Most tropical fauna species are found in Gabon. Wildlife includes elephants, buffalo, antelope, situngas, lions, panthers, crocodiles, and gorillas. As of 2002, there were at least 190 species of mammals and 156 species of birds throughout the country.

## 5 ENVIRONMENT

Gabon's environmental problems include deforestation, pollution, and wildlife preservation. The forests that cover 84% of the country are threatened by excessive logging activities. Gabon's coastal forests have been depleted, but there is a reforestation program, and most of the interior remains under dense forest cover. There are two national parks and four wildlife reserves in which hunting is banned. In 2003, only about 0.7% of Gabon's total land area was protected, including three Ramsar wetland sites.

Pollution of the land is a problem in Gabon's growing urban centers due to industrial and domestic contaminants. The nation's water is affected by pollutants from the oil industry. Gabon has 164 cu km of renewable water resources. About 47% of the country's rural dwellers and 95% of its urban population have pure drinking water. As a result of population expansion accompanied by an increased demand for meat, poaching has become a significant threat to the nation's wildlife.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 11 types of mammals, 5 species of birds, 1 type of reptile, 2 species of amphibians, 12 species of fish, 1 species of invertebrates, and 107 species of plants. Threatened species included Shelley's eagle owl, the thresher shark, the sun-tailed monkey, the clawless otter, and the black crowned crane. Gabon had the world's largest gorilla population.

## 6 POPULATION

The population of Gabon in 2005 was estimated by the United Nations (UN) at 1,384,000, which placed it at number 146 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.1%. The projected population for the year 2025 was 1,809,000. The population density was 5 per sq km (13 per sq mi). Most of the people live on the coast or are concentrated along rivers and roads; large areas of the interior are sparsely inhabited.

The UN estimated that 81% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.42%. The capital city, Libreville, had a population of 611,000 in that year. Another major population center is Port-Gentil, with about 164,000 inhabitants.

## 7 MIGRATION

Because of its limited population and booming economy, Gabon has relied heavily on laborers from other African nations, including Benin, Cameroon, Equatorial Guinea, Mali, São Tomé and Príncipe, and Senegal. About 100,000–200,000 non-Gabonese Africans were believed to be in Gabon, many of them from Equatorial Guinea or Cameroon. Foreigners made up at least 20% of the population in Gabon. However, in September 1994 Gabon enacted laws requiring foreigners to pay residence fees or leave the country. By the deadline in February 1995 some 55,000 foreign nationals left the country, and 15,000 legalized their residency.

In addition to some 1,500 urban refugees, Gabon has received two waves of refugees from the Republic of Congo. The first group,

mainly government officials, arrived in 1997 following the departure of President Lissouba; the second group, comprised of several thousand refugees, arrived in 1999 as a result of continued fighting in the Congo.

In 2000 remittances to Gabon from citizens working abroad totaled \$2 million or about \$2 per capita. In 2004, migrants numbered 18,626, including 13,787 refugees, and 4,839 asylum seekers. In 2005, the net migration rate was estimated as zero per 1,000 population, down from 7.9 per 1,000 in 1990.

## 8 ETHNIC GROUPS

There are at least 40 distinct tribal groups in Gabon. The Pygmies are said to be the original inhabitants. Only about 3,000 of them remain, scattered in small groups in the heart of the forest. The largest tribal group, the Fang (about 30% of the population), came from the north in the 18th century and settled in northern Gabon. In the Woleu-Ntem part of Gabon, their direct descendants may be found almost unmixed with other Bantu ethnic strains. The Nzebi, Obamba, Eshira, Bapounou, and Batéké are other major groups. Smaller groups include the Omyènè, a linguistic group that includes the Mpongwe, Galoa, Nkomi, Orungu, and Eneenga; these peoples live along the lower Ogooué, from Lambaréné to Port-Gentil. The Kota, or Bakota, are located mainly in the northeast, but several tribes have spread southward; they are well-known for their carved wooden figures. Other groups include Vili and the Séké. These other African groups and Europeans number about 154,000, including about 6,000 French and 11,000 persons of dual nationality.

## 9 LANGUAGES

French is the official language of the republic. The Fang language is spoken in northern Gabon, and other Bantu languages (Myene, Batéké, Bapounou/Eschira, Bandjabi) are spoken elsewhere in the country.

## 10 RELIGIONS

About 73% of the total population are Christian, with a majority of the people being Roman Catholic. About 12% are Muslim; with a majority of these being foreigners. About 10% practice traditional indigenous religions exclusively, but it is believed that a large number of Christians and Muslims also incorporate some elements of traditional religions within their practice. About 5% of the population are atheists or claim no religious affiliation.

The constitution provides for freedom of religion and this right is generally respected in practice. While religious organizations are not required to register with the government, many do so in order to be assured of full protection of their constitutional rights. The government has banned the registration of Jehovah's Witnesses since 1970, but the government has allowed the group to assemble and practice their faith. Certain Christian and Muslim holidays are celebrated as national holidays.

## 11 TRANSPORTATION

Until the 1970s, Gabon had no railroads. A 936-km (582-mi) railroad construction program, the Trans-Gabon Railway, began in October 1974. In its first stage, completed in 1983, the project linked the port of Owendo with the interior city of Booué (332 km/206 mi). The second stage, completed in December 1986,

linked Booué with Franceville (357 km/222 mi) via Moanda, thus facilitating exports of manganese from the southeast and forestry exploitation in the same region. A proposed third stage would continue the line from Booué to Belinga in the northeast, where there are iron ore deposits. As of 2004, Gabon State Railways totaled 814 km (506 mi) of standard-gauge track.

Main roads connect virtually all major communities, but maintenance work is difficult because of heavy rainfall. In 2002, the road network comprised 8,454 km (5,253 mi), of which 838 km (521 mi) were paved, including 30 km (19 mi) of expressways. A north-south road runs the length of the country, from Bitam to Ndendé. This main north-south link continues into Cameroon in the north and the Congo in the south. An east-west road connects Libreville and Mékambo. Farther south, another road runs from Mayumba to Lastoursville and Franceville. In 1995 there were about 23,000 automobiles and 10,000 commercial vehicles in use.

The busiest ports are Port-Gentil, the center for exports of petroleum products and imports of mining equipment, and Owendo, a new port that opened in 1974 on the Ogooué estuary, 10 km (6 mi) north of Libreville. Owendo's capacity, initially 300,000 tons, reached 1.5 million tons in 1979, when the port was enlarged to include timber-handling facilities. The smaller port at Mayumba also handles timber, and a deepwater port is planned for the city. In 1998, Gabon's merchant marine owned two vessels totaling 13,613 GRT. As of 2002, there was no merchant marine. As of 2003, Gabon had 1,600 km (994 mi) of perennially navigable waterways, including 310 km (193 mi) on the Ogooué River.

Gabon had an estimated 56 airports in 2004, but only 11 of which had paved runways as of 2005. There are three international airports: Libreville (Leon M'Ba), Port-Gentil, and Franceville. Air Gabon is the national airline, serving European, West and Central African, and domestic destinations. Numerous other airlines also provide international flights. Air Affaires Gabon handles scheduled domestic service. In 2003, about 386,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Bantu peoples began to migrate to what is now Gabon from Cameroon and eastern Nigeria at least 2,000 years ago. The Portuguese, who had sighted the coast as early as 1470, gave Gabon its name because the shape of the Río de Como estuary reminded them of a "gabao," a Portuguese hooded cloak. They also founded permanent outposts, notably at the mouth of the Ogooué River, and their missionaries followed shortly. After the Portuguese, the region was visited by the English, Dutch, and French. During the 17th century, the great French trading companies entered the slave trade. French Jesuit missionaries were active along the coast during this period, and their influence eventually extended to the powerful native kingdoms inland.

The abolition of the slave trade by France in 1815 ruined many merchants; but it did not end French interest in the Gabon coast. French vessels were entrusted to prevent the illegal slave trade; the search for new products for trade also led to French occupation of the coastal ports. In 1839, the French concluded a treaty with Denis, the African king whose authority had extended over the northern Gabon coast. The treaty ceded the kingdom to France in return for French protection. A similar treaty gave France much of the southern coast below the Ogooué, and gradually other coast-

LOCATION: 2°19' N to 3°55' S; 9°18' to 14°32' E. BOUNDARY LENGTHS: Cameroon, 302 kilometers (188 miles); Republic of the Congo, 1,656 kilometers (1,029 miles); Atlantic coastline, 739 kilometers (459 miles); Equatorial Guinea, 386 kilometers (240 miles). TERRITORIAL SEA LIMIT: 12 miles.

al chiefs accepted French control. The present capital, Libreville ("place of freedom"), was founded in 1849 by slaves who had been freed from a contraband slave runner.

French explorers gradually penetrated the interior after 1847. During 1855–59, Paul du Chaillu went up the Ogooué River, where he became the first European to see a live gorilla. He was followed by the Marquis de Compiègne, Alfred Marche, and other explorers, who mapped out its tributaries. Pierre Savorgnan de Brazza explored almost the entire course of the river during 1876–78. In 1880, he founded Franceville. In 1885, the Congress of Berlin recognized French rights over the right bank of the Congo, an area

that Brazza had explored extensively. In 1890, Gabon formally became a part of French Congo. It was separated into a district administrative region in 1903 and in 1910 was organized as a separate colony, part of French Equatorial Africa. In 1940, Free French forces ousted the Vichy government from Gabon.

Léon Mba and Jean-Hilaire Aubame had led the early independence movement in Gabon, but each had distinct political inclinations. Mba led the Gabon Democratic Bloc; Aubame led the Gabonese branch of the Party of African Reunion. The latter actively sought the formation of federal, supranational groupings in Africa, whereas the former was strongly opposed to such associations. Underlying the attitude of Mba was the belief that Gabon, with the greatest economic potential in the region, would end up supporting its poorer neighbors in any federal system.

In a referendum on 28 September 1958, the territory of Gabon voted to become an autonomous republic within the French Community. On 19 February 1959, a constitution was adopted, and a provisional government headed by Mba became the first official government of Gabon. Independence was formally proclaimed on 17 August 1960.

On 12 February 1961, Mba was elected president of the republic, heading a government of national unity in which Aubame served as foreign minister. Friction continued between Mba and Aubame, however, and after several years of political maneuvering, Aubame led a successful coup d'état on 18 February 1964. Mba was reinstated on the very next day through French military intervention, as provided for by a treaty signed between the Mba government and the French in 1960.

Mba created the post of vice president in February 1967, and at his death on 28 November of that year, power was transferred peacefully to his vice president, Albert-Bernard Bongo. On 12 March 1968, Bongo announced the formal institution of a one-party system and the creation of the Gabon Democratic Party (PDG) as the country's sole legal political organization. He was reelected without opposition in 1973, 1979, and 1986. (It was announced in 1973 that Bongo had taken the name of Omar and converted to Islam.)

During the 1970s and early to mid-1980s, the exploitation of Gabon's huge natural resources progressed rapidly, and in 1975, the country became a full member of OPEC. In 1986, depressed oil prices caused a sharp decline in oil earnings, resulting in severe austerity measures in 1986 and 1987.

These austerities in the face of Bongo's ostentations led to internal pressures for reform in the late 1980s. In 1989, Bongo began talks with some elements of the underground Movement for National Recovery (MORENA). This divided MORENA, but it failed to stem the emergence of new movements calling for the establishment of multiparty democracy.

In March–April 1990, Gabon convened a national political conference to discuss changes to the political system. The PDG and 74 other organizations that attended essentially divided into two loose coalitions, the ruling PDG and its allies on one hand; and the United Front of Opposition Associations and Parties on the other. The conference approved sweeping reforms, including the creation of a national senate, decentralization of the budgetary process, and freedom of assembly and of the press. However, the killing of an opposition leader on 23 May 1990 led to riots in

Port-Gentil and Libreville, which required France to send troops to protect its expatriates and corporate property.

Multiparty legislative elections were held in September–October 1990, but they were marred by violence and suspected fraud. Opposition parties had not yet been formally declared legal. In January 1991, the Assembly passed by unanimous vote a law legalizing opposition parties. Throughout 1991 and 1992, there was endemic unrest, government clamp-downs, and economic disruption. Still, the PDG reaffirmed its commitment to multiparty democracy. On 5 December 1993, multiparty presidential elections confirmed Bongo, who ran as an independent against Father Paul Mba Abessole, as president with 51% of the vote. Opposition parties protested the result and forced a postponement of the 26 December 1993 legislative elections. International observers complained of widespread procedural irregularities but found no evidence of deliberate fraud. Independent observers, however, reported that a governmental policy of limitations on freedoms of speech, press, association and assembly, as well as the harassment of its critics.

Paul Mba Abessole, angry at the outcome, announced the formation of a rival government. Its core concerns included new presidential elections, the restoration of peace, and the maintenance of national unity. The rival administration was supported by a High Council of the Republic, later called the High Council of Resistance, composed mostly of defeated presidential candidates.

Bongo was harshly critical of the opposition government and appealed to its members to join his government in a show of unity. In January 1994, Gabon's Constitutional Court ruled that the elections had been fair. Civil unrest continued, however, as the country suffered from the devaluation of the CFA franc. Trade union demands for higher salaries led Bongo to impose a curfew, ostensibly to quell labor unrest but he also ordered security forces to destroy a radio transmitter operated by his political opponents and to attack a leading opposition figure's private house. The labor unrest lasted less than a week, but resulted in between 9 and 68 deaths, depending on whose figures are to be believed.

Negotiations on the creation of a unified government were held throughout 1994 to little effect. In September, the Organization for African Unity sponsored multilateral talks in Paris, which finally resulted in a tentative power-sharing agreement among Bongo's PDG and the main opposition parties. Legislative elections, which had been postponed in December 1993, were rescheduled for 1995 and Bongo agreed to bring opposition party members into a new government. The agreement essentially fell apart, however, when Bongo gave only 6 of 27 ministries to opposition members. At least two opposition members refused to participate in the government. By mid-1995, Bongo formed a functioning government with a modicum of opposition representation.

In July 1996, the Gabonese overwhelmingly approved a new constitution, calling for, among other things, a 91-member Senate. Legislative elections were held in December of that year, fully three years after they were scheduled. The PDG won a substantial majority (85 of 120 seats). When elections for the Senate were held in January and February 1997, the PDG again emerged as the dominant party, winning 54 of the 91 seats.

Opposition parties declared Paul Mba Abessole, head of the National Rally of Woodcutters (RNB), the real winner and they attempted to set up a rival government. In 1998 Omar Bongo was

reelected president for a seven-year term with 66.6% of the votes. Pierre Mamboundou of UPG took a distant second with 16.5%, while Paul Mba Abessole (RNB) came third with 13.4%.

In 2002 Bongo announced his decision to set aside 10% of the country to protect its ecosystems as part of the Congo Basin Initiative. He also closed three newspapers after they reported allegations of corruption in his government. His appointment in January 2003 of Paul Mba Abessole to the post of third deputy prime minister suggested a clever move to co-opt the opposition. In November 2005, Bongo was reelected for a third seven-year term, thus reinforcing his status as the last of Africa's "Big Men." Facing a divided opposition, Bongo won 79.2% of the votes cast. The runner-up, Pierre Mamboundou won 13.6% while Zacharie Myboto polled only 6.6%. The next presidential election was scheduled for 2012.

### 13 GOVERNMENT

Gabon is a parliamentary democracy with a presidential form of government. Elected for a seven-year term by direct universal suffrage, the president, who is chief of state, appoints the prime minister, who in consultation with the president, selects and may dismiss members of the Council of Ministers. In 1967, the constitution was modified to provide for the election of a vice president, but in 1975, the office was abolished and replaced by that of a prime minister. In 1983, the constitution was amended officially to declare Gabon a one-party state. However, opposition parties were legalized in 1991.

The bicameral legislature consists of the Senate comprising 91 members who are elected by members of municipal councils and departmental assemblies. The National Assembly or *Assemblée Nationale* has 120 members who are elected by direct, popular vote to serve five-year terms. Legislation may be initiated by the president or by members of the assembly. The president may dissolve the assembly and call for new elections within 40 days and may also prorogue the body for up to 18 months. Legislation is subject to presidential veto and must then be passed by a two-thirds vote to become law. The voting age is 18.

### 14 POLITICAL PARTIES

When Gabon became independent in 1960, there were two major political parties. The Gabon Democratic Bloc (*Bloc Démocratique Gabonais—BDG*), led by Léon Mba, was an offshoot of the African Democratic Rally (*Rassemblement Démocratique Africain*), created by Félix Houphouët-Boigny of Côte d'Ivoire. The Gabon Democratic and Social Union (*Union Démocratique et Sociale Gabonaise—UDSG*), led by Jean-Hilaire Aubame, was affiliated with the Party of African Reunion (*Parti de Regroupement Africain*), an international movement created by Léopold-Sédar Senghor of Senegal. In the first elections after independence, neither party won a majority in the Assembly, and in the elections held in 1961, the leaders of the two parties agreed upon a single list of candidates; this joint list polled 99% of the votes. Mba became president and Aubame became minister of foreign affairs in a "government of national amity." This government lasted until February 1963, when the BDG element forced the UDSG members to choose between a merger of the parties and resignation from the government. The UDSG ministers all resigned, but Aubame was later appointed president of the newly created Supreme Court. He

resigned from this post in December 1963 and resumed his seat in the National Assembly.

In January 1964, Mba dissolved the Assembly and called for new elections on 23 February 1964. The UDSG was unable to present a list of candidates that would meet the electoral law, and when it seemed that the BDG list would be elected by default, the Gabonese military revolted and toppled the Mba government in a bloodless coup led by Aubame on 18 February 1964. French military forces intervened and reestablished the Mba government on 19 February. In the parliamentary elections held on 12 April 1964, the BDG list won 31 seats; the reorganized opposition gained 16 seats.

Another election was held in March 1967, in which Mba was reelected president and Albert-Bernard Bongo was elected vice president. Mba died on 28 November 1967, and Bongo became president on 2 December of that year. On 12 March 1968, the Democratic Party of Gabon (*Parti Démocratique Gabonais—PDG*), headed by Bongo, became the sole political party. On 25 February 1973, President Bongo was elected to his first full seven-year term. On 30 December 1979, Bongo was reelected with 99.85% of the more than 700,000 votes cast, a total that exceeded by far the number of registered voters. He was reelected again on 9 November 1986, reportedly receiving all but 260 of 904,039 votes cast. The single list of PDG National Assembly candidates was elected in February 1980, although independents were also allowed to run. In 1985, the list consisted of all PDG members, chosen by party activists from 268 nominated; only 35 incumbent deputies were retained. Thirteen women were elected. In 1983, three generals were elected to the central committee of the PDG, the first such admission of the military into high party ranks.

The Movement for National Reform (*Mouvement de Redressement National—MORENA*), an opposition group, emerged in 1981 and formed a government in exile in 1985. A number of persons were sentenced to long jail terms in 1982 for alleged participation in MORENA. All were released by mid-1986. In 1989, Bongo began talks with elements within MORENA, playing on division within their ranks. The resulting split ushered in the *Rassemblement National des Bûcherons*, *National Rally of Woodcutters* (RNB), and the MORENA-Original or Fundamental.

Emerging from the legalization of opposition party activity in March 1991 was the Association for Socialism in Gabon (APSG), the Gabonese Socialist Union (USG), the Circle for Renewal and Progress (CRP), and the Union for Democracy and Development (UDD).

Legislative elections were held in 1991, just prior to the legalization of political parties; the resulting National Assembly was constituted as follows: PDG, 64; Gabonese Party for Progress (PGP), 19; RNB, 17; MORENA-Originals, 7; Socialists, 9; others, 2. Presidential and legislative elections were scheduled for 1993, but only the presidential ballot was held, on 5 December. Protests over the fairness of the presidential election caused the government to postpone legislative elections.

Elections were delayed several times over the next three years, but were finally held on 15 and 29 December 1996, resulting in a National Assembly comprised as follows: PDG, 85; PGP, 10; RNB, 7; Circle of Liberal Reformers (CLR), 7; Socialists, 2. Elections for the newly created Senate were held on 19 January and 23 February 1997, resulting in a 91-seat chamber situated as follows:

PDG, 54; RNB, 19; PGP, 4; Republican and Democratic Alliance, 3; CLR, 1; Rally for Democratic Progress, 1; independents, 9; 2 seats undeclared.

National Assembly elections were held on 9 and 23 December 2001 with the resulting composition: PDG 86, RNB-RPG 8, PGP 3, ADERE 3, CLR 2, PUP 1, PSD 1, independents 13, others 3. Next Assembly elections were scheduled for 2006.

Elections into the Senate took place in January and February 2003. The results amounted to a repeat of the strength of parties after the 1997 poll. The PDG got 53 seats, RNB 20, PGP 4, ADERE 3, RDP 1, CLR 1, and Independents 9. Next elections were expected in January 2009.

## 15 LOCAL GOVERNMENT

Gabon is divided into nine provinces, administered by governors, which are subdivided into 37 prefectures, headed by prefects. There are eight separate sub-prefectures, governed by sub-prefects. These officers are directly responsible to the government at Libreville and are appointed by the president. In some areas, the traditional chiefs still retain power, but their position has grown less secure.

## 16 JUDICIAL SYSTEM

The civil court system consists of three tiers: the trial court, the appellate court, and the Supreme Court. The Supreme Court has three chambers: judicial, administrative, and accounts. The 1991 constitution, which established many basic freedoms and fundamental rights, also created a Constitutional Court, a body which considers only constitutional issues, and which has demonstrated a good degree of independence in decision-making. Some of its decisions on election freedoms were integrated into the electoral code of 1993, which formed the framework for the first multiparty presidential election held that year. In July 1995, the agreements to reform electoral procedures and to assure greater respect for human rights were approved by a national referendum.

The judiciary also consists of a military tribunal, which handles offenses under military law, a state security court (a civilian tribunal), and a special criminal court for cases of fraud and corruption involving government officials. There is no longer recognition of traditional or customary courts, although village chiefs continue to engage in informal dispute resolution.

The constitution provides for the right to a public trial and the right to counsel, but there is no right to a presumption of innocence. In addition, although the constitution ensures protection from arbitrary interference with privacy and correspondence, search warrants are easily obtained from judges, sometimes after the fact. A significant deterrent to political treason is the weak independence of the judiciary in state security trials where the influence of the executive may be of some import. The State Security Court is constituted by the government to consider state security matters; however, it had not met for years so its relevance is open to question.

## 17 ARMED FORCES

In 2005, Gabon maintained active armed forces numbering 4,700 personnel. The Army numbered 3,200 including the Presidential Guard. The Navy consisted of an estimated 500 sailors with two patrol/coastal vessels and two amphibious landing craft. The Air

Force had 1,000 personnel and 10 combat capable aircraft, including 6 fighter ground attack aircraft and 5 attack helicopters. Paramilitary forces consisted of a 2,000-member gendarmerie. France maintained 1,560 personnel in Gabon. The defense budget in 2005 totaled \$19.1 million.

## 18 INTERNATIONAL COOPERATION

Gabon was admitted to the United Nations on 20 September 1960 and has become a member of ECA and all the nonregional specialized agencies. Gabon is also a member of the African Development Bank, the ACP Group, G-24, G-77, the Central African States Development Bank (BDEAC), the African Union, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), and the WTO. Gabon is one of six members of the Monetary and Economic Community of Central Africa (CEMAC). Libreville is the headquarters for the 12-member African Timber Organization of timber exporters and for the Economic Community of Central African States. Gabon left OPEC in 1995. The nation is part of the Franc Zone. Gabon belongs to the Nonaligned Movement.

In environmental cooperation, Gabon is part of the Convention on Biological Diversity, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Gabon's per capita income is over four times that of most sub-Saharan African countries. Over 50% of Gabon's GDP comes from petroleum and mining production. The petroleum industry generates 80% of export earnings and more than 50% of government revenues. The manufacturing sector accounts for 60% of GDP overall and services account for 30%. Inefficient parastatal enterprises restrain private sector growth. Gabon received close to 22% of its total revenues from state-owned enterprises and government ownership of property in 2000. As of 2005, fewer than 10 state-owned enterprises had been completely privatized since 1997.

Gabon imports the majority of its food; it is densely forested and only a fraction of the arable land is cultivated. Yet, in 2005, 60% of its population gained their livelihood in the agricultural sector, where the staple food crops are cassava, plantains, and yams.

Gabon's cash crops are palm oil, cocoa, coffee, and sugar. Palm oil is the most important of the four. The coffee sector was hard hit in the 1980s by low world prices and lower producer prices; coffee prices strengthened again in the mid-1990s but sank again in the early 2000s. Gabon is self-sufficient in sugar, which it exports to the United States and other countries. Rubber production has been promoted in recent years.

Rich in resources, Gabon is a country that realized growth rates of 9.5% in the 1970s and early 1980s before succumbing to oil-price instability and international borrowing. In 1986 Gabon saw its GDP drop by half after a dramatic fall in the world price for oil. The economy suffered a second dramatic shock in 1994 when France suddenly devalued the CFA franc, causing its value to drop in half overnight. Immediately, prices for almost all imported goods soared as the inflation rate shot up to 35%. In the face of dramatically escalating prices, uncertainty and anger led petroleum workers to strike for a doubling of their wages. The

government reacted by imposing a national “state of alert.” Lootings and burnings were reported as government troops tried to silence opposition parties. High inflation was short-lived as the government’s tight monetary policy helped reduce inflation to 11% in 1995 and 1.5% in 2001. During the 2001–2005 time period inflation averaged 1.1% per year. Unfortunately, because there is little value-added to Gabon’s exports (oil and minerals), the devaluation has not helped Gabon’s economy, which continues to post growth rates of between 1–2%.

Content to remain dependent on oil and its other primary product exports, the government has not taken the steps necessary to diversify the economy. High labor costs, an unskilled workforce, and poor fiscal management continue to inhibit economic growth. In 2000, the government signed an agreement with the Paris Club to reschedule its official debt; however, because the country’s per capita income is higher than the eligibility levels set by the World Bank/IMF Heavily Indebted Poor Countries Initiative, it failed to qualify for debt relief under that program in 2003.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Gabon’s gross domestic product (GDP) was estimated at \$8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,800. The annual growth rate of GDP was estimated at 2.1%. The average inflation rate in 2005 was 1.5%. It was estimated that agriculture accounted for 6% of GDP, industry 58.8%, and services 35.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$4 million or about \$3 per capita and accounted for approximately 0.1% of GDP.

The World Bank reports that in 1990 household consumption in Gabon totaled \$2.96 billion or about \$2,202 per capita based on a GDP of \$6.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.2%. In 2001 it was estimated that approximately 40% of household consumption was spent on food, 9% on fuel, 3% on health care, and 7% on education.

## 21 LABOR

Gabon’s labor force numbered approximately 640,000 in 2005. Of these workers, 60% were engaged in agriculture, 25% were in the services sector, and the remaining 15% in industry. In 1997 (the latest year for which data was available) the unemployment rate was estimated at 21%.

In 1992, the former monopoly of the Gabonese Labor Confederation (COSYGA) was abolished and disassociated from the ruling Democratic Party of Gabon. COSYGA’s main union competitor is the Gabonese Confederation of Free Unions (CGSL). Since the 1990 National Conference, many small company-based unions have been started, resulting in sporadic and often disruptive strikes. Almost all private sector workers are union members. Workers have the right to strike provided that attempts at arbitra-

tion have failed and eight days notice of the intent to strike is given. The government observes the resolution of labor disputes and takes an active interest in labor-management relations. Unions in each sector of the economy negotiate with employers over pay scales, working conditions, and benefits.

As of 2002, the minimum wage was the equivalent of \$61 per month. This wage does not provide a decent living for a worker and family, although many Gabonese earn significantly more. The minimum working age is 16 and in the case of Gabonese children this law is rigorously enforced. However, there have been reports that the children of the many foreign workers in Gabon work at much younger ages. The Labor Code provides many protections for workers, including a 40-hour workweek with a minimum rest period of 48 uninterrupted hours.

## 22 AGRICULTURE

Since independence, the dominant position of the petroleum sector has greatly reduced the role of agriculture. Only 1.9% of the total land area is estimated to be under cultivation, and agriculture contributes only about 8% of the GDP on the average. In 2004, agricultural imports by Gabon accounted for nearly 19% of all imports. Gabon relies heavily on other African states and Europe for much of its food and other agricultural needs. Until World War II (1939–45), agriculture was confined primarily to subsistence farming and the cultivation of such crops as manioc, bananas, corn, rice, taro, and yams. Since independence there has been an intensive effort to diversify and increase agricultural production. Experimental stations and demonstration farms have been set up, and cooperatives have been established by consolidating rural communities. However, agriculture received low priority until the 1976–81 development plan, and laborers prefer to seek employment in urban areas. The development of agriculture and small business has been hindered by a lack of international competition. Another problem is lack of transportation to markets.

In 2004, Gabon produced about 230,000 tons of cassava, 155,000 tons of yams, 61,800 tons of other roots and tubers, 270,000 tons of plantains, 35,410 tons of vegetables, and 31,000 tons of corn. Sugarcane production was about 235,000 tons. Cocoa production in 2004 was 600 tons.

A state-owned 7,500 hectare (18,500 acre) palm oil plantation near Lambaréné began production in 1986. Palm oil production was 6,400 tons in 2004. A 4,300 hectare (10,600 acre) rubber project was being developed; rubber production in 2004 was 11,000 tons.

## 23 ANIMAL HUSBANDRY

Animal husbandry is limited by the presence of the tsetse fly, though tsetse-resistant cattle have recently been imported from Senegal to a cattle project. In 2005 there were an estimated 212,000 hogs, 195,000 sheep, 90,000 goats, 35,000 head of cattle, and 3.1 million chickens. In an effort to reduce Gabon’s reliance on meat imports, the government set aside 200,000 hectares (494,000 acres) in Gabon’s unpopulated Savannah region for three ranches at Ngounie, Nyanga, and Lekabi. Currently, however, frozen imports are the most important source of beef, costing four times less than locally produced beef. Poultry production satisfies

about one-half of Gabon's consumption demand. Typical annual production of poultry amounts to 3,600 tons.

## 24 FISHING

While there have been recent improvements in the fishing industry, it is still relatively undeveloped. Traditional fishing accounts for two-thirds of total catch. The waters off the Gabonese coast contain large quantities of fish. Gabonese waters are estimated to be able to support an annual catch of 15,000 tons of tuna and 12,000 tons of sardines. The fishing fleet was formerly based chiefly in Libreville. A new fishing port, however, was built at Port-Gentil in 1979. Port-Gentil is now the center of operations for the industrial fleet. Plans for a cannery, fish-meal factory, and refrigerated storage facilities are underway. The total catch in 2003 was 44,855 tons, 80% from the Atlantic. By international agreement and Gabonese law, an exclusive economic zone extends 200 mi off the coast, which prohibits any foreign fishing company to fish in this zone without governmental authorization. However, since Gabon has no patrol boats, foreign trawlers (especially French and Spanish) often illegally capture tuna in Gabonese waters.

## 25 FORESTRY

Gabon's forests, which cover an estimated 77% of its land surface, have always supplied many of the necessities of life, especially fuel and shelter. The forests contain over 400 species of trees, with about 100 species suitable for industrial use. Commercial exploitation began as early as 1892, but only in 1913 was okoumé, Gabon's most valuable wood, introduced to the international market. Forestry was the primary source of economic activity in the country until 1968, when the industry was supplanted by crude oil as an earner of foreign exchange. Gabon is the largest exporter of raw wood in the region, and its sales represent 20% of Africa's raw wood exports. Forestry is second only to the petroleum sector in export earnings, at \$319.4 million in 2003. Gabon's reserves of exploitable timber include: okoumé, 100 million cu m (3.5 billion cu ft); ozigo, 25–35 million cu m (882 million–1.2 billion cu ft); ilomba, 20–30 million cu m (706–1,060 million cu ft); azobe, 15–25 million cu m (530–882 million cu ft); and padouk, 10–20 million cu m (350–706 million cu ft).

Gabon supplies 90% of the world's okoumé, which makes excellent plywood, and also produces hardwoods, such as mahogany, kevazingo, and ebony. Other woods are dibetou (tigerwood or African walnut), movingui (Nigerian satinwood), and zingana (zebrano or zebrawood). Roundwood removals were estimated at 4 million cu m (143 million cu ft) in 2004, with 13% used as fuel wood.

Exploitation had been hampered, to some extent, by the inadequacy of transportation infrastructure, a deficiency now alleviated by the Trans-Gabon Railway and Ndjole-Bitam highway. Reforestation has been continuously promoted, and selective thinning and clearing have prevented the okoumé from being forced out by other species. Over 50 firms are engaged in exploitation of Gabon's forests. Logging concessions covering about five million hectares (12.3 million acres) have been granted by the government, with the development of the least accessible areas largely carried out by foreign firms. Traditional demand in Europe for African lumber products has declined in recent years; during the 1980s, European demand for okoumé dropped by almost one-third. Markets in Ja-

pan, Morocco, and Israel, however, have become more receptive to African imports.

## 26 MINING

Gabon was the richest of the former French Equatorial African colonies in known mineral deposits. In addition to oil, which accounted for 80% of the country's exports in 2004, Gabon was a world leader in manganese. Potash, uranium, columbium (niobium), iron ore, lead, zinc, diamonds, marble, and phosphate have also been discovered, and several deposits were being exploited commercially. Ownership of all mineral rights was vested in the government, which has increased its share of the profits accruing to foreign companies under development contracts.

The high-grade manganese deposits at Moanda, near Franceville, are among the world's richest. Reserves were estimated at 250 million tons with a metal content of 48%–52%. Production had been limited to a ceiling of 2.8 million tons a year, corresponding closely to the capacity of the cableway—at 76 km, Africa's longest overhead cable—used to transport the mineral to the Congo border, from where it was carried by rail to the port of Pointe Noire. The Trans-Gabon Railway provided an export outlet through the Gabonese port of Owendo. Use of the railroad has cut shipping costs by \$20 million per year. Manganese was exploited by the Mining Co. of L'Ougoué (Comilog, an international consortium), which ranked among the world's lowest-cost producers. In 2004, an estimated 2.4 million metric tons of metallurgical-grade ore were extracted, up from 1.95 million metric tons in 2003. Annual production capacity at the Moanda Mine was 2.5 million tons, with reserves estimated to last 100 years.

Gabon also produced an estimated 350,000 metric tons each of clinker and hydraulic cement in 2004. Also in that year an estimated 500 carats of diamonds (gem and industrial) were produced, along with 70 kg of gold.

The Mékambo and Belinga iron fields in the northeastern corner of Gabon were ranked among the world's richest. Reserves were estimated as high as 1 billion tons of ore of 60%–65% iron content, and production could reach 20 million tons a year. Although iron was discovered there in 1895, it was not until 1955 that a full-scale commercial license was issued. Exploitation still awaited the establishment of a 225 km extension of the Trans-Gabon Railroad from Booué to Belinga; construction has been considered unprofitable, because of unfavorable market conditions.

The potential for new developments in columbium, gold, manganese, and possibly phosphate suggested a continued role for mining in the economy. The lack of adequate infrastructure inhibited new grassroots exploration and remained a major constraint on development of the well-defined iron ore deposit at Belinga.

## 27 ENERGY AND POWER

Gabon is the fourth-largest oil producer in sub-Saharan Africa, and has the region's third-largest oil reserves. Oil prospecting began in 1931. Deposits were found on the coast or offshore in the vicinity of Libreville and Port-Gentil, in the northwestern part of the country. Later, large deposits were found in the south. Oil from the northwest is channeled by pipeline to Cape Lopez, where there are loading facilities for export. Huge additional deposits were found on Mandji Island in 1962. The Rabi Kounga oil field is Gabon's largest oil field. In 1997, it produced a peak of 217,000

barrels per day. As of November 2004, it was producing 55,000 barrels per day.

Although Gabon's proven petroleum reserves rose from 1.3 billion barrels in 1996 to 2.5 billion barrels in 2004, the government is concerned about long-term depletion of resources. Total production of crude oil fell from a peak of 371,000 barrels per day to an estimated 289,700 barrels per day in 2003. Gabon's production goes primarily to Argentina, Brazil, France, the United States, and, more recently, Taiwan. Net oil exports in 2003 are estimated at 289,680 barrels per day.

As of 1 January 2004, reserves of natural gas reserves estimated at 1.2 trillion cu ft, by the Oil and Gas Journal. Production and consumption of natural gas in 2002 were estimated at 3 billion cu ft, each. Gross output stood at 81.22 billion cubic feet in 2002, of which 55.09 cu ft was flared or vented off, and 19.42 billion cu ft was reinjected.

Hydropower accounts for 76% of Gabon's electric power output. In 2002 there were hydroelectric stations at the Kingulé and Tchimbélé dams on the Mbei River and at the Petite Poubara Dam, near Makokou on the Ogooué. Production and distribution of electricity are maintained by the Energy and Water Company of Gabon (SEEG), which was formed in 1963 and incorporates a number of smaller private and quasi-public entities. In 2002, electric power output totaled an estimated 1.16 billion kWh, with capacity estimated as of 1 January 2002 at 0.406 million kW. Consumption of electricity was 1.275 billion kWh in 2002. Natural gas is the principal fuel for the thermal plants.

## 28 INDUSTRY

Gabon's industry is centered on petroleum, manganese mining, and timber processing. Most industrial establishments are located near Libreville and Port-Gentil. Virtually all industrial enterprises were established with government subsidies in the oil boom years of the 1970s. Timber-related concerns include five veneer plants and a large 50-year-old plywood factory in Port-Gentil, along with two other small plywood factories. Other industries include textile plants, cement factories, chemical plants, breweries, shipyards, and cigarette factories. Gabonese manufacturing is highly dependent on foreign inputs, and import costs rose significantly in 1994 when the CFA franc was devalued. Increased costs and oversized capacity have made the manufacturing sector less competitive and it mainly supplies the domestic market. The government has taken steps to privatize parastatal enterprises.

Due to the fact that the Gabonese economy is dependent upon oil (crude oil accounts for over 80% of the country's exports, 43% of GDP, and 65% of state revenue), it is subject to worldwide price fluctuations. Gabon is sub-Saharan Africa's third-largest crude oil producer and exporter, although there are concerns that proven reserves are declining and production has declined as well. Thus the country has taken steps to diversify the economy, and to engage in further petroleum exploration. The Sogara oil refinery at Port-Gentil is the sole refinery in Gabon. The country produced 302,000 barrels of oil per day in 2001, which was a decrease of 9% from 1999 production levels. Gabon's proven oil reserves were estimated at 2.5 billion barrels in 2002, and its proven natural gas reserves were estimated at 1.2 trillion cubic feet (Tcf).

## 29 SCIENCE AND TECHNOLOGY

Gabon has a shortage of trained scientists and technicians and relies heavily on foreign—mostly French—technical assistance. In Libreville there are a French bureau of geological and mineral research, a technical center for tropical forestry, a research institute for agriculture and forestry, and a center for technical and scientific research. A laboratory of primatology and equatorial forest ecology is at Makokou, and an international center of medical research, concentrating on infectious diseases and fertility, is at Franceville. The University Omar Bongo, founded in 1970, has a faculty of sciences, schools of engineering and of forestry and hydraulics, and a health science center. The University of Sciences and Techniques of Masuke, at Franceville, founded in 1986, has a faculty of sciences. The Interprovincial School of Health is located in Mouila. In 1987–97, science and engineering students accounted for 29% of college and university enrollments. The African Institute of Information, at Libreville, trains computer programmers and analysts. In 1986, research and development expenditures totaled CFA Fr380 million.

In 2004 there were 61 scientists and engineers per million people that were engaged in research and development.

## 30 DOMESTIC TRADE

Most local produce is sold directly to consumers or to intermediaries at local markets in villages and towns, while imported goods are disposed of at the same time. Company agents and independent middlemen buy export crops at local markets or directly from the producers for sale to large companies. Both French and domestic companies carry on wholesale and retail trade in the larger cities. Nearly 70% of food products are imported. Large commercial companies generally sell hardware, food, clothing, tools, electrical goods, durable consumer goods, and cars. Medium-sized merchandise retail establishments are mostly operated by Syrian, Lebanese, or Asian expatriates. Small private companies are often owned by expatriates from elsewhere in West Africa and operate from market stalls. Gabonese have been trained in retailing in newly built stores. Those who qualify after training have been encouraged to buy the stores with government-sponsored loans. Advertising is carried by local newspapers, company publications, handbills, billboards, and radio and television stations.

Business hours are 8 AM–noon and 3–6 PM, Monday through Friday, and 8 AM–1 PM, Saturday. Banks are open 7:30–11:30 AM and 2:30–4:30 PM, Monday through Friday. Mainly French is spoken.

## 31 FOREIGN TRADE

Gabon has a record of trade surpluses. Until the late 1960s, timber was Gabon's main export. By 1969, however, crude petroleum had become the leader, accounting for 34% of total exports. Petroleum's share increased to 40.7% in 1972 and to 81.9% in 1974; it stood at 82.5% in 1985 and currently hovers around 80%.

Gabon's most lucrative export commodity is crude petroleum (81% in 2005). Wood accounts for a substantial amount of export revenues (9.3% in 2005), as does manganese (6.2% in 2005). Most of Gabon's oil goes to the United States.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.**3<sup>2</sup> BALANCE OF PAYMENTS**

Gabon's traditionally favorable trade balance does not always result in a favorable balance on current accounts, largely because of dividend payments and other remittances by foreign enterprises but also because of payments on large debts accumulated in the 1970s. Generally, however, an increasingly strong export performance and rising inflows of private and government capital have made Gabon's payments position one of the strongest of any African country.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Gabon's exports was \$5.78 billion while imports totaled \$1.53 billion resulting in a trade surplus of \$4.25 billion.

**3<sup>3</sup> BANKING AND SECURITIES**

The bank of issue is the Bank of the Central African States (Banque des Etats de l'Afrique Centrale-BEAC), the central bank for UDEAC members.

Commercial banking in Gabon is largely controlled by French and other foreign interests. At the end of 1999 there were five major commercial banks, including the Banque International de Commerce et d'Industrie du Gabon (BICIG, a branch of BNP France), the Union Gabonaise de Banque (UGB, a branch of Credit Lyonnais), the Banque Gabonaise et Francaise Internationale (BGFI, formerly Banque Paribas), Citibank, and The French Intercontinental Bank (FIBA).

The Gabonese Development Bank (BDG), 69% Gabonese-owned, is the nation's development bank. Other institutions concerned with development are the Credit Foncier du Gabon (CREFOGA, for housing), the Fund for Development and Expansion (FODEX, for small, to medium-sized firms), and the Banque Gabonaise de Credit Rural (loans for agriculture).

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$453.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$773.1 million. The discount rate, the

interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There is no securities market in Gabon, but in 1999, President Bongo spoke of opening a Gabon stock exchange.

**3<sup>4</sup> INSURANCE**

In 1974, a national company known as SONAGAR was created, 36% owned by the government. In 1986, there were four French insurance companies represented in Gabon. As of 1995, at least ten insurance companies were doing business in Gabon.

**3<sup>5</sup> PUBLIC FINANCE**

The oil sector brings in over 50% of government revenues. Government finances are generally poorly managed. Large deficits have required borrowing from foreign creditors, although the government's failure to privatize state-owned enterprises and to fully account for oil revenues has soiled its reputation with international financial institutions. After the 1994 devaluation of the currency, Gabon was forced to rescheduled its debt with the World Bank/IMF, the London Club of creditors, the African Development Bank, and the Paris Club. In April 2002, an 18-month stand-by arrangement with the IMF expired, without Gabon fulfilling its responsibilities.

The US Central Intelligence Agency (CIA) estimated that in 2005 Gabon's central government took in revenues of approximately \$2.4 billion and had expenditures of \$1.6 billion. Revenues minus expenditures totaled approximately \$845 million. Public debt in 2005 amounted to 29.5% of GDP. Total external debt was \$3.857 billion.

**3<sup>6</sup> TAXATION**

A graduated income tax ranging from 5–55% is imposed on civil servants and others who are paid fixed salaries or who have suf-

ficient income. A complementary tax is levied at 1% for incomes up to CFA FR100,000 per month and 5.5% on incomes over that figure. Additional taxes are levied on business transactions and on real property. There is a value-added tax on all goods and services at rates ranging from 5–14%. In April 1995, a value-added tax (VAT) was introduced, replacing three turnover taxes. The standard VAT rate in 2005 was 18%. Other taxes include a 2.6% payroll tax, a property tax, and a financial transactions tax.

The standard corporate tax rate is 35% after deduction for business expenses, with a minimum of 1.1% on turnover. There is a 20% withholding tax on dividends. Payments of interest, royalties, and for services are taxed at 10%. Government oil revenues are derived from royalty payments, a tax on petroleum company profits, a tax on exploration permits, and dividends paid by the petroleum companies.

### 37 CUSTOMS AND DUTIES

Gabon, Cameroon, the Central African Republic, and the Congo are joined in a customs union, the Union Douanière et Economique de l'Afrique Centrale (UDEAC). Gabon is a part of the franc zone, within which goods and capital flow without obstruction.

Import duties consist of a fiscal duty applied to all goods entering the UDEAC area, whatever their origin. Customs duties and taxes are based on the cost, insurance and freight (CIF) value. Basic products are taxed at 7.2%, raw materials at 29.8%, intermediate products and most food products at 53.4%, and luxury items 99.42%. In addition, there is an entry fee, a value-added tax (VAT) of 18% payable by all companies with a turnover of more than \$400,000, a complementary import tax, and a special fee on postal and border imports. Imports from outside the franc zone and the European Union are subject to licensing fees and prior authorization is required. Export duties and taxes are levied on specific commodities.

### 38 FOREIGN INVESTMENT

Gabon has benefited from considerable private investment centered on the development of petroleum resources. French investments predominated, accounting for over 73% of foreign investment, with the United Kingdom (21%) following. Since independence, however, Gabon has sought additional sources of investment and US companies have invested in the lumber industry, oil exploration, and mining. French influence by sector is estimated at 63% in construction, 50% in petroleum, 30% in timber, 20% in chemicals, and 29% in transportation. The biggest French company in Gabon is Shell Gabon. Foreign direct investment ranged from \$30 million in 2002 to \$323 million in 2004.

Gabon's investment code of 1989 gives preferential treatment with regard to taxation, duties, importation of certain equipment and raw materials, and royalties to all enterprises considered important for the development of Gabon's economy. The government reserves the right to give preferential treatment to Gabonese-owned industry. Free transfer of capital is guaranteed and there are no restrictions on area of activity. All new industrial, mining, farming, or forestry operations are exempt from income tax for the first two years.

In January 1996, the government passed a new law on privatization that resulted in the sale of the electricity and water monopoly (SEEG) in 1997 to a French firm. Other companies to be privatized include Transgabonese Railway (OCTRA) and the International Telecommunications Office (OPT).

### 39 ECONOMIC DEVELOPMENT

Economic liberalism tempered by planning is the basic policy of the Gabonese government, which seeks to make the most of the country's rich natural resources. Priority is being given to the agricultural sector, to reduce imports, and to diversify the economy. Limiting migration to the cities is also an important element in this strategy. Industrial development efforts are centered on resource processing industries. Building the infrastructure is also an identifiable priority.

The devaluation of the CFA (Communauté Financière Africaine) franc in 1994 did not stimulate local production and discourage imports as expected. Realizing the need for structural adjustments to restore economic competitiveness, the government developed a new strategy in 1995 that encouraged private sector development, promoted privatization of state-owned enterprises, and increased the government's efforts in providing health and education services. A 1997 International Monetary Fund (IMF) report on Gabon criticized the government of overspending and failing to meet structural reform schedules. The government negotiated an 18-month stand-by arrangement with the IMF in 2000, which expired in 2002; Gabon met few of its targets.

Oil production fell in 2001, and non-oil activity rose by 4%. Oil prices were high in the early 2000s, and Gabon's current account balance improved from a deficit of 8.8% of GDP in 1999 to a surplus of 3.2% in 2000; it fell to a deficit of 1% of GDP in 2001, in part due to lower oil exports. The IMF in 2003 encouraged Gabon's government to develop the non-oil sector as a way of replacing the oil and government sectors as the primary catalysts for economic growth and development. According to the IMF's staff report on the fourth review of Gabon's stand-by arrangement, Gabon's exports are expected to increase modestly in 2006–07, even though oil production is forecast to remain constant, at 13.4 million tons (266,928 barrels/day).

### 40 SOCIAL DEVELOPMENT

Old age, disability, and survivor pensions are available to all employees and are funded by contributions from employees and employers. Special systems are in place for civil servants, military personnel, the self-employed, and state contract workers. Other benefits include maternity and medical coverage, and workers' compensation. A family allowance is available to all salaried workers with children under the age of 16. Agricultural workers and subsistence farmers are not covered by these programs.

Women have many legal protections and participate in business and politics, although they face discrimination in many areas. Polygamy is still common, and the property rights of women in polygamous marriages are limited. Women are required by law to obtain permission from their husband before leaving the country. Domestic abuse is prevalent, especially in rural areas. There is limited legal and medical assistance for rape victims.

Minority Pygmies maintain their indigenous community and decision-making structures. However, they suffer societal discrimination and severe poverty. Gabon's human rights record has improved in recent years, although there continue to be reports of the use of abuse by security forces. Prison conditions are harsh and life threatening.

#### 41 HEALTH

Most of the health services are public, but there are some private institutions, of which the best known is the hospital established in 1913 in Lambaréné by Albert Schweitzer. The hospital is now partially subsidized by the Gabonese government.

Gabon's medical infrastructure is considered one of the best in West Africa. By 1985 there were 28 hospitals, 87 medical centers, and 312 infirmaries and dispensaries. As of 2004, there were an estimated 29 physicians per 100,000 people. Approximately 90% of the population had access to health care services. In 2000, 70% of the population had access to safe drinking water and 21% had adequate sanitation.

A comprehensive government health program treats such diseases as leprosy, sleeping sickness, malaria, filariasis, intestinal worms, and tuberculosis. Rates for immunization of children under the age of one were 97% for tuberculosis and 65% for polio. Immunization rates for DPT and measles were 37% and 56% respectively. Gabon has a domestic supply of pharmaceuticals from a large, modern factory in Libreville.

The total fertility rate has decreased from 5.8 in 1960 to 4.2 children per mother during childbearing years in 2000. Ten percent of all births were low birth weight. The maternal mortality rate was 520 per 100,000 live births as of 1998. In 2005, the infant mortality rate was 55.35 per 1,000 live births and life expectancy was 55.02 years. As of 2002, the overall mortality rate was estimated at 17.6 per 1,000 inhabitants.

The HIV/AIDS prevalence was 8.10 per 100 adults in 2003. As of 2004, there were approximately 48,000 people living with HIV/AIDS in the country. There were an estimated 3,000 deaths from AIDS in 2003.

World Health Organization specialists and the government of Gabon took immediate action against the mid-1990s reemergence of the Ebola virus.

#### 42 HOUSING

Credit institutions make small loans for the repair of existing houses and larger loans (amounting to almost the total cost of the house) for the construction of new houses, but the cost of homeownership and maintenance has still been beyond the reach of most average citizens. Because of their higher credit rating, salaried civil servants and employees of trading companies receive most of the loans. The government has established a national habitation fund, and there have been a number of urban renewal projects. As of 2000, 73% of urban and 55% of rural dwellers had access to improved water sources. About 25% of urban and 4% of rural dwellers had access to improved sanitation systems. It has

been estimated that the housing deficit within Libreville alone is about 100,000 dwellings.

#### 43 EDUCATION

The educational system is patterned on that of France, but changes are being introduced gradually to adapt the curriculum to local needs and traditions. The government gives high priority to education, especially the construction of rural schools. Education is free and compulsory between the ages of 6 and 16. Primary school covers five years of study. Students then choose either general secondary courses or a technical school program, each of which cover seven years. The academic year runs from October to June. The primary language of instruction is French.

In 2001, about 13% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2001 was estimated at about 78% of age-eligible students. The same year, enrollment in secondary schools was at less than 50% of age-eligible students. It is estimated that about 74% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 49:1 in 2003; the ratio for secondary school was about 28:1. In 2003, private schools accounted for about 29% of primary school enrollment and 30% of secondary enrollment.

Omar Bongo University, at Libreville, includes faculties of law, sciences, and letters; teachers' training schools; and schools of law, engineering, forestry and hydraulics, administration, and management. In 1999, about 7% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 1995 was estimated at about 63.2%, with 73.7% for men and 53.3% for women.

As of 2003, public expenditure on education was estimated at 3.9% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library (founded in 1969), National Archives (1969), and Documentation Center (1980) together form a collection of 25,000 volumes. The Omar Bongo University in Libreville has 12,000 volumes. The Information Center Library in Libreville has 3,500 volumes. There are also American and French Cultural Centers in Libreville housing modest collections. The Museum of Arts and Traditions at Libreville is a general interest museum. The National Museum of Gabon is also in Libreville.

#### 45 MEDIA

The Ministry of Information, Posts, and Telecommunications provides domestic services for Gabon and participates in international services. There are direct radiotelephone communications with Paris and other overseas points. In 2003, there were an estimated 29 mainline telephones for every 1,000 people. The same year, there were approximately 224 mobile phones in use for every 1,000 people.

Radio-Diffusion Télévision Gabonaise (RTG), which is owned and operated by the government, broadcasts in French and indigenous languages. Color television broadcasts have been introduced in major cities. In 1981, a commercial radio station, Africa No. 1, began operations. The most powerful radio station on the continent, it has participation from the French and Gabonese governments and private European media. In 2004, the govern-

ment operated two radio stations and another seven were privately owned. There were also two government television stations and four privately owned. In 2003, there were an estimated 488 radios and 308 television sets for every 1,000 people. About 11.5 of every 1,000 people were cable subscribers. Also in 2003, there were 22.4 personal computers for every 1,000 people and 26 of every 1,000 people had access to the Internet. There were six secure Internet servers in the country in 2004.

The national press service is the Gabonese Press Agency, which publishes a daily paper, *Gabon-Matin* (circulation 18,000 as of 2002). *L'Union* in Libreville, the government-controlled daily newspaper, had an average daily circulation of 40,000 in 2002. The weekly *Gabon d'Aujourd'hui*, is published by the Ministry of Communications. There are about nine privately owned periodicals which are either independent or affiliated with political parties. These publish in small numbers and are often delayed by financial constraints. Foreign newspapers are available.

The constitution of Gabon provides for free speech and a free press, and the government is said to support these rights. Several periodicals actively criticize the government and foreign publications are widely available.

#### 46 ORGANIZATIONS

There is a chamber of commerce at Libreville. UNIGABON, a national organization established in October 1959, conducts liaison work among mining companies, labor unions, public works societies, and transportation companies. There are some professional organizations, such as the Association of Editors of a Free and Independent Press and the Association of Sports Medicine.

Church organizations are active in the country and have a sizable following. They operate several mission schools and health centers. In rural areas, cooperatives promote the production and marketing of agricultural products. Among the tribes, self-help societies have grown rapidly, particularly in the larger towns, where tribal members act together as mutual-aid societies. There are youth and women's organizations affiliated with the PDG. The Alliance of YMCA's is also a major youth organization in the country, as are several scouting programs.

Volunteer service organizations, such as the Lions Clubs International and Rotary Clubs, are also present. There are national chapters of the Red Cross Society and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Gabon's tourist attractions include fine beaches, ocean and inland fishing facilities, and scenic sites, such as the falls on the Ogooué River and the Crystal Mountains. Many visitors come to see the

hospital founded by Albert Schweitzer at Lambaréné. In addition, there are two national parks and four wildlife reserves. Hunting is allowed in certain areas except during October and November.

Tourism accommodations are limited. In 2002 there were only 2,450 hotel rooms with a 70% occupancy rate. An estimated 222,257 tourists arrived in Gabon in 2003. Visitors must have a valid passport, visa, and evidence of yellow fever immunization.

In 2005, the US Department of State estimated the daily expenses of staying in Libreville at \$246. Elsewhere, expenses were as low as \$135 per day.

#### 48 FAMOUS GABONESE

The best-known Gabonese are Léon Mba (1902–67), the president of the republic from 1960 to 1967, and Omar Bongo (Albert-Bernard Bongo, b.1935), president since Mba's death. Born in Alsace (then part of Germany but now in France), Albert Schweitzer (1875–1965), a world-famous clergyman, physician, philosopher, and musicologist and the 1952 winner of the Nobel Prize for peace, administered a hospital that he established in Lambaréné in 1913.

#### 49 DEPENDENCIES

Gabon has no territories or colonies.

# THE GAMBIA

Republic of The Gambia

**CAPITAL:** Banjul (formerly Bathurst)

**FLAG:** The flag is a tricolor of red, blue, and green horizontal bands, separated by narrow white stripes.

**ANTHEM:** *For The Gambia, Our Homeland.*

**MONETARY UNIT:** In 1971, the dalasi (D), a paper currency of 100 butut, replaced the Gambian pound. There are coins of 1, 5, 10, 25, and 50 butut and 1 dalasi, and notes of 1, 5, 10, 25, and 50 dalasi. D1 = \$0.03096 (or \$1 = D32.3) as of 2004.

**WEIGHTS AND MEASURES:** Both British and metric weights and measures are in use.

**HOLIDAYS:** New Year's Day, 1 January; Confederation Day, 1 February; Independence Day, 18 February; Labor Day, 1 May; Assumption, 15 August; Christmas, 25 December. Movable religious holidays include Good Friday, Easter Monday, 'Id al-Fitr, 'Id al-'Adha, and Milad an-Nabi.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located on the west coast of Africa, The Gambia has an area of 11,300 sq km (4,363 sq mi), extending 338 km (210 mi) E–W and 47 km (29 mi) N–S. Comparatively, the area occupied by The Gambia is slightly less than twice the size of the state of Delaware. Bounded on the N, E, and S by Senegal (with which it is joined in the Confederation of Senegambia) and on the W by the Atlantic Ocean, The Gambia has a total boundary length of 820 km (510 mi), of which 80 km (50 mi) is coastline. The Gambia's capital city, Banjul, is located on the Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

The Gambia River, the country's major waterway, rises in Guinea and follows a twisting path for about 1,600 km (1,000 mi) to the sea. In its last 470 km (292 mi), the river flows through the Republic of The Gambia, narrowing to a width of 5 km (3 mi) at Banjul; during the dry season, tidal saltwater intrudes as far as 250 km (155 mi) upstream. Brown mangrove swamps line both sides of the river for the first 145 km (90 mi) from the sea; the mangroves then give way to more open country and, in places, to red ironstone cliffs. The land on either side of the river is generally open savanna with wooded areas along the drainage channels. Elevation reaches a maximum of 73 m (240 ft).

## <sup>3</sup> CLIMATE

The Gambia has a subtropical climate with distinct cool and hot seasons. From November to mid-May there is uninterrupted dry weather, with temperatures as low as 16°C (61°F) in Banjul and surrounding areas. Hot, humid weather predominates the rest of the year, with a rainy season from June to October; during this period, temperatures may rise as high as 43°C (109°F) but are usually lower near the sea. Mean temperatures range from 23°C (73°F)

in January to 27°C (81°F) in June along the coast, and from 24°C (75°F) in January to 32°C (90°F) in May inland. The average annual rainfall ranges from 92 cm (36 in) in the interior to 145 cm (57 in) along the coast.

## <sup>4</sup> FLORA AND FAUNA

The countryside contains many flowers, including yellow cassias and scarlet combretum. The tropical shrub area contains bougainvillea, oleander, and a dozen varieties of hibiscus. Distinctive fauna includes several varieties of monkeys. As of 2002, there were at least 117 species of mammals, 154 species of birds, and over 900 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The Gambia's environmental concerns include deforestation, desertification, and water pollution. Deforestation is the most serious problem, with slash-and-burn agriculture the principal cause. In the 1950s, 34,000 hectares (84,000 acres) were set aside as forest parks, but by 1972, 11% of these reserves had been totally cleared. During 1981–85, deforestation averaged 2,000 hectares (5,000 acres) per year. Reforestation programs have been set in place, so that from 1990–2000, reforestation took place at a rate of about 1% per year. In 2000, 48% of the total land area was forested.

A 30% decrease in rainfall over the last 30 years has increased the rate of desertification for The Gambia's agricultural lands. Water pollution is a significant problem due to lack of adequate sanitation facilities. Impure water is responsible for life-threatening diseases that contribute to high infant mortality rates. The Gambia has 3 cu km of renewable water resources with 91% used for farming activity. Only about 53% of the people in rural areas have pure drinking water.

As of 2003, only 2.3% of the total land area was protected. Bao-bolon Wetland Reserve is a Ramsar wetland site. The Gambia's wildlife has been threatened by changes in habitat and poaching. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 2 species of birds, 1 type of reptile, 11 species of fish, and 4 species of plants. Threatened species include the African slender-snouted crocodile and the West African manatee.

## 6 POPULATION

The population of The Gambia in 2005 was estimated by the United Nations (UN) at 1,595,000, which placed it at number 144 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.8%, a rate the government viewed as too high. A National Policy for the Advancement of Gambian Women, established in 1994, provides services aimed at lowering the fertility rate, which was about five births per woman. The projected population for the year 2025 was 2,625,000. The population density was 141 per sq km (366 per sq mi). The majority of the population lives near the Atlantic coast with the interior of the country sparsely populated.

The UN estimated that 26% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.66%. The capital city, Banjul (formerly Bathurst), had a population of 372,000 in that year.

## 7 MIGRATION

Each year, some 20,000–30,000 migrants from Senegal, Mali, and Guinea come to The Gambia to help harvest the groundnut crop. Gambians, in turn, move freely over national borders, which are poorly marked and difficult to police in West Africa. The Gambia also has an open-door policy for professionals, so it is used as a gateway to Europe and the United States.

In 2000 there were 185,000 migrants living in The Gambia. The migrants' stock made up approximately 14% of the population. By the end of 2004 there were 7,343 refugees and 602 asylum seekers, mainly from Senegal, in The Gambia. In addition, in 2004 over 500 Gambians sought asylum in Austria, Spain, the United Kingdom, and the United States. In 2005 the net migration rate was estimated as 1.27 migrants per 1,000 population, down from 13.3 per 1,000 in 1990.

## 8 ETHNIC GROUPS

Africans comprise 99% of the population in The Gambia. The Mandinka (Malinké), who make up an estimated 42% of the African population, came to The Gambia by the 13th century. The Fula account for about 18% of the population and live predominately in the eastern part of the country; other major African groups include the Wolof (16%), Jola (10%), Serahuli (9%), and others (4%).

Only 1% of the population is non-African, including Syrians, Lebanese, and British.

## 9 LANGUAGES

English is the official language, but there are 21 distinct languages spoken. The principal vernaculars are Wolof, Fula, and Mandinka, the latter spoken by the Mandingo.

## 10 RELIGIONS

Islam, which was introduced in the 12th century, is followed by about 90%. The main Muslim branches are Tijaniyah, Qadiriyah, Muridiyah, and Ahmadiyah. About 9% of the population are Christians, mostly Roman Catholics; they live primarily in the Banjul area. Protestant denominations include Anglicans, Methodists, Baptists, Seventh-Day Adventists, and Jehovah's Witnesses, along with other small evangelical groups. About 1% of Gambians practice traditional indigenous religions. In some areas, practices of animism are blended with Christianity or Islam. There is a small group of Baha'is.

The constitution provides for freedom of religion and this right is generally respected in practice. Certain Muslim and Christian holidays are officially observed. Both Biblical and Koranic studies are offered in public and private schools; participation is voluntary.

## 11 TRANSPORTATION

The Gambia River not only provides important internal transport but is also an international commercial link. Oceangoing vessels can travel 240 km (150 mi) upstream. In 2004 there were 390 km (243 mi) of total waterways. Banjul, the principal port, receives about 300 ships annually. Ferries operate across the river and between Banjul and Barra.

With the construction of major all-weather roads on both sides of the Gambia River, the waterway has become less significant for passenger traffic. As of 2002, there were 2,700 km (1,678 mi) of roads, including 956 km (594 mi) of paved roads. There were 106,600 passenger cars and 142,300 commercial vehicles were in use. The Gambia has no railroads. In 2005, Gambia's merchant marine totaled four vessels of 1,000 GRT or more, with 30,976 GRT. There is an international airport (the country's only one) at Yundum, 26 km (16 mi) from Banjul. Air Gambia, 60% state owned, acts as an agent only. Foreign air carriers provide international service.

## 12 HISTORY

Archeological evidence in the form of stone axes and broken pottery points to the existence of early habitation in the Gambia River region around 2000 BC. In 470 BC, Carthaginian sailors visited the River Gambia. Hannon the Carthaginian referred to The Gambia in his writings, making The Gambia known to the outside world. In AD 300, West African trading networks expanded as early empires established trading networks for peoples living in the Gambia River area. Later kingdoms of the Foni, Kombo, Sine-Saloum and Fulladou in The Gambia became trading partners of West Africa's great empires. Islam reached the Ghana Empire in the early 8th century, following the Arab conquest of North Africa.

Around AD 750, at Wassu, a large concentration of stone pillars was placed on the north bank of the River Gambia, the largest of

LOCATION: 13°10' to 13°35'36" N; 13°43'5" to 16°49'31" W. BOUNDARY LENGTHS: Senegal, 756 kilometers (470 miles); Atlantic coastline, 71 kilometers (44 miles). TERRITORIAL SEA LIMIT: 12 miles.

which weigh about ten tons and stand about eight and a half feet above the ground. The stones likely mark the burial sites of kings and chiefs similar to burial grounds of royalty in the Ghana Empire. In the 11th century, Islamic leaders (Karamos) were buried like this, making some of the circles holy places.

Eastern Gambia was part of the great West African empires that flourished for a millennium beginning with Ghana after AD 300. The relative political stability guaranteed by the empires permitted trade and movement of peoples throughout the region. Powerful kingdoms organized as families and clans of Wolof, Mandingo, and Fulbe (Fulani) peoples formed larger social and political units. Small groups of Mandingos had settled in The Gambia by the 12th or 13th century, and a Mali-based Mandingo empire was dominant in the 13th and 14th centuries.

Portuguese sailors discovered the Gambia River in 1455; its navigability made it uniquely important for European traders seeking to penetrate the interior. In 1587, English merchants began to trade in the area. The Royal African Company acquired a charter in 1678 and established a fort on James Island, a small island in the river estuary. In 1765, the forts and settlements in The Gambia were placed under the control of the crown, and for the next 18 years The Gambia formed part of the British colony of Senegambia, with headquarters at Saint-Louis. In 1783, the greater part of Senegambia was handed back to France; The Gambia section ceased to be a British colony and was returned to the Royal African Company.

In 1816, Capt. Alexander Grant entered into a treaty with the chief of Kombo for the cession of Banjul Island. He renamed it St. Mary's Island and established on it a settlement that he called Bathurst (now Banjul). In 1821, the British settlements in The Gambia were placed under the administration of the government of Sierra Leone. This arrangement continued until 1888, except for the period 1843–66, when The Gambia had its own colonial administration. In 1888, The Gambia again became a separate colony. Its boundaries were defined following an agreement with France in 1889.

After 1888, The Gambia was administered by a governor assisted by an Executive Council and a Legislative Council. In 1902, St. Mary's Island was established as a crown colony, while the rest of the territory became a protectorate. In 1960, universal adult suffrage was introduced in the protectorate, and a 34-member House of Representatives replaced the Legislative Council. The office of prime minister was created in 1962, and the Executive Council was reconstituted to include the governor as chairman, the prime minister, and eight other ministers. Dr. (later Sir) Dawda Kairaba Jawara, the leader of the Progressive People's Party (PPP), became the first prime minister. The Gambia attained full internal self-government on 4 October 1963, with Jawara as prime minister. An independence constitution, which came into force in February 1965, established The Gambia as a constitutional monarchy within the Commonwealth.

On 23 April 1970, after a referendum, The Gambia became a republic with Jawara as the first president. He and the ruling PPP

remained in power into the 1980s, weathering an attempted left-wing coup and paramilitary rebellion in July 1981, which was quashed by Senegalese troops under a mutual defense pact signed in 1965. An estimated 500–800 people died in the uprising, and there was much property damage. In February 1982, the Confederation of Senegambia was formally constituted. Jawara was re-elected to a new term as president that May, receiving 72.4% of the vote. He was reelected in March 1987, defeating two opponents with 59.2% of the vote, and again in April, 1992. He gained 59% of the vote to 22% for Sheriff Mustapha Dibba, his nearest of four rivals. His PPP was also returned to legislative power but with a reduced majority. It fell from 31 to 25 of the elected seats, in the 36-seat House of Representatives.

In March 1992 Jawara accused Libya of arming a force led by Samba Samyang, the leader of the 1981 coup attempt. Libya denied involvement. He also made similar accusations against Libya and Burkina Faso in 1988. In May 1992 Jawara announced an amnesty for most members of the Movement for Justice in Africa (MOJA) which had been linked to the failed 1981 coup. And in April 1993, two of MOJA's leaders returned from exile to organize as a political party.

Jawara was expected to retire in midterm, but on 22 July 1994 he was overthrown in a bloodless military coup led by Lt. Yahya Jammeh, who had studied in the United States and held an honorary post in the Alabama National Guard. President Jawara took shelter in an American warship which, at the time, had been on a courtesy call. The junta of junior officers and a few civilians suspended the constitution, banned all political activity, detained its superior officers, and placed ministers of the former government under house arrest. The European Union and the United States suspended aid and pressed for a quick return to civilian rule. In 1995, Vice President Sana Sebally attempted another coup, ostensibly to return civilian rule, but it failed. Isolated from the west, Jammeh sought diplomatic ties with other marginalized nations. In 1994, he established relations with Libya and, in 1995, he did so with Taiwan (incurring China's wrath and a break in relations). Economic accords were signed with Cuba as well as Iran.

On 26 September 1996, presidential elections were held in which Jammeh won 55.76% of the vote. Ousainou Darboe took 35.8% and Amath Bah won 5.8%. Three former contenders, the PPP, The Gambia People's Party and the National Convention Party, blamed for The Gambia's problems, were barred from competing. Two days later, Jammeh dissolved the Armed Forces Provisional Ruling Council, which he had formed upon taking power in 1994, and called for legislative elections in January 1997. The Alliance for Patriotic Reorientation and Construction won 32 of 45 contested seats (4 of the body's 49 are appointive). The elections were considered to have been relatively fair, although opposition candidates were harassed and there was almost no media exposure of any but the ruling party.

In 1998, tourism, the most important source of foreign currency, had risen to near precoup levels as Jammeh suppressed grumbling in the army, reestablished stability, and allowed some democratic reforms to move ahead. In February 1998, Jammeh made his first official visit to France. He signed a technical, cultural and scientific accord in Paris designed to reinforce Franco-Gambian cooperation. In 1999, Jammeh raised The Gambia's international profile by mediating between Casamance rebels and the Sen-

egalese government. The ADB, OPEC, and the Islamic Bank approved a round of loans and credits for building and equipping schools and hospitals, and the IMF agreed to a second annual loan worth \$11.8 million under the ESAF.

However, in March 2000 the government was reeling from accusations of embezzlement of some \$2–\$3 million of Nigerian oil aid, the siphoning off of millions of dollars of a Taiwanese loan, and money laundering in connection with the privately held peanut processing and marketing company, Gambian Groundnut Corporation (GGC). The government stepped up security measures and controls over the private media, which it justified on the grounds of an alleged coup attempt on 15 January 2000. The coup may have been stage-managed as a pretext for increased security measures. In mid-April, student protests ended with the deaths of 14 people. Local elections, scheduled for November 2000 were repeatedly postponed.

The 18 October 2001 presidential elections were conducted amidst charges of fraud, and thousands of Diola—members of Jammeh's ethnic group living across the border in Senegal—reportedly helped reelect Jammeh who took 52.96% of the vote. Ousainou Darboe of the United Democratic Party (UDP), who had formed a coalition with the People's Progressive Party (PPP) and with The Gambia People's Party (GPP) of Hassan Musa Camara, came in second. Despite his allegations of voting and identity card fraud, Darboe conceded defeat. The EU, the Commonwealth, the United Kingdom, the UN, and Transparency International observers said they were relatively satisfied with the conduct of the election.

In 1999, the HIV/AIDS adult prevalence rate was estimated to be below 2%, one of the lowest rates in sub-Saharan Africa. The 2002 UN Human Development Report ranked The Gambia 160th out of 173 countries on the basis of real GDP per capita, adult literacy, and life expectancy. In February 2004, government announced the discovery of large oil deposits, raising expectations of better economic times in The Gambia.

Freedom of expression was under severe strain as shown in December 2004 when a new press law imposed jail terms for sedition and libel. A few days later, newspaper editor and outspoken critic of the law Deyda Hydar was shot and killed. In March 2005, over 30 senior officials were arrested on suspicion of corruption.

## 13 GOVERNMENT

Under the republican constitution of 24 April 1970, as amended, the president, popularly elected for a five-year term, was the head of state. Presidential powers included designating a vice president, who exercised the functions of a prime minister, and appointing cabinet members. The House of Representatives had 36 members elected by universal adult suffrage (at age 18), five chiefs elected by the Chiefs in Assembly, and eight appointed nonvoting members; the attorney general was also a member *ex officio*.

The military junta suspended the constitution on 22 July 1994, but following presidential elections two years later, a unicameral National Assembly was instituted, consisting of 49 members, four of whom were appointed by the president with the remainder standing for election. As of 2005, the Assembly consisted of 53 members, 48 of which were popularly elected, and five of which were appointed by the president. They serve a five-year term. Presidential elections were due October 2006 and legislative elections

in January 2007. In late 2005, the five main opposition parties resolved to form the National Alliance for Development and Democracy (NADD). NADD is envisaged as the single platform that would help the opposition overcome its differences and capture power from the ruling APRC. Its plans include the Save The Gambia Democracy Project (STGDP), by which NADD hoped to mobilize resources from home as well as from abroad to lay new institutional foundations for democracy in The Gambia.

#### 14 POLITICAL PARTIES

The first Gambian political party, the Democratic Party, was formed in 1951 by Rev. John C. Faye. The Muslim Congress Party (CP) and the United Party (UP), led by Pierre S. N'jie, were formed in 1952. The People's Progressive Party (PPP), under the leadership of Dawda Kairaba Jawara, was formed in 1958 and has governed the country since independence. The CP and the PPP merged in 1968. Two other parties were formed to compete in the 1977 elections, the National Liberation Party and the National Convention Party (NCP). In the elections of May 1982, the PPP won 27 seats (the same as in 1977), the NCP 3, and independents 5; in March 1987, the PPP won 31 seats and the NCP 5; and in April, 1992, PPP won 25 seats and the NCP 6. Other parties included The Gambia People's Party (GPP), the People's Democratic Organization for Independence and Socialism (PDOIS), the Gambian People's Democratic Party (PDP), and the Movement for Justice in Africa (MOJA).

After the 1994 coup political parties were barred. The ban was lifted in August 1996, but three precoup parties, the People's Progressive Party, The Gambia People's Party, and the National Convention Party remained proscribed. An independent electoral commission lifted the ban on these parties in August 2001. Elections for the House of Assembly were held on 2 January 1997 with members installed on 16 January 1997. Jammeh's Alliance for Patriotic Reorientation and Construction took 33 of 45 contested seats, the United Democratic Party took 7 seats, the National Reconciliation Party 2 seats, the PDOIS 1 seat, and independents 2 seats.

Members of opposition parties were harassed during Jammeh's annual tour in 1999 when he lashed out at them as a "gang of alcoholics." His own party weathered rough seas in early 2000 as its secretary-general, Phodey Makalo, disappeared with most of its funds. The July 22 Movement, which served Jammeh as a militia and political vehicle to launch his campaign, was reintegrated into the APRC.

Parliamentary elections were held on 17 January 2002 giving the APRC 45 of 53 seats. The PDOIS took three seats. Citing elections bias on the part of the Independent Electoral Commission (IEC), the main challenger to the APRC, the United Democratic Party boycotted the elections. APRC candidates ran unopposed in 33 of 48 constituencies. Former head of state Sir Dawda Jawara returned from exile in September 2002 upon condition that he resign from his party.

Presidential elections were due in October 2006; new political alliances were in formation. In early 2006 Nigeria's President Olusegun Obasanjo, acting in his capacity as Chairman of the Commonwealth, visited Banjul in an effort to reconcile government and opposition politicians. The result was a Memorandum of Understanding in which the ruling APRC and NADD, or Na-

tional Alliance for Democracy and Development pledged to forget the past and to work to create a level playing field for the 2006 elections. If implemented faithfully, the accord could expand opportunities for opposition parties, such as the National Alliance for Democracy and Development that had suffered from government control of the print as well as electronic media.

#### 15 LOCAL GOVERNMENT

There are five administrative divisions, each with a council, the majority of whose members are elected. The divisions—Central River, Lower River, North Bank, Upper River, and Western—are subdivided into 35 districts administered by chiefs with the help of village mayors and councilors. Banjul has a city council.

#### 16 JUDICIAL SYSTEM

The judicial system is based on a composite of English common law, Koranic law, and customary law. It accepts compulsory ICJ jurisdiction with reservations, and includes subsidiary legislative instruments enacted locally. The constitution provides for an independent judiciary, and although the courts are not totally free from influence of the executive branch, they have demonstrated their independence on occasion.

The Supreme Court, presided over by a chief justice, has both civil and criminal jurisdiction. Formerly, appeals from any decision of the Supreme Court went before the Court of Appeals, whose judgments could be taken to the UK Privy Council. The January 1997 constitution provided for a reconfiguration of the courts with the Supreme Court replacing the Privy Council.

Muslim courts apply Shariah law in certain cases involving Muslim citizens, and in traditional matters, chiefs rule on customary law and local affairs. District tribunals serve as appeals courts in cases of tribal law and custom. Cases of first instance in criminal and civil matters are handled by administrative officers who function as magistrates in courts located in each of the five administrative regions and Banjul.

#### 17 ARMED FORCES

The Gambia's armed forces had 800 members in 2005, all of whom comprised the Gambian National Army, which was made up of two infantry battalions, one engineer squadron and a company of the Presidential Guard. The 70-member naval arm had three coastal patrol boats. The Gambia provided observers to five other African nations. The defense budget in 2005 totaled \$2.3 million.

#### 18 INTERNATIONAL COOPERATION

The Gambia was admitted to the United Nations on 21 September 1965 and is a member of ECA and all the nonregional specialized agencies except IAEA. It also belongs to the WTO, the African Development Bank, the ACP Group, the Commonwealth of Nations, the Organization of the Islamic Conference (OIC), ECOWAS, G-77, the Community of Sahel and Saharan States (CENSAD), the New Partnership for Africa's Development (NEPAD), and the African Union. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra

Leone. The union, has been scheduled to come on-stream in January 2003, but has been rescheduled for December 2009.

An agreement of confederation with Senegal, signed on 17 December 1981 and effective 1 February 1982, called for integration of the security services and armed forces of the two countries under the name Senegambia. The presidents of Senegal and The Gambia became president and vice president of Senegambia, respectively. The confederation was dissolved in 1989. The Gambia has played an active role in ECOWAS efforts to resolve the civil wars in Liberia and Sierra Leone. The country contributed troops to cease-fire monitoring groups in 1990 (ECOMOG) and in 2003 (ECOMIL). The Gambia has also supported UN operations and missions in Ethiopia and Eritrea (est. 2000), Burundi (2004), and Côte d'Ivoire (2004). The Gambia is a part of the Non-aligned Movement and participates in the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, The Gambia is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 1<sup>9</sup> ECONOMY

The Gambia's light sandy soil is well suited to the cultivation of groundnuts, which is the country's principal agricultural export. About 75% of the population is engaged in crop production and livestock raising. However, groundnut production has fallen in recent years, and in 1990, tourism overtook groundnut exports as the nation's number one export earner. Significant export revenues are earned from fishing and reexport trade.

The military's takeover of the country in 1994 resulted in a loss of \$50 million in aid from the West, equal to about 10% of national income. In addition, tourism declined dramatically; and Senegal, which surrounds The Gambia on three sides, closed the borders because of smuggling. As a result of the 1994 CFA franc devaluation, The Gambia's goods were no longer competitive in the reexport trade. During the late 1990s, the tourism industry rebounded, as did trade. Tourism declined in 2000, but record crops supported healthy economic growth in 2001. Tourism in 2002 accounted for 10–15% of GDP.

Average annual growth of GDP was at 2.7% for 1988 to 1998, but GDP growth was 5.7% in 2001. The GDP growth rate in 2005 was estimated at 7.1%. Corruption remains an ongoing problem, and the pace of privatization was slow in 2006. The inflation rate stood at 8.8% in 2005. Unemployment and underemployment rates remained extremely high.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 The Gambia's gross domestic product (GDP) was estimated at \$3.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,900. The annual growth rate of GDP was estimated at 7.1%. The average inflation

rate in 2005 was 8.8%. It was estimated that agriculture accounted for 35.5% of GDP, industry 12.2%, and services 52.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$40 million or about \$28 per capita and accounted for approximately 10.9% of GDP. Foreign aid receipts amounted to \$60 million or about \$42 per capita and accounted for approximately 16.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Gambia, The totaled \$293 million or about \$206 per capita based on a GDP of \$366.0 million, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.8%. It was estimated that in 1998 about 57.6% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2002, Gambia's workforce numbered about 300,000. Approximately 75% of workers were engaged in agriculture, with industry, commerce and services accounting for 19% of the labor force. The government provided jobs to 6% of the workforce in 2002. There was no unemployment data available.

The Labor Act of 1990 allows all workers (except civil servants, police, and military personnel) to form associations and trade unions. Approximately 10% of the workforce is unionized, which is about 30,000 workers. Strikes are permitted with 14 days' notice (21 days for essential services) to the Commissioner of Labor. Collective bargaining occurs even though unions are small and fragmented. Minimum wages and hours of employment are set by six joint industrial councils (commerce, artisans, transport, the port industry, agriculture, and fisheries), but only 20% of the labor force is covered by minimum wage legislation. The minimum wage was \$.66 per day in 2002. Most Gambians pool their resources within extended families in order to meet their basic needs. The statutory working age is 18, but because of limited opportunities for secondary schooling, most children begin working at age 14.

## 2<sup>2</sup> AGRICULTURE

The soil is mostly poor and sandy, except in the riverine swamps. On upland soils the main food crops, besides groundnuts, are millet, manioc, corn, and beans. Most landholdings range between five and nine hectares (12 and 22 acres). Agriculture supports about 80% of the active population, and contributed about 30% of GDP in 2003. Irregular and inadequate rainfall has adversely affected crop production in recent years.

The principal cash crop is groundnuts, grown on some 111,000 hectares (275,000 acres). Production totaled 73,000 tons in 2004. That year, the paddy rice crop was estimated at 22,000 tons. Other food crops in 2004 included an estimated 25,000 tons of corn and 90,000 tons of millet. Mangos, bananas, oranges, pawpaws, and limes are grown mainly in the Western Division. Oil palms provide oil for local consumption and kernels for export; palm oil production was estimated at 2,500 tons in 2004, and kernels at 2,000 tons.

### 23 ANIMAL HUSBANDRY

The livestock population in 2005 was estimated at 330,000 head of cattle, 270,000 goats, 148,000 sheep, and 19,000 hogs. Total production of meat in 2005 was 6,845 tons; cow's milk, 7,700 tons; and eggs, 748 tons.

### 24 FISHING

In 2003, the catch was 36,864 tons, as compared with 4,100 tons in 1967. Bonga shad accounted for about 60% of the 2003 catch. Exports of fish products amounted to \$1.1 million in 2002. A 1982 agreement with Senegal allows nationals of each country to operate fishing companies in the other's waters.

### 25 FORESTRY

Portions of The Gambia are covered by mangrove forest, open woodland, or savanna with woodland or bush. Wood resources are used for fuel (84%), poles, and rural housing construction. Roundwood removals were estimated at 750,000 cu m (26 million cu ft) in 2004.

### 26 MINING

The mineral industry was a minor component of Gambia's economy. Clays for bricks, laterite, silica sand, cockleshell, and sand and gravel were exploited for domestic construction needs. Production of silica sand was estimated at 1,530,000 metric tons in 2004, down slightly from 1,534,000 metric tons in 2003. The Gambia had significant glass and quartz sand deposits, and resources of ilmenite, rutile, tin, and zircon. The government has encouraged exploration for gold. Large deposits of ilmenite were discovered along the coast in 1953, and were exploited by UK interests from 1956 to 1959. A new mineral and mining act was being developed.

### 27 ENERGY AND POWER

In February 2004, the government announced the discovery of large oil deposits. The country must import all of the fossil fuels it consumes. In 2002, consumption and imports of refined petroleum products each came to 1,980 barrels per day. There were no known imports or consumption of natural gas products or coal. All electric power is produced at thermal stations. Installed capacity in 2002 totaled 29,000 kW, with electricity output at 135 million kWh in that year. Electric power consumption that same year came to 126 million kWh.

### 28 INDUSTRY

There is little industry in The Gambia. Industries include groundnut processing, fish processing, the processing of hides, building and repair of river craft, village handicrafts, and clothing manufacture. There are candle factories, oil mills, a soft drink factory, a distillery, a shoe factory and a soap and detergent plant. Although the government provides incentives for industrial development, progress on that front has been slow. In February 2004, the government announced the discovery of large oil deposits. The Gambia produces industrial minerals for local consumption. Privatization has been slow, except in the tourism and banking sectors. The largest industrial complex in the country, the Gambia Groundnut Company, formerly owned by the Alimenta group based in Switzerland, was taken over by the government in 1999. This led to

a protracted legal battle and out-of-court settlement, after which the parties agreed to a compensation plan. The government subsequently re-privatized the company.

### 29 SCIENCE AND TECHNOLOGY

The United Kingdom's Medical Research Council operates a field station (of its Dunn Nutrition Unit Laboratory in Cambridge) at Keneba, West Kiang, and a research laboratory on tropical diseases at Fajara, near Banjul. Gambia College, founded in 1978, has schools of agriculture, nursing and midwifery, and public health. The Gambia Ornithological Society, founded in 1974, is devoted to bird watching.

### 30 DOMESTIC TRADE

The marketing of the groundnut crop for export is handled by the Gambia Produce Marketing Board. About 75% of the population is employed in subsistence farming. Manufacturing is primarily based on agriculture and serves a domestic market. Cooperative banking and marketing unions finance the activities of a network of cooperatives in the groundnut-growing areas. Reexportation of goods through the port of Banjul is a major contributing factor to the economy. Normal business hours are from 8 AM to 4 PM, Monday through Thursday, and 8 AM to 12:30 PM on Friday. Banking hours are from 8 AM to 1 PM, Monday through Thursday, and from 8 to 11 AM on Friday. Shopping takes place between the hours of 9:30 AM and noon, and 2:30 to 6 PM, Monday through Friday, and from 9 AM to noon on Saturday.

### 31 FOREIGN TRADE

Peanut products are by far The Gambia's leading export. However, peanut exports were depressed in the early 1980s, first by drought and then by low world prices. Other exports include fish, cotton lint, and palm kernels. The leading imports are food, manufactured goods, raw materials, fuel, machinery, and transport equipment.

In 2004, The Gambia's primary export partners were: India (23.7%), the United Kingdom (15.2%), France (14.2%), Germany (9.6%), Italy (8.3%), Thailand (5.9%), and Malaysia (4.1%). The

primary import partners in 2004 were: China (23.7%), Senegal (11.6%), Brazil (5.9%), the United Kingdom (5.5%), the Netherlands (4.5%), and the United States (4.4%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

In 2005, the value of The Gambia's exports was estimated at \$140.3 million, and imports were valued at \$197 million. The current-account balance was estimated at -\$20.54 million. In 2005, The Gambia had \$81.55 million in reserves of foreign exchange and gold. The external debt burden was estimated at \$628.8 million in 2003.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank of Gambia (CBG), the bank of issue, was established in 1971. The largest commercial bank is Standard Chartered Bank Gambia, which is incorporated locally, with branches in Banjul, Bakav, Serrekunda, and Basse. The government no longer has an equity interest in the bank, in which the parent company holds 75% and Gambian shareholders 25%. The Gambia Commercial and Development Bank (GCDB) was wholly owned by the government but now has been sold to private interests, and the other commercial bank, the International Bank for Commerce and Industry (BICI), is, as of 1997, also privately owned.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$72.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$151.9 million.

### 3<sup>4</sup> INSURANCE

Among the insurance companies listed as doing business in The Gambia as of 1995 were the Gambia National Insurance Co., the Great Alliance Insurance Co., and the Senegambia Insurance Co.

### 3<sup>5</sup> PUBLIC FINANCE

The fiscal year extends from 1 July to 30 June. In the 1980s, expansionary fiscal policies exacerbated a weakening economy; by 1985, the budget deficit reached 30% of GDP. An economic recovery program was initiated to reduce public expenditures, diversify the agricultural sector, and privatize the parastatal sector. This step preceded the 1988 agreement with the IMF for a structural adjustment program which helped the economy grow at an annual rate of 4% between 1990 and 1993.

The US Central Intelligence Agency (CIA) estimated that in 2005 The Gambia's central government took in revenues of approximately \$46.63 million and had expenditures of \$62.6 million. Revenues minus expenditures totaled approximately -\$16.03 million. Total external debt was \$628.8 million.

### 3<sup>6</sup> TAXATION

Direct taxes provide only a small proportion of revenues, the greater proportion being derived from customs and excise duties and from foreign loans and grants-in-aid. Individuals are taxed on the basis of a graduated scale; companies are taxed at a flat rate on undistributed profits. The government revised the income tax system in March 1988 and enacted new sales taxes in April 1988

to broaden the tax base, improve tax collection, and rationalize the tax system.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Customs duties are assessed by CIF (cost, insurance, and freight) value, as is the 10% national sales tax, from which some imports are exempt. Some commodities may be subject to excise taxes.

### 3<sup>8</sup> FOREIGN INVESTMENT

Joint ventures have been encouraged in The Gambia, but with the stipulation that a portion of the profits must be reinvested. Under an ordinance passed in 1964, developing industries are exempt from profits tax for five years.

In 2002 the government embarked on a new effort to attract foreign investment, called the Gateway Project, financed by a World Bank loan. The Gambia Investment Promotion and Free Zone Agency (GIPZA) was established, with the first free zone planned for Banjui Airport. Gambia's foreign investment regime is open door and nondiscriminatory, with foreign companies treated the same as local companies. Incentives for locating in the free zones include exemptions from taxes and customs duties, a ten-year tax holiday, and a reduced 10% corporate income tax rate for investments in the tourist sector. The government's priorities for foreign investment are agriculture, fisheries, tourism, light manufacture and assembly, energy, mineral exploration and exploitation, and telecommunications.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Development goals have been focused on transport and communications improvements, increases in rice and groundnut yields, and production diversity.

The historical importance of Great Britain to The Gambia has declined, as Gambia has turned increasingly to the IDA and the European Development Fund, France, Germany, Switzerland,

Japan, and Arab donors for aid. When Western aid ceased after the 1994 military takeover, The Gambia turned to Taiwan, Libya, Cuba, Nigeria, and Iran for economic support.

In 1999, the EU intended to spend \$20 million on poverty alleviation, and the African Development Bank sponsored a \$1 million rehabilitation program for the fishing industry. In 2000, The Gambia was slated to receive \$91 million in debt relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative, intended to reduce poverty and stimulate economic growth. The IMF began a three-year \$27 million Poverty Reduction and Growth Facility (PRGF) Arrangement with The Gambia in 2002. As of January 2005, the World Bank had approved a total of 31 IDA credits for The Gambia for a total of approximately \$272.7 million. The government has directed spending to social sectors in recent years, including agriculture, education and health. A girls' scholarship program began in 2001 and was met with great success, enrolling girls from poor households in school.

#### 40 SOCIAL DEVELOPMENT

A national pension and disability system covers employed persons in quasi-government institutions and in participating private companies. The retirement age is 55, with early retirement at 45. Worker's compensation laws have been in effect since 1940. Benefits include medical, surgical, hospital and nursing care, and medication. A special scheme exists for civil servants and the military. Agricultural workers and subsistence farmers are excluded from coverage.

Women play little part in the public life of this conservative Islamic country. Arranged marriages are common, and polygamy is practiced. Women face discrimination in education and employment. Inheritance rights, moreover, favor men. The painful and often life-threatening practice of female genital mutilation continues to be widespread and is opposed by organized women's rights groups. Domestic violence is widespread, and considered a family issue. Education for children is compulsory, in theory, but this provision is not enforced in practice. Child labor and trafficking children persists.

Human rights are improving but there are still significant problems in many areas. There were reports of arbitrary arrest, detention and torture. The court system remained inefficient and corrupt.

#### 41 HEALTH

The Gambia has hospitals in Banjul (Royal Victoria) and Bansang and a health clinic in Konbo, St. Mary. The country provided 62% of its people with safe water and 37% with adequate sanitation in 2000. Health conditions are poor: in 2005, average life expectancy was estimated at only 53.75. Nearly half of all children die by age five, primarily because of malaria and diarrheal diseases. Malaria, tuberculosis, trypanosomiasis, and schistosomiasis are widespread.

In 2005 the infant mortality was estimated at 73.07 deaths per 1,000 live births. The Gambia has a higher than average maternal mortality rate, with an estimated 1,100 maternal deaths during childbirth or pregnancy per 100,000 live births. Contraceptives were used by 12% of married women ages 15–49. As of 2004,

there were fewer than 4 physicians per 100,000 people. There were as few as 12 nurses per 100,000 population. Dentists and pharmacists were also scarce, numbering fewer than 1 per 200,000 people. Total health care expenditure was estimated at 3.7% of GDP.

Female genital mutilation is performed on nearly every woman in The Gambia. The government published a policy opposing female genital mutilation, but there had been no specific laws prohibiting it. The most recent immunization rates available for children under one year old were as follows: tuberculosis, 98%; diphtheria, pertussis, and tetanus, 90%; polio, 29%; and measles, 87%.

The HIV/AIDS prevalence was 1.20 per 100 adults in 2003. As of 2004, there were approximately 6,800 people living with HIV/AIDS in the country. There were an estimated 600 deaths from AIDS in 2003.

#### 42 HOUSING

A Housing Finance Fund provides low-cost housing and related assistance. As of 2000, 80% of urban and 52% of rural dwellers had access to improved water sources. The government has been looking into the use of alternative building materials to cut housing expenses. In 2001, about 75% of building materials were imported.

#### 43 EDUCATION

Primary school is free but not compulsory and, as of 2002, lasts for nine years. Secondary schooling covers six years in two stages of three years each. The academic year runs from September to July. Primary school enrollment in 2003 was estimated at about 79% of age-eligible students. The same year, secondary school enrollment was about 33% of age-eligible students; 39% for boys and 27% for girls. It is estimated that about 68% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 38:1 in 2003; the ratio for secondary school was about 26:1. In 2003, about 21% of all secondary students were enrolled in private schools.

The University of The Gambia was established in 1999 with four faculties and Gambia College, which in turn has four schools (agriculture; science; education; and nursing, midwifery, and public health). The adult literacy rate for 2003 was estimated at about 40.1%, with 47.8% for men and 32.8% for women.

As of 2003, public expenditure on education was estimated at 2.8% of GDP, or 8.9% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Gambia National Library in Banjul contains 115,000 volumes; it serves as both a national archive and a public library. School libraries are organized through the National Library. Gambia College in Brikoma has a library of 23,000 volumes. The Yundum College Library at Banjul has 4,000 volumes, and the library of the Gambia Technical Training Institute has 3,880. Gambia Library and Information Services Association was formed in 1987. The Gambia National Museum, founded in 1982, is also in Banjul and features primarily archaeological and historical exhibits. The African Heritage Centre in Bakau serves as an art museum and gallery for local artists. The exhibits change as items are sold and new

ones are offered. Tanje Village Museum offers exhibits on natural history as well as glimpses of village culture.

#### 45 MEDIA

In 2003, there were an estimated 28 mainline telephones for every 1,000 people; about 10,600 people were on a waiting list for telephone service installation. The same year, there were approximately 73 mobile phones in use for every 1,000 people.

In 2004, the government operated one radio station and one television station. There is one private satellite TV station available. There were four private radio stations broadcasting throughout the country. In 2003, there were an estimated 394 radios and 15 television sets for every 1,000 people. Also in 2003, there were 13.8 personal computers for every 1,000 people.

There is one daily newspaper, *The Daily Observer*, with a 2002 circulation of 2,000. Though nominally independent, there have been allegations that editorial content was swayed toward promotion of the Alliance for Patriotic Reorientation and Construction (APRC). Other newspapers include *The Gambia Daily*, which, in spite of its name, is actually published three mornings per week, by the Ministry of Information and Broadcasting; the *Foroyaa*, a weekly with a circulation of 1,500; *The Gambia News and Report*, another weekly, also with a circulation of 1,500; and *The Point*, published twice a week, with a 2002 circulation of 4,000.

The old and new constitutions provide for free expression, but the government is said to prohibit all dissenting political publication and broadcasting.

#### 46 ORGANIZATIONS

The Gambia Chamber of Commerce and Industry represents many of the principal Gambian, British, and French firms. A network of cooperative societies functions within the groundnut-growing region. The Association of Farmers, Educators and Traders represents about 70,000 individuals. There are some professional associations, such as the Gambia Nurses Association, the Gambia Medical and Dental Association, and the Gambia Teachers Union. The Gambia Women's Finance Association helps promote business ownership among women. Youth organizations in-

clude the Gambia Scout Association, Girl Guides, and branches of YMCA/YWCA. There are several sports organizations in the country, including active branches of the Special Olympics. There are national chapters of the Red Cross Society, Caritas, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

All visitors need a valid passport and visa. Vaccinations against yellow fever are required if traveling from an infected area. Tourism significantly increased during the 1990s; however, outside of Banjul, facilities are limited and very basic. Main attractions are the 19th-century architecture in Banjul and the ecotourism along the Gambia River. Popular sports are football (soccer) and wrestling.

In 2005, the US Department of State estimated the daily expenses for staying in Banjul from November through April at \$185. Outside the capital, travel costs were significantly less expensive, averaging \$20 per day.

#### 48 FAMOUS GAMBIANS

The first prime minister of the independent Gambia and the first president of the republic until 1994 was Alhaji Sir Dawda Kairaba Jawara (b.1924). Col. Yahya A. J. J. Jammeh (b.1965) seized power from Jawara in a bloodless coup in 1994.

#### 49 DEPENDENCIES

The Gambia has no territories or colonies.

# GHANA

Republic of Ghana

**CAPITAL:** Accra

**FLAG:** The national flag is a tricolor of red, yellow, and green horizontal stripes, with a five-pointed black star in the center of the yellow stripe.

**ANTHEM:** *Hail the Name of Ghana.*

**MONETARY UNIT:** The cedi (¢) is a paper currency of 100 pesewas. There are coins of ½, 1, 2½, 5, 10, 20, and 50 pesewas and 1, 5, 10, 20, 50, and 100 cedis, and notes of 1, 2, 5, 10, 20, 50, 100, 200, 500, and 1,000 cedis. ¢1 = \$0.00011 (or \$1 = ¢127.42) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of the Inauguration of the Fourth Republic, 7 January; Independence Day, 6 March; Labor Day, 1 May; Republic Day, 1 July; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the southern coast of the West African bulge, Ghana has an area of 238,540 sq km (92,100 sq mi), extending 458 km (284 mi) NNE–SSW and 297 km (184 mi) ESE–WNW. Bordered on the E by Togo, on the S by the Atlantic Ocean (Gulf of Guinea), on the W by Côte d'Ivoire, and on the NW and N by Burkina Faso, Ghana has a total boundary length of 2,633 km (1,635 mi), of which 539 km (334 mi) is coastline. Comparatively, the area occupied by Ghana is slightly smaller than the state of Oregon. Ghana's capital city, Accra, is located on the Gulf of Guinea coast.

## <sup>2</sup>TOPOGRAPHY

The coastline consists mostly of a low sandy shore behind which stretches the coastal plain, except in the west, where the forest comes down to the sea. The forest belt, which extends northward from the western coast about 320 km (200 mi) and eastward for a maximum of about 270 km (170 mi), is broken up into heavily wooded hills and steep ridges. North of the forest is undulating savanna drained by the Black Volta and White Volta rivers, which join and flow south to the sea through a narrow gap in the hills. Ghana's highest point is Mount Afadjato at 880 m (2,887 ft) in a range of hills on the eastern border.

Apart from the Volta, only the Pra and the Ankobra rivers permanently pierce the sand dunes, most of the other rivers terminating in brackish lagoons. There are no natural harbors. Lake Volta, formed by the impoundment of the Volta behind Akosombo Dam, is the world's largest manmade lake (8,485 sq km/3,276 sq mi).

## <sup>3</sup>CLIMATE

The climate is tropical but relatively mild for the latitude. Climatic differences between various parts of the country are affected by the

sun's journey north or south of the equator and the corresponding position of the intertropical convergence zone, the boundary between the moist southwesterly winds and the dry northeasterly winds. Except in the north, there are two rainy seasons, from April through June and from September to November. Squalls occur in the north during March and April, followed by occasional rain until August and September, when the rainfall reaches its peak. Average temperatures range between 21–32°C (70–90°F), with relative humidity between 50% and 80%. Rainfall ranges from 83–220 cm (33–87 in) a year.

The harmattan, a dry desert wind, blows from the northeast from December to March, lowering the humidity and causing hot days and cool nights in the north; the effect of this wind is felt in the south during January. In most areas, temperatures are highest in March and lowest in August. Variation between day and night temperatures is relatively small, but greater in the north, especially in January, because of the harmattan. No temperature lower than 10°C (50°F) has ever been recorded in Ghana.

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are mainly those common to tropical regions, but because of human encroachment, Ghana has fewer large and wild mammals than in other parts of Africa. Most of the forest is in the south and in a strip along the border with Togo. Except for coastal scrub and grassland, the rest of Ghana is savanna. As of 2002, there were at least 222 species of mammals, 206 species of birds, and over 3,700 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Slash-and-burn agriculture and overcultivation of cleared land have resulted in widespread soil erosion and exhaustion. Over-

grazing, heavy logging, overcutting of firewood, and mining have taken a toll on forests and woodland. About one-third of Ghana's land area is threatened by desertification. Industrial pollutants include arsenic from gold mining and noxious fumes from smelters. Water pollution results from a combination of industrial sources, agricultural chemicals, and inadequate waste treatment facilities.

The nation has 30 cu km of renewable water resource with 52% used for farming activity and 13% used for industrial purposes; about 93% of all urban dwellers and 68% of the rural population have access to pure water.

Ghana has five national parks and four other protected areas; there are six Ramsar wetland sites. In 2003, 5.6% of the country's total land area was protected. The ban on hunting in closed reserves is only sporadically enforced, and the nation's wildlife is threatened by poaching and habitat destruction. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 15 types of mammals, 8 species of birds, 2 types of reptiles, 10 species of amphibians, 8 species of fish, and 117 species of plants. Threatened species included the white-breasted guinea fowl, the hartebeest, Pel's flying squirrel, the black crowned crane, the red-capped monkey, and the great white shark.

## 6 POPULATION

The population of Ghana in 2005 was estimated by the United Nations (UN) at 22,019,000, which placed it at number 49 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.3%, a rate the government viewed as too high. The government has become involved in programs aimed at slowing population growth, especially by educating adolescents about reproductive health. The projected population for the year 2025 was 32,846,000. The population density was 92 per sq km (239 per sq mi), with approximately 80% of the population residing in the south or in the far northeast and northwest.

The UN estimated that 44% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3%. The capital city, Accra, had a population of 1,847,000 in that year. Other large cities and their estimated populations were Kumasi (862,000) and Tema (209,000).

## 7 MIGRATION

For generations, immigrants from Burkina Faso and Togo did much of the manual work, including mining, in Ghana; immigrant traders from Nigeria conducted much of the petty trade; and Lebanese and Syrians were important as intermediaries. In 1969, when many foreigners were expelled, Ghana's alien community was about 2,000,000 out of a population of about 8,400,000. In 1986, the government estimated that at least 500,000 aliens were residing in Ghana, mostly engaged in trading.

Ghanaians also work abroad, some as fishermen in neighboring coastal countries. Many Ghanaians were welcomed in the 1970s by Nigeria, which was in the midst of an oil boom and in need of cheap labor. In early 1983, as the oil boom faded, up to 700,000 Ghanaians were expelled from Nigeria; soon after, however, many

deportees were reportedly being invited back by Nigerian employers unable to fill the vacant posts with indigenous labor. But in May 1985, an estimated 100,000 Ghanaians again were expelled from Nigeria.

The United Nations High Commissioner for Refugees (UNHCR) organized a plan for the voluntary repatriation of some 15,000 Liberian refugees; since June 1997, 3,342 have repatriated under the plan. Of those Liberian refugees remaining in Ghana, another 4,000 have expressed willingness to return to their homeland; however, the majority wish to stay in Ghana or be resettled in third countries. Repatriation efforts for both Liberian and Togolese refugees were ongoing in 1999. Also in 1999, both Liberian and Sierra Leonean refugees were still arriving in Ghana in sizable numbers. In 2000 the number of migrants living in Ghana was 614,000.

In 2004, Ghana hosted some 42,053 refugees, almost all Liberians. Asylum seekers numbered 6,010, mainly from Togo, Liberia, Sierra Leone and Côte d'Ivoire.

The level of remittances in Ghana increased appreciably from \$201.9 million in 1990 to \$1,017 million in 2003. As a percentage of GDP this increase is even more significant, 2.24% in 1990 to 13.4% in 2003. In 2005 the net migration rate was estimated as -0.59 migrant per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

It is fairly certain that Ghana has been occupied by Negroid peoples since prehistoric times. Members of the Akan family, who make up about 44% of the population, include the Twi, or Ashanti, inhabiting the Ashanti Region and central Ghana, and the Fanti, inhabiting the coastal areas. In the southwest, the Nzima, Ahanta, Ewe, and other tribes speak languages related to Twi and Fanti. The Moshi-Dagomba constitute about 16% of the population, the Ewe 13%, the Ga 8%, the Gurma 3%, and the Yoruba 1%. The Accra plains are inhabited by tribes speaking variants of Ga, while east of the Volta River are the Ewe living in what used to be British-mandated Togoland. All these tribes are fairly recent arrivals in Ghana, the Akan having come between the 12th and 15th centuries, the Ga-Adangbe in the 16th century, and the Ewe in the 17th century. Most of the inhabitants of the Northern Region belong to the Mole-Dagbani group of Voltaic peoples or to the Gonja, who appear to bear some relation to the Akan. European and other groups account for only 1.5% of the population.

## 9 LANGUAGES

Of the 56 indigenous languages and dialects spoken in Ghana, 31 are used mainly in the northern part of the country. The languages follow the tribal divisions, with the related Akan languages of Twi and Fanti being most prominent. Also widely spoken are Moshi-Dagomba, Ewe, and Ga. English is the official language and is the universal medium of instruction in schools. It is officially supplemented by five local languages.

## 10 RELIGIONS

An estimated 69% of the population belong to various Christian denominations, 15.6% are Muslims (though Muslim leaders claim the number is closer to 30%), and about 15.4% of the population follow traditional indigenous beliefs or other religions, includ-

LOCATION: 4°45' to 11°10' N; 1°12'E to 3°15' W. BOUNDARY LENGTHS: Togo, 877 kilometers (545 miles); Atlantic coastline, 539 kilometers (335 miles); Côte d'Ivoire, 668 kilometers (415 miles); Burkina Faso, 544 kilometers (338 miles). TERRITORIAL SEA LIMIT: 12 miles.

ing the Baha'i Faith, Buddhism, Judaism, Hinduism, Shintoism, Ninchiren Shoshu Soka Gakkai, Sri Sathya Sai Baba Sera, Sat Sang, Eckanker, the Divine Light Mission, Hare Krishna, and Rastafarianism. Christian denominations include Roman Catholics, three branches of Methodists, Anglicans, Mennonites, two branches of Presbyterians, Evangelical Lutherans, the Church of Jesus Christ of Latter-Day Saints, Seventh-Day Adventists, Pentecostals, Baptists, and Society of Friends. Some Christians also include elements of indigenous religions in their own practices, particularly magic and divination. There are three primary branches of Islam within the country: Ahlussuna, Tijanis, and Ahmadis. A small number of Muslims are Shia. Zetahil, a religion that is unique to Ghana, combines elements of both Islam and Christianity.

The indigenous religions generally involve a belief in a supreme being along with lesser gods. Veneration of ancestors is also common. The Afrikan Renaissance Mission, also known as Afrikania, is an organization which actively supports recognition and practice of these traditional religions.

In many areas of the country, there is still a strong belief in witchcraft. Those suspected of being witches (usually older women) have been beaten or lynched and occasionally banished to "witch camps," which are small villages in the north primarily populated by suspected witches. The law does provide protection for alleged witches. Among the Ewe in the Volta Region, there are still some who practice a form of religious servitude known as *Trokosi* (or *Fiashidi*). In this practice a virgin girl, usually in her early teens, is placed as a servant at a local shrine for a period of time that may extend from a few weeks to three years. The girl's service is meant to atone for crimes committed by a member of the girl's family. After the set period of service is completed, many girls continue to visit the shrine on a voluntary basis as a matter of maintaining family honor. Involuntary servitude is prohibited by law.

Although there is no state religion, attendance at assemblies or devotional services is required in public schools, with a service that is generally Christian in nature. However, this requirement is not always enforced.

## 11 TRANSPORTATION

The government's development program has been largely devoted to improving internal communications; nevertheless, both road and rail systems deteriorated in the 1980s. Rehabilitation began in the late 1980s, with priority being given to the western route, which is the export route for Ghana's manganese and bauxite production and also serves the major gold-producing area. Rail lines are also the main means of transportation for such products as cocoa, logs, and sawn timber; they are also widely used for passenger service. There were 953 km (592 mi) of narrow-gauge railway in 2004, with the main line linking Sekondi-Takoradi with Accra and Kumasi.

Ghana had about 47,787 km (29,723 mi) of roads in 2003, of which about 8,563 km (5,326 mi) were paved. Good roads link Accra with Tema, Kumasi, Takoradi, and Akosombo. In 2003, Ghana had 104,550 private automobiles and 53,450 commercial vehicles. The government transport department operates a cross-country bus service; municipal transport facilities are available in all main towns.

The Black Star Line, owned by the government, operates a cargo-passenger service to Canada, the United States, the United Kingdom, Italy, and West Africa. In 2005, Ghana had a merchant shipping fleet comprising four vessels of 1,000 GRT or over, totaling 19,086 GRT. Lake transport service between Akosombo and Yapei is operated by Volta Lake Transport Co.

Ghana has no natural harbors. An artificial deepwater port was built at Sekondi-Takoradi in the 1920s and expanded after World War II. A second deepwater port, at Tema, was opened in 1962, and in 1963 further extensions were made. At a few smaller ports, freight is moved by surfboats and lighters. The major rivers and Lake Volta provide about 1,293 km (803 mi) of navigable waterways.

In 2004, there were an estimated 12 airports in Ghana, 7 of which had paved runways as of 2005. Accra's international airport serves intercontinental as well as local West African traffic. Smaller airports are located at Sekondi-Takoradi, Kumasi, Tamale, and Sunyani. Ghana Airways, owned by the government, operates domestic air services and flights to other African countries and to the Federal Republic of Germany (FRG), London, and Rome. In 2003, approximately 241,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Oral traditions indicate that the tribes presently occupying the country migrated southward roughly over the period 1200–1600. The origins of the peoples of Ghana are still conjectural, although the name "Ghana" was adopted on independence in the belief that Ghanaians are descendants of the inhabitants of the empire of Ghana, which flourished in western Sudan (present-day Mali), hundreds of miles to the northwest, more than a thousand years ago.

The recorded history of Ghana begins in 1471, when Portuguese traders landed on the coast in search of gold, ivory, and spices. Following the Portuguese came the Dutch, the Danes, the Swedes, the Prussians, and the British. Commerce in gold gave way to the slave trade until the latter was outlawed by Great Britain in 1807. The 19th century brought a gradual adjustment to legitimate trade, the withdrawal of all European powers except the British, and many wars involving the Ashanti, who had welded themselves into a powerful military confederacy; their position as the principal captors of slaves for European traders had brought them into conflict with the coastal tribes. British troops fought seven wars with the Ashanti from 1806 to 1901, when their kingdom was annexed by the British crown.

In 1874, the coastal area settlements had become a crown colony—the Gold Coast Colony—and in 1901 the Northern Territories were declared a British protectorate. In 1922, part of the former German colony of Togoland was placed under British mandate by the League of Nations, and it passed to British trusteeship under the UN after World War II. Throughout this period, Togoland was administered as part of the Gold Coast.

After a measure of local participation in government was first granted in 1946, the growing demand for self-government led in 1949 to the appointment of an all-African committee to inquire into constitutional reform. Under the new constitution introduced as a result of the findings of this committee, elections were held in 1951, and for the first time an African majority was granted

a considerable measure of governmental responsibility. In 1954, further constitutional amendments were adopted under which the Gold Coast became, for practical purposes, self-governing. Two years later, the newly elected legislature passed a resolution calling for independence, and on 6 March 1957 the Gold Coast, including Ashanti, the Northern Territories Protectorate, and the Trust Territory of British Togoland, attained full independent membership in the Commonwealth of Nations under the name of Ghana. The Gold Coast thus became the first country in colonial Africa to gain independence. The nation became a republic on 1 July 1960.

During the period 1960–65, Ghana's first president, Kwame Nkrumah, steadily gained control over all aspects of Ghana's economic, political, cultural, and military affairs. His autocratic rule led to mounting but disorganized opposition. Following attempts on Nkrumah's life in August and September 1962, the political climate began to disintegrate, as government leaders accused of complicity in the assassination plots were executed or removed from office. A referendum in January 1964 established a one-party state and empowered the president to dismiss Supreme Court and High Court judges. Another attempt to assassinate Nkrumah occurred that month.

In February 1966, Nkrumah was overthrown. A military regime calling itself the National Liberation Council (NLC) established rule by decree, dismissing the civilian government and suspending the constitution. A three-year ban on political activities was lifted 1 May 1969, and after elections held in August, the Progressive Party, headed by Kofi A. Busia, formed a civilian government under a new constitution. During his two years in office, Busia lost much of his public following, and Ghana's worsening economic condition was the pretext in January 1972 for a military takeover led by Lt. Col. Ignatius Kutu Acheampong, who formed the National Redemption Council (NRC). Unlike the military rulers who came to power in 1966, however, the NRC made no plans for a rapid return to civilian rule. The NRC immediately repudiated part of the foreign debt remaining from the Nkrumah era and instituted an agricultural self-help program dubbed Operation Feed Yourself. By July 1973, the last 23 of some 2,000 persons arrested during the coup that brought the NRC to power had been released.

The NRC was restructured as the Supreme Military Council in 1976. A military coup on 5 July 1978 ousted Acheampong, who was replaced by Lt. Gen. Frederick Akuffo. Less than a year later, on 4 June 1979, a coup by enlisted men and junior officers brought the Armed Forces Revolutionary Council to power, led by a young flight lieutenant, Jerry Rawlings. Acheampong, Akuffo, and another former chief of state, A. A. Afrifa (who had engineered Nkrumah's overthrow in 1966), plus five others, were found guilty of corruption and executed in summary proceedings. Dozens of others were sentenced to long prison terms by secret courts. The new regime did, however, fulfill the pledge of the Akuffo government by handing over power to civilians on 24 September 1979, following nationwide elections. The Nkrumah-style People's National Party (PNP) won 71 of 140 parliamentary seats in the balloting, and PNP candidate Hilla Limann was elected president.

Ghana's economic condition continued to deteriorate, and on 31 December 1981 a new coup led by Rawlings overthrew the civilian regime. The constitution was suspended, all political parties were banned, and about 100 business leaders and government of-

ficials, including Limann, were arrested. Rawlings became chairman of the ruling Provisional National Defense Council. In the following 27 months there were at least five alleged coup attempts. Nine persons were executed in 1986 for attempting to overthrow the regime, and there remained concern over the activities of exile groups and military personnel.

A new constitution was approved by referendum on 28 April 1992 and Rawlings was elected with about 58% of the vote in a sharply contested multiparty election on 3 November 1993. The legislative elections in December, however, were boycotted by the opposition, and the ruling National Democratic Congress (NDC) was able to capture 190 of the 200 seats.

On 4 January 1993, the Fourth Republic was proclaimed and Rawlings was inaugurated as president. Opposition parties, assembled as the Inter-Party Coordinating Committee (ICC), issued a joint statement announcing their acceptance of the "present institutional arrangements" on 7 January, and further stated that they would continue to act as an elected opposition even though they had won no seats in the assembly.

Throughout the 1990s, Ghana's Northern Region has been the site of ethnic/tribal strife. The Kankomba, a landless, impoverished people, began to fight for economic rights against the dominant Nanumbia. In 1995, a curfew was imposed on the region amid massive strife.

Legislative elections were again held in 1996. By maintaining power throughout his elected term (1992–96), Rawlings became the head of the first Ghanaian government to serve a full term without being overthrown. In 1995, Rawlings set up an Electoral Commission charged with setting up and conducting free elections complete with international observers. The Commission enlisted the help of all registered opposition parties and conducted a massive drive to register voters. In the balloting, held 7 December 1996, 77% of the electorate turned out, a substantial improvement over the turnout in 1992. Most observers credited the increase with the Rawlings government's increased transparency.

In 1996, Rawlings was reelected to a second four-year term, having received about 58% of the vote to the Great Alliance Party candidate John Kufour's 40%. The NDC took 133 seats in the 200-member assembly. The NPP emerged as the leading opposition, taking 60 of the remaining seats. The next presidential elections were held on 7 and 28 December 2000, with Rawlings barred by law from serving a third term. Kufour won the election, taking 57.4% of the vote to NDC candidate and Rawlings' vice president John Atta Mills's 42.6% in the second round of voting (Kufour won 48.4% of the vote in the first round, and Mills took 44.8%). Five other candidates contested the elections, and Rawlings relinquished power willingly. When Kufour took office in January 2001, he began investigations into alleged corruption and human rights violations during the time Rawlings was in power, which caused consternation on Rawlings' part. Also on 7 December, parliamentary elections were held; the second round of voting was held on 3 January 2001, and the NPP took 100 of the 200 seats, to the NDC's 92. The elections were judged by international observers to be generally free and fair, although there were reports of government pressure on the media and voter intimidation.

Tension between Kufour and Rawlings continued throughout 2001, and came to a head on 4 June when Rawlings, who was celebrating the anniversary of his 1979 takeover of power, gave

a speech that implied Kufour did not have the confidence of the military. This was seen as a threat of another coup, and thousands marched in protest of Rawlings' statement. One of Kufour's first acts as president was to abolish the national holidays commemorating 4 June 1979 and the 31 December 1981 anniversary of the second coup that began the Rawlings era. Following Rawlings' speech, the military leadership stated its support of the Kufour government.

One of the most well-known Ghanaians is Kofi Annan, the seventh secretary general of the United Nations. Born in Kumasi, Ghana, on April 8, 1938, Kofi Annan rose as a UN bureaucrat and was elected by the UN Security Council as Secretary General on 13 December 1996 and confirmed by the UN General Assembly four days later. Annan was the first black African to become Secretary General. Annan's tenure as Secretary General was renewed on 1 January 2002 for another five-year term. Annan and the United Nations jointly received the Nobel Peace Prize for "their work for a better organized and more peaceful world" on 10 December 2001.

In early 2003, Kufour was host to talks between Côte d'Ivoire's new prime minister, Seydou Diarra, and representatives of the country's northern-based rebels in an attempt to reach an accord on a power-sharing agreement with President Laurent Gbagbo's government, after the civil war that broke out in the country in September 2002.

Ghana's leaders and citizens face unprecedented social threats. The National AIDS Control Programme (NACP) in Accra expects that by 2014 AIDS will account for 35% of all deaths. In 1994, AIDS accounted for an estimated 3.5% of all deaths with some 200 people being infected daily. In February 2000, the estimated HIV prevalence was between 4% and 5% nationwide. HIV/AIDS affects the development of all sectors including health, education, the labor force, economy, transport and agriculture. To curb the pandemic, Ghana has launched a national crusade against it. In August 2005 Ghana started producing antiretroviral (ARV) drugs in the capital Accra as part of government plans to expand distribution of the life prolonging treatment for its HIV-positive citizens. This was achieved in a joint venture between Danpong Pharmaceuticals of Ghana and Adams Pharmaceuticals of China. The venture was expected to decrease the government bill for providing ARVs to some 2,600 patients by 45%, according to official sources.

Despite this setback to Ghana's development, in August 1999, representatives of Shell and Chevron signed a memorandum of understanding with representatives of Nigeria, Benin, Togo, and Ghana specifying that a gas pipeline traversing the four countries would be built. In February 2003, the heads of state of the four countries signed a treaty on establishing a legal and fiscal framework and a regulatory authority for the \$500 million West African Gas Pipeline (WAGP). The pipeline will be designed to carry an initial volume of 195 million cubic feet of gas. In 2004 the US mining company Newmont entered Ghana's mining sector; it was projected they would invest up to \$1 billion.

On 15 July 2004 the National Reconciliation Commission (NRC) formally wrapped up public hearings after 18 months and over 2,000 accounts of human rights violations. Modeled on South Africa's Truth and Reconciliation Commission, Kufour's government set up the NRC on 3 September 2002 in order to foster na-

tional healing after human rights abuses and atrocities committed under Jerry Rawlings' and previous military regimes. Witnesses in the \$5 million process included ordinary Ghanaians and high-profile individuals, such as former President Rawlings. Rawlings appeared before the commission in February to answer questions about his role in specific atrocities, including murder. The NRC submitted its final report and recommendations in October 2004. The government accepted many of the commission's recommendations through a White Paper that was produced in April 2005, including establishment of a Reparation and Rehabilitation Fund for victims of abuse, training and much-needed reform in operation of the security forces.

John Agyekum Kufour won a mandate for a second term at the polls held on 7 December 2004. Kufour defeated NDC's Atta Mills, winning 52.45% of the vote to Mills' 44.64%. Grand Coalition's Edward Mahama and the Convention People's Party (NPP) George Aggudey, polled 1.92 % and 1 %, respectively. Government claims of a coup attempt raised fears of unrest. One month before the elections the government arrested and questioned a group of people, including seven former soldiers, who were allegedly found with military helmets, body armor, a firearm and ammunition. However, the Electoral Commission reported a remarkable turnout of 85.1%, about 8.5 million Ghanaians, credited to an aggressive voter registration campaign mounted by the Electoral Commission. For the first time registration included issue of picture identity cards and sought to eliminate fraud and build confidence in the electoral process. Both domestic and international observers pronounced the elections generally free, fair, and peaceful. There were a few incidents of intimidation and violence in which three people were reported killed. Eight political parties contested parliamentary elections that were run concurrently and four fielded presidential candidates. The 2004 election saw 30 new parliamentary constituencies added to the 2000 election, making a 230-member parliament. In the parliamentary elections, the ruling New Patriotic Party (NPP) won 128 seats, the National Democratic Congress (NDC), 94; the People's National Convention (PNC), 4; the Convention People's Party (CPP), 3; and an independent won 1 seat.

### 13 GOVERNMENT

Since independence, Ghana has experienced four military coups and ten changes of government. The military ruled Ghana by decree from 1972 to 1979, when an elected constituent assembly adopted a new constitution establishing a unicameral parliament and an executive branch headed by a president. On 31 December 1981, a military coup installed the Provisional National Defense Council (PNDC) as the supreme power; the constitution was suspended and the national assembly dissolved.

A consultative assembly, convened late in 1991 to draw up a new constitution, completed its work in March 1992. The government inserted a controversial amendment indemnifying officials of the PNDC from future prosecution for all acts of commission and omission during their term in office. In an April 1992 referendum, the constitution was approved by 92.5% of voters in a low turnout (58% of those eligible). It provides for a presidential system and a legislature (national assembly) of 200 members. Since the 1992 referendum, the government introduced multiparty competition, with the 1996 and 2000–2001 and 2004 elections

receiving high marks for fairness from international observers. In March 2004 Kufour's government averted a crisis by shelving an attempt to fast-track a bill seeking to allow all Ghanaians living abroad to register for the 2004 general elections. This action followed an outcry from opposition, which claimed the amendment was designed and timed to give the NPP an unfair electoral advantage in the 2004 elections, and threatened street protests if the bill was rushed through parliament.

Rawlings was both chief of state and head of government until his second term expired in December 2000. The president is elected for a four-year term, and the constitution bars a third term. John Agyekum Kufour was elected president in 2000 over Rawlings's vice president and hand-picked would-be successor, John Atta Mills. Kufour defeated Mills again in the 2004 elections winning a second and final term based on the country's constitution. Earlier, the opposition had supported the move to increase the number of seats in the national assembly from 200 in the 2000 elections to 230 for the 2004 elections.

## 14 POLITICAL PARTIES

The United Gold Coast Convention (UGCC) was established in 1947 with the declared aim of working for self-government at the earliest possible date. In 1949, as most of the UGCC leadership came to accept constitutional reform as an alternative to immediate self-government, the party secretary, Kwame Nkrumah, broke away and formed his own group, the Convention People's Party (CPP). In January 1950, Nkrumah announced a program of "positive action" for which he and the main leaders of the party were prosecuted and sentenced for sedition. At the first elections held in 1951 under a new constitution, the CPP obtained 71 of the 104 seats, and Nkrumah and his colleagues were released from prison to enter the new government. In May 1952, Kofi A. Busia, of the University College, founded the Ghana Congress Party (GCP), which continued the UGCC position of trying to form alliances with traditional chiefs. The GCP's leadership was a mixture of dissatisfied former CPP members and the professional-oriented leadership of the UGCC. In 1953, Nkrumah was elected life chairman and leader of the CPP.

In 1954, the assembly and cabinet became all African. A new party, the Ashanti-based National Liberation Movement (NLM), was formed to fight the general centralizing tendencies of the CPP and also to maintain the position of the traditional rulers; the NLM leadership, except for Busia, consisted of former CPP members. In the elections held in 1956, however, the CPP retained its predominant position, winning 72 of 108 seats in the Legislative Assembly.

One of the first acts of independent Ghana under Nkrumah was the Avoidance of Discrimination Act (1957), prohibiting sectional parties based on racial, regional, or religious differences. This led the opposition parties to amalgamate into the new United Party (UP), opposing the government's centralization policies and the declining power of the traditional rulers. The effectiveness of the opposition was reduced following the 1960 election by the withdrawal of official recognition of the opposition as such and by the detention of several leading opposition members under the Preventive Detention Act (1958). In September 1962, the National Assembly passed by an overwhelming majority a resolution call-

ing for the creation of a one-party state; this was approved by referendum in January 1964.

After the military takeover of February 1966, the National Liberation Council outlawed the CPP along with all other political organizations. The ban on political activities was lifted on 1 May 1969, and several parties participated in the August 1969 balloting. The two major parties contesting the election were the Progress Party (PP), led by Busia, which was perceived as an Akan-dominated party composed of former members of the opposition UP; and the National Alliance of Liberals (NAL), a Ewe- and CPP-dominated group under the leadership of the former CPP minister Komla Gbedemah. The PP won 105 seats in the 140-member National Assembly; 29 seats were captured by the NAL, and 6 by the five minor parties. In October 1970, the NAL merged with two of the smaller groups to form the Justice Party.

All political parties in Ghana were again disbanded following the January 1972 military coup led by Col. Acheampong. When political activities resumed in 1979, five parties contested the elections. The People's National Party (PNP), which won 71 of 140 seats at stake, claimed to represent the Nkrumah heritage; the Popular Front Party (PFP) and the United National Convention (UNC), which traced their lineage back to Busia's Progress Party, won 43 and 13, respectively. The Action Congress Party (ACP), drawing primary support from the Fanti tribe, won 10 seats, while the leftist Social Democratic Front won 3. After the elections, the PNP formed an alliance with the UNC. In October 1980, however, the UNC left the governing coalition, and in June joined with three other parties to form the All People's Party. The coup of December 1981 brought yet another dissolution of Ghana's political party structure. Opposition to the Provisional National Defense Council (PNDC) was carried on by the Ghana Democratic Movement (organized in London in 1983) and a number of other groups.

With adoption of a new constitution in April 1992, the long-standing ban on political activity was lifted on 18 May 1992. Ghanaians prepared for the presidential and legislative elections to be held in November and December. The parties that emerged could be grouped into three clusters. The center-right group was the most cohesive and it consisted of followers of Kofi Busia. They formed the New Patriotic Party (NPP) and chose Adu Boahe as their presidential candidate. The center-left group was Nkrumahists. Ideological and leadership differences kept them divided into five separate parties, of which the People's National Convention, a party led by ex-President Limann, was best organized. PNDC supporters comprised the third grouping. They favored continuity and, after forming the National Democratic Congress (NDC), were able to draft Rawlings as their candidate.

Rawlings eventually defeated Boahe (58% to 30%) for the presidency. Opposition parties boycotted the December 1992 legislative elections, and the NDC carried 190 of the 200 seats. But the fear of one-party control prompted a split in the NDC. The official opposition in parliament was a faction of the ruling NDC.

Meanwhile, the NPP provided the most serious challenge to the NDC. It sees itself as defender of the new constitution. The NPP broke away from the opposition, the Inter-Party Coordinating Committee, by announcing in August 1993 its recognition of the 1992 election results, which the ICC had refused to accept.

On 7 December 1996, parliamentary elections were again held and while Rawlings's NDC maintained a majority, it fell from 190

seats in 1992 to 133 seats. The NPP, leading the opposition, won 60 seats. The People's Convention held 5 seats and the People's National Convention held 1. The elections were preceded by a massive voter registration drive and judged to be free and fair by international observers.

Leading up to the 2000 elections, the four main opposition parties formed the Joint Action Committee (JAC) to monitor the electoral register and campaign activities to ensure transparency. The elections for the National Assembly were held on 7 December 2000 and 3 January 2001. The NPP emerged the winner by a slim margin, taking 100 seats to the NDC's 92. The socialist People's National Convention took three seats, the socialist Convention People's Party took one seat, and independents won four seats. In the 7 and 28 December 2000 presidential elections, in addition to the NPP's candidate John Kufour and the NDC's candidate John Atta Mills, the following five parties put presidential candidates forward: the People's National Convention, the Convention People's Party, the National Reform Party, the Great Consolidated Popular Party, and the United Ghana Movement.

On 7 December 2004, presidential and parliamentary elections were held simultaneously. Eight political parties competed in the parliamentary elections and four parties fielded candidates in the presidential elections. John Kufour won a second four-year term as president in elections which had an turnout of 85.1% of registered voters, and was judged to be generally free, fair, and peaceful by both domestic and international observers. For a second time, Kufour standing for the ruling NPP defeated his main challenger, NDC's Atta Mills. Kufour won 52.45% of the vote to Mills' 44.64%. Grand Coalition's Edward Mahama and the Convention People's Party (NPP) George Aggudey, won 1.92% and 1%, respectively.

In the parliamentary elections, only half of the eight parties contesting won seats in parliament. The ruling New Patriotic Party (NPP) won 128 seats, the National Democratic Congress (NDC), 94; the People's National Convention (PNC), 4; the Convention People's Party (CPP), 3; and independent, 1. The next elections were scheduled for December 2008.

## **15 LOCAL GOVERNMENT**

As of early 2003, Ghana was divided into 10 regions: Eastern, Western, Ashanti, Northern, Volta, Central, Upper East, Upper West, Brong-Ahafo, and Greater Accra. In 1994, the 10 regions were further subdivided into 267 local administrative units. Local government in Ghana has traditionally been subject to the central government because responsibilities between the two were not well-defined. In late 1982, the government announced that town and village councils, which had been dissolved after the 1981 coup, would be run by people's and workers' defense committees. They were replaced by Committees for the Defense of the Revolution in 1984. The Local Government Law of 1988 and the Local Government Act of 1993 further empowered local governments, and set the stage for efforts to assist them with development planning, working with civil society, and less dependence on central government for resources.

Elections for 103 district assemblies, 4 municipal assemblies, and 3 metropolitan assemblies were conducted in March 1994. In April 2000, the World Bank approved a US\$11-million credit for infrastructure development in Ghana's smaller cities. The Urban 5 Project is intended to support Ghana's decentralization program

through capacity building, improvement of urban infrastructure, and delivery of services at the levels of the district assemblies. The project is part of an 11-year program. Local assembly elections were held in August 2002; 14,079 candidates competed in the elections, which were peaceful but marked by low voter turnout. The next local assembly elections were scheduled for 2006.

## **16 JUDICIAL SYSTEM**

The 1992 constitution established an independent judiciary and a number of autonomous institutions such as the Commission for Human Rights to investigate and take actions to remedy alleged violations of human rights. The new system is based largely on British legal procedures. The new court system consists of two levels: superior courts and lower courts. The superior courts include the Supreme Court, the Appeals Court, the High Court, and regional tribunals. Parliament has the authority to create a system of lower courts. The old public tribunals are being phased out as they clear their dockets.

The 1971 Chieftaincy Act gives the traditional courts powers to mediate local matters. Traditional courts in which village chiefs enforce customary tribal laws in resolving local divorce, child custody, and property disputes continue to operate alongside the new courts.

The constitution provides for an independent judiciary. However, in practice the judiciary is influenced on occasion by the executive branch, and is hampered by a lack of staff and financial resources. The government nominates any number beyond a minimum of nine members to the Supreme Court, subject to parliament's approval.

Defendants have the right to have a public trial, to be presumed innocent, to have an attorney, and to cross-examine witnesses. Under Kufour's office there were improvements in human rights, freedom of expression, freedom of the press and independence of the judiciary from the executive.

## **17 ARMED FORCES**

In 2005, Ghana's active defense forces numbered 7,000 personnel. The Army had 5,000 members including the Presidential Guard. The 1,000-member Navy operated six patrol/coastal vessels. The Air Force had 1,000 personnel. Equipment included 19 combat capable aircraft, including 3 fighter ground attack aircraft and another 16 that were also used as training aircraft. The Ghanaian military provides support to UN and peacekeeping missions in eight countries or regions. The defense budget in 2005 totaled \$49.5 million.

## **18 INTERNATIONAL COOPERATION**

On 8 March 1957, Ghana was admitted to the United Nations; the nation belongs to ECA and several nonregional specialized agencies. Ghana is also a member of the African Development Bank, the ACP Group, Commonwealth of Nations, G-24, G-77, the New Partnership for Africa's Development (NEPAD), and African Union. The nation is also a member of the WTO and holds observer status in the OAS.

In November 1974, Ghana was admitted as a member of the International Bauxite Association and in June 1975 it ratified the treaty creating ECOWAS. From 2003–05, President John Agyekum Kufour served as the chairperson of ECOWAS heads of state.

In this capacity, he led the country in taking on a strong role in the Côte d'Ivoire and Liberian peace process. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra Leone.

In 2003, Ghana sent troops to Côte d'Ivoire as part of the ECOWAS stabilization force. Ghana has also offered support to UN missions and operations in Kosovo (est. 1999), Lebanon (est. 1978), the Western Sahara (est. 1991), Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Sierra Leone (est. 1999), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 1999). Ghana is part of the Nonaligned Movement.

In environmental cooperation, Ghana is part of the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Ghana's economy is led by the agricultural sector, which accounted for about 35% of GDP and employed 65% of the labor force in 2001. Its key crops are cassava, coco-yams (taro), plantains, and yams. Maize, millet, sorghum, rice, and groundnuts are also important staple crops. Agricultural crops which are sold for export include coffee, bananas, palm nuts, copra, limes, kola nuts, shea nuts, rubber, cotton, and kenaf. Cocoa, however, is the dominant export crop; in 2000–2001, cocoa production was estimated to be around 400,000 metric tons. The civil war in Côte d'Ivoire that began in 2002 contributed to a marked rise in cocoa prices, but it was unknown if this development would result in a long-term shift in the cocoa market.

Ghana produces meat, but not enough to satisfy local demand. The fishing industry, likewise, produces only about half of local demand.

Ghana has significant deposits of gold, and important new investments were made in this sector in 1992. In that year, earnings from gold exports exceeded those of cocoa for the first time, and continued to do so as of 2003. Industrial diamonds are also produced. Ghana is a modest oil producer and refines petroleum products. Bauxite deposits are substantial but largely unexploited: the aluminum smelter at Tema uses bauxite imported from Jamaica. Significant manganese production occurs at Nsuta.

In addition, tourism and timber are growth areas. Timber reserves, however, are declining due to large-scale deforestation that is both legally approved and illegal. With respect to tourism, infrastructure and communications outside the main cities are poor, but tourism has become the country's third-largest source of foreign currency.

Prior to 1990, the economy was dominated by over 300 state-owned enterprises. Although over 150 of these firms had been privatized by 1996, the overall pace of privatization has been slow. The economy is also hampered by poor roads and an inadequate telecommunications sector. Inflation has also been a problem peaking at 70% in 1995 before receding to about 21% by the end of 2001. Inflation has been fueled by undisciplined spending by parastatals and large public sector wage increases, which have added substantially to the government's budget deficit. In an attempt to contain inflation, the government has pursued a high interest rate

policy. The economy grew at 4.5% in 1995, up from 3.8% in 1994, due to increased gold production and a good cocoa harvest. The economy continued at a growth rate of 4.2% in 2001. Ghana remains heavily reliant on international assistance from the World Bank, its largest donor. Most aid is tied to progress in the privatization program. Ghana in 2001 applied for a debt reduction package under the Heavily Indebted Poor Countries Initiative set up by the World Bank and the IMF; Ghana was to receive \$875 million over three years.

The 600 km (373 mi) West Africa Gas Pipeline, for which Ghana will provide a supply point in Tema, was to be constructed in 2003, with an estimated capacity of 11 million cu m (400 million cu ft) a day.

The government under John Agyekum Kufuor that came to power in 2000 was dedicated to privatization and encouraging foreign investment. Kufuor declared his administration to usher in the "Golden Age of Business."

In 2004, the economy expanded by a significant 5.8%, up from 5.2% in 2003, and 4.5% in 2002; the GDP growth rate was expected to be 4.8% in 2005. This economic upsurge was sustained by a booming gold sector. Also there was a higher demand for cocoa as a result of political turmoil in neighboring Côte d'Ivoire (the world's biggest cocoa producer prior to 2002). Inflation, although on a downward spiral (it decreased from 26.7% in 2003 to 12.6% in 2004), remained a problem and was expected to grow again in coming years.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Ghana's gross domestic product (GDP) was estimated at \$51.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,500. The annual growth rate of GDP was estimated at 4.3%. The average inflation rate in 2005 was 15%. It was estimated that agriculture accounted for 35.5% of GDP, industry 25.6%, and services 39%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$65 million or about \$3 per capita and accounted for approximately 0.9% of GDP. Foreign aid receipts amounted to \$907 million or about \$44 per capita and accounted for approximately 12.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Ghana totaled \$6.17 billion or about \$298 per capita based on a GDP of \$7.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.7%. It was estimated that in 1999 about 39.5% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Ghana's workforce was estimated at 10.62 million. As of 2000 (the latest year for which data was available), agriculture accounted for 55% of the workforce, with 14% in industry, and 31.1% in services. According to a survey conducted in 2000 (the

latest year for which data was available), Ghana's unemployment rate was estimated at 8.2%.

Although freedom of association is provided by law, the government controls the right to unionize. Government has not, however, prevented the formation of unions. Less than 9% of workers in the formal economy are union members partially due to the weak economy. More workers, up to 86%, are entering the informal sector which is not organized. The law protects the right to strike after mandatory arbitration, but this has not been utilized. Workers are also permitted to engage in collective bargaining.

The minimum working age is 15, but local custom and economic necessity encourage many children to work at much younger ages. The government, labor, and employers set a daily minimum wage of \$.78 which was still in effect in 2002. This amount does not provide a living wage for a family. The legal maximum workweek is set at 45 hours, but most collective bargaining agreements allow for a 40-hour week. Health and safety regulations are difficult to enforce due to lack of resources.

## 22 AGRICULTURE

Agriculture, especially cocoa, forms the basis of Ghana's economy, accounting for 36% of GDP in 2003. Cocoa exports in 2004 contributed 35% (\$812.6 million) to total exports. About 28% of the total area, or 6,385,000 hectares (15,777,000 acres), was cultivated in 2003. About 85% of all agricultural land holders in Ghana are small scale operators who primarily farm with hand tools.

Cocoa beans were first introduced to Ghana in 1878 by Tettah Quarshie. Thereafter, the cultivation of cocoa increased steadily until Ghana became the world's largest cocoa producer, supplying more than one-third of world production by the mid-1960s. By the early 1980s, production was less than half that of two decades before; market conditions were aggravated by a drop of nearly 75% in world cocoa prices between 1977 and 1982. In 1983/84, cocoa production totaled 158,000 tons, the lowest since independence; by 2004, production had rebounded to about 736,000 tons (second highest after Côte d'Ivoire). The Ghana Cocoa Marketing Board purchases and (at least in theory) exports the entire cocoa crop, as well as coffee and shea nuts. Cocoa smuggling was made punishable by death in 1982.

Ghana continued to be a net food importer. Ghana's Ministry of Food and Agriculture estimated that Ghanaian agriculture may be operating at just 20% of its potential. The grain harvest in 2004 included corn, 1,157,600 tons; paddy rice, 241,800 tons; sorghum, 399,000 tons; and millet, 144,000 tons. Other crops were cassava, 9,738,000 tons; plantains, 2,380,000 tons; coco-yams (taro), 1,800,000 tons; yams, 3,892,000 tons; peanuts, 389,000 tons; tomatoes, 200,000 tons; sugarcane, 140,000 tons; coconuts, 315,000 tons; chilies and peppers, 270,000 tons; oranges, 300,000 tons; palm kernels, 37,000 tons; and palm oil, 114,000 tons. Considerable potential exists for the development of agricultural exports including pineapples, tomatoes, soybeans, and cut flowers.

## 23 ANIMAL HUSBANDRY

Livestock can be raised only in the tsetse-free areas, mainly in the Northern Region and along the coastal plains from Accra to the eastern frontier. Ghana's indigenous West African shorthorn is one of the oldest cattle breeds in Africa. Ghanaian livestock farms which can be termed ranches are few; average livestock population

for these outfits is about 400 animals. The elimination of deadly epizootic diseases by prophylactic inoculation of cattle (especially with the help of mobile immunization centers) resulted in a rise of the cattle population from 100,000 head in 1930 to 662,000 in 1968 and 1,385,000 in 2005. There were also about 3,631,000 goats, 3,211,000 sheep, 305,000 hogs, and 30,000,000 poultry. Total meat production in 2005 was 177,450 tons. Many live animals and much meat are imported (mainly from Nigeria) to satisfy local demand. A serious problem for the livestock industry continues to be the provision of adequate feed for animals during the dry season. Almost every household in Ghana rears a few animals for home consumption and as capital saving in case of crop failures.

## 24 FISHING

In 2003, the total marine fish catch was 315,756 tons, and the freshwater catch (not including subsistence fishing) about 75,938 tons. Round sardinella and European anchovies together accounted for 41% of the total catch. Exports of fish products amounted to \$118.4 million in 2003. In 1973, an industrial fishing complex at Tema began production of canned pilchards and sardines. Lake Volta accounts for about half the freshwater catch. Considerable potential exists for the development of shrimp and fish exports.

## 25 FORESTRY

The forest area (primarily in the south) covers about 28% of the country. Since October 1972, the government has acquired a majority share in a number of foreign-owned timber companies. The Timber Marketing Board has a monopoly on the export of timber and timber products.

Among the roughly 300 timber-producing species are the warwa obech, mahogany, utile, baku, and kokrodua; species such as avodire, sapale, and makuri are considered the best in Africa. A ban on the export of 21 species was established in 1979 in order to encourage the production of sawn timber and timber products. The total production of roundwood in 2004 was 22,078,000 cu m (779,353,000 cu ft), with 95% burned as fuel. Sawn wood production was 496,000 cu m (17,500,000 cu ft), with exports of \$104.9 million. Total exports of forest products in 2004 amounted to \$190.6 million. After cocoa and minerals, sawn timber and logs constitute the third-largest export item. The government is encouraging a shift to value-added timber exports in order to strengthen Ghana's position in the global market, create more employment, and bring in more foreign revenue.

## 26 MINING

Ghana's mining and quarrying sector in 2003, accounted for about 25% of the country's gross domestic product (GDP) and around 10% of the government's revenues. Employment in this sector is about 14,000 workers or under 1% of the country's labor force. Ghana was Africa's second-largest gold producer, behind South Africa, and was the continent's third-largest producer of aluminum metal and manganese ore. In 2003, exports of gold accounted for \$830 million out of total exports valued at \$2.471 billion. Extensive smuggling of gold, the top export of the Gold Coast, and of diamonds through the years has cut into government revenues, as well as high energy costs, which negated increased prices for gold

and cocoa. In 2003, Ghana also produced hydraulic cement, salt, diamonds, silver, and bauxite.

Gold production in 2003, not including smuggled or undocumented production was 68,700 kg, down from 69,271 kg in 2002.

Production of processed manganese ore, all from the Nsuta-Wassaw open-pit mine, was 1,509,000 metric tons in 2003, up from 1,136,000 metric tons in 2002. Only one relatively small bauxite deposit was worked, at Awaso. The site has been in production since 1941 by Ghana Bauxite Company (20% government owned); reserves have been estimated to last 30 years, and other ore reserves nearby were adequate to support mine life for a century. In 2003, production amounted to 495,000 metric tons, down from 684,000 metric tons in 2002. Akwatia, was the only formal operating diamond mine. However, over two-thirds of the diamonds produced were recovered by artisanal miners from alluvial and raised terrace gravel workings in the Birim Valley. Total production in 2003 (gem and industrial), and not including unreported artisanal production, amounted to 927,000 carats, down from 963,000 carats in 2002; total formal-sector production peaked in the 1970s at more than 2.5 million carats.

## 27 ENERGY AND POWER

Output of electricity totaled 5.858 million kWh in 2002, of which 89% was from hydroelectric sources and 11% was from fossil fuels. As of 2002 total installed capacity was 1,200 MW. The greatest single source of power is the Volta River Project, begun in 1962 and based on a hydroelectric installation at Akosombo, about 100 km (60 mi) northeast of Accra. Work on the Akosombo (or Volta River) Dam was finished in 1965. The first stage of the electrification project was completed in mid-1967 and had a capacity of 512,000 kW; by 1990, the plant's capacity had been expanded to 912 MW. Ghana's other major hydroelectric plant is at Kpong (160 MW). The Volta River Authority supplies 99% of the total national electricity consumption, 50–60% of which is absorbed by aluminum refining. Excess electricity is sold to Togo, Benin, and Côte d'Ivoire. A \$150 million project to extend the main grid to northern Ghana was completed in 1991.

Beginning in the 1970s, oil exploration was conducted offshore and in the Volta River Basin. In 1979, an offshore field developed by Agri-Petco, a US company, began operations; it was later taken over by Primary Fuel, also a US company, but production ceased in 1986. The Ghana National Petroleum Corporation, which was established in 1984, reported production of oil at the rate of 6,000 barrels per day at the South Tano Basin in 1991. By 1994, total Ghanaian crude oil production totaled only 1,400 barrels per day, but it rose to 7,000 barrels per day by 2002, compared with consumption totaling at 40,490 barrels per day in the same year. Nigerian oil accounts for the bulk of petroleum imports. Recoverable oil reserves were estimated at 16.2 million barrels, with refining capacity at 45,000 barrels per day, as of 1 January 2002. Refinery production in 2002 was put at 26,370 barrels per day. Natural gas reserves, located primarily in the Tano fields, were estimated as of 1 January 2003 at 23.7 billion cu m (840 billion cu ft).

## 28 INDUSTRY

Food, cocoa, and timber processing plants lead a list of industries that include an oil refinery, textiles, vehicles, cement, paper, chemicals, soap, beverages, and shoes. As part of its chemicals industry,

Ghana produces rubber, aluminum, and pharmaceuticals. Much of Ghana's industrial base was nationalized over the years. Encouraged by the IMF, however, Ghana has largely ended its parastatal era. Between 1991 and 1999, more than two-thirds of the 300 public sector companies were divested, and the government decided to speed up privatization by contracting private consultants to manage the process.

In 2000, industry annually accounted for about 25% of GDP. Recent industrial activity has included a reopened glass factory, a new palm oil mill, a locally supplied cement plant, and facilities for milling rice, distilling citronella, and producing alcohol. Industry in Ghana is now oriented towards the fabrication of value-added semi-manufactured and finished products rather than just primary commodities for export—items such as furniture, jewelry, beer bottles, aluminum cooking utensils, fruit juice, and chocolate bars. The Tema industrial estate includes the Tema Food Complex, comprised of a fish cannery, flour and feed mills, a tin-can factory, and other facilities. The aluminum smelter at Tema is owned by Kaiser Aluminum and is one of Ghana's largest manufacturing enterprises.

The construction industry in 2002 included projects geared toward the building of roads, bridges, coastal works, and residential housing.

Ghana produces no oil or natural gas, but it has an oil refinery with a capacity of 45,000 barrels per day. The Tema refinery operates on crude oil imported from Nigeria. Ghana has natural gas reserves of 24 billion cu m (847 billion cu ft). The 600 km (373 mi) West African Gas Pipeline was due to be completed in 2003, with a supply point in Tema. The pipeline was to have an estimated capacity of 11.33 cu m (400 cu ft) a day.

In 2004, industry made up 24.2% of the economy and employed and estimated 15% of the working population; the service sector was the most important contributor to the GDP, while the agriculture sector was the biggest employer.

## 29 SCIENCE AND TECHNOLOGY

The Council for Scientific and Industrial Research founded in 1958 at Accra, advises the government on scientific matters, coordinates the national research effort, and disseminates research results. Attached to the council are 14 research institutes, many of which deal with land and water resources. Other learned societies and research institutions include the Ghana Institution of Engineers, the Pharmaceutical Society of Ghana, and the Geological Survey of Ghana, all at Accra; and the Ghana Science Association, the Ghana Meteorological Services Department, and the West African Science Association, all at Legon; and the Cocoa Research Institute at Tafo-Akimo. The Ghana Academy of Arts and Sciences was founded in 1959.

The University of Ghana, at Legon, has faculties of agriculture and science, a medical school, and institutes for medical research and for Volta River Basin studies. The University of Cape Coast has a faculty of science and a school of agriculture. The University of Science and Technology at Kumasi has faculties of agriculture, environmental and development studies, pharmacy and science, and schools of engineering and medical science. The country also has a computer science institute in Accra and eight technical institutes and polytechnics in various cities. In 1987–97, science

and engineering students accounted for 32% of college and university enrollments.

In 2002, high technology exports totaled \$3 million, or 3% of manufactured exports.

### 30 DOMESTIC TRADE

Subsistence farming is still the primary basis of the domestic economy, with nearly 60% of the work force employed in agriculture. Although there are retail stores in all towns and main trading centers, most retail trade, particularly of food products, is still carried on in local markets, mainly by women. Larger wholesale and retail outlets (including supermarkets) are primarily located in Accra. The overseas marketing of primary agricultural products is effected through governmental marketing boards, which use trading companies and cooperatives as agents to purchase commodities from the producers. A value added tax of 12.5% applies to all consumer goods and services. An excise tax applies for certain products such as cigarettes and alcohol.

Normal business hours are from 8 AM to noon and 2 to 4:30 or 5 PM, Monday through Friday; some companies also open on Saturday morning. Banks are open from 8:30 AM to 2 PM, Monday through Thursday, and to 3 PM on Friday. English is widely spoken.

### 31 FOREIGN TRADE

Cocoa exports from Ghana produce almost a fifth of commodity export revenues (18%), and a competitive percentage of world cocoa exports (7.8%). The mining industry receives the largest percentage of export money, by selling gold, diamonds, base metals (37%), and aluminum (9.1%). Wood exports were also substantial (5.6%). Imports included capital equipment, petroleum, consumer goods, and foods, most notably rice.

In 2004, exports reached \$3.01 billion (FOB—free on board), while imports grew to \$3.7 billion (FOB). The bulk of exports went to Mexico (69.8%), the Netherlands (3.7%), and the United Kingdom (3%). Imports mainly came from Nigeria (12.6%), China (11.4%), the United Kingdom (6.6%), the United States (6.4%), France (4.9%), and the Netherlands (4.2%).

### 32 BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Ghana's exports was \$1.94 billion while imports totaled \$2.83 billion resulting in a trade deficit of \$890 million.

The International Monetary Fund (IMF) reported that in 2000 Ghana had exports of goods totaling \$1.9 billion and imports totaling \$2.74 billion. The services credit totaled \$504 million and debit \$597 million.

Exports of goods and services reached \$3.3 billion in 2004, up from \$3.1 billion in 2003. Imports grew from \$4 billion in 2003, to \$5 billion in 2004. The resource balance was consequently negative in both years, reaching -\$905 million in 2003, and -\$1.6 billion in 2004. The current account balance was positive, slightly decreasing from \$124 million in 2003, to \$107 million in 2004. Foreign exchange reserves (including gold) grew to \$1.5 billion in 2004, covering less than four months of imports.

### 33 BANKING AND SECURITIES

The Bank of Ghana, established in 1957, is the central bank. Commercial banking services are rendered mainly by the Commercial Bank of Ghana (worth approximately \$30 million in 1999); and SSB Bank Limited (worth about \$80 million in 1999). Two British banks, Barclays Bank of Ghana Ltd. and the Standard Chartered Bank of Ghana Africa Ltd. (both 40% state-owned), together had 67 branches in 1993. Other commercial banks include The Trust Bank Limited, The Agricultural Development Bank, Agricultural Bank Limited, Bank for Housing and Construction Limited, National Investment Bank Limited, Cooperative Bank Limited, Prudential Bank Limited, and International Commercial Bank Limited.

Merchant banks include the Merchant Bank of Ghana Limited, Ecobank Ghana Limited, CAL Merchant Bank Limited, First At-

lantic Merchant Bank Limited, and Metropolitan and Allied Bank Limited.

The International Monetary Fund reports that in 2000, currency and demand deposits—an aggregate commonly known as M1—were equal to \$478.0 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$975.6 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 27%.

A stock exchange was opened in Accra in 1987. By 1994, the tiny exchange was up nearly 300%. International mutual fund managers and other foreign investors have shown increasing interest in Ghana, and in 1998, the Ghana Stock Exchange (GSE) was judged the best performing bourse in emerging markets. In 2004, a total of 29 companies were listed on the GSE, which had a market capitalization that same year of \$2.644 billion. The GSE rose 91.3% from the previous year in 2004 to 6,798.5.

### 34 INSURANCE

In 1962, the government set up the State Insurance Corp. (SIC) with the primary aims of tightening control over the activities of insurance companies (including their investment policies) and providing insurance coverage for the government and governmental bodies. In 1972, the SIC started a new subsidiary, the Ghana Reinsurance Organization, to curb the outflow of reinsurance premiums from the country. Insurance services were available as of 1997 through 16 companies, five of them classified as foreign (although a 1976 law required the latter to distribute 20% of equity to the government and 40% to Ghanaian partners). In 1999, there were 21 insurance companies operating in Ghana.

### 35 PUBLIC FINANCE

Ghana turned to the IMF as the economy approached bankruptcy in 1983. The IMF-sponsored stabilization program, known as the ERP (Economic Recovery Program), was pursued vigorously through its several phases, and borrowing from the IMF came to a temporary end in 1992. Many changes took place in the ten years of the program. The currency was devalued repeatedly; foreign exchange was auctioned. The cocoa sector was revamped, starting with higher producer prices, and privatized. Ghana's civil service was one of Africa's largest, therefore the number of civil service employees was reduced; and the state attempted to unburden itself of its parastatals. A systematic program removed government subsidies, and tax collection procedures were strengthened. From 1995 to 1997, another IMF-backed structural adjustment program continued privatization, but public sector wage increases and defense spending countered austerity measures. Ghana's budgets have habitually been in deficit, financed mainly through the domestic banking system, with consequent rapid increases in the money supply and the rate of inflation. The third phase of the IMF program began in 1998, focusing on financial transparency and macroeconomic stability. In 2001, Ghana sought debt relief under the Heavily Indebted Poor Country (HIPC) program and reached decision point in early 2002.

The US Central Intelligence Agency (CIA) estimated that in 2005 Ghana's central government took in revenues of approximately \$3.2 billion and had expenditures of \$3.5 billion. Revenues

minus expenditures totaled approximately -\$290 million. Public debt in 2005 amounted to 80.1% of GDP. Total external debt was \$7.084 billion.

### 36 TAXATION

The basic corporate tax rate is 30% for all companies. However, companies that are listed for the first time on the Ghana Stock Exchange are given a 25% rate for three years. The 25% rate also is applied to hotels. Income from nontraditional exports is taxed at an 8% rate. Dividends and capital-gains are each taxed at 10%. A personal income tax ranging from 5%, to 35% for foreign nationals and rich citizens is also levied. As of 30 December 1998, Ghana's sales tax of 15% was replaced by value-added tax (VAT) with a standard rate of 10%. As of 6 January 2000, the standard VAT rate was increased to 12.5%. Exempt from the VAT are vaccines, other specified drugs, and salt. A salary tax of 5% on employees and 12.5% on employers finances the Social Security and National Insurance Trust pension program. There are also property (.05%) and excise taxes, a 0-15% gift tax, and a 2.5% national Health Insurance levy on all goods and services except those that are exempted.

### 37 CUSTOMS AND DUTIES

Ghana uses the Harmonized Commodity Coding System (HS) to classify goods. The ad valorem tax is assessed with the Customs Valuation Code (CVC) formulated by the World Trade Organization. In 1999, duty on most machinery and capital goods was 0%, the duty for raw materials and intermediate goods 10%, and the duty on most consumer goods 20%. The 12.5% VAT is also applied to imports on the basis of cost, insurance and freight (CIF) plus the duty. There are import restrictions on cigarettes, narcotics, mercuric medicated soap, toxic waste, contaminated goods, foreign soil, and counterfeit notes and coins of any country. The import license system was abolished in 1989, but a permit is still required for the import of drugs, communications equipment, mercury, gambling machines, handcuffs, arms and ammunition, and live plants and animals. There are no controls on exports.

Ghana is a member of ECOWAS. The country also created free zones in May 1996, one located in the Greater Accra Region and two other sites at Mpintsin and Ashiem. The seaports and airport also qualify as free zones, as do companies that export more than 70% of products. These companies receive a ten-year corporate tax holiday and zero import tax.

### 38 FOREIGN INVESTMENT

Before the 1983 Economic Recovery Program, nationalized enterprise was the cornerstone of Ghanaian investment policy. Under the supervision of the IMF and World Bank, the government styled its policies on the model of a number of Asian countries where encouragement of the private sector and foreign direct investment (FDI) are considered essential to sustained economic growth. The principal law on FDI is the Ghana Investment Promotion Center (GIPC) Law of 1994, which governs investments in all sectors except minerals and mining (under the Minerals and Mining Act of 1986 as amended in 1994 and administered by the Minerals Commission), oil and gas (under the Petroleum Exploration and Production Law of 1984 administered by the Ghana Na-

tional Petroleum Corporation—GNOC), and the free trade zones, established in 1996. The 1994 investment code guarantees the free transferability of dividends, loan repayments, licensing fees, and the repatriation of capital; provides guarantees against expropriation; and provides for dispute arbitration. Foreign investors are not subject to differential treatment on taxes, prices, or access to foreign exchange, imports, and credit.

The GIPC is responsible for promoting direct investment in Ghana. The only performance requirements are that a foreign investor must have at least \$10,000 in capital for joint ventures, \$50,000 for wholly foreign-owned ventures, and \$300,000 for trading companies, and that the latter must employ at least 10 Ghanaians. The free trade zone consists of land near the seaports of Tema and Takoradi and the Kotoka Airport. To qualify for free zone incentives—a year corporate tax holiday and zero duty on imports—the business must export at least 70% of its output. Small enterprises—petty trading, taxi services with less than 10-car fleets, beauty and barber shops, small scale mining, pool betting businesses, and lotteries besides soccer—are reserved for Ghanaians.

Since 2000, the government has transformed its general foreign investment promotion strategy to specific firm target promotion directed at production centers of Europe and Asia. The objectives of the program are to attract firms that seek to local and sub-regional markets and which contribute to value-added production using raw materials available in Ghana.

Because a number of different agencies are involved in the promotion and monitoring of FDI in Ghana, published statistics tend to be unreliable and unreconciled. For the period 2000 to 2002, the GIPC reported it had licensed 510 projects representing a total investment of \$351.2 million, \$297.9 million of which was FDI and \$53.3 million local funds. Of these, 342 were joint ventures and 169 wholly foreign-owned. From 1997 to 1999, FDI averaged \$66.7 million a year (UNCTAD estimates), compared to the \$100 million a year 2000 to 2002. In the first quarter of 2003, FDI was reported at a record-setting pace of \$56.7 million, \$49.7 million of which was for projects in the service sector. By the end of the year, capital inflows reached \$88 million. In the first three quarters of 2004, FDI levels jumped to \$85 million.

The major foreign investment projects in Ghana have been in mining and manufacturing. The United Kingdom has been the largest foreign investor, with investments exceeding \$750 million, primarily through Lonmin Plc's 32% stake in the Ashanti Goldfields Corporation. In 2003, Lonmin was in the process of selling its stake to AngloGold of South Africa, which was negotiating taking over the Ashanti Goldfields. The largest firm operating in Ghana is Valco, operated by the American company, Kaiser and Reynolds Aluminum, whose guaranteed use of electric power for aluminum refining made possible the building of the Volta Dam and its hydroelectric generating plant. In early 2003, a drought caused an energy crisis in Ghana and brought Valco's operations to a near standstill. Other American companies operating in Ghana include Teberebie Golfields Limited, CMS Generation (independent power producer), Affiliated Computer Services (since 2000, involved in developing offshore business process outsourcing projects), Regimanuel-Gray Limited (construction), Coca-Cola Company, Phyto-Riker (pharmaceuticals), Westel (ICT company formed by the partnership of Western Wireless Interna-

tional and Ghana National Petroleum Company), Pioneer Foods (Star-Kist Tuna), Union Carbide, Amoco, ChevronTexaco, and ExxonMobile.

### 39 ECONOMIC DEVELOPMENT

Recent economic policy has aimed at correcting basic problems in every phase of the economy: unemployment (20% in 1997), low productivity, high production costs, the large foreign debt (\$5.96 billion in 2001), low savings and investing, inflation (25% in 2001), and high private and government consumption. The country relies heavily on financial assistance from international lenders including the World Bank and the International Monetary Fund (IMF). Conditions of the loans include progress in privatizing state-owned enterprises and achieving macroeconomic performance targets.

The government's recently launched Vision 2020 plan aims at making Ghana a middle-income country through free-market reforms over the course of the next 25 years. Key elements of the plan include increased privatization of parastatals, a friendlier environment for foreign investment, renewed efforts to facilitate private-sector growth, and improvements in infrastructure and social welfare. By 2003, about two-thirds of 300 state-owned enterprises had been sold to private owners. During 1999, Japan announced the donation of \$16.5 million to import machinery, spare parts, and industrial materials. The US energy firm CMS announced planned to build a new electric generating unit, alleviating fears of further power outages.

In 2002, Ghana reached decision point on the IMF/World Bank's Heavily Indebted Poor Countries (HIPC) initiative, and was to receive \$3.7 billion in debt relief. The relief will allow Ghana to increase spending on education, health, programs to benefit rural areas, and improved governance. Ghana raised electricity, fuel, and municipal water rates, and raised taxes to stabilize its fiscal position, as part of the agreed-upon debt relief plan. In 2003, Ghana negotiated a three-year \$258 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF, to support the government's economic reform program for 2003–05.

The economic growth from previous years was expected to continue in coming years. Agricultural production was expected to pick up, particularly in cocoa and food crops. The service sector was also anticipated to expand with improvements in the telecommunications, transport, and tourist sectors. The mining sector will benefit from increased investments in the gold production. The manufacturing sector, on the other hand, will continue to suffer because of the high inflation, increasing imports, and the strong exchange rate.

### 40 SOCIAL DEVELOPMENT

A social insurance system, initiated in 1965, covers all employed persons, with a special system for the military. There is voluntary coverage for the self-employed. Pensions are funded by 5% contributions from employees and 12.5% contributions from employers. The minimum pension is set at 50% of the average annual salary. There are no sickness or maternity benefits provided, however, employed persons receive worker's compensation. Agricul-

tural workers and subsistence farmers are excluded from coverage in these programs.

Women play a prominent role in agriculture and domestic trade, and are represented at the highest levels of political life. Traditional courts, however, often deny women inheritance or property rights. Traditional customs also violate the human rights of children, including facial scarring and female genital mutilation. Violence against women is common and seldom reported. Among the Ewe ethnic group, a traditional practice called *tokosi* allows an individual or family to enslave a virgin daughter to a local priest or shrine for as long as three years as a means of assuring atonement for crimes committed by members of the family. In 2004 there were reports of 100 girls enslaved in that tradition. Child labor and forced marriage continue.

Ethnic tensions and violence continue in the northern region. Some human right abuses continue, although significant improvements were made. Discrimination against persons with HIV/AIDS remains a problem, thus discouraging people from seeking testing.

#### 41 HEALTH

Waterborne parasitic diseases are a widespread health hazard and the creation of Lake Volta and related irrigation systems has led to an increase in malaria, sleeping sickness, and schistosomiasis. The upper reaches of the Volta basin are seriously afflicted with onchocerciasis, a filarial worm disease transmitted by biting flies. Lymphatic filians in some remote villages of Ghana affect between 9.2 to 25.4% of the population. Control of filariasis in remote areas has been difficult. In 1997, efforts were made to vaccinate children up to one year old against tuberculosis, 72%; diphtheria, pertussis, and tetanus, 60%; polio, 61%; and measles, 59%. Total health care expenditure was estimated at 4.7% of GDP. In 2000, 64 % of the population had access to safe drinking water and 63% had adequate sanitation.

As of 2004, there were an estimated 9 physicians, 64 nurses, and 20 midwives per 100,000 people. Approximately 60% of the population had access to health care services.

In 2002, Ghana's estimated birth rate was 28 per 1,000 people. About 22% of Ghana's married women (ages 15 to 49) used contraception as of 2000. The total fertility rate in 2000 was 4.2 children for each woman's childbearing years. An estimated 8% of all births in 1999 were low birth weight. In 2005, the infant mortality rate was 56.36 per 1,000 live births, and the overall death rate in 2002 was estimated at 10.3 per 1,000 people. Life expectancy in Ghana was estimated at 58.47 years in 2005.

Twenty-six percent of all children under five were malnourished in 2000. Goiter was present in 33% of school-age children. The HIV/AIDS prevalence was 3.10 per 100 adults in 2003. As of 2004, there were approximately 350,000 people living with HIV/AIDS in the country. There were an estimated 30,000 deaths from AIDS in 2003. Two other common diseases were tuberculosis and measles. Cholera is still prevalent.

Thirty percent of all women in Ghana have undergone female genital mutation. Currently, Ghana's government has prohibited this under specific laws.

#### 42 HOUSING

About 72% of all housing in Ghana are traditional compound houses, which consist of a large U-shaped structure with a shared central courtyard. There are usually seven or more rooms per structure. There are some flats and other types of housing in urban areas. In rural areas, wood, mud, or cement huts with sheet iron or mud roofs are more common. Overcrowding, defined as 2.5 persons or more per room, affects about 44.5% of all households. In rural areas, about 52% of the population use latrine sewage systems; 47% have no specific sewage systems. About 51% of rural dwellings are owner occupied. These are typically mud or mud brick huts. In urban areas, less than 20% of all housing units are owner occupied. As of 2001, about 76% of urban and 46% of rural households had access to adequate water supplies. According to the latest available information, housing units in the 1980s numbered 2,458,000, with 5.2 people per dwelling.

Ghana's housing needs have been increasing as the main towns grow in population. In 1982, the government established the State Housing Construction Co. to help supply new low-cost dwelling units. The Bank for Housing and Construction finances private housing schemes on a mortgage basis. Under another housing ownership scheme, civil servants may acquire accommodations on purchase-lease terms. The Cocoa Marketing Board, the Social Security and National Insurance Trust, and other organizations have also invested in housing projects; nevertheless, most houses continue to be built without government assistance. Foreign mining companies provide housing for all their overseas employees and many of their African workers.

Recognizing that most private homes are too expensive for many citizens, the government has been working on programs addressing land and material costs and long-term financing for constructions. From 2001–2004, the government had planned to build about 20,000 housing units.

#### 43 EDUCATION

Most of the older schools, started by Christian missions, have received substantial financial help from the government, but the state is increasingly responsible for the construction and maintenance of new schools. Primary education has been free since 1952 and compulsory since 1961. Primary school lasts six years and is followed by six years of secondary schooling (at junior and senior levels). At the upper secondary level, students may choose to attend a three-year technical school. The academic year runs from September to June.

In 2001, about 41% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 63% of age-eligible students. The same year, secondary school enrollment was about 33% of age-eligible students. It is estimated that about 62% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 32:1 in 2003; the ratio for secondary school was about 19:1. In 2003, private schools accounted for about 18% of primary school enrollment and 11% of secondary enrollment.

Ghana has three main universities: the University of Ghana, in Legon, outside Accra; the University of Science and Technology in Kumasi; and the University of Cape Coast. In 2003, about 3% of

the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 54%, with 62.9% for men and 45.7% for women.

As of 2003, public expenditure on education was estimated at 4.1% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The Ghana Library Board maintains the Accra Central Library, 13 regional libraries, 47 branch libraries, mobile units, and children's libraries, with combined holdings of over three million volumes in 2002. The University of Ghana (Balme Library) in Legon has holdings of around 362,000 volumes and is the largest research library in Ghana. The University of Science and Technology Library has 310,000 volumes. The Research Library on African Affairs (formerly the George Padmore Memorial Library), which opened in Accra in 1961, maintains a collection of publications on various aspects of Africa.

The Ghana National Museum, in Accra, founded by the University College of Ghana and now operated by the Museum and Monuments Board, contains hundreds of exhibits illustrating the culture, history, and arts and crafts of Ghana and West Africa. The West African Historical Museum at Cape Coast, sponsored by the Museum and Monuments Board and the University of Cape Coast, opened in 1971. The Ghana National Museum of Science and Technology is at Accra. There are regional museums at Ho and Kumasi, which is also home to the Ghana Armed Forces Museum. The University of Ghana has several museums in Legon, maintained by the departments of geology and archaeology, and a teaching museum run by the Institute of African Studies.

#### 45 MEDIA

In 2003, there were an estimated 13 mainline telephones for every 1,000 people; about 154,800 people were on a waiting list for telephone service installation. The same year, there were approximately 35 mobile phones in use for every 1,000 people.

The National Communications Authority (NCA) is responsible for broadcast media licensing. The government-owned Ghana Broadcasting Corp. makes radio services available throughout the country in English and six other languages; an international radio service beams programs in English, French, and Hausa to all parts of Africa. A government-owned television service was established in 1965. In 2004, there was a total of 12 state-owned and 117 privately owned radio stations nationwide. There were 3 semiprivate television stations, 1 government station, and 3 cable networks. In 2003, there were an estimated 695 radios and 53 television sets for every 1,000 people. The same year, there were 3.8 personal computers for every 1,000 people and eight of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

In 2004, there were 50 newspapers throughout the country including 3 government-owned dailies, 2 government-owned weeklies, and many smaller privately owned newspapers. Most newspapers circulated only in regional capitals. The most prominent papers, with 2002 circulation figures, were *The Daily Graphic* (circulation 100,000) and *Ghanaian Times* (40,000), both government owned. *The Daily Telegraph* (10,000) is independent. Weeklies, with their 2002 circulation, include the *Weekly Spectator* (165,000), *The Mirror* (90,000), *The Ghanaian Chronicle* (60,000), *Graphic Sports*

(60,000), *Echo* (40,000), and *Evening News* (30,000). All papers are printed in English.

The government dominates all media, and though it is said to tolerate the small independent print media, it is reported to repress dissenting opinions during election times. The constitution does provide for free speech and press.

#### 46 ORGANIZATIONS

Cooperatives have played an important role in marketing agricultural produce, especially cocoa. The Cocoa Research Institute of Ghana promotes growth and development in the national cocoa industry and sponsors research in techniques for processing cocoa, coffee, shea, and kola. Their work is extended through the Ghana Cocoa Marketing Board. The National Chamber of Commerce, with headquarters in Accra, has 13 district chambers. The Ghana Employers' Association strives to promote better relations between workers and business owners. There are unions for a variety of occupations.

There are professional organizations for a number of careers and many of these are dedicated to research and education within their field, such as the Ghana Medical Association. National cultural associations—including associations of writers, musicians, artists, dancers, and dramatists—have been established. The Ghana Science Association was founded in 1958. The Ghana Academy of Arts and Science was founded in 1959.

National youth organizations include the Agricultural Youth Association, the Democratic Youth League of Ghana, the Ghana Scout Association, National Union of Ghanaian Students, Presbyterian Young People's Guild of Ghana, Student Christian Movement of Ghana, Green Earth Youth Organization, and groups of the YMCA/YWCA. There are several sports associations promoting amateur competition in such pastimes as tennis, squash, baseball and track and field.

Ghana Wildlife Society is active in matters of conservation and environmental protection. The Environmental Protection Association of Ghana supports conservation and resource management efforts, but also serves as an advocate for community health and rural development issues.

Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. Ghana has active chapters of the Red Cross, Habitat for Humanity, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism has become a leading industry in Ghana due to the support of the government. Attractions include casinos, fine beaches, game reserves, and old British, Dutch, and Portuguese trading forts and castles. Indigenous dance forms and folk music thrive in rural areas, and there are many cultural festivals. The National Cultural Center is in Kumasi, the capital of the Ashanti region, an area rich in traditional Ghanaian crafts. There is an Arts Center in Accra, as well as the National Museum, the Alwri Botanical Gardens, and the burial place of W.E.B. Du Bois. Football (soccer) is the main sport of Ghana, although cricket, boxing, body building, golf, basketball, and track and field are also popular. Visas, proof of sufficient funds, and an onward/return ticket are required of all visitors, as well as proof of yellow fever vaccination. In 2002, about 483,000 tourists arrived in Ghana. There were 15,453 hotel rooms

with 19,648 beds. Tourism expenditure receipts totaled \$441 million in 2003.

In 2005, the US Department of State estimated the cost of staying in Accra at \$171 per day. Daily expenses in Kumasi and other areas were less at \$132.

#### 48 FAMOUS GHANAIS

J. E. Casely Hayford (1867–1930), for 13 years a member of the Legislative Assembly, is remembered as a leading public-spirited citizen. Dr. J. E. K. Wegyir Aggrey (1875–1927), noted educational reformer, played a large part in the development of secondary education. Sir Henley Coussey (1891–1958) and Sir Emmanuel Quist (1882–1959) were distinguished jurists.

Persons from overseas who played a great part in the progress of Ghana were the Rev. Alexander Gordon Fraser (1873–1962), the first principal of Achimota School; Sir (Frederick) Gordon Guggisberg (1869–1930), who took the first steps toward Africanization of the public service and was instrumental in founding Achimota School; and Sir Charles Noble Arden-Clarke (1898–1962), who was governor of the Gold Coast during the preparatory years of independence (1948–57) and the first governor-general of Ghana. The writer, sociologist, and civil rights leader W(illiam) E(dward) B(urghardt) Du Bois (b.US, 1868–1963) settled in Ghana in 1961 and is buried in Accra.

Kwame Nkrumah (1909–72), the first president of the republic, served in that capacity until the military coup of February 1966; he died in exile in Guinea. J. B. Danquah (1895–1965), a lawyer, was named vice-president of the UGCC at the time of its founding in 1947. Detained along with Nkrumah after the Accra riots in 1948, he later helped to found the GCP. Arrested by Nkrumah in 1961, and again in 1964, he died in prison in 1965. Kofi Abrefa Busia (1913–78), a noted sociologist, was prime minister from October 1969 to January 1972. Flight-Lieut. Jerry (John) Rawlings (b.1947), the son of a Scottish father and a Ghanaian mother, led successful military coups in 1979 and 1981. He was elected president in 1992, and reelected in 1996. John Kufuor (b.1938) became president in 2001. Kofi Annan (b.1938) became secretary general of the United Nations in 1996.

#### 49 DEPENDENCIES

Ghana has no territories or colonies.

# GUINEA

Republic of Guinea  
*République de Guinée*

**CAPITAL:** Conakry

**FLAG:** The national flag is a tricolor of red, yellow, and green vertical stripes.

**ANTHEM:** *Liberté (Liberty)*.

**MONETARY UNIT:** The syli (s), of 100 cauris, was introduced in October 1972, replacing the Guinea franc (GFr); s1 = 10 old Guinea francs. In January 1986 the Guinea franc (GFr) of 100 centimes was restored on a one-to-one basis with the syli. There are notes of 25, 50, 100, 500, 1,000, and 5,000 GFr. GFr1 = \$0.00036 (or \$1 = GFr2,810) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Anniversary of Women's Revolt, 27 August; Referendum Day, 28 September; Independence Day, 2 October; Armed Forces Day, 1 November; Day of 1970 Invasion, 22 November; Christmas, 25 December. Movable religious holidays include 'Id al-Fitr, 'Id al-'Adha, and Easter Monday.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Guinea, on the west coast of Africa, has an area of 245,857 sq km (94,926 sq mi), extending 831 km (516 mi) SE–NW and 493 km (306 mi) NE–SW. Comparatively, the area occupied by Guinea is slightly smaller than the state of Oregon. Bordered on the N by Senegal, on the N and NE by Mali, on the E by Côte d'Ivoire, on the S by Liberia and Sierra Leone, on the W by the Atlantic Ocean, and on the NW by Guinea-Bissau, Guinea has a total boundary length of 3,719 km (2,311 mi), of which 320 km (199 mi) is coastline.

Guinea's capital city, Conakry, is located on the country's Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

Guinea owes its frontiers mainly to the accidents of the late 19th-century partition of Africa and has no geographic unity. The country can be divided into four regions: Lower Guinea (Guinée Maritime), the alluvial coastal plain; Middle Guinea, the plateau region of the Futa Jallon (Fouta Djallon), deeply cut in many places by narrow valleys; Upper Guinea (Haute Guinée), a gently undulating plain with an average elevation of about 300 m (1,000 ft), savanna country broken by occasional rocky outcrops; and the forested Guinea Highlands (Guinée Forestière), composed of granites, schists, and quartzites, including Mt. Nimba (1,752 m/5,747 ft), the highest peak in the country, at the juncture of Guinea, Liberia, and Côte d'Ivoire. The Niger River and its important tributary the Milo have their source in the Guinea Highlands; the Gambia River and Senegal River (whose upper course is called the Bafing in Guinea) rise in the Futa Jallon.

## <sup>3</sup> CLIMATE

The coastal region and much of the inland area have a tropical climate with a long rainy season of six months, a relatively high and uniform annual temperature, and high humidity. Conakry's

year-round average high is 29°C (84°F), and the low is 23°C (73°F); its average rainfall is 430 cm (169 in) per year. April is the hottest month; July and August are the wettest. Rainfall in the Futa Jallon is much less (about 150–200 cm/60–80 in) and more irregular, and temperatures are lower; moreover, the daily temperature range is much greater, especially during the dry season. In Upper Guinea, rainfall is lower than in the Futa Jallon. Rainfall in the highlands averages about 280 cm (110 in) annually; temperatures are relatively equable owing to the altitude.

## <sup>4</sup> FLORA AND FAUNA

Dense mangrove forests grow along the river mouths. Farther inland, the typical vegetation of Lower Guinea is woodland dominated by parinari, with many woody climbers and bushes below. Gum copal is common near streams. The Futa Jallon has been subject to excessive burning, and the lower slopes are characterized by secondary woodland, much sedge (*catagyna pilosa*), and expanses of laterite; the higher plateaus and peaks have dense forest, and some plants found nowhere else in the world have been reported on them. Savanna woodland characterizes Upper Guinea, with only tall grass in large areas; trees include the shea nut, tamarind, and locust bean. There is rain forest along the border with Liberia.

The elephant, hippopotamus, buffalo, lion, leopard, and many kinds of antelope and monkey are to be found in Guinea, as well as crocodiles and several species of venomous snakes. Birds are plentiful and diverse. As of 2002, there were at least 190 species of mammals, 109 species of birds, and over 3,000 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Centuries of slash-and-burn agriculture have caused forested areas to be replaced by savanna woodland, grassland, or brush. Dur-

ing 1981–85, some 36,000 ha (89,000 acres) of land were deforested each year. Between 1990–1995, Guinea lost an average of 1.14% of its forest and woodland area each year. Mining, the expansion of hydroelectric facilities, and pollution contribute to the erosion of the country's soils and desertification.

Water pollution and improper waste disposal are also significant environmental problems in Guinea. In 1994, water-borne diseases contributed to an infant mortality rate of 145 per 1,000 live births. The nation has 226 cu km of renewable water resources with 87% used in farming activity. Only about 35% of the people living in rural areas do not have pure water.

In 2003, less than 1% of the total land area was protected by the state. Human encroachment and hunting have reduced Guinea's wildlife, especially its large mammals, and overfishing represents a threat to the nation's marine life. A nature reserve has been established on Mt. Nimba as a UNESCO World Heritage Site. There are also 12 Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 18 types of mammals, 10 species of birds, 1 type of reptile, 5 species of amphibians, 8 species of fish, 3 species of invertebrates, and 22 species of plants. Threatened species included the African elephant, Diana monkey, and Nimba otter-shrew.

## 6 POPULATION

The population of Guinea in 2005 was estimated by the United Nations (UN) at 9,453,000, which placed it at number 83 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 105 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.7%, a rate the government viewed as too high. Fertility was six births per woman in 2005. The projected population for the year 2025 was 15,806,000. The population density was 39 per sq km (100 per sq mi).

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.59%. The capital city, Conakry, had a population of 1,366,000 in that year. Other large towns include Kankan (100,192), Labé, Nzérékoré, Boké, and Siguiri.

## 7 MIGRATION

After independence from France in 1958, Guineans left the country in increasing numbers, mostly for Senegal and Côte d'Ivoire. In the early and mid-1980s, probably two million Guineans were living abroad, perhaps half of them in Senegal and Côte d'Ivoire. Many of them returned after the end of the Sékou Touré regime in 1984.

In 1997, Guinea had the highest number of refugees of any West African nation. There were around 420,000 Liberians and around 250,000 from Sierra Leone in Guinea. These refugees escaped from the fighting in their respective countries. The voluntary repatriation program begun for Liberians in March 1998 was suspended at the resumption of fighting. Out of the 120,000 who opted for repatriation, some 80,000 were returned before the Guinean-Liberian border was closed. In 2000, conditions in Sierra Leone were not yet conducive to repatriation and 150,000 refugees from that nation remained in Guinea. The total number of refugees remaining

in Guinea in 2000 was 427,200. By the end of 2004, this number decreased to 139,252 refugees, mainly from Liberia and Sierra Leone, and 6,310 asylum seekers from Liberia, Côte d'Ivoire, and Sierra Leone. However, 4,700 Guineans applied for asylum, mainly to France, the United Kingdom, Canada, and the United States. In that same year 22,473 Liberians were voluntarily repatriated from Guinea. However, a population of 145,569 people, more than half living in camps, remained of concern to the United Nations High Commissioner for Refugees (UNHCR). In 2005, the net migration rate was estimated as -2.99 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Of Guinea's two dozen ethnic groups, three predominate: the Fulani, Malinké, and Soussou. The Fulani (sometimes called Peul), perhaps the largest single group (40% of the population), live mainly in the Futa Jallon. The Malinké, referred to in other parts of West Africa as Mandingo, and related peoples of the so-called Nuclear Mandé group (30%), live in eastern Guinea and are concentrated around Kankan, Beyla, and Kouroussa. The Soussou (20%), with related groups, are centered farther west and along the coast in the areas around Conakry, Forécariah, and Kindia. Related to them are the Dialonké, living farther east in Middle Guinea and western Upper Guinea. Smaller tribes make up the remaining 10% of the population. Toward the southeast, in the Guinea Highlands near the borders of Liberia and Côte d'Ivoire, are various Kru or peripheral Mandé groups; among them are the Kissi around Quéckédou, the Toma around Macenta, and the Koranko near Kissidougou. Notable among the 3,500 or so non-Africans are Lebanese and Syrians.

## 9 LANGUAGES

French is the official language and the language of administration. In 1967, a cultural revolution was announced for the purpose of "de-Westernizing" Guinean education. A literacy program begun in 1968 sought eventually to teach all citizens to speak and write one of the eight principal local languages: Malinké (Maninkakan), Fulani (Poular), Soussou, Kpelle (Guerzé), Loma (Toma), Kissi, Coniagu, and Bassari, all of which belong to the Niger-Congo language group. After the fall of the Touré regime in 1984, French was again emphasized; however, the tribal languages are still spoken.

## 10 RELIGIONS

About 85% of all Guineans, particularly the Fulani and Malinké, are Muslims; about 10% follow various Christian faiths; and most of the remaining 5% practice traditional African religions. Most Muslims belong to the Sunni sect, and practices, particularly public prayers and the prescribed fasts, are often combined with animist beliefs and ceremonies. Christian missions were established in the 19th century, but converts have been few. About 10% of the population are Christian. Among Christian groups are Roman Catholics, Anglicans, Baptists, Jehovah's Witnesses, Seventh-Day Adventists, and various other evangelical churches. There are a small number of Baha'is, Hindus, Buddhists, and observers of traditional Chinese religions. About 5% of the population follow traditional indigenous practices and beliefs.

The constitution provides for freedom of religion and this right is generally respected in practice. Though there is no state religion, some have claimed that Islam is generally favored by the

LOCATION: 8° to 15° w; 7°35' to 12°30' N. BOUNDARY LENGTHS: Senegal, 330 kilometers (205 miles); Mali, 932 kilometers (579 miles); Côte d'Ivoire, 605 kilometers (376 miles); Liberia, 563 kilometers (350 miles); Sierra Leone, 652 kilometers (405 miles); Atlantic coastline, 352 kilometers (219 miles); Guinea-Bissau, 386 kilometers (240 miles). TERRITORIAL SEA LIMIT: 12 miles.

government. Certain holidays of both Islam and Christianity are recognized as public holidays. The government has met with the Interreligious Council, a group of Anglican, Catholic, and Protestant leaders, to open a dialogue on electoral and governmental reform issues.

## 11 TRANSPORTATION

Lack of an adequate transportation network has hindered the country's development. As of 2004, Guinea's railroad system totaled 837 km (675 mi) of standard and narrow gauge lines, of which the largest part consisted of a 662 km (412 mi) long, single track narrow gauge (1,000-m) line. Owned by the state, the line runs from Conakry to Kankan and was built between 1900 and 1914. There is also a 175 km (109 mi) standard gauge line. Of 30,500 km (18,953 mi) of roads, some 5,033 km (3,128 mi) were

tarred in 2002. There were 23,155 automobiles and 13,000 commercial vehicles in 1995.

Conakry has a natural deepwater harbor that handles foreign cargo (mostly bauxite and alumina). Port modernization is scheduled with aid from the IDA, the African Development Bank, and the Federal Republic of Germany (FRG). A deepwater port at Kamsar, completed in 1973, handles the output of the Boké bauxite mine, as much as nine million tons a year. There are lesser ports at Kassa, Benty, and Kakande. Most rivers are of little value for navigation. A national shipping line is jointly owned with a Norwegian company. As of 2003, Guinea had 1,295 km (805 mi) of navigable inland waterways accessible by shallow draft native boats.

In 2004, there were an estimated 16 airports in Guinea, only 5 of which had paved runways as of 2005. Conakry's airport, Gbeesia, handles international jet traffic. Gbeesia, three smaller air-

fields at Labé, Kankan, and Faranah, and a number of airstrips are served by the national carrier, Air Guinée, which also flies to other West African cities and carried 36,000 passengers on domestic and international flights in 1997 (the latest year for which data was available).

## 1<sup>2</sup> HISTORY

Archaeological evidence indicates that at least some stone tools found in Guinea had been made by peoples who had moved there from the Sahara, pushed perhaps by the desiccation that had occurred in the Saharan region by 2000 BC. Agriculture had been practiced along the coast of Guinea by AD 1000, with rice the staple crop.

Most of Upper Guinea fell within the area influenced by the Ghana empire at the height of its power, but none of present-day Guinea was actually within the empire. The northern half of present-day Guinea was, however, within the later Mali and Songhai empires.

The Malinké did not begin arriving in Guinea until the 13th century; nor did the Fulani come in considerable numbers until the 17th century. In 1725, a holy war (jihad) was declared in Futa Jallon by Muslim Fulani. The onslaught was directed against the non-Muslim Malinké and Fulani; and it led ultimately to the independence of the Fulani of Futa Jallon. It also gave effect to their unity within a theocratic kingdom under Almamy Karamoka Alfa of Timbo.

Meanwhile, European exploration of the Guinea coast had begun by the middle of the 15th century; it was led by the Portuguese. By the 17th century, French, British, and Portuguese traders and slavers were competing with one another. When the slave trade was prohibited during the first half of the 19th century, Guinean creeks became hiding places for slavers harried by the ships of the British Royal Navy. French rights along the coast were expressly preserved by the Peace of Paris (1814), and French—as well as British and Portuguese—trading activities expanded in the middle years of the 19th century, when trade in peanuts, palm oil, hides, and rubber replaced that in slaves. The French established a protectorate over Boké in 1849 and consolidated their rule over the coastal areas in the 1860s. This inevitably led to attempts to secure a more satisfactory arrangement with the Fulani chiefs of Futa Jallon. A protectorate was established over the region in 1881, but effective sovereignty was not secured for another 15 years.

Resistance to the French advance up the Senegal and the Niger, toward Lake Chad, came from Samory Touré, a Malinké born in Upper Guinea. He had seized Kankan in 1879 and established his authority in the area southeast of Siguiri; but his attacks had spurred the inhabitants of the area to seek aid from French troops already established at Kita in the French Sudan (Soudan Français, now Mali) in 1882. Samory had signed treaties with the French first in 1886, and also in 1890. But on various pretexts both he and the French later renounced the treaties; so hostilities resumed. His capture in 1898 marked the end of concerted local resistance to the French occupation of Guinea, Ivory Coast (now Côte d'Ivoire), and southern Mali.

In 1891, Guinea was reconstituted as a French territory separate from Senegal, of which it had hitherto been a part. Four years later, the French territories in West Africa became a federation under a governor-general. The federation remained substantially

unchanged until Guinea attained independence. In 1946, Africans in Guinea became French citizens, but the franchise was at first restricted to the Europeanized *évolués*; it was not replaced by universal adult suffrage until 1957.

### The End of Colonial Rule

In September 1958, Guinea participated in the referendum on the new French constitution. On acceptance of the new constitution, French overseas territories had the option of choosing to continue their existing status, to move toward full integration into metropolitan France, or to acquire the status of an autonomous republic in the new quasi-federal French Community. If, however, they rejected the new constitution, they would become independent forthwith. French president, Charles de Gaulle, had made it clear that a country pursuing the independent course would no longer receive French economic and financial aid or retain French technical and administrative officers. Anyway, the electorate of Guinea rejected the new constitution overwhelmingly. Guinea accordingly became an independent state on 2 October 1958, with Ahmed Sékou Touré, then the leader of Guinea's strongest labor union, as president.

During its first three decades of independence, Guinea evolved to become a slightly militant socialist state. The functions and membership of the ruling Parti Démocratique de Guinée (PDG) were merged with the various institutions of government, including the state bureaucracy. Thus, the unified party-state had nearly complete control over the country's economic and political life. Guinea expelled the US Peace Corps in 1966 because of alleged involvement in a plot to overthrow President Touré. Similar charges were directed against France, with which diplomatic relations were severed in 1965 and not resumed until 1975. An ongoing source of contention between Guinea and its French-speaking neighbors was the estimated half-million expatriates in Senegal and Côte d'Ivoire. Some of these were active dissidents who, in 1966, had formed the National Liberation Front of Guinea (Front de Libération Nationale de Guinée—FLNG).

International tension rose again in 1970 when some 350 men, including FLNG partisans and Africans in the Portuguese army, invaded Guinea under the leadership of white Portuguese officers from Portuguese Guinea (now Guinea-Bissau). The invasion was repulsed after one day, but this was followed by waves of arrests, detentions, and some executions. Between 1969 and 1976, according to Amnesty International, 4,000 persons were detained for political reasons, with the fate of 2,900 unknown. After an alleged Fulani plot to assassinate Touré was disclosed in May 1976, Diallo Telli, a cabinet minister and formerly the first secretary-general of the OAU, was arrested and sent to prison, where he died without trial in November.

In 1977, protests against the regime's economic policy, which dealt harshly with unauthorized trading, led to riots in which three regional governors were killed. Touré responded by relaxing restrictions, offering amnesty to exiles (thousands of whom returned), and releasing hundreds of political prisoners. Ties with the Soviet bloc were relaxed as Touré sought increased Western aid and private investment in Guinea's sagging economy.

Single-list elections for an expanded National Assembly were held in 1980. Touré was elected unopposed to a fourth seven-year term as president on 9 May 1982. According to the government

radio, he received 100% of the vote. A new constitution was adopted that month, and during the summer Touré visited the United States as part of an economic policy reversal that saw Guinea seeking Western investment to develop its huge mineral reserves. New measures announced in 1983 brought further economic liberalization; private traders were even allowed to engage in produce marketing.

Touré died on 26 March 1984 while undergoing cardiac treatment at the Cleveland Clinic; he had been rushed to the United States after being stricken in Saudi Arabia the previous day. Prime Minister Louis Lansana Béavogui then became acting president, pending elections that were to be held within 45 days. On 3 April, however, just as the Political Bureau of the ruling Guinea Democratic Party (PDG) was about to name its choice as Touré's successor, the armed forces seized power, denouncing the last years of Touré's rule as a "bloody and ruthless dictatorship." The constitution was suspended, the National Assembly dissolved, and the PDG abolished. The leader of the coup, Col. Lansana Conté, assumed the presidency on 5 April, heading the Military Committee for National Recovery (Comité Militaire de Redressement National—CMRN). About 1,000 political prisoners were freed.

Conté suppressed an attempted military coup led by Col. Diarra Traoré on 4 July 1985. Almost two years later, it was announced that 58 persons, including both coup leaders and members of Touré's government, had been sentenced to death. However, it is believed that many of them, as well as Traoré, had actually been shot days after the coup attempt. All were identified with the Malinké, who were closely identified with the Touré regime. The military regime adopted free-market policies in an effort to revive the economy.

### Multiparty Democracy Initiated

Under pressure locally and abroad, Guinea embarked on a transition to multiparty democracy, albeit with considerable reluctance from the military-dominated government. Government legalized parties in April 1992, but it did not really allow them to function freely. It postponed presidential elections for over a year (until 19 December 1993) and then annulled the results from two Malinké strongholds, claiming victory with 51.7% of the vote. The Supreme Court upheld the Ministry of the Interior's decision despite official protest from the opposition. Though international opinion on the elections was divided, it was generally conceded that the elections administration had been widely manipulated in favor of the PUP candidate, and in several instances the voting process was fraudulent.

The legislative elections were delayed until 11 June 1995. These elections were supposed to have preceded the presidential elections, but the regime switched the order in 1993. The opposition felt that scheduling the presidential election first gave the incumbent an unfair advantage in both elections. International observers found significant flaws in these elections as well, and afterwards, the opposition vowed to boycott the Assembly. Factionalism within the opposition alliance, CODEM, shattered this resolve, and by the time the Assembly was convened, 71 PUP representatives and 43 members representing 8 other parties assumed their seats.

The greatest threat to Conté's power came in February 1996, when mutineers commanded tanks, fired upon the presidential palace, and seized the president. The palace was all but destroyed,

and some 30 to 50 people were killed, many of them civilians by stray bullets. Conté did strike a deal with the mutineers, agreeing to establish a multiparty grievance committee; but the committee was disbanded before it could issue its final report. No one received a death sentence, though 38 soldiers received sentences, 34 of them colonels, majors, captains, and lieutenants. Only six were Susu, and four of them received the lightest sentences. Conté gave in to the mutineers' demands by doubling soldiers' pay and taking over the defense department himself.

In December 1998, Guinea held its second round of multiparty elections. Though it was technically more acceptable than previous polling, the PUP marshaled the resources of the state and the public bureaucracy to conduct its campaign up-country. The opposition submitted a report detailing fraudulent and illegal election and campaign practices by the ruling party. Further, the Guinean Human Rights Organization and Amnesty International accused the government of routine torture—stripping, tying up, and beating opposition militants.

Before the international borders were reopened, the government seized Malinké RPG leader Alpha Condé for allegedly attempting to cross into Côte d'Ivoire. He and four RPG parliamentarians, and some 70 RPG militants were jailed. The Condé trial was repeatedly delayed, and the charges were changed to "recruitment of mercenaries with intent to overthrow the government." It was suspended shortly after it began in April 2000 when Condé's lawyers and the Court failed to agree on the legality of the arrest and the charges. Condé was being tried along with 48 others in the Cour de Sûreté de l'Etat (State Security Court).

The political climate in May 2000 was uneasy with fear that the Alpha Condé affair would drag on unresolved. Legislative and local elections were scheduled for later in the year, but the opposition renewed its calls to boycott them. Despite this adversity, municipal elections were held in June 2000 accompanied by violence in at least seven cities leading to several civilian deaths. Reports of arrests, beatings, rapes, and torture of protesters followed. The opposition indicated that it would boycott the legislative elections unless a neutral arbiter, such as an independent electoral commission, was established.

In mid-September 2000, the State Security Court convicted Condé of sedition and sentenced him to five years hard labor in prison, though later he was granted clemency. Seven of his 47 co-accused received lighter sentences, while the others were acquitted. The international community overwhelmingly condemned the trial as a mockery of justice. Condé's five-year sentence would eliminate him from running in the presidential elections slated for 2003.

What amounted to a constitutional coup took place in November 2001. In one fell swoop, Conté and the PUP-dominated National Assembly amended the constitution to increase the length of a presidential term from five years to seven, and to remove term limits. The amendment also allowed the president to nominate local government officials. In June 2002 flawed parliamentary elections resulted in the ruling party's gain of a two-third's majority in the Assembly.

Conté's declining health once fueled speculation that that he might not stand for reelection in 2003. Guinea, it was also argued, risked political chaos if Conté failed to run. The army, which is deeply divided by age, ethnicity and other factors, was thought

likely to intervene. Conté did run in elections held on 21 December however; and official results indicated that he won a massive 95.3% of the vote. In turn, Mamadou Boye Barry of the UPR captured 4.6%. Since then the Conté administration continued on as it were. As of 2005, soldiers had yet to oust the elected régime. In April 2004, former Prime Minister Sidya Toure and Ba Mamadou of the Union of Democratic Forces (UFDG) were barred from traveling to neighboring Senegal. Both claimed they were on a private mission. In January 2005, Conté survived an apparent assassination attempt, when shots were fired on his motorcade in the capital. Six months later in July 2005, Alpha Condé, head of the opposition Guinean People's Rally (or RPG), returned from exile and was welcomed by thousands of supporters. The next presidential election was due in December 2010.

### 13 GOVERNMENT

Guinea is a multiparty republic with a semi-authoritarian executive. Guinea's first constitution took effect on 12 November 1958 and was substantially amended in 1963 and 1974. Under the new constitution promulgated in May 1982 (but suspended in the military coup of April 1984), sovereignty was declared to rest with the people and to be exercised by their representatives in the Guinea Democratic Party (PDG), the only legal political party. Party and state were declared to be one and indivisible. The head of state was the president, elected for a seven-year term by universal adult suffrage (at age 18). A national assembly of 210 members was elected in 1980 from a single national list presented by the PDG; the announced term was five years, although the 1982 constitution and its precursors stipulated a term of seven (the assembly was dissolved after four years, in 1984). The constitution gave Assembly members control of the budget and, with the president, the responsibility to initiate and formulate laws.

Under the Touré regime there was no separation of functions or powers. The legislature, the cabinet, and the national administration were subordinate to the PDG in the direction and control of the nation. The assembly served mainly to ratify the decisions of the PDG's Political Bureau, headed by Touré, who was also president of the republic and secretary-general of the PDG. The assembly and the cabinet (appointed by Touré) implemented the decisions and orders of the party arrived at by the party congress, national conference, and the Political Bureau. Locally, PDG and government authority were synonymous.

The armed forces leaders who seized power after Touré's death ruled Guinea through the Military Committee for National Recovery (CMRN). Following the adoption by referendum of a new constitution on 21 December 1990, the CMRN was dissolved and a Transitional Committee of National Recovery (CTRN) was set up in February 1991 as the country's legislative body.

In 1993, the government created a 114-member national assembly. The assembly members are elected for a term of four years, 38 members in single-district constituencies, and 76 members by proportional representation. In July 1996, Lansana Conté created the post of prime minister; he also appointed his confidante, former Supreme Court chief justice Lamine Sidimé to the post. In December 2002, Conté reshuffled his cabinet. On 4 December 2004, Cellou Dalein Diallo became prime minister following the resignation of Lounseny Fall. Fall had resigned while on a visit to the United States.

### 14 POLITICAL PARTIES

From 1945, when political activity began in Guinea, until about 1953, the political scene was one of loose electoral alliances that relied more on the support of traditional chiefs and of the French administration than on political programs or organized memberships. After 1953, however, these alliances rapidly lost ground to the Guinea section of the African Democratic Rally (Rassemblement Démocratique Africain—RDA), an interterritorial organization founded in 1946. This section, known as the Guinea Democratic Party (Parti Démocratique de Guinée—PDG), was formed by Marxists determined to develop an organized mass political movement that cut across ethnic differences and had a strongly nationalist outlook. Their leader was Ahmed Sékou Touré, a prominent trade union leader in French West Africa. Regarded as the great-grandson of the warrior-chief Samory who had fought the French in the late 19th century, Touré had much support in areas where Samory had fought his last battles. But his strongest backers were the Susu in Lower Guinea. In 1957, the PDG won 57 of 60 seats in Territorial Assembly elections.

Convinced that the French Community proposed by De Gaulle would not result in real independence for the people of French West Africa, Touré called for a vote against joining the Community in the referendum of 28 September 1958. Some 95% of those voting in Guinea supported Touré in opting for Guinea's complete independence. In December 1958, the opposition parties fused with Touré's PDG, making it the only political party in the country. The precipitous withdrawal of the French bureaucracy in 1958 led, almost of necessity, to the PDG's inheritance of much of the structure of government.

During the 1960s, the PDG's party machinery was organized down to the grassroots level, with local committees replacing tribal authorities, and sectional, regional, and national conferences ensuring coordination and control. In 1968, a new local unit within the PDG, the Local Revolutionary Command (Pouvoir Révolutionnaire Local—PRL) was organized. By 1973, the PRL had assumed complete responsibility for local economic, social, and political affairs. There were 2,441 PRLs in 1981, each directed by a committee of seven members and headed by a mayor. Each of the 35 regions had a party decision-making body called a Federal Congress, headed by a secretary. A 13-member Federal Committee, headed by the regional governor, was the executive body. The 170 districts had similar bodies, called sections, congresses, and committees.

The Political Bureau, nominally responsible to a Central Committee, was the PDG's chief executive body. Until the military coup that abolished the PDG in April 1984, the Political Bureau was the focus of party and national power, and its members were the most important government ministers and officials, with Touré as chairman. The PDG and its mass organizations were outlawed after the 1984 coup.

Political parties were legalized in April 1992. Within a month, more than 30 parties had been formed, a number by government ministers who helped themselves to state funds and used the state agencies to promote their campaigns. The use of government vehicles for partisan activities and the disbursement of state monies to supporters were commonplace.

By July 1992, government had banned all political demonstrations. This hampered opposition parties preparing for National

Assembly elections then scheduled for late 1992 and presidential elections scheduled for early 1993. Elections were delayed. By October 1993, 43 political parties were legally registered. At least a dozen were allied with the government Party for Unity and Progress (PUP) while nearly thirty belonged to a loose coalition, the Democratic Forum, whose objective was to present a common candidate to run against Conté. The Forum dissolved when two of its members admitted they had already made their campaign deposit, which legally entitled them to enter the race. At that point, the field of candidates widened pitting seven opposition leaders against Conté. In December 1993, despite official protests by the opposition, Lansana Conté officially won 51.7% of the vote. International observers noted isolated incidents of violence and destruction of ballot boxes, and further declared the campaigning and balloting unsatisfactory.

In 1993, the most significant national opposition parties were the Rally for the Guinean People (RPG), the Union for a New Republic (UNR), and the Party for Renewal and Progress (PRP). The PRP and the UNR later merged to form the UPR, which presented Mamadou Ba as its candidate in the December 1998 elections. In these elections, Ba took second place with 24.6% of the vote, Alpha Condé (RPG) received 16.9%, Jean-Marie Doré received 1.7% (UPG), and Charles Pascal Tolno (PPG) claimed 1.0%. Again, under protest from the opposition, Conté won on the first round with 54.1% officially. In the elections of December 2003, Conté's share rose to a massive 95%. The next presidential election was due in 2010.

In the National Assembly, 38 seats are elected by single-member district, and 76 are assigned by proportional voting. In elections held in June 2002, all 114 members of the national assembly were elected directly for five-year terms. The PUP won 61.6% of the vote and controlled 85 seats; the UPR captured 26.6% of the votes and 20 seats; while other parties shared 11.8% of the vote and 9 seats between them. The next legislative elections were expected in 2007.

## 15 LOCAL GOVERNMENT

Under the Touré regime, the local units of the PDG, the local revolutionary commands (PRLs), were responsible for the political and economic administration of rural areas. In principle, the PRLs regulated all commerce, farming, distribution of land, public works, and communications, as well as civil life and the people's courts in communities under their authority. Each PRL had a company of militia of 101 members, subdivided into 4 platoons and 12 groups.

In the early 1990s, Guinea embarked upon an ambitious decentralization program. Three hundred and three rural development communities (CRDs) were created each comprising several districts (groupings of villages). The 303 CRDs were divided proportionately among the existing 33 prefectures, and four natural regions. In 1994, the number of regions was increased to seven headed by governors appointed by the president. The prefectures are under the tutelage of appointed prefects, who in turn supervise sub-prefects. A sub-prefecture is the location for public services within a CRD.

CRDs and the districts within them represent the most decentralized political and financial public authority. Elections for CRD councils were last held in 1991, and little investment has made

in them. However, through training and other investments, some CRDs have begun collecting hut, market, truck-stop, gravel pit, forestry, and other taxes. They have also begun to establish local development plans for schools, clinics, and mosques.

On 25 June 2000, the government organized municipal elections, which had been postponed from 29 June 1999 to December 1999, and then to June 2000 reportedly for budgetary reasons. The PUP ruling party claimed victory in 31 of Guinea's 38 communes, the Union for Progress and Renewal (UPR) won five local councils, the Assembly of Guinean People (RPG) one, and the Fight for Common Cause (LCC)—allied with the PUP—took one. Voter turnout was only 54%, or less than one-third of the adult population.

## 16 JUDICIAL SYSTEM

The judicial system is based on French civil law, customary law, and decree; legal codes are under revision, and Guinea has not accepted compulsory ICJ jurisdiction. In 1958 and 1965, the government introduced some customary law, but retained French law as the basic framework for the court system.

The system is composed of courts of first instance, two Courts of Appeal (in Kankan and in Conakry) and the Supreme Court. There is also a State Security Court (Cour de Sûreté de l'Etat), which tried the 1985 coup plotters, and conducted the Alpha Condé trial in 1999/2000. The legality of this court was debated in the February 1996 putsch. The Supreme Court ruled in favor of its validity since it predated the 1990 constitution, and the constitution failed to specifically address its existence. A military tribunal exists to handle criminal cases involving military personnel.

A traditional system of dispute resolution exists at the village and neighborhood level. Cases unresolved at this level may be referred to the courts for further consideration. The traditional system has been found to discriminate against women.

Although the 1990 constitution guarantees the independence of the judiciary, magistrates have no tenure and are susceptible to influence by the executive branch. The penal code provides for the presumption of innocence, the equality of citizens before the law, the right to counsel, and the right to appeal a judicial decision. This code is supported by the constitution, which provides for the inviolability of the home; judicial search warrants are required by law. In reality, police and paramilitary personnel often ignore these legal protections.

In September 1996, the government announced the creation of a discipline council for dealing with civil servants who abuse their positions in the government. In June 1998, a special arbitration court was established to resolve business disputes.

## 17 ARMED FORCES

The armed forces numbered about 9,700 active personnel in 2005, including 8,500 in the Army, 400 in the Navy, and 800 in the Air Force. The Army had 12 battalions with 38 T-34 and T-54 main battle tanks among its predominantly Soviet-made equipment. The Navy had 2 patrol/coastal craft, and the Air Force 8 combat capable aircraft, including 4 Soviet-made MiG-21 and MiG-17 fighters. There was a People's Militia of 7,000 and a combined 2,600 in

the gendarmerie and Republican Guard. The defense budget in 2005 totaled \$72 million.

## 18 INTERNATIONAL COOPERATION

Guinea was admitted to the United Nations on 12 December 1958 and is a member of ECA and several nonregional specialized agencies. It is a member of the WTO. Guinea also belongs to the African Development Bank, the ACP Group, ECOWAS, G-77, the New Partnership for Africa's Development (NEPAD), and the African Union. Guinea became a partner with Sierra Leone and Liberia in the Mano River Union in 1980, when it also joined Gambia and Senegal as a member of the Gambia River Development Organization. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra Leone. In addition, Guinea belongs to the Niger Basin Authority and the Organization of the Islamic Conference (OIC). The International Bauxite Association was established in Conakry in 1974 with Guinea as a charter member. Guinea is part of the Nonaligned Movement.

In environmental cooperation, the country is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Guinea has extensive mineral deposits, primarily bauxite, and hydroelectric resources, along with soils and climate favorable for producing a diverse array of food and export crops. The country has wide expanses of both natural and cultivated forests, and it has begun to exploit its potential as a producer of timber. Guinea is rich in fishery resources, and has an as-yet untapped potential to increase industrial fishing. Still, Guinea is one of the poorest countries in the world.

For two decades after French withdrawal in 1958 the country was governed according to socialist-style economic management. Agriculture was collectivized and private commerce and industry repressed. In 1984, a major reform movement gained political power and reforms were instituted aimed at developing a modern market economy. The collective farms were abolished, state-owned enterprises were liquidated, compulsory marketing through state agencies was abolished, food prices were decontrolled, and the government began actively to seek foreign investment for sectors other than mining and energy. Although the reforms were largely successful, the economy has been restrained by an underdeveloped infrastructure, including poor transportation and communications systems. High levels of debt, unemployment, and underemployment also hamper economic progress.

As of 2000, 80% of the population engaged in subsistence agriculture. The mining sector accounted for about 75% of exports. Real growth in the GDP was 3.3% in 2001 and was expected to reach 6.5% in 2004. Despite a rise in the world price for bauxite, Guinea's primary export, earnings in the mining sector have been weak. In 2000, Guinea qualified for debt relief under the Heavily Indebted Poor Countries Initiative established by the World Bank and the IMF, and it was to use the savings for improvements in education, health, rural roads and rural water access. Fighting

in Liberia and Sierra Leone has spilled over into Guinea and disrupted its economy.

The economy expanded by 2.7% in 2004, up from 1.2% in 2003, but down from 4.2% in 2002; in 2005, the GDP growth rate was estimated at 2.0%. The inflation has been on the rise since 2002 (when it hovered around 3.0%), and in 2005 it was estimated to have reached 35%. This development was triggered by panic buying after the Liberian and Sierra Leonian conflicts, and it posed serious problems to the economy. In addition, Guinea is not receiving any multilateral aid after the World Bank and the IMF cut off most of the assistance in 2003.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Guinea's gross domestic product (GDP) was estimated at \$20.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,200. The annual growth rate of GDP was estimated at 2%. The average inflation rate in 2005 was 35%. It was estimated that agriculture accounted for 23.7% of GDP, industry 36.2%, and services 40.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$111 million or about \$14 per capita and accounted for approximately 3.1% of GDP. Foreign aid receipts amounted to \$238 million or about \$30 per capita and accounted for approximately 6.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Guinea totaled \$3.09 billion or about \$391 per capita based on a GDP of \$3.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.7%. In 2001 it was estimated that approximately 29% of household consumption was spent on food, 5% on fuel, 2% on health care, and 9% on education. It was estimated that in 2003 about 40% of the population had incomes below the poverty line.

## 21 LABOR

In the latest year for which data was available, over 80% of Guinea's labor force of about three million in 2000 were engaged in agriculture. Services and industry accounted for the remaining 20% of the workforce, that same year. Most of the population relies on subsistence farming. Most of the wage and salary earners work in the public sector; mining is the other major source of salaried employment. Unemployment data was unavailable.

Guinea's Labor Code permits all workers (except military and paramilitary) to create and participate in labor organizations. The General Workers Union of Guinea (UGTG) and the Free Union of Teachers and Researchers of Guinea (SLECG) have emerged since the code ended the previously existing trade union monopoly system. However, the National Confederation of Guinean Workers (CNTG) remains the largest labor organization. Collective bargaining is protected by law. Salaried workers, including public sector civilian employees, have the right to strike, provided that they

have given 10 days' notice of an intent to strike and that they are not engaged in an essential service. About 5% of the workforce is unionized.

The minimum working age is 16, and is enforced for large firms working in the formal economy. However, most children work, either in the informal economy or in agriculture. The workweek is technically 48 hours, but most people work longer hours. The labor code has provisions for a minimum wage but the government has yet to establish one, and most workers do not earn a living wage.

## 22 AGRICULTURE

Only 2.6% of Guinea's arable land area is cultivated. Agriculture accounts for 22% of GDP and engages 84% of the active population. The agricultural sector of the economy has stagnated since independence. The precipitate withdrawal of the French planters and removal of French tariff preference hurt Guinean agriculture, and drought conditions during the 1970s also hindered production. Since 1985, however, the free market policies of the Second Republic have encouraged growth in agricultural production, with slow but steady increases in output. Guinea is a net food importer, however, importing some 30% of its food needs.

Price controls have also had a dampening effect on output. In theory, until the reforms of the early 1980s, the state controlled the marketing of farm produce. However, even during the late 1970s, when all private trade in agricultural commodities was illegal, only a small amount of agricultural production actually passed through the state distribution system; some 500,000 private smallholders reportedly achieved yields twice as high as government collectives, despite having little or no access to government credit or research and extension facilities. During the 1970s and early 1980s, agricultural exports fell markedly, and food production decreased, necessitating rice imports of at least 70,000 tons a year. (In 1984, a drought year, 186,000 tons of cereal had to be imported.) However, some restrictions on marketing were removed in 1979 and 1981; more recently, prices were decontrolled and many state farms and plantations dissolved. These steps appeared to bring improvements.

The principal subsistence crops (with estimated 2004 production) are manioc, 1,350,000 tons; rice, 900,000 tons; sweet potatoes, 60,000 tons; yams, 40,000 tons; and corn, 90,000 tons. Cash crops are peanuts, palm kernels, bananas, pineapples, coffee, coconuts, sugarcane, and citrus fruits. In 2004, an estimated 430,000 tons of plantains, 280,000 tons of sugarcane, 210,000 tons of citrus fruits, 150,000 tons of bananas, 300,000 tons of peanuts, 53,000 tons of palm kernels, and 22,500 tons of coconuts were produced. That same year, coffee production was estimated at 20,500 tons, compared to 14,000 tons on average annually from 1979 to 1981. Prior to the reforms, a large portion of the coffee crop was smuggled out of the country. Guinea's trade deficit in agricultural products was \$164.3 million in 2004.

## 23 ANIMAL HUSBANDRY

In 2005, there were an estimated 3,400,000 head of cattle, 1,140,000 sheep, 1,361,000 goats, 67,500 hogs, and 15,000,000 chickens. Almost all the cattle are the small humpless Ndama variety kept by the Fulani in Futa Jallon and Upper Guinea, where sheep and goats also are herded. The Ndama cattle are not susceptible to ani-

mal trypanosomiasis and, although very small, their yield in meat is good. Total meat production in 2005 was 58,435 tons.

## 24 FISHING

Guinea's annual ocean fisheries potential exceeds 200,000 tons, according to World Bank estimates. The total catch in 2003 was 118,845 tons, 97% from marine fishing. Domestic artisanal fisherman only catch about 13% of the estimated annual yield. Tuna is the most important catch. Many species found in Guinean waters are among the richest in West Africa and command high value. Exports of fish products in 2003 were valued at \$2.3 million. A 1990 agreement with the European Union reflected a growing investment interest in the fishing sector. Since then, several small scale fishing ventures have been established, including a shrimp farming project financed by the African Development Bank, and development of private cold storage facilities in 14 different prefectures.

## 25 FORESTRY

Forests and woodland make up about 28% of Guinea's land area. The nation's forest resources offer great promise, the major constraint on development being lack of adequate transportation. Logging and sawmill facilities have been built in the Nzérékoré area. Removal of roundwood was estimated at 12.2 million cu m (431 million cu ft) in 2004; about 95% of the harvest was used for fuel. Exports of forestry products totaled \$6.0 million in 2004, while imports amounted to \$4.5 million.

## 26 MINING

Guinea's mineral production in 2004 consisted primarily of bauxite, cement, diamonds, gold, and salt. The country also had deposits of graphite, iron, limestone, uranium, nickel and manganese. However, these deposits remained undeveloped. In 2004, Guinea was one of the world's top five bauxite producers and a major source of foreign currency.

The government has claimed that Guinea had 20 billion tons of bauxite reserves, with proven reserves of 18 billion tons. In 2004, Guinea's mine output of bauxite totaled an estimated 17.0 million metric tons wet-basis bauxite (metallurgical plus calcinable ore estimated to be 13% water), and 15.0 million metric tons dry-basis bauxite (wet-basis ore reduced to dry-basis, estimated to be 3% water). There was no recorded production from 2002 through 2004 of calcined bauxite.

In 2004, Guinea produced an estimated 10,700 kg of gold, including artisanal production, down from 16,622 kg in 2003. Artisanal production of gold was sold either directly to the Central Bank of Guinea, or to collectors. Diamond production, including artisanal, in 2004 totaled 740,000 carats, of which 70–80% were of gem quality. Artisanal production of diamonds that year accounted for about 700,000 carats. Hydrate alumina production in 2004 was estimated at 9,000 metric tons, with calcined alumina production estimated at 770,000 metric tons. The country also produced cement, clays, salt, sand and gravel, and stone.

Iron ore was mined at Kaloum until 1967. Larger, richer deposits have been found in the Mount Nimba and Simandou mountain areas, along the Liberian border. In 1974, the Mifergui-Simandou and Mifergui-Nimba mining companies were formed to exploit the deposits, with the government retaining half interest in the

firms. Reserves were estimated at 300–600 million tons. There was no iron ore production recorded in 2004.

The less-than-expected foreign investment was attributed to the country's perceived political and economic risks and decreased availability of financing for junior mining companies, as well as civil disturbances in neighboring countries Guinea-Bissau, Senegal, and Sierra Leone.

## 27 ENERGY AND POWER

Guinea has no known proven reserves of oil or natural gas (as of 1 January 2003), coal, or any oil refining capacity. As a result the country must import whatever refined petroleum products or fossil fuels it consumes. In 2002, consumption and imports of refined petroleum products each averaged 8,730 barrels per day. There were no imports or consumption of natural gas or coal in that year.

Guinea's electric power sector relies on hydropower and conventional thermal fuel to generate power. In 2002, electric power generating capacity stood at 0.284 million kW, of which almost 49% was hydroelectric, with the remainder, based on conventional thermal fuels. In that same year, electric power output totaled 0.773 billion kWh, of which hydroelectric generation supplied 0.443 billion kWh and fossil fueled sources 0.340 billion kWh. Total electric power consumption in 2002 came to 0.719 billion kWh.

## 28 INDUSTRY

Industry accounted for 38% of GDP in 2000, 9% of which consisted of manufacturing. The manufacturing growth rate for 2000 was 4.3%. During the socialist years, a sizeable parastatal industrial sector emerged. Guinea had 234 state-run enterprises in 1985, but fewer than 60 remained in the government's portfolio a decade later. Manufacturing in Guinea consists of three elements: public enterprises with large staffs, producing below capacity; small private businesses, mostly engaged in producing beverages, bread, bricks, carpentry, and boilers/metalwork; and small non-industrial units informally employing persons in a wide variety of occupations.

The alumina smelter at Fria operated at over 90% capacity, producing 660,000 tons in 1994. Among Guinea's other plants are agro-food processors, including a fruit cannery at Mamou, a fruit juice factory at Kankan, a tea factory at Macenta, a palm oil works at Kassa, a small tobacco factor at Beyla, two peanut oil works, at Dabola and at Agola, rice mills, a sugar complex consisting of two dams, a plantation, and a refinery. A textile complex at Sanoyah, a cement and plastics factories at Conakry, and a number of construction material plants are in operation. There is potential to develop a pharmaceuticals industry in Guinea.

Industry accounted for 36.2% of the GDP in 2005, and was bested by services with a 40.1% share; agriculture was the smallest economic sector (23.7%) and by far the largest employer, with an 80% share in the labor force. Global Alumina, a US based mining company is planning to open a \$2.5 billion alumina refinery in Sangaredi. By 2008, the refinery was expected to reach full production and produce 2.8 million tons of alumina per year.

## 29 SCIENCE AND TECHNOLOGY

The National Directorate for Scientific and Technical Research is in Conakry. The Center for Rice Research is in Kankan. The Pasteur Institute for Animalculture Research and the Institute for Fruit Research are in Kindia. Five colleges and universities, including the University Gamal Abdel Nasser in Conakry, offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 34% of college and university enrollments.

In 2000, there were 286 researchers and 104 technicians per million people, engaged in research and development (R&D).

## 30 DOMESTIC TRADE

Commerce was severely controlled through state trading enterprises until the end of the socialist era in 1984. Private Guinean traders can now import freely, the government having ended in 1992 its monopoly on imports of petroleum and pharmaceuticals. Prices for all goods other than imported rice and petroleum products were deregulated in 1986 and the private sector was permitted to engage in all levels of internal and external marketing. However, internal corruption and political conflicts have dissuaded foreign investment which is sorely needed to jump start commercial activity.

Business hours are 7:30 AM to 3 PM, Monday through Thursday, 7:30 AM to 1 PM on Friday, and 7:30 AM to 1 PM on Saturday. Banks are normally open from 8 AM to 12:30 PM, Monday through Saturday. French is the official language of businesses.

## 31 FOREIGN TRADE

Export figures for 2000 show that the mining industry accounted for 70% in export earnings, including mostly bauxite and alumina, but also gold. Unused postage, stamp-impressed papers, and checkbooks made up 12% of Guinea's total exports, and aluminum hydroxide exports represented another 11%.

Petroleum products, machinery and equipment, and food top the list of imports at 25%, 19%, and 18%, respectively, while vehicles (8.7%), and chemicals (8.4%) also contributed to total imports, worth approximately \$612 million in 2000.

Technically, the government no longer permits counter-trade or barter in international trade. Guinea retains its postcolonial ties with France, importing the large portion of goods from that country (following Côte d'Ivoire as leading provider), and exports the majority of its minerals to France, other European countries, and the United States.

In 2005, exports totaled \$612 million (FOB—free on board), while imports grew to \$680 million. In 2004, most of the exports went to France (17.7%), Belgium (14.7%), the United Kingdom (14.7%), Switzerland (12.8%), and the Ukraine (4.2%). Imports primarily came from Côte d'Ivoire (15.5%), France (9%), Belgium (6.1%), China (6%), and South Africa (4.8%).

## 32 BALANCE OF PAYMENTS

At the beginning of 1999, external debt totaled \$3.4 billion, representing 74% of GDP. The country relies on mining exports for

revenue. Significant debt relief programs are working towards alleviating debt servicing commitments.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Guinea's exports was \$694.5 million while imports totaled \$555.2 million resulting in a trade surplus of \$139.3 million.

The International Monetary Fund (IMF) reported that in 2001 Guinea had exports of goods totaling \$731 million and imports totaling \$562 million. The services credit totaled \$103 million and debit \$319 million.

Exports of goods totaled an estimated \$725 million in 2004, up from \$609 million in 2003. Imports grew from \$644 million in 2003, to an estimated \$688 million in 2004. The resource balance was consequently negative in 2003 (-\$35 million), and positive in 2004 (\$37 million). The current account balance improved from -\$187 million in 2003, to -\$174 million in 2004. Foreign exchange reserves (excluding gold) increased to \$3.5 billion in 2003.

**33 BANKING AND SECURITIES**

At independence, central banking functions were carried out by the Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest-BCEAO), and commercial banking by branches of five French banks. On 1 March 1960, Guinea withdrew from the franc zone. The Guinean branch of the BCEAO was abolished, and the Central Bank of Guinea was established. Later that year, four of the five private banks were closed down, and the fifth was nationalized in 1961. All banking activities were taken over by the Central Bank, but by 1962 its functions were decentralized and three new state-owned banks were added.

The National Credit Bank for Commerce, Industry, and Housing, with branches throughout Guinea, handled all commercial banking and made loans to finance commerce, industry, and housing. The Guinean Foreign Trade Bank performed functions related to foreign trade. The National Agricultural Development Bank granted medium and long-term loans for agricultural development. There was also a National Savings Bank. All these institutions except the Central Bank were abolished in late 1985 and were replaced by commercial banks.

There are six commercial banks in Guinea, including the Banque Internationale pour le commerce et l'industrie de la Guinée (BICIGUI); the Societe Generale des Banques en Guinee (SGBG); the Banque Islamique de Guinee (BIG); the Unione Internationale des Banques en Guinee (UIBG); and the International Commercial Bank de Guinée (ICBG), which was launched in Conakry in early November 1996. All involve French or US participation. The government has offered for sale to the general public shares in the BICIGUI. The bank controls roughly 45% of the country's banking resources, supplying one-third of all credits to the private sector and up to 60% of those awarded for international trade. BICIGUI has 12 branches (3 in Conakry).

In 1997, due to financial instability and lack of capital, the government was considering making obligatory the direct transfer of public-sector wages and salaries to designated accounts within the commercial banks. New regulations were created to stabilize the banking system by 2000, but those reforms have been delayed, leaving the banking system in the same state.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$287.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$353.6 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 16.25%.

Local currency may not be exported or imported. There are no securities exchanges in Guinea.

**34 INSURANCE**

All insurance companies were nationalized in January 1962. There is a national insurance company, the National Society of Insurance

and Reinsurance, and at least five other major companies based in Conakry.

### 3<sup>5</sup> PUBLIC FINANCE

Guinea did not have a formal government budget until 1989. Since then, overly optimistic revenue projections, increasing civil service salaries and military expenditures, and diversion of public funds have resulted in deficits. The government took control of the problematic electricity and water utilities in 2001, giving itself one year to fix the structural shortfalls and then find new partners to operate them.

The US Central Intelligence Agency (CIA) estimated that in 2005 Guinea's central government took in revenues of approximately \$305.6 million and had expenditures of \$590.4 million. Revenues minus expenditures totaled approximately -\$284.8 million. Total external debt was \$3.46 billion.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, budgetary central government revenues were GFr895,400 million and expenditures were GFr1,010 million. The value of revenues US dollars was us\$645 million, based on a official exchange rate for 1999 of us\$1 = GFr1,387.4 as reported by the IMF.

### 3<sup>6</sup> TAXATION

Personal income and capital gains are taxed at 35%, which is also the corporate tax rate. A 15% withholding tax is levied on dividends. Both employees (5%) and employers (18%) contribute to Social Security. In 1996, the government introduced a value-added tax (VAT). In 2003, the standard rate was set at 18%. Exports, international transportation, and basic food items are exempted.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Since 1994, import taxes have steadily increased. Import licenses are required for all imports regardless of country of origin and import duties are levied uniformly. Prohibited imports included

arms, military equipment, and narcotics. There was also an 18% VAT on all imported products. With the exception of gold and diamonds, no export taxes were levied.

### 3<sup>8</sup> FOREIGN INVESTMENT

Guinea's national identity rests on its proud refusal to enter the French community in 1958 and its offers of economic assistance in exchange for political independence. Even though the country has gone through substantial political and economic liberalization since the passing of independence hero, Sékou Touré, in 1984, the legacy still inhibits the embrace of foreign investment. The only sectors of the economy in which private foreign investment were originally allowed after independence were mining and energy, but in the early 1980s agricultural investment was also being sought. During 1983–85, direct foreign investment amounted to \$2.2 million.

An investment code following the 1984 coup indicated a new emphasis on private investment and incentives. It was replaced by the currently applicable investment code of 1987, as amended in 1995, which pledged national treatment, free repatriation of capital, special incentives for small and medium-size enterprises, nonmining exports, enterprises using over 70% local inputs, and those locating outside of Conakry. In 1989, under donor pressure, the government leased the operation of Conakry's water supply in a 10-year contract to a consortium led by the SARU and Vivendi companies of France operating as the management company SEEG (Société de Exploitation des Eaux de Guinée). After initial gains in efficiency, SEEG could not make further headway against nepotism and corruption and could not devise a way to get the government to pay its bills. Although the contract was renewed in June 2001, the private companies left in frustration. In 2003, under drought conditions, repeated riots in Conakry have protested the scarcity of water and electricity.

In 1992, investment policies were liberalized to permit private ventures in most sectors, including mining and telecommunications, and the Office of Private Investment Promotion (OPIP) was established as a one-stop shop to facilitate the process. By the revised mining code of 1995, foreigners could own up to 85% of mining ventures. The main bauxite mining company in Guinea, CBG (Compagnie des Bauxites de Guinée), is owned 49% by the government and 51% by Halco, which is a consortium of foreign companies made up of Alcan (Canada, 33%); Alcoa and its subsidiary, Reynolds (United States, 13%); Pechiney (France, 10%); VAW (Germany, 10%); and Comalco (Australia, 4%). In 2003, the smaller state-owned SBK (Société des Bauxites de Kindia-Debelé) mine, built in the 1970s as part of a barter agreement with the USSR to pay off loans by providing bauxite to a smelter in the Ukraine, was being managed by Russian Aluminum (RusAl). In 2003, RusAl also planned to acquire the Friguia mine, site of the first aluminum smelter in Africa and now badly in need of privatization and modernizing.

In 1992, the postal service was separated from telecommunications to allow outside participation in the latter. In December 1995 Telekom Malaysia Berhad acquired a 60% stake in SOTELGUI, the state telecommunications company. In the mobile sector, SOTELGUI competes against Spacetel (Israel) and Telecel (US-based).

SOURCE: Government Finance Statistics Yearbook 2004, Washington, DC: International Monetary Fund, 2004.

Diamond mining in Guinea has recently attracted explorations by De Beers (South Africa), Hymex and Trivalence Mining Corporations (Canadian), and Aredor Holding Company (Australia). Aredor has a reputation for nontransparent operations in gold mining in Guinea, leaving a few government officials wealthy and the local population with only a degraded and polluted environment. Gold mining in Guinea, like diamond mining, has until recently been mainly traditional and informal (illegal), but the Ghanaian company, Ashanti Goldfields, has operations in Guinea.

In 1995, revisions to the investment code divided the country into four administrative zones to better service foreign investment projects. Significant foreign direct investment projects for 1997 to 1998 included a \$200 million railway repair by Slovak Railways, a \$45 million gold exploration by Ashanti Goldfields, a \$24 million diamond exploration by Société Aurifère de Guinée and Hymex Diamant, a \$20 million expansion and modernization project by the government of Iran, and an \$8 million diamond operation by De Beers. Foreign direct investment (FDI) averaged \$17.55 million in 1997–98. In May 1999, the government, with the support of OPIP and UNIDO, hosted an investors' forum to which 500 potential investors were invited and over 100 potential investment projects were presented. In 1999, FDI peaked at \$63.4 million, whereas for 2000 and 2001, the average was \$35.5 million.

In 2004, Societe de Miniere de Dinguiraye and Societe Aurifere de Guinee (two expatriate gold-mining companies) made major investments in the mining sector. Global Alumina, a US based company, is planning to open a \$2.5 billion alumina refinery in Sangaredi, while Alcoa and Alcan are looking into starting a jointly owned alumina refinery of similar magnitude. Some of the main concerns of foreign investors are the need for a stable judicial and economic framework, and increased stability along Guinea's southern borders.

### 39 ECONOMIC DEVELOPMENT

After independence, French-held financial, commercial, industrial, and distributive organizations were expropriated, and the national economy was divided into three sectors: a state sector, a mixed sector, and a sector for guaranteed private investment. By the mid-1970s, the private sector had become insignificant, and government policy increasingly leaned toward greater government control of the mixed enterprises and the state-sector companies. The 1987–91 recovery program called for \$670 million in spending through 1989, with 42% for infrastructure and 24% for rural development. A major aim was to diversify the economy and reduce the heavy reliance on bauxite.

By 1990, the government had privatized the majority of its 180 public enterprises and closed over 300 state farms. From 1990 to 2000, the pace of structural reform slowed and debts increased as the economy failed to diversify. The Islamic Development Bank (IDB) granted two new loans to Guinea in 1997, and the Paris Club rescheduled a large portion of Guinea's bilateral debt, forgiving 50% of debt to France, and Russia forgave 70% of bilateral debt.

The government in recent years has taken steps to stimulate investment, encourage private-sector commercial activity, reduce the role of the state in the economy, and improve administrative and judicial frameworks. The government has also increased spending on education, health, infrastructure, banking, and jus-

tice sectors, and cut the government bureaucracy. Corruption and nepotism hamper economic development.

In 2000, Guinea was granted \$800 million in debt relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2001, Guinea negotiated a three-year \$81.3 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF, geared to support the country's efforts to stabilize the economy, promote growth, improve social services, and reduce poverty.

In 2003, the World Bank and the IMF cut off most of the financial assistance, and currently Guinea is not receiving any multilateral aid. The modest growth registered in 2005 was primarily caused by an increase in global demand and commodity prices on world markets. Although the inflation rate rose rapidly in 2004 and 2005 (to 35%), it was expected to taper off starting 2006. Mining was expected to continue to be the primer growth engine, with most of the other sectors expected to stagnate in the short term period.

### 40 SOCIAL DEVELOPMENT

There was a regression of social services during the Touré years. Although government sought to establish extensive social programs, they were badly organized and managed and, in the end, the treasury was empty. In 1994, social security legislation was updated, providing pensions at age 55 and cash sickness benefits for employed persons. Work injury laws, initiated in 1932, covers employed persons including agricultural salaried workers, domestic workers, apprentices, interns, and students at technical school. Officially, free medical treatment is available, as well as free care for pregnant women and for infants. In reality, health service is poor, and life expectancy is among the lowest in the world.

Women traditionally play a subordinate role in family and public life. The law prohibits discrimination based on gender, but is not effectively enforced. Violence against women is common, but the courts rarely intervene in domestic disputes. Inheritance customs favor male children over female children. Divorce laws favor men in awarding property and custody of children. Female genital mutilation (FGM), a practice that is both painful and often life-threatening, continues to be practiced in all parts of the country. In 2004 there was an increase in adherence to conservative Islamic beliefs, which further threatened the rights of women.

Human rights abuses include police abuse of prisoners, arbitrary detention, and torture. The government exercises its power to restrict unwanted political gatherings.

### 41 HEALTH

As of 2004, there were an estimated 9 physicians, 43 nurses, and 18 dentists per 100,000 people. Approximately 80% of the population had access to health care services.

The Republic of Guinea lies along the "goiter belt" of the Atlantic coast from west to central Africa. Low iodine intake has led to goiter in predominantly rural areas. Malaria, yaws, leprosy (3,580 cases in 1995), and sleeping sickness (in the forest areas in the Guinea Highlands) have been the major tropical diseases; tuberculosis and venereal diseases are also prevalent. There were 255 cases of tuberculosis in 1999 per 100,000 people. Yellow fever and smallpox have been brought under control, but schistosomiasis remains widespread. In 2000, 48% of the population had access to

safe drinking water and 58% had adequate sanitation. The most common diseases for children under five years old in 1994 were diarrhea, respiratory infections, helminthiasis, and malaria. Children up to one year old were vaccinated against tuberculosis, 69%; diphtheria, pertussis, and tetanus, 53%; polio, 53%; and measles, 56%. Total health care expenditures were 3.8% of GDP.

In 2002 Guinea had an estimated birthrate of 39.5 per 1,000 people. In 2000 the total fertility rate was 5.2 births per woman. Only 2% of Guinean women used some form of contraception. Malnutrition affected 26% of all children under five years old as of 1999. Goiter was found in 62.6% of school-age children in 1996. Infant mortality in 2005 was 91.45 per 1,000 live births and the overall mortality rate was estimated at 17 per 1,000 people in 2002. Average estimated life expectancy was 49.36 years in 2005.

The HIV/AIDS prevalence was 3.20 per 100 adults in 2003. As of 2004, there were approximately 140,000 people living with HIV/AIDS in the country. There were an estimated 9,000 deaths from AIDS in 2003.

Since 1986, Guinea has been revamping its health care system. Using the Bamako Initiative previously used by other sub-Saharan African nations, Guinea has set up several smaller health centers that offer immunization services, AIDS prevention and control, family planning, and tuberculosis control.

## 42 HOUSING

The most common rural dwelling is round, windowless, and made of wattle and daub or sun-dried mud bricks, with a floor of packed earth and a conical thatched roof. Urban dwellings are usually one-story rectangular frame or mud-brick buildings, generally without electricity or indoor plumbing. Conakry has a serious housing shortage. According to the latest available information (1980–88), the housing stock numbered over one million units, with 5.4 people per dwelling. In 2000, 72% of urban and 36% of rural households had access to improved water sources. About 94% of urban and 41% of rural households had access to improved sanitation systems.

## 43 EDUCATION

Before Guinea became independent, its educational system was patterned on that of France and French was the primary language of instruction. All schools were nationalized in 1961. In 1968, a “cultural revolution,” aimed at de-Westernizing Guinean life, was inaugurated; since then, eight vernaculars have been added to the school curriculum, and village-level programs have been set up to assist in the implementation of the plan. Although the French educational structure and its traditional degrees have been retained, African history and geography are now stressed. Education is free and compulsory between the ages of 7 and 13. Children go through six years of primary and seven years of secondary school. After this, students may choose to attend a three-year vocational school to complete their education. The academic year runs from October to June.

Primary school enrollment in 2003 was estimated at about 65% of age-eligible students; 73% for boys and 58% for girls. The same year, secondary school enrollment was about 21% of age-eligible students; 28% for boys and 13% for girls. It is estimated that about 41% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 44:1 in 2000;

the ratio for secondary school was about 30:1. In 2003, private schools accounted for about 20% of primary school enrollment and 12% of secondary enrollment.

The Gamal Abdel Nasser Polytechnic Institute was established at Conakry in 1963. The Valéry Giscard d'Estaing Institute of Agro-Zootechnical Sciences was founded in 1978 at Faranah. The University of Conakry was founded in 1984. The adult literacy rate for 1995 was estimated at about 35.9%, with 49.9% for men and 21.9% for women.

As of 2003, public expenditure on education was estimated at 1.8% of GDP, or 25.6% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The chief book collection and main exhibition center are in the National Institute of Research and Documentation (67,000 volumes) at Conakry. The National Library (40,000 volumes) and the National Archives are also located in Conakry. There are also small university libraries in Kankan and Conakry.

The National Museum, at Conakry, has displays of the ethnography and prehistory of Guinea, as well as a collection of art, fetishes, and masks of the Sacred Forest. The capital also has two natural history museums, covering botany and geology. There are regional museums in Kissidougou, Nzérékoré, Youkounkoun, Beyla, and Boké.

## 45 MEDIA

Telephone, telegraph, and postal services are government-owned. Submarine cables connect Conakry with Dakar, Freetown, and Monrovia; telecommunication links by satellite are also available. In 2003, there were an estimated 3 mainline telephones for every 1,000 people; about 1,400 people were on a waiting list for telephone service installation. The same year, there were approximately 14 mobile phones in use for every 1,000 people.

Radiodiffusion-Télévision Guinéenne broadcasts in French, English, Portuguese, Arabic, Creole, and local languages, as does TV-Nationale, the one television station in Guinea. In 2001, there were 4 AM and 1 FM radio stations. In 2003, there were an estimated 52 radios and 47 television sets for every 1,000 people. The same year, there were 5.5 personal computers for every 1,000 people and 5 of every 1,000 people had access to the Internet.

The government-owned *Horoya* is the only daily paper, with an estimated circulation of 20,000 in 2002. There are also a number of private press weeklies, including *La Lance*, *L'Oeil*, *Le Democrat*, *L'Independant*, *La Nouvelle Tribune*, *L'Observateur*, and the satirical newspaper *Le Lynx*.

The constitution provides freedom of the press, though in practice the government imposes broad control and censorship. All media are owned or controlled by the government.

## 46 ORGANIZATIONS

Regional farm organizations are leagued in a national union of planters' cooperatives. Mass organizations associated with the RDA include the Youth of the Democratic African Revolution and the Revolutionary Union of Guinean Women. The Guinea Chamber of Commerce, Industry, and Agriculture has 70 affiliates.

National women's organizations include the Association Guinéenne des Femmes Diplômées des Universités and Commission Nationale des Femmes Travailleuses de Guinée. Scouting organi-

zations are active for youth. Volunteer service organizations, such as the Lions Clubs International, are present. There is a national chapter of the Red Cross Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

Visitors to Guinea must have a valid passport, visa, and international vaccination record (World Health Organization card). A certificate of vaccination against yellow fever is also required. Malaria precautions are recommended. An annual cultural festival that includes theatrical and dance groups is held in October. In 2003, there were 3,634 tourist arrivals. Tourist receipts totaled \$8.1 million in 2001, and in 2002 there were 3,774 hotel rooms with 4,518 beds and a 70% occupancy rate. The average length of stay that same year was three nights.

In 2005, the US Department of State estimated the average daily expenses to stay in Conakry at \$143.

#### 48 FAMOUS GUINEANS

A revered figure of the 19th century is Samory Touré (1830?–1900), a Malinké born in Upper Guinea, who conquered large areas and resisted French military forces until 1898. The founder of modern Guinea was his alleged great-grandson Ahmed Sékou Touré (1922–84), a prominent labor leader and political figure who be-

came Guinea's first president in 1958. Guinea's best-known writer, Camara Laye (1928–80), wrote the novel *The Dark Child* (1953). Col. Lansana Conté (b.1934) became president in 1984. In 2004, he appointed Cellou Dalein Diallo (b.1953?) prime minister.

#### 49 DEPENDENCIES

Guinea has no territories or colonies.

# GUINEA-BISSAU

Republic of Guinea-Bissau

*República da Guiné-Bissau*

**CAPITAL:** Bissau

**FLAG:** The flag has equal horizontal stripes of yellow over green, with a red vertical stripe at the hoist bearing a black star.

**ANTHEM:** *Esta é a Nossa Pátria Bem Amada (This Is Our Well-Beloved Land).*

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr) replaced the Guinean peso (PG) as official currency in May 1997. The CFA franc, which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc comes in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00189 (or \$1 = CFA Fr528.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Death of Amílcar Cabral, 20 January; Labor Day, 1 May; Anniversary of the Killing of Pidjiguiti, 3 August; National Day, 24 September; Anniversary of the Movement of Readjustment, 14 November; Christmas Day, 25 December. Movable religious holidays include Korité (end of Ramadan) and Tabaski (Feast of the Sacrifice).

**TIME:** 11 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the west coast of Africa, Guinea-Bissau, formerly Portuguese Guinea, has a total area of 36,120 sq km (13,946 sq mi), about 10% of which is periodically submerged by tidal waters. Comparatively, the area occupied by Guinea-Bissau is slightly less than three times the size of the state of Connecticut. Besides its mainland territory, it includes the Bijagós Archipelago and various coastal islands—Jeta, Pecixe, Bolama, and Melo, among others. Extending 336 km (209 mi) N–S and 203 km (126 mi) E–W, Guinea-Bissau is bordered on the N by Senegal, on the E and SE by Guinea, and on the SW and W by the Atlantic Ocean, with a total boundary length of 1,074 km (667 mi).

Guinea-Bissau's capital city, Bissau, is located on the country's Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

The country is swampy at the coast and low-lying inland, except in the northeast. At high tide, approximately 10% of the land in the coastal region is submerged. There are no significant mountains but there is a central plateau rising to a couple hundred feet in elevation. Where the plateau stretches to the eastern frontier, it is called the Planalto de Gabú. This region has the nation's highest point, an unnamed point at 300 meters (984 feet). The lowest point is at sea level (Atlantic Ocean). The most important rivers include the Cacheu, Mansoa, Geba, and Corubal.

## <sup>3</sup> CLIMATE

Guinea-Bissau has a hot, humid, typically tropical climate, with a rainy season that lasts from mid-May to mid-November and a cooler dry season occupying the rest of the year. The average temperature in the rainy season ranges from 26–28°C (79–82°F).

Rainfall generally exceeds 198 cm (78 in), but droughts occurred in 1977, 1979, 1980, and 1983. The rainiest months are July and August. During the dry season, when the harmattan (dust-laden wind) blows from the Sahara, average temperatures do not exceed 24°C (75°F). The coldest months are December and January.

## <sup>4</sup> FLORA AND FAUNA

Guinea-Bissau has a variety of vegetation, with thick jungle in the interior plains, rice and mangrove fields along the coastal plains and swamps, and savanna in the north. Parts of Guinea-Bissau are rich in game, big and small. Several species of antelope, buffalo, monkeys, and snakes are found. As of 2002, there were at least 108 species of mammals, 235 species of birds, and over 1,000 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

One of the most significant environmental problems in Guinea-Bissau is fire, which destroys 40,000 ha of land per year and accelerates the loss of the nation's forests at a yearly rate of about 220 sq mi. In addition, Guinea-Bissau had lost over 75% of its original mangrove areas by the mid-1980s, with the remaining swamps covering about 236,000 hectares. Only about 79% of city dwellers and 49% of the people living in rural areas have access to pure drinking water. The nation has 16 cu km of renewable water resources, with 36% used for farming activity. Only 46% of the population have adequate sanitation.

Another environmental issue is soil damage, caused by drought and erosion, as well as acidification and salinization. The Ministry of Natural Resources, created in January 1979, is responsible for making and enforcing environmental policy.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 5 types of mammals, 1 species of birds, 1 type of reptiles, 10 species of fish, 1 species of invertebrates, and 4 species of plants. Threatened species included the Pygmy hippopotamus and the West African manatee.

## 6 POPULATION

The population of Guinea-Bissau in 2005 was estimated by the United Nations (UN) at 1,586,000, which placed it at number 145 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.0%, a rate the government viewed as too high. Only an estimated 6% of women use contraception and the fertility rate was seven births per woman. The projected population for the year 2025 was 2,875,000. The population density was 44 per sq km (114 per sq mi).

The majority of the population lives in small farming communities or fishing towns. The UN estimated that 32% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5%. The capital city, Bissau, had a population of 336,000 in that year.

## 7 MIGRATION

Centuries ago, the largely Muslim pastoral tribesmen to the east tended to migrate toward coastal regions, but this movement was inhibited to some degree by Portuguese colonization. In 1975, after the settlement of the guerrilla war against the Portuguese colonial administration, approximately 100,000 refugees returned from neighboring Senegal and Guinea.

In 1998, a civil war erupted in Guinea-Bissau, prompting tens of thousands to flee the capital for the surrounding countryside and several thousands to cross into neighboring countries. By June, some 300,000 people in the capital had been displaced. In July, several thousand local inhabitants and other nationalities left the country. Most refugees fled to Senegal and Guinea; others went as far as The Gambia and Cape Verde. By the end of 2004, there were 7,536 refugees, almost all of whom were from Senegal, and 141 asylum seekers. Populations of concern to the United Nations High Commissioner for Refugees (UNHCR) at the end of 2004 numbered 7,677, mainly in border regions. In that same year 284 Guineans sought asylum in France and Spain.

In 2005, the net migration rate was estimated as -1.54 per 1,000 population. The government views the immigration level as satisfactory, but the emigration level as too high.

## 8 ETHNIC GROUPS

About 99% of the population is African; the largest ethnic groups are the Balante (an estimated 30% of the African population), living mainly in the central region; the Fulani (20%), in the north; the Manjaca (14%); the Mandinga (13%); and the Pepel (7%), in the coastal areas. The remaining 1% of the population are primarily European or mulatto.

Of the nonindigenous people, the Cape Verdean mulatto community, which originated in the Cape Verde Islands, is the largest

group, accounting for about 2% of the total population of Guinea-Bissau. Resentment over the disproportionate political and commercial influence held by this group played a role in the 1980 coup. There is also a small foreign community, consisting mainly of Portuguese and of Lebanese and Syrian merchants.

## 9 LANGUAGES

Wide differences prevail in languages, since each tribe has its own vernacular, subdivided into numerous dialects. A Guinean “crioulo,” or Africanized Portuguese patois, is the lingua franca, while Portuguese is the official language.

## 10 RELIGIONS

About 49% of the population has retained traditional religious beliefs or animism. An estimated 38% of the population adhere to the Islamic faith. The Fulani and Mandinka ethnic groups are Muslim for the most part. Between 5% and 13% of the population are Christians with a majority being Roman Catholic. Freedom of religion is provided for in the constitution and this right is generally respected in practice.

## 11 TRANSPORTATION

Transportation facilities remain undeveloped, a factor that has hampered economic development as a whole, especially the exploitation of mineral deposits in the interior. There is no rail line in Guinea-Bissau. In 2002, the country had an estimated 4,400 km (2,735 mi) of roads, of which 453 km (282 mi) were tarred. These, however, consisted mostly of military penetration roads unfit for regular passenger and commercial traffic.

Bissau is the main port. Expansion and modernization projects costing at least \$48 million were undertaken there in the early 1980s. Secondary ports and harbors include Buba, Cacheu, and Farim. As of 2004, the country's four largest rivers are navigable for some distance, with shallow water access possible to much of the interior via creeks and inlets. Bissau is also the site of a modern international airport, while several aerodromes and landing strips serve the interior. In 2004 there were an estimated 28 airports, of which only 3 had paved runways (as of 2005). Linhas Aéreas da Guiné-Bissau (LIA), the national airline, also has service to Dakar, Senegal. Transportes Aéreos Portugueses (TAP), Air Guinée, Aeroflot, Air Senegal, Cape Verde Airlines, and Air Algérie provide international service. In 1997 (the latest year for which data is available) it carried 21,000 passengers on domestic and international flights.

## 12 HISTORY

The earliest inhabitants had been hunters and fishermen who were replaced by the Baga and other peoples who came from the east. The Portuguese explorer Nuno Tristão arrived in the region in June 1446 and established the first trading posts. The slave trade developed during the 17th century; at its center was the port of Bissau, from which thousands of captive Africans were sent across the Atlantic to Latin America. Portugal retained at least nominal control of the area, and British claims to coastal regions were dismissed by arbitration in 1870. Nine years later, the area became a separate Portuguese dependency, administratively subordinate to the Cape Verde Islands. Portuguese Guinea's boundaries with neighboring French possessions were delimited in an 1886 trea-

ty, and formal borders were demarcated by a joint commission in 1905. However, the interior was not effectively occupied until about 1920; nor did the Portuguese settle in the colony in large numbers. In 1951, together with other Portuguese holdings in Africa, Guinea was named a Portuguese overseas province.

In September 1956, a group of dissatisfied Cape Verdeans founded an underground movement to work for independence from Portugal. It was named the African Party for the Independence of Guinea and Cape Verde (Partido Africano de Independência da Guiné e Cabo Verde—PAIGC), and Amílcar Cabral became its secretary-general. On 19 September 1959, after more than 50 Africans had been killed during a dock strike that turned into a violent clash with police, Cabral called for an all-out struggle “by all possible means, including war.” By 1963, large-scale guerrilla warfare had broken out in the territory.

During the ensuing years, PAIGC guerrillas, fighting a Portuguese force of about 30,000, increased their hold on the countryside. When Cabral was assassinated on 20 January 1973, reportedly by a PAIGC naval officer, Aristides Pereira took over the leadership of the movement, which on 24 September 1973 unilaterally proclaimed the independence of the Republic of Guinea-Bissau.

A PAIGC victory became near certain after 25 April 1974, when the Lisbon government was overthrown in a coup. The leader of the new regime, Gen. António de Spínola, was a former governor-general and military commander in Portuguese Guinea, and had become an advocate of peaceful settlement of the war. On 26 August 1974, the Portuguese government and the PAIGC signed an agreement in Algiers under which Guinea-Bissau was to attain independence from 10 September. The same agreement also provided for the removal of all Portuguese troops by 31 October as well as a referendum to determine the future status of the Cape Verde Islands.

The new government, under President Luis de Almeida Cabral, brother to Amílcar Cabral, had to deal with extensive economic dislocations brought about by the war. On 27 September 1974, the government announced its intention to control all foreign trade, and in May 1975, the legislature approved a program to nationalize all land and to confiscate property belonging to persons who had “collaborated with the enemy” during the war.

In the first postindependence elections held in December 1976–January 1977, 80% of the population approved the PAIGC list of candidates for Regional Council membership. The 150-member National Assembly, selected by these representatives, convened on 13 March 1977. Luis Cabral was reelected president of Guinea-Bissau and of the 15-member Council of State, and Major João Bernardo Vieira was confirmed as the nation’s vice president and as president of the National Assembly.

On 14 November 1980, President Cabral, a mestiço with close ties to Cape Verde, was overthrown by a group of Guinean blacks under Vieira’s command. Severe food shortages and tensions in the alliance between Guinea-Bissau and Cape Verde had precipitated the bloody military coup, which led to the dissolution of the National Assembly and Executive Council, suspension of the constitution, arrest of the president, and temporary abandonment of the goal of unification with Cape Verde. A Revolutionary Council composed of nine military officers and four civilian advisers was named on 19 November, and a provisional government was ap-

LOCATION: 10°52' to 12°42' N; 13°38' to 16°43' W. BOUNDARY LENGTHS: Senegal, 338 kilometers (210 miles); Guinea, 386 kilometers (240 miles); Atlantic coastline, 398 kilometers (247 miles). TERRITORIAL SEA LIMIT: 12 miles.

pointed the following day. Diplomatic relations with Cape Verde, suspended at the time of the coup, were resumed in June 1982.

The National People’s Assembly, reestablished in April 1984, adopted a new constitution in May. It also elected a 15-member Council of State to serve as the nation’s executive body. As president of this council, Vieira served as both head of state and head of government. An abortive military coup took place in November 1985; in the aftermath, six persons were executed in July 1986 while another five died in detention. After ruling Guinea-Bissau as a one-party state for ten years, Vieira denounced single-party rule as elitist, inherently undemocratic, and repressive. In April 1991, Guinea-Bissau formally embraced multipartyism and adopted a new constitution. Four major opposition parties formed the Democratic Forum in January 1992 and sought to unseat PAIGC.

Elections scheduled for November 1992 were postponed until March 1993, giving the 11 opposition parties time to campaign and the multiparty electoral commission time to work out electoral procedures. They were again postponed until March 1994.

On 17 March 1993, João da Costa, the leader of the Party for Renovation and Development (PRD), was implicated in an attempted coup. On 4 February 1994, the supreme military court acquitted him.

In July 1994, Guinea-Bissau held its first multiparty legislative and presidential elections. João Bernardo Vieira was elected president, narrowly defeating Koumba Yala with 52% to 48% of the vote. The PAIGC led decisively in the Assembly elections with 46% of the vote. In October, Vieira appointed Manuel Saturnino da Costa prime minister. In 1995, a coalition of opposition parties reformed the Democratic Forum, appointing da Costa as its leader.

The PAIGC reelected Vieira as party leader in May 1998, but he was nearly overthrown in June when army mutineers staged an unsuccessful coup. The coup attempt triggered a brief but devastating civil war. Upon Vieira's request, Senegal and Guinea sent 3,000 troops to restore order. Bombardments destroyed the main hospital, damaged schools and markets, and displaced thousands. The World Food Program and the Red Cross provided emergency services to an estimated 130,000 of these victims. Under a peace agreement signed in Abuja in November, presidential and legislative elections were to be held before March 1999.

In May 1999, following the dismissal of General Ansumane Mané, troops loyal to the general stormed the presidential palace. Some 70 people died in the assault. Vieira took refuge at the French Cultural Center, and later sought asylum at the Portuguese Embassy. He was allowed to leave for Lisbon after renouncing the presidency and promising to return for trial. Malam Bacai Sanha presided over the interim government, which ended the 11-month civil war.

In November 1999, National Assembly elections took place, and in January 2000, Sanha lost to Koumba Yala in presidential elections judged free and fair. On 24 January, President Yala appointed his close friend, Caetano N'tchama, prime minister. Despite the elections, the country had a parallel government in the form of the military junta. In November 2000, Mané revoked Yala's military appointments and fighting erupted between forces loyal to the government and supporters of the junta. After regaining control, loyalist forces announced on 30 November that Mané had been killed.

Yet another crisis ensued in January 2001 when the Guinea-Bissau Resistance (or RGB/MB) withdrew from the government, charging that it had not been consulted over a cabinet reshuffle and calling for N'tchama's dismissal. N'tchama was fired in March, leaving a number of issues for his successor including the detention of about 130 members of the military accused of supporting Mané, and the alleged involvement of Guinea-Bissau in the Casamance conflict in neighboring Senegal. Health, education, and other social sectors were seriously underfunded, and underpaid civil servants were demanding higher wages. In addition, thousands of weapons were in private hands, and newly graduated young people had few or no prospects of employment after leaving school. Yala announced in December 2001 that his government had foiled yet another coup attempt.

In November 2002, Yala dissolved the parliament and named Mario Pires prime minister. Yala arrested his defense minister on 30 April 2003 on charges of plotting a coup, and in June he held emergency talks with disgruntled military leaders and key

ministers to prevent the collapse of his government. Under pressure from the UN Security Council to hold clean elections, Yala announced in June 2003 that parliamentary elections originally scheduled for 23 February and then pushed back to 20 April and then 6 July would be postponed yet again to August or September pending revision of the electoral roll. By July 2003, Yala's government owed six months in pay arrears to the army and civil service. In lieu of monetary remuneration, government workers were receiving payment in rice. In the words of the UN Secretary General Kofi Annan, the economy and government of Guinea-Bissau were on a precarious downward course.

Relations with Senegal have been strained over issues stemming from the Casamance conflict in Senegal, and over demarcation of the Bissauan-Senegalese border established by an agreement between Portugal and France in 1960. In 1992 and 1995, Senegalese warplanes bombed suspected rebel bases in Guinea-Bissau alleged to be safe havens for Casamance rebels. In March 1996, the two governments reached an initial accord, and in 1999 through the mediation of President Jammeh of The Gambia, leaders of the two sides concluded an agreement. However, skirmishes continued into 2001 necessitating the intervention of the UN Secretary General.

The dramas of political life in Guinea-Bissau would continue however. In September 2003, agreement was reached among the military and political parties to hold presidential and legislative elections. An interim civilian administration was also established, headed by President Henrique Rosa with Antonio Artur Rosa as prime minister. Elections followed in March 2004, which the PAIGC won. In October, the head of the armed forces was killed over problems that included outstanding wages. April 2005 saw the return from exile in Portugal of ex-president Joao Vieira, who had been toppled one decade earlier. The following month another former president, Koumba Yala deposed in 2003, declared he was still president; he also occupied the presidency building albeit briefly. The run-up to presidential elections in July 2005 was as uncertain as it was tempered by high-stakes intervention by international bodies. In the event, former military ruler Vieira was elected for a five-year term; he won 52% of the vote to defeat Malam Bacai Sanha, who polled 47.6%. The next presidential election was due in 2010.

## 13 GOVERNMENT

The 1973 constitution was suspended following the 1980 coup. A constitution was ratified on 16 May 1984 by the reestablished National People's Assembly. In April 1991 a new constitution, providing for a multiparty system, was adopted.

The Assembly and the regional councils are the nation's representative bodies. The popularly elected councils elect the 100-member Assembly from their own ranks, and the Assembly in turn elects a 15-member Council of State as the nation's executive body. The president of this council, whom the Assembly also elects, automatically becomes head of state, head of government, and commander-in-chief of the armed forces. Before multiple parties were authorized in 1991, all Assembly members had to be members of the ruling African Party for the Independence of Guinea and Cape Verde (PAIGC).

The president appoints the prime minister, who presides over the Council of Ministers. In March 2000, President Yala decid-

ed to assign five cabinet portfolios to the military junta to defuse tensions. He reshuffled and enlarged the cabinet in June 2003 ostensibly to broaden his political support. In September 2003, Yala was ousted in a bloodless coup led by the military chief, who complained about worsening economic and political conditions, including increasing hostility to media houses as well as journalists perceived to be opposed to government. Legislative elections held in March 2004 left PAIGC in control. Shortly after taking power in November 2005, President Vieira sacked the government of Prime Minister Carlos Gomes Junior. Aristides Gomes became prime minister.

#### **14 POLITICAL PARTIES**

Prior to 1991, the ruling African Party for the Independence of Guinea and Cape Verde (Partido Africano de Independência da Guiné e Cabo Verde—PAIGC) was the sole legal party in the Republic of Guinea-Bissau. During the presidency of Luis Cabral, hundreds of political opponents of the regime were reportedly murdered and buried in mass graves.

The 1980 coup was condemned by Cape Verdean leaders of the PAIGC, and in January 1981 they broke with the Guinea-Bissau branch to form the African Party for the Independence of Cape Verde. The following November, Guinean party officials decided to retain the name PAIGC for their branch and to expel Cape Verdean founder-members from the party.

Opposition parties were legalized by a new constitution adopted in April 1991. A dozen parties were recognized. Among them were: the Party for Renewal and Development (PRD), which was composed of educated dissidents who quit the PAIGC because of its authoritarianism; the Social Democratic Front (FDS), led by one of the founders of the PAIGC, Raphael Barbosa; the Front for the Struggle for Guinea-Bissau's National Independence, which predates PAIGC and was led by Mindy Kankoila, an early independence leader who had been in exile for 40 years; the National Convention Party (mainly Muslims and FDS dissidents); and the League for the Protection of the Ecology (LPE). The most important opposition party was Bafata, the Guinea-Bissau Resistance-Bafata Movement. Many parties prior to the general elections of 1994 formed a coalition, including the PRD, the FDS, the LPE, the Movement for Unity and Democracy (MUD), and the Democratic Party for Progress (PDP).

Free and fair legislative elections on 3 July 1994 gave the PAIGC a majority of 62 seats. The Guinea-Bissau Resistance (RGB-MB) was second in balloting with 19 seats, 12 for the Social Renovation Party (PRS), 10 for the Front for the Liberation and Independence of Guinea-Bissau, and 6 for the Union for Change Coalition.

In the November 1999 Assembly elections, the Partido da Renovacao Social (PRS), won 38 seats, the Resistencia da Guine-Bissau-Movimento Ba-Fata (RGB-MB) 28 seats, and the PAIGC 24 seats. Five parties garnered the remaining 12 seats in this election, which were part of the second consecutive set of free and fair competitive elections in Guinea-Bissau. Despite Yala's promises to form a government of national unity, the PRS and its ally, RGB-MB dominated the cabinet.

In the Assembly elections held on 28 March 2004, the PAIGC captured 31.5% of the vote, followed by PRS with 24.8%, and United Social Democratic Party with 16.1%. The Electoral Union won only 4.1% of the vote; APU got 1.3% and 13 other parties shared

22.2% between them. In terms of seats in the Assembly, PAIGC won 45, PRS got 35, and PUSD won 17. In turn, UE got 2 seats while APU won only 1 seat. The next Assembly elections were to be held in 2008.

#### **15 LOCAL GOVERNMENT**

Guinea-Bissau has 8 regions, not including the capital, and 37 sectors. Each region has a regional council, as does the capital, with membership consisting of elected representatives from the various sectors.

#### **16 JUDICIAL SYSTEM**

The civilian court system is essentially a continuation of the Portuguese colonial system. Nine Supreme Court judges are appointed by the president and serve at his pleasure. The Supreme Court has jurisdiction over serious crimes and serves as an appeals court for the regional military courts. State security cases are tried by civilian courts. Military courts try only cases involving armed personnel under the code of military justice. In rural areas, persons are often tried outside the formal system by traditional law. Dispute resolution before traditional counselors avoids the costs and congestion of the official courts.

The 1991 constitution guarantees many civil rights and fundamental freedoms, including freedom of speech and freedom of religion. The constitution provides for an independent judiciary, but its functioning is hampered by a lack of training, resources and by corruption. The president has authority to grant pardons and reduce sentences.

#### **17 ARMED FORCES**

In 2005, the armed forces had 9,700 active personnel, including a 2,000-man gendarmerie. The Army numbered 6,800 and was equipped with 10 main battle tanks and 15 light tanks. The 350-member Navy operated three patrol/coastal vessels. The 100-member Air Force had three combat capable aircraft that consisted of three fighters. The defense budget in 2005 was \$8.6 million.

#### **18 INTERNATIONAL COOPERATION**

Guinea-Bissau was admitted to the United Nations on 17 February 1974 and is a member of ECA and all the nonregional specialized agencies except IAEA. The nation is a member of the WTO and participates in the African Development Bank, the ACP Group, the African Union, ECOWAS, G-77, the West African Economic and Monetary Union, the Community of Sahel and Saharan States (CENSAD), the Alliance of Small Island States (AOSIS), the New Partnership for Africa's Development (NEPAD), and the Organization of the Islamic Conference (OIC). The nation is part of the franc zone and belongs to the Nonaligned Movement. In environmental cooperation, Guinea-Bissau is part of the Convention on Biological Diversity, Ramsar, CITES, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification. The country is also part of an Interstate Committee for Drought Control in the Sahel (CILSS).

#### **19 ECONOMY**

Guinea-Bissau is one of poorest countries in the world with 82% of the population relying on fishing and subsistence agriculture, and 88% of the population below the poverty line in 2002. The in-

dustrial sector is small, and mining is undeveloped. Offshore oil reserves that have not been exploited may be a source of income in the long term. Although firmly committed to market-style economic policies after an initial decade of socialist central planning, the government is burdened by a heavy external debt. Under the World Bank/IMF Heavily Indebted Poor Countries (HIPC) initiative, the net present value of Guinea-Bissau's total debt was to be reduced by 80% by 2003. By 2013, the level of debt was to be 43% lower than it would have been without help under the HIPC.

Cashews are the biggest cash crop, bringing in 95% of export revenues. The country is now the world's sixth-largest producer of cashews. Livestock produces adequate supplies of meat, and hides are among Guinea-Bissau's exports. Fishing prospects are excellent, but illegal fishing prevents a fuller realization of potential in this sector. Production and trade in forest products have been halted while implementation of reforestation policies occurs. In 1998, fighting between the government and a military junta brought chaos to the economy and halted most production: that year, GDP fell by 28%. Although the civil war had ended by 1999, in 2001 a fall in cashew prices and a decline in foreign assistance exacerbated the ailing state of the economy.

In 2002, the economy fell by -7.2%, but it bounced back in 2003, and by 2004 the GDP growth rate was 4.3%; in 2005, the economy was expected to expand by 2.3%. The inflation rate remains fairly stable and it does not pose a problem to the economy. The economic growth in recent years is largely due to emergency budgetary support funds, provided by the World Bank, the IMF, and the UNDP. In January 2005, the government announced that the country's vital cashew crop was threatened by a locust swarm.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Guinea-Bissau's gross domestic product (GDP) was estimated at \$1.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$800. The annual growth rate of GDP was estimated at 2.8%. The average inflation rate in 2002 was 4%. It was estimated that agriculture accounted for 62% of GDP, industry 12%, and services 26%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$18 million or about \$12 per capita and accounted for approximately 7.5% of GDP. Foreign aid receipts amounted to \$145 million or about \$98 per capita and accounted for approximately 63.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Guinea-Bissau totaled \$210 million or about \$141 per capita based on a GDP of \$239 million, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.3%.

## 21 LABOR

Guinea-Bissau's labor force numbered 480,000 in 2002, of which an estimated 82% of workers in 2000 were engaged in agricultural

activity. Primarily this consisted of subsistence farming. There was no data available on the country's unemployment rate.

The constitution grants workers the freedom to join and form trade unions, however, this affects a very small percentage of the population. Few workers outside of the public sector are organized. There were 11 registered labor unions in 2002. Workers are allowed to strike provided that they have given notice of their intention to do so. Collective bargaining is permitted but in practice does not occur.

Minimum wages are established but are not regularly enforced. The lowest legal monthly wage in 2002 was \$20, and this did not support a family. The minimum age for employment is 14 years but this is not enforced outside of the small formal economy. Many children work as street vendors or on farms in rural communities. Health and safety standards set by the government are not regularly enforced.

## 22 AGRICULTURE

The agricultural sector employs 83% of the labor force and contributes 64% of the GDP. Only 12% of the total land area is under permanent or seasonal cultivation. The country is divided into three major regions according to the water requirements of the major crops. On the coast and in river estuaries is the palm-tree (coconut) zone; rice is the predominant crop of the intermediary marshy areas; and peanuts are grown in the sandy areas of the interior. Rice is the major staple crop; corn, millet, and sorghum are also produced and consumed very widely. In the 1950s, Guinea-Bissau exported about 40,000 tons of rice per year; since 1962, rice has been imported, as frequent droughts often cause crop failure. In 2004, Guinea-Bissau produced 127,000 tons of rice, 22,000 tons of millet, 20,000 tons of peanuts, 45,000 tons of coconuts, 81,000 tons of cashew nuts, and 8,000 tons of palm kernels. Palm kernels, cashew nuts, and peanuts are the most important export crops. The war that culminated with independence in 1974 left the economy in shambles, reducing crop output by over one-third. Public investment, financed heavily by external borrowing, neglected agriculture to focus on the manufacturing sector. Agricultural recovery was hampered by inappropriate pricing policies, an overvalued exchange rate, and an inefficient marketing system. This policy has now been changed through price liberalization, so that some important goods like rice are now traded informally with neighboring countries. In 2004, trade in agricultural products consisted of \$40.5 million in imports and \$62.3 million in exports.

## 23 ANIMAL HUSBANDRY

Despite the damage wrought by the tsetse fly, cattle raising occupies many Guineans, especially among the Balante in the interior. In 2005, there were an estimated 530,000 head of cattle and 370,000 hogs, as well as 300,000 sheep and 335,000 goats.

## 24 FISHING

Fishing is slowly growing into a viable industry. Agreements allow the European Union countries to fish in national waters. Guinea-Bissau's own catch was an estimated 5,000 tons in 2003, with mullet accounting for 44%.

## 25 FORESTRY

Guinean forests and savanna woodland, covering about 60% of the country, primarily supply wood and timber for domestic consumption and fuel and construction material. Roundwood production was about 592,000 cu m (21,000,000 cu ft) in 2004, 71% used as fuel wood. Timber has become a feasible export, accounting for \$719,000 in 2004.

## 26 MINING

Mineral production (excluding natural gas and refined petroleum products) was not significant in 2004, and was limited to small-scale production of basalt, cement, clay, gold, limestone, salt, sand, silica sand, zircon, and laterites. Bauxite, diamonds, gold, and phosphate were economically promising minerals being explored; the Farim deposit had a phosphate resource of 166 million tons. Large deposits of bauxite, amounting to 200 million tons, were discovered in the Boé area in the late 1950s; lack of capital and transportation has hindered exploitation. The bauxite and phosphate resources were of low grade. Election of a new government in 2000 was seen as a step toward ending military conflicts that followed a 1998 military coup. The 1999 Mines and Minerals Act reformed mineral exploration and mine development and production, setting sizes and terms for exploration, mining, and prospecting leases.

## 27 ENERGY AND POWER

Guinea-Bissau has no known proven reserves of oil or natural gas (as of 1 January 2003), coal, or any oil refining capacity. As a result the country must import whatever fossil fuels it consumes. In 2002, refined oil imports and consumption averaged 2,400 barrels per day. There were no imports of natural gas or coal in that year.

Guinea-Bissau's electric power is generated entirely by conventional thermal fuels. Electric generating capacity in 2002 came to 0.021 million kW, with output at 0.056 billion kWh and consumption at 0.052 billion kWh for that same year.

## 28 INDUSTRY

Industry constitutes a small part of Guinea-Bissau's economy, contributing approximately 15% a year to GDP. Industries include a sugar refinery and a rice and groundnut processing plant. Guinea-Bissau ranks sixth in the world in cashew production. Brewing and urban construction are also represented in the industrial sector.

In the late 1980s, Guinea-Bissau attempted to attract foreign interest in several enterprises—a fish-processing plant, a plywood and furniture factory, and a plastics factory. The government moved to raise producer prices and to partially privatize parastatal trading companies during the 1990s, but civil war in 1998 disturbed these plans. In 1999, production resumed with foreign aid.

Oil exploration began in the 1960s, and the oil industry presents hopeful prospects for the country. Guinea-Bissau is in the midst of a border dispute with Senegal over an offshore exploration area, and under a 1995 agreement, the area in dispute is jointly managed by the two countries. Proceeds from the area are divided between Senegal and Guinea-Bissau on an 85:15 ratio, and in the early 2000s, Guinea-Bissau was negotiating for better terms to the agreement.

In 2003, the industrial production growth rate was 4.7%, with industry contributing 12.1% to the overall GDP. Agriculture represents the largest sector in the country, with a 63.6% share in the GDP, and with an 83% share in the labor force; services come in second, with a 24.3% in the economy.

## 29 SCIENCE AND TECHNOLOGY

No information is available.

## 30 DOMESTIC TRADE

Under Portuguese rule, commercial activities were significant only in the cities. The PAIGC introduced chains of all-purpose "people's stores," communally owned and managed; some of these were handed over to private traders beginning in 1985. Product distribution to inland areas is conducted by private carriers and by barge via the Geba River.

The military conflict of 1998–1999 caused a great deal of damage to the nation's land and infrastructure, which in turn had a severe effect on the agriculturally based economy. Normal business hours in the capital are 8 AM to 12 noon and 3 to 6 PM, Monday–Friday.

## 31 FOREIGN TRADE

Cashew nuts account for 70% of exports in terms of revenue, followed by fish, peanuts, palm kernels, and sawed lumber. The lumber trade shrunk in the late 1990s due to deforestation, but the fish sector was expected to grow. Imports include industrial and commercial supplies, fuels and lubricants, and transport equipment. Imported foods, beverages, and tobacco often surpass in value that of all of Guinea-Bissau's exports.

In 2004, exports reached \$116 million (FOB—free on board), while imports grew to \$176 million (FOB). The bulk of exports went to India (52.2%), the United States (22.2%), and Nigeria (13.2%). Imports included food products, capital equipment, and petroleum products, and mainly came from Senegal (44.6%), Portugal (13.8%), and China (4.2%).

## 32 BALANCE OF PAYMENTS

Like Portuguese Guinea, Guinea-Bissau has had chronic balance-of-payments problems because of its huge annual trade deficit, which has persisted despite efforts to restructure trade by diversifying the range of commodities available for export and by establishing new trading partners and more favorable trade agreements. Foreign assistance is an essential element in meeting payments needs.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Guinea-Bissau's exports was \$80 million while imports totaled \$55.2 million resulting in a trade surplus of \$24.8 million.

The International Monetary Fund (IMF) reported that in 1997 Guinea-Bissau had exports of goods totaling \$49 million and imports totaling \$62 million. The services credit totaled \$8 million and debit \$26 million.

Exports of goods and services reached \$98 million in 2004, up from \$77 million in 2003. Imports grew from \$104 million in 2003 to \$138 million in 2004. The resource balance was consequently negative in both years, worsening from -\$10 million in 2003, to -\$11 million in 2004. The current account balance was also negative, slightly improving from -\$18 million in 2003 to -\$9 million

in 2004. Foreign exchange reserves (including gold) grew to \$204 million, covering almost a year and a half of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

A savings and loan bank and a postal savings bank, both domestically owned, operate in Bissau. There are no securities exchanges in Guinea-Bissau. On 2 May 1997, the Guinea-Bissau escudo was replaced by the CFA franc. A team of technical experts from the Banque central des états de l'Afrique de l'ouest (BCEAO, the regional central bank) trained senior officials from the Banco Central de Guiné-Bissau (BCGB) in the management and accounting methods required by UEMOA (the monetary union of the West African subregion of the franc zone).

The first investment bank in Guinea-Bissau, Banco Africano Ocidentale (BAO), was established in the first quarter of 1997 with joint Portuguese and Guinea-Bissau capital, and became the country's first commercial bank in 2001. In 1999, three executives at the BCGB were accused of embezzling \$4.3 million since Guinea-Bissau joined the Franc Zone.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$81.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$82.3 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

### 3<sup>4</sup> INSURANCE

No recent information is available.

### 3<sup>5</sup> PUBLIC FINANCE

The IMF-sponsored structural adjustment program in Bissau began in 1987 and projected the achievements of a 3.5% growth rate, reforms to the economy, and public administration. Petroleum subsidies were reduced in 1988. In January 1989, customs duties and taxes on imports were lowered to reduce inflation. At the end of that year, the debt-service ratio stood at 43% of exports. The foreign debt was rescheduled by all major donors that fall. Early in the 1990s, failure to meet adjustment goals stopped payments, and progress in the mid-1990s brought the resumption of aid. Foreign aid literally supported the incumbent government of 1999. At the end of 2000, the country qualified for almost \$800 million in debt relief. It will continue to receive assistance under the Heavily Indebted Poor Countries (HIPC) initiative. The currency was devalued in May 1987. In January 1990, Guinea-Bissau agreed with Portugal to adopt the escudo. Reform of the national banking system was underway after 1989. In 1997, the escudo was replaced by the CFA franc. Bank officials siphoned off millions of dollars from reserves. External debt totaled \$931 million.

The US Central Intelligence Agency (CIA) estimated that Guinea-Bissau's total external debt was \$941.5 million.

### Balance of Payments – Guinea-Bissau (2002)

(In millions of US dollars)

### 3<sup>6</sup> TAXATION

Current information is unavailable.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Import licenses are freely issued for most goods. Most imports are taxed, but luxury goods are more heavily taxed, while capital goods enjoy special treatment. Duties are applied ad valorem; some common ones are rice (10%), gasoline (55%), diesel (15%), automobiles (40–95%), auto parts (36%), furniture (30%), and household appliances (25%). A 15–20% value-added tax (VAT) is also applied, as well as a 1% statistical tax and a 1% community solidarity tax.

### 3<sup>8</sup> FOREIGN INVESTMENT

As of June 1990, the government of Guinea-Bissau took new steps to encourage additional domestic and foreign investment. While key telecommunications, electricity, and infrastructure sectors remained under state control, others were to be privatized, including the brewery, the fishing industry, and the “people's shops” for retail trade. Bilateral and multilateral investment programs continue in each of the key productive sectors.

Guinea-Bissau's already low level of foreign direct investment (FDI) inflows (\$11 million in 1997) fell further with outbreak of civil war in 1998. FDI inflows were \$4.4 million in 1998 and \$8.6 million in 1999. With the return of an elected government in 2000, FDI inflows improved to \$23 million in 2000 and \$30 million in 2001.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

A main objective of the Guinea-Bissau government is the development of agriculture and infrastructure. Foreign aid averaged \$64.3

million per year from 1982–85. Multilateral aid accounted for almost half this sum, chiefly from the IDA. The first development plan (1983–88) called for self-sufficiency in food supplies, with 25% of a \$403.3 million investment going for construction and public works, 18% for rural development, and 14% for transport.

The second development plan (1988–91) was to be totally financed by foreign aid. Numerous countries and intergovernmental organizations have provided food aid, technical assistance, and balance-of-payments support.

In 1999, the prime minister toured Europe in search of aid. Portugal contributed \$4 million, Sweden \$2.3 million, and the total of the donor community's commitments reached over \$200 million. Rebuilding of the capital city, replacement of one-quarter of a million refugees, investment in infrastructure, and financing of the external debt, were among the goals of foreign aid slated for economic development.

In 2000, Guinea-Bissau qualified for almost \$800 million in debt service relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative, geared toward reducing poverty and stimulating economic growth. That year, it negotiated a three-year \$18 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF to support the government's 2000–03 economic reform program. Following approval of the assistance, the IMF stated the country had lost budgetary control, with large unauthorized expenditures, particularly on defense. A drop in world cashew prices and a loss of foreign program financing in 2001 resulted in a decrease in economic activity. The country in 2003 had yet to fully recover from the 1998–99 civil war.

Economic growth prospects for 2006–2007 are relatively modest, and are to a large extent dependent on the availability of international donor assistance, and on good weather for the cashew crop. Food prices, the largest component of the consumer price index, will have to be kept in check or they will negatively affect the inflation rate.

#### 40 SOCIAL DEVELOPMENT

Provision of health services, including maternal and child care, nutrition programs, environmental sanitation, safe water distribution, and basic education, is a social goal of the Guinea-Bissau government. There is no formal social welfare system in place.

Although officially prohibited by law, discrimination against women persists, especially in areas where Islamic law is dominant. Women have little access to education, and are responsible for most of the work on subsistence farms. The illiteracy rate for women is 82%. Domestic abuse against women is not only widespread, but also socially acceptable as a means of settling domestic disputes. As of 2004, female genital mutilation was an increasingly common practice.

Some cases of arbitrary detention and the use of excessive force were reported, and members of the security forces were not held accountable for abuses of detainees' rights.

#### 41 HEALTH

The health care system is inadequate. Aid from UNICEF and the World Health Organization has enabled Guinea-Bissau, one of the poorest countries in the world, to strengthen its health management and decentralize the health system in the country. The emphasis is on preventive medicine, with small mobile units serving the rural areas. Children were vaccinated against tuberculosis, 95%; diphtheria, pertussis, and tetanus, 74%; polio, 68%; and measles, 65%. Approximately 53% of the population had access to safe water and only 21% had adequate sanitation. As of 2004, there were an estimated 17 physicians, 109 nurses, 1 dentist, and 1 pharmacist per 100,000 people. The birthrate was an estimated 38.9 per 1,000 people as of 2002 and the general mortality rate was 15.1 per 1,000 people. Infant mortality was estimated at 107.15 deaths per 1,000 live births in 2005. Life expectancy was 46.61 years in that year. An estimated 20% of all births are low birth weight. The fertility rate was 5.8 children for each woman during her child-bearing years.

The HIV/AIDS prevalence was 10.00 per 100 adults in 2003. As of 2004, there were approximately 17,000 people living with HIV/AIDS in the country. There were an estimated 1,200 deaths from AIDS in 2003.

#### 42 HOUSING

Most traditional housing units are made of adobe, mud, and/or *quirinton*, a combination of woven branches and straw. Most of these units use petrol lamps for lighting; they do not have a sewage system or septic tank and water is usually available from wells or springs. Though most of the population lives in rural areas, recent migration to urban areas has accounted for urban housing shortages. In 1998, civil unrest in the capital forced about 300,000 residents out of their homes and about 5,000 homes were destroyed. As of the end of 1999, 50,000 of these people were still displaced. In 2001, there were about 7,000 refugees in the country as well, mostly from Senegal. Many of these have been placed in temporary camp shelters.

#### 43 EDUCATION

The 1998–99 civil war severely disrupted education, closing schools and keeping most of the country's children out of school for at least half a year. In 2000, UNICEF requested \$5.22 million to rebuild and refurbish damaged primary schools, buy teaching materials and school supplies, train teachers, and provide other types of aid. Education is compulsory between the ages of 7 and 13. Primary school studies cover six years, followed by five years of secondary school.

In 2001, about 3.2% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2001 was estimated at about 45% of age-eligible students, 53% for boys and 37% for girls. The same year, secondary school enrollment was about 9% of age-eligible students, 11% for boys and 6% for girls. It is estimated that about 27.7% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 44:1 in 2000; the ratio for

secondary school was about 14:1. In 2000, private schools accounted for about 19% of primary school enrollment and 12.8% of secondary enrollment.

Amilcar Cabral University, the first public university in the nation, was established in 2003. The University of Colinas de Boe, a private university, also opened in 2003. The adult literacy rate for 2003 was estimated at about 42.4%, with 58.1% for men and 27.4% for women.

As of 2003, public expenditure on education was estimated at 2.1% of GDP, or 4.8% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Institute of Studies and Research (Instituto Nacional de Estudos e Pesquisa—INEP) in Bissau maintains a collection of 40,000 volumes and includes national archives and a museum. The Museum of Guinea-Bissau, also in Bissau, has a library of 14,000 volumes and maintains collections of interest in the fields of ethnography, history, natural science, and economics. There are municipal libraries in major cities. There are two museums in Bissau, the Museum of Portuguese Guinea and the National Ethnographic Museum.

#### 45 MEDIA

In 2003, there were an estimated 8 mainline telephones for every 1,000 people. The same year, there was 1 mobile phone in use for every 1,000 people.

The main radio network is the government's Radiodifusão Nacional de Guiné-Bissau. There are however, several independent radio stations. One national television station broadcasts from 7 pm to midnight on weekdays and 5 pm to midnight on weekends. In 2000, there were 44 radios for every 1,000 people. In 2003, there were an estimated 178 radios and 36 television sets for every 1,000 people. The same year, about 15 of every 1,000 people had access to the Internet.

The government-owned daily, *Voz da Guine*, in Portuguese, had an estimated circulation of 6,000 in 2002. Privately owned newspapers (published once or a few times a week) include *Diario de Bissau*, *Banobero*, *Gazeta de Noticias*, *Fraskera*, and *No Pintcha*. These newspapers often delay publications due to financial constraints and dependence on the state-owned printing house, which often lacks supplies.

The constitution provides for free speech and free press, though journalists are said to practice self-censorship to avoid government pressures.

#### 46 ORGANIZATIONS

The constitution of 1991 made freedom of association for non-government organizations legal for the first time. Since that time, several human rights organizations have formed, including the Center for Judicial Information and Orientation, the Guinean Association for Studies and Alternatives, and the Guinean League for Human Rights, which emphasizes women's rights. Youth organizations are coordinated by the umbrella organization of the National Network of Youth Organizations of Guinea Bissau. Sports

associations are also active. There are national chapters of the Red Cross Society and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Game shooting, a major attraction for many travelers in Africa, is popular in Guinea-Bissau. Game is abundant in the open country, as well as in the more hazardous forest and jungle areas. The traditional practices of various ethnic groups also interest and attract tourists. The island of Bubaque and the town of Bolama are cited for their charm and beauty. All visitors need a valid passport and a visa secured in advance to enter Guinea-Bissau, as well as an onward/return ticket. Travelers from an infected area and most of Africa and South America are required to have evidence of a yellow fever vaccination.

#### 48 FAMOUS GUINEANS

The best-known Guinean of recent years was Amilcar Cabral (1921–73), a founder of PAIGC, its first secretary-general, and a key figure in the war for independence until he was assassinated. Luis de Almeida Cabral (b.1931), a cofounder of the liberation movement in September 1956 and the younger brother of Amilcar Cabral, subsequently became the first president of Guinea-Bissau; after release from detention by the Revolutionary Council in December 1981, he left the country. João Bernardo Vieira (b.1939), leader of the Revolutionary Council, came to power in the 1980 coup. Vieira was deposed by rebels in 1999, but made a political comeback in 2005, winning election as president.

#### 49 DEPENDENCIES

Guinea-Bissau has no territories or colonies.

# KENYA

Republic of Kenya  
*Jamhuri ya Kenya*

**CAPITAL:** Nairobi

**FLAG:** The flag is a horizontal tricolor of black, red, and green stripes separated by narrow white bars. At the center is a red shield with black and white markings superimposed on two crossed white spears.

**ANTHEM:** *Wimbo Wa Taifa (National Anthem)*, beginning “Ee Mungu nguvu yetu, ilete baraka Kwetu” (“O God of all creation, bless this our land and nation”).

**MONETARY UNIT:** The Kenya shilling (Sh) is a paper currency of 100 cents; the Kenya pound (KE) is a unit of account equivalent to 20 shillings. There are coins of 5, 10, and 50 cents, and 1 and 5 shillings; and notes of 5, 10, 20, 50, 100, and 200 shillings. Sh1 = \$0.01309 (or \$1 = Sh76.38) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; Madaraka Day, 1 June; Kenyatta Day, 20 October; Uhuru (Independence) Day, 12 December; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, ‘Id al-Fitr, and ‘Id al-’Adha.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the eastern coast of Africa, Kenya lies astride the equator. Its total area, including 11,230 sq km (4,336 sq mi) of water, is 582,650 sq km (224,962 sq mi), with a maximum length of 1,131 km (703 mi) SSE–NNW and a maximum width of 1,025 km (637 mi) ENE–WSW. Comparatively, the area occupied by Kenya is slightly more than twice the size of the state of Nevada. Kenya is bounded on the N by Sudan and Ethiopia, on the E by Somalia, on the SE by the Indian Ocean, on the S by Tanzania, and on the W by Lake Victoria and Uganda, with a total land boundary length of 3,477 km (2,161 mi) and a coastline of 536 km (333 mi).

Kenya’s capital city, Nairobi, is located in the south-central part of the country.

## <sup>2</sup> TOPOGRAPHY

Kenya is notable for its topographical variety. The low-lying, fertile coastal region, fringed with coral reefs and islands, is backed by a gradually rising coastal plain, a dry region covered with savanna and thornbush. At an altitude of over 1,500 m (5,000 ft) and about 480 km (300 mi) inland, the plain gives way in the southwest to a high plateau, rising in parts to more than 3,050 m (10,000 ft), on which most of the population and the majority of economic activities are concentrated. The northern section of Kenya, forming three-fifths of the whole territory, is arid and of semidesert character, as is the bulk of the southeastern quarter.

In the high plateau area, known as the Kenya Highlands, lie Mt. Kenya (5,199 m/17,057 ft), Mt. Elgon (4,310 m/14,140 ft), and the Aberdare Range (rising above 3,962 m/13,000 ft). The plateau is bisected from north to south by the Great Rift Valley, part of the geological fracture that can be traced from Syria through the Red Sea and East Africa to Mozambique. In the north of Kenya the valley is broad and shallow, embracing Lake Rudolf (Lake Tur-

kana), which is about 207 km (155 mi) long; farther south the valley narrows and deepens and is walled by escarpments 600–900 m (2,000–3,000 ft) high. West of the Great Rift Valley, the plateau descends to the plains that border Lake Victoria. The principal rivers are the Tana and the Athi, both flowing southeastward to the Indian Ocean, and the Ewaso Ngiro, which flows in a northeasterly direction to the swamps of the Lorian Plain.

## <sup>3</sup> CLIMATE

The climate of Kenya is as varied as its topography. Climatic conditions range from the tropical humidity of the coast through the dry heat of the hinterland and northern plains to the coolness of the plateau and mountains; despite Kenya’s equatorial position, Mt. Kenya is perpetually snowcapped. The coastal temperature averages 27°C (81°F), and the temperature decreases by slightly less than 2°C (3°F) with each 300 m (1,000 ft) increase in altitude. The capital, Nairobi, at 1,661 m (5,449 ft), has a mean annual temperature of 19°C (66°F); at 2,740 m (9,000 ft) the average is 13°C (55°F). The arid northern plains range from 21°–27°C (70–81°F).

Seasonal variations are distinguished by duration of rainfall rather than by changes of temperature. Most regions of the country have two rainy seasons, the long rains falling between April and June and the short rains between October and December. Average annual rainfall varies from 13 cm (5 in) a year in the most arid regions of the northern plains to 193 cm (76 in) near Lake Victoria. The coast and highland areas receive an annual average of 102 cm (40 in).

## <sup>4</sup> FLORA AND FAUNA

The vegetation and animal life of Kenya reflect the variety of its topography and climate. In the coastal region coconut trees flourish, with occasional mangrove swamps and rain forest. The vast plains

of the hinterland and the northern regions are covered with grass, low bush, and scrub, giving way in the high-lying plains to typical savanna country of open grass dotted with thorn trees, and in the more arid regions to bare earth and stunted scrub. The highland areas are in parts densely forested with bamboo and valuable timber, the predominant trees being African camphor, African olive, podo, and pencil cedar.

Wildlife of great variety is to be found in Kenya, both in the sparsely populated areas and in the national parks and reserves that have been created for its protection. Elephant, rhinoceros, lion, zebra, giraffe, buffalo, hippopotamus, wildebeest, and many kinds of buck are among the large mammals that abound on the plains and along the rivers. Kenya's diverse bird species include cranes, flamingos, ostriches, and vultures.

As of 2002, there were at least 359 species of mammals, 344 species of birds, and over 6,500 species of plants throughout the country.

## 5 ENVIRONMENT

Deforestation and soil erosion are attributed to growing population pressure, which creates increased demands for food production and firewood. Drought and desertification (to which 83% of Kenya's land area is vulnerable) threaten potential productive agricultural lands. By the mid 1980s, Kenya had lost 70% of its original mangrove areas, with the remainder covering an estimated 53,000–62,000 hectares. Also of concern is the drop in water level at Lake Victoria. Some reports estimate that in the period of 1995–2005, the water level dropped by one meter. Around Lake Nakuru, there has been a great loss of vegetation and deforestation, which, like the situation of Lake Victoria, has likely been caused by drought and desertification.

Water pollution from urban and industrial wastes poses another environmental problem. Kenya has 20 cu km of renewable water resources with 76% used in farming activity and 4% used for industrial purposes. Only about 46% of the residents in rural areas and 89% of city dwellers have pure drinking water.

In an effort to preserve wildlife, the government has set aside more than 3.5 million hectares as national parks and game preserves. In 2003, 8% of Kenya's total land area was protected, including Mount Kenya National Park, which is listed as a natural UNESCO World Heritage Site. Kenya has five Ramsar wetland sites. Game hunting and trade in ivory and skins have been banned, but poaching threatens leopards, cheetahs, lions, elephants, rhinoceroses, and other species. It is illegal to kill an animal even if it attacks. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 33 types of mammals, 28 species of birds, 5 types of reptiles, 4 species of amphibians, 29 species of fish, 16 types of mollusks, 11 species of other invertebrates, and 103 species of plants. Endangered species included the Sokoke scops owl, Taita blue-banded papilio, Tana River mangabey, Tana River red colobus, the green sea turtle, and the hawksbill turtle. There are 45 extinct species including the Kenyan rocky river frog and the Kenya oribi.

## 6 POPULATION

The population of Kenya in 2005 was estimated by the United Nations (UN) at 33,830,000, which placed it at number 34 in popula-

tion among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.2%, a rate the government viewed as too high. The projected population for the year 2025 was 49,357,000. The population density was 58 per sq km (151 per sq mi), but density varies significantly by region. About 75% of the population lives on only 10% of the land.

Kenya's population increased with remarkable rapidity in recent decades. According to UN estimates, the national total rose by 28% from 6,416,000 in 1950 to 8,189,000 in 1960; by 37% to 11,253,000 in 1970; by 46% to 16,466,000 in 1980; by 36% to 22,400,000 in 1987; by 24% to an estimated 27,885,000 in 1995; and by 21% to an estimated 33,830,000 in 2005.

The UN estimated that 36% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.67%. The capital city, Nairobi, had a population of 2,575,000 in that year. Mombasa, the chief seaport, had an estimated 900,000. Other large cities and their estimated populations were Nakuru, 333,800; Kisumu, 322,724; Eldoret, 246,900; Nyeri, 218,600; Machakos, 144,109; and Meru, 78,100.

The prevalence of HIV/AIDS has had a significant impact on the population of Kenya. The UN estimated that 15% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Throughout Kenya there is a slow but steady movement of the rural population to the cities in search of employment. Some Kenyans have emigrated to Uganda, and ethnic Somalis are present in significant numbers in Kenya's Northeastern Province.

Far-reaching migratory changes took place in the years immediately preceding and following independence. By 1961, the post-1945 trend of net European immigration was reversed, and in the three years that followed, approximately 29,000 Europeans left Kenya. Permanent emigration in 1964 reached 9,860, while permanent immigration totaled 5,406. In the first year of independence, some 6,000 Britons renounced their citizenship and applied for Kenyan citizenship; during the same period, approximately 70,000 persons living in Kenya—the majority of them Asians—were granted British passports. After the United Kingdom limited immigration by Asians in 1967, a crisis situation developed in Kenya. Work permits, without which Asians could not stay in the country beyond a limited period, were not issued, and the United Kingdom denied entry to Asians from Kenya who wanted to work in the United Kingdom. In 1973, the Kenya government served 1,500 notices of termination to Asian employees (there were 300 in 1972) and announced that by the end of 1974 it aimed to completely Kenyanize the country's retail and wholesale trade. In 1975, the Ministry of Commerce and Industry ordered the closing of 436 businesses, most of which belonged to Asians. Some 80,000 Asians were still living in Kenya at the time of the 1979 census, down from an estimated 180,000 in 1968.

In 2005, the net migration rate was -0.08 migrants per 1,000 population. The government views the immigration level as too high.

Kenya's refugee population includes Somalis, Sudanese, Ethiopians, Ugandans, and a smaller group comprised of various other nationalities. The total number of refugees was reduced from 420,000 in 1992 to 187,000 in June 1998. The decrease is mainly attributable to the repatriation of more than 155,000 refugees to Somalia and 70,000 to Ethiopia.

In 2004, Kenya was host to 249,310 refugees and asylum seekers. Of these, some 239,906 were refugees, 153,620 were from Somalia, over 64,000 from Sudan, and the remainder from Ethiopia. In that same year there were also 9,404 asylum seekers from Somalia, Ethiopia, the Democratic Republic of the Congo, and Uganda. Also in 2004, over 9,000 Kenyans sought asylum in South Africa, and more than another 1,000 in the United States, Canada, and the United Kingdom. According to *Migration News*, in December 2005 some 700,000 Sudanese refugees living in northwestern Kenya began to return. Since an agreement to end the fighting between southern Christians and Muslims who control the government in Sudan was signed in January 2005, already 250,000 refugees have returned.

## 8 ETHNIC GROUPS

African peoples indigenous to Kenya, who now form 98% of the population, fall into three major cultural and linguistic groups: Bantu, Nilotic, and Cushitic. Although most of the land area is occupied by Cushitic and Nilotic peoples, over 70% of the population is Bantu. The Luo, a Nilotic people, live in an area adjacent to Lake Victoria. Other Nilotes—Turkana, Maasai, Pokot, Nandi, Kipsigis, and Tugen—occupy a broad area in the west from Lake Rudolf to the Tanzania border. Cushites such as the Galla and Somali live in the eastern and northeastern parts of the country. The Bantu reside mainly in the coastal areas and the southwestern uplands; the most significant Bantu peoples are the Kikuyu, Kamba, and Luhya. The Kikuyu, who constitute the largest single ethnic group in Kenya, live for the most part north of Nairobi and have played a major role in the nation's political and social development. The estimated proportions of the major groups are Kikuyu 22%, Luhya 14%, Luo 13%, Kalenjin 12%, Kamba 11%, Kisii 6%, and Meru 6%. Other Africans constitute 15% of the total population. These smaller groups include the Bajuni, Kijikenda, Digo, and Nubians.

Non-Africans (Arabs, Asians, and Europeans) account for no more than 1% of the population. The Arab community is centered on the Indian Ocean coast. The Swahili, a group of mixed Arab-Africans with a cultural affinity to the Arabs, also live in the coastal region. Most Asians in Kenya have origins traceable to the Indian subcontinent; living primarily in urban centers, they consist of at least 31 culturally separate groups but make up less than 0.4% of the nation's population. The European community, which has rebounded since the 1960s, is primarily of British origin. About 12% of the Europeans hold Kenyan citizenship. A 1984 law provides that people born in Kenya of non-Kenyan parents can no longer claim Kenyan citizenship.

## 9 LANGUAGES

Although there are linguistic groupings of very similar dialects, nearly all the African ethnic groups have their own distinct languages. Swahili, however, increasingly has become an East African lingua franca, and in 1974 it became Kenya's official language, along with English. English remains in wide use in business and government, and parliamentary bills must be drafted and presented in that language. Both Gujarati and Punjabi are widely used among the Asian community.

## 10 RELIGIONS

An estimated 66% of the population are Christians with about 28% belonging to the Roman Catholic church and 38% belonging to Protestant churches. About 7% are Muslim, with many living in the Northeastern Province, the Coast Province, and the northern region of the Eastern Province. About 1% are Hindu and the remainder practice traditional religions or local branches of Christianity. As in other African states with complex religious histories and some renewal of cultural self-consciousness, it is likely that a majority of ethnic Kenyans also hold some traditional African beliefs. Foreign missionary groups include the African Inland Mission (Evangelical Protestant), the Pentecostal Assembly of Kenya, the Southern Baptist Church, and the Missionary Society of Britain (Anglican).

The current constitution provides for freedom of religion and this right is generally respected in practice. The Constitution of Kenya Review Commission submitted a draft for a new constitution in March 2004 that would specifically recognize a separation between state and religion. Christians and Muslims were debating the possibility that the new constitution would grant special recognition to the Islamic court system. Religious organizations must register with the government Registrar of Societies; some small splinter groups have had their applications denied. Certain Muslim and Christian Holidays are celebrated as national holidays.

## 11 TRANSPORTATION

Kenya's railway system in 2004, operated by the Kenya Railways Corp., consisted of 2,778 km (1,726 mi) of narrow gauge railway, of which over half was made up by the main line between the Ugandan border and Mombasa, the chief port.

A modern installation, the port at Mombasa serves Uganda, Tanzania, Rwanda, Burundi, the DROC, and the Sudan as well as Kenya. A national shipping line, 70% state owned, was created in 1987. There is steamer service on Lake Victoria. In 2005, the merchant marine had three ships (1,000 GRT or over), totaling 6,049 GRT.

As of 2002, the road system comprised an estimated 63,942 km (39,771 mi), of which about 7,737 km (4,812 mi) were paved. The major road from Nairobi to Mombasa is well paved, and the government has undertaken a campaign to widen and resurface secondary roads. All-weather roads linking Kenya with the Sudan and Ethiopia have been completed. Over 80% of Kenya's total passenger and freight traffic use road transport. In 2003, there were 261,920 private passenger automobiles and 110,540 commercial vehicles.

In 2004, there were an estimated 221 airports in Kenya, only 15 of which had paved runways as of 2005. There are major inter-

national airports at Nairobi (Jomo Kenyatta) and Mombasa (Moi International). The Nairobi air terminal, opened in 1958 and expanded in 1972 to receive jumbo jets, is a continental terminus for international services from Europe, Asia, and other parts of Africa. Air travel and air freight also are accommodated at Malindi, Kisumu, and numerous smaller airstrips. Kenya Airways flies to other nations of East Africa, the Middle East, Europe, and the Indian subcontinent. In 2003, about 1.678 million passengers were carried on scheduled domestic and international airline flights.

## <sup>12</sup>HISTORY

Fossil remains show that humanlike creatures lived in the area of Lake Rudolf perhaps two million years ago. As early as the third millennium BC, cattle were being herded in what is now northern Kenya. Sometime in the first millennium BC, food-producing Cushitic-speaking peoples, possibly from the Ethiopian highlands, appeared in Kenya. During the Iron Age (c.AD 1000), the first Bantu speakers arrived, probably from points south and west, resulting in the retreat of Cushitic speakers. The Nilotic speakers entered at the end of the 16th century from the north or northwest, from southern Sudan, and perhaps from the western Ethiopian borderland.

After their arrival, most groups settled into a pattern of slow and gradual movement highlighted by spurts of expansionist activity. For example, the Eastern Bantu (Kikuyu, Meru, Kamba, Pokomo, Teita, and Bajuni), possibly after settling in the area between Lamu and the Juba River, dispersed throughout southern and coastal Kenya. By 1400, the Kikuyu had reached the area near Mt. Kenya; they were joined there by the Meru in the 1750s. The Western Bantu (Luhya and Gusii) developed from an influx of Kalenjin (1598–1625) and Bantu (1598–1733) migrants. Other peoples, including the Luo, developed a strong ethnic identity and protected themselves from intruders. But as their population increased between 1750 and 1800, conflict arose, clans broke down, and another wave of migration ensued.

The Cushitic and Nilotic peoples (represented by Kalenjin ancestors of the Pokot, Nandi, Kipsigis, Kony, and Tugen) and others (such as the Turkana, Teso, and Galla) participated in independent movements beginning in the 16th century and lasting into the 18th. By 1800, the Kamba, acting as the chief carriers and go-betweens, dominated an extensive intergroup long-distance trade network that linked the interior to the East African coast. The last migrants into the country were the Somali, who did not enter northeastern Kenya in great numbers until the late 19th and early 20th centuries.

Meanwhile, another set of migrants settled on the Indian Ocean coast. As in the interior, the newcomers replaced the original hunter-gatherer inhabitants. In the period prior to the birth of Christ, Egyptians, Phoenicians, Persians, and possibly even Indonesians visited the coast. By the 10th century the Bantu had settled the coastal region in what the Arabs called the Land of the Zenj (blacks). As the area flourished, a mixed population of Arabs and Africans combined in creating the Swahili culture, a culture marked by its own language, a devotion to Islam, and the development of numerous coastal trade centers. Swahili cities such as Kilwa, Mombasa, and Pate remained independent of one another and of foreign control and, although they had little contact with

the interior, grew wealthy from their mercantile contacts with India and Arabia.

Throughout the 16th century, following Vasco da Gama's landing at Malindi in 1498, the coastal cities struggled to remain independent of the external threats posed first by the Portuguese and then by the Omani Arabs. Although the Portuguese established posts and gained a monopoly of the trade along the Kenya coast, the Arabs eventually succeeded in driving out the Portuguese and reestablishing Arab authority in 1740. Independent Arab settlements persisted for a century until, during the rule (1806–56) of Sayyid Sa'id, a kind of unity was established. Arab control even in the 19th century continued to be confined to the coastal belt, however. In 1840, Sayyid Sa'id moved the capital of his sultanate to Zanzibar.

Europeans began to assert their influence in East Africa. After jostling with the Germans and the Italians for Zanzibari favors, the British emerged with a concession for the Kenya coast in 1887. European penetration of the interior had begun decades earlier with the explorations of two German missionaries, Johannes Rebmann and Johann Ludwig Krapf, in 1847–49, and by the English explorer John Hanning Speke at Lake Victoria in 1858. In 1886, the United Kingdom and Germany reached agreement on their respective spheres of influence in East Africa, and the Imperial British East African Company, a private concern, began establishing its authority in the interior two years later. In 1890, a definitive Anglo-German agreement was signed, and arrangements were made with the sultan of Zanzibar for protection to be extended to his mainland holdings. When the company failed in 1895, the United Kingdom assumed direct control over the "East African Protectorate". In December 1901, the railway linking Mombasa with Lake Victoria was completed, and in the following year the boundary between Kenya and Uganda was shifted some 320 km (200 mi) westward to its present position. European and Asian settlement followed the building of the railway, and by World War I the modern development of Kenya was clearly evident. In 1920 the protectorate, with the exception of the coastal strip (later ceded by Zanzibar), was declared a crown colony.

In the interwar years, the major challenge to European political power came from Asians who wanted equality with Europeans in governmental representative institutions. This challenge was successfully resisted, but in the postwar period a more dynamic threat came from African nationalism.

### The Struggle for Independence

Africans made use of both legal and nonlegal methods in their struggle for power with the Europeans. The first efforts ended in the eruption of the Mau Mau movement, and a state of emergency was declared in October 1952. Supported primarily by the Kikuyu, Embu, and Meru tribes of Central Province, Mau Mau was a secretive insurrectionary movement that rejected the European domination over Kenya. The emergency lasted until late 1959, and cost over UK£55 million. At one time, more than 79,000 Africans were detained, and about 13,000 civilians (almost all African) were killed.

During the initial period of the emergency in 1954, the "Lyttelton" multiracial constitution was imposed on Kenyan political groups unable to agree among themselves. It provided both for African and Asian participation in a council of ministers with Eu-

LOCATION: 4°30' N to 4°30' S; 34° to 42° E. BOUNDARY LENGTHS: Sudan, 306 kilometers (190 miles); Ethiopia, 779 kilometers (484 miles); Somalia, 682 kilometers (424 miles); Indian Ocean, 523 kilometers (325 miles); Tanzania, 769 kilometers (478 miles); Lake Victoria, 138 kilometers (86 miles); Uganda, 772 kilometers (480 miles). TERRITORIAL SEA LIMIT: 12 miles.

Europeans and a system of communal representation for each racial group, with a formula of equality of representation in legislative and executive institutions between Europeans and non-Europeans. The introduction of direct elections for Africans to the Leg-

islative Council in 1957 was their first outstanding political gain. With the 1960 "MacLeod" constitution came an African-elected majority in the Legislative Council; this represented a decisive shift in the direction of an African-controlled state of Kenya. Rap-

id advancement toward self-government and independence under African leadership was delayed, however, because of conflicts between the two major African political parties over the future constitutional structure of the country. A constitutional conference in London in early 1962 produced a “framework” constitution, which included formation of a national government representing both political parties. Following new national elections under this constitution in May 1963, Kenya became self-governing on 1 June. On 12 December 1963, Kenya became independent. Exactly one year later it became a republic within the Commonwealth of Nations, with Jomo Kenyatta as the country’s first president. His political party, the Kenya African National Union (KANU), dominated the government, and leaders of a rival party, banned in 1969, were detained. On the other hand, some electoral choice was permitted: although all parliamentary candidates in 1969, 1974, and 1979 were KANU members, more than half the incumbents were unseated in the balloting.

An East African Community united Kenya, Tanzania, and Uganda in a common market and customs union until it was dissolved in 1977. Kenya has maintained remarkable political stability, despite territorial disputes with the Somali Democratic Republic, which resulted in sporadic fighting (1963–1968); and with Uganda (1970s). Tanzania closed its borders with Kenya between 1978 and 1983 because Kenya allegedly harbored Idi Amin’s supporters after his fall.

Kenyatta died on 22 August 1978 and was succeeded by his vice president, Daniel Arap Moi, who was elected president without opposition a month later. In June 1982, the National Assembly voted unanimously to make Kenya formally a one-party state. On 1 August 1982, a group of junior air force officers, supported by university students and urban workers, attempted a military coup. Looting in Nairobi, particularly of Asian-owned stores, continued for days. This resulted in more than 500 people reported killed, dissolution of the entire 2,100-member air force, closing of Nairobi University, jailing of almost 1,000 persons, conviction and sentencing to death of 12 conspirators in the following months, and their reported execution in 1985. President Moi ran unopposed in the elections of September 1983; in the National Assembly voting during the same month, five cabinet ministers and 40% of all incumbents went down to defeat.

In 1986, Moi declared that KANU was above government, the parliament and the judiciary. Critics of Moi, even within KANU, were expelled from the party and government repression widened. Many opposition leaders were detained in July 1990 and in 1991 (including former vice president, Oginga Odinga), and clashes between pro-democracy demonstrators and police left five dead.

### The Advent of Multiparty Democracy

As pressures mounted for political reform, the United States and 11 other donor nations pressed Moi to reduce government corruption, to improve its poor human rights record, and to institute economic reforms. In 1991, these donors withheld more than \$350 million in aid. In December 1991, Moi and his party legalized multiparty politics, but opposition to Moi and civil unrest continued. Ethnic violence from 1991 to 1994 in the Rift Valley left over 3,000 Kikuyu and Luo dead, allegedly the work of “trained warriors” from Moi’s ethnic group. In 1993, Africa Watch, a US-based human rights group, reported that as many as 1,500 Kenyans have

been killed and over 300,000 displaced as a result of ethnic violence instigated by Moi’s regime in the Rift Valley. In the lead-up to the 1997 general elections, ethnic fighting flared up in Mombassa, claiming over 42 lives. The death toll of these clashes pales in comparison to the Hutu-Tutsi genocide, but the social friction they have caused provided Moi with what he termed “proof” that the country is too fractured along tribal lines to allow true multiparty democracy.

In Nairobi in January 1992, more than 100,000 attended the first legal antigovernment rally in 22 years. Through the years, the Forum for the Restoration of Democracy (FORD) had emerged as the main opposition. But a conflict between Kenneth Matiba and Odinga signaled ethnic divisions in the run-up to elections required by 21 March 1993. Moi, exploiting those weaknesses, delayed the elections until December. The opposition, divided into eight parties, saw its initial support fade away. Although the late December elections were generally peaceful, Matiba, Odinga, and Mwai Kibaki, of the Democratic Party of Kenya, refused to accept the results. Moi was reelected with 37% of the vote; Matiba had 26%, Kibaki 19%, and Odinga 17%. For the National Assembly, KANU won 100 of the 188 seats; FORD-Kenya, 31; FORD-Asili, 31; and DP, 23. However, many of Moi’s cabinet ministers were defeated in their parliamentary contests.

Moi continued to demonstrate his authoritarianism in 1994 and 1995, as opposition groups struggled among themselves to present a united front. Moi’s overtly heavy security apparatus stepped up internal oppression, leading the Kenyan Human Rights Commission to report that in the first nine months of 1995, security forces murdered 74 Kenyans in detention, 12 of whom were killed by torture. Violence conducted by unofficial Moi-supported gangs continued as well.

Despite this, opposition forces became vocal as the 1997 elections neared, demanding constitutional reform. Primary among the demands was a constitutional convention and at the very least parliamentary action limiting the powers of the president, and an electoral reform providing for a runoff election if no presidential candidate received more than 50% of the vote—a virtual certainty. Moi, elected with only 36% of the vote in 1992, publicly acknowledged the need for such reforms, but repeatedly postponed any action. This further inflamed opposition parties, and as protests grew more violent, Moi’s repression followed suit. By 9 September 1997, over 70 people had been killed in demonstrations, including 7 protestors killed by police in July in a massive Nairobi demonstration that saw police beating religious leaders inside the Kenya Presbyterian Church at midday. Images of bloodied clerics fleeing armed mobs in the international media outlets led to harsher criticism, further marginalization, escalating civil unrest, and violence. Moi refused to concede to opposition demands, insisting that democratic reforms would lead to the splintering of the country.

On 29 and 30 December 1997, Kenyans went to the polls without constitutional or electoral reform. Again, early hopes of a united opposition victory were dashed as divisions reemerged. Over nine parties split the opposition vote. Moi was reelected with 40% of the vote; Mwai Kibaki of the Democratic Party (DP) had 31%; National Democratic Party’s (RDP) Raila Odinga had 11%; FORD-Kenya’s M.K. Wamalwa had 8%; and Charity Kaluki Ngilu of the Social Democratic Party (SDP) had about 8%. Of the 210

seats of the National Assembly, KANU won 108; DP, 39; NDP, 21; FORD-Kenya, 17; SDP, 15; Safina and three other parties shared 7 seats.

Following the 1997 elections, civil unrest continued, crime and corruption increased, while the AIDS pandemic claimed at least 600 lives per day. In February 2000 the British Foreign Office minister in charge of Africa, Peter Hain, referred to corruption in Kenya as "the economic equivalent of AIDS". Still, Moi managed to survive a vote of no confidence moved by opposition MPs in October 1998. After 30 months of snubbing the IMF, the Kenyan government finally resumed formal relations with the IMF and in mid-January 2000, the IMF Board voted to resume aid to Kenya. The reestablishment of the East African Common Market was expected to increase trade among the three sister countries.

The opposition and civil society coalesced over the issue of constitutional reform. Bowing to mounting pressure and civil unrest, Moi finally consented to a Constitutional Review Commission Amendment Act, which became effective on 29 January 1999. However, squabbling over who should lead the review process delayed action into 2003.

Following much speculation, Moi went on record saying he would retire at the end of his term in 2002. Although it appeared in April 2002 that elections would be postponed for a year to allow for the drafting of the constitution, the polls were held on 27 December 2002. Mwai Kibaki's landslide victory with 62.2% of the vote over Moi's hand-picked candidate Uhuru Kenyatta with 31.3% ended 24 years of KANU rule under Moi. In the parliamentary vote, Kibaki's National Rainbow Coalition (NARC) won 125 directly elected and seven appointed seats for a total of 132 seats, compared to 64 directly elected and 4 appointed seats for KANU in a parliament of 224 seats. Overall the polls were judged peaceful, free, and fair. The next elections were scheduled to be held in 2007.

President Kibaki campaigned on a policy of generating economic growth, improving education, combating corruption, and implementing a new constitution. With international aid flowing back into Kenya, there have been some major achievements with reference to economic growth and improvements in the educational system. However, the constitutional process proceeded much slower due to disagreements between the partners in the current coalition government. The Democratic Party (DP) led by Kibaki and National Alliance Party of Kenya (NAK) faction allied with Kibaki, favored a strong centralized presidential system, while the Liberal Democratic Party (LDP) faction—with fewer parliamentary seats in the coalition than the other two parties—preferred a federal parliamentary system with a strong prime minister while weakening the role of the president.

Raila Odinga, the leader of LDP, had hopes to become prime minister but the proposed new constitution was modified by the government during the Moi regime. The amendments retain a strong president, who controls a weaker prime minister. This resulted in a split between NAK and LDP, with the former campaigning for a "Yes" vote in the referendum on the constitution and the latter a "No". Uhuru Kenyatta's KANU party, which ruled Kenya for most of the postindependence era until its ouster in the 2002 elections was also vigorously campaigning for a "No" vote to the modified constitution. It was thought by some that the political wrangling and alignment over the referendum for the new consti-

tution would imply a wider realignment before the 2007 elections. In addition to these disagreements, there was also a lack of progress in tackling the problem of corruption and the donor nations, particularly the British, strongly criticized the Kibaki government for lack of progress on this front.

### **13 GOVERNMENT**

According to the constitution of 1963, as subsequently amended, the government of Kenya is led by a president who is chief of state, head of government, and commander-in-chief of the armed forces. The president is elected to serve a five-year term; he may, however, dissolve the National Assembly during his term, or the National Assembly may dissolve itself by a vote of no confidence, in which case a new presidential election must also be held. The president appoints the members of the cabinet (the vice president and the heads of the various ministries) from among members of the Assembly. The Assembly is barred by edict of the speaker from debating the conduct of the president. The cabinet is carefully balanced to maintain a multiethnic image, and the allocation of assistant ministerships is part of the communally arranged patronage system.

The unicameral National Assembly—established when the Senate and House of Representatives were merged by constitutional amendment in 1967—consisted in October 2005 of 210 members elected for a maximum term of five years, plus 12 national members nominated by the president and selected by parties in proportion to their parliamentary vote totals. In addition, the speaker of the Assembly and the attorney general are ex-officio members. Technically, MPs are allowed to introduce legislation, but in fact it is the attorney general who does so. Suffrage is universal at age 18.

The constitution recognizes the principle of maximum allocation of governmental powers to local authorities, and provision is made for the establishment of provincial assemblies with local administrative powers. The central government may abridge or extend the powers of local government in the national interest. The next elections were scheduled to take place in 2007.

### **14 POLITICAL PARTIES**

Following a constitutional conference at Lancaster House in London in February 1960, two national African parties were formed, the Kenya African National Union (KANU) and the Kenya African Democratic Union (KADU). The fundamental difference between the two parties resided in the fact that KANU tended to represent those persons and tribes that were most closely associated with an urban-oriented nationalism and sought a highly centralized political system for Kenya, while KADU represented the more rural and pastoral tribes, who feared a concentration of power by any central government. The political conflicts between these two parties tended to become identified with tribalism, since each party had a core group of tribes committed to it. In the national elections of May 1963, KANU won a majority of seats in both houses of parliament, and its leader, Jomo Kenyatta, assumed power. KADU dissolved itself voluntarily in 1964 and joined KANU.

Since 1964, KANU has dominated Kenyan politics. In March 1966, 30 KANU members of the House announced that they had formed an opposition party, later named the Kenya People's Union (KPU), led by Oginga Odinga, a Luo, who had resigned his post as

vice president. By-elections for the 30 seats, held in June 1966, resulted in the KPU's retention of only 9. In July 1969, Tom Mboya, the minister of economic planning, was assassinated. His death touched off old animosities between his tribe, the Luo, and the politically dominant Kikuyu, to which Kenyatta belonged. The government used the pretext of the assassination to ban the KPU and jail Odinga and other opposition leaders. In the 1969 elections, Kenyatta—who ran unopposed—and the KANU slate were returned to power. All parliamentary candidates also were KANU members in 1974 and 1979; however, there were many more candidates than constituencies, and in all three elections a majority of incumbents were unseated.

Following reports that Odinga, who had been freed in 1971, was planning to form a new, Socialist-oriented party, the National Assembly on 9 June 1982 declared Kenya a one-party state. In the wake of the attempted coup that August, Odinga was again detained, and treason charges were brought against his son, Raila Odinga, dean of the engineering school of the University of Nairobi. The treason charges were later dropped, but Oginga Odinga remained under house arrest from November 1982 to October 1983. By that time, presidential and parliamentary elections had been held, with some 900 KANU members vying for the 158 elective seats.

A clandestine dissident group known as Mwakenya was founded in 1981. In 1986, 44 persons were being held in connection with this group, 37 of whom were convicted of sedition. Other underground opposition groups emerged in the 1980s and in 1987 many joined to form the United Movement for Democracy (UMOJA, Swahili for unity).

In December 1991, the Moi government decided to end KANU's monopoly on legal political activity. A grand coalition known as the Forum for the Restoration of Democracy (FORD) was formed, but, before the December 1992 election, it fragmented into two factions—FORD-Kenya, headed by Oginga Odinga and FORD-Asili, led by Kenneth Matiba. The Democratic Party of Kenya (DP) was headed by Mwai Kibaki and the Kenya National Congress (KNC) by Chilube wa Tsuma. Three other parties were active, even in the face of persecution by Moi's police. In particular, government prevented opposition MPs, domestic and international human rights figures, and journalists from entering the security zones of the Rift Valley, where the government conducted a policy of ethnic cleansing against the area's non-Kalenjin population. In 1993 alone, the KANU-led government arrested 36 of the 85 opposition MPs.

In the run-up to the scheduled 1997 elections, opposition parties made a brief attempt at unity with the formation in 1995 of the united National Democratic Alliance. Factional bickering, however, rendered it stillborn. Also in 1995, the Safina Party was founded by Richard Leakey, the world-renowned paleoanthropologist and former head of the Kenya Wildlife Service, a post for which he was handpicked by President Moi. Leakey intended to organize an umbrella opposition party, but Moi promptly banned Safina. By 1996, however, several opposition parties had tentatively acknowledged their support of Safina. By March 1997 there were 26 registered political parties, but only 10 won parliamentary seats in the 1997 elections judged as fairly credible.

In the run-up to the 27 December 2002 elections, the opposition led by Mwai Kibaki organized a grand electoral alliance of

four parties, the National Rainbow Coalition (NARC). The four parties in this coalition were Democratic Party led by Mwai Kibaki, Forum for the Restoration of Democracy-Kenya, Liberal Democratic Party, and National Party of Kenya. This coalition was victorious in the December 2002 elections, which saw Mwai Kibaki being elected president of Kenya, defeating Uhuru Kenyatta. The seats won by party were as follows: NARC 125, KANU 64, FORD-P 14, and other 7; ex-officio 2; seats appointed by the president: NARC 7, KANU 4, and FORD-P 1.

## <sup>15</sup>LOCAL GOVERNMENT

Kenya is divided into seven provinces: Coast, Northeastern, Eastern, Central, Rift Valley, Nyanza, and Western. (The Nairobi area is separate and has special status.) These are subdivided into 63 districts, each headed by a presidentially appointed commissioner; provincial administration is closely supervised by the central government. There are two types of upper local authorities (municipalities and county councils) and four types of lower authorities (urban councils, township authorities, area councils, and local councils). The Nairobi area, administered by a city council, is the direct responsibility of the central government. Many of the councils raise their own revenues by taxes, construct and maintain roads, carry out public health schemes, construct and improve housing, support education, and provide agricultural and social welfare services.

## <sup>16</sup>JUDICIAL SYSTEM

The legal system is based on the 1963 constitution, the Judicature Act of 1967, and common law court precedent. Kenya accepts compulsory ICJ jurisdiction with reservations. Customary law, to the extent it does not conflict with statutory law, is used as a guide in civil matters concerning persons of the same ethnic group.

The judicial system consists of the Court of Appeal, which has final appellate jurisdiction, and subordinate courts. The High Court, sitting continuously at Nairobi, Mombasa, Nakuru, and Kisumu, and periodically at Eldoret, Kakamega, Nyeri, Kitale, Kisii, and Meru, consists of a chief justice and 24 associate judges, who are appointed by the president of the republic. The High Court has both civil and criminal jurisdiction, serving as an appellate tribunal in some cases and as a court of first instance in others. Lower courts are presided over by resident magistrates and district magistrates. Questions of Islamic law are determined by qadis' courts. Military courts handle court-martials of military personnel.

Although the constitution provides for an independent judiciary, the president has considerable influence over the judiciary. The president appoints the High Court Judges with the advice of the Judicial Service Commission. The president also has authority to dismiss judges, the attorney general, and other officials upon recommendation of a tribunal appointed by the president.

## <sup>17</sup>ARMED FORCES

Until 1963, Kenya's defense was the responsibility of the United Kingdom. On 10 December 1963, the withdrawal of British armed forces from Kenya was completed.

In 2005, Kenyan armed forces had 24,120 active personnel. The Army of 20,000 was equipped with 78 main battle tanks. The Navy had 1,620 personnel, including 120 Marines, and was equipped

with four patrol/coastal vessels. The Air Force had 2,500 personnel, 29 combat capable aircraft, including 9 fighters, and 11 attack helicopters. The 5,000-member national police had general service, air, and naval paramilitary units. Kenya contributed personnel to nine international peacekeeping missions, mainly in other African nations. In 2005, the defense budget totaled \$288 million.

## 18 INTERNATIONAL COOPERATION

On 16 December 1963, Kenya became a member of the United Nations; the nation participates in ECA and several nonregional specialized agencies, such as UNESCO UNHCR, IAEA, FAO, IRC, IMO, the World Bank, and WHO. Kenya is also a member of the African Development Bank, the ACP Group, the Commonwealth of Nations, COMESA, G-15, G-77, the WTO, the New Partnership for Africa's Development (NEPAD), and the African Union. President Daniel Arap Moi was OAU chairman during 1981–82 and 1982–83. Nairobi has become increasingly important as a headquarters for international agencies (including the secretariat of the UN Environment Program) and as a convention center for world organizations.

On 26 June 1980, Kenya signed an agreement with the United States allowing the latter access to air and naval facilities at Mombasa. Since the US embassy bombings in August 1998, the World Trade Center attacks on 11 September 2001, and the November 2002 hotel bombing in Mombasa, the two nations have solidified their common front against international terrorism. The administration of US president George W. Bush designated Kenya a strategic regional pillar in the American national security strategy, and renewed airbase, port access, and overflight agreements with the Kenyan government. In December 2002, US Secretary of Defense Donald Rumsfeld traveled to the region. Kenya receives 75% (\$15 million of \$20 million) of the funding authorized by the US Congress for counterterrorism in Africa.

The Kenyan government has played a key role in peace negotiations regarding the civil war in Sudan. On 9 January 2005, a Sudan North-South Comprehensive Peace Accord was signed in Nairobi. Likewise, the government has participated in negotiations to reinstate a central government authority in Somalia.

In environmental cooperation, Kenya is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Kenya's is an agricultural economy supported by a manufacturing sector, much of which dates from the pre-independence period, and a tourism sector, which is an important foreign exchange earner. Kenya has few mineral resources. Although Kenya is one of the most industrialized countries in East Africa, industry only accounts for around 13% of GDP. Kenya has a drought-prone agricultural sector in which maize is a principal staple crop, along with tubers—cassava, potatoes, and sweet potatoes. There is a shortage of arable land—only 12% is first-quality farm land—and little irrigation. Nonetheless, the country exports tea, coffee, cut flowers, and vegetables. Tea exports provide the largest share of foreign exchange earnings, followed by tourism. Horticultural produce and

tea are Kenya's two single most valuable exports, accounting for 25% and 23% respectively of domestic exports in 2004. Coffee exports were the third-largest source of foreign exchange earnings in 2002, due to a decline in world coffee prices and a decline in production, which was caused in part by mismanagement. However, coffee has declined in importance owing to the slump in world prices, and accounted for just 4.4% of domestic exports in 2004.

Kenya had one of Africa's strongest economies in the 1980s, posting growth rates of 5% annually. Kenya's economic performance was below potential in the 1990s owing to a variety of problems, including intermittent drought, poor economic management, rampant corruption, a lack of investment, a deteriorating infrastructure, and on-off donor relations. GDP per capita fell and poverty climbed. In the early 1990s, political turmoil and poor harvests slowed growth. Disagreements over the direction of future investments led to a suspension of foreign aid in 1992 resulting in low growth and high inflation. Under a structural adjustment program supported by the World Bank and International Monetary Fund (IMF) in 1993, Kenya strengthened its free market by abolishing price controls, removing import licensing requirements, and floating the currency. The end of most financial controls occurred in 1995. These reforms, together with a strong harvest, helped the economy to expand by 3% in 1994, 5% in 1995, and 4% in 1996.

In 1997 a drought caused continuing power interruptions, slowed business and manufacturing, and cast doubts on the country's ability to sustain growth. Flooding during 1998 caused industry slowdowns. At the same time, government corruption was threatening \$200 million in direct aid from the IMF and World Bank. The donor agencies' concern with official corruption was heightened in early 1996 when they learned that the government's request for a \$50-million low interest loan coincided with its purchase of a \$50-million private jet for the president. The purchase of the jet was a nonbudgeted expenditure hidden from the World Bank auditors. In August 1997, the IMF and World Bank, tired of Kenya's failure to clamp down on graft, ended talks on resuming aid, a move that resulted in cuts in bilateral aid programs. The government initiated its own Economic Recovery Strategy in September 1999 to improve public sector management.

Another drought in 1999–2000 caused water and energy to be rationed and reduced agricultural output. The IMF again provided loans to guide Kenya through the drought, but suspended them in 2001 when the government failed to implement anticorruption measures. Although ample rains returned in 2001, corruption—compounded with low investment and weak commodity prices—prevented any increase in economic growth. The new government installed after the elections of December 2002 committed itself to providing adequate education, a zero tolerance for corruption, and an economic environment conducive to domestic and foreign investment. However, the Kenyan economy continued to stagnate in 2002, real GDP growing by just 1.1%, compared with 1.2% in 2001. The sluggish performance was blamed on a number of factors, including election uncertainties, the continued suspension of donor assistance, low investor confidence, and the continuing deterioration in Kenya's infrastructure, which inflates business costs. The rise in oil prices in the second half of 2002 also did not help.

Despite hopes of an economic revival under the reform-minded Kibaki regime, economic growth continued to be sluggish in

2003, partly because of delays in securing a new agreement with the IMF. Real GDP growth increased to 2.8% in 2003, compared with 0.4% in 2002. In 2004 official data indicated that real GDP growth had increased to 4.3%. However, the average GDP growth for 2000–04 still remains modest, at 2.5% annually. The main contributors to real GDP growth of 4.3% in 2004 were transport and communications, wholesale and retail trade, and restaurants and hotels, all of which grew considerably faster than in 2003. The recovery continued to gain ground in 2005 with a 5.2% growth in GDP. This reflected a solid rise in international trade, the rapid roll-out of mobile phones, and a strong recovery in tourism.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Kenya's gross domestic product (GDP) was estimated at \$39.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,200. The average inflation rate in 2005 was 12%. It was estimated that agriculture accounted for 16.3% of GDP, industry 18.8%, and services 65.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$494 million or about \$15 per capita and accounted for approximately 3.4% of GDP. Foreign aid receipts amounted to \$483 million or about \$15 per capita and accounted for approximately 3.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Kenya totaled \$10.60 billion or about \$332 per capita based on a GDP of \$14.4 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990–2003 household consumption grew at an average annual rate of 2.1%. In 2001 it was estimated that approximately 31% of household consumption was spent on food, 21% on fuel, 2% on health care, and 8% on education. It was estimated that in 2000 about 50% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Kenya's labor force numbered an estimated 11.85 million. In 2003, agriculture accounted for an estimated 75% of the workforce in this impoverished country. As of 2001 (the latest year for which data was available), the unemployment rate was estimated at 40%.

The trade union movement is strong in Kenya and continues to pressure the government for better wages and improved living standards. However, union activity can result in dismissal or discrimination for employees. Complex rules severely limit the right to strike. The principal labor federation is the Central Organization of Trade Unions (COTU). Except for the 150,000–200,000 teachers believed to be members of Kenya National Union of Teachers and three other smaller unions, all unions are affiliated with the COTU. COTU, however, does little to pursue workers' rights. There were some 41 unions in Kenya with approximately 600,000 workers in 2001, or about 33% of the country's industrialized workforce.

The minimum legal working age is 16, however this does not apply to the agricultural segment which accounts for 80% of the labor force. The number of child laborers was estimated at five million in 2002. The minimum wage ranged between \$25 and \$42 per month in 2002, depending on location, age, and skill level.

## 2<sup>2</sup> AGRICULTURE

Agriculture remains the most important economic activity in Kenya, although less than 8% of the land is used for crop and feed production. Less than 20% of the land is suitable for cultivation, of which only 12% is classified as high potential (adequate rainfall) agricultural land and about 8% is medium potential land. The rest of the land is arid or semiarid. About 80% of the work force engages in agriculture or food processing. Farming in Kenya is typically carried out by small producers who usually cultivate no more than two hectares (about five acres) using limited technology. These small farms, operated by about three million farming families, account for 75% of total production. Although there are still important European-owned coffee, tea, and sisal plantations, an increasing number of peasant farmers grow cash crops.

From independence in 1963 to the oil crisis in 1973, the agricultural sector expanded by undergoing two basic changes: first, widespread acceptance of private ownership (replacing tribal ownership) and cash crop farming; second, the success of intensive nationwide efforts to expand and upgrade the production of African smallholders. Before World War II (1939–45) ended, agricultural development occurred almost exclusively in the "White Highlands," an area of some 31,000 sq km (12,000 sq mi) allocated to immigrant white settlers and plantation companies. Since independence, as part of a land consolidation and resettlement policy, the Kenya government, with financial aid from the United Kingdom, has gradually transferred large areas to African ownership. European-owned agriculture remains generally large-scale and almost entirely commercial.

After the 1973 oil crisis, agricultural growth slowed as less untapped land became available. Government involvement in marketing coupled with inefficient trade and exchange rate policies discouraged production during the 1970s. Coffee production booms in the late 1970s and in 1986 have in the past temporarily helped the economy in its struggle away from deficit spending and monetary expansion. Although the expansion of agricultural export crops has been the most important factor in stimulating economic development, much agricultural activity is also directed toward providing food for domestic consumption. Kenya's agriculture is sufficiently diversified to produce nearly all of the nation's basic foodstuffs. To some extent, Kenya also helps feed neighboring countries.

Kenya is Africa's leading tea producer, and was fourth in the world in 2004, behind China, India, and Sri Lanka. Black tea is Kenya's leading agricultural foreign exchange earner. Production in 2004 reached 295,000 tons. Tea exports were valued at \$463.7 million in 2004, or over 17% of total exports. The tea industry is divided between small farms and large estates. The small-scale sector, with more than 260,000 farmers, is controlled by the parastatal Kenya Tea Development Authority. The estates, consisting of 60–75 private companies, operate on their own.

Coffee is Kenya's third leading foreign exchange earner, after tourism and tea. In 2004, coffee earnings totaled \$89.1 million.

Production in 2005/06 amounted to an estimated 60,120 tons. Similar to the tea sector, coffee is produced on many small farms and a few large estates. All coffee is marketed through the parastatal Coffee Board of Kenya. The suspension of the economic provisions of the International Coffee Agreement in July 1989 disrupted markets temporarily, driving coffee prices to historical lows.

Kenyan horticulture has become prominent in recent years, and is now the third leading agricultural export, following tea and coffee. Fresh produce accounted for about 30% of horticultural exports, and included green beans, onions, cabbages, snow peas, avocados, mangoes, and passion fruit. Flowers exported include roses, carnations, statice, astromeria, and lilies.

Kenya is the world's largest producer and exporter of pyrethrum, a flower that contains a substance used in pesticides. The pyrethrum extract, known as pyrethrin, is derived from the flower's petals. A drop in production during the mid-1990s was due to increasing production costs, disease damage, and slow payment by the parastatal Pyrethrum Board of Kenya. The growing demand for "organic" and "natural" pesticides has increased international demand for pyrethrin, despite the existence of synthetic chemical substitutes. Kenya also produces sisal, tobacco, and bixa annatto (a natural food coloring agent) for export. In 2004, Kenya's pyrethrum production was 8,000 tons, 60% of the world total.

Other important crops in 2004 were sugarcane, 4,661,000 tons; corn, 2,138,000 tons; wheat, 300,000 tons; rice, 50,000 tons; and cotton, 5,000 tons. Smallholders grow most of the corn and also produce significant quantities of potatoes, beans, peas, sorghum, sweet potatoes, cassava, bananas, and oilseeds.

### 23 ANIMAL HUSBANDRY

In 2005 there were an estimated 12 million head of cattle, 10 million sheep, and 12 million goats. The number of chickens was estimated at 26 million. Kenya is self-sufficient in red meat production. Most of the beef comes from culling the dairy cattle, and from zebu breeds used by pastoralists moving their herds around Kenya's vast arid and semiarid areas. Total meat production in 2005 was 495,000 tons, with beef accounting for 65%.

Milk production is adequate for domestic needs; in 2005, fresh whole cow milk production amounted to 2,964,700 tons. Milk production is concentrated in the Rift Valley and Central Provinces. Together, these two provinces contain about 80% of Kenya's dairy cattle population. Dairy production accounts for about 12% of the total value of agricultural output. About 300,000 small dairy farmers produce 80% of the milk.

### 24 FISHING

Commercial fishing takes place on the coast of the Indian Ocean and on the shores of lakes Baringo, Naivasha, Rudolf, and Victoria. In the Victoria region, commercial companies process and package filleted and frozen lake fish, which are sold throughout East Africa. Fish farms have been established in various parts of Kenya. Sportsmen who fish in the highland lakes and streams provide a small amount of government revenue in the form of licenses and fees. The total fish catch for 2003 was 120,799 tons. Freshwater fish, particularly from Lake Victoria, predominated;

the inland catch was 113,704 tons. Exports of fish products were valued at \$57.3 million in 2003.

### 25 FORESTRY

Both hardwoods and softwoods are produced in Kenya. The chief hardwoods are musheragi, muiri, mukeo, camphor, and musaise. The chief softwoods are podo, cedar, and cypress. The supply of softwoods is adequate for local needs, both for building and other purposes. Wattle, grown mainly on small African plantations, provides the base of an important industry. Kenya maintains some 2,320,000 hectares (5,733,000 acres) in indigenous forests, mangroves, and forest plantations, about 4% of the total land area. Total forest and woodland coverage is about 30%. The timber cut in 2004 was 22.2 billion cu m (784 billion cu ft) of roundwood, of which 92% went for fuel. Production that year included 147,000 tons of paper and paperboard and 98,000 tons of wood pulp. In 1975, production of the first Kenya-made paper began at the Pan-African Paper Mills in Webuye.

### 26 MINING

Kenya is chiefly known for its production of fluorspar, limestone, gemstones, salt, soapstone, and soda ash. Cement was a leading industry and export commodity in 2003. National output of crude salt was estimated at 19,000 metric tons in 2003. Fluorspar (acid-grade) production was reported at 95,278 metric tons in the same year. Also in 2003, an estimated 750,000 tons of limestone were produced for cement. Kenya also produced secondary aluminum, anhydrite, barite, natural carbon dioxide gas, hydraulic cement, diatomite, feldspar, precious and semiprecious gemstones (amethyst, aquamarine, Iolite cordierite, green garnet, ruby, sapphire, and tourmaline), gold, gypsum, kaolin, refined secondary lead, lime, petroleum refinery products, crude steel, coral, granite, marble, industrial sand (glass), shale, sulfuric acid, and vermiculite. There are several gold deposits in the country.

### 27 ENERGY AND POWER

Kenya has no known reserves of oil, natural gas, or coal. As a result, the country must rely upon imports to meet its fossil fuel needs.

In 2002, Kenya's imports of petroleum products, including crude oil, averaged 56,830 barrels per day, of which crude oil accounted for 29,860 barrels per day. Domestic production of refined petroleum products averaged 33,390 barrels per day. Domestic demand averaged 51,170 barrels per day. Petroleum products are refined at Mombasa both for export and for domestic use. Oil prospecting continues along the Indian Ocean coast and offshore, but prospects of a commercially viable strike seem remote after roughly 40 years of exploration.

There were no imports of natural gas in 2002. Imports and the consumption of coal (all hard coal), each came to 109,000 short tons in 2002.

The majority of Kenya's electric power generating capacity is based upon hydropower. In 2002, the country's generating capacity came to 1.129 million kW, of which hydropower accounted for 0.675 million kW, and conventional thermal for 0.409 million kW. Geothermal/other capacity came to 0.045 million kW. Kenya's geothermal resources along the Great Rift Valley have been tapped by a plant near Lake Naivasha. National generation of electricity

in 2002 totaled 4.417 billion kWh, of which 21.7% was from fossil fuels, about 70% from hydropower, and the remainder from other renewable sources. Consumption of electricity in 2000 was 4.4 billion kWh. In 2002, demand declined slightly to 4.346 billion kWh.

## 28 INDUSTRY

Industry accounted for 13% of GDP in 2000, which in 2005 had declined to 10%. The reason for the decline or slow growth in manufacturing was an increasingly high-cost environment, owing to the deterioration in the transport infrastructure, expensive electricity, and poor governance (including overregulation and corruption). In order to bolster manufacturing, the government of Mwai Kibaki introduced favorable tax measures in the 2003/04 budget (including the removal of duty on capital equipment and other raw materials).

Although Kenya's manufacturing industries are small, they are the most sophisticated in East Africa. The manufacturing sector has been growing since the late 1990s and into the new century. The manufactures Kenya produces are relatively diverse. The transformation of agricultural raw materials, particularly of coffee and tea, remains the principal industrial activity. Meat and fruit canning, wheat flour and cornmeal milling, and sugar refining are also important. Electronics production, vehicle assembly, publishing, and soda ash processing are all significant parts of the sector. Assembly of computer components began in 1987. Kenya also manufactures chemicals, textiles, ceramics, shoes, beer and soft drinks, cigarettes, soap, machinery, metal products, batteries, plastics, cement, aluminum, steel, glass, rubber, wood, cork, furniture, and leather goods. It also produces a small number of trucks and automobiles. One quarter of Kenya's industrial sector is owned by UK investors; American investors are the next largest group.

Kenya has no known oil or natural gas reserves, although the government had spent \$1.6 million on oil exploration by 2000. The oil refinery in Mombasa, built in 1959 and half-owned by the government, and major oil companies, typically operates at around 65% of its total capacity (averaging 95,000 barrels per day) and is supposed to serve Kenya, Tanzania, Uganda, the DROC, Rwanda, Burundi, and offshore islands. Kenya deregulated its oil industry in 1994. Refinery products include gasoline, jet/turbo fuel, light diesel oil and fuel oil. The refinery's future is an important domestic issue in Kenya, and management is considering upgrading the facility rather than allowing the refinery to close.

## 29 SCIENCE AND TECHNOLOGY

Notable scientific institutions in Kenya include the UNESCO Regional Office for Science and Technology for Africa, in Nairobi; coffee and tea research foundations; grasslands and plant-breeding research stations; and numerous centers for medical, agricultural, and veterinary research. Medical research focuses on the study of leprosy and tuberculosis. The National Council for Science and Technology advises the government on scientific matters, and the Kenya National Academy of Sciences promotes advancement of learning and research; both organizations were founded in Nairobi in 1977. The University of Nairobi, founded in 1956, has colleges of agriculture and veterinary sciences, health sciences, architecture and engineering, and biological and physi-

cal sciences. Kenyatta University, founded in 1939 at Nairobi, has faculties of science and environmental education. Moi University, founded in 1984 in Eldoret, has faculties of forest resources and wildlife administration, science, technology, information sciences, environmental studies, health sciences, and agriculture. Edgerton University, founded in 1939 at Njoro, has faculties of agriculture and science. Other higher-education institutions include Jomo Kenyatta University College of Agriculture and Technology, Kenya Medical Training College, and Kenya Polytechnic, all in Nairobi, and five other institutes of science and technology elsewhere in the country.

In 1987–97, science and engineering students accounted for 19% of college and university enrollments. In 2002, high technology exports totaled \$35 million, or 10% of manufactured exports.

## 30 DOMESTIC TRADE

Mombasa and Nairobi, the two principal distribution centers for imported goods, are linked by rail or highway to the towns in their immediate areas. The head offices of all the leading import and export firms, mining companies, and banks, not only for Kenya but also for East Africa as a whole, are in one or the other of these two cities. Warehousing facilities are extensive in both cities. Retail outlets are generally small and are often owned and operated by a wholesaler.

Office and shop hours are generally from 8 AM to 5 PM, Monday–Friday, with lunchtime closing from 1 to 2 PM. Normal banking hours are 9 AM to 3 PM, Monday–Friday. The languages of business correspondence are English, Gujarati, and Swahili.

There are a number of advertising firms. Newspapers and trade magazines are the principal advertising media, but radio and cinema advertising are increasingly used. The annual, six-day Nairobi International Trade Fair is sponsored by the Agricultural Society of Kenya for the exhibition and promotion of products from all aspects of the agricultural, food processing, and construction industries.

## 31 FOREIGN TRADE

Kenya has a relatively diverse export profile, led by tea (28%) and horticultural products. Tea alone accounts for 17% of the world's

### Principal Trading Partners – Kenya (2003)

tea export market. Coffee follows closely (10%). Other key exports include garments, coffee, iron and steel, soda ash, fish, petroleum products, and plastics. Tourism is also an important source of revenues from foreigners.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Kenya's exports was \$1.8 billion while imports totaled \$3.1 billion resulting in a trade deficit of \$1.3 billion. In 2004, exports climbed by 11.4%, but imports rose faster, by 21.9%, pushing the trade deficit from \$1.11 billion in 2003 to \$1.65 billion in 2004. According to published data, covering the 12 months to April 2005, the trade deficit widened further, to just over \$2 billion as imports grew faster than exports.

### 3<sup>3</sup> BANKING AND SECURITIES

Kenya acquired its first separate currency on 14 September 1966, when the initial par value for the Kenya shilling was announced by the IMF. The new coin replaced, at par value, the East African shilling, previously issued for Kenya, Tanzania, and Uganda by the East African Currency Board, whose assets were divided by those nations following a June 1965 agreement.

The Central Bank of Kenya (CBK) was established in May 1966, taking over the administration of exchange control. Because the Kenya shilling soon became the strongest currency in East Africa, a black market for it developed. A complete ban on the export or import, or destruction of hard Kenyan currency was imposed in 1971 to discourage speculation.

The powers of the CBK were greatly reduced in the early 1990s with the liberalization of the financial sector. The commercial banks are free to set their own interest and exchange rates. The shilling has effectively been a convertible currency since the government signed Article VIII of the IMF Articles of Agreement in June 1994, and thereby pledged not to permit any restrictions on current international transactions. Foreign exchange is bought and sold in the interbank market in which the CBK is merely one player, although it intervened frequently with several large transactions in late 1994 and again in mid-1995, first to halt the appreciation of the shilling and then to stem its fall. The CBK retains responsibility for issuing treasury bills and bonds to cover the government deficit.

Of the 29 commercial banks operating in Kenya in 1985, several folded during a banking crisis in 1986. In 1992, there were 15 commercial banks operating in Kenya, and in 2002, there were 48 domestic and foreign commercial banks, 6 building societies, 37 insurance companies, 7 development finance companies, over 1,500 credit unions, and the Post Office Savings Bank. The financial sector is dominated by two multinational banks—the Standard Chartered Bank and Barclays Bank of Kenya; and the parastatal banks—Kenya Commercial Bank and National Bank of Kenya. They have branches in Nairobi and Mombasa and at least 25 other locales throughout the country. Other commercial banks include Citibank N.A., Euro Bank, and First American Bank.

Although they depend largely on the commercial sector for credit outlay, banks have started to turn to agriculture as an outlet. Land and agricultural banks provide financial assistance to farmers in the form of long-term loans for the discharge of onerous

mortgages and the purchase of livestock, implements, fertilizer, and so forth. Short-term loans are granted for seasonal expenses.

The reputation of the banking sector has suffered from a series of scandals. The largest financial scandal in Kenyan history broke in 1993 when the CBK closed down Exchange Bank and a related company, Goldenberg International, a gold and jewelry firm. Exchange Bank was accused of failing to honor foreign exchange contracts and Goldenberg of securing privileged access to the now-scrapped export compensation scheme. The auditor-general has questioned billions of shillings of payments to Goldenberg under the scheme for gold exports that have not been proven.

In 1997, the total assets of Kenya's four largest banks was \$2.8 billion, representing half of the total assets of all commercial banks. Banking sector fragility in 1999 resulted from poor management, and worsening economic conditions. In 1998, several major Kenyan banks collapsed, including Trust Bank, Reliance Bank, Prudential Bank, Bullion Bank; and the giant National Bank almost folded. In 1999, Richard Leaky was named director of the Central Bank of Kenya under pressure from the World Bank in order to stem corruption in the banking system.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.6 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$4.5 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 16.81%.

The Nairobi Stock Exchange (NSE) was founded in 1965 with six members. It was one of the largest stock markets in the sub-Saharan Africa (with South Africa, Nigeria, and Zimbabwe), with market capitalization of \$1.05 billion and 57 listed companies in 2001. The market received a small boost from the decision of the government to allow direct foreign investment in January 1995, but the limit on foreign ownership was 40%. The NSE index fell

from 1,913.4 in 2000 to 1,355.1 at the end of 2001. As of 2004, a total of 47 companies were listed on the NSE, which had a market capitalization that year of \$3.891 billion. In 2004, the NSE rose 7.6% from the previous year to 2,945.6.

### 3<sup>4</sup> INSURANCE

Insurance companies must be registered and licensed. Categories of compulsory insurance include motor third-party liability for bodily injuries and cargo insurance for imports. The insurance regulatory body is the Ministry of Finance and Planning. There were 37 insurance companies operating in Kenya in 1999. As of 2003, the value of all direct premiums written totaled \$411 million, of which nonlife premiums accounted for \$304 million. Kenya's top nonlife insurer in 2001 (the latest year for which data was available) was Kenindia, with gross written nonlife premiums of \$28.5 million. In that same year, the country's leading life insurer was ICEA, with gross written life premiums of \$22.4 million.

### 3<sup>5</sup> PUBLIC FINANCE

The fiscal year extends from 1 July to 30 June. Due to mismanagement of public funds, government expenditures are closely watched. Nevertheless, government spending has remained around 30% of GDP since 1995. While in the past Kenya has had some problems meeting loan obligations with the IMF and the World Bank, the country was set to receive over \$300 million in aid from those organizations in 2000. However, problems with internal reform forced the IMF and the World Bank to suspend those programs, and as of mid-2002 they have not been reinstated.

The US Central Intelligence Agency (CIA) estimated that in 2005 Kenya's central government took in revenues of approximately \$3.7 billion and had expenditures of \$3.8 billion. Revenues minus expenditures totaled approximately -\$165 million. Public debt in 2005 amounted to 67.4% of GDP. Total external debt was \$7.349 billion.

#### Public Finance – Kenya (2000)

(In millions of shillings, budgetary central government figures)

	2000	100.0%

(...) data not available or not significant.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund (IMF) reported that in 2000, the most recent year for which it had data, budgetary central government revenues were SH218,443 million and expenditures were SH198,019 million. The value of revenues in US dollars was us\$2,868 million and expenditures us\$2,831 million, based on a principal exchange rate for 2000 of us\$1 = SH 76.176 as reported by the IMF. Government outlays by function were as follows: general public services, 34.0%; defense, 8.5%; public order and safety, 6.9%; economic affairs, 18.0%; environmental protection, 0.7%; housing and community amenities, 3.0%; health, 5.4%; recreation, culture, and religion, 0.6%; education, 26.1%; and social protection, 6.3%.

### 3<sup>6</sup> TAXATION

The resident corporate income tax rate tax in 2005 was 30%, with the rate for branches of foreign companies at 37.5%. The withholding tax on dividends payable to residents was 5%. Dividend and interest income (except on bearer instruments) paid to non-residents, the withholding tax rates were 10% and 15%, respectively. These rates may be reduced or eliminated by the terms double tax treaties, which Kenya has with the United Kingdom, Germany, Denmark, Norway, and Sweden, Canada, India and Zambia. In 2002 the capital gains tax had been suspended but there was a compensating tax on companies which paid dividends out of untaxed profits. Royalties paid to nonresidents are subject to a 20% withholding tax. For residents, the rate falls to 5%. Insurance commissions, management and professional fees, sports and entertainment fees, and rents are also subject to taxation. Various tax incentives are offered to companies which develop and/or operate in export processing zones (EPZs).

Income tax rates on individuals are graduated, rising to a top marginal rate of 30%, down from 35% in 1996.

Since 1990, a value-added tax (VAT) has been applied to most goods and services. The standard rate as of 2005 was 16%. However, restaurant and hotel services are taxed at 14%, while medicines, newspapers, educational equipment, certain agricultural inputs and exports are zero-rated. Live animals, building materials, foodstuffs, certain financial services, some types of entertainment, land and building rentals and leases, passenger transport, and insurance are exempt. There are also local authority service taxes and a hospital insurance tax.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Most import license controls were dismantled in 1993. In 1997, an ad valorem import duty of 70% was imposed on rice, sugar, and milk. Priority items such as raw materials, spare parts, agricultural equipment, and medicines had an import tariff of only 5% in 1999. Most capital goods were imported at a tax rate of 15%. Other goods received specific allocations on the international harmonized system of product classification. The maximum tariff rate was 35%. Imports were also subject to a 18% value-added tax based on a free on board (FOB) plus duty valuation. There were also excise-taxes on alcohol and tobacco. There were few export duties. In 1999, Kenya, Uganda, and Tanzania signed the East Af-

frican Community (EAC) treaty providing for the removal of trade barriers by 2003.

Kenya operates six export processing zones, where manufacturers gain a 10-year corporate tax holiday (25% thereafter), a 10-year withholding tax holiday on dividend remittance, duty and VAT exemption on all imports except motor vehicles, and exemption from most other regulatory schemes. The Manufacturing Under Bond (MUB) program gives similar incentives to companies not located in the export processing zones.

### 38 FOREIGN INVESTMENT

In 1964, in the wake of independence, foreign investment in Kenya went down considerably. In a move to reverse this trend, the government issued a white paper in 1965 welcoming foreign investment and encouraging joint ventures. Foreign investments in 1965 totaled \$30 million, rising to \$52 million in 1971. The pace of investment accelerated during the 1970s, and by 1984 it was estimated that US investment alone had a value of \$350 million. In 1987, tax treaties with the United Kingdom, Germany, Zambia, Denmark, Norway, and Sweden were in force, but private foreign investment stagnated.

In the early 1990s, the government moved to encourage investment by liberalizing trade policies and removing impediments to the development of a free market. It was estimated in 1994 that foreign direct investment totaled more than \$1 billion. The foreign direct investment stock in Kenya has remained at the \$1 billion mark but increased slightly by 5% from \$1 billion in 2001 to \$1.1 billion in 2002; while outward stock remained insignificant. While in the 1990s flows of foreign direct investment (FDI) had stabilized at about \$50 million, they drastically declined to \$5 million in 2001 and \$28 million in 2002, as confidence in the government of the president, Daniel Arap Moi, reached an all-time low. Investors were also deterred by widespread corruption, overregulation, and the government's on-off relations with donors. FDI picked up to \$82 million in 2003, according to the World Investment Report by the UN Conference on Trade and Development (UNCTAD), reflecting a recovery in confidence under the new NARC government, but still remained significantly lower than in Tanzania and Uganda. FDI outflows, on the other hand, had grown continuously since 1997, and in 2002 outflows surpassed inflows.

The three largest affiliates of foreign transnational corporation investment in Kenya in the industrial sector were all from the United Kingdom and focused on tobacco, pharmaceutical, and food production. Other investments come from Germany and the United States. Regardless of the government's intentions to attract investment, power interruptions, poor roads, political turmoil, and rampant government corruption dissuaded most serious foreign investment. However, as the government of Kibaki attempted to bring political stability and to root out corruption, foreign direct investment was expected to rise, although as of 2004 this had not happened due to the fact that investors were cautious of the Kibaki regime's resolve.

### 39 ECONOMIC DEVELOPMENT

Central to Kenyan government planning is a continuing expansion of the level of exports and diversification of products. Moreover, Kenya has sought the orderly introduction of large numbers

of African farmers into former European agricultural areas. With the goal of full economic independence, the government continues to pursue Africanization of the private sector, particularly in commerce.

Kenya continues to assist private industry by tariff structures that permit the import of raw materials duty-free or at low rates; allow rebates or suspension of customs duties under certain conditions; and establish protective customs barriers. The 1979–83 development plan, Kenya's fourth, had as its main objective the alleviation of rural poverty. The 1984–88 development plan also emphasized the rural sector in calling for an annual real GDP growth of 4.9%.

Kenya has depended on external assistance for development financing, but the extent of that dependence has varied with domestic conditions. Whereas in the mid-1960s Kenya depended on external sources for 82% of its total development resources, by the early 1970s the proportion had fallen to only 45%. The late 1970s and 1980s brought renewed reliance on external loans, as the proportion of foreign financing needed to cover the annual government budget deficit rose from 28% in 1978–79 to 67% in 1981–82 and an estimated 89% in 1985–86.

Development in Kenya now depends on the private sector and on foreign and domestic investment as the parastatal sector is dismantled. Foreign exchange earnings were key to the sixth development plan (1989–93). Because of government mismanagement of funds during the period between 1996 and 1999, most development agencies (including the IMF and World Bank) refused to extend loans and gave up on structural reform programs. The government initiated its own Economic Recovery Strategy in 1999 to increase public sector management reliability, but there were doubts as to the effectiveness of the plan.

In 2000, the IMF renewed lending, in the amount of a three-year \$193 million Poverty Reduction and Growth Facility (PRGF) Arrangement, which was further augmented due to the impact of severe drought conditions. An anticorruption authority set up by the government was declared unconstitutional in December 2000, and other Kenyan reforms stalled. The IMF and World Bank once again suspended their programs. In July 2003, the IMF indicated it would resume lending to Kenya, as the Fund was encouraged by the country's efforts to fight corruption and promote good governance.

### 40 SOCIAL DEVELOPMENT

The National Social Security Fund operates a limited pension fund for employed persons. Retirees (age 55) are entitled to a lump sum equal to total contributions plus accrued interest. Disability and survivor benefits are also paid. Medical coverage for employees is available in government hospitals for certain illnesses including AIDS. Employers are also obligated to obtain private worker's injury insurance.

Facilities for social welfare have been largely in the hands of private and voluntary organizations. The government assists many of the voluntary organizations financially. The private and voluntary agencies are highly developed. There are societies that care for the blind, the deaf and mute, and the physically disabled, and voluntary organizations that care for the poor and destitute. Homes and

hostels have been established throughout the country for the care of orphans, young offenders, and juvenile prostitutes.

In 2003 the government outlawed violence against women, although domestic violence is a widespread problem affecting over half of the women in Kenya. Rape is an increasing problem in the country. Women also lack the legal rights provided to men. Women must obtain written permission from their husbands or fathers in order to obtain a passport. In practice, permission is also required for women applying for credit. Although the Law of Succession stipulates that sons and daughters should receive equal inheritances, traditional custom continues to benefit male children. Boys greatly outnumber girls in higher education. Female genital mutilation is widely practiced, especially among certain ethnic groups. Children are forced to marry against their will.

Ethnic tensions between Kenyan tribal groups are pronounced. Tribal violence has occurred in the Rift Valley, as well as ethnically motivated fighting between Nubian and Luo populations erupted in Nairobi. Although most ethnic groups are represented in the government, Kikuyus sometimes face discrimination and harassment by government officials. Kenya's human rights record remains poor. There are many reports of extrajudicial killings, the use of excessive force, and arbitrary arrest. Prison conditions are poor, and there are lengthy pretrial detentions. Defendants do not have the right to appointed lawyers except for capital cases.

#### 41 HEALTH

The National Hospital Insurance Fund is the most important health insurance program in Kenya. Membership is compulsory for all civil servants. The government is attempting to improve and upgrade existing health facilities and opening new ones. Kenya produces cotton wadding domestically, but all other medical equipment and supplies are imported. High-quality private practitioners require sophisticated medical equipment, but the public sector acquires less expensive equipment. Kenya also has a well-developed pharmaceutical industry that can produce most medications recommended by the World Health Organization.

The government is attempting to reduce malnutrition and combat deficiency diseases. Among Kenya's major health problems are tuberculosis and protein deficiency, the latter especially among young children. Although the incidence of malaria has been reduced, it still is endemic in some parts of Kenya and is responsible for anemia in children. Water supply, sanitation, bilharzia, and sleeping sickness also pose major problems. Schistosomiasis is endemic to some areas. In 2000, 49% of the population had access to safe drinking water and 86% had adequate sanitation.

As of 2003, the crude birth rate and overall mortality rate were estimated at 27.6 and 14.7 per 1,000 people respectively. As of 2000, 39% of married women (ages 15 to 49) were using contraception. Average life expectancy was 47.99 years in 2005 and infant mortality was 61.47 per 1,000 live births. The fertility rate was 4.4 children per childbearing years of a Kenyan woman as of 2000. Immunization rates for children up to one year old were fairly low: tuberculosis, 42%; diphtheria, pertussis, and tetanus, 36%; polio, 36%; and measles, 32%. Malnutrition affected an estimated 33% of children under five.

As of 2004, there were an estimated 13 physicians, 90 nurses, 2 dentists, and 5 pharmacists per 100,000 people. Health care expenditure was estimated at 7.8% of GDP. The government was

also encouraging the development of the private health care sector through tax incentives as well as other plans.

There has been a rapid spread of AIDS since the 1980s. The HIV/AIDS prevalence was 6.70 per 100 adults in 2003. As of 2004, there were approximately 1,200,000 people living with HIV/AIDS in the country. There were an estimated 150,000 deaths from AIDS in 2003.

#### 42 HOUSING

Rapid urbanization has made it difficult for the government to keep pace in providing adequate housing for those in need. In Nairobi, the population density is 3,079 persons per sq km (almost 8,000 per sq mi). More than half of the city's residents live in temporary shelters, generally in one of over 100 slum communities throughout the city. One-room shanties in the slum areas of Nairobi, Mombasa, and Nakuru are typically about 3 to 5 sq m and house 5 to 6 people. A high level of poverty paired with the high cost of available land mean fewer urban dwellers are in a position to purchase property of their own. In the mid-1990s, some slum dwellers, facing forced evictions, began to form federations as a means of protesting poor housing conditions and calling for better government housing regulations to provide for both adequate housing and home ownership.

Most housing in rural areas is privately built and owned by the residents. But many of these homes are built with traditional materials of mud and thatch and deteriorate in a relatively short time.

The central government is responsible for all housing projects and works closely with local authorities. Many new housing projects have been undertaken with financial aid from the National Housing Corp. According to the latest government information available, total housing stock in the 1980s stood at 3,470,000, with 6.1 people per dwelling.

#### 43 EDUCATION

Primary education is free and compulsory for eight years. Children start school at the age of five or six and spend eight years at primary school; four years at secondary school; and a further four years at the university. The academic year runs from October to July.

In 2001, about 44% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 66% of age-eligible students. The same year, secondary school enrollment was about 25% of age-eligible students. It is estimated that about 73% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2003.

There are four main universities in Kenya. Kenyatta University was founded in 1972 and is located in Nairobi. The University of Nairobi was founded in 1956 as the Royal Technical College of East Africa. The Moi University was founded in 1984 at Eldoret. The Egerton University, located at Njoro, was founded in 1939. The language of instruction in all the universities is English. In 2001, about 3% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 73.6%, with 77.7% for men and 70.2% for women.

As of 2003, public expenditure on education was estimated at 7% of GDP, or 22% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Kenya National Library Service, founded in 1965 and located in Nairobi, maintains over 25 provincial and community branches. The largest public library is the McMillan Memorial Library, formerly a private institution, which was taken over by the Nairobi City Council in 1962; it contained 275,000 volumes in 2002, including a collection of Africana, and had two branches. In 1996, Kenya National Library Service launched the Camel Mobile Service to transport books to villages and settlements between 5 and 10 km away from the main regional libraries. The libraries of the University of Nairobi, with 500,000 volumes, are the best supported in Kenya. Kenyatta University in Nairobi has 166,000 volumes. The British Council maintains three branch libraries, and the National Archives in Nairobi holds 40,000 volumes.

The National Museum in Nairobi and the Ft. Jesus Museum in Mombasa are the largest in Kenya. There are numerous local museums, including the Kiriandusi Prehistoric Site in Gilgil, founded in 1928, the Gedi Ruins Museum south of Malindi, and museums in Kabarnet, Lamu, Meru, Narak, and Olgorgesailie. The Kapenguria Museum, opened in 1993, details Kenya's political development and struggle for independence.

#### 45 MEDIA

The Ministry of Transport and Communications is responsible for telecommunications. In 2003, there were an estimated 10 main-line telephones for every 1,000 people; about 134,000 people were on a waiting list for telephone service installation. The same year, there were approximately 50 mobile phones in use for every 1,000 people.

Kenya Broadcasting Corporation (KBC), the country's government-owned broadcaster, is the only station with a national network for television and radio programming. In 2004, there were 12 independent radio stations. Kenya Television Network was the leading privately owned broadcaster. There were eight television stations in 2002. In 2003, there were an estimated 221 radios and 26 television sets for every 1,000 people. The same year, there were 6.4 personal computers for every 1,000 people and 13 of every 1,000 people had access to the Internet. There were eight secure Internet servers in the country in 2004.

In 2002, there were five major daily newspapers, all published in Nairobi. *The Daily Nation*, an independent paper founded in 1960, had a daily circulation of 170,000. The *Standard* (circulation 70,000) has ties to the KANU party. The other dailies include: *Tai-fa Leo*, a Swahili newspaper, circulation 57,000; the *Kenya Times*, associated with KANU, 52,000; and the *Kenya Leo*, (in Swahili, 40,000 in 1995).

While there is no formal censorship, the press is sometimes subject to harassment from public officials who have been treated unfavorably.

#### 46 ORGANIZATIONS

Voluntary societies are numerous. Some are affiliated with parent bodies in the United Kingdom; a few, such as the Rotary Club, the Round Table, Kiwanis, and the Lions Club, are affiliated internationally. The Red Cross, Habitat for Humanity, and Caritas are also active. African women's clubs, called Maendeleo ya Wanawake, have been organized throughout Kenya. Some are members of the

umbrella organization of National Council of Women of Kenya. National youth organizations include the Kenya Scouts Association, YMCA/YWCA, Kenya United Nations Youth and Student Association, and 4-K Clubs (a branch of 4-H Clubs). There are several sports associations and clubs representing amateur athletes competing in such pastimes as cricket, lawn tennis, squash, tae kwon do, yachting, and badminton.

National organizations promoting arts and science include the Kenya National Academy of Sciences (est. 1983), the Kenya Medical Association, and the multinational African Academy of Sciences (est. 1985). Organizations dedicated to research and education include the African Medical and Research Foundation and the African Centre for Technology Studies.

The Kenya National Chamber of Commerce and Industry, founded in 1965, has its headquarters in Nairobi. The Central Organization of Trade Unions and the Federation of Kenya Employers are based in Nairobi. Organizations dedicated to promoting the concerns of industry, business, and labor include the Agricultural Society of Kenya, Tea Board of Kenya, Kenya Tea Growers Association, and Fresh Produce Exporters' Association of Kenya. The Kenya Consumer's Organization is also active.

The World Conservation Union has an office in Nairobi. Other nature conservancy organizations include the Wildlife Clubs of Kenya Association and Save the Elephants.

#### 47 TOURISM, TRAVEL, AND RECREATION

Since Kenya attained independence in 1963, tourism has become the leading source of foreign exchange revenue. In 2003, there were 1,146,099 visitors, almost 60% of whom came from Europe. The hotels had an occupancy rate of 33% and the average length of stay was eight nights. Tourism expenditure receipts totaled \$631 million.

Accommodations in the form of lodges and campsites are available in the more remote areas, as well as five-star hotels in the more popular regions. Safaris are the chief attraction, whether they are photographic, cultural, or even sport. Kenya also boasts over 30 national parks and game preserves. The largest game preserve is Tsavo National Park, home of over 500 bird species; covering an area of about 21,343 sq km (8,241 sq mi), it is one of the world's largest wildlife sanctuaries. Nairobi has a professional repertory theater and a National Theater; the capital hosts a Festival of African music in July. Other attractions include the mosques of Mombasa, the spectacular scenery of the Great Rift Valley, the coffee plantations at Thika, and the world-renowned Tree Hotels. Tourists also enjoy the dramatic view of Mt. Kilimanjaro, which rises in neighboring Tanzania; as of 2006, scientists were predicting that Kilimanjaro's ice cap, which had visibly shrunk during the 1990s, would completely disappear by 2015.

Travelers from infected countries must carry a certificate of vaccination against yellow fever. Precautions are also recommended against typhoid and malaria. A valid passport, visa, and onward/return ticket are required for entry into Kenya.

In 2005, the US Department of State estimated the daily expenses of traveling in Nairobi at \$230. Mombasa averaged \$99 to \$152 per day, depending on the time of year.

## 48 FAMOUS KENYANS

The leading African figure in the modern history of Kenya was Jomo Kenyatta (1893?–1978). From the 1920s to the 1970s he was in the forefront of African nationalism. Imprisoned and restricted during the Mau Mau revolt for his alleged role in its organization, he was released in August 1961 and was president of independent Kenya from 1964 until his death. Another dominant African personality was Tom Mboya (1930–69), who commanded an international reputation as a political and labor leader. Oginga Odinga (1911–94), usually at odds with the ruling establishment, was vice-president from 1964 to 1966. Daniel arap Moi (b.1924), a son of poor farmers, was vice-president for 11 years before succeeding Kenyatta as president in 1978. He served until 2002, when he was succeeded by Mwai Kibaki (b.1931).

Sir Michael Blundell (1907–93), a leader of the European community after World War II, came to be identified with those who sought to create a nonracial political society; he was a director of Barclays Bank of Kenya from 1968 to 1981. Richard Leakey (b.1944) is a leading paleoanthropologist.

## 49 DEPENDENCIES

Kenya has no territories or colonies.

# LESOTHO

Kingdom of Lesotho

*Muso oa Lesotho*

**CAPITAL:** Maseru

**FLAG:** The flag is divided diagonally from the lower hoist side corner; the upper half is white bearing the brown silhouette of a large shield with crossed spear and club; the lower half is a diagonal blue band with a green triangle in the corner.

**ANTHEM:** *Lesotho Fatse La Bo-nata Rona (Lesotho, the Country of Our Fathers).*

**MONETARY UNIT:** Lesotho is part of the South African monetary area; the maloti of 100 lisente, introduced in 1980, is on a par with the South African rand (R), which also is legal tender. There are coins of 1, 2, 5, 10, 25, and 50 lisente, and notes of 2, 5, 10, 20, and 50 maloti (M). M1 = \$0.16129 (or \$1 = M6.2) as of 2005.

**WEIGHTS AND MEASURES:** British and metric weights and measures are in general use.

**HOLIDAYS:** New Year's Day, 1 January; Moshoeshoe's Day, 12 March; Family Day, 1st Monday in July; King's Birthday, 17 July; Independence Day, 4 October; National Sports Day, 6 October; Christmas, 25 December; Boxing Day, 26 December. Movable Christian holidays include Good Friday, Easter Monday, and Ascension.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Lesotho is an enclave within the Republic of South Africa, with an area of 30,355 sq km (11,720 sq mi), extending 248 km (154 mi) NNE–SSW and 181 km (112 mi) ESE–WNW. Comparatively, the area occupied by Lesotho is slightly smaller than the state of Maryland.

It is bordered on the E by the South African province of Natal, on the S by Cape Province, and on the W and N by the Orange Free State, with a total boundary length of 909 km (565 mi). Lesotho claims that Basotho lands now part of South Africa were unjustly taken by force in the 19th century.

Lesotho's capital city, Maseru, is located on the country's northwest border.

## <sup>2</sup> TOPOGRAPHY

Three distinct geographical regions, demarcated by ascending altitude, extend approximately north-south across Lesotho. The western quarter of the country is a plateau averaging 1,500–1,850 m (4,900–6,100 ft). The soil of this zone is derived from sandstone and, particularly in the westernmost region, is poor and badly eroded. The remainder of the country is highland. A zone of rolling foothills, ranging from 1,800–2,200 m (5,900–7,200 ft), forms the border between the lowlands and the mountains in the east.

The Drakensberg Range forms the entire eastern and southeast-eastern border. A spur of this range, the Maluti Mountains, runs north and south. Where it joins the Drakensberg Range there is a high plateau ranging from 2,700–3,200 m (8,900–10,500 ft) in elevation. The highest point is Thabana Ntlenyana, 3,482 m (11,425 ft), in the east. The rich volcanic soils of the foothills and mountains are some of the best in the country.

The sources of two of the principal rivers of South Africa, the Orange and the Tugela, are in these mountains. Tributaries of the

Caledon River, which forms the country's western border, also rise here. The Orange and Caledon rivers, together with their tributaries, drain more than 90% of the country.

## <sup>3</sup> CLIMATE

Temperatures vary widely from one geographical zone to another, and frequently within zones, depending on the altitude. In the lowlands, temperatures reach 32°C (90°F) or more in the summer and rarely fall below -7°C (19°F) in the winter. The range in the highlands is greater; temperatures sometimes fall below -18°C (0°F), and frost and hail are frequent hazards. Rainfall, which is mostly concentrated in the months from October to April, averages 71 cm (28 in) annually, varying from 191 cm (75 in) in parts of the mountains to as little as 60 cm (24 in) in the lowlands. Most of the rainwater is lost through runoff, and droughts are common.

## <sup>4</sup> FLORA AND FAUNA

Grass is the natural vegetation in this virtually treeless country. The high plateau is covered with montane or subalpine grassland. Red oat grass forms a dry carpet in much of the Drakensberg foothill region. The country's small size, high elevation, and limited range of habitats restrict the variety of fauna. The African lammergeier, a bird common in the mountains of Ethiopia but nowhere else in Africa, and the bald ibis, both of which are near extinction, are found in small numbers in the Drakensberg Range. As of 2002, there were at least 33 species of mammals, 123 species of birds, and over 1,500 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Much of the country has become denuded of its natural grass cover through uncontrolled grazing and rushing surface water. Related problems are severe soil erosion, soil exhaustion, and de-

sertification. In response to these problems, the Highlands Water Project has the goals of controlling, storing, and redirecting water to South Africa. More than 3.5 million trees, mostly eucalyptus, have been planted as part of a gully control program, and for production of fuel and poles. Among the agencies with environmental responsibility is the National Environmental Secretariat of the prime minister's office.

Unlike neighboring South Africa, Lesotho is not rich in game and other wildlife. The famous Basuto pony, of almost pure Arabian stock, reached its peak of quality and quantity around the turn of the century. After suffering a decline because of ruinous trading practices, overstocking, overgrazing, disease, and drought, the pony has begun to make a comeback through a selective breeding program and improved feeding methods. Other vanishing species, like the wildebeest and blesbok, have been reintroduced in areas where they formerly were numerous. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 7 species of birds, 1 species of fish, 1 species of invertebrate, and 1 species of plant. Threatened species included the blue crane, the brown hyena, the African lion and the lesser flamingo.

## **6** POPULATION

The population of Lesotho in 2005 was estimated by the United Nations (UN) at 1,804,000, which placed it at number 142 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 38% of the population under 15 years of age. There were 87 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be -0.1%. The projected population for the year 2025 was 1,604,000. The population density was 59 per sq km (154 per sq mi). Some 70% of the total population lives in the fertile lowlands, where the land can be most readily cultivated; the rest is scattered in the foothills and the mountains.

The UN estimated that 13% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.75%. The capital city, Maseru, had a population of 170,000 in that year. Other large towns are Leribe, Berea, and Mafeteng.

The prevalence of HIV/AIDS has had a significant impact on the population of Lesotho. The UN estimated that 30.1% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## **7** MIGRATION

In 1996, around 60% of active male wage earners in Lesotho worked in South Africa. Lesotho reported that 25,000 miners were sent to South African gold mines in the first six months of 2001. There were 6,000 migrants living in Lesotho in 2000, and virtually no refugees. According to *Migration Information Source*, Lesotho led the world's nations with the highest total remittances received as a percentage of GDP in 2001, with remittances as 26.2% of GDP, equivalent to \$112.80 per capita. In 2003 remittances were \$2.17 million. In 2004, the United Nations High Commissioner for Refugees (UNHCR) reported no refugees or asylum seekers. In 2005,

the net migration rate was an estimated -0.74 per 1,000 population. The government views the migration levels as satisfactory.

## **8** ETHNIC GROUPS

Lesotho is ethnically homogeneous. At least 99.7% of the people are Sotho. Europeans, Asians, and other groups make up the remaining population.

## **9** LANGUAGES

The Sesotho (southern Sotho) language is spoken by virtually all the indigenous population. English shares with Sesotho the position of official language. Zulu and Xhosa are also spoken.

## **10** RELIGIONS

Christian missions have long been active in Lesotho. As a result, about 90% of the population are Christian, with about 70% being Roman Catholic. The primary Protestant denominations are the Lesotho Evangelical Church and the Anglican Church. Muslims, members of other non-Christian religions, and atheists make up the remaining 10%. The indigenous population, including many of its Christian members, follow African traditional religions. Some of the Catholic churches in the country incorporate traditional customs into worship, including traditional music, language, and dress. Christians are found throughout the country, while Muslims tend to be concentrated in the northeastern part of the country. Many of the Muslims are of Asian descent, while most of the Christians are indigenous Basotho. Certain Christian holidays are celebrated as national holidays.

## **11** TRANSPORTATION

In 2002 there were 4,995 km (3,104 mi) of roadway in Lesotho, 887 km (551 mi) of which were paved. A 2.6-km (1.6-mi) South African railway connects Maseru's industrial park to the Bloemfontein-Natal line, providing a valuable freight link to South Africa.

In 2004, there were an estimated 28 airports, of which only 3 had paved runways as of 2005. Lesotho Airways and South African Airways maintain scheduled passenger service between Johannesburg and Moshoeshoe International, the new international airport 19 km (12 mi) outside of Maseru. Lesotho Airways also has regular service to Swaziland, Zimbabwe, and Mozambique, and to 28 domestic airstrips. In 1997 (the latest year for which data was available), about 29,000 passengers were carried on scheduled domestic and international airline flights. Air taxis and chartered planes serve airstrips at Maseru and other centers.

## **12** HISTORY

What is now Lesotho was inhabited by hunter-gatherers, called the San Bushmen by the whites, until about 1600, when refugees from Bantu tribal wars began arriving. In 1818, Moshoeshoe, a minor chief of a northern tribe in what was to become Basutoland, brought together the survivors of the devastating Zulu and Matabele raids and founded the Basotho nation. During the early days of its existence, the Basotho also had to contend with incursions by Boers from the Orange Free State. Moshoeshoe sought UK protection, but not before much land had been lost to white settlers. His urgent appeals for assistance went unheeded until 1868, when Basutoland became a crown protectorate. Moshoeshoe died in 1870. The following year, Basutoland was annexed to the Cape

Colony, over the protests of both Basotho and Boer leaders. In 1880, the so-called Gun War broke out between the Basotho and the Boers over the attempt to disarm the Basotho in accordance with the provisions of the Cape Peace Preservation Act of 1878. A high point in Basotho history was the successful resistance waged against the Cape's forces.

In 1884, Basutoland was returned to UK administration under a policy of indirect rule. Local government was introduced in 1910 with the creation of the Basutoland Council, an advisory body composed of the British resident commissioner, the paramount chief, and 99 appointed Basotho members. In effect, for the next 50 years the chiefs were allowed to govern. Under a new constitution that became effective in 1960, an indirectly elected legislative body, the Basutoland National Council, was created.

A constitutional conference held in London in 1964 approved the recommendations for a pre-independence constitution that had been made by a constitutional commission. The new constitution went into effect on 30 April 1965, following the general election. The resident commissioner became the British government representative, retaining powers for defense, external affairs, internal security, and the public service.

In April 1966, a conflict arose in parliament between the government and the opposition over Prime Minister Leabua Jonathan's motion requesting that Britain set a date for independence. To forestall passage of the motion, Paramount Chief Moshoeshe II replaced 5 of his 11 senatorial appointees with 5 opponents of the government. The High Court subsequently invalidated that action, declaring that his right to appoint 11 senators did not entail the right of dismissal. The Senate and National Assembly eventually passed the independence motion, the latter by a vote of 32 to 28, but the dispute foreshadowed a constitutional crisis that was not conclusively resolved at independence. The final independence conference was held in June 1966. Charging that the United Kingdom was granting independence to a minority government, and demanding a more significant role for the paramount chief, delegates representing the opposition withdrew. Moshoeshe II himself declined to sign the final accord.

### Independence

The United Kingdom granted independence to the newly named Kingdom of Lesotho on 4 October 1966; Moshoeshe II was proclaimed king on that date. The first general election following the attainment of independence was held in January 1970. When it appeared that the ruling party, the Basotho National Party (BNP), would be defeated, Prime Minister Jonathan, its leader, declared a state of emergency and suspended the constitution. The Basotho Congress Party (BCP), led by Ntsu Mokhehle, claimed that it had won 33 seats to the BNP's 23. Leabua Jonathan admitted he had lost the election but nevertheless arrested the opposition leaders. The unrest, he said, was due to Communist influence, and since the majority of the people were behind him he would suspend the constitution and hold new elections later. King Moshoeshe II was placed under house arrest and in April 1970 the Netherlands gave him asylum. He was permitted to return in December.

Scattered attacks on police posts occurred in January 1974 in an alleged attempt by supporters of the BCP to overthrow the government of the ruling BNP. The abortive coup d'état resulted in the arrest, killing, imprisonment, or exile of many people. In

LOCATION: 28°35' to 30°40' S; 27° to 29°30' E.

March 1975, 15 BCP followers were found guilty of high treason. The struggle against the Jonathan government continued through the late 1970s and early 1980s, with the Lesotho Liberation Army (LLA), the military arm of the BCP in exile, claiming responsibility for periodic bombings in Maseru, ambushes of government officials, and attacks on police stations. The Lesotho government charged that South Africa was allowing the LLA to use its territory as a base of operations.

Relations with South Africa deteriorated after that nation granted independence in 1976 to the Bantu homeland of Transkei, on Lesotho's southeastern border. When Lesotho (like all other nations except South Africa) declined to recognize Transkei, the Transkeian authorities closed the border with Lesotho, which also angered South Africa by harboring members of the banned African National Congress (ANC), an exiled South African insurgent group. On 9 December 1982, South African troops raided private residences of alleged ANC members in Maseru; 42 persons were

killed, including at least 12 Basotho citizens. In the early 1980s, South Africa used economic pressures against Lesotho.

Parliamentary elections scheduled for August 1985 by the Jonathan government were called off because all five opposition parties refused to take part, charging that the voters' roll was fraudulent. Later that year, South Africa stepped up its destabilization activities, conducting a commando raid and aiding antigovernment elements. On 1 January 1986, South Africa imposed a near-total blockade of Lesotho that resulted in severe shortages of food and essential supplies. On 20 January, a military coup led by Maj. Gen. Justin Metsing Lekhanya overthrew the government. All executive and legislative powers were vested in the king, acting on the advice of a six-man military council. On 25 January, a number of ANC members and sympathizers were flown from Lesotho to Zambia, whereupon South Africa ended its blockade of the country. All political activity was banned on 27 March.

There was widespread skepticism about the military government and its links to Pretoria, and agitation to return to civilian rule. In 1990, Lekhanya had Moshoeshe II exiled (for a second time) after the king refused to agree to the dismissal of several senior officers. In November 1990, a new law was announced providing for a constitutional monarchy but barring Moshoeshe from the throne. Later that month, Moshoeshe's son (King Letsie III), was elected king by an assembly of chiefs.

In April 1991, rebel army officers staged a bloodless coup, forcing Lekhanya to resign. He was succeeded by Col. Elias Ramaema as leader of a military junta. In July 1992, the king was allowed to return to a hero's welcome.

Multiparty elections were scheduled for 28 November 1992, but they were postponed until 1993 because of delays in delimiting parliamentary constituencies. Finally, on 27 March 1993, in the first democratic elections in 23 years, the Basotho Congress Party, the major opposition party, won all 65 seats in the Assembly. The BCP formed a government under Prime Minister Dr. Ntsu Mokhehle. The BCP offered to nominate four BNP members but only one opposition politician accepted. Several cabinet members were appointed from opposition ranks.

On 25 January 1994, army troops mutinied in Maseru after the government refused their demands for a 100% pay increase. Prime Minister Mokhehle requested military assistance from South Africa, but that request was denied. After three weeks of sporadic fighting, the two factions within the military agreed to a Commonwealth-brokered deal for negotiations with the government.

In August 1994, Lesotho's first democratically elected government faced another challenge when King Letsie III suspended parliament and imposed a "Ruling Council." The king had been angered by the Mokhehle government's creation of a board of inquiry to investigate the dethroning of his father. Although Letsie had the support of the security forces, his royal coup was condemned internally and internationally, and the United States cut off aid. On 14 September the crisis was resolved when the king agreed to return the throne to his father. However, two years later King Moshoeshe was killed in a car crash, and his son reclaimed the throne—much to the consternation of pro-democracy groups and Lesotho's neighbors.

Although the government increased military salaries in line with other government workers in 1995, an uprising three years later by a disgruntled faction of the Lesotho Defense Forces ne-

cessitated Botswana and South Africa military intervention. Over 50 soldiers were taken into custody and charged with mutiny in September 1998 on the heels of rioting and looting that destroyed parts of the capital following the May elections in 1998. The violence cost Lesotho untold millions as it sent the economy into a tailspin.

The Lesotho Congress for Democracy (LCD) won the majority in parliament in the 23 May 1998 general elections, leaving the once-dominant Basotho National Party (BNP) and Basotholand Congress Party (BCP) far behind in total votes. Although international observers as well as a regional commission declared the elections to have reflected the will of the people, many members of the opposition have accused the LCD of electoral fraud. The 1998 elections were the third multiparty elections in Lesotho's history. Nevertheless, after political riots following the disputed 1998, an all party forum called the Interim Political Authority was formed to level ground for the next poll. It proposed the restructuring of the Independent Electoral Commission, which happened, and the change of the model from winner takes all to mixed member proportional representation. In the 25 May 2002 general elections, the ruling Lesotho Congress for Democracy was reelected by majority, winning all but one of the 80 constituency based seats. Under the proportional representation system 40 compensatory seats were shared among nine opposition parties. In terms of popular vote in the 2002 elections, LCD won 54%, BNP 21%, LPC 7%, and other parties 18%.

As of 2005, the Lesotho government remained a modified form of constitutional monarchy. The prime minister, Pakalitha Mosisili, was head of government and had executive authority. The king serves a largely ceremonial function; he no longer possesses any executive authority and is proscribed from actively participating in political initiatives.

Lesotho remained among the poorest countries in Africa with the majority of the population living below the poverty line on less than \$1 a day. In June 2005, Lesotho had an HIV/AIDS prevalence rate of 28% among the adult population, and unemployment stood at 51%. Poverty, lack of jobs, and food shortages in the sub-region were driving rural to urban migration, and increasing the likelihood that young women and women heads of household would engage in commercial and risky sex to provide for their families.

## 13 GOVERNMENT

According to the 1993 constitution, the Kingdom of Lesotho is a monarchy with a bicameral parliament consisting of a National Assembly of 120 members—80 elected by direct popular vote and 40 by proportional vote—for five-year terms, and a Senate consisting of 33 members—22 chiefs and 11 others appointed by the ruling party.

Until 1993 the king was official chief of state (*motlotlehi*), and was designated by the College of Chiefs, according to Basotho custom. The prime minister (head of government) was appointed by the king and was a member of the majority party in the National Assembly. The cabinet was also appointed by the king, in accordance with advice of the prime minister, from among members of both houses of parliament.

Under the 1993 constitution the monarch has become a figurehead, a "living symbol of national unity" with no executive or leg-

islative powers. He is selected by traditional law and the College of Chiefs, which holds the power to determine who is next in the line of succession, and who shall serve as regent in the event that the successor is a minor. The College also may depose the monarch.

The leader of the majority party in the Assembly automatically becomes prime minister. Since 1998, the prime minister has been Pakalitha Mosisili, the leader of the Lesotho Congress for Democracy (LCD).

## **14 POLITICAL PARTIES**

The Basotho National Party (BNP), formerly the Basutoland National Party, was founded in 1959 and was in the forefront of Lesotho's independence drive. The BNP long stood for maintaining diplomatic relations with South Africa and for a cautious approach to cooperation with other African states, in an attitude of "choose our friends but live with our neighbors." However, in the 1970s and early 1980s, the BNP played a more active role in opposing apartheid. By 1998, BNP had become the leading opposition party, as the Lesotho Congress for Democracy (LCD) took power.

The Basotho Congress Party (BCP), founded in 1952 and formerly known as the Basutoland African Congress, is an outspoken Pan-Africanist party. The first party to demand independence, it subsequently opposed the "premature" granting of independence to a minority government. The third major party is the Marematlou Freedom Party (MFP). This party was formed in 1965 by the merger of two parties that had supported the chieftaincy.

In the general election held on 29 April 1965, the BNP won 31 seats, the BCP 25 seats, and the MFP 4 seats in the National Assembly. Chief Jonathan was himself defeated in the election, and Sekhonyana Maseribane was appointed prime minister. Chief Jonathan won a by-election on 1 June and assumed the office of prime minister. The two opposition parties, which together had polled 56.2% of the vote to 41.6% for the BNP (with 2.2% of the vote going to others), in an election in which only 62% of those eligible had voted, joined forces to protest Britain's granting of independence to a minority government. They also called for a more even distribution of executive power between the prime minister and the chief of state, and appealed to the UN, the Commonwealth, and the OAU in an unsuccessful bid to have the independence agreement rescinded.

The BCP claimed it had won 33 seats in the 60-seat National Assembly in the January 1970 general elections; the BNP won 23 seats, and the ballots for 4 seats had not been counted. Confusion over the outcome of the 1970 election (in which the United Democratic Party and the Communist Party participated but won no seats) resulted in suspension of the constitution by Prime Minister Jonathan, and political activities of opposition parties were subsequently restricted. Prime Minister Jonathan appointed two members of opposition parties to his cabinet in November 1975. The BCP then split into two factions: members of one accepted government posts, while leaders of the other organized an armed insurgency in exile.

The March 1993 election was contested by more than a dozen parties, but the chief vote getters were the BCP, still headed by Dr. Mokhehle, and the BNP, led by Evaristus Sekhonyana. Among the others are the MFP, the United Democratic Party (UDP), and the Communist Party of Lesotho (CPL). The BCP held all elected

seats in the National Assembly, despite having won just over half the vote.

Since 1998, the dominant political party has been the ruling Lesotho Congress for Democracy (LCD) under the leadership of Dr. Pakalitha Mosisili. LCD won just over 60% of the votes in the May 1998 parliamentary elections. The major opposition parties included: the Basotho National Party (BNP); the Basotholand Congress Party (BCP) led by Molapo Qhobela (24% of the 1998 vote); the Lesotho Labor Party/United Democratic Party Alliance (LLP/UDP) led by Charles Mofeli and Mamolefi Ranthimo; the Marematlou Freedom Party (MFP); the National Progressive Party (NPP); and the Sefate Democratic Union (SDU).

In the 25 May 2002 parliamentary election, the LCD garnered 54% of the vote, the BNP 21%, the Lesotho People's Congress or LPC 7%, and other parties took 18%. With the number of seats expanded from 80 to 120, the breakdown by party was: LCD 76, BNP 21, LPC 5, and other parties 18. Although opposition parties objected to the results, independent observers described the elections as free, fair, peaceful, lawful, and transparent—a model for Southern Africa. Next elections were due in 2007.

## **15 LOCAL GOVERNMENT**

There are 10 districts, each headed by a centrally appointed district administrator. District councils, established in 1944, were abolished in 1966. Each district is subdivided into wards, most of them presided over by hereditary chiefs allied to the royal family. During the period of military rule, each district was headed by a district secretary and a district military officer appointed by the central government and the defense force, respectively.

## **16 JUDICIAL SYSTEM**

The legal system is based on English common law and Roman-Dutch law with judicial review of legislative acts in High Court and Court of Appeal. Lesotho has not accepted compulsory ICJ jurisdiction.

The judicial system consists of the High Court, the Court of Appeal, subordinate courts, and the Judicial Service Commission (JSC). The members of the High Court are the chief justice, who is appointed by the chief of state, acting on the advice of the prime minister, and an unspecified number of puisne judges appointed by the chief of state, acting on the advice of the JSC. The Court of Appeal, which meets semiannually, is headed by a president, appointed by the chief of state, acting on the advice of the prime minister, and includes an unspecified number of justices of appeal, appointed by the chief of state, acting on the advice of the JSC. Parliament has the power of establishing subordinate courts and courts-martial. The High Court has unlimited original jurisdiction over civil and criminal matters, as well as appellate jurisdiction from subordinate courts.

Subordinate courts, comprising resident magistrate's courts, judicial commissioner's courts, and central and local courts, administer statute laws, while chiefs administer customary and tribal laws. There is no trial by jury. Military courts have jurisdiction only over military cases and their decisions are final.

## **17 ARMED FORCES**

As of 2005, Lesotho's armed forces totaled an estimated 2,000 active personnel, all of which were members of the Army. The ser-

vice also had a 110-member air wing. Equipment included 22 reconnaissance vehicles and 12 artillery pieces. The air wing operated 1 patrol aircraft, 3 transport aircraft, and 4 utility helicopters. The defense budget in 2005 was \$32.3 million.

## 18 INTERNATIONAL COOPERATION

Lesotho became a member of the United Nations on 17 October 1966 and participates in ECA and several nonregional specialized agencies, such as the FAO, IFC, ULP, IMF, the World Bank, UNESCO, UNHCR, and the WHO. Lesotho is also a member of the Commonwealth of Nations, the ACP Group, the African Development Bank, the African Union, and G-77. The country's close relationship with Southern Africa is a major factor in its economic survival. Lesotho belongs to the Southern African Customs Union (SACU) and the Southern African Development Community (SADC). Lesotho is also part of the Common Monetary Area (CMA) that includes Namibia, Swaziland, and South Africa.

The country is part of the Nonaligned Movement. In environmental cooperation, Lesotho is part of the Basel Convention, the Convention on Biological Diversity, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Lesotho is an agricultural country, with modest industrial, tourism, and labor-remittance incomes. Its economic policy is closely tied to that of South Africa and the South African Rand is accepted as legal tender. Remittances from miners employed in South Africa plunged by half between 1990 and 1996. As 35% of male wage earners are employed in South Africa, 54% of households in Lesotho are headed by women. There is an illicit but thriving trade in marijuana grown in Lesotho for sale in South Africa. Land is controlled by the Chiefs of the Kingdom and cannot be privately owned. Textile/garment and agro-industrial enterprises dominate the industrial sector and tend to be state-owned, although privatization has increased. Manufacturing and construction businesses, however, are mostly privately owned.

Future economic growth is tied to the massive Lesotho Highlands Water Project (LHWP) completed in 1998. The project captures, stores, and transfers the headwaters of the Orange River system to industry clustered around Johannesburg, South Africa. Ancillary dams provide electricity.

Civil unrest in 1998 destroyed 80% of the commercial infrastructure in Maseru and two other towns. GDP was down by 3.6% in 1998, but was up to 3.2% in 2001, 3.8% in 2002, 3.3% in 2003, 3.0% in 2004, and down to 0.8% in 2005. Lesotho has a large trade deficit, and is a recipient of aid from the World Bank and Western countries. In 2001, the IMF approved a \$32-million Poverty Reduction and Growth Facility program for Lesotho.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Lesotho's gross domestic product (GDP) was estimated at \$6.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$3,300. The annual

growth rate of GDP was estimated at 2%. The average inflation rate in 2005 was 4.7%. It was estimated that agriculture accounted for 15.4% of GDP, industry 44.2%, and services 40.4%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$184 million or about \$103 per capita and accounted for approximately 17.1% of GDP. Foreign aid receipts amounted to \$79 million or about \$44 per capita and accounted for approximately 5.7% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Lesotho totaled \$1.09 billion or about \$606 per capita based on a GDP of \$1.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of -0.8%. It was estimated that in 1999 about 49% of the population had incomes below the poverty line.

## 21 LABOR

The economically active population was estimated at 700,000 in 2002. Approximately 86% of the resident population engages in subsistence farming, and as many as 35% of male wage-earners work in South Africa. In 2002, the unemployment rate was put at 45%.

With the exception of civil servants, workers have the right to unionize, but only about 10% of the workforce are union members. While strikes are technically legal, no legally sanctioned strikes have occurred since independence in 1966. The rights to bargain collectively and organize, while technically legal, are often restricted by the government. There are three small trade union federations: the Lesotho Trade Union Congress, the Lesotho Federation of Democratic Unions, and the Congress of Lesotho Trade Unions; these three organizations seldom cooperate with each other.

While there are restrictions on working hours and practices for children under 14, in practice enforcement of these restrictions is ineffectual. The minimum wage is set by the government and varies from sector to sector. The minimum wage for unskilled labor was \$73 per month in 2002. The law requires a maximum 45-hour workweek with 12 days of paid leave and paid holidays. Minimum occupational safety standards exist but are not effectively enforced.

## 22 AGRICULTURE

In 2003, 17% of GDP came from agriculture. Crop production in Lesotho is a high-risk, low-yield activity due to poor soil quality and a harsh climate. All land is held in trust for the Basotho nation by the king and may not be alienated. The local chiefs allocate farmland to individuals, and user rights are generally available to married males; nevertheless, one out of seven households is landless. A 1979 act increases security of tenure by recording rights of inheritance and allowing mortgaging and subletting of land. The average landholding per family head is 1.9 hectares (4.7 acres).

Only 11% of Lesotho's land area is arable, but less than 1% has high potential. Most cultivated land is in the western lowlands. The principal food crop is corn. Main agricultural production in 2004 included (in tons) corn, 150,000; sorghum, 46,000; wheat, 51,000; dry beans, 8,000; and vegetables and melons, 18,000. The

country suffered from recurrent drought conditions in the 1980s and early 1990s. Lesotho is a large importer of grains and other foodstuffs.

Lesotho has one of the most advanced soil conservation programs in Africa. Terracing, grass stripping, and the construction of dams and irrigation canals are widely employed to cope with the severe erosion problems.

### 23 ANIMAL HUSBANDRY

The raising of livestock is the principal economic undertaking in Lesotho. Grazing rights on all noncultivated land are communal, and no limits are placed on the number of livestock permitted to graze an area. Lesotho's main exports are wool and mohair; in general, however, the quality of the livestock is poor and yields are low. In 2005 there were an estimated 850,000 sheep, 650,000 goats, 540,000 head of cattle, 154,000 asses, 100,000 horses, 65,000 hogs, and 1,800,000 chickens.

A number of livestock improvement centers have been established, and Merino rams and Angora bucks have been imported from South Africa for breeding purposes. Cattle, sheep, and goats are exported on the hoof. Hides and skins, usually from animals that have died of starvation or disease or have been slaughtered for human consumption, are also exported.

### 24 FISHING

Fishing has not yet been popularized, although the Malutsenyane River is one of the best natural trout-fishing grounds in Africa. There is virtually no commercial fishing. In 2003, the total catch was 32 tons, including 16 tons of carp.

### 25 FORESTRY

Lesotho is almost devoid of natural woodland. Trees have been planted in conjunction with soil conservation programs. Roundwood production in 2004 was estimated at 2.046 million cu m, all nonconiferous logs for fuel.

### 26 MINING

Lesotho has long been known as a source of diamonds, mostly from alluvial deposits, and was seeing a revival of its diamond mining industry. Geological surveys have revealed a limited variety of other exploitable mineral resources. In 2004, diamond production was estimated at 4,000 carats, up from 2,099 carats in 2003. Artisanal miners also produced small amounts of fire clay, gravel, dimension stone, and crushed rock for domestic consumption. Commercial interest in the mineral resources of Lesotho was limited to diamonds. The Lesotho Geological Survey has identified 33 kimberlite pipes and 140 dikes, of which 24 were diamondiferous.

The economy of landlocked Lesotho was based on subsistence agriculture, livestock, and remittances from migrant Basotho miners employed in South African gold mines. However, the number of migrant miners has fallen from an average of 110,000 in 1994, to 61,400 in 2003, and to 58,000 in 2004. The revival of the diamond industry in Lesotho showed hope for some new opportunities for Basotho mineworkers and for replacing related lost government revenues. Exploration for iron, coal, and uranium continued.

## 27 ENERGY AND POWER

Lesotho, as of 1 January 2005, had no proven reserves of oil, natural gas, or coal, and totally lacked any petroleum refining capacity. It was therefore, completely reliant upon imports to meet its refined oil, natural gas, and coal needs.

In 2004, imports and demand for petroleum products averaged 2,000 barrels per day, each. In 2003, Lesotho had no recorded imports of natural gas or coal.

Lesotho's electric power is entirely hydroelectric, and is produced by the Muela hydroelectric facility, which came online in 1999. Muela is part of a jointly financed project with South Africa called the Lesotho Highlands Water Project. The project called for two 34-km (21-mi) tunnels to transport water from Lesotho's rivers to South Africa, with the first delivery in 1996 and maximum operation by 2020. Plans involved the construction of seven dams, as well as a hydroelectric plant that could meet almost all of Lesotho's power needs. In 1999, the first phase of this plant, the 80 MW Muela facility, came online. As of 1 January 2003, Lesotho's installed generating capacity totaled 0.076 GW. Output in 2003 totaled 0.35 billion kWh, with consumption for that year at 0.36 billion kWh.

## 28 INDUSTRY

Lesotho has a wide variety of light industries, which include, among others, tire retreading, tapestry weaving, diamond processing, and production of textiles, shoes, electric lighting, candles, ceramics, explosives, furniture, and fertilizers. Manufacturing depends largely on agricultural inputs to support milling, canning, leather, and jute industries. In the 1980s, the Lesotho National Development Corporation promoted industrial development in the production of fruits and vegetables, tires, beer and soft drinks, parachutes, steel, and wire. In 1991, Lesotho inaugurated a television assembly plant. As the number of mineworkers has declined steadily over the past several years, a small manufacturing base has developed based on farm products and a rapidly growing apparel-assembly sector. The garment industry has grown significantly, mainly due to Lesotho qualifying for the trade benefits contained in the Africa Growth and Opportunity Act. The economy is still primarily based on subsistence agriculture, especially livestock, although drought has decreased agricultural activity.

In the early 2000s, there was growth in the manufacturing sector of the economy. Industry held a strong average annual growth of 10% between 1988 and 1998, and accounted for 38% of GDP in 2001. The major industrial contributor in 2000 was the Highlands Water Project. Lesotho has no known oil or natural gas reserves. Oil exploration took place in the 1970s, but those efforts were unsuccessful and exploration ceased.

## 29 SCIENCE AND TECHNOLOGY

The Ministry of Agriculture, Cooperatives, and Marketing maintains a research station at Maseru, along with several experimental stations in the field. Lesotho's Geological Survey Department is headquartered in Maseru. The National University of Lesotho, founded in 1966 at Roma, has faculties of science and agricul-

ture. Lesotho Agricultural College, founded in 1955, is located in Maseru.

In 1987–97, science and engineering students accounted for 19% of college and university enrollments. In 2002, Lesotho had 42 researchers and 26 technicians per million people that were actively engaged in research and development (R&D).

### 3<sup>0</sup> DOMESTIC TRADE

Except for the northern regions, where Indians monopolized trading activities, domestic trade was handled by Europeans before independence. The Taiwanese also played a role. Nevertheless, more and more Basotho are currently taking out trading licenses. Traders play a central role in wool and mohair marketing, often acting as wool classers as well. The expertise of the traders varies widely. Some have regular suppliers and customers and maintain high quality, while others are prone to careless handling practices, lowering the market value of wool.

As of 2005, nearly 85% of the workforce was employed in some level of subsistence agriculture. About 35% of male wage earners had jobs in South Africa.

Normal business hours in urban areas are from 8 AM to 1 PM and from 2 to 4:30 PM, Monday through Friday, and from 8 AM to 1 PM on Saturday. Banks are open from 8:30 AM to 1 PM Monday through Friday, and 9:30 to 11 AM on Saturday.

### 3<sup>1</sup> FOREIGN TRADE

Lesotho's chief exports are clothing, shoes, and road vehicles. Manufacturing accounted for 65% of exports in 1996. Other exports include wool and mohair, and food and live animals (7% each). The main imports are food, building materials, vehicles, machinery, medicines, and petroleum products.

Exports grew an average of 18.1% from 1993 through 1996, but declined slightly in 1998. Between 2001 and 2005 exports grew dramatically from \$278.6 million to \$749.9 million, an increase of 169% within a four-year period. Merchandise imports grew by 16.2% in 1992, but then declined by 6.9% in 1993 and fell 7.4% in 1994. Imports picked up again between 1995 and 1997, but declined in 1998. Between 2001 and 2005 imports increased from \$678.6 million to \$1.4 billion, an increase of 103%. In 1996, 66% of exports went to the Southern African Customs Union, 26% to

North America, and 4% to the EU. Increasingly, the United States has become a favorite destination for Lesotho's exports. In 2003 Lesotho sent 80.1% of its exports to the United States, while 19.2% went to the countries of the Southern African Customs Union and 0.1% to the European Union (EU). During the same year the Southern African Customs Union provided 86% of Lesotho's imports, Asia, 13.2%, and the EU, 0.1%.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Lesotho's chronic balance-of-payments deficit was partially offset by the flow of cash and material goods from Basotho workers in South Africa, but the end of this system in 1999 caused a higher total debt than usual. Revenues from the highlands water project may offset losses.

The European Intelligence Unit reported that in 2005 the purchasing power parity of Lesotho's exports was \$749.9 million while imports totaled \$1380 million resulting in a trade deficit of \$630.1 million.

### 3<sup>3</sup> BANKING AND SECURITIES

Lesotho is a member of the Common Monetary Area. The 1974 agreement, which was revised in 1986, provided access to the South African capital market for the Lesotho banking system. Lesotho is responsible for its own monetary policy and controls its own financial institutions, but management of the rand currency and the gold and foreign exchange reserves of the rand area remains the sole responsibility of South Africa. In 1980, the Lesotho Monetary Authority (now the Central Bank of Lesotho) began issuing loti as the national currency, but the South African rand remained legal tender and the loti was pegged at par with the rand.

Demand for credit in the private sector was strong during the 1990s in response to growth in the manufacturing, services, and construction sectors. In contrast, claims on central government were reduced as a result of the IMF-supported Structural Adjust-

ment Program; in fact, the government was a net saver with the domestic banking system in 1992. In the 1990s, interest rates remained positive in real terms and generally slightly higher than in South Africa due to higher margins.

The commercial bank sector is dominated by the government-owned Lesotho Bank and the South African-owned Stambic Bank which acquired Barclays Bank's interest in Lesotho. Lesotho Bank was privatized in 1999. The Lesotho Building Finance Corporation merged with Lesotho Bank in April 1993 to facilitate an increase in the scale of domestic mortgage lending. The Lesotho Agricultural Development Bank (LADB) had served to mobilize rural savings and provide agricultural credit, but it was liquidated in 2000.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$150.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$231.5 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 13%.

No securities exchange was in operation in Lesotho as of 2003.

### 34 INSURANCE

In 1995, there were at least three insurance companies operating in Lesotho. During the 1998 destruction of commercial life, most firms were not covered by insurance, lengthening the rebuilding process.

### 35 PUBLIC FINANCE

Proceeds from membership in a common customs union with South Africa form the majority of government revenue. Lesotho receives aid from myriad sources, including the United States, World Bank, United Kingdom, EU, and Germany.

The US Central Intelligence Agency (CIA) estimated that in 2005 Lesotho's central government took in revenues of approx-

imately \$738.5 million and had expenditures of \$792.1 million. Revenues minus expenditures totaled approximately -\$53.6 million. Total external debt was \$735 million.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were M3,617 million and expenditures were M3,564 million. The value of revenues in US dollars was us\$478 million, based on a principal exchange rate for 2003 of us\$1 = m7.56475 as reported by the IMF.

### 36 TAXATION

In 1960, a review of the tax structure was undertaken with a view toward ending the dual tax system, which made a distinction between Basotho and non-Basotho. It was decided that a basic tax, previously paid only by Basotho, would be paid by all male residents. A graded tax and a scaled income tax, both payable by all persons irrespective of race or sex, were subsequently imposed. The maximum tax rate for individuals is 35%, and corporations are taxed at a flat rate of 35%. Manufacturing companies are subject to a reduced 15% rate. A 25% withholding tax is paid on dividends, interest and royalties. However, manufacturing companies pay a 15% withholding rate on dividends and royalties. Lesotho has a value-added tax (VAT) system with a standard rate of 14%. However, the VAT for liquor is 15%, while electricity and telecommunications are subject to a 5% VAT.

### 37 CUSTOMS AND DUTIES

Customs and duties constitute the predominant source of ordinary revenue. Lesotho, together with Swaziland, Botswana, and Namibia, is a member of a customs union with South Africa; consequently, no tariffs exist on most goods moving among them. South Africa levies and collects the bulk of the customs, sales, and excise duties for the five countries, paying a share determined by an established formula of total customs collections to the other four. Imports from outside the customs union, regardless of ultimate destination, are subject to the same tariff rates.

### 38 FOREIGN INVESTMENT

The government actively encourages foreign investment, particularly investment in manufacturing plants and agricultural projects. The Lesotho National Development Corp. promotes industrial estates, with such attractions as a 15-year discretionary tax holiday or accelerated depreciation allowances, plus LNDC capital participation of up to 25%.

Annual foreign direct investment (FDI) inflow into Lesotho was \$269 million in 1997, but declined steadily for the rest of the decade, amounting to \$119 million in 2000. For the period 1997 to 2000, net FDI equaled over one-fifth (21.8%) of its GDP, the highest such ratio in the world. Most FDI is concentrated in textiles, garments, and light manufacture.

### 39 ECONOMIC DEVELOPMENT

The Lesotho government's development objectives are based on a food-security policy approach, built around small-scale irrigated agriculture projects and improved rural water supplies. Donors supported the fourth five-year plan (1988–91) with pledges of \$390 million. Lesotho receives development assistance from the United States, United Kingdom, Germany, South Africa, Canada,

Taiwan, the European Union, the World Bank, and various United Nations agencies.

In 2001, Lesotho negotiated a three-year \$35 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the International Monetary Fund (IMF). Unemployment, poverty, and the HIV/AIDS pandemic are challenges facing further economic development. The sale of the state telecommunications company in 2001 stood as evidence of Lesotho's continuing privatization program. The government in 2003 was committed to public sector reform and market-friendly policies, as illustrated by its support for the Lesotho Public Sector Improvement and Reform Project.

A review of Lesotho's economic performance in 2005 by the IMF welcomed the marked improvement seen across a range of macroeconomic indicators in recent years, noting in particular the lower fiscal deficits and improved balance-of-payments position. It also welcomed the government's commitment to increasing institutional capacity in order to better implement and monitor public spending programs, which will now be formulated in the context of a poverty reduction strategy. However, the IMF indicated that there was room for improvements in the economic policies in order for Lesotho to enhance labor skills, clear bottlenecks in infrastructure and public-sector delivery, and remove legal and administrative impediments to investment.

#### 40 SOCIAL DEVELOPMENT

In the past, many social welfare programs were organized on the local level or by missions. But the need for concerted action to alleviate hardships brought about by the severe droughts led to the creation in 1965 of a Social Welfare Department under the Ministry of Health (later the Ministry of Health and Social Welfare). Community development teams stimulate local initiative by conducting courses and forming voluntary community development committees. The Homemakers' Association, an organization long active in social welfare, has given family-management courses in remote areas under a grant from the Oxford Committee for Famine Relief (Oxfam).

The roles of women are limited by law and by tradition. Married women are considered legal minors under customary law. They are unable to sign any contract and have no legal standing in a court of law. Domestic violence is also a widespread problem although it is considered unacceptable behavior. The government has pledged to improve the rights of women. Limited resources limit the ability of government to implement child welfare programs.

Some human rights violations were reported, including excessive use of force by police, long pretrial delays, and poor prison conditions. Crime is a serious problem in Lesotho.

#### 41 HEALTH

Lesotho's major health problems, such as pellagra and kwashiorkor, stem from poor nutrition and inadequate hygiene. It was estimated that 44% of children under five years of age were considered malnourished. Famines have resulted from periodic droughts. Approximately 91% of the population had access to safe drinking water and 92% had adequate sanitation.

Tuberculosis and venereal diseases are also serious problems. Children up to one year old were vaccinated at the following rates:

tuberculosis, 55%; diphtheria, pertussis, and tetanus, 58%; polio, 66%; and measles, 82%. Rates for DPT and measles were, respectively, 85% and 77%. About 43% of children suffered from goiter.

The government of Lesotho is working to rehabilitate two hospitals and is making an overall effort to strengthen health care services. In 2004, there were 5 physicians, 1 pharmacist, and 60 nurses per 100,000 people. Approximately 80% of the population had access to health care services.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 30.7 and 16.8 per 1,000 people. The infant mortality rate per 1,000 live births was 88.75 in 2005. The total fertility rate has steadily declined to 4.4 children per woman. Of married women aged 15–49, contraceptives were used by 23%. Estimated life expectancy in 2006 was 34.47 years, the third shortest in the world.

The AIDS crisis in Lesotho is severe. The HIV/AIDS prevalence was 28.90 per 100 adults in 2003, the third highest in the world. As of 2004, there were approximately 320,000 people living with HIV/AIDS in the country. There were an estimated 29,000 deaths from AIDS in 2003.

#### 42 HOUSING

The Lesotho Housing and Land Development Corp. builds new housing for sale and rent, and a government-supported development program is building low-cost housing. The government has also begun to encourage private investment and ownership of housing through privatization of banking and legal reforms, the latter of which include the Law Reform Commission and the Land Policy Review Commission, which have been working on legislation to allow women equal rights in access to credit and land ownership.

#### 43 EDUCATION

A by-product of the long history of missionary activity in Lesotho was the relatively comprehensive development of education. Education is compulsory between the ages of 6 and 13. Primary school covers 7 years of study, followed by 3 years of junior secondary school, and 2 years of high school. Students may choose to attend craft schools after primary school instead of junior high. Those who complete junior high may opt for a two-year trade school instead of senior high. The languages of instruction are Sesotho and English. From the fifth year of primary school onwards, all instruction is conducted in English. The academic year runs from August to May.

In 2001, about 21% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 86% of age-eligible students. The same year, secondary school enrollment was about 22% of age-eligible students; 18% for boys and 27% for girls. It is estimated that about 67% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 47:1 in 2003.

The University of Lesotho, Botswana, and Swaziland (formerly known as Pius XII College), founded in 1964 at Roma, was unilaterally dissolved in October 1975 by Prime Minister Leabua Jonathan, who then renamed it the National University of Lesotho.

Lesotho Agricultural College, at Maseru, was founded in 1955. In 2003, about 3% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 81.4%, with 73.7% for men and 90.3% for women.

As of 2003, public expenditure on education was estimated at 8.9% of GDP, or 18.5% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Government Archive in Maseru has records dating from 1869. The Lesotho National Library, also in the capital, holds 88,000 volumes. The Thomas Mofolo Library at the National University of Lesotho is the largest library in the country with more than 170,000 books. The British Council maintains a library in Maseru, with 6,270 volumes and there is a library of 10,000 volumes at the Lesotho Agricultural College. The National Teachers Training College in Maseru also has a notable library. The Lesotho National Library Service, founded in 1976, sponsors three public library branches: Leribe, Mafeteng, and Mokhotlong. The Lesotho Library Association was founded in 1978. The Lesotho National Museum, at Maseru, has collections on archaeology, ethnography, and geology. The Morija Museum has collections in the same fields.

#### 45 MEDIA

The government operates postal and telephone services; the exchange at Maseru has been automatic since 1963. An earth-satellite station was opened in 1986. In 2003, there were an estimated 13 mainline telephones for every 1,000 people; about 21,000 people were on a waiting list for telephone service installation. The same year, there were approximately 42 mobile phones in use for every 1,000 people.

Government-owned Radio Lesotho broadcasts in English and Sesotho; it is the only station with a national range. There were seven privately owned radio stations in the country in 2005. The government-owned Lesotho Television is the only television station in the country. In 2003, there were an estimated 61 radios and 35 television sets for every 1,000 people. The same year, 10 of every 1,000 people had access to the Internet.

*Mphatlalatsane* is a daily Sesotho newspaper published in Maseru, with a 2002 circulation of 4,000. The *Moeletsi oa Basotho* is a weekly published by the Roman Catholic Church with a circulation of 20,000. The Lesotho Evangelical Church also publishes a newspaper, *Leselinyana le Lesotho (The Light of Lesotho)*, which comes out every other week with a circulation of 15,000. Other newspapers, with their 2002 circulations, include *Lentsoe la Basotho* (14,000) and *Lesotho Today* (7,000), both weeklies published by the Department of Information; *Mohlanka* (6,000); *Moafrika* (3,500); *Makatolle* (2,000); and the English weekly, *The Mirror* (4,000).

The Constitution provides freedom of speech and the press, and the government is said to respect these rights in practice.

#### 46 ORGANIZATIONS

Cooperative unions that are partly government-financed and government-sponsored, consumer cooperatives, artisan cooperatives, and the Progressive Farmers play an important part in economic and social development. There are also more than 100 active agricultural marketing and credit societies.

National youth organizations include the Association of Youth Cultural Clubs, Lesotho Scouts Association, Lesotho Work Camps Association, YMCA/YWCA, Lesotho Youth Federation, and the Student Representative Council of Lesotho. There are several sports organizations and clubs throughout the country, including branches of the Special Olympics. The Lesotho National Council of Women offers programs and activities to support and promote the development of women.

Volunteer service organizations, such as the Lions Clubs International, are present. The Red Cross, Caritas, the Society of St. Vincent de Paul, and Habitat for Humanity are active in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

The Lesotho National Tourist Board promotes tourism, which is increasing but still underdeveloped.

Permanent tourist camps are established in remote scenic areas for pony-trekking parties. The first such camp, consisting of bath and kitchen-equipped grass huts, was built at Marakabeis, near the end of the Mountain Road. Although lacking in game, Lesotho has spectacular natural attractions in its mountains and in Malut-senyane Falls, as well as excellent trout-fishing grounds. The rock paintings near Teyateyaneng are also a potentially important tourist site. The country's first national park, Sehlabathebe Mountain National Park, was established in 1970 in the Qacha's Nek District. There is a gambling casino in Maseru, along with mountain resorts and lodges.

Visas are not required for stays of up to 30 days, but a valid passport, proof of sufficient funds, and onward/return ticket are necessary. Vaccination against yellow fever is highly recommended and sometimes required. In 2003, there were 360,955 foreign visitors who arrived in Lesotho. Of the visitors, 230,946 came from South Africa.

In 2005, the US Department of State estimated the daily expenses for travel in Maseru at \$181; in other areas, \$84.

#### 48 FAMOUS BASOTHO

Moshoeshoe (or Moshesh, 1786–1870), a chief of the Bakoena tribe in what was then northern Basutoland, is acclaimed as the founder of the Basotho nation. Moshoeshoe II (1938–96) served as king of Lesotho from October 1966 until January 1996, when he was killed in an automobile accident. Crown Prince Letsie David Mohato (b.1963), who had served as king during his father's 1989–94 exile, returned to the throne in February 1996 as King Letsie III. Chief Leabua Jonathan (1914–87), prime minister of

Lesotho from its inception until 1986, was a leader in the drive for independence.

#### 49 DEPENDENCIES

Lesotho has no territories or colonies.

# LIBERIA

Republic of Liberia

**CAPITAL:** Monrovia

**FLAG:** The national flag, dating from 1847, consists of 11 horizontal stripes, alternately red (6) and white (5), with a single five-pointed white star on a square blue field 5 stripes deep in the upper left corner.

**ANTHEM:** *All Hail, Liberia, Hail.*

**MONETARY UNIT:** The Liberian dollar (L\$) of 100 cents was linked to the US dollar until January 1998, when it switched to a floating market determined rate. There are no Liberian notes. US notes in the denominations of 5, 10, 20, 50, and 100 dollars are in circulation and are legal tender. Both US and Liberian coins of 1, 5, 10, 25, and 50 cents, and 1 dollar are in circulation; as of 1982, a \$5 Liberian coin was issued. L1 = \$0.01821 (or \$1 = L54.906) as of 2004.

**WEIGHTS AND MEASURES:** US and UK weights and measures are used.

**HOLIDAYS:** New Year's Day, 1 January; Armed Forces Day, 11 February; Decoration Day, 2nd Wednesday in March; Birthday of J. J. Roberts (first president), 15 March; Fast and Prayer Day, 2nd Friday in April; National Redemption Day, 12 April; Unification Day, 14 May; Independence Day, 26 July; Flag Day, 24 August; Thanksgiving Day, 1st Thursday in November; Anniversary of 1985 Coup Attempt, 12 November; President Tubman's Birthday, 29 November; Christmas, 25 December. Good Friday and Easter Monday are movable religious holidays.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located on the west coast of Africa, Liberia has an area of about 111,370 sq km (43,000 sq mi), with a length of 548 km (341 mi) ESE–WNW and a width of 274 km (170 mi) NNE–SSW. Comparatively, the area occupied by Liberia is slightly larger than the state of Tennessee. On the N it is bounded by Guinea, on the E by Côte d'Ivoire, on the S and SW by the Atlantic Ocean, and on the NW by Sierra Leone, with a total land boundary length of 1,585 km (985 mi) and a coastline of 579 km (360 mi).

Liberia's capital city, Monrovia, is located on the Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

There are three distinct belts lying parallel to the coast. The low coastal belt is about 40 km (25 mi) wide, with tidal creeks, shallow lagoons, and mangrove marshes. The land then rises to rolling hills, with elevations of 60–150 m (200–500 ft). The third belt, comprising the bulk of Liberia, is marked by abrupt changes of elevation in a series of low mountains and plateaus, less densely forested than the hilly region. The Nimba Mountains are near the Guinea frontier. The Wologizi Mountains reach a maximum of about 1,380 m (4,528 ft) with Mt. Wutuvi, the nation's highest point. Of the six principal rivers, all of which are at right angles to the coast and flow into the Atlantic Ocean, only the Farmington is of much commercial importance. Sandbars obstruct the mouths of all rivers, making entrance hazardous, and upstream there are rocky rapids.

## <sup>3</sup> CLIMATE

The climate is tropical and humid, with little change in temperature throughout the year. The mean is 27°C (81°F), with temperatures rarely exceeding 36°C (97°F) or falling below 20°C (68°F). On the coast the heat is tempered by an almost constant breeze. Yearly rainfall is as high as 510 cm (200 in) on the coast, decreasing to about 200 cm (80 in) in areas farthest inland. There are distinct wet and dry seasons, most of the rainfall occurring between late April and mid-November. Average relative humidity in the coastal area is about 82% during the rainy season and 78% in the dry, but it may drop to 50% or lower between December and March, when the dust-laden harmattan blows from the Sahara.

## <sup>4</sup> FLORA AND FAUNA

Liberia, together with adjoining Sierra Leone and Côte d'Ivoire, includes the greatest of Africa's evergreen forests. There are about 235 species of trees; 90 varieties are present in potentially marketable quantities, including mahogany and ironwood. The bombex (cotton tree), the oil palm, and the kola tree are common. The wild rubber tree (*Funtumia elastica*) is indigenous, but the cultivated *Hevea brasiliensis* is the source of Liberia's commercial rubber. A variety of coffee peculiar to Liberia, *Coffea liberica*, was formerly common but has given way to the preferred *Coffea robusta*. Fruit trees include citrus varieties, the alligator apple, papaya, mango,

and avocado. Pineapples grow wild. Among the cultivated plants are cassava, cotton, cacao, indigo, and upland rice.

Elephant and buffalo, once common in Liberia, have largely disappeared, but several species of antelope are found in the interior; two of these, the white-shouldered duiker and the zebra antelope, are peculiar to Liberia. A lemur called Bosman's potto and several species of monkey, including the long-haired and the Diana, are found in the forests. Wild pigs and porcupines exist in sparsely settled areas, and several members of the leopard group are also found. Most of the 15 species of snakes are venomous. Termites build lofty nests throughout the country. In some areas the tsetse fly is found, and driver ants and mosquitoes are common. Several varieties of snail act as hosts in the propagation of certain enteric diseases. Among the birds are the hornbill, wild guinea fowl, cattle egret (cowbird), flamingo, woodpecker, and weaver. As of 2002, there were at least 193 species of mammals, 146 species of birds, and over 2,200 species of plants throughout the country.

## 5 ENVIRONMENT

The nation lacks regulatory agencies to supervise the preservation of the environment. As the 1980s began, Liberia was one of the last West African countries with significant primary forest reserves, but recent estimates suggest that deforestation continues at a rate of about 2% per year. Commercial logging, firewood cutting, and a government land-clearing program all threaten primary forestland. Forests currently account for less than 40% of Liberia's land. By the mid-1980s, the country had lost over 70% of its mangrove swamps. Hunting and loss of habitat have decimated wildlife along the coastal plain, and there are no longer any large herds of big game in the interior.

The water supply is usually limited to open sources such as streams, swamps, and shallow, uncovered wells; the result, especially during the rainy season, is that insects and parasites thrive, creating a major health hazard. Safe drinking water is available to 72% of Liberia's urban dwellers and 52% of its rural population. The Mano and St. John rivers are becoming increasingly polluted from the dumping of iron ore tailings, and the coastal waters from oil residue and the dumping of untreated sewage and waste water.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 20 types of mammals, 11 species of birds, 2 types of reptiles, 4 species of amphibians, 29 species of fish, 16 types of mollusks, 11 species of other invertebrates, and 103 species of plants. The Jentink's duiker, the white-breasted guinea fowl, Pel's flying squirrel, the green turtle, and the Liberian mongoose are threatened species in Liberia.

## 6 POPULATION

The population of Liberia in 2005 was estimated by the United Nations (UN) at 3,283,000, which placed it at number 129 in population among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.9%, a rate the government viewed as too high. Political instability in the country has undermined the effectiveness of government re-

productive health programs. The projected population for the year 2025 was 5,800,000. The population density was 29 per sq km (76 per sq mi).

The population consists of indigenous Africans and descendants of American black settlers (also known as Liberico-Americans or Amerafricans), in the ratio of at least 30 to 1.

The UN estimated that 45% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.97%. The capital city, Monrovia, had a population of 572,000 in that year. More than one-third of the population lives within an 80-km (50-mi) radius of Monrovia. After Monrovia, Buchanan, Harper, and Greenville are the largest port cities; Gbarnga, Kakaata, Sanniquellie, Zorzor, and Ghanpa are major interior towns.

The prevalence of HIV/AIDS has had a significant impact on the population of Liberia. The UN estimated that 6.5% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

The Liberian civil war caused a great amount of migration in the early 1990s. In May 1997, there were still 210,000 refugees in Côte d'Ivoire, 420,000 in Guinea, 17,000 in Ghana, 14,000 in Sierra Leone, and 6,000 in Nigeria. Since the beginning of 1997, the situation in Liberia has improved as the warring factions have been disarmed. Repatriation is only possible after the rainy season ends in October and the roads become passable again; however, between 1997 and 1999, as many as 120,000 refugees were repatriated back to Liberia. Insurgencies that struck Lofa County in April and August 1999 caused major setbacks for the programs of the United Nations High Commissioner for Refugees (UNHCR), as Lofa has been the single-largest county of return for Liberian refugees, mainly from Guinea.

As of 1999, Liberia was host to 90,000 refugees from Sierra Leone. In that year all Liberian refugees who had fled were presumed to have returned to their homeland. In March 2003, armed conflict between the government and two rebel groups spread to nine of Liberia's fifteen counties. A ceasefire agreement was broken soon after signing. The end of the 14-year civil war that killed a quarter of a million people, uprooted almost a third of the population, and left the country's infrastructure in ruins did not occur until 2005. A 15,000-strong UN peacekeeping force restored security to the country and disarmed and demobilized over 100,000 former fighters, allowing presidential elections to be held in November 2005.

According to UNHCR, by the end of 2004 there was an internally displaced population of 498,566 in Liberia. In addition, there were 56,872 returned refugees. In 2004 Liberia had 15,172 refugees from other countries (mainly from Côte d'Ivoire) and 5 asylum seekers. In that same year, Liberia ranked eighth-highest for the origin of refugees, with 335,500 by year end in Guinea, Sierra Leone, Côte d'Ivoire, Ghana, and the United States. In that same year over 5,000 Liberians sought asylum in Ghana, Guinea, Italy, Germany and France.

Net migration rates have vacillated widely. In 2005, the net migration rate was an estimated zero migrants per 1,000 population, compared to 36.5 migrants per 1,000 population in 2000. These

were significant changes from 1990, when the net migration rate stood at -27.0 per 1,000 population.

## 8 ETHNIC GROUPS

Indigenous African tribes constitute 95% of the population. Besides the descendants of the early settlers, Liberia is peopled by about 28 ethnic groups, each with its own language. They are believed to have migrated from the north and east between the 12th and 16th centuries AD, bringing with them elements of Egyptian and Arabian culture, such as the spinning and weaving of cotton and the smelting of iron. Linguistically, the tribes may be divided into three main groups: the Mande people in the north and far west, the Kru tribes (including the Krahn) in the east and southeast, and the Mel in the northwest. The largest groups are the Kpellé, Bassa, Gio, Kru, Grebo, Mano, Krahn, Gola, Gbandi, Loma, Kissi, Vai, and Bella. About 2.5% of the population is Americo-Liberian, descendants of immigrants from the United States who had been slaves. There are also two tribes not strictly Liberian: the Mandingo, who are itinerant Muslim traders, and the Fanti fishermen, who come from Ghana and stay a few years at a time in Liberia.

Because of intermarriage and an aggressive national unification program, tribal divisions are rapidly becoming less distinct, especially around the capital. Nevertheless, there is a strong tendency among the indigenous people to preserve their tribal identities.

Of the non-African resident population, the biggest component consists of Lebanese and Syrians.

## 9 LANGUAGES

English is the official language, but only a minority of the people (about 20%) can speak or write it. The tribal people use their own languages, of which there are about 20. Of these, Vai, Bassa, and Loma can be written and are being used in correspondence by these tribes. The international phonetic alphabet, introduced by missionaries, has facilitated the use of many of the other tribal languages for correspondence and publication of local newsletters.

## 10 RELIGIONS

The early settlers, freed American slaves, brought with them the culture and religion of the US deep South of the slavery era. Their descendants are generally adherents of Protestant denominations. It is estimated that about 40% of the population practice Christianity exclusively or in combination with traditional indigenous religions. Christian denominations include Lutheran, Baptist, Episcopalian, Presbyterian, Roman Catholic, United Methodist, African Methodist Episcopal (AME), AME Zionist, and several Pentecostal churches. About 20% of the population practice Islam. Mandingo traders, who live mainly in the northern and eastern counties, have made many Muslim converts and Egyptian and Pakistani Muslim missionaries have been active since 1956. About 40% of the population practice traditional indigenous religions exclusively. Veneration of ancestors forms the core of most Liberian traditional religion. There is also a small Baha'i community.

Though the law prohibits religious discrimination, there have been reports of violence and discrimination against Muslims and Islamic leaders complain of both social and political discrimination. Certain Christian holidays are celebrated as national holidays. The Inter-Religious Council of Liberia is a well-known na-

LOCATION: 4°20' to 8°33' N; 7°22' to 11°30' W. BOUNDARY LENGTHS: Guinea, 563 kilometers (350 miles); Côte d'Ivoire, 716 kilometers (445 miles); Atlantic coastline, 538 kilometers (334 miles); Sierra Leone, 306 kilometers (190 miles). TERRITORIAL SEA LIMIT: 200 miles.

tional group that seeks mutual understanding between faiths and also promotes peace between the Liberians United for Reconciliation and Democracy (LURD) and the Movement for Democracy in Liberia (MODEL).

## 11 TRANSPORTATION

In 2002 there were an estimated 10,600 km (6,586 mi) of public roads, of which only about 657 km (408 mi) were paved. Private roads built by rubber and lumber companies were mostly laterite-surfaced roads. Important paved roads connect Monrovia to the interior as far as the Guinea, Sierra Leone, and Côte d'Ivoire borders. There is major deterioration reported on all highways due to lack of maintenance since the civil war began. In 2003, there were 12,000 registered passenger autos, and 35,950 commercial vehi-

cles. Except for short-line buses, virtually all of Liberia's common carriers are taxicabs.

Railroad lines in Liberia, as of 2004, consisted of 490 km (304 mi) of standard and narrow gauge railways, of which the bulk (345 km/215 mi) were standard gauge lines. Of Liberia's three railways, all were owned by foreign steel and financial interests in conjunction with the Liberian Government, and used for the transportation of iron ore from mines to the ports of Buchanan and Monrovia. One of these, the Lamco Railroad, closed in 1989 after iron ore production ceased. The other two were shut down by the civil war. Large sections of the rail lines have been dismantled, and an estimated 60 km (37 mi) was exported for scrap.

The Free Port of Monrovia, opened in 1948, underwent substantial improvements during the late 1960s, so that ships with a draft up to 14 m (45 ft) can now be handled. A port used primarily for iron ore export was opened at Buchanan in 1963. These two deepwater ports handle over 98% of all cargo. Smaller ports, located at Greenville and Harper, handle mainly log exports. Many foreign-owned ships are registered in Liberia because of low fees and lenient labor laws. Liberia's registered merchant fleet in 2005 totaled 1,465 vessels (1,000 GRT or over) with 50,555,752 GRT.

Robertsfield, 58 km (36 mi) from Monrovia, is the site of the sole international airport. In 2004, there were an estimated 53 airports, of which only 2 had paved runways as of 2005. Medium-sized jets and small aircraft, including those of Air Liberia, provide service from Spriggs Payne Airport on the outskirts of Monrovia to destinations within Liberia.

## 12 HISTORY

It is believed that many of the peoples of Liberia migrated there from the north and east between the 12th and 16th centuries AD. Portuguese explorers first visited the coast in 1461, and Europeans traded with coastal tribes during the next three centuries. Modern Liberia was founded in 1822 by freed slaves from the United States. They were sent to Africa under the auspices of the American Colonization Society, a private organization whose purpose was "to promote and execute a plan for colonizing in Africa, with their own consent, the free people of color residing in the United States." The first settlement was on Providence Island near where the present capital city, Monrovia, is located. Although the Society, with the help of the United States government under President James Monroe (after whom Monrovia is named), had arranged with local chiefs for a settlement, the colonists were attacked by indigenous peoples, disease, and barely maintained their foothold.

The first governors of the settlement were agents appointed by the Colonization Society, but in 1847 Americo-Liberians established the Republic of Liberia under a constitution modeled after that of the United States. The state seal shows a ship at anchor in a tropical harbor, and bears the inscription, "The Love of Liberty Brought Us Here." Thus began over a 130 years of Americo-Liberian domination over the 16 indigenous ethnic groups within Liberia's borders.

Emigration to Liberia continued until the close of the US Civil War, during which about 14,000 settlers went to Liberia under the auspices of the Society, and some 5,700 captives, liberated from slave ships on the high seas by the US Navy, were sent by the US government.

Although the United States refused to extend diplomatic recognition to independent Liberia until the civil war, several European governments did, including Britain and France. However, as the scramble for Africa reached its feverish pitch, Liberia's "century of survival" began. Neighboring British and French colonial powers, on one pretext or another, and by force of arms, encroached upon the infant republic. During the last quarter of the 19th century, Liberia lost considerable resource-rich territory to adjoining British and French colonies. Pressure on Liberia's borders continued well into the 20th century.

Added to these dangers was Liberia's precarious economic position. In the 1870s, Liberia contracted for a \$500,000 loan from European sources. Because of increasing world competition from Brazilian coffee, European sugar beets, and steamers, Liberia was unable to generate sufficient export revenue, and defaulted on this loan. Recession forced Liberia into a series of ever larger loans. Liberians were further compelled to allow collection of customs revenues by Europeans and Americans. Eventually, Liberia was able to secure a \$5-million loan from a US firm, the Firestone Tire and Rubber Co., which set up rubber plantations in the country in 1926. The depression of the 1930s brought Liberia to the verge of bankruptcy, and government revenues fell in 1933 to a low of \$321,000.

In the early 1930s, Liberia's political sovereignty was also severely threatened. Accusations had begun to circulate internationally that Liberian laborers, with the complicity of high government officials, were being recruited for shipment to the Spanish island of Fernando Póo (now Bioko, in Equatorial Guinea) under conditions that resembled slave trading. A commission of inquiry, set up by the League of Nations at the request of Liberia's President Charles D. B. King, found some basis for the charges and implicated the vice president, who was forced to resign. President King also resigned.

Exportation of rubber from the new Firestone plantations began in 1934. The establishment of a US air base in Liberia during World War II and the building of an artificial harbor at Monrovia further stimulated the country's development. William V. S. Tubman, elected president in 1944 and reelected for five additional terms, sought to unify the country by attempting to bridge the wide economic, political, and social gaps between the descendants of the original American ex-slaves and the tribal peoples of the interior. President Tubman, affectionately called "Uncle Shad," died at the age of 74, after 27 years in office. He was known as the "Maker of Modern Liberia" for his open door policy of unrestricted foreign investment and his Unification Policy.

Upon his death in 1971, Vice-President William R. Tolbert, Jr. assumed the reigns of power. Tolbert was nominated by the True Whigs, Liberia's only legal political party, and, having been elected without opposition in October 1975, was inaugurated for an eight-year term in January 1976. Unfortunately, Tolbert's term coincided with a deep economic depression, which sparked Liberia's colonial revolution. The Progressive Alliance of Liberia (PAL) organized a protest against proposed increases in the price of rice. The meeting turned violent resulting in looting. Tolbert was forced to subsidize rice to restore order, a sign that the True Whig government was coming to an end.

### Doe Takes Power

On 12 April 1980 army enlisted men staged a coup. Tolbert and at least 26 supporters were killed in the fighting. Thirteen officials were publicly executed 10 days later. The People's Redemption Council (PRC) led by Sgt. Samuel K. Doe, a Krahn tribesman, became head of state. Doe suspended the constitution, but a return to civilian rule was promised for 1985. Despite two coups attempts in 1981, the government declared an amnesty for all political prisoners and exiles. Forty political prisoners were released in September of that year, and another 20 were released in December. A draft constitution providing for a multiparty republic was issued in 1983 and approved by referendum in 1984.

In the elections of 15 October 1985, nine political parties sought to challenge Doe's National Democratic Party of Liberia (NDPL), but only three were allowed to take part. Doe was elected with 51% of the vote, and the NDPL won 21 of the 26 Senate seats and 51 of the 64 seats in the House of Representatives. Foreign observers declared the elections fraudulent, and most of the elected opposition candidates refused to take their seats.

In November 1985, military leader Thomas Quiwonkpa and an estimated 500 to 600 people died in an unsuccessful coup attempt—the seventh since Doe took power. Krahn troops retaliated, killing thousands of Gio, considered supporters of the coup leaders. In late December 1989, a small group of insurgents calling themselves the National Patriotic Front of Liberia (NPFL) led by Charles Taylor invaded Liberia. The rebel invasion soon pitted ethnic Krahn sympathetic to the regime against those victimized by it, Gio and Mano. Thousands of civilians were massacred on both sides. Hundreds of thousands fled their homes.

By June 1990, Taylor's forces laid siege to Monrovia. A third force led by Prince Yormie Johnson, split from the NPFL. Johnson quickly controlled parts of Monrovia prompting evacuation of foreign nationals and diplomats by the US Navy in August. To restore order, the Economic Community of West Africa (ECOWAS) created the Economic Community Monitoring Group (ECOMOG) comprising some 4,000 troops from Nigeria, Ghana, Sierra Leone, The Gambia, and Guinea.

ECOWAS invited the principal Liberian players to meet in Banjul, Gambia to form a government of national unity. Exiled members of Liberia's leading political parties and associations elected Dr. Amos Sawyer, leader of the LPP to head an interim government of national unity (IGNU). Bishop Ronald Diggs of the Liberian Council of Churches became vice president. However, Taylor's NPFL refused to attend the conference, and the AFL, which formerly supported Doe, and the INPFL allied themselves against Taylor. Within days clashes erupted.

On 9 September 1990, Johnson's forces captured Doe at the port. His torture and execution were videotaped by his captors. ECOMOG was reinforced in order to protect the interim government headed by Dr. Sawyer. Sawyer was able to establish his authority over most of Monrovia, but the rest of Liberia was in the hands of various factions of the NPFL or of local gangs.

Repeated attempts to get Taylor and Johnson to cooperate with Sawyer proved fruitless. The war spilled into Sierra Leone, further complicating peacemaking and peacekeeping efforts. In April 1996, violence escalated in Monrovia. Roving gangs of heavily armed, leaderless teenagers recklessly sprayed the city with ma-

chine-gun fire and grenade launchers. More than 3,000 people were killed in the next two months and nearly every building in the capital suffered damage. Looters targeted international relief organizations for their radios, medicines, and cars.

On 8 May 1996, after more than 150,000 deaths and 13 peace accords, Liberia's four principal militias approved a peace plan that required an immediate halt to fighting, the removal of weapons and ammunition from the capital city of Monrovia, and the return of about \$20 million worth of vehicles and equipment stolen from international relief organizations. Additional troops from Ghana, Mali, Côte d'Ivoire, Niger, Burkina Faso, and Benin were brought in to enforce the peace accords, bringing the total number of foreign peacekeeping troops to 13,000. Meanwhile, it was apparent that disagreements over establishing an electoral commission and other difficulties in preparations would delay the proposed elections.

On 19 July 1997 some 500 international observers, including former US president Jimmy Carter, monitored the elections. They reported peaceful, mostly free and fair elections, although runners-up Johnson-Sirleaf and Kromah complained of irregularities. The official results gave Taylor the victory with 75.3% of the vote, while Johnson-Sirleaf obtained 9.6%. Taylor's National Patriotic Party (NPP) took 49 House seats and 21 seats in the Senate (out of 64 and 26 total seats respectively). On 2 August Taylor was inaugurated. He appointed a cabinet with some members of the transitional administration, and he established a nine-member national security council to maintain civil order.

Although insecurity prevailed in parts of Liberia, especially Lofa County, the last ECOMOG troops began leaving the country in October 1999. In July 1999, Taylor presided over the burning of a huge stockpile of weapons. By May 2000, much of Liberia was still in ruins, but international donors had made some progress in restoring agricultural production, reintegrating ex-combatants, and helping refugees and internally displaced persons resettle in their home areas.

Renewed fighting in 2000 led to a declaration of a state of emergency on 8 February 2002. Taylor lifted the emergency in September 2002, but by February-March 2003, the Liberians United for Reconciliation and Democracy (LURD) had made gains deep into territory previously held by government troops. Under ECOWAS supervision, the two sides met in Bamako in March 2003, the first such official encounter, and peace talks continued in Accra, Ghana. On 17 June, the two sides signed a cease-fire with commitments to a transition government without Taylor, but three days later Taylor declared that he would serve out his term to January 2004 with the possibility of seeking reelection.

On 11 August 2003, Taylor succumbed to international pressure, handed power over to his vice president, Moses Blah, and sought asylum in Nigeria where he has remained in exile. A week later, under the auspices of ECOWAS and the international donor 'Contact Group' (ICGL), the government, the LURD, and a new rebel group, the Movement for Democracy in Liberia (Model), signed a peace accord in Accra providing for an interim government, the National Transition Government of Liberia (NTGL) led by businessman, Gyudeh Bryant.

A National Transitional Legislative Assembly (NTLA), composed of warring factions, political parties, representatives of the

counties, special interests, and civil society, replaced the House of Representatives and the Senate. A 15,000-strong peacekeeping force—the UN Mission in Liberia—(UNMIL) was established with a one-year mandate to enforce the peace. The mandate was later extended until March 2006. UNMIL began to demobilize and disarm combatants, but because donors underestimated the number of soldiers, funds were insufficient to implement rehabilitation and reintegration. Repatriation through the United Nations High Commissioner for Refugees (UNHCR) of the estimated 350,000 Liberian refugees has been slow, but some 100,000 refugees were thought to have returned on their own.

The political transition formally ended following the 11 October 2005 election between front-runners George Weah, an internationally renowned soccer (football) player, and Ellen Johnson-Sirleaf, a Harvard-educated international civil servant and national politician. Despite protests of fraud by Weah's youthful supporters of the Congress for Democratic Change (CDC), Johnson-Sirleaf was declared the winner on the 8 November second-round ballot with 59.6% of the vote to Weah's 40.4%. The new government was formed on 6 January 2006, making Johnson-Sirleaf Africa's first woman head of state.

Pressure for Taylor's extradition to face trial for alleged war crimes was mounting into 2006. His extradition was demanded by the UN Special Court of Sierra Leone, which charged him with 17 counts of war crimes. In addition, over 300 African and international human rights and activist groups and the UN High Commissioner for Human Rights demanded his extradition. However, unless sufficient evidence supporting the allegations was available, Nigeria stated that it would not hand Taylor over. In February 2006, it was announced that Johnson-Sirleaf had inaugurated a Truth and Reconciliation Commission to investigate human rights abuses committed 1979–2003, marking the end of civil war.

### 13 GOVERNMENT

The Liberian republic is modeled after the United States. Its constitution approved on 3 July 1984 and effective 6 January 1986, provides for a president and vice president elected jointly by universal suffrage (at age 18) for a six-year term with a limit of two consecutive terms. Candidacy is again allowed after the lapse of at least one term. The president is both the chief of state and head of government. He or she nominates judges from a list submitted by a commission, serves as commander-in-chief of the armed forces, and has the right to veto legislation. Vetoes can be overridden by a two-thirds vote of both legislative houses. The legislature is divided into a Senate, its 26 members elected by counties for nine years, and a House of Representatives, its 64 members elected by equally apportioned constituencies for six years.

The constitution proscribes the one-party state and guarantees fundamental rights, such as free speech, press, and assembly. The president has the right to suspend certain rights by declaring a state of emergency in cases of war or serious civil unrest. A state of emergency, which must be confirmed by a two-thirds vote of both legislative houses, does not empower the president to suspend or abrogate the constitution, dissolve the legislature, suspend or dismiss the judiciary, or suspend the right of habeas corpus. The constitution guarantees fundamental freedoms to all persons irrespective of ethnic background. But because of the country's unique history, the constitution stipulates that “only persons who

are Negro or of Negro descent shall qualify by birth or by naturalization to be citizens of Liberia,” and only citizens may own land.

### 14 POLITICAL PARTIES

The president and all members of the legislature were formerly members of the True Whig Party, which was organized in 1860 and held power continuously from 1878 to 1980. The Progressive People's Party (PPP), formed in 1979, claimed to represent the interests of Liberia's indigenous peoples, in contrast to the Americo-Liberian stance of the True Whigs.

In March 1980, several PPP members were arrested, a move that may have triggered the April coup. Although all political activity was banned, many True Whig members retained their government posts.

The National Democratic Party of Liberia (NDPL), established by former president Samuel K. Doe, was victorious in the 1985 elections. The newly formed Unity Party, Liberian Action Party, and Liberian Unification Party were allowed to take part in these elections. The United People's Party (UPP), probably the largest opposition grouping, was founded by Gabriel Baccus Matthews, formerly head of the PPP. The UPP was not allowed to field candidates in 1985 but was legalized in 1986. The National Patriotic Party (NPP) was led by Charles Taylor.

In May 2000, the opposition led by Dr. Togba-Nah Tipoteh, formed a loose coalition of eleven entities called the Collaborating Political Parties (CPP), which aimed to present a common candidate in 2003. In mid-2001, several key opposition leaders including Ellen Johnson-Sirleaf met in Abuja, Nigeria to discuss political strategies. The opposition made a number of demands, which it advanced as pre-conditions before going to elections. Among these were the restructuring the armed forces as stipulated by the Abuja Accords, holding elections for chiefs and mayors, conducting a census, dissolving NPP party cells in the civil service, stopping ‘illegal’ funding of the NPP, guaranteeing opposition parties equal air time and reconstituting the elections commission (ECOM). Opposition political activity upcountry has been virtually nonexistent because of extreme insecurity.

In June 2003, Charles Taylor's NPP, held 49 of 64 House seats, and 21 of 26 Senate seats. The Unity Party held 7 House seats and 3 Senate seats. The All Liberia Coalition Party held 3 House seats and 2 Senate seats. Three other parties held the 5 remaining House seats among themselves.

In the first round of the 2005 elections, George Weah emerged with around 28% of the vote, Ellen Johnson-Sirleaf with 20%, and Charles Brumskine was third with 12%. Neither the Mandingo-backed LURD, nor the Krahn-dominated and Côte d'Ivoire-backed Model were able to transform themselves into political parties. In the Senate, the Coalition for the Transformation of Liberia (COTOL) won 7 seats followed by the NPP 4, the CDC, 3; the Liberian Party (LP) of Charles Brumskine, 3; the Unity Party (UP) of Charles Clarke, 3; and the Alliance for Peace and Democracy (APD) of Togba-na Tipoteh, 3. In the House of Representatives, the CDC secured 15 seats followed by the LP, 9; UP, 8; COTOL, 8; APD, 5; and NPP, 4. The next presidential and Senate elections were scheduled for 2014 and House of Representatives elections for 2011.

## 15 LOCAL GOVERNMENT

Liberia is divided into 13 counties, 2 territories, and the federal district of Monrovia. The counties are Grand Cape Mount, Sinoe, Grand Bassa, Maryland, River Cess, Bomi, Grand Kru, Margibi, Lofa, Borg, Grand Gedah, Nimba, and Montserrado. The territories are Marshall and Gibi.

The central government is supposed to appoint the county and territory superintendents. Counties are subdivided into districts headed by commissioners. There are also paramount, clan, and town chiefs. Cities elect their own mayors and councils.

## 16 JUDICIAL SYSTEM

The legal system is closely modeled on that of the United States. The 6 January 1986 constitution provides for the establishment of a Supreme Court consisting of a chief justice and four associate justices, to be appointed by the president from a panel recommended by a Judicial Service Commission. The consent of the Senate is required for these appointments and for the confirmation of lower court judges, to which a similar procedure applies. In theory, cases originate in magistrates' courts and may be taken for appeal to one of 10 circuit courts or to the highest court. Serious cases originate in the circuit courts. Traditional courts are presided over by tribal chiefs. A labor court was created in 1986.

For many years, the judicial system has suffered from corruption and domination by the executive. By mid-1990 the system had collapsed and justice administration was co-opted by the military commanders of various factions. In 1991, the Interim Government of National Unity (IGNV), revived the court system in the Monrovia area, and the National Patriotic Front of Liberia (NPFL) reopened courts in the areas under its control. After 1997, donors trained paralegals and human rights monitors to protect citizens up-country, and the US Department of Justice rebuilt magistrate courts, compiled 30 years of Supreme Court decisions, and published the Liberian Code so that judges and lawyers could have recourse to those decisions. Rebuilding the courts was expected to become a major thrust of the Johnson-Sirleaf government.

## 17 ARMED FORCES

As of 2005, active armed forces numbered between 11,000 and 14,000 personnel, including militias supportive of the government. Plans for a reorganized military include an army, navy, and an air force. In 2005, the defense budget totaled \$1 million.

## 18 INTERNATIONAL COOPERATION

Liberia is a charter member of the United Nations, having joined on 2 November 1945; it takes part in ECA and several nonregional specialized agencies, such as UNESCO, FAO, ILO, the World Bank, UNIDO, IMF, and the WHO. Liberia belongs to the ACP Group, the African Development Bank, ECOWAS, G-77, the Community of Sahel and Saharan States (CENSAD), the New Partnership for Africa's Development (NEPAD), and the African Union. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra Leone.

Liberia has participated in various African conferences and has advocated a cooperative association of African states to further such matters of mutual concern as public health, education, and

trade. A customs bloc, the Mano River Union, was established in 1973 with Sierra Leone and Guinea. Leaders of the three countries signed a nonaggression and antisubversion pact in 1986. Technical assistance activities of the UN in Liberia have emphasized agricultural development, teaching, vocational training, and control of yaws and malaria. The United Nations Mission in Liberia (UNMIL) was established in 2003 to serve as a peacekeeping operation in support of the transitional government. At least 48 nations have offered support for UNMIL. Liberia is part of the Non-aligned Movement.

In environmental cooperation, Liberia is part of the Convention on Biological Diversity, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The Liberian economy has come to a virtual standstill since civil war broke out in 1989. The country has an agricultural economy with the majority of the population earning its living in this sector. The principal crops are rice, cocoa, coffee, palm oil, sugar cane, and cassava. Financial mismanagement and the effects of civil war have divided the country into two economic zones, one centered in and around the major urban centers, the other comprising the bulk of the country's rural hinterland. Although the country is rich in natural resources—particularly minerals (gold, diamonds, and iron ore) and forests—little investment has entered the country since hostilities began. The 1996 Abuja peace accords initially provided some hope of an economic recovery in the coming decade, but fighting broke out again in 1999 and was ongoing in 2003. In August 2003, a comprehensive peace agreement ended 14 years of civil war and led to the resignation of former president, Charles Taylor, who was exiled to Nigeria. After two years of rule by a transitional government, democratic elections in late 2005 brought President Ellen Johnson-Sirleaf to power. However, the security situation is still volatile and the process of rebuilding the social and economic structure of this war-torn country remains sluggish.

Even prior to the civil war, Liberia faced serious financial problems. Deficits created in the 1970s were deepened by a wave of military spending resulting from the 1980 coup. To try to compensate, cuts in civil service salaries and currency manipulation were used as policy tools. A US-led effort to bring better fiscal management to the Liberian economy failed, and in 1988 the World Bank closed its offices in Monrovia. In March of 1990, the IMF threatened to expel Liberia for nonpayment of its debt.

The civil war has left most of Liberia's infrastructure in shambles. Businessmen and capital have left the country and continuing turmoil has prevented normal economic life. The remaining economic assets were plundered or destroyed by factional forces. In addition, President Charles Taylor's support for rebels fighting in Sierra Leone negatively impacted the climate for foreign investment. Although there are no official statistics, it is estimated that 85% of the population was unemployed in 2003 and that GDP grew at a negative rate of 31.3% during this year. However, with the end of political turmoil, GDP grew at a rate of 8% in 2005.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Liberia's gross domestic product (GDP) was estimated at \$2.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$700. The annual growth rate of GDP was estimated at 8%. The average inflation rate in 2003 was 15%. It was estimated that agriculture accounted for 76.9% of GDP, industry 5.4%, and services 17.7%.

Foreign aid receipts amounted to \$107 million or about \$32 per capita and accounted for approximately 28.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Liberia totaled \$420 million or about \$124 per capita based on a GDP of \$442.0 million, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

It was estimated that in 2002 about 80% of the population had incomes below the poverty line.

## 21 LABOR

Since the tribal people of the interior form the bulk of the population and engage primarily in subsistence agriculture, there were few skilled laborers in Liberia until recent years. Although there is still a dearth of highly skilled mechanics and technicians, an increasing number of Liberians are becoming able plant and machine operators. Approximately 70% of workers were engaged in agriculture, with 22% in services, and 8% in industry as of 2000. As of 2003 there has been only a gradual economic recovery since the civil war, with an estimated 85% of the labor force unemployed.

Before the onslaught of civil war, the labor force totaled about 1,349,000 persons. In 1988, total civilian employment stood at 701,000 and unemployment at 43%. The principal private employer then was Firestone, with 9,000 employees in 1987. The policy of foreign-owned companies has been to employ Liberian labor in the first instance and to encourage the training of skilled workers, especially in mechanical pursuits. There are still shortages of middle- and higher-level technicians and managerial personnel. From time to time, labor shortages are reported in large agricultural enterprises. The government has enacted a minimum wage law, but the larger employers have generally paid wages in excess of the legal minimum.

The Labor Congress of Liberia (LCL), formed in 1951, was the first significant trade union. Following the first major strike in 1955, the LCL leadership was arrested and the union dissolved. In 1958, it was revived under the leadership of the Ministry for Social Affairs and functioned mainly as a government organ. As a protest against government interference in the LCL, the Congress of Industrial Organizations of Liberia (CIOL) was organized in 1960. The Liberian Federation of Labor Unions was formed in 1980 by a merger of the LCL and CIOL. In 2002, there were a total of 30 functioning unions with a total of 60,000 members, most of whom were unemployed. Despite their organized strength, unions have little actual power.

There are minimum working ages, statutory minimum wages, and occupational safety and health standards but none of these are effectively enforced. Child labor laws are similarly not enforced, especially in rural areas. Most people engage in any work available despite wages or conditions.

## 22 AGRICULTURE

Before the civil war, agriculture was the main source of livelihood for the great majority of Liberians. Except on plantations operated by foreign concessionaires and wealthy Liberians, farming techniques are primitive. The "bush rotation" system of shifting cultivation is followed, in which the farmer clears up to two hectares (five acres) of wild forest or low bush each year, lightly cultivates it with crude hand tools, and plants rice or cassava as the rainy season begins. In 2003, agriculture engaged about 70% of the labor force on 6.3% of the total land area. Estimated production of field crops in 2004 included cassava, 490,000 tons; sugarcane, 255,000 tons; and rice, 110,000 tons. The government maintains a retail price ceiling on rice. Rice and wheat productions are insufficient to meet local needs.

The rain forest soils, while well drained, are strongly leached, making Liberia better adapted to tree-crop agriculture than to annual field-crop production. The major rubber, rice, coffee, cocoa, vegetable, and fruit producing areas lie outside of Monrovia. Rubber is the leading cash crop, with production in 2004 estimated at 115,000 tons. Before the war, six foreign-owned concessions produced over two-thirds of the rubber crop, with Firestone's Harbel plantation as the biggest in the world. Firestone ended its long association with Liberian rubber production with the sale of its interests to the Japanese-owned Bridgestone in 1988.

The principal export crops produced by small farmers are coffee, oil palm nuts, sugarcane, and fruits. Estimated production in 2004 was coffee, 3,200 tons; palm oil, 42,000 tons; and palm kernels, 11,000 tons. Banana production came to 110,000 tons; plantains, 42,000 tons. In 2004, Liberia had an agricultural trade deficit of \$21.7 million.

## 23 ANIMAL HUSBANDRY

The limited number of goats and sheep does not supply an adequate amount of protein for the Liberian diet, but poultry farming and marketing of eggs are on the increase; there were an estimated 5.3 million chickens in 2005. Experiments in crossing West African and Brahman cattle have not yet produced breeds resistant to the tsetse fly, but the potential remains for developing good beef animals. In 2005, Liberia had an estimated 220,000 goats, 210,000 sheep, 130,000 pigs, and 36,000 cattle.

## 24 FISHING

The fishing industry is dominated by the oceangoing trawlers of the Mesurado Fishing Co. The company also maintains a domestic distribution system that supplies a substantial amount of fish to the interior areas of the country. The total Liberian catch in 2003 was estimated at 11,314 tons.

## 25 FORESTRY

An estimated 31% of Liberia is covered by forest, its use largely confined to production of lumber for local needs. National forests constitute about 18% of the land area. In 2000, Liberia had

119,000 hectares (294,000 acres) of forest plantations. There were five major reforestation areas with a total of 4,260 hectares (10,500 acres). About 235 timber species grow in Liberia, of which 90 are potentially marketable, but natural stands of a single species are not common. This fact, plus difficulty of access and lack of practicable means of transportation, has tended to discourage commercial logging operations, despite the known existence of such valuable woods as African mahoganies and red ironwood. A number of foreign companies, mainly from the United States, have been granted concessions. The timber cut in 2004 yielded 5.912 million cu m (208.7 million cu ft) of roundwood, of which 94% was burned as fuel. Forest product exports in 2004 were valued at \$97.7 million.

## 26 MINING

In 2004, mineral production in Liberia was limited to diamonds, hydraulic cement, and gold. Since December 1989, when mining revenues accounted for 22% of gross domestic product (GDP), the mining sector has been severely damaged by 14 years of civil war and political instability. Estimated production of gold in 2004 was 20 kg, unchanged from 2003. Diamond production in 2004 was estimated at 10,000 carats, down from an estimated 40,000 carats in 2003, and from an estimated 80,000 carats in 2002. All of the country's diamond production comes from artisanal alluvial mining. In 2004, the country also produced hydraulic cement, of which production in 2004 was an estimated 40,000 metric tons, up from an estimated 25,000 metric tons in 2003. Liberia's undeveloped resources included barite, chromium, kyanite, manganese, nickel, palladium, platinum, titaniferous sands, and uranium. Liberia's New Mining Law of 2000 gives the Ministry of Lands, Mines, and Energy the responsibility of issuing four types of mining license—exploration, Class A (for up to 25 years; are limited to 1,000 sq km; and are open to foreign investors), Class B (for 5 years; are renewable; allow mechanized production; and are open to foreign ownership), and Class C (covers artisanal mining; are good for one year intervals with expiration on December 31; and is open only to Liberians). Eastern Liberia was made up of rocks of Birimian age with significant potential for gold. Western Liberia was made up of rocks of Archean age that contained diamond, gold, iron ore, nickel, manganese, palladium, platinum, and uranium.

## 27 ENERGY AND POWER

Liberia, as of 1 January 2003, had no known reserves of crude oil or natural gas, and as of June 2003, no known recoverable reserves of coal. As a result, Liberia's demand for petroleum products, natural gas, and coal are met by imports. In 2002, Liberia's imports and demand for petroleum products each averaged 3,200 barrels per day. There were no recorded imports of coal in 2002 or imports of natural gas in 2003. However, Liberia has a small refining capacity, that as of 1 January 2003 was put at 15,000 barrels per day.

As of 2002, all of Liberia's electric generating capacity used fossil fuels. For that year, installed capacity was put at 0.330 million kW, with production at 0.489 billion kWh. Demand for electricity in 2002 came to 0.455 billion kWh.

## 28 INDUSTRY

Before the civil war, Liberia's industrial sector was dominated by processing plants associated with its key agricultural outputs: rubber, palm oil, and lumber. The Liberian-owned Mesurado Group manufactured detergent, soap, industrial gas, and animal foods. Liberia also produced soft drinks, cement, plastics, shoes, recycled steel, and refined petroleum products. In addition, Liberia's industrial base produced rice and sugar, cookies and candy, candles, foam rubber, hand tools and aluminum parts, umbrellas, and batteries.

Between 1990 and 1996, faction leaders and business accomplices exploited the industrial wealth of the country. Using forced labor, stolen goods, and fuel, they engaged in forestry, mining, and rubber production techniques that were environmentally unsound and threatened future industrial capacity. Profits from these enterprises were used to acquire more munitions. Increased fighting in 2003 further aggravated the poor industrial climate. In 2004, industry accounted for only 9.8% of GDP, 5% of which was attributed to manufacturing. The 1975 "Liberianization" law protects the production of rice, gasoline, and cement; and the operation of travel agencies, gas stations, and beer and soft drink distributors from foreign interference, despite free trade agreements.

Liberia was a leading purveyor of transportation for the world's merchant fleet, but its position has declined rapidly. In 1995, the Liberian fleet consisted of 1,601 vessels with a gross tonnage of 59.4 million tons. This represented a decline of over 55% since 1982, due primarily to civil war, a reduction in oil tanker numbers, competition from other registry states, and opposition to the open registry system itself. The port of Monrovia was not even operational in 1999.

The oil refinery at Monrovia was closed in 1984. No viable oil or natural gas deposits have been discovered, although limited oil exploration has occurred.

## 29 SCIENCE AND TECHNOLOGY

Liberia has an agricultural experiment station in Suakoko; a geological, mining, and metallurgical society in Monrovia; and a research laboratory for the Mt. Nimba region, with headquarters in Robertsfield. The University of Liberia, founded in 1862, has colleges of agriculture and forestry, medicine, and science and technology. Cuttington University College, originally founded in 1889, has a science division, and the William V. S. Tubman College of Technology, founded in 1978, offers a three-year associate degree in engineering technology. All three institutions, as well as the Liberian Institute for Biomedical Research founded in 1952, are at Monrovia. Booker Washington Institute offers agricultural and industrial courses.

## 30 DOMESTIC TRADE

Before the civil war of 1989–96, internal trade was carried on mainly by large firms located in Monrovia with branches in other principal towns. However, conflict destroyed nearly all businesses and production facilities and most foreign investors left the country. The infrastructure around major cities also suffered. As of 2002, domestic trade and manufacturing was still limited. A small business sector has resumed operations, but primarily through Lebanese and Indian investors. The economy of the nation is highly de-

pendent on revenues from maritime licensing and timber exports. About 70% of the nation's work force is employed in agriculture (2000 est.). Among rural peoples, trade is often by barter.

### **3<sup>1</sup> FOREIGN TRADE**

Liberia had a history of trade surpluses before the war. Exports in 1998 were led by diamonds, followed by iron ore, rubber, and timber. Imports were led by mineral fuels, chemicals, machinery, transportation equipment, manufactured goods, and rice and other foodstuffs. In 2004 rubber accounted for \$93.4 million of exports, followed by cocoa which brought in \$3.5 million, and others that accounted for a total of \$6.9 million.

### **3<sup>2</sup> BALANCE OF PAYMENTS**

Liberia has a chronic payments deficit, with large capital outflows and debt-service payments. Since civil war broke out in 1989, exports of foreign currency-earning raw materials (iron, rubber, timber, diamonds, and gold) have plummeted, and massive emergency aid operations began.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Liberia's exports was \$110 million while imports totaled \$295 million resulting in a trade deficit of \$185 million.

### **3<sup>3</sup> BANKING AND SECURITIES**

In 1974, the government established the National Bank of Liberia. It became the exclusive banker and fiscal agent of the government, introduced reserve requirements for commercial banks, and undertook their supervision. Liberia's commercial banks had their main offices in Monrovia. The Liberian Bank for Development and Investment was established in November 1965 to provide additional medium- and long-term financial aid to worthwhile industrial projects. A National Housing and Savings Bank was established in 1972, with priority given to low-cost public housing. An Agricultural and Cooperative Development Bank provided credit to facilitate capital investment in agriculture.

In the 1980s, Liberia was plagued by the outflow and hoarding of US dollars, the only legal notes. The government minted a L\$5 coin to restore liquidity, but this action only led to more hoarding of US bills, which traded informally at a premium compared to similarly denominated Liberian coins.

In November 1996, the chairwoman of the ruling Council of State, Ruth Perry, imposed a freeze on all government spending. She said the step was necessary to stabilize state finances and provide for civil service salaries, many of which had not been paid for months. The only bill in circulation in 1999 was the L\$5 piece. Banks were only available as a repository for funds and did not pay interest or make loans. Banks operating in 1999 included the International Trust Company of Liberia, the Liberia Bank for Development and Investment (LBDI), the National Bank of Liberia, the National House and Savings Bank (NHSB), and the Tradevco Bank.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$35.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$58.5 million.

### **3<sup>4</sup> INSURANCE**

There is no information available on insurance.

### **3<sup>5</sup> PUBLIC FINANCE**

Government budgets, roughly in balance up to the mid-1970s, have since run heavily into deficit. Since civil war erupted in 1989, Liberia's fiscal management has collapsed. The country relies heavily on foreign aid, especially from the United States, Japan, the United Kingdom, France, Italy, Germany, China, and Romania. In recent years, Taiwan and Libya have surfaced as the largest direct donors to the Liberian government.

The US Central Intelligence Agency (CIA) estimated that in 2000 Liberia's central government took in revenues of approximately \$85.4 million and had expenditures of \$90.5 million. Revenues minus expenditures totaled approximately -\$5.1 million. Total external debt was \$3.2 billion.

### **3<sup>6</sup> TAXATION**

Before civil conflict began in Liberia, concession agreements negotiated between foreign interests and the Liberian government often provided tax exemption or modification for periods of 10, or more, years after the start of operations.

A moderately progressive tax on net income earned from Liberian sources by individuals, partnerships, and corporations was the largest source of government revenue. Net income was taxed at rates ranging from 11% to a maximum of 65% on income over \$99,000. Corporate tax rates ranged from 20–34% of taxable income with marginal rates of up to 50%.

An additional national reconstruction tax of up to 8% on income over \$1,000, was imposed in 1981, and was still in effect in 1991. Also levied were a sales tax of 0.5–2%, inheritance and gift taxes, and social security payroll taxes. In 2003, the violent chaos into which the society had descended while waiting on the international community to send aid made most questions about the tax regime irrelevant. In recent history, Liberia's wealth has been smuggled out, not taxed. In 1999, for instance, imports were improbably over three times the reported exports, a sign that not all exports were being reported. Of the \$60 million in tax revenue collected in 1999, only 22.4% came from income taxes on corporations and individuals. Sales taxes accounted for another 16%. The main sources of tax revenue have been import duties (almost 30%) and fees paid to Liberia's "flags of convenience" maritime registry (more than 23%).

### **3<sup>7</sup> CUSTOMS AND DUTIES**

Imports are subject to tariff duties, ranging from 2.5–25%, which constitute a major source of government income. Import duties are specific (based on weight) for some commodities, ad valorem (based on cost, insurance, and freight value) for others. Specific duties apply to foodstuffs, beverages, petroleum products, and certain rubber and textile products. All exports and some imports require licenses. Customs duties are 25% on luxury items such as alcoholic beverages, apparel, cosmetics, electronics, jewelry, and tobacco.

Goods may be landed, stored, sorted, manufactured, repacked, reforwarded, or transhipped within the area of the Free Port of

Monrovia without payment of customs duties, but the port was closed as of 1999.

### 38 FOREIGN INVESTMENT

Liberia has historically maintained an “open door” policy toward foreign investment, but since 1989 this policy has given way to the protectionist practices of the government. It has allowed a limited period of exemption from certain types of taxes and permits an unrestricted flow of dividend payments, but only in certain sectors. A 1975 “Liberalization” Law prohibits foreign ownership in many small and medium operations (such as travel agencies, gas stations, beer and soft drink distributors) and mandates the employment of Liberians at all levels. The law is often ignored but can also be invoked at any time.

In 1989, interest on long-term debt stood at 105% of exports. Attempts to bring financial stability to the economy failed dramatically in the early 1990s with the failure of the US-sponsored oversight mission and the breakdown in relations between Liberia and the IMF. Liberia plunged into a civil war from 1990 to 1997, which besides causing upwards of 150,000 deaths and displacing hundreds of thousands, destroyed the country’s infrastructure. The end of the fighting, with Charles Taylor’s accession to power as the only way to deter his followers from further destruction, brought little relief since his administration did not fulfill promises to fix what they had “broke.” Professions of adherence to principles of free trade and an open door to foreign investment also rung hollow as the state established monopolies in rice growing, gasoline distribution, cement import, and cement production. The free port at Monrovia continued to operate, but stevedore services have been monopolized by the National Port Authority, canceling the contracts of seven other companies. Corruption reached to the highest levels during Charles’s Taylor’s administration.

Most of Liberia’s principal enterprises were foreign owned before the civil war, with US investment—about \$300 million in 1987—foremost. Substantial investments were also made by the British, French, Swedish, Israelis, Swiss, Dutch, Italians, and Lebanese. After the civil war, some US companies resumed (Firestone) or began operations (some gold mining companies). However, most investors have been deterred by the regime’s failure to meet IMF targets, pervasive corruption, arbitrary administration, and the reemergence of violent rebellion.

In 1997 and 1998, foreign direct investment (FDI) inflow averaged \$15.5 million a year. From 1999 to 2001, average FDI inflow was \$11.3 million. According to the World Bank publication, World Investment Report, 2005, foreign direct investment into Liberia was almost nonexistent in 2002 and 2003 (about \$3 million and \$1 million respectively) but did increase modestly in 2004 to \$20 million, following the end of the civil war.

### 39 ECONOMIC DEVELOPMENT

The civil war and international financial obligations dim the prospects of economic development. While refugee resettlement looms as an early postwar priority, future economic development depends on reestablishing international confidence in Liberia’s financial management.

Liberia formed the Mano River Union (MRU) with Guinea and Sierra Leone, to promote development and regional economic integration. Although the civil war caused the MRU to become all

but defunct, in 2002 discussions on reviving the MRU took place. Foreign assistance to Liberia has declined, but Taiwan and Libya remain the largest donors of direct financial aid to the country. Western countries avoid direct aid to the government by sending assistance through international aid agencies and nongovernmental organizations (NGOs). In 2003, the International Monetary Fund (IMF) suspended Liberia’s voting rights in the Fund. As of February 2003, Liberia’s arrears to the IMF amounted to \$685 million.

The Economist Intelligence Unit reported that for quite sometime wealthy international donors, who are ready to assist reconstruction efforts in postwar Liberia, were withholding funding until Liberia’s National Assembly signed onto a Governance and Economic Management Action Plan (GEMAP). The Plan was created by the International Contact Group for Liberia to help ensure transparent revenue collection and allocation—something that was lacking under the transitional government and that has limited Liberia’s economic recovery. This plan was agreed to and officially signed into law by the chairman of the transitional government, Gyude Bryant, on September 15th, 2005. The reconstruction of infrastructure and the raising of incomes in this ravaged economy will largely depend on generous financial support and technical assistance from the donor community under GEMAP.

### 40 SOCIAL DEVELOPMENT

A social insurance and social assistance program was implemented in 1972. The current program covers public employees and employees of firms with five or more workers. The pension program is funded by equal contributions from employers and employees, while welfare is funded by the government. Work injury laws area also in place. Workers’ medical benefits include reasonable expenses for medical and surgical care, hospitalization, drugs, and appliances. However, most programs and institutions were disrupted by warfare.

In 2005, after 14 years of civil war, a Harvard-educated woman was elected president of Liberia. Ellen Johnson-Sirleaf is said to be a beacon of hope for women in Africa. However, rights for most women in the country are limited. Rural women remain largely subordinate in both public and private life. Women married under civil law have inheritance and property rights, but women married under tribal laws are considered property of their husbands. Domestic violence is widespread, and abused women have no recourse. Female genital mutilation is practiced by some ethnic groups.

Ethnic discrimination is explicitly prohibited by law. Despite this provision, citizenship is legally available only to blacks. Only citizens can own land, and noncitizens are restricted from owning certain types of businesses. The government had a poor human rights record, which includes disappearances, and beatings and torture by security forces.

### 41 HEALTH

Liberia has one of Africa’s highest fertility rates; in 2000 it averaged six children for every woman surviving through her child-bearing years. Average life expectancy was 38.89 years in 2005, one of the shortest in the world. As of 2004, there were an estimated 2 physicians, 6 nurses, and 4 midwives per 100,000 people. Only about 39% of the population has access to health care ser-

vices. Few Liberians had access to safe water (40%) and sanitation (24%) in 1994. More recent figures are unavailable.

Programs such as the Combating Childhood Communicable Diseases Program are credited with reducing mortality rates for children five and under. The infant mortality rate was 161.99 per 1,000 live births in 2005, the fourth highest in the world. The maternal mortality rate was 560 deaths per 100,000 live births. Contraceptive use is low. The level of measles immunization has dropped by 11% in the last few years from 55% in 1988 to 44% in 1994 (the most recent year for which figures are available). From 1990 to 1994, children up to one year were vaccinated against tuberculosis, 84%; diphtheria, pertussis and tetanus, 43%; and polio, 45%.

The general mortality rate in 2002 was an estimated 16 per 1,000 people. The Liberian staple diet of rice or cassava (manioc) is deficient in protein and children in particular suffer because of this. The major causes of death are malaria and gastrointestinal disease, attributable in part to poor sanitation. AIDS is a serious problem in Liberia. The HIV/AIDS prevalence was 5.90 per 100 adults in 2003. As of 2004, there were approximately 100,000 people living with HIV/AIDS in the country. There were an estimated 7,200 deaths from AIDS in 2003.

Nearly 900,000 women, or 60% of the female population, suffer female genital mutilation. Although the Liberian government has published policy opposing female genital mutilation, no law currently prohibits its use.

## 42 HOUSING

In the aftermath of the 1989–96 civil war from, over 60,000 families were displaced or living in very poor housing conditions. About 80% of the total housing stock was affected by the war. During the 1980s (the latest period for which housing data is available), the number of dwellings more than doubled, from 216,206 in 1981 to 500,000 as of 1988, with 4.8 people per dwelling.

The 1998–2000 National Reconstruction Program placed housing issues as a priority for government consideration. This was followed by the formulation of a five-year plan (2001–05) which also focused on reconstruction and new construction of adequate housing.

Many of the older corrugated-iron structures in Monrovia have been replaced with more modern dwellings, and houses of advanced design have been privately built to accommodate the growing urban population. The typical dwelling of the tribal people in the Liberian interior is the *rondavel*, a circular, one-room mud-and-wattle thatch-roofed hut, windowless and with a single low door. These *rondavels* are being replaced by large rectangular huts, also of mud and wattle, subdivided into two or more rooms and equipped with windows.

## 43 EDUCATION

Education is compulsory from ages 6 to 16. Elementary school (primary) covers six years of study. This is followed by three years of junior high and three years of senior high school. The largest secondary school is the Booker Washington Institute, a vocational school located at Kakata, with about 1,500 students. The academic year runs from March to December.

In 2001, about 56% of children between the ages of three and five were enrolled in some type of preschool program. Primary

school enrollment in 2001 was estimated at about 70% of age-eligible students. The same year, secondary school enrollment was about 18% of age-eligible students; 22.8% for boys and 13% for girls. It is estimated that about 21% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 38:1 in 2003.

There are three institutions of higher learning: the government-operated University of Liberia in Monrovia (established in 1862); Cuttington University College at Monrovia, an Episcopalian institution; and a three-year engineering school, the William V. S. Tubman College of Technology, founded at Monrovia in 1978. In 2001, there were about 44,000 students enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 55.9%, with 72.3% for men and 39.3% for women.

On average, 11% of the government's total annual budget is allocated to education.

## 44 LIBRARIES AND MUSEUMS

The government maintains a central public library in Monrovia, with 15,000 volumes. UNESCO also operates a library in Monrovia, and the Liberian Information Service has a research library in the same city. The University of Liberia and the Cuttington University College libraries have been slowly rebuilding their stock of books following looting during the 1990s.

The National Museum of Liberia is housed in the renovated Supreme Court building in Monrovia and the Tubman Center of African Cultures is located in Robertsport. Other museums include the National Cultural Center in Cape Mount, the Africana Museum at Monrovia, the W. V. S. Tubman Library-Museum at Harper, and the Natural History Museum at the University of Liberia.

## 45 MEDIA

In 2003, there were an estimated two mainline telephones for every 1,000 people. The same year, there was approximately one mobile phone in use for every 1,000 people.

The first national television station was opened early in 1964; although government owned, it is partly commercial. The state-owned Liberian Broadcasting System operates one service that does not have national range. As of 2005, there were five FM radio stations and three local television stations. In 2003, there were an estimated 274 radios for every 1,000 people. The number of television sets was unavailable in the same survey. In 2003, there were about 1,000 Internet subscribers nationwide. In 2004, there were 14 Internet hosts.

Many existing newspapers and magazines ceased publication when the Doe regime was overthrown in 1990. Afterward, a number of new ones were begun. As of 2005, there were at least five daily newspapers, including: *The Inquirer*, *The News*, and *The Analyst*. *The New Liberian*, published daily except Wednesday, is the official government newspaper. In 2005, there was a total of 18 newspapers published in Monrovia.

Freedom of speech and the press are provided for in the constitution, and the government is said to generally respect these rights in practice. However, years of civil strife have destroyed many facilities and disrupted all media in Liberia; many have failed to resume publication or broadcasting. A restrictive media law, instituted during the Doe regime, remains in force and provides the

government with wide powers for licensing and regulating the media.

#### 46 ORGANIZATIONS

Civic groups in Monrovia include the YMCA and YWCA, the Antoinette Tubman Children's Welfare Foundation, the Liberia Evangelistic Women Workers, the Red Cross, Boy Scouts, and Girl Guides. The Liberia Chamber of Commerce has its headquarters in Monrovia. Numerous secret societies are found among all the ethnic groups. Cultural groups include the Society of Liberian Authors, Liberian Arts and Crafts Association, and Liberian Research Association. There are sports associations promoting amateur competition in a variety of pastimes. The Boy Scouts of Liberia and Girl Guides have active troops. There are national chapters of the Red Cross Society, Caritas, the Society of St. Vincent de Paul, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Continued civil unrest has had an adverse effect on tourism. Hotels in or near Monrovia are suitable for tourists; there are missionary organizations and a youth hostel that also accommodate visitors. Safaris are offered in the Sapu National Park and water sports are popular along the many beaches. Football (soccer) is the national sport. Visitors must obtain a visa and passport as well as provide proof of a yellow fever vaccination.

In 2005, the US Department of State estimated the daily cost of travel in Monrovia at \$241.

#### 48 FAMOUS LIBERIANS

Joseph Jenkins Roberts (1809–76), who was governor under the Colonization Society at the time the republic was established, became its first and later its sixth president (1848–56, 1872–76) and gained the respect of the European colonial powers by his able exposition of Liberia's rights as a free and independent nation. The national heroine is Matilda Newport, who helped to repel an attack on the first struggling settlement. Among white Americans who went to Liberia to assist the early black settlers were Jehudi Ashmun (1794–1828) and Ralph Randolph Gurley (1797–1872), who together reorganized the colonists in 1824. William Vacararat Shadrach Tubman (1895–1971) was president of Liberia from 1944 until 1971. Angie E. Brooks-Randolph (b.1928) served

as president of the 1969/70 UN General Assembly. William Richard Tolbert, Jr. (1913–80) succeeded Tubman as president. He was killed in the 1980 coup led by Samuel Kanyon Doe (1950–90), who subsequently assumed the titles of commander in chief of the armed forces and chairman of the PRC. Doe was in turn tortured and killed in 1990 by rebels loyal to Charles G. Taylor (b.1948), the leader of the faction that gained control during the civil war. Taylor, who had become president in 1997, was forced into exile in 2003. Ellen Johnson-Sirleaf (b.1938) became the first elected female president of an African country in 2005.

#### 49 DEPENDENCIES

Liberia has no territories or colonies.

# LIBYA

Socialist People's Libyan Arab Jamahiriya

*Al-Jamahiriyah al-'Arabiyah al-Libiyah ash-Sha'biyah al-Ishtirakiyah*

**CAPITAL:** Tripoli (Tarabulus)

**FLAG:** The national flag is plain green.

**ANTHEM:** *Almighty God.*

**MONETARY UNIT:** The Libyan dinar (LD) of 1,000 dirhams is a paper currency. There are coins of 1, 5, 10, 20, 50, and 100 dirhams, and notes of ¼, ½, 1, 5, and 10 dinars. LD1 = \$0.76923 (or \$1 = LD1.3) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local weights and measures are used.

**HOLIDAYS:** UK Evacuation Day, 28 March; US Evacuation Day, 11 June; Anniversary of the Revolution, 1 September; Constitution Day, 7 October. Muslim religious holidays include 'Id al-Fitr, 'Id al-'Adha, the 1st of Muharram, and Milad an-Nabi.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the coast of North Africa, Libya is the fourth-largest country on the continent, with an area of 1,759,540 sq km (679,362 sq mi), extending 1,989 km (1,236 mi) SE–NW and 1,502 km (933 mi) NE–SW. Comparatively, the area occupied by Libya is slightly larger than the state of Alaska. It is bounded on the N by the Mediterranean Sea, on the E by Egypt, on the SE by the Sudan, on the S by Chad and Niger, on the W by Algeria, and on the NW by Tunisia, with a total land boundary length of 4,348 km (2,702 mi) and a coastline of 1,770 km (1,100 mi).

The Aozou Strip (114,000 sq km/44,000 sq mi) in northern Chad was claimed and had been occupied by Libya since 1973; in a judgment of 3 February 1994, the UN International Court of Justice returned the Aozou strip to Chad. Monitored by an observer force deployed by the UN Security Council, Libyan forces withdrew on 31 May 1994. However, Chadian rebels from the Aozou still reside in Libya. Libya also claims about 19,400 sq km (7,490 sq mi) of Nigerian territory.

Libya's capital city, Tripoli, is located on the Mediterranean coast.

## <sup>2</sup> TOPOGRAPHY

Libya forms part of the North African plateau extending from the Atlantic Ocean to the Red Sea. The highest point is Bikku Bitti, or Bette Peak, a 2,267-m (7,438-ft) peak in the extreme south. The chief geographical areas are Tripolitania, Cyrenaica, the Sirte Desert, and Fezzan. Tripolitania, in the northwest, consists of a series of terraces rising slowly from sea level along the coastal plain of Al-Jifara to a sharp escarpment. At the top of this escarpment is an upland plateau of sand, scrub, and scattered masses of stone, with elevations of up to 1,000 m (3,300 ft). Farther south are de-

pressions extending from east to west. Here are found many oases and artesian wells.

The Sirte Desert is a barren area along the Gulf of Sidra separating Tripolitania and Cyrenaica. An upland plateau rising to about 600 m (2,000 ft) gives a rugged coastline to Cyrenaica. This plateau, the Jabal Akhdar, contains three of Libya's leading cities—Banghāzī (or Benghazi), Al Baydā, and Darnah. Farther south the desert is studded with oases such as Jālū and Al Jaghbūb. The Fezzan, in the southwest, is largely a series of depressions with occasional oases. There are no perennial rivers in the country.

## <sup>3</sup> CLIMATE

The climate has marked seasonal variations influenced by both the Mediterranean Sea and the desert. Along the Tripolitanian coast, summer temperatures reach between 40 and 46°C (104–115°F); farther south, temperatures are even higher. Summers in the north of Cyrenaica range from 27–32°C (81–90°F). In Tobruk, the average January temperature is 13°C (55°F); July, 26°C (79°F). The ghibli, a hot, dry desert wind, can change temperatures by 17–22°C (30–40°F) in both summer and winter.

Rainfall varies from region to region. Rain falls generally in a short winter period and frequently causes floods. Evaporation is high, and severe droughts are common. The Jabal Akhdar region of Cyrenaica receives a yearly average of 40–60 cm (16–24 in). Other regions have less than 20 cm (8 in), and the Sahara has less than 5 cm (2 in) a year.

## <sup>4</sup> FLORA AND FAUNA

The primary plant is the deadly carrot (*Thapsia garganica*). Other flora are various cultivated fruit trees, olive trees, date palms, junipers, and mastic trees. Goats and cattle are found in the extreme north. In the south, sheep and camels are numerous. As of 2002,

there were at least 76 species of mammals, 76 species of birds, and over 1,800 species of plants throughout the country.

## 5 ENVIRONMENT

A major environmental concern is the depletion of underground water as a result of overuse in agricultural developments, causing salinity and seawater penetration into the coastal aquifers. The Great Manmade River Project, developed to transport water from large aquifers under the Sahara Desert to coastal cities, is the world's most extensive water supply project. Another significant environmental problem in Libya is water pollution. The combined impact of sewage, oil by-products, and industrial waste threatens the nation's coast and the Mediterranean Sea generally. Libya has about 1 cu km of renewable water resources. Only about 68% of the people living in rural areas have pure drinking water. The desertification of existing fertile areas is being combated by the planting of trees as windbreaks.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 5 types of mammals, 7 species of birds, 3 types of reptiles, 9 species of fish, and 1 species of plant. Endangered species in Libya included the Mediterranean monk seal, the leopard, and the slender-horned gazelle. The Bubal hartebeest and Sahara oryx are extinct.

## 6 POPULATION

The population of Libya in 2005 was estimated by the United Nations (UN) at 5,766,000, which placed it at number 106 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 35% of the population under 15 years of age. There were 107 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.4%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 8,323,000. The overall population density was 3 per sq km (8 per sq mi), but 90% of Libya's inhabitants live in the narrow coastal regions of Cyrenaica and Tripolitania.

The UN estimated that 86% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.15%. The capital city, Tripoli (Tarabulus), had a population of 2,006,000 in that year. Banghāzī, another chief city, had an estimated population of 1,033,000.

## 7 MIGRATION

The number of Italians was as high as 70,000 during the period of colonial rule. In 1964 Italians numbered 30,000, but most left after their land and property were nationalized in 1970. There were 30,000 Jews in Libya in 1948, but because of the Arab-Israeli conflict the community had virtually disappeared by 1973.

In 1984 there were officially 263,100 non-Libyans in the country, of whom more than 40% were Egyptians and 15% were Tunisians. The remainder came from a variety of other countries in Africa, the Mideast, and elsewhere. This figure was less than half the 569,000 foreigners in 1983, before new restrictions were placed on remittances abroad. In 1992, the foreign population was estimated at two million, half of them Egyptian, and 600,000 from South Korea, the Philippines, Thailand, and Vietnam. This estimated figure

probably reflects illegal immigration. About 100,000 Libyans were in exile in the mid-1980s.

The nomadic inhabitants of Libya follow regular patterns of migration; nomadic tribes in the south normally ignore international frontiers. Since the discovery of oil there has been significant internal migration from rural to urban regions.

In 2000 there were 570,000 migrants living in Libya, including 11,500 refugees. In 2004 there were 12,166 refugees, mainly from Palestine, and 200 asylum seekers, all located in Tripoli. Also, in that same year over 700 Libyans sought asylum in Sweden, the United Kingdom, and Norway. In 2005, the net migration rate was estimated at zero. The government views the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

For thousands of years the inhabitants of Libya were Berbers. Arabs started arriving in the 7th century AD, displacing or assimilating their Berber predecessors. The latest estimates indicate that 97% of the total population is comprised of Berbers and Arabs. The remaining 3% are made up of Greeks, Maltese, Italians, Egyptians, Pakistanis, Turks, Indians, and Tunisians.

## 9 LANGUAGES

Arabic is the official language; since 1969, its use in daily life, even by foreigners, has been encouraged by government decree. English, which is also used in some government publications, has replaced Italian as the second language; however, Italian is still widely understood. Berber is spoken by small communities, especially in Tripolitania. Native speakers constitute about 5% of the population.

## 10 RELIGIONS

Under the constitution, Islam is Libya's official religion and the government publicly supports a preference for a moderate practice of Islam. About 97% of the people are Sunni Muslim. In an effort to eliminate alternative political power bases, the government banned the once powerful Sanusiyya Islamic order. Libyan leader Colonel Mu'ammar Al-Qadhafi then established the Islamic Call Society, which is the Islamic arm of the government's foreign policy. The ICS's main goal was to promote a moderate form of Islam, reflecting the views of the government.

Though other religions are generally tolerated, the government places a number of restrictions, which essentially limit the practice of non-Muslim faiths. There are no known places of worship for the small number of Hindus, Baha'is and Buddhists within the country. Proselytizing is prohibited. Members of non-Muslim faiths are, however, free to worship within their own homes. There are about 100,000 Christians in the country, with about half of them being Roman Catholics. Other denominations include Anglican and Coptic and Greek Orthodox. There is also a very small Jewish community.

## 11 TRANSPORTATION

Transportation varies from dirt tracks suitable for camels and donkeys to a coastal highway extending for 1,822 km (1,132 mi) between the Tunisian and Egyptian borders. At the end of 1968, this highway was connected with a north-south road to Sabhā. Further extensions to Murzūq and Ghat were later completed, as

LOCATION: 19°30' to 33° N; 9°30' to 25° E. BOUNDARY LENGTHS: Mediterranean coastline, 1,770 kilometers (1,100 miles); Egypt, 1,115 kilometers (693 miles); Sudan, 383 kilometers (238 miles); Chad, 1,054 kilometers (655 miles); Niger, 354 kilometers (220 miles); Algeria, 982 kilometers (610 miles); Tunisia, 459 kilometers (285 miles). TERRITORIAL SEA LIMIT: 12 miles, but all of the Gulf of Sidra south of 32°30' is claimed.

well as a spur to Birāk. In 1973, a 350-km (217-mi) road between Nalut and Ghadamis was completed. Roads also connect the Cyrenaica coastal centers with the interior. In all, there were an estimated 24,484 km (15,214 mi) of roads in 2002, of which 6,798 km

(4,224 mi) were paved. In 2003, there were 368,600 private cars and 354,000 commercial vehicles registered in the country. As of 2004, Libya had no operating railways, following the closure in the mid-1960s of two railway lines and the dismantling of

the rest. However, work has begun on seven new standard gauge lines, totaling 2,757 km (1,715 mi), which it is hoped, will be completed by 2008.

The main ports are Tripoli, Banghāzī, Qasr Ahmad (the port for Miṣratāh), and Tobruk. Crude oil export terminals include Port Brega (Marsā al-Burayqah) and Ras Lanuf. Since 1973, Tripoli's harbor has been developed considerably. As of 2005, Libya's merchant fleet had 17 vessels of 1,000 GRT or more, totaling 129,627 GRT.

In 2004, there were an estimated 139 airports. As of 2005, a total of 59 had paved runways, and there were 2 heliports. Libya's two international airports are Tripoli Airport (34 km/21 mi south of Tripoli) and Benina Airport (19 km/12 mi from Banghāzī). In 1968, a new airport at Sabhā in the Fezzan was opened. Libyan Arab Airlines, established in 1965, operates to neighboring Arab countries, central and southern Africa, and Europe. Many major world airlines serve Libya. There is also regular domestic service, with airports at Tobruk, Port Brega, Ghat, Ghadamis, Miṣratāh, and Al Baydā. In 2003, about 627,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Archaeological evidence indicates that a Neolithic culture, skilled in the domestication of cattle and the cultivation of crops, existed as far back as 6000 BC along the Libyan coast. To the south, in what is now the Sahara, hunters and herdsman roamed what was then a well-watered savanna. Increasing desiccation and the coming of the Berbers about 2000 BC presumably, from southwestern Asia, ended this period. The pharaohs of the so-called Libyan dynasties who ruled Egypt (c.950–720 BC) are thought to have been Berbers. Phoenician seafarers, who arrived early in the first millennium BC, founded settlements along the coast, including one that became Tripoli.

Around the 7th century BC, Greek colonists settled in Cyrenaica. In succeeding centuries, the western settlements fell under the sway of Carthage; the eastern settlements fell to the Egyptian dynasty of the Ptolemies in the 4th century BC. When the Romans defeated Carthage in the Punic Wars of the 3rd and 2nd centuries BC, they occupied the regions around Tripoli. In 96 BC, they forced Egypt to surrender Cyrenaica, and Roman influence later extended as far south as the Fezzan. Libya became very prosperous under Roman rule; with the decline of Rome, western Libya fell in the 5th century AD to Germanic Vandal invaders, who ruled from Carthage. In the 6th century, the Byzantines conquered the Vandals and ruled the coastal regions of Libya until the Arab conquest of the 7th century. The Arabs intermixed with the Berbers, who were gradually absorbed into the Muslim Arab culture.

Western Libya was administered by the Aghlabids of Tunisia in the 9th century, and by the Fatimids of Tunisia and then Egypt in the 10th. During the 11th century, invasions by two nomadic Arab peoples, the Banu Hilal and Banu Sulaym, destroyed many of the urban and agricultural areas. Normans from Sicily occupied Tripoli and surrounding regions in 1145 but were soon displaced by the Almohads of Morocco; during the 13th century, the Hafsidis of Tunisia ruled western Libya. The eastern regions remained subject to Egyptian dynasties. In the 16th century, Spanish invaders seized parts of the coast, turning over control of Tripoli to the crusading Knights of the Order of St. John of Jerusalem. The

Ottoman Turks occupied the coastal regions in 1551, ruling the country until 1711, when Ahmad Qaramanli, of Turkish origin, wrested semiautonomous status from Istanbul. Pirate captains, operating out of Tripoli, raided the Mediterranean and the Italian coasts. The Qaramanlis ruled until 1835, when the Ottomans again assumed control.

In September 1911, the Italians invaded Libya, meeting fierce resistance from both Turks and indigenous Libyans. A peace treaty of 17 October 1912 between Turkey and Italy placed Libya formally under Italian rule, but the Libyans continued their resistance. Led by a Muslim religious brotherhood, the Sanusi, the Libyans (with some Turkish help) fought the Italians to a standstill during World War I. Following the war, and particularly after the accession of Benito Mussolini to power in Italy, the Italians continued their often-brutal efforts to conquer Libya. In 1931, 'Umar al-Mukhtar, a leader of the Sanusi, was captured and executed, and in 1932 the Italian conquest was completed. In World War II, Libya became a main battleground for Allied and Axis forces, until it was occupied by victorious British and Free French troops. The Treaty of 1947 between Italy and the Allies ended Italian rule in Libya and, when the Allies could not decide upon the country's future, Libya's fate was left to the UN. On 21 November 1949, the UN General Assembly voted that Libya should become an independent state. On 24 December 1951, Libya gained independence, with Muhammad Idris al-Mahdi as-Sanusi as king. In 1959 significant oil discoveries were made.

On 1 September 1969, a secret army organization, the Free Unionist Officers, deposed the king and proclaimed a republican regime. On 8 September, the Revolutionary Command Council (RCC) announced the formation of a civilian government. This government resigned on 16 January 1970, and a new cabinet was formed under Col. Mu'ammār al-Qadhafi, chairman of the RCC. Later that year, the United Kingdom and the United States closed their military installations. On 15 April 1973, Qadhafi called for a "cultural revolution" based on Islamic principles. In subsequent months, hundreds of "people's committees" were established to oversee all sectors of the nation's political, cultural, and economic life. In April 1974, Qadhafi withdrew from the supervision of daily administrative functions (these were assumed by Maj. Abdul Salam Jallud), but he remained the effective head of state of Libya.

Qadhafi sought to make Libya the axis of a unified Arab nation. Union was achieved with Egypt, Tunisia, Morocco, Syria, and Sudan at various times, but only on paper. Subsequent relations with the many Arab nations, including Egypt and Tunisia, have often been tense. Libya itself, despite rhetorical support for radical Palestinians, has stayed on the sidelines in Arab-Israeli conflicts.

Qadhafi has been equally active in Africa. In 1973, he annexed from Chad the disputed Aouzou Strip, an area that may contain rich deposits of uranium. In 1979, his armed forces tried unsuccessfully to prop up the failing regime of Idi Amin in Uganda. Libya sent over 10,000 troops into Chad in 1980 in support of the regime of Goukouni Oueddei, and a union of the two nations was proposed. Intense international pressure, however, led to a Libyan withdrawal in November 1981. After the fall of Oueddei's regime in June 1982, Qadhafi provided military support for Oueddei's efforts to topple the new French-backed government in Chad. Libya's and Oueddei's forces were in control of much of northern

Chad until 1987, when Chadian forces ousted them, capturing or destroying \$1 billion in Libyan military equipment, and attacking bases inside Libya itself. In 1989, after acknowledging his error in moving into Chad, Qadhafi agreed to a cease-fire and the submission of the dispute over the Aouzou Strip to the Court of International Justice. The Court settled the dispute in Chad's favor in 1994.

Qadhafi has been accused of supporting subversive plots in such countries as Morocco, Niger, Sudan, Egypt, Tunisia, Ghana, Burkina Faso, Nigeria, Gambia, Somalia, Senegal, and Mali and of providing material support for a variety of insurgents, including the Irish Republican Army, Muslim rebels in the Philippines, and Japanese and German terrorists. Qadhafi did find some support in small, poor black African countries, eager for Libyan aid. In 1982, however, he suffered a setback when the annual OAU summit scheduled for Tripoli failed to convene because of disputes over Libya's policies in Chad and its support of Polisario guerrillas in Western Sahara. As a result, Qadhafi was denied his term as OAU chairman. In contrast, in February 1997 in a deliberate jab at the UN Security Council's sanctions against Libya over the Lockerbie bombing affair, the OAU Ministerial Council met in Tripoli, the first time this meeting had been convened outside of its headquarters in Addis Ababa, Ethiopia.

In 1981, two Libyan jets were shot down by US fighters over the Gulf of Sidra, an arm of the Mediterranean claimed by Qadhafi as Libya's territorial waters. In 1982, the United States, charging Qadhafi with supporting international terrorism, banned oil imports from Libya and the export of US technology to Libya. In January 1986, the United States, citing "irrefutable evidence" of Libyan involvement in Palestinian attacks on airports in Rome and Vienna in the previous month, ordered all Americans to leave Libya and cut off all economic ties as of mid-1986. In March, a US naval task force struck four Libyan vessels after US planes entering airspace over the Libyan-claimed Gulf of Sidra were fired upon. On 15 April, following a West Berlin bomb attack in which US servicemen were victims, US warplanes bombed targets in Tripoli and Banghāzī. Libya said that Qadhafi's daughter was killed and two of his sons were wounded in the attack. Qadhafi survived several reported assassination and coup attempts in the 1980s and 1990s as well as the opposition of Islamist groups, which prompted him to crack down on militants in 1993.

Qadhafi's most serious challenge in the recent past was the tough sanctions imposed since 1992 and 1993 on Libya by the UN Security Council after he refused to surrender two men suspected in the terrorist bombing of a Pan American passenger jet over Lockerbie, Scotland, in 1988. The UN resolutions (nos. 731 and 883) prohibited sales of equipment and air travel to Libya and froze its overseas bank deposits but significantly, did not ban sales of petroleum products. Throughout the period of the sanctions the United States repeatedly attempted to persuade the UN to impose an oil embargo against Libya, but it was not successful. After numerous pleas to the UN by Arab and African countries and organizations to the UN Security Council to lift the sanctions, and numerous rounds of negotiations, in August 1998 Qadhafi agreed to eventually hand over the two Libyan suspects in the Lockerbie bombing for trial in the Netherlands before Scottish judges. The suspects were transferred to the Netherlands in April 1999. This decision led to an easing of tensions, with a suspension of the UN

sanctions (although they were not lifted at the time) and Britain resuming full diplomatic relations in July 1999. The United States, however, remained committed to the branding of Libya as a supporter of international terrorism and therefore a pariah state. In January 2001, the Scottish court in the Netherlands found one of the two Libyan defendants guilty of involvement in the Lockerbie bombing, and sentenced him to life imprisonment. The other Libyan was acquitted. US president, George W. Bush, stated sanctions would remain in place not only until Libya compensated for the bombing of the aircraft, but also until Libya admitted guilt and expressed remorse for the act. In mid-2002, Libya stated that it was ready, in principle, to pay families of the victims of the bombing compensation in the amount of US\$2.7 billion (US\$10 million for each of the 270 victims). In August 2003, Libya accepted the responsibility for the actions of its officials and payment of the compensation to the victims' families. UN sanctions were lifted in September 2003, and US International Emergency Economic Powers Act (IEEPA) sanctions were lifted in September 2004.

In early September 1995, Libya began deporting thousands of Arab workers, primarily Palestinian, Sudanese, and Egyptian. In a speech on 1 September 1995, Qadhafi stated that foreigners (including some 30,000 Palestinians) were being expelled in order to create jobs for Libyans, although the move was widely interpreted as punishment of the PLO for holding peace talks with Israel. Qadhafi stated that many of those being deported were Islamic militant "infiltrators" posing as migrant workers. On 6 and 7 September, at least 30 people were killed in Banghāzī when armed Islamic militants battled Libyan security forces during a roundup of workers for deportation. By 11 September, 7,000 Egyptians had been expelled, and thousands of Palestinians were stranded either at sea or at the border with Egypt. The deportations continued into October, when 650 Palestinians were stranded aboard a ferry off the coast of Cyprus, and 850 were still camped on the Egyptian border.

In March 1996, as many as 400 prisoners—many of them government opponents and Islamic militants—broke out of a prison near Banghāzī. The ensuing clash with Libyan troops was viewed by many observers as an indication of significant antigovernment feeling in eastern Libya. The growth of the Islamist movement in Libya is cause for concern in the region and for Qadhafi's maintenance in power.

In May 2001, Libya sent troops into the Central African Republic to aid President Ange-Félix Patassé and his supporters, to regain power after a failed coup attempt. It withdrew its troops in December 2002; Qadhafi stated the mission of restoring peace and stability to the country had been achieved. That month, Libya denied allegations put forward by the Democratic Republic of the Congo (DROC) that it was sending troops and equipment into Congolese territory along the border with the Central African Republic. On 13 December, the DROC government wrote the UN Security Council to condemn Libya's actions and to demand an immediate withdrawal of Libyan troops from its territory. The DROC accused Libya of aiding the Movement for the Liberation of the Congo (MLC), a rebel group.

Qadhafi has long called for reforms in the Arab League, including the creation of a single Arab currency, the forging of closer ties between the Arab League and the African Union, and the use of

Arab military force against Israel if it does not agree to the “complete return of the Palestinians to their land.”

In January 2003, Libya was elected by secret ballot to head the UN Commission on Human Rights. The votes were 33 in favor, 3 opposed, and 17 abstentions. This caused international controversy, and led to calls for reform of the UN. In 2006, plans were being made to create a new Human Rights Council to replace the UN Commission on Human Rights. The Human Rights Council is meant to be a standing body that would meet year-round to promote and protect human rights with a membership that excluded the worst human rights violators.

In December 2003, Libya publicly announced its intention to rid itself of weapons of mass destruction (WMD) and Missile Technology Control Regime (MTCR)-class missile programs. Since that time, it has cooperated with the United States, the United Kingdom, the IAEA, and the Organization for the Prohibition of Chemical Weapons toward these objectives. Libya also signed the IAEA Additional Protocol, and became a state party to the Chemical Weapons Convention.

### **13 GOVERNMENT**

The Libyan Arab Republic was established on 1 September 1969, and a new constitution was announced by the Revolutionary Command Council (RCC) on 11 December 1969. The constitution, which has been effectively superseded by the principles of Qadhafi’s “Green Book,” proclaimed Libya to be “an Arab, democratic, and free Republic, which constitutes part of the Arab nation and whose objective is comprehensive Arab unity.” Supreme authority rested with the 12-member RCC, which appointed both the prime minister and cabinet. Qadhafi, as chairman of the RCC, was the effective head of state and commander in chief of the armed forces. In March 1977, the nation’s name was changed to the Socialist People’s Libyan Arab Jamahiriya, and the “authority of the people” was proclaimed by a newly convened General People’s Congress (GPC). The people theoretically exercise their authority through a system of some 600 people’s congresses and committees. At the top of this system is the GPC, which replaced the RCC as the supreme instrument of government. The 760 GPC members are chosen out of about 2,700 representatives of the basic people’s congresses. All executive and legislative authority is vested in the GPC, but it meets for only two weeks a year and delegates most of its authority to its own Secretariat and to the General People’s Committee, in effect the cabinet, which is appointed by the Secretariat. GPC members serve three-year terms. Voting for local people’s congresses, whose elected members select members of the GPC, is mandatory for those over 18. In 1979, Qadhafi gave up his official post as secretary-general of the GPC to become a “private citizen.” As “Leader of the Revolution,” however, he remains the de facto head of state. He also remains the commander of the armed forces and virtually all power is concentrated in him and his close advisers. In 1988, public discontent with shortages led Qadhafi to limit the authority of revolutionary committees, release many political prisoners, and remove restrictions on foreign travel and private enterprise.

In the 1990s Qadhafi saw his regime challenged by discontented military personnel and Islamist groups. Several assassination attempts have been reported, both within the military and from armed Islamist groups. His intolerance of opposition has contin-

ued. In March 1997 the GPC adopted the Charter of Honor, imposing collective punishment on Libyans convicted of crimes of disorder, such as sabotage, drug and arms trafficking, and “terrorists, criminals, saboteurs and heretics.” The charter is clearly aimed at opponents of the regime.

### **14 POLITICAL PARTIES**

Political parties have not played an important role in Libya’s history. All political parties were banned in 1947 by British administrators, but many groups soon emerged to debate their country’s future. By 1949, the Tripolitanian National Congress Party, led by Bashir Sadawi, was the leading party. However, it was dissolved in 1952, following local disorders, after Libya’s first election campaign.

In 1971, the RCC founded the Libyan Arab Socialist Union as an alternative to political parties. It was viewed as an organization to promote national unity but has functioned little since 1977. Seven exiled opposition groups agreed in Cairo in January 1987 to form a joint working group, but their work had no discernible impact on political conditions in Libya. The following groups have been in opposition to the government: Fighting Islamic Group, Islamic Martyrs’ Movement, Libyan Baathist Party, Libyan Conservatives’ Party, Libyan Democratic Movement, Libyan Democratic Authority, Libyan Democratic Conference, Libyan Movement for Change and Reform, Libyan National Alliance, Movement of Patriotic Libyans, National Front for the Salvation of Libya, Libya Islamic Group, and Supporters of God.

### **15 LOCAL GOVERNMENT**

Jamahiriya means “state of the masses” and politically implementing this system would involve a process of total decentralization of power, whereby all decisions would be left to the citizens via direct democracy. One source claims that in 1998 the GPC divided Libya into 26 governorates (Sha’biyah), each to be headed by the secretary of a people’s committee. However, other sources differ on the structure of the local government. According to some sources, Libya is divided into 3 provinces, 10 governorates, and 1,500 administrative communes. One source lists a subdivision of 34 governorates. The CIA reports that there are 25 “municipalities,” but notes that they may have been replaced by 13 “regions.” There are municipal people’s congresses, as well as vocational, production, professional, and craft people’s congresses. Although in theory Qadhafi plans to decentralize power to the 600 popular congresses, most decision-making power is tightly controlled by the central government. The municipal people’s congresses appoint people’s committees to execute policy.

### **16 JUDICIAL SYSTEM**

The Proclamation of People’s Authority designates the Holy Quran as the law of society. The Libyan legal system largely follows Egyptian codes and precedents. All cases relating to personal status are dealt with according to Muslim law. Minor civil and commercial cases were heard in summary courts by a sitting judge in each village and town until January 2005. Cases of the first instance are heard by courts of first instance, and appeals may be taken to courts of appeal. A separate body called the Shariah Court of Appeals hears cases appealed from the lower courts involving Islamic law. There is also a Supreme Court, consisting of a president and

judges appointed by the GPC. It may deal with constitutional and legislative questions referred to it and may hear administrative cases. Special revolutionary courts try political offenses.

The 1994 Purge Law provides for the confiscation of private assets above a certain amount. The law requires that the confiscated property should be given to the poor.

## 17 ARMED FORCES

In 2005, the armed forces of Libya numbered 76,000 active and some 40,000 reserve personnel. The Army had an estimated 45,000 personnel armed with 2,025 main battle tanks, 120 reconnaissance vehicles, over 1,000 armored infantry fighting vehicles, 945 armored personnel carriers, and over 2,421 artillery pieces. The Navy had 8,000 personnel including the Coast Guard. Major naval units included 5 tactical submarines, 2 frigates, 4 corvettes and 23 patrol/coastal vessels. The Air Force numbered an estimated 23,000 active personnel, operating 374 combat capable aircraft, including 7 bombers, 229 fighters and 113 fighter ground attack aircraft. The service also had 60 attack helicopters. The military budget was \$620 million in 2005.

## 18 INTERNATIONAL COOPERATION

Libya joined the United Nations on 14 December 1955 and is a member of ECA and several nonregional specialized agencies, such as the FAO, UNESCO, IAEA, IFC, ILO, the World Bank, and the WHO. The country joined the Arab League in 1953, the OAU (now the African Union) in 1963, and OPEC in 1962. In January 1968, it was a founding member of OAPEC, along with Saudi Arabia and Kuwait. Libya also belongs to the African Development Bank, the Arab Bank for Economic Development in Africa,

the Arab Fund for Economic and Social Development, the Council of Arab Economic Unity, the Community of Sahel and Saharan States (CENSAD), the Arab Maghreb Union, the New Partnership for Africa's Development (NEPAD), and G-77. The country is an observer in the WTO.

Libya has been listed as a State Sponsor of Terrorism by the United States, even though the government has offered strong commitments to the United Nations to renounce and fight against terrorism. Libya is part of the Nonaligned Movement. In environmental cooperation, Libya is part of the Basel Convention, the Convention on Biological Diversity, the London Convention, the Montréal Protocol, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Until the late 1950s, Libya was one of the poorest countries in the world. In 1950, per capita annual income was about \$40, while Libya's most valuable source of foreign earnings was the revenue received for leasing bases to the United Kingdom and United States (the bases were vacated in 1970). But with the discovery of the Zaltan oil field in 1959, the economic horizons of the country were dramatically enlarged. The first oil pipeline, from B'ir Zaltan to the coast, was opened in 1961. More oil fields were subsequently discovered, until in 1970 a peak oil output of 159.9 million tons was achieved. Production has fallen since then, but its value has increased, and Libya remains one of the world's leading oil producers. Petroleum, petroleum products, and natural gas accounted for almost all the value of exports and for one-quarter of

GDP in 2002. As of 2002, Libya had 12 oil fields with reserves of 1 billion barrels or more each, and two others with reserves of 500 million–1 billion barrels.

Until the late 1950s, about 80% of the population was engaged in agriculture and animal husbandry; in 1999, however, only 18% of the labor force was engaged in agricultural pursuits. Agriculture, forestry, and fishing represented only 5% of GDP in 1999. A massive water pipeline project, called the Great Man-made River (GMR) project was initiated in 1984, and was expected to take 25 years to complete. The GMR is built to carry water in a 427 km (267mi) pipeline from 225 underground wells to a 3.3 million liter (880,000 gallon) reservoir. This scheme envisaged providing irrigation large areas devoted to cereal cultivation. The government believed that this project would help Libya achieve self-sufficiency in grain (the country has to import at least 75% of its food needs). Total costs of the GMR were likely to exceed \$25 billion.

The GDP was believed to have fallen 20% during 1984–86 due to low oil prices. After 1985, growth rates fluctuated sharply, reflecting changes in the oil market. Growth in GDP fell by 3% in 1998 due, once again, to falling oil prices, but prices rose in 1999–2000, leading to an increase in export revenues and a rise in GDP growth to 3% in 2001. In 2002, Libya devalued the official exchange rate of the dinar by 51% to increase the competitiveness of its firms and to attract foreign investment. At the same time it cut its customs duty rate by 50% on most imports to offset the effects of the currency devaluation.

Between 1992 and 1999, during the UN-imposed air embargo, many large projects were postponed because of budget restrictions. Libya's isolation slowed the pace of oil exploration through the absence of major foreign oil companies. Lack of outlets limited the development of refineries, petrochemicals, and gas facilities. In 1999, the UN sanctions on Libya—an air and arms embargo—were suspended because of the extradition of two suspects in the bombing of the Pan Am flight over Lockerbie. Oil companies are eager to exploit Libya's resources, and Libya as of 2003 was actively courting foreign companies to help develop its production capacity from 1.5 million barrels per day to 2 million barrels per day over a five-year period. Libya is looking to cast itself as a key economic intermediary between Europe and Africa.

The economy expanded by 9.3% in 2004, up from 9.1% in 2003; in 2005, the GDP growth rate was estimated at 8.5%. The inflation rate was in the negatives for some years, and at -3.4% in 2004 it posed problems to the export sector. The unemployment rate was 30% and represented one of the main problems the government had to deal with. The oil sector continued to be the main foreign exchange provider, but revenues from it are unevenly distributed across the different layers of society. The country's geographic location and its poor soils limit agricultural output, which means that most of the food (75%) has to be imported.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Libya's gross domestic product (GDP) was estimated at \$48.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$8,400. The annual

growth rate of GDP was estimated at 8.5%. It was estimated that agriculture accounted for 7.6% of GDP, industry 49.9%, and services 42.5%.

Foreign aid receipts amounted to \$10 million or about \$2 per capita.

The World Bank reports that in 2003 household consumption in Libya totaled \$10.97 billion or about \$1,973 per capita based on a GDP of \$23.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 2<sup>1</sup> LABOR

As of 2005, Libya's labor force totaled an estimated 1.64 million people. Unemployment as of 2004 was put at 30%. It was estimated that for 1997 (the latest year for which data was available), 17% of the workforce was in agriculture, with 29% in industry and 54% in the services sector. Foreign workers, who do much of the blue-collar and technical work, are not treated with equality under Libyan labor law, and may only stay in the country for the duration of their employment contracts. The largest employer is the government, which operates public utilities, public works, several banks, the port and harbor organizations, and other enterprises.

The National Trade Unions' Federation is the official trade organization, and any independent union or association is prohibited. All Libyan workers are required to join a trade union. Foreign workers may not join unions and have little protection. There is no collective bargaining; the government controls all employment matters. Strikes are not permitted. Foreign workers make up a large part of the labor force, but are subject to arbitrary treatment.

There is no information about the prevalence of child labor although the minimum age for employment is legally set at 18 years old. The maximum legal workweek is 48 hours. The average family wage is estimated at \$170 a month, but it is reported that employees are irregularly paid, especially in the public sector.

## 2<sup>2</sup> AGRICULTURE

Only about 1.2% of the country is cultivated. As of 2003, irrigation covered about 470,000 hectares (1,161,000 acres), or 22% of the cultivated area.

Agriculture is the only economic sector in which private ownership is still important. Cereals are grown in Tripolitania and Cyrenaica; agriculture in the Fezzan is concentrated in the oases. Virtually all crops are grown for domestic consumption. Nevertheless, most agricultural products must be imported; the cost, in 2004, was over \$1.1 billion. Estimated agricultural output in 2004, in tons, included potatoes, 195,000; tomatoes, 190,000; wheat, 125,000; and barley, 80,000. The 2004 production of fruits, in tons, included watermelons, 240,000; dates, 150,000; olives, 180,000; oranges, 44,000; and apples, 20,000.

Libya is investing a significant share of national revenues in agriculture in the hope of someday becoming agriculturally self-sufficient; cultivation has been changing from subsistence farming to highly mechanized operations. Development plans aim to increase irrigation and introduce and extend the use of advanced techniques; seeds and fertilizers have been subsidized. Areas singled out for development include the Al-Jifara Plain in Tripolitania; the Jabal Akhdar, east of Banghāzī; part of the Fezzan; and

the oases of Kufrah and Sarir. In the Kufrah oasis, large, untapped water reserves are being utilized to help provide fodder for sheep. In 1984, Libya embarked on a massive project to pipe water to the coast from underwater aquifers. The project was designed to transport 2 million cu m of water per day via 2,000 km (1,240 mi) of pipeline from 270 artesian wells in the east to connect Sirte and Banghāzī. The first phase was inaugurated in 1991 at a cost of \$5 billion; the total project is estimated to cost \$25 billion. In all, the scheme would provide 50 years of irrigation to the coastal areas, where 80% of Libya's agriculture is located.

A government agency markets farm produce and has authority to operate cooperatives and farms. The Agricultural Bank has been provided with sufficient capital to make short- and long-term loans easily available.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Before the transformation of the economy by the discovery of oil, livestock was an important sector, providing transport, clothing, food, and skins for tents. South of the Jabal areas, a wide belt of drought-resistant vegetation extending across most of the country is still used by nomadic and seminomadic herdsmen for grazing. In the Fezzan, the nomads move about between oases or other places where vegetation is suitable for their animals. Libya's livestock are vulnerable to disease and drought, and in past years losses have reached as high as 60%.

The livestock population of Libya in 2005 included 4,500,000 sheep, 1,265,000 goats, 130,000 head of cattle, 47,000 camels, 45,000 horses, 30,000 donkeys, and 25 million chickens. Private dairy farms are allowed to operate, but their milk has to be sold to the state. The government maintains large poultry farms.

New strains of livestock and more efficient grazing practices are being encouraged. The government hopes its development plans will make Libya self-sufficient in meat supplies. Livestock products in 2005 included 142,000 tons of meat, 60,000 tons of eggs, and 130,000 tons of cow's milk.

## 2<sup>4</sup> FISHING

Fishing is of minor importance, but the government is actively supporting extension of fishing and related activities, including the construction of sardine canning factories and modern storage facilities in the principal ports and the creation of local fishing fleets. Libya's excellent fishing grounds contain tuna, sardines, and other fish. The catch was 33,671 tons in 2003. Landings of bluefin and bigeye tuna have sharply increased since 1990. The value of fish exports significantly rose from \$380,000 in 1990 to \$79.5 million in 2003.

## 2<sup>5</sup> FORESTRY

The only important forest areas in Libya are shrubby juniper growths in the Jabal Akhdar areas of Cyrenaica. A few conifers are found in more isolated districts. Tripolitania has some forest remnants in inaccessible regions. Encroaching sand dunes in the north create a need for afforestation, and many acacia, Aleppo pine, carob, cypress, eucalyptus, olive, and palm trees have been planted. Some 358,000 hectares (884,600 acres) of Libyan territory are classified as "forest," but almost all of this land could more properly be called maquis. Dune fixation, both for reforestation

and to preserve agricultural land, has been an important part of the forestry program.

Up to 1976, the government had planted 213 million seedlings, mostly in western Libya. By 1981, 165,405 hectares (408,722 acres) of forest and 63,443 hectares (156,770 acres) of windbreak had been planted. During the 1980s, reforestation was proceeding at the rate of 32,000 hectares (79,000 acres) per year, but that rate slowed to 5,000 hectares (12,300 acres) during the 1990s. In 2004, roundwood removals were estimated at 652,000 cu m (23 million cu ft), of which 536,000 cu m (18.9 million cu ft) were used for fuel.

## 26 MINING

The nonfuel sector of the Libyan mining industry was negligible. Petroleum was Libya's leading industry in 2004, although oil production has fallen to under 50% of output in 1970. Libya was the third-largest crude oil producer in Africa, after Nigeria and Algeria. Nonhydrocarbon mineral production in 2004 consisted of lime, gypsum, hydraulic cement, salt, and sulfur (as a by-product of petroleum and natural gas). Estimated production in 2004 included: 1,026,000 metric tons of lime; 175,000 tons of gypsum; 15,000 metric tons of sulfur (by-product of petroleum and natural gas); 3.5 million metric tons of hydraulic cement; and 40,000 metric tons of salt. Libya had large reserves of iron ore in the Fezzan. The Wadi ash-Shatti iron ore deposit was estimated to contain 1,600 million tons of oolitic hematite, limonite, chamosite, and siderite with a grade range of 30%–48% iron. There were also deposits of magnesium salts (7.5 million tons) and potassium salts (1.6 million tons) in Maradah, south of the Port Brega oil terminal; potash in the Sirte Desert; and magnetite, phosphate rock, and sulfur.

## 27 ENERGY AND POWER

Libya is a major exporter of oil, mainly to Europe, mainly to Italy, Germany, France and Spain. The country is also a member of the Organization of Petroleum Exporting Countries (OPEC).

According to the Oil and Gas Journal, Libya's proven oil reserves, as of 1 January 2005, amount to 39 billion barrels. Although Libya has 12 oil fields, each with reserves of 1 billion barrels or more, plus two other fields with reserves in the 500 million to one billion barrel range, the country remains highly unexplored and is viewed as having excellent potential for additional oil discoveries.

Because Libya is a member of OPEC, its crude oil production is subject to a quota, which as of 1 November 2004, was placed at 1.445 million barrels per day. In 2004, Libya's oil output averaged an estimated 1.60 million barrels per day, of which crude oil accounted for 1.51 million barrels per day, and natural gas liquids at 65,000 barrels per day. Domestic oil demand in 2004 was estimated at an average of 237,000 barrels per day. Net exports in that year were estimated at an average of 1.34 million barrels per day.

Libya's domestic refining sector that is made up of five refineries, with a combined capacity of around 380,000 barrels per day, which is greater than its domestic consumption and allows to country to export refined petroleum products. The five refineries and their crude refining capacities are: the Ras Lanuf facility on the Gulf of Sirte (220,000 barrels per day); the Az Zawiyah refinery (120,000 barrels per day); the Tobruk refinery (20,000 barrels per day); the Brega (Libya's oldest at 10,000 barrels per day); and

the Sarir (10,000 barrels per day). Libya is also a direct distributor and producer of refined products in Germany, Switzerland, Italy and Egypt.

In addition to oil, Libya has large proven reserves of natural gas, which as of 1 January 2005, were estimated, by the Oil and Gas Journal, to contain 52 trillion cu ft. However, these reserves are thought to be larger because they are largely unexplored and unexploited. These potential reserves have been placed by Libyan experts at between 70 to 100 trillion cu ft. In 2002, natural gas output was estimated at 219 billion cu ft, with domestic demand in that year estimated at 197 billion cu ft. Libya is looking to expand its output of natural gas, in part as a replacement for oil in electric power generation, thus freeing up more oil for export, and for natural gas exports to Europe.

Libya's electric power generating sector is marked by rapidly increasing demand that has resulted in widespread power shortages. All of the country's existing power stations use conventional thermal fuels. Most facilities use oil, but others have been converted to use natural gas. Total electric power generating capacity in 2002 was estimated at 4.710 million kW, with output in that year at 14.424 billion kWh. Demand for electric power in Libya is growing rapidly at a rate of about 6–8% per year. In 2002, demand for power came to 13.414 billion kWh. By 2010, demand for power in Libya is anticipated to reach 5.8 GW and 8GW by 2020.

## 28 INDUSTRY

Libyan manufacturing industries developed significantly during the 1960s and 1970s, but fell far behind the petroleum sector of the economy in the 1980s. Non-oil manufacturing and construction sectors accounted for about 20% of GDP in 2002.

Libya is Africa's largest oil producer. Libya's oil and gas potential is vast and the country remains largely underexplored. The country's proven oil reserves are 29.5 billion barrels and production is 1.4 million barrels per day. Among the many industries utilizing petroleum products is a natural gas liquefaction plant which went into operation in 1971 at Marsá al-Burayqah (Port Brega). Libya is a direct producer of refined products in Italy, France, Germany, Spain, and Switzerland. The refining sector was adversely affected by the UN embargo; several projects for expanding domestic refining were delayed. When UN sanctions were suspended in 1999, foreign oil companies showed a keen interest in investing in the exploration and production of oil in Libya.

The petrochemicals industry is centered at the Marsá al-Burayqah plant, which produces methanol, ammonia, and urea. Despite the fact that the plant operates at only 35% of capacity, its production of urea and ammonia far exceeds domestic demand. A major plant producing ethylene, propylene, and butene was opened at Ras Lanuf in 1987. A second phase of the Ras Lanuf complex was to produce benzene, butadiene, methyl tertiary butyl ether (MTBE), and butane-1, but as of 2000, it was not complete. The Abu Kammash petrochemical complex produces ethylene dichloride (EDC), polyvinyl chloride (PVC), and vinyl chloride monomer (VCM). The iron and steel complex at Mişratāh began operations in 1990. Large natural gas reserves were underdeveloped in 2002; a pipeline network was expected to be planned by 2006.

Libya's other manufacturing industries are small, lightly capitalized, and devoted primarily to the processing of local agricultural products (tanning, canning fruits and vegetables, milling flour,

and processing olive oil), and to textiles, building materials, and basic consumer items. Handicraft products include carpets and rugs, silver jewelry, textiles, glassware, and leather goods.

Industry accounted for 49.9% of economic output in 2005, followed by services with a 42.5% share. Agriculture continued to be the weakest economic sector, with just a 7.6% share in the GDP. Oil and gas carry the lion share of industrial output, accounting for around 33% of the GDP. The non-oil manufacturing and construction sectors had expanded and by the early 2000s they included the production of petrochemicals, iron, steel, and aluminum.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

There is a predominance of foreign labor in scientific and technical positions. Al-Fatah University at Tripoli (founded in 1973) has faculties of science, engineering, agriculture, medicine, pharmacy, veterinary medicine, nuclear engineering, and petroleum and mining engineering. The University of Garyounis at Banghāzī (founded in 1955) has faculties of science and engineering. Bright Star University of Technology at Marsā al-Burayqah (founded in 1981) has faculties of basic engineering science, electrical and electronic engineering, mechanical and production engineering, chemical engineering, and petroleum engineering. Al-Arab Medical University at Banghāzī was founded in 1984. Sabhā University has faculties of science, agriculture, medicine, and engineering. A posts and telecommunications institute is at Tripoli.

Despite its abundant oil and gas reserves, Libya is highly interested in nuclear power. A 10-MW research reactor is located at Tajura.

## 3<sup>0</sup> DOMESTIC TRADE

Tripoli, the leading port and transportation center, is the focus of trading activities. In 1978, Qadhafi announced that individuals should cease engaging in trade or marketing, and in 1979 the private import-export trade was banned. In 1981, all shops were closed and replaced by huge supermarkets with stocks purchased by the state. About a dozen basic commodities are price-subsidized, and a rationing system was established in 1984. Because of an acute shortage of consumer goods, including food staples, some private stores were allowed to reopen by 1987. The nation depends heavily on imports for basic food products, since the agricultural sector only provides for about 25% of the nation's food supply as of 2002. The sale of alcohol is prohibited.

An annual international trade fair is held in Tripoli each March. Normal business hours are 7 AM to 2 or 2:30 PM, Saturday through Thursday. Banks are open Saturday through Thursday from 8:30 AM to 12:30 PM in winter and from 8 AM to 12 PM in summer. Summer banking hours also include 4 to 5 PM, Saturday through Wednesday.

## 3<sup>1</sup> FOREIGN TRADE

Libya has long enjoyed a favorable trade balance because of exports of crude oil, mostly to Europe. Crude petroleum and petroleum products make up the majority of Libya's export commodity

### Principal Trading Partners – Libya (2000)

(In millions of US dollars)

Country	Exports	Imports	Balance
World	10,194.9	3,731.5	6,463.4

market (93%). Other exports include natural and manufactured gas (3.1%), hydrocarbons (1.5%), and fertilizers (1.1%).

In 2005, exports reached \$31 billion (FOB—free on board), while imports grew to \$11 billion (FOB). The bulk of exports went to Italy (37%), Germany (16.6%), Spain (11.9%), Turkey (7.1%), and France (6.2%). Imports mainly came from Italy (25.5%), Germany (11%), South Korea (6.1%), the United Kingdom (5.4%), Tunisia (4.7%), and Turkey (4.6%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Libya customarily registered balance-of-payments surpluses from 1962 until 1981, thanks to large trade surpluses derived from the export of oil. Declining oil production caused payments deficits

from 1981 to 1984. The services and transfers accounts are in deficit because of travel by Libyans abroad, transportation costs, payments to foreign contractors, and remittances by foreign workers. The capital account is also usually in deficit because of Libyan aid and investment abroad. Foreign debt is difficult to calculate because trade debts are often settled by the barter supply of oil.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Libya's exports was \$13.1 billion while imports totaled \$8.7 billion resulting in a trade surplus of \$4.4 billion.

The International Monetary Fund (IMF) reported that in 1999 Libya had exports of goods totaling \$6.76 billion and imports totaling \$4 billion. The services credit totaled \$55 million and debit \$918 million.

Exports of goods totaled \$17 billion in 2004, up from \$15 billion in 2003. Imports grew from \$7 billion in 2003, to \$9 billion in 2004. The resource balance was consequently positive, and fairly constant in both years—\$8 billion. A similar trend was registered for the current account balance, which improved slightly from \$3.6 billion in 2003, to \$3.8 billion in 2004. Foreign exchange reserves (excluding gold) grew to almost \$26 billion in 2004, covering more than three years of imports.

### 33 BANKING AND SECURITIES

The Central Bank of Libya, established in 1956, supervises the national banking system, regulates credit and interest, and issues bank notes. It also regulates the volume of currency in circulation, acts as a banker to the government, provides clearinghouse facilities for the country's commercial banks, and administers exchange control. Since 5 August 1962, the bank has been vested with a monopoly in the import of fine gold.

Libya formerly had branches of many Arab, Italian, and British commercial banks; they were nationalized in 1969. The government ruled that 51% of the capital of each should be taken over by the government, which paid the value of this share. Thus, the Banco di Roma became Umma Bank, Barclays Bank eventually became Jamahiriya Bank, and the Banco di Sicilia became the Sahara Bank. The commercial department of the Central Bank was merged with two small banks to form the National Commercial Bank. In 1972, a reorganization of the commercial banks left the Jamahiriya and Umma banks owned by the Central Bank of Libya; two other institutions, the Sahara Bank and the Wahda Bank, were jointly owned by the Central Bank and private interests.

The National Agricultural Bank, established in 1957, provides advice and guidance on agricultural problems, advances loans to farm cooperatives, and generally assists the agricultural community. The Industrial and Real Estate Bank, founded in 1965, made loans for building, food-processing, chemical, and traditional industries; later it was divided into the Savings and Real Estate Bank and the Development Bank. A decree in 1966 abolished interest on loans made by the government development banks. In 1972/73, the government created the Libyan Arab Foreign Bank, later renamed Jamahiriya Foreign Bank, owned by the Central Bank of Libya, to invest in foreign countries. In 1981, its role in foreign investment was taken over by the Libyan Arab Foreign Investment Co.

In 1997, in addition to the central bank, there were eight other banks in Libya: the Agricultural Bank, Jamahiriya Bank, Libyan Arab Foreign Bank, National Commercial Bank, Sahara Bank, Savings and Real Estate Investment Bank, Umma Bank, and Wahda Bank. In 1994, Libyan financial assets frozen in the United States alone amounted to some \$1 billion. Interest rates are fixed by the central bank, which has applied a discount rate of 5% since 1980. The maximum lending rate for secured loans and overdrafts currently stands at 7%.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$11.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$15.2 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 5%.

There are no securities exchanges in Libya.

### 34 INSURANCE

In 1995, all classes of insurance were available through the Libya Insurance Co. and Al-Mukhtar Insurance Co., both state enterprises. All licensed vehicles require third-party liability insurance, and all imported goods must be insured.

### 35 PUBLIC FINANCE

The fiscal year follows the calendar year. There are two budgets, one for ordinary expenses, the other (and larger one) for development. By law, 15% of total oil revenue is put aside yearly into the country's reserves, while 70% of the remainder goes to development expenditures. All non-oil revenues are assigned to cover ordinary expenditures, and any shortfall is made up by transferring some of the petroleum revenues from the development budget. If funds from petroleum revenues are not sufficient to cover development expenses, some planned projects are postponed. Although Libya has used part of its oil revenue to finance internal development (new schools, hospitals, roads) much has been wasted. Limited privatization continued in 1993, involving the sale of some parastatal assets. In 1999, Libya announced the need for \$150 billion of investment in the economy in order to retain a growth rate of 5%; 60–70% of the funds were to be financed by public monies.

The US Central Intelligence Agency (CIA) estimated that in 2005 Libya's central government took in revenues of approximately \$25.3 billion and had expenditures of \$15.4 billion. Revenues minus expenditures totaled approximately \$9.8 billion. Public debt in 2005 amounted to 8% of GDP. Total external debt was \$4.267 billion.

### 36 TAXATION

Individual income taxes are levied at different rates for income from real estate, agriculture, commerce, industry, crafts, independent professions, and wages and salaries. Corporate taxes range from 20–60%. Also levied are a 16.7% royalty on petroleum pro-

duction, a general income tax of up to 90% and a Jihad tax. Indirect taxes in 2002 were mainly sales taxes at various rates.

### 37 CUSTOMS AND DUTIES

As of 1996, the average weighted tariff was 21.3%. Import controls remain extremely tight, even by regional standards, keeping Libya a difficult place to do trade.

Libya has a single-column tariff schedule. Goods from all countries are subject to the same duties. Also levied are customs surcharges totaling 15% of the application customs duties. Almost all customs duties are ad valorem.

### 38 FOREIGN INVESTMENT

Outside of the oil industry, foreign investment in Libya is limited. No foreign investment is allowed in certain areas, including banking, insurance, domestic commerce, and foreign aid. A minimum of 51% of the capital of joint stock companies must be held by Libyans and the chairman of the board of directors must be a Libyan national.

With the massive increase in oil revenues in the 1970s, Libya became a major exporter of capital. Economic cooperation agreements were signed with many African countries and in 1976 Libya purchased 10% of the shares of the Italian auto company Fiat; it sold its Fiat holdings in 1986 for about \$3 billion.

In 1999, with the lifting of international sanctions on Libya, Qadhafi called for foreign investment in the energy sector (hydrocarbons, power, and water). He also encouraged investment in telecommunications, transport, and electricity generation. Under the current prime minister, Ghanem, a large part of the national companies was privatized, and the economy as a whole is considered to be ripe for modernization and foreign investment. Many international oil companies (e.g. Shell) have recently returned to Libya and the tourism sector will likely benefit from investments in hotels and infrastructure.

### 39 ECONOMIC DEVELOPMENT

Under Libya's first five-year development plan (1963–68), several long-run measures were taken to raise industrial production and to expand and improve the quality of agriculture. Of the government's oil revenue, 70% was earmarked for the development plan. Of this total, 23% was allocated for public works, 17% for agriculture, 16% for communications, 13% for education, 7% for public health, and 4% for industry. The 1972–75 development plan targeted a growth of 11% annually in GDP. Investment was allocated as follows: industry and mineral resources, 15%; agriculture, 14%; communications, 14%; housing, 11%; petrochemicals, 11%; and education, 9%. The 1976–80 development plan invested principally in agriculture, 20%; communications, 14%; industry, 13%; and housing, 12%. The 1981–85 development plan called for investment in industry, 23%; agriculture, 18%; communications, 12%; and electricity, 12%. The drop in oil income caused a contraction in planned projects, however. The plan for 2001–05 foresaw \$35 billion total of investments, mostly in hydrocarbons, power, and water, with a projected GDP growth rate of 5%.

In 1980, Libyan bilateral aid to developing countries totaled 0.90% of GNP. In 1981, however, the total was only 0.39% of GNP. In 1981, Libya also contributed funds to multilateral aid organizations, principally to the Arab agencies and the OPEC Fund. As of

1987, the investments of the Libyan Arab Foreign Investment Co. included 30 companies in Arab countries. There are also significant Libyan holdings in African countries.

According to BIS, Libya increased its deposits in foreign banks in 1986, while at the same time reducing its outstanding debt. By 1989 Libya's net creditor position with BIS reporting banks had declined almost two-thirds in 1987. However, rising deposits in 1990 reflecting soaring oil revenues because of the Persian Gulf crisis, combined with reduced liabilities, led to a positive net balance. Due to the decline in oil export receipts in 1991, this surplus was reduced by one-third. Frozen assets in US banks netted \$1 billion in 1994. The 1999 lifting of sanctions saw increased foreign investment.

In 2003, the government planned to diversify the economy away from its total dependence on oil, which accounts for 95% of Libya's foreign currency. Tourism was one sector of the economy targeted for development, and those working in the industry have encouraged the formation of commercial banks to finance tourism projects. The Tourism Development Bank, 80% of whose shares are held by the private sector, was one example of this initiative. Qadhafi in 2003 urged Libyans to undertake investment projects such as road and port projects, and communication and industrial production projects. The oil sector was not to be privatized, but rather open to investment, while the public sector would not be entirely dismantled, but would work with the private sector. Qadhafi reaffirmed the need to establish people's socialism as the foundational economic structure of society, whereby companies would not be owned by the state, but by the people who run them, assisted by foreign investors where necessary. Libya initiated a \$35 billion investment plan for 2002–05. In July 2004, Libya applied for membership in the WTO; as of late 2006, the Working Party committee to consider the application had not met.

The economy was expected to expand vigorously. Thus, by 2006, the GDP growth rate was projected to be 8.1%—the result of slower output in the oil sector.

### 40 SOCIAL DEVELOPMENT

By law, all employees are entitled to sickness, invalid, disability, death, and maternity benefits and unemployment payments. The cost of these programs is shared by employers, employees, and the government. Survivor benefits are paid to widows, siblings, or sons. Rehabilitation programs are provided for sick and disabled employees to provide them with new employment opportunities. Lump sum grants are provided for maternity, births, and funerals. There is no statutory benefits for unemployment, and there are limited family benefits under Social Care Fund legislation.

Despite a constitutional proclamation providing equality for women, customary Muslim restrictions still apply. Women are granted full legal rights, but few women work outside of the home, and those who do remain in low-paid positions. There is evidence to suggest that younger, urban women are gradually becoming more emancipated. Younger women in urban areas have largely discarded the veil, although in rural areas it is still widely used. Women still must obtain their husband's permission in order to leave the country. Violence against women remains a serious problem and is not discussed publicly.

There have been many reports of continuing human rights violations, including torture. Under Libyan law, persons may be de-

tained incommunicado for unlimited periods, and the government has defended its practice of imprisoning political dissenters. Citizens do not have the right to legal counsel or to fair public trials. The government discriminates against ethnic and tribal minorities, and restricts freedom of speech, press, movement, assembly, religion, and association.

#### 41 HEALTH

In 2004, there were an estimated 129 physicians, 360 nurses, 14 dentists, and 25 pharmacists per 100,000 people. Approximately 72% of the population had access to safe drinking water and 97% had adequate sanitation.

Widespread diseases include typhoid, venereal diseases, and infectious hepatitis. In 1992, the UN approved trade and air traffic embargoes affecting the economy and health care system. With the assistance of the World Health Organization, Libya has eradicated malaria, once a major problem. Tuberculosis is still prevalent.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 27.6 and 3.5 per 1,000 people. The infant mortality rate was 24.6 per 1,000 live births in 2005. The fertility rate in 2000 was 3.5 children per woman during her childbearing years. The maternal mortality rate was estimated at 75 per 100,000 live births. The average life expectancy was 76.50 years in 2005. Immunization rates for children up to one year old were: diphtheria, pertussis, and tetanus, 96%, and measles, 92%. Diarrheal diseases took the lives of 4,683 Libyan children under five years of age in 1995.

The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 10,000 people living with HIV/AIDS in the country.

#### 42 HOUSING

Increasing urbanization has created slum conditions in the major cities. There have been slum clearance and building projects since 1954. Around 125,000 new homes were built between 1969 and 1977. Low-income families were allowed to buy ready-made houses from the state at 10% of cost or to build their own homes with interest-free loans. Real estate was the main area of private investment until 1978, when most tenants were made owners of their residences. The state paid full compensation to landlords for confiscated property and resold it to tenants at subsidized prices. As of the late 1980s, the last period for which housing information was available, total housing units numbered 700,000 with 5.6 people per dwelling.

#### 43 EDUCATION

When Libya attained independence, about 90% of its population was illiterate, and there were few university graduates. Since then, the government has invested heavily in education, which is free at all levels. In 1985, the number of years of compulsory schooling was increased from six to nine years. Many students are enrolled in kindergarten programs of one or two years. Basic (primary) education covers nine years of study. This is followed by four years of specialized secondary education or four years of vocational school. The academic year runs from September to June.

In 2001, about 8% of children between the ages of four and five were enrolled in some type of preschool/kindergarten program. In 1994, primary schools had 1,357,040 pupils. Secondary schools

had 310,556 pupils in 1992. Of these, 26,393 were in teacher training schools and 94,961 were in vocational schools. There has been a rapid increase in the number of students attending vocational schools, from 16,008 in 1980 to 118,564 in 1993.

The two main universities are Al-Fatah University and University of Garyounis in 1976. The Bright Star University of Technology at Marsá al-Burayqah was founded in 1981. There were also two higher institutes of technology and one of mechanical and electrical engineering. In 2003, about 58% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 81.7%, with 91.8% for men and 70.7% for women.

As of 2003, public expenditure on education was estimated at 2.7% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Banghāzī holds 150,000 volumes, including the official documents of the Arab League. The public library in Banghāzī had 14,000 volumes in 2002. Libya's largest library, with 295,000 volumes in 2002, is at the University of Garyounis; at that time, the Government Library in Tripoli had 37,000 volumes. The National Archives, which have an extensive collection of documents relating to the history of Tripolitania under Ottoman rule, are in Tripoli. In addition, France and Italy maintain cultural centers with libraries in the national capital. The Libyan Studies Center in Tripoli holds 100,000 volumes.

The museums exhibit mainly antiquities excavated from various Greek, Roman, Byzantine, and Arabic sites. The Department of Antiquities is responsible for all museums and archaeological sites in the country. Tripoli houses the Archaeological Museum, Epigraphy Museum, Ethnographic Museum, Natural History Museum, Prehistory Museum, and Islamic Museum. There are other museums, mainly archaeological, at Cyrene, Homs, Gaigab, Germa, Leptis Magna, Tokrah, Zanzur, Marsa Susah, and Sabrata.

#### 45 MEDIA

Postal, telephone, and wireless services are owned and operated by the government. Radiotelephone ties exist between Tripoli and European centers. In 2003, there were an estimated 136 mainline telephones for every 1,000 people. The same year, there were approximately 23 mobile phones in use for every 1,000 people.

The Socialist People's Libyan Arab Jamahiriya Broadcasting Corp. broadcasts on radio in Arabic and English, and on television in Arabic, English, Italian, and French. As of 2005, there were no privately owned broadcasting stations. In 2003, there were an estimated 273 radios for every 1,000 people. The number of television stations was not reported in the same survey. The same year, there were 23.4 personal computers for every 1,000 people and 29 of every 1,000 people had access to the Internet.

In 2002, there were three major daily newspapers. *Al-Fair Al-Jadeed* (The New Dawn) published in Tripoli, with circulation of about 40,000. The other dailies included *Al-Jihad* and *Libyan Press Review*. All print media is owned by the government.

The state is said to restrict all expression and opinion on matters deemed crucial to Qadhafi or his regime. All political activities, including publication and broadcasting, which are not officially approved are banned. Vague laws exist by which any speech or expression may be interpreted as illegal. It is said that there is a

pervasive system of informants, which creates an atmosphere of mistrust and self-censorship at all levels of society.

#### 4<sup>6</sup> ORGANIZATIONS

There are chambers of commerce in Tripoli and Banghāzī. Libya has few nongovernment organizations. Membership in an illegal organization was made a capital offense in 1975. Youth organizations include the General Union of Great Jamahiriya Students, which has a membership consisting of all Libyan students registered at both secondary and tertiary educational institutions throughout the country. There is also a Libyan Public Scout and Girl Guide movement. Several sports associations and clubs are active throughout the country. The Gaddafi Charity Foundation encourages volunteer efforts in social welfare and human rights programs. The Red Crescent Society and Caritas have active national chapters.

#### 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

Tourists are attracted to Libya's climate, extensive beaches, and magnificent Greek and Roman ruins. However, tourist facilities are not widely available, because tourism has been discouraged during the tenure of Qadhafi. It suffered a further blow with the 1992 imposition of UN sanctions related to the bombing of a Pan Am jet over Lockerbie, Scotland; UN sanctions were lifted in September 2003 when Libya resolved this case.

All visitors, except Arab nationals, need a valid passport and visa. Visitors must register at the nearest police station within three days of arrival to avoid problems either during their stay or when departing. In 2003, Libya had 957,896 foreign visitors. Of these visitors, 44% came from Egypt. There were 12,405 hotel rooms with 20,967 beds and an occupancy rate of 45%.

According to the US Department of State, the 2005 estimated cost of staying in Tripoli was \$344.

#### 4<sup>8</sup> FAMOUS LIBYANS

As Roman emperor, Septimius Severus (r.193–211) was responsible for initiating an extensive building program at his native Leptis Magna. Muhammad bin 'Ali as-Sanusi (1780?–1859), the founder

of the Sanusi order, established its headquarters in Cyrenaica in the 1840s. Muhammad Idris al-Mahdi as-Sanusi (1890–1983), his descendant, was Libya's first king, ruling the country from its independence until he was deposed in 1969. Col. Mu'ammad Muhammad al-Qadhafi (b.1942) became the actual ruler of the country at that time. Omar al-Muntasser (1939–2001) became secretary-general of the General People's Committee in 1987.

#### 4<sup>9</sup> DEPENDENCIES

Libya has no territories or colonies.

# MADAGASCAR

Democratic Republic of Madagascar  
*République Démocratique de Madagascar;*  
*Repoblika Demokratika n'i Madagaskar*

**CAPITAL:** Antananarivo

**FLAG:** The flag consists of a white vertical stripe at the hoist flanked at the right by two horizontal stripes, the upper in red, the lower in green.

**ANTHEM:** *Ry Tanindrazanay Malala O (Our Beloved Country).*

**MONETARY UNIT:** The Malagasy franc (FMG) is a paper currency. There are coins of 1, 2, 5, 10, 20, 25, 50, 100, and 250 Malagasy francs and notes of 50, 100, 500, 1,000, 2,500, 5,000, 10,000, and 25,000 Malagasy francs. FMG1 = \$0.00051 (or \$1 = FMG1,960) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is generally used.

**HOLIDAYS:** New Year's Day, 1 January; Commemoration of 1947 Rebellion, 29 March; Labor Day, 1 May; Independence and National Day, 26 June; All Saints' Day, 1 November; Christmas, 25 December; Anniversary of the Democratic Republic of Madagascar, 30 December. Movable religious holidays include Good Friday, Easter Monday, Ascension, and Pentecost Monday.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated off the southeast coast of Africa, Madagascar is the fourth-largest island in the world, with an area of 587,040 sq km (226,657 sq mi), extending 1,601 km (995 mi) NNE–SSW and 579 km (360 mi) ESE–WNW. Comparatively, the area occupied by Madagascar is slightly less than twice the size of Arizona. It is separated from the coast of Africa by the Mozambique Channel, the least distance between the island and the coast being about 430 km (267 mi). The coastline of Madagascar is 4,828 km (3,000 mi). Madagascar claims a number of small islands in the Mozambique Channel—the Îles Glorieuses, Bassas da India, Juan de Nova, and Europa—covering about 28 sq km (11 sq mi), which are administered by France.

Madagascar's capital city, Antananarivo, is located near the center of the island.

## <sup>2</sup> TOPOGRAPHY

Madagascar consists mainly of a block of crystalline rocks. It is generally described as a plateau, rising sharply from the narrow plain of the east coast and descending in a series of steps to the strip of sedimentary rocks along the west coast. The high plateau is much indented and, on the eastern edge, cut by deep gorges and waterfalls.

There are numerous volcanic outcrops that produce heights over 1,800 m (6,000 ft); the highest point is Mount Maromokotro (2,876 m/9,436 ft) in the Tsaratanana Massif. The eastern coast is almost straight and has very few anchorages. Behind its coral beaches there is an almost continuous line of lagoons from Foulpointe to Farafangana. These are linked by manmade channels to form an inland waterway called the Pangalanes Canal. The island's major rivers flow westward and are navigable for about 160 km (100 mi) inland.

## <sup>3</sup> CLIMATE

The climate of the eastern and northwestern coasts is dominated by the almost constant blowing of the southeasterly trade winds, which carry heavy rains during the austral winter (May to September). The central plateau and the western coast are sheltered from these winds but receive rain from the monsoon winds, which blow during the austral summer (October to April). Neither the trade winds nor the monsoons reach the southern part of the island, which consequently receives little rain and is, in places, a semidesert. The central plateau enjoys a tropical mountain climate with well-differentiated seasons. Generally speaking, the climate throughout the island is moderated by altitude, with the coast being hotter (average temperatures 21–27°C, or 70–80°F) and wetter than the plateau (average temperatures 13–19°C, or 55–67°F). Toamasina (Tamatave), on the east coast, has 284 cm (112 in) of rainfall annually, while Antananarivo, inland, has about 140 cm (55 in). Occasional cyclones have been devastating.

## <sup>4</sup> FLORA AND FAUNA

The flora and fauna of Madagascar have developed in isolation from those of Africa, and the flora is highly specialized. Scientists hold that Madagascar was originally covered with evergreen forests in the wetter areas of the east and north, which gave place to savanna on the plateau and semiarid vegetation in the south. Much of the original vegetation was destroyed by burning, so that the evergreen forest is now found only in a narrow strip along the steep eastern edge of the plateau, from north to south. Where the forest was destroyed, it was replaced by bush known as savoka, especially in the narrow east coast plain. There are a few small patches of deciduous forest in the northwest and west and mangrove swamps are general along the northwest and west coasts. Most of Madagascar is covered with a rather bare savanna-steppe,

green in the wet season but brown and red in the summer. The greater part of the plateau has a covering of laterite and fertility is low. The extreme south is free of laterite, but lack of rainfall prevents the greater fertility from being of much practical use.

The fauna is remarkable chiefly because of the presence of 28 species of lemur, a lower primate largely confined to Madagascar. The island has 32 species of chameleon. Among the 172 species of birds, 105 are found nowhere else in the world. The same is true for about 80% of the island's flowering plants and more than 95% of its reptiles. Madagascar is also unusual in its lack of poisonous snakes and, except for recent introductions, useful mammals. As of 2002, there were at least 141 species of mammals over 9,000 species of plants throughout the country.

## 5 ENVIRONMENT

Erosion, caused by deforestation and overgrazing, is a serious problem in Madagascar. Many farmers burn off their old crops at the end of winter and damage surrounding forests. By 1994, 75% of Madagascar's forests had been eliminated. In 2000, about 20% of the total land area was forested. Water pollution, caused mainly by sewage, is also a significant environmental problem in Madagascar: only 34% of the people living in rural areas and 75% of all city dwellers have access to pure drinking water. The nation has 337 cu km of renewable water resources. The Ministry of Animal Husbandry, Water, and Forests is the chief government agency with environmental responsibilities. In 2003, only about 4.3% of the total land area was protected.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 49 types of mammals, 34 species of birds, 18 types of reptiles, 55 species of amphibians, 66 species of fish, 24 types of mollusks, 8 species of other invertebrates, and 276 species of plants. Endangered species in Madagascar include the Alaotra grebe, Madagascar pochard, Madagascar fish eagle, and seven species of lemur. There are nine extinct species, including Delalande's coua and the Malagasy hippo. Worldwide trade in endangered and extinct species, estimated at between \$10 and \$20 billion in 1996, has created a market for Madagascar's exotic snakes and tortoises. The looting and smuggling of these species has decimated animal habitats and caused severe ecological harm.

## 6 POPULATION

The population of Madagascar in 2005 was estimated by the United Nations (UN) at 17,308,000, which placed it at number 57 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.7%, a rate the government viewed as too high. A Poverty Reduction Strategy Paper issued in 2005 sets access to contraception as a high priority. The projected population for the year 2025 was 28,177,000. The population density was 29 per sq km (76 per sq mi), with the western part of the country the least densely populated.

The UN estimated that 26% of the population lived in urban areas in 2005, and that urban areas were growing at an annual

rate of 3.84%. The capital city, Antananarivo, had a population of 1,678,000 in that year. Other important cities and their populations are Fianarantsoa, 300,000; Toamasina, 230,000; Antsirana (Diégo-Suarez), 220,000; Antsirabe, 220,000; and Mahajanga (Majunga), 200,000.

## 7 MIGRATION

Since independence, government policy has been uniformly opposed to immigration in any form. The advent of independence led to some emigration of foreign nationals, but it was not until the early 1970s, when the government undertook policies of national control and nationalization of foreign businesses, that foreign residents began leaving in any appreciable numbers. Comorians numbered 60,000 in 1976, but after Comorian-Malagasy clashes in December of that year, about 16,000 were repatriated. As of 2000, there were only a small number of refugees in Madagascar, all of urban socioeconomic background.

Rural-to-urban migration is nearly 6% a year. In 2000 there were 61,000 migrants living in Madagascar. In 1999 and 2005, the net migration was zero. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The Malagasy people are the result of the intermingling of immigrants. The original immigrants are believed to have been members of an Afro-Malagasy race that lived on the East African littoral. Later arrivals were Africans, Arabs, and, much more recently, immigrants from Europe, China, and India.

The general population can be divided into 18 tribes, with no single group holding a majority. Major ethnic groupings include the Malayo-Indonesian (including the Merina and related Betsileo) and the Cotiers (mixed African, Malayo-Indonesian, and Arab ancestry—the Betsimisaraka, Tsimihety, Antaisaka, and Sakalava). The Merina and Betsileo live in the central highlands and show evidence of Asian origin, while the coastal peoples, such as the Betsimisaraka, Tsimihety, and Sakalava, are of predominantly African origin. The Merina have been the ascendant group since the late 18th century. The course that colonialism took in Madagascar strengthened their domination of the political and intellectual life of the island. Resentment of the Merina and their dominant position by the other ethnic groups is still a source of social unrest.

The Indo-Pakistani community is commonly referred to as the Karana. There were about 20,000 Karana in the country in 2004. There are also significant numbers of French, Creole, and Comoran peoples.

## 9 LANGUAGES

The principal and official languages are French and Malagasy. Malagasy is a Malayo-Polynesian language which has different but mutually intelligible dialects and is spoken throughout Madagascar. The Merina dialect has come to be considered the standard literary form of the language. Instruction in French is preferred by

the coastal peoples, as it avoids connotations of Merina cultural dominance.

## 10 RELIGIONS

About 50% of the Malagasy are traditional tribal religionists, some exclusively and others practicing in conjunction with Christian beliefs. Although there are many variations in detail, nearly all of these traditional Malagasy share certain basic religious ideas, the central one being belief in the soul and its immortality. Besides the almighty (Andrianahary or Zanahary), secondary divinities are recognized, especially the earliest inhabitants of the island (Vazimba), legendary kings and queens, and other great ancestors. The burial places and other places of special significance in the lives of these secondary deities are objects of veneration and pilgrimages, during which special rites are performed.

Christianity was introduced to the Malagasy in the early 19th century, and it is influenced to a large extent by traditional beliefs. According to a 2004 report, about 50% of the population were nominally Christian; most are Roman Catholics. The Reformed Protestant Church of Jesus Christ in Madagascar is the largest Protestant denomination. Other denominations include Lutheran and Anglican churches as well as congregations of Seventh-Day Adventists, Jehovah's Witnesses, and the Church of Jesus Christ of Latter-Day Saints. Muslims, concentrated mostly in the north and northwest, constitute just under 10% of the population. There is also a small number of Hindus among the Indian population.

The constitution allows for freedom of religion and this right is generally respected in practice. The Malagasy Council of Christian Churches is an organization of Roman Catholic, Reformed, Lutheran, and Anglican officials that participate in a number of national programs addressing a wide variety of political and social issues.

## 11 TRANSPORTATION

As of 2004, Madagascar's railway system largely consisted of four main railroads, all publicly operated, that operated 732 km (555 mi) of one meter, narrow gauge track. These run from Toamasina to Antananarivo, with a branch from Moramanga to Lake Alaotra; from Antananarivo to Antsirabe; and from Fianarantsoa to Manakara on the east coast.

There are about 49,837 km (30,969 mi) of motor roads on the island, of which 5,781 km (3,592 mi) were paved in 2002. The main roads radiate from Antananarivo to Mahajanga and Antsiranana, to Toamasina, to Fianarantsoa, and to Ihosy, from which one branch goes to Toliara (Tuléar) and another to Tolânaro (Fort Dauphin). The road from Antananarivo to Fianarantsoa is tarred, as are portions of the other main routes. In 2003, there were 70,705 passenger automobiles and 43,000 commercial vehicles in use.

The three major ports are Toamasina, Nosy Be, and Mahajanga; Toliara and Antsiranana are also important. There are at least 13 other ports, engaged mainly in coastal trade. There was considerable freight traffic along the Pangalanes Canal, which runs parallel to the east coast from Toamasina to Farafangana for a distance of 700 km (435 mi). The canal was closed in 1979, however, because of silting. However, dredging had begun by 1985. The merchant fleet consisted of nine vessels of 1,000 GRT or more, totaling 14,865 GRT in 2005.

LOCATION: 43°12' to 50°17' E; 11°57' to 25°38' S. TERRITORIAL SEA LIMIT: 12 miles.

In 2004, there were an estimated 116 airports, 29 of which had paved runways as of 2005. The principal international airport is at Ivato, near Antananarivo. Air Madagascar (the national airline), Air France, Alitalia, Aeroflot, Air Mauritius, and Air Tanzania also provide international service. Air Madagascar, which is owned partly by Air France, also services internal locations. In

2003, about 404,000 passengers were carried on domestic and international flights.

## 12 HISTORY

Madagascar had no human inhabitants until about 2,500 years ago, when immigrants came, probably from Indonesia via the East African coast. This wave of immigration continued for at least 1,000 years, and there was also an influx of African peoples. Additional immigrants from Africa, Arabia, and the Persian Gulf and, much later, from Europe, India, and China did little more than supplement a fully settled population.

The earliest written histories of the Malagasy are the *sorabe*, in the Malagasy language using Arabic script. A Portuguese ship sighted the island and sailed along the coast in 1500. In 1502, the island was named Madagascar by the Portuguese, after the island of the same name originally reported by Marco Polo. During the 16th and 17th centuries, attempts were made by the Portuguese, British, Dutch, and French to establish settlements. All these efforts failed, and Madagascar became the lair of pirates who lived on Nosy Sainte Marie and intermarried with the Malagasy.

Among the Malagasy themselves, three main kingdoms appeared: that of the Merina in the central plateau, that of the Sakalava in the west, and that of the Betsimisaraka in the east. Under King Andrianampoinimerina (r.1787–1810), the foundations were laid for the primacy of the Merina kingdom.

Andrianampoinimerina was succeeded in 1810 by Radama I, his son, under whose guidance the Merina kingdom extended its rule over the major portions of the island (especially over the Betsimisaraka kingdom and the south). Radama welcomed Europeans to assist in the modernization of the kingdom and to further his conquests. On Radama's death in 1828, he was succeeded by his wife, Ranaivalona I, whose hostility to the innovations in her husband's reign led to a persecution of the Malagasy Christians and eventually to the expulsion of the Europeans after an Anglo-French bombardment of Toamasina in 1845.

Radama II, who succeeded his mother in 1861, was sympathetic to the French but was murdered in 1863. Shortly after this, Rainilaiarivony, who was to become prime minister and consort to three successive queens, took control of the government. The last three decades of Malagasy independence during the 19th century were marked by continued attempts of those opposed to innovation to undermine the prime minister's authority. He therefore slowed modernization and tried to retain independence by seeking British friendship against the French. The latter claimed a protectorate over parts of the Sakalava kingdom by virtue of treaties made in 1840, and disputes over this claim and over French properties on the island resulted in a war in 1883 which was ended in 1885 by a treaty giving the French control over Merina foreign policy.

The British recognized the French position under the terms of the Anglo-French Agreement of 1890, in exchange for French recognition of a British protectorate over Zanzibar. This exchange cleared the way for the French annexation of Madagascar in 1896. Malagasy resistance, especially in the south, was not finally overcome until 1904, however. Gen. Joseph Gallieni, governor-general from 1896 to 1905, opened the first government schools (hitherto all schools had been in the hands of the missions), established a free medical service for Malagasy, encouraged the study of Malagasy language and customs by the creation of the Malagasy Acad-

emy (Académie Malgache), and introduced new tropical crops in order to promote economic development. The impress of his policies remained substantial until the end of World War II. His successors, career colonial officials, struggled to promote economic growth, but World War I, subsequent economic difficulties in France, and the prolonged depression of the 1930s, together with the absence of easily exploitable resources, the distance of Madagascar from its main markets, and the shortage of labor, combined to impede their efforts.

During World War II, the Vichy French retained control of Madagascar until it was occupied in 1942 by British troops to prevent its naval facilities from being used by the Japanese. In 1943, French administration was restored under Gen. de Gaulle's Free French government. Madagascar became a French overseas territory in 1946. All Malagasy thus became French citizens, but only a limited number were accorded the franchise (mainly those with some education or experience of European ways in the French civil services or armed forces). A Territorial Assembly was established, with some control of the budget. It was composed entirely of members indirectly elected by provincial assemblies. The latter were wholly elected bodies, but there were separate electorates (and separate seats) for the French citizens of metropolitan status (including Europeans, Réunionnais, and some Malagasy given such status) and for Malagasy citizens of local status. Although the latter had a majority of the seats in both provincial and territorial assemblies, the number of seats assigned to the metropolitan electorate was most disproportionate to its numerical strength. This system was denounced by the nationalists, who had secured a majority of the Malagasy seats in the Territorial Assembly as well as the three Malagasy seats in the French National Assembly.

In March 1947, a rebellion broke out, and for a time the French lost control of the east coast. Europeans and loyal Malagasy were murdered and roads cut. The suppression of the rebellion required substantial forces and took more than a year. Loss of life was estimated at 11,000. The nationalist movement was disrupted by the rebellion and subsequent repressions, but was not destroyed. A period of reform beginning in 1956 resulted in abolition of the dual electorate system, placed Malagasy in important government positions, and led to the rebirth of serious political activity.

### The End of French Rule

In the referendum of 28 September 1958, Madagascar overwhelmingly voted for the new French constitution and became an autonomous republic in the new French Community. As the Malagasy Republic, it became a sovereign independent nation on 26 June 1960 and on 20 September 1960 was elected to UN membership.

The constitution that was adopted in October 1958 and amended in June 1960 provided Madagascar with a strong presidential form of government. The president, Philibert Tsiranana, remained in power until May 1972, when there were riots throughout Madagascar. The protests were led by a nationalist, leftist coalition of students, teachers, laborers, and urban unemployed. The repression that followed these demonstrations led to the fall of the Tsiranana government on 18 May. Gen. Gabriel Ramanantsoa was immediately asked to form a nonpolitical "government of national unity," which was composed of 11 ministers (5 military and 6 civilian). Ramanantsoa effectively destroyed the coalition by raising the minimum wages, providing strike pay, annulling the head and

cattle taxes, prosecuting corrupt officials, and introducing price and currency controls. The new government also broke diplomatic ties with South Africa, established relations with the Communist bloc, withdrew from the franc zone, and arranged for the withdrawal of French military forces under new cooperation agreements with France.

On 5 February 1975, following a period of social and ethnic unrest, Ramanantsoa was replaced as head of state by Col. Richard Ratsimandrava, who was assassinated in an attempted coup six days later. A military Directorate composed of 18 officers was immediately formed and assumed all governmental authority. The Directorate was superseded on 13 June by the all-military Supreme Council of the Revolution, headed by Didier Ratsiraka, who had been minister of foreign affairs in the Ramanantsoa government.

In December 1975, a draft constitution was approved in a referendum by 95% of the voters and the Second Malagasy Republic, to be called the Democratic Republic of Madagascar, was proclaimed. Ratsiraka was installed as president on 4 January 1976, thus remaining head of state.

The new regime accelerated growing state control of the economy, and Madagascar turned to the former USSR and the Democratic People's Republic of Korea for military aid. By 1979, however, growing economic difficulties forced Ratsiraka to develop closer ties with the West. Unemployment, inflation, and scarcities of basic foodstuffs caused serious rioting and social unrest in the early 1980s. Ratsiraka was elected to a new term as president on 7 November 1982. During 1986–87, the government was shaken by student protests against educational reforms, rioting in the port of Toamasina, attacks on Indo-Pakistani enterprises in four major urban centers, and famine in the south because of food-supply problems. By early 1987, the governing coalition appeared to be unraveling. On May Day, four of the parties called for the resignation of the government and early elections.

### Democratization Unleashed

In July 1992, after seven weeks of pro-democracy protests, Ratsiraka finally agreed to dissolve the cabinet and begin talks with the opposition. He also offered to hold a referendum on a new constitution by the end of 1992. Although he rejected demonstrators' demands that he resign, Ratsiraka released Albert Zafy, a popular opponent, and offered to form a coalition government with opposition leaders. Protests continued, and government troops fired on demonstrators in Antananarivo, killing as many as 50. In August, Ratsiraka asked his prime minister, Guy Willy Razanamasy, to form a new government and to "install democracy." By November, Ratsiraka agreed to share power with a transitional government headed by Zafy, his main rival. Ratsiraka's Revolutionary Supreme Council stepped down from power.

The democratization process survived an attempted coup on 29 July 1992, led by a faction of the Active Forces known as the Lifeblood Committee. On 19 August 1992, a new constitution was approved by national referendum. Ratsiraka's supporters interfered with the voting, seeking greater provincial autonomy. However the interior peoples, especially the Merina, strongly supported the new constitution. This was followed on 25 November by a presidential election, which a team of foreign observers deemed free and fair. Zafy defeated Ratsiraka, but without an absolute majority. In a runoff election on 10 February 1993, Zafy got 67% of

the vote to Ratsiraka's 33%. The president was installed in March, amid violent confrontations between Ratsiraka's supporters and government forces.

Parliamentary elections were held in June 1993 for the new National Assembly. Twenty-five parties won representation with Zafy's Forces Vives (FV) taking the largest block of seats—48. Eight parties had more than five seats. The National Assembly elected Francisque Ravony prime minister—55 votes to 45 for Roger Ralison (FV), and 35 for former Maoist leader, Manandagy Rakotonirina.

Communal (territorial) elections, the first step in creation of the Senate, were held in November 1995, but President Zafy's day in the sun was short-lived. He was impeached in September 1995, and then defeated by Ratsiraka in competitive elections in December 1996. On February 10, 1997, Ratsiraka became the second African head of state, after Mathieu Kérékou of Benin, to have lost and then reclaimed the presidency via competitive elections.

An extensive revision of the 1992 constitution was approved narrowly in a March 1998 constitutional referendum. International observers found the conduct of the referendum generally free and fair, but problems involving the compilation of voter lists, distribution of electoral cards, and other issues led to charges of fraud and manipulation. The revised constitution reduced checks and balances and strengthened the presidency at the expense of the National Assembly. Parliamentary elections held in May 1998 generally were free and fair, but there were credible complaints of electoral fraud. In November 1999, municipal elections were held for 1,392 mayoral posts and 20,000 council seats.

After 29 years of dormancy, the Senate reconvened in May 2001. However, a national crisis ensued following the 16 December 2001 presidential election when challenger Marc Ravalomanana claimed to have won the election outright over incumbent Didier Ratsiraka, thereby eliminating the need for a run-off. The official results gave Ravalomanana 46.2%, forcing him into a run-off with Ratsiraka (40.9%). Albert Zafy (Rasalama) claimed 5.4%, Herizo Razafimahaleo 4.2%, D. Rajakoba 1.8%, and P. Rajaonary 1.6%. With Ratsiraka refusing to step down, Ravalomanana and his supporters mounted strikes and protests culminating in Ravalomanana's seizure of the presidency in February 2002. Operating from his provincial fiefdom, Toamasina, Ratsiraka commanded his armed forces to lay siege to the capital, blowing up key bridges and cutting off foodstuffs and other critical supplies. The violence resulted in more than 70 deaths. US recognition of Ravalomanana in June 2002 was followed by international approval, forcing Ratsiraka in July 2002 to seek exile in France ending seven months of political and economic chaos in the country.

Ravalomanana's first 18 months in power were marked by his consolidation of power, which was countered by a reorganization of opposition parties. None of the opposition parties, however, presented a serious challenge to Ravalomanana's power. Indeed, the president's first moves were to punish supporters of the old government including the last prime minister, Andrianarivo, who was detained and put on trial. However, under pressure from Zafy's forces, Ravalomanana pardoned those serving sentences of less than three years and invited others to apply for amnesty. The influential Madagascar Council of Churches led the movement for reconciliation resulting in broad support for compromise.

In December 2002, the president's party, Tiako-I-Madagasikara (TIM) dominated national assembly elections, but in the November 2003 municipal polls, TIM's opponents gained 18 of 45 of the most important mayoral posts up for election. The results speak to the importance of local power bases in Madagascar.

Internationally, Ravalomanana was able to restore donor confidence in the economy, largely through the leadership of his prime minister, Jacques Sylla. Gradually, the administration established productive relations with African states that were expected to lead to Madagascar's admission to the Southern Africa Development Community (SADC). Moreover, Madagascar qualified as one of the first African states to be eligible for funding under the US Millennium Challenge Account (MCA). The MCA agreement was signed in early 2005. France and the United Kingdom have also been supportive of the Ravalomanana government.

Although Ravalomanana remained politically strong going into 2006, he was expected to face stiff challenges led by Albert Zafy, Richard Andriamanjato, a former parliamentary speaker, and the former chairman of the national council of churches, Edmond Razafimahefa. Nevertheless, the president rejected demands for a transition government leading into the presidential elections scheduled for late 2006, and also resisted European calls for a new electoral law and more independent elections commission. Analysts predicted that the president's party, TIM also could be vulnerable in the 2007 legislative elections because of its weak grassroots base that other parties have shown themselves capable of organizing.

### **13 GOVERNMENT**

The constitution of 21 December 1975, like that of the First Republic, provided for a strong presidential system of government. The president was elected for a seven-year term and was both chief executive and head of state. The president was assisted by the Supreme Council of the Revolution (Conseil Suprême de la Révolution—CSR), which was to be “the guardian of the Malagasy Socialist Revolution.” The president, as chairman of the CSR, named two-thirds of its members outright and chose the other third from a list submitted by the National People's Assembly. The premier, the designated head of government, was appointed by the president and assisted by a cabinet.

The 19 August 1992 constitution of the Third Republic provides for a head of state, the president, who is elected by universal suffrage to serve a five-year term. The president chooses a prime minister from a list of candidates nominated by the national assembly. The prime minister appoints the Council of Ministers.

The constitution provides for a two-chamber legislature—a 160-member national assembly and a senate. Members of the national assembly are elected by universal suffrage—82 by single-member and 34 by two-member constituencies—to serve four-year terms. The president appoints the remaining one-third. Regional assemblies elected by direct suffrage select two-thirds of the members of the 90-seat senate with the remaining one-third appointed by the president for a four-year term. Suffrage is universal at age 18.

### **14 POLITICAL PARTIES**

Following World War II, the Democratic Movement for Malagasy Renewal (Mouvement Démocratique de la Rénovation Malgache—MDRM), founded by several prominent national-

ists, demanded that Madagascar be declared a free state within the French Union. The French, however, organized the island as an overseas territory, granting the vote to few Malagasy. In the wake of the 1947 rebellion, the leaders of the MDRM, whom the French accused of planning and leading the revolt, were convicted of treason and sentenced to death (later commuted to life imprisonment). Charges of French brutality in the suppression of the revolt, however, gained considerable sympathy for the nationalist cause.

After independence, the Social Democratic Party of Madagascar and the Comoros (Parti Social Démocrate de Madagascar et des Comores—PSD) became the dominant political organization in the Malagasy Republic. It was organized in 1957 under the leadership of Philibert Tsiranana, the son of a Tsimihety peasant, and advocated a gradual approach to independence. In the Assembly elections of September 1960, the PSD won 75 seats out of 107. In the 1965 and 1970 elections, it increased its representation to 104 seats. The PSD was supported principally by peasants and other conservative elements, and favored strong ties with France. Tsiranana, who became president in 1960, was reelected in 1965 and again in 1972, just prior to his overthrow. The only real alternative during this period was the pro-Soviet Party of the Congress of Independence (Ankoton'ny Kongresi'ny Fahaleorantenan Madagaskara—AKFM), founded in 1958.

Other parties represented regions, provinces, tribes, or religious groups, but displayed little national strength. The most significant of the regional parties was the Movement for the Independence of Madagascar (Mouvement National pour l'Indépendance de Madagascar—MONIMA) which was led by Monja Jaona from Toliara. It represented the more radical intellectuals and landless peasants of the south. As a result of its armed opposition to the central government in April 1971, which was quickly and harshly suppressed, MONIMA became a truly left-wing opposition movement with support among students and urban radicals. Though MONIMA was banned, these elements led the series of demonstrations against the Tsiranana regime that resulted in its fall in May 1972. The ban on MONIMA was lifted in June.

After the assassination of the new head of state, Richard Ratsimandrava, in February 1975, all political parties were banned. The new constitution institutionalized the ban by providing for the creation of a sole party, to be called the National Front for the Defense of the Revolution (Front National pour la Defense de la Révolution—FNDR).

In effect, however, the FNDR became an umbrella group under which parties survived as “revolutionary associations.” MONIMA withdrew from the FNDR in 1977 but returned in 1981, bringing to seven the number of parties in the FNDR. The chief party was Ratsiraka's Vanguard of the Malagasy Revolution (Avant-garde de la Révolution Malgache—AREMA). On 29 May 1977, it won control of almost all provincial and local bodies, and on 30 June 1977, in an election in which voters were presented with a single FNDR list, AREMA won 112 Assembly seats to 16 for the PCI and 9 for two other parties.

In the presidential election of 7 November 1982, President Ratsiraka won reelection with 80.17% of the vote. His sole opponent, Monja Jaona, leader of MONIMA, was removed from the CSR and temporarily placed under house arrest after he called for a general strike to protest the election results. In elections in August

1983, AREMA again won a commanding majority in the Assembly. MONIMA left the FNDR in 1987.

Since the democratic changes of 1992 and 1993, numerous political organizations have operated in Madagascar. In 1991, Albert Zafy founded the National Union for Development and Democracy (UNDD). Zafy was supported in the 1993 elections by Forces Vive (FV), an informal alliance that included the UNDD and the AKFM–Fanavaozana, a breakaway group from the MFM (Mouvement pour le pouvoir prolétarien).

Following his defeat in the presidential elections of February 1993, Didier Ratsiraka created a new party, the Vanguard for Economic and Social Recovery (ARES—Avant Gardes pour le Redressement Économique et Social). Ratsiraka turned on his former policies by proposing a federalist arrangement that would give more autonomy to the provinces. In the elections of 17 May 1998, which were credibly free and fair, Ratsiraka was leading AREMA, now named the Association for the Rebirth of Madagascar, which took 62 seats, LEADER/Fanilo 15, AVI 14, RPSD 11, AFFA 6, MFM 3, AKFM/Fanavaozana 3, GRAD/Iloafo 1, Fihaonana 1, independents 34.

In the municipal elections on 14 November 1999, AREMA captured three of the six regional capitals, having previously held just one. The biggest losers were established opposition party candidates such as former president Albert Zafy, who was beaten in his own political stronghold of Antsiranana. Marc Ravalomanana, a 50-year-old businessman and a principal donor of funds to the AVI centrist party, won the mayorship of Antananarivo, the capital city. Although the vote was marred by poor organization, almost all the 1,392 mayorships and 20,000 council seats were contested by at least two candidates. Many these were independents, which seemed to signal that local elections were no longer being run from national party headquarters in the capital.

In the 15 December 2002 parliamentary elections, Ravalomanana's I Love Madagascar (TIM), captured a combined total of 125 out of 160 seats in parliament. The election results (minus presidential appointments) were as follows: TIM 103, FP 22, AREMA 3, LEADER/Fanilo 2, RPSD 5, TTS 2, HBM 1, and independents 22. The opposition criticized the poll as manipulated by the president's party.

In the early run-up to the national assembly elections expected in early 2007, AREMA appeared fractured by Toamasina major, Roland Ratsiraka, nephew of former president Didier Ratsiraka, who has led a youthful wing of the party to reconciliation with the Ravalomanana administration. The most concerted opposition to TIM was expected from the Three National Forces (3FN) alliance, under the leadership of former president, Albert Zafy. The opposition was expected to make gains in the national assembly elections scheduled for 2007, however, Mr. Ravalomanana was expected to retain the presidency given that no opposition figure appeared to have the national appeal sufficient to unseat him.

## 15 LOCAL GOVERNMENT

Prior to the Ravalomanana regime, Madagascar was divided into six provinces, subdivided into 28 regions comprising 148 departments, and further divided into nearly 1,400 communes. At the local level were some 11,393 *fokontany* (village or urban neighborhood organizations) with an elected president and council. All

levels of the Malagasy state were organized in hierarchical fashion within the jurisdiction of the Ministry of the Interior.

During the 1996 campaign, former president Didier Ratsiraka promised to draft laws that would make provinces autonomous. He subsequently sponsored workshops to gather input and share ideas with regional leaders. This controversial plan transferred power from the central government to the provinces and municipalities, and to administrative subdivisions for tax collection, service provision, and development planning. However, it was widely feared that provincial autonomy would threaten Madagascar's political unity.

Ravalomanana introduced a new structure that makes 22 new regions the main administrative units. Consequently, the power of the six autonomous provinces was greatly reduced, which was reflected in their shrinking budgets. While the regional leaders are centrally appointed, the municipal mayors, who exercise considerable power, are elected by direct popular vote.

## 16 JUDICIAL SYSTEM

The Malagasy judicial system is based on the French tradition. During the 1960s and 1970s the nation began a move from a bifurcated judicial system (customary courts for most Malagasy and local courts for foreign residents and urbanized Malagasy) to a single judicial system. At the top of the judicial system is the Supreme Court in Antananarivo. Other courts include the Court of Appeal, also in Antananarivo; courts of first instance for civil and criminal cases; ordinary and special criminal courts; and military courts. There are also a High Court of Justice to try high officials and a High Constitutional Court. Military courts presided over by civilian magistrates hear cases involving national security.

The traditional courts (*dina*) continue to handle some civil disputes and recently have been used in criminal cases because of inconvenience and inadequacy of the formal court system. Decisions by *dina* are not subject to the formal procedural protections of the formal court system. In some cases, however, they may be challenged at the appeals court level. *Dina*'s authority depends upon the mutual respect and consensus of the parties to abide by the ruling. *Dina* punishments are sometimes severe and include capital punishment.

The 1992 constitution guarantees an independent judiciary, and in practice the judiciary appears to be independent from the executive. In April 2002, a critical test of the judicial system occurred. With both Ratsiraka and Ravalomanana agreeing to a recount of the December 2001 polls, the High Constitutional Court declared Ravalomanana the winner. Ratsiraka defied the verdict, but Ravalomanana was sworn in for the second time on 6 May 2002 as Madagascar's fourth head of state.

## 17 ARMED FORCES

As of 2005, the armed forces of Madagascar were composed of 13,500 active personnel, of which the Army accounted for over 12,500, the Navy 500 (including around 100 Marines), and the Air Force 500. The Army's equipment included 12 light tanks and over 37 artillery pieces. The Air Force operated 14 transport and 5 utility fixed wing aircraft, and 6 support helicopters. There were no combat aircraft. The Navy operated one amphibious landing craft and one logistics/support vessel. The paramilitary Gendarmerie National, which had a strength of 8,100, is the main force for the

maintenance of public order and internal security. In 2005, the defense budget totaled \$275 million.

## 18 INTERNATIONAL COOPERATION

Madagascar was admitted to the United Nations on 20 September 1960 and is a member of ECA and several nonregional specialized agencies, such as the FAO, IAEA, the World Bank, UNESCO, UNHCR, UNIDO, and WHO. It is also a member of the WTO, the African Development Bank, the ACP Group, the Arab Bank for Economic Development in Africa, G-77, the African Union, Indian Ocean Commission, and COMESA. Madagascar is a member of the Nonaligned Movement. In environmental cooperation, the country is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montreal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Madagascar is a poor country, with over 70% of the population falling below the poverty level of \$50 a year. Its agriculture-based economy supports a majority of the labor force. There are substantial mineral deposits; and industry, which accounted for 11% of GDP in 1999, is centered on food processing. Madagascar sponsored an Export Processing Zone in 1991 and important investments have been made in tourism. Government efforts to strengthen the market economy have been erratic, while corruption and political instability continue to constrain growth. The country's infrastructure remains poor, with inadequate roads preventing the transportation of agricultural products from farm to market. Railroads and the port system are also undeveloped, although the telecommunications system is being revamped. The IMF and World Bank in 2000 released tranches of the Poverty Reduction and Growth Facility, and Structural Adjustment Credit, respectively, to assist the country in reducing poverty and implementing market reforms conducive to private sector development. Also in 2000, Madagascar was approved to receive debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative.

The agricultural sector, which accounted for 34% of GDP in 1999, is prone to cyclone damage and drought. Rice is the staple crop although Madagascar has sought to diversify crop production by promoting maize and potatoes. Cassava, bananas, and sweet potatoes are also important. Export crops are coffee, vanilla, and cloves, with coffee the most important. A decline in world coffee prices by 2003 had stifled growth. The sugar sector has been revived with the help of French investments.

Economic growth has been very instable in recent years, dropping from 6.0% in 2001 to -12.6% in 2002, and up to 9.7% in 2003, and 5.3% in 2004. Inflation has followed a similar pattern, growing from 6.9% in 2001 to 16.1% in 2002, dropping to -1.2% in 2003, and surging up again to 13.8% in 2004. There are no available figures for unemployment.

Though Madagascar has a considerable diversity of minerals, their remote locations have discouraged extraction. Chromite, graphite, and mica are exported along with gems such as topaz, garnets, and amethysts. Private mining interests have been invited to develop Madagascar's gold deposits, as well as ilmenite, zircon,

rutile, nickel, platinum, and bauxite. There has also been renewed interest in Madagascar's oil potential. Madagascar is rich in biodiversity, and many plants and animals found there exist nowhere else in the world. Hence, ecotourism is a sector of the economy with great potential for development.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Madagascar's gross domestic product (GDP) was estimated at \$15.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$900. The annual growth rate of GDP was estimated at 6.5%. The average inflation rate in 2005 was 10%. It was estimated that agriculture accounted for 28.7% of GDP, industry 16.5%, and services 54.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$16 million or about \$1 per capita and accounted for approximately 0.3% of GDP. Foreign aid receipts amounted to \$539 million or about \$32 per capita and accounted for approximately 10.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Madagascar totaled \$4.54 billion or about \$269 per capita based on a GDP of \$5.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.4%. In 2001 it was estimated that approximately 61% of household consumption was spent on food, 4% on fuel, 2% on health care, and 2% on education. It was estimated that in 2004 about 50% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in 2000 (the latest year for which data was available) was estimated at 7.3 million persons. As of 2002, agriculture employed 78% of the workforce, with industry employing 6.7% and services 15.3%. Although a 2002 survey put Madagascar's unemployment rate at 4.5%, the country's actual rate may be far higher.

Both public and private sector workers have the right to establish and join labor unions of their choice. However, only 5% of the total force was unionized in 2002. Unions are required to register with the government, but authorization is customarily given. The law provides for collective agreements between employers and trade unions. Strikes are legally permitted.

Working conditions are regulated by the constitution and the labor code. The law sets the minimum working age at 14 (18 where the work is hazardous) but this minimum is enforced only in the small formal sector of the economy. In the large agricultural sector, many children work with their parents on family farms. The minimum wage was \$25 per month in 2002, but this is not regularly enforced due to harsh economic realities. The standard legal workweek is 40 hours in industry, and 42.5 hours in agriculture.

## 2<sup>2</sup> AGRICULTURE

Although Madagascar's economy is essentially agricultural, much of the land is unsuitable for cultivation because of its mountainous terrain, extensive laterization, and inadequate or irregular rainfall. Only about 5% of the land area is cultivated at any one time. Despite these figures, agriculture accounts for 25% of GDP and employs about 75% of the work force. Large-scale plantations dominate the production of sisal, sugarcane, tobacco, bananas, and cotton, but, overall, Malagasy agriculture is dependent mainly on small-scale subsistence farmers cultivating less than one hectare (2.47 acres) of land.

A wide variety of food crops is grown. Rice is the staple of the Malagasy diet; production was an estimated 3,030,000 tons in 2004. Nevertheless, the yield is insufficient to meet the country's needs and in 1982, 1984, and 1990 cyclones severely damaged the rice crop. Cassava, bananas, and sweet potatoes are also important. Madagascar has sought to diversify staple crop production by promoting maize and potatoes. Other important food crops (with 2004 production figures) include cassava, 2,191,000 tons; sugarcane, 2,180,000 tons; sweet potatoes, 542,000 tons; potatoes, 280,500 tons; bananas, 290,000 tons; corn, 350,000 tons; and oranges, 83,000 tons.

In the 1980s, coffee regularly earned about 24% of total export revenues. After the collapse of the International Coffee Organization in 1989, however, coffee exports accounted for only 8.6% of Malagasy foreign trade earnings in 1992 (down from 35% in 1985); in 2004, it accounted for less than 1% of exports. Production was 85,000 tons in 1991 and about 65,000 tons in 2004.

Vanilla is the leading agricultural export, with production of 3,000 tons in 2004 and exports of 658 tons of extract (for a value of \$64.2 million, 16% of total exports). International trade in natural vanilla is determined by agreements between producers (mainly Madagascar and the Comoros) and the principal importers by which export prices and traded volumes are fixed. The government does not encourage overproduction, since the international market demand is very sensitive because of competition from synthetic vanilla (vanillin). Madagascar is the world's major natural vanilla producer, accounting for about 75% of production.

Cloves are another main export crop, grown mostly by smallholders. Production follows a four-year cycle with two–three years of high output followed by one year of low production. Clove production amounted to 1,500 tons and exports totaled 12,585 tons in 2004, valued at \$14.6 million. Other 2004 production figures for cash crops were seed cotton, 12,500 tons; peanuts, 39,000 tons; sisal, 17,000 tons; and cocoa, 4,500 tons. Pepper and cinnamon are other important export crops. Pepper and cinnamon exports in 2004 together amounted to 1,732 tons, valued at \$1.1 million. The sugar sector has been revived with the help of French investments. The needs of the domestic market are served by five sugar refineries.

Production of cash crops has been discouraged by the low prices paid by state agencies, which sometimes have failed to collect crops or pay for them on time. In 2004, Madagascar's agricultural trade surplus was \$28.5 million.

## 2<sup>3</sup> ANIMAL HUSBANDRY

More than half the land is used for raising livestock. Cattle occupy an important place in the Malagasy economy. They are, however, more important as evidence of wealth than as sources of meat and dairy products. Only since the end of World War I has the consumption of meat become widespread among Malagasy, and now beef consumption is relatively high compared with other African countries. Cattle are employed to trample the rice fields and to draw plows and small carts. Most cattle are of the humped zebu type. Madagascar has vast natural pastures (60% of total land area) and is free of cattle diseases; there is, therefore, considerable potential for increasing production.

Estimates of the size of livestock herds vary considerably. Estimates for 2005 were cattle, 10.5 million head; hogs, 1.6 million; sheep, 650,000; and goats, 1.2 million. Total meat production was about 297,000 tons. Beef and live animals are exported. The population of cattle has remained steady because of a high young animal mortality rate resulting from traditional livestock-raising techniques.

## 2<sup>4</sup> FISHING

Despite the island's long coastline, fishing is relatively undeveloped as an industry in Madagascar. On the east coast, with its stormy seas and absence of harbors, fishing is restricted mainly to the coastal lagoons and has been aptly characterized as virtually an extension of inland freshwater fishing. In the northwest, sardine and tuna are caught, and dried fish find a ready market. Dried fish also are prepared in the southwest. Lobsters, prawns, and shrimps are exported. Commercial maritime fishing is carried out by four joint-venture companies that operate along the northwest coast and account for most exports. The catch in 2003 was estimated at 152,238 tons, of which 32,500 tons were caught in inland waters. Vessels from European Union nations are allowed to take up to 11,000 tons of tuna and prawns a year. French investment has helped establish a tuna cannery.

## 2<sup>5</sup> FORESTRY

The forested area of Madagascar is estimated to cover more than 11.7 million hectares (about 28.9 million acres), or about 20% of the land. The main objectives of forestry policy have been to arrest further destruction of the woodlands, to pursue a systematic reforestation program in the interests of soil conservation and the domestic demand for construction timber, and to continue to meet the domestic need for firewood, of great importance in view of the absence of petroleum or exploited coal deposits. Eucalyptus, introduced at the end of the 19th century, acacias (especially mimosa), and various kinds of pine have been extensively used in reforestation. Raffia is the only forest product exported in any quantity. Roundwood removals were estimated at 10,867,000 cu m (384,000,000 cu ft) in 2003; 99% was used for fuel.

## 2<sup>6</sup> MINING

Madagascar's mining sector is primarily known for its production of chromite (chemical- and metallurgical-grade), as well as for the

production and export of phlogopite mica and high-quality crystalline flake graphite.

In 2003, output of chromite (marketable lumpy ore and gross weight concentrate) was 45,040 metric tons, up from 11,000 metric tons in 2002, but down significantly from the 131,293 metric tons produced in 2000, as a result of competition from South Africa. Graphite shipments (all grades) in 2003 totaled 2,000 metric tons. Output of mica (phlogopite) in 2003 totaled 90 metric tons.

Deposits of gems (amazonite, amethyst, beryl, citrine, cordierite, garnet, sapphire, and tourmaline) have been exploited, as have those of ornamental stones (agate, apatite, and aragonite—69% of total ornamental stone production—calcite, jasper, and labradorite) and stones for electrical geodes (quartz—industrial, rose, and smoky—and celestine). In 1999, Madagascar exported gemstones worth \$15.18 million, a 212% increase over 1999, and 270% over 1995—74% were exported to Thailand. In 2003, amethyst, emerald, ruby and sapphire production totaled 100 kg, 15 kg, 1,000 kg and 6,000 kg, respectively.

Madagascar in 2003 also produced mine gold (almost all was produced by artisanal miners and smuggled out of the country), natural abrasives, feldspar, kaolin, marble, marine salt, and dimension stone. Industrial calcite, clays, sand and gravel, and stone were presumably produced as well. Bastnaesite and monazite were not produced after 1996, although large deposits occurred of both, as well as of pyrochlore, and contained fergusonite, xenotime, euxenite, and uranium.

Extensive prospecting has led to the discovery of recoverable deposits of iron ore (910 million tons of resources; the 360-million-ton deposit near Soalala was the most valuable), bauxite (330–335 million tons in resources, in the southeastern part of the country), nickel (168 million tons; the largest resources were in the Ambatovy lateritic deposit), coal, copper, lead, manganese, platinum, tin, titanium, zinc, and zirconium. Madagascar's considerable mineral potential has remained unexploited; the main factors were the need for major infrastructure repairs, its poor power distribution systems, underfunded health and education facilities, and the inability to reform the economy and deal with chronic malnutrition, deforestation, land erosion, and population growth. One potentially positive development was the decision of the International Monetary Fund and the World Bank in 2000 to grant Madagascar \$1.5 billion in debt relief. In 2000, the Bureau du Cadastre Minier de Madagascar (BCCM) was established, to serve as a one-stop service for mining operators. An overhaul of mining regulations created a new system of strictly defined licenses and mining concessions. All mineral resources, except graphite and mica, were nationalized, and prospecting and exploitation was under state control.

## 27 ENERGY AND POWER

Madagascar had no known reserves of oil, or natural gas as of 1 January 2005. Nor does the country have any recoverable coal reserves. As a result, Madagascar must rely upon imports to meet its fossil fuel needs, although the country does have a small refining capacity.

Madagascar's demand and imports of petroleum products in 2004 averaged 12,000 barrels per day. Petroleum refining capac-

ity, as of 1 January 2005 averaged 15,000 barrels per day. In 2003, Madagascar had no imports or consumption of natural gas. However, it did import 0.01 million short tons of coal. Madagascar's only oil refinery was established at Toamasina in 1966.

Installed electrical capacity, as of 1 January 2003, amounted to 0.284 million kW, of which 63% in 2002 relied upon conventional fossil fuels. The remaining capacity in 2002 was hydroelectric. In 2003, electric power output came to 0.83 billion kWh, with consumption that year at 0.77 billion kWh. However, in 2002, hydro-power accounted for 66% of the power produced.

## 28 INDUSTRY

Industry consists largely of processing agricultural products and textile manufacturing. The industrial centers are in the high plateau and near the Toamasina port. Industrialization has been severely hampered by inadequate internal transportation and a restricted local market. Industry accounted for 11% of GDP in 1999. Most plants operated at less than one-third of full capacity.

The majority of industrial enterprises process agricultural products: rice, sugar, flour, tobacco, tapioca, and sisal. In addition, there are some meat-packing plants. Urea- and ammonia-based fertilizers are produced in a plant that opened in 1985. Madagascar produces pulp for paper and cement. Other industrial enterprises include cotton spinning and weaving mills and three automobile assembly plants.

The government-owned petroleum refinery at Toamasina has a capacity of 15,000 barrels per day, but it has been operating at reduced capacity since it was hit by a hurricane in 1994. The petroleum sector was liberalized in 1996, and the state oil company SOLIMA was privatized in 2000. Oil and gas exploration holds great potential for the country.

The share that industry contributed to the GDP grew to 16.7% by 2004; agriculture contributed only 29.3%, but was the main employer in the country; services held a 54% share in the GDP. Other industries include meat processing, soap, breweries, tanneries, sugar, textiles, glassware, cement, automobile assembly plant, paper, petroleum, and tourism.

## 29 SCIENCE AND TECHNOLOGY

France is the leading supplier of scientific and technical aid to Madagascar, and there are French research institutes in the country to study geology, hydrology, tropical forestry, and veterinary medicine.

The National Center of Applied Research in Rural Development, founded in 1974 at Antananarivo, conducts research into agriculture, forestry, fisheries, zoology, and veterinary studies. Also in the capital is a government department of agronomical research, the National Institute of Geodesy and Cartography, and the Pasteur Institute, which is devoted to biological research. The University of Antananarivo, founded in 1961, has departments of sciences, agriculture, polytechnics, and health sciences, and an Institute and Geophysical Observatory. The University of Fianarantsoa, founded in 1988, has departments of mathematics, physics-chemistry, engineering, and computer science. The University of Mahajanga, founded in 1977, has faculties of natural sciences, medicine, and dentistry and stomatology.

In 1987–97, science and engineering students accounted for 25% of college and university enrollments. In 2000 (the latest year for which there is data available), research and development (R&D) expenditures totaled \$15.332 million, or 0.12% of GDP. In that same year, the country had 47 technicians and 15 scientists and engineers per million people that were engaged in R&D.

### 30 DOMESTIC TRADE

Antananarivo, the capital and largest city, is the principal distribution center for the island. Toamasina, Mahajanga, Antsiranana, Toliara, and Tolânaro are the commercial centers for the provinces in which they are located. Distribution and packaging are being gradually modernized. Most general merchants in the small eastern communities are Chinese; most on the west coast are Indian. Domestic trade is small due to low-incomes of most residents and relatively high prices. Business is conducted in French and Malagasy. Advertising and marketing are not common.

Business hours vary, but generally are from about 8 AM to noon and 2 to 5:30 PM on weekdays and from 8 AM to noon on Saturdays. Banks are open 8 to 11 AM and 2 to 4 PM Monday through Friday.

### 31 FOREIGN TRADE

Madagascar consistently runs a trade deficit. Exports consist mainly of unprocessed agricultural products and some extracted minerals. Textiles are Madagascar's major export commodity (29%), followed by spices (14%), coffee (7.1%), and gemstones (6.5%). Other exports include preserved fruit (4.4%) and shellfish (4.1%).

Refined petroleum products were formerly imported in large quantities, but development of domestic refinery capacity altered this pattern. Madagascar now exports a small amount of petroleum products to East Africa and to other Indian Ocean islands. Crude petroleum still must be imported.

In 2004, exports reached \$868 million (FOB—free on board), while imports grew to \$1.1 billion (FOB). The bulk of exports went to the United States (35.8%), France (30.8%), Germany

(7.7%), Mauritius (4.6%), and Italy (3.4%). Imports included capital goods, petroleum, consumer goods, and food, and mainly came from France (17.2%), China (9.7%), Hong Kong (6.6%), Iran (6.4%), Mauritius (6.2%), and South Africa (5.6%).

### 32 BALANCE OF PAYMENTS

Madagascar's payments balance is chronically negative. Since private investment has been limited, the deficits have been covered by foreign aid grants, official loans, and the use of central bank reserves from good years. In 1981 Madagascar was refused credit by its suppliers because of worsening deficits. The IMF provided a standby loan in 1982, conditional on devaluation of the currency, increased agricultural sector investments, producer price increases for rice and cotton, and the imposition of a ceiling on the minimum wage. These measures had a positive effect, although export production continued to decline. Consequently, further standby credits were negotiated and, in the late 1980s, Madagascar's debt was periodically rescheduled conditional on further trade liberalization, tighter government spending controls, privatization of the state's banks, improvement of credit access, and the opening up of financial markets to foreigners. France and Germany canceled significant portions of Madagascar's debt at that time.

In 1997, the Paris Club approved a 67% debt reduction, but since the majority of the country's debt did not lie with the Paris Club, it retained an external debt of over \$4.5 billion. In 2000, Madagascar qualified for \$1.5 billion in debt service relief from the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2001, the IMF approved a three-year \$103 million loan to Madagascar.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Madagascar's exports was \$680 million while imports totaled \$919 million resulting in a trade deficit of \$239 million. The International Monetary Fund (IMF) reported that in 2001 Madagascar had exports of goods totaling

\$111 million and imports totaling \$114 million. The services credit totaled \$42 million and debit \$61 million.

Exports of goods and services reached \$1.3 billion in 2004, slightly increasing from the 2003 value. Imports grew from \$1.8 billion in 2003, to \$1.9 billion in 2004. The resource balance was consequently negative in both years, reaching -\$491 million in 2003 and -\$680 million in 2004. The current account balance was also negative, decreasing from -\$268 million in 2003, to -\$411 million in 2004. Foreign exchange reserves (including gold) grew to \$467 million in 2004, covering around three months of imports.

### 33 BANKING AND SECURITIES

Upon leaving the franc zone in June 1973, the government established the Central Bank of the Malagasy Republic (Banque Centrale de la République Magache). Also organized at that time were the Malagasy National Development Bank, an agricultural credit institution, and the National Investment Co., an industrial investment bank. In June 1975, the Ratsiraka government nationalized all private financial institutions. In December 1976, Bankin'ny Tantsaha Mpamokatra (BTM) was established as the national rural development bank, Bankin'ny Industria (BNI) as the national industrial development bank, and Banky Fampandrosoana ny Varotra (BFV) as the national bank for commerce. There was also a savings bank and a postal checking account system.

Economic reforms in 1988 allowed private foreign investment in the banking sector for the first time since the banks were nationalized. In 1989, the Banque Nationale de Paris was the first French bank to open a private bank, the BMOI, since 1975. Financial sector liberalization has been a key condition of adjustment support.

In 2001, there were six commercial banks in Madagascar, including Banque Malgache de l'Océan Indien (BMOI) and BNI-Credit Lyonnais (BNI-CL), both controlled by European banking institutions; Union Commercial Bank (UCB) and State Bank of Mauritius (SBM), both controlled by Mauritian companies; BTM, controlled by the Bank of Africa; and the Bank of New York (BFV/SG). Total assets of the biggest bank, BNI-CL, were approximately \$200 million in 1999. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$794.4 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.0 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 11%. There are no securities exchanges in Madagascar.

### 34 INSURANCE

In June 1975, as part of the government's Malagasization program, all insurance companies were nationalized. Most of these had previously been French. Foreign companies now operate only as coinsurers. Some of the insurance companies doing business in Madagascar included, in 1998: Avotra Mutuelle Générale d'Assurances Malagasy, Caledonian Insurance Co., Com-

### 35 PUBLIC FINANCE

In 2000, Madagascar started the preparation of a Poverty Reduction Strategy Paper (PRSP) under the Heavily Indebted Poor Countries (HIPC) initiative. By the end of the year, the IMF and the World Bank agreed that Madagascar had filled the requirements of the HIPC and together they reached a decision point for debt relief. As a result, various organizations, including the IMF, the Paris Club, and the African Development Bank awarded Madagascar grants or debt cancellations worth a total of \$355 million dollars in 2001.

The US Central Intelligence Agency (CIA) estimated that in 2005 Madagascar's central government took in revenues of approximately \$703.6 million and had expenditures of \$853 million. Revenues minus expenditures totaled approximately -\$149.4 million. Total external debt was \$4.6 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were FMG2,895 billion and expenditures were FMG4,283.5 billion. The value of expenditures in US dollars was less than us\$1 million, based on an official exchange rate for 2002 of us\$1 = FMG 6,832.0 as reported by the IMF. Government outlays by function were as follows: general public services, 41.5%; public order and safety, 8.6%; economic affairs, 14.9%; environmental protection, 3.9%; health, 8.0%; recreation, culture, and religion, 0.5%; education, 20.7%; and social protection, 1.9%.

### 36 TAXATION

Indirect taxes produce much more revenue than direct taxes. The most important indirect taxes are import duties (ranging from 0–25%), a value-added tax (20%), customs fees (0–25%), and consumption taxes (from 0–10%). Import licenses are not necessary, and exports have been liberalized. Direct taxation consists of a

graduated personal income tax with a maximum rate of 35%, a corporate profits tax at a flat rate of 35%, and a tax on income from transferable capital.

### 37 CUSTOMS AND DUTIES

Between 1960 and 1972, most Malagasy production went to France, where it was sold at subsidized prices. In return, preferential treatment was given to French imports. This reciprocal arrangement guaranteed the Malagasy a reliable return for their exports and enabled the French to pay low import duties and virtually monopolize the Malagasy market. Similar trade agreements were arranged with some European Community countries.

Beginning in 1972, however, the government restricted imports as much as possible and began the progressive cancellation of preferential arrangements to ensure greater diversity in supply sources. Import constraints were tightened during the early 1980s because of a severe shortage of foreign exchange but were liberalized in 1986. In 1988, Madagascar began a three-stage comprehensive tariff reform to simplify and reduce rates. Imported goods were divided into five categories and taxed at rates of 10–50%.

Customs duties continue to be an important source of revenue for Madagascar, as they are for many developing countries. The current tariff system, under a 2000 financial law, consists of four kinds of duties: an import tax (5% for crude materials, spare parts and inputs; 5–15% for capital goods; 25–30% for consumer goods; and up to 100% for some luxury items); custom fees of 0–25%; a consumption tax of 1–10%; and a value-added tax (VAT) of 20%.

### 38 FOREIGN INVESTMENT

Prior to independence, nearly all private investment was French. The investment code of 1973 required that the Malagasy government own at least 51% of most new foreign projects, especially those involving strategic sectors of the economy. Import duties on equipment, excise on products, and taxes on profits were reduced or waived. Priority was given to enterprises in the allocation of foreign exchange and in the sale of goods and services to the state and its enterprises. In 1974, the government embarked on a socialist course, nationalizing large foreign enterprises without compensation and imposing strict controls on imports, prices and foreign exchange. There was little private foreign investment under these restrictive policies. The economy contracted and productivity declined. In 1994, under the pressure and guidance of the IMF, the World Bank, and donor states, a new liberalized policy framework was instituted. In 1997, the government announced that 45 state enterprises were set for privatization by the end of 1998, but only two companies had been privatized by mid-1999. Nonetheless, public foreign investment is encouraged.

A new code that became operational in 1986 allowed some exporters tax holidays of up to eight years, and there were special incentives for small enterprises. Foreign investors had the right to transfer dividends freely. The investment code of 1990 provided further incentives to foreign private investors and was opposed by local businesses for that reason. Rules covering foreign exchange and the number of foreign employees were relaxed. Small- and medium-size companies were provided tax exemptions through the first ten years of operation.

A number of export processing zones were set up in Madagascar. These have attracted investors from Europe (50%, mainly French,

and Germany and Italy), Mauritania (30%), and Asia (10%, mostly Hong Kong and Singapore). Between 1990 and 1992, 69 new foreign-financed businesses were established in Madagascar. Investment during 1999 focused on the telecommunications, petroleum, and mining sectors. The value of foreign direct investment in 1998 was around \$16 million.

In 2005, the discovery of two kimberlites by a Canadian diamond exploration company may set the stage for major future investments in mining, and they might lead to the emergence of Madagascar as a major diamond producer.

### 39 ECONOMIC DEVELOPMENT

The 1982–1984 development plan, more modest than the previous one owing to limited resources, called for a shift from social investments (especially education and health) to agriculture, industry, and infrastructure. The following 1984–87 plan called for spending centered mainly on transport improvements and agricultural development. The 1986–90 plan, which superseded the 1984–87 plan, had 30% of the budget coming from private sources and 40% from foreign sources. The plan called for investments of 47% in agriculture in the ongoing effort to achieve food self-sufficiency and crop diversification.

Antigovernment strikes, corruption, and a lack of commitment have limited progress on the reforms since the early 1990s. In March 1997, a World Bank structural adjustment credit of \$70 million was approved; in July 1999, a \$100 million credit, and \$40 million from the International Monetary Fund (IMF). The GDP growth rate increased steadily since these credits were allocated to Madagascar. However, external debt remained at \$4 billion throughout the decade. One good sign during this period was a decrease in inflation, from 45% in 1993 to 6.2% in 1998.

In 2000, Madagascar was approved for \$1.5 billion in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2001, it negotiated a \$111.3 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF. The PRGF was due to expire in November 2004. Also in 2001, the Paris Club approved a debt cancellation of \$161 million, and the African Development Bank (AfDB) approved a debt cancellation of \$71.46 million and granted an additional credit of \$20 million to fight HIV/AIDS and poverty. Foreign direct investment in Madagascar's export processing zone strengthened the country's balance of payments position from 1997–2001, real GDP growth rate averaged 4.75%, and inflation was limited. The government embarked on an agenda of regulatory reform and public enterprise in 2002. Poverty, however, remained a constraint on growth and development.

Economic growth in 2005 was expected to reach around 5.1%, lower than initial estimates predicted. This trend was the result of high energy costs, frequent power cuts, and reduced consumer spending. By 2006, the economy was predicted to make slow but steady progress. The expansion of the economy will likely be fueled by a good performance in a series of key sectors: agriculture, tourism, and mining.

### 40 SOCIAL DEVELOPMENT

Old age, disability and survivor's pensions are funded by 1% contributions by employees and 3.5% by employers. There is a National Social Security Fund that provides family allowances and

workers' compensation for wage earners. Employed women receive 14 weeks of maternity leave at 50% of pay. An employment-related system for family allowances is available to residents of Madagascar or France.

Women enjoy a highly visible and influential position in society, occupying some important posts in business and in the public sector. Domestic abuse is not widespread and women have recourse when reporting abuse to authorities. A 2003 amendment to the penal code specifically prohibits domestic violence. Child labor persists.

Human rights are generally respected. Excessive pretrial detention is a problem in Madagascar, sometimes extending for periods that surpass the maximum sentence for the alleged offense.

#### 41 HEALTH

All medical services in Madagascar are free. Each province has a central hospital and local clinics, dispensaries, and maternity-care centers are supplemented by mobile health units. The main hospitals are the Hospital Befelatanana (1,300 beds) and Fort Dauphin Hospital (80). Total health care expenditure was estimated at 2.1% of GDP. As of 2004, there were an estimated nine physicians, 19 nurses, and nine midwives per 100,000 people.

Malaria remains one of the major health problems. The strategies of the fight against malaria consist of early care of malaria cases, drug interaction for pregnant women, and eradication of adult insects in the central highlands where malaria is common. The major endemic diseases are malaria, leprosy, and schistosomiasis. Tuberculosis is also prevalent. Approximately 47% of the population had access to safe drinking water and 42% had adequate sanitation.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 42.4 and 12.2 per 1,000 people. The fertility rate in 2000 was 5.4. Only 19% of married women (ages 15 to 49) used contraception. The infant mortality rate in 2005 was 76.83 per 1,000 live births. The maternal mortality rate was 490 per 100,000 live births. Immunization rates for children up to one year old were: tuberculosis, 87%; diphtheria, pertussis, and tetanus, 73%; polio, 73%; and measles, 68%. Approximately 48% of children under five years of age were considered malnourished. Nearly 22.8% of schoolchildren suffered from goiter. The average life expectancy was 56.95 years in 2005.

The HIV/AIDS prevalence was 1.70 per 100 adults in 2003. As of 2004, there were approximately 140,000 people living with HIV/AIDS in the country. There were an estimated 7,500 deaths from AIDS in 2003.

#### 42 HOUSING

Malagasy houses, although constructed of varying materials in different parts of the island (brick and wood in the plateau, thatch and leaves in the west, and often on stilts in the east), are always rectangular, sited north-south, with the doorway opening to the west. In the central plateau, they are often two stories high and have outside terraces.

The rapid growth of towns after World War II created grave problems of housing and sanitation, especially in Antananarivo, whose situation on a rocky promontory aggravates the difficulties of overcrowding. In the late 1980s, the latest period for which information is available, the housing stock totaled 2,350,000 with

4.5 people per dwelling. According to a 1993 survey, about 59% of all households lived in a one-room dwelling. About 83% of all dwellings were owner occupied. Only about 4% of all households had modern toilet facilities.

#### 43 EDUCATION

Education is free and compulsory for five years. This is followed by four years of lower secondary education. Students may then attend a three-year program in either general upper secondary studies or technical school studies. The academic year runs from October to July.

In 2001, about 3.4% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 79% of age-eligible students. In 1999, secondary school enrollment was about 11% of age-eligible students. It is estimated that about 46.8% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 50:1 in 2000; the ratio for secondary school was about 17:1.

The University of Madagascar in Antananarivo, established in 1961, also has campuses at Antsiranana, Fianarantsoa, Mahajanga, Toamasina, and Toliara. Also in Antananarivo are the Rural College of Ambatobe and the National Institute of Telecommunications and Posts. In 2003, about 2% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 70.6%, with 76.4% for men and 65.2% for women.

As of 2003, public expenditure on education was estimated at 2.9% of GDP, or 10.2% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The principal libraries are the National Library in Antananarivo, with 236,000 volumes, and the university library, with 195,000 volumes. Other important libraries include the National Archives (30,000 volumes), the Antananarivo municipal library (23,000), and the Albert Camus Cultural Center Library (35,000).

The palace of the queen in Antananarivo contains important art, archaeological, and historical exhibits, especially concerning the Merina kingdom. Other museums in the city are the Gallery of Fine Arts; the University of Madagascar's Museum of Art and Archaeology; the Folklore, Archaeology, Paleontology, and Animal Museum; the Historical Museum, and a natural history museum. There is also an oceanographic research museum in Nosy Be, a regional museum in Toamasina, and university museums in Fianarantsoa and Tuléar.

#### 45 MEDIA

In 2003, there were an estimated 4 mainline telephones for every 1,000 people; about 1,800 people were on a waiting list for telephone service installation. The same year, there were approximately 17 mobile phones in use for every 1,000 people.

The government-owned Radio-Télévision Malagasy broadcasts in French, Malagasy, and English, and telecasts in French and Malagasy; Radio Madgasi Kara, also state-owned, broadcasts in French and Malagasy. There are a few privately operated stations for both radio and television. As of 2001, there were 2 AM and 9 FM radio stations and 1 television station. In 2003, there were an estimated 216 radios and 25 television sets for every 1,000 people.

The same year, there were 4.9 personal computers for every 1,000 people and 4 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

In 2004, there were eight major daily newspapers. The largest (with 2002 circulation figures) were: *Atrika* (circulation 13,000), *Imongo Vaovao* (10,000), *Madagascar Tribune* (12,000), *Maresaka* (5,000), and *Midi-Madagasikara* (25,000). All are published in Antananarivo. Despite prior censorship of all print media, the press is independent and quite outspoken.

#### 46 ORGANIZATIONS

There are hundreds of cooperatives, and the Ratsiraka government has been encouraging *fokonolona*, or village organizations, to stimulate planned agricultural undertakings. Chambers of commerce, originally established in 1902, are located in a dozen towns. The national branch is the Chamber of Commerce, Industry, Art and Agriculture of Antananarivo, which serves as a multi-purpose group for tourism and trade. There are also seven major employers' organizations.

Tanora Tonga Saina is the government-sponsored youth movement. There are also scouting programs and a number of religiously and/or politically affiliated groups for youth. There are branches of Junior Chamber and YMCA/YWCA. A variety of sports associations are also active.

There are national chapters of the Red Cross Society, UNICEF, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism has been encouraged by the government as a source of foreign exchange since the mid-1980s, with an exception for the years 1991 and 2002, when the industry suffered due to civil unrest. There has been renewed growth in tourism, however, and in 2003, Madagascar had 139,000 foreign visitors, a 125% increase from 2002. Hotel rooms numbered 9,325 with 16,700 beds and an occupancy rate of 40%. The average length of stay was four nights. Tourist expenditure receipts totaled \$118 million.

Tourists are attracted to the city of Antananarivo, home to the largest open air market in the world. The hot springs town and resort of Antsirabe is also popular to visitors who enjoy boating and swimming.

Valid passports and visas are required. Certificates of vaccination against cholera and yellow fever are necessary of persons arriving from an infected area. Precautions against malaria are strongly advised.

In 2004, the US Department of State estimated the daily cost of staying in Antananarivo at \$217. Daily costs of visits to towns and villages were estimated at \$95.

#### 48 FAMOUS MALAGASY

The poet Jean-Joseph Rabéarivelo (1901–37) published several volumes of poetry (*Volumes, Presques Songes, Sylves*). Jacques Rabémananjara (b.1913), a founder of the MDRM, is well known for his verse play, *Les Dieux Malgaches*. Philibert Tsiranana (1910–78), a Tsimihety teacher, founded the PSD, and became Madagascar's first president in May 1959. Gen. Gabriel Ramanantsoa (1906–79) was head of state from May 1972 to February 1975. Adm. Didier Ratsiraka (b.1936) became head of state in June 1975 and president of the republic in January 1976. He served in that position until 1993, when he lost an election to Albert Zafy (b.1927), who was president until 1996. Ratsiraka was elected president once again in 1997, and served until 2002. That year, he and Marc Ravalomanana (b.1949) both claimed the presidency during an election controversy; Ratsiraka fled the country and Ravalomanana became president.

#### 49 DEPENDENCIES

Two offshore islands, Nosy Boraha and Nosy Be, are considered by Madagascar as integral parts of the country.

# MALAWI

Republic of Malawi

**CAPITAL:** Lilongwe

**FLAG:** The national flag is a horizontal tricolor of black, red, and green, with a red rising sun in the center of the black stripe.

**ANTHEM:** Begins "O God, Bless Our Land of Malawi."

**MONETARY UNIT:** The kwacha (K) of 100 tambala (t) is the national currency; it replaced the Malawi pound (M£) on 28 August 1970 and was linked with the pound sterling until November 1973. There are coins of 1, 2, 5, 10, and 20 tambala, and notes of 50 tambala and 1, 5, 10, 20, and 50 kwacha. K1 = \$0.00832 (or \$1 = K120.21) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Martyrs' Day, 3 March; Kamuzu Day, 14 May; Republic or National Day, 6 July; Mothers' Day, 17 October; National Tree Planting Day, 21 December; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday and Easter Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country in southeastern Africa, Malawi (formerly Nyasaland) has an area of 118,480 sq km (45,745 sq mi), of which 24,400 sq km (9,420 sq mi) consists of water, chiefly Lake Malawi (also known as Lake Niassa). Comparatively, the area occupied by Malawi is slightly smaller than the state of Pennsylvania. Malawi extends 853 km (530 mi) N–S and 257 km (160 mi) E–W. It is bounded on the N and E by Tanzania, on the E, S, and SW by Mozambique, and on the W by Zambia, with a total boundary length of 2,881 km (1,790 mi).

Malawi's capital city, Lilongwe, is located in the central part of the country.

## <sup>2</sup> TOPOGRAPHY

Topographically, Malawi lies within the Great Rift Valley system. Lake Malawi, a body of water some 580 km (360 mi) long and about 460 m (1,500 ft) above sea level, is the country's most prominent physical feature. About 75% of the land surface is plateau between 750 m and 1,350 m (2,460 and 4,430 ft) above sea level. Highland elevations rise to over 2,440 m (8,000 ft) in the Nyika Plateau in the north and at Mt. Sapitwa (3,000 m/9,843 ft). The lowest point is on the southern border, where the Shire River approaches its confluence with the Zambezi at 37 m (121 ft) above sea level.

## <sup>3</sup> CLIMATE

Variations in altitude in Malawi lead to wide differences in climate. The vast water surface of Lake Malawi has a cooling effect, but because of the low elevation, the margins of the lake have long hot seasons and high humidity, with a mean annual temperature of 24°C (75°F). Precipitation is heaviest along the northern coast of Lake Malawi, where the average is more than 163 cm (64 in) per

year; about 70% of the country averages about 75–100 cm (30–40 in) annually.

In general, the seasons may be divided into the cool (May to mid-August); the hot (mid-August to November); the rainy (November to April), with rains continuing longer in the northern and eastern mountains; and the post-rainy (April to May), with temperatures falling in May. Lilongwe, in central Malawi, at an elevation of 1,041 m (3,415 ft), has a moderately warm climate with adequate rainfall. The average daily minimum and maximum temperatures in November, the hottest month, are 17°C (63°F) and 29°C (84°F), respectively; those in July, the coolest month, are 7°C (45°F) and 23°C (73°F).

## <sup>4</sup> FLORA AND FAUNA

About 27% of the land area is forested. Grassland, thicket, and scrub are found throughout the country. There are indigenous softwoods in the better-watered areas, with bamboo and cedars on Mt. Sapitwa; evergreen conifers also grow in the highlands. Mopane, baobab, acacia, and mahogany trees are found at lower elevations. There are over 3,700 species of plants found throughout the country.

There are many varieties of animal life. The elephant, giraffe, and buffalo are found in certain areas; hippopotamuses dwell on the shores of Lake Malawi. The kudu, duiker, bushbuck, tsessebe, wildebeest, and hartebeest are among the antelopes to be found. Other mammals in Malawi are the baboon, monkey, hyena, wolf, zebra, lion, nocturnal cat, badger, warthog, and porcupine. In 2000, there were about 195 species of mammals.

There are at least 219 species of birds. Reptiles are plentiful and include freshwater turtle, crocodile, tortoise, marsh terrapin, chameleon, lizard, and many varieties of snakes; the Egyptian cobra has been found in the Shire Valley. Fish abound in the lakes and

rivers; species include bream, bass, catfish, mudfish, perch, carp, and trout. The mbuna is a tropical fish protected within the waters of the Lake Malawi National Park. Malawi is rich in insect life and has species in common with tropical West Africa and Tanzania.

## 5 ENVIRONMENT

Almost all fertile land is already under cultivation, and continued population pressure raises the threat of soil erosion and exhaustion, as well as infringement on forest resources for agricultural purposes. The demand for firewood has significantly depleted the timber stock. Malawi has about 16 cu km of renewable water resources. About of 96% city dwellers and 62% of the rural population have access to pure water.

The preservation of Malawi's wildlife is a significant environmental issue. As of 2003, 11.2% of the country's natural areas were protected, including Lake Malawi National Park, which is a natural UNESCO World Heritage Site, and Lake Chilwa, which is a Ramsar wetland site. Some of the nation's fish population is threatened with extinction due to pollution from sewage, industrial waste, and agricultural chemicals and siltation of spawning grounds. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 7 types of mammals, 13 species of birds, 5 species of amphibians, 9 types of mollusks, 2 species of other invertebrates, and 14 species of plants. Threatened species included the African elephant, cheetah, and African wild dog.

## 6 POPULATION

The population of Malawi in 2005 was estimated by the United Nations (UN) at 12,341,000, which placed it at number 70 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.2%, a rate the government viewed as too high. The projected population for the year 2025 was 23,750,000.

The overall population density was 104 per sq km (270 per sq mi), which is one of the highest in Africa. The Southern Region has about 50% of the population, the Central Region about 40%, and the Northern Region about 10%.

The UN estimated that 14% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.42%. The capital city, Lilongwe, had a population of 587,000 in that year. Other cities (and their estimated populations) include Blantyre (547,500), Mzuzu (99,700), and Zomba (73,400).

The prevalence of HIV/AIDS has had a significant impact on the population of Malawi. The UN estimated that 16.1% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Accelerating migration from rural to urban areas contributed to an annual urban growth rate of about 6% in the early 1990s. Between October 1992 and mid-1996, 1.3 million Mozambican refugees repatriated from Malawi; the return of refugees to Mozambique was

complete. In 2004 persons of concern to the United Nations High Commissioner for Refugees (UNHCR) in Malawi were 3,682 refugees and 3,335 asylum seekers from the Democratic Republic of the Congo and Rwanda. In 2004 over 1,700 Malawians sought asylum in South Africa and the United Kingdom.

Remittances in 2003 were \$856,000. In 2005 the net migration rate was estimated at zero per 1,000 population, a significant change from -17.1 per 1,000 in 1990. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The people of Malawi belong mainly to various Central Bantu groups. The Chewas are primarily located in the central regions of the country. The Nyanja live primarily in the south and the Lomwe (Alomwe) live south of Lake Chilwa. Other indigenous Malawians include the Tumbuko, Tonga, and Ngonde. The Ngoni (an offshoot of the Zulus from South Africa) and Yao arrived in the 19th century. There are a few thousand Europeans, mainly of British origin, including descendants of Scottish missionaries. There are also small numbers of Portuguese, Asians (mainly Indians), and persons of mixed ancestry.

## 9 LANGUAGES

Numerous Bantu languages and dialects are spoken. Chichewa, the language of the Chewa and Nyanja, is spoken by more than half the population, but the Lomwe, Yao, and Tumbuka have their own widely spoken languages, respectively known as Chilomwe, Chiyao, and Chitumbuka. English and Chichewa are the official languages.

## 10 RELIGIONS

As of a 2004 report, it is believed that more than 70% of the population are Christian, with the largest groups being affiliated with the Roman Catholic and Presbyterian (Church of Central Africa Presbyterian—CCAP) churches. There are smaller numbers of Anglicans, Baptists, Evangelicals, and Seventh-Day Adventists. Muslims account for approximately 20% of the population, with most belonging to the Sunni sect. Tribal religionists account for a small percentage of the population. There are also small numbers of Hindus and Baha'is. Certain Christian and Muslim holidays are celebrated as national holidays.

## 11 TRANSPORTATION

In 2004, Malawi had 797 km (495 mi) of railways, all of it narrow gauge. The main line of the rail system consisted of a single tracked, 1.067-m/3-ft 6 in (narrow) gauge rail line that ran from Salima to Nsanje, a distance of 439 km (273 mi), and operated by Malawi Railways. The line was extended from Salima to Lilongwe in 1977 and was later extended to Mchinji, on the border with Zambia. At Chipoka, 32 km (20 mi) south of Salima, the railway connects with the Lake Malawi steamer service, also operated by Malawi Railways. The railway line extends, in the south, from Nsanje to the port of Beira in Mozambique. The Central African Railway Co., a subsidiary of Malawi Railways, operates the

26 km (16 mi) span from Nsanje to the Mozambique border. Malawi Railways was privatized in 1999.

In 2002, Malawi had an estimated 14,594 km (9,069 mi) of roads, of which 2,773 km (1,723 mi) were paved. In 2003 there were 11,400 passenger cars, and 14,220 commercial vehicles.

Until 1982, about 95% of Malawi's foreign trade passed through Mozambican ports, mainly by rail connections, but by 1987, because of insurgent activity in Mozambique, over 95% of Malawi's exports were moving through South Africa's port of Durban. The use of this longer route, with only road transport through Malawi, was costing \$50 million a year in extra transport expenses. Since 1990, when Mozambican rebels closed down the route, goods have been shipped through Zambia. As of 1999, major Malawi ports and harbors include Chipoka, Monkey Bay, Nkhata Bay, and Nkhotakota. As of 2003, Malawi had 700 km (435 mi) of navigable waterways on Lake Malawi and on the Shire River.

Airports in 2004 numbered 42, only 6 of which had paved runways as of 2005. Malawi's principal airports include Kamuzu International Airport, at Lilongwe, and Chileka, at Blantyre. Air Malawi, the national airline established in 1967, provides international and domestic air service. National carriers to some other countries in the region operate complementary services to Malawi. There are no direct services to Asia and the Pacific or the Americas. In 2003, about 109,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Malawi has been inhabited for at least 12,000 years; its earliest peoples were nomadic hunter-gatherers. By the 13th century, Bantu-speaking migrants had entered the region. The Chewa peoples had become dominant by the early 16th century; their clans were consolidated under the leadership of a hereditary ruler called the karonga. Before the coming of the Europeans in the second half of the 19th century, Malawi was an important area of operations for Arab slave traders. The incursions of slaving took a heavy toll on the inhabitants, although the Chewa state never came under direct Arab rule. One of the major stated objectives of British intervention in the territory was to stamp out the slave trade.

The first European to explore the area extensively was David Livingstone, whose reports in the 1850s and 1860s were instrumental in the establishment of a series of mission stations in Nyasaland (as Malawi was then known) during the 1870s. In 1878, the African Lakes Company was formed by Scottish businessmen to supply the missions and provide a "legitimate" alternative to the slave trade. As the company extended its operations, it came into conflict with Yao tribesmen and Arab outposts toward the northern end of Lake Malawi. Fighting ensued in 1887–89, and pacification was completed only some years after the British government had annexed the whole of the territory in 1891. To Sir Harry Johnston, the first commissioner of the protectorate, fell the task of wiping out the remaining autonomous slave-trading groups. These anti-slavery operations were assisted by gunboats of the Royal Navy.

Nyasaland attracted a small group of European planters in the first decades of the 20th century. This group settled mainly in the Shire Highlands, and its numbers were never large. The territory was viewed by the imperial government as a tropical dependency, rather than as an area fit for widespread white settlement; many of the frictions that marred race relations in the Rhodesias were

LOCATION: 9°27' to 17°10' S; 32°20' to 36° E. BOUNDARY LENGTHS: Tanzania, 451 kilometers (280 miles); Mozambique, 1,497 kilometers (930 miles); Zambia, 820 kilometers (510 miles).

therefore minimized in Nyasaland. Missionaries and colonial civil servants consistently outnumbered planters in the European community, and lands occupied by European estates accounted for only a small part of the total land area.

Between World Wars I and II, the policy of the imperial government was built around the concept of "indirect rule"—that is,

increasing the political responsibility of the African peoples by building on the foundations of their indigenous political institutions. Although this policy was not implemented at a rapid pace, it was generally assumed that Nyasaland would ultimately become an independent African-led state. In 1953, however, Nyasaland was joined with the two Rhodesias—Northern Rhodesia (now Zambia) and Southern Rhodesia (now Zimbabwe)—in the Central African Federation. The Africans' reaction to this political arrangement was hostile. Disturbances sparked by opposition to the federation in 1959 led to the declaration of a state of emergency, and some Africans, including Dr. Hastings Kamuzu Banda, were detained.

The African political leaders imprisoned in Southern Rhodesia were released in April 1960, and they gathered African support for the Malawi Congress Party (MCP). The MCP increased the campaign against federation rule and in the August 1961 elections polled more than 90% of the vote, winning all of the 20 lower-roll seats and two of eight upper-roll places. An era of "responsible" government then began, with the MCP obtaining five, and eventually seven, of the 10 available Executive Council positions. At a constitutional conference held in London in November 1962, it was agreed that Nyasaland should become fully self-governing early in 1963, and that Banda, who headed the MCP, should become prime minister. On 19 December 1962, the British government announced acceptance "in principle" of the right of Nyasaland to secede from the federation.

In February 1963, as scheduled, Nyasaland became a self-governing republic. In July, at a conference held at Victoria Falls, it was decided that the Central African Federation would break up by the end of the year. In October, Banda visited the United Kingdom and successfully negotiated full independence, effective in mid-1964 after a general election based on universal adult suffrage. Accordingly, on 6 July 1964, Nyasaland became a fully independent Commonwealth country and adopted the name Malawi. On 6 July 1966, Malawi became a republic, and Banda assumed the presidency. After the constitution was amended in November 1970, Banda became president for life.

During the first decade of Banda's presidency, Malawi's relations with its black-ruled neighbors were sometimes stormy. At the opening session of the MCP convention in September 1968, President Banda made a claim to extensive territories outside the present boundaries of Malawi. The claim covered the whole of Lake Malawi and parts of Tanzania, Mozambique, and Zambia.

The Tanzanian government asserted that President Banda could make territorial claims only because he had the support of South Africa, Rhodesia (which at that time had a white minority government), and Portugal (which then still ruled Mozambique). In fact, in 1967, Malawi had become the first black African country to establish diplomatic relations with white-ruled South Africa; in August 1971, moreover, Banda became the first black African head of state to be officially received in South Africa, which supplied arms and development funds to Malawi.

The Banda government also faced some internal opposition. In October 1967, the Malawi government announced that a group of rebels, numbering about 25, wearing police uniforms and posing as insurgents from Mozambique, had entered Malawi with the intention of killing President Banda and his ministers. Eventually, eight of the rebels were convicted of treason and sentenced to

death; five others, including Ledson Chidenge, a member of the National Assembly, were sentenced to death for the murder of a former official of the MCP.

The aging Banda continued to rule Malawi with an iron hand through the 1970s and into the late 1980s. Several thousand people were imprisoned for political offenses at one time or another during his rule. One of these was former Justice Minister Orton Chirwa, leader of an opposition group in exile, who in May 1983 was sentenced to death after having reportedly been abducted from a town across the Zambian border in late 1981. Chirwa's sentence was commuted to life imprisonment in 1984. He died in prison in October 1992. The leader of another dissident group, Attati Mpakati, was assassinated in Harare, Zimbabwe, in March 1983. Three government ministers and a member of parliament—two of them key leaders of the MCP, with one of them, party secretary-general Dick Matenje, regarded as a possible successor to Banda—died in the middle of May 1983 in a mysterious car accident. Another staunch critic of the Banda regime, the journalist Mkwapatira Mhango, was killed together with nine members of his family in a bomb attack in Lusaka, Zambia, in 1989.

A serious problem in the 1980s concerned the activities of the Mozambique National Resistance (MNR), which, in its efforts (backed by South Africa) to bring down the government in Maputo, seriously disrupted Malawi's railway links with Mozambique ports. As a result, an increasing share of Malawi's trade had to be routed by road through Zambia and South Africa at great expense. In 1987, Malawi allowed Mozambican troops to patrol areas along their common border and sent several hundred troops into northeast Mozambique to help guard the railway leading to the port of Nacala. Other critical problems for Malawi, particularly during the late 1980s and the early 1990s were the nation's growing debt burden, severe drought, and the nearly one million refugees from Mozambique, most of whom have now returned to Mozambique.

In 1992, Banda's grip began to weaken. In March, Malawi's eight Roman Catholic bishops issued a pastoral letter protesting detention without trial and harsh treatment of political prisoners. University students demonstrated. Wildcat strikes and rioting in Blantyre and Lilongwe followed the arrest of opposition trade unionist Chakufwa Chihana in May. Nearly 40 were killed by police gunfire in the first significant antigovernment demonstrations since 1964. Chihana was released on bail in September and he formed a new group, the Alliance for Democracy (AFORD), that campaigned for multiparty elections. In December, Chihana was sentenced to two years for sedition.

Pressure mounted (including threats by aid donors abroad to suspend assistance), and in October Banda agreed to hold a referendum early in 1993 on whether Malawi should remain a one-party state. In the referendum, on 14 June 1993, 63% of those voting favored adopting multiparty democracy. Two opposition groups, AFORD and the United Democratic Front (UDF), both led by former MCP officials, held a massive rally in January 1993. Meanwhile, three opposition groups in exile merged to form the United Front for Multiparty Democracy, which then merged with the UDF inside Malawi. Chihana was released two days before the referendum.

In July and November 1993, parliament passed bills eliminating from the constitution single-party clauses (such as Hastings Kamuzu Banda's life presidency), appending a bill of rights, estab-

lishing a multiparty electoral law, and repealing detention without trial provisions of the Public Security Act. Dialogue among various major parties resulted in the establishment of a National Consultative Council and a National Executive Committee, with representatives from all registered parties, to oversee changes in the constitution, laws, and election rules and procedures. In December 1993, security forces disarmed Banda's paramilitary MCP Young Pioneers.

On 16 May 1994 the National Assembly adopted a provisional constitution, and the country held its first multiparty elections the following day. Bakili Muluzi of the UDF, a former cabinet minister, defeated Banda (MCP), Chihana (AFORD), and Kamlepo Kalua (Malawi Democratic Party). Of the 177 parliamentary seats contested, the UDF took 84, the MCP took 55, and AFORD 36. Muluzi immediately ordered the release of political prisoners and closed the most notorious jails. The new constitution took effect on 18 May 1995.

Malawi's second multiparty elections were held on 15 June 1999. The balloting showed a distinct regional cast to party constituency. Leading the UDF, Muluzi emerged the winner with 51.4% of votes in the presidential elections, followed by the MCP candidate, Gwanda Chakuamba, with 44.3%. Muluzi's UDF won 94 of 193 parliamentary seats, four short of a simple majority. Chakuamba's MCP took 63 seats, and its electoral ally, the AFORD, won 31; four seats went to independents. The results confirmed the regional voting trend set in 1994, with the UDF winning the densely populated south, the MCP strong in the central region and all of AFORD's seats coming from the rugged north.

Although international observers declared the contest free and fair, opponents alleged that the UDF had rigged the elections, and refused to recognize the outcome. Attempts to seek legal redress were rebuffed, leading to riots and the razing of 10 mosques in the north. At least two people were killed. Muluzi was inaugurated in Blantyre on 21 June 1999.

In July 2002, the National Assembly rejected proposals to amend the constitution to allow Muluzi to run for a third term in 2004. The proposals, resubmitted in February 2003, were quickly withdrawn under protests from opposition groups, civil society, and the diplomatic community. In all, three people were killed in the 2002 protests. Muluzi laid to rest speculation over his political intentions when he announced in April 2003 that the UDF National Executive Committee had endorsed a 68-year-old economist, Bingu wa Mutharika, as its presidential candidate for 2004. Mutharika, who hailed from Thyolo District 40 km (25 mi) southeast of Blantyre, was deputy governor of the Reserve Bank of Malawi before being appointed minister in the newly created Department of Economics and Planning.

Severe food shortages in 2002 affected some 3.2 million people. The shortages exacerbated living conditions for more than 65% of the population considered "poor," and for some 15% of the adult population infected with HIV/AIDS. Widows of AIDS victims were increasingly subjected to property grabbing by relatives.

In June 2003, overriding a court order, the government deported five men accused of al-Qaeda connections. Muslim protests in the central district of Kasungu were disbursed by police using rubber bullets and tear gas. In the town of Mangochi in the south, Muslim demonstrators looted seven churches and the offices of Save the Children USA. About 50 Muslims stormed the police sta-

tion where the detainees were being held, but were repelled by the police. Two of the five men headed local charities, while a third was a teacher at a Muslim school. Muluzi, himself a Muslim, declared that religious intolerance would not be allowed.

The third presidential and legislative elections were held on 20 May 2004. These elections had been scheduled to be held on 18 May, but were postponed for two days because the opposition complained of irregularities in the voters' roll. The opposition argued that the number of voters on the roll was several times larger than the eligible population of voting age in Malawi. The results were announced on 25 May by the Malawi Electoral Commission. Bingu wa Mutharika, the UDF candidate who had been hand-picked by outgoing President Muluzi, was declared elected. Mutharika received 35% of the votes, John Tembo of the MCP received 27%, Gwanda Chakuamba—the candidate of the Mgwirizano Coalition—received 26%, Brown Mpinganjira of the National Democratic Alliance received 8%, and Justin Malewezi of the Peoples' Progressive Movement received 3%. Of the 193 National Assembly seats available, the MCP won 60 seats, the UDF won 49, the Mgwirizano Coalition won 28, and independents won 38. This is in stark contrast to the 1999 elections in which the UDF almost won a majority of the seats.

Surveys conducted by Malawi media groups before the election had put Gwanda Chakuamba, the candidate of the Mgwirizano Coalition—a seven-party opposition coalition—in the lead. Immediately after the announcement of the results riots broke out in the major cities of Malawi, particularly Blantyre, the stronghold of Chakuamba, and a number of people lost their lives, shot by the police. Both Chakuamba and John Tembo of the MCP immediately challenged the results in court and demanded a recount. Following the elections in 2004 the political climate in Malawi remained unstable. As of early 2006, the National Assembly was in the process of impeaching Bingu wa Mutharika, who, in February 2005, left the UDF to form his own party, the Democratic Progressive Party (DPP).

After Banda was forced to liberalize his regime, Mutharika was one of the founders of the United Democratic Front, the party that won Malawi's first multiparty elections in 1994. Mutharika was at that time a supporter of the UDF leader, President Bakili Muluzi, but he soon became a critic of Muluzi's economic policies and left the UDF. He formed the United Party (UP) in 1997 and unsuccessfully opposed Muluzi in the 1999 presidential elections. Mutharika dissolved the UP and rejoined the UDF after being offered the deputy governorship at the Reserve Bank of Malawi. Immediately after being elected president in 2004, Mutharika fell out of favor with his predecessor and supporter, Muluzi, because of Mutharika's zero tolerance policy toward corruption. Once out of the presidency, Muluzi refused to retire as head of UDF and remained its chair. Muluzi's staunch supporters accused Mutharika of persecuting and harassing them through his campaign to end corruption. There was talk of firing Mutharika from the UDF. On 5 February 2005, Mutharika announced his resignation from the UDF and formed his own political party, the DPP. There was also an alleged assassination plot against him by UDF stalwarts in early January 2005. Those accused were later pardoned by Mutharika, but he maintained the existence of the plot.

Mutharika continued to fight for his political survival as opposition parties forged ahead with plans to impeach him. The fight

pitted Mutharika against former president of the country and now chairman of the United Democratic Front (UDF), Muluzi, with the UDF proposing an impeachment motion after Mutharika left the party which had sponsored him in the 2004 national elections. Mutharika's formation of his own political organization, DPP, effectively relegated the UDF to an opposition rather than a ruling party. Thus, on paper, the opposition parties formed the largest bloc in parliament while Mutharika's party, the DPP, did not have any seats. Muluzi aggressively sought the cooperation of the other opposition parties (which included John Tembo's MCP and Gwanda Chakuamba's Republican Party) to oust Mutharika through impeachment proceedings. He promised that once Mutharika was removed, a national governing council composed of the leaders of the three major political parties would rule the country. Such a promise contradicts the constitution, which notes that in the event of a vacancy in the presidency, the vice president automatically takes over.

As of mid-2006, Malawi's political crisis had not been resolved, with the former president (Muluzi) facing a corruption probe from the government's Anti-Corruption Bureau (ACB), and his successor (Mutharika) facing impeachment in parliament. The ACB is carrying out what UDF sees as politically motivated investigations into allegations that Muluzi deposited Kwacha 1.4 billion (us\$11.4 million) of donor funds into his personal account for his own personal use during his tenure as president. Although Mutharika was seen as having narrowly won the possibly rigged presidential elections in May 2004 under a UDF ticket, once in office he quickly won public support for his anticorruption drive, which also received the backing of donors who had unfrozen aid to the country. In October 2005, there were a number of demonstrations both for and against Mutharika's impeachment. UDF supporters marched in the commercial capital of Blantyre, demanding the immediate impeachment and removal of Mutharika from office. On 24 October 2005, as an impeachment motion was tabled in parliament by UDF, angry DPP supporters and sympathizers marched on parliament to protest against the proposed motion. The demonstrations turned violent with marchers vandalizing cars of opposition MPs.

Observers note that important national issues such as a worsening food crisis and the plight of HIV/AIDS victims were sidelined by the political wrangle. Instead of tackling these issues the government was distracted and the parliament lost focus to assist in tackling these issues. During the last days of the Muluzi presidency, Western donors froze balance of payments support to Malawi over corruption and governance concerns. However, with Mutharika's strong anticorruption stance, aid began to flow back into the country. However, continuing political crisis could again jeopardize foreign development assistance to Malawi.

### **13 GOVERNMENT**

Malawi officially became a republic on 6 July 1966, and its first constitution was adopted that year. The current constitution took effect on 18 May 1995 reaffirming the president as the head of state and supreme executive authority. In July 2003, he led a 38-member cabinet. Legislative power is vested in a unicameral parliament comprising a National Assembly of 193 seats with mem-

bers elected by popular vote to serve five-year terms. The most recent elections were held in 2004.

### **14 POLITICAL PARTIES**

Malawi was officially a one-party state from October 1973 until July 1993. The Malawi Congress Party (MCP) was the national party and Hastings Kamuzu Banda was its president for life. All candidates for the National Assembly had to be members of the MCP.

For years the opposition groups in exile achieved little success in their efforts to unseat the Banda government. The Socialist League of Malawi (LESOMA), with headquarters in Harare, was directed by Attati Mpakati until his assassination in March 1983. A second group, the Malawi Freedom Movement (MAFREMO), based in Tanzania, was led by Orton Chirwa, who was seized by Malawi authorities in late 1981 and imprisoned for life until his death in 1992. The Congress for the Second Republic, also based in Tanzania, was led by former External Affairs Minister Kanyama Chiume. The Save Malawi Committee (SAMACO) was formed in Lusaka, Zambia, in 1983.

In September 1992, trade unionist Chakufwa Chihana formed the Alliance for Democracy (AFORD) before being convicted of sedition. AFORD and others pushed successfully for a referendum on adopting a multiparty system, and the United Democratic Front (UDF) combined with a coalition in exile (the United Front for Multiparty Democracy) late in 1992.

From the introduction of multiparty competition in May 1994 to the elections in 2004, the UDF and its leader, Bakili Muluzi, dominated the political arena. In the 1994 presidential contest, Muluzi garnered 47.3% of the vote, and his party 84 of the 177 elective seats in the National Assembly. Muluzi obtained 51.4% of the vote in the 1999 presidential poll, and the UDF won 94 of 193 Assembly seats. However, a shake-up in UDF hierarchy in 2003 revealed vulnerabilities in the party's leadership and organization. This led to Muluzi handpicking his successor, Bingu wa Mutharika, who narrowly won 36% of the vote in the controversial May 2004 elections. Furthermore, UDF won only 49 out of the 193 seats in parliament, showing that the dominance the UDF had during Muluzi's tenure had considerably waned. Bingu wa Mutharika then abandoned the UDF and moved on to form his own political party, the Democratic Progressive Party (DPP), a move which infuriated Bakili Muluzi who attempted to lure other opposition parties to join him in impeaching Mutharika.

Since the 2003 shake-up in the UDF hierarchy, dissenters from this shake-up have formed their own political parties. The splinter group parties from the UDF include the National Democratic Alliance (NDA) founded by Brown Mpinganjira, who fell out of favor with Bakili Muluzi. At the general elections of May 2004 this party won 8 out of 193 seats. Brown Mpinganjira later de-registered his party and rejoined the UDF. Other former UDF and non-UDF leaders of smaller parties formed a loose electoral alliance called the Mgwirizano Coalition. This coalition includes seven smaller parties: Malawi Democratic Party, Malawi Forum for Unity and Development, Movement for Genuine Democratic Change, National Unity Party, People's Progressive Movement, People's Transformation Party, and Republican Party. Gwanda Chakuamba, founder and leader of the Republican Party, was the presidential candidate for the Mgwirizano Coalition in the May

2004 elections. He won 26% of the vote and the Mgwirizano Coalition won 27 out of 193 seats.

A recent addition to the Malawi political landscape is the Democratic Progressive Party (DPP) which was the ruling political party in Malawi as of mid-2006. It was formed in February 2005 by Malawian President Bingu wa Mutharika after a dispute with the United Democratic Front. There were allegations that members of the former governing UDF did not adequately tackle corruption. The many defections from UDF greatly weakened the position of UDF in both the government and the national assembly. A plethora of smaller parties could wield power if they formed effective coalitions, as illustrated by the Mgwirizano Coalition.

## 15 LOCAL GOVERNMENT

In 1996, Malawi was divided into three administrative regions—Northern, Central, and Southern—which were subdivided into 24 districts. In 2005 the number of districts was increased to 28 as some large districts were sub-divided into two. District councils provide markets, postal agencies, roads, and rural water supplies and exercise control over business premises and the brewing and sale of beer. More important, however, are the councils' responsibilities for primary education. Some of the councils run public health clinics. Council expenditures are mainly financed from direct government education grants, calculated to meet the salaries of teachers in most of the district schools. Other sources of revenue include annual taxes on all males over the age of 17 years who are residents in the district and charges for services rendered.

Town councils have powers similar to those of the district councils, but with greater emphasis on the problems that arise in urban areas. Their main functions are sewerage, removal of refuse, the abatement of nuisances, construction and maintenance of roads, and, in some cases, the provision of fire-fighting services. Revenue for town councils comes mainly from direct taxes on property.

## 16 JUDICIAL SYSTEM

Since 1969, Malawi has operated under two parallel court systems. The first is based on the United Kingdom legal system with local courts and a local appeals court in each district. Formerly, these courts heard all cases of customary law and had wide statutory, criminal, and civil jurisdiction. The upper layers consist of the Supreme Court of Appeal, the High Court, and magistrates' courts. A chief justice and four puisne judges appointed by the president staff the High Court. There is a chain of appeals from the local courts up to the Supreme Court of Appeal.

A second system was established in November 1969, when the National Assembly empowered the president to authorize traditional African courts to try all types of criminal cases and to impose the death penalty; the president was also permitted to deny the right of appeal to the High Court against sentences passed by the traditional courts, a right formerly guaranteed by the constitution. Traditional court justices are all appointed by the president. Appeals from traditional courts go to the district traditional appeals courts and then to the National Traditional Appeal Court. Appeals from regional traditional courts, which are criminal courts of the first instance, go directly to the National Traditional Appeal Court.

In 1993, the attorney general suspended the operation of regional and national level traditional courts in response to a report

by the National Consultative Council on problems in the workings of the traditional court system. Since then the trend is toward moving serious criminal and political cases from traditional to modern courts. Education and training seminars have led to some improvements in the functioning of the local traditional courts.

The constitution provides for an independent judiciary, which is respected in practice. Defendants have the right to public trial, to have an attorney, to challenge evidence and witnesses, and to appeal. The constitution superseded many old repressive laws. The High Court may overturn old laws that conflict with the constitution.

## 17 ARMED FORCES

In 2005, Malawi had an army of 5,300 personnel, organized into 3 infantry battalions, 1 independent paratroop battalion, 1 Marine company and 1 support battalion. The Army's air wing numbered 200 and the maritime wing had 220 members. There was a paramilitary gendarmerie of 1,500 in the mobile police force. In 2005, the defense budget totaled \$12.8 million.

## 18 INTERNATIONAL COOPERATION

Malawi became a member of the United Nations on 1 December 1964; the nation participates in ECA and several nonregional specialized agencies, such as the FAO, World Bank, ILO, IFC, UNESCO, UNIDO, and the WHO. Malawi also belongs to the WTO, the African Development Bank, the ACP Group, the Commonwealth of Nations, COMESA, G-77, the African Union, and the Southern Africa Development Community (SADC). The country is a member of the Nonaligned Movement and the Organization for the Prohibition of Chemical Weapons. The government has offered support to UN missions and operations in Kosovo (est. 1999), Liberia (est. 2003), the DROC (est. 1999), and Burundi (est. 2004).

In environmental cooperation, Malawi is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Malawi is an agricultural economy which, in recent years, has been troubled by drought and financial instability. It is dependent for most of its income on the export sales of tobacco (60%), and tea and sugar (20%). Other agricultural products include peanuts, coffee, and wood products. As a result of the 1992 drought, GDP declined by 7.9% after averaging 4.5% annual growth in 1989–91, and an impressive 6.7% annual growth rate during the 1970s. Growth averaged an annual 3.7% from 1988 to 1998. In 2001 GDP grew at -4.9% owing to a devastating drought. It was 1.8% in 2002, 4.4% in 2003, 4.2% in 2004 and 1% in 2005. International aid donors, concerned about human rights abuses in Malawi, have tied future support to human rights reforms. Beginning in 2000, the country was the recipient of \$1 billion in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries Initiative.

Manufacturing is small-scale, directed mainly to the processing of export crops. In 2000, the agricultural sector employed an estimated 86% of Malawi's population and accounted for about 40% of GDP. Over 90% of the population lives in rural areas. The sector experienced severe droughts in 1979–81, 1992, 1994, and

2001–02. Periods of flooding also plague Malawi, as happened in 2003. Production of maize, the main food staple, during the 2001/02 growing season was 1.6 million metric tons, approximately 600,000 short of estimated domestic demand. The World Bank approved a \$50-million assistance package for drought recovery in Malawi in November 2002. Other environmental challenges include deforestation and erosion. Recent economic reforms have led to the market pricing in the agricultural sector. The fledgling mining sector in Malawi is slowly growing with the support of international financing.

The government continues to privatize the ownership of public enterprises although the wealth of the country resides in the hands of a small elite. By 2005, about 50% of the more than 90 state-owned enterprises had been sold to private hands, 22% were actively being offered for privatization and an additional 13% had been earmarked for future transfer to the private sector.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Malawi's gross domestic product (GDP) was estimated at \$7.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$600. The annual growth rate of GDP was estimated at 1%. The average inflation rate in 2005 was 15.4%. It was estimated that in 2005 agriculture accounted for 35.9% of GDP, industry 14.5%, and services 49.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1 million and accounted for approximately 0.1% of GDP. Foreign aid receipts amounted to \$498 million or about \$45 per capita and accounted for approximately 29.8% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Malawi totaled \$1.46 billion or about \$132 per capita based on a GDP of \$1.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.4%. Approximately 50% of household consumption was spent on food, 7% on fuel, 2% on health care, and 6% on education. It was estimated that in 2004 about 55% of the population had incomes below the poverty line.

## 21 LABOR

As of 2001, the economically active population was estimated at 4.5 million. According to a 2003 estimate, 90% of the labor force engaged in agriculture. There is very little industry, and no available data on unemployment.

Although sanctioned by law, union membership is quite low due to the small number of workers in the formal sector of the economy. About 15% of the workforce was unionized in 2002. The only labor federation was the Trades Union Congress of Malawi, to which all unions belonged. In theory, unions have the right to organize, bargain collectively, and strike, but in practice labor relations are still in development.

The minimum working age is 14, but many children work due to cultural norms, agricultural predominance, and severe economic hardship. In 2002, the minimum wage was approximately \$0.89 per day in urban areas and \$0.66 in rural areas. This does not provide an adequate living wage. The legal maximum workweek is 48 hours but this regulation is not generally enforced.

## 22 AGRICULTURE

The agricultural sector is drought-prone and experienced severe droughts in 1979–81, 1992, and 1994. About 77% of the total land area of Malawi is under customary tenure—that is, subject to land allocation by village headmen based on traditional rights of succession by descent. Estate farming occupies about 23% of the cultivated land and provides about 90% of export earnings. In all, about 21% of Malawi's total land area is arable. Malawi is self-sufficient in food production (except during droughts), but the population increased more rapidly than the food supply in the 1980s.

Tobacco was first grown in 1889 near Blantyre in southern Malawi. Today, most production comes from the central region (around Lilongwe). Tobacco production was estimated at a record 160,014 tons in 1996 but fell to 69,500 tons in 2004. Malawi exports more than 95% of the tobacco it produces, which generates some 70% of all foreign earnings. Malawi's tobacco sector is in transition away from a rigid government-controlled system to a more market-oriented system that includes smallholder tobacco growers.

Tea, a major export crop, is produced mostly on estates; about 16,000 hectares (40,000 acres) are in tea plantations, mainly in the Mulanje and Thyolo districts. Production in 2004 was 45,000 tons. Sugarcane production was about 2,100,000 tons in 2004. Other cash crops produced in 2004 include peanuts, 61,000 tons, and seed cotton, 40,000 tons.

Although subsistence farmers participate in the production of export crops more extensively now than in the preindependence period, much customary agriculture is still devoted to cereal production. Pressure of population on the land is mounting and, in a few areas, expansion of acreage under export crops has been discouraged in favor of food production. Corn is the staple food crop; about 1,733,000 tons were produced in 2004. Late rains, floods, and an increasing Mozambican refugee population kept corn production from meeting domestic demand during the mid-1990s. Other food crops, with 2004 estimated production figures, include cassava, 2,559,000 tons; potatoes, 1,784,000 tons; beans, 79,000 tons; sorghum, 45,000 tons; plantains, 200,000 tons; bananas, 93,000 tons; and paddy rice, 50,000 tons.

## 23 ANIMAL HUSBANDRY

Animal husbandry plays a minor role in the economy. Pressure on the land for cultivation is sufficiently intense in many areas to rule out stock-keeping on any scale. In 2005 there were an estimated 1,900,000 goats, 750,000 head of cattle, 456,000 hogs, and 115,000 sheep. The number of poultry was estimated at 15.2 million in 2005. Meat production totaled 59,000 tons in 2004, includ-

ing 21,000 tons of pork and 16,000 tons of beef. Milk production was estimated at 35,000 tons.

## 24 FISHING

The growing commercial fishing industry is concentrated mainly in Lake Malawi, with small-scale activity in Lake Malombe, Lake Chilwa, and the Shire River. Fish farming is carried on in the south. The total catch in 2003 was estimated at 54,200 tons. Large employers of labor in the Southern Region are the major buyers, and much of the catch is sold directly to them. Fish from Lake Malawi contribute about 70% of animal protein consumption.

## 25 FORESTRY

Forests and woodlands cover an estimated 2.6 million hectares (6.3 million acres), or 27% of the land area. Natural forests are extensive, and in the high-altitude regions, the Forestry Department is engaged in a softwood afforestation program. However, Malawi's annual rate of deforestation was 2.4% during 1990–2000. Sizeable plantations of pine, cypress, and cedar have been established. Roundwood removals in 2004 were estimated at 5,621,000 cu m (198,400,000 cu ft), of which 91% went for fuel.

## 26 MINING

Quarrying for limestone and other building materials was the major mining activity in Malawi, but gemstones, including agate, amethyst, aquamarine, garnet, rhodolite, rubies, and sapphires, have also been produced, on a small scale. In 2004, a total of 21,224 metric tons of limestone (for cement) was produced. A total of 1,820 kg of gemstones were extracted in 2004, down from 2,297 kg in 2003. Also produced in 2004 were dolomite, lime, and crushed stone for aggregate, as well as possibly clays, sand and gravel, and other stone. The country had known deposits of apatite, asbestos, bauxite, columbium (niobium), corundum, dimension stone (including blue and black granite), galena, gold, granite, graphite, ilmenite, kaolin, kyanite, mica, monazite, phosphate rock, pyrite, rutile, tourmaline, uranium, and vermiculite, which have occasionally been exploited. Prospecting for other minerals has been undertaken, but no resources of commercial significance have been discovered, except for coal, bauxite (28.8 million tons), kaolin (14.1 million tons), silica sand (25 million tons), and monazite and strontianite (11 million tons in Kangankunde Hill). Mining and quarrying accounted for 1% of GDP in 2004. The mining sector in 2003, grew by 23.5%. No minerals were among the leading export commodities. The outlook for Malawi's mineral industry was tied to the country's ability to spur exports, improve educational and health facilities, solve environmental problems of deforestation and erosion, and deal with the rapidly growing problem of HIV/AIDS.

## 27 ENERGY AND POWER

Malawi, as of 1 January 2005 had no known petroleum, or natural gas reserves. Nor does it have any oil refining capacity. However, the country does have small recoverable reserves of coal.

In 2004, demand for petroleum products averaged 6,000 barrels per day, all of which was imported. There was no recorded demand or imports of natural gas in that year. Low-grade bituminous coal reserves were known about for many years, but mining did not begin until the last decades of the 20th century. Ma-

lawi has recoverable coal reserves of about 2 million short tons, reported as of July 2005. In 2003, coal consumption came to 0.02 million short tons.

Both the consumption and the production of electric power are small, even by African standards. Installed capacity, as of 1 January 2003 totaled 308,000 kW, the bulk of which is hydroelectric. In 2002, hydropower accounted for a little more than 93% of capacity, with conventional thermal plants accounting for the rest. In 2003, electric power output totaled 1.30 billion kWh, with demand that year at 1.21 billion kWh.

## 28 INDUSTRY

After a decade of rapid expansion—11% average growth per year in the 1970s—the pace of manufacturing growth slowed to 3.6% during 1980–90, and during 1990–2000, to 1.7%. In 2004, industry accounted for 19% of GDP.

Although Malawi's manufacturing sector is small, it is diverse. The processing of tea, tobacco, sugar, coffee, cement, and cotton accounts for most of its output. Factories manufacture soap, detergents, cigarettes, furniture, cookies, bread, blankets and rugs, clothing, and mineral waters. Other installations include a gin distillery, a cotton mill, and two textile plants. Brick making is well established. Roofing tiles are also produced, and radios are assembled. Other products made in Malawi include agricultural implements, bicycle frames, polishes, edible oils and fats, cattle foodstuffs, flour, matches, fishing nets, rope, twine and yarns, toiletries, and footwear. Two plants in Malawi retread tires, and its industries make a wide range of metal products.

## 29 SCIENCE AND TECHNOLOGY

Research stations for tea, tobacco, and other aspects of agriculture conduct their activities under the auspices of the Ministry of Agriculture. The Ministry of Forestry and Natural Resources maintains forestry and fisheries research units. The University of Malawi includes Bunda College of Agriculture and Kamuzu College of Nursing, both at Lilongwe; Malawi Polytechnic and the College of Medicine at Blantyre; and Chancellor College at Zomba, which has a faculty of science. The Geological Survey of Malawi, founded in 1921, is headquartered in Zomba. The Medical Association of Malawi, founded in 1967, is headquartered in Blantyre.

In 1987–97, science and engineering students accounted for 27% of college and university enrollments. In 2002, high technology exports were valued at \$1 million, 3% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Domestic trade is concentrated in the larger towns, since transportation of goods to most rural areas is difficult and most rural residents have extremely low incomes. Agriculture is the basis of the economy, with about 90% of the population employed in subsistence farming. Local markets and stands for produce and baked goods prevail.

A small manufacturing sector is located near Blantyre, which is the country's major commercial center. There are a few larger supermarkets and grocery stores in Lilongwe, but with limited inventories. Karonga and Nsanje are the main trading ports. Zomba is a regional commercial center for agriculture. Licenses are required for all persons engaged in trading; fees vary with the nature

of the business. In 2005 inflation was about 15.4% a decline from a high of 22.7%. Per capita GDP was at about \$600 in 2004.

Business hours are 7:30 or 8 AM to noon and 1 or 1:30 PM to 4:30 or 5 PM, Monday through Friday, and 7:30 or 8 AM to noon or 12:30 PM on Saturday. Banks are open weekdays from 8 to 12:30 PM (to 11:30 AM on Wednesday and 10:30 AM on Saturday).

### 3<sup>1</sup> FOREIGN TRADE

Malawi mostly exports tobacco (66%). Other commodity exports include tea (7.6%), sugar (6.0%), coffee (4.0%), and woven cotton fabrics (2.5%). Tea is sold primarily to the United Kingdom while sugar exports go to the EU and the United States.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Malawi runs an annual deficit on current accounts, which is generally mitigated but not annulled by capital inflows, mostly in the form of development loans.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Malawi's exports was \$364.1 million while imports totaled \$645 million resulting in a trade deficit of \$280.9 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Reserve Bank of Malawi was established in Blantyre in 1964. It took over, by stages, the functions in Malawi of the former Bank of Rhodesia and Nyasaland until that bank wound up its affairs in June 1965. The main duties of the Reserve Bank are to maintain currency stability and to act as banker to the government and to the commercial banks. The Reserve Bank administers exchange control and acts as registrar for local registered stock. The Reserve Bank also handles the issue of treasury bills on behalf of the government.

Malawi's financial services are unsophisticated and basic. Aside from the central bank, there are five licensed commercial banks, which are dominated by the two government-owned banks, the National Bank of Malawi and the Commercial Bank of Malawi. In 1999, the NBM was 48% owned by Press Corporation Limited (PCL), and 39% by ADMARC; CBM was 23% owned by PCL, 22%

by the Malawi government in direct shareholding, and 17% by the Malawi Development Corporation. The Malawi government owns MDC, ADMARC, and is PCL's largest shareholder (49%). As of 31 March 1999, total assets of the five banks reached about \$300 million. The other three commercial banks are the First Merchant Bank Limited, the Finance Bank of Malawi, and Indefinance.

The Investment and Development Bank of Malawi (Indebank), formed in 1972 with foreign and local participation, provides medium- and long-term credit. Although the country's financial market has been liberalized, the sole mortgage finance institution, the New Building Society (NBS), which came into operation at independence in March 1964, faces no competition. The New Building Society's assets stood at \$244.5 million in 1995.

A subsidiary of Indebank, the Investment and Development Fund (Indefund), finances small and medium-sized enterprises. The Malawi Development Corporation (MDC), which services the needs of large-scale industry, is state-owned. The Post Office Savings Bank (POSB) was restructured in 1994 and licensed as a commercial bank, the Malawi Savings Bank (MSB). Other major financial institutions include Loita Investment Bank, the Leasing and Financing Co. of Malawi (LFC), the Malawi Rural Finance Company (MRFC), and the Finance Corporation of Malawi (FINCOM).

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$136.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$268.3 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 46.8%.

The Malawi Stock Exchange (MSE) was established in December 1994 along with Stockbrokers Malawi to deal with listed company shares and to act as a broker in government and other secu-

rities approved by the Reserve Bank of Malawi (RBM). The stock exchange had no listings until November 1996, when shares in NICO were put up for sale. Since November 1994, the RBM has marketed Treasury bills of varying maturities (30, 61, 91, and 182 days) in an attempt to encourage greater participation by the private sector.

### 34 INSURANCE

Most insurance firms operating in Malawi are owned or sponsored by parent companies in the United Kingdom. However, the leading company, the National Insurance Co. (NICO), is owned by Malawi interests. There were seven insurance companies in operation in 1997. Motor vehicle insurance is compulsory.

### 35 PUBLIC FINANCE

Government revenues derive from import duties, income taxes on companies and individuals, income from government enterprises, excise duties, licenses, and value-added taxes. The fiscal year runs from 1 April to 31 March. Government consumption, which had an average annual growth rate of 7.0% during the 1980s, declined by 4.0% annually during the 1990s, and by 9.5% in 1998. Education, health, and agriculture were the three biggest items on the budget for 2000.

The US Central Intelligence Agency (CIA) estimated that in 2005 Malawi's central government took in revenues of approximately \$844.6 million and had expenditures of \$913.9 million. Revenues minus expenditures totaled approximately -\$69.3 million. Public debt in 2005 amounted to 208.6% of GDP. Total external debt was \$3.284 billion.

### 36 TAXATION

Individuals pay taxes on all income from Malawi, whether they are residents or nonresidents. Most operating businesses are required to prepay estimated tax on a quarterly basis. The corporate income tax in 2005 was 30%. Branches of foreign companies were taxed at 35%, but reduced rates applied to insurance businesses (21%), and to ecclesiastical, charitable or educational institutions or trusts (25%). Companies operating in export processing zones (EPZs) are exempt from corporate tax, and companies operating in priority areas can qualify for a ten-year exemption, followed by a reduced 15% tax rate, when the exemption expires. Other tax allowances are offered—for mining companies, for manufacturers, for exports, for training, among others—as investment incentives. Royalties, rents, fees and commissions are subject to a 20% withholding tax. Interest from banks is also subject to a 20% withholding rate if the interest is over 10,000 kwacha.

The income of individuals and partnerships is taxed according to a graduated scale with rates from 0–30%. For 2004, the government introduced a new top rate of 40%, and raised the threshold for taxable income from 30,000 kwacha to 36,000 kwacha (about \$340 to \$410). Municipal taxes are based on property valuations.

Malawi's main indirect tax is a 17.5% value-added tax (VAT) which applies to goods and selected services, including luxury goods and electronics, as well as imports.

### 37 CUSTOMS AND DUTIES

Trade licenses are required for the import and export of certain goods, including military uniforms, wild animals, some food, and military equipment. Malawi is a member of the Southern African Development Community (SADC) and the Common Market for Eastern and Southern Africa (COMESA), granting trade preferences to member states. The country also has bilateral trade agreements with Zimbabwe and South Africa, granting the duty-free exchange of goods.

In 1998, the government eliminated export taxes on tobacco, sugar, tea, and coffee. Machinery, basic foodstuffs, and raw materials are admitted with a 10–5% tax. In July 1999, the maximum tariff rate was reduced from 30% of value to 25%. Tariffs on intermediate goods and raw materials were reduced from 10% to 5% and from 5% to 0%, respectively.

Luxury goods are assessed at higher rates than ordinary consumer items. Excise duties are levied for revenue purposes on spirits, beer, cigarettes and tobacco, petroleum products, and certain other items.

### 38 FOREIGN INVESTMENT

The government actively encourages foreign investment, particularly in agriculture and in import-substitution and labor-intensive industries. Incentives such as exclusive licensing rights, tariff protection, and liberal depreciation allowances are offered. These incentives also include a tax allowance of 40% for new buildings and machinery, 20% for used buildings and machinery, and a 100% deduction for a manufacturing company's operating expenses for the first two years. Other incentives are: no import duty on heavy goods vehicles, raw materials for manufacturing, a maximum import tariff rate of 25%, no withholding tax on dividends, and tax holidays. Exporters do not have to pay the normal taxes or import duties. Repatriation of dividends and profits are freely permitted.

Encouraged by the formation of the Malawi Development Corp. and the implementation of a development plan, foreign investment increased in the mid-1960s. A sugar scheme on the lower Shire River was financed to a great extent by foreign investment, as were a distillery and a brewery. In 1987, Lever Brothers, Portland Cement, and David Whitehead and Sons had industrial plants in Malawi. The large plantation enterprises were originally established with capital largely from the United Kingdom. Exploration for oil under Lake Malawi began in 1999 but has not yielded any positive results so far.

Foreign direct investment (FDI) in Malawi was \$22 million in 1997, but rose to \$70 million in 1998. Annual FDI inflow averaged between \$45 million and \$60 million for the period 1999 to 2001.

### 39 ECONOMIC DEVELOPMENT

During the first decades of independence, agricultural development was emphasized. The government sought to implement this policy by providing the family farmer with basic agricultural support facilities, such as extension services, training, irrigation, and research, and by increasing the output of fertile areas through farm credit, marketing, and processing facilities. During this period, four major agricultural developments were sponsored: the Shire Valley Agricultural Development Project in the south; the

Lilongwe Land Development Program and the Central Region Lakeshore Development Project, both in the Central Region; and the Karonga Rural Development Project in the north.

More recently, improvements in the transportation infrastructure, especially in roads, have been emphasized. In the manufacturing sector, the government has stressed diversification. With major constraints on its foreign exchange, Malawi aims to reduce the trade gap, encourage exports, and reduce government expenditures.

The United Kingdom has traditionally been Malawi's principal aid donor. South Africa has been a significant source of aid as well, especially in financing construction in the capital at Lilongwe and the railway extension from Lilongwe to Mchinji. Other significant aid donors have included the European Union, France, Canada, Germany, Japan, the United States, Denmark, the African Development Bank, and the World Bank/IDA. In 1998, Malawi started a six-month International Monetary Fund (IMF) macroeconomic program aimed at reigning in the almost 60% inflation rate, with little success as of 1999.

In 2000, Malawi was approved for \$1 billion in debt service relief under the IMF/World Bank's Heavily Indebted Poor Countries (HIPC) initiative, to support poverty reduction efforts through expenditures on health, education, and rural development, among other areas. Also in 2000, Malawi negotiated a three-year \$58 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF, which was to expire in December 2003. In September 2002, the IMF approved \$23 million in emergency relief to support large imports of food due to shortages that year, and to fight malnutrition and starvation, particularly among those affected with HIV/AIDS. Recent government initiatives have targeted improvements in roads, and with participation from the private sector, improvements in railroads and telecommunications.

A new three-year PRGF was signed with the IMF, worth \$56 million, which commenced in July 2005. The main aim of the new PRGF is to restore fiscal discipline, with the priority on reducing domestic debt. The signing of the new PRGF increased the probability that Malawi will reach completion point around mid-2006 under the IMF-World Bank heavily indebted poor countries (HIPC) debt relief initiative. Once this completion point is reached a reduction in debt stock will be awarded by the IMF-World Bank. However, as the Economist Intelligence Unit states, various criteria need to be achieved before this can occur. First, the government needs to have its first two PRGF reviews concluded successfully by the end of January 2006. Second, it needs to have achieved one year of successful implementation of the poverty reduction program, which could be met by the end of 2005. Third, it must complete 11 specific completion point triggers, which would take a minimum of one year. However, the most important thing is that donors have resumed financial assistance to Malawi following the recent IMF deal, with the UK Department of International Development the first to resume funding of £20 million (\$37 million) for budgetary support.

#### 40 SOCIAL DEVELOPMENT

Pensions systems exists for public employees only. Government hospitals and clinics provides some medical services free to residents. Employers are required to obtain private worker's injury

insurance. Worker's compensation is provided for disability and survivor benefits.

The constitution specifies equal rights for women and minorities, but women face widespread discrimination in the home and in employment opportunities. Spousal abuse is common, and the authorities rarely intervene. Inheritance practices often leave widows without their share of the family's assets. Women are much more likely to be illiterate than their male counterparts. In 2004 the government addressed women's concerns, focusing on gender balance in political representation.

Some human rights abuses continued to occur under the democratic government. The use of excessive force and the mistreatment of prisoners is reported. Human rights organizations are free to operate openly and without restrictions.

#### 41 HEALTH

Health services, which rank among the poorest in Africa, are under the jurisdiction and supervision of the Ministry of Health and are provided to Africans free of charge. Approximately 80% of the population had access to health care services. As of 2004, it was estimated that there were fewer than two physicians 100,000 people. In 2000, 57% of the population had access to safe drinking water and 77% had adequate sanitation. Access to safe water and sanitation at times has been severely impeded by war.

The major health threats are malnutrition, malaria, tuberculosis, measles, dysentery, and bilharzia. Hookworm and schistosomiasis are widespread. The HIV/AIDS prevalence was 14.20 per 100 adults in 2003. As of 2004, there were approximately 900,000 people living with HIV/AIDS in the country. There were an estimated 84,000 deaths from AIDS in 2003. Malawi has taken an aggressive approach to AIDS prevention and allocates a substantial portion of its health budget on treatment.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37.13 and 23.2 per 1,000 people. About 31% of married women were using contraceptives as of 2000. The infant mortality rate in 2005 was 96.14 per 1,000 live births. The major cause of infant death in Malawi is diarrheal disease. The maternal mortality rate was 580 per 100,000 live births. An estimated 48% of children under five years old were considered malnourished. Immunization rates for children up to one year old were: tuberculosis, 100%; diphtheria, pertussis, and tetanus, 95%; polio, 94%; and measles, 87%. Life expectancy was 41.43 years in 2005.

#### 42 HOUSING

About 90% of the population live in rural areas. The traditional dwelling, used by anywhere from 45–65% of the total population, is a single-family home made of mud brick walls and a thatched roof. There are some more permanent structures, which are made with concrete, stone, or burnt brick walls and iron sheet, concrete, or asbestos roofs. Most dwellings have two or three rooms and the average household size is about 4.3 people. In 1998, at least 86% of dwellings were owner occupied. Only about 2.5% of residences had access to indoor piped water. Most drinking water was taken from boreholes, unprotected wells, and/or rivers and streams. About 74% of the population (both urban and rural) used pit latrines. About 22% had no toilets at all. Only 4.9% of the popula-

tion had access to electricity. Wood is typically used for cooking fuel and paraffin is used for lighting.

Government-built houses are either rented or sold. The Malawi Housing Corp. has also developed housing plots in order to relocate urban squatters.

### 4<sup>3</sup> EDUCATION

Control of education, including mission schools, is in the hands of the Ministry of Education. Attendance is compulsory for eight years at the primary level. Secondary education lasts for four years. The academic year runs from September to July.

As of 1999, 69% of primary-school-age children were enrolled in school. Most children in remote rural areas do not attend school. In 2003, secondary school enrollment was about 29% of age-eligible students. It is estimated that about 71% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 70:1 in 2003; the ratio for secondary school was about 46:1.

The University of Malawi, inaugurated at Zomba on 6 October 1965, has four constituent colleges at Zomba, Lilongwe, and Blantyre. A new medical school was established in Blantyre. In 2003, less than 1% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 64.1%, with 74.9% for men and 54% for women.

As of 2003, public expenditure on education was estimated at 6% of GDP, or 24.6% of total government expenditures.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The Malawi National Library Service, founded in 1968, has more than 804,000 volumes and maintains a nationwide interloan system with headquarters in Lilongwe, regional branches in Blantyre, Mulanje, Luchenza, Mzuzu and Karonga, and a number of smaller rural libraries and library centers. The largest library is that of the University of Malawi (375,000 volumes). The US Information Agency maintains a small library in Lilongwe, and the British Council has libraries in Blantyre and in the capital. The National Archives are in Zomba and contain 40,000 volumes.

The Museum of Malawi (1959), in Blantyre, has a collection displaying the nation's archaeology, history, and ethnography. The Cultural & Museum Center Karonga serves as a museum of natural history, including dinosaur fossils and other prehistoric remains. Other museums include the Lake Malawi Museum in Mangochi and a regional museum in Mzuzu. There is also a postal museum in Namaka housed in a traditional postal carrier's rest hut.

### 4<sup>5</sup> MEDIA

In 2003, there were an estimated eight mainline telephones for every 1,000 people; about 17,400 people were on a waiting list for telephone service installation. The same year, there were approximately 13 mobile phones in use for every 1,000 people.

Radio broadcasting services were provided in English and Chichewa by the state-owned Malawi Broadcasting Corp. over two stations in 2004. The same year, there were 14 private FM stations with limited coverage, including 6 religious stations. State-owned Television Malawi was the only national television broadcaster. In 2003, there were an estimated 499 radios and 4 television sets for every 1,000 people. The same year, there were 1.5 personal

computers for every 1,000 people and 3 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

*The Daily Times*, published in English in Blantyre, appears Monday through Friday and had a circulation of 22,000 in 2002. The other major daily publications were *Computer Monitor*, *Michiru Sun*, *The Enquirer*, and *U.D.F. News* (United Democratic Front). *The Malawi News*, a weekly, had a circulation of 30,000. Other weeklies include *The Independent*, *The Nation*, and *The New Express*.

Though previously strictly controlled by the government, the media enjoy new constitutional provisions suspending censorship powers. The government is said to respect these new provisions.

### 4<sup>6</sup> ORGANIZATIONS

The Malawi Chamber of Commerce and Industry has its headquarters at Blantyre. A branch of the British Medical Association has been organized in Zomba. In the larger towns, musical societies and theater clubs have been established.

The League of Malawi Women and the League of Malawi Youth are active. Other national youth organizations include the Catholic Students Community of Malawi, Malawi Young Pioneers, Student Alliance for Rural Development, and the Student Christian Organization of Malawi. A variety of sports associations are also active.

Service clubs include the Rotary, Lions Clubs, and the British Empire Service League. Some social welfare and economic development groups have organized under the umbrella of the Council for Nongovernmental Organizations in Malawi, established in 1985. International organizations with active chapters include the Salvation Army, Habitat for Humanity, UNICEF, and the Red Cross.

### 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

Tourist facilities are improving with the development of Malawi. The major cities and resorts are not as limited as the smaller, rural areas. The main tourist attraction in Malawi is Lake Malawi; the visitor is well served there by hotels and recreational facilities. There are also eight-day excursions around the lake available. Game parks, Mt. Mulanje, and Mt. Zomba also attract the tourist trade.

In 2003, there were 420,911 tourists who arrived in Malawi, almost 21% of whom came from Mozambique. Tourist receipts totaled \$43 million that year. Hotel rooms numbered 59,396 with 63,585 beds and an occupancy rate of 27% in 2002. The average length of stay was eight nights. A passport, proof of sufficient funds, and onward/return ticket are required for entry into Malawi. Upon entry, a 30-day visa is issued. Proof of vaccination against yellow fever is required for travelers from infected areas.

In 2004, the US Department of State estimated the daily cost of staying in Mangochi at \$224; in Lilongwe, \$180; and in Blantyre, \$167.

### 4<sup>8</sup> FAMOUS MALAWIANS

The dominant historic political figure is Dr. Hastings Kamuzu Banda (1906–1997). After a long period of medical practice in England, and a brief one in Ghana, he returned to Nyasaland in 1958 to lead the Malawi Congress Party. Following the declaration

of a state of emergency, Banda was detained from March 1959 to April 1960. He became Malawi's first prime minister in 1963, and in 1966 he became Malawi's first president; he was named president for life in 1971 and ruled without interruption until ousted in a 1994 election mandated by constitutional reform. Bakili Muluzi (b.1943) was president from 1994–2004. Bingu wa Mutharika (b.1934) won a disputed election to become president in 2004.

#### **49 DEPENDENCIES**

Malawi has no territories or colonies.

# MALI

Republic of Mali  
*République du Mali*

**CAPITAL:** Bamako

**FLAG:** The flag is a tricolor of green, yellow, and red vertical stripes.

**ANTHEM:** National Anthem begins "At thy call, O Mali."

**MONETARY UNIT:** The Malian franc (MF), a paper currency that had been floating with the French franc, was replaced in June 1984 by the French Community Franc (CFA Fr) at a ratio of MF2 = CFA Fr1. There are coins of 1, 2, 5, 10, 25, 50, and 100 CFA francs and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00189 (or \$1 = CFA Fr528.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Armed Forces Day, 20 January; Democracy Day, 26 March; Labor Day, 1 May; Africa Day, 25 May; Independence Day, 22 September; Christmas, 25 December. Movable religious holidays include 'Id al-Fitr, 'Id al-'Adha, Milad an-Nabi, and Easter Monday.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country in West Africa, Mali has an area of about 1,240,000 sq km (478,767 sq mi), extending 1,852 km (1,151 mi) ENE–WSW and 1,258 km (782 mi) NNW–SSE. Comparatively, the area occupied by Mali is slightly less than twice the size of the state of Texas. Bounded on the N and NE by Algeria, on the E and S by Niger, on the S by Burkina Faso and Côte d'Ivoire, on the SW by Guinea, on the W by Senegal, and on the W and NW by Mauritania, Mali has a total boundary length of 7,243 km (4,661 mi). Mali's capital city, Bamako, is located in the southwestern part of the country.

## <sup>2</sup> TOPOGRAPHY

There are few prominent surface features in Mali, which is crossed by two river systems—the Niger and the Senegal. In the southwest are low mountains deeply notched by valleys formed by the coursing of water. A second upland, in the circle formed by the Niger River, is virtually a plateau and contains Hombori Tondo, 1,155 m (3,789 ft), the highest point in Mali. In the northeast is Adrar des Iforas, an extension of Algeria's Ahaggar Mountains. The republic is divided into three natural zones. The Sudanese zone is an area of cultivation covering some 200,000 sq km (77,200 sq mi) in the south and in the inland delta (a pre-Tertiary lake bed into which the upper Niger once flowed). The Sahel stretches east to west through the center of the country and the Sahara stretches across the northern region. A number of seasonal lakes can be found in the central Sahel region.

## <sup>3</sup> CLIMATE

Southern and western Mali have a Sudanese climate with a short rainy season from June to September. Rainfall averages 140 cm (55 in) at Sikasso in the far south. To the north is the Sahelian zone, a

semiarid region along the southern border of the Sahara. At Gao, in Mali's northeast Sahel, rainfall is about 23 cm (9 in) a year. Actual year-to-year rainfall, however, is extremely erratic. In the Sahelian zone there are considerable variations of temperature, especially in April, May, and June, the period of maximum heat, and in December, when the hot, dry harmattan blows. Continuing north, one gradually enters into a Saharan climate, marked by the virtual absence of rain and an extremely dry atmosphere. Over 40% of the country is desert, and unsuitable for agriculture.

The year is divided into three main seasons varying in length according to latitude: October–January, a cool and dry season; February–May, a hot and dry season; and June–September, a season of rains characterized by lower temperatures and an increase in humidity. Between 1968 and 1974, Mali, with neighboring Sahelian states, experienced the worst drought in 60 years. Drought returned during 1982–85, and there is continuing concern over the southward advance of the desert.

## <sup>4</sup> FLORA AND FAUNA

The Saharan zone of Mali, an area of fixed dunes and false steppes, contains vegetation made up of thick-leaved and thorny plants (mimosas and gum trees). The vegetation of the Sahelian zone resembles that of the steppes, with thorny plants and shrubby savannas. The Sudanese zone is an area of herbaceous vegetation; its trees are bastard mahogany, kapok, baobab, and shea.

In the Saharan, or desert zone, animal life includes dorcas, cheetah, and maned wild sheep, the latter in the mountains. In the Sahelian region are found oryx, gazelle, giraffe, wart hog, ostrich, bustard, red monkey, and cheetah, as well as lion, jackal, fox, hyena, and cynhyena. In the Sudanese zone there are large and small antelope, buffalo, elephant, lion, and monkey, plus such small game as hare, bustard, guinea fowl, quail, pigeon, and such

water birds as duck, teal, sandpiper, peewee, godwit, and woodcock. Other birds include pelican, marabou, ibis, egret, heron, eagle, and vulture.

As of 2002, there were at least 137 species of mammals, 191 species of birds, and over 1,700 species of plants throughout the country.

## 5 ENVIRONMENT

The major environmental problem in Mali is the increasing desertification of the country. Soil erosion, deforestation, and loss of pastureland pose additional problems for the environment. Mali also has an inadequate water supply: only 76% of city dwellers and 35% of people living in rural areas have access to pure water. The country has about 60 cu km of renewable water resources, of which 97% of annual withdrawals is used for farming and 1% is used for industrial purposes.

The nation's wildlife is threatened by drought, poaching, and the destruction of the environment. Mali has a national park and four animal reserves that cover a total of 808,600 ha (1,998,100 acres), as well as six forest reserves covering 229,400 ha (566,900 acres). In addition, the Sahel has an elephant reserve of 1,200,000 ha (2,965,000 acres) and a giraffe reserve of 1,750,000 ha (4,324,000 acres). However, the authorities lack the means to prevent poaching of protected animals or cutting down of trees for firewood. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 5 species of birds, 1 type of reptiles, 1 species of fish, and 6 species of plants. Threatened species include the addax, cheetah, and barbary sheep. The Sahara oryx has become extinct in the wild.

## 6 POPULATION

The population of Mali in 2005 was estimated by the United Nations (UN) at 13.5 million, which placed it at number 65 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 47% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.2%, a rate the government viewed as too high. The projected population for the year 2025 was 24 million. The population density was 11 per sq km (28 per sq mi), but the western quarter of the country has three-quarters of the population, and along the Niger River, population density exceeds 1,300 per sq km (500 per sq mi). By contrast fewer than 4 people per square km (1.5 per sq mi) live in the northern three-fifths of Mali. About 10% of the inhabitants are nomadic, and the remainder rural.

The UN estimated that 30% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5.20%. The capital city, Bamako, had a population of 1.26 million in that year. Other important towns are Ségou, Mopti, Sikasso, and Kayes.

## 7 MIGRATION

The Fulani, Tuareg, and other nomadic groups of northern Mali move freely across desert borders to and from neighboring countries. As many as two million Malians migrate seasonally to Côte d'Ivoire, Senegal, and Libya. In addition, 150,000 Malians fled to

Algeria, Burkina Faso, and Mauritania in the early 1990s to escape government repression. Between June 1995 and 1999, some 131,780 Malian refugees returned home from Algeria, Burkina Faso, Mauritania, Niger, and Senegal. Malian refugees of Tuareg and Moor ethnic origin continue to return. There is also increasing migration from rural to urban areas.

In 1999, about 6,000 Mauritians were refugees in Mali's Kayes region. There were also 1,924 urban refugees from 17 African and Middle Eastern countries, predominantly Sierra Leone and Liberia. Of the 16,800 initial Mauritanian refugees, the United Nations High Commissioner for Refugees (UNHCR) helped to repatriate some 10,800. In 2004 there were 11,256 refugees in Mali, primarily from Mauritania, and 1,086 asylum seekers. In that same year some 2,000 Malians sought asylum in France, Spain, and Switzerland. In 2005, the net migration rate was an estimated -0.33 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The main ethnic groups of Mali are the Mande, including the Bambara, Malinke, and Sarakole, accounting for about 50% of the total population. Other groups include the Peul (or Fulani), accounting for 17%; the Voltaic, making up 12%; the Songhai, constituting 6%; the Tuareg and Moors 10%; and other groups 5%.

The Bambara, mostly farmers, occupy all of central Mali bounded by the Côte d'Ivoire frontier in the south and Nara and Nioro in the north. Malinke live chiefly in the regions of Bafoulabé, Kita, and Bamako. The Peul (or Fulani), semisedentary herdsmen, are to be found throughout the republic, but mainly in the region of Mopti. The Songhai—farmers, fishermen, and merchants—live along the banks and islands of the Niger River, east of the inland delta. The nomadic Tuareg, of Berber origin, are mainly in the north, in the Adrar des Iforas. The Minianka, largely farmers, populate the region of Koutiala, and the Senufo, also farmers, are found principally in the region of Sikasso. The Dogon, often considered to be the first occupants of Mali, are believed to have survived owing to the inaccessibility of their villages in the Hombori cliffs. The Dogon have won international esteem for their unique ceremonial artifacts. The majority of the peoples in Mali are Negroid; the Tuareg are classified as Caucasoid; and the Peul (Fulani) are of mixed origin.

## 9 LANGUAGES

French, the official language, is the language of administration and of the schools and is the main unifying tongue for the country's diverse population elements. There are virtually as many languages as there are ethnic groups. However, Bambara—widely spoken in western, central, and southern Mali—is understood by about 80% of the population. The Semitic-speaking Arabs and Hamitic-speaking Tuareg are the only groups with a traditional written language, although in recent years other languages, most of which belong to the Niger-Congo group of African languages, have come to be written. Fulani is spoken in the Niger delta, and Songhai in the east and northeast.

## 10 RELIGIONS

It is estimated that about 90% of the people are Muslims, the vast majority being Sunnis. The Islamic fundamentalist sect of Dawa

LOCATION: 10°10' to 25° N; 4°15' E to 12°15' W. BOUNDARY LENGTHS: Algeria, 1,376 kilometers (855 miles); Niger, 821 kilometers (510 miles); Burkina Faso, 1,202 kilometers (747 miles); Côte d'Ivoire, 515 kilometers (320 miles); Guinea, 932 kilometers (579 miles); Senegal, 418 kilometers (260 miles); Mauritania, 2,237 kilometers (1,390 miles).

has grown in Kidal, Mopti, and Bamako. The Wahabi movement is important in Tombouctou. About 5% of the population are Christian, with a split of about two-thirds Catholics and one-third Protestant. Most of the remainder practice indigenous religions. The constitution provides for freedom of religion and defines the country as a secular state.

## 11 TRANSPORTATION

Transportation is controlled by the government's Malian Transport Authority. Mali has some 729 km (453 mi) of railroad, all of it narrow gauge, and served by diesel electric locomotives. The main line, from Dakar in Senegal to Bamako, runs a twice-weekly passenger service. There is more frequent service between Bamako and Koulikoro, the last stop on the line, and between Bamako and

Kayes. The IBRD has helped finance the modernization of the Malian rail system.

Mali's road network includes about 15,100 km (9,383 mi) of highways of which some 1,827 km (1,135 mi) were paved as of 2002. A major project, completed in 1986, was the construction of a 558-km (347-mi) road between Gao and Sévare, near Mopti, to be part of a trans-Sahara highway linking Algeria and Nigeria. In 2003, there were 7,920 passenger cars and 9,900 commercial vehicles in Mali.

Mali is landlocked but it is served by the port of Dakar in Senegal. The Niger River, which in Mali is 1,782 km (1,107 mi) long, is navigable except for a 59-km (37-mi) stretch between Bamako and Koulikoro (the main river port), where it is cut by rapids. The Bani River, a tributary of the Niger, is navigable for 224 km (139 mi)

between San and Mopti. Regular service on the Niger is generally maintained from July through January. The Senegal is navigable between Kayes and Saint-Louis, Senegal. Mali, Senegal, and Mauritania make up the Senegal River Development Organization.

There were an estimated 28 airports in 2004, only 9 of which had paved runways as of 2005. An international airport is at Senou, 14 km (9 mi) from Bamako. Air Mali, the state-owned airline, flies to Gao, Mopti, Kayes, Nioro, Tombouctou, Nara, Yelimané, and Goundam. There are also airports at Ségou, Tessalit, Bourem, and Kidal. In 1992, Mali joined the ten other signatories of the Yaoundé Treaty and became a partner in Air Afrique. In 2003, about 46,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The recorded history of the area now called Mali begins with the empire of Ghana. This means it dates from about the 4th century AD. At its height in the 10th century, the Ghana Empire occupied eastern Senegal, southwest Mali, and southern Mauritania and carried on a steady trade across the Sahara with Arab states. It disintegrated by the 13th century and was succeeded by the Mali Empire, from which the independent republic takes its name.

The Mali Empire reached its peak in the 14th century under Mansa Musa (r.1312–37), who captured Tombouctou and made Mali a center of Muslim scholarship. Tombouctou and Djenné became key centers for trans-Saharan trade. By the 17th century, however, the empire had ceased to exist, and the Tuareg took much of the northern area.

Meanwhile, to the east, the Songhai Empire was founded around AD 700 on the middle Niger. Later centered at Gao, the empire was at its zenith after the capture of Tombouctou in 1468. The chief rulers in this period were Sonni Ali Ber (r.1464–92) and Askia Muhammad I (r.1492–1528). In 1591, the Songhai fell to an invading Moroccan army, which established secure bases at Gao, Tombouctou, and Djenné. Under Moroccan rule, a military caste known as the Arma developed, which controlled the countryside, but by 1780, the area had become fragmented into petty states.

In the 19th century, al-Hajj Umar, a member of the Tukolor tribe, waged a Muslim holy war against the pagans of the area. In 1862, he conquered Ségou and Macina, and the next year he plundered Tombouctou. He was killed in 1864 while trying to put down a rebellion. Around 1880, the French began their advance into what was to become the Republic of Mali. They were opposed from 1882 to 1898 by Samory Touré, a Malinké (Mandingo) leader who was ultimately captured and exiled. The capture of Sikasso in 1898 completed the French conquest.

Under French administration, the area became known as French Sudan (Soudan Français) and was a part of French West Africa. Achievements of French rule included the building of the Dakar-Bamako railway and a Niger Delta development scheme. In 1946, the Sudanese became French citizens, with representation in the French parliament. Under the constitution of 1946, the franchise was enlarged and a territorial assembly was established. Universal suffrage was established in 1957, when enlarged powers were conferred on the territorial assembly, which was also given the right to elect a council of ministers responsible for the administration of internal affairs. In 1958, under the constitution of the Fifth French

Republic, French Sudan became an autonomous republic, called the Sudanese Republic, within the French Community.

### Independence

In January 1959, in Dakar, representatives of the Sudanese Republic, Senegal, Dahomey (now Benin), and Upper Volta (now Burkina Faso) drafted a constitution of the Federation of Mali (named after the medieval African empire), but only the assemblies of the Sudanese Republic and Senegal ratified it and became members of the federation. Later that year the new Mali Federation asked the French Community to grant it complete sovereignty while permitting it to remain a member of the Community. The Mali Federation became a sovereign state in June 1960.

Discord soon arose over external and internal policy, and on 20 August 1960, the federation was dissolved. On 22 September 1960, the Sudan declared itself independent as the Republic of Mali. Modibo Keita, a cofounder of the African Democratic Assembly and political secretary of the Mali Federation's African Federation Party, took control of the government. The break with Senegal was followed by the decision to leave the French Community. All ties between Senegal and Mali were severed, and Mali embargoed trade with or through Senegal until 1963, when an accord was reached.

The one-party dictatorship led by President Keita evolved into a socialist regime modeled on that of the People's Republic of China. However, by 1968, economic problems and discontent became severe. On 19 November, Keita was overthrown in a bloodless coup led by Lt. (later Gen.) Moussa Traoré. The 1960 constitution was abolished, and a 14-member Military Committee for National Liberation took command. The junta brought Mali back into the franc zone in 1968 and opened its doors to investment from non-socialist as well as socialist countries.

Lt. Traoré became president in 1969, following an interim period of Yoro Diakité's presidency. (Diakité was expelled from the Military Committee in 1972 and died in the prison salt mines of Taoudenni in 1973.)

The military regime's efforts to improve the economic situation in Mali were frustrated by the prolonged period of drought that began in 1968 and peaked in 1972–73. It was estimated that, during that time, one-third of the population was rendered destitute. Severe drought conditions also prevailed in 1982–85.

In 1978, 29 army and police officers were convicted of plotting against the regime, and political unrest continued in later years. Traoré was elected president in 1979 under a new constitution, which also confirmed Mali as a one-party state. He was reelected in 1985. Fighting broke out between Mali and Burkina Faso on 25 December 1985 over possession of the Agacher Strip, an arid tract of land along their common border. About 65–70 men were killed before a cease-fire on 30 December. On 22 December 1986 the International Court of Justice, to which the dispute had been submitted in 1983, divided 2,952 sq km (1,140 sq mi) between the two countries in roughly equal parts.

### Democratization

On 26 March 1991, Lt. Col. Amadou Toumani Touré engineered a coup that toppled the Traoré government. Following bloody confrontations between youth groups and the army in 1990 and 1991 in which more than 200 were killed, Touré immediately set up a National Reconciliation Council which appointed a broad-based

Transitional Committee for Popular Salvation to oversee the transition to civilian democracy. In May 1991, a public trial broadcast over Malian radio eventually resulted in the conviction (February 1993) of former President Traoré and three associates, who received a death sentence for the March 1991 massacres.

A crisis was averted by a national conference, which included 48 political parties and some 700 civic associations. The participants met from 29 July to 14 August 1991, drafting new electoral rules, party statutes, and a new constitution, which was adopted by referendum in January 1992, and established an agenda for the transition. There were elections for municipal councilors and National Assembly deputies and, finally, presidential elections on 12 and 26 April 1992. Dr. Alpha Oumar Konaré, the leader of the Alliance for Democracy in Mali (ADEMA) became Mali's first democratically elected president with 69% of the vote. The Third Republic was launched. ADEMA also won 76 of the 116 National Assembly seats.

One of the last acts of the Touré transitional government was to negotiate (with Algerian mediation) a peace treaty in April 1992 with rebel Tuaregs in the north. The government acknowledged the Northerners' special status, and the Tuaregs renounced their claims to independence. Algeria agreed to guarantee the truce, which ended two years of fighting. In 1992 and 1993, between 60,000 and 100,000 Tuareg refugees returned from abroad. In February 1993, the government and the rebel group, the Unified Movements and Fronts of Azawad (MFUA), agreed to integrate MFUA guerrillas into the national army and, in May 1994, arrived at a further agreement to implement the 1992 National Pact. In May 1995, President Konaré personally visited refugee camps in bordering states in an effort to assure Tuareg refugees that it was safe to return home. In March 1996, after 3,000 Tuareg rebels had been integrated into the military, there was a massive ceremonial burning of their surrendered weapons in downtown Tombouctou. In January 2000, some 1,000 Tuareg returned home to northern Mali from Niger.

A culmination of pressures led to a new government in April 1993. Abdoulaye Sekou Sow replaced Younoussi Touré as prime minister, and the National Congress of Democratic Initiative (CNIT) took a portion of the ministerial portfolios. However, this government was short-lived. Student disgruntlement with the economy, high unemployment, the negative effects of structural adjustment, and the devaluation of the CFA franc contributed to much popular dissatisfaction, and to the fall of the Sow government in February 1994. In the subsequent government, ADEMA took 11 of the 16 ministries. Several ADEMA members left the party following Ibrahim Boubakar Keita's election as secretary of ADEMA and his appointment as prime minister. The detractors formed the Movement for Independence, Renaissance, and African Integration (MIRIA). The Patriotic Movement for Renovation (MPR) was also formed at this time, along with a splinter from the CNIT, the Party for National Liberation (PARENA). Upset with the pace of reforms, students continued their violent unrest, resulting in the January 1996 arrest of several student leaders. The crackdown was widely criticized, and in late January 1996, the CNIT introduced a motion of no confidence in parliament, which the government this time was able to survive.

Maliens took a step toward national healing in January 1999 when President Alpha Oumar Konaré commuted death sentenc-

es imposed on Traoré and his wife after they were convicted of embezzlement. The successful rural community elections of May–June 1999 strengthened Mali's quest for decentralized democracy. In spite of the low voter turnout caused by the boycott of the radical left, opposition groups won nearly 40% of the 10,000 council seats, though none of the parties won more than 10% of the seats. Given this new avenue for political participation, observers felt that the radical left, grouped under the Collectif des Partis Politiques de l'Opposition (COPPO), marginalized by its boycott, would want to contest future elections.

In February 2000, President Alpha Konaré announced a new national government spearheaded by Prime Minister Mande Sidibe, whose main task was to relaunch the economy. Konaré's cabinet included seven women and seven colonels. Six former ministers remained in government, including Foreign Minister Modibo Sidibe. Despite criticisms of corruption and failed economic policies, under Konaré, government became more representative and responsive to citizens. Society also became more open to debate. More than 40 newspapers, including 4 of 5 daily papers, were privately owned. Although the state controlled television, some 15 private radio stations operated in Bamako, and more than 40 stations broadcast freely up-country. Having served as chairman of ECOWAS, and being one of a few African heads of state to stand down after completing his constitutional term of office, Alpha Konaré enhanced Mali's reputation internationally.

On 28 April 2002, Amadou Toumani Touré, nicknamed "ATT," emerged the leader of the first-round presidential election with 29% of the vote, defeating former prime minister and rival, Ibrahim Boubacar Keita. In the run-off election on 12 May, Touré obtained 64% of the vote, defeating Soumaila Cissé to become the second democratically elected president of the Republic of Mali. Cissé won 35.6% of the vote. Eleven francophone African leaders witnessed the transfer of power from one constitutionally elected president to another—the first in Mali's history. New elections are due in May 2007.

### 13 GOVERNMENT

After independence, Mali was governed by the 1960 constitution, which provided for a national assembly. This body was abolished by the Keita regime in January 1968. Following the military coup of November 1968, the constitution itself was abolished and a provisional regime, the Military Committee for National Liberation, was established.

A long-awaited constitution was drawn up by the Military Committee in 1974 and endorsed in a public referendum on 2 June 1974. In this first national ballot since 1964, 99% of the electorate voted for acceptance. The constitution, which took full effect in 1979 and was amended in 1981, provided for a president with a six-year term, an 82-member national assembly, and a one-party system. The assembly was elected for a three-year term. There was universal suffrage at age 21. The 1979 constitution was replaced by a new constitution adopted by referendum in January 1992.

In 1997, the national assembly had 116 deputies with 10 parties represented. Presently, the total number of seats is 147 with members popularly elected serving five-year terms. Led by ATT, the Hope 2002 coalition holds 66 seats to 51 for ADEMA, and 30 held by other parties with the next rounds of elections scheduled for 2007.

The president, elected by popular vote, chooses the prime minister who selects a cabinet. Attempting to remain above party politics, ATT insisted that all of the main parties having won parliamentary seats in the July 2002 elections be represented by cabinet members in the government.

## 14 POLITICAL PARTIES

The first political party in Mali, the Sudan Progressive Party (Parti Soudanais Progressiste—PSP) was an affiliate of the French Socialist Party. It dominated political activity in French Sudan for 10 years. It was followed by the Sudanese Union, a revolutionary, anticolonial party, which had its main strength in the towns. In the two elections of autumn 1946, the Sudanese Union won 32% and 38% of the total votes.

The PSP continued to maintain its majority in the Territorial Assembly until the end of 1955, when a split in its ranks enabled the Union to capture a majority. By March 1957, the Sudanese Union won 60 of the 70 seats in the new Territorial Assembly, and in the Legislative Assembly election of March 1959 it obtained 76.3% of the votes and all the seats. After the break with Senegal, it emerged as the only party in the Republic of Mali, one with control that extended even to the smallest Muslim villages through its national political bureau. In the parliamentary elections of April 1964, the single list of 80 deputies presented by the Sudanese Union was elected by 99.5% of the voters. The party was disbanded at the time of the 1968 coup d'état.

The Democratic Union of Malian People (Union Démocratique de Peuple Malien—UDPM) was created as the sole legal political party in 1979. It chose the presidential candidate and the single list of candidates for the National Assembly. In National Assembly elections in 1979, UDPM candidates received 99.89% of the votes cast; in 1982, 99.82%; and in 1985, 99.47%. The party's general secretary since 1979 has been Gen. Moussa Traoré.

Shortly after the military coup in March 1991, some 48 parties were functioning, of which 23 contested the 1992 elections and 10 elected deputies to the National Assembly. The Alliance for Democracy in Mali (ADEMA) was the majority party, but with the change in prime minister and government on 12 April 1993, opposition parties were brought into cabinet; the National Committee for a Democratic Initiative (CNID) gained three cabinet posts.

In 1997, ADEMA held 76 seats in parliament, CNID held 9. Other parties represented in the National Assembly included the Sudanese Union/African Democratic Rally (US/RAD) with eight seats; the Popular Movement for the Development of the Republic of West Africa with six seats; Rally for Democracy and Progress (RDP) and the Union for Democracy and Development (UDD) with four seats each; and four other parties with the remaining seats. The UDPM, the former ruling party, attempted to relaunch itself in mid-1993, but the Supreme Court rejected its application for official recognition. It applied again in 1995 and was again rejected. Splits in ADEMA and CNID in 1995 resulted in the formation of the Movement for Independence, Renaissance, and African Integration (MIRIA)—headed by former vice president Traoré, the Patriotic Movement for Renovation (MPR), and the party for National Renovation (PARENA). In anticipation of the 1997 elections, PARENA announced it would form an alliance with ADEMA. However, flaws in the electoral process led to cancellation

of the results by the Constitutional Court. The repeat elections, though ruled free and fair by international observers, were boycotted by 18 opposition parties.

In 2000, ADEMA had not lost its grip on the National Assembly, holding 130 of 147 seats, with 12 more held by allied parties, and only 5 by the opposition. Despite the tradition of male domination in Mali, 18 seats were held by women, and women held 6 cabinet posts in the government.

Elections to the Assembly were held 14 July and 28 July 2002, giving Amadou Toumani Touré's government a substantial show of popular support with the following breakdown of seats: L'Espoir (hope) 2002 coalition 66, ADEMA 51, other parties 30. Despite Touré's attempt to ensure balance in the cabinet, the two main coalitions, Espoir 2002 and Alliance pour la République et la démocratie (ARD), criticized the new cabinet as being unrepresentative. L'Espoir 2002 objected to having received only two positions more than the ARD, even though they had backed the president in the second round of the elections. Nevertheless, Espoir did take most of the nonministerial parliamentary positions.

On 1 June 2003, in the presence of over 5,000 people gathered from around the country and abroad, Soumaila Cissé, vice president of ADEMA, who lost against Touré in the presidential election, announced the creation of a new party, Rally for Republic and Democracy (URD). The URD was expected to welcome an outflow of ADEMA supporters, perhaps as many as 25 deputies. ADEMA was working hard to stem the flow and estimated that no more than 10 of its deputies would defect to the URD. Legislative elections are to be held in July 2007.

## 15 LOCAL GOVERNMENT

In recent years, Mali has undertaken an ambitious decentralization program, which involves the capital district of Bamako and eight regions: Gao, Kayes, Kidal, Koulikoro, Mopti, Segou, Sikasso, and Tombouctou. The state retains an advisory role in administrative and fiscal matters, and it provides technical support, coordination, and legal recourse to these levels. Opportunities for direct political participation and increased local responsibility for development have been improved.

In August–September 1998, elections were held for urban council members, who subsequently elected their mayors. In May–June 1999, citizens elected their communal council members for the first time. Female voter turnout was about 70% of the total, and observers considered the process open and transparent. With mayors, councils, and boards in place at the local level, newly elected officials, civil society organizations, decentralized technical services, private sector interests, and donor groups began partnering to further development.

## 16 JUDICIAL SYSTEM

Mali's legal system derives from French civil law and customary law, and provides for judicial review of legislative acts in a Constitutional Court (which was formally established on 9 March 1994). Mali has not accepted compulsory ICJ jurisdiction.

A Supreme Court was established in Bamako in 1969. It is made up of 19 members, nominated for five years. The judicial section has three civil chambers and one criminal chamber. The Supreme Court has both judicial and administrative powers. The administrative section deals with appeals and fundamental rulings.

The Court of Appeal is also in Bamako. There are two magistrate courts of first instance, courts for labor disputes, and a special court of state security. Customary courts have been abolished. The 1992 constitution established a separate constitutional court and a High Court of Justice charged with responsibility for trying senior government officials accused of treason.

The 1992 constitution guarantees independence of the judiciary. Constitutional provisions for freedom of speech, press, assembly, association, and religion are generally respected. Nonetheless, the executive has considerable influence over the judiciary. The president heads the Superior Judicial, the body that supervises judicial activity, and the Ministry of Justice appoints judges and oversees law enforcement. Trials are public, defendants have the right to an attorney of their choice, and court-appointed attorneys are available to indigent defendants in criminal cases. However, the judicial system has a large case backlog resulting in long periods of pretrial detention.

## 17 ARMED FORCES

As of 2005, Mali's armed forces had 7,350 active personnel, all of whom were in the Army, which also included a 50 member naval force, and a 400 member air arm. The Army was equipped with 33 main battle tanks, 18 light tanks, and over 46 artillery pieces. The air arm had 16 combat capable aircraft made up of fighter aircraft. The service also operated two support and two utility helicopters. The naval arm consisted of three river patrol boats. Paramilitary forces number 4,800, including a gendarmerie of 1,800, a republican guard of 2,000, and a national police force of 1,000. In 2005, the defense budget totaled \$101 million.

## 18 INTERNATIONAL COOPERATION

Mali was admitted to the United Nations on 28 September 1960, and is a member of ECA and several nonregional specialized agencies, such as the FAO, UNSECO, UNIDO, the World Bank, IFC, IAEA, ILO, and the WHO. It also belongs to the African Development Bank, the ACP Group, G-77, ECOWAS, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), the African Union, the West African Development Bank, the West African Economic and Monetary Union, and the WTO.

With Senegal and Mauritania, Mali comprises the Senegal River Development Organization. It is also a partner in the Liptako-Gourma regional development scheme with Burkina Faso and Niger. Mali is a member of the International Committee for the Control of the Drought in the Sahel (CILSS)

As a member of ECOWAS, Mali is participating in the six-nation group mediating the conflict in neighboring Côte d'Ivoire. In 2003, Mali contributed 200–300 troops for peacekeeping operations in that war-torn country. Mali has also offered support to UN missions and operations in Liberia (est. 2003), Sierra Leone (est. 1999), Burundi (est. 2004), and the DROC (est. 1999). Mali is a member of the Nonaligned Movement.

In environmental cooperation, Mali is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Economic activity in Mali centers on domestic agricultural and livestock production. Vast stretches of Sahara desert limit Mali's agricultural potential and subject the country to severe, prolonged, recurrent drought. In periods of adequate rainfall, Mali approaches food self-sufficiency. The GDP growth rates are affected by the rainfall as well. GDP has gone to a high of 12.5% in 1989 when rainfall was good to negative growth in dry years. The growth rate of GDP in 2005 was estimated to be 6%.

About 80% of the population was engaged in agriculture as of 2005. Irrigated lands along the Niger River have been the focus of infrastructure development loans designed to increase the production of rice. Historically, livestock production was a mainstay of the Malian economy. About 10% of the population is nomadic. The dry savannah plains are free of the tsetse fly and production has been oriented to serve the growing market in Côte d'Ivoire to the south. Unfortunately, the severe droughts in the 1980s reportedly wiped out upwards of 80% of Malian herds, which were still recovering as of the early 2000s.

State-centered policies pursued in the years following independence were largely unsuccessful and led to a reintegration of the Malian economy into the CFA franc zone. Subsequent economic plans imposed on Mali, first by the French and then by the IMF, sought to dismantle the parastatals, privatize industry, and disengage the government from manipulative agriculture policies and price controls. These measures were hindered by the influential Malian civil service, the drought in the early 1980s and, in 1986, the fall in cotton prices, which led the government to suspend its debt-servicing obligations and to a suspension of IMF and World Bank credits. However, deficits fell sharply in 1990 and 1991 as a result of higher taxes and reduced civil service and parastatal demands. Unfortunately, the political repercussions of the government's austerity measures led to its downfall in 1991. The new government, however, continued the structural adjustment process, and the effort to reduce the budget deficits was intensified.

In January 1994 France devalued the CFA franc, cutting its value in half. The devaluation was designed to encourage new investment, particularly in the export sectors of the economy, and discourage the use of hard currency reserves to buy products that could be grown domestically. Unlike exporting countries, however, Mali imported most of its food, had little to export, and therefore, benefited little from the devaluation. A period of inflation, where the rate approached 35%, followed devaluation in 1994, but by 2001 it had moderated to a level of approximately 5% and in 2005 it was estimated to be 6%.

The country remains heavily dependent upon foreign aid, which amounted to 20% of GNP in 2002, mostly from France. Key sectors of economic growth in recent years have been in cotton production and gold: Mali as of 2005 was the leading producer and exporter of cotton in sub-Saharan Africa, and the second-largest producer of gold in West Africa.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Mali's gross domestic product (GDP) was estimated at \$11.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on

the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,000. The annual growth rate of GDP was estimated at 5.5%. The average inflation rate in 2002 was 4.5%. It was estimated that agriculture accounted for 45% of GDP, industry 17%, and services 38%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$138 million or about \$12 per capita and accounted for approximately 3.2% of GDP. Foreign aid receipts amounted to \$528 million or about \$45 per capita and accounted for approximately 12.7% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Mali totaled \$2.80 billion or about \$239 per capita based on a GDP of \$4.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.1%. In 2001 it was estimated that approximately 53% of household consumption was spent on food, 7% on fuel, 4% on health care, and 5% on education. It was estimated that in 2001 about 64% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

Of the total estimated workforce in Mali of 3.93 million in 2001 (the latest year for which data was available), agriculture and fishing accounted for an estimated 80%. In that same year, the estimated unemployment rate was 14.6%.

With the breakup of the Mali Federation in 1960, all the unions in the country joined together to form the National Union of Malian Workers (Union National des Travailleurs du Mali—UNTM). The UNTM was disbanded at the time of the 1968 coup, but was reestablished in 1970. Most workers organized in Mali belong to a union that is a member of UNTM federation. A second federation, the Syndicated Confederation of Malian Workers, was formed following a split in the UNTM in 1997. The two groups divide the nation's 12 unions between them. In 2002, essentially all wage earners were union members. The constitution provides for the right to strike within certain limitations in some sectors. For instance, civil servants and state-employed workers must engage in mediation and give two weeks notice of an intent to strike.

Workers in the formal industrial sector may start to work as young as 12, with parental permission. However, this provision does not apply to the millions of children working in rural areas or in the urban informal economy. Wage workers are given extensive protection under the labor laws, including a maximum workweek, a minimum wage, and a specified number of days of paid annual leave. In 2002, the minimum wage was about \$40 per month. The legal maximum workweek was set at 40 hours in industry, and 45 hours for agricultural laborers. Foreign, even illegal, workers are provided with the same protections.

## 2<sup>2</sup> AGRICULTURE

Only the southern part of Mali is suited to farming and less than 2% of Mali's area is cultivated. Agriculture accounted for about 38% of GDP, 36% of exports, and over 80% of the active labor force in 2003. Millet, rice, and corn are the basic food crops. Mil-

let and sorghum are cultivated mainly in the areas around Ségou, Bandiagara, and Nioro. Paddy rice is cultivated on irrigated farms in the area around Mopti, Ségou, and Niafouké. Cereals are produced for subsistence by 90% of farmers. Peanuts are grown in the Sudanese zone, as are cotton, fruits, vegetables, and henna. The shea tree nut, which grows wild, is exploited by Malians for its oil.

Output fluctuates widely as a result of the amount and distribution of rainfall. In 2004, coarse grain production was estimated at 2,118,000 tons. Production estimates in 2004 for principal agricultural crops grown for domestic use included millet, 815,000 tons; sorghum, 650,000 tons; sugarcane, 350,000 tons; corn, 365,000 tons; cassava, 24,000 tons; and sweet potatoes, 75,000 tons. The rice production figure was 877,000 tons.

Cotton is Mali's major foreign exchange earner. In 2004, Mali had a production of 239,500 tons. Buoyant world prices have increased foreign exchange earnings from cotton. In 2004, Mali's trade surplus in agricultural products was \$188.5 million.

The Niger Office, now a state-controlled agency, was set up in 1932 to aid in improving cotton and rice production. It developed the irrigation and modern cultivation of some 81,000 hectares (200,000 acres) in the dry inland delta of the Niger; in 2003, about 236,000 hectares (583,000 acres) in Mali were irrigated. The infrastructure includes a dam (2.6 km wide/1.6 mi), irrigation canals, ditches and dikes, and such installations as housing stores, warehouses, rice and oil mills, cotton-ginning factories, sugar refineries, soap factories, research stations, schools, and dispensaries. Growing cotton in irrigated fields did not succeed and was abandoned in 1970. All cotton is now grown in nonirrigated fields in the regions of Bamako, Ségou, and Sikasso.

## 2<sup>3</sup> ANIMAL HUSBANDRY

In 2005, there were an estimated 12,050,000 goats, 8,370,000 sheep, 7,700,000 head of cattle, 720,000 donkeys, 472,000 camels, 172,000 horses, 68,000 hogs, and 31 million chickens in Mali.

Virtually all cattle are owned by nomads. Cattle herding is centered in the Sahel (Nioro-Nara), the central Niger Delta (Ségou-Mopti-Bandiagara-Niafouké-Goundam), and the curve of the Niger (Tombouctou-Gao). A significant portion of trade in live animals is clandestine, because of higher prices in neighboring countries. Principal clients for cattle are Côte d'Ivoire and Ghana, and for sheep and goats, Côte d'Ivoire and Algeria. Meat and cattle are also exported to other African neighbors, such as Guinea, Senegal, Niger, and Benin.

There are two modern slaughterhouses, in Bamako and Gao. Total meat production was estimated at 248,700 tons in 2005. Livestock exports are the second-largest source of foreign exchange after cotton. Milk production was estimated at 608,440 tons (39% goat, 31% cow, 21% sheep), and the production of hides and skins at 15,040 tons.

## 2<sup>4</sup> FISHING

The Niger and its tributaries are extensively fished, and the Mopti region, where the Niger and Bani rivers flood the delta during the rainy season, accounts for 90% of the catch. The Senegal River accounts for most of the rest. Fishermen use nets, harpoons, and snares. About 90% of the fishing catch is dried or smoked for domestic consumption and export; Nile tilapia and North African

catfish are the main species. River fishing was severely affected by the 1968–74 and 1982–85 droughts. The total catch was 101,098 tons in 2003.

## 25 FORESTRY

Forest and woodland are estimated to cover some 13.1 million hectares (35.6 million acres), or about 10.8% of the total land area. A total of six forest reserves cover 229,400 hectares (566,900 acres). Mali's Water and Forests Service works to preserve and increase the amount and quality of general and classified forest domain and to assure reasonable exploitation. However, wood is Mali's primary energy source, and overcutting for fuel is a serious problem. Roundwood production in 2004 amounted to 5.38 million cu m (190 million cu ft), with 92% used for fuel.

## 26 MINING

Mali's mineral sector is dominated by gold mining. The country is Africa's third-largest gold producer, behind South Africa and Ghana, with gold accounting for 57% of Mali's total exports in 2003, or \$542 million. Total gold mine output (metal content) was 45,535 kg in 2003, down from 56,043 kg in 2002. The Sadiola Hill open-pit mine produced about 14,000 kg in 2003, from a resource of 120,000 kg. The Syama mine, which produced 8,000 kg, was mothballed in 2001, pending higher gold prices; it had the country's largest resources, 196,000 kg. The Morilla gold mine, opened in 2001, produced 24,700 kg in 2003, from a resource of 140,000 kg. The Loulo (105,000-kg resource), Yatela, Segala, and Alamoutala deposits were in development. Since 1997, Mali has attracted \$850 million in new gold development investments and expected to produce 50,000 kg per year by 2006. Large-scale gold mining began in 1984, at Kalana, southwest of Bougouni, with aid from the former USSR.

Mali, in 2003, also produced gypsum and salt. Salt output in that year totaled 6,000 metric tons. Gypsum production in 2003 totaled an estimated 500 metric tons. Salt mining provided an evocative link between Mali's present and past. Artisanal gold miners have also found diamonds in the Kenieba area.

Mali's mining sector remains undeveloped due to a lack of infrastructure needed to support mining. Bauxite, iron, calcium, kaolin, copper, manganese, phosphate, tin, zinc, lead, marble, and lithium deposits have been located. Manganese reserves were 7.5 billion tons, of 30–40% grade ore. Western Mali had numerous bauxite deposits, ranging from 10 to 580 million tons, at 2–48% aluminum content. Phosphate reserves were estimated at 10 million tons, with anhydrous phosphate content of 31%. There was a marble quarry at Sélinkégni, a limestone quarry at Diamou, and a phosphate complex at Bourem. Mineral exploration interest was focused on diamond, gold, and oil.

All mines were owned by the state; some quarries were privately owned. At the request of mining companies, the government set up a regional mining office in Kayes, to eliminate the 500 km journey between Bamako and the primary mining region in western Mali, for routine administrative operations. The government eliminated the tax on insurance for vehicles used on mining sites, and reduced taxes on sales by mining companies (from 6–3%), and on proceeds from the transfer of shares in mining companies (from 20–10%). The government also lengthened the tenure for medium-scale mining permits, and introduced a four-year permit

for small-scale mining. To address Mali's underdeveloped transportation network, the Africa Development Fund approved a loan to finance the multinational Kankan-Kouremale-Bamako road project in Guinea and Mali.

## 27 ENERGY AND POWER

Mali, as of 1 January 2003 had no known reserves of crude oil, natural gas, or refining capacity.

In 2002, the consumption and imports of petroleum products each averaged 4,070 barrels per day. There was no demand or imports of natural gas in that same year.

In 2002, Mali's electrical generating capacity stood at 0.250 million kW, of which 54% was dedicated to conventional thermal fuels, and the remainder to hydroelectric power. In that same year, electric power output totaled 0.668 billion kWh, of which almost 75% came from hydroelectric sources, and the rest from conventional thermal fuel sources. Consumption of electricity in 2002 was 0.621 billion kWh. However, given Mali's drought-prone circumstances, hydroelectric production is unreliable, and production at the Selingué plant is suspended when reservoir levels are low.

## 28 INDUSTRY

Mali has a small industrial sector, mostly enterprises producing textiles and consumer goods. There is growing local demand for consumer goods. Textiles account for about 50% of export value. In 2004, industry accounted for 25% of GDP. In 2002, the government was undertaking a program of privatization and restructuring of state-owned enterprises.

Groundnut-oil, rice-polishing, fruit-preserving, sugar-distilling, tea, and cottonseed-oil and cottonseed-cake plants are in operation, as are slaughterhouses. Industrial facilities include a vinegar factory, a cigarette factory, a soft-drink plant, a flour mill, a shoe factory, a tannery, and two textile plants. Other plants make tiles, furniture, farm implements, batteries, paint, and cosmetics and assemble radios, bicycles, and motorcycles. There are a few construction related facilities, including a brick factory, a ceramics factory, and a cement plant. Mali has no known oil or natural gas reserves.

## 29 SCIENCE AND TECHNOLOGY

Mali has a shortage of trained scientists and technicians and relies heavily on foreign, chiefly French, assistance. A French tropical agronomy research center is located in Bamako. The National Directorate for Meteorology, also in Bamako, publishes bulletins on agrometeorology and climatology. National centers for fruit and zootechnical research are located in Bamako. A national association for mineral research and mining is located in Kati. The National Center of Scientific and Technological Research in Bamako coordinates all research activity in Mali. National schools of engineering and of medicine and pharmacology are also in Bamako. The Rural Polytechnic Institute of Katibougou provides instruction and conducts research in agronomy, agricultural economics, stockbreeding, forestry, veterinary science, and rural technology.

In 1987–97, science and engineering students accounted for 12% of college and university enrollments.

### 30 DOMESTIC TRADE

Following independence, the government initiated an extensive program for the organization of rural cooperatives in the villages, with central purchasing organizations in the chief towns of the administrative districts. However, Mali's postindependence socialism has recently given way to emphasis on free trade and private enterprise. Agriculture is the basis of the economy with about 70% of the population employed in farming.

Since 1988, the government has been working on economic reforms that include a large scale privatization process and legal changes to encourage domestic commerce. For instance, business applications can generally be processed through a single ministry, in a program called *guichet unique* or "one window." This reform allows businesses to open sooner and with far less red tape than before. The government has also eliminated price controls on consumer goods and developed both a commerce code and commercial courts to encourage fair business development.

Normal business hours are from 8 AM to noon and from 3 to 5 PM, Monday–Saturday. On Fridays, most businesses close at noon. Banks are open from 8 AM to 2:30 PM, Monday–Thursday, and from 8 AM to 12:30 PM, Friday and Saturday.

### 31 FOREIGN TRADE

Cotton, gold, and livestock are Mali's leading exports. Increased cotton production and rising world prices have increased foreign exchange receipts, as has increased gold production. The 50% devaluation of the CFA franc in 1994 helped boost cotton, livestock, and other exports but doubled the cost of imports. Comparing 1994 to the index year of 1987, export activity decreased by 5% while import activity rose by 10%. Machinery and equipment, construction materials, petroleum, foodstuffs, and textiles are imported.

### 32 BALANCE OF PAYMENTS

Mali's chronic deficit in trade and other goods and services is largely offset by aid from other governments and international or-

Country	Exports	Imports	Balance

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

ganizations. The balance of payments is sharply influenced by the volume in cotton exports and the world price of cotton, the price of gold, the volume of official livestock exports, and the value of government-purchased imports. The value of exports covers only about 75% of imports. Mali's minimal industrial base and its dependence on imported machinery and petroleum negatively impact its balance of payments.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Mali's exports was \$988 million while imports totaled \$1,185 million resulting in a trade deficit of \$197 million.

### 33 BANKING AND SECURITIES

In 1959, the Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest—BCEAO) succeeded the Currency Board of French West Africa and Togo as the bank of issue for the former French West African territories, known now as the franc zone: Benin, Burkina Faso, Côte d'Ivoire, Mali, Niger, Senegal, and Togo. Foreign exchange receipts of the member states went into the franc zone's exchange pool, which in turn covered their foreign exchange requirements. In July 1962, however, Mali withdrew from the BCEAO and West African Monetary Union and established a bank of its own, the Bank of the Republic of Mali, which issued a new currency, the Malian franc.

In 1967, Mali returned to the franc zone, with its franc set at half the value of the CFA franc. In March 1968, the banking system was reorganized, and the Central Bank of Mali was established as the central issuing bank. In December 1982, Mali's application to rejoin the West African Monetary Union was rejected, as Upper Volta (now Burkina Faso), which had a border dispute with Mali, continued to oppose Mali's readmission until 1983. In 1984 it rejoined the BCEAO and the monetary union.

In addition to the Central Bank, commercial banks in 1997 included: the Bank of Africa, Banque Commerciale de Sahel, Banque

Malienne de Crédit et du Depots, and the Financial Bank Mali. Development banks in Mali include the Banque de Développement du Mali and the Banque Nationale de Développement Agricole. Domestic savings have increased since 1994. Along with other members of the Union économique at minétaire ouest-africaine (UEMOA), Mali now faces the problem of diversifying credit instruments in favor of small and medium-sized enterprises, which have historically relied upon informal sources of investment.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$514.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$664.6 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

### 34 INSURANCE

There were at least six insurance companies in Mali in 1995, the largest being the National Fund of Insurance and Reinsurance, a state company. Third-party motor insurance is compulsory.

### 35 PUBLIC FINANCE

Foreign aid accounted for 20% of Mali's budget in 1999. In order to fulfill its IMF responsibilities, the country has been privatizing companies for the past several years. Only about 14 companies remain in the hands of the government. Mali was judged eligible for the Heavily Indebted Poor Countries (HIPC) initiative and has been benefiting from it since 2000 as a budgetary support.

The US Central Intelligence Agency (CIA) estimated that in 2002 Mali's central government took in revenues of approximately \$764 million and had expenditures of \$828 million. Revenues minus expenditures totaled approximately -\$64 million. Total external debt was \$2.8 billion.

### 36 TAXATION

Elements of a progressive taxation system were introduced in 1992. There is a tax on business profits and a general income tax with a graduated rate. There is also a value-added tax (VAT) with a standard rate in 2003 of 15% for most goods and services, as well as an excise tax on alcoholic beverages, fuels and lubricants, cartridges and bullets, tobacco, and other goods. In addition, there are taxes on property, livestock, motor vehicles, and firearms and a head tax, among others. There are also registration and stamp fees.

### 37 CUSTOMS AND DUTIES

Customs duties constitute the leading source of government income and are imposed on both imports and exports. Import policies have been liberalized and import licensing eliminated since 1988. However, imports from Israel and South Africa are banned.

Duties on most goods range from 5–30% for imports from countries that do not belong to the West African Economic Community (CEAO), except for taxes on luxury goods, including cars and videocassette recorders, which vary from 80–100%. Duties for imports from CEAO members are approximately half the rate charged nonmembers.

## 38 FOREIGN INVESTMENT

Foreign investment in Mali is relatively small and is mainly in retail trade or light industry. With independence and Mali's announcement of an economic policy aimed at "planned socialism," private foreign investment came to a standstill in 1961. By 1968, after seven years of almost no private foreign investment, the trend was reversed and Mali specifically requested private foreign investment to aid its development. The parastatal sector was to be dismantled, although it has remained a significant part of the economy.

The 1991 investment code offers certain incentives, mostly in the form of tax holidays of five to ten years to companies prepared to invest in certain areas. In the three free zones, companies are granted permanent exemption from all fees and taxes, but must sell 20% of their production on the national market. Foreign and national investors are treated equally by law.

In 1998, annual foreign direct investment (FDI) inflows to Mali fell to \$35.8 million, down from \$74.3 million in 1997. FDI inflow increased to \$51.3 million in 1999, and for 2000 and 2001, averaged \$104.6 million. In 2002 FDI peaked at \$244 million but fell to \$132 million in 2003 and \$180 million in 2004. Mali's share of world FDI inflows during the period 1998 to 2000 was only 70% of its share of world GDP, although this was an improvement on its performance a decade earlier when its share of world inward FDI was only 30% of its share of world GDP. The recent increases in FDI are a reflection of international investment in mining and oil exploration.

## 39 ECONOMIC DEVELOPMENT

Fiscal management reform and continued dependence on foreign aid into the foreseeable future are the hallmarks of the economic development effort in the coming years. The 1994 devaluation of the CFA (Communauté Financière Africaine) franc resulted in increased exports of cotton, livestock, gold, and other products, but raised the price of imports. Strong prices for cotton worldwide, combined with record production in Mali in 1995, were both positive factors for the Mali economy. However, the agricultural sector is still highly vulnerable to drought and, in spite of its natural potential, unlikely to produce at self-sufficiency levels. In 1999, the EU provided \$82 million for the development of roads and bridges in Mali, and the West African Development Bank offered a loan to upgrade urban roads.

The government has taken steps to liberalize the regulatory climate in order to encourage foreign investment. Price controls on consumer goods (including on petroleum products), import quotas, and export taxes have all been eliminated. Privatization of state-owned enterprises continued throughout the 1990s and into the 21st century. In 1999, Mali negotiated a \$64 million four-year Poverty Reduction and Growth Facility (PRGF) Arrangement with the International Monetary Fund (IMF). In 2003, Mali was granted \$675 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative, to improve governance, strengthen social services, and develop infrastructure and key productive sectors. Economic development has been hindered by drought and falling world cotton prices.

## 40 SOCIAL DEVELOPMENT

Social welfare services are available mainly in urban areas, basically as an extension of labor benefits and medical aid under the labor code, which includes provisions for medical care, workers' compensation, and retirement benefits. Pensions were paid for by employee contributions of 3.6% and employer contributions in the amount of 5.4%. A system of family allowances, implemented in 2004 for wage earners, provides maternity and children's allowances, along with classes in prenatal and infant care. Employers are required to provide free sick leave to their employers, as well as maternity benefits equal to 100% of earnings for 14 weeks. Under tribal organization, the individual's basic welfare needs are traditionally cared for by the group. This system, however, is breaking down as the country develops.

The government has made a special effort to improve the status of women, and a few women have entered government employment. Yet, social and cultural factors still sharply limit educational and economic opportunities for most women. Despite legal protections, most women face active discrimination in the areas of divorce, inheritance, and child custody. Domestic abuse and violence against women is a common and tolerated problem. Women have little access to legal services. Female genital mutilation, a painful and often life-threatening procedure, is also commonly performed on young girls. It was estimated in 2004 that 95% of women underwent this procedure. The government is actively seeking to eliminate this practice by 2008. Child labor persists.

Human rights are generally respected although prison conditions remain poor.

## 41 HEALTH

Most health care is provided by the public medical services. At Bamako are the Institute of Tropical Ophthalmology and the Marchoux Institute for Leprosy, which, in addition to treating patients, carry out research. The number of private doctors and well-equipped medical institutions is small. There were fewer than five physicians per 100,000 population in 2004. Total health care expenditure was estimated at 4.3% of GDP. The pharmaceutical policies adopted in recent years have resulted in the destruction of the public network of drug distribution. Despite the high level of health care investment, lack of organization and misappropriation of money has impaired the effectiveness of the health care system.

The principal diseases are malaria, leprosy, tuberculosis, enteritis and other intestinal diseases, cholera, pneumonia, and infectious and parasite-related diseases such as schistosomiasis, onchocerciasis, and trypanosomiasis. Anemia, malnutrition, and tetanus are also widespread. The HIV/AIDS prevalence was 1.90 per 100 adults in 2003. As of 2004, there were approximately 140,000 people living with HIV/AIDS in the country. There were an estimated 12,000 deaths from AIDS in 2003.

Malaria is widespread, as is guinea worm. In 2000, 65% of the population had access to safe drinking water and 69% had adequate sanitation. Immunization rates for children up to one year old were: tuberculosis, 76%; diphtheria, pertussis, and tetanus,

52%; polio, 52%; and measles, 56%. Diarrheal diseases still claim the lives of children under the age of five.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 48.37 and 18.32 per 1,000 people. About 7% of married women (ages 15 to 49) used contraception as of 2000. The infant mortality rate was 109 per 1,000 live births in 2005, one of the highest in the world. The maternal mortality rate in 1998 was high at 580 per 100,000 live births. The average life expectancy was 48.64 years in 2005, up from 42 years in 2000. An estimated 80% of women underwent female genital mutilation.

## 42 HOUSING

Providing housing in the wake of rapid urbanization has been an ongoing challenge for the government of Mali. In 2002, it was estimated that about 45% of all residents in Bamako were living in substandard settlement housing, often in neighborhoods defined as slum or squatter settlements. Less than 2% of the district population had connections to sewage facilities. Only about 17% had in-home water connections. The government has tried to set new programs in place to stop the spread of the informal slum and squatter settlements and to upgrade such housing to higher standards.

Though formal housing structures in Bamako are like those of a European city. Elsewhere, housing ranges from similar urban structures to the tents of Tuareg nomads, the circular mud huts with thatched roofs characteristic of the indigenous African villages, and traditional Sudanese architecture. The latter employs a common building material called *banco*, a mixture of wet mud and straw that dries into a hard, almost cement-like consistency. This is applied over wooden frames and can be used for buildings of several stories. The buildings resemble those in North Africa and the Middle East.

Government activity is largely concentrated on improvement of urban housing and sanitation. The Real Estate Trust, a public corporation established in 1949, provides housing loans to persons wishing to build on their own land.

## 43 EDUCATION

The Malian school system begins with an initial primary cycle of six years, followed by a six-year cycle of secondary schooling (divided into two three-year stages). At the upper secondary level, students may opt to attend technical schools (two to three years) or vocational schools (four years). The academic year runs from October to June.

In 2001, less than 2% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 44% of eligible students; 50% for boys and 39% for girls. In 1998, there were 188,109 pupils enrolled in secondary schools. It is estimated that about 40% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 63:1 in 2000; the ratio for secondary school was about 29:1.

The University of Mali has four faculties: medicine, pharmacy and dentistry; technical sciences; juridical and economic sciences; and languages, arts, and humanities. The university also has schools for business administration, engineering, and teacher

training. In Koulikoro is the Rural Polytechnic Institute of Kati-bougou. In 2003, about 2% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 19%, with 26.7% for men and 11.9% for women.

As of 2003, public expenditure on education was estimated at 3% of GDP.

#### 44 LIBRARIES AND MUSEUMS

In Bamako are located the National Library and Archives (20,000 volumes), a municipal library, and the library of the Islamic Center, opened in 1987. In addition, the French Cultural Center, with 27,000 volumes, serves as a public library, and there is a US Information Service library as well as several other privately run libraries. The Public Reading Franco-Malian Operation, founded in 1977, sponsors about 52 public-reading libraries in the district of Bamako. Tombouctou has a center of historic research with libraries and museums containing valuable Arabic manuscripts. The National Museum, which also has a library, is in Bamako, as is the Sudanese Museum, detailing the country's history as the former French Sudan. Regional museums are located in Gao and Sikasso, and there is a historical museum in Tombouctou.

#### 45 MEDIA

In 2003, there were an estimated five mainline telephones for every 1,000 people. The same year, there were approximately 23 mobile phones in use for every 1,000 people.

In 2004, the state-owned broadcaster, Office de Radiodiffusion Television du Mali (ORTM) operated the nation's only television station and one radio station. There were over 125 other privately operated radio stations that year. A few stations broadcast in French and English. In 2003, there were an estimated 180 radios and 33 television sets for every 1,000 people. The same year, there were 1.4 personal computers for every 1,000 people and two of every 1,000 people had access to the Internet.

In recent years, several newspapers were forced to shut down for lack of adequate funding. Those papers still in business are often published sporadically. On average, there may be 10 or 12 papers available for purchase on any given day. *L'Essor*, which is controlled by the government, had a circulation of 3,500 in 2002. *Les Echos*, affiliated with the ruling party, has a circulation of about 25,000. The *Bulletin Quotidien* is a daily paper published by the Chamber of Commerce and the *Journal Officiel de la Republique du Mali* serves as the official publication of the president and the secretary general. Several government and privately published periodicals are also available.

The constitution also provides for free speech and a free press, and the government is said to respect these rights in practice.

#### 46 ORGANIZATIONS

There is a Chamber of Commerce and Industry in Bamako and a Chamber of Commerce in Kayes. There are youth and women's affiliates of the UDPM. The government is hoping to increase food production through the formation of village cooperatives. The

Committee for the Coordination of NGOs. In Mali works with organizations involved with emergency relief, environmental improvement and preservation, and community development.

A Junior Chamber program is available for youth. There are a number of sports associations throughout the country and volunteer service organizations, such as the Lions Clubs International, are also present. A few health organizations are active. There are national chapters of the Red Cross Society, Caritas, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

A government tourist organization was created in April 1974 to develop hunting, fishing, and sightseeing in Mali, particularly in the areas around Mopti, Tombouctou, and Gao. There are modern motels in Bamako and in Tombouctou, the ancient capital of Muslim learning and culture, previously forbidden to foreigners. Other attractions are Mali's national park and game reserves. Football (soccer) is a popular sport.

A visa must be obtained for entry into Mali. A vaccination certificate for yellow fever is also needed if traveling from an infected area. Typhoid, tetanus, meningitis, and hepatitis immunizations are recommended. There were 69,691 tourists who arrived in Mali in 2003. Hotel rooms numbered 3,907 with 5,066 beds. Tourist expenditure receipts totaled \$105 million in 2002.

In 2005, the US Department of State estimated the daily cost of staying in Bamako at \$182, and other areas of Mali at \$122.

#### 48 FAMOUS MALIANS

Early figures associated with the area of present-day Mali include Mansa Musa (r.1312–37), ruler of the Mali Empire, and Sonni 'Ali Ber (r.1464–92) and Askia Muhammad I (r.1492–1528), rulers of the Songhai Empire. Later figures include al-Hajj 'Umar (1797–1864), who plunged the entire area into a bloody holy war before he was killed while trying to put down a rebellion, and Samory Touré, (1835–1900), who fought the French at the head of a Malinké (Mandingo) army for 16 years (1882–98). Modibo Keita (1915–77) was, until November 1968, a leading figure in the political life of the country. He became the first president of the Republic of Mali in 1960. Moussa Traoré (b.1936) was president of Mali from 1969 to 1991. Alpha Oumar Konaré (b.1946) was elected president in 1992; he served until 2002. Brigadier Gen. Amadou Toumani Touré (b.1948) is considered the founder of Mali's democratic movement; he won the presidential elections in 2002.

#### 49 DEPENDENCIES

Mali has no territories or colonies.

# MAURITANIA

Mauritanian Islamic Republic  
[French] *République Islamique de Mauritanie*;  
[Arabic] *Al-Jumhuriyah; al-Islamiyah al-Muritaniyah*

**CAPITAL:** Nouakchott

**FLAG:** The flag consists of a gold star and crescent on a light green field.

**ANTHEM:** *Mauritania* (no words).

**MONETARY UNIT:** The ouguiya (UM), a paper currency of 5 khoums, issued by the Central Bank of Mauritania, replaced the Communauté Financière Africaine franc on 29 June 1973. There are coins of 1 khoum and 1, 5, 10, and 20 ouguiyas, and notes of 100, 200, 500, and 1,000 ouguiyas. UM1 = \$0.00380 (or \$1 = UM263.03) as of 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; African Liberation Day, 25 May; Anniversary of the Proclamation of the Republic, 28 November. Movable religious holidays include Laylat al-Miraj, 'Id al-Fitr, 'Id al-Adha, 1st of Muharram (Muslim New Year), and Milad an-Nabi.

**TIME:** GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in West Africa, Mauritania has an area of 1,030,700 sq km (397,955 sq mi). Mauritania extends 1,515 km (941 mi) NE–SW and 1,314 km (816 mi) SE–NW. Comparatively, the area occupied by Mauritania is slightly larger than three times the size of the state of New Mexico. It is bordered on the NE by Algeria, on the E and S by Mali, on the SW by Senegal, on the W by the Atlantic Ocean, and on the NW and N by the Western Sahara, with a total estimated boundary length of 5,828 km (3,621 mi), of which 754 km (469 mi) is coastline.

Mauritania's capital city, Nouakchott, is located on the Atlantic Coast.

## <sup>2</sup>TOPOGRAPHY

There are three distinct geographic regions in Mauritania: a narrow belt along the Senegal River valley in the south, where soil and climatic conditions permit settled agriculture; north of this valley, a broad east–west band characterized by vast sand plains and fixed dunes held in place by sparse grass and scrub trees; and a large northern arid region shading into the Sahara, advancing south several kilometers each year, and characterized by shifting sand dunes, rock outcroppings, and rugged mountainous plateaus that in a few places reach elevations of more than 500 m (1,640 ft). The high point, Mount Ijill at about 915 m (3,002 ft), is near Fdèrik. The country is generally flat.

## <sup>3</sup>CLIMATE

Although conditions are generally desertlike, three climatic regions can be distinguished. Southern Mauritania has a Sahelian climate; there is one rainy season from July to October. Annual

rainfall averages 66 cm (26 in) in the far south; at Nouakchott the annual average is 14 cm (5.5 in).

Trade winds moderate the temperature in the coastal region, which is arid. The average maximum temperature at Nouadhibou for January is 26°C (79°F), and for October 32°C (90°F); average minimums are 13°C (55°F) for January and 19°C (66°F) for July.

Most of Mauritania north of Atar—about two-thirds of the country—has a Saharan climate. Daytime temperatures exceed 38°C (100°F) in most areas for over 6 months of the year, but the nights are cool. Average annual rainfall at Atar is 10 cm (4 in).

## <sup>4</sup>FLORA AND FAUNA

In the desert there are some cacti and related species; oases support relatively luxuriant growth, notably date palms. In the south are grasses and trees common to the savanna regions, particularly the baobab tree, but also palms and acacias. The far south, in the Senegal River valley, has willows, jujube, and acacias. Lions, panthers, jackals, crocodiles, hippopotami, hyenas, cheetahs, otters, and monkeys survive in the south; in the north there are antelopes, wild sheep, ostriches and other large birds, and ducks. As of 2002, there were at least 61 species of mammals, 172 species of birds, and over 1,100 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Deforestation is a severe problem because of the population's growing need for firewood and construction materials. Slash-and-burn agriculture has contributed to soil erosion, which is aggravated by drought. The expansion of the desert into agricultural lands is accelerated by limited rainfall, deforestation, the consumption of vegetation by livestock, and wind erosion. The expansion of domestic herds onto grazing land formerly restricted to wildlife has

also taken a serious toll on the environment, both in erosion and in encroachment on wildlife species. In 2003, only 1.7% of Mauritania's total land area was protected. The nation also has a problem with water pollution, resulting from the leakage of petroleum and industrial waste along with sewage into the nation's ports and rivers. A government-built dam on the Senegal River is expected to alleviate the country's water problems and stimulate agriculture.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 7 types of mammals, 5 species of birds, 2 types of reptiles, 11 species of fish, and 1 species of invertebrates. Threatened species include the African gerbil, African slender-snouted crocodiles, and barbary sheep. The Sahara oryx has become extinct in the wild.

## 6 POPULATION

The population of Mauritania in 2005 was estimated by the United Nations (UN) at 3,069,000, which placed it at number 132 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 4,973,000. The overall population density was 3 per sq km (8 per sq mi), but varies significantly. More than 90% of the population lives in the southern quarter of the country, including the Senegal River Valley.

The UN estimated that 40% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.34%. The capital city, Nouakchott, had a population of 600,000 in that year.

## 7 MIGRATION

In seasonal grazing migrations, cattle are moved every year and are led to neighboring Senegal for sale. The droughts of the 1970s and early 1980s led to mass migrations to the towns. The population was 12% nomadic in 1988, compared to 83% in 1963. Some tribesmen of the Senegal River valley go to Dakar in Senegal for seasonal work or to engage in petty trade. A few thousand Mauritians live in France. In 2000 the number of migrants in the country was 63,000. In 2000 remittances were \$2 million, down from \$14 million in 1990.

There were 6,148 Mauritanian refugees in Mali as of 2004 and 2,364 Mauritanians applied for asylum in France. In that same year there were also 19,777 Mauritanian refugees in Senegal, all assisted by the United Nations High Commissioner for Refugees (UNHCR).

Between June 1995 and 1997, 36,000 Malian refugees in Mauritania returned home, with 6,782 Malian refugees still remaining. By the end of 2004, some 3,500 Malians remained in Mauritania, as did 26,000 Western Saharans. In 2004, there were 473 refugees and 117 asylum seekers in Mauritania. In 2005, the net migration rate was an estimated  $-0.04$  migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Moors (Maures), the main ethnic group, are a Caucasoid people of Berber and Arab stock, with some Negroid admixture. The Moors are further divided into ethno-linguistic tribal and clan groups. Other groups, all black, are the Tukulor, Sarakolé, Fulani (Fulbe), Wolof, and Bambara. The black population is found largely in southern Mauritania and in the cities. About 40% of the total population are a Moor/black admixture, 30% are Moors, and 30% are black. There is also small numbers of Europeans, mainly French and Spanish (the latter from the Canary Islands), and a small colony of Lebanese traders. Freed slaves or the descendants of freed slaves are known as *haratin*.

## 9 LANGUAGES

Arabic is the official language. The Arabic spoken in Mauritania is called Hasaniya. Wolof, Peular, and Soninke are spoken in southern Mauritania and recognized as national languages. French is widely used, particularly in business, but its status as an official language was eliminated in the 1991 constitution.

## 10 RELIGIONS

The constitution declares Islam to be the religion of both the state and its people. As such, over 99% of the population is Muslim, most of whom are Sunnis. The Qadiriya and the Tijaniya are influential Islamic brotherhoods. The few thousand Christians and a very small number of Jews are mostly foreigners. Though proselytizing is not legally prohibited, it is discouraged, particularly through restrictions on the publishing and distribution of materials that contradict or threaten the tenets of Islam.

## 11 TRANSPORTATION

Modern forms of transport are still undeveloped. There are few paved roads, only one freight railroad, two deep-water ports, and two airports that can handle international traffic.

In 2002, of some 7,720 km (4,797 mi) of roads, only 830 km (516 mi) were paved. There were only three paved highways, from Nouakchott north to Akjoujt and south to Rosso, continuing to Saint-Louis, Senegal. A 1,000-km (620-mi) east–west road between Nouakchott and Néma, started in 1975, was completed in 1985. A track continues north from Akjoujt to Bir Mogreïn, then branches northwest into Western Sahara and northeast into Algeria. Mauritania had about 11,450 passenger cars and 6,850 commercial vehicles in 2003.

As of 2004, Mauritania had 717 km (446-mi) of railway, all of it standard gauge, which linked the iron mines at Zouérate, near Fdèrik, with the port at Point-Central, 10 km (6 mi) south of Nouadhibou. A 40-km (24-mi) spur was built in 1981 to accommodate the planned new mine at El-Rhein. There is a wharf at Nouakchott; work on the construction of a deepwater port, financed by China, was completed in 1986. This "Port of Friendship" is the main commercial port and receives about 90% of imported goods. Nouadhibou, also a port, underwent extensive reconstruction, restoration, and equipment renewal in 1991. Other important ports and harbors include Bogue, Kaedi, and Rosso. The Senegal River offers over 220 km (137 mi) of year-round transport.

In 2004, there were an estimated 24 airports, 8 of which had paved runways as of 2005. The only airports that can handle long-

LOCATION: 14°42' to 27° N; 4°30' to 17°7' W. BOUNDARY LENGTHS: Algeria, 463 kilometers (288 miles); Mali, 2,237 kilometers (1,390 miles); Senegal, 813 kilometers (505 miles); Atlantic coastline, 754 kilometers (468 miles); Western Sahara, 1,561 kilometers (970 miles). TERRITORIAL SEA LIMIT: 12 miles.

distance jets are at Nouakchott and Nouadhibou. There are smaller airports at Ayoûn-el-'Atroûs, Akjoujt, Atar, FdÉrik, Kaédi, Kifa, and Néma. Air Mauritanie (60% state owned) provides domestic flights as well as service to the Canary Islands and Senegal. The multinational Air Afrique also operates within Mauritania. In 2003, about 116,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Tens of thousands of years ago, the Sahara was both lush and filled with game. Desiccation eventually forced the inhabitants southward, a process that in the 3rd and 4th centuries AD was speeded by the Berbers, who had domesticated the camel. As the Berbers pressed down from the north toward the Senegal River valley, black Africans who lived in the path of the invaders moved further to the south. From the 9th century, a Berber tribe, the Lamtuna, and two other Berber groups cooperated in the control of a thriving caravan trade in gold, slaves, and ivory from the south. They took desert salt and north African goods in exchange.

The Almoravids, a group of fervent Muslim Mauritanian Berbers conquered northwest Africa and much of Spain in the 11th century. They had, in turns, hostile and peaceful trade relations with the black African empire of Ghana. Their authority in the Mauritanian region had declined by the late 11th century. After the Almoravid empire was destroyed in the 12th century, the Mali kingdom, successor to Ghana, extended over southeastern Mauritania and dominated trade in the area. Later Mali was succeeded by the Songhai of Gao, whose empire fell to Moroccan invaders in 1591. Meanwhile, during the 14th and 15th centuries, nomadic Arab tribes of Yemeni extraction, the Banu Maqil, moved into Mauritania. By the 17th century, they had been able to establish complete dominance over the Berbers. They called themselves the Awlad-Banu Hassan. The Arabs and Berbers in Mauritania have since thoroughly intermingled with an Arabized Mauritania.

The Portuguese were the first Europeans to arrive, attracted in the 15th century by the trade in gold and slaves; later, the gum arabic trade became important. Competition for control was keen among Portuguese, French, Dutch, and English traders. The issue was resolved in 1815 when Senegal was awarded to France in the post-Napoleonic war settlement. During the 19th century, the French explored the inland regions and signed treaties with Moorish chieftains. Penetration of the desert zone was accelerated around the turn of the century in attempts to thwart Moorish raids on the Senegal River tribes. A Frenchman, Xavier Coppolani, was responsible for the signing of many treaties, and played a key role in the extension of French influence in the area. By 1903, he was in control of Trarza, the Moors' main base for raids on the river tribes. Coppolani was killed in 1905, but his work was completed by Gen. Henri Gouraud, who gained effective control of the Adrar region by 1909. Mauritania was established as a colony in 1920, but its capital was located at Saint-Louis in Senegal. Mauritania thus became one of the eight territories that constituted the French West Africa federation.

In 1946 a Mauritanian Territorial Assembly was established, with some control over internal affairs. During the next 12 years, political power increasingly passed to local political leaders. Mauritania voted for the constitution of the Fifth French Republic at the referendum of 28 September 1958; it thus became a self-gov-

erning member of the French Community. The Islamic Republic of Mauritania was proclaimed in November 1958, while complete independence was attained on 28 November 1960.

Since independence, Mauritania has experienced three successful coups in up to 10 attempts. The grounds for these lay in part in the human and civil rights abuses committed by the government. The black minority, located largely in the south, has staged anti-discrimination protests and campaigned against slavery in Mauritania. Officially, slavery has been banned since 1981; but a law that makes slavery a punishable offence has yet to be implemented. As of 2006, the government had not gone forward with a ceremony at which hundreds of slaves were to be set free under an arrangement supported by international antislavery organizations.

In foreign affairs, the government has turned increasingly toward the Arab world. Mauritania joined the Arab League in 1973 and withdrew from the franc zone during the same year; but ties with Europe, especially France, and the United States remain strong. The disastrous drought that struck Mauritania and the rest of the Sahel region during 1968–74 elicited substantial aid from the EC, the United States, Spain, France, and the Arab countries.

On 14 November 1975, the governments of Spain, Morocco, and Mauritania reached an agreement whereby Spain agreed to abandon control of the Spanish Sahara by 28 February 1976 and to share administration of the territory until then with Morocco and Mauritania. On 14 April 1976, Morocco and Mauritania announced a border delimitation agreement under which Morocco received more than two-thirds of the region (including the areas with the richest phosphate deposits). Morocco in effect annexed Western Sahara.

Morocco's action drew condemnation from across the world. The Popular Front for the Liberation of Saguia al-Hamra and Río de Oro (generally known as Polisario) even proclaimed Western Sahara as the Saharan Arab Democratic Republic. When Polisario forces, supported by Algeria, launched a war in the region, guerrilla raids on the Mauritanian railway, iron mines, and coastal settlements, including Nouakchott, forced Mauritania to call French and Moroccan troops to its defense. The effects of the war weakened the government both economically and politically, and in July 1978, Moktar Ould Daddah, Mauritania's president since 1961, was overthrown by a military coup. On 5 August 1979, Mauritania formally relinquished its portion of the disputed territory, except for the military base of LaGuera, near Nouadhibou. Morocco also occupied and then annexed that (Mauritania's) portion of the territory. Mauritania thereafter pursued a policy of strict neutrality in the Morocco-Polisario conflict, a policy that strained relations with Morocco.

In the wake of the 1978 coup, the constitution was suspended and the National Assembly and the ruling Mauritanian People's Party (PPM) were dissolved. After a period of political uncertainty, Lt. Col. Khouna Ould Haydalla became chief of state and chairman of the ruling Military Committee for National Salvation as of 4 January 1980. There were unsuccessful attempts to overthrow his government in 1981 and 1982. Amnesty International claimed in 1983 that more than 100 political prisoners, including a former president and former prime minister, were being held in total darkness in underground cells in the desert. These prisoners were freed shortly after a military coup on 12 December 1984

brought Col. Moaouia Ould Sidi Mohamed Taya to power as chief of state.

However, as the economy faltered, racial, ethnic, and class tensions increased and the society became polarized. The lines were drawn between the Maurs or Moors—aristocrats who have dominated government—and black African slaves or descendents of slaves, who have adopted Moorish culture, but remain second-class citizens on the other. Although the government refuses to release census data, it is estimated that Moors account for 30–60% of the population. The black population, which is concentrated along the Senegal River border, has organized an underground Front for the Liberation of Africans in Mauritania (FLAM); grievances were linked with an unsuccessful coup attempt in 1987.

Interethnic hostilities in 1989 exploded when a border dispute with Senegal led to race riots that left several hundred Senegalese dead in Nouakchott. The Moorish trading community in Senegal was targeted for retaliation. Thousands of refugees streamed across the border in both directions. Mass deportation of “Mauritanians of Senegalese origin” fueled charges that Mauritania was trying to eliminate its non-Moorish population. Africa Watch estimated that at least 100,000 black slaves were being held in Mauritania.

Against this backdrop, the military conducted a bloody purge from September 1990 through March 1991 during which some 500 mostly black soldiers were murdered. Taya legalized opposition parties in July 1991, but he also stepped up Arabization policies. Parliament granted the perpetrators of the purge legal immunity in May 1993.

On 26 January 1992, Taya was elected in Mauritania’s first multiparty presidential election with 63% of the vote. Ahmed Ould Daddah, the strongest of the four rivals and half-brother of Mauritania’s first president, gained 33% of the vote. However, the election was marked by fraud. The legislative elections that followed in March were boycotted by 6 of the 14 opposition parties. Taya’s Democratic and Social Republican Party (PRDS) easily won 67 of 79 Assembly seats.

Multiparty municipal elections were held in 1994, and the PRDS won control of 172 of the nation’s 208 administrative districts. Presidential elections were held on 12 December 1997. Main opposition parties claimed that campaign conditions favored the reelection of Taya to a second six-year term and called for a boycott of the elections. Kane Amadou Moctar, the first black African ever to run for the presidency, presented himself as a non-aligned candidate with a platform promising to fight slavery, assist the return of Mauritanian refugees from Senegal, and reform the fisheries policy. The elections took place without incident and Taya was declared the winner, taking 90% of the votes. Turnout was estimated at 70%, despite the opposition boycott. Moctar received less than 1% of the vote. Opposition leaders described the poll as a “masquerade,” citing reports of widespread irregularities that included children casting ballots and polls remaining open as late as 11 pm.

Elections were held in April 1998 for 18 of the Senate’s 56 seats. The PRDS won 17 of the 18 contested seats, with an independent gaining the remaining seat. In January 1999 the PRDS again won most of the 208 districts contested in municipal elections, though it is estimated that only 16% of the registered votes went to the polls.

Despite multiparty elections, Mauritania is far from a free society. Opposition politicians are harassed and arrested. In 1994 and again in 1998, Cheikh Sadibou Camara of the UDP was arrested for suggesting that the slave trade was continuing—publicly stating the suggestion is considered a crime in the country. Anti-Slavery International, based in London, presented an annual anti-slavery award to Camara in November 1998. The government also harasses journalists and has suspended publication of newspapers and magazines on numerous occasions in recent years. Since 1993, Mauritania has been denied US trade privileges because of its poor human rights record. Ahmed Ould Daddah had continued to confront the Taya regime; he was arrested in April 2000 but was released a few days later without charges. In May 2000 demonstrations by opposition parties in Nouakchott demanded an independent electoral commission.

Despite opposition protests, the PRDS has maintained its monopoly on power in the Senate and in the National Assembly. In Senate elections held 12 April 2002, the PRDS maintained its commanding majority of 54 seats to 1 for the RFD, and 1 for the UNDD. In National Assembly elections held 19 and 26 October 2001 (next to be held 2006), the PRDS garnered 79% of the vote, compared to 3.5% for the RDU, 3.5% for the UDP, 5% for the AC, 4% for the RDE, 3.5% for the UFP, and 1.5% for the FP. The breakdown by number of seats was as follows: PRDS 64, UDP 3, RDU 3, AC 4, RFD 3, UFP 3, and FP 1. The 2001 Assembly elections were generally considered free and fair by outside observers, but were subject to the usual incumbent advantages in sub-Saharan Africa.

In June 2003, the government was dealing with a coup attempt that nearly overthrew Taya. As many as 40 people were injured and six killed in two days of heavy fighting in the capital on 8–9 June. Sala Ould Henena, who was fired from the army because of his opposition to the government’s ties with Israel, was accused of leading former and mid-ranking army officers in the putsch. In response to the coup, the United States sent a 34-member military assessment team to Nouakchott to analyze US Embassy security needs. Analysts suspected that the cabal may have been provoked by a government crackdown earlier in the month against 32 Islamic leaders for their alleged ties to a foreign network of Islamic extremists and to former Iraqi leader Saddam Hussein.

In presidential elections held in 2003, Taya won reelection for a third term with 60.8% of the vote. But the opposition claimed that massive fraud marred the vote. There was little doubt though that Taya had been attracting opposition from among key segments of the population. In 1999, Mauritania became only the third Arab League state to establish full diplomatic relations with Israel. Taya’s links to Israel and his pro-Western, pro-US foreign policy had come under increasing criticism in the largely Muslim country. In September 2004, the government alleged yet another coup plot—the third in 15 months. In June 2005, an attack on an army base in the Sahara left 15 soldiers dead; it was blamed on insurgents from Algeria. All this seems to lend credence to allegations that Taya had been insensitive to the desires of Mauritanians, or that he had become too arrogant and too powerful to be bothered by what people thought about his government.

Thus, when Taya was deposed by a military coup on 3 August 2005, there was no public protest in his support. Dancing was reported on the streets of Nouakchott. On the other hand, oppo-

sition politicians welcomed the change; but they also vowed to intensify their watchdog function. Col. Ely Ould Mohamed Vall became chief of state and head of the new Military Council for Justice and Democracy. Col. Vall also promised to return to a constitutional order within two years, and vowed that no member of his caretaker administration would seek elective posts. Elections to the National Assembly were scheduled for November 2006, and to the Senate in January 2007. Presidential elections were scheduled for March 2007.

### **13 GOVERNMENT**

The constitution of 20 May 1961 declared Mauritania to be an Islamic republic. This constitution, which placed effective power in the hands of a president who was also head of the only legal political organization, the Mauritanian People's Party, was suspended in 1978 by the new military regime. Subsequently, executive and legislative powers were vested in the Military Committee for National Salvation. A draft constitution was published in 1980 but later abandoned; like the 1961 document, it called for a popularly elected president and National Assembly.

The July 1991 constitution delegates most powers to the executive. The president is to be elected by universal suffrage for a six-year term. The prime minister is appointed by the president and designated head of government. Parliament is composed of a bicameral legislature. The Senate, or *Majlis al-Shuyukh*, has 56 seats with 17 up for election every two years. Its members are elected by municipal leaders to serve six-year terms. The National Assembly, or *Majlis al-Watani*, has 79 seats with members elected by popular vote to serve five-year terms. These institutions pose no serious challenge and, moreover, are controlled by the president's party, although competing political parties were legalized in July 1991.

Since 2005, the military has controlled the levers of power, although in apparent consultation with politicians. On current reckoning, elections due from late 2006 through early 2007 might return politics and government in Mauritania to the democratic path. But a change in the transition time-table cannot be ruled out.

### **14 POLITICAL PARTIES**

As elsewhere in French West Africa, formal political movements developed in Mauritania only after World War II. Horma Ould Babana, the leader of the first party to be established, the Mauritanian Entente, was elected to the French National Assembly in 1946. His party was considered too radical by the traditional chiefs, who organized a more conservative party, the Mauritanian Progressive Union (UPM). The UPM won 22 of 24 seats in the 1952 elections for the Territorial Assembly. In the 1957 elections, the first under universal adult suffrage, 33 of 34 persons elected to the Territorial Assembly were UPM members. In 1958, the UPM absorbed the weakened Entente into its organization, forming a single party, the Mauritanian Regroupment Party (PRM).

After independence, Prime Minister Moktar Ould Daddah in May 1961 set up a presidential system of government, and in the subsequent presidential election he was the only candidate. In December 1961, a new single party was formed, the *Hizb Shab*, or Mauritanian People's Party (*Parti du Peuple Mauritanien*—PPM). The PPM included minority parties as well as the PRM. By 1965, the single-party system had been established by law. President

Ould Daddah was reelected in 1966, 1971, and 1976, but the PPM was dissolved after his ouster in 1978. No political parties functioned openly from 1978 until the 1991 military coup.

The Front for the Liberation of Africans in Mauritania (FLAM) was instrumental in stirring the 1989 unrest that ultimately led to multiparty elections. During this period of partisan organization, Taya formed the Democratic and Social Republican Party (*Parti Republicain et Democratique Social*—PRDS).

Chief among some 14 opposition parties has been the Union of Democratic Forces (UFD), which supported the runner-up in the January 1992 presidential election and boycotted the March parliamentary election. In May 1992, the UFD changed its name to UFD-New Era. In March 1993, it was weakened by the departure of eight centrist leaders to form a new political grouping. Also active are the Rally for Democratic and National Unity (RDU), the Union for Progress and Democracy (UPD), the Mauritanian Renewal Party (PMR), the People's Progressive Party (PPP), the Socialist and Democratic People's Union (SDPU), the Democratic Center Party (DCP), the Popular Front (FP), and El Har, a 1994 splintering of the UFD-New Era. The technically illegal Islamist party, Ummah, is very popular. The Action for Change (AC) party, which held four seats in the National Assembly following the October 2001 elections, was banned in January 2002.

After Taya won reelection in 2003, the Assembly was overwhelmingly dominated by his party, the PRDS. Since Col. Vall took power, opposition politicians appear to have become more involved, at least indirectly, in public decision making. For many years following 1998, Cheikh El Avia Ould Mohamed Khouna served as prime minister. On 8 August 2005 Sidi Mohamed Ould Boukakar became prime minister.

The Party of Democratic Convergence was banned in October 2005 because it was regarded as having breached Mauritanian law.

### **15 LOCAL GOVERNMENT**

Mauritania is divided into the city of Nouakchott and 12 regions, each with a governor and a commission. The regions are subdivided into 49 departments. Elections to municipal councils were held in December 1986 and again in 1992. The January–February 1994 municipal elections led to PRDS control of around 170 of the 208 municipalities, a majority retained by the PRDS in 1999.

Local elections were held in 2001. But the polls were marred as much by opposition boycott as by charges of massive fraud. All results for Nouakchott were annulled and a rerun ordered—although the reasons for such action remained unclear, given the boycott by opposition.

### **16 JUDICIAL SYSTEM**

The 1991 constitution completely revised the judicial system, which had previously consisted of a lower court in Nouakchott, labor and military courts, a security court, and a Supreme Court in addition to *qadi* courts, which handled family law cases.

The revised judicial system includes lower, middle, and upper level courts, each with specialized jurisdiction. The security court was abolished, and 43 department-level tribunals now bridge the traditional (*qadi*) and modern court systems. These courts are staffed by *qadis* or traditional magistrates trained in Koranic law. General civil cases are handled by 10 regional courts of first in-

stance. Three regional courts of appeal hear challenges to decisions at the department level. A Supreme Court, headed by a magistrate named by the president to a five-year term, reviews appeals taken from decisions of the regional courts of appeal.

The 1991 constitution also established a six-member constitutional court, three members of which are named by the president, two by the national assembly president, and one by the senate president.

While the judiciary is nominally independent, it is subject to pressure and influence by the executive, which controls the appointment and dismissal of judges. The system is strongly influenced by rulings and settlements of tribal elders based on Shariah and tribal regulations.

The Codes of Civil and Criminal Procedure were revised in 1993 to bring them into line with the guarantees of the 1991 constitution, which provides for due process of law.

## 17 ARMED FORCES

In 2005 the active armed forces of Mauritania numbered 15,870. The Army had 15,000 personnel armed with 35 main battle tanks, 70 reconnaissance vehicles, 25 armored personnel carriers, and 194 artillery pieces. The Navy had an estimated 650 active personnel. Major naval units consisted of 10 patrol/coastal vessels. The nation's Air Force had 250 active members. The aircraft inventory was limited to 2 reconnaissance, 12 transport, and 4 training aircraft. Paramilitary personnel numbered an estimated 5,000 personnel, with 3,000 in the gendarmerie and 2000 in the National Guard. The defense budget in 2005 totaled \$20.1 million.

## 18 INTERNATIONAL COOPERATION

Admitted to the United Nations on 27 October 1961, Mauritania is a member of ECA and several nonregional specialized agencies, such as the FAO, IFC, IMF, the World Bank, UNESCO, UNIDO, and the WHO. It is also a member of the ACP Group, the Arab Bank for Economic Development in Africa, African Development Bank, the Council of Arab Economic Unity, the Arab Fund for Economic and Social Development, the Organization of the Islamic Conference (OIC), G-77, the Arab League, the African Union, the New Partnership for Africa's Development (NEPAD), the Arab Maghreb Union, and the WTO. Mauritania has joined with Senegal and Mali to form the Organization for the Development of the Senegal River (Organisation pour la Mise en Valeur du Fleuve Sénégal—OMVS). Mauritania is a member of the Non-aligned Movement.

In environmental cooperation, Mauritania is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

The country is also a member with neighboring states of the Interstate Committee to Combat Drought in the Sahel (CILSS).

## 19 ECONOMY

While Mauritania is an agricultural country, historically largely dependent on livestock production, its significant iron ore deposits have been the backbone of the export economy in recent years. The droughts of the 1970s and 1980s transformed much of Mauritania, as the herds died off and the population shifted to urban

areas. In 1960, 85% of the population lived as nomadic herders. By 1999, that percentage had fallen to 5%, and nearly one-third of the population lives in the district of Nouakchott. Offshore oil reserves have been identified and are estimated at one billion barrels. Substantial oil production and exports were expected to begin in 2006 and were projected to average 75,000 barrels per day for that year. Gold and diamond prospecting hold potential as growth areas.

Most of Mauritania is desert or semiarid. Less than 1% of Mauritania receives sufficient rain for crop production, and that 1% is drought-prone. Leading staple crops are millet, sorghum, rice, corn, sweet potatoes and yams, pulses, and dates. The country is not agriculturally self-sufficient and this situation has been aggravated by increasing urbanization.

In 2006, iron ore sales accounted for approximately 40% of exports. Fish exports account for 60% of foreign earnings. The contribution of livestock herding and agriculture was 25% of GDP and employed about half of the workforce in 2001, but covered only a small percentage of the country's needs. The droughts of the 1970s and 1980s devastated the herds, but the FAO estimates that they had returned to pre-drought numbers by 1991. The recomposition of the Mauritanian herd and the development of water supplies have been a prime objective of the government.

The droughts have led to a buildup of foreign debt leaving the country dependent on financial aid flows from international donors. Mauritania became eligible for debt relief under the IMF/World Bank's Heavily Indebted Poor Countries (HIPC) initiative in 2000, and debt service relief reached \$1.1 billion by 2002, which almost halved Mauritania's debt burden. Foreign assistance accounted for 90% of investment from 1998–2001. In 2005 the GDP growth rate was estimated at 5.5%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Mauritania's gross domestic product (GDP) was estimated at \$6.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,000. The annual growth rate of GDP was estimated at 5.5%. The average inflation rate in 2003 was 7%. It was estimated that agriculture accounted for 25% of GDP, industry 29%, and services 46%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2 million or about \$1 per capita and accounted for approximately 0.2% of GDP. Foreign aid receipts amounted to \$243 million or about \$85 per capita and accounted for approximately 20.9% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Mauritania totaled \$852 million or about \$299 per capita based on a GDP of \$1.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.1%. It was estimated that in 2004 about 40% of the population had incomes below the poverty line.

## **2<sup>1</sup> LABOR**

The estimated labor force in Mauritania numbered 786,000 in 2001. In that year it was estimated that agriculture provided work for 50% of the labor force, with services accounting for 40% and 10% by industry. In 2004, the estimated unemployment rate was 20%.

Trade unions are grouped into three federations, of which the oldest is the Union of Mauritanian Workers (Union des Travailleurs de Mauritanie), which is affiliated with the ICFTU. The newer ones are the General Confederation of Mauritanian Workers, formed in 1994, and the Free Confederation of Mauritanian Workers. Approximately 90% of the formal segment of the economy is unionized. The right to strike is guaranteed by law. Collective bargaining is also permitted.

Children under the age of 14 are prohibited by law from engaging in nonagricultural work. In practice this regulation is not enforced. The guaranteed minimum workweek for most nonagricultural laborers is 40 hours with guaranteed overtime pay. However, domestic employees may work for up to 56 hours per week. The minimum wage was \$38.71 per month in 2002 for adult workers. There are minimum occupational health and safety standards, but they are inadequately enforced due to a lack of government funding.

## **2<sup>2</sup> AGRICULTURE**

Settled agriculture is restricted to the strip of land along the Senegal River and to oases in the north; only 0.2% of Mauritania's total land area is classified as arable. In general, landholdings are small. Overall agricultural development has been hampered not only by unfavorable physical conditions but also by a complicated land-tenure system (modified in 1984) that traditionally rested on slavery, inadequate transportation, and the low priority placed on agriculture by most government developmental plans. The country's traditional dependence on food imports has been heightened by drought. Agriculture's share of GDP has been steadily falling; in 2003 it stood at 19%, down from 29% in 1987.

Corn and sorghum production reached 6,000 and 68,000 tons, respectively, in 2004. Other crop production in 2004 included paddy rice, 77,000 tons; and millet, 400 tons. Date production was 24,000 tons in 2004.

The Mauritanian government is encouraging agricultural development of the Senegal River valley. The OMVS began in 1981 to build a dam at Manantali, in Mali, for purposes of river transport, irrigation, and hydroelectric power. In conjunction with this OMVS project, Mauritania initiated an irrigation and development scheme in 1975 for the Gorgol River valley, involving construction of a dam; the scheme would increase arable land by over 3,600 hectares (9,000 acres). This project was to be followed by other dams that together would add 30,000 hectares (74,100 acres) for food production. Another OMVS project, begun in 1981, was designed to block salt water from entering the fertile Senegal River delta. From 1989 to 1991, a series of measures aimed at stimulation and rationalization of agricultural production were initiated, including producer price increases, marketing and distribution liberalization, and streamlining of government-owned agricultural organizations.

## **2<sup>3</sup> ANIMAL HUSBANDRY**

Animal husbandry, a major activity in the traditional economy, grew rapidly during the 1960s because of a successful animal health campaign and, prior to 1968, favorable weather conditions. Indeed, cattle herds grew well beyond the number that could be supported by the natural vegetation. Thus, the land was already vulnerable when the drought years of 1968–74 reduced the cattle population from 2.6 million head in 1970 to 1.6 million in 1973. There were only 1.6 million head in 2005, while sheep and goats numbered 14.5 million and camels 1.3 million.

The Moors tend to regard their cattle as symbols of wealth and prestige; this attitude discourages the herders from selling or slaughtering the animals. Total meat production in 2005 was estimated at 89,349 tons, with mutton accounting for 28% and beef for 26%. Reported figures are incomplete, however, since animal smuggling is common and much trade is unrecorded.

## **2<sup>4</sup> FISHING**

With a potential catch of 600,000 tons, fishing employs 1.2% of the labor force and contributes about 5% to GDP. It is estimated that more than \$1 billion worth of fish is netted each year within the 320-km (200-mi) exclusive economic zone, but little of this sum benefits the treasury because the government lacks means of control and enforcement.

Since 1980, any foreigners wishing to fish in Mauritanian waters have been required by law to form a joint venture in which Mauritanian citizens or the government holds at least 51% of the capital. All of the catch must be landed in Mauritania for process and export, and each joint venture must establish an onshore processing facility. By 1987, over a dozen fishing companies had been established in Nouadhibou, including public and private interests from Algeria, France, Iraq, the Republic of Korea, Kuwait, Libya, Nigeria, Romania, Spain, and the former USSR. In May 1987, Mauritania signed a three-year fishing agreement with the EC, allowing all EC members to fish in Mauritanian waters; in return, Mauritania received approximately \$23 million. Since the mid-1980s, however, depletion of the stocks has made Mauritanian fishing increasingly uneconomical. Mauritania's boats have been in poor condition. In spite of the ship repair service in Nouadhibou, which opened in 1989, only about 50% of the fleet was up and running in 1992.

Traditional fishing is carried out along the Senegal River and traditional sea fishing at Nouakchott and Nouadhibou. The national catch was estimated at 80,000 tons in 2003. Principal species caught included octopus, sardine, squid, and hake. Exports of fish products were valued at \$103.4 million in 2003.

## **2<sup>5</sup> FORESTRY**

Sizable tree stands found in the southern regions are not fully exploited. The principal forest product is gum arabic, which is extracted from wild acacia trees that grow in the south. Until 1972, private traders collected and exported the gum; since 1972, it has officially been a monopoly of the state trading company, Société Nationale d'Importation et d'Exportation (SONIMEX). Nevertheless, much gum continues to be smuggled across the borders, par-

ticularly to Senegal. Roundwood removals were estimated at 1.6 million cu m (56 million cu ft) in 2004, 99% for fuel.

## 26 MINING

Iron ore mining and processing accounted for more than 44% of Mauritania's export earnings in 2003, which totaled \$388 million. Iron ore output (metal content) was estimated at 6.9 million metric tons in 2003. Iron ore production by gross weight that same year totaled 10.6 million metric tons.

Gypsum output, from some of the greatest reserves in the world, was estimated at 100,000 metric tons in 2003. In 2003, Mauritania also produced cement, salt, crude steel, sand and gravel, and stone. Mauritania was rich in copper; in the 1980s, the mine at Akjoujt was estimated to contain 100 million tons of ore averaging 2.25% copper, with trace amounts of gold. In 1996, gold recovery from tailings at the mine was discontinued because the stockpile was depleted. The nearby Guelb Moghreïn Project, which contained resources of 23.7 million tons (144 grams per ton of cobalt, 1.88% copper, and 1.41 grams per ton of gold), continued to be delayed, because of low gold and copper prices, and problems at the pilot plant. Phosphate deposits, and reserves of platinum, palladium, and nickel, have been identified, and prospecting continued for petroleum, tungsten, and uranium. Mineral exploration efforts were focused on diamond (on the Archean Reguibat craton), gold (in the Inchiri region), oil (offshore), and continued evaluation of copper-gold, kaolin, and peat deposits.

## 27 ENERGY AND POWER

Mauritania, as of 1 January 2005, had no proven reserves of crude oil, natural gas, coal, or petroleum refining capacity. But this may change in 2006. Mauritania's Chinguetti oilfield, discovered in 2001, is estimated to have reserves of 100 million barrels. In addition, the country has a number of other offshore gas and oil fields that are seen as promising.

In 2002, Mauritania imported and consumed an average of 22,750 barrels per day of refined oil products. There was no recorded demand for coal or natural gas in that same year.

Electric power is the country's primary energy source. In 2002, installed generating capacity was 115,000 kW, of which 56.5% of capacity was dedicated to hydropower, and the rest to conventional thermal sources. In 2002, electric output totaled 174 million kWh, of which almost 85% was generated by conventional thermal plants, with hydroelectric facilities accounting for the remainder. Consumption of electricity in 2002 came to 162 million kWh.

## 28 INDUSTRY

Fish processing, the principal industrial activity, is carried out in Nouadhibou. By far the largest fish processor is Mauritanian Fish Industries (IMAPEC), a Spanish company in which the Mauritanian government acquired a 51% share in 1980. IMAPEC has facilities for salting, drying, canning, and freezing fish, and for producing fish flour; virtually all of its output is exported. Overfishing is a problem, however, as is mismanagement of the fishing sector and the lack of an effective governmental fisheries policy. The government is modernizing the fisheries sector, through port extension and the development of warehouses. Other small industries

include chemical and plastic plants, food and beverages, metal products, building materials, and cookie factories.

The first desalination plant in Africa was completed at Nouakchott in January 1969, with a capacity of 3,000 cu m (106,000 cu ft) a day. A rolling mill at Nouadhibou, built in 1977, produced small quantities of iron rods and steel. A petroleum refinery in Nouadhibou, with an annual capacity of 1 million tons, opened in 1982, shut down in 1983, and resumed operation in 1987 with help from Algeria. Algeria also helped revitalize a sugar refining plant. Similarly, Kuwaiti and Jordanian interests reopened the steel mill after a shutdown. Each of these operations represents a drain on state revenues, and the government has shifted policy toward the promotion of less ambitious industrial development.

The government has signed exploration contracts with the Canadian Rex Diamond Mining Corporation, the American BHP Minerals and Bab-Co, the French La Source, and the Australian Ashton West Africa Property Limited in order to find gold, oil, phosphate, aluminum, and copper in Mauritania. Mauritania as of 2006 had an estimated one billion barrels of proven oil reserves. A national oil company, GPC, was created in 2004. Mauritania is one of four countries in West Africa with an operating oil refinery.

## 29 SCIENCE AND TECHNOLOGY

A research institute for mining and geology, founded in 1968, is at Nouakchott. The Economic Community of West Africa has an institute in Nouadhibou-Cansado conducting research in the fisheries industry. The Higher Scientific Institute, founded in 1986 at Nouakchott, has departments of mathematics, physics, chemistry, biology, geology, computer studies, natural resources, and ecology. In 1987–97, science and engineering students accounted for 41% of college and university enrollments.

## 30 DOMESTIC TRADE

Most trade is done at or near the "Friendship Port" of Nouakchott. The seaport of Nouadhibou is a main center for fishing operations. Most consumer goods are sold through small shops or boutiques, although some medium-sized supermarkets are becoming more common. There are a number of small and medium-sized family-owned retail and wholesale firms. Private exchange offices were created in 1994 and 1995. A new investment code put into place in 2001 is expected to attract foreign investment. Arabic is the official language, but French is the business language. Normal business and banking hours are from 7:30 AM to 3 PM, Sunday through Thursday, though it is somewhat common for businesses to open a little later in the morning than scheduled.

## 31 FOREIGN TRADE

Iron ore and fish products are the primary exports (98% of export revenue in 2005). The leading imports are foodstuffs, consumer goods, petroleum products, and capital goods. In 2004, Mauritania's principal export partners were: Japan (13.1%), France (11%), Spain (9.7%), Germany (9.7%), Italy (9.6%), Belgium (7.5%), China (6.1%), Russia (4.6%), and Côte d'Ivoire (4.1%). Principal import partners that year were: France (14.1%), the United States

**3<sup>2</sup> BALANCE OF PAYMENTS**

An external debt of \$2.6 billion in 1998 resulted in debt servicing that rose 38.5% from 1997 to 1998, causing a leap in the balance of payments deficit. External trade increased in the late 1990s, due to the creation of private exchange offices and the liberalization of exchange systems. Foreign investment began to resume as well. The country's outstanding foreign debt in 2000 was estimated at 220% of GDP, but due to debt cancellation and rescheduling, debt service payment problems were somewhat alleviated. Mauritania's external debt had declined to \$1.6 billion by 2000. In the same year, Mauritania qualified for \$1.1 billion in debt service relief from the IMF/World Bank Heavily Indebted Poor Countries

(HIPC) initiative, and in 2001 it received strong support from donor and lending countries. In 2002, Mauritania received \$305.7 million in economic aid from donor countries. In 2003, the IMF approved a three-year \$8.8 million loan to the country. In 2005, exports were valued at an estimated \$784 million, and imports at \$1.124 billion.

**3<sup>3</sup> BANKING AND SECURITIES**

At independence, Mauritania became a member of the West African Monetary Union (Union Monétaire Ouest Africaine—UMOA), but withdrew in 1973 to demonstrate its independent economic identity. When it withdrew, the government also relinquished membership in the African Financial Community (Communauté Financière Africaine—CFA), whose currency—the CFA franc—was freely convertible to French francs. Mauritania then created its own currency, the ouguiya, and a national bank, the Central Bank of Mauritania (Banque Centrale de Mauritanie), which was established in 1973.

After privatization in 1989, banks in Mauritania included Banque Arabe Libyenne-Mauritanienne pour le Commerce Extérieur et le Développement (BALM). BALM, founded in 1990, was 51% owned by Libyans and 49% owned by the state. Other banks included Banque Al-Baraka Mauritanie Islamique (BAMIS), Banque Mauritanie pour le Commerce Internationale (BMCI), and Banque Nationale de Mauritanie (BNM). BAMIS, established in 1990, was 50% Saudi owned and 10% BCM owned. BMCI, founded in 1990, was 10% BCM owned, and 90% of the bank was held by private interests. BNM, established in 1988, was 50% state owned.

In 2001, there were seven commercial banks, among them BAMIS, BMCI, BNM, Generale de Banque de Mauritanie (GBM), and the World Bank Representative in Mauritania. There are also three credit agencies and four insurance companies. The Saudi Al-Baraka firm owned 85% of BAMIS and the Belgium Belgolaise bank was the second-largest shareholder in commercial banks. There was also one bank specializing in housing construction and three credit agencies (Credit Maritime, Credit Agricole, and Mauritanie Leasing).

A significant drawback for the Mauritanian economy, partly due to the small number and low income of the population, was a dearth of domestic capital. The poor reputation of the domestic banking system, notwithstanding its recent overhaul, discouraged local savings. In 1997, the government encouraged the creation of popular saving agencies to revitalize the financial sector; and in 1998, the government introduced incentives to encourage fish exporters to keep their assets in the country. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$108.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$151.4 million.

**3<sup>4</sup> INSURANCE**

Insurance was handled by 13 foreign companies until July 1974 when the Mauritanian government assumed full control of insurance and reinsurance. All insurance business was controlled by

the Mauritanian Insurance and Reinsurance Co. There were two insurance companies in 1999.

### 3<sup>5</sup> PUBLIC FINANCE

Mauritania's budget is habitually in deficit. Mismanagement of public enterprises and an abundance of public sector employees led to large deficits in the early 1980s. In 1985, the government began an IMF-sponsored adjustment program to stabilize the economy and diminish the role of the public sector. The overall fiscal cash deficit (excluding debt forgiveness) fell from 12% GDP in 1985 to 5.4% in 1989. From 1989 to 1992, however, due to the Persian Gulf Crisis and turmoil with Senegal, the adjustment effort was set back. In 1994, the government instituted fiscal reform designed to broaden the tax base and reduce exemptions. Goals in 1999 included increasing public revenues, decreasing spending, and increasing the performance of public companies. Privatization continued through the 1990s, and state-owned companies accounted for approximately 20% of GDP at the end of 1997.

The US Central Intelligence Agency (CIA) estimated that in 2002 Mauritania's central government took in revenues of approximately \$421 million and had expenditures of \$378 million. Revenues minus expenditures totaled approximately \$43 million. Total external debt was \$2.5 billion.

### 3<sup>6</sup> TAXATION

Mauritania has a corporate income tax rate of 20%, with a 4% minimum rate on turnover. Capital gains are taxed at the corporate rate. However the tax may be deferred if the gains are used to acquire new fixed assets in the country in the following three fiscal years. Dividends are subject to a 10% withholding tax, which can be deducted if the recipient of the dividends is subject to corporate income tax. The major indirect taxes are import duties, a turnover tax on exports and mining companies, a value-added tax (VAT), excise levies on petroleum, tobacco, a service tax, and a tax on vehicles. As of 2005, the standard VAT rate was set at 14%. Wages and salaries are also subject to an income tax.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Along with other members of the West African Economic Community (CEAO), Mauritania imposes a revenue duty (*droit fiscal*) and a customs duty (*droit de douane d'entrée*) on most imported goods. The average tax rate for imports was 43% in 1999. Customs duties ranged from a minimum of 9% to a maximum of 27% for essential goods or nonluxury goods. Imports are also subject to the 14% VAT. Exports were not restricted, although both imports and exports require a license. The government planned to reduce taxes on imports to an average of 25%, and was considering the creation of free trade zones.

Since 1970, Mauritania has had a trade agreement with Senegal, allowing primary products to be traded between the two countries duty-free. Mauritania is also a member of ECOWAS.

### 3<sup>8</sup> FOREIGN INVESTMENT

With the nationalization of the mining sector in 1974, private foreign investment dropped drastically. Extension of government control over imports and domestic trade further curtailed the activity of foreign capital, as did ethnic clashes in 1989–91. In 1993, the government started to privatize parastatals, and by 1999, only

17% of GDP was accounted for by state-owned companies; 20% of Mauritanian companies were state-owned, including the telephone and postal services, utilities, transportation, radio and television, and mining production.

An investment code, approved in 1979, provided for tax holidays of up to 12 years on exports, imports of raw materials, and re-invested profits. The 1989 Investment Code guaranteed equal and free movement of capital in and out of Mauritania, in all sectors. It also provided incentives to new enterprises like a temporary tax reduction. Amendments have been made to the code to require hiring of Mauritians. Tax preferences are offered for using local materials and investing in priority sectors, like agriculture, minerals, and fish processing.

Foreign investment has been small since the ethnic violence of 1989 to 1991. However, in 1999 the government introduced new initiatives to attract foreign investment. From 1997 to 1999, the average annual inflow of foreign direct investment (FDI) was negligible, ranging from \$100,000 to \$900,000. In 2000, inflows increased to \$9.2 million and then, in 2001, to \$30 million. Foreign private investors include Mobil Oil of the United States, NAFTAL of Algeria, and Elf Aquitaine of France, in the petroleum sector; MINPROC, IFC of Australia in the gold sector; and CNF of China, the Al-Baraka Group of Saudi Arabia, and IFAFOOD of France, in the fishing sector.

Foreign investment climbed from 2001–04, particularly in the petroleum, mining, and telecommunications sectors, as well as tourism (especially hotels). In 2003 the government introduced a new investment code, designed to encourage foreign investment as well as local entrepreneurs.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Until the export earning capacity of Mauritania improves, its economy will remain fragile. External deficit management dominates the public investment horizon. In 1999, Mauritania obtained financing from the IDA, AFESD, and World Bank, for its economic and social development projects. The IDA funded a mining sector capacity building project, with \$500,000 cofinancing from the government. The AFESD gave an \$11.6 million loan to upgrade and develop small dams. The World Bank approved a \$15 million loan to support access to the country's mining sector.

In 2000, Mauritania was approved for \$1.1 billion in debt service relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative. That year, the country withdrew its membership in the Economic Community of West African States (ECOWAS), and increased commercial ties with Morocco and Tunisia (members of the Arab Maghreb Union), particularly in telecommunications. In 2003, the IMF approved an \$8.8 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement, to support the government's economic reform policies geared to reduce poverty. The IMF stressed the need for banking and exchange rate reform, and improved governance.

As of 2006, the development of Mauritania's one billion barrels of proved petroleum reserves held promise for the economy. The government emphasized the reduction of poverty, improvement of health and education, and privatization of the economy as policy priorities.

## 40 SOCIAL DEVELOPMENT

The National Social Security Fund administers family allowances, industrial accident benefits, insurance against occupational diseases, and old age pensions. Pensions are paid for by 1% contributions from employees and 2% contributions from employers. Employed women are entitled to a cash maternity benefit and payable up to 14 weeks. Workers and their families who are covered under the labor code are entitled to medical benefits. There is also a family allowance and a birth grant.

Opportunities for Mauritanian women are severely limited by social and cultural factors. Although they have the right to vote, women face considerable legal discrimination. According to Shariah law, the testimony in court of two women equals that of one man. The law mandates equal pay for equal work, and in the public sector, this law is respected and applied. Most young girls undergo female genital mutilation by the age of six months, although the incidence is decreasing among the urban population. Education is not compulsory and dire financial circumstances force many children to work. Laws prohibiting child labor are rarely enforced.

Slavery was abolished many times in Mauritania, the most recent law having been passed in 1980. Despite this, as of 2004 there are still slaves in the rural areas where a barter economy thrives. Some human rights abuses are reported including the use of excessive force to disperse demonstrators and inadequate prison conditions.

## 41 HEALTH

Mauritania's public health system consists of administrative units and health facilities organized in pyramid style. Total health care expenditure was estimated at 4.8% of GDP. In 2004, there were an estimated 14 physicians, 62 nurses, 2 dentists, 4 pharmacists, and 10 midwives per 100,000 people. In the mid-1990s, there were approximately 300 basic health units at the village level, about 130 health posts, and some 50 health centers. The health system is mostly public, but liberalization of private practice in the past several years has led to marked increase in the number of practitioners in the private sector. Mauritania's only major hospital is in Nouakchott. Only about 63% of the population had access to health care services. Private participation in the pharmaceutical sector has increased since 1987. Public facilities receive stocks from the Ministry of Health and Social Affairs. Drugs are distributed to patients at public facilities at no cost, but only 40% of demand can be met. Importation of narcotics is prohibited. Approximately 37% of the population had access to safe drinking water and 33% had adequate sanitation.

The main health problems include malaria, tuberculosis, measles, dysentery, and influenza. Guinea worm remains a major problem. Pregnancy complications are common due to unhygienic conditions and lack of medical care. In nondrought years, the staple diet of milk and millet is nutritionally adequate, if somewhat deficient in vitamin C. Immunization rates for children up to one year old were: tuberculosis, 93%; diphtheria, pertussis, and tetanus, 50%; polio, 50%; and measles, 53%. The rates for DPT and measles were, respectively, 40% and 62%. Forty-four percent of children under five were malnourished. The goiter rate was 31 per 100 school-age children.

The average life expectancy is among the lowest in the world—an estimated 52.73 years in 2005. The fertility rate was 5.7 in 2000. Only 3% of married women aged 15–49 were using some form of contraceptive. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 42.54 and 13.34 per 1,000 people. The infant mortality rate was 70.89 per 1,000 live births in 2005. The maternal mortality rate was 550 per 100,000 live births. Twenty-five percent of women underwent female genital mutilation and no specific law has been issued against it.

As of 2004, there were approximately 9,500 people living with HIV/AIDS in the country. The HIV/AIDS prevalence was 0.60 per 100 adults in 2003.

## 42 HOUSING

Construction accounts for a small fraction of GDP. The chief construction company, the Building Society of Mauritania, is hampered by inadequate manpower and capitalization. To encourage housing development, the government introduced new regulations in 1975 to encourage builders and to compel civil servants to purchase their own property and thus relieve the demand for public housing. The phenomenal growth of Nouakchott and the effects of rural migration, impelled by drought, have strained housing resources. In 1998, over 25% of residents in Nouakchott lived in substandard housing, such as tents, huts, or shacks, as did about 35% of Kiffa residents and 44% of Aioun residents.

## 43 EDUCATION

Six years of basic education are compulsory. A three-year lower secondary (college) program offers general education. Following this stage, students may choose to attend a three-year senior secondary school (*lycee*) or a technical school program of three or five years. The *lycee* programs offer specializations in arts and literature; natural sciences; mathematics, physics, and chemistry; or Koran (Quran) and Arabic studies. The academic year runs from October to June.

Primary school enrollment in 2003 was estimated at about 68% of age-eligible students. In 2001, secondary school enrollment was about 14.5% of age-eligible students. It is estimated that about 42.9% of all students complete their primary education. The student-teacher ratio for primary school was at about 42:1 in 2000; the ratio for secondary school was about 26:1.

The National Institute of Higher Islamic Studies was established in Boutilimit in 1961 and the National School of Administration was founded in 1966 at Nouakchott. The University of Nouakchott, founded in 1981, has a faculty of letters and human sciences and a faculty of law and economics. In 2003, about 4% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 51.2%, with 59.5% for men and 43.4% for women.

As of 2003, public expenditure on education was estimated at 4.1% of GDP, or 16.6% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Library at Nouakchott (10,000 volumes) and the National Archives (3,000) were both founded in 1955. The National Library is the depository for all the country's publications. There is a small library at the University of Nouakchott in the capital, as well as a French cultural center. The National Museum is also lo-

cated in Nouakchott and has archaeology and ethnography collections. There are several Arab libraries in the major towns.

#### 45 MEDIA

Many of Mauritania's post offices have telephone or telegraph services. There are direct telephone communications from Nouakchott to Paris. Administrative contact within the country is maintained by radiotelephone. Two earth-satellite stations came into service in 1985–86. In 2003, there were an estimated 14 mainline telephones for every 1,000 people. The same year, there were approximately 128 mobile phones in use for every 1,000 people.

The government operates all national radio and television networks, broadcasting in French, Arabic, and several African languages. In 2001 there were 1 AM and 14 FM radio stations, with 1 television station reported in 2002. Residents with satellite receivers and dish antennas receive television broadcasts from France and other Arab countries. Telecasts are in French and Arabic. In 2003, there were an estimated 148 radios and 44 television sets for every 1,000 people. The same year, there were 10.8 personal computers for every 1,000 people and 4 of every 1,000 people had access to the Internet.

In 2004 there were about 25 privately owned newspapers with a regular publication schedule, usually weekly. A government-operated daily, *Ach Chabb*, is published in French and Arabic. *Horizon*, another government daily, is published in French.

The constitution provides for freedom of speech and the press; however, by law copies of every newspaper must be submitted to the Ministries of Interior and Justice for approval before distribution.

#### 46 ORGANIZATIONS

The Chamber of Commerce, Industry, Agriculture, and Ranching is in Nouakchott. Youth organizations include the National Union of Students and Pupils of Mauritania and the Association of Scouts and Guides of Mauritania. Several sports associations are active within the country. The Lion's Club has active programs. The International Association of French-Speaking Women has a base in the country. The World Conservation Union has an office within the country. The Red Crescent Society and Caritas are active as well.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourists are attracted to Atar, the ancient capital of the Almoravid kingdom, and Chinguetti, with houses and mosques dating back

to the 13th century. Popular sports are rugby, surf fishing, tennis, football (soccer), basketball, and swimming.

There are few facilities for tourists, except in the capital, and travel is difficult outside of Nouakchott. Most visitors need a valid passport and visa; the visa requirement is waived for French and Italian nationals. A certificate of vaccination against yellow fever may be required if traveling from an infected area. Precautions against typhoid are recommended.

In 2005, the US Department of State estimated the daily cost of staying in Nouakchott at \$202.

#### 48 FAMOUS MAURITANIANS

Abu Bakr ibn Omar (Boubakar), paramount chief of the Lemtouna, defeated Ghana in 1076. His lieutenant and cousin, Yusuf ibn Tashfin, conquered Morocco in 1082 and most of Spain in 1091. The best-known contemporary Mauritanian is Moktar Ould Daddah (1924–2003), president from 1961 until 1978; after being ousted, he was eventually allowed to go to France. Lt. Col. Khouna Ould Haydalla (b.Spanish Sahara, 1940) became prime minister and chief of staff of the armed forces in 1978 and assumed the presidency in 1980. Col. Maaouya Ould Sid Ahmed Taya (b.1941), who had been prime minister (1981–84), was president from 1984 to 2005. Col. Ely Ould Mohamed Vall (c.1950) became the new military leader of Mauritania in 2005.

#### 49 DEPENDENCIES

Since relinquishing its claim to Western Sahara, Mauritania has no territories or colonies.

# MAURITIUS

Republic of Mauritius

**CAPITAL:** Port Louis

**FLAG:** The national flag consists of four horizontal stripes of red, blue, yellow, and green.

**ANTHEM:** *Glory to Thee, Motherland, O Motherland of Mine.*

**MONETARY UNIT:** The Mauritius rupee (₨) is a currency of 100 cents. There are coins of 1, 2, 5, 10, 25, and 50 cents and 1 rupee, and notes of 5, 10, 20, 50, 100, 200, 500, and 1,000 rupees. ₨1 = \$0.03432 (or \$1 = ₨29.14) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in general use; traditional weights and measures also are employed.

**HOLIDAYS:** New Year, 1–2 January; National Day, 12 March; Labor Day, 1 May. Christian, Hindu, and Muslim holidays also are observed.

**TIME:** 4 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Mauritius is situated in the Indian Ocean, about 900 km (559 mi) E of Madagascar and 2,000 km (1,250 mi) off the nearest point of the African coast. The island of Rodrigues, an integral part of Mauritius, is located about 560 km (350 mi) off its northeastern coast. The two islands of Agalega lie 1,122 km (697 mi) to the N of Mauritius; also to the N is the St. Brandon Group (Cargados Carajos Shoals). Mauritius has a total area of about 2,040 sq km (778 sq mi), of which the island of Mauritius occupies 1,860 sq km (720 sq mi); the island of Rodrigues, 110 sq km (42.5 sq mi); and the other offshore islands, 71 sq km (27 sq mi). Comparatively, the area occupied by Mauritius is slightly less than 10.5 times the size of Washington, DC. Mauritius extends 61 km (38 mi) N–S and 47 km (29 mi) E–W, and has a coastline of 177 km (110 mi).

The nation also claims Diego Garcia, a British dependency about 1,900 km (1,200 mi) NE, and a French possession, Tromelin Island, about 555 km (345 mi) NW. The OAU has supported Mauritius's claim to Diego Garcia.

The capital city of Mauritius, Port Louis, is located on the island's northwest coast.

## <sup>2</sup>TOPOGRAPHY

Mauritius is mostly of volcanic formation and is almost entirely surrounded by coral reefs. A coastal plain rises sharply to a plateau 275 to 580 m (900–1,900 ft) high. Piton de la Rivière Noire, the highest peak, reaches 828 m (2,717 ft). The longest river is the Grand River South East, which stretches from the center of the country to the central eastern border with a distance of 40 km (29 mi).

## <sup>3</sup>CLIMATE

The subtropical maritime climate is humid, with prevailing southeast winds. The temperature ranges from 18° to 30°C (64–86°F) at sea level, and from 13° to 26°C (55–79°F) at an elevation of 460 m (1,500 ft); the warmest season lasts from October to April, the coolest from June to September. From October to March, southeast trade winds bring heavy rains to the central plateau and windward slopes, which have a yearly average rainfall of over 500 cm (200 in). On the coast, rainfall averages about 100 cm (40 in) annually. Daily showers occur from April to September and occasional tropical cyclones between December and April.

## <sup>4</sup>FLORA AND FAUNA

Mauritius originally was covered by dense rain forest, which included heath and mossy forest at higher elevations and coastal palm savanna. Present vegetation consists chiefly of species brought by the settlers. Mauritius is the home of two indigenous snakes, the *Boleyria multicarinata* and *Casarea dussumieri*; also indigenous to Mauritius was the now extinct dodo bird, one of many exotic animal species that thrived in isolation from predators, including man. European settlers introduced dogs, cats, rats, monkeys, wild pigs, sambar deer, and mongoose.

## <sup>5</sup>ENVIRONMENT

The main environmental problems facing Mauritius are water pollution, soil erosion, and preservation of its wildlife. The sources of water pollution are sewage and agricultural chemicals. The erosion of the soil occurs through deforestation.

The Ministry of Housing, Lands, and the Environment has principal responsibility in environmental matters. As of 2003, about 7.8% of the nation's total land area is protected. According to a

2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 13 species of birds, 5 types of reptiles, 7 species of fish, 27 types of mollusks, 5 species of other invertebrates, and 87 species of plants. Endangered species on the island of Mauritius include the pink pigeon, Round Island boa and keel-scaled boa, green sea turtle, and Mauritius varieties of kestrel, parakeet, and fody. Endangered species on Rodrigues include distinctive varieties of brush warbler, fody, flying fox, and day gecko. Extinct species include the Mauritian duck, the Mauritius blue pigeon, the red rail, Rodrigues little owl, and the giant day gecko.

## 6 POPULATION

The population of Mauritius in 2005 was estimated by the United Nations (UN) at 1,243,000, which placed it at number 149 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 25% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 0.9%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 1,426,000. The population density was 609 per sq km (1,578 per sq mi).

The UN estimated that 42% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.48%. The capital city, Port Louis, had a population of 143,000 in that year. Other cities and their estimated populations were Beau Bassin/Rose Hill, 106,987; Vacoas/Phoenix, 103,564; Curepipe, 81,600; and Quatre-Bornes.

## 7 MIGRATION

A small number of Mauritians emigrate each year, principally to Australia, Europe, and Canada. In 2000 the number of migrants living in Mauritius was 8,000. The net migration rate was an estimated -0.41 per 1,000 population in 2005. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The largest group on Mauritius—about 68% of the population—is Indo-Mauritian, consisting of immigrants from India and their descendants. About 27% of the islanders are Creole (mixed European and African), 3% Sino-Mauritian, and 2% Franco-Mauritian.

## 9 LANGUAGES

English and French are the official languages; however, Creole, derived from French, is the most widely spoken (by 80.5% of the population). Bojpoori is the second most common language, spoken by about 12% of the population. Only 3.4% of the population speak French. Only a small minority speak English as a first language. On Rodrigues, virtually the entire population speaks Creole. Hindi, Urdu, and Hakka are also used in some groups.

## 10 RELIGIONS

According to a 2000 census, Hindus constituted about 50% of the total population. Christians made up about 32%, with a vast majority (about 85% of all Christians) affiliated with the Roman Catholic church. Other Christian denominations include Adventist, Assemblies of God, Christian Tamil, Church of England, Pen-

tecostal, Presbyterian, Evangelical, Jehovah's Witnesses, and the Church of Jesus Christ of Latter-Day Saints. Most Christians live in the southern portion of the country while the north tends to be predominantly Hindu. About 16% of the population were Muslims, with a majority being Sunni. There are a small number of Buddhists.

Throughout the country, there is a strong correlation between religious affiliation and ethnicity. Those of Indian descent are primarily Hindu or Muslim. Those of Chinese descent are often nominally Buddhists, but practicing Catholics, since they often admit their children to Catholic schools. Creoles and Europeans are primarily Catholic.

Though there is no state religion, a parliamentary decree allows that certain religions represented before independence (Roman Catholicism, the Church of England, Presbyterianism, Seventh-Day Adventist, Hinduism and Islam) are entitled to annual payments from the government. Other religions are registered by the Registrar of Associations in order to attain legal, tax-exempt status. Though there has been some social and political tension between the Hindu majority and the Christian, Muslim, and Creole minorities, there are few reports of violence or blatant discrimination. Certain Hindu, Tamil, Christian, and Muslim holidays are recognized as national holidays. The Ministry of Arts and Culture has a responsibility to promote interreligious and intercultural relations within the country.

## 11 TRANSPORTATION

Mauritius had an estimated 2,254 km (1,402 mi) of roads in 2003, of which all were paved, and included 75 km (47 mi) of expressways. As of 2003, there were 39,412 commercial vehicles and 101,436 private passenger cars. In 2005, the country had eight merchant ships in service of 1,000 GRT or more for a combined capacity of 22,946 GRT. In 1999 the Port Louis harbor completed a major expansion and modernization. Also in 2004 there were six airports, only two of which had paved runways as of 2005. Air Mauritius provides about four flights weekly to Rodrigues from the main airport at Plaisance, as well as, over 40 weekly international flights. In early 2001 Air Mauritius concluded an alliance with Delta Airlines. Other major airlines serving Mauritius are Air France, British Airways, Air India, Air Zimbabwe, Lufthansa (Condor), Singapore Airlines and South African Airways. In 2003, about 1.035 million passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Long uninhabited, Mauritius was probably visited by Arab and Malay seamen and later by Portuguese and other European voyagers. However, significant contact did not take place until the Dutch, under Admiral Wybrandt van Warwijck, arrived in 1598. They named the island after their stadtholder, Prince Maurice of Nassau. Settlers arrived in 1638; their settlements were abandoned in 1710, however, and the French took possession in 1715, sending settlers from Réunion in 1721. The island was governed by the French East India Company until 1767, and by the French government for the next 43 years, except for a brief period of independence during the French Revolution. During the Napoleonic wars,

French-held Mauritius became a major threat to British shipping in the Indian Ocean, and Britain occupied it in 1810.

Under British rule, Mauritius became a sugar-producing island. The French community secured major control of the cane fields and sugar refineries; lacking any appreciable British settlement, the island remained French in culture. Abolition of slavery in the British Empire caused an acute labor problem as the former slaves, African in origin, left the sugar fields to go into other occupations. To offset this loss, the United Kingdom, from 1835, allowed the planters to import indentured laborers from India. The system continued until 1907, with 450,000 Indians migrating to Mauritius.

The constitution of 1831 provided for a Council of Government, in which representation was largely by Europeans, although a few Creoles won nomination. The constitution of 1886 provided for a council of 27 members, including 10 elected members. The electorate was limited by property qualifications, which denied the population of Indian descent elective representation until 1926. The constitution of 1947 abolished property qualifications and extended the franchise to both sexes. Since 1948, the Indian population has dominated the elective seats. As a result of a constitutional conference held in London in September 1965, Mauritius was granted full internal self-government.

Mauritius became independent on 12 March 1968 and one month later became a member of the UN. Disturbances at the time of independence between Muslims and Creoles forced declaration of a state of emergency, at which time UK troops from Singapore aided in restoring order. Sir Seewoosagur Ramgoolam, chief minister in the colonial government, became the first prime minister after independence. Ramgoolam's Mauritius Labor Party (MLP) held power alone, or in coalition with others, until June 1982 when an alliance of the Mauritian Militant Movement (MMM) and the Mauritian Socialist Party (PSM) captured all 60 directly elected seats on the island of Mauritius. This coalition, known as the Militant Socialist Movement (MSM) formed a government. MMM leader Aneerood Jugnauth became prime minister. In March 1983, however, 11 of the 19 ministers resigned, all MMM members, and new elections were called. The voting, in August of that year, produced a clear mandate for a new coalition forged by Jugnauth. The MMM-dominated coalition won another clear-cut victory in August 1987 Legislative Assembly elections.

Jugnauth's coalition received a mandate again in the September 1991 general elections, winning 59 of 62 directly elected seats. As promised, the MSM/MMM alliance amended the constitution, making Mauritius a republic within the Commonwealth. Since 12 March 1992, Queen Elizabeth II has been replaced by a Mauritian chief of state.

In 1993, there was trouble in the coalition when a prominent minister in the MMM met officials of the Social Democrats (PMSD). The minister was fired by Jugnauth, but the other MMM members stayed in the coalition. At times, it appeared that the ruling coalition would fray, but they managed to negotiate terms of conciliation and stood united for the 20 December 1995 elections when they took 65% of the vote, or 60 of 62 elected seats. Dr. Navinchandra Ramgoolam became prime minister. Cassam Uteem and Angidi Veeriah Chettiar were later elected president and vice president.

LOCATION: 19°50' to 20°5' S; 57°18' to 57°48' E. TERRITORIAL SEA LIMIT: 12 miles.

Trouble in the coalition resurfaced in June 1997 when Ramgoolam fired MMM's leader, Paul Bérenger, who was vice-premier and minister of Foreign Affairs. Seven cabinet ministers belonging to MMM resigned in protest and, together with other elected MMM candidates, joined the parliamentary opposition group. This precipitated a second cabinet reshuffle since Ramgoolam took power in 1995. This left the labor party in power with only small parties aligned with it. Bérenger's place was now occupied by the vice president of the Labor Party, Kailash Purryag.

This unbalanced configuration provoked fears of a repeat of the ethnic clashes that had rocked Mauritius in 1968; however, ethnic violence did not materialize. After three days of rioting in the capital (Port Louis) and other parts of the country in February 1999, the country gradually returned to normal. Clashes between

Rastafarians and police were triggered by the death in police custody of a popular reggae singer, Kaya. Three protesters were killed, a policeman died of heart failure, and over 100 were wounded in the clashes.

Although the country had suffered corruption scandals under the previous administration of Prime Minister Navin Ramgoolam, Mauritius has largely avoided the corruption scourge characterizing much of Africa. After winning the September 2000 elections, the coalition government under Jugnauth and Bérenger stated that its priorities were to boost local and foreign investor confidence, and to re-launch the economy.

Mauritius is one of a few sub-Saharan African countries to attain the rank of middle-income status and rule by constitutional process—the country has had only three prime ministers since independence. In February 2002, two presidents—in their mostly ceremonial role—resigned in the space of a week objecting to anti-terror legislation prompted by the 11 September attacks on the World Trade Center. An interim president, Supreme Court Chief Justice Arianga Pillay, signed the bill into law, which was twice passed by the parliament owing to strong support from Prime Minister Anerood Jugnauth. The constitution requires the president either to sign the bill into law or leave office.

A ruling by the WTO following complaints of unfair trade practices lodged by Australia, Thailand, and Brazil caused Mauritius to lose its preferential access to US and European markets during 2005–07. Mauritius has enjoyed duty-free entry and trade quotas for its top two exports of sugar and textiles into the European and American markets since the 1970s. Under the Sugar Protocol, Mauritius enjoyed an annual fixed quota of over 500,000 metric tons at prices just under two-thirds of the world market price. Textiles were guaranteed duty-free entry into European Markets under the Lomé Convention with the EU, and a series of Multi-Fibre Agreements (MTA) renewed in 1977 and three other times since (the first MTA came to an end in 2005) restricted imports of low-cost textiles into Mauritius. This preferential access had attracted many investors into Mauritius.

Proposals by the EU reduced sugar prices in the EU by 37.5% during 2005–07. Removal of special trade status also exposes Mauritius to stiff competition from low-cost textile producers, notably China. The impending change in trade status resulted in tens of thousands of jobs lost in 2003/04 and more expected to follow in the export-processing zone (EPZ). With the comparative advantage about to evaporate, many investors were relocating to other low-cost countries. As one of the measures to revive the economy, Pravind Jugnauth, deputy prime minister and minister of finance and economic development, announced in April 2005 that Mauritius would become a duty-free island within four years, in order to attract tourists and trade and give Mauritians easier access to quality products at affordable prices. Still, economic woes precipitated by loss of preferential trade status, in particular growing unemployment, had political implications.

Analysts believe growing unemployment and a worsening economy helped to narrowly squeeze the opposition MLP-led Alliance Sociale into power in parliamentary elections that were held 3 July 2005. This alliance included five other parties: the Mauritian Party of Xavier-Luc Duval (Parti Mauricien Xavier-Luc Duval, PMXD), PMSD, The Greens (Les Verts), the Republican Movement (Mouvement Républicain, MR) and the Mauritian Militant Socialist

Movement (Mouvement Militant Socialiste Mauricien, MMSM). It beat the outgoing coalition composed of MSM and MMM. The Alliance Sociale coalition won 48.8% of the vote and 38 of the 62 elected seats compared to 42.6% of the vote and 22 seats won by the MSM/MMM/PMSD coalition. The turnout was 81.5%. Navinchandra Ramgoolam, the MLP leader, replaced Bérenger as the prime minister and formed a new government.

## 13 GOVERNMENT

The Mauritian government is parliamentary, with executive power vested under the constitution in a ceremonial president and an executive prime minister, who is leader of the majority party in parliament. The president and vice president are elected by the National Assembly, to serve five-year terms. The prime minister heads a Council of Ministers, which is responsible to a unicameral Legislative Assembly. Of its maximum 70 members, 62 are elected by universal suffrage (age 18), and as many as 8 “best losers” are chosen from runners-up by the Electoral Supervisory Commission by a formula designed to give at least minimal representation to all ethnic groups and underrepresented parties.

In elections held 25 February 2002, Karl Offmann was elected president and Raouf Bundhun vice president. Parliamentary elections were held 11 September 2000. In September 2003 the two-time premier, Sir Anerood Jugnauth, kept his coalition and campaign promise to hand over the premiership in mid-term to the MMM leader, and stepped down, and his deputy, Paul Raymond Bérenger, became prime minister. On 7 October 2003 Sir Anerood Jugnauth was sworn in as president of the republic, after Karl Offmann stepped down a year-and-a-half after assuming power. Raouf Bundhun remained vice president. Presidential elections are scheduled for 2007. Bérenger, the first Catholic, Franco-Mauritian head of government, did not stay in power for long either. Parliamentary elections held on 3 July 2005 returned Navin Chandra Ramgoolam to office as prime minister.

## 14 POLITICAL PARTIES

The Mauritius Labor Party (MLP), headed by Prime Minister Sir Seewoosagar Ramgoolam, received support during 35 continuous years in office (1947–82) from the Hindu and Creole communities and some Muslims; often sharing power in those years was the Muslim Committee of Action (MCA). The Mauritian Social Democratic Party (Parti Mauricien Social-Démocratique, PMSD) has long represented the Franco-Mauritian and Creole landowning class.

A new political party, the Mauritian Militant Movement (MMM), was formed in 1970. Its leaders were imprisoned in 1971 after the MMM called for a general strike to protest legislation banning strikes in industries controlled by MMM affiliates. The party leadership was later freed, and in the 1976 elections the MMM won more seats than the MLP, although not enough to achieve power. In the 1982 elections, the MMM captured 42 seats in parliament and joined the Mauritian Socialist Party (Parti Socialiste Mauricien, PSM) in a ruling coalition under Anerood Jugnauth; unlike the MMM, which had strong Creole representation, the PSM was primarily Hindu.

Jugnauth's government fell apart in the early months of 1983, in the course of a power struggle within the MMM that led to the prime minister's expulsion from his own party. Jugnauth then

formed the Mauritian Socialist Movement (Mouvement Socialiste Mauricien, MSM), which, in alliance with the MLP, captured 37 of 62 directly elected seats in the August balloting. The MMM won 19 seats, the PMSD 4, and a Rodrigues-based party, the Organisation du Peuple Rodriguais (OPR), 2. In August 1987 elections, the MSM, in alliance with the MLP and PMSD, won 39 of 62 directly elected seats; a three-party coalition including the MMM won 21 seats; and the OPR won 2 seats.

The legislative elections of 15 September 1991 resulted in the MSM/MMM alliance getting 59 seats (53% of the vote) and the MLP/PMSD alliance three seats (38%). By October 1993, however, the MMM had divided into two factions: one remained in the government and the other, headed by former Foreign Minister Paul Bérenger, took opposition seats in parliament.

Legislative elections held in December 1995 saw a newly solidified MMM/MLP coalition win 60 seats (35 for MLP and 25 for MMM) of the 62 elected seats. The Rodrigues Movement had two seats; two seats were given to the OPR; one to the Gaetan Duval Party; and one to Hizbullah. The MMM/MLP coalition fell apart in June 1997 with the firing of Bérenger from the vice-premier-ship, leaving the MLP in power with small parties aligned with it.

Following the reconfiguration of an opposition alliance comprising Anerood Jugnauth's Militant Socialist Movement and Paul Bérenger's Mauritian Militant Movement, the coalition successfully swept the 11 September 2000 elections, winning 52.3% of the vote, and holding the MLP/PMSD to 36.9%, and the OPR to 10.8%. The breakdown of seats was 54 for the MSM/MMM, 6 for the MLP/PMSD, and 2 for the OPR. Sir Anerood Jugnauth stepped down as he had promised and handed the premiership over to Paul Bérenger on 30 September 2003. Bérenger was to lose it in the 2005 elections.

In parliamentary elections held on 3 July 2005, the opposition Alliance Sociale led by the MLP, and also incorporating the PMXD, PMSD, The Greens, MR and MMSM, narrowly won the elections, garnering 48.8% of the vote and winning 38 of the 62 contested seats. The Alliance Social ousted Alliance MSM/MMM which won 42.6% of the vote and 22 parliamentary seats. The two remaining seats for Rodrigues were won by OPR, which took only 0.8% of the vote. According to the constitution, President Anerood Jugnauth allocated an additional eight seats to ethnic groups, bringing total representation to 42 Alliance Sociale, 24 MSM/MMM, and 4 OPR.

## 15 LOCAL GOVERNMENT

There are nine administrative districts and three dependencies, of which the Island of Rodrigues is one. The other dependencies are Agalega Islands and Carajos Shoals. The lowest level of local government is the village council, composed of elected as well as nominated members; above the village councils are three district councils. Commissions govern the major towns. There are also three dependencies.

Municipal council elections were held on 2 October 2005 followed by village council elections on 11 December 2005. The Alliance Sociale won all the wards in all the five municipalities, except in one of the four wards of the Town of Beau Bassin-Rose Hill, where Alliance MSM/MMM won three of the seven council positions.

## 16 JUDICIAL SYSTEM

The statutes are based mainly on old French codes and on more recent laws with English precedents. The Supreme Court has a chief justice and six other judges who also serve on the Court of Criminal Appeal, the Court of Civil Appeal, the Intermediate Court, the Industrial Court, and 10 district courts. Final appeal can be made to the UK Privy Council.

The president, in consultation with the prime minister, nominates the chief justice, and then with the advice of the chief justice also appoints the associate judges. The president nominates other judges on the advice of the Judicial and Legal Service Commissions.

The legal system provides fair public trials for criminal defendants. Defendants have the right to counsel, including court-appointed counsel in case of indigency.

Mauritius has had a good record of freedom of the press and rule of law, except for isolated incidents. These include a rough economic period and unrest in the 1970s when the government attempted to impose some restrictions, particularly on newspapers opposed to its policies, and arbitrary arrests became more frequent, but fierce opposition led to the abolition of the laws. There were also local and international concerns over government plans to put in place "sanctions" against private radio stations which had angered the government over coverage of an explosion in the northern city of Grand-Baie in August 2004.

## 17 ARMED FORCES

All defense and security duties are carried out by a 2,000 personnel paramilitary police force. The forces within this structure were an estimated 500-member Coast Guard and an estimated 1,500-member Special Mobile Force. There was also an air wing with two utility helicopters. The defense budget for 2005 was \$21.4 million.

## 18 INTERNATIONAL COOPERATION

Mauritius joined the United Nations on 24 April 1968 and belongs to ECA and several nonregional specialized agencies, such as the FAO, IAEA, the World Bank, UNESCO, UNIDO, and the WHO. The nation participates in the WTO, the African Development Bank, COMESA, Commonwealth of Nations, G-77, the ACP Group, Alliance of Small Island States (AOSIS), and African Union. In 1984, Mauritius joined Madagascar and Seychelles in establishing the Indian Ocean Commission; the Comoros and France (as the representative of Réunion) joined in 1985. Mauritius also is a member of the Southern Africa Development Community (SADC). The country is part of the Nonaligned Movement.

In environmental cooperation, Mauritius is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The Mauritius economy, diverse and conservatively managed, is based on export-oriented manufacturing (mainly clothing), sugar, and tourism. Most of production is done by private enterprise, with the government largely limiting its role to providing insti-

tutional facilities and incentives for production. More than 250 garment factories were operating in the Export Processing Zone (EPZ) of Mauritius in 2002, and more than 500 companies operate in the EPZ overall. As of 2005, services accounted for 64% of GDP, industry for 29.9%, and agriculture for 6.1%.

The economy grew at an impressive average rate of 6% in the early 1980s. However, economic growth started to decline in 1988 as the economy experienced some of the problems associated with success, including labor shortages, rising inflation, and capacity constraints. In the early 1990s, the economy showed signs of a modest recovery, with solid real growth and low unemployment. Between 1988 and 1998, the economy was estimated to have grown at an annual rate of approximately 5.3%, which is approximately where it stood in 2001. The GDP growth rate was estimated at 3.8% in 2005.

Important to Mauritius's industrial development is the Export Processing Zone (EPZ) in which imported goods and raw materials are processed for export. EPZ products include textiles and clothing (80%), electrical components, and diamonds. Manufacturing in the EPZ provided nearly 45% of export earnings in 2002. Legislation gives investors in EPZ enterprises tax relief, duty exemption on most imports, unlimited repatriation of capital and profits, and cut-rate electricity. However, some of the country's larger manufacturing industries were moving their labor-intensive production to Madagascar. Preferential access to markets in Europe and the United States has been threatened by WTO regulations that do away with textile, clothes, and sugar quotas.

Sugarcane covers approximately 45% of the island's land area, and 90% of cultivated land. Sugarcane accounts for 25% of export earnings. Adverse weather conditions reduced the importance of sugarcane to the Mauritian economy in the late 1990s, but exports of cane brought in almost 8% of the GDP. To further enhance its competitive advantage, in 1992 the government passed legislation for the creation of a commercial free port in Port Louis. The free port provides warehousing as well as facilities for processing foods and materials for reexport to destinations around the world. The financial services sector of the economy is expanding, as is the tourism sector. Mauritius is increasing its trade with India and South Africa, largely through more than 9,000 offshore entities.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Mauritius's gross domestic product (GDP) was estimated at \$16.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$13,300. The annual growth rate of GDP was estimated at 3.8%. The average inflation rate in 2005 was 5.6%. It was estimated that agriculture accounted for 6.1% of GDP, industry 29.9%, and services 64%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$215 million or about \$176 per capita and accounted for approximately 4.1% of GDP.

The World Bank reports that in 2003 household consumption in Mauritius totaled \$3.23 billion or about \$2,644 per capita based on a GDP of \$5.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individ-

uals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.7%. In 2001 it was estimated that approximately 21% of household consumption was spent on food, 13% on fuel, 3% on health care, and 13% on education. It was estimated that in 2001 about 10% of the population had incomes below the poverty line.

## 21 LABOR

Mauritius's labor force in 2005 was estimated at 570,000 workers. As of 2003, about 53.6% were employed in the services sector, 37.1% by industry and 9.4% by agriculture. The estimated unemployment rate in 2005 was 10.5%.

Unions have the legal right to organize, strike, and bargain collectively, and the trade union movement is active. There were over 335 labor unions in 2001, with 111,231 members, representing about 22% of the workforce. Workers are granted the right to strike, but this is severely curtailed by a mandatory cooling-off period and compulsory binding arbitration. Antiunion discrimination is prohibited and an arbitration tribunal handles complaints of such discrimination. Although the law protects collective bargaining, there are not enough safeguards in place to protect employees from discriminatory actions by employers.

The minimum working age is 15, with restrictions for those under age 18. However, child labor and exploitation is still practiced and penalties for infractions are minimal. Minimum wages are set by the government, and cost-of-living allowances are mandatory. The minimum wage ranged from \$3.53 to \$12.30 per week in 2002, but due to a labor shortage and contract negotiations, actual wages are about double this figure. The standard legal workweek is 45 hours.

## 22 AGRICULTURE

Sugarcane is the major crop. In 2004, 5.28 million tons of cane were produced. Sugarcane occupies 34% of Mauritius's total land area and 68% of its cultivated land. It is an estate economy, with 21 large estates accounting for about 30% of the land cultivated, and 14,822 employees in 2004. Small operations account for 40% of the land cultivated and are grouped into cooperatives. In 2004, processing of sugar accounted for 16% of agricultural exports. Agriculture accounted for 6% of GDP and 19% of exports in 2004. Sugar's importance has diminished in recent years as manufacturing and tourism have grown.

Tea production in Mauritius has been on the decline, disadvantaged by production cost increases, labor shortages, and low world prices. The area under tea cultivation declined from 2,905 hectares (7,178 acres) in 1990 to 674 in 2004. Tobacco production was 357 tons in 2004, and now provides the raw material for most locally produced cigarettes. In recent years, horticultural products have been successfully grown for export, including flowers (mainly anthuriums), tropical fruits, and vegetables.

Other crops and 2004 yields were (in thousands of tons): tea, 8.7; potatoes, 11.2; tomatoes, 14.4; bananas, 12; cucumbers, 6.9; and cabbage, 6.5. Almost any crop can be grown on Mauritius, but the shortage of land means almost all cereals must be imported, including rice, the staple food. Potatoes and other vegetables are grown in the sugar fields between rows of cane.

## 2<sup>3</sup> ANIMAL HUSBANDRY

In 2005, Mauritius had 93,000 goats, 28,000 head of cattle, 11,500 pigs, and 9.8 million chickens. That year, 4,000 tons of cow milk, 30,500 tons of meat, and 5,200 tons of hen eggs were produced.

## 2<sup>4</sup> FISHING

The total catch in 2003 was 11,169 tons, a decline from 21,157 tons in 1993. In 2003, about 16% of the catch consisted of snapper. Exports of fish products were valued at nearly \$75.1 million in 2003.

## 2<sup>5</sup> FORESTRY

About 8% of the total land area of Mauritius is classified as forest. Roundwood removals were an estimated 13,550 cu m (478,300 cu ft) in 2004, half of it burned as fuel. Sawn wood production was about 3,000 cu m (106,000 cu ft) in 2004.

## 2<sup>6</sup> MINING

There were few mineral resources in Mauritius. In 2004, Mauritius produced 89,400 metric tons of fertilizers, an estimated 7,700 metric tons of marine salt, and 65,000 metric tons of semi-manufactured steel. Historically, mineral output consisted of the local production and use of basalt construction stone, coral sand, lime from coral, and solar-evaporated sea salt. Concerns have been raised about the impact of coral sand mining on coastal lagoons. Polymetallic nodules occurred on the ocean floor, northeast of Tromelin Island, containing iron, manganese, and cobalt. However, these minerals were abundant on land. The near-term outlook for the exploitation of minerals other than construction materials was negligible.

## 2<sup>7</sup> ENERGY AND POWER

Mauritius, as of 1 January 2005 had no proven reserves of crude oil, natural gas, coal or petroleum refining capacity. As a result it is totally dependent upon imports to meet its fossil fuel needs.

In 2004, imports and consumption of refined petroleum products averaged 27,000 barrels per day. In 2003 demand for coal came to 320,000 short tons.

As of 1 January 2003, installed electric power generating capacity totaled 0.655 million kW, of which 91.6% of capacity was dedicated to conventional thermal fuel sources in 2002, and the remainder to hydropower. Electric power production totaled 1.94 billion kWh and consumption 1.81 billion kWh. A significant portion of all primary energy consumed comes from bagasse, or sugarcane waste.

## 2<sup>8</sup> INDUSTRY

Since 1986, Export Processing Zone (EPZ) export earnings have led those of the sugar sector. Investors are primarily from Mauritius itself and Hong Kong. The textile industry was the leading sector in the EPZ, with more than 90% of the EPZ's goods being produced for the United States and Europe; with the change in Mauritius's trade status taking effect in 2005, export earnings were under severe pressure. Other important products include chemicals, electronics, nonelectrical machinery, transportation equipment, precision engineering, skilled crafts, toys, nails, razor blades,

and tires. Industry accounted for 29.9% of GDP in 2005. Mauritius is also emerging as a major business and financial center.

Manufacturing centers on the processing of agricultural products, sugarcane in particular. Of the 20 large sugar-producing estates 17 have their own factory. Normal production varies between 600,000 to 700,000 metric tons, but adverse weather during the late 1990s reduced these figures. Molasses and rum are among the sugar by-products produced in Mauritius. Local tobacco is made into cigarettes, and factories are maintained to process tea. Other small industries produce goods for local consumption, such as beer and soft drinks, shoes, metal products, and paints.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

In 1997, (the latest year for which data is available) there were 201 scientists and engineers and 126 technicians per million people that were engaged in research and development (R&D), R&D expenditures that year totaled \$27.659 million or 0.29% of GDP. Of that amount, government sources accounted for 94.7%, with foreign sources accounting for the remaining 5.3%. High technology exports in 2002 totaled \$29 million, or 2% of the country's manufactured exports.

The Mauritius Institute in Port Louis, founded in 1880, is a research center for the study of local fauna and flora. The Mauritius Sugar Industry Research Institute, founded in 1953, is located at Réduit. The University of Mauritius, founded in 1965 at Réduit, has schools of agriculture, engineering, and science. In 1987–97, science and engineering students accounted for 14% of college and university enrollments. The Regional Sugarcane Training Center for Africa, located in Réduit, is sponsored by the United Nations Development Program. The Port Louis Museum maintains collections of fauna, flora and geology of Mauritius and other islands of the Mascarene region.

## 3<sup>0</sup> DOMESTIC TRADE

Port Louis is the commercial center and the chief port. A wide variety of goods are distributed through the standard channels of importers, wholesalers, retailers, and supermarkets. Franchising, mainly in restaurants, has become more popular in the past few years. The nation's first McDonald's opened in 2001.

The government maintains price and markup controls on a number of consumer goods, including rice, onions, iron and steel bars, edible oils, certain appliances, pharmaceuticals, sporting goods, timber, and many others. A 1998 Consumer Protection Act extends government pricing controls to several other basic commodities, such as cheese, butter, canned and frozen meats, and sugar. There is a 15% VAT tax.

The Mauritius Freeport, a customs duty-free zone in the port and airport, turned the country into a major regional distribution, transshipment, and marketing center. This zone provides facilities for warehousing, transshipment operations and minor processing, simple assembly, and repackaging.

Business hours are from 9 AM to 4 PM, Monday–Friday, and 9 AM to 12 PM on Saturday. Banks are open from 9:30 AM to 2:30 PM, Monday–Friday, and 9:30 to 11:30 AM on Saturday. Shops operate from 9:30 AM to 5 PM, Monday through Friday, and from 9 AM to 12 PM on Saturday. Most business is conducted in English and French.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.**3<sup>1</sup> FOREIGN TRADE**

Export revenues from the Export Processing Zone (EPZ) in the early 2000s amounted to 75% of total exports; and over \$1.2 billion in receipts. Over half of Mauritius's exports are comprised of clothes and textiles, while the majority of the remainder belongs to the sugar trade. With the change in trade status and new pricing structures for the EU going into effect, Mauritius's exports were likely to suffer. In 2004, Mauritius's principal export partners were: the United Kingdom (33.1%), France (20.4%), the United States (14.8%), Madagascar (5.1%), and Italy (4.1%). The principal import partners in 2004 were: South Africa (11.3%), China (9.4%), India (9.3%), France (9.2%), Bahrain (5.3%), and Japan (4.1%).

**3<sup>2</sup> BALANCE OF PAYMENTS**

Mauritius imports more than it exports, but the difference is taken care of by revenues from tourism and other services. In 2005, the value of Mauritius's exports was estimated at \$1.949 billion, and imports were estimated at \$2.507 billion. The current-account balance was estimated at \$151 million in 2005. Mauritius had \$1.605 billion in foreign exchange reserves and gold in 2005. The country held an external debt burden of \$2.958 billion.

**3<sup>3</sup> BANKING AND SECURITIES**

The Bank of Mauritius is the central bank. The Development Bank of Mauritius was established in March 1964 to provide loans for agricultural and industrial enterprises. There were 10 commercial banks operating in the country in 2002. Three were locally owned, including The Mauritius Commercial Bank Limited and the Sate Bank of Mauritius Limited, both of which dominated the market. The government-controlled Development Bank of Mauritius Limited provides loans to industry. The other seven banks are offshore, offering attractive tax rates, especially to US investment in India. Foreign exchange reserves at the Bank of Mauritius stood at \$840 million in 1997, and were expected to reach \$875 million

by mid-1998. Total commercial bank assets were estimated at \$3.4 billion.

The government made it clear early in the first quarter of 1997 that the Bank of Mauritius would intervene in the foreign exchange market in order to stabilize the value of the rupee. Interventions by the central bank helped the rupee to rebound after its decline against most foreign currencies, during the first nine months of 1996. In 1997, the Mauritian rupee was freely convertible.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$530.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 7.25%.

A market for securities or shares was not new to Mauritius when the Stock Exchange of Mauritius (SEMDEX) opened in 1989. Shares of companies had been traded in Mauritius in a market environment since the nineteenth century. The main difference between the market organized by *Chambre de Courtiers de l'île Maurice* and the market in its present form is the legal framework within which dealings in shares must now take place, and the regular meetings for share dealing. The stock market was opened to foreigners in 1994. In 2001, the market had 40 listed companies, and a capitalization that grew from \$55 million in 1989 to \$1.8 billion in 1997, but then had declined to \$1.1 billion by 2001. As of 2004, a total of 41 companies were listed on the SEMDEX, with a total capitalization of \$2.379 billion. In 2004, the SEMDEX rose 29.3% from the previous year to 710.8.

**3<sup>4</sup> INSURANCE**

There are at least 20 insurance companies operating in Mauritius. In 2003, the value of all direct insurance premiums written to-

taled \$241 million, of which life insurance premiums accounted for \$146 million. As of that same year, Mauritius's top nonlife insurer was Swan, with gross written nonlife premiums of \$20.7 million. The country's leading life insurer in 2003 was BAI, which had gross written life insurance premiums of \$47.7 million.

### 35 PUBLIC FINANCE

From the mid-1970s to 1981, the ratio of fiscal deficit to GDP increased from under 10% to 14%, due to deficit public spending. During the 1980s, an export-oriented economy caused the fiscal deficit to decline to 3% of GDP by 1989, and to 2% by 1991. In 1997, the deficit reached 4.6%, but the government announced measures that aimed at reducing the figure to 3.6% of GDP. The government's plan did not work; by fiscal year 2001/2002, the deficit had climbed to 6.3%. The new goal is to bring the deficit down to 3% of GDP by fiscal year 2005/2006.

The US Central Intelligence Agency (CIA) estimated that in 2005 Mauritius's central government took in revenues of approximately \$1.3 billion and had expenditures of \$1.7 billion. Revenues minus expenditures totaled approximately -\$393 million. Public debt in 2005 amounted to 26.2% of GDP. Total external debt was \$2.958 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were R32,919 million and expenditures were R37,972 million. The value of revenues in US dollars was us\$1,180 and expenditures us\$1,304, based on a market exchange rate for 2003 of us\$1 = R27.901 as reported by the IMF. Government outlays by function were as follows: general public services, 24.5%; defense, 0.8%; public order and safety, 7.6%; economic affairs, 11.9%; environmental protection, 4.2%; housing and community amenities, 4.5%; health, 8.4%; recreation, culture, and religion, 2.2%; education, 15.8%; and social protection, 20.1%.

### 36 TAXATION

As of 30 June 2005, Mauritius had a corporate income tax rate of 25%. However, companies that are awarded Tax Incentive Certificates by the government are eligible for a reduced tax rate of 15%. Effective 1 July 1998, offshore companies incorporated on or after this date were required to pay tax at a rate of 15%. In addition, mutual funds, unit trusts, and certain other types of companies pay a reduced rate of 15%. Companies granted a Global Business License are taxed at 15% and are eligible for other tax reductions and exemptions. Mauritius has double-taxation prevention treaties with about 30 countries. Generally, capital gains are not subject to an income tax. However, capital gains resulting from the disposal of land can be subjected to a separate tax. Land development taxes can also be assessed. Dividends are tax exempt.

The progressive scale for individual income tax, ranging from 5–30%, has been replaced by a simpler split schedule of two rates on taxable income: 15% on taxable income to 25,000 Rupees (about \$860), and 25% on the rest. Social Security taxes are also assessed.

A general sales tax (GST) averaging 5% was imposed in 1983. As of 7 September 1998, the GST was replaced by a value-added tax (VAT) with a standard rate of 10%. On 1 July 2001, the standard rate was raised to 12%, and then, as of 7 January 2002, to 15%, where it remained as of 2005. The VAT applies to all goods and services except those specifically exempted. The exempt list includes basic foodstuffs, basic services (medical, hospital and dental), basic utilities (water and electricity), and all exported goods and service.

### 37 CUSTOMS AND DUTIES

Mauritius maintains a list of preferred trading partners to which it gives preferential tariff rates. Taxes on imports from the preferred list are levied at 0–80%. Imports of goods from other countries, at the 55% rate or higher, are subject to an additional 10% duty. A value-added tax (VAT) of 15% is levied on all imports. Vehicles, petroleum, alcohol, cigarettes, and furniture are subject to special excise duties of up to 360%.

Most imports require a license and state enterprises control the import of rice, wheat, flour, petroleum, cement, tea, tobacco, and sugar. There are few export controls, except the need for licenses to export sugar, tea, vegetables, fruits, meat, fish, textiles, pharmaceuticals, gold, live animals, coral, and shells.

Mauritius is a member of the South African Development Community (SADC), whose objective is creation of a free trade area by 2005. The country is also a member of the Common Market for Eastern and Southern Africa (COMESA), which gives preferential rates of duty between member states.

### 38 FOREIGN INVESTMENT

The government offers a variety of investment incentives, including, for industries in the Export Processing Zone, a corporate tax exemption of at least 10 years; an exemption from import duties on capital goods and most raw materials; free repatriation of profits, dividends, and invested capital; and a waiver of income taxes on dividends for 10 years. All foreign investment must obtain approval from the prime minister's office, except in the offshore busi-

ness center and the stock exchange. Businesses in Freeport receive exemption from company tax and tax on dividends, preferential rates for storage, halved port handling charges, and exemption from import duty and sales tax on finished goods and machinery. Foremost among foreign investors are those from Hong Kong, followed by French, South African, German, and Indian interests.

Foreign ownership of services such as accounting, law, medicine, computer services, international marketing, and management consulting was limited to 30% in 1997. Ownership of investments serving the domestic market was limited to 49%. In December 2000, the Investment Promotion Act was passed, designed to streamline the investment process.

Total foreign direct investment (FDI) was \$33 million in 1996. (However, because foreign investors have not been registering with the Central Bank since the abolition of exchange controls in 1994, it is generally cautioned that official statistics underestimate the amount of foreign investment in the country. Not included is the increasingly important offshore financial sector.) In 1997, FDI inflow rose to \$56 million, mainly due to investments from South Africa in the banking sector. FDI inflow fell to \$12.7 million in 1998, but increased to \$55 million in 1999, most investments coming from South Africa. In 2000, FDI inflow reached almost \$260 million, mostly due to France Telecom's purchase of a 40% share of Mauritius Telecom as part of their strategic alliance. Most investments in Mauritius's Export Processing Zone (EPZ) have been in low-skilled manufacturing enterprises in textiles, garments, toys, and leather goods.

In the mid-2000s, some leading sectors for investment included: information and communications technology; telecommunications and broadcasting equipment and services; environment and water; pharmaceuticals and medical equipment and supplies; tourism; and financial services.

### **39 ECONOMIC DEVELOPMENT**

France has backed training for labor, a stock exchange (which opened under the Stock Exchange Act of 1988), and irrigation projects. The EU is supporting efforts at diversifying agriculture. The Mauritius plan to become an international financial center advanced as liberalized currency rules were put into effect in 1986. In 1995, Mauritius became the 12th member of the Southern African Development Community (SADC). Mauritius intended to invest up to \$1.5 billion in infrastructure development projects from 1997 to 2007.

The government is putting effort into information and communications technologies, in an effort to diversify the economy away from its reliance upon sugar, textiles and apparel, and tourism. The government developed a five-year Sugar Sector Strategic Plan for 2001–05, to restructure the sugar industry, including reducing the labor force and the number of sugar mills in operation. The country's export processing zone firms have sizeable investments in Madagascar's export processing zone, and have been affected by political upheavals there. Nonetheless, growth in Mauritius was strong in the mid-2000s, and social conditions were improving. A rising unemployment rate is a concern, however (the unemployment rate was estimated at 10.5% in 2005). The government has

passed anti-money laundering and antiterrorism legislation. With GDP growth rates averaging 5–6% in the mid-2000s, Mauritius's economic success was reflected in more equitable income distribution, reduced infant mortality rates, increased life expectancy, and greatly-improved infrastructure.

### **40 SOCIAL DEVELOPMENT**

Mauritius has a universal system of pensions that supplements an earnings-related pension system. The universal pension covers all residents, and is financed entirely from government sources. The universal pension pays a fixed sum according to the age of the pensioner. Employee pension benefits are determined by the number of years worked. A program of family allowances assists needy families with more than three children. Employment-related sickness and maternity benefits are provided, as well as worker's compensation and unemployment benefits, rent assistance, and a funeral grant.

The constitution prohibits discrimination based on gender. Although women do not face significant legal discrimination, most remain limited to traditional subordinate roles in the household and in the workplace. Domestic violence is pervasive and is often related to drug and alcohol abuse. The government is strengthening laws to protect women, although most stay with abusive spouses for financial and cultural reasons. The government is committed to promoting the rights of children.

Ethnic tensions exist between majority Hindus and minority Muslims. Human rights are generally respected, but there are reports of the mistreatment of prisoners and suspects.

### **41 HEALTH**

As of 2004, there were an estimated 85 physicians, 232 nurses, and 13 dentists per 100,000 people. In the same year total health care expenditure was estimated at 3.4% of GDP. In 2000, 100% of the population of Mauritius had access to safe water and 100% had adequate sanitation.

The average life expectancy in Mauritius in 2005 was 72.38 years and the infant mortality rate was 15.03 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at 16.34 and 6.8 per 1,000 people respectively. The maternal mortality rate was 50 per 100,000 live births. As of 2000, 75% of married women (ages 15 to 49) were using contraception.

According to World Health Organization reports, 5.3% of children 3–6 years of age were anemic. Immunization rates for children up to one year old were: diphtheria, pertussis, and tetanus, 89%, and measles, 85%. The island of Mauritius has a high prevalence of non-insulin dependent diabetes. Physical inactivity and glucose intolerance through obesity are suggested culprits.

The high rates of coronary heart disease seen in Asian Indians, African-origin Creoles, and Chinese in this rapidly developing country may point to future problems in this region. Most deaths are cardiovascular-disease related.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 700 people living with HIV/AIDS in the country. There were an estimated 100 deaths from AIDS in 2003.

## 42 HOUSING

There are three basic types of houses: wattle and daub construction with thatched roofs; galvanized sheet-iron structures; and houses constructed of wood. In 2000, There were 297,671 housing units nationwide. Of these, about 65% were detached houses, 24.5% were semidetached homes or blocks of flats. About 99% of all dwellings were privately owned. Most households have three to five people. About 83.7% of all dwellings have indoor piped water, 99% have electricity, 87.8% have an indoor kitchen, and 74.8% have an indoor bathroom.

## 43 EDUCATION

Education is free up to college level and is compulsory for six years. The educational system is based largely in the British school system. Primary school covers six years of study. This is followed by seven years of secondary studies (five years lower and two years upper). The academic year runs from August to May.

In 2001, about 87% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 97% of age-eligible students. The same year, secondary school enrollment was about 74% of age-eligible students. It is estimated that nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 25:1 in 2003; the ratio for secondary school was about 20:1. In 2000, private schools accounted for about 23.9% of primary school enrollment and 72.7% of secondary enrollment.

Postsecondary institutions include the University of Mauritius; the University of Technology, Mauritius; the Mauritius College of the Air; the Mauritius Institute of Education; and the Mahatma Gandhi Institute. There are several polytechnical schools and about 30 private organizations that offer tertiary-level programs of study. Many university students study in Europe, India, Australia, and the United States. In 2003, about 15% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 84.3%, with 88.2% for men and 80.5% for women.

As of 2003, public expenditure on education was estimated at 4.7% of GDP, or 12.1% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

Libraries include the Mauritius Institute Public Library (75,000 volumes), the Mauritius Archives (36,000), the University of Mauritius Library (100,000), and the Port Louis City Library (110,000). The National Library, located at Port Louis and opened in 2000, has a collection of 230,000 items. The Sugar Industry Research Institute Library maintains a unique collection of 29,870 volumes on all aspects of sugarcane cultivation and manufacture. The Mahatma Gandhi Institute in Moka operates a library as well.

The Mauritius Museums Council operates the Natural History Museums (1880) in Port Louis and in Mahébourg (1950). The Folk Museum of Indian Migration is in Moka at the Mahatma Gandhi Institute. Port Louis is also home to a historical museum and a natural history museum.

## 45 MEDIA

All parts of the island are linked by telegraph, telephone, and postal services. In 2003, there were an estimated 285 mainline telephones for every 1,000 people; about 13,500 people were on a waiting list for telephone service installation. Also in 2003, there were approximately 267 mobile phones in use for every 1,000 people.

The state-owned Mauritius Broadcasting Corp. provides radio and television service in French, English, Hindi, and Chinese. In 2001, the government established the Independent Broadcast Authority, which is intended to formulate regulations for private broadcast licenses. The members of the group are primarily representatives of government ministries and the chair is appointed by the prime minister. In 2004, there were three independent, privately owned radio stations in operation. There were no private television stations. In 2003, there were an estimated 379 radios and 299 television sets for every 1,000 people. The same year, there were 116.5 personal computers for every 1,000 people and 123 of every 1,000 people had access to the Internet. There were 19 secure Internet servers in the country in 2004.

There are over a dozen privately owned newspapers across the country. Leading daily newspapers (with 2002 circulations) include *L'Express* (35,000), *Le Mauricien* (35,000), *The New Nation* (15,000), and *The Sun* (unavailable), each published in Port Louis in both French and English. There are three major Chinese language newspapers.

Free speech and press are constitutionally provided and said to be respected by the government.

## 46 ORGANIZATIONS

There are various commercial and scholarly organizations of the Western type, including the Mauritius Chamber of Commerce and Industry; the Indian Traders' Association; the Mauritius Employers' Federation; The Mauritius Cooperative Agricultural Federation (which had 209 member societies in 1993); and the Mauritius Cooperative Union.

National youth organizations include the Young Socialists, the Mauritius Scout Association, the Mauritius Student Association for the United Nations, the Mauritius Union of Students' Councils, the Mauritius World Federalist Youth, the Mauritius Young Communist League, Junior Chamber, the National Federation of Young Farmers Clubs, and YMCA/YWCA. Several sports associations are active, including those representing such sports as taekwon do, squash, tennis, yachting, and badminton. The International Council of Hindu Youth also has a base in Mauritius.

The Institute for Consumer Protection, founded in 1983, serves as both a consumer protection agency and as an agency for the promotion of maternal and infant health. International organizations with active chapters in the country include Amnesty International, Caritas, and the Red Cross. The multinational Indian Ocean Commission, founded in 1982, is based in Mauritius.

## 47 TOURISM, TRAVEL, AND RECREATION

The government has made efforts to promote upscale tourism and attract visitors from more countries. In addition to the nation's beaches, lagoons, and other scenic sites, tourist attractions in-

clude the colonial architecture of Port Louis, an extinct volcano in Curepipe, the fishing port and naval museum at Mahebourg, and the Botanical Gardens at Pamplemousses. Football (soccer) is the national sport. Badminton, volleyball, basketball, tennis, and water sports are also popular. Many of the hotels also have golf facilities.

In 2003, about 702,000 tourists visited Mauritius, of whom 28% came from France. That year there were 9,647 hotel rooms with 19,727 beds and a 63% occupancy rate. Tourist expenditure receipts totaled \$946 million.

Visitors must have a valid passport, onward/return ticket, hotel confirmation, and sufficient funds for the stay. All travelers are required to carry a visa except nationals from the United States and most European countries.

In 2005, the US Department of State estimated the cost of staying in Mauritius at \$216.

#### 48 FAMOUS MAURITIANS

Sir Seewoosagur Ramgoolam (1900–85), the first leader of independent Mauritius, was prime minister from 1968 to 1982, when Anerood Jugnauth (b.1930) succeeded him. Jugnauth served as prime minister from 1982–95, and then again from 2000–03, when he was named president. Navinchandra Ramgoolam (b.1947), was prime minister from 1995–2000, and then again beginning in 2005.

#### 49 DEPENDENCIES

Dependencies are the Agalega Islands and the St. Brandon Group.

# MOROCCO

Kingdom of Morocco  
*Al-Mamlakah al-Maghribiyah*

**CAPITAL:** Rabat

**FLAG:** The national flag consists of a green five-pointed star at the center of a red field.

**ANTHEM:** The *Hymne Chérifien* is a twentieth-century composition without words.

**MONETARY UNIT:** The dirham (DH) is a paper currency of 100 Moroccan centimes. There are coins of 1, 5, 10, and 20 Moroccan centimes and ½, 1, and 5 dirhams, and notes of 5, 10, 50, 100, and 200 dirhams. DH1 = \$0.11390 (or \$1 = DH8.78) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of the King's Accession, 3 March; Labor Day, 1 May; National Day, 14 August; Anniversary of the Green March, 6 November; Independence Day, 18 November. Movable religious holidays include 'Id al-Fitr, 'Id al-Adha, 1st of Muharram (Muslim New Year), and Milad an-Nabi.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated at the northwestern corner of Africa, with its northernmost point only 29 km (18 mi) south of Gibraltar, Morocco claims a total area of 446,550 sq km (172,414 sq mi), of which the Western Sahara comprises 252,120 sq km (97,344 sq mi). The Western Sahara is claimed and administered by Morocco, but as of 2006, sovereignty remained unresolved. Comparatively, the area occupied by Morocco is slightly larger than the state of California. Morocco extends 1,809 km (1,124 mi) NE–SW and 525 km (326 mi) SE–NW. Morocco proper is bordered on the N by the Mediterranean Sea and the two Spanish enclaves of Ceuta and Melilla, on the E and SE by Algeria, on the S by Western Sahara, and on the W by the Atlantic Ocean, with a total land boundary length of 2,018 km (1,254 mi) and a coastline of 1,835 km (1,140 mi).

Morocco's capital city, Rabat, is located on the Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

Morocco proper is divided into three natural regions: (1) the fertile northern coastal plain along the Mediterranean, which also contains Er Rif, mountains varying in elevation up to about 2,400 m (8,000 ft); (2) the rich plateaus and lowlands lying between the three parallel ranges of the rugged Atlas Mountains, which extend from the Atlantic coast in the southwest to Algeria and the Mediterranean in the northeast; and (3) the semiarid area in southern and eastern Morocco, which merges into the Sahara Desert. The Atlas Mountains, with an average elevation of 3,350 m (11,000 ft), contain some of the highest peaks of North Africa, including Mt. Toubkal (4,165 m/13,665 ft), the highest of all. South of the Atlas are the Anti-Atlas Mountains, with volcanic Mt. Siroua (3,300 m/10,800 ft). The Western Sahara is rocky, sandy, and

sparsely populated, unsuited for agriculture but rich in phosphate deposits.

Morocco has the most extensive river system in North Africa. Moroccan rivers generally flow south or westward to the Atlantic or southeastward toward the Sahara; the Moulouya (Muluya), an exception, flows 560 km (348 mi) northeast from the Atlas to the Mediterranean. Principal rivers with outlets in the Atlantic are the Oumer, Rebia, Sebou (Sebu), Bou Regreg, Tensift, Draa, and Sous (Sus). The Ziz (Zis) and Rheris are the main rivers flowing southward into the Sahara.

## <sup>3</sup> CLIMATE

The rugged mountain ranges and the Atlantic Ocean moderate the tropical heat of Morocco. Temperatures in Casablanca range from an average minimum of 7°C (45°F) to a maximum of 17°C (63°F) in January and from a minimum of 18°C (64°F) to a maximum of 26°C (79°F) in July. Temperature variations are relatively small along the Atlantic coast, while the interior is characterized by extreme variations. The eastern slopes of the Atlas Mountains, which divert the moisture-laden Atlantic winds, have a rigorous pre-Saharan climate, while the western slopes are relatively cool and well watered. The rainy seasons are from October to November and from April to May. Maximum annual rainfall (75–100 cm/30–40 in) occurs in the northwest. Other parts of the country receive much less; half of all arable land receives no more than 35 cm (14 in) a year.

## <sup>4</sup> FLORA AND FAUNA

Extensive stands of cork oak exist in the Atlantic coastal region, while rich evergreen oak, cedar, and pine forests are found on the slopes of the Atlas. In the steppe region, shrubs, jujube trees, and the mastic abound, and along the wadis there are poplars, wil-

lows, and tamarisks. The olive tree is widely distributed, but the oil-yielding argan tree, unique to Morocco, grows only in the Sous Valley. The desert is void of vegetation except for occasional oases. Although the lion has disappeared, panthers, jackals, foxes, and gazelles are numerous. The surrounding waters abound in sardines, anchovies, and tuna. As of 2002, there were at least 105 species of mammals, 206 species of birds, and over 3,600 species of plants throughout the country.

## 5 ENVIRONMENT

Livestock overgrazing, clearing of forests for fuel, and poor soil conservation practices have led to soil erosion and desertification. Pollution of Morocco's water and land resources is due to the dumping of industrial wastes into the ocean, the country's inland water sources, and the soil. Water supplies have also been contaminated by the dumping of raw sewage and coastal waters have been polluted by oil. The nation has about 29 cu km of renewable water resources. Ninety-two percent of the annual water withdrawal is used in farming and 3% for industrial activity. About 99% of the nation's cities have improved water sources, but only 56% of rural dwellers have the same access. Morocco's cities have produced about 2.4 million tons of solid waste per year. The nation's environment is further challenged by pesticides, insect infestation, and accidental oil spills. The Ministry of Housing Development and Environment considers environmental impact as an integral part of its development strategy.

Destruction of wildlife has occurred on a large scale, despite strict laws regulating hunting and fishing. Moreover, the drainage of coastal marshlands to irrigate cultivated land has significantly reduced the numbers of crested coots, purple herons, and marbled and white-headed ducks. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 13 species of birds, 2 types of reptiles, 2 species of amphibians, 11 species of fish, 8 species of invertebrates, and 2 species of plants. Endangered species in Morocco include the Barbary hyena, Barbary leopard, waldrapp, Spanish imperial eagle, Mediterranean monk seal, and Cuvier's gazelle. The Bubal hartebeest is extinct. The Sahara oryx is extinct in the wild.

## 6 POPULATION

The population of Morocco in 2005 was estimated by the United Nations (UN) at 30,704,000, which placed it at number 37 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 30% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.6%, reflecting the decline in fertility rate to 3.3 births per woman. The projected population for the year 2025 was 38,762,000. The population density was 69 per sq km (178 per sq mi); however, the population density is highest in the plains and coastal areas of northwestern Morocco. Most of the population lives in the fertile plains or near the Mediterranean coast.

The UN estimated that 57% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.56%. The capital city, Rabat, had a population of 1,759,000

in that year. Other major cities and their estimated populations are Fès (Fez), 1,032,000; Oujda, 962,000; Marrakech, 951,000; Kénitra, 905,000; Tétouan, 856,000; Safi, 845,000; Meknès, 750,000; and Tangier, 669,685.

## 7 MIGRATION

The Moroccan government encourages emigration because of the benefit to the balance of payments of remittances from Moroccans living and working abroad. Remittances in 2003 amounted to \$3.2 billion. In the first half of the 1990s, about 585,000 Moroccans lived in France, nearly 142,000 in Belgium, some 67,500 in Germany, almost 157,000 in the Netherlands, and 50,000 in Spain. There is some seasonal migration within Morocco as workers move into cities and towns after planting and harvesting are finished. Over 200,000 people migrate permanently to the cities each year; the urban share of the total population increased from 29% to 48% between 1960 and 1994.

Spain has two enclaves on the Moroccan coast, Melilla and Ceuta, that are ringed by fences to keep Moroccans and other Africans out. In August 2004, several hundred Africans attempting to migrate to Europe broke through the fence at Melilla. According to Migration News, there are an estimated 10,000 sub-Saharan migrants in Morocco waiting to cross into the enclaves.

The war in Western Sahara has been a cause of significant migration, both of settlers from Morocco proper and of refugees to Algeria, (165,000 of the latter at the end of 1992). In late 1997 and early 1998, the United Nations High Commissioner for Refugees (UNHCR) established a presence in the Western Sahara Territory. In 1999 talks were underway with local authorities to plan for the repatriation of Saharawi refugees, mostly settled in four refugee camps in Tindouf. Repatriation was tentatively scheduled to begin in 2000. The number of migrants in Morocco in 2000 was 26,000. By the end of 2004 there were 2,302 persons of concern to UNHCR in Morocco: 2,121 refugees, 4 stateless persons, and 177 asylum seekers. In 2004, 267 Moroccans applied for asylum in Germany. In 2005, the net migration rate was an estimated 0.92 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Arab-Berbers constitute 99.1% of the total population. Berbers, who comprise an estimated 60% of the population, are concentrated largely in the northern regions of the Rif, the middle plains of the Atlas, and the Sous Valley. Arabs are distributed principally along the Atlantic coastal plain and in the cities. The Berbers and Arabs are closely intermingled and bilingualism is common. Formerly the Jewish community played a significant role in the economic life of the country, but its numbers decreased from about 227,000 in 1948 to an estimated 10,000 in 1989. Jews make up only about 0.2% of the population. Other groups made up the remaining 0.7%, including French, Spanish, Italian, and Algerian nationals living in Morocco.

## 9 LANGUAGES

Although classical Arabic is the written and official language, Maghribi Arabic, a dialect peculiar to Morocco, is widely spoken; it can hardly be understood by Arabs of the Middle East. Berber

LOCATION: 27°40' to 35°56' N (23° to 35°56' N including Western Sahara); 0°58' to 13° W (0°58' to 16°21' W including Western Sahara). BOUNDARY LENGTHS: (excluding Western Sahara): total coastline, 1,835 kilometers (1,140 miles); Algeria, 1,559 kilometers (974 miles); Western Sahara, 443 kilometers (275 miles). TERRITORIAL SEA LIMIT: 12 miles.

dialects, principally Rifi, Tamazight, and Tashilhit, are spoken in more remote mountainous areas by about one-third of the populace. However, in an effort to preserve their cultural and linguis-

tic heritage, the Berbers have successfully campaigned for government support of Berber language education. Berber has been taught at some primary schools and the government has prom-

ised to include Berber classes in all public schools by the 2008–09 school year. French is often used as the language of business, government, and diplomacy. Spanish is also spoken.

## 10 RELIGIONS

More than 99% of Moroccans are Sunni Muslims. The activity of other sects (chiefly Sufi) has diminished since independence. Most of the country's practicing Christians are part of the foreign community, with a majority of them affiliated with the Roman Catholic church. Rabat and Casablanca have small Protestant communities. There are only about 5,000 Jews in the country, also mostly in the Casablanca and Rabat urban areas. There are small numbers of Baha'is and Hindus.

Islam was officially declared the state religion in 1961, but full religious freedom is theoretically accorded to Christians and Jews. Under the leadership of King Mohammed VI (since 1999), the government has generally encouraged and promoted tolerance and respect among religions. For instance, in 1998 the government created a department for the study of comparative religions at the University of Rabat. However, the government does place several restrictions on religious activities and participation. It is illegal to attempt to convert any Muslim to another faith or to distribute non-Muslim Arabic-language literature, such as Bibles, and traditional Islamic law requires punishment for Muslims who convert.

## 11 TRANSPORTATION

The road network in 2002 extended 57,694 km (35,886 mi), of which 32,551 km (20,247 mi) were paved, including 481 km (299) of expressways. There were 1,360,000 passenger cars and 400,000 commercial vehicles in use in 2003.

The railroad system is administered by the National Railroad Office and consists of 1,907 km (1,185 mi) of standard-gauge railways, about 1,003 km (623 mi) of which are electrified. Diesel-operated trains are used on the remainder. The main lines run from Marrakech to Casablanca, Rabat, and Sidi Kacem and then branch north to Tangier and east to Meknès, Fès, and Oujda (on the Algerian border).

Casablanca is by far the most important port; second-largest in Africa, it accounted for 40% of goods loaded and unloaded. Tangier is the principal passenger and tourist port; Mohammedia handles most oil imports and can accommodate 100,000-ton tankers. There are also regional ports at Safi, Agadir, and Nador, as well as 10 minor ports. The Moroccan Navigation Co. (Compagnie Marocaine de Navigation-COMANAV), the largest shipping company, is 96% government owned. The country's merchant marine consisted of 41 vessels of 1,000 GRT or more totaling 236 131 GRT as of 2005.

Morocco has eight international airports, at Casablanca, Rabat, Tangier, Marrakech, Agadir, Fès, Oujda, and Al-Hoceima. In all there were an estimated 63 airports in 2004. As of 2005, a total of 25 had paved runways, and there was one heliport. The government-controlled Royal Air Maroc was founded in 1953 and operates flights to the United States, Latin America, Europe, Africa, and the Middle East; the airline also provides domestic service through a subsidiary, Royal Air Inter. In 2003, about 2.565 million passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The Berbers, the earliest known inhabitants of Morocco, suffered successive waves of invaders in ancient times: the Phoenicians, Carthaginians, Romans (1st century BC), Vandals (5th century AD), and finally the Byzantines (6th century). In 682, when the Arabs swept through North Africa, Okba (Uqba ibn-Nafi) conquered Morocco. Under successive Moorish dynasties, beginning with Idris I (Idris bin Abdallah) in 788, the Berber tribes were united and the Islamic faith and Arabic language adopted. The Idrisid dynasty, an offshoot of the Umayyad dynasty, with its capital at Fès (founded in 800), lasted until 974, when it was overthrown by the Berbers. Rising in the Sahara in the early 11th century, the powerful Muslim sect of the Almoravids extended its conquests over North Africa and ultimately into Spain. Abdallah bin Yasin, its chief, was proclaimed ruler over Morocco in 1055. In 1147, the Almohad sect (Al-Muwahhidun), led by Abd al-Mumin bin Ali, conquered the Almoravids and ruled Morocco until 1269, when the Marinid (Beni Marin) dynasty came to power.

In the 16th century, the Saudi dynasty, the new monarchical line, began. Ahmad al-Mansur (called Ad-Dahabi, "the Golden"), the greatest of the Saudi kings, ruled from 1578 to 1603 and inaugurated the golden age of Moroccan history. He protected Morocco from Turkish invasion, strengthened the country's defenses, reorganized the army, and adorned his magnificent capital at Marrakech with the vast booty captured in Timbuktu (1591). The decadence of the last Saudi kings brought Morocco under the control of the Filali dynasty, of mixed Arab and Berber descent, which continued to modern times.

Trade with France and other European countries became increasingly important in the 18th and 19th centuries, and when the French in 1844 defeated the combined Moroccan and Algerian forces at Isly, France became the ascendant power. Spain, under an agreement with France, invaded and occupied northern Morocco in 1860. There followed some 45 years of trade rivalry among the European nations in Morocco. The Act of Algeciras, signed on 7 April 1906 by representatives of the United States, Germany, the United Kingdom, France, and Spain (among others), established the principle of commercial equality in Morocco and provided for a joint Spanish-French police force in Moroccan ports.

On 30 March 1912, after France had ceded some 260,000 sq km (100,000 sq mi) of the French Congo to Germany, the French imposed a protectorate in Morocco under Marshal Louis Lyautey. The Moroccans, led by Abd al-Karim, a guerrilla leader, fought for independence in the Rif War (1921–26) but were defeated by the combined French and Spanish forces, although sporadic fighting continued in Morocco until 1934.

A nationalist movement first took shape around the Plan of Reforms (1934) submitted to the French government by a group of young Moroccans. In 1934, the National Action Bloc was formed, and Alal al-Fasi became the uncontested nationalist leader. In December 1943, the Bloc was revived as the Istiqlal (Independence) Party, which during and after World War II pressed for independence and reforms. It received support from the Sultan, Sidi Mohammed bin Yusuf, later King Mohammed V, who became the symbol of the independence struggle. He was exiled in late 1953, and two years of terrorism ensued. After lengthy negotiations, the Franco-Moroccan agreement of 2 March 1956 granted independence, and Mohammed V became king of Morocco. Incorporated

into the new nation was Tangier, once British territory, which had come under the rule of a consortium of powers in 1906 and since 1923 had been the center of an international zone.

After the death of Mohammed V on 26 February 1961, his son was crowned King Hassan II and became head of government. Hassan II increased his political power throughout the 1960s. In 1962, a constitutional monarchy was established, with the king retaining extensive powers. In June 1965, after student riots and other disorders, Hassan II declared a state of emergency and assumed all legislative and executive powers. A revised constitution promulgated in 1970 and approved by popular referendum gave the king broad personal power but reestablished parliament and ended the state of emergency. An attempted coup d'état by right-wing army officers in July 1971 forced the king to accept, at least in principle, the need for a more broadly based government. A third constitution, approved by referendum on 1 March 1972, transferred many of the king's executive and legislative powers to a parliament which was to have two-thirds of its members directly elected. However, a second coup attempt in August 1972 caused the king to renew the emergency decrees.

In 1975, after Spain announced its intention of withdrawing from sparsely populated but phosphate-rich Spanish Sahara (now the Western Sahara), the king pressed Morocco's claim to most of the territory. Following the government's well-organized "Green March" of about 350,000 Moroccans into the territory in November, Spain ceded the northern two-thirds of the region to Morocco and the southern third to Mauritania. However, Algeria refused to recognize the annexation and supported the claim to the territory by guerrillas of the Popular Front for the Liberation of Saguia al-Hamra and Río de Oro, better known as Polisario. The movement, based in the Algerian border town of Tindouf, proclaimed Western Sahara as the Saharan Arab Democratic Republic (SADR). In 1979, Mauritania renounced its claim to the southern part of the territory, which Morocco then occupied and annexed. By the early 1980s, Morocco had moved up to 100,000 soldiers into Western Sahara in a costly effort to put down the Polisario revolt. The army built a wall of earth and sand around the productive northwestern coastal region, containing about 20% of the total area, the towns of El Aaiún and Samara, and phosphate mines; later, three-quarters of the Western Sahara was enclosed. In the meantime, Polisario received not only military support, mainly from Algeria and Libya, but also diplomatic support from some 50 countries and from the OAU, which in 1982 seated a delegation from the SADR, provoking a walkout by Morocco and more than a dozen other members. In 1984, Morocco resigned from the OAU when it seated the SADR at its annual summit meeting. Earlier, in 1981, the king's agreement under African pressure for a referendum in the territory provoked strong criticism from Morocco's Socialist Party.

In 1988, UN Secretary General Perez de Cuellar persuaded Moroccan and Polisario representatives to accept a peace plan that included a cease-fire (effective in September 1991) and a referendum for the territory on independence or integration with Morocco. The vote was scheduled for 1992 but has been blocked by disagreement by the two sides on details, especially over voter eligibility. The UN force sent to mediate the struggle, MINUSRO (UN Mission for the referendum in Western Sahara) has been struggling to hold the referendum. In 1997, UN Secretary General Kofi Annan sent former US Secretary of State James Baker to

the region in hopes of ending the intransigence. Throughout the stalemate, the Moroccan government has repeatedly been accused of human rights violations in the Western Sahara.

Serious street riots, protesting against an imminent price hike for basic foodstuffs (subsequently canceled), ensued in June 1984 as the IMF demanded austerity measures in return for new credits. Between 1984 and 1994 King Hassan's government maintained close relations regionally and with Saudi Arabia and the other Gulf states and was the first Arab nation to condemn the Iraqi invasion of Kuwait. A 1984 treaty with Libya calling for a federation of the two countries was abrogated following the Libyan denunciation of the king for officially receiving Israeli Prime Minister Shimon Peres in July 1986. Israeli Prime Minister Rabin made a public visit in 1993 as the king continued to play a moderate role in the search for an Arab-Israel settlement, mediating the 1994 Israeli treaty with Jordan. In 1989, after a border agreement restored relations with Algeria, Morocco promoted the formation of the Arab Maghreb Union of the states of North Africa.

In 1993, after pro-government parties won most local elections the previous year, parliamentary elections were held. The two largest opposition parties, the Istiqlal and USFP, won over 40% of the vote, but center-right parties of the ruling coalition gained a slim majority in the vote's second stage amid charges of election fraud. When the opposition refused to join in a new coalition, a cabinet of technocrats and independents was approved by the king under Prime Minister Mohamed Karim Lamrani, who promised to accelerate the privatization of state-owned enterprises.

Meanwhile, the country's political opposition grew quite vocal in their discontent, prompting government reprisals. The country's most famous Islamist politician, Abdelsalam Yassine, was imprisoned, and Istiqlal joined forces with an Islamist organization to form a substantial opposition party. In response, King Hassan proposed in 1996 to make all of parliament directly elected—previously, one-third of the deputies were appointed, giving the king power to undermine any opposition majority. The king also proposed the creation of a second chamber of advisers—a move seen by opposition parties as simply replacing one rubber stamp chamber with another. Still, the proposals were put to a vote on 13 September and approved by, officially, 99% of the population.

Elections for the new chambers were scheduled for 1997. In the months leading up to the elections, opposition skepticism waned as the government made repeated assurances that voting would be fair and the results would be respected. In June 1997 elections for 24,523 municipal council and commune seats were held and judged to be fair. The Bloc démocratique won 31.7% of the seats, but control remained for the Entente nationale with 30.3% and the RNI, 26.4%.

Following the local elections, legislation in 1997 set up the new bicameral parliament approved in the 1996 constitutional referendum. The Chamber of Representatives would consist of 325 members directly elected for five-year terms. The Chamber of Advisors would be made up of 270 members selected by indirect election: 162 would represent local authorities, 81 trade chambers, and 27 employees' associations. In the same 1996 referendum 16 new regional councils, with members chosen for six-year terms by indirect election through an electoral college representing professions and local governments, had been established, and elections for these took place in October 1997.

The Chamber of Representatives elections took place on 14 November 1997. Fifty-eight percent of the voters participated. The Bloc démocratique won 34.3% of the vote, the Entente nationale 24.8%, and the center-right parties 27.3%. In a direct appeal to young voters on the part of most of the parties, 43% of the new chamber was made up of members under 45 years of age. Indirect elections for the Chamber of Advisors were held on 5 December 1997. The right and center-right parties predominated, as was expected, winning 166 of the 270 seats. The new two-house parliament met for the first time in January 1998.

On 4 February 1998 King Hassan appointed Abd ar-Rahman el-Yousoufi, leader of the USFP, as prime minister. This was a groundbreaking event, as it was the first time an opposition member had been appointed prime minister. The Yousoufi government attempted to tackle corruption and promote transparency of government. Though results were, on the whole, disappointing, King Hassan praised the government in March 1999.

On 23 July 1999 King Hassan died of a heart attack. He was succeeded by his eldest son, as Mohammed VI. One of his first important moves was to dismiss King Hassan's longtime interior minister and advisor, Driss Basri. Basri had been considered the real power behind King Hassan, so this move gave a clear indication that Mohammed VI planned to reign in control of his government. Upon assuming the throne, he pledged his commitment to constitutional monarchy, political pluralism and economic liberalism. Mohammed VI claimed he would address problems of poverty, corruption, and Morocco's human rights record, and would engage in job creation. His supporters are reformers and the young, but he is opposed by many Islamic conservatives.

Like most Islamic countries of the world, Morocco's government feels under threat from an internal Islamist movement, which itself is divided. The various groups have moved to fill the perceived void in social services: blood banks and medical clinics, food pantries, homeless shelters, and schools. Parliamentary elections were held on 27 September 2002, and the Islamist Justice and Development Party (PJD) trebled its seats, coming in third with 42 of 325 parliamentary seats; however, it was denied any ministerial posts in the governing coalition formed by the Socialist Union of Forces for Progress (which took 50 seats) and the nationalist Istiqlal Party (which won 48 seats). The PJD would like to see Islamic law applied nationwide, including a ban on alcohol and a provision to have women wear veils. Morocco's largest and most vocal Islamist organization, Justice and Charity, works outside of the electoral process. Justice and Charity formally rejects the king and the Moroccan constitution, and thus is prevented from participating in organized politics as a party. Justice and Charity's leader instructed his followers to boycott the elections entirely. The group is gaining in popularity; estimates place its membership from between 50,000 and 500,000, and it is especially popular among those under age 30.

Moroccan authorities began a crackdown against Islamist groups, including the Salafist Combatants, who committed crimes in the country. Mosques and bookshops were closed, and detentions and arrests of Islamists increased. Critics of the government's actions stated that the crackdown failed to address problems such as poverty and ignorance, which cause radicalism. In June 2002, three Saudis and seven Moroccan nationals, including three women, were arrested and accused of being part of an al-Qaeda plot to

plan terrorist acts in Morocco and against Western ships crossing the Strait of Gibraltar.

On 11 July 2002, Moroccan frontier guards planted the national flag on the uninhabited island of Perejil (Leila in Arabic), claimed by Spain. Spain landed troops to "recapture" the island, which Morocco claimed was equivalent to an act of war. The eviction of the Moroccan soldiers took place without any casualties. The United States helped to negotiate a deal to remove all forces from the island. The incident was one of a series of disputes between Spain and Morocco over a number of issues, including fishing rights, illegal immigration by Moroccans to Spain, the Spanish occupation of Ceuta and Melilla on the northern coast of Morocco, and the status of Western Sahara. Full diplomatic ties were reestablished between Spain and Morocco in January 2003. In 2005, King Juan Carlos of Spain made a state visit to Morocco.

In May 2003, Morocco's largest city, Casablanca, experienced a suicide terrorist attack which left 45 people dead and more than 100 people injured. The bombings were a simultaneous attack on a hotel, two Jewish owned restaurants, and a Jewish cemetery. By August of that same year four men were sentenced to death, two were suicide bombers who survived, and 83 others were imprisoned as fear increased that Islamic extremism was spreading. An organization alleged to have ties to al-Qaeda, the Moroccan Islamic Combat Group, was suspected of the Casablanca terrorist attack.

This group was also suspected in the 11 March 2004 Madrid train bombing, leading to the pursuit and arrest of Moroccan suspects in Spain and throughout Europe.

Natural disaster struck in February 2004 as a 5.1 earthquake struck northern Morocco, killing over 600 people.

In 2003, King Mohammed VI announced an initiative aimed at modernizing Moroccan society by granting new rights to women. He also celebrated the birth of his first son and heir, named Hassan after his grandfather, by ordering the release of over 9,000 convicts and reducing the jail sentences of more than 38,000 inmates. By 2004 parliament passed legislation on women's rights. The king also continued to maintain close ties with other Arab nations, as did his father. In 2003, Saudi Crown Prince Abdullah visited Morocco for talks about Iraq and the Palestinian territories. Mohammed VI further pursued his human rights agenda in 2004 by pardoning 33 prisoners, establishing a "truth commission," the Equity and Reconciliation Commission, headed by a former political prisoner. In hearings, about 200 people gave public testimony about past human rights abuses in Morocco.

After US designation of Morocco as a major non-NATO ally in 2004, Morocco's parliament approved a free trade agreement with the United States in 2005 that was scheduled to go into effect later that year. However, in mid-2005 a protectionist movement sprang up in Morocco as 22 civil-society groups formed a national coalition fighting against the free trade agreement with the United States. In August 2005, an 18-year-old Moroccan was arrested for the creation of the Zotob computer worm. Across the United States, the Zotob worm hindered computer operations of more than 100 companies as it acted on a flaw in the Windows 2000 operating system.

Regarding Western Sahara, efforts were undertaken in the late 1990s to register voters eligible for a referendum to be held in the

region. Morocco stated that approximately 200,000 people were eligible as voters, while Polisario stated only 70,000 people were natives of the territory. In November 2001, King Mohammed VI declared the UN's plan to hold the referendum on Western Sahara "null." Negotiations between the two parties had taken place in 2000 and 2001 under the guidance of former US Secretary of State and current UN envoy to Western Sahara, James Baker, and a "Framework Agreement" was drawn up which would make Western Sahara an autonomous part of Morocco for a five-year period, after which a referendum would be held to determine if the region would become independent. Another option would allow for the division of the territory, with one part going to Morocco and the rest becoming an independent Western Saharan state. In January 2003, Polisario rejected a new proposal for the territory put forward by Baker, which did not guarantee enough autonomy for the group to relinquish its demand for a referendum on independence. However, by July they accepted a peace plan that Morocco still opposed. In September of that year the rebels released 243 Moroccan prisoners. In 2004, when South Africa formally recognized the Polisario, Morocco responded by recalling its ambassador from Pretoria. In a continuing effort to clear the way for a peace settlement in the Western Sahara, the Polisario released their last (404) Moroccan prisoners in August 2005.

### 13 GOVERNMENT

The Moroccan crown is hereditary and is passed on to the oldest male descendant in direct line or to the closest collateral male relative. The king, claiming descent from the Prophet Muhammad, is commander of the faithful and the symbol of national unity. He makes all civil and military appointments and signs and ratifies treaties. He can dismiss the parliament (if in session) and bypass elected institutions by submitting a referendum to the people on any major issue or whenever parliament rejects a bill he favors. He presides over the cabinet, and if the integrity of the national territory is threatened or events liable to jeopardize the functioning of Morocco's national institutions occur, he may declare a state of emergency.

The constitution of 1992 was amended by referendum in 1996. The national legislature became bicameral with the lower house elected directly and the upper house consisting of two-thirds of its members elected and one-third appointed by the king. The Chamber of Representatives consists of 325 members directly elected for five-year terms. The Chamber of Advisors consists of 270 members selected by indirect election: 162 represent local authorities, 81 trade chambers, and 27 employees' associations. In an effort to include the opinions of young people, the voting age was lowered from 20 to 18 in 2002. Suffrage is universal.

### 14 POLITICAL PARTIES

Morocco has a well-developed multiparty system with varying numbers of officially recognized parties and remarkably stable and long-lived leadership.

The largest traditional party is the Istiqlal (Independence) Party, whose leader after its formation in 1943 was Alal al-Fasi. The Istiqlal, once a firm supporter of the throne, now follows a reformist program and backs the king on specific measures only; it had no representation in the government from 1963 to 1977.

The National Union of Popular Forces (Union Nationale des Forces Populaires—UNFP) was formed in September 1959, following a split in the ranks of the Istiqlal in January of that year. At that time, the UNFP was a coalition of left-wing ex-Istiqlalis, trade unionists, resistance fighters, and dissident members of minor political parties and drew support from the modern cities (Casablanca) and the Sous River Valley. Among its leaders were Mehdi bin Barka; Muhammad al-Basri, a leader of the Liberation Army in 1953–55; Abderrahim Bouabid; and Mahjub bin Sadiq, head of the Moroccan Labor Union (Union Marocaine du Travail—UMT). The party was handicapped by factionalism and further weakened by the political neutrality of the UMT after 1963, by the kidnapping and disappearance of Bin Barka in France in 1965, and by other apparent instances of government repression, including the imprisonment of Bin Sadiq in 1967.

In 1970, the UNFP and Istiqlal, having lost some popular support, formed the National Front to boycott the elections. The Front was dissolved in 1972, by which time the split between the political and trade union wings of the UNFP had become open, and in 1973 many UNFP leaders were arrested and tried for sedition in connection with civil disorders and guerrilla activities. The UNFP formally split into two parties in 1974, the more radical trade union wing calling itself the UNFP and the political wing forming the Socialist Union of Popular Forces (Union Socialiste des Forces Populaires—USFP).

The program of the Moroccan Communist Party has often been close to that of the UNFP. From 1969 to 1974, the Communist Party was banned, but since then it has appeared under various names. Two communist parties contested the 1997 elections, the Party of Renewal and Progress (PRP) and the Organization of Action for Democracy and the People (OADP), with the PRP obtaining nine seats in the lower house and seven in the upper house, while the OADP obtained four in the lower house and none in the upper house. The USFP, Istiqlal, PRP, and OADP formed the Democratic Block.

The National Entente block was made up of three parties: the conservative Popular Movement (MP), the conservative National Democratic Party (PND), and the centrist Constitutional Union.

The Center block was made up of the National Rally of Independents (RNI), the Democratic and Social Movement (MDS), and the National Popular Movement (MNP).

In addition, there are various other parties of liberal, socialist, or Islamist orientation, the latter represented by the moderate Constitutional and Democratic Popular Movement (MPCD), which changed its name at the end of 1998 to the Party of Justice and Development (PJD).

King Hassan II sometimes worked through the party system and sometimes ignored it. In 1963, royalist forces united into the Front for the Defense of Constitutional Institutions. A leading party in the Front was the Popular Movement (Mouvement Populaire—MP), the party of Berber mountaineers. Governments formed by Hassan II have consisted of MP members, followers of royalist front parties, and independents and technocrats loyal to the king. Following 1993 elections, which saw Istiqlal and the USFP winning a majority of the elected seats, the king used his power to appoint friendly deputies to the seats he controls. Opposition parties protested by refusing to participate in the government. In 1996, the king submitted for referendum revisions

to the constitution allowing for direct election for all members of parliament, a move greeted with initial suspicion but ultimately heralded as democratic as the 1997 elections for the newly comprised body approached. The various parties formed into Blocks, as listed above, though maintaining separate candidate lists. The results showed 15 parties gaining seats in the lower house and 13 obtaining seats in the upper house.

Twenty-six political parties participated in the 27 September 2002 elections for the Chamber of Representatives. The USFP took 50 seats; Istiqlal won 48; the Justice and Development Party (PJD) won 42; the National Rally of Independents won 41 seats; the Popular Movement took 27; the National Popular Movement took 18; the Constitutional Union won 16; and 15 other parties were represented. Women were guaranteed 10% of the seats. Two new political parties were recognized by the government for the 2002 elections—the Moroccan Liberal Party (PLM) and the Alliance of Liberties (ADL), which aimed to involve the youth and women in political action. The ADL won four seats in the Chamber of Representatives. The Islamist Justice and Development Party trebled the number of its seats in parliament, coming in third behind the USFP and Istiqlal. Justice and Charity, said to be the largest Islamist group, remains banned.

In the 2002 elections, parties were organized in the following blocks: the left-wing block, comprised of the USFP; the Party for Progress and Socialism (PPS), formerly the Communist Party; the Leftist Unified Socialist Party (PGSU), formerly the OADP; and the Socialist Democratic Party. The center-right block is comprised of the Istiqlal Party and the PJD. The Berberist block includes the Popular Movement (MP); the National Popular Movement (MNP); and the Social Democratic Movement (MDS). The conservative block consisted of the National Rally of Independents (RNI) and the Constitutional Union (UC). Driss Jettou was named prime minister. In the 2003 local and district elections, more than 30% of the 23,000 seats were won by the conservative Istiqlal Party and the left-wing USFP. The mainstream Islamist PJD party won less than 3% of the vote.

## 15 LOCAL GOVERNMENT

Local administration still follows many French and Spanish procedural patterns, but final authority rests with the king through the Ministry of the Interior. Morocco proper has 39 provinces and 8 urban prefectures (including 2 at Rabat-Salé and 5 at Casablanca). Each province and prefecture has a governor appointed by the king. The provinces and prefectures select councils or assemblies, which hold public sessions in the spring and fall. The assemblies are largely restricted to social and economic questions.

The provinces are divided into administrative areas, called *cercles*, each headed by a *superqaid* (*caïdat*). Each *cercle* is subdivided into rural and urban *communes*, each headed by a *qaid* or a *pasha*, respectively, and assisted by a council. Councilors are elected for six-year terms, and each council is composed of 9 to 51 members, depending on the size of the *commune*. The council president, chosen by secret ballot, presents the budget and applies the decisions of the council. Real power, however, is exercised by the *qaid* or *pasha*. The *communes* are supervised by the Ministry of the Interior, which retains final decision-making authority. As of 2002, there were 1,544 *communes* in Morocco; 247 are urban and 1,297 are rural. In the 2003 local elections two polling systems

dependent on the number of inhabitants were instituted. In *communes* with less than 25,000 inhabitants, councilors were elected based on a one-round relative majority; in *communes* exceeding 25,000 inhabitants, proportional representation was used.

## 16 JUDICIAL SYSTEM

Morocco has a dual legal system consisting of secular courts based on French legal tradition, and courts based on Jewish and Islamic traditions.

The secular system includes communal and district courts, courts of first instance, appellate courts, and a Supreme Court. The Supreme Court is divided into five chambers: criminal, correctional (civil) appeals, social, administrative, and constitutional. The Special Court of Justice may try officials on charges raised by a two-thirds majority of the full *Majlis*. There is also a military court for cases involving military personnel and occasionally matters pertaining to state security. The Supreme Council of the Judiciary regulates the judiciary and is presided over by the king. Judges are appointed on the advice of the council. Judges in the secular system are university-trained lawyers. Since 1965 only Moroccans may be appointed as judges, and Arabic is the official language of the courts.

There are 27 *Sadad* courts, which are courts of first instance for Muslim and Jewish personal law. Criminal and civil cases are heard, and cases with penalties exceeding a certain monetary amount may be appealed to regional courts. The *Sadad* courts are divided into four sections: Shariah; rabbinical; civil, commercial, and administrative sections; and criminal.

## 17 ARMED FORCES

Total Moroccan active military strength in 2005 was 200,800 personnel with reserves numbering 150,000. The Army had 180,000 personnel, the Navy 7,800 (including 1,500 Marines), and the Air Force 13,500 active personnel. The Army was equipped with 540 main battle tanks, of which 200 were in storage, 116 light tanks, 384 reconnaissance vehicles, 70 armored infantry fighting vehicles, 765 armored personnel carriers and 2,892 artillery pieces. The Navy's major vessels included three frigates and 27 patrol/coastal ships and boats. The Air Force had 89 combat capable aircraft, including 66 fighters. The service also operated 19 assault helicopters. Paramilitary forces totaled 50,000 personnel, which included a 20,000 member *gendarmierie* force. The Polisario Front opposition forces were estimated between 3,000–6,000. Moroccan troops were stationed in five countries on peacekeeping missions. The 2005 defense budget totaled \$2.07 billion.

## 18 INTERNATIONAL COOPERATION

Morocco became a member of the United Nations on 12 November 1956 and participates in ECA and several nonregional specialized agencies, such as the FAO, ILO, IAEA, the World Bank, IMO, UNSECO, UNHCR, UNIDO, and the WHO. The nation is a member of the African Development Bank, the Arab Bank for Economic Development in Africa, the Arab Fund for Economic and Social Development, the Arab Maghreb Union, the European Bank for Reconstruction and Development, the Organization of the Islamic Conference (OIC), G-77, the Community of Sahel and

Saharan States (CENSAD), and the Arab League. Morocco is an observer in the OAS and a partner in the OSCE.

In recent decades, Morocco has pursued a policy of nonalignment and has sought and received aid from the United States, Western Europe, and the former USSR. Relations with Algeria and Libya have been tense, especially since Morocco's takeover of the Western Sahara. In 1988, UN Secretary General Perez de Cuellar negotiated with Morocco and Polisario (a group seeking sovereignty for the Western Sahara as the Saharan Arab Democratic Republic) to accept a cease-fire and to hold a referendum for the territory to determine whether it will be independent or integrate with Morocco. Although the vote was scheduled for 1992, it has been blocked by disagreements over voter eligibility, and sovereignty was unresolved as of 2005. The United Nations Mission for the Referendum in Western Sahara (MINURSO, est. 1991) is supported by 24 countries. In 1989, Morocco restored relations with Algeria; it maintains relations with Saudi Arabia and the other Gulf states and condemned the Iraqi invasion of Kuwait.

In environmental cooperation, Morocco is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The major resources of the Moroccan economy are agriculture, phosphates, and tourism. Sales of fish and seafood are important as well. Industry and mining contribute over one-third of the annual GDP. Morocco is the world's third-largest producer of phosphates (after the United States and China), and the price fluctuations of phosphates on the international market greatly influence Morocco's economy. Tourism and workers' remittances have played a critical role since independence. The production of textiles and clothing is part of a growing manufacturing sector that accounted for approximately 34% of total exports in 2002, employing 40% of the industrial workforce. The government wishes to increase textile and clothing exports from \$1.27 billion in 2001 to \$3.29 billion in 2010. Following the expiration of the world multifiber agreement in 2005, however, the textile and apparel sector was expected to contract.

The high cost of imports, especially of petroleum imports, is a major problem. Another chronic problem is unreliable rainfall, which produces drought or sudden floods; in 1995, the country's worst drought in 30 years forced Morocco to import grain and adversely affected the economy. Another drought occurred in 1997, and one in 1999–2000. Reduced incomes due to drought caused GDP to fall by 7.6% in 1995, by 2.3% in 1997, and by 1.5% in 1999. During the years between drought, good rains brought bumper crops to market. Good rainfall in 2001 led to a 5% GDP growth rate. Morocco suffers both from high unemployment and a large external debt estimated at around \$15.6 billion in 2005.

Morocco suffers from poverty, urban overcrowding, inadequate housing infrastructure, and illiteracy, which reaches 83% for women in rural areas. The unemployment rate was estimated at 10.4% at the end of 2004, but that figure masks higher rates in urban areas (18%) and among college graduates (24%). The inflation rate stood at 1.4% in 2004 and was forecast to reach 1.9% in 2005, due to higher food and fuel prices. The real GDP growth rate in

2005 was estimated at 1.8%, down from 3.7% in 2004 and 5.2% in 2003. This fall in the growth rate was largely due to a slowdown in the agricultural sector, which employs 43% of the population.

Morocco and the United States in 2004 negotiated a free trade agreement that immediately eliminated tariffs on 95% of bilateral trade, with the remaining tariffs to be eliminated over the next nine years. Morocco also has a free trade agreement with the EU. The country is pursuing privatization of state-owned enterprises, including in the energy, water, and telecommunications sectors. Between 1993 and 2005, 66 Moroccan state-owned enterprises were fully or partially privatized, including the tobacco distribution company Régie des Tabacs, Banque Centrale Populaire, and 35% of Maroc Telecom to Vivendi.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Morocco's gross domestic product (GDP) was estimated at \$139.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,300. The annual growth rate of GDP was estimated at 1.8%. The average inflation rate in 2005 was 2.1%. It was estimated that agriculture accounted for 21.7% of GDP, industry 35.7%, and services 42.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$3.614 billion or about \$120 per capita and accounted for approximately 8.3% of GDP. Foreign aid receipts amounted to \$523 million or about \$17 per capita and accounted for approximately 1.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Morocco totaled \$28.60 billion or about \$950 per capita based on a GDP of \$43.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.9%. In 2001 it was estimated that approximately 33% of household consumption was spent on food, 16% on fuel, 5% on health care, and 15% on education. It was estimated that in 1999 about 19.0% of the population had incomes below the poverty line.

## 21 LABOR

Morocco's workforce was estimated in 2005 at 11.19 million. In 2003, an estimated 40% were in the agricultural sector, 45% in services, and the remaining 15% in industry. The unemployment rate was estimated at 10.5% in 2005.

Although the law provides for the right to form unions, the government interferes with the labor movement. Morocco's 17 trade unions are organized within three federations, and represent about half a million of the country's estimated nine million workers. Employees have the right to strike after engaging in arbitration. Work stoppages do occur, but security forces sometimes break up striking workers. Collective bargaining is utilized on a limited basis.

The 48-hour workweek is established by law, and overtime pay rates apply to all work in excess of 48 hours. At least one day of rest

must be granted per week. In 2002, the minimum wage was \$162 per month for industry and commerce and about \$8 per day in agriculture. The minimum wage is not effectively enforced in the informal sector, and even the government pays less in the lowest civil service grades. There is also legislation covering health, sanitation, and safety standards for a small number of workers.

## 22 AGRICULTURE

Some 9,376,000 hectares (23,168,000 acres), or 21% of the total land area, is arable (excluding Western Sahara). About 43% of arable land is devoted to cereals, 7% to plantation crops (olives, almonds, citrus, grapes, dates), 3% to pulses, 2% to forage, 2% to vegetables, 2% to industrial crops (sugar beets, sugarcane, cotton) and oilseeds, and 42% was fallow. The bulk of the indigenous population carries out traditional subsistence farming on plots of less than five hectares (12 acres). A temperate climate and sufficient precipitation are especially conducive to agricultural development in the northwest. In 2003, agriculture (together with forestry and fishing) accounted for 17% of GDP.

Morocco is essentially self-sufficient in food production. Grain plantings are typically triggered by autumn rainfall and last through mid-January. Irregularity in rainfall necessitates the importation of grains during drought years. As a result of the worst drought in decades, Morocco's cereal crop in 1995 was only one quarter of the average annual amount during the previous 10 years. Pulse, vegetable, and citrus production were also devastated. However, in 1996 Morocco received the highest levels of rainfall in 30 years, leading to record grain production. The principal export crops are citrus fruits and vegetables. The estimated output of principal crops (in thousands of tons) in 2004 was as follows: sugar beets, 4,560; wheat, 5,540; barley, 2,760; sugarcane, 992; tomatoes, 1,201; potatoes, 1,440; oranges, 719; olives, 470; corn, 224; sunflowers, 54; and peanuts, 49.

The government distributed some 500,000 hectares (1,235,500 acres) of farmland formerly owned by European settlers to Moroccan farmers in the late 1960s and the 1970s. To encourage Moroccans to modernize the traditional sector, the Agricultural Investment Code of 1969 required farmers in irrigated areas to meet the minimum standards of efficiency outlined by the government or lose their land. These standards applied to all farms of five hectares (12 acres) or more.

Dams and irrigation projects were begun under French rule and have continued since independence. In traditional areas, irrigation is by springs and wells, diversion of streams, and tunnels from the hills, as well as by modern dams and reservoirs. There are dams and irrigation projects on most of the country's major rivers, including the Sebou River in the northwest, which, along with its tributaries, accounts for some 45% of Morocco's water resources. Continued widespread variation in rainfall continues to produce serious droughts and occasional flash floods. In January 1994, the Kuwaiti Economic Development Fund agreed to lend \$60 million to the Moroccan government to help finance an irrigation project in the Haouz and Tassaout region of southern Morocco, which will provide irrigation services for 200,000 small farmers. Morocco had 1.45 million irrigated hectares (3.6 million acres) of agricultural land in 2003.

## 23 ANIMAL HUSBANDRY

Livestock raising contributes about one-third of agricultural income. Livestock fares poorly on the overgrazed pasture, and periods of drought reduce growth on an estimated 20.9 million hectares (51.6 million acres) of permanent pastureland as well as the output of fodder crops. In 2005, estimated livestock population was 17 million sheep, 5.3 million goats, and 2.7 million head of cattle. There were an estimated 985,000 donkeys, 525,000 mules, 36,000 camels, 8,000 pigs, and 137 million chickens in 2005. In 2005, production of beef and mutton was estimated at 148,000 tons; and poultry, 280,000 tons. Output of cow's milk was about 1.3 million tons in 2005, along with 230,000 tons of eggs. Even though most of the import licensing system has been abolished, licenses are still required for imported livestock and animal genetic materials, in an effort to protect local production.

## 24 FISHING

Fishing, which has been a major industry since the 1930s, is centered in Agadir, Safi, and Tan-Tan. In some years, Morocco is the world's largest producer of the European sardine (*Sardina pilchardus*). Coastal fishing accounts for about 86% of production; deep-sea fishing, 13%; and algae cultivation and aquaculture, 1%.

Landings from coastal waters totaled 885,131 tons in 2003, twenty-fourth in the world and the highest in Africa. Sardines accounted for 659,208 tons (74%) that year. The waters off Western Sahara are particularly rich in seafood. Coastal fishing supplies the Moroccan fish processing industry, which is concentrated in the southern cities of Layoun, Tan Tan, Tarfaya, and Agadir. The canning industry processes mostly sardines and to a lesser extent mackerels and anchovies. Many of the plants use obsolete equipment, and there is currently no government support to develop and introduce new technology to the industry.

The deep-sea catch consists mostly of cephalopods (such as octopus, squid, and cuttlefish), hake, sea bream, sole, and shrimp. Cephalopod deep-sea landings in 2004 included 23,000 tons of octopus, 1,200 tons of squid, and 6,000 tons of cuttlefish. The deep-sea cephalopod fishing fleet comprises some 290 active trawlers and accounts for two-thirds of the cephalopod catch. These trawlers can stay out to sea for up to three months. Nearly all deep-sea production is sorted, frozen in vessels, and exported upon arrival; Japan is the major buyer of Moroccan octopus.

Aquacultural production consists mainly of seabass, sea bream, oysters, tuna, and eel, which are produced for export to Europe. The principal aquaculture farms are located in Nador and Hoceima on the Mediterranean Sea, Oulidida on the Atlantic Ocean, and Azrou on an inland lake.

Much of the fish catch is processed into fish meal, fertilizer, and animal fodder. In 2003, \$988.6 million of fish products were exported primarily to the EU nations, Japan, and the United States. Deep-sea fishing is expected to become more important, because the EU is committed to reducing its fishing fleet size. Moroccan fish companies are expected to play a larger role in the world cephalopod market in the future. There is concern, however, that overfishing during one year may result in smaller catches in the future.

## 25 FORESTRY

Forests cover about 6.8% of the land area and provide subsistence for families engaged in cork gathering, wood cutting, and other forestry occupations. Cork, the principal forest product, is grown on 198,000 hectares (489,000 acres) of state-owned cork oak forests, which amounts to around 9% of the world's cork forest acreage. Annual production is usually around 15,000 tons, 4% of world production. Other commercial trees are evergreen oak, thuja, argan, and cedar. Esparto grass and vegetable fiber are other important forest products. Artificial plantings of more than 45,000 hectares (111,000 acres) of eucalyptus trees furnish the raw materials for a rapidly expanding cellulose textile industry. Production of roundwood in 2004 was 885,000 cu m (31 million cu ft), with 42% used as fuel wood. Trade in forest products that year amounted to \$455 million in imports and \$126.4 million in exports.

Reforestation has become a major goal of the government; the 1981–85 development plan proposed to reforest about 25,000 hectares (62,000 acres) annually; actual reforestation was about 13,000 hectares (32,000 acres) per year. Between 1990 and 2000, the area of forests and woodlands remained essentially unchanged.

## 26 MINING

Morocco was the third-largest producer of phosphate rock (behind the United States and China), had 88.5 billion tons in proved reserves, and was the largest phosphate exporter. The 2003 output of phosphate rock, including by Western Sahara, was 222.877 million tons (gross weight). All phosphate was produced by the state-owned Office Chérifien des Phosphates, founded in 1920, which was responsible for managing and controlling all aspects of phosphate mining. The combined capacity of the main facilities—at Youssoufia, Benguerir, BouCraa, Sidi Chenan, and Khouribga—was 27 million tons per year.

Morocco also had significant deposits of copper ore and produced 17,539 metric tons in 2003 (gross weight concentrates), down from 17,799 metric tons in 2002. Iron ore production (gross weight) in 2003 was 4,019 metric tons, down from 8,736 metric tons in 2002. Other minerals produced in 2003 included: lead (gross weight concentrate, 54,779 metric tons); barite (356,394 metric tons); rock salt (estimated at 200,000 metric tons); and acid-grade fluorspar (81,255 metric tons, down from 94,911 metric tons in 2002). In addition, Morocco produced antimony, cobalt, gold, mercury, silver, arsenic trioxide, bentonite, hydraulic cement, feldspar, fuller's earth (smectite), gypsum, mica, montmorillonite (ghassoul), phosphoric acid, marine salt, talc and pyrophyllite, and a variety of crude construction materials. Morocco also had the capacity to produce zircon, and had the only anthracite mine in the Mediterranean area—Jerada, in the Oujda region.

Plans called for increased domestic processing of phosphate into phosphoric acid for export. The government owned the subsoil mineral rights for all minerals. Exploration and new discoveries of oil and gas would yield sulfur and ammonia, which were needed for phosphate fertilizers. A four-year plan to upgrade the country's railway network was launched in 2000 to handle increased ridership by tourists and the needs of the phosphate industry. The plan, financed by the European Investment Bank and the Japanese Bank for International Cooperation, would lay an extra track between Meknès and Fès.

## 27 ENERGY AND POWER

Morocco has only small deposits of oil and natural gas. However, since many of its sedimentary basins have yet to be explored, those figures could rise.

Morocco, as of 1 January 2005, had proven crude oil and natural gas reserves of 1.6 million barrels, and 43 billion cu ft, respectively. In 2004, oil output totaled an estimated 500 barrels per day. Morocco has two oil refineries, the Samir and Sidi Kacem. The two facilities have a combined refining capacity, as of 1 January 2005, of 155,000 barrels per day. The Samir refinery produces 80% to 90% of the country's refined petroleum products. In 2002 there was an extensive fire and flood damage at the Samir refinery. Capacity was quickly restored to 60%, and in 2004 returned to near full-capacity production levels.

Coal imports in 2002 amounted to 5,648,000 million short tons, all of it hard coal.

Electricity production has grown rapidly, from 1.935 billion kWh in 1970 to 16.235 billion kWh in 2002, of which 93.6% was from fossil fuels and 5% came from hydropower, with the remainder from alternative sources. Electric power generating capacity in 2002 came to 4.878 million kW, of which 72% was dedicated to conventional thermal fuels and 26.6% to hydroelectric sources. Alternative sources accounted for the remaining capacity.

## 28 INDUSTRY

In 2004, industry accounted for 35.7% of GDP. Leading industrial sectors in 2006 were phosphate rock mining and processing, food processing, leather goods, textiles, and construction. Morocco holds the world's largest phosphate reserves, and is the world's third-largest phosphate producer, after the United States and China.

The manufacturing sector produces light consumer goods, especially foodstuffs, beverages, textiles, matches, and metal and leather products. Heavy industry is largely limited to petroleum refining, chemical fertilizers, automobile and tractor assembly, foundry work, asphalt, and cement. Many of the processed agricultural products and consumer goods are primarily for local consumption, but Morocco exports canned fish and fruit, wine, leather goods, and textiles, as well as such traditional Moroccan handicrafts as carpets and brass, copper, silver, and wood implements.

There are two oil refineries, one at Mohammedia and one at Sidi Kacem, with a total refining capacity of 155,000 barrels per day. There are also several petrochemical plants, a polyvinyl chloride factory, and many phosphate-processing plants. The Mahgreb-EU pipeline has been operating since 1996. There are four plants assembling cars and small utility vehicles: Renault Maroc, Sopriam, Somaca, and Smeia. A number of cement factories are also in operation. The Safi industrial complex, opened in 1965, processes phosphates from Youssoufia, pyrrhotites from Kettara, and ammonia.

Ownership in the manufacturing sector is largely private, but the government owns the phosphate-chemical fertilizer industry and much of the sugar-milling capacity, through either partnership or joint financing. It is also a major participant in the car and truck assembly industry and in tire manufacturing.

## 29 SCIENCE AND TECHNOLOGY

Research institutions include the Scientific Institute (founded in 1920), in Rabat, which does fundamental research in the natural sciences, and the Scientific Institute of Maritime Fishing (founded in 1947), in Casablanca, which studies oceanography, marine biology, and topics related to development of the fishing industry. Nine universities and colleges offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 41% of college and university enrollments. In 2002, Morocco's high technology exports totaled \$439 million, or 11% of its' manufactured exports.

## 30 DOMESTIC TRADE

Consumer-ready products are freely traded by the private sector through companies that distribute them to wholesalers, distributors, or directly to retailers. The government intervenes directly in domestic trade through price subsidies at the retail level for staples such as flour, vegetable oil, and sugar. The government has planned to phase out these subsidies over an extended period in order to avoid social unrest. Support prices, once a major incentive to promoting government-supported crops, have been eliminated.

Casablanca, the chief port, is the commercial center of Morocco. Other principal distribution centers include Safi, Agadir, and Tangier. Wet markets are open-air produce markets common in rural and urban areas. Central markets are found in major cities and contain many small shops selling mainly domestic products. Numerous family-operated grocery outlets are scattered throughout the country and are where food products are typically sold in Morocco. There are also a growing number of supermarkets in major metropolitan areas; over half of them are in Casablanca and Rabat. Retail establishments include department stores in the main cities and shops and specialty stores. Bazaars cater especially to the tourist trade. The first franchise, Pizza Hut, was established in 1992. There are now about 85 franchise firms in the country offering a wide variety of goods and services. Principal advertising media are newspapers, motion picture theaters, radio, television, and posters.

Business hours are generally from 8 or 8:30 AM to 6:30 PM, with a two-hour lunch break, but some shops stay open later. Large stores are open from 9 AM to 1 PM and from 3 to 7 PM. Souks are open Monday to Sunday from 8:30 AM to 1 PM and from 2:30 to 6 PM.

## 31 FOREIGN TRADE

As part of the government's trade liberalization process, a widespread antismuggling campaign has sharply reduced the amount of goods illegally entering Morocco. A large amount of hashish illegally exits the country.

The largest export receipts come from the garment sector. Morocco exports a large amount of foodstuffs, including shellfish, fruit and nuts, fish, and vegetables. Other exports include inorganic fertilizers and chemicals. Morocco produces about one-third of the world's crude fertilizers exports.

In 2004, exports were divided up into the following categories: food, beverages, and tobacco, 15.3%; semi-processed goods, 27.3%; and consumer goods, 37.2%. Imports were divided up as

follows: food, beverages, and tobacco, 8.7%; energy and lubricants, 16.4%; capital goods, 22.6%; semi-processed goods, 23.3%; consumer goods 22.6%.

Morocco's major markets in 2004 were: the EU (75.4% of all exports), India (3.4%), the United States (2.9%), and Brazil (2.1%). Morocco's major suppliers in 2004 were: the EU (59.1% of all imports), Saudi Arabia (5%), and the United States (4.1%). Of Morocco's EU trading partners, France is the largest, absorbing 33.6% of Morocco's exports and providing 18.2% of its imports. Spain and Italy are Morocco's second- and third-largest EU trading partners.

## 32 BALANCE OF PAYMENTS

Remittances from Moroccans working abroad, foreign aid, and a growing tourist industry have helped to offset chronic trade defi-

cits. In recent years, Morocco has turned increasingly to foreign borrowing to meet its financial needs.

In 2005, Morocco's exports were valued at \$9.472 billion; imports were valued at \$18.15 billion. The current-account balance was estimated at -\$607.5 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Morocco (Bank al-Maghrib), the central bank, has the sole privilege of note issue. It is required to maintain a gold or convertible-currency reserve equal to one-ninth of its note issue. The Ministry of Finance is responsible for the organization of banking and the money market. In February 1996 the central bank gave clearance for banks and finance houses to issue corporate bonds. Consumer credit companies are expected to be the first to take advantage of the new ruling. Other reforms scheduled for 1996 included a secondary market in public debt, an interbank foreign exchange market, and the launch of privatization bonds and global depository receipts (GDRs). As of 1997, only the interbank foreign exchange market had been implemented. Commercial banks were permitted to buy and sell foreign currency at market-determined rates, where previously foreign exchange rates were fixed on a daily basis by the central bank. The dirham was fully convertible in 1999.

Commercial banks must have 51% domestic majority ownership; some foreign banks were Moroccanized in 1975. There were 16 commercial banks in 2002, most of which were partly owned by European banks. The largest private commercial bank is the Banque Commerciale du Maroc (BCM), which is 32% owned by foreign banks, including Banco Central Hispano, Credito Italiano, and Crédit Commercial de France. Another important commercial bank was Wafa Bank, with a 10% share of deposits in 1999. Wafa Bank owned half of a year 2000 banking venture with Senegal to offer services to ECOWAS countries. The three largest banks account for over 60% of banking assets and deposits.

Public sector financial organizations specializing in development finance include the National Bank for Economic Development, Moroccan Bank for Foreign Trade, National Agricultural Credit Bank, and Deposit and Investment Fund. Also instrumental in development finance is the Bureau of Mineral Exploration and Participation, which has participatory interests in the production of all coal, petroleum, lead, and manganese. The National Bank for Economic Development, established in 1959, has been particularly active in financing manufacturing. The Agricultural Credit Bank makes loans to credit organizations, public institutions, and cooperatives. Private individuals borrow from local agricultural credit banks or from the agricultural credit and provident societies.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$22.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$29.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.44%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 4.71%.

The stock exchange (Bourse des Valeurs) at Casablanca, established in 1929, handles mostly European and a few North African

issues. The Casablanca stock market underwent a program of reform designed to attract increased interest from overseas and local investors. In 1993 the government approved legislation to turn the bourse into a private company with stock held by brokers, to create new stock-trading bodies and to channel the funds of small savers into share issues and unit trusts. In 1995, France agreed to finance further improvements, modeling the exchange on the Paris bourse and introducing computerization. In 2001, the stock exchange had 55 companies listed and a \$9.1 billion capitalization. As of 2004, a total of 52 companies were listed on the Bourse des Valeurs de Casablanca, which had a market capitalization of \$25.064 billion.

### 3<sup>4</sup> INSURANCE

In 1995, the government stepped in to rescue the ailing insurance industry after studies uncovered financial difficulties in a number of firms. The authorities stepped in to prevent collapses which could affect related financial services such as savings and investment, as well as the interlinked banking sector. However, in September 1995, the government abandoned its attempts to restructure five state insurance companies and put them into liquidation. The companies, then already in temporary receivership, were Compagnie Atlantique d'assurances et de réassurances, Arabia Insurance Co., Assurances la victoire, Assurances la renaissance, and Réunion marocaine d'assurances et de réassurances (Rémar). Their combined losses are estimated at up to \$550 million, mostly accumulated through pay-outs on car insurance, where the high accident rate had not been adequately reflected in premiums. Outstanding policies were transferred to the state finance company, Caisse de dépôt et de gestion (CDG). A new code has since been drawn up for insurance companies establishing reserve requirements similar to those applying to the banking sector. In 2000, the insurance companies AXA-Al Amane and CAA announced a merger that created insurance giant AXA Assurance Maroc. In 2003, the value of all direct insurance premiums written totaled \$1.288 billion, of which nonlife premiums accounted for \$927 mil-

lion. AXA Assurance Maroc was Morocco's top nonlife and life insurer in 2003 with gross written nonlife premiums of \$154.6 million, and gross written life insurance premiums of \$88.1 million.

### 3<sup>5</sup> PUBLIC FINANCE

The Moroccan government announced plans in 1999/2000 to cut the budget deficit by one-third, in order to encourage investment and job creation. By 1998, only 56 of 114 companies slated for privatization had been sold, and the rest had been withdrawn from sale. The government did not depend on privatization revenues for funds, rather on the ownership of the phosphates industry. Nearly 50% of the state budget was spent on public sector salaries, and 25% on debt servicing in 1999. Some privatization has taken place in recent years, however, including the government's sale of 35% of the state operator Maroc Telecom and the liberalization of rules governing oil and gas exploration.

The US Central Intelligence Agency (CIA) estimated that in 2005 Morocco's central government took in revenues of approximately \$12.9 billion and had expenditures of \$16.7 billion. Revenues minus expenditures totaled approximately -\$3.8 billion. Public debt in 2005 amounted to 72.3% of GDP. Total external debt was \$15.6 billion.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, central government revenues were DH102,436 million and expenditures were DH112,488 million. The value of revenues in US dollars was us\$10,448 million and expenditures us\$11,474 million, based on a official exchange rate for 1999 of us\$1 = DH9.804 as reported by the IMF. Government outlays by function were as follows: general public services, 40.5%; defense, 12.9%; public order and safety, 6.9%; economic affairs, 8.1%; housing and community amenities, 0.4%; health, 3.2%; recreation, culture, and religion, 0.8%; education, 17.8%; and social protection, 9.3%.

### 3<sup>6</sup> TAXATION

As of 2005, the professional profits and gains tax, at 35% since 1 January 1996 (except for insurance and banking institutions taxed at the previous rate of 39.6%), is the most important tax in Morocco, and can be assessed on either annual turnover or on net annual profits. The minimum tax in 2005 was 0.5% of turnover or 1,500 dirhams (about \$162), whichever was greater. Nonresident companies under contractual arrangements can opt for an alternative tax amounting to 8% of their contracts. The capital gains are taxed at 35%. Dividends are subject to 10% withholding which can be used as a tax credit. Branches of foreign companies are subject to the same taxes as Moroccan companies.

All wage earners are liable to a progressive tax on salaries, remunerations, and allowances under the General Income Tax (IGR). There are several types of deductions that can be applied in calculating an individual's taxable base income. There are also social security taxes and supplementary taxes on professional and rental income.

The main indirect tax is Morocco's value-added tax (VAT) with a standard rate of 20%, but with various reduced rates from 7% to 14% for more basic goods and services. As of 1 July 2001 imported barley was exempted from VAT.

### 3<sup>7</sup> CUSTOMS AND DUTIES

The policy of import liberalization that began in 1967, has continued and new commodities have been added to the list of items not subject to quotas. In the 1970 general import program, items not subject to quotas accounted for 75% of the imports. Most goods do not require import licenses. As of 2005, duties were as low as 2.5% and as high as 329% for frozen lamb meat. Import duties on food average 80%, which makes the price of imported consumer foodstuffs unaffordable for the average Moroccan. Value-added taxes are levied at 0–20%. Certain transactions have lower rates of 7% and 14%. Import taxes on machinery and equipment are 2.5% or 10%. Export taxes were discontinued in 1971.

Agreements between Morocco and the European Community (now the European Union) have provided for mutual tariff concessions. Citrus tariffs were cut 80% by the European Community by the mid-1970s; tariffs on canned fruit and vegetables were reduced more than 50%; and fish products, wine, olive oil, and cereals were given special concessions. In return, Morocco reduced its minimum tariffs by 30% and adjusted quotas on imports to Morocco.

The import tariff does not apply within the free zone of the Port of Tangier.

### 3<sup>8</sup> FOREIGN INVESTMENT

Foreign investment declined somewhat during the 1960s and 1970s because of political uncertainty and the government's Moroccanization policy requiring majority Moroccan ownership of foreign banks, trading companies, insurance firms, and small manufacturing plants. Many foreign firms either sold out or closed down before 30 September 1974, the first deadline for compliance with Moroccanization policies. In an effort to attract foreign capital, the government passed a new investment code in August 1973 that offered substantial tax concessions to private investors. To encourage badly needed foreign investment, a revised code introduced in 1982 permitted foreign investors 100% ownership of local companies in certain sectors and unrestricted transfer of capital. The effective repeal in 1990 of the Moroccanization law and regulatory changes, including tax breaks and streamlined approval procedures, led to a more than threefold increase in foreign investment inflows in the four years following its enactment.

A new investment code was passed in 1995 that provided income tax breaks for investments in certain regions, crafts and export industries; and import duty reductions; especially during the first five years of operation. It also contained foreign exchange provisions that favored foreign investors.

In 1997, annual foreign direct investment (FDI) inflows reached over \$1 billion, but then fell to \$333 million in 1998. FDI inflow in 1999 rose to a near-record of almost \$850 million mainly accounted for by two large investments: Telefonica of Spain and Telecom Portugal for mobile phones and Coca-Cola for bottling plants at Fès and Marrakech. In 2000, there was a 76% decrease in FDI inflow to Morocco to \$201 million, but in 2001 inward FDI was a record \$2.66 billion, due primarily to Vivendi Universal's \$2.1 billion purchase of a 35% share of Maroc Telecom.

The US-Morocco Free Trade Agreement (FTA), negotiated in 2004, is geared toward encouraging more US investors to take advantage of duty-free access to both the US and European markets.

In addition to tariff elimination, the FTA with Morocco includes investment provisions and commitments to increase access to the Moroccan services sector for American firms.

FDI totaled \$8.4 billion from 1967–2001. In 2003, FDI inflows amounted to \$2.43 billion. Spain was by far the largest foreign private investor in Morocco in 2003 (\$1.896 billion), followed by France (\$316.9 million), the United States (\$53.1 million), and Switzerland (\$37.5 million).

### 39 ECONOMIC DEVELOPMENT

Government policy stresses expansion and development of the economy, essentially through foreign investment. Morocco decided to abide by the International Monetary Fund's (IMF's) Article VIII, thus beginning the privatization of 112 public entities—mainly manufacturing enterprises, hotels, and financial institutions—slated for divestiture under the 1989 privatization law. Keeping major industries under government control, Morocco proceeded to open up investment only partially, keeping the majority of revenues from the phosphates and mining, banking and securities industries. Between 1993 and 2005, 66 Moroccan state-owned industries were fully or partially privatized, including the tobacco distribution company, Régie des Tabacs, Banque Centrale Populaire, and 35% of Maroc Telecom to Vivendi (an additional 16% was due to be sold in 2005).

Morocco instituted a series of development plans to modernize the economy and increase production during the 1960s. Net investment under the five-year plan for 1960–64 was about \$1.3 billion. The plan called for a growth rate of 6.2%, but by 1964 the growth rate had only reached only 3%. A new three-year plan (1965–67) targeted an annual growth rate of 3.7%. The main emphasis of the plan was on the development and modernization of the agricultural sector. The five-year development plan for 1968–72 called for increased agriculture and irrigation. The development of the tourist industry also figured prominently in the plan. The objective was to attain an annual 5% growth rate in gross domestic product (GDP); the real growth rate actually exceeded 6%.

Investment during the 1970s included industry and tourism development. The five-year plan for 1973–77 envisaged a real economic growth of 7.5% annually. Industries singled out for development included chemicals (especially phosphoric acid), phosphate production, paper products, and metal fabrication. Tourist development was also stressed. In 1975, King Hassan II announced a 50% increase in investment targets to allow for the effects of inflation. The 1978–80 plan was one of stabilization and retrenchment, designed to improve Morocco's balance-of-payments position, but the 4% annual growth rate achieved was disappointing.

The ambitious five-year plan for 1981–85, estimated to cost more than \$18 billion, aimed at achieving a growth rate of 6.5% annually. The plan's principal priority was to create some 900,000 new jobs and to train managers and workers in modern agricultural and industrial techniques. Other major goals were to increase production in agriculture and fisheries to make the country self-sufficient in food, and to develop energy (by building more hydroelectric installations and by finding more petroleum and other fossil fuels), industry, and tourism to enable Morocco to lessen its dependence on foreign loans. The plan called for significant expansion of irrigated land, for increased public works projects such as hospitals and schools, and for economic decen-

tralization and regional development through the construction of 25 new industrial parks outside the crowded Casablanca-Kénitra coastal area. Proposed infrastructural improvements included the \$2-billion rail line from Marrakech to El Aaiún; a new fishing port at Ad-Dakhla, near Argoub in the Western Sahara; and a bridge-tunnel complex across the Strait of Gibraltar to link Morocco directly with Spain. Large industrial projects included phosphoric acid plants, sugar refineries, mines to exploit cobalt, coal, silver, lead, and copper deposits, and oil-shale development.

Outstanding foreign debt commitments and their serving remain a significant obstacle to economic development. The 1992 financing requirements were mostly covered, largely because of grants and bilateral credit. Despite the cancellation by Saudi Arabia of \$2.8 billion of debt, the total still exceeded \$23 billion. Despite reschedulings through both the Paris Club of official creditors and the London Club of commercial creditors, servicing the debt accounted for 30% of exports of goods and services. The economic plan of 1999–2004 included the creation of jobs, promotion of exports and tourism, resumption of privatization, and infrastructure construction.

External debt stood at around \$15.6 billion in 2005, but the country had strong foreign exchange reserves (\$16.2 billion) and active external debt management, which was allowing it to service its debts. The government has begun to liberalize the telecommunications sector, as well as the rules for oil and gas exploration. Although Morocco has managed to maintain macroeconomic stability in recent years, the Moroccan monetary authorities must use monetary policy to keep the inflation rate differential between Morocco and the euro zone in check to maintain the competitiveness of Moroccan exports. The 2005 budget deficit was projected to be 4%. The public wage bill accounts for more than half of government expenditures; in part, this reflects the decision to expand the civil service to provide jobs for the well-educated.

### 40 SOCIAL DEVELOPMENT

The social security system covers employees and apprentices in industrial and commercial fields and the professions, as well as agriculture and forestry. There is also voluntary coverage for persons leaving covered employment, and voluntary complementary insurance is available. Benefits include maternity allowances, disability pensions, old age pensions, death allowances, and allowances for illness. Employees contributed 3.96% of earnings, and employers contributed 7.93% of payroll. Workers are also entitled to a family allowance for those with children under 12 years of age.

Women comprise about 35% of the work force and are employed mostly in the industrial, service, and teaching sectors. They have the right to vote and run for office, although they are much more likely to be illiterate than men. Women do not have equal status under Islamic family and estate laws. Under these codes, a woman can only marry with the permission of her legal guardian, which is usually her father. Husbands may initiate and obtain a divorce more easily than women, and women inherit less than male heirs. Child labor is common, particularly in the rug making and textile industries. Young girls often work as domestic servants. Employment of children under the age of 12 is prohibited by law. Domestic violence remains a widespread problem. In 2004 progress was

made in public awareness of the issue, and national hotlines were set up to assist victims.

Progress was made in reducing human rights abuses by the authorities. The government organized the first human rights conference ever held in the Arab world. Prison conditions remain poor.

#### 41 HEALTH

Health conditions are relatively poor, but programs of mass education in child and parent hygiene, as well as government-supervised health services in schools and colleges, have helped to raise standards. Campaigns have been conducted against malaria, tuberculosis, venereal diseases, and cancer. However, gastrointestinal infections, malaria, typhoid, trachoma, and tuberculosis remain widespread. The World Health Organization and UNICEF have cooperated in the government's campaigns against eye disorders and venereal diseases. The health system is comprised of three sectors: a public sector consisting of both the Ministry of Public Health and the Health Services of the Royal Armed Forces, a semi public sector, and a private sector. These together have been responsible for the dramatic reduction in mortality rates. Reform is under way with financing coming from health insurance revenues and the budget of the Public Health Ministry. Total health care expenditure was estimated at 4.4% of GDP.

In 2004, there were an estimated 48 physicians, 100 nurses, eight dentists, and 17 pharmacists per 100,000 people. There were 12 university hospitals, 20 regional hospitals, 45 provincial hospitals, 11 local hospitals, 14 diagnostic centers, and 377 health centers. It was estimated that 82% of the population had access to safe drinking water and 75% had adequate sanitation. Approximately 70% of the population had access to health care services.

Children up to one year of age were vaccinated against tuberculosis, 93%; diphtheria, pertussis, and tetanus, 87%; and polio, 87%. The crude birth rate and overall mortality rate were estimated at, respectively, 23.7 and 5.9 per 1,000 people. About 59% of married women (ages 15 to 49) used contraception. Infant mortality was estimated at 41.62 per 1,000 live births in 2005. The total fertility rate in 2000 was 2.6 children per woman. The under-five mortality rate fell from 215 in 1960 to 54 children per 1,000 live births in 2000. The maternal mortality rate was estimated at 230 per 100,000 live births in 1998. The average estimated life expectancy was 70.66 years in 2005.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 15,000 people living with HIV/AIDS in the country.

#### 42 HOUSING

Since the 1950s, significant numbers of Moroccans (estimated at over four million) have moved from the countryside to the urban centers to escape rural unemployment. Housing and sanitation, consequently, have become urban problems. The government is engaged in a low-cost housing program to reduce the slum areas, called *bidonvilles* that have formed around the large urban centers, especially Casablanca and Rabat. Since 1995, the government has been working on a program to build 200,000 low-cost housing

units. In 2001, a government official reported that about 320,000 families were living in slum areas.

#### 43 EDUCATION

The general school system includes modern secular public institutions, traditional religious schools, and private schools. Nine years of education are compulsory, but many girls leave school at a younger age than boys and girls are a minority in secondary as well as primary schools. Primary school covers six years of study, followed by three years of continued basic studies (college). Students may then attend a general secondary school (*lycée*) for three years or a technical school for two or three years. At about seventh or eighth grade, some studies may opt for vocational school programs. The language of instruction in primary schools is Arabic during the first two years, and both Arabic and French are used for the next three years. French is partly the language of instruction in secondary schools. The traditional religious schools are attended by only a small fraction of students. The government is committed to a unified public school system but has permitted private schools to continue because of the lack of alternative resources.

In 2001, about 60% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 90% of age-eligible students; 92% for boys and 87% for girls. The same year, secondary school enrollment was about 36% of age-eligible students; 38% for boys and 33% for girls. It is estimated that about 89.6% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 28:1 in 2003; the ratio for secondary school was about 18:1.

Morocco has six universities. Al-Qarawiyyin University at Fès, founded in 859, is reputed to be the oldest university in the world; it was reorganized in 1962–63 as an Islamic university, supervised by the Ministry of Education. The first modern Moroccan university, the University of Rabat (now the Muhammad V University), was opened in 1957. Other universities are Muhammad bin Abdallah (founded 1974), in Fès; Hassan II (1975), Casablanca; Cadi Ayyad (1978), Marrakech; and Muhammad I (1978), Oujda. There are about two dozen colleges and conservatories. In 2003, about 11% of the tertiary age population were enrolled in some type of higher education program.

In efforts to combat illiteracy, the king has established learning centers in over 100 mosques where citizens between the ages of 15 and 45 can receive literacy courses on Islam, civic education, and hygiene. The adult literacy rate for 2004 was estimated at about 50.7%, with 63.3% for men and 38.3% for women.

As of 2003, public expenditure on education was estimated at 6.5% of GDP, or 26.4% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The General Library and Archives (1920) in Rabat is the national library, with holdings of 600,000 volumes. Its notable collection of medieval books and manuscripts, of particular interest to Muslim scholars, contains 1,600 ancient manuscripts of famous Islamic writers, including an important treatise by Averroës and classical treatises on medicine and pharmacy. The Muhammad VI Library of the Al Akhawayn University has a collection of over 65,000 books as well over 450 national and international academic journals, magazines and newspapers. The University Sidi-Mohamed

Ben Abdelleh, in Fès, holds 225,000 volumes. There are various European and Colonial institutes through the country holding small collections. Of the 18 public libraries in Morocco, the largest is in Casablanca, with almost 360,000 volumes.

The Division of Museums, Sites, Archaeology, and Historic Monuments of the Ministry of Cultural Affairs administers 11 museums in major cities and at the ancient Roman site of Volubilis, northwest of Meknès. In some cities, such as Fès and Marrakech, small houses of historic and artistic interest have been preserved as museums. The Museum of Moroccan Arts and the Museum of Antiquities are in Tangiers. Also in Tangiers is the Forbes Museum, which holds a collection of lead soldiers that belonged to the American Malcolm Forbes. There are archeological museums in Tétouan, Rabat, and Larache. The National Science Museum and the Postal Museum are in Rabat. There are Ethnographic Museums in Chefchaouen and Tétouan.

#### 45 MEDIA

The postal, telephone, telegraph, radio, and television services are government operated. Telephone and telegraph services connect most towns, and cable service is available to France, Spain, and Gibraltar. In 2003, there were an estimated 40 mainline telephones for every 1,000 people. The same year, there were approximately 243 mobile phones in use for every 1,000 people.

Radiodiffusion Television Marocaine presents programs in Arabic, in Berber dialects, and in English, French, and Spanish. The television service, with studios in Casablanca and Rabat, presents daily programs in Arabic and French. A private television station, 2M International, began broadcasting in French and Arabic in 1989. As of 1999 there were 22 AM and 7 FM radio stations and 26 television stations. In 2003, there were an estimated 243 radios and 167 television sets for every 1,000 people. The same year, there were 19.9 personal computers for every 1,000 people and 33 of every 1,000 people had access to the Internet. There were 17 secure Internet servers in the country in 2004.

The country's main press agency, Maghreb Arab Press, is owned by the government. It published the daily Arabic newspaper, *Al-Anbâa* (*Information*), which had a 2002 circulation of about 15,000. Other leading daily newspapers published in Rabat (as of 2002) include the Arabic-language *Al Alam* (*The Flag*, circulation 100,000) and the French-language *L'Opinion* (60,000). The French-language *Le Matin du Sahara* (100,000) and *Maroc Soir* (50,000) are published in Casablanca. *Al Ittihad Al Ichtiraki* (*Socialist Unity*, 110,000) is a daily Arabic newspaper also published in Casablanca.

Press freedom is guaranteed by the constitution, and censorship of domestic publications was lifted in 1977, but criticism of Islam, the king, the monarchical system, or Morocco's claim to the Western Sahara is not permitted.

#### 46 ORGANIZATIONS

The Moroccan Trade, Industry, and Handicrafts Association encourages economic development. Chambers of commerce, industry, and agriculture function in most Moroccan cities. British, French, Spanish, and international chambers of commerce are active in Tangier.

Morocco has several drama societies, music organizations (notably the Association for Andalusian Music), and artists' associa-

tions. The multinational Islamic Educational, Scientific, and Cultural Organization is based in Rabat. Professional organizations include societies of doctors, pharmacists, lawyers, and engineers. There are several other associations dedicated to research and education for specific fields of medicine and particular diseases and conditions. Societies have been formed to encourage the study of economics, geography, prehistory, sociology, and statistics. There are associations of primary- and secondary-school teachers, parents, older students, and alumni. The National Center for Planning and Coordination of Scientific and Technical Research was established in 1981.

There are at least two major student political groups: the National Union of Moroccan Students and the General Union of Moroccan Students. There are youth movements affiliated with political parties and religious institutions. Scouting programs are also active in the country. There are sports associations representing a wide variety of pastimes, such as tennis, tae kwon do, squash, yachting, and badminton.

The National Mutual Aid Society, a welfare organization with many subdivisions, is headed by Princess Lalla Aïcha, the king's sister. Volunteer service organizations, such as the Lions Clubs International, are also present. The Red Crescent Society and Caritas are also active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Morocco's scenic variety and beauty, fascinating medieval cities, and favorable climate contribute to a steadily increasing flow of tourists. Tourism is one of the fastest-growing areas of the Moroccan economy and a valuable foreign exchange earner. Casablanca and Marrakech are favorite tourist destinations. Coastal beach resorts offer excellent swimming and boating facilities. Sports associations are widespread, particularly for football (soccer), swimming, boxing, basketball, and tennis.

Most visitors require passports but not visas for stays of up to three months. There were 4,511,684 tourists in 2003, with expenditure receipts totaling almost \$3.4 billion. Hotel rooms numbered 75,284 with 147,632 beds and an occupancy rate of 40%. The average length of stay was six nights.

In 2005, the US Department of State estimated the daily cost of staying in Casablanca at \$270; in Marrakech, \$252; and in Tangier, \$266.

#### 48 FAMOUS MOROCCANS

Important leaders and rulers include Idris I (Idris bin 'Abdallah, r.788–91), of the Umayyad dynasty, who came to Morocco and was able to consolidate much of the area. His son Idris II (r.791–804) founded Fès, the early capital. Yusuf bin Tashfin (r.1061–1106), a religious reformer, conquered much of Spain and northern Africa. Muhammad bin Tumart (1078?–1130) founded the Almohad sect and developed a democratic form of government. The founder of the Almohad dynasty, 'Abd al-Mumin bin 'Ali (1094?–1163), conquered Morocco and parts of Spain. Yakub al-Mansur (r.1184–99), who controlled all of North Africa west of Egypt, encouraged architecture and scholarship. Ahmad al-Mansur (r.1578–1603) drove all foreign forces out of Morocco, conquered the western Sudan, and established commercial and other contacts with England and Europe. Mawlay Isma'il (r.1672–1727) reunited Morocco and organized a harsh but effective centralized government. A ca-

pable and strong ruler famous for his justice was Muhammad bin 'Abdallah (r.1757–90).

Morocco has attracted many great minds, and it has been said that none of the great names in western Arabic philosophy is unconnected with Morocco. Avicenna (Ibn Sina, or Abu 'Ali al-Husayn, 980?–1037), a great Persian physician and philosopher and an author of long-used textbooks on medicine, who was born near Bukhoro (Bukhara), lived for a number of years in Morocco. So did Avenzoar (Ibn Zuhr, or Abu Marwan 'Abd al-Malik bin Abu-'l-'Ala' Zuhr, c.1090?–1162), physician and scholar, born in Sevilla, in Spain, and author of important medical treatises. Averroës (Ibn Rushd, or Abu al-Walid Muhammad ibn Ahmad ibn Rushd, 1126–98), greatest Arab philosopher of Spain, was born in Córdoba and lived in Morocco for many years. The doctor and philosopher Abubacer (Abu Bakr Muhammad bin 'Abd al-Malik bin Tufayl, d.1118) was likewise brought to the Moroccan court from Spain.

Among distinguished native-born Moroccans was Ahmad bin 'Ali al-Badawi (c.1200?–76), a Muslim saint who was active principally in Egypt. The great traveler Ibn Battutah (Abu 'Abdallah Muhammad bin Battutah, 1304–68?) visited and wrote about many countries of Africa, Asia, and Europe. The poetry of Muhammad bin Ibrahim (d.1955) is read throughout the Islamic world.

A famous fighter for Moroccan independence was 'Abd al-Karim (Muhammad 'Abd al-Karim al-Khattabi, 1882?–1963), who led a long campaign in the 1920s against French and Spanish forces. King Mohammed V (1909–61) gave up his throne as a gesture for independence, was arrested and exiled by the French, and returned in 1955 to become the first ruler of newly independent Morocco. He was succeeded by his son Hassan II (1929–1999), who continued his father's modernization program and expanded Morocco's territory and mineral resources by annexing West-

ern Sahara. Mohammed VI (b.1963) became king following his father's death in 1999.

## 49 DEPENDENCIES

Morocco has no territories or colonies.

# MOZAMBIQUE

Republic of Mozambique  
*República Popular de Moçambique*

**CAPITAL:** Maputo (formerly Lourenço Marques)

**FLAG:** The flag consists of green stripes of green, black, and yellow, separated by narrow bands of white. Extending from the hoist is a red triangle; centered on the triangle is a yellow five-pointed star upon which is a white book over which are crossed the black silhouettes of a hoe and an AK47 rifle.

**ANTHEM:** Begins “Viva viva FRELIMO.”

**MONETARY UNIT:** The Mozambique escudo (ME), linked until 1977 with the Portuguese escudo, was in June 1980 renamed the metical (MT); it is a paper currency of 100 centavos. There are coins of ½, 1, 2½, 5, 10, and 20 meticaís, and notes of 50, 100, 500, and 1,000 meticaís. MT1=\$0.00005 (or \$1 =MT19,445) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year’s Day, 1 January; Heroes’ Day, 3 February; Women’s Day, 7 April; Workers’ Day, 1 May; Independence Day, 25 June; Victory Day, 7 September; Day of Revolution, 25 September; Christmas, 25 December.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located on the southeastern coast of Africa, opposite the island of Madagascar, Mozambique (Moçambique), formerly known as Portuguese East Africa, has an area of 801,590 sq km (309,496 sq mi), of which land constitutes 784,090 sq km (302,738 sq mi) and inland water 17,500 sq km (6,757 sq mi). Comparatively, the area occupied by Mozambique is slightly less than twice the size of the state of California. The country extends 2,016 km (1,253 mi) NNE–SSW and 772 km (480 mi) ESE–WNW. It is bordered by Tanzania on the N, the Indian Ocean (Mozambique Channel) on the E, the Republic of South Africa on the S, Swaziland, South Africa, and Zimbabwe on the W, and Zambia and Malawi on the NW, with a total boundary length of 7,041 km (4,375 mi), of which 2,470 km (1,535 mi) is coastline.

## <sup>2</sup> TOPOGRAPHY

Mozambique is 44% coastal lowlands, rising toward the west to a plateau 150 to 610 m (500–2,000 ft) above sea level and on the western border to a higher plateau, 550 to 910 m (1,800–3,000 ft), with mountains reaching a height of nearly 2,440 m (8,000 ft). The highest mountains are Namuli (2,419 m/7,936 ft) in Zambézia Province and Binga (2,436 m/7,992 ft) in Manica Province on the Zimbabwean border. The most important rivers are the Zambezi (flowing southeast across the center of Mozambique into the Indian Ocean), the Limpopo in the south, the Save (Sabi) in the center, and the Lugenda in the north. The most important lake is the navigable Lake Malawi (Lake Niassa); Lake Cahora Bassa was formed by the impoundment of the Cahora Bassa Dam. In the river valleys and deltas, the soil is rich and fertile, but southern

and central Mozambique have poor and sandy soil, and parts of the interior are dry.

## <sup>3</sup> CLIMATE

Two main seasons, one wet and one dry, divide the climatic year. The wet season, from November through March, has monthly averages 27–29°C (81–84°F), with cooler temperatures in the interior uplands. The dry season lasts from April to October and has June and July temperatures averaging 18–20°C (64–68°F). The average annual rainfall is greatest (about 142 cm/56 in) over the western hills and the central areas, and lowest (30 cm/12 in) in the southwest.

A severe drought began to affect the central region of the country in 2001. As of 2005, the UN World Food Programme was still offering assistance to those who were most in need in the provinces of Maputo, Gaza, Inhambane, Manica, Sodalá, and Tete, but the program was underfunded and there were an estimated 500,000 people still in need of assistance. Much of the same region suffered a flood in 2000 which affected 300,000 people.

## <sup>4</sup> FLORA AND FAUNA

Thick forest covers the wet regions, where there are fertile soils, but the drier interior, which has sandy or rocky soils, supports only a thin savanna vegetation. Extensive stands of hardwood, such as ebony, flourish throughout the country. Mozambique has elephants, buffalo, wildebeests, zebras, palapalas, hippopotamuses, lions, crocodiles, nyalas, and other southern African game species. As of 2002, there were at least 179 species of mammals, 144

species of birds, and over 5,600 species of plants throughout the country.

## 5 ENVIRONMENT

The civil war combined with natural disasters from flooding and drought have created a life-threatening situation for the nation's people. According to a 1992 UN report, humans were the most endangered species in Mozambique. Other significant environmental problems include the loss of 70% of the nation's forests. The nation lost 7.7% of its forest and woodland between 1983 and 1993 alone. Mozambique has since launched reforestation projects, mostly involving the planting of conifers and eucalyptus.

The purity of the nation's water supply is also a significant issue. Surface and coastal waters have been affected by pollution. Mozambique has 99 cu km of renewable water resources. About 89% of the annual withdrawal is used in farming and 2% for industrial purposes. Only 76% of the nation's city dwellers and 24% of the rural population have access to improved water sources.

In 2003, about 8.4% of the total land area was protected, including the Marrromeu Complex, a Ramsar wetland site. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 23 species of birds, 5 types of reptiles, 3 species of amphibians, 21 species of fish, 4 types of mollusks, 1 species of other invertebrates, and 46 species of plants. Endangered species in Mozambique include the green sea, hawksbill, olive ridley, and leatherback turtles.

## 6 POPULATION

The population of Mozambique in 2005 was estimated by the United Nations (UN) at 19,420,000, which placed it at number 54 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.2%, a rate the government viewed as too high as it struggled to reduce poverty. The projected population for the year 2025 was 27,556,000. The population density was 24 per sq km (63 per sq mi), with about 60% of the population living in the central and southern coastal provinces.

The UN estimated that 32% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.22%. The capital city, Maputo (formerly Lourenço Marques), had a population of 1,221,000 in that year, while Beira had an estimated population of 500,000; Nampula, 314,965; and Nacala, 182,500.

The prevalence of HIV/AIDS has had a significant impact on the population of Mozambique. The UN estimated that 13% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Between April 1974 and the end of 1976, an estimated 235,000 of the 250,000 Portuguese in Mozambique fled the country. Famine and war produced another exodus in the 1980s, but this time of blacks. An October 1992 peace agreement left 4.5 million inter-

nally displaced and 1.5 million refugees abroad. Of the latter, at the end of 1992, some 1,058,500 were in Malawi; about 200,000 in South Africa, 136,600 in Zimbabwe, 75,200 in Tanzania, 48,100 in Swaziland, and 26,300 in Zambia. By May 1993 about 750,000 people in both categories had returned home. Mozambique traditionally supplies seasonal farm workers to South Africa farmers.

In October 1992, the 16-year civil war ended with a peace treaty. Between 1992 and 1996, the United Nations High Commissioner for Refugees (UNHCR) completed the largest repatriation project it has ever conducted in Africa. Over 1.3 million refugees returned to Mozambique from Malawi; 241,000 returned from Zimbabwe; 23,000 returned from South Africa, and 32,000 returned from Tanzania.

In 2000 there were 366,000 migrants living in Mozambique, including a small number of refugees. In 2004, there were 623 refugees and 4,892 asylum seekers. In that same year 151 Mozambicans applied for asylum in South Africa. In 2005, the net migration rate was an estimated zero, a significant change from 10.7 per 1,000 in 1990. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Nearly the total population (99.66%) is made up of indigenous tribal groups, including the Shangaan, Chokwe, Manyika, Sena, and Makua. Overall, there are 10 major ethnic clusters. The largest, residing north of the Zambezi, is the Makua-Lomwé group, representing about 37% of the total population. The Yao (Ajawa) live in Niassa Province. The Makonde live mainly along the Rovuma River. Other northern groups are the Nguni (who also live in the far south) and the Maravi. South of the Zambezi, the main group is the Tsonga (about 23%), who have figured prominently as Mozambican mine laborers in South Africa. The Chopi are coastal people of Inhambane Province. The Shona or Karanga (about 9%) dwell in the central region. Also living in Mozambique are Euro-Africans, accounting for about 0.2% of the population; Europeans, make up 0.06%; and Indians, constitute 0.08%.

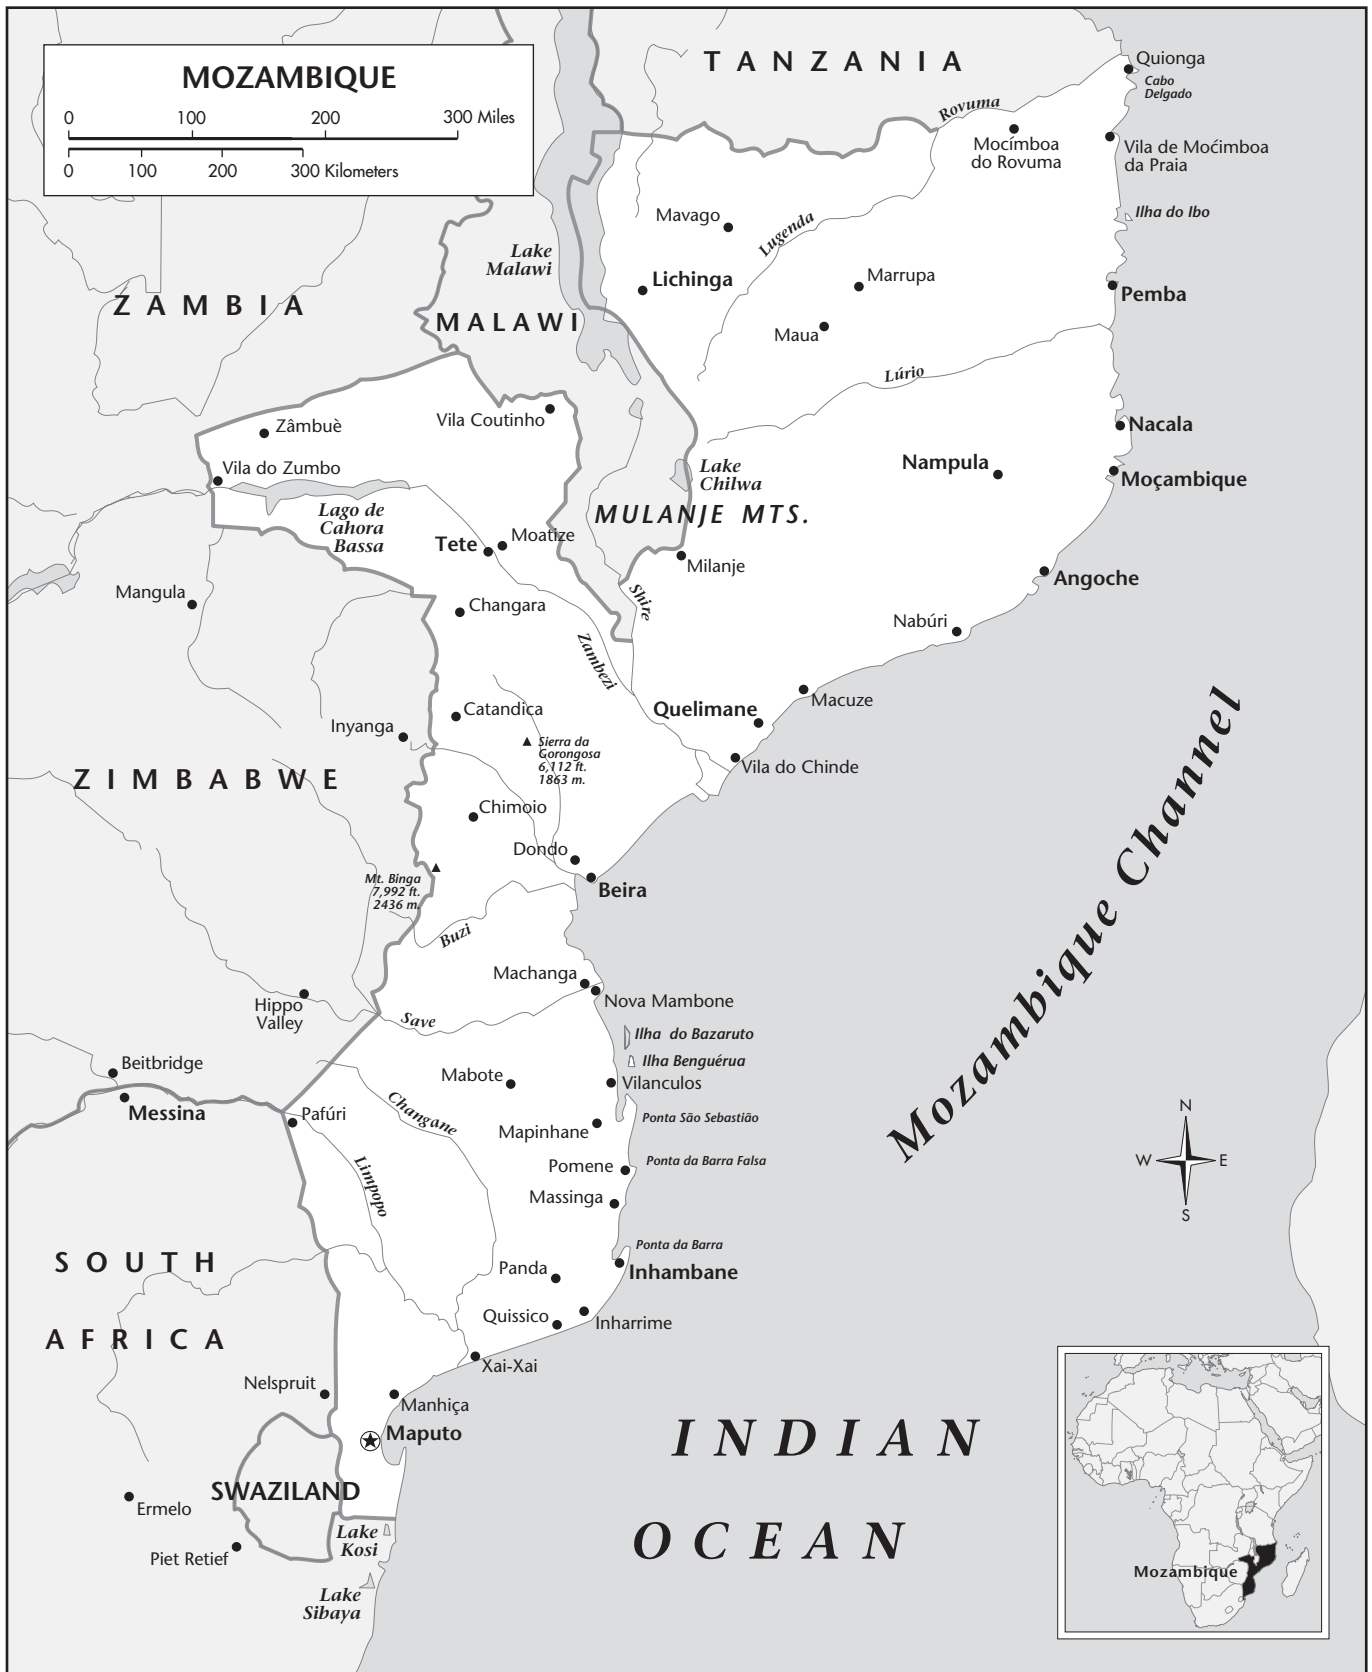

## 9 LANGUAGES

Portuguese remains the official language. It is spoken as a first language by only about 8.8% of the population and as a second language by about 27%. Different African ethnic groups speak their respective languages and dialects. The most prominent of these are Emakhuwa, spoken by about 26.1% of the population; Xichangana, by 11.3% of the population; Elomwe, by 7.6%; Cisena, 6.8%; and Echuwabo, 5.8%.

## 10 RELIGIONS

Reports from the National Institute of Statistics state that half of the population does not claim adherence to any religion or creed. However, local scholars claim that most of the population follows traditional indigenous customs and beliefs either exclusively or in conjunction with other religious traditions. Veneration of ancestors plays an important role in traditional customs as do *curandeiros*, the traditional healers or spiritualists who are consulted for healing, luck, and solutions to problems.

Of the eight million or so who claim religious affiliation, about 24% are Roman Catholic, 22% are Protestant, and 20% are Muslim (though some Muslim leaders claim a much larger percentage of adherents). The strongest Muslim communities are located in

LOCATION: 30°12' to 40°51' E; 10°27' to 26°52' S. BOUNDARY LENGTHS: Tanzania, 756 kilometers (470 miles); Indian Ocean coastline, 2,504 kilometers (1,556 miles); South Africa, 491 kilometers (305 miles); Swaziland, 108 kilometers (67 miles); Zimbabwe, 1,223 kilometers (760 miles); Zambia, 424 kilometers (263 miles); Malawi, 1,497 kilometers (930 miles). TERRITORIAL SEA LIMIT: 12 miles.

the northern provinces and along the coastal strip. Central provinces are predominantly Catholic and the southern regions have the most Protestants. There are also small groups of Jews, Hindus, and Baha'is across the country.

There are over 500 distinct denominations registered with the Department of Religious Affairs of the Ministry of Justice. Registration is required by law and an organization must have at least 500 members in good standing to be registered. However, unregistered groups have been allowed to worship without restrictions. The largest of the African Independent Churches in the country is the Zion Christian Church. Other Christian denominations include Anglican, Greek Orthodox, Presbyterian, Methodist, Baptist, Seventh-Day Adventist, Congregational, Church of Jesus Christ of Latter-Day Saints, Nazarene, Jehovah's Witnesses and other Pentecostal, evangelical, and apostolic organizations. The evangelical Christians are reported as the fastest growing religious groups in the country. Among Muslims, only Sunni and Ismaili communities are registered.

The People's Republic of Mozambique is a secular state. The government guarantees every citizen full freedom of conscience and the right to practice a religion or not. Though church schools and hospitals were nationalized after independence, reports indicate that many of these institutions have been returned to their respective religious organizations. There is a council of bishops, including Catholic and Anglican members, that meets with the president on a fairly regular basis to talk about current issues. The Inter-Religious Forum is an interfaith organization that offers social and disaster relief; members include those from the Christian Council of Mozambique, the Greek Orthodox Church, Muslims, Jews, and Bahai's. No religious holidays are officially observed, though individuals are generally allowed days off for their own religious observances.

## <sup>11</sup>TRANSPORTATION

Transport networks are of major importance to the economy. Mozambique's landlocked neighbors—Malawi, Zambia, Zimbabwe, and Swaziland—along with South Africa are the main users of the Mozambican transport system.

The railways are the best-developed sector, with three good rail links between major Mozambican ports and neighboring countries. By independence in 1975, almost the entire railway system was owned by the state and passed into the hands of the newly independent government. The route system is 3,123 km (1,943 mi) long, all of it narrow gauge, with the single largest user being South Africa. There are six routes that make up the majority of the country's railroads: the Nacala Corridor, connecting Nacala to Malawi (300 km/186 mi); the Sena Corridor, linking Beira, via Dondo, to the coalfields at Moatize (513 km/319 mi) and to Malawi (370 km/230 mi); the Beira Corridor, connecting Beira to Zimbabwe (315 km/196 mi); the Limpopo Corridor, linking Maputo with Zimbabwe (534 km/332 mi); the Resano Garcia line, connecting Maputo to South Africa (88 km/55 mi); and the Goba line, linking Maputo to Swaziland (68 km/42 mi).

The road network in 2002 totals an estimated 30,400 km (18,890 mi), of which 5,685 km (3,533 mi) are paved, but few roads are suitable for trucks and passenger cars. In 2003, there were 58,110 vehicles, including 29,530 passenger cars and 28,580 commercial vehicles.

Maputo, by far the leading port, has an excellent multipurpose harbor, with exceptional loading, unloading, and storage facilities. It is a major outlet for South Africa, Swaziland, Zimbabwe, Zambia, Malawi, and the eastern DROC. Other ports include Beira, Nacala, and Inhambane, which was reopened in 1980 after a 20-year closure. The Mozambican merchant fleet consisted of two cargo ships of 1,000 GRT or more, totaling 4,125 in 2005. As of 2004, Mozambique had 580 km (360 mi) of navigable waterways consisting of the Zambezi River to Tete and along Cahora Lake.

In 2004, there were an estimated 158 airports, 22 of which had paved runways as of 2005. Mozambique Air Lines (Linhas Aéreas de Moçambique—LAM), the state airline, operates both international and domestic services. In 2003, about 281,000 passengers were carried on domestic and international flights. The National Enterprise of Transport and Aerial Labor (Empresa Nacional de Transporte e Trabalho Aéreo—TTA) also provides domestic service. Maputo and Beira have international airports.

## <sup>12</sup>HISTORY

Mozambique's earliest inhabitants were hunter-gatherers, often referred to as Bushmen. The land was occupied by Bantu peoples by about AD 1000. In the following centuries, trade developed with Arabs who came across the Indian Ocean to Sofala. The first Europeans in the area were the Portuguese, who began to settle and trade on the coast early in the 16th century. During the 17th century, the Portuguese competed with Arabs for the trade in slaves, gold, and ivory, and set up agricultural plantations and estates. The owners of these estates, the *prazeiros*, were Portuguese or of mixed African and Portuguese blood (*mestiços*); many had their own private armies. Mozambique was ruled as part of Goa until 1752, when it was given its own administration.

Until the late 1800s, Portuguese penetration was restricted to the coast and the Zambezi Valley. The African peoples strongly resisted further expansion, but they were ultimately subdued. By the end of the 19th century, the Portuguese had made boundary agreements with their colonial rivals, the United Kingdom and Germany, and had suppressed much of the African resistance. Authority was given to trading companies such as Mozambique Co., which forced local people to pay taxes and work on the plantations. After the Portuguese revolution of 1926, the government of Portugal took a more direct interest in Mozambique. The trading companies' influence declined, and Mozambique in 1951 became an overseas province of Portugal.

As in other Portuguese territories, African resistance to Portuguese rule grew stronger as the British and French colonies in Africa began to win their independence. Gradually, various liberation movements were formed. On 25 June 1962, these groups united to form the Mozambique Liberation Front (FRELIMO) and elected Eduardo C. Mondlane as its first president. The armed struggle began on 25 September 1964, when FRELIMO guerrillas trained in Algeria went into action for the first time in Cabo Delgado. By 1965, fighting had spread to Niassa, and by 1968, FRELIMO was able to open fronts in the Tete region. By that time, it claimed to control one-fifth of the country. In response, the Portuguese committed more and more troops, military supplies, and military aid funds to the territory. On 3 February 1969, Mondlane was assassinated in Dar es Salaam, Tanzania; the acting leader of

FRELIMO, Samora Machel, became president of the organization in December 1970.

The turning point in the struggle for independence came with the Portuguese revolution of 25 April 1974. Negotiations between Portuguese and FRELIMO representatives led to the conclusion of an independence agreement in Zambia in September. Mozambique became officially independent at midnight on 24–25 June 1975, and the People's Republic of Mozambique was proclaimed in ceremonies on 25 June. Machel, who had returned to Mozambique on 24 May after 13 years in exile, became the nation's first president. He quickly affirmed Mozambique's support of the liberation movement in Rhodesia, and guerrilla activity along the Rhodesian border increased. On 3 March 1976, Mozambique closed its border with Rhodesia, severed rail and communications links, and nationalized Rhodesian-owned property. Because the transit fees paid by Rhodesia had been a major source of foreign exchange revenue, the action aggravated Mozambique's economic ills. During this period, Rhodesian forces conducted land and air raids into Mozambique to punish black nationalist guerrillas based there. These raids ended, and the border was reopened in 1980, following the agreement that transformed Rhodesia into Zimbabwe. However, South African airmen bombed Maputo in 1981 and 1983 in retaliation for Mozambique's granting refuge to members of the African National Congress (ANC), a South African black nationalist group.

The Mozambique National Resistance (RENAMO), created in 1976, allegedly by Portuguese settler and business interests with white Rhodesian (Central Intelligence Organization) backing, conducted extensive guerrilla operations in Mozambique during the 1980s. With an armed strength estimated as high as 12,000, RENAMO blew up bridges and cut rail and road links and pipelines. After the loss of its Rhodesian support, RENAMO received substantial aid from South Africa and also had bases in Malawi. Voluntary support for RENAMO within Mozambique was difficult to ascertain, but there was known to be considerable disaffection with the government because of food shortages and resistance by peasants to being resettled onto communal farms. In addition to these political problems, Mozambique experienced widespread floods in 1977–78 and recurrent drought periodically from 1979, especially in 1992.

On 16 March 1984, Mozambique and South Africa signed a nonaggression pact at Nkomati whereby Mozambique agreed to keep the ANC from using Mozambican territory for guerrilla attacks on South Africa, while South Africa agreed to stop supporting RENAMO. Nevertheless, South Africa continued to aid RENAMO, and as a result, in 1985 Mozambique pulled out of the commission that monitored the nonaggression pact. On 19 October 1986, President Machel and 33 others were killed when their Soviet-built jetliner crashed inside South Africa while returning to Maputo. Mozambican officials accused South Africa of employing a radio beacon to lure the craft off course to its destruction, but an international commission found that the crash was caused by negligence on the part of the Soviet crew. On 3 November 1986, FRELIMO's Central Committee elected Foreign Minister Joaquim A. Chissano president. In 1987, despite the jetliner crash and despite Mozambican claims that RENAMO and South Africa were responsible for the massacre of 386 people in a village near Inhambane, Mozambique and South Africa revived their nonag-

gression pact. Fighting intensified and hundreds of thousands of Mozambicans fled to Malawi and Zimbabwe.

In 1990, there was movement toward resolving the civil war. There were serious signs in the late 1980s that FRELIMO was moderating its views. At its 1989 Congress, FRELIMO formally abandoned its commitment to the primacy of Marxism-Leninism. The first peace talks in 13 years were scheduled for Blantyre, Malawi, but they broke down just before they were to open. In August, government and rebel leaders concluded three days of talks in Rome. That same month, Chissano announced that FRELIMO had agreed to allow opposition parties to compete openly and legally. Finally in November, government and RENAMO agreed to appoint the Italian government and the Catholic Church as mediators in peace talks.

It took until 4 October 1992 to sign a peace treaty ending the war, but sporadic fighting and new RENAMO demands slowed the implementation process. Chissano and Afonso Dhlakama, RENAMO's leader, signed an agreement that called for the withdrawal of Zimbabwean and Malawian troops that had assisted government forces guarding transport routes and the regrouping of both government and RENAMO soldiers at assembly points. It called for the formation of a new national army composed of half government and half RENAMO troops. A joint commission of government and RENAMO, along with a small UN monitoring force, and other joint commissioners, the police, and intelligence services were to oversee the agreement's implementation. In addition, multiparty elections were to be held within a year.

Delays troubled the process practically from the start. RENAMO was slow to appoint its representatives to the joint commissions. The UN operation (UNOMOZ) was formally approved in December 1992, but no troops arrived until March 1993, and it was midyear before 6,000 troops were deployed. RENAMO failed to implement the provision for demobilization and all of the provisions regarding freedom of movement and political organization in areas it controlled. New RENAMO demands were put forward almost monthly, and despite direct meetings between Dhlakama and Chissano and an October 1993 visit by UN Sec. Gen. Boutros Boutros-Ghali, the delays continued.

Political party activity picked up as efforts to resolve the civil war continued. By the end of 1996, 22 parties were active. In March 1993, government presented a draft electoral law to opposition parties, but not until late July was a meeting convened to discuss it. The opposition parties demanded a two-thirds majority on the National Electoral Commission. After Boutros-Ghali's visit, a compromise (10 out of 21 for the opposition parties) was agreed to. Delays also marked the effort to confine armed forces in designated areas.

Elections first scheduled for 1993 were conducted on 27–29 October 1994. On the presidential ballot, Chissano won 53.3% of the vote to Dhlakama's 33.7%. The remainder was split among 10 other contenders. On the legislative ballot, FRELIMO took 44% of the popular vote to RENAMO's 37.7%. FRELIMO had 129 seats and RENAMO, 112. The Democratic Union took nine seats. Dhlakama disputed the fairness of the vote, and the UN observers agreed that it had been less than ideal, but insisted that the announced results were sufficiently accurate. More than 2,000 international observers agreed. Chissano formed the new government on 23 December, with the entire cabinet made up of FRELIMO MPs. Early

in 1996, the Chissano government announced that it would postpone municipal elections slated for later that year until 1997. In presidential and parliamentary elections held in December 1999, Chissano defeated Dhlakama by 52.29% to 47.71% while his party took 133 seats against 117 for RENAMO in the parliamentary contest.

The next elections were held on 1 December 2004. In these elections Armando Guebuza, the new FRELIMO candidate, won 63.7% of the votes and the RENAMO candidate, Afonso Dhlakama, got 31.7%. In the parliamentary elections FRELIMO won 62% (1.8 million) of the votes, RENAMO 29.7% (905,000 votes) and 18 minor parties shared the remaining 8%. Under the proportional system, FRELIMO won 160 of the parliamentary seats and RENAMO won 90. The election results were contested by RENAMO and were widely criticized by international observers such as the European Union Election Observation Mission to Mozambique. Nevertheless, although the elections had shortcomings, it was agreed that the shortcomings did not affect the final result in the presidential election which was decisively in favor of FRELIMO. The new FRELIMO president, Armando Guebuza was sworn in as president of the republic on 2 February 2005 without the blessing of Dhlakama and RENAMO. Dhlakama was absent at the inauguration. In spite of the protests over the elections, RENAMO agreed to participate in the parliament and the Council of State. The next presidential and assembly of the republic elections were scheduled for December 2009.

With the return of normalcy to the war-torn country, Mozambique attempted to address the huge problem of the repatriation of the millions of refugees. By 1996, 1.6 million had returned. In 1997, Mozambique had become relatively stable, but remained mired in poverty. International investment, following structural adjustment programs initiated by the World Bank, poured in as the country engaged in a wholesale privatization of formerly state-owned enterprises on a scale unmatched anywhere in the world. In mid-2003, Mozambique was set to benefit from an \$11.8 million disbursement from the International Monetary Fund (IMF), following a positive review of its economic performance under the IMF's Poverty Reduction and Growth Facility (PRGF). Over 70% of the population reportedly lives in poverty, and an estimated 13% of adults between 15–49 years old are infected with HIV. Food insecurity also remained an issue for some 600,000 people affected by cyclical droughts and flooding.

### 13 GOVERNMENT

The constitution of the People's Republic of Mozambique became effective at midnight on 24–25 June 1975. Under the constitution and its revision enacted during 1977–78, Mozambique was a republic in which FRELIMO was the sole legal party. The president was the chief of state; the president of FRELIMO had to be the president of the republic. He acted on the advice of the Council of State Ministers, which he appointed and over which he presided. He also appointed provincial governors. The position of prime minister was created in a 1986 constitutional revision. The National People's Assembly, with 226 members, was the supreme organ of the state. Elections to the Assembly were held in 1977 and 1986, with the candidates chosen from a single FRELIMO slate.

A revised constitution with a multiparty system of government came into force on 30 November 1990. The name of the coun-

try was changed from the People's Republic to the Republic of Mozambique. Governmental institutions remain otherwise unchanged. According to the 1990 constitution, the president is to be elected by universal adult suffrage for a five-year term and might be reelected on only two consecutive occasions. The Assembly of the Republic replaced the People's Assembly. Its 250 deputies are to be elected for five-year terms.

### 14 POLITICAL PARTIES

The Mozambique Liberation Front (Frente de Libertação de Moçambique—FRELIMO), the sole legal political party until 1991, was founded in 1962 by the merger of three existing nationalist parties. Formation of FRELIMO did not mean complete political unity. Splinter groups or organizations began to appear in Cairo, Nairobi, and elsewhere, but none of these splinter organizations ever received the support of the OAU, which gave official recognition only to FRELIMO.

In August 1973, five anti-FRELIMO groups formed the National Coalition Party (Partido de Coligação Nacional—PCN). The PCN program called for a referendum on the country's future and the restoration of peace and multiracialism. The organized opposition from the Portuguese community took the form of the Independent Front for the Continuation of Western Rule (Frente Independente de Continuidade Ocidental—FICO, or "I stay"). FICO called for Portugal to continue the war against FRELIMO. In fact, however, the Portuguese government chose to recognize FRELIMO. After the formation of a provisional FRELIMO government in September 1974, the PCN was dissolved and its leaders detained.

Two years after independence, in 1977, FRELIMO was transformed from a liberation movement into a Marxist-Leninist vanguard party dedicated to the creation of a Socialist state. FRELIMO formally downgraded its ideological commitment at its July 1989 congress. Proposals to broaden party membership and decision making were also adopted. The new constitution in force in November 1990 legalized a multiparty system. Since then, activity has been vigorous. FRELIMO and RENAMO (created in 1976 as a dissident armed force) have been most popular, the latter especially in the central regions. The Mozambican National Union (UNAMO) registered early, and there are several smaller parties, including the Democratic Party of Mozambique (PADEMO) and the Mozambique National Movement (MONAMO). They were gearing up for multiparty presidential and legislative elections in October 1994.

The elections were held on 27 October 1994, and FRELIMO took 129 seats, RENAMO, 112, and the Democratic Union, 9. FRELIMO head Chissano won the presidential election with 53% of the vote to RENAMO's Dhlakama's 33%, with the rest split among 10 candidates.

By 1996, Mozambique had nearly two dozen political parties officially registered with the state. In addition to FRELIMO and RENAMO, the Democratic Union, a coalition of three smaller parties, was founded in 1994. UNAMO, a splinter from RENAMO, ran a strong presidential race, and the Liberal Democrats won almost 2% of the votes in the legislative elections.

In the presidential elections held in December 1999, Dhlakama lost again to Chissano, but gained 14 points over 1994. In the legislative polls RENAMO's 38.81% was only a slight improvement

over 37.7% in 1994. This translated to 133 parliamentary seats against 117 for RENAMO in the 250-seat assembly. In September 2000, Renamo-UE member Raul Domingos was expelled from the party, but he continues to hold his parliamentary seat as an independent. In mid-2002 FRELIMO announced that Armando Guebuza would be its candidate in the 2004 elections following Chissano's announcement earlier that he would not stand for a third term.

Chissano and Dhlakama met a number of times over 2001–2002 to discuss RENAMO's claim that the 1999 elections were rigged. RENAMO threatened to form a separate government in its stronghold—the six central and northern provinces. Barring this radical move, RENAMO leaders have demanded that Chissano name the governors of these provinces from among RENAMO's ranks. But Chissano refused to take such action on constitutional grounds. RENAMO's electoral alliance with 10 small parties—the RENAMO-Electoral Union—said that its own parallel count gave Dhlakama 52% in the presidential race and the coalition 50% in the 1999 legislative polls.

Mozambique is dominated by two political parties (FRELIMO and RENAMO) so much so that it is extremely difficult for anybody to achieve electoral success under the banner of any other party. However, there is a plethora of smaller parties. In the elections held in December 2004, 18 smaller parties, along side FRELIMO and RENAMO, contested in the elections. But expectedly FRELIMO and RENAMO shared 92% of the vote while the other 18 parties got only 8% of the vote. In these elections FRELIMO got 160 parliamentary seats while RENAMO received 90 seats. The new presidential candidate for RENAMO, Armando Guebuza, won 63.7% of the votes while RENAMO's candidate, Afonso Dhlakama, received 31.7% of the votes in 2004.

## 15 LOCAL GOVERNMENT

All of Mozambique outside the capital is organized into 10 provinces, subdivided into 112 districts, 12 municipalities, and 894 localities; the capital city of Maputo is considered an 11th province. Each provincial government is presided over by a governor, who is the representative of the president of the republic and is responsible to FRELIMO and the national government for his activities. Each province also has a provincial assembly, which legislates on matters exclusively bearing on that province. District, municipal, and local assemblies were established in 1977; local elections were held in that year and in 1986. Some 20,230 deputies for 894 local assemblies were elected by adult suffrage at age 18 from candidates chosen by local units of FRELIMO or, in their absence, by other local groups. Deputies of the provincial, district, and municipal assemblies were elected by the local bodies.

Elections were held in 1998 and were scheduled again for October 2003. RENAMO boycotted the first local polling in 1998, accusing the government of fraud. That resulted in a turnout of just 14.4% and a landslide victory for FRELIMO. In the November 2003 local assembly elections turnout was generally low, about 30% of the voters but far better than the turnout in the 1998 elections. The ruling FRELIMO party won in the greater majority of the 33 municipalities. Among the reasons cited for the low turnout in the 2003 local elections and the apathy of voters were an overall lack of trust in political parties, and the perception among voters that their votes would not bring about any changes in the

government. Nevertheless, European Union observers declared the local polling free and fair, but warned that a low voter turnout was a matter of concern ahead of the 2004 presidential and assembly vote.

## 16 JUDICIAL SYSTEM

The legal system is based on Portuguese civil law and customary law. The formal justice system is bifurcated into a civil/criminal system under auspices of the Ministry of Justice and a military justice system under joint supervision of the Ministries of Defense and Justice. At the apex is the Supreme Court, which hears appeals from both systems. The provincial and district courts are below the Supreme Court. There are also special courts such as administrative courts, customs courts, fiscal courts, maritime, and labor courts. Local customary courts, part of the civil/criminal system, handle estate, divorce, and other social and family issues.

Since abolition of the Revolutionary Military Tribunal and establishment of the Supreme Court in 1988, those accused of crimes against the state are tried in civilian courts under standard criminal procedural rules.

The 1990 constitution declares the establishment of an independent judiciary, with judges nominated by other jurists instead of designated by administrative appointment. It is the president, however, who continues to appoint the justices of the Supreme Court.

In nonmilitary courts, all criminal defendants enjoy presumptions of innocence, have the right to legal counsel, and the right of appeal; however, the judicial system suffers from lack of qualified judicial personnel and financial resources.

## 17 ARMED FORCES

The armed forces in 2005 numbered an estimated 11,200 active personnel. The Army had an estimated 9,000 to 10,000 personnel and was equipped with over 60 main battle tanks, in addition to 166 artillery pieces and other equipment. The Navy had 200 personnel for duty on Lake Malawi. Air Force personnel numbered 1,000; Air Force equipment included a small number of MiG-21 fighters and four attack helicopters. Mozambique had observers in three UN missions in the region. In 2005, the defense budget totaled \$116 million.

## 18 INTERNATIONAL COOPERATION

Mozambique was admitted to the United Nations (UN) on 16 September 1975 and takes part in ECA and several nonregional specialized agencies, such as the FAO, ILO, IMF, the World Bank, UNESCO, UNHCR, UNIDO, and the WHO. The country also belongs to the WTO, the ACP Group, the Commonwealth of Nations, the Organization of the Islamic Conference (OIC), the African Development Bank, G-77, and the African Union. Mozambique plays a leading role in the Southern African Development Community (SADC).

Mozambique is a member of the Nonaligned Movement. The country has supported UN operations and missions in East Timor (est. 2002), Burundi (est. 2004), and the DROC (est. 1999). In environmental cooperation, Mozambique is part of the Basel Convention, the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Mozambique, with its agricultural economy and considerable mineral reserves, is a highly indebted, poverty-stricken country. Civil war, ineffective socialist economic policies, and severe droughts plagued Mozambique's economy throughout the 1980s, leaving it heavily dependent on foreign aid. As of 2003, the government had received \$8 billion in foreign aid since 1986, representing 17% of GDP. Lack of security outside of major cities and the inability of relief organizations to find safe corridors for the transport of relief supplies only further depressed economic activity. Recent shifts in economic policy toward a market economy and a resolution of the civil war have laid the foundation for an economic recovery helping the economy to grow on average by 4.7% yearly between 1988 and 1998. In 2001, it stood at 13.0% but declined to 7.7% in 2003 and 7.0% in 2005. Main exports are prawns, cashew nuts, and cotton.

The poorly trained workforce and other factors constrain growth. The use of outdated data collection systems, geared more to a state-managed economy, means that the increasing vitality of the private sector tends to go unmeasured. The return of rain after the worst drought on record in 1992 and continuing peace meant that many Mozambicans were able to farm their lands again, making them less dependent on food aid. The 1992 peace accords, which halted the 16-year civil war, brought much needed relief from military activities.

In 2000, some of the worst flooding in the history of the country had killed and displaced many citizens, deterring economic well-being. Approximately 80% of the population is employed in agriculture, mostly on a small-scale, subsistence level. Longer term prospects for growth are encouraging, but highly dependent on good weather and a stable political situation. The country experienced double-digit GDP growth in the late 1990s. A value added tax was introduced in 1999, improving the government's capacity to collect revenue, the country witnessed inflows of capital in the early 2000s, and the exchange rate was stable. Although inflation was low, interest rates were high in 2002. The financial sector has been liberalized, and trade is following along that path. The government's privatization program has been one of the most successful in Africa. In 2000, Mozambique received debt relief under the Heavily Indebted Poor Countries (HIPC) initiative run by the World Bank and the IMF.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Mozambique's gross domestic product (GDP) was estimated at \$25.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,300. The annual growth rate of GDP was estimated at 7%. The average inflation rate in 2005 was 7.8%. It was estimated that agriculture accounted for 24.2% of GDP, industry 41.2%, and services 34.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$69 million or about \$4 per capita and accounted for approximately 1.6% of GDP. Foreign aid receipts

amounted to \$1,033 million or about \$55 per capita and accounted for approximately 25.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Mozambique totaled \$3.340 billion or about \$178 per capita based on a GDP of \$4.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.6%. It was estimated that in 2001 about 70% of the population had incomes below the poverty line.

## 21 LABOR

In 2000 (the latest year for which data was available), Mozambique's workforce was estimated at 9.2 million. As of 1997 (the latest year for which data was available), agriculture accounted for an estimated 81% of the labor force, with industry and commerce accounting for 6%, and services 13%. Unemployment that same year was estimated at 21%.

The law provides for workers to organize and join unions, although less than 1% of the workforce are union members. The vast majority of those unionized are in larger urban areas where industries are located. There is a constitutional right to strike, with the exception of government employees, police, military personnel, and employees of other essential services. There are two labor federations. The law protects the right of workers to engage in collective bargaining, and prohibits antiunion discrimination.

The minimum working age is 15 but many children work on family farms or in the informal urban economy. The minimum wage for industrial employment was set at \$30 per month in 2002. The agricultural minimum is \$20 per month. Neither of these minimums provide a living wage, and most workers earn more or engage in additional labor or family farming to supplement their earnings. The legal workweek is 44 hours. The government has enacted health and environmental laws to protect workers, but these provisions are ineffectually enforced.

## 22 AGRICULTURE

During the 1980s and early 1990s, Mozambique's agricultural sector was barely functional due to a combination of manmade and natural causes. The prolonged drought of 1981 to 1984 was followed by the floods and cyclone of 1984. By 1986, a famine emerged from renewed drought and civil war. Drought continued into 1987, followed by floods and locusts in 1988. Normal rainfall came in 1990, only to be followed by renewed drought in 1991 and 1992. In some regions food production declined by 80%, and in 1992 the food deficit reached a record 1.3 million tons. Normal rains returned in 1993, but the ongoing food relief requirement, exclusive of war refugees, was put at 1 million tons in 1994. Good rains and harvests helped the Mozambican economy grow by 5% in 1995 and 1996. By 1999, agricultural production was 5.5% higher than during 1989–91. By 2002–04, crop production was up 4.6% from 1999–2001.

Only about 5.8% of Mozambique is under cultivation at any one time, and more than two-thirds of the land is not exploited in any way. Nevertheless, agricultural pursuits support over 80% of the population and provided about 26% of the GDP in 2003. Since independence, there has been a serious decline in agricultural pro-

duction, attributed to the collapse of rural transport and marketing systems when Portuguese farmers and traders left the country. In the 1980s, state farms received the bulk of agricultural investment, but the yields were poor.

Mozambique's major cash crops are cashew nuts, cotton, copra, sugar, tea, and cassava, and its major food crops are corn and sorghum. Crop production in 2004 included cassava, 6,150,000 tons; sugarcane, 400,000 tons; coconuts, 265,000 tons; sorghum, 314,000 tons; peanuts, 127,000 tons; corn, 1,248,000 tons; bananas, 90,000 tons; oranges, 14,000 tons; grapefruits, 13,000 tons; cashew nuts, 58,000 tons; rice, 201,000 tons; cotton fiber, 25,000 tons; sunflowers, 11,000 tons; cottonseed, 24,000 tons; and tobacco, 12,000 tons. Mozambique is a net importer of food; in 2004, the trade deficit in agricultural products was \$218.6 million.

### 23 ANIMAL HUSBANDRY

Animal husbandry is an underdeveloped sector in the Mozambican economy. A lack of credit, deadly epizootic diseases, and other diseases carried by the tsetse fly make a commercially viable animal husbandry industry almost impracticable for the African traditional farmers, who predominate in this sector. In 2005 there were an estimated 1,320,000 head of cattle, 392,000 goats, 180,000 hogs, and 125,000 sheep. The number of chickens was estimated at 28 million; ducks, 670,000. Beef and veal production was estimated at 38,100 tons; poultry meat, 36,300 tons; cows' milk, 60,400 tons; and hen eggs, 14,000 tons. Mozambique must import substantial quantities of meat and livestock products.

### 24 FISHING

In 2003, commercial fishery production was 89,696 tons, of which lobsters and prawns were primarily for export. The potential catch is estimated at 500,000 tons of fish and 14,000 tons of prawns. South African trawlers are allowed to fish in Mozambican waters in return for providing a portion of their catch to Mozambique. In 2003, exports of shrimp and other seafood were valued at \$86.9 million. The European Union and Japan have each entered into agreements designed to help develop the fishing industry.

### 25 FORESTRY

Wood production is from natural forests and is almost entirely consumed by the local rural populations for fuel and construction. Forests constitute an estimated 30.6 million hectares (75.6 million acres). The timber industry is centered along the Beira Railroad and in Zambézia Province, where sawn and construction timber are produced for the nearby South African market. The timber cut was approximately 18 million cu m (635 million cu ft) of roundwood in 2004, with about 93% burned as fuel. Sawn wood production was 28,000 tons in 2004.

### 26 MINING

Mozambique's rich mineral deposits remained largely undeveloped. With the end of the civil war, efforts have been under way to revive the economy, with the minerals sector playing an important role. In 1999, mining accounted for less than 1% of GDP. In 2003, Mozambique produced bauxite, beryl, marine salt, cement, gravel and crushed rock, marble (block and slab) limestone, sands and tantalite. Zambézia, Nampula, and Tete provinces had large deposits of columbite, tantalite, beryl, semiprecious stones, feldspar,

kaolin, and coal. Manica Province produced copper and bauxite. Also known to occur were deposits of diatomite, fluor spar, guano, gypsum, iron ore, limestone, manganese, mica, nepheline syenite, perlite, phosphate rock (resources of 274 million tons), rare earths, silica sand, precious and ornamental stones (agate, amethyst, aquamarine, emerald, garnet, jasper, Morganite, rose quartz, tiger eye, and tourmaline), and titanium. Resources of heavy-mineral sands totaled 14 billion tons containing 300 million tons of ilmenite, as well as zircon and rutile.

Production of bauxite was in 2003 totaled 11,793 metric tons, up from 9,119 metric tons in 2002. Marble, production in 2003 totaled 452 cu m of block, down from 453 cu m in 2002, while slab output in 2003 totaled 10,227 sq m, up from 9,980 sq m in 2002. Gold was also produced in 2003, all by artisanal miners. Official production of gold in 2003 totaled 63 kg, up from 17 kg in 2002. Limestone, gravel and crushed rock, marine salt, sands and granite were also produced in 2003. Mozambique's only graphite mine closed in 1999, because of a tax dispute. Mozambique's gross domestic product (GDP) is estimated to have grown by 7.1% in 2003, according to the International Monetary Fund.

### 27 ENERGY AND POWER

Mozambique, as of 1 January 2005, had neither proven reserves of crude oil nor refining capacity, but it did have reserves of natural gas and coal.

As of 1 January 2005, Mozambique had natural gas reserves of 4.5 trillion cu ft. In 2003, natural gas output and consumption each came to 2.12 billion cu ft. Recoverable coal reserves have been placed at 234 million short tons, but additional reserves in the country's Moatize mines in the northwestern part of the country have been estimated at 2.4 billion short tons.

Mozambique is totally reliant upon imports of refined petroleum products. In 2004, imports and demand for refined oil each averaged 11,000 barrels per day.

Mozambique's electric power sector is heavily based upon hydroelectric generation. As of 1 January 2003, installed capacity was put at 2.392 million kW, with hydropower accounting for 91% of capacity, with the remaining capacity based on conventional thermal fuels. Electric power output in 2003 totaled 15.14 billion kWh, with consumption that year at 10.46 billion kWh.

### 28 INDUSTRY

Manufacturing is centered mostly in food processing and beverages. Food, beverages, and tobacco processing account for 62% of all manufacturing. Industry is concentrated around the larger cities of Maputo, Matola, Beira, and Nampula. Mozambique's industrial sector is primarily centered on the processing of locally produced raw materials, such as sugar, cashews, tea, and wheat. Brewing and textile production emerged in the 1980s, along with cement, fertilizer, and agricultural implement manufacturing. Other industries make glass, soaps, oils, ceramics, paper, tires, railway equipment, radios, bicycles, and matches. Major investments in aluminum processing, steel production, mineral extraction, fertilizer, and sugar production have been planned.

Economic reforms of the early 1990s promoted private ownership of industry and brought about a significant decline in the number of parastatals; from 1990 to 2000, over 1,200 smaller businesses had been divested, and 37 large enterprises had been priva-

tized. Only 11 large state-owned companies remained, including the national airline, telephone, electricity, insurance, oil and gas exploration, port and rail, airports, water supply, and fuel distribution companies. Government policy now supports the development of private enterprise fully.

The construction sector showed strong growth in the early 2000s, as projects to rebuild roads, bridges, schools, clinics, and other basic infrastructure were underway. There are considerable natural gas reserves, both onshore and offshore, but they have yet to be fully developed. Malawi, Zimbabwe, and Mozambique are planning to establish a 10,000 barrels per day joint fuel refinery in Mozambique, funded by Iran. In addition, the economy is set to benefit from a second-generation of comparatively smaller mega-projects, such as the Moma titanium mine in Nampula province scheduled to start production in late 2006.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Eduardo Mondlane University in Maputo, founded in 1962, has faculties of agricultural sciences, biology, engineering, mathematics, medicine, veterinary science, and sciences. Maputo also has the National Directorate of Geology, the Cotton Research Institute, the National Institute of Health, and the Meteorological Service. In 1987–97, science and engineering students accounted for 42% of college and university enrollments. In 2002, Mozambique's high technology exports totaled \$2 million, or 3% of its' manufactured exports.

## 3<sup>0</sup> DOMESTIC TRADE

The cities of Maputo, Beira, and Nampula are the main centers of commercial life, where it is estimated that 50% of all imported products are consumed. Maputo and Beira are trading centers and ports of entry. There is not a well-established distribution system for local or imported goods. Many local manufactures will sell or distribute their products on their own. Larger retailers will import high columns of goods and sell the excess to other smaller retailers. National distribution of regional products has been hindered by a poor transportation system. However, as of 2005, trading and distribution were still the primary business activities. A 17% val-

ue-added tax applies to most goods. Credit cards are not widely accepted.

Business hours are 8:30 AM to noon and 2 to 5 PM, Mondays through Fridays, 8 AM to 12 noon on Saturdays.

## 3<sup>1</sup> FOREIGN TRADE

There is a considerable amount of unofficial trade along the borders as well as unreported fish exports to Asia. In April 1997, Mozambique began a three-year contract with Crown Agents, a private British company, to take responsibility for the regulation of foreign trade in order to reduce smuggling and corruption.

Traditionally, shrimp accounted for the largest portion of Mozambique's export revenues (26%). Other exports included electric current (23%), fruits and nuts (15%), cotton (7.3%), and sugar (2.1%). However, in 2004 the major exports ranked by importance were aluminum, which earned \$915 million, electricity (\$102 million), shrimps (\$91 million), tobacco (\$40.9 million), and sugar (\$38.2 million).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Mozambique has traditionally had a balance-of-payments deficit and relies heavily on imported consumer and capital goods. Imports have risen steadily since 1987, substantially increasing the current account deficit. In recent years, the merchandise import-export ratio has been as low as 1:4. Mozambique is taking steps to improve its trade balance, however, by increasing the production of locally manufactured and agricultural goods. By the early 2000s, exports had risen over 40% since 1996. A faster rise in export earnings has been hampered in part by bankruptcies in the cashew processing industry, and poor prices for the sale of electricity generated by the Cahora Bassa hydroelectric dam (resulting from contracts negotiated by the colonial government over 20 years). But as of the early 2000s, prospects for an increase in exports appeared positive.

In 1999, Mozambique qualified for \$3.7 billion in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. (The amount was subsequently augmented to \$4.3 billion.) This debt relief improved the country's balance of payments. Prior to the HIPC approval, Mozambique owed \$8.3 billion in foreign debt. HIPC reduced the eligible debts held by participating creditors by 90%, or close to \$3 billion.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Mozambique's exports was \$1.782 billion while imports totaled \$2.24 billion resulting in a trade deficit of \$458 million.

## 3<sup>3</sup> BANKING AND SECURITIES

The Mozambican branch of the defunct Portuguese National Overseas Bank was nationalized without compensation. By a decree of 23 May 1975, it was reconstituted as the Bank of Mozambique (Banco de Moçambique—BM). Functioning as a central bank, it served as the government's banker and financial adviser, and as controller of monetary and credit policies. It was also an issuing bank, a commercial bank, and the state treasury; the bank

managed Mozambique's external assets and acted as an intermediary in all international monetary transactions.

In 1978, the government nationalized four of the five remaining commercial banks (the Banco Standard Totta de Moçambique remained private). In that year, a second state bank, the People's Investment Bank, was created and given responsibility for supervising a building society, the Mozambique Credit Institute (the industrial bank), and the National Development Bank.

After 1992, the government's economic reform program began to tackle the financial sector. Foreign banks were allowed to invest in Mozambican financial institutions, in 1994 interest rates were deregulated, and in 1995 the commercial activities of the central bank were assumed by a newly created institution, the Banco Comercial de Moçambique (BCM). By 1997, the government had privatized the BCM and the BPD (Banco Popular de Desenvolvimento). These banks were joined by Banco Português do Atlântico (BPA), Banco de Fomento e Exterior (BFE), and Banco Internacional de Moçambique (BIM), whose main shareholder is the Banco Comercial Português (BCP).

In 2001, along with the central Bank of Mozambique, there were eight banks operating in Mozambique, including the dominant BCM (owned by Banco Portugues Mello), BIM (owned by Banco Commercial Portugues), BPD (renamed Banco Austral after its sale to Southern Berhad Bank of Malaysia), Banco Standard Totta (55% owned by Banco Totta and Acores of Portugal, and 40% owned by Standard Bank of South Africa), Equator Bank (owned by Hong Kong and Shanghai Bank), Banco de Fomento do Exterior (branch of a Portuguese bank), Uniao Comercial de Bancos (a Mauritian bank), and Nedbank (South African).

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$486.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits,

and money market mutual funds—was \$1.1 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 33.64%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9.95%.

### 34 INSURANCE

In 1977, all insurance companies were nationalized and Empresa Moçambicana de Seguros was established as the sole state insurance enterprise. This company continued functioning through 1999.

### 35 PUBLIC FINANCE

The government's role in the economy has diminished during the past decade as the country has recovered from civil war. Preparations for privatization of many state-run industries and utilities had begun as of 2002, and the tax code has been revised.

The US Central Intelligence Agency (CIA) estimated that Mozambique's central government took in revenues of approximately \$1 billion and had expenditures of \$1.9 billion. Revenues minus expenditures totaled approximately -\$899 million. Total external debt was \$966 million.

### 36 TAXATION

Under Portuguese rule, taxation and tax collection were full of inequities and corruption at all levels of government. In 1978, after independence, much higher and more progressive taxes were introduced. These included an income tax on wages, salaries, and other benefits. As of 2005, Mozambique had a standard corporate tax rate of 32%. However, income derived from the breeding and agricultural sectors was subject to a 10% rate for the period 2003 through 2010. Capital gains and branch offices are taxed at the corporate rate. Dividends, interest and royalties are subject to a 20% withholding tax. A value-added tax (VAT) with a standard rate of 17% (as of 2005) is charged on most goods and services. Exemptions from VAT include basic foodstuffs, medicines and pharmaceuticals, books and journals, bicycles, agricultural inputs and fishing implements, waste disposal, burial and cremation services.

### 37 CUSTOMS AND DUTIES

Both import and export licenses are required for all goods. The average nominal customs tariff rate was reduced from 18% to around 10% in 1996, and remained in effect as of 2005, although duties on imported goods ranged from 0–30%, depending upon whether it is a primary, intermediate, or consumer good. Mozambique does not use import quotas. The country chaired the Southern African Development Community (SADC) from 1990 to 2000, and houses its Communications Commission (SATCC) in Maputo.

### 38 FOREIGN INVESTMENT

The liberalizing of Mozambique's economy began with the initiation of its economic recovery plan (ERP) in January 1987. Included in the program were measures to stimulate the private sector, an effort reinforced in 1990 by further legislation. In June 1993, the investment code was reformed to put foreign and local investors on an equal footing with respect to fiscal and customs regula-

tions. The parastatal sector has been progressively privatized, with only 11 large state-owned industries left in 1999. As the bulk of state-owned enterprises has already been privatized, there are currently no plans for additional major sales.

Certain tax incentives are available to encourage direct foreign investment, including a 50–80% reduction in taxes. The flow of capital is liberal. Regulations issued in 1999 established an Industrial Free Zone Council, which approved the first free zone enterprise in Maputo, MOZAL, an aluminum smelter. Companies in the free zone must engage in nontraditional industry and export at least 85% of production.

In 1998, foreign direct investment (FDI) inflow to Mozambique totaled about \$235 million, up 365% from 1997. FDI inflows peaked at \$382 million in 1999 then fell to \$139 billion in 2000. In the period 1998 to 2000, Mozambique's share of world FDI inflows was almost twice its share of world GDP, a considerable improvement on its performance 1988 to 1990, when its share of FDI flows was only 30% of its share of world GDP. In 2001, FDI inflow was a near-record \$225 million. However, the country's FDI inflows declined from \$225 million in 2001 to \$155.3 million in 2002.

The leading sectors for foreign investment in Mozambique have been industry, agribusiness and fishing, finance, and tourism. The driving force behind the country's FDI inflows had been the mining and some processing industries. Put together, they had drawn global TNCs giants into the economy. In recent years, these TNCs have not invested in any major projects. Many projects in the pipeline have not been operationalized.

FDI outflows are yet to reach a significant volume. Inward FDI stock had been dramatic in its growth, rising from just \$42 million in 1990 to over \$1.5 billion in 2002. Outward FDI stock showed a similar pattern, but the volume was less than \$1 million at the end of 2002. Portugal, Mauritius and Italy provided about 78% of the total FDI inflows to the country in 1999. Portugal is a key investor in Mozambique, contributing an average of 41% of the inward FDI flows in 1998 and 1999. Other, major foreign investors include South Africa, Great Britain, Hong Kong, and the Netherlands.

### 39 ECONOMIC DEVELOPMENT

The government of Mozambique has abandoned its postindependence preference for a socialist organization of society, which it had tried to effect through the creation of cooperatives, state farms, and industries. In cooperation with the International Monetary Fund (IMF), Mozambique was reforming its economy and preparing for a post-civil war period of economic growth. Progress has been slow, however, as parastatals continue to control the telecommunications, electric power, transportation, and fuel sectors of the economy. Growth sectors include agriculture and related processing industries, transportation, and mining.

In 1999, Mozambique's eligible debts were reduced by 90% by the IMF, World Bank, the Paris Club, and other multilateral lending agencies under the Heavily Indebted Poor Countries (HIPC) initiative. The country also hoped for 100% debt relief from the United States and gained complete debt cancellation from the United Kingdom. Debt stood at \$8.3 billion before 1999 and \$5.7 billion after reforms. A variety of infrastructure development projects have been carried out, including a road and railway from Maputo to Johannesburg.

The Economist Intelligence Unit forecasts that the economic expansion Mozambique experienced between 2000–2005 will continue for the next few years boosted by overall macroeconomic stability, policy reforms and continuing strong donor support against a background of broad-based expansion across most sectors of the economy, including agriculture, transportation, and tourism sectors. Over 1,200 state-owned enterprises were privatized, most of them small. In 2003, Mozambique was operating under a three-year \$76 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF. Floods in 2000 and food shortages in 2002 curtailed economic development. However, the outlook for the agricultural season in Mozambique for 2005/06 was more positive, with normal to above-normal rains forecast for the country. As a result, the government expects cereal production to grow by 6% in 2005/06, rebounding strongly from a 5% drop in production during the 2004/05 growing season.

### 40 SOCIAL DEVELOPMENT

Foreign aid is used in assisting Mozambican Labor and Social Welfare Ministries with building infrastructure to benefit the most disadvantaged groups in the country including disabled and abandoned children. The country is upgrading employment and professional training centers.

Despite government rhetoric and constitutional provisions mandating equal rights for both sexes, legal and social discrimination against women is pervasive. Women may not work outside of the home without the husband's permission. Inheritance rights, furthermore, strongly favor men over women. Tradition and custom lead many families to withdraw their daughters from school at an early age. Sexual harassment in the workplace is prevalent. Domestic violence against women, including beating and spousal rape, is widespread. Women believe that their husbands have the right to beat them. Child prostitution persists, and there is continuing abuse and exploitation of street children in urban areas.

Human rights abuses have been in decline, but there is evidence of systemic police brutality. Prison conditions are poor and, in some cases, life threatening.

### 41 HEALTH

Almost all health care services are provided by the government's National Health Service. The army maintains its own health posts and two hospitals. Traditional healers continue to play a significant role. All medical products must be registered with the Ministry of Health and, due to currency constraints, Mozambique is entirely dependent on bilateral and multilateral donors for its drug needs. Only 39% of the population had access to health care services. Total health care expenditure was estimated at 3.5% of GDP.

In 2004, there were an estimated 2 physicians, 21 nurses, 1 dentist, and 2 pharmacists per 100,000 people. The shortage of medical supplies and trained personnel has remained severe throughout Mozambique. Immunization rates were as follows: tuberculosis, 84%; diphtheria, pertussis, and tetanus, 61%; polio, 61%; and measles, 70%. The government pays no vaccination costs.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 36.4 and 25.1 per 1,000 people. Only 6% of married women ages 15–49 years used contraception as of 1999. Of all births in 1993–96, 20% were underweight. In 2005 the infant mortality rate was estimated at 130.79 per 1,000, one of

the highest in the world. The maternal mortality rate in 1989–95 skyrocketed to 1,500 per 100,000 live births; as of 1998, the rate was 1,100.

Since 1982, South African destabilization of Mozambique has caused children's health to suffer. War has led to the closure of 48% of the primary care network. The war has displaced over three million people and accounted for an estimated 500,000 childhood deaths between 1981–88. In addition, there were approximately 1.1 million civil war-related deaths between 1981 and 1992. Estimated average life expectancy was only 40.32 years in 2005.

Mozambique has a very serious AIDS problem. The HIV/AIDS prevalence was 12.20 per 100 adults in 2003. As of 2004, there were approximately 1,300,000 people living with HIV/AIDS in the country. There were an estimated 110,000 deaths from AIDS in 2003.

## 42 HOUSING

In 1997, there were about 3,540,700 housing units nationwide to serve about 3,634,581 households. The average household had 4.3 people. At last estimate, more than 60% of housing units were constructed of woven straw, about 15% of cane and wood sticks, and nearly 10% of bricks and concrete. Approximately 65% of all households used well water, nearly 20% river and spring water, almost 10% piped outdoor water, and less than 5% piped indoor water. Nearly 96% were without electricity, and over half had no toilet facilities.

## 43 EDUCATION

The education system in Mozambique has slowly been rebuilt after the civil war, which destroyed at least 50% of primary schools. In 1990, private schooling was reintroduced. Education is compulsory for seven years, but in practice, most students do not study for the full compulsory period. Primary school covers these first seven years. This is followed by five years of general secondary education or five years of technical school. The academic year runs from August to June.

Primary school enrollment in 2003 was estimated at about 55% of age-eligible students. The same year, secondary school enrollment was about 12% of age-eligible students. It is estimated that about 52.4% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 67:1 in 2003; the ratio for secondary school was about 27:1.

Eduardo Mondlane University is established at Maputo. The objective of the government is to promote the spread of education at all levels through democratization guided by the state. In 2003, about 1% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 46.5%, with 62.3% for men and 31.4% for women.

As of 2003, public expenditure on education was estimated at 2.4% of GDP, or 12.3% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Library of Mozambique, founded in 1961, contains 110,000 volumes. There is a small public library system. The principal museums in Maputo are the Museum of Natural History, founded in 1911, specializing in natural history and ethnography; the Freire de Andrade Museum (minerals); and the Military His-

tory Museum. Beira and Nampula have general museums; Manica has a natural history museum; and Isla da Inhaca, near Maputo, has a museum of marine biology. The National Museum of Ethnology is in Nampula.

## 45 MEDIA

Postal and telecommunications services are government-operated. In the larger cities, telephones are automatic. In 2003, there were an estimated five mainline telephones for every 1,000 people; about 12,700 people were on a waiting list for telephone service installation. The same year, there were approximately 23 mobile phones in use for every 1,000 people.

Radio Moçambique, the official radio service, broadcasts in Portuguese, English, Afrikaans, and local languages. TV Mozambique is the government-owned television service. Several private stations are operational, including about 40 community radio and television stations that are partially subsidized by the government and UNESCO. As of 2001, there were 12 AM and 17 FM radio stations (about 14 were privately owned) and 1 national television station. In 2003, there were an estimated 44 radios and 14 television sets for every 1,000 people. The same year, there were 4.5 personal computers for every 1,000 people and 3 of every 1,000 people had access to the Internet. There was one secure Internet servers in the country in 2004.

In 2002, major daily newspapers included *Notícias* (circulation 33,000), and *Diário do Moçambique* (16,000). Both papers are representative of the ruling party, as is the weekly publication *Domingo* (25,000). There are a number of smaller independent publications.

The constitution, the 1991 Press Law, and the 1992 Rome Peace Accords provide for free expression, including free speech and a free press; however, though some improvements were reported, the government has restricted some press freedoms.

## 46 ORGANIZATIONS

The Mozambique Chamber of Commerce, founded in 1980, is located in Maputo. Only a small percentage of the nation's workers belong to unions. There is a national teacher's union.

FRELIMO has emphasized mass organizations, such as the Organization of Mozambican Women and the Organization of Mozambican Youth. Scouting programs and active chapters of the YMCA/YWCA are available for youth. There are also several sports associations promoting competitions for amateur athletes.

There are national chapters of the Red Cross Society, Habitat for Humanity, the Society of St. Vincent de Paul, UNICEF, and Caritas.

## 47 TOURISM, TRAVEL, AND RECREATION

Prior to independence, tourism, mostly from South Africa and the former Rhodesia, was a very important activity. However, concern for security in the late 1970s and throughout the 1980s due to the political situation left the tourist industry at a mere fraction of its previous levels. Civil stability and economic prospects have improved and tourism has been steadily growing in Maputo, although it is still limited in other areas.

The coastal town of Pemba offers the third-largest natural bay in the world with white sand beaches and coral reefs that can be easily reached by most swimmers. Diving and water sports are popu-

lar in this town. The northern half of Mozambique Island, which has a number of old churches and mosques, has been declared a UNESCO World Heritage Site.

All foreign nationals need visas, which must be obtained prior to traveling. Yellow fever immunizations are required if traveling from an infected country.

Approximately 726,100 tourists visited Mozambique in 2003. Hotel rooms numbered 6,899 with 13,601 beds and an occupancy rate of 14%. Visitors stayed in Mozambique an average of two nights.

In 2004, the US Department of State estimated the cost of staying in Mozambique at \$242.

#### 48 FAMOUS MOZAMBICANS

Eduardo C. Mondlane (1920–69) was the first president of FRELIMO. His successor, and later the first president of independent Mozambique, was Samora Moisés Machel (1933–86). Joaquim Alberto Chissano (b.1939), foreign minister since independence, succeeded Machel as president in 1986; he served until 2005 and was succeeded by Armando Guebuza (b.1943).

#### 49 DEPENDENCIES

Mozambique has no territories or colonies.

# NAMIBIA

Republic of Namibia

**CAPITAL:** Windhoek

**FLAG:** Top left triangle is blue, center diagonal band is red, and the bottom right triangle is green. Colors are separated by narrow white bands. On the blue triangle is a golden sun with twelve triangular rays.

**ANTHEM:** *Namibia Land of the Brave*, music and words by Axali Doeseb.

**MONETARY UNIT:** The Namibian dollar (N\$) of 100 cents is in use; N\$1 = \$0.15748 (or \$1 = N\$6.35) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 21 March; Workers' Day, 1 May; Casinga Day, 4 May; Ascension Day, 12 May; Africa Day, 25 May; Heroes' Day, 26 August; Day of Goodwill, 7 October; Human Rights Day, 10 December; Christmas, 25–26 December. Movable religious holidays include Easter and Easter Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A vast land of desert and semidesert along the southwestern coast of Africa, Namibia covers 825,418 sq km (318,696 sq mi). Comparatively, the area occupied by Namibia is slightly more than half the size of the state of Alaska. It extends 1,498 km (931 mi) SSE–NNW and 880 km (547 mi) ENE–WSW (excluding the Caprivi Strip). Namibia is bordered by Angola and Zambia in the N, by Botswana in the E, by South Africa in the SE and S, and by the Atlantic Ocean to the W, with a total land boundary length of 3,936 km (2,446 mi) and a coastline of 1,572 km (977 mi).

The enclave of Walvis Bay (1,124 sq km/434 sq mi) was administered from 1977 to 1994 as part of South Africa's Cape Province, as were 13 offshore islands. Walvis Bay was reincorporated into Namibia on 1 March 1994. Namibia's capital city, Windhoek, is in the center of the country.

## <sup>2</sup> TOPOGRAPHY

Namibia is largely an elevated, waterless plateau partly suitable for arid grazing. The average altitude is 1,080 m (3,543 ft) above sea level; the high point, near the coast, is Konigstein, at 2,606 m (8,550 ft). Along almost the entire range of the coast there are sandy wastes and high, reddish sand dunes. The coastal strip comprises the Namib Desert, and the eastern region is part of the Kalahari Desert. All four permanent rivers form borders: the Kunene and Okavango in the north, the Zambezi in the northeast, and the Orange (Oranje) in the south.

## <sup>3</sup> CLIMATE

Namibia's climate is the driest in Africa, with sunny, warm days and cooler nights, especially during the winter months. The average temperature along the coast in the summer is 23°C (73°F); in

winter, the average temperature is 13°C (55°F). The fertile northern strip is always warmer, having a climate similar to that of southern Angola.

Much of Namibia is a land of perennial drought. The annual rainfall, which is concentrated in the November–March period, generally averages more than 70 cm (28 in) in the far north, 2.5–15 cm (1–6 in) in the south, and 35 cm (14 in) in the central plateau. But the rains often fail: some regions have gone nearly a century without a drop of rain.

## <sup>4</sup> FLORA AND FAUNA

Namibia is the home of a great variety of large fauna and avifauna. In the game parks and the neighboring grazing areas, there are the tallest elephants in the world, along with rhinoceroses; an abundance of lions, cheetahs, and leopards; ostriches; and a profusion of ungulates, including the giraffe, zebra, kudu, eland, black-faced impala, hartebeest, springbok, gemsbok, and wildebeest. Namibia is one of two countries in the world (with Mali) where there are elephants living in desert conditions. Desert elephants tend to have smaller bodies and larger feet than other elephants. Birds of prey are numerous, as are the Kori bustard and the Karroo korhaan. Among the unique flora are the desert welwitschia and many varieties of aloe. As of 2002, there were at least 250 species of mammals, 201 species of birds, and over 3,100 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Namibia's environmental concerns include water pollution and insufficient water for its population. The nation has 6 cu km of renewable water resources. About 68% of the annual withdrawal is used in farming and 3% for industrial purposes. Only about 72%

of the people living in rural areas have access to improved water sources. Nearly all of the urban population has safe water. Deforestation and soil erosion also threaten the nation's land. Agricultural chemicals, such as DDT, pose a threat to the environment due to excessive usage.

The Namibian Wildlife Trust, organized in 1982, works closely with the Department of Nature Conservation to maintain the habitat and to prevent poaching of threatened fauna and avifauna. In 2003, 13.6% of Namibia's total land area was protected. Twelve nature conservation areas cover 99,616 sq km (38,462 sq mi). Among these are the 22,270-sq-km (8,603-sq-mi) Etosha National Park, one of Africa's best-run and least-visited animal preserves; a smaller game park near Windhoek; and the Namib Desert Park (23,401 sq km/9,035 sq mi), east of Swakopmund. There is a seal reserve at Cape Cross, north of Swakopmund. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 10 types of mammals, 18 species of birds, 4 types of reptiles, 1 species of amphibian, 11 species of fish, 1 type of mollusk, and 24 species of plants. Threatened species include the black rhino, cave catfish, and the wild dog. Burchell's zebra has become extinct.

## 6 POPULATION

The population of Namibia in 2005 was estimated by the United Nations (UN) at 2,031,000, which placed it at number 140 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.1%, a rate the government viewed as too high. The projected population for the year 2025 was 2,061,000. The overall population density was 2 per sq km (6 per sq mi), with the far north the most densely populated region of the country.

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.54%. The capital city, Windhoek, had a population of 237,000 in that year. Other important areas (and their estimated populations) include Ondangwa (50,000) and Oshakati (40,000).

The prevalence of HIV/AIDS has had a significant impact on the population of Namibia. The UN estimated that 22.2% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Namibia's migrant labor force exceeds 100,000. Ovambo from northern Namibia have moved south since the 1920s to work in the diamond mines near the mouth of the Orange River, in the port of Walvis Bay, and in the cities and towns of the interior. Ovambo formerly migrated by the thousands to work in the gold mines of South Africa, but that traffic has diminished. Only 14,817 blacks of Namibian birth were resident in South Africa in 1991. Some Ovambo have gravitated from neighboring Angola

into northern Namibia. The resurgence of war in Angola in mid-1998 drove thousands of refugees into Namibia.

In 2000 there were 143,000 migrants residing in Namibia. Remittances in 2002 were US\$783 million. In 2004, there were 14,773 refugees, primarily from Angola, and 2,155 asylum seekers. Of the refugees, 8,490 were detained in a camp at Osire. The net migration rate in 2005 was an estimated 0.52 per 1,000 population. The government views the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

About 87.5% of the population is black; 6% is white; and 6.5% is mixed. Approximately 50% of total population belong to the Ovambo tribe, the largest group, who live mainly in the well-watered north. The second-largest group, constituting 9% of the population, is the Kavango, who reside along the Okavango River. The Damara, accounting for 7% of the populace, live east of the arid coast and to the south of the Ovambo, and the Herero, a herding people who range north of Windhoek, account for another 7%. The Nama, herders in the deep south, make up 5% of the population; the Caprivian, living in the easternmost portion of the strip, total 4%; the San (Bushmen) 3%; the Basters of Rehoboth, a farming community of mixed origin, 2%; and the Tswana 0.5%. The white population lives predominantly in central and southern Namibia. The Coloureds (peoples of mixed descent) live largely in Windhoek and other cities.

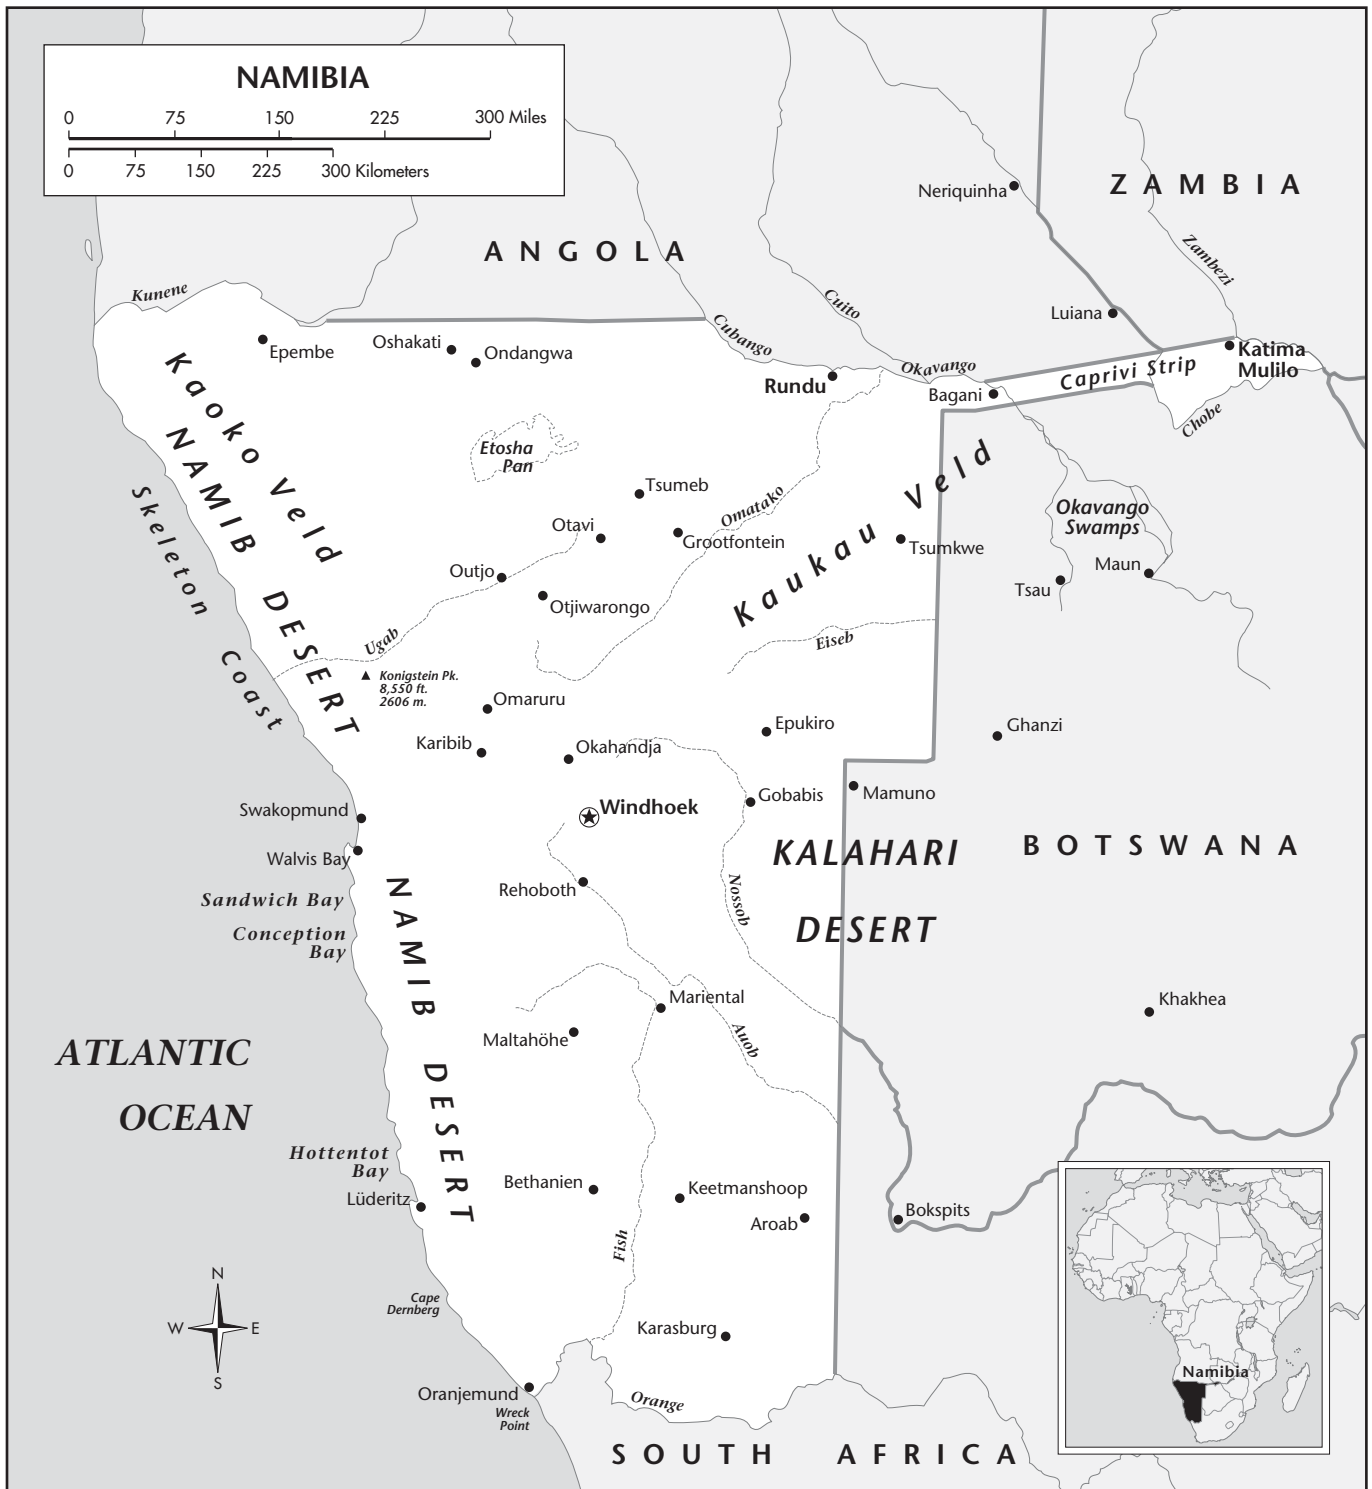

## 9 LANGUAGES

The official language of Namibia is English; however, it is only used by about 7% of the population. Afrikaans is the common language used by most people, including about 60% of the white population. Approximately 32% speak German. Ovambo, in any of several dialects, is widely used throughout the country, and Herero is widely spoken in Windhoek. Other indigenous languages are also used by the various tribes.

## 10 RELIGIONS

The first missionaries to proselytize in Namibia were British Congregationalists and Methodists; German and Finnish Lutherans; and German-speaking Roman Catholics. As a result, between 80–90% of Namibians are Christians, with the largest denominations being Lutheran and Roman Catholic. Other principal denominations, include Baptists, Methodists, and the Church of Jesus Christ of Latter-Day Saints. There are also a number of Zionist churches that blend traditional African beliefs with Pentecostal Christianity. Nearly 10% of the population practices indigenous religions, primarily among the ethnic tribes. One notable custom is the ritual fire, which some tribes keep burning continuously to ensure life, fertility, prosperity, and the happiness of ancestors. There are small numbers of Jews, Muslims, Buddhists, and Baha'is in the country.

The constitution provides for religious freedom and this right is generally respected in practice. Though there is no state religion, the government seems to favor the Anglican, Lutheran, and Roman Catholic churches. Certain Christian holidays are celebrated as national holidays.

LOCATION: 11°44' to 25°16' E; 16°58' to 28°58' S. BOUNDARY LENGTHS: Angola, 1,376 kilometers (855 miles); Zambia, 233 kilometers (144 miles); Botswana, 1,360 kilometers (850 miles); South Africa, 966 kilometers (600 miles); Atlantic Ocean, including Walvis Bay, 1,489 kilometers (921 miles). TERRITORIAL SEA LIMIT: 12 miles.

### 11 TRANSPORTATION

As of 2004, Namibia was traversed by 2,382 km (1,481 mi) of narrow gauge railway. The system consisted of a main line from South Africa connecting east of Karasburg and continuing to Keetmanshoop (with a side branch to Lüderitz), Mariental, and Windhoek before heading eastward to the ranching area of Gob-

abis and north to the copper-mining area of Tsumeb. Westward from Windhoek and also southwestward from Tsumeb, the main rail lines link the interior with Swakopmund and Walvis Bay. Of Namibia's 42,237 km (26,271 mi) of roadway, a total of 5,406 km (3,363 mi) were paved in 2002. The Trans-Kalahari Highway links Namibia and Gauteng Province in South Africa. The Trans-Capri-

vi Highway links Namibia to Zambia, Zimbabwe, and northern Botswana. As of 2003, there were a total of 154,850 vehicles in Namibia, of which 73,550 were passenger vehicles and 81,300 were commercial vehicles.

Walvis Bay, a South African enclave from 1977 to 1994, has been the main handler of Namibia's imports and exports and the home of the territory's once-vital fishing fleet since the 1920s. About 95% of all Namibian seaborne trade is transhipped there. Lüderitz, the site of the first German entry in 1883, has lost its status as a port because of harbor silting and poor transport links. However, it remains a center of the territory's crayfish industry. In 2005, Namibia had one merchant vessel, a cargo ship, of 1,000 GRT or more, totaling 2,265 GRT.

In 2004, there were an estimated 136 airports, 21 of which had paved runways as of 2005. Namibia's international airport (Windhoek International) is near Windhoek, with other modern facilities at Rundu, Grootfontein, Walvis Bay, Lüderitz, Keetmanshoop, and Oranjemund. Other towns have dirt airstrips, and many white Namibians fly their own aircraft from their farms to the urban centers. Air Namibia flew 214,000 international and domestic passengers in 1997. South African Airways links Windhoek to Europe and to the principal cities in South Africa. In 2003, about 266,000 passengers were carried by domestic and international airlines.

## 12 HISTORY

Paintings of animal figures on rock slabs in Namibia testify to at least 25,000 years of human habitation there. The San (Bushmen) may have been Namibia's earliest inhabitants. The Damara also claim to be the true indigenous Namibians, who were compelled to welcome waves of Herero and Ovambo from the north. By the 19th century, the Damara, Ovambo, and Herero were the largest indigenous ethnic groups. The Kavango and the Caprivians were settled in the areas where they now reside. There was competition for land, mostly between the Ovambo and the Herero. But then the invaders arrived. First came the Hottentots (now called Nama), brown-skinned peoples of mixed parentage from South Africa. They had guns and conquered a large swath of southern and central Namibia from the Herero and the Damara. The Germans came in 1883, initially as commercial colonizers and missionaries and then as soldiers. With military might, the Germans in the 1890s moved inland across the desert from Walvis Bay (which had been annexed by the British in 1878 and incorporated into Cape Colony in 1884) to Windhoek, establishing forts and subjugating the Herero and Damara. The Germans forcibly took land and cattle from the Herero, whose revolt was suppressed by the Germans at a cost of about 65,000 Herero lives. A Nama revolt met a similar fate in 1904.

When World War I broke out, the South Africans invaded Süd-West Afrika, as the German colony was then known. The South Africans wished to annex the territory, but the new League of Nations granted South Africa a mandate instead. From 1920 to 1946, South Africa administered the mandatory territory as if it were an integral part of the Union, but neglected social services and the Ovambo-Kavango sphere in the north.

After World War II, South Africa refused to acknowledge the jurisdiction of the UN over Namibia as a successor organization to the League of Nations. Instead, it progressively integrated Namibia into the Union. In the 1950s, senators from South West Africa

sat in the South African parliament. The UN took South Africa before the International Court of Justice, which gave ambiguous verdicts in 1962 and 1966, but in 1971 it decisively declared South Africa's occupation of Namibia illegal. In 1978, the UN Security Council rejected South Africa's annexation of Walvis Bay.

Meanwhile, in 1960, representatives of the indigenous majority had formed the South-West Africa People's Organization (SWAPO) to seek independence and black majority rule. Beginning in 1966, but especially after 1977, SWAPO used guerrilla tactics with varying success. South Africa countered by building up its armed forces along Namibia's borders with Zambia and Angola, where SWAPO had established bases and from where it launched raids.

In 1978, South Africa ostensibly accepted a Western-sponsored plan for an independent Namibia, but at the same time sponsored elections for a constituent assembly (opposed by the UN) that resulted in the victory of a white-dominated multi-ethnic party, the Democratic Turnhalle Alliance. Representatives of the United States, the United Kingdom, the Federal Republic of Germany, France, and Canada then attempted to devise a formula acceptable to South Africa that would permit Namibia to proceed to independence in accordance with UN Security Council Resolution 435 of 1978. Black African countries rejected South Africa's demand that Cuban forces leave neighboring Angola as part of a settlement.

A "transitional government of national unity," composed of South African-appointed members of six parties, was installed in 1985. The South African administrator-general retained the right to veto legislation, and South Africa continued to exercise authority over foreign affairs and defense. On 13 December 1988, seven months of US-mediated (with observers from the Soviet Union) negotiations, resulted in the signing by Angola, Cuba, and South Africa of the Protocol of Brazzaville, by which South Africa agreed to implement the UN Plan for Namibia. Cuba and Angola agreed to a phased, total withdrawal of Cuban troops from Angola. Further agreements on details were signed in New York on 22 December 1988.

The process to implement UN Resolution 435 on 1 April 1989 started off shakily. In contravention of SWAPO president Sam Nujoma's assurances to the UN to abide by a cease-fire and repatriate only unarmed insurgents, around 2,000 armed members of the People's Liberation Army (PLAN), SWAPO's military wing, crossed into northern Namibia from Angola. South African forces were authorized to oppose them and 375 PLAN fighters were killed. This misunderstanding was overcome by negotiations and peace was restored.

Elections, held 7–11 November 1989, were certified as free and fair. This transitional period involved the return of some 42,000 refugees and the return of SWAPO politicians and PLAN fighters in exile. SWAPO took 57% of the vote, just short of the two-thirds necessary to allow it a free hand in drafting a constitution. The main opposition Democratic Turnhalle Alliance (DTA) received 29%. By 9 February 1990 the constituent assembly had drafted and adopted a constitution based on the 1982 constitutional principles. Namibia became independent on 21 March 1990. Nujoma was sworn in as president by UN Sec. Gen. Javier Pérez de Cuéllar. Namibia's independence shines as a UN success story.

Since independence, the SWAPO government has pursued a policy of "reconciliation" with the white inhabitants. It is a vibrant multiparty, nonracial democracy. On 1 March 1994, the reincor-

porating of Walvis Bay into Namibia was completed through an agreement with South Africa.

Nujoma won the two-day 7–8 December 1994 legislative and presidential elections with 76% of the vote to the DTA's Mishake Muyongo's 23%. SWAPO won, 53 of the 72 contested seats of the National Assembly; DTA, 15; United Democratic Front (UDF), 2; Democratic Coalition of Namibia, 1; Monitor Action Group (MAG), 1.

By the late 1990s, secessionist sentiments were growing among the 92,000 Lozi of the Caprivi Strip in northeastern Namibia. They formed the Caprivi Liberation Front, led by Mishake Muyongo, former SWAPO executive secretary and DTA leader. On 2 August 1998, Caprivi Liberation Army (CLA) rebels attacked military, police, and other government installations around Katima Mulilo in Caprivi. Namibia declared a state of emergency that lasted three weeks. Six soldiers and police officers, and several civilians died in the attack. Many rebels were captured or killed by security forces. By December 1998, 2,250 Namibians from the Caprivi region had crossed into Botswana, allegedly fleeing persecution by the Namibian Defense Force, and 2,232 of them were given asylum in Botswana. In 2005, over 130 Caprivians are being held for trial on charges of treason, of which 13 are lodging a complaint under one of the several international and regional human rights treaties applicable in the country.

In November 1998, SWAPO used its two-thirds majority in parliament to change the constitution to allow Nujoma a third term of office. This move attracted wide national and international criticism in what some observers called a "torpedoing of democracy" to suit certain individuals. Namibia's ambassador to Britain and high-ranking SWAPO member, Ben Ulenga, resigned in protest over this. In March 1999, he formed his own party, the Congress of Democrats (CoD). Nujoma went on to win the (substantially free and fair) elections held on 30 November and 1 December 1999, taking 77% of the vote and three-quarters (55) of the 72 parliamentary seats. The CoD (tied with DTA at 7 seats) won the highest number of opposition votes (10.5%). At its congress in 2002, Nujoma was reelected head of SWAPO, which he has led for nearly 40 years. Although Nujoma will remain president of SWAPO until 2007, Hifikepunye L. Pohamba was selected as SWAPO's candidate at the extraordinary congress held in May 2004. Pohamba, former Minister of Lands, Resettlement and Rehabilitation, won the National Assembly and presidential elections with 76.4% of the votes. The elections of 15–16 November 2004, described as "generally free and well administered", gave SWAPO 55 of the 72 elected seats in the National Assembly. Six opposition parties won a total of 17 seats, including the CoD party, which won the largest number of opposition votes; the DTA; the National Unity Democratic Organization; the UDF; the Republican Party (RP); and the MAG.

Namibia maintained neutrality in its foreign policy, until the late 1990s, when 2,000 Namibian soldiers were sent to help President Laurent Kabila of the Democratic Republic of the Congo fight rebels. By August 2001, all but 150 of these troops had returned home. In December 1999 Namibia allowed Angolan troops to use its territory to pursue UNITA rebels. Between December 1999 and January 2000, scores of civilians were wounded or killed. The death of UNITA leader Jonas Savimbi in February 2002 and the subsequent peace accord between UNITA and the

Angolan government ended bouts of "hot pursuit" across the Namibian-Angolan border in connection with the quarter-century-long civil war in Angola. In 2003, the Namibian and Botswanan governments accepted the demarcation of their joint border along the Kwando, Linyanti, and Chobe rivers. In 2004, the Shesheke bridge across the Zambezi River was officially inaugurated, extending the Trans-Caprivi highway from Zambia and the DROC to Walvis Bay.

In June 2003, Namibia was included in free trade talks with the United States as part of the Africa Growth and Opportunity Act (AGOA). It also received more than US\$37 million over five years in assistance from the Global Fund to fight HIV/AIDS and is one of 14 countries that will benefit from a US\$15 billion five-year emergency plan for HIV/AIDS which was coordinated by the US government. Although the local production of anti-AIDS drugs was still being delayed, Namibia already provides anti-retrovirals to six public hospitals in an effort to assist the, then, 22.5% of the adult population that were HIV positive.

### 13 GOVERNMENT

The Namibia constitution adopted on 21 March 1990 is considered a model of democratic government. Universal suffrage and a strong emphasis on human rights and political freedom are prominent. An independent judiciary and legal obligations to improve the disadvantaged sectors of the population are written into the government. Namibia has a bicameral legislature. It consists of a National Assembly of 72 deputies elected for a five-year term, and up to six members appointed by the president, and a National Council comprised of two members from each of 13 regions elected for a six-year term. The National Council functions purely in an advisory capacity. The president is elected by direct, popular vote and serves as head of state and government and commander-in-chief of the defense force for no more than two five-year terms. The constitution was amended in November 1999 specifically to allow Nujoma (alone) a third term, a move that has attracted criticism both from within the country and the international community. There is also an independent ombudsman to investigate complaints and take action in defense of the interests of individuals and organization in their dealings with the state.

### 14 POLITICAL PARTIES

The South-West Africa People's Organization (SWAPO) is the largest political party, and during the struggle for independence, it was recognized by the OAU and the UN General Assembly as the sole legitimate representative of the Namibian people. SWAPO had a political wing, PLAN, that was engaged in war with South Africa. SWAPO's support comes chiefly from the Ovambo people of the north and from urban areas. The Democratic Turnhalle Alliance (DTA), a white-led amalgam of constituent ethnic parties, was the main opposition party in Namibia's first two elections. It narrowly lost the main opposition role (partly due to early alleged financial links with white South Africa) to the new (formed in March 1999) Congress of Democrats (CoD) in the 1999 elections. Three other parties—the United Democratic Front (UDF), the Monitor Action Group (MAG), and the Democratic Coalition of Namibia—won at least a seat in the 1994 and 1999 elections.

There are also several small ethnic parties, most of which were represented in the bodies appointed in 1985.

In the 1989 elections to the constituent assembly, SWAPO gained 41 seats (57.3%); the DTA 21 seats (28.6%); the United Democratic Front, four seats (5.6%); and the Action Christian National, three seats (3.5%). The other parties collectively gained three seats on 5% of the vote. In the 1994 elections, SWAPO maintained its commanding majority in the assembly, taking 73.9% of the vote, which translated to 53 seats. DTA held 15 seats; United Democratic Front, 2 seats; and one each by the Democratic Coalition of Namibia and the Monitor Action group. In the November/December 1998 elections for National Council, SWAPO took 21 seats, DTA 4, UDF 1 seat. In the November/December 1999 presidential elections, Nujoma performed even better than in previous elections, winning 76.8% of the vote. Ben Ulenga of the CoD had 10.5%; Katuurike Kaura of DTA, 9.6%; and Chief Justice Garoëb of the UDF, 3%. SWAPO swept 55 of the 72 National Assembly seats; CoD and DTA, got 7 each; UDF, 2; MAG, 1.

Nujoma and SWAPO hold a monopoly on power in what a specialist on Africa, Mahmood Mamdani, calls the “old nationalist model”—in which the liberation party is “the custodian of the nation, and anyone who disagrees is unpatriotic”.

In the 2004 local elections, SWAPO won 64% of the votes, CoD, 30%; DTA, 7.8%; UDF, 6%; and NUDO Progressive Party, Local Associations, RP, and NDMC, less than 5% of the votes each. The results of the 15–16 November 2004 presidential and National Assembly elections gave again a vast majority to SWAPO, with 76.3% of the votes backing up the newly elected president Hifikepunye Pohamba, followed by CoD (7.3%), DTA (5.2%), NUDO (4.2%), UDF (3.8%), RP (1.9%), and MAG (1.1%).

## 15 LOCAL GOVERNMENT

There are 13 regions in Namibia. The most populous is Omusati, followed by Ohangwena, Karas, Erongo, Kunene, Hardap, and Omaheke. They are governed by elected councils. Local governments (municipalities, towns and villages) have elected councils.

## 16 JUDICIAL SYSTEM

The court system retains Roman-Dutch elements inherited from South Africa along with elements of the traditional court system. The formal court system is arranged in three tiers: 30 magistrates' courts, the High Court, and the Supreme Court. The Supreme Court serves as the highest court of appeals and also exercises constitutional review of legislation.

The traditional courts handle minor criminal offenses such as petty theft and violations of local customs. In 1991 a presidential commission recommended that the traditional courts be maintained provided they act consistently with the constitution and laws. Legislation enacted in 1993 was intended to bridge the gap between traditional and magistrates' courts by creation of a system of “community courts.”

The constitution calls for an independent judiciary as well as an extensive bill of rights protecting freedom of speech, press, assembly, association, and religion and a guarantee of redress for those whose fundamental rights have been violated. It provides for an ombudsman to deliver free legal advice upon request.

Because of a shortage of trained magistrates and lack of legal counsel, courts typically face a significant backlog of cases awaiting trial. The government appointed the first public defender in 1993 and renewed funding for representation for indigent defendants.

Although the constitution specifically prohibits discrimination on the grounds of sex, race, color, ethnic origin, religion, creed, or social or economic status, some customary and apartheid-based laws dating from before independence have not yet been repealed.

## 17 ARMED FORCES

The armed forces in Namibia numbered 9,000 active personnel in 2005 and included the Presidential Guard and an air wing. The Army was equipped with a small number of aging main battle tanks, 12 reconnaissance vehicles, 60 armored personnel carriers and 81 artillery pieces. The Navy numbered around 200, and operated two patrol craft and one utility helicopter for fishery protection. The air wing's equipment included two MiG-23 fighters, 11 fixed wing transports and two attack helicopters. The paramilitary arm consisted of a special field force of 6,000, which included border guards. Namibia participated in five UN peacekeeping efforts in Africa. In 2005, the defense budget totaled us\$160 million.

## 18 INTERNATIONAL COOPERATION

Namibia became a member of the United Nations on 23 April 1990; it belongs to ECA and several nonregional specialized agencies, such as the FAO, IAEA, ILO, ITU, UNESCO, UNHCR, the World Bank, and the WHO. It also serves as a member of the African Development Bank, the ACP Group, the Commonwealth of Nations, G-77, the African Union, and the WTO. In the subregion, Namibia belongs to the South Africa Customs Union (SACU) and to the Southern Africa Development Community (SADC). Namibia is also part of the Common Monetary Area (CMA) that includes Lesotho, Swaziland, and South Africa. Namibia is a member of the Nonaligned Movement.

In environmental cooperation, Namibia is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Namibia's economy is dependent on a few primary commodity exports, including minerals (mainly diamonds, uranium, zinc, lead, copper, tin, lithium, and cadmium), livestock (both meat and hides), and fishing. Mining accounts for 14% of GDP and the majority of exports. Diamonds alone contribute approximately 10% of the national GDP. Tourism is also a growing Namibian industry. Led by the diamond industry, the GDP grew 6.6% in 1994, but by only 3.1% in 2003. The economy is highly linked to that of South Africa, in spite of gaining independence from that country in 1990. Eighty percent of Namibia's imports originate there, and transport and communications infrastructure are strongly linked with South Africa. The Namibian dollar continues to be linked at parity to the South African rand. Following significant depreciation in 1998, the currency regained strength since 2002, with the exchange rate at us\$1 = n\$6.35 at the end of December 2005.

Although one of the most prosperous African countries, the country's high per capita income level (approximately us\$1,800)

is unevenly distributed. With 22.5% of the adult population infected at the end of 2003, the HIV/AIDS pandemic is also having a devastating effect on the economy. Nonetheless, a democratically elected government is following economic and social policies aimed at the development of previously neglected regions of the country and that respond to the major challenges faced by the population.

The economy has a superior transport and communications infrastructure, an extensive natural resource base, a small population, and a stable government committed to competitiveness in attracting investment. Large oil and gas reserves were discovered in 2000. For these reasons analysts believe that Namibia's economy holds enormous potential for long-term economic growth.

According to the last national census, unemployment was high at around 31% in 2001, and the government was geared toward the creation of jobs. The services sector is the largest employer (56%), followed by agriculture (31.1%) and industry (12.2%). The private sector employs about 43% of all employed persons. The government indicated it wished to privatize state-owned enterprises, including in the electricity, telecommunications, water, and transportation sectors, but established no time frame for such privatization. Although tourism accounted for less than 3% of GDP in 2002, it grew faster than any other sector of the economy. Ecotourism is an important segment of the tourism industry, as Namibia has a wide variety of wildlife and striking scenery.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Namibia's gross domestic product (GDP) was estimated at us\$15.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at us\$7,800. The annual growth rate of GDP was estimated at 4.2%. The average inflation rate in 2002 was 2.7%. It was estimated that agriculture accounted for 9.3% of GDP, industry 27.8%, and services 62.9%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled us\$13 million or about us\$6 per capita and accounted for approximately 0.3% of GDP. Foreign aid receipts amounted to us\$146 million or about us\$73 per capita and accounted for approximately 3.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Namibia totaled us\$2.38 billion or about us\$1,182 per capita based on a GDP of us\$4.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.1%. It was estimated that in 2002 about 50% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, the labor force was estimated at 820,000 workers. In 2000 (the latest year for which data was available), agriculture accounted for 31.1% of the workforce, with another 56% in the ser-

vice sector, 12.2% in industry, and 0.7% in undefined occupations. In 2002, the unemployment rate was nearly 40%.

The constitution provides freedom of association, including the right to form and join trade unions, which was extended to public servants, farm workers, and domestic employees under the Labor Act of March 1992. The principal trade union organizations are the National Union of Namibian Workers (NUNW), a SWAPO-aligned federation, and the Namibia Federation of Trade Unions (NFTU). The main public service and construction unions are affiliates of the Namibia People's Social Movement (NPSM), formerly known as the Namibian Christian Social Trade Unions. Workers generally have the right to strike. Collective bargaining is permitted but is virtually only practiced in the mining and construction industries.

The minimum legal working age is 14, however child labor remains prevalent especially in rural areas. There is no legal minimum wage, and many workers have difficulty maintaining a decent standard of living. The legal workweek is set at 45 hours with a mandatory 24-hour rest period per week. The government implements health and safety standards.

## 22 AGRICULTURE

Less than 1% of Namibia is arable. About 31.1% of the active population depends on agriculture for their living. Agriculture consists of two sectors: a commercial sector with some 50,000 workers (producing 80% of annual yields), and a subsistence sector situated largely in communal areas. Colonialism left Namibia with a three-tier agricultural production system: 4,000 commercial ranches; 20,000 stock-raising households; and 120,000 mixed-farming operations. The ranches displaced local farmers on 66% of the viable farmland and left only 5% of the land to the 120,000 mixed-farming operations.

Corn is grown primarily in the area known as the Grootfontein-Otavi-Tsumeb triangle, where farms are much smaller than in other parts of the country. Corn production in 2004 amounted only to 33,000 tons (down from 50,000 tons in 1991). Recent droughts have created a dependency on grain imports. Namibia is dependent on South Africa for corn, sugar, fruit, and vegetables. In 2004, Namibia's agricultural trade deficit was us\$43.3 million.

Caprivi and Kavango in the northeast have potential for extensive crop development. Communal farms there are estimated to produce 60% of their staple food, such as mahango (which is also used to brew beer). Cotton, groundnut, rice, sorghum, and vegetable production have begun on an experimental basis in Kavango. An irrigation project at Hardap Dam near Mariental produces corn, alfalfa, feed corn, and grapes.

## 23 ANIMAL HUSBANDRY

Namibia is an arid country with very little arable land. Livestock production is the major agricultural activity, making up more than 90% of that sector's output. In 2005, there were an estimated 2,500,000 head of cattle, 2,900,000 sheep, and 2,100,000 goats. In 2005, meat production totaled 107,600 tons, including 77,300 tons of beef, 14,000 tons of mutton, and 5,000 tons of goat meat. Karakul pelts have been a leading export, but the world market is currently depressed. Namibia has ideal conditions for commercial

breeding of ostriches, and of other African game animals for meat, hide, trophy, and tourism purposes.

## 24 FISHING

The fish stocks of the rich Benguela current system were seriously depleted in the late 1970s and throughout the 1980s. Most species, however, were expected to recover by the late 1990s as a result of conservation programs. Fishing and fish processing are among the nation's best prospects for employment and economic growth. In early 1992, a new fisheries code was presented to parliament, which stressed employment and training opportunities for Namibian citizens, profit reinvestment, and revenue gain for the nation. The total catch in 2003 was 636,464 tons, with Cape hakes accounting for 192,275 tons and Cape horse mackerels for 366,912 tons. After independence in 1990, the volume of the nominal catch skyrocketed nearly tenfold. Exports of fish and fish products totaled us\$333 million in 2003.

## 25 FORESTRY

About 10% of Namibia consists of forests and woodland, including woodland savanna, all in the north and northeast. Most of the timber is used locally.

## 26 MINING

Namibia is among the world's premier producers of gem diamonds. In 2003 the mineral industry accounted for 20% of GDP and about two-thirds of the country's exports by value. More than 6,000 workers were employed by the minerals industry. The most valuable minerals were diamonds, uranium, copper, silver, lead, zinc, gold, pyrite, and salt. Diamonds were mainly recovered from a 96 km stretch along the coastline north of the Orange River; which produced 1,481,489 carats in 2003. Also produced in 2003 were tantalum, tin, cement, fluor spar, gypsum, semiprecious stones (agate, amethyst, garnet, pietersite, rose quartz, sodalite, and tourmaline), dolomite, granite, marble, sulfur (pyrite concentrate), and wollastonite.

In 2003, mine copper output was estimated at 19,500 metric tons (copper content), up from 18,012 metric tons in 2002; mine lead, 18,782 metric tons (metal content); zinc concentrate, 60,500 metric tons (metal content); and salt, 697,914 metric tons. Rössing Uranium, owned by Rio Tinto-Zinc, of the United Kingdom, produced uranium oxide at the world's sixth-largest producing uranium mine, at Swakopmund. Coal has been discovered in southeastern Namibia. Mineral exports accounted for one-half of total export value. In the period 1999–2003, the following minerals experienced one or more years of no output: antimony, arsenic, tantalite, tin, industrial diamond, gypsum, lithium minerals (amblygonite, lepidolite, and petalite), several semiprecious gemstones (amethyst, chrysocolla, garnet, crystal quartz, pietersite, rose quartz, and tourmaline), and sulfur.

## 27 ENERGY AND POWER

Namibia, as of 1 January 2005, had no proven reserves of crude oil, or refining capacity, but does have proven reserves of natural gas.

In 2004, Namibia's demand for refined oil products and imports each averaged 23,000 barrels per day.

Proven reserves of natural gas have been placed, as of 1 January 2005 at 2.2 trillion cu ft. However in 2003, there was no recorded demand or output of natural gas.

Namibia generates around 50% of the electric power it consumes domestically. The main source is the 240 MW Ruacana hydroelectric plant. However, output is cyclical, necessitating the importation of power from South Africa. In addition, the Ruacana plant has been experiencing significant problems, thus boosting the need by Namibia to import power. In 2003, demand for electric power totaled 2.37 billion kWh, with production that year totaling 1.46 billion kWh.

## 28 INDUSTRY

Namibia's small industrial sector has centered on meat packing and fish processing, with some production of basic consumer goods. There are furniture and clothing factories, metal and engineering works, assembly plants for imported components, and a cement plant (which, however, closed in 1999 due to pollution risks to the lives of workers and residents in the area). A Malaysian textile company, Ramatex, established a garment factory in Windhoek in 2002, yet was closed in 2005 following accusations of workers' rights violations and inappropriate environment and labor conditions.

In 2002, the manufacturing sector represented 10.7% of the national GDP. Historically dependent on South Africa's manufacturing sector, Namibia processes fish, minerals and meat for export, and produces food and beverages. The government has committed to a mixed-market economy and aims to diversify the economy away from its traditional reliance upon the mining sector, encouraging private-sector investment and export-oriented manufacturing industries. Although the construction only contributed 2.2% of GDP in 2002, new projects included extending the Northern Railway line from Tsumeb to Oshikango, the construction of a new State House, the resurfacing of the Kongola-Katima road, and the extension of the Trans-Caprivi highway westward.

Namibia remains underexplored with regard to oil and natural gas, but its greatest potential in the hydrocarbon sector remains with natural gas. The main significant discovery as of 2002 was the Kudu gas field off Luderitz. Originally involving big multinationals such as Shell and ChevronTexaco, these companies withdrew leaving the state-owned National Petroleum Corporation of Namibia (Namcor) in charge. Plans were to construct a moderate-size electric power generation plant in Oranjemund, a pipeline to the Western Cape in South Africa, and potentially two electric power plants there. The primary partners in the Kudu gas field project are Namcor, NamPower, Energy Africa and South Africa's Electricity Supply Commission (ESKOM).

## 29 SCIENCE AND TECHNOLOGY

The Namibia Department of Agriculture and Rural Development, founded in 1979 at Windhoek, supports extensive research on natural resources and ecology. The Desert Ecological Research Unit of Namibia, founded in 1963 at Swakopmund, carries out exploration and research in the Namib Desert and semiarid Namibia. The University of Namibia has a faculty of science. The Namibia Scientific Society, at Windhoek, is concerned with ornithology, spelae-

ology, botany, archaeology, herpetology, astronomy, and ethnology. Natural science exhibits are displayed at the Lüderitz Museum, the Museum Swakopmund, and the National Museum at Windhoek. In 1987–97, science and engineering students accounted for 4% of college and university enrollments. In 2002, Namibia's high technology exports totaled US\$6 million, or 1% of its' manufactured exports.

### 30 DOMESTIC TRADE

Windhoek is the country's major commercial center. A good road network, increasingly paved, facilitates trade and communications around the country. The marketing and distribution systems are mainly controlled by foreign investors and managers from South Africa and Germany. Domestic trade is heavily dependent on South African imports for most consumer goods; there is also significant South African presence in domestic investment mainly in the form of pension funds, life insurance and transactions between commercial banks. Business hours are from 7:30 AM to 4:30 or 5 PM, Monday through Friday. Many businesses are closed from mid-December to mid-January for a summer holiday.

### 31 FOREIGN TRADE

Key export markets for Namibia are the United Kingdom (48%), South Africa (23%), Spain (15%), and France (4%). Main exports in 2001 were diamonds (approximately 46% of total export earnings in 2003), processed fish, other minerals, animals and derived products, and beverages and other foods. Along with uranium, copper, silver, lead, zinc, and gold, mineral exports accounted for 68.9% of total export earnings in 2002. The Walvis Bay enclave is an export-processing zone, with the potential of becoming a center for re-exports toward Angola, South Africa, Zimbabwe, and Botswana.

Leading imports are vehicles and transport equipment, petroleum products and fuel, chemicals, foodstuffs, and machinery and electrical equipment. South Africa (80%), the United States (4%), Germany (2%), and Japan are the leading suppliers for Namibia's imports.

### 32 BALANCE OF PAYMENTS

Traditionally, Namibia has maintained a trade surplus resulting from its valuable mineral exports. However, over 95% of Namibia's consumption and investment goods are imported, resulting in wide fluctuations in the merchandise trade surplus due to the constant changes in world mineral prices. Displaying a trade deficit, the overall balance of payments went from a deficit of US\$50 million in 2002 to a deficit of US\$103 million in 2003.

Namibia joined the IMF in September 1990, when it began opening more to foreign trade. In recent years, the current account has maintained a surplus, due to surpluses in net current transfers, particularly in Southern African Customs Union (SACU) receipts and foreign development assistance not linked to capital assets. Germany, the United States, and Scandinavian countries are the principal bilateral donors. Although revenues from the SACU are expected to decline for Namibia as a result of the 2002 new arrangements, they still represent an important financial source for the government.

### 33 BANKING AND SECURITIES

Banking activities have recorded strong growth since independence in 1990, while the range of financial institutions operating in Namibia has begun to expand. Total assets of the four main commercial banks more than doubled in 1991–95, and during 1995 bank lending to the private sector rose by 34%, that represented 92% of total domestic credit, of which 41% comprised loans to individuals. There have been no banking failures since independence, but the regulatory regime inherited from South Africa is being brought more into line with international norms under a new banking institutions act that was due to come into effect in 1997.

First National Bank Namibia and Standard Bank Namibia have the largest branch networks and remain wholly owned subsidiaries of their South African parent banks. Other commercial banks included the Commercial Bank of Namibia (CBN, a subsidiary of the Geneva-based Société financière pour les pays d'outre mer, or SFOM), South Africa's Nedcor Bank, FirstRand Limited, and Bank Windhoek (in which South Africa's ABSA Bank is the main shareholder). In mid-1996, Bank Windhoek completed a merger with the Namibia Building Society. The City Savings and Investment Bank (CSIB) was launched in 1994 as Namibia's first indigenously owned financial institution. At that time it had a single branch in Windhoek, but has since grown. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to us\$733.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was us\$1.2 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9.25%.

Within four years, the Namibian Stock Exchange (NSE), which started operations in October 1992, grew to become sub-Saharan Africa's second-largest in terms of market capitalization, next to the Johannesburg Stock Exchange (JSE). The NSE is increasingly being used by local firms to raise capital for business expansions, while foreign investors are buying into Namibian equities through new listings and rights offers, which have been mainly oversubscribed. Some 95% of the NSE's overall market capitalization comprises dual-listings of South African parent groups of Namibian subsidiaries. Thirteen different companies were listed in 2001, when local market capitalization was us\$151 million. As of 2004, a total of 13 companies were listed on the NSE, which had a market capitalization that year of us\$442 million.

### 34 INSURANCE

The government embarked on a considerable shake-up of the insurance and pensions sector during the 1990s, over which the South African mutual societies had the biggest influence. Premium income continued to be invested mainly in South African assets following independence, overriding Namibian insurance funds like the Government Institutions Pension Fund (GIPF).

Legislative amendments of 1995 required that 35% of Namibian-generated funds under management be reinvested in specified local assets. A long-term insurance bill tabled at the end of 1996 made it compulsory for South African mutuals to establish Namibian-registered public companies and match net liabilities with local assets. As part of their asset localization measures, Sanlam and Old Mutual launched the first Namibian unit trusts in 1995. Other major insurance companies include Metropolitan Life and Mututal and Federal Insurance Company.

### 35 PUBLIC FINANCE

Although per capita GDP is one of the highest in Africa, the majority of Namibia's people live in poverty. The economy is one of the most advanced in the region, but income distribution is very skewed. In order to combat this problem, the government continues to concentrate its spending on social services. A large portion of the budget is also allocated to development projects, in-

#### Public Finance – Namibia (2002)

(In millions of Namibian dollars, budgetary central government figures)

	10,349	100.0%
<b>Revenue and Grants</b>

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

cluding boosting the construction industry and expanding the infrastructure.

The US Central Intelligence Agency (CIA) estimated that in 2005 Namibia's central government took in revenues of approximately us\$1.9 billion and had expenditures of us\$2 billion. Revenues minus expenditures totaled approximately -us\$94 million. Public debt in 2005 amounted to 39.6% of GDP. Total external debt was us\$1.164 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, budgetary central government revenues were n\$10,349 million and expenditures were n\$10,657 million. The value of revenues in US dollars was us\$982 million and expenditures us\$1,081 million, based on a market exchange rate for 2002 of us\$1 = n\$10.54075 as reported by the IMF. Government outlays by function were as follows: general public services, 26.4%; defense, 9.0%; public order and safety, 9.8%; economic affairs, 10.4%; housing and community amenities, 9.0%; health, 10.6%; recreation, culture, and religion, 2.2%; education, 22.4%; and social protection, 7.3%.

### 36 TAXATION

There is a progressive personal income tax with a top rate of 35%. The basic tax on corporate profits is 35%. Nonresident shareholders are taxed 10% on dividends, and there is a tax on undistributed profits. Mining companies, and oil and gas extraction companies are taxed at special rates. As of 27 November 2001, a value-added tax (VAT) replaced the 8% general sales tax (GST), with a standard rate of 15%. Exempted from VAT are education, medical services, hotel accommodations, and public transportation. There are also excise taxes on luxury goods.

### 37 CUSTOMS AND DUTIES

Namibia is part of the Southern African Customs Union (SACU), Preferential Trade Area for Eastern and Southern Africa (PTA), the Common Market for Eastern and Southern Africa (COME-

SA), and the SADC Free Trade Protocol. No tariffs exist on most goods moving between members, but there is a 15% duty on non-imports from nonmember nations, plus a 15% sales duty. It also has signed bilateral trade agreements with over 20 major trading nations around the world. Imports from outside the union are subject to a common tariff rate based on the Harmonized System of Import Classification; most imports need licenses. South Africa levies and collects most of the customs and excise duties for the other members and then pays each a share, based on an established formula. Namibia has double taxation agreements with South Africa, the United Kingdom, Sweden, and Germany (but not the United States) and is a member of the United Nations, the World Bank, the International Monetary Fund, and the World Trade Organization.

### 38 FOREIGN INVESTMENT

International investment, mostly South African, has historically played an important role in Namibia. In addition, there is significant UK and US investment in mining. Several international oil and gas distribution as well as fishing companies operate in Namibia. In December 1990, foreign investment legislation was liberalized. In April 1993, Namibia announced a program of private-sector investment incentives that included lower taxes, grants, and development loans. In 1994, the government created an export processing zone at Walvis Bay. Namibia's goal is to create an infrastructure that will serve as a reexport center for southern Africa, including Angola, South Africa, Zimbabwe, and Botswana.

The total foreign direct investment (FDI) in Namibia as a percent of GDP increased from 17.8% in 1998 to over 25% in 2004.

### 39 ECONOMIC DEVELOPMENT

Namibia's government will continue to build and diversify its economy around its mineral reserves. Priorities include expanding the manufacturing sector, land reform, agricultural development in the populous north, and improved education and health opportunities. Transfer of Walvis Bay and 12 offshore islands to Namibia in 1994 returned to Namibia its deep-water port and 20% of its offshore rights. With 9,000 workers, the fishing industry is an increasingly important source of private-sector employment.

The five-year development program started in 1994 set an annual growth rate target of 5%, highlighting government budget cuts and foreign investment and trade. As of 2002, gross domestic product (GDP) growth since the mid-1990s had averaged 3.5% a year. Unemployment remained high, at around 30% of the labor force, and economic growth was not substantial enough to significantly reduce poverty. The 2004–05 budget aimed to limit the fiscal deficit to 1.6% of GDP. The recent Namibian Stock Exchange (NSX) continues to expand, gaining weight particularly in sub-Saharan Africa.

### 40 SOCIAL DEVELOPMENT

By many economic and social indicators, including population per physician, per hospital bed, and per telephone, Namibia is statistically better off than many other sub-Saharan African countries. However, such comparisons also mask the huge dispari-

ties between rural and urban Namibia, and between its black and white populations.

The government is obliged by the constitution to promote actively the welfare of the people, including gender, racial and regional equality. Considerable discrimination against women exists in both formal and customary law. Community property laws, for example, define women as legal minors, unable to enter into any kind of contract without the husband's signature. In the absence of this permission, women may not open a bank account or purchase property. Some measures were taken to address these inequities through the Married Person's Equality Bill, which outlaws discrimination against women in civil marriages. However, the law does not affect practices in customary, or traditional, marriages. Domestic abuse and violence are widespread, and cultural views of women exacerbate the problem.

Human rights are generally respected. However, there are excesses by security forces, and prison conditions remain harsh. Indigenous San peoples have historically faced discrimination from Namibia's other ethnic groups. The government has attempted to redress the marginalization of the San by increasing their participation in decision-making on issues that affect them. These efforts have been applied unevenly, and the San remain relatively isolated and largely excluded from national decision making.

### 41 HEALTH

In 2004, there were an estimated 30 physicians, 168 nurses, and four dentists per 100,000 people. Safe water and adequate sanitation were available to 77% and 41% of the population, respectively. Since health services are provided by the ethnically-based second-tier authorities, the system is effectively segregated. Approximately 57% of the population had access to health care services.

In 2005, average life expectancy was 43.93 years and infant mortality was 48.98 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 34.2 and 22.3 per 1,000 people and the maternal mortality rate was estimated at 230 per 100,000 live births. About 29% of married women ages 15 to 49 years used some form of contraception.

Immunization rates for children up to one year old were: tuberculosis, 100%; diphtheria, pertussis, and tetanus, 79%; polio, 79%; and measles, 68%. The rates for DPT and measles were, respectively, 72% and 66%. About 26% of children under age five were malnourished. The Namibian government is considering fortifying foods with vitamin A and/or iron. Vitamin A deficiencies were seen in 20.4% of children under age five and goiter is a common problem.

The HIV/AIDS prevalence was 21.30 per 100 adults in 2003, the 6th highest rate in the world. As of 2004, there were approximately 210,000 people living with HIV/AIDS in the country. There were an estimated 16,000 deaths from AIDS in 2003. The epidemic was worst in the northeastern part of the country, where rates of infection were as high as 29% of the population. HIV/AIDS was the leading cause of mortality, followed by pneumonia, tuberculosis, and malaria. Measles and polio prevalence was low.

### 42 HOUSING

There is a sharp contrast in housing standards between white and black Namibians primarily because the economic imbalance between these groups has not evened out since the end of apartheid.

A majority of the population is rural, where most dwellings are self-constructed from local materials. In a 1991 housing survey, 50% of all housing units were kraals (huts) made from pole frames and thatch or mud walls. Some kraal are plastered with cow dung. It was estimated that 58% of all households lived in these type of huts. About 40% of kraal households had seven or more members. About 33% of all housing units were detached homes, but these were only serving 30% of all households.

The urban areas of Windhoek, Walvis Bay, and Swakopmund have faced housing challenges with rapid urbanization in those areas. In 2001, about 30% of all residents in Windhoek lived in informal settlement communities. From 1991–99, the city had developed three reception areas that were intended to be temporary settlements for new residents, who would have been resettled under the squatter's policy. Unfortunately, the settlements grew more quickly than the land and utility systems could be developed. In other cities, it has been estimated that about up to 70% of urban residents live in informal settlements. Regional and town governments build and rent housing to migrants, but the demand has overwhelmed the supply. In the 1990s, the backlog in housing units was estimated at 45,000 units.

In 2001, there were about 346,455 private households. The average number of people per household was about 5.1. About 87% of all households had access to safe drinking water. Less than 50% had access to modern toilet facilities, only 32% have electric lighting, and 62% used wood or charcoal for cooking fuel.

### 4<sup>3</sup> EDUCATION

Education is compulsory for 10 years between the ages of 6 and 16. Primary education is for seven years, and secondary lasts for five years. The academic year runs from February to November. In 2001, about 23% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 78% of age-eligible students; 76% for boys and 81% for girls. The same year, secondary school enrollment was about 44% of age-eligible students; 39% for boys and 50% for girls. It is estimated that about 92.4% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 28:1 in 2003; the ratio for secondary school was about 24:1.

Higher education is provided primarily by the University of Namibia, the Polytechnic of Namibia, and the Colleges of Education (at Windhoek, Ongwediva, Rundu, and Caprivi). There is an Academy for Tertiary Education for adult students. In 2003, about 7% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 85%.

As of 2003, public expenditure on education was estimated at 7.2% of GDP, or 21% of total government expenditures.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

Public libraries serve most cities and towns in an extensive network. The National Archives and a public library (78,000 volumes) are both located in Windhoek, as is the National Library, which contains about 90,000 volumes. The library of the University of Namibia at Windhoek holds 86,800 volumes.

There is a National Museum of Namibia in Windhoek, with an emphasis on the natural and human sciences, and local museums

in Lüderitz, Swakopmund, Gobabis, Omaruri, Outjo, Tsumeb, and other towns. The State Museum in Windhoek features objects from the cultures of the Nama, Bushman, Herero, Ovambo, and other Southern African peoples. The Lüderitz Museum features displays of diamond mining.

### 4<sup>5</sup> MEDIA

Namibia has good quality telephone service, with at least 18 automatic telephone exchanges that can put callers in touch with 63 countries. Communication with rural areas is provided by about 65 fixed radio stations and 500 mobile stations. Fax machines and telex services are readily available. In 2003, there were an estimated 66 mainline telephones for every 1,000 people; about 2,600 people were on a waiting list for telephone service installation. Also in 2003, there were approximately 116 mobile phones in use for every 1,000 people.

The government-owned Namibian Broadcasting Corp. transmits radio programs in English, German, Afrikaans, and African languages. Television relays from South Africa began in the Windhoek and Oshakati areas in 1981. In 2004, there were nine private radio stations, one private television station, and a private cable and satellite television service. In 2003, there were an estimated 134 radios and 269 television sets for every 1,000 people. About 16 of every 1,000 people were cable subscribers. Also in 2003, there were 99.3 personal computers for every 1,000 people and 34 of every 1,000 people had access to the Internet. There were nine secure Internet servers in the country in 2004.

Four major daily newspapers are published in Windhoek, including (with 2002 circulation): *The Namibian* (11,000), *Die Republikein* (12,000), and *The Windhoek Advertiser* (5,000). *Tempo* is a Sunday paper with a circulation of 11,000. The government owns and operates the Namibia Press Agency. The government also owns one biweekly newspaper, *New Era*, and two magazines, *Namibia Today* and *Namibia Review*.

The constitution provides for free speech and a free press, and the government is said to generally respect those rights. However, the government-owned Namibian Broadcasting Corporation operated most radio and television services, and though it provides significant coverage of opposition opinions, there have been many complaints of bias in the reporting of sensitive issues.

### 4<sup>6</sup> ORGANIZATIONS

There are two chambers of commerce in Windhoek. Professional and trade associations exist for teachers, miners, journalists, architects, jewelers, and members of the tourist industry. The National Scientific Society promotes research and education in the fields of national history, ethnology, archaeology, zoology, botany, and geology.

National youth organizations include the Namibian National Students Organization, the National Youth Council of Namibia, the SWAPO Youth League of Namibia, Junior Chamber, and Boy Scouts of Namibia. A number of sports associations are active within the country, representing such pastimes as sailing, badminton, baseball, and tennis. Women's organizations include the Sister Namibia Collective and the Namibia National Women's Organization. The YWCA has chapters in Namibia.

Volunteer service organizations, such as the Lions Clubs International, are also present. The Red Cross and the Society of St. Vincent de Paul are also active in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Namibia's prime tourist attractions are game viewing, trophy hunting, and the scenic beauty of its deserts. In the west, Swakopmund is a Hanseatic-style resort town populated by Namibians of German descent. It is the center for tours of the nearby Namib dunes, and for visits to the wild Skeleton Coast to the north. In the south, the Fish River Canyon, 85 km (53 mi) long and 700 m (2,300 ft) deep, ranks second in size to the Grand Canyon.

In 2003, Namibia had 695,221 foreign visitors, of whom 32% came from South Africa. There were 2,749 hotel rooms with 6,091 beds and an occupancy rate of 43%. Visitors stayed an average of two nights. Vaccinations are required if traveling from an infected area. All nationals except those of Japan, Germany, the United States, and 42 other countries are required to carry a visa for stays of up to 90 days.

In 2005, the US Department of State estimated the daily cost of staying in Windhoek at us\$157; in Etosha, us\$198; and in Swakopmund, us\$172.

#### 48 FAMOUS NAMIBIANS

Herman Toivo ja Toivo (b.1915?), the founder of SWAPO and the leader of Namibian nationalism, languished in a South African prison from 1966, when he was convicted of treason, until his release in March 1984. Sam Nujoma (b.1929) has been leader of SWAPO since 1966, and served as first president of Namibia, from 1990–2005. Hifikepunye Pohamba (b.1935) took office as Namibia's second president in 2005.

#### 49 DEPENDENCIES

Namibia has no territories or colonies.

# NIGER

Republic of Niger  
*République du Niger*

**CAPITAL:** Niamey

**FLAG:** The flag is a tricolor of orange, white, and green horizontal stripes, with an orange circle at the center of the white stripe.

**ANTHEM:** *La Nigérienne*.

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc comes in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00189 (or \$1 = CFA Fr528.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of 1974 military takeover, 15 April; Labor Day, 1 May; Independence Day, 3 August; Proclamation of the Republic, 18 December; Christmas, 25 December. Movable religious holidays include 'Id al-Fitr, 'Id al-Adha, and Milad an-Nabi.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country, the Republic of the Niger is the largest state in West Africa, with an area of 1,267,000 sq km (489,191 sq mi), extending 1,845 km (1,146 mi) ENE-WSW and 1,025 km (637 mi) NNW-SSE. Comparatively, the area occupied by Niger is slightly less than twice the size of the state of Texas. Bordered on the N by Libya, on the E by Chad, on the S by Nigeria, on the SW by Benin and Burkina Faso, on the W by Mali, and on the NW by Algeria, Niger has a total boundary length of 5,697 km (3,540 mi). Niger's capital city, Niamey, is located in the southwestern part of the country.

## <sup>2</sup> TOPOGRAPHY

Niger is four-fifths desert, and most of the northeast is uninhabitable. The southern fifth of the country is savanna, suitable mainly for livestock raising and limited agriculture. In the north-central region is the volcanic Air Massif, reaching a height of 1,944 m (6,376 ft) on Mt. Gréboun, the nation's highest point. Massifs along the Libyan border average about 800 m (2,600 ft). The southern plateau is at an elevation of 300–500 m (1,000–1,650 ft). The Niger River flows for about 563 km (350 mi) through southwestern Niger. To the north of the Niger are many ancient stream channels that flow periodically during wet weather. A portion of Lake Chad is situated in the southeastern corner of the country.

## <sup>3</sup> CLIMATE

Niger, one of the hottest countries in the world, has three basic climatic zones: the Saharan desert in the north, the Sahel to the south of the desert, and the Sudan in the southwest corner. The intense heat of the Saharan zone often causes the scant rainfall to evaporate before it hits the ground; at Bilma, in the east, annual rainfall is only 2 cm (0.79 in). On the average, rainfall in the Air

Massif is limited to a maximum of 25 cm (10 in) annually, and most of it comes during a single two-month period. At Agadez, in the northern Sahel, annual rainfall averages 16.5 cm (6.5 in), but yearly totals often vary greatly. In the south, rainfall is higher. It averages 56 cm (22 in) at Niamey, in the southern Sahel, and 87 cm (34 in) at Gaya, in the Sudanese zone. The rainy season is from May through October, with most rain in July and August. At Niamey, the average maximum daily temperature fluctuates from 31°C (88°F) in August to 41°C (106°F) in April. Nights are cool (below 20°C /68°F) from November to February.

## <sup>4</sup> FLORA AND FAUNA

The northern desert has vegetation only after rare rainfalls. The savanna includes a vast variety of herbaceous vegetation, with such trees as bastard mahogany, kapok, baobab, and the shea tree (karité). There are antelope, lion, waterbuck, leopard, hyena, monkey, wart hog, and countless varieties of bird and insect life. In the Niger River are crocodiles, hippopotamuses, and sometimes manatee. Turtles, lizards, pythons, horned vipers, and other varieties of snakes abound. As of 2002, there were at least 131 species of mammals, 125 species of birds, and over 1,450 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

In Niger, serious depletion of vegetation has been caused by the burning of brush and grass to prepare for the planting of crops, often on marginal land; by overgrazing of range lands; and by tree cutting for fuel and construction. Soil erosion and increasing desertification have also occurred. The nation has 4 cu km of renewable water resources. About 82% of the annual withdrawal is used in farming activity and 2% for industrial activity. Improved water

sources are available to 80% of urban dwellers and 36% of the rural population.

With Benin and Burkina Faso, Niger administers “W” National Park, of which 334,375 hectares (826,254 acres) are in Niger. There are also several game reserves, but resources for safeguarding protected fauna are insufficient. The nation’s wildlife is endangered by unlawful hunting and poaching. In 2003, about 7.7% of the total land area was protected, including 2 natural UNESCO World Heritage sites, and 12 Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 10 types of mammals, 2 species of birds, 1 species of invertebrate, and 2 species of plants. Threatened species include the addax, cheetah, and dama gazelle. The Sahara oryx has become extinct in the wild.

## **6** POPULATION

The population of Niger in 2005 was estimated by the United Nations (UN) at 13,957,000, which placed it at number 63 in population among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 48% of the population under 15 years of age. There were 105 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.4%, a rate the government viewed as too high. Adolescent fertility rates are especially high. The projected population for the year 2025 was 26,376,000. The overall population density was 11 per sq km (29 per sq mi); however, most of the population is concentrated in the fertile southern regions. Much of the land is uninhabited except for some nomadic herders.

The UN estimated that 21% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 6.01%. The capital city, Niamey, had a population of 890,000 in that year. Other major cities and their estimated populations are Zinder, 170,574; Maradi, 148,017; Tahoua, 99,900; and Agadez, 78,289.

## **7** MIGRATION

Most of the northern area of Niger is inhabited by migratory peoples who follow their flocks and herds through the mountainous countryside. During the 1968–75 Sahelian drought, however, these people were forced to leave the north. Many nomads migrated to urban areas in order to keep from starving, but some have since returned. As many as 500,000 people may have moved to Nigeria since the drought. About 100,000 returned in early 1983, when many foreigners were expelled from Nigeria. Thousands more Nigeriens were expelled from Nigeria in 1985, and in 1986; Algeria expelled about 2,000 of the 50,000 Nigerien nomads in southern Algeria. The migration from rural to urban areas has continued.

A five-year civil war (1990–95) between rival factions of Tuareg rebels drove many Tuaregs into big towns or neighboring countries such as Burkina Faso and Algeria. With the signing of a peace agreement in April 1995 came the implementation of a repatriation program. Repatriation of Nigerien refugees from Algeria and Mali was completed by 1998.

In 1999, some 3,589 Malian refugees were repatriated; however, some Malians remained on refugee sites, refusing to return to their homeland. By 2004 there were 344 refugees and 41 asylum

seekers. In 2005 the net migration rate was an estimated 0.65 migrants per 1,000 population. The government views the migration levels as satisfactory.

## **8** ETHNIC GROUPS

The Hausa are the largest ethnic group, forming 56% of the total population. The Djerma-Songhai, the second-largest group, constitute 22% of the population. They, like the Hausa, are sedentary farmers living on the arable southern tier. The Djerma-Songhai are concentrated in the southwest; the Hausa, in south-central and southeast Niger. Many of Niger’s inhabitants are nomadic or seminomadic livestock-raising peoples, including the Fulani, or Peul (8.5%), the Tuareg (8%), and the Beri Beri or Kanouri (4.3%). Arab, Toubou, and Gourmantche peoples make up the remaining 1.2% of the populace, along with some 1,200 French expatriates.

## **9** LANGUAGES

French is the national and official language, but it is spoken by only a small minority of the people. The various ethnic groups use their own local languages. Hausa is spoken all over the country as the language of trade. Djerma is also used extensively.

## **10** RELIGIONS

More than 90% of the population is Muslim, with the Tijaniyya, Senussi, and Hamalist sects being the most influential. The cities of Say, Kiota, Agadez, and Madarounfa are considered holy by local Islamic communities, and so the practice of other religions in those cities is not as well tolerated as in other areas. Christians, including both Catholics and Protestants, constitute less than 5% of the population; they tend to be concentrated in Maradi, Niamey, and other urban centers with expatriate populations. The Baha’is are very active and do account for a small percentage of the overall populace; they too are located primarily in Niamey and in communities on the west side of the Niger River, bordering Burkina Faso. Traditional indigenous religions are also practiced by a small percentage of the population.

Though relations between religious communities is generally amicable, there have been reports of tension between certain fundamental Muslims and various Christian organizations. The constitution provides for freedom of religion and no particular religion is designated as a state religion. However, the Islamic Association serves in an official advisory capacity on religious matters for the government. The constitution prohibits the formation of political parties based on religious doctrines. Religious organizations are registered with the Interior Ministry. Certain Christian and Muslim holidays are officially observed.

## **11** TRANSPORTATION

Landlocked Niger relies heavily on road and air transportation. As of 2002 there were 10,100 km (6,276 mi) of roads, of which 798 km (496 mi) were paved. The principal road runs from west to east, beginning at Ayorou, going through Niamey, Dosso, Maradi, and Zinder, and ending at Nguigmi. A 902-km (560-mi) all-weather stretch between Niamey and Zinder was opened in 1980. Extending from the main route are roads from Niamey to Burkina Faso (not paved), from Zinder to Algeria through Agadez (with tough desert driving on dirt tracks), from Dosso to Benin, and from Birni Nkonni and Maradi to Nigeria. A 602-km (385-mi) highway

LOCATION: 12° to 23°30' N; 0°30' to 15°30' E. BOUNDARY LENGTHS: Libya, 354 kilometers (220 miles); Chad, 1,175 kilometers (730 miles); Nigeria, 1,497 kilometers (930 miles); Benin, 190 kilometers (118 miles); Burkina Faso, 628 kilometers (390 miles); Mali, 821 kilometers (510 miles); Algeria, 956 kilometers (594 miles). Broken lines indicate rivers and lakes that are dry for most of the year, only filling with water during infrequent rainy periods.

between Tahoua and the uranium mines at Arlit was completed in 1981. SNTN, a government joint venture with a private French company, is the most important road hauler and has a monopoly over certain routes. In 2003, there were 21,000 passenger cars and 18,650 commercial vehicles.

Niger's most important international transport route is by road to the rail terminus at Parakou, Benin. From there, OCBN, a joint Benin-Niger railway, operates service to the Benin port of Cotonou. As of 2004, the Niger River is navigable for 300 km (186 mi) from Niamey to Gaya on the Benin frontier from September through March.

There were an estimated 27 airports and airfields in 2004, 9 of which (as of 2005) had permanent-surface runways. The international airport is at Niamey. There are domestic airports at Agadez, Maradi, Zinder, Arlit, and Tahoua. Niger is a participant in the transnational Air Afrique, which provides international service,

along with several other airlines. In 2003, about 46,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Through extensive archaeological research, much evidence has been uncovered indicating that man has been present in northern Niger for over 600,000 years. By at least 4000 BC, a mixed population of Libyan, Berber, and Negroid peoples had evolved an agricultural and cattle-herding economy in the Sahara. Written history begins only with Arab chronicles of the 10th century AD. By the 14th century, the Hausa had founded several city-states along the southern border of what is today the Republic of the Niger. About 1515, an army of the Songhai Empire of Gao (now in Mali), led by Askia Muhammad I, subjugated the Hausa states and captured the Berber city of Agadez, whose sultanate had existed for

many generations. The city had been important largely because of its position on the caravan trade routes from Tripoli and Egypt into the Lake Chad area. The fall of the Songhai Empire to Moroccan invaders in 1591 led to expansion of the Bornu Empire, which was centered in northeast Nigeria, into the eastern and central sections of the region. The Hausa states and the Tuareg also remained important. It was probably during the 17th century that the Djerma settled in the southwest. Between 1804 and 1810, a devout Fulani Muslim named 'Uthman dan Fodio waged a holy war against the Hausa states, which he subjugated along with a part of the Bornu Empire, west of Lake Chad. About that time, European explorers began to enter the area, starting with a Scot, Mungo Park, in 1805–06.

Bornu, Hausa, and Fulani entities vied for power during the 19th century, a period during which political control was fragmented. The first French military expeditions into the Niger area, at the close of the 19th century, were stiffly resisted. Despite this opposition, French forces pushed steadily eastward and by 1900 had succeeded in encircling Lake Chad with military outposts. In 1901, the military district of Niger was created as part of a larger unit known as Haut-Sénégal et Niger. Rebellions plagued the French forces on a minor scale until World War I, when a major uprising took place. Some 1,000 Tuareg warriors attacked Zinder in a move promoted by pro-German elements intent on creating unrest in French and British African holdings. British troops were dispatched from Nigeria to assist the French in putting down the disturbance. Although this combined operation broke the Tuareg resistance, not until 1922 was peace fully restored. In that year, the French made Niger a colony.

Niger's colonial history is similar to that of other former French West African territories. It had a governor but was administered from Paris through the governor-general in Dakar, Senegal. From 1932 to 1947, Niger was administered jointly with Upper Volta (now Burkina Faso) for budgetary reasons. World War II barely touched Niger, since the country was too isolated and undeveloped to offer anything of use to the Free French forces.

In 1946, the French constitution conferred French citizenship on the inhabitants of all the French territories and provided for a gradual decentralization of power and limited participation in indigenous political life. On 28 September 1958, voters in Niger approved the constitution of the Fifth French Republic, and on 19 December 1958, Niger's Territorial Assembly voted to become an autonomous state, the Republic of the Niger, within the French Community. A ministerial government was formed by Hamani Diori, a deputy to the French National Assembly and secretary-general to the Niger branch of the African Democratic Rally (Rassemblement Démocratique Africain—RDA). On 11 July 1960, agreements on national sovereignty were signed by Niger and France, and on 3 August 1960, the Republic of the Niger proclaimed its independence. Diori, who had been able to consolidate his political dominance with the help of the French colonial administration, became Niger's first president. His principal opponent was Djibo Bakary, whose party, known as the Sawaba, had been banned in 1959 for advocating a "no" vote in the 1958 French constitutional referendum. The Sawaba was allegedly responsible for a number of unsuccessful attempts to assassinate Diori after 1959.

Diori was able to stay in power throughout the 1960s and early 1970s. His amicable relations with the French enabled him to obtain considerable technical, military, and financial aid from the French government. In 1968, following a dispute between the ruling Niger Progressive Party (Parti Progressiste Nigérien—PPN) and the civil service over alleged corruption of civil service personnel, the PPN was given a larger role in the national administration. Over the years, Diori developed a reputation as an African statesman and was able to settle several disputes between other African nations. However, unrest developed at home as Niger, together with its Sahel neighbors, suffered widespread devastation from the drought of the early 1970s.

On 15 April 1974, the Diori government was overthrown by a military coup led by Lt. Col. Seyni Kountché, the former chief of staff who subsequently assumed the presidency. Madame Diori was killed in the rebellion, as were approximately 100 others, and the former president was detained (1974–80) under house arrest. Soon after the coup, French troops stationed in Niger left at Kountché's request.

The economy grew markedly in the late 1970s, chiefly because of a uranium boom that ended in 1980. The Kountché regime, which was generally pro-Western, broke diplomatic relations with Libya in January 1981 in alarm and anger over Libya's military intervention in Chad. Relations with Libya slowly improved, and diplomatic ties resumed in 1982. Nevertheless, Niger continued to fear Libyan efforts at subversion, particularly among the Tuareg of northern Niger. In October 1983, an attempted coup in Niamey was suppressed by forces loyal to President Kountché. Kountché died of a brain tumor in November 1987, and (then) Col. 'Ali Seybou, the army chief of staff, was appointed president.

In 1989, Seybou created what he intended to be a national single party, *Le Mouvement National pour la Société de Développement/The National Movement for a Developmental Society* (MNSD). However, the winds of democratic change ushered in multiparty competition. At the forefront for political reform was the labor confederation, which organized a widely observed two-day-long general strike. Following the example of Benin, a National Conference was held from July to October 1991 to prepare a new constitution. The conferees appointed an interim government, led by Amadou Cheiffou to work alongside the Seybou government to organize multiparty elections. Widespread fighting in the north and military mutinies in February 1992 and July 1993 postponed the elections, but a new constitution was adopted in a December 1992 referendum.

Niger's first multiparty elections took place on 27 February 1993. Mamadou Tandja, who succeeded Seybou as MNSD leader came in first with 34%. However, with Mohamadou Issoufou's support, Mahamane Ousmane defeated him in the March runoff with 54% of the vote. In the legislative elections, the MNSD won the largest number of the seats (29), but a coalition of nine opposition parties, the Alliance of Forces of Change (AFC) dominated the National Assembly with 50 of the 83 seats. Prime Minister Issoufou led the AFC.

The new government found itself threatened by an insurgency in the north. In March, it reached a three-month truce with the major Tuareg group, the Liberation Front of Air and Azaouak (FLAA), and was able to extend it for three more months. By September, however, the Tuaregs had split into three factions and only

one, the Front for the Liberation of Tamoust (FLT), agreed to renew the truce for three more months. Some Tuaregs, chiefly under the Armée Revolutionnaire de la Libération du Nord Niger (ARLNN) continued the rebellion, prompting more government reprisals.

The Tuareg raids created tension with Libya, suspected of inciting the insurgencies, and divided Nigerians over issues of favoritism. The government appeared biased in favor of members of the Djerma-Songhai (or Zarma-Songhai), one of Niger's five major ethnolinguistic groups. In April 1995, a tentative peace was reached via the joint mediation of Algeria, Burkina Faso, and France. However, ethnic disturbances continued in the south of the country.

In late 1994, disagreements between the president and the leadership of the National Assembly resulted in a political stalemate lasting throughout 1995. In the legislative elections of 12 January 1995, the AFC succumbed to factionalism allowing the MNSD to win a slight majority (29 seats). The MNSD formed a ruling coalition with its allies in the Democratic and Social Convention (24 seats). However, the two sides fought over the appointment of a prime minister, and then-prime minister, Hama Amadou, and President Ousmane fought over IMF austerity measures. In January 1996, Colonel Ibrahim Baré Maïnassara (known as Baré) toppled Ousmane and dissolved the Assembly. The military regime suspended political parties and civil liberties, and placed the president, prime minister, and president of the Assembly under house arrest. Despite Baré's pledge to restore democracy, donors cut assistance to Niger.

In May 1996, voters approved a new constitution that strengthened the powers of the executive. However, only 40% of the electorate voted. Baré lifted the ban on political parties, and in the July elections, despite evidence of massive fraud, declared himself the winner with 52% of the vote. Ousmane received 19% Tandja Mamadou 16%, Mahamadou Issoufou 8%, and Moumouni Amadou Djermakoye 5%. Baré's UNIRD took 52 of 83 Assembly seats in the November 1996 legislative elections.

On 9 April 1999, while boarding his helicopter, President Baré died in a hail of assassin's bullets. Political gridlock gripped the country, eroded public confidence in government, and allowed the military to intervene. The day prior to the assassination, opposition leaders had called on Baré to step down. Major Daouda Mallam Wanké said the presidential guard had opened fire in self-defense, and his junta later described the murder as an unfortunate accident. Few people believed it was, and the coup was roundly condemned by the international community. Baré's widow, Clemen Aicha Baré, filed claims against Wanké, as the prime perpetrator, and against the former prime minister Ibrahim Assane Mayaki for his alleged role in the assassination.

In October 1999, Wanké made good on his promise to return the country to civilian rule. Despite allegations of vote rigging, seven candidates contested the presidential elections. In the first round, Mamadou Tandja (MNSD) took 32.3% of the vote to Mahamadou Issoufou's (PNDS) 22.8%. In the 24 November runoff, Tandja was elected with 59.9% to Issoufou's 40.1%. Observers declared the second round free and fair. In the 24 November Assembly elections, five of seven parties won seats. The MNSD took 38 of 83 seats, the CDS 17, the PNDS 16, the RDP 8, and the ANDP 4.

The new National Assembly passed an amnesty for perpetrators of the January 1996 and April 1999 coups to avoid "the spirit of revenge or any form of resentment." Eight members of Maïnassara Baré's party dissented. Tandja said his top priority would be to work for political, social, and institutional stability, essential for national recovery.

In May 2002, Niger and Benin submitted a boundary dispute between them to the International Court of Justice in the Hague. At issue were sectors of the Niger and Mékrou Rivers and islands in them, in particular Lété Island. This dispute was resolved in Niger's favor by the Court in 2005.

On 30 July 2002, soldiers from three garrisons in the southeastern Diffa region mutinied, protesting low and overdue salaries and improper working conditions. The mutiny threatened Niamey, but troops loyal to the government put down the 10-day rebellion on 9 August. In December, at least 80 of the mutineers who were arrested in August escaped from prison.

Since then, with some exceptions, political stability prevailed. In early 2004 the government established an all-party dialogue and conflict resolution forum, the Conseil national de dialogue politique (CNDP). In May 2004 rumors of a new Tuareg rebellion surfaced following the desertion of former Tuareg rebels from the army, which coincided with armed attacks and banditry in the north. However, in July and December 2004 the country held successful local, presidential and parliamentary elections. Tandja was reelected in the presidential poll, a first for a Nigerien president.

Islamic guerrilla groups continued to operate in Niger. In early 2004, the police arrested members of the Muhajirun group, which apparently inspired by the Taliban, conducted a number of attacks in Borno state. In February and March, the Algerian Groupe salafist pour la predication et le combat (GSPC) allegedly clashed with authorities. This group had been responsible for the kidnapping of 32 tourists in early 2003 in Algeria and Mali. Livestock raiding across borders continued to be a problem as well.

Despite its convincing victory in the December 2004 polls, the ruling MNSD party faced serious social and economic challenges heading into 2006. A major food crisis in the second half of 2005 was portrayed as a famine in the international media and by UN agencies, and was strongly criticized by donor governments as the result of poor governance. Following the introduction of taxes on basic foodstuffs, the government became the target of major social protests, and ultimately had to withdraw the measures. Ultimately, an estimated 3 million of Niger's 12 million people were facing hunger, and some 32,000 children were thought to be severely malnourished. While President Tandja blamed food shortages on climatic factors and locust invasions, the main opposition party, the PNDS accused the government of diverting aid, and criticized it for its slow reaction and mismanagement of the crisis.

### 13 GOVERNMENT

The constitution of 8 November 1960 established the president of the republic, elected for a five-year term by direct universal suffrage, as chief of state and head of the executive branch. Legislative power was invested in a 50-member unicameral National Assembly. This constitution was suspended following the military coup of 15 April 1974, when the National Assembly was also dissolved. All executive and legislative power was taken over by the Supreme Military Council, composed of army officers. The president of the

Supreme Military Council was president of the council of ministers (cabinet) and head of state. Seyni Kountché held this office from 1974 to 1987. Most cabinet officers were civilians in 1987.

In 1987, a national development council was established to serve as a constituent assembly on a nonparty basis. It drafted the constitution of the Second Republic that came into force on 24 September 1989.

A national conference from July to October 1991 drafted a multiparty democratic constitution that was approved by national referendum on 26 December 1992. It established the Third Republic with a National Assembly of 83 deputies chosen by popular and competitive elections, a president likewise elected, and a prime minister elected by the Assembly. The new government with Mahamane Ousmane as its head was sworn in on 23 April 1993.

Political gridlock led to a (relatively) bloodless coup led by (then) Colonel Ibrahim Baré Maïnassara in January 1996. Within six months, the regime had drafted and submitted for national referendum a new constitution with a significantly strengthened executive. The document was approved on 12 May 1996 ushering in the short-lived Fourth Republic. In flawed elections, Baré Maïnassara declared himself winner over four other candidates on the first round, and his UNIRD party won a majority of seats in the Assembly.

Baré Maïnassara was assassinated on 9 April 1999 by his presidential guard. Major Daouda Wanké reappointed Ibrahim Assane Maiyaki as prime minister for the transition government. He then appointed a transitional cabinet consisting of 20 members, most of whom were civilian. Wanké also replaced 7 of Niger's regional military leaders. He announced that he would not run for the presidency and disqualified all military and security personnel, as well as all members of the transitional government from standing for election. Wanké named a 60-member independent national election commission to oversee the establishment of the election roles and the polling. The CRN renounced any form of remuneration during the transition period and moved to reduce by half the salaries of future members of government.

The constitution of the Fifth Republic, adopted 18 July 1999, provides for a semi-presidential government. The president, who may stand for two five-year terms, is head of state, and appoints the prime minister (head of government) from a list of three candidates proposed by the parliamentary majority. The president names all 23 cabinet ministers and other high-ranking civilian and military officials. Presidential actions must be countersigned by the prime minister. The National Assembly can unseat the prime minister through a no-confidence vote. The president can dissolve the 113-member (expanded from 83) National Assembly, assume emergency powers, and convene the Council of the Republic in the event of a constitutional crisis. The National Assembly has the power to pass a motion of no confidence in the government.

This Fifth Republic constitution created four new bodies: the Constitutional Court, the Superior National Defense Council, the Council of the Republic (a conflict resolution body), and the Economic, Social, and Cultural Council. The Council of the Republic was created to end the political impasse that brought down the Third Republic through the military coup in 1996. Amnesties for those involved in both the 1996 and 1999 coups were part of the constitutional draft.

## <sup>14</sup>POLITICAL PARTIES

Parties emerged only after World War II. In 1946, the African Democratic Rally (Rassemblement Démocratique Africain—RDA) became dominant with the help of several labor unions. By 1948, its popularity waned, and the Niger Progressive Party (Parti Progressiste Nigérien or PPN), the local branch of the RDA, was unable to reelect its candidate to the French National Assembly. Meanwhile, other parties, based on regional interests, gained strength.

In 1957, Djibo Bakary, the leader of a dissident RDA group, helped form a socialist party that became known as the Party of the African Regrouping (Parti du regroupement africain or PRA). Branches were quickly established in most of the other French-African territories.

Shortly before the voting on the French constitution in September 1958, the PPN joined with chiefs and dissident PRA members to form a coalition, the Union for the Franco-African Community (Union pour la Communauté Franco-Africaine), led by Hamani Diori, leader of the PPN. On 14 December 1958, the PRA group (known as the Sawaba), led by Djibo Bakary, was defeated by the new coalition, which won 54 of the 60 seats in the Assembly. Following full independence, Diori became president of the republic. Diori consolidated the position of the PPN by allying himself with Niger's powerful Muslim traditional chiefs, exiling Bakary, and banning the Sawaba in 1959. In 1964 and 1965, Bakary organized attacks from abroad on Diori's life.

The PPN became the only legal party under the Diori regime. In the October 1970 elections, Diori won 99.98% of the votes cast, and the PPN won 97.09% of the votes cast for the National Assembly. After the coup of 15 April 1974, the military government suppressed all political organizations in the country. Both Diori and Bakary (who returned from exile) were imprisoned until 1980.

In 1989, Seybou created the National Movement for a Developmental Society (MNSD). The MNSD was intended to be the sole legal party, but the constitutional referendum of December 1992 authorized a multiple party system. In the legislative elections on 12 January 1995 some 774 candidates ran for 83 Assembly seats. The MNSD won a slight majority (29 seats) and formed a coalition with the Democratic and Social Convention or CDS (24 seats). The coalition was factious, and in January 1996, leaders of a military coup dissolved the Assembly, overthrew the president, and banned political parties. Following the approval of a new constitution in May, political parties once again were allowed to exist.

In flawed presidential elections in July 1996, Baré Maïnassara took 52.22%, Mahamane Ousmane 19.75%, Mamadou Tandja 15.65%, and two other candidates took the remaining 12% of the vote. Legislative elections were held again in November 1996 for the reinstated 83-seat National Assembly. The pro-Maïnassara National Independents Union for Democratic Renewal (Union Nationale des Independents pour la renouveau democratique or UNIRD) won 52 seats, the Nigerian Alliance for Democracy and Progress-Zaman (ANDPS-Zaman Lahiya) 8, Union of Patriots, Democrats, and Progressives (Union des Patriotes Démocratiques et progressistes or UPDP-Shamuwa) 4, Union for Democracy and Social Progress (Union pour la démocratie et le progrès social or UDPS-Amana) 3, coalition of independents 3, with the remaining 6 seats divided among three other parties.

In the October–November 1999 presidential elections, Mamadou Tandja won convincingly with 32.3% on the first round and 59.9% on the second. Mahamadou Issoufou (Nigerien Party for Democracy and Socialism—PNDS) came in second with 22.8% and 40.1%. The others were Mahamane Ousmane (CDS) with 22.5%, Hamid Algabid (Rally for Democracy and Progress or Rassemblement pour la Démocratie et le Progrès—RDP) with 10.9%, Mumouni Djermakoye Amadou (ANDP) with 7.7%, Andre Sali-fou (UDPD) with 2.1% and Amadou Ali Djibo (Union des Nigériens Indépendants or Union of Independent Nigerians—UNI) with 1.7% of the vote.

A new political landscape emerged after the elections. The CDS of former president, Ousmane, rallied behind the MNSD to catapult Tandja and the MNSD to victory in the 24 November second round. Formerly, the CDS was pitted against the MNSD as part of the Alliance du Changement (AC) in the multiparty elections of 1991. Ousmane and Tandja were sworn enemies until General Baré's coup ousted Ousmane in 1996. The coup threw the CDS and the MNSD into the opposition, and made them both members of the umbrella alliance, the Front pour la Restauration et Défense de la Démocratie (FRDD) to compete in the elections in November 1996. The FRDD had comprised eight parties including the MNSD the CDS, and Issoufou's party, the PNDS.

In the National Assembly elected on 24 November 1999, 5 of 19 contending parties won seats. The MNSD took 38 of 83 seats, the CDS 17, the PNDS 16, the RDP 8, and the ANDP 4. Thus, the MNSD-CDS coalition had 55 of 83 seats. With its 16 seats, Issoufou's PNDS took leadership of the opposition coalition. The main allies of the opposition were the RDP and the ANDP bringing the coalition to 30 seats.

The November–December 2004 general elections saw the reelection of Mamadou Tandja and reinforced the dominance of the ruling coalition, the Alliance des forces démocratiques (AFD), comprising five parties led by the MNSD. Tandja won with 65.5% of the vote to 34.5% for Mahamadou Issoufou. In the legislative contest, the MNSD took 47 seats followed by the CDS, 22; the PNDS (the main opposition party) 17; the Social and Democratic Rally, 7; the RDP, 6; the ANDP, 5; and the Party for Socialism and Democracy in Niger, 1; other, 8. In all, the ruling coalition secured 88 of 113 seats. The next elections were scheduled for December 2009.

## 15 LOCAL GOVERNMENT

Niger consists of 8 regions (departments), subdivided into 36 districts (*arrondissements*) and a capital district. Democratization and demands for better governance has led to decentralization and popular participation in local government. However, devolving authority from the national level required adequate electoral safeguards. In 1999, the Supreme Court ordered a rerun elections in five regions. Opponents objected on the grounds that their candidates had held a clear lead over those of the president's party. The ensuing deadlock contributed to the crisis of government and to the 9 April coup.

## 16 JUDICIAL SYSTEM

The legal system, which is seriously under-resourced and subject to executive pressures and corruption, mirrors French civil law with important customary-law modifications. The High Court of

Justice, which is appointed by the National Assembly from among its own membership, is empowered to try the president and members of the government for crimes or offenses committed in performance of their official duties. Defendants and prosecutors may appeal verdicts from lower courts, first to the Court of Appeals and then to the Supreme Court, which sits as the highest court of appeal. The seven-member Constitutional Court has jurisdiction over electoral and constitutional matters, including ruling on the constitutionality of laws and ordinances, as well as compliance with international treaties and agreements. A Court of State Security tries crimes against the state.

Notably, the Constitutional Court has overruled several presidential decrees, rejected more than one-third of the candidates in the local elections in April 2004, and forced the government to change the electoral code and reschedule the local elections.

Traditional and customary courts hear cases involving divorce or inheritance. There are no religious courts. Customary courts, located in larger towns and cities, are presided over by a legal practitioner with basic legal training who is advised about local tradition by a local assessor. The actions of chiefs in traditional courts and of the presiding practitioner in customary courts are not regulated by the code provisions. Appeals can be taken from both customary and traditional courts to the formal court system.

## 17 ARMED FORCES

Niger's armed forces totaled 5,300 active personnel in 2005, with 5,200 serving in the Army and the remaining 100 personnel in the Air Force. Paramilitary forces numbered 5,400 including the gendarmerie (1,400), the Republican Guard (2,500), and the National Police (1,500). Niger participated in four UN peacekeeping missions in Africa. In 2005, the defense budget totaled \$30.6 million.

## 18 INTERNATIONAL COOPERATION

Niger was admitted to the United Nations on 20 September 1960, and is a member of ECA and several other nonregional specialized agencies, such as the FAO, ILO, the World Bank, IAEA, UNESCO, UNIDO, and the WHO. Niger is also a member of the WTO, the African Development Bank, the West African Development Bank, the ACP Group, ECOWAS, G-77, the Community of Sahel and Saharan States (CENSAD), the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), the West African Economic and Monetary Union, the Niger River and Lake Chad Basin Commissions, and the African Union. It has joined with Benin, Côte d'Ivoire, Burkina Faso and Togo in the Council of the Entente, a customs union with a common solidarity fund. The nation is part of the Franc Zone.

Niger is a member of the Nonaligned Movement. The government has offered support to UN missions and operations in Liberia (est. 2003), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 1999). In environmental cooperation, Niger is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Niger is an arid, landlocked country with much of its territory forming a portion of the Sahara. Most of its people live in a mar-

ginally productive and highly drought-prone band of arable land along Niger's southern border with Nigeria. Although at one time uranium mining was a mainstay of the Niger economy, revenues from uranium dropped by almost 50% in the late 1980s due to a decline in world demand for uranium. Export earnings declined from 22% of GDP in 1987 to 16% of GDP in 1998. In 2001 GDP grew by 7% but declined to 3.8% growth in 2005. Subsistence agriculture prevails in the less than 3% of the country that is under cultivation. Agriculture and livestock production employed an estimated 95% of the labor force in 2005.

In January 1994 France devalued the CFA franc, causing its value to drop in half overnight. The devaluation of the CFA franc improved Niger's trade relationship with Nigeria, and boosted revenue from the export of such products as livestock, peas, onions, and the cotton industry. As of 2003, Niger had yet to recover from the devaluation, in 1993 the current account to GDP ratio was close to zero, afterwards reaching an average negative 10%. Exports could not keep pace with the rising price of imports.

The Niger economy relies on bilateral and multilateral aid, and the government has been encouraged to restructure the economy by the International Monetary Fund and the World Bank. With a history of military rule, and a bad debt repayment record, foreign aid has been slow coming. However, Niger became eligible for debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative in 2000, in the amount of \$115 million. The fact that population growth has outpaced GDP has been a cause of Niger's increasing poverty.

The restoration of democratic rule in 2000 saw an increase in foreign aid. The government's privatization of state-owned enterprises, particularly in the telecommunications and electricity sectors, was to promote investment in 2003, as was exploration for gold deposits and oil. An increase in tourism to Niger's scenic northern desert has been diversifying the economy.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Niger's gross domestic product (GDP) was estimated at \$10.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$900. The annual growth rate of GDP was estimated at 3.8%. The average inflation rate in 2004 was 0.2%. It was estimated that agriculture accounted for 39% of GDP, industry 17%, and services 44%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$8 million or about \$1 per capita and accounted for approximately 0.3% of GDP. Foreign aid receipts amounted to \$453 million or about \$39 per capita and accounted for approximately 16.7% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Niger totaled \$2.29 billion or about \$194 per capita based on a GDP of \$2.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an

average annual rate of 1.8%. It was estimated that in 1993 about 63% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2002 (the latest year for which data was available), an estimated 70,000 individuals out of a workforce estimated in 1998 (the latest year for which data was available) at 5 million, received a regular wage or salary. About 90% of the country's workforce was engaged in agriculture, with industry and commerce accounting for 6% and government 4%. There is no data available as to the country's unemployment rate.

The Union of Workers' Syndicates of Niger (Union des Syndicats des Travailleurs du Niger—USTN) is the only trade union federation. It was founded in Niamey in 1960 and is affiliated with the African Trade Union Confederation. USTN has 38 member unions. Its head is appointed by the government. Unions represent a very small segment of the population, most members are government workers. Except for police and security forces, employees are permitted to engage in strikes.

The minimum wage varies for each class and category of salaried employees. The lowest minimum wage was approximately \$33 per month in 2001, which does not provide a family with a decent standard of living. The legal workweek is 40 hours for most occupations, with some legal workweeks extending to 72 hours. The minimum age for employment is 14 years old. This is observed in the formal sector of the economy, but child labor persists in the informal economy and in agriculture.

## 2<sup>2</sup> AGRICULTURE

Although only 2.8% of Niger's area is cultivated, farmers increased their production following the 1968–75 drought, and in 1980, the country became self-sufficient in food crops. The most plentiful rains in 30 years fell during the 1992–1993 season, pushing agricultural production up by 64%. Irrigation and off-season farming projects are of keen interest to the government and foreign donors. During 1990–2000, agricultural production grew by an annual average of 3.2%. Almost 90% of the active population is engaged in crop cultivation or animal husbandry. Agricultural techniques are still rudimentary; there are a few tractors in use (only 128 in 2003), and most farmers do not keep draft animals. Very little fertilizer is used. Irrigated land in 2003 totaled about 73,000 hectares (180,000 acres). Only 12% of Niger's total land area, located along the southern border, is potentially useful for rainfed cultivation. Over 95% of agriculture is on farms of less than five hectares (12 acres), with the average about three hectares (7.5 acres). Production of millet, the staple food of most of the people, depends heavily on rainfall. In 2004, millet production was 2,500,000 tons, sorghum was 580,000 tons, and rice was 76,500 tons. Other crops (with their estimated output) include cassava (100,000 tons), sugarcane (220,000 tons), lettuce (140,000 tons), and sweet potatoes (30,000 tons). Cowpeas are an important crop, but are only competitive as an export in neighboring Nigeria's market due to transportation costs. The government of Niger is encouraging crop diversification and the raising of export crops like onions, garlic, peppers, and potatoes, in addition to cowpeas.

Peanuts, formerly the main source of agricultural export revenue, are planted mainly in the Zinder area. Production increased from 8,980 tons in 1945 to a high of 298,000 tons in 1967. Be-

cause of a lack of producer incentives, production declined to only 87,000 tons in 1982, and only a fraction of that total was delivered to the government marketing agency, SOMARA, which had a monopoly on pricing and marketing peanut products until 1986. Production was reported at 110,000 tons for 2004.

Cotton, introduced in 1956 to reduce Niger's dependence on peanuts, has also suffered from lack of grower incentives. Production of seed cotton rose from 218 tons in 1956 to 6,682 tons in 1967 but was only around 10,000 tons in 2004.

### 2<sup>3</sup> ANIMAL HUSBANDRY

Almost half the land area of Niger is classified as pasture, but, like agriculture, animal husbandry has suffered greatly from insufficient rainfall. In 2005 there were an estimated 2.2 million head of cattle, 6.9 million goats, 4.5 million sheep, and 420,000 camels. About 12% of Niger's GDP comes from livestock production, which engages 29% of the population. Official statistics of Niger seriously underrepresent total exports—most animals are herded across borders without documentation.

Meat production, which had dropped to 38,000 tons in 1973, was an estimated 133,000 tons in 2005. Production of milk from goats and cows came to 105,000 and 184,000 tons, respectively. Cattle hides came to about 5,600 tons; sheepskins, 1,900 tons; and goatskins, 4,200 tons. There is a tannery at Maradi. Sandals, briefcases, and fine ladies handbags of high quality are produced in small numbers but seldom exported.

Meat exports are inspected and controlled by the customs service before leaving the country. Only inspected, tuberculin-tested cattle are used in export meat production. The Niger River valley south of Say is infested by the tsetse fly, and trypanosomiasis is, therefore, a major cattle disease.

### 2<sup>4</sup> FISHING

There is no commercial fishing on a wide scale, but fishing is an appreciable source of revenue for the Sorko on the Niger River and the Boudouma on Lake Chad. The fishermen on Lake Chad consume most of their catch. Most of the total annual catch of 55,900 tons in 2003 was from the Niger River and its tributaries; a small amount is from the Lake Chad region.

### 2<sup>5</sup> FORESTRY

The forest domain is only about 1% of Niger's surface. Roundwood production was estimated at 9,006,000 cu m (318 million cu ft) in 2004, 95% for fuel. Small amounts of gum arabic are extracted from acacia trees. Some tree planting has been undertaken, mainly with acacia species, but deforestation remains a serious problem. About 1,328 hectares (3,281 acres) were reforested annually during 1990–2000 and hundreds of thousands of trees have been planted, but these are highly vulnerable to drought.

### 2<sup>6</sup> MINING

Uranium dominated Niger's mining sector, ranking it fifth in the world in terms of production. Uranium mining was the country's leading industry in 2003, as well as its leading export commodity, accounting for around 32% of exports in 2003. In 2003, Niger produced 3,143 metric tons of uranium. A uranium boom occurred in the late 1970s, but with the reduction in world demand in the 1980s, prices fell, although the government was partly protected

by contracts negotiated earlier. Cement, brick, and chemical production were other leading industries, and Niger also produced clays, bituminous coal, gold, gypsum, limestone, molybdenum (in connection with uranium ore), phosphate rock, salt, sand and gravel, stone, cassiterite tin, and tungsten (and, at times, columbite, in connection with cassiterite).

Although uranium was the only mineral to be significantly developed, Niger was rich in a number of other minerals. The country's first gold mine, the Samira Hill open pit, was opened in 2000 by Niger's prime minister, and intended to produce 10,000 tons per day of ore. The combined reserves of Samira Hill and the nearby Libiri deposit were 10.1 million tons (2.2 grams per ton of gold). Gold output in 2003 was officially estimated at 28 kilograms. However, it is estimated that actual gold production is around 1,000 kg annually, if unreported output is included. In addition, there were some natron and sodium sulfate deposits, an estimated 650 million tons of iron ore deposits at Say, near Niamey, and 400 million tons of phosphate deposits in "W" National Park, in the Niger River Valley. There were also unexploited deposits of manganese, lithium, copper, zinc, lead, silver, cobalt, kaolin, feldspar, gypsum, limestone, marble, and clay.

### 2<sup>7</sup> ENERGY AND POWER

Even though it has proven crude oil reserves, the country has no refining capacity and imports all the refined oil it consumes.

As of 1 January 2003, Niger had proven crude oil reserves of 300 million barrels. However, the lack of any refining capacity and the untapped reserves means that the country is totally reliant upon imports of refined petroleum. In 2002, imports and demand for refined petroleum products each averaged 5,300 barrels per day.

Niger produced only a small amount of coal in 2002. Output and demand for coal in that year each came to 194,000 short tons. There were no recorded imports, production, or consumption of natural gas in 2002 by Niger.

Niger's electric power generating sector is completely reliant upon fossil fuels. Of the nation's 0.105 million kW of generating capacity all was fossil fuel dedicated. In 2002, electric power output totaled 0.228 billion kWh, of which consumption that year totaled 0.292 billion kWh. Imports of electric power in that year totaled 0.080 billion kWh.

### 2<sup>8</sup> INDUSTRY

Niger's manufacturing sector is small and consists mainly of the processing of domestic agricultural commodities. Agricultural products are processed at a groundnut oil plant, rice mills, flour mills, cotton gins, and tanneries. A textile mill and a cement plant operate, and light industries produce beer and soft drinks, processed meats, noodle products, baked goods, soaps and detergents, perfume, plastic and metal goods, farm equipment, canned vegetables, pasta, and construction materials. The 1994 devaluation of the CFA franc made light manufacturing more competitive by decreasing the cost of local inputs by 50%, but also raised the price of imports dramatically. There is potential for development of fertilizer, seed, and equipment production in the agribusiness

sector. There is a small cotton industry. Oil exploration has taken place, but as of 2005, no proven reserves had been discovered.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Niger relies heavily on foreign sources for technical expertise, and French agencies are especially active; the Bureau of Geological and Mineral Research, the French Company for the Development of Textile Fibers, the Institute of Fruit and Citrus Fruit Research, and the French Institute of Scientific Research for Development and Cooperation all have offices in Niamey.

The National Institute of Agronomical Research of Niger, in Niamey, maintains two soil-science stations, at Tarka and Kolo. There is also a national office of solar energy and a veterinary laboratory in Niamey. The Livestock Service of Niger has a Sahelian experimental station at Filingué for breeding zebu cattle and a center for goat breeding and poultry raising at Maradi. The University of Niamey, founded in 1971, includes faculties of science, agronomy, and health services, and institutes of radioisotopes and of research on the teaching of mathematics. In 1987–97, science and engineering students accounted for 32% of college and university enrollments. The National Museum of Niger, founded in 1959 in Niamey, has a zoo, a geological and mineral exhibition, and paleontology and prehistory museums.

## 3<sup>0</sup> DOMESTIC TRADE

The main domestic commercial center in Niger is in the capital city of Niamey. Merchants and peddlers in the small villages sell such items as beverages, cigarettes, soap, cloth, perfume, and batteries. About 90% of the work force is employed in subsistence farming and only 6% are involved in industry and commerce. Large foreign concerns (usually French-owned) import products to be sold in stores in Niamey and in the secondary cities. In 1997 and 2000, the government made revisions to its investment code in an effort to encourage much needed foreign investment.

The work day is typically from 7:30 AM to 12:30 PM, and 3:30 PM to 6:30 PM in government offices, Monday through Friday. Private businesses generally are open during those hours as well.

## 3<sup>1</sup> FOREIGN TRADE

Trade figures show that uranium accounts for about 54% of exports by value. The demand for uranium has steadily decreased since the 1980s. Exports of live animals and hides (primarily to Nigeria) represent 23% of exports. Vegetables (cowpeas, onions) are also exported, accounting for 23% of exports in 2005. In 2003, Niger's exports went primarily to France (42.3%), Nigeria (28.7%), Japan (17.2%), and Spain (4.6%). Imports are led by consumer goods, primary materials, machinery, vehicles and parts, petroleum, and cereals. Imports in 2003 came mostly from France (16.4%), Côte d'Ivoire (13.9%), China (10.6%), and Nigeria (7.7%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Niger's balance of payments deficit is usually offset by large amounts of bilateral and multilateral aid. A reduction of imports, combined with small increases in the value of uranium and other

exports, is expected to improve the trade imbalance in the early 2000s.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Niger's exports was \$438 million while imports totaled \$625 million resulting in a trade deficit of \$187 million.

## 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest-BCEAO) is the bank of issue for Niger and other West African states. Niger has a monetary committee that reports to the BCEAO and works under BCEAO general rules but possesses autonomy in internal credit matters.

Two development banks remained following the collapse of the Banque de développement de la république du Niger (BDRN) in 1990: Crédit du Niger (CN), and the Caisse nationale du crédit agricole (CNCA). Three commercial banks collapsed in Niger between 1988 and early 1992: the Banque internationale pour le commerce et l'industrie-Niger (BICI-N); the Banque de crédit et

de commerce (BCC), which the African Development Bank's Nigeria Trust Fund agreed to take over following the collapse of the parent bank; and the Bank of Credit and Commerce International (BCCI). Banque Meridien-BIAO du Niger was taken over in September 1995 in a combined purchase by Banque Belgoise of Belgium, which took 35%, and Cofipa, a European investment group (15%), the remaining 50% of the equity being sold to private Nigerian interests. The bank changed its name to BIA-Niger. The Banque arabe libyenne et nigérienne pour le commerce extérieur (Balinec) was rescued in March 1992 by Libya.

Smaller commercial banks operating in 2001 included the Bank of Africa; Ecobank; Banque Islamique du Niger; Sonibank (Société Nigerienne de Banque); BCN (Banque Commerciale du Niger); and Credit du Niger.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$141.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$186.5 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

### 34 INSURANCE

As of 1986, third-party automobile liability was compulsory, and no life insurance was being written. In 1987, automobile insurance accounted for 45% of all premium revenues. In 1997, there were at least five major insurance companies operating in Niger, among them LEYMA-La Société Nigérienne d'Assurances et de Réassurances. Transport, accident, fire, retirement, and all-risk insurance products were being offered.

### 35 PUBLIC FINANCE

Budgets are nominally balanced but only through the infusion of foreign loan funds and grants. Expenditures have been severely constrained because of the fall in receipts from the sale of uranium ore due to decline in world demand. The end of the uranium boom in the late 1980s left the public sector poorly equipped to adapt, as public expenditures had focused on infrastructure and construction projects at the expense of agricultural development. Uranium exports earnings more than halved from 1987 to 1998. Niger never completely recovered from the CFA franc devaluation. Consequently, heavy foreign debts were incurred. However, the country is eligible under the IMF's Heavily Indebted Poor Countries (HIPC) initiative for enhanced debt relief, and reached decision point in January 2001 and is expected to reach completion point by September 2003. Privatization is underway in Niger, but more for budgetary and financial rather than structural purposes. As of April 2003, the Nigerien government had sold five formerly state-owned companies, including water and telephone utilities, and expected to privatize another seven companies in that year.

The US Central Intelligence Agency (CIA) estimated that in 2002 Niger's central government took in revenues of approximately \$320 million and had expenditures of \$320 million. Total external debt was \$2.1 billion.

## 36 TAXATION

Although both a proportional and a general income tax of 60% are levied, few citizens of Niger are more than marginally taxed, since their incomes are too low. The most important sources of revenue are the taxes on industrial and commercial profits and the turnover tax on domestic goods and imports. Niger has value-added tax (VAT) with a standard rate set at 17% in 2003. Other significant sources of revenue from taxes are social security contributions, the registration tax, and excises on petroleum products, alcohol, and cigarettes. The corporate tax rate is 45%.

## 37 CUSTOMS AND DUTIES

In general, two main taxes make up the tariff system. A fiscal import duty of 5–66% is applied to almost all incoming goods, regardless of origin, and serves as a source of revenue. A common external tariff (CET) of maximum 22% is levied on all goods from non-WAEMU (West African Economic and Monetary Union) countries. There are also a value-added tax (VAT) of 15–20%, a statistical tax of 1%, and a community solidarity tax of 1%. Goods imported from countries that have trade agreements with Niger pay a minimum customs duty, while those from other countries are subject to a higher general tariff. Goods from EU countries other than France are dutiable at less than the minimum.

## 38 FOREIGN INVESTMENT

Except for uranium mining, foreign private capital has not been easy to attract to Niger. Prospective investors are discouraged by Niger's periods of military rule, small markets, inadequate infrastructure, bureaucratic delays, shortage of local capital, lack of skilled labor, and exorbitant transportation costs.

Niger's investment codes are liberal, with tax relief and tariff protection depending on the level of investment. Further advantages accrue to those investing in small-scale enterprise. The government seeks foreign investment in most sectors, and private-sector investment in parastatal enterprise is welcome.

In the period 1998 to 2000, Niger's share of world foreign direct investment (FDI) inflows was only one-tenth of its share of world production of goods and services. In 1997, FDI inflow peaked at \$25.5 million, and then fell to \$9 million in 1998. In 1999, the year President Baré was assassinated, FDI inflow dwindled to \$300,000. In 2000, FDI inflow recovered to \$19.3 million, but fell to \$2 million in 2002 and then recovered to 11 million in 2003. It was estimated at \$20 million in 2004.

## 39 ECONOMIC DEVELOPMENT

Government development programs have had three basic aims: first, to diversify production of foodstuffs; second, to develop underground water resources; and third, to develop and improve the country's infrastructure. France is the leading bilateral aid donor.

In 2000, the International Monetary Fund (IMF) approved a three-year \$76 million Poverty Reduction and Growth Facility (PRGF) Arrangement for Niger, to support the government's economic reform and poverty reduction program. The World Bank, Paris Club creditors, and the African Development Bank have provided assistance to the country under the Heavily Indebted Poor Countries (HIPC) initiative. Niger has enacted revisions

to the investment, petroleum, and mining codes, with attractive terms for investors. The country depends upon foreign direct investment for economic development. As of 2002, five of twelve state-owned enterprises scheduled for privatization had been sold to private hands.

In August of 2005 an IMF mission visited Niamey the capital of Niger to evaluate Niger's performance under its poverty reduction and growth facility (PRGF). It was determined that as a result of the food crisis, budget implementation was weaker than targeted, but more importantly the first review of the PRGF has not yet been concluded. Niger is ranked bottom of the UN's Human Development Index for 2005. According to the World Investment Report published by the UN Conference on Trade and Development, Niger was among the weakest countries in sub-Saharan Africa at attracting foreign direct investment in 2004.

#### 40 SOCIAL DEVELOPMENT

The National Social Security Fund provides pensions, family allowances, maternity benefits, and workers' compensation for employed persons, technical students and apprentices. These programs are financed by a 1.6% contribution from employees, and 2.4% contribution of payroll from employers. There is a special system for civil servants. Retirement is set at ages 58–60. These programs apply only to the minority of citizens who are formally employed, and subsistence farmers are excluded.

In 2004, a separate Ministry of Women's Promotion and Child Protection was established to promote and protect women and children. Women face both legal and social discrimination, particularly in rural areas. Men are recognized as the legal head of household, and in cases of divorce, the husband receives custody of all children under eight years of age. According to Islamic family code, men have preferential inheritance and property rights. Domestic abuse is common and women do not seek redress due to ignorance of the legal system and social stigmatization. Marriages at an early age are common, and young girls may be sent to live with her husband's family from the age of ten. Female genital mutilation, a practice that is both painful and potentially life threatening, is practiced by some ethnic groups.

Prison conditions are poor and facilities are overcrowded. International human rights organizations are permitted to visit facilities. Human rights in Niger are improving.

#### 41 HEALTH

In 2004, there were approximately three physicians per 100,000 people. In addition, there were only 23 nurses, four midwives and fewer than one dentist or pharmacist per 100,000 population. Total health care expenditure was estimated at 2.6% of GDP. Approximately 59% of the population had access to safe drinking water and only 20% had adequate sanitation.

Immunization rates for children up to one year old included: diphtheria, pertussis, and tetanus, 28%, and measles, 42%. About 40% of children under five years old are considered malnourished. The goiter rate was 35.8 per 100 school-age children.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 50 and 4.8 per 1,000 people. Only 8% of married women (ages 15 to 49) used contraception and the fertility rate was 7.2 children per woman during her childbearing years. In 2005 the average life expectancy was 43.50 years and the infant

mortality rate was 119.69 per 1,000 live births. Maternal mortality was 590 per 100,000 live births. Common diseases reported in Niger were measles, guinea worm, leprosy, and deaths from diarrheal diseases. As of 2004, there were approximately 70,000 people living with HIV/AIDS in the country. The HIV/AIDS prevalence was 1.20 per 100 adults in 2003. There were an estimated 4,800 deaths from AIDS in 2003. In Niger, 20% of women suffer from female genital mutilation. No government laws prohibit this procedure.

#### 42 HOUSING

According to the latest available information, for 1980–88 Niger's housing stock totaled 1,400,000 with 4.6 people per dwelling. The government has been working on projects to increase housing, particularly for low-income families, through the Federal Housing Authority, created in 1976. The Crédit du Niger offers housing loans.

Most government buildings and many houses in the metropolitan centers are essentially French in style. The Tuareg nomads live in covered tents, while the Fulani live in small collapsible huts made of straw mats. The villagers in the east live in round straw huts. In the center of the country, villagers construct houses of "banco," a mixture of mud and straw that has, when dried, a hard, cement-like consistency.

#### 43 EDUCATION

The educational system is patterned on that of France, but changes are gradually being introduced to adapt the curriculum to local needs and traditions. Schooling is compulsory for six years for children ages 6 to 12. While primary schooling lasts for six years, secondary lasts for seven years (in two cycles of four and three years). The academic year runs from October to June. In 2001, less than 2% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 38% of age-eligible students; 45% for boys and 31% for girls. The same year, secondary school enrollment was about 6% of age-eligible students; 7% for boys and 5% for girls. It is estimated that about 25.6% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 42:1 in 2003; the ratio for secondary school was about 30:1.

In 1963, the National School of Administration was founded in Niamey. The Université Abdou Moumouni, Niamey is the primary institution of higher learning. The Islamic University of West Africa at Say, mostly financed by the Organization of the Islamic Conference, was inaugurated in 1987. In 2001, about 1% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 14.4%, with 19.6% for men and 9.4% for women.

As of 2003, public expenditure on education was estimated at 2.3% of GDP.

#### 44 LIBRARIES AND MUSEUMS

There are state-run libraries in the large municipalities, as well as libraries maintained by religious orders, the military, and professional and other groups. The Regional Center of Research and Documentation for the Oral Tradition, in Niamey, was founded in cooperation with UNESCO in 1968; it preserves the oral history

of West Africa and has a library of 5,000 volumes. Abdou Moumouni University in Niamey holds 25,000 volumes. The French Cultural Center in Niamey also holds 25,000 volumes.

The National Museum of Niger, which has ethnographic and paleontological exhibits, is also in Niamey, as are a zoo, botanical gardens, craft workshops, and youth training centers. There are regional museums throughout the country, including the National Museum of Colonial History in Aba, the Archeology Museum in Nsukka, and the National War Museum of Umuahia, and a regional museum in Zinder.

#### 45 MEDIA

In 2003, there were an estimated two mainline telephones for every 1,000 people. The same year, there were approximately two mobile phones in use for every 1,000 people.

The Voice of the Sahel and Télé-Sahel, the government's radio and television broadcasting units, respectively, broadcast in French, Djerma, Hausa, Tamachek, Kanuri, Fulfuldé, Toubou, Gourmantché, and Arabic. There are several private stations. As of 2001, there were 5 AM and 6 FM radio stations. In 2002 there were three television stations. In 2003, there were an estimated 122 radios and 10 television sets for every 1,000 people. The same year, there was less than one personal computer for every 1,000 people and one of every 1,000 people had access to the Internet.

Major publications include the daily, *Le Sahel*, with a 2002 circulation of about 5,000, and the weekly *Le Sahel Dimanche* (3,000); a monthly, the *Journal Officiel de la République du Niger*, is also published. All are government publications. There are about 12 private publications, usually published weekly or monthly. These include *Le Republicain* (3,000) and *La Tribune du Peuple* (3,000).

The 1996 constitution provides for freedom of speech and the press, though the current government is said to limit press freedom and stifle political discussion through intimidation, harassment, and detention.

#### 46 ORGANIZATIONS

The Chamber of Commerce, Agriculture, Industry, and Handicrafts of Niger has headquarters at Niamey. There are also chambers of commerce in Agadez, Maradi, Tahoua, and Zinder. National youth organizations include the National Samariya Youth Movement, the Nigerien Student Union of the University on Niamey, Junior Chamber, and the Scout Association of Niger. There are several active sports associations within the country. There are several women's organizations promoting equal rights and government participation for women. The World Conservation Union has an office in Niamey. There are national chapters of the Red Cross Society and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

The government has promoted both domestic and international tourism since 1984. The "W" National Park along the Niger River

offers views of a variety of fauna, including lions, baboons, elephants, 300 species of birds, and 450 plant species. Other tourist attractions include Agadez's 16th-century mosque, one of the oldest in West Africa; villages built on piles in Lake Chad; the annual six-week gathering of nomads near Ingal; the Great Market and Great Mosque in Niamey, and the Sahara desert. Nigeriens engage in game hunting, fishing, swimming, and a variety of team sports. Visas are required for most travelers, as is a vaccination certificate for yellow fever and possibly cholera.

There were 39,000 foreign visitors who arrived in Niger in 2002. Hotel rooms numbered 1,472 with 2,843 beds and a 44% occupancy rate in 2003. That same year the average stay was seven nights. Tourist expenditure receipts totaled \$34 million.

In 2004, the US Department of State estimated the cost of staying in Niamey at \$177 per day.

#### 48 FAMOUS NIGERIENS

Hamani Diori (1916–89), a former schoolteacher, became leader of the local section of the PPN in 1946, became president of the General Council of the Republic of Niger in 1958, and was president of the Republic of the Niger until April 1974, when he was deposed by a military coup. Seyni Kountché (1931–87) became head of state after the coup of 1974 and ruled the country until his death. Col. Ibrahim Bare Maïnassara (1950–99), who led a coup in January 1996 that ousted the democratically elected government, was assassinated in May 1999. He was succeeded by Daouda Malam Wanké, head of the presidential guard, who held the post until December 1999.

#### 49 DEPENDENCIES

Niger has no territories or colonies.

# NIGERIA

Federal Republic of Nigeria

**CAPITAL:** Abuja

**FLAG:** The national flag consists of three vertical stripes. The green outer stripes represent Nigerian agriculture. The white center stripe represents unity and peace.

**ANTHEM:** *Arise, All Compatriots.*

**MONETARY UNIT:** On 1 January 1973, the Nigerian pound (₦) was replaced by the naira (₦) of 100 kobo at a rate of ₦2 = ₦1. There are coins of ½, 1, 5, 10, 25, and 50 kobo and 1 naira, and notes of 5, 10, 20, and 50 naira. ₦1 = \$0.00754 (or \$1 = ₦132.59) as of 2005.

**WEIGHTS AND MEASURES:** As of May 1975, the metric system is the official standard, replacing the imperial measures.

**HOLIDAYS:** New Year's Day, 1 January; National Day, 1 October; Christmas, 25 December; Boxing Day, 26 December. Movable Christian religious holidays include Good Friday and Easter Monday; movable Muslim religious holidays include 'Id al-Fitr, 'Id al-Adha, and Milad an-Nabi.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located at the extreme inner corner of the Gulf of Guinea on the west coast of Africa, Nigeria occupies an area of 923,768 sq km (356,669 sq mi), extending 1,127 km (700 mi) E–W and 1,046 km (650 mi) N–S. Comparatively, the area occupied by Nigeria is slightly more than twice the size of the state of California. It is bordered by Chad on the NE, by Cameroon on the E, by the Atlantic Ocean (Gulf of Guinea) on the S, by Benin (formerly Dahomey) on the W, and by Niger on the NW and N, with a total boundary length of 4,900 km (3,045 mi), of which 853 km (530 mi) is coastline. The borders between Nigeria and Chad and Nigeria and Cameroon are disputed, and there have been occasional border clashes.

Nigeria's capital city, Abuja, is located in the center of the country.

## <sup>2</sup> TOPOGRAPHY

Along the entire coastline of Nigeria lies a belt of mangrove swamp forest from 16 to 96 km (10–60 mi) in width, which is intersected by branches of the Niger and innumerable other smaller rivers and creeks. Beyond the swamp forest is a zone, from 80 to 160 km (50–100 mi) wide, of undulating tropical rain forest. The country then rises to a plateau at a general elevation of about 600 m (2,000 ft) but reaches a maximum of 2,042 m (6,700 ft) on the eastern border in the Shebshi Mountains, and the vegetation changes from woodland to savanna, with thick forest in the mountains. In the extreme north, the country approaches the southern part of the Sahara.

The Niger, the third-largest river of Africa, enters Nigeria from the northwest and runs in a southeasterly direction, meeting its principal tributary, the Benue, at Lokoja, about 550 km (340 mi) from the sea. It then flows south to the delta, through which it empties into the Gulf of Guinea via numerous channels. Other

main tributaries of the Niger are the Sokoto and Kaduna rivers. The second great drainage system of Nigeria flows north and east from the central plateau and empties into Lake Chad. Kainji Lake, in the northwest, was created by construction of a dam on the Niger above Jebba.

## <sup>3</sup> CLIMATE

Although Nigeria lies wholly within the tropical zone, there are wide climatic variations in different regions of the country. Near the coast, the seasons are not sharply defined. Temperatures rarely exceed 32°C (90°F), but humidity is very high and nights are hot. Inland, there are two distinct seasons: a wet season from April to October, with generally lower temperatures, and a dry season from November to March, with midday temperatures that surpass 38°C (100°F) but relatively cool nights, dropping as low as 12°C (54°F). On the Jos Plateau, temperatures are more moderate.

Average rainfall along the coast varies from about 180 cm (70 in) in the west to about 430 cm (170 in) in certain parts of the east. Inland, it decreases to around 130 cm (50 in) over most of central Nigeria and only 50 cm (20 in) in the extreme north.

Two principal wind currents affect Nigeria. The harmattan, from the northeast, is hot and dry and carries a reddish dust from the desert; it causes high temperatures during the day and cool nights. The southwest wind brings cloudy and rainy weather.

## <sup>4</sup> FLORA AND FAUNA

The natural vegetation is divisible into two main sections directly related to the chief climatic regions of the country: (1) high forest, including both swamp and rain forests, and (2) savanna. Along the coastal area, the mangrove tree predominates, while immediately inland is freshwater swamp forest, which is somewhat more diversified and includes varieties of palms, the abura, and ma-

hogany. North of the swamp forest lies near the rain forest, which forms a belt with an average width of some 130 km (80 mi). Here, trees reach as much as 60 m (200 ft) in height. Principal trees include the African mahogany, iroko, African walnut, and the most popular export wood, the obeche. Farther inland, the rain forest becomes displaced by tall grass and deciduous trees of small stature, characteristic of the savanna.

Few large animals are found in the rain forest; gorillas and chimpanzees in decreasing numbers are present, as well as baboons and monkeys. Reptiles abound, including crocodiles, lizards, and snakes of many species. Although many kinds of mammals can be found inland from the rain forest, these are not nearly so plentiful as in East or South Africa. Nigeria possesses two dozen species of antelope, but large concentrations of animals, even the common antelope, are rarely observed. The hippopotamus, elephant, giraffe, leopard, and lion now remain only in scattered localities and in diminishing number. Wildcats, however, are more common and widely distributed. Wildlife in the savanna includes antelope, lions, leopards, gazelles, and desert hyenas. Nigeria also abounds in bird life with a great number of species being represented.

As of 2002, there were at least 274 species of mammals, 286 species of birds, and over 4,700 species of plants throughout the country.

## 5 ENVIRONMENT

Many of Nigeria's environmental problems are those typical of developing states. Excessive cultivation has resulted in loss of soil fertility. Increased cutting of timber has made inroads into forest resources, exceeding replantings. Between 1983 and 1993 alone, Nigeria lost 20% of its forest and woodland areas. In 2000, about 14.8% of the total land area was forested.

Oil spills, the burning of toxic wastes, and urban air pollution are problems in more developed areas. In the early 1990s, Nigeria was among the 50 nations with the world's highest levels of carbon dioxide emissions, which totaled 96.5 million metric tons, a per capita level of 0.84 metric tons. However, emissions levels have since dropped significantly.

Water pollution is also a problem due to improper handling of sewage. Nigeria has 221 cu km of renewable water resources. Fifty-four percent of the annual withdrawal is used for farming activity and 15% for industrial purposes.

The principal environmental agencies are the Environmental Planning and Protection Division of the Federal Ministry of Works and Housing, and the analogous division within the federal Ministry of Industry.

In 2003, about 3.3% of the total land area was protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 25 types of mammals, 9 species of birds, 2 types of reptiles, 13 species of amphibians, 12 species of fish, 1 species of other invertebrate, and 170 species of plants. Threatened species include the drill, Presuu's red colobus, and the Ibadan malimbe. The Sahara oryx has become extinct in the wild.

## 6 POPULATION

The population of Nigeria in 2005 was estimated by the United Nations (UN) at 131,530,000, which placed it at number 9 in pop-

ulation among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.4%, a rate the government viewed as too high. The projected population for the year 2025 was 190,287,000. The overall population density was 142 per sq km (369 per sq mi), but regional differences are significant; population is densest in the south and sparsest in the north.

The UN estimated that 44% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.72%. The capital city, Abuja, had a population of 452,000 in that year. The principal cities include Lagos, the former capital and still the largest city, with an estimated metropolitan population of 14,037,000 and the highest population density of any major African urban conglomeration. Kano had a metropolitan population of 2,884,000, and Ibadan had 2,649,000.

The prevalence of HIV/AIDS has had a significant impact on the population of Nigeria. The UN estimated that 5.8% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Immigrants are drawn from neighboring nations by economic opportunity. On 17 January 1983, Nigeria, suffering from an economic crisis brought about by decreased earnings from oil, ordered all resident aliens to leave the country. Some 700,000 Ghanaians departed during the following weeks, as did smaller numbers from Benin, Cameroon, Chad, Mali, Niger, Togo, and Burkina Faso. In 1985, about 200,000 to 250,000 aliens were expelled, including about 100,000 from Ghana and 50,000 from Niger.

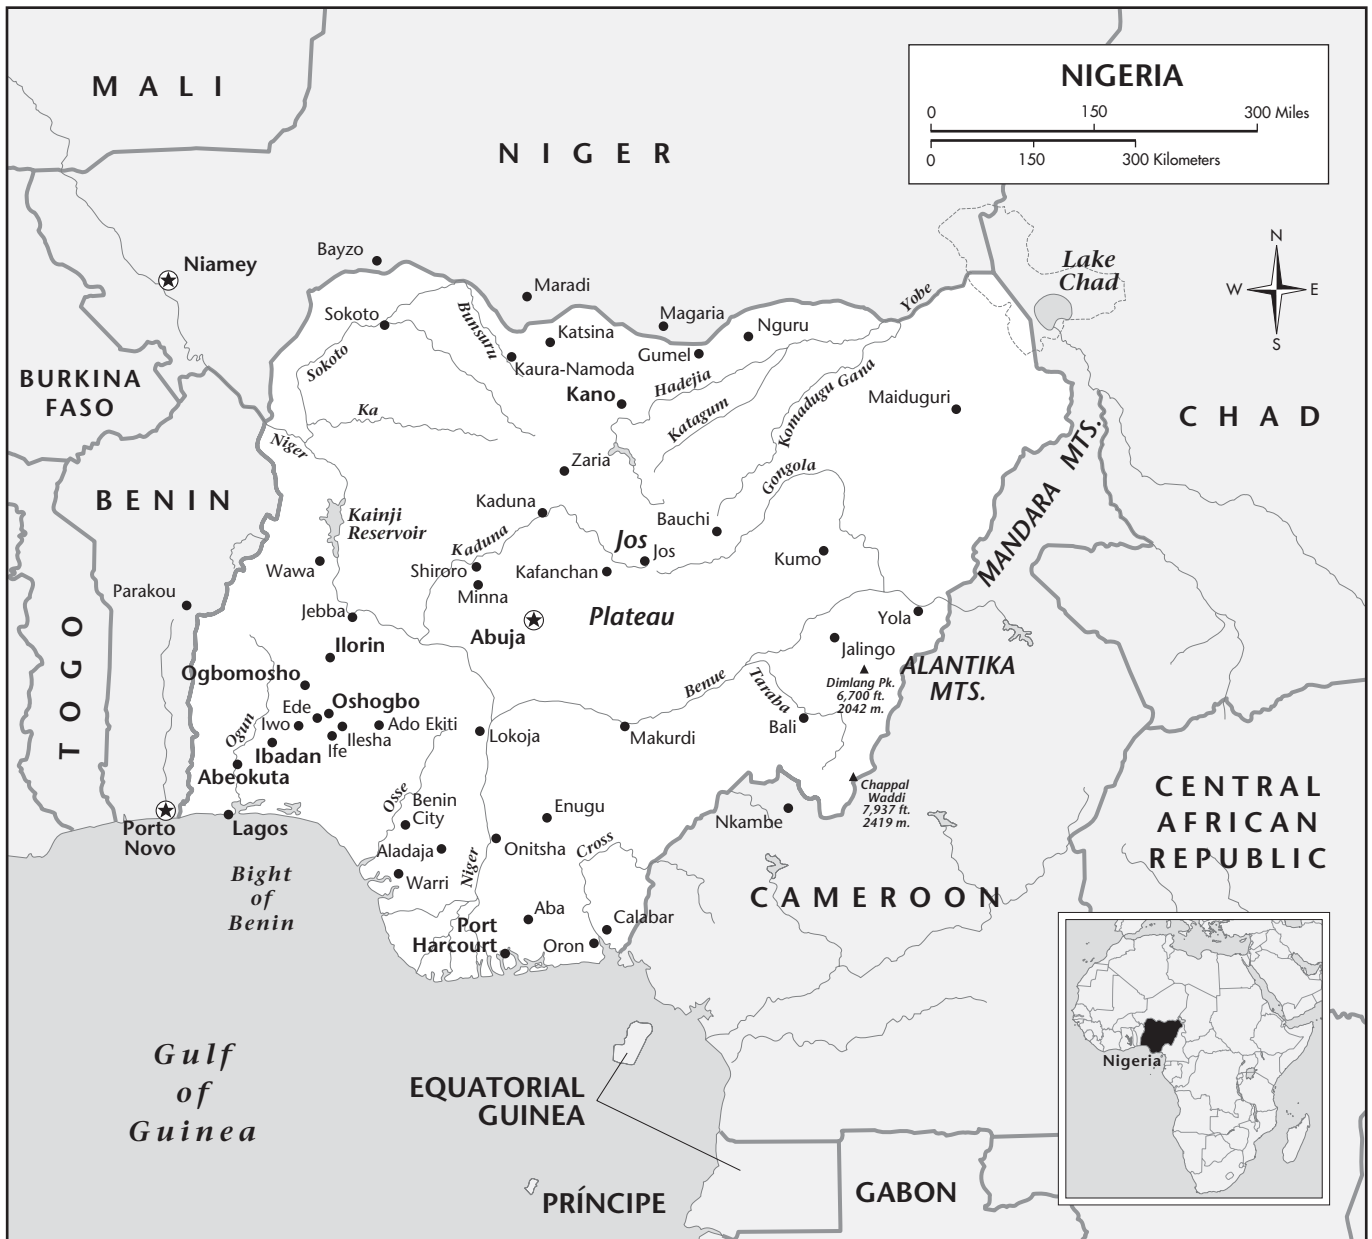

As of 2004, there were 8,395 refugees in Nigeria. Of these, some 5,341 were settled in a camp at Oru. The remainder were in Lagos or at various locations in north Nigeria. In that same year there were 1,086 asylum seekers and 364 returned refugees. In 2004, some 16,686 Nigerians were refugees in Cameroon. In that same year 17,000 Nigerians applied for asylum in 19 countries, mainly Austria, France, and Ireland, followed by other Western countries and South Africa.

The net migration rate in 2005 was an estimated 0.27 migrants per 1,000 population. Worker remittances in 2003 amounted to an estimated \$1.3 billion. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

There are more than 250 different ethnic groups within the country, none of which holds a majority. The four largest ethnic groups are the Hausa and Fulani, which together account for about 28% of the population; the Yoruba, accounting for 21% of the population; and the Ibos with 18% of the population. The Ijaw of the South Delta make up 10% of the people, followed by Kanuri (4%), the Ibibio (3.5%), and the Tiv (2.5%).

Yoruba predominate in Ogun, Ondo, Oyo, and Osun states. The Ibo (Igbo) predominate in Anambra, Imo, Abia, and Enugu states. The Hausa and Fulani constitute the largest single groups in

LOCATION: 2°30' to 14°30' E; 4°30' to 14°17' N. BOUNDARY LENGTHS: Chad, 87 kilometers (55 miles); Cameroon, 1,690 kilometers (1,050 miles); Atlantic coastline, 853 kilometers (530 miles); Benin, 773 kilometers (480 miles); Niger, 1,497 kilometers (930 miles). Broken lines indicate rivers and lakes that are dry for most of the year, only filling with water during infrequent rainy periods. TERRITORIAL SEA LIMIT: 30 miles.

Sokoto, Kaduna, Jigawa, Katsina, and Kano states. Other important groups include the Kanuri in Borno and Yobe states; the Edo (Bini) in Edo State; the Ibibio in Akwa Ibam State; the Ijaw (Ijo) in Rivers State; the Tiv in Benue and Plateau states; and the Nupe in Niger State.

**9 LANGUAGES**

The official language is English, although there are over 300 distinct indigenous tongues. Hausa is the mother tongue of more than 40% of the inhabitants of the northern states. Yoruba is commonly used in southwestern urban centers, including Lagos. Ibo

and Fulani are also widely spoken. Ethnic divisions roughly reflect the distribution of other vernaculars.

**10 RELIGIONS**

Religious affiliation in Nigeria is strongly related to ethnicity, with rather distinct regional divisions between ethnic groups. The northern states, dominated by the Hausa and Fulani groups, are predominantly Muslim while the southern ethnic groups have a large number of Christians. In the southwest, there is no predominant religion. The Yoruba tribe, which is the majority ethnic group in the southwest, practice Christianity, Muslim, and/or the traditional Yoruba religion, which centers on the belief in one supreme

god and several lesser deities. The Ibo of the east are primarily Catholic or Methodist, with some traditional practices included.

Overall statistics indicate that about 50% of the population are Muslim, with a majority practicing the Sunni branch of the faith. About 40% are Christian and about 10% practice traditional African religions or no religion at all. Many people include elements of traditional beliefs in their own practice of Christianity or Islam. The Christian community is composed of Roman Catholics (the largest denomination), Methodists, Anglicans, Baptists, Presbyterians, and members of Evangelical and Pentecostal groups.

Though the constitution prohibits state and local governments from declaring an official religion, a number of states have recently adopted various forms of the Islamic criminal and civil law known as Shariah, a move which many Christians believe to be an adoption of Islam as the *de facto* religion. The constitution also provides for freedom of religion, however, some states have restricted religious demonstrations, processions, or gatherings as a matter of public security. Business owners and public officials have been known to discriminate against individuals of a faith different than their own in matters of providing services and hiring practices. The same type of discrimination exists between members of different ethnic groups. Certain Christian and Muslim holidays are officially observed.

There is a high degree of tension between Christians and Muslims with a record of violence against both groups. However, conflicts may stem primarily from ethnic and regional differences, since there are a number of reports of violence between different ethnic groups of the same religion.

## 11 TRANSPORTATION

The main waterways are the Niger and Benue rivers and a system of navigable creeks and lagoons in the southern part of the country. The Niger is navigable to Onitsha by large riverboat and to Lokoja by barge throughout the year. Ports farther upstream on the Niger and Benue can be reached in the high-water season. Inland waterways total about 8,575 km (5,328 mi). Lagos remains Nigeria's principal port, handling more than 75% of the country's general cargo. Other ports are Port Harcourt, Calabar, and the delta port complex of Warri, Sapele, Koko, Burutu, Bonny, and Alesa Eleme. The Merchant Marine operated a fleet of 46 ships of 1,000 GRT or more, totaling 327,808 GRT in 2005. A 1987 decree requires 40% of total cargo generated by trade with Nigeria to be carried on Nigerian shipping.

As of 2004, the Nigerian railway system, the fifth-largest in Africa, was operated by the statutory Nigerian Railway Corp., which consisted of 3,557 km (2,210 mi) of narrow and standard gauge railways. Of that total, narrow gauge lines accounted for 3,505 km (2,180 mi). The greater part of the system is single tracked and consisted of two generally north-south lines, originating in Lagos and Port Harcourt. The westerly situated route ran northeast from Lagos through Ibadan, Ilorin, and Kaduna to Kano. An easterly situated line ran from Port Harcourt through Enugu and Makurdi, and joined the western line at Kaduna. Extensions carry the former north to Nguru and the latter north to Kaura-Namoda. Three branch lines connect other industrial and commercial centers to the main system. A 645-km (400-mi) extension of the Port Harcourt line from Kafanchan to Maiduguri, linking the main system with the northeastern corner of the country, was completed in

1964. However, years of neglect have seriously reduced the capacity and utility of the railway system.

Nigeria in 2002 had an estimated 193,200 km (120,054 mi) of roads, of which 59,892 km (37,216 mi) were paved, including 1,194 km (742 mi) of expressways. In 2003, some 1,108,200 vehicles were registered, including 681,200 passenger cars and 427,000 commercial vehicles.

Air traffic has been growing steadily. In 2004 there were an estimated 70 airports. As of 2005, a total of 36 had paved runways, and there was a single heliport. International service is provided from Lagos (Murtala Muhammed), Port Harcourt, and Kano airports by more than two dozen international airlines; a cargo-oriented international airport in Abuja was operational in 1987. Nigeria Airways, which operates internal Nigerian services and participates in international services, became a wholly Nigerian-owned company in 1961. Its regularly scheduled flights link Lagos and 15 of the 19 state capitals. Nigeria Airways also flies to many West African destinations, to Nairobi, Kenya, and Jiddah, Saudi Arabia, and to New York, London, Amsterdam, and Rome. In 2003, about 520,000 domestic and international passengers were carried on scheduled flights.

## 12 HISTORY

The history of Nigeria prior to the beginnings of British administration is not well documented. There is archaeological evidence, however, that an Iron Age culture had been present sometime between 500 BC and AD 200, and agriculture and livestock raising long before then. About the 11th century AD, Yoruba city-states developed in western Nigeria, and some, such as Benin, became powerful kingdoms in later centuries. During medieval times, northern Nigeria had contact with the large kingdoms of the western Sudan (Ghana, Mali, and Songhai) and with countries of the Mediterranean across the Sahara. Islamic influence was firmly established by the end of the 15th century, and Kano was famous not only as a center of Islamic studies but also as a great commercial entrepôt of the western Sudan. Until the arrival of the British, northern Nigeria was economically oriented toward the north and east, and woven cloth and leatherwork were exported as far as the North African ports of the Mediterranean. At the beginning of the 19th century, a jihad, or holy war, led by a Fulani sheikh, Uthman dan Fodio, established Fulani rule over the surviving Hausa kingdoms, until the British conquest at the end of the century.

In the south, the Portuguese were the first Europeans to establish close relations with the coastal people. In the late 15th century, they established a depot to handle trade goods and slaves from Benin. The Portuguese monopoly was broken after a century, and other European nations participated in the burgeoning slave trade. The British abolished slave trading in 1807, and thereafter British policy was directed at enforcing that ban on other nations. Interest in legitimate commerce developed slowly, but the discovery of the mouth of the Niger in 1830 provided an important impetus. The extension of British influence over Nigeria was gradual and, initially at least, unplanned. In 1861, the British annexed the island of Lagos, an important center of palm oil trade; thereafter, they gradually extended their influence over the adjacent mainland of Yorubaland.

In 1887, British influence over the eastern coast, which had been promoted since 1849 by consular agents, was regularized by the

establishment of the Oil Rivers Protectorate. This too was gradually extended inland and became the Niger Coast Protectorate in 1894. The acquisition of the interior of Nigeria, however, was accomplished largely by Sir George Goldie, founder of the Royal Niger Company, who by 1885 had eliminated commercial competition on the Niger and, by claiming treaties with responsible African authorities, had secured recognition of British influence over the Niger Basin by the European powers at the Berlin Conference. This influence was far more fancied than real; but it provided the basis for British rule over northern Nigeria, which was consolidated by a series of punitive expeditions culminating in the establishment of the Protectorate of Northern Nigeria in 1900.

The three separate administrative units were finally amalgamated in 1914 into the Colony and Protectorate of Nigeria, with Sir Frederick Lugard as governor-general. Despite the ostensible unification, the administrative individuality of the three separate regions—North, East, and West—was maintained. The chief characteristic of British rule in Nigeria was its system of local administration, known as indirect rule. In real terms though, indirect rule depended on a system of centralized political units with local (or native) chiefs at the lowest rungs of the hierarchy. It functioned well in the North, with variable success in the West, and poorly in the East.

After World War II, increasing pressures for self-government resulted in a succession of short-lived constitutions. The constitution of 1954 established a federal form of government, greatly extending the functions of the regional governments. A constitutional conference of May and June 1957 decided upon immediate self-government for the Eastern and Western regions, the Northern to follow in 1959. The step from self-government to independence was quickly taken. On 1 October 1960, Nigeria became a fully independent member of the British Commonwealth, and on 1 October 1963 it became a republic. Nnamdi Azikiwe was elected the first president of the Federal Republic of Nigeria.

Internal unrest began almost as soon as Nigeria raised its own flag; but its roots lay in the complex ethnic composition of the regions. It boiled over to resentment over the domination of the federal government by Northern elements, and culminated in a military coup on 15 January 1966. Organized by a group of Eastern junior army officers, the coup led to the deaths of the federal prime minister, Sir Abubakar Tafawa Balewa; the premier of the Northern Region, Sir Ahmadu Bello; and the premier of the Western Region, Chief S. L. Akintola. By 17 January, Maj. Gen. Johnson Aguiyi-Ironsi, commander-in-chief of the army, had suppressed the revolt and assumed supreme power. He suspended the constitution and dissolved the legislature, established a military government, and appointed military governors to replace the popularly elected civilian governors in the regions. On 29 July 1966, mutinous elements in the army, largely Northern army officers, staged a counter coup, killed Gen. Ironsi, and replaced him with Lt. Col. Yakubu Gowon as head of the military government. The July coup led to the massacre of thousands of Easterners residing in the Northern Region and to the exodus of more than one million persons (mostly Ibos) to the Eastern Region.

On 28 May 1967, Col. Gowon assumed emergency powers as head of the Federal Military Government and announced the division of the country into 12 states. The Northern Region was split into 6 states; the Mid-West, Western, and Lagos areas each became

separate states; and 3 states were formed from the Eastern Region. Rejecting the realignment, Eastern Region leaders announced on 30 May the independent Republic of Biafra, with Lt. Col. Odu megwu Ojukwu as head of state. On 6 July, the federal government declared war on the fledgling republic. By the time the war ended on 12 January 1970, Biafra had been reduced to about one-tenth of its original 78,000-sq-km (30,000-sq-mi) area; a million or more persons had perished, many from disease and starvation; many more had become refugees at home or abroad. Following the surrender, many Ibos returned to their former positions in Lagos, and Gen. Gowon's military regime sought to rehabilitate the three Eastern states as quickly as possible.

In October 1970, with the civil war behind him, Gen. Gowon set 1976 as the target date for Nigeria's return to civilian rule. Political change came slowly, however, and in October 1974, Gowon announced an indefinite postponement of plans for the transfer of power. The regime's recalcitrance in this and other areas, including its failure to check the power of the state governors and to reduce the general level of corruption, led to Gowon's overthrow on 29 July 1975. His successor, Brig. Murtala Ramat Muhammad, moved quickly in dismissing large numbers of officials, many of them corrupt and inefficient; and in establishing an ombudsman commission. One of his plans was to establish a new capital territory in the center of the country, at Abuja. On 13 February 1976, Muhammad was assassinated in the course of an abortive coup. He was replaced as head of the government by the former chief of staff of the armed forces, Lt. Gen. Olusegun Obasanjo, who pledged to carry on his predecessor's program. In March 1976, a decree established a 19-state federation. Political party activity was again permitted in late 1978, and a new constitution took effect on 1 October 1979, the day Alhaji Shehu Shagari took office as president. Leader of the conservative National Party of Nigeria, he also had the support of the Nigerian People's Party (NPP), led by former president Azikiwe. The NPP withdrew its support in 1981, leaving Shagari at the head of a minority government. In August 1983, Shagari won reelection to a second term as president; in late December, however, he was ousted in a military coup.

The new military regime, led by Maj.-Gen. Muhammadu Buhari, provoked growing public dissatisfaction because of its increasingly authoritarian character, and a military coup on 27 August 1985 brought Maj.-Gen. Ibrahim Badamasi Babangida to power. Assuming the title of president, Babangida promised greater respect for human and civil liberties; yet he banned Second Republic (1979–83) officials from participation in politics for 10 years. A return to full civilian rule was pledged by 1992, with local elections on a nonparty basis, the creation of a constituent assembly, the establishment of no more than two political parties, state elections, a national census, and finally presidential elections. The first step in the process—local elections on 12 December 1987—were marred by irregularities. To deal with Nigeria's economic troubles, stemming from the fall of world oil prices in the 1980s, Babangida inaugurated a "homegrown" Structural Adjustment Program (SAP) prompted by the IMF but not directed by them. It involved cuts in public spending, decreased state control over the economy, stimulation of exports, devaluation of the currency, and rescheduling of debt.

A mostly elected Constituent Assembly met in 1988 and approved modifications in the 1979 constitution. The process of

party formation proved awkward in a society as heterogeneous as Nigeria's. None of the 13 potential parties gained Babangida's approval. Instead, he decided to create two new parties, one "a little to the right" of center, another "a little to the left." Neither challenged government effectively.

Babangida's guided program of transition from military rule to a democratic civilian Third Republic was due for completion in 1992. But it was marked by crisis after crisis. Clashes between Muslims and Christians in 1991 and 1992 spread through northern cities. Hundreds were killed in the rioting itself and then by the army seeking to contain the riots. Pro-democracy groups also emerged across society, in part from frustration with the excesses of military rule; and because of suspicion that the military might renege on plans to turn over power to elected civilians.

In elections for state governors and assemblies, the National Republican Convention (NRC) won 13 of 30 assemblies and 16 governorships. The Social Democratic Party (SDP) carried 17 and 14, respectively. But voter indifference and fear of intimidation was high. When state governments took office, intraparty wrangling and political violence marred their performance.

Nonetheless, by January 1992, Nigerians geared up for the national presidential and legislative elections scheduled for later in the year. Nigeria's first successful census since independence (results announced in March 1992) indicated a population of 88.5 million, some 20 million fewer than estimated. The election register had to be revised downward, from 70 million to 39 million voters. On 20 May 1992, the government banned all political, religious, and ethnic organizations other than the two approved political parties.

In legislative elections held on 4 July, the left-of-center SDP won 47 of the 91 Senate seats and 310 of the 593 seats in the House of Representatives. The right-of-center NRC won 37 and 267 seats, respectively. The ruling military council pushed back the transition date until January 1993; it also postponed the inauguration of the National Assembly to coincide with the formal take-off of the Third Republic.

In August and September, the country began the process of narrowing the field of presidential candidates from 20 to 2 in preparation for the December elections. But on 17 November 1992, Babangida announced a third delay in the transfer of power from 2 January until 27 August 1993. Political violence and charges of electoral fraud disrupted the first round of presidential primaries. The second round in September was flawed, too. Faced with a virtual breakdown of the electoral machinery, the military council suspended the primary results in October. All 23 of the presidential aspirants were banned from future political competition. These disruptions were compounded by high levels of student and labor unrest, detentions of dissidents, and ethnic and religious violence. Nonetheless, the military council promised to give way to an elected civilian administration in 1993.

A new round of presidential nominations took place in March 1993. Chief M.K.O. Abiola (SDP) and Alhaji Bashir Tofa (NRC), both Muslim businessmen with ties to Babangida, won nomination. The presidential election of 12 June took place amid a flurry of legal efforts to halt it and great voter confusion. Abiola apparently defeated Tofa handily, 58.4% to 41.6% according to unofficial results.

But the National Electoral Commission set aside the results on 16 June. A week later, Babangida annulled the election citing irregularities, poor turnout, and legal complications. Abiola, backed largely by the Yoruba people, demanded to be certified as president-elect. Civil unrest followed, especially in Lagos.

After weeks of uncertainty and tension, Babangida resigned the presidency and his military commission on 26 August 1993. He handpicked a transitional council headed by Chief Ernest Shonekan. By mid-November, Gen. Sani Abacha forced Shonekan to resign and he installed himself as head of state. On 18 November 1993, he abolished all state and local governments and the national legislature. He replaced many civilian officials with military commanders. He banned political parties and all political activity and ordered strikers to return to work. The following week, he named an 11-member Provisional Ruling Council composed mainly of generals and police officials. He also created a 32-member Federal Executive Council to head government ministries. It included prominent civilians and some prodemocracy and human rights activists.

On 11 June 1994, Abiola proclaimed himself president and then went into hiding. He was arrested later that month, an action that portended much that was to come for Nigeria. Massive protests followed Abiola's arrest, but Abacha's military repressed the demonstrators violently. On 6 July Abiola pleaded not guilty to three counts of treason; the following day laborers went on strike to protest the Abacha regime. In the following months millions of Nigerian workers walked out in support of Abiola and refused to attend scheduled government talks. Abiola remained in prison through June 1996, when his outspoken wife Kudirat Abiola was assassinated. Strikes and protests continued in support of the sanctity of the vote, and of Abiola's mandate.

In August, General Abacha fired his army and navy commanders. Two weeks later he banned several newspapers, declaring that his government had absolute power and would not give in to prodemocracy demonstrators. Late in September, claiming that it was part of his plan to "rejuvenate the machinery of government," Abacha removed all civilians from his ruling council. Three months later he suspended habeas corpus and continued to round up and jail opponents. At the same time he rejected a court order demanding the release of Abiola from prison for medical treatment. In March 1995 Abacha ordered the arrest of former Nigerian leader Olusegun Obasanjo on suspicion of treason. Later in the month he dissolved labor unions and jailed their leaders. On 25 April Abacha canceled a 1 January 1996 deadline for the return of civilian rule and refused to discuss the matter. Though he lifted a ban on political parties in June 1995, Abacha placed tight restrictions on their operations. The July convictions in secret trials of 40 suspected traitors brought international condemnation and demands of leniency from critics of the Nigerian government. Ultimately Abacha relented on 1 October, commuting the death sentences of his convicted opponents and declaring that he would relinquish power to an elected government in 1998.

Despite these promises, many outside observers remained skeptical, largely due to fallout from the case of Ken Saro-Wiwa, leader of the Movement for the Survival of Ogoni People. Sentenced to death in October 1995 for a quadruple murder, many believed that Saro-Wiwa had been convicted on trumped-up charges stemming from his opposition to a proposed drilling agreement in Nigeria's

main oil-producing region. The executions in early November of Saro-Wiwa and eight others brought a torrent of criticism from the international community and resulted in Nigeria's suspension from the British Commonwealth and an embargo from the European Union on arms and aid to Nigeria. Bowing to this pressure, the Abacha government amended in May 1996 the law under which Saro-Wiwa and the others had been convicted and offered to hold talks on the matter with the United Kingdom.

Abacha announced efforts in November 1996 to spur economic change and raise living standards in the country, a pronouncement met with skepticism by an increasingly angry opposition. By December, opponents of the government detonated two bombs aimed at Col. Mohammed Marwa, head of the Nigerian military. Col. Marwa escaped both attacks.

In April 1998, four of Nigeria's five major political parties nominated Abacha as their presidential candidate. Amid opposition accusations that the transition plan was designed to prolong Abacha's rule, legislative elections held on 25 April were heavily boycotted. Nigeria's political fortunes changed suddenly on 8 June when Abacha died of an apparent heart attack. General Abdulsalami Abubakar took charge and promised to continue Abacha's transition. On 7 July, Abiola died of a suspected heart failure while still in custody.

On 20 July General Abubakar announced a new plan for return to civilian rule culminating in a transfer of power in May 1999. On 5 December local council elections took place with three parties qualifying to move on to state and national elections by winning at least 5% of the vote in 24 of 36 states. On 11 January 1999 elections for state governorships and legislatures were held.

Elections for president and the national legislature were held on 27 February 1999. Obasanjo (PDP) won the presidential elections with 62% of the vote, while Olu Falae, the candidate for the Alliance for Democracy (AD) and the All Peoples Party (APP), received 38%. Despite Falae's charges of election rigging, international observers from the Carter Center and the National Democratic Institute reported that available evidence of electoral abuse and other irregularities were unlikely to have affected the overall results. In April Olu Falae closed his case against Obasanjo after a federal appeals court in Abuja rejected two pleas. Power was handed over officially to the new government in May. Twenty heads of state attended Obasanjo's inauguration on 4 June, some two decades after he left office as a military ruler.

Obasanjo promised to restore law and order, fight corruption, and unify Nigeria's ethnically and religiously diverse peoples. The federal government increased the oil-producing states' share of revenue from 3% to 13%. However, these states were demanding a 50% share, so the increase did not resolve disputes over local ownership, control of resources, and embezzlement. In 1999, Nigeria was second on Transparency International's list of most corrupt countries (Cameroon was first).

In 1999, fighting in the Delta region killed several hundred people while outbreaks of fighting between Yorubas and Hausa in the area of Lagos resulted in hundreds more deaths. The Igbo demanded reparations of \$87 billion for the 1967–70 civil war. In February 2000, days of violent clashes between Muslims and Christians killed as many as 750 persons (mostly Igbo Christians, other southeasterners, and some Yorubas) in Kaduna, and destroyed several churches and mosques following announcements

that a fuller application of Islamic law, Shariah, would be introduced in Zamfara and at least five other northern states. The code includes punishments such as flogging and amputation, and in principle only affects Muslims, but has caused great consternation among non-Muslims.

In June and July 2001, between 100 and 200 people were killed in Nasarawa state in fighting between the Tiv and other ethnic groups. In October, more than 200 villagers were killed by the army in the east-central state of Benue in retaliation for the murder of 19 soldiers amid fighting between the Tiv and Junkun. From 7–13 September 2001 in the central city of Jos, about 915 lives were lost in inter-communal violence between Muslims and Christians, although the nongovernmental organization Human Rights Watch described the conflict as more political and economic than religious.

On 27 January 2002, more than 1,000 people died as a result of a series of explosions at an army munitions dump in Lagos. Many of the victims had fallen into a canal and drowned as they tried to leave the northern neighborhood of Ikeja. In February, some 100 people were killed in Lagos in ethnic clashes between Yorubas and Hausa. Thousands fled their homes. In November, more than 200 people were killed in riots between Muslims and Christians in Kaduna, following the publication of a newspaper article suggesting that the prophet Muhammad would have wished to marry one of the Miss World contestants competing in that beauty pageant to be held in Abuja on 7 December. The pageant was subsequently moved to London. Also in November, the Nigerian government stated that it would intervene to save the life of Amina Lawal, a 30-year old woman sentenced to death by stoning after she was found guilty in a Shariah court of having had extra-marital sex. Her case provoked large-scale protests from the international community.

In October 2002, the International Court of Justice ruled in favor of Cameroon in its territorial dispute with Nigeria over the oil-rich Bakassi peninsula. Fighting between the two countries over the region broke out in 1994, at which point Cameroon requested a world court ruling on the border dispute. The decision is not subject to appeal.

Nigerians, once dominated by the military, have become disappointed in the civilian rule initiated in 1999. But Nigerians have had to contend with increasing poverty, ethnic strife, religious intolerance, declining standards in health and education, and a stagnant economy. In 2000, an estimated 60% of the population lived below the poverty line. From 1999 until the end of 2002, approximately 10,000 people had been killed in political and sectarian fighting. In December 2001, Chief Ajibola Ige, the sitting attorney general and minister of justice of the federal government, was murdered in the bedroom of his home at Ibadan. Chief Ige's murder has remained unsolved, as have those of several other high-ranking politicians from the ruling PDP. These murders, a rising wave of crime in the country, as well as the militarization of the Niger Delta, cast doubts on the efficacy of the security agencies. It also served as a spur to calls for a decentralized police force, or one structured by region and/or state.

For many, the general elections of 2003 were critical to finding solutions to these and other questions, and could move the country forward. In 2002, 24 new political parties had joined the fray after the Supreme Court declared as invalid some of the conditions that the Independent National Electoral Commission (INEC) had

imposed on associations seeking a license to operate as political parties. The presidential race attracted more candidates, but public debates on issues were no clearer or deeper. The larger political parties did not face much challenge either.

The 2003 elections left the PDP in greater control of government. In the presidential poll, Obasanjo won 61.9% of the votes; former military head of state and candidate of the All Nigeria People's Party (ANPP), Muhammadu Buhari, took 31.2%. The AD, with a large Yoruba following, did not field a candidate in apparent support of Obasanjo's candidacy. The PDP also won 73 seats in the Senate and 213 in the House of Representatives; ANPP won 28 and 95 seats, while the AD took 6 and 31 seats respectively. The PDP won control of government in 28 states, ANPP got 7, and ADP won only in Lagos State. The results were contested at all levels. Buhari filed a suit against Obasanjo's victory that went all the way to the Supreme Court; it also drew a dissenting opinion in favor of the appellant.

In July 2003, an attempt was made with support from a detachment of the police to forcibly remove from power Chris Ngige, governor of Anambra State in the east. Subsequent efforts involved the burning down of major government symbols and the withdrawal of security details from Ngige. A senior police officer, a judge, and several minor actors in the saga were dismissed. In early 2004, Obasanjo declared a state of emergency in central Plateau State, also controlled by the PDP. This followed allegations of corruption against the governor, Joshua Dariye, who countered that he had donated some of the missing money to the PDP. In September 2005, yet another PDP governor, this time of oil-rich Bayelsa State, was arrested in London on suspicion of money-laundering. He returned to Nigeria but was removed from office and prosecuted for various economic offences. At the federal level, Obasanjo had been locked in battle with several segments of the PDP. He also openly accused his deputy, Vice President Atiku Abubakar of disloyalty after an apparent disagreement over succession in 2007.

Obasanjo's economic policy was controversial. Incessant increases in the price of petroleum products put his administration at disagreement with organized labor, and civil society. The PDP enacted a law that made it more difficult to form and sustain a single labor federation in Nigeria. Obasanjo received a debt-forgiveness deal with Nigeria's creditors and consistently averred a commitment to antipoverty programs. Not many jobs were being created and federal government units were downsized. In 2006 Obasanjo served notice that thousands of jobs were to be erased in the public sector. The next elections were scheduled for 2007.

### 13 GOVERNMENT

The 1979 constitution, promulgated by the outgoing military government, established a federal system resembling that of the United States, with a directly elected president and vice president (whose names appear on the same ballot) and separate executive, legislative, and judicial branches.

The military government that took command after the December 1983 coup suspended the 1979 constitution. The president held executive and legislative authority, in consultation with the 28-member Armed Forces Ruling Council, and appointed the cabinet.

After the Abacha seizure of power on 17 November 1993, the 1979 constitution remained suspended. A military-dominated Provisional Ruling Council (PRC) ruled by decree. A 32-member Federal Executive Council managed government departments, and the PRC dissolved the elected national and state legislatures and the local councils, replacing elected civilian governors with military administrators. The PRC also announced that it would hold a constitutional conference to plan for the future and to establish a timetable for a return to democracy. On 21 November 1993, Abacha signed a decree restoring the 1979 constitution (Second Republic). Nonetheless, legal experts disagreed which documents should form the basis for Nigerian government and law.

The new constitution, which became law in May 1999, restored constitutional rule under the Fourth Republic. Nigeria became a federal republic comprising 36 states and a Federal Capital Territory at Abuja. The national legislature is bicameral with 109 Senate seats and 360 House seats. Members of both houses are elected by universal suffrage (age 18) to a four-year term. The president is elected to no more than two four-year terms. The president chairs a Federal Executive Council, which he appoints. Legislative and presidential elections were held in April 2003. The results gave Obasanjo and many governors their second and final term under the 1999 Constitution.

### 14 POLITICAL PARTIES

Ethnic, religious, and regional differences have hindered the formation of a truly national Nigerian political party in Nigeria. Before 1966, the major parties were the Northern People's Congress (NPC), overwhelmingly dominant in the Northern Region and possessing a plurality in the federal House of Representatives; the National Council of Nigerian Citizens (NCNC), dominant in the Eastern Region and junior partner in coalition with the NPC in the federal House of Representatives; and the Action Group, majority party in the Western Region and the leading opposition group in the federal legislature. Policies and platforms of the major parties were similar, generally supporting welfare and development programs. Following the 1959 elections, the NCNC joined in a coalition with the NPC in the federal government.

The first national elections in independent Nigeria, held on 30 December 1964, were contested by two political alliances: the Nigerian National Alliance (NNA), led by Sir Ahmadu Bello, premier of the Northern Region, and the United Progressive Grand Alliance (UPGA), led by Michael Okpara, premier of the Eastern Region. The NNA comprised the NPC, the Western-based Nigerian National Democratic Party, and opposition parties representing ethnic minorities in the Eastern and Mid-Western regions. The UPGA included the NCNC, the Action Group, the Northern Elements Progressive Union (the main opposition party in the Northern Region), and the United Middle Belt Congress (a non-Muslim party strongly opposed to the NPC). Northerners feared Ibo domination of the federal government and sought support from the Yoruba, while the UPGA accused the Muslim Northerners of anti-Southern, antidemocratic, and anti-Christian attitudes. The election results, announced on 6 January 1965, gave a large majority to the NNA (198 of 267 constituencies). Before the balloting began, the UPGA charged that unconstitutional practices were taking place and announced that it would boycott the elections, in which only 4 million of the 15 million eligible voters ac-

tually cast ballots. On 4 January 1965, President Azikiwe called on Prime Minister Balewa to form a new government. In the supplementary elections held on 18 March 1965, the UPGA won all 51 seats in the Eastern Region and 3 seats in Lagos. This was followed by announcement of an enlarged and reorganized cabinet on 31 March. Ten months later the Balewa government was overthrown, the military assumed power, and on 24 May 1966 all political parties were banned.

When legal political activity resumed in 1978, five parties emerged: the National Party of Nigeria (NPN), representing chiefly the North and an educated, wealthy elite; the Nigerian People's Party (NPP), strong among the Ibos and slightly to the left of the NPN; the Unity Party of Nigeria (UPN), Yoruba-led and welfarist-oriented; the People's Redemption Party, advocating radical social change; and the Great Nigeria People's Party, espousing welfare capitalism. Shagari, the NPN presidential candidate, received the most votes (33.9%) in the 11 August 1979 presidential election, with Obafemi Awolowo of the UPN a close second (29.2%). In National Assembly elections held on 7 and 14 July 1979, the NPN won 36 of the 95 Senate seats and 168 of 440 House of Representatives seats. The UPN was second with 28 and 111, respectively; the NPP third with 16 and 78. Each of the five parties won control of at least two state governments in elections held 21 and 28 July 1979. In the presidential election of August 1983, incumbent President Shagari of the NPN won reelection to a second four-year term, polling 12,047,638 votes (47%). Obafemi Awolowo of the UPN placed second with 7,885,434 votes (31%). That same month, Shagari's NPN posted victories in Senate and House elections. However, there were widespread charges of irregularities in the balloting. All existing political parties were dissolved after the December 1983 coup.

During the 1990s two parties, the right-of-center National Republican Convention (NRC) and a left-of-center Social Democratic Party (SDP) were permitted limited activity during the transition from military rule. The two-chamber National Assembly to which they were elected never was granted genuine power. On 12 June 1993, Nigerians apparently elected Moshood Abiola, a wealthy businessman, president, but General Ibrahim Babangida annulled the vote over alleged corruption. Ernest Shonekan replaced him for the interim, and on 17 November General Sani Abacha took power, suspending all partisan and political activity. The May 1994 legislative elections were widely boycotted by foes of Abacha's military regime. On 1 October 1995, Abacha announced a three-year program for return to civilian rule.

Political parties, suppressed by the military government, were allowed to form in July 1998. Three parties were registered by the Provisional Ruling Council for participation in local, state and national elections: the All People's Party (APP) led by Mahmud Waziri; the People's Democratic Party (PDP) led by Solomon Lar; and the Alliance for Democracy (AD), led by Ayo Adebajo.

In the February 1999 election Obasanjo (PDP) won 62.8% of the vote; Olu Falae (AD/APP), received 37.2%. In the Senate, the PDP claimed 66 seats, the APP 23, the AD 19, with 1 other seat. In the House of Representatives, the PDP took 215 seats, the APP 70, the AD 66, and others 9. International observers reported some flaws, but generally approved the results.

The three registered parties suffered from leadership squabbles. Two factions claimed leadership of the AD, which is dominant

only in the Yoruba southwest. The APP elected a new chairman in December 1999, after its former chairman, Mahmud Waziri, defected to the PDP. In December 2002, 24 new political parties registered for the 2003 elections.

The 2003 elections were held as scheduled. They confirmed the PDP as Nigeria's largest political party. The ANPP was the second-largest party. Muhammadu Buhari, ANPP candidate for president in 2003, and its chair, Don Etiebet, each had their positions challenged. There were 33 registered political parties as of early 2006.

## <sup>15</sup> LOCAL GOVERNMENT

In March 1976, a reorganization of Nigeria's major administrative divisions was undertaken. The 12 preexisting states were reconstituted into 19 states as follows: Ogun, Ondo, and Oyo states were created out of the former Western State; Imo and Anambra states from East-Central State; Niger and Sokoto states from North-Western State; Benue and Plateau states from Benue-Plateau State; and Bauchi, Borno, and Gongola from North-Eastern State. Seven other states remained basically unchanged except for minor boundary adjustments and some name changes; these are (with original names where applicable, in parentheses) Lagos, Kaduna (North-Central), Kano, Bendel (Mid-West), Cross River (South-Eastern), Rivers, and Kwara. The Federal Capital Territory of Abuja comprises 7,315 sq km (2,824 sq mi) and was carved from the central part of the country between Kaduna, Plateau, and Niger states. By law, a fixed proportion of federally collected revenue is allotted monthly to the states and localities.

Under the military regime established in 1983, all state governors were appointed by the ruling council; in 1987, all but one governor was a military officer. The governor of each state served as chairman of an appointed state executive council. By the end of the Babangida regime in August 1993, there were 30 states (as of 2006, there were 36) governed by elected state legislatures and governors. On 18 November 1993, these governments were abolished and the civilian governors were replaced by military commanders.

The transition to civilian rule announced 20 July 1998 led to local council elections on 5 December 1998. The PDP, APP, and AD qualified to present candidates to state and national elections by winning 5% of the vote in 24 of the 36 states. The state governorships and legislatures were contested on 11 January 1999. As of mid-2002, the PDP controlled 21 of 36 state governments.

After the 2003 election, PDP controlled 28 state governments. Nearly all local government councils in these states, and many in states controlled by other parties were also run by the PDP. However, the commitment of its leadership to a system of autonomous local government was questionable. Many PDP governors (and non-PDP governors) reportedly diverted funds meant for local government; a law, the Monitoring and Allocation and Local Government Act, has made such action illegal. Shortly after May 2003, the federal government postponed local government elections to enable a panel appointed by it to examine the workings of the system. The reasoning for postponement was questionable, as the panel's report was not published.

## <sup>16</sup> JUDICIAL SYSTEM

Both the suspended 1979 constitution and the never-implemented 1989 constitutions, as well as the new constitution promulgated

on 29 May 1999, provide for an independent judiciary. In practice, the judiciary is subject to executive and legislative branch pressure, influence by political leaders at both the state and federal levels, and suffers from corruption and inefficiency.

Under the 1999 constitution, the regular court system comprises federal and state trial courts, state appeals courts, the Federal Court of Appeal, the Federal Supreme Court, and Shariah (Islamic) and customary (traditional) courts of appeal for each state and for the federal capital territory of Abuja. Courts of the first instance include magistrate or district courts, customary or traditional courts, Shariah courts, and for some specified cases, the state high courts. In principle, customary and Shariah courts have jurisdiction only if both plaintiff and defendant agree, but fear of legal costs, delays, and distance to alternative venues encourage many litigants to choose these courts.

Trials in the regular court system are public and generally respect constitutionally protected individual rights, including a presumption of innocence, the right to be present, to confront witnesses, to present evidence, and to be represented by legal counsel. However, low compensation for judges, understaffing, poor equipment, bribery, special settlements, and a host of developmental factors decrease the reliability and impartiality of the courts.

Under the Abubakar government, military tribunals continued to operate outside the constitutional court system, but they were used less and less frequently as military rule waned; the tribunals officially were disbanded by the implementation of the new constitution and the return to civilian rule. The tribunals had in the past been used to try both military personnel and civilians accused of various crimes, but groups asserted that these tribunals failed to meet internationally accepted standards for fair trial.

In October 1999, the governor of Zamfara signed into law two bills passed by the state legislature aimed at instituting Shariah law in the state. As a result, school children were being segregated by sex in Zamfara schools, some public transportation, and some health facilities. There were fears among non-Muslims that despite legal provisions, women and other groups would be subjected to discrimination in Shariah courts. As of early 2003, 11 other northern states had adopted various forms or adaptations of Shariah law, including: Sokoto, Kebbi, Niger, Kano, Katsina, Kaduna, Jigawa, Yobe, Bauchi, Borno, and Gombe. Some of these states have already issued sentences of public caning for consumption of alcohol, amputations for stealing, and death by stoning for committing adultery. Some sentences have been carried out, but no life has been taken in the pursuit of a decision by a Shariah court. Those found guilty for adultery have had the verdicts reversed on appeal.

The federal government announced in early 2006 that the religious police in Kano State (also called *Hisba*) had been assuming police functions with no official authorization to do so, thus acting beyond their powers. The same argument was advanced against ethnic militias, such as the Odu'a People's Congress.

The judiciary has faced testing moments since the 2003 polls. Obasanjo himself accused the judiciary of corruption; some legal practitioners also traded accusations against judges in open court. Election petitions at all levels brought with them allegations of bribery and witness tampering. Acting through the National Judicial Council, a body chaired by Nigeria's Chief Justice, the judiciary moved to cleanse its own house. Several judicial officers

were dismissed, disciplined in other ways, or exonerated after due hearing. The stated offenses ranged from receiving undue gratification to passing judgments that were patently illegal or procedurally wrong, or that brought the judiciary to ridicule.

## 17 ARMED FORCES

Nigeria's armed forces numbered 78,500 active personnel in 2005. The Army had 62,000 personnel armed with 200 main battle tanks, 100 *Scorpion* light tanks, 342 reconnaissance vehicles, over 397 armored personnel carriers, and more than 813 artillery pieces. The Navy had a total strength of 7,000 personnel, including Coast Guard personnel. Major naval units included one frigate, two corvettes, and eight patrol/coastal vessels. The Air Force had 9,500 personnel. Equipment included 84 combat capable aircraft, including 17 fighters and 36 fighter ground attack aircraft, in addition to 5 attack helicopters, of which 3 were nonoperational.

Paramilitary forces were estimated at 82,000 personnel and included 2,000 port security police, a coast guard, and a security and civil defense corps. Nigeria has observers and peacekeeping forces stationed in Burundi, Côte d'Ivoire, the DROC, Eritrea/Ethiopia, Liberia, Sierra Leone, Sudan, and Western Sahara. In 2005, the defense budget totaled \$841 million.

## 18 INTERNATIONAL COOPERATION

Nigeria was admitted to the United Nations on 7 October 1960, and since that time has become affiliated with ECA and several nonregional specialized agencies, such as the FAO, ILO, IAEA, the World Bank, UNESCO, UNHCR, UNIDO, and the WHO. The nation is also a member of the Commonwealth of Nations, the WTO, the ACP Group, the African Development Bank, G-15, G-24, G-77, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), and the African Union. Nigeria joined OPEC in June 1971. In May 1975, Nigeria became a founding member of ECOWAS. Among other regional organizations of which Nigeria is a member are the Niger Basin Authority and the Lake Chad Basin Commission. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra Leone.

Nigeria is a member of the Nonaligned Movement. The government has supported UN missions and operations in Kosovo (est. 1999), Western Sahara (est. 1991), Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Sierra Leone (est. 1999), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 2000).

In environmental cooperation, Nigeria is part of the Basel Convention, the Convention on Biological Diversity, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

The Nigerian economy, with an enterprising population and a wealth of natural resources, offers tremendous potential for economic growth. However, poor economic policy, political instability, and an overreliance on oil exports has created severe structural problems in the economy. Crude oil accounted for over 95% of exports and over 65% of government revenue in 2004; Nigeria

is the world's eighth-largest exporter of oil. However, agriculture remains the basic economic activity for the majority of Nigerians, employing roughly 70% of the labor force and accounting for 36.3% of GDP in 2004. Crop yields have not kept pace with the average population growth of 2.5% (2001–05 average), and Nigeria must import most of its food.

When the oil boom of the 1970s came to an end in the early 1980s, Nigeria's failure to bring domestic and foreign expenditures in line with its lower income led to a rapid buildup of internal and external deficits. Nigeria deferred payments on its large foreign debt, adopted austerity measures, scaled back ambitious development plans, and introduced a foreign exchange auction system that devalued the naira. These policies had a positive effect and from 1986 to 1990 real GDP grew at a 5.4% average annual rate.

However, in 1992 real GDP grew at only 4.1%, while the large government deficits, 10% of GDP in 1992, continued to expand. A crippling blow to the economy came in mid-1994 when oil workers in the southeast, unhappy with the way the central government collected oil revenue without giving any back, went on strike. With daily output down 25% because of the strike, the government's lack of revenue forced it to stop servicing most of its \$28 billion external debt. In the meantime the budget deficit reached \$1 billion, over 12% of GDP.

In 1996, the World Bank reported that an estimated \$2 billion in oil revenues from the early 1990s was diverted in a secret government bank account. There were also reports that significant amounts of oil revenue were being lost due to fraudulent practices at the country's oil terminals. In response, the Nigerian government appointed two inspection firms to oversee the loading of crude oil tankers.

By 2004 external debt stood at \$30.55 billion. In 2005, Nigeria carved out a deal to have some 60% of the \$31 billion debt the country owed to the Paris Club forgiven; Nigeria pledged to repay about \$12 billion. High unemployment and declining productivity hamper growth. As of 2006, the pace of privatizing state-owned enterprises and balancing the budget was slow, but liberalization of the telecommunications sector was underway. The government has also committed itself to privatizing the country's four state-owned oil refineries, and to developing several small, independently owned refineries. The rate of HIV infection is on the rise, especially among children, as is income inequality.

Although national elections were due to be held in April 2007, when President Olusegun Obasanjo would be replaced by a new leader, economic reforms begun under him were projected to continue. Coupled with rising oil prices and production, real GDP growth was forecast to be strong, at 4.8% in 2005 and 4.5% in 2006, although growth was expected to fall back to 3.3% in 2007 as political uncertainty mounted over the election period. Inflation was expected to average 15.9% in 2005, 12% in 2006, and 13.5% in 2007.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Nigeria's gross domestic product (GDP) was estimated at \$132.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current

dollars. The per capita GDP was estimated at \$1,000. The annual growth rate of GDP was estimated at 5.2%. The average inflation rate in 2005 was 13.5%. It was estimated that agriculture accounted for 26.8% of GDP, industry 48.8%, and services 24.4%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.677 billion or about \$12 per capita and accounted for approximately 2.9% of GDP. Foreign aid receipts amounted to \$318 million or about \$2 per capita and accounted for approximately 0.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Nigeria totaled \$26.24 billion or about \$193 per capita based on a GDP of \$57.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.7%. In 2001 it was estimated that approximately 51% of household consumption was spent on food, 31% on fuel, 2% on health care, and 8% on education. It was estimated that in 2000 about 60% of the population had incomes below the poverty line.

## 21 LABOR

The total labor force in Nigeria was estimated at about 57.21 million in 2005. Of those gainfully employed in 1999 (the latest year for which data was available), an estimated 70% were in agriculture, with about 10% in industry, and 20% in services. The estimated unemployment rate in 2005 was estimated at 2.9%.

The four labor federations were merged in 1978 into the Nigerian Labour Congress (NLC), which was strengthened by legislation establishing a compulsory dues checkoff system. Unions were strengthened by government decrees and a new constitution in 1999. Freedom of association and the right to strike were restored. The NLC is the only legal trade union organization (outside the petroleum industry) and claimed a membership of about four million in 2001. About 10% of the workforce was unionized in 2002.

In 2002, the minimum wage stood at approximately \$75 per month for federal workers and between \$55 and \$65 per month for state employees. Formal sector private employers follow the public sector standard. These wages are sufficient to provide a family with a decent standard of living. The workweek is set at 40 hours, but there is no law prohibiting excessive compulsory overtime. Children as young as 13 may work with special restrictions. In reality, as a result of crumbling public schools and dire economic conditions, many children of all ages work. The law stipulates minimum occupational health and safety standards, but such standards are not effectively enforced.

## 22 AGRICULTURE

In terms of employment, agriculture is an important sector of Nigeria's economy, engaging about one-third of the labor force. Agricultural holdings are generally small and scattered; farming is often of the subsistence variety, characterized by simple tools and shifting cultivation. These small farms produce about 80% of the total food. About 33.4 million hectares (82.5 million acres), or 36% of Nigeria's land area, are under cultivation. Nigeria's diverse climate, from the tropical areas of the coast to the arid zone

of the north, make it possible to produce virtually all agricultural products that can be grown in the tropical and semitropical areas of the world. The economic benefits of large-scale agriculture are recognized, and the government favors the formation of cooperative societies and settlements to encourage industrial agriculture. Large-scale agriculture, however, is not common. Despite an abundant water supply, a favorable climate, and wide areas of arable land, productivity is restricted, owing to low soil fertility in many areas and inefficient methods of cultivation. Agriculture contributed 26% to GDP in 2003.

The agricultural products of Nigeria can be divided into two main groups: food crops, produced for home consumption, and export products. Prior to the civil war, the country was self-sufficient in food, but imports of food increased substantially after 1973. Bread, made primarily from US wheat, replaced domestic crops as the cheapest staple food for much of the urban population. The most important food crops are yams and manioc (cassava) in the south and sorghum (Guinea corn) and millet in the north. In 2004, production of yams was 26.6 million tons (67% of world production); manioc, 38.1 million tons (highest in the world and 19% of global production); cocoyams (taro), 4 million tons; and sweet potatoes, 2,516,000 tons. The 2004 production estimates for major crops were as follows (in thousands of tons): sorghum, 8,028; millet, 6,282; corn, 4,779; rice, 3,542; peanuts, 2,937; palm oil, 920; sugarcane, 776; palm kernel, 618; soybeans, 465; and cotton lint, 140. Many fruits and vegetables are also grown by Nigerian farmers.

Although cocoa is the leading non-oil foreign exchange earner, growth in the sector has been slow since the abolition of the Nigerian Cocoa Board. The dominance of smallholders in the cocoa sector and the lack of farm labor due to urbanization holds back production. Nigeria produced 366,000 tons of cocoa in 2004, fifth in the world. Rubber is the second-largest non-oil foreign exchange earner. Despite favorable prices, production has fallen from 155,000 tons in 1991 to 142,000 tons in 2004. Low yield, aging trees, and lack of proper equipment have inhibited production.

Agricultural exports (including manufactured food and agricultural products) decreased in quantity after 1970, partly because of the discouraging effect of low world prices. In 1979, the importing of many foods was banned, including fresh milk, vegetables, roots and tubers, fruits, and poultry. The exporting of milk, sugar, flour, and hides and skins was also banned. During 1985–87, imports of wheat, corn, rice, and vegetable oil were banned as declining income from oil encouraged greater attention to the agricultural sector. In 1986, government marketing boards were closed down, and a free market in all agricultural products was established. In 2004, agricultural exports totaled \$486.7 million, while agricultural imports exceeded \$2.2 billion.

### 2<sup>3</sup> ANIMAL HUSBANDRY

Livestock production accounts for about 6% of GDP. There were an estimated 15.2 million head of cattle in Nigeria in 2005, over 90% of them in the north, owned mostly by nomadic Fulani. The prevalence of the tsetse fly in other areas restricts the majority of cattle to the fly-free dry savanna areas. The cattle owned by the Fulani and Hausa consist mainly of zebu breeds; cattle in the south are mainly Shorthorns. There were also an estimated 28 million

goats, 23 million sheep, 6.7 million pigs, 1 million asses, 206,000 horses, and 140 million chickens.

Improvements in stock, slaughterhouse, cold storage, and transport facilities have made parts of Nigeria almost self-sufficient in meat production, but many Nigerians outside the north suffer protein deficiency in their diet. In 2005, 1.07 million tons of meat and 432,000 tons of cow's milk were produced. The Livestock and Meat Authority controls operations in transport and slaughtering in the north.

### 2<sup>4</sup> FISHING

Fish is an important dietary element and one of the few sources of animal protein available to many Nigerians. Fishing is carried on in Nigeria's many rivers, creeks, and lagoons, and in Lake Chad; trawlers operate along the coast. The total fishing catch was 505,839 tons in 2003 (40% from inland waters), not enough to meet national requirements.

Both federal and state governments are encouraging the development of local fisheries, inland and at sea, by sponsoring research, stocking reservoirs, and offering training in improved fish culture and fishing gear. Fish ponds have been established in the southern part of the country. The fishing industry output has yet to regain its 538,000-ton high of 1983.

### 2<sup>5</sup> FORESTRY

About 14.8% of Nigeria, or roughly 13,517,000 hectares (33,400,000 acres) is classified as forest or woodland. High forest reserves occur mostly in Ogun, Ondo, and Oyo states; savanna forest reserves, chiefly in the northern states, are limited in value, yielding only firewood and local building materials. In 2004, 70.3 million cu m (2.5 billion cu ft) of roundwood were produced, 85% for fuel. That year, Nigeria's consumption of fuel wood and charcoal was third highest in Africa. Exports of timber and finished wood products were banned in 1976 in order to preserve domestic supplies. The ban was subsequently lifted and the forestry sector recorded gains. However, the country suffers from desertification, anemic reforestation efforts, and high levels of domestic wood consumption. The average annual deforestation rate was 2.6% during 1990–2000. In 2004, forestry imports totaled \$123 million, while forest product exports only amounted to \$18.5 million.

### 2<sup>6</sup> MINING

The oil sector was the cornerstone of the Nigerian economy. Nigeria in 2003 was Africa's largest oil producer, with petroleum and petroleum products accounting for 89.2% of exports in 2003. Other leading industries included cement and other construction materials, chemicals, fertilizer, ceramics, and steel.

Nigeria produced 4,800 metric tons (gross weight) of cassiterite tin concentrate in 2003, up from 3,600 metric tons in 2002. A smelter at Jos produced refined tin for export. In 2003, production of columbium and tantalum concentrates (gross weight) totaled 700 metric tons, up from 500 metric tons in 2002. Nigeria had plentiful supplies of limestone, and production totaled 2.2 million tons in 2003. In addition, Nigeria produced barite, clays, feldspar, gold, granite, kaolin, lead, marble, shale, and topaz. Gypsum output declined from 300,000 metric tons in 2002 to 100,000 metric tons in 2003. Nitrogen production was halted in 1999, while no iron ore was produced in 1999 or 2003, even though extensive

iron deposits included reserves of 2,500 million tons with an average content of 37%.

To attract local and foreign investment in the development of the nonfuel minerals sector and to broaden the country's industrial base, the Mining and Minerals Decree No. 34, enacted in 1999, provided for three-year tax holidays, exemption from customs duties for mining equipment, convertibility of foreign currency, and free transferability of funds. It also reaffirmed that all mineral rights were to be held by the federal government, although the national legislature was debating reallocation of mineral rights to the states. However, the country's reputation for civil strife, corruption, environmental degradation, fraud, poor infrastructure, and political uncertainty continued to temper international investors' interest in most projects. The adoption of Islamic Shariah law in many of the northern states added uncertainty to internal mineral projects in northern Nigeria. Mineral resource companies also had to cope with expectations that the companies should provide extensive physical and social infrastructure.

## 27 ENERGY AND POWER

Nigeria, as of April 2005, is reported to be the eleventh-largest producer of oil in the world and the largest oil producer in Africa. It is a major oil supplier to the United States and Western Europe. Nigeria is also a member of the Organization of Petroleum Exporting Countries (OPEC).

Nigeria, as of 1 January 2005, has estimated proven oil reserves of 35.5 billion barrels, according to the Oil and Gas Journal. In 2004, the country produced an estimated 2.5 million barrels of oil per day, of which crude oil accounted for 2.3 million barrels per day. In that same year, net exports and domestic consumption of oil were estimated at 2.2 million barrels per day and 321,000 barrels per day, respectively. According to the Oil and Gas Journal, crude oil refining capacity was estimated at 438,750 barrels per day, as of 1 January 2005. As a member of OPEC, Nigeria is subject to a crude oil production quota. As of August 2004, that quota was set at 2.6 million barrels per day.

Nigeria's proven reserves of natural gas makes the country one of the world's top 10 countries so endowed, and the largest in Africa. According to the Oil and Gas Journal, Nigeria's natural gas reserves were estimated at 176 trillion cu ft as of 1 January 2005. Although the Nigerian government plans to raise its earnings from natural gas exports to 50% of the country's revenues from oil by 2010, about 75% of the natural gas currently produced is flared-off due to a lack of infrastructure, according to a November 2004 estimate by the World Bank. In 2002, Nigeria produced an estimated 501 billion cu ft of natural gas, with domestic demand for that year at 225 billion cu ft and exports estimated at 225 billion cu ft.

Nigeria also has coal deposits. In 2002, recoverable coal reserves were estimated at 209 million short tons, with domestic consumption and production each estimated at 0.07 million short tons.

Nigeria's electric generating capacity is heavily dedicated to conventional thermal sources. In 2002, electric power generating capacity stood at 5.888 million kW, of which conventional thermal sources accounted for 67% of capacity, while hydroelectric dedicated capacity accounted for the rest. Electric power output in 2002 came to 14.743 billion kWh, with conventional thermal fueled output accounting for 52.4% of the power produced, and hydropower accounting for the remainder. However, power out-

ages in Nigeria are frequent and operations are well under the nation's estimated capacity. Also, consumers are billed for services rendered, which in part explains the country's widespread power theft, vandalism, and problems involving payments. In addition, only about 40% of the population has access to electricity, most of whom reside in urban areas. In January 2004, Nigeria began a rural electrification program that would connect 1,500 communities to the nation's power grid by 2007.

## 28 INDUSTRY

Industry accounted for 30.5% of GDP in 2004, mostly in the oil sector, and experienced 1.8% growth that year. Due to the high costs of production that result from inadequate infrastructure, Nigeria's manufacturing capacity utilization remains low. An estimated 10% of the labor force is employed in the industrial sector.

Nigeria is the eleventh-largest producer of oil in the world, and first in Africa. The oil sector supplies 95% of foreign exchange earnings and some 90% of total exports. Nigeria had proven oil reserves of 35.5 billion barrels in 2005, and planned to expand its proven reserves to 40 billion barrels by 2010. Nigeria's crude oil refining capacity was 438,750 barrels per day in 2005. There are four state-owned refineries in Nigeria, and hydrocarbon production is centered around Eleme, Warri, and Kaduna. Sabotage, fires, extended maintenance, and management problems plague the oil industry, however. There has been political unrest over the issue of the equitable sharing of Nigeria's oil profits with the population. Nigeria had an estimated 176 trillion cu ft of natural gas reserves in 2005, and the natural gas industry is seen to have great potential.

In October 2002, the International Court of Justice ruled in favor of Cameroon in its border dispute with Nigeria over the oil-rich Bakassi peninsula.

The textile industry is still in early stages of development. Between 60% and 70% of all raw materials used in textile production come from local sources. Foreign investment in the textile industry is led by Chinese and Indian investors. Other areas of expansion include cement production, tire production, and furniture assembly. The Delta Steel Plant at Aladja, built by a German-Austrian consortium, began production in 1982 and supplied three steel rolling mills at Oshogbo, Katsina, and Jos. The steel complex at Abeokuta began producing in 1983 and was renovated in 1995. As of 1999, most of these steel mills were inoperative, and the ones that did work had very small production rates.

Other important industries include sawmills, cigarette factories, breweries, sugar refining, rubber, paper, soap and detergent factories, footwear factories, pharmaceutical plants, tire factories, paint factories, and assembly plants for radios, record players, and television sets. Nigeria has five state-owned motor-vehicle assembly plants for Volkswagen, Peugeot, and Mercedes products, which by 2006 were put on the path toward privatization.

## 29 SCIENCE AND TECHNOLOGY

Learned societies include ones for ecology, engineering, entomology, fisheries, forestry, genetics, geography, medicine, microbiology, nutrition, and veterinary medicine. The Federal Ministry of Science and Technology has 25 attached research institutes that focus on cereals, cocoa, lake ecology, horticulture, forestry, livestock, root crops, veterinary medicine, oceanography and ma-

rine sciences, oil palms, rubber, and tropical agriculture, among other areas. The Geological Survey of Nigeria, founded in 1919, is concerned with geological mapping, mineral exploration, geophysical and geochemical surveys, and consultation on geological problems.

The National Museum branch in Jos, founded in 1989, has zoological and botanical gardens and a transport museum. Obafemi Awolowo University in Ile-Ife has a natural history museum founded in 1948. Nigeria has 60 universities and colleges offering courses in basic and applied science. Science and engineering students account for about 40% of college and university enrollments.

The Nigerian Academy of Science, founded in 1977, promotes and coordinates scientific and technological activities, trains scientists, advises the government on scientific matters, and organizes symposia and lectures.

### 3<sup>0</sup> DOMESTIC TRADE

The distribution of consumer goods is effected largely through a complex network of intermediary traders, who extend the area of distribution and often break down products into very small units for delivery to the ultimate consumer. A few trading companies, especially those with European equity and management, carry full product lines. Village markets are universal but tend to be more highly organized in the densely populated areas of the south. The great market centers such as Ibadan and Kano are attended by many thousands daily. Domestic commerce is limited by poor infrastructure, widespread fraud and corruption, and shortages of fuel that are exacerbated by illegal smuggling of gasoline across Nigeria's borders. The economy is still primarily cash based. Advertising has increased markedly since independence. Newspapers, magazines, radio, television, billboards, and movies are all utilized.

Businesses and government offices are generally open from 8:00 AM to 4:00 PM, Monday through Friday. In the Muslim north, establishments close at 1:00 PM on Friday so that Muslim workers can attend Jummat services. Supermarkets and stores are open from 8:30 AM to 5 PM, Monday through Friday, and from 7:30 AM to 1 PM on Saturdays. A large number of smaller shops and restaurants are often open from sunrise to near midnight.

### 3<sup>1</sup> FOREIGN TRADE

Nigeria's exports have been on a dramatic upswing. Between 1998 and 1999, they grew more than three-fold, and by 2000 nearly doubled again. Exports in 2006 were 90% dominated by crude oil. Liquefied natural gas accounted for 8.1% of exports in 2004. Cocoa is the largest agricultural export. Leading imports are machinery, chemicals, transportation equipment, manufactured goods, and food.

In 2004, Nigeria's leading markets were: the United States (49.9% of all exports); India (10.2%); Spain (7.5%); and Brazil (6.9%). Leading suppliers were the United States (8.9% of all imports); China (8.5%); the United Kingdom (8.2%); and the Netherlands (6.2%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Exports are dominated by oil, and with oil prices forecast to remain relatively high against a background of rising production from 2005–10, substantial trade surpluses were predicted. The trade surplus was estimated at \$18.2 billion in 2004. Over the 2001–05 period, the current-account balance averaged 0.6% of GDP. In 2004, the current-account surplus was estimated at \$5.228 billion.

### 3<sup>3</sup> BANKING AND SECURITIES

In 1892, Nigeria's first bank, the African Banking Corp., was established, patterned along British lines. Before World War II, two large British banks, the Bank of British West Africa and Barclays

Bank, virtually monopolized Nigerian banking. After 1945, a number of African-owned banks entered the field; between 1946 and 1952, however, more than 20 such banks failed. The bank of issue became the Central Bank of Nigeria (CBN) in 1958. It regulated most commercial banking operations in Nigeria, but the federal Ministry of Finance retained control of most international activities of the financial sector. The Nigerian Industrial Development Bank (NIDB) was established in 1964 to provide long- and medium-term financing to concerns in the industrial nonpetroleum, mining, and tourist sectors.

The 1969 Banking Decree required that all banking institutions be incorporated in Nigeria, and a 1976 law gave the government 60% ownership of all foreign banks. The Banking Decree also established minimum capital requirements for licensed banks, based on the total deposits. Important additional sources of credit were provided by thrift and loan societies and by the branches of the National Development Corporation. The National Bank for Commerce and Industry helped finance smaller enterprises. Merchant banking expanded rapidly from 1973 onward, when the Union Dominican Trust Company began operations.

With the adoption of the Structural Adjustment Program (SAP) in 1986, the licensing of new banks was liberalized. In July 1990 the state banks were privatized. Beginning in 1990 the country allowed the establishment of foreign banks, but 60% of the foreign banks that were established in Nigeria had to be held by Nigerian interests. In the same year the government began a program to establish 500 community banks. From 1985 to 1993, the number of banks rose from 40 to 120, but declined to 89 in 1998.

While there are over 100 banks in Nigeria, the main banks in 2002 included the Afribank, Universal Trust Bank, FSB International Bank, Diamond Bank Limited, United Bank for Africa (with Banque Nationale de Paris and Bankers Trust shareholdings), Union Bank of Nigeria, and First Bank of Nigeria (partly owned by Standard Chartered), Nigeria International Bank Limited. All but the last bank on the list were charged in 1996 with import duty and excise collection. Twenty-seven ailing banks were liquidated by the government in 1997, while others merged. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$7.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$11.8 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 20.5%.

The Nigerian (formerly Lagos) Stock Exchange (NSE) began operations on 1 July 1961, following passage of the Lagos Stock Exchange Act; the government promulgated regulations for the exchange and provided that all dealings in stock be carried out only by members of the exchange. The Securities and Exchange Commission (SEC) fixed prices of all new securities, and regulated the prices of those already being traded. Transactions of 50,000 shares or more were subject to SEC approval. The government encouraged public issues of shares by Nigerian companies in an effort to mobilize local capital for the country's development. The exchange, in Lagos, with branches in Kaduna and Port Harcourt, dealt in government stocks and in shares of public companies registered in Nigeria. After the provision of new investment incen-

tives under the Nigerian Enterprises Promotion Decree of April 1974, activity on the stock exchange increased.

In a bid to encourage foreign interest in the NSE, a computerized central securities clearing system (CSCS) was installed on 14 April 1997, although it got off to a quiet start. The custodian bank for the system was Nigeria International Bank/Citibank. The benefit of the system was that trades would be settled within one week and eventually within two days, compared with the long delays hitherto experienced in effecting share transfers after purchases and sales. On 21 April 1997, a CBN directive lifted the restrictions on equity ownership of individual and corporate investors in Nigerian banks. Under this legislation, it was possible for an individual or another corporation to own up to a 100% share in a bank. Prior to the directive, the maximum shareholding for an individual was just 10%, while for companies it was 30%.

Market capitalization of the Nigerian Stock Exchange (NSE) was \$14.464 billion in 2004, with 207 companies listed. The NSE All Share Index was up 18.5% in 2004 to 23,844.5.

### 34 INSURANCE

The Nigerian Reinsurance Corp. requires foreign insurance companies to reinsure 20% through the corporation. In 1976, the government took a 60% interest in foreign-owned insurance companies. The only compulsory insurance is that for motor vehicles. Laws of 1976 and 1977 regulate insurance firms, particularly those in the life insurance field, and provide for their registration, investigation, and minimum capitalization. The regulatory body is the Director of Insurance, under the Federal Ministry of Trade (Insurance Division). In 2003, the value of all direct insurance premiums written totaled \$422 million, of which nonlife premiums accounted for \$345 million. In 2002, Nigeria's top nonlife insurer was Nikon, with gross written nonlife premiums of \$91.6 million, while the nation's leading life insurer that same year was Alico, with gross written life insurance premiums of \$15.6 million.

### 35 PUBLIC FINANCE

The federal government is responsible for collecting taxes on income, profits, and property, as well as import and export taxes and excise duties. It also runs the national transportation system. The petroleum sector provides over 83% of budgetary revenues. A large share of these revenues is redistributed to state governments. The budget is consistently in deficit. In 1998, debt financing amounted to \$4.4 billion, but the 1999 budget provided for only \$1.7 billion. Public investment flourished during the oil boom years of the 1970s. When the oil market prices collapsed in the 1980s however, the Nigerian government maintained its high level of spending, thus acquiring substantial foreign debt. Although privatization efforts began in 1986, increased government spending outside the official budget since 1990 has damaged public finance reform. As a result, the federal deficit increased from 2.8% of GDP in 1990 to 9% in 1998. Through privatization, the government sold all state-owned banks, fuel distribution companies, and cement plants in 2000. Nigeria sought to sell the troubled Nigerian Airways before it ceased operations as of 2006. The state telephone company NITEL, launched a mobile phone network in 2001; the government also hoped to privatize it. Nigeria's official foreign debt is about

\$32 billion, about three-fourths of which is owed to Paris Club countries.

The US Central Intelligence Agency (CIA) estimated that in 2005 Nigeria's central government took in revenues of approximately \$12.8 billion and had expenditures of \$13.5 billion. Revenues minus expenditures totaled approximately -\$680 million. Public debt in 2005 amounted to 11.2% of GDP. Total external debt was \$37.49 billion.

### 36 TAXATION

By far the most important direct tax is the petroleum profits tax. The rate on taxable profits of petroleum companies since 1975 has been 85%, but a guaranteed profit of \$2.30 per barrel was established in 1986.

With the restoration of democracy, most state and local governments have found it necessary to introduce their own local levies in the face of dwindling revenues from the Federation Account to the State and Local Governments.

Nigeria had a standard corporate tax rate of 30%, as of 2005, plus a 2% education tax. A reduced rate of 20% is available for companies engaged in manufacturing, agricultural production or mining solid minerals, and for wholly export-oriented enterprises. There was also a capital gains tax of 10% on the disposal of assets inside or outside of Nigeria, although as of 1 January 1998 capital gains from the sale of stocks and share is exempt. There is a withholding tax of 10% on dividends, interest income, rental income and royalties. There is also a tax on companies engaged in upstream (exploration and production) activities in the petroleum sector.

Under the Personal Income Tax Act, both Nigerian and foreign residents in Nigeria are subject to a progressive tax on their worldwide income, with a top rate of 30%. Property taxes are assessed by state governments.

In 1993, the Value-added Tax Decree (VAT Act) abolished the 1986 Sales Tax Decree of 1986, establishing a VAT with a standard rate of 5% (as of 2005) chargeable on most goods and services. Exempted goods include medical and pharmaceutical products, basic foodstuffs, books and educational materials, baby products, locally manufactured fertilizers, all exports, plants and machinery used in export processing zones (EPZs). Of the proceeds collected, 50% goes to state government, 35% to local governments, and 15% to the administrative costs of the tax. States are also authorized to impose a tax on goods and services rendered in the state. Excise duties on beer, tobacco, textiles, and other goods are also levied.

### 37 CUSTOMS AND DUTIES

The federal government levies customs duties on most imports, but these duties were substantially reduced in 1986 and in 1995. The import duty varies from 5–60%, averaging 12%. All imports are also subject to a 7% port surcharge and a 5% value-added tax (VAT). The paperwork necessary for exporting and importing is lengthy. The taxation system has been widely avoided and valuations are arbitrary.

Prohibited exports include raw hides and skins, timber and building materials, raw palm kernels, and unprocessed rubber (to protect building and processing industries). Most goods produced in Nigeria may be freely exported. Prohibited imports include live

chicks, flour, vegetable oils, gypsum, mosquito repellent coils, plastic domestic articles, used tires, and weapons.

### 38 FOREIGN INVESTMENT

Nigeria is West Africa's most populous country, and one of the most developed. Investment in the petroleum industry was carried out on a very large scale in the 1970s, including funds devoted to production, refining, and petrochemicals. The petroleum industry was largely nationalized during that period. Upstream operations are dominated by the Shell Petroleum Development Company of Nigeria. The company has been involved in conflict with local groups, particularly the Movement for the Survival of the Ogoni People (MOPOS), which accused Shell of causing life-threatening environmental damage, while the company contends that the damage was caused by interference with its operations. Downstream, two consortiums with foreign participation have controlled about 30% of the market: TotalFinaElf Nigeria Plc and Unipetrol/Agip. However, in 2005, Majestic Oil (Sierra Leone) acquired Unipetrol's 24.22% share in the West Africa Oil Refinery when the company failed to invest in the rehabilitation of the facility.

In December 1989, a new Nigerian Enterprises Decree permitted 100% foreign ownership in any new venture except those in banking, oil, insurance, and mining. The government uses an open tender system for awarding government contracts. However, a patronage system exerts powerful influence over the awarding of such contracts. Government scandals, political instability, and endemic corruption (Nigeria is regularly ranked among the most corrupt countries in the world, often at the top of the list) have inhibited foreign investment. Corporate profits, except for those of oil companies, are taxed at 30%.

In 1992, the Nigerian Free Zone Act was passed establishing the Nigerian Export Processing Zone Authority (NEPZA). Free trade zones (FTZ), so renamed in 2001, are expanses of land with improved ports and/or transportation, warehousing facilities, uninterrupted electricity and water supplies, advanced telecommunications services and other amenities to accommodate business operations. Under the free trade zone system, as long as end products are exported (although 25% can be sold in the domestic market), enterprises are exempt from customs duties, local taxes, and foreign exchange restrictions, and qualify for incentives—tax holidays, rent-free land, no strikes or lockouts, no quotas in EU and US markets, and, under the 2000 African Growth and Opportunity Act (AGOA), preferential tariffs in the US market until 2008. When fully developed, free zones are to encompass industrial production, offshore banking, insurance and reinsurance, international stock, commodities, and mercantile exchanges, agro-allied industry, mineral processing, and international tourist facilities.

In 1995, the military government decreed the establishment of the Nigerian Investment Promotion Commission (NIPC) as well as the liberalization of the foreign exchange market. These, with amendments, remain the bases of Nigeria's policy of encouraging foreign investment. Foreign direct investment (FDI) inflow was reported at \$1.5 billion in 1997, and about \$1 billion in both 1998 and 1999. In late 2002, the Nigerian government announced that since the return to an elected government in May 1999, \$56.94 billion in FDI had flowed into the country, from a total of 170 foreign companies.

In 2003, the stock of FDI was estimated at \$24 billion, which accounted for approximately 43% of GDP. Total FDI inflow was \$1.2 billion in 2003. Total FDI outflow was estimated at \$93 million in 2003, while total FDI outward stock was estimated at \$4.6 billion, accounting for 8.3% of GDP. Most FDI inflows continue to fund oil and gas exploration and production, liquefied natural gas projects, and related activities.

### 39 ECONOMIC DEVELOPMENT

The agriculture sector was the focus of intense development interest during the 1990s, with food self-sufficiency the goal. In 1990, agriculture was the subject of a separate three-year development plan involving public and private spending targets concentrating on the family farmer. The program included price stabilization plans and schemes to revitalize the palm oil, cocoa, and rubber subsectors. The Agricultural Development Projects continued through the decade, but implementation of goals was difficult. The country still imports most of its wheat from the United States.

An integrated petrochemical industry was also a priority. Using the output of the nation's refineries, Nigeria produced benzene, carbon black, and polypropylene. The development of liquid natural gas facilities was expected to lead to the production of methanol, fertilizer, and domestic gas. Nigeria's refineries operated at less than optimal rates throughout the 1990s and into the early- and mid-2000s.

In the manufacturing sector, the government was backing a policy of local sourcing whereby locally produced raw materials were converted into finished products. By 2003, manufacturing accounted for 4% of gross domestic product (GDP), down from 13% in 1982.

By the beginning of the 2000s, the government was more concerned about halting corruption and reigning in the state budget than economic development. Nevertheless, the Niger Delta Development Commission (NDDC) was created to coordinate economic and social development in the oil-producing region.

Nigeria's foreign debt stood at around \$30.55 billion in 2004, a large portion of which was interest and payment arrears. The Obasanjo administration in the early 2000s was supporting private-sector-led, market-oriented economic growth, and had begun economic reform programs. Privatization of state-owned enterprises continued. A Stand-By Arrangement with the International Monetary Fund (IMF) approved in 2000 lapsed in 2001 as the government's economic reform program went off track. By 2005, Nigeria had negotiated a deal for forgiveness of 60% of its debt with the Paris Club.

By 2006, the centerpiece of President Obasanjo's policy agenda was the National Economic Empowerment and Development Strategy (NEEDS), which aimed to diversify the economy away from its dependence upon oil. Corruption was an issue that still demanded a great deal of attention. Although the government has called for economic reform, progress in the mid-2000s was held back by strong vested interests opposed to change, especially to privatization and the restructuring of the public sector. With offshore oil production increasing, the need to renegotiate Nigeria's OPEC quota was a priority in 2006. President Obasanjo sought to maintain good relations with Western powers and to promote Nigeria as a leading international and regional power.

### 40 SOCIAL DEVELOPMENT

A 2004 law established a unified system of mandatory individual accounts for public employees. The system is not fully implemented in the private sector. The National Social Insurance Trust Fund holds contributions previously made and will transfer the funds into a private pension. Old age pensions are available after age 50, and are not payable abroad. Medical benefits are provided to insured employees of firms with 10 or more workers. Employers fund work injury insurance. There is limited social assistance and health care benefits provided to families.

Although sex discrimination is banned under the constitution, traditional practices still deprive women of many rights and the adoption of Shariah law by many northern states has more severely limited the rights and freedom of women. A Woman may not obtain a passport without her husband's permission. It is customary for all assets to be turned over to the parents after the death of a male, leaving the widow economically destitute. Segregation by gender occurs in some schools, health facilities, and, in some states, on public transportation. *Purdah*, the Islamic practice of completely segregating a woman from men other than those within her family, is practiced in some families, primarily in the north. In Shariah courts, women's testimony is given less weight than that of men. Female genital mutilation (FGM) is widespread throughout the country despite government opposition. Domestic violence is widespread, and wife beating is permissible under the penal code. According to a 2004 survey, more than 64% of women and 61% of men believed that a husband had justification for beating his wife under certain circumstances, including burning food.

As of 2006, Nigeria's human rights situation had improved, but serious abuses remained. Arbitrary arrest and detention were still used to silence the government's critics. Reports of torture and extrajudicial killings persisted, and prison conditions were considered to be life threatening. Overcrowding and poor sanitary conditions were compounded by limited food, water, and medicine for inmates. Sentences of stoning and amputation were still imposed.

### 41 HEALTH

Nigeria's health care delivery system consists of a network of primary, secondary, and tertiary facilities. As of 2004, there were an estimated 27 physicians, 66 nurses, 2 dentists, 8 pharmacists, and 52 midwives per 100,000 people. The target areas for mass procurement of medical equipment are the teaching hospitals. The lack of proper facilities and inadequate remuneration of public sector health care workers have also spurred the development of a limited number of privately-owned hospitals which cater to those who can afford them. The country is in need of medical supplies and equipment. Some pharmaceuticals are manufactured in Nigeria. Approximately 57% of the population had access to safe drinking water and 63% had adequate sanitation. Total health care expenditure was estimated at 2.8% of GDP.

Despite the receding influence of such endemic diseases as yellow fever, health problems in Nigeria remain acute. Malaria and tuberculosis are the diseases of most frequent incidence, but serious outbreaks of cerebrospinal meningitis still occur in the north. Just under half of all deaths are thought to be among children,

who are especially vulnerable to malaria and account for 75% of registered malaria deaths. The prevalence of child malnutrition for children under age five was 46%. Goiter was present in 20% of all school-age children. Nigeria had the highest number of measles cases reported of all African nations, and diarrheal diseases remain prevalent. Close to 15% of all Nigerian children did not live to their fifth birthday. Immunization rates for children up to one year old were as follows: tuberculosis, 53%; diphtheria, pertussis, and tetanus, 45%; polio, 45%; and measles, 69%. Only 1% of children were immunized for yellow fever.

Schistosomiasis, guinea worm (19,766 cases in 1995), trachoma, river blindness, and yaws are other diseases of high frequency. Progress has been made in the treatment of sleeping sickness (trypanosomiasis) and leprosy. The former has been nearly eliminated by the introduction of new drugs, while the introduction of sulfone therapy has nearly halted the incidence of new cases of leprosy in the eastern states. A program for the eradication of river blindness and malaria has been undertaken in cooperation with the World Health Organization.

The government is also working on the control of sexually transmitted diseases, including HIV/AIDS, through public education and behavior change. HIV/AIDS has reached epidemic levels in Nigeria. The HIV/AIDS prevalence was 5.40 per 100 adults in 2003. As of 2004, there were approximately 3,600,000 people living with HIV/AIDS in the country, the third-highest in the world. There were an estimated 310,000 deaths from AIDS in 2003.

Only 15% of married women used contraceptives. The fertility rate in 2000 was 5.3 children per woman surviving her child-bearing years. The life expectancy for the Nigerian was only 46.74 years in 2005. In that year the infant mortality rate was 98.80 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 39.2 and 14.1 per 1,000 people.

## 42 HOUSING

Housing generally has not ranked high on the scale of priorities for social spending and state governments have tended to rely upon local authorities to meet the problem. Efforts at providing low-cost rural housing have been minimal, despite the creation of the Federal Mortgage Bank of Nigeria in 1977, and shantytowns and slums are common in urban areas. Overcrowding in urban housing is a serious problem. It has been estimated that about 85% of the urban population live in single rooms, often with eight to twelve persons per room. Living conditions are poor. The total number of housing units in 1992 was 25,661,000. In 1996, only about 27% of urban dwellers had access to piped water. Less than 10% of urban dwellers had an indoor toilet.

In 1979, at the establishment of a civilian government, about 37% of all housing units were cement or brick roofed with asbestos or corrugated iron; 34% were mud plastered with cement and roofed with corrugated iron. In the same year, 44% of urban dwellings were rented, 37% were owner occupied, 17% were rent free, and 2% were "quasi-rented" at below-average rates. Since then, the government has initiated a number of projects aimed at providing adequate housing at all income levels; but many of these were unsuccessful and because of the poor quality of workmanship in some of developments, many finished dwellings were soon left vacant.

## 43 EDUCATION

The 1979 constitution made primary education the responsibility of the states and local councils. State and federal authorities have concurrent powers over postprimary education. The first six years of primary education were made compulsory in 1976. These are followed by six years of general secondary studies or technical school studies. Primary education begins in the local language but introduces English in the third year. The academic year runs from October to July.

In 2001, about 8% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 67% of age-eligible students; 74% for boys and 60% for girls. The same year, secondary school enrollment was about 29% of age-eligible students; 32% for boys and 26% for girls. It is estimated that about 82.3% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 42:1 in 2003; the ratio for secondary school was about 35:1. In 2003, private schools accounted for about 7% of primary school enrollment and 20.7% of secondary enrollment.

The advancement in education in the southern states, compared with the relative lag in the northern states, reflects the contribution of Christian missions to the Nigerian educational system. Teacher-training colleges are operated by missions or voluntary societies; their schools, however, are regulated and largely supported by the government. There are 13 polytechnic colleges and 4 colleges of technology. A major obstacle to the further advancement of education in Nigeria is the shortage of qualified teachers; large numbers of foreigners are employed, particularly by the universities. In 2003, about 8% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 66.8%, with 74.4% for men and 59.4% for women.

Public expenditure on education was estimated at less than 1% of GDP.

## 44 LIBRARIES AND MUSEUMS

The National Library of Nigeria was founded in Lagos in 1962 and has over one million volumes, including some 35,000 United Nations documents and the National Information and Documentation Center. In 2004 there were 18 state branches of the National Library. The National Archives are in Enugu State. State governments have libraries in their respective capitals and in all the local government headquarters. Almost all of the 20 universities have libraries. The largest public library in Kano holds over 300,000 volumes. The chief university library is that of the University of Ibadan, which contains 450,000 volumes. Other sizable university collections are at the University of Lagos (375,000 volumes), the University of Ife (401,000), and the University of Nigeria at Nsukka and Enugu (717,000). The High Court of Lagos State holds a collection of 600,000 volumes. There are dozens of other privately maintained collections throughout the country.

The National Museum in Lagos contains many specimens of Nigerian art, mostly pieces of statuary and carvings, remarkable for their variety and quality. It also has archaeological and ethnographic exhibits. Other museums represent more specialized interests: the museum at Ife opened in 1955 in response to halt the

looting of national art treasures, and contains world-renowned bronze and terra cotta heads; the decorative arts museum at Benin City has a collection of bronzes; and that at Oron has a valuable collection of ancestor carvings. The museum at Jos, opened in 1952 originally as the National Museum, is a center of research into the prehistoric culture of Nigeria. The Esie Museum, at Ilorin in Kwara State, has stone antiquities, and the National Museum at Kaduna has archaeological and ethnographic exhibits, including a “craft village.” The Owo Museum, in Ondo State, displays arts, crafts, and ethnographic relics. There are also museums in Kano, Argungu, and Oshogbo. Lagos also houses the Centre for Black and African Art and Civilization.

#### 45 MEDIA

Telephone and telegraph communications are the responsibility of the Federal Ministry of Communications through its parastatal NITEL. Trunk lines and UHF links connect all the major towns, and all of these have exchange units, including automatic exchanges at Lagos, Ibadan, Kaduna, Kano, Jos, and Port Harcourt. In 2003, there were an estimated seven mainline telephones for every 1,000 people. The same year, there were approximately 26 mobile phones in use for every 1,000 people. Postal services are provided by another parastatal—NIPOST. There are post offices in all 305 local-government headquarters and other major towns.

Radio broadcasting is the joint responsibility of the federal and state governments, operating under the Federal Radio Corp. of Nigeria, created in 1978; state radio stations broadcast in English and local languages. Television, introduced in 1959, now operates throughout the country under the direction of the Nigerian Television Authority, with stations in all state capitals and channels set aside for the state governments. Several states also run their own stations. In 2001, there were nine television stations and six radio stations that were privately owned. In 2003, there were an estimated 200 radios and 103 television sets for every 1,000 people. The same year, there were 7.1 personal computers for every 1,000 people and 6 of every 1,000 people had access to the Internet. There were 13 secure Internet servers in the country in 2004.

In 2002 there were 26 major daily newspapers in Nigeria, some of them published by the federal or state governments. Leading Nigerian daily newspapers (with their 2002 estimated circulations) are: *Daily Times* (national, 400,000), *National Concord* (Lagos, 200,000), *Daily Champion* (Lagos, 150,000), *Nigerian Observer* (national, 150,000), *The Punch* (national, 150,000), *Nigerian Tribune* (national, 109,000), *New Democrat* (Kaduna, 100,000), *Nigerian Standard* (Jos, 100,000), *New Nigerian* (national, 80,000), *The Guardian* (Lagos, 80,000).

The constitution provides for freedom of speech and of the press and the government generally respected these rights; however, there were problems in some areas, particularly in restrictions on antigovernment reports.

#### 46 ORGANIZATIONS

Cooperatives are very important in Nigerian economic life. Many different societies are included in this category—consumers’ societies, thrift and credit societies, and others—but the most important are the marketing societies, which play a significant role in handling export produce, and sometimes in the production of both food and cash crops. Examples include the African Ground-

nut Council and the Cocoa Producers’ Alliance. However, the Structural Adjustment Program is gradually replacing cooperatives with farmers’ societies and export societies. There are chambers of commerce in all 19 state capitals and Abuja, and a National Association of Chambers of Commerce, Industry, Mines, and Agriculture in Lagos and Abuja.

The Girl Guides, the Boy Scouts, YWCA organizations, Muslim societies, Jamat Aid groups, and other community, social, and service groups are active in all towns and villages. There are sports clubs in Lagos and all the state capitals and national chapters of sports associations. Other national youth organizations include the National Association of Nigerian Students, the Ahmadyya Youth Association of Nigeria, 4-H, and the Catholic Youth Organization of Nigeria. National women’s organizations include the Nigeria Association of University Women and the National Center for Women in Development.

Literary and art associations meet regularly in Lagos, Kaduna, Enugu, and other major cities. Nigerian Academy of Sciences promotes public interest and education in the sciences. The Nigerian Medical Association promotes research and education on health issues and works to establish common policies and standards in healthcare. There are several other associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

The Constitutional Rights Project, founded in 1990, is a social action group. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. International organizations with national chapters include Amnesty International, the Society of St. Vincent de Paul, Habitat for Humanity, Caritas, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

There are five-star hotels in Lagos, Abuja, and Kaduna, and first-class hotels in all the state capitals. All of the cities have museums, which attract visitors to their historical artifacts. Many of the beaches are underdeveloped and lack accommodations and tourist facilities. Sports and social clubs offer facilities for swimming, sailing, tennis, squash, golf, and polo.

A passport valid for at least six months from visa purchase, return/onward ticket, and proof of sufficient funds are required for entry into Nigeria. Citizens of 106 countries including the United States and Canada also need visas. Travelers from infected areas are required to show a certificate of yellow fever vaccination. Precautions are recommended against malaria, meningitis, and typhoid.

There were 2,253,115 tourists who visited Nigeria in 2003, of whom 16.5% came from Europe. Receipts from tourism amounted to \$263 million in 2002.

In 2004, the US Department of State estimated the daily cost of staying in Abuja at \$266, and Lagos, \$315.

#### 48 FAMOUS NIGERIANS

Famous Nigerians of the 19th century include ‘Uthman dan Fodio (d.1817), who founded the Fulani empire at the beginning of the century, and Samuel Ajayi Crowther (1809–92), a Yoruba mis-

sonary of the Church of England who was consecrated first bishop of the Niger Territories in 1864.

*The Palm Wine Drinkard* and other stories by Amos Tutuola (1920–1997) exploit the rich resources of traditional Nigerian folk tales. Benedict Chuka Enwonwu (1921–1994), Nigeria's leading painter and sculptor, gained international fame, as has Wole Soyinka (b.1934), a prominent playwright who was awarded the 1986 Nobel Prize for Literature, the first African so honored. Novelists of note include Chinua Achebe (b.1930) and Cyprian Ekwensi (b.1921). Sports figures include Dick Tiger (1929–71), twice world middleweight champion and once light-heavyweight champion.

Herbert Macaulay (1864–1946) is regarded as the father of Nigerian nationalism. Among contemporary political figures, Dr. (Benjamin) Nnamdi Azikiwe (1904–96), long one of the leading West African nationalists and formerly premier of the Eastern Region, was a founder of the NCNC and first governor-general and president of independent Nigeria. Former chief rival of Azikiwe and founder of the Action Group, Chief Obafemi Awolowo (1909–87) resigned as premier of the Western Region to lead the opposition in the federal House of Assembly. The hereditary leader of the Hausa-Fulani ruling class in northern Nigeria and leader of the NPC until his assassination in January 1966 was Alhaji Sir Ahmadu Bello, sardauna of Sokoto (1909–66), who became prime minister of the Northern Region in 1954. The first prime minister was Alhaji Sir Abubakar Tafawa Balewa (1912–66), who also was assassinated in the 1966 coup. Chief Simeon Olaosebikan Adebo (1913–94), a leading Nigerian diplomat, has held several UN posts. Maj. Gen. Yakubu Gowon (b.1934) headed the Federal Military Government from July 1966 to July 1975, when he was deposed in a bloodless coup during his absence from Nigeria at an OAU meeting. Gowon is credited with formulating the post-civil war policy of reconciliation with the Ibos that resulted in the country's rapid recovery. Alhaji Shehu Shagari (b.1925) served in several high government posts before being elected president in 1979. Reelected in 1983, he was subsequently deposed in a military coup from which Maj. Gen. Muhammadu Buhari (b.1942) emerged as leader of the Supreme Military Council and head of

state. Basketball player Hakeem Alajuwon (b.1963) was named one of the 50 Greatest Players in NBA History by the National Basketball Association in 1996–97.

#### 49 DEPENDENCIES

Nigeria has no territories or colonies.

# RWANDA

Republic of Rwanda  
*Republika y'u Rwanda*

**CAPITAL:** Kigali

**FLAG:** The national flag has three horizontal bands of sky blue (top, double width), yellow, and green, with a golden sun with 24 rays near the fly end of the blue band.

**ANTHEM:** *Rwanda Rwacu* (*Our Rwanda*).

**MONETARY UNIT:** The Rwanda franc (RFr) is a paper currency. There are coins of 1, 5, 10, 20, and 50 francs and notes of 100, 500, 1,000, and 5,000 francs. RFr1 = \$0.00164 (or \$1 = RFr610) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Democracy Day, 28 January; Labor Day, 1 May; Independence Day, 1 July; Peace and National Unity Day, 5 July; Assumption, 15 August; Anniversary of 1961 Referendum, 25 September; Armed Forces' Day, 26 October; All Saints' Day, 1 November; Christmas, 25 December. Movable religious holidays include Easter Monday, Ascension, and Pentecost Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Rwanda, a landlocked country in east-central Africa, has an area of 26,338 sq km (10,170 sq mi), extending 248 km (154 mi) NE–SW and 166 km (103 mi) SE–NW. Comparatively, the area occupied by Rwanda is slightly smaller than the state of Maryland. It is bordered on the N by Uganda, on the E by Tanzania, on the S by Burundi, and on the W and NW by the Democratic Republic of the Congo (DROC—the former Zaire), with a total boundary length of 893 km (555 mi).

Rwanda's capital city, Kigali, is located near the center of the country.

## <sup>2</sup> TOPOGRAPHY

Rwanda lies on the great East African plateau, with the divide between the water systems of the Nile and Congo rivers passing in a north–south direction through the western part of the country. To the west of the divide, the land drops sharply to Lake Kivu in the Great Rift Valley; to the east, the land falls gradually across the central plateau—its grassy highlands are the core areas of settlement of Rwanda's peoples—to the swamps and lakes on the country's eastern border. Almost all of Rwanda is at least 1,000 m (3,300 ft) above sea level; the central plateau is between 1,500 and 2,000 m (4,950–6,600 ft) high. In the northwest on the border with the DROC are the volcanic Virunga Mountains; the highest peak, Mt. Karisimbi (4,519 m/14,826 ft), is snowcapped. Lake Kivu, 1,460 m (4,790 ft) above sea level, drains into Lake Tanganyika through the sharply descending Ruzizi River. The Kagera River, which forms much of Rwanda's eastern border, flows into Lake Victoria.

## <sup>3</sup> CLIMATE

The high altitude of Rwanda provides the country with a pleasant tropical highland climate, with a mean daily temperature range of

less than 2°C (4°F). Temperatures vary considerably from region to region because of the variations in altitude. At Kigali, on the central plateau, the average temperature is 21°C (70°F). Rainfall is heaviest in the southwest and lightest in the east. A long rainy season lasts from February to May and a short one from November through December. At Gisovu, in the west, near Kibuye, annual rainfall averages 160 cm (63 in); at Gabiro, in the northeast, 78 cm (31 in); and at Butare, in the south, 115 cm (45 in).

## <sup>4</sup> FLORA AND FAUNA

Most of Rwanda is a region of savanna grassland. There is little forest left; the country is one of the most eroded and deforested in all of tropical Africa. Remaining woodlands are small areas of tropical forests along the western border, north and south of Lake Kivu. The most common trees are eucalyptus—imported from the south in the 1890s—acacias, and oil palms.

Wildlife was abundant before the region became agricultural. There are still elephants, hippopotamuses, buffalo, cheetahs, lions, zebras, leopards, monkeys, gorillas, jackals, hyena, wild boar, antelope, flying lemurs, crocodiles, guinea hens, partridges, ducks, geese, quail, and snipe. Because the region is densely populated, these are becoming fewer, and some species are disappearing. As of 2002, there were at least 151 species of mammals, 200 species of birds, and over 2,200 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The ability of the nation's agricultural sector to meet the demands of its large population are complicated by the overuse and infertility of the soil. Soil erosion and overgrazing are also serious problems. The remaining forested area is under intense pressure from uncontrolled cutting for fuel. During 1981–85, deforestation averaged 3,000 hectares (7,400 acres) per year. Between 1990 and

2000, the average rate of deforestation was 3.9% per year. In 2000, only about 12.4% of the total land area was forested. Malaria and sleeping sickness have spread because forest clearing and irrigation have increased the breeding areas for disease-carrying insects. Rwanda has about 5 cu km of renewable water resources with 94% of annual withdrawals used for farming and 2% used for industrial activity. About 92% of the nation's city dwellers and 69% of the rural population have access to improved water sources. The nation's cities produce about 0.1 million tons of solid waste per year.

In 2003, about 6.2% of the total land area was protected. In northeastern Rwanda the beautiful Kagera National Park is a game reserve sheltering many types of wildlife. Volcano National Park, which surrounds Mt. Karisimbi and was Africa's first wildlife park, is one of the last existing homes of the mountain gorilla. The national parks suffered from uncontrolled poaching and unauthorized cultivation until recent years. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 13 types of mammals, 9 species of birds, 8 species of amphibians, 4 species of invertebrates, and 3 species of plants.

Threatened species include the chimpanzee, African elephant, and black rhinoceros. Sixteen species of fish have become extinct.

## 6 POPULATION

The population of Rwanda in 2005 was estimated by the United Nations (UN) at 8,722,000, which placed it at number 87 in population among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.3%, a rate the government viewed as too high. Chief among the government's concerns is whether the economy can support the growing population. The projected population for the year 2025 was 12,906,000. The population density was 331 per sq km (858 per sq mi), making Rwanda the most densely populated country on the African continent.

The UN estimated that 17% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 9.30%. The capital city, Kigali, had a population of 656,000 in that year.

The prevalence of HIV/AIDS has had a significant impact on the population of Rwanda. The UN estimated that 9.1% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Before independence, many Rwandans, compelled by famine and underemployment, migrated to neighboring Zaire (now DROC), Uganda, and Tanzania. The Hutu and Tutsi political quarrels have caused numerous Tutsi to flee their homeland, many of them going to Burundi, where there were 245,600 refugees at the end of 1992. In the mid-1960s, nearly 400,000 Rwandans were listed as permanent residents of Uganda. Some 85,800 Rwandan refugees were in Uganda at the end of 1992.

With renewed violence in 1994, one half of Rwanda's 7.5 million population was forced to flee their homes. Of these displaced per-

sons, 2.4 million refugees fled to neighboring countries. In 1996, violence in Burundi forced 100,000 Rwandans to repatriate. After the civil war in the DROC in October of 1996, 720,000 of the 1.1 million Rwandan refugees were forced to repatriate. In 1996 and early 1997, Tanzania returned 480,000 Rwandan refugees from its western regions. Another 10,000 returned from Uganda. In addition, one million refugees who left Rwanda in the 1950s and 1960s have also returned since 1994. By the end of 1997, fewer than 100,000 Rwandans remained outside the country; some 30,000 of these in the DROC were expected to return. In 2004, 19,743 Rwandans were refugees in the DROC, 19,604 in Uganda, 5,921 in the Congo, and 5,767 in Zambia. In that same year, over 2,000 Rwandans applied for asylum in Europe, Canada, and surrounding African countries.

As of 2004, Rwanda hosted some 67,605 refugees and asylum seekers, mainly Congolese, Burundi, and Ugandans. As in 1999, more than 30,000 refugees from the DROC were situated in two camps, Kiziba in Kibuye Prefecture and Gihembe in Byumba Prefecture. There was also an urban group of refugees and asylum seekers in Kigali.

In 2000, the net migration rate was 62.8 migrants per 1,000 population, a significant change from -58.4 per 1,000 in 1990. In 2005, the net migration rate was an estimated zero migrants per 1,000 population. Remittances in 2002 were \$7.2 million.

## 8 ETHNIC GROUPS

The population of Rwanda is about 84% Hutu, a Bantu people who are traditionally farmers. The Tutsi, a pastoral people, constitute about 15% of the total population, but many have fled into neighboring territories for refuge, especially since civil strife began in 1959. The Tutsi migrated to Rwanda sometime before the 15th century. An enormous amount of tension exists between the Hutu and the Tutsi and frequently leads to violence. There are also some Batwa (Twa), a tribe of hunters related to the Pygmies of the DROC; the earliest known inhabitants of the region, they now constitute about 1% of the population of Rwanda. There are also small numbers of Asians and Europeans.

## 9 LANGUAGES

The main language is Kinyarwanda, a member of the Bantu language family. The official languages are Kinyarwanda, French, and English. Kiswahili, a form of Swahili, is used in commercial centers.

## 10 RELIGIONS

European missionaries, notably the White Fathers, introduced Christianity to Rwanda in the late 19th century. A 2001 study indicated that about 94% of the population were Christians: 50% Catholic and 44% Protestant. Muslims accounted for about 5% of the total population and about 2% professed no religion at all. A small number of people practice indigenous religions exclusively, but it is believed that many adherents of other faiths incorporate traditional elements into their own practice. These elements include belief in a supreme being, Imaana, and a number of lesser deities, who can be communicated with through the spirits of

ancestors. There are small groups of Baha'is, Hindus, and others. There are several foreign missionary groups.

The constitution allows for freedom of religion; however, some groups have reported restrictions and discrimination from some local government authorities. Certain Christian and Muslim holidays are celebrated as national holidays.

## 1<sup>1</sup>TRANSPORTATION

In 2002, an estimated 12,000 km (7,457 mi) of road, one of the most intensive systems in all of Africa, radiated through Rwanda, but only about 996 km (620 mi) were paved. Five principal roads connect Kigali to other Rwandan cities, and an asphalted road connects Butare and Cyangugu. Most roads become impassable during the rainy season, and there are few bridges. In 1995, there were 7,868 automobiles, and 2,048 commercial vehicles in use. Bus service connects Kigali to the 10 prefectures. The most important roads for landlocked Rwanda's external trade run from Kigali to Kibungo and from Kigali to Kagitumba, thence connecting by road and rail with Indian Ocean ports in Tanzania and Kenya. About 90% of foreign trade is via the Kagitumba route, which leads to the Kenyan ports via Uganda. Rwanda has no railroads. There is traffic on Lake Kivu to the DROC from Gisenyi, Kibuye, and Cyangugu, using native craft and shallow-draft barges.

There were an estimated nine airports in 2004, four of which had paved runways as of 2005. International airports are at Kigali-Kanombe and at Kamembe, served by Air Rwanda, Sabena, Air Zaïre, Aeroflot, Air Burundi, Kenya Airways, Air Tanzania, Ethiopian Airlines, and Air France. Direct flights from Europe are available from Brussels, Paris, and Athens. Internal air traffic is provided by Air Rwanda to six domestic airfields.

## 1<sup>2</sup>HISTORY

Stone Age habitation, as far back as 35,000 years, has been reported in the region now called Rwanda. The first known inhabitants of the area were the Twa, a pygmoid group following hunting and gathering subsistence patterns. Later, between the 7th and 10th centuries AD, the Bantu-speaking Hutu people, who followed a settled, agricultural way of life, arrived, probably from the region of the Congo River basin. Between the 14th and 15th centuries, the Tutsi, a pastoral people of Nilotic origin, arrived from the north and formed numbers of small and independent chieftaincies. At the end of the 15th century, a few of these chieftaincies merged to form a state, near Kigali, under the leadership of Ruganzu I Bwimba. In the 16th century, the Tutsi dynasty began a process of expansion that continued into the late 19th century under the prominent Tutsi leader Kigeri IV Rwabugiri (d.1895).

The Tutsi conquest initiated a process of political integration. The ownership of land was gradually transferred from the Hutu tribes to the *mwami*, the king of the Tutsi, who became the supreme head and, in theory, absolute master of the country. He was the incarnation of the state and enjoyed an almost divine prestige. A feudal social system based on caste—the conquering Tutsi and the subject Hutu—was the dominant feature of social relations, and especially of economic and political relations. The ownership of cattle, a vital element in the social system, was controlled by the Tutsi, who in turn parceled out their use to the Hutu. The Hutu did the farming and grew the food, but had no part in government. The Tutsi did no manual labor. To a certain extent, however,

LOCATION: 1°4' to 2°50' S; 28°51' to 30°55' E. BOUNDARY LENGTHS: Uganda, 169 kilometers (105 miles); Tanzania, 217 kilometers (135 miles); Burundi, 290 kilometers (180 miles); Democratic Republic of the Congo (DROC), 217 kilometers (135 miles).

the castes were open to each other, and the northwest remained Hutu-controlled. Inter-marriage, especially between Tutsi males and Hutu females, was common. The Hutu language, Kinyarwanda, was eventually adopted by the Tutsi.

The first European known to have explored the region was John Hanning Speke, who traveled with Richard Burton to Lake Tanganyika in 1858, where he turned north in his search for the headwaters of the Nile. In 1871, Stanley and Livingstone landed at Bujumbura (now the capital of neighboring Burundi) and explored the Ruzizi River region. After the Berlin Conference of 1884–85, the German zone of influence in East Africa was extended to include Rwanda and Burundi, and in 1894, a German lieutenant, Count von Götzen, discovered Lake Kivu. Roman Catholic missionaries soon followed. After the *mwami* submitted to German rule without resistance in 1899, the Germans administered the territory through the traditional authorities in accordance with the laws and customs of the region. Belgium occupied the territory in 1916 during World War I, and was awarded a mandate that was known as Ruanda-Urundi (present-day Rwanda and Burundi) by the League of Nations in 1923. In 1925, an administrative

union was formed between the Ruanda-Urundi mandate and the Belgian Congo (now the DROC). A key policy of Belgian rule was the strengthening of the effective control of the Tutsi dynasty—under Belgian supervision—throughout Ruanda.

In 1946, Ruanda-Urundi became a UN trust territory under Belgian administration. Events in Africa after World War II aroused Hutu political consciousness and led the Hutu to demand the abolition of social and political inequalities. In November 1959, a Hutu revolution began, continuing sporadically for the next few years. Many Tutsi either were killed or fled to neighboring territories during the nationwide anti-Tutsi campaign named the “wind of destruction.” The Belgian authorities, along with the Roman Catholic missionaries, provided crucial support to the Hutu during this troubled period. A provisional government, republican in tendency and composed predominantly of members of the Parmehutu Party, was set up in Ruanda in October 1960. In the following January, the leaders of the Parmehutu proclaimed the deposition of the mwami and the creation of a republican regime. The new regime was recognized *de facto* by the administering authority, but the UN declared it to have been established by irregular and unlawful means.

On 25 September 1961, legislative elections and a referendum on retaining the institution and person of the mwami were held in Ruanda at the insistence of the UN General Assembly and under the supervision of the UN Commission for Ruanda-Urundi. The elections gave the Parmehutu, led by Grégoire Kayibanda, an overwhelming majority. In the referendum, about 95% of the electorate took part, voting 4 to 1 to abolish the monarchy. The UN strongly urged both Ruanda and Urundi to come to independence united, but reluctantly agreed that neither country wished to do so. On 27 June 1962, the UN General Assembly passed a resolution providing for the independent states of Rwanda and Burundi, and on 1 July, Rwanda became an independent country.

In December 1963, following an abortive invasion by Tutsi refugees from Burundi, a massive repression launched against the remaining resident Tutsi population caused the death of an estimated 12,000 Tutsi. The massacre was the signal for a renewed exodus of Tutsi elements into the neighboring territories of Uganda, Tanzania, the Congo (DROC), and Burundi. In all, approximately 150,000 Tutsi fled between 1959 and 1964.

In January 1964, the monetary and economic union that had existed between Burundi and Rwanda was terminated. Despite severe economic difficulties, Grégoire Kayibanda was reelected to a third four-year term as president in 1969. However, continuing internal unrest led the Rwandan army to overthrow the Kayibanda government in July 1973, and Maj. Gen. Juvénal Habyarimana assumed the presidency. His regime, dominated by officers from the north, took a more moderate stand on the issue of Hutu-Tutsi relationships than had the previous administration.

In 1975, he institutionalized his military regime, creating a one-party state under his National Revolutionary Movement for Development (MRND). A system of ethnic quotas was introduced that formally limited the Tutsi minority to 14% of the positions in the workplace and in the schools.

The regime was corrupt and authoritarian, and popular discontent grew through the 1980s. The MRND agreed to allow partisan competition and several new parties emerged in 1990 and 1991. But the greatest threat to the regime came in October 1990,

when over 1,000 Tutsi refugees invaded Rwanda from Uganda. This group, called the Rwanda Patriotic Front (RPF) had considerable success, considering that around 1,000 French, Belgian, and Zairian paratroopers helped defend the government in Kigali. Government forces retaliated by massacring Tutsi. A cease-fire was worked out later in October and Uganda, Burundi, and Zaire agreed to send in peacekeeping forces to supervise it. But fighting broke out again in January 1991. Further cease-fires were negotiated between government and Tutsi rebels in Brussels, Belgium, in March 1991 and in Arusha, Tanzania, in July 1992, but fighting continued.

In November 1990 Habyarimana announced that political parties would be permitted in 1991 and that tribal names would be abolished from national identity cards. In April 1992 Habyarimana appointed an opposition politician, Dismos Nsengiyaremye, as prime minister. The new cabinet included 9 members of the MRND and 10 opposition party members. Their supporters fought in the streets. Hardliners around Habyarimana were accused of trying to sidetrack the democratization process. By June the government had officially recognized 15 opposition parties. Talks with Tutsi leaders continued on power sharing, but the Hutu-Tutsi division appeared to be beyond reconciliation. A power sharing agreement was signed in Tanzania in January 1993, but this failed to end fighting. Another peace agreement was signed on 4 August 1993. The UN Security Council authorized on 5 October 1993 a peacekeeping force to assist in implementing the agreement. Unrest continued and no transitional government, which the agreement called for, was established.

In 1994 a total breakdown occurred. In February the minister of public works was assassinated. His supporters, in turn, murdered an opposition politician. In April, a rocket downed an airplane carrying the presidents of Rwanda and Burundi. All aboard were killed. They were returning to Kigali from regional peace talks in Tanzania. From that point on, Rwanda became a killing field as members of the Rwandan army and bands of armed Hutu massacred Tutsis and many moderate Hutus, including Prime Minister Agathe Uwilingiyimana. The extremist Coalition for the Defense of the Republic (CDR) encouraged and directed the killing. In response, the RPF stepped up its liberation efforts.

By July 1994 several hundred thousand persons had been killed and several hundred thousand more had fled their homes and the country to Burundi, Tanzania, and Zaire. The RPF occupied over half the country, seizing Kigali and restoring some semblance of order. While the international community was aware of the genocide occurring in Rwanda, little was done until the RPF had occupied a large part of the country. The UN approved a large expansion of the limited peacekeeping force in the area as the RPF consolidated its control and established a government of national unity, headed by a Hutu president, Pasteur Bizimungu. Major General Paul Kagame, a leader of the RPF, became minister of defense and vice president. The government announced that Hutu refugees, numbering in the millions, were safe to return to Rwanda, but few believed them and the conditions at the refugee camps, primarily in Zaire, began to deteriorate as disease and starvation became rampant. A 70-member Transitional National Assembly was formed in late 1994 in the hopes of returning order to the country. In February 1995, the UN Security Council created the International Criminal Tribunal for Rwanda.

Meanwhile, the government of Zaire's policy of forcible repatriation proved catastrophic as thousands of refugees died or disappeared. From April 1994 to 1997, some 100,000 Hutu refugees lost their lives while *Interahamwe* ("those who attack together") guerrillas—suspected of having perpetrated the genocide in Rwanda—were allowed free reign in the camps. In Rwanda, almost 90,000 suspected killers were arrested and detained in miserable conditions in whatever facilities the government could find, including soccer stadiums. The slow pace of the trials was a cause of considerable concern, but UN and Rwandan authorities defended the thoroughness, offering it as evidence that the government was not interested in wholesale revenge. Of the nearly 90,000 prisoners, 1,946 had been indicted by 1997. A process of *gacaca*—trial by local communities—began in June 2002 to speed up the trials of some 119,000 detainees.

When it became clear to Rwanda that the refugee camps in Zaire had become little more than training camps for Hutu paramilitaries, Rwandan and Ugandan troops enlisted Zairian rebel leader Laurent Kabila to oust longtime dictator Mobutu Sese-Seko. In less than eight months Mobutu was overthrown, and Kabila was made president the Democratic Republic of the Congo (formerly Zaire) in May 1997. A year later, irreconcilable differences between Kabila and Kagame and Yoweri Museveni of Uganda, led to "Africa's first world war" eventually involving nine African countries. Peace talks in South Africa in 2002 resulted in a formal cease-fire, troop withdrawals, and a plan for a transition government in the DROC, to which Rwanda's proxy, the RCD-Goma, was a signatory. By June 2003 with the backing of UN (MONUC) troops, the transition plan had commenced implementation, but fighting between Congolese soldiers, rebel groups, and Rwandan regulars continued.

In addition to conducting the *gacaca* trials, Rwanda faced several challenges to national healing and rebuilding. In April 2002, Bizimungu was jailed for possessing documents the government said advocated civil disobedience and ethnic division. (He was held until 2004, when he was sentenced to 15 years in prison.) In May 2002, the DROC filed a case with the International Court of Justice in the Hague accusing Rwanda of genocide against 3.5 million people in DROC. By late 2002, some 19,000 Rwandan refugees had been repatriated home from Tanzania, and another 5,000 from Zambia. In June 2003, Kagame signed a new constitution approved by national referendum into law, but international human and civil rights groups feared the constitution would limit multiparty pluralism and freedom of expression.

In March of 2003, a six-member EU election observation mission was sent to Rwanda in anticipation of a referendum to adopt the new constitution to observe election procedures, voting, and the referendum process.

On 26 May, Rwandans participated in a popular vote, which by 93% approved the parliament-supported draft constitution. On 4 June 2003, the new constitution was signed into law.

In July 2003, the government announced that presidential elections would be held on 25 August and parliamentary elections on 29 September, ending nine years of transitional rule. Opposition presidential candidate Faustin Twagiramungu, having returned from eight years in exile, said that he planned to form a new party before the elections, but he called for postponing them to allow more time for organization. However, his former *Mouvement*

*Démocratique Républicain* was banned and a new law passed, giving political parties 15 days to register again, ahead of the polls, and allowing candidates to run as independents—an option that Twagiramungu chose.

In the first post-genocide presidential election, and the first multiparty election since independence in 1962, Paul Kagame won a landslide victory. He ran on a platform of increased justice, economic growth, national unity, and good governance. As of early 2006, the date of the next presidential election was estimated to be 2008.

### 13 GOVERNMENT

The constitution of December 1978 provided for a unitary republic with executive, legislative, and judicial branches. The executive was headed by a president elected for a five-year term who presided over the council of ministers and was commander in chief of the armed forces. The secretary-general of the National Revolutionary Movement for Development, the sole legal political party, was empowered to act in the president's stead in the case of incapacity. The president shared legislative power with the country's unicameral legislature, the National Development Council, which consisted of 70 members.

A new constitution was adopted on 18 June 1991. It legalized independent parties. The executive branch consisted of an elected president and a prime minister and a Council of Ministers chosen from the legislature. The unicameral legislature continued the name, National Development Council.

The 4 August 1993 Peace Accord signed with the RPF called for a 22-month transition period leading to multiparty elections and the establishment of several new institutions. By 1994, the Rwandan patriotic Front had established control of the country, instituting a government of national unity, headed by President Pasteur Bizimungu, himself a Hutu.

In May 1995, the 70-seat transitional national assembly (TNA) created a new constitution. In early 2000 Bizimungu resigned, accusing the Tutsi-controlled parliament of unfairly investigating his allies on corruption charges. The vice president, Paul Kigame was inaugurated 22 April 2000, the country's first Tutsi president since independence from Belgium in 1962. In 2001 four additional seats—two for women and two for youth—were added to the TNA.

The 2003 constitution did not drastically change the composition of government. The executive arm of the government is comprised of the chief of state, the president, and the prime minister, who is head of the government. A Council of Ministers is appointed by the president.

The parliament is comprised of a Chamber of Deputies, which is made up of 80 seats, 53 of which are directly elected, and a 26-seat Senate.

### 14 POLITICAL PARTIES

In the last years of Belgian administration many political organizations were formed. In March 1957, Grégoire Kayibanda and other young Hutu leaders issued the *Hutu Manifesto* demanding a continuation of Belgian rule until the Hutu were better prepared to assume a role in political affairs. In June 1957, they formed the Hutu Social Movement, which, in 1959, became the Party of the Hutu Emancipation Movement (*Parti du Mouvement*

de l'Emancipation Hutu—Parmehutu). Parmehutu thereupon set a policy of ending Tutsi rule, drawing political definitions along ethnic lines, and abolishing the feudal system.

The Rwanda National Union Party (Union Nationale Rwandaise—UNAR), founded in September 1959 by Prosper Bwanakweli and backed by the mwami, was the leading monarchist party, calling for immediate self-government and independence under a hereditary (Tutsi) constitutional monarchy.

In the 1961 elections, Parmehutu received 77.7% of the votes cast; UNAR won 16.8%, and other minority parties 5.5%. Under a system of proportional representation, 35 of the 44 seats in the National Assembly went to Parmehutu. Parmehutu extended its control in the 1969 elections, and thereafter became the only political party in Rwanda until its disbanding by the military in 1973.

In 1975, President Habyarimana founded and became party president of the National Revolutionary Movement for Development (Mouvement Révolutionnaire Nationale pour le Développement—MRND), which became the nation's only legal party. Party membership was automatic at birth. The president of the MRND was the sole candidate in national presidential elections and appointed the party's secretary-general and central committee. In December 1981, the 64 deputies to the National Development Council were elected from 128 candidates chosen by the MRND. In the elections of December 1983, 140 MRND candidates vied for 70 seats in an enlarged Council; 17 former deputies were defeated.

In November 1990, the president announced that opposition political parties would be permitted to organize in 1991. Several new parties emerged, including the Democratic Republican Movement (MDR), the Liberal Party (LP), the Democratic and Socialist Party (PSD), and the Coalition for the Defense of the Republic (CDR). The latter, headed by Martin Bucyana, was charged with provoking the 1994 massacres.

Cracks within the Tutsi-based Rwandan Patriotic Front (RPF) and the Transitional National Assembly and government of unity widened following corruption probes and political and ethnic infighting.

Following President Bizimungu's resignation, Kagame was overwhelmingly elected president on 17 April 2000 during a special joint session of parliament and the cabinet receiving 81 of a possible 86 votes. Under the Arusha peace accord, the number of seats by party in the transitional government was predetermined and shared by eight parties: FPR 13, Democratic Republican Movement (MDR), 13; Democratic and Socialist Party (PSD), 13; Liberal Party (PL), 13; Christian Democrats (PDC), 6; RPA 6; Rwandan Socialist Party (PSR), 2; Islamic Democrats (PDI), 2; and others, 2.

Legislative elections on 29 September 2003 saw 8 parties and 17 independents compete for representation. On 1 October the RPF, party of President Paul Kagame, won a clear victory with 40 seats. The PSD earned 7 seats, and the PL, 6. The next election for Chamber of Deputies was scheduled for 2008 and for the Senate in 2011.

## 15 LOCAL GOVERNMENT

Rwanda is divided into 12 prefectures, or provinces, which coincide with former Belgian administrative divisions. The prefectures are supposed to be administered by prefects appointed by

the president. The former subchiefdoms and extratribal divisions were reorganized into 143 communes or municipalities. The commune, the basic political and administrative unit in Rwanda, is administered by an elected communal council presided over by a mayor. Until recently, communes had limited scope, however, decentralization has given local governments new powers and authorities previously reserved for central government.

## 16 JUDICIAL SYSTEM

The Rwandan legal system is based on Belgian and German civil codes and customary tribal law. The main courts in Rwanda are the Supreme Court of six justices, the High Courts of the Republic, provincial courts, district courts, and mediation committees.

Although the constitution provides for an independent judiciary, certain provisions also give the executive branch and the president authority to appoint and dismiss judges. When the president has the opportunity to nominate for supreme court seats, two nominations are required for each open supreme court seat. In practice, the courts are susceptible to government influence and manipulation.

The constitution guarantees defendants the right to counsel, but not a publicly funded defense. A shortage of attorneys, however, leaves many criminal defendants unrepresented. In many regions the chaos resulting from the 1994 civil war has disrupted the normal functioning of the judicial system. The government asked for help from the international community to rebuild the judiciary and appoint lower court officials.

## 17 ARMED FORCES

Rwanda's armed forces totaled 51,000 active personnel in 2005, which included paramilitary forces. The Army had 40,000 personnel, whose equipment included 24 main battle tanks, 106 reconnaissance vehicles, and 155 artillery pieces. The Air Force had an estimated 1,000 active members, whose major equipment included a small number of fixed-wing transport and training aircraft, and seven attack helicopters. Paramilitary forces consisted of up to 10,000 national police and local defense forces of approximately 2,000 members. In 2005, the defense budget totaled \$56.8 million. The civil war of 1994 weakened the government armed forces, who could not stop the Hutu-Tutsi tribal conflict.

## 18 INTERNATIONAL COOPERATION

Rwanda was admitted to the United Nations on 18 September 1962, and is a member of ECA and most of the nonregional specialized agencies, including the FAO, the World Bank, UNESCO, UNIDO, and the WHO. It is also a member of the WTO, the African Development Bank, the ACP Group, COMESA, G-77, the New Partnership for Africa's Development (NEPAD), and the African Union. In 1976, Rwanda joined Burundi and Zaire (now the DROC) in the Economic Community of the Great Lakes Countries, formed to develop the economic potential of the basin of Lakes Kivu and Tanganyika; its headquarters are in Gisenyi. In 1977, Rwanda joined Burundi and Tanzania in forming an economic community for the management and development of the Kagera River Basin. Uganda became a part of the community in

1980. Its headquarters are in Kigali. Rwanda is part of the Non-aligned Movement.

In environmental cooperation, Rwanda is part of the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on climate Change and Desertification.

## 19 ECONOMY

Rwanda has an agricultural economy with relatively few mineral resources. Coffee and tea are exports. During 1980–90, the Rwandan GDP annually grew by 2.3%, but the average growth rate declined by 3.6% between 1988 and 1998. The 1994 genocide threw the economy into a negative spiral, but foreign aid in the late 1990s brought about positive growth. Real growth rate of GDP in 2001 was 5%. The country has a high population density (the most densely populated in Africa), intensified by a 1.6% annual population growth rate between 1992 and 1998, which puts pressure on the land and the economy. The manufacturing base is limited to a few basic products. Soil erosion has limited growth in the agricultural sector. Poor markets, lack of natural resources, underdeveloped entrepreneurial and managerial skills, and difficult transportation problems all inhibit economic growth, along with the ethnic massacres of 1994 and the subsequent displacement of population. However, the IMF estimated that during 1995 Rwanda had recovered 40% of its pre-1994 economy. In the late 1990s, the government began a privatization program, in association with the World Bank, although the country has found it difficult to attract foreign investment. Rwanda became eligible in 2000 for \$810 million in debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. Low world coffee prices in the early 2000s deprived Rwanda of hard currency derived from export earnings.

The GDP growth rate was 2.5% in 2004, up from 2.3% in 2003, but significantly lower than the growth rates registered previously (9.5% in 2002); in 2005, the economy was expected to expand again by 4.0%. Since Rwanda is mostly an agricultural subsistence economy, most of this growth can be attributed to the foreign aid. The inflation rate was 12.0% in 2004, up from 7.1% in 2003.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Rwanda's gross domestic product (GDP) was estimated at \$11.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,300. The annual growth rate of GDP was estimated at 4.8%. The average inflation rate in 2005 was 8%. It was estimated that agriculture accounted for 37.6% of GDP, industry 22.8%, and services 39.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$7 million or about \$1 per capita and accounted for approximately 0.4% of GDP. Foreign aid receipts amounted to \$332 million or about \$39 per capita and accounted for approximately 20.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Rwanda totaled \$1.42 billion or about \$169 per capita based on a GDP of \$1.7 billion, measured in current dollars rather than

PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.5%. It was estimated that in 2001 about 60% of the population had incomes below the poverty line.

## 21 LABOR

According to official 2002 estimates, about 3.6 million persons were economically active in Rwanda. As of that year, more than 90% were engaged in subsistence agriculture. The government is the largest single employer of wage laborers. There is no data on unemployment in Rwanda.

The Central Union of Rwandan Workers (CESTRAR), Rwanda's largest and formerly sole authorized trade union organization, separated from the government and the MRND in 1991 as part of the political reforms under the new constitution. Four new independent unions were recognized by the government in 1991–92: the Union Association of Health Personnel in Rwanda; the Inter-professional Union of Workers of Rwanda; the Union of Secondary School Teachers; and the Association of Christian Unions, which represents public and private sector workers, small businessmen, and subsistence farmers. Since the 1994 genocide, Rwanda's union movement has somewhat recovered from the collapse which it, like all other institutions in the country, suffered. About 75% of those active in the modern (wage) sector were unionized as of 2001.

While the pre-genocide labor law is still technically in effect, the government is unable to implement its provisions. The minimum legal age for regular employment is 18 (14 for apprenticeships). Minimum wages vary with position and sector. The legal standard workweek is 40 hours, with 45 being the maximum.

## 22 AGRICULTURE

In 2000, about 91% of Rwanda's economically active population earned their living, directly or indirectly, from agriculture. Except for heavily eroded regions, the soil has a good humus content and is fertile, especially in the alluvial valleys and in the volcanic soils of the northwest. About 1.5 million hectares (3.7 million acres) are under cultivation. Subsistence agriculture predominates, and the basic agricultural unit is the small family farm of about one hectare (2.5 acres).

In 2004, the principal food crops (in tons) were plantains, 2,470,000; sweet potatoes, 908,000; cassava, 912,000; potatoes, 1,072,000; dry beans, 198,000; and sorghum, 164,000. The corn crop came to 88,000 tons and the sugarcane crop to 70,000 tons. The plantain crop is used principally for making beer and wine. Coffee, grown by some 600,000 smallholders, is the chief cash crop; in 2004, 20,000 tons were produced. Tea production came to about 14,500 tons in 2004. Coffee and tea together generally contribute 80% to export earnings. Rwanda also exports quinine and pyrethrum.

Rwanda has had devastating periods of famine. In 1928–29, more than 400,000 Rwandans died or were forced to migrate; in 1943–44, the figure was 300,000. Government planning has aimed at mitigating such catastrophes by striving for annual increases of food-crop production. Included in the government effort has been the introduction of rice cultivation by agronomists from Tai-

wan and China. Export diversification has been encouraged by the government, including production of alternatives such as sunflowers, and fruits and vegetables for the European winter market. In 2004, agricultural products accounted for 35% of exports, but there was an agricultural trade deficit of \$26 million.

### **2<sup>3</sup> ANIMAL HUSBANDRY**

Most farmers also raise livestock. In 2005 there were 1,004,000 head of cattle, 1,340,000 goats, 464,000 sheep, and 347,000 pigs. Chickens were also widely raised; in 2005 there were an estimated 2 million. Total meat production in 2005 was 50,800 tons, with beef and veal accounting for 45%.

The number of cattle owned by an individual has traditionally been a key indicator of status in Rwanda's social system. This factor has resulted in the accumulation of large herds of poor-quality stock. The government is striving to eliminate excess cattle and to improve the remainder by the introduction of modern stock-raising methods.

### **2<sup>4</sup> FISHING**

Fishing in the lakes and rivers is principally for local consumption. In 2003, Rwanda produced an estimated catch of 8,427 tons. The presence of methane-producing organisms in Lake Kivu limits the development of aquatic life.

### **2<sup>5</sup> FORESTRY**

There are no commercially exploitable woodlands; existing growths are too inaccessible for profitable development, although they are used locally for fuel and building. Erosion and cutting (due to farming and stock raising) have almost entirely eliminated Rwanda's original forests. Remaining growths are concentrated along the top of the Nile-Zaire divide and on the volcanic mountains of the northwest. There are scattered savanna woodlands in the eastern prefectures. Forests cover an estimated 307,000 hectares (759,000 acres). Roundwood removals came to an estimated 5,495,000 cu m (194 million cu ft) in 2003, 91% for fuel.

### **2<sup>6</sup> MINING**

Before the massacres of 1994, mineral commodities typically provided 10% of export earnings, mainly from concentrates of tin, tungsten, and columbium-tantalum ores, and gold bullion. Although by the mid-2000s, Rwanda had recovered most of the mineral output lost in 1994, many obstacles continued blocking full utilization of existing resources. Among them were the absence of high-grade ores, the lack of sufficient capital, continued civil unrest, massive population displacements, a 65% poverty rate, a shortage of skilled labor, the country's landlocked status, transportation costs among the highest in Africa, a recent increase in oil prices, a nagging Hutu extremist insurgency, and involvement in two wars in the Democratic Republic of the Congo. In 2004, mining and quarrying accounted for less than 1% of Rwanda's gross domestic product (GDP).

In 2004, estimated mineral production included: 300 metric tons of tin ore (metal content), compared to 192 metric tons in 2003; tungsten ore, 120 metric tons, compared to 78 metric tons in 2003; cement, 104,205 metric tons; and columbite-tantalite ore and concentrate (gross weight), 200,000 kg, up from 128,000 kg in

2003. There was no recorded mined gold output in 2004. Rwanda also produced natural gas in 2004. Some lava beds of the west and northwest contained potassium compounds useful for fertilizers. Exploitation of the country's peat deposits could become necessary to meet the subsistence farming sector's energy needs, Rwanda's deforestation rate being the third highest in Africa.

The Rwandan mineral industry consisted mostly of a number of small cooperatives and individual artisanal miners who produced ores and concentrates from scattered locations generally in a 30-km-wide (18-mi-wide) zone that extended east-west through Kigali. In 2000, the government privatized Régie d'Exploitation et de Développement des Mines, the state mining exploration company.

### **2<sup>7</sup> ENERGY AND POWER**

Rwanda has no proven reserves of coal, crude oil, or oil refining capacity, although the country has proven reserves of natural gas.

All of Rwanda's refined petroleum products are imported. In 2002, demand and imports of refined petroleum products each totaled 6,500 barrels per day. These included, 2,000 barrels per day of distillates, 860 barrels per day of gasoline, 3390 barrels per day of jet fuel, and 250 barrels per day of kerosene. Rwanda's proven natural gas reserves, as of January 2003, were estimated at two trillion cu ft. However, in 2002, there was no recorded production of natural gas or natural gas imports.

Rwanda's electrical energy derives chiefly from hydroelectric sources. Electricity production in 2002 totaled 100 million kWh, of which 2% was from fossil fuels and 98% from hydropower. Consumption of electricity in 2002 was 120 million kWh. Most of the country's electric power comes from four hydroelectric stations. Additional power is imported from the DROC. Total installed capacity in 2002 was 0.035 million kW, almost all of it hydroelectric.

### **2<sup>8</sup> INDUSTRY**

Manufacturing contributed 10% to Rwanda's GDP in 1998. The value added by industry dropped 75% in 1994, reflecting the turmoil and massacres of that year. The industrial sector as a whole contributed 20% to GDP in 2000, and the industrial production growth rate in 2001 was 7%.

Most industrial activity centers around food processing. Manufacturing and processing establishments have been at the artisan level, turning out items such as pottery, wicker baskets, bricks, shoes, tile, and insecticide. Rwanda has light industry which produces sugar, coffee, tea, flour, cigars, beer, wine, soft drinks, metal products, and assembled radios. Rwanda also has textile mills, soap factories, auto repair shops, a match factory, a pyrethrum refinery, and plants for producing paint, cement, pharmaceuticals, and furniture. War in 1994 severely disturbed industry. As of 2001, only 40% of prewar industries had restarted operations. There are abundant natural gas reserves in Lake Kivu, which Rwanda shares with the Democratic Republic of the Congo. Rwanda has expressed interest in exploiting those reserves, and in 2000, the country planned to build an inland methane gas plant.

The industrial production growth rate was 7% in 2001, stronger than the GDP growth rate. By 2004, industry made up 21.2% of the economy, although it employed only a fraction of the working

population; agriculture continues to be the biggest employer (an estimated 90% of all able bodies), and the most important contributor to the economy (41.1%).

## 29 SCIENCE AND TECHNOLOGY

The Institute of Agronomical Sciences of Rwanda, attached to the Ministry of Agriculture, and the Institute of Scientific and Technological Research have their headquarters in Butare, and the Directorate of Geological and Mineralogical Research within the Ministry of Industry is in Kigali. The National University of Rwanda, in Butare, has faculties of sciences, medicine, agriculture, and applied sciences. Science and engineering students account for about 30% of college and university enrollments. In 1987–97, research and development expenditures totaled less than 0.1% of GNP. There were 8 technicians and 35 scientists and engineers per million people engaged in research and development.

## 30 DOMESTIC TRADE

Kigali is the main commercial center in Rwanda. There are a few small supermarkets in Kigali offering imported items at rather high prices. However, smaller outdoor marketplaces selling locally produced foods and goods predominate in most areas. Nearly 90% of the work force is employed in agriculture, primarily at a subsistence level.

Business hours are from 8 AM to noon and from 2 to 5 PM, Monday through Friday. Banks are open from 8:30 AM to noon and from 2 to 5 PM, Monday through Friday.

## 31 FOREIGN TRADE

Between 1996 and 1999, exports grew 424%, while imports grew by a considerably smaller 25%. However, the value of imports still equals more than four times the value of exports. Imports for 1999 consisted chiefly of food, machinery and equipment, steel, petroleum products, cement, and construction material.

Rwanda's main commodity exports are coffee (56%) and tea (27%). Other exports include gold (17%) and animal hides and skins (0.9%).

In 2004, exports reached \$70 million (FOB—free on board), while imports grew to \$260 million (FOB). The bulk of exports went to Indonesia (64.2%), China (3.6%), and Germany (2.7%). Imports included foodstuffs, machinery and equipment, steel, petroleum products, cement and construction material, and mainly came from Kenya (24.4%), Germany (7.4%), Belgium (6.6%), Uganda (6.3%), and France (5.1%).

## 32 BALANCE OF PAYMENTS

The current account balance in relation to GDP was consistently negative through the 1990s, not only because of the 1994 genocide. Although the economy improved dramatically post-1994, export earnings in the early 2000s were hindered by low international coffee prices, depriving the country of hard currency. Rwanda's external debt stood at \$1.3 billion in 2000. In the same year, Rwanda became eligible for \$810 million in debt service relief from the IMF/World Bank Heavily Indebted Poor Countries

(HIPC) initiative. In 2002, the IMF approved a three-year \$5 million loan to Rwanda.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Rwanda's exports was \$61 million while imports totaled \$248 million resulting in a trade deficit of \$187 million.

The International Monetary Fund (IMF) reported that in 2001 Rwanda had exports of goods totaling \$93 million and imports totaling \$245 million. The services credit totaled \$50 million and debit \$189 million.

Exports of goods and services reached \$70 million in 2004, up from \$63 million in 2003. Imports grew from \$244 million in 2003 to \$273 million in 2004. The resource balance was consequently negative in both years, reaching -\$181 million in 2003, and -\$176

million in 2004. The current account balance was also negative, improving from -\$132 million in 2003 to -\$53 million in 2004. Foreign exchange reserves (excluding gold) grew to \$315 million in 2004, covering more than a year of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

From 1922 until the independence of Zaire (Belgian Congo, now DROC) in 1960, the monetary and banking systems of Rwanda and Burundi were integrated with those of the Congo. In July 1962, upon becoming independent, Rwanda and Burundi formed a joint monetary union administered by a common central bank. This bank was dissolved, and its functions as a central banking institution were transferred, in April 1964, to the National Bank of the Republic of Rwanda. The Banque nationale du Rwanda (BNR) was looted in July 1994 but reopened later in the year and has since reopened its branches in Butare and Ruhengeri. The bank imposes foreign exchange controls and administers the import licensing system.

There are four main commercial banks, of which two predate the war and two were established in 1995. The former are the Banque de Kigali, which is jointly owned by the state and two Belgian institutions—Belgolaise Bank and Générale de Banque—and the Banque commerciale du Rwanda, which is majority state-owned. The new institutions are the Banque de commerce, développement, et l'industrie (BCDI), whose main shareholders are Rwandans, and the Gold Trust Bank of Rwanda, whose main shareholders are Ugandan Asians. Rwanda also has a savings bank and a postal savings bank. The Rwandese Bank of Development and the People's Bank of Rwanda are the nation's development banks. The Banque Rwandaise de Développement (BRD) was also looted but reopened in mid-1995 with a large amount of bad debt.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$143.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$285.9 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 13%. There is no stock exchange in Rwanda.

### 3<sup>4</sup> INSURANCE

The Rwandan National Insurance Co., formed in 1975, is 90% state-owned. The Rwandan Insurance Society was founded in 1984. Insurance companies wishing to do business in Rwanda must be at least 51% Rwandan owned. Sonarwa and Soras, owned by the French group UAP, restarted operations on a modest scale.

### 3<sup>5</sup> PUBLIC FINANCE

Rwanda has both an ordinary budget for recurrent operations and a development budget for controlling development projects. In the 1960s and 1970s, prudent public finance management and generous foreign aid helped keep deficits and inflation low. With the fall of coffee prices during the 1980s, however, the government increased its control over the economy, and raised annual budget deficits to the equivalent of 11% of GDP by 1990. In 1998, Rwanda

signed a structural adjustment facility with the IMF, and started privatization of state-owned enterprises with the World Bank.

The US Central Intelligence Agency (CIA) estimated that in 2005 Rwanda's central government took in revenues of approximately \$509.9 million and had expenditures of \$584.6 million. Revenues minus expenditures totaled approximately -\$74.7 million. Total external debt was \$1.4 billion.

### 3<sup>6</sup> TAXATION

Direct taxation includes a tax on industrial and commercial profits, at 35% in 2005. Taxes on dividends and a turnover (sales) tax are also levied. Indirect taxation, forming the bulk of government tax revenue, is derived largely from import and export duties.

Individual taxes are levied in accordance with a progressive schedule with five brackets with a top rate of 35%. The tax law of 2002 provides for a number of additional deductions in calculating taxable income including pension payments, disability benefits, medical expenses, travel expenses, and on-the-job meal and training expenses. Diplomats and diplomatic staff, high ranking executives of international organizations, as well as persons and companies under special agreements ratified by law, are given special tax exemptions. Privileged persons include those dealing in exports as well as with donor-funded projects under an agreement with the government of Rwanda and the donor.

Rwanda has legislated a value-added tax (VAT) with a standard rate of 18% on all taxable goods and services.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Import duties have been the most important source of tax revenues since independence. There are two kinds of duties, both levied ad valorem: customs duties, averaging 15–30%, and revenue duties, averaging 5–15% (up to 60% for some goods). A 1% handling fee is also levied. Most imports require a license. Rwanda is a member of Common Market of Eastern and Southern Africa (COMESA).

### 3<sup>8</sup> FOREIGN INVESTMENT

Rwanda has attempted to attract foreign investment. The investment code of 1 July 1962, modified in 1977, offers preferential treatment to foreign companies judged to be of primary importance. These advantages include reduction of, or exemption from, import duties and exemption from the tax on dividends for the first five years. Profits may be repatriated at the official exchange rate. There are no restrictions on personnel recruitment and no demands for Africanization. Nevertheless, foreign investment is small because of Rwanda's small domestic market, inadequate infrastructure, and civil turmoil. Net direct foreign investment in 1995 was \$1 million (0.1% of GDP), down from \$8 million in 1990. In contrast, foreign aid in 1995 amounted to \$711 million, or over 50% of GDP.

In 2004, Rwanda was still heavily dependent on foreign aid (which represented 51% of the government's budget), and lacked a strong middle class and infrastructure developments that usually are sought after by private investors.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Rwanda's attempt to establish food self-sufficiency has delayed many of its development plans in other sectors. Rwanda typically

receives foreign aid from various European donors and the EU. After the 1994 genocide, Rwandan officials requested \$1.4 billion from the UN for reconstruction. Net concessional aid from international financial institutions and UN organizations in 1994 amounted to \$226 million. Foreign aid continued to rise in 1995, and leveled out through the late 1990s. Working with the International Monetary Fund (IMF) and World Bank, Rwanda hopes to restructure the economy and privatize the public sector in order to foster growth.

In 2000, Rwanda became eligible for \$810 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2002, the IMF approved a \$5.6 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement for Rwanda. Economic performance improved in the early 2000s. Demobilization and reintegration of army soldiers and ex-combatants, the jurisdiction of trials related to the genocide (gacaca courts), and assistance to genocide victims were priorities for government expenditure in 2002–03.

Economic growth in 2005 was, as a result of a good harvest year, higher than predicted. In addition to a strong agriculture sector, services and mining are expected to perform well. Rwanda remains, however, a poverty-stricken country that is heavily dependent on aid from abroad. In addition, it faced criticism from international donors and lending agencies following increased expenditures on defense.

#### 40 SOCIAL DEVELOPMENT

Social security programs aimed at meeting the individual's basic welfare needs have been established in law since independence. Old age pensions for workers, sickness and maternity benefits, and payments for those injured on the job are provided for all salaried workers. The system is funded by contributions from employees and employers. Old age pensions are available from age 55 to 65, unless the person is deemed prematurely aged. Most of the population live in poverty and engage in subsistence agriculture.

Although sex discrimination is outlawed by the constitution, women have only limited property rights and are not treated equally in employment, education, and other areas. However, women were elected to 40% of the seats in parliament in 2003. Domestic violence and wife beating are prevalent. Child labor and human trafficking are widespread.

The government's human rights record remains poor. Arbitrary arrest and detention continue, as well as life-threatening prison conditions. Freedom of speech and of the press are severely restricted.

#### 41 HEALTH

In 1995, an estimated 500,000–800,000 Rwandan refugees fled to neighboring Zaire (now the Democratic Republic of the Congo). Almost 50,000 died during the first month after the exodus, many of diarrheal diseases. In normal times, malnutrition is the greatest health problem in Rwanda. Animal proteins and fats are scarce. Kwashiorkor, a protein-calorie deficiency, is common, contributing to the death of many children and to liver trouble in older individuals; it also increases the severity of other prevalent diseases, among them pneumonia, tuberculosis, measles, whooping cough, and dysentery. Malaria and trypanosomiasis (sleeping sickness) are endemic. AIDS is a very serious issue in Rwanda.

The HIV/AIDS prevalence was 5.10 per 100 adults in 2003. As of 2004, there were approximately 250,000 people living with HIV/AIDS in the country. There were an estimated 22,000 deaths from AIDS in 2003.

Poor sanitation measures and water pollution also cause serious health problems; it was estimated that 41% of the population had access to safe drinking water and only 8% had adequate sanitation. Tuberculosis remains prevalent. Immunization rates for children up to one year of age included diphtheria, pertussis, and tetanus, 77%, and measles, 66%.

As of 2004, it was estimated that there were fewer than 2 physicians and 21 nurses per 100,000 people. Health care expenditure was estimated at 4.1% of GDP. The World Health Organization, the UN Food and Agriculture Organization, and UNICEF provide aid in public health services. Since the late 1960s, the UN, Belgium, France, and the United States have been assisting Rwanda in specific health-related projects.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 33.3 and 21.4 per 1,000 people. Average life expectancy in 2005 was 46.96 years with the infant mortality rate estimated at 91.23 per 1,000 live births. Maternal mortality was 210 per 100,000 live births. These rates do not include about 2,000 war-related deaths between 1991 and 1992 (Tutsi and Hutu conflict) and over 500,000 deaths in 1994 (mostly of Tutsi civilians by Hutu militias).

#### 42 HOUSING

The basic type of housing in the rural areas has been a structure that is most commonly beehive-shaped, made of mud bricks and poles, and covered with thatch. These residences are dispersed in the collines, farms organized on a family basis, and they accounted for 89% of Rwanda's housing units in 1978. However, in recent years the government initiated a National Habitat Program aimed at improving rural housing conditions and providing new housing for a large number of returning refugees and genocide survivors. One project of "villagization" is meant to construct rural village communities where public services and utilities might be provided more easily and, perhaps, with greater quality. Controversy exists over this project, since it is believed that some rural residents may be forcibly relocated from current homes to the new villages as they are consolidated into specific settlement areas. Part of the program includes a directive that will zone particular areas for housing and prohibit residence in nondesignated areas. Government policies have also been criticized because they do not necessarily address the existing housing shortage, but focus on accommodating returned refugees.

With international assistance, the government has renovated about 100,000 homes. As of 1998, it was estimated that at least 400,000 units, about 25% of the nation's housing stock, was in need of reconstruction or repair simply to accommodate for returning refugees. In 2002, there were about 1,757,426 households representing 7,963,809 people. About 94% of all households lived in a single-family structure. Most families live in homes made of wood and mud or sun-dried mud bricks with an earthen floor. Zinc or tiles are the most common type of roofing material. About 59% of all households get drinking water from a well or spring. Only about 6,729 households have a flush toilet. About 86% of all housing is owner occupied.

### 43 EDUCATION

There were no public schools in Rwanda until the 1950s and secondary education was then attainable only at a school founded in 1929 at Butare by Roman Catholic missionaries. With independence, Rwanda began a major expansion of its educational programs; in 1989, education accounted for 25.4% of total government expenditure. However, the Catholic Church continues to play the leading role in education.

Education is free and compulsory for six years, generally for children ages 7 to 13, but the law is not widely enforced. Primary school is for six years, followed by three years of junior and three years of senior secondary education. Technical school programs are available for students at the secondary level. Most primary and secondary schools are under the direction of religious missions, but many receive state subsidies. The academic year runs from September to June.

As of 2001, less than 3% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 87% of age-eligible students. The same year, secondary school enrollment was estimated at less than 10% of age-eligible students. It is estimated that about 37% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 60:1 in 2003; the ratio for secondary school was about 27:1. In 2003, private schools accounted for about 1% of primary school enrollment and 44% of secondary enrollment.

The National University of Rwanda at Butare was founded in 1963 by the government and a Canadian Roman Catholic order. Other known institutions are the African and Mauritian Institute of Statistics and Applied Economics in Kigali. In 2003, it was estimated that about 3% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 64%, with 70.5% for men and 58.8% for women.

As of 2003, public expenditure on education was estimated at 2.8% of GDP.

### 44 LIBRARIES AND MUSEUMS

The largest library collection is at the National University, which had approximately 199,000 volumes. There is a government library in Kigali, with about 15,000 volumes, and smaller collections are found in the administrative centers of the other prefectures. A National Library was founded in 1989 and had a collection of about 6,000 volumes in 2002. A library of 30,000 volumes is maintained at the Dominican Monastery in Kigali and the French Cultural Institute also maintains a collection in the capital. The Kigali Public Library, Rwanda's first public library, was still under construction as of 2006, with an expected opening day in 2007.

The National Museum in Butare contains an important collection for the study of the cultural evolution of the country and is housed in a building inaugurated in January 1989. An ethnological museum is maintained in Kabgayi and a geological museum in Ruhengeri. Kigali is home to the Geological Museum of Rwanda.

### 45 MEDIA

Telephone and telegraphic communications are the responsibility of the Ministry of Posts, Telecommunications, and Trans-

port. Telephone service is limited to Kigali and a few other important centers and is primarily for business and government use. In 2003, there were an estimated 3 mainline telephones for every 1,000 people. The same year, there were approximately 16 mobile phones in use for every 1,000 people.

The government-operated Radio of the Rwandan Republic provides domestic broadcasting service in French, Swahili, and Kinyarwanda. Television Rwandaise is the state-operated television broadcaster. As of 2005 there were at least five private radio stations. In 2003, there were an estimated 85 radios for every 1,000 people. The number of televisions in use is estimated at less than 1,000 nationwide. Also in 2003, 3 of every 1,000 people had access to the Internet.

ARP, a French-language daily press bulletin containing news of government activities, had a circulation of 100,000 in 2002. *Imvaho*, a weekly, had a circulation of 51,000. *La Releve*, a monthly, reached 1,700. All of these are published by the government. *The New Times* and the *Rwanda Herald* are privately owned, English-language papers.

The Fundamental Law provides for freedom of the press. However, it is said that the government harasses and intimidates the media at any reporting of views contrary to its goals.

### 46 ORGANIZATIONS

Under the Belgian administration, various commercial, agricultural, and welfare organizations were founded, and many have continued in operation since independence. There is a chamber of commerce and industry in Kigali and the Rwanda Private Sector Federation, to assist in business and trade. The government has also supported the growth of agricultural cooperatives.

Scouting and YMCA/YWCA programs are available for youth. There are sports associations promoting amateur competitions for athletes of all ages. Organizations dedicated to promoting the rights of women include the Federation of African Women Peace Networks, Pro-Femmes, and the Rwandan Women's Network. There are national chapters of the Red Cross Society, CARE International, UNICEF, the Society of St. Vincent de Paul, and Caritas.

### 47 TOURISM, TRAVEL, AND RECREATION

Tourism had declined in the 1990s due to war and economic factors. In 1997 new hotels and inns were opened in an attempt to rejuvenate the tourism industry. Tourists are drawn by Rwanda's mountain gorillas, wild game preserve, and by hiking opportunities in the Volcano National Park and the Akagera National Park.

A valid passport is required of all tourists, and a visa is necessary for all but the nationals of the United States, Germany, Canada, Uganda, Tanzania, Kenya, Burundi, and the Democratic Republic of the Congo. A certificate of vaccination against yellow fever is required of all visitors. Malaria, meningitis, hepatitis, and typhoid are health risks.

In 2005, the US Department of State estimated the daily cost of staying in Kigali was \$177. Other areas were significantly less at \$69 per day.

### 48 FAMOUS RWANDANS

Kigeri IV Rwabugiri (d.1895) was one of the most famous rulers of the precolonial Rwanda kingdom. Grégoire Kayibanda (1924–76), the first president of independent Rwanda, studied for the priest-

hood and became a teacher. He founded Parmehutu, the party that led the move to independence. Juvénal Habyarimana (1937–94) became president in July 1973 and remained in office until 1994, when a new government was established with Pasteur Bizimungu (b.1951) as president. Paul Kagame (b.1957), the founder of the Rwandese Patriotic Front and president of the country, is most well known for his role on the Rwandan genocide in 1994, and his destabilising role in the Second Congo War.

#### 49 DEPENDENCIES

The Republic of Rwanda has no territories or colonies.

# SÃO TOMÉ AND PRÍNCIPE

Democratic Republic of São Tomé and Príncipe  
*República Democrática de São Tomé e Príncipe*

**CAPITAL:** São Tomé

**FLAG:** The flag consists of three unequal horizontal stripes of green, yellow, and green; there is a red triangle at the hoist, and two black stars on the yellow stripe.

**ANTHEM:** *Independência Total (Total Independence)*.

**MONETARY UNIT:** The dobra (DB) is equal to 100 centimos. There are coins of 50 centimos and 1, 2, 5, 10, and 20 dobras, and notes of 50, 100, 500, and 1,000 dobras. DB1 = \$0.00010 (or \$1 = DB10,414.2) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Martyrs' Day, 4 February; Labor Day, 1 May; Independence Day, 12 July; Armed Forces Day, first week in September; Farmers' Day, 30 September. The principal Christian holidays also are observed.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

São Tomé and Príncipe, the smallest country in Africa, lies in the Gulf of Guinea, about 360 km (225 mi) off the west coast of Gabon. The nation has an area of 1,001 sq km (386 sq mi). Comparatively, the area occupied by São Tomé and Príncipe is slightly less than 5.5 times the size of Washington, D.C. São Tomé extends about 49 km (30 mi) NNE–SSW and 29 km (18 mi) ESE–WNW. Príncipe has a length of approximately 21 km (13 mi) SSE–NNW and a width of 15 km (9 mi) ENE–WSW.

São Tomé and Príncipe's capital city, São Tomé, is located on the northeast coast of the island of São Tomé.

## <sup>2</sup> TOPOGRAPHY

The islands form part of a chain of extinct volcanoes and are both quite mountainous. Pico de São Tomé, the highest peak on São Tomé, is 2,024 m (6,640 ft) above sea level. Most other peaks rise to only a little more than half that height. Príncipe's plateau area, extending along the northwestern coast, is larger than that of São Tomé. Pico de Príncipe is Príncipe's tallest mountain, reaching 948 m (3,109 ft) above sea level.

## <sup>3</sup> CLIMATE

The islands are tropical, but temperature varies a good deal with altitude. Coastal temperatures average around 27°C (81°F), but the mountain regions average only 20°C (68°F). Seasons are distinguished more by a change in precipitation than by a change in temperature. From October to May, the northern regions of São Tomé and Príncipe receive between 100 and 150 cm (40 to 60 in) of rain. The southern portions receive about 380 to 510 cm (150 to 200 in).

## <sup>4</sup> FLORA AND FAUNA

Except for the coastal flatlands where cocoa and coffee plantations predominate, São Tomé and Príncipe are dominated by forestland. Above 1,370 m (4,500 ft), the tropical rain forest changes to cloud-mountain forest. There is little livestock, but domestic fowl are abundant.

## <sup>5</sup> ENVIRONMENT

Water and land pollution are the most significant problems in São Tomé and Príncipe. The purity of the nation's water supply is questionable due to the lack of adequate water treatment systems. The nation's forests are also threatened due to overuse and there is no regulatory policy to regulate their preservation. The nation's cities are threatened by inadequate sewage treatment. Soil erosion and soil exhaustion are other major environmental problems.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 10 species of birds, 1 type of reptile, 3 species of amphibians, 7 species of fish, 1 type of mollusk, 1 species of other invertebrate, and 35 species of plants. Threatened species include the São Tomé short-tail, São Tomé sunbird, the West African seahorse, and at least six species of sharks.

## <sup>6</sup> POPULATION

The population of São Tomé and Príncipe in 2005 was estimated by the United Nations (UN) at 153,000, which placed it at number 175 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 38% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the

UN, the annual population rate of change for 2005–2010 was expected to be 2.5%, a rate the government viewed as too high. The projected population for the year 2025 was 225,000. The overall population density was 159 per sq km (413 per sq mi), but about 94% of the total populace lives on São Tomé.

The UN estimated that 38% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.87%. The capital city, São Tomé, had a population of 54,000 in that year. Santo António is the largest town on Príncipe.

## 7 MIGRATION

Historically, São Tomé and Príncipe received a substantial flow of what was allegedly temporary immigration in the form of contract labor. The *serviçais*, as they were called, came largely from Angola and Mozambique to work on the cocoa plantations; many were never repatriated. More recently, plantation labor has come from drought-stricken Cape Verde. Before 1974, Cape Verdeans were subsidized by the Portuguese government to settle on São Tomé and Príncipe in an effort to boost the islands' plantation economy. After the April 1974 revolution in Portugal and the coming of independence to the Portuguese territories, almost all the 3,000–4,000 European settlers left, while several hundred Angolans fled to São Tomé. Subsequently, more than 10,000 São Toméan exiles returned from Angola, and most Cape Verdeans left São Tomé. In 2000 the number of migrants totaled 7,000. In 2005, the net migration rate was an estimated -2.51 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Most of the island's permanent residents are Fôrros, descendants of the Portuguese colonists and their African slaves, who came from Gabon and the Guinea coast. Along the southeast coast of São Tomé lives a group called the Angolares, the descendants of Angolan slaves, shipwrecked in the 16th century, who established independent fishing communities. Others include the mestiço, *serviçais* (contract laborers from Angola, Mozambique, and Cape Verde), tongas (children of *serviçais* born on the islands), and Europeans, primarily Portuguese.

## 9 LANGUAGES

Portuguese, the official language, is spoken in a Creole dialect that reveals the heavy influence of African Bantu languages.

## 10 RELIGIONS

Christianity is the dominant religion, with Roman Catholics constituting about 80% of the total population and Protestants constituting about 15%. The primary Protestant groups are Evangelicals (about 3.4% of the population), New Apostolic (2%), and Seventh-Day Adventists (1.8%). Approximately 3% of the population are Muslim. About 2% are atheist. A very small number of people practice forms of witchcraft, but this is considered more of a custom than a religion and practitioners are often adherents of one of the other major religions. Certain Christian holidays are cel-

brated as national holidays. The constitution provides for religious freedom.

## 11 TRANSPORTATION

Transportation networks on São Tomé and Príncipe reflect the plantation economy. There were approximately 320 km (199 mi) of roadways in 2002. Surfaced roads, about 218 km (135 mi), serve principally to bring export crops to the port towns. Schooners are the main means of transportation for people living far from town. São Tomé and Santo António are the main ports; large freighters must be unloaded from their anchorage by barge because the ports are not deep enough to accommodate them. The Merchant Marine reported 15 ships of 1,000 GRT or more, totaling 79,490 GRT in 2005.

In 2004, there were two airports, both with paved runways. The international airport at São Tomé is serviced principally by the Angolan airline Transportes Aéreos de Angola, although Transportes Aéreos Portugueses and Aeroflot make occasional stops. Equatorial Airline of São Tomé and Príncipe, a government joint venture with a private European airline, flies to Príncipe and Libreville, Gabon. In 2001 (the latest year for which data is available), 35,100 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

São Tomé and Príncipe were probably uninhabited volcanic islands when the Portuguese landed there in 1471. In 1485, São Tomé was made a donatário (concession) of João de Paiva; the donatário provided for de Paiva to administer and profit by his administration of São Tomé according to Portuguese law. Subsequently, São Tomé served as a slave station.

The islands were settled by a group of Europeans and their African slaves. In 1493, 2,000 Jewish children were taken to São Tomé in an effort to populate the islands and raise the children as Christians, but by 1532 only 50 or 60 were left. It was Portuguese policy to deport its criminals, *degradados*, and orphans to remote colonial areas, and many of São Tomé's earliest male settlers came in this fashion. Female settlers were more often African slave women, and from the ensuing marriages a large mestiço population developed. A third group, separate from the European and mestiço populations, consisted of Angolares, descendants of shipwrecked Angolan slaves.

By the mid-16th century, the islands were Africa's leading exporter of sugar. São Tomé and Príncipe were taken over by the Portuguese crown in 1522 and 1573, respectively. Eventually, sugar lost its commercial importance, but in the early 19th century, two new cash crops, coffee and cocoa, were introduced, and by 1908 São Tomé had become the world's largest producer of cocoa. Plantation slavery or slave-like contract labor remained the basis of island labor for hundreds of years, and even when slavery formally ended in 1869, the plantations employed laborers "recruited" on "contract" from other areas of Portuguese-speaking Africa. In 1906, Henry Nevinson published his book, *A Modern Slavery*, which exposed the use of involuntary recruits, unacceptably high labor mortality, and poor work conditions on the islands. The outcry resulted in a boycott of São Tomé cocoa. The scandal occasioned some reforms, but oppressive conditions continued. As late as 1953, the governor of São Tomé ordered Portuguese troops to

open fire on striking plantation workers, leaving nearly 1,000 people dead, an action that aroused nationalist feeling.

A liberation group formed in the islands in 1960, but Portuguese control made it impossible to wage an effective guerrilla war. The organization, the Committee for the Liberation of São Tomé and Príncipe (later renamed the Movement for the Liberation of São Tomé and Príncipe—MLSTP), remained in exile in Gabon until it was recognized by Portugal in 1974 as the sole legitimate representative of the people of São Tomé and Príncipe.

### Independence

An independence agreement was concluded between Portuguese and MLSTP negotiators on 26 November 1974, and a transitional government was installed on 21 December. On 12 July 1975, São Tomé and Príncipe achieved full independence. On the same day, Manuel Pinto da Costa, the secretary-general of the MLSTP, was inaugurated as the country's first president.

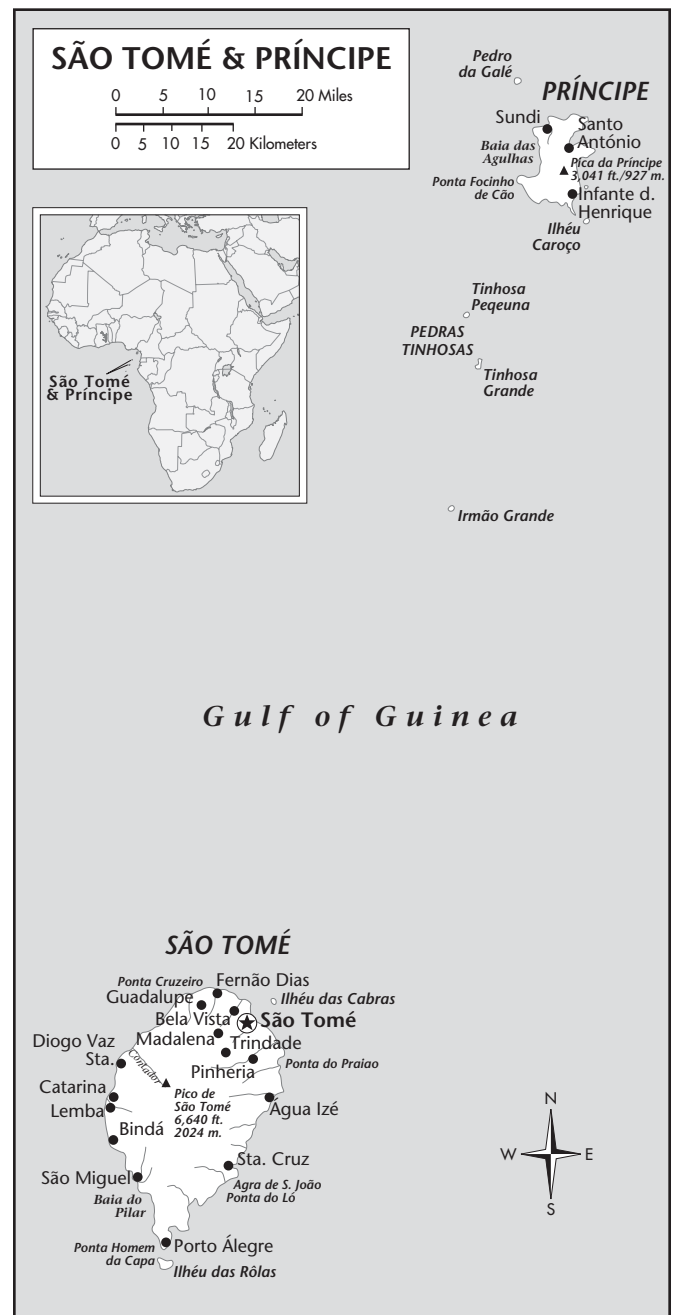

Following an alleged plot to overthrow the government, about 1,500 troops from Angola and Guinea-Bissau were stationed on the islands in 1978 at Pinto da Costa's request. Soviet, East European, and Cuban personnel were also reportedly on the islands. In 1979, Prime Minister Miguel dos Anjos da Cunha Lisboa Trouvoadá was arrested and charged with attempting to seize power. His post was assumed by Pinto da Costa, and the MLSTP was reported to be seriously split. In the early 1980s there was unrest on Príncipe, apparently provoked by separatists. By 1985, São Tomé and Príncipe had begun to establish closer ties with the West.

### Multiparty Democracy Launched

In 1990, a new policy of *abertura*, or political and economic "opening," was adopted. It led to the legalization of opposition parties and direct elections with secret balloting. The secret police were purged and freedom of association and press were encouraged. A number of groups, many led by politicians in exile, united as the Party of Democratic Convergence-Group of Reflection (PDC-GR) and were led by Miguel Trovoadá. An independent labor movement was launched and strikes were legalized. *Abertura* was also reflected in the evolution of a market economy and the privatization of state farms and enterprises.

On 20 January 1991, the nation held its first multiparty legislative elections. The former ruling party (MLSTP) was defeated by the PDC-GR. PDC-GR got 54.4% (33 seats) of the vote, the MLSTP 30.5% (21 seats), and the Democratic Opposition Coalition (CODO) 5.2% (1 seat). In the presidential election on 3 March 1991, Trovoadá was elected unopposed. In 1992, the government imposed a strict structural adjustment program at the behest of the IMF and the World Bank, which increased the price of gasoline and depreciated the value of the currency by 40%. The measures prompted massive demonstrations and calls for the dissolution of the government headed by Prime Minister Daniel Lima dos Santos Daio. The parliament then appointed Norberto Alegre prime minister, who then formed a new government.

In 1993, the PDC-GR continued to dominate the central government, but partisan activity accelerated. The president and the prime minister, both PDC-GR, also became involved in a dispute over interpretation of the constitution on the separation of powers. In November, a joint communique by four opposition parties accused government of "leading the country towards a social explosion" and denounced its "authoritarian and repressive attitude."

LOCATION: São Tomé: 0°13' N and 6°37' E. Príncipe: 1°37' N and 7°24' E.  
TERRITORIAL SEA LIMIT: 12 miles.

By 1994, Trovoadá was forced to again dissolve the government amid continued protests. The PDC-GR was increasingly seen as corrupt and complacent, but Trovoadá was viewed with equal skepticism. After firing Alegre, Trovoadá appointed a new prime minister from the PDC-GR, but the PDC-GR refused to acknowledge the president's right to do so, expelled the prime minister from the party, and refused to participate further with the government. In response, Trovoadá announced new elections for 2 October 1994. The MLSTP won 27 seats; the PDC-GR, 14; and the Independent Democratic Action Party, 14. Carlos Alberto Monteiro Dias da Graça was appointed prime minister. Regional elections

were held on Príncipe in March 1995, resulting in a commanding majority for the MLSTP.

A bloodless coup in August 1995 led by five Army officers temporarily disbanded the government, but international pressure reversed the coup and by year's end, a new government of national unity was created, headed by Prime Minister Armindo Vaz d'Almeida. In June 1996, Trovoada won presidential elections, taking 52% of the vote to (MLSTP) Manuel Pinto Costa's 48% in a rerun. The election was deemed generally free and fair by international observers, despite allegations of an unconstitutional modification of the voter lists between the first and second rounds. In September, the prime minister resigned and was replaced, after much infighting, by Raul Vagner de Conceição Bragança Neto. In March 1998 the civil service went on strike, the first since independence, demanding payment of six months of wage arrears, but government coffers were then said to be empty. Demobilized soldiers threatened to destabilize the country, demanding financial benefits provided for by a pact that ended the 1995 coup.

In the 8 November 1998 election, the MLSTP took 31 of the 55 parliamentary seats. The ADI won 16 and the PCD-GR, 8 seats. After Trovoada's veto of the first cabinet, Prime Minister Guilherme Posser da Costa formed a government in January 1999, announcing an austerity program to relaunch the economy and end corruption.

On 3 September 2001, a relatively unknown wealthy businessman, Fradique Melo Bandeira de Menezes, became São Tomé and Príncipe's third president as the result of free and fair elections held in July. Barred from seeking a third term, President Trovoada needed a successor who would protect his political and financial interests. It was widely speculated that Trovoada and his son Patrice believed they could control de Menezes from behind the scenes. De Menezes adopted a widely popular platform, ran a successful campaign, and gained enough votes on the first round to defeat Manuel Pinto da Costa, the candidate of the Movimento de Libertacao de São Tomé e Príncipe-Partido Social Democrata (MLSTP-PSD).

Despite de Menezes' efforts to clean up government and to eradicate poverty, instability and corruption continued to undermine social and economic progress in the period 2002–2006. Much of the instability could be attributed to the islands' inherently unstable governance structure—there have been seven prime ministers since 2001—and to the intense political competition related to the discovery of oil, auctioning of oil blocks, and desire to control revenues.

In March 2002, legislative elections were held eight months ahead of schedule resulting in a divided parliament with no party winning a majority. The unity government formed afterwards, which had been agreed to prior to the election, proved fractious and weak. Efforts to strip the president of his powers including his right to renegotiate an oil agreement with Nigeria, were rebuffed. A decision to call for fresh legislative elections was reneged upon, and in April 2003, riots broke out resulting in one death and much damage to public property.

A military coup on 16 July 2003 led to the deposing of de Menezes, who was in Nigeria at the time, and the arrests of the senior members of government. However, the president and cabinet were reinstated following international pressure and an agreement that a new government be formed with oversight over governmental

affairs by an international committee. In October, the first oil licensing round was held, but only one block was awarded to a consortium of American and Norwegian companies.

In September 2004, de Menezes dismissed the government of Maria das Neves over a corruption scandal. The successor government became embroiled in a similar scandal involving embezzlement at the government's aid agency, Gabinete de Gestao da Ajuda. Five more oil blocks were awarded in April 2005, but the process was marred by allegations of corruption in the adjudication process. A public sector strike in June 2005 led to the resignation of Vaz de Almeida; central bank governor Maria do Carmo Silveira was appointed the new prime minister. In July, President de Menezes called for a referendum on the country's constitutional form of government. The referendum sparked controversy, but had been agreed to as a condition in a memorandum of understanding signed by the president and party representatives in 2003. Nevertheless, on 24 November the National Assembly rejected the motion for a referendum by 45 votes to 5. General elections were held March 2006, with the coalition of MDFM-PCD winning 37% of the vote and 23 seats in the National Assembly; Tome Vera Cruz became the prime minister on 21 April 2006. MDFM is the Force for Change Democratic Movement (MDFM) and PCD is the Party for Democratic Convergence.

### **13 GOVERNMENT**

On 12 July 1975, São Tomé and Príncipe, formerly considered overseas territories of Portugal, became an independent democratic republic. The constitution, drafted by a constituent assembly, took effect on 12 December 1975. The president was chief of state, elected by the 40-member National Assembly for a term of four years. The prime minister, who was elected to a five-year term by the National Assembly on the recommendation of the MLSTP, appointed and headed the cabinet. District popular assemblies elected in August 1985 chose the members of the National Assembly, which elected Pinto da Costa to a third term as president on 30 September 1985. The MLSTP had been the sole legal political party until 1990. A new constitution announced by da Costa in 1989, was adopted by the National Assembly in April 1990, approved in an August referendum, and went into force in September 1990.

Under the 1990 constitution, the president is elected for a maximum of two five-year terms, and is nominally in charge of foreign affairs and defense. The prime minister is chosen by the National Assembly and approved by the president. Members of the 55-member National Assembly serve a four-year term. Suffrage is universal at age 18. Parliamentary elections were held March 2006 with presidential elections scheduled for July 2006.

The power-sharing configuration of government presents a pattern for political conflict that appears to be well-established. Under the country's semi-presidential system, the president must form a government with the opposition. Both presidents Trovoada and de Menezes were embroiled in conflicts with parliament largely stemming from the vague constitutional separation of powers.

### **14 POLITICAL PARTIES**

On 15 October 1974, the government of Portugal recognized the Movement for the Liberation of São Tomé and Príncipe (Movimento de Libertação de São Tomé e Príncipe—MLSTP) as the sole

legitimate representative for the islands. The party, formed in exile in 1960, at a Pan-African conference in Ghana, originally called itself the Committee for the Liberation of São Tomé and Príncipe (Comité de Libertação de São Tomé e Príncipe—CLSTP). In 1965, CLSTP publicly demanded independence and economic reforms for the islands. At a conference in Guinea in 1972, the CLSTP changed its name to the MLSTP and moved its headquarters to Gabon. Until the declaration of 15 October 1974, the MLSTP remained partially underground and in exile, expressing itself through a legal party, the Pro-Liberation Movement Association, led by the poet Alda de Espírito Santo. After independence, the MLSTP became the only political party. Until 1991, Manuel Pinto da Costa was secretary-general of MLSTP and president of the republic.

With the legalization of opposition party activity, several politicians returned from exile to organize their followers. Miguel Trovoadá, an MLSTP founder who had been exiled after challenging da Costa's leadership, formed the Democratic Convergence Party-Group of Reflection (PCD-GR) and, in the 1991 elections, it captured control of the National Assembly and the presidency. The Democratic Opposition Coalition (CODO) and the Christian Democratic Front (FDC), and other parties together captured 15% of the vote for the legislature.

In December 1992, the MLSTP came back to score a series of landslide victories in municipal and regional elections. It took control of six of the eight regional governing bodies. In the 1994 elections, the MLSTP solidified its control, taking 27 of the 55 seats. The PCD-GR took 14, as did the Independent Democratic Action Party. Only 42% of registered voters turned up. There was a bloodless and short-lived coup amid massive popular unrest due to wage stagnation in 1995. The military leaders held power only briefly before returning the civilian government to power. In 1996, a government of national unity headed by Prime Minister Armindo Vaz d'Almeida was inaugurated.

Nine parties contested the 8 November 1998 parliamentary elections. The MLSTP further solidified its parliamentary grip to 31 seats. The Independent Democratic Action Party (ADI) increased its seats to 14, whereas the PCD-GR got only 8 seats. São Tomé and Príncipe was one of 15 countries whose politicians formed the Union of African Parties for Democracy and Development (UAPDD) in Namibia in October 1998, aimed at promoting the interests of the continent.

In the July 2001 presidential elections, de Menezes benefited from the support of the Independent Democratic Action Party (ADI), the country's largest, but comparatively weak opposition, and five other political forces including the PCD, UNDP, Codo, PRD, and the PPP. Under the country's semi-presidential formula, the dominant parties in the parliament wield considerable powers. Therefore, although this coalition reflected the self-interests of the leaders of these political entities, it assured de Menezes of a constituency sufficient to score 56.3% to 39% of the vote over Pinto da Costa. Three other opposition figures took 5% of the vote.

On 3 March 2002, São Toméans went to the polls to elect a new parliament. The results ended in a deadlock for the MLSTP-PSD, which gained 39.6% of the vote, and Force for Change Democratic Movement (MDFM-PCD), which took 39.4% of the ballots. Ue-Kedadji coalition received 16.2%. The number of seats by party was: MLSTP-PSD 24, MDFM-PCD 23, Ue-Kedadji coalition 8.

In the run-up to the March 2006 elections, the two main opposition parties—the Force for Change Democratic Movement (MDFM) and the Party for Democratic Convergence (Partido de Convergencia Democrática—PCD) announced a renewal of their alliance. It remained to be seen whether smaller parties would join them. The Ue-Kedadji coalition (comprised of the ADI, PRD, Uniao Nacional para Democracia e Progresso—UNDP, Codo, and Partido Popular do Progresso—PPP) remained split over the announcement by the ADI in October 2005 that it intended to contest the elections on its own. An outright victory by the MLSTP-PSD, which had been predicted, and which would have ensured a more stable governance arrangement, was not realized in the March 2006 elections. Instead, the MDFM-PCD won 37% of the vote and 23 seats to MLSTP's 28.9% and 19 seats. ADI won 20% and 12 seats.

## 15 LOCAL GOVERNMENT

São Tomé and Príncipe is divided into two provinces, corresponding to the two islands, and seven counties, of which six are on São Tomé, each governed by its own assembly. Príncipe was granted political and administrative autonomy, which it has exercised since 29 April 1995.

## 16 JUDICIAL SYSTEM

The accord signed on 26 November 1974 between the Portuguese government and the MLSTP served as the legal code in the islands until 12 December 1975, when a new constitution was formally implemented.

The present legal system, based on Portuguese law and customary law, provides for an independent judiciary and affords litigants in civil cases the right to a fair public trial and a right to appeal. It affords criminal defendants a public trial before a judge as well as legal representation. A shortage of trained lawyers, however, makes implementing this right difficult. The highest court is the Supreme Court, which is appointed by and accountable to the National Assembly.

## 17 ARMED FORCES

A small citizen's army was formed by the MLSTP government after Portuguese troops were withdrawn. There are also several hundred Angolan troops.

## 18 INTERNATIONAL COOPERATION

São Tomé and Príncipe, admitted to the United Nations on 16 September 1975, takes part in ECA and several nonregional specialized agencies, such as the FAO, the World Bank, the ILO, UNESCO, UNIDO, and the WHO. The nation is also a member of the ACP Group, the African Development Bank, G-77, the Alliance of Small Island States (AOSIS), the New Partnership for Africa's Development (NEPAD), and the African Union. The country has observer status in the WTO. São Tomé and Príncipe is part of the Nonaligned Movement. In environmental cooperation, the nation is part of the Convention on Biological Diversity, CITES, the

Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

São Tomé and Príncipe is one of the poorest countries in the world. It is not self-sufficient in food, and imports 90% of its supply. The economy is based on cocoa-producing plantation agriculture, but the fall of cocoa prices since the early 1980s has created serious problems for the government. One consequence of the price decline was the abandonment of postindependence socialist-style economic policies in favor of market-style policies.

Since 1987, economic policy was driven by a World Bank and IMF-sponsored structural adjustment program with the objective of weaning the economy of its dependence on cocoa exports and foodstuff imports. Since 1991, the government has imposed fiscal and economic austerity measures, continued to devalue the currency, reformed the banking sector, raised electricity and fuel prices, and continued to privatize the nonagricultural sector. In 2000, the country became eligible for \$200 million in debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative, and international donors pledged additional aid in 2001. The country was expected to benefit from another round of HIPC debt relief in 2006, to help bring down the \$300 million debt burden. In 2005, the government signed on to a new three-year IMF Poverty Reduction and Growth Facility (PRGF) program worth \$4.3 million.

Although the economy contracted in real terms in 1990 and 1991, slow growth resumed in 1992 and continued through the rest of the 1990s. It stood at 4% in 2001, and had risen to an estimated 6% by 2005. Offshore oil production, the diversification of agriculture, and the promotion of tourism were the government's goals for economic growth in 2006. The development of petroleum resources in its territorial waters in the oil-rich Gulf of Guinea, in a 60–40 split with Nigeria, leaves São Tomé and Príncipe optimistic about the future. The first production licenses were sold in 2004, although a dispute over licensing with Nigeria delayed São Tomé and Príncipe's receipt of more than \$20 million in signing bonuses for almost a year.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 São Tomé and Príncipe's gross domestic product (GDP) was estimated at \$214.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,200. The annual growth rate of GDP was estimated at 6%. The average inflation rate in 2005 was 15.1%. It was estimated that agriculture accounted for 16.7% of GDP, industry 14.8%, and services 68.4%.

According to the World Bank, in 2002 remittances from citizens working abroad totaled \$1 million or about \$6 per capita and accounted for approximately 2.0% of GDP.

It was estimated that in 2004 about 54% of the population had incomes below the poverty line.

## 21 LABOR

Agriculture and fishing support most of the population. Laborers for the plantation sector come from mainland Africa and Cape Verde on a contract basis; Angola, Mozambique, and Nigeria are the major sources of contract labor. Plantation laborers gained a 400% wage increase on the eve of independence. Soon after, labor disruptions and the reorganization of production reduced the output of plantation crops. There is no numerical data available as to the size of the country's workforce, its occupational breakdown, or the unemployment rate.

Unemployment can reach up to 50% of the workforce, largely because of the unpopularity of plantation work among the Fôrros. Unrelated to the former sole union (an affiliate of the MLSTP), or any political party, the Independent Union Federation (IUF) was formed in 1992 to take advantage of freedom of association provisions now in the constitution. Workers may organize and bargain collectively. However, the IUF has had little luck in organizing the workers on the large state-owned plantations. The government remains the primary mediator for labor, even though privatization has reduced the relative role of the government as an employer.

While the minimum age for employment is legally set at 18, children occasionally do work, especially on state-run plantations. Conditions on the largest state-owned plantations—the nation's largest job sector—have been described as “medieval.” The free housing and medical care, which the workers are promised, are inadequate. Food and clothing, supposed to be provided at low cost in “company stores,” are typically more expensive than on the open market. Safety and health regulations are ineffectually enforced. The minimum wage is legally set at \$14 per month. The workweek is set at 40 hours, but this is only practiced in the modern economic sector.

## 22 AGRICULTURE

Plantation agriculture has long dominated the economy of the islands. In 2003, there were 55,000 hectares (96,400 acres) of farmland planted with permanent and seasonal crops. Before nationalization in 1975, private companies owned more than 80% of the arable land. Their plantations were managed by São Tomé mestiços, Cape Verdeans, and São Tomé Europeans. The rest of the arable land was owned by about 11,000 small proprietors. The nationalization law limited the private holdings to 100 hectares (247 acres) and reorganized 29 plantations into 15 state companies. In 1985, however, the government began legally recognizing the right of individual families to cultivate land within the state plantations. The two largest plantations were leased to European management in 1986.

A variety of microclimates enables the cultivation of diverse tropical crops, but soils are especially suited for cocoa (introduced from Brazil in the late 19th century), which is the major export crop. About half of all cultivated land is used for cocoa production. Labor disruptions, a reduced workweek, inadequate investment in repair and maintenance, and the use of worktime to conduct management and cooperative training programs combined to lower the cocoa output from 10,000 tons in 1975 to 3,900 tons in 1987. Production of cocoa was about 3,500 tons in 2004. Cocoa exports accounted for about 90% of export earnings. Coconuts are the second most important crop; production in 2004 totaled

about 28,500 tons. Other agricultural products in 2004 were palm kernels, 2,000 tons; bananas, 27,900 tons; cassava, 5,800 tons; and cinnamon, 30 tons.

Since 1990, economic policy has been driven by a World Bank and IMF-sponsored structural adjustment program aimed at diminishing the dependence on cocoa exports and food imports. The program called for fundamental land reform and accompanying measures to stimulate cultivation of food crops for local consumption.

### 2<sup>3</sup> ANIMAL HUSBANDRY

The livestock sector, largely pigs, was plagued by African swine fever once in 1979 and again in 1992, necessitating the destruction of the entire herd of some 30,000 animals. Disease severely affected chicken and egg production in 1993. There is no tsetse-borne disease in São Tomé, but production is limited by tuberculosis. In 2005 there were an estimated 4,600 head of cattle, 3,000 sheep, 5,000 goats, and 2,500 pigs.

### 2<sup>4</sup> FISHING

The Angolare community of São Tomé supplies fish to the domestic market. In 2003, the catch was 3,283 tons. Between 1976 and 1983, substantial investments were made in fishing by the government, but the investment has not significantly contributed to GDP; rather, it has exacerbated a nearly unsustainable debt service burden. European Union (EU) vessels catch tuna in island waters under license. There are also fishing agreements with Angola and Portugal. Foreign assistance has focused more recently on artisanal fishing.

### 2<sup>5</sup> FORESTRY

About 27% of São Tomé and Príncipe is covered with primary, though inaccessible, forest. Wood is used on the plantations for fuel to dry cocoa beans and elsewhere as a building material. Unrestricted cutting has been the rule in spite of the legal sanctions against it. In 1993, new forest regulations were issued and guards were trained to enforce them. Reforestation and scientific foresting have been enforced to avoid further loss. Roundwood removals were estimated at 9,000 cu m (317,700 cu ft) in 2004.

### 2<sup>6</sup> MINING

The mineral industry was not significant in the islands, and mineral wealth remained largely unexplored. Lime deposits were exploited for the local market, and small clay and stone open-pit operations supplied the construction industry.

### 2<sup>7</sup> ENERGY AND POWER

Hydroelectric facilities are on the Contador River on São Tomé. About 60% of São Tomé's 0.14 million kWh of electric power in 2002 were produced by hydroelectricity; the rest was thermal. Total installed capacity in the islands was 10,000 kW in 2002. Demand for electric power in 2002 totaled 0.013 million kWh. Most of São Tomé is electrified, but only a quarter of the nation's households have electricity.

São Tomé has no proven reserves of oil, natural gas, or coal, nor any refining capacity. All fossil fuel needs are met by imports of refined oil products. In 2002, imports and demand each averaged 630 barrels per day. Distillates and gasoline comprised the bulk

of these imports, at 430 barrels per day and 140 barrels per day, respectively.

### 2<sup>8</sup> INDUSTRY

São Tomé has very little industry; the industrial sector constituted only 14.8% of the GDP in 2005. Light construction items—textiles, soap, beer, fish, bread, and palm oil—are produced on the islands. Manufacturing declined by two-thirds between 1987 and 1998, while industry as a whole grew. The development of oil resources in its territorial waters promises a new addition to the industrial sector. In January 2006, Chevron Corp. began exploration drilling in the Gulf of Guinea on a block jointly owned by São Tomé and Nigeria.

### 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The Ministry of Agriculture maintains a library in São Tomé. The Center of Technical and Scientific Documentation, also in São Tomé, has an extensive library of specialized documents on agriculture and fisheries.

### 3<sup>0</sup> DOMESTIC TRADE

The landholding population of São Tomé and Príncipe grows some produce for the local market, but not on a large scale. Similarly, the Angolare population of São Tomé supplies fish to the local market. However, domestic agriculture and industry are not sufficient to fully supply local consumption, causing the country to rely heavily on imports for most goods. The port towns of São Tomé and Santo António are the principal commercial and distribution centers.

Business hours are Monday through Friday, 7:30 AM to 4:30 PM.

### 3<sup>1</sup> FOREIGN TRADE

São Tomé and Príncipe's trade balance depends on price levels for cocoa, which accounts for about 90% of export earnings. Copra is also exported. The value of imports was four times that of exports in 2006. The leading imports are machinery and electrical equipment, food, and petroleum products.

In 2004, the country's primary export partners were: the Netherlands (37.3%); China (12.8%); Belgium (7.6%); Germany (6.6%); Poland (5.3%); France (5%); and Brazil (4.1%). The ma-

(...) data not available or not significant.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

for import partners were: Portugal (52.3%); Germany (9.5%); the United States (6%); the Netherlands (4.8%), South Africa (4.3%); and Belgium (4.1%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Since the country cannot supply enough food and clothing for its own people, imports remain high, while export revenues vary according to world agricultural prices. There is also an outflow of remittances for workers employed under contract from abroad.

In 2005, exports were valued at an estimated \$8 million, with imports valued at \$38 million. That year, the current-account balance was estimated at -\$19 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Banco Nacional de São Tomé e Príncipe is the central bank and also handles commercial banking. The Caixa de Crédito is a government savings and loan institution serving industry, agriculture, and housing. There is also a postal savings bank. There is no stock exchange.

In mid-February 1997, the central bank announced it would circulate new banknotes and coins worth \$29 million during the second quarter of 1997, with higher denominations. The new money has become necessary due to persistent high inflation. Inflation reached 20% in 1998. In 1999, several senior central bank officials were dismissed in connection with the embezzlement of \$1 million. The bank governor himself was dismissed on suspicion of corruption, and a government investigation of the bank led to the resignation of a finance minister.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$10.8 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$17.8 million. The discount rate, the

interest rate at which the central bank lends to financial institutions in the short term, was 15.5%.

### 3<sup>4</sup> INSURANCE

A national insurance and reinsurance company was founded in 1980. There is also an insurance fund for civil servants.

### 3<sup>5</sup> PUBLIC FINANCE

In 1987, the government instituted an IMF structural adjustment program to encourage private sector growth. This goal has been the focus of economic reform since the early 90s. São Tomé and Príncipe has traditionally received foreign aid from the UN Development Program, the World Bank, the EU, Portugal, Taiwan, and the African Development Bank. In late 2000, the country qualified for enhanced debt relief through the IMF's Heavily Indebted Poor Countries (HIPC) Initiative.

The US Central Intelligence Agency (CIA) estimated that in 2005 São Tomé and Príncipe's central government took in revenues of approximately \$26.3 million and had expenditures of \$59.4 million. Revenues minus expenditures totaled approximately -\$33.09 million. Total external debt was \$318 million.

### 3<sup>6</sup> TAXATION

Export and import taxes, customs duties, and sales tax are the main sources of revenue from taxation. Income tax accounted for only 7% revenue in 1985. In 1997, the government began a program to improve tax collection. In 2002, remarkable increases in tax revenue were reported. A larger issue was the politics of allotting the country's offshore oil fields for development. Production was projected to begin in 2006 or 2007, bringing a new level of wealth. In July 2003, the military took over the government while the president was out of the country.

### 3<sup>7</sup> CUSTOMS AND DUTIES

All imports require a license. Customs duties are levied, but recent information on rates and dutiable items is not available. In 1987, a state enterprise marketed all exports and imports of 12 basic commodities.

### 3<sup>8</sup> FOREIGN INVESTMENT

Since independence, investments have been minimal. An investment code adopted in 1986 allows free transfer of profits, dividends, and liquidated assets, as well as exemption from export duties. Some investors may qualify for tax and import-duty exemptions. As of 2005, investors had to pay 27.4% of gross profit in taxes.

In 1999, the government granted Island Oil Exploration Limited the right to develop an offshore logistics center and port to support future oil and gas operations. The government also hopes for investment in the tourism sector. From 1997 to 2000, annual foreign direct investment (FDI) inflow increased from \$100,000 to \$2.2 million. In 2001, FDI inflow declined to \$1.1 million. FDI as a percentage of GDP rose from 8.17% in 2000 to 16.81% in 2003. In 2003, the total stock of inward FDI was \$28 million.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

With the help of the United Nations Development Programme, the government hopes to stabilize cocoa production through long-lease arrangements with private-sector management companies. A shift to black pepper and arabica coffee could revitalize the coffee sector. Food self-sufficiency depends on the success of the government's policy of turning fringe cocoa land over to mixed-agriculture family farmers. Projects to export plantains, cocoyam, and citrus fruits to Gabon are under study. The pork herds are to be reestablished. The fishing, forestry, and tourist industries are being revitalized. The government plans to promote the development of additional food-processing and construction material industries, as well as to improve the paved road network.

A three-year International Monetary Fund (IMF) agreement approved in 2000 provided for the reduction of public service employees, the organization of ports and customs, and the privatization of government industry, in order to help alleviate the growing debt. Also in 2000, the country became eligible for \$200 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. São Tomé expected to benefit from an addition round of HIPC debt relief in 2006. In 2005, the country signed on to a \$4.3 million three-year IMF Poverty Reduction and Growth Facility (PRGF) program. Privatization of the state-owned agricultural and industrial sectors has been a government priority. The development of petroleum resources in the Gulf of Guinea began in 2004 with the sale of production licenses. In January 2006, Chevron Corp. began exploration drilling on a block jointly owned by São Tomé and Nigeria.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

A national social security system was initially set up in 1979, and was amended in 1990. Old age, disability, and survivorship benefits are paid to all employed persons, including civil service and the military. There are also sickness and maternity benefits, worker's compensation, and a voluntary program for the self-employed. Retirement is set at age 62 for men and age 57 for women.

Women enjoy constitutional equality with men, and some have been government ministers, but in general they are limited to a subordinate role by the traditional culture. Female literacy is much lower than that of men, and women are underrepresented in the professions. Traditional views inhibit women from seeking redress for domestic abuse and violence. Economic opportunities are further limited to women due to a very high teenage pregnancy rate.

Human rights were generally well respected, although the country suffers from an inefficient judicial system and harsh prison conditions.

### 4<sup>1</sup> HEALTH

The government hopes that crop diversification will help alleviate malnutrition, which continues to plague the country. Tuberculosis is still present in the country. Approximately 57% of the country's children had been vaccinated against measles.

In 2004, there were an estimated 47 physicians, 127 nurses, 30 midwives, and 5 dentists per 100,000 people.

The mortality rate for children under five years old was 82 per 1,000 live births. The infant mortality rate was estimated at 43.11 per 1,000 live births in 2005 and life expectancy at 66.99 years. The total fertility rate was an estimated 5.9 children for each woman during her childbearing years. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 42.3 and 7.3 per 1,000 people.

### 4<sup>2</sup> HOUSING

Housing on the islands varies greatly, from the estate houses of the plantation headquarters to the thatch huts of the plantation laborers. Some town buildings are wooden; others are mud block with timber, as are plantation-labor dormitories. At the 2001 census, there were about 33,887 occupied dwellings. Of these, about 35% were built in 1975 or earlier. Wood, cement, and zinc are the most common building materials for walls, floors, and roofs.

### 4<sup>3</sup> EDUCATION

The school system before independence was basically the same as that of Portugal. Schooling is compulsory for four years only. Primary education is for four years and secondary has two stages: the first five years are followed by two more years. In 2001, about 25% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 98.5% of age-eligible students. The same year, secondary school enrollment was about 28.9% of age-eligible students. It is estimated that about 61% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 32:1 in 2003.

The Polytechnic Institute of São Tomé and Príncipe is a public institution, established in 1997. A private institution, Instituto Universitario de Contabilidade, Administracao e Informatica, was established in 1993. The adult literacy rate for has been estimated at about 79.3%, with 85% for men and 62% for women.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

São Tomé maintains libraries at the Center for Technical and Scientific Documentation (45,000 volumes) and the national assembly (1,000 volumes). A general National Museum was founded in 1976 and located in the Fortress of Saint Sebastian, constructed in 1585. Its exhibits are mainly of African and religious art.

### 4<sup>5</sup> MEDIA

In 2003, there were about 7,000 mainline telephones in use, with an additional 4,800 cellular phone subscribers.

The national government operates radio and television broadcasts in Portuguese. There were no independent radio or television stations as of 2005, but there is no law forbidding them. The Voice of America, Radio International Portugal, and Radio France International all rebroadcast locally. In 2002, there were five FM and one AM radio stations and two television stations. In 1997, there were about 38,000 radios and 23,000 television sets in use throughout the country. In 2003, there were 1,069 Internet hosts serving about 15,000 Internet subscribers.

In 2004, there were two government-owned newspapers. The *Diario da Republica* (1995 circulation: 500) is published weekly by

the government. *Notícias São Tomé e Príncipe* is also a weekly, with a 1995 circulation of 900. There were six independent papers and newsletters in 2004, publishing monthly or bimonthly.

The constitution provides for the freedoms of speech and of the press and the government generally respects these rights in practice.

#### 46 ORGANIZATIONS

Cooperative movements sponsored by the MLSTP function as part of the government's economic development program. The Youth Movement for the Liberation of São Tomé and Príncipe is a major youth organization for youth ages 15 to 24. There are some sports associations, such as the São Tomé and Príncipe Athletic Federation (track and field) and the São Tomé and Príncipe Football Federation. There are YMCA/YWCA branches in the country. The Red Cross and Caritas also have national chapters.

#### 47 TOURISM, TRAVEL, AND RECREATION

São Tomé and Príncipe's scenic beauty, wildlife, and unique historic architecture have the potential to attract tourists, but even though the islands have been a port of call for voyagers for centuries. Tourist facilities are minimal and restricted largely to the port towns and their environs. The first tourist hotel opened in 1986 and the government has encouraged greater private investment in the tourist sector. Two sports facilities opened in 1992. São Tomé has beautiful white sand beaches and a number of cof-

fee and cocoa plantations to explore. All visitors must have visas. A yellow fever vaccination certificate is required if traveling from an infected area.

#### 48 FAMOUS SÃO TOMÉANS

Rei Amador (d.1596), who rebelled against the Portuguese and almost overran the island in 1595, is a national hero. Alda de Espírito Santo (b.1926) is a poet and nationalist leader. Manuel Pinto da Costa (b.1937), the secretary-general of the MLSTP, became the country's first president on 12 July 1975, a post he held until his party was defeated in the elections of 1991. Miguel Trovoada (b.1936) succeeded Manuel Pinto da Costa as president; he served until 2001. Fradique de Menezes (b.1942) began his presidency in 2001.

#### 49 DEPENDENCIES

São Tomé and Príncipe has no territories or colonies.

# SENEGAL

Republic of Senegal  
*République du Sénégal*

**CAPITAL:** Dakar

**FLAG:** The flag is a tricolor of green, yellow, and red vertical stripes; at the center of the yellow stripe is a green star.

**ANTHEM:** Begins “Pincez, tous, vos koras, frappez les balafons” (“Pluck your koras, strike the balafons”).

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr) is the national currency. There are coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00191 (or \$1 = CFA Fr522.78) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Independence Day, 4 April; Labor Day, 1 May; Day of Association, 14 July; Assumption, 15 August; All Saints’ Day, 1 November; Christmas, 25 December. Movable religious holidays include ‘Id al-Fitr, ‘Id al-’Adha, Milad an-Nabi, Good Friday, Easter Monday, Ascension, and Pentecost Monday.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the western bulge of Africa, Senegal has a land area of 196,190 sq km (75,749 sq mi), extending 690 km (429 mi) SE–NW and 406 km (252 mi) NE–SW. Comparatively, the area occupied by Senegal is slightly smaller than the state of South Dakota. It is bordered on the N and NE by Mauritania, on the E by Mali, on the S by Guinea and Guinea-Bissau, and on the W by the Atlantic Ocean. Its westernmost point is also that of the African mainland. On the NE the boundary is set by the Senegal River, and on the E by the Falémé River. Senegal surrounds the long, narrow Republic of The Gambia on three sides. The total boundary length of Senegal is 3,171 km (1,970 mi), of which 531 km (330 mi) is coastline.

Senegal’s capital city, Dakar, is located on the Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

The northern part of the Senegal coast has dunes from Cap Vert to Saint-Louis, but to the south are muddy estuaries. Behind the coast is a sandy plain, which extends north to the floodplain of the Senegal River. The Casamance region in the south, isolated from the rest of Senegal by the Republic of The Gambia, is low but more varied in relief, while to the southeast lie the Tamgué foothills, which rise to a maximum altitude of 581 m (1,906 ft). Much of the northwest of Senegal (known as the Ferlo) is semidesert, but the center and most of the south, except for the forest of Casamance, are open savanna country. The major rivers—the Senegal, Saloum, Gambie, and Casamance—flow from east to west.

## <sup>3</sup> CLIMATE

Temperatures are lowest along the coast and highest inland; rainfall is highest in the south and lowest in the north. The wet season, which lasts from June to October, is shorter in the north and longer in the south, especially near the southwest coast. The average

annual rainfall ranges from 34 cm (13 in) at Podor in the extreme north to 155 cm (61 in) at Ziguinchor, in the southwest. At Dakar, the average is 57 cm (22 in); at Tambacounda, in the interior, it is 94 cm (37 in). Temperatures vary according to the season, with the highest temperatures registered in the northeast. At Dakar, during the cool season (December–April), the average daily maximum is 26°C (79°F) and the average minimum 17°C (63°F); during the hot season (May–November), the averages are 30°C (86°F) and 20° C (68°F).

An unusually heavy season of rain beginning in August 2005 caused severe flooding in Dakar and the surrounding region. At least 50,000 people had to abandon their homes for makeshift shelters. Unsanitary conditions brought about by flood damage sparked a cholera epidemic that affected over 27,000 nationwide; at least 400 people died from the disease.

## <sup>4</sup> FLORA AND FAUNA

Vegetation varies in different areas of Senegal, depending on the average rainfall. The most tropical part of southern Casamance has mangrove swamps and remnants of high forest, including oil palms, bamboo, African teak, and the silk-cotton tree. The dry thornland of the northeast has spiny shrubs, especially acacia, including the gum-bearing species. Most of Senegal is savanna. Trees, which are widely spaced in this region, include the African locust bean, tallow tree, and gingerbread plum, along with cassias and acacias.

The lion and leopard are occasionally found in the northeast, as are chimpanzees, elephants, hippopotamuses, and buffalo. The wild pig, hare, guinea fowl, quail, and bustard are widely distributed. Insects and birds are abundant, and there are numerous lizards, snakes, and other reptiles. As of 2002, there were at least 192

species of mammals, 175 species of birds, and over 2,000 species of plants throughout the country.

## 5 ENVIRONMENT

Much of the land is threatened with desertification because of overgrazing, inadequately controlled cutting of forests for fuel, and soil erosion from overcultivation. In 2000, about 32.2% of the total land area was forested. Dakar suffers from such typical urban problems as improper sanitation (especially during the rainy season, when sewers overflow) and air pollution from motor vehicles. The nation has about 26 cu km of renewable water resources with 92% of annual withdrawals used for farming activity and 3% used for industrial purposes. About 90% of the nation's city dwellers and 54% of the people living in rural areas have access to improved water sources. Senegal's cities have produced about 0.6 million tons of solid waste per year. Important environmental agencies include the Ministry of Scientific and Technical Research, which is responsible for coordinating all research and development in Senegal.

Senegal has at least six national parks, covering about 4% of the country's total area; game in forest reserves is classified by law as partially or completely protected, but poaching remains a problem. As of 2003, 11.5% of Senegal's total land area was protected, including four Ramsar wetlands and two natural UNESCO World Heritage Sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 11 types of mammals, 5 species of birds, 6 types of reptiles, 18 species of fish, and 7 species of plants. Threatened species include the western giant eland and four species of turtle (green sea, olive ridley, hawksbill, and leatherback). The Sahara oryx has become extinct in the wild.

## 6 POPULATION

The population of Senegal in 2005 was estimated by the United Nations (UN) at 11,658,000, which placed it at number 71 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.6%, a rate the government viewed as too high, although progress has been made in reducing the fertility rate. The projected population for the year 2025 was 17,348,000. The population density was 59 per sq km (153 per sq mi).

The UN estimated that 43% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.61%. The capital city, Dakar, had a population of 2,167,000 in that year. Other important towns and their estimated populations are Thiès, 340,000; Kaolack, the peanut export center, 191,023; and Saint-Louis, 190,000.

## 7 MIGRATION

There is considerable seasonal migration between The Gambia and Senegal in connection with cultivation and harvesting of peanuts. Estimates of the number of Guineans who had fled to Senegal for political reasons ranged from 40,000 to more than 500,000,

but all apparently returned after a 1984 military coup in Guinea. Some Senegalese work in France; others have moved to other African countries in search of work, especially to Côte d'Ivoire. Since relations improved between Senegal and Mauritania in 1996, both countries agreed to the return of Mauritanian refugees. Also living in Senegal are some 50,000 French and Lebanese, about a third of whom have Senegalese nationality.

There was a significant increase in the number of Sierra Leonean asylum seekers due to the outbreak of fighting in Sierra Leone in 1999. Conversely, peace was restored in Guinea Bissau in that year, allowing hundreds of Bissau Guineans who sought refuge in Senegal to return home. In 2000, the number of migrants was 284,000, including 20,000 remaining refugees. Worker remittances for that year amounted to \$130 million, or 2.7 GDP. By the end of 2004, there were 20,804 refugees and 2,412 asylum seekers, mainly from Liberia. Refugees were primarily from Mauritania, as they had been since 1994. In 2004, over 7,000 Senegalese were refugees in Guinea-Bissau, and some 900 sought asylum, primarily in Gambia. In 2005, the net migration rate was an estimated 0.2 per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The largest ethnic group is the Wolof, who make up about 43.3% of the total population; they live mainly in the northwest. The Pular rank as the second-largest group, constituting 23.8% of the population. Closely related to the Wolof are the Serer (14.7%), in west-central Senegal, who are skilled peanut cultivators, and the Lebu, mostly fishermen and farmers, concentrated in the Dakar area.

Other important groups are the Diola of Casamance, making up 3.7% of the populace; the Mandinka, in the southeast and in Casamance, accounting for 3%; the Soninke constituting 1.1%; the Tukulor, who live predominantly in the northeast; and the Fulani (Peul) and Bambara, scattered throughout the country. Europeans and Lebanese make up about 1% of the total population; other various groups constitute the remaining 9.4%.

## 9 LANGUAGES

French, the official language, is the language of administration and of the schools. Indigenous languages are also widely spoken, the major ones being Wolof, Pulaar, Diola, and Mandingo.

## 10 RELIGIONS

Government reports indicate that about 94% of the people are Muslim, with members of the Tijaniya and Muridiya brotherhoods having great social, political, and economic influence. About 4% of Senegalese are Christians, including Roman Catholics and a number of Protestant denominations. The remaining 2% practice exclusively traditional indigenous religions or no religion at all.

The constitution provides for the freedom of religion and defines the country as a secular state. However, the government does offer grant money to religious organizations through an application process that is open to all. Registration is not required, but most organizations do so in order to obtain full legal status to conduct business. The government encourages and supports Muslim pilgrimages to the Mecca and Catholic pilgrimages to the Vatican.

LOCATION: 11°30' to 17°30' W; 12° to 17° N. BOUNDARY LENGTHS: Mauritania, 813 kilometers (505 miles); Mali, 419 kilometers (260 miles); Guinea, 330 kilometers (205 miles); Guinea-Bissau, 338 kilometers (210 miles); Atlantic coastline, 531 kilometers (330 miles); the Gambia, 740 kilometers (460 miles). TERRITORIAL SEA LIMIT: 12 miles.

Certain Muslim and Christian holidays are recognized as national holidays.

## 11 TRANSPORTATION

As of 2004, Senegal had 906 km (562 mi) of railroad, all narrow gauge and all owned by the government. The main lines run from Dakar to Thiès and thence to Kidira on the Mali border, and from Thiès to Saint-Louis. There are also branch lines from Guinguineo to Kaolack, from Louga to Linguère, and from Diourbel to Touba, serving the peanut-growing areas. Of Senegal's estimated 14,576 km (9,058 mi) of classified roads in 2000 (the latest year for which data is available), some 4,271 km (2,654 mi) were paved, including 7 km (4.6 mi) of expressways. There are modern roads from Dakar

to Thiès, Saint-Louis, and Matam, and from Dakar to Kaolack and on through The Gambia to Ziguinchor in Casamance. In 2000, there were 70,700 passenger cars and 68,800 commercial vehicles in the combined territory, Senegambia.

Favorably located at the westernmost point of the continent and possessing up-to-date equipment, Dakar is one of the largest deepwater seaports on the West African coast, a major import-export center and a port of call for freight and passenger ships. The port can accommodate ships of up to 100,000 tons. The Senegalese Maritime Navigation Co. (Compagnie Sénégalaise de Navigation Maritime—COSENAM), a river and ocean freight transport line in which the government has an 84% share, was founded in 1979. However, by 2005 there was no Senegalese merchant marine.

The Senegal River, which has a sandbar across its mouth, is navigable by shallow-draft vessels all year round from Saint-Louis to Podor (225 km/140 mi) and between August and October as far as Kayes in Mali (924 km/574 mi). It is closed to foreign ships. The Saloum is navigable by oceangoing vessels to the important peanut port of Kaolack, 114 km (71 mi) upriver. The Casamance River is navigable to Ziguinchor, although not without difficulty. As of 2003, Senegal had 1000 km (622 mi) of internal navigable waterways.

In 2004 there were an estimated 20 airports in Senegal, 9 of which (as of 2005), were paved. Dakar's Yoff International Airport, a West African air center, is served by many foreign airlines. Air France, Air Senegal, and Air Afrique maintain routes connecting Saint-Louis, Thiès, Ziguinchor, Kédougou, Tambacounda, and 10 other towns with secondary air fields. Air Senegal is 50% owned by the government and 40% by Air Afrique, in which Senegal also holds a 7% share. In 2003, about 130,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Very little is known about the history of Senegal before the 16th century. The major feature seems to have been the gradual movement into Senegal of the Wolof and Sérér peoples from the northeast, who reached their present positions between the 10th and 15th centuries AD. At various times parts of Senegal were included in the empires of Tekkur, Ghana, and Mali. At the height of its power at the beginning of the 14th century, Mali controlled the Falémé and Upper Senegal. That century saw the emergence of the Jolof empire, controlling the six Wolof states of Jolof, Kayor, Baol, Walo, Sine, and Salum. In the middle of the 16th century, Kayor revolted and conquered Baol, but the other Wolof states continued to admit a shadowy suzerainty of Jolof. As the power of Kayor and Baol increased toward the end of the 17th century, however, Jolof power declined, probably because it was cut off by those states from access to the sea and European trading. The 18th and early 19th centuries were marked by struggles among the northernmost Wolof states and by sporadic Mauritanian attacks on them.

European activities in Senegal began with the arrival of the Portuguese at the Cap Vert Peninsula and the mouth of the Senegal River in 1444–45. The Portuguese enjoyed a monopoly on trade in slaves and gold until the 17th century, when they were succeeded by the Dutch, who virtually dominated all trade by 1650. The later 17th century brought the beginnings of the Anglo-French rivalry, which dominated the 18th century in Senegal as elsewhere. Throughout the 17th and 18th centuries, the main trading activities were the export of slaves and of gum arabic. Peanut cultivation by African peasants, the foundation of Senegal's modern economy, began in the mid-19th century.

French rule was confined to the old trading posts of Saint-Louis (founded in 1659), Gorée, and Rufisque until its expansion under the Second Empire, during the governorship of Gen. Louis Faidherbe (1854–65). The French occupation of Senegal was consolidated and extended under the Third Republic during the last three decades of the 19th century. In 1871, Senegal was again allowed to send a deputy to the French parliament, a right that had been abolished under the Second Empire. In the following decade, municipalities on the French model were established in Saint-Lou-

is, Gorée, Dakar, and Rufisque, and only the inhabitants of these towns took part in the elections of the deputy.

Between 1895 and 1904, a series of decrees consolidated eight territories into a French West Africa federation, of which Dakar became the capital. In 1920, a Colonial Council, partly elected by the citizens of the old towns and partly consisting of chiefs from the rest of Senegal, replaced the elected General Council previously established for the four towns. All the elected bodies were suppressed in 1940 but restored at the end of the war, and in 1946 Senegal was given two deputies in the French parliament. Under the constitution of 1946, the franchise was extended and a Territorial Assembly was established in Senegal. Universal suffrage was established in 1957. In 1958, Senegal accepted the new French constitution and became an autonomous republic within the French community.

On 17 January 1959, in Dakar, representatives of French Sudan (now Mali), Senegal, Dahomey (now Benin), and Upper Volta (now Burkina Faso) drafted a constitution for a Federation of Mali, but only the assemblies of French Sudan and Senegal ratified it and became members of the federation. The Mali Federation became a sovereign state on 20 June 1960, but conflicting views soon led to its breakup. On 20 August, the Legislative Assembly of Senegal proclaimed Senegal's national independence and announced its withdrawal from the federation. A new republican constitution was adopted on 25 August, and on 5 September, Léopold-Sédar Senghor was elected president and Mamadou Dia became prime minister, in effect retaining a position he had held since 1957.

After an attempt by Dia to avoid a vote of no-confidence in the National Assembly by calling out the national police, the legislature met in special session on 17 December 1962 and overthrew Dia's government by a motion of censure. Dia was arrested, and Senghor was elected by unanimous vote of the deputies as head of government. Less than three months later, the electorate approved a new constitution that abolished the post of prime minister and made the president both chief of state and head of the executive branch. A constitutional amendment in 1970 reestablished the office of prime minister, and Abdou Diouf, former minister of planning and industry, was appointed to the post on 26 February 1970. Dia, in detention since 1962, was released in March 1974 as part of an independence celebration.

Having been reelected president in 1968, 1973, and 1978, Senghor resigned as president at the end of 1980 and was succeeded by Diouf. In the summer of 1981, 2,000 Senegalese troops were sent to The Gambia to put down an attempted military coup there. The Confederation of Senegambia was constituted in February 1982 with Diouf as president. Under the terms of confederation, the two countries pledged to integrate their armed and security forces, form an economic and monetary union, and coordinate foreign policy, communications, and possibly other endeavors. The Senegambia agreement was dissolved on 30 September 1989. Diouf was elected to a full term as president on 27 February 1983, receiving 83.5% of the vote in a five-candidate contest. All parties were guaranteed equal access to the media, but the secret ballot was optional, and independent observers reported widespread electoral irregularities. The office of prime minister—constitutionally regarded as the president's successor—was once again abolished in April 1983.

The ruling Parti Socialiste Sénégalais (PS) was victorious in municipal and rural elections held in November 1984, although 12 of the 15 registered parties boycotted the polls. Diouf liberalized the political process and restructured his administration, making it less corrupt and more efficient. Government advocated modulated reform in the face of reactionary elements in the PS.

In the 1988 national elections, Diouf carried 77% of the vote and the PS took 103 of the 120 seats in the National Assembly. Despite a generally fair election, opposition protests escalated into rioting in Dakar. The city was placed under a three-month state of emergency. Diouf's principal opponent, Maitre Abdoulaye Wade of the Democratic Party, was among those arrested and tried for incitement. Afterwards, Diouf met with Wade and tensions eased.

In April 1989, a nationwide state of emergency was declared and a curfew imposed in Dakar after rioters killed dozens of Mauritians. Protesters had been enraged by reports of the killing of hundreds of Senegalese in Mauritania. Relations with Mauritania were broken and armed clashes along the border and internal rioting led to the expulsion of most Mauritians residing in Senegal. Diplomatic relations were reestablished in April 1992 and the northern border along the Senegal River was reopened.

In April 1991, Wade accepted the post of Minister of State in Diouf's cabinet. Diouf appointed Habib Thiam as prime minister on 7 April 1991, who then appointed the Council of Ministers in consultation with President Diouf.

Diouf and PS again won reelection in February 1993. His margin of victory, however, shrank to 58% versus 32% for Wade. The PS took only 84 seats in the May legislative elections and the PDS increased its representation from 17 to 27 seats. The Jappoo Leggeeyal Senegalese Party and the Democratic League won three seats each. Two other parties took the other three seats. Wade and other opponents denounced the elections as fraudulent, though international observers declared them generally free and fair. When the vice president of the Constitutional Court was murdered after the elections were officially certified, Wade and other PDS members were charged in the slaying. He and MPs with parliamentary immunity were later released. Political discontent followed these events and an opposition party demonstration in 1994 left six police officers dead and many civilians injured.

In November 1996, the government initiated a decentralization policy that devolved considerable political and administrative authority to the provinces. In July 1998, it undertook a major reshuffling of ministers and ministerial posts, and in November, it signed a peace accord with Guinea-Bissau that was intended to establish a buffer zone along the southern border. In keeping with the accord, the Senegalese army withdrew its 2,500 troops supporting then president, Joao Bernardo Vieira. Togolese, Gambian and Nigerian soldiers under ECOMOG replaced the Senegalese troops.

Since December 1983, the Movement of Democratic Forces of the Casamance (MFDC) has waged a low-level separatist war against the Senegalese government. The Movement splintered in 1991 and signed peace accords with the Senegalese government in 1991, 1993 and in December 1999 in Banjul. In 1992 and 1995, Senegalese warplanes bombed rebel bases in Guinea-Bissau suspected of providing safe havens and resupply points for the rebels. In March 1996, the two governments reached an accord. President Jammeh of The Gambia, who belongs to the same dominant Dio-

la ethnic group of the Casamance, and officials in Guinea-Bissau have mediated the conflict. Despite Abdoulaye Wade's campaign promises to end the insurgency through negotiations and military means, by June 2003 the fighting continued unabated. A deal reached in December 2004 has held up reasonably; but it could be undermined by in-fighting in the ruling PDS or between groups in the Casamance region.

In January 1999, the PS won highly controversial Senate elections by a landslide taking all 45 elected seats. However, a boycott by the two largest opposition parties undermined the Senate's credibility. The bill to create the Senate had been pushed through by the PS-dominated National Assembly in February 1998, thereby increasing the ruling party's representation. The voting rules also ensured a majority of PS politicians in the electoral college.

In April 2000, Abdoulaye Wade was inaugurated as Senegal's third president. The February-March elections were the first in Senegal's history to result in a change of government. Although Diouf won 41.3% of the vote on the first round, PS defectors Moustapha Niasse (AFP) and Djibo Leyti Ka (URD) threw their support behind Wade to give him 58.5% on the 19 March second round. His victory not only ended 40 years of rule by the Parti Socialiste, but it also ended speculation that Senegal's quasi-democracy was moribund. Using their cell phones, Senegalese youth called in results, which were broadcast by electronic media to prevent fraud.

Wade's record over his first three years in office was mixed. In December 2001, he became head of the Economic Community of West African States (ECOWAS), and the Union Economique et Monétaire Ouest-Africaine (UEMOA). In April 2002, Senegal hosted an international conference on the New Partnership for Africa's Development (NEPAD). As promised, he has begun building primary schools around the country. However, strikes by postal workers, bank employees, and teachers indicate considerable social unrest owing to unmet wage and benefits demands. The government's delay of local elections in the fall of 2001 and the replacement of elected officials with appointees (*délégations spéciales*) were widely criticized as antidemocratic.

Wade has also fallen out with some of the young bright stars with whom he rode to power in 2000. One example is Idrissa Seck. As prime minister, Seck claimed to know Wade's vision intimately; so he needed no prodding to work seamlessly with the president. Yet Seck's dismissal in April 2004 seemed questionable. In July 2005, he was arrested for inflating public contracts; when this spurred protests, he was jailed and then charged for undermining state security. Seck's supporters believed however that his travails were all political; that he had become influential in the PDS and announced his candidature for the 2007 presidential elections. All this, they argue, made him a threat to Wade's political ambition. In February 2006, Seck was released from jail after charges against him were dropped.

The Wade government released a poverty reduction strategy paper (PRSP) within the specified timeframe. It reduced the budget deficit, and improved relations with the IMF.

### 13 GOVERNMENT

Under the 1963 constitution, as amended, the president of the republic determines national policy and appoints the prime minister and his council of ministers. As presently constituted, the con-

stitution does not give the president the authority to dissolve the National Assembly or to veto legislation. However, if the National Assembly is requested to reconsider a measure it has enacted, the bill must be passed again by a three-fifths majority before it becomes law. The president also may ask the Supreme Court to rule on the constitutionality of a proposed law. With the consent of the president of the National Assembly and the Supreme Court, the president of the republic may submit any proposed law to national referendum. In his first two months of office, Abdoulaye Wade created a presidential council to coordinate and to execute policy decisions taken by his council of ministers.

Legislative power is exercised by the 120-member (formerly 140-member) National Assembly, elected to serve five-year terms. The Assembly elects the 16 members of the High Court of Justice from among its ranks. Members of the Council of Ministers may not be Assembly members, and are appointed by the prime minister in consultation with the president. The former senate, established in 1998, had 60 members, 48 elected by an electoral college (legislators and local, municipal and regional councilors), and 12 appointed by the president. Major opposition parties boycotted the Senate elections on 24 January 1999, and since 2001 it no longer functions. The next presidential election was due in 2007, and parliamentary elections soon thereafter. Wade seemed certain to run for reelection; and he would have to contend with younger politicians including Idrissas Seck.

#### 14 POLITICAL PARTIES

The Senegal branch of the French Socialist Party (SFIO) won the first postwar elections largely because its leaders constituted the only organized party that had contacts in all parts of the colony. It sought to establish political and juridical equality between French and Senegalese citizens. In 1948, however, its leaders, Ahmadou Lamine-Guèye and Léopold-Sédar Senghor, quarreled. Senghor left the SFIO and founded a new party, the Senegalese Democratic Bloc (Bloc Démocratique Sénégalais—BDS), which was based more in the rural areas than in the old communes, from which Lamine-Guèye derived his political support. The new party emphasized social and economic rather than juridical issues and geared its program closely to peasant interests and grievances. In 1951, it won both Senegalese seats in the French National Assembly and, in 1952, 43 of the 50 seats in Senegal's Territorial Assembly.

In the French National Assembly, Senghor had meanwhile taken a leading part in creating a new parliamentary group, the Overseas Independents (Indépendants d'Outre-Mer—IOM), emphasizing African and colonial problems. It was, however, confronted by another African party, the African Democratic Rally (Rassemblement Démocratique Africain—RDA), founded in October 1946 by African deputies hostile to the provisions of the constitution of 1946 regarding the overseas territories. Although the RDA substantially reduced the number of seats held by the IOM in the French parliament, in Senegal it made no inroads on the two established parties, the BDS and the SFIO.

Senghor and his associate Mamadou Dia secured overwhelming majorities at the parliamentary elections in 1956 and launched a campaign to unite all Senegalese parties. They faced the opposition of Lamine-Guèye, who sponsored a first attempt to create an African Socialist movement loosely associated with the SFIO, and

of the RDA leadership, which aimed at bringing about the unity of all parties within the RDA.

In 1956, Senghor's party, the BDS, was reorganized to become the Popular Senegalese Bloc (Bloc Populaire Sénégalais), which took a strongly nationalistic stance. In the Territorial Assembly elections in 1957, the first held under complete universal suffrage, it won 47 seats, while the SFIO won only 12. Lamine-Guèye and Senghor were reconciled in 1958 and their respective parties fused in April 1958 to form the Senegalese Progressive Union (Union Progressiste Sénégalaise—UPS). The UPS supported the new French constitution in the referendum of September 1958, and in the elections to the Senegal legislature in 1959 it won all 80 seats. After independence in 1960, the UPS remained the dominant political party. President Senghor was its secretary-general, and the party's National Council was responsible for major national policy decisions. In 1976, the UPS changed its name to the Senegalese Socialist Party (Parti Socialiste Sénégalais—PS), after joining the Socialist International.

There was no legal opposition party from 1966 until 1974, when Abdoulaye Wade obtained permission from Senghor to create the Senegalese Democratic Party (Parti Démocratique Sénégalais—PDS). The PDS won 17 Assembly seats in 1978, compared with 83 for the PS.

In 1981, the constitution, which had restricted the number of political parties to four, was amended to end all restrictions. In 1982, the government amended the electoral law for the legislature so that half the deputies would be elected on a basis of proportional representation, while the remaining members were chosen by direct suffrage. This helped the regime win the 1983 presidential and legislative elections in which Diouf received 83.5% of the votes cast. Presidential and legislative elections held in 1988 were marred by rioting in cities and minor conflicts in rural areas, but Diouf officially received 73.2% of the votes cast.

Seven parties contested the National Assembly elections of 9 May 1993. The PS won 84 seats; the PDS won 27; the Jappoo Leggeeyal ("Let Us Unite") Party and the Democratic League won three seats each; the Independence and Labor Party (PIT) won two seats; and the Senegalese Democratic Union/Renewal party got one.

Although many people have lamented Senegal's "stalled" democratic transition, democrats may be encouraged by the growth of party competition. From 1983 to 1993, the PDS increased its share of representation in the Assembly from 8 to 27 seats, while the number of PS seats declined from 111 to 84. In presidential elections over the same period of time, Abdoulaye Wade's percentage of the vote climbed from 15% to 32%, while Diouf's dropped from 83% to 58%. The number of officially recognized parties in Senegal has gone from one in 1973 to 26 in 1997. From 1978 to 1996, the number of parties contesting legislative elections went from 4 to 14.

In the February–March 2000 presidential elections, eight parties presented candidates. Diouf's PS enjoyed the support of several tiny parties, and a coalition of four parties known as the Convergence Patriotique (CP). The CP comprised the Bloc des Centristes Gainde (BCG) led by Jean-Paul Dais, the Parti Libéral Sénégalais (PLS), led by Ousmane Ngom, Serigne Diop's Parti Démocratique Sénégalais-Renovation (PDS-R), and the Parti Africain de l'Indépendance (PAI) of Majmouh Diop. The PAI was

once Marxist, while the three others emerged from splits in the PDS. On the other hand, Wade's PDS claimed the backing of the Pole de Gauche, a left-wing coalition of the And-jeff/Parti Africain pour la Démocratie et le Socialisme (AJ/PADS), and the Ligue Démocratique-Mouvement Travail (PIT).

However, the real difference in the outcome of the 19 March second round was the support of Moustapha Niassé (AFP) and to a lesser extent, Djibo Ka (URD), both defectors from the PS who formed their own parties. President Wade's subsequent appointment of Mr. Niassé as his prime minister all but confirmed the belief among Mr. Niassé's supporters that they were voting for a Wade-Niassé ticket. On the first round, Diouf obtained 41%, Wade 30%, Niassé 17%, Ka 7%, with four other candidates picking up the remaining 4% of the vote. Wade's second round alliance gave him an easy victory over Diouf with 58.5% of the vote.

The most recent parliamentary elections were held 29 April 2001 giving Wade's SOPI coalition an overwhelming victory with 89 seats to 11 for the AFP, 10 for the PS, and 10 for other parties. In the municipal and local elections 12 May 2002, Wade's coalition, the Convergence des actions autour du Président en perspective du 21ème siècle (CAP 21) captured a majority of the 433 posts. The opposition joined forces under the Cadre Permanent de Concertation (CPC), which included the Parti de l'indépendance et Travail (PIT), the Parti Socialiste (PS), the Union pour le Renouveau Démocratique (URD), and Alliance des Forces de Progrès (AFP). They attacked the government for failing to privatize the electric utility, for bungling groundnut sector reforms, and for mishandling relations with unions and multilateral lending institutions. The next elections were to be held in 2007.

## 15 LOCAL GOVERNMENT

Senegal's local administrative organization consists of ten regions—Fatick, Kaolack, Kolda, Ziguinchor, Tambacounda, Saint-Louis, Thiès, Diourbel, Louga, and Dakar—each headed by an appointed governor and an elected local assembly. The regions are divided into 28 departments, each headed by a prefect, who is assisted by two special secretaries. The departments in turn are divided into 99 districts (*arrondissements*), each headed by a subprefect. In rural areas the basic administrative unit is the rural community, usually made up of a group of villages with a total population of about 10,000.

In 1996, the assembly passed a comprehensive decentralization law that devolves significant authorities to lower levels of government for taxation, service delivery, and local management of resources, although implementation has been slow and uneven.

## 16 JUDICIAL SYSTEM

The High Council of the Magistrature, founded in 1960 and headed by the president, determines the constitutionality of laws and international commitments and decides when members of the legislature and the executive have exceeded their authority. A 16-member High Court of Justice, founded in 1962 and elected by the National Assembly from among its own members, presides over impeachment proceedings. The Supreme Court, founded in 1960, is made up of members appointed by the president of the republic on the advice of the High Council of the Magistrature. In June 1973, a Court of State Security was set up to deal with political offenses. Criminal cases are essentially subject to French

criminal law. Petty offenses are dealt with by justices of the peace in each department; ranked next in the judicial system are courts of first instance in each region. There are assize courts in Dakar, Kaolack, Saint-Louis, and Ziguinchor and a Court of Appeal in Dakar. There is also a military court system and a special court for the repression of the unlawful accumulation of wealth.

The constitution declares the independence of the judiciary, from the executive, the legislature and the armed forces. Judges are appointed by the president after nomination by the minister of justice. In practice, low pay and political ties make magistrates vulnerable to outside pressures.

Criminal defendants are presumed innocent until proven guilty and are afforded public trials, and the right to legal counsel, among other procedural rights. Muslims have the right to choose customary law or civil law for cases involving family inheritance.

The legal system is based on French civil law. In 1992 the Supreme Court was replaced by the Council of State for Administrative Questions, the Constitutional Council, and a Court of Appeals.

## 17 ARMED FORCES

Senegal's armed forces totaled 13,620 active personnel in 2005. The Army's 11,900 personnel included nine infantry or armored battalions, one artillery battalion, and one engineering battalion. The Navy had 600 members, whose major units were 10 patrol and two landing craft. The 770-member Air Force had no dedicated combat aircraft. Equipment included fixed wing transport, training and reconnaissance aircraft, and three support and two utility helicopters. There was also a paramilitary force of some 5,000 gendarmerie personnel. In 2005, the defense budget totaled \$99.6 million. Senegal supplied troops for service in four UN peacekeeping efforts. France maintains an estimated 1,100 military personnel in Senegal.

## 18 INTERNATIONAL COOPERATION

Senegal was admitted to the United Nations on 28 September 1960 and is a member of ECA and several nonregional specialized agencies, such as the FAO, IAEA, the World Bank, ILO, UNESCO, UNIDO, and the WHO. Senegal was a member of the UN Security Council in 1988–89. Senegal is a member of the ACP Group, the African Development Bank, ECOWAS, the Organization of the Islamic Conference (OIC), G-15, G-77, the WTO, the West African Economic and Monetary Union (WAEMU), the Community of Sahel and Saharan States (CENSAD), and the African Union. The nation is also a part of the Organization for the Development of the Senegal River (founded in 1975) and the Organization for the Development of the Gambia River (founded in 1978). Senegal remains in the Franc Zone. It was one of the founding governments of the New Partnership for Africa's Development (NEPAD).

Senegal has sent troops to Côte d'Ivoire as part of an ECOWAS peacekeeping force. The country has also offered support to UN missions and operations in Kosovo (est. 1999), Liberia (est. 2003), Burundi (est. 2004), and the DROC (est. 1999). Senegal is part of the Nonaligned Movement.

In environmental cooperation, Senegal is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MAR-

POL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Senegal's economy is based on its agricultural sector, primarily peanut production, a modest industrial sector, and a growing services sector. Agriculture and the fishing industry, which employ over 70% of the population and accounts for two-thirds of export revenues; is highly vulnerable to declining rainfall, desertification, and changes in world commodity prices. When the first of a series of droughts struck in the latter part of the 1960s, the economy deteriorated rapidly. As of 2005, 45 years after achieving independence, Senegal's resource-poor economy remained fragile and dependent upon foreign donors for continued viability. The country became eligible in 2000 for \$800 million in debt relief from the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative.

In 1979 Senegal began a long term structural adjustment program under the direction of the World Bank, the IMF, and bilateral donors. The program was aimed at reducing government deficits, the rate of inflation, and the negative trade balance. The government carried out a major program of privatization of the parastatal enterprises, reducing or eliminating its holdings in 30 of the approximately 40 institutions targeted. Some success was realized and from 1991 to 1992 the economy grew 2.5% on average in real terms. However, due to depressed economic conditions, low world prices for its exports, and its lack of international competitiveness, Senegal failed to meet most of its 1992 structural adjustment targets. Consequently, the country sank deeper into debt and low or no growth was predicted for 1993. In February 1993 President Diouf was reelected for a seven-year term, and his socialist party won a large majority of the legislative seats later that year. In deference to the labor unions and a possibility of political unrest, the government's 1993 budget failed to cut civil service wages. In addition, implementation of legislation to allow employers more flexibility in making layoffs was postponed.

In January 1994, France devalued the CFA franc, causing its value to drop in half. Immediately, prices for almost all imported goods soared as the inflation rate hit 32%. The devaluation was designed to encourage new investment, particularly in the export sectors of the economy, and discourage the use of hard currency reserves to buy products that could be grown domestically. In the face of raising prices, thousands demonstrated against the government. The government responded by imposing temporary price controls in an effort to prevent price-gouging by local merchants and halt the sharp rise in inflation.

After the initial shock, the devaluation began to pay dividends. Senegal was also helped by debt rescheduling and over \$1.5 billion in financial aid from the World Bank and other international donors. In 1995, foreign assistance represented almost 40% of the government's budget. This inflow of foreign aid, which was closely tied to progress on donor mandated economic reforms, helped the economy grow at a rate of 4.5% in 1995 and 1996, and over 5% in through late 1990s. Between 2001 and 2005 GDP grew at an average annual rate of 5% with a high of 6.5% in 2003 and a low of 1.1% in 2001. The inflation rate, which rose to 32% in 1994, fell to 1.6% in 2005.

As of 2005, over 80% of GDP represented private activity, and significant parastatal companies had been privatized, including water, telecommunications, mining, and aviation. However, the government still remained the country's largest single employer. The information technology sector had experienced a boom, as Senegal became fully connected to the Internet in 1996 and Senegalese have become experienced users of that service. Tourism is increasingly a source of foreign exchange, although the fishing sector remained Senegal's chief earner of foreign exchange in 2003 accounting for 46% of exports.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Senegal's gross domestic product (GDP) was estimated at \$20.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,800. The annual growth rate of GDP was estimated at 6.1%. The average inflation rate in 2005 was 1.7%. It was estimated that agriculture accounted for 16.1% of GDP, industry 21.4%, and services 62.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$344 million or about \$34 per capita and accounted for approximately 5.3% of GDP. Foreign aid receipts amounted to \$450 million or about \$44 per capita and accounted for approximately 7.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Senegal totaled \$5.03 billion or about \$493 per capita based on a GDP of \$6.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.2%. In 2001 it was estimated that approximately 46% of household consumption was spent on food, 13% on fuel, 3% on health care, and 15% on education. It was estimated that in 2001 about 54% of the population had incomes below the poverty line.

## 21 LABOR

Senegal's workforce was estimated at 4.82 million for 2005. According to a 1990 estimate (the latest year for which data was available), 77% of the labor force was in agriculture. The unemployment rate was estimated at 48% in 2001. The unemployment rate among urban youth was placed at 40%.

Senegal's fundamental labor legislation is based on the French overseas labor code of 1952, which provides for collective agreements between employers and trade unions, for the fixing of basic minimum wages by the government on recommendation of advisory committees. The code also provides for paid annual leave and for child allowances. The right to strike is recognized by law, and there are special labor courts. The largest trade union organization is the National Confederation of Senegalese Workers, which since 1970 has been the official union affiliated with the ruling PS. Its major rival is the National Union of Autonomous Labor Unions of Senegal. The industrial workforce is almost totally unionized. Although the relative number of union members is small, they have

considerable political power due to their control of vital segments of the economy.

The minimum working age is 16, when minors may work in apprenticeships. The prohibition of child labor is strictly enforced in the formal sector, but somewhat less so in the informal and traditional economies. The labor law provides for a workweek of 40 to 48 hours and minimum occupational and safety and health regulations. However, these labor regulations are not effectively enforced outside of the formal economy. The minimum wage was \$0.37 in 2001.

## 2<sup>2</sup> AGRICULTURE

Most of Senegal lies within the drought-prone Sahel region, with irregular rainfall and generally poor soils. With only about 5% of the land irrigated, the heavy reliance on rainfed cultivation results in large fluctuations in production. About 70% of the working population is involved in farming. Agriculture (including forestry, livestock, and fisheries) accounts for 17% of GDP. Most Senegalese farms are small (1.5–2.4 hectares/3.7–5.9 acres), and about 60% are in the so-called Peanut Basin, east of Dakar. Much of the agricultural land is still tribally owned. Only about 13% of Senegal's total land area is cultivated; millet took up 27% of the cultivated land in 2004.

Since independence, the Senegalese government has developed a system of generally small cooperatives to rationalize agricultural production and marketing and to free the farmers from chronic indebtedness to private traders; these were replaced in 1984 by a network of "village sections" with financial autonomy. Parastatal agencies guarantee minimum prices of major agricultural crops, including peanuts, millet, sorghum, rice, and cotton.

In theory all peanuts are processed locally, and prices of processed peanut oil and other peanut products are set by parastatal agencies. Production of unshelled peanuts varies widely because of periodic drought, and production is frequently underreported because of unauthorized sales to processors in neighboring countries. In 2004, the reported production was 465,000 tons (95% for oil). Cotton, Senegal's other major export crop, is produced and marketed under the direction of the Society for the Development of Textile Fibers (Société de Développement des Fibres Textiles—SODEFITEX). Seed cotton production was 58,000 tons in 2004. Other oil seed crops in 2004 included sesame seed, 24,000 tons; palm kernels, 5,900 tons; and melonseed, 1,800 tons.

Production of food crops, some of which are grown in rotation with peanuts, does not meet Senegal's needs. Only in years of favorable rainfall does the country approach self-sufficiency in millet and sorghum, the basic staples. Production amounts in 2004 included (in thousands of tons): corn, 423; millet, 379; rice, 265; cassava, 180; and sorghum, 132. Market gardening takes place largely in the Dakar region and to a lesser extent around Thiès. Sugarcane, grown on about 8,000 hectares (19,700 acres), yielded 850,000 tons of sugarcane in 2004.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Raising livestock is a primary activity in the northern section of Senegal and a secondary one for farmers in the southern and central regions. Cattle are raised mainly by the Sérér and by nomadic Fulani. Sheep and goats are important in parts of the southwest. Cattle imported from Mauritania meet part of the nation's

meat requirements, but livestock are also exported to neighboring countries.

In 2005, the estimated livestock population included 3.1 million head of cattle; 4.7 million sheep; 4 million goats; 509,000 horses; 412,000 donkeys; 315,000 hogs; 4,000 camels; and 46 million poultry. The slaughter in 2005 yielded an estimated 47,800 tons of beef and veal and 32,000 tons of sheep and goat meat. Hides are exported or used in local shoe production and handicrafts; 9,550 tons of cattle hides were produced in 2005. Substantial quantities of cheese, butter, and canned and powdered milk are imported.

The poultry sector consists of a few commercial producers and an important informal sector that also raises the chicks produced by the commercial sector. Production of poultry meat totaled 65,300 tons in 2005. Egg production was 34,000 tons in 2005. In 1996, an outbreak of Newcastle disease disrupted local egg production, and producers began vaccinating chicks at the breeding farms. Due to the large size of the traditional poultry sector, there is always disease present.

## 2<sup>4</sup> FISHING

Senegal has a flourishing fishing industry, and Dakar is one of the most important Atlantic tuna ports. In 2003, fish exports amounted to \$282.7 million. The total catch in 2003 was 448,271 tons, 24% of it was round sardinella and 33% Madeiran sardinella.

## 2<sup>5</sup> FORESTRY

Senegal has about 6.2 million hectares (15.3 million acres) of classified forest, most of it in the Casamance region. Timber production is small, with firewood and charcoal being the most important forest products. About 6.04 million cu m (213 million cu ft) of roundwood was cut in 2004, of which about 87% went for fuel. Senegal is highly vulnerable to declining rainfall and desertification.

## 2<sup>6</sup> MINING

Phosphate rock, fertilizer, petroleum refining, and the production of construction materials were among the minerals produced by Senegal in 2004. Mining has taken on added importance for Senegal's economy in the postindependence era, with phosphate rock, phosphoric acid, fertilizer production, artisanal gold, and petroleum exploration playing key roles in the country's economy. In 2004, production of aluminum phosphate was estimated at 4,000 metric tons. Calcium phosphate production that same year was estimated at 1.8 million metric tons, up from 1.761 million metric tons in 2003. Calcium phosphate-based fertilizer production was 210,000 metric tons in 2004. In addition to the Taiba phosphate rock mine already exploited northeast of Dakar, the government has identified deposits at Matam, whose 40.5 million tons of reserves would likely remain unexploited under existing phosphate market conditions.

Salt output was estimated at 240,000 metric tons in 2004. Also produced were hydraulic cement, fuller's earth (attapulgitite) and other clays, natural gas, crude oil, limestone, and sand. The government's estimate of unreported gold production in 2004 was placed at 600 kg unchanged for 2002 and 2003. Many foreign companies had active exploration permits in Sabodala and Kanoumering, where Precambrian (Birimian) metamorphic rocks were exposed and significant reserves of gold have been reported. Iron ore reserves of 600 million tons have been identified in the Faleme, Fa-

rangalia, and Goto deposits, with a forecast capacity of 12 million tons per year; their development, though, could not justify the cost of creating the extensive port shipping and rail infrastructure needed to exploit the deposits. Eastern Senegal also had 350,000 tons of marble, as well as deposits of peat, uranium, titanium, serpentine, and other minerals.

In 2000, a newly elected government included among its top priorities the development of the country's inadequate infrastructure by improving the highway system, modernizing railroads, and constructing a new airport. In 2001, the African Development Bank Group approved an \$18.7 million loan to help finance the 148-km Diamniadio-Mbour-Kaolack road project. The 25-month project was expected to revitalize economic growth in the region. The Ministère des Mines, de l'Énergie et de l'Hydraulique was responsible for the administration over natural resources, and the Direction des Mines et de la Géologie was responsible for the mining sector.

## 27 ENERGY AND POWER

Senegal's electric power generation is based entirely on conventional thermal or fossil fuels. Electric power generating capacity was 239,000 kW in 2002. Production in that year totaled 1.438 billion kWh. Consumption of electricity in 2002 was 1.337 billion kWh.

Although Senegal had proven crude oil reserves of 700 million barrels, and a crude oil refining capacity of 27,000 barrels per day, as of 1 January 2003, there was no recorded crude oil production in 2002. However, imports of crude oil totaled 18,540 barrels per day. Refined oil production averaged 18,890 barrels per day. Refined petroleum imports in 2002 averaged 12,640 barrels per day. Demand for refined oil products in that year averaged 30,050 barrels per day.

Senegal does possess modest natural gas reserves, that as of 1 January 2003 were put at 106 billion cu ft. Natural gas production in 2002 came to 1.77 billion cu ft, all of which went to meet domestic demand. There are also extensive reserves of peat along the coast between Dakar and Saint-Louis.

## 28 INDUSTRY

Senegal's manufacturing sector contributed 21.4% to GDP in 2005, registering annual growth increases consistently during the 1980s, 1990s, and into the 21st century. Agroindustry (oil mills, sugar refineries, fish canneries, flour mills, bakeries, beverage and dairy processing, and tobacco manufacturing) plays a key role and accounts for some 40% of value added. Especially important are groundnut-processing mills. The textile industry includes four cotton-ginning mills, factories for weaving, dyeing, and printing cloth, and plants that produce mattresses, thread, and hats. Cement, refined petroleum products, fertilizers, and phosphoric acid are produced. Other industrial products include plywood, boats, bicycles, soap, leather goods, paints, acetylene, sulfuric acid, and cigarettes.

Senegal's oil potential has yet to be completely ascertained. There is a refinery at Dakar, with production capacity of 27,000 barrels per day. Petrosen, the state-owned oil company, is encouraging exploration. One natural gas field has been discovered.

## 29 SCIENCE AND TECHNOLOGY

The African Regional Center for Technology, with 30 member states, has its headquarters in Dakar. Most research facilities in Senegal deal with agricultural subjects. Dakar has centers for mining and medical research and a research institute on African food and nutrition problems. An institute of research for oils and oilseeds is at Bambey. The Senegalese Institute of Agricultural Research, with headquarters at Dakar, operates a national center of agronomical research at Bambey, a national laboratory of livestock and veterinary research at Dakar, an oceanographic center at Dakar, and numerous other technical facilities throughout the country.

The University Cheikh Anta Diop de Dakar, founded in 1949, has faculties of medicine and pharmacy and of sciences, and research institutes in psychopathology, leprosy, pediatrics, renewable energy, applied tropical medicine, applied mathematics, health and development, environmental science, adontology and stomatology, applied nuclear technology, and the teaching of mathematics, physics, and technology. The University of Saint Louis has an applied mathematics unit. Other facilities for scientific training include a polytechnic school at Thiès; an international school of sciences and veterinary medicine, representing 13 French-speaking countries, at Dakar; and an institute of nutritional technology at Dakar. In 1987–97, science and engineering students accounted for 21% of college and university enrollments. For the period 1990–2001 there were three technicians and two scientists and engineers engaged in research and development per million people. In 2002, Senegal had high technology export of \$15 million, or 4% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Dakar is not only the capital and largest city of Senegal but also the nation's largest consumer market and a major commercial and industrial center of West Africa. Many large trading firms have headquarters in France. Lebanese residents also play an important role in trade, however, many of their businesses are gradually being replaced by Senegalese merchants. A small number of supermarkets and larger retail stores deal primarily in imported goods. A few foreign franchise firms have made their way into the country.

Smuggling of goods from The Gambia is a serious problem, since such illicit imports undercut Senegalese products in price. A large informal domestic trade takes place in the Dakar marketplace known as Sandaga. Here, street vendors sell a wide variety of goods from cosmetics and shoes to stereo equipment.

Since Senegal ratified the WTO agreement in 1995, the government's role in domestic trade has been reduced. Subsidies for rice, sugar, wheat, and flour have been eliminated.

Normal business hours are from 8 or 9 AM to noon and 3 to 6 PM, Monday–Friday, and 8 or 9 AM to noon on Saturday. Banks are usually open 7:45 AM to 12:15 PM and 1:30 to 3:45 PM, Monday–Friday.

## 31 FOREIGN TRADE

Export revenues doubled between 1997 and 2000. The most important commodity exports for Senegal are shellfish (20%), fish (14%), refined petroleum products (11%), peanut oil (9.7%), inor-

ganic chemicals (6.7%), and fertilizers (crude and manufactured, 6.2%). Main destinations of exports in 2004 were India (14%), France (10.2%), Mali (10.2%) and Italy (5.8%). During the same year imports came from France (25%), Nigeria (12.1%), Italy (4%) and Thailand (3.8%).

**32 BALANCE OF PAYMENTS**

Since independence, as in colonial times, Senegal's balance of payments has generally run a deficit on current accounts, mainly covered by foreign aid from France (and, more recently, from other EU members). Remittances from Senegalese working in France, together with small inflows of private capital, have also helped cover the shortfalls.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Senegal's exports was \$1.53 billion while

imports totaled \$2.41 billion resulting in a trade deficit of \$88 million.

**33 BANKING AND SECURITIES**

In 1959, the Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest—BCEAO) succeeded the Currency Board of French West Africa and Togo as the bank of issue for the former French West African territories. In 1962, it was reorganized as the joint note-issue bank of Benin, Côte d'Ivoire, Mauritania (which left in 1973), Niger, Senegal, Togo, and Upper Volta (now Burkina Faso), members of the West African Economic and Monetary Union (UEMOA). BCEAO notes, known as CFA francs, are guaranteed by France without limitation, formerly to the French franc and now to the euro. Foreign exchange receipts of the member states go into the franc area's exchange pool, which in turn covers their foreign exchange requirements. In 1973, the member states of the BCEAO signed new statutes that, among other things, provided for increased Africanization of bank personnel, transfer of headquarters from Paris to Dakar, and greater participation of the bank in the development activities of member states.

Commercial banks operating in Senegal include the International Bank for Occidental Africa (French-owned), Banque Internationale pour le Commerce et l'Industrie du Senegal, Credit Lyonnais, Banque Senegalo Tunisienne, Ecobank, Societe Generale, Citibank, and Banque Islamique du Senegal. The most significant development bank is the government-controlled National Development Bank of Senegal, which participates in development projects and provides credit for government organizations, mixed societies, and cooperatives. Another development financing institution is the Housing Bank of Senegal. A new credit institution, the National Fund for Agricultural Credit, was created in 1984.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$727.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.2 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There are no securities exchanges in Senegal.

**34 INSURANCE**

As of 1997, at least 14 companies provided insurance in Senegal. Third-party motor insurance is compulsory.

**35 PUBLIC FINANCE**

Although Senegal's finances are recorded as being in balance each year, in fact the country has run persistent deficits since 1976, generally covered by foreign aid which represented 32% of the budget in 2000. Senegal qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) Initiative. Progress on the structural reforms required for the program is on track, but slow. From 1987 to 1998, Senegal's fiscal deficit fell from 12% of GDP to 7% of GDP. Donor mandated economic reforms have helped the government

to restrain spending while the closing of tax loopholes has increased revenues helping Senegal to reduce the deficit.

The US Central Intelligence Agency (CIA) estimated that in 2005 Senegal's central government took in revenues of approximately \$1.6 billion and had expenditures of \$1.9 billion. Revenues minus expenditures totaled approximately -\$269 million. Public debt in 2005 amounted to 46.5% of GDP. Total external debt was \$3.61 billion.

The International Monetary Fund (IMF) reported that in 2000, the most recent year for which it had data, budgetary central government revenues were CFA Fr612.2 billion and expenditures were CFA Fr641.2 billion. The value in US dollars was revenue US\$860 million and expenditures US\$900 million, based on an official exchange rate for 2000 of US\$1 = CFA Fr711.98 as reported by the IMF. Government outlays by function were as follows: general public services, 34.2%; defense, 7.3%; economic affairs, 2.4%; housing and community amenities, 2.8%; health, 3.5%; and education, 13.7%.

### 36 TAXATION

The corporate income tax rate in Senegal in 2005 was 33%. There is also a 10% withholding tax on those profits realized in Senegal by foreign companies that have not been reinvested into the country. Generally, capital gains are taxed at the corporate rate. However if the gains are used to acquire new fixed assets in Senegal within three years, or arise from a merger or other acquisition, the tax can be deferred. Dividends and royalties are subject to withholding taxes of 10% and 20%, respectively. Interest income from long term bonds is subject too a 6% withholding tax. Interest from bank interest or other sources are subject to withholding taxes of 8% and 16%, respectively. Senegal has double-taxation treaties with about 18 countries.

Individual taxes include a salary tax on the employee (3% for a Senegalese worker, and 6% for a foreign worker) and a general income tax with rates ranging up to 50%.

Indirect taxes have long been the mainstay of Senegal's tax system, with import duties by far the most important. Other indirect taxes include the business license tax, export taxes, a real estate tax, and registration and stamp taxes. The value-added tax (VAT) has a standard rate of 18%. An equalization tax is applied to local purchases at 2% and to importations at 5%.

### 37 CUSTOMS AND DUTIES

In January 2000, Senegal put into effect a new tariff scheme that conforms to the common external tariff (CET) scheme agreed on by member nations of the West African Economic and Monetary Union (WAEMU). Under this new tariff structure, Senegal has four simple tariff rate categories: 0% on cultural and scientific goods, agricultural inputs, and capital goods and computer equipment not available from local production; 5% on raw materials, crude oil, and cereals for industry; 10% on semifinished products, intermediate goods, diesel and fuel oil; and 20% on consumer goods, capital goods and computer equipment available from local production, and vehicles. However, there also exists an array of other import tariffs, with a maximum combined rate of 52% and a value-added tax (VAT) of 18% applied to all imports.

In 1982, Senegal abolished its import licensing system, opening the market to all countries on an equal basis; previously, only products from the franc zone and the European Union (EU) could be imported without a license. Certain import restrictions exist on agricultural and industrial products that support the Senegalese economy.

### 38 FOREIGN INVESTMENT

Following independence, Senegal's economic policy shifted from a largely laissez-faire, noninterventionist stance to a policy of increasing government participation in economic affairs. By 1975, the government had effectively nationalized groundnut trade and processing, assumed majority control of the two main phosphate companies, and nationalized water distribution and electricity production. Half a generation later, in 1991, a slow privatization of the parastatal sector was under way.

In spite of its parastatal tradition, Senegal encourages private investment, which remains substantial. The investment code, enacted in 1962 and significantly revised in 1972, 1978, and 1981, encourages both domestic and foreign private investment in industrial, agricultural, mineral, transport, tourist, and other enterprises that conform to the goals of the national development program. Incentives include tax advantages and exemptions from customs and duties.

An industrial free trade zone located outside Dakar offers preferential access to West African Economic Community, ECOWAS, and European Economic Community countries. Aside from exchange-control regulations, there are no restrictions on the repatriation of capital and earnings for amounts up to CFA 200,000; above this amount, prior government approval is required. By the beginning of 1992, 15 firms had begun operations in the zone. In December 1983, Senegal signed a bilateral investment treaty with the United States, becoming the first sub-Saharan African nation to do so.

Foreign investment rose steadily from 13.8% of GDP in 1993 to 16.5% in 1997. In 1997, annual foreign direct investment (FDI) inflows peaked at \$176 million, but have declined since, with some

ups and downs. In 2001, FDI inflow was \$125.5 million, up from \$88 million in 2000. In the period 2001–04, FDI inflows totaled \$239 million at an average rate \$59.75 million per year. Most private investment in Senegal has come from France, and the telecommunications sector has attracted the most foreign investment.

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

Senegal's development program addresses the basic problems encountered by Senegal's economy: lack of diversified output, the inefficiency of investments, the role of state in economic activity, and the excessive expansion of domestic consumer demand. These problems have been partly addressed by programs focusing on food self-sufficiency, fishing, and tourism, and by strengthening high-return activities. Projects such as the Manantali irrigation project, the phosphate-to-fertilizer recovery project, and the trawler modernization program are examples of what Senegal is doing within this policy framework. In the area of manufacturing, capacity utilization improvement, equipment modernization, and low-capital production are emphasized. Since 1994, the government has made progress in privatizing state-owned enterprises, reducing labor costs to improve competitiveness in the manufacturing sector, and liberalizing trade by eliminating export subsidies and removing restrictions on certain strategic imports. Private economic revenues accounted for roughly over 80% of gross domestic product (GDP) in 2005, but trade liberalization had not progressed as much as planned.

In 2000, Senegal became eligible for around \$800 million in debt service relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2003, the IMF approved a \$33 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement for Senegal, to support the government's economic reform program. In September of 2005, the World Bank and the IMF backed a deal to cancel about \$55 billion of debts owed by 18 of the world's poorest countries, 14 of which are in sub-Saharan Africa including Senegal. The government is committed to continue the donor-supported economic reform program as outlined in the IMF's three-year poverty reduction and growth facility (PRGF). Senegal's Agency for the Promotion of Investment (APIX) aims to promote foreign investment.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

Since 1955, a system of family allowances for wage earners has provided modest maternity and child benefits. The system is financed by employer contributions at the rate of 7% of gross salary; an additional 1–5% contribution finances a fund for occupational health and accident coverage. Shared equally by employer and employee is a 6% contribution to a fund for general medical and hospital expenses. In addition, employees contribute 4.8% of gross salary to a retirement fund and employers contribute 7.2%. The retirement age is 55. This program covers employed persons, including domestic, seasonal and day workers.

According to the UN only 20% of women participate in the work force. Discrimination against women is widespread in both education and employment. Although prohibited by law, female genital mutilation is practiced by ethnic groups in rural areas. Women in urban areas, however, are making progress in the workplace. The government adopted legislation mandating fines and prison

terms of up to three years for sexual harassment. Although minority religions are protected under law and are free to practice their religions, non-Muslims may face discrimination in civil, political, or economic matters.

Despite the vigorous multiparty political activity, there have been charges of human rights violations and electoral irregularities, as well as restrictions on freedom of press and association. Security forces commit abuses including arbitrary arrest and detention, beatings, and torture.

### **4<sup>1</sup> HEALTH**

As of 2004, there were an estimated 7 physicians, 3 pharmacists, 1 dentist, 7 midwives, and 22 nurses per 100,000 people. Approximately 78% of the total population had access to safe drinking water and 70% had adequate sanitation. Total health care expenditure was estimated at 4.5% of GDP.

Major health problems include measles and meningitis along with such water-related diseases as malaria, trypanosomiasis, onchocerciasis, and schistosomiasis. There were approximately 258 cases of tuberculosis per 100,000 people. Malnutrition was prevalent in 23% of all children under age five. Goiter was present in 41 of 100 school-age children. Immunization rates for children up to one year old were: tuberculosis, 80%; diphtheria, pertussis, and tetanus, 65%; polio, 65%; and measles, 65%. Infant mortality was 54.12 per 1,000 live births in 2005; maternal mortality was 560 per 100,000 live births in 1998. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37 and 8.1 per 1,000 people. Only around 11% of married women (ages 15 to 49) used contraception. The total fertility rate in the same year was 5.1 children per woman living through her childbearing years. In 2005, life expectancy was 58.90, an improvement over the previous years.

The HIV/AIDS prevalence was 0.80 per 100 adults in 2003. As of 2004, there were approximately 44,000 people living with HIV/AIDS in the country. There were an estimated 3,500 deaths from AIDS in 2003.

### **4<sup>2</sup> HOUSING**

Most housing in Dakar is like that of a European city. Elsewhere, housing ranges from European-type structures to the circular mud huts with thatched roofs common in villages.

Since World War II, the growth of Dakar and other towns has been rapid, with government activity largely concentrated on improvement of urban housing and sanitation. In 1952, the city of Pikine was chosen as a place to rehouse about 100,000 people who were evicted from the slums of Dakar. In 2002, there were about one million people in Pikine. The town of Dalifort, between Pikine and Dakar, has since been chosen as a new site for government projects of rehousing. According to the latest available information for 1980–88, the total housing stock numbered 1,350,000 with 4.9 people per dwelling.

### **4<sup>3</sup> EDUCATION**

Education is compulsory for six years of primary school, for students between ages 6 and 12. For those attending secondary school, there are options for a seven-year general education (in two cycles of four years and three years) or a five-year technical or

vocational program (in two cycles of three years and two years). The academic year runs from October to July.

In 2001, about 3% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 69% of age-eligible students. The same year, secondary school enrollment was less than 19% of age-eligible students. It is estimated that about 47.8% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 49:1 in 2003; the ratio for secondary school was about 27:1. In 2003, private schools accounted for about 11% of primary school enrollment and 25% of secondary enrollment.

The University of Dakar has two graduate schools and numerous research centers. For over 30 years, the University of Dakar offered free tuition and generous subsidies to students. However, in 1994 it began implementing new austerity measures aimed at scaling back enrollment, raising academic standards and getting students to pay for more of the cost of their education. A polytechnic college opened at Thiès in 1973. Other colleges include a national school of administration at Dakar and a school of sciences and veterinary medicine for French-speaking Africa. Universities and equivalent institutions had about 29,000 students in 1998. The adult literacy rate for 2004 was estimated at about 39.3%, with 51.1% for men and 29.2% for women.

As of 2003, public expenditure on education was estimated at 3.6% of GDP.

#### 44 LIBRARIES AND MUSEUMS

There are four major libraries in Senegal, all located in Dakar. The oldest is the Archives of Senegal, founded in 1913, which has a collection of more than 26,000 volumes. The largest is the Central Library of the University of Dakar, founded in 1952, which has over 306,000 volumes. The Basic Institute of Black Africa (Institut Fondamental d'Afrique Noire—IFAN) and the Alliance Française maintain libraries of over 70,000 and 7,000 volumes, respectively. In addition to these major facilities, there are specialized libraries attached to various research institutes. In total, Senegal had 10 libraries associated with institutes of higher education in 2002.

The Museum of African Art in Dakar and the History Museum and the Museum of the Sea on Gorée Island are operated by IFAN. There are natural history museums in Dakar and Saint-Louis and a local museum in Saint-Louis.

#### 45 MEDIA

Telephone and telegraph services, publicly owned and operated, are good by African standards, particularly in the coastal area and in the main centers of peanut production. In 2003, there were an estimated 22 mainline telephones for every 1,000 people; about 9,800 people were on a waiting list for telephone service installation. The same year, there were approximately 56 mobile phones in use for every 1,000 people. French submarine cables connect Dakar with Paris, Casablanca, Conakry (Guinea), and Recife (Brazil), and radiotelephone facilities are also in operation. The postal system provides international telephone facilities.

The government-operated radio and television service has transmitters throughout the country. The two national radio networks based in Dakar broadcast mostly in French, while the regional stations in Rufisque, Saint-Louis, Tambacounda, Kaolack,

and Ziguinchor, which originate their own programs, broadcast primarily in six local languages. In 2004, there were over 25 privately-owned radio stations. There are no privately owned television stations in the country, but French and South African satellite services are available. In 2003, there were an estimated 126 radios and 78 television sets for every 1,000 people. The same year, there were 21.2 personal computers for every 1,000 people and 22 of every 1,000 people had access to the Internet. There were three secure Internet servers in the country in 2004.

The constitution guarantees freedom of opinion, which the press is generally free to exercise. In 2004, there were about 15 independent dailies and three government dailies. The main papers with 2002 circulation were: *Le Soleil du Sénégal*, the PS party newspaper, with an estimated 45,000 circulation, and *Sud Quotidien* (30,000). There are also several weekly newspapers and magazines.

#### 46 ORGANIZATIONS

There are chambers of commerce, industry, and agriculture in the principal cities. Professional and trade associations also exist. The Consumers International Subregional Office for West and Central Africa is located in Dakar.

The Alliance Française sponsors lectures and concerts. Of the many sport and social associations in the towns, those for soccer are especially popular, but racing clubs, aero clubs, and automobile clubs are also active. National youth organizations include the Democratic Youth Movement, the Socialist Youth Movement, Young Workers Movement, YMCA, and the Senegalese Scout Confederation. The John F. Kennedy Center Dakar encourages youth participation in volunteer efforts.

Volunteer service organizations, such as the Lions Clubs International, are also present. The Daniel Boitier Center in Dakar is a Roman Catholic organization for the study of social and economic problems. Panos Institute networks with community groups and organizations to encourage community development projects. The African Council of AIDS Service Organizations is based in Dakar. Other social action groups include the Femmes Développement Entreprise en Afrique, Goree Institute, and Hope Unlimited. International organizations with national chapters include Amnesty International, Defence for Children International, Caritas, Habitat for Humanity, UNICEF, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

The comfortable climate, variety of cultural attractions, attractive physical features such as the coastal beaches and the 5,996-sq-km (2,315-sq-mi) Niokolo-Koba National Park, and the relative proximity to Europe have all combined to make Senegal an increasingly popular vacation area and international conference center. Gorée Island, near Dakar, has many former slave houses, where perhaps 20 million slaves were kept before being shipped to America between 1536 and 1848. Wrestling and fishing are popular, and hunting is allowed from December to May on an 80,000-hectare (198,000-acre) reserve.

All visitors arriving from infected areas must have a valid yellow fever vaccination certificate. Visas are required for all foreign nationals except those of: Algeria, Mauritius, South Africa, Japan, Taiwan, Israel, Canada, the European Economic Community

(EEC), the United States, and the Economic Community of West African States (ECOWAS). Visas are valid for up to 90 days.

In 2003, there were 353,539 tourists who arrived in Senegal, a 17% increase from the previous year. Hotel rooms numbered 10,268 with 20,437 beds and an occupancy rate of 37%. The average length of stay was four nights.

According to 2005 US Department of State estimates, the daily cost of staying in Dakar was \$213. Other areas were less at \$114 per day.

#### 48 FAMOUS SENEGALESE

Blaise Diagne (1872–1934) was the first African to be elected to the French parliament and to hold office in the French government as an undersecretary of state. Léopold-Sédar Senghor (1906–2001), president of Senegal from 1960 until his retirement in 1980, was a French-language poet of distinction; in 1984, he became a life member of the French Academy, the first black African to receive that honor. Abdou Diouf (b.1935) was president of Senegal (1981–2000), after serving as prime minister (1970–80). Abdoulaye Wade (b.1926) became president in 2000. Among Senegalese writers are Birago Diop (1906–89), author of short stories, and David Diop (1927–60), an internationally known poet. Ousmane Sembene (b.1923) is a film director and writer of international repute. Cheikh Anta Diop (1923–86), RND leader, wrote many works of distinction on African history.

#### 49 DEPENDENCIES

Senegal has no territories or colonies.

# SEYCHELLES

Republic of Seychelles

**CAPITAL:** Victoria

**FLAG:** The flag is made up of five oblique bands of (left to right) blue, yellow, red, white, and green.

**ANTHEM:** Begins "Seychellois both staunch and true."

**MONETARY UNIT:** The Seychelles rupee (R) is a paper currency of 100 cents. There are coins of 5, 10, and 25 cents and 1, 5, 10, 20, 25, 50, 100, 1,000, and 1,500 rupees and notes of 10, 25, 50, and 100 rupees. R1 = \$0.18182 (or \$1 = R5.5) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's, 1–2 January; Labor Day, 1 May; National Day, 5 June; Independence Day, 29 June; Assumption, 15 August; All Saints' Day, 1 November; Immaculate Conception, 8 December; Christmas, 25 December. Movable religious holidays include Good Friday, Easter Monday, Corpus Christi, and Ascension.

**TIME:** 4 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Seychelles, an archipelago in the Indian Ocean, consists of an estimated 115 islands, most of which are not permanently inhabited. The second-smallest country in Africa, Seychelles has an area of 455 sq km (176 sq mi), of which Mahé, the principal island, comprises 144 sq km (56 sq mi). Comparatively, the area occupied by Seychelles is slightly more than 2.5 times the size of Washington, DC. There are two main clusters: one is a granitic group, centering around Mahé; the other, to the sw, includes the coralline Aldabra Islands and the Farquhar group. Situated about 1,600 km (1,000 mi) off the east coast of Africa, Mahé extends 27 km (17 mi) N–S and 11 km (7 mi) E–W.

The capital city of Seychelles, Victoria, is located on the island of Mahé.

## <sup>2</sup> TOPOGRAPHY

The Seychelles Islands are the highest points of the Mascarene Ridge, an Indian Ocean ridge running in a generally north-south direction. The granitic islands rise above the sea surface to form a peak or ridge which, in the case of Mahé, attains an elevation of 912 m (2,992 ft) at Morne Seychellois, the highest point. Rugged crests, towering cliffs, boulders, and domes contribute to the islands' great natural beauty. Here and there, in the hollows in the rock relief, are pockets of lateritic soil, often very thin and easily eroded. Mahé possesses white, sandy beaches behind which are flats of coral and shell known locally as plateaus. Small streams descending the mountain slopes deposit alluvial material, creating the most fertile soils on the island.

The coralline Seychelles are, in contrast, low lying, rising only a few feet above the surface of the sea. Many have the typical Indian Ocean lagoon. Soils tend to be thin, with poor moisture retention. These islands are suited only to the coconut palm and a few other species.

## <sup>3</sup> CLIMATE

Although the Seychelles Islands lie close to the equator, their maritime situation results in coastal temperatures that are fairly constant at about 27°C (81°F) throughout the year. At higher altitudes, temperatures are lower, especially at night. Mean annual rainfall at sea level on Mahé is 236 cm (93 in); in the mountains there may be as much as 356 cm (140 in) a year. On the southwestern coral islands, rainfall is much lower, averaging about 50 cm (20 in) a year on Aldabra. May to October is the relatively dry sunny season; in this period, the southeast monsoon winds bring brief showers every two or three days. The northwest monsoon arrives in December and continues until March, bringing frequent and heavy rain. Humidity is high, especially in the coastal areas.

## <sup>4</sup> FLORA AND FAUNA

Primary forest is found only on Praslin and Curieuse islands, northeast of Mahé. On Praslin, native forests of coco-de-mer have been protected in small reserves; its fruit, a huge coconut weighing up to 18 kg (40 lb), is the largest seed in the world and this is the only place where the palm is found growing wild. Virtually all the broadleaf evergreen rain forest has been cut down. In its place are the coconut plantations, with occasional patches of vanilla. Other existing trees are native to the islands and have adapted to the local conditions. Underplanting is quite usual and includes avocado, breadfruit, banana, cinnamon, mango, papaya, patchouli, and pineapple.

Sharks abound in the surrounding oceans, but on land there are no reptiles or mammals that present a threat to human life. The most noteworthy animal is the giant tortoise; once very plentiful, the species is now sorely depleted. There is a great variety of bird life including dozens of the world's rarest species, but very few insects.

## 5 ENVIRONMENT

Seychelles does not have the resources to maintain a comprehensive program of environmental regulation. The monitoring of the environment is complicated by the fact that the nation consists of 15 islands distributed over a 1.3 million sq km area. Seychelles has no natural fresh water resources. In addition, the nation has a water pollution problem due to industrial by-products and sewage. Fires, landslides, and oil leakage also affect the environment in Seychelles.

The government Environmental Management Plan of Seychelles 1990–2000 proposed 12 areas of environmental regulation. The Aldabra atoll is a native preserve on the UNESCO World Heritage list, as is the Vallée de Mai Nature Reserve. The Port Launay Coastal Wetlands are listed as a Ramsar site. The Ministry of Planning and External Relations and the Ministry of National Development hold principal environmental responsibility.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 13 species of birds, 3 types of reptiles, 6 species of amphibians, 10 species of fish, 2 types of mollusks, 2 species of other invertebrates, and 45 species of plants. The olive ridley, hawksbill, and green sea turtles and the Seychelles black parrot, Seychelles magpie robin, and Seychelles warbler are threatened species. The Aldabra brush warbler and the Seychelles parakeet (or parrot) have become extinct.

## 6 POPULATION

The population of Seychelles in 2005 was estimated by the United Nations (UN) at 81,000, which placed it at number 181 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 26% of the population under 15 years of age. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.0%, a rate the government viewed as too high. A National Population Policy, finalized in 2002, contained programs aimed at limiting population growth. The projected population for the year 2025 was 88,000. The overall population density was 180 per sq km (466 per sq mi), with 80% of the population living on the island of Mahé.

The UN estimated that 50% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.24%. The capital city, Victoria, had a population of 25,000 in that year.

## 7 MIGRATION

Entry for the purpose of employment is strictly controlled. Since the 1950s, some retirees from the United Kingdom have settled in Seychelles. In 2000 the total number of migrants was 5,000. In 2005, the net migration rate was an estimated -5.54 migrants per 1,000 population. The government views the emigration level as too high, but the immigration level as satisfactory.

## 8 ETHNIC GROUPS

There are no distinct ethnic divisions, apart from small Indian and Chinese groups constituting about 1% of the total population.

The bulk of the population is Seychellois, a mixture of African, French-European, and Asian strains.

## 9 LANGUAGES

Creole, a simplified form of French with borrowings from African languages, has been the first language since 1981 and is the initial language in public schools; it is spoken by about 91.8% of the population. English and French are also widely spoken as second languages. English is the first language of about 4.9% of the population. English, Creole, and French are all considered to be official languages; English is the official language of the National Assembly.

## 10 RELIGIONS

The great majority of the population practices Christianity. According to the most recent estimates, Roman Catholics constituted about 87% of the Christian community; Anglicans totaled another 7%. Other Christian churches include Baptists, Seventh-Day Adventists, the Assemblies of God, the Pentecostal Church, Nazarites, and Jehovah's Witnesses. Hindus, Muslims, and Baha'is are also present.

The constitution provides for freedom of religion and there is no state religion; however, the government does offer sometimes substantial financial assistance to churches from the state budget, primarily in the form of grants, through an application process that is open to all.

## 11 TRANSPORTATION

Until the opening of the international airport on Mahé in 1971, the Seychelles Islands were entirely dependent on the sea for their links with the rest of the world. Until 1970, passenger and cargo service by ship was irregular. In the early 1970s, however, new deepwater facilities were dredged at Victoria Harbor. Private ferries connect Mahé to Praslin and La Digue. As of 2005, there were five merchant ships of 1,000 GRT or more, totaling 42,223 GRT.

The road network totaled an estimated 280 km (174 mi) in 2002, of which 176 km (109 mi) were paved. One road encircles the island and another runs across the island by way of the central mountain ridge. There were 5,100 automobiles and 2,000 commercial vehicles in 1995.

In 2004 there were an estimated 15 airports, 8 of which had paved runways as of 2005. Seychelles International Airport is at Pointe Larue on Mahé. Flights to London, Zürich, Frankfurt, and Rome are in service via Air Seychelles, the national carrier. Air France's scheduled flights connect Seychelles with Europe. In 2001 (the latest year for which data is available) about 420,000 passengers were carried on scheduled domestic and international flights. Ligne Aérienne Seychelles (LAS), a private line, ran charter flights to Australia, Singapore, Botswana, and Malawi.

## 12 HISTORY

The Portuguese explorer Vasco da Gama discovered the Seychelles Islands (then uninhabited) in 1502, and an English expedition visited the islands in 1609. The name Seychelles derives from the *Vicomte des Séchelles*, Louis XV's finance minister. The French first claimed the islands in 1756, but colonization did not begin until 1768, when a party of 22 Frenchmen arrived, bringing with them a number of slaves. As competition grew among European nations

for the lucrative trade with India and Asia, more and more seamen called at the islands to provision their vessels and to pick up commodities useful for trade.

The French and British battled for control of the islands between 1793 and 1813. French bases were blockaded in 1794 and again in 1804; on each occasion, the French capitulated. Under the Treaty of Paris (1814), the islands, together with Mauritius, were ceded to Britain. Both before and after the cession, the islands were administered from Mauritius as dependent territories. When the British made clear that they would enforce the ban on slavery throughout the Empire, many of the French landowners who had continued to import African slaves, largely from Mauritius and Réunion, departed for Africa and elsewhere, taking their slaves with them. However, with slavery ended, thousands of liberated slaves and others came into the islands. Indian labor was introduced to work on the plantations and some Chinese immigrants became shopkeepers.

In 1872, a Board of Civil Governors was created, increasing the degree of political autonomy; a Legislative Council and an Executive Council were established in 1888. On 31 August 1903, the islands became a crown colony, no longer subordinate to Mauritius. By this date, the cosmopolitan character of Seychelles had been established. Intermarriage between the descendants of the French, African, and Asian populations produced the Seychellois of today.

In 1948, the first elections were held, filling four seats on the Legislative Council. A new constitution was written in 1966 and promulgated in 1967. It vested authority in a governor and a Governing Council. General elections, the first based on the principle of universal adult suffrage, were held in December 1967 for the new Legislative Assembly. Further amendments to the constitution in March 1970 gave the Seychellois greater autonomy over affairs of internal government.

Seychelles achieved independence at 12:05 AM on 29 June 1976. Upon independence, the UK government recommended the transfer from the British Indian Ocean Territory to Seychelles of the island groups of Aldabra and Farquhar and the island of Desroches. These islands, which had been detached from Seychelles in 1965, were duly returned to the new republic.

James Richard Marie Mancham, then leader of the conservative Seychelles Democratic Party, became president on independence, heading a coalition government that included Seychelles People's United Party (SPUP) leader France Albert René as prime minister. Mancham was overthrown by a coup on 5 June 1977 and went into exile; René became president. He suspended the constitution, dismissed the legislature, and ruled by decree.

In 1978, a new political party, the Seychelles People's Progressive Front (SPPF), absorbed the SPUP. The constitution of March 1979, adopted by referendum, established a one-party state as the country drifted toward a Marxist political system. In November 1981, about 50 mercenaries recruited in South Africa landed in Mahé, briefly seized the airport, and apparently planned to return Mancham to power; however, Seychellois troops forced them to flee. Tanzanian troops, airlifted to Seychelles following this incident, also played a part in restoring order after an abortive army mutiny of 17–18 August 1982 took at least nine lives. All Tanzanian troops had left the country by the end of 1984. A number of other plots have been alleged since then.

LOCATION: 3°41' to 10°13' S; 46°12' to 56°17' E. TERRITORIAL SEA LIMIT: 12 miles.

René was reelected president without opposition in June 1984. Since then, the Seychelles made progress economically and socially. Under rising pressure to democratize, in December 1991, René agreed to reform the electoral system. Multiparty elections were held in July 1992 (the first since 1974), and the prospect of reconciliation between René and Mancham supporters was raised. Many dissidents, including Mancham, returned from exile. In June 1993, 73% of the voters approved a new constitution providing for multiparty government.

Since the introduction of multiparty competition, the SPPF has remained dominant, but has gradually seen its popularity weaken. Presidential and National Assembly elections were held 23 July 1993, with René winning the presidency and the SPPF capturing all but one of the directly elected legislative seats. In the 1998 contest, René obtained 66.7% of the presidential vote and his party captured 30 of 34 seats. In August 2001 elections, René again defeated his opponents, but this time by only 54.19%, and in National Assembly elections in December 2002—the first to be held separately from presidential elections—the SPPF captured 23 seats to 11 for the SNP.

In April 2004, after 27 years in power, René—barred constitutionally from running for a third term—handed over power to his

vice president James Michel. The move gave Michel time to establish himself, and as SPPF party chair, René continued to exercise power behind the scenes. One sign of this power was the expansion of the central committee from 20 to 25 members composed of former ministers and key civil servants. In the annual SPPF congress in May 2005, Vice President Joseph Belmont was named to be Michel's running mate.

Whether the SPPF would continue its political dominance was believed to hinge primarily on the economy. Real GDP was expected to contract for the fourth consecutive year in 2006.

### **13 GOVERNMENT**

The 1976 constitution provided for a multiparty system, but was replaced in 1979 with a document authorizing a one-party state. The June 1993 constitution reestablished multiparty elections for president and for a National Assembly consisting of 33 members, 22 directly elected and 11 allocated on a proportional basis. The president is both head of state and head of government and appoints a cabinet of ministers from outside the National Assembly. Typically, the president also holds key ministerial posts. While the 1993 constitution guarantees extensive political and civil liberties, it also allows the curtailment of freedom of expression in order to protect "the reputation, rights, and freedoms of private lives of persons." This is a thinly veiled limitation on the freedom of the press. The independent media was the target of restrictions under the René administration.

In 1996, the SPPF successfully introduced constitutional changes, including the enlargement of the National Assembly to 35 (with 10 members to be chosen by proportional representation) and creation of the post for a vice president. In 1998, the United Opposition (UO) boycotted the National Assembly meetings protesting the SPPF's heavy-handed behavior. Presently, the National Assembly comprises 34 seats, 25 elected by popular vote and 9 allocated on a proportional basis to parties winning at least 10% of the vote.

The next presidential elections were due to take place by August 2006 with parliamentary elections scheduled to occur no later than the end of 2007. Parliamentary elections may be concurrent with presidential elections. The president and members of the National Assembly serve five-year terms.

### **14 POLITICAL PARTIES**

Before 1978 there were two political parties, the Seychelles Democratic Party (SDP) and the Seychelles People's United Party (SPUP), both founded in 1964. In the last legislative elections prior to independence, on 25 April 1974, the SDP won 13 of 15 elective seats and the SPUP 2. Appointments in June 1975 brought total party strength to 18 for the SDP and 7 for the SPUP. The successor to the SPUP, the Seychelles People's Progressive Front (SPPF), was established in 1979 as the sole legal party, with the avowed objective of creating a Socialist state; the SDP was declared to have "disappeared." There were at least three opposition groups in exile. In the 1979 parliamentary elections, 55 candidates sanctioned by the SPPF competed for 23 elective seats in the People's Assembly. In the 1983 parliamentary elections, 17 of the 23 elected candidates ran unopposed; and in the December 1987 elections, 36 candi-

dates, all of them members of the SPPF, competed for the 23 seats in the People's Assembly.

After René's announcement of a return to multiparty democracy, parties began to organize in preparation for an election to a constituent assembly in July 1992. Many dissidents returned from exile and the Democratic Party (DP) was reestablished. Also established were the Seychelles Party (PS), the Seychelles Democratic Movement (MSPD), and the Seychelles Liberal Party (SLP).

After the 23 July 1993 elections, eight opposition members obtained seats in the 33-seat National Assembly. René won the presidential election with 59.5% of the vote. The Parti Seselwa, the Seychellois National Movement, and the National Alliance Party opposed the adoption of the new constitution in 1993 and contested the July 1993 elections as the United Opposition (UO) coalition. Its presidential candidate, former president Mancham, received 36.6% of the vote. The SPPF won 21 legislative seats to the DP's 1. The SPPF was also given 6 of the 11 seats apportioned according to the percentage of the votes won; the DP, 4 seats; and the UO, 1 seat.

In the 1998 elections, the SPPF captured 30 seats; the UO three; and the DP only one seat. The Reverend Wavel Ramkalawan replaced James Mancham as leader of the opposition, and in late 1998, the UO changed its name to the Seychelles National Party (SNP). In National Assembly elections held in December 2002, the SPPF captured 23 seats to 11 for the SNP. The SPPF retained a strong grassroots structure throughout the islands.

### **15 LOCAL GOVERNMENT**

All seats on the 23 elected district councils (formerly the SPPF district branch committees) are held by SPPF members. In June 2003, SPPF delegates to a special party congress agreed that members of district committees would be appointed rather than elected.

### **16 JUDICIAL SYSTEM**

Magistrates' courts are normally the courts of the first instance. The Supreme Court hears appeals and takes original jurisdiction of some cases. An independent Appeal Court was established in 2005. The president of Seychelles appoints the chief justice—a naturalized citizen—and also appoints all other judges from other Commonwealth countries on seven-year contracts. As of 2005, the court president was Justice Michael Ramodibedi of Lesotho.

Civil law is based on the French Napoleonic Code, while criminal law follows the British model. Members of the armed forces accused of serious offenses are tried by court-martial unless the president decrees otherwise. Executive and ruling party dominance in the judicial system has been challenged unsuccessfully.

The Constitutional Court convenes weekly, or as needed, to consider constitutional and civil liberties issues. The Court of Appeal convenes twice a year and considers appeals from the Supreme Court and Constitutional Court only. In addition, an industrial court and a rent tribunal exist.

### **17 ARMED FORCES**

In 2005 there were 450 active personnel in the armed forces of Seychelles, including an army of 200 (one infantry company and one security unit) and a paramilitary national guard of 250. There was also a 200-member coast guard, that included 80 marines, and

20 others in an air wing. In 2005, the defense budget totaled \$12.6 million.

## 18 INTERNATIONAL COOPERATION

Admitted to the United Nations on 21 September 1976, Seychelles participates in ECA and several nonregional specialized agencies, such as the IAEA, FAO, the World Bank, UNCTAD, UNESCO, UNIDO, and the WHO. The nation belongs to the ACP Group, the African Development Bank, COMESA, SADC, the Cross-border Initiative in Eastern and Southern Africa (CBI), the Alliance of Small Island States (AOSIS), and the Indian Ocean Commission. It also belongs to the Commonwealth of Nations, G-77, and the African Union. The country has observer status in the WTO. It is part of the Nonaligned Movement. IN environmental cooperation, Seychelles is part of the Basel Convention, the Convention on Biological Diversity, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Seychelles possesses a thriving economy, but external debt holds back real economic development. Agriculture, fishing, and forestry accounted for about 4% of GDP in 1999. Crop production is limited by mountainous terrain and low soil fertility, leaving the Seychelles dependent on imports for beef, rice, potatoes, and some fresh produce. The manufacturing sector accounts for 26% of GDP. Since the opening of the international airport in 1971, the Seychelles economy has become dependent on tourism. In 1999, tourism employed 30% of the labor force, and provided the majority of foreign exchange earnings, but in 2000, industrial fishing surpassed tourism as the most important source of foreign exchange. Stiff international competition for tourist dollars caused the government to take steps to broaden the economic base by promoting the development of fishing and light manufacturing. The tourism industry was adversely affected by the 11 September 2001 terrorist attacks on the United States and the subsequent decline in air travel. Tuna fishing and canning accounted for 70% of GDP in 2003.

Although private enterprise and private property are permitted, the public sector drives the economy and accounts for more than 40% of GDP. The government controls the importation, licensing, and distribution of virtually all goods and services, and exercises significant control over all phases of the economy. Since 1990, a program to privatize the economy has resulted in progress in several sectors including tourism, fish processing, and agriculture. In 1995, the American food company Heinz and Co. purchased 60% of the previously state-owned Seychelles Tuna Canning Factory, and the joint venture between the government and Heinz is now the single largest employer in the Seychelles. In addition, most state-owned agricultural land has been turned over to private control. The government is attempting to develop an offshore and free trade zone to further develop the economy and move it away from its dependence upon tourism and fishing.

The economy registered a slight expansion of 1.3% in 2002, before it started plummeting—by -6.3% in 2003 and by -2.0% in 2004; in 2005 real GDP growth was -4.0%. Inflation remained fairly stable but was expected to jump to 10% in 2005 as a result

of the economic recession. The tourism sector continues to suffer as vacationers look for cheaper destination like the Comoros, Mauritius, and Madagascar. In addition, Heinz decided that it will sell its 60% stake in the Indian Ocean Tuna cannery as soon as a buyer is found.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Seychelles's gross domestic product (GDP) was estimated at \$626.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$7,800. The annual growth rate of GDP was estimated at -3%. The average inflation rate in 2005 was 4.4%. It was estimated that agriculture accounted for 3.2% of GDP, industry 30.4%, and services 66.4%.

According to the World Bank, in 2002 remittances from citizens working abroad totaled \$1 million or about \$12 per capita and accounted for approximately 0.1% of GDP.

## 21 LABOR

In 1996, the labor force numbered 30,900. Services accounted for 71% of the workforce, with industry 19% and agriculture the remaining 10%. In addition, there are self-employed people, casual workers, domestic servants, and agricultural workers on small land holdings. There was no data available as of the unemployment rate in Seychelles.

Seychelles had two trade unions organizations as of 2001: the Seychelles Federation of Workers' Union and the Independent Seychelles Workers Union. Employees have the right to organize and bargain collectively, but in practice most wages are set by the government—the country's largest employer. The government has the right to review and approve labor contracts between individuals and large firms. Approximately 15–20% of the workforce is unionized.

The minimum age for employment is 15, but children are encouraged to attend school until the 9th or 10th grade. Apprenticeships and vocational programs are available to those who leave school early. The minimum wage was \$427 per month in 2001. Most workers also receive a variety of free public services. The legal maximum workweek is 45 to 52 hours, but most government workers work less than that. The government has issued comprehensive occupational health and safety regulations but they are not effectively enforced. The government is making attempts to improve this enforcement.

## 22 AGRICULTURE

Although agriculture has long been the basis of the Seychelles economy, it contributes only about 4% to GDP. Production in 2004 included coconuts, 3,200 tons; and bananas, 1,970 tons. Tea planting began in the early 1960s. Other crops produced for export are cinnamon bark, vanilla, cloves, and patchouli (an essence used in soap and perfume). In 2004, the Seychelles produced 200 tons of cinnamon bark and 225 tons of tea. Sweet potatoes, yams, breadfruit, and cassava are grown in small quantities but are not suffi-

cient to satisfy the local demand. Oranges, lemons, grapefruit, bananas, and mangoes meet the local requirement only in season.

### 23 ANIMAL HUSBANDRY

Seychelles is self-sufficient in the production of pork, poultry, and eggs. In 2005 there were about 18,500 hogs, 5,150 goats, and 1,400 head of cattle. Cattle of improved strains are imported and maintained on an intensive feedlot system.

### 24 FISHING

Per capita fish consumption in the Seychelles is very high, yet the development of industrial fishing is at its early stages. The development of port services for foreign tuna fishing fleets since the early 1980s has raised incomes and living standards, while diminishing the role of artisanal fishing. Fishing accounts for about 1% of GDP and about 8% of exports. Foreign vessels fishing in Seychelles waters must be licensed to operate within the 322-km (200-mi) economic zone, which encompassed one of the world's richest tuna-fishing grounds. French investments have focused on tuna fishing and canning. The European Community, Korea, and Japan hold the key licenses to Seychelles coastal fishing. Fish landings by the domestic fleet totaled 86,869 tons, including 36,802 tons of skipjack tuna and 34,734 tons of yellowfin tuna. Exports of fish products totaled \$210.8 million in 2003.

### 25 FORESTRY

Little natural forest remains. Coconut plantations are the main source of timber, aside from imports. A reforestation program projects the planting of 100 ha (250 ac) each year. Imports of forest products totaled \$1.4 million in 2004.

### 26 MINING

Seychelles' mineral production in 2004 consisted granite dimension stone, gravel and crushed rock, and sand. Although production of guano (a phosphate fertilizer comprising bird droppings, extracted from Assumption) ceased in the mid-1980s, a plant with a capacity of 5,000 tons per year remained; modest production was unofficially reported in the mid-1990s. Output of granite dimension stone in 2004 was estimated at 93,000 metric tons, up from 92,120 metric tons in 2002. Gravel and crushed rock output in 2004 was estimated at 213,000 metric tons, up from 212,926 metric tons in the previous year. Sand production in 2004 was estimated at 2,200 metric tons, up from 2,165 metric tons in 2002. Polymetallic nodules were known to occur on the ocean bottom near the Admirante Islands. The Seychelles comprised 40 granitic and at least 50 coralline islands.

### 27 ENERGY AND POWER

Seychelles has a total installed electric generating capacity of 28,000 kW, as of 1 January 2003. Output in 2003 reached 0.24 billion kWh, of which 100% came from fossil fuels. Consumption of electricity in 2003 came to 0.22 billion kWh.

As of 1 January 2005, Seychelles had no proven reserves of crude oil, natural gas, or coal, nor any crude oil refining capacity. All fossil fuel and refined petroleum product consumption was met by imports. In 2004, imports and domestic demand for petroleum products each averaged 4,000 barrels per day. There were no recorded imports or consumption of natural gas or coal in 2003.

## 28 INDUSTRY

In 2000, the manufacturing and construction sector contributed 29% to GDP. The average annual industrial growth rate was averaging 10% in the early 2000s. Tuna fishing and canning accounted for 70% of GDP in 2002. The largest plant is the tuna cannery, opened in 1987 and privatized in 1995 with a 60% purchase by US-based Heinz Inc. The tuna business has grown rapidly, and the joint venture between Heinz and the government was the single largest employer in the Seychelles in 2002. Other factories are smaller and process local agricultural products. A tea factory handles locally grown tea. Others process copra and vanilla pods and extract coconut oil. There is a plastics factory, a brewery and soft drink bottler, and a cinnamon distiller. Salt, cigarettes, boats, furniture, steel products, publications, animal feeds, processed meats, dairy products, paints, and assembled televisions are also produced. Oil exploration is underway, and geophysical and geochemical analyses indicate potential for commercial production.

In 2004, the main contributors to the GDP were transport, communications, and distribution (30.3%), manufacturing (16.7%), government services (12.7%), and hotel and restaurants (10.1%). As of 2006, the Heinz company was liquidating its shares in the tuna canning factory, which had been privatized in 1995.

## 29 SCIENCE AND TECHNOLOGY

Seychelles Polytechnic, founded in 1983 at Victoria, has schools of agriculture, engineering, health studies, humanities and science, and maritime studies. In 2002, there were 18 researchers and 30 technicians engaged in research and development per million people. For that same year, R&D spending totaled R4.080 million. Of that amount, 89.7% came from government sources, with private nonprofit organizations accounting for 3.4% and foreign sources 6.9%.

## 30 DOMESTIC TRADE

The Seychelles Marketing Board (SMB), with wide powers over imports, distribution, and quality of goods, was established in 1984. Though its monopoly on the sale of fruits and vegetables was abandoned in 1987, the SMB still operates all major supermarkets.

### Principal Trading Partners – Seychelles (2002)

(In millions of US dollars)

Country	Exports	Imports	Balance

Australia	0.4	4.0	-3.6
Denmark	0.4	2.4	-2.0

(...) data not available or not significant.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

The small Chinese merchant class plays an important part in the retail trade. The variety of domestic goods for sale is very limited. There are price controls on most foodstuffs. The capital of Victoria is the major commercial center of the island. Shops range from supermarkets to a traditional open-air market. A small handicrafts and pottery industry creates products primarily for tourists.

Normal business hours are 8 AM to noon and 1:30 to 4 PM, Monday–Friday; 8 AM to noon on Saturday. Most business is conducted in English, but French is widely spoken.

### 3<sup>1</sup> FOREIGN TRADE

Foreign trade is habitually in deficit. Strict trade regulations hinder trade growth. Preserved fish (73%), fresh fish (8.0%), salted, dried, and smoked fish (6.5%), and shellfish (3.7%) account for the majority of Seychelles's commodity exports. Other exports include cinnamon and vanilla (2.4%).

In 2005, exports totaled \$312 million (FOB—free on board), while imports grew to \$460 million. Most of the exports went to the United Kingdom (27.7%), France (15.8%), Spain (12.6%), Japan (8.6%), Italy (7.5%), and Germany (5.6%). Major imports included food and live animals, manufactured goods, fuel, machinery and transport goods, and chemicals, and they mainly came from Saudi Arabia (15.5%), Spain (13.3%), France (10.3%), Singapore (7%), South Africa (6.8%), Italy (6.7%), and the United Kingdom (4.7%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Development aid, income from tourism, and earnings from reexports have generally been sufficient to offset Seychelles' persistent visible trade deficit.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Seychelles's exports was \$182.6

million while imports totaled \$360.2 million resulting in a trade deficit of \$177.6 million.

The International Monetary Fund (IMF) reported that in 2001 Seychelles had exports of goods totaling \$215 million and imports totaling \$387 million. The services credit totaled \$283 million and debit \$193 million.

Exports of goods and services totaled \$629 million in 2004, up from \$620 million in 2003. Imports grew from \$593 million in 2003, to \$629 million in 2004. The resource balance, while positive in 2003 at \$28 million, decreased to \$0 million in 2004, indicating that imports were growing faster than exports. A similar trend was registered for the current account balance, which deteriorated from -\$6 million in 2003, to -\$21 million in 2004. Foreign exchange reserves (including gold) decreased to \$37 million in 2004, covering less than a month of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The Seychelles Monetary Authority, established in 1978 as the bank of issue, became the Central Bank of Seychelles in 1983. Other government banks are the Seychelles Savings Bank and the Development Bank of Seychelles. Five major commercial banks operate in the Seychelles, namely Barclays, Nouvobanq, Banque Française Commerciale Océan Indien, Bank of Baroda, and Habib Bank. Development of an offshore banking center was announced in 1999.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$220.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$607.0 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 1%.

There is no stock exchange in Seychelles.

### 3<sup>4</sup> INSURANCE

All private insurance companies were nationalized in 1983 and their business transferred to the State Assurance Corp. Two of the companies doing business in the Seychelles in 1997 were H. Savy Insurance Co., and State Assurance Corp. of Seychelles.

### 3<sup>5</sup> PUBLIC FINANCE

Annual budgets of increasing deficits were common in the 1980s. The public sector is responsible for two-thirds of Seychelles' employment, and the budget amounts to about 40% of GDP. Public investment focuses on social and physical infrastructure, tourism, and export activities. Some privatization has occurred in recent years, including the privatization of some port operations and the Seychelles Tuna Canning Factory, 60% of which was purchased by Heinz.

The US Central Intelligence Agency (CIA) estimated that in 2005 Seychelles's central government took in revenues of approximately \$343.3 million and had expenditures of \$332.2 million. Revenues minus expenditures totaled approximately \$11.1 million. Public debt in 2005 amounted to 129.7% of GDP. Total external debt was \$276.8 million.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were R1,607 million and expenditures were R2,172.8

million. The value of revenues in US dollars was us\$293 million and expenditures us\$333 million, based on a official exchange rate for 2002 of us\$1 = R5.4800 as reported by the IMF. Government outlays by function were as follows: general public services, 35.5%; defense, 3.6%; public order and safety, 3.7%; economic affairs, 7.6%; housing and community amenities, 2.5%; health, 6.3%; recreation, culture, and religion, 1.1%; education, 9.7%; and social protection, 13.9%.

**36 TAXATION**

As of 2005, Seychelles had a progressive corporate income tax structure made up of four bands, with rates of 0%, 25%, 30%, and 40%. There is no capital gains tax in the Seychelles. A withholding tax of 15% is applied to dividends paid to nonresidents. Residents receiving dividends are not taxed. Interest income paid to nonresidents (excluding banks, financial companies, and other firms whose primary business is money lending) are subject to a 10% withholding rate. A 40% withholding rate is applied to interest received by residents or nonresidents holding a security issued by a Seychelles financial institution, and is applied at the time of redemption. Royalties paid to Seychelles citizens are not taxed, while nonresidents are subject to a 15% withholding rate. The principal indirect taxes are customs duties and a goods and services tax (GST). The GST applies a 12% tax on certain locally manufactured goods and on imported goods (in addition to the customs duty). Local services providers and tourism-related services providers are subject to a GST between 7% and 15%. The Seychelles operates as a tax haven. It applies a territorial basis of tax assessment to corporations, so they are taxed only on the income that is derived directly from the country. This makes it an inviting place for international companies to headquarter, because the profits made by branches are not imputed to the center for tax purposes. Also the government imposes no personal income tax,

although it does require social security contributions.

**37 CUSTOMS AND DUTIES**

All imports are controlled by the Seychelles Marketing Board (SMB), which places quotas on certain imports (such as motor vehicles) and other types of restrictions on other items. Prohibited goods include arms and ammunition, dangerous drugs, pornographic materials, and spearguns. Import tariffs are 30%.

The Seychelles International Trade Zone offers tax benefits and other advantages to exporters.

**38 FOREIGN INVESTMENT**

The government offers full repatriation of after-tax profits; normal exemption from import duties for machinery, spare parts, and raw materials; and possible tariff protection. While parastatals are common in Seychelles, there is no policy of nationalization, though joint ventures are preferred when foreign capital is involved. Public and private investment is sought for the tourist, fishing, agriculture, and manufacturing sectors. In 1995, the government established an International Investment Authority which offers incentives and tax concessions to foreign investors.

Annual foreign direct investment (FDI) inflows to the Seychelles from 1997 to 2000 ranged from \$54.4 million in 1997 to \$60 million in 1999. In 2001, FDI inflows slowed to \$34 million. In 2005, attempts were underway to find a buyer for Heinz's share in the Indian Ocean Tuna cannery, which delayed planned investments in the factory.

**39 ECONOMIC DEVELOPMENT**

The 1985–89 plan sought to create jobs and emphasized developing cash crops, tourism, and the fishing industry. The 1990–94 plan emphasized the need to attract foreign investment. Of considerable interest to donors in the 1990s was the 10-year plan to improve the Seychelles environment. In 1999, the government undertook an intensive review of trade policies in connection with its application to join the WTO, which may increase development. As of 2003, the Seychelles' WTO application was still pending.

The economy continued to contract in 2005, and was expected to continue the same trend in 2006. Tourism still suffers from decreasing numbers of incoming visitors, and manufacturing will remain depressed as a result of insufficient foreign exchange. Prospects for 2007 are somewhat brighter as major investments in luxury hotels are expected to put the economy back on track.

**40 SOCIAL DEVELOPMENT**

All citizens residing in Seychelles territory and resident foreign employees are entitled to participate in the social security fund. There is voluntary coverage available to the self-employed. Benefits are provided for old age, disability, survivorship, sickness, and maternity. Employees and employers are required to make monthly contributions. Retirement is set at age 63 with at least five years of residency. There is also a workers' compensation scheme. Health services are free for all residents under the National Health Plan. Although there is no statutory unemployment program, daily subsistence wages are provided under certain conditions.

Traditional Seychelles culture is matriarchal and women are accorded considerable respect within society. However, violence against women, particularly domestic violence, remains a prob-

lem, and has been linked to alcohol abuse. Women are fairly well represented in both the public and private sectors. Inheritance laws do not discriminate against women. In 2004, more than 70% of births were out of wedlock.

Human rights are generally respected although there are still arbitrary arrests and detentions. There is some discrimination against foreign workers. Nongovernmental organizations operate freely.

#### 41 HEALTH

In 2004, the Seychelles had an estimated 132 physicians, 5 pharmacists, 467 nurses, 4 midwives, and 12 dentists per 100,000 people. Approximately, 3.9% of the gross national product went to health expenditures. Water and sanitation were available to over 90% of the Seychelles residents.

The infant mortality rate in 2005 was estimated at 15.53 per 1,000 live births and average life expectancy at 71.82 years. In the same year, the birth rate was 17.3 and the overall mortality rate at 6.6. Approximately 99% of the country's children were vaccinated against measles, 99% against hepatitis B, and 97% against polio. Seychelles has also reached the 2000 goal of attaining at least 90% immunization DPT (diphtheria, pertussis, and tetanus). No cases of polio, measles, or neonatal tetanus were reported, however leprosy was still present.

#### 42 HOUSING

As of the 2002 census, there were about 20,270 housing units throughout the nation serving 20,933 households. The average household size was four members. Most homes were made of stone block with corrugated iron roofs (77%); others are constructed of wood frames and walls. Some rural houses were thatched. About 73% of all housing was listed in good condition; 66% of all housing was owner occupied. Of all housing units, 94% had flush toilets, 87% had indoor treated water, and 96% had electricity.

The Home Ownership Scheme lends money for building costs to low-income families, and the Housing Loan Fund provides loans for families who want to purchase or build their own homes. Concrete-block housing developments have been constructed.

#### 43 EDUCATION

Since 1980, public education has been free and compulsory for 10 years for children between the ages of 6 and 16. Six years of primary education are followed by five years of secondary education. Vocational courses are offered for secondary students. In 2001, about 90% of children between the ages of four and five were enrolled in some type of preschool program. Primary and secondary school enrollment in 2003 was estimated at about 100% of age-eligible students. It is estimated that nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 14:1 in 2003; the ratio for secondary school was also about 14:1.

Seychelles does not provide education at university level, but there is a teacher-training college and a polytechnic institute. Only members of the National Youth Service can apply to the teacher-training college. In the absence of higher education facilities,

many students study abroad, mainly in the United Kingdom. The adult literacy rate for 2004 was estimated at about 91.9%.

As of 2003, public expenditure on education was estimated at 5.2% of GDP, or 10.7% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Archives and a National Library (80,000 volumes) are both located in Victoria (Mahé Island). Seychelles Polytechnic University has 12,000 volumes. The Seychelles National Museum of History is located in the same building as the National Library. There is also a Seychelles Natural History Museum in Victoria.

#### 45 MEDIA

In 2002, there were 21,700 mainline phones in use nationwide. In 2003, there were an additional 54,500 mobile phones in use.

Radio-Television Seychelles, which is government owned, broadcasts in English, French, and Creole. Television service, controlled by the government, began in 1983. License fees for privately owned radio and television stations are so high that an independent media has not been able to develop. As of 1999 there were three AM radio stations and two television stations. There were 627 radios and 150 television sets per 1,000 population in 1998. In 2002, there were about 11,700 Internet subscribers served by over 260 Internet hosts. There is one daily newspaper—*Seychelles Nation* (2002 circulation 3,500)—published by the government in English, French, and Creole. The president has the authority to censor publications.

#### 46 ORGANIZATIONS

Trade groups include the Seychelles Chamber of Commerce and Industry and the Seychelles Farmers' Association. The Women's Association and the Youth Organization are arms of the SPPF. Other youth organizations include the National Youth League of the Seychelles and the Scout and Guide Movement of the Seychelles. There are several sports associations representing such pastimes as tennis, squash, yachting, and track and field. There are national chapters of the Red Cross and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

The prosperity of Seychelles depends on tourism. Visitors can enjoy coral beaches, water sports including scuba diving, water-skiing, and windsurfing, and boat or yacht tours of the islands. The archipelago's wildlife is also a popular tourist attraction. Valid passports are required, but visas are not. If traveling from an infected area a certificate of vaccination is required.

There were 122,038 tourist arrivals in 2003. Most of the visitors came from France and Germany. Hotel rooms numbered 2,435 with 4,926 beds and an occupancy rate of 46%. That same year the US Department of State estimated the daily cost of staying in Seychelles at \$271.

**48 FAMOUS SEYCHELLOIS**

Sir James Richard Marie Mancham (b.1939), leader of the SDP, became Seychelles' first president in 1976. He was deposed in 1977 by France Albert René (b.1935), who served until 2004. James Alex Michel (b.1944) became president in 2004.

**49 DEPENDENCIES**

Seychelles has no territories or colonies.

# SIERRA LEONE

Republic of Sierra Leone

**CAPITAL:** Freetown

**FLAG:** The national flag is a tricolor of green, white, and blue horizontal stripes.

**ANTHEM:** Begins "High we exalt thee, realm of the free, Great is the love we have for thee."

**MONETARY UNIT:** The leone (LE) is a paper currency of 100 cents. There are coins of ½, 1, 5, 10, 20, and 50 cents, and notes of 1, 2, 5, 10, 20, 50, 100, and 500 leones. LE1 = \$0.00041 (or \$1 = LE2,452.91) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is employed.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 27 April; Bank Holiday, August; Christmas, 24–25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, Whitmonday, 'Id al-Fitr, 'Id al-'Adha, and Milad an-Nabi.

**TIME:** GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the west coast of Africa, Sierra Leone has an area of 71,740 sq km (27,699 sq mi), extending 338 km (210 mi) N–S and 304 km (189 mi) E–W. Comparatively, the area occupied by Sierra Leone is slightly smaller than the state of South Carolina. It is bounded on the N and E by Guinea, on the SE by Liberia, and on the S and W by the Atlantic Ocean, with a total boundary length of 1,360 km (845 mi), of which 402 km (250 mi) is coastline. In addition to the mainland proper, Sierra Leone also includes the offshore Banana and Turtle islands and Sherbro Island, as well as other small islets.

Sierra Leone's capital city, Freetown, is located on the Atlantic Coast.

## <sup>2</sup>TOPOGRAPHY

The Sierra Leone Peninsula in the extreme west is mostly mountainous, rising to about 884 m (2,900 ft). The western part of the country, excluding the Peninsula, consists of coastal mangrove swamps. Farther east, a coastal plain extends inland for about 100–160 km (60–100 mi); many rivers in this area are navigable for short distances. Stretches of wooded hill country lead east and northeast to a plateau region generally ranging in elevation from 300 to 610 m (1,000 to 2,000 ft). There are peaks of over 1,830 m (6,000 ft), reaching a maximum of 1,948 m (6,390 ft) at Loma Mansa (Bintimani) in the Loma Mountains.

## <sup>3</sup>CLIMATE

Temperatures and humidity are high, and rainfall is heavy. The mean temperature is about 27°C (81°F) on the coast and almost as high on the eastern plateau. There are two distinct seasons: the dry season, from November to April, and the wet season, over the rest of the year, with the heaviest precipitation in July, August, and September. Rainfall is greatest along the coast, especially in the mountains, where there is more than 580 cm (230 in) annually, but it averages more than 315 cm (125 in) a year in most of the

country, with 366 cm (144 in) at Freetown. The relative humidity ranges from an average of 80% during the wet season to about 50% during the dry season.

## <sup>4</sup>FLORA AND FAUNA

About 25–35% of the land area, mostly in the north, consists of savanna or grasslands; 20–25%, mostly in the south-center, is low bush; another 20–25%, in the southeast, is secondary forest or high bush; 10–20% is swampland; and 3–5% is primary rain forest.

The emerald cuckoo, which has been described as the most beautiful bird in Africa, is found in Sierra Leone, although it has disappeared from the rest of West Africa. Other species include the Senegal firefinch, common bulbul, little African swift, Didric cuckoo, bronze manakin, cattle egret (or "tickbird"), and many birds that breed in Europe but winter in Sierra Leone. Crocodiles and hippopotamuses are indigenous to the river regions of the coastal plain. As of 2002, there were at least 147 species of mammals, 172 species of birds, and over 2,000 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Water pollution is a significant problem in Sierra Leone due to mining by-products and sewage. The nation has about 160 cu km of renewable water resource, with 89% of annual withdrawals used for farming and 4% for industrial purposes. Only 75% of the nation's city dwellers and 46% of those living in rural areas have access to improved water sources. The nation's cities have produced an average of about 0.3 million tons of solid waste per year.

Population pressure, leading to an intensification of agriculture, has resulted in soil depletion, while lumbering, cattle grazing, and slash-and-burn farming have decimated the primary forest. By 1985, deforestation had progressed to a total of 23 square miles. Agricultural lands are gradually replacing forestlands due to the need for food by a population that increased by 80% during the period between 1963 and 1990. The forests of the Sierra

Leone Peninsula are protected. The Sierra Leone River Estuary is a Ramsar wetland site. As of 2003, only 2.1% of Sierra Leone's total land area was protected. Government agencies with environmental responsibilities include the Ministry of Agriculture, Natural Resources, and Forestry, Ministry of Mines, Ministry of Lands and Human Development, Ministry of Energy and Power, and Ministry of Economic Planning and National Development.

Hunting for food has reduced the stock of wild mammals, and Cutamba Killimi National Park, which has some wildlife species found only in this part of West Africa, is exploited by poachers. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 10 species of birds, 3 types of reptiles, 2 species of amphibians, 8 species of fish, 4 species of invertebrate, and 47 species of plants. Threatened species in Sierra Leone include the white-breasted Guinea fowl, Diana monkey, the African sharp-nosed crocodile, and several species of shark.

## 6 POPULATION

The population of Sierra Leone in 2005 was estimated by the United Nations (UN) at 5,525,000, which placed it at number 107 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.3%, a rate the government viewed as too high. Contributing to the high growth rate is the low rate of contraception use, at 3.9% of married woman. The projected population for the year 2025 was 8,663,000. The overall population density was 77 per sq km (199 per sq mi), with the Sierra Leone Peninsula the most densely populated region of the country.

The UN estimated that 37% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.59%. The capital city, Freetown, had a population of 921,000 in that year. Other main towns are Koindu, Bo, Kenema, and Makeni.

The prevalence of HIV/AIDS has had a significant impact on the population of Sierra Leone. The UN estimated that 7% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Historically, there has been considerable movement over the borders to and from Guinea and Liberia. In the mid-1980s, the number of nonnative Africans was estimated at 30,000. Since the civil war in 1991, hundreds of thousands of refugees have left Sierra Leone. Of these refugees, 250,000 went to Guinea, 120,000 went to Liberia, and 4,000 went to The Gambia. Repatriation by the United Nations High Commissioner for Refugees (UNHCR) began in February 1997, as 1,400 returned home from Liberia and Mali. By February 1998, UNHCR planned to repatriate 240,000 refugees from Guinea, Liberia, and The Gambia. With the signing of the Lomé peace agreement in 1999, UNHCR planned for the repatriation of the remaining 450,000 Sierra Leonean refugees seeking asylum in the subregion, mainly in Guinea and Liberia, but also in

Côte d'Ivoire, The Gambia, and Nigeria. As of 1999, Sierra Leoneans made up UNHCR's largest refugee caseload in Africa. The total number of migrants in the country in 2000 was 47,000, including remaining refugees. In 2004, some 26,271 refugees returned to Guinea and Liberia. However, in that same year there were yet another 65,437 refugees in Sierra Leone, 61,192 from Liberia, and 138 asylum seekers.

In 2005, the net migration rate was an estimated zero migrants per 1,000 population. This was a significant drop from -18.7 per 1,000 in 1990. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The African population is composed of some 20 native ethnic groups, constituting 90% of the total population. The two largest are the Mende (about 30% of the population) and Temne (about 30%). Other peoples, making up the remaining 30% of the African populace, include the Bullom, Fulani, Gola, Kissi, Kono, Koranko, Krim, Kru, Limba, Loko, Malinke, Sherbro, Susu, Vai, and Yalunka. Creoles, descendants of freed Jamaican slaves who settled in the Freetown area in the late 18th century, account for the remaining 10% of the total population. Refugees from Liberia's recent civil war also live in Sierra Leone, along with small numbers of Europeans, Lebanese, Pakistanis, and Indians.

## 9 LANGUAGES

English is the official language; however, it is used regularly only by the literate minority. The Mende and Temne languages are widely spoken in the south and north, respectively. Krio, the mother tongue of the Creoles, derived largely from English, with words added from various West African languages, is the lingua franca and a first language for about 10% of the population, but is understood by 95%.

## 10 RELIGIONS

Reliable data on the exact numbers of practitioners of major religions is not available. However, most sources estimate that the population is 60% Muslim, 30% Christian, and 10% practitioners of traditional indigenous religions. Muslims were traditionally concentrated in the northern part of the country, and Christians in the south. However, an ongoing civil war has prompted relocation by large masses of the population. Reportedly, many syncretic practices exist, with up to 20% of the populace practicing a mixture of either Muslim or Christianity with traditional indigenous religions. Certain Muslim and Christian holidays are recognized as national holidays. The Inter-Religious Council serves an important role in civil society and works to promote the peace process within the country.

## 11 TRANSPORTATION

In 1970 there were more than 580 km (360 mi) of railway, but by the end of 1975, following an IBRD recommendation, Sierra Leone had dismantled most of its rail system and replaced it with new roadways; since the mid-1980s, only 84 km (52 mi) of narrow-gauge railway has remained, connecting the closed iron mines at Marampa with the port of Pepel, on the Sierra Leone River. The line remains operable but is in limited use. In 2002, Sierra Leone had about 11,700 km (7,270 mi) of roads, of which

some 904 km (562 mi) were paved. In 2003, there were 29,650 registered motor vehicles, including 20,300 automobiles, and 9,350 commercial vehicles.

Freetown has one of the finest natural harbors in the world, with an excellent deepwater quay, built in 1953. In 1970, work was completed on an extension that provides the port with berth facilities for six to eight ships and about 24 hectares (60 acres) of storage area. Peipel specializes in the export of iron ore, and Point Sam, the Sherbro River terminal, handles bauxite and rutile. Bonthe and Sulima are other ports. As of 2005, the merchant marine consisted of two petroleum tankers of 1,000 GRT or more, totaling 7,435 GRT. Sierra Leone has many rivers, however, some are navigable only over short distances for about three months of the year, during the rainy season. Of the 800 km (497 mi) of waterways, 600 km (373 mi) are navigable year round.

In 2004 there were an estimated 10 airports, however, as of 2005, only one had a paved runway, and there were also two heliports. An international airport at Lungi is connected by ferry to Freetown, across the bay. Extension of the runway was completed in 1968, bringing the airport to top-class international airport standard. It is served by about a dozen international airlines with regular flights to Europe, North and South America, and the rest of West Africa. Domestic service operates from Hastings Airfield, 22 km (14 mi) from Freetown, linking the capital to nearly all the large provincial towns.

The national air carrier, founded in 1961 as Sierra Leone Airways, was reconstituted in 1982 as Sierra Leone Airlines, under the management of Alia-Royal Jordanian Airline, which holds a 20% share. In 2003, about 14,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Archaeological research indicates that by AD 800 the use of iron had been introduced into what is now Sierra Leone and that by AD 1000 the coastal peoples were practicing agriculture. Beginning perhaps in the 13th century, migrants arrived from the more advanced savanna lands to the north and east.

European contact began in 1462 with the Portuguese explorer Pedro da Cintra, who gave the mountainous Peninsula the name Sierra Leone ("Lion Mountains"). From the 16th to the early 19th century, the region was raided for slaves for the Atlantic trade, and later in the 19th century, it was ravaged by African war leaders and slavers.

The colony of Sierra Leone was founded by British philanthropists to relieve the horrors of this slave trade. Granville Sharp, a leader in the movement to abolish slavery, planned it as a home for African slaves freed in England. In 1787, he sent out the first settlers to what he called "The Province of Freedom." In the following year, one of the Temne kings and his subordinate chiefs sold and ceded a strip of land on the north shore of the Sierra Leone Peninsula to Capt. John Taylor on behalf of the "free community of settlers, their heirs and successors, lately arrived from England, and under the protection of the British Government." A few years later, they were joined by settlers of African origin from England, Nova Scotia (freed slaves who, as loyalists, had fled the American Revolution), and Jamaica.

The Sierra Leone Company, of which Sharp was a director, was formed in 1791 to administer the settlement. The land did not

LOCATION: 6°55' to 10° N; 10°16' to 13°18' W. BOUNDARY LENGTHS: Guinea, 652 kilometers (405 miles); Liberia, 306 kilometers (190 miles); Atlantic coastline, 406 kilometers (252 miles). TERRITORIAL SEA LIMIT: 12 miles.

prove as fertile as described, and the settlement was the victim of attacks by neighboring tribes and by a French squadron. The burden of defense and settlement proved too heavy for the company, and Sierra Leone was transferred to the crown in 1808. The colony received additions of land up to 1861 through various treaties of friendship and cession from the local chiefs.

After 1807, when the British Parliament passed an act making the slave trade illegal, the new colony was used as a base from which the act could be enforced. Beginning in 1808, hundreds, and sometimes thousands, of slaves were freed each year, most of them remaining in Sierra Leone. In 1896, a British protectorate was declared over the hinterland of Sierra Leone, which was separate from the colony. Revolts in 1898 were provoked main-

ly by attempts to extend British colonial jurisdiction into the protectorate.

A 1924 constitution provided for the election of three members to a Legislative Council on a restricted franchise, and the constitution of 1951 provided for an elected majority, resulting in African rule. In 1957, the Legislative Council was replaced by a House of Representatives, most members of which were elected, and the literacy requirement for voters was dropped. In 1958, Milton Margai became Sierra Leone's first prime minister; in 1960, he led a delegation to London to establish conditions for full independence.

### Independence

Sierra Leone became an independent country within the Commonwealth of Nations on 27 April 1961. Milton Margai continued as prime minister until his death in 1964, when he was succeeded by his half-brother, Albert Margai, who held office until the national elections in March 1967. The outcome of the elections was disputed, but the All-People's Congress (APC) claimed a plurality of the seats in the House of Representatives. Before Siaka Stevens, chairman of the APC, could take office as prime minister, he was ousted in a bloodless coup led by the army chief, Brig. David Lansana. Martial law was declared, and a National Reformation Council remained in control for 13 months, until 18 April 1968, when it was overthrown by the Anti-Corruption Revolutionary Movement, a military group that formed the National Interim Council. On 26 April 1968, Stevens was installed as prime minister of a civilian government. Continuing political unrest prompted the declaration of a state of emergency in 1970 and a ban on the newly created United Democratic Party, an opposition group whose leaders were arrested.

In 1971, after an abortive military coup which was suppressed with aid from Guinea, a new constitution was adopted. The country was declared a republic on 19 April 1971. Two days later, Siaka Stevens, then prime minister, became the nation's first president. National elections were held in May 1973, and the APC won a nearly unanimous victory following the decision of the opposition Sierra Leone People's Party to withdraw its candidates because of alleged electoral irregularities. An alleged plot to overthrow Stevens failed in 1974, and in March 1976, he was elected without opposition for a second five-year term as president. In 1978, a new constitution was adopted, making the country a one-party state.

An economic slowdown, coupled with revelations of government corruption, led to a general strike in September 1981, called by the Sierra Leone Labour Congress; some labor leaders and other government critics were temporarily detained under emergency regulations, but the government met a key demand of the strikers by moving to reduce the prices of basic commodities. Violence and irregularities marked the parliamentary elections held in 1982, which were limited to the APC.

Stevens did not run for reelection as president in 1985, yielding power to his handpicked successor, Maj. Gen. Joseph Saidu Momoh, the armed forces commander, whose nomination by the APC was ratified in his unopposed election in October 1985. Parliamentary elections were held in May 1986. Following an alleged attempt to assassinate Momoh in March 1987, over 60 persons were arrested, including First Vice President Francis Minah, who was removed from office. An extensive reshuffling of the cabinet followed. Further reports of alleged coup attempts followed.

In April 1991, Sierra Leone was invaded from Liberia by forces commanded by Liberian rebel, Charles Taylor. Domestic support within Sierra Leone mounted and by 29 April 1992, Momoh was overthrown in a military coup. Momoh fled to Guinea. A National Provisional Ruling Council (NPRC) was created but, shortly afterward, on 2 May, the head of the five-member junta, Lt. Col. Yahya, was arrested by his colleagues and replaced by 29-year-old Capt. Valentine Strasser, who was formally designated head of state.

The Strasser government soon began ruling by a series of decrees and public notices limiting political freedoms. The NPRC dissolved parliament and political parties. Strasser talked of returning Sierra Leone to multiparty democracy, but his main goal was to end the fighting in the southeast where the forces of the National Patriot Front of Liberia (NPFL) and Sierra Leone dissidents were engaging a weakly-committed Sierra Leone armed force. Forces from the ECOWAS Monitoring Group sought to create a buffer along the boundary between the two countries. A rebellion led by Foday Sankoh of the Revolutionary United Front (RUF) simmered throughout 1993, although it seemed to falter as the Liberian rebels across the border lost ground. Facing a military stalemate, in November 1993 Strasser announced a unilateral cease-fire, an amnesty for rebels, and issued a timetable for a transition to democracy.

Through 1992 and 1993, Strasser used the security situation to consolidate his power. In December 1992, the government executed 26 alleged coup plotters from the Momoh government. In mid-1993, Strasser arrested his vice president, Capt. Solomon Musa. Policy was formulated and implemented by the NPRC, which established a Supreme Council of State comprising NPRC members, military officers and one civilian.

In 1996, Deputy Brig. Gen. Julius Maada Brio ousted Strasser and provided him safe conduct out of the country. Presidential and parliamentary elections took place in February 1996, but were opposed violently by rebel forces resulting in 27 deaths. Neither candidate, Ahmad Tejan Kabbah (United Peoples Party) or Dr. John Karefa-Smart, received a majority of the vote and a runoff election was held on 15 March 1996. Kabbah won the election with 59.4% of the vote.

In May 1997, Maj. Johnny Paul Koromah of the Armed Forces Revolutionary Council (AFRC) overthrew Kabbah. Clashes between the rebels and Nigerian troops followed, forcing 12,000 Freetown residents to flee the capital. With ECOMOG's support, President Kabbah returned from exile on 10 March 1998. However, rebel forces remained firmly in control of the north, the Kono diamond field, and areas along the Liberian border.

A violent rebel offensive in January 1999 led by the AFRC and Revolutionary United Front (RUF) forced the evacuation of diplomatic and foreign aid personnel from Freetown. As many as 5,000 residents were killed, 150,000 dislocated, and 20% of Freetown was destroyed. Rebels amputated the hands and feet of thousands of civilians "to send a message" to the government. Human rights reports documented unspeakable abuses on all sides. The attack was repelled, but rebels gained control of two-thirds of the country.

In March 1999, President Kabbah was forced to grant temporary amnesty to Corporal Foday Sankoh of the RUF. Sankoh received four ministerial positions and three deputies, bringing the rebel presence in government to seven. Peace talks resumed, and

a cease-fire was signed in May. In July, Jesse Jackson and ECOWAS chairman, Gnassingbe Eyadema, were present at the signing of the Lomé Peace Accord. In December 1999, ECOMOG forces began their withdrawal to be replaced by 11,000 UN observer troops (UNAMSIL), which eventually reached a troop strength of 17,000.

Disgruntled over the distribution of ministries in the unity government, the RUF resumed war in early May 2000, captured 500 UN personnel, and advanced to within 25 miles of the capital. However, on 17 May, Foday Sankoh was captured and eventually died in government custody in July 1993. Liberian President Charles Taylor, a supporter of the RUF, helped obtain the release of some of the peacekeepers, but insisted that Sankoh be part of the solution to the war. By June 2000, the rebels offered to trade their remaining captives for Sankoh's release, but the trade never materialized. Instead UNAMSIL routed the RUF and other armed groups, and concluded a peace agreement, which became fully effective January 2002. President Kabbah and his party won overwhelming victories at the presidential and parliamentary polls that followed on 14 May 2002.

Kabbah proceeded with restructuring and downsizing the army and security forces, and began to prosecute war criminals under a UN Special Court. In October 2002, Kabbah established a Truth and Reconciliation Commission (TRC) to accelerate emotional healing. The TRC's mandate expired in April 2004. By February 2003, some 1,400 people had provided testimony containing information about 3,000 victims who had suffered more than 4,000 violations, including 1,000 deaths and 200 cases of rape and sexual abuse. Militarily, nearly 50,000 combatants were demobilized and disarmed of some 15,000 weapons. Koroma, who escaped from the police in a failed coup attempt in 2003, had not been heard from and was presumed dead. In May 2003, authorities in Liberia produced the corpse of Col. Mosquito, the RUF bush commander.

UNAMSIL completed the first phase of its downsizing in late 2002 and in early May 2005, UN Secretary-General Kofi Annan said that the remaining troops except for a small rapid reaction force would be phased out by end of 2005. In local elections on 22 May 2004—the first such elections in over 30 years—the strong showing of the main opposition party APC sent a general message of discontent to the SLPP.

In June 2004, the first UN Special Court of War Crimes began its first trial of leaders of the pro-government militias, the Civil Defense Force (the Kamajors), and the RUF. In March 2005, trials for the AFRC defendants began. By early 2006, 13 people had been indicted (three posthumously—Foday Sankoh, Sam 'Mosquito' Bockarie, and Johnny Paul Koroma). Charles Taylor, who also faced charges under the Court, was exiled in Nigeria. The Nigerian government said that it would consider an extradition request from a democratically elected government of Liberia, but newly-elected President Ellen Johnson-Sirleaf had not made extradition a priority of her new government.

### 13 GOVERNMENT

A new constitution came into force on 1 October 1991, replacing the June 1978 constitution and subsequent modifications. However, it was suspended by the military junta after the 29 April 1992 coup. Shortly thereafter, the parliament and political parties were dissolved and the NPRC ruled by decree through a Supreme

Council of State (SCS) and a Council of State Secretaries (CSS-Cabinet). In November 1993 they announced a timetable leading to multiparty democracy and general elections in 1996. The constitution was suspended after the military coup in May 1997, but came into force again following the reinstatement of the Kabbah government in March 1998. A government of national unity formed in October 1999 as part of the Lomé Accords, but was short-lived.

In February 2002, a district block (proportional) representation system for the election of MPs came into force, replacing the first-past-the-post constituency system, which would be reinstated for the 2007 elections. As of 2005, the unicameral parliament had 124 seats—112 elected by popular vote and 12 filled by paramount chiefs elected in separate polls; members serve five-year terms. President Kabbah had indicated that he would step down after completing his current five-year term.

### 14 POLITICAL PARTIES

Party politics in Sierra Leone have a long and lively history. The Sierra Leone People's Party (SLPP), formed in 1951, dominated politics from its inception until 1967, when the All People's Congress (APC) claimed to have won a plurality of the seats in a disputed parliamentary election. The SLPP combined the Sierra Leone Organization Society, founded in the protectorate in 1946, and the Freetown People's Party, founded in the colony by the Rev. Etheldred Jones, also known as Lamina Sankoh. Although the SLPP won only two of the seven seats open to election in 1951, it was given recognition when the indirectly elected protectorate members and eight paramount chiefs joined with it. In 1953, Milton Margai became chief minister, and in 1957, the SLPP won 26 of the 39 seats being contested.

During the pre-APC period, the National Council of Sierra Leone (NCSL), founded in 1951, was the principal opposition group. It was influential only in the colony and favored a federal constitution with separate assemblies for the colony and the protectorate. When universal adult suffrage was introduced in 1957, the NCSL lost all its seats in the legislature. The United People's Party (UPP) was founded in 1956 by Cyril Rogers-Wright and Wallace Johnson to unite the interests of the colony and the protectorate. In the 1957 general elections, it won one seat in the legislature and gained three more after election petitions to the courts, so that it then constituted the principal legislative opposition.

In September 1958, Siaka Stevens and Milton Margai's half-brother, Albert Margai, withdrew from the SLPP and formed the People's National Party (PNP) to pursue a more militant policy. In 1960, the PNP and UPP joined the United National Front of all parties for the April constitutional talks in London. A national coalition government was formed, and Albert Margai became a cabinet minister.

Stevens left the United Front to form a new opposition group, the Elections Before Independence Movement (EBIM). Expelled from the PNP, he transformed the EBIM into the APC and, with support from younger radicals and much of the trade union movement, campaigned for a neutralist foreign policy and the need for a general election before independence. In March 1961, Stevens and some of his supporters were charged with sedition, libel, and incitement and were jailed just before independence under emer-

gency regulations. They were later released and acquitted of the charges.

In the election of 25 May 1962, the SLPP won 28 of 62 seats for ordinary members of the House of Representatives, the APC 16, the Sierra Leone Progressive Movement 4, and independents 14. After the election returns were announced, 12 of the independents declared themselves members of the SLPP, and Milton Margai was able to form a new government. Upon his death on 28 April 1964, Albert Margai became prime minister. Thirteen months of military rule followed the disputed 1967 elections, after which Siaka Stevens, leader of the APC, became prime minister.

Siaka Stevens, president from 1971 to 1985, created the APC in 1960. The APC dominated from 1967 until April 1992. In September 1970, another opposition group, the United Democratic Party, was formed. Shortly afterward, a state of emergency was declared, and on 8 October, the party was banned. The SLPP won 15 seats in the 1977 elections, the last in which an opposition party was allowed to participate. In the 1983 balloting, 173 candidates competed for 66 seats, and the remaining 19 elective seats (mostly held by members of the outgoing government) were uncontested. In 1978, a new constitution made the APC the sole legal party, and the SLPP was formally dissolved. Members of parliament were required to declare themselves members of the APC on penalty of losing their seats.

In the 1986 balloting, 335 candidates competed for the 105 popularly elected seats. Over half the sitting members, including three cabinet ministers, were defeated, and over 60% of those elected were newcomers to the House. After the April 1992 military coup, all political parties were banned and parliament was dissolved. In 1993 a timetable was prepared for a return to civilian rule and a multiparty democracy. Captain Valentine Strasser assumed leadership during the 1992 coup, but was overthrown in 1996.

In February 1996, Ahmad Tejan Kabbah, candidate of the National Peoples Party, was elected president with 59.4% of the vote. Fifteen parties registered for the 1996 elections. In the parliamentary competition for 80 seats (68 elected members; 12 paramount chiefs), the SLPP took 27 seats, the UNPP 17, the PDP 12, the APC 5, the NUP 4, and the DCP 3. These were the first elections since the former House of Representatives had been shut down by the military coup of April 1992. In November 1999, the RUF changed its name to the Revolutionary United Front Party (RUF) and Foday Sankoh gave addresses around the country as though he were running for president.

With a cease-fire in place, presidential elections were held in May 2002. In a landslide victory, Ahmed Tejan Kabbah, candidate of the SLPP obtained 70.06% of the vote to defeat Ernest Koroma of the APC. Koroma received 22.4% of the vote, while the Peace and Liberation Party (PLP) gained 3%, and others took 4.59%. The Revolutionary United Front Party (RUF) and its chairman Foday Sankoh, were thoroughly discredited. In the parliamentary contest for 112 elected seats, the SLPP captured 83 seats, the All People's Congress (APC) 27 seats, and the PLP 2 seats.

In May 2004, the APC won local elections in Freetown, but also fared well elsewhere winning 22% of the vote, 4 councils, and 116 councilors. The SLPP, which continued to dominate overall, won 70% of the vote, 15 councils, and 330 councilors. Independents elected 10 councilors, but won no councils. Both the SLPP and

APC alleged that the other side was guilty of vote-rigging, coercion, and multiple- and under-aged voting.

At the SLPP convention in September 2005, Solomon Berewa, the country's vice president, assumed leadership of the party and was designated the party's candidate for the 2007 presidential elections. Berewa defeated Charles Margai—son of the late prime minister Albert Margai—and a number of other aspirants. At its convention the main opposition party, the APC, chose Ernest Koroma, a Muslim, who also was confirmed as party chairman. Although the APC has made inroads into SLPP territory, it also will need to balance its ticket to be competitive in the south. A number of independents formed a new party, the Republican Movement, and several small parties met in June 2005 to strategize on the creation of a "third force". In addition, Charles Margai left the SLPP to form his own party, the PMDC.

## 15 LOCAL GOVERNMENT

Sierra Leone is divided into the Western Area (the former colony) and the Northern, Eastern, and Southern provinces (formerly the protectorate). The three provinces are divided into a total of 12 districts with 148 chiefdoms. Local government in the Western Area is administered by municipalities. Rural areas are governed by village committees, which send members to district councils, which in turn are represented in a rural area council.

Each province has a resident minister as administrative head. Local units within the provinces are, in ascending order of importance, villages, extended villages or sections, chiefdoms, and district councils. The 19 district councils, which contain elected members as well as paramount chiefs, are responsible for primary education, health centers, agricultural extension work, social welfare, community development, and transportation services (roads, bridges, and ferries). The war incapacitated local government by severely disrupting social institutions, and uprooting some two million refugees and internally displaced persons.

## 16 JUDICIAL SYSTEM

Local courts apply traditional law and customs in the chiefdoms. Elected indigenous leaders preside over the local courts. Magistrates hold court in the various districts and in Freetown, administering the English-based code of law. Appeals from magistrates' courts are heard by the High Court, which also has unlimited original civil and criminal jurisdiction. Appeals from High Court decisions may be made to the Court of Appeal and finally to the Supreme Court, consisting of a chief justice and not fewer than three other justices. The attorney general is a cabinet minister and head of the state law office, which is administered by the solicitor-general. Many of the justices, magistrates, and other lawyers are Sierra Leoneans trained in British universities or at Inns of Court in London. Judges serve until the age of 65.

The judiciary is not independent in practice and remains subject to manipulation. A UN Special Court for War Crimes, established at the end of the war, continued to hear cases of alleged war criminals in 2006.

## 17 ARMED FORCES

In 2005, the armed forces of Sierra Leone had about 12,000–13,000 active members. This was a new, UK-trained army formed after the dismantling of various factions. There were about 200

naval personnel, with five patrol craft. In 2005, the defense budget totaled \$26.1 million.

## 18 INTERNATIONAL COOPERATION

Admitted as the 100th member of the United Nations on 27 September 1961, Sierra Leone participates in ECA and several non-regional specialized agencies, such as the FAO, IAEA, ILO, UNCTAD, UNESCO, UNIDO, and the WHO. The country belongs to the WTO, the ACP Group, the African Development Bank, Commonwealth of Nations, ECOWAS, G-77, Organization of the Islamic Conference (OIC), the Islamic Development Bank, the New Partnership for Africa's Development (NEPAD), and the African Union. In 1980–81, then president Siaka Stevens served as chairman of the African Union and Freetown hosted the organization's summit conference in July 1980.

In October 1973, Sierra Leone and Liberia concluded the Mano River Union agreement, aimed at establishing an economic union of the two countries; Guinea joined the union in 1980. Trade restrictions among the three nations were abolished in 1981 and a common external tariff was established for most items of trade. The government is participating in efforts to establish a West African Monetary Zone (WAMZ) that would include The Gambia, Ghana, Guinea, Liberia, Nigeria, and Sierra Leone. The union, has been scheduled to come on-stream in January 2003, but has been rescheduled for December 2009.

Sierra Leone signed a defense pact with Guinea in 1971 allowing for the exchange of some army personnel. The United Nations Mission in Sierra Leone (UNAMSIL) was established in 1999 to cooperate with government officials by monitoring the implementation of peace agreements and the disarmament of civil and revolutionary forces. UNAMSIL is supported by 31 countries. Sierra Leone is part of the Nonaligned Movement.

In environmental cooperation, Sierra Leone is part of the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Although Sierra Leone is a potentially rich country with diverse resources, which include diamonds, gold, rutile, bauxite, and a variety of agricultural products, the economy has been severely depressed over the past two decades. The country has a chronic balance-of-payments deficit aggravated by a rebellion in the export-producing diamond regions of the country. The economy suffers from low production, poor export performance, large budget deficits, shortage of essential goods, deterioration of infrastructure, inability to service external debts, a pervasive parallel market, an influx of refugees from the civil war in Liberia, and inflation.

The government adhered to a structural adjustment program established in 1991–92 that called for a reduction in the number of civil service employees, increased privatization of the economy, increased taxation, and fiscal discipline. The program produced some improvements in the stability of the exchange rate and reduced inflation. Consequently, although some donors suspended aid, Sierra Leone gained the support of the World Bank, IMF, and other international agencies. In 1994, after the devaluation of the CFA franc, the inflation rate was at 104%.

Civil unrest in 1997 and the Army's takeover of the democratically elected government cast doubt on whether support would last. Less than a third of \$230 million dollars pledged in 1996 for the first stage of a five-year recovery program was given and it was likely that the donors would renege on the remainder if the political situation worsened. In 1997, GDP weakened by 20%, and remained at this depressed rate; in 1998, GDP gained by only 0.7%. Peace talks in 1998 broke down during the same year, and fighting continued into 2002.

In 2002, Sierra Leone qualified for \$950 million in debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. Under the IMF's Poverty Reduction and Growth Facility (PRGF), and with the aid of bilateral donors, the country is implementing strategies to reduce poverty and introduce stability by decentralizing government functions, supporting good governance and restoring local government, improving education and health programs, building an effective police force, and fighting corruption. The smuggling of diamonds out of the country from rebel-controlled areas remains a catalyst for instability and undermines the legitimate economy. Bauxite and rutile mines that were closed during the war had not reopened by 2003.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Sierra Leone's gross domestic product (GDP) was estimated at \$5.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$800. The annual growth rate of GDP was estimated at 5.5%. The average inflation rate in 2002 was 1%. It was estimated that agriculture accounted for 49% of GDP, industry 31%, and services 21%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$26 million or about \$5 per capita and accounted for approximately 2.6% of GDP. Foreign aid receipts amounted to \$297 million or about \$56 per capita and accounted for approximately 39.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Sierra Leone totaled \$759 million or about \$142 per capita based on a GDP of \$1.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of -4.2%. In 2001 it was estimated that approximately 47% of household consumption was spent on food, 9% on fuel, 3% on health care, and 13% on education. It was estimated that in 2004 about 70.2% of the population had incomes below the poverty line.

## 21 LABOR

There are approximately 1.4 million workers in Sierra Leone, but only 65,000 of those are actual wage earners. Subsistence agriculture is the occupation of vast majority of the population. There

was no further data available on occupational breakdown or the unemployment rate in Sierra Leone.

The 1991 constitution provides for the right of association, and all workers (including civil servants) have the right to join trade unions of their choice. The trade union movement in Sierra Leone, one of the oldest in West Africa, dates back to 1913, when Wallace Johnson organized the Customs Employees Union. Under his influence, other unions developed, and in 1943, the first Sierra Leone Trade Union Council (TUC) was formed. The Sierra Leone Council of Labor, which replaced the TUC in 1946, merged in May 1966 with the Sierra Leone Federation of Labor to form the Sierra Leone Labor Congress (SLLC). All unions are members of the SLLC, although membership is voluntary. In the mid-1980s, the SLLC had over a dozen constituent unions totaling about 40,000 members. With the decline of manufacturing, union membership has declined since then, although exact figures are unavailable. In 2001, about 60% of workers in urban areas (including government employees) were unionized, but unions have had little success in organizing workers in the agricultural and mining sectors.

The minimum working age is 18, but this is not enforced and children routinely work as vendors and petty traders in urban areas and work seasonally on family subsistence farms in rural areas. The standard workweek is 38 hours but most workweeks exceed that amount. Health and safety regulations set by law are not enforced. The minimum wage is set at \$10.50 per month.

## 22 AGRICULTURE

Agriculture is the primary occupation in Sierra Leone, employing two-thirds of the labor force and accounting for 50% of GDP. Most Sierra Leoneans live on small, scattered farms, following a scheme of bush-fallow rotation, slash-and-burn field preparation, and limited use of fertilizer. Agricultural exports in 2004 amounted to nearly \$13.9 million and consisted of coffee, cocoa, palm kernels, piassava, kola nuts, and ginger.

Rice, grown by 80% of farmers, is the most important subsistence crop and, along with millet in the northeast, is a food staple; 265,000 tons were produced in 2004, down from an annual average of 508,000 tons during 1989 to 1991. The Rice Research Institute, located in the Northern Province, breeds high-yielding varieties for seed. Other domestic food crops include cassava, yams, peanuts, corn, pineapples, coconuts, tomatoes, and pepper.

Coffee is grown in the eastern and southern provinces; production totaled 18,000 tons in 2004. Cocoa is grown in the Kenema and Kailahun districts of the Eastern Province and in the Pujehun District of the Southern Province, mainly on smallholdings of about 0.4–1.2 hectares (1–3 acres). In 2004, an estimated 11,000 tons of cocoa beans were produced. Palm produce is derived from stands of wild palms, mainly in the northeast and southeast; production in 2004 included 24,375 tons of palm kernels and 39,000 tons of palm oil. Although there is substantial local consumption of palm kernels, they are a major agricultural export. Piassava, a raffia palm fiber used for broom and brush bristles, is grown in the swampy areas of the extreme south. Small amounts of kola nuts were also exported, and modest crops of bananas, pineapples, and sugarcane were grown.

The 1991 invasion of rebels from Liberia in the eastern and southeastern provinces severely damaged agricultural production

and exports. Whereas annual agricultural growth averaged 3.1% during 1980–90, it declined by -0.1% during 1990–2000. However, during 2002–04 crop production had improved by 8.9% over 1999–2001.

## 23 ANIMAL HUSBANDRY

Estimates of livestock in 2005 were 400,000 head of cattle, 375,000 sheep, 220,000 goats, and 52,000 hogs. Large numbers of Ndamma cattle are kept, mainly by nomads in the savanna area of the northeast. Poultry farmers had an estimated 7.5 million chickens in 2005. Total meat production in 2005 was 23,259 tons, 48% of it poultry.

## 24 FISHING

Fresh fish is not a staple for the country as a whole but is much prized in Freetown and other parts of the Peninsula. The fishing industry, which once was confined to inshore waters, has spread into the middle waters and includes canoe, industrial, freshwater, and shellfish fisheries. Total fish and shellfish production in 2003 was 96,926 tons, with bonga shad accounting for 28,516 tons. Shrimp is the main export; fisheries exports were valued at \$11.5 million in 2003. The government has a joint venture agreement with Maritime Protection Services Sierra Leone Ltd., the purpose of which is to prevent poaching, protect artisanal fishing, increase revenue, and conserve maritime resources.

## 25 FORESTRY

About 15% of Sierra Leone is covered by forests. Much of Sierra Leone's rain forests have been cleared, with only remnant areas in the south and east; intensive farming gradually eliminated most of the forest area. There are still about 1 million hectares (2.5 million acres) of forests, with most of the prime forestland in the government estate in the mountainous eastern half of the country and in the Western Area hills. In 2004, an estimated total of 5.5 million cu m (194 million cu ft) of roundwood was harvested, 98% of it for fuel. Forests comprise both evergreen and semi-deciduous rain forests, swamp forests, mangrove forests, and significant areas of secondary and regenerating forests. The Gola Forest in the southeast is the largest remaining tract of rain forest.

## 26 MINING

The mining of diamonds was Sierra Leone's leading industry in 2003. In addition to diamonds, the country is also a producer of cement, gypsum, and salt. Although civil strife has adversely affected investment in natural resource development since 1995, conditions were expected to improve with the declaration that war had ended in 2001.

Diamond output in 2003 was reported at 506,819 carats, up sharply from 351,860 carats in 2002. However, these figures do not reflect smuggled artisanal output. National diamond output was placed at 600,000 carats annually from 1999 through 2001, and at 250,000 carats in 1998. It was believed that a substantial portion of the diamonds close to the earth's surface was smuggled out of the country. Alluvial diamonds, first discovered in Kono District in 1930, were widely scattered over a large area, but particularly along the upper Sewa River. The main diamond deposits were the Koidu and Tongo fields. DiamondWorks Ltd., of Canada,

which owned 60% of the Koidu mine (reserves of 2.67 million carats), announced in 2001 that it was returning to Sierra Leone. DiamondWorks also held diamond exploration licenses on the Sewa River with reserves containing 1.7 million carats. There was no recorded gold production from 1999 through 2003.

Cement production in 2003 totaled 169,500 metric tons, up from 144,100 metric tons in 2002. Gypsum output was estimated at 4,000 metric tons annually from 1999 through 2003. Salt production in 2003 was estimated at 1,800 metric tons, unchanged from 2002. There was no recorded output of rutile in Sierra Leone in 2003, although it had been announced that rutile mining would resume by that year.

Sierra Leone is known to have reserves of bauxite and other minerals including antimony, cassiterite, columbite, corundum, fluorspar, ilmenite, lead, lignite, magnetite, molybdenum, monazite, platinum, silver, tantalite, tin, titanium, tungsten, and zinc.

A 1999 amendment to the 1994 Mines and Minerals Act introduced procedures for sale and export of precious minerals by license holders, and penalties for unlawful possession or smuggling of precious minerals. In 2001, Sierra Leone and Angola introduced a diamond certification scheme in response to UN sanctions aimed at prohibiting importation of diamonds from rebel-controlled areas in the countries.

## 27 ENERGY AND POWER

Total national electricity production totaled 255 million kWh in 2002, with 100% from fossil fuels. Consumption of electricity in 2002 was 237 million kWh. Installed capacity in 2002 was 124,000 kW.

Sierra Leone, as of 1 January 2003, had no proven reserves of crude oil or natural gas. However, the country, as of 1 January 2003 did possess a modest crude oil refining capacity of 10,000 barrels per day. In 2002, imports of all petroleum products averaged 6,710 barrels per day, which included crude oil imports of 5,040 barrels per day. Refined oil production that year averaged 4,810 barrels per day, while demand averaged 6,410 barrels per day. There were no recorded imports or consumption of natural gas or coal in 2002.

## 28 INDUSTRY

Industry accounted for 30.6% of GDP in 2003, and is oriented toward the processing of raw materials and of light manufactured goods for domestic consumption. The sector has suffered from a lack of foreign exchange, high import costs, unreliable local services, and political instability. The Wellington Industrial Estate, covering 46 hectares just east of Freetown, was developed in the 1960s by the government to encourage investments. Its factories produce a variety of products, including cement, nails, shoes, oxygen, cigarettes, beer and soft drinks, paint, and knitted goods. Timber for prefabricated buildings is milled, and another factory produces modern furniture. Small factories in the Freetown area process tuna and palm oil. Oyster farming and shrimp production dominate the fishing industry. There are no proven oil reserves in the country, but there is one oil refinery. In 1992 the oil refinery in Freetown closed due to lack of capital for crude oil imports; in 1994 the facility was sold to Unipetrol of Nigeria. Its production capacity in 2002 was 10,000 barrels per day. Village craft products

include a popular cloth, rope, sail canvas, boats, wood carvings, baskets, and leather goods.

## 29 SCIENCE AND TECHNOLOGY

The Institute of Marine Biology and Oceanography, founded in 1966, affiliated with Fourah Bay College of the University of Sierra Leone at Freetown. The college itself, founded in 1827 by the Church Missionary Society, has faculties of engineering and pure and applied sciences and an institute of marine biology and oceanography. Also part of the university is Njala University College (founded in 1964), which has faculties of agriculture and environmental sciences, and the College of Medicine and Allied Health Sciences (founded in 1987). In 1987–97, science and engineering students accounted for 17% of college and university enrollments. A paramedical school in Bo operates with funds from the government and the European Community. The Ministry of Mines has a geological survey division to locate mineral deposits and advise on all matters relating to the earth. The Sierra Leone Medical and Dental Association, founded in 1961, is headquartered in Freetown.

## 30 DOMESTIC TRADE

As of mid-1997, domestic commerce was hampered by political instability and guerilla raids on villages. Fuel and food staples are in short supply and many businesses and banks remained closed. Foreign investment has been stalled by all these factors.

Freetown is the principal commercial and distribution center. Internal trade is normally carried on by trading firms that deal in a variety of merchandise. Bo is the commercial center for the central region of the country, with most significant trading activity in ginger, rice, coffee, cocoa, and palm oil and kernels. Makeni, in central Sierra Leone, is a trading center for the Temne people, who mainly produce rice.

Normal business hours were from 8 AM to 12:00 PM and 2 to 4:45 PM, Monday through Friday, with a half day on Saturday. Banks were open from 8 AM to 1:30 PM, Monday through Thursday, and 8 to 2 PM on Friday.

## 31 FOREIGN TRADE

Principal imports are foodstuffs, machinery and transportation equipment, fuels, and lubricants. Civil war has inhibited foreign trade since 1995. Sierra Leone's most important exports are diamonds (45%) and rutile (27%). Other exports include vegetable oil (4.4%), fresh fish (3.9%), shellfish (3.8%), coffee (3.5%), and cocoa (1.7%). In 1999, Sierra Leone shipped 7,000 tons of rutile to the United States, the first cargo since the mine was closed by rebels in early 1995.

About half of Sierra Leone's exports go to Belgium, in the form of diamond exports to Antwerp. In 1999, diamond exports fell from a high of \$500 million to \$30 million. An immense black market for diamonds exists, probably accounting for the majority of exports from Sierra Leone. In 2003, principal exports were diamonds (\$126.2 million), cocoa beans (\$2.6 million) with other commodities bringing in \$17.5 million.

Principal imports during the same year included fuel and lubricants (\$78.2 million), food (\$74.5 million), machinery and transport equipment (\$56.4 million), and manufactured goods (\$42.2 million). Principal trading partners for Sierra Leone's exports in

2004 were Belgium (63.1%), Germany (12%), the United States (5.5%) and India (7.3%). Imports came from Germany (16.3%), Côte d'Ivoire (9.3%), the United Kingdom (8.6%) and the United States (7.3%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Sierra Leone's frequently negative balance of trade and habitual deficit in current accounts are somewhat counterbalanced by capital inflows, generally from foreign governments.

The Economist Intelligence Agency reported that in 2005 the purchasing power parity of Sierra Leone's exports was \$200 million while imports totaled \$330 million resulting in a trade deficit of \$130 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Sierra Leone, established in 1963, is the central bank and bank of issue. The Banking Act of 1964 provides for the regulation of commercial banks by the central bank, including the control of money supply. Poor revenue collection, failure to control expenditures, and heavy debt servicing requirements as a result of past borrowing characterized government finances in the 1980s and early 1990s.

In the 1990s, there were six commercial banks operating in the country. Standard Chartered Bank Sierra Leone and Barclays Bank of Sierra Leone are both foreign banks that are locally incorporated, with Sierra Leonean staff. The International Bank of Trade and Industry opened in 1982, with funds from Lebanese and Sierra Leonean investors.

The National Development Bank was established in 1968 to finance agricultural and industrial projects. The National Cooperative Development Bank, established in 1971, serves as a central bank for all cooperatives and makes modest loans to individual farmers and cooperatives for agricultural improvements. Sierra

Leone also has a Post Office Savings Bank. Most banks closed during the rebel attacks of the late 1990s.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$95.4 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$146.4 million.

There is no securities exchange in Sierra Leone.

### 3<sup>4</sup> INSURANCE

The National Insurance Co. is government owned. All insurance companies in Sierra Leone are supervised by the Ministry of Finance.

### 3<sup>5</sup> PUBLIC FINANCE

The government of Sierra Leone has been prevented from having any significant economic influence in the country thanks to a shortage of foreign exchange, deep-seated corruption, and uncertainty surrounding the civil wars that periodically take place. The minister of finance came under attack in 2000 for declaring expenditures reaching \$30,000 on the war during the month of May alone, because government officials reportedly siphoned off money into private bank accounts. Payroll fraud in the same year to the tune of \$400,00 in the accounting office also took a toll on government respectability.

The US Central Intelligence Agency (CIA) estimated that in 2000 Sierra Leone's central government took in revenues of approximately \$96 million and had expenditures of \$351 million. Revenues minus expenditures totaled approximately -\$255 million. Total external debt was \$1.61 billion.

### 3<sup>6</sup> TAXATION

The main items of taxation are customs duties and direct taxes, which include income taxes. A 1963 amendment to the income

tax act abolished all personal deductions except medical and dental expenses and the costs of passage to and from Sierra Leone. A husband and wife are assessed separately for income tax on their individual incomes. Income tax is charged at a flat rate, with one rate for citizens and a higher rate for noncitizens. Also levied are a 55% corporate tax, property tax, payroll tax, social security contributions, and taxes on goods and services. In 2003, Sierra Leone's main indirect tax was its 20% sales tax.

### 37 CUSTOMS AND DUTIES

All import licensing requirements were eliminated in 1989 and all other restrictions, including those on cigarettes, ended in early 1992. Imports from other Mano River Union (MRU) members enter duty-free. Most duties for non-MRU imports average 20% but range from 0 to 100% on luxury goods. There is an additional 12.5% sales tax levied on all imports.

### 38 FOREIGN INVESTMENT

The government encourages the development of plantations and the investment of foreign private capital in agriculture and worthwhile new enterprises. Safeguards are provided against nationalization, and repatriation of capital, profits, and interest is permitted. Legislation in 1983 offered tax relief for up to five years, preferential access to import licenses, exemption from customs and duties on capital equipment and new materials, and special bonuses for companies setting up outside Freetown.

Sierra Leone attracted few foreign investors in the early 1990s. Progress in reforming the economy was expected to reverse that trend, but renewed civil disturbances in 1997 threatened those prospects. Rex Mining, the first company to invest in Sierra Leone after the civil war, suspended work at its diamond mine after the military coup in May of 1997. Production in the rutile and bauxite plants resumed in 2000, but continuance was unsure because of political unrest.

Foreign direct investment inflow (FDI) was \$9.6 million in 1997, but this was more than reversed by a net divestment outflow in 1998 of -\$9.8 million. Net FDI inflow was \$6 million in 1999 and averaged \$4.45 million a year in 2000 and 2001. In UNCTAD's ranking of 140 countries in terms of their potential for attracting foreign investment in the period 1998 to 2000, Sierra Leone was ranked number 140. In 2001–04 Sierra Leone continued to perform poorly in attracting FDI, attracting only \$2 million in 2002, \$3 million in 2003, and \$5 million in 2004. This can be explained by the fact that the country is still recovering from years of civil war, which ended in January 2002. The discovery of large iron ore deposits could result in far higher inflows of FDI.

### 39 ECONOMIC DEVELOPMENT

The Sierra Leone government, in addition to stabilizing its balance-of-payment and budgetary deficits and meeting its debt obligations, seeks investors in its mining sector. A parallel economy, lawless conditions, and a crumbling infrastructure continue to constrain economic growth. The government in the early 2000s was working with foreign donors to undertake rural development and agricultural projects. In 2001, the government created a mining community development fund to direct a portion of diamond export taxes to diamond mining communities. The govern-

ment encourages foreign investment. Senegal formed the Mano River Union (MRU) customs union with Liberia and Guinea to implement development projects and promote regional economic integration.

In 2001, the International Monetary Fund (IMF) approved a \$169 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement for Sierra Leone, to support the government's economic reform program. In 2002, Sierra Leone became eligible for nearly \$950 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. Agreement on a new IMF poverty reduction and growth facility in 2005 is expected to shape economic policy in the coming years.

### 40 SOCIAL DEVELOPMENT

All employees in the public and private sectors are covered under the social insurance plan initiated in 2001. There is voluntary coverage for the self-employed. The program is funded by employee and employer contributions, with the government providing funding for government employees only. Old age, disability, and survivorship benefits are available. Employers provide medical care for employees and their families through collective agreements.

Women are guaranteed equal rights under the constitution, and a number of women have held prominent posts. Even so, discrimination and violence against women are frequent. Women carry out most of the strenuous agricultural work, and are responsible for child rearing. According to a 2004 study, girls were denied an education more often than boys, and traditional beliefs kept women confined to the household. They do not have equal access to economic opportunities, health care, or social freedoms. Female genital mutilation, a practice which is painful and sometimes life threatening, is an entrenched cultural practice. It is estimated that as many as 80–90% of girls and women may have been affected. There is considerable local opposition to advocates campaigning to have the practice banned. Domestic abuse and violence is a widespread social problem.

The government's human rights record has improved, although there are continued reports of the mistreatment of detainees and illegal detention.

### 41 HEALTH

Sierra Leone had 52 hospitals and 263 dispensaries and health treatment centers. There was one hospital bed per 1,000 inhabitants. Only 38% of the population had access to health care services. As of 2004, there were an estimated seven physicians and 33 nurses per 100,000 people. Total health care expenditure was estimated at 5.3% of GDP.

Lassa fever has continued to spread in the Kenema district since 1996. A World Health Organization (WHO) mission investigated the outbreak and is helping to remedy short supplies in this war-torn country. With WHO and UNICEF technical assistance, an endemic diseases control unit reduced the incidence of sleeping sickness and yaws, and began a leprosy control campaign. Malaria, tuberculosis, and schistosomiasis remain serious health hazards, as does malnutrition.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 44.6 and 18.8 per 1,000 people. The in-

fant mortality rate was 162.55 per 1,000 live births in 2005, the third highest in the world. Since 1994, UNICEF estimated that Sierra Leone has one of the highest mortality rates in the world.

Only around 4% of married women (ages 15 to 49) were using contraception. The fertility rate was 5.8 children per woman surviving through the childbearing years. The prevalence of child malnutrition was 23% of children under five. Immunization rates for children up to one year old included: diphtheria, pertussis, and tetanus, 26%, and measles, 28%. Life expectancy in 2005 was 39.87 years, among the lowest in the world.

The HIV/AIDS prevalence was 7.00 per 100 adults in 2003. As of 2004, there were approximately 170,000 people living with HIV/AIDS in the country. There were an estimated 11,000 deaths from AIDS in 2003.

## 42 HOUSING

In 1999, as a result of the invasion of rebels, about 5,932 homes were completely destroyed in Freetown and the surrounding areas of Kissy, Wellington, Calaba Town, and Allen Town. The town of Koidu, which was once the second-largest town in the nation, suffered major destruction. National estimates indicate that by 2001, 300,000 homes were destroyed as a result of the internal rebellion. Approximately 1.2 million people were internally displaced or have fled to neighboring countries.

As of the 2004 census, there were an estimated 967,300 households counted representing about 4,836,500 people. Village houses in the provinces are traditionally made of sticks with mud walls and thatch or grass roofs; they may be circular or rectangular in shape. In some villages, wattle-and-daub construction has been replaced by sun-dried mud blocks, and roofs of grass, palm thatch, or palm tiles are giving way to corrugated iron sheeting. In Freetown, older two-story wooden houses have been being replaced by structures built largely of concrete blocks, with corrugated iron or cement-asbestos roofs.

In a 2003 survey, about 75.7% of all housing had mud walls; only 15% were constructed of stone or cement. Zinc was the most common roofing material (64.2% of all housing), followed by thatch (31.5%). Flooring is typically mud or stone. Nearly 83% of all housing units were single-story, one-household detached dwellings. About 81.5% of all dwelling units were owner occupied. Only about 16.3% of all housing was listed as needing no repairs; 11.7% was in need of complete reconstruction. In 2003, about 49.4% of all households relied on a communal pit for toilet facilities. Another 40.5% used a nearby bush or river. Only 1% of all households had indoor flush toilets. About 42.6% of all households drew their water supply from a river or stream and 25.9% had an ordinary well. Only 1.2% of all households had indoor piped water.

The government has made reconstruction a priority and has initiated a National Housing Policy to work on programs of reform, resettlement, and reconstruction. Through one program, the government has planned to sell public housing and to use the proceeds to build more housing units. Building is controlled in the major towns, and designs are subject to approval.

## 43 EDUCATION

Primary education is neither wholly free nor compulsory, but the ultimate goal of the government is to provide free primary school facilities for every child. Primary school last for three years, fol-

lowed by three years of junior secondary school and three years of senior secondary school. The academic year runs from October. In 2001, about 4% of all children between the ages of three and five were enrolled in some type of preschool program. In 2001, there were 554,000 students enrolled in primary school and 156,000 students enrolled in secondary school. It is estimated that about 56% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 37:1 in 2000; the ratio for secondary school was about 27:1.

Fourah Bay College, the oldest institution of higher learning in West Africa, was founded in 1827 by the Church Missionary Society, primarily to provide theological training. It was affiliated with the University of Durham in England in 1876 and received a royal charter in 1959 as the University College of Sierra Leone. In 1967, the University of Sierra Leone was chartered with two constituent colleges, Fourah Bay (in Freetown) and Njala University College (in Moyamba District). In 2001, there were about 9,000 students enrolled in higher education programs.

As of 2003, public expenditure on education was estimated at 3.7% of GDP.

## 44 LIBRARIES AND MUSEUMS

The library of Fourah Bay College, University of Sierra Leone, founded in 1827 has 200,000 volumes. Public collections are maintained by the Sierra Leone Library Board. The central public library collection is at Freetown, which holds 80,000 volumes. There are at least 10 branch locations. The American Cultural Center and the British Council both maintain small collections. The Sierra Leone National Museum contains documents concerning Sierra Leone and its history and various works of sculpture, especially Nomolis stone fetishes representing seated figures of unknown origin that have been found in the Mende areas. The Sierra Leone Railway Museum opened in 2005.

## 45 MEDIA

International cablegram, telex, and telephone services are provided by Sierra Leone External Telecommunications. In 2003, there were an estimated five mainline telephones for every 1,000 people. The same year, there were approximately 13 mobile phones in use for every 1,000 people.

The Sierra Leone Broadcasting Service manages radio and television transmissions. Radio Sierra Leone, the oldest broadcasting service in English-speaking West Africa, broadcasts mainly in English, with regular news and discussion programs in several indigenous languages and a weekly program in French. The Sierra Leone Television Service was inaugurated in 1963. Private stations do exist, but license fees are high, prohibiting some sources from operating on a regular basis. As of 1999 there were 1 AM and 9 FM radio stations and 2 television stations. In 2003, there were an estimated 259 radios and 13 television sets for every 1,000 people. The same year, 2 of every 1,000 people had access to the Internet.

In 2004, there were over 50 newspapers throughout the country. The only major daily newspaper is the government-owned *Daily Mail* (with a 2002 circulation of 10,000), but there were several privately owned weekly newspapers, including *New Shaft* (circulation 10,000) and *Weekend Spark* (20,000). Under legislation enacted in 1980, all newspapers must register with the Ministry of Information and pay a sizable registration fee.

The 1991 constitution provides for free speech and a free press, though in practice authorities are said to beat, detain, and otherwise harass journalists for publishing articles unflattering to the government.

#### 46 ORGANIZATIONS

There is a chamber of commerce in Freetown. The cooperative movement has grown rapidly since the 1960s.

National youth organizations include the National Union of Sierra Leone Students, Sierra Leone Association of Students in Economics and Commerce, Sierra Leone Scouts Association, YMCA/YWCA, and the Sierra Leone National Youth League. There are several sports associations in the country with programs for amateur athletes of all ages.

Several voluntary associations exist, mostly in the Freetown area; most of these are women's religious, cultural, political, or economic groups. Coordinating bodies include the Federation of Sierra Leone Women's Organizations, and the United Church Women. The Sierra Leone Association of Non-Governmental Organizations serves as another coordinating group. International organizations with national chapters include Amnesty International, Caritas, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

Sierra Leone has magnificent beaches, including Lumley Beach on the outskirts of Freetown, perhaps the finest in West Africa. Natural scenic wonders include Bintimani and the Loma Mountains, Lake Sonfon, and the Bumbuna Falls. There are several modern hotels in Freetown, as well as a luxury hotel and casino at Lumley Beach. There has been a slow response from the international community to change the image of the country to that of a tourist destination. A certificate of vaccination against yellow fever is required if traveling from an infected area. Tourist arrivals numbered about 285,000 in 2003. That same year there were 1,457 hotel rooms with 1,718 beds and an occupancy rate of 13%.

According to 2005 estimates of the US Department of State, the average cost of staying in Freetown was \$217 per day.

#### 48 FAMOUS SIERRA LEONEANS

Sir Samuel Lewis (1843–1903) was a member of the Legislative Council for more than 20 years and the first mayor of Freetown. Sir Milton Augustus Strieby Margai (1895–1964), the grandson of

a Mende warrior chief, was the founder of the SLPP and the first prime minister of Sierra Leone, a post he held until his death. Sir Albert Michael Margai (1910–80) succeeded his half-brother as prime minister from 1964 to 1967. Siaka Probyn Stevens (1905–88), the founder of the APC, was prime minister from 1968 to 1971 and became the republic's first president from 1971 to 1985. John Musselman Karefa-Smart (b.1915) served as minister of lands, mines, and labor, in which capacity he organized Sierra Leone's diamond industry, and also served as assistant director-general of WHO from 1965 to 1970. Davidson Nicol (1924–94) was his country's permanent representative to the UN from 1969 to 1971, served as president of the Security Council in 1970, and became executive director of UNITAR in 1972. Foday Sankoh (1937–2003) was the leader of the Revolutionary United Front, a guerrilla group that terrorized villages in the early 1990s.

#### 49 DEPENDENCIES

Sierra Leone has no territories or colonies.

# SOMALIA

**CAPITAL:** Mogadishu (Muqdisho)

**FLAG:** The national flag is light blue with a five-pointed white star in the center.

**ANTHEM:** *Somalia Hanolato (Long Live Somalia)*.

**MONETARY UNIT:** The Somali shilling (SH) of 100 cents is a paper currency. There are coins of 1, 5, 10, and 50 cents and 1 shilling, and notes of 5, 10, 20, 100, 500, and 1,000 shillings. SH1 = \$0.00009 (or \$1 = SH11,000; as of 2000).

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; National Independence Day, 26 June; Foundation of the Republic, 1 July. Muslim religious holidays include 'Id al-Fitr, 'Id al-Adha', 'Ashura, and Milad an-Nabi.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the horn of East Africa, Somalia has an area of 637,657 sq km (246,201 sq mi), extending 1,847 km (1,148 mi) NNE–SSW and 835 km (519 mi) ESE–WNW. Comparatively, the area occupied by Somalia is slightly smaller than the state of Texas. It is bounded on the N by the Gulf of Aden, on the E and S by the Indian Ocean, on the SW by Kenya, on the W and NW by Ethiopia, and on the NW by Djibouti, with a total land boundary of 2,340 km (1,454 mi) and a coastline of 3,025 km (1,880 miles). The boundary with Djibouti has been fixed by international agreement, but the western border with Ethiopia remains in dispute.

Somalia's capital city, Mogadishu, is located on the Indian Ocean coast.

## <sup>2</sup> TOPOGRAPHY

The northern region is somewhat mountainous, containing two main ranges, the Migiurtina and the Ogo, with plateaus reaching between 900 and 2,100 m (3,000–7,000 ft). To the northeast there is an extremely dry dissected plateau that reaches a maximum elevation of nearly 2,450 m (8,000 ft). South and west of this area, extending to the Shabeelle River, lies a plateau region called the Mudug Plain whose maximum elevation is 685 m (2,250 ft). The region between the Juba and Shabeelle rivers is low agricultural land, and the area that extends southwest of the Jubba River to Kenya is low pastureland.

The Jubba and Shabeelle rivers originate in Ethiopia and flow toward the Indian Ocean. They provide water for irrigation but are not navigable by commercial vessels. The Shabeelle dries up before reaching the ocean. Despite its lengthy shoreline, Somalia has only one natural harbor, Berbera.

## <sup>3</sup> CLIMATE

Somalia has a tropical but not torrid climate, and there is little seasonal change in temperature. In the low areas, the mean tem-

perature ranges from about 24°C to 31°C (75° to 88°F). The plateau region is cooler, the southwest warmer. The periodic winds, the southwest monsoon (June–September), and the northeast monsoon (December–March) influence temperature and rainfall. Rain falls in two seasons of the year: heavy rains from March to May, and light rains from September to December. Average annual rainfall is estimated at less than 28 cm (11 in). Droughts are not infrequent.

## <sup>4</sup> FLORA AND FAUNA

Acacia thorn trees, aloes, baobab, and candelabra trees are native to the semiarid regions. Trees that provide frankincense and myrrh are native to the region as well. Southern forests include eucalyptus and mahogany. Mangrove, kapok, and papaya grow along the rivers. Coconut, dune palm, pine, juniper, cactus, and flowering trees such as the flamboyant were imported and have become widespread in the populated areas.

Along with its large livestock herd, Somalia has one of the most abundant and varied stocks of wildlife in Africa. Animal life includes the elephant, lion, wildcat, giraffe, zebra, hyena, hippopotamus, waterbuck, gazelle, dik-dik, lizard, crocodile, turtle, porcupine, baboon, and boar. There is a large variety of snakes, the best known being the puff adder, the spitting cobra, and the krait. Domestic animals are camels, sheep, goats, and cattle. The most common birds are the ostrich, duck, guinea fowl, bustard, partridge, green pigeon, sand grouse, and heron. As of 2002, there were at least 171 species of mammals, 179 species of birds, and over 3,000 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The increasing aridity of the Somali climate, coupled with excessive timber cutting and overgrazing, has led to deforestation and desertification. In nearly every five-year period, Somalis can anticipate two years of drought. Overgrazing between Mogadishu and Chisimayu has resulted in the gradual movement of coastal

sand dunes inland, posing a serious threat to agricultural areas and human habitation. Somalia has about 6 cu km of renewable water resources with 97% of annual withdrawals used for farming, and 3% for urban and domestic use.

The hunting and trapping of antelopes and gazelles for their skins was banned in 1969. However, many species continue to be adversely affected by growing numbers of livestock, exclusion from watering spots by human settlement, and the cutting of bush vegetation and tree cover. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 15 types of mammals, 13 species of birds, 2 types of reptiles, 16 species of fish, 1 type of mollusk, and 17 species of plants. Threatened species in Somalia include the black rhinoceros, cheetah, Pelzeln's dorcas gazelle, Swayne's hartebeest, several species of shark, and the green sea, hawksbill, and leatherback turtles.

## 6 POPULATION

The population of Somalia in 2005 was estimated by the United Nations (UN) at 8,592,000, which placed it at number 88 in population among the 193 nations of the world. However, there has not been an official census since 1987 make reliable population data difficult to obtain. In addition, there is no central government to initiate positive population management policies. According to UN estimates in 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 98 males for every 100 females in the country. The UN estimated the annual population rate of change for 2005–2010 to be 2.9%. The projected population for the year 2025 was 14,862,000. The population density was 14 per sq km (35 per sq mi).

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5.40%. The capital city, Mogadishu (Muqdisho), had a population of 1,175,000 in that year. Hargeysa (the former capital of British Somaliland), had an estimated 150,000 inhabitants. Other cities included Chisimayu, Berbera, and Merca. Approximately 60% of the population is nomadic.

## 7 MIGRATION

Since about half of all Somalis are nomadic or seminomadic, there are substantial movements back and forth across the frontiers in the normal range of grazing activities. Within the country there has been a gradual migration toward the south and southwest, especially since the north was drought-stricken in the 1970s and early 1980s. A campaign of political terror began in 1986; so severe were the effects that it was estimated in 1993 that three-quarters of the population had been internally displaced since 1988.

The conflict with Ethiopia led to the influx of many refugees from the Ogaden, most of them ethnic Somalis. In 1990, an estimated 586,000 were being assisted by the UN High Commissioner for Refugees in refugee camps. The government claimed the total number in refugee camps exceeded 1.3 million. Yet the political violence in Somalia was so extreme that about 600,000 people fled the country between 1988 and 1991.

After Siyad Barre's regime fell in January 1991, fighting began between 16 different rival factions in Somalia. These clan wars and the long drought led to over 900,000 Somalis fleeing to neighboring nations. Of these, some 400,000 went to Kenya. As of May 1997, there were still 285,000 Somali refugees in Ethiopia, 131,000 in Kenya, 20,000 in Djibouti, and 10,000 in Yemen. The total number of migrants living in Somalia in 2000 was estimated at 22,000. By the end of 2004, Somalis had expanded their search for refugee, and had fled in large numbers ten countries: 153,627 to Kenya; 63,511 to Yemen; 36,700 to the United Kingdom; 31,110 to the United States; 17,331 to Djibouti; 16,470 to Ethiopia; and the remainder to Denmark, the Netherlands, South Africa, and Norway. More than half of these refugees were assisted by the United Nations High Commissioner for Refugees (UNHCR). In that same year over 10,000 Somalis applied for asylum in 23 countries, principally in South Africa.

In 2004, there were 357 refugees in Somalia, 334 asylum seekers, and 18,069 returned refugees to Djibouti and Ethiopia. In 2005, the net migration rate was an estimated 5.9 migrants per 1,000 population. This was a significant change from -21.9 per 1,000 in 1990. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The Somalis are classified as a Hamitic people with a Cushitic culture. It is believed that the Somalis descend from people who migrated from the equatorial lakes of Africa to settle in the area of Somalia's two rivers, there to intermix with pastoral groups from the north and migrants from the Arabian Peninsula, the Persian Gulf, and perhaps Southeast Asia.

Ethnic Somalis, who make up about 85% of the population, are divided into two main clan families: the Samaal, which includes the Darod, Isaaq, Hawiye, and Dir clan groups; and the Saab, which includes the Rahanweyn and Digil clans and other smaller clan groups. The Samaal are principally nomadic or seminomadic pastoralists; the Digil and Rahanweyn are primarily farmers and sedentary herders. There are also small Bantu-groups who living along the Shabeelle and Jubba rivers. Other smaller minority groups include the Benadiri, the Rer Hamar, Brawanese, Swahili, Tumul, Yibir, Yaxar, Madhiban, Hawrasmae, Muse Dheryo, and Faqayaqub.

The nonindigenous population consists primarily of Arabs, Italians, Pakistanis, and Indians. The Italians are mainly engaged in teaching, business, and banana production; the Arabs, Pakistanis, and Indians are primarily shopkeepers.

## 9 LANGUAGES

Somali, classified as a lowland Eastern Cushitic language, is spoken by all Somalis, with dialectal differences that follow clan family divisions. Loanwords from Arabic, English, and Italian have been thoroughly assimilated by Somali phonetic rules. Until 1972, the official languages of Somalia were oral Somali, Arabic, English, and Italian. In 1973, a written form of Somali, with a script based on the Latin alphabet, was adopted as the nation's chief official language. This official script largely replaced the use of English and Italian in newspapers and public documents. It is used in all

LOCATION: 12° N to 1°39' S; 41°30' to 51° E. BOUNDARY LENGTHS: Total coastline, 3,025 kilometers (1,874 miles); Kenya, 682 kilometers (424 miles); Ethiopia, 1,626 kilometers (1,016 miles); Djibouti, 58 kilometers (36 miles). TERRITORIAL SEA LIMIT: 200 miles.

schools. However, Arabic, English, and Italian are all still widely spoken and understood.

### 10 RELIGIONS

The Somalis are primarily Sunni Muslims of the Shaf'i sect. According to tradition, their ultimate ancestors were of the Quray-

shitic lineage of the Prophet Muhammad. Except for a small number of urbanites influenced by higher education, all Somalis belong to one of the following brotherhoods: Qadiriyyah, Salihiyyah, Ahmadiyyah, and Rifaiyyah. As Muslims, they adhere to the law of the Shariah whenever it does not conflict with local customary law. A small, extremely low-profile Christian community

does exist.

In 2004, a transitional government had not yet adopted a constitution; however, a Transitional Charter has established Islam as the state religion. Christian mission schools closed in 1972 and foreign Protestant missionaries were expelled in 1976. Proselytizing of any religion but Islam is illegal.

## **1<sup>1</sup>TRANSPORTATION**

Of 22,100 km (13,733 mi) of roads in Somalia in 2002, only 2,608 km (1,621 mi) were paved. A 1,054-km (655-mi) road constructed with Chinese financing and work crew participation, completed in 1978, tied together the northern and southern parts of the country for the first time. Motor vehicles in use in 1995 numbered 24,000, divided equally between passenger cars and commercial vehicles. There are no railways and no commercial water transport facilities.

The ports of Mogadishu, Chisimayu, and Berbera are served by vessels from many parts of the world, as well as by Somali and Arab dhows. Mogadishu in recent years handled more than 70% of Somalia's export and import traffic. In 1995, the state-owned shipping line operated two oceangoing vessels totaling 5,529 GRT. However, by 2005 no merchant marine existed.

In 2004, there were an estimated 60 airports, but only 6 had paved runways as of 2005. The major airfields are in Mogadishu and Berbera. International air service has been provided by the state-owned Somali Airlines (among other carriers), which also has regular flights connecting Mogadishu with regional centers and with Kenya, Djibouti, Saudi Arabia, the Comoros, Yemen, the Persian Gulf states, Frankfurt, Cairo, and Rome.

## **1<sup>2</sup>HISTORY**

Somalia was known as the Land of Punt by ancient Egyptians, who came to Somalia's northern shores for incense and aromatic herbs. In the 9th or 10th century, Somalis began pushing south from the Gulf of Aden coast. About this time, Arabs and Persians established settlements along the Indian Ocean coast. During the 15th and 16th centuries, Portuguese explorers attempted without success to establish Portuguese sovereignty over the Somali coast. Meanwhile, the main coastal centers continued to be controlled by Arab merchant families under the nominal suzerainty of the sultanate of Oman, which transferred its seat to Zanzibar in the early 19th century.

After the British armed forces occupied Aden in 1839, they developed an interest in the northern Somali coast. By 1874, Egyptians occupied several points on the shore, but their occupation was short-lived. From 1884 to 1886, the British signed a number of "protectorate" treaties with Somali chiefs of the northern area. The protectorate was first administered by the resident in Aden and later (1907) by the colonial office. From 1899 to 1920, British rule was constantly disrupted by the "holy war" waged by 'Abdallah bin Hasan (generally known in English literature as the "Mad Mullah").

Italian expansion in Somalia began in 1885, when Antonio Cecchi, an explorer, led an Italian expedition into the lower Juba region and concluded a commercial treaty with the sultan of Zanzibar. In 1889, Italy established protectorates over the eastern territories then under the nominal rule of the sultans of Obbia and of Alula; and in 1892, the sultan of Zanzibar leased concessions along the

Indian Ocean coast to Italy. Direct administrative control of the territory known as Italian Somaliland was not established until 1905. The Fascist government increased Italian authority by its extensive military operations. In 1925, the British government, in line with secret agreements with Italy during World War I, transferred the Jubaland (an area south of the Jubba River) to Italian control. During the Italo-Ethiopian conflict (1934–36), Somalia was a staging area for Italy's invasion and conquest of Ethiopia. From 1936 to 1941, Somalia and the Somali-inhabited portion of Ethiopia, the Ogaden, were combined in an enlarged province of Italian East Africa.

In 1940–41, Italian troops briefly occupied British Somaliland but were soon defeated by the British, who conquered Italian Somaliland and reestablished their authority over British Somaliland. Although the Ogaden was returned to Ethiopia in 1948, British administration over the rest of Italian Somaliland continued until 1950, when Italy became the UN trusteeship authority. A significant impetus to the Somali nationalist movement was provided by the UN in 1949 when the General Assembly resolved that Italian Somaliland would receive its independence in 1960. By the end of 1956, Somalis were in almost complete charge of domestic affairs. Meanwhile, Somalis in British Somaliland were demanding self-government. As Italy agreed to grant independence on 1 July 1960 to its trust territory, the United Kingdom gave its protectorate independence on 26 June 1960, thus enabling the two Somali territories to join in a united Somali Republic on 1 July 1960. On 20 July 1961, the Somali people ratified a new constitution, drafted in 1960, and one month later confirmed 'Aden 'Abdullah Osman Daar as the nation's first president.

From the inception of independence, the Somali government supported the concept of self-determination for the people of the Somali-inhabited areas of Ethiopia (the Ogaden section), Kenya (most of the northeastern region), and French Somaliland (now the Republic of Djibouti), including the right to be united within a greater Somalia. Numerous border clashes occurred between Somalia and Ethiopia, and between Somalia and Kenya. Soviet influence in Somalia grew after Moscow agreed in 1962 to provide substantial military aid.

Abdirashid 'Ali Shermarke, who was elected president in 1967, was assassinated on 15 October 1969. Six days later, army commanders seized power with the support of the police. The military leaders dissolved parliament, suspended the constitution, arrested members of the cabinet, and changed the name of the country to the Somali Democratic Republic. Maj. Gen. Jalle Mohamed Siad Barre, commander of the army, was named chairman of a 25-member Supreme Revolutionary Council (SRC) that assumed the powers of the president, the Supreme Court, and the National Assembly. Siad Barre was later named president.

In 1970, President Siad Barre proclaimed "scientific socialism" as the republic's guiding ideology. This Marxist ideology stressed hard work and public service and was regarded by the SRC as fully compatible with Islam. A number of industries and large firms, especially foreign banks and oil companies, were nationalized. Self-help projects were instituted to clean up the towns and villages, construct roads and sidewalks, dig and maintain wells and irrigation canals, build infirmaries and schools, and stabilize sand dunes. In 1972, the SRC proclaimed the adoption of a Latin script for Somali; in 1973, it inaugurated widespread literacy campaigns.

The drought that affected large areas of Africa from 1968 to 1973 became severe in Somalia in late 1974, and in November of that year, the SRC declared a state of emergency, set up relief camps, and initiated food rationing.

Controversy arose in 1975 over US charges that the USSR was developing a military installation at the port of Berbera. Somalia denied the charges and invited inspection by journalists and US congressmen, who reported that they had found evidence of Soviet missile-handling facilities there. Somali officials did acknowledge receipt of Soviet military and technical advisers. Meanwhile, Ethiopia claimed that a Soviet-equipped Somalia represented a threat to its security. That same year, Siad Barre extended formal recognition to the Western Somali Liberation Front in the Ogaden. Somali forces took part in the fighting but were defeated in 1977, soon after the USSR had swung its support to Ethiopia. Late in the year, Siad Barre expelled the Soviets. Relations with the United States warmed, and in 1980, in return for military and economic aid (about \$80 million in 1982), Siad Barre agreed to allow the United States use of air and naval facilities at the northern port of Berbera, facilities that had been built by the USSR, and also at Mogadishu.

A new constitution was ratified in 1979. On 30 December 1979, an unopposed list of 171 candidates was elected to the People's Assembly, which, the following month, elected Siad Barre unanimously to a new term of office. (Unopposed elections were again held on 31 December 1984.) In October 1980, Siad Barre declared a state of emergency and reestablished the SRC, responding to the activities of an Ethiopian-backed opposition movement, the Somali Salvation Democratic Front (SSDF). The state of emergency was lifted in March 1982, but at midyear the insurgents, supported by a reported 10,000 Ethiopian troops, invaded Somalia. By December, however, only a small area was in insurgent or Ethiopian hands.

In January 1986, Siad Barre met with Lt. Col. Mengistu Haile Mariam, Ethiopia's head of state, in Djibouti, in an effort to improve relations between the two countries. Two other meetings of Somali and Ethiopian officials were held in May and August, but no agreement was reached. After Barre's unopposed reelection on 23 December 1986—the first direct presidential election in Somalia—Barre appointed a prime minister for the first time, Lt. Gen. Mohamed 'Ali Samater, the first vice president and minister of defense. The SSDF had virtually crumbled by the end of 1986, but in 1987 another insurgent group, the Somali National Movement, was conducting operations in the north (the former British Somaliland). In February 1987 relations between Somalia and Ethiopia deteriorated following an Ethiopian attack on six settlements. Growing out of the Soviet shift to the Ethiopian side, American-Somali relations became closer during the administration of US president Ronald Reagan. This included a 10-year agreement providing US forces access to naval and air facilities at Berbera and increasing US military aid to Somalia.

In 1988, both the Ethiopian and Somalian governments, faced by growing internal resistance, pledged to respect their border. But by 1990, the Somali regime was losing control. Armed resistance from the Somali Salvation Democratic Front (SSDF), the Somali Democratic Alliance (SDA), the Somali Democratic Movement (SDM), the Somali National Movement (SNM), the Somali Patriot Movement (SPM), and the United Somali Congress (USC)

were turning Somali territory into a death trap. Government forces were no less ruthless. Each was led by a clan leader or local warlord. Donor nations threatened to cut off aid unless the atrocities were ended.

In March 1990, Barre called for dialogue and, possibly, an end to single-party rule, but he was eventually ousted and, in January 1991, he fled Mogadishu. The USC seized the capital, but fighting continued. The SNM controlled much of the north and declared its territory the independent state of "Somaliland." By December, the USC had split in two. One faction was led by Ali Mahdi Muhammad, the interim president, the other by Gen. Muhammad Farrah Aided. They were from different subclans of the Hawiye clan. The fighting continued and the warring factions prevented people from planting and harvesting crops. Several hundred thousand people died. Far more were threatened by starvation. Over a half-million fled to Kenya. Contagious disease spread through refugee camps inside the country. The starvation and total breakdown of public services was publicized in the western media. Calls for the UN to intervene mounted. Yet, the food relief that was sent was stolen by soldiers and armed looters. Private relief efforts were frustrated and subject to extortion. Late on 3 December 1992, the UN Security Council passed a resolution to deploy a massive US-led international military intervention (UNITAF—United Task Force) to safeguard relief operations. By the end of December, Aided and Ali Mahdi had pledged to stop fighting. The UNITAF spread throughout the country. Violence decreased dramatically. But later, gunmen began to appear again.

US forces shifted their mandate toward the UN-Boutros-Ghali position of trying to confiscate arms and "technicals"—vehicles with mounted heavy weapons. Although the problem of relief distribution had largely been solved, there was no central government, few public institutions, and local warlords and their forces became increasingly emboldened.

By early 1993, over 34,000 troops from 24 UN members—75% from the United States—were deployed. Starvation was virtually ended, a modicum of order was restored, and hope had returned. Yet, little was done to achieve a political solution or to disarm the factions. From January 1993 until 27 March, 15 armed factions haggled in Addis Ababa, Ethiopia, and finally reached agreement to end hostilities and to form a transitional National Council for a two-year period to serve as the political authority in Somalia.

On 4 May 1993, the relief effort, Operation Restore Hope, was declared successful and US force levels were sharply reduced. Command of relief, disarmament, and reconstruction work was assumed by the UN. This effort, UNOSOM II, featured Pakistani, US, Belgian, Italian, Moroccan, and French troops, commanded by a Turkish general. However, on 23 June 1993, 23 Pakistani soldiers were killed in an ambush, and the UN Security Council ordered the arrest of those responsible. Gen. Aided's forces were blamed and a \$25,000 bounty was placed on Aided's head.

Mogadishu subsequently became a war zone. In early October 1993, 18 US Army Rangers were killed and 75 were wounded in a firefight. American public opinion turned against the effort forcing President Bill Clinton to withdraw US troops. Despite diplomatic overtures by his special envoy, Charles Oakley, and an inclusive UN-, and then Ethiopian-, sponsored set of talks, mediation failed. Kenya's President Daniel Arap Moi also mediated. After the US pullout, some 19,000 UN troops remained. Security Council

Resolution (897) redefined the UNOSOM II mandate—emphasizing peacemaking and reconstruction—but it was a recognition that the assertive, coercive strategy of the UN had failed and that a more neutral role was necessary.

The United States completed its withdrawal of troops in March 1995, after which Mogadishu again disintegrated into chaos. The last of three major battles was engaged after peace talks between the factions collapsed in November 1996. Some 300 people, many civilians and aid workers, were killed in a month of fighting.

The hope for restored order was rekindled with the death of Gen. Aideed on 1 August 1996. Aideed's rivals declared a ceasefire, although his son and successor, Hussein Muhammad Aideed, vowed revenge and renewed the fight.

Because the factional splits were not based on ideological, religious, or issue differences, but instead were quests for power and riches, there was little hope for the restoration of a central government, and by the year 2000 the country was split into four pieces—Somaliland to the far north, Puntland to the northeast, South Mogadishu controlled by Hussein Muhammad Aideed and North Mogadishu dominated by Ali Mahdi. Islamic courts took on the task of establishing law and order.

Despite overtures by Libya to influence the political configuration, clan elders met in neighboring Djibouti, and at the Arta Peace Conference on 26 August 2000 established a three-year Transitional National Government (TNG) with Abdiqassim Salad Hassan as president. The purpose of the TNG was to restore stability. However, the TNG controlled only pockets of the capital and country, and by August 2003 the TNG was due to expire.

Meanwhile, on 14 April 2003 citizens in the self-declared republic of Somaliland, went to the polls to elect a president in Somaliland's first multiparty election. After disputing the results, the Kulmiye party's presidential candidate, Ahmad Muhammad Silanyo, said that the intervention of elders and others had persuaded him to accept the outcome, perhaps with promises for a power-sharing deal. Incumbent president Dahir Riyale Kahin of the Unity of Democrats Party (UDUB) was declared the winner by the Somaliland Election Commission (SEC), a decision that later was confirmed by the constitutional court.

By July 2003, more than 350 delegates had gathered for a national conference held in Kenya—Somalia's 14th peace talks in ten years—to vote on a parliament that would elect an interim president, who would then appoint a prime minister. Delegates, who were to elect a president from among more than 30 candidates, broke through a serious impasse by selecting a federal system of government and nominating a 351-member parliament to serve a four-year term. However, Hassan threatened to withdraw from the talks unless various grievances were resolved including complaints that the parliament was too large, that elders alone should elect the president, and that Arabic must not be considered a second language. Further, the proposal to federate the country according to existing jurisdictions was rejected by Hassan because in his opinion it would dismember Somalia into a collection of small states and deepen existing divisions in the country. Indeed, some counterterrorism experts feared that a federal system would encourage warlordism and provide safe havens for international terrorists. Finally, in late 2004 a new federal transitional parliament (FTP) was formed.

Moving the FTP to Somalia proved a dangerous proposition. The prime minister's first visit to Mogadishu was marred by an explosion at a rally, and in November 2005, six people were killed and 20 injured in an attack on his convoy. That same month, the son of an FTP official was shot and killed, and some 12 people were killed and 21 wounded as the result of fighting triggered by Islamic militias bent on closing cinemas and video stores. In early 2006 clan militias killed some 30 people and wounded 70 more in fighting in the southern port city of Chisimayu and in towns in Mudug and Galguduud.

In December 2005 the peace process was jeopardized further when the Mogadishu faction of the FTP elected a regional council to govern Banaadir (greater Mogadishu). Many of the electees belonged to the Hawiye clan, which surrounds Mogadishu. Some observers viewed this development as a direct affront to the authority of and a formal break with the Jowhar interim government.

The following month, thanks to mediation by Yemen, President Yusuf and Parliament Speaker Sharif Hassan Sheikh Aden—the leader of the Mogadishu faction—declared that they would cooperate with each other, and in February the FTP met on Somali soil for the first time at a food warehouse in the central town of Baidoa. Some 205 of the 275 MPs attended. Surrounded by heavy security, President Yusuf made strong appeals for peace, unity, and national security. Those not attending the meeting were mostly Mogadishu warlords, who were determined to move the government from Jowhar (56 miles north of Mogadishu) back to Mogadishu. They also disagreed over the perceived need for foreign peacekeepers in the country.

According to a report by the International Crisis Group (ICG), international donors were most likely to succeed in promoting peace in Somalia by not backing one faction over another in the divided TFG, and instead support the transitional federal charter, revive the parliament, and establish a government of national unity. This approach, according to ICG, stood the best chance of preventing Somalia from becoming a haven for terrorists.

## 13 GOVERNMENT

Somalia is perhaps the world's best-known example of a failed state. Its governments have been as fractured as they have been ineffective, and since independence have only nominally ruled the territory within its borders. Since 1991, there has been no recognized permanent central government, and both Somaliland and Puntland—formally part of Somalia—have declared their autonomy. Puntland, which has exercised self-rule since 1998, has not declared its intention to become independent, while Somaliland seeks international recognition as an independent state.

From July 1961 to October 1969, Somalia was a parliamentary democracy based on the principle of separation of powers. After the army's seizure of power in October 1969, Maj. Gen. Siad Barre was named chairman of the 25-member SRC, which then elected him president. A constitution, approved in January 1979 by the ruling Somali Revolutionary Socialist Party and ratified by popular referendum on 25 August, vested legislative authority in the People's Assembly of 177 members serving five-year terms. This assembly could be dissolved by a two-thirds vote of its members or by the president. The People's Assembly was given the right to elect the president to a six-year, renewable term. (This was changed in 1984 to a direct popular election for a seven-year

term.) The president was authorized to appoint members of the cabinet and to act as its chairman. He was declared commander in chief of the armed forces, with the power to declare war and to appoint the president of the Supreme Court. An article of the document allowed him to invoke emergency rule. On 24 October 1980, Siad Barre issued a decree suspending those constitutional provisions that were incompatible with the state of emergency triggered by the conflict with Ethiopia.

Large-scale fighting among clan factions from 1989 to January 1991 brought about the collapse of the Barre regime and his flight from Mogadishu. An interim administration (based on the 1969 constitution) was created by the United Somali Congress, but it collapsed in November 1991 and its two warring factions plunged Somalia into total civil war. The northern province declared its independence on 18 May 1991 as the sovereign state of "Somaliland," the name it bore under British colonial rule. That independence, so far, has brought relatively orderly rule. On 5 May 1993, Mohammed Ibrahim Egal was elected president by members of the central committee.

Barre's overthrow in June 1991 marked the end of viable central government. Some 15 armed factions have been fighting continuously, except for the relatively peaceful early months of UN-US administration from December 1992 until around June 1993. UNOSOM II was technically in control until March 1995, when the UN withdrew the last of its troops from the country. With the UN's departure, the country split into zones controlled by the various factions. Gen. Aideed's death on 1 August 1996 renewed prospects for political stability as rival warlords Osman Ali Atto and Ali Mahdi Muhammed declared a cease-fire. It was also hoped that the moderate Osman Atto, Aideed's clansman and a former advisor, would assume control of Aideed's forces. But Aideed's immediate successor, his son Hussein Muhammad Aideed, renewed the fight against his father's rivals.

As of 2005, Somalia was nominally ruled by a transitional national government (TNG)—established October 2000—with a president, prime minister, and 91-member cabinet. The president was Abdullahi Yusuf Ahmed, the prime minister was Ali Mohamed Ghedi. Dahir Riyale Kahin was president of the Somaliland Republic. In September 2004, an interim 275-member Federal Transitional Parliament (FTP) was formed of representatives of Somalia's four major clans, each with 61 seats, while a fifth grouping of minority clans held 31 seats. Somaliland, Puntland, and traditional clan and faction strongholds are beyond the token control of the TNG. New elections were scheduled to take place in 2009 depending on political conditions.

Although not yet recognized as an independent nation, Somaliland maintains an army, a police force, a currency, a judicial system, and levies taxes. It has not been free of the factional fighting that pervades the south, but it enjoys far more stability and less lawlessness. It successfully held parliamentary elections in September 2005, although the opening of the 82-member body was marred by protests outside the building and a brawl inside. Nonetheless, because of concern with extremists and instability in the Horn of Africa, the United States, United Kingdom, and the EU were reported to be leaning toward recognition of Somaliland as an independent state.

## 14 POLITICAL PARTIES

Political parties in Somalia may be thought of more accurately as collections of clans and sub-clans vying with each other for political power. Prior to October 1969, Somalia had a nominal multi-party system of government where opposition in parliament came from within the majority party as well as from opposition parties. The Somali Youth League (SYL), the largest party, was formed in 1943 as the Somali Youth Club. Its program included the unification of all Somalis (including those in Kenya, Ethiopia, and French Somaliland); social, political, and economic development; and nonalignment in international affairs. It represented almost all government personnel, entrepreneurs, and skilled and quasi-skilled workers of the southern area, formerly Italian Somaliland. In the first national elections after independence, held on 30 March 1964, the SYL won an absolute majority of 69 of the 123 parliamentary seats. The remaining seats were divided among 11 parties. In general elections held in March 1969, the ruling SYL, led by Mohammed Ibrahim Egal, was returned to power. A total of 64 political parties contested the elections. In October 1969, the Supreme Revolutionary Council (SRC) prohibited all political parties and announced that elections would be held in due course. In 1976, the SRC was abolished and its functions transferred to the leadership of the newly formed Somali Revolutionary Socialist Party (SRSP), which was led by the former SRC members. Siad Barre was general secretary of the SRSP, which remained the sole legal party until his overthrow in January 1991. Subsequently, the Somali National Movement (SNM) seized control of the north and established the independent state of "Somaliland." Since then, armed factions largely identified with clans and sub-clans divided up the territory as they fought and negotiated to expand their influence.

Many of the factions bear the titles of political parties; e.g., the Somali Democratic Movement, the Somali National Union, the Somali Patriotic Movement, and the United Somali Congress (USC). In fact, their bases are not national. The USC controlled Mogadishu and much of central Somalia until late in 1991 when it split into two major factions. Aideed's Somali National Alliance (SNA) identified with the Habar Gadir subclan of the Hawiye clan and Ali Mahdi's Somali Salvation Alliance (Abgal subclan of the Hawiyes). Currently the latter exists as the "Group of Twelve" coalition and these are the two dominant claimants to national power.

Aideed was killed on 1 August 1996 and was succeeded by his son, Hussein Muhammad Aideed. Some observers believe he could be displaced by Osman Ali Atto, an elder clansman and former Aideed advisor who was a rival of the general's at the time of the latter's death. Osman Atto is considered more moderate than Aideed, and more receptive to a political solution for Somalia.

The main political factions comprising the FTP are the National Salvation Council (NSC); the Somali Restoration and Reconciliation Council (SRRC); and various civil society and traditional leaders. The 91-member cabinet is split between proponents of locating the government at Jowhar and those who want to move it back to Mogadishu. Somaliland's main parties are the Democratic United National Party (UDUB), led by the president; Kulmiye ("unifier"); and the Justice Party (UCID).

## 15 LOCAL GOVERNMENT

Somalia is divided into 18 regions (*gobolka*): Awdal, Bakool, Banaadir, Bari, Bay, Galguduud, Gedo, Hiiraan, Jubbada Dhexe, Jubbada Hoose, Mudug, Nugaal, Sanaag, Shabeellaha Dhexe, Shabeellaha Hoose, Sool, Togdheer, and Woqooyi Galbeed.

Until 1973, the country was divided into eight regions, each headed by an official chosen by the central government. The regions were subdivided into 48 districts, headed by district commissioners also appointed by the government. There were 83 municipalities and sub-municipalities. The powers of the municipal councils included local taxation, town planning, registry and census, public services, and approval of the local budget. The major educational, economic, and social services were financed and maintained by the central government, which also exerted supervisory control over the municipal councils through its power to remove mayors and to dissolve the councils.

## 16 JUDICIAL SYSTEM

Owing to the collapse of national government, no national judicial system exists. However, much of the country has reverted to Shariah with the possibility for appeals; secular courts exist in some localities. The UN operation in Somalia oversaw administration of the Somalia penal code in those areas under UN supervision. Islamic law and traditional mediation continue to be applied to settle disputes over property and criminal offenses. The fear of renewed anarchy interferes with impartial administration of justice, and prosecution of war crimes is difficult.

In 1993, plans were released for a three-tier judicial system with courts of appeals, regional courts, and district courts. In the self-declared Republic of Somaliland, adoption of a new constitution is pending and the pre-1991 penal code is in effect. In North Mogadishu and part of South Mogadishu, the middle Shabelle and the Gedo and Hi'ran regions, court decisions are only based on Shariah law.

Historically, under the 1961 constitution the Supreme Court was the highest juridical organ of the republic, having ultimate jurisdiction over all civil, penal, and administrative matters, and over all rights established by the constitution and by the laws of the state. Other judicial organs were qadi courts (Muslim courts), district courts, provincial courts, and courts of assize. Judicial organs of second instance were a tribunal of qadis, a court of appeals, and an appeals court of assize. Somali citizens participated as jurors in the courts of assize and the appeals court of assize. The Ministry of Justice administered the prison system and the offices and employees of the judicial organs. It prepared projects and regulations dealing with judicial matters and it supervised notaries, the bar, and the Office of State Attorney.

When the SRC assumed all judicial as well as executive and legislative powers in October 1969, it suspended the Supreme Court. However, the court was reopened in December 1969, and the rest of the court system was left much as before. A new National Security Court was empowered to rule on cases involving persons accused of attempting to undermine the independence, unity, and security of the state. The 1979 constitution established the Constitutional Court (composed of the Supreme Court and delegates to the People's Assembly) to decide on the constitutionality of laws. It also empowered the Higher Judicial Council, chaired by the presi-

dent and composed of high-ranking SRC members, to be responsible for the selection, promotion, and discipline of members of the judiciary.

## 17 ARMED FORCES

The regular armed forces disintegrated in the revolution of 1991, leaving the nation awash with Russian, Chinese, and European weapons. Clan gangs armed with these weapons terrorized relief workers during their humanitarian efforts sponsored by international and private organizations, and battled a UN and US expeditionary force to a standstill. Between December 1992 and March 1994 over 100,000 US military personnel served in Somalia. As of late 2005, the national armed forces had not been reconstituted, and the country was torn between the Republic of Somaliland declared by the Somali National Movement in the north and insurgent groups in the south. There was no data on military expenditures for 2005 or on the exact number of armed Somalis.

## 18 INTERNATIONAL COOPERATION

Somalia, which joined the United Nations on 30 September 1960, participates in ECA and several nonregional specialized agencies, such as the FAO, the World Bank, ILO, UNESCO, UNHCR, UNIDO, and the WHO. It is also a member of the ACP Group, the African Development Bank, the Arab Fund for Economic and Social Development, the Council of Arab Economic Unity, the Islamic Development Bank, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), G-77, the Arab League, and African Union.

Since 1960, the Somali government has sponsored a policy known as Pan-Somalism that strives for the unification of all Somali populations within the region into a Greater Somalia. This issue has a major impact on relations with Ethiopia, Kenya, and Djibouti and tensions between Somalia and these countries has escalated to violence in the past. Somalia is part of the Nonaligned Movement. In environmental cooperation, Somalia is part of CITES, the Montréal Protocol, and the UN Conventions on the Law of the Sea and Climate Change.

## 19 ECONOMY

Somalia's economy, one of the poorest in the world, is an agricultural one based primarily on livestock and, to a lesser extent, on farming. Livestock accounts for about 40% of GDP and a large percentage of export earnings, mainly from Saudi Arabia; bananas are the main cash crop and account for nearly 50% of export earnings. Other crops produced for domestic consumption are cotton, maize, and sorghum. There are plans to develop the fishing industry. Northern Somalia is the world's largest source of incense and myrrh. There has been little exploitation of mineral resources, which include petroleum, uranium, and natural gas. Since 1990, the economy has been a shambles, the consequence of drought and of protracted civil strife which has left the country without central authority. By early 1992, virtually all trade, industrial and agricultural activities had stopped, large numbers of people were forced from their homes, and more than six million people were at risk of starvation. In 1993, donors pledged \$130 million toward Somalia's reconstruction. The aid, together with good rains and increased stability, helped ease the food situation and few commu-

nities were at risk of widespread famine in 1997; however, the lack of rains in spring 2001 caused major food shortages in the south of the country. Continued fighting and the lack of a central authority in 2003 prevented significant improvements in economic conditions. The UN through its various relief agencies is the country's largest employer. Although Somalia was largely still in a state of anarchy in 2003, despite ongoing peace talks, the telecommunications sector was functioning, with most major cities having wireless telephone services. By 2005 Somalia was still a chaotic country with little political stability in sight. According to the US Central Intelligence Agency, Somalia's economic fortunes are driven by its deep political divisions with economic life continuing in part because much activity is local and relatively easily protected.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Somalia's gross domestic product (GDP) was estimated at \$4.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$600. The annual growth rate of GDP was estimated at 2.4%. It was estimated that agriculture accounted for 65% of GDP, industry 10%, and services 25%.

It was estimated that for the period 1980 to 1990 household consumption grew at an average annual rate of 1.3%.

## 21 LABOR

There are approximately 3.7 million workers in Somalia, with nomadic shepherds and subsistence farmers accounting for 71% of the working population. Industry and services employed the remaining 29.9%. Since the overwhelming majority of the population was engaged in stock herding or agriculture, the number of unemployed was not large, but there was considerable unemployment in the urban centers. There was no further data available on unemployment in Somalia.

Labor codes were enacted in the early 1960s for minimum wages, hours of work, employment of women and children, vacations, and collective bargaining. After the 1969 revolution, the SRC dissolved the existing unions and took action to organize the General Federation of Somali Trade Unions along lines more in keeping with its plans for a Socialist state, but it was believed to have ceased functioning with the collapse of the government in 1992. As of 2001, the recent constitution of Somaliland provided the right to unionize, but no unions had been formed yet. There are no systems in place to implement acceptable work conditions, child labor regulations, workweek standards or wage minimums.

## 22 AGRICULTURE

Only 1.7% of Somalia's total land area is cultivated, and 69% is permanent pasture. There are two main types of agriculture, one indigenous and the other introduced by European settlers. The Somalis have traditionally engaged in rain-fed dry-land farming or in dry-land farming complemented by irrigation from the waters of the Shabeelle and Jubba rivers or from collected rainwater. The rainy season lasts from April to June and these rains typically bring about 75% of Somalia's annual cereal production. Corn, sor-

ghum, beans, rice, vegetables, cotton, and sesame are grown by both methods. Bananas and sugarcane have been the main commercial crops, grown on irrigated land along the two rivers. Sugarcane is cultivated at Giohar and Jilib. Somalia is the world's leading producer of frankincense.

Between 1975 and 1991, all land was nationalized. Existing customary rights were generally honored, but the state took over large areas of irrigable land in the river valleys. Plantations had to register to obtain a concession grant, with the value of the land itself excluded from the selling price. In 1993, privatization and assistance from Italy (the main market for banana exports) began to help revitalize the agricultural sector. In 2001, agricultural products accounted for 47% of exports and 17% of imports; there was an agricultural trade surplus of \$10.2 million. In 2001 a severe drought affected southern Somalia and the UN appealed for food aid for half a million people.

## 23 ANIMAL HUSBANDRY

The majority of Somalis raise livestock; in some areas, particularly in the north, this is the only means of subsistence. During the civil war, herds were looted and killed. The national cattle herd was estimated at 5.3 million head at the end of 2001. At that time, Somalia also had 13.1 million sheep, 12.7 million goats, and 6.2 million camels. Live animals along with hides and skins are significant exports.

Having no official central government, the traditional Somali system of customary law and politics has been instrumental in maintaining economic stability. Somalia's animal herding sector is stronger than that of either of its neighbors, Kenya or Ethiopia. During the 1990s, Somalia accounted for more than 60% of all livestock exports in East Africa. In the northern part of Somalia (Somaliland and Puntland), sheep and goat exports from the major ports of Berbera and Bossaso now exceed pre-1991 levels. By Somali custom, the cross-border livestock trade is facilitated by brokers who certify that traded livestock are not stolen, and thus act as insurance agents for cross-border trading. Fees are lower on the Somali side of the cross-border trade than on the Kenyan side, indicating that rustling may be a more severe problem in Kenya than in Somalia. According to data from the Kenyan government, Somalia's export of cattle to Kenya more than doubled between 1991 and 2000. In 2000, severe drought struck Somalia, and Kenya closed its border to Somali livestock to prevent importing any animals infected with Rift Valley Fever.

## 24 FISHING

Approximately 1% of the population is engaged full-time in fishing. Fish-processing plants produced fish flour, inedible oil, and semirefined edible oil. In 1985, fish—tuna, sardines, mackerel, and lobster—and fish products accounted for 10.7% of exports. The catch in 2003 was 18,000 tons. Fisheries exports have declined from about \$14.8 million in 1990 to \$3.4 million in 2003. In 1993, the yearly potential catch was estimated at 200,000 tons, which could bring in an estimated \$26 million in revenue each year. One of the government's aims has been to establish fishing coopera-

tives; in 1975, thousands of nomads from the drought-affected area were resettled in fishing villages.

## 25 FORESTRY

Forests cover 12% of Somalia's land area, but only 4% of the land has dense tree stands. Somalia is one of the few areas in the world where frankincense is produced; incense trees of the genus *Boswellia* are found in the northeast. Gum arabic in small quantities is also produced. In the scant forests along the rivers of the Jubba region, *Euphorbia ruspoli* is milled and used for the production of banana crates. Roundwood production was estimated at 10,576,000 cu m (373.3 million cu ft), with almost 99% of it burned as fuel.

## 26 MINING

The Somali minerals sector, which was not a significant economic force before the 1991 overthrow of the government, failed to expand in the ensuing years of political and economic instability. In 2003, small quantities of gypsum, marine salt, and sepiolite (meerschaum) were exploited, and the country also presumably produced clays, sand and gravel, crushed and dimension stone, and limestone (for lime manufacture and/or agriculture). Officially reported mineral and trade data have been unavailable owing to lack of a central government from 1991 to 2000, and the secession of Somaliland and Puntland. In 2003, Somalia's output of gypsum, marine salt and sepiolite were estimated at 1,500 metric tons, 1,000 metric tons and 6 metric tons, respectively. The civil war forced the closure of Somalia's cement plant and oil refinery (a leading industry), and halted exploration for natural gas and other resources. There were unexploited deposits of anhydrite, bauxite, columbite, feldspar, natural gas, iron ore, kaolin, quartz, silica sand, tantalum, thorium, tin, and uranium, and recent discoveries of amethyst, aquamarine, emerald, garnet, opal, ruby, and sapphire. Mining of the gemstones, in Somaliland, has been limited by a lack of modern equipment, civil strife, and damage to the infrastructure; a EU-funded nongovernmental organization was working with Somaliland's government to exploit gemstone resources. Tin was mined by the British before World War II, and charcoal was the fifth-leading export commodity. The outlook showed little change for the short run.

## 27 ENERGY AND POWER

Somalia has no reserves of oil, or coal, nor any refining capacity, but does have modest reserves of natural gas.

Somalia relies on imported petroleum products for the production of its electric energy. Installed capacity in 2002 was 80,000 kW, all of it based on conventional thermal fuels. Total production in that year was 240 million kWh, with domestic demand at 223 billion kWh.

In 2002, Somalia's imports and consumption of refined oil products each averaged 4,800 barrels per day. Although Somalia had proven reserves of natural gas in 2002 of 2.833 billion cu m, there was no production, imports or demand for natural gas in that year. An oil refinery, built with Iraqi assistance, was opened at Gesira, near Mogadishu, in 1978 but has not operated since 1991. There was no demand or imports of coal in 2002. The only immediately exploitable domestic sources of energy are firewood and charcoal.

## 28 INDUSTRY

Before the start of civil war in the early 1990s, the manufacturing sector was beginning to develop. However, all industries suffered major losses during the civil war, accounting in 2000 for only 10% of GDP. Industries mainly serve the domestic market and, to a lesser extent, provide some of the needs of Somalia's agricultural exports, such as the manufacture of crates for packing bananas. Most industries have been looted, however, and many sold for scrap metal.

The most important industries were petroleum refining (as of 2000 shut down), the state-owned sugar plants at Jowhar and Gelib, an oilseed-crushing mill, and a soap factory. Other industries manufactured corrugated iron, paint, cigarettes and matches, aluminum utensils, cardboard boxes and polyethylene bags, and textiles. A cement plant at Berbera was completed in 1985.

The fish- and meat-canning export industries operate below capacity. Textiles are produced at the SOMALTEX plant, which supplies virtually the entire domestic market. Most major enterprises were government-owned, but private plants produce food, beverages, chemicals, clothing, and footwear. There are also plants for milk processing, vegetable and fruit canning, and wheat flour and pasta manufacturing, as well as several grain mills. The country's first pharmaceuticals factory, near Mogadishu, opened in 1986. Local craft industries produce sandals and other leather products, cotton cloth, pottery, baskets, and clay or meerschaum vessels.

The oil refinery at Mogadishu, with a production capacity of 10,000 barrels per day, has been out of operation since 1991. There is one natural gas field, but exploration and exploitation of oil and natural gas has been suspended since political conflict began.

## 29 SCIENCE AND TECHNOLOGY

In 1993, the Somali National University in Mogadishu had faculties of medicine, agriculture, veterinary medicine, engineering, geology, and industrial chemistry. Also located in Mogadishu were the Institute for the Preparation of Serums and Vaccines, the Laboratory of Hygiene and Prophylaxy, and the Society of Medicine and Tropical Hygiene. In Mogadishu there is the school of public health and a veterinary college; the Geological Survey Department of the Ministry of Water Development and Mineral Resources and the Survey and Mapping Department of the Ministry of Public Works. A technical college is located in Burao.

## 30 DOMESTIC TRADE

Despite the lack of a central government, domestic commerce in Somalia is still active, although on a small scale. Some merchants, using satellite telephones or radios coordinate distribution networks that transport food and other goods between various rival territories. Small shops barter or sell a limited number of such imported and domestic items as tea and coffee, kerosene, sugar, cotton goods, spices, cereals, skins, hides, and ghee. Outside the urban centers, the barter system is often employed. In the urban centers, small traders deal essentially in a cash economy.

Mogadishu is a primary business and commercial center and hosts a large number of shops and markets offering a variety of goods. In the south, at the mouth of the Juba River, Kismayu serves as an important port, particularly for banana exports.

Hargeisa serves as a watering and trading center for many of the nation's nomadic herders.

Usual business hours are from 8 AM to 12:30 PM and from 4:30 PM to 7 PM, Saturday to Thursday.

### **31 FOREIGN TRADE**

Exports consist largely of livestock (camels, sheep, and goats), bananas, hides, and fish. Principal imports are manufactures, petroleum products, food, and petroleum. Imports also include guns, medicine, and khat (a stimulant leaf chewed by Somalis). Foreign trade is handled by local traders who coordinate transactions despite factional fighting and the lack of a central government. Many traders in the north have relocated from Berbera to Bosaso in order to avoid foreign exchange regulations imposed by the self-proclaimed Somaliland government in the northwest. Livestock is normally driven from northeast Ethiopia to ports, and then shipped to Saudi Arabia. In 1998, Saudi Arabia imposed a 16-month ban on the import of livestock because of low health standards. Government revenues fell from \$45 million to \$25 million in that year. Although the ban was lifted in 1999, it was recently re-imposed in 2005 because of Rift Valley Fever concerns, severely hampering this sector. Remittances from Somalis working abroad constitute one of the Somalia's main sources of foreign exchange, reaching an estimated \$500 million in 1999.

### **32 BALANCE OF PAYMENTS**

Since independence, Somalia has consistently had an unfavorable balance of payments on current accounts, caused by deficits of trade and invisible transactions. In the 1980s, Somalia depended on direct transfers and capital assistance from other governments, and became even more dependent after civil war and ensuing anarchy broke out in 1991. Economic aid reached \$192 million in 1995. Total external debt in 2003 was estimated at \$2.84 billion.

### **33 BANKING AND SECURITIES**

The Central Bank of Somalia, a government institution with branches in every region, controls the issue of currency and performs the central banking functions of the state. All banks were nationalized in 1970. The Central Bank was set up in 1960. The Commercial and Savings Bank, formed in 1975 from a merger of the National Commercial Bank and the Somali Savings and Credit Bank, was closed in June 1990. The Somali Development Bank was created in 1983, and the Commercial Bank of Somalia was opened in July 1990. The formal banking system no longer functions.

As of 1996, the Somali shilling was still widely in use despite the lack of a government to back the currency, which was holding its value because there were no new notes. In 1999, the mass distribution of counterfeit Somali shillings reduced the value of the shilling against the US dollar from 7.5 to 10,000. The exchange rate was at 2,600 in 2000. Four competing versions of the national currency were reported to be in circulation.

A new bank, the Barakat Bank of Somalia, was established in Mogadishu at the end of October 1996. Initially capitalized at \$2 million, the bank intended to use the dollar as its working currency; and to specialize in small loans to Somali traders, foreign currency exchange, and currency transactions abroad. The bank aimed to establish a further 90 branches across the country.

There are no securities exchanges in Somalia.

### **34 INSURANCE**

A small number of European agencies which had acted as agents for foreign insurance companies were replaced by a state-owned insurance company, the National Insurance Co. of Somalia, in 1972.

### **35 PUBLIC FINANCE**

The Somali budget has been in deficit since the early 1970s. Disintegration of the national economy since 1991 has led to relief and military intervention by the UN. No central government authority existed as of 2006, so there was no functioning system of civil administration to collect and disburse public finances.

The US Central Intelligence Agency (CIA) estimated that Somalia's total external debt was \$3 billion.

### **36 TAXATION**

Direct taxes are imposed on income and profits, when officials can collect them. In 1986, tax rates on wages and salaries ranged from 0–18.9%. Income from trade and the professions was taxed at rates of up to 35%. Indirect taxes are imposed on imports, exports, mortgages, vehicle registration, sugar, alcohol, and a number of other goods and services. In 2003, Somalia's sales tax rate was 10%.

### **37 CUSTOMS AND DUTIES**

Customs and duties are levied primarily to provide income for the state and to offer protection to local industries. Most duties are ad valorem and range from zero to 100%. Unspecified goods are dutiable at 25% ad valorem. A general sales tax of 10% for imported goods is also levied.

### **38 FOREIGN INVESTMENT**

Civil strife and the lack of a central government have discouraged foreign investment. Although the UN and associated foreign governments spent \$4 billion dollars to restore order to the country, no productive assets remained after their departure in 1995. The only economic spin-off appears to have been contracts issued to local companies to dispose of military debris and trash. Foreign investment in the late 1990s centered around the communications structure in mobile phone technology and energy creation, but continuation of political conflicts well into 2002 drove away investment. For the period 1997 to 2001, annual foreign direct investment (FDI) ranged from \$1.1 million in 1997 to a negative divestment of -\$800,000 in 1999. Across the five years, net FDI flows were barely positive, at \$400,000. However the ongoing chaos and periodic violence in Somalia continue to be a major obstacle to FDI inflows. For example, in 2002, FDI inflows turned negative, offsetting the small momentum registered from the gains of 2000.

### **39 ECONOMIC DEVELOPMENT**

Successive Somali governments have sought to stimulate production in all sectors of agriculture, commerce, and industry. However, drought, inflation, civil strife, and the rise of oil prices have severely hampered these programs. Government priorities prior to the civil war included the expansion of the fishing fleet, food self-sufficiency based on the development of the Baardheere dam

project, livestock breeding, and meat export programs, and transport and telecommunication improvements.

Clan warfare has left Somalia without a central government since 1991. Economic development at the beginning of the new millennium was expected to be devoted in large part to the rebuilding of the Somali civil administration. Despite a continuing lack of infrastructure in the early 2000s, domestic trade was thriving and the clan system had sufficiently organized the economic system to support the population. The ongoing civil disturbances and clan rivalries have interfered with any broad-based economic development and international aid arrangements. In 2004 and 2005 Somalia's overdue financial obligations to the IMF continued to grow. Experts agree that the return of peace and security to the whole country is essential for viable economic growth. According to the Economist Intelligence Unit, the recent influx of armaments in 2005 indicated that increased stability is unlikely, which will further delay any significant resumption of large-scale assistance from the international community.

#### 40 SOCIAL DEVELOPMENT

Since 1989, internal fighting and widespread drought conditions have severely disrupted government and its ability to provide social services. Private humanitarian agencies tried to fill the need but fighting, extortion, and the activities of armed factions and looters chased many of them away. The UN has also tried to help, but it too finds operations difficult. Somalia in effect has no national government, and current data for social services is unavailable.

Although the constitution prohibits discrimination based on sex or ethnicity, societal discrimination and violence against women and children are prevalent. Women play a subordinate role in Somalia's culture and politics. Polygyny is practiced and female genital mutilation is nearly universal. The punishment for murdering a woman is half as severe as that for killing a man. Rape is a common occurrence.

Serious human rights violations included suppression of civil and political rights, disappearances, arbitrary detention, and harsh prison conditions. As of 2004, many civilians were still being killed in factional fighting.

#### 41 HEALTH

In 1972, all health facilities and the services of all private medical personnel were placed under state control. Government policy was eventually to provide free medical treatment for all. One of the self-help projects instituted by the SRC was the construction of local clinics. As of 2004, it was estimated that there were fewer than 5 physicians per 100,000 people, and only 19 nurses, and fewer than one dentist or pharmacist per 100,000 population.

Somalia has a high incidence of tuberculosis, schistosomiasis, and pulmonary disturbances. Malaria and intestinal parasites are endemic. Serious dietary deficiencies are found, particularly in the north. Only 31% of the population had access to pure drinking water, which is rarely available outside the larger cities. Water outside these centers needs to be filtered, boiled, or chemically treated. Somalis, however, take few of these precautions. A very low 17% of the population had adequate sanitation, and only 27% had access to health care services.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 46.8 and 18 per 1,000 people. Only 1%

of married women (ages 15 to 49) have used contraception. Average life expectancy in 2005 was only 48.09 years and the infant mortality rate was 116.70 per 1,000 live births. The maternal mortality rate was a very high 1,100 per 100,000 live births in 1991.

Immunization rates for children up to one year old were: tuberculosis, 31%; diphtheria, pertussis, and tetanus, 18%; polio, 18%; and measles, 30%. The rates for DPT and measles were, respectively, 18% and 26%. The HIV/AIDS prevalence was 1.00 per 100 adults in 2003. As of 2004, there were approximately 43,000 people living with HIV/AIDS in the country.

#### 42 HOUSING

According to the latest available information for 1980–88, the total number of housing units was 710,000 with 6.8 people per dwelling. However, years of civil war and the 2004 tsunami took a toll on the nation's housing stock. The war caused internal migration and displacement to the extent that some areas are highly overpopulated while other neighborhoods have been abandoned. In 2005, it was estimated that about 85% of the total population was living in slums or partially destroyed housing. About 40 villages were damaged or destroyed by the tsunami of December 2004, which was generated by a massive earthquake in the Indian Ocean.

Development schemes aided by UN and foreign assistance programs have helped alleviate some housing shortages. Town planning and housing are under the jurisdiction of municipalities, and assistance is given by the central government only when it has approved a project submitted by the municipality. The typical Somali house is either a cylindrical hut with a conical thatched roof or a rectangular hut with an angular roof of thatch or metal.

#### 43 EDUCATION

Private schools were closed or nationalized in 1972 and all education was put under the jurisdiction of the central government. In 1975 primary education was made compulsory. A minimum of eight years of schooling at the primary level is mandatory; however, many prospective students, particularly among the nomadic population, cannot be accommodated. Secondary education lasts for four years.

Primary school enrollment in 1995 was estimated at less than 10% of age-eligible students. The same year, secondary school enrollment was at less than 6% of age-eligible students.

Mogadishu University is the primary source for higher education. All institutions at the higher level had 817 teachers and 15,672 students in 1986. The adult literacy rate for 2001 was estimated at about 37.8%, with 49.7% for men and 25.8% for women.

#### 44 LIBRARIES AND MUSEUMS

The National Museum of Somalia in Mogadishu (3,000 volumes) maintains a highly specialized library dealing primarily with African and Somali culture, government, and history. The National Library, under the supervision of the Ministry of Higher Education and Culture, has 9,000 volumes, and the Somali Institute of Public Administration also has a book collection; both are in Mogadishu. The Amoud University Library has about 65,000 volumes. The National Museum in Mogadishu is a restored residence of the viceroy of the sultan of Zanzibar. Besides its comprehensive

collection of Somali ethnographic material, the museum has local art objects, fossils, and old coins.

#### 45 MEDIA

In 2003, there were an estimated ten mainline telephones for every 1,000 people. The same year, there were approximately three mobile phones in use for every 1,000 people.

The transitional government operates Radio Mogadishu. There are several privately owned radio and television stations, many of which are local or regional in range. Most of the country can receive transmissions from British Broadcasting. In 2001, there were three main television stations, two in Mogadishu and one in Hargeisa. In 2003, there were 60 radios and 14 television sets for every 1,000 people. The same year, about nine of every 1,000 people had access to the Internet. There were four Internet hosts in 2004.

In 2004, there were two daily newspapers, one government and one independent. There was also an English language weekly newspaper. And several other small weekly papers. Freedom of speech and the press are severely limited, according to reports. Factional infighting creates an atmosphere of mistrust, and media representatives such as comedians, actors, and journalists have been arrested, detained, or otherwise harassed. Most news comes from foreign broadcasts.

#### 46 ORGANIZATIONS

Private organizations that existed in the 1960s have largely been replaced by government-sponsored groups. Among party-controlled groups are the Union of Somali Cooperatives Movement, the Somali Women's Democratic Organization, and the Somali Revolutionary Youth Organization.

There are active sports associations promoting amateur competitions among athletes of all ages in pastimes such as squash, tennis, badminton, dance sport, and weightlifting; some of these, such as the Somalia Football Federation, are affiliated with international organizations as well.

Volunteer service organizations, such as the Lions Clubs International, are also present. There is a national chapter of the Red Crescent Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

Somalia's modest tourist industry has declined since the civil war began in 1991. Every person entering Somalia is required to have a valid passport and a proper visa. An official certificate showing immunization against yellow fever is necessary if traveling from an infected area.

Before the war, Somalia offered lovely beaches, excellent diving, and numerous species of East African wildlife.

#### 48 FAMOUS SOMALIS

The most important historical figure in Somali history is Muhammad 'Abdallah bin Hasan (known popularly in English literature as the "Mad Mullah"). He was born about 1860 and during his youth devoted himself to religious studies. In August 1899, with his followers of the Salihyyah confraternity, he declared a holy war against the British, Italians, and Ethiopians. His resistance to the British lasted until his death in November 1920. Muhammad, also known as one of Somalia's greatest poets, was the first to call

for Somali unity. Other important historical figures include Sharif Abu Bakr bin 'Abdallah al-'Aydarus (d.1503), who founded the Qadiriyyah confraternity in the Somali region; Sheikh 'Ali Maye Durogba of Marka (d.1917), who founded the Ahmadiyyah sect in Somalia; and Sheikh Muhammad Guled (d.1918), who started the Salihyyah sect in Somalia.

'Abdullahi 'Issa Mohamed (b.1921) was prime minister during the Italian trusteeship administration (1956–60) and was Somalia's first foreign minister. Aden 'Abdullah Osman Daar (b.1908) is regarded as the Somali most responsible for bringing about the transition of the Somali territory from dependence to independence; he was the nation's first president. Abdirashid 'Ali Shermarke (1919–69) was Somalia's first prime minister after independence and the nation's second president. He was assassinated on 15 October 1969 by a member of his bodyguard. Maj. Gen. Jalle Mohamed Siad Barre (1921–95) was the leader of the bloodless coup that took over the government six days later and established the SRC. He subsequently became president of the Somali Democratic Republic. Mohamed 'Ali Samatar (b.1931), first vice-president and minister of defense, became prime minister in 1986. Mohammed Farah Aidid (1934–96) was the clan leader that gained control over much of Somalia during the civil war. His son, Hussein Aidid (b.1962), a former US marine, took over after his death. Abdiqasim Salad Hassan (b.1941) was recognized as president in exile in Djibouti in 2000, serving until 2004. In October of that year, Abdullahi Yusuf Ahmed (b.1934) was named the transitional president of Somalia. Osman Hasan Ali (b.1950) became famous as the wealthy financier of clan militias during the civil war.

#### 49 DEPENDENCIES

Somalia has no territories or colonies.

*Republiek van Suid-Afrika*

**CAPITAL:** Pretoria (administrative); Cape Town (legislative); Bloemfontein (judicial)

**FLAG:** The national flag, adopted in 1994, consists of a blue-black triangle placed vertical to the hoist and bordered in gold-yellow. Bands of red, white, green, white, and blue appear horizontally.

**ANTHEM:** Two anthems are currently in use: the official anthem, *Die Stem van Suid-Afrika* (*The Call of South Africa*), and *Nkosi Sikelel' Afrika* (*God Bless Africa*), a hymn adopted by most liberation groups.

**MONETARY UNIT:** The South African rand (R) is a paper currency of 100 cents. It is used throughout the South African monetary area. There are coins of 1, 2, 5, 10, 20, and 50 cents and 1 rand, and notes of 2, 5, 10, 20, and 50 rand. R1 = \$0.16155 (or \$1 = R6.19) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year's Day, 1 January; Republic Day, 31 May; Kruger Day, 10 October; Day of the Vow, 16 December; Christmas, 25 December; Goodwill Day, 26 December. Movable religious holidays include Good Friday and Ascension; Family Day is a movable secular holiday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The area of South Africa is 1,219,912 sq km (471,011 sq mi). Comparatively, the area occupied by South Africa is slightly less than twice the size of the state of Texas. Considered as a whole, South Africa extends 1,821 km (1,132 mi) NE-SW and 1,066 km (662 mi) SE-NW. It is bounded on the N by Botswana and Zimbabwe (formerly Rhodesia), on the NE by Mozambique and Swaziland, on the E by the Indian Ocean, on the S by the confluence of the Indian and Atlantic oceans, on the W by the Atlantic Ocean, and on the NW by Namibia. South Africa also controls two small islands, Prince Edward and Marion, which lie some 1,920 km (1,200 mi) southeast of Cape Town. South Africa's capital city, Pretoria, is located in the northeastern part of the country.

## <sup>2</sup>TOPOGRAPHY

South Africa has a mean altitude of about 1,200 m (3,900 ft), and at least 40% of the surface is at a higher elevation. Parts of Johannesburg are more than 1,800 m (6,000 ft) above sea level. There are three major zones: the marginal regions, which range in width from 80 to 240 km (50–150 mi) in the east to 60–80 km (35–50 mi) in the west, and including the eastern plateau slopes, Cape folded belt, and western plateau slopes; a vast saucer-shaped interior plateau, separated from the marginal zone by the Great Escarpment; and the Kalahari Basin, only the southern part of which projects into north-central South Africa. The land rises steadily from west to east to the Drakensberg Mountains (part of the Great Escarpment), the tallest of which is Mt. Injasuti (3,408 m/11,181 ft), on the border with Lesotho.

The coastal belt of the west and south ranges between 150 and 180 m (500 and 600 ft) above sea level and is very fertile, producing citrus fruits and grapes, particularly in the western Cape.

North of the coastal belt stretch the Little and the Great Karoo highlands, which are bounded by mountains, are semiarid to arid, and merge into sandy wastes that ultimately join the arid Kalahari. The high grass prairie, or veld, of the Orange Free State and the Transvaal is famous for its deposits of gold and silver; other minerals are found in the Transvaal's bush veld. From the Drakensberg, the land falls toward the Indian Ocean in the rolling hills and valleys of Natal, which are covered with rich vegetation and, near the coast, subtropical plants, including sugarcane.

The two most important rivers draining the interior plateau are the Orange (with its tributary the Vaal), which flows into the Atlantic Ocean, and the Limpopo, which empties into the Indian Ocean through Mozambique. Of the fast-flowing rivers with steeply graded courses that produce spectacular waterfalls, the largest is the Tugela, which rises in the Mont-aux-Sources and flows swiftly to the Indian Ocean.

## <sup>3</sup>CLIMATE

South Africa lies almost wholly within the southern temperate zone, and its climate is more equable than that of corresponding northern latitudes because of its surrounding waters. Temperature differentials between east and west coasts stem from the influences, respectively, of the warm Mozambique (Agulhas) Current and the cold Benguela Current. The average daily minimum temperature at Durban, on the east coast, ranges from 11°C (52°F) in July to 21°C (70°F) in February; on the west coast, at Port Nolloth, the range is from 7°C (45°F) to 12°C (54°F) during the corresponding months. Temperatures are cooler in the highlands: at Johannesburg, the average daily minimum is 4°C (39°F) in June and July and 14°C (57°F) in January. On the high veld there are sharp differ-

ences of temperature between day and night, but there is less daily fluctuation nearer the coast.

Rainfall is unpredictable in large parts of the country, and prolonged droughts are a serious restriction on farming in such areas. While the mean annual rainfall is 46 cm (18 in), 21% of the country receives less than 20 cm (8 in) and 31% gets more than 60 cm (24 in). Much of South Africa gets its rain in the summer months, but the western coastal belt is a winter rain area. Along the Cape south coast, rain falls during both seasons.

#### **4 FLORA AND FAUNA**

The variety of South Africa's climate and altitude accounts for its diversified flora and fauna. Major vegetation zones include the forest and palm belt of the east, south, and southwest coasts; the temperate grasslands (veld) of the eastern portion of the interior plateau; the desert and semidesert (Karoo) vegetation of the western interior; and the bushveld (savanna) of the Kalahari and the northeast. Of the 200 natural orders of plants in the world, over 140 are represented and South Africa has over 25,000 species of flora, including a floral kingdom found nowhere else. There are 200 species of euphorbia, about 350 different kinds of heath in the Cape Province alone, and more than 500 species of grass. Wild flowers (including the protea, South Africa's national flower) grow in great profusion throughout the Cape region.

Aardvark, jackal, lion, elephant, wild buffalo, hippopotamus, and various kinds of antelope are still found in some parts of the country. In the great game parks, animals may be seen living in natural surroundings. So extensive is the variety both of smaller mammals and of plants that they have not yet all been identified. The number of different kinds of birds is estimated at well over 300; that of snakes, 200. The number of species of insects is estimated at 40,000, and there are about 1,000 kinds of fish.

#### **5 ENVIRONMENT**

Recent industrialization and urbanization have taken their toll on the South African environment, as have such agricultural practices as veld fires, overgrazing of livestock, and intensive use of pesticides. Soil erosion and desertification are two more significant environmental issues in South Africa. Three hundred to four hundred million tons of soil per year are lost. The country's limited water resources have been impaired by mineralization, eutrophication, and acidic mine drainage. South Africa has 45 cu km of renewable water resources, with 72% of annual withdrawals used for farming and 11% for industrial activity. The country's cities produce about 4.2 million tons of solid waste per year. Air pollution in urban areas stems primarily from coal burning and motor vehicle exhausts. The government has taken steps to address these issues: Johannesburg was the site of the 2002 World Summit on Sustainable Development, and South Africa is seen as a leader of the developing world on issues such as climate change, conservation, and biodiversity.

The principal environmental bodies are the Department of Water Affairs, the Department of Environmental Affairs, and the Department of National Health and Population Activities. Pursuant to a government "white paper" about environmental conservation policy, approved in 1980, a comprehensive environmental protection bill was given parliamentary approval in 1982. It included development of a comprehensive technology for treating sewage

and industrial effluents, surveys of threatened natural habitats, research on marine pollution, monitoring of atmospheric pollutants, and a program of environmental education in the public schools.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 29 types of mammals, 36 species of birds, 20 types of reptiles, 21 species of amphibians, 49 species of fish, 18 types of mollusks, 109 species of other invertebrates, and 75 species of plants. Threatened species in South Africa include the riverine rabbit, Cape Mountain zebra, Treur River barb, and several species of butterfly. Twelve species have become extinct, including the cape warthog, bluebuck, Burchell's zebra, and quagga.

About 5.5% of the total land area is protected and there are numerous nature and game reserves and national parks. Some 120 rare Addo elephants are protected in Addo Elephant National Park, 56 km (35 mi) north of Port Elizabeth; Bontebok National Park (near Swellendam, Cape Province) is a habitat for the last surviving herd of bontebok antelope; Mountain Zebra National Park (near Cradock, in Cape Province) is a refuge for several hundred rare mountain zebras and springbok; and Kruger National Park, in northeastern Transvaal, has almost every species of South African wildlife in its natural habitat.

#### **6 POPULATION**

The population of South Africa in 2005 was estimated by the United Nations (UN) at 46,923,000, which placed it at number 27 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 33% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 0.7%. The projected population for the year 2025 was 47,779,000. The overall population density was 39 per sq km (100 per sq mi); however, more than a third of the people live on only 4% of the land area.

The UN estimated that 53% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.65%. The administrative capital, Pretoria had a population of 1,209,000 in that year. Johannesburg, the largest city and the commercial and industrial center of the country, had a metropolitan population of 3,228,000; Cape Town, the legislative capital, had a population of 3,103,000. Other major cities include East Rand, 3,043,000; Durban, 2,643,000; West Rand, 1,297,000; Sasolburg, 1,259,000; and Port Elizabeth, 998,000; Bloemfontein, the judicial capital, approximately 300,000.

The prevalence of HIV/AIDS has had a significant impact on the population of South Africa. The UN estimated that 21.3% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

#### **7 MIGRATION**

Preference was given in the past to immigrants from those countries from which South Africa's present white population is derived. Between 1963 and 1984, the number of immigrants averaged about 37,000 annually, and the number of emigrants about 12,000. Between 1980–84, some 72,528 Zimbabwe residents em-

LOCATION: 16°28' to 32°54' E; 22°8' to 34°50' S. BOUNDARY LENGTHS: Botswana, 1,778 kilometers (1,105 miles); Zimbabwe, 225 kilometers (140 miles); Mozambique, 491 kilometers (305 miles); Swaziland, 449 kilometers (279 miles); total coastline, 2,954 kilometers (1,836 miles); Namibia, 1,078 kilometers (670 miles); Lesotho, 909 kilometers (565 miles). TERRITORIAL SEA LIMIT: 12 miles.

igrated to South Africa. After 1984, immigration fell, and, perhaps as a consequence, the white population actually declined between 1980–91. Of the 63,495 immigrants between 1986–91, 16,815 came from other African countries, 16,056 from the United Kingdom, 16,512 from other European countries, and 14,112 from other parts of the world. Emigration came to 46,541 during these years.

In 1986, it was estimated that between 1.5 million and 2 million black Africans migrate temporarily to South Africa each year to fulfill work contracts, although only about 500,000 foreign male Africans are living and working in the country at any given time. South Africa was providing informal sanctuary to perhaps

200,000 refugees from Mozambique in 1992, most of whom repatriated by 1996.

Since 1999, one of South Africa's main challenges has been the increasing cross-border migration. In addition to the large number of undocumented migrants that enter the country, as of 1999, the country was hosting some 55,000 asylum seekers, only 8,500 of whom had been recognized as refugees. Also in 1999, xenophobia was on the rise, with 30 refugees and asylum seekers having been killed in attacks on foreigners since 1995. The number of migrants living in South Africa in 2000 was 1,303,000, including refugees. In 2004 there were 27,683 refugees and 115,224 asylum seekers. Over 7,000 refugees were from Somalia, 5,000 were from

Angola, and the remainder from the DROC. Asylum seekers were from Zimbabwe, the DROC, Somalia, Nigeria, and Pakistan.

In 2005, the net migration rate was an estimated -0.21 migrants per 1,000 population. The government views the migration levels as satisfactory.

## <sup>8</sup>ETHNIC GROUPS

Legal separation of the racial communities was a cornerstone of government policy through most of the 20th century. This racial policy, often called apartheid but referred to in South African government circles as “separate development,” created and maintained one of the most rigidly segregated societies in the world. During the 1970s and 1980s, enforcement of separatist policies eased, but the division of the population into four racial communities, Africans (blacks), whites, coloreds, and Asians, remained. The rules of apartheid were formally abolished in 1991, but most citizens still describe themselves as one of the four traditional categories.

At the 2001 census, about 79% of the population were black Africans. This black population includes a large number of peoples, including the Zulu, Xhosa, Northern Sotho, Southern Sotho, Tswana, Shangana-Tsongo, and Swazi. Whites account for about 9.6% of the total population. About 60% of the whites are descendants of Dutch, French Huguenot, and German settlers, and about 40% are of British descent; South Africans of European, especially Dutch, descent are called Afrikaners. The Cape Coloureds, accounting for about 8.6% of the total population, are a long-established racial amalgam of white, Hottentot, and other African, Indian, and Malay lineage. Asians make up about 2.5% of the population; they include descendants of Indian, East Indian, and Chinese indentured laborers who were not repatriated after their brief period of service as miners. There are a few thousand Khoikhoi within the country, an indigenous nomadic people who are primarily sheep and cattle herders.

## <sup>9</sup>LANGUAGES

The interim constitution adopted in 1993 recognized 11 languages as official at the national level: Afrikaans, English, Ndebele, Sepedi, Sesotho, Swazi, Tsonga, Tswana, Venda, Xhosa, and Zulu. All were still recognized officially in 2005. The African languages spoken in South Africa are of the Niger-Congo family. In general, English is more commonly spoken in the cities, and Afrikaans in the rural areas.

Afrikaans is a variant of the Dutch spoken by the 17th-century colonists, and it includes lexical items, phrases, and syntactic structures from Malay, Portuguese, the Bantu group, Hottentot, and other African languages, as well as from English, French, and German. Afrikaans has borrowed from English words such as *gelling* (gallon), *jaart* (yard), *sjieling* (shilling), and *trippens* (three pence), while English has taken over *kraal*, *veld*, and other Afrikaans words. More than 70% of South African whites are bilingual. Afrikaans is the primary language of about 13.3% and English of 8.2%. The most widely spoken primary language is Zulu, spoken by about 23.8% of the population. Xhosa follows with about 17.6% of the population as primary speakers. Sepedi is spoken by 9.4% of the population, Setswana by 8.2%, Sesotho by 7.9%, and Tsonga by 4.4%. The remaining 7.2% included speakers of German, Portuguese, and other languages.

## <sup>10</sup>RELIGIONS
