144 Internet hosts in the country.

The Andorran constitution ensures freedom of speech and press, and the government is said to respect these rights in practice.

### 4<sup>6</sup> ORGANIZATIONS

There are about 10 human rights associations in the country, the most active being the Association of Immigrants in Andorra (AIA), which defends the rights of foreign residents. The Association of Andorran Women (AAW) focuses on women's rights.

The Andorra Chamber of Commerce, Industry and Services works to support commercial and economic growth in Andorra by promoting the educational government in the administration of practical training for companies; coordinating trade fairs, exhibitions, and conventions; and supporting research programs. There are networking and educational associations representing a variety of professions, such as the Andorran Medical Association, the Andorran College of Dentists, the Andorran Bar Association, and the Andorran College of Engineers.

The Youth Council of Andorra (Area de Jovent), founded in 1988, serves as a nongovernmental platform for major youth and student organizations. The General Union of Andorran Students (Agrupacio General dels Estudiants d'Andorra (AGEA), founded in 1990, is a union of university students. Other youth NGOs include: the Andorran Red Cross Youth, Andorran Catholic Student Movement, and youth associations of Andorran Kiwanis, Lions and Rotary clubs. Andorra also sponsors an organization of the Special Olympics and a few national sports organizations, including groups for squash and sailing.

There are national chapters of the Red Cross Society, Caritas, and UNICEF.

### 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

Tourism has brought considerable prosperity to Andorra and now constitutes the principal source of income. Visitors, mostly from France and Spain, come to Andorra each summer to attend the fairs and festivals, to buy consumer items at lower prices than are obtainable in the neighboring countries, and to enjoy the pleasant weather and beautiful scenery. There is skiing at Pas de la Casa and Soldeu in winter.

Shrines and festivals are both key attractions to tourists. Romanesque churches and old houses of interest are located in Ordino, Encamp, Sant Julià de Lòria, Les Escaldes, Santa Coloma, and other villages. The best known is the shrine of Our Lady of Meritxell, Andorra's patroness, between Canillo and Encamp.

Pilgrims come from France and Spain to pay homage on 8 September, the festival day of Andorra's patroness. Each of the larger villages has its own festival during which the *sardana*, Andorra's national dance, is performed.

There is an International Jazz Festival at Escaldes-Engordany in July and the International Music Festival of Ordino in September.

In 2003, about 3,138,000 tourists visited Andorra, of whom 72% came from Spain, a 3% decline from 2002. Visitors need a valid passport to enter Andorra. No visa is required.

In 2003, the US Department of State estimated the daily cost of a stay in Andorra at \$226.

#### **48 FAMOUS ANDORRANS**

There are no internationally famous Andorrans.

#### **49 DEPENDENCIES**

Andorra has no territories or colonies.

# ARMENIA

Republic of Armenia  
*Hayastani Hanrapetut 'Yun*

**CAPITAL:** Yerevan

**FLAG:** Three horizontal bands of red (top), blue, and gold.

**ANTHEM:** *Mer Hayrenik*.

**MONETARY UNIT:** The dram (introduced 22 November 1993) is a paper currency in denominations of 10, 25, 50, 100, 200, and 500 drams. The dram (֏) replaced the Armenian ruble and the Russian ruble (₺). Currently ֏1 = \$0.00225 (or \$1 = ֏445) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year's Day, 1–2 January; Christmas, 6 January; Day of Remembrance of the Victims of the Genocide, 24 April; Peace Day, 9 May; Anniversary of Declaration of First Armenian Republic (1918), 28 May; Public Holiday, 21 September; Day of Remembrance of the Victims of the Earthquake, 7 December; New Year's Eve, 31 December.

**TIME:** 4 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Armenia is a landlocked nation located in southeastern Europe/southwestern Asia. Comparatively, the area occupied by Armenia is slightly smaller than the state of Maryland with a total area of 29,800 sq km (11,506 sq mi). Armenia shares boundaries with Georgia on the N, Azerbaijan on the E and S, Iran on the S, and Turkey on the W and has a total boundary length of 1,254 km (778 mi). Armenia's capital city, Yerevan, is located in the west-central portion of the country on the Hrazdan River.

## <sup>2</sup> TOPOGRAPHY

The topography of Armenia features the high Armenian Plateau and three primary mountain ranges, the Lesser Caucasus Mountains in the north, the Vardenis Range in central Armenia, and the Zangezur Range in the southeast. There is little forest land and a few fast flowing rivers. The Aras River Valley contains good soil. Mount Aragats, an extinct volcano in the plateau region, is the highest point in Armenia at 13,425 ft (4,095 m). The nation occasionally suffers from severe earthquakes. In December 1988, a massive earthquake struck near the city of Kumayri, killing over 25,000 people.

## <sup>3</sup> CLIMATE

Armenia's climate ranges from subtropical to alpine-like in the mountains. The mean temperature in midsummer is 25°C (77°F). In midwinter, the mean temperature is 0°C (32°F). Rainfall is infrequent. The capital city receives 33 cm of rain annually (13 in), though more rainfall occurs in the mountains.

## <sup>4</sup> FLORA AND FAUNA

Armenia is located in what geographers call the Aral Caspian Lowland. The country has broad sandy deserts and low grassy pla-

teaus. The region is home to European bison, snow leopards, cheetahs, and porcupines.

## <sup>5</sup> ENVIRONMENT

In 2000, Armenia's chief environmental problems resulted from natural disasters, pollution, and warfare. A strong earthquake in 1988 resulted in 55,000 casualties. Radiation from the meltdown of the nuclear reactor facility at Chernobyl in the former Soviet Union also polluted the environment. The nation's soil has also been polluted by chemicals including DDT and the Hrazdan and Ares rivers have also been polluted. The war between Armenia and Azerbaijan has strained the country's economy, limiting the resources that can be devoted to environmental preservation. It has also led to an energy blockade that has caused deforestation as trees are cut for firewood. Yet another environmental hazard is the restarting of the Metsamor nuclear power plant, which has been brought online without the safety systems recommended by the IAEA.

From 1990–1995, deforestation occurred at an average annual rate of 2.69%. However, some reforestation projects have been initiated. As of 2003, 7.6% of the total land area in Armenia is protected, including two sites protected as Ramsar wetlands: Lake Sevan and Lake Arpi. As of 2002, 11 of the nation's 84 species of mammal were threatened, as were 4 species of bird and 1 higher plant species. Endangered species include the Barbel sturgeon, Dahl's jird, and the field adder.

## <sup>6</sup> POPULATION

The population of Armenia in 2005 was estimated by the United Nations (UN) at 3,033,000, which placed it at number 133 in population among the 193 nations of the world. In 2005, approximately 11% of the population was over 65 years of age, with another 22% of the population under 15 years of age. There were 87

males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.3%; this low rate, attributed to a decline in fertility rates and migration, was considered too low by the government. The projected population for the year 2025 was 3,258,000. The population density was 102 per sq km (264 per sq mi).

The UN estimated that 65% of the population lived in urban areas in 2005, and that population in urban areas was changing at an annual rate of -0.43%. The capital city, Yerevan, had a population of 1,079,000 in that year. Other urban centers and their estimated populations include Kumayri (206,600) and Kirovakan (170,200). Most of the cities and towns are located along the river valleys in the north and west.

## 7 MIGRATION

Independent Armenia is only a portion of historic Armenia, which at its greatest extent also included lands now in Turkey, Iran, and Azerbaijan. There are Armenian communities in these countries and also in Russia, Georgia, Lebanon, Syria, and the United States. Between 1988 and 1993 around 360,000 ethnic Armenians arrived in Armenia from Azerbaijan as a result of the conflict over the disputed territory of Nagorno-Karabakh. In 1995 a citizenship law, which included special provisions making naturalization much easier for refugees from Azerbaijan, was enacted. By the end of January 2004, the number of refugees from Azerbaijan obtaining Armenian citizenship topped 65,000. One of the largest naturalizations of refugees in recent decades, United Nations High Commissioner for Refugees (UNHCR) supported the process with financial and material assistance. In 2003, there were 50,000 internally displaced persons (IDP) within the country. The UNHCR reported that at the end of 2004 there were 235,235 refugees in Armenia and 68 asylum seekers, of which over 50,000 refugees were assisted by UNHCR. From 1998 to 2003, except for 2000, remittance flows to Armenia grew by 20% per year.

Armenia has a net migration rate of -6.1 migrants per 1,000 population as of 2005. The government views both the immigration and emigration levels as too high.

## 8 ETHNIC GROUPS

A 2004 report indicates that Armenians comprise an estimated 98% of the population. Minority groups include the Azeri, Russians, Ukrainians, Belarussians, Jews, Assyrians, Georgians, Greeks, and Yezidi Kurds. As of 1993, most of the Azeris had emigrated from Armenia.

## 9 LANGUAGES

Armenian is spoken by about 97% of the population. Armenian belongs to an independent branch of the Indo-European linguistic family. It is a highly inflective language, with a complicated system of declensions. It is agglutinative, rich in consonants, and has no grammatical gender. The vocabulary includes many Persian loan words. There are two main dialects: East Armenian, the official language of Armenia, and West, or Turkish, Armenian. The alphabet, patterned after Persian and Greek letters, has 38 characters. Armenian literature dates from the early 5th century AD. Yezidi is

spoken by about 1% of the population; Russian and other various languages are spoken by the remaining 2%.

## 10 RELIGIONS

In 2005, about 90% of the population were nominally members of the Armenian Apostolic Church. Catholic churches, both Roman and Mekhitaris (Armenian Uniate), had an estimated 180,000 adherents. The next largest group was the Yezidi, a Kurdish ethnic and religious group that practice a mixture of beliefs from Islam, Zoroastrianism, and animism; they had an estimated 30,000 to 40,000 members. Other Christian denominations include Pentecostals, Greek Orthodox, Jehovah's Witnesses, the Armenian Evangelical Church, Baptists, Seventh-Day Adventists, the Church of Jesus Christ of the Latter-day Saints (Mormons). Most Jews, Muslims, and Baha'is are located in Yerevan.

Armenia became a Christian country in the 4th century AD. In 1991, the Law on Freedom of Conscience established the separation of church and state but granted the Armenian Apostolic Church status as the national church. All religious denominations and organizations outside of the Armenian Apostolic Church must be registered in order to operate. Those that are not registered are prohibited from publishing newspapers or magazines, sponsoring television or radio broadcasts, and renting meeting space. In 1997 amendments tightened registration requirements by raising the minimum number of adult members to qualify for registration from 50 to 200. The laws also indicate that a petitioning organization must adhere to a doctrine that is based on "historically recognized Holy Scriptures." Registration and monitoring of religious groups was originally under the jurisdiction of a government-based Council of Religious Affairs. In 2002 the president abolished the council and announced that a new office, under the prime minister, would handle matters of religion. The National Minorities and Religious Affairs Department was also established by the government.

The Armenian Apostolic Church is a member of the World Council of Churches.

## 11 TRANSPORTATION

As of 2004, there were 825 km (513 mi) of 1.520-m (broad) gauge railroad, not including industrial lines. An estimated 828 km (515 mi) are electrified. Supplies that arrive from Turkey by rail must be reloaded, due to a difference in rail gauges. Goods that cross Georgia or Azerbaijan are subject to travel delay from strikes and blockages and may be interdicted.

As of 2003, the highway system included 7,633 km (4,748 mi) of roads, all of which are paved. Of that total, 1,561 km (971 mi) are expressways.

There were an estimated 16 airports as of 2004, 11 of which had paved runways (as of 2005). The Zvartnots airport at Yerevan is fairly well maintained and receives scheduled flights from Moscow, Paris, New York, London, Amsterdam, Athens, Beirut, Dubai (UAE), Frankfurt, Istanbul, Prague, Tehrān, Vienna, Zürich, and Sofia. In 2003, 367,000 passengers were carried on scheduled domestic and international flights.

Cargo shipments to landlocked Armenia are routed through ports in Georgia and Turkey.

## 12 HISTORY

Armenian territories were first united into an empire under Tigranes the Great (95–55 BC), whose extensive lands included parts of Syria and Iraq. Defeated by the Roman general Pompey, Armenia became a client state of the Roman Empire. Rome and Sasanian Persia partitioned Armenia, and after them Byzantium and the Ummayed and Abbasid caliphates controlled parts of Armenia. Armenia adopted Christianity at the beginning of the 4th century AD. The Seljuk Turks invaded Armenia in the 11th century, followed by Genghis Khan and Timur, leading to mass emigrations. Persia and Ottoman Turkey divided Armenia into eastern and western portions in the 16th–18th centuries. Russia took over Persia's holdings in 1828, and during the latter part of the 19th century both Russia and Turkey carried out harsh repression against nationalist activities among Armenians under their sway, leading to many deaths and mass emigrations. During World War I, Ottoman Turkey carried out forced resettlement and other harsh policies against Armenians, which Armenians term their national genocide. The historical experience remains a contentious issue in Armenian-Turkish relations.

After the Bolshevik revolution in Russia in 1917, Armenia declared independence in May 1918. Armenia's population of 750,000 included as many as 300,000 who had survived flight from Turkey, and the heavy burden of independence among hostile neighbors (it clashed with Turkey, Georgia, and Azerbaijan) and an inhospitable climate may have led to as many as 150,000 deaths from famine and disease. Although the August 1920 Treaty of Sevres accorded international recognition of Armenian independence, the Russian Red Army conquered Armenia in November 1920. In 1922, Armenia was named part of a Transcaucasian Soviet Federated Socialist Republic, which encompassed lands now in Armenia, Azerbaijan, and Georgia, but it became a separate union republic in 1936. During the 1920s, Moscow drew internal borders in the Caucasus, which resulted in Nagorno-Karabakh (NK), then a mostly ethnic Armenian region, being incorporated into Azerbaijan, separated from the rest of Soviet Armenia by a few miles of Azerbaijani territory. NK was given the status of an "autonomous republic."

Following a February 1988 call by the Nagorno-Karabakh (NK) legislature for unification with Armenia, the Armenian Supreme Soviet in December 1989 declared that NK, a largely ethnically Armenian-populated enclave within Azerbaijan, was part of Armenia. It also proclaimed Armenia's sovereignty over its land and resources. A popular referendum on independence was held in Armenia on 21 September 1991, in which 94% of the eligible population reportedly participated and which was approved by 99%. The Armenian legislature declared Armenia's independence two days later. Armenia received worldwide diplomatic recognition upon the collapse of the Soviet Union in December 1991.

Beginning in 1988, conflict engulfed NK, with Azerbaijan resisting the secession or independence of its enclave. Casualties were estimated at over 5,000. Emigration of 350,000 Armenians residing in Azerbaijan and over one million Azerbaijani residing in Armenia or NK followed pogroms in both states and conflict in NK and surrounding areas. In December 1991, a referendum in NK (boycotted by local Azerbaijani) approved NK's independence and a Supreme Soviet was elected, which on 6 January 1992, declared NK's independence and futilely appealed for world rec-

LOCATION: 40°0' N to 45°0' E BOUNDARY LENGTHS: Total boundary lengths, 1,254 kilometers (780 miles); Azerbaijan (east), 566 kilometers (352 miles); Azerbaijan (south), 221 kilometers (137 miles); Georgia, 164 kilometers (102 miles); Iran, 35 kilometers (22 miles); Turkey, 268 kilometers (167 miles).

ognition. In 1993, Armenian forces gained control over NK and surrounding areas, occupying over 20% of Azerbaijani territory, which they continued to hold despite an Azerbaijani offensive in 1993–1994 that reportedly cost 6,000 Azeri casualties. A cease-fire has held fitfully since May 1994, but talks on a political settlement remain inconclusive. In the six-year period of conflict from 1988 to 1994, more than 35,000 people were killed and nearly one million have been left homeless.

In November 1989, Levon Ter-Petrosyan became a leader of the Armenian National Movement (ANM), which grew out of the Karabakh Committee to push for Armenia's independence, and its chairman in March 1990. ANM and other nationalist deputies cooperated to elect him chairman of the Armenian Supreme Soviet in August 1990, inflicting a serious blow on the Armenian Communist Party. Following Armenia's declaration of independence, presidential elections were held on 16 October 1991. Ter-Petrosyan was supported by the ANM, winning 83% of the vote against

six other candidates, including internationally famous dissident Paruir Hairikian of the Association for National Self-Determination and Sos Sarkisyan of the Armenian Revolutionary Federation (ARF; called Dashnaktsutyun in Armenian, meaning “federation”). Ter-Petrosyan was sworn into office on 11 November 1991, for a five-year term. His suspension of the activities of Armenian Revolutionary Federation party in December 1994 and a trial of its leaders raised concerns among some observers about possible setbacks to democratization.

Elections to Armenia’s unicameral 190-member National Assembly (legislature) were held in June 1995, at the same time as a referendum in which Armenian voters adopted the country’s first post-Communist new constitution. International observers reported many campaign and voting irregularities. Observers from the Organization for Security and Cooperation in Europe (OSCE) judged the elections “free but not fair,” in part because the main opposition party, the ARF, was banned from participation, the government dominated campaigning, the CEC appeared heavily pro-government in its decisions, and security officers constituted a chilling presence in many voting places. Voting irregularities reported on election day by the international observers included the violation of secret voting and pressure in voting places to cast a ballot for certain parties or candidates. In all, the Republic Bloc and other pro-government parties won 166 out of 190 seats, while the opposition won only 18 and independents four (two seats were undecided).

Ter-Petrosyan won reelection as president on 22 September 1996, by garnering 51.75% of the vote, a far smaller majority than in 1991, barely avoiding runoff balloting. Ter-Petrosyan’s main opponent in the presidential race was Vazgen Manukian, head of the National Democratic Union (NDU) party. He garnered 41.3% of the presidential vote. Manukian had worked closely with Ter-Petrosyan in the Karabakh Committee. Following the presidential election, followers of Manukian’s electoral coalition demonstrated against what they and many international observers termed irregular voting procedures. On 25 September 1996, tens of thousands of protesters stormed the legislative building in Yerevan and assaulted the legislative speaker and deputy speaker, both belonging to the ANM. The crowd was dispersed by police with few injuries or deaths.

In March 1997, in an attempt to garner greater public support for his regime, Ter-Petrosyan appointed a highly popular war hero of the NK conflict, Robert Kocharian, to the post of prime minister of Armenia. Ter-Petrosyan and others viewed Kocharian as having the leadership abilities necessary to help revive the slumping economy and to increase tax collection. In accepting the prime ministership, Kocharian resigned as president of NK.

Ter-Petrosyan announced in September 1997 that he had accepted an Organization for Security and Cooperation in Europe (OSCE) peace plan as a basis for resolving the NK conflict that would require “compromises” from Armenia. The two-stage plan called for NK Armenians to withdraw from most territories they had occupied outside of NK and for international peacekeepers to be deployed, followed by discussion of NK’s status. The announcement brought open criticism from Kocharian and other Armenian and NK officials. On 1 February 1998, Yerkrpah, a legislative faction and militia group composed of veterans of the NK conflict, and headed by the country’s defense minister, called for

Ter-Petrosyan to resign. Many members of Ter-Petrosyan’s ANM legislative faction defected, leading to the resignation of the parliamentary speaker. Heated debate in the legislature culminated with Ter-Petrosyan’s resignation on 3 February 1998. Ter-Petrosyan denounced the “bodies of power” for demanding his resignation, referring obliquely to Kocharian, Defense Minister Vazgen Sarkisyan, and Minister of the Interior and National Security Serzh Sarkisyan. Although the constitution called for the legislative speaker to assume the duties of acting president pending an election, the resignation of the speaker caused these duties to devolve upon Prime Minister Kocharian. A special presidential election was scheduled for 16 March 1998.

Twelve candidates succeeded in registering for the March presidential election. The main contenders were Kocharian, Vazgen Manukyan (who had run against Ter-Petrosyan in 1996 and was head of the National Democratic Union), and Karen Demirchyan (head of the Armenian Communist Party from 1974 to 1988). Since none of the candidates won the required “50% plus one” of the 1.46 million votes cast (in a 64% turnout), a runoff election was held on 30 March. In the runoff, acting President and Prime Minister Kocharian received 59.5% of 1.57 million votes cast (in a 68.5% turnout). The OSCE concluded that “this election showed improvement in some respects over the 1996 election,” but did “not meet OSCE standards to which Armenia has committed itself.” Observers alleged ballot box stuffing, discrepancies in vote counting, and fraud perpetrated by local authorities that inflated the number of votes for Kocharian. Nevertheless, he was inaugurated on 9 April 1998. The legislature selected Demirchyan as its speaker on 10 June.

On 27 October 1999, gunmen entered the legislature and opened fire on deputies and officials, killing Prime Minister Vazgen Sarkisyan and Speaker Karen Demirchyan, two deputy speakers, and four others. The purported leader of the gunmen claimed they were targeting the prime minister and were launching a coup to “restore democracy” and end poverty, and took dozens hostage. President Robert Kocharian rushed to the legislature and helped negotiate the release of the hostages, promising the gunmen a fair trial. The killings appeared the product of personal and clan grievances. Abiding by the constitution, the legislature met on 2 November and appointed Armen Khachatryan (a member of the majority Unity bloc) as speaker, and Kocharian named Sarkisyan’s brother Aram the new prime minister the next day, seeking to preserve political balances. Political infighting intensified. The military prosecutor investigating the assassinations detained a presidential aide, appearing to implicate Kocharian in the assassinations. The Unity and Stability factions in the legislature also threatened to impeach Kocharian in April 2000. Seeking to counter challenges to his power, Kocharian in May 2000 fired his prime minister and defense minister. In October 2001, on the second anniversary of the shootings in parliament, thousands of protesters staged demonstrations in Yerevan to demand Kocharian’s resignation. In December 2003, six individuals were sentenced to life imprisonment for their roles in the 1999 assassinations. The death penalty in Armenia had been abolished that August. Protests against Kocharian’s presidency continued in 2004, despite his reelection in 2003.

Although Armenia has the highest economic growth rate of any country in the former Soviet Union, more than 50% of the pop-

ulation lives in poverty. Unemployment and emigration remain problems, and Armenia is under a trade blockade from Turkey and Azerbaijan over the dispute in Nagorno-Karabakh—goods are transported only through Georgia. However, US and European companies interested in tapping oil and gas reserves in the Caspian Sea have been planning the construction of a pipeline through the Caucasus to Turkey. In September 2001, Russian President Vladimir Putin visited Armenia, the first Russian president to do so since independence. Armenia and Russia negotiated a 10-year economic cooperation package, and an agreement was reached on expanding a Russian military base in Armenia.

Presidential elections were held on 19 February 2003, with no candidate receiving 50% of the votes; a runoff election was scheduled for 5 March. Kocharian took 48.3% of the first-round vote, with Stepan Demirchyan—son of Karen Demirchyan, the former parliamentary speaker assassinated in 1999—taking 27.4% of the vote. Artashes Geghamian came in third with 16.9%. The opposition called the election fraudulent and said it would not recognize the vote, and observers from the Organization for Security and Cooperation in Europe (OSCE) declared the election “flawed.” Stuffing of ballot boxes allegedly took place, although many ballots were cast in transparent boxes, in an attempt to have a fair vote. Also, Kocharian received five times as much television coverage as all of his opponents combined. In the run-off election held on 5 March, Kocharian was reelected president with 67.5% of the vote; Demirchyan received 32.5%.

### 13 GOVERNMENT

Armenia adopted its post-Soviet constitution by public referendum on 5 July 1995 by 68% of the voters. A commission headed by Ter-Petrosyan had drawn up the draft constitution. It provides for a strong presidential system of government with a weak legislative system, granting the president power to appoint and remove the prime minister, judges, and prosecutors. It also gives him liberal grounds for dissolving the legislature, declaring martial law, and limiting human rights by declaring a state of emergency. The president serves a five-year term. The prime minister is nominated by the president and is subject to legislative approval. The prime minister with presidential and legislative approval appoints the Cabinet of Ministers. The unicameral National Assembly has 131 members, who serve four-year terms; 75 members are elected by party list, and 56 by direct vote.

### 14 POLITICAL PARTIES

Armenia held elections to a new single-chamber 131-seat legislature on 30 May 1999, with 75 deputies elected by party list and 56 elected by direct vote. Twenty-one parties and blocs fielded candidates on the party list vote, but only six passed a 5% vote hurdle. The Unity bloc garnered 42% of over two million votes cast, gaining 29 seats, followed by the Communist Party of Armenia with about 12% of the vote. In constituency balloting, the Unity Bloc (which included the country’s two largest parties, the People’s Party and the Republican Party) garnered the most seats (35), followed by nonparty-affiliated candidates (29). Other major parties that received at least 7% of the party list vote in the 1999 legislative race include the National Democratic Union, Armenian Revolutionary Federation-Dashnaktsutyun, Law-Governed Country Party, Communist Party of Armenia, the Armenian Pan-National

Movement, Law and Unity bloc, and the Mission Party. The other registered parties included both those newly created for the legislative race and more traditional parties. They were the Mighty Motherland, Homeland bloc, Ramkavar Azatakan Party (Liberal Democratic Party), Freedom Party, Democratic Party of Armenia, Union of Socialist Forces and Intelligentsia bloc, Union of Communist and Socialist Parties, Youth Party of Armenia, Decent Future, National State Party, Free Hayk Mission Party, Shimiram Party, and ONS+ bloc (the National Self-Determination and Homeland-Diaspora).

Legislative elections were held on 25 May 2003. The Republican Party won 23.5% of the vote (23 seats) for deputies elected by party list, followed by Justice Bloc, 13.6% (14 seats); Rule of Law, 12.3% (12 seats); ARF (Dashnak), 11.4% (11 seats); National Unity, 8.8% (9 seats); United Labor Party, 5.7% (6 seats). However, seats by party change frequently as deputies switch parties or declare themselves independent.

### 15 LOCAL GOVERNMENT

The regional governmental structure is closely modeled after the national structure. The president appoints governors to Armenia’s 11 provinces (*marzer*), including the mayor of the capital of Yerevan, which has the status of a *marz*. Each province has both executive and legislative bodies that control the provincial budget and businesses within the region. Regional governments do not have authority to pass laws independent of national legislation. *Marzer* are divided into rural and urban communities (*hamainkner*), and Yerevan is divided into 12 districts. The communities and Yerevan districts are governed by community chiefs and legislative bodies called councils of elders (*avakani*). In the cities, community chiefs hold the title of mayor. In 1997 a law on self-government was passed calling for decentralization in some areas and some fiscal independence for local governments. Elections for mayors, community chiefs, and local councils in 654 constituencies were held 20 October 2002, with a 46% voter turnout rate (an increase of close to 20% from the turnout in 1999). Local elections are held every three years. There were fewer complaints of electoral irregularities than in previous elections. The ruling Republican Party fielded the most candidates, and 18 other parties, in addition to independents, participated. The Law-Governed Country Party came in second, and the Armenian Revolutionary Federation was third. Local elections were held once again in October 2005, and voters decided not to return many incumbents to office.

### 16 JUDICIAL SYSTEM

The constitution provides for an independent judiciary, but in practice courts are vulnerable to pressure from the government, though legal reforms are resulting in some changes. The court system consists of district courts of first instance, an Appeals Court, and a Court of Cassation. Judges for the local courts of first instance and the Court of Appeals began operating under a new judicial system in January 1999. Judges were selected for their posts based on examinations and interviews by the Minister of Justice, approval of a list of nominees by the Council of Justice, and approval by the president. Unless they are removed for malfeasance, they serve for life. About one-half of Soviet-era judges have been replaced. Prosecutors and defense attorneys also began retrain-

ing and recertification. A military bureaucracy continues to follow Soviet-era practices.

A Constitutional Court has the power to review the constitutionality of legislation, approves international agreements, and settles electoral disputes. Its effectiveness is limited. It only accepts cases referred by the president, two-thirds of the members of the legislature, or election-related cases brought by candidates in legislative or presidential races. The president appoints four of the nine judges of the Constitutional Court.

The constitution establishes a Council of Justice, headed by the president and including the prosecutor general, the minister of justice, and 14 other members appointed by the president. The Council appoints and disciplines judges in courts of first instance and the Court of Appeals. A Council of Court Chairs has been created to reduce the power of the Ministry of Justice and increase the independence of the judicial system. It is responsible for financial and budgetary issues involving the courts, and consists of 21 senior judges.

A criminal procedure code entered into force in January 1999 specifies that a suspect may be detained for no more than 12 months pending trial, has the right to an attorney, right to a public trial and to confront witnesses, and the right to appeal.

## 17 ARMED FORCES

The active armed forces numbered 48,160 in 2005. There were 45,000 personnel in the Army, organized into five corps that would include a mix of motorized and standard rifle regiments, armored and other support units. Equipment in 2005 included 110 main battle tanks, 104 armored infantry fighting vehicles, 140 armored personnel carriers, and 229 artillery pieces. The Air and Defense Aviation Forces numbered 3,160 personnel with 16 combat capable aircraft (one fighter and 15 fighter ground attack aircraft) and 12 attack helicopters. Paramilitary forces numbered 1,000 and were made up of border troops and Ministry of Internal Affairs personnel. The military budget in 2005 totaled \$135 million.

## 18 INTERNATIONAL COOPERATION

Armenia was admitted to the United Nations on 2 March 1992. The country serves as a member of several specialized agencies within the United Nations, such as FAO, IAEA, ICAO, IDA, IFC, IFAD, ILO, IMF, UNCTAD, UNESCO, UNIDO, WIPO, and WHO. Armenia is a member of the CIS and the Council of Europe. The country was admitted to the OSCE on 30 January 1992 and serves as an observer in the OAS. It became a full member of the WTO on 5 February 2003. Armenia is one of 12 members of the Black Sea Economic Cooperation Zone, which was established in 1992. It is also a part of the Euro-Atlantic Partnership Council and the EBRD. Armenia is a member of the Organization for the Prohibition of Chemical Weapons and the NATO Partnership for Peace. The country ratified the Conventional Armed Forces in Europe (CFE) Treaty in July 1992. The Armenia government supports the cause of the ethnic Armenian secessionists in the Nagorno-Karabakh region of Azerbaijan. The OSCE is serving as a mediator in what has been a sometimes violent struggle.

In environmental cooperation, Armenia is part of the Basel Convention, the Conventions on Biological Diversity and Long Range Transboundary Air Pollution, Ramsar, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the

UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

As part of the Soviet Union, the Armenian economy featured large-scale agro-industrial enterprises and a substantial industrial sector that supplied machine tools, textiles, and other manufactured goods to other parts of the USSR in exchange for raw materials. Trade with its neighbors, on which resource-poor Armenia relies heavily, was jeopardized by the outbreak of conflict over the Nagorno-Karabakh enclave in 1988, and by political instability in Georgia and Azerbaijan. Also, in December 1988, a severe earthquake did considerable damage to Armenia's productive capacity, aggravating its regional trade deficit. The physical damage had not been repaired when the economy suffered the implosion that accompanied the breakup of the Soviet Union in 1991.

With independence, as real GDP fell 60% from 1992–93, small-scale agriculture came to dominate in place of the former agro-industrial complexes, with crops of grain, sugar beets, potatoes, and other vegetables, as well as grapes and other fruit. Growth was not registered until 1994, at 5%, when, in July, a cease-fire was signed by Armenia, Azerbaijan and Nagorno-Karabakh, and, in December, the government embarked on a comprehensive IMF-monitored program of macroeconomic stabilization and structural reform. By 1996, growth was in double digits and inflation in single digits, although set-backs, which began in late 1996, reduced real GDP growth to 3% in 1997, while inflation surged to 27%. In 1998, real growth reached 7.3% while inflation fell to a single digit 8.7%, despite the negative impacts of the Russian financial crisis and a continuing Azerbaijan-led economic blockade over the unresolved Nagorno-Karabakh issue.

Growth in the first nine months of 1999 was at an annual rate of 6%, but this was reduced to 3% for the year in the disruptions following the hostage-takings and assassinations of the prime minister and parliamentary speaker in October, a stated motive for which was the large proportion of Armenians living in poverty (at 55% in 2001 by CIA estimates). Inflation was held to 0.7% in the crisis, due to policy changes that have continued to keep inflation at a low level. Moderate GDP growth of 6% was achieved in 2000 while prices, as measured by the consumer price index, actually declined an estimated 0.8%.

In 2001, targeted real growth under the IMF-guided program was 6% but actual growth was about 10% (CIA est.) as the effects of economic reforms, the privatization of small and medium-sized enterprises, and increased foreign investment began to impact performance. IMF and CIA estimates for 2002 were for real growth between 12.5% and 12.9%, with stable price levels. Barring major disruptions (only too likely as the war in Iraq, launched 19 March 2003, added another source of instability to the region), Armenia was expected to attain its pre-independence level of per-capita income by 2005. Growth sectors include telecommunications, assembly of electric and electronic appliances, agriculture and food processing, energy generation and distribution, construction, coal and gold mining, and international air communications.

The IMF-sponsored economic liberalization program encouraged remarkable GDP growth rates: 13.9% in 2003, 10.1% in 2004, and a predicted 8.0% in 2005. Rising investment levels, exports, and real incomes also contributed to this growth. Inflation, tamed

in 2002, was on the rise in 2003 and 2004, at 4.7% and 7.0% respectively. For the most part however, the government has done a good job of keeping the inflation in check, and stabilizing the local currency. Despite encouraging economic figures though, unemployment remains fairly high (at around 14%) and poverty is a critical issue that needs to be dealt with immediately.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Armenia's gross domestic product (GDP) was estimated at \$15.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,100. The annual growth rate of GDP was estimated at 8%. The average inflation rate in 2005 was 2.4%. It was estimated that agriculture accounted for 24.9% of GDP, industry 34.6%, and services 40.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$168 million or about \$55 per capita and accounted for approximately 6.0% of GDP. Foreign aid receipts amounted to \$247 million or about \$81 per capita and accounted for approximately 8.5% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Armenia totaled \$2.35 billion or about \$768 per capita based on a GDP of \$2.8 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.8%. In 2001 it was estimated that approximately 52% of household consumption was spent on food, 18% on fuel, 3% on health care, and 15% on education. It was estimated that in 2003 about 43% of the population had incomes below the poverty line.

## 21 LABOR

As of 2004, Armenia's labor force numbered 1.2 million. In 2002, an estimated 25% were involved in industry, 45% in agriculture, and 30% in services. The unemployment rate was estimated at 30% in 2003.

Legislation passed in 1992 guarantees workers the right to bargain and organize collectively. An independent labor federation was created in 1997. However, organized labor remained weak as of 2005, because of high unemployment and a slow economy. Collective bargaining does not occur because most large employers are still under state control. Labor disputes are generally settled in economic or regular courts of law. According to the Confederation of Labor Unions (CLU) an estimated 290,000 workers belonged to 25 labor unions in 2005.

Armenians are guaranteed a monthly minimum wage which was set at around \$26.00 as of 2005. The standard legal workweek was 40 hours, with mandatory overtime and rest periods. Children under the age of 16 are prohibited by law from full-time labor, although children at age 14 can be employed if permission is given by the child's parents and from the labor union. Due to the dire economic situation, none of these legal standards are relevant. Although the government is required to promulgate mini-

mum occupational health and safety standards, as of end 2005, such standards have yet to be implemented. In addition, a lack of government resources and general worker insecurity prevent any effective enforcement of the nation's labor laws.

## 22 AGRICULTURE

Before the collapse of the Soviet Union, about 16% of Armenia's land was cultivated. As of 2002, there were an estimated 560,000 hectares (1,384,000 acres) of arable cropland (20% of the total land area), of which 65,000 hectares (160,600 acres) were planted with permanent crops. Agriculture engaged about 45% of the economically active population in 2003. That year, agricultural production was 13% higher than what it had been during 1999–2001.

Production for 2004 included tomatoes, 222,047 tons; potatoes, 575,942 tons; wheat, 296,000 tons; and grapes, 148,892 tons. In 2002, there were some 18,300 tractors and 4,000 harvester-threshers in service.

## 23 ANIMAL HUSBANDRY

Over one-fifth of the total land area is permanent pastureland. In 2004, the livestock population included: sheep, 580,000; cattle, 565,800; pigs, 85,300; goats, 48,300; and horses, 12,500. There were also some 3.6 million chickens. In 2004, some 54,000 tons of meat were produced, including 33,400 tons of beef and veal, 7,200 tons of mutton and lamb, 4,300 tons of poultry, and 8,500 tons of pork. In 2004, 535,800 tons of milk, 31,500 tons of eggs, 4,500 tons of cheese, and 1,200 tons of greasy wool were also produced. Meat, milk, and butter are the chief agricultural imports.

## 24 FISHING

Fishing is limited to the Arpa River and Lake Sevan. Commercial fishing is not a significant part of the economy. The total catch in 2003 was 1,633 tons. Trout and carp are the principal species.

## 25 FORESTRY

Forests cover an estimated 12.4% of Armenia. Soviet mismanagement, the 1988 earthquake, hostilities with Azerbaijan, and fuel shortages have impaired development. Available timber is used for firewood during the harsh winters. Imports of forestry products totaled \$12.2 million in 2003.

## 26 MINING

Mineral resources in Armenia are concentrated in the southern region, where several operating copper and molybdenum mines were located. Armenia had been mining one-third of the former Soviet Union's (FSU) output of molybdenum (2,073 metric tons in 2002, down from 3,100 metric tons in 2000). Copper mines were located at Kapan, Kadzharan, Agarak, Shamlugh, and Akht'ala; the latter two were not in operation in 2002. Kadzharan and Agarak also had molybdenum mines. Despite relative proximity to rail and port facilities that supplied European markets, the mineral sector's ability to compete on the world market was inhibited by infrastructure problems. Armenia's production of perlite has been estimated at a steady 35,000 metric tons annually, from 1998 through 2002.

In 2002, Armenia produced industrial minerals such as clays, diatomite, dimension stone, limestone (12.5 million short tons),

salt (30,300 metric tons), and semiprecious stones. It mined copper (16,641 metric tons of copper concentrate), copper-zinc, and native gold deposits. The Zod and Megradzor gold mines ceased operations in 1997. The government hoped to revive the gold industry through the recovery of gold tailings at the Cuarat gold mill. Significant by-product constituents in the nonferrous ores in 2002 included barite, gold (estimated at 3,200 kg), lead, rhenium, selenium, silver (5,500 kg), tellurium, and zinc.

Armenia's exports of mineral products in 2002 accounted for around 70% of its total exports by value. In that year, total exports were valued at \$507.2 million.

## 27 ENERGY AND POWER

With only negligible reserves of oil, natural gas, and coal, and with no production, Armenia is heavily reliant on foreign imports. Following the breakup of the Soviet Union, oil consumption has declined from 48,400 barrels per day in 1992 to 38,630 barrels per day in 2002. Natural gas consumption in 2002 was 38.49 billion cu ft. Total electrical consumption in 2002 was 4.446 billion kWh.

Net electricity generation in 2002 totaled 5.215 billion kWh, primarily from the reopened Medzamor nuclear plant at Yerevan (815,000 kW capacity), the Hrazdan (near Akhta) oil/natural gas plant (1,110,000 kW capacity), the Yerevan heat/power plant (550,000 kW capacity), and the Sevan-Hrazdan hydroelectric plant and smaller plants (925,000 kW capacity). Of total electricity generated in 2002, some 31% came from hydroelectric plants, 40% from nuclear power, and 29% from thermal power. Total capacity in 2002 was 3.341 million kW. The Medzama plant, reopened in 1995, increased electricity generation by 40% and has enabled electricity to be supplied around the clock for the first time in years. However, the Armenian government has promised to decommission the plant by 2004 to save money on maintenance if enough alternative power sources can be found by that time. As of 2002 three major and 38 smaller hydroelectric projects were planned, at a total cost of \$300 million, with backing by the World Bank.

As of 1999, the domestic distribution grid for electric power was scheduled for restructuring and privatization, with assistance from the World Bank and the US Agency for International Development (USAID). A December 1988 earthquake disrupted the Yerevan nuclear power plant, creating almost total dependence on imported oil and natural gas for power. When ethnic hostilities with Azerbaijan again resurfaced in 1992, Azerbaijan discontinued service of its pipeline to Armenia (with natural gas from Turkmenistan). The only other supply routes passed either through Turkey (which was sympathetic to Azerbaijan) or through Georgia (which was dealing with its own civil chaos). Since the 1994 ceasefire with Azerbaijan, the revival of energy supplies has helped start the recovery of Armenia's economy. If Armenia and Azerbaijan ever resolve their disputes, the transit of oil and gas from the Caspian Sea region abroad will become possible.

## 28 INDUSTRY

Before the earthquake in 1988, Armenia exported trucks, tires, electronics, and instruments to other republics. A number of these plants were destroyed by the earthquake. Armenia was also a major producer of chemical products, some 59% of which were exported to other republics. Armenia has the highest number of

specialists with higher education and second highest number of scientists of all the former Soviet republics. Since the collapse of the Soviet Union, industrial production has been severely disrupted by political instability and shortages of power. Much of Armenia's industry is idle or operating at a fraction of its capacity.

Economic blockades by Turkey and Azerbaijan as part of the continuing dispute over Nagorno-Karabakh have cut Armenia off from an old direct gas pipeline from Azerbaijan, as well as precluded it from participation in any of the east-west pipelines being built in the post-Soviet era. The alternative Armenia has pursued is a gas pipeline from Iran delivering Turkmenistan gas (to avoid sanctions on customers of Iran, which were renewed by the US Congress in August 2001). Intergovernmental agreements on the project were signed in 1992 and 1995. In December 1997 the Korpezehe-Kurt-Kwi pipeline feeding Turkmen natural gas directly into the Iranian system was opened. In December 2001 agreement was reached on a route that bypassed the Azeri exclave of Nakhichevan, running from Kadzharan to the southern border at Megri. Work on the Armenian section of the Iran-Armenian gas pipeline was to have begun in 2002 but was delayed until 2003 by disputes over the price Iran was intending to charge.

Light industry dominates Armenia's industrial sector and is striking for its diversity. The leading industries in 2002 included metal-cutting machine tools, forging-pressing machines, electric motors, tires, knitted wear, hosiery, shoes, silk fabric, chemicals, trucks, instruments, microelectronics, gem cutting (in 2002, 53 diamond-polishing companies exported \$150 million worth of diamonds), jewelry manufacture (up 200% in 2002), software development, food processing, and brandy. Most of the country's small and medium-sized enterprises have been privatized, spurring the recovery of industrial growth.

Progress has been slower with larger industries often due to the lack of viable bidders. About 70% of the larger operations had been privatized by 1998, the year Armenia passed legislation for the sale of the country's electricity transmission and distribution networks, retaining government control over power generation. To support the privatization, the European Bank for Reconstruction and Development (EBRD) bought a 20% share in each of Armenia's four distribution companies in an agreement preserving the government's right to buy back the shares should the agreement be abrogated. In 2002, after two failed offerings, management of the electricity distribution network was won by Daewoo Engineering. In 2001, Armenia reached a debt-to-equity agreement with Russia to exchange the debt it owed Russia—at almost \$100 million and requiring about \$20 million a year to service, the largest and only nonconcessional part of Armenia's external debt—for five nonperforming state-run enterprises. The centerpiece was the Hrazdan Thermal Power Plant, valued at about \$100 million, but also including the "Mars" Electronics Factory established in 1986 for making robots, and three research institutes. Under the debt for property agreement the Russian government will turn the operations over to private entrepreneurs.

Armenia has the highest number of cooperatives (per capita) in the Commonwealth of Independent States. By CIA estimates for 2000, industry accounted for 32% of GDP, but employed about 42% of the labor force. In 2002, with 12.5% overall GDP growth, industry grew 16%, including a 42% growth in construction. The country is projecting growth along with partnership opportuni-

ties in areas such as power generation, aviation, construction, electronics, apparel, tourism, food processing, industrial property acquisition, banking, and other areas.

In 2004, industry accounted for 36.1% of the overall GDP; agriculture made up 22.9% of the economy, while services came in first with 41.1%. What is remarkable though, is the fact that only about 25% of the working population was employed by the industry, whereas around 45% worked in agriculture. This indicates a high productivity rate in the industrial sector, and a low one in agriculture. The industrial production growth rate was, at 15%, higher than the GDP growth rate, indicating that industry is the main engine of the Armenian economy. Particularly metallurgy, energy, and machine building managed to attract new investment and helped boost the industrial sector output.

## 29 SCIENCE AND TECHNOLOGY

The Armenian National Academy of Sciences, founded in 1943 and headquartered in Yerevan, has departments of physical, mathematical, and technological sciences; and natural sciences; and 32 research institutes in fields such as agriculture; biological, mathematical, physical, and earth sciences; and technology. Yerevan State University (founded in 1919) has faculties of mechanics, mathematics, physics, radiophysics, chemistry, biology, geology, geography, and mathematical cybernetics and automatic analysis. Also in Yerevan are the State Engineering University of Armenia (founded in 1930), the Yerevan State Medical University (founded in 1922), the Yerevan Zootechnical and Veterinary Institute (founded in 1929), and the Armenian Scientific and Technical Library. In 1987–97, science and engineering students accounted for 29% of college and university enrollments.

As of 2002, there were 1,606 researchers and 147 technicians per million people, actively engaged in research and development (R&D). Spending on R&D accounted for \$24.25 million, or 0.25% of GDP in 2002. Of that amount, government accounted for 55.2% of R&D spending, while foreign sources accounted for 11.2%. The remainder was undistributed. In 2002, high technology exports totaled \$3 million, 2% of the country's manufactured exports.

## 30 DOMESTIC TRADE

As of 1999, there were about 23,128 wholesale and retail companies registered in Armenia, accounting for over 54% of the total registered businesses. The main retail center is in Yerevan. A majority of retail establishments are small food and specialty item shops. Many of these work with wholesalers and sell items on a consignment basis. There are also large open markets in Yerevan and other cities offering a wide variety of food, clothing, housewares, and electronics.

Beginning in 1996, the government launched a major privatization drive. By 1999, over 80% of small businesses and over 60% of medium and large corporations were in private hands. Nearly all farmland is privately owned. Seasonal open-air food markets are also popular. Some of these markets still engage in bartering.

## 31 FOREIGN TRADE

Armenia's main trading partners are Belgium, Russia, the United States, Iran, Switzerland, Israel, Georgia, the United Kingdom, the UAE, and the EU. Exports include gold and diamonds, aluminum, transport equipment, electrical equipment, and scrap metal. Im-

ports include grain and other foods, fuel and energy. Inter-republic trade has suffered as a result of border hostilities, particularly the ongoing conflict over the Armenian enclave of Nagorno-Karabakh in Azerbaijan, which may prevent the proposed Caspian Sea oil pipeline from passing through Armenia. As of 2003, recent talks between the leaders of Armenia and Azerbaijan represented a positive step toward resolving the dispute.

Due to its delicate geographic placement, Armenia scores modest foreign trade figures. In 2004, exports totaled only \$850 million (FOB—Free on Board), while imports climbed to \$1.3 billion (FOB). Main export commodities were precious or semiprecious stones and metals (accounting for 42.5% of total exports), base metals (19.5%), mineral products (11.7%), prepared foodstuffs (9.7%). Principal imports included precious or semiprecious stones and metals (22.5%), mineral products (16.2%), machinery and equipment (10.1%), and prepared foodstuffs (7.0%). These last figures indicate that while Armenia has a vibrant industry, it is not exploiting it to its fullest potential. Existing trade barriers probably hinder the export of manufactured goods, so it has to resort to trading mainly natural resources.

## 32 BALANCE OF PAYMENTS

Although the government is working to reduce Armenia's large trade deficits by improving export performance, the conflict over the Armenian enclave of Nagorno-Karabakh in Azerbaijan continues to weaken the economy by disrupting normal trade and supply links. Armenia receives large amounts of humanitarian assistance.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Armenia's exports was \$338.5 million while imports totaled \$868.6 million resulting in a trade deficit of \$530.1 million.

The International Monetary Fund (IMF) reported that in 2001 Armenia had exports of goods totaling \$353 million and imports totaling \$773 million. The services credit totaled \$187 million and debit \$204 million.

Exports of goods and services continued to grow in the following years, reaching \$696 million in 2003, and \$738 million in 2004. Imports followed a similar path, totaling \$1.1 billion in

2003, and \$1.2 billion in 2004. The resource balance was consequently negative in both years, at around -\$400 million. The current account balance was also negative, dropping to -\$190 million in 2003, and recuperating to -\$161 million in 2004. Reserves of foreign exchange and gold reached \$555 million in 2004, covering almost six months of imports.

**3<sup>3</sup> BANKING AND SECURITIES**

The Central Bank of Armenia is charged with regulating the money supply, circulating currency, and regulating the commercial banks of the country. Commercial banks in Armenia include the Ardshinbank, Armagrobank, Armeconombank, Armimplexbank, Arminvestbank, Bank Armcommunication, Bank "Capital," Bank "Haykap," Central Bank of Armenia, Commercial Bank "Ardana," Commercial Bank Anelik, "Gladzor" Joint Stock Commercial Bank, Masis Commercial Bank, and the State Specialized Savings Bank of the Republic of Armenia. Leading foreign banks include: Mellat Bank (Iran) and Midland Armenia (UK).

The IMF has been concerned about the direction of policy taken by the National Bank of Armenia and the slow pace of financial reform. Armenia's financial sector is overbanked and beset with nonperforming credits, mainly to large state enterprises. Armenia has been a model reforming country among the former Soviet republics, and multilateral creditors are worried that public pressure may now force the government to loosen monetary and fiscal policies.

It was revealed in January 1997 that the central bank's credits to finance the government's budget gap has surpassed their \$100 million limit in the first 10 months of 1996. The bank has been forced to intervene in the domestic markets, selling foreign exchange reserves to maintain the stability of the dram. The dram has lost some 14% in value since September 1996, when it stood at Դ412:\$1. By the end of June 1997 the rate had gone down to almost Դ500:\$1. The International Monetary Fund reports that in 2001,

currency and demand deposits—an aggregate commonly known as M1—were equal to \$141.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$310.3 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 19.4%.

There are three stock exchanges in Armenia the largest of which is the Yerevan Stock Exchange which listed 91 companies in 1999 and had total capitalization of \$17 million. The next largest is the "Adamand" Yerevan Commodity and Stock Exchange which listed 45 companies.

**3<sup>4</sup> INSURANCE**

Insurance is largely controlled by government organizations inherited from the Soviet system, although private insurance companies are not unknown.

**3<sup>5</sup> PUBLIC FINANCE**

In 1994, the government began a three-year effort to privatize the national industries. Loans from the IMF, World Bank, EBRD, and other financial institutions and foreign countries aimed at eliminating the government's budget deficit. However, by 1996, external public debt exceeded \$353 million with annual debt service payments exceeding \$55 million. Loans to Armenia since 1993 total over \$800 million.

The US Central Intelligence Agency (CIA) estimated that in 2005 Armenia's central government took in revenues of approximately \$786.1 million and had expenditures of \$930.7 million. Revenues minus expenditures totaled approximately -\$144.6 million. Total external debt was \$1.868 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were Դ338,463 million. The value of revenues was us\$590 million, based on an exchange rate for 2002 of us\$1 = Դ573.35 as reported by the IMF.

### 36 TAXATION

Armenia's complex tax system was revised in 1997 and again in 2001. The top corporate profit tax rate was lowered from 30% to 20%. As of 1 July 2001 a single rate was applied to all taxable profits, defined as the difference between revenues and the sum of wages, amortization payments, raw and intermediate purchases, social security contributions, insurance fees, and interest expenses. Newly formed enterprises are exempt from taxes for the first two years, but there is no provision for carrying forward losses.

Individual income taxes are withheld by enterprises and are paid to the Ministry of Finance monthly. The personal income tax has been reduced from three bands to two: 10% for monthly taxable income up to Ծ80,000 (\$144) and 20% plus a payment of Ծ8,000 (\$14.40) for taxable income between Ծ120,000 and Ծ320,000 (\$1,892) for monthly taxable income above Ծ80,000. Armenians also pay taxes to social security and pension funds. In 1992, Armenia introduced a value-added tax, which stood at 20% in 2003. Excise taxes are applied to diesel fuel, oil, spirits, wine and beer at various rates. There are also land taxes and property taxes. Achieving a higher level of tax collection has been an important part of Armenia's economic reform programs. The fiscal deficit was projected at 2.4% of GDP for 2003.

### 37 CUSTOMS AND DUTIES

All exports are duty-free. Minor customs duties (up to 10%) are imposed on certain imports. Imports of machinery and equipment for use in manufacturing by enterprises with foreign investment are exempt from all customs duties.

### 38 FOREIGN INVESTMENT

Armenia's investment climate is regulated by the bilateral investment treaty (BIT) signed with the United States on 23 September 1992 and by the law on foreign investment adopted by Armenia on 31 July 1994. Armenia has also concluded BITs on investment and investment protection with 15 other countries: Georgia, Turkmenistan, Kyrgyzstan, Ukraine, Iran, Egypt, Romania, Cyprus, Greece, France, Germany, Canada, Argentina, China, and Vietnam. Its investment policy is geared to attract foreign investment, with foreign investors accorded national treatment and any sector open to investment. As of 2003, under the law of profit tax, two-year tax holidays are accorded foreign investors whose equity investment in a resident company is at least 500 million drams, or a little less than one million dollars. There are no limits on the repatriation of profits, or on the import and export of hard currency, so long as the currency is imported or earned in Armenia. Otherwise there is a \$10,000 limit on the export of cash.

In late 1997, the government initiated the privatization of 11 of the larger state owned enterprises (SOEs), including the energy sector. It was not until 2002, however, that a suitable and willing foreign investor, Daewoo Engineering, was found to manage privatized electricity distribution. Operations at the Zvartnots International Airport have also been successfully leased. The 2001 debt-for-equity swap with Russia, whereby five unproductive SOEs (Hrazdan Thermal Power Plant, the "Mars" Electronics Factory established in 1986 to build robots, and three research labs) were exchanged for the cancellation of Armenia's debt with Russia (about \$100 million of nonconcessional lending that was costing

almost \$20 million/year to service) promised to increase Russian private investment in Armenia as the Russian government passed the assets on to private investors.

From 1998–2000 annual inflow of foreign direct investment (FDI) ranged from \$120 million to \$230 million, though it fell to \$75.9 million in 2001 in the wake of the global contraction of foreign investment following the 11 September 2001 terrorist attacks on the US World Trade Center. In 2002, FDI increased 12% to about \$85 million. A large share of FDI comes from the Armenian diaspora in the United States, Russia, Iran, France, Greece, the United Kingdom, Germany, and Syria. Since 1998, the Lincy Foundation of Armenian American Kirk Kirkorian has made available about \$165 million to support small and medium enterprise (SME) development (offering concessional loans for businesses that are at least 51% Armenian owned), assistance for tourism development (\$20 million in 2000), and infrastructure repair (\$60 million in 2002 and \$80 million in 2003). Armenia's accession to the World Trade Organization in 2000 has helped improve the investment climate as a consequence of meeting the WTO's strictures for membership.

The flow of foreign capital into Armenia continued to grow steadily, reaching \$155 million in 2003, and \$300 million in 2004. The main FDI sources have been Russia, the United States, Greece, France, and Germany. Unfortunately, only a small part of the capital inflows were geared towards green field investments. At the end of 2003, the accumulated stock of FDI amounted to 32% of the GDP.

### 39 ECONOMIC DEVELOPMENT

Development planning in Armenia has been aimed at counteracting the effects of three devastating blows to its economy: the earthquake of 1988; open warfare and economic blockade over Nagorno-Karabakh; and the combination of hyperinflation and industrial collapse following its separation from the Soviet Union. The government has been aggressive in launching economic reform, beginning with its privatization of agricultural land in 1991, which boosted crop output 30% and resulted in a 15% increase in agricultural production. In December 1994, Armenia embarked on a series of ambitious programs of economic reform guided by the International Monetary Fund (IMF) that have resulted in nine years of positive growth rates. On its present course, Armenia will achieve its pre-independence level of per capita income by 2005. By 1997, privatization of most small industry, as well as an estimated 70% of larger enterprises, was complete. Progress has been slower with larger state-owned enterprises (SOEs), not least because the government has had difficulty finding bidders at its cash sales auctions. In 1997, the ministries controlling the SOEs were merged, and their functions changed from direct control to general supervision and special support. The Ministry of Industry and the Ministry of Trade, and certain parts of the Ministry of Economy and the Ministry of Privatization and Foreign Investment were also merged in order to streamline the bureaucracy.

In late 1997, 11 large enterprises were offered for sale and in 1998 the parliament passed a law allowing for the sale of the state electricity transmission and distribution networks. Viable bidders were not immediately forthcoming and on 5 December 2000, as a means of supporting the privatization program, the European Bank of Reconstruction and Development (EBRD) agreed to take

20% shares in each of Armenia's four electricity distribution companies, with provision for the Armenian government's right to buy back the shares if the agreements were abrogated. The privatization process of the distribution networks stalled in 2001 and 2002 as twice the government failed to attract any final bids. To make the offer more attractive, the government merged the four distribution companies into one closed-end joint stock company, Electricity Networks of Armenia, and on 31 October 2002, 100% of the shares were acquired by the English company, Midland Resources Holding, Ltd. Midland in turn contracted with Daewoo International of South Korea to manage the newly privatized company. By 2002, only a small fraction of a total 100 larger SOEs had been privatized, according to the US Agency for International Development (USAID).

The republic has substantial deposits of gold, copper, zinc, bauxite, and other minerals, which could be developed with Western capital. The government is currently exploring alternative trade routes, and seeking export orders from the West to aid production and earn foreign exchange. Much of Armenia's industry remains idle or operating at low capacity utilization in large part because of the country's political isolation from oil and gas supplies.

Armenia's determination to create a market-oriented economy and democratic society has engaged (in addition to the IMF) the World Bank and EBRD as well as other financial institutions and foreign countries. Nevertheless, Armenia continues to remain economically isolated in comparison with its Caucasian neighbors.

The Armenian economy is expected to grow strongly in the coming years, based on increased domestic consumption, which in turn is fueled by higher wages and remittances from abroad. In addition, further investments are expected to come in the country as a result of economic restructuring and trade-oriented policies. Armenia boasts a highly educated work force, a diverse and dynamic industrial base, and a strategic geographic location. However, as long as the Nagorno-Karabakh conflict will not be resolved, the economy will find it hard to reach its fullest potential.

#### 40 SOCIAL DEVELOPMENT

Pension and disability benefit systems were first introduced in 1956 and 1964. More recent legislation was passed in 2002 and implemented in 2003. Retirement is set at age 63 for men and age 59.5 for women, although earlier retirement is allowed for those engaged in hazardous work. The cost is covered by employee, employer, and government contributions. Work injury legislation provides 100% of average monthly earnings for temporary disability and a proportion of wages up to a maximum of 100% for permanent disability, depending on the extent of incapacity. Unemployment, sickness, and maternity benefits and family allowances are also provided under Armenian law.

Women in Armenia largely occupy traditional roles despite an employment law that formally prohibits discrimination based on sex. Women do not receive the same professional opportunities as men and often work in low-level jobs. In 2004 women earned approximately 40% less than men. Societal attitudes do not view sexual harassment in the workplace worthy of legal action. Violence against women and domestic violence is widespread and underreported. According to a recent survey, 45% of women were subject to psychological abuse, and 25% of women were physically

abused. Most women do not report domestic abuse due to fear of reprisal and embarrassment.

The constitution protects the freedom of assembly and the freedom of religion. The government allows minorities, such as the Russians, Jews, Kurds, Yezids, Georgians, Greeks, and Assyrians, the right to preserve their cultural practices, the law allows them to study in their native language. Discrimination is prohibited on the basis of race, sex, religion, language disability, or social status. Human rights abuses appear to be widespread. Prison conditions fail to meet international standards and accusations of police brutality are not uncommon.

#### 41 HEALTH

The infant mortality rate was 23.28 per 1,000 live births in 2005, an increase over the previous five years. The estimated maternal mortality rate was 35 per 100,000 live births as of 1999. Life expectancy in 2005 averaged 71.55 years. There were 7,000 war-related deaths from 1989 to 1992; the death rate was estimated at 10 per 1,000 people in 2002. The incidence of tuberculosis was 58 per 100,000 people. Immunization rates declined as of 1994 due to war and earthquakes but have begun to recover. In 1999, the immunization rates were as follows for a child under the age of one: tuberculosis, 72%; polio, 95%; and measles, 92%. In the same year, the estimated immunization rate for DPT was 91%. In 2000 the total fertility rate was 1.3 births per woman and the maternal mortality rate was an estimated 35 per 100,000 live births.

As of 2004, there were an estimated 352 physicians and 473 nurses per 100,000 people and the country spent an estimated 7.8% of its GDP on health care. In this former republic of the Soviet Union, health care has undergone rapid changes in the last few years. The break from the Soviet Union has meant a disruption of the system that once provided member states with equipment, supplies, and drugs. Out-of-pocket payments by individual are now required for most health care services. However, the health care delivery itself is still largely organized as it was during the Soviet era, with regional clinics and walk-in centers delivering most primary health care services.

The incidence of heart disease is high compared to other moderately developed countries. There is nearly a 50% chance of dying of heart disease after age 65 for both women and men. The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 2,600 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

#### 42 HOUSING

Housing throughout Armenia has been somewhat scarce for the past two decades due to a number of factors, including a history of state control, a devastating earthquake in 1988, and civil conflicts. Since the 1993 passage of a law on privatization for previously state and public-owned housing, about 96% of apartments were privatized and transferred to ownership by the existing tenants.

A large number of buildings are neglected and in serious disrepair and utilities are limited and expensive. The total number of housing units in 2001 was at about 750,719. Nearly 59% were multi-unit dwellings, most of which are in urban areas. About 25% of all multi-unit homes were built before 1960; another 52% were built between 1960 and 1980. Only about 85% of the popu-

lation have access to improved water supplies. Only 9% have central heating. About 50% of the population rely on wood burning stoves as a primary heating source.

Overcrowding and homelessness is a great concern, particularly among the population of refugees and displaced persons. In 2001, about 11% of all households lived in one-room homes. In 2001, it was estimated that about 40,000 families (5% of all households) had no permanent shelter. Nearly 40% of these people lived in temporary shelters called *domics* within the earthquake zone. Another 40,000 families were on waiting lists for new permanent housing because of overcrowding. About 1,200 new housing units were completed in 2001. The same year, there were about 29,000 unfinished housing units (4,487 buildings). Most of these were started in the late 1980s and early 1990s within the earthquake zone, and were simply left incomplete because of lack of funds and materials.

### 43 EDUCATION

Education is compulsory between the ages of 7 and 14 years and is free at both the primary and secondary levels. The system is broken into three levels. Primary school lasts for three years, followed by intermediate school, which lasts for five years. This is followed by two years of general secondary education. Primary school enrollment in 2003 was estimated at about 94%; 95% for boys and 93% for girls. The same year, secondary school enrollment was about 83%; 82% for boys and 85% for girls. The pupil to teacher ratio for primary school was at about 17:1 in 2003; the ratio for secondary school was about 10:1.

Since the early 1990s, increasing emphasis has been placed on Armenian history and culture. The school year runs from September to July. Instruction is available in Armenian and Russian. The education system is coordinated through the Ministry of Education and Science and the Council of Rectors of Higher Educational Establishments. About 3.2% of the GDP was given to education in 2003.

The adult literacy rate for 2004 was estimated at about 99%, with a fairly even rate between men and women. There are two universities in Yerevan: the Yerevan State University (founded in 1919) and the State Engineering University of Armenia. Seven other educational institutions are located in the capital. There are several other institutes of higher education throughout the country. About 25% of all age-eligible students were enrolled in tertiary education programs in 2003.

### 44 LIBRARIES AND MUSEUMS

There are two branches of the National Library, with the main branch in Yerevan comprising 6.2 million volumes as of 2002. The main library of the Armenian Academy of Sciences in Yerevan has 4.4 million volumes. The Armenian Academy of Sciences and the universities each have research libraries. The Armenian Library Association was established in 1995.

Yerevan's museums include the National Gallery of Arts; the Yerevan Children's Picture Gallery, a unique collection of children's art from Armenia and around the world; the Museum of Modern Art; the House Museum of Ovanes Tumanjan, Armenia's most renowned poet; and the Museum of Ancient Manuscripts. There are also museums devoted to the composer Aram Khachaturian (including his piano) and the filmmaker Sergei Paradjanov, Ar-

menia's most famous sons. The Genocide Memorial and Museum at Tsitsernakaberd is in Yerevan. The Matenadaran Manuscript Museum, also in Yerevan, was established to preserve the ancient written culture of the region.

### 45 MEDIA

In 2003, there were an estimated 148 mainline telephones for every 1,000 people; about 60,800 people were on a waiting list for telephone service installation. The same year, there were approximately 30 mobile phones in use for every 1,000 people. Communications are the responsibility of the Ministry of Posts and Telecommunications and are operated by Armental, a 90% Greek-owned company. Yerevan is linked to the Trans-Asia-Europe fiber-optic cable through Iran. Communications links to other former Soviet republics are by land line or microwave, and to other countries by satellite and through Moscow.

A majority of citizens rely on radio and television as a primary source of news and information. Armenian and Russian radio and television stations broadcast throughout the country. In 2004, there were over 20 radio stations and over 40 television broadcasters, most of which were privately owned and operated. In 2003, there were an estimated 264 radios and 229 television sets for every 1,000 people. Though cable television service is available, only about 1.2 of every 1,000 people are subscribers. In 2003, there were 15.8 personal computers for every 1,000 people and 37 of every 1,000 people had access to the Internet. There were four secure Internet servers available in 2004.

The three largest newspapers as of 2002 were *Golos Armenii* (*The Voice of Armenia*, circulation 20,000), *Hayastani Hanrapetutyun* (a joint publication of the parliament and the newspaper's staff), and *Respublika Armenia*, (the Russian-language version of *Hayastani Hanrapetutyun*). According to the Yerevan Press Club, the total newspaper circulation in the country in 2004 was 60,000, an increase of 20,000 from 2003. There were about 27 newspapers available in the capital.

Armenia's constitution provides for freedom of expression, and is said to generally uphold freedom of speech and press. However, journalists seem to adhere to an unspoken rule of self-censorship, particularly when reporting on political issues, since they traditionally depend on the government for funding and access to facilities. The government has, it is noted, begun to shed itself of the state publishing apparatus, and it has dissolved the Ministry of Information.

### 46 ORGANIZATIONS

Important political movements in Armenia include the Armenian National Movement and the National Self-Determination Association. Armenian trade unions belong to the umbrella organization Council of Armenia Trade Unions. The Chamber of Commerce and Industry of the Republic of Armenia promotes the economic and business activities of the country in world markets.

The National Academy of Sciences of Armenia encourages the public interest in science and seeks to ensure availability and effectiveness of science education programs. The Armenian Physical Society serves a similar role. The group also works with various research programs. The Independent Media Center promotes the freedom and accuracy of press and other media. The Armenian Medical Association promotes research and education in the

field; there are also several professional associations for specialized fields of medicine.

There are a number of national sporting organizations, including the Athletic Federation of the Republic of Armenia, the Armenian National Paralympic Committee, and other groups sponsoring football (soccer), baseball, skiing, and the Special Olympics. The National Youth Council of the Republic of Armenia coordinates youth organizations through the support of the Ministry of Culture, Sports, and Youth. An affiliate of the United Nations of Youth (UNOY), a foundation based in the Netherlands, was established in Armenia in 1994. Other youth groups include the Aragast Youth Club and the Armenian Euro Club Unipax. There are active chapters of the Girl Guides and Girls Scouts; the World Organization of Scouting is represented by the Armenian National Scout Movement. The Armenian Junior Chamber is a national leadership development organization. The YMCA is also present.

Organizations representing the rights and role of women in society include the League of Armenian Women, the Union of the Protection of Women's, Children and Family Rights, and the Women's Alliance. There is a national chapter of the Red Cross Society, World Vision, and Habitat for Humanity. The Armenian Relief Society supports local community health development programming.

#### 47 TOURISM, TRAVEL, AND RECREATION

Although there is a shortage of resources, Armenia has been investing in new hotels to increase tourism. Outdoor activities and scenery seem to be the primary attractions. Lake Sevan, the world's largest mountain lake, is a popular summer tourist spot. The Tsakhador ski resort is open year round for skiing in the winter and hiking and picnicking the rest of the year. Mt. Ararat, the traditional site of the landing of Noah's Ark, is located along the border with Turkey. Yerevan, Armenia's capital, also boasts theaters; the casinos in Argavand are popular with tourists and Albanian citizens.

In 2003, there were about 206,000 visitor arrivals, as compared to 45,000 in 2000. Tourist receipts totaled \$90 million in 2003.

In 2002, the US Department of State estimated the daily cost of staying in Yerevan at \$184.

#### 48 FAMOUS ARMENIANS

Levon Ter-Petrosyan was president of Armenia from 1991 until 1998. Gagik G. Haroutunian has been prime minister, vice presi-

dent, and chairman of the Council of Ministers since November 1991. Gregory Nare Katzi, who lived in the 10th century, was Armenia's first great poet. Nineteenth-century novelists include Hakob Maliq-Hakobian (1835?-1888) whose pen name is "Raffi" and the playwright Gabriel Sundukian (1825-1912). G. I. Gurdjieff (1872?-1949) was a Greek-Armenian mystic and teacher. Soviet aircraft designer Artem Mikuyan (1905-70) served as head of the MiG design bureau. Arshile Gorky (1904-48) was an Armenian-American abstract expressionist painter.

#### 49 DEPENDENCIES

Armenia has no territories or colonies.

# AUSTRIA

Republic of Austria

Republik Österreich

**CAPITAL:** Vienna (Wien)

**FLAG:** The flag consists of a white horizontal stripe between two red stripes.

**ANTHEM:** *Land der Berge, Land am Ströme (Land of Mountains, Land on the River).*

**MONETARY UNIT:** The euro replaced the schilling as the national currency in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year's Day, 1 January; Epiphany, 6 January; May Day, 1 May; Assumption, 15 August; National Day, 26 October; All Saints' Day, 1 November; Immaculate Conception, 8 December; Christmas, 25 December; St. Stephen's Day, 26 December. Movable religious holidays include Easter Monday, Ascension, Whitmonday, and Corpus Christi. In addition, there are provincial holidays.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Austria, with an area of 83,858 sq km (32,378 sq mi), is a landlocked country in Central Europe, extending 573 km (356 mi) E–W and 294 km (183 mi) N–S. Comparatively, Austria is slightly smaller than the state of Maine. Bounded on the N by Germany and the Czech Republic, on the E by Hungary, on the S by Slovenia and Italy, and on the W by Liechtenstein and Switzerland, Austria has a total boundary length of 2,562 km (1,588 mi).

While not making any territorial claims, Austria oversees the treatment of German speakers in the South Tyrol (now part of the autonomous province of Trentino-Alto Adige), which was ceded to Italy under the Treaty of St.-Germain-en-Laye in 1919.

Austria's capital city, Vienna, is located in the northeastern part of the country.

## <sup>2</sup> TOPOGRAPHY

Most of western and central Austria is mountainous, and much of the flatter area to the east is hilly, but a series of passes and valleys permits travel within the country and has made Austria an important bridge between various sections of Europe. The principal topographic regions are the Alps, constituting 62.8% of Austria's land area; the Alpine and Carpathian foothills (11.3%); the Pannonian lowlands of the east (11.3%); the granite and gneiss highlands of the Bohemian Massif (10.1%); and the Vienna Basin (4.4%).

The highest point of the Austrian Alps is the Grossglockner, 3,797 m (12,457 ft). The Danube (Donau) River, fully navigable along its 350-km (217-mi) course through northeastern Austria, is the chief waterway, and several important streams—the Inn, Enns, Drava (Drau), and Mur—are tributaries to it. Included within Austria are many Alpine lakes, most of the Neusiedler See (the lowest point in Austria, 115 m/377 ft above sea level), and part of Lake Constance (Bodensee).

## <sup>3</sup> CLIMATE

Climatic conditions depend on location and altitude. Temperatures range from an average of about -7 to -1°C (20 to 30°F) in winter to about 18 to 24°C (65 to 75°F) in July. Rainfall ranges from more than 102 cm (50 in) annually in the western mountains to less than 66 cm (26 in) in the driest region, near Vienna.

## <sup>4</sup> FLORA AND FAUNA

Plants and animals are those typical of Central Europe. Austria is one of Europe's most heavily wooded countries, with 47% of its area under forests. Deciduous trees (particularly beech, birch, and oak) and conifers (fir) cover the mountains up to about 1,200 m (4,000 ft); above that point fir predominates and then gives way to larch and stone pine. There is a large variety of wildlife. Although chamois are now rare, deer, hare, fox, badger, marten, Alpine chough, grouse, marmot, partridge, and pheasant are still plentiful. The birds of the reed beds around the Neusiedler See include purple heron, spoonbill, and avocet. The ibex, once threatened, has begun breeding again. Hunting is strictly regulated.

## <sup>5</sup> ENVIRONMENT

The Ministry of Health and Environmental Protection, established in 1972, is responsible for the coordination at the national level of all environmental protection efforts, addressing its efforts toward problems including waste disposal, pollution, noise, sulfur dioxide, and carbon monoxide levels, as well as emissions by the iron, steel, and ceramics industries. A toxic waste law enacted in 1984 established strict regulations for the collection, transport, and disposal of dangerous substances. The Austrian government has imposed strict regulations on gas emissions, which helped to reduce sulphur dioxide by two-thirds over an eight-year period beginning in 1980. In 1992 Austria was among the 50 countries

with the highest level of industrial carbon dioxide emissions, producing 56.6 million metric tons of emissions, or 7.29 m tons per capita. In 1996, the level rose to 59.3 million metric tons. In 2000, the total was 60.8 million metric tons.

Austrians continue to fight the problem of acid rain which has damaged 25% of the country's forests. In general, environmental legislation is based on the "polluter pays" principle. The water resources fund of the Ministry for Buildings and Technology distributed more than \$20 billion for canalization and waste-water purification plants between 1959 and the early 1980s; the Danube and the Mur have been the special focus of efforts to improve water quality.

Endangered species include Freya's damselfly and the dusky large blue butterfly. As of 2002, there were at least 83 species of mammals, 230 breeding and wintering bird species, and over 3,000 species of plants. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 5 types of mammals, 8 species of birds, 7 species of fish, 22 types of mollusks, 22 other invertebrates, and 3 species of plants. Endangered species include Freya's damselfly, slender-billed curlew, bald ibis, Danube salmon, and the European mink. About 33% of the total land area is protected, including 19 Ramsar wetland sites.

## 6 POPULATION

The population of Austria in 2005 was estimated by the United Nations (UN) at 8,151,000, which placed it at number 92 in population among the 193 nations of the world. In 2005, approximately 15% of the population was over 65 years of age, with another 16% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.1%, a rate the government viewed as too low. The projected population for the year 2025 was 8,396,000. The population density was 97 per sq km (252 per sq mi).

The UN estimated that 54% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of just 0.08%. The capital city, Vienna (Wien), had a population of 2,179,000 in that year. Other large cities and their estimated populations include Graz, 237,810; Linz, 188,968; Salzburg, 145,000; and Innsbruck, 140,000.

## 7 MIGRATION

Every Austrian has the constitutional right to migrate. For several years after the end of World War II (1945), fairly large numbers of Austrians emigrated, mostly to Australia, Canada, and the United States, but as the economy recovered from war damage, emigration became insignificant. Austria retains the principle of the right of asylum, and the benefits of Austrian social legislation are granted to refugees and displaced persons. Between 1945 and 1983, 1,942,782 refugees from more than 30 countries came to Austria, of whom about 590,000 became Austrian citizens (including some 302,000 German-speaking expatriates from Czechoslovakia, Romania, and Yugoslavia). Following the political upheavals in Hungary in 1956, Czechoslovakia in 1968, and Poland in 1981, Austria received large numbers of refugees from these countries: 180,432 Hungarians, about 100,000 Czechs and Slovaks, and 33,142 Poles. Between 1968 and 1986, 261,857 Jewish emigrants from the Soviet

Union passed through Austria, about one-third of them going to Israel and the rest to other countries, primarily the United States. Of Austrians living abroad, some 186,900 were residents of Germany in 1991. Estimated as of 2005, Austria had a net migration rate of 1.97 migrants per 1,000 population.

In 2003 of Austria's roughly eight million inhabitants, 9.4% were foreign residents, with about two-thirds of them coming from the successor states of the former Yugoslavia, Germany, and Turkey. Between 1985 and 2001, over 254,000 foreigners were naturalized. Austria's proportion of foreign-born residents in 2001 was even higher than that of the United States, reaching a level of 12.5%.

By the end of 2004 there were 38,262 asylum seekers and 18,319 refugees in Austria. The majority of those seeking asylum were from the Russian Federation, Serbia and Montenegro, Moldova, India, Turkey, China, and Pakistan. Approximately 16% of the asylum seekers were from the Russian Federation alone. Citizenship legislation has been changed to allow foreign spouses to become citizens only after five years of marriage to the same Austrian spouse.

In 2003, the foreign labor force was 11.8% of the total labor force. Turkish workers traditionally have had the highest unemployment rate of all foreign worker groups.

## 8 ETHNIC GROUPS

Austrians are a people of mixed Dinaric, Nordic, Alpine, and East Baltic origin. In a 2001 census, about 91.1% of respondents were Austrian. Minority groups include Croatians, Slovenes, Slovaks, Romas, Czechs, Serbs, Bosniaks, and Hungarians. These make up about 4% of the population. Turks make up about 1.6% of the population and Germans constitute less than 1%.

## 9 LANGUAGES

The official national language is German and nearly 99% of the inhabitants speak it as their mother tongue. People in Vorarlberg Province speak German with an Alemannic accent, similar to that in Switzerland. Slovene is the official language in Carinthia and both Croatian and Hungarian are official languages in Burgenland. In other provinces, Austrians speak various Bavarian dialects. There are also small groups of Czech, Slovak, and Polish speakers in Vienna.

## 10 RELIGIONS

As of 2001, about 74% of the people were Roman Catholic, but reports indicate that only about 17% of all Roman Catholics were active participants in formal religious service. About 4.7% of the population belonged to the Lutheran and Presbyterian churches (Evangelical Church, Augsburg and Helvetic Confessions). Muslims accounted for about 4.2% of the population. The Jewish community stood at about 0.1% of the population; and Eastern Orthodox (Russian, Greek, Serbian, Romanian, Bulgarian) at 2.2%. Other Christian churches had accounted for about 0.9% of the population. These include the Armenian Apostolic Church, the New Apostolic Church, the Syrian Orthodox Church, the Church of Jesus Christ of Latter-day Saints, and the Methodist Church of Austria, among others. The Church of Scientology reportedly had somewhere between 5,000 and 6,000 members and the Unification Church had about 700 members. Other small groups within the country, which are termed as "sects" by the government,

LOCATION: 46°22' to 49°1' N; 9°22' to 17°10' E BOUNDARY LENGTHS: Germany, 784 kilometers (487 miles); Czech Republic, 362 kilometers (225 miles); Slovakia, 91 kilometers (57 miles); Hungary, 366 kilometers (227 miles); Slovenia, 330 kilometers (205 miles); Italy, 430 kilometers (267 miles); Liechtenstein, 37 kilometers (23 miles); Switzerland, 164 kilometers (102 miles).

include: Hare Krishna, the Divine Light Mission, Eckankar, the Osho movement, Sai Baba, Sahaja Yoga, Fiat Lux and the Center for Experimental Society Formation. About 12% of respondents claimed to be atheists and 2% indicated no religious affiliation at all.

The constitution provides for freedom of religion and this right is generally respected in practice. The government is secular, but many Roman Catholic holidays are celebrated as public holidays. Religious organizations are divided into three legal categories under the 1874 Law on Recognition of Churches and the 1998 Law on the Status of Religious Confessional Communities, and each division offers a different level of rights. Those divisions are: officially recognized religious societies, religious confessional communities, and associations. There were 13 officially recognized religious societies in 1998. The Ecumenical Council of Austrian Churches provides an interfaith forum for discussions on a variety of issues. Pro Oriente, an international organization of Catholic and Orthodox churches, also holds an active chapter in the country.

## 11 TRANSPORTATION

Austria has a dense transportation network. The Federal Railway Administration controls some 90% of Austria's 6,021 km (3,745

mi) of railways in 2004, which is made up of standard and narrow gauge track. Of the 5,565 km (3,461 mi) of standard-gauge track, 3,859 km (2,400 mi) are electrified, while 146 km (91 mi) of the 456 km (284 mi) of narrow-gauge track are electrified.

In 2003, paved highways totaled 133,718 km (83,172 mi) and included 1,677 km (1,043 mi) of expressways. In 2003, there were 4,054,308 passenger cars, and 335,318 commercial vehicles in use.

Austria has 358 km (223 mi) of inland waterways, over 80% of which are navigable by engine-powered vessels. Most of Austria's overseas trade passes through the Italian port of Trieste; the rest is shipped from German ports. In 2005, the oceangoing merchant fleet of Austria consisted of 8 ships of 1,000 GRT or over, with a capacity of 29,624 GRT.

In 2004, there were an estimated 55 airports in Austria. As of 2005, a total of 24 had paved runways, and there was also one heliport. Of the six major airports in Austria—Schwechat (near Vienna), Graz, Innsbruck, Klagenfurt, Linz, and Salzburg—Schwechat is by far the most important. In 2003, Austrian air carriers provided flights for 6.903 million passengers and carried 431,000 freight ton km.

## 12 HISTORY

Human settlements have existed in what is now Austria since prehistoric times. In 14 BC, the region, already overrun by various tribes, including the Celts, was conquered by the Romans, who divided it among the provinces of Noricum, Pannonia, and Illyria. The Romans founded several towns that survive today: Vindobona (Vienna), Juvavum (Salzburg), Valvidena (Innsbruck), and Brigantium (Bregenz). After the fall of the Roman Empire, Austria became (about AD 800) a border province of Charlemagne's empire until the 10th century, when it was joined to the Holy Roman Empire as *Österreich* ("Kingdom of the East").

From the late 13th to the early 20th century, the history of Austria is tied to that of the Habsburg family. In 1282, Rudolf von Habsburg (Rudolf I, newly elected German emperor) gave Austria (Upper and Lower Austria, Carinthia, Styria, and Carniola) to his sons, Albrecht and Rudolf, thus inaugurating the male Habsburg succession that would continue unbroken until 1740. The highest point of Habsburg rule came in the 1500s when Emperor Maximilian I (r.1493–1519) arranged a marriage between his son and the daughter of King Ferdinand and Queen Isabella of Spain. Maximilian's grandson became King Charles I of Spain in 1516 and, three years later, was elected Holy Roman emperor, as Charles V. Until Charles gave up his throne in 1556, he ruled over Austria, Spain, the Netherlands, and much of Italy, as well as over large possessions in the Americas. Charles gave Austria to his brother Ferdinand, who had already been elected king of Hungary and Bohemia in 1526; the Habsburgs maintained their reign over Austria, Bohemia, and Hungary until 1918.

When the last Habsburg king of Spain died in 1700, France as well as Austria laid claim to the throne. The dispute between the continental powers erupted into the War of the Spanish Succession (1701–14) and drew in other European countries in alliance with the respective claimants. At the end of the war, Austria was given control of the Spanish Netherlands (Belgium), Naples, Milan, and Sardinia. (It later lost Naples, together with Sicily, in the War of the Polish Succession, 1733–35.) In 1740, after the death of Charles VI, several German princes refused to acknowledge his daughter and only child, Maria Theresa, as the legitimate ruler of Austria, thus provoking the War of the Austrian Succession (1740–48). Maria Theresa lost Silesia to Prussia but held on to her throne, from which she proceeded to institute a series of major internal reforms as ruler of Austria, Hungary, and Bohemia. After 1765, she ruled jointly with her son, Holy Roman Emperor Joseph II (r.1765–90). Following his mother's death in 1780, Joseph, an enlightened despot, sought to abolish serfdom and introduce religious freedom, but he succeeded only in creating considerable unrest. Despite the political turmoil, Austria's cultural life flourished during this period, which spanned the careers of the composers Haydn and Mozart.

During the French Revolutionary and Napoleonic wars, Austria suffered a further diminution of territory. In 1797, it gave up Belgium and Milan to France, receiving Venice, however, in recompense. In 1805, Austria lost Venice, as well as the Tyrol and part of Dalmatia, to Napoleon. Some restitution was made by the Congress of Vienna (1814–15), convened after Napoleon's defeat; it awarded Lombardy, Venetia, and Istria and restored all of Dalmatia to Austria, but it denied the Habsburgs the return of former possessions in Baden and the Netherlands.

From 1815 to 1848, Austria, under the ministry of Prince Klemens von Metternich, dominated European politics as the leading power of both the German Confederation and the Holy Alliance (Austria, Russia, and Prussia). Unchallenged abroad, the reactionary Metternich achieved peace at home through ruthless suppression of all liberal or nationalist movements among the people in the Habsburg Empire. In 1848, however, revolutions broke out in Hungary and Bohemia and in Vienna itself; Metternich resigned and fled to London. Although the revolutions were crushed, Emperor Ferdinand I abdicated in December. He was succeeded by his 18-year-old nephew, Franz Josef I, who was destined to occupy the Austrian throne for 68 years, until his death in 1916. During his reign, Austria attempted to set up a strong central government that would unify all the Habsburg possessions under its leadership. But nationalist tensions persisted, exacerbated by outside interference. In 1859, in a war over Habsburg-controlled Lombardy, French and Sardinian troops defeated the Austrians, ending Austrian preeminence in Italian politics; and in 1866, Prussia forced Austria out of the political affairs of Germany after the Seven Weeks' War. In 1867, Hungarian nationalists, taking advantage of Austria's weakened state, compelled Franz Josef to sign an agreement giving Hungary equal rights with Austria. In the ensuing Dual Monarchy, the Austrian Empire and the Kingdom of Hungary were united under one ruler. Each country had its own national government, but both shared responsibility for foreign affairs, defense, and finance. Self-government for the empire's Magyar (Hungarian) population was balanced by continued suppression of the Slavs.

On 28 June 1914, at Sarajevo, Serbian patriots, members of the Slavic movement, assassinated Archduke Francis Ferdinand, nephew of the emperor and heir to the Austrian throne. Their act set off World War I, in which Austria-Hungary was joined by Germany (an ally since 1879), Italy (a member, with the first two, of the Triple Alliance of 1882), and Turkey. They became known as the Central Powers. In 1915, Italy defected to the side of the Allies—France, Russia, the United Kingdom, and (from 1917) the United States. After the defeat of the Central Powers and the collapse of their empires in 1918, Austria, now reduced to its German-speaking sections, was proclaimed a republic. The Treaty of St.-Germain-en-Laye (1919) fixed the borders of the new state and forbade it any kind of political or economic union with Germany without League of Nations approval.

During the next decade, Austria was plagued by inflation, food shortages, unemployment, financial scandals, and, as a consequence, growing political unrest. The country's two major political groupings, the Christian Socialist Party and the Social Democratic Party, were almost equal in strength, with their own private paramilitary movements. A small Austrian Nazi party, advocating union with Germany, constituted a third group. In March 1933, Chancellor Engelbert Dollfuss, leader of the Christian Socialists, dissolved the Austrian parliament, suspended the democratic constitution of 1920, and ruled by decree, hoping to control the unrest. In February 1934, civil strife erupted; government forces broke up the opposition Social Democratic Party, executing or imprisoning many persons. Dollfuss thereupon established an authoritarian corporate state along Fascist lines. On 25 July, the Nazis, emboldened by Adolf Hitler's rise in Germany, assassinated Dollfuss in an abortive coup. Kurt von Schuschnigg, who had served under

Dollfuss as minister of justice and education, then became chancellor. For the next four years, Schuschnigg struggled to keep Austria independent amid growing German pressure for annexation (*Anschluss*). On 11 March 1938, however, German troops entered the country, and two days later Austria was proclaimed a part of the German Reich. In 1939, Austria, now known as Ostmark, entered World War II as part of the Axis alliance.

Allied troops entered Austria in April 1945, and the country was divided into US, British, French, and Soviet zones of occupation. Declaring the 1920 constitution in force, the occupying powers permitted Austrians to set up a provisional government but limited Austrian sovereignty under an agreement of 1946. Austria made effective use of foreign economic aid during the early postwar years. The United States and the United Kingdom supplied \$379 million worth of goods between 1945 and 1948; another \$110 million was provided by private organizations; and Marshall Plan aid amounted to \$962 million. Inflation was checked by the early 1950s, and for most of the remainder of that decade the economy sustained one of the world's highest growth rates.

On 15 May 1955, after more than eight years of negotiations, representatives of Austria and the four powers signed, at Vienna, the Austrian State Treaty, reestablishing an independent and democratic Austria, and in October all occupation forces withdrew from the country. Under the treaty, Austria agreed to become permanently neutral. As a neutral nation, Austria has remained outside the political and military alliances into which postwar Europe is divided. Economically, however, it has developed close links with Western Europe, joining EFTA in 1960 and concluding free-trade agreements with the EEC (now the EU) in 1972. Because of its location, Austria served as an entrepôt between the Western trade blocs and the CMEA, with which it also had trade relations. Austria was twice the site of US-USSR summit meetings. In June 1961, President John F. Kennedy and Premier Nikita S. Khrushchev conferred in Vienna, and in June 1979, presidents Jimmy Carter and Leonid I. Brezhnev signed a strategic arms limitation agreement in the Austrian capital. Austria joined the EU in 1995 and European economic and monetary union in 1999.

On 8 July 1986, following elections in May and June, former UN Secretary-General Kurt Waldheim was sworn in as president of Austria. During the presidential campaign, Waldheim was accused of having belonged to Nazi organizations during World War II and of having taken part in war crimes while stationed in Greece and Yugoslavia with the German army from 1942 to 1945; he denied the charges. After his inauguration, diplomats of many nations made a point of avoiding public contact with the new president, and on 27 April 1987, the US Justice Department barred him from entering the United States. To the dismay of many leaders, Pope John Paul II granted Waldheim an audience at the Vatican on 25 June.

Waldheim declined to run for a second term, and in July 1992, Thomas Klestil was elected federal president and he was reelected on 19 April 1998. Relations with Israel, which had been strained under Waldheim's presidency, returned to normal.

The growing strength of Austria's Freedom Party, headed by Jörg Haider, is evidence of a turn to the right in Austrian politics. Although the party did not capture the votes it wanted to in the 17 December 1995 legislative elections, in the elections for European Parliament on 14 October 1996 the aggressively nationalist, anti-

immigrant, anti-European Freedom Party took 28% of the vote, 2% behind the Social Democrats. The People's Party and Social Democrats remained together in a coalition throughout the 1990s and prepared Austria for entry into the European economic and monetary union. Cautious reforms took place, and the administration privatized state-owned enterprises, brought down inflation to less than 1% in 1998, and reduced the budget deficit to 2%. Average growth rates between 1997 and 2000 were over 2%. Unemployment fell to 4% in 2000. However, the global economic downturn that began in 2001 caused Austria's economy to suffer; coupled with costs resulting from severe flooding in August 2002, Austria's budget deficit increased sharply. In 2004–05 the economy rebounded: GDP growth was once again at 2%, allowing Austria to retain its position among the top European economies.

The Freedom Party scored a triumph in the general election of October 1999, coming in second behind the Social Democrats with 27% of the vote. After the traditional coalition of Social Democrats and the conservative People's Party failed to reach agreement on the next government in early 2000, the leader of the People's Party, Wolfgang Schüssel, turned to Haider and the Freedom Party to form a new administration. President Klestil had no choice but to accept the new coalition agreement. Its installation on 3 February 2000 provoked widespread protests both within Austria and from other members of the European Union. The EU partners decided to boycott Austria in all official meetings, a decision that caused a severe crisis in the EU itself. Haider resigned as party chairman in April 2000 although he remained governor of Carinthia. His withdrawal from federal politics did not soften the views of the EU, which imposed diplomatic sanctions on Austria. (They were lifted in September 2000.) A power struggle within the Freedom Party between Haider and Austria's Vice-Chancellor and Freedom Party chair Susanne Riess-Passer in September 2002 resulted in Riess-Passer's resignation, along with that of two Freedom Party ministers. The People's Party/Freedom Party coalition government collapsed, and new elections were called for 24 November 2002. In those elections, Schüssel's People's Party made wide gains; the Freedom Party suffered a major defeat. It dropped to 10% of the vote, down from its 2000 showing of 27%. Despite these results, and after failed negotiations with the Social Democrats and Greens, Schüssel formed a coalition government with the Freedom Party, which was sworn in on 1 April 2003. Schüssel subsequently moved closer to the right, notably on asylum and immigration issues (in October 2003, his government introduced a package of asylum legislation which are seen as the most restrictive in Europe). In April 2005, the Freedom Party split when Haider left to form the Alliance for Austria's Future. Members of both groups remain in government.

After the new government took office in 2003, it launched a series of austerity measures designed to save the government €8 billion. Early retirement was to be cancelled, cuts were planned in public services and the health care system was to be reformed, and, most controversially, drastic cuts were proposed in the nation's pension system. As a result, approximately 500,000 Austrians took part in nationwide strikes in May 2003, the largest in 50 years.

In January 2001, the Austrian government and several Austrian companies agreed to provide \$360 million to a general settlement fund to compensate Jews who had their property and assets seized

by the Nazis during World War II. Each victim of Nazi persecution was to receive \$7,000. Austria also created a social fund to pay pensions to survivors no longer living in the country, in the amount of \$100 million.

Following the 11 September 2001 terrorist attacks on the United States, Austria passed a Security and Defense Doctrine, representing a shift in Austria's longstanding policy of neutrality. Although Austria will not participate in military alliances requiring mutual defense commitments, the country is gradually moving towards closer integration with European security structures, which would allow for participation in the EU rapid reaction force and NATO's Partnership for Peace program. Austria contributed peacekeeping forces to the former Yugoslavia, and supported NATO strikes on Serbia during the Kosovo conflict. Austria contributed 60 soldiers to the international military protection force in Afghanistan following the US-led military campaign there.

In April 2004, Heinz Fischer was elected president. In May 2005, the Austrian parliament ratified the EU constitution. However, the rejection of that constitution by the French and Dutch in referenda held later in May and June 2005 doomed the plan for further European union indefinitely. Concerns about immigration, poor economies, EU expansion, and loss of national identity are some of the reasons French and Dutch voters gave for rejecting the constitution.

### 13 GOVERNMENT

The second Austrian republic was established on 19 December 1945. According to the constitution of 1920, as amended in 1929, Austria is a federal republic with a democratically elected parliament. The president, elected by popular vote for a six-year term, appoints a federal chancellor (*Bundeskanzler*), usually the leader of the largest party in parliament, for a term not exceeding that of parliament (four years); upon the chancellor's proposal, the president nominates ministers (who should not serve in parliament at the same time) to head the administrative departments of government. The ministers make up the cabinet, which formulates and directs national policy. Cabinet ministers serve out their terms subject to the confidence of a parliamentary majority. The president is limited to two terms of office.

The parliament, known as the Federal Assembly (*Bundesversammlung*), consists of the National Council (*Nationalrat*) and Federal Council (*Bundesrat*). The Bundesrat has 62 members, elected by the country's unicameral provincial legislatures (*Landtage*) in proportion to the population of each province. The Nationalrat has 183 members (prior to 1970, 165 members), elected directly in nine election districts for four-year terms by secret ballot on the basis of proportional representation. All citizens 25 years of age or older are eligible to serve in parliament; all citizens 18 years of age or older may vote. Voting is compulsory for presidential elections. The electoral law was amended in February 1990 to extend the franchise to Austrians living permanently or temporarily abroad. All legislation originates in the Nationalrat; the Bundesrat exercises only a suspensory veto.

### 14 POLITICAL PARTIES

The restoration of the republic in 1945 revived political activity in Austria. In general elections that November, the Austrian People's Party (*Österreichische Volkspartei—ÖVP*), successor to the

prewar Christian Socialists, emerged as the strongest party, with the reborn Socialist Party of Austria (*Sozialistische Partei Österreichs—SPÖ*) trailing slightly. The ÖVP and SPÖ, controlling 161 of the 165 seats in the Nationalrat, formed a coalition government and worked closely with the Allies to construct an independent and democratic Austria. This coalition held until after the elections of 1966, when the ÖVP, with a majority of 11 seats, formed a one-party government headed by Chancellor Josef Klaus. In 1970, the SPÖ won a plurality in the Nationalrat and was able to put together a minority Socialist government under its leader, Bruno Kreisky. Kreisky remained in power until 1983—longer than any other non-Communist European head of government. The Socialist Party was renamed the Social Democratic Party in 1991, and began to advocate free-market oriented policies. It has also supported Austria's entry into the EC (now EU).

The ÖVP, also referred to as Austria's Christian Democratic Party, favors free enterprise, competition, and the reduction of class differences. Organized into three constituencies—businessmen, farmers, and employees—it advocates provincial rights and strongly supports the Catholic Church. The SPÖ, also known as the Social Democratic Party, advocates moderate reforms through democratic processes. It favored continued nationalization of key industries, economic planning, and widespread social welfare benefits. It is closely allied with the Austrian Trade Union Federation and its constituent unions. The economic policy differences between the two parties diminished in the 1990s as both recognized the need to introduce structural reforms and bring down budget deficits. Their main disagreements are on the pace of change, rather than on the need to introduce reforms.

A third political group, the Union of Independents (*Verband der Unabhängigen—VdU*), appeared in 1949. Strongly antisocialist, with anticlerical, pan-German elements, it challenged the coalition in the elections of that year, winning 16 seats. By the mid-1950s, however, the VdU, consistently denied a voice in government by the two major parties, had begun to disintegrate. In 1955, it was reorganized, under new leadership, as the Freedom Party of Austria (*Freiheitliche Partei Österreichs—FPÖ*). In 1970, with six seats in the Nationalrat, the FPÖ was accepted as a negotiating partner by the SPÖ. The party favors individual initiative over collective security. By the turn of the 21st century, under the leadership of Jörg Haider, the FPÖ was an extreme nationalist, anti-immigrant, anti-European party. In June 1992, FPÖ dissidents founded the Free Democratic Party. In 2005, Haider split from the FPÖ to form the Alliance for the Future of Austria (BZÖ).

The Communist Party of Austria (*Kommunistische Partei Österreichs—KPÖ*) has declined steadily in strength since the end of World War II. It has had no parliamentary representation, for example, since 1959, when it lost the three seats won in 1956. The KPÖ was the first party in the Nationalrat to propose, in 1953, that Austria become a neutral nation.

In the elections of 24 April 1983, dominated by economic issues, the SPÖ (with 47.8% of the vote) won 90 seats, down from 95 in 1979; the ÖVP (with 43.21%) 81; and the FPÖ (with 4.97%) 12. The KPÖ polled 0.66% of the vote but won no seats. Two new environmentalist groups, the United Greens of Austria (*Vereinten Grünen Österreichs*) and the Alternative List—Austria (*Alternative Liste Österreichs*), likewise failed to gain representation in the Nationalrat, although they collectively polled more than 3%

of the total vote. In May, Kreisky, having failed to win a clear majority, resigned. He was succeeded as party leader and chancellor by Fred Sinowatz, who proceeded to form a coalition government with the FPÖ.

Following the election of Kurt Waldheim to the presidency in June 1986, Sinowatz resigned and was succeeded by Franz Vranitzky, a former finance minister. The SPÖ-FPÖ coalition broke down in September 1986. Following parliamentary elections on 23 November 1986, a new government was sworn in on 21 January 1987, with Vranitzky from the SPÖ as chancellor and Alois Mock, FPÖ chairman, as vice-chancellor and prime minister.

In the general election of 7 October 1990, the “grand coalition” continued. The 183 seats in the Nationalrat were distributed as follows: SPÖ (80), ÖVP (60), FPÖ (33), and the Green Alternative (10). It also governed after the 1995 elections.

The 1999 elections finally brought change and was a watershed event. In the legislative election held on 3 October 1999, the 183 seats in the Nationalrat were distributed as follows: SPÖ (65), ÖVP (52), FPÖ (52), Greens (14), and Liberal Forum (0). Compared to the 1995 elections, the SPÖ lost 6 seats, the Liberal Forum lost all of its 10 seats and had no representation in the new National Assembly, the ÖVP retained more or less its share of the vote, while the Greens went from 9 to 14 seats and the FPÖ went from 40 seats to 52 seats and became, together, with the People’s Party, the second-largest bloc in parliament. The leader of the ÖVP, Wolfgang Schüssel, formed a coalition with the FPÖ, and became chancellor.

Following the 24 November 2002 elections, party strength in the Nationalrat was distributed as follows: ÖVP, 42.3% (79 seats); SPÖ, 36.5% (69 seats); FPÖ, 10% (18 seats); the Greens, 9.5% (17 seats); the Liberal Forum, 1% (no seats); and the KPÖ, 0.6% (no seats). Schüssel remained chancellor, and formed a government with the FPÖ, as he was unable to persuade the SPÖ and the Greens to join in a coalition with the ÖVP. As of 2005, a coalition government comprising the ÖVP and Jörg Haider’s Alliance for the Future of Austria, which split from the FPÖ that April, was ruling the country.

In the presidential election held on 25 April 2004, Heinz Fischer of the SPÖ was elected president with 52.4% of the vote, defeating Benita Ferrero-Waldner of the ÖVP (47.6% of the vote). Fischer succeeded Thomas Klestil, who had served as president since 1992.

## 15 LOCAL GOVERNMENT

Austria is divided into nine provinces (Länder): Vienna (Wien), Lower Austria (Niederösterreich), Upper Austria (Oberösterreich), Styria (Steiermark), Carinthia (Kärnten), Tyrol (Tirol), Salzburg, Burgenland, and Vorarlberg. The relationship between the provinces and the central government is defined by the constitution. Most administrative, legislative, and judicial authority—including taxation, welfare, and police—is granted to the central government. The Länder, which enjoy all residual powers, act as executors of federal authority.

Each province has its own unicameral legislature, elected on the basis of proportional representation. All legislation must be submitted through the provincial governor (*Landeshauptmann*) to the competent federal ministry for concurrence. If such concurrence is not obtained, the provincial legislature can reinstate the

bill by majority vote. In case of prolonged conflict between the federal authorities and the provincial legislatures, the Constitutional Court may be appealed to for settlement.

The provincial governor, elected by the provincial legislature (*Landtag*), is assisted by a cabinet (*Landesrat*) consisting of ministries analogous to those at the federal level. Each province is divided into several administrative districts (*Bezirke*), each of which is under a district commissioner (*Bezirkshauptmann*). Local self-government is vested in popularly elected communal councils which, in turn, elect various local officers, including the mayor (*Bürgermeister*) and his deputies. There are some 2,300 communities in Austria, as well as 15 cities that have independent charters and fall directly under provincial authority rather than that of the districts. Vienna is both a municipality and a province.

## 16 JUDICIAL SYSTEM

Austria in 2005 had 140 local courts (*Bezirksgerichte*) with civil jurisdiction. There were also 20 provincial and district courts (*Landesgerichte* and *Kreisgerichte*) with civil and criminal jurisdiction and four higher provincial courts (*Oberlandesgerichte*) with criminal jurisdiction, located in Vienna, Graz, Innsbruck, and Linz. The Supreme Court (*Oberster Gerichtshof*), in Vienna, acts as the final appellate court for criminal and civil cases. The Constitutional Court (*Verfassungsgerichtshof*) has supreme jurisdiction over constitutional and civil rights issues. The Administrative Court (*Verwaltungsgerichtshof*) ensures the legal functioning of public administration. A central auditing authority controls financial administration. Judges are appointed by the federal government and cannot be removed or transferred. Trial by jury was reintroduced in 1951. There is no capital punishment.

The judiciary is independent of the other branches. Judges are appointed for life and can only be removed for specific reasons established by law and only after formal court action has been taken.

Before the mid 1990s, the law allowed for detention of suspects for 48 hours without judicial review and up to two years of detention during the course of a criminal investigation. Amendments to the law in 1994 required more stringent judicial review of pre-trial and investigative detention. Criminal defendants are afforded a presumption of innocence, public trials, and jury trial for major offenses, as well as a number of other procedural rights.

## 17 ARMED FORCES

As of 2005, Austria’s active armed forces totaled 39,900 personnel plus another 9,500 civilians. In addition, another 60,000 reservists undergo refresher training annually. The Army is the largest service in terms of manpower, with 33,200 personnel in 2005. Equipment included 114 main battle tanks, 220 light tanks, 637 armored personnel carriers, and 684 artillery pieces. Austria’s Air Force in 2005 had 6,700 active personnel, which operated 40 combat capable aircraft, which included 12 fighters. There were also 17 transport and 44 training aircraft. The 2005 defense budget totaled \$2.29 billion. Austrian armed forces in 2005 were deployed

to 12 countries or regions under UN, NATO or European Union command.

## 18 INTERNATIONAL COOPERATION

The Federal Constitutional Law on the Neutrality of Austria, adopted on 26 October 1955, bound the nation to neutrality and banned it from joining any military alliances or permitting the establishment of foreign military bases on its territory. However, since 1995, the country has been rethinking this position on neutrality. In December 2001, Austria adopted a Security and Defense Doctrine; although Austria will not participate in military alliances requiring mutual defense commitments, the country is gradually moving toward greater integration with European security arrangements, which would allow for participation in the EU rapid reaction force and NATO's Partnership for Peace program.

Austria became a member of the UN on 14 December 1955. It is a member of ECE and all the nonregional specialized agencies, such as FAO, IFC, ILO, WHO, and the World Bank. The country became a member of the WTO 1 January 1995 and of the OSCE on 30 January 1992. Vienna has served an important role as a meeting place and headquarters site for a variety of international activities. The headquarters of OPEC, IAEA, UNIDO, and the International Institute for Applied Systems Analysis are located in Vienna. Austria belongs to the Council of Europe, the OECD, the Paris Club, the European Space Agency, and the European Union. Austria's interest in the Third World is exemplified by membership in the Asian and Inter-American development banks and by its permanent observer status with the OAS.

Austria is part of the Australia Group, the Zangger Committee, and the Organization for the Prohibition of Chemical Weapons. Austrian troops have been part of UN peacekeeping forces in Kosovo (est. 1999), Western Sahara (est. 1991), Ethiopia and Eritrea (est. 2000), Georgia (est. 1993), and Cyprus (est. 1964).

In environmental cooperation, the country is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Air Pollution; Ramsar; CITES; the International Tropical Timber Agreements; the Kyoto Protocol; the Montréal Protocol; MARPOL; and the Nuclear Test Ban Treaty.

## 19 ECONOMY

Liberalization inspired by the EU and greater acceptance of the values of competition have transformed Austria's economy since the 1980s. Previously, the state maintained a strong presence in the Austrian economy, but in the 21st century private enterprise increasingly takes on a primary position. Basic industries, including mineral production, heavy industry, rail and water transport, and utilities, were nationalized during 1946–47 and in 1970 were reorganized under a state-owned holding company, the Austrian Industrial Administration (Österreichische Industrieverwaltungs-Aktiengesellschaft—ÖIAG). In 1986, the ÖIAG was renamed the Österreichische Industrieholding AG, and a process of restructuring and privatization took place that traversed the 1990s and early 2000s. German companies in particular took advantage of the privatization of Austrian firms.

Austria's period of unparalleled prosperity lasted from the 1950s through the early 1970s; the economy was characterized by a high rate of growth, modest price increases, and a favorable climate in industrial relations. By 1975, Austrian industry, the single

most important sector of the economy, had more than quadrupled in value over 1945. But the general economic slowdown that followed the oil price hike of late 1973 affected Austria as it did other European countries. During 1978–81, annual real growth averaged 2.6%, about standard for the OECD countries, but there was no real growth in 1981 and only 1.1% growth in 1982, as Austria endured its most prolonged recession since World War II. The following years saw an improvement. Between 1984 and 1991, annual real GDP growth averaged 2.8%. In 1992, it was 1.7%. Following the mild recession in 1993, Austria's economy—driven by strong exports, investment, and private consumption—expanded an average of 2% throughout the 1990s. GDP growth stood at 2.4% in 2004, and dropped to an estimated 1.7% in 2005. GDP growth was forecast at 1.8% for 2006, and to accelerate to 2.1% for 2007. Despite the impact of high oil prices projected for 2006, inflation was expected to ease over the 2006–07 period. The inflation rate (at consumer prices) stood at 1.8% in 2004.

Due in large measure to a global economic downturn and resulting low domestic demand, in 2002 Austria was experiencing its worst slowdown in over a decade. However, in 2001, Austria balanced its budget for the first time in 30 years, in part due to an increase in taxes. (The only countries with higher tax burdens than Austria are Denmark, Finland, and Sweden.) However, the conservative government led by the Austrian People's Party that came into power in November 2002 gave less priority to maintaining a balanced budget, and by 2003, the budget deficit was -1.1%, and was expected to rise to -2% in 2006, with a modest improvement in 2007. Austria's ratio of government debt to GDP remained high among European countries in the early 2000s, at over 65%. Austria benefited from its proximity to the faster-growing economies of Central and Eastern Europe in the early 2000s, but was negatively impacted by the low growth in Germany, its largest trading partner. Severe flooding in Central Europe during August 2002 resulted in extra budget outlays for flood damage. The unemployment rate stood at 4.5% in 2004. Austria profits from a high productivity rate. It has also met with success in privatizing most of its large manufacturing firms. Austria in the early 2000s invested in high-growth industries such as telecommunications, biotechnology, medical and pharmaceutical research, and electronics.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Austria's gross domestic product (GDP) was estimated at \$269.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$32,000. The annual growth rate of GDP was estimated at 1.9%. The average inflation rate in 2005 was 2.3%. It was estimated that agriculture accounted for 2.3% of GDP, industry 30.8%, and services 66.9%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.294 billion or about \$284 per capita and accounted for approximately 0.9% of GDP.

The World Bank reports that in 2003 household consumption in Austria totaled \$144.16 billion or about \$17,819 per capita based on a GDP of \$253.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures

of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.3%. It was estimated that in 1999 about 3.9% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, the labor force was estimated at 3.49 million workers. As of 2005, an estimated 70% of the workforce was engaged in the services sector, 27% in industry, and 3% in agriculture. Foreign laborers, mainly from the former Yugoslavia and Turkey, constitute a significant part of the total workforce. The unemployment rate has risen slightly in recent years, from 3.6% in 1994 to 4.8% in 2002. As of 2005, Austria's unemployment rate was estimated at 5.1%.

Workers were organized into the 13 trade unions affiliated in the Austrian Trade Union Federation (Österreichische Gewerkschaftsbund—ÖGB), accounting for an estimated 47% of the nation's workforce, as of 2005. This confederation negotiates collective bargaining agreements with the Federal Economic Chamber (Bundeskammer der gewerblichen Wirtschaft) representing employers. Although the right to strike is recognized, strikes are rarely used due to cooperation between labor and management. Collective bargaining is prevalent. Disputes over wages, working hours, working conditions, and vacations are settled by a labor court or an arbitration board.

The workweek is set at a maximum of 40 hours, although most Austrian workers put in 38–38.5 hours per week. A 50% differential is generally paid for overtime on weekdays, 100% on Sundays and holidays. In addition, it is required that an employee be given at least 11 hours off between workdays. There is no national minimum wage. Most employees are covered by collective bargaining agreements, which set wages by industry. However, the unofficial accepted minimum is \$14,880 to \$17,360 per year which provides a family with a decent standard of living. The minimum legal age for employment is 15 years, and this is effectively enforced.

## 2<sup>2</sup> AGRICULTURE

Although small, the agricultural sector is highly diversified and efficient. Most production is oriented toward local consumption.

Of Austria's total area, about 18% was arable in 2002; meadows and pasturelands constituted another 24%. The best cropland is in the east, which has the most level terrain. Farms are almost exclusively family-owned. Most holdings are small or medium-sized and, in many cases, scattered. As of 2003, agriculture employed 4.5% of the labor force. In 2003, agriculture (together with forestry) contributed 2.3% to Austria's total GDP.

The use of farm machinery has been increasing steadily; 330,000 tractors were in operation in 2002, up from 78,748 in 1957. Austria today uses less land and manpower and produces more food than it did before World War II (1939–45). Better seeding and more intensive and efficient application of fertilizers have helped raise farm yields and have enhanced self-sufficiency in foodstuffs. Agriculture is highly protected by the government; overproduction, especially evidenced by recurring grain surpluses, requires a hefty subsidy to be paid by the government in order to sell abroad at market prices. Nevertheless, the Austrian government has been

able to maintain farm income, although Austria has some of the highest food costs in Europe.

Chief crops, in terms of sown area and yield, are wheat, rye, oats, barley, potatoes, and sugar beets. Austria is near self-sufficiency in wheat, oats, rye, fruits, vegetables, sugar, and a number of other items. Major crop yields in 2004 included (in tons) sugar beets, 2,935,000; barley, 1,007,000; wheat, 1,719,000; potatoes, 693,000; rye, 213,000; and oats, 139,000. Vineyards yielded 351,000 tons of grapes crushed for wine.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Dairy and livestock breeding, traditionally the major agricultural activities, account for about three-fifths of gross agricultural income.

Milk, butter, cheese, and meat are excellent, and Austria is self-sufficient in dairy products and in most meats. In 2004, livestock included 3,245,000 hogs, 2,052,000 head of cattle, 325,000 sheep, 85,000 horses, and 11,600,000 million poultry. Meat and poultry production in 2004 totaled 996,000 tons. During 2004, Austrian dairy farms produced 3,559,000 tons of milk, 169,000 tons of cheese, and 32,000 tons of butter. In 2004, some 88,700 tons of eggs were produced, which satisfied over 90% of domestic demand. By specializing in quality strains of cattle, hogs, and horses, Austrian breeders have gained wide international recognition. Livestock products, primarily milk, account for about 35% of agricultural exports.

## 2<sup>4</sup> FISHING

Fishing is not important commercially, and fish do not constitute a large part of the Austrian diet. Commercial catches consist mainly of carp and trout. The total catch in 2003 was 2,605 tons. Aquacultural production in 2003 was 2,233 tons, mostly rainbow trout. A sizable segment of the population engages in sport fishing.

## 2<sup>5</sup> FORESTRY

Austria has the second-largest percentage of forest in the European Union. About 47% of Austria's total area is forested, mostly in the foothills and mountains. Styria, in the southeast, is 60% covered with forests, while Burgenland in the east has only 32% forest coverage. About two-thirds of the trees are coniferous, primarily spruce; beech is the most important broadleaf type.

Over-cutting during World War II (1939–45) and in the post-war period resulted in a decline in timber production from 9.5 million cu m (335 million cu ft) in 1936 to a low of about 7.1 million cu m (251 million cu ft). From 1950 to 2003, sawn lumber output rose from 4,000 cu m (141,000 cu ft) to 10.5 million cu m (370.7 million cu ft). Competition reduced the number of sawmills from 5,100 in 1950 to 1,400 in 2003, with about 10,000 employees. Bark beetle infestations adversely affected production in the mid-1990s. Total roundwood yield was 17.1 million cu m (602 million cu ft) in 2003. In 2004, about 7.8 million cu m (247 million cu ft) of softwood lumber logs were produced. To prevent over cutting, export restrictions have been introduced, and reforestation on both public and private land is compulsory. Exports of raw timber and cork are supplemented by exports of such forestry products as paper, cardboard boxes, prefabricated houses, toys, matches, turpentine, and volatile oils. Austria is the world's

fourth-largest softwood lumber exporter, with shipments valued at €1.28 billion in 2003.

## 26 MINING

After a period of postwar expansion, mineral production has stagnated in recent decades, and metals mining continues to decline, because of high operating costs, increased foreign competition, low ore grades, and environmental problems. All the metal mines in the country were closed, except an iron ore operation at Erzberg (producing 1.8 million tons of iron ore and concentrate in 2000) and a tungsten operation at Mittersill, which was the West's largest underground tungsten mine. Most of the growth in the mineral resources area was in the production of industrial minerals, the area in which future mining activities will most likely be concentrated, mostly for domestic consumption.

Austria produces 2.5% of the world's graphite, ranking 10th in the world, and is one of the world's largest sources of high-grade graphite. In 2000, estimated output was 12,000 metric tons, down from 30,000 metric tons in 1996. The country produces 1.6% of the world's talc, ranking ninth, with a reported output in 2003 of 137,596 tons of crude talc and soapstone. The country's only producer of talc, Luzenac Naintsch AG, operated three mines, in the Styria region, and produced a range of talc, chloritic talc, dolomite talc, and chlorite-mica-quartz ores.

Output of other minerals in 2003 output in metric tons, include: limestone and marble, 24,477,000 metric tons; dolomite, 6,079,000 metric tons, for the domestic cement industry, along with calcite and limestone; gypsum and anhydrite, 1,004,000 metric tons; brine salt, 3,422,000 cubic meters (salt mines are owned by the government, with plans to privatize the operations); tungsten, 1,400 tons; pumice (trass), 4,000 tons; and crude kaolin, 100,000 metric tons. Gold production in 2003 was 25 kg. Crude magnesite production was reported at 767,000 metric tons in 2003.

Lignite production has been declining since 1963. In 2003, lignite production totaled 1,152,000 metric tons. Production of bituminous coal declined steadily after World War II, and in 1968 ceased altogether.

## 27 ENERGY AND POWER

Austria is one of the foremost producers of hydroelectric power in Europe. The most important power facilities are publicly owned; 50% of the shares of the large private producers are owned by provincial governments.

In 2000, net electricity generation was 58.8 billion kWh, of which 28.5% came from fossil fuels, 68.6% from hydropower, none from nuclear energy, and the remainder from other sources. In the same year, consumption of electricity totaled 54.8 million kWh. Total installed capacity at the beginning of 2001 was 14.2 million kW. In 2000 petroleum accounted for 39% of energy consumption, natural gas 20%, coal 10%, nuclear energy 0%, and hydroelectric power 31%. During the winter, when there is less flowing water for hydroelectric power, domestic electricity demands must be supplemented by imports from neighboring countries.

Oil, first produced in 1863, is found both in Upper Austria, near Wolfsegg am Hausruck, and in Lower Austria, in the vicinity of Vienna. After reaching a peak of about 3,700,000 tons in 1955, oil production gradually declined to 22,000 barrels per day in 2000. Natural gas production was 1.698 billion cu m (60 billion cu ft)

in 1998, far short of domestic needs; consumption amounted to 6.862 billion cu m (242 billion cu ft) in that year.

## 28 INDUSTRY

Industrial output has increased vastly since the beginning of World War II and contributed 30.8% of the GDP in 2004. The industrial production growth rate in 2004 was 3.3%. In 1946, the federal parliament nationalized basic industries. Major parts of the electric and electronics, chemical, iron and steel, and machinery industries remained state controlled until the 1990s, when the Austrian government embarked upon a privatization program. As of 2005, the steel, aluminum, and petroleum industries were majority-owned by private shareholders. Other privatizations in the early 2000s were the Austrian tobacco company, the Vienna airport company, Telekom Austria, Voest-Alpine Steel, and Boehler Uddeholm, an important tool and specialty steel manufacturer.

Iron and steel production greatly expanded its output after 1937. A total of 155,403 automobiles were manufactured in 2001 and 24,988 heavy trucks were produced in 2000. The sale of automotive parts and equipment was a \$3 billion industry in 2004, albeit a decline from \$3.35 billion in 2003 and \$3.87 billion in 2002.

Traditionally, the most important sectors of the textile industry have been embroidery, spinning, weaving, and knitting. However, foreign competition cut into the Austrian textile industry. Following the expiration of the World Trade Organization's longstanding system of textile quotas at the beginning of 2005, the EU signed an agreement with China in June 2005, imposing new quotas on 10 categories of textile goods, limiting growth in those categories to between 8% and 12.5% a year. The agreement runs until 2007, and was designed to give European textile manufacturers time to adjust to a world of unfettered competition. Nevertheless, barely a month after the EU-China agreement was signed, China reached its quotas for sweaters, followed soon after by blouses, bras, T-shirts, and flax yarn. Tens of millions of garments piled up in warehouses and customs checkpoints, which affected both retailers and consumers.

The chemical industry, which was relatively unimportant before World War II, now ranks second in value of production, behind the mechanical and steel industry. Other leading industries, in terms of production value and employment, are electrical and electronic machinery and equipment, pulp and paper, ceramics, and especially foodstuffs and allied products. Austria has always been famous for its skilled craftsmen, such as glassblowers, goldsmiths, jewelers, lacemakers, potters, stonemasons, and wood-carvers.

The country is taking steps to change its image from one in which traditional "rust belt" industries such as steel and heavy engineering dominate. In 2005, the electronics, biotechnology, and medical and pharmaceutical sectors were high growth industries.

## 29 SCIENCE AND TECHNOLOGY

Numerous research institutes in Austria play an important role in conducting and coordinating advanced agricultural, medical, scientific, and technical research. The Austrian Research Council supports and coordinates scientific research. The major learned society is the Austrian Academy of Sciences (founded in 1847 and headquartered in Vienna). The Austrian Science Foundation (founded in 1967) and the Austrian Industrial Research Fund together form the Austrian Research Council, which supports and

coordinates scientific, applied, and industrial research and development and advises federal and state governments on scientific matters. The Natural History Museum and the Trade and Industrial Museum of Technology, both in Vienna and founded in 1748 and 1907, respectively, each have large libraries.

Austria has 11 universities offering training in basic and applied sciences and 13 federal colleges of technology. In 2004, provisional data showed Austrian spending on research and development (R&D) as totaling €5.273 billion, of which 41.5% came from business, 36.7% from the government and 21.5% from foreign sources. In 1987–97, science and engineering students accounted for 29% of college and university enrollments. In 2002, of all bachelor's degrees awarded, 26.5% were in the sciences (natural, mathematics and computers, and engineering). As of 1998 (the latest year for which data was available), there were 2,346 researchers and 993 technicians per million people, that were actively engaged in R&D. In 2002, high-tech exports were valued at \$8.433 billion and accounted for 15% of all manufactured exports.

### 30 DOMESTIC TRADE

Vienna is the commercial, banking, and industrial center. Railroad lines passing through it connect Austria with all neighboring countries. Vienna is also the major, but not the only, distribution center; every large provincial city is the hub of marketing and distribution for the surrounding area. Most items are sold in privately owned general or special stores, but consumer cooperatives are also active. Though small specialty shops have accounted for about 90% of retail establishments, larger outlets and shopping malls are becoming popular. For instance, close to the small village of Parndorf, Burgenland, 40 minutes outside of Vienna, there is a designer outlet featuring more than 90 department stores and specialty shops selling over 350 international brands. Although modeled after the American shopping mall, the McArthur Glen Designer Outlet resembles an Austrian baroque village.

By law, most Austrian shops may be open no more than 66 hours per week. Legal shopping hours are from 6 AM to 7:30 PM Monday through Friday, and 6 AM to 5 PM on Saturdays. However, normal business hours are from 8 or 9 AM to 6 PM, Mondays through Fridays. Saturday shopping hours are normally 8 or 9 AM to 12 or 1 PM. Banks usually stay open from 8 AM to 12:30 PM and from 1:30 to 3 PM (5:30 PM on Thursday) on the weekdays. Retail establishments are governed by stricter rules than in the United States. Sunday hours are generally not permitted.

Advertising is displayed in newspapers, periodicals, and trade journals, and on posters on public conveyances, public stands, and billboards. Considerable advertising is done in cinemas. International fairs are held every spring and autumn in Vienna, and specialized fairs are held regularly in Dornbirn, Graz, Innsbruck, Klagenfurt, Ried im Innkreis, and Wels.

### 31 FOREIGN TRADE

Austria depends heavily on foreign trade. During the Cold War, the government consistently maintained strong ties with the West while being careful to preserve the country's neutrality. In 1972, Austria achieved association with the EEC without encountering much Soviet opposition. Austria formerly had long-term bilateral trade agreements with CMEA nations, and played an important role as a mediator in East–West trade dealings. It applied

for membership in 1989, ushering a new era in relations with the countries of Central and Eastern Europe. Austria became a member of the EU in 1995, and a member of the EMU in 1999; euro notes and coins were introduced in place of the Austrian schilling in 2002.

Austria's commodity trade pattern has changed significantly since the 1930s. Because of its increasing self-sufficiency in agricultural production, expansion in output of certain basic industries, and development of new industries, Austria is no longer as dependent as in pre-World War II years on imports of food and raw materials.

The rise in industrial capacity has resulted in an extensive rise in export volume, with finished and semifinished goods accounting for well over 80% of the total export value. The major industry and export commodity in Austria is the automobile and its components, made up of plates and sheets of iron or steel, internal combustion engines and piston parts, motor vehicle parts and accessories, and complete passenger motor cars. These exports comprise a large portion of Austria's exports, while machinery and paper products continue to be important commodities. Medicinal and pharmaceutical product exports are increasing, but are still low compared to those of the automobile industry.

Approximately 71% of Austria's trade is with EU nations. Although Germany, Italy, and the United States remain Austria's main trading partners, expanding trade with the new EU members of Central and Eastern Europe that joined the EU in May 2004 represent a sizeable element of Austrian economic activity.

In 2004, exports totaled an estimated \$102.7 billion, and the total value of imports was estimated at \$101.2 billion, for a trade surplus of \$1.5 billion.

### 32 BALANCE OF PAYMENTS

Revenues in 2004 were estimated at \$142.5 billion; expenditures were estimated at \$146.4 billion. Austria's current account balance in 2004 was estimated at -\$3.283 billion.

### 33 BANKING AND SECURITIES

The Austrian National Bank (Österreichische Nationalbank), originally opened on 2 January 1923 but taken over by the Ger-

man Reichsbank in 1938, was reestablished on 3 July 1945. The bank is a corporation with capital shares fixed by law at \$150 million; 50% of the shares are, by law, owned by the government. The central bank and the bank of issue, it preserves the domestic purchasing power of the Austrian currency and its value in terms of stable foreign currencies, and controls external transactions affecting the balance of payments. It also sets reserve requirements for credit institutions.

The Austrian banking system also includes joint-stock banks, banking houses, and private banks, as well as postal savings banks, private savings banks, mortgage banks, building societies, and specialized cooperative credit institutions. The most important credit institutions are the joint-stock commercial banks, the two largest of which, the Creditanstalt-Bankverein and the Österreichische Länderbank, were nationalized in 1946; shares representing 40% of the nominal capital of the two were sold to the public in 1957.

On 12 January 1997, the coalition partners, after long and intensive negotiations, agreed to sell Credit and staff-Bankverein to the indirectly state-owned Bank Austria, which is dominated by the senior coalition party, the Social Democratic Party (SPO). The sale created a financial and industrial giant in Austria, which holds about one-quarter of the assets of all financial institutions.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$52.9 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$171.2 billion.

A special decree of Empress Maria Theresa (1 August 1771) provided for the establishment of a stock exchange in Vienna. From the mid-19th century to the beginning of World War I, it was the main capital market of middle and eastern Europe, and from 1918 to 1938, it had continuous international importance as an equity market for the newly founded nations originating from the former monarchy. The exchange also deals in five Austrian and sev-

en foreign investment certificates. The Austrian Traded Index has grown steadily in the past few years, growing 8.71% in 2002, and averaging a growth rate of 10.15% in the past five years. Market capitalization as of December 2004 stood at \$85.815 billion, with the index up 57.4% at 2,431.4 from the previous year. There were 99 companies listed on the Wiener Borse AG in 2004.

**3.4 INSURANCE**

Insurance in Austria is regulated by the Ministry of Finance under legislation effective 1 January 1979. Motor-vehicle third-party liability, aviation accident and third-party liability, workers' compensation, product liability, professional indemnity for certain professions, and nuclear-risk liability coverage are compulsory. Armed sportsmen, accountants, pipeline operators, and notaries are also required to carry liability insurance. In 2003, the value of all direct premiums written totaled \$14.996 billion, of which non-life premiums accounted for the largest portion at \$8.410 billion. The nation's top nonlife insurer for 2003 was Allianz Elementar with gross nonlife written premiums of \$983.5 million. Austria's top life insurer that same year was Sparkassen-Vericherung, with gross life written premiums of \$857.5 million.

**3.5 PUBLIC FINANCE**

The government's proposed annual budget is submitted to the Nationalrat before the beginning of each calendar year (which coincides with the fiscal year). Within certain limits, the Finance Minister can subsequently permit the maximum expenditure levels to be exceeded, but any other excess spending must receive the approval of the Nationalrat in the form of a supplementary appropriations bill or an amendment to the budgetary legislation. Annual expenditures, which in the early 1960s rose markedly owing to increases in defense expenditures, social services, federal operations, and capital expenditures, were less expansionary in 1965–70. During the 1970s, the annual budget again began to rise, expenditures increasing at a faster rate than revenues, but by

the mid-1980s, both expenditures and revenues were increasing at about the same rate. As a result of a mini-recession in 1993, the budget deficit widened to 4.7% of GDP in 1994. The increase in the budget deficit was mainly due to the government's decision to let automatic stabilizers work, when it became apparent that business activity was slowing down. Rising budget deficits present an economic challenge to the government. Despite these problems, Austria managed to meet the criteria necessary to join the European Monetary Union (EMU) in 1999.

The US Central Intelligence Agency (CIA) estimated that in 2005 Austria's central government took in revenues of approximately \$148.6 billion and had expenditures of \$154.5 billion. Revenues minus expenditures totaled approximately -\$5.9 billion. Public debt in 2005 amounted to 64.5% of GDP. Total external debt was \$510.6 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were €85,652 million and expenditures were €87,934 million. The value of revenues was us\$80,606 million and expenditures us\$82,537 million, based on an exchange rate for 2002 of us\$1 = €1.0626 as reported by the IMF. Government outlays by function were as follows: general public services, 15.6%; defense, 2.2%; public order and safety, 3.1%; economic affairs, 6.4%; environmental protection, 0.3%; housing and community amenities, 1.1%; health, 13.0%; recreation, culture, and religion, 0.7%; education, 10.2%; and social protection, 47.4%.

### 36 TAXATION

The income tax for individuals in 2005 was progressively set up to 50% on a four-bracket progressive schedule: 21% (on taxable income from €3,640 to €7,270; 31% (€7,270 to €21,800); 41% (€21,800 to 50,870); and 50% above €51,000. Married people are taxed separately. Payroll withholding tax is in effect.

Taxes are levied on corporations (25% on distributed and undistributed profits), trade income, real estate, inheritance, dividends, gifts, and several miscellaneous services and properties. A value-added tax was introduced 1 January 1973 at a basic rate of 16%. The standard rate in 2005 was 20%. A reduced rate of 10% applied to basic foodstuffs, agricultural products, rents, tourism, and entertainment; banking transactions are exempt and exports are untaxed. There was also an augmented rate of 32% on automobiles, airplanes, and ships.

Capital gains and dividend income are taxed at 25% and are withheld at the source. There is no wealth tax. In accordance with EU guidelines, tax exemptions and reductions are included in incentive packages for investment in economically depressed and underdeveloped areas along Austria's eastern border.

### 37 CUSTOMS AND DUTIES

Austria is committed to a program of progressive trade liberalization. As a member of the European Union, non-EU imports are covered by the EU's common tariff policy, the TARIC (integrated tariff). For most manufactured goods, this tariff results in the addition of a 3.5% duty. Import quotas affect other imports such as raw materials or parts. In addition, imports are levied an import

value-added tax, which is 20% for everything except food products, for which it is 10%.

Import licenses are required for a variety of products, including agricultural produce and products, tobacco and tobacco products, salt, war materials, and poisons. An automatic licensing procedure is applied to certain products. Free-trade zones are located at Graz, Linz, Bad Hall, and Vienna.

### 38 FOREIGN INVESTMENT

Between 1948 and 1954, an estimated \$4 billion was invested in the Austrian economy. Austria raised foreign capital largely through loans rather than as direct investment. Many post-World War II projects were financed by US aid; US grants and loans in the post-war period totaled about \$1.3 billion before they began to taper off in 1952. To stimulate domestic and foreign investment, especially in underdeveloped areas of Austria, two specialized investment credit institutions were founded in the late 1950s.

The Austrian government welcomes productive foreign investment, offering a wide range of assistance and incentives at all levels ranging from indirect tax incentives to direct investment grants. Until 2006, 41% of Austria's land area is eligible for support under various EU structural reform programs. In 2005, Austria lowered its corporate tax from 34% to 25%, making the investment climate more agreeable to foreign companies. Of particular interest are investments in industries that are seeking to create new employment in high technology, promoting capital-intensive industries linked with research activities, improving productivity, replacing imports, increasing exports, and are environmentally "friendly." Austria has strict environmental laws, rejects nuclear energy, and has tight restrictions on biotech products. Full foreign ownership is permitted, except in nationalized sectors, and such enterprises have the same rights and obligations as domestic companies.

Austria has sizeable investments in the countries of Central and Eastern Europe, and continues to move low-tech and labor-intensive production to those regions. Austria has the potential to attract EU firms seeking convenient access to developing markets in Central and Eastern Europe and the Balkans.

Following record inflows in 2000 and 2001 and a significant drop in 2002, foreign direct investment rebounded in 2003 to \$8.1 billion, equal to 2.9% of GDP, the third highest ever. New FDI in the first half of 2004 amounted to \$2.1 billion. This raised the value of FDI stock in Austria to \$62 billion by mid-2004. New Austrian direct investment abroad reached \$7.7 billion in 2003, equal to 2.7% of GDP. In the first half of 2004, the amount was \$3.1 billion. This raised the value of Austrian direct investment stock abroad to \$61.5 billion by mid-2004.

### 39 ECONOMIC DEVELOPMENT

The federal government held a majority share in two of the three largest commercial banks and all or most of the nation's electricity, coal and metal mining, and iron and steel production, as well as part of Austria's chemical, electrical, machine, and vehicle industries. The republic's share in the nationalized industries was handed over on 1 January 1970 to the Austrian Industrial Administration Co. (Österreichische Industrieverwaltungs-Aktiengesellschaft—ÖIAG), of which the government was the sole shareholder. The ÖIAG, in line with the government's industrialization program, regrouped the nationalized industries into six sectors:

iron and steel; nonferrous metals; shipbuilding and engineering; electrical engineering; oil and chemicals; and coal. This was later regrouped into five sections: steel; metals; machinery and turnkey operations; electronics, petroleum, petrochemicals and plastics; and chemicals, pharmaceuticals, and fertilizers.

The nationalized establishments operated according to free-enterprise principles and did not receive tax concessions. Private investors were subsequently allowed to buy shares in them. The government, however, maintained voting control in these transactions. The legislation providing for ÖIAG's reorganization of the iron and steel industry included codetermination provisions granting employees the right to fill one-third of the seats on the board of directors. The postal, telephone, and telegraph services and radio and television transmission were state monopolies, as was the trade in tobacco, alcohol, salt, and explosives.

During the 1970s, the government placed new emphasis on centralized economic planning. Key elements in the new policy were the planning of public investment, selective promotion of private sector investment, coordinated expansion of the energy sector and state-owned industry, and assistance for the structural improvement of agriculture. Special emphasis was given to the reform of the handicrafts industry.

In 1986, the ÖIAG was renamed the Österreichische Industrie-holding AG, and a process of restructuring and privatization took place in 1993. In 1996, the post and telecommunications monopoly was privatized, and other companies were split up and taken over by foreign, and especially German, companies. The agricultural sector has gone through substantial reform through the EU's common agricultural policy. Computer software and services, telecommunications, advertising, and Internet services are growing commercial enterprises.

In the 21st century, Austria needs to emphasize its knowledge-based sectors of the economy, continue to deregulate the service sector, and encourage greater participation in the labor market of its aging population. The aging phenomenon, together with already high health and pension costs, poses problems in tax and welfare policies.

#### 40 SOCIAL DEVELOPMENT

Austria has one of the most advanced and comprehensive systems of social legislation in the world. The General Social Insurance Bill of 1955 unified all social security legislation and greatly increased the scope of benefits and number of insured. All wage and salary earners must carry sickness, disability, accident, old age, and unemployment insurance, with varying contribution levels by employer and employee for each type of insurance. Health insurance is available to industrial and agricultural workers, federal and professional employees, and members of various other occupational groups. For those without insurance or adequate means, treatment is paid for by public welfare funds.

Unemployment benefits mostly range from 40–50% of previous normal earnings. After three years' service, regular benefits are paid up to between 20 and 30 weeks; thereafter, for an indefinite period, a worker, subject to a means test, may receive emergency relief amounting to 92–95% of the regular benefit. Work injury laws were first enacted in 1887. Citizens are eligible for old age pensions after age 65 (men) and age 60 (women) if they have 35

years of contributions paid or credited. In 2004 the age for retirement began increasing by one month per quarter.

Employers must contribute 4.5% of payroll earnings to a family allowance fund. Family allowances are paid monthly, depending on the number of dependent children, with the amount doubled for any child who is severely handicapped. The state provides school lunches for more than 100,000 children annually. In addition, it administers the organization of children's holiday programs and provides for the care of crippled children, for whom there is a state training school. The state also grants a special birth allowance and a payment for newlyweds setting up their first home; unmarried people establishing a common household may apply for tax remission. The government provides maternity benefits, takes care of destitute old people, and provides for war victims and disabled veterans. Administration of social insurance is carried out in the provinces by autonomous bodies in which both employers and employees are represented. Payment is also made to victims of political persecution during the Nazi era and to victims of violent crime.

Women make up an increasing percentage of the work force. Austrian women earn 79% as much as men. While the number of women in government is low in relation to the overall population, there are female members of parliament, cabinet ministers, state secretaries, town councilors, and mayors. The law proscribes sexual harassment in the workplace, and the government generally enforces these laws. It is believed that violence against women is a widespread problem, and cases generally remain unreported. The government provides shelters and hotlines for victims. Children's rights are fully protected by law.

The constitution provides for the freedoms of religion and assembly, and the government respects these rights. A growing problem is right-wing extremism and the emergence of neo-Nazi groups. Racial violence against ethnic minorities in Austria is evident. In 2005, Austria adopted an Equal Treatment Bill to combat racism and discrimination.

#### 41 HEALTH

Austria's federal government formulates health policy directive and public hygiene standards are high. The country spent an estimated 8.2% of GDP on health care annually as of 1999 and, in recent years, has expanded its public health facilities. Virtually every Austrian has benefits of health insurance. In principle, anyone is entitled to use the facilities provided by Austria's health service. The costs are borne by the social insurance plan or, in cases of hardship, by the social welfare program.

As of 2004, there were an estimated 324 physicians and 589 nurses per 100,000 people. Life expectancy in 2005 was 78.92 years. The infant mortality rate for that year was 4.66 per 1,000 live births that year. In 1999, 6% of births were low weight. Improvement has been made in lowering the under-age-five mortality rate from 43 children per 1,000 in 1960 to 5 per 1,000 in 2004. An estimated 90% of married women (ages 15–49) used contraceptives.

As of 1999, Austria immunized its one-year-old children as follows: diphtheria, pertussis, and tetanus (90%) and measles (90%). The overall death rate in 2002 was 10 per 1,000 people, and in 1999 there were 16 cases of tuberculosis per 100,000 people. The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 10,000 people living with HIV/AIDS in

the country. There were an estimated 100 deaths from AIDS in 2003. Vienna's medical school and research institutes are world famous; spas (with thermal springs), health resorts, and sanatoriums are popular among Austrians as well as foreigners.

## 4<sup>2</sup> HOUSING

During the First Republic (1919–38), Vienna and several other Austrian municipalities supported a progressive housing policy and built model apartment houses for workers. From the end of World War II until 1967, 157,386 small homes were built under the Federal Accommodation Fund, and 75,663 damaged homes were repaired under the Housing Reconstruction Fund. A system of subsidies for public housing has since been decentralized, and control turned over to local authorities. The Housing Improvement Act of 1969 provided for state support for modernization of outdated housing.

In 2003, there were an estimated 3,863,262 dwellings in the nation. About 74% of all dwellings were privately owned. As of 1990, 25% of Austria's housing stock had been built before 1919; 19% between 1971 and 1980; 18% between 1961 and 1970; 15% between 1945 and 1960; 13% after 1981; and 10% between 1919 and 1944. About 53,000 new dwellings were completed in 2000 and 41,914 were built in 2002.

## 4<sup>3</sup> EDUCATION

The Austrian educational system has its roots in the medieval monastic schools that flourished toward the end of the 11th century. The present state education system goes back to the school reforms introduced by Maria Theresa in 1774. In 1869, the Imperial Education Law unified the entire system of compulsory education.

In 1962, Austria's education system was completely reorganized under a comprehensive education law, and compulsory education was extended from eight to nine years. Since 1975, all schools are coeducational and education at state schools is free of charge. Primary education lasts for four years. After primary school, pupils may either attend a general secondary school (*Hauptschule*), which is organized into two four-year courses of study (lower and upper secondary), or an academic secondary school, which also covers an eight-year program. Financial support is provided for postsecondary schooling. Secondary age students may also choose a five-year vocational program. Those who complete their studies at secondary or higher vocational school are qualified to attend the universities. Disabled students either attend special schools or are mainstreamed into regular classrooms. The primary language of instruction is German. The school year runs from October to June.

In 2001, about 84% of children ages three to five attended preschool programs. Primary school enrollment in 2003 was estimated at about 90% of age-eligible students; 89% for boys and 91% for girls. The same year, secondary school enrollment was about 89%, with equal percentages of boys and girls. The pupil to teacher ratio for primary school was at about 13:1 in 2003; the ratio for secondary school was about 11:1.

Austria maintains a vigorous adult education system. Almost all adult education bodies owe their existence to private initiative. The Ministry of Education, under the auspices of the Development Planning for a Cooperative System of Adult Education in Austria, has joined private bodies in setting up projects for en-

hancing the quality of adult education programs. As of 2003, public expenditure on education was estimated at 5.7% of GDP.

As of 2002, the adult literacy rate was estimated at 98%. There are 12 university-level institutions and six fine-art colleges offering 430 subjects and about 600 possible degrees. There are several other institutes of higher education throughout the country. In 2003, about 49% of the tertiary age population were enrolled in some type of higher education program.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

Austria is rich in availability of large library collections and is filled with strong, unique collections. The largest and most important of Austria's 2,400 libraries is the Austrian National Library, which contains more than 2.6 million books and over 3 million non-book materials. It includes nine special collections: manuscripts and autographs, incunabula (old and precious prints), maps and globes, music, papyri, portrait and picture archives, Austrian literature archives, pamphlets and posters, and a theater collection. The National Library serves as a center for the training of professional librarians, prepares the Austrian national bibliography, and provides a reference service for Austrian libraries. The largest university libraries are the University of Vienna (5.5 million volumes), Graz University (3 million), and Innsbruck University (1.4 million). There are at least 12 prominent scientific libraries in the country, primarily associated with universities. Austria also has several hundred private libraries, such as the renowned libraries in the monasteries at Melk and Admont. The Austrian Institute of Economic Research in Vienna maintains an internationally renowned research library and electronic databases on international economic trends and forecasts.

The Haus-, Hof-, and Staatsarchiv, founded in Vienna in 1749, was combined in 1945 with the Allgemeine Verwaltungsarchiv to form the Austrian State Archives. The Archives' collection ranks as one of the most important in the world, with more than 100,000 manuscripts and documents, some dating as far back as the year 816. Most notable are the state documents of the Holy Roman Empire—including those of the Imperial Court Council (from 1555), the Imperial Court Chancellery (from 1495), and the Mainz Imperial Chancellery (from 1300); documents of the subsequent Austrian State Chancellery; and those of the Austro-Hungarian Foreign Ministry.

There are over 700 museums in Austria, including art museums, archaeology and history museums, science and technology museums, and regional museums. There are eight recognized historical sites in the country. The most important museums had their origins in the private collections of the House of Habsburg. The Museum of Fine Arts (Kunsthistorisches Museum) in Vienna (1871) contains a vast collection of Flemish, Italian, and German paintings by old masters. It also houses distinguished collections of Egyptian and Oriental objects, classical art, sculpture and applied art, tapestries, coins, and old musical instruments. The Albertina Museum houses the world's largest graphic art collection, including the most extensive collection in existence of the works of Albrecht Dürer. The Secular Treasury (Schatzkammer) houses the jewels and insignia of the Holy Roman Empire and of all the Austrian emperors. The numerous collections formerly in the possession of the imperial court have in large part been brought together for display in the Natural History Museum, the Muse-

um of Fine Arts, and the Hofburg (Innsbruck). Vienna's Schönbrunn Palace contains a collection of imperial coaches from the Habsburg court. The Austrian Gallery in Belvedere Castle (Vienna), formerly the summer palace of Prince Eugene of Savoy, houses unique examples of medieval Austrian art as well as works of 19th- and 20th-century Austrian artists. The Museum of Modern Art was opened in Vienna's Palais Liechtenstein in 1979; incorporated into it was the Museum of the 20th Century, founded in 1962. Also of interest is Vienna's Lipizzaner Museum, featuring the city's famous white horses, and a museum of Sigmund Freud's apartment and office.

There are also other castles, manor houses, monasteries, and convents, many of which date from the Middle Ages and which are of interest for their architecture as well as for their contents. Important scientific collections are housed in the Natural History Museum, the Museums of Anthropology and Folklore, and the Technical Museum, all in Vienna; the Joanneum, in Graz; the Ferdinandeum, in Innsbruck; the Carolino Augusteum and the House of Nature, in Salzburg; and the Folk Museum, in Hallstatt, Upper Austria, which contains local prehistoric discoveries dating from the 4th and 3rd centuries BC. Salzburg has two historical museums dedicated to Mozart—the house where he was born and another house in which he lived. In Vienna, there is a museum dedicated to Sigmund Freud.

The Jewish Museum Vienna contains a memorial to Austrian victims of the Holocaust and a 40,000-volume research library on the history of the Jews in Austria and Vienna. There is also a Holocaust memorial at the site of the Maunthausen concentration camp.

#### 45 MEDIA

The Austrian Post and Telegraph Administration operates all telephone, telegraph, teletype, and postal services. In 2003, there were an estimated 481 mainline telephones for every 1,000 people. The same year, there were approximately 879 mobile phones in use for every 1,000 people.

Oesterreichischer Rundfunk (ORF) is the primary public broadcasting company in Austria. The first national commercial television license was granted to ATV in 2000. Commercial radio stations began in the 1990s. As of 2001, there were a total of about 2 AM and 65 FM radio stations in the country and 10 television stations. In 2003, there were an estimated 763 radios and 637 television sets for every 1,000 people. Nearly 157 of every 1,000 people held subscriptions to cable television. The same year, there were 369.3 personal computers for every 1,000 people and 462 of every 1,000 people had access to the Internet. There were 1,586 secure servers in the country in 2004.

As of 2005, Austria had 15 national and regional daily newspapers. Vienna accounts for about half of total readership. The two most widely read papers are the tabloids *Kronen Zeitung* (circulation 850,000 in 2005) and *Der Kurier* (circulation 172,000 in 2005). Other leading dailies (with 2005 circulation figures unless noted) include *Kleine Zeitung* (171,405 in 2004), *Oberösterreichische Nachrichten* (in Linz, 123,000 in 2002), *Salzburger Nachrichten* (126,000), *Tiroler Tageszeitung* (in Innsbruck, 103,600 in 2002), and *Die Presse* (76,000), and *Der Standard* (71,000). *Neue Zeit*, published in Graz, is a major daily for the Social Democrat party with a circulation of about 66,100 in 2002. The leading peri-

odicals include the weeklies *Wochenpresse—Wirtschaftswoche* and *Profil* and the monthly *Trend* which had a circulation of 95,000 in 1995.

Freedom of the press is constitutionally guaranteed and there is no state censorship; the Austrian Press Council is largely concerned with self-regulatory controls and the effective application of a code of ethics. The Austrian Press Agency is independent of the government and operates on a nonprofit basis; most major newspapers share in its financing.

#### 46 ORGANIZATIONS

The Federal Economic Chamber, including representatives of commerce, industry, trade, and transport, has official representatives in most counties. Every province has an economic chamber organized in the same way as the federal chamber. District chambers of agriculture are combined into provincial chambers, which are further consolidated in a national confederation. Provincial chambers of labor are combined in a national chamber. Austria has a committee on the International Chamber of Commerce.

The Federation of Austrian Industrialists, with an organizational membership of almost 5,000, is subdivided into departments for trade, industry, finance, social policies, and communications, with sections for press relations and organization. There are associations of bankers, insurance companies, and publishers, as well as other commercial and professional groups.

Austria has a large number of scholarly associations, as well as several groups dedicated to the support and promotion of various arts and sciences. The latter include the Association for Sciences and Politics, the Austrian Academy of Sciences, the Austrian Association of Music, the Austrian Physical Society, the Austrian P.E.N. Center, and the Austrian Science Fund. Filling a specialty niche, Vienna is home to the International Confederation of Accordionists and the International Gustav Mahler Society.

The Austrian Medical Chamber is a notable institution for the promotion of health education, research, and policy making. There are numerous associations representing a wide variety of specialized medical fields and promoting research for the treatment and prevention of particular diseases and conditions.

The Austrian Sports Federation represents over three million athletes in the country in promoting education and competition in a wide variety of sports. There are numerous association for particular sports, including Frisbee, football (soccer), baseball, golf, ice hockey, tennis, and badminton. There is an Austrian Paralympic Committee, an Olympic Committee, and a Special Olympics committee.

The Austrian Union of Students (AUS), the national university student coordinating body, is incorporated under Austrian federal public law to serve as a legal representative body for Austrian university students through Federal Ministries responsible for higher education and through the National Parliament. The secretariat of the National Unions of Students of Europe (ESIB) is housed within the AUS. Other youth organizations, representing a variety of concerns and interests, include the Austrian Socialist Youth Organization, Young Austrian People's Party, Union of Liberal Youth, Communist Youth of Austria, Austrian Catholic Youth Group, Cartel Association of Austrian Catholic Student Unions, Protestant Youth Welfare Organization, Protestant Student Community, Austrian Trade Union Youth Organization, Austrian Friends

of Nature Youth Organization, Junior Chamber Austria, and Austrian Alpine Youth Organization. Scouting organizations are also present for both boys and girls.

Organizations of Greenpeace, The Red Cross, and Amnesty International are also present. There are active chapters of Lions Clubs and Kiwanis International.

## 47 TOURISM, TRAVEL, AND RECREATION

Austria ranks high among European tourist countries. It has a year-round tourist season: in winter, tourists come to the famous skiing resorts and attend outstanding musical events in Vienna; in summer, visitors are attracted by scenery, sports, and cultural festivals, notably in Vienna and Salzburg. Of the 4,000 communities in Austria, nearly half are considered tourist centers.

Tourist attractions in the capital include 15 state theaters and the Vienna State Opera (which also houses the Vienna Philharmonic); the Vienna Boys' Choir; St. Stephen's Cathedral; the Schönbrunn and Belvedere palaces; and the Spanish Riding Academy, with its famous Lippizaner stallions. Just beyond the city boundary are the Vienna Woods, with their picturesque wine taverns.

About 40 or 50 towns and villages qualify as major resorts for Alpine skiing, and Innsbruck has been the site of two Winter Olympics, in 1964 and 1976. Mountaineering is another Austrian specialty, with Austrian climbers having scaled high peaks all over the world. Austrians have frequently taken titles in world canoeing championships. Football (soccer) is a very popular sport. Austria also puts on a number of prominent annual events for cyclists. Probably the most challenging tour on the amateurs' program is the "Tour d'Autriche," which has been held every year since 1949. This race through Austria's mountains covers a total distance of almost 1,500 kilometers. Motor racing, motorcycle racing and speedway racing are also extremely popular sports in Austria.

Foreign tourist traffic is the leading single source of foreign exchange, and tourism is a major contributor to the Austrian economy. An estimated 13,748,371 foreign visitors arrived in Austria in 2003. Receipts from tourism amounted to \$16 billion. That year there were 282,614 rooms in hotels, inns, and pensions with 631,085 beds and a 36% occupancy rate. The average length of stay was four nights.

Visitors entering Austria for a short stay need only a valid passport if from the United States or the European Union countries, but an Austrian visa is required for visits exceeding three months.

In 2005, the US Department of State estimated the daily cost of staying in Austria at \$255 to \$276.

## 48 FAMOUS AUSTRIANS

### Political Figures

Monarchs who played a leading role in Austrian and world history include Rudolf I of Habsburg (1218–91), founder of the Habsburg dynasty and Holy Roman emperor from 1273; Maria Theresa (1717–80), who succeeded to the Habsburg dominions by means of the Pragmatic Sanction of 1740; her son Joseph II (1741–90), the "benevolent despot" who became Holy Roman emperor in 1765; Franz Josef (1830–1916), emperor of Austria at the outbreak of World War I; and his brother Maximilian (Ferdinand Maximilian Josef, 1832–1867), who became emperor of Mexico

in 1864, ruling on behalf of Emperor Napoleon III of France, and was deposed and executed. Prince Klemens Wenzel Nepomuk Lothar von Metternich (1773–1859), Austrian foreign minister from 1809 to 1848, was the architect of the European balance of power established at the Congress of Vienna in 1815. Adolf Hitler (1889–1945), born in Braunau, was dictator of Germany from 1933 until his death. Leading Austrian statesmen since World War II are Bruno Kreisky (1911–1990), Socialist Party chairman and chancellor of Austria from 1970 to 1983; and Kurt Waldheim (b.1918), Austrian diplomat and foreign minister, who was UN secretary-general from 1971 to 1981 and was elected to the presidency in June 1986.

### Artists, Writers, and Scientists

Austria has produced many excellent artists, writers, and scientists but is probably most famous for its outstanding composers. Beginning in the 18th century and for 200 years, Vienna was the center of European musical culture. Among its great masters were Franz Joseph Haydn (1732–1809), Wolfgang Amadeus Mozart (1756–91), Franz Schubert (1797–1828), Anton Bruckner (1824–96), Gustav Mahler (1860–1911), Hugo Wolf (1860–1903), Arnold Schönberg (1874–1951), Anton von Webern (1883–1945), and Alban Berg (1885–1935). Although born in northwestern Germany, Ludwig van Beethoven (1770–1827) and Johannes Brahms (1833–97) settled in Vienna and spent the rest of their lives there. Composers of light music, typical of Austria, are Johann Strauss, Sr. (1804–49), Johann Strauss, Jr. (1825–99), Dalmatian-born Franz von Suppé (Francesco Ezechiele Ermenegildo Cavaliere Suppe-Demelli, 1819–95), Hungarian-born Franz Lehár (1870–1948), and Oskar Straus (1870–1954). Outstanding musicians are the conductors Clemens Krauss (1893–1954), Karl Böhm (1894–1981), and Herbert von Karajan (1908–89); the pianists Artur Schnabel (1882–1951) and Alfred Brendel (b.1931); and the violinist Fritz Kreisler (1875–1962).

Leading dramatists and poets include Franz Grillparzer (1791–1872), Nikolaus Lenau (1802–50), Ludwig Anzengruber (1839–81), and Hugo von Hofmannsthal (1874–1929). Novelists and short-story writers of interest are Adalbert Stifter (1805–68), Marie von Ebner-Eschenbach (1830–1916), Arthur Schnitzler (1862–1931), Hermann Bahr (1863–1934), Stefan Zweig (1881–1942), Robert Musil (1880–1942), Hermann Broch (1886–1952), Yakov Lind (b.1927), Peter Handke (b.1942), and Elfriede Jelinek (b.1946), who won the 2004 Nobel Prize in Literature. Although born in Czechoslovakia, the satiric polemicist Karl Kraus (1874–1936), the poet Rainer Maria Rilke (1875–1926), the novelist and short-story writer Franz Kafka (1883–1924), and the poet and novelist Franz Werfel (1890–1946) are usually identified with Austrian literary life. Film directors of Austrian birth include Max Reinhardt (Maximilian Goldman, 1873–1943), Erich von Stroheim (Erich Oswald Stroheim, 1885–1957), Fritz Lang (1890–1976), Josef von Sternberg (1894–1969), Otto Preminger (1905–86), and Billy Wilder (1906–2002). Internationally known performers born in Austria include Lotte Lenya (Karoline Blamauer, 1900–81) and Maximilian Schell (b.1930).

### Architects and Artists

Two great architects of the Baroque period were Johann Bernhard Fischer von Erlach (1656–1723) and Johann Lucas von Hildebrandt (1668–1745). Three prominent 20th-century painters were

Gustav Klimt (1862–1918), Oskar Kokoschka (1886–1980), and Egon Schiele (1890–1918).

### Physicians

Psychoanalysis was founded in Vienna by Sigmund Freud (1856–1939) and extended by his Austrian colleagues Alfred Adler (1870–1937), Otto Rank (1884–1939), Theodor Reik (1888–1969), and Wilhelm Reich (1897–1957). Eugen Böhm-Bawerk (1851–1914) and Joseph Alois Schumpeter (1883–1950) were outstanding economists. A renowned geneticist was Gregor Johann Mendel (1822–84). Christian Johann Doppler (1803–53), a physicist and mathematician, described the wave phenomenon known today as the Doppler shift. Lise Meitner (1878–1968) was the physicist who first identified nuclear fission. Austrian Nobel Prize winners in physics are Erwin Schrödinger (1887–1961), in 1933; Victor Franz Hess (1883–1964), authority on cosmic radiation, in 1936; and atomic theorist Wolfgang Pauli (1900–1958), discoverer of the exclusion principle, in 1945. Winners of the Nobel Prize in chemistry are Fritz Pregl (1869–1930), who developed microanalysis, in 1923; Richard Zsigmondy (1865–1929), inventor of the ultramicroscope, in 1925; biochemist Richard Kuhn (1900–1967), a pioneer in vitamin research, in 1938; and biochemist Max Ferdinand Perutz (1914–2002) for research in blood chemistry, in 1962. Winners of the Nobel Prize in physiology or medicine are otologist Robert Bárány (1876–1936), in 1914; psychiatrist Julius Wagner-Jauregg (1857–1940), for developing a treatment for general paresis, in 1927; Karl Landsteiner (1868–1943), discoverer of blood groups, in 1930; German-born pharmacologist Otto Loewi (1873–1961), for his study of nerve impulse transmission, in 1936; Carl Ferdinand Cori (1896–1984) and his wife, Gerti Theresia Radnitz Cori (1896–1957), whose work with enzymes led to new ways of fighting diabetes, in 1947; and Konrad Lorenz (1903–1989), discoverer of the “imprinting” process of learning, in 1973. In 1974, Friedrich August von Hayek (1899–1992), a noted monetary theorist, was awarded the Nobel Prize in economics.

### Humanitarians

The Nobel Peace Prize was awarded to Baroness Berta Kinsky von Suttner (b. Prague, 1843–1914), founder of the Austrian Society of Peace Lovers and author of *Lay Down Your Arms!*, in 1905; and to Alfred Hermann Fried (1864–1921), a prolific publicist for the cause of international peace, in 1911. One of the most influential philosophers of the contemporary age was Ludwig Josef Johann Wittgenstein (1889–1951). Rudolf Steiner (1861–1925), the founder of anthroposophy, was an Austrian. Theodor Herzl (b. Budapest, 1860–1904), founder of the Zionist movement, was an early advocate of the establishment of a Jewish state in Palestine. Simon Wiesenthal (b. Poland, 1908–2005), a Nazi concentra-

tion-camp survivor, searched for Nazi war criminals around the world.

### Athletes

Austrians have excelled in international Alpine skiing competition. In 1956, Toni Sailer (b. 1935) won all three Olympic gold medals in men's Alpine skiing events. Annemarie Moser-Pröll (b. 1953) retired in 1980 after winning a record six women's World Cups, a record 62 World Cup races in all, and the 1980 women's downhill skiing Olympic championship. Franz Klammer (b. 1953), who won the 1976 men's downhill Olympic title, excited spectators with his aggressive style. Arnold Schwarzenegger (b. 1947) was once the foremost bodybuilder in the world and became a successful Hollywood actor and governor of California.

## 49 DEPENDENCIES

Austria has no territories or colonies.

# BELARUS

Republic of Belarus  
*Respublika Belarus*

**CAPITAL:** Minsk

**FLAG:** Two horizontal bands of red (top) and green, with the red band twice as wide as the green. At the hoist is a vertical band showing a traditional Belarussian ornamental pattern.

**ANTHEM:** *Maladaya Belarus.*

**MONETARY UNIT:** The Belarus ruble (BR) circulates along with the Russian ruble (R). The government has a varying exchange rate for trade between Belarus and Russia. BR1 = \$0.00047 (or \$1 = BR2,140) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year's Day, 1 January; Orthodox Christmas, 7 January; International Women's Day, 8 March; Labor Day, 1 May; Victory Day, 9 May; Independence Day, 27 July; Day of Commemoration, 2 November; Christmas, 25 December.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Belarus is a landlocked nation located in eastern Europe, between Poland and Russia. Comparatively the area occupied by Belarus is slightly smaller than the state of Kansas, with a total area of 207,600 sq km (80,154 sq mi). Belarus shares boundaries with Latvia on the N, Russia on the N and E, Ukraine on the S, Poland on the SW, and Lithuania on the NW. The boundary length of Belarus totals 3,098 km (1,925 mi).

The capital city of Belarus, Minsk, is located near the center of the country.

## <sup>2</sup> TOPOGRAPHY

The topography of Belarus is generally flat and contains much marshland. The Belarussian Ridge (Belorusskaya Gryda) stretches across the center of the country from the southwest to the northeast. The highest elevation is at Dzerzhinskaya Gora, 346 m (1,135 ft).

## <sup>3</sup> CLIMATE

The country's climate is transitional between continental and maritime. July's mean temperature is 19°C (67°F). January's mean temperature is -5°C (23°F). Rainfall averages between 57 cm (22.5 in) and 61 cm (26.5 in) annually.

## <sup>4</sup> FLORA AND FAUNA

About 45% of the country is forest land. Pine trees are found throughout the north, but spruce, alder, ash, birch, and oak trees are also common. Some of the mammals in the forest include deer, brown bears, rabbits, and squirrels. The southern region is a swampy expanse. The marshes are home to ducks, frogs, turtles, archons, and muskrats.

## <sup>5</sup> ENVIRONMENT

As part of the legacy of the former Soviet Union, Belarus's main environmental problems are chemical and nuclear pollution. Belarus was the republic most affected by the accident at the Chernobyl nuclear power plant in April 1986. Northerly winds prevailed at the time of the accident; therefore, most of the fallout occurred over farmland in the southeastern section of the country (primarily in the Gomel and Mogilev oblasts). Most experts estimate that 25–30% of Belarus's farmland was irradiated and should not be used for agricultural production or to collect wild berries and mushrooms, although it continues to be used for these and other purposes. Belarus has 88 UNESCO World Heritage Sites, including the Bialowieza Forest. There are seven Ramsar wetland sites. In 2003, about 6.3% of the total land area was protected.

In addition, Belarus has significant air and water pollution from industrial sources. The most common pollutants are formaldehyde, carbon emissions, and petroleum-related chemicals. In 1992, Belarus was among the world's top 50 nations in industrial emissions of carbon dioxide, producing 102 million metric tons, or 9.89 metric tons per capita. In 1996, the total fell to 61.7 million metric tons. The soils also contain unsafe levels of lead, zinc, copper, and the agricultural chemical DDT. All urban and rural dwellers have access to safe drinking water.

As of 2002, Belarus had over 2,000 species of plants, 74 mammal species, and 194 bird species. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 6 types of mammals, 4 species of birds, and 8 other invertebrates. Endangered species include the European bison and the European mink.

## <sup>6</sup> POPULATION

The population of Belarus in 2005 was estimated by the United Nations (UN) at 9,776,000, which placed it at number 81 in popu-

lation among the 193 nations of the world. In 2005, approximately 14% of the population was over 65 years of age, with another 16% of the population under 15 years of age. There were 88 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be -0.6%, a rate, viewed by the government as too low, that reflects low fertility rates and high mortality rates, especially among adult men. The projected population for the year 2025 was 9,399,000. The population density was 47 per sq km (122 per sq mi).

The UN estimated that 72% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.09%. The capital city, Minsk, had a population of 1,705,000 in that year. The estimated population of other major cities included Homyel, 481,000; Mahilyow, 374,000; Hrodna, 317,366; and Brest (formerly Brest-Litovsk), 290,000.

Almost 25% of the population of Belarus was killed during World War II, and combined with the fatalities of the Soviet-era purges, the postwar population was one-third smaller than it had been in 1930. It was not until the 1970s that the population returned to prewar levels.

## 7 MIGRATION

With the breakup of the Soviet Union in 1991, some two million Belarussians were among the various nationality groups who found themselves living outside their autonomous regions or native republics. Most of the Belarussians who have returned to Belarus fled other former Soviet republics because of fighting or ethnic tensions. From 1989 to 1995, 3,000 Belarussians returned from Azerbaijan and 3,000 Belarussians returned from Kyrgyzstan. From 1991 to 1995, 16,000 Belarussians returned from Kazakhstan and 10,000 Belarussians returned from Tajikistan. In 1999 Belarus had 131,200 internally displaced persons from the ecological effects of the accident at the Chernobyl nuclear power plant, and 160,000 “returnees” (ethnic Belarussians who had returned to Belarus from other former republics).

A defining characteristic of migration between former Soviet republics is its irregular or transient quality and the existence of “shuttle” migrants. Some 2005 estimates suggest that there are 10 million irregular migrants in the region. The estimated net migration rate for Belarus in 2005 was 2.42 per 1000 population. The government views the immigration level as too high.

As of 2004, Belarus had an estimated 8,200 asylum seekers officially registered with the United Nations High Commissioner for Refugees (UNHCR). In 2004, about 2,100 Belarussians made asylum claims, the majority in Sweden.

## 8 ETHNIC GROUPS

In 2005, an estimated 81.2% of the total population was Belarussian. Russians made up about 11.4% of the populace; Poles, Ukrainians, and other groups combined to make up about 7.4% of the population.

## 9 LANGUAGES

Belarussian belongs to the eastern group of Slavic languages and is very similar to Russian. It did not become a separate language until the 15th century, when it was the official language of the grand duchy of Lithuania. It is written in the Cyrillic alphabet but has two letters not in Russian and a number of distinctive sounds. The

vocabulary has borrowings from Polish, Lithuanian, German, Latin, and Turkic. Russian and other languages are also spoken.

## 10 RELIGIONS

As of 2005, the State Committee on Religious and National Affairs estimated that approximately 80% of the population were Belarussian Orthodox. About 15–20% were Roman Catholics. Between 50,000 and 90,000 people were Jewish. Other minority religions included the Greek Rite Catholic Church, the Belarus Autocephalous Orthodox Church, Seventh-Day Adventists, Calvinism, Lutheranism, Jehovah’s Witnesses, the Apostolic Christian Church, and Islam.

Since the 1994 elections, the country’s first president, Alyaksandr Lukashenka, who claims to be an “Orthodox atheist,” has maintained a policy of favoring the Belarussian Orthodox Church (a branch of the Russian Orthodox Church) as the country’s chief religion. A 2003 Concordat between the government and the Belarussian Orthodox Church (BOC) more firmly established the special relationship between the government and the BOC. The BOC works closely with the government in developing and implementing political policies, including those related to such departments as the ministries of education, defense, health, and labor. The president grants the Orthodox Church special financial aid that is not given to other denominations and has declared the preservation and development of Orthodox Christianity a “moral necessity.”

The government’s State Committee on Religious and National Affairs (SCRNA), established in 1997, categorizes religions and may deny any faith it designates as “nontraditional” permission to register. The traditional faiths are the BOC, the Roman Catholic Church, Orthodox Judaism, Sunni Islam, and Evangelical Lutheranism. In 2002, Lukashenka passed a new law on religion that prohibits all religious groups from importing or distributing religious materials without prior approval from the government. The new law prevents foreigners from leading any religious organizations and prohibits those organizations from establishing clerical training schools within the country. The new law also set a more complex registration system and prohibits the operations of any unregistered group.

## 11 TRANSPORTATION

About 5,512 km (3,417 mi) of broad and standard gauge railways traverse Belarus, connecting it to Russia, Ukraine, Lithuania, Poland, and Latvia, as of 2004. Of that total, broad gauge accounts for 5,497 km (3,419 mi). Of the 93,055 km (57,880 mi) of highways in 2003, all were hard-surfaced. As of 2003, there were 1,557,800 passenger cars and 25,400 commercial vehicles registered for use.

The European Bank for Reconstruction and Development (EBRD) initiated a study of railways and roads in 1993 to help determine location advantages for future development in Belarus. The focus of the EBRD study also included the development of the trucking industry.

Because Belarus is landlocked, there are no ports or merchant fleet. Although, there are, as of 2003, some 2,500 km (1,555 mi) of navigable canals and rivers, but whose use is limited by their location near the country’s perimeter, and by shallowness. In 1995, Belarus claimed to have retained 5% of the merchant fleet of the former Soviet Union. As of 2004, there were an estimated 133 air-

ports in the country. As of 2005, a total of 44 had paved runways and there is also a single heliport. In 2003, scheduled airline traffic carried about 234,000 domestic and international passengers.

## 12 HISTORY

The Belarussians are the descendants of Slavic tribes that migrated into the region in the 9th century. They trace their distinct identity from the 13th century when the Mongols conquered Russia and parts of Ukraine. During this period, Belarus managed to maintain its identity as part of the Grand Duchy of Lithuania. The union of the Grand Duchy with the Polish Kingdom in 1569, resulting in the emergence of the Polish-Lithuanian Commonwealth (*Rzeczpospolita*), put the territory of Belarus under Polish rule. As a result of the partitions of *Rzeczpospolita* in 1772, 1793, and 1795 by Imperial Russia, Austria, and Prussia, Belarus fell to the Russian Empire.

In March 1918, at the time of the Soviet-German Treaty of Brest-Litovsk in which Moscow agreed to relinquish claim to a substantial amount of territory captured by Germany in exchange for peace, the Belarussian National Republic was formed with German military assistance. However, after the German government collapsed in November 1918 and German forces were withdrawn from the region, Bolshevik troops moved in and set up the Belarussian Soviet Socialist Republic in January 1919. In 1922 the Belarus SSR became one of 15 socialist republics to form the Union of Soviet Socialist Republics. Two years later, Belarus's borders were enlarged at the expense of Russia and Ukraine. Later, parts of eastern Poland were annexed to Belarus by Stalin under the 1939 Molotov-Ribbentrop pact. However, Belarus was devastated by World War II.

During the decades of Soviet rule, Belarus underwent intense Russification, and its leaders generally complied with Soviet policy. However, after extensive nuclear contamination by the 1986 Chernobyl accident in neighboring Ukraine, Belarussian nationalists, acting from exile in Lithuania, organized the Belarussian People's Front. The nationalist upsurge of the period was intensified by the discovery of mass graves from the Stalinist purges of the 1930s at Kuroplaty and other locations. Although the Belarussian leadership still supported keeping the Soviet Union intact, Belarus's parliament declared Belarus a sovereign state within the USSR in July 1990. Shortly after the abortive August 1991 coup attempt against Mikhail Gorbachev, Belarus declared its independence on 26 August 1991.

Belarus's first president, Alyaksandr Lukashenko, was elected in July 1994, the same year the country adopted its first post-Communist constitution. Lukashenko has halted economic and political reform, and silenced or even jailed his critics using internal security forces. At the end of 1996, Belarus sent the last of its nuclear missiles back to Russia. Also in November 1996, Lukashenko won a plebiscite to expand his power as president, although most observers agreed that the election was not fair. On 28 November 1996, Lukashenko signed into law a new constitution containing provisions that gave him almost total control of all branches of government and extended his term by two years to 2001. A new bicameral National Assembly replaced the old Parliament. During 1996, Lukashenko suspended the registration of new enterprises, stopped privatization, and spurned World Bank assistance. Under the new constitution, the president has the right to hire and

LOCATION: 53°53' N; 28°0' E BOUNDARY LENGTHS: Total boundary lengths, 3,098 kilometers (1,925 miles); Latvia 141 kilometers (88 miles); Lithuania 502 kilometers (312 miles); Poland, 605 kilometers (376 miles); Russia 959 kilometers (596 miles); Ukraine, 891 kilometers (554 miles).

fire the heads of the Constitutional Court and the Central Bank, and he also has the right to dissolve parliament and veto its decisions. Most members of the international community criticized the plebiscite expanding Lukashenko's power, and do not recognize the 1996 constitution or the bicameral legislature that it established.

The constitutional changes implemented by the president sparked strong protests, including public demonstrations and opposition by the Constitutional Court and members of parliament, some of whom attempted to form their own assembly. However, all dissent was effectively suppressed, and Lukashenko remained in power. After boycotting the April 1999 local elections, his political opponents held an alternative presidential election in July. This was followed by a new crackdown that forced opposition leader Semyon Sharetzky into exile. From exile Sharetzky proclaimed himself the nation's legitimate ruler, but his action had little effect on the actual state of political affairs in the country. Another prominent political dissident, Vactor Gonchar, was reported missing in September 1999.

In April 1997, Lukashenko and Russia's President Yeltsin signed an initial charter for economic union that included a plan to adopt a common currency. However, over the following two years, implementation of the integration plan moved slowly, and in September 1999, Belarus took steps to peg the country's currency to the euro. Nevertheless, at the end of year, Belarus and Russia reaffirmed their intentions of forming an economic alliance. The leaders of both countries signed a new treaty in December 1999, and it was approved by both parliaments. In April 2000 Russia's new president, Vladimir Putin, reconfirmed his country's commitment to strengthening ties with Belarus.

Parliamentary elections held in 2001 were criticized by election observers as being neither free nor fair. Lukashenko and his administration manipulated the election process to make sure a minimum of opposition candidates were elected to parliament. Turnout in 13 constituencies was so low that a repeat of the voting was necessary (it was held in March 2001). On 9 September 2001, Lukashenko was reelected president in what Organization for Security and Cooperation in Europe (OSCE) observers described as undemocratic elections. Lukashenko won 75.6% of the vote, with opposition candidate Vladimir Goncharik winning 15.4% and Liberal Democratic Party leader Syargey Gaydukevich winning 2.5%. The government reported 83.9% of eligible voters participated in the election.

In June 2002, Russian president Vladimir Putin refused to follow the path to integration that Belarus had proposed for the two nations, saying it would lead to the recreation of "something along the lines of the Soviet Union." While Lukashenko pledged not to relinquish Belarus's sovereignty in the union with Russia, Putin put forth a proposal for the "ultimate unification" of both countries. Putin envisioned a federation based on the Russian constitution, with the Russian ruble as the state's sole currency and the election of a president in 2004. A constitution for the union was approved in March 2003. In April 2003, the speaker of the Russian Duma indicated Armenia, Ukraine, and Moldova might be probable candidates for joining the Belarus-Russian union. Although Lukashenko's relations with Moscow continued to improve (Russia endorsed the 2001 elections and the 2004 referendum), as of 2006, little progress had been made in solving some of the problems related to the organization and structure of the Belarus-Russian union.

European policy has not been coherent or proactive in facing the human right violations in Belarus. In November 2002, 14 EU states imposed a travel ban on Lukashenko and several of his government ministers as a way of protesting Belarus's poor human rights record. However, Lukashenko continued to eliminate political opponents, attack independent press, and expand his powers. In February 2003, Lukashenko pledged support for Iraq in the prelude to war that began on 19 March, led by a US and UK coalition, to project an image of a strong and independent leader.

Among European countries Poland has been playing the most active role in promoting democratic changes and market transformation in Belarus, and supporting the country's national revival. However, the Polish government has not developed a strong or consistent policy of dealing with Lukashenko. The Belarussian Union of Poles (ZPB), an organization representing the 400,000 ethnic Poles living in Belarus, had its headquarters raided by police in July 2005, after Lukashenko accused the organization of

plotting his overthrow. Poland recalled its ambassador after the incident, and relations between the two countries were strained as of early 2006.

On 16 December 2005 presidential elections were announced for 19 March 2006.

### 13 GOVERNMENT

In May 1993, a draft constitution was presented to the 12th session of parliament, which adopted 88 of the new constitution's 153 articles.

Until mid-1994, Belarus was the only former Soviet republic not to have a president. The chairman of the Supreme Soviet was considered the chief of state, but power remained in the hands of the Council of Ministers headed by a prime minister.

On 19 July 1994, elections for president were held in Belarus. Alyaksandr Lukashenko received 80.1% of the vote. He was elected on a platform of clearing out the ruling Communist establishment. Lukashenko, however, is not a democrat but a Communist populist, who appears to have no plans for implementing political or economic reform.

He has been cited by Human Rights Watch for numerous violations and, by Western standards, rules as a dictator.

In November 1996, Lukashenko won a plebiscite to expand his powers. He signed a new constitution into law giving the president power to dissolve parliament and authorized the formation of a new bicameral National Assembly with a 64-member upper house, the Council of the Republic, and a 110-member lower house, the House of Representatives. All legislators serve four-year terms. The president's term was also extended until 2001, the year when he was reelected. The October 2004 referendum, criticized by Western observers as fraudulent, revised the constitution to eliminate presidential term limits. Consequently, Lukashenko was eligible to run for a third term in September 2006. Parliamentary elections held at the same time resulted in the election of only pro-Lukashenko candidates, with many opposition candidates disqualified on technicalities.

### 14 POLITICAL PARTIES

The Communist Party was declared illegal after the abortive August 1991 coup attempt, but was relegalized in February 1993. With two other pro-Communist parties it merged into the People's Movement of Belarus in May 1993. On the whole, political parties have not gathered the momentum evident in other former Soviet republics. None of the parties has had a large public following.

The parties with the greatest representation in the 260-member unicameral Supreme Council elected in 1995 were the Communist Party (42 seats) and the Agrarian Party (33). Following the elections in October 2004, which were widely criticized internationally, all the seats were won by pro-Lukashenko candidates. The Supreme Council was disbanded under the terms of the 1996 constitution and replaced with a bicameral legislature, for which the first elections were held in January 1997.

The primary pro-government party is the Belarussian Popular Patriotic Union, which supports President Lukashenko and the proposed union with Russia. Other pro-government parties include the Agrarian Party (AP), the Belarussian Communist Party (KPB), the Liberal Democratic Party of Belarus, and the Social-Sports Party. The primary opposition party is the Belarussian

Popular Front, whose chairman, Zyanon Paznyak, was in exile in the United States and whose other leaders were jailed at various times. The Popular Front was one of three parties that organized the alternative presidential elections held in 1999 to protest the extension of President Lukashenko's term to 2001. Other opposition parties are the Belarussian Social-Democrat Party Narodnaya Gromada (BSDP NG), the Belarussian Social-Democratic party Hromada, the United Civic party (UCP), the Party of Communists Belarussian (PKB), and the Women's Party "Nadezhda". The opposition Belarussian Party of Labor was liquidated in August 2004, but remains active.

## 15 LOCAL GOVERNMENT

Belarus is divided into six provinces (*oblasts*) and one municipality. The *oblasts* are roughly parallel to counties in the United States. Each has a capital city, and the name of the *oblast* is typically derived from the name of this city. The names of the six *oblasts* are Brestskaya, Homyel'skaya, Hrodzyenskaya, Mahilyowskaya, Minskaya, and Vitsyebskaya. The municipality is Horad Minsk. Local Councils of Deputies are elected for four-year terms. A 1994 decree gave the president the right to appoint and dismiss senior local officials. The constitutional modifications passed in 1996 give the president increased powers over local government, including the power of nullifying rulings by local councils.

## 16 JUDICIAL SYSTEM

The courts system consists of district courts, regional courts, and the Supreme Court. Higher courts serve as appellate courts but also serve as courts of first instance. There are also economic courts, and a Supreme Economic Court. Trials are generally public unless closed on grounds of national security. Litigants have a right to counsel and, in cases of need, to appointment of counsel at state expense.

The president appoints all district level and military judges. The 1996 constitution gives the president the power to appoint 6 of the 12 members of the Constitutional Court, including the chief justice. The Council of the Republic appoints the other remaining 6 members of the Constitutional Court. The judiciary is not independent and is under the influence of the executive. Legislation concerning independence of the judiciary was passed in 1995, but the laws have not been implemented. The Constitutional Court was established in 1994, and adjudicates serious constitutional issues, but it has no power to enforce its decisions. Prosecutors are responsible to the Procurator General who is appointed by the Council of the Republic according to the 1996 constitution. The offices of prosecutors consist of district offices, regional, and republic level offices.

## 17 ARMED FORCES

The active armed forces of Belarus numbered 72,940 in 2005. The reserves consisted of 289,500 individuals who had military service within the last five years. The nation's military is organized into three services: an army; an air force; and an air defense force. The Army numbered 29,600 active personnel, and was supported by 1,586 main battle tanks, 1,588 armored infantry fighting vehicles, 916 armored personnel carriers, and 1,499 artillery pieces. The Air Force and Air Defense Force numbered a combined 18,170 active personnel. The Air Force had 210 combat capable

aircraft, including 50 attack helicopters. The Air Defense Force operated 175 surface-to-air missile batteries. Belarus also had a paramilitary force of 110,000 personnel, which included 12,000 border guards, an 87,000-man militia, and 11,000 Ministry of Interior Troops. The militia and the border guards are also under the command of the Interior Ministry. In 2005 the defense budget totaled \$251 million.

## 18 INTERNATIONAL COOPERATION

Belarus was admitted to the United Nations on 22 October 1945 and serves on several specialized agencies, such as IAEA, IMF, UNCTAD, UNESCO, UNIDO, WHO, and the World Bank. It is an observer in the WTO. Belarus joined the OSCE on 30 January 1992. The country is part of the Commonwealth of Independent Nations (CIS) and the Central European Initiative. In 2000, Belarus, Kazakhstan, Russia, Kyrgyzstan, and Tajikistan established the Eurasian Economic Community.

The country has signed the Nuclear Nonproliferation Treaty and has formal diplomatic ties with many nations. It is a member of the Nuclear Suppliers Group (London Group) and the Non-aligned Movement. The country is also a member of the NATO Partnership for Peace. The United States recognized Belarus's sovereignty 25 December 1991. US diplomatic relations with Belarus were established two days later. Belarus has unresolved boundary disputes with Ukraine and Latvia.

In environmental cooperation, Belarus is part of the Basel Convention, the Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the London Convention, the Montréal Protocol, MARPOL, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Belarus's economy has been geared toward industrial production, mostly in machinery and metallurgy with a significant military component, although trade and services account for an increasing share of economic activity. Forestry and agriculture, notably potatoes, grain, peat, and cattle, are also important. Belarus's economy is closely integrated with those of Eastern Europe and the other republics of the former Soviet Union, and the breakup of the Soviet Union was highly disruptive to it. The demand for military products was cut sharply, and supplies of imported energy and raw materials were curtailed.

Despite repeated calls by the IMF for economic reform in Belarus, the Lukashenko government remains committed to maintaining state control over most industries. Lukashenko's administration has also come under severe criticism for its monetary policies. Western analysts accuse the Belarussian government of printing more money to subsidize higher salaries, thereby fueling inflation.

In 1997, Belarus and Russia signed a treaty of union, to provide for close cooperation in foreign affairs and military and economic policies, including freedom of movement for citizens, property ownership, and participation in local elections. Each country will retain its sovereignty, independence, territorial integrity, and other aspects of statehood however. A constitution for the union was approved in 2003.

The business climate remains poor in Belarus: as of 2000, production had increased, but products were uncompetitive on the

world market and many were placed in warehouses for storage. Losses from state-owned businesses are largely written off, which prevents those businesses from going bankrupt and keeps unemployment artificially low. Because Lukashenko controls all governmental power, there are no checks and balances or legal provisions for regulating business matters. However, as of 2003, Belarus had six free economic zones, which have attracted foreign investment, especially from Poland, Russia, and Germany, with the United States as the sixth-largest investor.

Economic expansion has been strong over the past years, with a boost of the GDP growth rate from 7.1% in 2003, to 11.0% in 2004; in 2005, the rate is expected to return to the 2003 level. This expansion was fueled by strong domestic demand, as a result of an increase in real wages, and due to a better and more stable macroeconomic situation. Inflation has been fairly high, but decreasing—in 2004 it was 18.1%, and by 2005 it was expected to dwindle further to 13.0%. Unemployment is very low at 2%, but a large number of the working force is believed to be underemployed.

Despite having an economy that seems to be doing well on paper, most international analysts agree that as long as Lukashenko will continue to favor the obsolete industrial base, and as long as he will continue to pump subsidies into the agricultural sector (the peasants and the blue collar workers are his main constituency), Belarus will not achieve healthy and sustainable economic growth.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Belarus's gross domestic product (GDP) was estimated at \$77.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$7,600. The annual growth rate of GDP was estimated at 7.8%. The average inflation rate in 2005 was 11.5%. It was estimated that agriculture accounted for 9.3% of GDP, industry 31.6%, and services 59.1% in 2005.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$162 million or about \$16 per capita and accounted for approximately 0.9% of GDP. Foreign aid receipts amounted to \$32 million or about \$3 per capita and accounted for approximately 0.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Belarus totaled \$10.42 billion or about \$1,055 per capita based on a GDP of \$17.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.0%. In 2001 it was estimated that approximately 36% of household consumption was spent on food, 15% on fuel, 7% on health care, and 10% on education. It was estimated that in 2003 about 27.1% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

The labor force as of end 2003 numbered 4.305 million workers. Of that total in that same year, an estimated 14% were engaged

in agriculture, 51.3% in services, and 34.7% in industry. In 2004, the number of registered unemployed was officially put at 2%, but there was a large segment of the working population that was underemployed.

Although the constitution provides for the right of workers to form and join independent unions, these rights are not respected in practice. Union activity is discouraged, and almost impossible to conduct in most of the state-owned larger industries. Strikes are legally permitted but tight control by the regime over public demonstrations makes it difficult to strike or hold public rallies. The government has harassed and arrested union leaders, and broken up union-sponsored activities. In addition, workers who are fired for union or political activity are not required to be re-hired by their employers.

Forced or compulsory labor by adults or children is prohibited. The statutory minimum employment age is 16, although a child of 14 can be employed if the parent or legal guardian gives written consent. In addition, minors under the age of 18 cannot work at hazardous jobs, or those which will adversely affect his or her education. Also they cannot work overtime on government holidays, or on the weekend. The workweek was set at 40 hours, with a 24-hour rest period per week. Safety and health standards in the workplace are often ignored. As of 2005, the minimum wage was us\$55 a month, which does not provide a decent standard of living. However, average real wages were officially reported (as of end 2005) at around us\$250 per month, although many receive additional income from the underground economy.

## 2<sup>2</sup> AGRICULTURE

Belarus had about 5,570,000 hectares (14,159,000 acres) of arable land (27.6% of the total) in 2002. Agriculture engaged about 14% of the economically active population in 2003 and accounted for 9.3% of GDP in 2005. Production levels (in 1,000 tons) for 2004 include: potatoes, 9,900; sugar beets, 3,088; barley, 2,070; rye, 1,480; wheat, 1,025; and oats, 765. In 2002, 64,200 and 13,800 tractors and combines, respectively, were in service.

## 2<sup>3</sup> ANIMAL HUSBANDRY

About 15% of the total land area is devoted to pastureland. In 2004, there were some 3,924,000 cattle, 3,287,000 pigs, 63,000 sheep, and 24,000,000 chickens. Of the 639,500 tons of meat produced in 2004, beef and veal accounted for 35%; poultry, 14%; pork, 50%, and other meats, 1%. Belarus produces more dairy products than any other former Soviet republic except Russia, with 5.2 million tons of milk, 77,400 tons of butter and ghee, and 80,800 tons of cheese produced in 2004. That year, egg production amounted to 163,300 tons; honey, 3,100 tons.

## 2<sup>4</sup> FISHING

As a landlocked nation, fishing is confined to the system of rivers (Pripyat, Byarezina, Nyoman, Zach Dvina, Sozh, Dnieper) that cross Belarus. The total catch in 2003 was 12,318 tons, with aquaculture accounting for 44% of that amount.

## 2<sup>5</sup> FORESTRY

About 45% of the total land area was covered by forests in 2000. Radioactive contamination of some forestland from the 1986 Chernobyl disaster has severely restricted output. In 2003, Belar-

us produced 7.5 million cu m (265 million cu ft) of roundwood, of which 1,518,000 cu m (53.6 million cu ft) were exported for a value of \$35.7 million.

## 26 MINING

Potash was the one significant mineral resource possessed by Belarus, which ranked second in world output in 2000. During the 1980s, Belarus produced 5 million tons per year (calculated based on potassium oxide content), about 50% of the former Soviet Union's output. After the breakup of the Soviet Union, production fell to 1.95 million tons by 1993. A program was then undertaken to raise the quality of potash to world standards to increase exports. Total production in 2002 was 3.8 million tons, down from 4.55 million tons in 1999. Potash was mined in the Salihorsk region, by the Belaruskaliy production association. Accumulated waste from the industry has raised environmental concerns. Two plants produced 2.17 million tons of cement in 2002.

## 27 ENERGY AND POWER

Domestic electricity is produced by four thermal plants. Belarus also imports electricity generated by nuclear and hydroelectric plants. In 2004, a total of 30 billion kWh was generated, of which 24.841 billion kWh came from thermal sources and 0.028 billion kWh from hydropower. In the same year, consumption of electricity totaled 28.015 billion kWh. Total capacity in 2002 was 7.838 million kW.

Only a small portion of Belarus's energy requirement is met by local production. Belarus has been producing oil since 1964 and had 37 operational fields in 1995. As of 2002 Belarus had oil reserves estimated at 198 million barrels, but there was a lack of foreign investment to fund exploration. In 2002, around 36,500 barrels of oil were produced per day, along with a nominal amount of peat and natural gas. Peat is found throughout the country and is processed by 37 fuel briquetting plants. Natural gas production in 2002 totaled 6.71 billion cu ft. There are two major oil refineries: Mazyr and Navapolatsk. Although oil consumption has been cut roughly in half since the early 1990s, Belarus was still obliged to import 75% of its oil from Russia as of 2002. In December 2002, Belarus sold its 11% stake in Slavneft, a joint Belarus and Russian state-run oil company, to Russia.

Belarus is an important transit route for Russian oil and natural gas exports to Eastern Europe, via pipelines that can carry up to 1,030,000 barrels per day of oil and 22.7 billion cu m (800 billion cu ft) per year of natural gas. Roughly half of Russia's net oil exports travel through Belarus, and a trade agreement between the two countries exempts Russia from paying export duties on this oil. In March 1993, Poland and Russia entered into an agreement to build a 2,500-mile natural gas pipeline from Russia's northern Yamal Peninsula, through Belarus and Poland, to Germany. When completed by 2010, the planned capacity of the new pipeline will be more than 56.6 billion cu m (2 trillion cu ft) per year. To maintain stable supplies of oil and natural gas, Belarus has entered into a joint project with Russia, sponsored by the European Bank for Reconstruction and Development (EBRD), to develop 60 million tons of oil from idle wells in Russia's Tymen region in exchange for guaranteed Russian oil supplies.

## 28 INDUSTRY

Belarus's industrial base is relatively well-developed and diversified compared to other newly independent states. Industry accounted for 31.6% of GDP in 2005. Belarus's main industries are engineering, machine tools, agricultural equipment, fertilizer, chemicals, defense-related products, prefabricated construction materials, motor vehicles, motorcycles, textiles, threads, and some consumer products, such as refrigerators, watches, televisions, and radios. The types of motor vehicles produced are off-highway dump trucks with up to 110-metric-ton load capacity, tractors, earth movers for construction and mining, and 25-metric-ton trucks for use in roadless and tundra areas.

While there had been an increase in industrial production as of 2002, a high volume of unsold industrial goods remain stocked in warehouses, due to high overhead costs that make Belarussian products uncompetitive on the world market. Belarus has taken few steps to privatize state-owned industries: it was estimated that around 10% of all Belarussian enterprises were privatized as of 2000.

By 2004, the participation of industry in the overall economic output had decreased to 36.4%, while its share in the labor fell to 34.7%; agriculture made up 11% of the GDP, and employed 14% of the labor force; services came in first with 52.6%, and 51.3% respectively. The industrial production growth was less than half of the GDP growth rate, at 4%, but it recovered in the first nine months of 2005 (10%), and was well above the same rate in Russia and Ukraine (4% and 3.2% respectively).

## 29 SCIENCE AND TECHNOLOGY

The Academy of Sciences of Belarus, founded in 1929 and headquartered in Minsk, has departments of physics, mathematics, and informatics; physical and engineering problems of machine building and energetics; chemical and geological sciences, biological sciences, and medical-biological sciences; it also operates numerous research institutes.

The Belarussian State University, founded in 1921 at Minsk, has faculties of applied mathematics, biology, chemistry, geography, mechanics and mathematics, physics, and radiophysics and electronics. The Belarussian State Technological University, founded in 1930 at Minsk, has faculties of chemistry technology and engineering, forestry, and organic substances technology. In 1987-97, science and engineering students accounted for 48% of college and university enrollment.

The Belarussian State Scientific and Technical Library, located in Minsk, had more than 1.2 million volumes as of 1996. In 2002, total research and development (R&D) expenditures in Belarus amounted to \$348.3 million, or 0.6% of GDP, of which 63.4% came from the government, 24.4% from business, 10.1% from foreign sources, and 2.2% from higher education. In that year, 1,870 researchers and 207 technicians per million people were actively engaged in R&D. In 2002, high technology exports totaled \$212 million, or 4% of manufactured exports.

## 30 DOMESTIC TRADE

In 1992, retail prices rose more than 1,000%. The same year a parallel national currency (called the ruble) was introduced and declared the only legal tender for purchasing goods such as food, al-

cohol, and tobacco. In 1998, the inflation rate was 182%. Though the government had initiated some capitalist reforms from 1991 to 1994, President Alexander Lukashenko (elected 1994) has significantly slowed efforts toward privatization through a program of “market socialism.” The government has administrative control of prices and currency exchange rates and has also reestablished certain management rights over private enterprises. As of early 2003, nearly 80% of industry was state-owned. Independent banks had also been renationalized.

### 3<sup>1</sup> FOREIGN TRADE

Before the collapse of the Soviet Union, Belarus exported about 40% of its industrial output to other Soviet republics and imported 90% of its primary energy and 70% of its raw materials from them. Belarus has remained exceedingly dependant on Russia for economic support; a proposed EU-style partnership between the two nations threatens its economic independence.

In 2000, Belarus exported machinery and transport equipment, chemicals, petroleum products, and manufactured goods. Imports included fuel, natural gas, industrial raw materials, textiles, and sugar. Belarus's major trading partners are Russia, Ukraine, Poland, and Germany. Imports and exports grew at an annual pace of over 61% in 1995.

Unlike Russia, Belarus did not manage to maintain a positive resource balance in 2004—while exports grew to \$11.5 billion (FOB—Free on Board), they were surpassed by imports, at \$13.6 billion. Russia continued to dominate Belarus's trade, receiving 47% of its exports, and sending 68.2% of its imports. Other important trading partners included the United Kingdom, Germany, the Netherlands, and Poland.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Belarus's exports was \$7.5 billion, while imports totaled \$8.1 billion, resulting in a trade deficit of \$600 million.

The International Monetary Fund (IMF) reported that in 2001 Belarus had exports of goods totaling \$7.26 billion and imports

totaling \$8.06 billion. The services credit totaled \$1.01 billion and debit \$603 million.

Unlike any other country in the region, Belarus recently witnessed a trade recoil, with exports of goods and services decreasing from \$11.6 billion in 2003, to \$9.9 billion in 2004; imports went down from \$12.3 billion in 2003, to \$10.3 billion in 2004. The resource balance was consequently negative, but not alarming— -\$678 million in 2003, and -\$441 million in 2004. The current account balance followed a similar path, improving from -\$505 million in 2003, to -\$271 million in 2004. Total reserves (including gold) were insignificant at \$432 million, covering less than a month of imports in 2004.

### 3<sup>3</sup> BANKING AND SECURITIES

The National Bank of Belarus is the central bank of Belarus, charged with regulating the money supply, circulating currency, and regulating the commercial banks of the country. The currency unit is the ruble. There are no current figures on the level of foreign currency reserves, but it is widely assumed that these have dwindled to perilously low levels because of the need for the National Bank of Belarus to maintain the local currency at its overvalued exchange rate on the Minsk Interbank Currency Exchange (MICE). The central bank has also had to turn to the street market to replenish reserves; in August, 1996, it bought \$25 million, paying effectively 10% more than it would have through MICE. Under Belarus's “currency corridor,” the Belarussian ruble cannot fall below BR615,000: \$1 at its twice-weekly auctions at the MICE. The street market accounts for 70–80% of foreign exchange trading. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$640.0 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.8 billion. The discount

rate, the interest rate at which the central bank lends to financial institutions in the short term, was 48%.

### 34 INSURANCE

No recent information about the insurance industry in Belarus is available.

### 35 PUBLIC FINANCE

Because it was formerly a part of the Soviet Union, Belarus has a well-established industrial base, but the transition from a centrally planned economy to a free market economy has not been easy. Privatization, although in progress, has been happening slowly, and foreign investment is discouraged by the “hostile” business climate.

The US Central Intelligence Agency (CIA) estimated that in 2005 Belarus's central government took in revenues of approximately \$5.9 billion and had expenditures of \$6.3 billion. Revenues minus expenditures totaled approximately -\$440 million. Total external debt was \$4.662 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were BR6,960.4 billion and expenditures were BR7,089 billion. The value of revenues was US\$4 million and expenditures US\$4 million, based on an official exchange rate for 2002 of US\$1 = BR1,790.917 as reported by the IMF. Government outlays by function were as follows: general public services, 20.9%; defense, 4.6%; public order and safety, 4.4%; economic affairs, 13.0%; health, 3.6%; recreation, culture, and religion, 1.4%; education, 4.1%; and social protection, 47.9%.

### 36 TAXATION

Belarus imposes a wide array of taxes on business and citizens. In 2005, the corporate income tax for resident companies was 24% and 30% for insurance companies and banks. Securities transactions are taxed at 40%. Companies with profits of over 5,000 times

the minimum wage are taxed an additional 15% under certain conditions. Joint ventures in which foreign participation is more than 30% are eligible for a three-year tax holiday.

The main indirect tax is the country's value-added tax (VAT) with a standard rate of 18%. A reduced rate of 10% is placed upon certain foodstuffs, agricultural products, repair services, hair-dressers, and laundries. Other consumption taxes include a 3% turnover tax and excise taxes ranging from 10–75%. There are also taxes on the use of natural resources, including the Chernobyl nuclear plant. Individual income is taxed according to a progressive schedule of rates ranging from 12% (up from 4.7%) to 30%. There is a 64.8% employer payroll tax for social security and employment taxes. There are also direct taxes on property and land.

### 37 CUSTOMS AND DUTIES

A 1995 customs union with Russia allows goods to flow between the two countries duty-free. However, the union required Belarus to conform its customs rates to those of Russia, resulting in a tariff increase from 5–10% to 20–40%. In 1995, Belarus also introduced a 20% import VAT (value-added tax) to be paid at the border on all incoming goods, except certain raw material used by local manufacturers.

### 38 FOREIGN INVESTMENT

The European Bank for Reconstruction and Development (EBRD) financed several major infrastructure improvement and commercial projects. The World Bank was financing construction and telecommunication projects, but these were discontinued in 1996 by President Lukashenko. At the end of the decade, President Lukashenko's steadfast refusal to implement market reforms continued to keep foreign investment levels low. In May 2002, however, the government announced a new program aimed at raising the share of foreign investment in GDP from 19% to 26–28%, with most investments coming from Russia. Several state-owned enterprises (SOEs), including oil refineries and chemical plants, were to be transformed into joint stock companies in preparation of selling 49.9% in blocks of 10%. Many restrictions are still tied to foreign investments and in June 2003, President Lukashenko announced that he had turned down proposals from foreign investors amounting to \$10 billion because of unacceptable terms. The president stated that the government's goal was at least \$1 billion in foreign direct investment (FDI) in 2003.

FDI inflow for Belarus reached \$444 million in 1999, up from \$352 million in 1997 and \$203 million in 1998. However, the inflow was reduced to a trickle in 2000 (\$90 million) and 2001 (\$169 million). During the decade 1993 to 2003, according to the Belarus government, foreign investment totaled \$4 billion, \$1.7 billion in FDI and \$2.5 billion in credits guaranteed by the government. All but a small proportion of foreign investment has come from Russia. Other sources include the Netherlands, Germany, and the United States (McDonald's, Coca Cola, and Ford). However, McDonald's and Coca Cola have both had problems with the government and the Ford plant is closed.

Investments have regained strength in 2004, but they were still relatively low to the GDP. What is worse, though, is the fact that only a small percentage of investments come from outside the country—due to a relatively inauspicious business climate and continued state control of major national companies. For the most

part, investments are fueled by a high domestic demand (such as financing of new housing), and only a small part went to productive assets.

### 39 ECONOMIC DEVELOPMENT

In the summer of 1995, the Belarussian president announced the policy of “market socialism,” after a period of economic liberalization and privatization that had taken place from 1991–94. The government still controls key market sectors as the private sector only makes up 20% of the economy. Most of the heavy industry in Belarus remains state-owned. Belarus offers easy credit to spur economic growth, but this comes at the price of high inflation. To combat spiraling wages and prices, President Lukashenko imposed price controls. These policies have driven away foreign investment and left Belarus economically isolated.

Bad harvests in 1998 and 1999 and continued trade deficits worsened the climate of economic development. The government resorted to inflationary monetary policies, including the printing of money, to pay salaries and pensions. In 2000, the government tightened its monetary policies, but in 2002, the International Monetary Fund (IMF) criticized Belarus for its economic performance, and refused to resume loans to the country. (IMF loans were last offered in 1995.) The balance of payments situation remained weak from 2001–03, as the ruble rose against the US dollar and the Russian ruble. The current account deficit was \$279 million or 2% of gross domestic product (GDP) in 2003. There were plans in 2003 for monetary and currency union with Russia, which would require substantial macroeconomic reforms on the part of Belarus.

The country’s good economic performance is expected to falter in the coming years due to the concerted effect of a series of factors. First of all, oil prices (which have boosted export returns) are expected to level off soon. An appreciation of the currency will work as a disincentive for exporters, while the growth of wages cannot exceed the growth in productivity for too long. Also, Belarus’s most important trade partner, Russia, will probably curtail imports, as it is itself in an economically difficult position.

### 40 SOCIAL DEVELOPMENT

Old age, disability, and survivors are protected by a social insurance system updated in 1999. Sickness, maternity, work injury, family allowance, and unemployment benefits are covered by the system. Employers contribute between 10–35% of payroll depending on the type of company. The government covers the cost of social pensions and subsidies as needed. Retirement is set at age 60 for men and age 55 for women. Workers’ compensation laws were first instituted in 1939. Family allowances are available for families with one or more children.

The human rights record of Belarus has worsened in recent years, after President Lukashenka amended the constitution to extend his stay in office and handpick members of parliament. Reports of police brutality are widespread and prison conditions are poor. Arbitrary arrests and detention have been reported, as well as incidents of severe hazing in the military. As of 2004, political opponents and protests are met with a violent government response. The government abridges freedom of the press, speech, assembly, religion, and movement. Religious freedom and equality is provided for in the constitution, but religions other than Rus-

sian Orthodox are discriminated against. There were a number of right wing and skinhead groups active in 2004.

Domestic abuse and violence against women continued to be a significant problem in 2004. Although laws against rape exist, most women do not report the crime due to fear that the police will blame the victim. Spousal rape is not viewed as a crime. While there are no legal restrictions on women’s participation in public life, social barriers are considerable, and women commonly experience discrimination when it comes to job opportunities. The law mandates equal pay for equal work, but few women reach senior management or government positions. Trafficking in women remains a serious problem.

### 41 HEALTH

The basic framework of the health care system has remained the same since the breakup of the Soviet Union. Health care is administered through a network of hospitals, polyclinics, tertiary care centers, and walk-in clinics. As of 2004, there were an estimated 450 physicians, 1,234 nurses, 44 dentists, and 31 pharmacists per 100,000 people. In addition to hospitals and medical personnel, the medical infrastructure comprises pharmacies and other retail outlets from which people and institutions acquire medicines and other basic medical supplies. Health care expenditures were an estimated 5.6% of GDP.

The incident with the most wide-ranging effects on the health of the Belarussian population was the accident at the Chernobyl nuclear power plant in April 1986. An estimated 2.2 million Belarussians were directly affected by radioactive fallout. As a result of the disaster, the population is constantly subject to increased amounts of background radiation that weakens the immune systems of individuals in contaminated areas; many are said to suffer from “Chernobyl AIDS.”

The 1999 birthrate was 10 per 1,000 inhabitants, with 101,317 births. Life expectancy in 2005 was 68.72 years. In 1997, children one year of age were immunized at the following rates: tuberculosis, 98%; diphtheria, pertussis, and tetanus, 97%; polio, 98%; and measles, 98%. The infant mortality rate in 2005 was 13.37 per 1,000 live births. Maternal mortality was estimated at 28 per 100,000 live births in 1998. In 1999, there were 80 deaths from tuberculosis per 100,000 people.

The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 15,000 people living with HIV/AIDS in the country. There were an estimated 1,000 deaths from AIDS in 2003.

The National AIDS Center was established in 1990.

### 42 HOUSING

The lack of adequate, affordable housing continues to be a problem for Belarus, but certain advances have been made. After the 1986 Chernobyl nuclear plant disaster, the government was forced to seal off 485 human settlement areas, displacing about 135,000 people. Over 65,000 apartments and homes have since been built to house these people. Since 1992, the government has been reforming housing laws to secure the constitutional right of citizens to acquire, build, reconstruct, or lease housing facilities.

In 1999, about 97% of the population were living in what was defined as conventional dwellings (primarily detached houses, separate or shared apartments or flats, and hostels). About 56%

were living in separate flats. About 31% were in detached houses. Those living in flats had the greatest access to improved utilities, such as central heating, central piped hot water, and flush toilets. Nationwide, only about 68% of the population had flush toilets in the home (1999), and only 71% had piped water. About 26.5% of the total population were using stove heating. About 66% of the housing stock had been built in the period 1961–90.

### 43 EDUCATION

Education is compulsory for children between the ages of 6 and 15. The primary school program covers four years of study and the basic education covers five years. General secondary programs are offered at gymnasiums (general studies), lyceums (affiliated with universities), and colleges (vocational studies); general secondary studies courses cover an additional two years. Students also have an option of attending a four-year technical school (technicum) or a three-year trade school instead of the general programs.

Primary school enrollment in 2003 was estimated at about 94% of age-eligible students. The same year, secondary school enrollment was about 85% of age-eligible students. The student-to-teacher ratio for primary school was at about 16:1 in 2003. The ratio for secondary school was about 9:1. It is estimated that about 98.7% of all students complete their primary education. The academic year runs from September to July.

Education at public higher education institutes is free for students who pass the entrance competition. In 2005, there were 44 public higher education institutions, including 25 universities, 9 academies, 4 institutes, 5 colleges, and 1 technical school. There were also 13 private higher education institutions. Total enrollment at these institutions was about 545,800. The largest public institute is the Belarussian State University, which is located in Minsk and was founded in 1921. The adult literacy rate for 2004 was estimated at about 99.8%, with equal rates for men and women.

The official languages of education are Belarussian, which is written in the Cyrillic script, and Russian. The government is now putting more emphasis on replacing Russian with Belarussian. The Ministry of Education and the National Institute for Higher Education are the primary administrative bodies. As of 2003, public expenditure on education was estimated at 6% of GDP.

### 44 LIBRARIES AND MUSEUMS

As of 2002, the National Library in Minsk held 7.6 million volumes. The country also had an extensive public library system. Universities with significant library holdings include the Belarussian State Polytechnical Academy (over two million volumes), Belarussian State University (1.7 million volumes), and the Minsk Teacher Training Institute (1.2 million volumes). The presidential library holds 1.5 million volumes, and the Gomel Regional Library has 1.3 million volumes.

The country records 14,392 monuments and historic sites. The State Art Museum in Minsk houses the country's largest collection of fine arts. The Belarussian State Museum of the Great Patriotic War (World War II) in Minsk houses artifacts and memorials of the country's great travails during the war. There is a historical and archaeological museum in Grodno and a natural history museum in Belovezskaja Pusca.

### 45 MEDIA

The Ministry of Telecommunications controls all telecommunications through Beltelcom. In 2003, there were an estimated 311 mainline telephones for every 1,000 people; about 292,800 people were on a waiting list for telephone service installation. The same year, there were approximately 113 mobile phones in use for every 1,000 people.

The government operates the only nationwide television and radio stations; however, there are several local stations. Some Russian, Polish, and Lithuanian stations are received in various parts of the country, but the government has blocked certain programming and has removed some channels from local cable access. In 2003, there were an estimated 199 radios and 362 television sets for every 1,000 people. About 77.2 of every 1,000 people were cable subscribers. In 2003, 141 of every 1,000 people had access to the Internet. There were four secure Internet servers in the country in 2004. All ISPs are controlled by the state.

The most widely read newspapers (with 2002 circulation figures) are *Sovetskaya Belorussiya* (Soviet Belorussia, 330,000); *Narodnaya Hazeta* (People's Newspaper, 259,597); *Respublika* (Republic, 130,000); *Vechernii Minsk* (Evening Minsk, 111,000); *Svaboda* (90,000); *Zvyazda* (Star, 90,000); and *Belorusskaya Niva* (Belarussian Cornfield, 80,000).

Most of the higher circulation papers are controlled by the state in some way. Though freedom of the press is granted in the 1996 constitution, the government continues to restrict this right through a virtual monopoly over forms of mass communication and its desire to limit media criticism of its actions. It controls the editorial content and policy of the largest circulation daily newspapers and of radio and television broadcasts and places severe restrictions on the editorial content of independent publications or broadcasts. Local radio and television stations are pressured to refrain from reporting on national issues. Government authorities reserve the right to ban and censor publications presenting critical reports on national issues. In 2004, the government suspended publication of 25 privately-owned newspapers.

### 46 ORGANIZATIONS

Belarus's important business and commercial organizations include the Chamber of Commerce and Industry of the Republic of Belarus. Important agricultural and industrial organizations include the Belarussian Peasants' Union, the Union of Entrepreneurs and Farmers, and the Union of Small Ventures. There are number of professional associations, particularly for members of medical professions.

The National Academy of Sciences and the Belarussian Physical Society promote public interest and education in science. The Belarussian Think Tanks is a public policy center involved in developing and promoting ideas to create democracy, market economy, and respect for human rights in Belarus.

Political interest youth organizations include the Belarussian Patriotic Youth Union and the Youth Front of Belarus (est. 1993). The Belarus Youth Information Center (YIC) was founded in 1994 to encourage and support youth involvement in science, culture, and education. The Belarussian Students Association is an affiliate member of the National Union of Students in Europe (ESIB). There is an organization of Girl Guides in the country, YMCA/YWCA,

and a Junior Chamber Belarus. Several sports associations are active, representing such pastimes as baseball and softball, track and field, badminton, tennis, and air sports. The country sponsors a National Olympic Committee, a Paralympic Committee, and a Special Olympics chapter.

The International Association for Volunteer Effort serves to promote and provide a network for voluntary service organizations, including Lions Club International, which is active in the country. There is also a League of Youth Voluntary Service. There are active chapters of the Red Cross, Caritas and UNICEF.

#### **47 TOURISM, TRAVEL, AND RECREATION**

Scenery, architecture, and cultural museums and memorials are primary attractions in Belarus. The Belavaezhskaja Puscha Nature Reserve features a variety of wildlife and a nature museum. The city of Hrodna is home to the baroque Farny Cathedral, the Renaissance Bernadine church and monastery, and the History of Religion Museum, which is part of a renovated 18th-century palace. There are also two castles in the area, both housing museums. A valid passport and visa are required of all visitors. An HIV test is required for visits longer than 90 days.

In 2003, there were 63,779 tourist arrivals in Belarus, up from 61,033 in 2000. Tourism receipts totaled \$339 million.

In 2005, the US Department of State estimated the cost of staying in Minsk at \$187 per day.

#### **48 FAMOUS BELARUSSIANS**

Frantsky Sharyna, who lived in the first quarter of the 16th century, translated the Bible into Belarussian. Symeon of Polatsk was a 17th-century poet who wrote in Belarussian. Naksim Bahdanovich was an important 19th-century poet. Modern writers include

Uladzimir Dubouka (1900–1976) and Yazep Pushcha, both poets. Kuzma Chorny and Kandrat Krapiva (1896–1991) were writers of fiction during the outpouring of Belarussian poetry and literature during the 1920s. Famous modern composers from Belarus included Dzmitry Lukas, Ryhor Pukst, and Yauhen Hlebau (1929–2000).

#### **49 DEPENDENCIES**

Belarus has no territories or colonies.

# BELGIUM

Kingdom of Belgium

*Dutch: Koninkrijk België;*

*French: Royaume de Belgique*

**CAPITAL:** Brussels (Brussel, Bruxelles)

**FLAG:** The flag, adopted in 1831, is a tricolor of black, yellow, and red vertical stripes.

**ANTHEM:** *La Brabançonne* (*The Song of Brabant*), named after the Duchy of Brabant.

**MONETARY UNIT:** The euro replaced the Belgian franc in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro; and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Independence Day, 21 July; Assumption Day, 15 August; All Saints' Day, 1 November; Armistice Day, 11 November; Dynasty Day, 15 November; and Christmas, 25 December. Movable religious holidays are Easter Monday, Ascension, and Whitmonday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in northwestern Europe, Belgium has an area of 30,510 sq km (11,780 sq mi) and extends 280 km (174 mi) SE–NW and 222 km (137 mi) NE–SW. Comparatively, the area occupied by Belgium is about the same size as the state of Maryland. Belgium borders on the Netherlands to the N, Germany and Luxembourg to the E, France to the S and SW, and the North Sea to the NW, with a total boundary length of 1,385 km (859 mi).

Belgium's capital city, Brussels, is located in the north-central part of the country.

## <sup>2</sup> TOPOGRAPHY

The coastal region, extending about 16–48 km (10–30 mi) inland, consists of sand dunes, flat pasture land, and polders (land reclaimed from the sea and protected by dikes), and attains a maximum of 15 m (50 ft) above sea level. Eastward, this region gradually gives way to a gently rolling central plain, whose many fertile valleys are irrigated by an extensive network of canals and waterways. Altitudes in this region are about 60–180 m (200–600 ft). The Ardennes, a heavily wooded plateau, is located in southeast Belgium and continues into France. It has an average altitude of about 460 m (1,500 ft) and reaches a maximum of 694 m (2,277 ft) at the Signal de Botrange, the country's highest point. Chief rivers are the Schelde (Scheldt, Escaut) and the Meuse (Maas), both of which rise in France, flow through Belgium, pass through the Netherlands, and empty into the North Sea.

## <sup>3</sup> CLIMATE

In the coastal region, the climate is mild and humid. There are marked temperature changes farther inland. In the high southeasterly districts, hot summers alternate with very cold winters.

Except in the highlands, rainfall is seldom heavy. The average annual temperature is 8°C (46°F); in Brussels, the mean temperature is 10°C (50°F), ranging from 3°C (37°F) in January to 18°C (64°F) in July. Average annual rainfall is between 70 and 100 cm (28 to 40 in).

## <sup>4</sup> FLORA AND FAUNA

The digitalis, wild arum, hyacinth, strawberry, goldenrod, lily of the valley, and other plants common to temperate zones grow in abundance. Beech and oak are the predominant trees. Among mammals still found in Belgium are the boar, fox, badger, squirrel, weasel, marten, and hedgehog. The many varieties of aquatic life include pike, carp, trout, eel, barbel, perch, smelt, chub, roach, bream, shad, sole, mussels, crayfish, and shrimp.

## <sup>5</sup> ENVIRONMENT

About 520 sq km (200 sq mi) of reclaimed coastal land is protected from the sea by concrete dikes. As of 2000, Belgium's most significant environmental problems were air, land, and water pollution due to the heavy concentration of industrial facilities in the country. The sources of pollution range from nuclear radiation to mercury from industry and pesticides from agricultural activity. The country's water supply is threatened by hazardous levels of heavy metals, mercury, and phosphorous. It has a renewable water supply of 12 cu km. Pollution of rivers and canals was considered the worst in Europe as of 1970, when strict water-protection laws were enacted.

Air pollution reaches dangerous levels due to high concentrations of lead and hydrocarbons. Belgium is also among the 50 nations that emit the highest levels of carbon dioxide from industrial sources. In 1996 its emission level was 106 million metric tons. Belgium's problems with air pollution have also affected neighbor-

ing countries by contributing to the conditions which cause acid rain.

The Ministry of Public Health and Environment is Belgium's principal environmental agency, and there is also a Secretary of State for Public Health and Environment. The Belgian government has created several environmental policies to eliminate the country's pollution problems: the 1990–95 plan on Mature Development, an Environmental Policy Plan, and the Waste Plan.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 9 types of mammals, 10 species of birds, 6 species of fish, 4 types of mollusks, and 7 other invertebrates. The Mediterranean mouflon, the Atlantic sturgeon, and the black right whale are listed as endangered. There are nine Ramsar wetland sites within the country.

## 6 POPULATION

The population of Belgium in 2005 was estimated by the United Nations (UN) at 10,458,000, which placed it at number 77 in population among the 193 nations of the world. In 2005, approximately 17% of the population was over 65 years of age, with another 17% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.1%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 10,809,000. The population density was 342 per sq km (887 per sq mi).

The UN estimated that 97% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.16%. The capital city, Brussels (Brussel, Bruxelles), had a population of 998,000 in that year. Other major urban areas are located within 100 km (60 mi) of Brussels. The largest cities and their estimated populations include Antwerp (Antwerpen, Anvers), 952,600; Gent (Ghent, Gand), 230,951; Charleroi, 206,779; Liège (Luik), 196,825; Brugge (Bruges), 117,172; and Namur (Namen), 106,213.

The government has conducted a census every 10 years since 1848. Since 1984 the registration of births and deaths has been delegated to the Flemish and Walloon language communities. Belgium's population has distinctive language and ethnic divisions. The Ardennes region in the south is the least densely populated region.

## 7 MIGRATION

At the end of 2001, 862,000 persons of foreign nationality were living in Belgium. About 65% were those of other EU countries, primarily Italy, France, the Netherlands, and Spain. There were also a considerable number of Moroccans and Turks living in Belgium that year. In 2003 the foreign labor force in Belgium was 7.6%, and the foreign population was 8.3%. The net migration rate of Belgium was 1.23 migrants per 1,000 population as estimated for 2005.

As of 2004, Belgium hosted approximately 13,500 refugees. In 2004 there were 22,863 asylum applications, mostly from Russia, the Democratic Republic of the Congo, and Iran.

## 8 ETHNIC GROUPS

Two thousand years ago the population of Belgium, as mentioned by Julius Caesar in his book on the Gallic wars, was of Celtic stock. This population was displaced or lost its identity, however, during the great invasions that brought down the Roman Empire. The Salian Franks, who settled there during the 4th century AD, are considered the ancestors of Belgium's present population. The origin of the language frontier in Belgium has never been satisfactorily explained. In the indigenous population, the ratio of Flemings (Dutch speakers) to Walloons (French speakers) is about 5 to 3. In 2004, the Flemings constituted about 58% of the total population; Walloons accounted for 31.7%. The remaining 11% was comprised of those with mixed ancestry or other groups.

## 9 LANGUAGES

According to a 1970 constitutional revision, there are three official languages in Belgium—French, Dutch (also called Flemish), and German. Dutch is the language of the four provinces of Antwerp, Limburg, East Flanders (Oost-Vlaanderen), and West Flanders (West-Vlaanderen), which form the northern half of the country. French is the language of the four southern Walloon provinces of Hainaut, Liège, Luxembourg, and Namur. The central province of Brabant is divided into three districts—one French-speaking (Nivelles, Nijvel), one Dutch-speaking (Leuven, Louvain), and one bilingual (composed of the 19 boroughs of the capital city, Brussels). The majority of people in the Brussels metropolitan area are French-speaking. According to 2005 estimates, 60% of the total population speak Dutch (Flemish), 40% speak French, less than 1% speak German, and 11% are legally bilingual in Dutch and French.

The relationship between the two major language groups has been tense at times. For many years, French was the only official language. A series of laws enacted in the 1930s established equality between the two languages. Dutch became the language of administration, the schools, and the courts in the Flemish region (Flanders), while French continued to be the language of Wallonia. The use of German is regulated in the same way in the German-speaking municipalities in the province of Liège. As a rule, French is studied in all secondary schools in the Flemish region, while Dutch is a required secondary-school subject in Wallonia.

In 1963, a set of laws created four linguistic regions (with bilingual status for Brussels), a decision incorporated into the constitution in 1970. Subsequent legislation in 1971–74 provided for cultural autonomy, regional economic power, and linguistic equality in the central government. Disagreement over the future status of bilingual Brussels intensified during the late 1970s. In 1980, after a political crisis, the Flemish and Walloon regions were given greater autonomy, but the issue of Brussels, a predominantly French-speaking territory surrounded by a Dutch-speaking region, remained intractable and was deferred.

## 10 RELIGIONS

According to a 2001 Survey and Study of Religion conducted by universities within the country, about 47% of the population were nominally Roman Catholic. However, other sources have reported that Roman Catholics account for as high as 75% of the popula-

LOCATION: 49°29'52" to 51°30'21" N; 2°32'48" to 6°25'38" E. BOUNDARY LENGTHS: Netherlands, 450 kilometers (280 miles); Germany, 162 kilometers (101 miles); Luxembourg, 148 kilometers (92 miles); France, 620 kilometers (385 miles); North Sea, 66 kilometers (41 miles). TERRITORIAL SEA LIMIT: 12 miles.

tion. The Roman Catholic Church estimates that of its total Belgian membership, only about 10–15% are active participants.

Based on the Survey and Study of Religion, the Muslim population numbered about 364,000, most of whom were Sunni. Protestants numbered between 125,000 and 140,000. Greek and Russian Orthodox adherents numbered about 70,000. The Jewish community was approximately 45,000 to 55,000 and Anglicans numbered approximately 10,800. The largest unrecognized religions included the Jehovah's Witnesses, with 27,000 members, and the Church of Jesus Christ of Latter-day Saints (Mormons), with about 3,000 members. About 350,000 people belong to laics, the government's term for nonconfessional philosophical organizations. Estimates indicate that up to 15% of the population do not practice any religion at all. About 7.4% claim to follow the tenets of nonconfessional philosophical organizations (*laic*).

The constitution provides for freedom of religion and this right is generally respected in practice. The government gives "recognized" status to Roman Catholicism, Protestantism, Judaism, Anglicanism, Islam, and Orthodox Christianity. These groups are allowed to receive some funding from the government. Laic groups are also considered as a recognized religion. Some social discrimination has been reported by Jews, Muslims, and members of "unrecognized" groups.

## <sup>11</sup>TRANSPORTATION

In 2004, the densest railway network in the world comprised 3,521 km (2,190 mi) of track operated by the government-controlled Belgian National Railway Co., of which 2,927 km (1,821 mi) was electrified. In addition, Belgium has a regional railway network of 27,950 km (17,367 mi). The road network in 2003 comprised 149,757 km (89,417 mi) of highways, of which 117,110 km (72,842 mi) were paved, including 1,747 km (1,087 mi) of expressways. All major European highways pass through Belgium. In 2003, Belgium had 4,793,271 passenger cars and 661,948 commercial vehicles registered for use.

Inland waterways comprise 2,043 km (1,270 mi) of rivers and canals, and are linked with those of France, Germany, and the Netherlands. In 2003, a total of 1,570 km (976 mi) of these waterways are in regular commercial use. The chief port, Antwerp (one of the world's busiest ports), on the Scheldt River, about 84 km (52 mi) from the sea, handles three-fourths of the country's foreign cargo. Other leading ports are Ghent and Zeebrugge. Liège is the third-largest inland river port in Western Europe, after Duisburg, Germany, and Paris. In 2005 the Belgian merchant fleet was comprised of 53 vessels, with a total of 1,146,301 GRT. The fleet numbered 101 ships (2.2 million GRT) in 2002, but offshore registry programs and so-called "flags of convenience" have enticed ship owners into foreign registry.

In 2004, there were an estimated 43 airports. As of 2005 a total of 25 had paved runways, and there was also a single heliport. The Belgian national airline, Sabena, formed in 1923, is the third-oldest international airline. Brussels National Airport, an important international terminus, is served by more than 30 major airlines. In 2003, a total of 2.904 million passengers flew on scheduled domestic and international flights.

## 12 HISTORY

Belgium is named after the Belgae, a Celtic people whose territory was conquered in 57 BC by Julius Caesar and was organized by him as Gallia Belgica. In 15 BC, Augustus made Gallia Belgica (which at that time included much of present-day France) a province of the Roman Empire. In the 5th century AD, it was overrun by the Franks, and in the 8th century, it became part of the empire of Charlemagne. But this empire soon fell apart, and in the 10th century there emerged several feudal units that later would become provinces of Belgium. These included the counties of Flanders, Hainaut, and Namur, the duchy of Brabant, and the prince-bishopric of Liège. During the three following centuries, trade flourished in the towns of the county of Flanders. Antwerp, Bruges, Ypres (Ieper), and Ghent in particular became very prosperous. In the 15th century, most of the territory that currently forms Belgium, the Netherlands, and Luxembourg—formerly called the Low Countries and now called the Benelux countries—came under the rule of the dukes of Burgundy as the result of a shrewd policy of intermarriage. Through the marriage of Mary of Burgundy with Archduke Maximilian of Austria, those same provinces, then collectively known as the Netherlands, became part of the Habsburg Empire in the early 1500s. When Maximilian's grandson Emperor Charles V divided his empire, the Netherlands was united with Spain (1555) under Philip II, who dedicated himself to the repression of Protestantism. His policies resulted in a revolt led by the Protestants.

Thus began a long war, which, after a 12-year truce (1609–21), became intermingled with the Thirty Years' War. Under the Treaty of Westphalia (1648), which ended the Thirty Years' War, independence was granted to the northern Protestant provinces. The southern half remained Roman Catholic and under Spanish rule. By this time, the southern Low Countries (the territory now known as Belgium) had become embroiled in Franco-Spanish power politics. Belgium was invaded on several occasions, and part of its territory was lost to France.

Under the Peace of Utrecht (1713), which concluded the War of the Spanish Succession, Belgium became part of the Austrian Empire. The country was occupied by the French during the War of the Austrian Succession (1744) but was restored to Austria by the Treaty of Aix-la-Chapelle (1748). Belgium entered a period of recovery and material progress under Maria Theresa and her son Joseph II. The latter's administrative reforms created widespread discontent, however, which culminated in the Révolution Brabançonne of 1789. Leopold II, successor to Joseph II, defeated the Belgians and reoccupied the country, but his regime won little popular support. In 1792, the French army invaded the Belgian provinces, which were formally ceded to France by the Treaty of Campo Formio (1797). This French regime was defeated by the anti-Napoleonic coalition at Waterloo in 1815.

Belgium was united with the Netherlands by the Congress of Vienna in 1815. This action caused widespread discontent, culminating in a series of uprisings. The Dutch were compelled to retreat, and on 4 October 1830, Belgium was declared independent by a provisional government. The powers of the Congress of Vienna met again at London in June 1831 and accepted the separation of Belgium and the Netherlands. However, William I, king of the United Netherlands, refused to recognize the validity of this action. On 2 August 1831, he invaded Belgium, but the Dutch force was repulsed by a French army. In 1839, he was forced to accept the Treaty of the XXIV Articles, by which Belgian independence was formally recognized. The European powers guaranteed Belgium's status as "an independent and perpetually neutral state."

In 1831, the Belgian Parliament had chosen Prince Leopold of Saxe-Coburg-Gotha as ruler of the new kingdom, which was already in the process of industrialization. In 1865, Leopold I was succeeded by Leopold II (r.1865–1909), who financed exploration and settlement in the Congo River Basin of Africa, thereby laying the foundations of Belgium's colonial empire. Leopold's nephew, Albert I, came to the throne in 1909. At the outbreak of World War I, German troops invaded Belgium (4 August 1914). The Belgian army offered fierce resistance, but by the end of November 1914, the only Belgian towns not occupied by the Germans were Nieuport (Nieuwpoort), Furnes (Veurne), and Ypres. Belgium, on the side of the Allies, continued to struggle to liberate the kingdom. Ypres, in particular, was the scene of fierce fighting: nearly 100,000 men lost their lives at a battle near there in April and May 1915 (during which the Germans used chlorine gas), and at least 300,000 Allied troops lost their lives in this region during an offensive that lasted from late July to mid-November 1917.

Under the Treaty of Versailles (1919), Germany ceded to Belgium the German-speaking districts of Eupen, Malmédy, St. Vith, and Moresnet. The country made a remarkable recovery from the war, and by 1923, manufacturing industries were nearly back to normal. After a heated controversy with Germany over reparations payments, Belgium joined France in the occupation of the Ruhr in 1923. In 1934, Leopold III succeeded Albert.

Belgium was again attacked on 10 May 1940, when, without warning, the German air force bombed Belgian airports, railroad stations, and communications centers, and Belgian soil was invaded. Antwerp fell on 18 May and Namur on 23 May. By the end of the month, British, French, and Belgian forces were trapped in northwestern Belgium. King Leopold III surrendered unconditionally on 28 May and was taken prisoner of war. The Belgian government-in-exile, in London, continued the war on the side of the Allies. With the country's liberation from the Germans by the Allies and the well-organized Belgian underground, the Belgian government returned to Brussels in September 1944. During the Allied landings in Normandy, King Leopold III had been deported to Germany. In his absence, his brother Prince Charles was designated by parliament as regent of the kingdom.

The country was economically better off after World War II than after World War I. However, a tense political situation resulted from the split that had developed during the war years between Leopold III and the exiled government in London, which had repudiated the king's surrender. After his liberation by the US 7th Army, the king chose to reside in Switzerland. On 12 March 1950, 57.7% of the Belgian electorate declared itself in favor of allow-

ing Leopold III to return as sovereign. The general elections of 4 June 1950 gave an absolute majority to the Christian Social Party, which favored his return, and on 22 July 1950, Leopold came back from exile. But the Socialists and Liberals continued to oppose his resumption of royal prerogatives, and strikes, riots, and demonstrations ensued. On 1 August 1950, Leopold agreed to abdicate, and on 17 July 1951, one day after Leopold actually gave up his throne, his son Baudouin I was formally proclaimed king.

In 1960, the Belgian Congo (now the Democratic Republic of the Congo), a major vestige of Belgium's colonial empire, became independent. The event was followed by two years of brutal civil war, involving mercenaries from Belgium and other countries. Another Belgian territory in Africa, Ruanda-Urundi, became independent as the two states of Rwanda and Burundi in 1962.

Belgium was transferred into a federal state in July 1993. The country is divided into three regions (Flanders, Wallonia, and Brussels) and three linguistic communities (Flemish, French, and German). Voters directly elect members to the regional parliaments. The French-speaking branch of the Socialist party dominates Wallonia while the Dutch-speaking faction of the Christian Democratic Party governs Flanders. As a participant in the Marshall Plan, a member of NATO, and a leader in the movement for European integration, Belgium shared fully in the European prosperity of the first three postwar decades. Domestic political conflict during this period centered on the unequal distribution of wealth and power between Flemings and Walloons. The Flemings generally contended that they were not given equal opportunity with the Walloons in government and business and that the Dutch language was regarded as inferior to French. The Walloons, in turn, complained of their minority status and the economic neglect of their region and feared being outnumbered by the rapidly growing Flemish population. In response to these conflicts, and after a series of cabinet crises, a revised constitution adopted in 1970 created the framework for complete regional autonomy in economic and cultural spheres. In July 1974, legislation provided for the granting of autonomy to Flanders, Wallonia, and Brussels upon a two-thirds vote in parliament. However, the necessary consensus could not be realized. In 1977, a Christian Social–Socialist coalition proposed to establish a federal administration representing the three regions, but could not obtain parliamentary approval for the proposal. In 1980, however, following several acts of violence as a result of the dispute, parliament allowed the establishment in stages of regional executive and legislative bodies for Flanders and Wallonia, with administrative control over cultural affairs, public health, roads, and urban projects.

Labor unrest and political violence has erupted in the past. In 1982, as a result of an industrial recession, worsened by rising petroleum prices and debt servicing costs, the government imposed an austerity program; an intensification of the austerity program, announced in May 1986, aimed to cut public sector spending, restrain wages, and simplify the taxation system. Vigorous trade-union protests have taken place to protest the freezing of wages and cuts in social security payments. Belgium has one of the largest national debts in Western Europe. Since 1995, however, unions have gone along with pay freezes to restore profitability and improve labor market performance.

A riot in May 1985, at a soccer match between English and Italian clubs, caused the death of 39 spectators and precipitated a po-

litical crisis. The government coalition collapsed over charges of inefficient policing, and a general election returned the Christian Social–Liberal alliance to power in November 1985. This in turn accelerated terrorist attacks on public places as well as NATO facilities, responsibility for which was claimed by an extreme left-wing group, Cellules Combattantes Communistes (CCC). Security was tightened in 1986. Linguistic disputes between the French- and Dutch-speaking sections have continued to break out. Extremist parties have sought to capitalize on anti-immigrant feeling among the general population. The Flemish Blok (now Flemish Interest) has been the third-largest party in Flanders and openly advocates an independent Flanders in order to get rid of French-speakers and foreigners.

Economic performance was buoyant from 1996, with growth rates averaging close to 3%; however, with the global economic downturn of the beginning of the 21st century, Belgium's growth rates have lowered. Belgium joined the European economic and monetary union in January 1999 with no problems. Actual unemployment was around 12% as of 2004 but was closer to 20% if elderly unemployed people and people in special government-sponsored programs were included.

Parliamentary elections were held on 18 May 2003, and the Flemish Liberals and Democrats (VLD) finished first in the Flemish elections, defeating the Socialists and Christian Democrats, and the far-right Vlaams Blok. In Wallonia, the Socialists came in first. In both elections, the Greens suffered. Prime Minister Guy Verhofstadt, in office since 1999, formed a center-left coalition of Liberals and Socialists after the May elections. Under Verhofstadt's leadership, Belgium legalized euthanasia and the use of marijuana, and approved gay marriages.

Under Belgium's "universal jurisdiction" law, enacted in 1993, Belgian courts can hear cases involving war crimes and crimes against humanity even if the crimes were not committed in Belgium and did not involve Belgian citizens. Amendments to the law in April 2003 made it harder to bring a case where neither victim, plaintiff, nor accused were Belgian. Israeli Prime Minister Ariel Sharon and former US president George H. W. Bush were charged with war crimes under the law, relating to the 1982 Sabra and Shatila massacres in Lebanon, and the bombing of a civilian shelter in the 1991 Gulf War, respectively. Due to pressure from the United States, Belgian courts now may try only cases which involve charges against Belgian citizens or people resident in Belgium.

The European Union was divided over the use of military force by the United States and UK in the months leading up to the war in Iraq that began on 19 March 2003. Belgium stood with France and Germany in opposing a military response to the crisis.

In 2004, the far-right Vlaams Blok increased its share of the vote in regional and European elections. However, the Belgian High Court ruled that the party was racist and stripped it of the right to state funding and access to television. The party was subsequently reorganized under a new name, the Vlaams Belang, or Flemish Interest.

In May 2005, the government survived a confidence vote, enabling it to put to rest a dispute over the voting rights of French speakers in Dutch-speaking areas around Brussels. This came after months of negotiations over the issue, which sparked demonstrations and riots and brought the government to the brink of collapse.

### 13 GOVERNMENT

Belgium is a hereditary monarchy governed under the constitution of 1831. This document has been frequently amended in recent years to grant recognition and autonomy to the Dutch- and French-speaking communities. Executive power is vested in the king, who appoints and removes ministers, civil servants, judges, and officers. In June 1991, parliament approved a constitutional amendment to allow female members of the royal family to succeed to the throne. The monarch, however, would continue to be known as king regardless of gender.

With approval of parliament, the king has the power to declare war and conclude treaties; he is commander-in-chief of the armed forces. According to the constitution, the king's rights include conferring titles of nobility, granting pardons, and administering the coinage of money. However, none of the king's acts becomes effective unless countersigned by a minister, who assumes responsibility for such acts before parliament. Therefore, the king must choose ministers who represent the majority in parliament. Each ministry is created in response to necessity, and there is no fixed number of ministers.

Legislative power is vested in the king and in the two-chamber parliament. The Chamber of Representatives has 150 members, who are elected for a four-year term through a system of proportional representation. The Senate has 71 members, with 40 directly elected and 31 indirectly elected or co-opted for a four-year term. All persons 18 years of age and older are entitled to vote in parliamentary elections, and those who fail to vote are subject to fines. In time of emergency, the king may convoke extraordinary sessions. The government and both chambers may introduce legislation, and both chambers have equal rights. When a bill is introduced, a committee examines it and appoints a rapporteur, who reports on it before the full assembly. The king may dissolve the chambers either simultaneously or separately, but an election must be provided for within 40 days and a session of the new parliament must meet within two months.

In accordance with the constitutional reform of 1980, there are three communities: the Dutch-, the French-, and the German-speaking communities. They have, in a wholly autonomous manner, responsibility for cultural affairs, education, and for matters concerning the individual. There are also three regions (Flanders, Wallonia, and Brussels), which are responsible for the regional aspects of a broad range of concerns, including the economy, energy, public works and housing, employment, and environmental policy. The institutions of the communities and regions are based on the same principles as those of the national political structure: each entity has a "regional parliament" (the council), whose decisions are implemented by a "regional government" (the executive). The council and the executive are directly elected and can only be brought down by a vote of no confidence.

On 14 July 1993, parliament approved a constitutional revision creating a federal state.

### 14 POLITICAL PARTIES

Political parties in Belgium are organized along ethnolinguistic lines, with each group in Flanders having its Walloon counterpart. The three major political alliances are the Christian Social parties, which have consisted of the Parti Social Chrétien (PSC) and the

Christelijke Volkspartij (CVP); the Socialist parties, the Parti Socialiste (PS) and Socialistische Partij (SP); and the Liberal parties, Parti Réformateur et Liberal (PRL) and Flemish Liberal Democrats (VLD). The People's Union (Volkunie, or VU) was the Flemish nationalistic party, while the French-speaking Democratic Front (Front Démocratique des Francophones—FDF) affirms the rights of the French-speaking population of Brussels. The Flemish Interest (Vlaams Belang—VB) is separatist and antiforeigner while the much smaller far-right National Front (Front Nationale—FN) is openly racist and xenophobic. In 2001, the CVP was renamed the Christian Democratic and Flemish Party (CD and V); the SP was renamed the Social Progressive Alternative Party, or SPA; and the VU split into two parts—the conservative wing established the New Flemish Alliance (NVA), and the left-liberal wing became the Spirit Party. Groen! (formerly AGALEV) is the Flemish Green Party, and ECOLO represents francophone Greens. In 2002, the PSC was renamed the Democratic Humanistic Center (CDH), and the PRL, FDF, and the MCC or Movement of Citizens for Change (created in 1998 by a former leader of the francophone Christian Democrats), formed a new alliance called the Reform Movement (MR). Although these changes in parties' names and new groupings have taken place in the last few years, the Belgian political landscape has not been seriously reorganized.

Following the 13 June 1999 election, party strength in the Chamber of Representatives was as follows: CVP, 14.1% (22 seats); PS, 10.1% (19 seats); SP, 9.6% (14 seats); VLD, 14.31% (23 seats); PRL, 10.1% (18 seats); PSC, 5.9% (10 seats); VB, 9.9% (15 seats); VU, 5.6% (8 seats); ECOLO, 7.3% (11 seats); AGALEV, 7.0% (9 seats); FN 1.5% (1 seat) (150 total seats).

The 1999 election ended the political career of Prime Minister Jean-Luc Dehaene, the Flemish Christian Democrat who led a center-left coalition of francophone and Flemish socialists and his francophone Christian Democratic Party throughout the 1990s. Six parties (French-speaking and Dutch-speaking branches of the Liberal, Socialist, and Green parties) reached a core agreement only three weeks after the election on forming a "blue-red-green" coalition government. It was Belgium's first government in 40 years not to include the Christian Democrats, the first to include the Greens, and the first since 1884 to be led by a Liberal prime minister (Guy Verhofstadt).

The presence of the Greens means a commitment to a progressive withdrawal from nuclear energy, starting with gradual decommissioning of nuclear power stations more than 40 years old. However, the Greens were dealt a setback in the 2003 elections. In the 18 May 2003 elections, the party strength was distributed as follows: VLD, 15.4% (25 seats); SPA-Spirit, 14.9% (23 seats); CD and V, 13.2% (21 seats); PS, 13% (25 seats); VB, 11.6% (18 seats); MR, 11.4% (24 seats); CDH, 5.5% (8 seats); N-VA, 3.1% (1 seat); ECOLO, 3.1% (4 seats); AGALEV, 2.5%, no seats; FN, 2%, (1 seat), and Vivant (Alive), a human rights party, took 1.2% of the vote but secured no seats. Verhofstadt formed a center-left coalition government.

### 15 LOCAL GOVERNMENT

Belgium is divided into 10 provinces: Antwerp, East Flanders, West Flanders, and Limburg in the north, Hainaut, Liège, Luxembourg, and Namur in the south, Flemish Brabant, and Walloon Brabant. Each of the provinces has a council of 50 to 90 members

elected for four-year terms by direct suffrage and empowered to legislate in matters of local concern. A governor, appointed by the king, is the highest executive officer in each province.

There are 482 communes. Each municipality has a town council elected for a six-year term. The council elects an executive body called the board of aldermen. The head of the municipality is the burgomaster, who is appointed by the sovereign upon nomination by the town council. Recently, the number of municipalities has been greatly reduced through consolidation.

In 1971, Brussels was established as a separate bilingual area, presided over by a proportionally elected metropolitan council. Linguistic parity was stipulated for the council's executive committee.

## 16 JUDICIAL SYSTEM

Belgian law is modeled on the French legal system. The judiciary is an independent branch of government on an equal footing with the legislative and the executive branches. Minor offenses are dealt with by justices of the peace and police tribunals. More serious offenses and civil lawsuits are brought before district courts of first instance. Other district courts are commerce and labor tribunals. Verdicts rendered by these courts may be appealed before five regional courts of appeal or the five regional labor courts in Antwerp, Brussels, Gent, Mons, and Liège. All offenses punishable by prison sentences of more than five years must be dealt with by the 11 courts of assize (one for each province and the city of Brussels), the only jury courts in Belgium. The highest courts are five civil and criminal courts of appeal and the supreme Court of Cassation. The latter's function is to verify that the law has been properly applied and interpreted. The constitutionality of legislation is the province of the Council of State, an advisory legal group.

When an error of procedure is found, the decision of the lower court is overruled and the case must be tried again. The death penalty was abolished for all crimes in Belgium in 1996.

A system of military tribunals, including appellate courts, handles both military and common-law offenses involving military personnel. The government is considering narrowing the jurisdiction of these courts to military offenses. All military tribunals consist of four officers and a civilian judge.

Detainees must be brought before a judge within 24 hours of arrest. Although there are provisions for bail, it is rarely granted. Defendants have right to be present, to have counsel, to confront witnesses, to present evidence, and to appeal.

## 17 ARMED FORCES

Belgium's active armed forces in 2005 numbered 36,900, with 18,650 reservists. In terms of personnel, the army is the largest, with 24,800 active members (4,200 reservists), followed by the air force with 6,350 active members (1,600 reservists), and the navy with 2,450 active personnel (1,200 reservists). Belgium also has an 1,800 active member medical service (850 reservists) and a Joint Service force of 1,500 active members (2,200 reservists). The army is equipped with 52 main battle tanks, 104 armored infantry fighting vehicles, 223 armored personnel carriers, and 132 artillery pieces (48 self-propelled). The air force operated 90 combat aircraft, in addition to 36 transports, two early warning/electronic intelligence aircraft, and 49 helicopters. The navy operates a pair of guided missile frigates in addition to one patrol vessel, and

six mine warfare/counter measures/hunter ships and nine logistics and support vessels. In 2005 Belgium spent \$3.35 billion on defense.

## 18 INTERNATIONAL COOPERATION

Belgium is a charter member of the UN, having joined on 27 December 1945, and participates in ECE and all the nonregional specialized agencies. Paul-Henri Spaak of Belgium served as the UN General Assembly's first president (1946–47); from 1957 to 1961, he also served as the secretary-general of NATO, of which Belgium is also a member. The country has been partnered with Luxembourg in the Belgium-Luxembourg Economic Union (BLEU) since 1922. In 1958, Belgium signed a treaty forming the Benelux (Belgium-Netherlands-Luxembourg) Economic Union, following a 10-year period in which a customs union of the three countries was in effect. Belgium is also a member of the Asian Development Bank, Council of Europe, the European Union, the European Investment Bank, the Paris Club (G-10), G-9, the Western European Union, and OECD. It is also a permanent observer of the OAS and a member of the OSCE (1973) and the WTO (1995).

Brussels, the seat of EU institutions, has become an important regional center for Western Europe. In 1967, the Supreme Headquarters Allied Powers Europe (SHAPE) was transferred from Rocquencourt, near Paris, to a site near Mons. On 16 October 1967, the NATO Council's headquarters were moved from Paris to Brussels. Belgium is a member of the Permanent Court of Arbitration.

Belgium is part of the Organization for the Prohibition of Chemical Weapons, Nuclear Suppliers Group (London Group), the Australia Group, the Nuclear Energy Agency, the European Space Agency, the Zangger Committee, and the European Organization for Nuclear Research. The country has offered support for UN efforts in Kosovo (est. 1999), India and Pakistan (est. 1949), Burundi (est. 2004), and the DROC (est. 1999).

In environmental cooperation, Belgium is part of the Antarctic Treaty, the Basel Convention, the Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the London Convention, the International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

In relation to its size and population, Belgium is among the most highly industrialized countries in Europe. Poor in natural resources, it imports raw materials in great quantity and processes them largely for export. Exports equal around 80% of GDP, and about three-quarters of Belgium's foreign trade is with other EU countries.

With the exception of Luxembourg and Ireland, Belgium is the most open economy in the EU as measured by the value of exports and imports relative to GDP, and one of the most open in the world. Belgium's economy is highly integrated with that of its three main neighbors—Germany, France, and the Netherlands.

For a century and a half, Belgium maintained its status as an industrial country, not only by virtue of its geographical position and transport facilities but also because of its ability for most of this period to shape production to meet the changing requirements of

world commerce. Since the 1950s, the Belgian parliament enacted economic expansion laws to enable long-established industries to modernize obsolete plant equipment. Belgium's highly developed transportation systems are closely linked with those of its neighbors. Its chief port, Antwerp, is one of the world's busiest. Belgium has a highly skilled and productive workforce, and the economy is diversified. By 2004, the service sector accounted for approximately 73% of GDP, followed by industry (25.7%) and agriculture (1.3%).

Real growth averaged 5.4% annually during 1967–73 but, like that of other OECD countries, slumped to 2.5% during 1973–80, and 0.7% during 1981–85. It averaged 2.6% during 1984–91 and was 2.3% in 1995. In 1993, Belgium's recession was the most severe in the EU after Germany's. By 1998, real growth stood at 2.8%. Real GDP growth in 2003 was 1.1% due to the global economic downturn existing in 2001–03. Growth picked up in 2004, to 2.7%, but was expected to slow to 1.3% in 2005, due to the impact of high oil prices on Belgium and its export markets. A slight recovery was forecast for 2006 (1.7%) and 2007 (2%). Average inflation was forecast at 2.7% in 2005, 2.5% in 2006, and 2.1% in 2007. The government will need to keep the budget from falling into deficit; budget surpluses will be needed until around 2030 to provide for the costs of an aging population. The 2006 budget was expected to be in balance for the seventh year in a row.

In 1993, when Belgium became a federal state with three distinct regions (Flanders, Wallonia, and Brussels), substantial economic powers were given to each region, such as jurisdiction over industrial development, research, trade promotion, and environmental regulation. Belgium has been seen as a "laboratory state," in that its federal system might stand as a precursor to a more unified EU based on regional divisions.

In 2004 Belgium had the fourth-highest standard of living in the world. However, being a highly taxed and indebted country, some businesses have stated Belgium stifles private enterprise.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Belgium's gross domestic product (GDP) was estimated at \$329.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$31,800. The annual growth rate of GDP was estimated at 1.5%. The average inflation rate in 2005 was 2.7%. It was estimated that agriculture accounted for 1% of GDP, industry 24%, and services 74.9% in 2004.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$3.933 billion or about \$378 per capita and accounted for approximately 1.3% of GDP.

The World Bank reports that in 2003 household consumption in Belgium totaled \$165.38 billion or about \$15,902 per capita based on a GDP of \$301.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.8%. In 2001 it was estimated that approximately 17% of household consumption was spent on

food, 8% on fuel, 3% on health care, and 1% on education. It was estimated that in 1989 about 4% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, the Belgian workforce was estimated at 4.77 million people. In 2003, it was estimated that the service industry employed 74.2% of workers, while 24.5% were employed in industry, and 1.3% in agriculture. The overall unemployment rate climbed to 12% in 1998, but fell to 7.2% by 2002. In 2005, unemployment had risen slightly to an estimated 7.6%.

The law provides workers with the right to associate freely and workers fully exercise their right to organize and join unions. Approximately 63% of the country's workforce (employed and unemployed) are union members. Workers have a broad right to strike except in "essential" industries including the military. A single collective bargaining agreement, negotiated every other year, covers about 2.4 million private sector workers. This gives unions considerable control over economic policy. In addition, unions also freely exercise the right to strike.

Belgium has a five-day, 38-hour workweek. Overtime pay is time-and-a-half on Mondays through Saturdays, with double-time paid on Sundays. Overtime is limited to 11 hours daily and up to 50 hours weekly. In addition, an 11-hour rest period is required between two work periods. Children under the age of 15 years are prohibited from working. Those between the ages of 15 and 18 may engage in part-time work-study programs, or work during school vacations. Child labor laws and standards are strictly enforced. In 2005, the national minimum wage was \$1,492 per month, in addition to extensive social benefits. This minimum wage provides a decent standard of living for workers and their families.

## 22 AGRICULTURE

Agriculture's role in the economy continues to decrease. In 2003, about 1.3% of the employed population worked on farms, compared with 3.7% in 1973. Agriculture's share in the GNP fell from 3.8% in 1973 to about 1.5% in 2002. Many marginal farms have disappeared; the remaining farms are small but intensively cultivated. Average farm size grew from 6.17 hectares (15.2 acres) in 1959 to 26.88 hectares (66.4 acres) in 2005, when there were 51,540 farms (down from 269,060 in 1959). About 80% of the country's food needs are covered domestically. The richest farm areas are in Flanders and Brabant. About 1.4 million hectares (3.4 million acres), or 45% of Belgium's total area, are under cultivation. Over half the land cultivated is used for pastureland or green fodder; one-quarter is used for the production of cereals. Total production of grains in 2004 was around 2.5 million tons, of which wheat accounted for about 65%; corn, 22%; barley, 10%; and spelt, triticale, oats, rye, and other grains, 8%.

Government price policy encourages increased production of wheat and barley with decreasing production of rye and oats. Increased emphasis is being placed on horticulture, and nearly all fruits found in temperate climates are grown in Belgium. Chief among these are apples, pears, and cherries. Producers of tomatoes and apples were obliged to refrain from marketing part of their 1992 harvests in order to hold up prices. Tomato production in 2004 totaled 250,000 tons, about 1% of European production.

Belgium imports considerable quantities of bread and feed grains, fodder concentrates, and fruits. Its only agricultural exports are processed foods and a few specialty items such as endive, chicory, flower bulbs, sugar, and chocolates. In 2004, agricultural products amounted to 8.6% of exports; there was an agricultural trade surplus of \$3.2 billion that year. Imports from other EU countries account for 85% of agricultural imports.

### 2<sup>3</sup> ANIMAL HUSBANDRY

Livestock raising is the most important single sector of Belgian agriculture, accounting for over 60% of agricultural production. In 2004 there were about 2.7 million head of cattle, 6.4 million hogs, 151,000 sheep, and 33,000 horses. Belgian farmers breed some of the finest draft horses in the world, including the famous Percherons.

The country is self-sufficient in butter, milk, meat, and eggs. Some cheese is imported, mainly from the Netherlands. Milk production amounted to 3.35 million tons in 2004.

### 2<sup>4</sup> FISHING

The chief fishing ports are Zeebrugge and Ostend (Oostende, Ostende), from which a fleet of 156 boats (with a combined 23,262 GRT) sail the North Atlantic from the North Sea to Iceland. The total catch in 2003 was 27,800 tons, whose exports were valued at \$762.4 million. Principal species caught that year were plaice, sole, turbot, and cod.

### 2<sup>5</sup> FORESTRY

Forests cover 21% of the area of Belgium. Commercial production of timber is limited; roundwood production in 2003 was estimated at 4.76 million cu m (168 million cu ft). Most common trees are beech and oak, but considerable plantings of conifers have been made in recent years. Belgium serves as a large transshipment center for temperate hardwood logs, softwood lumber, and softwood plywood. Large quantities of timber for the woodworking industry are typically imported from the Democratic Republic of the Congo. The total output of Belgium's wood processing and furniture industry in 2004 was €5.65 billion, with furniture accounting for 52%; wood panels, 22%; and construction, packing, and other wood products, 26%.

The total value of exports of forest products in 2003 was \$4.7 billion, with imports of \$3.9 billion. Belgium's wood processing industry consists of over 2,000 enterprises, 65% of which are furniture manufacturers, typically with fewer than five employees.

### 2<sup>6</sup> MINING

Belgium's only remaining active mining operations in 2003 were for the production of sand and gravel and the quarrying of some stone, including specialty marbles and the Belgian blue-gray limestone called "petit granite." An important producer of marble for more than 2,000 years, Belgium was recognized for the diversity and quality of its dimension stone. All the marble quarries are in Wallonia, and red, black, and gray are the principal color ranges of the marble. The country was an important producer of such industrial materials as carbonates, including limestone, dolomite, silica sand, whiting, and sodium sulfate.

The mineral-processing industry was a significant contributor to the Belgian economy. The refining of copper, zinc, and minor

metals, and the production of steel (all from imported materials), were the most developed mineral industries in Belgium. The country possessed Europe's largest electrolytic copper and zinc refineries, and one of the continent's largest lead refineries. In addition, Belgium retained its position as the world's diamond capital. Estimated production figures for 2003, in metric tons, included: secondary copper, 125,000 and primary zinc, 230,000. Hydraulic cement output in 2003 totaled 8 million tons, with lime and dead-burned dolomite at 1.7 million tons. Quarried Belgian bluestone, or petit granite, totaled 1.2 million cu m in 2003. Petite granite, which is actually a dark blue-gray crinoidal limestone, was one of the most important facing stones the country produces.

Belgium was once a major producer of coal, as the Belgian coal mining industry dates back to the 12th century. Coal was mined in the Sambre-Meuse Valley; the last mines closed in 1992. Metallic mining was in its heyday from 1850 to 1870, after which mining activity decreased until the last iron ore operations at Musson and Halanzy were closed in 1978. Belgium has no economically exploitable reserves of metal ores.

### 2<sup>7</sup> ENERGY AND POWER

In 1998 there were about 120 power stations operating in Belgium; capacity as of 2002 was 14.223 million kW. Electricity generated in that year totaled 76.516 billion kWh, of which 44.992 billion kWh was from nuclear sources and 29.535 kWh came from fossil fuels. In 1981, only 25% of the nation's power was from nuclear sources. By 2002, that figure had risen to 40%, or 5.738 million kW. Hydroelectric generation in 2002 totaled 0.356 billion kWh, while geothermal and other sources accounted for 1.633 kWh. Electricity consumption in the same year was 78.760 billion kWh. The principal sources of primary energy for conventional power production are low-grade coal and by-products of the oil industry. Belgium is heavily dependent on imports of crude oil, but it exports refined oil products. Power rates in Belgium are regulated through a voluntary agreement between labor, industry, and private power interests. In 2000, total energy consumption was 2.8 quadrillion Btu, of which 45% came from petroleum, 23% from natural gas, 12% from coal, 17% from nuclear energy, and the remainder from hydroelectric and other renewable sources.

### 2<sup>8</sup> INDUSTRY

Industry, highly developed in Belgium, is devoted mainly to the processing of imported raw materials into semifinished and finished products, most of which are then exported. Industry accounted for 24% of GDP in 2004. Steel production is the single most important sector of industry, with Belgium ranking high among world producers of iron and steel. However, it must import all its iron ore, which comes principally from Brazil, West Africa, and Venezuela. About four-fifths of Belgium's steel products and more than three-quarters of its crude steel output are exported. In recent years, Belgian industry has been hampered by high labor costs, aging plant facilities, and a shrinking market for its products. Nevertheless, industrial production rose by nearly 11% between 1987 and 1991, as a result of falling energy costs (after 1985) and financial costs, and only a moderate rise in wage costs. Industrial production continued to rise in the late 1990s; 1997 registered a 4% growth rate, while it slowed to 3.1% in 1998. The industrial growth rate in 2000 was 5.3%; it was -0.5% in 2001,

due to the global economic downturn, and rebounded to an estimated 3.5% in 2004.

Production of crude steel declined from 16.2 million tons in 1974 to 11.3 million tons in 1991, while the output of finished steel dropped from 12.2 million tons to 8.98 million tons. In 2004, Belgium's total crude steel production was 11.7 million metric tons. Belgium as a steel-producing country ranked 18th in the world in 2004, and was the 5th largest steel exporting country in the world. The industry employs some 19,500 people. By 1981, 60% of all Belgian steel production and 80% of all Wallonian steel (concentrated in Charleroi and Liège) came under the control of a single company, the government-owned Cockerill-Sambre. Government subsidies for this firm ended (in conformity with EC policy) in 1985. In 1998, French-owned Usinor agreed to take over Cockerill-Sambre, the last major steel making enterprise in Wallonia. As a result of this and other mergers, the Belgian steel industry is now dominated by one multinational company, Arcelor, based in Luxembourg. Arcelor, which was created in 2001, is the largest steel company in the world and is a merger of Usinor, Arbed, and Arcelia.

Belgium also produces significant amounts of crude copper, crude zinc, and crude lead. The bulk of metal manufactures consists of heavy machinery, structural steelwork, and industrial equipment. The railroad equipment industry supplies one of the most extensive railroad systems in Europe. An important shipbuilding industry is centered in Temse, south of Antwerp. Belgian engineering and construction firms have built steel plants, chemical works, power stations, port facilities, and office buildings throughout the world.

Belgium's automotive industry has always been one of the strongest components of its economy. Belgium is a world leader in the car assembly industry; with nearly 95% of its output designed for export, Belgium has the highest per capita production in the world. Belgium's local automotive production in 2003 was estimated at \$23.5 billion.

The textile industry, dating from the Middle Ages, produces cottons, woolens, linens, and synthetic fibers. With the exception of flax, all raw materials are imported. Centers of the textile industry are Bruges, Brussels, Verviers, Gent, Courtrai (Kortrijk), and Malines (Mechelen). Carpets are made in large quantities at Saint-Nicolas (Sint-Niklaas). Brussels and Bruges are noted for fine linen and lace. Foreign competition has cut into the Belgian textile industry, however. Following the expiration of the World Trade Organization's longstanding system of textile quotas at the beginning of 2005, the EU signed an agreement with China in June 2005 imposing new quotas on 10 categories of textile goods, limiting growth in those categories to between 8% and 12.5% a year. The agreement runs until 2007, and was designed to give European textile manufacturers time to adjust to a world of unfettered competition. Nevertheless, barely a month after the EU-China agreement was signed, China reached its quotas for sweaters, followed soon after by blouses, bras, T-shirts, and flax yarn. Tens of millions of garments piled up in warehouses and customs checkpoints, which affected both retailers and consumers.

The chemical industry manufactures a wide range of products, from heavy chemicals and explosives to pharmaceuticals and photographic supplies. The diamond-cutting industry in Antwerp supplies most of the United States's industrial diamond require-

ments. Eighty percent of all rough diamonds are handled in Antwerp, and 50% of all polished diamonds pass through Antwerp. The Antwerp World Diamond Center is concentrated in a two-square-mile area, comprising more than 1,500 diamond companies and four diamond bourses. Those working in the Belgian diamond industry are increasingly being pressured to refrain from buying "conflict diamonds" from Africa, whose proceeds have fueled civil wars in a number of African countries, including Sierra Leone, the Democratic Republic of the Congo, and Angola. Belgium has one of the largest glass industries in the world. Val St. Lambert is especially known for its fine crystal glassware. Belgian refineries (chiefly in Antwerp) turn out oil products.

## 29 SCIENCE AND TECHNOLOGY

The Royal Academy of Sciences, Letters, and Fine Arts, founded in Brussels in 1772, and since divided into French and Flemish counterparts, has sections for mathematics, physical sciences, and the natural sciences. There are, in addition, many specialized societies for the study of medicine, biology, zoology, anthropology, astronomy, chemistry, mathematics, geology, and engineering. The National Scientific Research Fund (inaugurated in 1928), in Brussels, promotes scientific research by providing subsidies and grants to scientists and students. The Royal Institute of Natural Sciences (founded in 1846), also in Brussels, provides general scientific services in the areas of biology, mineralogy, paleontology, and zoology. In 1987–97, science and engineering students accounted for 41% of college and university enrollment. In 2004 total research and development (R&D) expenditures provisionally amounted to €6.712 billion. As of 2001 (the latest year for which there is complete data) there were 1,462 technicians and 3,134 researchers per million people actively engaged in R&D. In that same year, 64.3% of R&D expenditures came from business, with 21.4% from the government, and 11.8% from foreign sources. In 2002, high technology exports totaled \$15.736 billion or 11% of manufactured exports.

Among the nation's distinguished scientific institutions are the Center for the Study of Nuclear Energy in Mol (founded in 1952); the National Botanical Garden of Belgium in Meise (founded in 1870); the Royal Observatory of Belgium in Brussels (founded in 1826); the Institute of Chemical Research in Tervuren (founded in 1928); the Royal Meteorological Institute in Brussels (reorganized in 1913); the Von Karman Institute for Fluid Dynamics in Rhode-St-Genese (founded in 1956) and supported by NATO; and the Institute of Spatial Aeronomy in Brussels (founded in 1964). Belgium has 18 universities and colleges offering degrees in basic and applied sciences.

## 30 DOMESTIC TRADE

Brussels is the main center for commerce and for the distribution of manufactured goods. Other important centers include Antwerp, Liège, and Ghent. Most large wholesale firms engage in import and export. Customary terms of sale are payment within 30–90 days after delivery, depending upon the commodity and the credit rating of the purchaser.

In 1994, the government began privatization efforts of several public sector corporations, including banks and airlines. The domestic market is relatively small. Instead, the economy relies heavily on trade as various industries have capitalized on the country's

prime central European location, which serves as a regional transit and distribution center. The country also serves as a vital test market for many European goods and franchises.

Business hours are mainly from 8 or 9 AM to 5 or 6 PM, Monday through Friday, with an hour for lunch. Banks are open from 9 AM to between 3:30 and 5 PM, Monday–Friday. Retail stores are generally open from 9 AM to 6 PM, Monday through Saturday; some may close for lunch. Larger stores and shopping centers stay open until 9 PM on Fridays. Important international trade fairs are held annually in Brussels and Ghent. Advertising techniques are well developed, and the chief media are the press, radio, and television.

### 31 FOREIGN TRADE

Foreign trade plays a greater role in the Belgian economy than in any other EU country except Luxembourg. Exports constituted around 80% of GDP in the early 2000s. Belgium's chief exports are iron and steel (semifinished and manufactured), chemicals, textiles, machinery, road vehicles and parts, nonferrous metals, diamonds, and foodstuffs. Its imports are general manufactures, foodstuffs, diamonds, metals and metal ores, petroleum and petroleum products, chemicals, clothing, machinery, electrical equipment, and motor vehicles. In 1921, Belgium partnered with Luxembourg in the Belgium-Luxembourg Economic Union (BLEU).

In 2004, 77.4% of Belgium's exports and 74% of its imports were traded with EU countries. Belgium's leading markets in 2004 were Germany (17.5% of total exports), France (17.4%), the Netherlands (12.9%), the United Kingdom (8.6%), and Italy (5.4%). Belgium's leading suppliers in 2004 were the Netherlands (19.9% of all imports), Germany (16.6%), France (13.7%), the United Kingdom (7.8%), and the United States (5.6%).

### 32 BALANCE OF PAYMENTS

Belgium ran deficits on current accounts each year from 1976 through 1984. Trade deficits, incurred consistently in the late 1970s and early 1980s, were only partly counterbalanced by invisible exports, such as tourism and services, and capital transfers. Belgium in the early 2000s had a high current account surplus—\$14.3 billion in 2003, and averaging 4.2% of GDP from 2000–04. The current account surplus in 2004 was estimated at \$11.4 billion.

Belgium in the early 2000s was attempting to meet the EU's Maastricht target of a cumulative public debt of not more than 60% of GDP. However, the public debt only fell below 100% of GDP at the end of 2003, for the first time in nearly 30 years. Public debt stood at 96.2% of GDP in 2004.

The total value of exports in 2003 was estimated at \$189.2 billion. Imports were estimated at \$173 billion, for a trade surplus of \$16.2 billion.

### 33 BANKING AND SECURITIES

The National Bank of Belgium (Banque Nationale de Belgique-BNB, founded in 1850), the sole bank of issue, originally was a joint-stock institution. The Belgian government took over 50% of its shares in 1948. Its directors are appointed by the government, but the bank retains a large degree of autonomy. In Belgium, most regulatory powers are vested in the Banking Commission, an autonomous administrative body that monitors compliance of

all banks with national banking laws. In order to restrain inflation and maintain monetary stability, the BNB varied its official discount rate from 2.75% in 1953 to a peak of 8.75% in December 1974; by 1978, the rate was reduced to 6%, but it rose steadily to a high of 15% in 1981 before declining to 11.5% at the end of 1982 and 9.75% by December 1985. By 1993 the discount rate was 5.25%. At the time of its abolition on December 15, 1998, the discount rate was 2.75%.

By law, the name “bank” in Belgium may be used only by institutions engaged mainly in deposit bank activities and short-term operations. Commercial banks are not authorized to invest long-term capital in industrial or business enterprises. The largest commercial bank, the General Banking Society, came into being in 1965 through a merger of three large banks. The National Society for Industrial Credit provides medium-term loans to in-

dustrial firms and exporters. Other institutions supply credit to small business and to farmers. The leading savings institute is the General Savings and Retirement Fund, which operates mainly through post office branches. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$63.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$241.7 billion.

The Bourse in Belgium is a very old institution. As early as the 13th century, merchants from the main commercial centers, particularly Genoa and Venice, used to gather in front of the house of the Van der Bourse family in Brugge, which was then the prosperous trading center of the low countries. The word “Bourse” is often considered to have originated in Brugge.

The Brussels Stock Exchange was founded in 1801 after Napoleon, then Consul of the Republic, issued a decree of the 13th Messidor in the 9th Year that “There shall be an exchange in Brussels, in the Department of the Dyle.” The law of 30 December 1867, completely abolished the provisions then in force controlling the profession of broker, the organization of the exchanges and the operations transacted there. After the crisis of 1929 through 1933, a commission was created to assure investors of greater security. The Commercial Code of 1935 still controls the organization of the stock exchange in large measure. Since the law of 4 December 1990, the Société de la Bourse de valeurs mobilières de Bruxelles (SBVMB) is organized under the form of a cooperative society. There is also an exchange in Antwerp. Market capitalization as of December 2004 stood at \$818.520 billion, with the local BEL 20 Index up 30.7% from the previous year at 2,932.6.

The exchanges deal in national, provincial, and municipal government bonds, government lottery bonds, and company shares. The issuance of shares and bonds to the public is subject to the control of the Banking Commission in Brussels. There are also a number of special industrial exchanges; the most prominent one is the Diamond Exchange in Antwerp.

### 34 INSURANCE

Insurance transactions are regulated by the Insurance Control Office of the Ministry of Economic Affairs. Compulsory classes of insurance in Belgium are workers’ compensation, automobile liability, and inland marine liabilities. Life and disability insurance needs are to a large extent met by Belgium’s extensive social security system. Compulsory insurance includes third-party automobile liability, workers’ compensation, “no fault” liability for property owners with free access to property, hunter’s liability, and nuclear liability for power facilities.

In 1996 and 1997, a general pattern of mergers and acquisitions among European union insurers formed, as companies sought to strategically take advantage of the single market in insurance, which became effective in July 1994. Many insurance companies throughout the European Union (EU) are considered too small to operate effectively on an international scale, to meet the challenge of *bancassurance*, or to invest sufficiently in the new technology needed to survive in the increasingly competitive industry. In 2003, the value of direct premiums written totaled \$33.814 billion, of which \$21.004 billion was accounted for by life insurance premiums. The country’s top life insurer that year was ETHIAS Life,

with gross life premiums written of \$3,458.8 million. The top non-life insurer was Axa Belgium, with gross written nonlife premiums (including healthcare) of \$1,265.1 million in 2003.

### 35 PUBLIC FINANCE

The government’s budgetary year coincides with the calendar year. In the final months of the year, the minister of finance places before Parliament a budget containing estimated revenues and expenditures for the following year, and a finance law authorizing the collection of taxes is passed before 1 January. Inasmuch as expenditure budgets generally are not all passed by then, “provisional twelfths” enable the government to meet expenditures month by month, until all expenditure budgets are passed. Current expenditures, supposedly covered by the usual revenues (including all tax and other government receipts), relate to the normal functioning of government services and to pension and public debt charges. Capital expenditures consist mainly of public projects and are normally covered by borrowings. Improvements in fiscal and external balances in the early 1990s and a slowdown in external debt growth enables the Belgian government to easily obtain loans on the local credit market. As a member of the G-10 group of leading financial nations, Belgium actively participates in the IMF, World Bank, and the Paris Club. Belgium is a leading donor nation, and it closely follows development and debt issues, particularly with respect to the DROC and other African nations.

The US Central Intelligence Agency (CIA) estimated that in 2005 Belgium’s central government took in revenues of approximately \$180.4 billion and had expenditures of \$180.5 billion. Revenues minus expenditures totaled approximately -\$100 million. Public debt in 2005 amounted to 93.6% of GDP. Total external debt was \$980.1 billion.

Government outlays by function were as follows: general public services, 37.8%; defense, 2.9%; public order and safety, 2.3%; economic affairs, 4.3%; environmental protection, 0.1%; health,

14.9%; recreation, culture, and religion, 0.2%; education, 2.7%; and social protection, 34.8%.

### 36 TAXATION

The most important direct tax is the income tax. Since enactment of the tax law of 20 November 1962, this tax has been levied on the total amount of each taxpayer's income from all sources. As of 2005, the top individual income tax rate is 50%, excluding local taxes. Local taxes are levied at rates varying from 4–10%. Taxes are not paid in one lump sum, but rather by a series of prepayments on the various sources of income. There is a withholding tax on salaries that is turned over directly to the revenue officer. Self-employed persons send a prepayment to the revenue officer during the first half of July. Banks and stockbrokers who offer dividends must first deduct a prepayment of 25%. Taxes on real estate are based on the assessed rental value.

The general corporate income tax, which is levied on all distributed profits, was lowered from 48% to 45% in 1982, to 43% in 1987, to 38% in 1993, and stands at 33% as of 2005. Nondistributed profits are taxed at progressive rates ranging from 28–41%. In some instances, local government bodies are entitled to impose additional levies. Numerous tax exemptions are granted to promote investments in Belgium.

In 1971, a value-added tax system was introduced, replacing sales and excise taxes. A general rate of 21% was applied as of 1996 to industrial goods, with a reduced rate of 6% applying to basic necessities and an interim rate of 12% to certain other products, such as social housing and agricultural products.

### 37 CUSTOMS AND DUTIES

Customs duties are levied at the time of importation and are generally ad valorem. Belgium applies the EU common external tariff (CET) to goods imported from non-EU countries. There is a single duty system (the CET) among all EU members for products coming from non-EU members. Theoretically, no customs duties apply for goods imported into Belgium from EU countries. Value-added taxes are levied on the importation of foodstuffs, tobacco, alcohol, beer, mineral water, and fuel oils. There are no export duties.

### 38 FOREIGN INVESTMENT

Foreign investment in Belgium generally takes the form of establishing subsidiaries of foreign firms in the country. Belgium is the economic as well as the political center of Europe. The Belgian government actively promotes foreign investment. In recent years, the government has given special encouragement to industries that will create new skills and increase export earnings. The government grants equal treatment under the law, as well as special tax inducements and assistance, to foreign firms that establish enterprises in the country. There is no regulation prescribing the proportion of foreign to domestic capital that may be invested in an enterprise. The foreign investor can repatriate all capital profits and long-term credit is available. Local authorities sometimes offer special assistance and concessions to new foreign enterprises in their area. Since the start of EU's single market, most, but not all,

trade and investment rules have been implemented by Belgium in order to be in line with other EU member nations.

The corporation tax rate was reduced in 2003 to 33.99% (24.98% for small companies). Over time, the Belgian government intends to reduce the corporate tax rate to 30%. The standard rate of value-added tax (VAT) is 21%. Overall, Belgium has strong competitive advantages, such as an excellent transportation infrastructure, high-quality industrial sites, and a skilled and productive workforce.

As of 2005, some of Belgium's leading sectors for US foreign investment were automotive parts and service equipment, biotechnology, computer services and software, consumer goods, electric power systems and services, environmental technologies, plastic materials and resins, telecommunication services and equipment, textile fabrics, and travel and tourism services.

Between 2001 and 2005, Belgium was expected to attract an annual average of \$30.2 billion in foreign direct investment. With 3.4% of total world FDI, Belgium ranks seventh. Countries with large investments in Belgium include the United States, Germany, United Kingdom, Netherlands, France, and Switzerland. In 2004, foreign direct investment outflows from the 25 EU countries fell by some 25%, while inflows coming from the rest of the world fell by more than 50%. These falls were strongly influenced by investment flows with the United States. With inflows higher than outflows by €4 billion, Belgium was the EU's largest net recipient of FDI from outside the EU. Belgium was the fourth highest recipient of FDI from within the EU in 2004, at €19 billion, behind the United Kingdom, Luxembourg, and France. In all, Belgium's intra-EU outflows totaled €16.6 billion, and intra-EU inflows totaled €18.9 billion. Extra-EU outflows totaled €4.4 billion, and extra-EU inflows totaled €8.8 billion. Belgian investment abroad is substantial in the fields of transport (particularly in Latin American countries), nonferrous metals, metalworking, and photographic materials.

Belgium has well-developed capital markets to accommodate foreign finance and portfolio investment. More than half its banking activities involve foreign countries. The world's first stock market was opened in Antwerp in the 14th century. At the end of 2000, the Brussels Stock Market merged with the Paris and Amsterdam bourses (and later Lisbon) to form the Euronext stock exchange. Euronext forms the largest (in volume) multinational stock and derivatives exchange in Europe. In 1996, the European Association of Securities Dealers Automated Quotation (EASDAQ) Exchange opened in Belgium, modeled on the NASDAQ electronic exchange, dedicated to young dynamic "dot.com" start-ups. In April 2001, NASDAQ bought majority ownership and renamed it NASDAQ-Europe.

### 39 ECONOMIC DEVELOPMENT

Belgian economic policy is based upon the encouragement of private enterprise, with very little government intervention in the economy. Also, as a country heavily dependent upon foreign trade, Belgium has traditionally favored the freest exchange of goods, without tariffs or other limitations. Restrictions on free enterprise and free trade have always been due to external pressure and abnormal circumstances, as in time of war or economic decline.

To meet increased competition in world markets and to furnish relief for areas of the country suffering from chronic unemploy-

ment, the government has taken measures to promote the modernization of plants and the creation of new industries. Organizations have been established to provide financial aid and advice, marketing and scientific research, studies on methods of increasing productivity, and nuclear research for economic utilization. Government policy aims at helping industry to hold costs down and to engage in greater production of finished (rather than semi-finished) goods. Results have been mixed, with greater success in chemicals and light manufacturing than in the critical iron and steel industry.

In 1993, the government modified its policy of forbidding more than 49% private ownership in government banks, insurance companies, and the national telecommunications company. In 2000, the government enacted tax reform, reducing corporate, trade, and income taxes. The tax cuts planned through 2006, although improving work and investment incentives, will have to be countered by reduced government spending to compensate for the lost revenue. The telecommunications sector has been liberalized, as have the gas and energy markets.

Belgium successfully attained a budget deficit of less than 3% by the end of 1997, as stipulated by the EU. Due to a strict control of spending, the government has managed to balance the budget in recent years; the 2006 budget foresees balance for the seventh year in a row, but is based on optimistic growth and revenue assumptions. A main economic policy priority has for many years been the reduction of the large public debt, which fell below 100% of GDP at the end of 2003, for the first time in nearly 30 years. With Belgium's employment rate one of the lowest in the EU, the government has created a target of increasing employment by 200,000 by 2007.

#### 40 SOCIAL DEVELOPMENT

Belgium has a social insurance system covering all workers dating back to 1900 for old age and 1944 for disability. The current law was last updated in 2001, and the age to receive full retirement benefits will be increasing to age 65 by 2009. The law provides for disability and survivorship benefits as well. Sickness and maternity benefits were originally established in 1894 with mutual benefits societies. There is work accident and occupational disease coverage for all employed persons. Family allowances cover all workers, with special systems for civil servants and the self-employed.

The Belgian government has taken an active stance to protect and promote the rights of women and children. Domestic violence is a problem and in 2004 the government initiated a national plan to increase awareness. Belgium's equal opportunity law includes a sexual harassment provision, giving women a stronger legal basis for complaints. Child protection laws are comprehensive, and governmental programs for child welfare are amply funded. The government also attempts to integrate women at all levels of decision-making and women play an important role in both the public and private sectors.

Legislation prohibits discrimination based on race, ethnicity or nationality, and penalizes incitement of hate and discrimination. The constitution provides for the freedom of religion. Although minority rights are well protected in Belgium, extreme-right political parties with xenophobic beliefs have gained ground in recent years. In 2004, there were several attacks on Jews and Muslims.

#### 41 HEALTH

Every city or town in Belgium has a public assistance committee (elected by the city or town council), which is in charge of health and hospital services in its community. These committees organize clinics and visiting nurse services, run public hospitals, and pay for relief patients in private hospitals. There is a national health insurance plan, membership of which covers practically the whole population. A number of private hospitals are run by local communities or mutual aid societies attached to religious organizations. A school health program includes annual medical examinations for all school children. Private and public mental institutions include observation centers, asylums, and colonies where mental patients live in groups and enjoy a limited amount of liberty.

A number of health organizations, begun by private initiative and run under their own charters, now enjoy semiofficial status and receive government subsidies. Among them are the Belgian Red Cross, the National Tuberculosis Society, the League for Mental Hygiene, and the National Children's Fund. The last of these, working through its own facilities and through cooperating agencies, provides prenatal and postnatal consultation clinics for mothers, a visiting nurse service, and other health services. Health expenditures were estimated at 8.8% of total GDP.

Roughly 60% of Belgium's hospitals are privately operated, non-profit institutions. As of 2004, there were an estimated 418 physicians, 1074 nurses, 70 dentists, and 145 pharmacists per 100,000 people. Nearly 100% of the Belgium population has access to health services. In 1999, the country immunized one-year-old children as follows: diphtheria, pertussis, and tetanus, 96%, and measles, 83%. The infant mortality rate in 2005 was 5 per 1,000 live births, one of the lowest in the world. Average life expectancy for that year was 79 years. The HIV/AIDS prevalence was 0.20 per 100 adults in 2003. As of 2004, there were approximately 10,000 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

#### 42 HOUSING

Belgium no longer has a housing shortage. In the mid-1970s, an average of over 60,000 new dwellings were built every year; by the early 1980s, however, the government sought by reducing the value-added tax on residential construction to revitalize the depressed housing market. Public funds have been made available in increasing amounts to support the construction of low-cost housing, with low-interest mortgages granted by the General Savings and Retirement Fund.

The 2001 census reports a total of 4,248,502 private, occupied dwellings in the country. About 82% of the population live in single-family homes. About 14% are apartment dwellers. The average household size is 2.4 persons. About 68% of all units are occupied by owners or crowners.

#### 43 EDUCATION

Education is free and compulsory for children between the ages of 6 and 18. Belgium has two complete school systems operating side by side. One is organized by the state or by local authorities and is known as the official school system. The other, the private school system, is largely Roman Catholic. For a long time, the rivalry between the public and private systems and the question of subsidies

to private schools were the main issues in Belgian politics. The controversy was settled in 1958, and both systems are presently financed with government funds along more or less identical lines.

Within the public system, there are also some variations in programming between the French community and the Flemish community. In both, the primary (elementary) school covers six years of study. In the French system, secondary school is divided into three levels, with each level lasting two years. Following this course of study, a student may choose to continue in a one-year program for professional development, technical training, or preparation for university studies. There are also programs for artistic development. In the Flemish system, secondary students may choose between four educational tracks: general, technical, artistic, or vocational. Each track covers a six-year course of study. Most children between the ages of three and five attend some type of preschool program. The academic year runs from September to July.

Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 97% of age-eligible students. The student-to-teacher ratio for primary school was at about 12:1 in 2003.

Higher education centers on the eight main universities: the state universities of Ghent, Liège, Antwerp, and Mons; the two branches of the Free University of Brussels, which in 1970 became separate private institutions, one Dutch (Vrije Universiteit Brussel) and the other French (Université Libre de Bruxelles); the Catholic University of Brussels; and the Catholic University of Louvain, which also split in 1970 into the Katholieke Universiteit Leuven (Dutch) and the Université Catholique de Louvain (French). Total enrollment in tertiary education programs for 2001 was at about 367,000. In 2003, about 61% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate is estimated at about 98%.

As of 2003, public expenditure on education was estimated at 6.3% of GDP.

#### 44 LIBRARIES AND MUSEUMS

There are large libraries, general and specialized, in the principal cities. Brussels has the kingdom's main reference collections, including the Royal Library (founded in 1837), with about four million volumes, as well as the Library of Parliament (1835) with 600,000 volumes, the Library of the Royal Institute of Natural Sciences (681,000 volumes), and the General Archives of the Kingdom, founded in 1794, with 350,000 documents from the 11th to the 20th centuries. Antwerp is the seat of the Archives and the Museum of Flemish Culture, which has an open library of 55,000 volumes. The university libraries of Louvain (1.2 million volumes), Gent (three million volumes), and Liège (1.7 million volumes) date back to 1425, 1797, and 1817, respectively. The library of the Free University of Brussels (1846) has 1.8 million volumes. Also in Brussels is the library of Commission of the European Communities. In addition, there are several hundred private, special, and business libraries, especially in Antwerp and Brussels, including Antwerp's International Peace Information Service (1981) with 25,000 volumes related to disarmament, and the library of the Center for American Studies in Brussels, with 30,000 volumes dealing with American civilization.

Belgium's 200 or more museums, many of them with art and historical treasures dating back to the Middle Ages and earlier,

are found in cities and towns throughout the country. Among Antwerp's outstanding institutions are the Open-Air Museum of Sculpture in Middelheim Park, displaying works by Rodin, Maillo, Marini, Moore, and others; the Rubens House, containing 17th-century furnishings and paintings by Peter Paul Rubens; and the Folk Art Museum (1907) featuring popular music and crafts unique to Flemish Culture and mythology. Brussels' museums include the Royal Museum of Fine Arts (founded 1795), which has medieval, Renaissance, and modern collections; Royal Museum of Central Africa (1897), which has rich collections of African arts and crafts, natural history, ethnography, and prehistory; the Royal Museum of Art and History (1835), with its special collections of Chinese porcelain and furniture, Flemish tapestries, and of 18th- and 19th-century applied and decorative art; and the Museum of Modern Art, featuring 20th-century paintings, sculptures, and drawings. Museums in Bruges, Liège, Gent, Malines, and Verviers have important general or local collections.

#### 45 MEDIA

International and domestic telegraph and telephone service, operated by a government agency, is well developed. In 2003, there were an estimated 489 mainline telephones for every 1,000 people. The same year, there were approximately 793 mobile phones in use for every 1,000 people.

National radio and television service is organized into Dutch and French branches. Commercial broadcasting is permitted, hence costs are defrayed through annual license fees on radio and television receivers. There are two national public stations, one broadcasting in French, the other in Dutch. In addition, there are at least two Dutch-language, one French-language, and one German language commercial stations. In 2003, there were an estimated 793 radios and 541 television sets for every 1,000 people. About 377.7 of every 1,000 people are cable subscribers. Also in 2003, there were 318.1 personal computers for every 1,000 people and 386 of every 1,000 people had access to the Internet. There were 946 secure Internet servers in the country in 2004.

The Belgian press has full freedom of expression as guaranteed by the constitution of 1831. There are some restrictions on the press regarding slander, libel, and the advocating of racial or ethnic hate, violence, or discrimination. Newspapers are published in French and Dutch, and generally reflect the views of one of the major parties. Agence Belga is the official news agency.

The major daily newspapers published in French, with their 2002 circulations and political affiliation, include *Le Soir* (Independent), 178,500; *La Lanterne* (Socialist), 129,800; *La Libre Belgique* (Catholic-Independent), 80,000; and *La Nouvelle Gazette* (Liberal), 94,600. Dutch language papers include *De Standaard* (Flemish-Catholic), 372,000; *De Gazet van Antwerpen* (Christian Democrat), 148,000; and *Het Volk/Nieuwe Gids* (Catholic-Labor), 143,300. The Flemish language paper *Het Laatste Nieuws* (Independent) had a 2002 daily circulation of 308,808. About 500 weeklies appear in Belgium, most of them in French or Dutch and a few in German or English. Their overall weekly circulation is estimated to exceed 6.5 million copies.

#### 46 ORGANIZATIONS

Among Belgium's numerous learned societies are the Royal Academy of Sciences, Letters, and Fine Arts and the Royal Academy

of Medicine; in addition, there are the Royal Academy of French Language and Literature and the Royal Academy of Dutch Language and Literature. There is a cultural council for each of the three official languages. Architects, painters, and sculptors are organized in the Association of Professional Artists of Belgium.

Business and industry are organized in the Belgium Business Federation (1885), the Chambers of Commerce, and the American Chamber of Commerce in Brussels, as well as on the basis of industrial sectors and in local bodies. Among the latter, the Flemish and Walloon economic councils and the nine provincial economic councils are the most important. The ACP Business Forum, the Association of European Chambers of Commerce and Industry, and the International Confederation of Free Trade Unions meet in Brussels. There are a vast number of national professional, trade, and industry associations for a wide variety of occupations and professions.

The many sports societies include the Royal Belgian Athletic League, the Jockey Club Royal de Belgique, and soccer, cycling, archery, homing pigeon, tennis, hunting, boating, camping, and riding clubs. Youth organizations include four branches of the World Organization of Scouting and an organization of Girl Guides.

Veterans' and disabled veterans' associations, voluntary associations to combat the major diseases, and philanthropic societies are all active in Belgium.

There are active chapters of the Red Cross, UNICEF, CARE International, Greenpeace, Caritas, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Belgium has three major tourist regions: the seacoast, the old Flemish cities, and the Ardennes Forest in the southeast. Ostend is the largest North Sea resort; others are Blankenberge and Knokke. Among Flemish cities, Brugge, Gent, and Ypres stand out, while Antwerp also has many sightseeing attractions, including the busy port, exhibitions of the diamond industry, and the Antwerp Zoo, an oasis of green in the city center. Brussels, home of the European Community headquarters, is a modern city whose most famous landmark is the Grand Place. The capital is the site of the Palais des Beaux-Arts, with its varied concert and dance programs, and of the Théâtre Royal de la Monnaie, home of the internationally famous Ballet of the 20th Century. St. Michael's Cathedral and Notre Dame du Sablon are the city's best-known churches. The Erasmus House in the suburb of Anderlecht and the Royal Palace and Gardens at nearby Laeken are popular tourist centers. Louvain possesses an architecturally splendid city hall and a renowned university. Malines, seat of the Belgian primate, has a handsome cathedral. Liège, in the eastern industrial heartland, boasts one of the finest Renaissance buildings, the palace of its prince-bishops. Tournai is famous for its Romanesque cathedral. Spa, in the Ardennes, is one of Europe's oldest resorts and gave its name to mineral spring resorts in general. Namur, Dinant, and Huy have impressive fortresses overlooking one of the most important strategic crossroads in Western Europe, the Meuse Valley.

All travelers are required to have a valid passport; visas are issued for stays of up to 30 days. No visa is required for citizens of the United States or Canada.

There were 5.2 million visitor arrivals in 2003, when receipts from tourism amounted to \$8.7 billion. In that year, Belgium had 63,220 hotel rooms and 16,368 beds.

In 2005, the US Department of State estimated the daily cost of staying in Belgium at between \$161 and \$320.

#### 48 FAMOUS BELGIANS

Belgium has produced many famous figures in the arts. In the 15th century, one of the great periods of European painting culminated in the work of Jan van Eyck (1390?-1441) and Hans Memling (1430?-94). They were followed by Hugo van der Goes (1440?-82), and Pieter Brueghel the Elder (1525?-69), the ancestor of a long line of painters. Generally considered the greatest of Flemish painters are Peter Paul Rubens (1577-1640) and Anthony Van Dyck (1599-1641). In the 19th century, Henri Evenepoel (1872-99) continued this tradition. The 20th century boasts such names as James Ensor (1860-1949), Paul Delvaux (1897-1994), and René Magritte (1898-1967). Modern Belgian architecture was represented by Victor Horta (1861-1947) and Henry van de Velde (1863-1957).

Belgium made substantial contributions to the development of music through the works of such outstanding 15th- and 16th-century composers as Johannes Ockeghem (1430?-95), Josquin des Prés (1450?-1521), Heinrich Isaac (1450?-1517), Adrian Willaert (1480?-1562), Nicolas Gombert (1490?-1556), Cipriano de Rore (1516-65), Philippe de Monte (1521-1603), and Roland de Lassus (known originally as Roland de Latre and later called Orlando di Lasso, 1532-94), the "Prince of Music." Later Belgian composers of renown include François-Joseph Gossec (1734-1829), Peter Van Maldere (1729-68), André Ernest Modeste Grétry (1741-1813), César Franck (1822-90), and Joseph Jongen (1873-1953). Among famous interpreters are the violinists Eugène Ysaye (1858-1931) and Arthur Grumiaux (1921-86). André Cluytens (1905-67) was the conductor of the National Orchestra of Belgium. Maurice Béjart (Maurice Berger, b.1927), an internationally famous choreographer, was the director of the Ballet of the 20th Century from 1959 until 1999.

Outstanding Belgian names in French historical literature are Jean Froissart (1333?-1405?) and Philippe de Commines (1447?-1511?), whereas early Dutch literature boasts the mystical writing of Jan van Ruysbroeck (1293-1381). The 19th century was marked by such important writers as Charles de Coster (1827-79), Camille Lemonnier (1844-1913), Georges Eeckhoud (1854-1927), and Emile Verhaeren (1855-1916) in French; and by Hendrik Conscience (1812-83) and Guido Gezelle (1830-99) in Flemish. Among contemporary authors writing in French, Michel de Ghelderode (1898-1962), Suzanne Lilar (1901-1992), Georges Simeon (1903-1989), and Françoise Mallet-Joris (b.1930) have been translated into English. Translations of Belgian authors writing in Dutch include works by Johan Daisne (1912-78) and Hugo Claus (b.1929).

Eight Belgians have won the Nobel Prize in various fields. The poet and playwright Maurice Maeterlinck (1862-1949), whose symbolist dramas have been performed in many countries, received the prize for literature in 1911. Jules Bordet (1870-1961) received the physiology or medicine award in 1919 for his contributions to immunology. The same award went to Corneille J. F. Heymans (1892-1968) in 1938 and was shared by Albert Claude (1898-1983) and Christian de Duve (b.1917) in 1974. Russian-born Ilya Prigogine (1917-2003) won the chemistry prize in 1977. Three Belgians have won the Nobel Peace Prize: Auguste Beern-

aert (1829–1912) in 1909, Henri Lafontaine (1854–1943) in 1913, and Father Dominique Pire (1910–69) in 1958.

Belgium's chief of state since 1951 had been King Baudouin I (1930–93), the son of Leopold III (1901–83), who reigned from 1934 until his abdication in 1951. Baudouin was succeeded by his younger brother Albert II (b.1934) in 1993.

#### 49 DEPENDENCIES

Belgium has no territories or colonies.

# BOSNIA AND HERZEGOVINA

Republic of Bosnia and Herzegovina  
*Republika Bosnia i Herzegovina*

**CAPITAL:** Sarajevo

**FLAG:** Introduced in early 1998, the flag consists of a yellow triangle on a royal blue field, with a row of white stars running diagonally along the triangle's edge. The yellow triangle represents the country's three main ethnic groups, while the royal blue field and stars symbolize a possible future inclusion in the Council of Europe.

**ANTHEM:** *Zemljo Tisućljetna (Thousand-Year-Old Land)*.

**MONETARY UNIT:** 1 convertible marka (KM) = 100 convertible pfenniga. KM1 = \$0.00699 (\$1 = KM143) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1–2 January; Labor Days, 1–2 May; 27 July; 25 November.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Bosnia and Herzegovina is located in southeastern Europe on the Balkan Peninsula, between Croatia and Serbia and Montenegro. Comparatively, Bosnia and Herzegovina is slightly smaller than the state of West Virginia, with a total area of 51,129 sq km (19,741 sq mi). Bosnia and Herzegovina shares boundaries with Croatia on the N, W, and S, Serbia and Montenegro on the E, and the Adriatic Sea on the S, with a total boundary length of 1,459 km (906 mi). Bosnia and Herzegovina's capital city, Sarajevo, is located near the center of the country.

## <sup>2</sup> TOPOGRAPHY

The topography of Bosnia and Herzegovina features hills, mountains, and valleys. Approximately 50% of the land is forested. The country has three main geographic zones: high plains and plateaus along the northern border with Croatia, low mountains in the center, and the higher Dinaric Alps which cover the rest of the country. Approximately 10% of the land in Bosnia and Herzegovina is arable. Bosnia and Herzegovina's natural resources include coal, iron, bauxite, manganese, timber, wood products, copper, chromium, lead, and zinc. Bosnia and Herzegovina is subject to frequent and destructive earthquakes.

## <sup>3</sup> CLIMATE

The climate features hot summers and cold winters. In higher elevations of the country, summers tend to be short and cold while winters tend to be long and severe. Along the coast, winters tend to be short and rainy. In July, the mean temperature is 22.5°C (72.5°F). January's mean temperature is 0°C (32°F). Annual rainfall averages roughly 62.5 cm (24.6 in).

## <sup>4</sup> FLORA AND FAUNA

The region's climate has given Bosnia and Herzegovina a wealth of diverse flora and fauna. Ferns, flowers, mosses, and common trees

populate the landscape. Beech forests are found throughout the mountains, with spruce found at some higher altitudes. Wild animals include deer, brown bears, rabbits, fox, and wild boars.

## <sup>5</sup> ENVIRONMENT

Metallurgical plants contribute to air pollution. Ongoing interethnic civil strife has seriously damaged the country's infrastructure and led to water shortages. Urban landfill sites are limited. As of 2000, about 44.4% of the total land area is forested. Deforestation was not a significant problem. In 2003, only 0.5% of the total land area was protected. Hutovo Blato is a Ramsar wetland site. The Sutjeska National Park in the south covers an area of about 17,500 hectares (43,250 acres).

As of 2002, there were at least 72 species of mammals and 205 species of birds. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 8 types of mammals, 8 species of birds, 1 type of reptile, 1 species of amphibian, 11 species of fish, 10 other invertebrates, and 1 species of plant. Endangered species include the slender-billed curlew, Danube salmon, and the field adder.

## <sup>6</sup> POPULATION

The population of Bosnia and Herzegovina in 2005 was estimated by the United Nations (UN) at 3,840,000, which placed it at number 125 in population among the 193 nations of the world. In 2005, approximately 12% of the population was over 65 years of age, with another 18% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–10 was expected to be 0.1%, a rate the government viewed as too low. The government is concerned about high numbers of working-age people leaving the country and problems with reproductive health care practices. (An estimated 30% of all pregnancies end in abor-

tion.) The projected population for the year 2025 was 3,677,000. The population density was 75 per sq km (195 per sq mi).

The UN estimated that 43% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.45%. The capital city, Sarajevo, had a population of 579,000 in that year.

Civil strife greatly reduced the population through war, genocide, and emigration. When the Dayton Peace Agreement was signed in 1996, there were an estimated two million Bosnian refugees and displaced persons. That year, there were an estimated 25,000 more deaths than births, creating a population decrease of 1%. By 2006 the population was no longer declining, but massive emigration continued to be a concern for the country's economic future.

## 7 MIGRATION

Many people living in Bosnia and Herzegovina fled the war that followed independence. In other countries, their numbers were lumped together with other refugees from "Yugoslavia" or "former Yugoslavia." As of 1999, more than 330,000 Bosnian refugees were still in need of a permanent home. An estimated 110,000 Bosnian refugees and 30,000 displaced people returned to their homes from outside and within Bosnia in 1998. Only some 41,000 minority returns occurred in 1998, and some 3,000 in 1999. In 2003, there were 330,000 internally displaced persons (IDP) within the country.

In 2005, the net migration rate was estimated as .3 migrants per 1,000 population. Worker remittances in 2003 totaled \$870 million. The government views the emigration level as unsatisfactory.

## 8 ETHNIC GROUPS

In 2002, about 48.3% of the people were Bosniak (Muslim) and 34% were Serbs. Croats made up about 15.4% of the populace.

## 9 LANGUAGES

Croatian, Serbian, and Bosnian are all spoken.

## 10 RELIGIONS

Throughout its history, ethnicity and religion have served as flash points for conflict and changes in government. Ethnic groups tend to be closely linked with distinct religious affiliations; however, the rate of active religious participation is considered to be low. The Bosniaks are generally Muslim. As such, nearly 40% of the population is Muslim. The Serbs are generally Serbian Orthodox, a faith practiced by about 31% of the population. Most of the Serbian Orthodox live in the Republika Srpska. The Croats are primarily Roman Catholic, a faith practiced by about 15% of the population. Protestants account for about 4% of the population. Missionary groups include Seventh-Day Adventists, Jehovah's Witnesses, Methodists, the Church of Jesus Christ of Latter-day Saints (Mormons), and Krishna Consciousness. There is a small Jewish community.

The constitution provides for freedom of religion and this right is generally respected in practice. In 2004, the state passed a Law on Religious Freedom which provides for greater freedom of religion and governs the legal licensing of religious groups.

## 11 TRANSPORTATION

Bosnia and Herzegovina's railway system, as of 2004, consisted of 1,021 km (634 mi) of standard gauge track, of which 795 km (494 mi) had been electrified. In 2002, there were 21,846 km (13,575 mi) of highways, of which 14,020 km (8,712 mi) were paved.

Ports include those at Bosanska Gradiska, Bosanski Brod, Bosanski Samac, and Brčko. All are inland waterway ports on the Sava. However, none are fully operational. Large sections of the Sava are blocked by downed bridges, silt and debris. There is no merchant marine.

In 2004 there were an estimated 27 airports. Of these in 2005, eight had paved runways and there were also five heliports. In 2003, about 73,000 passengers were carried on scheduled flights.

## 12 HISTORY

### Origins

Bosnia and Herzegovina occupies the area between historical Croatia-Slavonia to the north, Dalmatia to the south, and Serbia and Montenegro to the east/southeast. Populated in ancient times by Thracians, Illyrians, Celts, with Greek colonies since 400 BC, the area was taken over by the Romans around 168 BC. However, it took the Romans some one hundred and fifty years to gain control of the entire area, which they called Dalmatia Province. The most difficult aspect of their occupation was getting past the coastal cities to build roads to rich mining sites in the interior, which still maintained its native, Illyrian character in resistance to pressures to Romanize. Eventually, many Romanized Illyrians became important leaders in the Roman armies and administration and some even became emperors. The division of the Roman Empire into the western and eastern halves in AD 395 found Bosnia as the frontier land of the western half, since the dividing line ran south from Sirmium on the Sava river along the Drina River to Skadar Lake by the Adriatic coast.

Slavic tribes have been raiding and settling in the Balkan area in large numbers since the 5th century AD, moving in slowly from their original lands east of the Carpathian Mountains. These early Slavic settlers were joined in the 7th century AD by Croatian and Serbian tribes invited by Byzantine Emperor Heraclius to help him fight the Avars. The area of Bosnia and Herzegovina became the meeting ground of Croats (western area) and Serbs (eastern area). As medieval Bulgarians, Croats, and Serbs developed their first states, Bosnia became a battleground among them and the Byzantine Empire. Christianization of the area was completed by the 9th century, when most of the Bosnian area came under the influence of Rome and Croats became Catholic, while most Serbs fell under the influence of the Byzantine Empire and became Eastern Orthodox.

The Bosnian area between the 9th and 11th centuries was essentially under Croatian influence when not conquered by Bulgarians, Serbs, or Byzantium. After Hungary and Croatia effected their royal union in AD 1102, Hungary took over Bosnia and the Dalmatian cities in 1136. Bosnia was then ruled by Croatian "Bans" under joint Hungarian-Croatian sovereignty. When the soldiers supplied by Ban Borić (r.1150–1167) to the Hungarian Army were defeated by Byzantium in 1167 at Zemun, Bosnia came under Byzantine rule. Hungary renewed its claim to Bosnia in 1185, during Ban Kulin's reign (1180–1204), which was marked

by his independence from Hungary, partly due to the inaccessibility of its mountainous terrain.

Geography itself was an incentive to the local autonomy of Bosnia's individual regions of Podrina, Central Bosnia, Lower Bosnia, and Hum (today's Herzegovina). Each region had its own local hereditary nobility and customs, and was divided into districts (*Župas*). The typical Bosnian family of this period had possession of its land without dependence on a feudal relationship to prince or king, as was the case in much of Europe. Bosnia was nominally Catholic under the jurisdiction of the Archbishop of Dubrovnik, who would consecrate a Bishop of Bosnia, usually from local Bosnian priests. These Bosnian Catholics used a Slavic liturgy and a modified Cyrillic alphabet called "Bosaniča" and had no knowledge of Latin. The region of Hum, on the other hand, was settled by Serbs in the interior, was mixed Orthodox and Catholic in the coastal area and mostly ruled by princes of the Serbian dynasty (Nemanja) until 1326.

The Catholic Church in Bosnia was isolated from the coastal areas and had developed its own Slavic liturgy and practices. These customs were suspect to the Latin hierarchy in both Hungary and the coastal cities. Ignorance of the language and customs of simple people and poor communications generated rumors and accusations of heresy against the Bosnian Church and Ban Kulin, its supposed protector. Kulin called a Church Council in 1203 at Bolino Polje that declared its loyalty to the Pope and renounced errors in its practices. Reports of heresy in Bosnia persisted, possibly fanned by Hungary, and caused visits by Papal legates in the 1220s. By 1225 the Pope was calling on the Hungarians to launch a crusade against the Bosnia heretics. In 1233, the native Bishop of Bosnia was removed and a German Dominican appointed to replace him. In spite of Ban Ninoslav's (1233–1250) renunciation of the "heresy," the Hungarians undertook a crusade in 1235–41, accompanied by Dominicans who were already erecting a cathedral in Vrhbosna (today's Sarajevo) in 1238. The Hungarians used the crusade to take control of most of Bosnia, but had to retreat in 1241 because of the Tartars' attack on Hungary. This allowed the Bosnians to regain their independence and in 1248 the Pope sent a neutral team (a Franciscan and a Bishop from the coastal town of Senj) to investigate the situation but no report is extant.

The Hungarians insisted that the Bosnian Church, which they suspected of practicing dualist, Manichaean beliefs tied to the Bogomils of Bulgaria and the French Cathars, be subjected to the Archbishop of Kalocsa in Hungary, who it was thought would intervene to end these heretical practices. In 1252, the Pope obliged. However, no Bishop was sent to Bosnia itself—only to Djakovo in Slavonia—so this act had no impact on the Bosnian Church. The crusades against the Bosnian Church caused a deep animosity towards the Hungarians that in the long run weakened Bosnian's determination to resist the invasion of the Islamic Turks. Thus the Bosnian Church that professed to be loyal to Catholicism, even though it continued in its practice of ascetic and rather primitive rituals by its Catholic monastic order, was pushed into separation from Rome.

Around 1288, Stjepan Kotroman became Ban of the Northern Bosnia area. In his quest to consolidate all of Bosnia under his rule, though, he was challenged by the Šubić family of Croatia, who had taken over Western Bosnia. Paul I Šubić then expanded his family's area of control, becoming Ban of Bosnia and later, in 1305, Ban

of All Bosnia. However, the power of the Šubić family declined in subsequent years, and Kotroman's son Stjepan Kotromanić was able to take control of Central Bosnia by 1318, serving as a vassal of the Croatian Ban of Bosnia, Mladen Šubić. Kotromanić then allied himself with Charles Robert, King of Hungary, to defeat Mladen Šubić, helping Kotromanić to consolidate his control over Bosnia, the Neretva River Delta, and over Hum, which he took in 1326 but lost in 1350 to Dušan the Great of Serbia. In recognition of the role the Hungarians had played in his consolidation of power in Bosnia, Ban Kotromanić gave his daughter Elizabeth into marriage to King Louis of Hungary in 1353, the year of his death.

Raised in the Orthodox faith, Kotromanić was converted to Catholicism by Franciscan fathers, an order he had allowed into Bosnia in 1342. The Franciscans concentrated their efforts at conversion on the members of the Bosnian Church (or Bogomili) and, by 1385, had built some 35 monasteries, four in Bosnia itself. Since most Franciscans were Italian and did not know the Slavic language, their effectiveness was not as great as it could have been and it was concentrated in the towns where numerous non-Bosnians had settled to ply their trades. During this period silver and other mines were opened which were administered by the townspeople of Dubrovnik. This influx of commerce helped in the development of prosperous towns in key locations and customs duties from increased trade enriched Bosnian nobles. A whole new class of native craftsmen developed in towns where foreign colonies also prospered and interacted with the native population, thus raising Bosnia's overall cultural level.

Kotromanić's heir was his nephew Tvrtko (r.1353–91) who would become the greatest ruler of Bosnia. Tvrtko could not command the loyalty of the nobles at first, however, and he soon lost the western part of Hum (1357) to Hungary as the dowry promised to King Louis of Hungary when he married Elizabeth, Kotromanić's daughter. But by 1363, Tvrtko had grown powerful enough to repel Hungarian attacks into Northern Bosnia. In 1366 Tvrtko fled to the Hungarian Court, having been unable to repress a revolt by his own nobles, and with Hungarian help regained his lands in 1367. In 1373 he obtained the upper Drina and Lim Rivers region. In 1377 he was crowned King of Bosnia and Serbia (his grandmother was a Nemanja) at the Mileševo monastery where Saint Sava, the founder of the Serbian Orthodox Church, was buried. Between 1378 and 1385, Tvrtko also gained control of the coastal territory of Trebinje and Konavli near Dubrovnik, along with the port city of Kotor. In 1389, Tvrtko sent his troops to support the Serbian armies of Prince Lazar and Vuk Branković at the legendary Battle of Kosovo Polje. The battle itself was a draw but it exhausted the Serbs' capability to resist the further Turkish invasions. The Turks retreated, having suffered the death of Sultan Murad I, assassinated by a Serbian military leader, and Tvrtko's commander at Kosovo claimed victory. Having sent such a message to Italy, Tvrtko was hailed as a savior of Christendom. He had made a first step towards a possible unification of Bosnia and Serbian lands, but the Turks, and then his own death in 1391, made it impossible.

Bosnia did not disintegrate after Tvrtko's death, but was held together through a Council of the key nobles. The Council elected weak kings to maintain their own power and privileges. Tvrtko had no legitimate descendants so his cousin Dabiša (r.1391–95) was elected, followed by his widow Helen of Hum (r.1395–98), and

then Stjepan Ostoja (r.1398–1404), opposed by Tvrtko II (r.1404–09), probably Tvrtko I's illegitimate son. Between 1404 and 1443, Bosnia witnessed civil wars between factions of the nobles taking opposite sides in the Hungarian wars of succession. Thus Stjepan Ostoja was returned to the throne from 1409 to 1418, followed by Stjepan Ostojić (r.1418–21), then Tvrtko II again (r.1421–43). During this period the Turks participated in Bosnian affairs as paid mercenaries, through their own raids, and by taking sides in the struggles for the Bosnian throne. The Turks supported Tvrtko II, who managed to rule for over 20 years by recognizing the sovereignty of both the Hungarians and Turks, and playing one against the other. After the Turks' conquest of Serbia in 1439 made them direct neighbors of Bosnia along the Drina River, Turkish raids into Bosnia increased. The Ottomans assumed a key role in internal Bosnian affairs and became the mediator for Bosnian nobles' quarrels. The Bosnian nobles and their Council clung to their opposition to a centralized royal authority, even though it could have mounted a stronger defense against Hungarians and Turks. Thus Bosnia grew ever weaker with the skillful maneuvering of the Turks. Twenty years after Tvrtko II's death, in 1443, the Turks conquered an exhausted Bosnia with a surprise campaign.

Herzegovina (named after the ruler of Hum, Stefan Vukčić who called himself Herzeg/Duke) was occupied by the Turks gradually by 1482, and the two regions were subject to the Ottoman Empire for the next 400 years until the 1878 takeover by Austria.

#### Under Ottoman Rule

The mass conversion of Bosnian Christians to Islam, a rather unique phenomenon in European history, is explained by two schools of thought. The traditional view recognizes the existence of a strong Bogomil heresy of dualism and social protest. These Bosnian Christians, having been persecuted by both Catholic and Orthodox Churches and rulers, welcomed the Ottomans and easily converted in order to preserve their land holdings. In doing so, they became trusted Ottoman soldiers and administrators. The other school of thought denies the existence of a strong and influential Bogomil heresy, but defines the Bosnian Christian church as a nativistic, anti-Hungarian, loosely organized religion with a Catholic theological background and simple, peasant-based practices supported by its monastic order. The rulers/kings of Bosnia were Catholic (with the single exception of Ostoja) and very tolerant of the Orthodox and so-called Bosnian religions. However, these religious organizations had very few priests and monks, and therefore were not very strong. The Bosnian Church was practically eliminated in 1459 through conversions to official Catholicism, or the forced exile of its leadership. Thus, by the time of the Turkish conquest, the Bosnian Church had ceased to exist and the allure of privileged status under the Ottomans was too strong for many to resist.

Bosnia and Herzegovina was ruled by a Pasha or Vizier appointed by the Sultan and assisted by a Chancellor, supreme justice, and treasurer, each heading his own bureaucracy, both central and spread into eight districts (*Sandžaks*). Justice was administered by a *khadi* who was both prosecutor and judge using the Koran for legal guidance, thus favoring Muslim subjects. Catholics, who were outside the established Orthodox and Jewish communities represented by the Greek Orthodox Patriarch and Chief Rabbi in Constantinople, were particularly exposed to arbitrary persecu-

tions. In spite of all this, communities of followers of the Orthodox (Serbian) Church and Catholic (Croatian) Church survived into the late 19th century when in 1878 Austria obtained the authority to occupy Bosnia and Herzegovina, putting an end to four centuries of Ottoman rule. The Ottomans introduced in Bosnia and Herzegovina their administration, property concepts, and customs. The adherents to Islam were the ruling class, regardless of their national or ethnic backgrounds. Christian peasants practically became serfs to Muslim landlords while in the towns civil and military administrators had control over an increasingly Muslim population. Large numbers of Bosnians fled the Turkish takeover and settled in Venetian-occupied coastal areas where many continued the fight against the Turks as "Uskoki" raiders. Others emigrated north or west into Slavonia and Croatia and were organized as lifetime soldiers along military regions (*Krajina*) in exchange for freemen status, land, and other privileges. On the Bosnian side, Christians were not required to enter military service, but the so-called "blood tax" took a heavy toll by turning boys forcibly into Muslim Janissaries—professional soldiers converted to Islam who would generally forget their origins and become oppressors of the Sultan's subjects. Girls were sent to harems. Taxation became more and more oppressive, leading to revolts by the Christian peasantry that elicited bloody repressions.

#### Under Austro-Hungarian Rule

Historically both Croats and Serbs have competed for control over Bosnia. The Croats, who had included Bosnia in their medieval kingdom, could not effectively continue their rule once joined with the more powerful Hungarians in their royal union. The Serbs, on the other hand, were assisted by Hungary in their expansion at the expense of the Byzantine Empire. Later, they also received Hungarian support in their resistance to Turkish inroads and therefore could not invest their energies in Bosnia, in their view a "Hungarian" territory. Thus Bosnia was able to assert its own autonomy and individuality, but did not evolve into a separate nation. With the Austrian occupation, however, a new period began marked by a search for a Bosnian identity, supported by Austria who had an interest in countering the national unification ambitions of both Croats and Serbs.

The population of Bosnia and Herzegovina was divided into three major religious-ethnic groups: Croatian Catholics, Serbian Orthodox, and Bosnian Muslims. With the disappearance of the Bosnian Church just before the Ottoman occupation in 1463, most Bosnians were Croatian and Catholic, with a Serbian Orthodox population concentrated in Eastern Herzegovina and along the Drina River frontier with Serbia. The Serbs were mostly peasants, many of whom became serfs to Muslim landlords. Their priests, who were generally poorly educated, lived as peasants among them. Serbian urban dwellers, insignificant in number at first, grew to be an important factor by the late Ottoman period and developed their own churches and schools in the 19th century. Crafts and commerce were the main occupations of the new Serbian middle class.

Croats were also mostly peasants and, like the Serbs, became serfs to Muslim landlords. Members of the Franciscan order lived among the peasants, even though they also had built several monasteries in urban centers. There was almost no Croat middle class

LOCATION: 44°17' N; 17°30' E. BOUNDARY LENGTHS: Total land boundary lengths, 1,459 kilometers (905 miles); Croatia, 932 kilometers (578 miles); Yugoslavia, 527 kilometers (327 miles); total coastline, 20 kilometers (12 miles).

at the start of the Austrian period and the Catholic clergy was generally its advocate.

The Muslim group consisted of three social subgroups: the elites, the peasants, and urban lower classes. Most Muslims were peasants, but they were free peasants with a standard of living not better than that of the Christian serf-peasants. The Muslim hodžas (priests) lived among the peasants as peasants themselves. The second subgroup consisted of merchants, craftsmen, and ar-

tisans and were mostly concentrated in towns. Together with the urban lower classes, these two groups made up the Muslim majorities in most towns by 1878. The members of the Muslim elites were mostly religious functionaries, landowners, and commercial entrepreneurs, all favored by Islamic laws and traditions. Following the 1878 occupation, Austria recognized the right of Turkish functionaries to keep their posts, the right of Muslims to be in communication with their religious leaders in the Ottoman Em-

pire, the right of Turkish currency to circulate in Bosnia, and also promised to respect all traditions and customs of the Bosnian Muslims. The Austrian approach to the administration of Bosnia and Herzegovina was close to the British colonial model that retained the existing elites and cultural individuality while gradually introducing Western administrative and education models.

Bosnia and Herzegovina was divided by the Turks into six administrative regions that were confirmed by Austria: Sarajevo, Travnik, Bihać, Donja Tuzla, Banja Luka, and Mostar (Herzegovina). Each was headed by a regional supervisor. Participation in cultural and religious organizations was encouraged, while engaging in politics was prohibited. The Austrians promoted a policy of equality between Christians and Muslims, banned organizations of an open political purpose, and prohibited the use of national names (Serb and Croat) for public institutions. At the same time, educational institutions designed to promote loyalty to Bosnia (and Austria) as such were encouraged. Censorship and other means were used to insulate Bosnians from the influence of their Croatian and Serbian co-nationals across the borders. By terminating the earlier Muslim secular/religious unity, many administrative and judicial functions were no longer carried out by the Muslim elites, but were instead presided over by the Austrian bureaucracy and judiciary, though a separate Muslim judiciary was continued. The Muslim landowners lost some privileges but were able to retain their land and the system of serfdom was allowed to continue.

A widespread and important institution supporting Muslim cultural life was the Vakif (Vakuf in Serbian/Croatian). The Vakuf was a revenue-producing property set up and administered as a family foundation for the support of specified causes. Once set up, a Vakuf could not be sold, bequeathed, or divided and was exempt from normal taxes. In 1878 it was estimated that one-fourth to one-third of usable land in Bosnia was tied to Vakufs. The administration of Vakufs was lax and open to much manipulation and abuse. The Austrian administration was able to establish effective controls over the Vakuf system by 1894 through a centralized commission and the involvement of prominent Muslims in the administration of Vakuf revenues in support of Islamic institutions.

The continuation of serfdom by the Austrian authorities was a deep disappointment for the peasants that were eagerly expecting emancipation. Abuses led to peasant revolts until the Austrians introduced cash payments of the tithe (one-tenth of harvest due to the state) and the appraising of harvest value as basis for payment in kind (one-third) to the landlord. A land-registry system was instituted in 1884, and landowners that could not prove legal ownership lost title to some properties. This policy generated wide discontent among Muslim landowners. Another cause of frequent disorders were cases of religious conversions. Under Muslim law, a Muslim convert to another faith was to be executed (this penalty was later eased to banishment). The Austrian policy of confessional equality required a freedom of religious conversion without any penalty and a conversion statute was issued in 1891.

The general aim of the Austrian administration was to guide the development of a coequal confessional society that would focus its efforts on cultural and economic progress without political and national assertiveness. Benjamin von Kallay, the first Austrian Chief Administrator for Bosnia and Herzegovina wanted to avoid

anything that could lead to the creation of a separate Muslim nation in Bosnia. On the other hand, he was determined to insulate Bosnians from external developments in the South Slavic areas. Such a position was unrealistic, however, since all of the main groups—Serbs, Croats, and Muslims—identified themselves with their own national/religious groups in the neighboring areas and had developed intense cultural/political relationships with them. Serbs looked at Serbia's successes and hoped for unification with their motherland. Croats followed closely the Croatian-Hungarian tensions and hoped likewise for their unification. The Muslim community, meanwhile, struggled for its own cultural/religious autonomy within a Bosnia that still recognized the Ottoman Sultan's sovereignty and looked to him for assistance.

The unilateral annexation of Bosnia and Herzegovina to Austria in 1908 exacerbated Austria's relations with Serbia (and almost caused a war) and with the Hungarian half of the Hapsburg Crown that opposed the enlargement of the Slavic population of Austria-Hungary. Serbia's victories in the Balkan wars added fuel to the "Yugoslav" movement among the South Slavs of Austria, including Bosnia and Herzegovina. Here the Austrian administration countered the growing "Yugoslav" assertiveness with a "divide and rule" initiative of developing a separate "Bosnian" national consciousness which they hoped would tie together Serbs, Croats, and Muslims. All nationalist movements use elements of history to develop their own mythology to unite their members. Thus, the medieval Bosnian kingdom was the basis for development of a Bosnian national consciousness. It was opposed by most Serbs and Croats, who awaited unification with Serbia or Croatia, but gave some sense of security to the more isolated Muslim Bosnian community. Already by the beginning of the 20th century, separate ethnic organizations and related political associations had to be allowed. The 1908 annexation led to the promulgation of a constitution, legal recognition of political parties, and a Bosnian Parliament in 1910. The internal political liberalization then allowed the Austrian administration to concentrate on the repression of student radicals, internal and external terrorists, and other such perceived threats to their rule.

The Muslim community was split internally, with a leadership dominated by landowners and weakened by the forced emigration to Turkey of its top leaders. It finally came together in 1906 and formed the Muslim National Organization (Muslimanska Narodna Organizacija) as its political party, with the blessing of its émigré leaders in Istanbul. Intense negotiations with the Austrian administration produced agreements on religious and cultural autonomy as well as landowners' rights. The latter were a preeminent concern, and landowners were able to preserve their ownership rights based on Ottoman law and the peasants' payments of compulsory dues. The religious autonomy of the Muslim faith was assured by having the nominees for the top offices confirmed by the Sultan's religious head upon request by the Austrian Embassy in Istanbul. The same process was also used in matters of religious dogma and law.

Cultural autonomy for Muslims was affirmed through the streamlining of the preexisting vakuf system into local, regional, and central assemblies responsible for the operation of the vakufs and the related educational system. Overall, the Muslims of Bosnia had achieved their objectives: preserving their large land-

holdings with peasants still in a quasi-serfdom condition; assuring their cultural autonomy; and retaining access to the Sultan, head of a foreign country, in matters of their religious hierarchies. Politically, the Muslim National Organization participated in the first parliament as part of the majority supportive of the Austrian government.

Serbs and Croats had also formed political organizations, the nature of which reflected Bosnia's peculiar ethnic and socio-political conditions. The Serbian National Organization (Srpska Narodna Organizacija) was founded in 1907 as a coalition of three factions. The Croatian National Community (Hrvatska Narodna Zajednica) was formed in 1908 by liberal Croat intellectuals, followed in 1910 by the Croatian Catholic Association (Hrvatska Katolička Udruga). A cross-ethnic Social Democratic party, formed in 1909, failed to win any seats in the Parliament. A Muslim Progressive Party, formed in 1908, found hardly any support even after changing its name to the Muslim Independent Party. The Muslims were more conservative and were opposed to the agrarian reform demanded by the Serbs and Croats, who each continued to favor an association or unification with their respective "Mother Country." Croats asserted the Croatian character of Bosnia based on its Croatian past, while Serbs just as adamantly claimed its Serbian character and supported Serbia's "Greater Serbia" policies.

Given the demographics of Bosnia and Herzegovina (1910 census: Serbian Orthodox, 43%; Croat Catholics, 23%; Muslims, 32%) each side needed the support of the Muslims who, though pressured to declare themselves Serbs or Croats, very seldom would do so and would rather keep their own separate identity. Up until the Balkan wars, Muslims and Serbs would support one another hoping for some kind of political autonomy. Croats advocated unification with Croatia and a trialist reorganization of the Hapsburg Monarchy, giving the united South Slavs a coequal status with Austrians and Hungarians. Any cooperation by the Muslims was predicated on support for the continuation of serfdom. This stance prevented cooperation with the Croatian Catholic Association, which insisted on agrarian reform and the termination of serfdom.

With the Serbian victories and Ottoman defeat in the Balkan wars, Serbs became more assertive and Croats more willing to cooperate with them in the growing enthusiasm generated by the idea of "Yugoslavism." A parliamentary majority of Serbs and Croats could have effected the liberation of the peasants in 1913 but the Hungarians opposed it. The assassination of Archduke Ferdinand on 28 June 1914, and World War I, combined to make the issue moot when the Parliament was adjourned. The assassination of the Archduke was apparently the work of members of the "Young Bosnia" students association supported (unofficially) by Serbia through its extremist conspiratorial associations, the "Black Hand" and the "Serbian National Defense." The Austrian ultimatum to Serbia was extremely harsh but Serbia met all the conditions that did not violate its sovereignty. Austria nevertheless declared war and immediately attacked Serbia. The Serbian community of Bosnia and Herzegovina was subjected to a regime of terror and indiscriminate executions by the Austrian authorities. Serbian leaders were subjected to trials, court martial proceedings, and infamous concentrations camps where internees died of epidemics and starvation.

### First (Royal) Yugoslavia

Throughout World War I, Bosnians fought in Austrian units, particularly on the Italian front until Austria's surrender. The Bosnian National Council decided to unite with the Kingdom of Serbia, as Vojvodina did and the Montenegrin assembly did on 24 November 1918. On 27 November 1918 the delegation from the Zagreb-based National Council of the Slovenes, Croats, and Serbs also requested unification with Serbia of the Slovene, Croat, and Serbian lands of Austria-Hungary. Following the Declaration of Union on 1 December 1918, a provisional government was set made up of representatives of Serbia and the National Council, with other groups added later. A provisional Assembly was also convened consisting of members of the Serbian Parliament, nominees from the National Council and other regional Assemblies such as Bosnia and Herzegovina and Vojvodina. In November 1920 a Constituent Assembly was elected and functioned as both the legislature and constitutional convention. Bosnian Serbs supported the Serbian Agrarian Party, while two Muslim parties, the National Muslim Organization from Bosnia and Herzegovina and the Džemijet Party of the Kosovo and Macedonia Muslims had seats in the assembly. Croats, on the other hand, joined the mainstream parties of Croatia.

By joining the Kingdom of Serbs, Croats, and Slovenes in 1918, Bosnia and Herzegovina ceased to exist as a distinct political/historical unit, particularly since the heads of local governments were appointed by and directly accountable to the central government in Belgrade. After 10 years of a tumultuous parliamentary history culminating in the assassination of Croatian deputies, King Alexander dissolved parliament and disbanded all political parties, establishing a royal dictatorship in 1929. He then reorganized the country into a "Yugoslavia" made up of nine administrative regions (*banovine*) named after rivers. What once was Bosnia and Herzegovina was split among four of the new units (Vrbaska, Drinska, Primorska, and Zetska). Serb and Croat peasants were finally freed from their feudal obligations to Muslim landlords through the agrarian reforms decreed in 1919 and slowly implemented over the next 20 years. Except for Bosnia and Herzegovina and Dalmatia, land held by ex-enemies (Austrians, Hungarians, Turks) were expropriated without compensation and redistributed to the peasants—1.75 million of them plus 2.8 million dependents. As a result, the average size of agricultural holdings fell to 15 acres, causing inefficiencies and very low yields per acre. Peasants were forced to borrow even to buy food and necessities. They fell deeply in debt, both to local shopkeepers who charged 100–200% interest and to banks that charged exorbitant rates up to 50%. In comparison, peasant cooperatives in Slovenia used single digit interest rates.

Politically, the Muslim Organization, as a small party, allied itself mostly with the Slovene People's Party and either the Serbian Democratic or Radical parties in order to participate in a series of governments before the 1929 royal dictatorship was implemented. The Muslim Organization's main goals were to obtain the best possible compensation for land expropriated from Bosnia's Muslim landowners and to preserve the Muslims' cultural identity. In 1932, Muslim leaders joined the Croats, Slovenes, and some Liberal Serbs in issuing the Zagreb manifesto calling for an end to the King's dictatorship and for democratization and regional auto-

mies. For this the centralist regime interned and imprisoned several of the leaders and instituted wider repressions. Following the assassination of King Alexander in 1934 in Marseille, France, the Croat Peasants Party was joined by the Muslims, Serbian Agrarians, and Serbian Democrats in opposition to the Centralists, winning 38% of the votes in spite of the government's intimidating tactics. With the opposition refusing to take part in the parliament, a new government was formed by the Serbian Radicals with the inclusion of the Muslims and the Slovene People's Party.

This new coalition government lasted until 1939, but was never able to resolve the "Croatian" autonomy issue. In addition, while under the leadership of Milan Stojadinović, Yugoslavia's foreign policy moved the country closer to Italy and Germany. Meanwhile a growing consensus had developed that the "Croatian" question had to be solved, particularly in view of the aggressive ambitions of Yugoslavia's neighbors. Thus, the Regent Prince Paul and Dr. Vladimir Maček, leader of the Croatian Peasant Party, worked with the Minister of Social Policy, Dragiša Cvetković, on an agreement establishing a Croatian Banovina made up of the historical regions of Croatia-Slavonia and Dalmatia along with parts of Vojvodina, Srem, and Bosnia. The president of the senate, Monsignor Anton Korošec (also leader of the Slovene People's Party), engineered the resignation of five ministers, two Slovenes, two Muslim, and Dragiša Cvetković. Regent Paul then called on Cvetković to form a new government. Dr. Maček became vice-premier and Ivan Subašić was named Ban of the autonomous Croatian Banovina, which was given its own Sabor (parliament). The Croatian parties considered this development as a positive first phase towards their goal of an independent Croatia that would incorporate all of Bosnia and Herzegovina. The Serbian centralists, on the other hand, saw this phase as a threat to their own designs of incorporating Bosnia and Herzegovina (and Serb populated areas of Croatia) into a "Greater Serbia" unit of Yugoslavia. Thus, on the eve of World War II, the stage was set for a direct confrontation between the independent minded Croatians and centralistic Serbs. The Muslims of Bosnia were caught in their crossfire.

### World War II

Germany, Italy, and their allies Hungary, Romania, and Bulgaria, attacked Yugoslavia on 6 April 1941 and divided the country among themselves. The Croatian terrorist Ustaša organization collaborated with the aggressors and was allowed to proclaim an Independent State of Croatia on 10 April 1941. This new state incorporated the old Croatian Banovina in addition to all of Bosnia and Herzegovina. Of its total population of 6.3 million, one-third were Serbian and 750,000 were Muslim. Once entrenched in power, the Ustaša troops began implementing their plan for "cleansing" their Greater Croatia of the Serbian population by the use of terror, mass deportations, and genocidal massacres later condemned by the Nürnberg Court.

The Serbian population responded in kind with its Cetnik formations and by joining the Partisan resistance movement led by Josip Broz-Tito, head of the Yugoslav Communist Party. Bosnia and Herzegovina suffered terrible losses in several German-led offensives against Bosnian resistance, and in the internecine civil war among Communist-dominated Partisans, nationalist Cetniks (mostly Serbs), and Croatian Ustaše and home guard units. The Muslim population in particular was caught in the middle be-

tween the Ustaše and the Serbian Cetniks. The Ustaše considered the Muslims of Croatian origin and expected them to collaborate with the Ustaša regime. The Serbian Cetniks, on the other hand, viewed most Muslims as the hated Turks and Ustaša collaborators, and therefore engaged in slaughters of Muslims, particularly in Eastern Bosnia around the cities of Foča and Goražde.

The political programs of the Cetniks and Partisans were a reflection of the old centralist (Serbian) hegemony and the Federalist positions of the prewar opposition parties. Thus the Partisan resistance, though aiming at a revolutionary power grab, offered a federated Yugoslavia made up of individual republics for each national group—Serbs, Croats, Slovenes, newly recognized Macedonians and Montenegrins. To avoid a battle over a Serbian-Croatian border issue, Bosnia and Herzegovina was resurrected as a buffer area between Serbia and Croatia. It would also allow (again) for the cultural autonomy of the Muslim population. The Allied and Soviet support the Partisans received enabled them to prevail, and they organized Socialist Yugoslavia as a Federative People's Republic with Bosnia and Herzegovina as one of the constituent republics approximately within the boundaries of the former Austrian province.

When Soviet armies entered Yugoslavia from Romania and Bulgaria in the fall of 1944—Marshal Tito with them—military units and civilians that had opposed the partisans had no choice but retreat to Austria or Italy to save themselves. Among them were the Cetnik units of Draža Mihajlović, and "home guards" from Serbia, Croatia, and Slovenia that had been under German control but were pro-Allies in their convictions and hopes. Also in retreat were the units of the Croatian Ustaša that had collaborated with Italy and Germany in order to achieve (and control) an "independent" greater Croatia, and in the process had committed terrible and large-scale massacres of Serbs, Jews, Gypsies, and others who opposed them. Of course, Serbs and Partisans counteracted and a fratricidal civil war raged over Yugoslavia, pitting Croats against Serbs, Communists against Nationalists. These skirmishes not only wasted countless lives, they used up the energy and property that could have been used instead against the occupiers. After the end of the war, the Communist-led forces took control of all of Yugoslavia and instituted a violent dictatorship that committed systematic crimes and human rights violations on an unexpectedly large scale. Thousands upon thousands of their former opponents were returned from Austria by British military authorities only to be tortured and massacred by Partisan executioners.

### Second (Communist) Yugoslavia

Such was the background for the formation of the second Yugoslavia as a Federative People's Republic of five nations—Slovenes, Croats, Serbs, Macedonians, and Montenegrins—and Bosnia and Herzegovina as a buffer area with its mix of Serb, Muslim, and Croat populations. The problem of large Hungarian and Muslim Albanian populations in Serbia was solved by creating the autonomous region of Vojvodina (Hungarian minority) and Kosovo (Muslim Albanian majority) to assure their political and cultural development. Tito attempted a balancing act to satisfy most of the nationality issues that were carried over unresolved from the first Yugoslavia, but failed to satisfy anyone.

Compared to pre-1941 Yugoslavia where Serbs enjoyed their controlling role, the numerically stronger Serbs in the new Yugo-

slavia had “lost” the Macedonian area they considered “Southern Serbia”; they had lost the opportunity to incorporate Montenegro into Serbia; they had lost direct control over the Hungarian minority in Vojvodina and Muslim Albanians of Kosovo (viewed as the cradle of the Serbian nation since the Middle Ages); they could not longer incorporate into Serbia the large Serbian populated areas of Bosnia; and they had not obtained an autonomous region for the large minority Serbian population within the Croatian Republic. The Croats, while gaining back from Hungary the Medjumurje area and from Italy the cities of Rijeka (Fiume), Zadar (Zara), some Dalmatian islands, and the Istrian Peninsula, had “lost” the Srem area to Serbia and Bosnia and Herzegovina, which had been part of the World War II “independent” Croatian state under the Ustaša leadership. In addition, the Croats were confronted with a deeply resentful Serbian minority that became ever more pervasive in public administrative and security positions. The Slovenes had obtained back from Hungary the Prekmurje enclave and from Italy most of the Slovenian lands taken over by Italy following World War I (Julian Region and Northern Istria). Italy retained control over the “Venetian Slovenia” area, the Gorizia area, and the port city of Trieste. (Trieste was initially part of the UN protected “Free Territory of Trieste,” split in 1954 between Italy and Yugoslavia, with Trieste itself given to Italy.) Nor were the Slovenian claims to the southern Carinthia area of Austria satisfied. The “loss” of Trieste was a bitter pill for the Slovenes and many blamed it on the fact that Tito’s Yugoslavia was, initially, Stalin’s advance threat to Western Europe, thus making Western Europe and the United States more supportive of Italy.

The official position of the Marxist Yugoslav regime was that national rivalries and conflicting interests would gradually diminish through their sublimation into a new Socialist order. Without capitalism, nationalism was supposed to wither away. Therefore, in the name of their “unity and brotherhood” motto, any “nationalistic” expression of concern was prohibited and repressed by the dictatorial and centralized regime of the “League of Yugoslav Communists” acting through the “Socialist Alliance” as its mass front organization. As a constituent Republic of the Federal Yugoslavia, Bosnia and Herzegovina shared in the history of the second experiment in “Yugoslavism.”

After a short postwar “coalition” government period, the elections of 11 November 1945, boycotted by the noncommunist “coalition” parties, gave the Communist-led People’s Front 90% of the vote. A Constituent Assembly met on November 29 and abolished the monarchy, establishing the Federative People’s Republic of Yugoslavia. In January 1946, a new constitution was adopted, based on the 1936 Soviet constitution. The Stalin-engineered expulsion of Yugoslavia from the Soviet-dominated Cominform Group in 1948 was actually a blessing for Yugoslavia after its leadership was able to survive Stalin’s pressures. Survival had to be justified, both practically and in theory, by developing a “road to Socialism” based on Yugoslavia’s own circumstances. This new “road map” evolved rather quickly in response to some of Stalin’s accusations and Yugoslavia’s need to perform a balancing act between the NATO alliance and the Soviet bloc. Having taken over all power after World War II, the Communist dictatorship under Tito pushed the nationalization of the economy through a policy of forced industrialization, to be supported by the collectivization of agriculture.

The agricultural reform of 1945–46 (limited private ownership of a maximum of 35 hectares (85 acres) and a limited free market after the initial forced delivery of quotas to the state at very low prices) had to be abandoned because of the strong passive, but at times active, resistance by the peasants. The actual collectivization efforts were initiated in 1949 using welfare benefits and lower taxes as incentives along with direct coercion. But collectivization had to be abandoned by 1958 simply because its inefficiency and low productivity could not support the concentrated effort of industrial development.

By the 1950s, Yugoslavia had initiated the development of its internal trademark: self-management of enterprises through workers councils and local decision-making as the road to Marx’s “withering away of the state.” Following the failure of the first five-year plan (1947–51), the second five-year plan (1957–61) was completed in four years by relying on the well-established self-management system. Economic targets were set from the local to the republic level and then coordinated by a Federal Planning Institute to meet an overall national economic strategy. This system supported a period of very rapid industrial growth in the 1950s. But a high consumption rate encouraged a volume of imports, largely financed by foreign loans, far in excess of exports. In addition, inefficient and low-productivity industries were kept in place through public subsidies, cheap credit, and other artificial protective measures that led to a serious crisis by 1961.

Reforms were necessary and, by 1965, “market socialism” was introduced with laws that abolished most price controls and halved import duties while withdrawing export subsidies. After necessary amounts were left with the earning enterprise, the rest of the earned foreign currencies were deposited with the national bank and used by the state, other enterprises, or were used to assist less developed areas. Councils were given more decision-making power on investing their earnings. They also tended to vote for higher salaries in order to meet steep increases in the cost of living. Unemployment grew rapidly even though “political factories” were still subsidized. The government thus relaxed its restrictions to allow labor migration particularly to West Germany where workers were needed for its thriving economy. Foreign investment was encouraged up to 49% in joint enterprises, and barriers to the movement of people and exchange of ideas were largely removed. The role of trade unions continued to be one of transmission of instructions from government to workers, allocation of perks along with the education/training of workers, monitoring legislation, and overall protection of the self-management system. Strikes were legally neither allowed nor forbidden but—until the 1958 miners strike in Trbovlje, Slovenia—were not publicly acknowledged and were suppressed. After 1958, strikes were tolerated as an indication of problems to be resolved. Unions, however, did not initiate strikes but were expected to convince workers to go back to work.

Having survived its expulsion from the Cominform in 1948 and Stalin’s attempts to take control, Yugoslavia began to develop a foreign policy independent of the Soviet Union. By mid-1949 Yugoslavia ceased its support of the Greek Communists in their civil war against the then Royalist government of Greece. In October 1949, Yugoslavia was elected to one of the nonpermanent seats on the UN Security Council and openly condemned North Korea’s aggression toward South Korea. Following the “rapproche-

ment” opening with the Soviet Union initiated by Nikita Khrushchev and his 1956 denunciation of Stalin, Tito intensified his work on developing the movement of nonaligned “third world” nations. This would become Yugoslavia’s external trademark, in cooperation with Nehru of India, Nasser of Egypt, and others. With the September 1961 Belgrade summit conference of nonaligned nations, Tito became the recognized leader of the movement. The nonaligned position served Tito’s Yugoslavia well by allowing Tito to draw on economic and political support from the Western powers while neutralizing any aggressiveness from the Soviet bloc. While Tito had acquiesced, reluctantly, to the 1956 Soviet invasion of Hungary for fear of chaos and its liberalizing impact on Yugoslavia, he condemned the Soviet invasion of Dubček’s Czechoslovakia in 1968, as did Romania’s Ceausescu, both fearing their countries might be the next in line for “corrective” action by the Red Army and the Warsaw Pact. Just before his death on 4 May 1980, Tito also condemned the Soviet invasion of Afghanistan. Yugoslavia actively participated in the 1975 Helsinki Conference and agreements and the first 1977–78 review conference that took place in Belgrade, even though Yugoslavia’s one-party communist regime perpetrated and condoned numerous human rights violations. Overall, in the 1970s and 1980s, Yugoslavia maintained fairly good relations with its neighboring states by playing down or solving pending disputes—such as the Trieste issue with Italy in 1975—and by developing cooperative projects and increased trade.

Ravaged by the war, occupation, resistance, and civil war losses and preoccupied with carrying out the elimination of all actual and potential opposition, the Communist government faced the double task of building its Socialist economy while rebuilding the country. As an integral part of the Yugoslav federation, Bosnia and Herzegovina was, naturally, impacted by Yugoslavia’s internal and external political developments. The main problems facing communist Yugoslavia and Bosnia and Herzegovina were essentially the same as the unresolved ones under Royalist Yugoslavia. As the “Royal Yugoslavism” had failed in its assimilative efforts, so did the “Socialist Yugoslavism” fail to overcome the forces of nationalism. Bosnia and Herzegovina differs from the other republics because its area has been the meeting ground of Serbian and Croatian nationalist claims, with the Muslims as a third party, pulled to both sides. Centuries of coexistence of the three major national groups had made Bosnia and Herzegovina into a territorial maze where no boundaries could be drawn to clearly separate Serbs, Croats, and Muslims without resorting to violence and forced movements of people. The inability to negotiate a peaceful partition of Bosnia and Herzegovina between Serbia and Croatia doomed the first interwar Yugoslavia to failure. The Socialist experiment with “Yugoslavism” in post-World War II Yugoslavia was particularly relevant to the situation in Bosnia and Herzegovina where the increasing incidence of intermarriage, particularly between Serbs and Croats, caused the introduction of the “Yugoslav” category with the 1961 census. By 1981 the “Yugoslav” category was selected by 1.2 million citizens (5.4% of the total population), a large increase over the 273,077 number in 1971. Muslims, not impacted much by intermarriage, have also been recognized since 1971 as a separate “people” and numbered two million in 1981 in Yugoslavia. The 1991 census showed the population of Bosnia and Herzegovina consisting mainly of Muslims (43.7%),

Serbs (31.4%), and Croats (17.3%) with 6% “Yugoslavs” out of a total population of 4,364,000.

Bosnia as a political unit has existed since at least 1150. Headed by a Ban in the Croatian tradition, Bosnia lasted for over 300 years with an increasing degree of independence from Hungary through King Tvrtko I and his successors until the occupation by the Ottoman Turks in 1463 (1482 for Herzegovina). Bosnia and Herzegovina was then ruled by the Turks for 415 years until 1878, and by Austria-Hungary for 40 years until 1918. Bosnia and Herzegovina ceased to be a separate political unit only for the 27 years of the first Yugoslavia (1918–1945) and became again a separate unit for 47 years as one of the republics of the Federal Socialist Republic of Yugoslavia until 1992. Yet, in spite of an 800-year history of common development, the Serbs, Croats, and Muslims of Bosnia and Herzegovina never assimilated into a single nation. Bosnia was initially settled by Croats who became Catholic and then by Orthodox Serbs escaping from the Turks. Under the Turks, large numbers converted to Islam and, in spite of a common language, their religious and cultural differences kept the Serbs, Croats, and Muslims apart through history so that Bosnia and Herzegovina has been more a geographic-political notion than a unified nation.

Consequently, while the resurgent nationalism was galvanizing Croatia into an intensifying confrontation with Serbia, the Bosnian leadership had to keep an internal balance by joining one or the other side depending on its own interests. Bosnia and Herzegovina was torn between the two opposing “liberal” and “conservative/centralist” coalitions. In terms of widening civil and political liberties, Bosnia and Herzegovina usually supported in most cases the liberal group. Its own economic needs as a less developed area, however, pulled it into the conservative coalition with Serbia in order to keep the source of development funds flowing to itself, Montenegro, Macedonia, and Serbia (for the Kosovo region). Also, the “Yugoslav” framework was for Bosnia and Herzegovina an assurance against its possible, and very likely bloody, partitioning between Serbia and Croatia.

The liberal group, centered in Slovenia and Croatia, grew stronger on the basis of the deepening resentment against forced subsidizing of less-developed areas of the federation and buildup of the Yugoslav army. Finally, the increased political and economic autonomy enjoyed by the Republics after the 1974 constitution and particularly following Tito’s death in 1980, assisted in turning Tito’s motto of “unity and brotherhood” into “freedom and democracy” to be achieved through either a confederated rearrangement of Yugoslavia or by complete independence of the Republics. The debate over the reforms of the 1960s had led to a closer scrutiny—not only of the economic system, but also of the decision-making process at the republic and federal levels, particularly the investment of funds to less developed areas that Slovenia and Croatia felt were very poorly managed, if not squandered. Other issues of direct impact on Bosnia and Herzegovina fueled acrimony between individual nations, such as the 1967 Declaration in Zagreb claiming a Croatian linguistic and literary tradition separate from the Serbian one, thus undermining the validity of the “Serbo-Croatian” language. Also, Kosovo Albanians and Montenegrins, along with Slovenes and Croats, began to assert their national rights as superior to their rights as Yugoslav nationals.

The Eighth Congress of the League of Communists of Yugoslavia (LCY) in December 1964 acknowledged that ethnic prejudice and antagonisms existed in socialist Yugoslavia. The Congress went on record against the position that Yugoslavia's nations had become obsolete and were disintegrating into a socialist "Yugoslavism." Thus the republics, based on individual nations, became bastions of a strong Federalism that advocated the devolution and decentralization of authority from the federal to the republic level. "Yugoslav Socialist Patriotism" was at times defined as a deep feeling for one's own national identity within the socialist self-management of Yugoslavia.

Economic reforms were the other focus of the Eighth LCY Congress led by Croatia and Slovenia, with emphasis on efficiencies and local economic development decisions with profit criteria as their basis. The liberal bloc (Slovenia, Croatia, Macedonia, Vojvodina) prevailed over the conservative group and the reforms of 1965 did away with central investment planning and political factories. The positions of the two blocks hardened into a national-liberal coalition that viewed the conservative, centralist group led by Serbia as the Greater Serbian attempt at majority domination.

To the conservative centralists the devolution of power to the republic level meant the subordination of the broad "Yugoslav" and "Socialist" interests to the narrower "nationalist" interest of republic national majorities. With the Croat League of Communists taking the liberal position in 1970, nationalism was rehabilitated as long as it didn't slide into chauvinism. Thus the "Croatian Spring" bloomed and impacted all the other republics of Yugoslavia. Meanwhile, as the result of a series of 1967–68 constitutional amendments that limited federal power in favor of the republics and autonomous provinces, the federal government was seen by liberals more as an inter-republican problem-solving mechanism bordering on a confederacy. A network of inter-republican committees established by mid-1971 proved to be very efficient at resolving a large number of difficult issues in a short time. The coalition of liberals and nationalists in Croatia generated sharp condemnation in Serbia, where its own brand of nationalism grew stronger, but as part of a conservative-centralist alliance. Thus the liberal/federalist versus conservative/centralist opposition became entangled in the rising nationalism within each opposing bloc. The devolution of power in economic decision-making spearheaded by the Slovenes assisted in the "federalization" of the League of Communists of Yugoslavia. This resulted in a league of quasi-sovereign republican parties. Under strong prodding from the Croats, the party agreed in 1970 to the principle of unanimity for decision making that, in practice, meant a veto power for each republic. However, the concentration of economic resources in Serbian hands continued with Belgrade banks controlling half of total credits and some 80% of foreign credits. This was also combined with the fear of Serbian political and cultural domination. The Croats were particularly sensitive regarding language, alarmed by the use of the Serbian version of Serbo-Croatian as the norm with the Croatian version as a deviation. The language controversy thus exacerbated the economic and political tensions, leading to easily inflamed ethnic confrontations.

Particularly difficult was the situation in Croatia and Serbia because of issues relating to their ethnic minorities—Serbian in Croatia and Hungarian/Albanian in Serbia. Serbs in Croatia sided with the Croat conservatives and sought a constitutional amend-

ment guaranteeing their own national identity and rights and, in the process, they challenged the "sovereignty" of the Croatian nation and state, as well as its right to self-determination, including the right to secession. The conservatives won and the amendment declared that "the Socialist Republic of Croatia (was) the national state of the Croatian nation, the state of the Serbian nation in Croatia, and the state of the nationalities inhabiting it."

Meanwhile Slovenia, not burdened by large minorities, developed a similar liberal and nationalist direction along with Croatia. This fostered an incipient separatist sentiment opposed by both the liberal and conservative party wings. Led by Stane Kavčič, head of the Slovenian government, the liberal wing gained as much political local latitude from the federal level as possible during "Slovenian Spring" of the early 1970s. By the summer of 1971, the Serbian party leadership was pressuring President Tito to put an end to the "dangerous" development of Croatian nationalism. While Tito wavered because of his support for the balancing system of autonomous republic units, the situation quickly reached critical proportions also in terms of the direct interests of Bosnia and Herzegovina. Croat nationalists, complaining about discrimination against Croats in Bosnia and Herzegovina, demanded the incorporation of Western Herzegovina into Croatia. Serbia countered by claiming Southeastern Herzegovina for itself. Croats also advanced many economic and political claims: to a larger share of their foreign currency earnings, to the issuance of their own currency, to establishment of their own national bank to negotiate foreign loans, to the printing of Croatian postage stamps, to a Croatian army and to recognition of the Croatian Sabor (Assembly) as the highest Croatian political body and, finally, to Croatian secession and complete independence.

Confronted with such intensive agitation, the liberal Croatian party leadership could not back down and did not try to restrain the public demands nor the widespread university students' strike of November 1971. This situation caused the loss of support from the liberal party wings of Slovenia and even Macedonia. At this point Tito intervened, condemned the Croatian liberal leadership on 1 December 1971 and supported the conservative wing. The liberal leadership group resigned on 12 December 1971. When Croatian students demonstrated and demanded an independent Croatia, the Yugoslav army was ready to move in if necessary. A wholesale purge of the party liberals followed, with tens of thousands expelled from the party. Key functionaries lost their positions, while several thousands were imprisoned (including Franjo Tuđman who later became president in independent Croatia). Leading Croatian nationalist organizations and their publications were closed. On 8 May 1972 the Croatian party also expelled its liberal wing leaders and the purge of nationalists continued through 1973 in Croatia, as well as in Slovenia and Macedonia. However, the issues and sentiments raised during the "Slovene and Croat Springs" of 1969–71 did not disappear. Tito and the conservatives were forced to satisfy nominally some demands and the 1974 constitution was an attempt to resolve the strained inter-republican relations as each republic pursued its own interests over and above a conceivable overall "Yugoslav" interest.

Beginning in 1986, work began on amendments to the 1974 constitution. They created a furor, particularly in Slovenia. Opposition was strongest to the amendments that proposed creation of a unified legal system, central control of transportation and com-

munication, centralizing the economy into a unified market, and granting more control to Serbia over its autonomous provinces of Kosovo and Vojvodina. These changes were seen as being accomplished at the expense of the individual republics. A recentralization of the League of Communists was also recommended but opposed by liberal/nationalist groups.

By 1989, the relations between Slovenia and Serbia reached a crisis point, especially following the Serbian assumption of control in the Kosovo and Vojvodina provinces (as well as in Montenegro). Serbian President Milošević's tactics were extremely distasteful to the Slovenians and the use of force against the Albanian population of the Kosovo province worried the Slovenes (and Croats) about the possible use of force by Serbia against Slovenia itself. The tensions with Serbia convinced the Slovenian leadership of the need to take protective measures and, in September 1989, draft amendments to the constitution of Slovenia were published. These included the right to secession, the sole right of the Slovenian legislature to introduce martial law and to control the deployment of armed forces in Slovenia.

A last attempt at salvaging Yugoslavia was to be made as the extraordinary Congress of the League of Communists of Yugoslavia convened in January 1990 to review proposed reforms such as free multiparty elections and freedom of speech. The Slovenian delegation attempted to broaden the spectrum of reforms but was rebuffed and walked out on 23 January 1990, pulling out of the Yugoslav League. The Slovenian Communists then renamed their party the Party for Democratic Renewal. On 10 April 1990 the first free elections since before World War II were held in Slovenia. A coalition of six newly formed democratic parties, called Demos, won 55% of the votes, with the remainder going to the Party for Democratic Renewal, the former Communists, 17%; the Socialist Party, 5%; and the Liberal Democratic Party (heir to the Slovenia Youth Organization), 15%. The Demos coalition organized the first freely elected Slovenian government of the post-Communist era with Dr. Lojze Peterle as the prime minister.

Milan Kučan, former head of the League of Communists of Slovenia, was elected president with 54% of the vote. His election was seen as recognition of his efforts to effect a bloodless transfer of power from a monopoly by the Communist party to a free multiparty system and his standing up to the recentralizing attempts by Serbia.

All of these developments had also a deep impact on Bosnia and Herzegovina. When the Antifascist Council of the National Liberation of Yugoslavia (AVNOJ) proclaimed the federal principle on 29 November 1943, Bosnia and Herzegovina was included as one of the constituent republics of post-World War II Yugoslavia. Muslims were not considered a "nation" yet. Serbs claimed that Muslims were Islamized Serbs, and Croats claimed that Muslims were descendants of the Croatian Bosnian Church that had converted to Islam. The Muslims themselves, meanwhile, claimed their own separate identity and were recognized as equal to Serbs and Croats.

The sense of Muslim identity grew stronger and incorporated demands for Muslim institutions parallel to the Serbian and Croatian ones. Muslims sought to define themselves as the only "true" Bosnians and thus a call to define Bosnia and Herzegovina as a "Muslim" Republic. Muslim activist groups multiplied during the 1970s and 1980s.

Since the 1970s and into the late 1980s the Muslims' self-assertiveness as an ethnic community grew ever stronger and was viewed as a balancing element between Serbs and Croats. As the winds of change away from communism swept the western republics of Slovenia and Croatia in 1989 and 1990, Bosnia and Herzegovina also was preparing for multiparty elections to be held on 18 November 1990. Meanwhile, across Bosnia and Herzegovina's borders with Croatia, the Serbian population was clamoring for its own cultural and political autonomy. Serbs perceived threats from the Croatian Democratic Union, the winner in the April 1990 elections in Croatia.

By July 1990, a Bosnia and Herzegovina branch of the Croatia-based Serbian Democratic Party had become very active in the 18 Bosnian communes with Serbian majorities adjacent to the Croatia Krajina (border area). By the fall of 1990, the program of the Serbian Democratic Party in Croatia had advanced a plan to include the Bosnian Serbs into a joint Krajina state, which would have a federal arrangement with Serbia proper. This arrangement, it was hoped, would undercut any thoughts of a confederation of Slovenia, Croatia, and Bosnia and Herzegovina. Such a confederation, however, was favored by the Party of Democratic Action (Muslim) and the Croatian Democratic Union. In spite of their differences in long-term goals, the three nationalist parties were committed to the continuation of Bosnia and Herzegovina and to the termination of Communist rule. On 1 August 1990, Bosnia and Herzegovina declared itself a "sovereign and democratic state." The former Communist Party became the Party of Democratic Change, while Yugoslavia's Prime Minister Marković formed the Alliance of Reform Forces that advocated his economic reforms. The Muslim Party, Serbian Party, and Croatian Democratic Union then formed a coalition government with Alija Izetbegović of the Muslim Party as President of Bosnia and Herzegovina.

### Independence and War

Meanwhile, Slovenia and Croatia had published a joint proposal in October 1990 for a confederation of Yugoslavia as a last attempt at a negotiated solution, but to no avail. The Slovenian legislature also adopted a draft constitution in October proclaiming that "Slovenia will become an independent state." On 23 December 1990, a plebiscite was held on Slovenia's "disassociation" from Yugoslavia if a confederation solution could not be negotiated within a six-month period. An overwhelming majority of voters approved the secession provision. Slovenia declared its independence on 25 June 1991. On 27 June 1991, the Yugoslav Army tried to seize control of Slovenia and its borders with Italy, Austria, and Hungary under the pretext that it was its constitutional duty to assure the integrity of Socialist Yugoslavia. The Yugoslav Army units were surprised by the resistance they encountered from the Slovenian "territorial guards" which surrounded Yugoslav Army tank units, isolated them, and engaged in close combat, mostly along border checkpoints. These battles ended in most cases with Yugoslav units surrendering to the Slovenian forces. The war in Slovenia was ended in 10 days due to the intervention of the European Community; a cease-fire was declared, which gave time to the Yugoslav Army to retreat from Slovenia by the end of October 1991.

The coalition government of Bosnia and Herzegovina had a very difficult time maintaining the spirit of ethnic cooperation won in its elections, while the situation in Slovenia and Croatia

was moving to the point of no return with their declaration of independence of 25 June 1991 and the wars that followed. Particularly worrisome were the clashes in Croatia between Serbian paramilitary forces and Croatian police and the intervention of the Yugoslav Army in order to “keep the peace.” Another element that worried the Bosnian government was the concentration of Yugoslav Army units in Bosnia and Herzegovina following their retreat first from Slovenia and then from Croatia. In October 1991, the Serbian Democratic Party held a plebiscite in the two-thirds of Bosnian territory under Serbian control and announced the establishment of a Serbian Republic inside Bosnia and Herzegovina.

In December 1991, the Bosnian Parliament passed a Declaration of Sovereignty and President Izetbegović submitted to the European Community an application for international recognition of Bosnia and Herzegovina as an independent nation. A referendum on independence was held on 29 February 1992. With the Serbs abstaining in opposition to the secession from Yugoslavia, Muslims and Croats approved an independent Bosnia and Herzegovina by a vote of 99.7%. In reaction to the referendum, Serbs proceeded to prepare for war in close cooperation with the Yugoslav army.

On 1 March 1992 in Sarajevo a Serbian wedding party was fired upon. This was the spark that ignited armed confrontations in Sarajevo and other areas of Bosnia and Herzegovina. The Bosnian Serbs by late March of 1992, formally established their own “Serbian Republic of Bosnia and Herzegovina.” The international recognition of Bosnia and Herzegovina by the European Community and the United States (along with the recognition of Slovenia and Croatia) was issued on 6 April 1992. This action was viewed as another affront to the Serbs, and gave more impetus to Serbian determination to oppose the further splitting of Yugoslavia that would cause the final separation of Serbs in Croatia and Bosnia and Herzegovina from Serbia proper. The bond among the Serbs of Croatia and Bosnia with the Serbian government controlled by Slobodan Milošević, and with the Yugoslav Army was firmly cemented. The decision of Serbia, along with the Serbs of Bosnia and Croatia, to take advantage of Yugoslavia’s demise and try to unite Serbian territories in Croatia and Bosnia and Herzegovina with Serbia proper precipitated the wars in Croatia first and then in Bosnia and Herzegovina. Desperate acts by Serbs engaged in “ethnic cleansing” (torching, and systematic rape and executions in imitation of the World War II Ustaša tactics) revolted the whole world and elicited retaliation by the initially allied Croats and Muslims.

War spread in Bosnia in mid-1992 with the relentless bombardment of Sarajevo by Serbs and the brutal use of “ethnic cleansing,” primarily by Serbs intent on freeing the areas along the Drina River of Muslim inhabitants. Croats and Muslims retaliated in kind, if not in degree, while Serbs took over control of some 70% of the country and used concentration camps and raping of women as systematic terror tactics to achieve their “cleansing” goals. Croats kept control of western Herzegovina, while their Muslim allies tried to resist Serbian attacks on mostly Muslim cities and towns full of refugees exposed to shelling and starvation while the world watched in horror. The European Community, the United States, the UN, and NATO coordinated peacekeeping efforts, dangerous air deliveries to Sarajevo, airdrops of food and medicinal

supplies to keep the people of Sarajevo from dying of starvation and sicknesses.

The various plans proposing the division of Bosnia and Herzegovina into three ethnic cantons were not acceptable to the winning Serbian side. The cantonization plans were also a partial cause for the breakdown of the Muslim-Croatian alliance when the two sides began fighting over areas of mixed Croat and Muslim populations. One such area was the city of Mostar in Herzegovina, where the Croats had established the Croatian union of “Herzeg-Bosnia,” later named the state of Herzeg-Bosnia. Finally, under the threat of air strikes from NATO, the Serbs agreed to stop the shelling of Sarajevo and hand over (or remove) their heavy artillery by February 1994, so Sarajevo could get a respite from its bloody siege of several years. A truce was implemented by mid-February 1994 and was barely holding while continuing negotiations were taking place that, on US initiative, brought Croats and Muslims back together on a confederation plan accepted by the two sides and signed in Washington on 18 March 1994.

In July 1994, the EC, the United States, and Russia agreed on a partition plan giving the Croat-Muslim side 51% of the land, with 49% offered to the Bosnian Serbs who, holding 70%, would need to give up a large area under their control. As of the end of July 1994, the Bosnian Serbs’ parliament had rejected the plan and had resumed occasional sniping and mortar shelling of Sarajevo, shooting at UN peacekeepers and supply airplanes, and blocking of the single access road to Sarajevo. After almost two-and-a-half years of war, destruction, and terrible suffering imposed on the people of Bosnia and Herzegovina, the efforts of the international community and its very cumbersome decision-making process had brought Bosnia and Herzegovina back to the partitioning plan originally agreed on at a Lisbon meeting in February 1992. In the fall of 1994, President Milošević of Serbia had closed the borders between Serbia and Bosnia and Herzegovina in order to stop any further assistance to the “Republika Srpska” that he himself helped establish. President Milošević agreed to “extricate” Serbia from its direct support for the Bosnian Serbs in the hope that a compromise partitioning plan that would allow each side to “confederate” with Croatia and Serbia respectively and would offer both sides the opportunity to turn their energies to positive efforts of physical and psychological reconstruction.

The quest to create a “Greater Serbia” continued into July 1995, when Bosnian Serbs overran the UN protected areas of Srebrenica and Zepa, extending their territory near the Croatian border. Over 8,000 Bosnian Muslim men and boys were summarily executed at Srebrenica. In retaliation, NATO forces initiated air raids on Bosnian Serb positions on 30 August 1995. Two weeks later, Bosnian Serb forces began lifting their siege on Sarajevo, and agreed to enter into negotiations on the future of Bosnia. Pressured by air strikes and diplomacy, Serb leaders joined authorities from Croatia and Bosnia in Dayton, Ohio, for US-sponsored peace talks.

#### **The Dayton Accords**

After three years of war, the General Framework Agreement for Peace in Bosnia and Herzegovina was completed on 21 November 1995 in Dayton, Ohio. Signed in Paris in mid-December, the agreement called for 60,000 NATO peacekeepers to oversee the disarming process. The agreement, known as the Dayton Accords, provided for the continuity of Bosnia and Herzegovina as a sin-

gle state with two constituent entities: the Federation of Bosnia and Herzegovina (FBH) and the Republika Srpska (RS). The FBH occupies the 51% of the territory with a Bosniak (Muslim) and Croat majority, while the RS occupies the remaining 49% with a Bosnian Serb majority. Following the signing of the Dayton Accords, the UN economic sanctions against the Federal Republic of Yugoslavia and the Bosnian Serb party were suspended, and the arms embargo was lifted (except for heavy weapons). During 1996, the NATO-led Implementation Force assisted with the military aspects of the Dayton Accords to provide stability in order to facilitate civilian reconstruction and the return of refugees and displaced persons. Elections were scheduled and conducted on 11 September 1996.

In March 1996, the International Criminal Tribunal for the former Yugoslavia filed its first charges against Serbian soldiers accused of committing atrocities in Bosnia. Among those cited were Serb generals Djordje Djukic and Ratko Mladic, and the former Bosnian Serb leader Radovan Karadzic. In May 1997, the tribunal completed its first trial with a conviction of a Bosnian Serb police officer for murdering two Muslim policemen and the torture of Muslim civilians.

Casualty estimates from the war vary from as low as 25,000 to over 250,000 persons. Some three million people became refugees or internally displaced persons. About 320,000 Bosnians had taken refuge in Germany during the war. However, the refugees returned to find a significant housing shortage and massive unemployment. Moreover, the goals of the Dayton Accords to encourage the rebuilding of multi-ethnic communities have not been realized. Bosnian Serb and Bosnian Croat leaders continued to reinforce ethnic partitions and resisted cooperation with Bosniaks to carry out the peace agreement.

Despite the Dayton Accords, outbreaks of violence persisted. The legacy of centuries of confrontations by the Austro-Hungarian, Russian, and Turkish Empires in the Balkans continued to haunt the area and a rekindling of the conflict was almost inevitable. In June 1998 NATO peacekeeping forces decided to extend their stay until a more stable peace was achieved. General elections held in 1998 were relatively quiet, but tensions in the Kosovo region increased as Yugoslav forces attacked Kosovar rebels. In March 1999 NATO jets downed two Yugoslav MiG fighters, allegedly thwarting an attempted attack on peacekeeping forces. Fighting between Serbs and ethnic Albanians in Kosovo raged as NATO aircraft bombed the area. Russia attempted to pass a resolution in the UN Security Council to forbid further bombing runs by NATO warplanes, but failed. Violent conflicts dissipated through the next year, as the International Court of Justice furthered reparations for crimes, and Yugoslavia agreed to a peace plan on 3 June 1999.

Bosnia and Croatia signed a border agreement in July 1999. The strategically located city of Brčko—previously Serb-ruled, and a main site of contention between the country's factions—received a Muslim-Croat/Serb coalition government in March 1999 from the Hague International Court of Justice. Officials from the Serb Republic were disturbed because this portion of land was the one territorial link between the western and eastern portions of the Republic. In 1999, NATO began reducing the 25-nation peacekeeping force by one-third over a period of six months. Mass gravesites continued to be unearthed in northeastern Bosnia, near

Sarajevo and in Srebrenica as numerous war criminals were arrested and brought to trial at the Hague.

Municipal elections were held in March 2000, and general elections took place that November. The November elections resulted in a win for the Serbian nationalist Serb Democratic Party (SDS), formerly lead by Karadzic, in the Republika Srpska; the Croatian nationalist HDZ party won among ethnic Croat voters; but the reformist Social Democratic Party narrowly beat the Bosnian Muslim nationalist Party of Democratic Action (SDA) party in certain areas of the Federation. In May 2001, Bosnian Serbs used force to break up ceremonies marking the rebuilding of two destroyed mosques in Banja Luka and Trebinje.

Parliamentary, presidential, and municipal elections were held in October 2002, and nationalists strengthened their positions. The work of the International Criminal Tribunal for the former Yugoslavia at The Hague continued. In 2001, former Bosnian Serb President Biljana Plavsic surrendered to the tribunal, but pleaded not guilty to charges of genocide; however, in October 2002, she changed her plea to one of guilty of crimes against humanity, and was sentenced to 11 years in prison. In early 2001, a verdict against three Bosnian Serbs found guilty of torturing and raping Bosnian Muslim women marked the first time the tribunal called rape a crime against humanity. Later that year the tribunal found Bosnian Serb general Radislav Krstic guilty of genocide for his role in the massacre at Srebrenica; he was sentenced to 46 years in prison.

In May 1999, former Yugoslav President Milošević was indicted by the tribunal for war crimes committed in Kosovo; he was subsequently indicted for crimes committed in Bosnia and Herzegovina and Croatia, including charges of genocide carried out in Bosnia and Herzegovina from 1992–95. His trial began in February 2002. In December 2004, the NATO-led Stabilization Force in Bosnia and Herzegovina (SFOR), whose goal was to deter renewed hostilities, concluded its mission. Peacekeeping operations were taken up by the European Union Force in Bosnia and Herzegovina (EUFOR). In June 2005, a Bosnian armed unit with members from all three main ethnic groups left for Iraq, to support the US-led coalition at war there.

### 13 GOVERNMENT

Several proposals contributed to the current system of government, which was outlined through the Dayton Accords of 1995. The February 1992 Lisbon proposal first suggested the partitioning of Bosnia and Herzegovina into “ethnic cantons,” but was rejected by the Muslim side. The Vance-Owen proposal of early January 1993 dividing Bosnia and Herzegovina, still a unified state, into nine “ethnic majority” provinces with Sarajevo as a central weak government district was accepted by Croats and Muslims on 7 January 1993 and ratified on 20 January 1993 by the Bosnian Serbs’ Parliament with a 55-to-15 vote in spite of deep misgivings. However, two key events delayed the necessary detailed implementation discussions: Croat forces’ attacks on Muslims in Bosnia and Herzegovina and on Serbs in Croatia, and the new administration of US President Bill Clinton, from whom the Bosnian Muslims hoped to obtain stronger support, even military intervention. Thus by mid-March 1993, only the Croats had agreed to the three essential points of the Vance-Owen proposal, namely the Constitutional Principles (10 provinces), the Military Arrange-

ments, and the detailed map of the 10 provinces. On 25 March 1993 the Bosnian Muslims agreed to all the terms, but the Bosnian Serb legislature on 2 April 1993 rejected the revised 10-province map and the Vance-Owen plan was scuttled.

The Owen-Stoltenberg plan was based on a June 1993 proposal in Geneva by Presidents Tudjman and Milošević about partitioning Bosnia and Herzegovina into three ethnic-based “states.” Owen-Stoltenberg announced the new plan in August 1993 indicating that the three ethnic states were realistically based on the acceptance of Serbian and Croatian territorial “conquests.” At the same time the Croat Bosnian “parliament” announced the establishment of the “State of Herzeg-Bosnia” and the Croatian Democratic Alliance withdrew its members from the Bosnian Parliament. The Bosnian Parliament then rejected the Owen-Stoltenberg Plan while seeking further negotiations on the Muslim state’s territory and clarifications on the international status of Bosnia and Herzegovina.

The next plan, developed with the more proactive participation of the United States and bringing together again the Croats and Muslims into a federation of their own, was signed in Washington on 18 March 1994 following the Sarajevo cease-fire of 17 March. On 31 March 1994 the Bosnian assembly in Sarajevo approved the new constitutional provisions establishing a Federation of Muslims and Croats with the presidency to alternate between Croats and Muslims. The Geneva contact group (United States, United Kingdom, France, Germany, Russia) agreed on a new partition plan in July 1994 that divided Bosnia and Herzegovina: 51% to the joint Muslim-Croat federation and 49% to the Serbs.

Under the Dayton Accords, a constitution for Bosnia and Herzegovina was established that recognized a single state with two constituent entities. The Federation of Bosnia and Herzegovina (FBH) incorporated the 51% of the country with a Bosnian Muslim and Bosnian Croat majority, while the Republika Srpska (RS) occupied the 49% of the country with a Bosnian Serb majority. The constitution specified a central government with a bicameral legislature, a three-member presidency comprised of a member of each major ethnic group, a council of ministers, a constitutional court, and a central bank. The bicameral Parliamentary Assembly consists of a House of Peoples, with 15 delegates, and the House of Representatives, with 42 members. In each house, two-thirds of the representatives are from the Federation of Bosnia and Herzegovina and one-third from the Republika Srpska.

As a result of the Dayton Accords, Bosnia and Herzegovina is administered in a supervisory role by a High Representative chosen by the UN Security Council. As of 2005, that representative was Paddy Ashdown.

Elections for central and federation-level canton offices were conducted on 14 September 1996 as specified by the Dayton Accords. Alija Izetbegović, Momcilo Krajisnik, and Kresimir Zubak were elected to the presidency representing respectively the Bosniaks (Muslims), Serbs, and Croats. Izetbegović was named Chair in accordance with the new constitution. Krajisnik, later accused of joining Karadzic in siphoning off million of dollars in potential tax revenue through gasoline and cigarette monopolies, boycotted the council after one meeting, paralyzing the government.

Izetbegović was reelected to the Muslim seat of the joint presidency in the September 1998 elections; Ante Jelavic won the Croat seat; and Zivko Radisic, the Serb seat. An eight-month chairper-

sonship rotates among the three joint presidents. Elections were held in 2002. Sulejman Tihić won the Muslim seat; Dragan Cović, the Croat seat; and Mirko Sarović, the Serb seat. In April 2003, Sarović resigned following a report by Western intelligence agencies regarding an affair involving illegal military exports to Iraq and allegations of spying on international officials. He was replaced by Borislav Paravac. In March 2005, High Representative Paddy Ashdown removed Dragan Cović from the presidency, who faced corruption charges. He was replaced by Ivo Miro Jović.

The FBH government has a president and a bicameral parliament (House of Representatives and House of Peoples). The RS government has a president and a unicameral legislature (National Assembly). As a result of a 2002 constitutional reform process, an RS Council of Peoples was established in the RS National Assembly. In 2003, High Representative Paddy Ashdown abolished the Supreme Defense Council of the RS, and altered the constitutions of the RS and FBH, removing all reference to statehood from both.

## 14 POLITICAL PARTIES

Three main political parties wield significant political power at all levels of government. The Serb Democratic Party (SDS) dominates the Republika Srpska, the Party of Democratic Action (SDA) is the main Bosniak (Muslim) nationalist party, and the Croatian Democratic Union of Bosnia and Herzegovina (HDZ) represents Croat areas. However, a reformist party, the Social Democratic Party (SDP) in the FBH is gaining in popularity. Other parties include: Party for Bosnia and Herzegovina (SBIH); Civic Democratic Party (GDS); Croatian Peasants’ Party of BiH (HSS); Croat Christian Democratic Union of Bosnia and Herzegovina (HKDU); Croat Party of Rights (HSP); Independent Social Democratic Party (SNSD); Liberal Bosniak Organization (LBO); Liberal Party (LS); Muslim-Bosniak Organization (MBO); Republican Party of Bosnia and Herzegovina (RP); Serb Civic Council (SGV); Socialist Party of Republika Srpska (SPRS); Serb Radical Party (SRS); Democratic Socialist Party (DSP); Social Democrats of Bosnia Herzegovina; Party for Democratic Progress (PDP); National Democratic Union (DNZ); Social Democratic Union (SDU); Serb National Alliance (SNS); and the Coalition for a United and Democratic BiH (coalition of SDA, SBIH, LS, and GDS). Parliamentary elections were held on 5 October 2002, and seats in the House of Representatives were distributed as follows: SDA, 10 seats; the SBiH, 6 seats; the SDS, 5 seats; HDZ, 5 seats; the SDP, 4 seats; the SNSD, 3 seats; the PDP, 2 seats; and 6 other parties took 1 seat each.

## 15 LOCAL GOVERNMENT

Bosnia and Herzegovina is divided into the Federation of Bosnia and Herzegovina (FBH) and the Republika Srpska (RS). The FBH is further divided into 10 cantons: Goražde, Livno, Middle Bosnia, Neretva, Posavina, Sarajevo, Tuzla Podrinje, Una Sana, West Herzegovina, and Zenica Doboje. There are also municipal governments. Brčko district, in northeastern Bosnia, is an administrative unit under the sovereignty of Bosnia and Herzegovina; it is not

part of either the RS or the FBH, and the district remains under international supervision.

## 16 JUDICIAL SYSTEM

The 1995 Dayton Accords established a constitution including a Constitutional Court composed of nine members. The Constitutional Court's original jurisdiction lies in deciding any constitutional dispute that arises between the FBH and the RS or between Bosnia and Herzegovina and one or both of the FBH and the RS. The Court also has appellate jurisdiction within the territory of Bosnia and Herzegovina. The constitution provides for an independent judiciary, although it is subject to influence by nationalist elements, political parties, and the executive branch. Original court jurisdiction exists in both municipal and cantonal courts (10 in the FBH); the RS has 5 municipal courts and district courts. Appeals in the FBH are taken to the Federation Supreme Court, and in the RS to the RS Supreme Court. The constitution provides for open and public trials. The legal system is based on civil law system.

## 17 ARMED FORCES

As of 2005, the armed forces of Bosnia and Herzegovina (BiH) consisted of 24,672 active personnel, of which the army is the largest service with 16,400. However, the country is composed of two political entities: the Muslim and Croat-based Federation of Bosnia and Herzegovina and the Serb-based Republika Srpska. As a result, the country's armed forces, as well as its equipment, are divided between the two entities. In December 2003, the Bosnian parliament passed a law that established a chain of command that went from the State Presidency to the Ministry of Defense, then to the Joint Staff, then to a joint Operational Command, and from there, down to the armed forces of each entity. In 2005, the Federation Army (excluding 40,000 reservists) had 16,400 active personnel, supported by 188 main battle tanks, 35 armored infantry fighting vehicles, 129 armored personnel carriers, and more than 946 artillery pieces. The Army of the Republika Srpska had 8,200 active personnel and 20,000 reservists. Equipment included 137 main battle tanks, 74 armored infantry fighting vehicles, 74 armored personnel carriers, and 500 artillery pieces. The (Serb) air wing includes 14 combat capable aircraft, of which there are 13 fighter ground attack aircraft. Under the Dayton Peace Accord (1995) and the Common Defence Policy (2001) the armed forces are being reduced. Defense spending in 2005 totaled \$143 million.

## 18 INTERNATIONAL COOPERATION

Bosnia and Herzegovina was admitted to the United Nations on 22 May 1992 and serves in several specialized agencies, such as the FAO, IAEA, UNESCO, UNIDO, and WHO. The country is an observer in the WTO. Bosnia and Herzegovina joined the OSCE on 30 April 1992. The country is also a member of G-77, the Council of Europe, the Southeast Europe Cooperation Initiative (SECI), and the Central European Initiative. Bosnia and Herzegovina is an observer in the OAS and the OIC. The country is part of the Nonaligned Movement and has supported UN efforts in Ethiopia and Eritrea (est. 2000) and the DROC (est. 1999). Diplomatic relations with Croatia, Albania, and Serbia and Montenegro have

been stable since the signing of Dayton Accords (1995). In environmental cooperation, Bosnia and Herzegovina is part of the Basel Convention, the Convention on Long-Range Transboundary Air Pollution, Ramsar, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Convention on the Law of the Sea and Climate Change.

## 19 ECONOMY

Before the war, Bosnia and Herzegovina ranked next to Macedonia as the poorest republic of the former Yugoslav SFR. Although industry accounted for over 50% of GDP, Bosnia and Herzegovina was primarily agricultural. Farms were small and inefficient, thus necessitating food imports. Industry was greatly overstaffed, with Bosnia and Herzegovina accounting for much of the former Yugoslav SFR's metallic ore and coal production. Timber production and textiles also were important.

The destructive impact of the war on the economy led to a 75% drop in GDP. Since the Dayton Accords of 1995, trade increased in Croat areas, and significant growth began in Muslim areas. Reconstruction programs initiated by the international community financed the construction of infrastructure and provided loans to the manufacturing sector. External aid amounted to \$5 billion between 1995–99. This aid caused growth rates to increase to 30%, but as of 2003, that rate had stabilized to around 6%. Actual GDP growth by that year had reached half its prewar level.

Privatization has been slow and Western financial organizations are increasing calls for reform in this area, especially in telecommunications and energy. (The private sector accounts for only 35% of the economy.) Foreign direct investment remains low, due in part to corruption and many layers of bureaucracy. Tax reform is needed, as is reform of the banking industry and the financial services sector. In 2002, the government adopted a poverty reduction strategy designed to create more jobs and increase exports. As foreign aid declines in coming years, Bosnia and Herzegovina will need to increase exports to generate hard currency revenues. Some progress was made in this area in 2001 with exports of clothing, furniture, and leather goods.

The economic rate of recovery has been spectacular and encouraging in subsequent years. Thus, the GDP growth rate improved from 5.6% in 2002, to 7.0% in 2003, and 8.3% in 2004; it was expected to grow even further, at 9.5%, in 2005. Unemployment, similar to most former Yugoslav republics, save Slovenia, remains a major problem. In 2004, the unemployment rate was 44%, although many of the officially jobless are thought to be working within the grey economy. Inflation has decreased to insignificant levels (0.8% in 2004), and it may pose a problem to the country's export sector.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Bosnia and Herzegovina's gross domestic product (GDP) was estimated at \$28.3 billion. Bosnia has a large informal sector that could also be as much as 50% of official GDP. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$6,800. The annual growth rate of GDP was esti-

mated at 5.2%. The average inflation rate in 2005 was 1.4%. It was estimated that agriculture accounted for 14.2% of GDP, industry 30.8%, and services 55%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.178 billion or about \$307 per capita and accounted for approximately 16.9% of GDP. Foreign aid receipts amounted to about \$130 per capita.

The World Bank reports that in 2003 household consumption in Bosnia and Herzegovina totaled \$6.4 billion or about \$1,670 per capita based on a GDP of \$7.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

It was estimated that in 2004 about 25% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in 2002 numbered 1.026 million. As of end 2004, the official unemployment rate stood at an estimated 45.5%. However, the actual unemployment rate may be between 25% and 30%, due to the so-called "gray economy." There is no data available as to the occupational breakdown of the Bosnian work force.

All workers are legally entitled to form or join unions and to strike, but labor activity is limited due to high unemployment rates and economic hardship. Unions are highly politicized and are formed along ethnic lines. Strikes were used frequently in 2001 as a form of protest against arrears in salaries and overdue wages.

The minimum employment age in the Bosnian-Croat Federation and the Republika Srpska entities is 15. However, many younger children often assist with family agricultural work and minors between the ages of 15 and 18, in order to work, must provide a valid health certificate. As of 2005, the minimum wage was \$193 per month in the Federation and \$51 in Republika Srpska. The legal workweek in both entities is 40 hours, although seasonal workers may work up to 60 hours per week. Laws in both entities require a 30-minute rest period during the work day. Safety and health regulations are generally ignored due to the economic devastation of war.

## 22 AGRICULTURE

About 21.3% (1,030,000 hectares/2,545,000 acres) of the total area was considered arable land in 2002. About 4% of the economically active population was engaged in agriculture in 2003. During the disintegration of Yugoslavia, civil fighting in the major agricultural areas often interrupted harvests and caused considerable loss of field crops. Principal crops harvested in 2004 included (in 1,000 tons): corn, 800; wheat, 250; potatoes, 350; fruit, 157; oats, 55; and rye, 12.

## 23 ANIMAL HUSBANDRY

There are some 1.2 million hectares (three million acres) of permanent pastureland, representing about 23.5% of the total land area. Because of the breakup of Yugoslavia and subsequent civil war, the livestock population fell significantly during the 1990s. In 2004, the livestock inventory included (in 1,000s): sheep, 670; cattle, 440; pigs, 300; horses, 18; and chickens, 4,700.

Production of meat fell from 158,000 tons in 1990 to 24,000 tons in 1999, and amounted to 32,300 tons in 2004. In 2004, milk

production was 460,000 tons; egg production was 15,100 tons during that time.

## 24 FISHING

With no ports on its 20 km (12 mi) of Adriatic coastline, marine fishing is not commercially significant. Inland fishing occurs on the Sava, Una, and Drina Rivers. The total catch in 2003 was 8,635 tons, 77% from inland waters.

## 25 FORESTRY

About 2.7 million hectares (6.7 million acres) are forested, accounting for nearly 53% of the total land area. Much of the output is used for fuel. In 2003, forest product imports totaled \$24 million; exports, \$65.3 million.

## 26 MINING

Bosnia and Herzegovina's mineral resources include iron ore, lead, zinc, manganese, and bauxite. Iron ore production was centered in Varescaron, Jablanica, Ljubija, and Radovan; lead and zinc ore was mined at Olovo, Varescaron, and Srebrenica; manganese ore operations were centered at Bosanska Krupa; bauxite deposits were worked at Vlasenica, Zvornik, and Banja Luka; substantial nickel deposits had been worked near Visegrad; and substantial nickel deposits had been worked near Visegrad. Energoinvest operated a lead-zinc mine at Srebrenica, a manganese mine at Buzim, bauxite mines in many locations, alumina plants at Birac-Zvornik and Mostar, an aluminum smelter at Mostar, and a petroleum refinery at Bosanski Brod. Before the civil war, Bosnia and Herzegovina was a major center for metallurgical industries in the former Yugoslavia and a major producer of bauxite, alumina, and aluminum. Mineral production in 2003 were, in metric tons: iron ore, 126,929; bauxite, 229,317; lead, (none reported for 2003); zinc, (none reported for 2003); salt, 84,000; crude gypsum, 77,500; ceramic clay, 35,861; and ornamental stone, 35,800 sq m. Other nonfuel mineral resources included asbestos, barite, bentonite, kaolin, lime, magnesite, ammonia nitrogen, glass sand, sand and gravel, soda ash, caustic soda, and crushed and brown stone. Capacity utilization in industrial minerals mining has fallen and modernization and privatization were essential for long-term viability.

## 27 ENERGY AND POWER

As of 2002, total electrical capacity was 3.950 million kW. Generation for that year amounted to 10.401 billion kWh, of which 5.215 billion kWh was hydroelectric and 5.186 billion kWh were produced by conventional thermal plants. Electrical generation was irregular during the civil conflict of the early to mid-1990s. Total electricity consumption in 2000 was 2.6 billion kWh. In 2002, consumption had risen to 8.559 billion kWh.

Brown coal and lignite mines are located around Tuzla. Coal production is consumed primarily by the country's thermal electric power stations. A petroleum refinery at Bosanski Brod reportedly had an annual capacity of 100 million tons in 1995, and depends entirely on imports; however, the refinery was extensively damaged in April 1993 during local fighting.

## 28 INDUSTRY

Mining and mining-related activities make up the bulk of Bosnia and Herzegovina's industry. Steel production, vehicle assembly,

textiles, tobacco products, wooden furniture, and domestic appliances are also important industries. Industrial capacity, largely damaged or shut down in 1995 because of the civil war, has increased. In 1998, industrial production grew an estimated 35%. Nevertheless, this figure remains lower than the pre-1992 rate, and in 2001, output stood only about half its prewar level. In the Republika Srpska, the Serb Democratic Party controls every significant production facility, government department, and state institution. Privatization began in 1999, but as of 2001, only 7 of 138 strategic enterprises had been sold. Large gains were made in the export of clothing, furniture, and leather goods in 2001. The construction sector in 2002 held promise for growth, as projects to improve infrastructure were underway.

Industrial production growth in 2004 was outpaced by the GDP growth rate, reaching only 5.5%, as opposed to 8.3%. This is an indicator that industry was outperformed by the services sector, which contributed 55% to the overall GDP; industry came in second with a 30.8% share in the GDP composition; agriculture contributed 14.2%. The industrial output growth seemed to recover in 2005, with strong performances by the manufacturing and mining sectors.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Scientific and engineering education is provided at the universities of Sarajevo, Banja Luka, and Tuzla (founded in 1948, 1975, and 1976, respectively). The Institute for Thermal and Nuclear Technology, founded in 1961, is located in Sarajevo. Leading professional groups include the Society of Mathematicians, Physicists and Astronomers, the Union of Engineers and Technicians, and the Medical Society of Bosnia and Herzegovina, all headquartered in Sarajevo.

## 3<sup>0</sup> DOMESTIC TRADE

Bosnia and Herzegovina is still struggling with efforts to move from socialism to private sector, market-led capitalism. Commerce has been severely restricted by the ongoing interethnic civil strife. In the Bosnian Serb area, senior police commanders and officials in the governing Serb Democratic Party have a monopoly on cigarette and gasoline sales. Retail establishments tend to be very small with limited inventories; however, some large shopping centers are gaining ground. Direct marketing and sales are also gaining in popularity. Installment plans and financing, even for very low cost items, is common, since credit is not widely available or accepted.

Though postwar reconstruction is nearly complete, as of 2002, the country's economy still depended heavily on foreign aid. With the establishment of the Central Bank and currency board in 1997, inflation has since been brought under control; however, unemployment is still high, at about 40% in 2002. As of 2002, the private sector only accounts for about 35% of the economy.

## 3<sup>1</sup> FOREIGN TRADE

Due to the UN trade embargo, international trade with Bosnia and Herzegovina was limited during the civil war. In 2000, exports amounted to nearly \$1 billion, up from less than \$400 million in 1998. Clothing, furniture, and leather goods led this upswing in export revenues. Exports went mainly to Italy, Yugoslavia, and Switzerland. Imports in 2000 totaled \$3.6 billion, with Croatia, It-

aly, and Slovenia supplying 21%, 16%, and 14% of the total value, respectively.

Before the war, manufactured goods accounted for 31% of exports; machinery and transport equipment, 20.8%; raw materials, 18%; other manufactured products, 17.3%; chemicals, 9.4%; fuel and lubricants, 1.2%; and food and live animals, 1.2%. Fuels and lubricants made up 32% of annual imports before the war; machinery and transport equipment, 23.3%; other manufactured items, 21.3%; chemicals, 10%; raw materials, 6.7%; food and live animals, 5.5%; and beverages and tobacco, 1.9%.

Exports totaled \$1.7 billion (FOB—Free on Board) in 2004, and mainly went to Italy (22.3%), Croatia (21.1%), Germany (20.8%), Austria (7.4%), Slovenia (7.1%), and Hungary (4.8%). Base metals topped the list of exports, with 24.9% of total exports; followed by wood and wood products (15.2%); mineral products (11.8%); and chemicals (7.5%). Imports were more than three times as high as exports, at \$5.2 billion, and mainly came from Croatia (23.8%), Slovenia (15.8%), Germany (14.8%), Italy (11.4%), Austria (6.6%), and Hungary (6.1%). The most import import commodities were machinery (15.5%), mineral products (12.7%), foodstuffs (11.7%), and chemicals (9.4%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Bosnia and Herzegovina's exports was \$1.1 billion while imports totaled \$3.1 billion resulting in a trade deficit of \$2 billion. The International Monetary Fund (IMF) reported that in 2001 Bosnia and Herzegovina had exports of goods totaling \$1.17 billion and imports totaling \$3.92 billion. The services credit totaled \$288 million and debit \$228 million. Although Bosnia and Herzegovina runs large trade deficits, due to low domestic production, the gap between imports and exports in the early 2000s was narrowing steadily. Export growth in 2001 was fueled by duty-free access of Bosnian exports to the EU.

Exports of goods and services totaled \$2.1 billion (FOB—Free on Board) in 2004, up from \$1.5 billion in 2003. Imports grew from \$5.6 billion in 2003, to \$6.7 billion in 2004. The resource balance was on a negative upsurge, growing from -\$4.1 billion in 2003, to a whopping -\$4.6 billion in 2004. A similar trend was registered for the current account balance, which deteriorated from

-\$1.7 billion in 2003, to -\$1.9 billion in 2004. The national reserves (including gold) were \$1.8 billion in 2003, covering approximately 4 months of imports; in 2004, they grew to \$2.4 billion.

**33 BANKING AND SECURITIES**

The central bank of Bosnia and Herzegovina is the National Bank of Bosnia and Herzegovina. In June 1992 Yugoslavia's central bank refused to issue Yugoslavian dinars in Bosnia and Herzegovina. Commercial banks in the country include Privredna Banka Sarajevo, Hrvatska A Banka d.d. Mostar, and Investiciono-Komercijalna Banka d.d. Zenica.

In 1996, Croatian dinars were used in Croat-held areas for currency, presumably to be replaced by new Croatian kuna. Old and new Serbian dinars were used in Serb-held areas. Hard currencies, such as the deutschmark, supplanted local currencies in areas held by the Bosnian government. In April 1997 the presidential council agreed on a single currency, the konvertibilni marka (KM), for both the Muslim/Croat and Bosnian Serb parts of the country.

Bank privatization is problematic, but improving. Some of the state-owned banks targeted for privatization were actually privatized during the war. Many are considered insolvent, but in 2001, individual bank deposits in Federation banks were up 178%. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.2 billion.

**34 INSURANCE**

No recent information is available.

**35 PUBLIC FINANCE**

The US Central Intelligence Agency (CIA) estimated that in 2005 Bosnia and Herzegovina's central government took in revenues of approximately \$4.3 billion and had expenditures of \$4.4 billion.

Revenues minus expenditures totaled approximately -\$28 million. Total external debt was \$3.1 billion.

**36 TAXATION**

Current information is unavailable due to civil unrest.

**37 CUSTOMS AND DUTIES**

Bosnia has signed free trade agreements with Croatia, Serbia and Montenegro, and Slovenia. Tariff rates for imports from other countries are zero, 5% or 10%, depending on the good, with consumption and luxury goods generally receiving the higher rates.

**38 FOREIGN INVESTMENT**

Private investment plummeted during the civil war, when UN sanctions were in force. The conclusion of the Dayton Peace Accords in 1995 brought positive changes in the investment climate. In May 1998, a law on foreign direct investment (FDI) was passed and in June 1998, a law on privatization. While privatization of small and medium enterprises made good progress, the state of larger strategic firms has progressed more slowly. As of spring 2002, only 7 of 138 large state-owned enterprises had been sold and only 35% of the economy had been privatized. The largest foreign sale was the Zenica Steel Mill, which became the BH Steel Company in a joint venture with Kuwait Consulting and Investment Company (KCIC) in which both sides put up \$60 million (KCIC paid \$12 million in 1999 and took over \$48 million of debt).

In 1997, only \$1 million of FDI flowed into Bosnia and Herzegovina, but this jumped to \$54.6 million in 1998 and then to \$148.8 million in 1999. A decline occurred in 2001 to \$131.5 million (when riots broke out in two Republika Srpska towns over the rebuilding of mosques), but the numbers recovered to \$164 million. The overwhelming majority of foreign investment into Bosnia and Herzegovina comes from aid groups and international financial institutions.

From 1994 to 2002, over half (55.5%) of FDI was in manufacturing, thanks primarily to the BH Steel Company venture. Banking has received 16.5% (mainly from Dubai, Austria, and Croatia); services, 6.8%; trade, 6.2%; transport, 0.9%; and tourism, 0.7%.

Previous years have seen Bosnia and Herzegovina take on major changes in an attempt to attract foreign investors. A liberal State Foreign Investment Policy Law, a common currency, and a more streamlined trade and customs policy were some of the most noteworthy attempts to increase capital inflows. However, these efforts failed to bring about the desired result—an indicator that more changes of the legal framework and business environment have to be undertaken. Foreign investments totaled around \$1.9 billion in 2003. In the first nine months of 2004, \$367 million in FDI came into the country, with 60% of these inflows going to the banking sector.

**39 ECONOMIC DEVELOPMENT**

Following the 1995 peace agreement, economic assistance was expected to lay the groundwork for a revival of the economy. The actual distribution of assistance to particular entities or areas was tied to the government's compliance with the Dayton Accords. Into 2005, privatization and reconstruction were ongoing. The absence of a single market in Bosnia and Herzegovina is an obstacle to economic development, as is the lack of legal certainty and a

high degree of bureaucratization. A central bank was established in 1997, and a new currency launched in 1998. Successful debt negotiations have been held with the London Club and the Paris Club.

In 2004, Bosnia and Herzegovina scored an important increase in economic output, but the GDP was still below prewar levels. Apart from a series of systemic and political problems, the country has to fight rampant unemployment, a large underground economy, and an inflation level that was not helping the already low export levels. However, one of Bosnia's long-term goals is EU integration. A series of planned privatizations and restructurings in the energy, transportation, telecommunication, and construction sectors were expected to jump-start the economy and create a circle of cumulative causations that will attract future investments in the future.

#### 40 SOCIAL DEVELOPMENT

Social welfare systems have been in crisis since the wars of the 1990s. International efforts are in place to shift from humanitarian aid to a sustainable social welfare system. There is also an effort to reformulate disability pensions.

Although gender discrimination is proscribed by the 2003 Law on Gender Equality, the extent of legal and social discrimination against women varies by region. Women in urban areas pursue professional careers in such areas as law, medicine, and academia, while their rural counterparts are often relegated to the margins of public life. Violence against women remains underreported and there are accounts of police inaction in domestic situations. It was estimated in 2004 that over 25% of families experiences domestic violence. The problem is more significant in rural areas, and is exacerbated by poverty and alcoholism. Trafficking of women remains a major problem in the region.

All sides were guilty of human rights atrocities in the war and its aftermath. By 1995, it was estimated that up to two-thirds of the country's prewar population have become refugees or displaced persons. Women were targeted for cruel treatment during the war, and Serb forces systematically used rape as a tool to accelerate ethnic cleansing. The worst single incident of genocide in Europe since World War II occurred in the Bosnian "safe haven" of Srebrenica in 1995. Over 7,000 men and boys were massacred at Srebrenica. As of 2005, many if not most of the perpetrators of these vicious acts remain unpunished.

Human rights abuses have continued in the political entities established by the 1995 Dayton Peace Accords. Discrimination and harassment of minority ethnic groups remain a huge problem in all regions. There are widespread reports of police brutality and corruption, and prison standards are poor. However, human rights groups are able to operate without government restrictions.

#### 41 HEALTH

There were over 200,000 war-related deaths in the 1990s (120,000 in 1992 alone) and many Bosnians were permanently disabled. Besides causing hundreds of thousands of deaths and injuries, the Bosnian war destroyed much of the health care infrastructure. Many hospitals were destroyed and infant mortality rates increased.

In 2005, the average life expectancy was 78 years. The infant mortality rate was 11 deaths per 1,000 live births in that year. In

2002 the birth rate was estimated at 13 per 1,000 people and the death rate was 8 per 1,000. In 1999, an estimated 83% of children under one had a measles vaccination and 90% of children were immunized for diphtheria. In 1999, there were 87 cases of tuberculosis per 100,000 people.

Salaries for health care providers are low, and medical equipment is outdated. As of 2004, there were an estimated 134 physicians, 411 nurses, 16 dentists, and 9 pharmacists per 100,000 people. Primary care is provided through health centers (*dom zdravljas*) and outpatient branches called *ambulantas*. As of 1999 there were 87 *dom zdravljas* in the Bosnian Federation, staffed by general practitioners and nurses, providing primary care, preventive care, health education, and rehabilitation. Among the secondary and tertiary care facilities in the Republika Srpska is one in Banja Luka that has 1,327 beds and one in Sarajevo with 776 beds. The country has five medical schools. Health expenditure was estimated at 8% of GDP.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 900 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

#### 42 HOUSING

There is a chronic housing shortage in Bosnia and Herzegovina, since a majority of all homes, and even a few entire towns, were destroyed during the civil war in the period 1992–1995. Over two million people were forced from their homes during that time and about 65% of the housing stock was destroyed or seriously damaged. Since 1998, over 100,000 housing units have been repaired in some way, but many existing homes are still in serious need of repair and utilities are not always available. With the help of international assistance programs, only about half of the nation's refugees and displaced residents were able to return to their homes by 2001.

#### 43 EDUCATION

Before the Bosnian war of the early 1990s, the area covered by present-day Bosnia and Herzegovina had 641 primary and 243 secondary schools. By 1996, these totals had been reduced to 270 primary and 141 secondary schools. There were fewer than 200,000 primary pupils, taught by 8,000 teachers, and 65,500 secondary students, with 4,100 teachers.

Education at the elementary level is free and compulsory for students between the ages of 6 and 15. At the secondary level, children have the option to take up general education (gymnasium), vocational, or technical. General secondary lasts for four years and qualifies the students for university education. In 2001 the government began a modernization program for primary and secondary education, covering curriculum, special needs education, in-service teacher training, and other areas. The academic year runs from October to July. The languages of instructions are Croatian and Serbian. Education is administered by the Ministry of Education, Science, Culture and Sports. Each of the country's 10 cantons also has its own education ministry.

There are four main universities: the University of Banja Luka (founded in 1975); the University of Mostar (founded in 1977); the University of Tuzla (founded in 1976); and the University of Sarajevo (founded in 1949), which offers programs in the social

sciences, humanities, sciences, medicine, law, and engineering. Several other academies have been founded throughout the country since 1993. The adult literacy rate for 2004 was estimated at about 95.6%, with 98.4% for males and 91.1% for females.

#### 44 LIBRARIES AND MUSEUMS

Numerous historic sites have been damaged by war, including the National and University Library of Bosnia and Herzegovina, which sustained major damage and a large loss of materials in a 1992 bombing. Outside groups, such as UNESCO, have since been working to rebuild the National Library. In Banja Luka, there is an important university and public library founded in 1936, and holding 226,000 volumes with an impressive collection of Eastern manuscripts. The University of Sarajevo also housed an impressive library, but it was badly damaged during the civil war. The National Museum of Bosnia and Herzegovina has a library with 162,000 volumes.

Prior to the 1992 war, Sarajevo was a major cultural center in the Balkans. It still hosts nearly a dozen museums, including the Museum of the Old Orthodox Church, the Museum of Young Bosnia, the State Museum, and the Museum of the City of Sarajevo, as well as Bosnia's National Museum. In the provinces are the Museum of the National Struggle for Liberation in Jajce and the Museum of Herzegovina in Mostar.

#### 45 MEDIA

In general, the telephone and telegraph network is in need of modernization and expansion. Service in many urban centers is said to be below the level of other former Yugoslav republics. In 2003, there were an estimated 245 mainline telephones for every 1,000 people. The same year, there were approximately 274 mobile phones in use for every 1,000 people.

There are over 200 commercial radio and television stations, but the most influential stations are those operated by the Public Broadcasting Service of Bosnia-Herzegovina and Serb Republic Radio-TV. In 2003, there were an estimated 243 radios for every 1,000 people. The number of television sets in use was unavailable in the same survey. Also in 2003, about 26 of every 1,000 people reported having access to the Internet. There were 15 secure Internet servers in the country in 2004.

In Sarajevo, the daily newspaper *Oslobodjenje* (*Liberation*) managed to publish continuously throughout the siege of that city despite power and phone line outages, newsprint shortages, and direct attacks on its offices. Founded in 1943 as a Nazi resistance publication, *Oslobodjenje*, which is published in Serbo-Croatian, had a circulation of 56,000 in 2002. In 1993, two of its editors received international recognition from the *World Press Review*.

The constitution signed in Dayton, Ohio, on 21 November 1995, provides for freedom of speech and the press. However, the extreme ethnic segregation in various regions is reported to put the media in each area under considerable regional restrictions. The development of independent media is beginning to be implemented, through the sponsorship of private organizations, cultural societies, and political parties, along with Western aid organizations.

#### 46 ORGANIZATIONS

The Bosnia and Herzegovina Chamber of Commerce promotes trade and commerce in world markets. There are some professional associations, particularly those representing medical professionals in specialized fields.

There are over a dozen learned societies in Bosnia and Herzegovina. Research institutions in the country are concentrated in the areas of nuclear technology, meteorology, historical monument preservation, and language.

Youth organizations include the Student Union of Bosnia and Herzegovina and the Council of Scout Associations. There are a number of sports associations, including those dedicated to such favorite pastimes as tennis, skating, and handball. There is also an active committee of the Special Olympics.

There is a national chapter of UNICEF and the Red Cross Society. Volunteer service organizations, such as the Lions Clubs International, are also present.

#### 47 TOURISM, TRAVEL, AND RECREATION

Civil war has limited the development of a tourism industry in Bosnia and Herzegovina. Sarajevo, the capital city, is growing as a tourist attraction. The city was the site of the 1984 Winter Olympics. In 2003, there were about 165,000 tourist arrivals. Tourist receipts totaled \$258 million.

According to the US Department of State, the cost of staying in Sarajevo in 2005 was about \$172 per day.

#### 48 FAMOUS BOSNIANS AND HERZEGOVINIANS

Dr. Alija Izetbegović (1925–2003) was the president of Bosnia and Herzegovina from 1991–96, and was a member of the three-man presidency from 1996–2000 until he stepped down due to ill health. Dzemal Bijedic (1917–1977) was a leader of Yugoslavia from 1971 until 1977, when he was killed in a plane crash. The 1914 assassination of the Austrian Archduke Franz Ferdinand in Sarajevo led to WW I.

#### 49 DEPENDENCIES

Bosnia and Herzegovina has no territories or colonies.

# BULGARIA

Republic of Bulgaria

*Republika Bulgariya*

**CAPITAL:** Sofia (Sofiya)

**FLAG:** The flag is a tricolor of white, green, and red horizontal stripes.

**ANTHEM:** *Bulgariya mila, zemya na geroi* (*Dear Bulgaria, Land of Heroes*).

**MONETARY UNIT:** The lev (LV) of 100 stotinki has coins of 1, 2, 5, 10, 20, and 50 stotinki and 1 and 2 leva, and notes of 1, 2, 5, 10, 20, 50, and 100 leva. LV1 = \$0.64103 (or \$1 = LV1.56) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Days, 1–2 May; Education and Culture Day, 24 May; Christmas, 24–25 December.

**TIME:** 2 PM=noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Part of the Balkan Peninsula, Bulgaria has an area of 110,910 sq km (42,822 sq mi), and extends 330 km (205 mi) N–S and 520 km (323 mi) E–W. Comparatively, the area occupied by Bulgaria is slightly larger than the state of Tennessee. Bulgaria is bounded on the N by Romania, on the E by the Black Sea, on the SE by Turkey, on the S by Greece, and on the W by Macedonia and Serbia, with a total boundary length of 1,808 km (1,123 mi).

Bulgaria's capital city, Sofia, is located in the west central part of the country.

## <sup>2</sup> TOPOGRAPHY

Bulgaria consists of a number of roughly parallel east–west zones. They are the Danubian tableland in the north, the Balkan Mountains (Stara Planina) in the center, and the Thracian Plain, drained by the Maritsa River, in the south. The Rhodope, Rila, and Pirin mountains lie in the southwestern part of the country. The average elevation is 480 m (1,575 ft), and the highest point, in the Rila Mountains, is the Musala, at 2,925 m (9,596 ft). The Danube (Dunav), Bulgaria's only navigable river, forms most of the northern boundary with Romania. Located along the Eurasian Tectonic Plate, the country does experience some low-level magnitude earthquakes.

## <sup>3</sup> CLIMATE

Bulgaria lies along the southern margins of the continental climate of Central and Eastern Europe. Regional climatic differences occur in the Danubian tableland, exposed to cold winter winds from the north, and the Thracian Plain, which has a modified Mediterranean climate and is protected by the Balkan Mountains against the northern frosts. January temperatures are between 0° and 2°C (32–36°F) in the lowlands but colder in the mountains; July temperatures average about 22° to 24°C (72–75°F). Precipitation is fairly regularly distributed throughout the year and amounts to an average of 64 cm (25 in.).

## <sup>4</sup> FLORA AND FAUNA

As of 2002, there were at least 81 species of mammals, 248 species of birds, and over 3,500 species of plants in the country. In the northeast lies the typical steppe grassland zone of the Dobrudja, merging into the wooded steppe of the Danubian tableland. Most trees in this area have been cut down to make room for cultivated land. The Balkan Mountains are covered by broadleaf forests at lower altitudes and by needle-leaf conifers at higher elevations. The vegetation of the Thracian Plain is a mixture of the middle-latitude forest of the north and Mediterranean flora. Deforestation has reduced the amount of wildlife, which includes bears, foxes, squirrels, elks, wildcats, and rodents of various types. Fish resources in the Black Sea are not extensive.

## <sup>5</sup> ENVIRONMENT

Bulgaria's air pollution problem results from the combined influence of industry and transportation. In the mid-1990s, Bulgaria was among the 50 countries with the highest industrial emissions of carbon dioxide, producing 54.3 million metric tons, or 6.08 metric tons per capita. In 1996, the total was 55.2 million metric tons. Industrial pollutants, especially from metallurgical plants, are responsible for damage to 115 sq mi of land in Bulgaria. Bulgaria's rivers and the Black Sea are seriously affected by industrial and chemical pollutants, raw sewage, heavy metals, and detergents. However, nearly 100% of the population have access to safe drinking water.

Twenty-five percent of Bulgaria's forests have been significantly damaged by airborne pollutants. In 2000, about 33.4% of the total land area was forested. Only 4.5% of the country's total land area is protected, including the Pirin National Park and the Srebarna Nature Reserve, which are both natural UNESCO World Heritage Sites. There are 10 Ramsar wetland sites.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 12 types of mammals, 11 species of birds, 2 types of reptiles, 10 species of fish, and 11 other inverte-

brates. Endangered species in Bulgaria include the Rosalia long-horn, Atlantic sturgeon, and slender-billed curlew.

## 6 POPULATION

The population of Bulgaria in 2005 was estimated by the United Nations (UN) at 7,741,000, which placed it at number 94 in population among the 193 nations of the world. In 2005, approximately 17% of the population was over 65 years of age, with another 14% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be -0.5%, a rate the government viewed as too low. With one of the lowest fertility rates in the world, Bulgaria has experienced population declines since 1990. The projected population for the year 2025 was 6,565,000. The population density was 70 per sq km (181 per sq mi).

The UN estimated that 70% of the population lived in urban areas in 2005, and that urban areas were declining in population at an annual rate of -0.31%. The capital city, Sofia (Sofiya), had a population of 1,076,000 in that year. Other large cities include Plovdiv, 715,904; Varna, 320,668; Burgas, 259,985; Ruse, 266,213; and Stara Zagora, 167,708.

## 7 MIGRATION

Emigration between 1948 and 1951 consisted mainly of Jews going to Israel and Turks going to Turkey. A high of 99,477 (of whom 98,341 were Turks) was reached in 1951. Most of the emigrants since the 1950s have been Turks bound for Turkey or other Balkan countries. A total of 313,894 emigrated to Turkey in 1989 because of government persecution. More than 100,000 had returned to Bulgaria by February 1990. Meanwhile, about 150,000 ethnic Bulgarians also emigrated. In 1991 about three million Bulgarians were living abroad. Of those emigrating 85% were under age 30.

According to *Migration News*, due to low fertility and emigration, Bulgaria's population is shrinking faster than any other nation in Europe. The majority of those leaving Bulgaria are moving to Germany, Spain, the Netherlands, and North America. The net migration rate, estimated for 2005, was -4.3 migrants per 1,000 population. Once the European Union (EU) lifted visa requirements for Bulgarians in 2001, Bulgarians illegally migrated to Western countries. Between April 2001 and October 2002, about 6,561 Bulgarians were arrested and expelled from EU countries, the United States, and Canada. The number of illegal foreigners in Bulgaria is low. Due to the high unemployment rate (12% in 2004), there are serious restrictions on foreign workers.

As of 2004, there were 4,684 refugees and about 920 registered asylum seekers in Bulgaria. Most of the refugees and asylum seekers were from Afghanistan, Iraq, Serbia, Montenegro, and Armenia.

## 8 ETHNIC GROUPS

In 2001, Bulgarians accounted for an estimated 83.9% of the total population. The Turks, who constituted about 9.4% of the total, are settled mainly in the southern Dobrudja and in the eastern Rhodope Mountains. Romas account for about 4.7% of the popu-

lation. Other groups, including Macedonians, Armenians, Tatars, and Circassians, make up the remaining 2% of the populace.

Macedonians live mainly in the Pirin region of southwestern Bulgaria. Romanian-speaking Vlachs live in the towns and countryside of northwestern Bulgaria. Greek-speaking Karakatchans are nomadic mountain shepherds of Romanian origin. The Gagauzi of northeastern Bulgaria are a Turkish-speaking group of Christian Orthodox religion. Bulgaria's cities have small minorities of Russians, Jews, Armenians, Tatars, and Greeks.

## 9 LANGUAGES

Bulgarian is classified as a Slavic language of the southern group, which also includes Macedonian, Serbo-Croatian, and Slovenian. Old Bulgarian, also known as Old Church Slavonic, was the first Slavic language fixed in writing (9th century). For this purpose, two Bulgarian monks, Cyril and Methodius, created a new alphabet, based partly on the Greek, that became known as the Cyrillic alphabet. Both the grammar and the vocabulary of modern Bulgarian show Turkish, Greek, Romanian, and Albanian influences.

According to a 2001 census, 84.5% of the population speak Bulgarian, 9.6% speak Turkish, 4.1% speak Roma, and 1.8% speak other languages or did not specify a primary language.

## 10 RELIGIONS

According to a 2004 report, about 82.6% of the population belonged at least nominally to the Bulgarian (Eastern) Orthodox Church. There were also an estimated 12.2% who were Muslims. Other religious groups include Roman Catholics, Jews, Uniate Catholics, Protestants, and Gregorian-Armenians.

After seizing power in 1946, the Communist regime, whose aim was eventually to establish an atheistic society, sought during the ensuing period to replace all religious rites and rituals with civil ceremonies. The new constitution of 1991 guaranteed freedom of religion to all, but named the Bulgarian Orthodox Church as a "traditional" religion of state. Under a 2002 Confessions Act, all religious groups except for the Bulgarian Orthodox Church must register with the Sofia Municipal Court in order to offer public worship. The registration process tends to be long and selective.

## 11 TRANSPORTATION

The Bulgarian Railway Company (BDZ) oversees Bulgaria's railway system. Railroads are still the basic means of freight transportation in Bulgaria. Of the 4,294 km (2,671 mi) of railroad lines in use in 2004, about 94% were standard gauge. A total of 245 km (152 mi) of narrow gauge right of way accounted for the remainder.

In 2003, roadways extended for 102,016 km (63,453 mi), of which 93,855 km (58,378 mi) were paved, including 328 km (204 mi) of expressways. Road transportation has grown steadily in recent years. Bulgaria has many highway projects underway, including portions of the Trans-European Motorway (TEM), a route connecting Budapest with Athens via Vidin and Sofia and with Istanbul via eastern Bulgaria. As of 2003, there were 2,309,300 passenger cars and 337,200 commercial vehicles registered for use.

Water transportation is also significant. As of 2005, Bulgaria's maritime fleet was comprised of 64 ships with a total capacity of 757,972 GRT, as compared with 97,800 GRT in 1961. The major seaports are Burgas and Varna. Principal river ports are Ruse,

LOCATION: 41°14' to 44°13' N; 22°22' to 28°37' E. BOUNDARY LENGTHS: Romania, 608 kilometers (378 miles); Black Sea, 354 kilometers (220 miles); Turkey, 240 kilometers (149 miles); Greece, 494 kilometers (307 miles); Macedonia, 148 kilometers (92 miles); Serbia, 318 kilometers (198 miles). TERRITORIAL SEA LIMIT: 12 miles.

Lom, and Vidin. In addition, the country as of 2004 had 470 km of navigable internal waterways.

In 2004 there were an estimated 213 airports. As of 2005 a total of 128 had paved runways, and there was also a single heliport. Sofia's Vrazhdebna Airport is the major air center, but there are also international airports at Varna and Burgas, as well as seven domestic airports. Initially a joint Soviet-Bulgarian concern, Bulgarian Airlines (BALKAN) passed into Bulgarian hands in 1954. Civilian airlines in Bulgaria carried about 75,000 passengers on scheduled domestic and international airline flights in 2003.

## 12 HISTORY

Ancient Thrace and Moesia, the areas that modern Bulgaria occupies, were settled in the 6th century AD by Southern Slavs migrating from the area north of the Carpathian Mountains (mod-

ern-day Ukraine and Romania). The Thracian tribes, which had populated that territory since the middle of the 2nd century BC, were displaced or conquered. In the 7th century AD, the Bulgars, a Central Asian Turkic tribe, crossed the Danube River to settle permanently in the Balkans. In alliance with the overpowered Slavs, the Bulgars formed the Bulgarian state, which was recognized by the Byzantine Empire in 681 AD. The name and initial political framework of the new state were taken from the Bulgars, but the language and the culture remained predominantly Slavic.

In the late 9th century, Bulgaria became an arena for political and cultural rivalry between the Byzantine Empire centered in Constantinople and the Roman Empire. The Bulgarians adopted Christianity from the Byzantine Empire and embraced the Cyrillic alphabet, named for St. Cyril. As a result, the integration of the

disparate tribes into a Bulgarian people was more or less complete by the end of the 9th century.

The early Bulgarian state reached its territorial and cultural height under Simeon I (r.893–927). In 1018, Bulgaria, which had struggled to assert itself against Constantinople since its foundation, fell under Byzantine dominance. The country rose again as a major Balkan power in the 12th and 13th centuries, especially under Ivan Asen II (r.1218–41) whose rule extended over nearly the whole Balkan Peninsula except the Greek islands. However, by the end of the 14th century, Bulgaria was overrun by the Ottoman Turks, who ruled the country for nearly five centuries.

The Ottoman rule was often oppressive and sought to assimilate Bulgarian Christianity, culture, and language. Rebellions were frequent but sporadic and unorganized. However, in the early 19th century, under the influence of Western ideas such as liberalism and nationalism, a well-organized national liberation movement emerged. Its efforts culminated in the April uprising of 1876, which was brutally crushed. Russia, a rival of the Ottoman Empire at the time, insisted on a peaceful solution to the Bulgarian question. When diplomacy failed, Russia declared war on Turkey. The Bulgarian state was restored in the aftermath of the Russian-Turkish War of 1877–1878.

Apprehensive of the existence of a big Bulgarian state under Russian influence, the Congress of Berlin (June–July 1878) divided the Bulgarian territories into three parts. Northern Bulgaria was given the status of an independent principality under Turkish suzerainty, with its capital at Sofia. Southern Bulgaria (then known as Eastern Rumelia) remained under Turkish rule as an autonomous province. Lastly, ethnic Bulgarians in the regions of Macedonia and Thrace were unconditionally returned to the Ottoman Empire. The decisions of the Congress triggered first the Kresna–Razlog uprising (1878–1879), which sought to unify the Principality of Bulgaria and Eastern Rumelia; and the Ilinden–Preobrazhenie Uprising (1903), which demanded the liberation of Macedonia. Neither rebellion was immediately successful.

In 1879 the First Grand National Assembly adopted the first Constitution of Bulgaria and elected the German prince Alexander Battenberg as the prince of Bulgaria. In 1885, the continuing unrest in Eastern Rumelia culminated in a military coup, which annexed the province to Bulgaria. Stefan Stambolov, premier from 1887 to 1894, consolidated the country's administration and economy. In 1908 Bulgaria declared itself a kingdom completely independent of Turkey.

Striving to unite “all Bulgarians,” the country took part in the First Balkan War (October 1912–May 1913) and fought with the anti-Turkish coalition (Greece, Serbia, and Montenegro) against the Ottomans. Bulgaria gained most of Thrace including a long-desired outlet to the Aegean Sea. But as a result of a dispute over Macedonia, Bulgaria became pitted against Greece and Serbia. Turkey joined the Greece–Serbia coalition in the hope of winning back some of its territories. Romania also sided against Bulgaria in the Second Balkan War (June–July 1913), and Bulgaria was defeated. As a result, Bulgaria lost southern Dobrudja to Romania, a large part of Macedonia to Serbia, western Thrace to Greece and southeastern Thrace to Turkey. Having sided with the Central Powers in World War I in an attempt to recoup its losses, Bulgaria also lost its outlet to the Aegean Sea and additional parts of Mace-

donia and Dobrudja through the Treaty of Neuilly (27 November 1919).

At the end of World War I, Bulgarian ruler Tsar Ferdinand of Saxe-Coburg-Gotha abdicated in favor of his son, Boris III, who ruled Bulgaria until his death in 1943. After an early period of stability and initial progressive reform under the leadership of Premier Alexander Stamboliski (assassinated in 1923 after agreeing to recognize Yugoslav sovereignty in Macedonia), growing political rivalries allowed Tsar Boris to establish a military government in 1934 and then to personally assume dictatorial powers in 1935.

When World War II broke out, Bulgaria moved toward an alliance with Germany in the hope of recovering lost territories. In 1940, Romania was forced to return southern Dobrudja, and during the war, Bulgaria occupied Macedonia and western Thrace. By 1943, some 20,000 Jews were deported but protests from political and clerical leaders stopped further cooperation, thus saving all of the remaining 50,000 Jews in the country. Bulgaria did, however, actively deport Jews in all areas it conquered.

After Tsar Boris's sudden death in 1943, a cabinet, which was in most respects a German puppet, assumed power. Coordinated mainly by Communists, resistance to the Germans and the authoritarian Bulgarian regime was widespread by 1943. In September 1944, Soviet troops entered the country. At that time, the Bulgarian government withdrew from the occupied territories, severed relations with Germany, and intended to sign an armistice with the Western Allies. But Moscow declared war on Bulgaria and proceeded with the occupation of the country. A coalition government—the Fatherland Front (Otechestven Front)—was established, which, with the assistance of the Soviet army, came under the domination of the Communist Party. Subsequently, anti-Communist political activists were purged.

A plebiscite in September 1946 replaced the monarchy with the People's Republic of Bulgaria and the Communists openly took power. The 1947 peace treaty formally ending Bulgaria's role in World War II allowed the nation to keep southern Dobrudja but limited the size of its armed forces.

Shortly after coming to power, the Bulgarian Communist Party fell under increasing pressure from Moscow to demonstrate its loyalty by stepping up the “socialist transformation” in the country. The Bulgarian leadership moved to ascertain its effective monopoly on political power by eliminating political opposition in the country and “nationalist” elements within the party and to emulate the Soviet economic experience through the introduction of a planned economy. A new constitution in 1947 instituted the nationalization of industry, banking, and public utilities and the collectivization of agriculture. Centralized planning was introduced for the development of the national economy through a series of five-year plans, which stressed the expansion of heavy industry at the expense of agriculture and light industry. Subsequently, Bulgaria joined the Warsaw Pact and CMEA, thus placing itself firmly within the Soviet bloc.

Under Todor Zhivkov, first secretary of the Communist Party since 1954 and president since 1971, the Bulgarian government remained unquestionably loyal to the Soviet Union. This continued even after Soviet leader Joseph Stalin's death in 1953. While some freedom of expression was gradually restored, labor camps closed, and persecution of the Christian church ended, upheavals like those in Poland and Hungary in 1956 or in Czechoslovakia

in 1968 were not allowed in Bulgaria. Still, a cultural “thaw” took place in the late 1970s under the leadership of Zhivkov’s daughter, Lyudmila Zhivkova. To further strengthen support for the regime, the party leadership devoted enormous resources to the celebration of the national past and culture. However, the period of the so-called “revival process” (with two peaks in 1972–1974 and 1984–1985) was marked by a campaign to assimilate members of Bulgaria’s Turkish minority by forcing them to take Slavic names, prohibiting them from speaking Turkish in public, and subjecting them to other forms of harassment; more than 300,000 Bulgarian Turks crossed the border into Turkey to escape persecution.

The Communist regime drew its legitimacy by preserving the strong egalitarian and statist political traditions in the country. Additionally, the relatively good economic performance and impressive set of social policy achievements generated a considerable level of popular support. The developmental rise in mechanization, technical sophistication, and productivity was remarkable especially given the lack of natural resources and energy endowment and the very low initial material and cultural levels. However, despite these accomplishments, Bulgaria remained one of the countries with the lowest living standards in both Western and Eastern Europe. Moreover, the many and generous social policies were secured at the expense of economic efficiency.

Thus the radical changes introduced in the Soviet Union by Mikhail Gorbachev were welcomed and readily replicated in Bulgaria. A program of far-reaching political and economic changes was announced in July 1987, including an administrative overhaul meant to reduce the number of Communist Party functionaries by as much as two-thirds, the introduction of self-management for individual enterprises, and liberalization of rules for joint ventures with foreign investors. Economic and political restructuring throughout the Soviet Bloc empowered reformist elements within the Bulgarian Communist Party, which were growing increasingly restive under Zhivkov.

Although Zhivkov was never a despot in the Stalinist mold, by the early 1980s his regime was growing increasingly corrupt, autocratic, and erratic. The long-time ruler resisted attempts to change and moved into a pattern of direct confrontation with reformists, led by his foreign minister, Petar Mladenov. Mladenov, who had close ties to Gorbachev, wanted to change Bulgaria’s image, which had been tarnished by Zhivkov’s intensifying efforts to “assimilate” the country’s ethnic Turks. Finally, in November 1989, Mladenov, backed by other reformists within the party, was able to take advantage of an international environmental conference convened in Sofia to press for Zhivkov’s resignation. Mladenov was also successful in winning support from Defense Minister Dobri Dzhurov, thus leaving Zhivkov without resort to the military. Zhivkov had no choice but to resign.

Mladenov had intended to reform the Communist Party, not remove it from power. However, demonstrations on ecological issues in the streets of Sofia in November 1989 soon broadened into a general campaign for political reform. However, as the newly emergent opposition groups signaled their entry into the political arena by organizing the Union of Democratic Forces (UDF), the Communist leaders invited opposition leaders to roundtable negotiations meant to provide the elite with a safe channel against the anticipated popular backlash against communism. A new

democratic constitution was negotiated and multiparty elections held in June 1990.

In something of a surprise, the Socialists led by Mladenov received nearly 53% of the 1990 vote, while the UDF got only about a third; the rest of the votes went to the Movement for Rights and Freedoms (MRF), which had emerged to represent the interests of the country’s one million ethnic Turks. Popular hostility to Mladenov forced him to resign about a month after the election. Since the Socialists remained generally in charge of the government, there was little tangible progress with economic reform, and Bulgaria’s economy, left in poor condition by Zhivkov, continued to decline. In addition, a great deal of effort was devoted to the attempt to prosecute Zhivkov and his prominent cronies for malfeasance, incompetence, and other failings. Zhivkov fought back vigorously, exposing the sins of former colleagues who had remained in power.

Although convictions were eventually obtained (in 1992, with additional charges brought in 1993), the exercise served to undermine public sympathy for the Socialists. That opened the way for the National Assembly to appoint the leader of the UDF and famous dissident, Zhelyu Zhelev, as a president. Moreover, the first Socialist government, led by Prime Minister Andrei Lukanov, a Mladenov ally, collapsed after a few months of its coming to power; in December 1990, the replacement government of Dimitar Popov, an unaffiliated technocrat, outlined an ambitious program of economic reform.

The National Assembly passed a new constitution in July 1991, making Bulgaria the first of the Eastern Bloc countries to adopt a new basic law. Among other things, this document called for new parliamentary elections to be held in October 1991. The UDF received 34%, the Socialists, 33%, and the MRF, 8%. The UDF adamantly refused to cooperate with the former Communists, instead taking the MRF as their coalition partner. Filip Dimitrov of the UDF led Bulgaria’s first non-Communist government since World War II; however, most of his ministers were chosen for technical expertise rather than party affiliation and 60% of them were drawn from outside the National Assembly. In January 1992, there were direct presidential elections. Zhelev received 45% of the votes while his Socialist opponent, Velko Vulkanov, received 30%.

Dimitrov undertook an ambitious program of economic and political transformation: he invested his administration in returning property confiscated by the Communists and in the privatization of industry by issuing shares in government enterprises to all citizens. However, Bulgaria’s economy continued to deteriorate and unemployment continued to grow as uncompetitive industries failed, exposing strains within the ruling coalition. In late 1992 the Dimitrov government was replaced by a minority coalition of the Socialists, the MRF, and some defecting UDF deputies. Widely seen only as a caretaker prime minister, Lyuben Berov defied predictions, remaining in power for more than 15 months.

The UDF was unrelenting in its hostility to Berov, accusing Berov of trying to “re-communize” Bulgaria; they submitted as many as six votes of no-confidence in a single year. This increasing political deadlock and the continued deterioration of Bulgaria’s economy led to new parliamentary elections in 1994.

Pledging to defend ordinary citizens against the excesses of the free market, the Bulgarian Socialist Party and its two nominal coalition partners won an absolute majority in the 1994 elections.

The BSP government, headed by Zhan Videnov, failed to move forward with economic reforms and by the end of 1996, Bulgaria had become the poorest country in Europe with average wages at only \$30 a month. In the November 1996 presidential elections, Petar Stoyanov of the UDF was elected president by a wide margin over Socialist party candidate Ivan Marazov.

Fueled by a slow pace of structural reforms, rampant corruption, and a failure to establish market discipline, Bulgaria's problems culminated in a severe economic crisis in 1996–1997. Without a stable government and with their economy in free fall, Bulgarians demonstrated in the capital for new parliamentary elections. After a few months of chaos and hyperinflation, a major foreign exchange crisis, and the collapse of the banking sector, Bulgaria adopted a Currency Board Arrangement with the International Monetary Fund in July 1997. A conservative fiscal policy and a significant acceleration of structural reforms have underpinned the Currency Board Arrangement.

The elections held in April 1997 were won by a four-party alliance, United Democratic Forces (UtDF), anchored by the UDF. The new prime minister Ivan Kostov quickly instituted economic reforms, passed a tough budget, and clamped down on crime and corruption. The economy began to stabilize and popular discontent began to subside. New IMF loans were approved, and the government embarked on a campaign to attract foreign investment and speed up privatization. The battle against entrenched political corruption continued through 1999 and 2000 and included the dismissal of top government officials. The government increasingly embraced the West, declaring its interest in NATO membership and allowing access to its airspace during the NATO bombing of Serbia in the spring of 1999.

In 1999 Bulgaria also started the accession negotiations to become a member of the European Union (EU). Despite much economic and political progress achieved by the Kostov cabinet, the citizenry was nevertheless disillusion with the party's corruption and its inability to address the high unemployment in the country.

In April 2001, Simeon Saxe-Coburg-Gotha, the exiled son of Tsar Boris, established a political party, the National Movement for Simeon II (NMS2), pledging to fight corruption, to improve Bulgaria's chances for EU membership, and to better the economy (through deregulation, privatization, and investment). Saxe-Coburg-Gotha was accused (both by the left and the right) of being an opportunist and a populist without competence and political experience, but he claimed his party's intent was not to restore the monarchy but to move ahead with reforms. And as the elections came closer, Saxe-Coburg-Gotha's popularity kept growing. His NMS2 party won 120 of 240 parliament seats in the 2001 elections. Having failed to win an absolute majority, the NMS2 signed a coalition agreement with the Movement for Rights and Freedoms. Saxe-Coburg-Gotha's cabinet included two MRF and two BSP ministers.

However, only 100 days after Saxe-Coburg-Gotha came to power, workers (including miners, power engineers, health professionals, transport, construction, railway and metal workers, and teachers) took to the streets of Sofia to protest the lack of progress in improving the economy and their living standards.

Saxe-Coburg-Gotha pursued a strongly pro-Western course. Bulgaria sent a nearly 500-strong stabilization force patrol to Iraq.

In November 2002, NATO officially invited Bulgaria to join the organization in 2004. Also in 2002, the EU announced that Bulgaria was not ready to become a member in 2004, but was expected to join the EU in 2007. In Luxembourg on 25 April 2005, the Treaty of Accession of Republic of Bulgaria to the European Union was signed. At the time, support for Bulgaria's integration in the EU was about 65%.

Four years after Saxe-Coburg-Gotha came to power, the government reported significant economic growth (5.3 %) but corruption and organized crime continued to plague the country, and high unemployment, low standard of living, and increasing inequality continue to face Bulgarians. Moreover, for the first time in Bulgaria's post-Communist history, ethnic tensions escalated into riots between the Bulgarian and Roma communities in several Bulgarian cities, including Sofia. Hopes for better social protection, disillusionment with Saxe-Coburg-Gotha's policies, and heightened ethnic tensions were all reflected in the results of the 25 June 2005 parliamentary elections. The Coalition for Bulgaria (CfB) won the elections but failed to muster majority. The NMS2 came second but received only half of the votes it got in the 2001 elections. The right was in disarray, as the conservative votes were divided among three parties. Lastly, the rising support for the MRF, the third-largest parliamentary group, was paralleled by the emergence of an ultranationalist coalition, Attack Coalition (ATAKA). After the elections, ATAKA was largely marginalized by other parties and soon began to crumble as its representatives began to defect.

In the political maneuvering that followed the elections, the Socialist bid for forming a government was immediately supported by the MRF but was blocked by the NMS2. The stumbling blocks in the negotiations process seem to be the distribution of key posts and the head of the future cabinet. As negotiations dragged on, the EU urged a rapid resolution of the situation so the country could continue implementing the reforms required for accession in 2007. Ending weeks of postelection deadlock, the new Bulgarian government formally took office on 17 August, after parliament approved the nominations of Prime Minister Sergey Stanishev of the Bulgarian Socialist Party and his 17 cabinet members. The new cabinet was finally elected following a coalition deal among the three leading parties—the BSP, the NMS2, and the MRF—that jointly control 169 out of 240 seats in the legislature.

Prime Minister Stanishev maintained that EU membership was his government's top priority and pledged to make up for lost time. He also promised to intensify the campaign against corruption and organized crime and confirmed that the 400 remaining Bulgarian troops deployed in Iraq will be withdrawn before the end of 2006.

### 13 GOVERNMENT

The Bulgarian constitution of July 1991 provides for a multiparty presidential-parliamentary form of republican government, in which all the citizens of the Republic of Bulgaria take part with the right to vote. The document provides clear distinctions among the legislative, executive, and judicial branches of government.

The Council of Ministers is the main executive body, headed by the prime minister. The Council of Ministers conducts the internal and foreign policy of the state, secures public order and national security, and exercises control over the public administra-

tion and the military forces. The president, who is chief of state, is popularly elected to a five-year term, and may serve a maximum of two terms. The president serves as commander-in-chief of the armed forces and appoints and dismisses their senior command. Among the president's duties is also setting the date for national referenda, scheduling parliamentary elections and naming of the prime minister, who must be confirmed by the National Assembly. Together with the prime minister or the respective minister, the president countersigns decrees to promulgate newly adopted laws. The emerging tradition is that the president sets the overall direction of policy, while the prime minister and his cabinet, presently 14 people, are responsible for day-to-day implementation.

The legislative branch of government is the National Assembly, with 240 members elected to four-year terms. Deputies are elected on a proportional voting basis in a mixed proportional/majoritarian system of elections, in which parties must receive at least 4% of the total national vote in order to receive seats. The largest parliamentary group constructs the cabinet. A simple majority is required to approve the Council of Ministers and to adopt regular legal acts. Amendments to the constitution, however, require approval by a three-quarters majority. Members of parliament represent not only their electoral regions but also the whole nation. The National Assembly elects temporary and permanent commissions, where parliamentarians participate. Members of the National Assembly, as well as member of the Council of Ministers, have the right to introduce draft laws, but only the Council of Ministers develop draft laws on the state budget.

#### **14 POLITICAL PARTIES**

Bulgaria did not develop the welter (confusing array) of political parties that most of the other post-Communist societies enjoyed—or suffered.

The Bulgarian Socialist Party (BSP) is the successor of the former Bulgarian Communist Party and combines various leftist factions. Some are of social democratic orientation while others remain attached to communism. The 1989 internal coup left the party with strong public support—53% of the vote in the 1991 elections. In 1994 the socialists won a majority in the parliamentary elections for the second time after the fall of state socialism but fell out of favor after two years of particularly disastrous economic policies, which had reduced their popular support to 10% by the end of 1996. The reputation of the BSP is still tied to its inability to deal with the problems of 1996 in the minds of the populace. The BSP remained in opposition after the 1997, 2001, and 2005 elections. In 2000, the socialists remaining in the BSP also made a significant break with the past by changing their former negative attitude towards NATO membership (without however cooling down support for good relations with Russia). In December 2001, Sergey Stanishev was elected as the new party leader with a mission to not only redefine and reform the BSP but also to rejuvenate it by trying to attract younger supporters. In addition, BSP became a full member of the Socialist International. In its campaign for the 2005 parliamentary elections, the party chose to focus on the neglected social rights of the Bulgarian citizens.

The Union of Democratic Forces (UDF) was created in the final days of the Communist regime (1989) as a platform movement uniting 15 different formerly dissident political groups. When the UDF came to power in 1992, the divisions between these factions

weakened the government, which lost a vote of confidence in parliament in 1994. Under the leadership of Ivan Kostov in early 1997, the UDF was transformed into a single party with liberal ideology. During the 1996–1997 political and parliamentary crisis, the UDF dominated the a conservative coalition, United Democratic Forces (UtDF), which became the main opposition force to the Bulgarian Socialist Party and won a majority in the 1997 parliamentary elections. Kostov stepped down after the party lost in the 2001 parliamentary elections and was succeeded by his former foreign minister Nadezhda Mikhailova in June 2002. However, despite the party losing the 2003 local elections, Mihailova was reelected as UDF chairwoman.

In February 2004, Ivan Kostov, together with about 2,000 party members (among them 29 members of parliament), left the party. In May 2004, the group around Kostov established a new right-wing party named Democrats for Strong Bulgaria (DSB), which vows to work for a country with strong democracy, capable state institutions, and wealthy society. The party won about 6% of the vote in the 2005 elections.

The Union of Free Democrats (UFD) is one of the smaller rightist parties in Bulgaria. It was founded by Stefan Sofiyanski in December 2001 as a split-off of the Union of Democratic Forces. The party's main goals are economic prosperity, political stability, and integration in the EU and NATO.

The Movement for Rights and Freedoms (MRF) primarily represents the interests of Bulgaria's large Turkish minority (about 10% of the population), which was harshly repressed during the Zhivkov years. In economic issues the MRF advocates neoliberal policies. Even though the party did not participate in Dimitrov's cabinet, the MRF initially supported the UDF and later was the pivot on which the Berov cabinet hinged; then, however, the party switched to being an informal coalition partner of the Socialists. Nevertheless, it supported the UtDF government during its tenure in office. For the 2001 parliamentary elections the MRF formed a coalition with two small parties and got in power together with the NMS2. Yet, nationalist antipathy among many Bulgarians towards the country's large Turkish minority makes the MRF an unpopular coalition partner for most political parties. In fact in 1991 the MRF was accused of "being an ethnic party" and has proven a costly partner in the majority of post-1989 governments.

While ethnic Turks have been represented in parliament since 1990, parties have included very few members of the Roma national minority. Still, compared with Roma in Slovakia and Romania for example, Bulgarian Roma are relatively successful in exercising influence on the government through the formation of an umbrella coalition. Nonetheless, Roma efforts are hampered by corruption and the lack of focused agendas among Roma organizations. Discrimination, unwillingness of mainstream political parties to encourage Roma participation, and the lack of political engagement within the Roma community itself are all obstacles to the political inclusion of the Roma.

The National Movement Simeon II (NMS2) is a coalition of the unregistered movement Simeon II and two registered parties—Bulgarian Party of Women (led by Vessela Draganova-Dencheva) and the Movement for National Revival (headed by Toshko Peikov). Registered as a party in April 2002, it was founded by Simeon Saxe-Coburg-Gotha, the exiled son of Tsar Boris. Simeon Saxe-Coburg-Gotha's advisors and top ministers were young Bulgarian

emigrants who, having built careers abroad mostly in Western finance, returned to their homeland to affect economic change. The NMS2 proposed to bring about change to Bulgaria's economic and political outlook "within 800 days." Thousands of Bulgarians hastened to join the NMS2 in what many saw as a protest against those who ruled Bulgaria since the collapse of communism. In the 2001 elections, the NMS2 took the lead in forming a new government but the popularity of the party quickly declined. The movement places NATO and EU integration high on the political agenda. After the 2005 elections, the party received only half of the seats it had in the previous assembly.

In the 25 June 2005 parliamentary elections, the Coalition for Bulgaria (dominated by the Bulgarian Socialist Party) was backed by 31.1% of votes and received a total of 83 seats in the 240-seat Assembly. The National Movement Simeon II (NMS2) garnered 19.9%, and 53 seats. The Movement for Rights and Freedoms (MRF) ranked third with 12.7% and 33 seats. The surprise in the 2005 elections, the nationalist coalition ATAKA received 8.2% and 17 seats. The United Democratic Forces (UDF), which was supported by 7.7% of the voters, received 20 seats, whereas the other rightist party Democrats for Strong Bulgaria (DSB) won 6.5% and 17 seats. Lastly, the Bulgarian People's Union (BPU), a coalition of the Union of Free Democrats (SSD) and the Agrarian Party of Anastasia Mozer (BZNS), won 5.2% and 13 seats.

## 15 LOCAL GOVERNMENT

Bulgaria is divided into 262 municipalities (*obshtini*). The municipality is the main administrative territorial unit for local government and is governed by a mayor and an elected municipal council. Municipal councils determine the policy of every municipality, including economic development, environmental, and educational policies, as well as cultural activities. Mayors are in charge of the whole executive activity of their municipality, of keeping the public order, and of organizing distribution of the municipal budget.

Bulgaria is also divided into 28 provinces (*oblasti*), which are larger administrative territorial units through which the government decentralizes its policies. The Council of Ministers appoints the regional governor for each province.

In preparation for EU accession, six planning regions were created in 1999 to fulfill the requirements for receiving cohesion funds. However, as of mid-2006, those regions existed on paper only.

## 16 JUDICIAL SYSTEM

Bulgaria has an independent judicial system. The 1991 constitution provides for regional courts, district courts, a Supreme Court of Cassation, which rules on decisions by the lower courts, and a Supreme Administrative Court, which rules on the legality of actions by institutions of government. A Constitutional Court is responsible for judicial review of legislation and for resolving issues of competency of the other branches of government as well as impeachments and election law. Judges are appointed by the Supreme Judicial Council, which organizes and administers the judiciary. The Constitutional Court has 12 judges appointed to a nine-year term by the National Assembly, the president, and judicial authorities.

Military courts handle cases involving military personnel and national security issues. Under the 1991 constitution, the judicia-

ry is independent of the legislative and executive branches. The trials are public. Criminal defendants have the right to confront witnesses, the right to counsel, and the right to know the charges against them to prepare their defense. The constitution prohibits arbitrary interference with privacy, home, or correspondence.

Bulgaria accepts compulsory jurisdiction of the International Court of Justice.

## 17 ARMED FORCES

As of 2005, the armed forces of Bulgaria consisted of 51,000 active personnel with reserves numbering 303,000. For that year, the army numbered 25,000 active members, while the navy had 4,370 active personnel and the air force 13,100 active members. The army that year had 1,474 main battle tanks, 18 reconnaissance vehicles, 214 armored infantry fighting vehicles, 1,643 armored personnel carriers, and 1,774 artillery pieces. The navy's major units consisted of one tactical submarine, one frigate, seven corvettes, 16 patrol/coastal vessels, and 20 mine warfare ships. The air force had 137 combat capable aircraft, including 35 fighters and 94 fighter ground attack aircraft. There were also a 34,000-member paramilitary force that included 12,000 border guards, 4,000 security police, and 18,000 railway and construction troops. Bulgaria participated in six missions abroad, including Afghanistan and Iraq. The defense budget for 2005 totaled \$630 million.

## 18 INTERNATIONAL COOPERATION

Bulgaria joined the United Nations on 14 December 1955 and participates in the ECE and all the nonregional specialized agencies. It belongs to the WTO (1996) and is a candidate for membership in the European Union. The nation also belongs to NATO (2004), the Council of Europe, the Central European Initiative, G-9, the Central European Free Trade Agreement (CEFTA), and the OSCE, and has observer status in the OAS. Bulgaria is part of the Australia Group, the Zangger Committee, the European Organization for Nuclear Research (CERN), and the Nuclear Suppliers Group (London Group). It is a guest in the Nonaligned Movement. In environmental cooperation, Bulgaria is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Before World War II, Bulgaria was an agricultural country, consisting mainly of small peasant farms; farming provided a livelihood for about 80% of the population. After the war, the Communist regime initiated an industrialization program. By 1947, a sizable portion of the economy was nationalized, and collectivization of agriculture followed during the 1950s. Until 1990, the country had a centrally planned economy, along Soviet lines, and its sequence of five-year economic plans, beginning in 1949, emphasized industrial production. In 1956, according to official Bulgarian statistics, industry contributed 36.5% of national income, and agriculture and forestry, 32.9%; in 1992, the respective contributions were 42.5% and 12%.

Although Bulgaria has brown coal and lignite, iron ore, copper lead, zinc, and manganese, it lacks other important natural re-

sources and must export in order to pay for needed commodities. Because it relied on the USSR and other CMEA countries for essential imports and as the major market for its exports, and lacks foreign exchange, the Bulgarian economy was greatly influenced by the breakup of the Soviet bloc and the switch to hard-currency foreign trade. In the 1970s, the economic growth rate was quite high (6.8% annually), but the pace of growth slowed in the 1980s, mainly because of energy shortages. The average annual growth rate was only 2% in that decade.

With the disintegration of Soviet-bloc trade and payments arrangements, GDP declined by about 10% in 1990, 13% in 1991, 8% in 1992, and an estimated 4% in 1993. Meanwhile, Bulgaria began an economic reform program supported by the World Bank and IMF. But the economy remained largely state controlled, although there was progress in privatizing many smaller enterprises. The private sector accounted for only about 20% of GDP in 1993 and 45% in 1996. Efforts at economic reform stalled in 1994 as the Socialist government again failed to privatize state-owned industries and institute structural reforms aimed at creating a market economy. The economy was further plagued by wide-scale corruption among businessmen from the former Communist Party who stripped state enterprises of their assets and transferred the funds out of the country. By 1997, the Bulgarian economy was at the brink of collapse with inflation at 300%, the banking system in chaos, and the government on the verge of bankruptcy. Bulgaria became the poorest country in Europe with average monthly wages of \$30 a month.

Angry with the governing Socialists, tens of thousands of Bulgarians demonstrated in the capital calling for early elections. In April of 1997 a new government took power and instituted structural reforms designed to bring order to the economy. The government of Prime Minister Ivan Kostov quickly moved to implement market reforms. While operating under the direction of an IMF currency board, Bulgaria pegged the lev to the deutschmark (and now also to the euro), and reduced inflation to 1%. In 1997, the private sector accounted for 65% of GDP. This milestone marked the first time in the post-Communist era that the private sector outperformed the public sector in production. In addition to structural reforms, the Kostov government also moved to combat corruption by becoming the first non-OECD country to ratify the anti-bribery convention.

As of 2003, industry increasingly was being privatized, and agriculture was almost completely privatized. Bulgaria started accession talks with the EU in 2000, but was not one of 10 new countries formally invited to join the body in December 2002. If Bulgaria completes its accession requirements, it is expected to join the EU in 2007, along with Romania. Bulgaria's laws are being harmonized with EU laws, and customs barriers between them are breaking down. By the end of 1999, more than 50% of Bulgaria's exports went to EU nations.

Following the 2001 elections that brought Simeon Saxe-Coburg-Gotha to office as prime minister, the stock market soared 100%, but the government in 2002 was unable to live up to its pledge to improve living standards. Foreign direct investment rose modestly in 2002, and although economic growth slowed that year from its 5.8% high in 2000, it was higher than that of many other European countries. Tourism was strong in 2002, and although the weather was poor that year, Bulgaria's agricultural sector per-

formed well. Taxes were lowered, and there is a zero percent capital gains tax on stock market investments.

Bulgaria's overall economic performance has been positive in the last couple of years. In 2004, the GDP grew by 5.7%, and was expected to expand by 6% in 2005, and 4.5% in 2006. This growth was fueled by an increase in domestic demand (encouraged by higher real wages and remittances from abroad), a more dynamic job market, and bank credits. Inflation was rather high in 2004, peaking at 6.2%, but was expected to regress to 4% in 2005. At 12%, unemployment was on a downward path in 2004, and was expected to drop even further by 2006, to 10%. This was the result of a more dynamic private job market, and government policies geared towards unemployment reduction. Corruption, however, remains a stumbling block to Bulgaria's economic success, and a challenge that has to be addressed before the 2007 EU accession deadline.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Bulgaria's gross domestic product (GDP) was estimated at \$67.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$9,000. The annual growth rate of GDP was estimated at 5.4%. The average inflation rate in 2005 was 4.5%. It was estimated that agriculture accounted for 9.3% of GDP, industry 30.4%, and services 60.3% in 2005.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$67 million or about \$9 per capita and accounted for approximately 0.3% of GDP. Foreign aid receipts amounted to \$414 million or about \$53 per capita and accounted for approximately 2.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Bulgaria totaled \$13.72 billion or about \$1,754 per capita based on a GDP of \$19.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of -0.4%. In 2001 it was estimated that approximately 30% of household consumption was spent on food, 17% on fuel, 8% on health care, and 11% on education. It was estimated that in 2002 about 13.4% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Bulgaria's workforce totaled an estimated 3.34 million. As of third quarter 2004, an estimated 11% of workers were in agriculture, with 32.7% in industry and the remaining 56.3% in the service sector. Unemployment was estimated at 11.5% in 2005.

The constitution guarantees the right of all to form or join trade unions of their own choosing. The labor code recognizes the right to strike when all other means of conflict resolution have been exhausted. Essential employees, mainly military and law enforcement personnel, are forbidden to strike and political strikes are prohibited as well. Although the law forbids discrimination against union members and union organizing activities, there are

reports of union members and organizers being harassed, demoted, dismissed or relocated. There are also reports that some newly hired workers are being forced to sign “yellow dog” contracts, namely agreements that they would not join a union or help organize one. About 18% of Bulgaria’s workforce is unionized, although that percentage has been decreasing.

Minimum age for employment is 16 years, with 18 years the minimum for hazardous work. In the formal sector these regulations are generally observed, but in certain industries, family operations, and illegal businesses, children are exploited. The law establishes a standard workweek of 40 hours with at least one 24-hour rest period per week. Overtime rates of no less than 150% during weekdays, 175% during weekends, and 200% during official holidays are mandated by law. The minimum wage was about \$94 per month as of 2005, but is inadequate to support a worker and a family with a decent standard of living. Minimum health and safety standards exist and are effectively enforced in the public sector, but not effectively enforced in the largely unregulated and often informal private sector.

## 22 AGRICULTURE

In 2002, the total arable land area covered 3,583,000 hectares (8,834,000 acres). The average annual agricultural growth rate was -2.1% for 1980–90 and -0.4% for 1990–2000. By 2000, agricultural output was only two-thirds of what it was in 1990. However, during 2002–04, crop production averaged 2.9% higher than during 1999–2001. In 2005, agriculture accounted for 9.3% of GDP. In 2004, agriculture (including fishing and forestry) engaged about 11% of the economically active population.

Collectivized agriculture became the norm under the Communist government after 1958. In March 1991, the government adopted a land law which restored ownership rights to former owners of expropriated land. These owners were to receive 20–30 hectares (49–74 acres) each of land approximating the type and location of the former holdings, regardless of whether or not the owner cultivates that land. After February 1991, full price liberalization for producers and consumers was to occur. However, the agricultural sector was still shrinking due to the lack of progress in the implementation of privatization and property restitution. A grain crisis developed when Bulgaria exported a million tons of wheat in 1995. Currency depreciations, increased taxes, and lack of funds exacerbated the disintegration of the agricultural sector in the mid-1990s.

The principal grain-growing areas are the Danube tableland and southern Dobrudja. The production of major crops in 2004 (in thousands of tons) was wheat, 3,961; corn, 2,123; barley, 1,181; sunflower seeds, 1,079; and rapeseed, 22.

Bulgaria is a major supplier of grapes, apples, and tomatoes to Europe and the former Soviet Union. Potatoes and paprika are also important crops. Production in 2004 included (in thousands of tons): grapes, 400; apples, 30; tomatoes, 400; and potatoes, 574. About 60,000 tons of tobacco were also produced that year.

Machinery available to agriculture has increased significantly. Tractors rose from 25,800 units in 1960 to 53,800 units in 1985, before falling to 32,100 in 2002; combines increased from 7,000 to 16,000 in 1985, but by 2002 numbered only 9,000 in use. About 16% of the cultivated area is irrigated.

## 23 ANIMAL HUSBANDRY

Meadows and pastures make up about 18% of the total land area. Bulgaria had 2,100,000 sheep, 18,000,000 chickens, 1,000,000 hogs, 750,000 goats, 668,000 cattle, 200,000 donkeys, and 150,000 horses in 2004. Meat production (in carcass weight) in 2004 amounted to 479,000 tons. In the same year, the country produced 1,590,000 million tons of milk and 92,000 tons of eggs.

## 24 FISHING

Fishing resources in the Black Sea are less than abundant. Before 1960, the annual catch was slightly above 5,000 tons. Fishing output reached a high of 167,100 tons in 1976, then fell to 115,607 tons in 1982. Prior to 1989, Bulgaria used to produce about 20,000 tons of fish from freshwater aquaculture. The fish farms and fish processing industries went through major restructuring and privatization during the 1990s. Only after 2000 did the fish industry register some growth. In 2003, the total catch was 16,498 tons, about 80% from inland waters. Fishing vessels are based at the ports of Varna and Burgas. The most popular river fish is sturgeon. Due to environmental limitations, the government sets an annual sturgeon quota; for 2003 it was 22 tons. The beluga caviar quota set that year was 1,720 kg (3,780 lb).

## 25 FORESTRY

Forests cover 3,700,000 hectares (9,143,000 acres), or 33.4% of Bulgaria’s territory. About 80% of the total forest area is wooded forest land. Forests are about 34% coniferous and 66% deciduous, and mainly occupy regions of higher altitudes. Over half of the forests in Bulgaria are situated on slopes of over 20°, making harvesting and reforestation very difficult. The principal lumbering areas are the Rila and western Rhodope Mountains in the southwest and the northern slopes of the Balkan Mountains in the center. Forestry and the forest industry contribute about 2% to the GDP.

Intensive exploitation and neglect before and during World War II (1939–45) and even more intensive exploitation following the war contributed to the deterioration of the forests. So during 1945–65, 860,000 hectares (2,125,000 acres) were reforested; the 20-year plan (1961–80) called for the planting of 1.4 million hectares (3.5 million acres). During the 1980s, annual reforestation averaged 50,000 hectares (123,500 acres). Despite the intensive harvesting during 1950–73 (which exceeded the government’s Forest Management Plan—FMP), the total timber volume has increased from 165 million cu m (5.8 billion cu ft) in 1934 to 404 million cu m (14 billion cu ft) in 1995. The FMP decreased the amount of timber permitted to be cut from 6.8 million cu m (240 million cu ft) in 1955 to 6.2 million cu m (219 million cu ft) of roundwood in 1995 because fewer large trees are available. Roundwood production has decreased from 8.6 million cu m (304 million cu ft) in 1960 to 4.8 million cu m (522 million cu ft) in 2003. Forestry exports in 2003 totaled \$139.3 million. Bulgaria exports logs to Turkey, Greece, Italy, and Macedonia; veneer to Greece and Syria; and particleboard to Greece, Macedonia, and Egypt. The main problems prohibiting greater roundwood production are diseases, drying of trees, and pests. Acid rain and heavy metals have not hurt the local forests. In 1998, the government began a forestry restitution and privatization program covering 3.6 million hect-

ares (8.9 million acres). The average annual reforestation rate was 0.6% during 1990–2000.

## 26 MINING

Bulgaria was an important regional producer of nonferrous metal ores and concentrates, and was mostly self-sufficient in mineral requirements. Mining and metalworking in the region was well documented by Roman times, when Bulgaria and Romania, known respectively as Thrace and Dacia, were important sources of base and precious metals. Small quantities of bismuth, chromite, copper, gold, iron, lead, magnesite, manganese, molybdenum, palladium, platinum, silver, tellurium, tin, uranium, and zinc were mined, as well as the industrial minerals anhydrite, asbestos fiber, barite, bentonite, common clays, refractory clays, dolomite, feldspar, fluorspar, gypsum, kaolin, industrial lime, limestone, nitrogen (in ammonia), perlite, pyrites, salt (all types), sand and gravel, silica (quartz sand), calcined sodium carbonate, dimension stone, sulfur (content of pyrite), sulfuric acid, and crushed stone. Most of the copper deposits were within a roughly 50 km-wide (30 mi) swath from Burgas in the east, to the former Yugoslavia in the west, and almost all was produced by two enterprises, Asarel-Medet, at Panagurishte, and Elatzite-Med, at Srednogorie; copper was also mined at Burgas and Malko Turnovo. Lead and zinc were mined chiefly in the Rhodope Mountains, at Madan and Rudozem. Production outputs for 2003 were: gold, 2,142 kg; gross copper, 26,415,000 tons; barite ore (run of mine), 637,000 metric tons; limestone and dolomite, 11,000,000 tons; industrial lime, 2,902,000 tons; and silica, 610,000 tons. Manganese ore production was zero in 1999 and 2000, but totaled 1,516 metric tons in 2001 and 4 metric tons each in 2002 and 2003.

In 1998, the National Program for Sustainable Development of Mining in Bulgaria was drafted and approved, and the Underground Resources Act was enacted. The latter, which aimed to promote private enterprise and foreign investment, stipulated that underground mineral wealth was the property of the state, and provided for claims by domestic and foreign companies for the development and operation of mineral deposits for up to 35 years with potential 15-year extensions. Improved economic performance at the end of the 1990s, the significant shift away from economic uncertainties during the transition from central economic planning, improving political stability in the Balkans, and greater investor confidence in the legal underpinnings of the growing privatization process combined to contribute to the \$1 billion net foreign investment in 2000, one-third more than in 1999.

## 27 ENERGY AND POWER

Bulgaria has only modest reserves of oil and natural gas, but somewhat larger recoverable reserves of coal. But it is nuclear power that allows Bulgaria to be an exporter of electricity.

In 2002 Bulgaria's output of electrical power was estimated at between 40.9 and 43.1 billion kWh, of which: around 43% came from fossil fuels; 5% from hydropower; 49% from nuclear energy; and the remainder from geothermal and other sources. In the same year, consumption of electricity is estimated at 31.797 billion kWh to 32.7 billion kWh. Total installed capacity is estimated at about 11.8 GW in 2002, of which: hydropower accounts for 1.672 million kW; nuclear for 3.782 million kW; and thermal for 6.326 million kW.

As previously noted, Bulgaria's nuclear power generating capability accounts for a major portion of the country's electrical power output, as well as allowing Bulgaria to be a power exporter. That capability is based upon its Kozloduy facility, which has six reactors, of which only four are working. In 2002, Bulgaria exported 8.335 billion kWh of electricity. In 2001, it earned \$150 million from exports of electric power to Serbia and Montenegro, Kosovo, Greece, Turkey, and Macedonia.

Bulgaria is heavily reliant on petroleum product imports. The country's proven oil reserves, as of 1 January 2005, were estimated at 15 million barrels, with production and consumption estimated in 2004 at 1,000 barrels per day and 86,000 barrels per day, respectively. Exploration for oil and natural gas is primarily centered in the Black Sea and in the northern part of the country. Bulgaria's sole refinery is located at Burgas, the country's main port. In 2002, refinery output was put at 123,140 barrels per day, but according to an Energy Information Administration analysis brief, updated as of March 2005, actual refining capacity was estimated at 115,000 barrels per day.

Bulgaria's consumption of natural gas far exceeds its proven reserves and production, and it must rely on imports to meet almost its entire natural gas needs. As of 1 January 2005, Bulgaria's proven reserves of natural gas were estimated at 0.2 trillion cu ft. Output in 2002 was estimated at only 0.1 billion cu ft. Imports and consumption were both estimated at 174 billion cu ft. for that same year.

Coal is the most important mineral fuel, with lignite accounting for nearly 90% and brown coal for around 10%. Bulgaria was estimated in 2002 to have recoverable coal reserves of 2,988 million short tons. Production, consumption and imports of coal are estimated at: 28.4 million short tons; 32.4 million short tons; and 4.0 million short tons, respectively.

## 28 INDUSTRY

Before World War II, Bulgarian industry, construction, mining, and handicrafts contributed only 17% to the net national income and accounted for only 8% of employment. Handicrafts in 1939 contributed almost half the net industrial output, followed by textiles and food processing. In the postwar period, the Communist regime nationalized industry and, through economic planning, emphasized a heavy industrialization program that resulted in a substantial increase in the metalworking and chemical industries. Between 1950 and 1960, the annual rate of growth of output in industry (including mining and power production) was 14.8%, according to the official index of gross output. Official statistics indicate that industrial output grew by 1,100% between 1956 and 1980, with the production of capital goods increasing by 1,500% and the production of consumer goods by 658%. Industrial output increased by 9.1% annually during 1971–75, 6% during 1976–80, 6.8% during 1980–85, and 2.7% during 1985–90. Ferrous metallurgy was given special emphasis in the 1960s, machine-building and chemicals in the 1970s and early 1980s, and high technology in the mid-1980s.

Even before the collapse of communism, industrial and agricultural production fell annually until 1997 and 1998, respectively, when the Kostov reforms took effect. Although traditional industries remain the foundation of the industrial sector, Bulgaria expects high-technology production to post gains in the future as high-tech companies establish operation there.

Industry accounted for 29% of GDP in 2001. The privatization of Bulgaria's industries was largely complete as of 2002, with the exception of a few large companies, such as Bulgartabac. The construction sector should realize strong growth due to the need to undertake major infrastructure projects. Growth in 2003 was expected in light industry, including electronics, textiles, and food processing.

In 2004, industry accounted for 30.1% of the GDP (and 32.7% of the labor force); agriculture made up 11.5% of the GDP (and 11% of the labor force), while services came in first with a 58.4% representation in the economic output, and 56.3% of the workforce.

Primary industries included electricity, gas and water, food, beverages and tobacco, machinery and equipment, base metals, chemical products, coke, refined petroleum, and nuclear fuel. Bulgaria also produces electrical components and computers. The industrial production growth rate reached 5.2% in 2004.

## 29 SCIENCE AND TECHNOLOGY

In 1996, Bulgaria had 25 agricultural, medical, scientific, and technological learned societies and 117 research institutes. The Bulgarian Academy of Sciences (founded in 1869) is the main research organization. The Academy of Medicine (founded in 1972) has five higher medical institutes. Total expenditures on research and development (R&D) in 2002 totaled \$278.313 million or 0.5% of GDP. Of that amount, 69.8% came from the government, while 24.8% came from business. Higher education and nonprofit sources each accounted for 0.2% in 2002. The remainder came from foreign sources. In that same year there were 1,158 researchers and 466 technicians per million people, actively engaged in R&D. High technology exports in 2002 totaled \$85 million, accounting for 3% of the country's manufactured exports. A large-scale program of scientific and technological cooperation of CMEA countries was adopted at the end of 1985.

Bulgaria has 18 universities and colleges offering degrees in basic and applied sciences. In Sofia are the National Natural History Museum (founded in 1889) and the National Polytechnical Museum (founded in 1968). In 1987–97, science and engineering students accounted for 27% of university enrollment.

## 30 DOMESTIC TRADE

Private shops and small supermarkets are open in many cities and local farmer's markets are still active. A few warehouse stores have opened in Sofia. The government has remained committed to privatization efforts. By the end of 1999, 71% of state-owned assets had been privatized. Bulgaria has also attracted a number of foreign investors, including US companies such as American Standard, McDonald's, Kraft Foods, and Hilton International. However, Germany is the top foreign investor.

Newspapers and magazines are the important means of advertising to the population at large. Radio advertisements are permitted for half an hour each day.

Offices are open from 8:30 AM to 12:30 PM and from 1:30 to 5:30 PM, Monday through Friday. Normal banking hours are 8 AM to 12 noon, Monday–Friday, and 8 to 11 AM on Saturday.

## 31 FOREIGN TRADE

The principal imports were crude oil, natural gas, diesel fuel, fuel oil, coal, textiles, and machinery and equipment.

Geographic distribution of trade has changed radically twice: since World War II and the collapse of the Soviet bloc. Whereas before the war Bulgaria traded mainly with the countries of Western and Central Europe, after the war, trade shifted almost entirely to the countries of the Communist bloc. In 1991, 49.8% of all exports still went to the former USSR and 43.2% of all imports still came from the former USSR.

By the mid-1990s, weak demand in the former Soviet bloc markets led to an increase in exports to European Union countries which now take about 56% of Bulgaria's exports. Other important export areas include Central and Eastern European, and other OECD countries. Principal export markets in 2004 included Italy (with 13.1% of all exports), Germany (11.6%), Turkey (9.3%), Belgium (6.1%), Greece (5.6%), US (5.3%), and France (4.9%). The main import partners were Germany (with 15.1% of all imports), Italy (10.2%), Russia (7.9%), Greece (7.5%), Turkey (6.9%), and France (4.4%). Exports totaled \$9.1 billion (FOB—Free on Board) in 2004; imports grew to \$12.2 billion (FOB); the trade deficit was \$3.1 billion.

## 32 BALANCE OF PAYMENTS

During the postwar industrialization program, Bulgaria had a trade imbalance, made up largely by credits, particularly from the former USSR. From 1952 to 1958, the country had visible export surpluses, but another industrialization drive resulted in a trade imbalance during 1959–61, and there were persistent imbalances during the latter part of the 1960s. In the early 1970s, export surpluses were reported for most years; there were also small surpluses in 1979, 1980, and 1984. With the collapse of COMECON trade, Bulgaria began exporting agricultural products and light manufactured products in exchange for consumer goods. During the first nine months of 1992, Bulgaria recorded its first surplus in many years. Failure of the government to institute economic reforms, however, led to severe economic hardship and trade deficits of \$1.4 billion in 1993 and \$1.6 billion in 1994. In 1994, the

deficit was partially financed by almost \$1.1 billion in aid from other countries and international financial institutions. In 2000, the current account deficit was financed by \$1 billion in foreign direct investment and additional funding from international financial institutions.

The US Central Intelligence Agency (CIA) reported that in 2002 the purchasing power parity of Bulgaria's exports was \$5.3 billion while imports totaled \$6.9 billion resulting in a trade deficit of \$1.6 billion.

The International Monetary Fund (IMF) reported that in 2001 Bulgaria had exports of goods totaling \$5.11 billion and imports totaling \$6.7 billion. The services credit totaled \$2.42 billion and debit \$1.88 billion. By 2004, the exports of goods and services grew to \$14 billion, while the imports totaled \$16.5 billion. The resulting resource balance was thus -\$2.5 billion, while the current account balance hit -\$1.8 billion. Bulgaria's total reserves (including gold) amounted to \$9.2 billion in 2004.

### 33 BANKING AND SECURITIES

All banks were nationalized in 1947 in accord with Soviet banking policies. Until 1969, the Bulgarian National Bank (BNB) was the chief banking institution handling deposits of state and local governments and national enterprises. It was the bank of issue and was authorized to credit enterprises with funds for facilities and activities not covered by the capital investment plan. In 1969 it was renamed the Bulgarian Central Bank and remained the bank of issue. Two new banks—the Industrial Bank and the Agricultural and Trade Bank—assumed the functions of providing credit for industry and for agriculture and individuals, respectively. In 1968, the Bulgarian Foreign Trade Bank was established as a joint-stock company. The State Savings Bank was the chief savings institution.

In 1996, the Bulgarian National Bank, lacking reserves, virtually gave up attempts to stabilize the exchange rate and contain infla-

tion. However, the outlines of future economic policy under a new government appear to be decided, given that all parties agreed that a currency board was the linchpin of economic stabilization. The IMF opened negotiations with the caretaker government on the introduction of a currency board, which it made a condition of further funding. When Bulgaria achieved independence in 1991, a two-tier banking system was formed. The Bulgarian National Bank became the country's central bank. The country has a state savings bank with 491 branches. There are about 80 commercial banks in Bulgaria. Some of the commercial banks are cross-border banks that are involved in the foreign exchange market. Some of the banks licensed for cross-border foreign exchange include: Agricultural and Co-operative Bank (1987), Balkenbank (1987), Biochim Commercial Bank (1987), Bulgarian Post-Office Bank, Economic Bank (1991), Hemus Commercial Bank, and the Bank for Economic Enterprise (December 1991).

In a related move that was also seen as a step towards the restrictive regime of a currency board, the central bank announced in late January of 1997 that it would no longer be fixing a base interest rate. Instead, the BNB would set an indicative rate defined by the interest on short-term government bonds. Banks themselves would be able to set their own rates according to market principles, without interference from the central bank. In 2001, the exchange rate to the dollar was 2.1847 leva. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.2 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$5.5 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 3.74%.

The First Bulgarian Stock Exchange was established in Sofia on 8 November, 1991 as a joint stock company with capital of Lv10,000,000 divided into 10,000 shares of Lv1,000 each. Designated as SOFIX, it is managed by a Board of Directors and by a Chief Executive. The exchange currently trades mainly in unlisted securities. As of 2004, there were 332 companies listed on the SOFIX. Market capitalization as of December 2004 stood at \$2.804 billion, with the SOFIX Index up 37.6% from the previous year at 625.3.

### 34 INSURANCE

Private insurance companies were nationalized in 1947 and absorbed into the State Insurance Institute. Property insurance and life insurance are compulsory for collective farms and voluntary for cooperatives, social organizations, and the population in general. Insurance policies and premiums have increased steadily for both. Third-party automobile liability and workers' compensation are also compulsory insurances. The Insurance Regulatory body is the Ministry of Finance. Since March of 1998, foreigners have been permitted to own a Bulgarian insurer. In 2003, total direct premiums written totaled \$387 million, of which nonlife premiums accounted for \$343 million. Bulgaria's top nonlife insurer was Bulstrad, with \$58.9 million of gross nonlife premiums written in

2003. That same year, DZI was the country's top life insurer with \$18.1 million of gross life premiums written.

### 3<sup>5</sup> PUBLIC FINANCE

An annual budget for all levels of government, becoming effective on 1 January, is voted by the National Assembly, after having been prepared by the Ministry of Finance. The disintegration of the Communist system in November 1989 and the subsequent collapse of the Soviet trade bloc caused severe economic disruption, pushing the government's budget deficit to 8.5% of GDP in 1990 (not including interest payments on commercial foreign debt). However, by the late 90s the country was seeing unprecedented growth (5.8% in 2000), due to aggressive market reforms put in place by the government during the prior decade.

The US Central Intelligence Agency (CIA) estimated that in 2005 Bulgaria's central government took in revenues of approximately \$1.1 trillion and had expenditures of \$1 trillion. Revenues minus expenditures totaled approximately \$0.1 trillion. Public debt in 2005 amounted to 32.4% of GDP. Total external debt was \$15.46 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were LV12,484 million and expenditures were LV12,417 million. The value of revenues was us\$7,092 million and expenditures us\$7,054 million, based on an exchange rate for 2003 of us\$1 = LV1.7604 as reported by the IMF. Government outlays by function were as follows: general public services, 17.1%; defense, 6.6%; public order and safety, 7.6%; economic affairs, 11.9%; housing and community amenities, 0.7%; health, 11.9%; recreation, culture, and religion, 1.6%; education, 5.2%; and social protection, 37.3%.

### 3<sup>6</sup> TAXATION

Bulgaria revised much of its tax system in 1996. One of the changes states that foreign persons receiving remuneration as lecturers and consultants, royalties, license payments, and remuneration for technical services, are charged with a 32% tax at the time of payment. The personal income tax is progressively rated up to 24%. As of 1 January 2005, the standard corporate or profit tax rate is 15%. A withholding tax of 7% is assessed on dividends. Employers are required to contribute 37% of employees' gross salaries for social security insurance while the employees contribute an additional 2%. The value-added tax covers all goods, services and imports at a standard rate of 20%. However, exemptions include insurance and financial services, the transfer of or the renting of land, and educational and health related services. Other taxes include a property tax at a rate of 2–4%.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Most imports are subject only to declaration and registration. However, special licenses are required for imports of tobacco, alcoholic beverages, oils, military hardware, radioactive materials, jewelry, precious metals, pharmaceutical items, and narcotics. The Ministry of Foreign Trade supervises the collection of customs duties. The amount collected is not published.

Goods arriving from foreign points to be unloaded in Bulgaria must have customs manifests and other shipping documents as specified by law. Customs duties are paid ad valorem at a rate of

5–40% on industrial products and 5–70% on agricultural products. Goods from EU nations receive preferential tariff rates. Duty must be paid on all goods except those specifically exempt, such as many foods products, farm machinery, toiletries, fertilizer and pesticide, mining equipment, and medical and dental supplies. In August 1987, the national assembly adopted a law to establish tariff-free zones to attract foreign investment beginning in January 1988. Taxes on imports include a value-added tax of 20%, a 0.5% customs clearance fee, and a 3% import surcharge.

### 3<sup>8</sup> FOREIGN INVESTMENT

Bulgaria has realized the need to attract foreign investment and has one of the most liberal foreign investment laws in the region. The 1997 Foreign Investment Law set up the Foreign Investment Agency (FIA) to administer the regime. In 1999, currency laws were liberalized to conform with IMF Article VIII obligations. Foreign investors can enter into joint ventures, start new (greenfield) ventures, purchase companies in Bulgaria's privatization process, or acquire portfolio shares. The law governing privatizations is the 1992 Law on the Transformation and Privatization of State and Municipal Enterprises. In November 2000, amendments were made to enhance the transparency and efficiency of the privatization process and to bring it under parliamentary control, but domestic political turmoil and austerity under an IMF stand-by program combined with the external economic slowdown to bring foreign investment in privatization to a low of less than \$20 million in 2001. By 2000, about 78% of the state enterprises slated for privatization had been sold off with foreign investors participating mainly through direct cash purchases. The government encourages the use of Brady bonds (debt-for-equity swaps) in payment instruments. Bulgarian bad debt bonds (zunks) can be purchased on the local market at a 30–35% discount on the face value and are accepted at a 40% premium in privatization sales.

Under legislation from 1987 and since revised, Bulgaria has six free zones where companies with foreign participation can receive

equal or preferential treatment. The most profitable free zone is the one at Plovdiv. Others are on the Danube (at Ruse and Vidin), near the Turkish border (at Svilengrad), near the Serbia border (Dragomen), and on the Black Sea (at Burgas, which has the most advanced warehousing and transshipment facilities).

In 1992, foreign direct investment (FDI) was \$34.4 million, mostly from Austria and Hungary. In 1993, FDI jumped to \$102.4 million, \$22 million from privatization and over half (\$56 million) from Germany. By 1997, FDI inflow had risen to \$636.2 million. Most (\$421.4 million) came from privatization sales and the largest source was Belgium (\$264 million). In 1998, the effects of the Russian financial crisis helped produce the first postindependence decline to \$620 million; \$155.8 million was from privatization and Cyprus was the largest source (\$109 million), mainly from Stambouli Enterprises. In 1999, FDI inflow recovered to \$818 million, with \$226.7 million coming from privatization sales and with Germany, Cyprus, and Russia each the source of over \$100 million FDI. FDI inflow peaked in 2000 at \$1 billion, with \$366 million from privatization. The largest sources were Italy (\$339.7 million) and Greece (\$241 million). The global economic slowdown beginning in 2001 reduced FDI inflow to \$812.9 million in 2001 and to an estimated \$478.7 million in 2002. Contributions from privatization reached a low of \$19.2 million, recovering to an estimated \$135.6 million in 2002. In 2001, Greece (\$240.2 million) and Italy (\$146.5 million) were the sources of the largest investments, and in 2002, the only FDI inflow over \$100 million was from Austria (\$137.7 million). A main source of disinvestments was Korea (Daewoo and Hyundai), with negative flows of -\$9.2 million in 2001 and -\$41.3 million in 2002.

From 1992 to 2002, total FDI inflow was \$5.14 billion, \$1.58 billion from privatization sales. Sources include at least 25 countries, with the top five being Greece (12.4%), Germany (12.2%), Italy (10.5%), Belgium (9.4%), and Austria (8.7%). The sectors receiving the most net FDI 1998 to 2002 were banks and other financial activities (23.5%); trade and repair services (14.1%); telecommunications (9.1%); petroleum, chemicals, rubber and plastics (7.2%); and mineral products including cement and glass (6.8%). In 2004, FDI reached a record high of \$2.5 billion (the equivalent of 9.2% of the GDP), and was expected to remain high in 2005 at around \$2.1 billion. The main source of FDI has been the EU, with around 67% of total investments.

Capital markets are small and underdeveloped in Bulgaria. The new Bulgaria Stock Exchange opened in 1998 with 998 companies and a total market valuation of \$992 million. In December 2001, there were 399 listed companies with a market capitalization of \$505 million. However, Bulgaria offers a favorable investment climate, boasting strong economic growth, political stability, a well educated workforce and competitive costs. It is a good springboard to other markets in Europe and the Middle East, and as EU accession candidate in 2007 it can serve as an entry point to otherwise well protected markets.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Until 1990 when the post-Communist government began a program of privatization, the economy was almost entirely nationalized or cooperatively owned and operated on the basis of state plans. These were designed to expand the economy as a whole, with emphasis on the growth of heavy industry (fuels, metals, ma-

chinery, chemicals) and on the development of export goods. In 1971, productive enterprises were grouped into more than 60 state concerns responsible for almost all nonagricultural production.

Bulgaria's first five-year plan (1949–53) emphasized capital investment in industry. The period was marked by a slow pace in agricultural production (owing largely to collectivization and small investment), an inadequate supply of consumer goods, and a poor livestock output. The 1953–57 plan provided for a decrease in industrial investment, with a resultant improvement in agriculture, housing, and living conditions. The food-processing industry, important for export, began to receive greater attention in 1958, as did textiles and clothing. The lagging rate of growth during the early 1960s was due mainly to poor agricultural output and to a slower industrial pace. The third five-year plan (1958–62), with its "big leap forward" (1959–60), was claimed to have reached its goals by the end of 1960, but definite shortcomings remained. The fourth plan (1961–65) devoted 70% of total investment to industry, while agriculture received only 6.5%. Investments directed by the fifth plan (1966–70) adhered essentially to precedent, with some shift toward agriculture, and this trend continued under the sixth plan (1971–75). Of total investment during 1971–73, over 40% went to industry and 15% to agriculture. The 1976–80 plan resulted in a 35% increase in industrial output and a 20% increase in agricultural output. The overall growth rate began to slow down in the late 1970s, and the 1981–85 plan reflected the concept of a more gradual economic growth. Under the 1986–90 plan, it was projected that national income would grow by 22–25%, industrial output by 25–30%, and agricultural production by 10–12%. Priority was to be given to the development of high technology.

In the 1990s, the post-Communist government began a program to reform of the nation's economy. It rescheduled the foreign debt, abolished price controls, and became a member of the International Monetary Fund (IMF) and IBRD. The reforms, however, were not embraced by the Socialist government that took power in 1994 and by 1996 the economy was in a tailspin. The government led by Prime Minister Ivan Kostov that took power in 1997 laid the financial groundwork for a market economy by selling off state firms, strengthening the currency (lev), and doing away with price controls, state subsidies, monopolies, and trade restrictions. As a result of its successful stabilization of the lev and inflation, Bulgaria is viewed favorably by investors and is a candidate for membership in the European Union (EU). Membership in that body was expected for 2007 if accession requirements are met, including progress on privatization.

The government of Prime Minister Simeon Saxe-Coburg-Gotha, which came to power in 2001, took steps to reduce taxes, rein in corruption, and encourage foreign investment. Bulgaria nevertheless suffers from high unemployment and low standards of living. A \$337 million stand-by arrangement with the IMF, approved in February 2002, expired in February 2004. The government, while pledging to the IMF that it would adhere to sound macroeconomic policies (including controlling spending, strengthening tax administration, curbing inflation, balancing the budget, and strengthening the country's external financing position), stated the improvement of Bulgarians' living standards was central to the country's economic development.

Although Bulgaria has registered some of the highest GDP growth rates in Europe, the real income of the population (and

subsequently their living standards) have failed to develop as quickly. Policy makers in Bulgaria are therefore looking to match the macroeconomic boom with similar improvements at the population level, particularly in terms of lower unemployment and more job opportunities. The national elections from June 2005 were followed by political turmoil, none of the parties being able to gain a clear majority. Eventually, the socialist party managed to form a government around Prime Minister Sergei Stanishev and promised to continue economic reforms and market restructuring. Together with Romania, Bulgaria is seeking to meet the EU accession date of 2007. Corruption remains the main point of contention for both countries, and is an issue that needs to be addressed promptly in the coming period.

#### 40 SOCIAL DEVELOPMENT

The code for compulsory social insurance was revised in 2000. It provides for dual coverage by a social insurance system and mandatory private insurance. The program covers all employees, self-employed persons, farmers, artists, and craftsman. Old age benefits begin at age 61 and 6 months for men and 56 and 6 months for women; these will be increased incrementally until 2009 when retirement age will be 63 for men and 60 for women. Survivors' and disability pensions are also provided, as well as work injury and unemployment benefits. Maternity benefits amount to 90% of earnings for 135 days. The government provides family allowance benefits based on the age and number of children.

Although women have equal rights under the constitution, they have not had the same employment opportunities as men. Although many women attend university, they have a higher rate of unemployment, and are likely to work in low paid jobs. Violence against women remains a serious problem, and domestic violence is considered a family problem and not a criminal matter. The government provides no shelter or counseling for women. There exists societal stigma against rape victims, and no laws prohibit sexual harassment. Trafficking in women remains a huge problem.

A significant problem of discrimination against the Roma minority continued in 2004. Although freedom of speech is provided for by the constitution, the government maintains influence over the media and libel is a criminal offense. The government and public have limited tolerance for religious freedom.

#### 41 HEALTH

The Ministry of Health is the controlling and policy-making agency for the health system in Bulgaria. An estimated 4% of GDP went to health expenditure. The Bulgarian government passed a bill restoring the right of the private sector to practice medicine and permitting the establishment of private pharmacies, dentists, and opticians. Bulgarian citizens resident in the country still have use of the free national health service. Bulgaria is in the process of restructuring its health care system from one based on command and control to one founded on pluralism. Medical care has never been well funded, but the shift from a centrally planned to a private enterprise system has left the medical sector in disarray. Doctors continue to receive low wages and operate inadequate and outdated machinery and patients on the whole receive minimal health services. In 1993, the World Bank assessed the country's problems and recommended numerous changes and improvements. The Ministry of Health sought funding for 19–21 addi-

tional health centers and the rehabilitation of 67 secondary centers served by 283 emergency medical teams. Utilization of health care services, including hospitalization, outpatient treatment, and preventive care, declined throughout the 1990s.

Bulgaria has 98 municipal hospitals with an average of 227 beds apiece, and 32 general district hospitals with an average of 874 beds. In addition there were 12 university hospitals in Sofia. As of 2004, there were an estimated 338 physicians, 443 nurses, 81 dentists, and 16 pharmacists per 100,000 people. Mortality in 2000 was 13 per 1,000, compared with 8.1 in 1960.

Stroke mortality is among the highest in Europe and circulatory diseases account for more than half of all deaths. Smoking is on the increase; alcohol consumption is high; physical activity is low; and obesity is common. Bulgarians have a high intake of fats, sugars, and salt. One out of eight people has high blood pressure. Improved maternal and child care lowered infant mortality from 108.2 per 1,000 in 1951 to 13 per 1,000 in 2000. However, by 2005 the infant mortality rate increased to an estimated 20.55 per 1,000 live births. In 1999, there were 46 cases of tuberculosis per 100,000 people despite high immunizations for this disease. In the same year Bulgaria immunized children up to one year old as follows: diphtheria, pertussis, and tetanus, 96%, and measles, 96%. An estimated 76% of married women (ages 15 to 49) used contraception. The fertility rate has decreased from 2.2 per woman in 1960 to 1.3 per woman in 2000. Bulgaria's maternal mortality rate is below the average for countries of medium human development. Approximately 99% of the population had access to safe drinking water. Life expectancy in 2005 was 72 years on average.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 346 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

#### 42 HOUSING

There are two main types of housing environments in the country: street district and housing complexes. Most of the street district housing was built before World War II and consists of private lots built to follow a street regulation plan. Beginning in the 1950s, housing complexes were built on public property, though the homes themselves are privately owned. Over 120 complexes have been built in the last 50 years, with a large number of pre-fab homes. Capital investment for housing construction during the period 1976–80 amounted to Lv3.5 billion. At the end of 1985 there were 3,092,000 dwelling units in the country, 24% more than in 1975; by 1991, this figure had risen to 3,406,000. In 2004 there were an estimated 3,704,798 dwellings; about 477 per 1,000 population. The average number of people per household was 2.09. About 11% of all housing stock are one-room dwellings; about 65% are two- or three-room units. About 63% of all dwellings are in urban areas.

Although housing construction during the period 1976–85 averaged about 60,000 units per year, the housing shortage continues, especially in the larger cities, because of the influx into urban areas of new workers and because of the emphasis placed on capital construction. In 1975, to curb urban growth, the government instituted tight restrictions on new permits for residences in major cities. In December 1982, the Communist Party decreed that,

in order to halt the growth of Sofia, a number of enterprises in the capital would be closed or moved elsewhere.

### 43 EDUCATION

Education is free and compulsory for eight years between the ages of 7 and 19. Primary education is divided into two stages of four years in each stage. Secondary students then choose either a general studies or vocational training program, each of which lasts for four years. The Academic year runs from September to June. The language of instruction is Bulgarian.

In 2001, about 70% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 90% of age-eligible students. The same year, secondary school enrollment was about 87% of age-eligible students. It is estimated that about 97% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 17:1 in 2003; the ratio for secondary school was about 12:1.

There are over 30 higher education institutions, including four universities. The most important is the University of Sofia, founded in 1888. The others include the University of Plovdiv (founded 1961), the University of Veliko Tarnovo (founded 1971), and the American University in Bulgaria (founded 1991). All higher level institutions had a total of 262,757 students and 26,303 teaching staff in 1997. In 2003, about 39% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 98%, with fairly even rates for men and women.

As of 2003, public expenditure on education was estimated at 3.6% of GDP.

### 44 LIBRARIES AND MUSEUMS

The St. Cyril and St. Methodius National Library, established in 1878 in Sofia, is the largest in Bulgaria (2.52 million volumes); since 1964, the Elin Pelin Bulgarian Bibliographic Institute has been attached to it. Other important libraries are the Central Library of the Scientific Information Center (with 740,000 volumes), the Bulgarian Academy of Sciences library (1.74 million volumes), the Sofia University Library (1,500,000 volumes), and the Ivan Vazov National Library in Plovdiv (with 1,300,000 volumes). The Pencho Slaveykov Public library in Varna has over 800,000 volumes. The Union of Librarians and Information Services Officers was established in Bulgaria in 1990.

Bulgaria has some 200 museums, of which the most important include the National Archaeological Museum (attached to the Academy of Sciences) and the National Art Gallery (with a collection of national and foreign art), both in Sofia. Other museums are devoted to history, science, and the revolutionary movement, and include the Bojana Church Museum in Sofia, the Museum of Wood Carvings and Mural Painting in Trjauna, with an important collection of artifacts from the Bulgarian National Revival Period in the 18th and 19th centuries, and the Open-Air Museum of Ethnography in Gabrovo.

### 45 MEDIA

Telecommunications systems are owned and operated by the state. In 2003, there were an estimated 380 mainline telephones for every 1,000 people; about 114,600 people were on a waiting list for

telephone service installation. The same year, there were approximately 466 mobile phones in use for every 1,000 people.

In Spring 2000, the government awarded a license for the first privately owned television station with nationwide coverage to the Balkan News Corporation; in 2003, Nova TV became the second national commercial station. All other national television stations are state-owned, though there are a number of privately operated regional stations. In 2003, there were an estimated 543 radios for every 1,000 people; the number of television sets was not available in the same survey. It is estimated that about 133 of every 1,000 people subscribe to cable television services. In 2003, there were 51.9 personal computers for every 1,000 people and 206 of every 1,000 people had access to the Internet. There were 46 secure Internet servers in the country in 2004.

The principal Sofia papers, with their publishers and estimated daily circulations (2002), are: *24 Chasa*, Vest Publishing House, 330,000; *Bulgarska Armiya*, Ministry of Defense, 30,000; *Demokratiya*, Union of Democratic Forces, 45,000; *Duma*, Socialist Party, 130,000; *Trud*, Confederation of Independent Trade Unions, 200,000; *Zemedelsko Zname*, Agrarian People's Union, 178,000; and *Zemya*, Socialist Party, 53,000.

The constitution of Bulgaria ensures freedom of speech and of the press, and the government is said to generally respect these rights. National television and radio broadcasting remain under supervision of the Council for Electronic Media and the Communications Regulation Commission.

### 46 ORGANIZATIONS

Bulgaria's important economic organizations include the Bulgarian Chamber of Commerce and Industry (1985) and organizations dedicated to promoting Bulgaria's exports in world markets. There are trade unions representing a wide variety of vocations. The Confederation of Independent Trade Unions of Bulgaria was founded in 1901 and taken over by the Communists after World War II. In 1990, it became an independent organization. It has about 75 member federations and four association members. There are professional and trade organizations representing a variety of fields.

The Bulgarian Medical Association serves as a national organization promoting high standards of healthcare, advancement in medical research, and the free dissemination of health information. There are also several similar medical organizations dedicated to promoting research and education concerning specific conditions and diseases.

There are several associations promoting a wide range of sports and leisure activities, including bobsledding, badminton, baseball, chess, yoga, and amateur radio. The National Federation of Sports in Schools was established in 1993 to promote and coordinate sport activities through the schools. There are national branches of the Olympic Committee, the Special Olympics, and the Paralympic Committee.

The Bulgaria Academy of Science promotes scientific study and advancement, conducts research projects, and maintains a museum. The Institute of Art Studies is cosponsored by the Academy of Science as an organization dedicated to promoting Bulgarian art and culture.

Since 1990, a number of youth organizations have developed throughout the country. The Bulgarian Democratic Youth, with

about 90,000 members, became the successor to the Dimitrov Young Communist League. The group serves to advance civic enterprise and control and promote a social environment for enterprising youth. Student groups include the Federation of Independent Student Associations, the Bulgarian Association of University Women, the Independent Student Trade Union, and the Student League of Beliko Turnovo. There is an Organization of Bulgarian Scouts and active branches of YMCA/YWCA.

There are national chapters of the Red Cross Society, UNICEF, Habitat for Humanity, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Bulgaria is rich in mineral waters and has numerous tourist spas. Visitors are attracted to the Black Sea resorts and the archaeological monuments. There are three national parks—Pirin, Rila, and Central Balkan—all rich in historic sites and self-regulating ecosystems. Lying between the slopes of the Balkan and the Sredna Gora mountain range is the Valley of Roses. Foreign visitors to Bulgaria must have a passport. Visas are not required for stays of up to 30 days.

In 2003, about 6.2 million tourists visited Bulgaria, a 12% increase from 2002. In that same year, tourist receipts totaled \$2.1 billion. There were 143,960 beds available in hotels and other establishments, with an occupancy rate of 34%. Visitors stayed in Bulgaria an average of four nights.

In 2004, the US Department of State estimated the cost of staying in Sofia at \$221 per day. In smaller towns the daily costs were approximately \$87.

#### 48 FAMOUS BULGARIANS

The founders of modern Bulgarian literature, writing before the end of Turkish rule, were Georgi Rakovski (1821–67), Petko Slaveikov (1827–95), Lyuben Karavelov (1835–79), and Kristo Botev (1848–76), who was one of Bulgaria's greatest poets. The most significant writer after the liberation of 1878 was Ivan Vazov (1850–1921), whose *Under the Yoke* gives an impressive picture of the struggle against the Turks. Pentcho Slaveikov (1866–1912), the son of Petko, infused Bulgarian literature with philosophical content and subject matter of universal appeal; his epic poem *A Song of Blood* recalls an insurrection suppressed by the Turks in 1876. In the period between the two world wars, Nikolai Liliyev (1885–1960) and Todor Trayanov (1882–1945) were leaders of a symbolist school of poetry. Elin Pelin (1878–1949) and Iordan Iovkov (1884–1939) wrote popular short stories on regional themes. More recent writers and poets include Nikola Vapzarov, Christo Shirvenski, Dimiter Dimov, Orlin Vassilev, and Georgi Karaslavov. Elias Canetti (1905–94), Bulgarian born but lived from 1938 until his death in the United Kingdom, received the Nobel Prize for literature in 1981. Tzvetan Todorov (b.1939), is a Bulgarian philosopher and literary theorist living in France; he is the author of *The Conquest of America* (1982). Ivan Mrkvicka (1856–1938), a

distinguished Czech painter who took up residence in Bulgaria, founded the Academy of Fine Arts in Sofia.

A prominent Bulgarian statesman was Alexander Stamboliski (1879–1923), Peasant Party leader who was premier and virtual dictator of Bulgaria from 1920 until his assassination. The best known modern Bulgarian, Georgi Dimitrov (1882–1949), was falsely charged in 1933 with burning the Reichstag building in Berlin; he became general secretary of the Comintern until its dissolution and prime minister of Bulgaria in 1946. Traicho Kostov (1897–1949), an early revolutionary leader, was a principal architect of Bulgaria's postwar economic expansion. Caught up in the Tito-Stalin rift, he was expelled from the Politburo and executed in December 1949. Todor Zhivkov (1911–1998) was first secretary of the Bulgarian Communist Party between 1954 and 1989, the longest tenure of any Warsaw Pact leader. His was marked by ardent and steadfast support of Soviet policies and ideological positions. Zhivkov's daughter Lyudmila Zhivkova (1942–81), a Politburo member since 1979, was regarded by Western observers as second only to her father in power and influence. Zhivkov was replaced by Dimitar Popov as premier of a coalition government headed by the Socialist Party (formerly the Communist Party). Simeon II (b.1937) was the last tsar of Bulgaria from 1943–46, and was prime minister from 2001–05. He is also known as Simeon of Saxe-Coburg-Gotha.

#### 49 DEPENDENCIES

Bulgaria has no territories or colonies.

# CROATIA

Republic of Croatia

*Republika Hrvatska*

**CAPITAL:** Zagreb

**FLAG:** Red, white, and blue horizontal bands with the Croatian coat of arms (red and white checkered).

**ANTHEM:** *Lijepa Nasa Domovina*.

**MONETARY UNIT:** The Croatian kuna (HRK was introduced in 1994, consisting of 100 lipa. HRK1 = \$0.16892 (or \$1 = HRK5.92) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Epiphany, 6 January; Labor Day, 1 May; Republic Day, 30 May; National Holiday, 22 June; Assumption, 15 August; Christmas, 25–26 December.

**TIME:** 7 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Croatia is located in southeastern Europe. Comparatively, the area occupied by Croatia is slightly smaller than the state of West Virginia with a total area of 56,542 sq km (21,831 sq mi). Croatia shares boundaries with Slovenia on the w, Hungary on the n, Serbia on the e, Bosnia and Herzegovina on the s and e, and the Adriatic Sea on the w, and has a total boundary length of 8,020 km (4,983 mi), including 5,835 km (3,626 mi) of coastline. Croatia's capital city, Zagreb, is located in the northern part of the country. Croatia's territory includes 1,185 nearby islands in the Adriatic Sea, of which only 66 are inhabited.

## <sup>2</sup> TOPOGRAPHY

The topography of Croatia is geographically diverse, with flat plains along the Hungarian border, as well as low mountains and highlands near the Adriatic coast. The country is generally divided into three main geographic zones: the Pannonian and Peri-Pannonian Plains in the east and northwest, the central hills and mountains, and the Adriatic coast. Approximately 24% of Croatia's land is arable. Croatia's natural resources include: oil, some coal, bauxite, low-grade iron ore, calcium, natural asphalt, silica, mica, clays, and salt. Croatia's natural environment experiences effects from frequent earthquakes, air pollution from metallurgical plants, coastal pollution from industrial and domestic waste, and forest damage.

## <sup>3</sup> CLIMATE

Croatia's climate in the lowlands features hot, dry summers and cold winters. In Zagreb, the average annual temperature is 12°C (53°F) with average highs of 2°C (35°F) in January and 27°C (80°F) in July. In the mountains, summers are cool and winters cold and snowy. Along the coast, the climate is Mediterranean with mild winters and dry summers. In Split, the average annual temperature is 17°C (62°F). Annual average precipitation is about 94 cm (37 in).

## <sup>4</sup> FLORA AND FAUNA

The region's climate has given Croatia a wealth of diverse flora and fauna. Ferns, flowers, mosses, and common trees populate the landscape. Along the Adriatic Sea there are subtropical plants. Native animals include deer, brown bears, rabbits, fox, and wild boars. As of 2002, there were at least 76 species of mammals, 224 species of birds, and over 4,200 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Air pollution (from metallurgical plant emissions) and deforestation are inland environmental problems. In 1996 industrial carbon dioxide emissions totaled 17.5 million metric tons. In 2000, total emissions were at 19.6 million metric tons. Coastal water systems have been damaged by industrial and domestic waste. All of Croatia's urban dwellers have access to safe drinking water. Environmental management is becoming more decentralized, thereby empowering city and municipal administrations to determine environmental policy. Croatia's 195 protected areas cover 421,000 hectares (1,040,000 acres), or 7.5% of the country's natural areas. The Plitvice Lakes National Park is a natural UNESCO World Heritage Site. There are four Ramsar wetland sites. In 2000, about 31% of the total land area was forested.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 7 types of mammals, 9 species of birds, 1 type of reptiles, 2 species of amphibians, 27 species of fish, and 11 species of invertebrates. Endangered species include the Atlantic sturgeon, slender-billed curlew, and the Mediterranean monk seal.

## <sup>6</sup> POPULATION

The population of Croatia in 2005 was estimated by the United Nations (UN) at 4,438,000, which placed it at number 117 in population among the 193 nations of the world. In 2005, approximately

16% of the population was over 65 years of age, with another 17% of the population under 15 years of age. There were 93 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be -0.3%, a rate the government viewed as too low. The projected population for the year 2025 was 4,318,000. The population density was 78 per sq km (203 per sq mi).

The UN estimated that 56% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.50%. The capital city, Zagreb, is by far the largest city in the country. It had a population of 688,000 in 2005. Other cities and their estimated populations include Split, 265,000; Rijeka, 206,000; and Osijek, 165,000.

## **7** MIGRATION

In the early 1990s, some 160,000 people living in Croatia fled to neighboring countries to escape ethnic conflict, with another 120,000 fleeing to countries abroad. Total returns to Croatia as of February 2000 numbered over 112,000, including 36,000 Croatian Serbs who repatriated from Serbia and Montenegro. Also, nearly 74,000 internally displaced people had returned to their homes within Croatia. In February 2000, an estimated 250,000 Croatian Serb refugees were still registered in Serbia and Montenegro and Bosnia and Herzegovina. Of these, more than 25,000 had applied for return under the government's Return Programme. The total number of migrants living in Croatia in 2000 was 425,000. In 2004, the United Nations High Commissioner for Refugees (UNHCR) was assisting some 23,744 people in Croatia: 3,663 refugees, 7,468 returnees, and over 12,500 internally displaced people. In addition, there were 852 voluntary repatriations to Bosnia and Herzegovina and 6,616 to Serbia and Montenegro. In 2004, an estimated 200 Croatians sought asylum in Ireland and Sweden. The net migration rate in 2005 was estimated at 1.58 migrants per 1,000 population. The government views the emigration level as too high.

## **8** ETHNIC GROUPS

As of the 2001 census, Croats make up about 89.6% of the population and Serbs account for 4.5%. The remainder include Bosniaks, Hungarians, Slovenians, Czechs, and Roma.

## **9** LANGUAGES

Serbo-Croatian is the native language and is used by 96% of the populace. Since 1991, Croats have insisted that their tongue (now called Croat) is distinctive. The spoken language is basically the same, but Serbs use the Cyrillic alphabet and Croats the Roman alphabet. The Croatian alphabet has the special consonants *č*, *ć*, *š*, *ž*, *dj*, *dž*, and *nj*, representing sounds provided by the Cyrillic alphabet. The remaining 4% of the population speak various other languages, including Italian, Hungarian, Czech, Slovak, and German.

## **10** RELIGIONS

Christianity was introduced into the area in the 7th century. Under the Yugoslav Socialist Republic, churches—Roman Catholic in particular—experienced repression by the state. This moderated in 1966, when an agreement with the Vatican recognized a religious role for the clergy. The latest estimates recorded a Ro-

man Catholic population of 85%, with 6% Orthodox Christians, and 1% Muslims. Less than 1% were Jewish and about 4% belong to other faiths, including the Church of Jesus Christ of Latter-day Saints, Jehovah's Witnesses, Greek Catholic, Pentecostal, Hare Krishna, Baptist, Seventh-Day Adventist, and the Church of Christ. About 2% of the population are atheists. The Orthodox are primarily Serbs; other minority religions can be found mostly in urban areas. No formal restrictions are placed on religious groups, and all are free to conduct public services and run social and charitable institutions.

The constitution provides for freedom of conscience and religion and this right is generally respected in practice. Though there is no official state religion, the Roman Catholic Church, the Serbian Orthodox Church, the Islamic community, and several smaller Christian denominations have signed agreements with the government through which they qualify for state support. A 2003 Regulation on Forms and Maintaining Records of Religious Communities in Croatia requires all religious organizations to register with the government in order to receive legal status under the Law on Religious Communities.

## **11** TRANSPORTATION

Croatia's railroads consist of two main routes. An east–west route originating in Serbia nearly parallels the Sava before reaching Zagreb and continuing on to Slovenia and Hungary. The north–south route connects the coastal cities of Split and Rijeka to Zagreb. Another railway connects Dubrovnik to Bosnia and Herzegovina. As of 2004, there were 2,726 km (1,694 mi) of standard gauge railroad line. However, some parts remain inoperative or out of use due to territorial disputes. Highways totaled 28,588 km (17,782 mi) in 2003, of which 24,186 km (15,044 mi) were paved roads, including 583 km (363 mi) of expressways. As of 2003, there were 1,293,400 passenger cars and 143,100 commercial vehicles registered for use.

Rijeka, Split, and Kardeljevo (Ploce) are the main seaports along the Adriatic. There are 785 km (488 mi) of perennially navigable inland waters. Vukovar, Osijek, Sisak, and Vinkovci are the principal inland ports. In 2005, Croatia had 73 ships of at least 1,000 GRT, for a total capacity of 750,579 GRT.

Croatia had an estimated 68 airports in 2004. As of 2005 a total of 23 had paved runways, and there was one heliport. Principal airports include Dubrovnik, Split, and Pleso at Zagreb. In 2003, about 1.267 million passengers were carried on scheduled domestic and international flights.

## **12** HISTORY

### Origins through the Middle Ages

Slavic tribes penetrated slowly but persistently into the Balkan area beginning in the 5th century. Their migration, and that of the Serbians, occurred upon the invitation of the Byzantine emperor Heraclius I (r. 610–641) in 626, to repel the destructive inroads of the Avars. A coalition of Byzantine and Croat forces succeeded in forcing the Avars out of Dalmatia first, and then from the remainder of Illirycum and the lands between the Drava and Sava rivers. The Croats settled on the lands that they had freed from the Av-

LOCATION: 45°10' N 15°30' E. BOUNDARY LENGTHS: Total boundary lengths, 2,197 kilometers (1,365 miles); Serbia, 241 kilometers (165 miles); Bosnia and Herzegovina, 932 kilometers (579 miles); Slovenia, 670 kilometers (416 miles); Hungary, 329 kilometers (204 miles); Montenegro, 25 kilometers. COASTLINE: 5,790 kilometers (3,598 miles); mainland coastline, 1,778 kilometers (1,105 miles); islands coastline, 4,012 kilometers (2,493 miles).

ars and established their own organized units that included indigenous Slavic tribes.

By the year 1000, Venice, having defeated the Croatian fleet, controlled the entire Adriatic coast. The coastal cities, while welcoming the Italian cultural influence of Venice, feared potential Venetian domination over their trading interests with the enormous Balkan hinterland. Thus Dubrovnik (formerly called Ragusa), with its growing fleet, preferred to remain tied to the more distant Byzantine Empire.

Zvonimir, son-in-law of the Hungarian king Bela I, was crowned king of Croatia in 1075. Zvonimir died around 1089 without an

heir, leaving his widow with the throne, but the nobles opposed her rule because of her Hungarian ancestry. The king of Hungary intervened to protect his sister's interests (and his own) by occupying Pannonian Croatia. The area was recovered in 1095 by Peter Svacic from Knin (1093–97). Peter, the last independent king of Croatia, was killed in battle in 1096 by King Koloman of Hungary, who then conquered Croatia. After concluding a nonaggression pact with Venice, which had retained control of the coastal islands and cities, the Croats rebelled and drove the Hungarian forces back to the Drava River frontier between Croatia and Hungary.

### Royal Union with Hungary

In 1102, Koloman regrouped and attacked Croatia. He stopped at the Drava River, however, where he invited the nobles representing the 12 Croatian tribes to a conference. They worked out the so-called *Pacta Conventa*, an agreement on a personal royal union between Hungary and Croatia (including Slavonia and Dalmatia). The overall administration of the state would be by a “ban” (vice-roy) appointed by the king, while regional and local administration were to stay in the hands of the Croatian nobles. This legal arrangement, with some practical modifications, remained the basis of the Hungarian-Croatian personal royal union and relationship until 1918.

Internal warfare among Croatia’s nobility weakened its overall ability to resist attack from Venice. In 1377, Tvrtko (1353–1390) proclaimed himself king of the Serbs, Bosnia, and the Croatian coast. Venice was defeated in 1385, and was forced to surrender all rights to the coastal cities all the way to Durazzo in today’s Albania. Dubrovnik also gained its independence from Venice, recognizing the sovereignty of the Hungarian-Croatian king.

### Defense against the Turks

By the mid-15th century the threat from both the Turks and Venice was growing more ominous, leading King Sigismund to establish three military defense regions in 1432. As these defensive regions were further developed, they attracted new, mostly Serbian, settlers/fighters who became the strong Serbian minority population in Croatia. The Ottoman threat brought about the appointment of Vladislav Jagiellon, the king of Poland, as king of Hungary and Croatia in 1440. Vladislav was succeeded in 1445 by Ladislav, son of Albert of Hapsburg, and therefore king of both Austria and Hungary/Croatia. Since Ladislav was a minor, John Hunyadi, a brilliant general, was appointed regent. Hunyadi had to protect the throne from the counts of Celje, who, in 1453, also claimed the title of ban of Croatia. Ulrich, one of the counts of Celje, fell victim to Hunyadi’s assassins at the defense of Belgrade from the Turks in 1456. This murder was avenged by King Ladislav V, who had Hunyadi executed in 1456.

After 1520, the Turks began effective rule over some Croatian territory. In 1522, the Croatian nobility asked Austrian archduke Ferdinand of the Hapsburgs to help defend Croatia against the Turks, but by 1526, the Turks had conquered Eastern Slavonia and had advanced north into Hungary. On 29 August 1526, in a massive battle at Mohacs, the Turks defeated the Hungarian and Croatian forces, killing King Louis. By 1528, the Ottomans held the southern part of Croatia, and by 1541 had conquered Budapest. Dubrovnik, on the other hand, had accepted the Ottoman suzerainty in 1483, keeping its autonomy through its extensive trade with the Turkish empire. Most coastal towns were under the protection of Venice, with its good trade relations with the Turks.

In 1526, after King Louis’s death at Mohacs, Ferdinand of Hapsburg was elected king of Hungary and Croatia. The Hapsburg rulers began to encroach on the rights of Croats by turning the throne from a traditionally elected position into a hereditary one, and by allocating Croatian lands as fiefs to their supporters, turning the Croatian peasants from free men into serfs.

King Ferdinand III (r.1637–1657) consolidated Hungary and Croatia under Hapsburg rule. Under Ferdinand’s son, Leopold I (who in 1658 had also become the German emperor), the status of

Hungary and Croatia continued to deteriorate. All power was centralized in the hands of the king/emperor and his court. Leopold tried to emulate the absolutist model practiced by Louis XIV of France. The Turkish offensives of 1663 were successfully repelled by the Croatian brothers Nicholas and Peter Zrinski. Following the defeat of the Turks at Saint Gotthard in western Hungary in 1664, Leopold I unilaterally concluded a 20-year peace treaty with the Turks based essentially on the prewar situation.

The Peace of Vasvar proved to the Hungarians and Croats that the Hapsburg court was not interested in fighting the Turks for Hungary and Croatia. This situation led to a conspiracy by the Zrinski brothers and key Hungarian nobles against the Hapsburg Court. But the Turks warned the Hapsburgs of the conspiracy, and Peter Zrinski and his coconspirator Francis Frankopan were executed on 30 April 1671 (Nicholas Zrinski had died in 1664). Leopold I suspended for 10 years the office of the Croatian ban.

The last king of the male Hapsburg line was Charles III (r.1711–1740). In 1722, during his reign the Hungarian parliament agreed to extend the Hapsburg hereditary right to its female line (Charles had no son), something already agreed to by the Croatian parliament in 1712. At the same time the Hungarians obtained a legal guarantee on the indivisibility of the realm of the Crown of Saint Stephen, which included Croatia. Charles was thus followed by his daughter Maria Teresa (r.1740–1780) who, by decree, divided Croatia into regions headed by her appointees. Joseph II, her son, emancipated the serfs, tried to improve education, tried to impose the German language as a unifying force, closed monasteries in an attempt to control the Roman Catholic Church, and decreed religious toleration. In the 1788 war against the Turks, Joseph II suffered a devastating defeat; he died two years later.

Leopold II, Joseph II’s brother, succeeded him, and recognized Hungary and Croatia as kingdoms with separate constitutions. Hungarian replaced Latin as the official language of the Hungarian parliament. Hungarians then began trying to establish the Hungarian language in Croatia, Slavonia, and Dalmatia, thus initiating a hundred-year struggle of the Croats to preserve their identity.

### Napoleon and the Spring of Nations

With the peace treaty of Campoformio ending the war against Napoleon in 1797, Austria obtained the territories of the Venice Republic, including the Adriatic coast as far as Kotor. In 1806, Napoleon seized Dubrovnik, and in 1809 he obtained control of Slovenian and Croatian territories and created his Illyrian Provinces. The French regime levied heavy taxes and conscription into Napoleon’s armies. With Napoleon’s defeat, all of Dalmatia reverted back to direct Austrian administration until the end of World War I in 1918.

In 1825, Francis I called the Hungarian parliament into session and the Hungarians resumed their pressure to introduce the Hungarian language into Croatian schools. Ljudevit Gaj became the leader of the movement calling for the reassertion of the independent Kingdom of Croatia and advocated the introduction of “Illyrian” (Croatian) as the official language to replace Latin. A member of the Illyrian movement, Count Janko Draškovic, also promoted the idea of reorganizing the Hapsburg lands into a federation of political units with coequal rights. The Croatian parliament then nullified the previous agreement on using Hungarian, and made Croatian the official language of parliament. In 1840, the Croatian

Sabor voted for the introduction of Croatian as the language of instruction in all Croatian schools and at the Zagreb Academy.

The struggle over the Croatian language and national identity brought about the establishment of the first political parties in Croatia. The Croatian-Hungarian Party supported a continued Croat-Hungarian commonwealth. The Illyrian Party advocated an independent kingdom of Croatia comprising all the Croatian lands including Bosnia and Herzegovina. The Austrian government banned the term “Illyrian” and the name of the Illyrian party of Ljudevit Gaj and Draskovic was changed to the National Party.

At the next session of the Hungarian parliament in 1843, the Croatian delegation walked out when not permitted to use Latin instead of Hungarian. The Croatian National Party submitted to the emperor its demands to reestablish an independent government of Croatia, elevate the Zagreb Academy to university status, and raise the Zagreb bishopric to the archbishopric rank. The lines were thus drawn between the Hungarian and Croatian nationalists. This situation came to a head in 1848 when great unrest and revolts developed in Austria and Hungary.

#### Autonomy or Independence

Francis Joseph I (r.1848–1916) ascended to the Hapsburg throne on 2 December 1848 and ruled for a long time, favoring the Hungarians against the Croats. Croatian parties had split between the pro-Hungarian union and those advocating Croatian independence based on ancient state rights. The latter evolved into the “Yugoslav” (South Slavic Unity) movement led by Bishop Josip Juraj Strossmayer and the “Pravaši” movement for total Croatian independence led by Ante Starcevic. Austria and Hungary resolved their problems by agreeing on the “dual monarchy” concept. The Hungarian half of the dual monarchy consisted of Hungary, Transylvania, Croatia, Slavonia, and Dalmatia. A ban would be appointed by the emperor-king of Hungary upon the recommendation of the Hungarian premier, who would usually nominate a Hungarian noble. Croatia-Slavonia-Dalmatia was recognized as a nation with its own territory, the Croatian language was allowed, and it was granted political autonomy in internal affairs. But in reality, the Hungarians dominated the political and economic life of Croatia.

#### Yugoslavism

In the 1870s, Ivan Mazuranic was appointed ban of Croatia. He implemented general administrative reform and a modern system of education. The Sabor instituted a supreme court and a complete judicial system. The 1878 Congress of Berlin allowed Austria’s military occupation and administration of Bosnia and Herzegovina and the Sandzak area (lost by the Turks after their defeat by Russia in 1877). The Croatian Sabor then requested the annexation of those areas, but Austria and Hungary refused. Croatia and Serbia were deeply disappointed, and Serbia began supporting terrorist activities against the Austrians. In 1881, the military region was joined to Croatia, thus increasing the size of its Serbian Orthodox population. This offered the Hungarian ban Khuen Hedervary the opportunity to play Serbs against Croats in order to prevent their joint front. The relations between Croats and Serbs continued to deteriorate.

By 1893, there was a united Croatian opposition that called for equality with Hungary, the unification of all Croatian lands, and which invited the Slovenes to join Croatia in the formation

of a new state within the framework of the Hapsburg monarchy. This united opposition took the name of Croatian Party of Right (“Stranka Prava”). National unification, however, had strong opposition from powerful forces: the Hungarians with their Great Hungary Drive; the Serbs, who wanted to annex Bosnia and Herzegovina into Serbia; the Italians, claiming Istria, Rijeka, and Dalmatia; and the Austrians, and their Pan-Germanic partners.

Croats and Serbs formed a Croat-Serbian coalition, winning a simple majority in the 1908 Croatian parliamentary elections, followed by the Party of Right and the Peasant Party, led by the brothers Anthony and Stephen Radic. Also in 1908, the direct annexation of Bosnia and Herzegovina by Austria took place. The Party of Right and the Peasant Party supported the annexation, hoping that the next step would be Bosnia and Herzegovina’s incorporation into a unified Croatia. Serbia, conversely, was enraged by the annexation. Assassination attempts increased and led to the assassination of Archduke Ferdinand and his wife in Sarajevo on 28 June 1914. These tragedies followed the Serbian victories and territorial expansion in the wake of the 1912 and 1913 Balkan wars.

The idea of a separate state uniting the South Slavic nations (“Yugoslavism”) grew stronger during World War I (1918–18). An emigré “Yugoslav Committee” was formed and worked for the unification of the South Slavs with the Kingdom of Serbia. In 1917, an agreement was reached on the formation of a “Kingdom of Serbs, Croats, and Slovenes” upon the defeat of Austro-Hungary.

#### Royal Yugoslavia

The unification of Croatia and the new “Kingdom of Serbs, Croats, and Slovenes” on 1 December 1918 was flawed by the inability to work out an acceptable compromise between the Serbs and Croat-Slovenes. The National Council for all Slavs of former Austro-Hungary was formed on 12 October 1918 in Zagreb (Croatia) and was chaired by Monsignor Anton Korošec, head of the Slovenian People’s Party. On 29 October 1918, the National Council proclaimed the formation of a new, separate state of Slovenes, Croats, and Serbs of the former Austro-Hungary. The Zagreb Council intended to negotiate a federal type of union between the new state and the Kingdom of Serbia that would preserve the respective national autonomies of the Slovenes, Croats, and Serbs. Monsignor Korošec had negotiated a similar agreement in principle with Serbian prime minister Nikola Pašic in Geneva, but the Serbian government reneged on it. While Korošec was detained in Geneva, a delegation of the National Council went to Belgrade and submitted to Serbia a declaration expressing the will to unite with the Kingdom of Serbia, and Serbia readily agreed. On 1 December 1918, Prince Alexander of Serbia declared the unification of the “Kingdom of Serbs, Croats, and Slovenes.”

The provisional assembly convened in 1918, with the addition to the Serbian parliament of representatives from the other south Slavic historical regions, while the Croatian Sabor was deprived of its authority. The elections to the Constituent Assembly were held on 28 November 1920 but the 50-member delegation of the Croatian Republican Peasant Party refused to participate. The new Vidovdan Constitution was adopted on 28 June 1921 by a “simple majority” vote of 223 to 35, with 111 abstentions in the absence of the Croatian delegation with 50 votes.

The period between 1921 and 1929 saw a sequence of 23 governments, a parliament without both the Croatian delegation’s 50

votes and the Communist Party's 58 votes (it continued its work underground). This situation assured control to the Serbian majority, but it was not possible to govern the new country effectively without the participation of the Croats, the second-largest nation.

Finally, in 1925, Prime Minister Pašić invited Stjepan Radic, head of the Croatian Peasant Party, to form a government with him. However, not much was accomplished and Pašić died just a few years later. On 20 June 1928 Radic was shot in parliament by a Serbian deputy and died the next month. Riots broke out as a result of his assassination.

Dr. Vlatko Macek, the new Croatian Peasant Party leader, declared that "there is no longer a constitution, but only king and people." A coalition government under Prime Minister Monsignor Anton Korošec, head of the Slovene People's Party, lasted only until December 1928. King Alexander dissolved the parliament on 6 January 1929, abolished the 1921 constitution, and established his own personal dictatorship as a temporary arrangement.

At first, most people accepted King Alexander's dictatorship as a necessity, which gave the country an opportunity to focus on building its economy from the foundation of postwar reconstruction. Royal decrees established penalties of death or 20 years in prison for terrorism, sedition, or Communist activities. All elected local councils and traditional political parties were dissolved. Freedom of the press was severely constrained and government permission was required for any kind of association. All power was centralized and exercised by the king through a council of ministers accountable only to him.

On 3 October 1929, the country was renamed the Kingdom of Yugoslavia, and the territorial regions (banovinas) were named after rivers to emphasize the king's opposition to national names. One of the consequences of the dictatorship and its harsh measures against political opposition and cultural nationalism was the emigration of some political opponents, among them some of the top leadership of the Croatian Peasant Party and the leader of the Ustaša movement, Ante Pavelic.

The new constitution, initiated by King Alexander on 3 September 1931, was in theory a return to civil liberties and freedoms of association, assembly, and expression. But in reality, all such freedoms were limited by the king's decrees that remained in force. Parliament was to consist of two houses with a council of ministers still accountable directly to the king. The Croatian opposition grew stronger, and in the winter of 1932, their Zagreb Manifesto called for the removal of Serbian hegemony, and for popular sovereignty. In reaction, the regime interned or imprisoned political opponents. Croatia was seething with rebellion, and the three-year prison sentence for opposition leader Macek would have sparked an open revolt, were it not for the danger of Fascist Italy's intervention.

The worldwide economic depression hit Yugoslavia hard in 1932. Opposition continued to grow to the king's dictatorship, which had not proffered any solutions to the so-called Croatian question. In late 1934, the king planned to release Macek from prison, reintroduce a real parliamentary system, and try to reach some compromise between Serbs and Croats. Unfortunately, King Alexander was assassinated in Marseille on 9 October 1934 by agents of the Ustaša group, which was trained in terrorism in Hungary with Mussolini's support. Prince Paul, King Alexander's

cousin, headed the interim government, releasing Macek and other political leaders, but otherwise continuing the royal dictatorship. On 5 May 1935, the elections for a new parliament were so shamefully improper that a boycott of parliament began. Prince Paul consulted with Macek, and a new government of reconstruction was formed by Milan Stojadinovic. The new government initiated serious discussions with Macek on a limited autonomous Croatian entity that would be empowered on all matters except the armed forces, foreign affairs, state finance, customs, foreign trade, posts, and telegraphs.

Since 1937, the thorniest issue discussed had been the make-up of the federal units. Serbs wanted to unite with Macedonia, Vojvodina, and Montenegro. Croatia wanted Dalmatia and a part of Vojvodina. Slovenia was recognized as a separate unit, but Bosnia and Herzegovina posed a real problem, with both Croats and Serbs claiming ownership over a land that contained a substantial minority of Bosnian Muslims. Meanwhile, intense trade relations with Germany and friendlier relations with Italy were bringing Yugoslavia closer to those countries. Adolph Hitler's annexation of Austria and Czechoslovakia in 1938 made it imperative that Yugoslavia resolve its internal problem before Hitler and Mussolini attempted to destabilize and conquer Yugoslavia.

Stojadinovic resigned, and Prince Paul appointed Dragiša Cvetkovic as prime minister, charging him with the task of reaching a formal agreement with the Croatian opposition. The agreement was concluded on 26 August 1939. Macek became the new vice-premier, a territorial region of Croatia was established that included Dalmatia and western Herzegovina, and the traditional Sabor of Croatia was revived. But autonomy for Croatia was not received well by most of Serbia. Concerned with the status of Serbs in Croatia, Serbia was anxious to incorporate most of Bosnia and Herzegovina. Even less satisfied was the extreme Croatian nationalist Ustaša movement, whose goal was an independent greater Croatia inclusive of Bosnia and Herzegovina. For the Ustaša, this goal was to be achieved by any means and at any cost, including violence and support from foreign powers. Tensions between the extremes of the failed Yugoslavia had seemingly reached the boiling point.

### World War II

Meanwhile, the clouds of World War II had gathered with Italy's takeover of Albania and its war with Greece, and Hitler's agreement with Stalin followed by his attack on Poland in the fall of 1939, resulting in its partitioning. Hungary, Romania, and Bulgaria had joined the Axis powers and England and France had entered the war against Germany and Italy. With the fall of France in 1940, Hitler decided to assist Mussolini in his war with Greece through Bulgaria, and therefore needed Yugoslavia to join the Axis so Germany would be assured of ample food and raw materials.

The Yugoslav Government had limited choices—either accept the possibility of immediate attack by Germany, or join the Axis, with Hitler's assurance that no German troops would pass through Yugoslavia towards Greece. The regent was aware of Yugoslavia's weak defense capabilities and the inability of the Allies to assist Yugoslavia against the Axis powers, despite security agreements with Britain and France. Yugoslavia signed a treaty with Hitler on 26 March 1941 and on 27 March a coup d'état by Serbian military officers forced the regent to abdicate. The military declared Prince Peter the new king, and formed a government with Gener-

al Dušan Simovic as premier and Macek as vice-premier. The new government tried to temporize and placate Hitler, who was enraged by the deep anti-German feeling of the Yugoslav people who shouted in demonstrations, “Bolje rat nego pakt” (Better war than the pact). Feeling betrayed, Hitler unleashed the German fury on Yugoslavia on 6 April 1941 by bombing Belgrade and other centers without any warning or formal declaration of war.

The war was over in 11 days, with the surrender signed by the Yugoslav Army Command while the Yugoslav government (with young King Peter II) fled the country for allied territory and settled in London. Yugoslavia was partitioned among Germany, Italy, Hungary, Bulgaria, and Italian-occupied Albania, while Montenegro, under Italian occupation, was to be restored as a separate kingdom. Croatia was set up as an independent kingdom with an Italian prince to be crowned Tomislav II. Ante Pavelic was installed by the Italians and Germans as head of independent Croatia (after Macek had declined Hitler’s offer). Croatia was forced to cede part of Dalmatia, with most of its islands and the Boka Kotorska area, to Italy. In exchange, Croatia was given Bosnia and Herzegovina and the Srijem region up to Belgrade.

On 10 April 1941, the “resurrection of our independent State of Croatia” was proclaimed in Zagreb by Slavko Kvaternik for Ante Pavelic, who was still in Italy with some 600 of his Ustaše. With Pavelic’s arrival in Zagreb five days later, the Ustaša regime was established, with new laws that expressed the basic Ustaša tenets of a purely Croatian state viewed as the bulwark of Western civilization against the Byzantine Serbs. Slavko Kvaternik explained how a pure Croatia would be built—by forcing one-third of the Serbs to leave Croatia, one-third to convert to Catholicism, and one-third to be exterminated. Soon Ustaša bands initiated a bloody orgy of mass murders of Serbs unfortunate enough not to have converted or left Croatia on time. The enormity of such criminal behavior shocked even the conscience of German commanders, but Pavelic had Hitler’s personal support for such actions which resulted in the loss of lives of hundreds of thousands of Serbs in Croatia and Bosnia and Herzegovina. In addition, the Ustaša regime organized extermination camps, the most notorious one at Jasenovac where Serbs, Jews, Gypsies, and other opponents were massacred in large numbers. The Serbs reacted by forming their own resistance groups (“Cetniks”) or by joining with the Communist-led partisan resistance, and thus struck back at the Ustaša in a terrible fratricidal war encouraged by the Germans and Italians.

The Ustaša regime organized its armed forces into the Domobrani, its Ustaša shock troops, and the local gendarmerie. Its attempt at organizing the Croatian people in the fascist mode failed, however. Most Croats remained faithful to the Croatian Peasant Party Democratic principles, or joined the Partisan movement led by Josip Broz-Tito that offered a federal political program. With respect to Bosnia and Herzegovina, the Ustaša regime never attained real control. The continuous fighting generated by Cetniks and Partisans fighting one another while being pursued by the Ustaša, the Germans, and the Italians made it impossible for the Ustaša to dominate. Most Croats rejected (and deeply resented) the trappings of an imported Fascist mystique and the abuse of their Catholic faith as a cover or justification for the systematic slaughter of their Serbian neighbors.

By the spring of 1942, the Ustaša regime began to retreat from its policy and practice of extermination of Serbs. But the terrible

harm was done, and one consequence was the deep split between the Serbian members and their Croatian colleagues within the cabinet of the Yugoslav government-in-exile. The Serbs held the entire Croatian nation accountable for the Ustaša massacres, and reneged on the 1939 agreement establishing the Croatian Banovina as the basis for a federative reorganization in a postwar Yugoslavia. This discord made the Yugoslav government-in-exile incapable of offering any kind of leadership to the people in occupied Yugoslavia. The fortunes of war and diplomacy favored the Communist Partisans—after Italy’s surrender in September 1943, it handed over to the Partisans armaments and supplies from some 10 Italian divisions. More and more Croats left their homeguard, and even some Ustaša units, to join the Partisans. Some Ustaša leaders, on the other hand, conspired against Pavelic in order to negotiate with the allies for recognition of the “independent” state of Croatia. But they were caught and executed in the summer of 1944.

With the entry of Soviet armies into Yugoslav territory in October 1944, the Communist Partisans swept over Yugoslavia in pursuit of the retreating German forces. Pavelic and his followers, along with the Croatian homeguard units, moved north to Austria at the beginning of May 1945 to escape from the Partisan forces and their retaliation. The Partisans took over Croatia, launching terrible retaliation in the form of summary executions, people’s court sentences, and large scale massacres, carried out in secret, of entire homeguard and other Ustaša units.

### Communist Yugoslavia

Such was the background for the formation of the second Yugoslavia led by Tito as a Federative People’s Republic of five nations—Slovenia, Croatia, Serbia, Macedonia, Montenegro—with Bosnia and Herzegovina as a buffer area with its mix of Serbs, Muslims, and Croats. The problem of large Hungarian and Muslim Albanian populations in Serbia was solved by creating the autonomous regions of Vojvodina (Hungarian minority) and Kosovo (Muslim Albanian majority) that assured their political and cultural development. Tito attempted a balancing act to satisfy most of the nationality issues that were still unresolved from the first Yugoslavia, and decades of ethnic and religious conflict.

In pre-1941 Yugoslavia, Serbs had enjoyed a controlling role. After 1945 the numerically stronger Serbs had lost the Macedonian area they considered Southern Serbia, lost the opportunity to incorporate Montenegro into Serbia, and had lost direct control over both the Hungarian minority in Vojvodina and Muslim Albanians of Kosovo, which had been viewed as the cradle of the Serbian nation since the Middle Ages. They could no longer incorporate into Serbia the large Serbian-populated areas of Bosnia, and had not obtained an autonomous region for the large minority of Serbian population within the Croatian Republic. The Croats—while gaining back from Hungary the Medjumurje area and from Italy the cities of Rijeka (Fiume), Zadar (Zara), some Dalmatian islands, and the Istrian Peninsula—had lost the Srijem area to Serbia, and Bosnia and Herzegovina. In addition, the Croats were confronted with a deeply resentful Serbian population that became ever more pervasive in public administrative and security positions.

The official position of the Marxist Yugoslav regime was that national rivalries and conflicting interests would gradually dimin-

ish through their sublimation into a new Socialist order. Without capitalism, nationalism was supposed to wither away. Therefore, in the name of unity and brotherhood, nationalistic expression of concern was prohibited, and repressed by the dictatorial and centralized regime of the League of Yugoslav Communists acting through the Socialist Alliance as its mass front organization. After a short postwar coalition government, the elections of 11 November 1945, boycotted by the non-communist coalition parties, gave the communist People's Front 90% of the votes. A constituent assembly met on 29 November, abolished the monarchy, and established the Federative People's Republic of Yugoslavia. In January 1946, a new constitution was adopted, based on the 1936 Soviet constitution.

The Communist Party of Yugoslavia took over total control of the country and instituted a regime of terror through its secret police. To destroy the bourgeoisie, property was confiscated, and the intelligentsia were declared "enemies of the people," to be executed or imprisoned. Large enterprises were nationalized, and forced-labor camps were formed. The church and religion were persecuted, properties confiscated, religious instruction and organizations banned, and education used for Communist indoctrination. The media was forced into complete service to the totalitarian regime, and education was denied to "enemies of the people."

The expulsion of Yugoslavia from the Soviet-dominated Cominform Group in 1948, engineered by Soviet leader Joseph Stalin, was actually a blessing for Yugoslavia. Yugoslavia's "road to Socialism" evolved quickly in response to Stalin's pressures and Yugoslavia's need to perform a balancing act between the North Atlantic Treaty Organization (NATO) and the Soviet bloc. Tito also pushed the nationalization of the economy through a policy of forced industrialization supported by the collectivization of agriculture.

By the 1950s, Yugoslavia had initiated the development of what would become its internal trademark: self-management of enterprises through workers' councils and local decision-making as the road to Marx's "withering away of the state." Following the failure of the first five-year plan (1947–51), the second five-year plan (1957–61) was completed in four years by relying on the well-established self-management system. Economic targets were set from the local to the republic level and then coordinated by a federal planning institute to meet an overall national economic strategy. This system supported a period of very rapid industrial growth in the 1950s. But a high consumption rate encouraged a volume of imports financed by foreign loans that exceeded exports. In addition, inefficient and low productivity industries were kept in place through public subsidies, cheap credit, and other artificial protective measures, leading to a serious crisis by 1961. Reforms were necessary and, by 1965, market socialism was introduced with laws that abolished most price controls and halved import duties while withdrawing export subsidies. The agricultural reform of 1945–46 limited private ownership to a maximum of 35 hectares (85 acres). The limited free market (after the initial forced delivery of quotas to the state at very low prices) had to be abandoned because of resistance by the peasants. The actual collectivization efforts were initiated in 1949 using welfare benefits and lower taxes as incentives, along with direct coercion. But collectivization had to be abandoned by 1958 simply because its inefficiency and low productivity could not support the concentrated effort of industrial development.

The government relaxed its restrictions to allow labor migration, particularly large from Croatia to West Germany, where workers were needed for its thriving economy. Foreign investment was encouraged (up to 49%) in joint enterprises, and barriers to the movement of people and exchange of ideas were largely removed. The role of trade unions continued to include transmission of instructions from government to workers, allocation of perks, the education/training of workers, monitoring of legislation, and overall protection of the self-management system. Strikes were legally allowed, but the 1958 miners' strike in Trbovlje, Slovenia, was not publicly acknowledged and was suppressed. After 1958, strikes were tolerated as an indication of problems to be resolved.

After the split from the Cominform, Yugoslavia began also to develop a foreign policy independent of the Soviet Union. By mid-1949, Yugoslavia ceased its support of the Greek Communists in their civil war against the then-Royalist government of Greece. In October 1949, Yugoslavia was elected to one of the nonpermanent seats on the UN Security Council and openly condemned Communist-supported North Korea's aggression towards South Korea. Following Nikita Khrushchev's 1956 denunciation of Stalin, Tito intensified his work on developing the movement of nonaligned "third world" nations. This would become Yugoslavia's external trademark, in cooperation with Nehru of India, Nasser of Egypt, and others. With the September 1961 Belgrade summit conference of nonaligned nations, Tito became the recognized leader of the movement. The nonaligned position served Tito's Yugoslavia well by allowing Tito to draw on economic and political support from the Western powers while neutralizing aggressive behavior from the Soviet bloc.

While Tito had acquiesced, reluctantly, to the 1956 Soviet invasion of Hungary for fear of political chaos and its liberalizing impact on Yugoslavia, he condemned the Soviet invasion of Dubcek's Czechoslovakia in 1968, as did Romania's Ceausescu, both fearing their countries might be the next in line for "corrective" action by the Red Army and the Warsaw Pact. Just before his death on 4 May 1980, Tito also condemned the Soviet invasion of Afghanistan. Yugoslavia actively participated in the 1975 Helsinki Conference and Agreements, and the first 1977–78 review conference that took place in Belgrade, even though Yugoslavia's one-party Communist regime perpetrated and condoned numerous human rights violations.

The debates of the 1960s led to a closer scrutiny of the Communist experiment. The 1967 Declaration in Zagreb, claiming a Croatian linguistic and literary tradition separate from the Serbian one, undermined the validity of the "Serb-Croatian" language and a unified Yugoslavian linguistic heritage. Also, Kosovo Albanians and Montenegrins, along with Slovenes and Croats, began to assert their national rights as superior to the right of the Yugoslavian federation. The eighth congress of the League of Communists of Yugoslavia (LCY) in December 1964 acknowledged that ethnic prejudice and antagonism existed in socialist Yugoslavia, and that Yugoslavia's nations were disintegrating into a socialist Yugoslavism. Thus the republic, based on individual nations, became an advocate of a strong federalism that devolved and decentralized authority from the federal to the republic level. Yugoslav Socialist Patriotism was defined as a feeling for both national identity and for the overall socialist self-management framework of Yugoslavia, despite the signs of a deeply divided country.

As the Royal Yugoslavism had failed in its assimilative efforts, so did the Socialist Yugoslavism fail to overcome the forces of nationalism. In the case of Croatia, there were several key factors sustaining the attraction to its national identity: more than a thousand years of its historical development, the carefully nurtured tradition of Croatian statehood, a location bridging central Europe and the Balkan area, an identification with Western European civilization, and the Catholic religion with the traditional role of Catholic priests (even under the persecutions by the Communist regime). In addition, Croatia had a well-developed and productive economy with a standard of living superior to most other areas of the Yugoslav Federation other than Slovenia. This generated a growing resentment against the forced subsidizing by Croatia and Slovenia of less developed areas, and for the buildup of the Yugoslav Army. Finally, the increased political and economic autonomy enjoyed by the Republic of Croatia after the 1974 constitution and particularly following Tito's death in 1980, added impetus to the growing Croatian nationalism.

### Croatian Spring

The liberal bloc (Slovenia, Croatia, Macedonia, Vojvodina) prevailed over the conservative group, and the reforms of 1965 did away with central investment planning and political factories. The positions of the two blocs hardened into a national-liberal coalition that viewed the conservative, centrist group led by Serbia as the Greater Serbian attempt at majority domination. The devolution of power in economic decision making, spearheaded by the Slovenes, assisted in the federalization of the League of Communists of Yugoslavia as a league of quasi-sovereign republican parties. Under strong prodding from the Croats, the party agreed in 1970 to the principle of unanimity for decision making. In practice, this meant each republic had veto power. However, the concentration of economic resources in Serbian hands continued, with Belgrade banks controlling half of total credits and some 80% of foreign credits. Fear of Serbian political and cultural domination continued, particularly with respect to Croatian language sensitivities aroused by the use of the Serbian version of Serbo-Croatian as the norm, with the Croatian version as a deviation.

The language controversy thus exacerbated the economic and political tensions between Serbs and Croats, spilling easily into ethnic confrontations. To the conservative centrists the devolution of power to the republic level meant the subordination of the broad Yugoslav and Socialist interests to the narrow nationalist interest of national majorities. With the Croat League of Communists taking the liberal position in 1970, nationalism was rehabilitated. Thus the "Croatian Spring" bloomed and impacted all the other republics of Yugoslavia. Meanwhile, through a series of constitutional amendments in 1967–68 that limited federal power in favor of republics and autonomous provinces, the federal government came to be viewed by liberals as an inter-republican problem-solving mechanism bordering on a confederalist arrangement. A network of inter-republican committees established by mid-1971 proved to be very efficient, resolving a large number of difficult issues in a short time. The coalition of liberals and nationalists in Croatia, however, also generated sharp condemnation in Serbia, where its own brand of nationalism grew stronger, but as part of a conservative-centrist alliance. Thus, the liberal/federalist

versus conservative/centrist conflict became entangled in the rising nationalism within each opposing bloc.

Particularly difficult were the situations in Croatia and Serbia because of their minorities issues. Serbs in Croatia sided with the Croat conservatives and sought a constitutional amendment guaranteeing their own national identity and rights. In the process, the Serbs challenged the sovereignty of the Croatian nation. The conservatives prevailed, and the amendment declared that "the Socialist Republic of Croatia (was) the national state of the Croatian nation, the state of the Serbian nation in Croatia, and the state of the nationalities inhabiting it."

Meanwhile, Slovenia, not burdened by large minorities, developed in a liberal and nationalist direction. This fostered an incipient separatist sentiment opposed by both the liberal and conservative party wings. Led by Stane Kavcic, head of the Slovenian Government, the liberal wing gained as much political local latitude from the federal level as possible during the "Slovenian Spring" of the early 1970s. By the summer of 1971, the Serbian Party leadership was pressuring President Tito to put an end to what was in their view the dangerous development of Croatian nationalism. While Tito wavered because of his support for the balancing system of autonomous republic units, the situation quickly reached critical proportions. Croat nationalists, complaining about discrimination against Croats in Bosnia and Herzegovina, demanded the incorporation of western Herzegovina into Croatia. Serbia countered by claiming southeastern Herzegovina for itself. Croats also advanced demands for a larger share of their foreign currency earnings, the issuance of their own currency, their own national bank that would directly negotiate foreign loans, the printing of Croatian postage stamps, to a Croatian Army, to recognition of the Croatian Sabor as the highest Croatian political body and, finally, to Croatian secession and complete independence.

Confronted with such intensive agitation, the liberal Croatian Party leadership could not back down and did not restrain the public demands nor the widespread university students' strike of November 1971. This situation caused the loss of support from the liberal party wings of Slovenia and even Macedonia. Tito intervened, condemning the Croatian liberal leadership on 1 December 1971, while supporting the conservative wing. The liberal leadership group resigned on 12 December 1971. When Croatian students demonstrated and demanded an independent Croatia, the Yugoslav Army was ready to move in if necessary. A wholesale purge of the party liberals followed with tens of thousands expelled. Key functionaries lost their positions, several thousands were imprisoned (including Franjo Tudjman who later became president of independent Croatia), and leading Croatian nationalist organizations and their publications were closed. On 8 May 1972 the Croatian Party also expelled its liberal wing leaders and the purge of nationalists continued through 1973.

However, the issues and sentiments raised during the "Slovene and Croat Springs" of 1969–71 did not disappear. Tito and the conservatives were forced to satisfy nominally some demands, and the 1974 Constitution was an attempt to resolve the strained inter-republican relations as each republic pursued its own interests over and above any conceivable overall Yugoslav interest. The repression of liberal-nationalist Croats was accompanied by the growing influence of the Serbian element in the Croatian Party (24% in 1980) and police force (majority). This influence contrib-

uted to the ongoing persecution and imprisonments of Croatian nationalists into the 1980s. Tito's widespread purges of the "Croatian Spring" movement's leadership and participants in 1971 had repressed the reawakened Croatian nationalism, but could not eliminate it. Croatian elites had realized the disadvantages of the Croatian situation and expressed it in 1970–71 through the only channel then available—the Communist Party of Croatia and its liberal wing. With the purges, this wing became officially silent in order to survive, but remained active under the surface, hoping for its turn. This came with the 1974 constitution and its devolution of power to the republic level, and was helped along by the growing role of the Catholic church in Croatia. The Catholic church, as the only openly organized opposition force in the country, became the outspoken defender of Croatian nationalism. As a result, Catholic leaders and priests were subjected to persecution and furious attacks by the government.

### Yugoslavia—a House Divided

After Tito's death in 1980, relations between the Croatian majority and the Serbian minority became strained. Tito had set up a rotating presidency in which the leaders of each of the six republics and two autonomous regions of Serbia would have the Yugoslavian presidency for one year at a time. Unfortunately, the Serbian president that first held the office was not recognized by the Croats. Demands for autonomy by the half million Serbs in Croatia were brushed aside by the Croats, who pointed out the absence of such autonomy for Croats in Vojvodina and Bosnia and Herzegovina. Thus the conservatives' control of the League of Communist of Croatia between 1972 and 1987 could not prevent the resurfacing of the Croat question, which led in a few years to Croatia's disassociation from Yugoslavia and to war.

As the Communist parties of the various republics kept losing in membership and control, the clamoring for multiparty elections became irresistible. The first such elections were held on 8 April 1990 in Slovenia where a coalition of non-Communist parties (Demos) won, and formed the first non-Communist Government since 1945. In Croatia, the Croatian Democratic Union (HDZ) under the leadership of Dr. Franjo Tudjman, had worked illegally since 1989 and had developed an effective network of offices throughout Croatia and in Vojvodina and Bosnia and Herzegovina. The HDZ had also established its branches abroad from where, particularly in the United States, it received substantial financial support. Thus, in the elections of late April-early May 1990 the Croatian Democratic Union was able to obtain an overwhelming victory with 205 of 356 seats won and a majority in each of the three chambers of the Croatian Assembly. In the most important Socio-Political Chamber, Dr. Tudjman's party won 54 of the 80 seats, with the Communists and their allies obtaining only 26 seats. On 30 May 1990, Dr. Tudjman was elected president of Croatia with 281 of 331 votes and Stjepan Mesic became prime minister. Krajina Serbs voted either for the former Communists or for their new Serbian Democratic Party (SNS) led by Jovan Raškovic. The Serbian Democratic Party gained five delegates to the parliament and became the main voice of the Serbs in Croatia.

The overwhelming victory of Dr. Tudjman's party made the Serbs very uncomfortable. Their traditional desire for closer political ties to Serbia proper, the prospect of losing their overrepresentation (and jobs) in the Croatian Republic's administration,

and fear of the repetition of the World War II Ustaša-directed persecutions and massacres of Serbs made them an easy and eager audience for Slobodan Milošević's policy and tactics of unifying all Serbian lands to Serbia proper. Tensions between Croats and Serbs increased when Tudjman proposed constitutional amendments in June 1990 defining Croatia as the Sovereign State of the Croats and other nations and national minorities without specifically mentioning the Serbs of Croatia. The Serbs feared they would be left unprotected in an independent Croatia and therefore strongly supported Milošević's centralist policies. This fear, and the anti-Croatian propaganda from Belgrade that claimed the revival of the Ustaša, and called upon Serbs to defend themselves, caused Jovan Raškovic to reject the invitation from Tudjman to join the new government as its deputy prime minister. Instead, Raškovic ended the participation in legislative activities of the five Serbian Democratic Party deputies. At the end of August 1990, a new Serbian National Council adopted a "Declaration on the Sovereignty and Autonomy of the Serbian People" implying the need for cultural autonomy for the Serbs if Croatia were to remain a member of the Yugoslav Federation, but claiming political autonomy for the Serbs if Croatia were to secede from the Yugoslav Federation. A referendum held on 18 August 1990 by Serbs in Croatia gave unanimous support to their "Declaration on Sovereignty" as the foundation for the further development of their Knin Republic—as their council of Serbian-majority communes was called, from the name of the Dalmatian city of Knin where it was based.

The Tudjman government refrained from taking any action against the Knin Republic in order to avoid any reason for interference by the Yugoslav Army. But Tudjman made very clear that territorial autonomy for the Serbs was out of the question. When in December 1990 Croatia proclaimed its sovereignty and promulgated its new constitution, the Serbs of Croatia established a "Serbian Autonomous Region," immediately invalidated by the constitutional court of Croatia. Then in February 1991, Croatia and Slovenia declared invalid all federal laws regarding the two republics. On 28 February, the Krajina Serbs declared their autonomy in response to Croatia's call for disassociation from the Yugoslav Federation. Violence spread in many places with clashes between the Serbian paramilitary and special Croatian police units with Yugoslav Army units ordered to intervene. The Yugoslav Army was also used in Serbia in March 1991 to aid Serbian authorities against large Serbian opposition demonstrations in Belgrade. The sight of Yugoslav tanks in the streets of Belgrade, with two dead and some 90 wounded, signaled the decision of the Yugoslav Army to defend Yugoslavia's borders and oppose interethnic clashes that could lead to a civil war. Clearly the Serbian leadership and the Yugoslav Army top command (mostly Serbian) had cemented their alliance, with the goal of preserving Yugoslavia as a centralized state through pressuring Slovenia and Croatia into disarming their territorial defense units and by threatening forceful intervention in case of their refusal. But Slovenia and Croatia continued to buy arms for their defense forces, and to proclaim their intentions to gain independence.

At the end of March 1991, there were again bloody armed clashes between the Krajina Serbs and Croatian police, and again the Yugoslav Army intervened around the Plitvice National Park, an area the Serbs wanted to join to their Knin Republic. For President Tudjman this Serbian action was the last straw—Croatia had been

patient for eight months, but could wait no longer. The overall determination of Serbia to maintain a unitary Yugoslavia hardened, as did the determination of Slovenia and Croatia to attain their full independence. This caused the Yugoslav Army leadership to support Serbia and Slobodan Milošević, who had made his position clear by the spring of 1991 on the potential unilateral separation of Slovenia, Croatia, and Bosnia and Herzegovina. Since there was no substantial Serbian population in Slovenia, its disassociation did not present a real problem for Milošević. However, separation by Croatia and Bosnia and Herzegovina would necessitate border revisions in order to allow for lands with Serbian populations to be joined to Serbia.

### Independence

A last effort to avoid Yugoslavia's disintegration was made by Bosnia and Herzegovina and Macedonia with their 3 June 1991 compromise proposal to form a Community of Yugoslav Republics whereby national defense, foreign policy, and a common market would be administered centrally while all other areas—other than armed forces and diplomatic representation—would fall into the jurisdiction of the member states. But it was already too late. Serbia opposed the federal nature of the proposal and this left an opening for the establishment of separate armed forces. In addition, Milošević and the Yugoslav Army had already committed to the support of the Serbs' revolt in Croatia. In any case, both Milošević and Tudjman were past the state of salvaging Yugoslavia. They met in Split on 12 June 1991 to discuss how to divide Bosnia and Herzegovina into ethnic cantons.

The federal government of Yugoslavia ceased to exist when its last president (Stjepan Mešić, Croatia's future president) and prime minister (Ante Marković), both Croatian, resigned on 5 December 1991. Both Croatia and Slovenia reaffirmed their decision to disassociate from federal Yugoslavia after a three-month moratorium, in the Brioni Declaration of 7 July 1991. The European Community held a conference on Yugoslavia, chaired by Lord Carrington, where a series of unsuccessful cease-fires was negotiated for Croatia. The conference also attempted to negotiate new arrangements based on the premise that the Yugoslav Federation no longer existed, a position strongly rejected by Serbia, who viewed with great suspicion Germany's support for the independence of Slovenia and Croatia. Germany granted recognition to Slovenia and Croatia on 18 December 1991, while other European community members and the United States followed suit. The European community continued its efforts to stop the killing and destruction in Croatia, along with the UN special envoy, Cyrus Vance, who was able to conclude a peace accord on 3 January 1992 calling for a major UN peacekeeping force in Croatia. Part of the accord was also an agreement by the Serbian side to hand over to the UN units their heavy weapons and to allow the return to their homes of thousands of refugees. The international community stood firmly in support of the preservation of Yugoslavia. The United States and the European community had indicated that they would refuse to recognize the independence of Slovenia and Croatia if they unilaterally seceded. At the same time, Slovenia and Croatia defined their separation as a disassociation by sovereign nations, and declared their independence on 25 June 1991. Milošević was prepared to let Slovenia go, but Croatia still held around 600,000 ethnic Serbs. Milošević knew that a military

attack on a member republic would deal a mortal blow to both the idea and the reality of a "Yugoslavia" in any form. Thus, following the Yugoslav Army's attack on Slovenia on 27 June 1991, Milošević used the Yugoslav Army and its superior capabilities toward the goal of establishing the Serbian autonomous region of Krajina in Croatia. Increased fighting from July 1991 caused the tremendous destruction of entire cities (for example, Vukovar) and large-scale damage to medieval Dubrovnik. Croatia had been arming since 1990 with the financial aid of émigrés, and thus withstood fighting over a seven-month period, suffering some 10,000 deaths, 30,000 wounded, over 14,000 missing and lost to the Krajina Serbs (and to the Yugoslav Army). Croatia also lost about one-third of its territory—from Slavonia to the west and around the border with Bosnia and south to northern Dalmatia.

By late 1992, rebel Serbs controlled about one-third of Croatia's territory. In 1993, the Krajina Serbs voted to integrate with Serbs in Bosnia and Serbia. Although the Croatian government and the Krajina Serbs agreed to a cease-fire in March 1994, further talks disintegrated. This portion of land was strategically important to Croatia because it held the land routes to the Dalmatian coast (supporting the once-thriving tourist industry), the country's petroleum resources, and the access route from Zagreb into Slavonia. Also in 1994, the Croatian government agreed to give up its plan to partition Bosnia with Serbia. In return for US political support (which included military training and equipment), Croatia began cooperating with the Bosnian Muslims and recognized the sovereignty of Bosnia and Herzegovina.

In May 1995, the Croatian Army—in a mission it called "Operation Storm"—quickly occupied western Slavonia, and by August 1995, the Krajina region was under Croatian control. International reaction to the military mission was mild, and was largely judged as vindication for earlier Serb aggression. An estimated 200,000 Serbs fled from the region their ancestors had occupied for 200 years. Before the Croatian Army could move into eastern Slavonia, the government halted the mission, upon insistence by the United States. The cessation of the Croatian military campaign before it reached eastern Slavonia probably prevented a future round of revenge killings.

Eastern Slavonia was then put under UN control, with a force of about 5,500 military and police peacekeepers. With the signing of a basic agreement between the Croatian government and the Eastern Slavonia Serbs at the Dayton Peace Accords in Dayton, Ohio, in 1995, the UN had the support to establish the UN Transitional Administration for Eastern Slavonia (UNTAES) on 15 January 1996. The UNTAES established a Transitional Police Force, in which Serb and Croat police forces jointly administered the region, in order to prepare the area for reversion to Croatian control in July 1997. On 15 January 1998, any Serbs remaining in eastern Slavonia became Croatian citizens. Also, the Serbs that fled Croatia for fear of persecution were invited back into the country on 26 June 1998, when the Croatian parliament adopted the Croatian government's Return Program.

The 1997 elections that supported the reigning President Tudjman and his HDZ party were considered "fundamentally flawed." The tight grip that Tudjman kept on the Croatian nation through control of the media, police, and judicial system were considered not only undemocratic, but unconstitutional. In 1999, President Tudjman announced that "National issues are more important

than democracy,” alienating many Croats and concerning international observers. Tudjman cooperated with some requests of the International Criminal Tribunal for the Former Yugoslavia (ICTY), but refused to comply with others, especially the insistence on field investigations into the military operations of the 1990s. The ruling party agreed in 1999 to hold new parliamentary elections in January 2000, but these were scheduled too late for Tudjman to organize his resistance. He died on 10 December 1999, and Speaker of Parliament Vlatko Pavletic assumed interim power. On 18 February 2000, Stjepan Mesic was elected president of Croatia, signaling a new era in Croatian history that promised to be more European and more peaceful. In February 2005, Mesic was elected for a second term, with 66% of the vote, over his main contender—Jadranka Kosor.

The parliamentary elections held in early 2000 resulted in an end to the rule of the HDZ party, which won only 46 of 151 seats in the House of Representatives; Social Democratic Party (SDP) leader Ivica Racan led a center-left coalition government as prime minister. Constitutional reforms later that year reduced the powers exercised by the president, and replaced the semi-presidential system of government with a parliamentary one. In 2001, parliament approved a constitutional amendment abolishing its upper house, the House of Counties. The HDZ branded the government's move as politically motivated, as it controlled the upper house, and had been able to delay reform-minded legislation.

In November 2003, the parliamentary elections were won by the HDZ, which took 66 out of 152 seats in the House of Representatives. The SDP got only 34 seats, while other parties, and representatives, had to settle for 10 seats or less. Ivo Sanader, the leader of HDZ, was invited by president Mesic to form a government. Subsequently, the parliament gave its consent, and Sanader was appointed prime minister with 88 votes in favor. Sanader promised his party underwent major changes since the death of Tudjman, and pledged to uphold democracy and the rule of law. He is a strong supporter of EU and NATO membership.

In September 2001, the ICTY indicted Milošević for war crimes and crimes against humanity committed in the war in Croatia. He went on trial in The Hague in February 2002. However, in September 2002, under pressure from nationalists, the Croatian government declined to turn over to the Hague tribunal former Army chief-of-staff Janko Bobetko, indicted for war crimes. In March 2003, former Maj. Gen. Mirko Norac was sentenced in a Croatian court to 12 years in prison for orchestrating the killings of Serb civilians in 1991. He was the most senior Croatian Army officer to be convicted for war crimes in a Croatian court. Norac had given himself up to Croatian authorities in March 2001 on the understanding that he would not be extradited to the ICTY.

In February 2003, Croatia submitted its application for membership to the EU; it concluded its Stabilization and Association Agreement (SAA) with the EU in May 2001. In October 2005, the EU gave Croatia the green light for the continuation of accession talks although some of its deemed war criminals were still at large. Croatia is also an aspirant for NATO membership.

### **13 GOVERNMENT**

Croatia is a democratic republic with a president and parliamentary system of government. The parliament of Croatia, formed on

30 May 1990, adopted a new constitution on 22 December 1990. The executive authority is held by the president, elected for five years, and a government cabinet headed by the prime minister. Constitutional reforms in 2000 significantly reduced the powers exercised by the president. However, the president remains the supreme commander of the armed forces, and participates in foreign and national security policy decision-making. The constitutional court assures legality. In October 2005, the president was Stjepan Mesic, and the prime minister was Ivo Sanader.

In March 2001, amendments to the constitution abolished the upper house of parliament (House of Counties) in what had been a bicameral legislature (also including the lower house, or House of Representatives). The unicameral parliament, known as the Sabor (Assembly), has up to 160 members elected for four-year terms. In 2005 there were 140 domestic representatives, 8 representatives for the minorities, and 4 Diaspora representatives.

The threshold that parties must cross for representation in parliament is 5% of the turnout in each of the 10 electoral districts. Croatian citizens that live outside the country's borders are counted in a distinct electoral unit, and their votes are weight directly against the number of domestic votes to determine the number of parliamentary seats the Diaspora will receive. (To vote, one must be 18 or older, or 16 if employed.) The prime minister is nominated by the president, in line with the balance of power in the Assembly. Domestic policy-making is the responsibility of parliament.

### **14 POLITICAL PARTIES**

In the presidential elections of May 1997, Tudjman, founder of the Christian Democratic Union (HDZ) in 1988, won a second term as president of Croatia, with 61.2% of the vote. International monitors, however, condemned the elections as seriously biased in favor of the incumbent. Zdravko Tomac of the socialist Social Democrat Party won 21.1% of the vote, and Vlado Gotovac of the moderate Social Liberal Party received 17.7%. After the death of Tudjman at the end of 1999, presidential elections were held in January and February 2000. Thirteen candidates successfully registered for the election. Stjepan Mesic of the Croatian People's Party (HNS), supported by the Croatian Peasant Party (HSS)/Istrian Democratic Sabor (IDS)/LS liberal coalition, defeated rival Drazen Budiša of the Social Democratic Party (SDP)/Croatian Social Liberal Party (HSL) coalition, 41.1% to 27.7% in the first round, with Croatian Democratic Union (HDZ) candidate Mate Granic gaining 22.5% of the vote, and 56% to 44% in the second round of the ballot. Mesic won in 17 out of 21 counties. Voter turnout in round one was 63% and 61% in round two. Mesic was voted in, for a second term, in 2005. He had the support of eight political parties and defeated his main contender—Jadranka Kosor—in the second round of the elections, with 66% of the popular vote.

In the parliamentary elections held 23 November 2003, HDZ garnered 66 seats in the House of the Representatives; the SDP won 34; the HSS and HNS both won 10; the HSP (the Croatian Party of Rights) won 8; the IDS won 4; Libra, HSU (the Croatian Party of Pensioners), and SDSS (Independent Democratic Serb Party), all won 3; while 11 seats went to others. The HDZ formed a minority government coalition with DC (Democratic Center), HSL, HSU, and SDSS. The leader of HDZ, Ivo Sanader, became the new prime minister.

## 15 LOCAL GOVERNMENT

Local government in Croatia consists of municipalities that are grouped into 20 counties and 1 city. Citizens are guaranteed the right to local self-government with competencies to decide on matters, needs, and interest of local relevance. Counties consist of areas determined by history, transportation, and other economic factors. The 20 counties are: Zagreb, Kradina-Zagorje, Sisacko-Moslavacka, Karlovac, Varazdin, Koprivnica-Krizevci, Bjelovar-Bilogora, Hrvatsko Primorje-Gorski Kotar, Lika-Senj, Virovitica-Posavina, Požega-Slavonija, Slavonski Brod-Posavina, Zadar-Knin, Osijek-Baranja, Šibenik, Vukovar-Srijem, Dalmatia-Split, Istria, Dubrovnik-Neretva, Medijmurje; and the City of Zagreb.

The mayor of Zagreb is elected by the city assembly and is approved by the president. In the local elections of 2001, tens of thousands of candidates contested 566 councils and assemblies at the municipal, town, county, and Zagreb City levels. (There are approximately 440 municipalities and 120 towns in Croatia). A total of 3.8 million voters were registered for the elections. The local election results roughly mirrored those of the parliamentary elections of 2000. However, in the May 2005 local elections voter turnout was estimated to be lower than 35%, with the SDP prevailing in the bigger cities—Zagreb, Split, and Rijeka. HDZ's popularity decreased dramatically since the parliamentary elections in 2003—the party garnered only about 16% of the local vote, mostly in rural areas and small towns.

## 16 JUDICIAL SYSTEM

The judicial system is comprised of municipal and county courts, a Supreme Court, an Administrative Court, and a Constitutional Court. A High Judicial Council (made up of 11 members serving eight-year terms) appoints judges and public prosecutors. The judicial system, supervised by the justice and administration ministry, remains subject to ethnic bias and political influence, especially at the local level. Judges are prohibited constitutionally from being members of any political party.

A commercial court system handles all commercial and contractual disputes. The Supreme Court judges are appointed for an eight-year term by the Judicial Council. The Constitutional Court has 13 judges (11 prior to March 2001) who are also elected in the same manner. The military court system was abolished in November 1996. The constitution prohibits the arbitrary interference with privacy, family, home or correspondence, but these freedoms are not always protected by the government.

## 17 ARMED FORCES

The armed forces of Croatia are restricted by the Dayton Peace Accords. In 2005 the number of active armed forces personnel totaled 20,800 with 108,200 reservists. The Army had 14,050 active personnel, followed by the Navy with 2,500 and the Air Force with 2,300. The Army had 291 main battle tanks, 104 armored infantry fighting vehicles, 53 armored personnel carriers, and 1,452 artillery pieces. The Navy's principal units included one tactical submarine, two corvettes, five patrol/coastal vessels, five amphibious landing craft, and seventeen logistics/support vessels. The Air Force had 27 combat capable aircraft, including 20 fighters and 9 attack helicopters. Croatia also had a paramilitary force of 10,000

armed police. Croatia as of 2005 was involved in 12 foreign countries or regions as part of NATO and UN military and peacekeeping missions. Croatia's military budget in 2005 was \$626 million.

## 18 INTERNATIONAL COOPERATION

Croatia was admitted to the United Nations on 22 May 1992; it is part of the ECE and serves on several specialized agencies, such as the FAO IAEA, ICAO, IMF, UNESCO, UNIDO, WHO, and the World Bank. The nation was admitted to the WTO on 30 November 2000. Croatia is a member of the OSCE, the Council of Europe, the Central European Initiative, Euro-Atlantic Partnership Council, and the European Bank for Reconstruction and Development. The nation is a candidate for membership in the European Union. Croatia participates in the NATO Partnership for Peace and the Adriatic Charter, and sits as an observer in the OAS.

Croatia is an observer in the Nonaligned Movement and is part of the Organization for the Prohibition of Chemical Weapons. The UN sent peacekeeping troops to Croatia in the spring of 1992 to mediate an ongoing civil war in the region. In environmental cooperation, Croatia is part of the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the London Convention, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Before the dissolution of the Yugoslav SFR, Croatia was its second-most prosperous and industrialized area (after Slovenia). Per capita output in Croatia was comparable to that of Portugal and about 33% above the Yugoslav average. Croatia's economic problems were largely inherited from a legacy of Communist mismanagement and a bloated foreign debt. More recently, fighting caused massive infrastructure and industrial damage to bridges, power lines, factories, buildings, and houses. Croatia's economy also had to grapple with a large population of refugees and internally displaced persons. As a result of the war and loss in output capacity, GDP fell by more than 40%.

Yet while the economy has stabilized in recent years, Croatia continues to suffer from structural problems. Under the late President Franjo Tuđman, the Croatian government regularly bailed out failing banks and businesses, regardless of their survivability. This practice needs to be stopped and industry restructured if Croatia is to progress on the path of market reforms. Although unemployment remains high and the country has a growing trade deficit, Croatia in the early 2000s experienced a growth in tourism and an increase in remittances and investment from expatriate Croats. Many small and medium-sized businesses have been privatized, and even larger state-owned industries were in the process of being restructured in 2002, such as shipbuilding. In October 2001, the government signed a Stabilization and Association Agreement with the EU, which moves the country in the direction of integration with the EU. Croatia joined the WTO in 2000. Major growth sectors are energy, tourism, construction, transportation, and telecommunications.

In 2002, the GDP growth rate reached a peak at 5.2%, falling in subsequent years at 4.3% (2003), and 3.7% (2004); for 2005, it was expected to fall even further at 3.1%. The inflation has dropped substantially since 2000, and has stabilized at around 2%. Unem-

ployment, although on a downward path, remained a problem in 2004, at 18.7%. Despite recent moderate economic performance, Croatia's prospects for the future appeared positive. In January 2005, presidential elections were held, and the coalition government started negotiations for EU entry, with the expected accession date being set for 2009 or 2010. A number of privatizations were to be completed by that date, and the government was to prove that Croatia stood as a politically stable and trustworthy country.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Croatia's gross domestic product (GDP) was estimated at \$53.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$11,600. The annual growth rate of GDP was estimated at 3.2%. The average inflation rate in 2002 was 3.2%. It was estimated that agriculture accounted for 7% of GDP, industry 32.8%, and services 62.2% in 2005.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.069 billion or about \$241 per capita and accounted for approximately 3.7% of GDP. Foreign aid receipts amounted to \$121 million or about \$27 per capita and accounted for approximately 0.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Croatia totaled \$16.91 billion or about \$3,805 per capita based on a GDP of \$28.8 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.4%. In 2001 it was estimated that approximately 24% of household consumption was spent on food, 18% on fuel, 4% on health care, and 3% on education. It was estimated that in 2003 about 11% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, there were an estimated 1.7 million persons in Croatia's labor force. As of 2004, employment by sector was as follows: industry 32.8%; agriculture, 2.7%; and 64.5% in the services sector. In 2004, the official unemployment rate was placed at 18.7%. However, labor force surveys indicated that unemployment was at an estimated 14%.

All workers, except the military and police, may form and join unions of their own choosing without prior authorization. Generally, unions were independent of political parties and of the government. About 64% of the workforce was unionized in 2005. The right to strike and bargain collectively is protected by law, although there are restrictions and limitations. Nonpayment of wages continues to be a serious problem.

National minimum wage standards are in place, but are insufficient in providing a worker and family with a decent living standard. The minimum wage was set at \$308 per month as of 2005. In 2002 the standard workweek was shortened from 42 to 40 hours. Workers are also entitled to a 30-minute break every day, one day

off every seven days, and a minimum of eighteen days paid vacation per year. The minimum working age is 15 and this is generally enforced. In addition, workers under the age of 18 are prohibited from working overtime, at night or under hazardous conditions. There are also occupational safety and health standards, but these are not routinely respected.

## 22 AGRICULTURE

An estimated 1,588,000 hectares (3,924,000 acres), or 28.4% of total land, was arable in 2002. About 2.7% of the economically active population was engaged in agriculture in 2004; in 2005 it accounted for about 7% of GDP.

The civil war reduced agricultural output in the years immediately following the breakup of the Yugoslav SFR. Production of 2004 major crops included (in thousands of tons): wheat, 840; corn, 2,200; sugar beets, 1,000; grapes, 350; apples, 58; and plums, 30. Total production of cereals fell from 3,179,000 tons in 1997 to 2,355,000 in 2004. Plums are used in the production of slivovitz, a type of plum brandy.

## 23 ANIMAL HUSBANDRY

About 28% of the total land area consists of pastures. In 2004, there were 1,489,000 pigs, 466,000 cattle, 721,000 sheep, 93,000 goats, 10,000 horses, and 10,235,000 chickens. That year, 140,686 tons of meat were produced, including 70,000 tons of pork, 35,500 tons of poultry, 23,000 tons of beef, and 1,800 tons of mutton. Milk production in 2004 totaled 768,500 tons; eggs, 45,700 tons; and cheese, 23,935 tons. Cattle breeding accounts for about 50% of agriculture's contribution to the GDP.

## 24 FISHING

With a mainland coastline of 1,778 km (1,105 mi) and island coastlines totaling 4,012 km (2,493 mi) on the Adriatic, Croatia is suited to the development of marine fishing. However, Croatia lacks adequate fishing vessels as well as the infrastructure to transport and process seafood. The total catch in 2003 was 19,946 tons, of which 98% was from marine waters. Sardine is the principal saltwater species caught; carp is the most common freshwater species. Croatia's annual catch has declined steadily due to overfishing for a variety of species. However, fish farming has resulted in an overproduction of freshwater species and a decline in prices. Aquaculture produced 7,605 tons of fish in 2003.

## 25 FORESTRY

About 32% of the total area was forest or woodland in 2000. Croatia supplies small but good quality oak and beech; the wood industry has traditionally been oriented to the Italian market (accounting for over 35% of exports), and suffered damages during the civil war. Total roundwood production in 2003 was 3.8 million cu m (136 million cu ft), with exports of 560,000 cu m (19.8 million cu ft). Croatian exports of hardwood lumber typically consist of 50% beech, 30% oak, and 6% ash. Panels and veneer are also exported and Croatia is starting to increase the output of value-added products such as veneer sheets, plywood, and particle board. Total exports of wood products amounted to \$274.9 million in 2003. The forestry sector along with the whole of Croatian indus-

try is also attempting to produce in accordance with European standards and develop standardized contracts.

## 26 MINING

Aside from petroleum, the chief minerals industry, Croatia produced small quantities of ferrous and nonferrous metals and industrial minerals, mainly for domestic needs. In 2003, the mining and quarrying sector saw production increase by about 15% from 2002. Cement output in 2003 was up 8% from 2002. The production of clays, lime, nitrogen, pumice, stone, and sand and gravel satisfied most of Croatia's demand for construction materials; the importance of industrial minerals was expected to grow with continued postwar reconstruction. Mineral production in 2003 included cement, 3.654 million tons; salt, processed at Pag Island, 31,281 metric tons; bentonite, 13,568 metric tons; crude gypsum, 166,000 metric tons; and quartz, quartzite, and glass sand, 237,141 metric tons. Bauxite production dropped to zero in 2003, from 1,500 tons in 1996. Prior to the breakup of Yugoslavia, Croatia was the federation's chief producer of natural gas and petroleum, and a leading producer of iron and steel. The minerals sector was heavily hurt by the 1991–92 war, which damaged facilities, affected the market for raw materials, and disrupted normal commercial activities; the outlook remained captive to political and social stabilization in the region.

## 27 ENERGY AND POWER

Croatia's electric power generating capacity totaled 3.595 million kW in 2002, of which 2.076 million kW was hydroelectric and 1.519 kW conventional thermal sources. Although for that same year, a total of 11.755 billion kWh was produced, of which 6.443 billion kWh came from conventional thermal fuel sources and 5.311 billion kWh came from hydropower, consumption of electricity outstripped output, at 14.453 billion kWh, thus requiring Croatia to import 3.927 billion kWh in that year.

As of 1 January 2004, Croatia had proven oil reserves of 75 million barrels. In 2002 estimated oil production totaled 22,000 barrels per day. As with electricity, Croatia's demand for oil outstripped its output in that year. Consumption that year totaled an estimated 91,000 barrels daily, thus forcing Croatia to rely on imports to make up the difference. Imports in 2002 were estimated at 69,000 barrels per day.

Croatia, as of 1 January 2004, had proven natural gas reserves totaling 0.87 trillion cu ft. In 2001 production of natural gas was estimated at 62 billion cu ft, while consumption came to 100 billion cu ft. As a result, Croatia imported an estimated 38 billion cu ft of natural gas in 2001.

Although Croatia has recoverable coal reserves in 2001 of 43 million short tons, there was no known production. Thus to meet its need for coal, all the coal consumed in 2001, 0.88 million short tons, was imported.

## 28 INDUSTRY

Light industry, especially for the production of consumer goods, was more advanced in Croatia than in the other republics of the former Yugoslav SFR. Croatia's main manufacturing industries include chemicals and plastics, machine tools, fabricated metal products, electronics, pig iron and rolled steel products, aluminum processing, paper and wood products (including furniture),

building materials (including cement), textiles, shipbuilding, petroleum and petroleum refining, and food processing and beverages.

The collapse of Yugoslavia and the hostilities following Croatia's declaration of independence in 1991 damaged industrial production. Manufacturing employed about 335,000 people in 1995. The textile and clothing industry accounted for about 11% of total industrial output in 1995; the food industry, 17%. Industrial production increased 3.7% in 1998 and accounted for 24% of GDP. Industrial production increased to 33% of GDP in 2002. There is a need for reconstruction of basic infrastructure and housing, which should provide increased activity in the construction sector. The government was pursuing privatization of state-owned enterprises; the sale of INA, the national oil and gas company (which was expected to be completed by 2002) was finalized in 2003.

Although industry is an important part of the Croatian economy, in 2004 it performed sub par—the industrial production growth rate was only 2.7%, as compared to the 3.7% GDP growth rate. Still, it made 30.8% of the Croatian economy, and employed 32.8% of the labor force; agriculture participated with 7% to the overall GDP, and employed 2.7% of the working people; services came in first with 62.2% and 64.5% respectively. Croatia has to increase the privatization pace of state-owned companies if it is to accede to the EU by 2009/2010.

## 29 SCIENCE AND TECHNOLOGY

The Croatian Academy of Sciences and Arts (founded in 1866 and headquartered in Zagreb) has sections devoted to mathematical sciences and physics, natural sciences, and medical sciences. The country also had, as of 1996, 13 medical, scientific, and technical research institutes. The Museum of Natural Sciences (founded in 1924) is located in Split and the Croatian Natural History Museum (founded in 1846) and the Technical Museum (founded in 1954) are in Zagreb. The universities of Zagreb (founded in 1669), Osijek (founded in 1975), Rijeka (founded in 1973), and Split (founded in 1974) offer degrees in basic and applied science. In 1987–97, science and engineering students accounted for 30% of university enrollment.

As of 2002, Croatia had 1,920 researchers and 444 technicians per million people engaged in research and development (R&D). In 2002, Croatian R&D expenditures totaled \$519.726 million, or 1.14% of GDP. High technology exports that year were valued at \$432 million, accounting for 12% of the country's manufactured exports. R&D spending for the year 2000 (the latest year for which there is spending breakdown data) came mostly from the government, accounting for 54.2% of R&D spending. Business accounted for 44.2%, with foreign sources accounting for the rest.

## 30 DOMESTIC TRADE

Domestic trade occurs mainly between urban industry and rural agriculture. Civil strife and economic recessions in the past decade have severely weakened the domestic economy. The government has looked toward foreign investments to boost the economy. Privatization and anticorruption programs are likely to attract such foreign investments. A boost in the tourism industry has also

aided the economy. As of 2002, about 58% of the GDP was contributed by the services sector.

Normal working hours for public offices are 8:30 AM to 5:00 PM, Monday through Friday. Banks are typically open from 7:00 AM to 7:00 PM, Monday through Friday, and from 7:00 AM until noon on Saturdays. During the week, shops are open from 7:00 AM to 8:00 PM, and from 7:00 AM until 3:00 PM on Saturdays. Summer holidays may translate into closed businesses during the months of July and August.

### 3<sup>1</sup> FOREIGN TRADE

Ships are Croatia's major export (13.6% of exports), while other commodities fall close behind, including refined petroleum products (8.1%), polymers (2.9%), men's outerwear (3.4%), and women's outerwear (2.6%). Croatia's diverse export market also includes various chemicals, foodstuff, and raw materials.

In 2004, exports reached \$7.8 billion (FOB—Free on Board), but were more than doubled by imports at \$16.7 billion (FOB). Croatia mainly exports transport equipment, textiles, chemicals, foodstuffs, and fuels, and its most important export partners are Italy (which received 23% of Croatia's total exports), Bosnia and Herzegovina (13.4%), Germany (11.4%), Austria (9.6%), and Slovenia (7.6%). The most important import commodities were machinery, transport and electrical equipment, chemicals, fuels and lubricants, and foodstuffs, and they mainly came from Italy (17.1%), Germany (15.5%), Russia (7.3%), Slovenia (7.1%), Austria (6.9%), and France (4.4%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Before the civil war, Croatia led the Yugoslav SFR in worker remittances, as thousands of Croats held factory jobs in Germany and elsewhere. In order to provide a framework for economic recovery, the government organized the Ministry for Reconstruction, which plans to rebuild war-damaged regions and infrastructure for tourism, which could bring in much needed foreign currency. Croatia had almost no foreign exchange reserves in 1991, but by the beginning of 1996 the National Bank of Croatia reported \$1,386 million in foreign exchange reserves.

Croatia's balance of payments situation has been helped by tourism receipts, but its strong export sectors registered declines in the early 2000s. In 2000, Croatia's main exports were ships and boats, petroleum products, and textiles and apparel. The textiles and apparel sectors were faced with competition from low-wage countries, and in wood product exports, Croatian producers compete with lower-priced Southeast Asian products. Croatian farmers state they are unable to compete with subsidized farm products in the EU. The food processing and chemical industries have been losing their markets due to their inability to produce competitively priced goods of high quality.

The US Central Intelligence Agency (CIA) reported that in 2002 the purchasing power parity of Croatia's exports was \$5.1 billion while imports totaled \$9.7 billion resulting in a trade deficit of \$4.6 billion.

The International Monetary Fund (IMF) reported that in 2001 Croatia had exports of goods totaling \$4.75 billion and imports totaling \$8.76 billion. The services credit totaled \$4.87 billion and debit \$1.94 billion.

Exports of goods and services totaled \$17.8 billion in 2004, up from \$14.9 billion in 2003. Imports grew from \$17.2 billion in 2003, to \$20.2 billion in 2004. The resource balance was relatively stable over this time period, slightly depreciating from -\$2.3 billion in 2003, to -\$2.4 billion in 2004. A reverse trend was registered for the current account balance, which improved from -\$2.1 billion in 2003, to -\$1.6 billion in 2004. The national reserves (including gold) were \$8.2 billion in 2003, covering less than 6 months of imports; by 2004, they increased to \$8.8 billion.

### 3<sup>3</sup> BANKING AND SECURITIES

The National Bank of Croatia was founded in 1992. It has the responsibility of issuing currency and regulating the commercial banking sector. The Croatian dinar was issued 23 December 1991, and was replaced in 1994 by the kuna.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

Commercial banks in Croatia include: Dalmatinska Banka, Zadar (1957), Dubrovačka Banka, Dubrovnik (1990), Slavonska Banka, Samobor (1873), Istarska Banka, Pula, and Osijek (1990). As of February 1996 Croatia had 57 banks. In 1995, Raiffeisenbank Austria d.d. Zagreb began operating in Croatia as the first bank with 100% foreign capital.

Bad lending practices, whereby banks willingly lend to local companies regardless of creditworthiness, has plagued the Croatian banking sector. Many Croatian banks remained in crisis into 2000. Since independence, a total of 15 Croatian banks have gone bankrupt.

The Croatian Bank for Reconstruction and Development (HBOR) was established in 1992 as a 100% government-owned institution, with the tasks of financing reconstruction and development and promoting exports through credits and credit guarantees. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$12.7 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 3.9%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 5.9%.

The Zagreb Stock Exchange (ZSE) started operations in 1991. However, out of the entire portfolio of the Croatian Privatization Fund only 2% was privatized through the exchange. The introduction of the new Privatization Act in 1996 was expected to increase the role of the stock exchange, as was the adoption of an Investment Funds Act and a Securities Act. The Securities Law regulates the public offer of securities, legal entities who are authorized to conduct business with securities, securities transactions, prohibitions regarding businesses with securities, and the protection of investors. As of 2004, a total of 145 companies were listed on the ZSE, which had a capitalization of \$10.959 billion. In 2004, the CROBEX rose 32.1% to 1,565.8.

### 34 INSURANCE

The Insurance Companies Supervision Directorate grants approvals for insurance companies' operations and supervises the operations of insurance companies doing business in Croatia. Insurance companies may be established by domestic or foreign entities and may be formed as a joint-stock, mutual, private, or public company. Pension funds (divided between employees, self-employed and independent farmers) controlled substantial financial assets in Croatia as of 1997. In 2003, direct premiums written totaled \$905 million, of which nonlife premiums accounted for \$704 million. In 2002, the country's top nonlife insurer was Croatia, with \$304.2 million in gross nonlife premiums written. The top life insurer, that same year was Grawe, with \$33 million in gross life premiums written.

### 35 PUBLIC FINANCE

The fiscal year follows the calendar year. The IMF and World Bank have granted Croatia \$192 million and \$100 million, respectively, to repair economic imbalances from war and to curb hyperinflation. The EBRD has approved financial support totaling \$230 million for infrastructure, telecommunications, and energy

projects which otherwise would be unobtainable by the Croatian government.

The US Central Intelligence Agency (CIA) estimated that in 2005 Croatia's central government took in revenues of approximately \$17.6 billion and had expenditures of \$19.3 billion. Revenues minus expenditures totaled approximately -\$1.6 billion. Public debt in 2005 amounted to 52.1% of GDP. Total external debt was \$29.28 billion.

The International Monetary Fund (IMF) reported that in 2001, the most recent year for which it had data, central government revenues were HRK65,484 million and expenditures were HRK73,796 million. The value of revenues was us\$7,852 million and expenditures us\$8,848 million, based on an exchange rate for 2001 of us\$1 = HRK8.340 as reported by the IMF. Government outlays by function were as follows: general public services, 9.4%; defense, 5.3%; public order and safety, 5.6%; economic affairs, 8.1%; housing and community amenities, 3.5%; health, 16.0%; recreation, culture, and religion, 1.3%; education, 8.0%; and social protection, 42.8%.

### 36 TAXATION

In December 2000 the government adopted a package of tax laws including the General Tax Law, the Law on Tax Advising, the Law on Corporate Profit Tax, and the Income Tax Law. In general, the new laws reduced some rates, but widened the tax base. The corporate profits tax was reduced from 35% to 20%. Reduced corporate tax rates of 5%, 10% and 15% are available for companies locating in "special care areas" (62 municipalities and towns deemed to be undeveloped) and in the Vukovar area. The corporate tax rate is also reduced for larger new investments: 7% for investments of at least HRK10 million (about \$1.56 million); 3% for investments of at least HRK20 million (about \$3.12 million); and 0% on investments over HRK60 million (about \$9.3 million). Companies operating in one of Croatia's 12 free trade zones (FTZs) pay half the standard corporate tax rate (10%) or 0% if their investment is more than HRK1 million (about \$156,000). There is no separate

foreign investment law in Croatia, so branches of foreign companies are taxed the same as domestic companies, though only on profits made in Croatia. There is also a municipal firm tax of up to HRK2,000 (about \$312).

Changes to the Personal Income Tax (PIT) Law, effective 1 January 2003, increased the number of PIT tax brackets from four to five (counting the personal allowance tax free amount), increasing slightly the bands for the lower rates, but introducing a new highest rate of 45%. The new rates were 0% up to about \$2,609 a year (using \$1 = HRK6.9); 15% for the next increment of income up to \$5,217 a year; 25% on the next increment to \$11,740 a year; 35% on the next increment to \$39,364 a year; and 45% on income above \$36,522 a year. Croatians are taxed on their worldwide income while foreigners pay only on income realized in Croatia. Deductions from taxable income are allowed for medical and housing expenses. There is a 15% withholding tax on dividend, interest and royalty income. Local surcharges on state income taxes range from up to 10% in small municipalities to up to 30% in Zagreb. The inheritance and gift tax is 5%, and there is a 5% real property transaction tax. Property taxes are assessed locally.

The employee's contribution to social security is 20%. By the pension reform legislation effective as of 1 January 2002, 15% goes to the national pension fund and 5% to new private pension funds. The new pension system is mandatory for workers under 40 as of 1 January 2002, and optional for workers 40 to 50 years old. Workers over 50 continue to contribute all 20% to the national pension fund. As of January 2003, the cap on social security contributions by an employee was set at \$54,620 per year. The employers' contributions to social security, amounting to 17.2%, go for health and unemployment insurance: 15% for general health insurance, 0.5% for work-related accident insurance, and 1.7% for unemployment insurance.

The main indirect taxes in Croatia are the value-added tax (VAT), with a flat rate of 22%, and excise taxes. Specified goods and services, such as those from banks and insurance companies, are exempt from the VAT (0% rate). Slot machines are taxed at about \$14.50 per month, while winnings from games of chance are subject to the 22% VAT. Per-unit excise taxes are assessed on petroleum products, tobacco, beer, alcoholic drinks, coffee, and nonalcoholic drinks. Luxury goods carry a 30% excise. Producers and importers of vehicles (cars, motorbikes, boats and airplanes) pay excise taxes, while buyers of used vehicles pay a sales tax. Auto insurance premiums are taxed at 15%, for liability insurance, and 10%, for comprehensive insurance. There are local consumption taxes on alcoholic drinks up to 3%.

### 37 CUSTOMS AND DUTIES

The Customs Law, Law on Customs Tariffs, and Law on Customs Services were implemented in 1991. Croatia adopted all of the international tariffs and protection agreements ratified by the former Yugoslav SFR that did not contravene Croatia's constitution. The customs system was considerably changed in 1996 with a new customs law that harmonized the system with that of the European Union. In 2000, customs laws were revamped yet again to allow the government to change tariff rates annually. Customs duties range mainly from 0–18%. The average tariff for industrial goods is 5% and for agricultural goods 27%. In 1996, goods such as raw materials, semifinished goods, spare parts, supplies used for re-

pairing war damage, and the household possessions of returning Croatian refugees were exempted from customs duty and subject only to an administrative charge of 1%. The Customs Tariff lists all the goods specified and grouped into a system of 11 sections and 97 chapters with remarks on each chapter to simplify the customs declaration procedure.

Croatia has free trade agreements with Bosnia and Herzegovina, Hungary, Macedonia, and Slovenia, and has an Association Agreement with the European Union.

### 38 FOREIGN INVESTMENT

Attracting foreign investment is a key goal of the comprehensive strategy for long-term development, "Croatia in the 21st Century," adopted 21 June 2001 with an aim of becoming a fully integrated member of the European Union. The day before, the bilateral investment treaty (BIT) with the United States entered into force. Croatia does not have a separate foreign investment law, so foreign firms generally receive national treatment under the 1995 Company Law. The Law on Free Trade Zones (FTZs) was adopted in June 1996. Companies making infrastructure investments of at least \$125,000 are eligible for a five-year tax holiday, while others (except those in retail trade, which are excluded from FTZs) pay half Croatia's corporate income tax rate (10% instead of 20%). Exported goods are fully exempt from custom duties and taxes. The government has designated 12 FTZ locations. The Croatian constitution states that rights acquired through capital investments cannot be withdrawn by law or any legal act and it also insures free repatriation of profits and capital upon disinvestment.

From 1993 to 2000, total foreign investment in Croatia totaled \$4.68 billion, about 24% from the United States and 24% from Germany. Most foreign direct investment (FDI) has come through the privatization of government-owned assets and most has been directed to trade, services, banking, and telecommunications, rather than industry. The inflow of FDI was \$0.55 billion in 1997, \$1 billion in 1998, and peaked at \$1.6 billion in 1999, due largely to the sale of 35% of the state telecommunications company, Hrvatske Telekomunikacije (HT), to Deutsche Telekom (DT) for \$830 million. In 2000, FDI inflow fell back to \$1.1 billion, then recovered to almost \$1.5 billion in 2001 due to the sale of another 16% of HT to DT for \$422 million, giving DT a 51% majority ownership. In 2002, FDI fell back to \$900 million.

In foreign portfolio investment, as of 31 December 2001, US investors held \$734 million of Croatia securities, \$255 million in equity shares in Croatian companies, and \$479 million in long-term debt securities. Outward investment by Croatian firms from 1993 through the first quarter of 2001 totaled \$413 million, 39% going to Poland and 28% to Bosnia and Herzegovina.

The total stock of FDI that entered into Croatia between 1993 and 2003 was \$10.1 billion, averaging around \$1 billion per year. In the first three quarters of 2004, \$877 million was invested in Croatia, which appeared to be down significantly over 2003, when total FDI amounted to \$1.7 billion. Most of these investments went to telecommunications (20.9%), banking (19.6%), pharmaceuticals (11.3%), and petroleum production (7.8%). The largest investors were Austria (with 25.7% of total foreign capital inflows), Germany (20.7%), and the United States (14.7%).

Croatia's performance in terms of FDI inflow has been average if compared to other countries in Central and Eastern Europe. Most

foreign capital was used for acquiring state-owned enterprises (or shares in those), and less was used for greenfield investments. The situation was expected to change in future years though, as the political system in the country has become more stable, and the government was gearing up for the EU accession.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

In October 1993, the government adopted an ambitious three-phase program intended to stabilize the economy through fiscal stabilization, currency reform, and accelerated privatization. The plan, however, relies upon cooperation with international financial organizations.

Economic development has been closely tied with privatization. By 1995, the process of ownership transformation had been fully completed by 2,554 companies. There were 221 companies that had the two Croatian Pension Funds and Croatian Privatization Funds (CPF) as majority owners, and 1,225 companies having the same funds as minority owners. The CPF is legally obliged to offer the shares of its portfolio for sale at auction, and as a rule sells its shares through the Zagreb Stock Exchange. Continued liberalization is expected by the reformist government of Ivica Racan, who aimed in 2003 to speed Croatia's anticipated membership in the European Union. The national insurance, oil, and gas companies were planned to be privatized during 2002–03. Croatia is a member of the IMF, IBRD, and EBRD (as one of the Yugoslav SFR's successor states). Upon the outbreak of conflict in Yugoslavia, the United States suspended all benefits to Yugoslavia under the General System of Preferences, but benefits under this program were subsequently extended on 11 September 1992 to all the former Yugoslav SFR republics except Serbia and Montenegro. Despite the economic adversity, foreign investors have been keen to identify business opportunities in Croatia's relatively stable economy.

In February 2003, Croatia negotiated a 14-month, \$146-million Stand-By Arrangement with the IMF to support the government's economic and financial program. Strong domestic demand and business and government investment contributed to a 5% real gross domestic product (GDP) growth in the first nine months of 2002, compared to 3.8% in 2001. The government deficit declined in 2002, and inflation fell. The currency remained stable as well. The public debt rose, however, to 57.5% of GDP at the end of 2002, up from 55% at the end of 2001. This general economic success was due in part to a good tourist season, and a large highway construction program, in addition to increased private consumption and rising investment.

Croatia's economic performance was weaker in 2003 and 2004, partly due to a relatively unattractive investment climate. Croatia has failed to attract major greenfield investments which would have renewed its economic base, and would have created more dynamism in the market. Red tape, corruption, and problems posed by domestic companies, have also kept a lot of investors away. Nonetheless, the country boasts an educated workforce, a stable government, equality under the law, and the prospects of joining both the EU and NATO—all factors that make it a very attractive market, with great future potential.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

The effects of the 1991 war, the great refugee burden, the disruptions of the Bosnian war, the absence of significant international

aid, and other factors combined to strain the country's social fabric and economy. In 1993, the average standard of living stood at less than 50% of its level before 1991. Over 400,000 Croats were displaced by the war and its aftermath.

Croatia's first pension laws date back to 1922, with most recent changes in 2003. The law provides for a dual system of a social system and mandatory private insurance. Health and maternity benefits, workers' compensation, unemployment coverage, and family allowances are also provided. Retirement is set at age 63 for men and age 58 for women.

Women hold lower paying positions in the work force than men even though gender discrimination is prohibited by law. Also, women are more likely to be unemployed. Rape and spousal rape are grossly underreported, and there are only four women's shelters. Domestic abuse rose considerably in 2004, with 50% more cases registered. The weak economic situation, the aftermath and uncertainty from the war, and alcohol abuse are considered aggravating factors.

The constitution states that all persons shall enjoy all rights and freedoms, regardless of race, color, sex, language, religions, political opinion, national origin, property, birth, education or social status. However, ethnic tensions continue. Muslims and Serbs in Croatia face considerable discrimination. Arbitrary detention and torture, abuse of detainees, and other human rights violations continue. The Roma population also suffers discrimination.

### 4<sup>1</sup> HEALTH

Croatia is in the process of improving health care since the war years in the 1990s. Life expectancy in 2005 was 74.45 and infant mortality rate per 1,000 live births was 6.84. The overall mortality rate was 11 per 1,000 people.

Croatia had 84 hospitals in 1997, including both general and tertiary care facilities. The country is known for its spas, where patients receive preventive and rehabilitative care that makes use of spring water and other natural resources, as well as such treatments as massage. As of 2004, there were an estimated 237 physicians, 499 nurses, 68 dentists, 50 pharmacists, and 34 midwives per 100,000 people. Approximately 95% of the population had access to safe drinking water and 100% had adequate sanitation.

Immunization rates for children under the age of one were as follows: tuberculosis, 98%; diphtheria, pertussis, and tetanus, 92%; measles, 93%; and polio, 92%. In 1999, the incidence of tuberculosis was 61 per 100,000 people.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 200 people living with HIV/AIDS in the country. There were an estimated 10 deaths from AIDS in 2003.

### 4<sup>2</sup> HOUSING

After years of war, the country is just beginning the process of rebuilding not only homes for the thousands who were displaced by the conflict, but industries, businesses, and civic buildings as well. As of the mid-1990s, nearly 800,000 displaced persons and refugees from Bosnia and occupied Croat territories were in Croatia, of whom approximately 640,000 have found temporary housing

with families in Croatia. By 1997, thousands of refugees (mostly from Eastern Slavonia) still remained housed in coastal hotels.

According to the 2001 census, there were a total of 1,877,126 dwellings in the nation; about 1,660,649 dwellings were for permanent residents. Most dwellings had between two to four rooms. About 70,817 dwellings had been built since 1996. There were about 1,455,116 households representing 4,272,590 people. Most households had between two to four members.

As of 2001, the government has implemented a Welfare Supported Housing Construction Program to assist low-income families unable to purchase apartments.

### 43 EDUCATION

Education at the elementary level is free and compulsory for children between the ages of 6 and 15 years. Primary education covers an eight-year course of study. Secondary education covers a four-year course of study in one of three tracks: grammar schools, technical and vocational schools, and art schools. The academic year runs from October to June. The primary language of instruction is Croatian.

In 2001, about 38% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 89% of age-eligible students. The same year, secondary school enrollment was about 87% of age-eligible students. It is estimated that about 95.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 18:1 in 2003. The ratio for secondary school was about 11:1.

In higher education, there are five universities: University of Osijek (founded in 1975), University of Rijeka (founded in 1973), University of Split (founded in 1974), University of Zadar, and University of Zagreb (founded in 1669). There are also 7 polytechnic schools and 17 professional schools. In 2003, about 39% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 98.1%, with 99.3% for men and 97.1% for women.

As of 2003, public expenditure on education was estimated at 4.5% of GDP, or 10% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

The National and University Library of Croatia in Zagreb (founded in 1606) had 2.5 million volumes in 2002. The Zagreb public library holds close to 300,000 volumes. In 1995, the country reported having 232 public libraries with a combined collection of 4.6 million volumes. The Information and Documentation Centre and Library of the Institute for International Relations is also in Zagreb, with holdings that include books, periodicals and journals, and official documents from various countries and in a variety of languages. The Croatia Library Association was founded in 1940.

Major museums in Zagreb include the Historical Museum of Croatia, Strossmeyer's Gallery of Old Masters, and the Gallery of Modern Art. Other major cultural centers include Split, which houses the Museum of Croatian Medieval Archeology, and Dubrovnik, with the Natural Sciences Museum among others. In all, the country boasts over 100 museums.

### 45 MEDIA

In 2003, there were an estimated 417 mainline telephones for every 1,000 people. The same year, there were approximately 584 mobile phones in use for every 1,000 people.

Government controlled Croatian Radio-Television (Hrvatska Radiotelevizija) has charge of all broadcasting. In 1999, Croatian Radio ran 16 AM and 98 FM stations with 5 shortwave options. In 1995, there were 36 television stations. It has been estimated that 80% of the population relies on the government-sponsored television news program, *Dnevnik*, for national news. Independent local stations can only cover about 65% of the country's territory. In 2003, there were an estimated 330 radios for every 1,000 people; the number of televisions was not available in the same survey. In 2003, there were 173.8 personal computers for every 1,000 people and 232 of every 1,000 people had access to the Internet. There were 146 secure Internet servers in the country in 2004.

In 1995, there were nine daily newspapers with a combined circulation of over 400 million, and 563 nondailies (including over 60 weeklies); there were about 400 periodicals. As of 2002, the major dailies included *Vecernji List* (circulation 200,000), published in Zagreb, and *Novi List* (60,000), published in Rijeka, as well as the sports daily *Sportske Novosti* (55,000), published in Zagreb. In 1994, there were some 2,600 book titles published.

In October 1996, a comprehensive Law on Public Information was passed in Parliament with general support from all parties to regulate the media. In general, government influence on media through state ownership of most print and electronic media outlets restricts constitutionally-provided freedoms of speech and press.

### 46 ORGANIZATIONS

In 1852, the Chamber of Commerce and Crafts was first organized in Zagreb. In 1990, the Croatian Chamber of the Economy (CCE) was established as the authentic representative of the Croatian economy. The CCE consists of 20 county chambers and promotes trade and commerce in world markets along with the Association of Independent Businesses and the Zagreb Trade Fair.

Since 1994, over 30 professional organizations have been founded in the CCE. A number of organizations promoting research and education in various medical and scientific fields have also formed, including the Croatia Medical Association. The Rudjer Boskovic Institute is a national organization that conducts research and educational programs for the natural sciences. The Croatian Academy of Sciences and Arts has been active since 1861. The Croatian Physical Society formed in 1990.

There are many sports associations throughout the country, including the general Croatian Athletic Federation and a chapter of the Special Olympics. Youth organizations include the umbrella organization of the Croatian National Youth Council (NSMH), the Croatian Club for the United Nations (CCUN), and the Junior Chamber of Croatia (JCC), as well as scouting programs. Among many national women's organizations are the Croatian Association of University Women the Women's Infoteka, and Be Active, Be Emancipated (BABE).

There are national chapters of the Red Cross Society and Amnesty International.

## 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include visits to Dubrovnik and Split to enjoy the climate, scenery, and excellent swimming from April to October. Beautiful historic churches and ancient palaces can be found in the major cities. The many nudist camps and casinos are also popular attractions.

Approximately 3,086,506 foreign visitors arrived in Croatia in 2003. That year the average length of stay was five nights. There were 77,113 hotel rooms with 193,538 beds and a 27% occupancy rate. Tourism expenditure receipts totaled \$6.5 billion.

In 2003, the US Department of State estimated the daily cost of staying in Zagreb at \$220.

## 48 FAMOUS CROATS

Dr. Franjo Tudjman was president of Croatia from May 1990 until his death in 1999. Stjepan Mesić (b.1934) has been president since 2000. Nikica Valentić, Ivica Račan, and Ivo Sanader have all served as prime minister in recent years. Two Nobel prize winners have come from Croatia, both chemists: Lavoslav Ružička (1887–1976) and Vladimir Prelog (1906–98).

Josip Broz-Tito (1892–1980) was the leader of Communist Yugoslavia for many years after World War II. In 1948, he led his country away from the Communist bloc formed by the Soviet Union. Tito served in the Red Army during the Russian Civil War and led the Yugoslav resistance movement during World War II.

There are several internationally known figures in literature and the arts: Ivan Gundulić (1589–1638) wrote about the Italian influences in Croatia in *Dubravka*. Count Ivo Vojnović (1857–1929) is best known for *A Trilogy of Dubrovnik*. Miroslav Krleža (1857–1981) captured the concerns of prerevolutionary Yugoslavia in his trilogy of the Glembay family (1928–32) and in novels like *Return of Philip Latinovicz* (1932) and *Banners* (1963).

Double-agent Duško Popov (1912–1981), who worked during World War II, was the model for Ian Fleming's James Bond. The wartime figure, Andrija Artuković (1899–1988), known as "Butcher of the Balkans" for his activities in support of Germany, is from Croatia. Religious leader Franjo Šeper (1884–1981) was born in Croatia, as was inventor Nikola Tesla (1856–1943). Musician Artur Radzinski (1894–1958) became conductor of the New York Philharmonic in 1943 and of the Chicago Symphony in 1947. Zinka Kumc Milanov (1906–1989) was a dramatic opera soprano with the New York Metropolitan Opera in the 1950s and 1960s. Mathilde Mallinger (1847–1920) was a famous Croatian soprano who performed with Berlin Opera from 1869–1882.

## 49 DEPENDENCIES

Croatia has no territories or colonies.

# CZECH REPUBLIC

Czech Republic  
*Ceskaá Republika*

**CAPITAL:** Prague (Praha)

**FLAG:** The national flag consists of a white stripe over a red stripe, with a blue triangle extending from hoist to midpoint.

**ANTHEM:** *Kde domov můj* (*Where Is My Native Land*).

**MONETARY UNIT:** The koruna (Kc) is a paper currency of 100 haléru, which replaced the Czechoslovak koruna (Kcs) on 8 February 1993. There are coins of 1, 5, 10, 20, and 50 heller and of 1, 2, 5, 10, 20, and 50 koruny, and notes of 10, 20, 50, 100, 200, 500, 1,000, 2,000, and 5,000 koruny. Kc1 = \$0.04216 (or \$1 = Kc23.72) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Anniversary of Liberation, 9 May; Day of the Apostles, St. Cyril and St. Methodius, 6 July; Christmas, 25 December; St. Stephen's Day, 26 December. Easter Monday is a movable holiday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Czech Republic is a strategically located landlocked country in Eastern Europe. It sits astride some of the oldest and most significant land routes in Europe. Comparatively, the Czech Republic is slightly smaller than the state of South Carolina with a total area of 78,866 sq km (30,450 sq mi). It shares boundaries with Poland (on the NE), Slovakia (on the SE), Austria (on the S), and Germany (on the W and NW) and has a total boundary length of 1,881 km (1,169 mi). The capital city of the Czech Republic, Prague, is located in the north central part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography of the Czech Republic consists of two main regions. Bohemia in the west is comprised of rolling plains, hills, and plateaus surrounded by low mountains. Moravia in the east is very hilly. The country's highest point is Mt. Snezka at 1,602 m (5,256 ft) in the Krkonose Mountains along the north central border with Poland. The Elbe River is the nation's longest with a distance of 1,165 km (724 mi); located in the northwest, it runs north into Germany.

## <sup>3</sup>CLIMATE

The Czech Republic has a Central European moderate and transitional climate, with variations resulting from the topography of the country. The climate is temperate with cool summers, and cold, cloudy, and humid winters. The average temperature in Prague ranges from about -1°C (30°F) in January to 19°C (66°F) in July. A generally moderate oceanic climate prevails in the Czech lands. Rainfall distribution is greatly influenced by westerly winds, and its variation is closely correlated to relief. Over three-fifths of the rain falls during the spring and summer, which is advantageous for agriculture. The precipitation range is from 50 cm (20 in) to

more than 127 cm (50 in); rainfall is below 58 cm (23 in) in western Bohemia and southern Moravia.

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are Central European in character. Almost 70% of the forest is mixed or deciduous. Some original steppe grassland areas are still found in Moravia, but most of these lowlands are cultivated. Mammals commonly found in the Czech Republic include the fox, hare, hart, rabbit, and wild pig. A variety of birds inhabit the lowlands and valleys. Fish such as carp, pike, and trout appear in numerous rivers and ponds. As of 2002, there were at least 81 species of mammals, 205 species of birds, and over 1,900 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

The Czech Republic suffers from air, water, and land pollution caused by industry, mining, and agriculture. Lung cancer is prevalent in areas with the highest air pollution levels. In the mid-1990s, the nation had the world's highest industrial carbon dioxide emissions, totaling 135.6 million metric tons per year, a per capita level of 13.04 metric tons. However, in 2000, total carbon dioxide emissions had decreased to about 118.8 million metric tons. Like the Slovak Republic, the Czech Republic has had its air contaminated by sulfur dioxide emissions resulting largely from the use of lignite as an energy source in the former Czechoslovakia, which had the highest level of sulfur dioxide emissions in Europe, and instituted a program to reduce pollution in the late 1980s. Western nations have offered \$1 billion to spur environmental reforms, but the pressure to continue economic growth has postponed the push for environmental action.

The Czech Republic has a total of about 13 cu km of freshwater resources, of which 2% is used for farming and 57% is used for in-

dustry. Both urban and rural dwellers have access to safe drinking water. Airborne emissions in the form of acid rain, combined with air pollution from Poland and the former GDR, have destroyed much of the forest in the northern part of the former Czechoslovakia. Land erosion caused by agricultural and mining practices is also a significant problem.

In 2000, about 34% of the total land area was forested. In 2003, about 16.1% of the total land area was protected by the government. There are 11 Ramsar wetland sites in the country.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 6 types of mammals, 9 species of birds, 7 species of fish, 2 types of mollusks, 17 species of other invertebrates, and 4 species of plants. Endangered species include the Atlantic sturgeon, slender-billed curlew, and Spengler's freshwater mussel.

## 6 POPULATION

The population of Czech Republic in 2005 was estimated by the United Nations (UN) at 10,212,000, which placed it at number 78 in population among the 193 nations of the world. In 2005, approximately 14% of the population was over 65 years of age, with another 15% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be -0.1%, a rate the government viewed as too low. The country has one of the lowest fertility rates in the world. The projected population for the year 2025 was 10,217,000. The population density was 129 per sq km (335 per sq mi), with the most densely populated areas in North Bohemia, Central Bohemia, and in Moravia.

The UN estimated that 77% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.05%—essentially a standstill. The capital city, Prague (Praha), had a population of 1,170,000 in that year. Other major cities and their estimated populations include Brno, 400,000; Ostrava, 331,448; and Plzen (Pilsen), 175,049.

## 7 MIGRATION

After World War II, nearly 2.5 million ethnic Germans were expelled from the Sudeten region, which was part of Czechoslovakia and Poland. The emigration wave from Czechoslovakia after the Communist takeover in February 1948 included some 60,000 people; another 100,000 persons left the country after the invasion of the Warsaw Pact countries in August 1968. Emigration slowed during the 1970s to about 5,000 annually, but during the 1980s, some 10,000 people (according to Western estimates) were leaving each year. *Migration News* reported that in mid-2004 legal foreign workers numbered 170,000, mainly Slovaks (72,000), Ukrainians (39,400), and Vietnamese (21,400). This was an strong increase from 20,000 legal foreign workers 10 years earlier. *Migration Information* estimated the illegal migrant population as ranging from 300,000 to 340,000.

The Czech Republic encountered its first refugee influx in 1990. From 1990–2000 there were more than 22,000 applicants. In 2004 there were 1,144 refugees. In 2004, 1,119 people sought asylum. The net migration rate for 2005 was estimated as .97 migrants per 1,000 population. In 2000 there were 236,000 migrants living in

the Czech Republic. The government views both the immigration and emigration levels as too high.

## 8 ETHNIC GROUPS

Between 1945 and 1948, the deportation of the Sudeten Germans altered the ethnic structure of the Czech lands. Since the late 1940s, most of the remaining Germans have either assimilated or emigrated to the West. In 2001, Czechs constituted 90.4% of the total population, Moravians accounted for 3.7%, and Slovaks made up 1.9%. Other ethnic groups include Germans, Roma, and Poles.

## 9 LANGUAGES

Czech, which belongs to the Slavic language group, is the major and official language. In addition to the letters of the English alphabet, the Czech language has both vowels and consonants with acute accents (indicating length) and háčeks: á, é, í, ó, ú, č, dč, ě, ň, ř, š, ť, ž, as well as ů (the circle also indicates length). In Czech, q, w, and x are found only in foreign words. There are numerous dialects. Many older Czechs speak German; many younger people speak Russian and English. Slovak is also spoken.

## 10 RELIGIONS

Though the country has a strong tradition of Christianity, the Communist rule of 1948 to 1989 greatly repressed religious practice so that many citizens do not claim membership in any religious organizations. In 2001, only about 38% of the population claimed to believe in God. About 52% claimed to be atheist. Only about 5% of the population are practicing Roman Catholics, while about 1% are practicing Protestants. The Islam community has about 20,000–30,000 members while the Jewish community has only a few thousand people.

The constitution provides for religious freedom, and the government reportedly respects this right in practice. Religious affairs are handled by the Department of Churches at the Ministry of Culture. In 2002 the Religious Freedom and the Position of Churches and Religious Associations established a tiered registration system for religious organizations. There is no requirement to register; however, officially registered groups are granted certain legal rights and various subsidies from the government.

## 11 TRANSPORTATION

There are some 9,543 km (5,936 mi) of standard and narrow gauge railroads in the Czech Republic, connecting Prague with Plzen, Kutná Hora, and Brno, as of 2004. Of that total, 9,421 km (5,860 mi) are standard gauge. The Czech Republic had 127,672 km (79,412 mi), of roadway in 2002, all of which were paved, including 518 km (322 mi) of expressways. In 2003, there were 3,706,012 passenger cars and 445,000 commercial vehicles registered for use. As a landlocked nation, the Czech Republic relies on coastal outlets in Poland, Croatia, Slovenia, and Germany for international commerce by sea. As of 2004, there were 664 km of navigable inland waterways, on the Elbe, Vltava, and Oder rivers. The principal river ports are Prague on the Vltava and Děčín on the Elbe. In 2004 there were an estimated 120 airports. As of 2005, a total of 44 had paved runways, and there were also two heliports. Principal airports include Turany at Brno, Mosnov at Ostrava, and Ruzyně at Prague. Ruzyně is the nation's primary commercial airliner.

LOCATION: 49°26' to 51°3' N; 12°6' to 18°54' E. BOUNDARY LENGTHS: Poland, 658 kilometers (409 miles); Slovakia, 214 kilometers (133 miles); Austria, 362 kilometers (225 miles); Germany, 646 kilometers (401 miles).

all, Czech airports in 2003 performed 36 million freight ton-km of service. In that same year, domestic and international flights carried 3.392 million passengers.

With the separation of Czechoslovakia, the new Czech Republic has rapidly replaced its former Eastern European trading partners with Western ones (primarily Germany and the rest of the EU). This shift in the direction of transportation of goods into and out of the Czech Republic has overloaded the current infrastructure of roads, airports, and railroads. In 1993, the government targeted several goals to develop the transportation network, including: the development of priority connections between Prague and Vienna, Berlin, Warsaw, Nuremberg, Munich, and Linz; the construction of 264 km (164 mi) of new highways over the next 8–10 years for improved trucking links; expansion of the Prague Ruzyně airport; connection to Western Europe's high-speed rail system; and the acquisition of better rolling stock.

Most goods are shipped by truck. Currently, underdeveloped railroads and waterways often cannot accommodate intermodal

transport. As of 2001, a \$3.5 billion project was underway to modernize the rail system.

## 12 HISTORY

The first recorded inhabitants of the territory of the present-day Czech Republic were the Celtic Boii tribe, who settled there about 50 BC. They were displaced in the early modern era by German tribes (Marcomanni, Quidi) and later by Slavs, who pushed in from the east during the so-called Migration of the Peoples. The new settlers kept the Roman version of the name Boii for that region, Boiohaemum, which later became Bohemia. The first unified state in the region was that of a Frankish merchant named Samo, who protected his lands from the Avar empire in Hungary and the Franks of the West, reigning until his death in 658. This mercantile city-state lasted until the 9th century, when it grew into the Moravian Empire. The fidelity of this new empire had strategic importance to both the Eastern and the Western Church, who sent missionaries to convert the Moravian people. Beginning in 863, two

Orthodox monks, Cyril and Methodius, succeeded in converting large numbers of people to the Byzantine church (introducing a Slavic alphabet named “Cyrillic” after one of the monks), but Roman Catholic missionaries gained the majority of converts.

The Moravian Empire was destroyed at the end of the 9th century (903–907) by invading Magyars (Hungarians), who incorporated the eastern lands into their own, while the Kingdom of Bohemia inherited the lands and peoples of the west. The Premyslid Dynasty took control of the Bohemian kingdom, allying with the Germans to prevent further Magyar expansion. In the year 1085, Prince Vratislave was the first Bohemian prince to receive royal status from the Byzantine Empire, gaining his title by supporting Henry IV against Pope Gregory VII. A century later, in 1212, Premysl Otakar I was given the Golden Bull of Sicily, proclaiming Bohemia a kingdom in its own right, and the Bohemian princes the hereditary rulers of that land. During the 13th century, the powers gained by the Premyslid Dynasty through the German alliance waned as this relationship brought the substantial migration of Germans into Bohemia and Moravia. The next line to rule Bohemia, starting with John of Luxembourg (1310–1346), came to power before a time of great social and religious strife. Charles IV of Luxembourg was not only King of Bohemia (1346–1378), but Holy Roman Emperor as well, ushering in the Czech “Golden Age,” but his ties to the Roman Catholic Church would later tear the Kingdom apart. In 1348 he founded the Charles University in Prague, one of the first learning institutions to operate outside of the Church’s monasteries, which nourished the minds of Bohemian intellectuals. As the citizens of Prague began to learn of the intransigence of the Roman Catholic Church, Wenceslas IV, successor to Charles IV, experienced a series of economic and political crisis (1378–1419) that escalated with The Great Schism of the Church. Bohemia became a center of passionate opposition to the Catholic Church, and to German domination, led by Jan Hus in the Hussite movement. Burned at the stake for heresy in 1415 by German Emperor Sigismund, Hus became a national martyr and hero, and the country was in open rebellion (1420–1436). During this time, Sigismund conducted six crusades in Bohemia to end the revolution, until he finally succeeded in 1434. By 1436, tired of fighting, both sides signed the Compacts of Basle. These documents allowed the Hussite denomination, and became the model of religious tolerance, which did not last for long. In 1462 Hungary extended its control over Bohemia, ruling through the Jagellon Dynasty until 1526, when Ferdinand of Hapsburg was elected to the Crown of St. Wenceslas, making Bohemia the property of the House of Hapsburg.

The Czechs were predominantly Protestant, while their new rulers were bent on introducing the Roman Catholic faith to Bohemia, exacerbating civil tensions. Although Protestants were able to secure certain civil rights, and the freedom to worship, peace was fragile. In 1618 two Protestant churches were closed, leading Protestants to throw two royal governors out of the windows of Prague Castle, an act known as the “Defenestration of Prague.” At the same time, 27 Protestant nobles were executed by the Habsburgs. In the Thirty Years’ War, which followed, the Czechs deposed their Catholic king, replacing him with Frederick of the Palatinate, a Protestant. The Protestant forces of the Bohemian Estates were defeated by the Catholic Emperor in 1620, at the Battle of White Mountain, and the Catholics again took the throne. This

represented a disaster for the Czechs, who had their lands seized and their leaders executed, while nearly 30,000 of their number fled. The war ended in 1648 with the Peace of Westphalia, which sanctioned the large-scale immigration of Germans, resulting in the gradual Germanification of Czech territory. Under Empress Maria-Theresa (1740–1780) Bohemia became part of Austria, and the most industrialized part of the Austrian Empire, but Czech culture and language were suppressed.

Political tranquility was ended by the riots, which broke out across Europe in 1848. On 11 March 1848, a demonstration in Prague demanded freedom of the press, equality of language, a parliament to represent Czech interests, and an end to serfdom. A Pan-Slavic Congress was convened in Prague in June of the same year, under Francis Palacky, a Bohemian historian. The Austrian authorities responded by imposing a military dictatorship, which struggled to restrain a steadily rising tide of nationalist aspirations. When World War I began, thousands of Czech soldiers surrendered to the Russians, rather than fight for the Austro-Hungarians. They were transformed into the Czech Legion, which fought for the Russians until the Russian Revolution of 1917. Although Austria retained nominal control of Bohemia until the war’s end, a separate Czech National Council began functioning in Paris as early as 1916.

#### Formation of the Czechoslovak Republic

It was the members of that Council, especially Eduard Benes and Tomas Masaryk, who were instrumental in gaining international support for the formation of an independent Czech and Slovak state at war’s end. The Czechoslovak Republic, established 28 October 1918 under President Tomas Masaryk, was a contentious mix of at least five nationalities—Czechs, the so-called Sudeten Germans, Slovaks, Moravians, and Ruthenians—who created one of the 10 most developed countries in the world, during the interwar period. All these nationalities were granted significant rights of self-determination, but many groups wished for full independence, and some of the Sudeten Germans hoped for reunification with Germany. In 1938 Adolph Hitler demanded that the Sudeten German area, which was the most heavily industrialized part of the country, be ceded to Germany. A conference consisting of Germany, Italy, France, and Great Britain, was convened, without Czechoslovakian representation. Ignoring the mutual assistance pacts, which Czechoslovakia had signed with both France and the USSR, this conference agreed on 30 September 1938 that Germany could occupy the Sudetenland. On 15 March 1939, Hitler took the remainder of the Czech lands, beginning an occupation that lasted until 9 May 1945.

Many prominent Czechs managed to escape the Germans, including Eduard Benes, the president, who established Provisional Government in London, in 1940, and Klement Gottwald, the communist leader, who took refuge in Moscow. In 1945, negotiations between Benes, Gottwald, and Josef Stalin established the basis for a postwar government, which was formed in the Slovak city of Kosice in April 1945 and moved to Prague the following month.

The government was drawn entirely from the National Front, an alliance of parties oriented toward Soviet Russia, with whom Czechoslovakia now had a common border, after the USSR incorporated Ruthenia. Although deferring to the communists,

the National Front government managed to run Czechoslovakia as a democracy until 1948. The communists had been the largest vote getter in the 1946 elections, but it seemed likely that they might lose in 1948. Rather than risk the election, they organized a putsch, with Soviet backing, forcing President Benes to accept a government headed by Gottwald. Benes resigned in June 1948, leaving the presidency open for Gottwald, while A. Zapotocky became prime minister. In a repeat of Czech history, Jan Masaryk, foreign minister at the time, and son of T. Masaryk, was thrown from a window during the coup, a “defenestration” which was reported as a suicide.

Once Czechoslovakia became a People’s Republic, and a faithful ally of the Soviet Union, a wave of purges and arrests rolled over the country (1949–1954). In 1952 a number of high officials, including Foreign Minister V. Clementis and R. Slansky, head of the Czech Communist Party, were hanged for “Tito-ism” (after the Yugoslavian president who had been dismissed from the Cominform) and “national deviation.”

After an unsuccessful Army coup on his behalf, Novotny resigned, in March 1968, and Czechoslovakia embarked on a radical liberalization, which Dubček termed “socialism with a human face.” The leaders of the other eastern bloc nations and the Soviet leaders viewed these developments with alarm. Delegations went back and forth from Moscow during the “Prague Spring” of 1968, warning of “counterrevolution.” By July the neighbors’ alarm had grown; at a July meeting in Warsaw they issued a warning to Czechoslovakia against leaving the socialist camp. Although Dubček himself traveled to Moscow twice, in July and early August, to reassure Soviet party leader Brezhnev of the country’s fidelity, the Soviets remained unconvinced.

On the night of 20–21 August 1968, military units from all the Warsaw Pact nations, save Romania, invaded Czechoslovakia, to “save it from counterrevolution.” Dubček and other officials were arrested, and the country was placed under Soviet control. Repeated efforts to find local officials willing to act as Soviet puppets failed, so on 31 December 1968 the country was made a federal state, comprised of the Czech Socialist Republic and the Slovak Socialist Republic. In April Gustav Husak, once a reformer, but now viewing harmony with the USSR as the highest priority, was named head of the Czech Communist Party. A purge of liberals followed, and in May 1970 a new Soviet-Czechoslovak friendship treaty was signed; in June Dubček was expelled from the party.

Between 1970 and 1975 nearly one-third of the party was dismissed, as Husak consolidated power, reestablishing the priority of the federal government over its constituent parts and, in May 1975, reuniting the titles of party head and republic president. Civil rights groups formed within the country; including a group of several hundred in 1977 that published a manifesto called “Charter 77,” protesting the suppression of human rights in Czechoslovakia. These groups did not seriously impinge upon Husak’s power, but his successors had difficulty suppressing the liberalization movement.

Once again, it was revolution in the USSR which set off political change in Czechoslovakia. Husak ignored Soviet leader Mikhail Gorbachev’s calls for *perestroika* and *glasnost* until 1987, when Husak reluctantly endorsed the general concept of Party reform, but delayed implementation until 1991. Aging and in ill health, Husak announced his retirement in December 1987, declaring that Milos

Jakes would take his post. Jakes had been a lifelong compromiser and accommodator who was unable to control dissenting factions within his party, which were now using the radical changes in the Soviet Union as weapons against one another.

Even greater pressure came in early autumn 1989, when the West German Embassy in Prague began to accept East German refugees who were trying to go west. Increasingly the East German government was being forced to accede to popular demand for change, which in turn emboldened Czech citizens to make similar demands. On 17 November 1989, a group of about 3,000 youths gathered in Prague’s Wenceslas Square, demanding free elections. On Jakes’s orders, they were attacked and beaten by security forces; igniting a swell of public indignation, expressed in 10 days of nonstop meetings and demonstrations. This “Velvet Revolution” ended on 24 November, when Jakes and all his government resigned. Novotny resigned his presidency soon after. Although Alexander Dubček was put forward as a possible replacement, he was rejected because he was Slovak. The choice fell instead on Vaclav Havel, a playwright and dissident, and founder of the Charter 77 group, who was named president on 29 December 1989.

Dismantling of the apparatus of a Soviet-style state began immediately, but economic change came more slowly, in part because elections were not scheduled until June 1990. In the interim, the old struggle between Czechs and Slovaks resulted in the country being renamed the Czech and Slovak Federal Republic. In the June elections the vote went overwhelmingly to Civic Forum and its Slovak partner, and economic transformation was begun, although there were continued tensions between those who wished a rapid move to a market economy and those who wanted to find some “third way” between socialism and capitalism. Equally contentious was the sentiment for separation by Slovakia, the pressure for which continued to build through 1991 and 1992. In the June 1992 elections the split between the two parts of the country became obvious, as Czechs voted overwhelmingly for the reform and anticommunist candidates of Vaclav Klaus’ Civic Democratic Party (ODS), while Slovaks voted for V. Meciar and his Movement for Democratic Slovakia, a leftist and nationalist party. Legislative attempts to strengthen the federative structure, at the expense of the legislatures of the two constituent republics, failed, and the republics increasingly began to behave as though they were already separate so that, for example, by the end of 1992, 25.2% of Czech industry was been privatized, as opposed to only 5.3% of Slovak industry. The prime ministers of the two republics eventually agreed to separate, in the so-called “velvet divorce,” which took effect 1 January 1993.

Havel (who did not subscribe to any party in the interest of political tranquility) was reconfirmed as president by a vote of the Czech parliament on 26 January 1993. Klaus was successful in fostering growth in the newly formed Czech Republic, emerging from close 1996 elections with another term as prime minister, but after the first glow of liberation, major cracks in the system became visible. Milos Zeman of the Social Democratic Party (CSSD) challenged Klaus’ policies, during and after the 1996 elections, especially those relating to economic growth (which was slowing). The year 1996 also saw the first elections for the 81-member Senate, the upper body of parliament, which reflected a major split in the attitude of Czech voters. Governmental democracy and a newly liberated economy had not brought about the immediate

transformation that Czech citizens wanted to see, and they ended up blaming the ODS party for their woes. This, and charges of corruption in the ODS party, brought about the triumph of the opposition. In the 1998 elections, the majority of votes went to the Social Democratic Party, in a platform that stressed economic regulation and the socialist approach to government. Milos Zeman was appointed as the prime minister by President Vaclav Havel on 17 July 1998. Havel had been reelected president the previous January for another five-year term.

In March 1999, the Czech Republic became a member of NATO. In January 2001, the largest street demonstrations since the overthrow of Communism were held to protest the appointment of Jiri Hodac as the head of public service television. He was seen as a political appointee and was accused of compromising editorial independence. Hodac resigned following the protests. In April, Vladimir Spidla became leader of the Social Democrats; he was more left-wing than Zeman, and was dismissive of ODS leader Vaclav Klaus. When in the June 2002 elections the Social Democrats gained the largest number of seats in the Chamber of Deputies, Spidla became prime minister. Spidla formed a government with the Coalition, composed of the Christian-Democratic Union/Czechoslovak People's Party, and the Freedom Union (Kolic), holding 101 seats in the 200-seat Chamber (70 seats for the CSSD, and 31 for the Coalition). The ODS came in second with 58 seats, and the Communists, in their best showing since the Velvet Revolution, came in third with 41 seats.

In August 2002, Central Europe was plagued by torrential rain, and Prague suffered its worst flooding in 200 years. The city's historic district was spared, but towns and villages across the country were devastated.

The Czech Republic was one of 10 new countries to be formally invited to join the EU in December 2002, and its accession was completed in 2004. Issues to be resolved by the countries include adoption of the euro, migration, and agriculture, among others.

Havel stepped down as president in February 2003, after his second five-year term expired. Havel's rival and former prime minister, Vaclav Klaus, was elected president by a slim majority of 142 votes in the 281-member parliament after two inconclusive elections and three rounds of balloting on 28 February. Although when he left the presidency opinions about his legacy were mixed in the Czech Republic, on the international scene Havel remains eternally popular for being a voice for democracy.

In the 2004 European Parliament elections the CSSD garnered only 8.8% of the votes, signaling that the party's popularity among voters was on a downward spiral. As a consequence, in July 2004, the Socialists decided to sack the prime minister, Vladimir Spidla, and replace him with the minister of interior, Stanislav Gross.

Gross, who was an engine-driver trainee for the state railway company before the Velvet Revolution, became a Social Democrat in 1992 and quickly worked his way up the party ranks. He was only 35 when he replaced Spidla—Europe's youngest prime minister. His reign was short-lived though. Plagued by scandals and corruption and faced with the dissolution of his own government, Gross resigned only nine months after his appointment. Jiri Paroubek, the regional development minister in Gross's government, was appointed as the new Czech prime minister on 25 April 2005. He faced the difficult task of cutting public spending in prepa-

ration for the eurozone membership while improving his party's popularity among voters in anticipation of the 2006 elections.

### **13 GOVERNMENT**

The Czech Republic has a democratic government, based on a bicameral parliamentary democracy and the free association of political parties. Human and civil rights are guaranteed by the Bill of Fundamental Rights and Freedoms, a part of the constitution. The constitution of the Czech Republic was adopted by the Czech legislature in December 1992. It mandates a parliament; a Senate with 81 members who are elected for six-year terms, and a Chamber of Deputies or lower house of 200 members who are elected for four-year terms. Every two years, one third of the Senate's seats come up for reelection. The first Senatorial elections were held in November 1996. The last Senatorial elections were held in November 2004 with the next being scheduled for November 2006. The Chamber of Deputies was first seated by popular vote in 1992. The last elections took place in June 2002 with the next scheduled for June 2006. A resolution by parliament is passed by a clear majority, while a constitutional bill or an international treaty must be passed by at least a 60% majority. All citizens over the age of 18 can vote.

The head of the executive branch is the president, who is elected by parliament for a five-year term, and may serve two terms successively. The president is the supreme commander of the armed forces and has the power to veto bills passed by parliament under certain conditions. The last successful presidential election was held on 28 February 2003 and named Vaclav Klaus as president. This election came after Vaclav Havel stepped down from office on 2 February 2003 after earlier elections held 15 and 24 January 2003 were inconclusive. The next presidential elections were scheduled for January 2008. The prime minister, or premier, comes from the majority party, or a coalition, and is appointed by the president. The president appoints the ministers of the government on the recommendation of the prime minister.

### **14 POLITICAL PARTIES**

Before 1996, the strongest political party in the republic was the Civic Democratic Party (ODS), headed by former prime minister Vaclav Klaus, a right-wing conservative party supporting democracy and a liberal economy. Supporters of the ODS are, in general, highly educated business people who come from Prague or other major cities. The ODS right-wing coalition with the Civic Democratic Alliance (ODA), Christian Democratic Union, and Christian Democratic Party, lost its majority in Parliament by two seats in the 1996 elections. Klaus and his coalition governed in the minority with the blessing of the opposition Social Democrats (CSSD), a socialist left-wing party that focuses on economic reform/growth in a planned economy. Supporters of the CSSD are mainly blue-collar laborers from industrial areas.

In December 1997, the ODS coalition (ODS, Christian Democratic Union/Czechoslovak People's Party or KDU-CSL, and ODA) was forced to resign due to the collapse of the union, government scandals, and a worsening economy. A temporary government was formed in January 1998, led by Mr. Tošovsk, which was given the task to prepare the country for new elections. These were held in June 1998, where the Czech Social Democratic Party gained the majority of votes (32.3%). After negotiating with

the ODS, which gained 27.74% of the votes, the CSSD formed a minority government, creating the first left-oriented party since Communist rule.

In the 1998 elections, the CSSD gained 74 seats in the Chamber of Deputies and 25 seats in the Senate, while the ODS gained 63 seats in the lower house and 29 in the Senate. The Christian Democratic Union-Czechoslovak People's Party (KDU-CSL, Catholic-conservative) took 20 seats in the Chamber and 13 in the Senate, and the Freedom Union (US, break-off party from the ODS) won 19 seats in the lower house and 3 in the Senate. Voters who became disillusioned with the bad policies of the ODS coalition took a significant number of seats away from the party, and gave them to the Freedom Union. The Communist Party won 24 seats in the Chamber of Deputies and 2 seats in the Senate.

President Havel, who was reelected on 26 January 1993, did not subscribe to any political party in the interest of political tranquility. He appointed Milos Zeman of the majority Social Democratic Party as prime minister on 17 July 1998.

In the 2002 elections, the CSSD gained 70 seats in the Chamber of Deputies and 11 seats in the Senate. The ODS took 58 seats in the Chamber and 26 in the Senate, and the Coalition, a grouping of the KDU-CSL and the Freedom Union (US), won 31 seats in the Chamber and 31 seats in the Senate. The Communist Party, in its strongest showing since the end of Communist rule, took 41 seats in the lower house and 3 seats in the Senate. The CSSD formed a majority government (101 seats) in the Chamber of Deputies with the Coalition. Vladimir Spidla of the CSSD became prime minister; following disastrous results in the 2004 European Parliament elections, he was replaced with Stanislav Gross—the former minister of interior. Accusations of corruption, and threats from the Christian Democrats to leave the coalition, forced Gross to resign after only nine months in office. On 25 April 2005 he was replaced with Jiri Paroubek, his former regional development minister.

Vaclav Klaus of the ODS was inaugurated president on 7 March 2003, after parliament voted him into office in February, after many rounds of voting. Next parliamentary elections were scheduled for June 2006.

## 15 LOCAL GOVERNMENT

The Czech Republic is divided into 6,000 municipalities for local administration, 13 self-governing regions, popularly elected for a four-year period of office, and the capital city of Prague, with a mayor and city council elected for four-year terms. Under Communist rule, Czechoslovakia's government was so centralized that little to no local government existed. Such institutions have become more common since the formation of the 1992 constitution and democratic rule.

## 16 JUDICIAL SYSTEM

Under the 1992 constitution, the judiciary has been completely reorganized to provide for a system of courts, which includes a Supreme Court; a supreme administrative court; high, regional, and district courts; and a constitutional court. The Supreme Court, which is situated in Brno, is the highest appellate court and has national jurisdiction. The High Courts, with seats in Prague and Olomouc, represent the second instance in the judicial system. The District Courts deal with proceedings in the first instance and are situated in the capital towns of the administrative districts.

The 15-member constitutional court created in 1993 rules on the constitutionality of legislation. Constitutional court judges are appointed by the president, subject to Senate approval, for 10-year terms.

Military courts were abolished in 1993 and their functions transferred to the civil court system. The new judiciary is independent from the executive and legislative branches and appears to be impartial in its application of the law. Criminal defendants are entitled to fair and open public trials. They have the right to have counsel and enjoy a presumption of innocence.

## 17 ARMED FORCES

The Czech Republic had 22,272 active personnel in 2005. The Army numbered 16,663 active members with 298 main battle tanks. The Air Force had 5,609 active personnel, with 40 combat capable aircraft. The Czech Republic also had a 5,600 member paramilitary force made up of 4,000 border guards and 1,600 internal security personnel. The Czech Republic provided support to NATO, UN and peacekeeping missions in nine countries in Asia, Europe and Africa. Military spending in 2005 amounted to \$2.19 billion.

The Košice Agreement of 1945 provided for military organization, equipment, and training to be modeled after those of the former USSR. Czechoslovakia was a signatory to the Warsaw Pact of 14 May 1955, which provided for military cooperation with the USSR and other Soviet-bloc countries and for a joint command with headquarters in Moscow.

## 18 INTERNATIONAL COOPERATION

Czechoslovakia was a charter member of the United Nations, admitted on 24 October 1945. The Czech Republic became a member of the UN on 8 January 1993; it is part of the ECE and serves on several specialized agencies, such as the IFC, IMF, WHO, the World Bank, and UNESCO. The Czech Republic was admitted to NATO on 12 March 1999 and became a member of the European Union on 1 May 2004. It is also a member of the OECD, the OSCE, the Central European Initiative, the Council of Europe, and the European Bank for Reconstruction and Development. The country is an observer in the OAS and an affiliate member of the Western European Union.

The nation is part of the European Organization for Nuclear Research (CERN), the Nuclear Suppliers Group (London Group), and the Nuclear Energy Agency. It is also a part of the Australia Group and the Zangger Committee. In environmental cooperation, the Czech Republic is part of the Antarctic Treaty, Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Before World War II, Bohemia and Moravia were among the most agriculturally and industrially developed areas in Europe. In 1993, the Czech Republic emerged from 40 years of centralized economic planning in the Communist era (including the more balanced economic development of the 1960s) with a more prosperous and less debt-ridden economy than most other post-Communist countries. It enjoys an extensive industrial sector strong in both heavy and precision engineering, self-sufficiency in a variety of

agricultural crops as well as an exportable surplus of meat, extensive timber resources, and adequate coal and lignite to supply two-thirds of its total energy needs.

After recovering from a recession following the 1993 separation from Slovakia, the republic enjoyed GDP growth of 4.8% in 1995. GDP growth of up to 5.5% was forecast for 1996 and 1997. Unemployment also stabilized at less than 3% through 1996. The annual rate of inflation dropped from 20% in 1993 to 9% in 1996. The thriving economy of the mid-1990s depended upon loans easily secured from state-owned banks to newly privatized companies that did not have effective managers. This method of fueling the economy collapsed in a 1997 currency crisis which caused the economy to go into a three-year recession. Following this collapse, the government rescued and privatized the four largest banks in the Czech Republic, which stabilized the banking sector, now largely foreign-owned. The banks had begun to lend again by 2001.

As of 2001, the country was receiving the highest level of foreign direct investment per capita in Central Europe, and 40% of industrial production was coming from foreign-owned companies. This high level of investment drove the value of the koruna up in 2001, which, coupled with a downturn in the global economy, put a damper on industry. The steel and engineering industries were struggling in the early 2000s, but growth in information technology and electronics diversified the economy. The telecommunications, energy, gas, and petrochemical sectors were due to be privatized by 2002.

Severe flooding in Central Europe in August 2002 negatively impacted the Czech economy. The tourism sector was especially affected.

The country was formally invited to join the EU in December 2002, and it will need to keep its budget deficit below the 3% of GDP mandated by the EU for entering into European economic and monetary union (it was 5.3% in 2002). The deficit is balanced against the influx of revenue from privatization, however, which reached 11.3% of GDP in 2002. Accession to the EU was completed in 2004.

The relatively slow pace of growth from 2001 and 2002 was replaced with moderately high growth rates of the GDP in 2003 and 2004: 3.7% and 4.0% respectively; in 2005 the economy was expected to strengthen even further, with a real GDP growth of 4.3%. This moderate growth is the sign of a maturing economy that is trying to embed the market in a stable system. Inflation remained fairly stable, hovering around 3%. The unemployment rate fluctuated between 9% and 10%.

The Czech Republic remains one of the strongest economies in Central and Eastern Europe. The main growth engines are exports, foreign and domestic investment, and tourism. The state-owned telecommunications company—Cesky Telecom—was to be privatized in 2005, which together with improvements in the financial sector, and better management of EU funds was supposed to strengthen the economy on the short term. Car manufacturing (the Czech Republic is part of the so-called “Detroit of Europe” region), and tourism are two of the country’s strongest industries.

## **2<sup>0</sup> INCOME**

The US Central Intelligence Agency (CIA) reports that in 2005 Czech Republic’s gross domestic product (GDP) was estimated at

\$184.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$18,100. The annual growth rate of GDP was estimated at 4.6%. The average inflation rate in 2005 was 2%. It was estimated that agriculture accounted for 3.4% of GDP, industry 39.3%, and services 57.3% in 2004.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$500 million or about \$49 per capita and accounted for approximately 0.6% of GDP. Foreign aid receipts amounted to \$263 million or about \$26 per capita and accounted for approximately 0.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Czech Republic totaled \$45.59 billion or about \$4,470 per capita based on a GDP of \$90.4 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.8%. In 2001 it was estimated that approximately 24% of household consumption was spent on food, 14% on fuel, 5% on health care, and 12% on education.

## **2<sup>1</sup> LABOR**

As of 2005, the labor force was estimated at 5.27 million. Among wage earners in 2002, an estimated 4% were engaged in agriculture; 38% in industry; and 58% in services. The estimated unemployment rate in 2005 was 9.1%.

The right to form and join unions is protected by law. As of 2005, about 20% of the Czech labor force was unionized, although union membership was on the decline. The major labor confederation is the Czech-Moravian Chamber of Trade Unions. Workers are freely allowed to organize and engage in collective bargaining. Striking is also allowed, but only after mediation efforts fail. However, workers in certain critical sectors cannot strike and are limited only to mediation. Collective bargaining is usually conducted on a company-by-company basis between unions and employers.

In 2005, the standard workweek was 40 hours, with at least two days of rest. There is also a mandatory 30-minute rest period during the eight-hour day. Overtime is limited to eight hours per week and is subject to employee consent. The minimum working age is 15 years with some exceptions allowing legal employment to 14-year-old workers. There are strict standards for all workers under the age of 18, and these standards are routinely enforced. Occupational health and safety standards are prescribed and effectively enforced except in some industries still awaiting privatization. As of 2005, the minimum wage was \$287 per month and is considered to provide a decent standard of living for a worker and a family.

## **2<sup>2</sup> AGRICULTURE**

Agriculture is a small but important sector of the economy which has steadily declined since the “Velvet Revolution” of 1989. In 2003, cultivated areas accounted for 43% of the total land area. Agriculture contributed 3.4% to GDP in 2004.

The principal crops are grains (wheat, rye, barley, oats, and corn), which support the Czech Republic’s dozens of small brew-

eries. Production in 2004 included wheat, 5,042,000 tons; barley, 2,330,000 tons; rye, 313,000 tons; oats, 227,000 tons; and corn, 552,000 tons. At 166 liters (44 gallons) per person, the Czech Republic is the world's highest per capita beer-consuming nation. There is a long tradition of brewing in the Czech Republic; some of the world's oldest brands were invented there. After Germany, the Czech Republic is Europe's largest producer of hops; production in 2004 was 6,311 tons. Other important crops include oil-seeds, sugar beets, potatoes, and apples.

Agriculture lags behind other sectors in the restoration of private properties seized after 1948. As of 1993, agricultural subsidies were restricted to the formation of new farms, and the production of wheat, dairy products, and meat. Over the long term, the government estimates that over 250,000 agricultural workers will need to find employment in other sectors and that arable land in use will decrease by 9%.

### 23 ANIMAL HUSBANDRY

Hogs, cattle, and poultry are the main income-producers in the livestock sector. In 2004 there were an estimated 1,428,000 head of cattle and 3,126,000 hogs. The number of chickens that year reached an estimated 14.2 million; sheep, 115,900; goats, 11,900; and horses, 24,000.

Meat, poultry, and dairy production have been oriented toward quantity rather than quality. In 2004, meat production totaled 759,254 tons, with pork accounting for 52%.

### 24 FISHING

Fishing is a relatively unimportant source of domestic food supply. Production is derived mostly from pond cultivation and, to a lesser extent, from rivers. The total catch in 2003 was 5,127 tons, all from inland waters. Aquacultural production amounted to 19,670 tons that year.

### 25 FORESTRY

The Forest Code (1852) of the Austro-Hungarian Empire was incorporated into the laws of the former Czechoslovakia and governed forest conservation until World War II (1939–45). Most forests were privately owned, and during the world wars, they were excessively exploited. The Czech Republic had an estimated 2,632,000 hectares (6,504,000 acres) of forestland in 2000, accounting for 34% of the total land area. As of 2003, forest ownership was 62% state, 21% private, and 15% municipal. Total roundwood production in 2003 was 14.5 million cu m (512 million cu ft), with exports of 2.5 million cu m (88 million cu ft). Since the Czech government began property restitution, the need for wood products has far outstripped domestic supply, especially for furniture and construction materials.

### 26 MINING

The mining and processing sector's share of GDP in 2002 was 1.2%, down from 3.7% in 1993. Mining and processing of industrial minerals and the production of construction materials continued to be of regional and domestic importance. Economic resources of most metals have been depleted. As of end 2000 only gold-bearing and tin-tungsten ores were among the exceptions. All the raw materials consumed by the country's steel industry were imported, including iron ore and concentrate, manganese

ore, copper, and unwrought lead and zinc. Lead and zinc have not been mined for about seven years, and the number of registered lead deposits declined from 17 in 1998 to nine in 2002, none of which were being worked. The country's eight iron ore deposits were no longer worked. In 2002: kaolin production was 3.65 million metric tons, down from 5.543 million tons in 2001; common sand and gravel, 12.464 million cu m, up from 12.1 million cu m in 2001; foundry sand, 676,000 tons, compared to 771,000 tons in 2001; glass sand, 853,000 tons, compared to 974,000 tons in 2001; dimension stone, 285 million cu m, down from 300 million cu m in 2001; limestone and calcareous stones, 10.186 million tons; building stone, 10.6 million cu m; hydrated lime and quicklime, 1.12 million tons; feldspar, 401,000 metric tons, up from 373,000 metric tons in 2001; diatomite, 28,000 metric tons, down from 83,000 metric tons in 2001; and graphite, 16,000 metric tons, down from 17,000 metric tons in 2001. Output of crude gypsum and anhydrite went from 24,000 metric tons in 2001 to 108,000 metric tons in 2002. The Czech Republic also produced arsenic, hydraulic cement, bentonite, dolomite, crude gemstones and pyrope-bearing rock, illite, iron ore, nitrogen, quartz, salt, basalt (for casting), silver, sodium compounds, sulfuric acid, talc, uranium, wollastonite, and zeolites.

### 27 ENERGY AND POWER

The Czech Republic has only small proven reserves of oil and natural gas, but relatively abundant recoverable reserves of coal.

The electricity production market in the Czech Republic is dominated by Ceske Energeticke Zavody (CEZ), which is majority owned by the state. In 2003, CEZ provided 74% of the country's power, with the remaining 26% of the nation's power provided by 8 regional power companies, of which CEZ holds a majority stake in 5.

In 2002, the Czech Republic had 15.298 million kW of electrical generating capacity. This included conventional thermal at 11.537 million kW; nuclear at 2.760 million kW; hydroelectric at 1.000 million kW; and geothermal/other at 0.001 million kW. For that same year, electricity generation was estimated at 71.8 billion kWh, of which 50.835 billion kWh came from conventional thermal sources; 17.801 billion kWh from nuclear sources; 2.467 billion kWh from hydropower; and 0.655 billion kWh from geothermal/other sources. Electricity consumption in 2002 was estimated at 55 billion kWh. Exports of electricity for 2002 totaled 20.900 billion kWh, with imports for that year at 9.502 billion kWh.

The Czech Republic has two operational nuclear power plants: Dukovany; and Temelin, the latter located 37 miles from the Austrian border. Temelin initially went online in December 2000, with a second reactor placed on trial operation 8 April 2003. The following month, both Temelin reactors became fully operational. Both plants are operated by CEZ and generated 42% of the company's power, accounting for 30% of its installed generating capacity in 2003. In 2002, nuclear power accounted for almost 25% of the electric power produced by the Czech Republic. Nuclear power is an important part of the Czech.

The Czech Republic's crude oil reserves are limited, totaling an estimated 15 million barrels as of 1 January 2004. Oil production in 2003 came to an estimated 13,200 barrels per day, with preliminary figures showing a consumption rate for all oil products of 186,000 barrels per day for that year. According to British Petro-

leum, oil product consumption totaled 202,000 barrels per day for 2004. As a result, the Czech Republic is heavily dependent upon imported oil. In 2002, total crude and refined oil product imports totaled 191,410 barrels per day. While much of the Czech Republic's oil imports come from Russia, the country has been able to tap other sources via the Ingolstadt-Kralupy nad Vltavou-Litvinov (ILK) pipeline, which permits crude oil to be transported from Trieste by way of the Trans-Alpine pipeline. The ILK pipeline is operated by Mero CR.

As with oil, the Czech Republic has only limited reserves of natural gas. In 2002, consumption and production of natural gas was estimated at 337 billion cu ft, and 5.4 billion cu ft, respectively. Imports for that year came to 343.76 billion cu ft. Estimated natural gas reserves have been placed at 0.14 trillion cubic ft, as of 1 January 2004.

The Czech Republic, between 1993 and 2002, has seen its demand for coal fall 23%. In spite of this, coal remains an important source of energy. In 2002, coal accounted for 43% of the nation's primary energy demand. Estimated recoverable coal reserves in the Czech Republic amounted to 6,259 million short tons in 2001. Coal production and consumption of all types in 2002, was estimated at 70.4 million short tons and 65 million short tons, respectively.

## 28 INDUSTRY

Before World War II, Czechoslovakia favored traditional export-oriented light industries, including food processing. Concentration on the production of capital goods since the war has been at the expense of consumer goods and foodstuffs, although there have been increases in the metalworking industry and in the production of glass, wood products, paper, textiles, clothing, shoes, and leather goods. Some of these and other consumer goods—such as the world-famous pilsner beer, ham, and sugar—had figured prominently in the pre-World War II export trade, but machinery was predominant under the Communist regime.

The extent of Czechoslovakian industry still ranks both the Czech and Slovak republics among the world's most industrialized countries. A final wave of privatization begun in 1995 has resulted in an 80% private stake in industry, although the government maintains some control over steel, telecommunications, transport, and energy industries. However, in 2001, the energy utility CEZ was due to be privatized. Industry accounted for 40.7% of GDP and 38% of employment through 1995. However, while industrial wages continued to grow through 1996, output fell 3.5%, forcing the government to implement new austerity measures to spur renewed growth. Nevertheless, industry, which accounted for over 40% of the economy, registered a 4.7% decline in 1998. The recession, which continued into 1999, brought disillusionment to many Czechs who had emerged from the 1989 "Velvet Revolution" as the most prosperous citizens of the former East Bloc. The European recession, which began on the heels of the economic downturn in the United States beginning in 2001, further exacerbated the struggling Czech economy. Industry accounted for 41% of GDP in 2001, and employed 35% of the work force. Although the relative contribution of industry to the economy had begun to decline in 2002, the industrial base remained diversified.

Major industries in the Czech Republic include fuels, ferrous metallurgy, machinery and equipment, coal, motor vehicles, glass,

and armaments. The country is particularly strong in engineering. The Czech Republic in 2001 was receiving the highest foreign direct investment in the region, which was devoted to restructuring industrial companies. Forty percent of industrial production in 2001 came from companies with foreign capital, up from 15% in 1997. The Czech Republic produced 465,268 automobiles in 2001, up 2% from 2000. Skoda Auto, now owned by Volkswagen, is a successful Czech enterprise.

In 2004, the industrial sector contributed 39.3% to the overall GDP, and employed 38% of the total labor force; agriculture was not a big contributor to the GDP—only 3.4%, and employed only 4% of the working population; services came in first with 57.3% and 58% respectively. The industrial production growth rate was slightly higher than the GDP growth rate, reaching 4.7% in 2004. Car manufacturing remains the main industrial driving force, and is followed by metallurgy, machinery and equipment, glass, and armaments.

## 29 SCIENCE AND TECHNOLOGY

The Czech Academy of Science has divisions of life and chemical sciences, mathematics, and physical and earth sciences, and 43 attached medical, scientific, and technical research institutes. In addition, there are 28 specialized agricultural, medical, scientific, and technical learned societies. There are technology museums in Brno, Mladá Boleslav, and Prague, and the latter also has a natural history museum. The Czech Republic has 13 universities offering degrees in medicine, natural sciences, mathematics, engineering, and agriculture. In 1987–97, science and engineering students accounted for 28% of university enrollment. In 2002, a total of 30.2% of all bachelor's degrees awarded were science degrees (natural sciences, mathematics and computers, and engineering).

In 2003, total expenditures for research and development (R&D) amounted to Kc32,246.6 million, of which 51.5% came from business, 41.8% came from government sources, 2.2% came from higher education, and 4.6% came from foreign sources. In 2002 (the latest year for which this data was available) there were 1,467 researchers and 792 technicians per million people actively engaged in R&D. High technology exports in 2002 totaled \$4.494 billion, accounting for 14% of manufactured exports that year.

## 30 DOMESTIC TRADE

In the Communist period, marketing and distribution, including price-fixing, were controlled by the federal government; administration on the lower levels was handled by the national committees. Cooperative farms sold the bulk of their produce to the state at fixed prices, but marginal quantities of surplus items were sold directly to consumers through so-called free farmers' markets. Starting in 1958, the government operated a program of installment buying for certain durable consumer goods, with state savings banks granting special credits.

The "Velvet Revolution" of 1989 brought rapid privatization program on an innovative voucher system. Each citizen was given an opportunity to purchase a book of vouchers to be used in exchange for shares in state-owned businesses. As a result, more than 20,000 shops, restaurants, and workshops in both the Czech and Slovak republics were transferred to private owners by public auction in a wave of "small" privatization, and through distribution of ownership shares. Under communism, nearly 97% of

businesses were state-owned. Today, about 80% of the economy is wholly or partially in private hands.

The commercial center of the country is Prague. Though there are numerous small shops throughout the city, American and European style supermarkets and department stores are developing and providing stiff competition. Shopping malls have also begun to develop. Though most transactions are still in cash, credit cards are gaining a wider acceptance within major cities. Direct marketing, particularly through catalog sales, has become more popular, particularly in areas outside of the major cities.

Businesses generally adhere to a standard 40-hour workweek, though many may close early on Fridays. Most businesses do not keep weekend hours.

### 31 FOREIGN TRADE

Czechoslovak foreign trade has traditionally involved the import of raw materials, oil and gas, and semi-manufactured products and the export of semifinished products and consumer and capital goods. In 1989, trade with former Eastern bloc nations accounted for 56% of Czechoslovakia's total foreign trade; by the end of 1992 their share had more than halved to 27%.

The Czech Republic engages in the export of numerous manufactured goods that are used in the production of automobiles, furniture, and electrical appliances. The manufacturing of metals, including iron and steel plates and sheets, and base metal bring in 5.7% of export dues. The road vehicle industry results in 15.6% of exports. Other export commodities include textiles (4.3%), glassware (which the country is famous for producing—1.6%), furniture (2.7%), and electrical machinery (2.9%). A majority of these products are exported to Germany.

Total exports grew to \$66.5 billion (FOB—Free on Board) in 2004. Machinery and transport equipment made up the bulk of total export at 52%, and were followed by raw materials and fuels (9%), and chemicals (5%). The main destination points were Germany (where 36.1% of total exports went), Slovakia (8.4%), Austria (6%), Poland (5.3%), the United Kingdom (4.7%), France (4.7%), Italy (4.3%), and the Netherlands (4.3%). Imports totaled \$68.2 billion, and came mainly from Germany (31.8%), Slovakia (5.4%), Italy (5.3%), China (5.2%), Poland (4.8%), France (4.8%), and Russia (4.1%). The main import commodities included machinery and transport equipment (46%), raw materials and fuels (15%), and chemicals (10%).

### 32 BALANCE OF PAYMENTS

The current account balance in 2001 improved from 2000, when it stood at approximately \$3.5 billion, or 4.8% of GDP, due to a narrowing trade gap. Strong inflows of foreign direct investment have led to surpluses in the financial account, which easily cover the current account deficit.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of the Czech Republic's exports was \$38 billion while imports totaled \$41.7 billion resulting in a trade deficit of \$3.7 billion.

The International Monetary Fund (IMF) reported that in 2001 the Czech Republic had exports of goods totaling \$33.4 billion and imports totaling \$36.5 billion. The services credit totaled \$7.09 billion and debit \$5.6 billion.

Exports of good and services grew faster than imports in 2004, jumping at \$76.6 billion (from \$56.5 in 2003); imports expanded from \$58.5 to \$77 billion. Thus, while the resource balance was -\$2 billion in 2003, by 2004 it improved to -\$400 million. The current account balance remained fairly stable, reaching -\$5.6 billion in 2004. The country's total reserves (including gold) grew to \$28.5 billion in the same year, covering almost five months of imports.

### 33 BANKING AND SECURITIES

The Czech National Bank (CNB) is the country's central bank, charged with issuing currency and regulating the state's commercial banking sector. Since mid-1996 domestic credit and M2 growth have fallen sharply. Growth in M2 stood at 7.8% at the end of December 1996, well below the central bank's 13-17% growth

target for 1996 and in the middle of its 8–12% target range for 1997.

In the mid-1990s, there were 36 commercial and savings banks in the Czech Republic. The state had one state financial bank, 21 Czech joint-stock companies, 6 partly owned foreign banks, and 7 foreign banks. The new Czech Export Bank commenced operations in late 1996. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$15.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$42.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.69%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 4.75%.

The origins of the first exchange in Prague go back to the 1850s when foreign exchange and securities were the principal trading products. An exchange trading securities and commodities was established in 1871. The volumes traded at the exchange fluctuated considerably and in 1938 official trading was suspended. After World War II the operation of the Prague Exchange was not restored and in 1952 the Exchange was officially abolished. In 1990 eight banks became members of the Preparatory Committee on Stock Exchange Foundation. In 1992 this institution transformed itself into a stock exchange. The Prague Stock Exchange has been trading debt securities (mostly government and bank issues) since April 1993. Volume in mid-1993 was Kc18 million, of which two-thirds were listed issues. Leading Czech banks include: Ceská spořitelna (Czech Savings Bank), Investiční a poštovní banka (Investment and Postal Bank), Komerční banka (Commercial Bank), and the Československá obchodní banka (Czechoslovak Commercial Bank). As of 2004, a total of 554 companies were listed on the Prague Stock Exchange. Total capitalization that year totaled \$30.863 billion. In 2004, the PX 50 rose 56.6% from the previous year to 1,032.0.

### 3<sup>4</sup> INSURANCE

The pre-World War II insurance companies and institutions of the former Czechoslovakia were reorganized after 1945 and merged, nationalized, and centralized. Since 1952, the insurance industry has been administered by the State Insurance Office, under the jurisdiction of the Ministry of Finance. Two enterprises conducted insurance activities, the Czech and the Slovak Insurance Enterprises of the State.

Property insurance and car insurance are used by more than 80% of the population in the Czech Republic. By 2001, the Czech Republic's state insurance enterprise, Ceska Pojistovna, had been joined by nearly two dozen other firms, including branches of foreign companies. Most offer standard life and health insurance, as well as property coverage and commercial insurance. Third-party auto insurance, workers' compensation, employer's liability and liability for lawyers, auditors, architects, civil engineers, airlines and hunters are compulsory. By law however, Ceska Pojistovna must write the automobile liability cover, and it maintains control of the market. As of 2003, the value of all direct premiums written totaled \$3.714 billion, of which nonlife premiums accounted for \$2.290 billion. Ceska pojistovna was the country top nonlife and life insurer in that same year, with gross nonlife and life premiums written totaling \$835.9 million and \$618.4 million, respectively.

By 1997, proposals to switch the country's pay-as-you-go pension system into one incorporating mandatory private savings and voluntary pension insurance were developed. The introduction of such a scheme drew sharp criticism from the opposition and met with skepticism from the CNB, which has indicated that the quality of capital market regulation would have to improve considerably before pension funds of the kind proposed could be built up.

### 3<sup>5</sup> PUBLIC FINANCE

In the early 1990s, it was estimated that about 97% of businesses were under state control. By 2003, the nonprivate sector accounted for less than 20% of business ownership. In fact, the Czech Republic's economy advanced so quickly out of communism that the country was admitted to the EU in 2004.

The US Central Intelligence Agency (CIA) estimated that in 2005 Czech Republic's central government took in revenues of approximately \$48.1 billion and had expenditures of \$53 billion. Revenues minus expenditures totaled approximately -\$4.8 billion. Public debt in 2005 amounted to 33.1% of GDP. Total external debt was \$43.2 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were Kc852.04 billion and expenditures were Kc979.81 billion. The value of revenues was us\$30 million and expenditures us\$34 million, based on an official exchange rate for 2003 of us\$1 = Kc28.209 as reported by the IMF. Government outlays by function were as follows: general public services, 12.4%; defense, 4.7%; public order and safety, 5.7%; economic affairs, 13.8%; environmental protection, 1.3%; housing and community amenities, 2.5%; health, 16.6%; recreation, culture, and religion, 1.0%; education, 9.4%; and social protection, 32.6%.

#### Public Finance – Czech Republic (2003)

(In billions of koruny, central government figures)

<b>Revenue and Grants</b>	<b>852.04</b>	<b>100.0%</b>
Tax revenue	416.1	48.8%
Social contributions	387.25	45.4%
Grants	12.4	1.5%
Other revenue	36.29	4.3%
<b>Expenditures</b>	<b>979.81</b>	<b>100.0%</b>
General public services	121.63	12.4%
Defense	46.04	4.7%
Public order and safety	56.04	5.7%
Economic affairs	135.03	13.8%
Environmental protection	12.57	1.3%
Housing and community amenities	24.62	2.5%
Health	162.17	16.6%
Recreational, culture, and religion	9.54	1.0%
Education	92.52	9.4%
Social protection	319.66	32.6%

### 36 TAXATION

As of 1 January 2006, the standard corporate income tax rate in the Czech Republic is 24%. Dividends are subject to a withholding tax of 15% and are not included in taxable income. If 25% of the shares have been held for two years, a participation exemption applies. Personal income tax is progressive with four brackets and a top rate of 32% (15% up to yearly income of about \$4,000, 20% on income between \$4,000 and \$8,000, 25% on income between \$8,000 and \$12,000, and 32% on income above \$12,000, with additional lump sums of \$600, \$1400, and \$2400, respectively, paid at the 20%, 25%, and 32% levels). Payroll taxes of 47.5% (35% paid by the employer and 12.5% paid by the employee) cover pension insurance, sickness insurance, and employment insurance. There is a real estate transfer tax of 3%; gift taxes of 1–40%; and inheritance taxes of 0.5–20%. Withholding taxes are applied to income of nonresidents: 15% on income from dividends and interest; and 25% on income from royalties and operating licenses. The Czech Republic has bilateral tax treaties (BITs) with about 65 countries. In the BITs withholding rates are generally lower.

The main indirect tax is a system of value-added taxes (VATs) which replaced turnover taxes as of 1 January 1993. There are three VAT rates: 19% on most goods and some services; 5% on basic foodstuffs, minerals, pharmaceuticals, medical equipment, paper products, books, newspapers, and public transport services; and 0% on exports.

### 37 CUSTOMS AND DUTIES

On 1 January 1993, Czechoslovakia divided into two independent states, the Czech Republic and the Slovak Republic. Both states maintain a customs union that continues most of the same trade policies of the former Czechoslovakia. All imports into the Czech Republic, except those from the Slovak Republic, are subject to an ad valorem rate of up to 80%, but with an average of 4.6%. There is also a value-added tax (VAT) of 19% for everything except necessities, such as food and pharmaceuticals, for which it is 5%. Preferential treatment is granted to developing countries. The Czech Republic has trade agreements with Bulgaria, Hungary, Poland, Romania, Slovakia, and Slovenia, which comprise the Central European Free Trade Agreement (CEFTA).

### 38 FOREIGN INVESTMENT

Moody's Investors Service gave the Czech Republic the first investment-grade A rating to be awarded to a former Soviet bloc country. As of 2001, foreign direct investment (FDI) stock per capita in the Czech Republic was \$2,432, the highest among the Eastern European transitional economies. FDI has served Czech economic development in providing capital and managerial expertise for restructuring its enterprises. National treatment is the general rule, with screening of foreign investment proposals required only in banking, insurance and defense industries. A competitive exchange rate and low wages have been conducive to foreign investment, but in 1998 a six-point incentive package approved by the Czech government helped ratchet annual FDI inflows to about double previous levels. Incentives—tax breaks up to 10 years, duty-free imports, rent reductions, benefits for job creation, training grants, and incentives for reinvestments and expansions—are available for investments above \$10 million, or above \$5 million

in regions where unemployment is over 25%. The Czech Republic has also authorized nine commercial or industrial custom-free zones that operate according to the same rules as those in the European Union. By 2002, the government had negotiated bilateral investment treaties (BITs) with 66 countries, the BIT with the United States in force since 1992.

From 1993 to 2001, the Czech Republic attracted \$26.76 billion cumulative FDI inflow, of which 27.6% has come from the Netherlands, 26% from Germany, 10.2% from Austria, 8.6% from France, 6.2% from the United States, 4.1% from Belgium, 3.8% from Switzerland, 3.1% from the United Kingdom, 1.9% from Denmark, and 8.5% from other countries. Annual FDI inflow jumped from about \$880 million in 1993 to 2.5 billion in 1995 due to the first foreign investment in the state-owned telecommunications system and German investment in the automotive industry. In 1997, FDI inflow had fallen back to \$1.3 billion, but in 1998, with the introduction of incentives for foreign investment, FDI inflow rose to \$3.7 billion and then spiked to \$6.3 billion in 1999. For 2000 and 2001, annual FDI was just below \$5 billion, and in 2002, reached a record \$7.5 billion. By economic sector, the principal destinations for FDI flows into the Czech Republic from 1990 to 2000 have been financial intermediation (18%), wholesale trade (15%), nonmetallic mineral products manufacture (7.5%), and motor vehicle manufacture (6.5%). Other significant areas have been food and beverages, energy, and retail sales. In 2000, direct investment outflow from the Czech Republic totaled \$726 million, 37.7% to Slovenia, 25.6% to Poland, and 15.9% to Russia.

In 2002, the inflow of capital from abroad reached \$9.3 billion—the second-largest FDI per capita in Central and Eastern Europe, after Slovenia. The total stock of foreign investment was \$41.1 billion in 1993–2003, growing by almost \$14 billion between 2002 and 2003, and averaging \$4.1 billion annually. Germany and the Netherlands were the main investors, with \$11.3 billion (31%) and \$9.6% (26.0%) respectively. They were followed by the United States and Austria, with \$3.6 billion (10.1%) each, France with \$2.2 billion (6%), and the United Kingdom with \$1.9 billion (5.2%). Overall, the Czech Republic has received more FDI per capita than any other country in Central and Eastern Europe, most of it going towards manufacturing, financial services, hotels and restaurants, and transportation and telecommunications.

### 39 ECONOMIC DEVELOPMENT

Post-communist economic recovery has been implemented by development of the private sector, particularly in the trade and services areas, increased exports to industrialized nations, control of inflation, and achievement of a positive trade balance. The most promising growth sectors are those involving advanced technology, environmental protection, biotechnology, and, generally, high value-added production. At the end of 1996, approximately 80% of the Czech Republic's large companies had been privatized, most via voucher privatization, through which nearly six million Czechs bought vouchers exchangeable for shares in companies that were to be privatized. By 1997, however, the recovery had petered out and the Czech Republic plunged into a recession which lasted through 1999. Most analysts blamed the downturn on an incomplete restructuring.

In 2002, the nonprivate sector accounted for only 20% of business; however, the state has retained minority shares in many

heavy industrial enterprises, and many large firms were placed under the control of state-owned banks due to voucher privatization. (Bank privatization was in the completion stages in 2003.) The EU contributed significant resources to prepare the country for accession, including speeding administrative, regulatory, and judicial reform; accession to the EU was completed in 2004. The government is faced with high unemployment; a need for industrial restructuring; transformation of the housing sector; reform of the pension and healthcare systems; and a solution to environmental problems. The decline in industry's contribution to the economy has led to factory closings and job losses. Real gross domestic product (GDP) growth increased to 2.2% in the first quarter of 2003, despite the global economic recession and in part due to high household consumption.

By 2004 the GDP growth rate reached 4.0%, and its increase was attributed to significant inflows of foreign capital and growing consumer demand. High investment rates have managed to expand productivity, and helped create new jobs and increase real wages. Inflation remained fairly low over this time period, strengthening the national currency, but at the same time undermining the export sector. As part of the EU, the Czech Republic can tap into a large market, and its maturing economy allows it to compete with countries from Western Europe.

#### **40 SOCIAL DEVELOPMENT**

Social welfare programs in the former Czechoslovakia dated back to the Austro-Hungarian Empire. Work injury laws were first introduced in 1887 and sickness benefits in 1888. During the First Republic (1918–39), social insurance was improved and extended. After World War II, new social legislation made sickness, accident, disability, and old age insurance compulsory. The trade unions administered health insurance and family allowances. The government's Bureau of Pension Insurance administered the pension insurance program, which was funded by the government and employers. In 1960, social welfare committees were established within the regional and district national committees to exercise closer control.

Current programs include old age pensions, disability, survivor benefits, sickness and maternity, work injury, unemployment, and family allowances. Employers are required to contribute 21.5% of payroll, while employees contribute 6.5% to the pensions program. The retirement age has been gradually increasing.

In recent years, women have played an increasingly greater role in Czech society and now account for about half of the labor force. Although the principle of equal pay for equal work is generally followed, women hold a disproportionate share of lower-paying positions. The unemployment rate for women is greater than for men, and only a small number of women hold senior positions in the work force. Rape and domestic violence is underreported, although societal attitudes are slowly improving to help victims seek assistance from authorities. In 2004, the Criminal Code was amended to recognize domestic violence as a distinct crime. Crisis centers exist to help victims of sexual abuse and violence. Sexual harassment is prohibited by law. Trafficking in women and children is evident.

The Roma minority, officially estimated to number 150,000–175,000, face discrimination in housing, employment, and often

are subject to harassment. Racially motivated crime is on the increase, as is skinhead activity. Religious freedom is generally tolerated. The Czech Republic's human rights record is fairly good, although judicial backlogs result in extended pretrial detention in some cases and sporadic police violence has been reported.

#### **41 HEALTH**

The Czech health care system combines compulsory universal health insurance with mixed public and private care. Health insurance is funded by individuals, employers, and the government. A number of physicians have private practices and maintain contracts with the insurance system for reimbursement of their services. As of 2004, there were an estimated 342 physicians, 946 nurses, 65 dentists, 51 pharmacists, and 48 midwives per 100,000 people. Health care expenditure was estimated at 7.2% of GDP.

Health activities are directed by the Ministry of Health through the National Health Service. Factories and offices have health services, ranging from first-aid facilities in small enterprises to hospitals in the largest. All school children receive medical attention, including inoculations, X-rays, and annual examinations. In 1999, children up to one year of age were immunized for the following diseases: diphtheria, pertussis, and tetanus, 98%; and measles, 95%.

Special attention has been devoted to preventive medicine, with campaigns waged against tuberculosis, venereal diseases, cancer, poliomyelitis, diphtheria, and mental disturbances. Diseases of the circulatory system are the leading cause of death. Free guidance and care given to women and children have resulted in a low infant mortality rate of 3.93 per 1,000 live births in 2005, one of the lowest in the world. The total fertility rate in the same year was 1.2. The maternal mortality rate in 1998 was low at 14 maternal deaths per 100,000 live births. Average life expectancy in 2005 was 76.02 years. The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 2,500 people living with HIV/AIDS in the country. There were 10 reported deaths from AIDS in 2003.

#### **42 HOUSING**

Currently, the lack of affordable housing, which inhibits labor mobility, is a major factor slowing economic growth in the Czech Republic. Problems include lack of financing, shortages of materials and labor, and a poorly developed infrastructure. In the mid-1990s the government drafted a new housing policy which, among other things, would lift existing restrictive legal provisions barring occupants from buying and reselling flats and differentiate rents according to quality and location of flats.

According to the 2001 census, there were about 4,366,293 dwelling units within the country with about 87% permanently occupied. About 1,969,568 dwellings are houses. There is an average of 2.69 people per household.

#### **43 EDUCATION**

Education is under state control and free, up to and including the university level. Nine years of education are compulsory. There is a general primary school program that lasts for nine years. However, after the fifth year, some students may choose to enter more specialized programs that will include their secondary education

studies as well. Secondary programs include general academic studies (gymnasium), vocational studies, technical programs, or art studies (music and drama). The academic year runs from September to June. The primary languages of instruction are Czech, German, and English.

In 2001, about 95% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 87% of age-eligible students. The same year, secondary school enrollment was about 90% of age-eligible students. Most students complete their primary education. The student-to-teacher ratio for primary school was at about 17:1 in 2003; the ratio for secondary school was about 11:1.

Universities in the current Czech Republic include the world-famous Charles University at Prague (founded 1348); Palacky University at Olomouc (1576; reestablished 1946); and J. E. Purkyne University at Brno (1919; reestablished 1945). In 2003, about 36% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate is estimated at about 99%.

As of 2003, public expenditure on education was estimated at 4.4% of GDP, or 9.6% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library of the Czech Republic (six million volumes in 2005) in Prague is the result of a 1958 amalgamation of six Prague libraries, including the venerable University Library, founded in 1348. It holds a valuable expensive collection of Mozart's papers and manuscripts. Other collections of significance are the university libraries at Brno and Olomouc. The State Research Library, including all six of its branches, holds more than six million volumes. In 1997, the Czech Republic had 6,245 public libraries with 53.7 million volumes and 1.4 million registered users. The Jirí Mahen Library in Brno, established in 1921, is the largest municipal library in the region of Moravia; the library holds about 800,000 books and operates a system of 35 branch locations. The Association of Library and Information Professionals of the Czech Republic had about 1,200 members in 2005.

Castles, mansions, churches, and other buildings of historical interest are public property. Many serve as museums and galleries. The largest museum in the country is the world-famous National Museum in Prague. The National Gallery, also in Prague, contains outstanding collections of medieval art and 17th-century and 18th-century Dutch paintings. Other Prague museums of note include the Jewish Museum, the Antonin Dvorak Museum (celebrating the life of the Czech composer, 1841–1904), and the Museum of Toys, holding the world's second-largest exposition of toys. Other outstanding museums and galleries are located in Brno and Plzen. The Prague Botanical Gardens are among the finest in Europe.

#### 45 MEDIA

In 2003, there were an estimated 360 mainline telephones for every 1,000 people; about 27,300 people were on a waiting list for

telephone service installation. The same year, there were approximately 965 mobile phones in use for every 1,000 people.

In 2000, there were 31 AM and 304 FM radio stations and 150 television stations. In 2003, there were an estimated 803 radios and 538 television sets for every 1,000 people. About 94.4% of every 1,000 people were cable subscribers. In 2003, there were 177.4 personal computers for every 1,000 people and 308 of every 1,000 people had access to the Internet. There were 316 secure Internet servers in the country in 2004.

Major newspapers, their publishers (where applicable), and estimated 2002 circulation totals are: *Blesk*, 420,000; *Hospodarske Noviny*, 130,000; *Mladá Fronta*, Socialist Union of Youth, 350,000; *Moravskoslezsky Den*, 130,000; *Obansky Denikof*, 109,000; *Práce*, Revolutionary Trade Union Movement, 220,600; *Rudé Právo*, Communist Party, 350,000; *Svobodné Slovo*, Socialist Party, 230,000; *Svoboda*, 100,000; and *Vecernik Praha*, 130,000.

Formerly, the Communist Party and the government controlled all publishing. Formal censorship, via the government's Office for Press and Information, was lifted for three months during the Prague Spring of 1968, but prevailed after that time until the late 1980s. As of 1999, the government was said to fully uphold the legally provided freedoms of free speech and a free press.

#### 46 ORGANIZATIONS

The most important umbrella labor organization is the Czech and Slovak Confederation of Trade Unions, an organization that promotes democracy. The World Federation of Trade Unions has an office in Prague. Confederation of Industry of the Czech Republic (est. 1990) is also in Prague. Professional societies representing a wide variety of careers are also active. Important political associations include the Czech Democratic Left Movements and the Civic Movement. The Center for Democracy and Free Enterprise (est. 1991) promotes development of democratic institutions and a free market economy.

The Academy of Sciences of the Czech Republic was founded in 1993 to support and encourage research and educational institutions involved in the fields of natural and technical sciences, social sciences, and humanities.

Youth organizations include the Czech Association of Scouts and Guides (CASG), YMCA and YWCA, and chapters of The Red Cross Youth. There are many sports associations in the country, some of which are affiliated with international organizations as well. National women's organizations include the Gender Studies Center in Prague and the Czech Union of Women.

Multinational organizations based in Prague include the International Association for Vehicle Systems Dynamics and the International Union of Speleology. There are national chapters of Amnesty International and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

Prague, which survived World War II relatively intact, has numerous palaces and churches from the Renaissance and Baroque periods. There are many attractive mountain resorts, especially in northern Bohemia. The mineral spas in Prague are popular as well as the historic monuments. Football (soccer), ice hockey, skiing, canoeing, swimming, and tennis are among the favorite sports. A passport is required for all foreign nationals, whether temporary

visitors or transit passengers. Visas are not required for stays of up to 90 days.

There were 94,984,476 tourist arrivals in 2003. Hotel rooms numbered 97,282, with 225,288 beds and an occupancy rate of 35%. Tourist receipts amounted to \$4 billion, and the average stay was three nights.

In 2004, the US Department of State estimated the cost of staying in Prague at \$306 per day.

#### 48 FAMOUS CZECHS

The founder of modern Czechoslovakia was Tomáš Garrigue Masaryk (1850–1937), a philosopher-statesman born of a Slovak father and a Czech mother. Eduard Beneš (1884–1948), cofounder with Masaryk of the Czechoslovak Republic, was foreign minister, premier, and president of the republic (1935–38 and 1940–48). Jan Masaryk (1886–1948), son of Tomáš G. Masaryk, was foreign minister of the government-in-exile and, until his mysterious death, of the reconstituted republic. Klement Gottwald (1896–1953) became a leader of the Czechoslovak Communist Party in 1929 and was the president of the republic from 1948 to 1953; Antonín Zápotocký (1884–1957), a trade union leader, was president from 1953 to 1957. Alexander Dubček (1921–92) was secretary of the Czechoslovak Communist Party and principal leader of the 1968 reform movement that ended with Soviet intervention. Gen. Ludvík Svoboda (1895–1979) was president of the republic from 1968 to 1975. Gustáv Husák (1913–91) was general secretary of the Communist Party from 1969 to 1987; he became president of the republic in 1975. Parliamentary elections at the end of 1989 saw the rise of the playwright Vaclav Havel (b.1936) to power. The Czech and Slovak republics decided to split in 1992. Havel was elected first president of the Czech Republic in parliamentary elections. Vaclav Klaus (b.1941) was elected the second president of the Czech Republic in 2003.

Perhaps the two most famous Czechs are the religious reformer John Huss (Jan Hus, 1371–1415) and the theologian, educator, and philosopher John Amos Comenius (Jan Amos Komenský, 1592–1670), an early advocate of universal education. *The History of the Czech People* by František Palacký (1798–1876) inspired Czech nationalism. Karel Havlíček (1821–56) was a leading political journalist, while Alois Jirásek (1851–1930) is known for his historical novels. The most famous woman literary figure is Božena Němcová (1820–62), whose *Babička* (*The Grandmother*), depicting country life, is widely read to this day. A poet of renown, Jaroslav Vrchlický (1853–1912) wrote voluminous poetry and translations. *The Good Soldier Schweik* by Jaroslav Hašek (1883–1923) is a renowned satire on militarism. Karel Capek (1890–1938), brilliant novelist, journalist, and playwright, is well known for his play *R.U.R.* (in which he coined the word *robot*). Jan Patočka (1907–77) was one of the most influential Central European philosophers of the 20th century. Bedřich Smetana (1824–84), Antonín Dvořák (1841–1904), Leoš Janáček (1854–1928), and Bohuslav Martinů (1890–1959) are world-famous composers. The leading modern sculptor, Jan Stursa (1880–1925), is best known for his often-reproduced *The Wounded*.

Prominent 20th-century Czech personalities in culture and the arts include the writers Vladislav Vančura (1891–1942) and Ladislav Fuks (1923–94), the painter Jan Zrzavý (1890–1977), and the Czech filmmakers Jirí Trnka (1912–69) and Karel Ze-

man (1910–89). Leaders of the “new wave” of Czechoslovak cinema in the 1960s were Ján Kadar (1918–79) and Miloš Forman (b.1932), both expatriates after 1968. Josef Koudelka (b.1938) is a Czech photographer who resides in France. The best-known political dissidents in the 1970s and 1980s were the playwrights Pavel Kohout (b.1928) and Václav Havel (b.1936), and the sociologist Rudolf Battěk (b.1924). The novelist Milan Kundera (b.1929), who has lived in France since 1975, is the best-known contemporary Czech writer. Czechs have become top world tennis players: Martina Navrátilová (b.1956), expatriate since 1975, Ivan Lendl (b.1960), Hana Mandlíková (b.1962), Jana Novotná (b.1968), and Martina Hingis (b.1980) have thrilled audiences with their skills on the courts.

There have been only two Czechoslovak Nobel Prize winners: in chemistry in 1959, Jaroslav Heyrovský (1890–1967), who devised an electrochemical method of analysis; and in literature in 1984, the poet Jaroslav Seifert (1901–86).

#### 49 DEPENDENCIES

The Czech Republic has no territories or colonies.

# DENMARK

Kingdom of Denmark  
*Kongeriget Danmark*

**CAPITAL:** Copenhagen (København)

**FLAG:** The Danish national flag, known as the Dannebrog, is one of the oldest national flags in the world, although the concept of a national flag did not develop until the late 18th century when the Dannebrog was already half a millennium old. The design shows a white cross on a field of red.

**ANTHEM:** There are two national anthems—*Kong Kristian stod ved højen mast* (*King Christian Stood by the Lofty Mast*) and *Der er et yndigt land* (*There Is a Lovely Land*).

**MONETARY UNIT:** The krone (KR) of 100 øre is a commercially convertible paper currency with one basic official exchange rate. There are coins of 25 and 50 øre, and 1, 5, 10, and 20 kroner, and notes of 50, 100, 500, and 1,000 kroner. KR1 = \$0.16863 (or \$1 = KR5.93) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local units are used for special purposes.

**HOLIDAYS:** New Year's Day, 1 January; Constitution Day, 5 June; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays include Holy Thursday, Good Friday, Easter Monday, Prayer Day (4th Friday after Easter), Ascension, and Whitmonday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in southern Scandinavia, the Kingdom of Denmark consists of Denmark proper, the Faroe Islands, and Greenland. Denmark proper, comprising the peninsula of Jutland (Jylland) and 406 islands (97 of them inhabited), has an area of 43,094 sq km (16,638 sq mi) and extends about 402 km (250 mi) N–S and 354 km (220 mi) E–W. Comparatively, the area occupied by Denmark is slightly less than twice the size of the state of Massachusetts. The Jutland Peninsula accounts for 29,767 sq km (11,493 sq mi) of the total land area, while the islands have a combined area of 13,317 sq km (5,142 sq mi). Except for the southern boundary with Germany, the country is surrounded by water—Skagerrak on the N, Kattegat, Øresund, and Baltic Sea on the E, and the North Sea on the W. Denmark's total boundary length is 7,382 km (4,587 mi), of which only 68 km (42 mi) is the land boundary with Germany.

Bornholm, one of Denmark's main islands, is situated in the Baltic Sea, less than 160 km (100 mi) due E of Denmark and about 40 km (25 mi) from southern Sweden. It has an area of 588 sq km (227 sq mi) and at its widest point is 40 km (25 mi) across.

Denmark's capital city, Copenhagen, is located on the eastern edge of the country on the island of Sjælland.

## <sup>2</sup>TOPOGRAPHY

The average altitude of Denmark is about 30 m (98 ft), and the highest point, Yding Skovhøj in southeastern Jutland, is only 173 m (568 ft). In parts of Jutland, along the southern coast of the island of Lolland, and in a few other areas, the coast is protected by dikes. All of Denmark proper (except for the extreme southeast of the island of Bornholm, which is rocky) consists of a glacial de-

posit over a chalk base. The surface comprises small hills, moors, ridges, hilly islands, raised sea bottoms, and, on the west coast, downs and marshes. There are many small rivers and inland seas. Good natural harbors are provided by the many fjords and bays.

## <sup>3</sup>CLIMATE

Denmark has a temperate climate, the mildness of which is largely conditioned by the generally westerly winds and by the fact that the country is virtually encircled by water. There is little fluctuation between day and night temperatures, but sudden changes in wind direction cause considerable day-to-day temperature changes. The mean temperature in February, the coldest month, is 0°C (32°F), and in July, the warmest, 17°C (63°F). Rain falls fairly evenly throughout the year, the annual average amounting to approximately 61 cm (24 in).

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are those common to middle Europe. There are many species of ferns, flower, fungi, and mosses; common trees include spruce and beech. Few wild or large animals remain. Birds, however, are abundant; many species breed in Denmark and migrate to warmer countries during the autumn and winter. Fish and insects are plentiful. As of 2002, there were at least 43 species of mammals, 196 species of birds, and over 1,400 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Denmark's most basic environmental legislation is the Environmental Protection Act of 1974, which entrusts the Ministry of the Environment, in conjunction with local authorities, with anti-

pollution responsibilities. The basic principle is that the polluter must pay the cost of adapting facilities to environmental requirements; installations built before 1974, however, are eligible for government subsidies to cover the cost of meeting environmental standards.

Land and water pollution are two of Denmark's most significant environmental problems although much of Denmark's household and industrial waste is recycled. In the mid-1990s, Denmark averaged 447.3 thousand tons of solid waste per year. Animal wastes are responsible for polluting both drinking and surface water. Nitrogen and phosphorus pollution threaten the quality of North Sea waters. A special treatment plant at Nyborg, on the island of Fyn, handles dangerous chemical and oil wastes. The nation has about 6 cu km of renewable water resources with 43% of annual withdrawals used for farming and 27% for industrial purposes.

Remaining environmental problems include air pollution, especially from automobile emissions; excessive noise, notably in the major cities; and the pollution of rivers, lakes, and open sea by raw sewage. In the early 1990s Denmark ranked among 50 nations with the heaviest industrial carbon dioxide emissions. In 1996, emissions totaled 56.5 million metric tons per year. In 2000, the emissions total dropped to 44.6 million metric tons.

As of 2003, Denmark had at least 220 protected sites, with an area of over 1.3 million hectares, or about 34% of the total land area. The Ilulissat Icefjord is a natural UNESCO World Heritage Site; there are 38 Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 4 types of mammals, 10 species of birds, 7 species of fish, 1 type of mollusk, 10 species of other invertebrates, and 3 species of plants. Endangered species include the coalfish whale, blue whale, loggerhead, leatherback turtle, and Atlantic sturgeon.

## 6 POPULATION

The population of Denmark in 2005 was estimated by the United Nations (UN) at 5,418,000, which placed it at number 108 in population among the 193 nations of the world. In 2005, approximately 15% of the population was over 65 years of age, with another 19% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.2%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 5,527,000. The population density was 126 per sq km (326 per sq mi).

The UN estimated that 72% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.28%. The capital city, København (Copenhagen), had a population of 1,066,000 in that year. Other large towns are Aarhus (Aarhus), 291,258; Odense, 184,308; Aalborg (Aalborg), 162,521; Esbjerg, 82,314; and Randers, 62,252.

## 7 MIGRATION

Emigration is limited, owing mainly to the relatively high standard of living in Denmark. There are 500 refugees accepted every year by Denmark for resettlement. These refugees are those who need an alternative place to their first country of asylum, usually for protection-related reasons. An Integration Act took effect 1 January 1999. Under this act, most foreign nationals, including

refugees, must participate in a three-year integration program, during which their social assistance is reduced. In 2004 Denmark received 65,310 refugees. The main countries of origin for these refugees were Bosnia and Herzegovina (25,395), Iraq (11,831), and Afghanistan (6,369). Also in 2004, Denmark received 3,235 asylum applications; of these, about 15% were given permission to stay. The countries of origin for asylum seekers were Bosnia and Herzegovina, Iraq, Palestine, Russia, Serbia and Montenegro, Somalia, and Iran.

In April 1999 the government enacted a plan ("Lex Kosovo") to provide temporary protection for evacuees from Macedonia. (These were Kosovars who had already sought asylum in Denmark but whose cases were pending or had been rejected.) Under this plan, all were granted temporary protection for a renewable six-month period. As of August 1999, 2,823 people had been evacuated from Macedonia to Denmark.

In 2005 the net migration rate was estimated as 2.53 migrants per 1,000 population.

## 8 ETHNIC GROUPS

The population of Denmark proper is of indigenous northern European stock, and the Danes are among the most homogeneous peoples of Europe. The population is comprised of Scandinavian, Inuit (Eskimo), and Faeroese peoples. There is also a small German minority in southern Jutland and small communities of Turks, Iranians, and Somalis.

## 9 LANGUAGES

Danish is the universal language. In addition to the letters of the English alphabet, it has the letters *ae*, *ø*, and *å*. A spelling reform of 1948 replaced *aa* by *å*, but English transliteration usually retains the *aa*. There are many dialects, but they are gradually being supplanted by standard Danish. Modern Danish has departed further from the ancient Nordic language of the Viking period than have Icelandic, Norwegian, and Swedish (to which Danish is closely related), and there is a substantial admixture of German and English words. Danish may be distinguished from the other Scandinavian languages by its change of *k*, *p*, and *t* to *g*, *b*, and *d*, in certain situations and by its use of the glottal stop. Faeroese and Greenlandic (an Eskimo dialect) are also used. Many Danes have a speaking knowledge of English and German, and many more are capable of understanding these languages.

## 10 RELIGIONS

About 84.3% of the people are nominally members of the official state religion, the Evangelical Lutheran Church, which is supported by the state and headed by the sovereign. Only about 3% of these Evangelical Lutherans are active members. Muslims are the next largest group with about 3% of the population. Protestants and Roman Catholics together make up another 3% of the population. Christian denominations represented in the country include Baptists, Jehovah's Witnesses, Methodists, Seventh-Day Adventists, The Church of Jesus Christ of Latter-day Saints (Mormons), Anglicans, and Russian Orthodox. Copenhagen is the site of the European headquarters for the Church of Scientology, which is not officially recognized as a religion by the state. There are about 7,000 Jews in the country. An indigenous religion known as Forn

LOCATION: 54°33'31" to 57°44'55" N; 8°4'36" to 15°11'59" E. BOUNDARY LENGTHS: Germany, 68 kilometers (42 miles); total coastline, 7,314 kilometers (4,545 miles). TERRITORIAL SEA LIMIT: 3 miles.

Sidr was officially recognized in 2003; followers worship the old Norse gods. About 5.4% of the population claim no religious affiliation and 1.5% claim to be atheists.

Religious freedom is provided by the constitution and this right is generally respected in practice. As the official church of state, the Evangelical Lutheran Church is the only church which receives state funding. A number of other religious groups have complained that this system is unfair and contrary to religious equality. In 1999 an independent four-member council appointed

by the government published guidelines and principles for official approval of religious organizations. The guidelines establish clear requirements that religious organizations must fulfill, including providing a full written text of the religion's central traditions, descriptions of its rituals, an organizational structure accessible for public control and approval, and constitutionally elected representatives who can be held responsible by authorities. The guidelines also forbid organizations to "teach or perform actions inconsistent with public morality or order." Official approval offers tax-exempt

status to the organization and marriages within approved churches are automatically recognized by the state.

## <sup>11</sup>TRANSPORTATION

Transportation is highly developed in Denmark. The road system is well engineered and adequately maintained. Among the most important bridges are the Storstrom Bridge linking the islands of Sjaelland and Falster, and the Little Belt Bridge linking Fyn and Jutland. A new train and auto link joins Sjaell and Fyn (18 km/11 mi); a new series of bridges connecting Denmark to Sweden—spanning 4.9 mi across the Oresund Strait and costing Kr13.9 billion—opened in July 2000. The link reduces transit time between the two countries to 15 minutes for cars and trucks and less than 10 minutes for high-speed trains. Cars travel on the upper tier and trains on the lower. As of 2002, Denmark had 71,474 km (44,414 mi) of roadways, all of which were paved, including 880 km (547 mi) of expressways. In 2003, Denmark had 1,894,649 passenger cars and 428,949 commercial vehicles registered for use.

The railway system had a total of 2,628 km (1,635 mi) of standard gauge railroad in 2004, of which 595 km (370 mi) was electrified.

The Danish merchant fleet as of 2005 was composed of 287 ships of at least 1,000 GRT, for a total of 6,952,473 GRT. The majority of these vessels belonged to the Danish International Registry, an offshore registry program allowing foreign-owned vessels to sail under the Danish flag. Denmark, which pioneered the use of motor-driven ships, has many excellent and well-equipped harbors, of which Copenhagen is the most important. Denmark also had 417 km of navigable inland waterways, as of 2001.

There were an estimated 97 airports in 2004, of which 28 had paved runways as of 2005. Kastrup Airport near Copenhagen is a center of international air traffic. Domestic traffic is handled by Danish Airlines in conjunction with SAS, a joint Danish, Norwegian, and Swedish enterprise. In 2003, about 5.886 million passengers were carried on scheduled domestic and international airline flights.

## <sup>12</sup>HISTORY

Although there is evidence of agricultural settlement as early as 4000 BC and of bronze weaponry and jewelry by 1800 BC, Denmark's early history is little known. Tribesmen calling themselves Danes arrived from Sweden around AD 500, and Danish sailors later took part in the Viking raids, especially in those against England. Harald Bluetooth (d.985), first Christian king of Denmark, conquered Norway, and his son Sweyn conquered England. During the reign of Canute II (1017–35), Denmark, Norway, and England were united, but in 1042, with the death of Canute's son, Hardecanute, the union with England came to an end, and Norway seceded. During the next three centuries, however, Danish hegemony was reestablished over Sweden and Norway, and in the reign of Margrethe (1387–1412) there was a union of the Danish, Norwegian, and Swedish crowns. In 1523, the Scandinavian union was dissolved, but Norway remained united with Denmark until 1814.

The Reformation was established in Denmark during the reign of Christian III (1534–59). A series of wars with Sweden during the 17th and early 18th centuries resulted in the loss of Danish territory. Meanwhile, under Frederik III (r.1648–70) and Christian

V (r.1670–99), absolute monarchy was established and strengthened; it remained in force until 1849. Freedom of the press and improved judicial administration, introduced by Count Johann von Struensee, adviser (1770–72) to Christian VII, were abrogated after his fall from favor. Having allied itself with Napoleon, Denmark was deprived of Norway by the terms of the Peace of Kiel (1814), which united Norway with Sweden; and as a result of the Prusso-Danish wars of 1848–49 and 1864, Denmark lost its southern provinces of Slesvig, Holstein, and Lauenburg. Thereafter, the Danes concentrated on internal affairs, instituting important economic changes (in particular, specialization in dairy production) that transformed the country from a nation of poor peasants into one of prosperous smallholders. Denmark remained neutral in World War I, and after a plebiscite in 1920, North Slesvig was re-incorporated into Denmark.

Disregarding the German-Danish nonaggression pact of 1939, Hitler invaded Denmark in April 1940, and the German occupation lasted until 1945. At first, the Danish government continued to function, protecting as long as it could the nation's Jewish minority and other refugees (some 7,200 Jews eventually escaped to neutral Sweden). However, when a resistance movement developed, sabotaging factories, railroads, and other installations, the Danish government resigned in August 1943 rather than carry out the German demand for the death sentence against the saboteurs. Thereafter, Denmark was governed by Germany directly, and conflict with the resistance intensified.

After the war, Denmark became a charter member of the UN and of NATO. In 1952, it joined with the other Scandinavian nations to form the Nordic Council, a parliamentary body. Having joined EFTA in 1960, Denmark left that association for the EEC in 1973. Meanwhile, during the 1950s and 1960s, agricultural and manufacturing production rose considerably, a high level of employment was maintained, and foreign trade terms were liberalized. However, the expense of maintaining Denmark's highly developed social security system, growing trade deficits (due partly to huge increases in the price of imported oil), persistent inflation, and rising unemployment posed political as well as economic problems for Denmark in the 1970s and 1980s, as one fragile coalition government succeeded another.

Economic performance was strong after the mid-1990s. Annual growth of GDP was 3% between 1994 and 1998 although the rate dropped to 1.6% in 1999. (It was projected to be 2.3% in 2005–06.) Thanks to strong growth, unemployment fell from 12.2% in 1994 to 6% in 1999. In March 2000, the buoyant economic outlook prompted Prime Minister Poul Nyrup Rasmussen to announce a referendum on Economic and Monetary Union to take place on 28 September 2000; it was rejected by 53.2% of the electorate. Voters narrowly rejected the Maastricht Treaty on European Union in 1992, but later approved it in 1993 after modifications were made in Denmark's favor. One of the special agreements was that Denmark could opt not to join EMU. For all practical purposes, however, Danish monetary policy has closely followed that of the European Central Bank and the Danish crown shadows the euro (the European single currency).

As with other European countries, Denmark in the 21st century sees illegal immigration as a major problem. The issue was a deciding one in the 20 November 2001 elections, with the right-wing xenophobic Danish People's Party (founded in 1995) gaining 12%

of the vote and 22 seats to become the third-largest party in parliament. The new government composed of the Liberal Party and the Conservative Party formed by Prime Minister Anders Fogh Rasmussen depended upon the Danish People's Party for legislative support. In June 2002, parliament passed a series of laws restricting the rights of immigrants, including the abolition of the right to asylum on humanitarian grounds, and cuts of 30–40% in the social benefits available to refugees during their first seven years of residency. In February 2005, Fogh Rasmussen won a second term as prime minister as his Liberal Party again formed a coalition with the Conservative Party. Rasmussen became the first Danish Liberal leader to win a second consecutive term. The Danish People's Party, although not part of the governing coalition, strengthened its presence in parliament by two seats.

### 13 GOVERNMENT

Denmark is a constitutional monarchy. Legislative power is vested jointly in the crown and a unicameral parliament (Folketing), executive power in the sovereign—who exercises it through his or her ministers—and judicial power in the courts. The revised constitution of 1953 provides that powers constitutionally vested in Danish authorities by legislation may be transferred to international authorities established, by agreement with other states, for the promotion of international law and cooperation.

The sovereign must belong to the Lutheran Church. The crown is hereditary in the royal house of Lyksborg, which ascended the throne in 1863. On the death of a king, the throne descends to his son or daughter, a son taking precedence.

Executive powers belong to the crown, which enjoys personal integrity and is not responsible for acts of government. These powers are exercised by the cabinet, consisting of a prime minister and a variable number of ministers, who generally are members of the political party or coalition commanding a legislative majority. No minister may remain in office after the Folketing has passed a vote of no confidence in him or her.

The single-chamber Folketing, which has been in existence since 1953, is elected every four years (more frequently, if necessary) by direct and secret ballot by Danish subjects 18 years of age and older. Under the 1953 constitution there are 179 members, two of whom are elected in the Faroe Islands and two in Greenland. Of the remaining 175 members, 135 are elected by proportional representation in 17 constituencies, and 40 supplementary seats are divided among the parties in proportion to the total votes cast.

A parliamentary commission, acting as the representative both of the Folketing and of the nation, superintends civil and military government administration.

### 14 POLITICAL PARTIES

Until 1849, the Danish form of government was autocratic. The constitution of 1849 abolished privileges, established civil liberties, and laid down the framework of popular government through a bicameral parliament elected by all men over 30. In 1866, however, the National Liberal Party, composed largely of the urban middle class, succeeded in obtaining a majority for a constitution in which the upper chamber (Landsting) was to be elected by privileged franchise, the great landowners gaining a dominant position. This proved the starting point of a political struggle that

divided Denmark until 1901. Formally, it concerned the struggle of the directly elected chamber, the Folketing, against the privileged Landsting, but in reality it was the struggle of the Left Party (made up largely of farmers, but after 1870 also of workers) to break the monopoly of political influence by the Right Party (consisting of the landowning aristocracy and the upper middle class). Meanwhile, the workers established trade unions, their political demands finding expression in the Social Democratic Party. In 1901, Christian IX called on the Left to form a government, and thereafter it was the accepted practice that the government should reflect the majority in the Folketing.

In 1905, the Left Party split. Its radical wing, which seceded, became a center party, the Social Liberals, and sought to collaborate with the Social Democrats. In 1913, these two parties together obtained a majority in the Folketing, and a Social Liberal government led Denmark through World War I. A new constitution adopted in 1915 provided for proportional representation and gave the vote to all citizens, male and female, 25 years of age and older (changed in 1978 to 18 years). In an attempt to obtain a broader popular base, the old Right Party adopted the name Conservative People's Party, and thenceforth this party and the Moderate Liberals (the old Left Party), the Social Liberals, and the Social Democrats formed the solid core of Danish politics. The Social Democrats briefly formed governments in 1924 and in 1929, in association with the Social Liberals.

During the German occupation (1940–45), a coalition government was formed by the main political parties, but increasing Danish popular resistance to the Germans led the Nazis to take over executive powers. From 1945 to 1957, Denmark was governed by minority governments, influence fluctuating between the Social Democrats on the one hand and the Moderate Liberals and Conservatives on the other, depending on which of the two groups the Social Liberals supported. In 1953, a new constitution abolished the Landsting and introduced a single-chamber system in which parliamentarism is expressly laid down.

Aims of the Social Democratic Party are to nationalize monopolies, redistribute personal incomes by taxation and other measures, partition farm properties to form independent smallholdings, and raise working-class living standards through full employment. It supports the principle of mutual aid, as practiced in a combination of social welfare and widespread public insurance schemes. The Conservative Party advocates an economic policy based on the rights of private property and private enterprise and is firmly opposed to nationalization and restrictions, though it is in favor of industrial protection. It calls for a national contributory pensions scheme that would encourage personal initiative and savings. The major parties support the UN and NATO and favor inter-Scandinavian cooperation.

Issues in the 1970s focused less on international matters than on policies affecting Denmark's economy. The general elections of December 1973 resulted in heavy losses for all the established parties represented in the Folketing and successes for several new parties, notably the center-left Democratic Center Party and the "Poujadist" Progress Party led by Mogens Glistrup, an income tax expert who reputedly became a millionaire by avoiding taxes and providing others with advice on tax avoidance. The Progress Party, established early in 1973, advocated the gradual abolition of income tax and the dissolution of over 90% of the civil service.

The Social Democrats, who had been in power, lost significantly in this election, and their chairman, Anker Jørgensen, resigned as prime minister. In mid-December, Poul Hartling was sworn in as prime minister, with a Liberal Democratic cabinet. The 22 Liberal members in the Folketing made up the smallest base for any government since parliamentary democracy was established in Denmark.

When it became clear in December 1974 that the Folketing would not approve the drastic anti-inflation program the Hartling government had announced, general elections were again called for. In the January 1975 balloting, the Liberals almost doubled their representation in the Folketing. However, because most of the other non-Socialist parties had lost support and because three of the four left-wing parties simultaneously gained parliamentary seats, the preelection lack of majority persisted, and Hartling resigned at the end of the month. After several attempts at a coalition by Hartling and Anker Jørgensen, the latter's alignment of Social Democrats and other Socialist-oriented minority parties finally succeeded in forming a new government. Jørgensen remained prime minister through general elections in 1977, 1979, and 1981. In September 1982, however, dissension over Jørgensen's plan to increase taxes in order to create new jobs, boost aid to farmers, and reduce the budget deficit led the government to resign. A four-party coalition led by Poul Schlüter, the first Conservative prime minister since 1901, then took power as a minority government, controlling only 66 seats out of 179. After the defeat of his 1984 budget, Schlüter called for new elections, which were held in January 1984 and increased the number of seats controlled by the coalition to 79. Following elections in September 1987, however, the number of seats held by the coalition fell to 70.

The 1994 election brought to power a three-party coalition of Social Democrats, Center Democrats, and Radical Liberals (they commanded a total of 76 seats in the 179-seat parliament). The 1994 election produced significant difficulties for the political right. The Conservatives were usually the major right-wing force with a legacy of heading governments but it saw its representation drop to 28 seats from 31 while the Liberal Party increased its share of the vote from 15.8% to 23.3% and thereby became the largest opposition party. The center-left coalition survived the departure of the Center Democrats in 1996, which rejected Prime Minister Poul Nyrup Rasmussen's decision to seek support for the 1997 budget from the far left. The fragile two-party coalition stumbled from one crisis to another in 1997 and the 1998 election promised to bring a Liberal-Conservative cabinet back to power. In February 1998, the Social Democrats recovered in opinion polls and Nyrup Rasmussen called a snap election.

The election results were as follows: Social Democrats 35.9% (65 seats), Radical Liberals 3.9% (7 seats), Center Democrats 4.3% (8 seats), Christian People's Party 2.5% (4 seats), Socialist People's Party 7.6% (13), Unity Party 2.7% (5 seats), Liberals 23% (43), Conservatives 8.9% (17), Progress Party 2.4% (4), and Danish People Party 7.4% (13 seats). Following the 1998 election, the Social Democratic and Radical Liberal coalition remained intact with Nyrup Rasmussen as prime minister. The Conservatives suffered a dramatic defeat and saw their share of the vote drop from 15% to 8.9%. The two far right parties—the Danish People's Party and the Progress Party—recorded the biggest gains by taking votes from the mainstream right-wing parties. In March 2000, Nyrup

Rasmussen reshuffled his cabinet to breathe new life into government and to respond to the pressures coming from the Danish People's Party, which accused the government of being soft on immigration. Campaigning on a platform "Denmark for the Danes," the People's Party attracted a large number of sympathizers.

The issue of immigration remained primary in the early elections called for by Nyrup Rasmussen on 20 November 2001. Nyrup Rasmussen's Social Democrats suffered a major defeat, gaining only 29.1% of the vote and 52 seats. Center-right parties gained their largest majority since 1926. The Liberal Party (31.3% of the vote and 56 seats) and the Conservative People's Party (9.1% and 16 seats) formed a minority government headed by Anders Fogh Rasmussen (no relation to Poul Nyrup Rasmussen) that depended upon the anti-immigrant Danish People's Party (12% and 22 seats) for legislative support. Other parties represented in the Folketing following the 2001 elections were as follows: Socialist People's Party, 6.4% (12 seats); Radical Left, 5.2% (9 seats); Unity List—the Red Greens, 2.4% (4 seats); Christian People's Party, 2.3% (4 seats); and the 2 representatives each from the Faroe Islands and Greenland.

Elections for the Folketing were next held on 8 February 2005. The percentage of the vote gained by each party and distribution of seats was as follows: Liberal Party, 29% (52 seats); Social Democrats, 25.9% (47 seats); Danish People's Party, 13.2% (24 seats); Conservative Party, 10.3% (18 seats); Social Liberal Party, 9.2% (17 seats); Socialist People's Party 6% (11 seats); Unity List, 3.4% (6 seats); and the two representatives each from the Faroe Islands and Greenland. Anders Fogh Rasmussen led a Liberal-Conservative coalition for a second consecutive term as prime minister. After the election, Fogh Rasmussen pledged to continue a "fair and firm immigration policy."

## 1<sup>5</sup> LOCAL GOVERNMENT

A major reform of local government structure took effect on 1 April 1970. Copenhagen, Fredericksberg, and the regional municipality of Bornholm enjoy dual status as both local and county authorities. The previous distinction between boroughs and urban and rural districts was abolished, and the number of counties was reduced from 25 to 14 (the number in 2005 stood at 13). The primary local units (municipalities), reduced from 1,400 to 275 (271 as of 2005), are governed by an elected council (*kommunalbestyrelse*) composed of 9 to 31 members who, in turn, elect a mayor (*borgmester*) who is vested with executive authority. Each county is governed by an elected county council (*amtsråd*), which elects its own chairman, or county mayor (*amstborgmester*). County councils look after local matters, such as road building and maintenance, health and hospital services, and general education.

A major restructuring of local government was planned for 2007. The government's proposal was for the counties to be replaced by five regions, and for a reduction of the municipalities to 98. The new municipalities were to take over most of the responsibilities of the former counties. Most of the new municipalities were expected to have populations exceeding 20,000 people.

The Faroe Islands and Greenland enjoy home rule, with Denmark retaining responsibility for foreign affairs, defense, and monetary matters. Representatives of the Faroe Islands announced plans to organize a referendum on independence from Denmark by fall 2000. The government's response was to threaten to cut off

all aid to the Faroese if they opted for independence. The referendum planned for May 2001 was cancelled.

## 16 JUDICIAL SYSTEM

As a rule, cases in the first instance come before one of 82 county courts. Certain major cases, however, come under one of the two High Courts (Landsrettes), in Copenhagen and Viborg, in the first instance; otherwise these courts function as courts of appeal. The High Courts generally sit in chambers of three judges. In jury trials (only applicable in cases involving serious crimes) three High Court judges sit with 12 jurors. The Supreme Court (Højesteret) is made up of a president and 18 other judges, sitting in two chambers, each having at least five judges; it serves solely as a court of appeal for cases coming from the High Courts. Special courts include the Maritime and Commercial Court. An Ombudsman elected by and responsible to parliament investigates citizen complaints against the government or its ministers.

The judiciary is fully independent of the executive and legislative branches. Judges are appointed by the monarch on recommendation of the Minister of Justice and serve life terms. They may be dismissed only for negligence or for criminal acts. Denmark accepts compulsory jurisdiction of the International Court of Justice with reservations.

## 17 ARMED FORCES

Since 1849 Danish military defense has been based on compulsory national service. All young men must register at the age of 18 and are subject to 9–12 months' service. Voluntary military service is popular because of educational benefits. Total active armed forces numbered 21,180 in 2005, including 680 Joint Service personnel. The Army consisted of 12,500 active members, with the Navy at 3,800, and the Air Force at 4,200. There were also 129,700 members in the reserves which included about 59,300 in the volunteer home guard. The Danish Army had 231 main battle tanks, 310 armored personnel carriers, and 860 artillery pieces (176 are towed). Denmark's navy operated three guided missile corvettes in addition to 67 patrol/coastal and six minewarfare vessels. The Danish Air Force operates 62 combat capable aircraft. Danish forces participated in NATO, UN, and European Union missions in 13 countries/regions around the globe, including support for Operation Enduring Freedom. Military expenditures for 2005 amounted to \$3.17 billion.

## 18 INTERNATIONAL COOPERATION

Denmark became a charter member of the United Nations on 24 October 1945 and belongs to ECE and several nonregional specialized agencies. In association with WHO, Denmark has supported UN relief work by supplying medical personnel to assist developing countries. The European regional office of WHO is in Copenhagen. The country is a member of the WTO. Denmark participates actively in multilateral technical aid programs, and the Danish Council for Technical Cooperation provides additional aid to developing countries in Asia and Africa. The nation also assists the African Development Bank and the Asian Development Bank. Denmark is a member of NATO and of various inter-European organizations including the Council of Europe, the European Investment Bank, G-9, the Paris Club, and the OECD.

Denmark is a member of the European Union and an observer in the OAS.

As a member of the Nordic Council, Denmark cooperates with other northern countries—Finland, Iceland, Norway, and Sweden—in social welfare and health insurance legislation and in freeing its frontiers of passport control for residents of other Scandinavian countries. The nation also participates in the regional Council of the Baltic Sea States and the Barents Council. Denmark has observer status in the Western European Union.

Denmark belongs to the Australia Group, the Zangger Committee, the Nuclear Suppliers Group (London Group), the European Organization for Nuclear Research (CERN), and the Nuclear Energy Agency. In environmental cooperation, Denmark is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Air Pollution; Ramsar; CITES; the London Convention; International Tropical Timber Agreements; the Kyoto Protocol; the Montréal Protocol; MARPOL; the Nuclear Test Ban Treaty; and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Denmark was traditionally an agricultural country. After the end of World War II, manufacturing gained rapidly in importance and now contributes 25.5% of national income, compared with 2.2% for agriculture. As of 2004, the service sector accounted for over 72.3% of GDP. Important service sectors are communications and information technologies, management consulting, and tourism. Shipping remains the most important service sector in Denmark: Denmark has always been a prominent maritime nation, and since much Danish shipping operates entirely in foreign waters, it contributes considerably to the nation's economy. Denmark also has important investments abroad.

Danish living standards and purchasing power are among the highest in the world, but the domestic market is limited by the small population, and most important industries must seek foreign markets in order to expand. Natural resources are limited, and therefore Denmark must export in order to pay for the raw materials, feeds, fertilizers, and fuels that must be imported. Integration into the EU's common agricultural policy has considerably improved Danish terms of trade by providing higher prices.

Productivity increased greatly in the postwar period. In agriculture the volume index for production rose steadily, while the agricultural labor force decreased. Similarly, improved techniques and mechanization in industry enabled production to increase, despite a percentage decline in the number of persons employed. In the 21st century, high-tech agriculture is a mark of Denmark's thoroughly modern market economy. As well, up-to-date small-scale and corporate industry, extensive government welfare measures, a stable currency, and a high dependence upon foreign trade all contribute to Denmark's prosperity.

From 1961 to 1971, the average annual rate of price increases in Denmark was 6.1%; in 1972, it was 6.6%; in 1973, 9.3%; and in 1974, partly because of rising oil costs, 15.2%. Throughout the remainder of the 1970s and through 1982, inflation remained in the 9–12% bracket. It then dropped from 6.9% in 1983 to 1.3% in 1993. By 1995, it had increased to 3.3% but in 1998 was down again to 1.8%. The inflation rate averaged 2% over the 2001–05 period.

Economic activity slackened during the 1970s, with GDP growth at 2.3% a year, down from a rate of about 4.5% during 1960–70. Growth remained moderate during the 1980s, averaging 2% a year. The GDP grew by 2.2% in 1990, but only at 1% in 1991, 1.2% in 1992, and 1.1% in 1993. In 1994, growth began to rebound, with GDP growing by 3.1%; in 1998 growth was 2.6%. In 2001, GDP growth was only 0.9%, down from 3% in 2000, largely due to the global economic slowdown and poor domestic demand. GDP growth recovered in 2004, helped by income tax cuts, and was forecast to remain solid in 2005–06. GDP growth was estimated at 2.9% in 2005, falling gradually to 2.6% in 2006 and 2.1% in 2007. This rapid economic expansion is being driven by strong household demand for goods and services, as well as healthy investment growth.

Recessions in 1974–75 and 1980–81 spurred a substantial rise in unemployment. From a rate of 0.9% in 1973, unemployment reached 12.3% in 1993. By 1995, it had decreased to 10.2%, still quite high compared to the United States, but about the same as other EU countries. By 1998, however, it fell to an estimated 6.5%. The unemployment rate stood at 6% in 2003 and 6.2% in 2004, among the lowest of EU countries.

Throughout the 1970s and through most of the next six years, Denmark's trade balance was in chronic deficit, but a surplus was registered in 1987 and continued through 1997. Denmark's vulnerability to the Asian and Russian financial crises in the late 1990s resulted in a balance of payments deficit in 1998. As of 2005, the current account had been in surplus since 1998. The current account balance as a percentage of GDP over the 2001–05 period was 2.8%.

Although Denmark easily met all of the criteria for membership in the European economic and monetary union (EMU), it opted to stay out of the euro zone. Denmark participates in the exchange-rate mechanism (ERM 2), which pegs the Danish krone to the euro. A referendum to ratify the EU constitutional treaty had been postponed indefinitely as of December 2005.

The government was likely to continue an expansionary fiscal policy in 2006, and the general government budget surplus was forecast to narrow. The Danish government lowered income and corporate taxes in 2004. Government debt remains high, at 47.4% of GDP in 2003, albeit down from the 2000–02 period.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Denmark's gross domestic product (GDP) was estimated at \$182.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$33,500. The annual growth rate of GDP was estimated at 2.2%. The average inflation rate in 2005 was 1.9%. It was estimated that agriculture accounted for 2.2% of GDP, industry 24%, and services 73.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$941 million or about \$175 per capita and accounted for approximately 0.4% of GDP. Foreign aid receipts amounted about \$8 per capita.

The World Bank reports that in 2003 household consumption in Denmark totaled \$100.33 billion or about \$18,624 per capita

based on a GDP of \$211.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.7%. In 2001 it was estimated that approximately 16% of household consumption was spent on food, 11% on fuel, 3% on health care, and 17% on education.

## 2<sup>1</sup> LABOR

In 2005, Denmark's labor force was estimated at 2.9 million. Of those employed in 2002, an estimated 79% were in the services sector, 17% in industry, and 4% in agriculture. The Danish unemployment rate in 2005 was estimated at 5.7%. The 1982–90 period brought a 1.3% decline in agricultural employment, a slight decrease in employment in manufacturing, and a large increase in employment in services, especially government services (education, social welfare, etc.). With the aim of holding down unemployment, the government offers the option of early retirement, apprenticeship and trainee programs, and special job offerings for the long-term unemployed.

As of 2005, an estimated 78% of all wage-earners were organized into trade unions. These unions are independent of the government or political parties. Most unions are limited to particular trades. Most workers are entitled to strike and that option is exercised often. Collective bargaining is practiced widely. Military personnel and the police are also allowed to form and join a union.

Although there is no nationally mandated minimum wage rate, the average net wage (including pension benefits) for adult workers was \$29 per hour in 2004, which was sufficient to provide a decent standard of living for a family. The typical private sector workweek, as set by contract, not law, was 37 hours in 2005. Overtime is not compulsory. The minimum age for full-time work is 15 years, although children as young as 13 can work part-time, although there are limits imposed as to the tasks they can perform and the hours worked. Health and safety standards are set by law and cover school-age children in the workplace.

## 2<sup>2</sup> AGRICULTURE

About 54% of the land in 2002 was cultivated, most of it for feed and root crops. In 2003, agriculture engaged 3.4% of the labor force. Although agriculture is of great significance to the Danish economy, its relative importance declined from 19% of the GDP in 1961 to 2.1% in 2003.

The majority of farms are small and medium-sized; about 63% are smaller than 50 hectares (124 acres). In 2004, there were 45,624 Danish farms. Thousands of smallholdings have been established since 1899 under special legislation empowering the state to provide the land by partitioning public lands, by expropriation, and by breaking up large private estates. In the more newly established holdings, the farmer owns only the buildings (for which the state advances loans), the land being owned by the state and the smallholder paying an annual rent fixed under the land-tax assessment. Comparatively few new holdings have been established since 1951.

Grain growing and root-crop production are the traditional agricultural pursuits, but considerable progress has been made in recent decades in apple growing and the production of field, for-

age, flower, and industrial seeds. Although the soil is not particularly fertile and holdings are kept deliberately small, intensive mechanization and widespread use of fertilizers and concentrated feeds result in high yields and excellent quality. In 2002 there were 123,000 tractors and 97,000 harvester-threshers.

The crop yields of major crops for 2004 were (in thousands of tons): barley, 3,590; wheat, 4,759; rye, 146; sugar beets, 2,829; rapeseed (canola), 469; and corn for fodder, 4,381.

Agricultural exports supplied 17.2% of the value of Danish exports in 2004. Farm products provide materials for industrial processing, and a significant share of industry supplies the needs of domestic agriculture.

The Danish government devotes particular effort to maintaining the volume, price, quality, and diversity of agricultural products, but internal regulation is largely left to private initiative or exercised through private organizations, notably the cooperatives.

### 23 ANIMAL HUSBANDRY

Denmark is generally regarded as the world's outstanding example of intensive animal husbandry. It maintains a uniformly high standard of operations, combining highly skilled labor, scientific experimentation and research, modern installations and machinery, and versatility in farm management and marketing. The excellent cooperative system guarantees the quality of every product of its members. Meat, dairy products, and eggs contribute a most important share of Danish exports. There is a close relationship between cost of feed and export prices.

The livestock population in 2004 included 1,646,000 head of cattle (including 563,000 dairy cows), 13,233,000 hogs, 141,000 sheep, 39,000 horses, and 16,136,000 chickens. Mink, fox, polecat, finnraccoon, and chinchilla are raised for their pelts. In 2004, 12.6 million pelts were processed, valued at Kr2.7 billion.

The value of exported meat and animal products in 2004 amounted to \$4.6 billion, consisting primarily of live pigs and pork, cheese, and canned meat. Production in 2004 included 4,569,000 tons of milk, 46,700 tons of butter, and 335,500 tons of cheese. In addition, egg production was 81,000 tons in 2004. Some 50% of all eggs consumed domestically are produced by alternative methods, a phrase that generally refers to layers raised organically or in free-range. The government's goal is for all eggs to ultimately be produced by noncaged layers. Organic milk is also a growing market. Organically produced feed's share of the domestic market is also increasing.

### 24 FISHING

The country's long coastline, conveniently situated on rich fishing waters, provides Denmark with excellent fishing grounds. Fishing is an important source of domestic food supply, and both fresh and processed fish are important exports. During 1990–95, the government financially supported fleet reduction in order to alleviate structural problems in the industry, and 605 vessels left the fleet during those years. At the beginning of 2005, there were 2,180 Danish fishing vessels, with a combined 95,685 GRT. The catch is composed mainly of herring and sprat, cod, mackerel, plaice, salmon, and whiting; but sole and other flatfish, tuna, and

other varieties are also caught. In 2004, total Danish landings were 984,037 tons.

Denmark is one of the world's leading seafood exporters. In 2003, fish exports were valued at \$3.2 billion, up 17% from 2000.

### 25 FORESTRY

A law of 1805 placing all forestland under reservation stated that "where there is now high forest there must always be high forest." Various measures were adopted to maintain forest growth. Later revisions of the law compelled all woodland owners to replant when trees are felled and to give adequate attention to drainage, weeding out of inferior species, and road maintenance. As a result, forests, which occupied only 5% of Denmark's land area and were actually in danger of extinction at the beginning of the 19th century, now make up 10% of the land and are in excellent condition. The total forest area in 2000 was 486,000 hectares (1,200,000 acres). Spruce and beech are the most important varieties. The government would like to increase forest area to 800,000 hectares (1,977,000 acres), nearly 20% of Denmark's total area, during the next 80 years.

Roundwood harvested in 2003 amounted to 1.8 million cu m (64 million cu ft), of which about 75% came from conifers and 25% came from broadleaf species. Denmark is a large importer of softwood lumber, especially from the other Scandinavian countries, and is a large particleboard consumer. Total Danish wood trade in 2003 amounted to \$2.3 billion, consisting of imports of \$1.9 billion and exports totaling \$391.5 million. Pine logs account for about 60% of the total value of imported wood, much of it used by the furniture industry. Danish furniture exports in 2004 amounted to more than \$2.5 billion.

On 3 December 1999, the first hurricane ever recorded in Denmark destroyed large tracts of its forested areas. Estimated loss of trees amounted to 150% of Denmark's normal annual timber harvest.

### 26 MINING

Denmark's industrialized market economy depended on imported raw materials, its mineral resources were mainly fossil fuels in the North Sea, and the nonfuel minerals industry included mining and quarrying of chalk, clays, diatomite, limestone (agricultural and industrial), and sand and gravel (onshore and offshore). The industrial minerals sector was particularly active. There were some 90 pits in Denmark from which clay was mined; this material was used primarily by the cement, brick making, and ceramic tile industries. The production of sand, gravel, and crushed stone has become more important in recent years, not only in meeting domestic demand, but also as an export to Germany and other Scandinavian countries. Kaolin, found on the island of Bornholm, was used mostly for coarse earthenware, furnace linings, and as filler for paper; production was 2,500 metric tons in 2004, unchanged from 2000. There were important limestone, chalk, and marl deposits in Jutland. Chalk production totaled 1,950,000 tons in 2004. Limonite (bog ore) was extracted for gas purification and pig iron production. Large deposits of salt were discovered in Jutland in 1966; in 2004, 610,000 metric tons were mined. The country also produced fire clay, extracted moler, lime (hydrated and quicklime), nitrogen, peat, crude phosphates, dimension stone (mostly granite), and sulfur. According to the constitution, sub-

surface resources belonged to the nation, and concessions to exploit them required parliamentary approval.

## 27 ENERGY AND POWER

Denmark's energy sector is marked by negligible sources of waterpower, and no nuclear power plants. However, the country has significant oil and natural gas reserves located in the North Sea, and it is also turning to wind power as an important source of electrical power generation.

In 2002, Denmark's electrical generating capacity totaled 12.746 million kW. Of that total, conventionally fueled capacity accounted for 10.049 million kW. Geothermal/other fuel based capacity was next at 2.868 million kW and hydropower based capacity at 0.011 million kW. In that same year, Denmark generated 36.367 billion kWh of electric power, of which thermal fuel powered generation accounted for 29.319 billion kWh, followed by geothermal/other powered generation at 29.319 billion kWh, and hydropower generation at 0.032 billion kWh. Imports of electrical power in 2002 totaled 8.900 billion kWh, with exports for that year at 11.100 billion kWh. The Danish electrical generating sector is marked by its use of alternative or geothermal/other power sources, most notably, wind-driven generation. Although 80% of the nation's electric power was generated by fossil fuels, slightly more than 19% was generated by alternative sources. According to a report by BusinessWeek online, dated 30 April 2001, around 13% of Denmark's electric power is wind generated, and the country has become a leader in the manufacturing of wind powered generating equipment.

Denmark's position flanking the North Sea has given the nation a share of the significant oil and natural gas reserves that have been discovered there. As of 1 January 2002, Denmark had proven oil reserves of 1.23 billion barrels. By the end of 2004, according to British Petroleum (BP), Denmark's proven oil reserves rose to 1.3 billion barrels. In 2002, Denmark produced an average of 370,760 barrels per day of crude oil. In 2004, that total rose to an average of 394,000 barrels per day, according to BP. In addition, between 1999, and 2005, a number of new fields have begun to produce, boosting the country's crude oil output. However, starting in 1997, Denmark's oil consumption has steadily fallen, according to BP. In that year the consumption of all oil products dropped to 229,000 barrels per day, from 235,000 barrels per day in 1996. In 2003, total oil product consumption fell to 193,000 barrels per day, and in 2004 fell 1.8% to 189,000 barrels per day.

Denmark has proven reserves of natural gas, as of end 2004, of 0.09 trillion cu m, and output has steadily risen over the previous three decades. According to BP, in 2002, Denmark produced 8.4 billion cu m of natural gas. In 2004, output rose to 9.4 billion cu m.

Denmark has no proven coal reserves and must therefore import all the coal it consumes. In 2002, imports of hard black coal totaled 6,946,000 tons.

## 28 INDUSTRY

Manufacturing greatly expanded after the end of World War II and now accounts for a greater share of national income than does agriculture. In 2004, manufacturing (including mining and utilities) accounted for 25.5% of the GDP, employing approximately 17% of the total working population. In the important food and

drink industry, which tends to be relatively stable, the pattern differs for various branches, but meat packing has developed remarkably. The chemical, metalworking, and pharmaceutical industries have made notable progress. Handicrafts remain important, and Danish stone, clay, glass, wood, and silver products are world famous. Other important industries include: iron, steel, machinery and transportation equipment, textiles and clothing, electronics, construction, furniture, shipbuilding and refurbishment, and windmills.

In the world market, Danish manufacturers, having a limited supply of domestic raw materials, a relatively small home market, and a naturally advantageous geographic position, have concentrated on the production of high-quality specialized items rather than those dependent on mass production. For example, Denmark became the world's largest supplier of insulin, the raw materials for which come from livestock intestines; the Danish company Novo Nordisk is the world leader in insulin and diabetes care. Denmark by the early 2000s produced some 20–25% of the world's hearing aids.

Machinery, by far the most important industrial export, includes cement-making machinery, dairy machinery, diesel engines, electric motors, machine tools, and refrigeration equipment. Other important exports include meat and meat products (especially pork and pork products—Denmark is the world's largest exporter of pork), fish, dairy products, chemicals, furniture, ships, and windmills.

## 29 SCIENCE AND TECHNOLOGY

The Ministry of Research is the central administrative unit for research policy. Among advisory bodies to it are the Danish Council for Research Policy, the Danish Natural Science Research Council, the Danish Medical Research Council, the Danish Agricultural and Veterinary Research Council, the Danish Technical Research Council, and the Danish Committee for Scientific and Technical Information and Documentation. The chief learned societies are the Royal Danish Academy of Science and Letters (founded in 1742) and the Danish Academy of Technical Sciences (founded in 1937). Denmark also has 29 specialized learned societies in the fields of agricultural and veterinary science, medicine, natural sciences, and technology. Among the principal public research institutions are the universities Aalborg, Aarhus, Copenhagen, Odense, and Roskilde; the Royal Veterinary and Agricultural University at Frederiksberg; the Technological University of Denmark near Copenhagen; the National Hospital in Copenhagen; the Risø National Laboratory near Roskilde; the Danish Institute for Fisheries and Marine Research at Charlottenlund; and the Danish Meteorological Institute at Copenhagen. In 1987–97, science and engineering students accounted for 25% of university enrollment. In 2002, a total of 10.6% of all bachelor's degrees awarded were for the sciences (natural sciences, mathematics and computers, and engineering). Many of the world's preeminent theoretical nuclear physicists have worked at the Niels Bohr Institute for Astronomy, Physics, and Geophysics of Copenhagen University. Copenhagen has museums of geology and zoology and botanical gardens.

Research and development (R&D) expenditures in 2002 totaled \$4,178.639 million or 2.51% of GDP. For that same year, there were 3,153 technicians and 4,822 researchers per million people actively engaged in R&D. In 2001, business provided 61.5% of all

funding for R&D activities, followed by government at 28%, foreign sources at 7.8% and higher education at 2.6%. Total R&D spending that year came to \$3,877.477 million, or 2.40% of GDP. In 2002, high-tech exports were valued at \$8.089 billion and accounted for 22% of manufactured exports.

### 30 DOMESTIC TRADE

Large units are becoming more common in wholesale as well as retail trade, ordering directly from local manufacturers and foreign suppliers. Retail operations now include purchasing organizations, various types of chains, cooperatives, self-service stores, supermarkets, and department stores. Chain stores are gaining dominance in the nonfood retail goods market. The food retail sector is dominated by Dansk Supermarked, Coop Danmark, and about 30 other independent food import establishments. A 25% value-added tax applies to most goods and services.

Danish retail trade is marked by keen competition between independent retailers, manufacturers' chains, and consumer cooperatives. About 30% of all Danish retail establishments are in the greater Copenhagen area, and these account for almost 40% of all retail sales.

Business opening hours vary between 8 and 9 AM; closing is between 5:30 and 7 PM for stores and 4 to 4:30 PM for offices. Early closing (1 PM) on Saturdays is now standard. Banking hours are from 9:30 AM to 4 PM, Monday through Friday; also, 4 to 6 PM on Thursday.

General, trade, and technical periodicals are important media, and direct-mail, television, and film advertising are used extensively. The most important trade exhibition, the International Fair, takes place every spring in Copenhagen.

### 31 FOREIGN TRADE

The Danish economy depends heavily on foreign trade. Denmark is a net exporter of food and energy. Raw materials for use in production used to account for more than half the value of imports, but have seen a considerable decline in recent years. Farm products traditionally comprised the bulk of total Danish exports, but since 1961, industrial exports have greatly exceeded agricultural exports in value. In 2003, industrial products accounted for 81%

#### Principal Trading Partners – Denmark (2003)

of Denmark's total commodity exports by value (of which machinery and instruments covered 35%); agricultural and fishing exports accounted for 10% (of which pork and pork products covered 48%—Denmark is the world's largest exporter of pork). Raw materials and semi-manufactures accounted for 43% of imports, consumer goods 29%, capital equipment 14%, transport equipment 7%, fuels 5%, and other imports 2%.

Denmark's trading partners in 2003 (according to percent of total trade in goods) included Germany (21%), Sweden (13%), the United Kingdom (8%), the United States (5%), Norway (5%), Japan (2%), and eastern European countries (5%).

To curb domestic demand, the government introduced several fiscal restraint measures in 1986, resulting in a decline in imports. Such measures and a tight-money policy have curbed inflation and made Danish exports more competitive, leading to trade surpluses in the late 1980s, 1990s, and early 2000s. In 2004, total exports were \$75.6 billion and imports were \$67.2 billion, for a trade surplus of \$8.4 billion.

A great producer of food, Denmark's commodity exports include meat, fresh fish, and cheese, each of which command a substantial percentage of the world's food exports in their categories. The country also exports fine furniture and medicaments.

### 32 BALANCE OF PAYMENTS

The decline in Denmark's trade balance since the end of World War II resulted in a serious deterioration in the balance-of-payments position, particularly after 1960. In the late 1960s, the course of Denmark's international economic activity paralleled trends in continental Europe, with high trade and capital flow levels being accompanied by a deteriorating current-account position; this condition continued into the early 1970s. The Danish government had hoped that Denmark's entry into the EC would reduce the country's persistent deficit and bring the balance on current account into a more favorable position, but this was not

the case in the late 1970s. Although current account deficits were reduced somewhat in 1980–81, thanks to the devaluation of the krone and the restrictive income and fiscal policies implemented in 1979–80, the deficit again increased in 1982 and by 1985 was at the highest level since 1979.

In 1990, after a century of deficits, the balance of payments showed a surplus of \$1.3 billion, and rose to \$4.7 billion in 1993. In 1994 the surplus dropped to \$2.7 billion, but by 2002 it stood at \$8.4 billion. The surplus has allowed Denmark to begin repaying its large foreign debt, which peaked in 1988 at \$44 billion, or 40% of GDP. (External debt stood at \$21.7 billion in 2000.) Net interest payments on debt continue to be a burden, accounting for about 10% of goods and services export earnings.

As of 2005, except for one year—1998—Denmark had had comfortable current account surpluses for 15 years. The current account surplus stood at \$6.5 billion in 2004.

### 3<sup>3</sup> BANKING AND SECURITIES

By an act of 7 April 1936, the Danish National Bank, the bank of issue since 1818, was converted from an independent to an official government corporation. Its head office is in Copenhagen, and it has branches in provincial towns. The Nationalbank performs all the usual functions of a central bank, and it holds almost all the nation's foreign exchange reserves. Commercial banks provide short-term money to business and individuals, almost always in the form of overdraft credits, which are generally renewable.

Danish banks, hit particularly hard by the Nordic banking crisis of 1991–93, have rebounded. By the end of the decade, they had rebounded completely. Their recovery was bolstered in large part by continuing capital gains in securities markets. In mid-2003, there were 187 commercial and savings banks, eight mortgage credit institutions, 30 investment companies, 138 nonlife insurance companies, and 94 life assurance companies and multi-employer pension funds.

Credit and mortgage societies are active in Denmark. In 1982, index-linked real estate loans were introduced, initially carrying nominal interest rates of 2.5% per year, with balance and installments adjusted yearly according to variations in the consumer price index and wage indexes. In the mid-1990s, the lending rate was about 12%. The International Monetary Fund reports that in 1999, currency and demand deposits—an aggregate commonly known as M1—were equal to \$54.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$97.5 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 3.37%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 3%.

The stock exchange (or Bourse) in Copenhagen was built during 1619–30 by Christian IV. He subsequently sold it to a Copenhagen merchant, but it reverted to the crown and in 1857 was finally sold by Frederik VII to the Merchants' Guild. Although it is the oldest building in the world built as an exchange and still used as one, the nature of the business transacted in it has greatly changed. Originally a commodity exchange equipped with booths and storage rooms, the Bourse is now almost exclusively a stock exchange. In 1970, the Stock Exchange was placed under the jurisdiction of the Ministry of Commerce with a governing committee

of 11 members. Only a few bond issues are made by manufacturing firms each year. In 1980, Denmark took the initial step toward becoming the first country to convert the issuing of stock, share, and bond certificates into a computer account registration system. As of 2004, a total of 178 companies were listed on the Copenhagen Stock Exchange, which had a total capitalization of \$151.342 billion. In that same year, the KFX Copehagen rose 0.7% from the previous year to 286.7.

### 3<sup>4</sup> INSURANCE

The Danish insurance industry is regulated by the Danish Supervisory Authority of Financial Affairs. Danish companies do most stock insurance business. Some government-owned insurance companies sell automobile, fire, and life insurance and handle the government's war-risk insurance program. In Denmark, third-party auto insurance, workers' compensation, nuclear power station insurance, hunter's liability, dog liability, third-party aircraft liability and mortgaged property insurance are compulsory. The two primary pieces of legislation affecting the insurance industry are the Insurance Companies Act and the Insurance Contracts Act. The first contains regulations for establishing and operating insurance companies and describes the public supervision of the insurance business. The second governs relations between insurance companies, policy holders, and claimants. In 2003, the value of all direct premiums written totaled \$16.737 billion, with life premiums accounting for the largest portion at \$10.944 billion. Denmark's top nonlife insurer that same year was Tryg Skade, with gross nonlife premiums written of \$1,177.9 million. Danica Pension was the country's top life insurer in 2003 with gross life premiums written of \$1.772.4.

### 3<sup>5</sup> PUBLIC FINANCE

The finance bill is presented to the Folketing yearly; the fiscal year follows the calendar year. As a general rule, the budget is prepared on the "net" principle, the difference between receipts and expen-

ditures—surplus or deficit—of public undertakings being posted to the revenue accounts. By far the largest amounts of public expenditure are for social security, health, education and research, unemployment insurance, pensions, allowances, and rent subsidies. Under a new tax reform plan, agreed upon by the government and the Danish People's Party in March 2003, Danish citizens received tax relief in 2004, although at a lesser rate than originally was hoped. Denmark has yet to accept the euro as its currency, although it meets all the criteria set forth by the European Monetary Union to do so. The 1993 Finance Act serves as an example of how revenue is only to a limited degree spent on the public sector's own operational and initial expenditure, but mainly repaid to citizens. Out of the Kr340 billion the government had at its disposal in 1993, 46% was to be sent back to individual citizens as income transfers. In addition, the government transferred 12% of the budget to municipalities in the form of block grants, which also will largely end up as transfer payments to individuals.

The US Central Intelligence Agency (CIA) estimated that in 2005 Denmark's central government took in revenues of approximately \$148.8 billion and had expenditures of \$142.6 billion. Revenues minus expenditures totaled approximately \$6.2 billion. Public debt in 2005 amounted to 40.4% of GDP. Total external debt was \$352.9 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were Kr532,687 million and expenditures were Kr504,284 million. The value of revenues was us\$80,857 million and expenditures us\$76,546 million, based on a market exchange rate for 2003 of us\$1 = Kr6.588 as reported by the IMF. Government outlays by function were as follows: general public services, 27.2%; defense, 4.6%; public order and safety, 2.6%; economic affairs, 6.8%; housing and community amenities, 1.6%; health, 0.9%; recreation, culture, and religion, 2.3%; education, 12.6%; and social protection, 41.3%.

### 36 TAXATION

Denmark's taxes are among the highest in the world. Danish residents are liable for tax on global income and net wealth. Nonresidents are liable only for tax on certain types of income from Danish sources.

The corporate income tax in Denmark is 30%, which must be prepaid during the income tax year to avoid a surcharge. Capital gains are also taxed at the 30% rate.

Personal income tax is collected at state, county and local levels. A tax ceiling ensures that combined income taxes do not exceed 59% of income. Income tax rates are progressive: 39% on income up to €22,118; 45% on income between €22,118 and €36,025; and 60% on income above €36,025. Several kinds of deductions or reductions can be applied to taxable income. Dividends are taxed at 28% up to the amount of personal allowance, after which the rate goes to 43%. Royalties are subject to a 30% tax rate. There is also a voluntary church tax with an average rate of 0.8%. The social security contribution from employee earnings is 9%, 8% for unemployment insurance and 1% for special pension scheme savings. The voluntary church tax and social security contributions do not count toward the 59% tax ceiling. Tax is withheld at the source. Foreign researchers and key employers may qualify for a gross tax

of 25% on their salary instead of paying regular income tax. They are still liable for 9% social security contributions.

Denmark's main indirect tax in the value-added tax (VAT) first introduced in March 1967 with a standard rate of 10%. The current standard rate of 25% was introduced in January 1992. Daily newspapers and a few other goods and services are exempt from the VAT.

### 37 CUSTOMS AND DUTIES

Denmark—a consistent advocate of free and fair conditions of international trade—had until recently the lowest tariff rate in Europe. However, owing to shortages of foreign currency, Denmark did impose quantitative restrictions on imports, and as late as 1959 about 64% of Danish industrial production was so protected. On joining the European Free Trade Association (EFTA) on 8 May 1960, Denmark began eliminating tariff rates and quantitative restrictions on industrial products from other EFTA countries. By 1 January 1970, those that remained were abolished. On 1 January 1973, Denmark ended its membership in EFTA and became a member of the European Community, which not only represents a free trade area but also seeks to integrate the economies of its member states.

Denmark adheres to provisions of GATT on import licensing requirements although certain industrial products must meet Danish and EC technical standards. Denmark converted to the Harmonized System of import duties on 1 January 1988. Most products from European countries are duty-free. Duty rates for manufactured goods range from 5–14% of CIF value, and a 25% VAT is applied to imported, as well as domestic, products. Basic necessities and foodstuffs are given a 0% rate. Agricultural products are governed by the Common Agricultural Policy (CAP), a system of variable levies, instead of duties.

### 38 FOREIGN INVESTMENT

Denmark is a rich, modern society with state-of-the-art infrastructure and distribution system. A highly-skilled labor force and a northern location in Europe make it attractive to foreign investors wishing to have access to markets in Scandinavia, the Baltics, and other northern European destinations. Denmark is a firm advocate of liberal trade and investment policies and actively courts foreign investment.

Foreign investors are treated on an equal footing with Danish investors; investment capital and profits may be freely repatriated. After the late 1950s, Denmark attracted a moderate amount of foreign investment. In 1998, however, annual FDI inflows jumped from \$2.8 billion to \$7.7 billion and then soared to \$32.3 billion in 2000. In terms of success in attracting FDI, Denmark went from the 62nd ranked country (out of 140 countries studied) on UNCTAD's Inward FDI Performance Index for the period 1988 to 1990 to the 12th ranked country for the period 1998–2000. Denmark's ranking in terms of potential for inward FDI increased from 10th place in the world to 8th place. In the economic slowdown of 2001 and in decline in FDI inflows that followed the 11 September 2001 terrorist attacks in the United States, annual FDI inflow fell to about \$14 billion in 2001 and to an estimated \$7.7 billion in 2002.

The total stock of FDI in Denmark increased by 79% from 1998–2003, and corresponded to approximately 25% of GDP in

2003 (at \$54 billion). Danish investment abroad amounted to 27% of GDP. The corporate tax is relatively low by EU-15 standards, at 28%. There is no additional local tax, franchise, or net wealth tax. The corporate tax is paid after deductions for expenses.

The largest foreign investors in Denmark are the United States, Sweden, and the United Kingdom. The main sources of FDI stock in Denmark in 2003 were the United States (28%), Sweden (20%), the United Kingdom (10%), Norway (9%), and Germany (4%). The main destinations of Danish investment abroad in 2003 were the United Kingdom (12%), Norway (10%), Sweden (9%), the United States (6%), and Germany (6%).

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

For many years, Danish governments followed a full-employment policy and relied chiefly on promotion of private enterprise to achieve this end. Beginning in the late 1970s, however, the government increased its intervention in the economy, in response to rising unemployment, inflation, and budget deficits. Inflation has been curbed and budget deficits reduced. This bolstered the currency from devaluation, but at the cost of restraining growth, and unemployment continued to rise.

Government influence on private enterprise through the exercise of import and export licensing has diminished in recent years. The discount policy of the National Bank is of major importance to the business community. Control of cartels and monopolies is flexible. The government has in recent years sold part or whole interest in many business entities, including the national telecommunications company TDC, Copenhagen airports, and the government's computer services company, Datacentralen. Most of the country's power stations are owned and operated by local governments and municipalities.

Capital incentives are available to assist new industries, mainly in the less-developed areas of Denmark. Municipalities also provide infrastructure, industrial parks, or inexpensive land. Under a 1967 provision, the Regional Development Committee (composed of representatives of a number of special-interest organizations and central and local authorities) can grant state guarantees or state loans for the establishment of enterprises in less developed districts.

In 1978, Denmark reached the UN target for official development assistance (ODA) in the mid-1970s: 0.7% of GNP. It reached 0.96% of GNP in 1991, second only to Norway, and 1.01% in 2001, when it led the world in ODA. In 2004, Denmark set aside 0.84% of its GNP for ODA, third highest behind Norway and Luxembourg. Denmark's official assistance to developing countries amounted to \$2 billion in 2004.

Unemployment was at a 25-year low in 2002, and the economy weathered the global economic recession fairly well. (Unemployment was also low in 2004, at 6.2%.) The government ran fiscal surpluses in order to prepare for the costs of an aging population. Nevertheless, state spending to total economic activity remains one of the highest in the world. Small and medium-sized businesses characterize the private sector, with companies with less than 50 employees accounting for approximately half of total employment, and only 12% of the workforce work in firms with more than 500 employees. Women are highly represented in the labor force.

The government was likely to continue an expansionary fiscal policy in 2006, and the general government budget surplus was forecast to narrow. The Danish government lowered income and corporate taxes in 2004, and announced in 2005 that it was working on simplifying the rules governing the taxation of dividends. Government debt remains high, but the public budget was in surplus in 2005.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

Denmark was one of the first countries in the world to establish efficient social services with the introduction of relief for the sick, unemployed, and aged. Old age benefits date back to 1891. Social welfare programs include health insurance, health and hospital services, insurance for occupational injuries, unemployment insurance and employment exchange services, old age and disability pensions, rehabilitation and nursing homes, family welfare subsidies, general public welfare, and payments for military accidents. Maternity benefits are payable up to 52 weeks. In 2004 the retirement age increased to 69 years for residents.

According to the constitution, any incapacitated person living in Denmark has a right to public relief. Benefits such as maintenance allowances for the children of single supporters, day care, and others, involve neither repayment nor any other conditions; some others are regarded as loans to be repaid when possible. Family allowances are paid to families with incomes below a certain threshold; rent subsidies require a means test. Denmark has a dual system of universal medical benefits for all residents and cash sickness benefits for employees. All Danish citizens over 67 years of age may draw old age pensions. Disability pensions, equal in amount to old age pensions plus special supplements, are paid to persons with a stipulated degree of disablement.

Women make up roughly half of the work force. Laws guarantee equal pay for equal work, and women have and use legal recourse if they feel discriminated against. Spousal rape and spousal abuse are criminal offenses. There are crisis centers that counsel and shelter victims of domestic violence. Children's rights are well protected.

The constitution provides for freedom of the press and speech, assembly and association, and for religious freedom, and generally respects these rights. Discrimination based on sex, creed, race, or ethnicity is prohibited by law.

### **4<sup>1</sup> HEALTH**

Denmark's health care system has retained the same basic structure since the early 1970s. The administration of hospitals and personnel is dealt with by the Ministry of the Interior, while primary care facilities, health insurance, and community care are the responsibility of the Ministry of Social Affairs. Anyone can go to a physician for no fee and the public health system entitles each Dane to his/her own doctor. Expert medical/surgical aid is available, with a qualified nursing staff. Costs are borne by public authorities, but high taxes contribute to these costs. As of 2004, there were an estimated 366 physicians and 972 nurses per 100,000 people. In addition, there were 90 dentists, 49 pharmacists, and 25 midwives per 100,000 people.

The total fertility rate in 2000 was 1.7, while the maternal mortality rate was 10 per 100,000 live births. Approximately 63% of married women (ages 15 to 49) used contraception. Cardiovas-

cular diseases and cancer were the leading causes of death. Denmark's cancer rates were the highest in the European Union. The HIV/AIDS prevalence was 0.20 per 100 adults in 2003. As of 2004, there were approximately 5,000 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

Danish citizens may choose between two systems of primary health care: medical care provided free of charge by a doctor whom the individual chooses for a year and by those specialists to whom the doctor refers the patient; or complete freedom of choice of any physician or specialist at any time, with state reimbursement of about two-thirds of the cost for medical bills paid directly by the patient. Most Danes opt for the former. All patients receive subsidies on pharmaceuticals and vital drugs; everyone must pay a share of dental bills. Health care expenditure was estimated at 8.4% of GDP.

Responsibility for the public hospital service rests with county authorities. Counties form public hospital regions, each of which is allotted one or two larger hospitals with specialists and two to four smaller hospitals where medical treatment is practically free. State-appointed medical health officers, responsible to the National Board of Health, are employed to advise local governments on health matters. Public health authorities have waged large-scale campaigns against tuberculosis, venereal diseases, diphtheria, and poliomyelitis. The free guidance and assistance given to mothers of newborn children by public health nurses have resulted in a low infant mortality rate of 4.56 per 1,000 live births (2005). Medical treatment is free up to school age, when free school medical inspections begin. As of 2001, children up to one year of age were vaccinated against diphtheria, pertussis, and tetanus (99%) and measles (92%). In 2005, life expectancy at birth was 77.62 years. The overall death rate was 11 per 1,000 people.

## 42 HOUSING

In recent decades, especially since the passage of the Housing Subsidy Act of 1956, considerable government support has been given to housing. For large families building their own homes, government loans have been provided on exceptionally favorable terms, and special rent rebates have been granted to large families occupying apartments in buildings erected by social building societies or in buildings built with government loans since 1950. Subject to certain conditions, housing rebates have been granted to pensioners and invalids. An annual grant is made to reduce householders' maintenance expenses. This extensive support helped to reduce the wartime and immediate postwar housing shortage.

In 2005, there were 2,633,886 dwellings in the nation; 94% were occupied. About 38% were detached, single-family homes; another 35% were detached, multi-family homes and 12% were terraced or linked dwellings. Of the occupied dwellings, about 51% were owner occupied. About 26% of all dwellings consist of five rooms and a kitchen; only about 48,892 dwellings do not have a kitchen at all. During the period 1991–2004, less than 20,000 new homes were built each year. About 17,778 new dwellings were built in 2004, mostly by private builders. Approximately 231,906 dwellings were built before 1900. About 40% of the housing stock was built 1950–79.

## 43 EDUCATION

Primary, secondary, and most university and other higher education are free. Preschools are operated by private persons or organizations with some government financial aid. Education has been compulsory since 1814; currently, it is compulsory for nine years, for children ages 7 to 16. The Danish primary school system, known as the *Folkeskole*, covers the nine required years and many opt for an additional 10th year. English is included in the curriculum from the fifth grade. After basic schooling, two-thirds of the pupils apply for practical training in a trade or commerce at special schools. The remaining one-third enroll in secondary schools, which finish after three years with student examination and pave the way for higher education at universities. Municipal authorities, with some financial aid from the central government, have been responsible for providing schools for these children.

In 2001, about 90% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 96% of age-eligible students. Most students complete their primary education. The student-to-teacher ratio for primary school was at about 10:1 in 2000; the ratio for secondary school was also about 10:1.

Adult education exists side by side with the regular school system. Founded as early as 1844, the folk high schools are voluntary, self-governing high schools imparting general adult education. In addition, there are hundreds of schools for higher instruction of pupils without previous special training. There are 12 universities, including the University of Copenhagen (founded in 1479), the University of Aarhus (founded as a college in 1928 and established as a university in 1933), the University of Odense (opened in 1966), and the University Center at Roskilde (founded in 1970). Attached to the various faculties are institutes, laboratories, and clinics devoted primarily to research, but also offering advanced instruction. There are about 100 specialized colleges with professional programs. Many specialized schools and academies of university rank provide instruction in various technical and artistic fields. All these institutions are independent in their internal administration. In 2003, about 67% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for has been estimated at nearly 100%.

As of 2003, public expenditure on education was estimated at 8.5% of GDP, or 15.4% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

Denmark's national library, the Royal Library in Copenhagen, founded by Frederik III in 1653, is the largest in Scandinavia, with over 4.6 million volumes. The manuscript department of the Royal Library holds an extensive collection of the manuscripts and correspondence of Hans Christian Andersen and the Søren Kierkegaard Archives (manuscripts and personal papers). The National Museum of Photography (over 25,000 pieces) and the Museum of Danish Cartoon Art are also housed at the Royal Library. Three other large libraries are the University Library in Copenhagen, Copenhagen Public Libraries, and the State Library at Aarhus. The Regional Library of Northern Jutland includes a central library, 17 branch locations and 3 mobile units. As of 2002, there

were 250 free public libraries throughout the country with 892 points of service. That year, the public libraries had a total of more than 31.4 million volumes. The Danish Library Association was founded in 1905. The Danish Union of Librarians had about 5,500 members in 2005.

Among the largest museums are the National Museum (with rare ethnologic and archaeological collections), the Glyptotek (with a large collection of ancient and modern sculpture), the State Art Museum (containing the main collection of Danish paintings as well as other Scandinavian artists), the Thorvaldsen Museum, the Hirshsprung Collection, and the Rosenborg Palace, all in Copenhagen, and the National Historical Museum in Frederiksborg Castle, at Hillerod. Among the newer facilities is the Amalienborg Museum in Copenhagen, which opened in 1994 and houses treasures of the royal family. The National Museum of Science and Technology in Elsinore includes the Teknisk Museum (Museum of Technology) and the Trafikmuseum (Transport Museum); the Kommunikationsmuseum (Museum of Communications) in Aalborg is an extension of the Teknisk Museum.

#### 45 MEDIA

Although the government telephone service owns and operates long-distance lines and gives some local service, the bulk of local telephone service is operated by private companies under government concession with government participation. In 2003, there were an estimated 669 mainline telephones for every 1,000 people. The same year, there were approximately 883 mobile phones in use for every 1,000 people. Telegraph services are owned and operated by the government.

The radio broadcasting services are operated by the Danish State Radio System, on long, medium, and short waves. Television broadcasting hours are mainly devoted to current and cultural affairs and to programs for children and young people. There is no commercial advertising on radio or television; owners of sets pay an annual license fee. As of 1998 there were 2 AM and 355 FM radio stations and 26 television stations. In 2003, there were an estimated 1,400 radios and 859 television sets for every 1,000 people. About 236.7 of every 1,000 people are cable subscribers. In 2003, there were 576.8 personal computers for every 1,000 people and 513 of every 1,000 people had access to the Internet. There were 1,724 secure Internet servers in the country in 2004.

The largest daily newspapers (with their political orientation and 2002 circulation totals) are *Ekstra Bladet* (independent/social-liberal, 159,500), *Politiken* (independent/social-liberal, 153,500), *Berlingske Tidende* (independent/conservative, 160,100), *B.T.* (independent/conservative, 144,900), *Aarhus Stiftstidende* (independent, 176,400), *Vendsyssel Tidende* (independent, 114,000), *Aalborg Stiftstidende* (independent, 72,700), and *Fyens Stiftstidende* (independent, 66,400).

Complete freedom of expression, including that in print and electronic media, is guaranteed under the constitution. The media in Denmark are largely independently operated and are free from government interference.

#### 46 ORGANIZATIONS

Nearly every Danish farmer is a member of at least one agricultural organization and of one or more producer cooperatives. The oldest agricultural organization, the Royal Agricultural Society of

Denmark, was established in 1769, but most of the other organizations have been founded since 1850. They promote agricultural education and technical and economic development. Local societies have formed provincial federations, which in turn have combined into two national organizations, the Federation of Danish Agricultural Societies and the Federation of Danish Smallholders Societies. The Cooperative Movement of Denmark comprises three groups: agricultural cooperatives, retail cooperatives, and urban cooperatives. Owners of estates and large farms belong to separate organizations specializing in the affairs of larger agricultural units. Most consumers' cooperative societies belong to the Danish Cooperative Wholesale Society, which makes bulk purchases for member societies and also manufactures various products.

The Federation of Danish Industries and the Industrialists' Association in Copenhagen represent industrial undertakings and trade associations, safeguard and promote the interests of industry, and deal with trade questions of an economic nature. The Danish Confederation of Trade Unions has also been influential. The Council of Handicrafts represents various crafts, trades, and industries, and gives subsidies to technical and trade schools. The leading organizations of the wholesale trade are the Copenhagen Chamber of Commerce and the Provincial Chamber of Commerce. There are also active professional societies representing a broad range of career fields.

The scholarly and cultural organization of the Royal Danish Academy of Sciences and Letters was founded in 1742. A wide variety of organizations exist to promote research and education in medical and scientific fields, such as Danish Academy of Technical Sciences, the Danish Dental Association, the Danish Medical Society, and the Danish Cancer Society. The Danish Council of Ethics is appointed by the government to conduct research and offer legislative recommendations on bioethical issues.

A number of national and regional cultural organizations are active, as are associations representing popular sports and recreational activities. The Danish Athletic Federation represents about 30,000 athletes nationwide. The Danish Youth Council is an umbrella organization representing about 62 youth organizations with a combined membership of over one million youth. Youth organizations include the Conservative Youth of Denmark, Danish 4-H Youth, Danish Socialist Democratic, Faroe Islands Youth Council, Greenland Youth Council (SORLAK), scouting programs, and YMCA/YWCA.

Denmark has active chapters of The Red Cross, CARE, Caritas, Greenpeace, UNICEF, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Dozens of castles, palaces, mansions, and manor houses, including the castle at Elsinore (Helsingor)—site of Shakespeare's *Hamlet*—are open to the public. Tivoli Gardens, the world-famous amusement park, built in 1843 in the center of Copenhagen, is open from May through mid-September. Copenhagen is an important jazz center and holds a jazz festival in July. The Royal Danish Ballet, of international reputation, performs in Copenhagen's Royal Theater, which also presents opera and drama. Greenland, the world's largest island, is part of the Kingdom of Denmark and attracts tourists to its mountains, dog sledges, and midnight sun.

A valid passport is required of all visitors except for Scandinavian nationals. Visas are not required for stays of up to 90 days.

Approximately 1,294,477 tourists visited Denmark in 2003. There were 41,729 hotel rooms with 106,080 beds and an occupancy rate of 35% in that year.

In 2005, the US Department of State estimated the cost of staying in Copenhagen at \$288 per day.

#### 48 FAMOUS DANES

Denmark's greatest classic writer and the founder of Danish literature is Ludvig Holberg (1684–1754), historian, philologist, philosopher, critic, and playwright, whose brilliant satiric comedies are internationally famous. Another important dramatist and poet is Adam Gottlob Oehlenschlaeger (1779–1850). The two most celebrated 19th-century Danish writers are Hans Christian Andersen (1805–75), whose fairy tales are read and loved all over the world, and the influential philosopher and religious thinker Søren Kierkegaard (1813–55). Nikolaj Frederik Severin Grundtvig (1783–1872), noted theologian and poet, was renowned for his founding of folk high schools, which brought practical education to the countryside. The leading European literary critic of his time was Georg Morris Brandes (Cohen, 1842–1927), whose *Main Currents in 19th-Century European Literature* exerted an influence on two generations of readers. Leading novelists include Jens Peter Jacobsen (1847–85); Martin Anderson Nexø (1869–1954), author of *Pelle the Conquerer* (1906–10) and *Ditte* (1917–21); and Johannes Vilhelm Jensen (1873–1950), who was awarded the Nobel Prize for literature in 1944 for his series of novels. Karl Adolph Gjellerup (1857–1919) and Henrik Pontoppidan (1857–1943) shared the Nobel Prize for literature in 1917. Isak Dinesen (Karen Blixen, 1885–1962) achieved renown for her volumes of gothic tales and narratives of life in Africa. Jeppe Aakjsaer (1866–1930), poet and novelist, is called the Danish Robert Burns. A great film artist is Carl Dreyer (1889–1968), known for directing *The Passion of Joan of Arc*, *Day of Wrath*, and *Ordet*. Famous Danish musicians include the composers Niels Gade (1817–90) and Carl Nielsen (1865–1931), the tenors Lauritz Melchior (1890–1973) and Aksel Schiøtz (1906–75), and the soprano Povla Frijsch (d.1960). Notable dancers and choreographers include August Bournonville (1805–79), originator of the Danish ballet style; Erik Bruhn (1928–86), who was known for his classical technique and was director of ballet at the Royal Swedish Opera House and of the National Ballet of Canada; and Fleming Ole Flindt (b.1936), who has directed the Royal Danish Ballet since 1965. The sculptor Bertel Thorvaldsen (1770–1844) is the artist of widest influence. Jørn Utzon (b.1918) is an architect best known for his design of the Sydney Opera House.

Notable scientists include the astronomers Tycho Brahe (1546–1601) and Ole Rømer (1644–1710); the philologists Ramus Christian Rask (1787–1832) and Otto Jespersen (1860–1943); the physicist Hans Christian Ørsted (1777–1851), discoverer of electromagnetism; Nobel Prize winners for physics Niels Bohr (1885–1962) in 1922 and his son Aage Niels Bohr (b.1922) and Benjamin Mottelson (b.1926) in 1975; Niels Rybert Finsen (b.Faroe Islands, 1860–1904), August Krogh (1874–1949), Johannes A. G. Fibiger (1867–1928), and Henrik C. P. Dam (1895–1976), Nobel Prize-winning physicians and physiologists in 1903, 1920, 1926, and 1944, respectively. Jens Christian Skou (b.1918) shared the Nobel prize in chemistry in 1937. Frederik Bajer (1837–1922) was awarded the Nobel Prize for peace in 1908. Knud Johan Victor

Rasmussen (1879–1933), explorer and anthropologist born in Greenland, was an authority on Eskimo ethnology.

Queen Margrethe II (b.1940) became sovereign in 1972.

#### 49 DEPENDENCIES

##### Faroe Islands

The Faroe Islands (Faerøerne in Danish and Føroyar in the Faroese language), whose name stems from the Scandinavian word for sheep (får), are situated in the Atlantic Ocean, due N of Scotland, between 61°20' and 62°24'N and 6°15' and 7°41'W. The 18 islands, 17 of which are inhabited, cover an area of 1,399 sq km (540 sq mi). Among the larger islands are Streymoy (Strømø) with an area of 373 sq km (144 sq mi), Eysturoy (Østerø) with 286 sq km (110 sq mi), Vágar (Vaagø) with 178 sq km (69 sq mi), Suduroy (Syderø) with 166 sq km (64 sq mi), and Sandoy (Sandø) with 112 sq km (43 sq mi). The maximum length of the Faroe Islands is 112 km (70 mi) N–S and the maximum width is 79 km (49 mi) NE–SW. The total coastline measures 1,117 km (694 mi).

The estimated population in July 2002 was 46,011. Most Faroese are descended from the Vikings, who settled on the islands in the 9th century. The Faroes have been connected politically with Denmark since the 14th century. During World War II (1939–45), they were occupied by the British, and in this period important political differences emerged. The Faroese People's party advocated independence for the islands; the Unionists preferred to maintain the status quo; and the Faroese Social Democrats wanted home rule. After the war, it was agreed to establish home rule under Danish sovereignty, and since 23 March 1948, the central Danish government has been concerned only with matters of common interest, such as foreign policy and foreign-currency exchange. The Faroes have their own flag, levy their own taxes, and issue their own postage stamps and banknotes. The Faroese language, revived in the 19th century and akin to Icelandic, is used in schools, with Danish taught as a first foreign language.

The Faroese parliament, or Logting, dates back to Viking times and may be Europe's oldest legislative assembly. Members are elected by popular vote on a proportional basis from 7 constituencies to the 32-member Logting; representation has been fairly evenly divided among the four major parties. After the April 2002 election, the Union Party had 8 seats; Republican Party, 8; Social Democrats, 7; People's Party 7. The Independence Party and the Center Party had one seat each. The islands elect two representatives to the Folketing (Danish parliament).

In keeping with the islands' name, sheep raising was long the chief activity, but in recent years the fishing industry has grown rapidly. The total fish catch was nearly 360,000 metric tons in 1996; fisheries exports generated 94% of the territory's \$471 million in exports in 1999. Principal varieties of fish caught are cod, herring, and haddock; almost the entire catch is exported. Exports go mainly to Denmark (32%), the United Kingdom (21%), France (9%), Germany (7%), Iceland (5%), and the United States (5%). Imports valued at \$469 million in 1999, come mainly from Denmark (28%), Norway (26%), Germany (7%), Sweden (5%), and Iceland (4%). Agriculture is limited to the cultivation of root vegetables, potatoes, and barley, and contributed 27% to the gross domestic product (GDP) in 1999.

The economy is regulated by an agreement with Denmark whereby the central government facilitates the marketing of Faroese fisheries products and guarantees to some extent an adequate supply of foreign currency.

### Greenland

Greenland (Grønland in Danish, Kalaallit Nunaat in Greenlandic) is the largest island in the world. Extending from 59°46' to 83°39' N and from 11°39' to 73°8' W, Greenland has a total area of 2,166,086 sq km (836,330 sq mi). The greatest N–S distance is about 2,670 km (1,660 mi), and E–W about 1,290 km (800 mi). Greenland is bounded on the N by the Arctic Ocean, on the E by the Greenland Sea, on the SE by the Denmark Strait (separating it from Iceland), on the S by the Atlantic Ocean, and on the W by Baffin Bay and Davis Strait. The coastline measures 44,087 km (27,394 mi). The ice-free strip along the coast, rarely exceeding 80 km (50 mi) in width, is only 410,449 sq km (158,475 sq mi) in area. The rest of the area, covered with ice measuring at least 2,100 m (7,000 ft) thick in some places, amounts to 1,755,637 sq km (677,855 sq mi). Greenland has a typically arctic climate, but there is considerable variation between localities, and temperature changes in any one locality are apt to be sudden. Rainfall increases from north to south, ranging from about 25 to 114 cm (10–45 in). Land transport is very difficult, owing to the ice and rugged terrain, and most local travel must be done by water. SAS operates flights on the Scandinavia-US route via Greenland, and tourists are being attracted by Greenland's imposing scenery.

The population, grouped in a number of scattered settlements of varying sizes, was estimated at 56,376 in 2002, down from 58,203 in 1996. Greenlanders are predominantly Eskimos, with some admixture of Europeans. The Greenlandic language, an Eskimo-Aleut dialect, is in official use. Most native Greenlanders were engaged in hunting and fishing, but a steadily increasing number are now engaged in administration and in private enterprises. The Europeans chiefly follow such pursuits as administration, skilled services, and mining.

The Vikings reached Greenland as early as the 10th century. By the time Europeans rediscovered the island, however, Norse culture had died out and Greenland belonged to the Eskimos. Danish colonization began in the 18th century, when the whale trade flourished off Greenland's western shore. In 1933, the Permanent Court of Arbitration at The Hague definitively established Danish jurisdiction over all Greenland. Up to 1953, the island was a colony; at that time it became an integral part of Denmark. Greenland held that status until 1979, when it became self-governing after a referendum in which 70% of the population favored home rule. The 31 members in the Landsting (parliament) are elected by popular vote on the basis of proportional representation. In the election held November 2001, the left-wing Siumut Party won 10 seats; Inuit Ataqatigiit, 8; the right-wing Atassut Party, 7; the Demokratiit, 5; and the Katusseqatigiit, 1. Greenland elects two representatives to the Folketing; following the December 2002 election, the representatives were from the Siumut and Inuit Ataqatigiit parties.

Fishing, hunting (mainly seal, and to a lesser extent fox), and mining are the principal occupations. Greenland's total fish catch in 1994 was 112,576 tons, and fisheries exports were valued at \$267 million. Agriculture is not possible in most of Greenland, but some few vegetables are grown in the south, usually under glass.

At Ivigtut, on the southwest coast, a deposit of cryolite has long been worked by a Danish government-owned corporation, but reserves are believed to be nearing depletion. The government has a controlling interest in the lead-zinc mine at Mestersvig, on the east coast. Production began in 1956 and has continued sporadically. Low-grade coal mined at Disko Islands, midway on the west coast, is used for local fuel needs. Mining activities ceased in 1990 but exploration activity has revealed the potential for economic exploitation of antimony, barite, beryllium, chromite, coal, columbium, copper, cryolite, diamond, gold, graphite, ilmenite, iron, lead, molybdenum, nickel, platinum-group metals, rare earths, tantalum, thorium, tungsten, uranium, zinc, and zirconium. Fish and fish products make up the bulk of exports. Raw materials are administered jointly by a Denmark-Greenland commission. Underground resources remain in principle the property of Denmark, but the Landsting has veto power over matters having to do with mineral development.

A US Air Force base is situated at Thule, in the far north along the west coast, only 14° from the North Pole; Greenland also forms part of an early-warning radar network. An international meteorological service, administered by Denmark, serves transatlantic flights. In 1960, a 1,500-kW atomic reactor was set up in northern Greenland to supply electric power to a new US scientific base built on the icecap, 225 km (140 mi) inland from Thule.

# ESTONIA

Republic of Estonia  
*Eesti Vabariik*

**CAPITAL:** Tallinn

**FLAG:** Three equal horizontal bands of blue (top), black, and white.

**ANTHEM:** *Mu isamaa, mu õnn ja rõõm* (*My Native Land, My Pride and Joy*).

**MONETARY UNIT:** The Estonian kroon (EEK) was introduced in August 1992, replacing the Russian ruble. EEK1 = \$0.08032 (or \$1 = EEK12.45) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 24 February; Labor Day, 1 May; Victory Day, anniversary of the Battle of Vonnu in 1919, 23 June; Midsummer Day, 24 June; Christmas, 25–26 December. A movable religious holiday is Good Friday, the Friday before Easter.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Estonia is located in northeastern Europe, bordering the Baltic Sea, between Sweden and Russia. Comparatively, the area occupied by Estonia is slightly smaller than the states of New Hampshire and Vermont combined, with a total area of 45,226 sq km (17,462 sq mi). Estonia shares boundaries with the Baltic Sea on the N and W, Russia on the E, and Latvia on the S. Estonia's land boundaries total 633 km (392 mi). Its coastline is 3,794 km (2,352 mi). Estonia's capital city, Tallinn, is located in the northern part of the coast.

## <sup>2</sup> TOPOGRAPHY

The topography of Estonia consists mainly of marshy lowlands with a hilly region in the southeast. Over a third of the country is forest. The highest point is Suur Munamagi, located in the Haanja Uplands of the south, with an altitude of 318 m (1,043 ft). The lowest point is at sea level (Baltic Sea).

The country has more than 1,000 natural and artificial lakes. The largest lake is Lake Peipus, located along the border with Russia. The shared lake has a total area of 3,555 sq km (1,386 sq mi). The Pärnu is the longest river with a length of 144 km (89 mi). The Narva and Ema are also chief rivers.

## <sup>3</sup> CLIMATE

The proximity of the Baltic Sea influences the coastal climate. At the most western point, Vilsandi Saar, the mean temperature is 6°C (42.8°F). At the country's most eastern points, the mean temperature is between 4.2 and 4.5°C (36 to 40°F). Rainfall averages 50 cm (20 in) on the coast. Inland, rainfall averages 70 cm (28 in). Rainfall is heaviest during the summer and lightest in the spring.

## <sup>4</sup> FLORA AND FAUNA

Calcareous soil and a relatively mild climate permit rich flora and fauna in western Estonia. Native plants number over 1,600 species. The abundance of woodland and plant species provides a

suitable habitat for elk, deer, wild boar, wolf, lynx, bear, and otter. As of 2002, there were at least 65 species of mammals and 205 species of birds.

## <sup>5</sup> ENVIRONMENT

Air, water, and land pollution rank among Estonia's most significant environmental challenges. The combination of 300,000 tons of dust from the burning of oil shale by power plants in the northeast part of the country and airborne pollutants from industrial centers in Poland and Germany poses a significant hazard to Estonia's air quality.

Estonia's water resources have been affected by agricultural and industrial pollutants, including petroleum products, which have also contaminated the nation's soil. Some rivers and lakes within the country have been found to contain toxic sediments in excess of 10 times the accepted level for safety.

The nation's land pollution problems are aggravated by the 15 million tons of pollutants that are added yearly to the existing 250 million tons of pollutants. In 1994, 24,000 acres of the country's total land area were affected. Radiation levels from the nuclear accident at Chernobyl exceed currently accepted safety levels.

In 2003, about 11.8% of the total land area was protected, including 11 Ramsar Wetlands of International importance. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included four types of mammals, three species of birds, one species of fish, and four species of invertebrates. The European mink and the Atlantic sturgeon are among those listed as endangered.

## <sup>6</sup> POPULATION

The population of Estonia in 2005 was estimated by the United Nations (UN) at 1,345,000, which placed it at number 147 in population among the 193 nations of the world. In 2005, approximately 16% of the population was over 65 years of age, with another 16% of the population under 15 years of age. There were 85 males for

every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be -0.3%, a rate the government viewed as too low. The decline in population was due to an extremely low birth rate (1.7 births per woman). The projected population for the year 2025 was 1,171,000. The population density was 30 per sq km (77 per sq mi), with the northern portion of the country being the most densely populated.

The UN estimated that 69% of the population lived in urban areas in 2005, and that population in urban areas was declining at an annual rate of -0.90%. The capital city, Tallinn, had a population of 391,000 in that year. Other cities and their populations were Tartu, 101,297; Narva, 85,000; Kohtla-Järve, 72,000; and Pärnu, 55,000.

## 7 MIGRATION

Newly independent in 1918, Estonia was occupied and annexed in 1940 by the Soviet Union. It was occupied by German troops the following year. When the Soviet army returned in 1944, more than 60,000 Estonians fled to Sweden and Germany. Other Estonians were sent to Soviet labor camps. Many Russians migrated to Estonia under Soviet rule. Some left after Estonia became independent again.

After the breakup of the Soviet Union in 1991, Estonia suffered from waves of transit migration. As of 1999, ethnic Estonians represent only 65% of the total population of Estonia. Russians, Ukrainians, and Belarussians represent nearly 33%, and other groups comprise the remaining 2%. Only 70% of inhabitants are citizens of Estonia, mainly the ethnic Estonians and about 100,000 Russians. Some 90,000 Russians with permanent residence in Estonia are citizens of Russia. These large ethnic minorities live segregated from ethnic Estonians and tend not to understand the Estonian language. The total number of migrants living in Estonia in 2000 was 365,000, approximately one-quarter of the population. In 2004 a population of 150,536 stateless people existed in Estonia. In 2003 remittances to Estonia were \$9.1 million. In 2005 the net migration rate was estimated as -3.18 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

According to a 2000 census, Estonians make up about 67.9% of the population, Russians 25.6%, Ukrainians 2.1%, Belarussians 1.3%, Finns 0.9%, and others 2.2%. Non-Estonians were found chiefly in the northeastern industrial towns, while rural areas were over 80% Estonian.

## 9 LANGUAGES

Estonian is a member of the Finno-Ugric linguistic family. It is closely related to Finnish and distantly related to Hungarian. Standard Estonian is based on the North Estonian dialect. Most of the sounds can be pronounced as either short, long, or extra long. Changing the duration of a sound in a word can alter the grammatical function of the word or change its meaning completely. The language is highly agglutinative, and there are no less than 14 cases of noun declension. Most borrowed words are from German. The alphabet is Roman. The first text written in Estonian dates from 1525. Estonian is the official language and is spoken by

about 67.3% of the population; however, Russian (29.7%), Ukrainian, English, Finnish, and other languages are also used.

## 10 RELIGIONS

Christianity was introduced into Estonia in the 11th century. During the Reformation it converted largely to Lutheranism, although political events in the 18th and 19th century occasioned a strong Russian Orthodox presence. Independence from the Soviet Union, achieved in 1991, relieved the pressure under which religious groups had labored since 1940.

In 2005 there were an estimated 165 congregations of the Estonian Evangelical Lutheran Church with about 180,000 members. There were also about 59 congregations of the Estonian Apostolic Orthodox Church (20,000 members) and 30 congregations of the Estonian Orthodox Church (150,000 members). While Lutherans and Orthodox constitute the majority, there are smaller communities of Baptists, Methodists, Roman Catholics, Methodist, Jehovah's Witnesses, Pentecostals, and other Christian denominations. The Church of Jesus Christ of Latter-day Saints (Mormons) has a significant number of missionaries in the country. There are also Jewish, Muslim, and Buddhist communities; however, each of these minority faiths has less than 6,000 followers. About 70,000 people in the country claimed to be atheists.

The constitution provides for freedom of religion and this right is generally respected in practice. All religious organizations must register with the Religious Affairs Department of the Ministry of Interior Affairs. Basic Christian ecumenical religious instruction is available in public schools as an elective. Certain Christian holidays are observed as national holidays.

## 11 TRANSPORTATION

Estonia in 2004 had a total of 958 km (596 mi) of broad gauge railroad track, all common carrier railway lines, not including industrial lines, of which 132 km (82 mi) was electrified. Tallinn, Haapsalu, Pärnu, Tartu, and Narva are provided rail access to Russia, Latvia, and the Baltic Sea. In order to overcome problems in rolling stock shortages and load fluctuations, a second line of tracks is being laid along the Tallinn-Narva route.

Highways in 2003 totaled 56,849 km (35,360 mi), of which 13,303 km (8,274 mi) are paved, including 99 km (62 mi) of expressways. Motor vehicles dominate domestic freight transportation, carrying nearly 75% of all dispatched goods.

The Baltic Sea (with the Gulf of Finland and Gulf of Riga) provides Estonia with its primary access to international markets. The principal maritime ports are Tallinn and Pärnu. The merchant fleet had 43 vessels of at least 1,000 GRT for a total capacity of 212,998 GRT in 2005. Sea transportation has increased especially since the completion of Tallinn's new harbor and the acquisition of high capacity vessels. Ships carry grain from North America and also serve West African cargo routes. In 1990, a ferry service opened between Tallinn and Stockholm. During one of these commutes in September 1994, the ferry *Estonia* sank off the coast of Finland, resulting in about 900 deaths. The tragedy brought international attention to the safety design of roll-on/roll-off ferries in use worldwide. As of 2003, Estonia had some 500 km (311 mi) of navigable internal waterways.

There were an estimated 29 airports in 2004, of which 12 had paved runways, and one heliport (as of 2005). The principal air-

port at Tallinn has direct air links to Helsinki and Stockholm. Estonian Air is the principal international airline. In 2003, about 395,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

What is now Estonia was ruled in turn by the Danes, the Germans, and the Swedes from the Middle Ages until the 18th century. Russia annexed the region in 1721. During the 19th century, an Estonian nationalist movement arose which by the early 20th century sought independence.

After the 1917 Bolshevik Revolution and the advance of German troops into Russia, Estonia declared independence on 24 February 1918. But after the German surrender to the Western powers in November 1918, Russian troops attempted to move back into Estonia. The Estonians, however, pushed out the Soviet forces by April 1919, and the following year Soviet Russia recognized the Republic of Estonia.

The Nazi-Soviet Pact of 1939 assigned Estonia to the Soviet sphere of influence. The Red Army invaded in June 1940 and "admitted" the Estonian Soviet Socialist Republic into the USSR in August 1940. However, Hitler's forces invaded the USSR in June 1941 and took control of Estonia shortly thereafter. The German Army retreated in 1944, and Soviet forces once again occupied Estonia.

Taking advantage of the relatively greater freedom allowed under Mikhail Gorbachev in the late 1980s, an Estonian nationalist movement, the Popular Front, was launched in 1987. Estonia declared its independence from Moscow on 20 August 1991. A new constitution was adopted on 28 June 1992.

With much fanfare, the last Russian tanks and 2,000 troops were removed from Estonia on 17 August 1994, ending 50 years of military presence in Estonia. Russia also announced it would begin dismantling two nuclear reactors within Estonia. Estonia demanded the return of more than 750 sq mi of land that Russia considered part of its territory, but that belonged to Estonia before World War II. When Estonia renewed its claim to those lands, the Russian government began constructing 680 border posts, many of which are guarded by armed soldiers and linked by fences.

One of the worst maritime disasters since World War II occurred on 28 September 1994, when the ferry *Estonia*, en route from Tallinn to Sweden, sank off the coast of Finland, killing about 900 people. Investigators reported that locks on the huge front cargo door of the ferry failed during a storm, letting in a flood of water that caused the ship to sink in only a few minutes.

The 1995 parliamentary vote reflected dissatisfaction among rural inhabitants and pensioners and signaled a change from the vigorous free-market reforms that dominated Estonia's transition from Soviet rule. The results of the election, however, didn't significantly alter Estonia's commitment to a balanced budget, a stable currency, or a good foreign investment climate. Following the March 1995 elections, Tiit Vähi was approved as prime minister, but he and his cabinet resigned in October 1995 amidst a scandal within the administration that involved telephone tapping and the clandestine sales of weapons. President Lennart Meri later appointed a new government, which reinstated Vähi as prime minister. In September 1996 Meri won a second presidential term, al-

LOCATION: 57°30' to 59°40' N; 21°50' to 28°10' E. BOUNDARY LENGTHS: Latvia, 339 kilometers (211 miles); Russia, 294 kilometers (183 miles); total coastline, 3,794 kilometers (2,358 miles).

though the election was turned over to an electoral college after no candidate won the required two-thirds majority in parliamentary balloting in August. Following a no-confidence vote in February 1997, Prime Minister Vähi resigned and was replaced by Mart Siimann, who formed a minority government.

Reformers once again won control of Estonia's parliament in the March 1999 general elections, in which a coalition of center-right parties gained a slim majority, winning 53 out of 101 seats. (However, the left-leaning Center Party won 28 seats, the highest number for a single party.) Mart Laar was named prime minister. The new government was expected to emphasize political reforms as much as economic ones, focusing on the elimination of corruption and inefficiency in the civil service, courts, and police. Since it gained its independence in 1991, Estonia's foreign policy focused on integration with Western Europe, with the specific long-range goals of EU and NATO membership. One of these goals received a boost in 1998 when Estonia was invited by the European Union to begin negotiations toward membership. In December 2002, the EU formally invited Estonia, one of 10 new candidate countries, to join the body as of May 2004. A referendum on Estonia's entry into the EU was held on 14 September 2003, and on 1 May 2004 Estonia became a member of the EU. In November 2002, Estonia was one of seven Central and East European countries to be invited to join NATO, with accession taking place on 29 March 2004. Internally, Estonia still faces the challenge of integrating its minority population of ethnic Russians fully into the nation's public life.

In September 2001 Arnold Rüütel was elected president, succeeding Meri, who was barred by the constitution from seeking a third consecutive term. Rüütel's victory was seen as a reaction to popular dissatisfaction with the government and growing economic problems in small towns and rural areas, among other reasons. However, because none of the presidential candidates received the required two-thirds vote in parliament after three rounds of voting, an electoral college, composed of all members of parliament and 266 local government representatives, elected the president. In January 2002, Laar resigned as prime minister and Siim Kallas took his place. The next presidential election was to take place fall 2006.

Parliamentary elections held on 2 March 2003 resulted in the formation of a coalition government made up of the center-right Res Publica, the right-leaning Reform Party, and the rural party People's Union. Thirty-six-year-old Juhan Parts became prime minister on 10 April. On 24 March 2005, Parts resigned, and President Arnold Rüütel asked Reform Party chairman Andrus Ansip to form a new government. Ansip became prime minister on 12 April, representing the Reform Party, the Center Party, and the People's Union. The next parliamentary elections were scheduled for March 2007.

As of 2005, Estonia had the most advanced information infrastructure of any country in the former Communist Eastern bloc. Around 700,000 of Estonia's approximately 1.4 million people bank online, up from zero in 1997. Citizens use the Internet to access state services and to conduct any number of business transactions, and many people who never owned a landline telephone now rely on wireless phones.

After nearly 10 years of negotiations, in May 2005 Russia and Estonia signed a treaty delimiting their border. In June, the Estonian parliament ratified the border treaty, but introduced an amendment referring to the Soviet occupation, despite warnings from Russia not to do so. Russia reacted by withdrawing from the treaty.

### 13 GOVERNMENT

Estonia adopted a new post-Soviet constitution on 28 June 1992. It declares Estonia a parliamentary democracy with a unicameral parliament. The parliament (Riigikogu) has 101 seats. Members of parliament serve four-year terms. The president (who is elected for a five-year term), prime minister and the cabinet make up the executive branch of government. The president is the head of state while the prime minister is the head of government. Both the parliament and the president are elected by direct universal suffrage of citizens 18 years or older.

### 14 POLITICAL PARTIES

The Independent Communist Party of Estonia split from the Communist Party of the Soviet Union in January 1991. The Pro Patria Party, the Estonian Social Democratic Party, the Christian-Democratic Union of Estonia, the Estonian National Independence Party, and Estonian Green Movement were among the many parties that emerged in recent years. The Popular Front of Estonia, founded in 1988 to unite pro-independence forces, has lost much of its influence and role since the attainment of independence. The non-Estonian, mainly Russian, interests are represented by the Inter-Movement of the Working People of Estonia and the Union of

Work Collectives, both founded in 1988. In addition, a Russian Democratic Movement has emerged that specifically represents the Russian-speaking population of Estonia.

In the parliamentary elections of March 1995, the Coalition Party and Rural Union (made up of four parties: Coalition Party, Country People's Party, Farmer's Assembly, and Pensioners' and Families' League) won 41 seats; Reform Party-Liberals, 19; Center Party, 16; Pro Patria, 8; Our Home is Estonia, 6; Moderates (consisting of the Social Democratic Party and Rural Center Party), 2; and Right-Wingers, 5.

The Pro Patria and the Estonian National Independence Party, which had allied themselves in the 1995 election, joined forces at the end of that year to form the Fatherland Union. In the March 1999 elections, the Fatherland Union and two other parties formed a broader coalition that won a narrow majority in parliament, garnering a total of 53 parliamentary seats (Fatherland Union, 18; Estonian Reform Party, 18; Moderates, 17). However, the party winning the single largest number of seats was the Estonian Center Party, with 28. The remaining seats were distributed as follows: the Estonian Coalition Party, 7; the Estonian Rural People's Union, 7; and the United People's Party, 6.

In the 2 March 2003 elections, the Center Party and Res Publica, a new political party, each won 28 seats in the Riigikogu; the Reform Party took 19 seats; the People's Union won 13; the Fatherland Union took 7 seats; and the Moderates won 6. The Res Publica, Reform, and People's Union parties formed a coalition government, securing 60 of 101 seats in parliament. The next parliamentary elections were to be held March 2007.

### 15 LOCAL GOVERNMENT

Estonia's major administrative divisions are 15 counties (*maakond*). The counties are further subdivided into municipalities—rural communes (*vald*) and urban municipalities (*linn*). Since October 2005, there were 227 municipalities in Estonia, 34 of them urban and 193 of them rural.

While only citizens are allowed to vote in Estonia's national elections, residents of Estonia, including noncitizens, are allowed to vote in local elections. Noncitizens, however, cannot be candidates in local (or national) elections. Office-holders serve three-year terms. The last local elections were held on 16 October 2005. In the 2005 local elections, some 800,000 Estonians, or 80% of the eligible electorate, had access to a new e-voting system via the Internet, the largest run by any European country. In the end, only 1% of voters cast their vote online.

### 16 JUDICIAL SYSTEM

The 1992 constitution established a court system consisting of three levels of courts: (1) rural, city, and administrative courts, (2) circuit courts of appeal, and (3) the National Court. The National Court engages in constitutional review of legislation. At the rural and city courts, the decisions are made by a majority vote with a judge and two lay members. There are 2 city courts, 14 county courts, and 4 administrative courts in Estonia (20 courts of first instance). There are three circuit courts of appeal, at Tallinn and Tartu, and the Viru circuit court located in the city of Jõhvi. The National Court has 19 judges.

The constitution provides for an independent judiciary and the judiciary is independent in practice. The Chief Justice of the Na-

tional Court, nominated by the president and confirmed by the Riigikogu, nominates National Court judges, whose nominations need to be confirmed by the Riigikogu. The Chief Justice of the National Court also nominates the lower court judges who are then appointed by the president. Judges are appointed for life. The 1992 interim criminal code abolishes a number of political and economic crimes under the former Soviet Criminal Code. A new criminal procedural code was adopted in 1994.

The constitution provides for a presumption of innocence, access to prosecution evidence, confrontation and cross-examination of witnesses, and public trials.

## 17 ARMED FORCES

Active armed forces numbered 4,934 in 2005, with some 24,000 reservists. The Army maintained four defense regions with 3,429 soldiers. The Navy numbered 331 active members and the Air Force had 195 active personnel. The Estonian Border Guard numbered 2,600 and also served as the coast guard. The estimated defense expenditure in 2005 was \$207 million. As of 2005, Estonian forces were deployed in Afghanistan, Bosnia, Iraq, Serbia and Montenegro, and as United Nations observers in the Middle East.

## 18 INTERNATIONAL COOPERATION

Estonia was admitted to the United Nations (UN) on 17 February 1991 and belongs to several specialized UN agencies, such as the FAO, IAEA, World Bank, ICAO, ILO, IMF, IMO, UNESCO, and the WHO. The country is also a member of the OSCE, the European Bank for Reconstruction and Development, the Council of the Baltic Sea States, the Council of Europe, the European Investment Bank, and NATO. Estonia joined the WTO in 1999 and the European Union in 2004. It has observer status in the OAS and is an affiliate member of the Western European Union.

Estonia belongs to the Australia Group and the Nuclear Suppliers Group (London Group). In environmental cooperation, Estonia is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Convention on Climate Change.

## 19 ECONOMY

Estonia has one of the strongest economies among the former Soviet republics. Its mineral resources include 60% of former Soviet oil shale deposits, as well as phosphates. Light manufacturing dominates industry, with major sectors that include textiles, furniture, and electronics. Agriculture is based mainly on rearing livestock, but dairy farming is also significant. Estonia is self-sufficient in electrical power.

The economy started to revive after the 1992 monetary reform, reintroducing the preoccupation quasi-convertible Estonian kroon. Estonia's economy quickly became one of the strongest post-Communist economies in eastern Europe as successive governments remained committed to the implementation of market reforms. Growth continued until 1998, when Estonia underwent its first post-Soviet economic downturn. GDP growth slowed to 4% in 1998 and declined to -1.1% in 1999. The economy began to improve the following year.

Estonia's economic progress is linked to its liberal foreign trade regime (there are few tariffs or nontariff barriers), effective bank-

ruptcy legislation, and swift privatization. State subsidies were in the process of being abolished in the early 2000s, and all of these measures helped to stabilize and restructure the economy. As a result, Estonia received high levels of foreign direct investment. Although the global economy was in a downturn in the early 2000s, Estonia was able to maintain GDP growth rates of around 5%, higher than many other European countries. Major growth sectors include information technology, transportation, and construction services. Estonia was formally invited to join the EU in December 2002, and was finally accepted in May 2004. The country became a member of the WTO in 1999.

The GDP growth rate in 2004 was 6.2%, up from 5.1% in 2003; in 2005, the economy was expected to expand by 6.0%. The inflation rate has been fluctuating, but, at 3.0% in 2004, it was well under control and did not pose any problems to the economy. Unemployment was, at 9.6%, fairly high, although on a downward trend (in 2000 the unemployment rate was 13.6%); in 2005, unemployment was expected to drop further to 9.2%. Electronics and telecommunications are two of the main growth sectors, but Estonia is strongly dependent on the economic performance of three of its main trade partners: Finland, Sweden, and Germany.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Estonia's gross domestic product (GDP) was estimated at \$21.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$16,400. The annual growth rate of GDP was estimated at 7.1%. The average inflation rate in 2005 was 4%. It was estimated that agriculture accounted for 4.1% of GDP, industry 29.1%, and services 66.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$40 million or about \$30 per capita and accounted for approximately 0.4% of GDP. Foreign aid receipts amounted to \$85 million or about \$62 per capita and accounted for approximately 1.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Estonia totaled \$5.14 billion or about \$3,800 per capita based on a GDP of \$9.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.5%. In 2001 it was estimated that approximately 41% of household consumption was spent on food, 24% on fuel, 8% on health care, and 4% on education. It was estimated that in 1995 about 8.9% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Estonia's workforce was estimated at 670,000. As of 2003, agriculture accounted for 6.2% of the workforce, with 32.5% engaged in industry, and 61.3% in the services sector. Unemployment was estimated at 9.2% in 2005.

The Estonian constitution guarantees the right to form and freely join a union or employee association. The Central Orga-

nization of Estonian Trade Unions (EAKL) was founded in 1990 as a voluntary and culturally Estonian organization to replace the Estonian branch of the Soviet labor confederation. In 2002, the EAKL claimed 58,000 members. A rival union, the Organization of Employee Unions, split off from the EAKL in 1993, and claimed about 40,000 members in 2001. In 2005, about 10% of the Estonian workforce was unionized. Workers had the right to strike, and of collective bargaining, both of which were freely practiced. About 15% of Estonia's workforce were covered under collective bargaining agreements as of 2005.

The statutory minimum employment age is 18, although children aged 15 to 17 years may work with parental permission. Children between the ages of 13 and 15 can also work, but in addition to parental or guardian approval, they must also have the approval of a labor inspector. Minors under the age of 18 are also prohibited from performing dangerous and hazardous work. The number of hours minors can work and when they can work are also limited. The standard workweek is legally set at 40 hours with a mandatory 24-hour rest period. The monthly minimum wage was about \$218 in 2005, with around 94% of the nation's workforce earning more than the minimum rate.

## 22 AGRICULTURE

In 2003, agricultural lands covered 561,000 hectares (1,386,000 acres), or 13.2% of Estonia's land area. During the Soviet period, forced collectivization reduced the share of labor in agriculture from 50% to less than 20%. By 2003, however, there were 36,859 private farms, with an average size of 21.6 hectares (53.4 acres). Agriculture accounted for 15.1% of GDP in 1991 and 4% in 2003.

Principal crops in 2004 included potatoes, 170,900 tons; barley, 289,500 tons; wheat, 184,700 tons; rye, 19,700 tons; and oats, 75,200 tons. In 2004 agricultural products accounted for 5.1% of exports and 8.4% of imports; the agricultural trade deficit was \$430.8 million that year.

## 23 ANIMAL HUSBANDRY

Over 10% of the total land area is meadow or pastureland. In 2005, there were 340,100 pigs, 249,000 head of cattle, 38,800 sheep, and 2,162,000 chickens. Meat production is well developed and provides a surplus for export. In 2005, 15,300 tons of beef, 40,000 tons of pork, and 15,000 tons of poultry were produced. That year, Estonia's dairy cows produced 650,000 tons of milk. Cattle breeding was the main activity during the Soviet era, and production quotas were set extremely high, which required massive imports of feed. Pork production has risen in recent years to offset the decline in the total cattle herd. The wool clip in 2005 was 80 tons.

## 24 FISHING

Estonia's Baltic and Atlantic catch is marketed in the former Soviet Union, in spite of its own need for quality fish products. The fishing industry is seen as an important way to acquire access to the world market, but scarcity of raw materials currently limits its development. The total catch in 2003 was 80,580 tons. The total value of fisheries exports increased from \$79.7 million in 2000 to \$142.1 million in 2003. The two major species of the 2003 catch

were Atlantic herring and European sprat, each of which accounted for 37%.

## 25 FORESTRY

The government estimated that some 45% of the land area was covered by forests and woodlands in 1999. The production of wood and wood products is the second-largest industry after textiles; two cellulose plants (at Tallinn and Kehra) use local raw material, but have caused significant environmental problems. There is also a fiberboard processing plant (for furniture making) at Püssi. Roundwood production amounted to 10.2 million cu m (360 million cu ft) in 2004; when exports of 3.4 million cu m (120 million cu ft) of roundwood were valued at \$131.3 million. Total forestry exports in 2003 amounted to \$533.3 million; imports, \$205.7 million.

## 26 MINING

Oil shale was the primary mineral of importance. The country also produced cement, clays, nitrogen, peat, sand and gravel, and industrial silica sand. Production figures for 2003 were: clays for brick, 134,900,000 cu m, down from 149,000,000 cu m in 2002; clays for cement, 27.3 million cu m, up from 19.0 million cu m in 2002; and sand and gravel, 4.470 million cu m. Phosphate quarrying at the Maardu deposit ceased because of environmental concerns.

## 27 ENERGY AND POWER

Estonia gets most of its energy from oil shale, found in abundance in the northeastern region of the country. Oil shale is burned to produce electricity and accounts for approximately 6,000 barrels per day of oil production in 2004. With domestic consumption in that year totaling 60,000 barrels per day, Estonia had to import the difference primarily from Russia. There are no natural gas reserves in Estonia, which relies on imports from Russia. Natural gas consumption in 2004 stood at 50 billion cu ft, with imports accounting for all of it.

Estonia is however, a net exporter of electricity, sending its surplus power to parts of northwest Russia and to Latvia. In 2004, a total of 8.9 billion kWh was generated, most of it from Estonia's oil shale-fired plants at Narva. Domestic consumption of electricity for that year totaled 6.4 billion kWh, with generating capacity put at 3.3 GW. Surplus electricity from the two plants is exported to Latvia and the Russian Federation.

## 28 INDUSTRY

Estonian industrial production focuses on shipbuilding, electric motors, furniture, clothing, textiles, paper, shoes, and apparel. Extractive industries include oil shale, phosphate, and cement production. According to the US Central Intelligence Agency, industry accounted for 29% of GDP in 2001. In 1991, 26.6% of industrial output was accounted for by the food industry, 25.9% by light industry, 12.7% by machine-building and metalworks, 10.3% by the timber industry, and 8.5% by chemicals. The textile mills of Kreenholmi Manufacturer in Narva and Bälți Manufacturer in Tallinn are the country's largest industrial enterprises. Construction was slated to be a principal growth sector in 2002.

Between 1990 and 1995, industrial output shrank by an average of 14.9% per year, but most of the decline occurred in the years

immediately after independence; by 1994, industrial production was on the rise. In 1995, value added by industry accounted for 28% of GDP and has remained stable since.

The industrial production growth rate was 5% in 2000, lower than the GDP growth rate (7.8%), and an indication of an under-performing industrial sector. In 2004, industry had a 28.9% share in the GDP; agriculture made up a small part of the economy (4.1%), while services was the best performing sector, with a 67% share in the GDP. Current industries include engineering, electronics, wood and wood products, textiles, information technology, and telecommunications.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The Academy of Sciences, founded in 1938, has divisions of astronomy and physics, informatics and technical sciences, and biology, geology, and chemistry, and research institutes devoted to biology, ecology, experimental biology, zoology and botany, environmental biology, marine sciences, astrophysics and atmospheric physics, chemical physics and biophysics, chemistry, geology, physics, computer research and design, cybernetics, and energy. Other research institutes in the country are devoted to preventive medicine and oil shale research. Tallinn Technical University (founded in 1918) offers science and engineering degrees. The University of Tartu, founded in 1632, has faculties of biology and geography, mathematics, medicine, and physics and chemistry, as well as an institute of general and molecular pathology. Estonian Agricultural University was founded in 1951. In 1987–97, science and engineering students accounted for 27% of university enrollment.

In 2002, expenditures for research and development (R&D) totaled \$134.267 million, or 0.81% of GDP. Of that total, 53.8% came from government sources, while business provided 29.2%, followed by foreign sources at 14.4%, higher education at 2.4% and private nonprofit institutions at 0.2%. In that same year Estonia had 2,253 researchers and 386 technicians per million people that were actively engaged in R&D. In 2002 high technology exports by Estonia totaled \$375 million, accounting for 12% of manufactured exports.

## 3<sup>0</sup> DOMESTIC TRADE

Before the collapse of the Soviet Union, Estonia's domestic trade was underdeveloped by international standards. Most trading companies were owned either by the state or by cooperatives. In recent years, many shops have been privatized or municipalized, new private shops established, and the assortment of goods widened. By 1992, there were 4,026 shops in Estonia.

Open-air markets control a large segment of domestic food sales. Market prices are usually lower than those in grocery stores, making it difficult for them to compete. Retail sales of food products amounted to \$441 million in 1995.

## 3<sup>1</sup> FOREIGN TRADE

During the Soviet era, Estonia's foreign trade was characterized by large net imports, 80–85% of which came from other Soviet republics, which were also the destination of 95% of Estonian exports. Beginning in 1992, the value of exports began to surpass that of imports, and the share of trade with other former Soviet

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

republics diminished. In 2000, Estonia's exports totaled \$3.8 billion, 69% of which went to EU nations.

The most important export industry in Estonia is electronics (24.5%). Cork, wood, and their manufactures account for the second-largest consolidated group of commodity exports (11.9%). Other important exports include apparel (5.3%), textiles (4.4%), and furniture (3.8%).

In 2004, exports reached \$5.7 billion (FOB—Free on Board), while imports grew to \$7.3 billion (FOB). The bulk of exports went to Finland (23.1%), Sweden (15.3%), Germany (8.4%), Latvia (7.9%), Russia (5.7%), and Lithuania (4.4%). Imports included machinery and equipment (33.5%), chemical products (11.6%), textiles (10.3%), foodstuffs (9.4%), and transportation equipment (8.9%), and mainly came from Finland (22.1%), Germany (12.9%), Sweden (9.7%), Russia (9.2%), Lithuania (5.3%), and Latvia (4.7%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Since independence, Estonia has dismantled a Soviet-era system of trade barriers and tariffs to become one of the world's most free-trading nations. In the early 1990s, exports to the West quadrupled, helping to generate a strong surplus in the current account. By the late 1990s and early 2000s, however, the balance of trade on goods became generally negative. Services and capital inflows produced income in the form of foreign direct investment, which remained strong.

The US Central Intelligence Agency (CIA) reported that in 2002 the purchasing power parity of Estonia's exports was \$3.4 billion while imports totaled \$4.4 billion resulting in a trade deficit of -\$1 billion.

The International Monetary Fund (IMF) reported that in 2001 Estonia had exports of goods totaling \$3.34 billion and imports totaling \$4.13 billion. The services credit totaled \$1.64 billion and debit \$1.07 billion.

Exports of goods reached \$6.0 billion in 2004, and were expected to grow to \$7.6 billion in 2005. Imports were expected to reach \$9.3 billion in 2005, up from \$7.9 billion in 2004. The resource balance was consequently negative, reaching -\$1.9 billion in 2004, and -\$1.7 billion in 2005. The current account balance was also

negative, at -\$1.4 billion in 2004, and an expected -\$1.5 billion in 2005. Foreign exchange reserves (excluding gold) grew to \$1.8 billion in 2004, covering less than three months of imports.

**3<sup>3</sup> BANKING AND SECURITIES**

All links with the Soviet budget and financial system were severed in 1991, and today Estonia has the strongest and most advanced banking system in the Baltic States. In January 1990 the Bank of Estonia was created, which merged two years later with the Estonian branch of Gosbank (the Soviet State Bank) to form the country's new central bank. In December 1988 the authorities established the first Estonian commercial bank, the Tartu Commercial Bank, and by September 1991 there were 20 commercial banks responsible for 27% of total credit extended by banks. The commercial banks include the Bank of Tallinn (1990), Estonian Commercial Bank of Industry (1991), Cand Bank of Estonia (1990), and South Estonian Development Bank. Savings banks include the Estonian Savings Bank, a bank with 432 branches.

Like those of other Eastern European countries, Estonia's banking sector has suffered from an excessive number of banks: there were 43 by the end of 1992. Consolidations took place in 1993, with the banks being merged in Eesti Hispank (Estonian Unified Bank). As of 2001 there were 7 licensed commercial banks in Estonia. The merger agreement between the Union Bank of Estonia and the North Estonian Bank was signed in January 1997. With combined assets of EEK4.97 billion (\$414 million), the merger pushed Union Bank of Estonia (the name of the new entity) from third to second place in terms of assets. Hansabank remained Estonia's largest bank, especially after its merger with Hoiupank (Saving Bank). In 1999, SwedBank bid successfully for a majority interest in Hansabank.

Since independence, Estonia's banks have played a major role in fostering a climate of economic stability. In 1997, they took the initiative in tightening credit in the wake of the Asian finan-

cial crisis. This action, which resulted in a rise in interest rates, checked fears of a too-rapid economic expansion, which would bring about inflation. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.92%.

There are two stock exchanges in Estonia: the Estonian Stock Exchange and the Tallinn Stock Exchange, inaugurated in May 1996. As of 2004, there were 13 companies listed on the Tallinn Stock Exchange, which had a capitalization that year of \$6.203 billion. The TALSE rose 57.1% in 2004 from the previous year to 448.8.

**3<sup>4</sup> INSURANCE**

Since Estonia regained its independence, it has sought to develop a system of health insurance involving the decentralization of medical care. Third-party automobile liability insurance is compulsory.

**3<sup>5</sup> PUBLIC FINANCE**

The new government exercises fiscal responsibility characterized by a strictly balanced budget. No transfers or preferential credits are given to public enterprises, and governmental borrowing from the central bank is forbidden. In January 1996 Estonia instituted a centralized treasury system for managing the government's budget.

The US Central Intelligence Agency (CIA) estimated that in 2005 Estonia's central government took in revenues of approximately \$5.1 billion and had expenditures of \$5 billion. Revenues minus expenditures totaled approximately \$109 million. Public debt in 2005 amounted to 3.8% of GDP. Total external debt was \$10.09 billion.

**Public Finance – Estonia (2001)**

(In millions of krooni, central government figures)

<b>Revenue and Grants</b>	<b>29,896</b>	<b>100.0%</b>

(...) data not available or not significant.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund (IMF) reported that in 2001, the most recent year for which it had data, central government revenues were EEK29,896 million and expenditures were EEK29,237 million. The value of revenues was us\$1,710 million and expenditures us\$1,673 million, based on an exchange rate for 2001 of us\$1 = EEK17.478 as reported by the IMF. Government outlays by function were as follows: general public services, 19.4%; defense, 5.0%; public order and safety, 7.2%; economic affairs, 9.5%; health, 16.3%; recreation, culture, and religion, 4.0%; education, 7.3%; and social protection, 31.4%.

### 36 TAXATION

Estonia does not tax the income of resident or permanently established nonresident companies. Instead, they are subject only to a tax on distributions (dividends, fringe benefits, gifts, profit distributions, and those payments not related to the payer's business) to resident legal entities, resident and nonresident persons, and nonresident companies. In 2006, those subject are taxed at 22%. A further reduction to 20% is slated to take effect in 2007. Interest payments are subject to a 24% withholding tax that is paid to resident persons, and on that portion of interest paid to nonresident persons or companies that is over the market interest rate. Royalty payments made to nonresident firms and persons, are subject to a 15% withholding tax. Resident persons and companies are subject to a higher, 24% withholding rate. Generally, capital gains received by resident persons and companies are taxed as income. For companies, the gains are taxed as part of the distribution, when it is made. Individuals do not pay a capital gains tax on the sale of their primary residence.

Personal income taxes, in 2006, are assessed at the same flat rate of 22% as corporate profits. Some school fees, living allowances, and interest on loans for the purchase of residential housing are deductible from taxable income. A withholding tax of 22% is imposed on dividends paid to nonresidents that hold less than 20% of the share capital in the paying company. However, Estonia has double tax treaties with at least 22 countries in which withholding taxes are eliminated or substantially reduced. A new Law on Social Tax came into effect in January 1999. The rate of social tax is 33% payable by employers and self-employed individuals. There are relatively few allowable deductions from taxable income in the Estonian tax code. The annual land tax varies from 0.1–2.5% of assessed value.

Main indirect tax is a value-added tax (VAT) set at a with a standard rate of 18% by a new Law on VAT passed in July 2001 and effective in January 2002. Reduced rates of 0% and 5% apply to some goods and services, including a 0% rate on exported goods and a specific list of exported services. Excise duties are levied on tobacco, alcoholic beverages, motor fuel, motor oil, and fuel oil (but not liquefied or compressed gas), motor vehicles, and packages (imposed to encourage recycling of package material). There is a gambling tax, and a customs processing fee on each customs declaration submitted. Rights of recording are taxed at 0.4%. Local governments have the authority to impose taxes and municipal taxes range from 1–2%.

### 37 CUSTOMS AND DUTIES

Estonia has a liberal trade regime, with few tariff or nontariff barriers. Among the few items that have tariffs placed on them are

agricultural goods produced in countries that are not among Estonia's preferred trading partners. There is also a value-added tax (VAT) levied ad valorem on everything except a few select commodities, including medicines and medical equipment, funeral equipment, and goods for nonprofit purposes.

### 38 FOREIGN INVESTMENT

Estonia has successfully attracted a large number of joint ventures with Western companies, benefiting from a well-developed service sector and links with Scandinavian countries. The foreign investment act passed by the Supreme Council in September 1991 offers tax relief to foreign investors. Property brought into Estonia by foreign investors as an initial capital investment is exempt from customs duties, but is subject to value-added tax. A foreign investor is legally entitled to repatriate profits after paying income tax.

In 1998, foreign direct investment (FDI) inflows peaked at \$580.6, up from \$266.7 million in 1997. FDI inflow averaged \$346 million in 1999 and 2000, but increased to \$538 million in 2001. Estonia's share of world FDI flows from 1998 to 2000 were 2.3 times its share of world GDP, making it 16th among the 140 countries ranked on FDI performance by UNCTAD.

Industry accounts for 46% of the total foreign investment, primarily in the pulp and paper, transportation, and services sectors. Wholesale and retail trade accounts for 27% of foreign investment; transport, 14%. Estonian agribusiness is an area of growing interest to foreign investors.

During the past decade, Estonia has been one of the best performing Central and Eastern European countries in terms of foreign investments attracted. Numerous foreign companies have considered Estonia to be an attractive market, and today companies partly or wholly owned by foreign nationals make up one-third of the country's GDP, and over 50% of its exports. In 2004, total capital inflows rose to \$850 million, with Sweden and Finland being the largest investors.

### 39 ECONOMIC DEVELOPMENT

After passing an ownership act in June 1990, the government began a privatization program at the beginning of 1991. Most of the nearly 500 state-owned companies have since passed into new hands. The Estonian Privatization Agency (EPA) was established to oversee major privatization programs. In late 1995, EPA announced privatization plans for Estonian Railways, Estonian Energy, Estonian Oil Shale, Estonian Telekom, and Tallinn Ports. Estonian Gas, Estonian Tobacco, and Estonian Air were privatized in 1996. As of 2002, only the port and the main power plants remained state-controlled.

Estonia has excellent intellectual property laws, has enacted modern bankruptcy legislation, and has seen the emergence of well-managed privately held banks. The constitution mandates a balanced budget, and the climate for foreign investment is positive. In 2003, the economy was vulnerable, and the size of the current account deficit was a particular concern. The government was urged by the International Monetary Fund (IMF) to pursue a fiscal surplus policy, to prepare for membership in the European Union (EU). The country joined the World Trade Organization (WTO) in 1999 and the EU in 2004.

The economy expanded at healthy rates in the first half of 2005, and is expected to continue the trend for a couple of more years.

This growth was fueled by increased private consumption and fixed investment. The export sector has been another sector that has registered high growth rates, and it is predicted to out-perform the import sector in coming years.

#### **40 SOCIAL DEVELOPMENT**

Social security programs were originally introduced in 1924. After independence from the Soviet Union, new social insurance systems were introduced. The current law was implemented in 2003. Pension systems are funded by contributions from employers and the government. Retirement is set at age 63 for men and 59 for women, and is set to increase to age 63 for both men and women. Other social welfare programs include worker's compensation, unemployment assistance, survivorship payments, maternity and sickness benefits, and family allowances. There is a family allowance for all children under 17 years of age.

Women constitute slightly more than half the work force, and in theory are entitled to equal pay. Although women on average achieve higher educational levels than men, their average pay was lower. Sexual harassment is not officially reported. Domestic violence is a widespread problem and is grossly underreported; spousal abuse is not a criminal offense. Public attention is focused increasingly on the welfare of children in the wake of family crises caused by economic dislocation. Educational issues were aggressively addressed in 2004.

Ethnic Russians sometimes face discrimination in housing and employment. Estonian language requirements make it difficult for many of them to find public sector employment. Citizenship has not automatically been extended to ethnic Russians living in Estonia, and a significant proportion of the population remain non-citizens. Discrimination based on race, sex, nationality, or religion is illegal under the constitution. Prison conditions remain poor, and police brutality is commonly reported.

#### **41 HEALTH**

A major reform of the primary care system was implemented in 1998, making family practitioners independent contractors with combined private and public-financed payment. In 2000, there was an estimated fertility rate of 1.2. The maternal mortality rate was 50 maternal deaths per 100,000 live births as of 1998. In 2005, the infant mortality rate was an estimated 7.87 per 1,000 and the overall death rate as of 2002 was 13.4 per 1,000 people. Life expectancy in 2005 averaged 71.77 years. In 1999, Estonia immunized children up to one year old against diphtheria, pertussis, and tetanus, 95%; and measles, 92%.

The number of hospitals in Estonia decreased significantly during the 1990s, with the number of available beds cut by one-third between 1991 and 1995. As of 1998, there were 78 hospitals, with a total of 10,509 beds. As of 2004, there were an estimated 316 physicians and 629 nurses per 100,000 people. The country's only medical school is the Tartu University Medical Faculty.

The HIV/AIDS prevalence was 1.10 per 100 adults in 2003. As of 2004, there were approximately 7,800 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

#### **42 HOUSING**

According to 2000 census figures, the total number of dwellings in the country was at about 628,615. Of these 617,399 were described as conventional dwellings; 424,769 were apartments and 171,086 were single-family, detached dwellings. About 85% of all conventional dwellings were owned by private citizens residing in Estonia. About 3.8% of all conventional dwellings are owned by housing associations. Only about 3.7% of all conventional dwellings were built in 1991 or later; 59% of the housing stock was built during the period 1961–1990. The housing costs of low-income families are subsidized.

#### **43 EDUCATION**

Prior to the 1990s, the Soviet system of education was followed. This was modified after Estonia's separation from the USSR. Primary education (basic school) covers nine years. This is followed by a general secondary school (gymnasium) or a vocational school, both of which cover a three-year program. Students in vocational schools may choose to continue in an advanced program of another three years. The academic year runs from September through June. The primary languages of instruction are Estonian, Russian, and English.

In 2001, most children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 95% of age-eligible students. The same year, secondary school enrollment was about 88% of age-eligible students. Most students complete their primary education. The student-to-teacher ratio for primary school was at about 14:1 in 2003; the ratio for secondary school was about 10:1.

There are two well-known universities: the University of Tartu, founded in 1632, and the Talliva Technical University, founded in 1936, which mainly offers engineering courses. In 2003, about 66% of the tertiary age population were enrolled in some type of higher education program; with 50% for men and 83% for women. The adult literacy rate for 2004 was estimated at about 99.8%.

As of 2003, public expenditure on education was estimated at 5.7% of GDP.

#### **44 LIBRARIES AND MUSEUMS**

The National Library of Estonia in Tallinn, founded in 1918, contains over 3.2 million volumes. Other important libraries located in Tallinn include the Estonian Technical Library (11.8 million volumes) and the Estonian Academic Library (2.2 million). The Tartu State University Library is the largest academic library with 3.7 million volumes. In 2004, there were 564 public libraries in the country, along with 512 school libraries and 75 research and special libraries.

The Estonian History Museum in Tallinn was established in 1864. It contains 230,000 exhibits that follow the history of the region's people from ancient times to the present. The Estonian National Museum in Tartu, established in 1909, features exhibits about the living conditions of Estonians. Also in Tallinn is the Art Museum of Estonia, the Estonian Open Air Museum, the Estonian Theater and Music Museum, and the Tallinn City Museum. Tartu University houses a Museum of Classical Antiquities.

## 45 MEDIA

Though the telecommunications system has had recent improvements in the form of foreign investment through business ventures, there are still thousands of residents on waiting lists for service lines, with the average wait for service at about 1.4 years in 2000. In 2003, there were an estimated 341 mainline telephones for every 1,000 people; about 4,500 people were on a waiting list for telephone service installation. The same year, there were approximately 777 mobile phones in use for every 1,000 people.

Estonian Radio began regular broadcasting in 1926. In 1937, the highest radio tower in Europe (196.7m) was built in Türi. In the 1970s, Estonian Radio was the first in the former Soviet Union to carry advertising. Estonian television began broadcasting in 1955, and started color broadcasts in 1972. It broadcasts on four channels in Estonian and Russian. As of 2001, there were 98 FM radio stations and 3 television stations. In 2003, there were an estimated 1,136 radios and 507 television sets for every 1,000 people. About 117 of every 1,000 people are cable subscribers. Also in 2003, there were 440.4 personal computers for every 1,000 people and 444 of every 1,000 people had access to the Internet. There were 113 secure Internet servers in the country in 2004.

Journalism was subject to varying degrees of censorship from the Russian occupation in 1940 until the late 1980s. The most popular daily newspapers (with 2002 circulation figures) are *Noorte Haal* (*The Voice of Youth*, 150,000), *Postimees* (*Postman*, 59,200), *Paevaleht* (*The Daily Paper*, 40,000), and *Rahva Haal* (*The Voice of the People*, 175,000). The most widely read weeklies (with 1995 circulation figures) are the *Maaleht* (*Country News*, 50,000) and the *Eesti Ekspress* (*Estonian Express*, 55,000).

Estonia has an active publishing industry, although it faced economic difficulties in the early 1990s. The ISBN code has been used in Estonia since 1988. There were 2,291,000 book titles published in 1994.

The government is said to respect constitutional provisions for free expression. Foreign publications are widely available and private print and broadcast media operate freely.

## 46 ORGANIZATIONS

The Chamber of Commerce and Industry of the Republic of Estonia promotes trade and commerce with its neighbors. Also, there is a chamber of commerce in Tartu. Professional societies and trade unions have developed for a number of careers.

Research and educational organizations include the Estonian Academy of Sciences and the Estonian Medical Association. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

The Estonian Institute, established in 1989, promotes the appreciation of Estonian culture abroad. *Ars Baltica* is a multinational group based in Vilnius that promotes appreciation for regional arts and culture.

Most student organizations belong to the umbrella organizations of the Federation of Estonian Student Unions or the Federation of Estonian Universities. Other youth organizations include the Estonian Green Movement, YMCA/YWCA, Junior Chamber, the Estonian Scout Associations, and the Girl Guides. In 1989

Estonian sports were reorganized and the Soviets reduced their control of Estonia's sports system. In the same year the National Olympic Committee was restored. Other sports associations have since formed, including groups for wind surfing, yachting, Frisbee, and football (soccer). The Estonian Association of University Women promotes educational and professional opportunities for women.

The Estonian Institute for Human Rights monitors actions concerning civil rights and offers legal aid and information to the public. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. There is a national chapter of the Red Cross Society.

## 47 TOURISM, TRAVEL, AND RECREATION

Visitors are drawn to the country's scenic landscapes, Hanseatic architecture, music and dance festivals, regattas, and beach resorts. The ancient town of Tallinn, noted for its architectural preservation, is a major tourist attraction and is linked by regular ferries to Helsinki and Stockholm.

There were 3,377,837 foreign arrivals in Estonia in 2003, almost 61% of whom came from Northern Europe. Tourist receipts totaled \$886 million. The 12,445 hotel rooms with 27,487 beds had an occupancy rate of 47%. The average length of stay was two nights.

In 2005, the US Department of State estimated the daily expenses in Tallinn at \$210.

## 48 FAMOUS ESTONIANS

Lennart Meri (b.1929), writer, filmmaker, and historian, became president of Estonia in 1992 and won a second term in 1996. He left office in 2001, and was succeeded by Arnold Rüütel (b.1928). Writer Friedrich Reinhold Kreutzwald (1803–1882) wrote the epic *Kalevipoeg* (*Son of Kalev*), which was published by the Estonian Learned Society in 1857–61 and marked the beginning of Estonian national literature.

The revolution of 1905 forced many Estonian writers to flee the country. In 1906 a stable government was established in Estonia and a literary movement took hold, Birth of Young Estonia. The movement was led by poet Gustav Suits (1883–1956). He fled to Finland in 1910 but returned after the Russian Revolution of 1917. Later, Suits became a professor of literature at Tartu University. His fellow writers and poets between the revolution of 1917 and 1940 included Friedbert Tuglas (1886–1971) and Marie Under (1883–1980). Writers who fled abroad during World War II include Karl Rumor (1886–1971) and Arthur Adson (1889–1977). Estonian writers banned or exiled during the Soviet period include the playwright Hugo Raudsepp (1883–1952). American Architect Louis Kahn (1901?–1974) was born in Estonia.

## 49 DEPENDENCIES

Estonia has no territories or colonies.

# FINLAND

Republic of Finland  
*Suomen Tasavalta*

**CAPITAL:** Helsinki

**FLAG:** The civil flag contains an ultramarine cross with an extended right horizontal on a white background.

**ANTHEM:** *Maamme* (in Swedish, *Vårt land*; *Our Land*).

**MONETARY UNIT:** The euro replaced the markkaa as the official currency in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; May Day, 1 May; Independence Day, 6 December; Christmas, 25–26 December. Movable holidays include Good Friday, Easter Monday, Whitsun, and Midsummer Day (late June). Epiphany, Ascension, and All Saints' Day are adjusted to fall always on Saturdays.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Part of Fenno-Scandia (the Scandinavian Peninsula, Finland, Karelia, and the Kola Peninsula), Finland has an area of 337,030 sq km (130,128 sq mi), of which 31,560 sq km (12,185 sq mi) is inland water. Comparatively, the area occupied by Finland is slightly smaller than the state of Montana. Its length, one-third of which lies above the Arctic Circle, is 1,160 km (721 mi) N–S; its width is 540 km (336 mi) E–W.

Finland borders on Russia to the E, the Gulf of Finland to the SE, the Baltic Sea to the SW, the Gulf of Bothnia and Sweden to the W, and Norway to the NW and N, with a total land boundary of 2,628 km (1,629 mi) and a coastline of about 1,126 km (698 mi), excluding islands and coastal indentations.

Finland's capital, Helsinki, is located on the country's southern coast.

## <sup>2</sup>TOPOGRAPHY

Southern and western Finland consists of a coastal plain with a severely indented coastline and thousands of small islands stretching out to the Åland Islands. Central Finland is an extensive lake plateau with a majority of the country's 60,000 lakes; 24.5% of the area of Mikkelin Province is water.

Northern Finland is densely forested upland. The highest elevations are in the Norwegian border areas; northwest of Enontekiö rises Haltia, a mountain 1,328 m (4,357 ft) above sea level. Extensive, interconnected lake and river systems provide important natural waterways.

## <sup>3</sup>CLIMATE

Because of the warming influence of the Gulf Stream and the prevailing wind patterns, Finland's climate is comparatively mild

for the high latitude. During the winter, the average temperature ranges from -14°C to -3°C (7–27°F), while summer mean temperatures range from 13–18°C (55–65°F). Snow cover lasts from about 90 days in the Åland Islands to 250 days in Enontekiö. Average annual precipitation (including both rain and snow) ranges from 40 cm (16 in) in northern Finland to 71 cm (28 in) in southern Finland.

## <sup>4</sup>FLORA AND FAUNA

Forests, chiefly pine, spruce, and birch, are economically the most significant flora. There are more than 1,100 native species of higher plants; flora is richest in southern Finland and the Åland Islands. Of 22,700 species of fauna, more than 75% are insects. At least 60 species of mammals are native to Finland. Fur-bearing animals (otter, marten, ermine) are declining in number, while elk, fox, and beaver have increased. Of some 248 species of breeding birds, the best known is the cuckoo, the harbinger of spring. Of some 66 species of freshwater fish, 33 have some economic importance; in fresh waters, the perch, walleyed pike, great northern pike, and others are plentiful. Salmon remains the favorite of fly rod enthusiasts.

## <sup>5</sup>ENVIRONMENT

Finland's main environmental issues are air and water pollution, and the preservation of its wildlife. Finland's principal environmental agency is the Ministry of the Environment, established in 1983. Beginning in 1987, environmental protection boards were established for every community with more than 3,000 inhabitants. To preserve the shoreline profile, 30–50% of the shores suitable for recreational use may not be built on. Industrial pollutants from within the country and surrounding countries affect the purity of both the nation's air and water supplies. In 1996 carbon di-

oxide emissions from industrial sources totaled 59.1 million metric tons. However, the total dropped to about 53.4 million metric tons in 2000. Acid rain from high concentrations of sulfur in the air has damaged the nation's lakes. The nation has 107 cu km of renewable water resources with 85% used for industry and 12% used in domestic and urban areas. In 1993, the Finnish Council of State introduced new approaches to the control of water pollution. Lead-free gasoline was introduced in 1985.

Care is taken to protect the flora and fauna of the forests, which are of recreational as well as economic importance. Closed hunting seasons, nature protection areas, and other game-management measures are applied to preserve threatened animal species. As of 2003, about 9.3% of Finland's total land area was protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 3 types of mammals, 10 species of birds, 1 species of fish, 1 type of mollusk, and 1 species of plant. Endangered species include the Siberian sturgeon, European mink, and the Saimaa ringed seal.

## 6 POPULATION

The population of Finland in 2005 was estimated by the United Nations (UN) at 5,246,000, which placed it at number 110 in population among the 193 nations of the world. In 2005, approximately 16% of the population was over 65 years of age, with another 18% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.2%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 5,427,000. The population density was 15 per sq km (40 per sq mi). Population distribution is uneven, however, with the density generally increasing from northern and inland regions to the southwestern region.

The UN estimated that 62% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.24%. The capital city, Helsinki, had a population of 1,075,000 in that year. Other large cities and their estimated populations include Espoo, 229,443; Tampere, 206,097; Vantaa, 185,429; and Turku, 175,059. Rovaniemi, with a population of 58,500, is considered the capital of Finnish Lapland.

## 7 MIGRATION

From 1866 to 1930, a total of 361,020 Finns emigrated, mostly to the United States and, after the US restriction of immigration, to Canada. After World War II, about 250,000 to 300,000 Finns permanently emigrated to Sweden. This migration ended by the 1980s because of a stronger Finnish economy.

More than 400,000 people fled the Soviet occupation of the Karelia region during World War II. There was also a heavy migration from rural areas, particularly the east and northeast, to the urban, industrialized south, especially between 1960 and 1975. By 1980, 90% of all Finns lived in the southernmost 41% of Finland.

From 1990 to 2000, the number of foreign citizens in Finland increased from 21,000 to 100,000. In April 1990, it was declared that all Finns living within the former Soviet Union, many known as Ingrians, could be considered return migrants to Finland. As of 2003, 25,000 Ingrians had returned to Finland, with approximately the same number awaiting entry interviews. Finland's

long-standing ethnic minorities include Swedes, Sami (indigenous population), Jews, Romani or Gypsies, Tartars, and Russians. However, by 2004 its foreign born population represented over 168 nations. Most of these foreign born were from the former Soviet Union, former Yugoslavia, Sweden, Iraq, Somalia, Turkey, the United States, China, Vietnam, Thailand, and returning Finns. The estimated net migration rate in 2005 was 0.89 migrants per 1,000 population.

During the latter half of the 1990s, Finland received an average of 700–900 asylum seekers per year. Approximately 60% of applicants were granted a residence permit. By July 1999, more than 1,000 Slovak Romas applied for asylum, prompting the Finnish government to implement a temporary four-month visa plan for Slovak citizens. By August 1999, some 993 people had been evacuated from Macedonia to Finland; the evacuees were granted temporary protection. As of 2004, Finland had 11,325 refugees and asylum seekers.

Finland accepts 500 refugees each year for those who need an alternative to their first country of asylum.

## 8 ETHNIC GROUPS

The Finns are thought to be descended from Germanic stock and from tribes that originally inhabited west-central Russia. Excluding the Swedish-speaking minority, there are only two very small non-Finnish ethnic groups: Lapps and Gypsies. Finns constitute about 93.4% of the total population, Swedes make up 5.7%, Russians account for 0.4%, Estonians for 0.2%, Roma for 0.2%, and Sami (Lapps) for 0.1%. Several societies have been established to foster the preservation of the Lappish language and culture.

## 9 LANGUAGES

From the early Middle Ages to 1809, Finland was part of the Kingdom of Sweden, and its official language was Swedish. Finnish did not become an official language until 1863. In 2003, 92% of the population was primarily Finnish-speaking and 5.6% was primarily Swedish-speaking. Swedish-speaking Finns make up more than 95% of the population of the Åland Islands and Swedish-speaking majorities are also found in parts of Uudenmaan, Turun-Porin, and Vaasan provinces. Swedish, the second legal language, is given constitutional safeguards. Only a minority of individuals have another language as their mother tongue, principally Lapp, Russian, English, or German. Finnish belongs to the Finno-Ugric language group and is closely related to Estonian; more distantly to the Komi, Mari, and Udmurt languages spoken among those peoples living in Russia; and remotely to Hungarian.

## 10 RELIGIONS

Both the Evangelical Lutheran Church and the Orthodox Church are considered state churches. As of 2004, about 84.1% of the inhabitants belong to the Evangelical Lutheran Church. Reports indicate, however, that only between 2–10% of Lutherans attend services on a regular basis. Approximately 1% of the inhabitants, largely evacuees from the Karelian Isthmus, are members of the Orthodox Church in Finland. Another 1% belong to the Pentecostal Church. Other religious bodies include the Free Church, Jehovah's Witnesses, Adventists, Roman Catholics, Methodists, Mormons, Baptists, Swedish Lutherans, and Jews. There are about

20,000 Muslims in the country. About 10% of the population claim no religious affiliation.

Freedom of religion has been guaranteed since 1923. As a state church, the Evangelical Lutheran Church has an elected Church Assembly that makes legislative proposals to the parliament, which can be approved or rejected, but not altered. The Orthodox Church has three dioceses, in Helsinki, Karelia, and Oulu, and owes allegiance to the Ecumenical Patriarch of Constantinople. Citizens who belong to one of these state churches pay a church tax as part of their income tax. For members, the church handles state registrar duties, such as record keeping for births, deaths and marriages. There is a registration service available for members of other faiths. Religious groups must register with the government in order to qualify for tax relief.

## 11 TRANSPORTATION

In 2004 there were an estimated 78,168 km (48,620 mi) of roads, of which 50,616 km (31,483 mi) were paved, including 653 km (406 mi) of expressways. In 2003 registered motor vehicles included 2,259,383 passenger cars and 334,009 commercial vehicles.

There were 5,851 km (3,639 mi) of broad gauge railway lines in operation in 2004, of which 99% were operated by the Finnish State Railways, and some 2,400 km (1,493 mi) were electrified. In 2005, there were 94 ships in Finland's merchant fleet of 1,000 GRT or more, totaling 1,152,175. Import traffic is concentrated at Naantali, Helsinki, Kotka, and Turku, while the ports of Kotka, Hamina, Kemi, Oulu, and Rauma handle most exports. Icebreakers are used to maintain shipping lanes during winter months. More than 900 people were killed in September 1994 when the ferry *Estonia* sank in rough seas off the Finnish coast while sailing from Estonia to Sweden. In 2004 there were 7,842 km (4,877 mi) of navigable inland waterways, of which includes the 3,577 km (2,224 mi) Saimaa Canal System, of which the southern part was leased from Russia.

Airports numbered 148 in 2004, of which 76 had paved runways as of 2005. Helsinki-Vantaa is the principal airport, located at Helsinki. State-run Finnair is engaged in civil air transport over domestic and international routes. In 1962, Finnair took over Kar-Air, the second-largest air carrier in Finland. In 2003, around 6.184 million passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Finland, a province and a grand duchy of the Swedish kingdom from the 1150s to 1809 and an autonomous grand duchy of Russia from 1809 until the Russian Revolution in 1917, has been an independent republic since 1917. Ancestors of present-day Finns—hunters, trappers, agriculturists—came to Finland by way of the Baltic regions during the first centuries AD, spreading slowly from south and west to east and north. Swedish control over Finnish territory was established gradually beginning in the 12th century in a number of religious crusades. By 1293, Swedish rule had extended as far east as Karelia (Karjala), with colonization by Swedes in the southwest and along the Gulf of Bothnia. As early as 1362, Finland as an eastern province of Sweden received the right to send representatives to the election of the Swedish king. On the basis of the Swedish constitution, Finland's four estates—nobles, clergy, burghers and peasant farmers—were also entitled to send representa-

LOCATION: 59°30'10" to 70°5'30" N; 19°7'3" to 31°35'20" E. BOUNDARY LENGTHS: Russia, 1,313 kilometers (820 miles); Sweden, 586 kilometers (364 miles); Norway, 729 kilometers (445 miles); total coastline, 1,126 kilometers (694 miles).

TERRITORIAL SEA LIMIT: 4 miles.

tives to the Diet in Stockholm. As a result of over six centuries of Swedish rule, Finnish political institutions and processes (marked by growing constitutionalism and self-government), economic life, and social order developed largely along Swedish lines. Swedish colonization in Finland was concentrated in the southern and western regions of Finland.

When Sweden was a great power in European politics in the 17th century, Finland and the Finns bore a heavy military burden. Finland was a battleground between the Swedes and Russia, whose encroachments on southeastern Sweden were persistent as Swed-

ish power declined in the 18th century. After Sweden's military defeat in the Napoleonic wars of 1808–09, sovereignty over Finland was transferred to Russia from Sweden after Napoleon and Tsar Alexander I concluded the Peace of Tilsit. Under the Russian rule of Alexander I, Finland was granted a privileged autonomous status that enabled Finland to continue the grand duchy's constitutional heritage. Alexander I, like his successors, took a solemn oath to "confirm and ratify the Lutheran religion and fundamental laws of the land as well as the privileges and rights which each class and all the inhabitants have hitherto enjoyed according to the constitution." Toward the end of the 19th century, a Russian drive to destroy Finland's autonomy ushered in several decades of strained relations and galvanized the burgeoning nationalist movement. Culturally, the nationalist movement in Finland was split linguistically between the Fennomen who advocated Finnish language and culture and the Svecomen who promoted the continued dominance of Swedish. By the end of the 19th century, the Fennomen had gained the upper hand. In Russia's Revolution of 1905, Finland managed to extract concessions that included the creation of a modern, unicameral parliament with representatives elected through universal suffrage, including women. Thus, Finland was the first European country to offer women political suffrage at the national level. After the Bolshevik seizure of power in Russia in the late fall of 1917, Finland declared its independence on 6 December. A short civil war ensued (28 January–10 May 1918) between the Red faction supported by the Soviet Bolsheviks and the White faction supported by Germany. The White forces, led by General Mannerheim, were victorious, but Finland was forced to reorient its alliances toward the western allies when Germany was defeated in WWI.

In July 1919, Finland became a democratic parliamentary republic. In the nearly two decades of peace following the settlement of disputes with Sweden (over the Åland Islands) and the former USSR (East Karelia) there were noteworthy economic and social advances. Despite its neutral pro-Scandinavianism in the 1930s and support for the collective security provisions of the League of Nations, the country was unavoidably entangled in the worsening relations between the great powers. Negotiations with the former USSR, which demanded certain security provisions or territorial concessions, broke down in 1939, and two wars with the USSR ensued. The Winter War, lasting from 30 November 1939 to 13 March 1940, ended only when Finland ceded areas of southeastern Finland and the outer islands of the Gulf of Finland to the Soviets. However, Finland watched warily as the Soviets annexed the independent Baltic states of Estonia, Latvia, and Lithuania. After appeals to western allies went unfulfilled, Finland turned toward Germany for protection, and when Germany attacked the USSR on 26 June 1941, Finland entered the war on the German side. During the early part of the Continuation War, which lasted from 26 June 1941 to 19 September 1944, the Finns pushed the Soviets back to the old frontier lines and held that position for nearly three years. In 1944, a Russian counterattack forced Finland to ask for peace. The armistice terms of 1944, later confirmed by the Paris Peace Treaty of 10 February 1947, provided for cession of territory and payment of reparations to the Soviets and required Finland to expel the German troops on its soil; this resulted in German-Finnish hostilities from October 1944 to April 1945. Under the 1947 peace treaty Finland ceded some 12% of its

territory to the USSR, imprisoned several prominent politicians, reduced its armed forces, and undertook to pay heavy economic reparations. A Soviet naval base was established only 25 km from Helsinki. A separate Treaty of Friendship, Cooperation, and Mutual Assistance, concluded in 1948 under heavy Soviet pressure, obligated Finland to resist attacks on itself or the USSR and in effect precluded Finland from undertaking any significant foreign policy initiative without the Kremlin's approval.

Finland's postwar policy, based on the Paasikivi Line named for the president that formulated the policy, has been termed dismissively as "Finlandization." It is true that Finland maintained a scrupulous and cautious policy of neutrality in foreign affairs. However, after 1955, when the Soviets withdrew from their Finnish base, Finland became an increasingly active member of the United Nations and the Nordic Council, as well as various Western economic organizations. Despite Soviet pressure, the Finnish Communist Party steadily declined in influence. Finland's standing was further enhanced by the signing of the 1975 Helsinki treaty, which called for pan-European cooperation in security, economic, political, and human rights matters. The dominant figure of postwar politics was Urho Kekkonen, the Agrarian (later Center) Party leader who held the presidency from 1956 to 1981, when he resigned because of ill health. The cornerstone of his policy was maintenance of a center-left coalition (including the Communists), good relations with the former USSR, and a foreign policy of "active neutrality."

Despite the negative connotations, "Finlandization" was something of a success. Unlike the Baltic states, Finland maintained sovereign independence and even managed to prosper in the post-WWII environment. Postwar political stability allowed a striking economic expansion and transformation in Finland. In 1950, nearly 70% of Finns worked on the land; now that figure is about 8%. Kekkonen's long rule ended in a resignation owing to ill health and the Social Democratic leader Mauno Koivisto, then prime minister, became acting president in October 1981. Koivisto was elected president in his own right in January 1982 and reelected in 1988.

Koivisto's tenure as president ended in 1994. In the presidential elections of February 1994 when voters for the first time directly elected the president, Martti Ahtisaari, former UN mediator and of the Finnish Social Democratic Party, defeated Elisabeth Rehn (defense minister) of the Swedish People's Party in a runoff election. Ahtisaari chose not to run for reelection in 2000, and in that contest no fewer than five candidates for the presidency were women. On 6 February 2000, Finns elected their first female president, Tarja Halonen, the Social Democratic foreign minister in the Lipponen government, who won 51.6% of the vote in a runoff electoral contest with Esko Aho, leader of the Center Party.

Finland faced a deep recession brought about in part by the collapse of the Soviet market that accounted for 20% of Finnish exports. During 1991–94, the recession pushed unemployment up to nearly 20%. The collapse of the Soviet Union and the dissolution of the FCMA Treaty by mutual agreement of Finland and the USSR prompted Finland to reassess its relationship with Europe. In March 1994, Finland completed negotiations for membership in the EU. Finland's relationship with the EU was a major issue of political debate even within the governing coalition. Following a referendum held in October 1994 with 57% approval, Finland for-

mally joined the EU at the beginning of 1995. Finland also joined the European economic and monetary union in 1999, and adopted the euro as its currency in 2002.

#### **Beyond Finlandization: Finland and the European Union**

While a relative newcomer to European politics, Finland entered the political limelight as it took over the six-month rotating presidency of the European Union in the second half of 1999. The priorities of the Finnish presidency included a number of pressing issues: preparing for institutional reform necessary prior to enlargement of the Union; increasing the transparency of the functioning of EU institutions; boosting employment and deepening the social dimension of European cooperation; environmental responsibility; and finally, in the area of foreign policy, the Finns championed the “Northern Dimension” which would extend a number of cooperative schemes to include the EU and non-EU countries along the Baltic, including increased ties with northwestern Russia. Though highly touted, this last initiative foundered as Europe continued to be preoccupied with ongoing NATO efforts in Kosovo. At the presidency’s concluding summit (December 1999) of the European Council in Helsinki, the Finns could nonetheless point to a number of successes under their presidency. The groundwork for opening accession negotiations with six more applicant countries from Eastern Europe and recognizing Turkey’s applicant status were approved by the 15 heads of state. In addition, the European Council approved the establishment of a rapid reaction force outside the structure of NATO, which would allow Europe to have an independent capacity to react in areas in which NATO was not engaged. This was an important accomplishment for Finland, whose neutral status makes participation in NATO actions problematic. However, in recent years, Finland has considered NATO membership; its military policy calls for increased cooperation with and participation in NATO and EU-led operations, including NATO’s “Partnership for Peace” program. But the majority of Finns oppose NATO membership.

The issue of Finland’s support for the US-led war in Iraq that began on 19 March 2003 was a deciding factor in the 16 March parliamentary elections. Opposition leader Anneli Jäätteenmäki accused sitting Prime Minister Paavo Lipponen of moving Finland too close to the US position on the use of military force to disarm Iraq, and her party went on to win the elections, albeit by a slim majority. Finland donated €1.6 million for humanitarian aid in Iraq. In June 2003, Prime Minister Jäätteenmäki resigned amid accusations that she used leaked confidential information on Iraq to help her party win the March elections. The secret information was based on talks between Lipponen and US President George W. Bush in the run-up to the Iraq war. Jäätteenmäki was accused of lying to parliament over her use of the classified documents, which she had requested and obtained during her election campaign. Jäätteenmäki was replaced as prime minister by Matti Vanhanen. Jäätteenmäki was acquitted in March 2004 of inciting an aide to Lipponen to leak the documents.

In May and June 2005, workers in the paper industry—which accounts for one-quarter of total Finnish export earnings—went on a seven-week strike over the issues of holiday pay and working hours. The paper industry workers wanted better pay and shorter working hours during the Christmas and midsummer holiday seasons. A lockout instituted by paper mill employers resulted in

the closure of mills around the country. In July, unions and employers gave backing to a new three-year work and pay package.

Presidential elections were held on 15 January 2006. President Tarja Halonen came out ahead, with 46.3% of the vote, and Sauli Niinistö came in second with 24.1% of the vote. Since no candidate received a majority of the vote, a runoff election was held on 29 January. Results were Halonen, 51.8%, and Niinistö, 48.2% of the votes cast.

### **13 GOVERNMENT**

Finland’s republican constitution combines a parliamentary system with a strong presidency. Legislative powers are vested in the Eduskunta (parliament), a unicameral body established in 1906. Members of parliament are elected for four-year terms by proportional representation from 15 multi-member electoral districts under universal suffrage at age 18. Finland was the first country in Europe to grant suffrage to women in national elections (1906). After the 2003 elections nine parties were represented, but the five largest (and traditional) parties shared 181 seats. The 1994 presidential election was the first direct presidential vote since the country gained independence in 1917. Previously voters selected slates of electors who then chose the president. Currently the president is elected directly in a two-stage vote. If no candidate gets a majority in the first round, a second round is held between the two candidates with the largest first round totals. The president is elected for a six-year term.

Finland’s political system traditionally has been more like the French than most other European parliamentary democracies because of the division of executive power between the president and the prime minister. The president is the constitutionally designated head of state that appoints the cabinet, serves as commander-in-chief of the armed forces and, until recently, had primary responsibility for foreign policy. Traditionally, Finnish presidents have been responsible for foreign policy and remained neutral on domestic issues. During the Cold War, Finnish presidents had a special role in reassuring the USSR of Finnish good intentions. The president previously had the power to dissolve the legislature and order new elections, initiate legislation, and issue decrees. The president could veto legislation by not signing a bill, but if the Eduskunta after a general election passed it again without amendment, it became law.

On 1 March 2000, a new Finnish constitution entered into force. The new constitution increases the power of the parliament in relation to the government (cabinet) and increases the power of the government in relation to the president. The power of the Finnish presidency has been circumscribed in rather dramatic fashion while the power of the prime minister has increased. In the past, the Finnish president had the right to intervene in the formation of the government and to dissolve a recalcitrant government. Under the new constitution, the president only formally appoints the prime minister and is bound by the decisions derived from negotiations among the parliamentary groups. Party leaders with the most seats in parliament select the prime minister, in a complex bargaining process. The president appoints other ministers on the recommendation of the prime minister. The president may accept the resignation of a government or minister only in the event of a vote of no confidence by the parliament. In addition, under the new constitution, the government is more respon-

sible to the parliament. For instance, the government must submit its program to parliament immediately after being appointed so that the parliament may take a vote of confidence in the government. Foreign and security policy have become shared responsibilities between the president and the government, with the prime minister and foreign minister taking an active role in formulating a consensus approach to Finnish foreign policy. The government, not the president, now has responsibility over issues related to EU affairs, given the impact of much European law on domestic legislation. The parliament has created a “Grand Committee” to scrutinize EU matters and to ensure parliament’s influence on EU decision-making.

Since 1945 no single party has ever held an absolute parliamentary majority, so all cabinet or governmental decisions involve coalitions. The cabinet is composed of the heads of government ministries and has as its primary responsibility the preparation of governmental budgets and legislation and the administration of public policies. The prime minister and cabinet serve only so long as they enjoy the support of a working majority in parliament, and there have been frequent changes of government.

Women are fairly well represented in both the executive and legislative branches of government in Finland. Women hold 37% of the seats in the 200-member Eduskunta and there were 8 women among the 18 cabinet members after the 2003 elections. Women have held top leadership positions, including defense minister (Elisabeth Rehn) and foreign minister (Tarja Halonen) and speaker of parliament. In February 2000, Finns elected Tarja Halonen their first female president. Anneli Jäätteenmäki was named prime minister following elections in March 2003. Halonen was reelected president in 2006.

## 14 POLITICAL PARTIES

Four major partisan groupings have dominated political life in Finland, although none commands a majority position among the electorate. The Finnish Social Democratic Party (Suomen Sosialidemokraattinen Puolue—SDP) was organized in 1899 but did not become a significant political force until 1907, following the modernization of the country’s parliamentary structure. Swedish-speaking Socialists have their own league within the SDP. The party’s program is moderate, and its emphasis on the partial nationalization of the economy has in recent decades given way to support for improvement of the condition of wage earners through legislation. The SDP has generally worked closely with the trade union movement and has been a vigorous opponent of communism.

The Center Party (Keskusapuolue—KESK; until October 1965, the Agrarian League—Maalaisliitto) was organized in 1906. While initially a smallholders’ party, it won some support from middle and large landowners but virtually none from nonagricultural elements. In an effort to gain a larger following in urban areas, the party changed its name and revised its program in 1965. In February 1959, an Agrarian League splinter party, the Finnish Small Farmers’ Party, was formed; in August 1966, it took the name Finnish Rural Party (Suomen Maaseudun Puolue—SMP). The Liberal People’s Party (Liberaalinen Kansanpuolue—LKP) was formed in December 1965 as a result of the merger of the Finnish People’s Party and the Liberal League; in 1982, the LKP merged with the KESK.

The National Coalition Party (Kansallinen Kokoomus—KOK), also known as the Conservative Party, was established in 1918 as the successor to the conservative Old Finnish Party. Its program, described as “conservative middle-class,” has traditionally emphasized the importance of private property, the established church, and the defense of the state.

The Finnish Christian League (Suomen Kristillinen Liitto—SKL), founded in 1958, was formed to counter the increasing trend toward secularization and is usually found on the political right with the KOK.

The Swedish People’s Party (Svenska Folkpartiet—SFP), organized in 1906 as the successor to the Swedish Party, has stressed its bourgeois orientation and the need for protecting the common interests of Finland’s Swedish-speaking population.

The Finnish People’s Democratic League (Suomen Kansan Demokraattinen Liitto—SKDL) represents the extreme left. Emerging in 1944, and illegal before then, the SKDL was a union of the Finnish Communist Party (organized in 1918) and the Socialist Unity Party. The SKDL had urged close relations with the former USSR and the Communist bloc, but it later moderated its demands for the establishment of a “people’s democracy” in Finland. In 1986, a minority group within the SKDL was expelled; for the 1987 elections, it established a front called the Democratic Alternative (DEVA). Following the collapse of the Soviet Union, the SKDL in May 1990 merged with other left parties to form the Left Alliance (Vasemmistoliitto—VL).

The Greens, an environmentalist alliance, won four seats in the Eduskunta in 1987, although they were not formally organized as a political party.

From the end of World War II until 1987, Finland was ruled by a changing center-left coalition of parties that included the SDP, KESK, SKDL, LKP, SFP, and SMP. The government formed on 30 April 1987 included seven members of the KOK, including the prime minister, Harri Holkeri; eight from the SDP; two from the SFP; and one from the SMP. Conservative gains in the 1987 election put non-Socialists in their strongest position in parliament in 50 years. Following the general election of March 1991, the Center Party led by Esko Aho emerged as the largest single party in parliament. A new four-party, center-right coalition was formed composed of the Center Party, the National Coalition Party, the Swedish People’s Party, and the Finnish Christian League.

The victory by the SDP in the 1995 parliamentary elections ended the reign of the right-center coalition that held control during four years of economic stagnation. The SDP’s leader, Paavo Lipponen, became Finland’s new prime minister in April 1995. Lipponen fashioned a “rainbow coalition” following the March 1995 elections that included the following: the Social Democratic Party (with Lipponen as prime minister), the National Coalition Party, the Left Alliance, the Swedish People’s Party, and the Green League. In opposition were the Center Party, the Finnish Christian League, the Young Finns, the Ecology Party, the True Finns, and the Åland Island’s Party representative.

The parliamentary election in 1999 reflected a mixture of discontent and continuity. A cooling economy (caused by Russia’s economic collapse in 1998), the opposition’s plans for radical tax cuts, and controversy about EU policies dominated the campaign. Opposition leader (and former prime minister) Aho promised radical tax and economic policy changes. He could govern only if

he succeeded in prying the Conservatives out of Lipponen's coalition. SDP party scandals over privatization of the telecommunications sector and other issues threatened the otherwise impressive performance of the rainbow coalition that many thought would not survive the full parliamentary term.

The outcome of the 1999 elections was a setback for the Social Democrats, whose share of the votes declined from 28.3% in 1995 to 22.9% in 1999. The SDP parliamentary delegation declined from 63 to 51. The Conservatives advanced from 17.9% of the vote in 1995 (and 39 seats) to 21% in 1999 (and 46 seats). The three smaller coalition parties continued to share 42 seats among them. The opposition Centrists advanced modestly from 19.9 to 22.4% of the vote (gaining four seats for a total of 48). The SDP remained the largest parliamentary group, and Lipponen retained the right to renew his coalition, making it the longest-serving government in Finnish history.

The elections of 2003 were colored by disagreements between Lipponen's Social Democrats and the Center Party led by Anneli Jäätteenmäki. Jäätteenmäki accused Lipponen of closely aligning Finland with the US position on forcibly disarming Saddam Hussein's regime in Iraq. Jäätteenmäki's criticisms were popular with voters, and the Center Party emerged with 24.7% of the vote to take 55 seats in the Eduskunta. The representation of the other parties in parliament in 2003 was as follows: SDP, 22.9% (53 seats); KOK, 18.5% (40 seats); the Left Alliance, 9.9% (19 seats); the Greens, 8%, (14 seats); the Christian Democrats, 5.3% (7 seats); the People's Party, 4.6% (8 seats); the agrarian True Finns Party, 1.6% (3 seats); and the representative from the Åland Island's Party held one seat. Jäätteenmäki formed a coalition government with the Social Democratic Party and the Swedish People's Party. She later resigned in June as a result of accusations that she misused confidential government documents regarding talks between Lipponen and President George W. Bush over the run-up to the Iraq war. Jäätteenmäki in 2004 was acquitted of charges she incited an aide to Lipponen to leak the documents.

## 15 LOCAL GOVERNMENT

There is an ancient and flourishing tradition of local self-government extending back to the 14th century. The present law on local government was enacted in 1976. There are six provinces (*läänit*), each headed by a governor appointed by the president. One of them, Ahvenanmaa (Åland Islands), has long enjoyed special status, including its own elected provincial council, and a statute effective 1 January 1952 enlarged the scope of its autonomy. The other provinces are directly responsible to the central government.

Below the provincial level, the local government units in 2005 included 432 municipalities. The number of municipalities has fluctuated over the years, but the trend has been downwards. (In 1955, there were 547 municipalities.) Each local government unit is self-governing and has a popularly chosen council. Local elections are held every four years; being partisan in nature, they are regarded as political barometers. The councilors are unsalaried. Local administration is carried out under the supervision of council committees, but professional, full-time managers usually run day-to-day affairs. The functions of local government include education, social welfare, health, culture, utilities, and collection of local taxes.

## 16 JUDICIAL SYSTEM

There are three levels of courts: local, appellate, and supreme. The municipal courts of the first instance are staffed in each case by a magistrate and two councilors. Each of the six appellate courts is headed by a president and staffed by appellate judges. In certain criminal cases these courts have original jurisdiction. The final court of appeal, the Supreme Court (*Korkein oikeus*), sits in Helsinki. There are also the Supreme Administrative Court, a number of provincial administrative courts, and some special tribunals. The administration of justice is under the supervision of a chancellor of justice and a parliamentary ombudsman.

The judiciary is independent from the executive and legislative branches. Supreme Court judges are appointed to permanent positions by the president and are independent of political control. Retirement is mandatory at age 70.

Like most other Nordic judicial systems, Finland's constitution calls for a Parliamentary Ombudsman. The Ombudsman is an independent official from the legal field, who is elected by the parliament and charged with "overseeing the courts of law, other public authorities and public servants in the performance of their official duties as well as public employees and other persons in the exercise of public functions...In discharging his or her duties, the Parliamentary Ombudsman shall also oversee the implementation of Constitutional rights and international human rights." The Ombudsman and Deputy Ombudsman investigate complaints by citizens regarding the public authorities, conduct investigations, and may intervene in matters of his or her own initiative. This important institution assists citizens in navigating the often Byzantine bureaucratic maze of the social welfare state and provides greater accountability and transparency in the enormous Finnish public sector.

## 17 ARMED FORCES

Total armed forces in Finland numbered 28,300 active personnel in 2005, with reserves totaling 237,000. The Army had 20,500 personnel, while the Navy had 5,000, and the Air Force 2,800. The Army's equipment included 226 main battle tanks, 263 armored infantry fighting vehicles, 614 armored personnel carriers, and 1,446 artillery pieces. Major naval units included 11 patrol/coastal vessels, 19 mine warfare ships, six amphibious landing craft, and 35 logistical/support vessels. The Air Force had 63 combat capable aircraft, consisting of fighter ground attack aircraft. The Air Force also operated one antisubmarine warfare aircraft and 22 transports. Finland's paramilitary frontier guard numbered 3,100. The defense budget in 2005 totaled \$2.7 billion. Finland's armed forces also provided observers and troops to nine different UN and NATO operations in 2005.

## 18 INTERNATIONAL COOPERATION

Finland has been a UN member since 14 December 1955; it participates in several UN specialized agencies, such as the FAO, World Bank, IAEA, ILO, UNESCO, UNIDO, and the WHO. Finland is also a member of the OECD, the WTO, G-9, and the Paris Club. The country joined the European Union in 1995. In addition, Finland plays a role in the African Development Bank and Asian Development Bank, and is involved in a number of bilateral projects,

primarily in African countries. The nation holds observer status in the Western European Union and the OAS.

Officially neutral, Finland seeks to maintain friendly relations with both the United States and Russia, its powerful eastern neighbor. Finland has hosted many major meetings and conferences, including rounds I, III, V, and VII of the Strategic Arms Limitation Talks (SALT) between the United States and USSR (1969–72). In November 1972, the multilateral consultations on the Conference on Security and Cooperation in Europe (CSCE, now the OSCE) began in Helsinki. These initial consultations were followed by the first phase of CSCE at the foreign ministerial level and then by the third phase at the highest political level, culminating with the signing of the Final Act in Helsinki on 1 August 1975. Foreign ministers of the United States, Canada, and 33 other European countries met in Helsinki on 30 July 1985 to commemorate the 10th anniversary of the signing of the Final Act.

Finland has a close relationship with the other Scandinavian (Nordic) countries. The main forum of cooperation is the Nordic Council, established in 1952; Finland joined in 1955. A common labor market was established in 1954, granting citizens of member states the right to stay and work in any other Scandinavian country without restrictions. Finland also belongs to the Council of the Baltic Sea States (est. in 1992).

Finland is part of the Australia Group, the Nuclear Suppliers Group (London Group), the European Organization for Nuclear Research (CERN), the Nuclear Energy Agency, the Zangger Committee, and the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, Finland is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Air Pollution; Ramsar; CITES; the London Convention; International Tropical Timber Agreements; the Kyoto Protocol; the Montréal Protocol; MARPOL; the Nuclear Test Ban Treaty; and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

At the end of World War II, Finland's economy was in desperate straits. About 10% of the country's productive capacity had been lost to the former USSR, and over 400,000 evacuees had to be absorbed. Between 1944 and 1952, Finland was burdened with reparation payments to the USSR, rising inflation, and a large population growth. However, the GDP reached the prewar level by 1947, and since then the economy has shown consistent growth.

Handicapped by relatively poor soil, a severe northern climate, and lack of coal, oil, and most other mineral resources necessary for the development of heavy industry, the Finns have nonetheless been able to build a productive and diversified economy. This was made possible by unrivaled supplies of forests (Finland's "green gold") and waterpower resources ("white gold"), as well as by the Finnish disposition toward hard work, frugality, and ingenuity. Agriculture, long the traditional calling of the large majority of Finns, has been undergoing continuous improvement, with growing specialization in dairying and cattle breeding. The industries engaged in producing timber, wood products, paper, and pulp are highly developed, and these commodities continue to make up a significant proportion of the country's exports. After World War II, and partly in response to the demands of reparations payments, a metals industry was developed, its most important sectors being

foundries and machine shops, shipyards, and engineering works. The 1990s saw Finland develop one of the world's leading high tech economies. Dependent on foreign sources for a considerable portion of its raw materials, fuels, and machinery, and on exports as a source of revenue, the Finnish economy is very sensitive to changes at the international level.

The annual growth of GDP averaged 4.3% between 1986 and 1989, after which it was hard hit by the collapse of the former USSR, formerly Finland's chief trading partner. For 40 years, Finland and the USSR had conducted trade on a barter basis, a practice that ended in 1991. GDP was flat in 1990, fell by 7.1% in 1991, a further 4% in 1992, and 3.6% in 1993.

The regional economic recovery in Europe during 1994 helped Finland's economy to turn around. By early 1995, the economy began to show signs of strong growth—GDP had grown 4.5% by the end of that year, and by 2000, it had reached 6.1%. In October 1996 Finland agreed to join the European currency grid, which limits currency fluctuations to 15% up or down, and proclaimed its determination to join European economic and monetary union (EMU); it joined the EMU in 1999. Thus far, it is the only Nordic EU member to join, as Denmark and Sweden decided to opt out of the EMU.

The success of the Finnish economy in the late 1990s was largely due to the country's success in the high tech sector. Finland has one of the highest rates in the world for per capita Internet connections and mobile phone ownership; in 2002, 75% of Finns owned a mobile phone. Chief among Finnish companies is Nokia, the world's leading producer of mobile phones.

In 2001, the global economy was in a downturn, and Finland's economy was duly affected. Demand for Finnish exports declined, and industrial production shrank for the first time in 10 years. In 2001, Finland's GDP growth was among the lowest of the euro zone, at 0.7%, and unemployment remained above the euro zone average (9%). However, the service sector (accounting for over 60% of GDP) remained strong. In 2004, the government cut taxes and tempered inflation in order to prod private consumption and promote GDP growth. GDP growth was estimated at 1.6% in 2005, and was forecast to accelerate to 2.5% in 2006 and 2.7% in 2007, still well below the growth rates seen in the latter part of the 1990s. The inflation rate was expected to be 1.3% in 2005, rising to 1.8% in 2006 and 2% in 2007. The unemployment rate was estimated at 8.9% in 2004, above the EU average, but the government estimated the unemployment rate would drop to 8.5% in 2005. A relatively inflexible labor market and high employer-paid social security taxes hamper growth in employment.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Finland's gross domestic product (GDP) was estimated at \$158.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$30,300. The annual growth rate of GDP was estimated at 1.7%. The average inflation

rate in 2005 was 1.2%. It was estimated that agriculture accounted for 3.1% of GDP, industry 30.4%, and services 66.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$642 million or about \$123 per capita and accounted for approximately 0.4% of GDP.

The World Bank reports that in 2003 household consumption in Finland totaled \$84.55 billion or about \$16,223 per capita based on a GDP of \$161.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.1%. In 2001 it was estimated that approximately 17% of household consumption was spent on food, 10% on fuel, 4% on health care, and 15% on education.

## 21 LABOR

The Finnish labor force numbered an estimated 2.61 million in 2005. Of these workers, 32% were engaged in public services, 22% in industry, 14% in commerce, 10% in finance, insurance, and business service, 8% in agriculture and forestry, 8% in transport and communications, and 6% in construction. From the mid-1960s to the mid-1970s, the rate of unemployment fluctuated between 1.5% and 4% of the total workforce. Since then, however, the unemployment rate has crept upward, reaching 8.5% in 2002. In 2005, the unemployment had fallen slightly to an estimated 7.9%.

The law provides for the right to form and join unions. As of 2005, about 79% of workers were members of a trade union. These unions are not regulated by the government or political parties. Labor relations are generally regulated by collective agreements among employers, employees and the government. Workers have the right to strike, but such actions are considered legal only if an employment contract is not in effect and that the strike is being carried out pursuant of new contract negotiations. Strikes that may involve the national security are put before an official dispute board that can make nonbinding recommendations to the cabinet as to the strike's duration.

Child labor regulations are strictly enforced by the labor ministry. Minors under the age of 16 cannot work at night or more than six hours per day. In addition there are occupational health and safety restrictions applied to child labor. The law does not mandate minimum wages, as it is established by industry in collective bargaining negotiations for each sector of the workforce. The workweek is legally set at 40 hours with five days of work and premium pay for overtime, which is limited to 250 hours annually and 138 hours in any four-month period. Health and safety standards are effectively enforced.

## 22 AGRICULTURE

Finnish farming is characterized by the relatively small proportion of arable land under cultivation, the large proportion of forestland, the small-sized landholdings, the close association of farming with forestry and stock raising, and the generally adverse climatic and soil conditions. Farming is concentrated in southwestern Finland; elsewhere, cultivation is set within the frame of the forest. In 2004, there were 70,983 farms. The average farm had about 31 hectares (78 acres) of arable land. Small-sized farms were encouraged by

a series of land reforms beginning with the Lex Kallio of 1922. The Land Use Act of 1958 sought to improve the conditions of existing farms by increasing the land area, amalgamating nonviable farms, and introducing new land-use patterns. The agricultural labor force was 5.5% of the economically active population in 2000. In 2003, agriculture contributed 5% to GDP.

The principal crops in 2004 (in tons) were barley, 1,725,000; oats, 1,002,000; sugar beets, 1,064,000; potatoes, 619,000; and wheat, 782,000. A total of 2,243,000 hectares (5,542,000 acres) were classified as arable in 2004.

## 23 ANIMAL HUSBANDRY

Livestock production contributes about 70% of total agricultural income. Livestock in 2004 included cattle, 969,000 head; hogs, 1,365,000; sheep, 109,000; and horses, 61,000. There were 3,981,000 poultry that same year. Some 201,000 reindeer are used by the Lapps as draft animals and for meat.

In recent years, Finland has attained exportable surpluses in some dairy, pork, and eggs. Production in 2004 included pork, 198,000 tons; beef, 93,000 tons; eggs, 58,000 tons; butter, 58,000 tons; and cheese, 93,000 tons. Milk production in 2004 was estimated at 2.3 billion liters.

## 24 FISHING

At the beginning of 2004, the Finnish fishing fleet consisted of 3,798 vessels, with an average vessel capacity of 5 GRT. The total catch in 2003 was 135,295 tons and exports of fishery commodities totaled \$13 million. The most important catch is Atlantic herring, with 64,020 tons caught in 2003. Other important species are rainbow trout, perch, pike, salmon, and cod. In 2005, salmon and herring caught in the Gulf of Bothnia and Gulf of Finland were found to contain higher levels of dioxins potentially harmful to human health.

## 25 FORESTRY

Forestry in Finland has been controlled since the 17th century. Since 1928, the government has emphasized a policy of sustainable yields, with production reflecting timber growth. Forest land covered 26.3 million hectares (65 million acres), or over 85% of the total land area, in 2003. The total growing stock is around 2.0 billion cu m (71 billion cu ft), and the annual increment is estimated at 83 million cu m (2.9 billion cu ft). The most important varieties are pine (47% of the total growing stock), spruce (34%), birch (15%), aspen, and alder. About 61% of the productive woodland is privately owned (in 440,000 holdings); 24% is owned by the state; the remainder is owned by companies, communes, and religious bodies. There are 170 major sawmills in Finland with a combined output of 13.5 million cu m (477 million cu ft) in 2004. Numerous small sawmills serve local markets.

In 2004, the roundwood harvest was estimated at 53.8 million cu m (1.9 billion cu ft), of which 13.5 million cu m (477 million cu ft) were processed as sawnwood, 25 million cu m (883 million cu ft) as wood pulp, and 4.5 million cu m (159 million cu ft) as firewood. Finland ranks fourth in Europe (after Sweden, Germany, and Russia) as a producer of sawn softwood. Over 70% of annual Finnish forestry output is exported, including over 90% of all printing paper and 50% of all particleboard produced. Over 60% of forestry product exports are sent elsewhere in Europe; Finland

supplies Europe with about 10% of its demand. In 2004, exports of forestry products were valued at nearly \$11 billion, or about 25% of total exports.

In 1999, Finland launched its National Forest Program 2010. The goal of the program is to raise industrial roundwood production to 63–68 million cu m (2.2–2.4 billion cu ft) while adhering to ecosystem management principles. The Finnish Forest Research Institute estimates that roundwood harvesting can rise to 74 million cu m per year and still sustain the growing stock.

## 26 MINING

For the metals industry, a key sector of its industrialized market economy, Finland depended on imports of raw materials, especially crude oil, iron ore, nickel matte, petroleum products, and zinc concentrate. Copper refining and metals production constituted a major mineral industry, with most output destined for export. Outokumpu Oyj was the third-largest zinc metal producer in Europe (15% share of the market and 5% share of world zinc production). In 2004, Finland mined chromite, copper, nickel, zinc, feldspar, lime, nitrogen, phosphate rock, pyrite, sodium sulfate, limestone and dolomite, quartz silica sand, sulfur, talc, and wollastonite. The Kemi mine, on the Gulf of Bothnia near the Swedish border, was the only chromium mine in Scandinavia and one of the largest in the world, with estimated reserves of 150 million tons and an annual capacity of one million tons. Mine output of zinc in 2004 was 69,333 metric tons, down from 70,652 metric tons in 2003; feldspar, 57,149 metric tons, up from 48,353 metric tons in 2003; chromite (gross weight of ore, concentrate, and foundry sand), 550,000 metric tons, up from 549,000 metric tons in 2003 and copper (mine output), 15,500 metric tons, up from 14,900 in 2003. Exploration activities were focused largely on diamond, gold, and base metals deposits (sulfide zinc, zinc, copper, chalcopyrite, pyrite, sphalerite, and platinum-group metals, or PGM). Finland also had capacities to mine mica, phosphate-apatite, quartz, and quartzite, and to mine and produce 8 million tons per year of apatite.

Mineral reserves were declining, and many were expected to be exhausted soon, as a result of extensive mining over the past 400 years. Although Finland had scarce mineral resources, it was influential in the global mining industry as a world leader in mining technology, ore processing, and metallurgy. With the acquisition of the metallurgical businesses of Lurgi Metallurgie AG of Germany, Outokumpu Technology became the world's leading supplier of copper and zinc plants, a major supplier of aluminum technologies, and the key supplier of innovative technologies for the ferrous metals and ferroalloy industries. Government involvement in the mineral industry was considerably higher in Finland than elsewhere in the EU. State-owned companies such as Finnminers Group, Kemira Oyj, Outokumpu, and Rautaruukki Oy dominated the domestic minerals industry, while institutions such as the State Geological Research Institute and the State Technological Research Center were active in exploration and research.

## 27 ENERGY AND POWER

Finland relies upon imports to meet its fossil fuel needs. In 2002, imports of crude oil and refined petroleum products averaged 315,460 barrels per day, with consumption at 215,790 barrels per day. Exports of the difference averaged 115,220 barrels per day.

Imports and consumption of dry natural gas came to 160.01 billion cu ft, and 159.94 billion cu ft, respectively in 2002.

Finland's electric power generating capacity in 2002 stood at 16.475 million kW, of which the bulk, 10.898 million kW, was dedicated to conventional thermal generation. Hydropower capacity, nuclear and geothermal/other came to 2.895 million kW, 2.640 million kW and 0.042 million kW, respectively in 2002. Total electricity production for that year amounted to 71.303 billion kWh, of which conventional thermal sources totaled 29,770 billion kWh. Hydroelectric, nuclear and geothermal/other sources produced: 10.668 billion kWh; 21.180 billion kWh; and 9.685 billion kWh. Consumption of electricity was 78.312 billion kWh in 2002. Finland has four nuclear power plants, two 465-MW reactors at the Loviisa plant and two 735-MW reactors at the Tvo facility. Most of Finland's waterpower resources are located along the Oulu and Kemi rivers.

## 28 INDUSTRY

Since the end of World War II, industrial progress has been noteworthy. Contributing factors include the forced stimulus of reparation payments, large quantities of available electric power, increased mining operations, growing mechanization of agriculture and forestry, development of transportation and communications, and steady foreign demand for Finnish exports. In terms of value of production and size of labor force, the electronics and electrical industry is, as of 2005, the most important, displacing the metals industry. Also highly significant are the food, pulp and paper, machinery, chemical, and shipbuilding industries. The most important industrial regions center around Helsinki, Tampere, Turku, Lappeenranta, Lahti, Jyväskylä, and the valleys of the Kymi and Kokemäki rivers, and coastal towns like Kotka, Rauma, and Pori. The state no longer owns a majority of the outstanding stock in most industrial companies.

The growth in Finnish industry, from 25.8% of GDP in 1990 to 28.4% by 2000 and 30.2% in 2004, is atypical for developed countries, where the services sector has tended to increase more than industry. In 2004, industry employed 22% of the labor force. Finland is a world leader in the making of cellular telephone handsets, paper machinery, medical devices, and instruments for environmental measurements. Nokia, the largest company in the country, produces the most mobile telephones in the world (it is, however, nearly 90% foreign-owned, especially by American pension foundations). Biotechnology is an increasingly important sector, with strength in pharmaceuticals, biomaterials, diagnostics, and industrial enzymes. Finland's biotechnology industry ranked sixth in Europe in 2005. The software industry is one of Finland's most promising industrial sectors; currently, there are more than 3,000 software companies in Finland, many of them start-ups or in early growth stages. The electrical engineering industry's roots go back to the late 19th century: the company founded by Gottfried Strömberg, who built generators and electric motors, is now a profitable arm of the Asea Brown Boveri Group. Finnish companies such as Instru, Vaisala, and Neles (now part of Metso) have succeeded in areas such as industrial automation and medical and meteorological technology. Metso, formed from Valmet and Tampella, is today the world's leading producer of paper machines. Although certain fashion (Luhta and Marimekko) and footwear (Palmroth) design companies are important, the previously strong "heavy" textile in-

dustry—making cotton, woolen, and other fabrics—has virtually disappeared due to foreign competition.

## 29 SCIENCE AND TECHNOLOGY

Scientific research is carried out at state research institutes, private research centers, and institutions of higher learning. The Technology Development Center, established in 1983 under the Ministry of Trade and Industry, oversees technological research and coordinates international research activities. The Academy of Finland (founded in 1947), a central governmental organ for research administration, reports directly to the Ministry of Education. It promotes scientific research and develops national science policy by maintaining research fellowships, sponsoring projects, and publishing reports. Finland has 13 universities offering courses in basic and applied sciences. The University of Helsinki operates a natural history museum that has zoological, botanical, and geological components. The principal learned societies, all in Helsinki, are the Federation of Finnish Scientific Societies (founded in 1899), the Finnish Academy of Science and Letters (founded in 1908), and the Finnish Society of Sciences and Letters (founded in 1838); preeminent in technological development is the Finnish Technical Research Center (founded in 1942) at Espoo.

In 1987–97, science and engineering students accounted for 39% of university enrollment. In 2002, science degrees (natural sciences, mathematics and computers, and engineering) accounted for 32.2% of all bachelor's degrees awarded.

In 2002, expenditures on research and development (R&D) amounted to \$4.7 billion or 3.46% of GDP. Business enterprises, including those in which the central or local government owns major shares, financed 69.5% of the nation's research, followed by government at 26.1%, with foreign sources and higher education accounting for 3.1% and 0.2%, respectively. High technology exports in 2002 totaled \$9.139 billion, or 24% of the country's manufactured exports. In that same year, there were 7,431 researchers (excluding technicians) per million people actively engaged in research and experimental development.

## 30 DOMESTIC TRADE

Domestic trade is carried on through the customary wholesale and retail channels. Kesko is Finland's largest retailer. The S-Group consists of cooperative societies and SOK with their subsidiaries. The S-Group's largest retail area is the grocery trade. Valio, a dairy company, is the leading food business company in terms of net turnover.

Office hours are from 8 AM to 5 PM, Mondays through Fridays, with lunch lasting from one to two hours. Government offices are open from 8 AM to 4 PM. Stores and shops are open from 9 AM to 6 PM, Monday through Friday, and 9 AM to 3 PM on Saturday, but department stores and shopping malls stay open until 8 PM on weekdays and until 4 PM on Saturday.

Advertising is found on television, radio, the Internet, and in traditional print sources. There are two public and two commercial television stations in Finland. In 2005, Finland became the first European country to issue a license for commercial television service for mobile phones. By 2005, there were 83 commercial radio stations in Finland with almost 300 frequencies around the country; commercial radio in Finland got its start in 1985. Finland

recently rescinded a ban on alcohol advertising, but maintains a ban on tobacco advertising.

## 31 FOREIGN TRADE

Exports of goods and services contribute 33% of the country's GDP. Exports in 2004 totaled \$61.04 billion, and imports totaled \$45.17 billion, for a trade surplus of \$15.87 billion. The EU is by far Finland's largest trading partner. In 2003, 53% of all exports went to the EU, and 55% of all Finnish imports originated from the EU. Although Germany—Finland's largest EU trading partner in 2004—is within the euro zone, its other two main EU trading partners, the United Kingdom and Sweden, are outside it. Therefore, in 2003, only 32.8% of exports went to the euro area, and only 34.5% of imports originated there. Finland's leading markets in 2004 were Sweden (11.1% of all exports), Germany (10.7%), Russia (8.9%), the United Kingdom (7%), and the United States (6.4%). Leading suppliers in 2004 were Germany (14.6% of all imports), Russia (13.1%), Sweden (10.9%), China (4.6%), and France (4.5%).

## 32 BALANCE OF PAYMENTS

Finnish households and businesses became more cautious in spending, due to the deep recession in the early 1990s and the slowdown in the global economy that began in 2001. Nonetheless, the financial health of Finnish companies improved in the late 1990s and into the 2000s.

The trade surplus in 2004 stood at \$15.87 billion. The current account surplus stood at \$11.39 billion in 2004. The current account surplus averaged 6.2% of GDP from 2000–04. Public debt was estimated at 46.8% of GDP in 2004.

## 33 BANKING AND SECURITIES

The central bank is the Bank of Finland—the fourth-oldest in Europe—established in 1811 with headquarters in Helsinki and seven branch offices. Possessing extensive autonomy though subject to parliamentary supervision, and endowed with extensive monetary and fiscal powers, the Bank is administered by a six-member board of management appointed by the president of the republic.

It has an exclusive monopoly over the issuance of notes. Completing its preparations for Economic and Monetary Union (EMU), on 17 January 1997 the government submitted to the Eduskunta a proposal for a new Act of the Bank of Finland. The main purpose of the act was to prepare the Bank of Finland institutionally for Stage 3 of EMU by providing for its independence ahead of the move to a single currency, in line with the requirements set out in the Maastricht treaty.

As of 1999, leading deposit banks in Finland included: Nordea (Merita Nordbanken, the result of a merger between Merita and Swedish Nordbanken, Danish Unidanmark, and Norwegian

Christiania Bank); OKO Bank (the Cooperative Bank Group, the first bank in the world to offer online banking transaction services, in 1996); and the Sampo Group (the result of a merger between Sampo Insurance Company and the Leonia bank group). Eight major commercial banks and 40 savings banks serve the country. Six foreign banks have branches in Finland.

In 1996 the markka stayed firm against the German mark. In the fourth quarter of 1996 Finland's three-month money-market rate, the Helibor, fell by nearly 40 basis points, from 3.48% to just 3.09%. The fall resulted in further convergence with German money-market rates. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$37.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$59.8 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.26%.

An exchange at Helsinki (established in 1912) is authorized to deal in stocks. As of 2004, there were 134 companies listed on the Helsinki Stock Exchange (HEX), which had a market capitalization of \$183.765 billion in that same year. In 2004, the HEX 25 rose 19.6% from the previous year to 1,831.0.

**3<sup>4</sup> INSURANCE**

Insurance in Finland is highly developed and diversified. There are 56 Finnish insurance companies, 16 of them engaged in life insurance. Workers' compensation, hunter's liability, workers' pension, nuclear liability, ship owners' and employers' liability, and automobile third-party insurance are compulsory. Other forms of insurance include fire, burglary, water damage, maritime, funeral, livestock, fidelity guarantee, and credit.

In 2003, direct premiums written totaled \$14.123 billion, of which life insurance accounted for \$11.065 billion. The country's top nonlife insurer that same year was If Vahinkovakuutus, with \$962.2 million in gross nonlife premiums written. Nordea was the country's leading life insurer that year with \$1,040.7 million of life premiums written.

**3<sup>5</sup> PUBLIC FINANCE**

Budget estimates are prepared by the Ministry of Finance and submitted to the legislature. They are referred to the finance committee and subsequently reported back to the full body. Supplementary budgets are usual. Finland's budget balance continued its sharp deterioration in 1992, as the deep recession resulted in decreased tax revenues and increased social expenditures. Extensive government support for the fragile banking system and increased interest expenditures were also responsible. The rest of the 1990s, however, proved much more auspicious for the fast-growing Finnish economy. GDP grew 5.6% in 2000, fueled by a booming electronics industry.

The US Central Intelligence Agency (CIA) estimated that in 2005 Finland's central government took in revenues of approximately \$99.6 billion and had expenditures of \$97.1 billion. Revenues minus expenditures totaled approximately \$2.4 billion. Public debt in 2005 amounted to 42% of GDP. Total external debt was \$211.7 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were €56,864 million and expenditures were €50,390 million. The value of revenues was us\$53,514 million and expenditures us\$47,415 million, based on an exchange rate for 2002 of us\$1 = €1.0626 as reported by the IMF. Government outlays by function were as follows: general public services, 12.7%; defense, 4.0%; public order and safety, 3.1%; economic affairs, 10.4%; environmental protection, 0.5%; housing and community amenities, 0.7%; health, 8.2%; recreation, culture, and religion, 1.1%; education, 12.5%; and social protection, 47.2%.

### 36 TAXATION

As of 1 January 2005 the standard corporate income tax rate was 26%, which is also the capital gains tax rate. Branches of foreign companies are taxed equally. The Lutheran Church and the Orthodox Church receive a share of the corporate tax. Withholding taxes, reduced or eliminated through double taxation treaties which Finland has with about 60 countries, are otherwise 28% on dividends, and on income from royalties. Interest paid to resident persons received from debentures, bonds, and bank deposits are subject to a 28% withholding tax. Generally, nonresidents are exempt from this tax. Dividends paid from one resident company to another resident company are also exempt.

Personal income taxes are assessed in a progressive schedule up to 33.5% on taxable income over €56,900. Local income taxes vary from 16–21% of income, depending upon the taxing municipality. Also at the municipal level is a religious tax with proportional rates ranging from 1–2.25% of taxable income. Other direct taxes include a wealth tax, a tax on the transfer of property assets (4.1%), and a tax on transfers of movable assets (1.6%). The amount of national, local, wealth, and health insurance taxes are limited to no more than 60% of taxable income.

Main indirect tax is a value-added tax (VAT) with a standard rate of 22%. A reduced rate of 17% is charged on basic foodstuffs and animal feed. Medicines, books, public transportation, hotel services, and cultural events are subject to an 8% VAT. Exports, the sale or rental of immovable property, insurance, healthcare, educational and financial/bank services are exempt.

### 37 CUSTOMS AND DUTIES

Finland, as a member of the European Union, allows imports from EU and EFTA countries to enter duty-free. Finland is also a part of the European Economic Area, an agreement that eliminates trade barriers in Europe. Because it is a member of the European Union, Finland complies with trade agreements the EU has made with non-EU countries. Customs duties are levied based on the goods' CIF value (cost, insurance, and freight) at the time and place of importation.

### 38 FOREIGN INVESTMENT

Finland is favorably disposed toward foreign investment and there is in general no ban on wholly foreign-owned enterprises. Regulations have been liberalized over the years and are generously interpreted. Certain acquisitions of large Finnish companies may require follow-up clearance from the Ministry of Trade and Industry, the purpose of which is to protect "essential national interests." The Aland Islands are an exception to these open invest-

ment practices: based on international agreements dating from 1921, property ownership and the right to conduct business are limited to only those individuals with right of domicile in the Aland Islands.

The government started to privatize fully state-owned companies in the early 1990s. By 2005, however, the state, on the global and competitive markets, had switched its role to a risk investor in new, promising, and innovative high-technology companies.

By international standards, the amount of direct investment in Finland had in the past been relatively modest. From 1988 to 1990 its share of world foreign direct investment (FDI) was only half of its share of world GDP. In terms of overall attractiveness as a foreign investment destination, Finland was ranked sixth out of the 140 countries in UNCTAD's study of inward FDI potential. In the 1990s, this potential became more fully realized as foreign investments increased steadily. In the period 1998 to 2000, Finland's share of (FDI) flows grew to be almost twice its share of world GDP. It has continued to be ranked highly in overall attractiveness for foreign investment in the early 2000s. In 2005, Finland was ranked by Transparency International as the second least corrupt country in the world, tied with New Zealand and just behind Iceland.

Annual FDI inflow stood at over \$12 billion in 1998, up from \$2.1 billion in 1997. FDI inflow fell to \$4.6 billion in 1999, but increased to \$8.8 billion in 2000. In the global slowdown of 2001, FDI inflow to Finland fell to \$3.6 billion. Most investment comes from Sweden, the United Kingdom, the United States, Germany, and France. Finnish investment abroad is in the form of long-term export credits and direct investment by private companies. In 2003, there was a net inflow of investment to Finland, in the amount of €5.2 billion. At the end of 2003, the book value of the stock of outward direct investment was €60.3 billion, and the book value of the stock of inward direct investment was €36.6 billion.

The corporate tax rate stood at 26% in 2005 (down from 29%), and the tax rate on capital gains was 28%. The net wealth tax was to be abolished as of 1 January 2006. The Finnish labor force is highly skilled and well educated, which makes for an attractive investment climate.

### 39 ECONOMIC DEVELOPMENT

Over a decade after the end of the Cold War, Finland has entered a new phase in its economic development. After a three-year recession in which the Finnish economy reeled from the collapse of the Soviet market in the early 1990s, Finland rebounded by shifting its economic sights westward. The successful development of high tech industries has placed Finland in the forefront of the communications boom. This factor, combined with European Union (EU) membership in 1995, radically altered Finland's economic significance.

Economic activity is spread between the north and the south of the country, particularly in the information and communications technology sector. Oulu in northern Finland is a technology center, for example, as is the Helsinki region in the south. Agricultural activity is concentrated in the southern part of Finland, although reindeer husbandry is focused in the far north.

Finland's educational system is one of the best among OECD countries, and its highly developed welfare state allowed the country to convert easily to the euro. Early retirement has depressed

the labor supply, however, and the population is aging rapidly. This could lower potential economic growth in the future. Pension reform was enacted in 2002. The main domestic issue for Finland in 2005 remained improving the labor market, both by reducing the unemployment rate, and by increasing participation in employment. Recent tax cuts have been intended to stimulate the labor market and to keep public finances on a sound footing. Finland must further its integration with the EU and develop better relations with Baltic-rim countries, particularly Russia. Finland remains vital as a transshipment channel to Russian markets, especially in the northern regions.

Finland has put relatively more funds into research and development than most other western countries, as demonstrated by the success of the electronics and other high-tech industries.

#### 40 SOCIAL DEVELOPMENT

Social welfare legislation in Finland is patterned largely on Scandinavian models. The system has evolved gradually in response to social needs. Major benefits include employees' accident insurance, old age and disability pensions, unemployment insurance, sickness insurance, compensation for war invalids, and family and child allowances. The first laws were implemented in 1927, with the most recent update in 2003. Family allowance payments are based on number of children and marital status of the parents. There are also birth grants, and child home care allowances for parents who stay home to care for a child under age three. A universal pension system currently covers all Finnish citizens who have lived in the country for at least three years and foreign nationals with at least five years' residence. Payments begin at age 65.

Women have a high level of education and hold a large number of elective political posts. Finland has a comprehensive equal rights law. However, women seldom hold high-paying management positions in the private sector, and it was estimated in 2004 that women earn on average only 82 cents for every dollar that a male earns. Although there is violence against women, the government takes actions to combat it. There are strict criminal penalties for violence against women, and there are many shelters and programs to assist victims. The relatively high level of domestic violence seems to be due to the high rate of alcoholism.

Indigenous Sami (Lapps) receive government subsidies, which enable them to maintain their traditional reindeer herding lifestyle. Minorities' rights and culture are traditionally protected by law. However, increasing hostility toward immigrants in recent years prompted the passage of a new law designed to facilitate the integration of immigrants into Finnish society and the granting of political asylum.

#### 41 HEALTH

In Finland, the local authorities are responsible for the majority of health services. The entire population is covered by health insurance, which includes compensation for lost earnings and treatment cost. This program is run by the Social Insurance Institution and is supplemented by private services. In 1991, a new Private Health Care Act took effect to enhance the quality of services provided.

In 2004, there were an estimated 311 physicians per 100,000 people. In addition, Finland had approximately 2,171 nurses per 100,000 people, the largest per capita number of nurses in the

world. There were also an estimated 91 dentists, 149 pharmacists, and 77 midwives per 100,000 people. Health care, safe water, and sanitation are available to 100% of the population. An estimated 6.8% of the GDP went to health expenditures.

Approximately 80% of married women (ages 15 to 49) were using contraceptives. The fertility rate was 1.7 children per woman throughout her childbearing years. Children were vaccinated against the following diseases: diphtheria, pertussis, and tetanus, 100%; polio, 99%; and measles, 98%.

The infant mortality rate in 2005 was 3.57 per 1,000, one of the world's lowest. Heart disease among men is high relative to other European countries and diseases of the circulatory system cause about half of all deaths in the country, with cancer being the second leading cause of death. The likelihood of dying after age 65 from heart disease was 366 per 1000 men and 351 per 1000 women. Life expectancy in 2005 was 78.35 years.

While female health is good by international standards, male mortality in the over-25 age bracket is much higher in Finland than in most industrial countries. The main reason for the excessive male death rate is cardiovascular disease. Tobacco consumption decreased from 1.7 kg (3.7 lbs) in 1984–86 to 1.5 kg (3.3 lbs) a year per adult in 1995. The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 1,500 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

In 1994, Finland became the first country to eradicate indigenous cases of measles, German measles, and mumps. The diseases have disappeared except for a small number of cases brought in from abroad.

#### 42 HOUSING

At the end of World War II, Finland faced a critical housing shortage. About 14,000 dwellings had been severely damaged during the war and only a modest amount of new housing was built from 1939 to 1944. Some 112,000 dwellings were lost to the ceded territories, and homes had to be found for the displaced persons. Government participation was inevitable in this situation. Two measures passed in the late 1940s, the Land Acquisition Act and the Arava Law, made large-scale credit available on reasonable terms. In the period 1949–59, a total of 334,000 dwellings were built, including 141,900 supported by the Land Acquisition Act and 89,400 supported by the Arava Law.

The migration into urban centers that continued throughout the 1950s and 1960s resulted in a constant urban housing shortage even after the war losses had been replaced. During the period 1960–65, the number of new dwellings averaged about 37,000 annually. To stimulate housing construction, the government passed the Housing Act in 1966 providing for increased government support. As a result of this Act, the number of new dwellings supported by government loans rose rapidly. In the period 1966–74, a total of 466,900 dwellings were completed, of which 214,700 were supported by government loans.

From 1974 through 1985, another 558,000 new units were added to the housing stock. In 1991, 51,803 new dwellings were completed, down from 65,397 in 1990. The total number of dwellings in 2000 was 2,512,442. In 2003, the total number of dwelling units was about 2,604,000. About 57.6% of all units were owner occupied. About 53.9% of all households are in single-family

residences; 40% of all households are in single-family detached dwellings. Overcrowding, which is defined as more than one person per room (excluding the kitchen), affects about 20% of the population.

### 4<sup>3</sup> EDUCATION

The public school system unites the primary school and lower secondary school into a compulsory nine-year comprehensive school, with a six-year lower level and a three-year upper level. Instruction is uniform at the lower level. At the upper one, there are both required and elective courses. The upper secondary school (gymnasium) and vocational schools continue with three-year programs.

In 2001, about 55% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 95% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 16:1 in 2003.

People's high schools and workers' academies are evidence of the widespread interest in popular or adult education. Although they are owned by private foundations or organizations, these ventures also receive state subsidies. Higher education falls into three categories: universities and institutions of university status; people's high schools or colleges; and workers' academies. Entrance to the universities is through annual matriculation examinations. There are 20 universities and 20 polytechnical schools. All of the universities are owned and operate by the state. The polytechnical schools are co-funded by state and local governments. Among the best known institutes are the University of Helsinki (founded 1640), Turku University (founded 1922), the Helsinki School of Economics, and the University of Tampere. University study is free of charge. In 2003, about 88% of the tertiary age population were enrolled in some type of higher education program; 80% for men and 96% for women. The adult literacy rate for 2000 was estimated at 100%.

As of 2003, public expenditure on education was estimated at 6.4% of GDP, or 12.7% of total government expenditures.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The largest library in Finland is the Helsinki University Library, with 2.6 million volumes in 2002; it acts both as the general library of the university and as the national library. Next in size are the Helsinki City Library (a regional library with 1.76 million volumes) and the libraries at Turku University (1.9 million) and Åbo Academy (1.7 million). There are about 400 research and university libraries in Finland, most of which are small. There are 19 regional libraries in the country. The Espoo City Library is one such regional library; it sponsors 14 branch locations, 2 institutional locations, and 2 mobile units.

The number of museums has grown rapidly since World War II. There are over 200 museums and 19,100 monuments and historic sites throughout the country. Many museums, which are accessible only from May to September, are open-air, depicting local or rural history. Among the better-known museums are the National, Mannerheim, and Municipal museums and the Ateneum Art Museum in Helsinki; the Turku Art Museum and Provincial

Museum; the Runeberg Museum at Porvoo; and the outdoor museums at Helsinki and Turku.

### 4<sup>5</sup> MEDIA

Telephone lines are both state and privately owned, but long-distance service is a state monopoly. In 2003, there were an estimated 492 mainline telephones for every 1,000 people. The same year, there were approximately 910 mobile phones in use for every 1,000 people.

Broadcasting is run by Oy Yleisradio Ab, a joint-stock company of which the government owns over 90%, and MTV, a commercial company. Regular television transmission began in 1958. As of 1999 there were 6 AM and 105 FM radio stations and 120 television stations. In 2003, there were an estimated 1,624 radios and 679 television sets for every 1,000 people. The same year, there were 441.7 personal computers for every 1,000 people and 534 of every 1,000 people had access to the Internet. There were 1,283 secure Internet servers in the country in 2004.

In 2001, there were about 256 newspapers, with 56 dailies. Major newspapers, with their political affiliation and daily circulation in 2002, are *Helsingin Sanomat* (in Helsinki), independent, 472,600; *Iltta-Sanomat* (Helsinki), independent, 218,100; *Aamulehti* (Tampere), conservative, 132,900; *Turun Sanomat* (Turku), independent, 113,400; *Iltalehti* (Helsinki), 101,980; *Kaleva* (Oulu), independent, 83,800; *Kauppalehti* (Helsinki), 80,000; *Keskisuomalainen* (Jyväskylä), Center Party, 79,200; *Hufvudstadsbladet* (Helsinki, Swedish), independent, 59,200; *Satakunnan Kansa* (Pori), conservative, 58,000; and *Kansan Uutiset* (Helsinki), Finn. People's Democratic League, 42,400. The leading weekly journals in 1995 were *Seura* (circulation 276,000) and *Apu* (254,000).

The broadcast and print media enjoy independence and support from the government, which abides by legally provided free speech and press.

### 4<sup>6</sup> ORGANIZATIONS

The cooperative movement is highly developed. Cooperatives have developed extensive educational and informational programs, including a lively cooperative press and many training schools. They are divided into three major groups. Pellervo-Seura is the Central Organization of Farmers' Cooperatives. It provides educational and advisory services to its 800 member organizations. All the agricultural cooperative central organizations are members of Pellervo: the Cooperative Dairy Association, Meat Producers' Central Federation, Central Cooperative Egg Export Association, a wholesalers' cooperative for farm inputs and products, and the forest products cooperative. The Kulutusosuuskuntien Keskusliitto (KK) Cooperative Organizations, the so-called progressive cooperatives, include the KK (educational union of KK cooperatives), OTK (general wholesalers for KK cooperatives), and insurance associations. The FSA Cooperative Organizations are the Swedish-speaking cooperatives. Among their members are the FSA (general union of the Swedish-Finnish cooperatives), Labor (cooperative purchasing wholesalers), Åland Central Cooperative (a central cooperative for cooperative dairies on the Åland Islands), cooperative marketing associations for eggs and dairy products, and the Central Fish Cooperative.

Occupational and trade associations are numerous. In the agricultural sector the most influential is the Central Union of Agri-

cultural Producers, a nonpolitical farmers' trade union. The Federation of Agricultural Societies concentrates on advisory and educational functions. Important in industry and commerce are the Confederation of Finnish Industries, Central Federation of Handicrafts and Small Industry, Central Board of Finnish Wholesalers' and Retailers' Associations, and the Finnish Foreign Trade Association. Professional associations are available for a wide variety of fields. The Central Chamber of Commerce of Finland has its headquarters in Helsinki.

Cultural and philanthropic organizations are also numerous; among the most influential are the Finnish Academy, the Finnish Cultural Fund, and the Wihuri Foundation. Other national cultural organizations include the Fine Arts Association of Finland and the Finnish Society of Sciences and Letters. There are also associations for a variety of hobbyists.

The Finnish Medical Association promotes research and education on health issues and works to establish common policies and standards in healthcare. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions, such as the Finnish Heart Association and the Finnish Diabetes Association.

National youth organizations exist for a variety of interests, including Finnish 4-H Federation, Finnish Union of Students, Guides and Scouts of Finland, the Youth League of the Coalition Party, and chapters of YMCA/YWCA. Some youth organizations are linked to political parties, such as the Youth League of the Coalition Party. The National Council of Women of Finland is an umbrella organization for women's rights groups throughout the country. The Finnish White Ribbon Union works with groups dedicated to helping women and youth who are victims of drug and alcohol addictions.

The Finnish League for Human Rights is based in Helsinki. At the level of international cooperation are such organizations as the Norden societies and the League for the United Nations. The Red Cross, Amnesty International, and Greenpeace also have active chapters.

#### 47 TOURISM, TRAVEL, AND RECREATION

Finland offers natural beauty and tranquility in forest cottages and on the tens of thousands of islands that dot the 60,000 lakes and the Baltic Sea. Winter offers cultural events and cross-country skiing; winter festivals feature sled and skating competitions, ice castles, and crafts. Finland is the original home of the sauna, a national tradition. Popular sports include skiing, cycling, fishing, golfing, running, rowing, and wrestling. A valid passport is required. Visits of over 90 days require a tourist/business visa.

In 2003, approximately 4,527,000 foreign visitors arrived in Finland, of whom 35% came from Russia. There were 55,767 hotel rooms with 120,051 beds, and an occupancy rate of 46%. Tourist expenditure receipts totaled \$2.6 billion.

In 2005, the US Department of State estimated the daily cost of staying in Helsinki at \$304. Other areas averaged \$310 per day.

#### 48 FAMOUS FINNS

Great Finnish literary figures include Elias Lönnrot (1802–84), compiler of the national epic, the *Kalevala*; Johan Ludwig Runeberg (1804–77), the most important of the 19th-century Finnish-Swedish writers, known for his *Elk Hunters* and *Songs of Ensign*

*Stål*; Aleksis Kivi (1834–72), the founder of modern Finnish-language literature and author of *The Seven Brothers*; Juhani Aho (1861–1921), master of Finnish prose; Eino Leino (1878–1926), perhaps the greatest lyric poet to write in Finnish; Frans Eemil Sillanpää (1888–1964), a Nobel Prize winner (1939), known to English-language audiences through his *Meek Heritage* and *The Maid Silja*; Toivo Pekkanen (1902–57), whose novels portray the impact of industrialization on Finnish life; Mika Waltari (1908–79), member of the Finnish Academy; Väinö Linna (1920–92), a Scandinavian Literature Prize winner (1963) and author of *The Unknown Soldier* (1954); and the antiwar novelist and playwright Veijo Meri (b.1928).

Finnish architects who are well known abroad include Eliel Saarinen (1873–1950) and his son Eero Saarinen (1910–61), whose career was chiefly in the United States; Alvar Aalto (1898–1976); Viljo Revell (1910–64); and Aarne Ervi (1910–77). Leading sculptors were Väinö Aaltonen (1894–1966) and Eila Hiltunen (1922–2003); Laila Pullinen (b.1933) is also famous. Five representative painters are Helena Schjerfbeck (1852–1946), Albert Edelfelt (1854–1905), Akseli Gallen-Kalléla (1865–1931), Pekka Halonen (1865–1933), and Tyko Sallinen (1879–1955). Arts and crafts hold an important place in Finnish culture: leading figures are Tapio Wirkkala (1915–85) and Timo Sarpaneva (b.1926). Finnish music has been dominated by Jean Sibelius (1865–1957). Also notable are the composer of art songs Yrjö Kilpinen (1892–1957), the composer of operas and symphonies Aulis Sallinen (b.1935), and opera and concert bass Martti Talvela (1935–89).

Scientists of international repute are A. I. Wirtanen (1895–1973), Nobel Prize winner for chemistry in 1945; Rolf Nevanlinna (1895–1980), mathematician; Pentti Eskola (1883–1964), geologist; V. A. Heiskanen (1895–1971), professor of geodesy; Aimo Kaarlo Cajander (1879–1943), botanist and silviculturist; Edward Westermarck (1862–1939), ethnographer and sociologist; and Yrjö Väisälä (1891–1971), astronomer. Ragnar Arthur Granit (1900–1991) shared the Nobel Prize in physiology or medicine in 1967. Linus Torvalds (b.1969) is a software engineer best known for initiating the development of Linux.

Outstanding athletes include Hannes Kolehmainen (1890–1966) and Paavo Nurmi (1897–1973), who between them won 14 Olympic medals in track. Another distance runner, Lasse Viren (b.1949), won gold medals in both the 1972 and 1976 games. Other Olympic gold medalists include skier Janne Lahtela (b.1974) and Nordic combined athlete Samppa Lajunen (b.1979).

Major political figures of the 19th century were Johan Wilhelm Snellman (1806–81) and Yrjö Sakari Yrjö-Koskinen (1830–1903). Inseparably linked with the history of independent Finland is Marshal Carl Gustaf Emil Mannerheim (1867–1951), and with the recent postwar period President Juho Kusti Paasikivi (1870–1956). Sakari Tuomioja (1911–64) was prominent in UN affairs. President Urho Kekkonen (1900–86) was instrumental in preserving Finland's neutrality. Mauno Henrik Koivisto (b.1923) served as president from 1982 until 1994. Martti Oiva Kalevi Ahtisaari (b.1937), a former president (1994–2000) and UN diplomat, is noted for his international peace work. Tarja Kaarina Halonen (b.1943) became Finland's first woman president in 2000. She was reelected in 2006.

**49 DEPENDENCIES**

Finland possesses no territories or colonies.

# FRANCE

French Republic  
*République Française*

**CAPITAL:** Paris

**FLAG:** The national flag is a tricolor of blue, white, and red vertical stripes.

**ANTHEM:** *La Marseillaise*.

**MONETARY UNIT:** The euro replaced the franc as the official currency in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; World War II Armistice Day, 8 May; Bastille Day, 14 July; Assumption, 15 August; All Saints' Day, 1 November; World War I Armistice Day, 11 November; Christmas, 25 December. Movable holidays include Easter Monday, Ascension, and Pentecost Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in Western Europe, France is the second-largest country on the continent, with an area (including the island of Corsica) of 547,030 sq km (211,209 sq mi). Comparatively, the area occupied by France is slightly less than twice the size of the state of Colorado. It extends 962 km (598 mi) N–S and 950 km (590 mi) E–W. France is bounded on the N by the North Sea and Belgium, on the NE by Luxembourg and Germany, on the E by Switzerland and Italy, on the S by the Mediterranean Sea, on the SW by Andorra and Spain, on the W by the Bay of Biscay and the Atlantic Ocean, and on the NW by the English Channel, with a total boundary length of 6,316 km (3,925 mi), of which 3,427 km (2,130 mi) is coastline.

France's capital city, Paris, is located in the north central part of the country.

## <sup>2</sup> TOPOGRAPHY

France topographically is one of the most varied countries of Europe, with elevations ranging from 2 m (7 ft) below sea level at Rhône River delta to the highest peak of the continent, Mont Blanc (4,807 m/15,771 ft), on the border with Italy. Much of the country is ringed with mountains. In the northeast is the Ardennes Plateau, which extends into Belgium and Luxembourg; to the east are the Vosges, the high Alps, and the Jura Mountains; and along the Spanish border are the Pyrenees, much like the Alps in ruggedness and height.

The core of France is the Paris Basin, connected in the southwest with the lowland of Aquitaine. Low hills cover much of Brittany and Normandy. The old, worn-down upland of the Massif Central, topped by extinct volcanoes, occupies the south-central area. The valley of the Rhône (813 km/505 mi), with that of its tributary the Saône (480 km/298 mi), provides an excellent passageway from the Paris Basin and eastern France to the Mediterranean.

There are three other main river systems: the Seine (776 km/482 mi), draining into the English Channel; the Loire (1,020 km/634 mi), which flows through central France to the Atlantic; and the Garonne (575 km/357 mi), which flows across southern France to the Atlantic.

## <sup>3</sup> CLIMATE

Three types of climate may be found within France: oceanic, continental, and Mediterranean. The oceanic climate, prevailing in the western parts of the country, is one of small temperature range, ample rainfall, cool summers, and cool but seldom very cold winters. The continental (transition) type of climate, found over much of eastern and central France, adjoining its long common boundary with west-central Europe, is characterized by warmer summers and colder winters than areas farther west; rainfall is ample, and winters tend to be snowy, especially in the higher areas. The Mediterranean climate, widespread throughout the south of France (except in the mountainous southwest), is one of cool winters, hot summers, and limited rainfall. The mean temperature is about 11°C (53° F) at Paris and 15°C (59° F) at Nice. In central and southern France, annual rainfall is light to moderate, ranging from about 68 cm (27 in) at Paris to 100 cm (39 in) at Bordeaux. Rainfall is heavy in Brittany, the northern coastal areas, and the mountainous areas, where it reaches more than 112 cm (44 in).

## <sup>4</sup> FLORA AND FAUNA

France's flora and fauna are as varied as its range of topography and climate. It has forests of oak and beech in the north and center, as well as pine, birch, poplar, and willow. The Massif Central has chestnut and beech; the subalpine zone, juniper and dwarf pine. In the south are pine forests and various oaks. Eucalyptus (imported from Australia) and dwarf pines abound in Provence. Toward the Mediterranean are olive trees, vines, and mulberry

and fig trees, as well as laurel, wild herbs, and the low scrub known as maquis (from which the French resistance movement in World War II took its name).

The Pyrenees and the Alps are the home of the brown bear, chamois, marmot, and alpine hare. In the forests are polecat and marten, wild boar, and various deer. Hedgehog and shrew are common, as are fox, weasel, bat, squirrel, badger, rabbit, mouse, otter, and beaver. The birds of France are largely migratory; warblers, thrushes, magpies, owls, buzzards, and gulls are common. There are storks in Alsace and elsewhere, eagles and falcons in the mountains, pheasants and partridge in the south. Flamingos, terns, buntings, herons, and egrets are found in the Mediterranean zone. The rivers hold eels, pike, perch, carp, roach, salmon, and trout; lobster and crayfish are found in the Mediterranean.

As of 2002, there were at least 93 species of mammals, 283 species of birds, and over 4,600 species of plants throughout the country.

## 5 ENVIRONMENT

The Ministry for the Environment is the principal environmental agency. France's basic law for the protection of water resources dates from 1964. The mid-1970s brought passage of laws governing air pollution, waste disposal, and chemicals. In general, environmental laws embody the "polluter pays" principle, although some of the charges imposed—for example, an aircraft landing fee—have little effect on the reduction of the pollutant (i.e., aircraft noise).

Water pollution is a serious problem in France due to the accumulation of industrial contaminants, agricultural nitrates, and waste from the nation's cities. As of 1994, 20% of France's forests were damaged due to acid rain and other contaminants. France has 179 cu km of renewable water resources with 72% used for industrial purposes and 10% used for farming.

Air pollution is a significant environmental problem in France, which had the world's 11th-highest level of industrial carbon dioxide emissions in 1992, totaling 362 million metric tons, a per capita level of 6.34 metric tons. The total level of carbon dioxide emissions in 2000 was about the same at 362.4 million metric tons. Official statistics reflect substantial progress in reducing airborne emissions in major cities: the amount of sulfur dioxide in Paris decreased from 122 micrograms per cu m of air in 1971 to 54 micrograms in 1985. An attempt to ban the dumping of toxic wastes entirely and to develop the technology for neutralizing them proved less successful, however, and the licensing of approved dump sites was authorized in the early 1980s.

In 2003, 13.3% of France's total land area was protected; these areas include both national and regional parks, as well as 8 biosphere reserves, 2 UNESCO World Heritage Sites, and 15 Ramsar Wetlands of International Importance. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 16 types of mammals, 15 species of birds, 3 types of reptiles, 3 species of amphibians, 16 species of fish, 34 types of mollusks, 31 species of other invertebrates, and 2 species of plants. Endangered or extinct species in France include the Corsican swallowtail, the gray wolf, the false ringlet butterfly, the Pyrenean desman, and the Baltic sturgeon. It has been estimated that 25% of all species known to have appeared in France were extinct, endangered, or in sub-

stantial regression. Extinct species include Perrin's cave beetle and the Sardinian pika.

## 6 POPULATION

The population of France in 2005 was estimated by the United Nations (UN) at 60,742,000, which placed it at number 21 in population among the 193 nations of the world. In 2005, approximately 16% of the population was over 65 years of age, with another 19% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.4%, a rate the government viewed as too low. The projected population for the year 2025 was 63,377,000. The population density was 110 per sq km (285 per sq mi), with much of the population concentrated in the north and southeast areas of the country.

The UN estimated that 76% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.67%. The capital city, Paris, had a population of 9,794,000 in that year. The next largest cities and their estimated populations include Lyon, 1,408,000; Marseille, 1,384,000; and Lille, 1,031,000. Other major urban centers include Toulouse, Nice, Strasbourg, Nantes, Bordeaux, Montpellier, Rennes, Saint-Étienne, and Le Havre.

## 7 MIGRATION

A new law on immigration and asylum was passed by parliament in May 1998. The law included amendments to include the French constitution's provision to protect "those fighting for freedom" and those threatened with inhuman and degrading treatment in their country of origin. France hosted some 6,300 Kosovar Albanians who arrived in 1999 under the UNHCR/IOM Humanitarian Evacuation Programme. In 2004, a total of 110,321 asylum applications were submitted to France, mostly from Asia, Africa, and Europe. In the same year, recognition of refugee status was granted to some 14% of asylum seekers. Refugees enjoy all the rights of regular immigrants. In 2004 France harbored 139,852 refugees, mainly Sri Lankans, Vietnamese, Turks, Cambodians, Congolese, and Serbians.

Populations of concern to the United Nations High Commissioner for Refugees (UNHCR) in France numbered 151,452. In 2005 it was estimated that illegal foreigners numbered 200,000–400,000. According to *Migration News*, France deported 11,000 illegals in 2003, 16,000 in 2004, and an expected 23,000 in 2005. Minorities are not recognized in France. They are expected to connect with "the Indivisible Republic," entitled in the French constitution. Nevertheless, in Paris environs between April and August 2005, rioting and fires killed immigrants. Police evacuated run-down buildings where asylum seekers and irregular foreigners lived in crowded conditions.

Remittances to France in 2002 were \$761 million. In 2005, the net migration rate was estimated as 0.66 migrants per 1,000 population.

## 8 ETHNIC GROUPS

The French are generally derived from three basic European ethnic stocks: Celtic, Latin, and Teutonic (Frankish). There are also small groups of Flemings, Catalans, Germans, Armenians, Roma, Russians, Poles, and others. The largest resident alien groups are

Algerians, Portuguese, Moroccans, Italians, Spaniards, Tunisians, and Turks.

## <sup>9</sup>LANGUAGES

Not only is French the national language of France, but it also has official status (often with other languages) throughout much of the former French colonial empire, including about two dozen nations in Africa. In all, it is estimated that more than 300 million people have French as their official language or mother tongue. Moreover, French is the sole official language at the ICJ and UPU, and shares official status in most international organizations. Other languages spoken within France itself include Breton (akin to Welsh) in Brittany; a German dialect in Alsace and Lorraine; Flemish in northeastern France; Spanish, Catalan, and Basque in the southwest; Provençal in the southeast, and an Italian dialect on the island of Corsica.

## <sup>10</sup>RELIGIONS

According to 2005 estimates, about 83–88% of the population are nominally Roman Catholic, but church officials claim that only about 8% are practicing members of the church. About 2% are Protestant, mostly Calvinist or Lutheran. Muslims (mostly North African workers) make up about 7–8%. Jews and Bahais each made up about 1%. There are about 250,000 Jehovah's Witnesses and between 80,000 and 100,000 Orthodox Christians. Christian Scientists, Mormons, and Scientologists are also represented. About 6% of the population have no religious affiliation.

The French Jewish community is one of the largest in the world, along with those in the United States, Israel, and the successor states of the former USSR; more than half are immigrants from North Africa. The 600,000 members are divided between Reform, Conservative, and Orthodox groups. Jews have enjoyed full rights of citizenship in France since 1791, and the emancipation of Central European Jewry was accomplished, to a large extent, by the armies of Napoleon Bonaparte. Anti-Semitism became a flaming issue during the Dreyfus affair in the late 1890s; in the 1980s, principal French synagogues were under police guard because of a wave of attacks by international terrorists.

The constitution provides for freedom of religion, and the government reportedly respects this right in practice. Church and state have been legally separate since 1905. Registration for religious groups is not required, but most groups choose to do so in order to gain tax-exempt status. The 2001 About-Picard Law allows for the dissolution of groups that endanger the physical or psychological well-being of individuals, promote illegal medical practices, violate the freedom of others, or commit fraud. Groups which advocate religious interests in dialogue with the government include the Council of Bishops (Catholic), the Protestant Federation of France, the General Consistory of Jews of France, and the French Council of the Muslim Faith. The Interministerial Monitoring Mission Against Sectarian Abuses monitors the activities of religious sects or cults that are considered to be a possible threat to society or may be acting in violation of the law.

## <sup>11</sup>TRANSPORTATION

France has one of the most highly developed transportation systems in Europe. Its outstanding characteristic has long been the degree to which it is centralized at Paris—plateaus and plains of-

fering easy access radiate from the city in all directions, and rivers with broad valleys converge on it from all sides. In 2003, the French road network totaled 891,290 km (554,438 mi), all of which was paved, and included about 10,390 km (6,462 mi) of national highways. In 2003 there were 29,560,000 passenger cars and 6,068,000 commercial vehicles in use.

All French railroads were nationalized in 1938 and are part of the national rail network Société Nationale des Chemins-de-Fer Français, 51% of whose shares are controlled by the government. As of 2004 there were 29,519 km (18,361 mi) of standard and narrow gauge railway track in operation, of which about 14,481 km (9,007 mi) were electrified. Standard gauge track accounted for nearly the entire system, with narrow gauge right of way accounting for only 167 km (104 mi). Le Train à Grande Vitesse (TGV), the fastest train in the world, averaging 250 km (155 mi) per hour over most of its run, entered service between Paris and Lyon in 1981. TGV service between Paris and Lausanne became fully operational in 1985. The TGV set another world speed record on 18 May 1990 with a registered speed of 515.2 km/h (320.2 mph). The Paris subway (métro), begun in the early 1900s but extensively modernized, and the city's regional express railways cover a distance of 472 km (293 mi). The métro has over one million passengers a day. Parisian bus lines carry about 800,000 passengers daily. Other cities with subways are Marseille, Lille, and Lyon, with construction underway in Toulouse.

Two high-speed rail tunnels under the English Channel link Calais and Folkestone, England (near Dover). The 50-km (31-mi) project by Eurotunnel, a British-French consortium, was completed in 1993. From these terminals, people can drive their cars and trucks onto trains, which can make the underground trek in about 30 minutes. Rail lines that run through the tunnel include Le Shuttle, which provides both freight and passenger service, and Eurostar, a high-speed passenger-only line. In November 1996 a truck aboard a Le Shuttle train caught fire in the tunnel, causing extensive damage but no loss of life. Service was partially restored within weeks of the incident and full repairs were completed by the following May.

France, especially in its northern and northeastern regions, is well provided with navigable rivers and connecting canals, and inland water transportation is of major importance. As of 2000, there were about 8,500 km (5,287 mi) of navigable waterways, of which 1,686 km (1,048 mi) was accessible to craft of 3,000 metric tons. The French merchant marine, as of 2005, had a total of 56 ships with 1,000 GRT or over, and a total capacity of 703,639 GRT. Kerguelen, an archipelago in the French Antarctic Territory, offers an offshore registry program which is less regulatory than official French registry. The leading ports are Marseille, Le Havre, Dunkerque, Rouen, Bordeaux, and Cherbourg. Other important ports include Boulogne, Brest, Fos-Sur-Mer, Sete, and Toulon. More than half of freight traffic to and from French ports is carried by French ships.

In 2004 there were an estimated 478 airports in France. In 2005, a total of 288 had paved runways, and there were also three heliports. France's national airline, Air France, is government subsidized. It operates regularly scheduled flights to all parts of the world. The Concorde, jointly developed by France and the United Kingdom at a cost of more than £1 billion, entered regular transat-

lantic service in 1976. Both British Airways and Air France ceased operations of Concorde passenger flights in 2003.

There are two major private airlines: the Union des Transports Aériens, which provides service to Africa and the South Pacific, and Air Inter, which operates within metropolitan France. The two international airports of Paris, Charles de Gaulle and Orly, both located in Paris, lead all others in France in both passenger and freight traffic. In 2003, about 47.259 million passengers were carried on scheduled domestic and international air flights.

## 12 HISTORY

Cave paintings and engravings, the most famous of them at Lascaux, near Montignac in the southwest, attest to human habitation in France as early as 30,000 years ago. Relics from the period between 4000 and 1800 BC include some 4,500 dolmens (structures consisting of two vertical stones capped by a horizontal stone), nearly 1,000 of them in Brittany alone, and more than 6,000 menhirs (single vertical stones), measuring 1.5–21.3 m (5–70 ft) in height and weighing up to 350 tons. There may already have been 2–3 million people in France when Phoenician and Greek colonists founded cities on the southern coast around 600 BC.

Detailed knowledge of French history begins with the conquest of the region (58–51 BC) by Julius Caesar. The country was largely inhabited by Celtic tribes known to the Romans as Gauls. Under Roman rule the Gallic provinces were among the most prosperous and civilized of the empire. Roman roads, traces of which still may be seen, traversed the land. Numerous cities were founded. Latin superseded the Celtic dialects. Christianity spread rapidly in Roman Gaul after its introduction there in the 1st century, and by the time the empire began to disintegrate a few hundred years later, the Gauls were a thoroughly Romanized and Christianized people. Early in the 5th century, Teutonic tribes invaded the region from Germany, the Visigoths settling in the southwest, the Burgundians along the Rhône River Valley, and the Franks (from whom the French take their name) in the north. The Germanic invaders probably never constituted more than a dominant minority of the population.

The first leader to make himself king of all the Franks was Clovis (466–511), who began his reign in 481, routing the last forces of the Roman governors of the province in 486. Clovis claimed that he would be baptized a Christian in the event of his victory against the Visigoths, which was said to have guaranteed the battle. Clovis regained the southwest from the Visigoths, was baptized in 496, and made himself master of western Germany, but after his death the kingdom disintegrated and its population declined under the Merovingian dynasty. In 732, Charles Martel was able to rally the eastern Franks to inflict a decisive defeat on the Saracens—Muslim invaders who already controlled the Iberian Peninsula—between Poitiers and Tours. He spawned the Carolingian family, as well as his grandson, Charlemagne (r.768–814), who was the greatest of the early Frankish rulers. Ruling “by the sword and the cross,” he gave the kingdom an efficient administration, created an excellent legal system, and encouraged the revival of learning, piety, and the arts. He added to the territories under his rule through wide conquests, eventually reigning over an area corresponding to present-day France, the FRG, the Low Countries, and northern Italy. On Christmas Day in the year 800,

he was crowned emperor of the West and ruler of the 1st Holy Roman Empire by the pope in Rome.

After the death of Charlemagne, the vast Carolingian Empire broke up during a century of feuding, the title of emperor passing to German rulers in the east. The territory of what is now France was invaded anew, this time by pagan tribes from Scandinavia and the north, and the region that later became known as Normandy was ceded to the Northmen in 911 by Charles III (“the Simple,” r.898–923). At the end of the century, Hugh Capet (r.987–996) founded the line of French kings that, including its collateral branches, was to rule the country for the next 800 years. Feudalism was by now a well-established system. The French kings were the dukes and feudal overlords of the Île de France, centered on Paris and extending roughly three days’ march around the city. At first, their feudal overlordship over the other provinces of France was almost entirely nominal. Some of the largest of these, like the Duchy of Brittany, were practically independent kingdoms. The Duchy of Normandy grew in power when William II, duke of Normandy, engaged in the Norman Conquest of England (1066–70) and became king as William I (“the Conqueror”), introducing the French language and culture to England. The powers of the French monarchy were gradually extended in the course of the 11th and early 12th centuries, particularly by Louis VI, who died in 1137. The power of his son Louis VII (r.1137–80) was challenged by Henry of Anjou, who, upon his accession to the English throne as Henry II in 1154, was feudal master of a greater part of the territory of France, including Normandy, Brittany, Anjou, and Aquitaine. Henry’s sons, Richard and John, were unable to hold these far-flung territories against the vigorous assaults of Louis’s son Philip Augustus (r.1180–1223). By 1215, Philip had not only reestablished the French crown’s control over the former Angevin holdings in the north and west but also had firmly consolidated the crown’s power in Languedoc and Toulouse. Philip’s grandson Louis IX (St. Louis), in a long reign (1226–70), firmly established the strength of the monarchy through his vigorous administration of the royal powers. The reign of Louis’s grandson Philip IV (“the Fair,” 1285–1314) marks the apogee of French royal power in the medieval period. He quarreled with the papacy over fiscal control of the French clergy and other aspects of sovereignty. His emissaries arrested Pope Boniface VIII and after his death removed the seat of the papacy to Avignon, where the popes resided under French dominance (the so-called Babylonian Captivity) until 1377.

It is estimated that between 1348 and 1400 the population dropped from 16 million to 11 million, mainly from a series of epidemics, beginning with the Black Death (bubonic plague) of 1348–50. In 1415, Henry V of England; taking advantage of civil war between the Gascons and Armagnacs, and the growing insanity of Charles VI; launched a new invasion of France and won a decisive victory at Agincourt. Charles VI (r.1380–1422) was compelled under the Treaty of Troyes (1420) to marry his daughter Catherine to Henry and to declare the latter and his descendants heirs to the French crown. Upon Henry’s death in 1422, his infant son Henry VI was crowned king of both France and England, but in the same year, Charles’s son, the dauphin of France, reasserted his claim, formally assumed the royal title, and slowly began the reconquest.

LOCATION: 42°20' to 51°5' N; 4°47' W to 8°15' E. BOUNDARY LENGTHS: Belgium, 620 kilometers (387 miles); Luxembourg, 73 kilometers (45 miles); Germany, 451 kilometers (280 miles); Switzerland, 573 kilometers (358 miles); Italy, 488 kilometers (305 miles); Andorra, 60 kilometers (37 miles); Spain, 623 kilometers (389 miles); total coastline (including islands), 3,427 kilometers (2,125 miles). TERRITORIAL SEA LIMIT: 12 miles.

Philip the Fair was succeeded by three sons, who reigned briefly and who left no direct male heirs, ending the Capetian dynasty. In 1328, his nephew Philip VI (in accordance with the so-called Salic Law, under which succession could pass through a male line only) mounted the throne as the first of the Valois kings. The new king's title to the throne was challenged by Edward III of England, whose mother was the daughter of Philip the Fair. In 1337, Edward as-

serted a formal claim to the French crown, shortly thereafter quartering the lilies of France on his shield. The struggle that lasted from 1337 to 1453 over these rival claims is known as the Hundred Years' War. Actually it consisted of a series of shorter wars and skirmishes punctuated by periods of truce. Edward won a notable victory at Crécy in 1346, in a battle that showed the superiority of English ground troops and longbows against the French

knights in armor. In 1356, the French royal forces were routed by the Prince of Wales at Poitiers, where the French king, John II, was taken prisoner. By terms of the Treaty of Brétigny (1360), the kingdom of France was dismembered, the southwest being formally ceded to the king of England. Under Charles V (r.1364–80), also called “Charles the Wise,” however, the great French soldier Bertrand du Guesclin, through a tenaciously conducted series of skirmishes, succeeded in driving the English from all French territory except Calais and the Bordeaux region.

#### 1422–1789

The first part of the Hundred Years’ War was essentially a dynastic rather than a national struggle. The English armies themselves were commanded by French-speaking nobles and a French-speaking king. Although the legitimate succession to the French crown was the ostensible issue throughout the war, the emerging forces of modern nationalism came into play with the campaign launched by Henry V, whose everyday language was English and who, after Agincourt, became an English national hero. France owed no small measure of its eventual success to the sentiment of nationalism that was arising throughout the country and that found its personification in the figure of Joan of Arc. Early in 1429, this young woman of surprising military genius, confident that she had a divinely inspired mission to save France, gained the confidence of the dauphin. She succeeded in raising the siege of Orléans and had the dauphin crowned Charles VII at Reims. Joan fell into English hands and at Rouen in 1431 was burned at the stake as a heretic, but the French armies continued to advance. Paris was retaken in 1436, and Rouen in 1453; by 1461, when Charles died, the English had been driven from all French territory except Calais, which was recaptured in 1558.

Louis XI (r.1461–83), with the support of the commercial towns, which regarded the king as their natural ally, set France on a course that eventually destroyed the power of the great feudal lords. His most formidable antagonist, Charles the Bold, duke of Burgundy, who ruled virtually as an independent monarch, commanded for many years far more resources than the king of France himself. But after the duke was defeated and killed in a battle against the Swiss in 1477, Louis was able to reunite Burgundy with France. When Louis’s son Charles VIII united Brittany, the last remaining quasi-independent province, with the royal domain by his marriage to Anne of Brittany, the consolidation of the kingdom under one rule was complete.

Under Charles VIII (r.1483–98) and Louis XII (r.1498–1515), France embarked on a series of Italian wars, which were continued under Francis I (r.1515–47) and Henry II (r.1547–59). These wars developed into the first phase of a protracted imperialistic struggle between France and the house of Habsburg. Although the Italian wars ended in a French defeat, they served to introduce the artistic and cultural influences of the Italian Renaissance into France on a large scale. Meanwhile, as the Reformation gained an increasing following in France, a bitter enmity developed between the great families that had espoused the Protestant or Huguenot cause and those that had remained Catholic. The policy of the French monarchy was in general to suppress Protestantism at home while supporting it abroad as a counterpoise to Habsburg power. Under the last of the Valois kings, Charles IX (r.1560–74) and Henry III (r.1574–89), a series of eight fierce civil wars devastated France,

called The Wars of Religion. Paris remained a stronghold of Catholicism, and on 23–24 August 1572, a militia led by the Duke of Guise slaughtered thousands of Protestants in the Massacre of St. Bartholomew. The Protestant Henry of Navarre was spared because of his royal status and eventually, on the death of Henry III, he acceded to the throne, beginning the Bourbon dynasty. Unable to capture Paris by force, Henry embraced Catholicism in 1593 and entered the city peacefully the following year. In 1598, he signed the Edict of Nantes, which guaranteed religious freedom to the Huguenots. With the aid of his minister Sully, Henry succeeded in restoring prosperity to France.

Assassinated in 1610 by a Catholic fanatic after 19 attempts on his life, Henry IV was succeeded by his young son Louis XIII, with the queen mother, Marie de Médicis, acting as regent in the early years of his reign. Later, the affairs of state were directed almost exclusively by Cardinal Richelieu, the king’s minister. Richelieu followed a systematic policy that entailed enhancing the crown’s absolute rule at home and combating the power of the Habsburgs abroad. In pursuit of the first of these objectives, Richelieu destroyed the political power of the Protestants by strictly monitoring the press and French language through the Academie Française; in pursuit of the second he led France in 1635 into the Thirty Years’ War, then raging in Germany, on the side of the Protestants and against the Austrians and the Spanish. Richelieu died in 1642, and Louis XIII died a few months later. His successor, Louis XIV, was five years old, and during the regency of his mother, Anne of Austria, France’s policy was largely guided by her adviser Cardinal Mazarin. The generalship of the prince de Condé and the vicomte de Turenne brought France striking victories. The Peace of Westphalia (1648), which ended the Thirty Years’ War, and the Peace of the Pyrenees (1659) marked the end of Habsburg hegemony and established France as the dominant power on the European continent. The last attempt of the French nobles in the Paris Parliament to rise against the crown, called the Fronde (1648–53), was successfully repressed by Mazarin even though the movement had the support of Condé and Turenne.

The active reign of Louis XIV began in 1661, the year of Mazarin’s death, and lasted until his own death in 1715. Louis XIV had served in the French army against Spain before his accession, and married the daughter of the King of Spain in order to bring peace to the region, despite his love for Mazarin’s niece. Assisted by his able ministers Colbert and Louvois, he completed Mazarin’s work of domestic centralization and transformed the French state into an absolute monarchy based on the so-called divine right of kings. Industry and commerce were encouraged by mercantilist policies, and great overseas empires were carved out in India, Canada, and Louisiana. By transforming the nobles into perennial courtiers, financially dependent on the crown, the king clipped their wings. Lavish display marked the early period of his reign, when the great palace at Versailles was built, beginning the era of French Classicism.

The reign of Louis XIV marked the high point in the prestige of the French monarchy. It was a golden age for French culture as well, and French fashions and manners set the standard for all Europe. Nevertheless, the Sun King, as he was styled, left the country in a weaker position than he had found it. In 1672, he invaded the Protestant Netherlands with his cousin Charles I of England, defeating Spain and the Holy Roman Empire as well in 1678. In

1685, he revoked the Edict of Nantes, and an estimated 200,000 Huguenots fled the country to escape persecution. Whole provinces were depopulated, and the economy was severely affected by the loss of many skilled and industrious workers. Louis undertook a long series of foreign wars, culminating in the War of the Spanish Succession (1701–14), in which England, the Netherlands, and most of the German states were arrayed against France, Spain, Bavaria, Portugal, and Savoy. In the end, little territory was lost, but the military primacy of the country was broken and its economic strength seriously sapped.

The reign of Louis XV (1715–74) and that of his successor, Louis XVI (1774–93), which was terminated by the French Revolution, showed the same lavish display of royal power and elegance that had been inaugurated by the Sun King. At the same time, the economic crisis that Louis XIV left as his legacy continued to grow more serious. A series of foreign wars cost France its Indian and Canadian colonies and bankrupted the country, including the French and Indian War (1755–1760). Meanwhile, the locus of the economic power in the kingdom had shifted to the hands of the upper bourgeoisie in the Enlightenment, who resented the almost wholly unproductive ruling class that espoused Classicism. The intellectual currents of the so-called Age of Reason were basically opposed to the old order. Voltaire attacked the Church and the principle of absolutism alike; Diderot advocated scientific materialism; Jean-Jacques Rousseau preached popular sovereignty. The writer changed from a royal servant into a revolutionary force.

#### 1789–1900

In 1789, faced with an unmanageable public debt, Louis XVI convened, for the first time since the reign of Louis XIII, the States-General, the national legislative body, to consider certain fiscal reforms. The representatives of the third estate, the Commons, met separately on 17 June and proclaimed themselves the National Assembly. This action, strictly speaking, marked the beginning of the French Revolution, although the act that best symbolized the power of the revolution was the storming of the Bastille, a royal prison, by a Paris mob on 14 July—an event still commemorated as a national holiday. With the support of the mob, which forced the king, his wife Marie Antoinette, and his family from the palace at Versailles into virtual imprisonment in the Tuileries in Paris; the Assembly was able to force Louis to accept a new constitution including The Declaration of the Rights of Man and the Citizen, providing for a limited monarchy, the secularization of the state, and the seizure of Church lands. War with Austria, which wished to intervene to restore the status quo ante in France, broke out in 1792. The Assembly's successor, the National Convention, elected in September 1792, proclaimed the First French Republic. Louis XVI was convicted of treason and executed. The radical group of Jacobins under Maximilien Robespierre's leadership exercised strict control through committees of public welfare and a revolutionary tribunal. The Jacobins attempted to remake France in the image of an egalitarian republic. Their excesses led to a Reign of Terror (1793–94), carried out indiscriminately against royalists and such moderate republican groups as the Girondins. Manifest opposition to the Jacobins and specifically to Robespierre combined to end their reign in the summer of 1794. In 1795, a new constitution of moderate character was introduced, and executive power was vested in a Directory of five men. The Directory,

weakened by inefficient administration and military reverses, fell in turn in 1799, when the military hero Napoleon Bonaparte engineered a coup and established the Consulate. Ruling autocratically as the first consul, Bonaparte established domestic stability and decisively defeated the Austrian-British coalition arrayed against France. In 1804, he had himself proclaimed emperor as Napoleon I and, until his downfall in 1814, he ruled France in that capacity.

Capitalizing on the newly awakened patriotic nationalism of France, Napoleon led his imperial armies to a striking series of victories over the dynastic powers of Europe. By 1808, he was the master of all Europe west of Russia with the exception of the British Isles. That year, however, the revolt in Spain—upon whose throne Napoleon had placed his brother Joseph—began to tax French military reserves. Napoleon's ill-fated attempt to conquer Russia in 1812 was followed by the consolidation of a powerful alliance against him, consisting of Russia, Prussia, Britain, and Sweden. The allies defeated Napoleon at Leipzig in 1813 and captured Paris in the spring of 1814. Napoleon was exiled to the island of Elba, just off the northwest coast of Italy, and Louis XVIII, a brother of Louis XVI, was placed on the French throne. In March 1815, Napoleon escaped from Elba, rallied France behind him, and reentered Paris in triumph behind the fleeing Louis XVIII. He was, however, finally and utterly crushed by the British and Prussian forces at Waterloo (18 June 1815) and spent the remaining years of his life as a British prisoner of war on the island of St. Helena in the South Atlantic.

After the final fall of Napoleon, Louis XVIII ruled as a moderate and peaceful monarch until 1824, when he was succeeded by his brother Charles X, an ultra royalist. Charles attempted to restore the absolute powers of the monarchy and the supremacy of the Catholic Church. In 1830, he was ousted after a three-day revolution in which the upper bourgeoisie allied itself with the forces of the left. Louis Philippe of the house of Orléans was placed on the throne as "citizen-king" with the understanding that he would be ruled by the desires of the rising industrial plutocracy. In 1848, his regime was overthrown in the name of the Second Republic. Four years later, however, its first president, Louis Napoleon, the nephew of Napoleon I, engineered a coup and had himself proclaimed emperor under the title Napoleon III. The Second Empire, as the period 1852–71 is known, was characterized by colonial expansion and great material prosperity. The emperor's aggressive foreign policy eventually led to the Franco-Prussian War (1870–71), which ended in a crushing defeat for France and the downfall of Napoleon III. France was stripped of the border provinces of Alsace and Lorraine (which once belonged to the Holy Roman Empire) and was forced to agree to an enormous indemnity. A provisional government proclaimed a republic on 4 September 1870 and took over the responsibility for law and order until a National Assembly was elected in February 1871. Angered at the rapid capitulation to Prussia by the provisionals and the conservative National Assembly, the national guard and radical elements of Paris seized the city in March and set up the Commune. During the "Bloody Week" of 21–28 May, the Commune was savagely dispatched by government troops.

Democratic government finally triumphed in France under the Third Republic, whose constitution was adopted in 1875. Royalist sentiment had been strong, but the factions backing different branches of the royal house had been unable to agree on a can-

didate for the throne. The Third Republic confirmed freedom of speech, the press, and association. It enforced complete separation of church and state. Social legislation guaranteeing the rights of trade unions was passed, and elections were held on the basis of universal manhood suffrage. The Third Republic, however, was characterized by an extremely weak executive. A long succession of cabinets was placed in power and shortly thereafter removed from office by the all-powerful lower house of the national legislature. Nevertheless, the republic was strong enough to weather an attempt on the part of the highly popular Gen. Georges Boulanger to overthrow the regime in the late 1880s, as well as the bitter dispute between the left-wing and right-wing parties occasioned by the trumped-up arrest and long imprisonment of Capt. Alfred Dreyfus, a scandal in which Dreyfus's being Jewish was as much an issue as the treason he had allegedly committed. The eventual vindication of Dreyfus went hand in hand with the decisive defeat of the monarchists and the emergence of a progressive governing coalition, with Socialist representation.

### The 20th Century

During World War I (1914–18), the forces of France, the United Kingdom, Russia, and, from 1917, the United States were locked in a protracted struggle with those of Germany, Austria-Hungary, and Turkey. Although France, under the leadership of Georges Clemenceau, could claim a major share in the final Allied victory, it was in many respects a Pyrrhic victory for France. Almost all the bitter fighting in the west was conducted on French soil, and among the Allies French casualties—including nearly 1,400,000 war dead—were second only to those sustained by Russia. The heavily industrialized provinces of Alsace and Lorraine were restored to France under the Treaty of Versailles (1919), and Germany was ordered to pay heavy war reparations. Nevertheless, the French economy, plagued by recurrent crises, was unable to achieve great prosperity in the 1920s, and the worldwide economic depression of the 1930s (exacerbated in France by the cessation of German reparations payments) was accompanied in France by inflation, widespread unemployment, and profound social unrest. Right- and extreme left-wing elements caused major disturbances on 6 February 1934. In 1936, the left-wing parties carried the parliamentary elections and installed a so-called Popular Front government under a Socialist, Léon Blum. Blum nationalized certain war industries, carried out agricultural reforms, and made the 40-hour week mandatory in industry. Increasing conservative opposition forced the Popular Front government from power, however, and in the face of the growing menace of Adolf Hitler's Germany, the leftists accepted the conservative government of Édouard Daladier in 1938. In a futile attempt to secure peace, Daladier acquiesced in British Prime Minister Neville Chamberlain's policy of appeasement toward Hitler. Hitler was not to be appeased, however, and when Germany invaded Poland in September 1939, France joined the United Kingdom in declaring war on Germany.

On 10 May 1940, the Germans launched a great invasion of the west through the Low Countries and the heavily wooded and sparsely defended Ardennes region. In less than a month, German forces outflanked the French Maginot Line fortifications and routed the French armies between the Belgian frontier and Paris. Marshal Pétain, the aged hero of World War I, hastily formed a government and sued for peace. With the exception of a triangu-

lar zone with its northern apex near Vichy, all France was placed under the direct occupation of the Germans. The Vichy regime ended the Third Republic and proclaimed a constitution based on the slogan "labor, family, fatherland," as opposed to the traditional republican "liberty, equality, fraternity." While the Vichy government did its best to accommodate itself to the German victory, French resistance gathered overseas around Gen. Charles de Gaulle, a brilliant career officer who had escaped to London on 18 June 1940 to declare that France had "lost a battle, not the war." De Gaulle organized the Provisional French National Committee, and this committee of the Free French later exercised all the powers of a wartime government in the French territories where resistance to the Germans continued. The Free French forces took part in the fighting that followed the Allied invasion of North Africa in 1942, and in 1943 a provisional French government was established at Algiers. Regular French units and resistance fighters alike fought in the 1944 campaign that drove the Germans from France, and shortly after the liberation of Paris, de Gaulle's provisional government moved from Algiers to the capital. It was officially recognized by the United States, the United Kingdom, and the former USSR in October 1944.

France's postwar vicissitudes have been political rather than economic. De Gaulle resigned as head of the government early in 1946 over the issue of executive powers, and in spite of his efforts the Fourth Republic, under a constitution that came into effect in December 1946, was launched with most of the weaknesses of the Third Republic. Almost all powers were concentrated in the hands of the National Assembly, the lower house of Parliament, and there were numerous warring political parties.

Although the people of metropolitan France overwhelmingly approved de Gaulle's program for eventual Algerian independence, some French army officers and units attempted to overthrow the government by terrorism, which de Gaulle suppressed by temporarily assuming emergency powers. Peace negotiations were successfully concluded with Algerian rebel leaders, and Algeria gained independence on 1 July 1962. By then, nearly all of France's former African territories had attained independence. France has continued to provide economic assistance, and its ties with most of the former colonies have remained close. Almost continuous fighting overseas in French colonies, first in Indochina, which was lost in 1954, and later in Algeria, the scene of a nationalist rebellion among the Muslims, placed a heavy burden on France and led, especially after the Suez expedition of 1956, to disillusionment on the part of elements in the French army, which felt that its work was being undermined by a series of vacillating parliamentary governments. In May 1958, extremists among the French settlers in Algeria, acting with a group of army officers, seized control of Algiers. Sympathetic movements in Corsica and in metropolitan France raised the specter of a right-wing coup. The government found itself powerless to deal with the situation, and on 1 June, Gen. de Gaulle, regarded as the only leader capable of rallying the nation, was installed as premier. He ended the threat peaceably, and in the fall of 1958, he submitted to a national referendum a new constitution providing for a strong presidency; the constitution won overwhelming approval. Elections held in November swept candidates pledged to support de Gaulle into office, and in December 1958, he was officially named the first president of the Fifth Republic.

During the mid-1960s, de Gaulle sought to distance France from the Anglo-American alliance. France developed its own atomic weapons and withdrew its forces from the NATO command; in addition, de Gaulle steadfastly opposed the admission of the United Kingdom to the EEC, of which France had been a founding member in 1957. The Treaty of Rome in 1957 created the original European Economic Community that consisted of Germany, Belgium, France, Italy and The Netherlands, and formed EURATOM, which created an open forum for scientific exchange and nuclear arms regulation on the continent.

The political stability of the mid-1960s ended in the spring of 1968, with student riots and a month-long general strike that severely weakened the Gaullist regime. In April 1969, Gen. de Gaulle resigned following a defeat, by national referendum, of a Gaullist plan to reorganize the Senate and regional government. In June, Georges Pompidou, a former premier in de Gaulle's government, was elected the second president of the Fifth Republic. Between 1969 and 1973, the Gaullist grip on the French populace continued to weaken, at the end of which time de Gaulle was forced to accept the United Kingdom, Ireland and Denmark into the EC, and to work within the economic constraints of the "Snake Mechanism" which, starting in 1972, linked EC currencies. In 1974, after President Pompidou died in office, an Independent Republican, Valéry Giscard d'Estaing, narrowly won a national runoff election (with Gaullist help) and became the third president of the Fifth Republic. Giscard strengthened relations with the United States but continued to ply a middle course between the superpowers in world affairs. The European Currency Unit (ECU) was born in 1979 from the economic stresses of the 1970s, leading eventually to the introduction of the common currency, the euro, in 2002.

Although Giscard's center-right coalition held firm in the March 1978 legislative elections, a Socialist, François Mitterrand, was elected president in May 1981, and the Socialists captured a parliamentary majority in June. Mitterrand launched a program of economic reforms, including the nationalization of many industrial companies and most major banks. However, three devaluations of the franc, high unemployment, and rising inflation led to the announcement of an austerity program in March 1983. In foreign policy, Mitterrand took an activist stance, opposing the US attempt in 1982 to halt construction of a natural gas pipeline between the former USSR and Western Europe, committing French troops to a peacekeeping force in Lebanon, and aiding the Chadian government against domestic insurgents and their Libyan backers.

In July 1984, Mitterrand accepted the resignation of Prime Minister Pierre Mauroy and named Laurent Fabius to replace him, signaling his intention to stress economic austerity and modernization of industry. In foreign affairs, the government attempted some retrenchment during 1984, withdrawing peacekeeping troops from Lebanon and announcing a "total and simultaneous" withdrawal of French and Libyan troops from Chad. However, Libyan troops did not actually withdraw as envisioned, and fighting there prompted a return of French troops in 1986. A major scandal was the disclosure in 1985 that French agents were responsible for the destruction in New Zealand, with the loss of a life, of a ship owned by an environmentalist group protesting French nuclear tests in the South Pacific.

In March 1986 elections, the Socialists lost their majority in the National Assembly, and Mitterrand had to appoint a conservative prime minister, Jacques Chirac, to head a new center-right cabinet. This unprecedented "cohabitation" between a Socialist president and a conservative government led to legislative conflict, as Chirac, with backing from the National Assembly, successfully instituted a program, opposed by Mitterrand, to denationalize 65 state-owned companies. Chirac encountered less success late in 1986 as he sought to deal with a wave of terrorist violence in Paris. In 1988, Chirac challenged Mitterrand for the presidency, but in the May runoff election, Mitterrand won a commanding 54% of the vote and a second seven-year term. Chirac then resigned, and Mitterrand formed a minority Socialist government.

Economic and social problems as well as government scandals strained relations between the Socialist Mitterrand, the Conservative PM Eduard Balladur in the second cohabitation, and a center-right government. Unemployment remained high and new legislation increased police powers to combat illegal immigration. Several prominent politicians were the subject of corruption charges and in 1993 legal proceedings were instituted against former premier minister, Laurent Fabius, related to an HIV-infected blood scandal. A prominent Socialist prime minister, Pierre Bérégovoy, committed suicide in May 1993 over media allegations of financial improprieties.

In May 1995, Jacques Chirac was elected president, winning 52.64% of the popular vote, compared to 47.36% for socialist Lionel Jospin, and Alain Juppé was appointed prime minister. The National Assembly had elected an RPR-Gaullist majority in 1993, setting the country firmly in the grips of the type of conservatism that had been ousting socialist and Social Democrats in much of Western Europe during the mid-to-late 1980s. Chirac immediately set about instituting austerity measures to rein in government spending in the hope of meeting certain rigid monetary guidelines so that France would be ready to join the European Monetary Union (EMU) in 1999. The EMU would create a single European currency, the "euro," to replace member countries' individual currencies. The idea of a monetary union had never been widely popular in France and the Maastricht Treaty, which set down conditions for EMU membership passed by only a slim margin.

Many of Chirac's attempts to reduce public spending and limit—or even erode—France's welfare state met with stern resistance. With the signing of the Amsterdam Treaty of 1997, Chirac sensed the need for a reaffirmation of his commitment to meet austerity measures for EMU membership. Chirac dissolved the National Assembly, calling for parliamentary elections in 1997, one year earlier than constitutionally mandated. In doing so, the French president believed he would demonstrate that the majority of the population believed in responsible cutbacks in government spending and anti-inflammatory monetary policy, despite the adverse effects they might have on the country's already quite high inflation. In May and June of 1997, elections were held and Chirac's plan badly backfired with the Socialists winning a commanding majority, along with the Communists. After the elections, a demoralized Chirac appointed Socialist leader Lionel Jospin prime minister, beginning the third cohabitation government. Jospin, a halfhearted supporter of monetary union, called for a program of increased government spending to create 700,000 jobs, a reduction in the work week from 39 to 35 hours, and made a broad pledge

to protect the welfare state. The euro was successfully launched in 1999, and the currency was circulated in January 2002.

Presidential elections were held on 21 April and 5 May 2002. In the first round, Chirac won 19.9% of the vote, National Front leader Jean-Marie Le Pen came in second with 16.9%, and Prime Minister Jospin finished third with 16.2% of the vote. The strong showing by Le Pen sent shock waves throughout France and Europe, as his extreme right-wing, anti-immigrant, xenophobic party demonstrated its popularity. Jospin announced he was retiring from politics; for the first time since 1969 the Socialists did not have a candidate in a presidential runoff, marking a major defeat for the French left.

In the second round of voting, Chirac overwhelmingly defeated Le Pen, taking 82.2% of the vote to Le Pen's 17.8%. It was the largest majority since direct presidential elections were first introduced, and was preceded by a major popular campaign against Le Pen. Chirac named centrist Jean-Pierre Raffarin to be prime minister. In elections for the National Assembly held in June 2002, the center-right coalition Union for the Presidential Majority (consisting of Chirac's Rally for the Republic and the Liberal Democracy party and created on the wake of the first round on the ashes of the short-lived *Union en Mouvement*) won a landslide victory, taking 33.7% of the vote and 357 of 577 seats in parliament. The Socialist Party finished second with 24.1% and 140 seats. Le Pen's National Front failed to win a single seat.

Jean-Pierre Raffarin started out by governing through ordinances, and eventually obtained a majority from his party that was large enough to carry him through the legislative elections. His political line exhibited a peculiar communicative style and enforced reforms with unflagging certainty – his adversaries would term this style “neo-liberalism.” In 2003 alone, he led policies to reform the retirement system and to regionalize most administrative offices that were centralized in Paris, despite strong social unrest and demonstrations—In the summer of 2003, civil servants went on strike against the reform of the retirement benefits system and part-time workers in entertainment went on strike, demanding higher salaries and improved benefits. Raffarin's popularity rate began to plummet; this, combined with the sharp electoral defeat sustained at the regional elections, was blamed on his social policies. As a consequence, the prime minister dissolved the government, and handpicked Jean-Louis Borloo as minister of social affairs. However, the prime minister had to handle both the former's social agenda—sustaining rent-controlled housing, backed up by President Chirac—and Sarkozy's extremely conservative managing of the finances. Jean-Pierre Raffarin then faced even more criticism especially from Dominique de Villepin.

Raffarin's term of office came to a brisk end after the “no” vote to the referendum held on 29 May 2005, on whether to adopt the project of the European Constitutional Treaty. He offered to resign on 31 May 2005, and was immediately replaced by Dominique de Villepin.

Dominique de Villepin had been named minister of foreign affairs in 2002, upon the reelection of President Chirac. In 2002–03, France was confronted with a major foreign policy dilemma. Throughout 2002, the United States and United Kingdom were committing troops to the Persian Gulf region, positioning themselves against Iraq and accusing its leader, Saddam Hussein, of possessing weapons of mass destruction. In the event that Iraq

would not disarm itself of any weapons of mass destruction it might possess, it was evident that the United States and United Kingdom might use those troops to force a regime change in Iraq. The UN Security Council unanimously passed Resolution 1441 on 8 November 2002, calling upon Iraq to disarm itself of chemical, biological, and nuclear weapons or weapons capabilities, to allow the immediate return of UN and International Atomic Energy Agency (IAEA) weapons inspectors, and to comply with all previous UN resolutions regarding the country since the end of the Gulf War in 1991. The United States and United Kingdom indicated that if Iraq would not comply with the resolution, “serious consequences” might result, meaning military action. The other three permanent members of the Security Council, France, Russia, and China, expressed their reservations with that position. France was the most vocal opponent of war, and threatened to use its veto power in the Security Council if another Security Council resolution authorizing the use of force was called for. The United States and United Kingdom abandoned diplomatic efforts at conflict resolution in March 2003, and on 19 March, the coalition went to war in Iraq. Once coalition forces defeated Iraq and plans for reconstruction of the country were being discussed in April, France stressed the need for a strong role to be played by the UN in a postwar Iraq.

On 31 May 2005, Dominique de Villepin was chosen by President Chirac to become prime minister. In his inaugural speech, he gave himself 100 days to earn the trust of the French people and to give France its confidence back. He was increasingly perceived as a potential presidential candidate, an opinion reinforced by his acting as head of state during the cabinet meeting held on 7 September 2005 and for the 60th session of the UN General Assembly held on 14–15 September 2005 while President Chirac suffered from a cerebral vascular complication.

The eruption of rioting in many parts of France in fall 2005 posed the most serious challenge to government authority since the student riots that took place in Paris in 1968. The government imposed a state of emergency. Thousands of vehicles were set on fire in nearly 300 towns; more than 1,500 people had been arrested by mid-November 2005, when the violence began to subside. Areas with large African and Arab communities were most affected (France has Europe's largest Muslim population and over half the country's prison population is Muslim), where anger among many immigrant families over unemployment and discrimination has long been simmering. France's youth unemployment rate in 2005 was 23%, one of Europe's worst, and in “sensitive urban zones,” youth unemployment reached 40%. The unrest caused politicians to rethink their social and economic policies.

### 13 GOVERNMENT

Under the constitution of the Fifth Republic (1958), as subsequently amended, the president of the republic is elected for a five-year term (changed from a seven-year term following a referendum on 24 September 2000) by direct universal suffrage. If no candidate receives an absolute majority of the votes cast, a runoff election is held between the two candidates having received the most votes. If the presidency falls vacant, the president of the Senate assumes the office until a new election can be held within 20–35 days. The president appoints the prime minister and, on the prime

minister's recommendation, the other members of the cabinet. The president has the power to dissolve the National Assembly, in which event new elections must be held in 20–40 days. When the national sovereignty is gravely menaced, the president is empowered to take special measures after consultation with the premier and other appropriate officials. The National Assembly, however, may not be dissolved during the exercise of exceptional powers. The president promulgates laws approved by the legislature, has the right of pardon, and is commander of the armed forces.

The bicameral parliament consists of two houses, the National Assembly and the Senate. Under a system enacted in 1986, the National Assembly is composed of 577 deputies, each representing an electoral district. If no candidate receives a clear majority, there is a runoff among those receiving at least 12.5% of the vote; a plurality then suffices for election. All citizens aged 18 or over are eligible to vote.

The deputies' term of office, unless the Assembly is dissolved, is five years. The Senate consisted, as of 2003, of 321 members indirectly elected to nine-year terms, one-third being chosen every three years. Of the total, 296 represented metropolitan France, 13, overseas departments and territories, and 12, French citizens residing abroad; all are chosen by electoral colleges. In addition, European elections are held to choose 87 French deputies out of 626 in the European Parliament every five years, with proportional representation.

To become law, a measure must be passed by parliament. Parliament also has the right to develop in detail and amplify the list of matters on which it may legislate by passing an organic law to that effect. Regular parliamentary sessions occur once a year, lasting nine months each (amended in 1995 from two shorter sessions a year). A special session may be called by the prime minister or at the request of a majority of the National Assembly. Bills, which may be initiated by the executive, are introduced in either house, except finance bills, which must be introduced in the Assembly. These proceedings are open to the public, aired on television, and reported.

The prime minister and the cabinet formulate national policy and execute the laws. No one may serve concurrently as a member of parliament and a member of the executive. Under certain circumstances, an absolute majority in the National Assembly may force the executive to resign by voting a motion of censure. Under the new law of 1993, members of the government are liable for actions performed in office deemed to be crimes or misdemeanors, and tried by the Court of Justice.

## 14 POLITICAL PARTIES

French political life has long been ruled both by considerations of political theory and by the demands of political expediency. Traditional issues such as the separation of church and state help to distinguish between right and left, but otherwise the lines separating all but the extremist political parties are difficult to draw. One result of this has been the proliferation of political parties; another, the assumption by political parties of labels that seldom indicate any clear-cut platform or policy.

Broadly, since the late 1950s, French politics has been dominated by four political groups: the Gaullists, an independent center-right coalition, the Socialists, and the Communists. After the parliamentary elections of 23 and 30 November 1958, the first to

be held under the constitution of the Fifth Republic, the largest single group in the Assembly was the Union for the New Republic (UNR), which stood for the policies of Gen. de Gaulle, elected president of the republic for a seven-year term in 1958. Independents of the right were the second-largest group, and the Christian Socialists (Mouvement Républicain Populaire) and several leftist groups followed. Only 16 members were elected by the center groups and only 10 were Communists.

In the November 1962 elections, the Gaullist UNR scored an unparalleled victory, polling 40.5% of the total votes cast. As a result of the elections, several old parliamentary groups disappeared, and new groups emerged: the Democratic Center (Centre Démocratique) with 55 seats; the Democratic Rally (Rassemblement Démocratique), 38 seats; and the Independent Republicans (Républicains Indépendants—RI), 33 seats. The UNR and the Democratic Workers Union (Union Démocratique du Travail—UDT), left-wing Gaullists, agreed to a full merger of their parties and together controlled 219 seats.

In the first presidential elections held by direct universal suffrage in December 1965, President de Gaulle was reelected on the second ballot with 55.2% of the total vote. In the March 1967 general elections, the UNR-UDT gained 246 seats against 116 for the Socialists and 73 for the Communists. Following nationwide strikes and civil disturbances by workers and students in the spring of 1968, new parliamentary elections were held in June, in which de Gaulle's supporters won a sweeping victory.

The Union for the Defense of the Republic (Union pour la Défense de la République—UDR) emerged as the new official Gaullist organization. Political movements of the center joined to form the Progress and Modern Democracy group (Centre-PDM), while Socialists and the democratic left united under the Federation of the Left. Of the 487 Assembly seats, the UDR won 292 seats; RI, 61; Federation of the Left, 57; Communists, 34; Centre-PDM, 33; and independents, 10.

On 28 April 1969, following the defeat in a national referendum of a Gaullist plan to reorganize the Senate and regional government, President de Gaulle resigned. He was succeeded by former premier Georges Pompidou, a staunch Gaullist, who won 58% of the vote in elections held on 15 June 1969. During the Pompidou administration, Gaullist control was weakened by an alliance between the Communist and Socialist parties. In March 1973 elections, the Gaullist UDR lost 109 seats, falling to 183 of the 490 seats at stake. The Communists and Socialists increased their representation to 72 and 103, respectively. The remaining seats were won by the RI (55) and by centrists, reformists, and unaffiliated candidates (77).

On 2 April 1974, President Pompidou died. In elections held on 5 May, Gaullist candidate and former premier Jacques Chaban-Delmas was defeated, receiving only 15% of the votes cast. The leader of the leftist coalition, François Mitterrand, received over 11 million votes, and Valéry Giscard d'Estaing, the leader of the RI, over 8 million. However, as neither had won a majority, a runoff election was held on 19 May. Giscard, with the help of Gaullist votes, defeated Mitterrand by a margin of 50.7% to 49.3%. Jacques Chirac of the UDR was made premier, with a cabinet made up mainly of RI and UDR members.

A new Gaullist party, the Rally for the Republic (Rassemblement pour la République—RPR), founded by Chirac in 1976, re-

ceived 26.1% of the vote in the second round of the 1978 legislative elections, winning 154 seats in the National Assembly. That year, the centrist parties had formed the Union for French Democracy (Union pour la Démocratie Française—UDF). The federation, which included the Republican Party (Parti Républicain), the successor to the RI, won 23.2% of the vote in the second round of balloting, giving the centrist coalition 124 seats in the National Assembly. The Socialists and Communists, who ran on a common platform as the Union of the Left, together won 199 seats (Socialists 113, Communists 86) and 46.9% of the vote. Independents, with the remaining 3.8%, controlled 14 seats, for a total of 491.

In the presidential elections of 26 April and 10 May 1981, Mitterrand received 25.8% of the vote on the first ballot (behind Giscard's 28.3%) and 51.8% on the second ballot, to become France's first Socialist president since the 1930s. Within weeks, Mitterrand called new legislative elections: that June, the Socialists and their allies won 49.2% of the vote and 285 seats, the RPR 22.4% and 88 seats, the UDF 18.6% and 63 seats, the Communists 7% and 44 seats; independents won the remaining 2.8% and 11 seats. In return for concessions on various political matters, four Communists received cabinet portfolios, none relating directly to foreign affairs or national security. The sweeping victory of the left was, however, eroded in March 1983 when Socialist and Communist officeholders lost their seats in about 30 cities in municipal balloting. Meanwhile, the Communists had become disaffected by government policies and did not seek appointments in the cabinet named when a new Socialist prime minister, Laurent Fabius, was appointed in July 1984.

The National Assembly elections held in March 1993 represented a major defeat for the Socialist Party and their allies. The RPR and UDF won 247 and 213 seats, respectively, while the Socialists were reduced to 67 seats. The Communists also suffered losses, securing only 24 seats. Minor parties and independents won 26 seats. In cantonal elections held in March 1985, the candidates of the left won less than 40% of the vote, while candidates on the right increased their share by 10–15%. The Socialists lost 155 of the 579 Socialist seats that were at stake. As a result, the Socialists introduced a new system of proportional voting aimed at reducing their losses in the forthcoming general election of 16 March 1986. The Socialists and their allies nevertheless won only 33% of the vote and 216 seats out of 577 in the expanded National Assembly. The RPR, the UDF, and their allies received 45% of the vote and 291 seats. The Communists, suffering a historic defeat, split the remaining 70 seats evenly with the far-right National Front, which won representation for the first time. The Socialists remained the largest single party, but the coalition led by the RPR and UDF had a majority; on that basis, Mitterrand appointed RPR leader Chirac as prime minister, heading a center-right government. Following his defeat by Mitterrand in the May 1988 presidential election, Chirac resigned and a minority Socialist government was formed.

In 1995, Jacques Chirac was elected president, defeating Socialist Lionel Jospin. In 1997, one year before they were scheduled, Chirac called for new parliamentary elections, hoping to achieve a mandate to inaugurate his policy of fiscal austerity. Instead, the Gaullists suffered a stunning defeat by the Socialists and Communists, leading to the appointment of Jospin as prime minister. In those elections, held 25 May and 1 June 1997, the Gaullists saw their parliamentary presence decline from 464 seats to 249; the

Socialists (and related splinter groups) went from 75 seats to 273; the Communists from 24 to 38; the Greens from no seats to 8; and the far-right National Front maintained its single seat.

The first round of presidential elections were held on 21 April 2002, with Jospin coming in third behind National Front leader Jean-Marie Le Pen and Jacques Chirac in the first round. Two days after these results, on 23 April 2002, the Union en Mouvement (Union in Motion—UEM) was dissolved and replaced by the Union pour la majorité présidentielle (Union for Presidential Majority—UMP) in order to create a major public support behind Chirac in his second round face-off with Le Pen. In May 2002, Jacques Chirac defeated Jean-Marie Le Pen in the second round, taking 82.2% of the vote to Le Pen's 17.8%.

In the National Assembly elections held in June 2002, Chirac's UMP (RPR united with the Liberal Democracy party, formerly the Republican Party) won an overwhelming majority of seats, taking 357 to the Socialists' 140. The National Front failed to win a single seat; the UDF held 29 seats and the Communists took 21. The Greens held only three seats.

On 17 November 2002, the UMP changed its name to Union pour un Mouvement Populaire (Union for a Popular Movement), keeping the same acronym but modifying the out-of-date appellation.

Its first test occurred in March 2004, during the cantonal and regional elections. While suffering a devastating loss, it managed, through alliances, to secure a relative majority of the votes.

Its second test was the European elections, also held in 2004. The UMP won only 17% of the votes, while the Socialist Party earned 29% and the UDF (composed of members that refused to join in the UMP) reached 12%. The UDF's relative success was largely caused by the attractive alternative that it offered voters that were unhappy with the government's take on social and European issues.

The relative slump of the right can also be explained by the rise of popularity of the National Front and the unpopularity generated by the Raffarin governments.

## 15 LOCAL GOVERNMENT

In 1972, parliament approved a code of regional reforms that had been rejected when proposed previously by President de Gaulle in 1969. Under this law, the 96 departments of metropolitan France were grouped into 22 regions. Regional councils composed of local deputies, senators, and delegates were formed and prefects appointed; in addition, regional economic and social committees, made up of labor and management representatives, were created. This system was superseded by the decentralization law of 2 March 1982, providing for the transfer of administrative and financial authority from the prefect to the general council, which elects its own president; the national government's representative in the department is appointed by the cabinet. The 1982 law likewise replaced the system of regional prefects with regional councils, elected by universal direct suffrage, and, for each region, an economic and social committee that serves in an advisory role; the national government's representative in each region, named by the cabinet, exercises administrative powers. The first regional assem-

bly to be elected was that of Corsica in August 1982; the first direct assembly elections in all 22 regions were held in March 1986.

Each of the 96 departments (and four overseas: Martinique, Guadeloupe, Reunion and French Guiana) is further subdivided for administrative purposes into *arrondissements*, cantons, and communes (municipalities). The basic unit of local government is the commune, governed by a municipal council and presided over by a mayor. A commune may be an Alpine village with no more than a dozen inhabitants, or it may be a large city, such as Lyon or Marseille. The majority, however, are small. In 1990, only 235 communes out of 36,551 had more than 30,000 inhabitants; 84% of all communes had fewer than 1,500 inhabitants, and 43% had fewer than 300. (As of 2002, France had 36,763 communes). Most recently the trend has been for the smallest communes to merge and create larger urban communities, or to come together as communal syndicates to share responsibilities. Municipal councilors are elected by universal suffrage for six-year terms. Each council elects a mayor who also serves as a representative of the central government. Several communes are grouped into a canton, and cantons are grouped into *arrondissements*, which have little administrative significance. As of 1 January 2005, France had 36,779 communes (214 of them overseas).

## 16 JUDICIAL SYSTEM

There are two types of lower judicial courts in France, the civil courts (471 tribunaux d'instance and 181 tribunaux de grande instance in 1985, including overseas departments) and the criminal courts (tribunaux de police for petty offenses such as parking violations, tribunaux correctionnels for criminal misdemeanors). The function of the civil courts is to judge conflicts arising between persons; the function of the criminal courts is to judge minor infractions (*contraventions*) and graver offenses (*délits*) against the law. The most serious crimes, for which the penalties may range to life imprisonment, are tried in assize courts (*cours d'assises*); these do not sit regularly but are called into session when necessary. They are presided over by judges from the appeals courts. In addition, there are special commercial courts (*tribunaux de commerce*), composed of judges elected among themselves by tradesmen and manufacturers, to decide commercial cases; conciliation boards (*conseils de prud'hommes*), made up of employees and employers, to decide their disputes; and professional courts with disciplinary powers within the professions. Special administrative courts (*tribunaux administratifs*) deal with disputes between individuals and government agencies. The highest administrative court is the Council of State (*Conseil d'État*).

From the lower civil and criminal courts alike, appeals may be taken to appeals courts (*cours d'Appel*), of which there were 27 in 2003. Judgments of the appeals courts and the courts of assize are final, except that appeals on the interpretation of the law or points of procedure may be taken to the highest of the judicial courts, the Court of Cassation in Paris. If it finds that either the letter or spirit of the law has been misapplied, it may annul a judgment and return a case for retrial by the lower courts. The High Court of Justice (*Haute Cour de Justice*), consisting of judges and members of parliament, is convened to pass judgment on the president and cabinet members if a formal accusation of treason or criminal behavior has been voted by an absolute majority of both the Na-

tional Assembly and the Senate. The death penalty was abolished in 1981.

The Conseil Constitutionnel, created by the 1958 constitution, is now the only French forum available for constitutional review of legislation. Challenges to legislation may be raised by the president of the republic, the prime minister, the president of the Senate, the president of the National Assembly, 60 senators, or 60 deputies of the National Assembly during the period between passage and promulgation (signature of president). Once promulgated, French legislation is not subject to judicial review.

The French judiciary is fully independent from the executive and legislative branches. The judiciary is subject to European Union mandates, which guide national law. This has been the case in the Court of Cassation since 1975, in the Council of State since 1989, and now even in the civil courts.

## 17 ARMED FORCES

In 2005 there were 254,895 active personnel in the French armed services. An additional 104,275 served in the Gendarmerie Nationale, which is heavily armed. Reserves totaled 21,650 from all services. In 2005 the military budget was \$41.6 billion.

France's strategic nuclear forces in 2005 had 4,041 active personnel, of which 2,200 were Navy personnel, 1,800 Air Force, and 41 Gendarmerie Nationale. Equipment included four SSBNs, 24 Navy and 60 Air Combat Command fighter/ground attack aircraft. The French have the third-largest nuclear arsenal in the world with a suspected total of 482 weapons. The Army in 2005 numbered 133,500 military and 28,500 civilian personnel. Included were 7,700 members of the Foreign Legion, a 14,700 member marine force and an estimated 2,700 Special Operations Forces, as part of the French Army. Equipment included 926 main battle tanks, 1,809 reconnaissance vehicles, 601 armored infantry fighting vehicles, 4,413 armored personnel carriers, and 787 artillery pieces (105 towed).

The French Navy numbered 46,195 active personnel and 10,265 civilians in 2005. For that year, the Navy was equipped with 10 modern submarines (4 SSBNs and 6 SSNs), 34 principal surface combatants (including one CVN and one CVH or helicopter carrier), and 85 other ships for mine warfare, amphibious operations, and logistics and support. France had 6,443 naval aviation personnel. There were also 2,050 naval marines, including 500 commandos. The Navy also provided coast guard services and fishery protection. The French Air Force numbered 65,400 active members, plus 5,700 civilians, and operated 295 combat capable aircraft.

France maintains substantial forces abroad in a number of countries, current and former possessions, and protectorates. These forces are supported by aircraft and naval ships in the Indian and Pacific oceans, and in the Caribbean. France has substantial garrisons in Antilles-Guyana, New Caledonia, Réunion Island, and Polynesia, and it provides military missions and combat formations to several African nations. Troops are also deployed on peacekeeping missions in several different regions and countries.

## 18 INTERNATIONAL COOPERATION

France is a charter member of the United Nations, having joined on 24 October 1945, and actively cooperates in ECE, ECLAC, ESCAP, and most of the nonregional specialized agencies; it is one of the five permanent members of the Security Council. France

joined the WTO in 1995. France is also a founding member of the European Union. Although France still belongs to NATO, in 1966 the nation withdrew its personnel from the two integrated NATO commands—Supreme Headquarters Allied Powers Europe (SHAPE) and Allied Forces Central Europe (AFCENT). In December 1995, the country announced an intention to increase participation in the NATO military wing once again. France is a member of the Asian Development Bank, the African Development Bank, the Central African States Development Bank (BDEAC), European Bank for Reconstruction and Development, Council of Europe, OAS (as a permanent observer), OECD, OSCE, G-5, G-7, G-8, the Association of Caribbean States (ACS), and the Paris Club.

Since 2003, France has supported four UN Security Council (UNSC) resolutions on Iraq. The country serves as a commissioner on the UN Monitoring, Verification, and Inspection Commission and has also offered support to UN missions in Kosovo (est. 1999), Lebanon (1978), the Western Sahara (1991), Ethiopia and Eritrea (2000), Liberia (2003), the DROC (1999), and Haiti (2004).

France belongs to the Australia Group, the Nuclear Suppliers Group (London Group), the Nuclear Energy Agency, the Zangger Committee, the Organization for the Prohibition of Chemical Weapons, and the European Organization for Nuclear Research (CERN). In environmental cooperation, France is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Air Pollution; Ramsar; CITES; the London Convention; International Tropical Timber Agreements; the Kyoto Protocol; the Montréal Protocol; MARPOL; and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

France is one of the most richly endowed countries of Europe. The favorable climate, extensive areas of rich soil, and long-established tradition of skilled agriculture have created ideal conditions for a thriving farm economy. Agriculture and the agro-food industries account for a larger share of economic activity than in many other west European nations. Large deposits of iron ore, a well-integrated network of power plants, important domestic reserves of natural gas, good transport, and high standards of industrial workmanship have made the French industrial complex one of the most modern in Europe.

After World War II, France's economy was stronger than it had been in the period between the two world wars. But on the debit side were the extremely high costs of France's colonial campaigns in Indochina and North Africa; the periodic lack of confidence of French investors in the nation's economy, resulting in the large-scale flight of funds; and the successive devaluations of the franc.

Through most of the 1960s and early 1970s, the French economy expanded steadily, with GDP more than doubling between 1959 and 1967. However, the international oil crisis of 1974 led to a sharp rise in import costs; the resulting inflation eroded real growth to about 3% annually between 1977 and 1979. Further oil price increases in 1979–80 marked the beginning of a prolonged recession, with high inflation, high unemployment, balance-of-payments deficits, declining private investment, and shortages in foreign exchange reserves. However, GDP grew by an annual average of 2.5% between 1984 and 1991. During the early 1990s,

GDP expanded by an average 2%, a modest rate. By the late 1990s, however, the economy began to record higher growth rates. In 1998 the French economy grew by 3.3% in real terms. Unemployment, however, remained high at 11.5%. To combat this, the Socialist-led coalition of Lionel Jospin enacted legislation cutting the work week to 35 hours in 2000. This measure, along with other incentives, resulted in unemployment falling under 10% as over 400,000 new jobs were created in the first half of 2000. In 2002, GDP growth was low (1%), due to the global economic slowdown and a decline in investment. However, France's exports increased at a greater rate than imports, fueling the economy. France in 2002 fell from being the world's fourth-largest industrialized economy to fifth, being replaced by the United Kingdom. In 2004, France had a \$1.737 trillion economy, in purchasing power parity terms. In 2004, real GDP growth was 1.9%. In 2005, real GDP growth was expected to slow to 1.4%, before picking up to 1.6% in 2006 and 2.2% in 2007.

France and the United States are the world's top two exporting countries in defense products, agricultural goods, and services. Taxes remain the highest in the G-8 industrialized countries, and the tax structure is seen as a hindrance to business activity. The fastest-growing sectors of the economy have been telecommunications, aerospace, consulting services, meat and milk products, public works, insurance and financial services, and recreation, culture, and sports. Although the government has privatized many large companies, banks, and insurers, it still controls large sectors of the economy, including energy, transportation, and the defense industry.

The French social model, characterized by heavy state involvement in the economy, a tax on wealth, and generous benefits for workers, has proved to be a strong disincentive to growth and job creation. Unemployment, at 9.8% in September 2005, is double that in the United Kingdom. The pension system and rising health-care costs strain public finances. Attempts to liberalize the economy have met strong resistance from labor unions and the left. Pension reforms proposed by the government of Jean-Pierre Raffarin in early 2003 were met by huge protests and strikes in France. Discontent with the economy played a large role in France's rejection of the EU constitution in May 2005. Dominique de Villepin, who became prime minister after the EU vote, promised to focus on unemployment and was in the process of engineering the sale of parts of Gaz de France and Electricité de France (the world's largest generator of nuclear power) to help compensate for state deficits. Violent unrest in hundreds of towns erupted in the fall of 2005, triggered by frustration over high unemployment among urban youth. Politicians were faced with the challenge to craft social and economic policies to address the underlying causes of the rioting, which was centered in communities with large African and Arab populations, where youth unemployment reportedly approached 40% (and stood at 25% in the country overall).

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 France's gross domestic product (GDP) was estimated at \$1.8 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current

dollars. The per capita GDP was estimated at \$29,900. The annual growth rate of GDP was estimated at 1.5%. The average inflation rate in 2005 was 1.9%. It was estimated that agriculture accounted for 2.5% of GDP, industry 21.4%, and services 76.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$11.418 billion or about \$191 per capita and accounted for approximately 0.6% of GDP.

The World Bank reports that in 2003 household consumption in France totaled \$976.15 billion or about \$16,324 per capita based on a GDP of \$1.8 trillion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.6%. In 2001 it was estimated that approximately 22% of household consumption was spent on food, 9% on fuel, 3% on health care, and 8% on education. It was estimated that in 2000 about 6.5% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, the French workforce was estimated at 27.72 million. In 1999 (the latest year for which data was available), 71.5% of the workforce was employed in the services sector, with industry accounting for 24.4%, and 4.1% in agriculture. As of 2005, the unemployment rate was estimated at 10%, although overall youth unemployment was much higher (25%), with unemployment among urban youth approaching 40%.

Although only about 7% of the workforce was unionized as of 2005, trade unions have significant influence in the country. Workers freely exercise their right to strike unless it is prohibited due to public safety. Many unions are members of international labor organizations. Collective bargaining is prevalent. It is illegal to discriminate against union activity.

The government determines the minimum hourly rate, which was the equivalent of \$9.64 as of 2005. This amount provides a decent standard of living for a family. The standard legal workweek is set at 35 hours with restrictions on overtime. Children under age 16 are not permitted to work, and there are restrictions pertaining to employment of those under 18. Child labor laws are strictly enforced. The labor code and other laws provide for work, safety, and health standards.

## 22 AGRICULTURE

Agriculture remains a vital sector of the French economy, even though it engages only about 3.3% of the labor force and contributes about 3% of the GDP. Since the early 1970s, the agricultural labor force has diminished by about 60%. In 2003, France's full-time farm labor force of 592,550 was still the second-highest in the EU. France, whose farms export more agricultural food products than any other EU nation (accounting for 19% of the EU's total agricultural output in 2003), is the only country in Europe to be completely self-sufficient in basic food production; moreover, the high quality of the nation's agricultural products contributes to the excellence of its famous cuisine. France is one of the leaders in Europe in the value of agricultural exports—chiefly wheat, sugar,

wine, and beef. Tropical commodities, cotton, tobacco, and vegetable oils are among the chief agricultural imports.

As of 2003 36% of France's area was arable. About 11.8 million hectares (29.1 million acres) of the usable farm area is under annual crops, with another 228,000 hectares (563,000 acres) in permanent crops. There were 735,000 farms in France in 1995, of which only 454,000 were managed by full-time farmers. Since the 1950s, the number of farms has declined and the size of individual holdings has increased. By 1983 there were about 1.13 million farms, as compared to 2.3 million in 1955, and the average farm size was about 26 hectares (64 acres). Average farm size had grown to around 50 hectares (124 acres) in 2000. Because French law provides for equal rights of inheritance, traditionally much of the farmland came to be split up into small, scattered fragments. One of the major aims of postwar plans for rural improvement has been the consolidation of these through reallocation. Such consolidation also fosters the growth of mechanization. In 2003 there were 1,264,000 tractors (fourth in the world after the United States, Japan, and Italy) compared with 100,000 in 1948, and 1,327,900 in 1974.

Of the total productive agricultural area, about 61% is under cultivation, 35% is pasture, and 4% vineyards. The most productive farms are in northern France, but specialized areas, such as the vegetable farms of Brittany, the great commercial vineyards of the Languedoc, Burgundy, and Bordeaux districts, and the flower gardens, olive groves, and orchards of Provence, also contribute heavily to the farm economy.

Among agricultural products, cereals (wheat, barley, oats, corn, and sorghum), industrial crops (sugar beets, flax), root crops (potatoes), and wine are by far the most important. In 2004, the wheat crop totaled 39,704,000 tons and barley, 11,040,000 tons. Other totals (in tons) included oats, 598,000; corn, 16,391,000; sugar beets, 30,554,000; rapeseed, 3,969,000 tons; and sunflower seed, 1,467,000 tons. Wine production in 2004 totaled 557 million liters from 7,542,000 tons of grapes. There is large-scale production of fruits, chiefly apples, pears, peaches, and cherries.

## 23 ANIMAL HUSBANDRY

Output of animal products in 2003 was valued at nearly €3.7 billion, the highest in the EU. In 2005, farm animals included 19.3 million head of cattle, 15 million swine, 10.2 million sheep and goats, and 355,000 horses. Poultry and rabbits are raised in large numbers, both for farm families and for city markets. Percheron draft horses are raised in northern France, range cattle in the central highlands and the flatlands west of the Rhône, and goats and sheep in the hills of the south. Meat production in 2005 included 1,529,000 tons of beef and veal, 2,257,000 tons of pork, 1,971,000 tons of poultry, and 123,000 tons of mutton. Meat exports in 2004 were valued at over \$3.3 billion.

Dairy farming flourishes in the rich grasslands of Normandy. Total cows' milk production in 2005 was 25,282,000 tons. France produces some 300 kinds of cheese; in 2005, production totaled about 1,824,000 tons. Butter and egg production were 426,000 and 1,245,000 tons, respectively. Dairy and egg exports generated \$5 billion in 2005.

## 2<sup>4</sup> FISHING

France's 4,716 km (2,930 mi) of coastline, dotted with numerous small harbors, has long supported a flourishing coastal and high-seas fishing industry. Total fish production in 2003 amounted to 874,397 tons (valued at €1,686 million) with the fresh wild catch accounting for 44%; the frozen wild catch, 27%; and aquaculture, 28%. French aquaculture consists mainly of oyster and mussel production; most of the facilities are located along the English Channel and the Atlantic coasts. Aquaculture yielded 246,919 tons in 2003, valued at €542 million.

Herring, skate, whiting, sole, mackerel, tuna, sardines, lobsters, and mussels make up the principal seafood catch, along with cod, mostly from the fishing banks off northern North America, where French fishing vessels have sailed for centuries. Production of canned seafood products in 2003 totaled 80,501 tons, mostly tuna, mackerel, and sardines.

In 2004, France's trade deficit for seafood products was 604,050 tons, valued at over €2.1 billion. The United Kingdom and Norway are France's leading seafood suppliers.

## 2<sup>5</sup> FORESTRY

Forestry production in France has been encouraged by the government since the 16th century, when wood was a strategic resource in building warships. Although much of the original forest cover was cut in the course of centuries, strict forest management practices and sizable reforestation projects during the last 100 years have restored French forests considerably. Since 1947, the government has subsidized the afforestation and replanting of 2.1 million hectares (5.2 million acres) of forestland along with thousands of miles of wood transport roads. The reforestation project in the Landes region of southwestern France has been particularly successful. During 1990–2000, the forested area increased by an annual average of 0.4%. About 66% of the forestland is covered with oak, beech, and poplar and 34% with resinous trees. There were some 16 million hectares (39.5 million acres) of forest in 2001, amounting to 29% of France's total area. This makes France the third most forested country in the EU, behind Sweden and Finland. The forestry and wood products sector employed 257,000 persons in 35,000 companies in 2000. In 2004, the gross value added by France's forestry industry was €2.9 billion.

Production of roundwood in 2004 was 34.6 million cu m (1.22 billion cu ft), and was supplemented with imports. Hardwood log production reached 6.5 million cu m (229 million cu ft) that year, while plywood panel production amounted to 500,000 cu m (17.6 million cu ft). Softwood log production totaled 13 million cu m (459 million cu ft) in 2004. Trade in forestry products in 2003 amounted to \$8.1 billion in imports and \$6.3 billion in exports.

In December 1999, a hurricane hit France and damaged an estimated 50 million cu m (1.8 billion cu ft) of trees, with 31 million cu m (1.1 billion cu ft) in public forests.

## 2<sup>6</sup> MINING

France was a major European mineral producer, despite significant declines in the production of traditional minerals in recent years. France was among the leading producers of coal, was Europe's only producer of andalusite, and counted iron among its top export commodities in 2002. France was also self-sufficient in salt,

potash, fluorspar, and talc. Talc de Luzenac, a subsidiary of Rio Tinto, was the leading producer of talc in the world. In addition, France had sizable deposits of antimony, bauxite, magnesium, pyrites, tungsten, and certain radioactive minerals. One of the world's most developed economies, France had to make considerable changes in the structure of its industries, particularly those mineral industries controlled by the state. Prior to 2000, the state's heavy economic and political involvement was a main element of national mineral policy. Cessation of government subsidies to unprofitable operations, cheaper foreign sources, and depletion of mineral reserves have greatly affected the industry, particularly bauxite, coal, iron ore, lead, uranium, and zinc. The government has made efforts to promote the private sector, to proceed with a program of privatization, and to reduce the dependence of state-owned companies on subsidies. To encourage exploration, the government in 1995 passed a law expediting the granting of surveying and mining licenses.

Production figures for 2003 were: agricultural and industrial limestone, 12,000 metric tons; hydraulic cement, 20 million tons; salt (rock, refined brine, marine, and in solution), 6.673 million tons; crude gypsum and anhydrite, 3.5 million tons (France was one of Europe's largest producers of gypsum, with two-thirds coming from the Paris Basin); marketable kaolin and kaolinitic clay, 323,000 tons; crude feldspar, 671,000 tons; marketable fluorspar, 89,000 tons; barite, 81,000 metric tons, up slightly from 80,000 metric tons in 2003; kyanite, andalusite, and related materials, 65,000 tons; mica, 10,000 metric tons; and crude and powdered talc (significant to the European market), 645,000 metric tons. In 2003 France also produced copper; gold; silver; powder tungsten; uranium; elemental bromine; refractory clays; diatomite; lime; nitrogen; mineral, natural, and iron oxide pigments; Thomas slag phosphates; pozzolan and lapilli; and soda ash and sodium sulfate. No iron ore was produced in 2003; the iron ore basin, stretching from Lorraine northward, used to produce more than 50 million tons per year, but its high phosphorus and low iron content limited its desirability. Terres Rouges Mine, the last to operate in Lorraine, closed in 1998. France ceased producing bauxite (named after Les Baux, in southern France) in 1993. Mining of lead and zinc has completely ceased.

## 2<sup>7</sup> ENERGY AND POWER

France's energy and power sector is marked by modest reserves of oil, natural gas and coal, and a heavy reliance upon nuclear energy to meet its energy needs.

As of 1 January 2005, France had estimated proven oil reserves of 0.1 billion barrels, with the bulk of its oil production in the Paris and Aquitaine Basins. In 2001, crude oil production was 28,000 barrels per day, but declined to 23,300 barrels per day in 2004. Total oil product output, including refinery gain, came to an estimated 76,600 barrels per day, of which 30% was crude oil. In 2004, domestic demand for oil came to an estimated 1,976,900 barrels per day, making France the world's 10th-largest consumer of oil. As a result of the disparity between consumption and production, France has had to import crude oil. In 2004, net imports of crude oil came to 1.96 million barrels per day.

Like its oil resources, France's coal and natural gas reserves are very limited. As of 1 January 2005, the country had an estimated 500 billion cu ft of proven natural gas reserves. Production and

consumption of natural gas in 2003 totaled an estimated 100 billion cu ft and 1,554.5 billion cu ft, respectively.

France's recoverable coal reserves, production, and consumption in 2003 were estimated at 16.5 million short tons; 1.9 million short tons; and 21.4 million short tons, respectively. In April 2004, France closed its last operating coal mine and has since relied on coal imports to meet its demand for coal.

During the 1950s France became increasingly dependent on outside sources for petroleum. Although petroleum and natural gas continued to be produced in France itself (as they are today), the nation came to rely almost entirely on imports from oil fields of the Middle East, putting a heavy strain on the country's foreign exchange reserves. Discoveries of large supplies of natural gas and petroleum in the Sahara Desert changed the outlook radically; in 1967 France was able to meet almost half its fuel needs from countries within the franc zone. Petroleum production from the Saharan fields rose spectacularly from 8.7 million tons in 1960 to 53 million tons in 1970. Although France lost title to the Saharan deposits after Algerian independence, arrangements were made with the Algerian government to keep up the flow of oil to France.

Developments in the 1970s exposed the limitations of this strategy. Algeria took controlling interest in French oil company subsidiaries in 1971. The oil shocks of the mid- and late 1970s drove France's fuel and energy imports up; in 1975, fuel imports accounted for 22.9% of all imports. In response, France began an energy conservation program, but oil consumption continued to increase between 1973 and 1980, when fuel imports made up 26.6% of total imports. Mergers involving France's top oil companies in 1999 and 2000 created the fourth-largest oil company in the world, TotalFinaElf.

France's electric power sector is marked by a heavy reliance upon nuclear power. France has become the world's leading producer of nuclear power per capita, with the world's second-greatest nuclear power capacity (exceeded only by the United States). Nuclear power accounts for 78.5% of the electric power generated in France, followed by hydroelectric at 11.5% and conventional thermal at 9.3%. In 2003, France had an installed generating capacity estimated at 112 GW, with production and consumption estimated at 536.9 billion kWh and 433.3 billion kWh, respectively. All electric power generation and distribution is controlled by the state-owned monopoly, Electricite de France (EdF). However, France has slowly begun to deregulate its electricity sector and to privatize EdF. France is also Europe's second-largest power market, exceeded only by Germany.

## 28 INDUSTRY

Industry has expanded considerably since World War II, with particularly significant progress in the electronics, transport, processing, and construction industries. France is the world's fourth-leading industrial power, after the United States, Japan, and Germany (although France was surpassed by the United Kingdom in 2002 as the world's fourth-largest economy). Manufacturing accounted for almost 80% of total exports of goods and services in 2005, and exports represent about 27% of French GDP.

In 2004, the industrial sector accounted for 24.3% of GDP. Manufacturing, including construction and engineering, accounts for 29% of all jobs, 40% of investments, and almost 80% of exports. The state has long played an active role in French industry, but

government involvement was greatly accelerated by a series of nationalization measures enacted by the Socialists in 1982. By 1983, about one-third of French industry—3,500 companies in all—was under state control. However, there was some privatization during 1986–88, later resumed in 1993, with 21 state-owned industries, banks, and insurance companies scheduled to be sold. Although substantial progress had been made in privatization in the early 2000s, the government still held a majority stake in such industries as aeronautics, defense, automobiles, energy, and telecommunications. In July 2005, the government partially privatized Gaz de France, and in October gave the go-ahead for the partial privatization of Electricité de France.

Although France's industrial output has quadrupled since 1950, by 2005 nearly 1.5 million jobs had been lost since the 1980s. This shrinkage reflects not only steadily rising productivity, but also the major restructuring of industry due to globalization and the instability of oil markets. In this respect, French industry has seen a rapid concentration of its firms and a sharp rise in direct investment abroad. As of 2005, French companies controlled some 15,800 subsidiaries outside France, employing 2.5 million people. On the other hand, 2,860 companies controlled by foreign capital are responsible for 28% of France's output, 24% of jobs, and 30% of the manufacturing sector. France is the third-largest destination of inward investment in the world, after the United States and the United Kingdom, above all in the fields of information technology, pharmaceuticals, machine tools, and precision instruments.

The steel industry has suffered because of international competition and a general shift away from steel to aluminum and plastics. The French aluminum industry is dominated by a factory in Dunkirk owned by Pechiney, which was privatized at the end of 1995.

The French automotive industry ranks third in world exports. The two leading companies are PSA (which controls the Peugeot and Citroen brands) and Renault, the latter state-owned. The domestic market, however, has fallen prey to foreign competitors, especially from Germany and Japan, forcing the French auto makers to make greater use of robots, lay off workers, and open plants abroad.

The French aircraft industry, not primarily a mass producer, specializes in sophisticated design and experimental development. Some of its models, such as the Caravelle and the Mirage IV, have been used in over 50 countries. Aérospatiale became a state company after World War II. Airbus, based in Toulouse and formed in 1970 following an agreement between Aérospatiale and Deutsche Aerospace (Germany), is the world's largest manufacturer of commercial aircraft. Airbus was incorporated in 2001 under French law as a simplified joint stock company. The Airbus A380 will seat 555 passengers and be the world's largest commercial passenger jet when it enters service in 2006.

The chemical industry, although not as strong as its rivals in Germany and the United States, ranks fourth in the world. The pharmaceuticals, perfume, and cosmetics industry is highly significant. France is the world's largest exporter of perfumes.

The textile industry is also important: France is the world's fourth-largest exporter of women's clothing. However, foreign competition has cut into the French textile industry. Following the expiration of the World Trade Organization's longstanding system of textile quotas at the beginning of 2005, the EU signed

an agreement with China in June 2005 imposing new quotas on 10 categories of textile goods, limiting growth in those categories to between 8% and 12.5% a year. The agreement runs until 2007, and was designed to give European textile manufacturers time to adjust to a world of unfettered competition. Nevertheless, barely a month after the EU-China agreement was signed, China reached its quotas for sweaters, followed soon after by blouses, bras, T-shirts, and flax yarn. Tens of millions of garments piled up in warehouses and customs checkpoints, which affected both retailers and consumers.

Agribusiness is an increasingly important industry, supplying France's vast number of restaurants and hotels. The food processing industry is a major force in the French economy. Cooperative ventures are particularly important to the food industry. France is the world's second-largest wine producer after Italy. It is the world's second-largest exporter of cheeses.

The great concentrations of French industry are in and around Paris, in the coal basin of northern France, in Alsace and Lorraine, and around Lyon and Clermont-Ferrand. French industry, in general, is strong on inventiveness and inclined toward small-scale production of high-quality items. The French government offers subsidies and easy credit to firms undertaking relocation, reconversion, or plant modernization.

## 29 SCIENCE AND TECHNOLOGY

French inventors played a pivotal role in the development of photography and the internal combustion engine. To French ingenuity the world also owes the first mechanical adding machine (1642), the parachute (1783), the electric generator (1832), the refrigerator (1858), and the neon lamp (1910). French industry has pioneered in the development of high-speed transportation systems, notably the supersonic Concorde and the TGV high-speed train, and French subway companies have built or provided equipment for mass-transit systems in Montréal, Mexico City, Río de Janeiro, and other cities.

France is a leading exporter of nuclear technology and has developed the first commercial vitrification plant for the disposal of radioactive wastes by integrating them in special glass and then encasing the glass in stainless steel containers for burial. In 1965, France was the third nation, after the USSR and the United States, to launch its own space satellite. The French no longer launch their own satellites, however, preferring instead to contribute to the European Space Agency.

The Académie des Sciences, founded by Louis XIV in 1666, consists of eight sections: mathematics, physics, mechanics, astronomy, chemistry, cellular and molecular biology, animal and plant biology, and human biology and medical sciences. The Centre National de la Recherche Scientifique (CNRS), founded in 1939, controls more than 1,370 laboratories and research centers. In 1996, the CNRS employed 19,391 researchers and engineers and 7,263 technicians and administrative staff. In addition, there are well over 100 other scientific and technological academies, learned societies, and research institutes. France has a large number of universities and colleges that offer courses in basic and applied sciences. The Palais de la Découverte in Paris (founded in 1937) is a scientific center for the popularization of science. It has departments of mathematics, astronomy, physics, chemistry, biology, medicine, and earth sciences, and includes a planetarium

and cinema. A similar Parisian facility is the Cité des Sciences et de l'Industrie (founded in 1986). The city also has the Musée National des Techniques (founded in 1794) and the Musée de l'Air et de l'Espace (founded in 1919).

In 1987–97, science and engineering students accounted for 37% of university enrollment. In 2002, of all bachelor's degrees awarded, 27.1% were for the sciences (natural, mathematics and computers, and engineering).

In 2002, France's total research and development (R&D) expenditures amounted to \$36,357.186 billion or 2.27% of GDP, of which business provided 52.1%, followed by the government at 38.4%, foreign sources at 8%, and higher education at 0.7%. In that same year, high-tech exports were valued at \$52.582 billion and accounted for 21% of manufactured exports. R&D personnel in 2002 numbered 3,134 scientists and engineers per million people.

## 30 DOMESTIC TRADE

The heart of French commerce, both domestic and foreign, is Paris. One-third of the country's commercial establishments are in the capital, and in many fields Parisian control is complete. The major provincial cities act as regional trade centers. The principal ports are Marseille, for trade with North Africa and with the Mediterranean and the Middle East; Bordeaux, for trade with West Africa and much of South America; and Le Havre, for trade with North America and northern Europe. Dunkerque and Rouen are important industrial ports.

The trend away from traditional small retailers is seen as a threat to tradition and, in some areas of the country, government assistance is offered to small retailers. Even so, larger retail outlets and hypermarkets have gained ground. Mail order sales and specialty chain stores have also grown. In 1999, metropolitan France had about 30,000 wholesale enterprises. In 2000, there were 5,863 supermarkets. In 2002, there were about 107 department stores. Among the 50 largest commercial companies in France are the department stores Au Printemps and Galeries Lafayette. A value-added tax (VAT) of 19.6% applies to most goods and services.

Business hours are customarily on weekdays from 9 AM to noon and from 2 to 6 PM. Normal banking hours are 9 AM to 4:30 PM, Monday–Friday. Most banks are closed on Saturdays; to serve a particular city or larger district, one bank will usually open Saturday mornings from 9 AM to noon. Store hours are generally from 10 AM to 7 PM, Monday–Saturday. Most businesses close for three or four weeks in August.

Advertising in newspapers and magazines and by outdoor signs is widespread. A limited amount of advertising is permitted on radio and television. Trade fairs are held regularly in Paris and other large cities.

## 31 FOREIGN TRADE

Leading French exports, by major categories, are capital goods (machinery, heavy electrical equipment, transport equipment, and aircraft), consumer goods (automobiles, textiles, and leather), and semifinished products (mainly chemicals, iron, and steel). Major imports are fuels, machinery and equipment, chemicals and paper goods, and consumer goods.

The French trade balance was favorable in 1961 for the first time since 1927, but after 1961 imports rose at a higher rate than

exports. Trade deficits generally increased until the 1990s. From 1977 to 1985, the trade deficit nearly tripled. Among factors held responsible were heavy domestic demand for consumer products not widely produced in France, narrowness of the range of major exports, and a concentration on markets not ripe for expansion of exports from France, notably the EU and OPEC countries. In the following years a growing change in the trade balance developed, and the deficit narrowed appreciably in 1992. By 1995, France had a trade surplus of \$34 billion. By 2004, however, France once again had a trade deficit, of \$7.9 billion. In all, France is the world's fourth-largest exporter of goods and the third-largest provider of services. France is the largest producer and exporter of farm products in Europe. Total trade for 2004 amounted to \$858.2 billion, over 40% of GDP.

Garnering the highest revenues of export commodities from France are transport machinery, including automobiles, vehicle parts, and aircraft. French wine, perfumes, and cosmetics represent about a quarter each of the world market in their respective categories.

Trade with EU countries accounted for 61% of all French trade in 2004. In 2004, France's leading markets were Germany (15% of total exports), Spain (10.4%), the United Kingdom (9.4%), and Italy (9.3%). Leading suppliers were Germany (17.4% of all imports), Italy (9%), Belgium-Luxembourg (7.8%), and Spain (7.4%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Between 1945 and 1958, France had a constant deficit in its balance of payments. The deficit was financed by foreign loans and by US aid under the Marshall Plan, which totaled more than \$4.5 billion. A 1958 currency reform devalued the franc by 17.5%, reduced quota restrictions on imports, and allowed for repatriation of capital; these measures, combined with increased tourist trade and greater spending by US armed forces in the franc zone, improved France's payments position. With payments surpluses dur-

ing most of the 1960s, gold and currency reserve holdings rose to \$6.9 billion by the end of 1967. However, a massive deficit in 1968 led to another devaluation of the franc in 1969, and by 31 December 1969, gold and reserve holdings had dropped to \$3.8 billion. After surpluses in 1970–72 raised international reserves to over \$10 billion, price increases for oil and other raw materials resulted in substantial negative balances on current accounts in 1973 and 1974; because of this, France required massive infusions of short-term capital to meet its payments obligations.

Huge surpluses on the services account led to positive payments balances during 1977–80, when reserves rose by nearly \$9.7 billion. After that, France's trade position deteriorated sharply. Foreign exchange reserves fell from \$27.8 billion as of March 1981 to \$14.1 billion by March 1983. To meet its payments obligation, France had to secure a \$4 billion standby credit from international banks as well as loans from Saudi Arabia and the EC. During the mid-1980s, the trade deficit generally moderated; the current accounts balance recovered in 1985 from the heavy deficits of the past.

In 1992, the merchandise trade account recorded a surplus after having recorded a significant deficit of 1990. Trade in industrial goods (including military equipment) and a surplus in the manufacturing sector (the first since 1986) were responsible for the boost in exports. Economic growth rose throughout 1994 due to exports to English-speaking countries and a strong economy in Europe. Exports of both goods and services significantly contributed to GDP growth in 1995 with exports of goods totaling \$270.4 billion and imports totaling \$259.2 billion, resulting in a trade balance on goods of \$11.2 billion. Exports of services totaled \$97.8 billion while imports totaled \$78.5 billion, resulting in a balance on services of \$19.2 billion.

Although France in recent years has run consistent trade and current account surpluses, the country's trade balance showed a deficit in 2001, the first since 1991. It turned around in 2002. The value of merchandise exports in 2004 totaled \$421.1 billion, while imports totaled \$429.1 billion, resulting in a trade deficit of \$7.9 billion. Total trade for 2004 amounted to \$858.2 billion, over 40% of GDP. France for several years had posted surpluses on the services and investment income balances. Nevertheless, the current account recorded a deficit of \$4.8 billion, or 2% of GDP in 2004.

### 3<sup>3</sup> BANKING AND SECURITIES

The Banque de France, founded in 1800, came completely under government control in 1945. It is the bank of issue, sets discount rates and maximum discounts for each bank, regulates public and private finance, and is the Treasury depository. In 1945, a provisional government headed by Gen. de Gaulle also nationalized France's four largest commercial banks, and the state thus came to control 55% of all deposits. The four banks were Crédit Lyonnais, the Société Générale, the Banque Nationale pour le Commerce et l'Industrie, and the Comptoir National d'Escompte de Paris. In 1966, the Banque Nationale and the Comptoir merged and formed the Banque Nationale de Paris (BNP).

In 1982, Socialist president François Mitterrand nationalized 39 banks, bringing the state's control over deposits to 90%. Among leading banks nationalized in 1982 was the Crédit Commercial de France, but this bank and Société Générale were privatized in 1987 by the Chirac government.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

France's (and Europe's) biggest bank is a curiosity. *Crédit Agricole*, founded at the end of the 19th century, was for most of its life a federation of rurally based mutual credit organizations. It has preserved its rural base and plays the leading role in providing farmers with state-subsidized loans. After 1982 it was allowed to pursue a policy of diversification, so that farmers eventually accounted for only 15% of its customers. In 1995 *Crédit Agricole* was listed as the eighth-biggest bank in the world, being preceded by six Japanese banks and HSBC Holdings.

In 1999, BNP and rival *Société Générale* attempted to take over another private bank, *Paribas*. Concurrently, BNP was waging a takeover bid for *Société Générale* itself. Ultimately, BNP won outright control of *Paribas*, but only 36.8% of the shares of *Société Générale*.

*La Poste*, the postal service, which in France is an independent public entity, also offers financial services and held about 10% of the market in 2002. By virtue of the Banking Act of January 1984, the main regulatory authority for the banking sector is the *Commission Bancaire*. It is presided over by the governor of the *Banque de France*. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$300.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$896.5 billion.

Public issues of stocks and bonds may be floated by corporations or by limited partnerships with shares. Publicly held companies that wish their stock to be traded on the exchange must receive prior authorization from the Stock Exchange Commission within the Ministry of Finance. In January 1962, the two principal Paris stock exchanges were merged. The six provincial exchanges specialize in shares of medium-size and small firms in their respective regions. In 2004, a total of 701 companies were listed on *EURONEXT Paris*. Total market capitalization in that same year came to \$1,857.235 billion. In 2004, the *CAC 40* index was up 7.4% from the previous year to 3,821.2.

Measured by stock market capitalization, the Paris Bourse is the third-largest in Europe after London and Frankfurt. The Lyon Bourse is the most active provincial stock exchange. *MATIF* (*marché à terme des instruments financiers*), the financial futures exchange, was opened in Paris in 1986 and has proved a success. The *Société des Bourses Françaises* (SBF), the operator of the French stock market, has been determinedly pursuing a policy of reform and modernization, and it expects to benefit from the liberalization of financial services brought about by the EU's Investment Services Directive (ISD). French legislation, providing for the liberalization of financial services, transposed the directive into national law.

### 34 INSURANCE

Insurance is supervised by the government directorate of insurance, while reinsurance is regulated by the Ministry of Commerce. In 1946, a total of 32 major insurance companies were nationalized, and a central reinsurance institute was organized. All private insurance companies are required to place a portion of their reinsurance with the central reinsurance institute. In France, workers' compensation, tenants' property damage, third-party automobile,

hunter's liability insurance, and professional indemnity for some professions are among those insurance lines that are compulsory.

However, as of 1996, the insurance sector was being shifted completely into private hands. *Union des Assurances de Paris* (UAP), which is France's largest insurance group, was privatized in 1994. The combining of insurance services with retail banking has become fashionable in recent years, hence the neologism *bancassurance*. Partners in this practice are UAP and BNP. Another development has been to forge alliances across the Rhine in Germany. Since July 1994, insurers registered in other European Union (EU) countries have been able to write risks in France under the EU Non-Life Directive.

In 2003, the value of direct premiums written totaled \$163.679 billion, of which life premiums totaled \$105.436 billion. In 2002, *Groupama GAN* was France's leading nonlife insurer, with \$7.5 billion of nonlife premiums written. *CNP* was the leading life insurer, that same year, with \$15.3 billion in written life premiums.

### 35 PUBLIC FINANCE

The fiscal year runs from 1 January to 31 December. Deficits have been commonplace, but in recent years, efforts have been made to cut back on the growth of taxes and government spending and, since 1986, to remove major state enterprises from the expense of government ownership. Deficit reduction became a top priority of the government when France committed to the European Monetary Union (EMU). Maastricht Treaty targets for the EMU required France to reduce the government's budget deficit to 3% of GDP by 1997. The government still maintains a fairly tight hold on myriad enterprises, ranging from energy to financial services to industry; government spending accounted for 52% of GDP in 2001.

The US Central Intelligence Agency (CIA) estimated that in 2005 France's central government took in revenues of approximately \$1.06 trillion and had expenditures of \$1.1 trillion. Revenues minus expenditures totaled approximately -\$84 billion. Pub-

lic debt in 2005 amounted to 66.5% of GDP. Total external debt was \$2.826 trillion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were €674.87 billion and expenditures were €727.39 billion. The value of revenues was us\$635 million and expenditures us\$292 million, based on a market exchange rate for 2002 of us\$1 = €1.0626 as reported by the IMF. Government outlays by function were as follows: general public services, 15.2%; defense, 5.2%; public order and safety, 1.7%; economic affairs, 9.2%; environmental protection, 0.2%; housing and community amenities, 0.8%; recreation, culture, and religion, 0.7%; and education, 9.8%.

### 36 TAXATION

As with most industrialized democratic systems, France's tax system is complex and nuanced, though also subject to recent movements to reductions and simplifications. The basic corporate income tax rate for filings in 2006 was 33.33%, with a social surcharge of 3.3% that is applied when the global corporate income tax charge is over €763,000. A 1.5% surcharge for 2005 was abolished for fiscal years ending on or after 1 January 2006. Long-term capital gains by firms were taxed at a basic rate of 15%, plus surcharges. However, starting in 2006, the tax rate on long-term gains from qualified shareholdings received by companies will drop to 8%. Short-term capital gains are taxed according to the progressive individual income tax schedule. The main local tax is the business tax, charged on 84% of a value derived from the rental value of the premises, 16% of the value fixed assets, and 18% of annual payroll, and at rates set by local authorities each year. The business tax (taxe professionnelle) varies significantly from place to place, with a range of 0–4%.

Individual income tax in France is assessed in accordance with a progressive schedule of statutory rates up to 48.09%. However, French tax law contains many provisions for exemptions and targeted reductions from taxable income, so that the actual income tax paid is highly individualized. Taxable capital gains for individuals include the sale of immovable property, securities and land (excluding bonds or the individual's primary residence). Gains that exceed the annual exemption are subject to a 27% tax rate. Past the fifth year, the capital gain is reduced by 10% per each year of ownership. Exempt are capital gains on the sale of the principal residence. If the sale of securities exceeds €15,000, the gains are taxed at a 27% rate.

The main indirect tax is the value-added tax (VAT) first introduced in January 1968. The standard rate in 2005 was 19.6%, with a 5.5% on most foodstuffs and agricultural products, medicines, hotel rooms, books, water and newspapers. A 2.1% rate applies to certain medicines that are reimbursed by the social security system. Nonindustrial businesses that do not pay the VAT on consumption (banks, insurance companies, the medical sector, associations, nonprofit organizations, etc.) pay a wage tax to cover social levies assessed according to a progressive schedule. Generally, social security contributions by employers range from range from approximately 35–45%, with the employee responsible for 18–23%. Inheritance taxes (succession duties) range from 5–60%, as do gift (donations) taxes. There is also a patrimonial tax of 3% on the fair market value of property owned in France, although foreign companies whose French financial assets are more than

50% are exempt. Also, foreign property holders may be exempt according to the terms of a bilateral tax treaty with France. (France is party to a numerous bilateral tax treaties with provisions that can greatly reduce tax liabilities for foreign investors.) Local taxes include a property tax, charged to owners of land and buildings, and a housing tax, charged to occupants of residential premises, assessed according to the rental value of the property. The social security system is operated separately from the general tax system, financed by contributions levied on earned income in accordance with four regimes: a general regime covering 80% of French citizens, a regime for agricultural workers, a special regime for civil servants and railway workers, and a regime for the self-employed. Tax levies have been used, however, to shore up the finances in the social security system.

### 37 CUSTOMS AND DUTIES

Virtually all import duties are on an ad valorem CIF (cost, insurance, and freight) value basis. Minimum tariff rates apply to imports from countries that extend corresponding advantages to France. General rates, fixed at three times the minimum, are levied on imports from other countries. France adheres to the EU's common external tariff for imports. Most raw materials enter duty-free, while most manufactured goods have a tariff of 5–17%. The recession of the early 1980s gave rise to calls for protectionist measures (e.g., against Japanese electronic equipment), but the socialist government remained ostensibly committed to free trade principles. Observers noted, however, that cumbersome customs clearance procedures were being used to slow the entry of certain Japanese imports, notably videotape recorders, to protect French firms. There is a standard 19.6% VAT on most imports, with a reduced rate of 5.5% for basic necessities.

### 38 FOREIGN INVESTMENT

Investment regulations are simple, and a range of financial incentives for foreign investors is available. France's skilled and productive labor force; central location in Europe, with its free movement of people, services capital, and goods; good infrastructure; and technology-oriented society all attract foreign investors. However, extensive economic regulation and taxation, high social costs, and a complex labor environment are all challenges for the investor.

All direct investments in France require advance notification of—and in some cases approval by—the Treasury Department. Investments from other EU countries cannot be refused, but the department may specify whether the investment is to be financed from French or foreign sources. High taxes dampen the investment climate: the standard rate of corporation tax in 2005 was 33.3%. In 2000, the standard rate of value-added tax (VAT) was cut from 20.6% to 19.6%.

Foreign direct investment (FDI) in France climbed from \$6.5 billion in 1973 to over \$150 billion in 1997. The book value of total FDI stock in France in 2003 was \$349 billion.

The annual inflow of FDI rose to almost \$31 billion in 1998, up from \$23 billion in 1997. From 1999 to 2002, annual FDI inflows averaged \$47.7 billion. In 2002, FDI inflow was \$48.2 billion, and in 2003 it was \$52 billion. The major investors are the United States, the United Kingdom, the Netherlands, Germany, and Belgium. In 2003, the outflow of investment totaled \$63 billion.

France invests most heavily in the United Kingdom, the United States, Germany, and Switzerland.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Since World War II (1939–45), France has implemented a series of economic plans, introduced to direct the postwar recovery period but later expanded to provide for generally increasing governmental direction of the economy. The first postwar modernization and equipment plan (1947–53) was designed to get the machinery of production going again; the basic economic sectors—coal, steel, cement, farm machinery, and transportation—were chosen for major expansion, and productivity greatly exceeded the target goals. The second plan (1954–57) was extended to cover all productive activities, especially agriculture, the processing industries, housing construction, and expansion of overseas production. The third plan (1958–61) sought, in conditions of monetary stability and balanced foreign payments, to achieve a major economic expansion, increasing national production by 20% in four years. After the successful devaluation of 1958 and an improvement in the overall financial and political situation, growth rates of 6.3% and 5% were achieved in 1960 and 1961, respectively. The fourth plan (1962–65) called for an annual rate of growth of between 5% and 6% and an increase of 23% in private consumption; the fifth plan (1966–70), for a 5% annual expansion of production, a 25% increase in private consumption, and the maintenance of full financial stability and full employment; and the sixth plan (1971–75), for an annual gross domestic product (GDP) growth rate of between 5.8% and 6% and growth of about 7.5% in industrial production. The sixth plan also called for increases of 31% in private consumption, 34% in output, and 45% in social security expenditure.

The seventh plan (1976–80) called for equalization of the balance of payments, especially through a reduction of dependency on external sources of energy and raw materials; a lessening of social tensions in France by a significant reduction in inequalities of income and job hierarchies; and acceleration of the process of decentralization and deconcentration on the national level in favor of the newly formed regions. Because of the negative impact of the world oil crisis in the mid-1970s, the targets of the seventh plan were abandoned in 1978, and the government concentrated on helping the most depressed sectors and controlling inflation.

In October 1980, the cabinet approved the eighth plan (1981–85). It called for development of advanced technology and for reduction of oil in overall energy consumption. After the Socialists came to power, this plan was set aside, and an interim plan for 1982–84 was announced. It aimed at 3% GDP growth and reductions in unemployment and inflation. When these goals were not met and France's international payments position reached a critical stage, the government in March 1983 announced austerity measures, including new taxes on gasoline, liquor, and tobacco, a "forced loan" equivalent to 10% of annual taxable income from most taxpayers, and restrictions on the amount of money French tourists could spend abroad. A ninth plan, established for the years 1984–88, called for reducing inflation, improving the trade balance, increasing spending on research and development, and reducing dependence on imported fuels to not more than 50% of total energy by 1990. The 10th plan, for 1989–92, gave as its central objective increasing employment. The main emphasis was on

education and training, and improved competitiveness through increased spending on research and development.

France adopted legislation for a 35-hour work week in 1998 that became effective in 2000. The object was to create jobs. Pension reform was being legislated in 2003, amid much popular protest. France's demography is changing, with the active population beginning to decline in 2007—this is due to reduce annual per capita GDP growth. Spending on health care increased in the early 2000s. The general government financial deficit exceeded the EU limit of 3% of GDP in 2004.

By the mid-1990s, and in line with European Union (EU) policy, French economic policy took a turn away from state dominance and moved toward liberalization. Large shares of utilities and telecommunications were privatized. Moreover, austerity came to the fore in budgetary planning as the government moved to meet the criteria for Economic and Monetary Union (EMU). France adopted the euro as its currency in 1999, and discontinued the franc in favor of euro bills and coins in 2002. Public debt, however, was estimated at 67.7% of GDP in 2004, among the highest of the G-8 nations. Despite privatization efforts, the state in the early 2000s still owned large shares in corporations in such sectors as banking, energy, automobiles, transportation, and telecommunications.

Economic policy challenges for France in 2006 included reducing the budget deficit and making inroads into the rate of unemployment, which remains high even by EU standards. This requires reforming the tax and benefits system, as well as public administration and the legal framework for the labor market, but social resistance to such reforms is high.

Concerned about its stake in the EU Common Agricultural Policy (France is the largest beneficiary of the policy), in October 2005, France called a meeting of EU foreign ministers and demanded that the negotiating authority of the European Trade Commissioner be restricted. The commissioner, Peter Mandelson, emerged from that meeting in a stronger position and insisted that France had no power to block his proposals. That November, France threatened to veto any deal brokered by Mandelson that would go too far in reducing EU farm subsidies and tariffs.

In 2005, Prime Minister Dominique de Villepin was at odds with his political rival and interior minister Nicolas Sarkozy over the pace of economic reforms. De Villepin advocated gradual reforms, while Sarkozy called for a "rupture" with the past.

French loans to its former African territories totaled CFA Fr50 billion by November 1972, when President Pompidou announced that France would cancel the entire amount (including all accrued interest) to lighten these countries' debt burdens. In 1993, France spent \$7.9 billion on international aid, \$6.3 billion in 1997, and \$5.4 billion in 2002.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

France has a highly developed social welfare system. The social security fund is financed by contributions from both employers and employees, calculated on percentages of wages and salaries, and is partially subsidized by the government. Old age insurance guarantees payment of a pension when the insured reaches age 60. Disability insurance pays a pension to compensate for the loss of earnings and costs of care. Unemployment insurance is provided for all workers. Workers' medical benefits are paid directly for all necessary care. Maternity benefits are payable for six weeks before

and 10 weeks after the expected date of childbirth for the first and second child. There is a universal system of family allowances for all residents, including a birth grant, income supplements for reduced work, and child care benefits.

Equal pay for equal work is mandated by law, although this is not always the case in practice. Men continue to earn more than women and unemployment rates are higher for women than for men. Sexual harassment is illegal in the workplace and is generally effectively enforced. In 2004 legislation was passed creating a High Authority to Fight Discrimination and Promote Equality. Rape and spousal abuse laws are strictly enforced and the penalties are severe. Shelters, counseling, and hotlines are available to victims of sexual abuse and violence.

Religious freedom is provided for by the constitution. However, large Arab/Muslim, African, and Jewish communities have been subject to harassment and prejudice. Extremist anti-immigrant groups have increasingly been involved in racial attacks. Discrimination on the basis of race, sex, disability, language, religion, or social status is prohibited.

#### 41 HEALTH

Under the French system of health care, both public and private health care providers operate through centralized funding. Patients have the option of seeing a private doctor on a fee basis or going to a state-operated facility. Nearly all private doctors are affiliated with the social security system and the patients' expenses are reimbursed in part. Many have private health insurance to cover the difference. During the 1980s, there was a trend away from inpatient and toward outpatient care, with a growing number of patients receiving care at home. Cost containment initiatives were raised in the 1980s and early 1990s to increase patient contributions and establish global budgets for public hospitals. In 1991, new reforms to strengthen the public sector were initiated. The social security system subsidizes approximately 75% of all health care costs. Pharmaceutical consumption in France is among the highest of all OECD member countries (exceeded only by Japan and the United States). In 1992, the French government imposed a price-fixing mechanism on drugs.

France's birth rate was estimated at 11.9 per 1000 in 2002. Approximately 79% of France's married women (ages 15 to 49) used contraception. The total fertility rate in 2000 was 1.9 children per woman during her childbearing years.

As of 2004, there were an estimated 329 physicians, 667 nurses, 68 dentists, and 101 pharmacists per 100,000 people. Life expectancy in 2005 averaged 79.6. The infant mortality rate was 4.26 per 1,000 live births that year. The overall death rate was an estimated 9.1 per 1,000 people as of 2002. Tobacco and alcohol consumption continue to be health concerns in France.

Efforts to immunize children up to one year old include: diphtheria, pertussis, and tetanus, polio, and measles. The HIV/AIDS prevalence was 0.40 per 100 adults in 2003. As of 2004, there were approximately 120,000 people living with HIV/AIDS in the country. There were an estimated 1,000 deaths from AIDS in 2003.

#### 42 HOUSING

In 2004, there were 30.3 million dwellings nationwide. About 25.4 million, or 84%, were primary residences, 2.9 million were second homes, and about 1.8 million, or 6.1%, were vacant. About 58%

of all dwellings are detached homes. The number of people per household was about 2.3. Over 2.9 million residential buildings were built in 1990 or later.

After World War II, in which 4.2 million dwellings were destroyed and one million damaged, the government took steps to provide inexpensive public housing. Annual construction rose steadily through the 1950s and 1960s; in 1970–75, housing construction of all types increased by an annual average of more than 6%. In 1975, the total number of new dwellings completed was 514,300. Construction slowed thereafter, and by 1996 the number had declined to 236,270.

In accordance with a law of 1953, industrial and commercial firms employing 10 or more wage earners must invest 1% of their total payroll in housing projects for their employees. These funds can finance either public or private low-cost housing. Concerns must undertake construction of low-cost projects either on their own responsibility or through a building concern to which they supply capital. Special housing allowances are provided for families who must spend an inordinately large share of their income on rent or mortgages.

#### 43 EDUCATION

The supreme authority over national education in France is the Ministry of Education. Education is compulsory for children from the age of 6 to 16 and is free in all state primary and secondary schools. Higher education is not free, but academic fees are low, and more than half of the students are excused from payment.

Since the end of 1959, private institutions have been authorized to receive state aid and to ask to be integrated into the public education system. In 2003, about 15% of elementary-school children and 25% of secondary-level students attended private schools, the majority of which are Roman Catholic. In Brittany, most children attend Catholic schools. Freedom of education is guaranteed by law, but the state exercises certain controls over private educational institutions, nearly all of which follow the uniform curriculum prescribed by the Ministry of Education.

Primary school covers five years of study. There are two levels of secondary instruction. The first, the *collège*, is compulsory; after four years of schooling are successfully completed, the student receives a national diploma (*brevet des collèges*). Those who wish to pursue further studies enter either the two-year *lycée d'enseignement professionnel* or the three-year *lycée d'enseignement général et technologique*. The former prepares students for a certificate of vocational competence, the latter for the *baccalauréat*, which is a prerequisite for higher education. Choice of a *lycée* depends on aptitude test results. The academic year runs from September to June. The primary language of instruction is French.

In 2001, nearly all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 94% of age-eligible students. It is estimated that about 98% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 19:1 in 2003; the ratio for secondary school was about 12:1.

There are about 70 public universities within 26 *académies*, which now act as administrative units. Before the subdivision of these 26 units, the oldest and most important included Aix-Mar-

seille (founded in 1409), Besançon (1691), Bordeaux (1441), Caen (1432), Dijon (1722), Grenoble (1339), Lille (1562), Montpellier (1180, reinstated 1289), Nancy-Metz (1572), Paris (1150), Poitiers (1432), Rennes (1735, founded at Nantes 1461), Strasbourg (1538), and Toulouse (1229). The old University of Paris, also referred to as the Sorbonne, was the oldest in France and one of the leading institutions of higher learning in the world; it is now divided into 13 units, only a few of which are at the ancient Left Bank site. There are Catholic universities at Argers, Lille, Lyon, and Toulouse.

Besides the universities and specialized schools (such as École Normale Supérieure, which prepares teachers for secondary and postsecondary positions), higher educational institutions include the prestigious Grandes Écoles, which include the École Nationale d'Administration, École Normale Supérieure, Conservatoire National des Arts et Métiers, and École Polytechnique. Entrance is by competitive examination. Advanced-level research organizations include the Collège de France, École Pratique des Hautes Études, and École des Hautes Études en Sciences Sociales. In 2003, about 56% of the tertiary age population were enrolled in some type of higher education program; with 49% for men and 63% for women. The adult literacy rate has been estimated at about 98%.

As of 2003, public expenditure on education was estimated at 5.6% of GDP, or 11.4% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

Paris, the leader in all intellectual pursuits in France, has the largest concentration of libraries and museums. The Bibliothèque Nationale, founded in Paris in 1480, is one of the world's great research libraries, with a collection of over 10.4 million books, as well as millions of manuscripts, prints, maps, periodicals, and other items of importance (including 11 million stamps and photographs). The libraries of the 13-unit University of Paris system have collective holdings of more than six million volumes, and each major institution of higher learning has an important library of its own. The national archives are located in the Hôtel Rohan Soubise in Paris. There are dozens of libraries and historic sites dedicated to specific French writers and artists, including the Maison de Balzac in Paris, the Musée Calvin in Noyon, the Musée Matisse in Nice, the Musée Rodin in Meydon (there is also a National Museum of Rodin in Paris), and the Musée Picasso in Paris. Most provincial cities have municipal libraries and museums of varying sizes.

There are more than 1,000 museums in France. The Louvre, which underwent an extensive renovation and addition in the 1980s, including the construction of its now-famous glass pyramid, contains one of the largest and most important art collections in the world, covering all phases of the fine arts from all times and regions. The Cluny Museum specializes in the arts and crafts of the Middle Ages. The Museum of Man is a major research center as well. The Centre National d'Art et de Culture Georges Pompidou opened in 1977 on the Beaubourg Plateau (Les Halles). Primarily a museum specializing in contemporary art, it also houses several libraries (including the public library of Paris), children's workshops, music rooms, and conference halls. The Musée d'Orsay, a major new museum housing impressionist and postimpressionist paintings and many other works set in historical context, opened to the public in December 1986 in a former train station. Many of the 19th-century and 20th-century paintings in the Musée d'Orsay

had previously been housed in the Musée du Jeu de Paume. Many of the great churches, cathedrals, castles, and châteaux of France are national monuments.

#### 45 MEDIA

Postal, telephone, and telegraph systems are operated by the government under the direction of the Ministry of Post, Telegraph, and Telephones. In 2003, there were an estimated 566 mainline telephones for every 1,000 people. The same year, there were approximately 696 mobile phones in use for every 1,000 people.

The government-controlled Office de Radiodiffusion-Télévision Française was replaced in January 1975 by seven independent state-financed companies. A law of July 1982 allowed greater independence to production and programming organizations. Under deregulation, many private radio stations have been established. Of the three state-owned television channels, TF-1, the oldest and largest, was privatized in 1987; a fourth, private channel for paying subscribers was started in 1984. Contracts were awarded in 1987 to private consortiums for fifth and sixth channels. As of 1999 there were 41 AM and 800 FM radio stations (many of the FM stations were repeaters) and 310 TV stations. In 2003, there were an estimated 950 radios and 632 television sets for every 1,000 people. About 57.5 of every 1,000 people are cable subscribers. Also in 2003, there were 347.1 personal computers for every 1,000 people and 366 of every 1,000 people had access to the Internet. There were 3,855 secure Internet servers in the country in 2004.

Traditionally, the French press falls into two categories. The *presse d'information*, with newspapers with the largest circulation, emphasizes news; the *presse d'opinion*, usually of higher prestige in literary and political circles but of much lower daily circulation, presents views on political, economic, and literary matters. In 2002, there were over 100 dailies in the country. Some of the important regional papers rival the Parisian dailies in influence and circulation.

Leading national newspapers (with their organizational affiliation and 2005 circulation totals unless noted) are: *Le Figaro* (moderate conservative, 326,800), *Le Monde* (independent, elite, 324,400), *International Herald Tribune* (English-language, 210,000 in 2002), *Liberation* (135,600), *L'Humanité* (Communist, 49,500), and *La Croix* (Catholic, 98,200 in 2002). Some leading regional dailies include *Ouest-France* (in Rennes, mass-appeal, 761,100 in 2005), *La Voix du Nord* (in Lille, conservative, 356,903 in 2004), *Sud-Ouest* (in Bordeaux, independent, 359,300 in 2002), *Nice-Matin* (in Nice, radical independent, 243,800 in 2002), *Les Dernières Nouvelles D'Alsace* (in Strasbourg, 215,460 in 2004), *La Dépêche du Midi* (in Toulouse, radical, 218,214 in 2004), and *Le Telegramme* (in Morlaix, 199,710 in 2004). *L'Express* and *Le Point* are popular news weeklies.

The Agence France-Presse is the most important French news service. It has autonomous status, but the government is represented on its board of directors. There are some 14,000 periodicals, of which the most widely read is the illustrated *Paris-Match*, with a weekly circulation (in 1995) of 868,370. Several magazines for women also enjoy wide popularity, including *Elle*, (1995 circulation 360,000). Also for women are magazines publishing novels in serial form. The most popular political weeklies are *L'Express* (left-wing), with a circulation of about 419,000; the satirical *Le Canard Enchaîné* (left-wing), circulation 500,000; *Le Nouvel Obser-*

*vateur* (left-wing), circulation 399,470; and the news-magazine *Le Point* (independent), circulation 280,770. Filmmaking is a major industry, subsidized by the state.

The law provides for free expression including those of speech and press, and these rights are supported by the government.

#### 46 ORGANIZATIONS

The Confédération Générale d'Agriculture, originating in its present form in the resistance movement of World War II, has become the principal voice for farmers. The Société des Agriculteurs de France is considered the organization of landowners. Agricultural cooperatives, both producers' and consumers', are popular. There are also more than 44 large industrial trade organizations. Chambers of commerce function in the larger cities and towns. The International Chamber of Commerce has its headquarters in Paris, the national capital.

There are professional associations covering a wide variety of fields. The Association Médicale Française is a networking association for physicians that also promotes research and education on health issues and works to establish common policies and standards in healthcare. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions. The World Medical Association has an office in Ferney-Voltaire.

The Institute of France (founded in 1795) consists of the famous French Academy (Académie Française), the Academy of Sciences, the Academy of Humanities, the Academy of Fine Arts, and the Academy of Moral Sciences and Politics. There are many scientific, artistic, technical, and scholarly societies at both national and local levels. The multinational organization of European Academy of Arts, Sciences and Humanities is based in Paris. The United Nations Educational, Scientific and Cultural Organization (UNESCO) has an office in Paris as does the European Space Agency.

There are also many associations and organizations dedicated to various sports and leisure time activities. Youth organizations are numerous and range from sports groups, to volunteer and service organizations, religious and political organizations. Some groups with international ties include Junior Chamber, YMCA/YWCA, and the Guides and Scouts of France. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. The Red Cross, the Society of St. Vincent de Paul, CARE, UNICEF, and Greenpeace have national chapters.

#### 47 TOURISM, TRAVEL, AND RECREATION

France has countless tourist attractions, ranging from the museums and monuments of Paris to beaches on the Riviera and ski slopes in the Alps. Haute cuisine, hearty regional specialties, and an extraordinary array of fine wines attract gourmets the world over; the area between the Rhone River and the Pyrenees contains the largest single tract of vineyards in the world. In 1992 Euro Disneyland, 20 miles east of Paris, opened to great fanfare but was plagued by the European recession, a strong French franc, bad weather, and difficulty marketing itself to the French.

The most popular French sport is soccer (commonly called "le foot"). The men's soccer team won the World Cup in 1998. Other favorite sports are skiing, tennis, water sports, and bicycling. Between 1896 and 1984, France won 137 gold, 156 silver, and 158 bronze medals in the Olympic Games. Paris hosted the Summer

Olympics in 1900 and 1924; the Winter Olympics took place at Chamonix in 1924, Grenoble in 1968, and Albertville in 1992. Le Mans is the site of a world-class auto race.

Tourists need a valid passport to enter France. A visa is not necessary for tourist/business stays of up to 90 days.

France is one of the world's top tourist destinations. In 2003, there were approximately 75,048,000 visitors, of whom 51% came from Western Europe. The 603,279 hotel rooms with 1,206,558 beds had an occupancy rate of 58%. The average length of stay that same year was two nights.

In 2005, the US Department of State estimated the daily expenses of staying in Paris at \$418. Elsewhere in France, expenses ranged from \$187 to \$374 per day.

#### 48 FAMOUS FRENCH

Principal figures of early French history include Clovis I (466?–511), the first important monarch of the Merovingian line, who sought to unite the Franks; Charles Martel ("the Hammer," 689?–741), leader of the Franks against the Saracens in 732; his grandson Charlemagne (742–814), the greatest of the Carolingians, crowned emperor of the West on 25 December 800; and William II, Duke of Normandy (1027–87), later William I of England ("the Conqueror," r.1066–87). Important roles in theology and church history were played by St. Martin of Tours (b.Pannonia, 316?–97), bishop of Tours and founder of the monastery of Marmoutier, now considered the patron saint of France; the philosopher Pierre Abélard (1079–1142), traditionally regarded as a founder of the University of Paris but equally famous for his tragic romantic involvement with his pupil Héloïse (d.1164); and St. Bernard of Clairvaux (1090?–1153), leader of the Cistercian monastic order, preacher (1146) of the Second Crusade (1147–49), and guiding spirit of the Knights Templars. The first great writer of Arthurian romances was Chrétien de Troyes (fl.1150?).

The exploits of famous 14th-century Frenchmen were recorded by the chronicler Jean Froissart (1333?–1401). Early warrior-heroes of renown were Bertrand du Guesclin (1320–80) and Pierre du Terrail, seigneur de Bayard (1474?–1524). Joan of Arc (Jeanne d'Arc, 1412–31) was the first to have a vision of France as a single nation; she died a martyr and became a saint and a national heroine. Guillaume de Machaut (1300?–1377) was a key literary and musical figure. François Villon (1431–63?) was first in the line of great French poets. Jacques Coeur (1395–1456) was the greatest financier of his time. Masters of the Burgundian school of composers were Guillaume Dufay (1400?–1474), Gilles Binchois (1400?–1467), Jan Ockeghem (1430?–95), and Josquin des Prez (1450?–1521). Jean Fouquet (1415?–80) and Jean Clouet (1485–1541) were among the finest painters of the period. The flag of France was first planted in the New World by Jacques Cartier (1491–1557), who was followed by the founder of New France in Canada, Samuel de Champlain (1567–1635).

The era of Louis XIV ("le Roi Soleil" or "the Sun King," 1638–1715) was in many respects the golden age of France. Great soldiers—Henri de La Tour d'Auvergne, vicomte de Turenne (1611–75), François Michel Le Tellier, marquis de Louvois (1639–91), and Louis II de Bourbon, prince de Condé, called the Grand Condé (1621–86)—led French armies to conquests on many battlefields. Great statesmen, such as the cardinals Armand Jean du Plessis, duc de Richelieu (1585–1642), and Jules Mazarin (1602–

61), managed French diplomacy and created the French Academy. Great administrators, such as Maximilien de Bethune, duc de Sully (1560–1641), and Jean-Baptiste Colbert (1619–83), established financial policies. Noted explorers in the New World were Jacques Marquette (1637–75), Robert Cavalier, Sieur de La Salle (1643–87), and Louis Jolliet (1645–1700). Jean-Baptiste Lully (1632–87), Marc-Antoine Charpentier (1634–1704), and François Couperin (1668–1733) were the leading composers. Nicolas Poussin (1594–1665), Claude Lorrain (1600–1682), and Philippe de Champaigne (1602–74) were the outstanding painters. In literature, the great sermons and moralizing writings of Jacques Bénigne Bossuet, bishop of Meaux (1627–1704), and François Fénelon (1651–1715); the dramas of Pierre Corneille (1606–84), Molière (Jean-Baptiste Poquelin, 1622–73), and Jean Racine (1639–99); the poetry of Jean de La Fontaine (1621–95) and Nicolas Boileau-Despréaux (1636–1711); the maxims of François, duc de La Rochefoucauld (1613–80), and Jean de La Bruyère (1645–96); the fairy tales of Charles Perrault (1628–1703); the satirical fantasies of Savinien de Cyrano de Bergerac (1619–55); and the witty letters of Madame de Sévigné (1626–96) made this a great age for France. Two leading French philosophers and mathematicians of the period, René Descartes (1596–1650) and Blaise Pascal (1623–62), left their mark on the whole of European thought. Pierre Gassendi (1592–1655) was a philosopher and physicist; Pierre de Fermat (1601–55) was a noted mathematician. Modern French literature began during the 16th century, with François Rabelais (1490?–1553), Joachim du Bellay (1522–60), Pierre de Ronsard (1525–85), and Michel de Montaigne (1533–92). Ambroise Paré (1510–90) was the first surgeon, and Jacques Cujas (1522–90) the first of the great French jurists. Among other figures in the great controversy between Catholics and Protestants, Claude, duc de Guise (1496–1550), and Queen Catherine de Médicis (Caterina de' Medici, b. Florence, 1519–89) should be mentioned on the Catholic side, and Admiral Gaspard de Coligny (1519–72), a brilliant military leader, on the Protestant side. Two famous kings were Francis I (1494–1547) and Henry IV (Henry of Navarre, 1553–1610); the latter proclaimed the Edict of Nantes in 1598, granting religious freedom to his Protestant subjects. The poetic prophecies of the astrologer Nostradamus (Michel de Notredame, 1503–66) are still widely read today.

### 1700–1900

During the 18th century, France again was in the vanguard in many fields. Étienne François, duc de Choiseul (1719–85), and Anne Robert Jacques Turgot (1727–81) were among the leading statesmen of the monarchy. Charles Louis de Secondat, baron de La Brède et de Montesquieu (1689–1755), and Jean-Jacques Rousseau (b. Switzerland, 1712–78) left their mark on philosophy. Denis Diderot (1713–84) and Jean Le Rond d'Alembert (1717–83) created the Great Encyclopedia (*Encyclopédie ou Dictionnaire Raisonné des Sciences, des Artes et des Métiers*). Baron Paul Henri Thierry d'Holbach (1723–89) was another philosopher. Jeanne Antoinette Poisson Le Normant d'Etoiles, marquise de Pompadour (1721–64), is best known among the women who influenced royal decisions during the reign of Louis XV (1710–74). French explorers carried the flag of France around the world, among them Louis Antoine de Bougainville (1729–1811) and Jean La Pérouse (1741–88). French art was dominated by the painters Antoine Watteau (1684–1721), Jean-Baptiste Chardin (1699–1779), François

Boucher (1703–70), and Jean Honoré Fragonard (1732–1806) and by the sculptor Jean Houdon (1741–1828). Jean-Philippe Rameau (1683–1764) was the foremost composer. French science was advanced by Georges Louis Leclerc, Comte de Buffon (1707–88), zoologist and founder of the Paris Museum, and Antoine Laurent Lavoisier (1743–94), the great chemist. In literature, the towering figure of Voltaire (François Marie Arouet, 1694–1778) and the brilliant dramatist Pierre Beaumarchais (1732–99) stand beside the greatest writer on gastronomy, Anthelme Brillat-Savarin (1755–1826).

The rule of Louis XVI (1754–93) and his queen, Marie Antoinette (1755–93), and the social order they represented, ended with the French Revolution. Outstanding figures of the Revolution included Jean-Paul Marat (1743–93), Honoré Gabriel Riquetti, comte de Mirabeau (1749–91), Maximilien Marie Isidore Robespierre (1758–94), and Georges Jacques Danton (1759–94). Napoleon Bonaparte (1769–1821) rose to prominence as a military leader in the Revolution and subsequently became emperor of France. Marie Joseph Paul Yves Roch Gilbert du Motier, marquis de Lafayette (1757–1834), was a brilliant figure in French as well as in American affairs. This was also the period of the eminent painter Jacques Louis David (1748–1825) and of the famed woman of letters Madame Germaine de Staël (Anne Louise Germaine Necker, baronne de Staël-Holstein, 1766–1817).

During the 19th century, French science, literature, and arts all but dominated the European scene. Among the leading figures were Louis Jacques Mendé Daguerre (1789–1851), inventor of photography, and Claude Bernard (1813–78), the great physiologist. Other pioneers of science included Jean-Baptiste Lamarck (1744–1829) and Georges Cuvier (1769–1832) in zoology and paleontology, Pierre Laplace (1749–1827) in geology, André Marie Ampère (1775–1836), Dominique François Arago (1786–1853), and Jean Bernard Léon Foucault (1819–68) in physics, Joseph Louis Gay-Lussac (1778–1850) in chemistry, Camille Flammarion (1842–1925) in astronomy, and Louis Pasteur (1822–95) in chemistry and bacteriology. Louis Braille (1809–52) invented the method of writing books for the blind that bears his name. Auguste (Isidore Auguste Marie François Xavier) Comte (1798–1857) was an influential philosopher. Literary figures included the poets Alphonse Marie Louis de Lamartine (1790–1869), Alfred de Vigny (1797–1863), Alfred de Musset (1810–57), Charles Baudelaire (1821–67), Stéphane Mallarmé (1842–98), Paul Verlaine (1844–96), and Arthur Rimbaud (1854–91); the fiction writers François René Chateaubriand (1768–1848), Stendhal (Marie Henri Beyle, 1783–1842), Honoré de Balzac (1799–1850), Victor Marie Hugo (1802–85), Alexandre Dumas the elder (1802–70) and his son, Alexandre Dumas the younger (1824–95), Prosper Mérimée (1803–70), George Sand (Amandine Aurore Lucie Dupin, baronne Dudevant, 1804–76), Théophile Gautier (1811–72), Gustave Flaubert (1821–80), the Goncourt brothers (Edmond, 1822–96, and Jules, 1830–70), Jules Verne (1828–1905), Alphonse Daudet (1840–97), Emile Zola (1840–1902), and Guy de Maupassant (1850–93); and the historians and critics François Guizot (1787–1874), Jules Michelet (1798–1874), Charles Augustin Sainte-Beuve (1804–69), Alexis de Tocqueville (1805–59), Ernest Renan (1823–92), and Hippolyte Adolphe Taine (1828–93). Charles Maurice de Talleyrand (1754–1838), Joseph Fouché (1763–1820), Adolphe Thiers (1797–1877), and Léon Gambetta (1838–82) were leading states-

men. Louis Hector Berlioz (1803–69) was the greatest figure in 19th-century French music. Other figures were Charles François Gounod (1818–93), composer of *Faust*, Belgian-born César Auguste Franck (1822–90), and Charles Camille Saint-Saëns (1835–1921). Georges Bizet (1838–75) is renowned for his opera *Carmen*, and Jacques Lévy Offenbach (1819–80) for his immensely popular operettas.

In painting, the 19th century produced Jean August Dominique Ingres (1780–1867), Ferdinand Victor Eugène Delacroix (1789–1863), Jean-Baptiste Camille Corot (1796–1875), Honoré Daumier (1808–79), and Gustave Courbet (1819–77), and the impressionists and postimpressionists Camille Pissarro (1830–1903), Édouard Manet (1832–83), Hilaire Germain Edgar Degas (1834–1917), Paul Cézanne (1839–1906), Claude Monet (1840–1926), Pierre Auguste Renoir (1841–1919), Berthe Morisot (1841–1895), Paul Gauguin (1848–1903), Georges Seurat (1859–91), and Henri de Toulouse-Lautrec (1864–1901). Auguste Rodin (1840–1917) was the foremost sculptor; Frédéric Auguste Bartholdi (1834–1904) created the Statue of Liberty. The actresses Rachel (Elisa Félix, 1821–58) and Sarah Bernhardt (Rosine Bernard, 1844–1923) dominated French theater.

### The Twentieth and Twenty-First Centuries

In 20th-century political and military affairs, important parts were played by Georges Clemenceau (1841–1929), Ferdinand Foch (1851–1929), Henri Philippe Pétain (1856–1951), Raymond Poincaré (1860–1934), Léon Blum (1872–1950), Jean Monnet (1888–1979), Charles de Gaulle (1890–1970), Pierre Mendès-France (1907–82), François Maurice Marie Mitterrand (1916–96), and Valéry Giscard d'Estaing (b.1926). Winners of the Nobel Peace Prize include Frédéric Passy (1822–1912) in 1901, Benjamin Constant (1852–1924) in 1909, Léon Victor Auguste Bourgeois (1851–1925) in 1920, Aristide Briand (1862–1932) in 1926, Ferdinand Buisson (1841–1932) in 1927, Léon Jouhaux (1879–1954) in 1951, and René Cassin (1887–1976) in 1968. Albert Schweitzer (1875–1965), musician, philosopher, physician, and humanist, a native of Alsace, received the Nobel Peace Prize in 1952.

Famous scientists include the mathematician Jules Henri Poincaré (1854–1912); the physicist Antoine Henri Becquerel (1852–1908), a Nobel laureate in physics in 1903; chemist and physicist Pierre Curie (1859–1906); his wife, Polish-born Marie Skłodowska Curie (1867–1934), who shared the 1903 Nobel Prize for physics with her husband and Becquerel and won a Nobel Prize again, for chemistry, in 1911; their daughter Irène Joliot-Curie (1897–1956) and her husband, Frédéric Joliot-Curie (Jean-Frédéric Joliot, 1900–1958), who shared the Nobel Prize for chemistry in 1935; Jean-Baptiste Perrin (1870–1942), Nobel Prize winner for physics in 1926; the physiologist Alexis Carrel (1873–1944); and Louis de Broglie (1892–1987), who won the Nobel Prize for physics in 1929. Other Nobel Prize winners for physics include Charles Édouard Guillaume (1861–1938) in 1920, Alfred Kastler (1902–84) in 1966, Louis Eugène Néel (1904–2000) in 1970, Pierre-Gilles de Gennes (b.1932) in 1991, and Georges Charpak (b.1924) in 1992; for chemistry, Henri Moissan (1852–1907) in 1906, Victor Grignard (1871–1935) in 1912, Paul Sabatier (1854–1941) in 1912, and Yves Chauvin (b.1930) in 2005. Also, in physiology or medicine: in 1907, Charles Louis Alphonse Laveran (1845–1922); in 1913, Charles Robert Richet (1850–1935); in 1928, Charles Jules

Henri Nicolle (1866–1936); in 1965, François Jacob (b.1920), André Lwoff (1902–94), and Jacques Monod (1910–76); and in 1980, Jean-Baptiste Gabriel Dausset (b.1916).

The philosopher Henri Bergson (1859–1941) received the 1927 Nobel Prize for literature. Émile Durkheim (1858–1917) was a founder of modern sociology. Pierre Teilhard de Chardin (1881–1955), a Jesuit, was both a prominent paleontologist and an influential theologian. Claude Lévi-Strauss (b.Belgium, 1908) is a noted anthropologist, Pierre Bourdieu (1930–2002) was an important sociologist, and Fernand Braudel (1902–85) was an important historian. Twentieth-century philosophers included: Louis Althusser (1918–1990), Raymond Aron (1905–1983), Gaston Bachelard (1884–1962), Georges Bataille (1897–1962), Jean Baudrillard (b.1929), Gilles Deleuze (1925–1995), Jacques Derrida (1930–2004), Michel Foucault (1926–1984), Pierre-Félix Guattari (1930–1992), Philippe Lacoue-Labarthe (b.1940), Henri Lefebvre (1901–1991), Emmanuel Lévinas (1906–1995), Jean-François Lyotard (1924–1998), Maurice Merleau-Ponty (1908–1961), and Paul Ricoeur (1913–2005).

Honored writers include Sully-Prudhomme (René François Armand, 1839–1907), winner of the first Nobel Prize for literature in 1901; Frédéric Mistral (1830–1914), Nobel Prize winner in 1904; Edmond Rostand (1868–1918); Anatole France (Jacques Anatole Thibaut, 1844–1924), Nobel Prize winner in 1921; Romain Rolland (1866–1944), Nobel Prize winner in 1915; André Paul Guillaume Gide (1869–1951), a 1947 Nobel laureate; Marcel Proust (1871–1922); Paul Valéry (1871–1945); Colette (Sidonie Gabrielle Claudine Colette, 1873–1954); Roger Martin du Gard (1881–1958), Nobel Prize winner in 1937; Jean Giraudoux (1882–1944); François Mauriac (1885–1970), 1952 Nobel Prize winner; Jean Cocteau (1889–1963); Louis Aragon (1897–1982); André Malraux (1901–76); Anaïs Nin (1903–1977); Jean-Paul Sartre (1905–80), who was awarded the 1964 Nobel Prize but declined it; Simone Lucie Ernestine Marie Bertrand de Beauvoir (1908–86); Simone Weil (1909–43); Jean Genet (1910–86); Jean Anouilh (1910–87); Albert Camus (1913–60), Nobel Prize winner in 1957; Claude Simon (1913–2005), a 1985 Nobel laureate; Marguerite Duras (1914–96); Roland Barthes (1915–80); and Georges Perec (1936–1982). Antoine de Saint-Exupéry (1900–1944) was a French writer and aviator. Romanian-born Eugene Ionesco (1912–94) and Irish-born Samuel Beckett (1906–89) spent their working lives in France. Significant composers include Gabriel Urbain Faure (1845–1924), Claude Achille Debussy (1862–1918), Erik Satie (1866–1925), Albert Roussel (1869–1937), Maurice Ravel (1875–1937), Francis Poulenc (1899–1963), Olivier Messiaen (1908–92), Darius Milhaud (1892–1974), and composer-conductor Pierre Boulez (b.1925). The sculptor Aristide Maillol (1861–1944) and the painters/artists Henri Matisse (1869–1954), Georges Rouault (1871–1958), Georges Braque (1882–1963), Spanish-born Pablo Picasso (1881–1974), Russian-born Marc Chagall (1887–1985), Marcel Duchamp (1887–1968), Fernand Léger (1881–1955), and Jean Dubuffet (1901–85) are world famous.

Of international renown are actor-singers Maurice Chevalier (1888–1972), Yves Montand (Ivo Livi, 1921–91), and Charles Aznavour (b.1924); actor-director Jacques Tati (Jacques Tatischeff, 1907–82); actors Charles Boyer (1899–1978), Jean-Louis Xavier Trintignant (b.1930), Jean-Paul Belmondo (b.1933), and Gérard Philipe (b.1929); actresses Simone Signoret (Simone Kamink-

er, 1921–85), Jeanne Moreau (b.1928), Leslie Caron (b.1931), Brigitte Bardot (b.1934), Catherine Deneuve (b.1943), Isabelle Huppert (b.1953), Isabelle Adjani (b.1955), Juliette Binoche (b.1964), Julie Delpy (b.1969), and Audrey Tautou (b.1978); singer Edith Piaf (1915–63); master of mime Marcel Marceau (b.1923); and directors Georges Méliès (1861–1938), Abel Gance (1889–1981), Jean Renoir (1894–1979), Robert Bresson (1901–99), René Clément (1913–96), Eric Rohmer (Jean-Marie Maurice Scherer, b.1920), Alain Resnais (b.1922), Jean-Luc Godard (b.1930), Louis Malle (1932–95), and François Truffaut (1932–84). One of the most recognizable Frenchmen in the world was oceanographer Jacques-Yves Cousteau (1910–97), who popularized undersea exploration with popular documentary films and books.

#### 49 DEPENDENCIES

French overseas departments include French Guiana, Guadeloupe, Martinique, and Saint-Pierre and Miquelon (described in the *Americas* volume under French American Dependencies) and Réunion (in the *Africa* volume under French African Dependencies). French overseas territories and collectivities include French Polynesia, French Southern and Antarctic Territories, New Caledonia, and Wallis and Futuna (see French Asian Dependencies in the *Asia* volume), and Mayotte (in the *Africa* volume). The inhabitants of French overseas departments and territories are French citizens, enjoy universal suffrage, and send elected representatives to the French parliament.

# GEORGIA

Republic of Georgia  
*Sakartveld Respublika*

**CAPITAL:** T<sup>b</sup>ilisi (Tbilisi)

**FLAG:** White rectangle, in its central portion a red cross connecting all four sides of the flag; in each of the four corners is a small red bolnur-katskhuri cross; the five-cross flag appears to date back to the 14th century.

**ANTHEM:** *National Anthem of the Republic of Georgia.*

**MONETARY UNIT:** The lari (L) was issued in 1995 to replace government coupons that were introduced in 1993. 1L = \$0.54945 (or \$1 = 1L.82) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year's Day, 1–2 January; Christmas, 7 January; Independence Day, 26 May; St. George's Day, 22 November.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Georgia is located in southeastern Europe, bordering the Black Sea, between Turkey and Russia. Comparatively, the area occupied by Georgia is slightly smaller than the state of South Carolina, with a total area of 69,700 sq km (26,911 sq mi). Georgia shares boundaries with Russia on the N and E, Azerbaijan on the E and S, Armenia and Turkey on the S, and the Black Sea on the W. Georgia's land boundary totals 1,461 km (906 mi). Its coastline is 310 km (192 mi). Its capital city, T<sup>b</sup>ilisi, is located in the southeastern part of the country.

## <sup>2</sup> TOPOGRAPHY

The topography of Georgia is mainly mountainous, with the great Caucasus Mountains in the north and lesser Caucasus Mountains in the south. The highest point in the nation is Mount Shkhara at a height of 5,201 m (17,064 ft) in the Greater Caucasus. The Kolkhida Lowland opens to the Black Sea in the west and the Kura River basin lies in the east. The Kura River is the nation's longest river with a length of 1,514 km (941 mi). Good soils occur in the river valley flood plains and in the foothills of the Kolkhida Lowland.

## <sup>3</sup> CLIMATE

Georgia's climate along the Black Sea coast is similar to that along the Mediterranean, warm, humid, and almost subtropical. Farther inland the climate is continental, with warm summers and cold winters. July's mean temperature is 23°C (73.8°F). The mean temperature in January is -3°C (27.3°F). The annual rainfall in Georgia is 51 cm (20 in). In the mountains it is much cooler, with snow and ice all year in altitudes above 3,600 m (12,000 ft).

## <sup>4</sup> FLORA AND FAUNA

The country's land is composed of gently rolling plains. The Caucasus Mountains in Georgia begin a series of high mountains in Central Asia. The subtropical zone of the Black Sea coast of the

Caucasus Mountains has a distinctive vegetation: woods of black alder, oak, elm, and beech with a profusion of lianas and an admixture of evergreens. Mountain goats, Caucasian goats, Caucasian antelope, European wild boar, porcupine, and the leopard inhabit the Caucasus, and reptiles and amphibious creatures abound. As of 2002, there were at least 107 species of mammals, 208 species of birds, and over 4,300 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Georgia suffers from pollution of its air, water, and soil. Air pollution is especially heavy in Rust'avi. In 1996, Georgia's industrial carbon dioxide emissions totaled 2.9 million metric tons; in 2000, the total was at 6.2 million metric tons. The Mtkvari River and the Black Sea are both heavily polluted. Pesticides from agricultural areas have significantly contaminated the soil.

In 2003, 2.3% of Georgia's total land area was protected. There are two Ramsar wetland sites: one in central Kolkheti and the other at the Ispani II marshes. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 11 types of mammals, 8 species of birds, 7 types of reptiles, 1 species of amphibian, 6 species of fish, and 10 species of invertebrates. Species on the endangered list include Atlantic sturgeon, slender-billed curlew, Mediterranean monk seals, Darevsky's viper, and the Armenian birch mouse.

## <sup>6</sup> POPULATION

The population of Georgia in 2005 was estimated by the United Nations (UN) at 4,501,000, which placed it at number 116 in population among the 193 nations of the world. In 2005, approximately 13% of the population was over 65 years of age, with another 19% of the population under 15 years of age. There were 90 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–10 was stagnant at 0.0%, a

rate the government viewed as too low. The projected population for the year 2025 was 4,178,000. The population density was 64 per sq km (167 per sq mi), with the majority of the population living near the Black Sea or in the river valleys.

The UN estimated that 52% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of -0.88%. The capital city, T'bilisi (Tbilisi), had a population of 1,064,000 in that year. Other cities and their estimated populations include Kútáisi, 268,800, and Rustavi, 181,400.

## 7 MIGRATION

With independence in 1991 came three secessionist movements in three autonomous areas and conflicts in two of them. The conflict in South Ossetia in 1991, followed by the conflict in Abkhazia in 1992 and 1993, resulted in the mass displacement of ethnic Georgians, Ossetians, and Abkhaz, as well as other ethnic minorities. As many as 200,000 Georgians may have fled the fighting in Abkhazia in 1993. By December 1996, Georgia had 280,000 internally displaced persons. In February of 1997, a voluntary repatriation plan was agreed upon for persons to return to South Ossetia. Hostilities resumed in Gali in May 1998, displacing some 40,000 residents. Georgia's first census in 2002 detailed 4,961 stateless and 8,058 foreign citizens.

By year end 2004 there remained 237,069 internally displaced persons, mainly in urban areas, 29.6% in T'bilisi and 46.4% in Samegrelo-Zemo Svaneti region. Repatriation of Meskhetian Turks began in 2003 and was planned to continue until 2011. Transit migration, trafficked migrants (primarily women from other former Soviet states), migrants from Asia and Africa, and irregular migrants were of increasing concern in 2004 as Georgia looked to membership in the European Union (EU). In addition, in that same year there were 2,559 refugees, mainly Chechen/Kist from the Pankisi Gorge, and 11 asylum seekers.

Georgian emigration during the 1990s was estimated between 300,000 to more than 1.5 million. In 2004, some 8,934 Georgians sought asylum in over 18 countries, mainly Austria, France, Slovakia, and Sweden. In 2005, the net migration rate was estimated as -4.62 migrants per 1,000 population, a significant change from -9.2 per 1,000 in 1990. The government views the migration levels as too high.

## 8 ETHNIC GROUPS

According to the 2002 census, 83.3% of the population are Georgian. The leading minorities are Azeris with 6.5%, Armenians with 5.7%, Russians with 1.5%, and others (including Ossetians and Abkhaz) with 2.5%.

## 9 LANGUAGES

Georgian is the official language and is spoken by about 71% of the population. Georgian is a South Caucasian language called Kartveli by its speakers. There is no article and a single declension with six cases. The alphabet is a phonetic one with 33 symbols. The literature dates from the 5th century AD.

Russian is spoken by 9% of the population, Armenian by 7%, Azeri by 6%, and various other languages are spoken by the remaining 7%. Abkhaz is the official language in Abkhazia.

## 10 RELIGIONS

In the 4th century AD Christianity briefly enjoyed the status of official religion, but successive conquests by Mongols, Turks, and Persians left Georgia with a complex and unsettled ethnic and religious heritage. According to the 2002 census, over 70% of the population are nominally Georgian Orthodox. About 13% are members of other Orthodox groups, including Russian, Armenian, and Greek. A small number of ethnic Russians belong to dissident Orthodox groups such as the Molokani, Staroveriy (Old Believers) and the Dukhoboriy. About 9.9% of the population are Muslims, most of whom are ethnic Azeris, Georgian Muslims of Ajara, and ethnic Chechen Kists. Less than 1% of the population are Roman Catholics. Smaller Christian denominations include Baptists, Seventh-Day Adventists, Pentecostals, Jehovah's Witnesses, the Armenian Apostolic Church, and the New Apostolic Church. There are also small numbers of Bahai's and Hare Krishnas. There are about 8,000 Jews in the country.

In 2002, the parliament ratified a concordat with the Georgian Orthodox Church (GOC) granting them special recognition; however, the constitution has established a separation of church and state and freedom of religion. Some non-Orthodox groups have complained of the privileged status granted to the GOC. For instance, the GOC is allowed to review public school textbooks and to make suggestions on content. Registration of religious organizations is not required, but many do so in order to gain the legal status necessary to rent office or worship space and import written materials.

## 11 TRANSPORTATION

Railroads in Georgia as of 2004, consisted of 1,612 km (1,003 mi) of broad and narrow gauge lines, all of which were electrified. Nearly all of the country's railways were broad gauge, accounting for 1,575 km (980 mi), with narrow gauge lines making up only 37 km (23 mi). Railways serve primarily as connections to the Black Sea for inland cities like T'bilisi, Chiat'ura, Jvari, and Tkvarcheli. Highways in 2003 totaled an estimated 20,247 km (12,594 mi), of which 7,973 km (4,959 mi) were paved. The maritime fleet of 175 ships (of 1,000 GRT or over) had a capacity of 855,908 GRT in 2005. Batumi and Poti are the principal Black Sea ports. As of 2004, Georgia had an estimated 30 airports, 19 of which had paved runways, and three heliports (as of 2005). Its only international airport is T'bilisi which is capable of handling 1,000–1,200 passengers per hour. In 2003 there were about 2,000 aircraft departures, and around 124,000 passengers carried on scheduled domestic and international airline flights.

## 12 HISTORY

Georgia has existed as a state on a sporadic basis since classical times. The first Georgian state can be traced to the 4th century BC. Throughout its history Georgia has been conquered by the Romans, Iranians, the Arabs, the Turks, the Mongols and the Hordes of Tamerlane. Georgia did enjoy independence for short periods of time from the 6th to the 12th centuries AD. The Mongols invaded and conquered Georgia by 1236. Later the Ottoman and Persian empires competed for control of the region. Western Georgia be-

LOCATION: 42°0' N; 44°0' E. BOUNDARY LENGTHS: Total boundary lengths, 1,461 kilometers (908 miles): Armenia, 164 kilometers (102 miles); Azerbaijan, 322 kilometers (200 miles); Russia, 723 kilometers (450 miles); Turkey, 252 kilometers (157 miles); total coastline, 310 kilometers (193 miles).

came a Russian protectorate in 1783. All of Georgia was absorbed directly in the Russian empire during the 19th century.

During the tumult of the Russian revolution, Georgia declared its independence on 26 May 1918. Twenty-two countries recognized this new state, including Soviet Russia. Nonetheless, the Soviet Red Army invaded in February 1921 and Georgia's brief independence came to an end.

Many Georgians fell victim in the late 1920s and 1930s to Soviet collectivization, crash industrialization, and Stalin's purges (despite his Georgian-Ossetian ethnic origins). Nationalist riots were brutally suppressed in 1924 and 1956, and nationalist mass demonstrations occurred in 1978 and 1988. In April 1989, many Georgian demonstrators were murdered, some with shovels, by Soviet military and police forces during a peaceful protest against perceived Russian support for Abkhaz autonomy demands.

Georgia's first multiparty legislative elections, held in October 1990, resulted in a victory for the party coalition Round Table-Free Georgia, headed by academic and dissident Zviad Gamsakhurdia. He was subsequently selected by the deputies to serve as chairman of the legislature. Following a March 1991 referendum, a formal declaration of independence was unanimously ap-

proved by the legislature on April 9. Gamsakhurdia was popularly elected as president in May, but still faced opposition from, among others, parties belonging to the National Congress, a national liberation body formed in October 1990. The Mkhedrioni paramilitary group, led by Jaba Ioseliani, was allied with the National Congress. During 1991, Gamsakhurdia's erratic attempts to remake Georgian society and politics caused the head of the National Guard, Tengiz Kitovani, to also join the opposition. The National Guard and Mkhedrioni spearheaded a general assault to overthrow Gamsakhurdia in December 1991, forcing him to flee the country in early January 1992.

A military council formed by Ioseliani, Kitovani, and others assumed power, suspending the Soviet-era constitution (and replacing it with one from 1921), dissolving the legislature, and declaring emergency rule. Former Georgian leader Eduard Shevardnadze (the Communist Party boss of Georgia from 1972 to 1985) was invited in early March 1992 to head a provisional government. He formed a civilian State Council to rule until elections could be held, and was elected head of its four-member presidium. During legislative elections in October 1992, he was elected speaker in an uncontested race. The new legislature granted Shevardnadze

wide-ranging powers as head of state pending completion of a new constitution. In May 1993, Shevardnadze moved to consolidate his power by securing the resignations of Kitovani and Ioseliani from government posts. Gamsakhurdia returned from exile in September 1993 to the western Georgian region of Mingrelia and led a revolt to unseat Shevardnadze. Pro-Shevardnadze forces, assisted by the Russian military, were able to put down the revolt by early November 1993. Gamsakhurdia's death was reported in early January 1994. In further moves by Shevardnadze to consolidate power, Kitovani was arrested in January 1995 for planning an illegal paramilitary attack on Abkhazia, and he neutralized Ioseliani's Mkhedrioni.

Several of Georgia's ethnic minorities stepped up their dissident and separatist actions in the late 1980s and early 1990s. South Ossetians in 1989 called for their territory to be joined with North Ossetia in Russia, or for independence. Repressive efforts by former Georgian president Gamsakhurdia triggered conflict in 1990, reportedly leading to about 1,500 deaths and 50,000 displaced persons, mostly ethnic Georgians. In June 1992, Russian president Boris Yeltsin brokered a cease-fire, and a predominantly Russian military "peacekeeping" force numbering about 500 was stationed in South Ossetia. A coordinating commission on settlement of the Georgian-Ossetian conflict, composed of OSCE, Russian, Georgian, and North and South Ossetian emissaries, meets regularly, but rapprochement remains elusive. The November 1999 OSCE Summit Declaration urged Georgia and South Ossetia to agree on resettling displaced persons and called for international aid for the region. In his state of the nation speech on 9 February 2000, Shevardnadze praised the Russian peacekeepers and successes in reconciliation between ethnic Ossetians and Georgians.

Georgia's southern Ajaria region is to a large extent self-governing, under conditions resembling a police state. Ajaria's authorities claim that regional laws take precedence over national laws, and Shevardnadze has had to undertake extensive negotiations to establish national law in the region.

The Abkhaz conflict has resulted in about 10,000 deaths and over 200,000 refugees and displaced persons, mostly ethnic Georgians. In July 1992, the Abkhaz Supreme Soviet declared its effective independence from Georgia. This prompted Georgian national guardsmen to attack Abkhazia. In October 1992, the UN Security Council (UNSC) approved the first UN observer mission to a NIS state, termed UNOMIG, to help reach a settlement. In September 1993, Russian and North Caucasian "volunteer" troops that reportedly made up the bulk of Abkhaz separatist forces broke a cease-fire and quickly routed Georgian forces. Abkhaz-Georgian talks leading to a cease-fire were held under UN auspices, with the participation of Russia and the OSCE. In April 1994, the two sides signed framework accords on a political settlement and on the return of refugees and displaced persons. A Quadripartite Commission was set up to discuss repatriation, composed of Abkhaz and Georgian representatives and emissaries from Russia and the UN High Commissioner for Refugees. The next month, a cease-fire was signed by Georgia and Abkhazia, providing for Russian troops (acting as Commonwealth of Independent States or CIS peacekeepers) to be deployed in a security zone along the Enguri River, which divides Abkhazia from the rest of Georgia. The Russian Defense Ministry in 1999 reported the deployment of about 1,700 peacekeepers.

A major point of contention between the two sides is Georgia's demand that displaced persons be allowed to return to Abkhazia, after which an agreement on broad autonomy for Abkhazia may be negotiated. The Abkhazians have insisted upon recognition of their "equal status" with Georgia as a precondition to large-scale repatriation. The CIS in 1997–1998 endorsed Shevardnadze's call for creating a special Abkhaz-Georgian administration, with UN and OSCE participation, to first seek peace in Abkhazia's Gali area, and to expand the security zone and give Russian peacekeepers police powers. Abkhazia refused to countenance changing the peacekeeping mandate. Although Shevardnadze has criticized the failures of the Russian peacekeepers, in February 2000 he stated that he saw no alternative to their presence, since no other international forces have come forward.

After a hiatus of two years, UN-sponsored peace talks were reconvened in mid-1997. In late 1997, the sides agreed to set up a Coordinating Council to discuss cease-fire maintenance and refugee, economic, and humanitarian issues. Coordinating Council talks and those of the Quadripartite Commission have been supplemented by direct discussions between an envoy from Vladislav Ardzinba, whom Abkhazian separatists have elected as their president, and the Georgian State Secretary. Abkhaz forces in mid-1998 reportedly expelled 30,000–40,000 ethnic Georgians who resided in the Gali area. In June 1999 in Istanbul, the two sides agreed to resume contacts they had cut off the year before, and a working group agreed to implement the separation of warring forces.

In November 1995, Eduard Shevardnadze was elected to the recreated post of president, receiving 74.32% of the vote in a six-person race, and a new parliament was selected. International observers termed the elections generally free and fair nationwide except in the region of Ajaria.

Seven candidates were registered to run in Georgia's 9 April 2000 presidential election. The major challengers to Shevardnadze were Jumbar Patiashvili, former first secretary of the Georgian Communist Party (who ran in the 1995 presidential race), and Aslan Abashidze, chairman of the Ajarian Supreme Council. Both challengers were leaders of the Revival Bloc that contested the 1999 legislative races. Abashidze did not actively campaign and withdrew from the race one day before the vote, alleging an unfair contest. Other speculation was that he withdrew in return for concessions from Shevardnadze on local power and finances. Voting did not take place in Abkhazia or South Ossetia. The Georgian Central Election Commission (CEC) reported that Shevardnadze received 80% of 1.87 million votes and Patiashvili received 17% (less than he received in 1995). The 150 OSCE monitors reported on April 10 that the election did not meet OSCE standards, though "fundamental freedoms were generally respected during the election campaign and candidates were able to express their views." They stressed that the government aided the incumbent, state media were biased, vote counting and tabulation procedures lacked uniformity and, at times, transparency, ballot box stuffing had taken place, and some voting protocols reportedly had been tampered with.

In March 2001, officials from Georgia and Abkhazia signed an accord stating they would not use force against one another. However, meetings between the two sides were cancelled later in the year due to continuing hostilities and hostage incidents. On 8 October 2001, a UNOMIG helicopter was shot down over Abkhazia,

and all nine people on board were killed. As of February 2003, those responsible for the downing had not been identified. In August 2002, Georgia and Abkhazia failed to come to an agreement on the withdrawal of Abkhaz fighters from the Kodori Gorge, the only enclave controlled by Georgia in Abkhazia. Georgia was concerned that Russians were supporting the Abkhaz fighters. In January 2003, UN Secretary-General Kofi Annan declared little progress had been made on talks to determine the future status of Abkhazia, and that the mandate for UNOMIG should be extended another six months, until 31 July 2003.

Upon coming into his second term in office, Shevardnadze claimed he would fight corruption and low living standards, undertake market reforms, and protect the territorial integrity of Georgia. Georgia desired NATO membership, and on 22 November 2002, Shevardnadze formally requested that Georgia be invited into the alliance. Russia did not immediately react to the announcement. In 1999, the OSCE demanded that Russia remove all of its troops from Georgia. In 2001, Russia vacated the Gudauta and Vaziani bases and the Marneuli military airfield, but did not agree to a time frame for a departure from the Akhalkalaki and Batumi military bases. One sore spot in Georgian-Russian relations remains the situation in Chechnya. Russian officials have accused Georgia of aiding Chechen rebels, especially in the Pankisi Gorge region of Georgia. Russia regards the armed conflict in Chechnya as a part of the international campaign against terrorism, and has demanded Georgia cooperate in combating Chechens in the region. In September 2002, Russia warned Georgia that it would take military action if Georgia failed to deal with Chechen rebels in the Pankisi Gorge. The United States, since 11 September 2001, has claimed that members of the al-Qaeda organization are operating in the Pankisi Gorge, and has enlisted Georgia's support in undertaking antiterror operations there. In April and May 2002, US Special Forces arrived in Georgia to train and equip troops for counterterrorist operations. On 8 February 2003, Russia claimed that terrorists recently arrested in Great Britain and France had trained in the Pankisi Gorge, and used laboratories built there to produce the poisonous toxin ricin that can be used as an agent in chemical warfare.

The end of 2003 brought with it drastic changes for Georgians. The parliamentary elections that were held on 2 November 2003 were criticized by national and international organizations as being grossly rigged. Mikhail Saakashvili, who received a law degree from Columbia University and worked in the United States for a short while, denounced the election results and urged the population of Georgia to nonviolent civil disobedience against the authorities. People responded to Saakashvili's call and mounted protests in T'bilisi (the so-called "Rose Revolution"), crying for fair elections. (The "Rose Revolution" inspired similar movements in other parts of the world, most notably in Ukraine where the "Orange Revolution" brought about long awaited change.) President Shevardnadze eventually bowed down under the pressure, and on 23 November 2003 resigned from his post, leaving parliamentary speaker Nino Burjanadze in charge until fresh presidential elections could be staged. This move was followed by a decision of the Supreme Court to annul the parliamentary elections results.

On 4 January 2004, Saakashvili emerged victorious in the presidential elections—he received support from all the opposition parties and garnered a 96.3% of the votes. His party, the Nation-

al Movement-Democratic Front, subsequently won 67.6% of the votes (and 135 out of 150 party list seats in parliament) in the re-run of the parliamentary elections; the Rightist Opposition got 7.6% (15 seats), while other parties received less than 7%. The new prime minister was Zurab Noghaideli.

This victory, however, came in a context where Georgia was very politically, socially, and economically unstable. Aslan Abashidze, the leader of the Ajarian Autonomous Republic in western Georgia, accused Saakashvili of planning to invade Ajaria and declared a state of emergency and the mobilization of armed forces. He failed to attract support from Russia though, and intense criticism from several foreign governments and international organizations forced him to resign in May 2004 and leave for Moscow. These events were followed by tensions in the other two problematic regions—South Ossetia and Abkhazia. Parliamentary elections in South Ossetia in May 2004, and troubled presidential elections in Abkhazia in October 2004, were not recognized by the government in T'bilisi. A proposal on autonomy for South Ossetia presented by Saakashvili was consequently refused by the South Ossetian leaders who asked for full independence.

In May 2005, George W. Bush became the first US president to visit Georgia. That same month, the Baku-T'bilisi-Ceyhan pipeline was officially opened, with US secretary of energy Samuel Bodman joining the presidents of Kazakhstan, Azerbaijan, Georgia, and Turkey at the opening ceremony. A year later, oil began flowing through the pipeline.

### 13 GOVERNMENT

Until 1995, Georgia was governed according to a constitution dating back to 1921. Shevardnadze, though, pushed for the adoption of a new constitution giving the president added powers. A new constitution was approved by the legislature in August 1995. It re-establishes a strong presidency, though affirming a balance of executive and legislative powers more equitable than those in most other new constitutions approved by former Soviet republics. The president is elected for a five-year term. The constitution establishes a unicameral, 235-member legislature elected by single-mandate constituencies (85 seats) and party lists (150 seats). Legislators serve four-year terms. Government ministers are responsible to the president, who is assisted by a state minister. Shevardnadze in December 1999 decreed enhanced powers for the state minister "equal to those of a prime minister." The speaker's only constitutional powers are to sign bills and serve as acting president in case the president is indisposed or dies. The legislature agreed that federal provisions would be added to the constitution after Georgia's territorial integrity has been assured. The breakaway regions of South Ossetia and Abkhazia are currently not under the control of the central government, and Ajaria is at least partly self-governing.

Voting for the new legislature took place on 5 November 1995, simultaneous with the presidential race. Only three of the 54 parties running received at least 5% of the party list vote required to win seats, though other parties won representation through constituency races; they have formed eight legislative factions. The elections were judged "consistent with democratic norms" by international observers.

Legislative elections were held in the spring of 2004. Voting was by party lists (150 seats) and single-member constituencies (73

seats; 12 sitting members representing separatist Abkhaz districts were allowed to retain their seats). Fifteen parties and blocs were registered but only two parties received at least 7% of the vote needed to gain party list seats (the new minimum was approved in July 1999). The National Movement-Democratic Front won 135 seats; the Rightist Opposition won 15.

## 14 POLITICAL PARTIES

Major political parties that won representation in the legislature elected in 1999, based on their share of the party list voting, included Shevardnadze's Georgian Citizens' Union (gaining 891,000 of 2.1 million party list votes cast), Ajarian leader Abashidze's pro-government Revival Union (537,000 votes), and Industry Will Save Georgia (151,000 votes). The Georgian Labor Party just failed to gain enough votes to win party list seats (141,000 votes). Other parties that gained more than 1% of the party list vote included the opposition National Democratic Party (NDP; it won the second-largest number of such seats in 1995), the People's Party, and the United Communist Party. Most of the minor political parties and groups characterized themselves as opposed to the government.

In November 2003, former President Eduard Shevardnadze resigned from office in a bloodless "Rose Revolution" following protests against his rule and what were seen to be fraudulent parliamentary elections. The election results were later annulled. Presidential elections were held on 4 January 2004, and Mikhail Saakashvili was elected president. His party, the National Movement-Democratic Front, won 135 seats out of the 150 that are on the party lists; the Rightist Opposition won the other 15.

## 15 LOCAL GOVERNMENT

Georgia's administrative subdivisions include the Abkhazian and Ajarian Autonomous Republics. The Georgian Supreme Soviet stripped South Ossetia of its autonomous status in late 1990, following its demands to secede and become a part of Russia. Abkhazia and South Ossetia consider themselves self-ruling, and Ajaria has substantial effective autonomy. There are 53 districts (*rayons*) and 11 cities, whose governors or mayors are appointed by the president. Local assembly (*sakrebulo*) elections were held for the first time under the new constitution in November 1998. Thirteen parties participated in the voting for more than 150,000 candidates for 10,000 municipal and district (*rayon*) assemblies or councils. In small towns and villages of fewer than 2,000 voters, 654 majoritarian elections were held, while elsewhere 377 proportional elections by party lists took place. The Citizen's Union Party won the largest number of seats, followed by the Revival bloc, the National Democratic Party, and the Labor Party, though 12 of the 13 parties won some seats. Inadequate funding and the absence of legislation limited the functions of the new locally elected governments. Opposition parties accused the government and the ruling Citizens' Union Party of retaining the effective power to appoint the mayors of the largest cities and the regional leaders. There remains considerable contention between the central government and the Autonomous Ajarian Republic over the scope of local powers.

Local elections were held on 2 June 2002, and 4774 *sakrebulo* seats in regional Georgia were decided, along with 49 seats in T'bilisi. Independents won 2,749 of the regional seats, with the New Right Party taking 544 seats; Industry Will Save Georgia taking 478 seats; and the Revival Party/21st Century Bloc taking 195

seats. The Citizens' Union of Georgia won only 69 seats in a major defeat, faring poorly in both T'bilisi and the regions. This was attributed to a split between the two main factions of the party prior to the elections, both of which strove for the right to campaign as the CUG. The conservative faction won the right to campaign as the CUG in the week prior to the elections, and the reformist faction campaigned as the Christian Conservative Party.

## 16 JUDICIAL SYSTEM

Before 1995, Georgia's legal system retained traces of the pre-Soviet era, the Soviet period, the Gamsakhurdia presidency, and the State Council period. Courts included district courts, a T'bilisi city court, a supreme court in each of the two autonomous republics, and at the highest level the Supreme Court of the Republic.

The 1995 constitution provides for an independent judiciary. However, the judiciary is subject to some executive pressure and pressure from extensive family and clan networks. The Law on Common Courts, passed in 1997, establishes a three-tier court system. District courts hear petty criminal and civil cases. Regional courts of appeal have original and appellate jurisdiction. They try major criminal and civil cases, review cases, and can remand cases to the lower court for retrial. The Supreme Court was envisioned as the highest appellate court, but it also hears some capital cases and appeals from the Central Electoral Commission.

A constitutional court was set up in September 1996. It arbitrates constitutional disputes between the branches of government and rules on individual claims of human rights abuses.

Administration of the court system was transferred from the Justice Ministry to a Council of Justice in 1997, to increase the independence of the courts from budgetary and other influence. The council consists of four members from each of the three branches of government.

The constitution provides for the rights to presumption of innocence, to have a public trial, to legal counsel, and to refuse to make a statement in the absence of counsel. A criminal procedures code was approved in November 1997, and a new criminal code was passed in June 1999. The criminal procedures code aimed at reducing the dominant power of prosecutors over arrests and investigations. Under the new procedures, judges issue warrants for arrest and detention orders, and detentions must follow correct legal procedures, including informing detainees of their rights, allowing visits by family members and lawyers, and treating detainees without brutality. In mid-1999, however, some of the liberal strictures on defendants' rights were reversed at the insistence of the prosecutors, who continue to have a major influence over the courts.

Under the Law on Common Courts, Georgia has launched a system of testing judges on basic legal principles; many of those who have taken the test have failed. Georgia's accession to the Council of Europe in April 1999 led to new legislation taking jurisdiction over the prison system away from the Interior (police) Ministry and giving it to the Ministry of Justice.

## 17 ARMED FORCES

Georgia had a total of 11,320 active personnel in its armed forces as of 2005, supported by 1,578 reservists in the National Guard. The Army was the largest force in terms of manpower, with 7,042 active personnel. The Navy and the Air Force each had 1,350 active

members. The Army had 86 main battle tanks, 89 armored infantry fighting vehicles, 91 armored personnel carriers, and 109 artillery pieces. Major naval units included 11 patrol/coastal vessels and six amphibious landing craft. The Air Force had seven combat capable aircraft that included six fighter ground attack aircraft, plus another used in a training capacity. The service also operated three attack helicopters. Paramilitary troops numbered 11,700, including 6,300 Ministry of Interior troops and 5,400 border guards. Georgian armed forces were deployed to Iraq in a peacekeeping support role, and under NATO in Serbia and Montenegro. There are also troops from 25 countries in Georgia acting as observers and in a peacekeeping role. The nation's defense budget in 2005 totaled \$44 million.

## 18 INTERNATIONAL COOPERATION

Georgia was admitted to the United Nations on 21 July 1992. The country is a member of several UN specialized agencies, such as the FAO, IAEA, ICAO, IFAD, ILO, IMF, UNCTAD, UNESCO, UNIDO, WHO, and the World Bank. Georgia joined the Commonwealth of Independent State (CIS) in 1993 and became a member of the WTO in 2000. The nation also belongs to the OSCE, the Council of Europe, the Black Sea Economic Cooperation Zone, the Euro-Atlantic Partnership Council, and the European Bank for Reconstruction and Development. Georgia has observer status in the OAS and is part of the NATO Partnership for Peace. In 2001, Georgia, Uzbekistan, Ukraine, Azerbaijan, and Moldova formed a social and economic development union known as GUAAM. Uzbekistan withdrew from the partnership in 2005.

In 1993, a UN Observer Mission (UNOMIG) was established in Georgia to monitor cease-fire agreements between the State of Georgia and the region of Abkhazia and to support ongoing CIS peacekeeping forces in that region. About 23 countries offer support for UNOMIG.

In environmental cooperation, Georgia is part of the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Over a decade after its emergence from the Soviet Union as an independent state, Georgia's economy has not fully recovered from the hyperinflation and economic collapse that by 1994 had reduced its GDP to 20% of its 1990 levels. In 2002 its GDP levels were still only at 40% of what they were in the 1980s. Continued civil strife and unresolved separatist struggles with Abkhazia and South Ossetia have combined with pervasive corruption, tax evasion, and a "shadow economy" larger than the legitimate one to stifle the country's economic progress. Shortfalls in revenues have caused the government to turn to external as well as domestic financing to cover chronic budget deficits. Foreign borrowing has in turn led to balance of payments problems and resort to IMF facilities. Georgia has entered into three programs with the IMF since independence. A short standby arrangement, June 1995 to February 1996, was followed on expiration by a multi-year program under the Extended Structural Adjustment Facility (ESAF), which was in effect to 13 August 1999 when the IMF withdrew due to the failure of Georgia to meet budgetary targets. In Janu-

ary 2001, a revised program with more realistic targets was approved under the Poverty Reduction and Growth Facility (PRGF). In March 2001, having an IMF-supervised program underway, Georgia was able to reach an agreement with the Paris Club for rescheduling some of its sovereign debt owed to Paris Club members. From May to October 2001, the IMF again suspended disbursements to Georgia because of its failure to meet the program's conditionals. The 2001 PRGF program was scheduled to expire in January 2004; the government sought and was awarded a new three-year PRGF in June 2004.

Georgia's mild climate makes it an important agricultural producer, raising a growing range of subtropical crops (including tea, tobacco, citrus fruits, and flowers) in the coastal region and exporting them to the northern republics in return for manufactured goods. Georgia supplied almost all of the former Soviet Union's citrus fruits and tea, and much of its grape crop.

In 1996, the government embarked on a program for the privatization of land holdings. The country also has deposits of manganese, coal, iron ore, and lead, plus a skilled, educated work force. There were several oil refineries operating at the Black Sea port of Batumi. Since low points in 1994 and 1995, there has been sustained growth, although not in all sectors, and inflation has been brought substantially under control. Inflation fell from 163% (consumer prices) in 1995 to 39% in 1996 and 7% in 1997. The growth in GDP reached double digits, 11.2% (1996) and 10.6% (1997), stimulated in part by work on the Baku-Supsa pipeline (opened in April 1999). Since 1998, however, GDP growth slowed to about 3% a year due a combination of the effect of economic crises in Russia and Turkey (which together supply 40% of Georgia's imports and buy over 40% of its exports), an influx of refugees since 1999 from neighboring war-torn Chechnya, severe droughts affecting Georgia's agricultural output in 1998 and 2000, and, from 2001, the global economic slowdown. In 1998, overall GDP growth slowed to 3%, as agricultural production dropped 10% and industrial production dropped 2%. Growth remained at only 3% in 1999. GDP growth was even lower (2%) in 2000, despite 11% growth in industrial production, due to a recurrence of drought which caused agricultural production to fall 15% in one year.

In 2001, agriculture recovered somewhat, growing 6%, but industrial production fell back 5%, reflecting in part an 11% decrease in exports to countries outside the CIS. Exports to CIS countries, by contrast, rose 23% in 2000 and 9% in 2001. Georgia official statistics report that the GDP grew overall by 4.5% in 2001, while the US CIA estimated growth at 8.4%. Inflation, which spurted to 19% in 1999, fell to moderate levels of between 4% and 5% in 2000 and 2001.

In 2002, the economy was hampered by the necessity of importing over 90% of the petroleum products consumed due to the shutting down of its only two remaining refineries. The larger 106,000-barrels-per-day refinery at Batumi was closed for modernization and expansion under an agreement with Japan's Mitsui Corp. A small 4,000 barrels-per-day refinery, built in 1998 and idle for much of 2001, was closed permanently in 2002 by its operation company, CanArgo, in favor of a plan to replace it with a larger 30,100-barrels-per-day facility. Georgia's future economic prospects were thought to have improved greatly in December 2002 however, with the announcement of an agreement

on the Georgia portion of the Baku-Tbilisi-Ceyhan (BTC) pipeline, which opened in May 2005. In addition to the BTC project, which is to pipe oil from the Caspian Sea to the Turkish port of Ceyhan on the Mediterranean to supply Western European markets, Georgia and Turkey concluded another agreement to build a railway from Tbilisi to Kars, Turkey. The railway would transport oil to Turkish refineries. Plans also exist to develop Georgia into a transit center for natural gas.

The economy experienced an explosive expansion in 2003, with a GDP growth rate of 11.1%. The economy cooled down in 2004, growing by 6.2%, but was expected to pick up again in 2005, with a projected growth rate of around 8.0%. The inflation rate was stable, fluctuating between 4% and 6%. As such, inflation did not pose a problem to the overall economy, although it was expected to rise in 2005 to 8.5%. The "Rose Revolution" in 2003 brought hope that the economy would take a turn for the better by emulating a Western development pattern. The Baku-Tbilisi-Ceyhan oil pipe lines and the Baku-Tbilisi-Erzurum gas pipe lines have brought much needed investment into the country and helped alleviate the chronic unemployment. However, Georgia's energy sector was still dependent on imports from Russia as of 2005, and its market needed heavy restructuring before it could reach functional economy status.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Georgia's gross domestic product (GDP) was estimated at \$16.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$3,400. The annual growth rate of GDP was estimated at 10%. The average inflation rate in 2005 was 8%. It was estimated that agriculture accounted for 16% of GDP, industry 26.8%, and services 57.2%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$246 million or about \$54 per capita and accounted for approximately 6.2% of GDP. Foreign aid receipts amounted to \$220 million or about \$43 per capita and accounted for approximately 5.5% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Georgia totaled \$3.12 billion or about \$684 per capita based on a GDP of \$4.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.5%. In 2001 it was estimated that approximately 33% of household consumption was spent on food, 13% on fuel, 2% on health care, and 4% on education. It was estimated that in 2001 about 54% of the population had incomes below the poverty line.

## 21 LABOR

The labor force was estimated at 2.1 million in 2001 (the latest year for which data was available). Agriculture provided work to 40% of the labor force, with another 40% engaged in services and

the remaining 20% in industry. The estimated unemployment rate was 17% in 2001.

Employees have the right to form or join unions freely. A confederation of independent trade unions has emerged with the abandonment of the old centralized Soviet trade unions. Georgia's main trade union is the Amalgamated Trade Unions of Georgia. Workers are permitted to engage in collective bargaining, but this practice is not extensive.

The minimum employment age is 16 except in unusual circumstances, and this minimum employment age is generally respected. The government sets public-sector salaries dependent on the pay grade of the employee. The lowest such wage was \$10.80 per month in 2002. There is no state prescribed minimum wage for the private sector. In general, wages and salaries do not provide a decent standard of living for a family. The legal standard workweek is 41 hours with a 24-hour rest period weekly.

## 22 AGRICULTURE

About 15% of Georgia's total land area was considered arable in 2003. Since independence in April 1991, Georgian agriculture has become much more associated with the private sector; 99% of agricultural land is now privately held. In 2003, agriculture accounted for an estimated 20% of GDP.

During the Soviet era, Georgia produced almost the entire citrus and tea crop and most of the grape crop for the entire Soviet Union. In 2004, production levels (in thousands of tons) included corn, 410; wheat, 186; barley, 61; tea, 24; vegetables and melons, 490; and grapes, 180.

## 23 ANIMAL HUSBANDRY

Meadows and pastures account for about 30% of the Georgian land area. In 2005, the livestock population included cattle, 1,250,000; sheep, 689,000; pigs, 484,000; buffaloes, 35,000; horses, 44,000; and chickens, 9,100,000. Beef production in 2005 totaled some 51,000 tons; pork, 35,000 tons; and chicken, 15,000 tons. About 781,000 tons of milk were produced in 2005, as were 31,500 tons of eggs.

In mid-1993, a ban was placed on the export of dairy products (including milk), cattle and poultry, meat and meat products, and leather. Georgia does not produce enough meat and dairy products to satisfy domestic demand. Meat imports in 2004 exceeded \$19.7 million.

## 24 FISHING

The Black Sea and Kura River are the main sources of the domestic catch. The total catch in 2003 was about 3,361 tons, with marine fishing accounting for 97%. Anchovies made up 67% of the total catch in 2003. Commercial fishing is not a significant contributor to the economy.

## 25 FORESTRY

About 44% of Georgia is covered with forests or woodlands, but the mountainous terrain inhibits forestry production. Timber

production is primarily for domestic use; exports of forestry products amounted to only \$17.9 million in 2003.

## 26 MINING

Georgia had significant mineral deposits, but the future of the industry depended on a more secure climate for investment, through greater political and economic stability. Manganese was the country's foremost mineral commodity in the Soviet era, producing 5 million tons in the mid-1980s; production has since fallen precipitously, reaching 59,100 metric tons in 2000, but had increased to an estimated 80,000 metric tons in 2002. Manganese came from the Chiat'ura basin; reserves of high-grade ore were almost depleted.

The Madneuli region was a major site of barite, copper, lead-zinc, gold, and silver mining. Lead and zinc were mined at the Kvaisi deposit, and arsenic was mined from the Lukhumi and Tsansa deposits. In 1995, the Georgian State Geology Committee, *Gruzgeologiya*, stated that Georgia had gold reserves of 250 tons and silver reserves of 1,500 tons, with another 250 tons of prospective gold reserves.

In 1996, Georgia permitted foreign firms to manage metallurgical enterprises. The Zestafoni ferroalloy plant was signed over to the Russian-Georgian Bank for Reconstruction and Development in conjunction with a US partner, North Atlantic Research, to be managed for a period of 10 years.

Mine output of copper was 8,000 metric tons in 2002. In that same year, gold output was estimated at 2,000 kg, and for silver, an estimated 33,000 kg. Also produced in 2002 were mine lead, barite, bentonite, mine zinc, and cement.

## 27 ENERGY AND POWER

Georgia must rely on imports for most of its energy needs. Its limited oil reserves were placed at about 30 million barrels in 2003. The country produced 2,000 barrels per day in 2004, much less than the 42,200 barrels of oil it consumed each day that same year. However, oil exploration is actively being carried out both on land and along the Black Sea coast. Most of the oil comes primarily from Azerbaijan, and Russia. Natural gas reserves in 2003 were placed at 0.3 trillion cu ft, with production and consumption at 0.6 billion cu ft and at 35.3 billion cu ft, respectively in that year.

Georgia has two oil refineries, a 106,000-barrel-per-day (bpd) facility at Batumi and a smaller refinery at Sartichala. Georgia plans on utilizing its Black Sea ports to become a significant transshipment point for oil produced by Azerbaijan (and the other republics of central Asia). On 8 March 1996, Georgia and Azerbaijan signed a 30-year agreement to pump a portion of the oil produced in the Azeri waters of the Caspian Sea to the Georgian port of Suspa. From there, the oil will be shipped across the Black Sea to western markets via Turkey. The pipeline along this route became operational in April 1999 following substantial upgrades. Additionally, improved ties with Iran will reduce dependence on energy imports from Russia, from which Georgia is trying to distance itself economically.

Deteriorating plants and equipment prevent Georgia's power sector from operating at full capacity, and power outages are common in many areas of the country. As with its imports of natural gas, Georgia is in arrears in paying for the electricity it has

been obliged to import from Armenia, Azerbaijan, and Russia. The country has substantial untapped hydroelectric potential, however, and is planning to build two new hydroelectric plants on the Rioni River and a third, the 40-MW Minadze station, on the Kura River. In 2003, electricity production amounted to 6.7 billion kWh. In 2002, hydropower accounted for 83% of the electricity produced and 16.6% was from fossil fuel. Installed capacity in 2003 was 4.4 GW, with consumption at 6.8 billion kWh for that year. The two major power plants are a thermal plant at T'bilisi (with a capacity of 1,280,000 kW) and the Enguri hydroelectric plant (with a 1,325,000 kW capacity). Consumption of electricity in 2000 totaled 7.9 billion kWh.

Georgia is one of the 12 former Soviet republics to found the Intergovernmental Council on Oil and Gas (ICOG), which stresses international cooperation in the oil and natural gas industry and will entitle members to receive Russian energy resources in exchange for investment in Russia's oil and natural gas industries.

## 28 INDUSTRY

Heavy industry, based on the country's mineral resources, predominates, and includes metallurgy, construction materials, and machine building. Light industry includes food processing, beverage production, consumer durables, garments, and oil-processing. Hyperinflation in 1994 together with continuing political unrest severely affected industrial production. By 1995, industrial output of state enterprises was one-fifth of the 1990 level.

In 1996, although industrial production rose 6% for the year, less than 20% of the country's industries were operating, most at less than 15% of capacity. In 1997 another improvement of 7% was recorded, but in 1998, due mainly to the financial crisis in Russia, industrial production fell 2%. By the end of 1998, the privatization of small businesses was largely completed, with over 12,860 becoming privately owned. Among the large state enterprises, about 1,200 had been changed into joint stock companies, 910 of which have since been privatized.

Despite a model legal framework for the privatization of its enterprises, industry in Georgia had only been 15.2% privatized as of 2002, with the construction industry at about 18.5%, mainly because of a lack of buyers. The least privatized sector is energy, where, according to a recent USAID assessment, the infrastructure borders on catastrophic failure.

Growth in industrial production returned in 1999 and 2000, at 7% and 11%, respectively, but in 2001, there was a decline of 5%, due, externally, to declining export demand in non-CIS countries, and, internally, to the shutdown of most of Georgia's refinery production. Before independence, Georgia had several refineries, but by 2001, it had only two: one at the Black Sea port of Batumi with a 106,000 b/d capacity, and the other, a small 4,000 b/d refinery built in 1998 near CanArgo's Ninotsminda oil field called the Georgian-American Oil Refinery (GAOR).

In 2001, the GAOR operated only between July and September, and at less than 50% capacity. In September 2001, CanArgo shut it down, announcing plans to build a \$200 million refinery in its place that would have a 30,100 b/d capacity. In 2002, the Batumi refinery was also closed, undergoing a \$250 million upgrade and expansion directed by the Mitsui Corporation. As a result, Georgia has been obliged to import over 90% of its petroleum products.

Mitsui has undertaken the work without Georgian government guarantees of its investment. The lack of such guarantees caused two other Japanese companies, Marubeni and JGC, to drop out of the project. Georgia's most promising industrial development came in December 2002, when agreement was announced for the construction of Georgia's part of the Baku-Tbilisi-Ceyhan (BTC) pipeline; the pipeline was officially opened on 25 May 2005.

Industry accounted for 26.8% of overall economic output in 2005, and it was the sector with the smallest representation in the working population; agriculture and services were by far the largest employers (both with an approximate equal representation in the labor force—40%), although they achieved different productivity levels—agriculture accounted for 16% of the GDP, while services came in first with 57.2%. Current important industries include steel, aircraft, machine tools, electrical appliances, mining (manganese and copper), chemicals, wood products, and wine.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The Georgian Academy of Sciences has departments of mathematics and physics, earth sciences, applied mechanics, machine building, and control processes, chemistry and chemical technology, agricultural science problems, biology, and physiology and experimental medicine. Georgia has 44 research institutes, many attached to the academy, conducting research concerning agriculture, fisheries, and veterinary science; and medicine, natural sciences, and technology. The academy's Sukhumi Botanical Garden is maintained at Chavchavadze. The Scientific and Technical Library of Georgia, with more than 10 million volumes in 1996, is located in Tbilisi. Eight colleges and universities offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 39% of university enrollment.

In 2002, research and development spending totaled \$33.702 million, or 0.29% of GDP. As of that same year, high technology exports totaled \$41 million, or 38% of all manufactured exports. As of 2002, there were 2,317 researchers and 241 technicians per million people actively engaged in R&D.

## 3<sup>0</sup> DOMESTIC TRADE

The war in Abkhazia severely disrupted domestic trade in 1993 and hyperinflation in 1994 led to widespread fighting in the nation and catastrophic economic decline. Economic conditions began to improve by the mid-1990s following the influx of foreign aid. Agriculture continues to be a primary basis for the domestic economy. The fastest growing segment of the economy, however, is in services, which accounted for about 55% of the GDP in 2002. Small privately owned shops are still more prevalent than supermarkets or larger retail establishments. Business hours are generally from 9 AM to 6 PM, Monday through Friday.

## 3<sup>1</sup> FOREIGN TRADE

Traditionally Georgia has been heavily dependent on Russia for power, bridges, roads, and other economic essentials. In return, Georgia sends Russia fruit, wine, and other agricultural products. Georgia's current government, however, is pursuing closer links with the EU and Turkey.

In 2005, exports reached \$1.4 billion (FOB—Free on Board), while imports grew to \$2.5 billion (FOB). The bulk of exports went to Turkey (18.3%), Turkmenistan (17.8%), Russia (16.2%), Arme-

nia (8.4%), the United Kingdom (4.9%), and Azerbaijan (3.9%). Principal exports were ferro alloys, copper and gold, ferrous waste and scrap, iron and steel, wine, and mineral water. Imports included oil, gas, electricity, tubes and pipes, and automobiles, and mainly came from Russia (14%), Turkey (11%), the United Kingdom (9.3%), Azerbaijan (8.5%), Germany (8.2%), the Ukraine (7.7%), and the United States (6%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Georgia's high level of imports, until 2000, was largely due to its capital account surplus, stemming from the inflows of investments, loans, and grants, rather than from weak export performance. Georgia's capital account subsequently fell into deficit.

The US Central Intelligence Agency (CIA) reported that in 2002 the purchasing power parity of Georgia's exports was \$515 million

while imports totaled \$750 million resulting in a trade deficit of \$235 million.

The International Monetary Fund (IMF) reported that in 2000 Georgia had exports of goods totaling \$459 million and imports totaling \$971 million. The services credit totaled \$206 million and debit \$216 million.

Exports of goods and services reached \$1.1 billion in 2004, down from \$1.3 billion in 2003. Imports decreased from \$1.9 billion in 2003, to \$1.8 billion in 2004. The resource balance was consequently negative in both years, reaching -\$583 million in 2003 and -\$637 million in 2004. The current account balance was also negative, decreasing from -\$391 million in 2003, to -\$430 million in 2004. Foreign exchange reserves (including gold) decreased to \$187 million in 2004, barely covering a month of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The National Bank of Georgia (NBG), the state's central bank, was founded in 1991. The NBG has the functions of a central bank, namely issuing currency, managing the exchange rate, controlling monetary and credit aggregates, and regulating the activities of the banking sector.

In September 1995 Georgia introduced a new currency, the lari (l), to replace its interim currency, the coupon, at the rate of 1l = coupon1,000,000. The coupon had been introduced in May 1993 after the collapse of the ruble zone in response to a severe cash shortage in the republic. The coupon experienced one of the steepest devaluations of any currencies in the former Soviet Union, plummeting from around coupon1,000 = \$1 shortly after its introduction to coupon1,550,000=\$1 by December 1994. The coupon was scarcely used by the private sector, where the majority of transactions were carried out in dollars and rubles.

The government has since had more success with the lari. The new currency was introduced at 1l.3 = \$1, and given the dramatic success in reducing inflation, by the end of November 1996 it had appreciated slightly to trade around 1l.28 = \$1. However, by 2001, it had lost some value, trading at 1l.07 = \$1.

At the time of independence there were, in addition to the NBG, five specialized commercial banks, about 200 small domestic commercial banks, and the former Georgian branches of the Soviet Savings Bank and Vneshekonombank. During 1993 and 1994, a large number of small banks were set up, peaking at 227 by mid-1994. Several of these have since collapsed, leaving creditors bankrupt. In December 1994, the central bank stripped 28 commercial banks of their licenses on the ground that they had insufficient funds. In June 1995, the head of the central bank, Nodar Javakhishvili, moved to further stiffen capital requirements and stripped 22 more banks of the licenses. This was followed in July and August with similar measures that resulted in 58 additional banks losing their licenses. Also during 1995 was the merger of three state banks (Eximbank, Industrial Bank, and the Savings Bank) into the United Georgian Bank. State-owned banks accounted for some 75% of banking sector assets.

The first foreign bank, the Georgian-US bank, was opened in T'bilisi in early 1994. In September 1996 a joint investment bank began its operations with its founding capital contributed by the United Georgian Bank, the Commercial Bank of Greece, and the European Bank for Reconstruction and Development (EBRD). Emlak Bankasi, a Turkish bank, and the Caucasus Development

Bank, based in Azerbaijan, currently maintain offices in T'bilisi. In 1997, the EBRD announced that it is to lend \$5 million to Absolute Bank, a US-Georgian joint venture, with 60% US ownership. The bank has \$3 million in assets, making it one of the largest Georgian banks in terms of capital.

Other commercial banks include the Agricultural Bank (1991), the Bank of Industry and Construction (1991), Housing Bank of Georgia (1991), and the State Savings Bank (1989).

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$190.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$356.0 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 17.5%.

The Caucasian Exchange, a stock exchange, opened recently in Georgia.

### 3<sup>4</sup> INSURANCE

Georgia's insurance system is largely inherited from government-controlled Soviet institutions. The civil war impairs growth of the insurance sector.

### 3<sup>5</sup> PUBLIC FINANCE

Georgia has been notorious for mismanaging its budget. In 1999, the IMF put one of its programs in the country on hold because Georgia could not meet the conditional budgetary targets the IMF set forth. A more realistic budget in the second half of 2000 paved the way for a new IMF program beginning in January 2001. Georgia's progress towards those new budgetary goals has been uneven, but it has remained on track.

The US Central Intelligence Agency (CIA) estimated that in 2005 Georgia's central government took in revenues of approximately \$872.5 billion and had expenditures of \$1 billion. Revenues minus expenditures totaled approximately \$871.4 billion. Total external debt was \$1.9 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were 1933.3 million and expenditures were 11,009.8 million. The value of revenues was us\$435 million and expenditures us\$471 million, based on an exchange rate for 2003 of us\$1 = 1.2.1457 as reported by the IMF. Government outlays by function were as follows: general public services, 34.1%; defense, 6.0%; public order and safety, 10.7%; economic affairs, 8.8%; housing and community amenities, 0.6%; health, 1.0%; recreation, culture, and religion, 2.5%; education, 4.1%; and social protection, 32.4%.

### 3<sup>6</sup> TAXATION

As of 2004, Georgia has a standard corporate profits tax of 20%. Capital gains are considered part of taxable profits and are taxed at the corporate rate. Taxes on dividends, interest, and management fees are withheld at the source at a rate of 10%. Foreign entities not permanently established pay a withholding tax of 10% on dividends, interest, and royalty payments. There is also a withholding tax of 4% on insurance premiums and payments for international telecommunications and transportation services. A 1% tax on property of enterprises (TPE) is charged foreign companies that have permanent establishments in Georgia. There is also a per-

sonal income tax, paid by resident and nonresident individuals, which has four brackets, the first one being a negative income tax of 12% up to an income of 1200 (about \$93). For 1201–350 (about \$165), the tax is 124 (\$11) plus 15%. For 1351–600 (\$286), the tax is 146.5 (\$22) plus 17%. Above 1600, the tax is 198 (\$42) plus 20%. Social charges are deducted from employees' salaries: 15% for the health protection fund and 1% for the social security fund. Employers' contributions are 3% for the health protection fund, 27% for social security, and 1% for unemployment. There is also a value-added tax (VAT) of 20% (reduced from 28%), in addition to various excise taxes, ranging from 10–90%

Georgia has one of the worst rates of tax compliance in the world. Chronic shortfalls in revenue collection means that the state must turn to external financing and loans from the National Bank of Georgia to make up for budget deficits. External borrowing to cover budget shortfalls have been the primary reason Georgia has had to turn to the IMF and the Paris Club for stand-by credit agreements and rescheduling of sovereign debt. The high rate of tax evasion puts legitimate business at a competitive disadvantage with a large "shadow economy," estimated officially to constitute 40–60% of the economy, but generally believed, according to the US State Department, to be much higher. Estimates of underpaying of taxes by enterprises have been close to 80%.

**37 CUSTOMS AND DUTIES**

Georgia has an open trade regime, with most commodities carrying tariffs of either 5% or 12%, although automobiles have considerably higher rates. Some goods, such as grains, humanitarian goods, and aviation fuel, are exempt from carrying customs tariffs. Imported goods are also subject to a value-added tax (VAT) of 20% and an excise tax of 5–100% is levied on luxury goods.

**38 FOREIGN INVESTMENT**

Georgia was one of the first former Soviet republics to adopt market reforms on foreign investment. However, political instability

has hampered efforts to attract capital from abroad. Oil and gas pipeline projects and expanded privatization sales promised to reverse this trend. By the mid-1990s both GDP and total foreign investment began to grow steadily. In September 1998 the decision was made to make all future economic regulations in full conformity with the norms of the European Community. Legislation in 2000 extended the scope of the privatization program, created a capital market, and provided for the registration of enterprise and agricultural land, all conducive to improving Georgia's investment climate. Also in 2000, the currency appeared to have stabilized. The main hindrances to foreign investment flows are not the legal framework but pervasive corruption and arbitrary and biased administration.

Annual foreign direct investment (FDI) inflow swelled to \$242 million in 1997 and \$265.3 million in 1998 mainly due to work on the Baku-Supsa pipeline and on the Supsa terminal. FDI flows fell to an annual average of \$124.3 million 1999 to 2001. Total FDI stock from 1990 to 2000 was an estimated \$672 million. The United States has been the leading source of foreign investment, accounting for about 22%.

Investment levels have, as expected, soared in recent years. Mainly due to work on the Baku-Tibilisi-Ceyhan pipeline and the Shah Deniz gas pipeline, FDI levels have grown from \$163 million in 2002, to \$336 million in 2003, and \$490 million in 2004. Preliminary data for 2005 shows that inflows of capital have reached \$284 million in the first half of the year. An encouraging fact is the winding down of the effects of the pipeline projects, and the increase in foreign investments as a result of privatizations done by the government.

**39 ECONOMIC DEVELOPMENT**

In late 1992, the government inaugurated its Medium-Term Program of Macroeconomic Stabilization and Systemic Change focusing on price and trade liberalization, budget constraints for public enterprises, and privatization. As part of a small enterprise privatization program, the first auction of small-scale assets was held in T'bilisi in March 1993. Practically all housing has been privatized, as well as a high percentage of agricultural land. Privatization was progressing as of 2003, and the government was developing the legal framework necessary for a good climate of investment. Nevertheless, due to a lack of enough foreign direct investment in 2003, the transportation and communication infrastructure remains in poor condition.

In spite of these reforms, political instability continues to hamper Georgian economic development. Although the Baku-T'bilisi-Ceyhan oil pipeline brings much needed foreign investment, most observers feel that the fate of the Georgian economy hinges on the ultimate fate of the Caucasus.

Corruption hampers economic development, and has undermined the credibility of the government's economic reforms. The size of the shadow economy is also a concern. The Paris Club rescheduled Georgian debt in 2001. That year, Georgia negotiated a three-year \$144 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF, which was due to expire in 2004. The IMF encouraged the country to implement tax reform, to improve revenue collection, strengthen the banking system, and to combat corruption and smuggling.

The construction of the Baku-Tbilisi-Ceyhan oil pipe lines and the Baku-Tbilisi-Erzurum gas pipe lines have been extremely beneficial for the economy of Georgia. The economy has registered impressive growth rates (11.1% in 2003, and 8% in 2005), unemployment has been alleviated, and the privatization of several national enterprises has been made easier as a result. A strong industrial sector, together with higher productivity rates in the agricultural sectors, will ensure that the impressive economic expansion will continue at similar rates for at least another couple of years. The government needs to speed up reforms however, and ensure a proper economic restructuring by developing and diversifying its manufacturing and export bases.

#### 40 SOCIAL DEVELOPMENT

All employees are eligible for old age benefits, which are funded primarily by employers, who contribute 31% of payroll. Disability and death are not covered. A special social pension exists for the aged and disabled who do not qualify for the employee pension system as determined by need. Paid maternity leave is provided for up to eight weeks, although it is reported that employers frequently withhold benefits. Temporary disability is only payable if the employer is responsible for the injury, although unemployment and permanent disability benefits are provided. Medical services are provided to needy residents by government health officials. Family allowances, initiated in 2002, provide for all needy residents, and is funded by the government.

Women remain predominantly in low-skilled, low-paying jobs, regardless of qualifications. Female participation in politics has been discouraged, and women rarely fill leadership positions in the private sector. Discrimination and harassment in the workplace are common. Violence against women is a serious problem and there are virtually no mechanisms to assist victims. Societal bias discourages the reporting of domestic abuse or sexual violence. In 2004, kidnapping of women for marriage still occurred.

Human rights abuses by the police and security forces continue, often to obtain confessions or extract money. Prison conditions are inhumane and life threatening, and corruption is endemic in the judicial and law enforcement systems. There is some discrimination against ethnic minorities.

#### 41 HEALTH

Since 1995 there have been wide-ranging reforms to the centralized system of health care inherited from the former Soviet Union. Staffed by a disproportionate number of specialists, and supporting a relatively high number of hospital beds, the system proved too costly and inefficient to maintain. In the period immediately following independence, financial shortages led to delayed payment, or even nonpayment, of medical staff salaries; a virtual halt to investment in new medical equipment and buildings; and the emergence of a black market in pharmaceuticals. Changes in health care policy since 1995 include introduction of a health insurance system and an end to free health care outside a basic package of health benefits, as well as new systems of provider payment. The network of rural and urban primary care centers is still largely a holdover from the Soviet era, but the payment structure for ser-

vices has changed. Health care expenditure was estimated at 2.8% of GDP.

In 2004, there were an estimated 391 physicians, 372 nurses, 29 midwives, and 30 dentists per 100,000 people. Immunization rates for the country in 1997 were as follows: children up to one year old were vaccinated against tuberculosis, 76%; diphtheria, pertussis, and tetanus, 92%; polio, 98%; and measles, 95%.

Life expectancy in 2005 was an average of 75.88 years and the infant mortality rate was 18.59 per 1,000 live births. The total fertility rate has decreased from 2.9 children per woman of child-bearing years in 1960 to 1.1 in 2000. The under-five mortality rate was 59 per 1,000 live births. The maternal mortality rate was much lower than the average in Eastern Europe. In 1995 there were 22 maternal deaths per 100,000 live births. The estimated overall mortality rate as of 2002 was 14.6 per 1,000 people. There were approximately 2,000 civil war-related deaths in 1992. A diphtheria epidemic has spread through the former Soviet Union. In most affected countries, the incidence rate of reported diphtheria has increased two- to tenfold every year.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 3,000 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

#### 42 HOUSING

Before independence, most urban housing was regulated by the government while most rural housing was privately owned. Beginning in the mid 1990s, legislation towards privatization led to the legalization of an open real estate market. Unfortunately, the need for adequate housing is far greater than current supplies. In 1989, there were 152,033 people registered and waiting for adequate housing. Overcrowding became a problem as extended families stayed together in one household simply because of the lack of alternative housing. Natural disasters have caused trouble for an already problematic housing situation. Mudslides are common in some areas. In 1987, a mudslide destroyed 210 homes and seriously damaged 850 more. In 1991, an earthquake destroyed 46,000 homes. Civil unrest has caused a great deal of homelessness as well. As of 2001, there were about 300,000 displaced persons throughout the country.

During 1995 a total of 55,423 sq m of dwelling was built in the republic, but this represented only a 4.4% increase in new dwelling area since 1987. Building costs are high, with the price of one square meter often between \$500 and \$1,000. At the 2002 census, there were 1,243,158 private households, with the average size of household at 3.5 persons.

In western Georgia, a typical older home is wooden, raised off the ground slightly in areas where flooding or very damp ground is problematic. In the drier climate of eastern Georgia, stone (later brick) houses with flat roofs were constructed along roads. In urban regions, two-story brick or cement block homes are not uncommon.

#### 43 EDUCATION

Georgia's educational system was based on the Soviet model until the late 1980s, when there was a de-emphasis of Soviet educational themes in favor of Georgian history and language. Georgian students are taught in a number of languages, including Georgian,

Russian, Armenian, Azerbaijani, Abkhazian, and Ossetian. Education is compulsory for nine years, beginning at age seven. Elementary school covers six years of study. This is followed by either seven years of general secondary school or six years of technical school. The academic year runs from September to June.

In 2001, about 41% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 89% of age-eligible students. The same year, secondary school enrollment was about 78% of age-eligible students. It is estimated that about 82% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 16:1 in 2000; the ratio for secondary school was about 8:1.

There are 24 state institutions of higher learning in the country and 73 private accredited institutions. These include the Iran Dzhavakhladze University of T'bilisi, Georgian Technical University, Abkhazian State University, and State University of Batumi. In 2003, about 38% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate has been estimated at about 99%.

As of 2003, public expenditure on education was estimated at 2.2% of GDP, or 11.8% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library in T'bilisi holds over six million volumes, while the Georgian State Public Library has eight million. The largest library in the country, however, is the Scientific and Technological Library of Georgia, which contains 10.1 million volumes. There are dozens of private libraries held by various scientific, cultural, and religious organizations and extensive university library holdings. Chief among the latter are T'bilisi State University (three million volumes), the Polytechnic University in T'bilisi (1.14 million volumes), and the Pedagogical Institute in T'bilisi (336,000 volumes).

Most of the country's cultural institutions are in T'bilisi, including the State Art Museum, the Museum of Fine Arts, the State Museum of Georgia, the T'bilisi Museum of History and Ethnography, and the Georgian State Museum of Oriental Art. There are local or specialty museums in Gori, Suchumi, and Kútáisi.

#### 45 MEDIA

Georgia has international telecommunications links via landline to other former Soviet republics and Turkey. There is also a low capacity satellite earth station and connections via Moscow. In 2003, there were an estimated 133 mainline telephones for every 1,000 people; about 138,800 people were on a waiting list for telephone service installation. The same year, there were approximately 107 mobile phones in use for every 1,000 people.

In 2004, there were 54 independent television stations in the country, but only three provided national service. Though independently operated, most stations rely on some amount of support from the national or regional governments. There are at least 10 radio stations in operation, most of which are privately owned. Primary news agencies include the state operated Sakinform, and the privately held Prime-News, Iprinda, and Kavkasia-Press. In 2003, there were an estimated 568 radios and 357 television sets

for every 1,000 people. About 12.4 of every 1,000 people were cable subscribers. Also in 2003, there were 31.6 personal computers for every 1,000 people and 31 of every 1,000 people had access to the Internet. There were 11 secure Internet servers in the country in 2004.

In 2001, there were about 200 independent newspapers throughout the country. The most widely read was *Sakartvelos Respublika*, with a 1995 circulation of 40,000. In T'bilisi, the major daily is *Vestnik Gruzzi (Georgian Herald)*. There are also several general and special interest periodicals available.

The constitution and a 1991 press law provide for a free press, but in practice the government is said to restrict some press rights. Libel laws, as well as pressure from business and society leaders and government authorities, inhibit hard core investigative reporting.

#### 46 ORGANIZATIONS

Georgia's Chamber of Commerce and Industry promotes trade and commerce with its fellow members of the CIS. The country belongs to the International Chamber of Commerce as well. Union organizations in Georgia include the Confederation of Independent Trade Unions, an umbrella organization. Important political organizations include the all-Georgian Mecrab Kostava Society and the Paramilitary group Mkhredrioni.

The Georgian Academy of Sciences, promoting research and education in all branches of science, was established in 1941. The Georgian Medical Association serves as a physician networking organization while also promoting research and education on health issues and working to establish common policies and standards in healthcare. There are also associations dedicated to research and education for specific fields of medicine and particular diseases and conditions, such as Georgian Association of Cardiology.

Youth organizations include the National Youth Council of Georgia (through the Department of Youth and Sport), the United Nations of Youth: Georgia, YMCA/YWCA, and scouting programs. There are also several sports associations promoting amateur competition in such pastimes as baseball, track and field, badminton, and figure skating.

Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. There are national chapters of the Red Cross Society and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Bounded by the Black Sea and the Caucasus Mountains, Georgia has been known for its lucrative tourist industry, but tourism declined after independence due to political and economic turmoil. Mtskheta, the ancient capital, is home to the Svetitskhoveli Cathedral, an 11th-century edifice that is the spiritual center of the Georgian Orthodox Church, and a major tourist attraction. The present-day capital, T'bilisi, is over 1,000 years old and offers historic citadels, cathedrals, and castles, as well as warm springs and dramatic mountain views. In 2002, approximately 298,469 tourists

visited Georgia. There were 3,712 hotel rooms with 8,250 beds and an occupancy rate of 71%.

In 2005, the US Department of State estimated the average daily expenses for T'bilisi at \$245. Other areas ranged from \$96 to \$128 per day.

#### 48 FAMOUS GEORGIANS

Eduard A. Shevardnadze (b.1928), a key figure in the Soviet government, was president of Georgia from 1992 until 2003, when he resigned in the midst of mounting criticism following disputed elections, known as the "Rose Revolution." Mikhail Saakashvili (b.1967) was elected president in January 2004. Joseph Stalin (1879–1953), a key figure in the Soviet period, was born in Gori, Georgia. The medieval poet Shota Rustaveli, who was from Georgia, wrote the masterpiece *Knight in the Tiger's Skin*. Nineteenth-century poets include Ilia Chavchavadze (1837–1907), Akaki Tsereteli (1840–1915), and Vazha Pshwda. Writers of that century include Titsian Tabidze (1895–1937), Giorgi Leonidze, and Irakli Abashidze. Painters include Niko Pirosmanashvili (1862–1918),

and Irakli Toidze. Composers include Zakhari Paliashvili (1871–1933) and Meliton Balanchivadze (1862–1937).

#### 49 DEPENDENCIES

Georgia has no territories or colonies.

# GERMANY

Federal Republic of Germany  
*Bundesrepublik Deutschland*

**CAPITAL:** Berlin

**FLAG:** The flag is a tricolor of black, red, and gold horizontal stripes—the flag of the German (Weimar) Republic from 1919 until 1933.

**ANTHEM:** *Einigkeit und Recht und Freiheit (Unity and Justice and Liberty)*.

**MONETARY UNIT:** The euro replaced the deutsche mark as the official currency in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; German Unity Day, 3 October; Repentance Day, Wednesday before the 3rd Sunday in November (except Bavaria); Christmas, 25–26 December. Movable religious holidays include Good Friday, Easter Monday, Ascension, and Whitmonday. In addition, the movable Carnival/Rose Monday holiday and various provincial holidays also are celebrated.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Germany is located in western Europe, bordering the North Sea between France and Poland. Germany is slightly smaller than the state of Montana, with a total area of 357,021 km sq (137,847 mi sq). Germany shares boundaries with Denmark and the Baltic Sea on the N, Poland and the Czech Republic to the E, Austria to the SE, Switzerland to the S, France to the SW, Luxembourg, Belgium, and the Netherlands to the W, and the North Sea to the NW. Germany's boundary length totals 6,010 km (3,734 mi), of which 2,389 km (1,484 mi) is coastline. Germany's capital city, Berlin, is located in the northeastern part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography of Germany is varied. The area along the Baltic coast is sandy, with dunes and small hills. Adjacent to the coast are forested ridges and numerous lakes of the Mecklenburg lake plateau. Around Berlin, the relief is less hilly. The southern limit of the lowland area is formed by a wide zone of fertile loess, reaching from Magdeburg to the highlands in the South. These highlands include the Harz Mountains; the densely wooded Thuringian Forest and the Erzgebirge (Ore Mountains), where the Fichtelberg rises to 1,214 m (3,983 ft). In the northeast, the wide German lowland—characterized by sandy North Sea shores, heath and moor (in the south), and highest altitudes of about 300 m (1,000 ft)—rises slowly to the central Germany uplands. These low, eroded mountains (1,070–1,520 m/3,500–5,000 ft) extend from the Rhine to the former border of East Germany.

In the west are a wide rift valley and a narrow gorge carved by the Rhine River. A group of plateaus and low mountains, averaging 460 m (1,500 ft) in altitude and including the Black Forest and Odenwald Mountains (highest peak, the Feldberg, 1,493 m/4,898 ft), form the greater part of southern Germany. They merge grad-

ually with the highest walls of the Bavarian Alps (2,440–2,740 m/8,000–9,000 ft), which form the boundary between Germany, Switzerland, and Austria; the Zugspitze (2,962 m/9,718 ft), on the Austrian border, is the highest point in Germany.

The only major lake is Lake Constance (Bodensee; within Germany, 305 sq km/118 sq mi), which is shared with Switzerland and Austria. Except in the extreme south, all of Germany is drained by rivers that empty into the North Sea. The Rhine, with its two main tributaries, the Mosel and the Main, dominates the western areas; farther east are the Ems, the Weser, the Elbe, and the Oder. These rivers have estuaries that are important for the ports located there. In the south, the Danube flows from west to east. The East Frisian Islands are off the northwest coast; the North Frisian Islands lie along the coast of Schleswig. The small island of Helgoland is opposite the mouth of the Elbe River.

## <sup>3</sup>CLIMATE

The climate is temperate; rapid changes in temperature are rare. Average temperatures in January, the coldest month of the year, range from 1.5°C (35°F) in the lowlands to -6°C (21°F) in the mountains. July is the warmest month of the year, with average temperatures between 18°C (64°F) in low-lying areas to 20°C (68°F) in the sheltered valleys of the south. The upper valley of the Rhine has an extremely mild climate. Upper Bavaria experiences a warm alpine wind (Föhn) from the south. The Harz Mountains form their own climatic zone, with cool summers, cold wind, and heavy snowfalls in winter.

Precipitation occurs throughout the year: in the northern lowlands, from 51 to 71 cm (20–28 in); in the central uplands, from 69 to 152 cm (27–60 in); in the Bavarian Alps, to more than 200 cm (80 in). The higher mountains are snow covered from at least January to March.

#### **4 FLORA AND FAUNA**

Plants and animals are those generally common to middle Europe. Beeches, oaks, and other deciduous trees constitute one-third of the forests; conifers are increasing as a result of reforestation. Spruce and fir trees predominate in the upper mountains, while pine and larch are found in sandy soil. There are many species of ferns, flowers, fungi, and mosses. Fish abound in the rivers and the North Sea. Wild animals include deer, wild boar, mouflon, fox, badger, hare, and small numbers of beaver. Various migratory birds cross Germany in the spring and autumn. As of 2002, there were at least 76 species of mammals, 247 species of birds, and over 2,600 species of plants throughout the country.

#### **5 ENVIRONMENT**

Industrialization has taken its toll on Germany's environment, including that of the former GDR, which, according to a 1985 UNESCO report, had the worst air, water, and ground pollution in Europe. Since 1976, the Petrol Lead Concentration Act has limited the lead content of gasoline; for control of other automotive pollutants, the government looked toward stricter enforcement of existing laws and to technological improvements in engine design. The Federal Emission Protection Act of 1974, based on the "polluter pays" principle, established emissions standards for industry, agriculture and forestry operations, and public utilities. Nevertheless, by 1994, 50% of Germany's forests had been damaged by acid rain.

Germany has 107 cu km of renewable water resources, of which 86% are used for industrial purposes. Water pollution is evident in virtually every major river of the FRG, and the Baltic Sea is heavily polluted by industrial wastes and raw sewage from the rivers of eastern Germany. In the 1980s, the Rhine, from which some 10 million Germans and Dutch draw their drinking water, was 20 times as polluted as in 1949. Between November 1986 and January 1987 alone, 30 tons of mercury, 900 lb of pesticides, 540 tons of nitrogen fertilizers, and 10 tons of benzene compound were discharged into the river. The Effluency Levies Act, effective January 1978, requires anyone who discharges effluents into waterways to pay a fee reckoned in accordance with the quantity and severity of the pollutant; the proceeds of this act are allocated for the building of water treatment plants and for research on water treatment technology and reduced-effluent production techniques.

Significant sources of air pollution include emissions from coal-burning utility plants and exhaust emissions from vehicles using leaded fuels. In 1996 industrial carbon dioxide emissions totaled 861 million metric tons. However, the total carbon dioxide emissions in 2000 was down to 785.5 metric tons. The nation has set maximum levels for biocides in the soil, to protect food supplies. Under the nation's basic waste disposal law of 1972, some 50,000 unauthorized dump sites have been closed down and 5,000 regulated sites established; provisions governing toxic wastes were added in 1976. Germany's principal environmental agency is the Ministry of Environment, Nature Conservation and Reactor Safety, created in June 1986.

In 1970, the first German national park, with an area of 13,100 hectares (32,370 acres), was opened in the Bavarian forest, and in 1978 a second national park (21,000 hectares/52,000 acres) was opened near Berchtesgaden. The third national park, in

Schleswig-Holstein (285,000 hectares/704,250 acres), opened in 1985, and a fourth, in Niedersachsen (240,000 hectares/593,000 acres), opened in 1986. The Messel Pit Fossil Site became a natural UNESCO World Heritage Site in 1995. There are also 32 Ramsar wetland sites. As of 2003, 32.6% of Germany's total land area is protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 9 types of mammals, 14 species of birds, 12 species of fish, 9 types of mollusks, 22 species of other invertebrates, and 12 species of plants. Endangered species include Freya's damselfly, Atlantic sturgeon, slender-billed curlew, and the bald ibis. Species believed to be extinct include the Bavarian pine vole, Tobias' caddisfly, the wild horse, and the false ringlet butterfly.

#### **6 POPULATION**

The population of Germany in 2005 was estimated by the United Nations (UN) at 82,490,000, which placed it at number 14 in population among the 193 nations of the world. In 2005, approximately 18% of the population was over 65 years of age, with another 15% of the population under 15 years of age. There were 95 males for every 100 females in the country.

Because of a low birthrate, an aging population, and emigration, Germany's population generally declined from the mid-1970s until around 1990. A heavy influx of immigrants in the 1990s more than compensated for the slight population loss due to more deaths than births. Although the annual growth rate in the 1980s was only 0.1%, immigration in the 1990s led to an annual growth rate in that decade of 0.8%. With immigration slowing, according to the UN, the annual population rate of change for 2005–10 was expected to be -0.1%, a rate the government viewed as too low.

The projected population for the year 2025 was 82,017,000. The population density was 231 per sq km (598 per sq mi).

The UN estimated that 88% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.19%. The capital city, Berlin, had a population of 3,327,000 in that year. Other large urban areas are: the Rhein-Main urban agglomerate, which includes Darmstadt, Frankfurt, Offenbach and Wiesbaden, 3,721,000; the Rhein-Neckar urban agglomerate which includes, Ludwigshafen am Rhein, Heidelberg, Mannheim, Frankenthal, Neustadt an der Weinstrasse and Speyer 1,625,000; the Rhein-Ruhr Middle urban agglomerate, which includes, Düsseldorf, Mönchengladbach, Remscheid, Solingen and Wuppertal 3,325,000; the Rhein-North urban agglomerate which includes, Duisburg, Essen, Krefeld, Mühlheim an der Ruhr, Oberhausen, Bottrop, Gelsenkirchen, Bochum, Dortmund, Hagen, Hamm and Herne 6,566,000; the Rhein-South urban agglomerate which includes Bonn, Cologne (Köln) and Leverkusen 3,084,000; the Saarland urban agglomerate which includes Neunkirchen, Saarbrücken and Saarlouis 896,000; Hamburg, 2,686,000; Stuttgart, 2,705,000; Munich (München), 2,318,000; Hanover (Hannover), 1,296,000; Bielefeld, 1,312,000; Nuremberg (Nürnberg), 1,206,000; Aachen, 1,073,000; Karlsruhe, 990,000; Saarland, 896,000; and Bremen, 889,000.

#### **7 MIGRATION**

From 1946 to 1968, 475,505 Germans emigrated to the United States, 262,807 to Canada, and 99,530 to Australia and Oceania.

LOCATION: 47°16' to 55°4' N; 5°52' to 15°2' E. BOUNDARY LENGTHS: Denmark, 68 kilometers (42 miles); Poland, 456 kilometers (285 miles); Czech Republic, 646 kilometers (403 miles); Austria, 784 kilometers (487 miles); Switzerland, 334 kilometers (208 miles); France, 451 kilometers (281 miles); Luxembourg, 138 kilometers (86 miles); Belgium, 167 kilometers (104 miles); Netherlands, 577 kilometers (358 miles); total coastline, 2,389 kilometers (1,480 miles). TERRITORIAL SEA LIMIT: 12 miles.

During the same period, however, millions of people of German origin and/or speech migrated to West Germany from eastern Europe, notably from the former Czechoslovakia and East Germany. Migration from East Germany to West Germany reached a climax just before the erection of the frontier wall in Berlin on 13 August 1961. It is estimated that about 4 million people—many of them

skilled workers and professionals—crossed from East Germany to West Germany during the 40-year existence of East Germany. Immigration of ethnic Germans from Poland continued to be heavy after 1968, totaling about 800,000 between 1970 and 1989.

According to German law, persons who are not ethnic Germans are foreigners (except for the few granted citizenship) even

if they were born and have spent their entire lives in Germany. Conversely, ethnic Germans are not foreigners even if emigrating from birthplaces and homes in eastern Europe.

From 1992 until 1996, 560,000 ethnic Germans (out of a total of 1.1 million in 1989) had left Central Asia for Germany. These returning ethnic Germans were formerly deported by Soviet leader Joseph Stalin during World War II as they were living in the Volga region and other parts of the former Soviet Union.

Some 350,000 Bosnians were granted temporary protection in Germany in the early 1990s. Repatriation plans began for the Bosnians in October 1996, when 30,000 Bosnians repatriated voluntarily. During 1998, approximately 83,000 people returned to Bosnia under the Government-Assisted Return Programme (GARP). Another 2,021 were returned forcibly. By 1999, more than 250,000 Bosnians had returned to their homeland.

Under the UNHCR/IOM Humanitarian Evacuation Programme, 14,689 people had been evacuated from Macedonia to Germany as of 1999. The evacuees, as well as Kosovars who had already sought asylum in Germany but whose cases were still pending or already rejected, were granted temporary protection, renewable every three months. As of 20 August 1999, 4,147 evacuees had returned to their homeland. In 2005 Germany returned 51,000 Kosovars, including 34,000 Roma to the UN-administered province.

Germany remains the third-largest asylum country in Europe, receiving 876,622 refugees in 2004. The main countries of origin were Serbia and Montenegro, Turkey, Iraq, Ukraine, Afghanistan, Russia, and Iran. Of these refugees 86,151—mainly from Serbia and Montenegro, Turkey, Iraq, Russia, Iran, India, and Pakistan—sought asylum. In 2005 slow job growth in Germany caused many young Germans to migrate abroad for jobs, inspiring the term “reverse foreign worker.”

The 2004 estimate of worker remittances received by Germany was \$6 billion. However, it was also estimated that in that same year Germany was the source of \$10 billion in remittances. The 2005 estimate of Germany’s net migration rate was 2.18 migrants per 1,000 population.

## **8** ETHNIC GROUPS

Until the late 1950s, the population was 99% German; the Danes in Schleswig-Holstein were the sole national minority. The influx of foreigners as “guest workers” beginning in the late 1950s led to an upsurge in the number of permanent foreign residents. Germans account for about 91.5% of the total population. About 2.4% of the population are Turkish. Other minority groups include Italians, Greeks, Poles, Russians, Serbo-Croatians, and Spanish. Even persons born and reared in Germany are considered foreigners unless they are ethnically German or naturalized. The Roma (Sinti) were recognized as “national minorities” in 1995.

## **9** LANGUAGES

German is the official language, and although dialectical variations are considerable, High German is standard. Low German, spoken along the North and Baltic Sea coasts and in the offshore islands, is in some respects as close to Dutch as it is to standard German. Sorbian (also known as Wendish or Lusatian) is a Slavic language spoken by the Sorbian minority. Under the GDR it was taught in schools in their settlement area. There was a daily newspaper in

Sorbian and a publishing house for Sorbian literature. Many of Germany’s sizable foreign-born population still speak their native languages, and there are numerous Turkish-speaking school children. Romani is spoken by the nation’s small Roma population; the language has no written form and the Roma generally restrict the use of the language to within their own community.

In 1996, new rules were established reforming German orthography. Designed to eliminate the last vestiges of Gothic spelling, the rules, among other things, eliminated hyphens, restored some umlauts, and replaced the ß character. Confusion ensued when newly published dictionaries differed in their spellings of many words.

## **10** RELIGIONS

According to a 2004 report, the Evangelical Church, a federation of several church bodies including Lutheran, Uniate, and Reformed Protestant Churches, has about 27 million members, accounting for 33% of the population. Church officials report that only about 4% of members attend services on a regular basis. The Catholic Church also has 27.2 million members, or 33.4% of the population, with only about 17.5% of members active. Muslims make up approximately 3.4–3.9% of the populace with 3.1 to 3.5 million practitioners. Orthodox churches claim 1.1 million members, or 1.3% of the people. The Greek Orthodox Church is the largest division, followed by Romanian, Serbian, Russian (Moscow Patriarchate and Orthodox), Syrian, and Armenian Apostolic. Other Christian churches have about one million members, or 1.2% of the population. The largest of these are the New Apostolic Church (430,000 members), Jehovah’s Witnesses (165,000 members), Baptists (87,000 members), and Methodists (66,000 members). Smaller groups include the Church of Jesus Christ of Latter-day Saints (Mormons), Seventh-Day Adventists, the Apostolate of Jesus Christ, Mennonites, Quakers, and the Salvation Army.

About 87,500 members of Jewish congregations live in Germany, making up 0.1% of the populace. There were also small numbers of Unification Church members, Scientologists, Hare Krishnas, members of the Johannish Church, Buddhists, the International Grail Movement, Ananda Marga, and Sri Chinmoy. Approximately 21.8 million people, or 26.6% of the population, belonged to smaller religious organizations or had no religious affiliation at all.

Freedom of religion is guaranteed, and although there is no official state religion, churches can receive financial support from the government.

## **11** TRANSPORTATION

Although the German transportation network was heavily damaged during World War II, the system is now one of the best developed in Europe (although much of the infrastructure in the former East Germany needs significant improvement). Because of the country’s central location, almost all continental surface traffic has to cross its terrain. In 2004, the railroad system consisted of 46,142 km (28,700 mi) of operational standard and narrow gauge track. Of that total, standard gauge lines accounted for 45,928 km (28,567 mi), of which 20,084 km (12,492 mi) was electrified. Narrow gauge lines accounted for 238 km (148 mi), of which only 16 km (10 mi) was electrified. The greater part of Germany’s rail

system is operated by the government-owned Federal Railways System.

Highways and roads in 2003 totaled 231,581 km (144,043 mi), all of which were paved. As of 2003, there were 45,022,926 passenger cars and 3,541,193 commercial vehicles in use.

The total length of regularly used navigable inland waterways and canals was 7,300 km (4,540 mi) in 2004. Canals link the Elbe with the Ems, the Ems with the Dortmund, and the Baltic with the North Sea. The most important inland waterway consists of the Rhine and its tributaries, which carry more freight than any other European waterway. The Kiel Canal is an important connection between the Baltic Sea and North Sea. Major ports and harbors include Berlin, Bonn, Brake, Bremen, Bremerhaven, Cologne, Dresden, Duisburg, Emden, Hamburg, Karlsruhe, Kiel, Lübeck, Magdeburg, Mannheim, Rostock, and Stuttgart. In 2005, the FRG had a merchant fleet comprised of 332 ships of 1,000 GRT or more with a combined capacity of 5,721,495 GRT.

Germany had an estimated 550 airports in 2004. As of 2005, a total of 332 had paved runways, and there were also 33 heliports. Major airports include Schönefeld, Tegel, and Tempelhof at Berlin, Halle at Leipzig, Osnabrück at Münster, as well as those at Bremen, Dresden, Frankfurt, Düsseldorf, Hamburg, Hanover, Cologne-Bonn, Stuttgart, Nuremberg, and Munich. Lufthansa, organized in 1955, is the major air carrier; its route network includes both North and South America, the Near and Far East (including Australia), Africa, and Europe. In 2003, about 72.693 million passengers were carried on scheduled domestic and international airline flights, and 7,298 million freight ton-km of service was performed

## 12 HISTORY

Hunting and gathering peoples roamed the land now known as Germany for thousands of years before the first farmers appeared in the sixth millennium BC. By the time these Indo-Europeans made contact with the Romans late in the 2nd century BC, the Teutons of the north had driven most of the Celts westward across the Rhine. During the succeeding centuries, Germanic tribes such as the Alemanni, Burgundians, Franks, Lombards, Vandals, Ostrogoths, and Visigoths gradually developed in the territory between the Rhine estuary in the west, the Elbe River in the east, and northern Italy in the south. Some of these peoples, whom the Romans called barbarians (from the Latin *barbari*, meaning “foreigners”), overran Italy and helped destroy the Roman Empire; others settled in Britain, France, and Spain. The area on either side of the Rhine was contested until Charlemagne, king of the Franks (r.768–814), extended his domain to include most of Germany as far as the Elbe; he was crowned emperor at Rome in 800. Charlemagne’s empire was eventually divided among his three grandsons, and the German sector itself was divided in the latter part of the 9th century.

Otto I, greatest of a new Saxon dynasty, united Germany and Italy and was crowned first Holy Roman emperor in 962. The strength of the rising Holy Roman Empire was undercut, however, by the two-pronged involvement in Italy and in Eastern Europe. Successive generations of Germanic emperors and of various ducal families engaged in constant struggles within Germany as well as with the papacy, and dispersed their energies in many ventures beyond the confines of the empire. Frederick I (Barbarossa,

r.1152–90), of the Hohenstaufen family, overcame the last of the powerful duchies in 1180. His grandson Frederick II (r.1212–50), the most brilliant of medieval emperors, reigned from Sicily and took little interest in German affairs. Four years after his death, the empire broke up temporarily, and there followed a 19-year interregnum. In 1273, Rudolf of Habsburg was elected emperor, but neither he nor any of his immediate successors could weld the empire into a manageable unit.

The Holy Roman Empire’s loose and cumbersome framework suffered from lack of strong national authority at the very time when powerful kingdoms were developing in England, France, and Spain. In the ensuing period, the Holy Roman emperors tended to ally themselves against the nobility and with the prosperous German cities and with such potent confederations of towns as the Hanseatic and Swabian leagues. During the 15th century and part of the 16th, Germany was prosperous: commerce and banking flourished, and great works of art were produced. However, the already weak structure of the empire was further undermined by a great religious schism, the Reformation, which began with Martin Luther in 1517 and ended in the ruinous Thirty Years’ War (1618–48), which directly and indirectly (through disease and famine) may have taken the lives of up to two million people. Thereafter, Germany remained fragmented in more than 300 principalities, bishoprics, and free cities. In the 18th century, Prussia rose to first rank among the German states, especially through the military brilliance of Frederick II (“the Great,” r.1740–86).

During the French Revolution and the Napoleonic wars, German nationalism asserted itself for the first time since the Reformation. Although frustrated in the post-Napoleonic era, the nationalist and liberal movements were not eradicated, and they triumphed briefly in the Frankfurt parliament of 1848. Thereafter, a number of its leaders supported the conservative but dynamic Prussian chancellor, Otto von Bismarck. After a series of successful wars with Denmark (1864), Austria (the Seven Weeks’ War, 1866), and France (the Franco-Prussian War, 1870–71), Bismarck brought about the union of German states (excluding Austria) into the Second Empire, proclaimed in 1871.

Germany quickly became the strongest military, industrial, and economic power on the Continent and joined other great powers in overseas expansion. While Bismarck governed as chancellor, further wars were avoided and an elaborate system of alliances with other European powers was created. With the advent of Wilhelm II as German emperor (r.1888–1918), the delicate international equilibrium was repeatedly disturbed in a series of crises that culminated in 1914 in the outbreak of World War I. Despite initial successes, the German armies—leagued with Austria-Hungary and Turkey against the United Kingdom, France, Russia, and eventually the United States—were defeated in 1918. As a consequence of the war, in which some 1,600,000 Germans died, the victorious Allies through the Treaty of Versailles (1919) stripped Germany of its colonies and of the territories won in the Franco-Prussian War, demanded the nation’s almost complete disarmament, and imposed stringent reparations requirements. Germany became a republic, governed under the liberal Weimar constitution. The serious economic and social dislocations caused by the military defeat and by the subsequent economic depression, however, brought Adolf Hitler and the National Socialist (Nazi) Party to power in 1933. Hitler converted the republic into a dictatorship,

consolidated Germany's position at home and abroad, and began a military expansion that by 1939 had brought a great part of Europe under German control, either by military occupation or by alliance, leading to World War II.

Germany signed a military alliance with Italy on 22 May 1939 and a nonaggression pact with the former USSR on 23 August. Hitler's army then invaded Poland on 1 September, and France and Britain declared war on Germany two days later. France surrendered on 22 June 1940; the British continued to fight. On 10 December 1941, Germany declared war on the United States, three days after the attack on Pearl Harbor by its ally Japan. Hitler's troops were engaged on three major fronts—the eastern front (USSR), the North African front, and the western front (France). Hitler relied heavily on air power and bombed Britain continuously during 1941–42. But by 1943, German forces were on the defensive everywhere, thus marking the beginning of the end of the Nazi offensive thrusts. Finally, on 7 May 1945, after Hitler had committed suicide, the Allies received Germany's unconditional surrender. It is estimated that more than 35 million persons were killed during World War II. Of this number, at least 11 million were civilians. Among them were nearly 6 million Jews, mostly eastern Europeans, killed in a deliberate extermination by the Nazi regime known as the Holocaust; there were also about 5 million non-Jewish victims, including Gypsies, homosexuals, political dissidents, and the physically and mentally handicapped.

#### From Division to Reunification

After the surrender in 1945, Germany was divided into four occupation zones, controlled respectively by the former USSR, the United States, the United Kingdom, and France. Berlin was likewise divided, and from April 1948 through May 1949 the USSR sought unsuccessfully to blockade the city's western sectors; not until the quadripartite agreement of 1971 was unimpeded access of the FRG to West Berlin firmly established. In 1949, pending a final peace settlement, Germany was divided into the Federal Republic of Germany, or West Germany, consisting of the former United Kingdom, French, and US zones of occupation, and the German Democratic Republic, or East Germany, consisting of the former Soviet zone of occupation. Territories in the east (including East Prussia), which were in German hands prior to 1939, were taken over by Poland and the former USSR.

The FRG's first chancellor (1949–63), Konrad Adenauer, the leader of the Christian Democratic Union (CDU), followed a policy of "peace through strength." During his administration, the FRG joined NATO in 1955 and became a founding member of the EC in 1957. That same year, the Saar territory, politically autonomous under the Versailles Treaty but economically tied to France after 1947, became a German state after a free election and an agreement between France and the FRG. A treaty of cooperation between those two nations, signed on 22 January 1963, provided for coordination of their policies in foreign affairs, defense, information, and cultural affairs. The cost of this program of cooperation with the West was further alienation from the GDR and abandonment, for the foreseeable future, of the goal of German reunification. Many citizens, including a significant number of skilled and highly educated persons, had been covertly emigrating through Berlin in the West, and on 13 August 1961, East Berlin was sealed off from West Berlin by a wall of concrete and barbed

wire. The Western Allies declared that they accepted neither the legality nor the potential practical consequences of the partition and reaffirmed their determination to ensure free access and the continuation of a free and viable Berlin.

On 16 October 1963, Adenauer resigned and was succeeded by former Finance Minister Ludwig Erhard, who is generally credited with stimulating the FRG's extraordinary postwar economic development—the so-called economic miracle. Kurt George Kiesinger of the CDU formed a new coalition government on 17 November 1966 with Willy Brandt, leader of the Social Democratic Party, as a vice-chancellor. Three years later, Brandt became chancellor, and the CDU became an opposition party for the first time. One of Brandt's boldest steps was the development of an "Eastern policy" (*Ostpolitik*), which sought improved relations with the Socialist bloc and resulted, initially, in the establishment of diplomatic ties with Romania and the former Yugoslavia. On 7 December 1970, the FRG signed a treaty with Poland reaffirming the existing western Polish boundary of the Oder and western Neisse rivers and establishing a pact of friendship and cooperation between the two nations. That August, the FRG had concluded a nonaggression treaty with the former USSR; a 10-year economic agreement was signed on 19 May 1973. Throughout the late 1960s and early 1970s, tensions over the Berlin division in particular and between the two Germanys generally eased markedly, as did, in consequence, the intensity of pressures from both Allied and Soviet sides over the issue of reunification. In an effort to normalize inter-German relations, FRG Chancellor Willy Brandt and GDR Chairman Willi Stoph exchanged visits in March and May 1970, the first such meetings since the states were established. A basic treaty between the two Germanys was reached on 21 December 1972 and ratified by the Bundestag on 17 May 1973; under the treaty, the FRG recognized the sovereignty and territorial integrity of the GDR, and the two nations agreed to cooperate culturally and economically. Two years later, the GDR and FRG agreed on the establishment of permanent representative missions in each others' capitals. Relations with Czechoslovakia were normalized by a treaty initialed 20 June 1973. The early 1970s brought an upsurge of terrorism on German soil, including the killing by Palestinians of Israeli athletes at the 1972 Summer Olympics in Munich. The terrorist wave, which also enlisted a number of German radicals, continued into the mid-1970s but declined thereafter.

Brandt remained chancellor until 6 May 1974, when he resigned after his personal aide, Günter Guillaume, was arrested as a spy for the GDR. Helmut Schmidt, Brandt's finance minister, was elected chancellor by the Bundestag on 16 May. Under Schmidt's pragmatic leadership, the FRG continued its efforts to normalize relations with Eastern Europe, while also emphasizing economic and political cooperation with its West European allies and with the United States. Schmidt remained chancellor until the fall of 1982, when his governing coalition collapsed in a political party dispute. General elections in March 1983 resulted in a victory for the CDU, whose leader, Helmut Kohl, retained the chancellorship he had assumed on an interim basis the previous October. In January 1987 elections, Kohl was again returned to power, as the CDU and its coalition allies won 54% of the seats in the Bundestag.

The exodus of East Germans through Hungary in the summer of 1989 as well as mass demonstrations in several East German cities, especially Leipzig, led to the collapse of the German Demo-

cratic Republic in the fall of 1989. Chancellor Kohl outlined a 10-point plan for peaceful reunification, including continued membership in NATO and free elections in March 1990. Following these elections, the two Germanys peacefully evolved into a single state. Four-power control ended in 1991 and, by the end of 1994, all former Soviet forces left the country, although British, French, and American forces remained for an interim period. Berlin became the new capital of Germany, although the shift from Bonn to Berlin took place over several years.

Unification has been accompanied by disillusionment and dissatisfaction with politics and the economy. A falling GDP and rising unemployment have raised concerns that the costs of unification were underestimated. By 1997, the German government had given more than \$600 billion to eastern Germany through business subsidies, special tax breaks, and support payment for individuals, while private companies invested \$500 million more. Even so, the eastern German economy was fundamentally bankrupt with unemployment at about 20%. Some analysts predict that convergence of the two economies will not be complete for another 10 to 20 years. In the meantime, the financial drain imposed on Bonn by the east threatened to imperil Germany's other convergence project, European economic unification. However, Germany and 11 other EU countries introduced a common European currency, the euro, in January 2002.

By October 1996, Chancellor Helmut Kohl had been in office for 14 years, becoming the longest-serving postwar German chancellor. In 1998, German voters decided it was time for a change. In the September parliamentary elections, Kohl's CDU (Christian Democratic) coalition was defeated by the SPD, and Gerhard Schröder became the first Social Democrat in 18 years to serve as Germany's chancellor. The following month, Schröder formed a center-left coalition with the Green Party. The new coalition inaugurated "Future Program 2000" to tackle the country's economic woes and in June 1999 pushed through the most extensive reform package in German history, which included major cuts in state spending as well as tax cuts. In April 1999, the German government was transferred from Bonn back to its prewar seat in Berlin, where the Bundestag moved into the renovated (and renamed) building formerly known as the Reichstag.

In July 1999 Johannes Rau became the first Social Democrat to be elected president of Germany in 30 years. However, continuing dissatisfaction with the nation's budget deficit and other problems resulted in a disappointing showing for the Social Democrats in local elections in September 1999.

In July 2000 government negotiators reached an agreement on the payment of compensation to persons subjected to forced and slave labor under the Nazi regime. A total of DM10 billion was to be paid out under the auspices of a specially created foundation. Official figures showed that racist attacks increased by 40% in 2000, a worrying trend.

In June 2001, the government and representatives from the nuclear industry signed an agreement to phase out nuclear energy over the next 20 years.

Following the 11 September 2001 terrorist attacks on New York and Washington, D.C., Germany agreed to deploy 4,000 troops to the US-led campaign in Afghanistan directed to oust the Taliban regime and al-Qaeda forces. It was Germany's largest deployment outside Europe since World War II, and in November, Schröder

survived a parliamentary confidence vote following his decision to deploy the troops.

Parliamentary elections were held on 22 September 2002. Schröder, unable to campaign on a strong economy, staked out a foreign policy position that ran counter to that of the United States. Throughout 2002, the United States and the United Kingdom were committing troops to the Persian Gulf region, and, in the event that Iraq would not disarm itself of any weapons of mass destruction it might possess, it was evident that the United States and the United Kingdom might use those troops to force a regime change in Iraq. Schröder announced Germany unconditionally would not support a war in Iraq, and that Germany was in favor of a peaceful settlement to the conflict. Edmund Stoiber of the CDU was Schröder's opponent in the September elections, and the race between them was exceedingly close. Stoiber took a more nuanced position on the question of Iraq, and accused Schröder of damaging German-American relations. Stoiber was more popular with voters on matters of fighting unemployment (9.8% nationwide), and improving a sluggish economy. The SPD and CDU/CSU each won 38.5% of the vote, but the SPD emerged with 251 to 248 seats in the Bundestag (due to a peculiarity in the German voting system which awards extra seats to a party if it wins more constituency seats than it is entitled to under the party vote), and in coalition with the 55 seats won by the Green Party, formed a government with Schröder remaining chancellor.

The UN Security Council unanimously passed Resolution 1441 on 8 November 2002, calling upon Iraq to disarm itself of chemical, biological, and nuclear weapons or weapons capabilities, to allow the immediate return of UN and International Atomic Energy Agency (IAEA) weapons inspectors, and to comply with all UN resolutions regarding the country since the end of the Gulf War in 1991. The United States and the United Kingdom indicated that if Iraq would not comply with the resolution, "serious consequences" might result, meaning military action. The other three permanent members of the Security Council, France, Russia, and China, expressed their reservations with that position. Germany became a two-year (nonveto bearing) member of the Security Council in January 2003, and aligned itself with France, the most vocal opponent of war. The United States and the United Kingdom abandoned diplomatic efforts at conflict resolution in March, and on 19 March, the coalition went to war in Iraq. Once coalition forces defeated Iraq and plans for reconstruction of the country were being discussed in April, Germany stressed the need for a strong role to be played by the UN in a postwar Iraq.

Although Schröder was popular for his position toward Iraq, he became increasingly criticized for the economic underperformance of Germany. Major challenges included the growing level of unemployment, high level of state deficit, and the slow economic growth. During Schröder's second term, Germany became the world's largest exporter of goods, surpassing the United States.

The high unemployment level became quite astonishing, because Germany's low unemployment rate was at one point the envy of the industrial world. In the year 2000, Germany's unemployment rate exceeded 8%. By the end of 2002 over four million people were unemployed in Germany. The unemployment level in 2004 climbed to an even higher mark. The situation got worse in early 2005, when Germany's Federal Labor Agency announced that on January 2005 more than five million Germans were unem-

ployed, which was the highest number since 1932, when the economic devastation of the Great Depression brought the Weimar Republic to an end. The important unemployment level during the first three months of 2005 triggered a negative reaction, even from those who supported the government. Critics complained that the Social Democrat-Green administration of Chancellor Gerhard Schröder was not doing enough.

In addition to the high rate of unemployment Germany also experienced growing state deficit, which meant that it spent more than it earned. In the early 1990s Germany pressured the EU to change its rules, such that no EU member state's deficit could be more than 3% of its GDP, but Germany in 2002 was in fact breaking this rule with a GDP of 3.75%. Furthermore, *Wirtschafts- und Währungspolitik Bulletin* and Federal Statistics Office reported that in 2004 Germany's budget deficit remained at 3.7% of its gross domestic product, which means that it exceeded the European Union's rules for the third year in a row.

Germany has struggled to produce GDP growth of even 1% a year. In comparison to the other Western European countries, from 1995 to 2003 the Western European economies, averaged together, grew by 18.1%, but in Germany it experienced growth of only 10.2%. Although, the Federal Statistics Office in Wiesbaden reported that in May 2005 the German economy experienced some improvement by expanding at the greatest pace since 2001, slightly rebounding from a contraction. Unfortunately, consumer spending, the biggest part of the economy, has not increased for some time.

To deal with the economic challenges in 2003 Gerhard Schröder launched a major reform package called "Agenda 2010." Agenda 2010 was Schröder's plan to reform Germany's declining economy and restore Germany's competitiveness in the world market. This policy aimed to reform health, education, labor training, social security, family welfare, unemployment benefits, and pensions. Agenda 2010's priority was labor-market reform. Neither these reforms nor reduced taxation did much to improve the slow economic growth or lower the unemployment that had reached especially great proportions since the Great Depression.

Following the protests on 1 January 2005 the government's controversial reform of unemployment benefits, also called "Hartz IV" reform, came into effect. Under this reform, those who have been unemployed for over a year would qualify for a flat-rate benefit, only if they could prove that they were actively looking for work. Schröder's inability to deal with the weak economy was thought to have contributed to his loss of the chancellorship in the 2005 elections to Angela Merkel (CDU/CSU). A very tense election race followed by an alliance between the two opposing parties; the CDU/CSU and the SPD became known as the Grand Coalition. On 10 October 2005 Merkel officially became the chancellor of Germany.

Merkel defined the main goal of her government as reducing unemployment, and improving GDP growth. It was her goal to improve the German economy by pursuing a mix of reforms including cutting public spending, lowering corporate tax rates, accelerating labor-market, and pushing through other reforms begun by Merkel's predecessor. She also intended to increase value-added tax, social insurance contributions, and the top rate of income tax.

During her first few months in office, Angela Merkel attained an 85% approval rating. During the third quarter of 2005, the econ-

omy posted a 0.6% increase over the previous year's period and it was forecasted that Germany's GDP would grow by 1.6–1.8% in 2006. Although Germany's unemployment rate was still at 11.3%, it had been gradually decreasing since mid-2005.

Angela Merkel presided over a fragile coalition government consisting of her conservative Christian Democratic Union (CDU) party, the conservative Christian Social Union (CSU), and the left-leaning Social Democratic Party (SDP). Consequently, to push any reforms or programs through, she would have to be able to work together with the Social-Democrats.

In the field of foreign policy, Angela Merkel acknowledged the importance of Franco-German relations. She intended to maintain Germany's strong ties with France; however, not as exclusively as they used to be. Merkel was interested in working with the new EU member states and repairing relations with the United States. During Merkel's term it was thought that Germany might become less involved with Russia due to her criticism of the Russian president, Putin's, policies in Chechnya and human rights abuses. Germany would continue to support Turkey in its desire to become a European Union member state and to support Iraq from outside. The next chancellor election was scheduled for November 2009.

### 13 GOVERNMENT

Germany is a federal republic founded in 1949. Germany's Basic Law (*Grundgesetz*) or its constitution, was promulgated on 23 May 1949. On 3 October 1990, the Federal Republic of Germany and the German Democratic Republic were unified in accordance with Article 23 of the Basic Law, under which the FRG is governed. German governmental structure consists of three branches: the executive branch represented by a president (titular chief of state) and a chancellor (executive head of government), a legislative branch composed of a bicameral parliament, and a judicial branch represented by the independent Federal Constitutional Court. The federal government exercises complete sovereignty and may be amended by a two-thirds vote of the legislature.

The federal chancellor and his or her cabinet ministers and the federal president compose a federal executive branch. This branch is situated at the center of the German political system, where the chancellor is the head of federal government and an elected president performs the largely ceremonial functions of proposing the chancellor to the Bundestag, promulgating laws, formally appointing and dismissing judges and federal civil servants, and receiving foreign ambassadors. The president is elected for a five-year term by a federal convention composed of members of the Bundestag and an equal number of delegates elected by the provincial legislatures.

Every four years, after national elections and seating of the newly elected Bundestag (parliament) members, the federal president nominates a chancellor candidate to that parliamentary body and the chancellor is elected by majority vote in the Bundestag. Since a chancellor can only be elected by a coalition possessing a majority of the seats in parliament, each individual chancellor belongs to a particular party and represents the ideologies of that party. The Bundestag cannot remove the chancellor simply with a vote of no-confidence. The Basic Law allows only for a "constructive" vote of no-confidence; that is, the Bundestag can remove a chancellor only when it simultaneously agrees on a successor.

The chancellor's authority is drawn from the provisions of the Basic Law and from his or her status as leader of the party (or coalition of parties) holding a majority of seats in the Bundestag. The chancellor has powers of patronage and agenda-setting circumscribed by coalition government. Thus, the chancellor outlines federal policy and declares guidelines for cabinet ministers. Any formal policy guidelines issued by the chancellor are legally binding directives and must be implemented by the cabinet ministers. Guideline power allows the chancellor to interfere in any policy issue and to determine the government's approach to the problem.

Ministers are appointed and dismissed by the federal president with chancellor's approval; no Bundestag approval is needed. By and large, the chancellor and ministers are accountable to the Bundestag.

The bicameral legislature (the federal parliament) consists of a federal council (Bundesrat) and a federal diet (Bundestag).

The Bundestag is the principal legislative chamber in the parliament. Members of the Bundestag are the only federal officials directly elected by the public. The Bundestag had 497 voting deputies in 1987; 22 nonvoting deputies represented West Berlin. Following unification, Bundestag membership was raised to 662 deputies; as of September 2005 it stood at 614. Elections are held every four years (or earlier if a government falls from power). Candidates must be at least 18 years of age. Bundestag members are elected for four-year terms by universal, free, and secret ballot, and may be reelected. The most important organizational structures within the Bundestag are parliamentary groups (Fraktionen), which are formed by each political party represented in the chamber. Among other things, the Bundestag may introduce federal bills. However, it usually responds to federal bills introduced by the federal government or by the federal council.

The Bundesrat is the body that represents the interests of the states (Länder) within this federal structure. It consists of 69 representatives appointed by the provincial governments according to the population of each province. Each state has three to six votes depending on population and is required to vote as a block. The federal council participates in the Federation's policy-making and thus acts as a counterweight to the federal diet (Bundestag). It also serves as a link between the federation and the federal states' delegations representing the governments of the states. It can reject any federal bill and it has an absolute veto power over any federal legislation that has an impact on the states.

Disagreements between the two chambers are handled by a conciliating committee.

## 14 POLITICAL PARTIES

The "five percent clause," under which parties represented in the Bundestag must obtain at least 5% of the total votes cast by the electorate, has prevented the development of parliamentary splinter groups. In order to become a leading force in the parliament, parties have to win the local elections and become a majority by building coalitions. The coalition that receives the most votes respectively has the most votes in the parliament. Since party elections happen on the regional level, consistency of the parliament depends on the outcome of the Länder's elections.

The chancellor of Germany always belongs to the coalition of the parties that received the largest number of seats in the Bundestag. The chancellor seemingly could push his reforms by count-

ing on the support of his coalition. However, coalitions do not agree on everything and often are fragmented. In addition, there is some fragmentation within each party. Additionally, after the German unification, there has been noticeable discrepancy between east and west because Western and Eastern Germany had different patterns of party developments.

Looking back, only three parties gained representation in the Bundestag following the elections of September 1965. The Christian Democratic Union (Christlich-Demokratische Union—CDU) and its Bavarian affiliate, the Christian Social Union (Christlich-Soziale Union—CSU), with 245 seats, remained the strongest group, as it had been since the first Bundestag was elected in 1949. The Social Democratic Party (Sozialdemokratische Partei Deutschlands—SPD) increased its seats to 202 and remained the major opposition party. The Free Democratic Party (Freie Demokratische Partei—FDP), winning 49 seats, joined with the CDU and the CSU to form the "small coalition" government of Chancellor Ludwig Erhard.

The coalition government was dissolved in October 1966, following a budgetary disagreement between the CDU/CSU and the FDP. In November 1966, the CDU/CSU joined with the SPD to form a new coalition government, but following the general elections of September 1969, the SPD and FDP formed a coalition government with a combined strength of 254 seats. The elections of November 1972 resulted in a coalition composed of the SPD's 230 seats and the FDP's 42, over the CDU/CSU's 224 seats. Following the resignation of SPD leader Willy Brandt, Helmut Schmidt (SPD) was elected chancellor by the Bundestag in May 1974 by a 267–255 vote. The SPD/FDP coalition retained its majorities in the elections of 1976 (SPD 214, FDP 39) and 1980 (SPD 218, FDP 53).

In the general election of 25 January 1987, the results were as follows: CDU/CSU, 44.3% (223 seats); FDP, 9.1% (46 seats); SPD, 37% (186 seats); and the Greens, 8.3% (42 seats). The first all-Germany elections were held 2 December 1990. The results were as follows: CDU/CSU, 43.8% (319 seats); SPD, 33.5% (239 seats); FDP, 11.0% (79 seats); and Greens, 1.2% (8). The Party of Democratic Socialism (PDS), successor to the SED (Communist party), won 2.4% of the vote and 17 seats. East German parties were allowed to win seats if they received at least 5% of the vote in East Germany. After the breakup of the coalition in 1982, however, the CDU/CSU swept to victory in the voting of March 1983, winning 244 seats and 48.8% of the vote, compared with 226 seats (44.5%) in 1980 and 243 seats (48.6%) in 1976. The swing party, the FDP, took 34 seats (6.9%) and joined the CDU/CSU in a coalition behind Chancellor Helmut Kohl. The SPD polled 38.2% (down from 42.9% in 1980) and captured 193 seats, for a drop of 25.

The CDU and CSU emphasize Christian precepts but are not denominational parties. They favor free enterprise and are supported by small business, professional groups, farmers, and Christian-oriented labor unions. In foreign policy, the CDU/CSU alliance supports European integration and the strengthening of NATO.

The SPD is the oldest and best organized of all German parties. In recent decades it has modified its traditional Marxist program and made an appeal not only to industrial workers but also to farmers, youth, professional people, and the petty bourgeoisie. Its revised Godesberg Program (1959) envisages a mixed econo-

my, support for European integration and NATO, public ownership of key industries, a strong defense force, and recognition of religious values.

The FDP is a more heterogeneous organization, consisting of both classical liberals and strongly nationalistic groups. The party is supported mainly by business interests and Protestant groups. It rejects socialism or state capitalism in principle. The Greens (Die Grünen) constitute a coalition of environmentalists and antinuclear activists; in 1983, they became the first left-wing opposition party to gain a parliamentary foothold since the Communists won 15 seats in 1949. In 1990, in cooperation with Alliance 90, a loose left-wing coalition, the Greens were able to clear the 5% hurdle and win Bundestag seats.

The October 1994 elections saw a weakening of the Free Democratic and Christian Democratic coalition and a strengthening of the Social Democrats and the Greens. The Christian Democrats won 41.5% of the vote and the Free Democrats 6.9%. This gave the governing coalition 341 seats in parliament and a majority of only 10 seats as compared to its previous 134-seat edge. The combined opposition alliance took 48.1% of the vote (331 seats): the Social Democrats took 36.4%; the Greens, 7.3%; and the former Communists in eastern Germany (now called the Party of Democratic Socialism), 4.4%.

Kohl's CDU-CSU coalition was weakened further in the September 1998 parliamentary elections, winning only 245 seats (35.1%), compared with 298 for the SDP (40.9%). Seats won by other parties were as follows: Greens, 47; Free Democrats, 44; and Party of Democratic Socialism, 35. Following the election, Germany's new chancellor Gerhard Schröder formed a center-left coalition government with the Green Party.

Elections held in September 2002 saw both the SPD and the CDU-CSU coalition each win 38.5% of the vote; however, the SPD came away with 251 seats to 248 for the CDU-CSU. The SPD renewed its coalition with the Greens, who took 8.5% of the vote and 55 seats, and Schröder remained chancellor. The Free Democrats took 7.4% of the vote and 47 seats, and the PDS won 4.3% of the vote and held 2 seats in the Bundestag. On 23 May 2004, Horst Koehler was elected president with the next election scheduled for May 2009.

In the November 2005 elections, Gerhard Schröder (SPD/Greens coalition) lost the chancellery office to Angela Merkel (CDU/CSU-FDP coalition). It was the first time in German history that one of the two larger parties has nominated a woman for this position. The election campaign turned into a tense race of Merkel running against Schröder. Election polls fluctuated as well as did the predictions of the election results. Polls showed that right before the election day, at least a quarter of German voters were still undecided.

Germany held the elections on 18 September 2005, except in a constituency in Dresden that held the elections on 2 October. Unsurprisingly, both candidates came close with the Christian Democrats receiving only 1% more votes and four more seats than the SPD. Exit polls showed that neither coalition group had won a majority of seats in the federal diet (Bundestag), and both parties lost seats compared to 2002. The SPD/Green coalition fell from 306 seats (in a house of 603) to 273 seats (in a house of 614). At the same time the CDU/CSU-FDP coalition fell from 295 seats to 286 seats. In the final distribution of seats in the federal diet, CDU

got 180 seats, CSU received 46 seats, FDP gained 61 seats, SPD got 222 seats, the Greens remained with 51 seats, and the recently formed left-wing Left Party (or PDS/WASG alliance) climbed up to 54 seats. The next parliamentary elections were to be held September 2009.

Neither of the coalitions (SPD-Greens and CDU/CSU-FDP) could achieve a majority of vote in the federal diet (Kanzlermehrheit) that is required to elect a chancellor. Both chancellors claimed a victory, but to make it functional, they had to negotiate with all of the parties to form an appropriate winning coalition. On 10 October, a round of negotiations ended with the Grand Coalition between the CDU/CSU and the SPD. Angela Merkel officially became chancellor on the condition that 16 seats in the new cabinet would be equally split up between the CDU/CSU and the SPD and with the SPD controlling 8 out of the 14 ministries, including the ministries of foreign affairs and finance.

## **15 LOCAL GOVERNMENT**

The Basic Law guarantees local self-government, and the states (Länder) are granted all powers not specifically reserved to the federal government. The Federal Republic consists of 13 Länder, and 3 free states (Freistaaten); Baden-Wuerttemberg, Bayern (Freistaat), Berlin, Brandenburg, Bremen, Hamburg, Hessen, Mecklenburg-Vorpommern, Niedersachsen, Nordrhein-Westfalen, Rheinland-Pfalz, Saarland, Sachsen(Freistaat), Sachsen-Anhalt, Schleswig-Holstein, and Thuringen (Freistaat).

Länder each have ministerial governments and legislatures. They have primary responsibility for the maintenance of law and order; jurisdiction over their own finances, taxes, and administration; and supreme authority in education and other cultural activities. Through the Bundesrat, the Länder have considerable influence in federal legislation and can prevent the central government from imposing radical reforms.

Communes (Gemeinden) are the basic units of local government, apart from the municipalities, and have the right to regulate such local matters as those involving schools, building, cultural affairs, and welfare. Halfway between the Länder and the communes are the counties (Landkreise), which have autonomy in such matters as road building, transportation, and hospitals. They are administered by a Landrat, the chief official, and a Kreistag (country legislature).

## **16 JUDICIAL SYSTEM**

Cases of the first instance are tried by local or Landkreis courts and the superior courts in each of the Länder. The Federal Court of Justice in Karlsruhe, the court of last resort in regular civil and criminal cases, consists of members appointed by a committee that includes federal and Land ministers and several Bundestag members. A court of appeal and the several Land and Landkreis courts are subordinate to the Karlsruhe tribunal. Special courts handle administrative, labor, financial, and social welfare matters. The Federal Constitutional Court, the highest court in the land, has competence to decide problems concerning the Basic Law and to test the constitutionality of laws. The court has 16 members: one 8-member panel elected by a committee of the Bundestag, the other by the Bundesrat.

The judiciary is independent of the legislative and judicial branches and remains free from interference or intimidation. The

Basic Law provides for the rights to a fair trial and prohibits arbitrary interference with privacy, family, home and correspondence. The government authorities generally respect these prohibitions.

## 17 ARMED FORCES

The unification of Germany in 1991 brought the amalgamation of the People's Army of the German Democratic Republic and the Bundeswehr of the Federal Republic—on the Bundeswehr's terms, modified by political guidance. Essentially, West Germany abolished the East German Ministry of Defense and officer corps, but kept much of the GDR's Russian equipment and a few of its career officers and noncommissioned specialists. The Bundeswehr occupied East German military installations and found many of them beyond repair for training and suitable housing. The Bundeswehr moved eastward with all deliberate speed, especially since six Russian divisions and a tactical air force still remained in German installations. (With dependents these dispossessed Russians numbered almost 500,000). Meanwhile, Germany's NATO allies still maintained an integrated ground and air forces of almost 250,000 troops in western Germany, although this force shrank with the departure of the Canadian and Belgian forces, and the reduction of the American and British contingents in the 1990s.

The German active armed forces in 2005 numbered 284,500, supported by 358,650 reserves. Active Army personnel numbered 191,350. The German Army has large amounts of equipment including 2,398 main battle tanks, 409 reconnaissance vehicles, 2,067 armored infantry fighting vehicles, 3,123 armored personnel carriers, and 1,682 artillery pieces. In addition, the Germans have abundant air defense weapons, helicopters, engineering equipment, and sophisticated antitank weapons.

The German Navy has 20,700 active members, including 3,700 naval aviation personnel. The Navy operates 13 tactical submarines and 14 major surface combat vessels (all frigates), 14 patrol and coast combatants, and 23 mine warfare ships.

The German Air Force numbered 51,400 active personnel in 2005. It is structured into the Air Force Command and Transport Command. Equipment for the air force includes 417 combat capable aircraft and 96 transport aircraft of all types.

In 2005 Germany's defense budget totaled \$30.2 billion. German armed forces are actively involved in peacekeeping and UN missions abroad. Germany has troops in France and Poland, and trains with the United States military.

## 18 INTERNATIONAL COOPERATION

The Federal Republic of Germany became a full member of the United Nations on 18 September 1973; it belongs to several non-regional specialized UN agencies. It is also an active participant in the Council of Europe, the European Union, NATO, OECD, OSCE, the Asian Development Bank, the African Development Bank, the Council of the Baltic Sea States, the Euro-Atlantic Partnership Council, the Caribbean Development Bank, G-5, G-7, G-8, and the Paris Club (G-10). Germany is a permanent observer of the OAS and a nonregional member of the West African Development Bank. The country is a member of the WTO.

Germany has supported UN operations and missions in Kosovo (1999), Ethiopia and Eritrea (2000), Sierra Leone (1999), and Georgia (1993). Germany is part of the Australia Group, the Zangger Committee, the Nuclear Suppliers Group (London Group),

the Nuclear Energy Agency, the Organization for the Prohibition of Chemical Weapons, and the European Organization for Nuclear Research (CERN).

In environmental cooperation, Germany is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Air Pollution; Ramsar; CITES; the London Convention; International Tropical Timber Agreements; the Kyoto Protocol; the Montréal Protocol; MARPOL; the Nuclear Test Ban Treaty; and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Germany, with a GDP of \$2.83 trillion (at market exchange rate) and \$2.43 trillion (purchasing power parity—PPP) in 2005, has the world's third-largest economy in exchange-rate terms and the fifth-largest economy measured by PPP. It is the largest economy in Europe. More than in most other advanced economies, manufacturing remains at the heart of the German economy, although the share of overall industrial output (excluding construction) in GDP declined from 26.9% in 1992 to 22.6% in 2002. As of 2005, the steelmaking sector in the Ruhr region had declined significantly, and agriculture had become a sector of only marginal importance for the economy as a whole.

Before unification in 1990, GNP in West Germany increased at an annual average rate of 7% between 1950 and 1960 and 5.4% between 1960 and 1970. This rate slowed to 3.1% between 1970 and 1980 and 2.3% between 1980 and 1990. However, the unification of Germany in October 1990 proved a heavy economic burden on the west. In 1992, the former East Germany accounted for only 8% of GDP. Transfer payments and subsidies for the east resulted in a large public deficit. Alarmed at the potential for inflation, the Bundesbank pursued a tight monetary policy. This boosted the value of the mark and had a recessionary effect on the European economy. The unemployment rate in 1993 was 7.3% in the west, but 15.8% in the east because so many antiquated, inefficient enterprises were unable to compete in a market economy. These factors led to the recession of 1992–93 with growth in the GDP dropping to 1.1%. The economy recovered in 1994, posting a growth rate of 2.9%, but declined to 1.9% in 1995 and 1% in 1996.

Strong exports in 1997 were expected to bring the growth rate back to 3.5% with sustained growth projected at 4–4.5% for 1998–2000. Such hopes failed to materialize, as the real growth rate for 1998 was 2.7%. The costs of reunification saddled the country with \$300 billion in debt, forcing western Germans to pay a 7.5% "solidarity" surtax for reconstructing the eastern section. Even with the infusion of cash, the eastern sector was essentially bankrupt in the late 1990s with 25% unemployment and worker output at 50% of its western counterpart. However, high unemployment did not result in a drop in the hourly wage rate. High labor costs also plague the west where workers average a 38-hour work week and enjoy six weeks of vacation per year. To remain competitive, German companies cut staff and relocated manufacturing jobs to lower-wage countries.

The coalition government of Social Democrats and Greens elected in 1998 pledged to combat Germany's economic sluggishness through a reform program dubbed "Future Program 2000." This program included budget cuts, tax reforms, and a major reform of the pension system. The government also tried to coor-

dinate better labor-management cooperation in its effort to implement its reforms. This coalition government was returned to power in 2002, and Chancellor Gerhard Schröder called on citizens to “renew Germany” by pulling together during difficult economic times. Germany, on the brink of recession, saw a drop in the government’s popularity. Schröder threatened to resign in 2003 if his reform package, called “Agenda 2010,” was not passed by 2004. This program included a relaxation of job protections, reductions in unemployment and health care benefits, and an easing of the rules on collective bargaining. Indeed, the Social Democrats’ traditional support from unions was compromised by the proposed reforms, including, as in France, pension reform: strikes broke out in Germany, France, Austria, and Italy in 2003 due to opposition to cuts in old-age benefits. Neither the reforms of “Agenda 2010” nor reduced taxation did much to improve consumer confidence for Germany’s industrial workers, who were unemployed in large numbers. The unemployment rate in Germany stood at 10.6% in 2004, and at 12.4% for the first quarter of 2005.

As a result of elections held in September 2005, a “grand coalition” of the Christian Democratic Union (CDU) and the Social Democratic Party (SDP), headed by Chancellor Angela Merkel, was faced with the task of implementing further economic reforms. Reforming business taxes was one item on the policy agenda. The federal corporation tax rate is 25%, with local taxes pushing the total tax burden on companies up to 38%.

GDP growth was predicted to be a weak 0.9% in 2005, and 1.1% in 2006, with consumer prices rising by 1.9% in 2005 and 1.8% in 2006. Germany was expected to be forced to meet the EU’s 3% budget-deficit ceiling by 2007. In 2005, a deficit of 3.7% of GDP was forecast, 3.4% in 2006, and 3.1% in 2007.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Germany’s gross domestic product (GDP) was estimated at \$2.4 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$29,700. The annual growth rate of GDP was estimated at 0.8%. The average inflation rate in 2005 was 2%. It was estimated that agriculture accounted for 1.1% of GDP, industry 28.6%, and services 70.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$5.693 billion or about \$69 per capita and accounted for approximately 0.2% of GDP.

The World Bank reports that in 2003 household consumption in Germany totaled \$1.408 trillion or about \$17,069 per capita based on a GDP of \$2.4 trillion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.5%. In 2001 it was estimated that approximately 14% of household consumption was spent on food, 7% on fuel, 2% on health care, and 10% on education.

## 2<sup>1</sup> LABOR

Germany’s labor force in 2005 was estimated at 43.32 million workers. Employment by sector in 2003 was as follows: industry 31.9%; agriculture 2.5%; services 65.5%; other occupations 0.1%. Unemployment was estimated at 11.6% in 2005.

The right to organize and to join trade unions is guaranteed by law. As of 2005, about 28% of the eligible labor force was unionized. In 1991, the western trade unions successfully expanded eastward, where they created western structures in the new states, totally dominating overall development so that no GDR trade union survived reunification. Disputes concerning the interpretation of labor agreements are settled before special labor courts. Wages and working conditions in virtually all commercial and industrial establishments are governed by collective bargaining agreements between employers’ associations and trade unions. Germany in 2005 did not have an administratively or legislated minimum wage rate.

As of 2005, children under the age of 15 were generally prohibited from employment, and these child labor laws were strictly enforced. Minors 13 and 14 years of age were permitted to work on a farm up to three per day, or deliver newspapers up to two hours per day. Although the average workweek ranges from 36 to 39 hours, the law allows a maximum workweek of 48 hours. Also mandated are a 25% premium for overtime; paid holidays and vacations (15 workdays annually, minimum, and 18 days for employees over 35 years of age); and a 10% premium for night work. However, under various collective bargaining agreements, most workers are entitled to an even greater wage premium for overtime work and even more vacation time than legally required (six weeks per year is typical). About 74% of Germany’s labor force in 2005 was covered by a collective bargaining agreement, which partly explains the relatively high wages in the absence of a minimum wage law, and why working time and vacation provisions exceed legal requirements. Health and safety standards are stringently regulated.

## 2<sup>2</sup> AGRICULTURE

Although 34% of the total area of Germany is devoted to crop production, production falls far short of satisfying industrial and consumer demand. Agriculture accounted for only 1% of GDP in 2003. The total amount of arable land in 2003 came to 12,040,000 hectares (29,750,000 acres). In 2003, the average size of Germany’s 420,697 farms was about 40 hectares (100 acres).

Article 15 of the 1990 Treaty (for monetary, economic and social union) arranged for transitional price supports for GDR farmers until an integration within the EU agricultural market could occur. Before reunification, agriculture had engaged about 6.1% and 3% of the economically active populations of the former GDR and old FRG, respectively. Agriculture engaged 2.5% of Germany’s population in 2002. The former GDR Länder contribute significantly to German agricultural production. The chief crops in order of yield in 2004 were sugar beets, 27,159,000 tons; wheat, 25,427,000 tons; barley, 12,933,000 tons; and potatoes, 13,044,000 tons. Apples and pears as well as cherries and peaches are significant fruit crops. In 2003, apple production was the smallest since 1995 from bad pollination and forest damage. Viticulture is important in the southwest, and Germany is a renowned producer of

wines for world consumption; 105 million liters of wine were produced in 2004. Germany is the world's second-largest importer of agricultural products (after the United States), with nearly \$50.8 billion in 2004.

### 23 ANIMAL HUSBANDRY

The government regulates the marketing of livestock, meat, and some dairy products; it also controls the distribution of livestock for slaughter and meat. Livestock in 2005 included 13,257,000 head of cattle (including five million milk cows), and 26,235,000 hogs, 2,138,000 sheep, 520,000 horses, 112,000,000 chickens, and 8,000,000 turkeys. Milk production amounted to 27.6 million tons in 2005; cheese, 2,074,000 tons; and butter, 444,000 tons. Meat production in 2005 included 4.5 million tons of pork, 1.1 million tons of beef, 1 million tons of poultry, and 54,000 tons of lamb, mutton, and goat. In 2002, of the 2.8 million cattle tested for BSE ("mad cow" disease), 0.003% were confirmed positive. Some 798,000 tons of eggs were produced in 2005. Germany is the leading meat, milk, and honey producer of Europe.

### 24 FISHING

The importance of the fishing industry has declined in recent years. At the beginning of 2004, the German fishing fleet consisted of 2,281 vessels with 66,008 GRT. In 2004, there were 88 fishery companies employing 9,004 people. The total catch in 2004 amounted to 288,000 tons, of which 125,000 tons came from domestic ports. The main fishing areas are the North Sea, the Baltic Sea, and the waters off Greenland. Overfishing is a serious environmental problem. The government subsidizes capacity reduction and modernization measures. The fish varieties accounting for the greatest volume are herring, mackerel, cod, and sardines. Aquaculture consists mostly of pond-raised trout and carp. Imports of fish products totaled 774,095 tons in 2004 (valued at \$2.63 billion), while exports amounted to 370,508 tons (valued at \$1.14 billion). Norway and Denmark together supply 40% of Germany's fish and seafood imports. Germany is the fourth-largest fish processing country in the EU (after the United Kingdom, France, and Spain). Processed fish production amounted to 474,428 tons in 2004, valued at \$1.91 billion.

### 25 FORESTRY

Total forest area amounted in 2000 to over 10.7 million hectares (26.5 million acres), about 31% of the total land area. Reforestation has resulted in a 6% increase in the forest area since the end of World War II (1939–45). Deciduous species (such as beech, oak, ash, maple, and alder) originally covered about two-thirds of the area, and conifers were only predominant in higher elevations. Today, hardwood trees comprise only one-third of the forests. Principal softwood species include silver fir, pine, spruce, and Douglas fir, which was introduced from the northwest United States late in the 19th century. The most thickly wooded of the federal Länder are Hessen and Rhineland-Pfalz. A total of 54 million cu m (1.9 billion cu ft) of timber was cut in 2005. The wood products industry consists of about 185,000 companies employing more than 1.3 million people, larger than the German automotive industry. Almost half of the raw timber is used by sawmills for lumber production. The German sawmilling industry consists of about 2,500 sawmills producing around 17 million cu m (600 mil-

lion cu ft) of softwood lumber and 1.2 million cu m (42.4 million cu ft) of hardwood lumber. Total trade in forest products during 2004 included \$14.8 billion in imports and \$6.3 billion in exports. Output of paper and paperboard totaled 20.4 million tons in 2004, highest in Europe. High domestic labor costs compel Germany to import substantial quantities of value-added products such as veneers and panels.

### 26 MINING

Germany's export-oriented economy was the largest in Europe. Approximately one-third of Germany's gross domestic product (GDP) depended upon exports. Germany was also a major processing nation, relying on imports of raw materials for the metals processing industry and the manufacture of industrial mineral products. The country was a leader in the mining equipment manufacturing sector, and was among the largest and most technologically advanced producers of iron, coal, and cement. Although the underground mining sector has steadily declined, certain minerals remained important domestically and worldwide. In 2003, Germany was the world's largest lignite producer, the world's third-largest producer of potash, a leading producer of kaolin in Western Europe, a major European producer of crude gypsum, and self-sufficient in feldspar and salt. The only metal mineral still mined in Germany was uranium.

Except for the very large lignite and potash operations, most of the producing and processing facilities in operation were small. The restructuring and privatization of facilities in the former German Democratic Republic (GDR) continued in 2003, including of the mineral-resource industries. Production figures for 2003 were, in million tons: potash, 3.563; kaolin, 3.5; marketable gypsum and anhydrite, 1.748, down from 1.761 in 2001; feldspar, 0.5; industrial dolomite and limestone, 106, up from 76 in 2001; and marketable salt (evaporated, rock, and other), 16.3, up from 15.6 in 2001. In 2003, Germany also produced barite; bromine; chalk; clays (bentonite, ceramic, fire, fuller's earth, brick); diatomite; fluorspar; graphite; lime; quicklime; dead-burned dolomite; nitrogen; phosphate materials, including Thomas slag; mineral and natural pigments; pumice; dimension stone; quartz; quartzite; slate; building sand; gravel; terrazzo splits; foundry sand; industrial glass sand; talc; and steatite. In terms of overseas developments, Süd-Chemie AG was the largest bentonite producer in Europe. Between 140 and 160 small- to medium-sized clay mines were in operation; about one-half of the high-quality refractory and ceramic clays produced were from the Rhineland-Palatinate area. No iron ore was mined in 1999 and 2000; demand was met by imports of 47 million tons.

### 27 ENERGY AND POWER

Germany is the greatest consumer of electric power in Europe. In 2003, total installed capacity was estimated at 119.8 GW. Total production of electric power in that year amounted to an estimated 558.1 billion kWh, of which 63% was produced in conventional thermal plants (mainly fueled by hard coal), 28% in nuclear installations, and 6% from other renewable sources. As of November 2005, there were 17 nuclear plants, and as of 2003, Germany ranked fourth internationally in nuclear power generation. In 2001, the German government and its utility companies signed an

agreement to gradually phase out nuclear power over the coming decades due to environmental concerns.

Proven natural gas reserves were estimated at 9.9 trillion cu ft, as of 1 January 2005. Domestic production in 2003 accounted for slightly more than 24% of the natural gas consumed in 2003. In that year, domestic demand for natural gas was put at an estimated 3.3 trillion cu ft, while domestic production that year was estimated at 0.8 trillion cu ft. Major natural gas suppliers to Germany are Russia, the Netherlands, and Norway. In 2000 production began at Germany's first offshore gas field in the North Sea. It is expected to produce 3.3 billion cu m (116 billion cu ft) of gas per day for 16 years. Production of oil was estimated at 169,300 barrels per day in 2005, of which 38% was crude oil. Local production is not sufficient to cover consumption, which totaled an estimated 2.6 million barrels per day in 2005.

Germany has extensive coal reserves. In 2003, recoverable reserves of coal totaled an estimated 7,428.5 million short tons, with consumption and production estimated at 273 million short tons and 229.1 million short tons, respectively, for that same year. Germany's hard coal (anthracite and bituminous) deposits lie deep underground and are difficult to mine economically. As a result, hard coal extraction is subsidized by the government, which for 2005, plans to spend \$3.5 billion for subsidies. However, by 2012, coal subsidies are slated to fall to \$2.3 billion, the result of a pact with the coal industry reached in 1997. Brown coal, or lignite, however, is easier to obtain and does not require subsidies from the government. It also accounts for the vast bulk of German coal output. In 2003, of the 273.0 million short tons of coal produced, brown coal accounted for 86% of production, with 13% for bituminous and 1% for anthracite. The lignite industry, which is centered in the eastern part of the country, was drastically changed as a result of unification and the introduction of the strict environmental and safety laws of the pre-1991 FRG.

Germany is also looking at renewable energy sources. Under the Renewable Energy Sources Act, Germany is looking to have 12.5% of its energy supplied by renewable sources by 2010, and 20% by 2020. During the 1990s, more than 5,000 electricity-generating windmills were installed in Germany, mostly along the North Sea coast, and wind power is expected to supply 3.5% of electricity by 2010. As of November 2005, Germany had 14,600 MW of installed wind power capacity and 390 MW of installed solar voltaic capacity.

## 28 INDUSTRY

Germany is the world's third-largest industrial power, behind the United States and Japan. The major industrial concentrations of western Germany are the Ruhr-Westphalia complex; the Upper Rhine Valley, Bremen and Hamburg, notable for shipbuilding; the southern region, with such cities as Munich and Augsburg; and the central region, with such industrial cities as Salzgitter, Kassel, Hanover, and Braunschweig. In the east, most of the leading industries are located in the Berlin region or in such cities as Dresden, Leipzig, Dessau, Halle, Cottbus, and Chemnitz.

The main industrial sectors in the former GDR were electrical engineering and electronics, chemicals, glass, and ceramics. The optical and precision industries were important producers of export items. Following unification, wages in the east were allowed to reach levels far exceeding productivity. As a result, many facto-

ries closed and industrial production plunged by two-thirds before stabilizing.

German industry has been struggling with high labor costs, stiff international competition, and high business taxes. Large industrial concerns like Daimler-Benz have spun off unprofitable companies, cut staff, and are looking for ways to boost productivity. Policies such as these have led to a loss of some two million industrial jobs since 1991. Other companies, like the electronics giant Siemens, have moved plants abroad in search for lower labor costs and to secure positions in developing economies like China and Thailand.

Despite the costs of restructuring the former GDR, Germany had some of the largest and most successful companies in the world as of late 2005, from automobiles to advanced electronics, steel, chemicals, machinery, shipbuilding, and textiles. German industrial products are known for their high quality and reliability. Nevertheless, the global recession that began in 2001 negatively affected German industry, with 45,000 insolvencies in 2002, including Holzmann, the large construction company. The construction industry, which experienced a post-reunification boom in the early 1990s, experienced an 8% drop in orders at the beginning of 2002. Although German industry (excluding construction) as a percentage of GDP declined from 26.9% in 1992 to 22.6% in 2002, manufacturing in 2005 remained at the heart of the German economy.

## 29 SCIENCE AND TECHNOLOGY

The reunification of East and West Germany has created great opportunities for the entire population but has also placed great strains on the nation. Perhaps nowhere is this more evident than in science, engineering and technical education, and vocational training. Germany maintains an excellent science and technology educational system and vocational training in many fields. About 140,000 science and engineering students graduated per year in the last years of the 20th century. Still, the challenge of incorporating the former German Democratic Republic (GDR) into a complete and modern German nation is daunting. Public and university research facilities in the former East Germany are old and poorly maintained, and science and engineering students have been found to be poorly trained and equipped to work in more modern West German institutions and companies. It is believed that the German government will need to completely rebuild the science and technology infrastructure in the former GDR before it can compare with more modern German facilities.

The German national science and technology budget is applied to many areas of science and technology, and leading fields include traditional areas of German strength, like chemical, automotive and telecommunications research and development. Current policy emphasizes the application of science and technology to enhance Germany's economic and competitive standing, while protecting the nation's health and the environment. Support for science and technology also occurs at other levels. There are independent laboratories, comprised of both the national laboratories and private research institutes like the Max Planck and Fraunhofer Societies. In addition, German industry supports many important types of research and development, and the German states, or *Länder*, provide still more resources for scientific research. The Ministry for Science and Technology (BMFT), an organization

without parallel in the United States, both coordinates and sets priorities for the entire national science and technology program. Finally, Germany's participation in the European Union also has a significant science and technology component—Germany provides funding, scientists, and laboratories for broad European research and development. In 2003 total research and development (R&D) expenditures in Germany amounted to \$56,592.7 billion, or 2.64% of GDP. Of that total, 65.5% came from the business sector, followed by the government at 31.6%, the foreign sector at 2.3%, and by higher education at 0.4%.

In 2002, there were 3,222 scientists and engineers and 1,435 technicians per million people that were actively engaged in R&D. High-tech exports that same year were valued at \$86.861 billion, accounting for 17% of manufactured exports.

Germany has numerous universities and colleges offering courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 47% of university enrollment. In 2002, of all bachelor's degrees awarded, 30.2% were in the sciences (natural, mathematics and computers, and engineering).

The Natural History Museum in Berlin (founded in 1889) has geological, paleontological, mineralogical, zoological, and botanical components. The country has numerous specialized learned societies concerned with agriculture and veterinary science, medicine, the natural sciences, and technology.

### 30 DOMESTIC TRADE

Wholesalers, retailers, mail-order houses, door-to-door salespersons, department stores, consumer cooperatives, and factory stores all engage in distribution. There are about 630,000 commercial enterprises in Germany, with over than 760,000 local units. Nearly 5 million people are employed in domestic trade, which has a yearly turnover of over €1 trillion.

Chain stores are common, with the top 10 German retail organizations accounting for almost 80% of total German retail turnover. Convenience shops are a fast growing market outlet in Germany.

The economy is generally described as a “social market economy.” The state continues to own some major sections of the economy and provides subsidies for the growth and development of some sectors. However, free enterprise and competition are encouraged. Privatization of public utilities has resulted in greater competition and lower prices. The economy as a whole is primarily export oriented, with nearly one-third of national product exported.

Usual business hours for retail stores are from 9 AM to 6 or 6:30 PM on weekdays and from 9 AM to 4 PM on Saturday. Retail stores are not open on Sundays or holidays unless they have a special limited permit allowing them to be open. Twenty-four-hour shopping is available only at certain gas stations and at other sites related to travel. Wholesale houses and industrial plants usually have a half day (noon closing) on Saturday. Banks are open Monday–Friday from 8:30 AM to 1 PM and from 2:30 PM to 4 PM (5:30 PM on Thursday).

### 31 FOREIGN TRADE

Germany is one of the world's great trading nations. In 2003 and 2004 it was the largest exporter in the world. In 2004, Germany's exports amounted to \$909.7 billion, compared with the United

States' \$811.1 billion. German imports stood at \$717.9 billion, resulting in a trade surplus of \$191.8 billion in 2004.

Manufactured products are the leading exports. Germany supplies a large portion of the world with automobiles and car parts. Germany's motor vehicle exports made up 18.4% of its total exports in 2004. Diverse machinery exports, including nonelectrical and electrical parts, also account for a large percentage of the world's exports in those commodities (and 14% of Germany's total exports in 2004). Chemical products, telecommunications technology, in addition to devices for electricity production and distribution, are the next leading exports. The leading markets for Germany's goods in 2004, in order of importance, were France, the United States, the United Kingdom, Italy, and the Netherlands.

In 2004, Germany's major imports were chemical products (11% of total imports), motor vehicles (10.3%), petroleum and natural gas (6.8%), machinery (6.7%), and computers and related products (4.8%). Germany's leading suppliers in 2004, in order of importance, were France, the Netherlands, the United States, Italy, and the United Kingdom.

### 32 BALANCE OF PAYMENTS

After experiencing deficits during 1979–81, Germany's current accounts balance rebounded to a surplus of about DM9.9 billion in 1982 and then kept rising to DM76.5 billion in 1986, primarily because of falling prices for crude oil and other imports, combined with appreciation of the deutsche mark relative to other European currencies. By 1989, Germany's current account surplus was nearly 5% of GNP. With reunification, however, this changed immediately. Imports rushed in as former-GDR residents sought newly available consumer goods, and exports fell as goods and services were diverted to the east. As a result, Germany recorded current account deficits since 1991, created in part because of the substantial foreign borrowing undertaken to finance the cost of unification. Even so, large current account surpluses from the 1970s and 1980s helped Germany to maintain its position as the world's second-largest creditor with net foreign assets estimated at \$185 billion in 1995. From 1990 to 1996, however, Germany's share of world exports dropped from 12% to 9.8% due in large part to high

labor costs which were making it hard for Germany to compete in the global economy. Germany in 2001 ranked second behind the United States in numbers of both exports and imports, and ran a current account surplus. By 2004, it was the world's leading exporter, and had a current account surplus estimated at \$73.59 billion.

**33 BANKING AND SECURITIES**

The central banking system of Germany consists of the German Federal Bank (Deutsche Bundesbank), currently located in Frankfurt am Main (but which is expected to move to Berlin, the capital), one bank for each of the Länder (Landeszentralbanken), and one in Berlin, which are the main offices for the Federal Bank. Although the Federal Bank is an independent institution, the federal government holds the bank's capital and appoints the presidents as well as the board of directors; the Central Bank Council acts as overseer. All German banks are subject to supervision by the German Federal Banking Supervisory Authority (Bundesaufsichtsamt für das Kreditwesen) in Berlin.

The Federal Bank is the sole bank of issue. Until the advent of the euro in 1999 it set interest and discount rates. These functions are now the domain of the European Central Bank (ECB). However, the Federal Bank maintains a leading role in domestic banking. The largest commercial banks are the Deutsche Bank, Dresdner Bank, and Commerzbank. In 1997 Germany had 232 commercial banks, including the "big three," 56 subsidiaries or branches of foreign banks, and 80 private banks. There are also 13 central giro institutions. In addition, there are 657 savings banks and 18 credit institutions with special functions, including the Kreditanstalt für Wiederaufbau (Reconstruction Loan Corporation), which is the channel for official aid to developing countries. In all, there were over 45,000 bank offices in 2002. The German financial system includes just under 2,700 small industrial and agricultural credit cooperatives and allied institutions, in addition to four central institutions; 33 private and public mortgage banks that obtain funds

from the sale of bonds; the postal check and postal savings system; and 34 building societies. In April 2000, a proposed merger between two of the "big three," Deutsche Bank and Dresdner Bank, collapsed. The deal would have reduced operating costs by relieving both banks of their branch networks.

After the Bundesbank just missed its target range for M3 growth for 1996 of 4% to 7%, it decided on a two-year target for monetary supply growth to cover the 1997-98 period leading up to the planned hand-over of responsibility to the ECB on 1 January 1999.

In 1996 Moody's Investments Service capped an extremely poor year for Deutsche Bank by reducing its triple A rating to Aa1. This reflects the fact that elite banks are finding it harder to retain the triple A rating as banking becomes internationally more competitive. Deutsche Bank announced that it hoped to shed 1,300 employees through attrition by 2000.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$544.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1,849.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.37%.

Under the constitution, the governments of the Länder regulate the operations of stock exchanges and produce exchanges. Eight stock exchanges operate in Berlin, Bremen, Düsseldorf, Frankfurt, Hamburg, Hannover, Munich, and Stuttgart. Germany has several other independent exchanges for agricultural items. There are no restrictions on foreign investments in any securities quoted on the German stock exchanges. However, a foreign (or domestic) business investor that acquires more than 25% of the issued capital of a German quoted company must inform the company of this fact. The most notable recent banking legislation is the January 2002 elimination of the capital gains tax on holdings sold by one corporation to another. In 2004, a total of 660 companies were listed on the Deutsche Borse AG. Market capitalization in 2004 totaled 41,194.517 billion. The DAX in 2004 rose 7.3% from the previous year to 4,256.1.

**34 INSURANCE**

In 2003, the value of direct premiums written totaled \$170.811 billion, of which nonlife premiums accounted for \$94.073 billion. Germany's top nonlife insurer in that same year was Allianz Versicherungswirtschaft with gross nonlife premiums written of \$9,071.1 million. The country's leading life insurer that year was Allianz Leben, with \$11,554.2 billion in life insurance premiums written. Worker's compensation, third party automobile liability, legal liability for drug companies, airlines, hunters, auditors, tax advisors, security firms, architects, lawyers, nuclear power station operators, and accident and health insurance are compulsory. The insurance sector is highly regulated and, despite the opening of the European Union (EU) market, it will be difficult for foreign companies to win the confidence of potential German customers.

**35 PUBLIC FINANCE**

The 1967 Law for the Promotion of Economic Stability and Growth requires the federal and state governments to orient their budgets to the main economic policy objectives of price stability,

high employment, balanced foreign trade, and steady commensurate growth. The Financial Planning Council, formed in 1968, coordinates the federal government, states, municipalities, and the Bundesbank in setting public budgets. Income, corporate turnover, mineral oil, and trade taxes account for more than 80% of all tax revenue, with the federal government controlling just under half of it. Since the 1960s, social insurance provisions have accounted for the largest share of federal expenditures. Germany's reunification in 1990 raised special problems with regard to economic and financial assimilation. The Unification Treaty provided that the new states should be incorporated in the financial system established by the Basic Law as much as possible from the onset. Therefore, since 1991, the new states have basically been subject to the same regulations with regard to budgetary management and tax distribution as the western states. A "German Unity Fund" was initiated to provide financial support for the new states (and their municipalities); it is jointly financed by the western states, with most of the money being raised in the capital market.

The US Central Intelligence Agency (CIA) estimated that in 2005 Germany's central government took in revenues of approximately \$1.2 trillion and had expenditures of \$1.3 trillion. Revenues minus expenditures totaled approximately -\$113 billion. Public debt in 2005 amounted to 68.1% of GDP. Total external debt was \$3.626 trillion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were €653.46 billion and expenditures were €698.61 billion. The value of revenues was us\$738 million and expenditures us\$788 million, based on a market exchange rate for 2003 of us\$1 = €.8860 as reported by the IMF. Government outlays by function were as follows: general public services, 13.7%; defense, 3.6%; public order and safety, 0.4%; economic affairs, 6.7%; environmental protection, 0.1%; housing and community amenities,

0.9%; health, 19.3%; recreation, culture, and religion, 0.1%; education, 0.4%; and social protection, 54.8%.

### 36 TAXATION

In 2000, the German tax system underwent a major reform featuring a dramatic reduction in taxes on business (from a corporate income tax rate of 40% to 25%, and the elimination altogether of a 53% tax on investment profits), as well as a scheduled reduction in the top income tax rate to 42% by 2005 from 56% in the 1980s, and 53% in 2000. As of 2005, Germany's corporate income tax rate was 25%, plus a 5.5% surcharge. There is also a 5% basic trade tax, although rates in the main cities range from 20–25%. A nonresident corporation, whose headquarters and management are outside of Germany, does not have to pay the surcharge. Business related capital gains are taxed as income, with a 95% exemption on gains from the sale of most shareholdings by companies for tax years ending after 31 December 2003. Business activities are also subject to municipal trade taxes of 12–20.5%, depending upon the municipality.

As of 2005, Germany's progressive individual income tax had a top rate of 42%, plus a 5.5% surcharge. Although self-employed persons are subject to the country's trade tax, the tax can be credited against a person's individual income tax. In 2005 the progressive schedule of income tax rates saw an increase in the 0%, tax-free base to €7,665, with decreases in other brackets. However, the threshold for the highest tax rate decreased from €55,008 in 2002 to €52,293 in 2003 to €52,152 in 2005. Rates and exemptions depend on the number of children, age, and marital status of taxpayer. Individuals also pay an 8–9% church tax, although non-churchgoers, and members of the Orthodox or Anglican Churches are exempt from paying any church tax. Other direct taxes include an inheritance and gift tax, a net worth tax, and a 2% real estate transfer tax.

The main indirect tax in Germany is a value-added tax (VAT) introduced in 1968 with a standard rate of 10%. By 2003, the standard rate had risen to 16%. A reduced rate of 7% applies to some basic foodstuffs, water supplies, medical care and dentistry, medical equipment for disabled persons, books, newspapers and periodicals, some shows, social housing, agricultural inputs, social services, and public transportation. Items exempt from the VAT include admissions to cultural events, building land, supplies for new buildings, TV licenses, telephones and faxes, basic medical and dental care, the use of sports facilities, and some waste disposal services. Exports are also zero-rated.

### 37 CUSTOMS AND DUTIES

Germany is a member of the European Union and thus has a common import customs tariff and complies with trade agreements put in place by the EU. Germany is also a contracting party to the Harmonized System Convention. In regard to trade with non-EU countries, most raw materials enter duty-free, while most manufactured goods are subject to varying rates between 5% and 8%. Germany levies a 15% value-added tax on industrial goods.

### 38 FOREIGN INVESTMENT

All foreign investment must be reported to the German Federal Bank (Bundesbank), but there are no restrictions on the repatriation of capital or profits. Until the 1998 deregulation of Deutsche

Telekom, telecommunications remained closed to foreign investment. There is no special treatment for foreign investors. As of 2005, incentives for investment in the former GDR deemed to be desirable included accelerated depreciation, loans at below-market interest rates, and cash investment grants and subsidies. Still applicable in all of Germany as of 2005 were cash grants; tax incentives such as capital reserve allowances and special depreciation allowances; investment grants; and credit programs, including low-interest loans. Foreign firms may also participate in government and/or subsidized research and development programs.

Although few formal barriers exist, high labor costs have discouraged foreign companies from setting up manufacturing plants in Germany. Nevertheless, the German government and industry enthusiastically encourage foreign investment in Germany. German law provides foreign investors national treatment.

There are eight free ports in Germany operated under EU Community law. These duty-free zones within the ports are open to both domestic and foreign entities.

Across the 10-year period 1991 to 2001, total foreign direct investment (FDI) totaled \$393 billion, the third highest total in the world. Half of this came in 2000, when FDI inflow reached over \$195 billion. Annual FDI inflow had been \$12 billion in 1997, rising to \$24.5 billion in 1998, to \$54.7 billion in 1999. With the bursting of the dot.com bubble in 2001, FDI inflow to Germany fell to about \$21.1 billion in 2001 and was estimated at \$36.2 billion in 2002.

According to the Bundesbank, FDI in Germany in 2003 (the latest figures available) had fallen to \$12.9 billion, about two-thirds less than the 2002 high. In GDP terms, 2003 flows of FDI represented 0.6% of Germany's GDP, while the total stock of FDI in 2003 equaled 26.1% of GDP.

FDI outflows from Germany peaked at almost \$106.5 billion in 1999. FDI outflows were about \$36.9 billion in 2001 and \$8.7 billion in 2002. German flows of direct investment abroad plunged to \$2.6 billion in 2003.

### **39 ECONOMIC DEVELOPMENT**

Germany describes its economy as a "social market economy." Outside of transportation, communications, and certain utilities, the government has remained on the sidelines of entrepreneurship. Beginning in 1998, and in line with EU regulations, the German government began deregulating these fields as well. It has, nevertheless, upheld its role as social arbiter and economic adviser. Overall economic priorities are set by the federal and Land governments pursuant to the 1967 Stability and Growth Act, which demands stability of prices, a high level of employment, steady growth, and equilibrium in foreign trade. In addition to the state, the independent German Federal Bank (Bundesbank), trade unions, and employers' associations bear responsibility for the nation's economic health. With the advent of the euro in 1999, much of the Federal Bank's authority in monetary matters was transferred to the European Central Bank (ECB). In the international arena, Germany has acted as a leader of European economic integration.

Government price and currency policies have been stable and effective. Less successful have been wage-price policies, which have been unable to control a continued upward movement. Inflationary pressures have increased and combined with a gener-

al leveling off in productivity and growth. Attempts to neutralize competition by agreements between competitors and mergers are controlled by the Law Against Restraints of Competition (Cartel Act), passed in 1957 and strengthened since then. The law is administered by the Federal Cartel Office, located in Bonn.

Unemployment remained at an average 9% in the early 2000s; it was twice as high in eastern Germany as in western Germany. As of the first quarter of 2005, the unemployment rate stood at 12.4%. Although much effort has been expended to integrate the former East German economy with the West's (infrastructure has improved drastically and a market economy has been introduced), progress in causing the two economies to converge slowed in the late 1990s and early 2000s. Annual transfers from West to East amounted to approximately \$70 billion in 2005. Germany had the weakest GDP growth in the EU from 1994–2003, when Germany's economy was moribund.

The aging population, combined with high unemployment, has pushed social security outlays to a level exceeding contributions from workers. Corporate restructuring and growing capital markets are setting the foundations allowing Germany to thrive globally and to lead the process of European economic integration, particularly if labor-market rigidities are addressed. However, in the short run, rising expenditures and lowered revenues have raised the budget deficit above the EU's 3% debt limit.

### **40 SOCIAL DEVELOPMENT**

The social security system of the FRG remained in place following unification with the German Democratic Republic. However, the GDR system continued to apply on an interim basis within the former GDR territory. The two systems were merged effective 2 January 1992. The social insurance system provides for sickness and maternity, workers' compensation, disability, unemployment, and old age; the program is financed by compulsory employee and employer contributions. Old age pensions begin at age 65 after five years of contribution. Worker's medical coverage is comprehensive, including dental care. Unemployment coverage includes all workers, trainees, apprentices, and at-home workers in varying degrees. The government funds a family allowance to parents with one or more children.

Equal pay for equal work is mandated by law, but women continue to earn less than men. Women continue to be underrepresented in managerial positions. Sexual harassment of women in the workplace is recognized and addressed. Although violence against women exists, the law and government provides protection. Victims of violence can receive police protection, legal help, shelter and counseling. Children's rights are strongly protected.

Freedom of religion is guaranteed by the Basic Law in Germany, although there have been reports of some discrimination against minority religions. Extremist right-wing groups continue to commit violent acts against immigrants and Jews although the government is committed to preventing such acts. The Basic Law also provides for the freedom of association, assembly, and expression.

### **41 HEALTH**

Health insurance in Germany is available to everyone. Benefits are broad and nationally uniform, with only minor variations among plans. They include free choice of doctors; unlimited physician

visits; preventive checkups; total freedom from out-of-pocket payments for physician services; unlimited acute hospital care (with a nominal co-payment); prescription drug coverage (with a minimal co-payment); comprehensive dental benefits (with a 25–30% co-payment); vision and hearing exams, glasses, aids, prostheses, etc.; inpatient and psychiatric care (and outpatient psychiatric visits); monthly home care allowances; maternity benefits; disability payments; and rehabilitation and/or occupational therapy. Health care expenditure was estimated at 10.5% of GDP. Expenditures on health are among the highest in the world.

In 2004, there were approximately 362 physicians, 951 nurses, 78 dentists, and 58 pharmacists per 100,000 people. There were about 2,260 hospitals in Germany, with about 572,000 beds. A gradual deinstitutionalization of people with chronic mental illness has taken place, with the number of hospital beds declining from 150,000 in the former West Germany in 1976 to a total of 69,000 in Germany as a whole as of 1995. Germany immunized 85% of children up to one year old against diphtheria, pertussis, and tetanus.

Average life expectancy was 78.65 years in 2005. Infant mortality was 4.16 per 1,000 live births in the same year, one of the lowest in the world. As of 2002, the birth rate was estimated at 8.9 per 1,000 live births and the overall death rate at 10.4 per 1,000 people. Contraceptive use is high. Nearly 75% of married women 15–49 used some form of birth control. The total fertility rate in 2000 was 1.4 children per woman throughout her childbearing years. The maternal mortality rate was low at 8 deaths per 100,000 live births.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 43,000 people living with HIV/AIDS in the country. There were an estimated 1,000 deaths from AIDS in 2003.

Tobacco consumption has decreased significantly from 2.4 kg (5.3 lbs) in 1984 to 2.1 kg (4.6 lbs) a year per adult in 1995. The heart disease average in Germany was higher than the European average.

## 4<sup>2</sup> HOUSING

Nearly 2.8 million of the country's 12 million dwellings were destroyed or made uninhabitable as a result of World War II. In the early 1950s, there were 10 million dwellings available for 17 million households. From 1949 to 1978, over 18 million housing units were built, a construction rate of over 500,000 a year; since then, new construction has slowed, averaging 357,000 new units annually during the period 1980–85. Over 4.2 million housing units were built in 1991 or later (excluding residential homes).

Over half of the population live in residential buildings of three or more dwelling units. Nearly 98% of all dwelling units are in such multi-unit residential buildings; of these, about 42.6% are owner occupied. About 69% of the dwelling units in residential buildings have central heating systems. Gas and oil are the most common energy sources. In 2002, there was a total of about 38,957,100 dwelling units nationwide; only 254,900 were residential homes. The average number of persons per household is 2.2.

## 4<sup>3</sup> EDUCATION

Most schools and kindergartens are the responsibility of the states, not of the federal government. Therefore, though the overall struc-

ture is basically the same, it is difficult for a pupil to transfer from one school to another. German teachers are civil servants. They are required to have a teaching degree and are paid according to a uniform salary scale. Attendance at all public schools and universities is free.

Children start school after their sixth birthday and are required to attend on a full-time basis for nine or ten years, depending on the state of residence. After four years of primary or elementary school (*Grundschule*), students choose from three types of secondary school. The best pupils go to a gymnasium, which prepares them for the university matriculation examination, or *abitur*. A second option is the *realschule*, leading to technical job training and middle-management employment. The third type is the *hauptschule*, or general school.

However, a network of correspondence courses has developed, geared for those who wish to continue their studies while working. In Germany, vocational training is the rule. On-the-job training in an authorized company is combined with instruction in a vocational school. Vocational training is concluded by taking a theoretical and practical examination before a Board of the Chamber, and those who pass are given a certificate. This system of vocational training has clearly reduced youth unemployment.

In 2001, nearly all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment has been estimated at about 84% of age-eligible students. In 2003, secondary school enrollment was about 88% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 14:1 in 2003; the ratio for secondary school was also about 14:1.

Higher education is represented by three types of institutions: universities (*technische universitäten*), colleges of art and music, and universities of applied sciences (*fachhochschulen*). There are also several *fachschulen*, which offer continuing vocational training for adults. In 2003, about 51% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate has been estimated at about 99%.

As of 2003, public expenditure on education was estimated at 4.8% of GDP, or 9.5% of total government expenditures.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

Germany had no national library until 1913, when the German Library (7.2 million volumes in 2002) in Leipzig brought together an extensive collection literature of the German language under one roof. The library also contains 3.9 million volumes of works written in exile by German authors during the Nazi era. In 1990 a further consolidation of German libraries was completed with the establishment of the German Library in Frankfurt, which had 18 million volumes in 2002. Other prominent libraries are the Bavarian State Library in Munich (7.6 million books) and the Prussian Cultural Property State Library (10 million books) in Berlin. The Herzog-August Library in Wolfenbüttel (848,000 volumes) has archives of 12,000 handwritten medieval books. One of the most important collections of German literature is at the Central Library of German Classics in Weimar. The Berlin Central and Regional Library, the public library network for the area, contains over 3.1 million print and electronic sources. The German Library for the Blind in Leipzig was founded in 1894. It serves as a pub-

lishing house and production center for Braille texts and audio books, as well as a public lending library containing 40,000 book titles and 5,000 titles of sheet music in Braille.

Germany has more than 4,500 state, municipal, association, private, residential, castle, palace, and church and cathedral treasures museums, which annually attract over 100 million visitors. Berlin has the Egyptian and Pergaman Museums, the Painting Gallery of Old Masters, and the National Gallery of Modern Art. The Jewish Museum opened in Berlin in 2001 offering exhibits on the history and culture of the Jewish people in the region. The Germanic National Museum in Nuremberg has the largest collection on the history of German art and culture from antiquity to the 20th century. The German Museum in Munich is one of the most well known natural sciences and technology museums in Europe. The Pinakothek Moderne, opened in 2003, houses a huge modern art collection in Munich. In addition, there are hundreds of smaller museums, ethnological and archaeological institutions, scientific collections, and art galleries.

The Bach Archive in Leipzig contains a museum, research institute, and library dedicated to the life and work of the composer J.S. Bach, who once served as the city's music director. Beethoven Haus in Bonn and the Richard Wagner Museum Haus in Bayreuth honor two more famous German composers. Museums on the life and work of Goethe are located in Frankfurt (birthplace) and Weimer. Lutherhaus in Wittenberg serves as a historical museum for both the life and work of Martin Luther and the Protestant Reformation that he ignited.

#### 45 MEDIA

Since reunification, postal services have been under the jurisdiction of the Deutsche Bundespost Postdienst and telecommunications under Deutsche Bundespost Telekom. Intensive capital investments since reunification have rapidly modernized and integrated most of the obsolete telephone network of the former GDR. In 2003, there were an estimated 657 mainline telephones for every 1,000 people. The same year, there were approximately 785 mobile phones in use for every 1,000 people.

There are 11 regional broadcasting corporations, including Zweites Deutsches Fernsehen, which operates Channel Two nationally. In 1999 there were 77 AM, 1,621 FM, and 373 television stations. In 2003, there were an estimated 570 radios and 675 television sets for every 1,000 people. About 250.8 of every 1,000 people were cable subscribers. Also in 2003, there were 484.7 personal computers for every 1,000 people and 473 of every 1,000 people had access to the Internet. There were 13,847 secure Internet servers in the country in 2004.

There are about 305 national, regional, and local newspapers in Germany, as well as a large number of other periodicals. Of the newspapers sold on the street, the *Bild* has the largest circulation at about 3.8 million in 2005. The *Berliner Zeitung*, founded in 1945 but completely redesigned in 1997, is a nationally prominent daily with a circulation on 2005 of about 180,000. Other influential daily national newspapers (with 2005 circulation rates unless noted) are: the *Express* (Cologne, 468,800 in 2004), *Rheinische Post* (Duesseldorf, 443,100 in 2004), the *Sächsische Zeitung* (Dresden, 416,800 in 2004), the *Frankfurter Allgemeine Zeitung* (Frankfurt, 377,000), *Die Welt* (244,000 in 2004), *Frankfurter Rundschau*

(167,000), *Süddeutsche Zeitung* (Munich, 437,000), *Der Tagesspiegel* (135,000), and *Die Tageszeitung* (59,000).

Over 20,000 periodicals are published in Germany. The best-known internationally is the news magazine *Der Spiegel* which is modeled after the American *Time* magazine. The German Press Agency, owned by German newspaper publishers and publishers' organizations, furnishes domestic and international news. There are hundreds of small press agencies and services.

The Basic Law provides for free press rights, and the government mostly supports these rights in practice, though propaganda of Nazi and certain other proscribed groups is illegal, as are statements endorsing Nazism.

#### 46 ORGANIZATIONS

The Federation of German Industries, the Confederation of German Employers' Associations, the Federation of German Wholesale and Foreign Traders, and the Association of German Chambers of Commerce represent business in the FRG. There are about 14 regional associations of chambers of business and industry located in the largest cities; many maintain branch offices in smaller cities. The chambers are organized into provincial associations and are headed by the Permanent Conference of German Industry and Trade. The cooperative movement is well developed. Consumer cooperatives are represented in the International Cooperative Alliance by the Central Association of German Cooperatives, founded in 1949; it also represents credit cooperatives. The central association of agricultural cooperatives, the German Raiffeisen Society, is located in Wiesbaden. The Association of German Peasants is the largest society of farmers. There is also a Central Association of German Artisan Industries. The private Association of Consumers operates more than 150 local advisory centers. Professional societies and associations are numerous and represent a wide variety of occupations and fields of study.

Civil action groups (Bürgerinitiativen) have proliferated in recent years. August 13 Working Committee serves in part as a human rights awareness organization. Deutscher Frauenring serves as an umbrella organization for national women's groups. The Red Cross is active. There are national chapters of Habitat for Humanity, CARE and Caritas.

The German Academy of Arts in Berlin and the Academy of Fine Arts in Dresden are well-known arts organizations. There is a network of seven academies of science in Germany. The UNESCO Institute for Education has an office in Hamburg. A few cultural and learned associations particular to Germany include the International Gottfried Wilhelm Leibniz Society, the International Heinrich Schutz Society, and the International Hegel Gesellschaft Society. There are numerous organizations dedicated to research and education in scientific fields, particularly those relating to medicine.

There are about 80 youth associations, most of which belong to the Federal Youth Ring. The scouting movement is highly active and political parties sponsor groups associated in the Ring of Political Youth. In total there are about 90 national youth organizations and youth associations. Many of them are part of the umbrella organization known as the German Federal Youth Association.

There are thousands of groups and associations sponsoring various arts and cultural activities and special organizations for various hobbies and sports. The German Sports Confederation serves

as an umbrella organization for over 88,000 sports clubs nationwide. There are also many patriotic and religious organizations in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Germany is famous for its beautiful scenery, particularly the Alps in the south and the river valleys of the Rhine, Main, and Danube; the landscape is dotted with castles and medieval villages. Theater, opera, and orchestral music abound in the major cities. The area that was formerly the German Democratic Republic offers a number of Baltic beach resorts and scenic Rügen Island. Residents of the United States and Canada need only a valid passport to enter Germany for a period of no more than three months; citizens of other countries need a visa. All border formalities for residents of other European Community countries were abandoned with the lifting of trade barriers in 1993.

Facilities for camping, cycling, skiing, and mountaineering are abundant. Football (soccer) is the favorite sport; Germany hosted and won the World Cup competition in 1974, and was scheduled to host in 2006. Tennis has become more popular since Boris Becker won the Wimbledon Championship in 1985; German Steffi Graf was inducted into the International Tennis Hall of Fame in 2004. The Olympic Games were held in Berlin in 1936, during the Hitler years, and in Munich in 1972.

Approximately 16,357,037 tourists visited Germany in 2003, almost 34% of whom came from Western Europe. There were 892,302 hotel rooms with about 1.6 million beds and an occupancy rate of 33%. The average length of stay was two nights. Tourism receipts totaled \$31.6 billion that year.

In 2005, the US Department of State estimated the daily expenses in Munich at \$350; in Cologne, \$323; and in Berlin, \$353.

#### 48 FAMOUS GERMANS

The roster of famous Germans is long in most fields of endeavor. The name of Johann Gutenberg (1400?–1468?), who is generally regarded in the Western world as the inventor of movable precision-cast metal type, and therefore as the father of modern book printing, might well head the list of notable Germans. Martin Luther (1483–1546), founder of the Reformation, still exerts profound influence on German religion, society, music, and language.

The earliest major names in German literature were the poets Wolfram von Eschenbach (1170?–1220?), Gottfried von Strassburg (d.1210?), and Sebastian Brant (1457?–1521). Hans Sachs (1494–1576) wrote thousands of plays, poems, stories, and songs. Hans Jakob Christoffel von Grimmelshausen (1620?–76) created a famous picaresque novel, *Simplicissimus*. The flowering of German literature began with such renowned 18th-century poets and dramatists as Friedrich Gottlieb Klopstock (1724–1803), Gotthold Ephraim Lessing (1729–81), Christoph Martin Wieland (1733–1813), and Johann Gottfried von Herder (1744–1803), and culminated with the greatest German poet, Johann Wolfgang von Goethe (1749–1832), and the greatest German dramatist, Johann Christoph Friedrich von Schiller (1759–1805). Leaders of the Romantic movement included Jean Paul (Jean Paul Friedrich Richter, 1763–1825), August Wilhelm von Schlegel (1767–1845), Novalis (Friedrich von Hardenberg, 1772–1801), Ludwig Tieck (1773–1853), E. T. A. (Ernst Theodor Wilhelm—the A stood for

Amadeus, the middle name of Mozart) Hoffmann (1776–1822), and Heinrich Wilhelm von Kleist (1777–1811). The brothers Jakob Grimm (1785–1863) and Wilhelm Grimm (1786–1859) are world-famous for their collections of folk tales and myths. Heinrich Heine (1797–1856), many of whose poems have become folksongs, is generally regarded as the greatest German poet after Goethe. Other significant poets are Friedrich Hölderlin (1770–1843), Friedrich Rückert (1788–1866), Eduard Mörike (1804–75), Stefan Georg (1868–1933), and Rainer Maria Rilke (1875–1926). Playwrights of distinction include Friedrich Hebbel (1813–63), Georg Büchner (1813–37), Georg Kaiser (1878–1945), Ernst Toller (1893–1939), and Bertolt Brecht (1898–1957). Two leading novelists of the 19th century were Gustav Freytag (1816–95) and Theodor Storm (1817–88). Germany's 20th-century novelists include Ernst Wiechert (1887–1950), Anna Seghers (Netty Reiling, 1900–1983), and Nobel Prize winners Gerhart Johann Robert Hauptmann (1862–1946), Thomas Mann (1875–1955), Nelly Sachs (1891–1970), and Heinrich Böll (1917–86). Other major writers of the 20th and 21st centuries include German-born Erich Maria Remarque (1898–1970), Günter Grass (b.1927), Christa Wolf (b.1929), and Peter Handke (b.1942).

Leading filmmakers include G. W. (Georg Wilhelm) Pabst (b.Czechoslovakia, 1885–1967), F. W. (Friedrich Wilhelm Plumpe) Murnau (1888–1931), Fritz Lang (b.Austria, 1890–1976), German-born Ernst Lubitsch (1892–1947), Max Ophüls (Oppenheimer, 1902–57), Leni (Helene Bertha Amalie) Riefenstahl (1902–2003), Volker Schlöndorff (b.1939), Werner Herzog (b.1942), Rainer Werner Fassbinder (1946–82), Wim Wenders (b.1945), and Doris Dörrie (b.1955). Outstanding performers include Emil Jannings (Theodor Friedrich Emil Janenz, b.Switzerland, 1886–1950), Marlene Dietrich (1901–1992), and Klaus Kinski (Claus Günther Nakszynski, 1926–91).

The two giants of German church music were Heinrich Schütz (1585–1672) and, preeminently, Johann Sebastian Bach (1685–1750). Significant composers of the 18th century were German-born Georg Friedrich Handel (1685–1759), Carl Philipp Emanuel Bach (1714–88), and Christoph Willibald von Gluck (1714–87). The classical period and music in general were dominated by the titanic figure of Ludwig von Beethoven (1770–1827). Romanticism in music was ushered in by Carl Maria von Weber (1786–1826), among others. Outstanding composers of the 19th century were Felix Mendelssohn-Bartholdy (1809–47), Robert Schumann (1810–56), Richard Wagner (1813–83), and Johannes Brahms (1833–97). Major figures of the 20th and 21st centuries are Richard Strauss (1864–1949), Paul Hindemith (1895–1963), Carl Orff (1895–1982), German-born Kurt Weill (1900–50), Hans Werner Henze (b.1926), and Karlheinz Stockhausen (b.1928). Important symphonic conductors included Otto Klemperer (1885–1973), Wilhelm Furtwängler (1886–1954), Karl Böhm (1894–1981), and Eugen Jochum (1902–87). Among Germany's outstanding musical performers are singers Elisabeth Schwarzkopf (b.1915) and Dietrich Fischer-Dieskau (b.1925), and pianists Walter Gieseking (1895–1956) and Wilhelm Kempff (1895–91).

Veit Stoss (1440?–1533) was one of the greatest German sculptors and woodcarvers of the 15th century; another was Tilman Riemenschneider (1460?–1531). Outstanding painters, engravers, and makers of woodcuts were Martin Schongauer (1445?–91), Matthias Grünewald (1460?–1528?), Hans Holbein the Elder (1465?–

1524), Lucas Cranach (1472–1553), Hans Holbein the Younger (1497?–1543), and above all, Albrecht Dürer (1471–1528). More recent artists of renown are the painters Emil Nolde (1867–1956), Franz Marc (1880–1916), Max Beckmann (1884–1950), the US-born Lyonel Feininger (1871–1956), Otto Dix (1891–1969), Max Ernst (1891–1976), and Horst Antes (b.1936); the painter and cartoonist George Grosz (1893–1959); the sculptors Ernst Barlach (1870–1938) and Wilhelm Lehmbruck (1881–1919); the painter-etcher-sculptor Käthe Kollwitz (1867–1945); the Dadaist Hannah Höch (1889–1978); the painter-sculptor-installation artist Joseph Beuys (1921–1986); the painter and sculptor Anselm Kiefer (b.1945); and the architects Walter Gropius (1883–1969), leader of the Bauhaus School of Design, Ludwig Mies van der Rohe (1886–1969), Erich Mendelsohn (1887–1953), Gottfried Böhm (b.1920), and Helmut Jahn (b.1940).

### Scholars and Leaders

German influence on Western thought can be traced back at least as far as the 13th century, to the great scholastic philosopher, naturalist, and theologian Albertus Magnus (Albert von Bollstädt, d.1280) and the mystic philosopher Meister Eckhart (1260?–1327?). Philipp Melancthon (Schwartzerd, 1497–1560) was a scholar and religious reformer. Gottfried Wilhelm von Leibniz (1646–1716) was an outstanding philosopher, theologian, mathematician, and natural scientist. The next two centuries were dominated by the ideas of Immanuel Kant (1724–1804), Moses Mendelssohn (1729–86), Johann Gottlieb Fichte (1762–1814), Friedrich Ernst Daniel Schleiermacher (1768–1834), Georg Wilhelm Friedrich Hegel (1770–1831), Friedrich Wilhelm Joseph von Schelling (1775–1854), Arthur Schopenhauer (1788–1860), Ludwig Andreas Feuerbach (1804–72), Karl Marx (1818–83), Friedrich Engels (1820–95), and Friedrich Wilhelm Nietzsche (1844–1900). In the 20th century, Edmund Husserl (1859–1938), Oswald Spengler (1880–1936), Karl Jaspers (1883–1969), Martin Heidegger (1889–1976), and Hans-Georg Gadamer (1900–2002) are highly regarded. Figures of the Frankfurt School of social and political philosophy include Theodor Adorno (1903–1969), Max Horkheimer (1895–1973), Walter Benjamin (1892–1940), Herbert Marcuse (1898–1979), and Jürgen Habermas (b.1929). Political theorist Hannah Arendt (1906–1975) is also highly regarded, as is Carl Schmitt (1888–1985). One of the founders of modern Biblical scholarship was Julius Wellhausen (1844–1918). Franz Rosenzweig (1886–1929) was one of the most influential modern Jewish religious thinkers, as was Gershom Scholem (1897–1982).

Among the most famous German scientists are Johann Rudolf Glauber (1694–1768), Justus von Liebig (1803–73), Robert Wilhelm Bunsen (1811–99), and Nobel Prize winners Hermann Emil Fischer (1852–1919), Adolf von Baeyer (1835–1917), Eduard Buchner (1860–1917), Wilhelm Ostwald (1853–1932), Otto Wallach (1847–1931), Richard Martin Willstätter (1872–1942), Fritz Haber (1868–1934), Walther Nernst (b.Poland, 1864–1941), Heinrich Otto Wieland (1877–1957), Adolf Otto Reinhold Windaus (1876–1959), Carl Bosch (1874–1940), Friedrich Bergius (1884–1949), Otto Hahn (1879–1968), Hans Fischer (1881–1945), Friedrich Bergius (1884–1949), Georg Wittig (1897–1987), Adolf Butenandt (1903–1995), Otto Diels (1876–1954), Kurt Alder (1902–58), Hermann Staudinger (1881–1965), Karl Ziegler (1898–1973), Manfred Eigen (b.1927), Ernst Otto Fischer (b.1918), Johann Deisenhofer

(b.1943), Robert Huber (b.1937), and Hartmut Michel (b.1948) in chemistry; Karl Friedrich Gauss (1777–1855), Georg Simon Ohm (1787–1854), Hermann Ludwig Ferdinand von Helmholtz (1821–94), Heinrich Rudolf Hertz (1857–1894), and Nobel Prize winners Wilhelm Konrad Röntgen (1845–1923), Max Karl Ernst Ludwig Planck (1858–1947), Albert Einstein (1879–1955), Gustav Ludwig Hertz (1887–1975), Werner Heisenberg (1901–76), Walter Bothe (1891–1957), Carl-Friedrich von Weizsäcker (b.1912), Rudolf Mössbauer (b.1929), Hans Bethe (1906–2005), Klaus von Klitzing (b.1943), Ernst Ruska (1906–1988), Gerd Binnig (b.1947), Johannes Georg Bednorz (b.1950), Hans Georg Dehmelt (b.Germany, 1922), Wolfgang Paul (1913–1993), Wolfgang Ketterle (b.1957), and Theodor Wolfgang Hänsch (b.1941) in physics; Rudolf Virchow (1821–1902), August von Wassermann (1866–1925), and Nobel Prize winners Robert Koch (1843–1910), Paul Ehrlich (1854–1915), Emil von Behring (1854–1917), Otto H. Warburg (1883–1970), Konrad Lorenz (Austria, 1903–89), Konrad Emil Bloch (1912–2000), Feodor Felix Konrad Lynen (1911–1979), Max Delbrück (b.Germany 1906–1981), Sir Bernard Katz (b.Germany 1911–2003), Georges Jean Franz Köhler (1946–1995), Erwin Neher (b.1944), Bert Sakmann (b.1942), Christiane Nüsslein-Volhard (b.1942), and Günter Blobel (b.1936), in physiology or medicine; earth scientists Alexander von Humboldt (1769–1859) and Karl Ernst Richter (1795–1863); and mathematician Georg Friedrich Bernhard Riemann (1826–66). Notable among German inventors and engineers are Gabriel Daniel Fahrenheit (1686–1736), developer of the thermometer; Gottlieb Daimler (1834–1900), Rudolf Diesel (b.Paris, 1858–1913), and Felix Wankel (1902–88), developers of the internal combustion engine; airship builder Count Ferdinand von Zeppelin (1838–1917); and rocketry pioneer Wernher von Braun (1912–77). Leading social scientists, in addition to Marx and Engels, were the historians Leopold von Ranke (1795–1886) and Theodor Mommsen (1817–1903), Nobel Prize winner in literature; the political economist Georg Friedrich List (1789–1846); the sociologists Georg Simmel (1858–1918) and Max Weber (1864–1920); and the German-born anthropologist Franz Boas (1858–1942). Johann Joachim Winckelmann (1717–68) founded the scientific study of classical art and archaeology. Heinrich Schliemann (1822–90) uncovered the remains of ancient Troy, Mycenae, and Tiryns; Wilhelm Dörpfeld (1853–1940) continued his work.

Outstanding figures in German political history are the Holy Roman emperors Otto I (the Great, 912–973), Frederick I (Barbarossa, 1123–90), Frederick II (1194–1250), and Spanish-born Charles V (1500–58); Frederick William (1620–88), the “great elector” of Brandenburg; his great-grandson Frederick II (the Great, 1712–86), regarded as the most brilliant soldier and statesman of his age; Otto Eduard Leopold von Bismarck (1815–98), the Prussian statesman who made German unity possible; Austrian-born Adolf Hitler (1889–1945), founder of Nazism and dictator of Germany (1933–45); and Konrad Adenauer (1876–1967), FRG chancellor (1948–63). Walter Ernst Karl Ulbricht (1893–1973), chairman of the Council of State (1960–73), and leader of the SED from 1950 to 1971, was the dominant political figure in the GDR until his death in 1973. Erich Honecker (1912–94) became first secretary of the SED in 1971 and was chairman of the Council of State and SED general secretary from 1976 until the FRG and GDR merged in 1990. Willi Stoph (1914–1999), a member of the Polit-

buro since 1953, served as chairman of the Council of Ministers in 1964–73 and again from 1976 on. Willy Brandt (1913–1992), FRG chancellor (1969–74) won the Nobel Peace Prize for his policy of Ostpolitik. Other Nobel Peace Prize winners were Ludwig Quidde (1858–1941), Gustav Stresemann (1878–1929), Carl von Ossietzky (1889–1938), and Albert Schweitzer (1875–1965).

Baron Friedrich Wilhelm Ludolf Gerhard Augustin von Steuben (1730–94) was a general in the American Revolution. Karl von Clausewitz (1780–1831) is one of the great names connected with the science of war. Important military leaders were Hellmuth von Moltke (1800–1891); Gen. Paul von Hindenburg (1847–1934), who also served as president of the German Reich (1925–34); and Gen. Erwin Rommel (1891–1944).

Pope Benedict XVI (b. Joseph Alois Ratzinger, 1927) became the 265th pope in 2005. He is the ninth German pope, the last being the Dutch-German Adrian VI (1522–1523).

#### 49 DEPENDENCIES

Germany has no territories or colonies.

# GREECE

Hellenic Republic  
*Elliniki Dhimokratia*

**CAPITAL:** Athens (Athínai)

**FLAG:** The national flag consists of nine equal horizontal stripes of royal blue alternating with white and a white cross on a royal-blue square canton.

**ANTHEM:** *Ethnikos Hymnos* (*National Hymn*), beginning “Se gnorizo apo tin kopsi” (“I recognize you by the keenness of your sword”).

**MONETARY UNIT:** The euro replaced the drachma as official currency in 2002. The euro is divided into 100 cents. There are coins in denominations of 1, 2, 5, 10, 20, and 50 cents and 1 euro and 2 euros. There are notes of 5, 10, 20, 50, 100, 200, and 500 euros. €1 = \$1.25475 (or \$1 = €0.79697) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Epiphany, 6 January; Independence Day, 25 March; Labor Day, 1 May; Assumption, 15 August; National Day (anniversary of successful resistance to Italian attack in 1940), 28 October; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Shrove Monday, Good Friday, and Easter Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Greece is the southernmost country in the Balkan Peninsula, with a total area of 131,940 sq km (50,942 sq mi); about a fifth of the area is composed of more than 1,400 islands in the Ionian and Aegean seas. Comparatively, the area occupied by Greece is slightly smaller than the state of Alabama. Continental Greece has a length of 940 km (584 mi) N–S and a width of 772 km (480 mi) E–W. It is bounded on the N by Macedonia and Bulgaria, on the NE by Turkey, on the E by the Aegean Sea, on the S by the Mediterranean Sea, on the SW and W by the Ionian Sea, and on the NW by Albania, with a total land boundary length of 1,228 km (763 mi) and a coastline of 13,676 km (8,498 mi). The capital city of Greece, Athens, is located along the country’s southern coast.

## <sup>2</sup> TOPOGRAPHY

About four-fifths of Greece is mountainous, including most of the islands. The most important range is the Pindus, which runs down the center of the peninsula from north to south at about 2,650 m (8,700 ft) in average elevation. Mt. Olympus (Ólimbos; 2,917 m/9,570 ft) is the highest peak and was the legendary home of the ancient gods.

Greece has four recognizable geographic regions. The Pindus range divides northern Greece into damp, mountainous, and isolated Epirus (Ipiros) in the west and the sunny, dry plains and lesser mountain ranges of the east. This eastern region comprises the plains of Thessaly (Thessalía) and the “new provinces” of Macedonia (Makedonia) and Thrace (Thraki)—“new” because they became part of Greece after the Balkan wars in 1912–13. Central Greece is the southeastern finger of the mainland that cradled the city-states of ancient Greece and comprises such classical provinces as Attica (Atiki), Boeotia (Voiotia), Doris, Phocis,

and Locris. Southern Greece consists of the mountainous, four-fingered Peloponnesus (Pelopónnisos), separated from the mainland by the Gulf of Corinth (Korinthiakós Kólpos). Islands of the Aegean comprise the numerous Cyclades (Kikládés); the Dodecanese (Dhodhekánisos), including Rhodes (Ródhos); and the two large islands of Crete (Kriti) and Euboea (Évvoia).

Greek rivers are not navigable. Many dry up in the summer and become rushing mountain torrents in the spring. The longest river is the Maritsa, which runs along the northeast border a distance of 480 km (300 mi).

Greece is located above the convergence of the Eurasian and the African Tectonic Plates, a situation which causes frequent earthquakes and tremors. While many quakes are low magnitude tremors with minimal damage and injury, stronger quakes are not entirely uncommon. On 14 August 2003, a 6.3 magnitude earthquake occurred in western Greece causing injuries to about 50 people and damaging roads and buildings.

## <sup>3</sup> CLIMATE

The climate in southern Greece and on the islands is Mediterranean, with hot, dry summers and cool, wet winters. Winters are severe in the northern mountain regions. The summer heat is moderated by mountain and sea breezes. Precipitation is heaviest in the north and in the mountains. Average annual rainfall varies from 50 to 121 cm (20–48 in) in the north and from 38 to 81 cm (15–32 in) in the south. The mean temperature of Athens is 17°C (63°F), ranging from a low of 2°C (36°F) in the winter to a high of 37°C (99°F) in the summer.

## <sup>4</sup> FLORA AND FAUNA

Of the 4,992 species of higher plants recorded in Greece, about 742 are endemic to the country. Many pharmaceutical plants and

other rare plants and flowers considered botanical treasures flourish in Greece. Vegetation varies according to altitude. From sea level to 460 m (1,500 ft), oranges, olives, dates, almonds, pomegranates, figs, grapes, tobacco, cotton, and rice abound. From 460 to 1,070 m (1,500–3,500 ft) are forests of oak, chestnut, and pine. Above 1,070 m (3,500 ft), beech and fir are most common.

Fauna are not plentiful, but bear, wildcat, jackal, fox, and chamois still exist in many sparsely populated areas. The wild goat (agrimi), which has disappeared from the rest of Europe, still lives in parts of Greece and on the island of Crete. There are about 95 species of mammal throughout the country. Migratory and native birds abound and there are more than 250 species of marine life. Natural sponges are a main export item.

## 5 ENVIRONMENT

Among Greece's principal environmental problems are industrial smog and automobile exhaust fumes in metropolitan Athens. Over half of all industry is located in the greater Athens area. From June to August 1982, the air pollution became so oppressive that the government closed down 87 industries, ordered 19 others to cut production, and banned traffic from the city center. In July 1984, the smog again reached the danger point, and 73 factories were ordered to cut production and cars were banned from the city. In January 1988, the number of taxis in the center of Athens was halved, and private cars were banned from the city's three main thoroughfares. The smog regularly sends hundreds of Greeks to the hospital with respiratory and heart complaints. Greece is among the 50 nations with the world's highest levels of industrial carbon dioxide. In 1992, it ranked 37th, with emissions totaling 73.8 million metric tons, a per capita level of 7.25. In 1996, the total rose to 80.6 million metric tons.

Water pollution is a significant problem due to industrial pollutants, agricultural chemicals such as fertilizers and pesticides, and sewage. The Gulf of Saronikos is one of the most polluted areas because 50% of Greece's industrial facilities are located there. Greece has 58 cu km of renewable water resources with 81% used for farming and 3% used for industrial purposes.

Greece's pollution problems are the result of almost complete disregard for environmental protection measures during the rapid industrial growth of the 1970s, compounded by unbalanced development and rapid, unregulated urban growth. Government policies have emphasized rational use of natural resources, balanced regional development, protection of the environment, and increased public participation in environmental matters. Four environmental and planning services were consolidated under the Ministry for Physical Planning, Housing, and the Environment.

In 2003, about 3.6% of the total land area was protected by the state. Meteora and Mount Athos are UNESCO World Heritage Sites. There are 10 Ramsar wetland sites in the country. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 11 types of mammals, 14 species of birds, 6 types of reptiles, 4 species of amphibians, 27 species of fish, 1 type of mollusk, 10 species of other invertebrates, and 2 species of plants. Endangered species include the Mediterranean monk seal, the hawksbill turtle, Atlantic sturgeon, and the large copper butterfly.

## 6 POPULATION

The population of Greece in 2005 was estimated by the United Nations (UN) at 11,100,000, which placed it at number 74 in population among the 193 nations of the world. In 2005, approximately 18% of the population was over 65 years of age, with another 15% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be stagnant at 0.0%, a rate the government viewed as too low. The projected population for the year 2025 was 11,394,000. The population density was 84 per sq km (218 per sq mi).

The UN estimated that 60% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.58%. The capital city, Athens (Athínai), had a population of 3,215,000 in that year. Another major urban area is Thessaloniki with a metropolitan population of 824,000.

## 7 MIGRATION

Under League of Nations supervision in 1923, more than one million Greek residents of Asia Minor were repatriated, and some 800,000 Turks left Greece. During the German occupation (1941–44) and the civil war (1944–49), there was a general movement of people from the islands, the Peloponnesus, and the northern border regions into the urban areas, especially the Athens metropolitan area, including Piraiévs. Between 1955 and 1971 about 1,500,000 peasants left their farms—about 600,000 going to the cities, the rest abroad. According to the 1981 census, 813,490 Greeks had migrated since 1975 to urban areas, and 165,770 had moved to rural areas. The growth rate of the Athens, Thessaloniki, Pátrai, Iráklion, and Vólos metropolitan areas during 1971–81 far exceeded the population growth rate for the nation as a whole.

Many Greeks leave the country for economic reasons. In the years after World War II, the number of annual emigrants has varied from a high of 117,167 (in 1965) to a low of 20,330 (in 1975). The net outflow of Greek workers during the 1960s was 450,000; during the 1970s, however, there was a net inflow of 300,000. This mainly reflected declining need for foreign labor in western Europe.

In 1974, when the Greek military government collapsed, about 60,000 political refugees were living overseas; by the beginning of 1983, about half had been repatriated, the remainder being, for the most part, Communists who had fled to Soviet-bloc countries after the civil war of 1944–49. After the fall of Communism in 1989 slightly more than half of the migrants to Greece were Albanians, followed by other influxes from nearby countries. In 2002 Greece received \$1.18 billion in remittances.

In 2004, Greece received 7,375 applications for asylum, as compared to 4,367 in 1997. Most of them were from Iraq, Afghanistan, Georgia, Algeria, and Iran. In that same year Greece had a population of 2,489 refugees and another 3,459 persons of concern (primarily Iraqi Christians) according to the United Nations High Commissioner for Refugees (UNHCR). According to *Migration News*, in 2005 Greece had 900,000 to 1.2 million immigrants, including 400,000 in irregular status. In August 2005 Greece passed a new immigration law allowing for foreigners legally living in the country in 2004 to become permanent residents in 2006. How-

ever, the ethnic Greek Albanians and about 500,000 unauthorized foreigners were excluded from this policy change.

In 2005, the net migration rate was estimated as 2.18 migrants per 1,000 population.

## 8 ETHNIC GROUPS

About 98% of the population is Greek. Minority groups include Turks, Macedonian Slavs, Albanians, Armenians, Bulgarians, Jews, and Vlachs. Though a number of citizens identify themselves as Pomaks, Romas, Macedonians, Slavomacedonians, Roma, and Arvanites, the government does not officially acknowledge these groups as minorities. Though some citizens describe themselves as Turks or Turkish, use of the term is prohibited in titles of organizations or associations. The Greeks also object to use of the term Macedonian by the Slavic speaking inhabitants of that region.

## 9 LANGUAGES

Modern Greek, the official language, is the first language of about 99% of the population. English, learned mostly outside the school system, and French are widely spoken. Turkish and other minority languages, such as Albanian, Pomakic, Kutzovalachian, and Armenian, also are spoken. The vernacular and the language of popular literature are called *dimotiki* (demotic). The official language dialect—*katharevousa*—generally used by the state, the press, and universities, employs classical terms and forms. In 1976, the government began to upgrade the status of *dimotiki* in education and government. The liturgical language is akin to classical Greek.

## 10 RELIGIONS

The government does not keep statistics on membership in religious groups; however, it is estimated that about 97% of the population are nominally members of the Greek Orthodox Church. Official estimates place the number of Muslims at about 98,000 people, with most living in Thrace. Jehovah's Witnesses and the Roman Catholic Church each have about 50,000 members. There are about 30,000 Protestants and 5,000 Jews. There are small congregations of the Church of Jesus Christ of Latter-day Saints (Mormons), the Church of Scientology, and the Anglican church. There is a very small Baha'i community.

Under the constitution, the Eastern Orthodox Church of Christ (Greek Orthodox) is the "prevailing" religion of Greece; the church is self-governing under the ecumenical patriarch resident in Istanbul, Turkey, and is protected by the government, which pays the salaries of the Orthodox clergy. The Orthodox Church is also allowed a significant influence in economic and political policies. The constitution prohibits proselytizing. The Orthodox Church, Judaism, and Islam are considered to be "legal persons of public law," a designation of preferred legal status that makes it easier for these groups to own property and gain legal representation in court. Religious groups must obtain a house of prayer permit through the Ministry of Education and Religion in order to open a public place of worship. Approval for a permit is based in part on the opinion of the local Orthodox bishop.

## 11 TRANSPORTATION

Greek transportation was completely reconstructed and greatly expanded after World War II. The length of roads in 2002 was 117,000 km (72,704 mi), of which 107,406 km (66,742 mi) were

paved. Toll highways connect Athens with Lamía and Pátrai. In 2003 there were 5,024,600 motor vehicles, including 3,885,908 passenger cars and 1,138,692 commercial vehicles in use.

The Hellenic State Railways, a government organ, operates the railroads, which in 2004 had a total length of 2,571 km (1,597 mi), that which consisted of standard, narrow and dual gauge lines. Standard gauge lines made up the bulk of the nation's railway system, at 1,565 km (973 mi), of which 764 km (475 mi) was electrified. Narrow gauge lines accounted for 983 km (611 mi), with dual gauge trackage amounting to 23 km (14 mi). The agency also operates a network of subsidiary bus lines connecting major cities. The privately owned Hellenic Electric Railways operates a high-speed shuttle service between Piraiévs and Athens.

Principal ports are Elefsís, Thessaloniki, Vólos, Piraiévs, Iráklion, and Thira. In 2005 the Greek merchant fleet had 861 ships (down from 2,893 in 1982) of 1,000 GRT or over, for a total of 30,186,624 GRT. In addition, Greek shipowners had many other ships sailing under Cypriot, Lebanese, Liberian, Panamanian or other foreign registries. The Greek fleet was hard hit by the international shipping slump of the 1980s. The inland waterway system consists of three coastal canals and three inland rivers, for a total of 80 navigable km (50 mi).

Greece had an estimated 80 airports in 2004. As of 2005, a total of 67 had paved runways, and there were also eight heliports. Athens' main airport connects the capital by regular flights to major cities in Europe, the Middle East, and North America. The new Athens airport at Spata opened March 2001. Olympic Airways, nationalized in 1975, operates a large internal domestic network as well as international flights. In 2003, about 7.519 million passengers were carried on domestic and international flights. Also during 2003, Greek aircraft performed 63 million freight ton-km of service.

## 12 HISTORY

Civilization in Greece first arose on Crete in the 3rd millennium BC, probably as a result of immigration from Asia Minor (now Turkey). The Minoan civilization (c.3000–c.1100 BC), named after the legendary King Minos (which may have been a title rather than a name), was centered in the capital of Knossos, where it became known as Helladic (c.2700–c.1100 BC). During the 2nd millennium BC, Greece was conquered by Indo-European invaders: first the Achaeans, then the Aeolians and Ionians, and finally the Dorians. The Greeks, who called themselves Hellenes after a tribe in Thessaly (they were called Greeks by the Romans after another tribe in northwestern Greece), adapted the native culture to their own peasant village traditions and developed the characteristic form of ancient Greek political organization, the city-state (*polis*). The resulting Mycenaean civilization (c.1600–c.1100 BC), named after the dominant city-state of Mycenae, constituted the latter period of the Helladic civilization.

The Mycenaean, who were rivals of the Minoans, destroyed Knossos about 1400 BC and, according to legend, the city of Troy in Asia Minor about 1200 BC. The Minoan and Mycenaean civilizations both came to a relatively abrupt end about 1100 BC, possibly as a result of the Dorian invasion, but the foundations had already been laid for what was to become the basis of Western civilization. It was the Greeks who first tried democratic government; produced the world's first outstanding dramatists, poets,

historians, philosophers, and orators; and made the first scientific study of medicine, zoology, botany, physics, geometry, and the social sciences.

In the 1st millennium BC, overpopulation forced the Greeks to emigrate and to colonize areas from Spain to Asia Minor. The Greeks derived their alphabet from the Phoenicians during the 8th century BC. By the 6th century BC, the two dominant *polises* (city-states) were Athens and Sparta. The 5th century BC, recognized as the golden age of Athenian culture, brought the defeat of the Persians by the Athenians in the Persian Wars (490–479 BC) and the defeat of Athens and its allies by Sparta and its allies in the Peloponnesian War (431–404 BC). The territory that is present-day Greece was under Spartan rule.

The inability of Greeks to unite politically led to the annexation of their territories by Philip II of Macedon in 338 BC and by his son Alexander the Great. Through Alexander's ambition for world empire and his admiration of Greek learning, Greek civilization was spread to all his conquered lands. The death of Alexander in 323 BC, the breakup of his empire, and the lack of national feeling among the Greeks prepared the way for their conquest by Rome at the close of the Macedonian Wars in 146 BC.

Greece was made a Roman province, but Athens remained a center of learning. To speak the Greek language was to speak the language of culture, commerce, art, and politics. Greeks were widely influential in Rome, in the Egyptian city of Alexandria, and elsewhere. For this reason, the period between the death of Alexander and the beginning of the Roman Empire is known as the Hellenistic period.

When the Roman Empire was officially divided in AD 395, Greece, by this time Christianized, became part of the Eastern Roman Empire, eventually known as the Byzantine Empire (so named from Byzantium, the former name of Constantinople, its capital). The Byzantine Empire lasted for more than a thousand years. During this period, Greek civilization continued to contribute to Byzantine art and culture.

The formal schism between Eastern Orthodox Christianity and Roman Catholicism came in 1054, when Pope Leo IX and Patriarch Michael Cerularius excommunicated each other. The continuity of Byzantine rule was broken by the fall of Constantinople in the Fourth Crusade in 1204. Under the Latin Empire of the East, which lasted until 1261, Greece was divided into feudal fiefs, with the Duchy of Athens passing successively under French, Spanish, and Florentine rulers.

The Ottoman Turks, who conquered Constantinople in 1453 and the Greek peninsula by the end of the decade, gave the Greeks a large degree of local autonomy. Communal affairs were controlled by the Orthodox Church, and Greek merchants ranged throughout the world on their business ventures, but Greece itself was poverty-stricken. Following an unsuccessful attempt to overthrow the Turks in 1770—an uprising aided by Russia, as part of Catherine the Great's plan to replace Muslim with Orthodox Christian rule throughout the Near East—the Greeks, led by the archbishop of Patras, proclaimed a war of independence against the Turks on 25 March 1821. The revolution, which aroused much sympathy in Europe, succeeded only after Britain, France, and Russia decided to aid the Greeks in 1827. These three nations recognized Greek independence through the London Protocol of 1830, and the Ottomans accepted the terms later in the year.

The same three powers also found a king for Greece in the person of Otto I of Bavaria. During his reign (1832–1844), Otto I faced a series of foreign and domestic problems. In March 1844, Otto's administration was pressured to draft a constitution to establish a new government. Under this document, the leader would reign as a constitutional monarch and the legislature would be elected by all property-holding males over the age of 25. Otto managed to hold onto power for another decade, until the outbreak of the Crimean War (1854–1856). Otto sent troops to occupy Ottoman territory with the pretense of protecting Christians in the Balkans, but the European powers sided against him. Otto, humiliated, was forced to give up his "Christian Cause" in the Balkans. He abdicated in 1862.

Next Prince William George of Denmark, who ruled as King George I, took control of Greece until his assassination in 1913. During and after his rule, Greece gradually added islands and neighboring territories with Greek-speaking populations, including the Ionian Islands, ceded by the British in 1864; Thessaly, seized from Turkey in 1881; Macedonia, Crete, and some Aegean islands in 1913; and the Dodecanese Islands and Rhodes, ceded by Italy in 1947.

The first half of the 20th century for Greece was a period of wars and rivalries with Turkey; of republican rule under the Cretan patriot Eleutherios Venizelos; of occupation by Italy and Germany during World War II (in World War I, Greece had been neutral for three years and had then sided with the Allies); and of a five-year civil war (1944–49) between the government and the Communist-supported National Liberation Front, in which US aid under the Truman Doctrine played a significant role in defeating the insurgency. In September 1946, the Greeks voted back to the throne the twice-exiled George II (grandson of George I), who was succeeded upon his death in April 1947 by his brother Paul I. A new constitution took effect in 1952, the same year Greece joined NATO. For much of the decade, Greece backed demands by Greek Cypriots for *enosis*, or the union of Cyprus with Greece, but in 1959, the Greek, Turkish, and Cypriot governments agreed on a formula for an independent Cyprus, which became a reality in 1960.

King Paul died on 6 March 1964 and was succeeded by his son Constantine. Meanwhile, a parliamentary crisis was brewing, as rightist and leftist elements struggled for control of the army, and the government sought to purge the military of political influence. On 21 April 1967, a right wing military junta staged a successful coup d'état. Leftists were rounded up, press censorship was imposed, and political liberties were suspended. After an unsuccessful countercoup on 13 December 1967, King Constantine and the royal family fled to exile in Italy. Lt. Gen. George Zoetakis was named regent to act for the king, and Col. George Papadopoulos was made premier. A constitutional reform was approved by 92% of the voters in a plebiscite held under martial law on 29 September 1968. Under the new constitution, individual rights were held to be subordinate to the interests of the state, many powers of the king and legislature were transferred to the ruling junta, and the army was granted extended powers as overseer of civil order. The constitution outlawed membership in the Communist Party. US military aid to Greece, suspended after the 1967 coup, was restored by President Richard M. Nixon in September 1970.

Following an abortive naval mutiny in 1973, Greece was declared a republic by the surviving junta. Papadopoulos became

LOCATION: 34°48'2" to 41°45'1" N; 19°22'41" to 29°38'39" E. BOUNDARY LENGTHS: Macedonia, 228 kilometers (142 miles); Bulgaria, 494 kilometers (308 miles); Turkey, 206 kilometers (128 miles); Albania, 282 kilometers (176 miles); total coastline, 13,676 kilometers (8,496 miles). TERRITORIAL SEA LIMIT: 6 miles.

president, only to be overthrown by a group of officers following the bloody repression of a student uprising. The complicity of the junta in a conspiracy by Greek army officers on Cyprus against the government of Archbishop Makarios precipitated the final fall from power of Greece's military rulers in July 1974, when the Turkish army intervened in Cyprus and overwhelmed the island's Greek contingent. Constantine Karamanlis, a former prime min-

ister and moderate, returned from exile to form a civilian government that effectively ended eight years of dictatorial rule.

General elections were held on 17 November 1974, the first since 1964, marking the recovery of democratic rule. In a referendum held on 8 December 1974, 69% of the electorate voted to end the monarchy and declare Greece a parliamentary republic. On 7 June 1975, a democratic constitution was adopted by the

new legislature, although 86 of the 300 members boycotted the session. Karamanlis became Greece's first prime minister under the new system, and on 19 June 1975, parliament elected Konstantinos Tsatsos as president.

Prime Minister Karamanlis, who had withdrawn Greece from NATO's military structure in 1974 to protest Turkey's invasion of Cyprus, resumed military cooperation with NATO in the fall of 1980 (a few months after he was elected president of Greece) and brought his nation into the European Community (EC) effective 1 January 1981. With the victory of the Pan-Hellenic Socialist Movement (Panellinio Socialistikou Kinema—PASOK) in the elections of October 1981, Greece installed its first Socialist government. The new prime minister, Andreas Papandreou—the son of former prime minister George Papandreou and a man accused by rightists in 1967 of complicity in an abortive leftist military plot—had campaigned on a promise to take Greece out of the EC (although his government did not do so). In November 1982, he refused to allow Greek participation in NATO military exercises in the Aegean, which were then canceled. In January 1983, the government declared a general amnesty for the Communist exiles of the 1944–49 civil war.

In mid-1982, in an attempt to deal with the deepening economic crisis, the government created a ministry of national economy, which embraced industrial and commercial affairs. The proposed “radical socialization” of the economy, however, provoked widespread opposition, which limited it to the introduction of worker participation in supervisory councils; state control was imposed only on the pharmaceutical industry (in 1982). Of Greece's largest enterprises, only the Heracles Cement Co. was nationalized (in 1983). Relations with labor were strained as the government sought to balance worker demands that wages be indexed to inflation with the growing need for austerity; in late 1986, the government imposed a two-year wage freeze, which provoked widespread strikes and demonstrations.

In 1985, Prime Minister Papandreou unexpectedly withdrew his support for President Karamanlis's bid for a second five-year term and announced amendments to the constitution that would transfer powers from the president to the legislature and prime minister. Karamanlis resigned and Papandreou proceeded with his proposed changes, calling an election in June and winning a mandate to follow through with them (parliament's approval was given in March 1986). Subsequently, however, the government began to lose power; the opposition made substantial gains in the 1986 local elections, and a 1987 scandal associated with Papandreou further weakened the government. In January 1988, Papandreou met with Turkish premier Turgut Ozal in Switzerland; they agreed to work toward solving the problems between the two countries.

Two rounds of parliamentary elections were held in 1989; neither was conclusive. After the June vote, the center-conservative New Democracy (ND) party, with 146 of 300 seats, formed a government with left wing parties and concentrated on investigating scandals of the Papandreou government, including those of the former prime minister himself. That government resigned in the fall, and new elections were held in November. The ND and PASOK both improved their totals and an all-party coalition was formed to address economic reform. That government, however,

also failed. In April 1990 elections, the ND emerged victorious to lead the government.

In the balloting of 10 October 1993, PASOK won 171 seats to 110 for the ND and Papandreou was again elected prime minister, despite repeated scandals of both personal and political nature. In 1995, parliament appointed Konstantinos Stephanopoulos president. Voters appeared dissatisfied with ND's economic reforms while PASOK won support for its hard-line foreign policy demanding that the former Yugoslav Republic of Macedonia change its name. Many Greeks believe the name of the newly independent state implies territorial designs on the northern Greek region, which once formed part of historic Macedonia. In 1995, Papandreou became ill and was not able to adequately perform his duties. In January 1996, PASOK named Costas Simitis prime minister. In June of that year, Papandreou died at 77, ending the tumultuous political career of postwar Greece's most important—and controversial—politician.

In 1996, Simitis, facing strong resistance to austerity measures from labor and farmers, called on the president to dissolve parliament and hold early elections. Simitis had vowed not to call for a dissolution, but faced with mounting opposition to his austerity measures—taken to prepare the Greek economy for European monetary union in 1999—felt he needed a reinforced mandate. The election, held on 22 September 1996, returned PASOK and Simitis to power, giving them, in fact, a commanding majority in parliament.

The next four years were highlighted by continued Greek-Turkish tension, and Simitis's push for Greek entry into the monetary union. Relations with Turkey reached a new low in early 1999 when Turkey's most-wanted man, Kurdish terrorist leader Abdullah Ocalan, was captured by the Turkish secret services in Nairobi, Kenya. Ocalan had sought refuge in the Greek embassy and was seized while en route to the airport, apparently on the way to an asylum-granting country in Africa. Ocalan's capture led to subsequent Turkish charges that the Greek state sponsored international terrorism.

The outbreak of a war in Kosovo little over a month later also placed Greece in an awkward diplomatic position. Although the overwhelming majority of the Greek public opposed the war, the Simitis government maintained its ties to NATO and offered logistical—although not combat—support to its allies. Nevertheless, the widespread anti-Western backlash remained for some months. Rioting greeted US president Bill Clinton when he visited Greece in November 1999.

Unexpectedly, relations with Turkey began to significantly improve in August 1999 following a devastating earthquake in Turkey that killed over 20,000 Turkish citizens. Greece was among the first countries to offer aid to its traditional foe. When a smaller earthquake struck Greece the following month, Turkey reciprocated the Greek gesture. In the aftermath of the tragedies, Greece and Turkey continued a dialogue that resulted in the signing of cooperation accords in the areas of commerce and the fight against terrorism. In addition, Greece supported the decision of the December 1999 European Union (EU) summit in Helsinki to place Turkey as a candidate for EU membership, which also contributed to improving relations between Greece and Turkey. When the EU in late 2002 announced Turkey would not be one of 10 new candidate countries invited to join the body as of 2004, Greece pressed

the EU to set a date for the start of accession talks. Greece itself entered the euro zone on 1 January 2002.

Relations between the two countries also warmed due to cooperation on a project to build a natural gas pipeline connecting them; the pipeline was scheduled to be in operation by November 2006.

Negotiations between the Greek and Turkish leaders in Cyprus were held in early 2003 to see if they could agree on a plan to unify the island prior to Cyprus signing an EU accession treaty on 16 April. The talks failed, and the internationally recognized Greek government of Cyprus signed the accession treaty. However, later that month, Turkish-Cypriot leader Rauf Denktaş opened the borders of northern Cyprus to Greeks, and by 15 May 2003, about 250,000 Greek Cypriots and 70,000 Turkish Cypriots—40% of the island's combined population—had visited each other's side.

Approximately 90% of Greece's population was opposed to the US-led war in Iraq that began on 19 March 2003. Prime Minister Costas Simitis indicated that by waging war, the United States and United Kingdom were undermining the EU. Yet he gave the coalition permission to use of Greece's airspace in launching strikes against Iraq.

Greece's international standing received a boost when the country hosted the 2004 Summer Olympics.

In February 2005, parliament elected Karolos Papoulias president by a vote of 279 out of 300 votes; he took office on 12 March 2005.

### 13 GOVERNMENT

Before the 1967 coup, executive power was vested in the crown but was exercised by a Council of Ministers appointed by the king and headed by a premier. The 1975 constitution abolished the 146-year-old Greek monarchy and created the office of president as head of state. If a majority in parliament fails to agree on the selection of a president, the office is filled in a general election. The president, who is limited to two five-year terms, appoints the prime minister, who is head of government and requires the confidence of parliament to remain in power. (The constitution was amended in 1986 to reduce the power of the president, limiting his right to dissolve parliament on his own initiative and depriving him of the right to dismiss the prime minister, veto legislation, or proclaim a state of emergency; basically, these powers were transferred to parliament.) The prime minister selects a cabinet from among the members of parliament.

Legislative power is vested in a parliament (Vouli), a unicameral body of 300 deputies elected by direct, universal, secret ballot for maximum four-year terms. A proportional electoral system makes it possible for a party with a minority of the popular vote to have a parliamentary majority. In the 1974 elections, voting was made compulsory for all persons aged 21–70 residing within 200 km (124 mi) of their constituencies. Suffrage is now universal and compulsory at age 18.

### 14 POLITICAL PARTIES

After World War II, political parties in Greece centered more on leaders than platforms. The Greek Rally, founded and led by Field Marshal Alexander Papagos, won control of the government in the 1951 elections. About 10% of the vote was received by the Union of the Democratic Left, a left wing party founded in 1951 as

a substitute for the Communist Party, outlawed since 1947. When Papagos died in October 1955, Constantine Karamanlis formed a new party called the National Radical Union, which won the elections of 1956, 1958, and 1961 and held power until 1963, when Karamanlis resigned and the newly formed Center Union, comprising a coalition of liberals and progressives and led by George Papandreou, subsequently won a narrow plurality, with Papandreou becoming prime minister. In elections held in February 1964, the Center Union won 174 out of 300 seats; however, King Constantine dismissed Papandreou in July 1965, and Stephanos Stephanopoulos formed a new government. This government, too, was short-lived. Political conflict came to a head when Panayotis Kanellopoulos, leader of the National Radical Union, who had been appointed premier of a caretaker government, set new elections for 28 May 1967. On 21 April, however, a military coup resulted in the cancellation of elections and suppression of political parties, which lasted until 1974.

On 28 September 1974, following his return from exile, Karamanlis formed the New Democracy Party (Nea Dimokratia—ND), advocating a middle course between left and right and promoting closer ties with Western Europe. The Center Union—New Forces (EKND), renamed the Union of the Democratic Center (EDHK) in 1976, rallied liberal factions of the former Center Union and announced a line that generally paralleled ND policies. The EDHK disintegrated following the 1981 elections. Other groups to emerge, most of them led by former opponents of the junta, included the Pan-Hellenic Socialist Movement (Panellinio Socialistiko Kinema—PASOK), led by Andreas Papandreou; the United Left (UL), which brought together elements of the Union of the Democratic Left and the Communist Party to oppose the upcoming elections; and the National Democratic Union (NDU), which represented an amalgam of various elements, including some royalists and right wing activists. Also in 1974, the Communist Party (Kommounistiko Komma Ellados—KKE) was made legal for the first time since 1947; the party later split into two factions, the pro-Soviet KKE-Exterior and the Eurocommunist wing, called the KKE-Interior. In May 1986, the KKE-Interior changed its name to the New Hellenic Left Party.

In the general elections held on 17 November 1974, the ND won an overwhelming majority in parliament, with the EKND forming the major opposition. The ND was again the winner in 1977, although its parliamentary majority dropped from 220 to 172. After parliament elected Karamanlis president in 1980, George Rallis succeeded him as prime minister. In the elections of 18 October 1981, Papandreou's PASOK won 48% of the popular vote and commanded a clear parliamentary majority. Although PASOK won again in the election of 2 June 1985, its share of the total votes cast fell to 45.8%.

In the elections of 10 October 1993, PASOK had about the same percentage (46.9%) and a majority of 171 seats. The ND followed with 110 seats and an offshoot party, Political Spring, had 10 seats. The Communists gained 9 places.

In the parliamentary elections of 22 September 1996, PASOK retained its majority, but lost 9 seats. ND emerged with 108 seats; the KKE, 11; Coalition of the Left and Progress, 10; and the Democratic and Social Movement Parties, 9. The Political Spring lost all its seats in the election, gaining only 2.95% of the popular vote.

PASOK continued its dominance of the post-1974 era with yet another victory at the polls on 9 April 2000. In a close election PASOK won 158 seats (43.8% of the vote), ND earned 125 seats (42.7%), the KKE held steady at 11 (5.5%), while the Coalition of the Left and Progress saw its share of the seats drop to 6 (3.2%). The Democratic Social Movement failed to clear the 3% hurdle needed for representation and Political Spring once again failed to win any seats.

Following the 7 March 2004 elections, ND increased its seats in parliament to 165 (45.5%), while PASOK's number declined to 117 (40.6%). The KKK gained one seat, winning 12 (5.9%), with the Coalition of the Left and Progress (Synaspismos) holding steady at 6 seats (3.3%).

## 15 LOCAL GOVERNMENT

The 1975 constitution restored the large measure of local self-government initially provided for in the constitution of 1952 and re-emphasized the principle of decentralization, although local units must depend on the central government for funding. Under the military regime of 1967–74, local units had been closely controlled by the central authorities.

Greece is divided into 13 regional governments (*periferiarchis*), which are subdivided into 51 prefectures or nomarchies (*nomoi*), in addition to the autonomous administration of Mt. Áthos (Aghion Oros) in Macedonia. Each prefecture is governed by a prefect (*nomoi*) who is elected. There are also 272 municipalities or *demoi* (cities of more than 10,000 inhabitants), administered by mayors; communes (with 300 to 10,000 inhabitants), each run by a president and a community council; and localities.

The rocky promontory of Mt. Áthos, southeast of Salonika, is occupied by 20 monasteries, of which 17 are Greek, one Russian, one Serbian, and one Bulgarian. Mt. Áthos is governed by a 4-member council and a 20-member assembly (1 representative from each monastery). The special status of Mt. Áthos was first formalized in the 1952 constitution.

## 16 JUDICIAL SYSTEM

The 1975 constitution (Syntagma) has been revised twice, in 1985 and in 2001. The constitution provides for an independent judiciary.

The constitution designates the Supreme Court (Areios Pagos) as the highest court of appeal. It consists of both penal and civil sections. A Council of State does not hear cases but decides on administrative disputes, administrative violations of laws, and revision of disciplinary procedures affecting civil servants. The Comptrollers Council decides cases of a fiscal nature. The 1975 constitution also established a Special Supreme Tribunal as a final arbiter in disputes arising over general elections and referenda, in addition to exercising review of the constitutionality of laws. Other elements of the judicial system include justices of the peace, magistrates' courts, courts of first instance, courts of appeal, and various administrative courts. Judges of the Supreme Court, the courts of appeal, and the courts of first instance are appointed for life on the recommendation of the Ministry of Justice. The president has the constitutional right, with certain exceptions, to commute and reduce sentences.

## 17 ARMED FORCES

In 2005 Greece's active armed forces totaled 163,850 members and were supported by some 325,000 reservists. As of that year, there were 110,000 active personnel in the Army, 19,250 in the Navy, and 23,000 in the Air Force. The Greek field army has a large and varied combined arms structure, with units manned at three different levels of readiness: 85% are fully ready; 65% are ready within 24 hours; and 20% are ready within 48 hours. The 1,150 troops serving on Cyprus include 1 mechanized brigade. The Army operates 1,723 main battle tanks, 175 reconnaissance vehicles, 501 armored infantry fighting vehicles, 1,640 armored personnel carriers, and 4,660 artillery pieces. The Navy had 13 tactical submarines, 18 frigates, 4 corvettes, 36 patrol and coastal combatants, and 13 mine warfare vessels, as well as various amphibious and support vessels. The Navy's aviation arm is focused on antisubmarine warfare and search and rescue. The Air Force operated 283 combat capable aircraft in addition to 120 fixed and rotary wing transport aircraft. The paramilitary consisted of 4,000 coast guard and customs officers. Greek military personnel provided support to UN peacekeeping missions in seven countries or regions around the world. In 2005, the defense budget totaled \$4.46 billion. The United States has one major naval base on Greek soil and several smaller installations.

## 18 INTERNATIONAL COOPERATION

Greece is a charter member of the United Nations (UN), having joined on 25 October 1945, and participates in ECE and several nonregional specialized agencies. Greece was admitted to NATO in 1951 but suspended its military participation (1974–80) because of the Cyprus conflict. It belongs to the Council of Europe, the OECD, OSCE, WTO, G-6, the European Bank for Reconstruction and Development, the Black Sea Economic Cooperation Zone, and the Western European Union. Greece is also a permanent observer at the OAS. The country became a full member of the European Union as of 1 January 1981.

In August 1987, Greece and Albania signed a pact ending the state of war that had existed between them since World War II (1939–45). The Greek government continues to be in dispute with the neighboring Republic of Macedonia over the name of the latter. In 1995, Greece agreed to recognize the country as the Former Yugoslav Republic of Macedonia. Greece and Turkey have unresolved boundary disputes in the Aegean Sea and tension between the two countries has grown in connection with the Greek-Turkish disputes in the nation of Cyprus. Greece has supported UN operations and missions in Kosovo (est. 1999), Western Sahara (est. 1991), Ethiopia and Eritrea (est. 2000), and Georgia (est. 1993). Greece has guest status in the Nonaligned Movement.

Greece belongs to the Australia group, the Zangger Committee, the Nuclear energy Agency, the Nuclear Suppliers Group (London Group), and the European Organization for Nuclear Research (CERN). In environmental cooperation, Greece is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

The Greek economy suffers from a paucity of exploitable natural resources and a low level of industrial development relative to the rest of Western Europe. By 1992, it had fallen behind Portugal to become the poorest European Community (now European Union—EU) member; with the entrance into the EU of 10 primarily Eastern European nations in 2004, that was no longer the case. In 2004, agriculture (with forestry and fishing) generated about 7% of GDP but employed about 12% of the labor force. Agricultural exports include tobacco, cotton, wheat, raisins, currants, fresh fruits, tomato products, olive oil, and olives. In 2004, industry and construction accounted for about 22% of GDP and 20% of the labor force. Wholesale and retail trade and other services provided some 71% of GDP, employing 68% of the labor force.

Next to food processing, textile manufacturing used to be the most important industry, but chemicals and metals and machinery have outstripped it in recent years. Paper products has been a fast-growing industry since 1980. Greece has stimulated foreign investments in the development of its mineral resources by constitutionally providing guarantees for capital and profits. The government has encouraged tourism, which has developed into a major source of revenue (15% of GDP in 2004). Greece continues to play a dominant role in the international shipping industry.

During the late 1950s and 1960s, the government took steps to reclaim land, develop new farms, increase credits and investments for agriculture, protect agricultural prices, and improve the agricultural product and utilize it to the best advantage; however, the country still depends on many imports to meet its food needs. Industrial output contributed substantially to the rapid increase in national income after 1960, and manufacturing and service industries were the fastest-growing sectors in the 1970s. In the 1980s, however, the economy retracted sharply because of the worldwide recession and growth in real terms was sluggish. In the best year of the decade, 1988, GDP grew by 4.9%. In 1993, GDP dropped by 0.5%, but rebounded in 1995 by 2.0%. Inflation, which neared 20% in 1991, had been lowered to 8.1% in 1995, lower than the many European Union (EU) countries that struggled mightily with inflation in the mid-1990s. As Greece pursued an economic austerity program aimed at meeting the criteria for European economic and monetary union (EMU), inflation continued to fall, reaching less than 4% at the end of 1998. Greece entered into the EMU in 2001.

As of 2006, Greece had failed to meet the EU's Growth and Stability Pact budget deficit criteria of 3% of GDP since 2000. Greece is a recipient of EU aid, amounting to 3.3% of annual GDP. The country's public debt burden is a major drag on economic growth and prosperity, at 112% of GDP in 2004. Unemployment remained high at 10% in 2004 and the country was in need of introducing social insurance reform. Greece has a large public sector (some 40% of GDP), but is implementing privatization policies. Per capita GDP is about 70% of the leading euro-zone economies. Public and private investment was strong in 2003, in preparation for the 2004 Olympic Games that were held in Athens; the Greek economy grew at a rate of approximately 4% in 2003 and 2004. Spending on the Olympic Games contributed to an estimated general government deficit of 6.6% of GDP in 2004; however, the deficit was forecast to fall substantially in 2005–07, although it was projected to remain above the 3% of GDP limit established by the

EU's Growth and Stability Pact. GDP growth was expected to slow from 4.2% in 2004 to 3.4% in 2005, 3.1% in 2006, and 2.9% in 2007. Inflation was likely to rise from 3% in 2004 to 3.8% in 2005, driven by indirect tax rises and high international oil prices, before easing again to 3.3% in 2006 and 2.8% in 2007.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Greece's gross domestic product (GDP) was estimated at \$242.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$22,800. The annual growth rate of GDP was estimated at 3.3%. The average inflation rate in 2005 was 3.8%. It was estimated that agriculture accounted for 6.2% of GDP, industry 22.1%, and services 71.7%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.564 billion or about \$142 per capita and accounted for approximately 0.9% of GDP.

The World Bank reports that in 2003 household consumption in Greece totaled \$114.60 billion or about \$10,418 per capita based on a GDP of \$172.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.4%.

## 21 LABOR

In 2005, Greece's labor force was estimated at 4.72 million people. In 2004, it was estimated that agriculture accounted for 12% of the labor force, followed by industry at 20% and the services sector at 68%. Unemployment was estimated at 10.8% in 2005.

In 2005, about 26% of salaried, nonagricultural employees belonged to unions. Altogether, there were over 4,000 trade unions. Unions were organized on a territorial rather than a plant basis: all workers of a certain trade in a town usually belong to one union. On a nationwide scale, union members of the same trade or profession form a federation; the General Confederation of Greek Workers (GSEE) is the central core of the private sector union movement. Government plays an important role in labor-management relations. Collective bargaining and the right to strike are protected by law, although workers must give notice of an intent to strike (4 days for public utilities, 24 hours in the private sector). Because of a history of compulsory arbitration as a means to resolve labor disputes, unions successfully lobbied for new legislation, passed in 1992, which restricted the use of compulsory arbitration in favor of mediation procedures.

As of 2005, the maximum legal workweek is 40 hours in the private sector and 37.5 hours in the public sector. The minimum monthly salary negotiated by the GSEE for that same year was around \$35 per day or \$779 per month. This amount provided a decent standard of living for a family. Annual vacations (of up to a month) with pay are provided by law. In general, employment of children under the age of 15 in the industrial sector was prohibited. The minimum age for children employed in cinemas, theaters

and family businesses was 12. Industrial health and safety standards are set by law and regularly enforced.

## 22 AGRICULTURE

Agriculture in Greece suffers not only from natural limitations, such as poor soils and droughts, but also from soil erosion, lack of fertilizers, and insufficient capital investment. The total farm labor force in 2003 was 129,900 full-time and nearly 1.4 million part-time workers.

About 30% of the land area is cultivable, and it supports over half of the population. Of the land under cultivation in 2003, about 72% was planted in seasonal crops, and 28% in orchards and vineyards. About 38% of the agricultural land was irrigated in 2003. Although agriculture accounts for 17% of the work force, its role in the economy is declining; in 2003 agriculture accounted for 7% of GDP, down from 25% in the 1950s.

In recent decades, Greek agriculture has been characterized by an increasing diversification of fruit crops for export. Agricultural production of principal crops in 2004 was estimated as follows (in thousands of tons): sugar beets, 2,300; corn, 2,300; olives, 2,130; tomatoes, 1,800; wheat, 1,800; peaches and nectarines, 955; oranges, 903; cotton, 359; apples, 288; barley, 220; and tobacco, 127.

Progress has been made toward modernization in machinery and cultivation techniques. Agricultural products, including processed foods, beverages, and tobacco, make up one-third of total exports. To expand agricultural production and encourage farm prosperity, the government exempts agricultural income from most taxes, extends liberal farm credits, and subsidizes agriculture. It also operates a service by which individual growers or cooperatives may hire heavy farm equipment at low prices, encourages the development of industries that use farm products, provides educational programs, and has sought to halt the trend toward ever-smaller farm holdings. There were 255,000 tractors, 5,150 harvester-threshers, and 13,450 milking machines in use in 2003.

## 23 ANIMAL HUSBANDRY

In 2005 there were 9,000,000 sheep, 5,400,000 goats, 1,000,000 hogs, 600,000 head of cattle, 68,000 donkeys, 29,000 horses, 28,000 mules, and 28,000,000 chickens. Although production of milk, meat, and cheese has risen greatly since the end of World War II (1939–45), Greece still must import substantial quantities of evaporated and condensed milk, cheese, cattle, sheep, hides, and meat. Estimated meat production in 2005 included 134,000 tons of poultry, 134,000 tons of pork, 124,000 tons of mutton and goat meat, and 75,000 tons of beef and veal. Livestock products in 2005 included (in thousands of tons) cow's milk, 780; sheep milk, 700; goat milk, 495; cheese, 246; eggs, 105; honey, 15; and butter, 4. Recent modernization in machinery has especially helped poultry and hog operations. Exports of dairy and egg products were valued at \$216.4 million in 2004 (mostly going to European Union nations).

## 24 FISHING

The fishing industry has expanded and been modernized in recent years. In 2002, the Greek fishing fleet consisted of 19,504 vessels with 97,579 GRT, and there were 33,992 people employed in small scale fisheries. The total fish catch was 197,596 tons in 2003.

A total of \$317.2 million of fish and fish products were exported that year. In the north of Greece, freshwater fisheries have been restocked and developed, but the inland catch only accounted for 3% of total volume in 2003.

Sponge fishing, formerly an important undertaking in the Dodecanese and other regions, decreased in volume from 135.5 tons of sponges in 1955 to 2.5 tons in 2003.

## 25 FORESTRY

Forests cover about 28% of the total area. Much of the forest area was destroyed during the 1940s, but the government's reforestation program planted more than 100 million trees during the 1970s and 1980s. Pine, fir, and oak are the most common trees, and resin and turpentine are the principal products. In 2004, 1,672,000 cu m (59,022,000 cu ft) of roundwood were harvested, including 1.073 million cu m (37.88 million cu ft) of firewood. Sawn wood production in 2004 totaled 196,000 cu m (6,911,000 cu ft), and wood-based panels, 770,000 cu m (27.2 million cu ft). Production of timber is insufficient to meet the domestic demand, and many forestry products are imported. Total trade in forestry products in 2003 amounted to \$929 million imports and \$112.4 million in exports.

## 26 MINING

The minerals industry, consisting of the mining, industrial minerals, and metal processing sectors, was a small but important part of the national economy. Greece, the only Balkan country in the European Union (EU), was the union's largest producer of bauxite, magnesium, nickel, and perlite, and was second to the United States in bentonite production (from Milos Island). Chromite (from Tsingeli Mines, near Volos) and zinc (from Kassandra Mines, in Olympias and Stratoni) were other important commodities. Greek marble, produced in all parts of the country, continued to play a leading role in the international dimension stone market because of its versatility and many colors (ash, black, brown, green, pink, red, and multicolored). With the exception of bauxite, Greece's mines operated far below their productive capacity. A relatively small industrial base, lack of adequate investment, and distance from EU markets, have restricted the export potential of the country. The emerging Balkan markets could offer opportunities for growth. About 50% of the country's mineral production was exported. Northern Greece was thought to contain a significant amount of exploitable mineral resources, and most new activities were directed toward gold.

Production in 2003 of bauxite was 2.418 million metric tons, compared to 2,468,865 metric tons in 2002. Nickel (content of ferromagnesian) output in 2003 was estimated at 18,000 metric tons, while crude perlite production in that year was estimated at 850,000 metric tons, up from 838,997 metric tons in 2002. Other types of magnesite produced were dead-burned, caustic-calcined, and crude huntite/hydromagnesite, which had unique flame-retardant properties. Grecian Magnesite S.A., with its open-pit mine at Yerkini, was a leading magnesite producer in the western world. Also produced in 2003 were alumina, lead, manganese, silver, barite, cement, kaolin, feldspar, gypsum (from Crete), anhydrite, nitrogen, pozzolan (Santorin earth, from Milos), pumice (from Yali), salt, silica, sodium compounds, dolomite, marble, flysch, quartz, sulfur, zeolite, and crude construction materials. No asbestos was

produced in 2003. Other mineral deposits of commercial importance were antimony, gold (placer dredger), asbestos, emery, ceramic clay, talc, and limestone. Industrial processing of mineral ores was very limited until the 1960s and 1970s, when facilities for refining nickeliferous iron ore and bauxite were developed.

## 27 ENERGY AND POWER

Coal and oil are imported to supply power for the many small generating plants spread over the country. Before World War II, the Athens-Piraiévs Electricity Co. operated the only modern plant in Greece, which ran on imported coal. In 1950, the government-organized Public Power Corp. was established to construct and operate electricity generating plants and power transmission and distribution lines; by 1955, it had erected four major power plants. In 1965, the first two units of the Kremasta hydroelectric station were opened; by 2001, installed capacity totaled 10.2 million kW. Production of electricity increased from 8,991 million kWh in 1970 to 50,400 million kWh in 2000, of which 91.5% was provided by thermal power, 6.6% by hydroelectric stations, and the rest by other sources. It has been estimated that 15% of Greece's energy needs can be supplied by wind power by 2010, and there are wind farms on Crete, Andors, and a number of other Greek islands. As of 2002, solar water heaters were used in 20% of Greek homes.

As of 2003, 63% of Greece's total energy consumption came from oil. Greece has actively explored offshore oil resources. A field off Thásos in the northern Aegean began operations in July 1981. Total production, however, fell from 25,000 to 6,000 barrels per day between 1986 and 1998. In 2004, oil production totaled an estimated 6,411 barrels per day, of which crude oil accounted for 2,836 barrels per day, from reserves estimated at 7 million barrels, as of 1 January 2005. Consumption in 2004 totaled an estimated 429,000 barrels per day, making Greece strongly reliant on imported oil, mostly from Russia, Libya, OPEC, the Persian Gulf, and Egypt. Natural gas production in 2003 totaled an estimated 1.0 billion cu ft, compared with an estimated consumption of 86 billion cu ft for that same year. Two-thirds of Greece's imports of natural gas come from Russia, with the remainder from Algeria. Greece's only substantial fossil fuel resource is brown coal, or lignite. Its lignite reserves totaled an estimated 4,299 million short tons in 2003, with production and consumption estimated at 75.3 million short tons and 76 million short tons, respectively for that same year.

## 28 INDUSTRY

Manufacturing, which now ranks ahead of agriculture as an income earner, has increased rapidly owing to a vigorous policy of industrialization. However, Greek industry must rely on imports for its raw materials, machinery, parts, and fuel. Greece has only a rudimentary iron and steel industry and does not manufacture basic transport equipment, such as cars and trucks. Industry is concentrated in the Athens area.

Chief industries in 2006 were food, beverages and tobacco; metals and metals manufactures; machinery and electrical goods; chemicals; textiles; and nonmetallic minerals. Although the government controls certain basic industries, such as electric power and petroleum refining, most industry is privately owned. The portion of government-controlled industries is declining as the state has divested itself of substantial control over key hold-

ings such as Olympic Airways and the telecommunications company, OTE. There is substantial room for investment in tourism infrastructure.

The industrial sector accounted for 22% of GDP in 2004, and it grew by 4.1% that year. High technology equipment is a growth sector, as are the production of electrical machinery, office machinery and computers, defense products, building products and equipment, medical equipment, environmental engineering products and services, and certain agricultural products.

## 29 SCIENCE AND TECHNOLOGY

The Academy of Athens, founded in 1926, oversees the activities of research institutes in astronomy and applied mathematics and in atmospheric physics and climatology. Greece has five other scientific research institutes. Specialized scientific learned societies include the Association of Greek Chemists, founded in 1924, and the Greek Mathematical Society, founded in 1918, both headquartered in Athens. Advanced scientific and technical training is provided at nine colleges and universities. The University of Athens has maintained a zoological museum since 1858. In the early 1980s, the government established a Ministry of Research and Technology to foster scientific and technological development.

In the period 1987-97, science and engineering students accounted for 26% of university enrollment. In 2001, Greece had 1,357 scientists and engineers per million people who were engaged in research and development (R&D). In that same year, total spending on R&D amounted to 1,226.070 million, or 0.65% of GDP. The government sector accounted for the largest portion of R&D spending in 2001 at 46.6%, followed by the business sector at 33.1%. Foreign sources accounted for 18.4%, with higher education accounting for 2%. In 2002, high technology exports by Greece totaled \$524 million, or 10% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Industry and trade are centered on about 20 seaports throughout the country. Athens, Piraeus, and Thessaloniki are the principal commercial cities; importers and exporters have offices in these cities and branches in other centers. There are about 300,000 wholesale and retail trading establishments in the country.

In general, small shops specialize in particular lines of merchandise, but there are a growing number of department stores. Most people buy in the small shops and in the markets. Usual private sector business hours are from 8 or 9 AM to 5 PM Monday through Friday. Banking hours are from 8:30 AM to 2 PM Monday through Friday. Stores are open from 9 AM to 6 PM, Monday through Saturday, but some have longer evening hours. Businesses are often closed for extended vacations throughout July and August, reopening in September after the annual trade fair.

Advertising is used widely in the towns and cities, and several advertising agencies are active in Athens and Thessaloniki. The most common media are television, newspapers, radio, films, billboards, neon signs, and window displays. The principal annual trade fair is the International Fair of Thessaloniki, held in September.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.**3<sup>1</sup> FOREIGN TRADE**

Garments and cotton have traditionally provided Greece with the most exports, followed by petroleum products; fruit, nuts, and vegetable oils; and tobacco. Tobacco exports from Greece are substantial on the world commodities export market. In 2004, the major exports were machinery (19.3% of all exports), food (17.1%), and transportation (13.7%, not including services). The major imports in 2004 were machinery (20.7% of all imports), chemicals and plastics (14.2%), and food (13.7%). Trade is the second-largest services sub-sector, after property management. The transportation and communications sector has grown in importance following the liberalization of the telecommunications market, while the financial services sector also increased in the mid-2000s. Greece's leading markets in 2004 were Germany (12.6% of all exports), Italy (10.5%), the United Kingdom (7%), and France (4.2%). Leading suppliers included Germany (12.3% of all imports), Italy (12%), France (6.5%), and the Netherlands (5.1%).

**3<sup>2</sup> BALANCE OF PAYMENTS**

Because it imports more than twice the value of its exports, Greece has registered chronic annual deficits in its balance of payments. The major contributors to Greece's foreign exchange earnings are tourism, shipping services, and remittances from Greek workers abroad. Greece's relatively small industrial base and lack of substantial investment since the mid-1990s limited the country's export potential. Greece's productive base expanded in 1999 and 2000, however, in part due to a thriving stock exchange, and low interest rates. A devaluation of the drachma in 1998 and Greece's inclusion in the euro zone in 1999 restored Greek competitiveness. Merchandise exports amounted to \$15.7 billion in 2004 and imports to \$47.4 billion, while the current-account deficit was \$13 billion. The current-account balance averaged -6.7% from 2001–05.

**3<sup>3</sup> BANKING AND SECURITIES**

The government-controlled Bank of Greece (founded in 1927) is the central bank and the bank of issue; it also engages in other banking activities, although the European Central Bank is in

charge of monetary policy. There are 33 Greek commercial banks, which are dominated by two massive, state-controlled banking groups, the National Bank and the Commercial Bank. Nineteen of the commercial banks are foreign, including three American banks. The two leading private banks are Alpha Credit and Ergo, which ranked third and fifth, respectively, in 1997 in the Greek banking industry in terms of assets. Banks still must redeposit 70% of all their foreign exchange deposits with the Bank of Greece at the going interest rate plus a small commission. In 1999, as part of a general privatization program, the government began selling shares in the National Bank of Greece and Ionian Bank was sold outright and taken over by Alpha Credit.

The Currency Committee, composed of five cabinet ministers, controls the eight specialized credit institutions: the Agricultural Bank, National Investment Bank, National Investment Bank for Industrial Development, Hellenic Industrial Development Bank, National Mortgage Bank, Mortgage Bank, Postal Savings Bank, and Consignments and Loans Fund. The money supply in 2001, as measured by M1, was 24.7 billion euros. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$22.2 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$129.6 billion.

The Athens Stock Exchange (Chrimatisterion) was founded by royal decree in 1876. In 1967, significant reforms were instituted, including more stringent listing requirements, bringing about a rapid increase in the number of listed securities. New legislation was introduced in 1988 to expand and liberalize its activities. The rule changes provided for the establishment of brokerage companies, thus breaking the traditional closed shop of individual brokers. In 1997 there were 53 brokerage houses and just 6 private brokers. Computerized trading was implemented in 1992 and there has since been a rapid evolution of the market. The aim is

to secure total dematerialization of shares and to allow brokers to screen-trade from their offices. A satellite trading floor was established in Thessaloniki in 1995. In 1996, Greek law was harmonized with the European Union financial services directive, and banks may now be directly represented on the floor of the exchange instead of having to establish subsidiary brokerage houses. The late 1990s witnessed a boom on the exchange. In 1998, the index rose 85%, while the first five months of 1999 saw a further jump of 43.7%. However, this expansion did not continue into the new millennium. Between 2002 and 2003, the index lost 33.1% of its value. As of 2004, a total of 340 companies were listed on the Athens Stock Exchange (ASE), which had a market capitalization of \$125.242 billion that year. In 2004, the ASE rose 23.1% from the previous year to 2,786.2.

### 3<sup>4</sup> INSURANCE

Most of Greece's large insurance companies are partly or wholly owned by banks. In addition, insurers are required to join several unions, trade groups, and insurance pools. Brokers in Greece also must be accepted by the Ministry of Trade. In Greece, the social security scheme and third-party automobile liability insurance are compulsory. In 2003, the direct premiums written were valued at \$3.668 billion, of which nonlife premiums accounted for \$2.040 billion. Ethniki was the country's largest nonlife and life insurer in 2003, with total gross earned non life premiums (including personal accident and inwards reinsurance) and gross written life insurance premiums valued at \$361.2 million and \$258.3 million respectively.

Insurance companies have begun to develop private pension schemes and corporate pension schemes. However, most occupational pension funds remain under state control because they are part financed by state-enacted levies. Insurance companies have also been responsible for the recent explosion in unit trusts (mutual funds), from two in 1989 to 152 in December 1995, when there were more than D2 trillion (7.8% of GDP) under management.

### 3<sup>5</sup> PUBLIC FINANCE

The state budget includes ordinary revenues and expenditures and a special investment budget administered by the Ministry of Coordination. The public sector, which employs 15% of the workforce, has many more civil servants than required for a country the size of Greece. Public payrolls, liberal social security benefits, and loss-generating state owned companies have all contributed to a government deficit. Recent austerity measures implemented to meet the criteria for European Monetary Union membership significantly lowered the budget shortfall.

The US Central Intelligence Agency (CIA) estimated that in 2005 Greece's central government took in revenues of approximately \$94.1 billion and had expenditures of \$103.4 billion. Revenues minus expenditures totaled approximately -\$9.2 billion. Public debt in 2005 amounted to 108.9% of GDP. Total external debt was \$75.1 billion.

### 3<sup>6</sup> TAXATION

The corporate income tax rate in Greece in 2005 was 32%. The profits of general partnerships (OE) and limited partnerships (EE) were taxed at 25%. A discount of 2.5% was given to companies that settled their corporate tax liability in full when they filed their

tax returns. A surcharge is applied to gross rental income, but the surcharge is not to exceed the primary corporate tax. Capital gains were taxed at rates between 20% and 35%. Dividends paid to the corporate or individual shareholder are not taxed. Interest paid to Greek legal entities is 20% and 35% to foreign legal entities that do not have a permanent establishment in Greece.

The progressive personal income tax schedule for 2005 has a top rate of 40%. Various deductions or tax credits can be applied to taxable income for medical and hospitalization expenses; social security taxes; interest payments on home loans; and donations to charitable organizations, with special deductions for families whose income is derived primarily from their own work on agricultural enterprises. The withholding tax is 15% on interest income from banks and 10% on interest income derived from treasury bills and corporate bonds. There is a 20% tax on royalty payments, but these are often reduced or eliminated in bilateral double tax prevention treaties, of which Greece has concluded more than 35. Gift and inheritance taxes, property taxes on large estates having a certain value, real estate transfer taxes, and taxes on urban property and rural property are also levied.

The main indirect tax in Greece is its value-added tax (VAT) introduced in January 1987. The standard VAT rate in 2005 was 19%. There were also three reduced rates—0% on domestic transportation, lawyers and land registrar fees; 4.5% on books and newspapers; and 9% on foodstuffs, agricultural products and medical materials. Excise duties are charged on tobacco, alcohol, gasoline, and automobiles.

### 3<sup>7</sup> CUSTOMS AND DUTIES

The import tariff protects domestic products and provides a source of government revenue. Many Greek industries are not yet large enough or sufficiently modern to compete in price with foreign products, either in markets abroad or in Greece itself. As a full member of the European Union (EU) since 1981, Greece eliminated its remaining tariffs and quotas on imports from EU nations

by 1986 and aligned its own tariffs on imports from other countries with those of EU members. Greek exports to EU countries are tariff-free. Imports from non-EU countries are subject to the EU's common customs tariff. Most raw materials enter duty-free, while manufactured goods have rates between 5% and 7%. Textiles, electronics, and some food products have higher rates. Motor vehicles, yachts, and motorcycles are subject to special duties. In addition, Greece imposes an 8–19% value-added tax and special consumption taxes on alcohol and tobacco.

### 38 FOREIGN INVESTMENT

The government encourages foreign capital investment and protects foreign investors against compulsory appropriation of their assets in Greece. Incentives include reduced tax rates and increased depreciation rates.

Total direct foreign investment (FDI) was estimated at \$3.78 billion in 1995. From 1995 to 1997, FDI inflow averaged about \$1 billion a year. In the wake of the Russian financial crisis of 1998, FDI inflow fell to \$700 million in 1998 and to \$567 million in 1999. FDI inflow in 2000 reached over \$1 billion and grew to a record \$1.56 billion in 2001. In 2002, FDI inflow fell nearly 90% to \$50.3 million. For the period 1999 to 2002, FDI inflow averaged about \$833 million.

Outward FDI flow was \$542 million in 1999, over \$2 billion in 2000, and \$611 million in 2001. Outward FDI increased to \$655.3 million in 2002. For the period 1999 to 2002, average outward FDI from Greece was \$993.3 billion.

From 2001–05, FDI inflows averaged 0.6% of GDP. The corporate tax rate was being cut from 35% to 32% on income earned in 2005, to 29% on income earned in 2006, and to 25% on income earned in 2007. Value-added tax (VAT) is levied at 19%, 8%, and 4.5%. Although there is no official estimate of total foreign investment in Greece, as of 2002 the total stock of FDI was estimated at \$6 billion, or approximately 4.3% of GDP. Greece's investment abroad is directed primarily to the Balkans. Greek direct investment in the Balkans was estimated at \$3.6 billion in 2002.

### 39 ECONOMIC DEVELOPMENT

Until the mid-1970s, Greek governments devoted themselves principally to expanding agricultural and industrial production, controlling prices and inflation, improving state finances, developing natural resources, and creating basic industries. In 1975, the Karamanlis government undertook a series of austerity measures designed to curb inflation and redress the balance-of-payments deficit. A new energy program included plans for stepped-up exploitation of oil and lignite reserves, along with uranium exploration in northern Greece. Increased efforts at import substitution were to be undertaken in all sectors. On 7 March 1975, in an effort to strengthen confidence in the national currency, the government announced that the value of the drachma would no longer be quoted in terms of a fixed link with the US dollar, but would be based on daily averages taken from the currencies of Greece's main trade partners.

The Socialist government that took office in 1981 promised more equal distribution of income and wealth through "democratic planning" and measures to control inflation and increase productivity. It imposed controls on prices and credit and began to restructure public corporations. But the government was

cautious in introducing what it called "social control in certain key sectors" of the economy, and it ordered detailed studies to be made first. Its development policies emphasized balanced regional growth and technological modernization, especially in agriculture. The conservative government that came to power in 1990 adopted a 1991–93 "adjustment program" that called for reduction of price and wage increases and a reduction in the public-sector deficit from 13% to 3% of GDP. Twenty-eight industrial companies were to be privatized.

The chief goal of the Simitis government was admission to the European Monetary Union (EMU). As a consequence, his government instituted an austerity program aimed to tackle chronically high inflation, unemployment, and a bloated public sector. By 1998–99, these policies showed significant progress. Greece gained admission to the EMU in 2001, and adopted the euro as its new currency in 2002. The Greek economy was growing at rates above European Union (EU) averages from 2002–05; however, unemployment and inflation rates were still higher than in most euro-area countries. In 2004, Greece's general government debt stood at approximately 112% of GDP. Greece benefits from EU aid, equal to about 3.3% of GDP.

Privatization of state-owned enterprises has moved at a relatively slow pace, especially in the telecommunications, banking, aerospace, and energy sectors. In 2003, preparations for the 2004 Olympics drove investment, but spending on the Olympic Games contributed to a general government deficit of 6.6% of GDP in 2004. With the aid of EU grants, Greece will need to update its infrastructure, especially in the northern regions and on the islands. Improvements in road, rail, harbor, and airport links financed through the EU's Community Support Framework (CSF) programs have contributed to economic decentralization.

### 40 SOCIAL DEVELOPMENT

The Social Insurance Foundation, the national social security system, is supported by contributions from employees, employers and the government. It provides for old age, disability and survivorship. Work injury and unemployment benefits are also provided. Sick leave and maternity benefits have been in place since 1922. Current benefits include medical care, hospitalization, medicine, maternity care, dental coverage, appliances, and transportation. Payments also include birth and funeral grants.

Although the law mandates equal pay for equal work, according to statistics in 2004 women's pay amounted to 75.5% of men's pay. Domestic violence and rape remains underreported, and the number of prosecutions and convictions is low. Women are beginning to enter traditionally male-oriented careers such as law and medicine, but only make up 42.5% of the work force. Sexual harassment is specifically prohibited by law.

Occasional human rights abuses, involving residents, illegal aliens and persons in custody, have been reported. Government measures to improve prison conditions continue. The constitution prohibits discrimination on the basis of nationality, race, language, religion, or political beliefs. In practice the government does not always protect these rights.

### 41 HEALTH

Since World War II, the government has broadened health services by building new hospitals and providing more clinics and

medical personnel. Total health care expenditure was estimated at 8.4% of GDP. As of 2004, there were an estimated 410 physicians per 100,000 people. There are severe air quality problems in Athens. Pulmonary tuberculosis, dysentery, and malaria, which were once endemic, have been controlled. The incidence of typhoid, which was formerly of epidemic proportions, dropped to only 149 cases in 1985 following the application of US aid to improve sanitary conditions in more than 700 villages. At present, 100% of the population has access to safe water. In 2005, the infant mortality rate was 5.53 per 1,000 live births. The total fertility rate in 1980 (2.2) has dropped to 1.3 as of 2000. The birthrate was an estimated 9.8 per 1,000 people. The sharp birth rate decline since World War II has been attributed to the legalization of abortion. In 2005, life expectancy averaged 79.09 years. As of 2002, the overall mortality rate was estimated at 9.8 per 1,000 people.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 600 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

## 42 HOUSING

Construction of new dwellings (including repairs and extensions) reached 88,477 units in 1985 and rose to 120,240 in 1990. Most new construction is in Athens or Thessaloniki, indicating the emphasis on urban development. Considerable amounts of private investment have been spent on the construction of apartment houses in urban areas. In 2001, the total number of dwelling units was 5,476,162. About 47.9% of all dwelling units are owner occupied. About 40% of all dwellings are single household homes.

## 43 EDUCATION

Education is free and compulsory for nine years beginning at age six, and primary education lasts for six years. Secondary education is comprised of two steps: first three years, followed by an additional three years of college preparation. At the upper secondary levels, students may choose to attend a three-year vocational school. The central and local governments pay the cost of state schools, and private schools are state-regulated. The academic year runs from September to June. Greek is the primary language of instruction.

In 2001, about 68% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 86% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 12:1 in 2003; the ratio for secondary school was about 9:1.

In July 1982, the Socialist government initiated a program to democratize the higher-education system; a law was approved that diminished the power of individual professors by establishing American-style departments with integrated faculties. Junior faculty members and representatives of the student body were granted a role in academic decision-making. The legislation also curbed university autonomy by establishing the National University Council to advise the government on higher-education planning, and the Academy of Letters and Sciences to set and implement university standards.

Greece has six major universities: Athens, Salonika, Thrace, Ioánnina, Crete, and Pátrai—together with the National Technical University of Athens, the new University of the Aegean, and the Technical University of Crete, plus seven special institutions of higher education. There are several technological educational institutions, which offer nondegree programs of higher education. Private universities are constitutionally banned. In 2003, about 74% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 91%, with 94% for men and 88.3% for women.

As of 2003, public expenditure on education was estimated at 4% of GDP, or 7% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Library traces its origins to 1828, when it was established on the island of Aíyina; the library was moved to its present site in Athens in 1903 and today has more than 2.5 million volumes. Both the National Library and the Library of Parliament (1.5 million volumes) act as legal depositories for Greek publications and are open to the public. Public libraries are located mainly in provincial capitals, and there are regional libraries with book-mobile services for rural areas.

Besides the libraries attached to the universities and other educational institutions, there are several specialized research libraries located in Athens. Outstanding special collections can be found at the Democritus Nuclear Research Center (91,000 volumes), the Center of Planning and Economic Research (30,000 volumes), the Athens Center of Ekistics (30,000 volumes), and the Gennadius Library (80,000 volumes), which houses a large collection on modern Greek history. Being at the crossroads of different civilizations and an important European country, there are several libraries attached to various cultural and ethnic studies centers. Notable among these are the libraries of the Institute for Balkan Studies in Thessaloniki, the British Council, the Society for Byzantine Studies in Athens, and the Center for Asia Minor Studies in Athens.

Most museums are devoted to antiquities and archaeology. One of the richest collections of Greek sculpture and antiquities is found at the National Archaeological Museum in Athens, which is also home to the Byzantine and Christian Museum, Benaki Museum, and Kanellopoulos Museum. The most impressive archaeological remains, of course, are the great temples and palaces at Athens (particularly the Parthenon and the Stoa of Attalos), Corinth, Salonika, Delphi, Olympia, Mycenae, the island of Delos, and Knossos, on Crete. There are also notable museums dedicated to the work of other cultures, including the Byzantine Museum and the Jewish Museum, both in Athens. Among the newer facilities are the Hellenic Children's Museum (1987), the Museum of Greek Popular Musical Instruments (1991), the Museum of Delphic Celebrations of Angelos and Eva Sikelianou (1991), the Nikolaos Parantinos Museum of Sculpture (1991), and the Maria Callas Museum (2003) all located in Athens.

## 45 MEDIA

The Greek Telecommunications Authority operates domestic telegraph and telephone communications. In 2003, there were an estimated 454 mainline telephones for every 1,000 people; about 1,700 people were on a waiting list for telephone service installa-

tion. The same year, there were approximately 902 mobile phones in use for every 1,000 people.

Radio Athens broadcasts are carried by provincial relay stations located in various parts of the country; other stations are operated by the Greek armed forces and by the Hellenic National Radio and Television Institute. There are numerous independent radio and television stations. In 2003, there were an estimated 466 radios and 519 television sets for every 1,000 people. The same year, there were 81.7 personal computers for every 1,000 people and 150 of every 1,000 people had access to the Internet. There were 290 secure Internet servers in the country in 2004.

In 2002, there were over 150 daily papers throughout the country. The largest Athens dailies (with estimated 2002 circulation rates) are *To Vima* (250,000), *Eleftheros Typos* (167,186), *Ta Nea* (135,000), *Ethnos* (84,700), *Apogevmatini* (72,900), and *Avriani* (51,300).

The constitution provides for freedom of speech and press, and with a few exceptions the government is said to respect these rights. On matters involving the politically sensitive subject of the recognition of certain ethnic minorities, it is reported that the government is restrictive. The constitution also allows for seizure of publications that insult the president, offend religious beliefs, contain obscene articles, advocate violent overthrow of the political system, or disclose military and defense information. However, such action is very rare.

#### 46 ORGANIZATIONS

Most of the larger cities and towns have associations of commerce, industry, handicrafts, and finance. There are some consumers' and producers' cooperatives; chambers of commerce and industry function in Athens, Piraiévs, and Salonika. There are professional and trade organizations for a variety of occupations and industries, such as the Association of Greek Honey Processors and Exporters, the Greek Association of Industries and Processors of Olive Oil, and the Pan-Hellenic Association of Meat-Processing Industries. The Federation of Greek Industries draws together many of these business and manufacturing organizations.

The Academy of Athens serves to promote public interest in science and works to improve availability and effectiveness in science education programs. Artists, writers, musicians, educators, and journalists are organized into professional associations. Scholarly societies include those devoted to archaeology, anthropology, geography, history, political science, and sociology. Several professional associations also promote research and education in their field.

National youth organizations in Greece include the Greek Democratic Socialist Youth, Girl Guides and Girl Scouts of Greece, the Association of Boy Scouts, YMCA/YWCA, the Greek Youth Federation, the Radical Left Youth, and the Student and Scientist Christian Association of Greece. There are several sports organization in Greece, including the historical societies of the Hellenic Federation of Ancient Olympic Games and the International Society of Olympic Historians. The World Chess Federation is based in Athens.

There are national chapters of the Red Cross Society, Caritas, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Principal tourist sites, in addition to the world-famous Parthenon and Acropolis in Athens, include Mt. Olympus (the home of the gods in ancient mythology), the site of the ancient oracle at Delphi, the Agora at Corinth, the natural spring at the rock of the Acropolis, and the Minoan ruins on Crete. Operas, concerts, ballet performances, and ancient Greek dramas are presented at the Athens Festival each year from July to September; during July and August, Greek classics also are performed in the open-air theater at Epidaurus, 40 km (25 mi) east of Árgos. Popular sports include swimming at the many beaches, sailing, water-skiing, fishing, golf, and mountain climbing.

The Greek government encourages tourists and facilitates their entry and accommodation. A passport is needed for admission; residents of the United States, Australia, Canada, and 37 other countries do not require a visa for a stay of up to 90 days.

About 14,180,000 tourists visited Greece in 2002. There were 330,970 hotel rooms in 2003 with 628,170 beds. The average length of stay that same year was seven nights.

In 2005, the US Department of State estimated the cost of staying in Athens at \$294 per day. Elsewhere in the country, daily expenses ranged from \$53 to \$296.

#### 48 FAMOUS GREEKS

The origins of Western literature and of the main branches of Western learning may be traced to the era of Greek greatness that began before 700 BC with the epics of Homer (possibly born in Asia Minor), the *Iliad* and the *Odyssey*. Hesiod (fl.700 BC), the first didactic poet, put into epic verse his descriptions of pastoral life, including practical advice on farming, and allegorical myths. The poets Alcaeus (620?–580? BC), Sappho (612?–580? BC), Anacreon (582?–485? BC), and Bacchylides (fl.5th cent. BC) wrote of love, war, and death in lyrics of great feeling and beauty. Pindar (522?–438? BC) celebrated the Panhellenic athletic festivals in vivid odes. The fables of the slave Aesop (b.Asia Minor, 620?–560? BC) have been famous for more than 2,500 years. Three of the world's greatest dramatists were Aeschylus (525–456 BC), author of the *Oresteia* trilogy; Sophocles (496?–406? BC), author of the Theban plays; and Euripides (485?–406? BC), author of *Medea*, *The Trojan Women*, and *The Bacchae*. Aristophanes (450?–385? BC), the greatest author of comedies, satirized the mores of his day in a series of brilliant plays. Three great historians were Herodotus (b.Asia Minor, 484?–420? BC), regarded as the father of history, known for *The Persian Wars*; Thucydides (460?–400? BC), who generally avoided myth and legend and applied greater standards of historical accuracy in his *History of the Peloponnesian War*; and Xenophon (428?–354? BC), best known for his account of the Greek retreat from Persia, the *Anabasis*. Outstanding literary figures of the Hellenistic period were Menander (342–290? BC), the chief representative of a newer type of comedy; the poets Callimachus (b.Libya, 305?–240? BC), Theocritus (b.Italy, 310?–250? BC), and Apollonius Rhodius (fl.3d cent. BC), author of the *Argonautica*; and Polybius (200?–118? BC), who wrote a detailed history of the Mediterranean world. Noteworthy in the Roman period were Strabo (b.Asia Minor, 64? BC–AD 24?), a writer on geography; Plu-

tarch (AD 46?–120?), the father of biography, whose *Parallel Lives* of famous Greeks and Romans is a chief source of information about great figures of antiquity; Pausanias (b.Asia Minor, fl. AD 150), a travel writer; and Lucian (AD 120?–180?), a satirist.

The leading philosophers of the period preceding Greece's golden age were Thales (b.Asia Minor, 625?–547? BC), Pythagoras (570?–500? BC), Heraclitus (b.Asia Minor, 540?–480? BC), Protagoras (485?–410? BC), and Democritus (460?–370? BC). Socrates (469?–399 BC) investigated ethics and politics. His greatest pupil, Plato (429?–347 BC), used Socrates' question-and-answer method of investigating philosophical problems in his famous dialogues. Plato's pupil Aristotle (384–322 BC) established the rules of deductive reasoning but also used observation and inductive reasoning, applying himself to the systematic study of almost every form of human endeavor. Outstanding in the Hellenistic period were Epicurus (341?–270 BC), the philosopher of moderation; Zeno (b.Cyprus, 335?–263? BC), the founder of Stoicism; and Diogenes (b.Asia Minor, 412?–323 BC), the famous Cynic. The oath of Hippocrates (460?–377 BC), the father of medicine, is still recited by newly graduating physicians. Euclid (fl.300 BC) evolved the system of geometry that bears his name. Archimedes (287?–212 BC) discovered the principles of mechanics and hydrostatics. Eratosthenes (275?–194? BC) calculated the earth's circumference with remarkable accuracy, and Hipparchus (190?–125? BC) founded scientific astronomy. Galen (AD 129?–199?) was an outstanding physician of ancient times.

The sculptor Phidias (490?–430? BC) created the statue of Athena and the figure of Zeus in the temple at Olympia and supervised the construction and decoration of the Parthenon. Another renowned sculptor was Praxiteles (390?–330? BC).

The legal reforms of Solon (638?–559? BC) served as the basis of Athenian democracy. The Athenian general Miltiades (554?–489? BC) led the victory over the Persians at Marathon in 490 BC, and Themistocles (528?–460? BC) was chiefly responsible for the victory at Salamis 10 years later. Pericles (495?–429? BC), the virtual ruler of Athens for more than 25 years, added to the political power of that city, inaugurated the construction of the Parthenon and other noteworthy buildings, and encouraged the arts of sculpture and painting. With the decline of Athens, first Sparta and then Thebes, under the great military tactician Epaminondas (418?–362 BC), gained the ascendancy; but soon thereafter, two military geniuses, Philip II of Macedon (382–336 BC) and his son Alexander the Great (356–323 BC), gained control over all of Greece and formed a vast empire stretching as far east as India. It was against Philip that Demosthenes (384–322 BC), the greatest Greek orator, directed his diatribes, the *Philippics*.

The most renowned Greek painter during the Renaissance was El Greco (Domenikos Theotokopoulos, 1541–1614), born in Crete, whose major works, painted in Spain, have influenced many 20th-century artists. An outstanding modern literary figure is Nikos Kazantzakis (1883–1957), a novelist and poet who composed a vast sequel to Homer's *Odyssey*. Leading modern poets are Kostas Palamas (1859–1943), Georgios Drosines (1859–1951), and Constantine Cavafy (1868–1933), as well as George Seferis (Seferiades, 1900–72), and Odysseus Elytis (Alepoudhelis, 1911–96), winners of the Nobel Prize for literature in 1963 and 1979, respectively. The

work of social theorist Cornelius Castoriadis (1922–97) is known for its multidisciplinary breadth. Musicians of stature are the composers Nikos Skalkottas (1904–49), Iannis Xenakis (b.Romania, 1922–2001), and Mikis Theodorakis (b.1925); the conductor Dmitri Mitropoulos (1896–1960); and the soprano Maria Callas (Calogeropoulos, b.United States, 1923–77). Filmmakers who have won international acclaim are Greek-Americans John Cassavetes (1929–89) and Elia Kazan (1909–2003), and Greeks Michael Cacoyannis (b.1922) and Constantin Costa-Gavras (b.1933). Actresses of note are Katina Paxinou (1900–73); Melina Mercouri (1925–94), who was appointed minister of culture and science in the Socialist cabinet in 1981; and Irene Pappas (Lelekou, b.1926).

Outstanding Greek public figures in the 20th century include Cretan-born Eleutherios Venizelos (1864–1936), prominent statesman of the interwar period; Ioannis Metaxas (1871–1941), dictator from 1936 until his death; Constantine Karamanlis (1907–98), prime minister (1955–63, 1974–80) and president (1980–85) of Greece; George Papandreou (1888–1968), head of the Center Union Party and prime minister (1963–65); and his son Andreas Papandreou (1919–96), the PASOK leader who became prime minister in 1981. Costas Simitis (b.1936) was leader of PASOK and prime minister from 1996–2004. He was succeeded by Kóstas Karamanlís (b.1956).

## 49 DEPENDENCIES

Greece has no territories or colonies.

# HUNGARY

Republic of Hungary  
*Magyar Népköztársaság*

**CAPITAL:** Budapest

**FLAG:** The national flag, adopted in 1957, is a tricolor of red, white, and green horizontal stripes.

**ANTHEM:** *Isten áldd meg a magyart* (*God Bless the Hungarians*).

**MONETARY UNIT:** The forint (Ft) of 100 fillérs is a paper currency with flexible rates of exchange. There are coins of 10, 20, and 50 fillérs and 1, 2, 5, 10, 20, 100, and 200 forints, and notes of 50, 100, 500, 1,000, and 5,000 forints. Ft1 = \$0.00508 (or \$1 = Ft196.83) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of 1848 uprising against Austrian rule, 15 March; Labor Day, 1 May; Constitution Day, 20 August; Day of the Proclamation of the Republic, 23 October; Christmas, 25–26 December. Easter Monday is a movable holiday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Hungary is a landlocked country in the Carpathian Basin of Central Europe, with an area of 93,030 sq km (35,919 sq mi), extending 268 km (167 mi) N–S and 528 km (328 mi) E–W. Comparatively, the area occupied by Hungary is slightly smaller than the state of Indiana. It is bounded on the N by Slovakia, on the NE by the Ukraine, on the E by Romania, on the S by Serbia and Croatia, on the SW by Slovenia, and on the W by Austria, with a total boundary length of 2,171 km (1,349 mi). Hungary's capital city, Budapest, is located in the north central part of the country.

## <sup>2</sup>TOPOGRAPHY

About 84% of Hungary is below 200 m (656 ft) in altitude, its lowest point, at the Tisza River, being 78 m (256 ft) above sea level and the highest being Mt. Kékes (1,014 m/3,327 ft) in the Mátra Mountains, northeast of Budapest. The country has four chief geographic regions: Transdanubia (Dunántúl), the Great Plain (Alföld), the Little Plain (Kisalföld), and the Northern Mountains. Hungary's river valleys and its highest mountains are in the northeast. Generally, the soil is fertile. The chief rivers are the Danube (Duna) and Tisza. The largest lake is Balaton, which has an area of 601 sq km (232 sq mi).

## <sup>3</sup>CLIMATE

Hungary lies at the meeting point of three climatic zones: the continental, Mediterranean, and oceanic. Yearly temperatures vary from a minimum of  $-14^{\circ}\text{C}$  ( $7^{\circ}\text{F}$ ) to a maximum of  $36^{\circ}\text{C}$  ( $97^{\circ}\text{F}$ ). The mean temperature in January is  $-4^{\circ}\text{C}$  to  $0^{\circ}\text{C}$  ( $25^{\circ}$  to  $32^{\circ}\text{F}$ ) and in July,  $18^{\circ}$  to  $23^{\circ}\text{C}$  ( $64^{\circ}$  to  $73^{\circ}\text{F}$ ). Rainfall varies, but the annual average is approximately 63 cm (25 in)—more in the west and less in the east—with maximum rainfall during the summer months. Severe droughts often occur in the summers.

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are those common to Central Europe. Oak is the predominant deciduous tree; various conifers are located in the mountains. Among the abundant wildlife are deer, boar, hare, and mouflon. The Great Plain is a breeding ground and a migration center for a variety of birds. Fish are plentiful in rivers and lakes. As of 2002, there were at least 83 species of mammals, 208 species of birds, and over 2,200 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Chemical pollution of the air and water is extensive, but resources to combat pollution are scarce: a 1996 government study estimated that us\$350 million were needed to combat pollution, but only us\$7 million were allocated for this purpose. According to the study, air pollution affects 179 areas of the country, soil pollution affects 54 areas, and water pollution affects 32. Hungary is also one of 50 nations that lead the world in industrial carbon dioxide emissions, with a 1992 total of 59.9 million metric tons, a per capita level of 5.72 metric tons. However, the total carbon dioxide emissions dropped to 54.2 million metric tons in 2000. Hungary has 6 cu km of renewable water resources, with 55% used for industrial purposes and 36% used for farming activity. Hungary's principal environmental agency is the National Council for Environment and Nature Conservation, under the auspices of the Council of Ministers.

Geothermal aquifers lie below most of Hungary. The water brought from these to the earth's surface ranges in temperature from  $40^{\circ}\text{C}$  ( $104^{\circ}\text{F}$ ) to  $70^{\circ}\text{C}$  ( $158^{\circ}\text{F}$ ). In the southwest, geothermal aquifers have produced water at  $140^{\circ}\text{C}$  ( $284^{\circ}\text{F}$ ). Some of these waters are cooled and used for drinking water, but many aquifers are used to heat greenhouses.

In 2003, about 7% of the total land area was protected. According to a 2006 report issued by the International Union for Con-

servation of Nature and Natural Resources (IUCN), threatened species included 7 types of mammals, 9 species of birds, 1 type of reptile, 8 species of fish, 1 type of mollusk, 24 species of other invertebrates, and 1 species of plant. Endangered species included the longicorn, the alcon large blue butterfly, the dusky large blue butterfly, and the Mediterranean mouflon.

## 6 POPULATION

The population of Hungary in 2005 was estimated by the United Nations (UN) at 10,086,000, which placed it at number 79 in population among the 193 nations of the world. In 2005, approximately 16% of the population was over 65 years of age, with another 16% of the population under 15 years of age. There were 91 males for every 100 females in the country. According to the UN, the population for 2005–10 was expected to decline annually by -0.4%, a rate the government viewed as too low. The fertility rate, which had been declining since the 1990s, reached just 1.5 births per woman in 2005. The projected population for the year 2025 was 9,588,000. The population density was 108 per sq km (281 per sq mi).

Since the early 1950s, there has been a fundamental shift of the population from rural to urban areas. The UN estimated that 65% of the population lived in urban areas in 2005. The urban growth rate has substantially slowed in recent years, with the UN estimating annual growth in urban areas at just 0.14% as of 2005. The capital city, Budapest, had a population of 1,708,000 in that year. Other urban areas include: Debrecen, 217,706; Miskolc, 211,000; Szeged, 178,878; Pécs, 172,177; Nyíregyháza, 115,643; Székesfehérvár, 111,478; and Kecskemét, 107,267.

## 7 MIGRATION

Sizable migration during the two world wars resulted from military operations, territorial changes, and population transfers. Peacetime emigration in the decades before World War I was heavy (about 1,400,000 between 1899 and 1913). Emigration of non-Magyars was prompted by the repressive policy of Magyarization; groups also left because of economic pressures, the majority going to the United States and Canada. In the interwar period, migration was negligible, but after 1947 many thousands left, despite restrictions on emigration. As a result of the October 1956 uprising, approximately 250,000 persons fled Hungary. The largest numbers ultimately emigrated to the United States, Canada, the United Kingdom, Germany, France, Switzerland, and Australia. Emigration totaled 42,700 between 1981 and 1989. By the 1990s, emigration was virtually nonexistent; only 778 persons left in 1991, according to official statistics.

Between 1990 and 2003, some 115,000 immigrants acquired Hungarian citizenship, granted almost exclusively to ethnic Hungarians from neighboring countries. At the end of 2000, 3% of Hungary's population (294,000) were foreign-born, resulting from international migration, and as a consequence of historic events such as border changes or citizenship agreements. According to *Migration Information Source*, from 1990 to 2003, the border guards recorded 152,000 cases of foreigners attempting to enter illegally, and 80,000 efforts to leave Hungary illegally. These activities indicate Hungary's transit role in illegal migration.

Since 1960, net migration from the villages to the cities has decreased, from about 52,000 that year to 20,814 in 1986. Since

1989, Hungary has received nearly 155,000 refugees, with major influxes from Romania in 1988–89 and the former Yugoslavia in 1991–92. About 5,400 asylum seekers have been recognized as refugees since 1989. In the 1990s Hungary provided temporary protection for over 32,000 Bosnians. Most of these refugees resettled to another country or repatriated. The Temporary Protection status of some 480 Bosnian refugees, who remained in Hungary in the latter part of the 1990s, was withdrawn by the government in mid-1999. As a result of the Kosovo crisis, 2,800 Yugoslav asylum seekers arrived in Hungary, including 1,000 Kosovo Albanians. The organized voluntary repatriation of refugees began in August 1999, when the first 185 Kosovars returned to their homeland. At the end of 2004 there were 7,708 refugees and 354 asylum seekers in Hungary. Asylum seekers were from Georgia and Turkey. In 2004, 832 Hungarians applied for asylum in Canada.
